Emergency Response/Contingency Plan

(Hazardous Materials Business Plan Module)

Authority Cited: HSC, Section 25504(b); Title 22, Div. 4.5, Ch. 12, Art. 3 CCR

facilities that handle hazardous materials in specified quantities must have a written emergency response plan. In addition, facilities that generate 1,000 kilograms or more of hazardous waste per month, or accumulate more than 6,000 kilograms of hazardous waste on-site at any one time, must prepare a contingency plan. Because the requirements are similar, they have been combined in a single document, provided below, for your convenience. This plan is a required module of the Hazardous Materials Business Plan (HMBP). **If you already have a plan that meets these requirements, you should not complete the blank plan, below, but you must include a copy of your existing plan as part of your HMBP.**

This site-specific Emergency Response/Contingency Plan is the facility's plan for dealing with emergencies and shall be implemented immediately whenever there is a fire, explosion, or release of hazardous materials that could threaten human health and/or the environment. **At least one copy of the plan shall be maintained at the facility for use in the event of an emergency and for inspection by the local agency.** Within Santa Clara County, hospitals and police agencies have delegated receipt of these plans to the local agencies administering Hazardous Materials Business Plans, so additional copies need not be submitted. However, a copy of the plan and any revisions must be provided to any contractor, hospital, or agency with whom special (i.e. contractual) emergency services arrangements have been made *(see section 3, below)*.

1. Evacuation Plan:

a. The following alarm signal(s) will be used to begin evacuation of the facility *(check all that apply)*:

☐ Bells; ☒ Horns/Sirens; ☒ Verbal *(i.e. shouting)*; ☒ Other *(specify)* **Phones, PA System**

b. ☒ Evacuation map is prominently displayed throughout the facility.

Note: A properly completed HMBP Site Plan satisfies contingency plan map requirements. This drawing (or any other drawing that shows primary and alternate evacuation routes, emergency exits, and primary and alternate staging areas) must be prominently posted throughout the facility in locations where it will be visible to employees and visitors.

2. a. Emergency Contacts*:

Fire/Police/Ambulance	Phone No. 911
State Office of Emergency Services	Phone No. (800) 852-7550

b. Post-Incident Contacts*:

Fire Department Hazardous Materials Program	Phone No.: (650) 522-7940
San Mateo County Environmental Health Division	Phone No. (650) 363-4305
California EPA Department of Toxic Substances Control	Phone No. (510) 540-3739
Cal-OSHA Division of Occupational Safety and Health	Phone No. (408) 452-7288
Air Quality Management District	Phone No. (415) 771-6000
Regional Water Quality Control Board	Phone No. (510) 622-2300

** These telephone numbers are provided as a general aid to emergency notification. Be advised that additional agencies may be required to be notified.*

c. Emergency Resources:

Poison Control Center	Phone No. (800) 876-4766
Nearest Hospital: Name: **Sequoia Hospital**	Phone No.: (650) 369-5811
Address: **170 Alameda de las pulgas**	City: **Redwood City**

3. Arrangements With Emergency Responders:

If you have made special (i.e. contractual) arrangements with any police department, fire department, hospital, contractor, or State or local emergency response team to coordinate emergency services, describe those arrangements below:

4. Emergency Procedures:

...ergency Coordinator Responsibilities:

a. Whenever there is an imminent or actual emergency situation such as a explosion, fire, or release, the emergency coordinator *(or his/her designee when the emergency coordinator is on call)* shall:
   i. Identify the character, exact source, amount, and areal extent of any released hazardous materials.
   ii. Assess possible hazards to human health or the environment that may result from the explosion, fire, or release. This assessment must consider both direct and indirect effects *(e.g. the effects of any toxic, irritating, or asphyxiating gases that are generated, the effects of any hazardous surface water run-off from water or chemical agents used to control fire, etc.)*.
   iii. Activate internal facility alarms or communications systems, where applicable, to notify all facility personnel.
   iv. Notify appropriate local authorities *(i.e. call 911)*.
   v. Notify the State Office of Emergency Services at 1-800-852-7550.
   vi. Monitor for leaks, pressure build-up, gas generation, or ruptures in valves, pipes, or other equipment shut down in response to the incident.
   vii. Take all reasonable measures necessary to ensure that fires, explosions, and releases do not occur, recur, or spread to other hazardous materials at the facility.

b. Before facility operations are resumed in areas of the facility affected by the incident, the emergency coordinator shall:
   i. Provide for proper storage and disposal of recovered waste, contaminated soil or surface water, or any other material that results from a explosion, fire, or release at the facility.
   ii. Ensure that no material that is incompatible with the released material is transferred, stored, or disposed of in areas of the facility affected by the incident until cleanup procedures are completed.
   iii. Ensure that all emergency equipment is cleaned, fit for its intended use, and available for use.
   iv. Notify the California Environmental Protection Agency's Department of Toxic Substances Control, the County of San Mateo Environmental Health Division, and the local fire department's hazardous materials program that the facility is in compliance with requirements b-i and b-ii, above.

Responsibilities of Other Personnel:

On a separate page, list any emergency response functions not covered in the "Emergency Coordinator Responsibilities" section, ...bove. Next to each function, list the job title or name of each person responsible for performing the function. Number the page(s) ...propriately.

5. Post-Incident Reporting/Recording:

The time, date, and details of any hazardous materials incident that requires implementation of this plan shall be noted in the facility's operating record.

Within 15 days of any hazardous materials emergency incident or threatened hazardous materials emergency incident that triggers implementation of this plan, a written Emergency Incident Report, including, but not limited to a description of the incident and the facility's response to the incident, must be submitted to the California Environmental Protection Agency's Department of Toxic Substances Control, the County of San Mateo Environmental Health Division, and the local fire department's hazardous materials program. The report shall include:

a. Name, address, and telephone number of the facility's owner/operator;
b. Name, address, and telephone number of the facility;
c. Date, time, and type of incident *(e.g. fire, explosion, etc.)*;
d. Name and quantity of material(s) involved;
e. The extent of injuries, if any;
f. An assessment of actual or potential hazards to human health or the environment, where this is applicable;
g. Estimated quantity and disposition of recovered material that resulted from the incident;
h. Cause(es) of the incident;
i. Actions taken in response to the incident;
j. Administrative or engineering controls designed to prevent such incidents in the future.

6. Earthquake Vulnerability: [19 CCR §2731(e)]

Identify any areas of the facility and mechanical or other systems that require immediate inspection or isolation because of their vulnerability to earthquake-related ground motion:

All chemical and waste storage areas must be inspected for leaks and spills. All buildings will be inspected for structural damage.

7. Emergency Equipment:

CCR §66265.52(e) [as referenced by 22 CCR §66262.34(a)(4)] and the Hazardous Materials Storage Ordinance require that emergency equipment at the facility be listed. Completion of the following Emergency Equipment Inventory Table meets this requirement.

EMERGENCY EQUIPMENT INVENTORY TABLE

1. Equipment Category	2. Equipment Type	3. Locations *	4. Description**

Employee Training Plan

(Hazardous Materials Business Plan Module)

Authority Cited: HSC, Section 25504(c); Title 22, Div. 4.5, Ch. 12, Art. 3 CCR

All facilities that handle hazardous materials must have a written employee training plan. This plan is a required module of the Hazardous Materials Business Plan (HMBP). A blank plan has been provided below for you to complete and submit if you do not already have such a plan. **If you already have a brief written description of your training program that addresses all subjects covered below, you are not required to complete the blank plan, below, but you must include a copy of your existing document as part of your HMBP.**

Check all boxes that apply. *[Note: Items marked with an asterisk (*) are required.]*:

1. **Personnel** are trained in the following procedures:

☒	Internal alarm/notification *
☒	Evacuation/re-entry procedures & assembly point locations*
☐	Emergency incident reporting
☐	External emergency response organization notification
☐	Location(s) and contents of Emergency Response/Contingency Plan
☐	Facility evacuation drills, that are conducted at least *(specify)* _____ *(e.g. "Quarterly", etc.)*

2. **Chemical Handlers** are additionally trained in the following:

☒	Safe methods for handling and storage of hazardous materials *
☐	Location(s) and proper use of fire and spill control equipment
☒	Spill procedures/emergency procedures
☒	Proper use of personal protective equipment *
☒	Specific hazard(s) of each chemical to which they may be exposed, including routes of exposure *(i.e. inhalation, ingestion, absorption)* *
☒	**Hazardous Waste Handlers/Managers** are trained in all aspects of hazardous waste management specific to their job duties *(e.g. container accumulation time requirements, labeling requirements, storage area inspection requirements, manifesting requirements, etc.)* *

3. **Emergency Response Team Members** are capable of and engaged in the following:

☐	Personnel rescue procedures
☐	Shutdown of operations
☐	Liaison with responding agencies
☐	Use, maintenance, and replacement of emergency response equipment
☒	Refresher training, which is provided at least annually *
☐	Emergency response drills, which are conducted at least *(specify)* _____ *(e.g. "Quarterly", etc.)*

Record Keeping

(Hazardous Materials Business Plan Module)

All facilities that handle hazardous materials must maintain records associated with their management. A summary of your recordkeeping procedures is a required module of the Hazardous Materials Business Plan (HMBP). A blank summary has been provided below for you to complete and submit if you do not already have such a document. **If you already have a brief written description of your hazardous materials recordkeeping systems that addresses all subjects covered below, you are not required to complete this page, but you must include a copy of your existing document as part of your HMBP.**

Check all boxes that apply. The following records are maintained at the facility. *[Note: Items marked with an asterisk (*) are required.]*:

☒	Current employees' training records *(to be retained until closure of the facility)* *
☒	Former employees' training records *(to be retained at least three years after termination of employment)* *
☒	Training Program(s) *(i.e. written description of introductory and continuing training)* *
☒	Current copy of this Emergency Response/Contingency Plan *
☒	Record of recordable/reportable hazardous material/waste releases *
☒	Record of hazardous material/waste storage area inspections *
☐	Record of hazardous waste tank daily inspections *
☐	Description and documentation of facility emergency response drills

Note: The above list of records does not necessarily identify every type of record required to be maintained by the facility.

A copy of the Inspection Check Sheet(s) or Log(s) used in conjunction with required routine self-inspections of your facility must be submitted with your HMBP. *(Exception: Available from your local agency is a Hazardous Materials/Waste Storage Area Inspection Form that you may use if you do not already have your own form. If you use the example provided, you do not need to attach a copy.)*

Check the appropriate box:

☒	We will use the Unidocs "Hazardous Materials/Waste Storage Area Inspection Form" to document inspections.
☐	We will use our own documents to record inspections. ***(A blank copy of each document used must be attached to this HMBP.)***

HAZARDOUS MATERIALS BUSINESS PLAN
SPILL PREVENTION, EMERGENCY RESPONSE, TRAINING AND CLOSURE PLAN

Business Name: L-3 Communications, Randtron Antenna Systems
Business Address: 130 Constitution Drive, 150 Constitution Drive
123 Independence Drive, Menlo Park, CA 94025

In addition to the general business, chemical inventory and site map information, the San Mateo County Environmental Health Division requires completion of the following sections pertaining to spill prevention, emergency response, employee training and site closure. These sections contain specific elements pertaining to the Hazardous Materials Business Plan, the hazardous waste contingency plan, stormwater pollution prevention, and underground storage tank(UST) monitoring.

SPILL PREVENTION PLAN

1. Describe how hazardous materials are handled, stored and monitored to prevent or minimize a spill or release from occurring (e.g., secondary containment, segregation of incompatibles, daily visual monitoring).
   All liquids are stored in a bermed storage area and or NFPA approved storage cabinets; solids are stored in secured areas. Material is transferred from storage areas to work stations or dispensing areas in their original sealed containers. Incompatible materials are kept separate. Hazardous waste is handled per all Federal and State hazardous waste regulations. Hazardous waste is maintained in a secured, bermed area for no longer than 90 days and disposed of by a licensed transporter/TSDF. All storage areas are inspected on a weekly basis.

2. Describe operations, activities and/or storage locations where a release is most likely to occur.
   We have three areas at this site where a release may occur. 1) Hazardous Waste storage shed beside 150 Constitution Drive. 2) Hazardous Material storage shed beside 150 Constitution Drive. 3) Bermed storage area behind 130 Constitution Drive.

3. Describe Best Management Practices (BMP's) you use to reduce or eliminate illicit discharge of pollutants to the storm sewer system.
   All area where hazardous materials and wastes are stored are confined to areas where there exists secondary containment and no exposure to stormwater. Materials are handled in small quantities to minimize the likelihood of a released and personnel are trained in spill response procedures.

4. Describe underground storage tank and/or aboveground storage tank monitoring procedures used to prevent an unauthorized release from occurring.
   Underground Storage Tanks are not located at this facility.

EMERGENCY RESPONSE PLAN

1. Provide a list of emergency response equipment designated for a hazardous materials emergency (e.g, fire extinguishers, fire suppression systems, spill control equipment, shut-off switches, personal protective equipment, decontamination equipment, and communication and alarm systems).

EQUIPMENT TYPE	LOCATION	CAPABILITY
Gramular absorbents	Through out bldgs	liquid spills
Absorbent pads, boom	Haz Waste shed	liquid spills
Plastic shovel	Haz Waste shed	absorbent clean up
Fire Extinguisher	Through out bldgs	ABC dry powder
Eyewash Station	Through out bldgs	plumbed & mounted portable
Emergency Alarm	Haz Waste shed	bell alarm/flashing light

2. Describe pre-emergency arrangements with local fire departments, police departments, hospitals, contractors, and other state and local emergency response agencies.
Sequoia Occupational Health Clinic, treatment of injured employees.

3. The definition of a release or threatened release of a hazardous material includes incidents that pose an actual or potential hazard to human health and safety, property or the environment. In the event of a hazardous materials release or threatened release, state law requires immediate verbal notification to the agencies listed below.

   a. Local Fire Department
   b. County Environmental Health
   c. State Office of Emergency Services (OES)

   Provide phone number other than 9-1-1 for the following:

Local Fire Department	(650) 688-8400
Local Police Department	(650) 858-3300
Nearest Hospital Sequoia Hospital	(650) 369-5811
County Environmental Health	(650) 363-4305
State Office of Emergency Services	(800) 852-7550 or (916) 262-1621

4. Describe procedures for notifying onsite emergency response personnel and outside agencies (e.g., Fire, Health, Police, State, OES) needed during hazardous materials emergencies.
   All employees have been trained to dial the internal emergency extension (ext.555) from any phone to initiate the ERT. Once on scene the ERT will determine whether or not outside agencies need to be notified.

5. Describe any security system or equipment that could impede site access by emergency responders.
   All entrances, besides the front lobby, require an access badge to unlock/open the door. After business hours the gates at the building 1 and 5 parking lot entrances are locked. During non-working hours there is a security guard stationed in the lobby located in Building1 (130 Constitution Drive.

6. Describe procedures for notification and evacuations of visitors and employees during hazardous materials emergencies. Primary and alternate evacuation routes and assembly areas must be clearly identified on the site map.
   Employees and visitors will be notified to evacuate via the PA system or an alarm. Evacuation maps are posted through out the buildings.

7. Describe mitigation or clean-up procedures to be implemented by onsite personnel in the event of a release, threatened release, fire or explosion involving hazardous materials. Indicate if the business has an onsite emergency response team (ERT) and if so, describe how the ERT will interact with outside emergency response agencies if additional assistance is required.
   L-3 Communications has an ERT which has been trained to the First Responder Operations level. Spills or releases will be contained by the ERT in a defensive manner. L-3's hazardous waste hauler will be contracted fro clean up and removal of waste.

8. Describe procedures for immediate inspection, isolation, and shutdown of equipment or systems that may be involved in a hazardous materials release or threatened release.
   All hazardous materials and wastes are stored in bermed areas of NFPA compliant cabinets. If it is safe to do so, a visual inspection of hazardous waste and material storage areas will be done to ensure that there is not a release.

EMPLOYEE TRAINING PLAN

All employees must participate in an on-going training program that addresses proper hazardous material handling and emergency response procedures. New hires must receive initial training and existing employees must receive annual "refresher" training.

1. Describe employee training as it pertains to the following:

   a. Safe handling and management of hazardous materials or wastes
   b. Notification and evacuation of facility personnel and visitors
   c. Notification of local emergency responders and other agencies
   d. Use and maintenance of emergency response equipment
   e. Implementation of emergency response procedures
   f. UST monitoring and release response procedures (N/A)

   L-3 Communications performs annual Hazardous Waste training which covers spill response, handling, storing, and labeling of hazardous waste. Hazards Communication training covers spill response, handling, storing, and labeling of hazardous material. L-3 Communications has established evacuation procedures which are covered during New Hire Orientation. Employees are informed during Hazard Communication and New Hire Orientation that anyone may active the ERT by dialing 555 or make notification to local emergency responders by simply dialing 9-911. Other agencies would be contacted by the EH&S Coordinator as required.

2. Describe documentation and record keeping procedures for training activities. Please note that if you generate hazardous waste at your business, you must also maintain documents onsite that indicate employee names and job titles, job descriptions, and descriptions of the type and amount of initial and refresher training.

   Training documentation is kept in the EH&S office as well as in each employees personnel file in Human Resources. EH&S keeps the class attendance sign in sheet and Human Resources keeps a page which employee has signed stating that he/she understands the material covered in the class.

CLOSURE PLAN

Contact San Mateo County Environmental Health prior to business closure. Business closure guidelines are available upon request.

1. Describe procedures that will be implemented in the event of a full or partial site closure. Include agency notification, hazardous materials removal, hazardous waste disposal, equipment breakdown and removal, and site decontamination.

   Should L-3 Communications discontinue business operations at their current facility then all hazardous materials and wastes would be disposed of per Federal and State regulations within 90 Days. San Mateo County Health would be notified of the closure by the EH&S Coordinator and arrangements for a closure inspection would be made.

HMBP ACCIDENTIAL SPILL PREVENTION PLAN

Randtron Antenna Systems (RAS) policy requires that the health and safety of the employee and protection of the environment be primary considerations in the conduct of its businesses. To implement this policy, programs are in place to assure conformity with all applicable regulations, environmental laws, and other requirements.

The primary objective of this plan is to prevent the discharge of any hazardous substance that may risk the safety of employees or the environment. The main focus of this plan is employee participation.

The following are covered by this plan:

- Drainage Control
- Storage, Containment and Security
- Transfer Operations
- Inspections and Record Keeping
- Training and Spill Prevention Procedures

Drainage Control

All sinks that are in close proximity to chemical workstations clearly state no chemicals allowed and the employee have been instructed that chemicals are not to be used at the sinks. Water samples are taken twice a year.

All storm drains are inspected quarterly for signs of discharge and they are also inspected monthly during rainfall to insure that the storms are not discharging pollutants into the environment. BMP's are in place to minimize any pollutants that might find it's way into the storm drain.

Storage, Containment and Security

RAS has four areas that are outside where a release may occur and they are:

- Bermed storage area behind 130 Constitution Drive
- Hazardous Waste storage shed behind 150 Constitution Drive
- Hazardous Material storage shed behind 150 Constitution Drive
- Hazardous Waste storage shed beside 1150 Chrysler Drive

Hazardous materials are stored in secured, storage sheds and or approved storage cabinets. All storage sheds have secondary containment and are clearly marked. Only authorized employees have access to these sheds and after hours the site is patrolled by an outside security company.

Transfer Operations

Any hazardous materials transferred from storage areas to work stations or dispensing areas are done in their original sealed containers and materials that are handled are in small quantities to minimize the likelihood of a released. All hazardous waste is handled per Federal and State hazardous waste regulations by trained employees and are disposed of by Clean Harbors, a hazardous waste transporter.

There is an adequate amount of adsorbent materials kept at each storage area in case of leaks or spills. There are empty drums and shovels to contain any spilled material. All contaminated material would be collected in a 55-gallon drum and disposed of as hazardous waste.

Inspections and Record Keeping

All hazardous waste storage areas are inspected weekly by company employees to insure that all areas are free from spills, waste containers are properly labeled, incompatible materials are separated and all Emergency Response equipment is functioning properly. Any discrepancies found are corrected immediately. All inspection records and spill records are kept onsite for at least 3 years.

Training

All employees that work with hazardous materials must participate in an on-going training program that addresses proper hazardous material handling, storage and emergency response procedures. New employees receive initial training and existing employees receive annual "refresher" training. The employee training focuses on the following:

- Understanding hazardous materials and MSDS
- Safe handling and management of hazardous materials or wastes
- Implementation of emergency response procedures
- Spill response
- Notification and evacuation of facility personnel and visitors
- Use and maintenance of emergency response equipment
- Notification of local emergency responders and other agencies

RAS has established evacuation procedures, which are covered during New Hire Orientation and annual refresher training. Evacuation drills are conducted annually

Redwood City, CA 94065

RE: Notice of Violation, Dated 6/22/93

Dear Bill Klokke,

I am writing to you as part of Loral Randtron Systems' ongoing effort to conform to all SBSA regulations. Specifically, this letter addresses the requirement in section 6.9 for a documented explanation of why it was necessary that we receive a "notice of violation" from your office. Wastewater sampling was conducted by SBSA on 4/29/93 and a notice of violation was delivered on 6/23/93. This notice was issued due to lab results indicating Randtron Systems exceeded our allowed cyanide concentration limits in mg/l and possibly, as well, our daily mass limits.

Loral Randtron Systems operates an etching and chemical conversion coating facility on a non-continuous basis, as if it were a job shop. Etching of 6061 Aluminum precede both dip braze and chemical conversion coating operations. The etching operation removes oxides prior to conversion coating and conversion coating provides corrosion resistance and/or minimizes electrical resistance on finished parts. Our conversion coating operations utilize two distinct types of material manufactured by Parker and Amchem Company (Alodine 600 and Alodine 1200). The Alodine 600 consists basically of chromic acid and Alodine 1200 is chromic acid agumented with potassium ferracyanide, which is utilized as a thickening and drying agent. The class of finish required dictates the type of material and the processing time.

When Randtron Systems applied for a wastewater discharge permit, SBSA conducted an inspection of our facility and collected 24 hour grab samples of our rinse water waste stream on several occasions. SBSA reports dated 8/25/92, 10/21/92, and 1/22/93 all indicated that we were always well

below our permitted concentration and mass limits for cyanide and hexavalent chrome releases.

Along with your reported lab analysis, Randtron Systems conducted experimentation to insure that chrome levels would not exceed Federal and local permitted values. We assumed that our system was in balance and therefore, no problems existed with the function of our wastewater discharge system.

Unfortunately, on April 4, 1993, as results indicate, shop loading required the usage of Alodine 1200, which caused a peak in cyanide release resulting in our exceeding the concentration limits allowed in our permit.

Normally, Alodine 1200 is not utilized on a daily basis and therefore, when SBSA conducted testing for the initial settings of our permit limits, no cyanide was detected. In addition, minimal levels of cyanide were detected during all subsequent samplings.

While the measurement as reported by your office is in excess of our permitted value, we feel that it is an aberration of an actual representative value if our waste water were discharged on a continuous basis rather than in a batch process. Never the less, Randtron Systems acknowledges the fact that we need to address the issue of cyanide release.

For the short term we have implemented in our operating procedure the requirement that all cyanide bearing rinse water be collected and treated as a hazardous waste. This rinse water will be manifested and disposed of at a TSDS by a licensed facility. In addition, we request that an intermediate solution be considered by amending our permitted value for cyanide release to a number more representative of our actual usage. We base this request on the fact that the quantity of cyanide-bearing rinse water release varies greatly from day to day and quite frequently no cyanide is released for long periods of time. A more realistic value for our facility would be the Federal limits as set by 40CFR433 (.65 mg/l). Finally, as a long term solution to cyanide release, Randtron Systems will explore material

product substitutions so that we may eliminate all cyanide release. Please note that a substitution process is a long term project due to required customer approval on all military contracts.

If you can help to expedite our request for a permit amendment, or have any questions, please feel free to contact me at (415) 326-9500.

Sincerely,

Gary Schneider

N O T I C E O F V I O L A T I O N - MONITORING REPORT

Lockheed Martin Randtron Sys.
130 Constitution Dr.
Menlo Park, CA
94025

File No. : 77-10.11
Date : 03/23/97
Sample No.: 15-086A
CERTIFIED MAIL

To: Gary Schnieder I.E.

A [✓] grab or [ ] composite sample of wastewater was collected from the P Trap Bldg 4 (IWD-1) monitoring location at your facility on 02/11/97 by personnel of the South Bayside System Authority. Laboratory analysis gave the following results:

Parameter	Value		Limits	Status
cyanide	1.3000	mg/l	0.6500	Violation

*Range *** Concentration in mg/l

COMPLIANCE WITH WASTEWATER DISCHARGE LIMITS: YES [ ]
NO [XX]

SBSA Regulation section 6.9. requires a written explanation of the cause of this violation. This report is due within 30 days from the delivery of this NOTICE OF VIOLATION.

Please call us at (415) 594-8411 if you have any questions.

File # 77-10.11

NOTICE OF VIOLATION

A composite/grab sample of wastewater, Sample # 19-124B was collected from the deburring sump (Bldg. 1) monitoring location at your facility on 1/18/2002 by personnel of the South Bayside System Authority.

This sample was NOT in compliance with all limits in your wastewater discharge permit. SBSA Regulations Section 6.9 requires a written explanation of the cause of the violation. This explanation is due within 30 days from the delivery of this NOTICE OF VIOLATION.

Laboratory and computer results are attached.

Please call us at (650) 594-8411 if you have any questions.

Environmental Records Request

Asterisks (*) indicate required fields

This form was successfully submitted and saved

Section 6256 of the Public Records Act requires access to public records within 10 days the date of receipt. The Division will make every effort to provide access within 10 days with advance notification for an appointment to review records. This allows us time to retrieve files from off-site and review files. Should the request take longer than 10 days, the department will inform the requestor of additional time needed to perform the request.

County policy for file review: An Expedited File Review can be arranged for a fee of $50 and we will contact you within three (3) working days to schedule your expedited appointment. Seven (7) site addresses per expedited request. ***Please indicate in the comment box below if you are requesting files to be expedited.*

Provide complete address (street number, street name and city) or Assessor's Parcel Number.

The requesting party will be notified as soon as files/documents are available.

Cancelling a records request, contact Environmental Health at 650-372-6200.

Date of Request*	12/12/2014
Name of Person/Entity Requesting*	Carrie Locke c/o AEI Consultants

To: Carrie Locke <carrie.locke@gmail.com>

Dear Carrie Locke,

Thank you for your request. We have searched our records and have no records that respond to your below request for:

123 Independence Drive
Menlo Park

If you have any questions or concerns, please call or e-mail me.

Sincerely,

Rochelle Reed
Public Records Section
BAAQMD
415-749-4784

Public Records Request No. 2014-12-0251

1 message

Rochelle Reed <publicrecords@baaqmd.gov> Wed, Dec 31, 2014 at 10:27 AM
To: Carrie Locke <carrie.locke@gmail.com>

Dear Carrie Locke,

Thank you for your request. We have searched our records and have no records that respond to your below request for:

125 Independence Drive
Menlo Park

If you have any questions or concerns, please call or e-mail me.

Sincerely,

Rochelle Reed
Public Records Section
BAAQMD
415-749-4784

2013 Annual Water Quality Report

The City of Menlo Park Municipal Water District (Water District) is pleased to provide our water customers with pertinent information about the quality of our drinking water. This annual water quality report tells you where our water comes from, what our tests show about it, and more. You can be assured that the safety of your water supply is our top priority and we will notify you immediately if there is any reason for concern about our water. We are providing this information to you so you can make informed choices about our water supply.

The Water District is committed to providing its customers with a safe and reliable supply of high-quality drinking water that meets Federal and State standards. Each year the District provides a summary of the water quality sampling results and other information through an Annual Water Quality Report. This Report was prepared in accordance with the Federal Safe Drinking Water Act and California Department of Public Health (CDPH) requirements.

Este informe contiene información muy importante sobre su agua potable. Tradúzcalo o hable con alguien que lo entienda bien.

這是一份有關您飲用水的品質報告，內含重要資訊。若您對報告內容有不甚瞭解之處，請務必找人為您翻譯及詳細解釋。

Our Drinking Water Source

The District purchases all of its water from the San Francisco Public Utilities Commission (SFPUC). SFPUC water is primarily from the Hetch Hetchy watershed located in the Sierra Nevada Mountains and is supplemented by water from the Alameda watershed. In 2013, the District supplied an average of 3.26 million gallons of water per day to approximately 16,000 residents through two service areas; the eastern service area and the western service area (see map below). The eastern service area is primarily located east of El Camino Real and the western service area is in the Sharon Heights area of the City. The California Water Service Bear Gulch District provides water to the middle area of the City.

The Hetch Hetchy System

Water from SFPUC's Hetch Hetchy system originates from spring snowmelt flowing down the Tuolumne River to storage in Hetch Hetchy Reservoir. Our pristine, well protected Sierra water source is approved by the United States Environmental Protection Agency (USEPA) and California Department of Public Health (CDPH) so that no filtration is required. Hetch Hetchy water is supplemented with surface water from two local watersheds. Rainfall and runoff from the 35,000-acre Alameda Watershed spanning Alameda and Santa Clara counties—are collected in the Calaveras Reservoirs and San Antonio Reservoir for filtration and disinfection at the Sunol Valley Water Treatment Plant. Rainfall and runoff from the 23,000-acre Peninsula Watershed in San Mateo County are stored in the Crystal Springs Reservoir, San

Andreas Reservoir, and Pilarcitos Reservoir, and are filtered and disinfected at the Harry Tracy Water Treatment Plant. As in the past, the Hetch Hetchy Watershed provided the majority of our total water supply, with the remainder contributed by the two local watersheds in 2013.

Protecting the SFPUC Water System from Seismic Disaster

More than $4 billion is being invested in seismic-related water infrastructure repairs, replacements or retrofits to protect the SFPUC's regional water system in the event of an earthquake. The SFPUC and the Water District are making this investment in the Water System Improvement Program (WSIP) to ensure that the regional water system will be able to deliver water for public health, fighting fires and disaster recovery as quickly as possible following a seismic event. To date, almost 80% of the 84 water infrastructure projects have been completed.

The U.S. Geological Survey has commended the SFPUC and its regional partners for taking the initiative to address the seismic threats in the region with this massive water infrastructure program. However, despite these significant efforts to safeguard the Hetch Hetchy regional system from an earthquake, there is a chance that up to 30% of the regional turnouts that supply water to your service area could be without service for up to 60 days. There is no way to predict where the next earthquake might strike or what areas could be impacted.

Tap Versus Bottled: Water Quality Testing

Did you know that Tap water is more stringently regulated than Bottled water? Tap water is highly regulated by the EPA, and the Water District must meet all CA Department of Public Health testing requirements.

Contaminants and Regulations

Contaminants that may be present in source water include:

- Microbial contaminants, such as viruses and bacteria may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
- Inorganic contaminants, such as salts and metals, can be naturally occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming. Pesticides and herbicides may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses.
- Pesticides and herbicides may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses.
- Organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, can come from gas stations, urban stormwater runoff, agricultural application, and septic systems.
- Radioactive contaminants, which can be naturally occurring or be the result of oil and gas production, and mining activities.

More information about contaminants and potential health effects can be obtained by calling the USEPA's Safe Drinking Water Hotline **800-426-4791**.

Special Health Needs

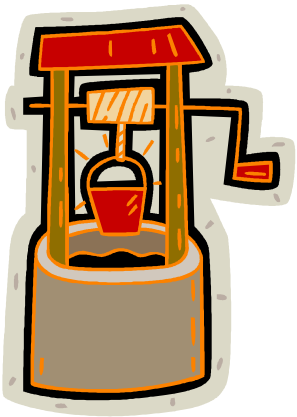
Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons, such as those with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly people, and infants, can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. USEPA/Centers for Disease Control guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available from the USEPA's Safe Drinking Water Hotline **800-426-4791** or at **www.epa.gov/safewater**.

Fluoridation and Dental Fluorosis

Mandated by State law, water fluoridation is a widely accepted practice proven to be safe and effective for preventing and controlling tooth decay. Our water is optimally fluoridated at 1.0 mg/l. Infants fed formula mixed with water containing fluoride at the optimal level may have an increased chance of developing tiny white lines or streaks in their teeth. These marks are referred to as mild to very mild fluorosis, and are often only visible under a microscope. Even in cases where the marks are visible, they do not pose any health risk. CDC considers it safe to use optimally fluoridated water for preparing infant formula. To lessen this chance of dental fluorosis, you may choose to use low-fluoride bottled water to prepare infant formula. Nevertheless, children may still develop dental fluorosis due to fluoride intake from other sources such as food, toothpaste and dental products. Contact your health provider or CDPH if you have concerns about dental fluorosis. Additional information can be found at CDPH website **www.cdph.ca.gov/certlic/drinkingwater/pages/fluoridation.aspx** or **CDC website www.cdc.gov/fluoridation**.

Lead from Plumbing Fixtures

Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. There are no known lead service lines in our water distribution system. We are responsible for providing high quality drinking water, but we cannot control the variety of materials used in plumbing components. It is possible that lead levels at your home may be higher than at others because of plumbing materials used on your property.



If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Infants and young children are typically more vulnerable to lead in drinking water than the general population. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead levels in your water, you may wish to have your water tested. Additional information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the USEPA's Safe Drinking Water Hotline **800-426-4791**, or at **www.epa.gov/safewater/lead**

Tap Versus Bottled: Water Costs

Did you know that Bottled water is more than 300 times the cost of Tap water?

A gallon of Bottled water costs about $7.50 compared to a gallon of Tap water which costs less than one penny.

Menlo Park Emergency Water Supply Project Update

The District has two reservoirs in the western service area for emergency storage; however the eastern service area does not have emergency storage or a dedicated secondary water supply. In May 2009, the City Council completed a feasibility study for the eastern service area which stated that multiple wells could provide about 3,000 gpm (gallons per minute) to meet average-day potable water needs. In January 2013, the City Council authorized design of the first emergency well to be constructed at the City's Corporation Yard located at 333 Burgess Drive.

Design and construction of the Corp Yard Well consists of design, environmental review, well drilling, and construction of the above-ground wellhead facilities. The design process is underway, and the City anticipates the environmental document will be available for public review later this year, with the well drilling to occur in 2015 and construction of the wellhead facilities in 2016.

Later this year the City anticipates holding Community Meetings to obtain public feedback on additional emergency well locations. For more information, please visit http://www.menlopark.org/emergencysupplywells.

Managing our Water Wisely: Urban Water Management Planning

The California Water Code requires urban water suppliers to prepare an Urban Water Management Plan (UWMP) to assess water supplies and demands 20 years into the future. Plan requirements include discussions of current and planned water sources, future demands, water supply reliability, and water shortage contingency plans. The UWMP must be updated every five years and Menlo Park completed the most recent update in 2010. The City worked collaboratively with SFPUC to assess supplies and demands during normal precipitation year and reviewed shortage contingency plans for dry periods. The UWMP can be found on the City's website at: http://www.menlopark.org/watermanagementplan.

2013 Annual Water Quality Report

This annual report contains important information about the quality of your drinking water and our commitment to providing excellence in water quality.

Menlo Park, CA 94025

Prepare Yourself for Emergencies

Recent earthquakes in the news are fitting reminders to prepare ourselves with emergency provisions. Although the SFPUC and the Water District strive to ensure a reliable supply of water for our customers, a natural disaster such as a major earthquake could interrupt water delivery. As a result, **it is imperative that everyone be prepared for the unexpected both in your homes and place of business.**

- Store tap water in a dark, cool place — at least three to five days worth of water (one gallon of water per person, per day, including pets) in clean, plastic, airtight food grade containers, such as two-liter soda bottles.
- Label each container with a date, and replace the water every six months.
- At the time of usage, add 16 drops of bleach to each gallon to ensure disinfection. (Use pure household bleach only—not products with scents or other additives.) Mix and allow the water to stand for 30 minutes before use. If a camp stove is available, you can also disinfect the water by bringing water to a rolling boil for 5 to 10 minutes.
- If you run out of stored drinking water, strain and treat water from your water heater. To strain, pour it through a clean cloth or layers of paper towels. Treat with household bleach, as directed above. Other sources of water inside the home are ice cubes, and the reservoir tank of your toilet (not the bowl).
- If your water supply is not sufficient for hand washing, use antiseptic hand gel or wipes.

Water Conservation Tips

Ways to conserve indoors:

- Fix leaking faucets, pipes, toilets, etc.
- Do not use the toilet for trash disposal.
- Take shorter showers.
- Do not let the water run while shaving or brushing your teeth.
- Soak dishes before washing.
- Install water-saving devices in faucets, toilets and appliances.

Ways to conserve outdoors:

- Use a broom instead of a hose to clean the driveway.
- Water the lawn and garden in the early morning or evening.
- Use mulch around plants and shrubs.
- Repair leaks in faucets and hoses.
- Use water-saving nozzles.

Water Quality Data for Year 2013

The enclosed table lists all detected drinking water contaminants in calendar year 2013 and the information about their typical sources. Contaminants below detection limits for reporting are not shown, in accord with regulatory guidance. We received a monitoring waiver from the CDPH for some contaminants which reduces their monitoring frequencies.

Maintaining Water Quality

The City continually works to maintain the quality of its water through the following activities:

Hydrant and Water Main Flushing: City maintenance crews routinely flush fire hydrants and water mains to remove sediment and keep the distribution system refreshed. As a result, residents in the immediate vicinity may experience temporary discoloration in their water. This discoloration does not affect the safety of the water. If you experience discoloration in your water after crews have been flushing in your neighborhood, clear the water from your home pipes by running water faucets for a few minutes.

Backflow Testing: Backflow prevention devices keep the water supply safe by ensuring that the water used at commercial, industrial, and irrigation sites does not flow back into the City's distribution system. The District sends out notifications and tracks the testing and repair of over 800 backflow devices each year.

Key Water Quality Terms

Following are definitions of key terms referring to standards and goals of water quality noted on the adjacent data table.

Public Health Goal (PHG): The level of a contaminant in drinking water below which there is no known or expected risk to health. PHGs are set by the California Environmental Protection Agency.

Maximum Contaminant Level Goal (MCLG): The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs are set by the USEPA.

Maximum Contaminant Level (MCL): The highest level of a contaminant that is allowed in drinking water. Primary MCLs are set as close to the PHGs or MCLGs as is economically and technologically feasible. Secondary MCLs (SMCLs) are set to protect the odor, taste, and appearance of drinking water.

Maximum Residual Disinfectant Level (MRDL): The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG): The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Primary Drinking Water Standard (PDWS): MCLs and MRDLs for contaminants that affect health along with their monitoring and reporting requirements, and water treatment requirements.

Regulatory Action Level: The concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow.

Treatment Technique (TT): A required process intended to reduce the level of a contaminant in drinking water.

Turbidity: A water clarity indicator that measures cloudiness of the water, and is also used to indicate the effectiveness of the filtration system. High turbidity can hinder the effectiveness of disinfectants.

Cryptosporidium is a parasitic microbe found in most surface water. We regularly test for this waterborne pathogen, and found it at very low levels in source water and treated water in 2013. However, current test methods approved by the USEPA do not distinguish between dead organisms and those capable of causing disease. Ingestion of *Cryptosporidium* may produce symptoms of nausea, abdominal cramps, diarrhea, and associated headaches. *Cryptosporidium* must be ingested to cause disease, and it may be spread through means other than drinking water.

City of Menlo Park - Water Quality Data for Year 2013 [1]

DETECTED CONTAMINANTS	Unit	MCL	PHG or (MCLG)	Range or Level Found	Average or [Max]	Major Sources in Drinking Water
TURBIDITY						
Unfiltered Hetch Hetchy Water	NTU	5	N/A	0.2 - 0.3 [2]	[3.6] [3]	Soil runoff
Filtered Water from Sunol Valley Water Treatment Plant (SVWTP)	NTU	1 [4]	N/A	-	[0.98]	Soil runoff
	-	Min 95% of samples ≤ 0.3 NTU [4]	N/A	99.9%	-	Soil runoff

	-	Min 95% of samples ≤ 0.3 NTU [4]	N/A	100%	-	Soil runoff
DISINFECTION BYPRODUCTS AND PRECURSOR						
Total Trihalomethanes	ppb	80	N/A	0.8 - 54.4	[32] [5]	Byproduct of drinking water disinfection
Haloacetic Acids	ppb	60	N/A	2.1 - 43.8	[21] [5]	Byproduct of drinking water disinfection
Total Organic Carbon [6]	ppm	TT	N/A	1 - 3.4	2.2	Various natural and man-made sources
MICROBIOLOGICAL						
Total Coliform [7]	-	NoP ≤ 5.0% of monthly samples	(0)	-	**[0%]**	Naturally present in the environment
Giardia lamblia	cyst/L	TT	(0)	<0.01 - 0.04	<0.01	Naturally present in the environment
INORGANICS						
Fluoride (source water) [8]	ppm	2.0	1	ND - 0.8	0.4 [9]	Erosion of natural deposits; water additive to promote strong teeth
Chloramine (as chlorine)	ppm	MRDL = 4.0	MRDLG = 4	1.5 - 2.9	[2.4] [10]	Drinking water disinfectant added for treatment
RADIONUCLIDES						
Gross Alpha Particle Activity	pCi/L	15	(0)	ND - 3.9	ND	Erosion of natural deposits

CONSTITUENTS WITH SECONDARY STANDARDS	Unit	SMCL	PHG	Range	Average	Major Sources of Contaminant
Aluminum [11]	ppb	200	600	ND - 52	ND	Erosion of natural deposits; some water treatment residue
Chloride	ppm	500	N/A	<3 - 18	10.2	Runoff / leaching from natural deposits
Color	unit	15	N/A	<5 - 6	<5	Naturally occurring organic materials
Specific Conductance	µS/cm	1600	N/A	29 - 258	169	Substances that form ions when in water
Sulfate	ppm	500	N/A	0.8 - 33	16.6	Runoff / leaching from natural deposits
Total Dissolved Solids	ppm	1000	N/A	<20 - 109	71	Runoff / leaching from natural deposits
Turbidity	NTU	5	N/A	0.1 - 0.3	0.1	Soil runoff

LEAD AND COPPER	Unit	AL	PHG	Range	90th Percentile	Major Sources in Drinking Water
Copper	ppb	1300	300	<1.0 - 179 [12]	76.9	Internal corrosion of household water plumbing systems
Lead	ppb	15	0.2	<1.0 - 10.5 [13]	2.0	Internal corrosion of household water plumbing systems

OTHER WATER QUALITY PARAMETERS	Unit	ORL	Range	Average
Alkalinity (as $CaCO_3$)	ppm	N/A	7 - 71	46
Bromide [14]	ppb	N/A	17 - 24	21
Calcium (as Ca)	ppm	N/A	3 - 23	13
Chlorate [15]	ppb	800 (NL)	39 - 690	303
Hardness (as $CaCO_3$)	ppm	N/A	7 - 89	53
Magnesium	ppm	N/A	<0.2 - 8.3	5.3
pH	-	N/A	6.5 - 9.4	8.4
Silica	ppm	N/A	4.8 - 5.2	5
Sodium	ppm	N/A	3 - 18	12

KEY:	
< / ≤	= less than / less than or equal to
AL	= Action Level
Max	= Maximum
Min	= Minimum
N/A	= Not Available
ND	= Non-detect
NL	= Notification Level
NoP	= Number of Coliform-Positive Sample
NTU	= Nephelometric Turbidity Unit
ORL	= Other Regulatory Level
pCi/L	= picocurie per liter
ppb	= part per billion
ppm	= part per million
µS/cm	= microSiemens/centimeter

Footnotes:

(1) All results met State and Federal drinking water health standards.

(2) Turbidity is measured every four hours. These are monthly average turbidity values.

(3) The highest turbidity of the unfiltered water in 2013 was 3.6 NTU.

(4) There is no turbidity MCL for filtered water. The limits are based on the TT requirements for filtration systems.

(5) This is the highest locational running annual average value.

(6) Total organic carbon is a precursor for disinfection byproduct formation. The TT requirement applies to the filtered water from the SVWTP only.

(8) The SFPUC adds fluoride to an optimum level of 0.9 ppm to help prevent dental caries in consumers. The CDPH specifies the fluoride levels in the treated water be maintained within a range of 0.8 ppm - 1.5 ppm. In 2013, the range and average of the fluoride levels were 0.7 ppm - 1.4 ppm and 0.9 ppm, respectively.

(9) The natural fluoride level in the Hetch Hetchy supply was ND. Elevated fluoride levels in the SVWTP and HTWTP raw water are attributed to the transfer of fluoridated Hetch Hetchy water into the reservoirs.

(10) This is the highest running annual average value.

(11) Aluminum also has a primary MCL of 1000 ppb.

(12) The most recent Lead and Copper Rule monitoring was in 2012. Of the 38 site samples collected at consumer taps none had copper concentrations above the AL.

(13) The most recent Lead and Copper Rule monitoring was in 2012. Of 38 site samples collected at consumer taps none had lead concentrations above the AL.

(14) Bromide was monitored at HTWTP treated water in 2013.

(15) The detected chlorate in the treated water is a degradation product of sodium hypochlorite used by the SFPUC for water disinfection.

APPENDIX F

QUALIFICATIONS

Carrie Locke – Associate Consultant

BCE – Civil Engineering, Georgia Institute of Technology

Ms. Locke has over 15 years of experience in the environmental consulting and engineering industry. Her project experience includes Phase I Environmental Site Assessments and Real Estate Transaction Screens in conformance with ASTM, Freddie Mac, Fannie Mae and HUD standards; design and implementation of soil and groundwater investigations for due diligence purposes and regulatory agency requirements; groundwater monitoring well installation and monitoring projects; development of Sewer Master Plans and Collection System Models, projecting future sewer system needs based on population growth and land use; and water distribution feasibility studies.

Select project experience for Ms. Locke includes:

- Assessment of numerous auto repair facilities, gas stations, dry cleaning facilities, and complex industrial sites
- Assessment of high-rise hotel buildings in San Francisco and Los Angeles
- Review of Phase I Environmental Site Assessments by others for finalization to the client for over 7 years
- Design and oversight of subsurface investigations at a variety of sites such as dry-cleaning facilities, gas stations, automotive repair shops, agricultural properties, and other industrial facilities
- In the State of California, development of Sewer Master Plans for the Cities of Livermore, Chico, and Fresno. This involved using various modeling software programs and mapping software, such as ArcGIS.
- Contribution to a feasibility study for the repair of a raw water pipeline for the City of Santa Cruz

Orion Alcalay – Executive Vice President, Due Diligence Services

MS – Environmental Management, University of San Francisco
BS – Environmental Science, University of California, San Diego
EPA Accredited Asbestos Inspector
OSHA 40-Hour Hazardous Waste Worker Training

Mr. Alcalay has worked in the environmental consulting industry since 1999. As Executive Vice President of Due Diligence Services, Mr. Alcalay is responsible for ensuring the consistency and quality of due diligence services throughout AEI.

Mr. Alcalay provides senior review expertise on a company-wide basis to ensure compliance with ASTM and AAI standards as well as satisfying client requirements for Phase I Environmental Site Assessments, Transaction Screens, and Property Condition Assessments. Day to day responsibilities include senior reviewing, project oversight, staff supervision, business development and client management.

Mr. Alcalay's project management experience has included:

- Phase I Environmental Site Assessments, Real Estate Transaction Screens and Property Condition Assessments in conformance with ASTM, Housing and Urban Development (HUD) Multi-Family Accelerated Processing (MAP) 223(f) and 232, CMBS, Freddie Mac, and Fannie Mae protocols.

- The design and implementation of Phase II soil and groundwater investigations for a variety of suspected contaminants for due diligence and liability purposes.

- The design and implementation of regulatory agency driven soil and groundwater investigations and corrective action projects (Groundwater Monitoring Well Installation and Monitoring Projects).

- Asbestos Inspections and Metals Sampling.

In addition, Mr. Alcalay is well-informed in the areas of NEPA/CEQA compliance. His experience has allowed him to be a successful liaison between clients and regulatory agencies in order to effectively address the needs of both parties.

1.0 INTRODUCTION

This report presents the results of a Phase I Environmental Site Assessment (ESA) for the commercial property located at 1205 Chrysler Drive in Menlo Park, California (the site or subject property). The site location is shown on Plate 1, and the subject property and vicinity are shown on Plate 2.

1.1 Purpose and Scope of Work

PES Environmental, Inc. (PES) was retained by The Sobrato Organization (Sobrato) to compile and evaluate available information to assess for Recognized Environmental Conditions (RECs) associated with the site. PES understands that the Phase I ESA is a component of the environmental due diligence conducted by Sobrato to support a planned acquisition of the site.

The ESA was performed in general accordance with ASTM guidelines for Phase I Environmental Site Assessments (ASTM E 1527-13). These guidelines comply with the U.S. Environmental Protection Agency's All Appropriate Inquiries (AAI) rule adopted in November 2013. The following tasks were conducted during this ESA:

- Federal, State and local agency databases were reviewed to identify nearby sites which have reported the use, storage, or release of hazardous materials;
- Regulatory agency records regarding the site and adjacent properties were reviewed;
- Historical aerial photographs, Sanborn Fire Insurance maps, and historical topographic maps of the site and surrounding area were evaluated, as available, to assess prior land uses;
- Individuals with knowledge of the site were interviewed;
- An inspection of the site and a reconnaissance of surrounding properties were performed to assess the potential for contamination of the site from on-site or off-site sources. The site inspection was conducted by an environmental professional with qualifying experience under AAI; and
- This report was prepared presenting the results of the Phase I assessment.

A Recognized Environmental Condition, or REC, is defined in the ASTM International guidelines (ASTM E 1527-13) as the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. A controlled REC (CREC) is a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of

required controls (e.g., property use restrictions, activity/use limitations, institutional controls, or engineering controls). A historical REC (HREC) is a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls.

De minimis conditions are defined by ASTM as conditions that generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate government agencies. A *de minimis* condition is not a REC, HREC or CREC.

1.2 Special Terms and Conditions

The ESA activities were conducted in general accordance with ASTM E 1527-13. Chain-of-title documentation was not provided to PES. There are no other special terms or conditions for this report.

1.3 Limitations and Exceptions

This Phase I ESA was performed in accordance with practices and procedures generally accepted in the consulting environmental engineering profession at the time and place they were performed. The findings, opinions, conclusions, and recommendations expressed herein are applicable as of the date the services were provided. Our professional judgment to assess the potential for contamination is based on limited data; no warranty is given or implied.

The Phase I ESA was prepared at the request of Sobrato as part of its due diligence for acquisition of the subject property and may be relied on only by Sobrato and its successors, assigns, parent companies, affiliates and subsidiaries. No other party may rely on this report without the express written permission of Sobrato and PES.

2.0 SITE DESCRIPTION

2.1 Location and Site Access

The site is located in an area primarily used for light industrial/commercial purposes within the City of Menlo Park and County of San Mateo, California. The subject property address is 1205 Chrysler Drive. There are no other known current or former addresses for the site.

The subject property is accessed via driveways off Independence and Chrysler Drives.

2.2 Site and Vicinity Characteristics

The site consists of a single legal parcel covering approximately 2.3 acres and identified by San Mateo County Assessor's Parcel Number (APN) 055236300. The City of Menlo Park zoning designation for the site is M2 (General Industrial District).

The site is bounded to the south by Independence Drive and to the east by Chrysler Drive. The adjacent properties to the north and west are commercial and light industrial buildings and associated parking lots (Plate 2). The nearest residential housing is located approximately 1,400 feet to the south.

According to the United States Geological Survey (USGS) *Palo Alto, California* Quadrangle 7.5-minute series topographic map dated 1999, the site is situated at an elevation of approximately 10 feet above mean sea level (MSL). The site is flat-lying. The regional topography slopes gently to the north-northeast.

2.3 Local Geology and Hydrogeology

The subject property is located in the southwest side of the San Francisco Bay basin, a sediment-filled structural basin. The results of subsurface investigations performed in the vicinity indicate that the area is underlain by fine-grained alluvium consisting of clays interbedded with silts, sands, and fine-gravels (SCI, 1992). This material is likely part of the Holocene Bay Mud. The thickness of the Bay Mud in this area is unknown; however, the Bay Mud ranges from less than 1-foot to over 150 feet thick, depending on location. The unconsolidated Holocene Bay Mud and associated Quaternary surficial deposits in, and surrounding, San Francisco Bay are underlain by highly faulted and structurally deformed and displaced Cenozoic sedimentary rocks of the Woodside Assemblage.

Groundwater has been encountered in the site vicinity at depths ranging from approximately 8 to 11 feet below ground surface (bgs). At two sites southeast of the subject property, groundwater flow has been measured to the southwest, away from the San Francisco Bay and the subject property. Other sites northeast of the subject property have measured a groundwater flow to the north and east-northeast, toward the Bay. A CalTrans groundwater pumping station south of the site along U.S. Highway 101 was used for dewatering beneath a railroad right-of-way. Pumping at this station may have locally affected groundwater flow. It is not known whether the pumping station is still in use.

The closest surface water body is San Francisco Bay, located approximately 0.9 miles north of the Site. Salt marshes at the edge of the bay extend shoreward to within 900 feet of the site. Based on FEMA map data presented in the EDR report (Appendix A), approximately 90 percent (%) of the Site is located within the 100-year floodplain that extends to San Francisco Bay.

2.4 Wetlands

As shown in the EDR database report (Appendix A), there are no National Wetlands Inventory (NWI) identified wetlands on the subject property. There are wetlands and salt marshes bordering San Francisco Bay starting approximately 900 feet north of the site.

2.5 Descriptions of Existing On-Site Structures and Improvements

The subject property is currently occupied by an approximately 40,400 square feet single-story concrete tilt-up commercial building with a brick and steel single-story addition on the south side of the building. The entire building is on a concrete slab-on grade foundation. The site building was originally constructed in the late 1960s as a concrete tilt-up structure comprising approximately 22,500 square feet. Additions to the building in the early 1970s, including the brick and steel addition, resulted in the configuration of the present-day structure. There have been no significant exterior changes to the building since the 1970s based on inspection of historic aerial photographs.

2.5.1 Structures and Current Use

The building is currently occupied by Pan Pacific Mechanical (Pan Pacific). Pan Pacific uses the facility for fabrication and machining of plumbing and construction materials. The building interior is separated into two main work spaces. Office space along the southern end of the building occupies approximately 20 percent of the overall building footprint. The remaining 80 percent of the building space is used in support of the fabrication and machining operations performed by Pan Pacific.

Chemical use at the facility occurs in the machining and fabrication workspace. The chemicals used on-site are generally limited to compressed gases, grease and sealants. The grease and sealants are stored in small quantities on open shelving units located inside the open work area. Compressed gases are stored outside the building. The chemicals used on-site are consumed during use with no waste generated. Antifreeze, polyurethane foams and gasoline canisters are stored in a storage shed located outside the west exterior wall of the building. These chemicals are reportedly only for use at off-site project locations. Touch-up paint is stored in the storage unit and inside the building. Additional chemical use and storage information is discussed in Section 5.1

2.5.2 Other Improvements

The property has parking lots on the east and west sides of the building. These lots are accessed from driveways on Independence and Chrysler Drives. The south side of the property facing Independence Drive, the southeast corner of the site, and a strip between the parking lot and Chrysler Drive east of the building are landscaped and include concrete sidewalks.

There is a storage shed located outside the west exterior wall of the building. This unit is used to store equipment and supplies, including chemicals (gasoline, antifreeze and polyurethane foam) for use at off-site locations. Chemical storage is discussed in greater detail in Section 5.1.

There is one pad-mounted transformer at the site (Plate 2). The transformer is in good condition with no leaks or oil-staining. There are no generators, elevators, compactors or other hydraulic equipment on-site other than one forklift with a hydraulic lift mechanism.

Electricity and natural gas are supplied by Pacific Gas and Electric (PG&E). Water is supplied by Menlo Park Municipal Water District, and sewage services are provided by West Bay Sanitary District (WBSD).

2.6 Current Uses of Adjoining Properties

A reconnaissance of the surrounding area was completed to assess whether neighboring sites represent a potential environmental condition that could affect the subject site. The current uses of the adjoining properties as observed during the site inspection are summarized below.

Properties to the South

The site is bordered to the south by Independence Drive. There is a vacant single-story office building located beyond Independence Drive to the south.

Properties to the East

The site is bordered on the east by Chrysler Drive. A two-story commercial building occupied by Randtron Antenna Systems is located further to the east. There is a vacant multi-story office building to the southeast and an occupied multi-story office building to the northeast.

Properties to the North

The site is bordered on the north by a single-story commercial building occupied by Dow Chemical Company's Clean Filtration Technologies Division.

Properties to the West

The site is bordered on the west by a one-story commercial building. The building tenants were identified as Transcend Inc. and Neodyne, Inc.

2.7 Past Uses of Property and Adjoining Properties

Historical site use information was obtained through a review of aerial photographs, historical topographic maps, city address directories, and results of previous investigations. Historical Sanborn Fire Insurance Maps are not available for the subject property area.

2.7.1 Historical Sources

Site use information was obtained through a review of the following list of historical sources. The results of the review of these sources are summarized below:

- Aerial Photographs: Aerial photographs obtained from EDR were reviewed for the following years: 1943, 1948, 1950, 1958, 1968, 1974, 1982, 1991, 1998, 2005, 2009, 2010, and 2012. A summary of the aerial photograph review and copies of these photographs are presented in Appendix B. The site location is identified on each of the aerial photographs for reference;

- Sanborn Fire Insurance Maps: A search for available historical Sanborn Fire Insurance Maps was performed by EDR. EDR did not identify any Sanborn Maps for the site. A copy of the EDR 'No Coverage' report is provided in Appendix C;

- Topographic Maps: Various topographic maps of the subject property vicinity were compiled by EDR. The following maps were included in the compilation: USGS Palo Alto Quadrangle 15-minute series topographic maps produced in 1899, 1943, 1947, 1948, and 1961; USGS Santa Cruz Quadrangle 30-minute series topographic map produced in 1902; and Palo Alto Quadrangle 7.5-minute series topographic maps produced in 1953, 1961, 1968 (photo revised), 1973 (photo revised), 1991, and 1997, were reviewed by PES. A summary of the topographic map review and copies of the maps are presented in Appendix D. The site location is identified on each of the topographic maps for reference;

- City Directories: A search of city directories was performed by EDR for the years 1970, 1977, 1980, 1985, 1992, 1995, 1999, 2003, 2008 and 2013. A summary of the city directories review and copies of the directory listings are presented in Appendix E;

- San Mateo County: Records related to hazardous materials, hazardous wastes, storage tanks, chemical releases and groundwater protection at the site were requested from San Mateo County;

- Menlo Park Fire Protection District: Records related to hazardous materials, hazardous wastes, storage tanks, chemical releases and groundwater protection at the site were requested from the Menlo Park Fire Protection District (MPFPD). The MPFPD responded on April 7, 2015 stating that they did not have any records related to these subjects for the Site; and

- Menlo Park City Records: Building permit records were requested from the Menlo Park Building Department (MPBD). PES reviewed the MPBD files for the site on April 16, 2015 at the MPBD office. No MPBD records of environmental concern were identified by PES during the review.

2.7.2 Historical Review Summary

The following provides historical use information for the subject property and vicinity based on available historical resources listed in the previous sections.

Subject Property

The earliest reviewed record for the site is an 1899 topographic map, which shows the site as undeveloped land. Aerial photographs from 1943 to 1958 show the subject property as vacant land with likely agricultural use (grain and/or row crop farming). The 1968 aerial photograph and 1968 topographic map of the site show a building in the footprint of the present-day site building. The 1974 aerial photograph shows that the original building has been expanded to its approximate present-day footprint. No significant changes to the site were identified from 1968 to the present-day.

Available historical city directory references indicate the subject property address was occupied from 1970 to 1992 by Equipment Engineers and Krebs Engineers. Krebs Engineers was the sole occupant of the building in 1995. Directories for 1999 and 2003 did not identify a tenant on the property. In 2008 and 2013, the site tenant was listed as Comcast of California and Comcast, respectively. The current site tenant is Pan Pacific Mechanical.

Subject Property Vicinity

The history of the site vicinity is similar to the subject property. The 1899 topographic map shows the site vicinity as undeveloped land. Aerial photographs from the 1940s to 1958 also show the subject property vicinity in use for agricultural purposes (grain and/or row crops) with the exception of two buildings that were under construction approximately 150 feet southeast of the site in 1958. By 1968, commercial development in the site vicinity began in earnest with all adjacent properties to the north, east and west developed with commercial buildings. The adjacent property to the south was developed in the late 1970s to early 1980s. By 1982, the site vicinity was fully developed to its approximate present-day condition.

2.7.3 Interviews

An interview was conducted with Mr. Matthew Vincent. Mr. Vincent is a shop foreman at Pan Pacific, the current tenant at the subject property. Mr. Vincent has approximately 3 years of experience with the site. Mr. Vincent confirmed that Pan Pacific has occupied the site for approximately 3 years. The company uses the facility for: (1) company administrative purposes; and (2) machining and fabrication of construction and plumbing materials.

Mr. Vincent is not aware of any current or historical environmental concerns related to the subject property and is not aware of prior or current underground storage tanks associated with the property. Mr. Vincent did indicate that he believes asbestos-containing materials (ACMs) are present on the site. Pan Pacific completed a limited redevelopment of the site

approximately 3 years ago consisting of a new concrete slab floor and equipment storage shelving to support their operations. A contractor working with Pan Pacific indicated that floor tiles in the primary work space likely contained asbestos. Pan Pacific decided not to disturb the surface, and instead placed a new concrete slab floor over the tiles. Apparently no ACMs testing has been conducted on the site and no operations and maintenance (O&M) program is in place. Mr. Vincent did not have any knowledge regarding the potential for lead-based paint at the site.

Mr. Vincent stated that chemical use observed at the site was limited to various compressed gases, grease, and various sealants. The grease and sealants are stored on a shelving unit located in the southern portion of the interior work space and are used on site for machining and fabrication processes. Compressed gases are stored along the western exterior of the building and are stored upright and secured to prevent tipping.

Mr. Vincent indicated that the anti-freeze, polyurethane foams and gasoline canisters are stored on the site and are not used in any capacity at the subject property. The chemicals are used on their project sites. These gasoline, antifreeze solution and polyurethane foams are stored in the exterior storage shed on the western side of the subject property building. At the time of the site visit, the gasoline canisters were mostly empty, with only approximately 10 gallons stored on site. There is also paint storage inside the building and in the storage shed.

Mr. Vincent confirmed that there were no chemical spills at the site during Pan Pacific's tenure at the site and he did not have knowledge of any current or historical environmental releases at any of the adjoining properties. He had no knowledge or concerns related to chemical use or handling at the adjacent property businesses.

Based upon Mr. Vincent's interview responses summarized above, no site-specific potential environmental concerns were identified.

In addition to the interviews summarized above, Sobrato, the User of this Phase I report, was requested to provide responses to the ASTM E 1527-13 User Questionnaire. Sobrato's responses to the questionnaire are:

- Sobrato is unaware of any environmental liens recorded against the subject property;
- Sobrato is unaware of any environmental use restrictions on the subject property;
- Sobrato does not have specialized knowledge or experience potentially relevant to the subject property;
- Sobrato does not have any commonly known or reasonably ascertainable information about the subject property that would assist in the preparation of this report;

- Sobrato is not aware of any obvious indicators of the presence or likely presence of environmental releases/impacts at the subject property other than the information provided in this report; and

- Sobrato stated that the purchase price of the subject property reasonably reflects the fair market value of the property.

3.0 PREVIOUS ENVIRONMENTAL DOCUMENTS

A number of previous environmental investigations were conducted at the site. These investigations are discussed in the following sections.

3.1 Phase I ESA - 1995

A Phase I ESA was performed at the site in 1995 by E^2C, Inc. (E^2C). A copy of the E^2C report is included in Appendix F. At the time of the Phase I ESA, the site was occupied by Krebs Engineers. E^2C's Phase I ESA findings (paraphrased from E^2C [1995]) were:

- The Phase I ESA has not revealed any evidence to indicate, or suggest, that the site has been impacted by past or present, on-site land use or owner operations;

- Surrounding sites were identified that are currently, or have been, under investigation for a chemical release; however, they do not appear to have the potential to negatively impact the subject site;

- Potential ACMs were noted during the site inspection. These included 12-inch x 12-inch floor tiles and acoustic tiles, 2 feet x 4 feet drop ceiling tiles, and rolled linoleum. Because the subject site building was constructed in 1968, ACMs may exist on the site; and

- E2C, Inc. concluded that no further investigations are warranted at this time.

3.2 Phase II ESA - 1996

E^2C performed a Phase II Investigation of the site in 1996 (E^2C, 1996a). A copy of the E^2C report is included in Appendix F. For the investigation, E^2C installed a shallow soil boring at three sump locations inside the building and three borings located in the landscaped areas outside the south and east sections of the building. The boring locations are shown on Plate 2.

A soil sample was collected from each of the three sump locations (S-1, S-2 and S-3). The samples were analyzed for total recoverable petroleum hydrocarbons (TRPH) by USEPA Method 418.1. The results indicated that TRPH was detected in samples S-1 and S-3 at

concentrations of 50 and 140 milligrams per kilogram (mg/kg). No other analyses were performed on the samples.

A groundwater sample was collected from each of the three exterior borings (HP-1, HP-2 and HP-3 (Plate 2). Samples HP-1 and HP-2 were tested for purgeable halocarbons by USEPA Method 8010. HP-1 contained 81 micrograms per liter (μg/L) of trichloroethene (TCE) and HP-2 contained 36 μg/L of TCE, 9.0 μ/L chloromethane and 3.2 μg/L of bromoform. The sample from HP-3 was analyzed for total petroleum hydrocarbons at gasoline (TPH-g) by USEPA Method 8015M and benzene, toluene, ethylbenzene and xylenes (BTEX) by USEPA Method 8020. HP-3 contained 140 μg/L TPH-g and 8.3 μg/L xylenes.

In addition to the soil and water samples discussed above E^2C collected five samples of building materials in the office area of the site for asbestos analysis. Asbestos were detected in three of the samples (linoleum, floor tile mastic and wallboard mud). The asbestos sampling results are discussed in detail in Section 5.7.1.

Based on investigation findings, E^2C concluded that the groundwater impacts identified in borings HP-1 through HP-3 were from an off-site source and that the soil impacts did not warrant additional site investigation. E^2C recommended reporting the investigation results to the San Mateo County Environmental Health department (SMCEH).

3.3 Sludge and Soil Sampling Report - 1996

At the request of SMCEH, E^2C performed additional site investigations that included sampling of the sludge in the three sumps discussed in Section 3.2 and installation of shallow soil borings proximal to a compressor located outside the west wall of the site building. A soil sample was collected from each of the two borings. The sump locations and the two new boring locations (#4 and #5) are shown on Plate 2. The results of the investigation are reported in E^2C (1996b) and copy of the E^2C report is included in Appendix F.

A sample of the accumulated sludge in the bottom of each sump was collected. The samples were analyzed for chromium, cadmium, nickel, lead, and zinc by USEPA 7000 series methods, TRPH by USEPA Method 418.1 and halogenated volatile organic compounds (HVOCs) by USEPA Method 8010. For the sludge samples, the metals concentrations detected in the samples were all below State of California Total Threshold Limit Concentrations (TTLCs) except for lead in Sump 1. The lead value detected, 1,200 mg/kg, was above the TTLC for lead (1,000 mg/kg). HVOCs were not detected in Sump 1 but were detected in Sumps 2 and 3 at total concentrations ranging from 0.0573 to 252.7 mg/kg. The HVOCs detected in Sump 2 included chloroethane (3.6 mg/kg), 1,1-dichloroethane (150 mg/kg), tetrachloroethane (PCE; 6.4 mg/kg), 1,1,1-trichloroethane (TCA; 90 mg/kg) and TCE (2.7 mg/kg). HVOCs detected in Sump 3 included chloroethane (0.0063 mg/kg), methylene chloride (0.029 mg/kg) and PCE (0.022 mg/kg). The results indicated that TRPH was detected in samples from Sump 1, Sump 2 and Sump 3 at concentrations of 610, 30,000 and 800 mg/kg. No other analyses were performed on the samples.

The soil samples collected from the compressor area were analyzed for chromium, cadmium, nickel, lead, and zinc by USEPA 7000 series methods and TRPH by USEPA Method 418.1. For the sludge samples, the metals concentrations detected in the samples were all below State of California TTLCs. The results indicated that TRPH was detected at 66 mg/kg in boring #4. TRPH was not detected in boring #5. No other analyses were performed on the samples.

Based on the sampling results summarize above, E^2C recommended disposal of the sludge in the sumps and subsequent steam cleaning, and either closure in place or closure by removal of the sumps. E^2C stated that the results from the soil samples at locations #4 and #5 were below applicable regulatory guidelines; therefore, no action was warranted.

3.4 SMCEH Closure Letter - 1997

On January 14, 1997, SMCEH issued a letter (SMCEH, 1997) to Krebs Engineers confirming closure of the Krebs Engineers operations. The letter states that closure was achieved under the supervision of SMCEH and that no further action was required by SMCEH. No details of the closure were provided in the letter.

3.5 Site Status Summary - 1997

At the request of SMCEH, E^2C prepared a Site Status Summary Report of previous work at the site (E^2C, 1997a). The Site Status Summary Report reiterated and summarized the results from the previous Phase I ESA (Section 3.1), the Phase II ESA (Section 3.2) and the Sludge and Soil Sampling Report (Section 3.3). The information in these reports is summarized above. No new information was presented in the Site Status Summary Report.

3.6 Soil and Groundwater Sampling and Analysis Report - 2001

At the request of SMCEH in May 1997 (after issuance of the site Closure letter [Section 3.4]), E^2C prepared a Work Plan for Groundwater Investigation in Former Sump Areas (E^2C, 1997b). The Work Plan called for one soil boring at each of the three site sumps. One soil sample and one groundwater sample were to be collected from each boring and analyzed for TRPH, VOCs and lead.

After a hiatus in site work from 1997 until 2001, E^2C conducted a site investigation consistent with the Work Plan that was prepared in 1997 (E^2C, 1997b). The 2001 work was reported in E^2C's February 2001 Soil and Groundwater Sampling and Analysis Report (E^2C, 2001) and a copy of the report is included in Appendix F. E^2C reported that one soil boring was advanced next to each of the three now-decommissioned sumps located at the site (Plate 2). At each boring, one soil sample was collected at 3 feet bgs (at the approximate base of the former sumps) and then the boring was advanced to groundwater and a groundwater grab sample was collected from each boring.

The soil and groundwater samples were analyzed for TRPH by USEPA Method 418.1, HVOCs by USEPA Method 8010, methyl-tert-butyl-ether (MTBE) by USEPA Method 8260 and lead by USEPA Method 6010.

TRPH and MTBE were not detected in the soil and groundwater samples. Lead was detected in all three soil samples and two of the three water samples. E_2C reported that the levels of lead detected were consistent with natural background levels.

The majority of HVOC target analytes for USEPA Method 8010 were not-detected in the soil and groundwater samples. HVOCs were not detected in the soil samples from Sumps 1 and 2. In the soil sample from Sump 3, cis-1,2-dichloroethene was detected at a concentration of 6.9 μg/kg and TCE was detected at a concentration of 7.7 μg/kg.

HVOCs detected in groundwater samples included TCE at Sump 1 (22 μg/L) and TCE at Sump 2 (17 μg/L). At Sump 3, cis-1,2-dichloroethene was present at a concentration of 1.7 μg/L, 1,1-dichloroethane was present at 0.58 μg/L and TCE was present at 59 μg/L.

Based on the soil and groundwater sampling results, E2C stated that: "If the former on-site sumps were the point source of the TCE, the expected soil contamination levels would be much higher than those currently detected. Since the TCE and general overall VOC soil contaminant levels are less than that detected in the groundwater, it is highly unlikely that the Site is the source of the groundwater contamination. Furthermore since the total soil VOC contaminant levels in each sample point are less than 1 mg/kg, no soil remediation is required".

E_2C's conclusion for the report was that the low concentrations of VOCs detected in the soil and groundwater near the former locations of the sumps is due to groundwater contamination that has migrated onto the subject site from off-site sources and is not a result of prior site activities. E_2C recommended that the site be granted case closure status.

3.7 California Regional Water Quality Control Board No Further Action Letter - 2002

On March 27, 2002, the San Francisco Bay Region of the California Regional Water Quality Control Board issued a No Further Action determination for the site (RWQCB, 2002). The No Further Action letter stated that after their review of the February 2001 Soil and Groundwater Investigation Report (Section 3.6), the RWQCB determined TCE is present in groundwater beneath all three sumps with a maximum concentration of 59 μg/L; however, based on the lack of TCE impacts to soils beneath two of the sumps and the low level of TCE in soils beneath the third sump (7.7 μg/kg), the RWQCB stated that "the subject property is located within an industrial area with regional groundwater contamination" and determined that "based on the available information, including current land use, and assuming the information provided is accurate and representative of site conditions, no further action related to the pollutant release at the subject site is required." A copy of the letter is included in Appendix F.

With respect to current Environmental Screening Levels (ESLs) for potential vapor intrusion concerns, the concentrations of TCE detected in groundwater beneath the subject property were all well below the 1,300 μg/L ESL for commercial properties for subsurface soils consisting of a fine-coarse soil matrix. In spite of the relatively high ESL for TCE, current trends for vapor intrusion evaluations, particularly in South Bay Superfund sites, are becoming increasingly more conservative. Vapor barrier mitigation systems for new construction are typically considered for TCE concentrations that are significantly lower than the ESLs.

4.0 RECORDS REVIEW

4.1 Environmental Liens and Activity and Use Limitations

Based on review of an environmental database search conducted by EDR, there are no Federal Superfund (National Priority List [NPL]) liens associated with the subject property.

4.2 Standard Environmental Record Sources

The discussion presented in this section is based on available information provided by environmental agencies and databases. An EDR database report dated March 25, 2015, contains listings of sites located within a 1-mile radius which were selected in accordance with the ASTM E 1527-13 standard. This information is obtained from computerized databases of Federal, State, and local records. The database report, which includes descriptions of the listings, is provided in Appendix A.

The following regulatory agency databases were searched and reported in the EDR report:

- U.S. Environmental Protection Agency (U.S. EPA) – Comprehensive Environmental Response Compensation, and Liability Information System (CERCLIS);
- U.S. EPA – CERCLA NPL;
- U.S. EPA – CERCLA Proposed NPL;
- U.S. EPA – Superfund (CERCLA) Consent Decrees (CONSENT);
- U.S. EPA – CERCLA Records of Decision (ROD);
- U.S. EPA – CERCLA NPL Deletions;
- U.S. EPA – CERCLA No Further Remedial Action Planned Site (CERC-NFRAP);
- U.S. EPA – Facility Index System (FINDS);
- U.S. EPA – Emergency Response Notification System (ERNS);

- U.S. EPA – Hazardous Materials Information Reporting System (HMIRS);
- U.S. EPA – Material Licensing Tracking System (MLTS);
- U.S. EPA – Mines Master Tracking Index File (MINES);
- U.S. EPA – Federal Superfund Liens (NPL Liens);
- U.S. EPA – PCB Activity Database System (PADS);
- U.S. EPA – RCRA Administrative Action Tracking System (RAATS);
- U.S. EPA – Section 7 Tracking Systems (SSTS);
- U.S. EPA – Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA)/Toxic Substance Control Act (TSCA) Tracking System (FTTS);
- U.S. EPA – Toxic Substances Control Act (TSCA);
- U.S. EPA – Resource Conservation and Recovery Information System (RCRAInfo), Treatment, Storage, or Disposal (TSD) facilities, and Small Quantity and Large Quantity Generators (SQG and LQG) of hazardous waste;
- U.S. EPA – Emergency Response Notification System (ERNS);
- U.S. EPA RCRA Corrective Action Report (CORRACTS);
- U.S. EPA Facility Index System (FINDS);
- U.S. EPA Toxic Chemical Release Inventory System (TRIS);
- California State Water Resources Control Board (SWRCB) – Leaking Underground Storage Tank Listing (LUST) sites including Indian Land;
- SWRCB UST;
- SWRCB – Voluntary Cleanup Sites (VCP); and
- SWRCB – Solid Waste Facilities (SWF/LF).

PES also searched the following agency websites for environmental records related to the subject property:

- California State Water Resources Control Board's (SWRCB) GeoTracker website located at http://geotracker.swrcb.ca.gov/; and

- Department of Toxic Substances Control's (DTSC) EnviroStor website located at http://www.envirostor.dtsc.ca.gov/public/default.asp.

4.2.1 Subject Property Records

The subject property address was listed in three ASTM-required databases and two non-ASTM supplemental databases searched by EDR. These listings are discussed below.

One former tenant, Krebs Engineers, was listed on the Spills, Leaks, Investigations and Cleanup) SLIC database. PES obtained information on this listing from the SWRCB GeoTracker website and from SMCEH. The documents are discussed in detail in Section 3.0 and copies of pertinent documents are included in Appendix F. As a result of site investigations conducted in beginning in 1995 and concluding in 2001, the RWQCB issued a No Further Action determination for the site on March 27, 2002.

One former tenant, Krebs Engineers, was listed on the HIST Cortese database. This database is a compilation of sites identified in the past by the State Water Resource Control Board [LUST], the Integrated Waste Board [SWF/LS], and the Department of Toxic Substances Control [CALSITES] databases. These lists are no longer updated by their respective state agencies. Based on the identification of Krebs Engineers, the listing appears to be a duplicate of the SLIC listing discussed above and the RGA LUST listings described below.

Krebs Engineers was also listed on the RGA LUST database twice. The two listings indicated that Krebs Engineers was present on the database in 1997, 1998, 2000, 2001, 2002 and 2008. The RGA LUST database lists LUST sites that have been recovered from older, no longer in use, databases. The dates of the Krebs Engineers listings correspond with the identification and investigation of a release that was identified at the site in 1996 and received a subsequent No Further Action closure determination in 2002 (Section 3.7). This release is described in the SLIC discussion above and in detail in Section 3.0. The RGA listing for 2008 does not correspond to any other known or reported release at the site and may be a typographical or transcription error.

Three former site tenants, Roto Rooter, Krebs Engineers, and Comcast of California, are listed on HAZNET database. The HAZNET database listings indicate that Roto Rooter generated 'aqueous solutions containing less than 10 percent (%) total organic residues' in 1998 and 2001, and 'waste oil and mixed oil' in 2001. All of these wastes were reported to be recycled. The Krebs Engineers HAZNET listings indicate that from 1994 through 1996, they generated oxygenated solvents ('acetone, butanol, ethylacetate, etc.'), 'laboratory waste chemicals' (unspecified) and liquids with 'halogentated organic compounds $\geq$1,000 milligrams per liter (mg/L)'. All of these chemicals were reported to have been transferred off-site for disposal or recycling. The Comcast of California HAZNET listing indicated that they shipped unspecified wastes off-site for bulking and treatment. Wastes were shipped under hazardous waste management codes H010 through H129 and H131 through H136. These codes are used for wastes that can be treated through recovery (metals and solvents) fuel blending, and other

recovery techniques. The Comcast HAZNET listing specified that there was no on-site treatment of these wastes.

The San Mateo Business Inventory listing reports the site generates and recycles waste oil or waste solvent.

No other listings for the site address were present in the EDR report.

PES requested records from the MPFPD, the MPBD and San Mateo County to evaluate current and historical uses of the subject property. The MPFPD responded on April 7, 2015 with a statement that they had no records related to ASTs, USTs or hazardous materials release responses for the subject property address. PES reviewed site records, permits and plans for the site at the MPBD on April 16, 2015. No environmental concerns were identified in the records other than issues already discussed elsewhere in this report.

San Mateo County provided records from Roto-Rooter, a site tenant from approximately 1997 to 2001. The records consisted of a Hazardous Materials Business Plan (HMBP), hazardous materials inspections and requests for HMBP improvements, and a 2001 letter approving closure of the Roto-Rooter operations at the site. Similar records from 1992 to 1997 were identified for Krebs Engineers, including closure of Krebs' operations in January 1997. The records included hazardous waste manifests and shipping records, inspection forms, and copies of reports of investigation that are also discussed in Section 3.0. Pertinent information in the county records indicated that; there were no ASTs or USTs at the site; wastes appeared to be handled in an appropriate manner and recycled or disposed of off-site; there were no records indicating significant violations of County regulations; and there were no records of a release or spill response in the records other than the information for Krebs Engineers discussed in Section 3.0. Based on the records summarized above, no significant environmental concerns were identified other than the site investigations discussed in detail in Section 3.0.

4.2.2 Surrounding Area

Several sites in the subject property vicinity are listed on hazardous materials release and/or storage databases, as discussed below.

149 Commonwealth Drive, Menlo Park

In 1987, a soil and groundwater investigation was performed at the property located approximately 750 feet to the southeast of the subject property at 149 Commonwealth Drive, apparently as due diligence for a property transfer. At the time, the building was owned and used by Heublein for warehousing. Six groundwater monitoring wells were installed, and groundwater samples were collected from the wells. As part of the investigation, one well was installed on the property southeast of the subject property (151 Commonwealth), at the northern corner of the facility. VOCs were detected in groundwater collected from some of the wells, although there was reportedly no record of VOC use on the property.

Additionally, VOCs were not detected in soil samples collected during well installations. TCE was the primary VOC detected in groundwater, but low levels of 1,1-dichloroethane, cis-1,2-dichloroethene, and 1,1,1-trichloroethane were also detected. TCE concentrations as high as 2,200 micrograms per liter (μg/L) were detected in 1992. All of the detected TCE concentrations were above the U.S. EPA Maximum Contaminant Level (MCL) of 5 μg/L for drinking water supplies. A southeasterly groundwater flow was measured at the facility. This flow direction is away from the subject property (Section 2.3). In a letter dated October 21, 1998, the RWQCB issued a No Further Action letter for the 149 Commonwealth site, noting that the VOCs detected at the facility most likely originated at off-site source areas. The wells were destroyed in 1998. Based on the distance of this site from the subject property (approximately 750 feet to the southeast), the measured groundwater flow direction away from the subject property, and the RWQCB no further action determination for the 149 Commonwealth Drive facility, it is not considered to pose a significant environmental concern with respect to the subject property.

1150 Chrysler Drive, Menlo Park

A release of gasoline-range petroleum hydrocarbons was identified in 1985 at the 1150 Chrysler Drive facility located approximately 100 feet east of the subject property. SMCEH, the oversight agency for this release, issued a Case Closure determination for this site on April 10, 1999. Based on the type of agency Case Closure determination and the inferred direction of groundwater flow away from the subject property, this site is not considered to pose a significant environmental concern with respect to the subject property.

135 Commonwealth Drive, Menlo Park

In 2007, a release of diesel-range petroleum hydrocarbons to soil and groundwater was identified at the 135 Commonwealth Drive facility located approximately 150 feet southeast of the subject property. Subsequent site investigations, including installation of seven borings, nine soil and groundwater borings, and six soil vapor borings; demonstrated that: (1) maximum site contaminant levels were 190 mg/kg TPH as diesel in soil; (2) 1.82 μg/L toluene in groundwater and 1.92 μg/L xylenes in groundwater were detected from one groundwater sampling location and, 0.8 μg/L 1,2,3-tricholorobenzene and 1.4 μg/L naphthalene were detected in a second sampling location – these concentrations were below applicable ESLs (the remaining groundwater samples were 'not-detected' for all compounds; and, (3) a number of VOCs were detected in soil vapor; however, only benzene from one soil vapor sampling location exceeded the potential applicable ESL for contaminant concentrations in soil gas. The remaining detected soil vapor compounds were below all applicable ESLs.

Review of the laboratory data reported on Geotracker for the 135 Commonwealth Drive site indicated that all soil, groundwater and soil vapor samples were tested for PCE and TCE. None of the soil, groundwater or soil vapor samples contained PCE or TCE. One of the 135 Commonwealth reports suggested that groundwater flow was to the north at this location; however, the flow direction statement was qualified as "anticipated" and no information was presented documenting actual groundwater flow direction at the site or in the surrounding area.

Based on the concentrations summarized above, and additional site investigation information, SMCEH, the oversight agency for this release, issued a Case Closure and No Further Action determination for the site on December 8, 2009. Based on the type of release, levels of contaminants identified in groundwater and soil vapor, this site is not considered to pose a significant environmental concern with respect to the subject property and does not appear to be a potential source of the TCE detected in groundwater at the subject property.

188 Constitution Drive

This site is located approximately 900 feet northeast of the subject property. In July 2004, Approximately 235 tons of metal-containing soils were excavated from the location of a former sludge tank located at 188 Constitution Drive. After excavation, testing of in situ soils confirmed that the metals concentrations had been reduced to background concentrations. Tests of groundwater confirmed that groundwater was not significantly impacted. Based on the removal action and the confirmation soil and groundwater sampling data, the San Mateo County Health Department issued a case closure letter to the facility on January 25, 2005 (SWRCB, 2005; San Mateo Health Department, 2005). Based on the case closure determination and the lack of groundwater impacts, this site is not considered to pose a significant environmental concern with respect to the subject property.

300 Constitution Drive

Tyco Electronics, located at 300 Constitution Drive, is approximately 2,400 feet east of the subject property. This site is listed in numerous federal, state and local databases for releases of chlorinated solvents, polychlorinated biphenyls (PCBs) and metals to surface water, soil and groundwater. Surface water discharge from the site is north, towards San Francisco Bay. Measured groundwater flow at the Tyco Electronics site is to the east, away from the subject property (GRA, 2007). Based on the distance of the Tyco Electronics site from the subject property, the direction of groundwater flow away from the subject property, and the direction of surface water flow away from the subject property, this site is not considered to be a significant environmental concern with respect to the subject property.

In addition to the sites discussed above, there are numerous environmental database listings related to the storage and use of chemicals at adjacent and nearby properties. Based on review of these listings, no spills or releases were identified for the facilities and no evidence of improper storage, handling or disposal was identified. The proper use of chemicals at these adjacent and nearby sites is not considered to be an environmental concern.

The remaining sites in the surrounding area that are listed in the databases are not expected to present significant environmental conditions to the subject property based on one or more of the following: (1) the listed site has received case closure by the appropriate regulatory agency; (2) the listed site is either cross gradient or down gradient of the subject property with respect to the inferred regional groundwater flow direction; (3) the listed site is a

soils-only affected case; and/or (4) the listed site is located at too great a distance to represent a significant environmental condition with respect to the subject property.

5.0 SITE INSPECTION

An inspection of the subject property was conducted on April 16, 2015 by Mr. Matthew Eddy of PES. All areas of the site building and the exterior parking lots and grounds were inspected. Mr. Eddy was accompanied by Mr. Vincent, the site shop foreman for Pan Pacific. Photographs taken during the site inspection are presented on Plates 3 through 13.

Exterior Observations

The subject property contains one single-story, concrete tilt-up building on a concrete slab-on-grade foundation. Exterior areas around the north, east and west sides of the building are asphalt-paved driveways, outdoor storage areas, and parking lots. The south side of the building facing Independence Drive is landscaped and has concrete sidewalks.

One pad mounted transformer was observed outside the north end of the subject property building (Plate 2). No leaks or oil stains were observed on the transformer or the concrete pads.

There are solid waste and recycling waste bins located on northern perimeter along the fence line. Two bins located inside the building are used for metal recycling.

The remaining exterior areas of the site are used for materials and product storage and as driveways and employee parking lots. Machined metal parts are present along the northern side of the subject property building. The parts are stored on pallets and enclosed in cardboard. Oil from the machined parts was observed streaking down the inside of the cardboard containers and onto the pallet floor bottoms. Due to the open nature of the pallet bottoms, it is possible that oil could be present on the asphalt paved surface due to this storage; however, observations suggest that such staining would be at *de minimis* levels. Minor oil staining, typical of vehicle parking lots and also considered *de minimis*, was observed in the driveways and parking areas.

No significant environmental concerns were identified in the exterior areas of the site.

Interior Observations

The interior space is primarily utilized as a large open floor work area in support of the machining and fabrication processes. Work stations and machinery are spread out throughout the space with raw materials primarily stored along the perimeter. Some site work is performed in clean rooms.

Chemical storage in the interior is limited to a shelving unit located near the southern edge of the machining and fabrication area. Chemicals are stored in open shelving units. No environmental concerns were observed in the machining or fabrication areas of the building.

The southeast portion of the building is occupied by office space and drafting areas. No environmental concerns were observed in the office and drafting areas.

Adjacent Properties

The adjacent properties are used for commercial and business administration purposes. No significant industrial operations were observed on these properties and no evidence of chemical or waste storage was observed.

5.1 Chemical Use and Storage

According to Mr. Vincent, chemical use for site operations is limited to small quantities of grease, sealants and larger quantities of compressed gases. The grease and sealants are stored in an open shelf unit located in the southern portion of the building. Mr. Vincent confirmed that these chemicals are consumed during use; therefore, no chemical waste is generated from site operations.

As discussed above, Pan Pacific stores polyurethane foam, antifreeze and small quantities of gasoline in a storage shed along the west exterior wall of the site building. Mr. Vincent confirmed that these chemicals are stored on-site for use at off-site locations.

Pan Pacific also stores paint in the storage shed and beneath a stairwell inside the building. These paints are used for building maintenance.

No significant environmental concerns were identified with respect to the storage, handling, use or disposal of chemicals at the site.

5.2 Underground and Aboveground Storage Tanks

No evidence of historical USTs or ASTs was identified during research activities conducted for this Phase I ESA.

5.3 Generators

There are no generators located at the facility.

5.4 Elevators

No elevators are present at the site.

5.5 Hydraulic Equipment

One forklift with hydraulic forks is present on-site. No evidence of leaking or staining was observed on the lift.

No other hydraulic equipment (compactors, machinery, etc.) is present at the site.

5.6 Indications of Polychlorinated Biphenyls (PCBs)

One pad-mounted, oil-filled electrical transformer is present at the site. The transformer at the site was in apparent good condition with no evidence of current leaks or historical releases.

The transformer was labeled as a non-PCB containing transformers. The transformer is owned by PG&E.

Fluorescent lights are present throughout the facility; therefore, PCB-containing ballasts may be present.

5.7 Other Conditions

The following sections discuss investigation findings for non-ASTM issues that may present potential concerns at the site.

5.7.1 Asbestos

An assessment of asbestos-containing materials (ACM) was not within the scope of this Phase I ESA; however, PES identified one prior site investigation (E2C, 1996a) that reported the results from five samples collected from the office area of the site. According to E2C, asbestos was identified in the 'linoleum in the ladies restroom' at a concentration of 20% asbestos and in the mastic of the 'gray 12x12 vinyl floor tile' located throughout the office area at a concentration of 3% asbestos. Asbestos was also identified in the 'mud' of the wallboard in the 'ladies lounge' area of the office at a concentration of 2% asbestos.

Standards set by the Occupational Safety and Health Administration (OSHA) require building owners to presume that thermal system insulation (TSI) and surfacing ACM found in buildings constructed before 1981, and floor tile installed in buildings through 1981, are asbestos containing, unless demonstrated to be less than 1 percent asbestos through sampling. Based on the late-1960s construction date of the subject property building, ACM may be present in other building materials.

5.7.2 Radon

The National Radon Database includes radon information from U.S. EPA/State Residential Radon Surveys conducted between 1986 and 1992. The database includes test results from

32 sites within San Mateo County. The average value for radon level reported in this region was 0.594 pico curies per liter (pCi/l) of air for the first floor living area. This is significantly lower than the U.S. EPA's recommended action level of 4 pCi/l.

The California Radon Database included results from 101 tested sites within zip code 94025. Approximately 20 percent (%) of the sites reported radon levels exceeding the U.S. EPA's recommended action level of 4 pCi/l. The California database does not report sample location (first floor, second floor, basement) information.

The Federal survey data indicates that it is unlikely that radon levels in slab-on-grade structures in the subject property area are likely to be below the U.S. EPA action level. The State database results indicate that there are areas within the subject property zip code that have elevated radon levels.

5.7.3 Solid Waste

Solid waste and recycling receptacles are located along the north fence in the site yard and there are two metal recycling bins inside the site building. No concerns were observed with respect to solid waste disposal or recycling bins for the subject property.

5.7.4 Lead in Paint

An assessment of lead in paint was not within the scope of this Phase I ESA and no prior lead paint surveys of the subject property have been identified. The Consumer Products Safety Commission limited lead content in residential paint to 0.06 percent (600 parts per million) in 1978. Based on the late-1960s construction date of the subject property building, lead-based paint may be present.

5.7.5 Lead in Drinking Water

No on-site sampling data for lead in drinking water was identified in the Phase I ESA research. PES reviewed the most recent available (2013) water quality report from the City of Menlo Park Municipal Water District, the supplier of potable water to the site. The 2013 report stated that the 90th percentile concentration for lead in supplied water was 0.002 milligrams per liter (mg/L) and the highest concentration detected was 0.0105 mg/L. These concentrations are below the USEPA action level of 0.015 mg/L for lead.

5.7.6 Water Damage and Mold

No evidence of significant water damage or potential mold growth was identified at the subject property and Mr. Vincent was unaware of any water damage or mold growth.

6.0 SUMMARY AND CONCLUSIONS

The site consists of a single legal parcel covering approximately 2.3 acres and identified by San Mateo County Assessor's Parcel Number (APN) 055236300. The City of Menlo Park zoning designation for the site is M2 (General Industrial District). The subject property has one, approximately 40,400-square feet, single-story concrete tilt-up commercial building with slab-on-grade construction. A single-story brick and steel addition was added at the southeast corner of the building in the 1970s. The site building was originally constructed in the late 1960s and expanded in the 1970s. The building has changed little since its initial construction and subsequent expansion.

The site is bounded to the south by Independence Drive and to the east by Chrysler Drive. The adjacent properties to the north and west are commercial and light industrial buildings and associated parking lots (Plate 2). The nearest residential housing is located approximately 1,400 feet to the south.

The building is currently occupied by Pan Pacific. Pan Pacific uses the facility for fabrication and machining of plumbing and construction materials. The building interior is separated into two main work spaces. Office space along the southern end of the building occupies approximately 20 percent of the overall building footprint. The remaining 80 percent of the building space is used in support of the fabrication and machining operations performed by Pan Pacific.

Chemical use at the facility occurs in the machining and fabrication workspace. Chemical use observed at the site was limited to various compresses gases, grease, and various sealants. Chemicals stored in a storage shed on-site but only used at off-site locations included anti-freeze solution, polyurethane foams and less than 10 gallons of gasoline.

Historical Site Use

Subject Property

The earliest reviewed record for the site is an 1899 topographic map, which shows the site as undeveloped land. Aerial photographs from 1943 to 1958 show the subject property as vacant land with likely agricultural use (grain and/or row crop farming). By the late 1960s the site was developed with a building with a footprint similar to the present-day site building. With the exception of minor expansion in the early 1970s, no significant changes to the site were identified since its initial construction. Available historical city directory references indicate the subject property address was occupied from 1970 to 1992 by Equipment Engineers and Krebs Engineers. Krebs Engineers was the sole occupant of the building in 1995. Directories for 1999 and 2003 did not identify a tenant on the property. In 2008 and 2013, the site tenant was listed as Comcast of California and Comcast, respectively. The current site tenant is Pan Pacific Mechanical.

Because of the historical agricultural use of the property, there is the potential for the presence of residual pesticides (e.g., organochlorine/ organophosphorus pesticides, chlorinated herbicides, arsenic, and lead) in soil. However, because of the subsequent site redevelopment, it is likely that the site soils have been highly disturbed and that concentrations of residual pesticides, if present, would be expected to be less than in the pre-redevelopment soils.

No surveys for lead-based paint have been identified for the site. Asbestos sampling at the site conducted in 1996 identified ACM in the office areas. Based in the late 1960s date of construction, lead-based paint may also be present at the site.

Previous Environmental Investigations

Several previous environmental investigation of the site were identified beginning with a Phase I ESA prepared in 1995 and subsequent investigations prompted by concerns related to chemical use and waste in three sumps located inside the site building and a compressor located outside the west wall of the building. After several investigations a final soil and groundwater investigation was conducted in 2001. The site investigations identified low levels of petroleum hydrocarbon compounds and HVOCs in soil and groundwater at the site; however, soil concentrations were below regulatory levels and groundwater impacts appeared to be from area-wide groundwater impacts rather than an on-site release. The RWQCB issued a No Further Action determination for the subject property on March 27, 2002 (Appendix F) stating that "the subject property is located within an industrial area with regional groundwater contamination" and determined that "based on the available information, including current land use, and assuming the information provided is accurate and representative of site conditions, no further action related to the pollutant release at the subject site is required".

Site Observations

The subject property parking lots, transformer, solid waste collection area, product and materials storage areas and landscaping were observed to be well-maintained and in fair condition. No evidence of current or historical spills, releases, staining or stressed vegetation was observed at the site.

The southeast section of the building is used for offices, company administration, and drafting. These areas were also well-maintained and in good condition. The building machining and fabrication area is primarily a large, open, work space area in the northern section of the building. This work area has individual work stations and machines spread out throughout the space. There are clean rooms and clean areas in the work space. Raw materials are primarily stored along the perimeter of the open room.

The chemicals used on-site are generally limited to compressed gases, grease and sealants. The grease and sealants are stored in small quantities on open shelving units located inside the open work area. Compressed gases are stored outside the building. The chemicals used on-site are consumed during use with no waste generated.

Antifreeze, polyurethane foams and gasoline canisters are stored in a storage shed located outside the west exterior wall of the building. These chemicals are only for use at off-site project locations. Touch-up paint is stored in the storage unit and inside the building.

No evidence of current or historical spills, releases or staining was observed inside the building and no potential environmental concerns were identified at the site during the site visit.

Regulatory Agency Records

Tenants at the subject property address were listed in three ASTM-required databases and two non-ASTM supplemental databases searched by EDR. One former tenant, Krebs Engineers, was listed on three databases (SLIC, HIST Cortese and RGA LUST). All three of these database listings are for the release and subsequent investigations related to the three sumps and compressor at the site. These investigations are discussed in the Previous Investigations section above and in detail in Section 3.0. As indicated above, a No Further Action determination was made for these listings in 2002.

Three former site tenants, Roto Rooter, Krebs Engineers, and Comcast of California, are listed on HAZNET database. The HAZNET database listings indicate that these former tenants used potentially hazardous chemicals on-site and generated hazardous wastes. All of the wastes generated by these tenants were reported to be managed properly off-site by either recycling or disposal.

San Mateo County provided chemical and waste management records from two previous site tenants, Roto-Rooter and Krebs Engineers. The records consisted of HMBPs, hazardous materials inspections, requests for HMBP improvements, hazardous waste manifests and other reports. Both tenants received letters from SMCEH approving closure of their operations at the time they terminated their lease of the site. Pertinent information in the county records indicated that; there were no ASTs or USTs at the site; wastes appeared to be handled in an appropriate manner and recycled or disposed of off-site; there were no records indicating significant violations of County regulations; and there were no records of a release or spill response in the records other than the information for Krebs Engineers discussed in the Previous Investigations section above and Section 3.0.

The MPFPD provided a statement indicating that they had no records related to ASTs, USTs or hazardous materials release responses for the subject property address. The MPBD records were reviewed at the Menlo Park building department offices on April 16, 2015. No records of environmental concern were identified.

There are a number of environmental database listings for adjacent/nearby properties; however, none of the listings were identified as potential environmental concerns with respect to the subject property

Conclusion

PES has performed a Phase I Environmental Site Assessment, in conformance with the scope and limitations of ATSM Practice E 1527-13, of the property located at 1205 Chrysler Drive, Menlo Park, California. Any exceptions to, or deletions from, this practice are described in Sections 1.2 and 1.3 of this report. This assessment revealed no recognized environmental conditions (RECs) or controlled recognized environmental conditions (CRECs) in connection with the property.

One historical recognized environmental condition (HREC) was identified:

- Site investigations at the subject property were conducted beginning in 1995 and ending in 2002. The investigations were prompted by concerns related to chemical use and waste in three sumps located inside the site building and a compressor located outside the west wall of the building. Low levels of petroleum hydrocarbon compounds and HVOCs in soil and groundwater at the site. The RWQCB issued a No Further Action determination for the subject property on March 27, 2002 (Appendix F) stating that "the subject property is located within an industrial area with regional groundwater contamination" and determined that "based on the available information, including current land use, and assuming the information provided is accurate and representative of site conditions, no further action related to the pollutant release at the subject site is required". Based on the No Further Action determination and because the determination did not require environmental, administrative or institutional controls under the current use of the property, these impacts at the site are considered to be an HREC.

- Potential environmental concerns for the subject property that are not RECs, HRECs or CRECs include;

- No off-site sources of TCE impacts to groundwater were identified that represented an obvious source of the TCE detected at the subject property. This includes the 135 Commonwealth Drive site that is located in a presumed upgradient direction only 150 feet from the subject property. If there is an on-site source of TCE, it has not been detected based on the previous investigations performed at the subject property. Also, the TCE in groundwater data from previous investigations was collected between 1997 and in 2002 and the current concentrations of TCE in groundwater are not known. For redevelopment considerations, potential TCE vapor intrusion concerns can be mitigated through the design and construction of a standard vapor barrier system, if necessary;

- The presence of ACM based on 1996 sampling data; and

- The potential presence of lead-based paint based on the age of construction of the original building in the late 1960s.

7.0 DATA GAPS STATEMENT

No data gaps that may have affected our ability to identify RECs associated with the subject property were identified.

8.0 ADDITIONAL SERVICES

No additional services were provided during the preparation of this Phase I ESA.

9.0 ENVIRONMENTAL PROFESSIONAL STATEMENT

We declare that to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312.

We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all appropriate inquires in conformance with the standards and practices set forth in 40 CFR Part 312. Resumes of the Environmental Professionals signing this report are presented in Appendix G.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

EXECUTIVE SUMMARY

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site List

CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 10/25/2013 has revealed that there is 1 CERC-NFRAP site within approximately 0.5 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 12/09/2014 has revealed that there are 3 CORRACTS sites within approximately 1 mile of the target property.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 12/09/2014 has revealed that there is 1 RCRA-TSDF site within approximately 0.5 miles of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 12/09/2014 has revealed that there are 3 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/09/2014 has revealed that there are 17 RCRA-SQG sites within approximately 0.25 miles of the target property.

Federal institutional controls / engineering controls registries

US INST CONTROL: A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

A review of the US INST CONTROL list, as provided by EDR, and dated 09/18/2014 has revealed that there is 1 US INST CONTROL site within approximately 0.5 miles of the target property.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State

Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 03/11/2015 has revealed that there are 6 ENVIROSTOR sites within approximately 1 mile of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/09/2014 has revealed that

there are 3 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR US Hist Auto Stat: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Auto Stat list, as provided by EDR, has revealed that there is 1 EDR US Hist Auto Stat site within approximately 0.25 miles of the target property.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be

L-3 RANDTRON ANTENNA SYSTEMS (Continued) **S103627611**

considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

BAY ASSOCIATES WIRE TECHNOLOGIES CORPORATION (Continued) **1000857529**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Registry ID: 110002795431

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

EPA Region:	09
Land type:	Private
Classification:	TSDF
Description:	Handler is engaged in the treatment, storage or disposal of hazardous waste
Classification:	Large Quantity Generator
Description:	Handler: generates 1,000 kg or more of hazardous waste during any calendar month; or generates more than 1 kg of acutely hazardous waste during any calendar month; or generates more than 100 kg of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste during any calendar month; or generates 1 kg or less of acutely hazardous waste during any calendar month, and accumulates more than 1 kg of acutely hazardous waste at any time; or generates 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste during any calendar month, and accumulates more than 100 kg of that material at any time

Owner/Operator Summary:

Owner/operator name:	TYCO ELECTRONICS CORP.

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: Yes
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Universal Waste Summary:
Waste type: C
Accumulated waste on-site: No
Generated waste on-site: Yes

Waste type: E
Accumulated waste on-site: No
Generated waste on-site: Yes

Waste type: Batteries
Accumulated waste on-site: Yes
Generated waste on-site: No

Waste type: Lamps
Accumulated waste on-site: Yes
Generated waste on-site: No

Waste type: Thermostats
Accumulated waste on-site: Yes
Generated waste on-site: No

Biennial Reports:

Last Biennial Reporting Year: 2013

Annual Waste Handled:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs): 27895

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Amount (Lbs): 9572

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.
Amount (Lbs): 7756

Waste code: D004
Waste name: ARSENIC
Amount (Lbs): 668

Event date: 03/30/2011
Event: Current Human Exposures under Control, Yes, Current Human Exposures Under Control has been verified. Based on a review of information contained in the EI determination, current human exposures are expected to be under control at the facility under current and reasonably expected conditions. This determination will be re-evaluated when the Agency/State becomes aware of significant changes at the facility.

Environmental Interest/Information System

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

TSCA SUBMITTER

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Completed Info:
Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 01/13/1988
Comments: Site screening done: Site is an active TSD. SI done 8/86. Subsurface PCB contamination. DCE, CD and Pb in groundwater. > drinking. Pending action by RCRA.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 06/20/1991
Comments: Raychem Corporation submitted a PEA to the Dept on 5/17/91. Results of the PEA indicate PCB in soil above extremely hazardous ttlc. Contaminated GW under site. A residential neighborhood and a school are located less than 200’ to the South of site. A tidal slough and sensitive wetland are adjacent to the north boundary of the site. High-tech chemical, plastics and materials manufacturer operated at site since 1965. PEA submitted in May 1991 indicates that nickel and cadmium may be present in soils above their respective TTLC and/or STLC. Elevated levels of solvents found in GW under the site. PCB found in soils at levels above the extremely hazardous waste TTLC. PCB has also migrated off-site via surface runoff. Draft ISE determination and RAO sent to TLO for review on June 11, 1991.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Potential Media Affected: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Gasoline
Site History: Extracted from Geologica's October 2, 2013 Supplemental Soil Sampling and Remedial Excavation Completion Report. San Mateo County does not take responsibility for the accuracy of the statements made or any professional interpretations made in the referenced report. In April 2013, GEOLOGICA completed a supplemental soil quality sampling investigation of the former CT International site at 3645 Haven Avenue in Menlo Park, CA. The investigation was conducted to evaluate soil quality conditions relative to the current Residential Environmental Screening Levels (ESLs) established by the San Francisco Bay Regional Water Quality Control Board (RWQCB). Between June and August 2013, GEOLOGICA conducted a focused soil excavation program to remove soil containing petroleum hydrocarbons and/or lead at concentrations greater than the RWQCBs Residential ESLs. This scope of work was developed by GEOLOGICA based on discussion with Mr. Charles Ice of the San Mateo County Environmental Health System (SMCEHS). The purpose of the investigation and excavation was to remove the no-residential use deed restriction on the property.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 12/16/2014

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 12/16/2014

Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 12/16/2014

Data Release Frequency: Quarterly

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 10/25/2013

Data Release Frequency: Varies

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Date of Government Version: 12/22/2014

Local Lists of Hazardous waste / Contaminated Sites

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

EPA WATCH LIST: EPA WATCH LIST
EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)
The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR US Hist Auto Stat: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 07/30/2013
Date Data Arrived at EDR: 08/19/2013
Date Made Active in Reports: 10/03/2013

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Licensed Facilities
Source: Department of Social Services
Telephone: 916-657-4041

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

Longitude (West):	122.1758 - 122° 10' 32.88''
Universal Tranverse Mercator:	Zone 10
UTM X (Meters):	572869.9
UTM Y (Meters):	4148592.0
Elevation:	10 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	37122-D2 PALO ALTO, CA
Most Recent Revision:	1999

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

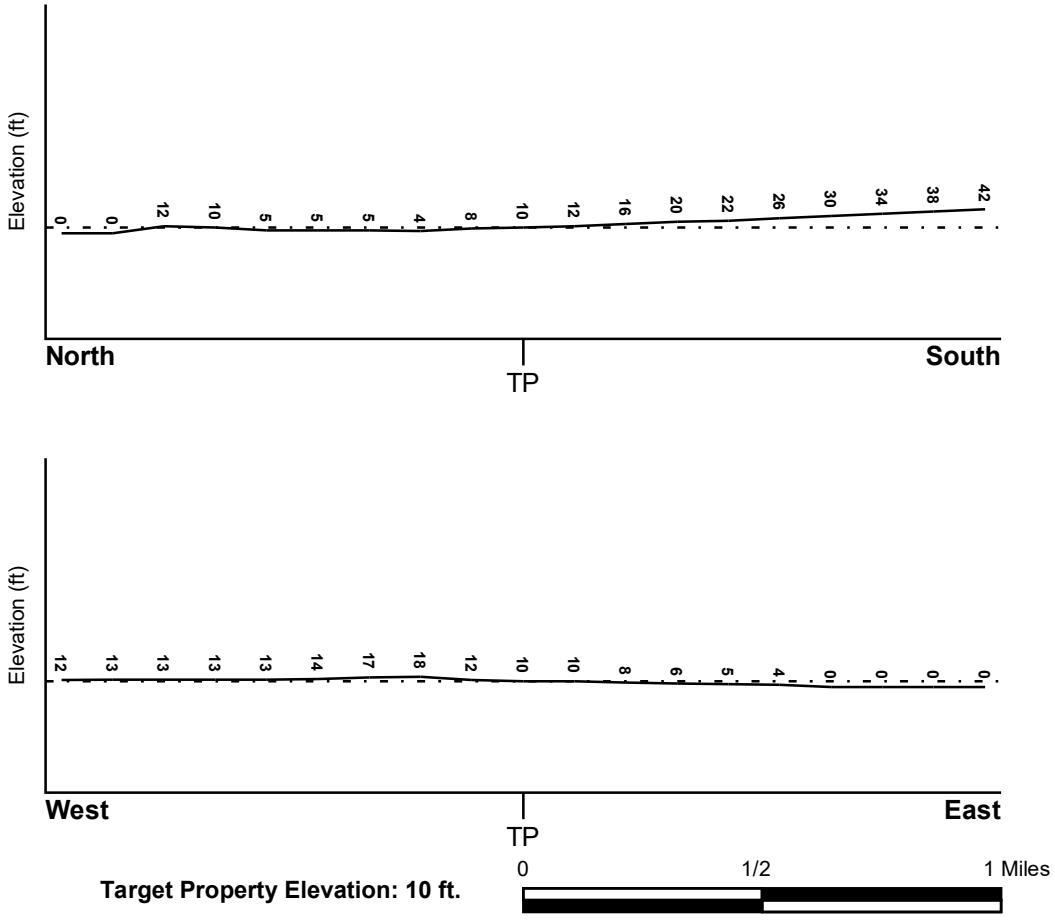
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County	FEMA Flood Electronic Data
SAN MATEO, CA	YES - refer to the Overview Map and Detail Map

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
PALO ALTO	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW

C23	1/2 - 1 Mile SW	Not Reported

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Urban land

Soil Surface Texture:
Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class:
Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	5 inches		Not reported	Not reported	Max: 0.01 Min: 0	Max: Min:

Soil Map ID: 2

Soil Component Name: Urban land

Soil Surface Texture:
Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class:
Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	16 inches	clay	Not reported	Not reported	Max: 1.4 Min: 0.42	Max: 9 Min: 7.9
2	16 inches	59 inches	clay	Not reported	Not reported	Max: 1.4 Min: 0.42	Max: 9 Min: 7.9

Soil Map ID: 4

Soil Component Name: Orthents

Soil Surface Texture: variable

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	59 inches	variable	Not reported	Not reported	Max: Min:	Max: Min:

Soil Map ID: 5

Soil Component Name: Novato

Soil Surface Texture: clay

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Very poorly drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil

2	16 inches	59 inches	clay	Not reported	Not reported	Max: 1.4 Min: 0.42	Max: 9 Min: 7.9

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

RADON

State Database: CA Radon
Source: Department of Health Services
Telephone: 916-324-2208
Radon Database for California

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities
Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater
Source: Department of Commerce, National Oceanic and Atmospheric Administration

California Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines, prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

AERIAL PHOTOGRAPHS

Appendix B
Historical Aerial Photographs Review

Subject Property

Date	Photo Quality	Comments
1943	Good	Site is vacant land, likely used for farming (row crops).
1948	Good	No significant change from previous photograph.
1950	Good	New gravel road directly to site. Possible filling?
1958	Good	Road in previous photograph is gone. Site does not appear to have been filled.
1968	Good	Building present onsite - is smaller than current site building.
1974	Good	Site builidng has been expanded to approximately present-day size and shape.
1982	Good	No significant change from previous photograph.
1991	Good	No significant change from previous photograph.
1998	Good	No significant change from previous photograph.
2005	Good	No significant change from previous photograph.
2009	Good	No significant change from previous photograph.
2010	Good	No significant change from previous photograph.
2012	Good	No significant change from previous photograph.

Adjacent Properties

Date	Photo Quality	Comments
1943	Good	Bay mud flats approximately 500 ft. to north. Gravel road to site.
1948	Good	No significant change from previous photograph.
1950	Good	No significant change from previous photograph.
1958	Good	No significant change from previous photograph.
1968	Good	Chrysler and Independence Dr. have been constructed and commercial/industrial buildings are present on the north, east and west ajd. properties.
1974	Good	No significant change from previous photograph.
1982	Good	Buildings have been constructed to south of site. Adjacent properties are fully developed.
1991	Good	No significant change from previous photograph.
1998	Good	No significant change from previous photograph.
2005	Good	No significant change from previous photograph.
2009	Good	No significant change from previous photograph.
2010	Good	No significant change from previous photograph.
2012	Good	No significant change from previous photograph.

EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by PES Environmental, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

Site Name: Sobrato, Menlo Park

APPENDIX D

HISTORICAL TOPOGRAPHIC MAPS

Appendix D
Historical Topographic Maps Review

Subject Property

Date	Comments
1899	Site is shown as undeveloped land.
1902	No change from previous map.
1943	No change from previous map.
1947	No change from previous map.
1948	No change from previous map.
1953	No change from previous map.
1961	No change from previous map.
1968	A building is present on the Site on the footprint of the present-day building.
1973	No change from previous map.
1991	Individual buildings are no longer shown on the map. The site is shaded gray indicating developed land.
1997	No change from previous map.

Appendix D
Historical Topographic Maps Review

Adjacent Properties

Date	Comments
1899	Adjacent and nearby properties are undeveloped. San Francisco Bay and associated salt marshes are located 900 ft. to north
1902	No change from previous map.
1943	No change from previous map.
1947	No change from previous map.
1948	No change from previous map.
1953	A road to the approximate southeast corner of the subject property has been constructed. No other significant changes.
1961	Chrysler and Independence Drives are present. A building is present to the southeast and to the west of the subject property. No other change from previous map.
1968	Commercial-type buildings are present on the adjacent properties to the north, east and southeast. The adjacent lot to the west is vacant as is the lot south of the site across Independence Drive. The general area has been developed for commercial use although some land remains undeveloped.
1973	No changes to the adjacent properties. Several more commercial-type buildings have been constructed in the general area.
1991	Individual buildings are no longer shown on the map. The adjacent and nearby areas are shaded gray indicating developed land.
1997	Individual buildings are no longer shown on the map. The adjacent and nearby areas are shaded gray indicating developed land.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.

ATTN: Mr. Keith Gard
SUBJECT: PHASE I ENVIRONMENTAL SITE ASSESSMENT
1205 Chrysler Drive
Menlo Park, California

Dear Mr. Gard:

Pursuant to your authorization, E_2C, Inc. has completed a Phase I Environmental Site Assessment (ESA) of the above-mentioned site, as outlined in our Proposal dated August 24, 1995. The purpose of this ESA is to assess the potential for contamination having been created by past-or-present, on-site activities, or by the migration of contaminants from agency documented off-site sources.

This ESA was prepared using guidelines presented in Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process (The American Society for Testing and Materials [ASTM], E 1527-93).

Should you have any questions or require supplemental information, please do not hesitate to contact us.

Sincerely,

Eileen H. Ashton
Staff Environmental Specialist

EXECUTIVE SUMMARY

E_2C, Inc. has completed a Phase I Environmental Site Assessment (ESA) of the property located at 1205 Chrysler Drive in Menlo Park, California. At the time of our inspection the property was occupied by a one-story, commercial building constructed in approximately 1968.

The site and surrounding area have a history of commercial and industrial use. According to our research of agency listings of known toxic- and fuel-leak sites, there are several sites, both adjacent and in the surrounding area, which are under investigation for a chemical release. The subject site is not a listed toxic- or fuel-leak site. The listed sites in closest proximity to the subject site, do not appear to have the potential to impact the subject site.

At the time of our inspection, there were no visible on-site sources of environmental concern; however, we highly recommend double-containment for chemicals, including new stock.

1.0 INTRODUCTION

E_2C, Inc. has completed a Phase I ESA of the property located at 1205 Chrysler Drive in Menlo Park, California, in accordance with our Proposal dated August 24, 1995. The investigation was performed by E_2C, Inc. to satisfy the requirements for a Phase I ESA. The intent of this investigation was to conduct an environmental assessment that will address real and potential environmental impairments, or risks of impairments, that may represent existing or potential financial and legal liabilities to Krebs Engineering and/or their agents.

2.0 SCOPE OF SERVICES

The Scope of Services for the performance of this Phase I ESA included the following tasks:

- Research and review of available geologic and hydrologic information concerning the vicinity of the subject site.

- Review of aerial photos of the property to determine what activities have occurred at the site within the past 30-to-40 years.

- Inspection of the property to determine current business activities and evaluate past business activities at the site.

- Acquisition of a computerized review of federal publications to identify National Priorities List (NPL); Resource Conservation and Recovery Act (RCRA); United States Environmental Protection Agency (EPA), Region 9, comprehensive Environment Response, compensation, and Liability Information System (CERLIS); RCRA Treatment Storage and Disposal (TSD); and Emergency Response Notification System (ERNS) sites located within close proximity to the subject site as well as landfills, leaking Underground Storage Tank (UST) sites, and registered UST sites.

- Review of local regulatory files concerning chemical use and storage at the subject site.

- Preparation of this report in general accordance with Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process (The American Society for Testing and Materials [ASTM], E 1527-93).

3.0 SITE LOCATION AND DESCRIPTION

The subject site is located at 1205 Chrysler Drive in the City of Menlo Park, California, and is identified as Assessors Parcel Number 055-236-300.

According to the United States Geologic Survey Map, Palo Alto Quadrangle, the subject site lies in Section 22, Township 5 South, Range 3 West of the Mount Diablo Base and Meridian. The subject site and the surrounding areas are generally flat, lying at an elevation of approximately 10-feet above mean sea level, sloping gently to the north. The subject site lies approximately 2,000-feet to the south of Flood Slough, which empties into San Francisco Bay. Figure 1 shows the approximate location of the property.

The subject site is located in an industrial area (zoning designation M2 or General Industrial), and is occupied by one commercial building, approximately 34,400 square feet in size. The building was constructed in 1968. Paved parking areas and landscaping surround the buildings. Photographs of the subject site are included in Appendix B of this report.

4.0 SITE CONDITIONS

4.1 Regional Geology

The subject site is located on the east side of the San Francisco Peninsula, on a relatively narrow alluvial plain between the Santa Cruz Coastal Mountains and the San Francisco Bay. The area of the subject site is underlain by alluvial deposits of late Pleistocene Age (10,000 to 70,000 years old). These deposits are underlain by bedrock of the Franciscan Formation, that is considered to be of Mesozoic Age (65 to 225 million years old).

The alluvium was derived from the erosion of older Jurassic/Cretaceous bedrock of the Franciscan Series which formed the Coastal Range Mountains, and was deposited by flowing water on active stream channels, terraces, and on developing alluvial fans. The deposits grade from poorly consolidated, coarse-grained sands and gravels on the west side of the plain along the base of the mountains to fine-grained alluvial fan and fresh water marsh deposits to the east near the Bay. These bedded deposits vary from being moderately or highly permeable (sands and gravels) to low-permeable aquitards (clay). The underlying Franciscan rocks are composed of graywacke, greenstone, sandstones, conglomerates, and other hard units.

During the Cenozoic Era (the last 65 million years), the region has been subject to complex tectonic evolution as the ancestral California margin underwent transition from a convergent to a transform plate margin (Atwater, 1970). During this period, the earth's crust was broken into smaller sinking blocks that formed basins and embayments. These are interspersed with areas of uplift that formed highlands, such as the coastal mountains.

4.2 Soil Conditions

According to the U.S. Soil Conservation Service, Soil Survey of San Mateo County, Eastern Part, and the San Francisco County, California (1991), soil in the subject site area has been classified as Urban land-Orthents; soil which is either covered by asphalt, concrete, buildings, and other structures (Urban land) or that consists of soil material, gravel, broken cement and asphalt, bay mud, and solid waste material (Orthents). This soil type occurs in areas that were once part of San Francisco Bay and adjacent tidal flats but have been filled to accommodate development. They tend to be highly variable in their properties and characteristics due to the type and amount of fill material used.

4.3 Hydrologic Conditions

The subject site is located on reclaimed land, and the imported surface soils on the site are approximately 6 to 8 feet thick, based on information from drilled soil borings on nearby sites. Underlying soils tend to be water-saturated, moderately to highly plastic clays referred to as "Bay Mud." These Clays generally have a very low permeability, and do not release water easily.

Groundwater in the local vicinity is estimated to flow in a northerly direction, although the direction of flow may be locally altered by supply well pumping, remedial extraction wells, and by the salt evaporation ponds located north of the subject site.

4.4 *Major Regional Faults and Earthquake Hazards*

The subject site is located in the seismically active San Francisco Bay Region. Three major faults in this region have a history of strong earth movement. Many other less-known and less-active faults exist in the region. These major faults are: 1) the San Andreas Fault Zone, located approximately 7-miles to the west; 2) the Calaveras Fault Zone, located approximately 16-miles to the

5.0 SITE HISTORY

To assist in establishing historical uses of the subject site, a review of historical aerial photographs, available agency files, and previous environmental investigations concerning the subject site was performed.

5.1 Historical Aerial Photographs

Historical aerial photographs, available through Pacific Aerial Surveys in Oakland, California, were reviewed to help evaluate past land uses on the subject site and on surrounding properties. Representative photographs are included in Appendix A.

In the earliest aerial photograph studied (dated May 8, 1961), the subject site appears to be vacant land. Surrounding parcels are also vacant except for one lot to the northwest and one located directly south, across Chrysler Drive, from the subject site. These sites appear to be developed with commercial or industrial buildings.

In an aerial photograph dated May 29, 1975, the subject site is developed to its current level. Surrounding parcels are also developed to their current levels, except for the parcel to the southwest, across Independence Drive which was still vacant in 1975.

Aerial photographs dated June 16, 1983 and June 12, 1990, show the subject site and surrounding parcels developed to their current level.

None of the aerial photographs reviewed showed evidence of environmental impairment or hazardous materials storage on the subject site or immediately adjacent parcels.

northeast; and 3) the Hayward Fault Zone, located approximately 11-miles to the northeast of the subject site. Strong seismic activity on any of these three major faults could have an adverse impact on the subject site, causing moderate-to-major structural damage.

4.5 Meteorologic Setting

The site is located within the San Francisco Bay Area, which is considered a "Mediterranean" type climate. Warm, dry summers, along with cool, wet winters, are typical for this area. Mean annual precipitation in the form of rainfall for the site is approximately 17 inches. The prevailing wind at the site and the Bay Area in general is from the northwest. At this time, climatic effects on the site show no evidence for environmental concern.

5.2 Tenant History

According to documents reviewed at the Menlo Park Building Department, and conversations with Mr. Steve Gerlach, Vice President of Administration for Krebs Engineering (Krebs), the firm has occupied the facility since its construction in 1968.

6.0 SITE SURVEY

The subject property was inspected on September 20, 1995, by Eileen H. Ashton of E_2C, Inc., accompanied by Mr. Gerlach. A Site Plan is shown on Figure 2 and Site Photographs are presented in Appendix B. At the time of inspection, the subject property was being used for the administrative, testing, and assembly facility operations of Krebs, a manufacturer of equipment used primarily in mining operations. Between 50 and 100 people are currently employed at this facility which includes a machine shop, welding area, sandblasting unit, two paint booths, materials storage area(s), and administrative offices. Chemicals are used on-site; however, we found no evidence of the misuse of hazardous materials, unseasonably dead vegetation, midnight dumping, Underground Storage Tanks (USTs), or other suspect conditions related to the current use and/or improper handling of hazardous materials at the subject site. In general, the interior and exterior portion of the site appeared to be in good condition.

6.1 Administrative Area

Administrative offices currently occupy approximately 4,400 square feet of the subject building. Approximately 1,200 square feet were added in 1980. The area is carpeted except for the hallways which are covered in 12" x 12" grey, Vinyl Floor Tiles (VFTs). Ceilings are composed of 2' x 4' acoustical, drop ceiling panels. The floors of both the men's and women's rest rooms are covered in rolled linoleum. The copy room walls and ceiling are covered with 12" x 12" acoustic tiles. These tiles are painted and appear to be in good condition. The floor is covered in 12" x 12", blue VFTs. Two attic rooms are utilized as file archive and office supply storage areas.

The facility's Material Safety Data Sheets (MSDSs), Illness and Injury Prevention Program (IIPP), and Hazardous Materials Management Plan (HMMP) are accessible to all employees. A copy of the HMMP is presented in Appendix

D. The facility is identified as a generator of less than 5-tons of hazardous waste per year and is registered with the EPA as CAD#981463664. Also on file in the administrative area, are receipts for the transportation and disposal of all wastes generated on-site by certified waste haulers. Waste paint, lacquers, and solvents are picked-up and properly disposed of on a monthly basis (or as needed) by Safety-Kleen Corporation of Rancho Cordova, California; spent solvents are picked-up and properly disposed of by California Solvent Recycling Corporation.

The facility was last inspected by Mr. Duane O'Donnell, Hazardous Materials Specialist for the San Mateo County Department of Health Services (SMCDHS) on June 8, 1995. No violations were noted.

6.2 Manufacturing Area

This area can be separated into four divisions: the Testing Area; the Machine Shop; the sandblasting and paint booths; and the stock, shipping and receiving area. The total square footage is approximately 30,000 square feet.

In the Testing Area, Krebs' receives 55-gallon plastic drums containing various minerals from client job sites. Krebs investigates dilutions of the minerals in order to achieve maximum separation of the mineral particles. The mineral-water mixture is put back into the client's barrel, allowed to settle, and the water is pumped out of the barrel into a trench which leads to the sanitary sewer. This trench has a floor sump, which has been permanently plugged. All minerals are shipped back to the client. Krebs does not accept any potentially hazardous materials for testing; instead, Krebs travels to the job site to perform testing on potentially hazardous materials.

The Machine Shop is located adjacent to the Testing Area. Hydraulic cutting oil and lubricants are used in small quantities (approximately 5-gallons). Metal filings are frequently swept up and placed in bins for recycling. One sump is

located in this area, which connects to the trench located in the Testing Area. A specially designed filter has been installed to prevent metal from collecting in the sump and entering the stormwater outlet.

6.3 Yard

Most of the yard area is used for loading trucks. Stock propane, acetylene, argon gas, oxygen, and hydraulic and cutting oil are kept in a metal shed, divided into three storage areas. All pressurized gases are kept chained in an upright position. Hydraulic oil is kept in a 55-gallon drum on a wooden pallet, surrounded by a spill sock. Cutting oil is kept in 5-gallon buckets, also on the pallet. Apparent oil staining was noted on the soil underneath the pallet, but it appeared to be surficial.

Waste products awaiting pick-up and disposal are kept in drums in a fenced-off area. Several containers of spent chemicals were located outside this area and were not secondarily contained. It would be prudent to provide secondary containment for this area.

6.4 Asbestos

Beginning in 1971, the U.S. EPA and the Consumer Product Safety Commission began banning the manufacture of ACMs. The first materials to be banned were sprayed-on pipe insulation, in 1971. In 1975, joint compound and spackling materials, used mostly in dry wall or sheetrock-related construction, were banned. Pitching compounds, such as those used in asphalt-roofing materials, were banned in 1977, and all sprayed-on friable ACMs, such as the acoustical plaster used to treat the ceilings in many commercial and residential buildings, were banned in 1978. Production and importation of flooring material, all roofing materials and corrugated, asbestos-cement sheets were banned in August 1990. The distribution of these materials was also to end in August 1992, but the ban on distribution is currently being challenged

legally. Based on the above, one can assume that the greater the age of the building, the greater the potential that ACMs are present.

Asbestos is not generally considered to be a health threat unless the individual fibers become airborne and are inhaled. This phenomena will occur if the more friable ACMs are disturbed. The airborne release of asbestos fibers is very rare in materials such as VFTs, rolled linoleum floor covers, and sheetrock-joint compounds because the fibers in the floor tiles and linoleum are cemented together and, in the case of sheetrock-joint compounds, the fibers generally are encapsulated by paint. If these materials are properly maintained (i.e., kept waxed or painted) and not disturbed through excessive wear or removal, they are not considered by the EPA or the Bay Area Air Quality Management Board to be an environmental or health threat.

Sprayed-on acoustical ceiling plaster (sometimes referred to as "cottage cheese" because of its textured appearance) has a greater potential to become friable because of its composition. However, through proper maintenance (i.e., the application of paint or another sealing material), the potential for this material to become friable is minimized.

As of the time of this investigation, we know of no laws which require the abatement of ACMs from buildings unless the building is to be demolished. Legislation exists which requires that the owners of buildings with known ACMs inform the tenants or residents of the building that ACMs are present (California Health and Safety Code Sections 25915 - 25919.7). Furthermore, Section 25915 requires that the knowledge of ACMs on properties must be disclosed during real estate transactions.

According to two recently published documents, "Asbestos" by the Bay Area Air Quality Management District, and "Asbestos in the Home" by the EPA's Consumer Product Safety Commission, the current recommendation regarding ACMs is that they be properly maintained and are allowed to remain in place.

This minimizes the release of ACMs into the atmosphere that would be created by the disturbance of the ACMs. As stated above, these maintenance methods include sealing the ACMs with paint or other sealers. Or, in the case of VFTs that would otherwise be removed, the EPA recommends that the old ACM tile be left in place and covered with newer, non-ACM tiles.

The construction date of the building (1968) is prior to the implementation of many government bans on the use of asbestos in common building materials. Therefore, it is likely that ACMs exist within the subject site building. No samples were collected as part of this study, however, if the building is to be sold, demolished, or remodeled, a full-asbestos investigation is recommended. Of particular note are the VFTs, the rolled linoleum in the rest rooms and the 12"x12" acoustic tiles in the copy room.

6.5 Polychlorinated Biphenyls (PCBs)

There is one pole-mounted transformer located on the north side of the subject site building; however, no staining of the pole or surrounding pavement was noted during our inspection.

According to Pacific Gas & Electric Company (PG&E), which owns and maintains electrical transformers in the City of Menlo Park, PCB-abatement programs were initiated and completed in the early 1980's. In some areas, this abatement program targeted transformers located near water-ways, schools, residential areas, food-processing facilities, and government properties. PG&E states that PCB-containing oil was replaced with mineral oil in 99.9% of all state-wide transformers during those abatement programs. After replacement, the maximum allowable concentration of residual PCBs remaining in a transformer was 50 parts per million (ppm).

Should there be a concern over the possible existence of PCBs in an on-site or off-site transformer, PG&E can be contacted to arrange for an inspection and sampling of the transformer oil. Should the transformer be found to contain

PCBs above a concentration of 50 ppm, PG&E will replace the oil with PCB-free oil at no cost. Should the transformer be found to contain PCBs below 50 ppm, PG&E will charge a fee for the inspection and sampling of the transformer.

6.6 Survey of Adjacent Properties

During our on-site inspection, we also conducted a general survey of activities and businesses surrounding the subject property. The majority of the surrounding area is developed with light-manufacturing businesses. As discussed in Subsection 5.1, commercial and industrial usage of the area was observed in aerial photographs dating back to 1961.

Use of USTs, hazardous materials placards, or indications of chemical mishandling on surrounding properties is discussed in Subsection 7.1.

7.0 DOCUMENT RESEARCH

To further evaluate potential sources of contamination originating from on-or off-site sources, a review of published agency documents, agency files, and other pertinent documents was performed.

7.1 Federal and State Records Sources

E_2C, Inc. contracted with NATEC Environmental Engineering Consultants (NATEC) for the performance of a computerized geographical data base search to identify sites of potential environmental significance located within a one-mile radius of the subject site. The NATEC computer data base identifies sites that fall under the following categories:

- Superfund Sites (NPL)
- Sites under review by EPA (CERCLIS)
- Sites with leaking USTs (LUST)
- Documented hazardous material spill sites (ERNS)
- Small and large generators of hazardous materials (RCRA)
- Hazardous waste sites
- Facilities that Treat, Store, and Dispose of hazardous materials (TSD)
- Sites prioritized by the State for clean up
- Sites under review by the State
- Landfills

Each government list reviewed by NATEC is indicated in their report, which is presented in Appendix C of this report. The NATEC report also presents a map showing the approximate location of all sites identified within a one-mile radius of the subject site. This data base search meets the requirements of the ASTM E1527-93 standard.

7.2 Off-Site Areas of Environmental Concern

Fuel-Leak Attenuation

In fuel leak cases, preliminary research conducted by regulatory agencies in the San Francisco Bay Area indicates that attenuation and degradation of the product in groundwater play major roles in reducing the hydrocarbon contamination to non-detectable levels within several hundred feet of the contaminant source. Moreover, this research indicates that in over 90% of the hydrocarbon contamination cases, groundwater contaminant plumes do not extend more than 200-feet from the source.

Toxic-Leak Attenuation

In the case of toxic substances in the groundwater, namely the more mobile VOCs, detectable levels may extend several thousand feet from the source. In most VOC groundwater plume cases, however, attenuation will act to reduce the contamination to non-detectable levels within ½-mile of the source.

Groundwater Flow

Although sites where chemical use and/or chemical spill incidents have been documented within a 1-mile radius of the subject site, an impact to the subject site from these identified sites is only possible if the released chemicals migrate towards the subject site via groundwater. Therefore, chemical release sites with groundwater impact located upgradient to the subject site in terms of groundwater flow, may represent a potential environmental threat to the subject site. Conversely, chemical release sites located downgradient of the subject site are considered to have no potential for impacting the subject site. Release sites located cross-gradient are, in general, considered to have no potential to impact the subject site also, unless they are located in very close proximity to the subject site, in which case a limited degree of lateral migration may have resulted in an impact to the subject site. As discussed in Subsection 4.3, the anticipated regional groundwater flow direction is northerly, towards

San Francisco Bay. Actual groundwater flow direction can only be determined through the installation of on-site monitoring wells.

Based on the above factors, E_2C, Inc. has researched three LUST sites, one of which is also listed on CORTESE and SARA. These sites have been identified by NATEC as being located within a ½-mile radius (approximately 2,640 feet) of the upgradient property line of the subject site. Each site is discussed below. The number presented after the address corresponds to the identifying demarcation on the radius map presented in the NATEC report in Appendix C. In summary, it appears that the subject site has not likely been impacted by contaminants originating on the identified documented chemical release sites.

Knappkins - 4055 Bohannon Drive (4)

This site, located approximately 1,000-feet to the southwest of the subject site, had four USTs removed from the site in September of 1990. Contamination due to TPHd and TPHg was discovered in both soil and groundwater at above allowable concentrations. Excavated soils were reportedly bioremediated on-site and groundwater extraction and treatment is currently being performed by Dames & Moore of San Jose. Eight groundwater monitoring wells have been installed, four of which are located on the neighboring property located at 160 Scott Drive. The site has been monitored on a quarterly basis since March of 1993. Groundwater samples collected from the most contaminated well (KP-1) in March of 1993, were reported to contain 4,500 parts per billion (ppb) of TPHg, 1,500 ppb of TPHd, and all the Benzene, Toluene, Ethyl Benzene, and Xylenes (BTEX) constituents ranging from 12 to 100 ppb. The well in closest proximity to the subject site (KP-8) was found to contain initial concentrations of 250 ppb of TPHg, 85 ppb of TPHd, 1.9 ppb of Benzene, and 2.3 ppb of Ethyl Benzene.

The most current sampling event occurred in July of 1995 and test results indicate a decline in all contaminants. Concentrations detected in samples

collected from KP-1 were reported as 890 ppb of TPHg, 100 ppb of TPHd, and Ethyl Benzene and Xylenes at concentrations of 8.6 and 7.9, respectively. Only TPHd was detected in KP-8 at a concentration of 92 ppb. The next sampling event is scheduled to occur in October 1995.

Based on the distance between this site and the subject site, and the documented attenuation, it is the professional opinion of E_2C, Inc. that this site does not present an environmental risk to the subject site.

Bay Associates - 1150 Chrysler Drive (3)

Bay Associates is located approximately 530-feet to the southwest of the subject site. One 1,000-gallon gasoline UST was removed from the site in 1985. Free-phase hydrocarbons were observed on the surface of groundwater in the tank excavation, and hydrocarbon-bearing soil was observed during tank removal. A total of seven on-site monitoring wells have been sampled on a quarterly basis since November 1993 and groundwater remediation system options are currently being discussed. According to a letter from Sierra Environmental Services (Sierra) of Martinez, California, to Ms. Gail Lee of the San Mateo County Department of Health Services (SMCDHS), the contamination plumes "appears to be limited to a shallow, thin aquifer extending to approximately 10 to 13 feet below grade. The relatively flat gradient and low-permeability soil appears to have prevented further off-site migration of the hydrocarbon plume."

Based on this conclusion, it is our professional opinion that this site does not pose an environmental risk to the subject site.

Heublein Inc. - 151 Commonwealth Drive (C2)

This site is located approximately ¼-mile to the southeast of the subject site. A 10,000-gallon diesel UST was removed from the distillery complex on April

19, 1988, following the report of a leak three months earlier. An investigation performed by Ensco, Inc. (Ensco), dated September 1988, indicated that both soil and groundwater had been impacted with diesel. Nine monitoring wells have been installed and based on quarterly sampling laboratory results, the concentrations appear to have diminished from 850,000 ppb of TPHd in November of 1986 to 150 ppb in March of 1995. From static water levels measured in four wells, Ensco reported an estimated groundwater gradient in a southwest direction, away from the subject site. It is thought this reversal of the regional groundwater gradient is due to extensive groundwater pumping in the inland areas.

The Heublein site contains at least one monitoring well from an environmental investigation being conducted at 149 Commonwealth Drive. Trace concentrations of several Volatile Organic Compounds (VOCs), most notably TCE, have been detected in the groundwater collected from this well. This site, is not listed by the NATEC database, and based on the documented, reverse groundwater direction, neither 149 or 151 Commonwealth Drive appear to pose an environmental risk to the subject site.

7.3 Landfills

The nearest active landfill to the site is the City of Palo Alto Refuse Disposal Site located approximately 4¼-miles to the southeast (cross-gradient), from the subject site. The facility's capacity is 730-tons per day and is scheduled for closure in 2002. The nearest inactive landfill is the former Martin Park Landfill, located approximately ⅓-miles to the southeast (down-gradient). This landfill was closed in 1974. Neither of these facilities are located in an up-gradient position in close proximity to the subject site; therefore, it is our professional opinion that they do not represent an environmental threat to the subject site.

7.4 Oil and Gas Wells

According to the California Department of Conservation, Division of Oil and Gas Map W3-10, the nearest oil and gas field is the Half Moon Bay Oil and Gas Field, located near the Pacific Ocean, approximately 7-miles southwest of the subject site. The field was discovered in the 1890's, and a few wells are still in production. The San Francisco Bay Region is not a significant petroleum producing area; the few accumulations discovered have not been of environmental concern.

7.5 Water Quality

According to the following documents, there have been no contaminated private or public wells identified within a 1-mile radius of the subject site:

- The California Department of Health Services (DHS) Office of Drinking Water, Status Report AB1803 (dated June 19, 1990);
- The State Water Resources Control Board, Well Investigation Program report (dated November 28, 1990).

More recent studies of water quality within private and public water supply wells have not been performed.

7.6 County and City Records Sources

In the City of Menlo Park, the Menlo Park Fire Protection District (MPFPD) is the lead agency for fire inspections, permitting, inspection, and hazardous materials management. In the case of confirmed soil and/or groundwater contamination from petroleum hydrocarbons, the San Mateo County, Department of Health Services (SMCDHS) is the lead agency. In cases involving confirmed groundwater contamination from toxics, the San Francisco Regional Water Quality Control Board (RWQCB) is the lead agency. During this study E_2C, Inc. researched files for the subject site available through the MPFPD and SMCDHS. These reviews are discussed in the following Subsections.

7.6.1 San Mateo County, Department of Health Services

SMCDHS inspection files for the subject site showed no major violations, hazardous materials-related incidents, or previous environmental investigations.

7.6.2 Menlo Park Fire Protection District

According to Mr. Ron Keefer, Hazardous Materials Specialist for MPFPD, no hazardous materials-related incidents or major violations have occurred at the subject site.

7.7 Additional Agency Contacts

The following is a general description of the documents, records, reports, notes, and correspondence that may be on file with the different agencies; however, agencies vary within cities and counties.

City Planning Department

- Building Plans and Proposed Site Development.
- Land usage constraints based on zoning.

City Building Permit Department

- Building Permits and Plans, which may include proposed fuel storage tanks, sumps, and hazardous material storage.
- Geotechnical Reports addressing subsurface soil characteristics and groundwater depth data.
- Demolition Permits.

City Fire Department

- Notes and records on visual site inspections.
- Notes and records of fuel storage tanks and hazardous material Storage.
- Notes and records of citations and violations.
- Notes and records of fuel storage tank installations/removals.
- Reports and correspondence by consultants or other agencies regarding soil and/or groundwater contamination, and remediation.
- Facility Closure reports requested by the Fire Department.
- HMMP and MSDS documentation.

County Water Districts (Santa Clara and Alameda Counties)

- Notes and records of fuel storage tank leaks or spills.
- Fuel storage tank removal records and reports.
- Soil excavation reports.
- Soil and/or groundwater contamination reports.
- Notes, records, and reports on groundwater monitoring well Installations.
- Groundwater monitoring reports; Quarterly and Annual.
- Correspondence with other agencies, with the property owner, and with consultants regarding potential or known groundwater contamination and remediation.
- Final Closure notification.

County Department of Public Health

- The lead agency in San Mateo County, and in unincorporated areas of Alameda and Santa Clara Counties.
- Maintains essentially the same records as the County Water Districts and the Fire Departments, if it is the lead agency.

Regional Water Quality Control Board

- All reports obtained from the County Water Districts or from the County Health Departments if they are the lead agency.
- Correspondence with other agencies, the property owner, and consultants.
- Requests for additional studies.
- Results of RWQCB public meetings.
- Final Closure notification.

8.0 CONCLUSIONS AND RECOMMENDATIONS

E_2C, Inc. has performed a Phase I ESA in general conformance with the Scope and Limitations of ASTM Practice E1527 of the Krebs Engineering facility located at 1205 Chrysler Drive in Menlo Park, California. Any exceptions to, or deletions from, this practice are described in Section 9.0 of this report. This assessment has not revealed any evidence to indicate, or suggest, that the site has been impacted by past-or-present, on-site land used or owner operations.

Potential ACMs noted during our inspection included 12" x 12" floor tiles and acoustic tiles, 2' x 4' drop ceiling tiles, and rolled linoleum. Because the subject site building was constructed in 1968, ACMs may exist on the site. However, all suspect materials were noted to be in a non-friable condition at the time of our inspection; therefore, no building materials samples were collected during the course of our investigation. Should suspect materials become exposed and friable, or should removal become necessary, E_2C, Inc. recommends that these materials be sampled and that any ACMs be removed and disposed of by a licensed Asbestos Abatement Contractor in accordance with pertinent guidelines.

The site and surrounding area have an approximate 25-year history of commercial and industrial use. Our research of documented fuel and toxic leak sites, located upgradient to the subject site, indicates that while several surrounding sites, are currently, or have been, under investigation for a chemical release, they do not appear to have the potential to negatively impact the subject site.

The subject site is not, itself, a listed toxic or fuel-leak site and at the time of our inspection, there were no visible on-site sources of environmental concern. Secondary containment should be provided for all on-site chemicals.

Based on the research presented in this report, E_2C, Inc. concludes that limited no further investigations are warranted at this time.

9.0 SIGNATURES OF ENVIRONMENTAL PROFESSIONALS

The conclusions of this report are based solely on the Scope of Services outlined and the sources of information referenced in this report. Any additional information that becomes available concerning this report should be submitted to E_2C, Inc. so that our conclusions may be reviewed and modified, if necessary. No groundwater, soil or building materials were collected or analyzed as part of this investigation. This report was prepared in October of 1995 for the sole use of Krebs Engineering and/or their agents.

Should you have any questions or require supplemental information, please do not hesitate to contact us.

Sincerely,

Eileen H. Ashton
Staff Environmental Specialist

Kendall W. Price, CEG/REA
President

DATE: 09/14/95

SUBJECT PROPERTY

Legal Description: 37/E-2
Address: 1205 CHRYSLER DRIVE
MENLO PARK, CA 94025

Order No.: SE95045

REQUESTED INFORMATION

Enviro Scan
1.0 Mile Site Map

Government Records Report
This report is limited in scope and accuracy to the available government records searched as listed in the table of contents. This report represents only a search of those records as of the date specified herein. The specific government records searched do not include all sites of environmental contamination or risk. The subscriber acknowledges that NATEC assumes no responsibility for the completeness and accuracy of the recorded lists as compiled by the various governmental agencies. The purpose of this report is for a records search and is not a substitute for a Phase I Environmental Audit.

Site Map
NATEC Site Maps are based on both U.S. Geological Survey elevation data and U.S. Government Tiger files. The subscriber acknowledges that NATEC assumes no responsibility for the completeness or accuracy of such maps or coordinates derived there from.

Title Custody Report
The Title Custody Report represents a search of the recorded chain of title documents regarding a specific real property. The title reports will show a summary of those deeds, easements, right of ways, and ground leases of record as compiled by the respective County Recorder's Office.
The subscriber acknowledges that other documents that may record pertinent information to the subject property will not be provided in the title report. All services performed shall include only the subject property and shall not include any easements, reversion or other interests in abutting properties. This report is for information only and shall not be deemed to constitute title insurance and will not determine status of ownership or liens on the subject property.

Historical Profile
The Historical Profile report will include a government records search and a written review of pertinent historical aerial photographs of the site on each available decade, including one aerial photograph.
NATEC services does not include an evaluation of the information contained in the recorded documents. The subscriber acknowledges that government records and title records may not include certain information and accepts the limitations of the service provided herein.

MAP KEY

The preceding map represents specific properties found in this report by a corresponding icon and reference number. If more than one site is in a small vicinity (.03 miles), a cluster is assigned to the center of the given group. An example of cluster numbering is as follows:

C1 - (3)

Where C1 indicates CLUSTER #1 and the (3) indicates a total of 3 sites in this cluster.

* Mapping information is based on the mapping information provided by the U.S. Government Tiger files and may vary from local street guide maps. Sites that are not provided on the map are generally the result of inaccurate or incomplete information provided by Federal and State government record lists.

CERCLIS

(Federal)

The information contained in this report is the current database provided by the E.P.A. list as of January, 1995.

The U.S. Environmental Protection Agency (E.P.A.) has compiled this list of contaminated properties for designation under the Federal Superfund Program pursuant to the *Comprehensive Environmental Response Compensation and Liability Act (CERCLA).* These sites represent environmental concern for the discharge of hazardous materials by hazardous waste generators, treatment and storage facilities, and hazardous waste disposal sites.

* Distance coordinates are provided as a convenience only. Estimated distance is based on the mapping information provided by the U.S. Government Tiger files and may vary from local street guide maps. Elevation data is based on U.S. Geological Survey data and is limited in scope and accuracy to this source. Sites that are not provided with coordinates are generally the result of inaccurate or incomplete information provided by Federal and State government record lists.

NPL

(Federal)

NATIONAL PRIORITY LIST

The information contained in this report is the current database provided by the E.P.A. list as of August, 1994.

The Environmental Protection Agency has compiled this list from the designated CERCLIS list. The NPL sites are prioritized as to their significant risk to human health and the environment. The list targets those sites to receive remedial funding under the *Comprehensive Environmental Response Conservation and Liability Act (CERCLA).* The NPL lists the nation's highest priority sites for remedial action. Only NPL sites can receive CERCLA funding.

* Distance coordinates are provided as a convenience only. Estimated distance is based on the mapping information provided by the U.S. Government Tiger files and may vary from local street guide maps. Elevation data is based on U.S. Geological Survey data and is limited in scope and accuracy to this source. Sites that are not provided with coordinates are generally the result of inaccurate or incomplete information provided by Federal and State government record lists.

The NATEC database listing as of this date indicates no locations within a one mile radius of the subject property.

SUPERFUND (LIENS)

FEDERAL SUPERFUND LIENS

The information contained in this report is the current database provided by the E.P.A. list as of November, 1992.

Under the authority granted the E.P.A. by the *Comprehensive Environmental Response Conservation and Liability Act (CERCLA)*, E.P.A. is authorized to place a Superfund Lien on property that the agency has spent money on for remedial action or notified the owner of the potential of liability for remedial action.

* Distance coordinates are provided as a convenience only. Estimated distance is based on the mapping information provided by the U.S. Government Tiger files and may vary from local street guide maps. Elevation data is based on U.S. Geological Survey data and is limited in scope and accuracy to this source. Sites that are not provided with coordinates are generally the result of inaccurate or incomplete information provided by Federal and State government record lists.

The NATEC database listing as of this date indicates no locations within a one mile radius of the subject property.

SWIS

SOLID WASTE INFORMATION SYSTEMS

The information in this report is the current list prepared by the California Waste Management Board as of March, 1993.

The California Waste Management Board maintains this list pursuant to the Solid Waste Management and Resource Recovery Act of 1972. The list contains an inventory of active, inactive, and closed solid waste disposal and transfer facilities.

* Distance coordinates are provided as a convenience only. Estimated distance is based on the mapping information provided by the U.S. Government Tiger files and may vary from local street guide maps. Elevation data is based on U.S. Geological Survey data and is limited in scope and accuracy to this source. Sites that are not provided with coordinates are generally the result of inaccurate or incomplete information provided by Federal and State government record lists.

RCRA

(FEDERAL RCRIS)

RESOURCE CONSERVATION AND RECOVERY ACT

The information in this report is the current database provided by the E.P.A. as of January, 1995.

Under the Resource Conservation and Recovery Act, the Environmental Protection Agency compiles this list classification of generators of hazardous waste materials. Generators in this classification are required to have U.S. E.P.A. I.D. numbers on all waste manifest disposal records. This list is inclusive of, but not limited to: transporters, conditionally exempt small quantity generators, small quantity generators, large quantity generators, treatment/storage/disposal facilities, burner/blenders, transporters, and handler violations.

* Distance coordinates are provided as a convenience only. Estimated distance is based on the mapping information provided by the U.S. Government Tiger files and may vary from local street guide maps. Elevation data is based on U.S. Geological Survey data and is limited in scope and accuracy to this source. Sites that are not provided with coordinates are generally the result of inaccurate or incomplete information provided by Federal and State government record lists.

LUST

LEAKING UNDERGROUND STORAGE TANKS

The information in this report is the current list prepared by the California Water Resources Control Board as of January, 1995.

The State of California Water Resources Control Board (WRCB) in Sacramento provides a list of all leaks of hazardous substances from underground tanks. This database provides information on contamination case types. Additional sources of information are provided by the nine local offices of the WRCB in California.

* Distance coordinates are provided as a convenience only. Estimated distance is based on the mapping information provided by the U.S. Government Tiger files and may vary from local street guide maps. Elevation data is based on U.S. Geological Survey data and is limited in scope and accuracy to this source. Sites that are not provided with coordinates are generally the result of inaccurate or incomplete information provided by Federal and State government record lists.

CORTESE

STATE OF CALIFORNIA OFFICE OF PLANNING AND RESEARCH

The information contained in this report is compiled by the State of California's Governors Office and is current as of November, 1990.

This is a listing of potential and confirmed hazardous waste and substance sites throughout California. The information in this list was consolidated within the State Office of Planning and Research. The data for the list was received from the State Water Resources Control Board (WRCB), The California Waste Management Board (CWMB), and the Department of Health Services (DHS).

This database is no longer in production and is provided as a convenience only.

DHS: Records that have been compiled by the Toxic Substances Control Division of the Department of Health Services. This code indicates an abandoned hazardous waste site.

DHS2: Records that have been compiled by the Environmental Health Division of the Department of Health Services. This code indicates public water drinking wells that serve less than 200 connections ("small wells").

DHS3: Records that have been compiled by the Environmental Health Division of the Department of Health Services and consist of public water drinking wells that serve more than 200 connections ("large wells").

DHS5: Sites pursuant to Section 25356 of the Health and Safety Codes (sites included under the Hazardous Substance Cleanup Bond Act).

WRCB: Records compiled by the Water Resources Control Board. These are sites of reported leaks that have been investigated by the WRCB. Leak sites do not necessarily lie within incorporated boundaries of listed cities.

CWMB: Records compiled by the California Waste Management Board. These are solid waste disposal facilities from which there is a known migration of hazardous waste.

* Distance coordinates are provided as a convenience only. Estimated distance is based on the mapping information provided by the U.S. Government Tiger files and may vary from local street guide maps. Elevation data is based on U.S. Geological Survey data and is limited in scope and accuracy to this source. Sites that are not provided with coordinates are generally the result of inaccurate or incomplete information provided by Federal and State government record lists.

BEP

BOND EXPENDITURE PLAN

The information in this report is the current list prepared by the California Department of Health Services as of January, 1990.

Under the California Hazardous Substance Bond Act of 1984, the California Department of Health Services has developed a listing of those hazardous waste sites subject to develop a site specific expenditure plan for an appropriation of funds for cleanup under the Bond Expenditure Plan.

This database was incorporated into the CAL-SITES database. It is no longer in production and is provided as a convenience only.

* Distance coordinates are provided as a convenience only. Estimated distance is based on the mapping information provided by the U.S. Government Tiger files and may vary from local street guide maps. Elevation data is based on U.S. Geological Survey data and is limited in scope and accuracy to this source. Sites that are not provided with coordinates are generally the result of inaccurate or incomplete information provided by Federal and State government record lists.

The NATEC database listing as of this date indicates no locations within a one mile radius of the subject property.

CAL-SITES

The information contained in this report is the current database provided by the E.P.A. as of March, 1995.

The CDHS compiled this database pursuant to Section 253596 of the California Health and Safety Code. The list contains information on potential hazardous waste sites that have been identified by the Historical Abandoned Site Survey Program. The CDHS researched a major portion of the various state environmental agencies that could possibly help identify potential hazardous waste sites. Once sites are confirmed as hazardous sites they may be merged into the database of the CORTESE List and/or the Bond Expenditure Program (BEP) List. Names may remain on this list even though a determination has been made that no leak had occurred and the DHS is requiring no further action to protect the environment or public health.

* Distance coordinates are provided as a convenience only. Estimated distance is based on the mapping information provided by the U.S. Government Tiger files and may vary from local street guide maps. Elevation data is based on U.S. Geological Survey data and is limited in scope and accuracy to this source. Sites that are not provided with coordinates are generally the result of inaccurate or incomplete information provided by Federal and State government record lists.

FACILITY DATA

Distance:	0.3 mile Northwest
Elevation:	22'
Map Ref.#:	5
Facility No.:	41-35-0016
Facility Name:	SEIBERT, J., MACHINE CORP
Address:	119 INDEPENDENCE DR.
City and zip:	MENLO PARK 94025
Status:	Site Screening Req'd The site requires an initial screening. A SS normally takes about fifteen hours and includes a review of the readily available documentation and, usually, a drive-by. Sites will usually be given a status of NFA, PEARL, PEARM, or PEARH after the SS is complete.
Status Date:	06/01/88

Distance:	0.5 mile Southeast
Elevation:	31'
Map Ref.#:	C1
Facility No.:	41-28-0137
Facility Name:	RAYCHEM CORPORATION
Address:	300 CONSTITUTION DRIVE
City and zip:	MENLO PARK 94025
Status:	Former Annual Workplan Site, Referred to RCRA The site has been on the Annual Workplan or State Bond Expenditure Plan in the past and is now being mitigated under the lead of the Permitting Program.
Status Date:	08/01/94

Facility No.:	41-49-0048
Facility Name:	BROWNING-FERRIS INDUSTRIES
Address:	END OF MARSH ROAD, EAST OF HIGHWAY 101
City and zip:	MENLO PARK 94025
Status:	Former Annual Workplan Site, Referred to RWQCB The site has been on the Annual Workplan or State Bond Expenditure Plan in the past and is now being mitigated under the lead of the RWQCB.
Status Date:	04/01/85

WDS

WASTE DISCHARGE SYSTEMS

The information in this report is produced by the State of California Environmental Affairs Agency Office of Hazardous Material Data Management.

This data base contains information on sites which have been issued waste discharge requirements. Under State and Federal regulations, generators are allowed to discharge to publicly owned treatment works (POTW's) specified levels of waste water toxins. (Some of these industries have categorical pretreatment standards for their discharges; other companies may fall under locally developed limits.) The current information was compiled from the agency published list as of August, 1994.

* Distance coordinates are provided as a convenience only. Estimated distance is based on the mapping information provided by the U.S. Government Tiger files and may vary from local street guide maps. Elevation data is based on U.S. Geological Survey data and is limited in scope and accuracy to this source. Sites that are not provided with coordinates are generally the result of inaccurate or incomplete information provided by Federal and State government record lists.

The NATEC database listing as of this date indicates no locations within a one mile radius of the subject property.

SARA TITLE III

TOXIC CHEMICAL RELEASE INVENTORY

Section 313 of the Emergency Planning and Community Right to Know Act (Title III of the Superfund Amendments and Re-authorization Act of 1986) requires certain facilities to file an annual toxic chemical release inventory form with the United States Environmental Protection Agency and the California Environmental Affairs Agency. Facilities are required to report releases to air, water, and land. The current information was compiled from the agency published list as of August, 1993.

* Distance coordinates are provided as a convenience only. Estimated distance is based on the mapping information provided by the U.S. Government Tiger files and may vary from local street guide maps. Elevation data is based on U.S. Geological Survey data and is limited in scope and accuracy to this source. Sites that are not provided with coordinates are generally the result of inaccurate or incomplete information provided by Federal and State government record lists.

WMUDS

WASTE MANAGEMENT UNIT DATABASE SYSTEM

This report lists sites tracked by the State of California Water Resources Control Board staff and the Regional Water Quality Control Boards for program tracking and inventory of waste management units.

WMUDS is intended as an enhancement to WDS (Waste Discharger System); it does not duplicate any information in WDS. In addition, WMUDS contains information regarding SWAT (Solid Waste Assessment Test program) and TPCA (Toxic Pits) programs. The current information was compiled from the agency published list as of January, 1995.

* Distance coordinates are provided as a convenience only. Estimated distance is based on the mapping information provided by the U.S. Government Tiger files and may vary from local street guide maps. Elevation data is based on U.S. Geological Survey data and is limited in scope and accuracy to this source. Sites that are not provided with coordinates are generally the result of inaccurate or incomplete information provided by Federal and State government record lists.

UST

UNDERGROUND STORAGE TANKS

The information in this report is the current list prepared by the California Water Resources Control Board as of August, 1994.

The State of California Water Resources Control Board (WRCB) in Sacramento provides a list of all permitted underground tanks containing hazardous substances. This database provides information on all registered underground storage tanks.

* Distance coordinates are provided as a convenience only. Estimated distance is based on the mapping information provided by the U.S. Government Tiger files and may vary from local street guide maps. Elevation data is based on U.S. Geological Survey data and is limited in scope and accuracy to this source. Sites that are not provided with coordinates are generally the result of inaccurate or incomplete information provided by Federal and State government record lists.

ERNS

EMERGENCY RESPONSE NOTIFICATION SYSTEM

ERNS supports the release notification requirements of section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), as amended; section 311 of the Clean Water Act; and sections 300.51 and 300.65 of the National Oil and Hazardous Substances Contingency Plan.

ERNS is a national database and retrieval system of Incident-Notification information, as initially reported: regarding incidents of reported releases of oil and hazardous substances. The information contained in this report combines data from the United States Coast Guard National Response Center Database with data from the 10 EPA Regions.

Information is recorded in ERNS when a release is initially reported to the federal government by any party. Most of the information in ERNS is comprised of initial notifications, supplying preliminary information on a release, and are cited as unverified data. The current information was compiled from the agency published list as of June, 1993.

* Distance coordinates are provided as a convenience only. Estimated distance is based on the mapping information provided by the U.S. Government Tiger files and may vary from local street guide maps. Elevation data is based on U.S. Geological Survey data and is limited in scope and accuracy to this source. Sites that are not provided with coordinates are generally the result of inaccurate or incomplete information provided by Federal and State government record lists.

The NATEC database listing as of this date indicates no locations on the subject property.

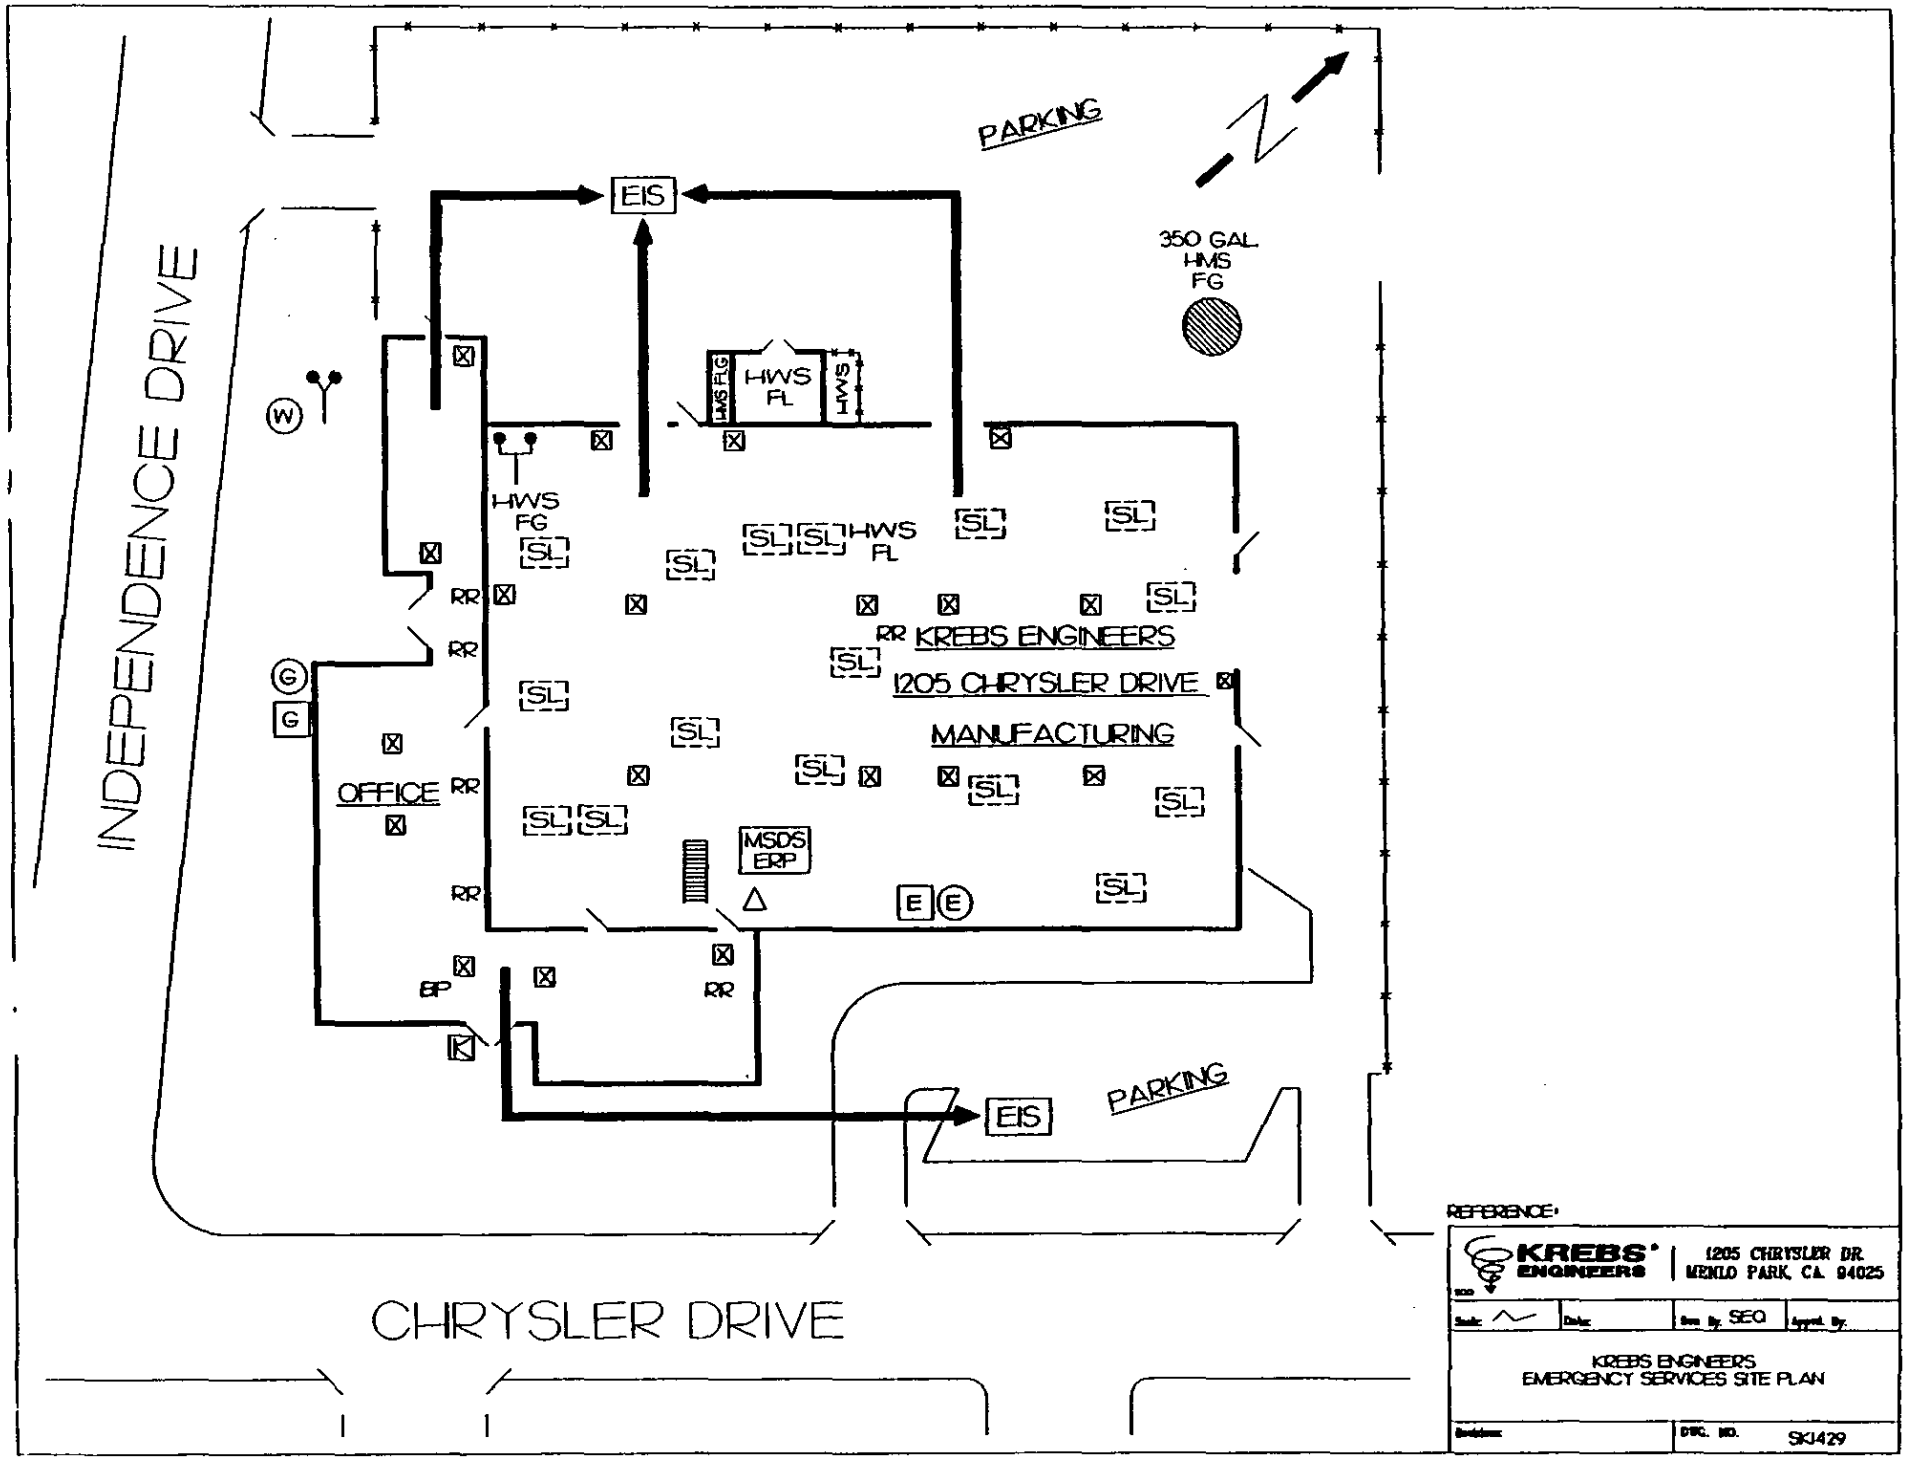
SECTION C. PREVENTION PLAN

1. How are chemical products/wastes handled, stored and monitored to prevent the releases from occurring?
Only trained employees or liscensed haulers are permitted to work with chemical products/ wastes.

2. List the emergency equipment maintained on site for use in a possible chemical spill, fire and/or explosion.
Protective clothing, FIRE EXTINGUISHERS, SECONDARY CONTAINMENT, LIQUID ABSORBING MATERIAL, EYEWASH

3. Describe arrangements you have made with local fire, health, and medical agencies to familiarize them with your facility's operation?
DETAILED SITE LAYOUT OF FACILITY, INCLUDING LOCATION OF HAZARDOUS MATERIALS AND FIRE FIGHTING EQUIPMENT



SECTION D. EMERGENCY PROCEDURES

4. Describe any security system in place at your facility that would assist or impede emergency response personnel upon their arrival at your facility.
HONEY PROTECTION SERVICES MONITORS FIRE ALARMS AND PHONES EMERGENCY PERSONNEL WHEN ALARMS OR FIRE BELLS ARE ACTIVATED

5. In the event of a chemical spill each facility is required by State Law to provide an immediate verbal report to:

   a) The local Fire Department (911)
   b) The State Office of Emergency Services (OES)
   (800) 852-7550 or (916) 427-4341

   In the event of a release affecting the environment either on or off-site, how will immediate notification and evacuation of employees be conducted? Indicate evacuation routes and assembly areas on the general facility map.

SUBJECT: **PHASE II ENVIRONMENTAL SITE ASSESSMENT**
1205 Chrysler Drive
Menlo Park, California

Dear Mr. King:

E_2C, Inc. is pleased to present herein the results of our Phase II Environmental Site Assessment (ESA) conducted at the above-mentioned site. The work documented within this report was performed in accordance with our Proposals dated March 29 and April 17, 1996, which outlined actions specifically aimed at determining if the subject site has been impacted by the migration of contaminants from upgradient sources. This investigation also included the collection of five building material samples for asbestos analysis. The collection of these samples was verbally authorized by Mr. King on April 23, 1996.

Should you have any questions or require supplemental information, please do not hesitate to contact us.

Sincerely,

Eileen H. Ashton

1.0 INTRODUCTION

E_2C, Inc. has completed a Phase II ESA at 1205 Chrysler Drive, in Menlo Park, California. This investigation was performed to ascertain if the subject site has been impacted by the migration of contaminants from upgradient sources. Based on the original construction date (1968) of the subject site building, this investigation also included the collection of five building material samples for asbestos analysis.

This investigation consisted of the advancement of six exploratory soil borings, the collection of soil samples at strategic intervals, the collection of grab groundwater samples, and the collection of five building material samples.

This report presents the methodologies employed by E_2C, Inc. during the performance of this investigation, results of laboratory analyses, and appropriate Conclusions and Recommendations.

2.0 LOCATION AND DESCRIPTION

The subject site is located at 1205 Chrysler Drive, in the City of Menlo Park, California (see Figure 1). According to the United States Geological Survey (USGS) Map, Palo Alto Quadrangle, the site is located in Section 22, Township 5 South and Range 3 West of the Mount Diablo Base and Meridian, at an approximate average elevation of 10-feet above mean sea level.

The subject site, which is located in an industrial area, is currently occupied by one commercial building, approximately 34,400 square feet in size. Paved parking areas and landscaping surround the building.

2.1 Regional and Site Geology

The subject site is located on the east side of the San Francisco Peninsula, on a relatively narrow alluvial plain between the Santa Cruz Coastal Mountains and the San Francisco Bay. The area of the subject site is underlain by alluvial deposits of late Pleistocene Age (10,000 to 70,000 years old). These deposits are underlain by bedrock of the Franciscan Formation, that is considered to be of Mesozoic Age (65 to 225 million years old).

The alluvium was derived from the erosion of older Jurassic/Cretaceious bedrock of the Franciscan Series which formed the Coastal Range Mountains, and was deposited by flowing water on active stream channels, terraces, and on developing alluvial fans. The deposits grade from poorly consolidated, coarse-grained sands and gravels on the west side of the plain along the base of the mountains to fine-grained alluvial fan and fresh water marsh deposits to the east near the Bay. These bedded deposits vary from being moderately or highly permeable (sands and gravels) to low-permeable aquitards (clay). The underlying Franciscan rocks are composed of graywacke, greenstone, sandstones, conglomerates, and other hard units.

During the cenozoic Era (the last 65 million years), the region has been subject to complex tectonic evolution as the ancestral California margin underwent transition from a convergent to a transform plate margin (Atwater, 1970). During this period, the earth's crust was broken into smaller sinking blocks that formed basins and embayments. These are interspersed with areas of uplift that formed highlands, such as the coastal mountains.

2.2 Soil and Hydrologic Conditions

According to the United States Soil Conservation Service, Soil Survey of San Mateo County, Eastern Part, and the San Francisco County, California (1991), the subject site area has been classified as Urban land-Orthents; soil which is either covered by asphalt, concrete, buildings, and other structures (Urban land) or that consists of soil materials, gravel, broken cement and asphalt, bay mud, and solid waste material (Orthents). This soil type occurs in areas that were once part of San Francisco Bay and adjacent tidal flats but have been filled to accommodate development. They tend to be highly variable in their properties and characteristics due to the type and amount of fill material used.

The subject site is located on reclaimed land, and the imported surface soils on the site are approximately 6-to-8 inches thick, based on information from drilled soil borings on nearby sites. Underlying soils tend to be water-saturated, moderately to highly plastic clays referred to as "Bay Mud." These clays generally have a very low permeability, and do not release water easily.

Groundwater in the local vicinity is estimated to flow in a northerly direction, although the direction of flow may be locally altered by supply well pumping, remedial extraction wells, and by the salt evaporation ponds located north of the subject site.

3.0 SITE BACKGROUND

According to research performed on the subject site by E_2C, Inc. for a Phase I ESA dated October 6, 1995, the subject site was initially developed with the current building in 1968. The current tenant, Krebs Engineering (Krebs), has been the sole occupant of the building.

Krebs utilizes the site for the administrative, testing, and assembly of eqiupment used in mining operations. The facility was found to generate small quantities (less than 5-gallons) of hazardous waste per year, which it handled and disposed in a safe and appropriate manner.

The subject site is located downgradient (with respect to groundwater flow direction), and within ¼-mile of, at least three known, agency-listed chemical release sites. These sites were not thought to have the potential to impact the subject site based on both documented attentuation and distance from the subject site; however, as discussed in Section 5.3.2 of this report, the chemicals released at these three sites may be off-site sources of the low concentrations of contamination detected in the groundwater of the subject site during this Phase II ESA.

4.0 SCOPE OF WORK

The scope of work conducted during this study included the following tasks:

- Performed a Soil/HydroPunch survey that rendered three soil samples and two "grab" groundwater samples from six separate locations. All soil samples were analyzed for Total Recoverable Petroleum Hydrocarbons (TRPH); two water samples were analyzed for Volatile Organic Compounds (VOCs); and one water sample was analyzed for Total Petroleum Hydrocarbons in the form of gasoline (TPHg) and Benzene, Toluene, Ethylbenzene, and Xylenes (BTEX).

- After sample collection, all Soil/HydroPunch borings were filled to grade with a Type II Portland cement.

- Collection and analyses of five building material samples thought to possibly contain asbestos. These samples were analyzed utilizing Polarized-Light Microsopy (EPA Method 600).

- Preparation of this report documenting the results of this soil, groundwater, and asbestos investigation.

5.0 E_2C, INC. FIELD INVESTIGATION

On April 25, 1996, three exploratory soil borings (SP-1 through SP-3) were advanced inside the subject building as shown on Figure 2. Soil samples were collected from a depth of approximately 2-feet below grade at each location. An attempt to collect one grab groundwater sample from the boring located in the Machine Shop was prevented due to encountering refusal at a depth of approximately 5-feet below grade. Additional temporary borings were attempted in this area without success.

Additionally, three exploratory groundwater borings (HP-1 through HP-3) were advanced along the southern and eastern (upgradient with respection to groundwater flow direction) property boundaries as shown on Figure 2. Groundwater was encountered at approximately 6 feet. Grab groundwater samples were collected from HP-1 and HP-2; however, groundwater did not flow into HP-3. Therefore, HP-3 was allowed to remain open for a period of 24 hours at which time another attempt to collect a groundwater sample was made without success. On April 29, 1996, the boring was relocated approximately 1.5-feet to the south of the original boring and a groundwater sample was collected.

All samples were collected utilizing Soil/HydroPunch methodology as described in Subsection 5.1.

5.1 SoilPunch/HydroPunch Methodology

SoilPunch sampling consists of using a hydraulic hammer to drive sections of ¾-inch diameter galvanized steel pipes, containing a steel rod, into the ground until the desired point of sample collection is encountered. Once the desired depth is reached, the rod is removed from the pipe and the open pipe is driven further into the soil causing an undisturbed soil sample to be retained in the end of the pipe. The pipe is then removed from the ground and the section of pipe

containing the soil sample is cut off and retained as the sample. The ends of the sample tube are covered with a small sheet of teflon and tight-fitting caps.

HydroPunch sampling consists of driving five-foot sections of ¾-inch diameter galvanized-or carbon-steel pipes into the ground, past the point of soil sample collection, until the perforated lead section of pipe is situated within the water-bearing zone. The end of the lead section of pipe is plugged so that soil will not enter the tube as the pipe is driven through the soil. Because the lead section of pipe is perforated, groundwater will generally flow into the pipe. To encourage groundwater migration into the pipe, sparging is sometimes performed. Sparging consists of pressurizing the HydroPunch hole through the open pipe with filtered air at a rate of 100-cubic feet per minute for a period of approximately two seconds. The pressurized air is passed through a 0.05 micron filter with a pressure gauge. This procedure often opens up pores or small channels in the soil that will allow water to then flow into the pipe. Once groundwater flows into the pipe, a sample is obtained from the conduit using a clean, stainless-steel bailer.

All soil and groundwater samples were placed on ice and transported under Chain of Custody to a California certified analytical laboratory.

5.2 Results of Laboratory Analyses

All soil samples were analyzed for TRPH; two water samples were analyzed for VOCs; and one water sample was analyzed for TPHg and BTEX. The results are summarized in the following Subsections, on Figure 3, and are presented in their entirety in Appendix A.

5.2.1 Soil Sample Analyses and Results

The laboratory analyses results indicate that low concentrations of TRPH (oil and grease) were detected in SP-1 (collected in the Testing Area) and

in SP-3 (collected in the Paint Spray Booth Area). Machining oils are not utilized by Krebs in either of these areas. Detected concentrations were 140 parts per million (ppm) and 50 ppm, respectively. TRPH was not detected in SP-2 (collected from the Machine Shop). The concentration detected in SP-3 is above the traditional regulatory action level of 100 ppm. TRPH is relatively immobile in soils and these detected levels will likely degrade in-place and do not represent a threat to groundwater beneath the subject site.

Based on Krebs' historical use of hazardous materials, it appears unlikely that their operations are the cause of this contamination. Possible attributable causes may be site grading operations (i.e. use of oil for dust control) and/or grading equipment maintenance. It was not uncommon during the late 1960's and early 1970's, for the maintenance of grading equipment to be performed at a project site. Often this meant the dumping of spent industrial lubricants and fluids (i.e. used crank case oil). Additionally, the source of the engineered fill used to reclaim this site is unknown and, therefore, it is also possibile contaminated fill was utilized.

5.3.2 Grab Groundwater Sample Analyses and Results

The laboratory analyses results indicate that groundwater contamination due to TPHg (140 parts per billion [ppb]) was detected in HP-3. The VOC Trichloroethene (TCE) was detected in both HP-1 (81 ppb) and HP-2 (48.2 ppb). As all sample locations are upgradent with respect to groundwater flow direction, it appears that this contamination originated off-site and is not due to Krebs' business operations. The laboratory reports are presented in Appendix B.

As discussed in E_2C, Inc.'s Phase I ESA, dated October 6, 1995, for the subject site, three sites in the surrounding area have the potential to be

the source of these contaminants. Bay Associates (Bay), located approximately 500-feet to the southwest of the subject site, removed a 1,000-gallon gasoline Underground Storage Tank (UST) in 1985. Although the environmental consultant for Bay stated that off-site migration appeared to be prevented due to soil conditions and a relatively flat gradient, this site should be considered as a potential off-site source of the TPHg detected in HP-3.

Heublein Inc. (Heublein), located at 151 Commonwealth Drive is located approximately ¼-mile from the subject site. As discussed in detail in the Phase I ESA, this site is under investigation for contamiation due primarily to TPHd; however, trace concentrations of several VOCs, and most notably TCE, have been detected in the groundwater. While groundwater at this site has been documented to flow away from San Francisco Bay due to extensive groundwater pumping in the inland areas, it is not unreasonable to consider this a potential off-site source of contamination.

It should be noted that while the two sites mentioned above are listed chemical release sites, there may be additional, unlisted and unknown off-site sources.

5.3 Destruction of Soil Borings

After advancement and sample collection, all borings were destroyed using a Type II Portland cement grout that was poured into the boreholes and brought to existing grade.

6.0 ASBESTOS

E_2C, Inc. collected samples of five building materials on April 26, 1996. The samples were analyzed for asbestos content by Environmental Management Consultants (EMC) of Phoenix, Arizona, using EPA Method 600/M4-82-020 (Polarized Light Microscopy [PLM]). As shown on Table 1, the results of the sample analyses indicate that asbestos is present at a level of 20% within the linoleum in the ladies rest room located in the "new" office wing; at a level of 3% in the mastic of the gray 12"x12" Vinyl Floor Tile (VFT) located throughout the building; and, in the "mud" of the wallboard collected from the ladies lounge in the original portion of the building. None of the building materials collected were in a friable condition. Please see Figure 4 for a map of the sample collection points and Appendix C for a copy of EMC's certified analytical report.

6.1 General Discussion on Asbestos

By 1978, the U.S. EPA and the Consumer Product Safety Commission had implemented bans on the manufacturing of friable Asbestos Containing Materials (ACMs) in building materials such as sprayed-on pipe insulation, acoustical ceiling material, and sprayed-on fire proofing. Subsequent efforts to ban the use of asbestos in the manufacturing of non-friable building materials, such as joint compound, asphalt-roofing materials, and flooring materials were overturned in 1991. Based on this information, it is assumed that the greater the age of the building, the greater the potential that ACMs are present.

Asbestos is not generally considered to be a health threat unless the individual fibers become airborne and are inhaled. This phenomena will occur if the more friable ACMs are disturbed. The airborne release of asbestos fibers is very rare in materials such as VFTs, rolled linoleum floor coverings, and sheetrock-joint compounds because the fibers in the floor tiles and linoleum are cemented together and, in the case of sheetrock-joint compounds, the fibers generally are

encapsulated by paint. If these materials are properly maintained (i.e., kept waxed or painted) and not disturbed through excessive wear or removal, they are not considered by the EPA or the Bay Area Air Quality Management District (BAAQMD) to be an environmental or health threat.

Sprayed-on acoustical ceiling plaster (sometimes referred to as "cottage cheese" or "popcorn material" because of its textured appearance) has a greater potential to become friable because of its composition. However, through proper maintenance (i.e., the application of paint or another sealing material), the potential for this material to become friable is minimized.

As of the time of this investigation, we know of no laws which require the abatement of ACMs from buildings unless the building is to be demolished. Legislation exists that requires owners of buildings with known ACMs to inform the tenants or residents of the building that ACMs are present (California Health and Safety Code Sections 25915 - 25919.7). Furthermore, Section 25915 requires that the knowledge of ACMs on properties be disclosed during real estate transactions.

According to two recently published documents, "Asbestos" by the BAAQMD, and "Asbestos in the Home" by the EPA's Consumer Product Safety Commission, the current recommendation regarding ACMs is that they be properly maintained and are allowed to remain in place. This minimizes the release of ACMs into the atmosphere that would be created by the disturbance of the ACMs. As stated above, these maintenance methods include sealing the ACMs with paint or other sealers. In the case of VFTs that would otherwise be removed, EPA recommends that the old ACM tile be left in place and covered with newer, non-ACM tiles.

7.0 CONCLUSIONS AND RECOMMENDATIONS

E_2C, Inc. has completed a Phase II ESA for the subject property located at 1205 Chrysler Drive which included the collection of three soil samples from locations within the subject building, three grab groundwater samples from the exterior of the property, and five suspect ACM samples.

7.1 Conclusions

The results of this study indicate that soil contamination due to TRPH exists in the soil beneath the building. Additionally, groundwater contamination due to TPHg and TCE exists in the groundwater beneath the property. Detected contaminant concentrations are considered low. It does not appear, based on the low quantities and types of hazardous materials utilized by Krebs during their business operations, that there is, or has been, an on-site source for the contamination. Possible attributable causes are site grading operations (i.e. use of oil for dust control), historic on-site maintenance of grading equipment (circa 1968), or contaminated engineered fill. It is likely that passive bioremedation will gradually eliminate the near surface area impacted with low levels of TRPH.

Based on the laboratory analyses of groundwater samples collected from three upgradient borings, it appears that contaminated groundwater has migrated onto the subject site from off-site sources. Moderate concentrations of TCE were detected in two groundwater samples collected from along the eastern property boundary and a low concentration of TPHg was detected in the groundwater sample collected from the southern property boundary. Based on the detected concentrations, the knowledge of nearby, documented, chemical release sites, and the effects of natural attentuation, it appears that these sample locations may be at the downgradient edge of a contaminant plume, or plumes.

Additionally, asbestos was detected in one of the linoleum types, in mastic, and in the "mud" of the original wallboard. However, the building is maintained in an excellent condition and the identified ACMs were observed to be non-friable. The detected asbestos does not represent a health threat as long as it is properly maintained.

7.2 Recommendations

This investigation was not required by any regulatory authority; however, it may be prudent to report the groundwater findings to the San Mateo County Department of Health Services (SMCDHS), the agency overseeing the nearby chemical release sites. This information could assist in the investigation of these chemical release sites.

All building materials found to contain asbestos should be property maintained. If major remodeling, or demolition, is to occur, a licensed asbestos abatement contractor should be contacted prior to any activity.

8.0 PROFESSIONAL CERTIFICATION AND LIMITATIONS

This report has been prepared by E_2C, Inc., under the professional supervision of the Principal whose seal and signature appears herein.

The conclusions of this report are based solely on the Scope of Services outlined and the sources of information referenced in this report. Any additional information that becomes available concerning this site should be submitted to E_2C, Inc. so that our conclusions may be reviewed and modified, if necessary. This report was prepared for the sole use of Mr. Jack King and/or his agents.

Should there be any questions or require supplemental information, please do not hesitate to contact us.

Sincerely,

Eileen H. Ashton
Staff Environmental Specialist

Kendall W. Price, CEG/REA
President

ATTN: Mr. Douglas Schlepp
SUBJECT: **SOIL & SLUDGE SAMPLING REPORT**
1205 Chrysler Drive
Menlo Park, California

Dear Mr. Schlepp:

E_2C, Inc. is pleased to present herein the results of our soil and sludge sampling event conducted at 1205 Chrysler Drive (hereafter referred to as the Site). The work documented within this report was performed pursuant to the request of the San Mateo Office of Environmental Health (SMOEH) and in accordance with our Proposal dated August 29, 1996. The work was witnessed by Mr. Duane O'Donnell of the SMOEH.

Laboratory analyses of the three samples of residual material (sludge) from sumps located in the former Testing Area (Sump #1), the former Paint Booth (Sump #2), and the former Machine Shop (Sump #3) indicated elevated concentrations of lead in Sump #1, TRPH in all three sumps, and VOCs in Sump #2. One of the two native soil samples collected in the area of the former compressor equipment indicate the presence of low levels of petroleum oil.

The attached report documents the methodologies employed by E_2C, Inc. during this investigation and presents our findings and conclusions. Should you have any questions or require supplemental information, please do not hesitate to contact us.

Sincerely,

Eileen H. Ashton
Staff Environmental Specialist

1.0 INTRODUCTION

E_2C, Inc. has completed soil and sludge sampling at 1205 Chrysler Drive in Menlo Park, California (the Site). This sampling was mandated in an August 22, 1996 letter to Krebs Engineers by the San Mateo County Environmental Health Services (SMCEHS). A copy of the August 22, 1996 letter is presented in Appendix A.

This investigation consisted of the collection of three residual material samples (sludge) collected from three interior separators, and the collection of two native soil samples: one below the former concrete compressor pad, and one in a downgradient position relative to the former compressor location.

This report presents the methodologies employed by E_2C, Inc. during the performance of this investigation, results of laboratory analyses, and appropriate Conclusions and Recommendations.

2.0 LOCATION AND DESCRIPTION

According to the United States Geological Survey (USGS) Map, Palo Alto Quadrangle, the site is located in Section 22, Township 5 South, and Range 3 West of the Mount Diablo Base and Meridian, at an approximate average elevation of 10-feet above mean sea level. Please see the Site Location Map presented as Figure 1.

According to the Menlo Park Planning Department, the Site and surrounding industrial area has a zoning designation of M2, which stands for General Industrial use. A one-story commercial building (circa 1968) (approximately 34,400 square feet in size), associated paved parking areas, and landscaping currently occupy the Site.

2.1 Regional and Site Geology

The Site is located on the eastern side of the San Francisco Bay depression, a major structural depression in northwestern California that is located between the Diablo Range on the east and the Santa Cruz Mountains on the west. The Bay depression was created by the downwarping of the San Andreas rift zone, near the western side of the depression, and the Hayward fault, running along the base of the East Bay Hills on the eastern side (Department of Water Resources, 1968). The Hayward fault trends northwest-southeast, approximately 4-miles east of the Site.

The area of the Site is underlain by alluvial deposits of late Pleistocene Age (10,000 to 70,000 years old). The Pleistocene Age deposits are underlain by bedrock of the Franciscan Formation, that is considered to be of Mesozoic Age (65 to 225 million years old). The alluvium was derived mainly from the erosion of older sedimentary rocks in the Diablo Range to the east that was deposited by flowing water on active stream channels, terraces, and on developing alluvial fans. These late Pleistocene Age deposits are locally very thick, and generally

consist of weakly consolidated, slightly weathered, poorly sorted, irregular, interbedded clay, silt sand, and gravel (Helley et al., 1979).

2.2 Soil and Hydrologic Conditions

According to the United States Soil Conservation Service, Soil Survey of Santa San Mateo County, Eastern Part, and San Francisco County, California (1991), the surface soils at the Site have been classified as Urban land-Orthents; soil which is either covered by asphalt, concrete, buildings, and other structures (Urban land), or that consists of soil material, gravel broken cement and asphalt, bay mud, and solid waste material (Orthents). This soil type occurs in areas that were once part of San Francisco Bay and adjacent tidal flats but have been filled to accommodate development. They tend to be highly variable in their properties and characteristics due to the type and amount of fill material used.

The Site is located on reclaimed land and imported surface soils on the site are thought to be approximately 6 to 8 feet thick. Underlying soils tend to be water-saturated, moderately to highly plastic clays referred to as "Bay Mud." These Clays generally have a very low permeability, and do not release water easily.

Groundwater in the local vicinity is estimated to flow in a northerly direction, although the direction of flow may be locally altered by supply well pumping, remedial extraction wells, or by the salt evaporation ponds located north of the Site. Depth to groundwater has been measured to be approximately seven feet below ground surface (bgs).

3.0 SITE BACKGROUND

Krebs Engineers (Krebs), a manufacturer of equipment used primarily in the mining industry, has occupied the Site since its development in 1967. The facility housed the administrative, testing, and assembly operations and included a machine shop, welding area, sandblasting unit, two paint booths, chemical storage areas, and offices. Krebs recently moved its operations out-of-state and no longer has operations at the Menlo Park facility.

4.0 SCOPE OF WORK

The Scope of Work conducted during this study included the following tasks:

- The collection of one sample of sludge from each of three interior sump chambers. Each sample was analyzed for the presence of Chromium (Cr), Cadmium (Cd), Nickel (Ni), Lead (Pb), Zinc (Zn), TRPH, and VOCs.

- The collection of two near surface soil samples from below the concrete slab in the location of the former compressor. Each sample was analyzed for the presence of Cr, Cd, Ni, Pb, Zn, and TRPH.

- After sample collection, the borings were filled to grade with a Type II Portland Cement.

- Preparation of this report documenting the results of this sampling event.

5.0 E_2C, INC. FIELD INVESTIGATION

5.1 Sample Collection Methodology

The sludge samples from the sumps were collected in clean, brass sampling tubes (with one end capped), which was inserted by hand into the material and allowed to fill with liquid and sludge. The sludge was compressed into the tube, allowing the liquid to rise to the top and drain back into the sump. This process was repeated until the entire sampling tube was filled with sludge material.

For the collection of soil samples beneath the former compressor area, the concrete slab was first cored with a 4-inch diameter drill. Using a hand-auger, shallow borings were advanced into the near surface soil at each sampling location to a depth of approximately eight inches. When the desired point of sample acquisition had been reached, the auger head was removed from the boring. Soil was removed from the auger head and packed by hand into a clean, brass sampling tube. After the sampled material was packed into the tubes, the ends of the tubes were covered with aluminum foil, capped, and labeled. All samples were transported under refrigeration to a State-certified laboratory for subsequent analyses. A Chain-of-Custody accompanied the samples. Soil sample locations are shown on Figure 2.

5.2 Results of Sample Analyses

The results of analyses for the sludge and the two soil samples are presented in Table 1 below. Detected concentrations above the State Total Threshold Limit Concentration (TTLC) values, or recommended regulatory cleanup levels, are highlighted. Please see Appendix B for the complete laboratory report.

TABLE 1
RESULTS OF SOIL SAMPLE ANALYSES
(in parts per million [ppm])

Sample Type	Sample ID	Location	TRPH	VOCs	Cr	Cu	Ni	Pb	Zn
Sludge	Sump #1	Testing Area	610	<0.000 5-0.001	16	5.4	94	1,200	550
	Sump #2	Paint Booth	30,000	252.7	450	1.6	84	91	4,100
	Sump #3	Machine Shop	800	0.0573	240	2.3	440	49	650

	TTLCs	--	--	--	500	100	2,000	1,000	5,000

NA = Not Analyzed

5.3 Destruction of Soil Borings

After advancement and sample collection, the borings were destroyed using a Type II Portland cement grout that was poured into the boreholes and brought to existing grade.

6.0 CONCLUSION

E_2C, Inc. has completed soil and sludge sampling related to Facility Closure Requirements for the Site located at 1205 Chrysler Drive. This sampling event included the collection of three samples from sludge found in the three interior sumps, and two native soil samples from locations near the former compressor, which was located behind the building.

Analyses of these samples show elevated concentrations of lead in Sump #1 (Testing Area), TRPH in all three sump samples, and VOCs in Sump #2 (Paint Booth). All residual material (liquid and solid) should be removed from each of the three sumps and properly disposed of by a licensed hazardous waste hauler. The SMCEHS guidelines, dated July 1991 (see Appendix C), should be subsequently followed for the steam cleaning and removed or abandoned in place.

Detected concentrations of metals and TRPH in the two soil samples (#4 and #5) collected from beneath the former air compressor were below regulatory action levels, therefore, no further action in regards to this area is recommended.

A copy of this report should be provided to:

7.0 PROFESSIONAL CERTIFICATION AND LIMITATIONS

This report has been prepared by E_2C, Inc., under the professional supervision of the Principal whose seal and signature appears herein.

The conclusions of this report are based solely on the Scope of Services outlined and the sources of information referenced in this report. Any additional information that becomes available concerning this site should be submitted to E_2C, Inc. This report does not document complete closure activities, but only that portion related to intial soil and sludge sampling. This report was prepared for the sole use of Krebs Engineers and/or its agents.

Should you have any questions or require supplemental information, please do not hesitate to contact us.

Sincerely,

Eileen H. Ashton
Staff Environmental Specialist

RE: Closure Requirements for 1205 Chrysler Drive, Menlo Park

As we discussed on the telephone this morning, closure requirements for the above site include:

1. Completion of all requirements of the San Mateo County hazardous materials Business Closure Guidelines, including preparation of a closure workplan.

2. Compliance with San Mateo County closure guidelines for oil/water separators (clarifiers).

3. Sampling plan to include, and not limited to:

   a. Soil samples in the compressor pad / oil storage area, which exhibited extensive petroleum stains on areas of the concrete pad which was cracked.

   b. Laboratory identification of liquids and sludges in the oil/water separator/clarifiers.

As the attached guidelines indicate, a representative of this Division must be present during all sampling operations.

Completion of the above referenced requirements will insure that contaminated equipment and structures are identified and decontaminated prior to new tenancy. However, the issue of groundwater contamination on the property must be addressed with Gail Lee of the San Mateo County Remedial Oversight Program. Ms. Lee's telephone number is 415-363-4972.

APPENDIX C
SMCEHS CLOSURE GUIDELINES FOR OIL/WATER SEPARATORS

ENVIRONMENTAL HEALTH SERVICES DIVISION

BOARD OF SUPERVISORS
ANNA G. ESHOO
MARY GRIFFIN
TOM HUENING
TOM NOLAN
WILLIAM J. SCHUMACHER

COUNTY OF SAN MATEO

MARGARET TAYLOR
DIRECTOR OF HEALTH SERVICES

590 HAMILTON STREET • REDWOOD CITY • CALIFORNIA 94063 363-4305

PERMANENT CLOSURE AND / OR REMOVAL OF OIL / WATER SEPARATORS (CLARIFIERS) IN SAN MATEO COUNTY

Traditionally oil water / separators have been used over the years in service stations, auto repair garages and many other businesses. It is now unnecessary to discharge water from the service station and / or garage floor to the oil / water separator, since drips from any product containing petroleum hydrocarbons, new oil, used oil, antifreeze or solvent can be safely removed and disposed of as solid hazardous waste using absorbent materials.

The following procedure must be used when an oil / water separator (clarifier) is to be removed and / or abandoned in place:

1. The generator must obtain a temporary EPA number if he / she does not have already a permanent number from the Department of Health Services.

2. The generator must notify the local waste water treatment plant and San Mateo County Office of Environmental Health of the activity being undertaken.

3. All liquid must be removed and disposed of as hazardous waste by a licensed hazardous waste hauler or a hazardous waste determination must be made.

4. All solids (sludge) must be removed and disposed of as hazardous waste by a licensed hazardous waste hauler or a hazardous waste determination must be made.

5. The oil / water separator shall be steam cleaned and liquid removed as hazardous waste or a hazardous waste determination must be made.

6. A county inspector must be present if samples are to be taken to verify hazardous / non-hazardous waste category. A minimum of 72 hour notice is required prior to taking samples.

7. Once the oil / water separator (clarifier) has been properly cleaned, a visual inspection will be conducted by a San Mateo County inspector to determine damage to the sump, piping and the interior of each division in the box. Particular attention will be paid to any cracks in the side walls or faulty connections in the piping. If the integrity of the vessel is intact as determined by a 24 hour hydrostatic test, the oil / water separator (clarifier) will be considered clean and ready to be removed and / or abandoned in place.

8. Signs of damage in the oil / water separator (cracks, especially in the floor and sidewalls) must be differentiated from stress fractures which are considered a common occurrence in any concrete structure and do not compromise its integrity.
A soil sampling protocol will be required if the integrity of the container is compromised. This protocol must be approved by San Mateo County Office of Environmental Health before work begins.

9. Inlet piping shall be sealed with concrete grout from the drains to the point of entry into the oil / water separator (clarifier). Outlet piping shall be sealed as far as is practical with a plastic cap to reduce sloughing. Any vent stacks dedicated to use by the separator will be sealed in the same way. The chamber within the separator will be filled with cement slurry or sand up to 6 inches below the container's opening. The remaining space will be permanently sealed level to the surface of the floor with a concrete cap.

10. A minimum fee equivalent to 3 hours is to be charged for the following:
1 hour for review of initial proposal
1 hour for sampling procedure
1 hour for final report review

ATTN: Mr. Douglas Schlepp
SUBJECT: **SITE STATUS SUMMARY REPORT**
1205 Chrysler Drive
Menlo Park, California

Dear Mr. Schlepp:

E_2C, Inc. is pleased to present herein a summary of the investigative work performed on the subject site to date. This summary was requested by the San Mateo County Department of Health Services in their letter dated February 18, 1997, in response to the findings presented in E_2C, Inc.'s "Soil & Sludge Sampling Report" dated October 25, 1996 and E_2C, Inc.'s Phase II Environmental Site Assessment" dated May 15, 1996. A copy should be forwarded to:

Ms. Tanya Haeri-McCarroll
Hazardous Material Specialist
County Remedial Oversight Program
San Mateo County Health Services Agency
590 Hamilton Street
Redwood City, CA 94063

The attached report documents the methodologies employed by E_2C, Inc. during this investigation and presents our findings and conclusions. Should you have any questions or require supplemental information, please do not hesitate to contact us.

Sincerely,

Kendall W. Price, CEG/REA
President

APPENDIX A	HAZARDOUS WASTE MANIFESTS
APPENDIX B	SMCHSA CLOSURE LETTER DATED JANUARY 14, 1997

1.0 SUMMARY

This document has been prepared pursuant to the San Mateo County Health Services Agency letter to Krebs Engineering, dated January 14, 1997.

1.1 Site Name, Address and County Site Number

Site Name: Krebs Engineers

Site Address: 1205 Chrysler Drive
Menlo Park, California
(see Figure 1)

County Site Number: #449051

1.2 Background

May 1996

In May of 1996, E_2C, Inc. completed a Phase II Environmental Site Assessment (ESA) which included the collection of three soil samples from locations within the subject building and three grab groundwater samples collected from upgradient locations along the eastern, and southern, property boundaries as shown on Figure 2.

The analytical results of this study indicated that soil contamination up to 140 parts per million (ppm) due to Recoverable Petroleum Hydrocarbons (TRPH) exists in the soil beneath the building. Additionally, groundwater contamination due to Total Petroleum Hydrocarbons as gasoline (TPHg), and to Trichloroethene (TCE) were detected in the groundwater beneath the property. Maximum detected groundwater contaminant concentrations were 140 parts per billion (ppb) and 81 ppb, respectively.

October 1996

In October of 1996, E_2C, Inc. performed soil and sludge sampling related to Facility Closure Requirements for the Site located at 1205 Chrysler Drive.

This sampling event included the collection of three samples from sludge found in the three interior sumps for waste characterization purposes, and two native soil samples from locations near the former compressor, which was located behind the building.

Analyses of the sludge samples showed elevated concentrations of lead in Sump #1 (Testing Area), TRPH in all three sump samples, and VOCs in Sump #2 (Paint Booth) as summarized below and depicted on Figure 3.

Consistent with the directives of the San Mateo County Health Services Agency, all residual material (liquid and solid) was removed from each of the three sumps by Safety Kleen and properly disposed of by a licensed hazardous waste hauler (see Appendix A for documentation). The sumps were subsequently steam cleaned and abandoned in place.

Detected concentrations of metals and TRPH in the two soil samples (#4 and #5) collected from beneath the former air compressor were below regulatory action levels.

RESULTS OF SAMPLE ANALYSES
(in parts per million [ppm])

Sample Type	Sample ID	Location	TRPH	VOCs	Cr	Cu	Ni	Pb	Zn
Sludge	Sump #1	Testing Area	610	<0.0005-0.001	16	5.4	94	1,200	550
	Sump #2	Paint Booth	30,000	252.7	450	1.6	84	91	4,100
	Sump #3	Machine Shop	800	0.0573	240	2.3	440	49	650
	Sample ID	**Sample Depth**	--	--	--	--	--	--	--

APPROVED CLOSURE

A January 14, 1997 letter issued by the SMCHSA states that Krebs' business operations at the subject site were considered appropriately closed and that no further action was required. Please see Appendix B for a copy of this closure letter.

1.3 Planned Actions

Additional investigatory or remedial actions will be considered and undertaken upon further discussion with the SMCHSA caseworker with the intent of determining specific investigation goals. Upon clarification of these goals, a schedule of planned actions for the next quarter will be provided.

1.4 Contaminant Characterization Status

Soil Pollution

Soil contamination due to low levels of TRPH (maximum of 140 ppm) has been detected below the concrete slab of the subject building.

Free Product

No free product has been observed in the soil or groundwater samples collected to date. All standing sludge in the former on-site sumps has been properly removed and disposed of to the satisfaction of SMCHSA.

Dissolved Constituents

Groundwater samples collected from upgradient borings has been found to contain the Volatile Organic Compound (VOC), TCE at a maximum concentration of 81.0 ppb.

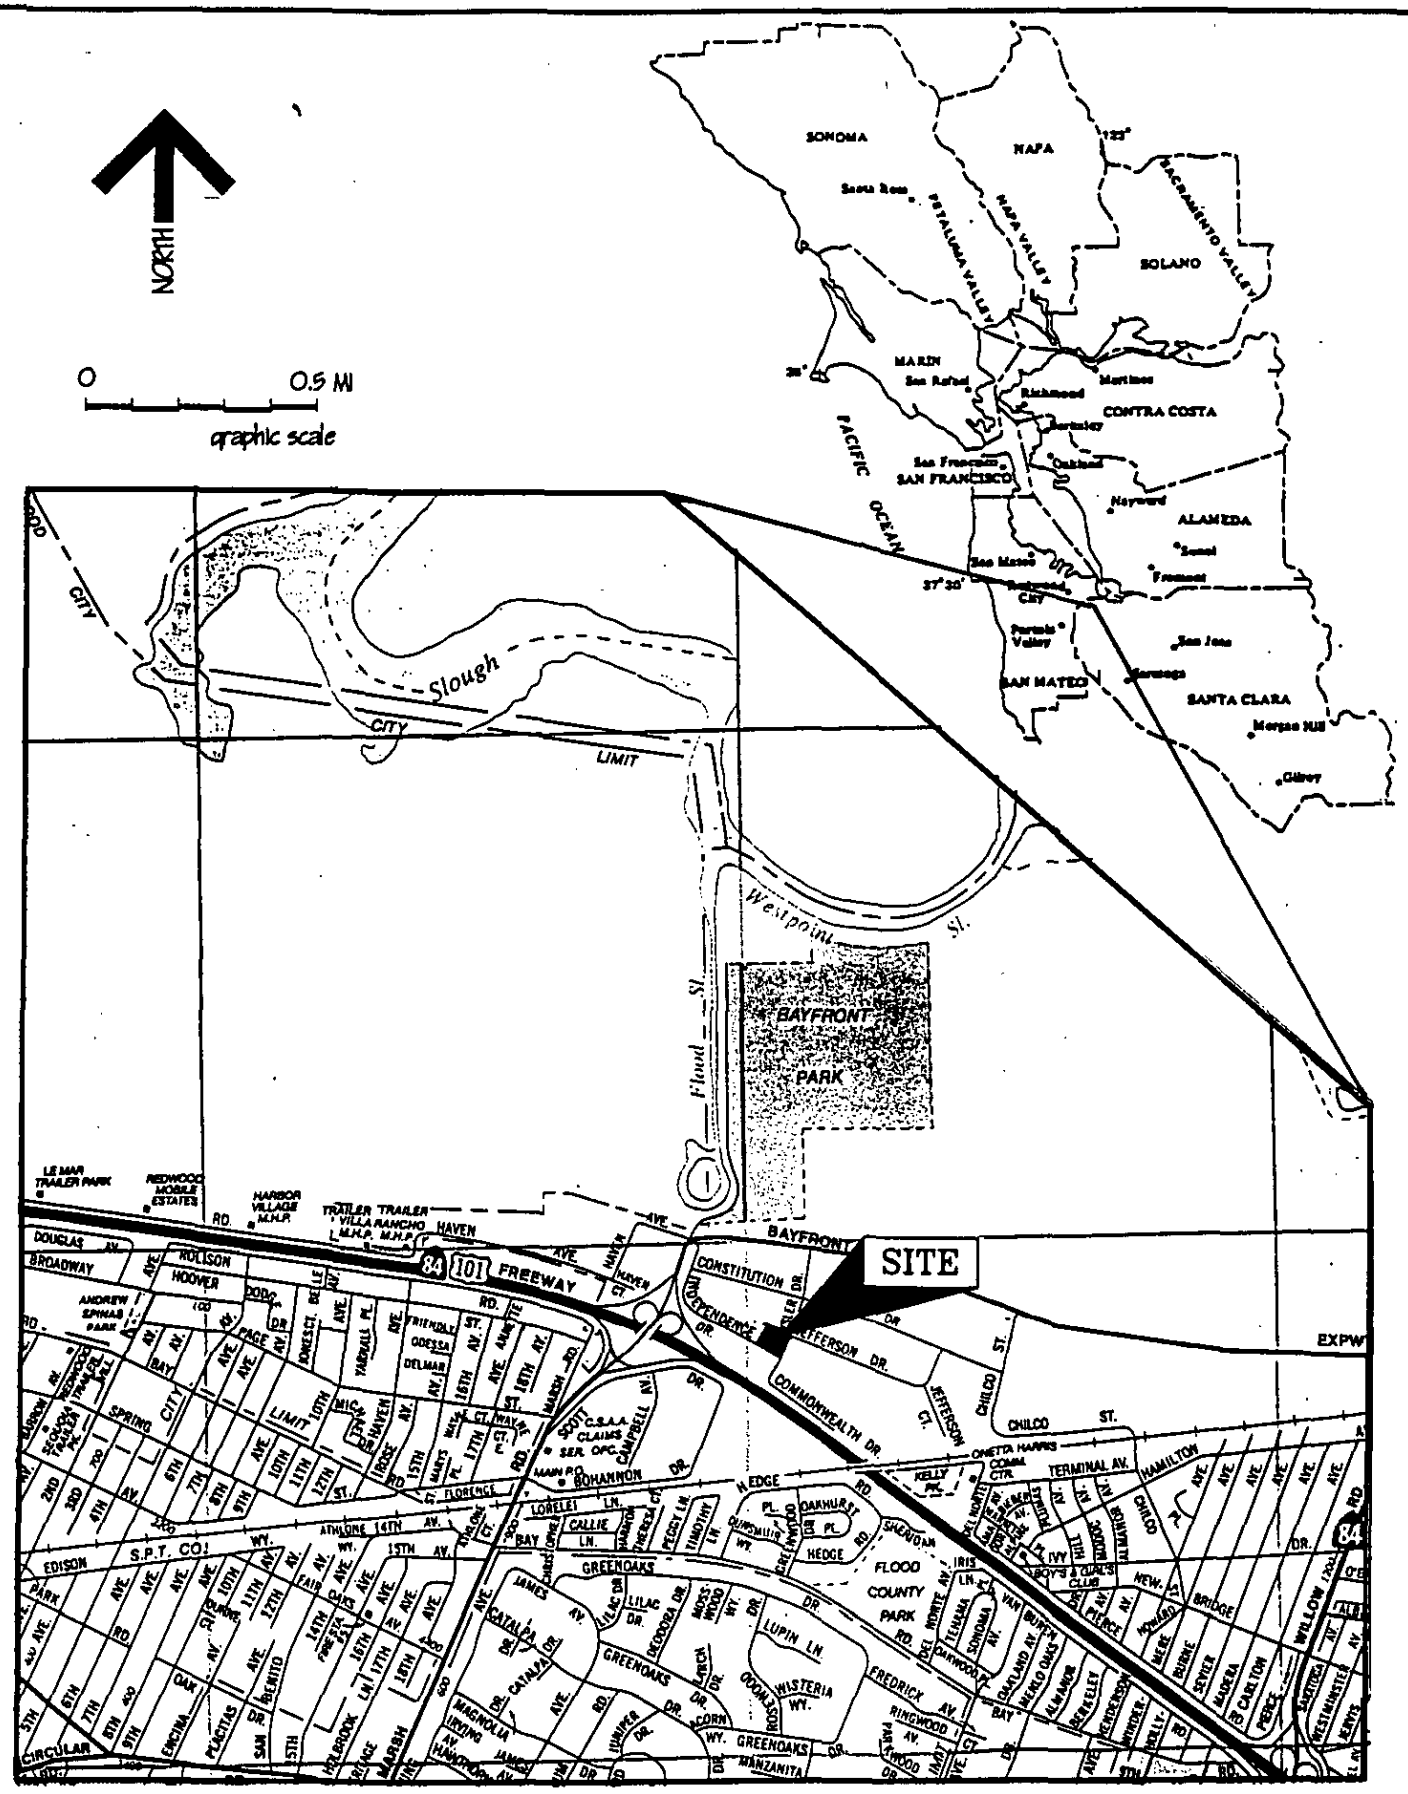
1.5 Remediation Status

No soil or groundwater remedial activities have been conducted.

2.0 PROFESSIONAL CERTIFICATION AND LIMITATIONS

This summary report has been prepared by E_2C, Inc., under the professional supervision of the Principal whose seal and signature appears herein, and was prepared for the sole use of Krebs Engineers and/or its agents.

Should you have any questions or require supplemental information, please do not hesitate to contact us.



Sincerely,

Kendall W. Price, CEG/REA
President

NOTICE OF LAND DISPOSAL RESTRICTION OF WASTE

TO: SAFETY-KLEEN CORP.
1722 COOPER CREEK ROAD
DENTON, TX 76208

EPA ID: TXD077603371

UNDER MANIFEST NUMBER LINE NUMBER
THE GENERATOR NOTED BELOW IS SHIPPING TO YOU A RESTRICTED WASTE UNDER FEDERAL AND STATE LAND DISPOSAL RESTRICTION REGULATIONS. IN ACCORDANCE WITH THESE REGULATIONS, THE GENERATOR HEREBY PROVIDES NOTICE THAT THE WASTE IS RESTRICTED AND THE EPA WASTE CODES AND APPROPRIATE TREATMENT STANDARDS ARE AS FOLLOWS:

HAZARDOUS WASTE CODES: D007 D006 D008

TREATABILITY GROUP: NONWASTEWATERS

EPA WASTE CODE	WASTE DESCRIPTION AND TREATMENT/REGULATORY SUBCATEGORY OR REGULATED HAZARDOUS CONSTITUENT	TREATMENT STANDARD CONCENTRATION OR TECHNOLOGY CODE
D006	CADMIUM (CD)	1.0 MG/L TCLP
D007	CHROMIUM (CR)	5.0 MG/L TCLP
D008	LEAD (PB)	5.0 MG/L EP OR TCLP

THIS HAZARDOUS DEBRIS IS SUBJECT TO THE ALTERNATIVE TREATMENT STANDARDS OF 40 CFR 268.45 FOR THE ABOVE CONTAMINANTS THAT ARE SUBJECT TO TREATMENT.

NOTES: * THESE TREATMENT STANDARDS DO NOT PRECLUDE SOLVENT RECOVERY OR USE AS FUEL PRIOR TO LAND DISPOSAL.
** NEW TREATMENT STANDARDS UNDER FEDERAL RULES EFFECTIVE 12-19-94.
*** TREATMENT STANDARDS APPLICABLE IN CERTAIN HWSA-AUTHORIZED STATES.
****AND MEET UNIVERSAL TREATMENT STANDARDS
*****NEW TREATMENT STANDARDS UNDER FEDERAL RULES EFFECTIVE 7-8-96.

16. **GENERATOR'S CERTIFICATION:** I hereby declare that the contents of this consignment are fully and accurately described above by the proper shipping name and are classified, packed, marked, and labeled, and are in all respects in proper condition for transport by highway according to applicable international and national government regulations, including applicable state regulations.
If I am a large quantity generator, I certify that I have a program in place to reduce the volume and toxicity of waste generated to the degree I have determined to be economically practicable and that I have selected the practicable method of treatment, storage, or disposal currently available to me which minimizes the presents and future threat to human health and the environment; OR, if I am a small quantity generator, I have made a good faith effort to minimize my waste generation and select the best waste management method that is available to me and that I can afford.

EMPTY DRUM CERTIFICATION

I hereby certify that these drums are "empty" as that term is defined in the national *Environmental Protection Agency* regulations, 40 CFR 261.7*, and that they have been properly prepared for transportation under the regulations of the U.S. Department of Transportation, 49 CFR 173.29**

Date: 9/4/96

Signature: [signature]

* With regard to most regulated residues, EPA's 40 CFR 261.7 says: " A container ... is empty if:

(i) All wastes have been removed that can be removed using the practices commonly employed to remove materials from that type of container, e.g., pouring, pumping, and aspirating and

(ii) No more than 2.5 centimeters (one inch) of residue remain on the bottom of the container..."

EPA has explained this rule, saying that "one inch of waste material is an overriding constraint and may remain in an empty container only if it cannot be removed by normal means. The rationale for this provision is that there are certain tars and other extremely viscous materials that will remain in the container even after the container is emptied by normal means."

For residues of products specifically listed by name in 40 CFR 261.33(e), EPA says the container is empty only "if the container ... has been triple-rinsed using a solvent capable of removing" the product, or has been cleaned by another method shown to achieve equivalent removal.

** DOT's 49 CFR 173.29 says that all openings on the empty container must be closed, and that all markings and labels must be in place as if the drum were full of its original contents. A DOT shipping paper is not required for transportation of a drum for reconditioning via contract or private motor carrier. DOT placarding is not required for vehicles carrying empty containers.

APPENDIX B
SMCHSA CLOSURE LETTER DATED JANUARY 14, 1997

HEALTH SERVICES AGENCY

ENVIRONMENTAL HEALTH SERVICES DIVISION

January 14, 1997

Mr. Doug Schlep, President
Krebs Engineers
5505 W. Gillette Road
Tucson, AZ 85437

SUBJECT: Closure Report for Krebs Engineers
1205 Chrysler Drive
Menlo Park, CA 94025

Dear Mr. Schlep:

This letter confirms the closure, under San Mateo County supervision, of your **Krebs Engineers** operation at the subject site. With the provision that the information provided to this agency was accurate and representative of existing conditions, it is our position that **no further action is required at this time.**

Please be advised that this letter does not relieve you of any liability under the California Health and Safety Code or Water Code for past, present, or future operations at the site. Nor does it relieve you of the responsibility to clean up existing, additional, or previously unidentified conditions at the site which cause or threaten to cause pollution or nuisance or otherwise pose a threat to water quality or public health. Nor does it relieve you of any additional requirements by the property owner.

Additionally, be advised that changes in the present or proposed use of the site may require further site characterization and mitigation activity. It is the property owner's responsibility to notify this agency of any changes in report content, future contamination findings, or site usage.

Thank you for your cooperation in this matter. I may be reached at (415) 363-4708.

Sincerely,

Duane O'Donnell

ATTN: Mr. Doug Schlepp
SUBJECT: **WORK PLAN FOR GROUNDWATER INVESTIGATION IN FORMER SUMP AREAS**
1205 Chrysler Drive
Mountain View, California

Dear Mr. Schlepp:

E_2C, Inc. is pleased to present our Work Plan for the work requested in the San Mateo County Health Services Agency (SMCHSA) letter dated May 13, 1997. The goal of this investigation is to evaluate impact to soil and/or groundwater beneath the three former sump locations and obtain official case closure form the SMCHSA.

All proposed action will be performed in accordance with the following guidelines:

- California Regional Water Quality Control Board (RWQCB). "Staff Recommendations for Preliminary Evaluation and Investigation of Underground Tank Sites," (August 1990).
- State of California. "Leaking Underground Fuel Tank (LUFT) Field Manual: Guidelines for Site Assessment, Cleanup and Underground Storage Tank Closure," (October 1989).
- RWQCB letter dated January 12, 1996.

Should you have any questions, or need additional information, please do not hesitate to contact us.

Sincerely,

Eileen H Ashton
Staff Environmental Specialist

FIGURES AND TABLES

FIGURE 1 SITE LOCATION MAP

FIGURE 2 SITE PLAN WITH HISTORIC ANALYTICAL RESULTS & PROPOSED BORING LOCATIONS

1.0 SITE INFORMATION

1.1 Site Responsible Party Addresses

Site Address: 1205 Chrysler Drive
Menlo Park, California

Responsible Party: Krebs Engineers
5505 W. Gillette Road
Tucson, AZ 85743

1.2 Site Description

The Site is located on the northeast corner of the intersection of Chrysler Drive and Independence Drive in the City of Menlo Park California (see Figure 1). A 34,400 square-foot, one-story commercial building (circa 1968), associated parking areas, and landscaping occupy the Site.

1.3 Past and Current On-site Business Activities

Krebs Engineers (Krebs), a manufacturer of mining equipment, occupied the Site from approximately 1968 until mid-1996. Krebs' facility operations (which consisted of administrative, testing, and assembly operations), were formally closed by the SMCHSA as documented in their letter dated January 14, 1997. The building was sold shortly thereafter and is currently occupied by a sanitation service.

for the sumps only.

1.4 History of Spills and Unauthorized Releases

On-site

E_2C, Inc. reviewed files pertaining to the Site at the SMCHSA and the Menlo Park Fire Protection District for a Phase I Environmental Site Assessment (ESA) in October of 1995. At that time, no major violations, hazardous materials-related incidents, or previous environmental investigations were noted. The Site is not an agency-listed chemical-release site.

Off-site

The Site is located within an area which has been developed with light industrial facilities for approximately 25 years. As part of the October 1995 Phase I ESA, E_2C, Inc. researched the following three agency-listed Leaking Underground Storage Tank (LUST) sites which area located within a 0.5-mile radius of the presumed upgradient (southeasterly) property line of the Site: 1) Knappkins, located approximately 1,000-feet to the southwest; 2) Bay Associates, located approximately 530-feet to the southwest; and 3) Heublein Inc., located approximately 0.25-miles to the southeast. All three sites had fuel and/or waste oil USTs removed and have documented soil and water contamination due to Total Petroleum Hydrocarbons as gasoline (TPHg), Benzene, Toluene, Ethyl Benzene, and Xylenes (BTEX), and TPH as diesel (TPHd). The Heublein site is also under investigation for Volatile Organic Compounds (VOCs), most notably Trichloroethylene (TCE).

Due to the long term industrial use of the subject area and the length of time passed since the Phase I ESA was performed, it is possible that: 1) additional chemical release sites have been identified within a 1-mile radius of the Site, and/or, 2) further investigation has been performed on the above-referenced three LUST sites. Therefore, the potential for

contaminants originating off-site and migrating to the Site via groundwater can not be eliminated.

1.5 Summary of On-site Environmental Investigations

REPORT	SUMMARY
October 1995 Phase I Environmental Site Assessment E_2C, Inc.	The Site and surrounding area have an approximately 25-year history of commercial and industrial use. Several surrounding sites are documented chemical release sites which have the potential to be adversely impacting the Site. The Site is not a listed chemical release site and there were no visible on-site sources of environmental concern.
May 1996 Phase II Environmental Site Assessment E_2C, Inc.	Three soil samples and three grab groundwater samples were collected from beneath the Site. The analytical results indicated that minor soil contamination due to Oil Grease existed beneath the subject building and groundwater contamination due to VOCs existed on the southern and eastern property lines.
October 1996 Soil & Sludge Sampling Report E_2C, Inc.	Collection of three sludge samples from the interior sumps and two native soil samples from locations near the former compressor. Analyses indicated elevated concentrations of lead Petroleum Hydrocarbons, and VOCs in the sludge samples. Detected concentrations of metals and Petroleum Hydrocarbons beneath the former compressor location were below regulatory action levels.

In summary, soil contamination due to TRPH has been detected below the concrete slab of the subject building in the area of the former paint spray booth at a maximum concentration of 140 ppm. Grab groundwater samples collected from borings located in the presumed upgradient direction (south and east) have been found to contain TCE at a maximum concentration of 81.0 ppb. No free product has been observed in the soil or groundwater samples collected to date. All standing sludge in the former on-site sumps has been properly removed and disposed of to the satisfaction of the SMCHSA as evidence in their letter dated January 14, 1997.

2.0 SCALE MAP

As requested in the San Mateo County Remedial Oversight Program document entitled, "Corrective Action Guidelines, Policies and Procedures," dated May 1996, a map indicating the following applicable designations is presented as Figure 2:

- Site boundaries and adjacent streets
- Locations of all former sumps, chemical and waste storage areas, processing, manufacturing, and loading areas,
- Locations of borings, measured at right angles to the nearest street center,
- Proposed soil boring and/or monitoring well locations,
- North arrow and scale.

3.0 SAMPLING AND ANALYSIS PLAN

3.1 Chemicals of Concern

The Chemicals of Concern identified in the sludge samples collected in September of 1996 are: Pb, Chloroethane, 1,1-Dichloroethane (1,1-DCA), Tetrachloroethene (PCE), 1,1,1-Trichloroethane (1,1,1-TCA, Trichloroethene (TCE), and Methylene Chloride.

3.2 Certified Laboratory and Chain-of-Custody Procedures

All analyses performed in conjunction with the scope of work presented in this work plan will be performed at:

Entech Analytical Labs, Inc. (CA ELAP #1369)
525 Del Rey Avenue, Suite E
Sunnyvale, CA 94086

3.3 Sampling Procedures and Management

The concrete floor over the sample point will be cored and removed. A field technician will hand auger to the proper depth. Soil samples will then be collected in clean, brass sampling tubes using a slide hammer. The ends of the tubes will be covered with sheets of Teflon, and capped. The technician will continue to auger to groundwater (anticipated between 4 and 7-feet bgs). Grab groundwater samples will be collected via siphon into containers appropriate for the analysis. All samples will be labeled, recorded on a Chain-of-Custody, placed on ice, and transported to Entech.

document SW-846. As stated in Subsection 3.2, all laboratory analyses will be performed at a laboratory certified by the State of California to perform the requested services. Upon request from the SMCHSA, duplicate samples or field-split samples will be provided to evaluate the variability of analytical results. All sampling equipment will be thoroughly cleaned prior to use on the Site and between sample locations. All non-disposable equipment will be steam-cleaned or washed with an anionic detergent solution (i.e. Liquinox or Alconox), rinsed with tap water, rinsed with distilled water, drained of excess water, and air-dried or wiped dry with a clean towel.

3.4 Analytical Detection Limits & Preservation

All analyses will be conducted using the Method Detection Limit (MDL) for the applicable EPA Test Method as follows:

SOIL SAMPLES		
ANALYTE	**EPA TEST METHOD**	**MDL (mg/kg)**
✓ TRPH	9071 5520 D+F	50
✓ VOCS	8010	Varies from 0.5-3.0
Pb	7420	0.5
✓ MTBE	8020	5.0
GRAB GROUNDWATER SAMPLES		
ANALYTE	**EPA TEST METHOD**	**MDL (ug/l)**
✓ TRPH	418.1 5520 B+F	50
✓ VOCS	624	Varies from 0.5-3.0
Pb	239.1	0.5
✓ MTBE	602	5.0

Laboratory reports will be reviewed to check that analyses are completed within the recommended sample holding times and that proper sample preservation, preparation, and extraction techniques have been used. Measures of percent recovery for spiked samples will be evaluated for compliance with established laboratory control limits. Data identified as being of sufficient quality will be used; suspect data will be identified.

4.0 GEOLOGY AND HYDROGEOLOGY

4.1 Geologic Characteristics of Aquifers

The Site is located along the western edge of the San Francisco Bay. The general area is underlain by artificial fill, ranging from loose to very well consolidated gravel, sand, silt, clay, rock fragments, organic matter, and man-made debris in various combinations.

4.2 Groundwater Flow Directions

The regional groundwater flow direction is assumed to be in a northerly direction, toward San Francisco Bay, located approximately 1-mile to the north of the Site, although the direction of flow may be locally altered by supply well pumping, remedial extraction well, and by the salt evaporation ponds located approximately 0.75-miles north of the Site. Site specific groundwater flow direction has not been calculated.

During previous on-site subsurface investigations, groundwater has been encountered as high as 4-feet bgs.

4.3 Soil Lithology

No formal soil lithology has been conducted for the Site. According to the United States Department of Agriculture, Soil Conservation Service's "Soil Survey of San Mateo County, Eastern Part, and San Francisco County, California," dated 1991, soils at the Site are classified as Urban land-Orthents. Soils of this series are found in areas that were once part of San Francisco Bay and adjacent tidal flats. Orthents soils are typically very deep

and are poorly drained and somewhat poorly drained. They vary greatly in texture. They are made up of soil material, gravel, broken cement and asphalt, bay mud, and solid waste material. The properties and characteristics of these soils are highly variable because of the differences in the kind and amount of fill material used.

4.4 Aquifer Test

No aquifer tests have been performed on-site or are proposed in this Work Plan.

4.5 Monitoring Well Elevations

No monitoring wells exist on-site, and none are proposed at this time.

5.0 EXTENT OF SOIL AND GROUNDWATER POLLUTION

5.1 Objective and Rationale of Monitoring Well Locations

The objective of the proposed scope of work is to evaluate whether the former sumps released contaminants into the soil and groundwater beneath them.

5.2 Proposed Boring Locations

One boring is proposed in each of the three former sump locations as shown on Figure 2. Using slide hammer methodology, one soil sample will be collected from the native soil at an approximate depth of 3-feet bgs. The borings will then be advanced to groundwater using a hand auger, and grab groundwater samples will be collected. Groundwater is anticipated to be first encountered between 4- and 7-feet bgs.

All samples will be tested for TRPH, VOCs, Total Lead, and Methyl-Tertiary-Butyl-Ether (MTBE).

6.0 BENEFICIAL USES

6.1 San Francisco Bay Region Basin Plan

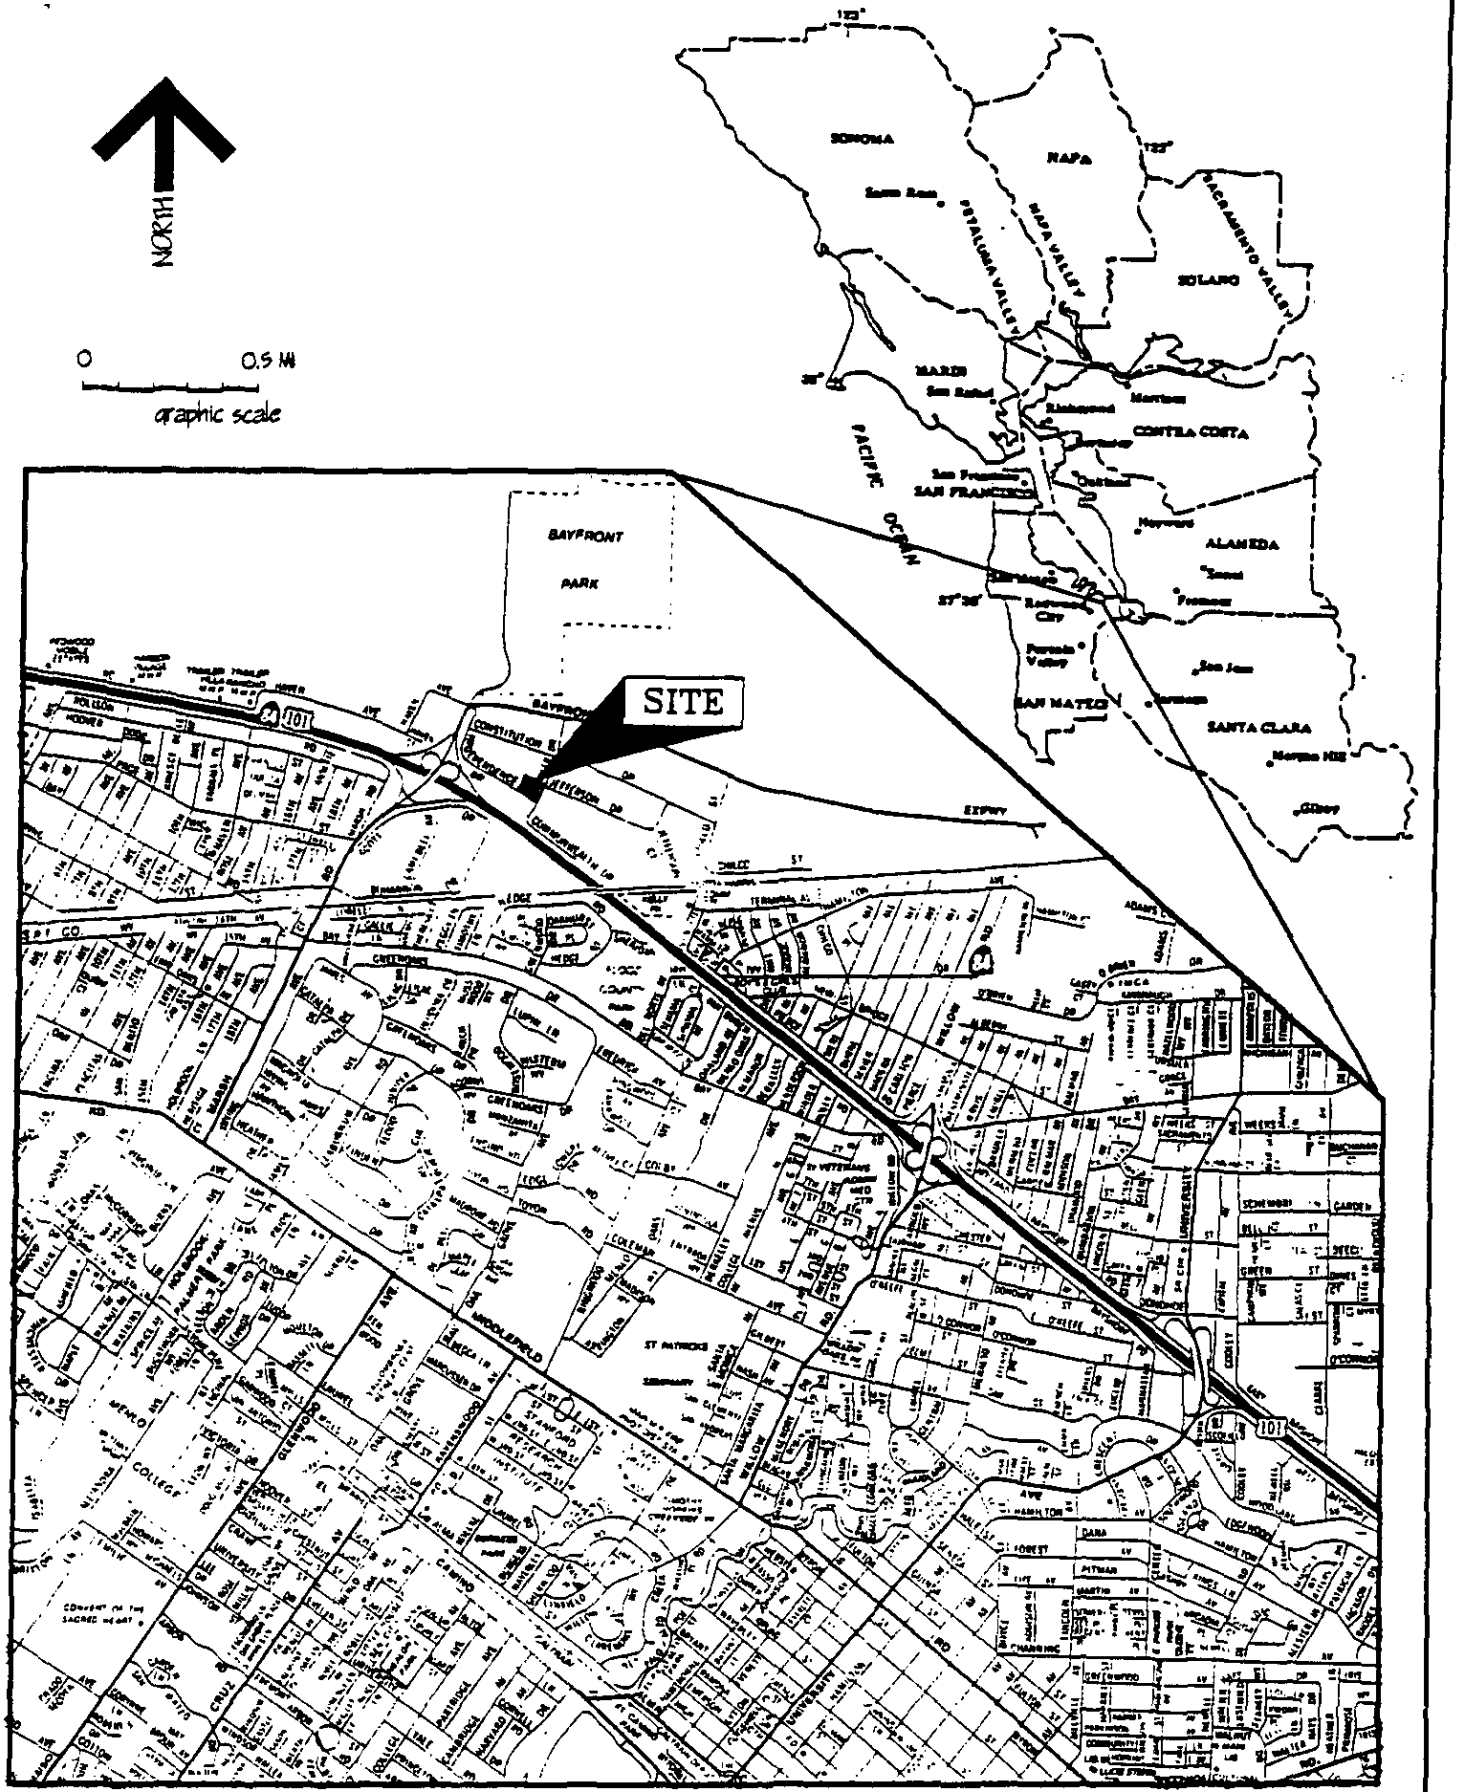
According to the San Francisco Bay Region Basin Plan, existing beneficial uses of the nearest body of water to the Site (the San Francisco Bay) are:

- ocean, commercial and sport fishing,
- industrial service and supply,
- navigation,
- recreational (both water contact and non-contact),
- preservation of rare and endangered species habitat,
- estuarine habitat,
- fish migration, and
- shellfish harvesting.

No beneficial uses exist for agriculture, groundwater recharge, or municipal use according to the Basin Plan.

not proven for gw

7.0 PROFESSIONAL CERTIFICATION AND LIMITATIONS



This Work Plan has been prepared by E_2C, Inc. for the sole use of Krebs Engineers and/or their agents under the professional supervision of the Principal whose seal and signature appear below. To the best of our knowledge, all statements contained herein are true and correct.

Sincerely,

Eileen H. Ashton
Staff Environmental Specialist

SUBJECT: SOIL & GROUNDWATER SAMPLING & ANALYSIS REPORT
1205 Chrysler Drive
Menlo Park, California

Dear Mr. King:

E2C, Inc. is pleased to present the accompanying final report of the Soil Sampling and Analysis prepared for the subject Site.

E2C, Inc. appreciates the opportunity to have been of service. Should you have any questions or require additional information or services please call us at 408.327.5700.

Sincerely,
E2C, Inc.

INTRODUCTION AND PURPOSE

This report presents the description of activities, results, conclusions, and recommendations from the soil and groundwater sampling for the property located at 1205 Chrysler Drive in the City of Menlo Park, California (hereinafter referred to as the "Site"). A Site map is presented in the figures section of this report.

The purpose of this work was to complete the investigation as outlined in our July 22, 1997

- Analyze both soil and groundwater samples for the following constituents:
  --Total Recoverable Petroleum Hydrocarbons (TRPH) by EPA Test Method 418.1
  --Volatile Organic Compounds (VOCs) by EPA Test Method 8010
  --Lead by EPA Test Method 245.1
  --MTBE by EPA Test Method 8260
- Prepare a written report for presentation to the RWQCB.

DESCRIPTION OF ACTIVITIES

On January 28, 2002, Mr. Forrest Cook of E2C, Inc. (E2C) was on-Site with Environmental Testing of San Jose, California to collect soil and groundwater samples three sample locations. The three soil boring locations were located adjacent to the three former sump locations, as described in the Work Plan. See Figure 2 for the approximate locations.

A.) Soil Samples

Soil samples collected from each of the sample locations were collected with the Geoprobe® equipment set. Samples were collected at 3 feet below ground surface (bgs), or approximately equivalent with the bottom of the former sumps. At the desired depth, the liner tube was removed from the Geoprobe® sample barrel and cut to the desired sample length. The ends of the designated sample tube were covered with Teflon sheeting and caps; tape was applied to seal the caps to the tube; an identification label affixed; and the

samples were placed on ice for transport to McCampbell Analytical, Inc. under standard Chain-of-Custody procedures.

B.) Grab Groundwater Samples:

Grab groundwater samples were collected from each of the three soil boring locations. The Geoprobe® equipment was used to probe directly into the water table (approximately 5-10 feet bgs). A narrow-diameter slotted PVC casing was inserted to the depth of the hole. Polyethylene tubing with a bailer fitting was inserted into the casing and groundwater was transferred to the sample bottles by manual action. The samples were collected in 40-ml glass screw-cap VOA vials and amber liter bottles. The samples were placed on ice for transport to McCampbell Analytical, Inc. under standard Chain-of-Custody procedures.

All boreholes were backfilled with neat cement to grade level.

ANALYTICAL RESULTS

Each of the samples was analyzed for Total Recoverable Petroleum Hydrocarbons (TRPH) by EPA Test Method 418.1, Volatile Organic Compounds (VOCs) by EPA Test Method 8010, Lead (Pb) by EPA Test Method 245.1, and MTBE by EPA Test Method 8260. The analytical results are summarized in the following tables.

Table 1: Analytical Soil & Groundwater Sampling Results

Sample Location	Sample ID	Sample Type	TRPH (ppm)	MTBE (ppb)	Lead (ppm)	VOCs* (ppb)		
						cis 1,2-Dichloroethene	1,1-Dichloroethane	TCE
Sump 1	S-1-3	Soil	ND	ND	8.0	ND	ND	ND
	GW-1	Water	ND	ND	ND	ND	ND	22
Sump 2	S-2-3	Soil	ND	ND	11.0	ND	ND	ND
	GW-2	Water	ND	ND	7.8	ND	ND	17
Sump 3	S-3-3	Soil	ND	ND	10.0	6.9	ND	7.7
	GW-3	Water	ND	ND	0.042	1.7	0.58	59

ND = Non-Detect at given laboratory detection limits

TCE = Trichloroethene

VOCs* = All other constituents of EPA Test 8010 were ND

The complete analytical results are presented in Appendix A of this report.

CONCLUSIONS

As shown in Table 1, TRPH and MTBE were non-detect in each of the soil and groundwater samples collected. Lead was detected in extremely low levels in 5 of the 6 analyzed samples. These levels of lead are consistent with natural background levels. The majority of VOCs tested for were non-detect at given laboratory detection levels in each of the samples analyzed. Low concentrations of three constituents of EPA Test Method 8010 for VOCs (i.e. cis 1,2-Dichloroethene, 1,1-Dichloroethane, and TCE) were detected in the soil and groundwater samples located at Sump 3. Only an extremely low concentration (22 and

17ppb, respectively) of TCE was detected in one of the grab groundwater sample at sump 1 and 2.

TCE was detected in the grab groundwater samples from all three sample locations. However, it was only detected in one of the analyzed soil samples (S-3-3). Also, the concentration level of TCE detected in Soil Sample S-3-3 was much lower than it's corresponding grab groundwater sample (GW-3) collected from the same location. If the former on-Site sumps were the point source of the TCE the expected soil contamination levels would be much higher than those currently detected. Since the TCE and general overall VOC soil contaminant levels are less than that detected in the groundwater, it is highly unlikely that the Site is the source of the groundwater contamination. Furthermore sine the total soil VOC contaminate level per each sample point is less than 1-ppm, no soil remediation is required.

As indicated in our Work Plan, the Site is located with an area which has been develop with industrial facilities for approximately 25 years. As part of our January 2001 Phase I ESA, E2C researched the following three agency-listed Leaking Underground Storage Tank (LUST) sites which are located with a 0.5-mile radius of the presumed upgradient (southeasterly) property line of the Site:

1.) Knappkins, located approximately 1,000-feet to the southwest
2.) Bay Associates, located approximately 530-feet to the southwest
3.) Heublein, Inc., located approximately 0.25-miles to the southeast

All three sites had fuel and/or waste oil USTs removed and have documented soil and water contamination due to petroleum hydrocarbons. More notably, the Heublein site is also under investigation for VOC contamination, which includes TCE.

RECOMMENDATIONS

It is E2C, Inc.'s professional opinion that the low concentrations of VOCs detected in the soil and groundwater near the former locations of the on-Site sumps is due to groundwater contamination that has migrated onto the subject Site from off-site sources and is not a result of prior Site activities involving the former sumps. As such, E2C recommends that the Site be granted case closure status from the RWQCB.

Should you have any questions or require supplemental information, please feel free to contact us.

Sincerely,

Forrest Cook

Dear Forrest:

Enclosed are:

1). the results of **6** samples from your **#2050SC01; Chrysler** project,

2). a QC report for the above samples

3). a copy of the chain of custody, and

4). a bill for analytical services.

All analyses were completed satisfactorily and all QC samples were found to be within our control limits. If you have any questions please contact me. McCampbell Analytical Laboratories strives for excellence in quality, service and cost. Thank you for your business and I look forward to working with you again.

Yours truly,

Edward Hamilton, Lab Director

January 17, 2002
File No. 41S0157 (NK)

Mr. Kendall Price
E_2C, Inc.
382 Martin Avenue
Santa Clara, CA 95050-3112

SUBJECT: Approval of Workplan for Groundwater Investigation, 1205 Chrysler Drive, Menlo Park, San Mateo County.

Dear Mr. Price:

Regional Board staff have reviewed the subject report, submitted by E_2C, Inc. in July 1997 on behalf of Krebs Engineers. The investigation will determine whether soil or groundwater beneath the former sumps has been impacted. Staff finds the report to be satisfactory and it is hereby approved.

E_2C, Inc. proposes to collect soil and grab groundwater samples from beneath each of the three former sumps. Each of the samples will be analyzed for TPH, MTBE, VOCs, and total lead.

It is our understanding that E_2C, Inc. may request case closure after the investigation is completed. If you have any questions, please contact Nancy Katyl of my staff at (510) 622-2408, or e-mail nk@rb2.swrcb.ca.gov.

Sincerely,

Anders Lundgren, Senior Engineer
Toxics Cleanup Division

APPENDIX C

E2C, INC WORK PLAN
JULY 22, 1997

WORK PLAN
FOR GROUNDWATER INVESTIGATION
IN FORMER SUMP AREAS
1205 Chrysler Drive
Menlo Park, California
July 22, 1997

Prepared For
KREBS ENGINEERS

Prepared By

Tucson, AZ 85743

ATTN: Mr. Doug Schlepp
SUBJECT: **WORK PLAN FOR GROUNDWATER INVESTIGATION IN FORMER SUMP AREAS**
1205 Chrysler Drive
Mountain View, California

Dear Mr. Schlepp:

E_2C, Inc. is pleased to present our Work Plan for the work requested in the San Mateo County Health Services Agency (SMCHSA) letter dated May 13, 1997. The goal of this investigation is to evaluate impact to soil and/or groundwater beneath the three former sump locations and obtain official case closure form the SMCHSA.

All proposed action will be performed in accordance with the following guidelines:

- California Regional Water Quality Control Board (RWQCB). "Staff Recommendations for Preliminary Evaluation and Investigation of Underground Tank Sites," (August 1990).
- State of California. "Leaking Underground Fuel Tank (LUFT) Field Manual: Guidelines for Site Assessment, Cleanup and Underground Storage Tank Closure," (October 1989).
- RWQCB letter dated January 12, 1996.

Should you have any questions, or need additional information, please do not hesitate to contact us.

Sincerely,

Eileen H Ashton
Staff Environmental Specialist

Kendall W. Price, CEG/REA
President

FIGURES AND TABLES

FIGURE 1 SITE LOCATION MAP

FIGURE 2 SITE PLAN WITH HISTORIC ANALYTICAL RESULTS & PROPOSED BORING LOCATIONS

1.0 SITE INFORMATION

1.1 Site Responsible Party Addresses

Site Address: 1205 Chrysler Drive
Menlo Park, California

Responsible Party: Krebs Engineers
5505 W. Gillette Road
Tucson, AZ 85743

1.2 Site Description

The Site is located on the northeast corner of the intersection of Chrysler Drive and Independence Drive in the City of Menlo Park California (see Figure 1). A 34,400 square-foot, one-story commercial building (circa 1968), associated parking areas, and landscaping occupy the Site.

1.3 Past and Current On-site Business Activities

Krebs Engineers (Krebs), a manufacturer of mining equipment, occupied the Site from approximately 1968 until mid-1996. Krebs' facility operations (which consisted of administrative, testing, and assembly operations), were formally closed by the SMCHSA as documented in their letter dated January 14, 1997. The building was sold shortly thereafter and is currently occupied by a sanitation service.

1.4 History of Spills and Unauthorized Releases

On-site

E_2C, Inc. reviewed files pertaining to the Site at the SMCHSA and the Menlo Park Fire Protection District for a Phase I Environmental Site Assessment (ESA) in October of 1995. At that time, no major violations, hazardous materials-related incidents, or previous environmental investigations were noted. The Site is not an agency-listed chemical-release site.

Off-site

The Site is located within an area which has been developed with light industrial facilities for approximately 25 years. As part of the October 1995 Phase I ESA, E_2C, Inc. researched the following three agency-listed Leaking Underground Storage Tank (LUST) sites which area located within a 0.5-mile radius of the presumed upgradient (southeasterly) property line of the Site: 1) Knappkins, located approximately 1,000-feet to the southwest; 2) Bay Associates, located approximately 530-feet to the southwest; and 3) Heublein Inc., located approximately 0.25-miles to the southeast. All three sites had fuel and/or waste oil USTs removed and have documented soil and water contamination due to Total Petroleum Hydrocarbons as gasoline (TPHg), Benzene, Toluene, Ethyl Benzene, and Xylenes (BTEX), and TPH as diesel (TPHd). The Heublein site is also under investigation for Volatile Organic Compounds (VOCs), most notably Trichloroethylene (TCE).

Due to the long term industrial use of the subject area and the length of time passed since the Phase I ESA was performed, it is possible that: 1) additional chemical release sites have been identified within a 1-mile radius of the Site, and/or, 2) further investigation has been performed on the above-referenced three LUST sites. Therefore, the potential for

contaminants originating off-site and migrating to the Site via groundwater can not be eliminated.

1.5 Summary of On-site Environmental Investigations

REPORT	SUMMARY
October 1995 Phase I Environmental Site Assessment E_2C, Inc.	The Site and surrounding area have an approximately 25-year history of commercial and industrial use. Several surrounding sites are documented chemical release sites which have the potential to be adversely impacting the Site. The Site is not a listed chemical release site and there were no visible on-site sources of environmental concern.
May 1996 Phase II Environmental Site Assessment E_2C, Inc.	Three soil samples and three grab groundwater samples were collected from beneath the Site. The analytical results indicated that minor soil contamination due to Oil Grease existed beneath the subject building and groundwater contamination due to VOCs existed on the southern and eastern property lines.
October 1996 Soil & Sludge Sampling Report E_2C, Inc.	Collection of three sludge samples from the interior sumps and two native soil samples from locations near the former compressor. Analyses indicated elevated concentrations of lead Petroleum Hydrocarbons, and VOCs in the sludge samples. Detected concentrations of metals and Petroleum Hydrocarbons beneath the former compressor location were below regulatory action levels.

In summary, soil contamination due to TRPH has been detected below the concrete slab of the subject building in the area of the former paint spray booth at a maximum concentration of 140 ppm. Grab groundwater samples collected from borings located in the presumed upgradient direction (south and east) have been found to contain TCE at a maximum concentration of 81.0 ppb. No free product has been observed in the soil or groundwater samples collected to date. All standing sludge in the former on-site sumps has been properly removed and disposed of to the satisfaction of the SMCHSA as evidence in their letter dated January 14, 1997.

2.0 SCALE MAP

As requested in the San Mateo County Remedial Oversight Program document entitled, "Corrective Action Guidelines, Policies and Procedures," dated May 1996, a map indicating the following applicable designations is presented as Figure 2:

- Site boundaries and adjacent streets
- Locations of all former sumps, chemical and waste storage areas, processing, manufacturing, and loading areas,
- Locations of borings, measured at right angles to the nearest street center,
- Proposed soil boring and/or monitoring well locations,
- North arrow and scale.

3.0 SAMPLING AND ANALYSIS PLAN

3.1 Chemicals of Concern

The Chemicals of Concern identified in the sludge samples collected in September of 1996 are: Pb, Chloroethane, 1,1-Dichloroethane (1,1-DCA), Tetrachloroethene (PCE), 1,1,1-Trichloroethane (1,1,1-TCA, Trichloroethene (TCE), and Methylene Chloride.

3.2 Certified Laboratory and Chain-of-Custody Procedures

All analyses performed in conjunction with the scope of work presented in this work plan will be performed at:

Entech Analytical Labs, Inc. (CA ELAP #1369)
525 Del Rey Avenue, Suite E
Sunnyvale, CA 94086

3.3 Sampling Procedures and Management

The concrete floor over the sample point will be cored and removed. A field technician will hand auger to the proper depth. Soil samples will then be collected in clean, brass sampling tubes using a slide hammer. The ends of the tubes will be covered with sheets of Teflon, and capped. The technician will continue to auger to groundwater (anticipated between 4 and 7-feet bgs). Grab groundwater samples will be collected via siphon into containers appropriate for the analysis. All samples will be labeled, recorded on a Chain-of-Custody, placed on ice, and transported to Entech.

document SW-846. As stated in Subsection 3.2, all laboratory analyses will be performed at a laboratory certified by the State of California to perform the requested services. Upon request from the SMCHSA, duplicate samples or field-split samples will be provided to evaluate the variability of analytical results. All sampling equipment will be thoroughly cleaned prior to use on the Site and between sample locations. All non-disposable equipment will be steam-cleaned or washed with an anionic detergent solution (i.e. Liquinox or Alconox), rinsed with tap water, rinsed with distilled water, drained of excess water, and air-dried or wiped dry with a clean towel.

3.4 Analytical Detection Limits & Preservation

All analyses will be conducted using the Method Detection Limit (MDL) for the applicable EPA Test Method as follows:

SOIL SAMPLES		
ANALYTE	EPA TEST METHOD	MDL (mg/kg)
TRPH	9071	50
VOCS	8010	Varies from 0.5-3.0
Pb	7420	0.5
MTBE	8020	5.0
GRAB GROUNDWATER SAMPLES		
ANALYTE	EPA TEST METHOD	MDL (ug/l)
TRPH	418.1	50
VOCS	624	Varies from 0.5-3.0
Pb	239.1	0.5
MTBE	602	5.0

Laboratory reports will be reviewed to check that analyses are completed within the recommended sample holding times and that proper sample preservation, preparation, and extraction techniques have been used. Measures of percent recovery for spiked samples will be evaluated for compliance with established laboratory control limits. Data identified as being of sufficient quality will be used; suspect data will be identified.

4.0 GEOLOGY AND HYDROGEOLOGY

4.1 Geologic Characteristics of Aquifers

The Site is located along the western edge of the San Francisco Bay. The general area is underlain by artificial fill, ranging from loose to very well consolidated gravel, sand, silt, clay, rock fragments, organic matter, and man-made debris in various combinations.

4.2 Groundwater Flow Directions

The regional groundwater flow direction is assumed to be in a northerly direction, toward San Francisco Bay, located approximately 1-mile to the north of the Site, although the direction of flow may be locally altered by supply well pumping, remedial extraction well, and by the salt evaporation ponds located approximately 0.75-miles north of the Site. Site specific groundwater flow direction has not been calculated.

During previous on-site subsurface investigations, groundwater has been encountered as high as 4-feet bgs.

4.3 Soil Lithology

No formal soil lithology has been conducted for the Site. According to the United States Department of Agriculture, Soil Conservation Service's "Soil Survey of San Mateo County, Eastern Part, and San Francisco County, California," dated 1991, soils at the Site are classified as Urban land-Orthents. Soils of this series are found in areas that were once part of San Francisco Bay and adjacent tidal flats. Orthents soils are typically very deep

and are poorly drained and somewhat poorly drained. They vary greatly in texture. They are made up of soil material, gravel, broken cement and asphalt, bay mud, and solid waste material. The properties and characteristics of these soils are highly variable because of the differences in the kind and amount of fill material used.

4.4 Aquifer Test

No aquifer tests have been performed on-site or are proposed in this Work Plan.

4.5 Monitoring Well Elevations

No monitoring wells exist on-site, and none are proposed at this time.

5.0 EXTENT OF SOIL AND GROUNDWATER POLLUTION

5.1 Objective and Rationale of Monitoring Well Locations

The objective of the proposed scope of work is to evaluate whether the former sumps released contaminants into the soil and groundwater beneath them.

5.2 Proposed Boring Locations

One boring is proposed in each of the three former sump locations as shown on Figure 2. Using slide hammer methodology, one soil sample will be collected from the native soil at an approximate depth of 3-feet bgs. The borings will then be advanced to groundwater using a hand auger, and grab groundwater samples will be collected. Groundwater is anticipated to be first encountered between 4- and 7-feet bgs.

All samples will be tested for TRPH, VOCs, Total Lead, and Methyl-Tertiary-Butyl-Ether (MTBE).

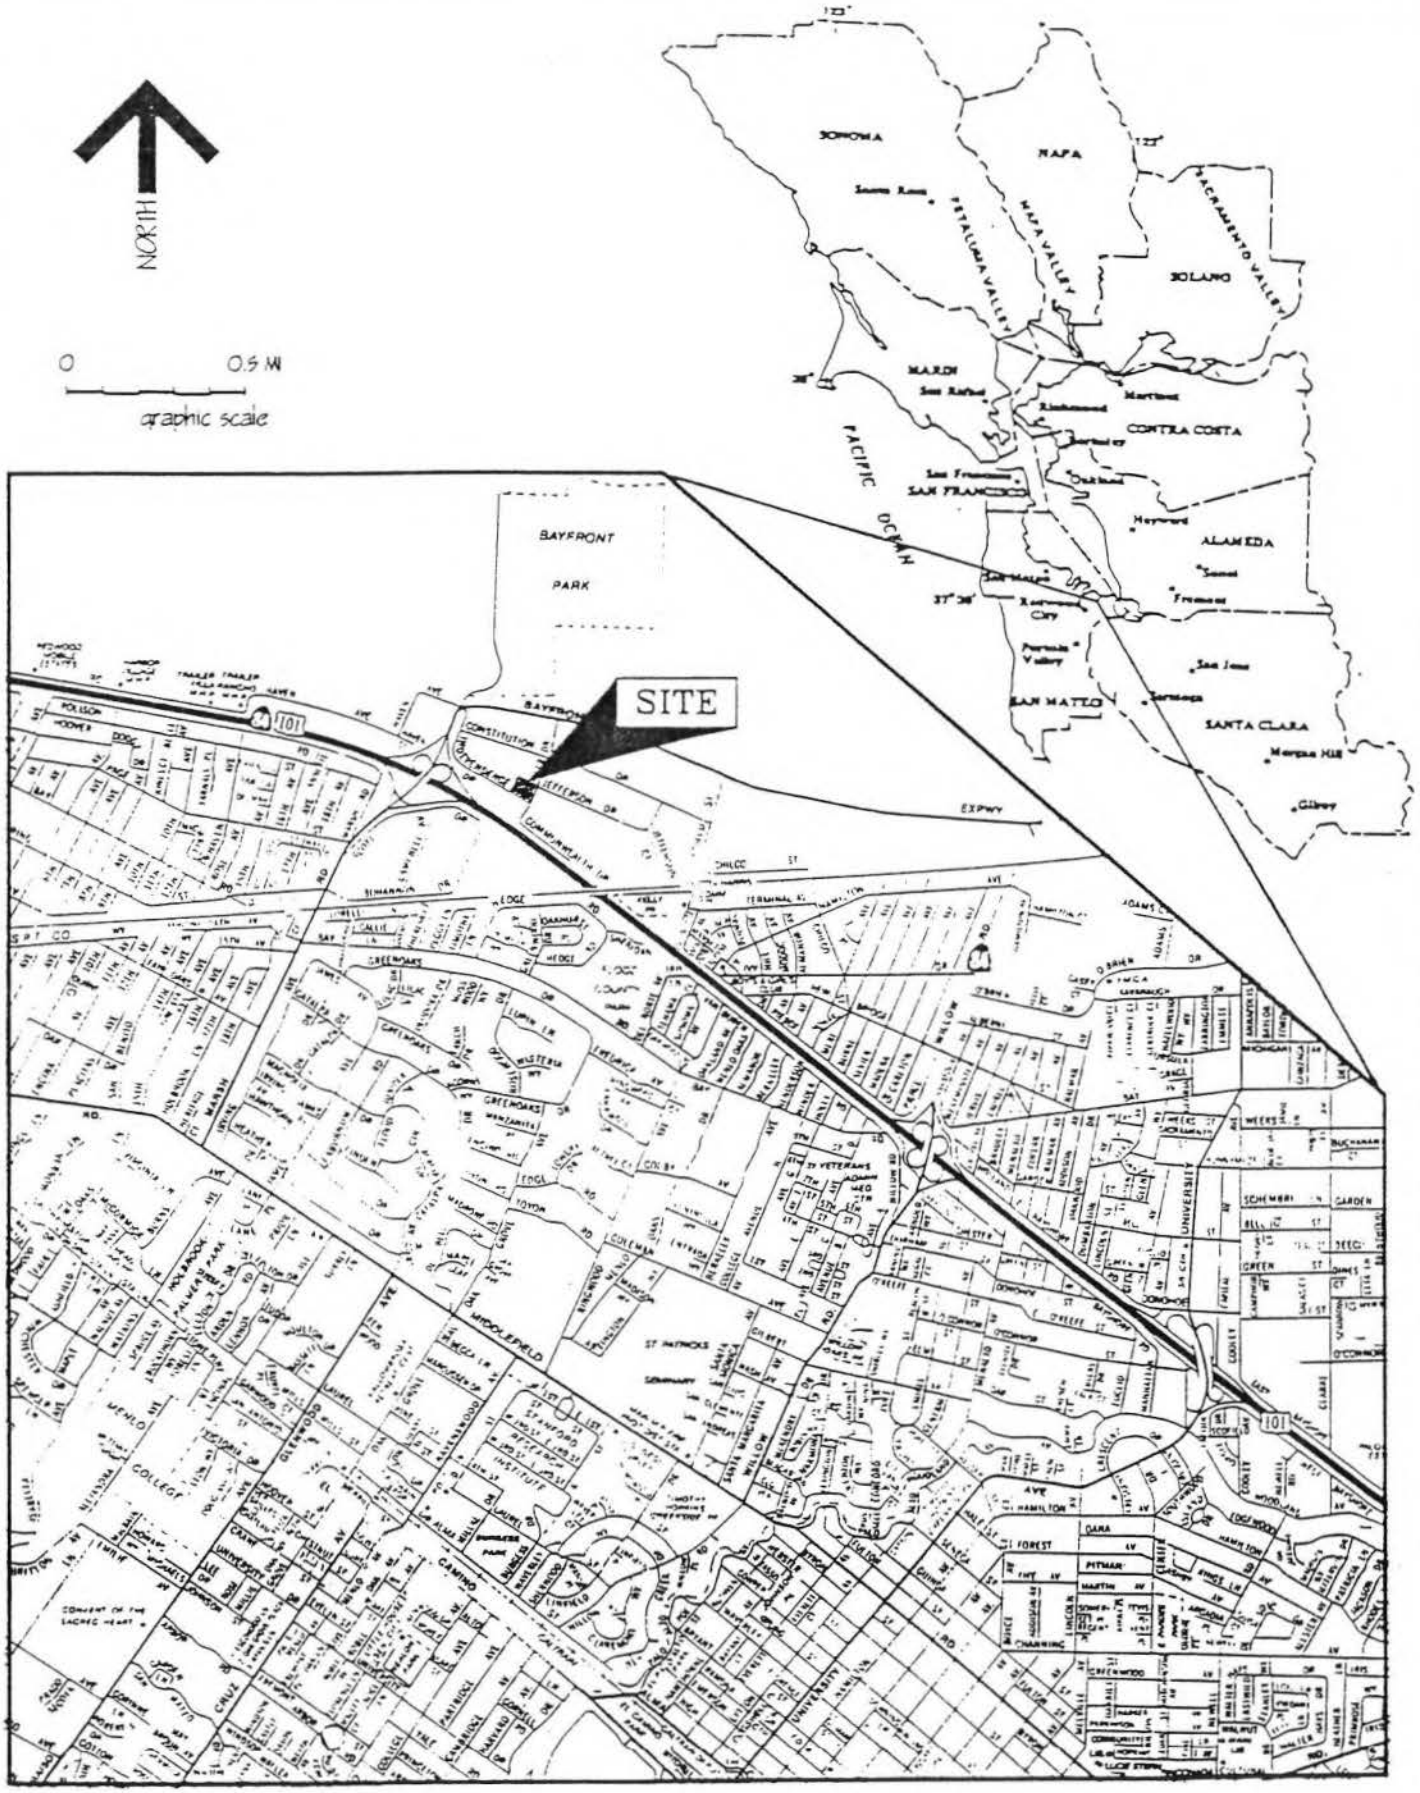
6.0 BENEFICIAL USES

6.1 San Francisco Bay Region Basin Plan

According to the San Francisco Bay Region Basin Plan, existing beneficial uses of the nearest body of water to the Site (the San Francisco Bay) are:

- ocean, commercial and sport fishing,
- industrial service and supply,
- navigation,
- recreational (both water contact and non-contact),
- preservation of rare and endangered species habitat,
- estuarine habitat,
- fish migration, and
- shellfish harvesting.

No beneficial uses exist for agriculture, groundwater recharge, or municipal use according to the Basin Plan.



7.0 PROFESSIONAL CERTIFICATION AND LIMITATIONS

This Work Plan has been prepared by E_2C, Inc. for the sole use of Krebs Engineers and/or their agents under the professional supervision of the Principal whose seal and signature appear below. To the best of our knowledge, all statements contained herein are true and correct.

Sincerely,

Eileen H. Ashton

Gray Davis
Governor

March 27, 2002
File No. 41S0157 (NK)

Mr. Jack King
12 Fairway Place
Half Moon Bay, CA 94019

SUBJECT: No Further Action, 1205 Chrysler Drive, Menlo Park, San Mateo County.

Dear Mr. King:

This letter confirms the completion of site investigation and remedial action for the pollutant releases at the subject site.

Regional Board staff have reviewed the February 25, 2002, Soil and Groundwater Sampling and Analysis Report for the subject property, submitted by E_2C, Inc. The investigation was performed pursuant to the July 1997 Workplan for Groundwater Investigation, which was approved in our January 17, 2002 letter. The investigation was to determine whether the soil or groundwater beneath the former sumps has been impacted by petroleum, VOCs or lead.

Soil and groundwater samples were collected adjacent to each of the three former sumps. Trichloroethene (TCE) was detected in all three groundwater samples, with a maximum concentration of 59 ppb. However, only one soil sample contained TCE, at a concentration of 7.7 ppb. No petroleum constituents were detected in any of the samples, and lead levels were within natural background range. The subject property is located within an industrial area with regional groundwater contamination.

Based upon the available information, including the current land use, and with the provision that the information provided to this agency was accurate and representative of site conditions, no further action related to the pollutant release at the subject site is required.

If you have any questions, please contact Nancy Katyl of my staff at (510) 622-2408, or e-mail nk@rb2.swrcb.ca.gov.

Sincerely,

Stephen A. Hill
Toxics Cleanup Division Chief

For Loretta K. Barsamian
Executive Officer

APPENDIX G

RESUMES OF ENVIRONMENTAL PROFESSIONALS

GERALD W. HARRIS, L.G.

Senior Geologist

Mr. Harris is a senior environmental consultant with 26 years of experience in Phase I ESAs, remedial investigations, feasibility studies, remedial action planning and implementation, NPDES stormwater and sediment management, environmental site assessments, data validation and management, regulatory compliance, hydrology, risk-based data evaluation, and economic geology. He has managed Phase I ESA, hazardous waste assessment and remediation, environmental compliance, stormwater permitting and economic geology projects for more than 19 years. Mr. Harris has expertise in performing Phase I ESAs under ASTM 1527-13 at facilities ranging from small, single-proprietor buildings to large timberlands and electric power generation sites. He also has detailed experience with stormwater management and treatment, abandoned site evaluation and reclamation, the investigation and remediation of metals-contaminated sites, data management, data validation, and economic geology. Mr. Harris is knowledgeable with the ASTM Phase I standards, NPDES stormwater compliance regulations, hazardous materials and waste management and disposal regulations, and federal environmental regulations, including the National Environmental Protection Act (NEPA), CERCLA and the Superfund Act Reauthorization Amendment (SARA)

EDUCATION

B.S., Geology, University of Washington, 1986

M.S., Geology, University of Alaska Fairbanks, 1994

EXPERIENCE

2002 – Present:	PES Environmental, Inc., Novato, California
1995 – 2001:	IT Corporation, Inc., Renton, Washington and Eugene, Oregon
1990 – 1994:	EA Engineering, Science, and Technology, Redmond, Washington
1988 – 1989	Alaska Division of Geological and Geophysical Surveys

TRAINING, CERTIFICATIONS, AND REGISTRATIONS

NWETC Training Certification
OSHA 40-Hour Health and Safety Training (1990)
OSHA 8-Hour Supervisor Training (2000)
Annual OSHA 8-Hour Health and Safety Refresher (2009)
Licensed Geologist – Washington, #1714

REPRESENTATIVE PROJECTS

Project/Program Manager for Phase I Environmental Site Assessments and environmental compliance audits – Oregon - Responsibilities include management and execution of Phase I ESAs and hazardous waste audits for property owners, managers, lenders, and law firms. Duties include scheduling and implementing Phase I ESAs and audits retail, commercial, and industrial properties. Projects include Phase I ESAs for a $250MM sale of an electric utility plant and coal mine, several timberland properties involving more than 100,000 acres, former sawmill and gun club site, manufacturing facilities, high-tech business parks, and commercial shopping centers.

Project manager for RI and litigation support at a large green veneer facility in the southern Willamette Valley, Oregon - The project included assessment of historical environmental issues including; buried hazardous wastes; fuel and hydraulic oil releases; and, a UST removal and assessment. Currently providing transaction support to client.

Project Manager for two Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) treatability studies at the nation's largest Superfund site in Montana - Work included remedial investigation, treatability studies, construction oversight, database management, and regulatory negotiations.

Project Manager for installation, operation, and monitoring of a landfill gas (LFG) treatment system at an abandoned landfill brownfield in Oregon - Responsibilities included LFG extraction well installation, construction oversight, regulatory negotiations, monitoring plan development and implementation, report preparation, and project management.

Project Manager for a USEPA emergency response action in Nighthawk, Washington - Responsible for the emergency removal of 100,000 cubic yards of mine tailings deposited in the floodplain of the Similkameen River; the design and construction of a permanent upland repository for the mine tailings; design and construction of sediment management plans for the floodplain and repository; and, revegatation/restoration of the floodplain.

Project data manager and lead data validator for RI/FS/RA projects in Oregon and Washington - Sites include wood product mills, bulk chemical storage and distribution facilities, and bulk petroleum facilities. Familiar with GIS/KEY®, ACCESS®, and EXCEL® data management software.

WILLIAM F. FRIZZELL

President
Principal Engineer

Mr. Frizzell is a civil/environmental engineer with 36 years of experience, specializing in environmental assessments of properties, soil and groundwater investigations and remediation, and hazardous and solid waste management. He has been the project manager responsible for all phases of Remedial Investigations/Feasibility Studies and remedial action planning and design. He has evaluated hazardous waste disposal facilities throughout the U.S., focusing on facilities' compliance with Federal and State regulations, and hydrogeological characteristics of the disposal sites. For real estate transfer projects, Mr. Frizzell has performed and/or managed more than 200 environmental assessments for developers, lenders, and attorneys. He has worked closely with developers on residential and commercial projects, which require environmental cleanup strategies and remediation of soils and/or groundwater. He also provides third party review of environmental projects for preparation of Environmental Impact Reports and litigation support. Mr. Frizzell has developed plans and specifications for hazardous waste site closures and has been involved in the design of gas, leachate, and surface water control systems. In addition, he has designed and prepared plans and specifications for slurry walls to control the migration of contaminated groundwater, and have been responsible for the selection and installation of synthetic liners for hazardous waste applications.

Mr. Frizzell's project experience also includes dredging feasibility studies for open water and land disposal sites. These projects have included characterization of sediments in contaminated and uncontaminated environments, biological and water quality assessments, monitoring programs and maintenance of disposal areas.

Mr. Frizzell has also performed site investigations for foundation studies and has experience in design and construction of projects involving structural grouting, dam construction, and earthwork.

EDUCATION

B.S., Civil Engineering, University of California, Berkeley, 1978

Postgraduate education has included courses and seminars in Storm Water Management, Geotechnical Engineering of Waste Management Systems, Groundwater Hydrology, Hazardous Materials Management and Handling, Stabilization and Solidification of Hazardous Waste, and Management Training.

SAFETY TRAINING

Health and safety training and update courses following EPA and OSHA requirements. Courses included training in physical, chemical, and toxicological properties of hazardous materials; hazard evaluation and control; selection and use of personal protective equipment; sampling and monitoring techniques and equipment; site entrance and decontamination procedures; and safety plan development.

EXPERIENCE

1989 - Present:	PES Environmental, Inc., Novato, California
1981 - 1989:	Harding Lawson Associates, Novato, California
1978 - 1981:	Woodward Clyde Consultants, San Francisco, California.

REGISTRATION

Civil Engineer - California, Arizona, Washington

Environmental Assessor - California, Washington

REPRESENTATIVE PROJECTS

Storm Water Management – Program manager for assisting various clients in compliance with the State of California Industrial Activities Storm Water General Permit. Activities included preparation of storm water pollution prevention plans, storm water monitoring plans and annual reports.

Litigation Support/Expert Witness Projects - Litigation support and expert witness services have included the areas of soil and groundwater remediation cost recovery actions; standard of care evaluations for environmental site assessments; assessment of damages due to releases from underground storage tanks; and claims due to a residential development over contaminated soils and groundwater. Client: Various Law Firms

Real Estate Assessment Projects - Program and project manager responsible for all phases of numerous real estate transfer assessment projects. Projects involve evaluating properties for potential liability due to hazardous waste contamination, site history evaluations, site inspections, regulatory review, and preparation of assessment reports. Program responsibilities include marketing, business development, training, and quality assurance/

quality control program development. Clients: Various Lending Institutions, Insurance Companies, Attorneys, Finance Companies and Developers

Dredging Feasibility Studies, Port of Oakland, California - Project manager responsible for dredged sediment disposal project involving site characterization and geochemical and surface water modeling to predict effluent water quality. Project involved conducting a feasibility study to dispose highly saline and contaminated sediments in an upland environment and development of control measures. Client: Port of Oakland

Richmond Marsh Restoration, Richmond, California - Large amounts of paint residue were uncovered during construction of new channels to restore marshland on edge of San Francisco Bay. As project manager: developed and implemented site-characterization plans; developed, tested, and analyzed potential remedial actions; selected preferred remedial action; prepared draft and final Remedial Action Plans; attended public hearings; developed community Relations Plan; and developed construction plans and specifications and post-construction monitoring plans. Managed all negotiations with state regulatory agencies. Client: City of Richmond

Hazardous-Waste Investigation, State Superfund Site, Richmond, California - Project manager for investigation at former pesticide formulating and packaging site. Responsible for all phases of investigation, including hydrogeological studies, analytical testing program, contaminant transport evaluations, study of offshore contaminant migration in marine sediments, evaluation of bioavailability of contaminants to marine organisms, and dredging of contaminated sediments. Planned and implemented remedial actions involving construction of temporary waste piles, installing synthetic membranes, and removing and transporting contaminated soils and debris. Project has included close coordination and involvement with various state regulatory agencies. Client: Levin Richmond Terminal Corporation

PCB Spill Investigation and Cleanup, Northern California State Superfund Site - Engineer for study to determine extent of contamination from PCB spill. Organized hydrogeologic study to determine contaminant migration potential, examined cleanup options, and prepared economic analysis of alternatives. Client: MGM Brakes

Landfill Closure Plans and Specifications, Alameda, California - Project manager responsible for preparing plans and specifications for closing 43-acre sanitary landfill adjacent to San Francisco Bay. Project included construction of surface impoundments for placing dredge spoils for use as cover material and preparation of earthwork plans and specifications for cover system. Project also included designing and installing post-closure groundwater monitoring system and performing leachate characterization study and contingency plan. Client: City of Alameda

Soil Process and Treatment Program, Richmond, California - Project manager for site remediation involving processing and treatment of 35,000 cubic yards of lead-contaminated

soil. Processing involved physical separation through screening; treatment involved proprietary fixation process. Responsible for regulatory negotiations, contractor selection, and quality control program. Client: City of Richmond

Site Remediation Program, Pittsburg, California - Project engineer responsible for plans and specifications to remediate 4-acre asbestos-contaminated site. Project involved examination and evaluation of cover options, selection of contractors, regulatory negotiations, and construction observation. Client: John Mansville

Slurry-Wall Design, Martinez, California - Project engineer responsible for designing 3300-foot-long slurry wall through existing surface impoundments containing effluent from oil refinery. Responsible for setting up and evaluating effluent/bentonite slurry permeability testing program for development of design criteria. Duties also included preparing plans and specifications, evaluating contractors' bids, and reviewing construction-control program for slurry-wall installation. Client: Shell Oil

Surveys of Hazardous-Waste Treatment, Storage, and Disposal Sites, Nationwide - Project manager responsible for conducting surveys and preparing evaluation reports for over 50 commercial hazardous-waste facilities. Evaluations focus on hydrogeologic, managerial, environmental, regulatory, financial, and safety aspects of disposal-site operations. Projects have been performed in response to generator concern for "cradle to grave" responsibility for hazardous waste. Clients: Shell Oil Company, Chevron U.S.A. Inc., and IBM Corporation

Landfill Assessment and Geotechnical Studies, Albany and Berkeley, California - Project manager for investigating and evaluating inactive sanitary landfills in regard to generation and migration of leachate and methane, providing recommendations for developing landfills to support various structures, assessing potential impact of landfill on future development, and preparing preliminary closure plans. Project has also included preliminary geotechnical studies for landfills involving geohazards evaluation, general foundation recommendations, and slope-stability studies. Client: Hall, Goodhue, Haisley and Barker, for Santa Fe Land Improvement Company

Closure Plan Development, Tucson, Arizona - Project engineer for closure plan for 18 sludge-drying beds from wastewater treatment plant. Project included developing analytical testing program, decontamination procedures, and plans for closing system. Client: Hughes Aircraft Company

Hazardous-Waste Investigation, State Superfund Site, Richmond, California - Project manager for site investigation and remedial-action planning at site contaminated with heavy metals from uncontrolled releases from waste piles and buried drums. Duties included setting up field investigations and analytical programs for site characterization and planning remedial actions. Client: Summer del Caribe

RCRA Part B Permit Application Review, Hazardous-Waste Facility - Responsible for reviewing Part B permit applications for various treatment, storage, and disposal facilities.

Reviews focus on operators' compliance with federal regulations. Client: A. T. Kearney, for U.S. Environmental Protection Agency

Hydrogeological and Geotechnical Investigation of Dioxin Contamination, Times Beach, Missouri - Served as alternate field operations manager. Conducted drilling and sampling and implemented decontamination and chain-of-custody procedures. Client: CH2M Hill, for U.S. EPA

Environmental Risk Assessment, Santa Rosa, California - Developed risk assessment report focusing on environmental risks associated with City of Santa Rosa operations, including sewer treatment plants, sludge disposal, and hazardous-material storage. Client: Environmental Risk Assessors, U.S.A.

Hazardous Waste Investigation, Sacramento, California - Engineer and assistant project manager for site investigation to characterize unknown wastes and to determine lateral and vertical extent of contamination due to unmanaged-disposal practices. Client: Aerojet

Hazardous Waste Investigation, Santa Rosa, California - Engineer for site investigation to determine existence and direction of migration of organic solvents from point sources of pollution. Organized analytical testing program to determine amounts and extent of groundwater pollution. Client: Hewlett-Packard

Landfill Closure, Alameda, California - Project engineer responsible for preparing all phases of plans and specifications for combination sanitary landfill closure and dredge spoils pond construction on 110-acre site. Project involved design of landfill closure system, slurry wall for leachate control, passive methane gas venting system, dike construction, seawall repair, decant structure, and hydraulic control systems. Client: U.S. Navy

Hazardous Waste Investigation, Martinez, California - Field engineer during investigation to determine extent of contamination due to leaching from disposal pond containing tetra ethyl lead. Supervised drilling activities and safety procedures for initial phase of cleanup study. Client: E.I. DuPont Nemours

Gasoline Spill Investigation, Novato, California - Project engineer during investigation conducted to determine extent of groundwater and soil contamination resulting from leaking underground gasoline storage ranks. Project involved using soil-gas and groundwater monitoring techniques. Client: Texaco Incorporated

Gasoline Spill Investigation, Stockton, California - Conducted post-remedial-action investigation to assess potential for future migration of gasoline from service station with residual soil contamination. Client: Exxon Company U.S.A.

Tailings Dam, Green River, Wyoming - Resident engineer during construction of tailings dam for solid-waste management program. Responsible for quality control, redesigned plans to accommodate field conditions, and prepared final earthwork report. Client: Allied Chemical

Hillside Development, Walnut Creek, California - Resident engineer in charge of construction for many phases of earthwork. Supervised mass grading operations including landslide repair, installation of subsurface drainage, and rebuilding of cut slopes. Installed and monitored hydraugers and piezometers for groundwater control. Client: Terra California

Gravel Island, Beaufort Sea, Alaska - Design verification agent during construction of island for drilling platform. Reviewed design criteria and observed construction in arctic environment. Client: Exxon Company, U.S.A.

Foundation Construction, Oakland, California - Field engineer during construction of drilled-pier foundations. Client: Peralta Hospital

Structural Grouting, Port Clinton, Ohio - Field engineer for stabilization of power plant foundation. Designed grout mixes according to varying subsurface conditions, supervised grouting batch plant operation, and installed extensometers to measure rock displacement during construction. Client: Toledo Edison Company

Earthquake Engineering, San Francisco, California - Developed seismic-response spectra for several sites in California using various computer programs and data-retrieval systems. Client: Nuclear Regulatory Commission

1.0 INTRODUCTION

1.1 Purpose and Scope of Work

This report presents the results of a Phase I Environmental Site Assessment (ESA) for the commercial property located at 119 Independence Drive in Menlo Park, California (the site or subject property). The site location is shown on Plate 1, and the subject property and vicinity are shown on Plate 2. PES Environmental, Inc. (PES) performed the Phase I ESA on behalf of The Sobrato Organization (Sobrato). PES was retained by Sobrato to compile and evaluate available information to assess for Recognized Environmental Conditions (RECs) associated with the site.

The ESA was performed in general accordance with ASTM International guidelines for Phase I Environmental Site Assessments (ASTM E1527-13). These guidelines comply with the U.S. Environmental Protection Agency's All Appropriate Inquiries (AAI) rule adopted in November 2013. The following tasks were conducted during this ESA:

- Federal, State and local agency databases were reviewed to identify nearby sites which have reported the use, storage, or release of hazardous materials;
- Regulatory agency records regarding the site and adjacent properties were reviewed;
- Historical aerial photographs, Sanborn Fire Insurance maps, and historical topographic maps of the site and surrounding area were obtained and reviewed to evaluate prior land uses;
- Previous environmental reports prepared for the subject property and vicinity were reviewed;
- Individuals with knowledge of the site were interviewed;
- An inspection of the site and a reconnaissance of surrounding properties were conducted to assess the potential for contamination of the site from onsite or offsite sources. The site inspection was conducted by an environmental professional with qualifying experience; and
- This report was prepared to present the results of the Phase I ESA investigation.

A Recognized Environmental Condition, or REC, is defined in the ASTM International guidelines (ASTM E1527-13) as the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. A controlled REC (CREC) is a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous

substances or petroleum products allowed to remain in place subject to the implementation of required controls (e.g., property use restrictions, activity/use limitations, institutional controls, or engineering controls). A historical REC (HREC) is a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meets unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls.

De minimis conditions are defined by ASTM as conditions that generally do not present a threat to human health or the environment, and that generally would not be the subject of an enforcement action if brought to the attention of appropriate government agencies. A *de minimis* condition is not a REC and not a CREC.

1.2 Special Terms and Conditions

The ESA activities were conducted in general accordance with ASTM E1527-13. There are no other special terms or conditions for this report.

1.3 Limitations and Exceptions

This Phase I ESA was performed in accordance with practices and procedures generally accepted in the consulting environmental engineering profession at the time and place they were performed. The findings, opinions, conclusions, and recommendations expressed herein are applicable as of the date the services were provided. Our professional judgment to assess the potential for contamination is based on limited data; no warranty is given or implied.

The Phase I ESA was prepared at the request of Sobrato as part of its pre-acquisition due diligence of the subject property and may be relied on only by Sobrato. No other party may rely on this report without the express written permission of Sobrato and PES.

PES was not provided information regarding the value or purchase price of the subject property, nor prices of comparable properties in the site vicinity. In accordance with ASTM E1527-13, an evaluation of the purchase price relative to those of comparable properties should be conducted by the user of this Phase I ESA, as applicable.

2.0 USER PROVIDED INFORMATION

2.1 Title Records

Title records were not provided to PES for the preparation of this Phase I ESA.

2.2 Environmental Liens or Activity/Use Limitations

Copies of environmental liens, activity limitations, and use limitations were not provided to PES, and PES is not aware of any such liens or activity/use limitations associated with the subject property.

2.3 Specialized Knowledge

PES does not possess any specialized knowledge regarding the subject property. Also, as noted below, Sobrato has reported to PES that it has no specialized environmental knowledge regarding the subject property.

2.4 Owner, Property Manager, and Occupant Information

As part of this Phase I ESA, a Key Site Manager Questionnaire was completed by Mr. Chris Carter, the current owner of the property. Mr. Carter indicated that he was aware of groundwater monitoring wells on the site when he purchased the property in 1991 and was aware of groundwater contamination, though he was not aware of the specifics. With the exception of the wells and groundwater contamination, Mr. Carter is not aware of any environmental concerns or violations with respect to the site. A copy of the User Questionnaire is provided in Appendix A.

2.5 Reason for Performing Phase I

The Phase I ESA was completed as part of the environmental due diligence by Sobrato to support a planned acquisition of the site.

3.0 SITE DESCRIPTION

3.1 Location and Description

The subject property is within the City of Menlo Park and consists of one legal parcel identified by San Mateo County Assessor's Parcel Number (APN) 055-236-180, covering approximately 1-acre. The site has a street address of 119 Independence Drive, Menlo Park, California.

3.2 Site and Vicinity Characteristics

The subject property is accessed via driveways off Independence Drive. The site is located in an area primarily used for light industrial/commercial purposes. The site consists of one building, asphalt-paved ground level parking, an asphalt-paved exterior yard with temporary structures, and landscaped areas. The subject property and the adjacent areas are shown on Plate 2.

The site is bound to the south by Independence Drive. The site is bound to the north, east and west by commercial and light industrial buildings and associated parking lots.

3.3 Physical Setting

According to the United States Geological Survey (USGS) *Palo Alto, California* Quadrangle 7.5-minute series topographic map dated 1999, the site is situated at an elevation of approximately 10 feet above mean sea level (MSL). The site is flat-lying. The regional topography slopes gently to the north-northeast.

3.4 Local Geology and Hydrogeology

According to a subsurface investigation performed by J.V. Lowney & Associates for the site in 1987 (Lowney, 1987), the soil beneath the site is roughly characterized by four regions. Black, very stiff silty clay extends from the ground surface to approximately 7 feet below ground surface (bgs). A stiff to very stiff, light brown to orange brown, silty clay was encountered from 7 to 11.5 feet bgs and from 15 to 17 feet bgs. Dark brown, well graded gravel was encountered between 11.5 and 15 feet bgs. From 17 to 20 feet bgs, dark brown, well graded sand was encountered. Two borings were completed to install groundwater monitoring wells and were terminated at 20 feet bgs.

The same report by Lowney measured the depth to groundwater at 4.1 feet bgs, though they noted potential groundwater fluctuations should be considered. At two sites southeast of the subject property, groundwater flow has been measured to the southwest, away from the San Francisco Bay and the subject property. Other sites northeast of the subject property have measured a groundwater flow to the north and east-northeast, toward the Bay. A CalTrans groundwater pumping station south of the site along U.S. Highway 101 was used for dewatering beneath a railroad right-of-way. Pumping at this station may have locally affected groundwater flow. It is not known whether the pumping station is still in use.

The closest surface water body is San Francisco Bay, located approximately 0.9 miles north of the Site. Salt marshes at the edge of the bay extend shoreward to within 900 feet of the site. Based on FEMA map data presented in the EDR report (Appendix A), the Site is located within the 100-year floodplain that extends to San Francisco Bay.

3.5 Wetlands

As shown in the EDR database report (Appendix A), there are no National Wetlands Inventory (NWI) identified wetlands on the subject property. There are wetlands and salt marshes bordering San Francisco Bay starting approximately 900 feet north of the site.

3.6 Descriptions of Existing On-Site Structures and Improvements

The subject property is currently occupied by an approximately 13,000 square feet building of steel frame and wood construction. The building is one story but has been improved with a loft style storage area above the northeast portion of the building. The entire building is on a concrete slab-on grade foundation. The site building was originally constructed in the late 1960s and a review of historic aerial photographs indicates that no significant changes have taken place since. The areas surrounding the buildings have been improved with asphalt-paving, curbing, and landscaping

3.6.1 Structures and Current Use

The building is currently occupied by The Davey Tree Expert Company (Davey) with two sub-tenants: The Jensen Landscaping Service (Jensen) and Tacklin Design. In addition, the property owner, Mr. Chris Carter, maintains a storage space. The building interior is separated into four primary work spaces with approximately 20 percent of the overall footprint dedicated to office space in the southeastern portion associated with Davey. An additional 40 percent of the interior footprint is utilized by both Davey and Jensen for the storage of mechanical equipment, tools and vehicles associated with tree and landscaping services. Tacklin Design occupies approximately 20 percent of the footprint in a partitioned section in northwest corner of the building for research and development (R&D) of robotics systems; including the use of welding and mechanical devices. The remaining 20 percent of the footprint is occupied by Mr. Carter in a partitioned section in the northeast corner of the building. Mr. Carter uses the space for storage of two vehicles and furniture associated with an interior design staging business. The loft storage area above the northeast portion of the building is used by Davey for miscellaneous storage.

3.6.2 Other Improvements

Electricity and natural gas are supplied by Pacific Gas and Electric (PG&E). Water is supplied by Menlo Park Municipal Water District, and sewage services are provided by West Bay Sanitary District (WBSD).

3.7 Current Uses of Adjoining Properties

A reconnaissance of the surrounding area was completed to assess whether neighboring sites represent a potential environmental condition that could affect the subject site. The current uses of the adjoining properties as observed during the site inspection are summarized below.

Properties to the South

The site is bordered to the south by Independence Drive. There is a vacant single-story office building located across Independence Drive to the southeast and a vacant lot to the southwest.

Properties to the East

The site is bordered on the east by a single story commercial/industrial building occupied by L3 Randtron Antenna Systems at 123-125 Independence Drive. This site is also being evaluated for purchase by Sobrato and is discussed in detail in Section 5.2.2.

Properties to the North

The site is bordered on the north by a two-story commercial building occupied by Carr & Ferrell LLP at 120 Constitution Drive.

Properties to the West

The site is bordered on the west by a one-story commercial/industrial building occupied by Studio Red at 115 Independence Drive.

3.8 Past Uses of Property and Adjoining Properties

Historical site use information was obtained through a review of aerial photographs, historical topographic maps, city address directories, and results of previous investigations. Historical Sanborn Fire Insurance Maps are not available for the subject property area.

3.8.1 Historical Sources

Site use information was obtained through a review of the following list of historical sources. The results of the review of these sources are summarized below:

- Aerial Photographs: Aerial photographs obtained from EDR were reviewed for the following years: 1943, 1948, 1950, 1958, 1968, 1974, 1982, 1991, 1998, 2005, 2009, 2010, and 2012. A summary of the aerial photograph review and copies of these photographs are presented in Appendix B. The site location is identified on each of the aerial photographs for reference;

- Sanborn Fire Insurance Maps: A search for available historical Sanborn Fire Insurance Maps was performed by EDR. EDR did not identify any Sanborn Maps for the site. A copy of the EDR 'No Coverage' report is provided in Appendix C;

- Topographic Maps: Various topographic maps of the subject property vicinity were compiled by EDR. The following maps were included in the compilation: USGS Palo Alto Quadrangle 15-minute series topographic maps produced in 1899, 1943, 1947, 1948, and 1961; USGS Santa Cruz Quadrangle 30-minute series

topographic map produced in 1902; and Palo Alto Quadrangle 7.5-minute series topographic maps produced in 1953, 1961, 1968 (photo revised), 1973 (photo revised), 1991, and 1997, were reviewed by PES. A summary of the topographic map review and copies of the maps are presented in Appendix D. The site location is identified on each of the topographic maps for reference;

- City Directories: A search of city directories was performed by EDR for the years 1970, 1977, 1980, 1985, 1992, 1995, 1999, 2003, 2008 and 2013. A summary of the city directories review and copies of the directory listings are presented in Appendix E;

- San Mateo County: Records related to hazardous materials, hazardous wastes, storage tanks, chemical releases and groundwater protection at the site were requested from San Mateo County Environmental Health (SMCEH), the applicable Certified Unified Program Agency (CUPA); and

- Menlo Park City Records: Building permit records were requested from the Menlo Park Building Department (MPBD). As of the date of this Phase I ESA, the MPBD has not responded to PES's request for files. PES will complete the file reviews once information is obtained from the MPBD. At this time, it is not expected that the MPBD files will materially change the findings and conclusions of this report.

3.8.2 Historical Review Summary

The following provides historical use information for the subject property and vicinity based on available historical resources listed in the previous sections.

Subject Property

The earliest reviewed record for the site is an 1899 topographic map, which shows the site as undeveloped land. Aerial photographs from 1943 to 1958 show the subject property as vacant land with likely agricultural use (grain and/or row crop farming). A 1968 aerial photograph shows the subject property developed with the current structure in place. The structure is surrounded by asphalt paved parking lots and landscaping. A large unpaved yard is present north of the site building. By 1991, an aerial photograph shows the northern portion of the site paved. No other significant changes to the site were identified from 1968 to the present-day.

Available historical city directory references indicate the subject property address was occupied in 1970 by S&M Manufacturing Corporation, from 1970 to 1980 by Siebert Machine, from 1992 to 1995 by A&A Racing Service and Ranzi Corporation, from 1992 to 1999 by Motion Pro and from 2008 to 2013 by Davey. The current site tenant is Davey.

Subject Property Vicinity

The history of the site vicinity is similar to the subject property. The 1899 topographic map shows the site vicinity as undeveloped land. Aerial photographs from the 1940s to 1958 also

show the subject property vicinity in use for agricultural purposes (grain and/or row crops). By 1968, an aerial photograph shows adjacent properties located at 115, 120 and 123 Independence Drive developed. Aerial photographs through 1991 show continued development of commercial type buildings in the vicinity, with no significant changes taking place after 1991.

3.8.3 Interviews

An interview was conducted with Mr. Chris Carter. Mr. Carter is the property owner and has been associated with the property since 1991. Mr. Carter was aware of the monitoring wells, MW-1 and MW-2, Mr. Carter was not aware of any chemical spills or concerns related to chemical use or handling at the adjacent property businesses.

Based upon Mr. Carter's interview responses summarized above, no site-specific potential environmental concerns were identified.

In addition to the interviews summarized above, Sobrato, the User of this Phase I report, was requested to provide responses to the ASTM E 1527-13 User Questionnaire. Sobrato's responses to the questionnaire are:

- Sobrato is unaware of any environmental liens recorded against the subject property;
- Sobrato is unaware of any environmental use restrictions on the subject property;
- Sobrato does not have specialized knowledge or experience potentially relevant to the subject property;
- Sobrato does not have any commonly known or reasonably ascertainable information about the subject property that would assist in the preparation of this report;
- Sobrato is not aware of any obvious indicators of the presence or likely presence of environmental releases/impacts at the subject property other than the information provided in this report; and
- Sobrato stated that the purchase price of the subject property reasonably reflects the fair market value of the property.

4.0 PREVIOUS ENVIRONMENTAL DOCUMENTS

Two previous environmental investigations were conducted at the site. These documents are discussed in the following sections.

4.1 Soil and Ground Water Quality Reconnaissance Investigation - 1987

A Soil and Ground Water Quality Reconnaissance Investigation was performed at the site in 1987 by J.V. Lowney & Associates (Lowney). A copy of the Lowney report is included in Appendix F. Lowney installed a groundwater monitoring well (MW-1) in 1987 for Bohannon Development Corporation for a potential acquisition of the site. The well, located at the northeast corner of the property, was sampled and there were detections of volatile organic compounds (VOCs) including trichloroethylene (TCE) at 420 micrograms per liter (μg/L) and 1,1- Dichloroethylene (1,1-DCE) at 35 μg/L. Lowney stated in their report that Raychem was operating the site at that time for spooling operations and also indicated that Raychem was using small quantities of TCE. Lowney recommended installing additional wells in order to determine if the detected VOCs were coming from off-site or if there was a possible on site source. In addition, six discrete depth soil samples were collected during drilling operations. A composite of the six samples was analyzed for VOCs and priority metals. VOCs were not detected in the composite sample. Arsenic was detected in the composite sample at 12 milligrams per kilogram (mg/kg) and chromium was detected at 51 mg/kg.

A second well (MW-2) was installed at the southeast corner of the property by Lowney in 1991. PES did not obtain any reports for sampling well when it was installed but did obtain a 2009 report for MW-1 and MW-2 as discussed below.

4.2 Groundwater Sampling Report - 2009

Environmental Risk Specialties Corporation (ERS) sampled MW-1 and MW-2 in 2009 for Mr. Chris Carter at the request of the SMCEH. The results of the analysis of the groundwater in 2009 included TCE at 303 μg/L and 108 μg/L; 1,1-DCE at 1,9 μg/L and 0.6 μg/L; and cis 1,2-DCE at 22.4 μg/L and 8.9 μg/L in wells MW-1 and MW-2 respectively. ERS concluded that the groundwater flow direction could not be established without installing at least one additional well. They also indicated that the occupant of the site at that time, Davey, did not appear to be the source of the VOCs in groundwater.

5.0 RECORDS REVIEW

5.1 Environmental Liens and Activity and Use Limitations

Based on review of an environmental database search conducted by EDR, there are no Federal Superfund (National Priority List [NPL]) liens or State environmental deed restrictions associated with the subject property. No information indicating the presence of environmental liens on the subject property was provided by Sobrato.

No activity/use limitations were identified for the subject property. As such, no evaluation of activity/use limitations compliance was performed for this assessment.

5.2 Standard Environmental Record Sources

The discussion presented in this section is based on available information provided by environmental agencies and databases. An EDR database report dated March 25, 2015, contains listings of sites located within a 1-mile radius which were selected in accordance with the ASTM E 1527-13 standard. This information is obtained from computerized databases of Federal, State, and local records. The database report, which includes descriptions of the listings, is provided in Appendix A.

The following regulatory agency databases were searched and reported in the EDR report:

- U.S. Environmental Protection Agency (U.S. EPA) – Comprehensive Environmental Response Compensation, and Liability Information System (CERCLIS);
- U.S. EPA – CERCLA NPL;
- U.S. EPA – CERCLA Proposed NPL;
- U.S. EPA – Superfund (CERCLA) Consent Decrees (CONSENT);
- U.S. EPA – CERCLA Records of Decision (ROD);
- U.S. EPA – CERCLA NPL Deletions;
- U.S. EPA – CERCLA No Further Remedial Action Planned Site (CERC-NFRAP);
- U.S. EPA – Facility Index System (FINDS);
- U.S. EPA – Emergency Response Notification System (ERNS);
- U.S. EPA – Hazardous Materials Information Reporting System (HMIRS);
- U.S. EPA – Material Licensing Tracking System (MLTS);
- U.S. EPA – Mines Master Tracking Index File (MINES);
- U.S. EPA – Federal Superfund Liens (NPL Liens);
- U.S. EPA – PCB Activity Database System (PADS);
- U.S. EPA – RCRA Administrative Action Tracking System (RAATS);
- U.S. EPA – Section 7 Tracking Systems (SSTS);
- U.S. EPA – Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA)/Toxic Substance Control Act (TSCA) Tracking System (FTTS);
- U.S. EPA – Toxic Substances Control Act (TSCA);

- U.S. EPA – Resource Conservation and Recovery Information System (RCRAInfo), Treatment, Storage, or Disposal (TSD) facilities, and Small Quantity and Large Quantity Generators (SQG and LQG) of hazardous waste;
- U.S. EPA – Emergency Response Notification System (ERNS);
- U.S. EPA RCRA Corrective Action Report (CORRACTS);
- U.S. EPA Facility Index System (FINDS);
- U.S. EPA Toxic Chemical Release Inventory System (TRIS);
- California State Water Resources Control Board (SWRCB) – Leaking Underground Storage Tank Listing (LUST) sites including Indian Land;
- SWRCB UST;
- SWRCB – Voluntary Cleanup Sites (VCP); and
- SWRCB – Solid Waste Facilities (SWF/LF).

PES also searched the following agency websites for environmental records related to the subject property:

- California State Water Resources Control Board's (SWRCB) GeoTracker website located at http://geotracker.swrcb.ca.gov/;
- Department of Toxic Substances Control's (DTSC) EnviroStor website located at http://www.envirostor.dtsc.ca.gov/public/default.asp; and

5.2.1 Subject Property Records

The subject property address was listed in two databases searched by EDR. These listings are discussed below.

- One former tenant, Siebert Machine Corporation, was listed on the Envirostor Database. Details were not specified regarding the reason for the listing; and
- One former tenant, Siebert Machine Corporation, was listed on The San Mateo Business Inventory listing for the generation and storage of hazardous wastes.

No other listings for the site address were present in the EDR report.

PES requested records from the MPBD and SMCEH to evaluate current and historical uses of the subject property. As of the date of this Phase I ESA, the MPBD has not responded to

PES's request for files. PES will complete the file reviews once information is obtained from the MPBD.

SMCEH files pertaining to Raychem, a former tenant at the site, consisted of chemical inventories and correspondence letters. Correspondence letters indicated that the quantity of Raychem's chemical storage at 119 Independence Drive never met the minimum threshold requiring a Hazardous Materials Management Plan or Business Plan. Chemical inventories did not list any quantities of TCE but did note the presence of 2 gallons of Tetrachloroethlyene (PCE). Additional correspondence between Raychem and SMCEH indicated that MW-1 was installed by the owner of the property without input from Raychem and furthermore, to Raychem's knowledge, the well had no connection to their use of the subject property.

SMCEH files included a permit for the installation of MW-2 in 1991 listing Mr. Carter, as the owner. Lowney performed the installation of MW-2. A 2010 correspondence between SMCEH and Mr. Carter indicates that an annual groundwater monitoring report was required to satisfy the due diligence requirement of Mr. Carter's mortgage lender. PES is only aware of the groundwater sampling reports detailed above. A permit was issued in 2011 for the destruction of both MW-1 and MW-2 and the wells were abandoned.

5.2.2 Surrounding Area

Several sites in the subject property vicinity are listed on hazardous materials release and/or storage databases, as discussed below.

115 Independence Drive

This site is located immediately to the west of the subject property. Regulatory agency files document that the site has had investigations of soil, groundwater and soil gas between 1989 and 1997. Levine-Fricke-Recon (LFR) compiled information of the investigations performed prior to 1996 in their July 5, 1996 *Phase I Environmental Site Assessment and Limited Asbestos Survey of 115 Independence Drive, Menlo Park, California 94025*. Subsequently LFR conducted additional soil and groundwater investigation of the property in 1997. Pertinent information from the LFR reports indicate the following:

- The building was reportedly constructed in 1966. Electro Nuclear Laboratories used the property from about 1967 to 1975 for component manufacturing. There were various tenants from 1974 to 1978 including Irex Corporation, Triad Systems Corporation, Xirex Corporation, and James E. Brown, CPA. LFR did not find tenant information from 1979 through 1982. Raychem Corporation leased the property from about 1983 until 1994. Raychem divisions during its tenancy included Medical Products, Local Area Network, and GelTek;

- Two groundwater monitoring wells (MW-1 and MW-2) were sampled in 1989 and were found to contain TCE at 590 and 610 parts per billion (ppb), MW-2 was also found to contain 1,1 DCE at 25 ppb. MW-2 was also found to contain cadmium (50 ppb),

chromium (150 ppb) and silver (30 ppb) all above federal and state drinking water standards. (PES notes that LFR reported the results as ppb which is roughly equivalent to μg/L; the units nomenclature that is used elsewhere in this report.);

- Raychem completed a closure process in 1994 under the oversight of the SMCEH. The closure process included collecting a soil sample next to a floor drain that exhibited etching and corrosion. The results of the analysis of the sample showed the presence of TCE at 0.005 parts per million (ppm);

- LFR also reported that the adjacent property to the east, 119 Independence Drive site was listed by VISTA on the SCL regulatory database (State equivalent CERCLIS list). LFR reported the results of the 1987 groundwater sampling and cited the results of the TCE, and 1,1-DCE from monitoring wells MW-1 and MW-2 that were discussed for the 119 Independence Drive in Section4.0.. LFR further indicated that they contacted Diane Mims of the RWQCB in May 1996 about the results of the sampling at 119 Independence Drive. According to LFR, the RWQCB stated that the 119 Independence Drive property is not adequately characterized and that the concentration of chlorobenzene detected in groundwater is a significant issue. (PES notes that based on review of the 1987 monitoring report for 119 Independence Drive, chlorobenzene was not detected in the groundwater. As such, it is uncertain if this was an erroneous reference or if other data is available and not found during PES' review). LFR also reported that Diane Mims indicated that additional soil and groundwater characterization may likely be required for the 119 Independence Drive site. LFR also mentioned that Raychem had been an occupant of the 119 Independence Drive site; and

- The RWQCB issued a letter dated June 27, 1996 to Ernest and Young, representatives of prospective purchasers of the 115 Independence Drive property, stating that based on the soil, groundwater and soil gas testing on the property they believed the VOC contamination of the groundwater was from an off-site source. Furthermore the RWQCB stated that the property owner would not be responsible for investigation and cleanup on their property caused by an off-site source.

LFR subsequently performed Geoprobe push sampling and analysis of soil and groundwater at 12 locations across the site in January 1997. The LFR results were presented in their January 28, 1997 *Letter Report of Soil and Groundwater Sampling and Analytical Results, 115 Independence Drive, Menlo Park, California.* This sampling was apparently performed as part of environmental due diligence for LFR's client, Studio Red, prior to purchasing the site.

The results of LFR's investigation showed the presence of TCE in groundwater from 160 ppb to 340 ppb from samples collected between about 12 to 20 feet. Other VOCs including 1,1,1, TCA; cis-1,2-DCE; 1,1-DCE were also detected but the predominant VOC was TCE. There were no detections of TCE or other VOCs in soil samples collected from the boreholes at depths of 5 to 6 feet. Contours of the TCE in groundwater were plotted and were interpreted by LFR as indicating an off-site origin but the results were inconclusive as to the location or direction of an off-site source.

120 Independence Drive

This site is located immediately to the north of the subject property. In 1986, a 1,000-gallon gasoline UST was removed from the site. A groundwater sample was collected from within the former tank pit and analysis indicated a concentration of 6,700 ppbTPHg.

- In 1993, three groundwater monitoring wells were installed and two exploratory soil borings were advanced in the vicinity of the former UST by Pacific Environmental Group, on behalf of the J.A. Moreing Company. No petroleum hydrocarbons were detected in the soil samples and concentrations of benzene in groundwater samples ranged from 0.3-0.4 ppb. Subsequent quarterly monitoring of groundwater wells produced no detectable concentrations of petroleum hydrocarbons;

- A 1993 monitoring event identified a TCE concentration spike of 1,200 ppb in one of the monitoring wells. Subsequent monitoring events were conducted and additional wells were installed to further characterize the extent of the VOC contamination. TCE concentrations were found to range from 29 ppb to 540 ppb; and

- The SF RWQCB reviewed the findings of the phase II work and granted a request for No Further Action on April 1, 1998. The RWQCB indicated that a regional TCE plume exists in the area but was not able to determine a source. The site received Case Closure on April 4, 1998.

Remaining Sites

The following sites are listed on the San Mateo County Business Inventory Database for the generation and recycling of waste oil/solvent:

- 127 Independence Drive – located approximately 190 feet east of the subject property;

- 150 Independence Drive – located approximately 120 feet southeast of the subject property;

- 120 Independence Drive – located approximately 50 feet south of the subject property;

- 111 Independence Drive – located approximately 325 feet northwest of the subject property; and

- 110 Independence Drive – located adjacent and north of subject property.

The remaining sites in the surrounding area that are listed in the databases are not expected to present significant environmental conditions to the subject property based on one or more of the following: (1) the listed site has received case closure by the appropriate regulatory agency; (2) the listed site is either cross gradient or down gradient of the subject property with respect to the inferred regional groundwater flow direction; (3) the listed site is a

soils-only affected case; and/or (4) the listed site is located at too great a distance to represent a significant environmental condition with respect to the subject property.

123-125 Independence Drive Phase I ESA

PES reviewed an AEI Consultants' (AEI) report *Phase I Environmental Site Assessment* dated January 16, 2015 for the 123-125 Independence Drive property located immediately east of the subject property. Although not included in the EDR Report as a listed site, AEI's research identified this property as having a documented release that is not on regulatory agency databases as described below. This report was provided to Sobrato by the property owner, Balco Properties, Ltd., as part of their disclosure documentation for Sobrato's due diligence in consideration of purchasing the 123-125 Independence Drive property. The report was prepared for City National Bank for appraisal purposes and is included in Appendix F.

AEI reported that this 0.96-acre site was agricultural land prior to development in the early 1960s. Since then, the site was occupied by Cal-Air Conditioning Service and Oceans Magazine (1971-1974); Triad Systems Corporation and West Coast Dental (1975-1976); Sunburst Solar Energy, Solid State Solar Controls, Granger Association, and Randtron Systems (Randtron) (1977-1982); and Randtron (1984-present). AEI reported that Randtron uses the site for assembly of antennae for the Department of Defense aircraft, testing of antennae, and typical office activities.

AEI's research of SMCEH and other regulatory agency files indicated the following:

- There is a regional plume of TCE impact to the shallow groundwater and a source of the TCE has not been identified;

- There were two underground gasoline storage tanks (a 1,000-gallon tank and an 8,000-gallon tank) removed from the site in 1985. These USTs were located to the northwest of the building, in close proximity to the 119 Independence Drive property. A water sample was collected from the tank pit during the removal activities and analyzed for total petroleum hydrocarbons as gasoline (TPHg). The sample was found to contain 93 parts per million of TPHg. No other analyses were performed. The water from the pit was apparently "skimmed" before the pit was backfilled with excavated soil. Reportedly, the most heavily contaminated soil was set aside to "air dry". Apparently there is no closure documentation in the SMCEH files and no follow-up work was conducted. This represents a REC for the property that would require sampling and analysis of the subsurface to assess the degree of impact from the former USTs;

- AEI reported that Randtron (reported as operating under L3 Randtron Antenna Systems or Loral Randtron Systems in earlier days) conducted operations in a number of buildings in the area. The 123-125 Independence Drive property is referred to as Randtron Plant 2. Adjacent properties to the northeast and east are Randtron Plant 1 (130 Constitution) and Plant 6 (127 Independence Drive); respectively. Apparently,

most of Randtron's manufacturing occurred at Plant 1 and at nearby properties at 1150 Chrysler (Plants 3 and 4) and 150 Constitution (Plant 5). AEI reviewed files associated with Randtron's use of hazardous materials in the area and reported that Randtron had used, or is using, many oils, non-chlorinated solvents, chlorinated solvents, as well as other chemicals. AEI noted that the majority of Randtron's chlorinated solvent handling was conducted at Plants 3, 4, and 5 and, to a lesser extent, at Plant 6 and Plant 2; (123-125 Independence Drive). AEI reported that the presence of TCE in the shallow groundwater and the use of the property by Randtron are RECs that would require investigation for potential impacts to groundwater and assessing vapor intrusion concerns; and

- AEI also reported that due to the age of the building there is a potential for the presence of lead-based paint and asbestos as "other environmental considerations".

AEI recommended *"The performance of a Phase II Subsurface Investigation to determine the level of chlorinated solvent contamination in the subsurface of the subject property as well as to determine whether any source areas exist at the subject property, and to determine whether any residual contamination remains in the area of the former gasoline USTs."* Furthermore AEI stated that *"Based on the results of the Phase II Investigation, the performance of a Human Health Risk Assessment may be prudent in determining the potential risk of vapor migration into the building"*.

Bohannon Gateway Development

As part of PES' research into the surrounding area properties, available on-line information was reviewed for the currently proposed Bohannon Gateway Development (BGD) project. The boundaries of the BGD project include the properties directly across Independence Drive and encompassing 100 through 190 Independence Drive as well as a separate area encompassing 105 through 155 Constitution Drive located about 330 feet north of the subject property. Information reviewed included California Environmental Quality Act (CEQA) documents including the Initial Study, draft Environmental Impact Report (EIR), revised EIR and public comments to the draft EIR. Pertinent information from PES' review of the 100-190 Independence Drive portion of the BGD project is summarized below.

Phase I ESAs were performed by EFI Global for the 100 through 190 Independence Drive properties in 2005. It is noted that PES did not review the Phase I ESAs but they are summarized in the CEQA documentation. There were no reported RECs associated with the historical or current use of these properties. However, it was noted that there is a regional impact of TCE to the shallow groundwater and the Phase I ESAs reportedly did not suspect any of the 100 through 190 Independence Drive properties were potential sources of the TCE. It was noted however that off-site properties where there is documented elevated concentrations of TCE include 115 and 119 Independence Drive and 120 Constitution Drive that could be potential source areas. PES did not obtain any documentation that indicates that Phase II subsurface investigations were performed for the 100 through 190 Independence Drive properties.

As part of the public comments to the Draft EIR, the SMCEH responded in letters dated July 24 and September 18, 2009. A summary of their comments include:

- The SMCEH requires that a Soil and Groundwater Management Plan be submitted and approved for any dewatering or excavation activities deeper that 5 feet at the site;

- The SMCEH did not agree that there were no RECS associated with these properties indicating that the presence of TCE impacted groundwater and some of the chemical use histories of properties constitute a REC that would usually lead to Phase II investigations of groundwater, soil, and soil vapor;

- The SMCEH also indicated that deficiencies in the draft EIR included possible incomplete review of files associated with 115 and 119 Independence Drive and 120 Constitution Drive properties and no recognition of the potential impacts from the VOCs in groundwater due to the vapor intrusion pathway. The SMCEH recommended that the project proponent work with the RWQCB in determining the potential impacts of the regional contaminants in groundwater; and

- Based on PES' review of the revisions to the draft EIR, it appears that the project sponsor will submit a Phase II subsurface investigation report concurrent with the first building permit submittal for each phase of construction. The Phase II report will include a risk analysis for future occupants of the buildings. Additionally, a Soils and Groundwater Management Plan will be prepared to address soil, soil vapor, and groundwater. If there are potential risks identified due to soil vapors, the project will also need to include institutional controls and a soil vapor system design.

PES is not aware of any Phase II investigative work on these properties at the time of preparing the Phase I ESA.

6.0 SITE INSPECTION

An inspection of the subject property was conducted on June 18, 2015 by Mr. Matthew Eddy of PES. All areas of the site building and the exterior parking lots and grounds were inspected. Mr. Eddy was accompanied by Mr. Carter, the property owner. Photographs taken during the site inspection are presented on Plates 3 through 13.

Exterior Observations

The subject property contains one single-story, steel frame with wood construction building on a concrete slab-on-grade foundation. Exterior areas around the north, east, and west sides of the building are asphalt-paved driveways, outdoor storage areas, and parking lots. The south side of the building facing Independence Drive is landscaped and has concrete sidewalks.

There are solid waste and recycling waste bins located on the eastern perimeter along the fence line. Just north of the solid waste storage areas are three shipping containers. The southernmost shipping container belongs to Davey and was inspected. The shipping container reportedly stored approximately 100 to 200 gallons of sealed herbicides containers and equipment for tree care operations. The outside of the shipping container did not clearly indicate its contents. The remaining shipping containers belong to Jensen and Mr. Eddy was not able to access them during the inspection.

Two enclosed storage areas were observed along the northern exterior wall of the site building. More central to the building is a three sided aluminum storage enclosure containing oil and waste oil storage for use with tree maintenance and landscaping mechanical equipment. Both storage containers and the paved asphalt surface showed signs of staining. Open top containers of oil were present. The second enclosure consisted of a fenced-in containment area. A sign on the door indicated the presence of pesticides. While small quantities of pesticide were present (approximately 10 gallons), the majority of the enclosure was used for miscellaneous equipment storage. The remaining exterior areas of the site are used for parking and larger equipment storage.

Interior Observations

The interior space is primarily utilized as storage for equipment, vehicles and tools associated with the tree and landscaping services. As indicated previously, the reminder of the space is utilized for Davey office space, Tacklin Design tenant space and storage space reserved for the property owner, Mr. Carter.

Chemical storage in the interior is limited to a flammable-safe storage shed in the northern portion of the building. Chemicals appeared properly labeled and secured. No environmental concerns were observed in the office areas.

6.1 Chemical Use and Storage

Chemical use observed on site is limited oil, gasoline, herbicides, pesticides and common household cleaning chemicals. All pesticides and herbicides appeared properly stored and secured. The oil storage area in the three-sided shed showed signs of staining. In addition, oil containers were not properly covered and secured. Davey also stores minimal quantities of paint in the three-sided enclosure.

6.2 Underground and Aboveground Storage Tanks

No evidence of historical USTs or ASTs was identified during research activities conducted for this Phase I ESA.

6.3 Generators

There are no generators located at the facility.

6.4 Elevators

No elevators are present at the site.

6.5 Hydraulic Equipment

Hydraulic equipment was present on vehicles and utilized in some mechanical tools. No evidence of leaking or staining was observed associated with the equipment.

6.6 Indications of Polychlorinated Biphenyls (PCBs)

Fluorescent lights are present throughout the facility; therefore, PCB-containing ballasts may be present.

6.7 Other Conditions

The following sections discuss investigation findings for non-ASTM issues that may present potential concerns at the site.

6.7.1 Asbestos

An assessment of asbestos-containing materials was not conducted as part of this Phase I ESA.

Standards set by the Occupational Safety and Health Administration (OSHA) require building owners to presume that thermal system insulation (TSI) and surfacing asbestos containing material (ACM) found in buildings constructed before 1981, and floor tile installed in buildings through 1981, are asbestos containing, unless demonstrated to be less than 1 percent asbestos through sampling. The rule does not permit an assumption to be made that a material does not contain asbestos in buildings constructed after 1980. However, since the late 1970s to early 1980s, asbestos has been removed or substituted for in all but a small number of construction products. For example, asbestos is still used, although at low concentrations, in various mastics and roofing materials. Based on the late-1960s construction date of the subject property building, ACM may be present in other building materials.

6.7.2 Radon

The National Radon Database includes radon information from U.S. EPA/State Residential Radon Surveys conducted between 1986 and 1992. The database includes test results from 32 sites within San Mateo County. The average value for radon level reported in this region

was 0.594 pico curies per liter (pCi/l) of air for the first floor living area. This is significantly lower than the U.S. EPA's recommended action level of 4 pCi/l.

The California Radon Database included results from 101 tested sites within zip code 94025. Approximately 20 percent (%) of the sites reported radon levels exceeding the U.S. EPA's recommended action level of 4 pCi/l. The California database does not report sample location (first floor, second floor, and basement) information.

The Federal survey data indicates that it is unlikely that radon levels in slab-on-grade structures in the subject property area are likely to be below the U.S. EPA action level. The State database results indicate that there are areas within the subject property zip code that have elevated radon levels.

6.7.3 Solid Waste

Solid waste and recycling receptacles are located along the east fence in the site yard and there are two metal recycling bins inside the site building. No concerns were observed with respect to solid waste disposal or recycling bins for the subject property.

6.7.4 Lead in Paint

An assessment of lead in paint was not within the scope of this Phase I ESA and no prior lead paint surveys of the subject property have been identified. The Consumer Products Safety Commission limited lead content in residential paint to 0.06 percent (600 parts per million) in 1978. Based on the late-1960s construction date of the subject property building, lead-based paint may be present.

6.7.5 Lead in Drinking Water

No on-site sampling data for lead in drinking water was identified in the Phase I ESA research. PES reviewed the most recent available (2013) water quality report from the City of Menlo Park Municipal Water District, the supplier of potable water to the site. The 2013 report stated that the 90th percentile concentration for lead in supplied water was 0.002 milligrams per liter (mg/L) and the highest concentration detected was 0.0105 mg/L. These concentrations are below the USEPA action level of 0.015 mg/L for lead.

6.7.6 Water Damage and Mold

No evidence of significant water damage or potential mold growth was identified at the subject property and Mr. Carter was unaware of any water damage or mold growth.

7.0 SUMMARY AND CONCLUSIONS

The site consists of a single legal parcel covering approximately 1.0 acres and identified by San Mateo County Assessor's Parcel Number (APN) 055-236-180. The City of Menlo Park zoning designation for the site is M2 (General Industrial District). The subject property has one, approximately 13,000-square feet, single-story steel frame with wood commercial building with slab-on-grade construction. The site building was originally constructed in the late 1960s and has undergone only minor interior improvement since.

The site is bounded to the south by Independence Drive. The site is bound to the north, east and west by commercial and light industrial buildings and associated parking lots.

The building is currently occupied by Davey with two sub-tenants: Jensen and Tacklin Design. In addition, the property owner, Mr. Chris Carter, maintains a storage space.

Chemical use observed on site is limited to oil, gasoline, herbicides, pesticides and common household cleaning chemicals. All pesticides and herbicides appeared properly stored and secured. The oil storage area in the three-sided shed showed signs of staining. In addition oil containers were not properly covered and secured. Davey also stores minimal quantities of paint in the three-sided enclosure.

Historical Site Use

Subject Property

The earliest reviewed record for the site is an 1899 topographic map, which shows the site as undeveloped land. Aerial photographs from 1943 to 1958 show the subject property as vacant land with likely agricultural use (grain and/or row crop farming). A 1968 aerial photograph shows the subject property developed with the current structure in place. No other significant changes to the site were identified from 1968 to the present-day.

No surveys for lead-based paint have been identified for the site. Based in the late 1960s date of construction, lead-based paint may also be present at the site.

Previous Environmental Investigations

PES reviewed two groundwater investigations performed for the subject property. A groundwater monitoring well installed in 1987, located at the northeast corner of the property, was sampled and revealed VOC contamination including TCE at 420 μg/Land 1,1-DCE at 35 μg/L. An additional well was installed on the southeast portion of the property in 1991 and a 2009 groundwater investigation by ERS revealed VOC concentrations of: TCE at 303 μg/L and 108 μg/L; 1,1-DCE at 1,9 μg/L and 0.6 μg/L; and cis 1,2-DCE at 22.4 μg/L and 8.9 μg/L in wells MW-1 and MW-2 respectively.

Site Observations

Exterior areas around the north, east and west sides of the building are asphalt-paved driveways, outdoor storage areas, and parking lots. The south side of the building facing Independence Drive is landscaped and has concrete sidewalks.

There are solid waste and recycling waste bins located on the eastern perimeter along the fence line. Just north of the solid waste storage areas are three shipping containers. One shipping container reportedly stored approximately 100 to 200 gallons of herbicides and equipment for tree care operations.

A three sided aluminum storage enclosure was present on the north face of the subject property building. The enclosure contained oil and waste oil associated with tree maintenance and landscaping mechanical equipment. Both storage containers and the paved asphalt surface showed signs of staining. Open top containers of oil were present

Regulatory Agency Records

The subject property address was listed in two databases searched by EDR. These listings are discussed below:

- One former tenant, Siebert Machine Corporation, was listed on the Envirostor Database. Details were not specified regarding the reason for the listing; and

- One former tenant, Siebert Machine Corporation, was listed on the The San Mateo Business Inventory listing for the generation and storage of hazardous wastes.

No other listings for the site address were present in the EDR report. SMCEH records pertaining to the subject property consisted of chemical inventories and correspondence with Raychem, correspondence and reports regarding the monitoring wells, and the destruction of the wells. SMCEH did not identify any violations of environmental concerns related to Raychem.

A number of records were reviewed regarding adjacent and nearby properties. In particular, adjacent sites at 115 Independence and 120 Constitution are consistent with 119 Independence Drive in identifying TCE groundwater contamination. The area as a whole has a history of light industrial practices and, to date, the RWQCB has not identified a specific source of the VOC contamination.

Conclusion

PES has performed a Phase I Environmental Site Assessment, in conformance with the scope and limitations of ATSM Practice E 1527-13, of the property located at 190 Independence Drive, Menlo Park, California. Any exceptions to, or deletions from, this practice are described in Sections 1.2 and 1.3 of this report.

PES identified two RECs associated with the subject property:

- Groundwater samples collected from wells MW-1 and MW-2, located in the northeast and southeast corners of site respectively, indicate elevated TCE concentrations in the groundwater beneath the subject property. TCE concentrations in groundwater samples from MW-1 were 404 ppb and 303 ppb in 1987 and 2009 respectively. TCE concentration in a groundwater sample taken from MW-2 was 108 ppb in 2009. The presence of TCE in the groundwater beneath the site constitutes a REC; and

- There were two underground gasoline storage tanks (a 1,000-gallon tank and an 8,000-gallon tank) removed from the northwest portion of the t 123-125 Independence Drive property. The tank locations were immediately east, and adjacent to, the subject property. A water sample was collected from the tank pit during the removal activities and analyzed for TPHg. The sample was found to contain 93 parts per million of TPHg. No other analyses were performed. The water from the pit was apparently "skimmed" before the pit was backfilled with excavated soil. There is no closure documentation in the SMCEH files and no follow-up work was conducted. The proximity of the former USTs to the subject property and the inadequate characterization constitutes a REC for the subject property.

It is noted that the source of TCE in this area has not been determined and the RWQCB apparently has not been actively involved in pursuing this issue. They seemed to have expressed an interest in the 119 Independence Drive site in 1996 but it appears there has been no action taken since that time.

It also appears that potential vapor intrusion concerns have not been evaluated in this area as they have been in many other South Bay areas where TCE has been detected in shallow groundwater. Guidelines adopted by the RWQCB for evaluation of vapor intrusion include multiple lines of sampling such as soil gas, sub-slab vapors, and indoor air are being conducted for similar areas overlying plumes of TCE in groundwater (SFRWQCB, 2014). Depending upon the results of the sampling, various intrusion mitigation approaches such as modifications to HVAC systems, sub-slab depressurization systems, and vapor barriers with either active or passive venting systems can be evaluated, if exposure concerns are identified.

Potential environmental concerns for the subject property that are not RECs, HRECs or CRECs include;

- The past agricultural use of the property may have resulted in the presence of residual chemicals such as pesticides, herbicides, arsenic, and lead. Although not a concern under current use, should the property be redeveloped, the potential presence of such chemicals should be evaluated, as necessary for earthwork or off-haul considerations;

- The potential presence of LBP and ACMs based on the age of construction of the original building in the late 1960s; and

- The presence of oil stained asphalt and improper oil storage creates the potential for soil contamination in the area defined by the three-sided storage unit immediately north of the site building.

7.0 DATA GAPS STATEMENT

No data gaps that may have affected our ability to identify RECs associated with the subject property were identified. Two shipping containers on the western boundary of the subject property were not inspected and the MPBD has not responded to PES's request for files. PES will complete the file reviews once information is obtained from the MPBD, but it is not anticipated to have a material effect on the conclusions presented herein.

8.0 ADDITIONAL SERVICES

No additional services were provided during the preparation of this Phase I ESA.

9.0 ENVIRONMENTAL PROFESSIONAL STATEMENT

We declare that to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312.

We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all appropriate inquires in conformance with the standards and practices set forth in 40 CFR Part 312. Resumes of the Environmental Professionals signing this report are presented in Appendix G.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site List

CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 10/25/2013 has revealed that there is 1 CERC-NFRAP site within approximately 0.5 miles of the target property.

GENERAL CIRCUITS INC	***3585 HAVEN AVENUE***	***WNW 1/4 - 1/2 (0.479 mi.)***	***S86***	***165***

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 03/10/2015 has revealed that there are 3 CORRACTS sites within approximately 1 mile of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/10/2015 has revealed that there are 2 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/10/2015 has revealed that there are 15 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 03/10/2015 has revealed that there is 1 RCRA-CESQG site within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 05/04/2015 has revealed that there are 6 ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal landfill and/or solid waste disposal site lists

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database.

A review of the SWF/LF list, as provided by EDR, and dated 05/18/2015 has revealed that there is 1 SWF/LF site within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/10/2015 has revealed that there are 3 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR US Hist Auto Stat: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Auto Stat list, as provided by EDR, has revealed that there is 1 EDR US

EXECUTIVE SUMMARY

Hist Auto Stat site within approximately 0.25 miles of the target property.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Registry ID: 110002795431

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

HEUBLEIN INC. (Continued) **1000163757**

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Site History:	Extracted from Geologica's October 2, 2013 Supplemental Soil Sampling and Remedial Excavation Completion Report. San Mateo County does not take responsibility for the accuracy of the statements made or any professional interpretations made in the referenced report. In April 2013, GEOLOGICA completed a supplemental soil quality sampling investigation of the former CT International site at 3645 Haven Avenue in Menlo Park, CA. The investigation was conducted to evaluate soil quality conditions relative to the current Residential Environmental Screening Levels (ESLs) established by the San Francisco Bay Regional Water Quality Control Board (RWQCB). Between June and August 2013, GEOLOGICA conducted a focused soil excavation program to remove soil containing petroleum hydrocarbons and/or lead at concentrations greater than the RWQCBs Residential ESLs. This scope of work was developed by GEOLOGICA based on discussion with Mr. Charles Ice of the San Mateo County Environmental Health System (SMCEHS). The purpose of the investigation and excavation was to remove the no-residential use deed restriction on the property.

ANTON MENLO (Continued) **S113186828**

referenced report. The site is located in an industrial portion of Menlo Park, San Mateo County, California, between Highway 101 and the San Francisco Bay (Figure 1). The overall site is bounded by Haven Avenue to the south, 3585 Haven Avenue to the west, 3645 Haven Avenue to the east, and 3641 Haven Avenue and salt ponds to the north. The site is relatively flat, sloping gently to the north toward San Francisco Bay. AMEC understands that SAP intends to develop the site for multi-unit rental housing. Figure 2 presents an initial proposed layout for the residential complex. In addition, AMEC understands that SAP intends to raise the site elevation by approximately 2.5 to 3 feet through the import of clean fill material to be compacted on site prior to development. In general, approximately 2 to 3 feet of fill is distributed across the site. The fill material is of varying quality and includes debris such as wood, rubber material, concrete, brick, and ceramics. The results of the Phase II ESA activities indicate that the general character of chemical impacts to the fill material are likely insignificant relative to residential human health screening criteria1, with the exception of the following locations: h At the northwestern portion of the site, impacted soil was identified at boring location SB-13 (Figure 3), which may be associated with the historical operation of an automotive salvage facility. h At one boring location (SB-10) within an enclosed yard north of the 3611 Haven Avenue building, several pesticides were detected at concentrations exceeding their respective residential Environmental Screening Levels (ESLs) in the soil sample collected at 1 foot bgs. h One polychlorinated biphenyl (PCB) congener (PCB-1260) was detected above its residential ESL in the surface soil sample (SB-19-SUR) collected adjacent to a transformer located west of the 3611 Haven Avenue building. Concrete samples were collected from the pad around the transformer and the swale directly adjacent to the pad to evaluate whether the materials will require special handling during demolition activities. PCBs were not detected in any concrete samples, indicating that the concrete may be disposed of as part of the building demolition.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Biennial Reports:

Last Biennial Reporting Year: 2013

Annual Waste Handled:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs): 27895

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Amount (Lbs): 9572

TYCO ELECTRONICS CORPORATION (Continued) **1000170323**

Waste code:	D003
Waste name:	A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

TYCO ELECTRONICS CORPORATION (Continued) **1000170323**

Waste code: F005
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Amount (Lbs): 16960

Waste code: LABP
Waste name: LAB PACK
Amount (Lbs): 7748

Waste code: P015
Waste name: BERYLLIUM
Amount (Lbs): 12

Waste code: P029
Waste name: COPPER CYANIDE
Amount (Lbs): 8

Waste code: P030
Waste name: CYANIDES (SOLUBLE CYANIDE SALTS), NOT OTHERWISE SPECIFIED
Amount (Lbs): 8

Waste code: P087
Waste name: OSMIUM OXIDE OSO4, (T-4)-
Amount (Lbs): 7

Waste code: P098
Waste name: POTASSIUM CYANIDE
Amount (Lbs): 14

Waste code: P099
Waste name: ARGENTATE(1-), BIS(CYANO-C)-, POTASSIUM
Amount (Lbs): 14

Waste code: U080
Waste name: METHANE, DICHLORO-
Amount (Lbs): 7748

Waste code: U134
Waste name: HYDROFLUORIC ACID (C,T)
Amount (Lbs): 1643

Waste code: U160
Waste name: 2-BUTANONE, PEROXIDE (R,T)
Amount (Lbs): 7748

Corrective Action Summary:

Event: RFI Approved

Event date: 06/04/2004
Event: RFI Workplan Approved

Event date: 10/04/2004
Event: RFI Approved

Event date: 04/26/2005
Event: Stabilization Measures Evaluation,This facility is not amenable to stabilization activity at the present time for reasons other than 1- it appears to be technically infeasible or inappropriate (NF) or 2- there is a lack of technical information (IN). Reasons for this conclusion may be the status of closure at the facility, the degree of risk, timing considerations, the status of corrective action work at the facility, or other administrative considerations.

Event date: 07/10/2006
Event: CMS Approved

Event date: 07/27/2006
Event: Date For Public Notice On Proposed Remedy

TYCO ELECTRONICS CORPORATION (Continued) **1000170323**

Registry ID: 110000482399

Environmental Interest/Information System
NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

TYCO ELECTRONICS CORPORATION (Continued) **1000170323**

TSCA SUBMITTER

AIR SYNTHETIC MINOR

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Completed Info:
Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 06/20/1991
Comments: Raychem Corporation submitted a PEA to the Dept on 5/17/91. Results of the PEA indicate PCB in soil above extremely hazardous ttlc. Contaminated GW under site. A residential neighborhood and a school are located less than 200’ to the South of site. A tidal slough and sensitive wetland are adjacent to the north boundary of the site. High-tech chemical, plastics and materials manufacturer operated at site since 1965. PEA submitted in May 1991 indicates that nickel and cadmium may be present in soils above their respective TTLC and/or STLC. Elevated levels of solvents found in GW under the site. PCB found in soils at levels above the extremely hazardous waste TTLC. PCB has also migrated off-site via surface runoff. Draft ISE determination and RAO sent to TLO for review on June 11, 1991.

Completed Area Name: PROJECT WIDE

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 12/16/2014

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 12/16/2014

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

WMUDS/SWAT: Waste Management Unit Database
Waste Management Unit Database System. WMUDS is used by the State Water Resources Control Board staff and the Regional Water Quality Control Boards for program tracking and inventory of waste management units. WMUDS is composed of the following databases: Facility Information, Scheduled Inspections Information, Waste Management Unit Information, SWAT Program Information, SWAT Report Summary Information, SWAT Report Summary Data, Chapter 15 (formerly Subchapter 15) Information, Chapter 15 Monitoring Parameters, TPCA Program Information, RCRA Program Information, Closure Information, and Interested Parties Information.

Date of Government Version: 04/01/2000

Local Lists of Hazardous waste / Contaminated Sites

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 02/25/2015
Date Data Arrived at EDR: 03/10/2015

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

FINDS: Facility Index System/Facility Registry System

Facility Index System. FINDS contains both facility information and 'pointers' to other sources that contain more detail. EDR includes the following FINDS databases in this report: PCS (Permit Compliance System), AIRS (Aerometric Information Retrieval System), DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes), FURS (Federal Underground Injection Control), C-DOCKET (Criminal Docket System used to track criminal enforcement actions for all environmental statutes), FFIS (Federal Facilities Information System), STATE (State Environmental Laws and Statutes), and PADS (PCB Activity Data System).

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

EPA WATCH LIST: EPA WATCH LIST
EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List
The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)
The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR US Hist Auto Stat: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 07/30/2013
Date Data Arrived at EDR: 08/19/2013

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Licensed Facilities
Source: Department of Social Services
Telephone: 916-657-4041

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

UTM Y (Meters):	4148679.2
Elevation:	10 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	37122-D2 PALO ALTO, CA
Most Recent Revision:	1999

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

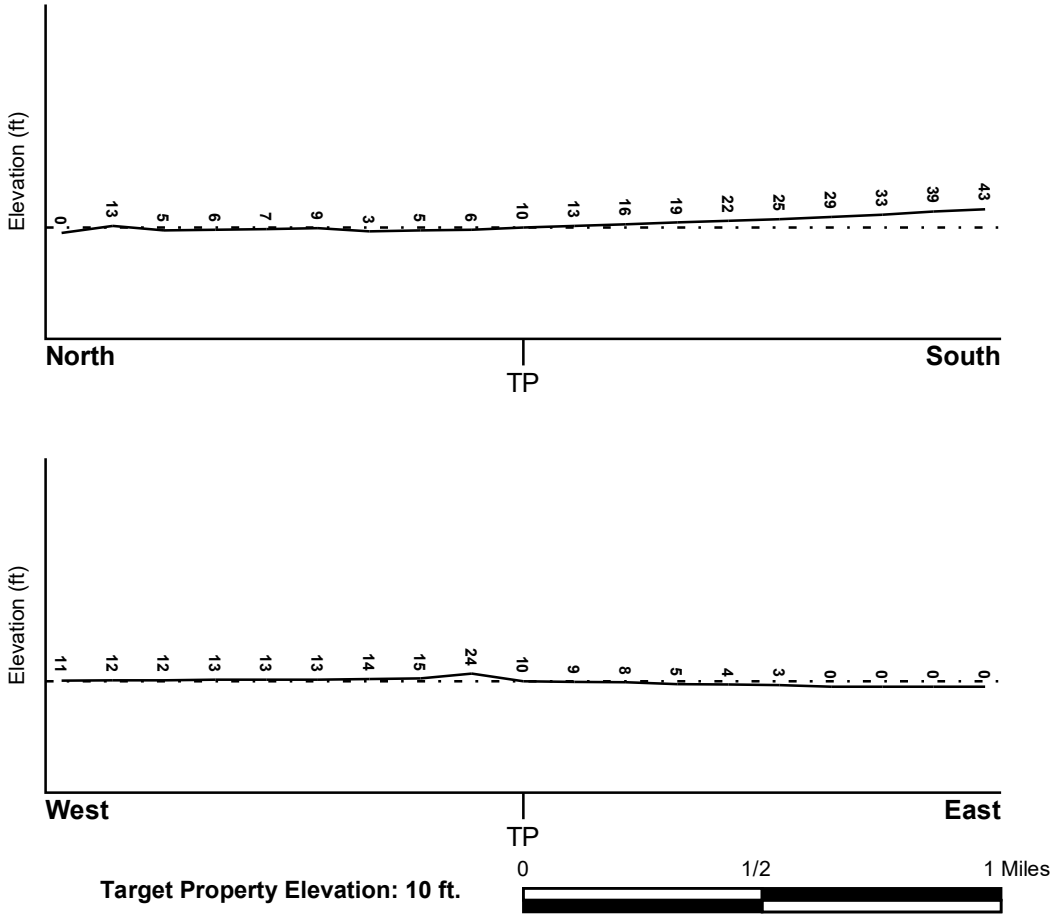
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NNE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County	FEMA Flood Electronic Data
SAN MATEO, CA	YES - refer to the Overview Map and Detail Map

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
PALO ALTO	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
1	0 - 1/8 Mile NE	NNW

B19	1/2 - 1 Mile SW	Not Reported

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Urban land

Soil Surface Texture:
Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class:
Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	5 inches		Not reported	Not reported	Max: 0.01 Min: 0	Max: Min:

Soil Map ID: 2

Soil Component Name: Novato

Soil Surface Texture: clay

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Very poorly drained

Hydric Status: All hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by PES Environmental, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

Site Name: 119 Independence
Address: 119 Independence Drive
City, State, Zip: Menlo Park, CA 94025

RE: SOIL AND GROUND WATER QUALITY RECONNAISSANCE INVESTIGATION FOR THE INDEPENDENCE DRIVE SITE MENLO PARK, CALIFORNIA

Attention: Mr. David Bohannon II
Mr. Ronald F. Skykora

Gentlemen:

In accordance with your request, we have performed a soil and ground water quality reconnaissance investigation for the above-referenced site. The accompanying report presents the results of our investigation. The scope of work performed was discussed with you and described in our confirming agreement with you dated March 5, 1987.

Our report features an executive summary on the following pages to enable you to quickly obtain the principal findings, conclusions and recommendations of the investigation.

We refer you to the text of the report for results and conclusions. If you have any questions concerning our findings, please call.

Very truly yours,

J. V. LOWNEY & ASSOCIATES

Glenn A. Romig

John V. Lowney

EXECUTIVE SUMMARY

J. V. Lowney & Associates has been retained by Bohannon Development Company to perform a soil and ground water quality reconnaissance investigation for the Independence Drive Site located in Menlo Park, California. The purpose of this investigation was to install one permanent ground water monitoring well and evaluate at a reconnaissance level the soil and ground water quality at selected locations in the uppermost water bearing strata and near surface soil at the above-referenced site. Principal findings and conclusions are listed below.

1. One exploratory boring was advanced to a depth of approximately 20 feet at the location shown in Figure 1 and was converted to a permanent ground water monitoring well. The well was drilled and completed to standards established by the San Mateo County Office of Environmental Health.

2. The well was completed in water-bearing strata which consisted of silty clay with sand, coarse sand and gravel. The well was developed by bailing techniques, and was sampled with a teflon bailer. The sample was analyzed for concentrations of EPA priority pollutants.

3. Surfacial soil samples were obtained from six locations within the site boundaries. The soil samples were composited into one sample for laboratory analysis. The composite sample was also analyzed for concentrations of EPA priority pollutants.

4. The records of the Regional Water Quality Control Board were reviewed to help determine whether any soil or ground water contamination incidents had been reported in the immediate site vicinity. Several fuel and solvent leak incidents have occurred within a 2.2 mile radius of the site. However, no

information is available there indicating that the known contamination incidents have impacted or threaten to impact the soils or ground water of the site.

5. We have had discussions with Mr. Mark Green, the environmental manager of Raychem Corporation, the current tenant of the development. During a tour of the site, it was noted that small quantities of hazardous chemicals are used in the building. The largest container size for any of these compounds is one gallon and they are stored in cabinets in a small laboratory. One 55-gallon drum of diesel fuel was observed to the rear of the fenced lot. In addition, several 5-gallon gasoline cans were observed in a wooden shed where lawnmowers are stored. Mr. Green stated that they have had no chemical spills at this site.

6. The general direction of ground water flow of the first encountered shallow water bearing zone in the site vicinity is generally to the northeast.

7. Laboratory analysis of the ground water samples did not reveal any acid extract organics, base/neutral extract organics, pesticides, PCB compounds or asbestos in concentrations greater than the laboratory detection limits. Two volatile organic compounds, 1,1-dichloroethene and trichloroethene (TCE), were detected in the ground water sample at concentrations well in excess of the action levels for drinking water. In addition, low levels of two priority metals, cadmium and selenium, were detected in the ground water at concentrations in excess of the action levels for drinking water.

   The priority metal concentrations in the ground water sample from the monitoring well at the site may represent, in our opinion, natural background levels. In addition, the saline conditions occurring at the site may adversely affect the accuracy of the laboratory procedure used to analyze for heavy metals.

8. In our opinion, further investigation of the volatile organic contaminants is desirable and would likely be required by the Regional Water Quality Control Board. The magnitude of this investigative effort cannot be determined at this time, but would probably require installation of additional ground water monitoring wells and an on-going monitoring program.

SOIL AND GROUND WATER QUALITY RECONNAISSANCE INVESTIGATION FOR THE INDEPENDENCE DRIVE SITE MENLO PARK, CALIFORNIA

INTRODUCTION

In this report we present the results of our findings pertaining to the soil and ground water quality reconnaissance investigation of the Independence Drive site located at 119 Independence Drive in Menlo Park, California. This report presents information on the chemical analyses of one ground water sample and one composite soil sample, and provides discussion of the site topography, geology, environmental setting, hydrogeology and the location of reported known contamination sites in the immediate site area.

Purpose

The purpose of this ground water and soil quality assessment has been to evaluate and document the concentrations of EPA Priority Pollutant compounds existing at selected locations at the time of this study in on-site surfacial soils and ground water from the uppermost water bearing zone. One permanent ground water monitoring well was installed to facilitate water sampling at later dates, and the geologic and hydrogeologic setting of the site was briefly evaluated.

Project Description

The site is currently occupied by a maintenance and spooling operation building used by Raychem Corporation since 1981. Appurtenant flexible pavements for traffic drives and parking are located about the building.

SCOPE OF WORK

The scope of work performed for this investigation included the following:

1. Review of previous hydrogeologic and ground water contamination reports for this area prepared by others, and a review of our experience in the area.

2. Coordination with the California Regional Water Quality Control Board regarding acceptable investigation and sampling techniques, and discussions with the Board concerning reported ground water contamination occurrences in the general site vicinity.

3. Discussions with the tenant regarding the use and storage of hazardous materials at this site, and previous contamination incidents occurring at the site.

4. Drilling of one exploratory boring into the uppermost water-bearing stratum and obtaining representative soil samples and logging soil stratigraphy.

5. Installation of one permanent ground water monitoring well constructed according to guidelines established by the San Mateo County Office of Environmental Health.

6. Well development by bailing techniques, and water sampling.

7. Collection of near surface soil samples at six locations at the site.

8. Analysis of samples in accordance with EPA Methods 608, 624 and 625 to determine the presence of priority pollutant contaminants.

9. Preparation of this report.

This study was conducted under the direction and review of John V. Lowney, P.E., Principal Engineer, and Glenn A. Romig, P.E., Associate Engineer. Lawrence Pavlak, Certified Engineering Geologist, researched the files of the Regional Water Quality Control Board, assisted in the interpretation of the laboratory tests and preparation of this report.

LIMITATIONS

Soil deposits and rock formations may vary in type, strength and many other important properties across any geological area. The study that we have made assumes that the data determined in the field and laboratory are reasonably representative of field conditions and that the subsurface conditions are reasonably susceptible to interpolation and extrapolation between borings.

We make no warranty, expressed or implied, except that our services have been performed in accordance with geotechnical engineering and hydrogeological principles generally accepted at this time and location.

The results of this study are based on reference material from the files of the Regional Water Quality Control Board and data obtained from the site and laboratory investigations. We have analyzed the available information using what we believe to be current applicable geotechnical engineering and hydrogeological techniques.

SITE HISTORY

Aerial Photograph Review

Aerial photographs of the site vicinity were reviewed during the course of this investigation. Several black and white photos were obtained from the files of Pacific Aerial Survey printed at a scale of 1 inch equals 1,000 feet and encompassed the time period June 1955 to May 1979 as shown in Table 1 below:

TABLE 1. AERIAL PHOTOGRAPHS REVIEWED

Date	Source	Scale	I.D. Number
6-8-55	Pacific Aerial Surveys	1" = 1,000'	AV 170-19-07
10-28-69	Pacific Aerial Surveys	1" = 1,000'	AV 933-17-6
10-28-69	Pacific Aerial Surveys	1" = 1,000'	AV 933-18-4
5-30-79	Pacific Aerial Surveys	1" = 1,000'	AV 1705-16-08
5-30-79	Pacific Aerial Surveys	1" = 1,000'	AV 1705-17-04

The basic structure which currently occupies the site appears in the 1969 photographs. At the time of the 1955 photo, the site appears to be undeveloped farm land.

Reported Contamination Incidents

The San Francisco Region of the Regional Water Quality Control Board maintains records of reported fuel spills and leaks within their jurisdiction. We have reviewed those records to help determine whether any soil or ground water contamination incidents had been reported in the immediate site vicinity.

Several fuel and solvent leak incidents have reportedly occurred within a 2.2 mile radius of the site. Their locations and distances from the site are listed below in Table 2.

TABLE 2. REPORTED SOIL AND GROUND WATER CONTAMINATION INCIDENTS OBTAINED FROM THE FILES OF THE REGIONAL WATER QUALITY CONTROL BOARD

Facility	Approximate Distance and Direction From Site	Type of Incident
Carl Olsen & Sons 3750 Haven Avenue Menlo Park, CA	0.2 mile Northwest	Gasoline leak, cleaned up
Mobil Oil Co. 1110 Marsh Road Menlo Park, CA	0.4 miles Southwest	Gasoline leak, ground water contaminated

Rohm & Haas 1901 Spring Street Redwood City, CA	2.2 miles West	Solvent and chromium contamination in soil and ground water

Tenant Use of Hazardous Material

An interview was conducted on March 2, 1987 with Mr. Mark Green, Environmental Manager of Raychem Corporation. We understand that Raychem has occupied the site at 119 Independence Drive since 1981. We understand that no underground storage tanks are located at the site which is currently used to wind wire cables onto spools.

A locking metal storage cabinet is located in a small laboratory in the building. It was observed to contain small containers (maximum size of 1 quart) of sodium perchlorate, hydrochloric acid, potassium hydroxide, hydrogen peroxide, sulfuric acid, and nitric acid. An unlocked wooden cabinet in the same lab had containers of acetone, toluene, trichloroethene, methyl ethyl ketone, xylene, and methyl 2 pyroldono. The largest of these containers had a volume of one gallon. In the back lot, a single 55-gallon drum of diesel fuel was observed. A wooden shed which is used to store lawnmowers also contained five gasoline cans of 5-gallon capacity. Mr. Green stated that no hazardous materials management plan is required for this site due to the small quantities of hazardous compounds stored there.

SITE INVESTIGATION

Site Description

The generally flat site is occupied by the building and shed previously described, asphaltic concrete pavement and landscaped areas. An unpaved area exists at the northeast corner of the property.

Exploratory Borings

One exploratory boring was advanced into the uppermost water-bearing sediments on March 2, 1987 at the location shown on the Site Plan, Figure 1. The exploratory boring was located within the boundaries of the site.

The boring was advanced using steam-cleaned, 8-inch diameter, continuous flight augers, and was logged by our field engineer. The log of our boring and details regarding our field investigation are included in Appendix A.

The boring was terminated at a depth of approximately 20 feet. Soil samples in the boring were obtained at depths of 0.5 foot and 3.5 feet, and then at 5-foot depth intervals to the maximum exploration depth using a steam-cleaned or tri-sodium phosphate (TSP) cleaned, split spoon, and Modified California-type samplers. Near-surface soil samples were also collected at six locations at the site.

Installation of Monitoring Wells

The exploratory boring was converted to a permanent ground water monitoring well with the installation of PVC casing. The casing used for the well was 2-inch I.D. threaded, flush-jointed PVC Schedule 40 casing with perforated slots installed in the lower portion of the well. After the casing was installed, a filter pack composed of aquarium sand was placed in the annulus to a level above the slotted casing. A seal composed of bentonite pellets topped by cement was placed in the annulus above the sand pack to the surface. The well has been completed with a locked, threaded cap on the casing and a concrete vault box with steel lid. Well construction details are noted on the monitoring well completion diagram following the exploratory boring log.

Well Development and Sampling

The monitoring well was developed by bailing techniques prior to sampling such that the water sample would be representative of the ground water. Development was accomplished by removing a minimum of three casing volumes of ground water. The ground water sample was collected utilizing a teflon bailer which was

thoroughly cleaned with tri-sodium phosphate and rinsed with distilled water. A water sample was obtained from the boring for chemical analysis in accordance with EPA Test Methods 608, 624 and 625 for priority pollutant contaminants.

Subsurface Materials

Based on the findings of our subsurface exploration, the soils at the site can be roughly grouped into four relatively continuous strata as described below.

Stratum A: Silty Clay (CL/CH)

Black, very stiff silty clay (CL/CH) of moderate to high plasticity extends from the surface to a depth of approximately 7 feet.

Stratum B: Silty Clay (CL)

Light brown to orange brown with some light grey mottling, stiff to very stiff silty clay (CL) of low plasticity was encountered beneath Stratum A to a depth of 11.5 feet and from 15 to 17 feet.

Stratum C: Well Graded Gravel (GW)

Dark brown, very dense, fine to coarse well graded gravel (GW) was encountered at a depth interval of 11.5 to 15 feet.

Stratum D: Well Graded Sand (SW)

Dark brown, dense, fine to coarse well graded sand (SW) was encountered at a depth of 17 feet to the maximum depth explored of 20 feet.

Ground Water

A stabilized ground water level was measured at a depth of approximately 4.1 feet below present site grades during sampling of the monitoring well, two days following drilling. Please be cautioned, however, that fluctuations in the level of the ground water may occur due to variations in rainfall and other factors not in evidence at the time measurements were made.

GEOLOGIC SETTING

The Independence Drive site is located on the southwestern margin of San Francisco Bay, and is underlain by a thick sequence of sand-gravel, silt and clay deposits. Ground water in this area is generally confined within sand and gravel aquifers separated by relatively low permeability clay deposits. The thicker clay deposits act as aquitards or partial barriers to the vertical movement of ground water from one aquifer to another.

The unconsolidated sediments in the region range from Pliocene to Recent in age. The geologic formations which are most important to this investigation are the late Pleistocene to recent alluvial and estuarine deposits. These two formations are among the water-bearing series as described in the California Department of Water Resources Bulletin 118-1, Appendix A. The maximum depth of these formations in the valley are estimated to be greater than 1000 feet. The site was historically part of the Palo Alto Baylands tidal marsh system. Much of the Baylands has been destroyed by man's activities. The Independence Drive site is situated on the eastern fringe of the San Francisquito Creek alluvial fan. In pre-historic times, this area was inundated by tidal waters of San Francisco Bay.

Based on driller's logs, published literature, and data obtained by J. V. Lowney and Associates, the valley alluvium appears to be a very complex deposit of unconsolidated sand, gravel, silt, and clay. The sand and gravel units are buried stream channel and estuarine deposits which are interlayered with silt, and clay deposits of both estuarine, marine and continental origins. Data interpreted by the California Department

of Water Resources (1975) and by Howland (1976) indicate that there are numerous buried channel deposits underlying the region. These ancient stream channels which drained into San Francisco Bay meandered across the Santa Clara Valley, and have since been buried, partly because of tectonic events and land subsidence.

The shallow sediments occuring at less than 200 feet in the site region have been characterized by Howland (1976). The upper 60 feet generally consist of two beds of poorly sorted silty sand and gravel from approximately 10 to 60 feet below the surface. The beds are generally 5 to 10 feet thick, are complexly interfingered, and are variable in lateral extent and thickness. These sediments are referred to as the "shallow" aquifer. They are locally separated by the silty clay deposits containing lenses of sand and gravel (Howland, 1976).

Underlying these sediments from 60 to approximately 150 feet below the surface is silty clay containing sand and gravel. From 150 to 200 feet, these sediments are predominantly sand-gravel mixtures (Howland, 1976). These sediments are referred to as the "deep" aquifer.

At greater depths are relatively thicker water-bearing aquifers, composed of sand and gravel and separated by clay aquitards. These aquifers extend to the bedrock surface, 1,000 to 1,500 feet below the ground surface. The uppermost water bearing stratum was penetrated and sampled during this investigation. A site boring was advanced to a depth of 20 feet.

HYDROGEOLOGY

The Independence Drive site is located in the Santa Clara Valley Ground Water Sub Basin. Ground water beneath the site area is generally confined within sand and gravel aquifers separated by low permeability clay deposits. A shallow aquifer zone and several deeper aquifers are indicated in this area, each with its own ground water flow pattern. As described in the previous section, numerous lenses and channels of sediments occur within the shallow zone in the region.

The ground water contour map of the region indicates that ground water is flowing in a northeast direction toward a discharge area which is probably located near San Francisco Bay. Potentiometric levels described in Howland (1976) indicate that there is a general downward gradient from the upper to the lower lense of the shallow water-bearing sediments, and from these sediments to the deeper aquifer at 150 to 200 feet.

RESULTS

Laboratory testing consisted of the following analyses to detect the presence of EPA Priority Pollutant chemicals and metals, and of other chemical compounds and parameters:

Laboratory Procedures

a. Purge and trap gas chromatography/mass spectrometry (GC/MS) to detect 30 purgeable volatile organic compounds including organic solvents, benzene, carbon tetrachloride, TCE, and toluene (EPA Method 624).

b. Extraction gas chromatography/mass spectrometry to detect base/neutral organic compounds: 16 polynuclear aromatics, 12 ethers and esters, eight nitrogen-containing compounds, 11 chlorinated hydrocarbons; and 11 acid organic compounds (EPA Method 625).

c. A gas chromatography scan (EPA Method 608) which detects 25 organochlorine pesticide compounds including DDT, and PCBs.

d. An atomic absorption scan which detects 13 priority pollutant metals.

e. The samples were analyzed for asbestos fiber content utilizing optical scanning techniques.

f. In addition, the water samples were tested for cyanide by distillation followed by colorometric methods.

The laboratory analysis of the soil and water samples was performed by Sequoia Analytical Laboratory of Redwood City, California. The laboratory is certified by California Department of Health Services (designees of U.S. Environmental Protection Agency) for all of the above analyses. Test results are discussed below and are presented on the attached analytical reports located in Appendix B.

Soil and Water Quality Analysis

Six soil samples were collected on March 2, 1987, transported on ice to Sequoia Analytical Laboratory and were composited into one sample at the laboratory. A ground water sample was collected from the monitoring well on March 4, 1987, and was also transported on ice to Sequoia Analytical Laboratory. The soil and

water samples were analyzed as described above. The complete results of the chemical analysis performed on the ground water sample are shown in Appendix B and summarized in Table 3 on the following page.

Results of Water Sample Analysis

The analyses of the ground water sample did not reveal any acid extract organics, base/neutral extract organics, pesticides, PCB compounds or asbestos in concentrations greater than the laboratory detection limits. Low concentrations of two priority metals were detected at concentrations in excess of the current action levels for drinking water. These "action level" concentrations have been recommended by the State of California Department of Health Services. It is generally accepted that concentrations of prescribed hazardous compounds or elements in drinking water at levels equal to or greater than the action levels is a potential health hazard. Cadmium was found in a concentration of 0.02 parts per million (ppm), while the action level for cadmium in drinking water is 0.01 ppm. Selenium was detected in the sample at a concentration of 0.026 ppm which is in excess of the current action level of 0.01 ppm for drinking water. Mr. Cliff Bowen of the California Department of Health Services stated that the action level for selenium in drinking water will soon be changed to 0.045 ppm. If this change is incorporated, the selenium level detected in the sample will be below the action level.

Two volatile organic compounds, as shown on Table 3, were detected in the ground water sample at concentrations in excess of current action levels for drinking water. 1,1-Dichloroethene was found at a concentration of 35 parts per billion (ppb), while the action level for this compounds is 6 ppb. Thrichloroethene (TCE) was detected at a concentration of 420 ppb, while the action level for TCE in drinking water is 5 ppb.

Results of Soil Sample Analysis

No priority pollutants were detected in the composite soil sample in concentrations in excess of the total threshold limit concentrations as detailed in Title 22 of the California Administrative Code. To compensate for dilution of the soil samples by compositing them, the results were multiplied by 6 when comparing them to the total threshold limit concentrations. Elements found in concentrations in soil greater than the total threshold limit concentration are defined in the code as being extremely hazardous materials.

TABLE 3. SUMMARY OF CHEMICAL COMPOUNDS DETECTED IN WATER SAMPLE ABOVE CURRENT ACTION LEVELS FOR DRINKING WATER

Volatile Organic Compounds	(concentrations in ppb)
1,1-Dichloroethene	35
Trichloroethene	420

Priority Metals	(concentrations in ppm)
Cadmium	0.02
Selenium	0.026

CONCLUSIONS AND RECOMMENDATIONS

The purpose of this investigation was to review site history and ground water conditions, and to evaluate and document at a reconnaissance level the concentrations of any EPA Priority pollutant chemicals existing in the composite soil sample and the ground water sample tested from the near-surface soils and the uppermost aquifer.

Field work for the current investigation consisted of drilling one exploratory boring, which was converted to a permanent ground water monitoring well. A water

sample and a composite soil sample were analyzed for EPA Priority Pollutants, asbestos and selected common solvents.

Chemical analysis was performed on the ground water sample collected at the site and revealed low concentrations of some priority metals. These concentrations are generally below the current action levels for drinking water with the exception of low concentrations of cadmium and selenium, which are above the action levels. Concentrations of priority metals detected in the water samples may represent natural background levels. In addition, the saline environment at the site has a detrimental effect on the laboratory analysis for heavy metals.

The laboratory analysis also detected two volatile organic compounds in the water sample far in excess of action levels for drinking water. The source of this contamination is unclear at this time. One of the contaminants, TCE, is known to be used at this site, in apparently small quantities. In addition, Raychem has a history of spills and leaks at their nearby site listed in Table 2. Several priority pollutants were discovered in concrete floor slabs, soils and ground water at their Constitution Drive facility. No priority pollutants were detected in the composite soil sample in concentration in excess of the total threshold limit concentration as detailed in the California Administrative Code.

It is uncertain at this time what investigation or remedial action, if any, would be required at this site by the Regional Water Quality Control Board. The Regional Board typically considers several factors including the sensitivity of the ground water recharge area and the potential beneficial uses of the ground

water. At a minimum, we would anticipate the Board to require at least one or more additional ground water monitoring wells and an ongoing ground water monitoring program. Remediation of the contamination is a possible requirement, especially if an on-site source is identified.

The shallow aquifer penetrated and sampled during the course of this investigation is not utilized as a source of drinking water and is not considered to have significant beneficial uses at the present time.

In our opinion, it would be desirable to determine if the contamination is from an on-site or an off-site source prior to purchasing the site. As the regional ground water gradient at the site is generally towards the San Francisco Bay to the northeast of the site, installing a monitoring well or wells along Independence Drive at the western end of the site and performing chemical analysis on ground water from the monitoring wells would give an indication as to whether the contamination is from an on-site or an off-site source. If the contamination is determined to likely be from an off-site source, there is a greater probability that only an ongoing monitoring program would be required by the Regional Water Quality Control Board as the shallow aquifer sampled is on the edge of the San Francisco Bay and is not a source of drinking water and does not appear to have significant beneficial use at this time. However, if the additional chemical analyses indicate that the contamination is from an on-site source, the Regional Board will likely require additional investigations to locate the source of the contamination and to take remedial action as appropriate.

need to do this

As discussed with you, it would be desirable to resample the installed monitoring well and have the ground water sample tested by two independent chemical laboratories. This procedure is recommended to confirm that the chemical analyses have been performed properly and are not a one-time or erroneous result.

Background data on the soil and water quality of the site will provide a data baseline of current site conditions. The well has been established as permanent monitoring well, and may be used to obtain additional ground water samples in the future if desired. Please note that this reconnaissance assessment does not provide full compliance with local monitoring requirements for the installation of underground storage facilities.
