Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Licensed Facilities
Source: Department of Social Services
Telephone: 916-657-4041

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

GEOCHECK ®- PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

458507
120 GRANITE ROCK WAY
SAN JOSE, CA 95136

TARGET PROPERTY COORDINATES

Latitude (North):	37.282877 - 37ˆ 16’ 58.36’’
Longitude (West):	121.842274 - 121ˆ 50’ 32.19’’
Universal Tranverse Mercator:	Zone 10
UTM X (Meters):	602631.4
UTM Y (Meters):	4126677.8
Elevation:	157 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	5640414 SAN JOSE EAST, CA
Version Date:	2012

EDR’s GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

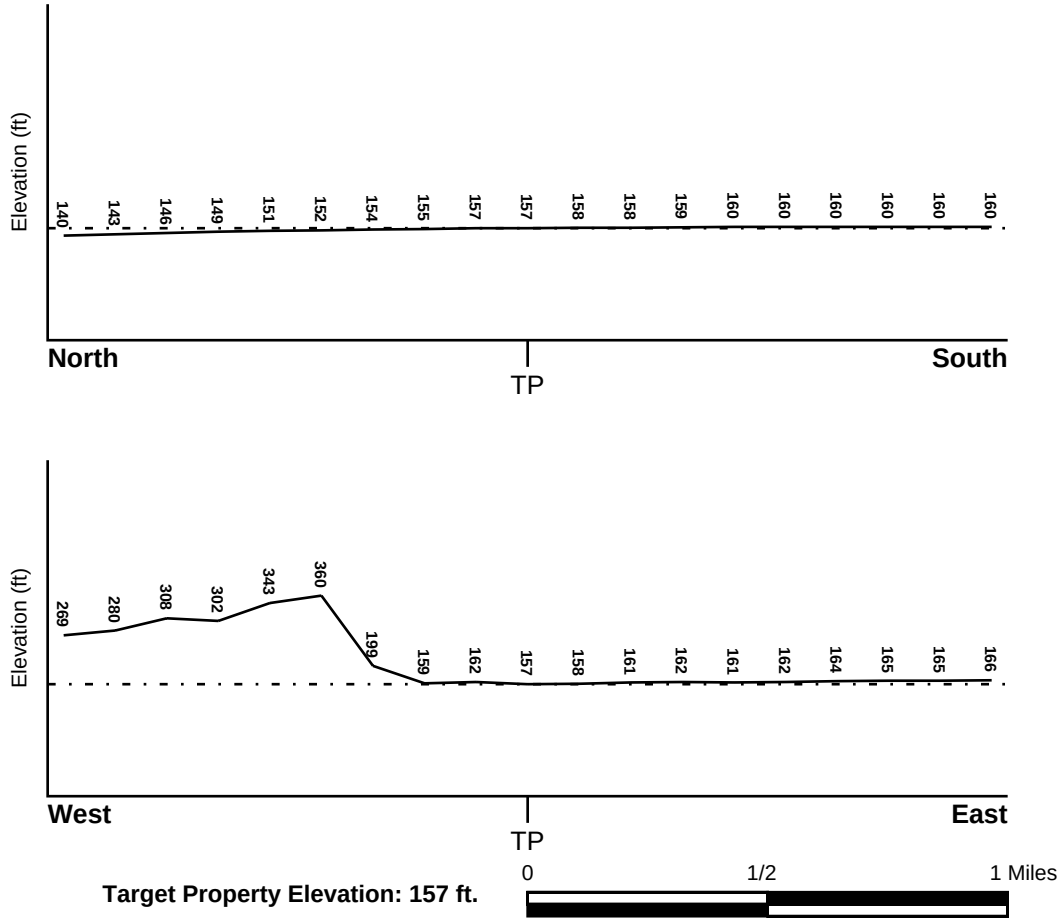
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NNW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Target Property Elevation: 157 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06085C0262H	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
SAN JOSE EAST	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Quaternary
Series:	Quaternary
Code:	Q *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratifed Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name:	BOTELLA
Soil Surface Texture:	clay loam
Hydrologic Group:	Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.
Soil Drainage Class:	Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel:	MODERATE
Depth to Bedrock Min:	> 60 inches
Depth to Bedrock Max:	> 60 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	9 inches	clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 0.60 Min: 0.20	Max: 7.30 Min: 5.60
2	9 inches	41 inches	silty clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 0.60 Min: 0.20	Max: 7.80 Min: 5.60
3	41 inches	76 inches	sandy clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand.	Max: 0.60 Min: 0.20	Max: 7.80 Min: 5.60

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: No Other Soil Types

Surficial Soil Types: No Other Soil Types

Shallow Soil Types: No Other Soil Types

Deeper Soil Types: No Other Soil Types

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish and Wildlife
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program
State Water Resources Control Board
Telephone: 916-341-5577
The GAMA Program is Californias comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Heath Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

California Oil and Gas Well Locations
Source: Dept of Conservation, Geologic Energy Management Division
Telephone: 916-323-1779
Oil and Gas well locations in the state.

California Earthquake Fault Lines
Source: California Division of Mines and Geology
The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

RADON

State Database: CA Radon
Source: Department of Public Health
Telephone: 916-210-8558
Radon Database for California

PHYSICAL SETTING SOURCE RECORDS SEARCHED

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by AEI Consultants were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

Certification # 9F45-4EA7-A1EF

PO # 298057

Project 458507

UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

Sanborn® Library search results

Certification #: 9F45-4EA7-A1EF

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- ☑ Library of Congress
- ☑ University Publications of America
- ☑ EDR Private Collection

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1922 through 2017. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

#1000

November 8, 1996

Mr. Tony Warman
Granite Rock Company
P.O. Box 50001
Watsonville, CA 95076

Dear Mr. Warman:

Subject: Underground Storage Tank Case Closure—Granite Rock Capitol Plant, 100 Granite Rock Way, San Jose, CA; Case No. 07S1E34J01f; Underground Storage Tank Cleanup Fund No. 1925

This letter confirms the completion of site investigation and remedial action for the underground storage tank(s) formerly located at the above-described location. Enclosed is the Case Closure Summary for the referenced site for your records.

Based upon the available information, including the current land use, and with the provision that the information provided to this agency was accurate and representative of site conditions, no further action related to the underground storage tank release is required.

This notice is issued pursuant to a regulation contained in Title 23, California Code of Regulations, Division 3, Chapter 16, Section 2721(e). If a change in land use is proposed, the owner must promptly notify this agency. Please refer to the enclosed closure summary for site management requirements.

Please contact Ms. Christine Tulloch at the Santa Clara Valley Water District's Camden Office, (408) 927-0710, extension 2636, if you have any questions in this matter.

Sincerely,

MAXIMUM DOCUMENTED CONTAMINANT CONCENTRATIONS—BEFORE AND AFTER CLEANUP

Contaminant	Soil (ppm)		Water (ppb)		Contaminant	Soil (ppm)		Water (ppb)	
	Before*	After	Before	After		Before	After	Before	After
TPH (Gas)	NA	NA	NA	NA	Xylene	NA	NA	NA	NA
TPH (Diesel)	12,000	53,000	NA	NA	Ethylbenzene	NA	NA	NA	NA
Benzene	NA	NA	NA	NA	Oil & Grease	NA	NA	NA	NA
Toluene	NA	NA	NA	NA	Heavy Metals	NA	NA	NA	NA
Other (8240/8270)	NA	NA	NA	NA	Other	NA	NA	NA	NA

Description of Interim Remediation Activities: Overexcavation to 25 feet below ground surface (bgs) was reportedly performed near the pump island. Borings were drilled to define the extent of contamination. One sample contained 53,000 parts per million (ppm) Total Petroleum Hydrocarbons as Diesel (TPHD). All other soil samples from nine borings were nondetectable.

*Highest detected during overexcavtion at 17 feet bgs near the pump island.

IV. CLOSURE

Does completed corrective action protect existing beneficial uses per the Regional Board Basin Plan? Yes		
Does completed corrective action protect potential beneficial uses per the Regional Board Basin Plan? Yes		
Does corrective action protect public health for current land use? Santa Clara Valley Water District staff does not make specific determinations concerning public health risk. However, it does not appear that the release would present a risk to human health under current conditions. If an exposure pathway is completed to the residual soil pollution at ≈20 feet bgs at SB-2, a health and safety plan should be prepared before conducting subsurface work.		
Site Management Requirements: See above.		
Should corrective action be reviewed if land use changes? Yes		
Monitoring Wells Decommissioned: No	Number Decommissioned: —	Number Retained: —
List Enforcement Actions Taken: None		
List Enforcement Actions Rescinded: None		

V. ADDITIONAL COMMENTS, DATA, ETC.

Considerations and/or Variances: A localized area of diesel pollution in soil was detected around the pump island between 12 feet and 20 feet bgs. Some of the significantly affected soil was removed. However, 53,000 ppm TPHD was detected at SB-2 at ≈20 feet bgs.

Conclusion: The extent of pollution was defined and is very localized. A 40-foot buffer zone of apparently unaffected soil exists between the pollution and groundwater. This buffer zone includes a 10-foot clay layer. Therefore, Santa Clara Valley Water District staff has determined that beneficial uses of groundwater are not threatened.

VI. LOCAL AGENCY REPRESENTATIVE DATA

Prepared by: Christine A. Tulloch	Title: Water Quality Specialist
Signature:	Date: 11/6/96
Approved by: James S. Crowley, P.E.	Title: Associate Civil Engineer
Signature:	Date: 11/7/96

This closure approval is based upon the available information and with the provision that the information provided to this agency was accurate and representative of site conditions.

Attachment: Site Vicinity Map

This document and the related CASE CLOSURE LETTER, shall be retained by the lead agency as part of the official site file.

P.O. Box 50001
Watsonville, CA 95076

Dear Mr. Warman:

Subject: Work Plan Concurrence, Graniterock Company, 130 Graniterock Way, San Jose, California

Thank you for providing the August 30, 1995, "Work Plan for Additional Site Characterization," by Weber, Hayes, and Associates. The Santa Clara Valley Water District concurs with your consultant's work plan to install four soil borings and analyze a minimum of two soil samples from each boring for Total Petroleum Hydrocarbons as Diesel and Benzene, Ethylbenzene, Toluene, and Xylenes.

TECHNICAL REPORT REQUEST

Please submit an Additional Site Characterization Report by **December 1, 1995**. This report is being requested pursuant to the Regional Water Quality Control Board's authority under California Water Code Section 13267. Please submit a copy of this report to the Santa Clara Valley Water District (Attention: Ms. Linda Dorn). If you have any questions, please call me at the Camden Office, (408) 927-0710, extension 2643.

Sincerely,

UNDERGROUND STORAGE TANK CLEANUP FUND PROGRAM, REMOVAL OF MONIES FROM LETTER OF COMMITMENT (LOC); CLAIM NUMBER 001925; FOR SITE ADDRESS 100 GRANITE ROCK WAY, SAN JOSE , CA

It has come to my attention the LOC issued to you in the amount of $15,000 has not been responded to with a request for reimbursement. Our letter dated February 4, 1997 informed you that you must submit your first reimbursement request for the costs that you reported to have incurred within 90 calendar days from the issue date of the LOC.

This letter is to inform you that the Underground Storage Tank Cleanup Fund Program has made a recent policy change regarding LOC's issued and for which no reimbursement request has been received within 90 days

The new policy states:

If you do not submit your first reimbursement request for corrective action costs which you have incurred within ninety (90) days from the date the LOC was issued, your funds will automatically be deobligated. Once deobligated, any future funds for this site will be obligated subject to availability of funds at such time when we receive your reimbursement request.

Please submit your reimbursement request with the required documentation within thirty (30) days from the date of this letter. If a response is not received, your funds will automatically be deobligated from your LOC.

If you have any questions, please contact Judi Nash at (916) 227-4527.

Sincerely,

Dave Deaner, Manager
Underground Storage Tank Cleanup Fund

Mr. Tony Warman
Granite Rock Company
411 Walker Street
Watsonville, CA 95076

Dear Mr. Warman:

Subject: Granite Rock Capitol Plant, 100 Granite Rock Way, San Jose, CA

This notifies you that Santa Clara Valley Water District (District) records indicate that a spill or leak of gasoline, fuel, or waste oil has contaminated soil and/or groundwater underlying the subject site and that you have been identified as a responsible party. Pursuant to the California Water Code, polluted soil and groundwater shall be cleaned up to the satisfaction of the Regional Water Quality Control Board (Regional Board). The Regional Board is the state agency responsible for enforcing the California Water Code to protect beneficial uses of both surface and groundwater.

Due to the large numbers of subsurface fuel leak cases being reported, the Regional Board has been unable to provide detailed regulatory oversight on these cases. A program has been developed between the Regional Board and the District where the District provides oversight on fuel leak cases and issues case closure certification. Therefore, in order to protect groundwater quality and proceed towards case closure, we request that you conduct and complete investigation and cleanup activities at the subject site without delay.

The investigation and cleanup of polluted soils and groundwater will generally follow the steps listed in the enclosed summary which is excerpted from the District's guidelines entitled, "Investigation and Remediation at Fuel Leak Sites Guidelines for Investigation and Technical Report Preparation," dated March 1989 (revised October 1990). These guidelines describe the steps for investigation and cleanup (remediation) that are necessary to progress towards case closure and are included in the enclosed guidance package.

Please conduct an investigation to delineate the extent of petroleum hydrocarbon contamination in soil and groundwater at the site. You are requested to submit a technical report documenting the activities and findings of the investigation by **September 2, 1995**. This request is made pursuant to the Regional Board's authority under Section 13267 of the California Water Code.

Copies of all future reports, letters, etc., should be submitted to the Santa Clara Valley Water District (Attention: Ms. Linda Dorn) and

We would also like to inform you of the State Water Resources Control Board Underground Storage Tank Cleanup Fund, from which eligible applicants may receive reimbursement for cleanup costs. The toll free telephone number for further information is (800) 813-3863.

Please check with your consultant to determine whether or not they have the District's guidelines. If you or your consultant have any questions, please call me at the Camden Office, (408) 927-0710, extension 2643.

Sincerely,

Re: Diesel Contaminated Soil at 100 Graniterock Way, San Jose

Dear Linda:

I enclose a copy of an investigation report pertaining to the above referenced sits. The report was completed by Weber & Associates, Engineering Geologists, of Watsonville in 1992.

If I can be of any further assistance in this matter, please do not hesitate to call me at 408/724-5611, Ext. 48.

Sincerely,

GRANITE ROCK COMPANY

Project Memo: Soil Contamination Investigation Status Report, Former Underground Storage Tank, Graniterock Capitol Plant, 100 Graniterock Way, San Jose, CA

Dear Tony,

This letter describes the current status of the diesel contaminated soil investigation at the former tank site, 100 Graniterock Way, San Jose, and presents results of soil sampling. The purpose of this project memo is to provide an informational summary to allow decisions for further action at the site, to achieve full remediation and case closure by the lead regulatory agency (Santa Clara Valley Water District).

This memo includes a summary of the field work conducted to date, the estimated extent of soil contamination, the current regulatory framework and probable agency requirements for additional work, and a discussion of cleanup options. Soil sampling results are shown on th eattached figures.

A summary of Weber and Associates's project charges to date for drilling, soil sampling, lab analysis, and geologic services is included.

A location map (Figure 1), a sample location/contaminant concentration map (Figure 2), Geologic Cross-Section (Figure 3) and photographs of field operations are attached to this memo. For brevity, we have retained all Exploratory Boring Logs and sampling Certified Analytical Results in our file. Let me know if you wish to receive a copy of these items.

SUMMARY OF SITE INVESTIGATION

8/16/91 Three underground diesel storage tanks excavated at the site. A total of six soil samples were collected and analyzed for TPH diesel. One soil sample, closest to the former pump location, detected diesel above Action Levels (1300 ppm).

10/24/91 A Weber and Associates geologist directed excavation to a depth of approximately 17 feet in the corner of the excavation where diesel was detected (see Figure 2). Diesel odor was evident in soil from 17 feet deep, especially beneath the former pump location. A total of three soil samples from the excavation and one composite sample from excavated soil were collected and analyzed for diesel (see Figure 2). The trench was backfilled to the level of the rest of the tank excavation (approximately 14 feet).

11/21/91 Additional excavation with a larger backhoe was conducted, to a total depth of 25 feet. The exploratory trench to 25 feet deep is shown on Figure 2. Diesel odor was evident in soil from 25 feet deep. The trench was backfilled to the level of the rest of the tank excavation (approximately 14 feet).

12/3/91 Soil boring SB-1 was drilled on the margin of the excavation to a depth of 25 feet. A total of 2 soil samples were collected from 20 and 25 feet. No diesel was detected in these samples (see Figure 3). Drilling access into the excavation was not possible, and the drill rig was unable to drill angle borings, so additional drilling beneath the excavation was postponed.

12/12/91 Soil boring SB-2 was drilled at an angle, passing directly below the existing excavation, and collecting continuous soil samples from 30-40 feet deep (see Figure 3). This boring determined the depth of soil contamination and the depth to groundwater. A thick clay layer was encountered between 29-40 feet, above the groundwater table, which was encountered at a depth of 63 feet (see Figure 3). A total of 6 samples were analyzed for TPH as diesel. Diesel contamination in soil samples was limited to less than 30 feet deep. No diesel detected in sample 2D at 30 feet, or in any deeper samples (see Figure 3).

These sample results are significant, for they indicate that diesel contamination is limited to the upper 30 feet of soil, and does not extend to groundwater. These exploratory boring results indicate that groundwater is seperated from contaminated soil by approximately 30 feet of soil, including a 10 foot thick clay layer. If this clay layer is continuous, it may have provided a barrier for the downward migration of hydrocarbons.

Regulatory Agency Status & Potential Requirements

Santa Clara Valley Water District (SCVWD) continues to be the lead regulatory agency for soil cleanup at the subject site and they will dictate the requirements necessary for eventual case closure. SCVWD closure requirements are established in their document entitled, Investigation & Remediation at Fuel Leak Sites: Guidelines For Investigation and Technical Report Preparation, dated March, 1989, and based on State Water Resources Control Board regulations.

We have begun, but not completed, an "interim soil remediation" by removing some readily removable fuel-impacted soil from the source area. Drilling results indicate that the lateral extent of contamination is limited, and the vertical extent extends to approximately 30 feet.

If all diesel-impacted soil is excavated, and sampling from the excavation confirms removal of soil to non-detectable levels (note: not just to higher Action Levels), then the property owner may apply for site closure with no groundwater monitoring requirement. This is desirable, because if contaminated soil is left in place, 1-3 monitoring wells and a minimum of one year of quarterly groundwater monitoring will probably be required by the SCVWD. In addition, the property will remain listed as an active contamination site, with attendant loss of property value.

The SCVWD will require a report documenting all site characterization, and summarizing the soil clean up, signed by a Registered Geologist or Certified Engineering Geologist. They will require a certification that excavation backfill is compacted to create an equivalent vertical permeability to native conditions, to prevent creation of a more permeable zone were infiltration could contaminate groundwater. We have discussed the use of the Graniterock product Controlled Density Fill to achieve this.

Although it is not strictly required for a "self-directed site", we recommend preparation and submittal to the SCVWD of a written Work Plan describing the proposed soil excavation, sam-

pling and backfilling. This will ensure regulatory approval of the finished work.

The SCVWD will also require composite soil sampling and analysis for TPH diesel of excavated soil, to characterize it for treatment or disposal. Standard sampling density requirements are 1 sample per 50 cubic yards of soil. Onsite storage/treatment of excavated soil will probably be acceptable.

Recommended Additional Work

Based on the apparently limited lateral extent of soil contamination, and the total depth of 30 feet, removal of all diesel-impacted soil using an excavator is a reasonable option. Ramping during the excavation may be required to reach all contaminated soil, and the distribution of diesel in the subsurface may be irregular and greater than estimated. Soil sampling should be conducted during excavation to confirm removal of diesel to non-detectable levels, if possible.

The excavation, sampling, and backfilling should be conducted under a written Work Plan, after approval by the Santa Clara Valley Water District. Weber and Associates is able to prepare the workplan, conduct excavation sampling, and provide project management as required by Graniterock.

Uncontaminated overburden soil or soil removed for ramping should be segregated and stockpiled separately during the excavation, to limit the volume of diesel-impacted soil which must be sampled and handled after excavation.

Excavated soil should be sampled for TPH as diesel on a density of one sample per 50 yards, and should be stockpiled on site for bioremediation composting treatment to remove diesel hydrocarbons. Depending on the soil volume and concentrations, soil disposal to thermal treatment or landfilling may be an economic option. Disposal may be more expensive initially, but may be competitive if total biotreatment costs are considered.

Project Costs to Date

Total Weber and Associates project charges to date, including all drilling charges and lab charges, are $7825.91. A progress billing with a detailed invoice breakdown of all charges will be mailed under separate cover.

Additional costs are difficult to estimate accurately, because the amount of excavation required is not known exactly. We estimate that Weber and Associates costs to prepare a workplan, revise it after your review, supervise excavation and backfilling, conduct soil sampling, and prepare a final report as $4500, plus $1200 in analytical lab fees. This does not include materials for backfilling, excavation equipment charges, or soil bioremediation sampling and treatment work. We can prepare more detailed cost estimates for remaining work if needed, once our scope of work is determined. Please give me a call to discuss this project.

Respectfully submitted,

G.E. WEBER AND ASSOCIATES

Joseph Hayes
Certified Engineering Geologist #1629

Attention: PATRIC HOBAN

This is the CERTIFICATE OF ANALYSIS for the following samples as received.

Client Project ID:	#H-1083 GRANITE ROCK SAN JOSE EXCAVATION
Date Received by Lab:	Oct 25, 1991
Total Number of Samples:	5
Sample Matrix:	SOIL

BTEX is analyzed in accordance with EPA Test Methods for Evaluating Solid Waste, (SW846), Third edition, November 1986. Method 5030 (Purge and Trap) is used for the sample preparation/introduction, and Method 8020 (Aromatic Volatile Organics) is used for the analysis.

Total Volatile Petroleum Hydrocarbons as Gasoline is analyzed in accordance with the California State Water Resources Control Board Leaking Underground Fuel Tank (LUFT) Field Manual, Last Revision October 1989. Method 5030 (Purge and Trap) is used for the sample preparation and introduction.

Total Semi & Non-volatile Petroleum Hydrocarbons as Diesel is analyzed in accordance with the California State Water Resources Control Board Leaking Underground Fuel Tank (LUFT) Field Manual, Last Revision October 1989. EPA Method 3550 (Sonication) is used for sample extraction/preparation.

AN/EN, Inc. is accredited by the California Department of Health Services; Certificate Number 1183, issued May 7,1990. The DHS-Environmental Laboratory Accreditation Program can be reached at (415) 540-2800.

Watsonville, CA 95076

Subject: Workplan for Additional Site Characterization, 100 Graniterock Way, San Jose, CA

Dear Mr. Warman,

Weber, Hayes and Associates are pleased to submit this workplan for a soil sampling program to determine the extent of diesel hydrocarbon contamination at the 100 Graniterock Way site. This workplan is intended to comply with a request from the Santa Clara Valley Water District in their letter dated May 2, 1995, for an investigation to delineate the extent of hydrocarbon contamination.

Previous Sampling

Previous sampling has been conducted in the former underground storage tank area at the site, including 10 soil samples from the tank excavation , and two soil borings (SB1, SI Previous sampling indicated that soil contamination was present beneath the former diesel fuel dispenser Previous excavation, drilling and sampling results were presented in our letter report, Soil Contamination Status Report, Weber and Associates, February 2, 1992. One of the soil borings (SB2) was an angle boring beneath the former diesel dispenser. This angle boring had a linear distance of 65 feet and a total depth of approximately 63 feet. Diesel hydrocarbons contamination was first detected at 17 feet and was limited to less than 30 feet deep. Groundwater was encountered at 63 feet, below a 10-foot thick clay unit (see attached boring logs). Soil sample locations are shown on Figure 2 and a geologic cross section showing the angle boring results is presented as Figure 3. Geologic boring logs for SB1 and SB2 are attached to this report.

These previous sampling results indicate that a relatively small area of soil contamination with diesel hydrocarbons greater than 100 ppm remains at depths of 17-26 feet in the northwest corner of the former excavation. Previous excavation in the former tank area has removed much of the source of soil contamination. Soil boring SB1 detected no diesel hydrocarbons and constrains the lateral extent of contamination to the east (see Figure 3). Soil boring SB 2 passes through high concentrations at 21 feet, but detected no diesel at concentrations above 10 ppm at 26, 30, 40, or 50 feet. Therefore, the vertical depth is believed to be limited to approximately 26 feet. The estimated lateral extent is shown on Figure 2.

However, the lateral extent of soil contamination is not defined to the north and west. Because the depth of the remaining detected soil contamination (up to 26 feet) is at or near the limit of conventional excavation depths, accurate delineation of the size of the remaining soil contamination is needed to determine the best remedial action, or if remedial action is justified.

This workplan presents a program of additional soil borings to define the lateral limits of soil contamination, and to confirm the detection in 1991 of remaining high diesel concentrations beneath the former fuel dispenser.

As you know, for reimbursement by the state UST Cleanup Fund, completion and regulatory approval of a Corrective Action Plan (CAP), followed by solicitation of multiple bids to conduct the CAP, is required prior to beginning corrective action. The results of this investigation should be sufficient to conduct a review of corrective action alternatives, and to prepare a Corrective Action Plan which meets the requirements of Article 11, Chapter 16, of California Underground Storage Tank regulations. This CAP should include a review of at least three alternatives, and the cost-effectiveness of each.

SCOPE OF WORK

This scope of work includes drilling four exploratory soil borings, to obtain soil samples for hydrocarbon contamination. We feel that four borings will be sufficient to estimate the vertical and lateral extent of soil contamination, and will provide information to select a cleanup strategy. If one of the perimeter borings detects high diesel concentrations, additional borings may be required to define the extent of contamination.

The proposed boring locations are shown on the attached site map. The tasks involved are described in greater detail below.

Task 1 - Pre-field Services

Prior to drilling, a site health and safety plan should be completed, underground utilities should be located, and the workplan should be reviewed and approved in writing by the Santa Clara Valley Water District.

Task 2 - Drilling and Soil Sampling

Four soil borings to a depth of approximately 30 feet are proposed. The exploratory borings will be drilled using hollow-stem augers, to avoid the use of drilling fluids. Soil samples will be collected at 5-foot intervals, or as needed, using a California split spoon sampler. Continuous soil samples will be collected from 15-25 feet, to discern soil stratigraphy and potential lateral migration paths. Borings will be carefully logged by a California Registered

Geologist, using samples and cutting returns. Soil samples will be selected for chemical analysis based on saturation and stratigraphy. If groundwater is encountered, a sample will be collected from the first saturated soil zone. Previous borings at the site encountered groundwater deeper than 60 feet, and groundwater is not expected in the proposed borings.

Soil samples for chemical analysis will be collected in clean brass sleeves, capped and sealed with tape, and packed on ice for transport to the laboratory with the appropriate chain of custody documentation. Drill cuttings generated during the drilling procedure will be temporarily stored on site to await the results of chemical analysis. A single composite soil sample will be collected from the soil cuttings to characterize them for disposal.

An Organic Vapor Analyzer (OVA) calibrated for benzene will be used in the field to detect the presence of organic vapors. This instrument is a helpful tool for field screening samples and selecting samples for laboratory analysis.

Completed borings will be backfilled with cement grout to prevent creation of a vertical conduit for contaminant transport.

Task 3 - Laboratory Analysis

Up to two soil samples from each boring will be analyzed for gasoline components of benzene, toluene, xylene, and ethylbenzene (BTEX), and/or for total petroleum hydrocarbons as diesel. Analysis of soil samples will be performed in a DHS certified lab.

Task 4 - Report and Corrective Action Plan Preparation

Following receipt of analytic results, a written report will be prepared summarizing the results of the investigation and presenting recommendations for further action. This report will include boring logs and analytical results. In addition, this report should include a Corrective Action Plan (CAP) which meets the requirements of Article 11, Chapter 16, of California Underground Storage Tank regulations. This CAP should include a statement of remedial objectives, a review of at least three alternatives, and a review of the cost-effectiveness of each alternative. Likely alternatives include natural biodegradation, soil excavation and treatment, or in-situ treatment.

Please contact us if you have any questions regarding this workplan.

Sincerely,
Weber, Hayes and Associates

LETTER OF COMMITMENT FOR REIMBURSEMENT OF COSTS

CLAIM NO: **001925**

AMENDMENT NO: **0**

CLAIMANT: **GRANITE ROCK COMPANY**

BALANCE FORWARD: **$0**

CO-PAYEE: **NONE**

THIS AMOUNT: **$15,000**

JOINT CLAIMANT: **NONE**

NEW BALANCE: **$15,000**

ATTN: **TONI WARMAN**
CLAIMANT ADDRESS: **P O BOX 50001**
WATSONVILLE, CA 95077-5001

TAX ID/SSA NO: **94-0519560**

Subject to availability of funds, the State Water Resources Control Board (SWRCB) agrees to reimburse **GRANITE ROCK COMPANY** (Claimant) for eligible corrective action costs at **CAPITOL PLANT 100 GRANITE ROCK WAY, SAN JOSE, CA 95136** (site). The commitment reflected by this Letter is subject to all of the following terms and conditions:

1. Reimbursement shall not exceed **$15,000** unless this amount is subsequently modified in writing by an amended Letter of Commitment.

2. The obligation to pay any sum under this Letter of Commitment is contingent upon availability of funds. In the event that sufficient funds are not available for reasons beyond the reasonable control of the SWRCB, the SWRCB shall not be obligated to make any disbursements hereunder. If any disbursements otherwise due under this Letter of Commitment are deferred because of unavailability of funds, such disbursements will promptly be made when sufficient funds do become available. Nothing herein shall be construed to provide the Claimant with a right of priority for disbursement over any other claimant who has a similar Letter of Commitment.

3. All costs for which reimbursement is sought must be eligible for reimbursement and the Claimant must be the person entitled to reimbursement thereof.

4. Claimant must at all times be in compliance with all applicable state laws, rules and regulations and with all terms, conditions, and commitments contained in the Claimant's Application and any supporting documents or in any payment requests submitted by the Claimant.

5. No disbursement under this Letter of Commitment will be made except upon receipt of acceptable Standard Form Payment Requests duly executed by or on behalf of the Claimant. All Payment Requests must be executed by the Claimant or a duly authorized representative who has been approved by the Division of Clean Water Programs.

6. Any and all disbursements payable under this Letter of Commitment may be withheld if the Claimant is not in compliance with the provisions of Paragraph 5 above.

7. Neither this Letter of Commitment nor any right thereunder is assignable by the Claimant without the written consent of the SWRCB. In the event of any such assignment, the rights of the assignee shall be subject to all terms and conditions set forth in this Letter of Commitment and the SWRCB's consent.

8. This Letter of Commitment may be withdrawn at any time by the SWRCB if completion of corrective action is not performed with reasonable diligence.

IN WITNESS WHEREOF, this Letter of Commitment has been issued by the SWRCB this **14th** day of **January, 1997**.

UNDERGROUND STORAGE TANK CLEANUP FUND, CLAIM NO. 001925, FOR SITE ADDRESS: 100 GRANITE ROCK WAY, SAN JOSE

The State Water Resources Control Board (State Board) is able to issue, pursuant to applicable regulations, the enclosed Letter of Commitment (LOC) in an amount not to exceed **$15,000**. This LOC is based upon our review of the corrective action costs you reported to have incurred to date. The LOC may be modified by the State Board.

It is very important that you read the terms and conditions in the LOC. The State Board will take steps to withdraw this LOC after 90 calendar days from the date of this letter unless you proceed with due diligence with your cleanup effort.

NOTE: You must also submit your first reimbursement request for the costs that you reported to have incurred within 90 calendar days from the date of this letter or submit a **written** explanation as to the status of the cleanup and **when** a reimbursement request can be expected. Failure to submit a request or an approved explanation may result in the removal of committed funds. Claims filed with the Underground Storage Tank Cleanup Fund far exceed the funding available and it is important that you make use of the funding that has been committed to your cleanup in a timely manner.

You are reminded that you must comply with all regulatory agency time schedules and requirements and you must obtain three bids for any required corrective action. Only corrective action costs *required* by the regulatory agency to protect human health, safety and the environment can be claimed for reimbursement. **Unless waived in writing, you are required to obtain *preapproval of costs* for all future corrective action work (form enclosed).** If you have any questions on obtaining preapproval of your costs or the three bid requirement, please call Steve Marquez, our engineer assigned to claims in your Region, at (916) 227-0746. Failure to obtain preapproval of your future costs may result in the costs not being reimbursed.

Recycled Paper

The following documents needed to submit your reimbursement request are enclosed:

- "Reimbursement Request Instructions" package. **Retain this package for future reimbursement requests.** These instructions must be followed when seeking reimbursement for corrective action costs incurred after January 1, 1988. Included in the instruction package are samples of completed reimbursement request forms and spreadsheets
- "Bid Summary Sheet" to list information on bids received which **must be completed and returned.**
- "Certification of Non-Recovery From Other Sources" which **must be returned before any reimbursements can be made.**
- "Reimbursement Request" forms which you **must use to request reimbursement of costs incurred.**
- "Spreadsheet" forms which you **must use in conjunction with your reimbursement request.**
- "Claimant Data Record" (Std. Form 204) which **must be completed and returned with your first reimbursement request.**

We continuously review the status of all active claims. If you do not submit a reimbursement request or fail to proceed with due diligence with the cleanup, we will take steps to withdraw your LOC.

If you have any questions regarding the enclosed documents, please contact Jim Wehinger at (916) 227-4532.

Sincerely,

Dave Deaner, Manager
UST Cleanup Fund Program

Subject: Results of Additional Site Characterization, and Site Closure Request, 100 Granite Rock Way, San Jose, CA

Dear Mr. Warman,

This report presents the results of the additional site characterization that was conducted on October 2, 1995 at 100 Granite Rock Way in San Jose, CA. This work was conducted according to the workplan dated August 30, 1995, to determine the extent of diesel hydrocarbon contamination at the 100 Granite Rock Way site. Additional soil borings beyond those propos 1 in our workplan (seven borings rather than the four proposed) were drilled for completeness of effort in attempting to locate any remaining hydrocarbons. A limited area of residual soil contamination was detected in a single sample in 1992 (see Weber and Associates Investigation Status Report dated February 5, 1992) but was not found in any of the seven borings in the same area drilled in this investigation. Groundwater is at a depth of approximately 60 feet. Previou soil boring SB2 encountered groundwater at 63 feet, with an 11-foot thick clay layer at 29-40 feet deep separating shallow soils from groundwater, and no detected hydrocarbons in four soil samples from between 30-63 feet deep (Weber and Associates, 1992). No groundwater was encountered in any of the current borings, and there is no indication that groundwater at the site has ever been impacted with hydrocarbons.

PREVIOUS INVESTIGATIONS

8/16/91 Three underground diesel storage tanks excavated at the site. A total of six soil samples were collected and analyzed for TPH diesel. One soil sample, closest to the former pump location, detected diesel above Action Levels (1,300 ppm).

10/24/91 A Weber and Associates geologist directed excavation to a depth of approximately 17 feet in the corner of the excavation where diesel was detected. Diesel odor was evident in soil from 17 feet deep, especially beneath the former pump location. A total of three soil samples from the excavation and one composite sample from excavated soil were collected and analyzed for diesel. The trench was backfilled to the level of the rest of the tank excavation (approximately 14 feet).

11/21/91 Additional excavation with a larger backhoe was conducted, to a total depth of 25

Re: 100 Graniterock Way, San Jose, California

Dear Ms. Dorn:

I submit a copy of an additional site characterization of the above referenced site for your information and review. The work was conducted by Weber-Hayes of Watsonville who also conducted the previous site characterization work.

The report concludes that the site is characterized as uncontaminated and no further effort is required. I trust that you will concur and that we can close this site.

I look forward to hearing from you

Sincerely,

GRANITE ROCK COMPANY

Tony Warman

Tony Warman
Environmental Manager

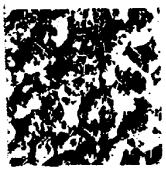
Enc.



soil removed from 20-25 feet deep. The trench was backfilled to the level of the rest of the tank excavation (approximately 14 feet).

12/3/91 Soil boring SB-1 was drilled on the margin of the excavation to a depth of 25 feet. A total of 2 soil samples were collected from SB1 at 20 and 25 feet. No diesel was detected in these samples. Drilling access into the excavation was not possible, and the drill rig was unable to drill angle borings, so additional drilling beneath the excavation was postponed.

12/12/91 Soil boring SB-2 was drilled at an angle, passing directly below the existing excavation, and collecting continuous soil samples from 30-40 feet deep. This boring determined the depth of soil contamination and the depth to groundwater. A thick clay layer was encountered between 29-40 feet, above the groundwater table, which was encountered at a depth of 63 feet. A total of 6 samples were analyzed for TPH as diesel. Diesel contamination in soil samples was limited to less than 30 feet deep. No diesel detected in the samples at 30 feet, or in any deeper samples.

CURRENT INVESTIGATION

Drilling and Soil Sampling

On October 2, 1995 six soil borings were drilled to a depth of approximately 30 feet and one boring was drilled to 15 feet (EB4) in the approximate area of the former fuel pump island (see Figure 2). The area of the former fuel pump island was located using aerial photographs of the site supplied by Granite Rock Company. Eight soil samples were collected at 5-foot intervals, and/or at changes in lithology. Groundwater was not encountered in any of the borings. Drilling and sampling procedures are explained in Appendix C.

Boring EB4 encountered sand and gravel fill to approximately 12 feet. The fill material encountered in this boring is backfill apparently from the former tank excavation and helped to further confirm the former pump island location and placement of the remaining borings.

Results

Soil cuttings were field screened for discoloration, hydrocarbon odor, and for detection of hydrocarbons using an HNU System organic vapor analyzer (OVA) with a 10.2 ev bulb, calibrated for benzene. No discoloration or odor was observed in the soil cuttings nor was there any detection of organic vapors by the OVA. Selected soil samples were analyzed for total petroleum hydrocarbons as diesel (TPH diesel) and the gasoline constituents of benzene, toluene, ethylbenzene and xylenes (BTEX). None of the target compounds were detected in any of the eight soil samples.

Conclusions and Recommendations

No diesel or BTEX contamination was detected during this recent soil investigation. This investigation included drilling two borings within five feet of the previous boring SB2, and drilling a ring of borings around the previous boring SB2 (see Figure 2). No hydrocarbons were found in any soil samples, indicating that no remaining soil body with hydrocarbon contamination is present in this area. It is possible that the diesel contamination in soil detected in 1992 has biodegraded in the intervening 3 years, or that the contaminated zone which remained after previous excabvation (in 1992) was only a limited area of hydrocarbons in soil (less than 5 feet radius) which we did not detect in this investigation.

Because no soil contamination was detected in a thorough testing program in the former soil contamination area, and because previous drilling indicates a 10-foot thick clay layer is present between 30-40 feet, ending 20 feet above groundwater, and because no soil contamination beneath this clay layer, and no groundwater contamination have ever been encountered at the site, we do not believe further site investigation or corrective action is needed. Therefore, we respectfully request on behalf of the property owner that the Santa Clara Valley Water District close the underground tank site investigation, and provide a written closure letter stating that no further action is required.

After your review, a copy of this report should be submitted to:

Ms. Linda Dorn

This is the **CERTIFICATE OF ANALYSIS** for the following samples as received.

Client Project ID:	**H-1083 GRANITE ROCK**
Date Received by Lab:	10/03/95
Total Number of Samples:	8
Sample Matrix:	**SOIL**

Volatile Organics are analyzed in accordance with EPA Test Methods for Evaluating Solid Waste, (SW846), Third edition, July 1992. Method 5030 (Purge and Trap) is used for the sample preparation/introduction. Method 8010 (Halogenated Volatile Organics-GC/ELCD) or Method 8240 (Volatile Organics-GC/MS) is used for the analysis.

BTEX is analyzed in accordance with EPA Test Methods for Evaluating Solid Waste, (SW846), Third edition, July 1992. Method 5030 (Purge and Trap) is used for the sample preparation / introduction. Method 8020 (Aromatic Volatile Organics) is used for the analysis.

Total Volatile Petroleum Hydrocarbons (Gasoline, Stoddard) are analyzed in accordance with the California State Water Resources Control Board Leaking Underground Fuel Tank (LUFT) Field Manual, Last Revision October 1989. Method 5030 (Purge and Trap) is used for the sample preparation and introduction.

Total Extractable Petroleum Hydrocarbons (Diesel, Oil, Kerosene, Stoddard, etc.) are analyzed in accordance with the California State Water Resources Control Board Leaking Underground Fuel Tank (LUFT) Field Manual, Last Revision October 1989. EPA Method 3550-sonication (soil) or EPA Method 3510-separatory funnel liquid-liquid (water) is used for sample extraction/preparation.

Organochlorine Pesticides are analyzed in accordance with EPA Test Methods for Evaluating Solid Waste, (SW846), Third edition, July 1992. EPA Method 3550 (soil) or EPA Method 3510 (water) is used for sample extraction/preparation. Method 8080 (Organochlorine Pesticides GC-ECD/ECD) is used for the analysis.

AN/EN, Inc. is accredited by the California Department of Health Services; Certificate Number 1186 (original issue May 7,1990). The DHS- Environmental Laboratory Accreditation Program can be reached at (510) 540-2400.

+ Revision of the original 10/11/95 issue to modify the analyte list.

Reviewed and Approved: Laurie Glantz-Murphy, Laboratory Manager

APPENDIX C

DRILLING AND SAMPLING PROCEDURES

Soil sampling was conducted during drilling for the purpose of lithologic identification, potential volatile organic compound detection using an organic vapor analyzer (OVA) and for analysis by a certified laboratory. Samples were retrieved by driving a Modified California sampling barrel into native soils through the hollow-stem drill column. Once the sampling barrel was brought to the surface, soil targeted for laboratory analysis was immediately placed in brass liners, protected at both ends with Teflon tape, sealed with non-reactive caps, taped, and stored in an insulated container cooled with blue ice. The selected samples were transported under appropriate chain-of-custody documentation to a State-certified laboratory (AN/EN, Inc. of Marina) for targeted compound analyses. Additional soil cores were removed from the sampling barrel, logged by an experienced geologist using the Unified Soil Classification System, and placed directly into core boxes for comparative analysis. Soil was checked for discoloration and hydrocarbon odor. All borings were backfilled to the surface with 10-sack cement slurry to prevent creation of a vertical conduit.

Subject: Workplan for Additional Site Characterization, 100 Graniterock Way, San Jose, CA

Dear Mr. Warman,

Weber, Hayes and Associates are pleased to submit this workplan for a soil sampling program to determine the extent of diesel hydrocarbon contamination at the 100 Graniterock Way site. This workplan is intended to comply with a request from the Santa Clara Valley Water District in their letter dated May 2, 1995, for an investigation to delineate the extent of hydrocarbon contamination.

Previous Sampling

Previous sampling has been conducted in the former underground storage tank area at the site, including 10 soil samples from the tank excavation , and two soil borings (SB1, SB2). Previous sampling indicated that soil contamination was present beneath the former diesel fuel dispenser. Previous excavation, drilling and sampling results were presented in our letter report, Soil Contamination Status Report, Weber and Associates, February 2, 1992. One of the soil borings (SB2) was an angle boring beneath the former diesel dispenser. This angle boring had a linear distance of 65 feet and a total depth of approximately 63 feet. Diesel hydrocarbons contamination was first detected at 17 feet and was limited to less than 30 feet deep. Groundwater was encountered at 63 feet, below a 10-foot thick clay unit (see attached boring logs). Soil sample locations are shown on Figure 2 and a geologic cross section showing the angle boring results is presented as Figure 3. Geologic boring logs for SB1 and SB2 are attached to this report.

These previous sampling results indicate that a relatively small area of soil contamination with diesel hydrocarbons greater than 100 ppm remains at depths of 17-26 feet in the northwest corner of the former excavation. Previous excavation in the former tank area has removed much of the source of soil contamination. Soil boring SB1 detected no diesel hydrocarbons and constrains the lateral extent of contamination to the east (see Figure 3). Soil boring SB 2 passes through high concentrations at 21 feet, but detected no diesel at concentrations above 10 ppm at 26, 30, 40, or 50 feet. Therefore, the vertical depth is believed to be limited to approximately 26 feet. The estimated lateral extent is shown on Figure 2.

However, the lateral extent of soil contamination is not defined to the north and west. Because the depth of the remaining detected soil contamination (up to 26 feet) is at or near the limit of conventional excavation depths, accurate delineation of the size of the remaining soil contamination is needed to determine the best remedial action, or if remedial action is justified.

This workplan presents a program of additional soil borings to define the lateral limits of soil contamination, and to confirm the detection in 1991 of remaining high diesel concentrations beneath the former fuel dispenser.

As you know, for reimbursement by the state UST Cleanup Fund, completion and regulatory approval of a Corrective Action Plan (CAP), followed by solicitation of multiple bids to conduct the CAP, is required prior to beginning corrective action. The results of this investigation should be sufficient to conduct a review of corrective action alternatives, and to prepare a Corrective Action Plan which meets the requirements of Article 11, Chapter 16, of California Underground Storage Tank regulations. This CAP should include a review of at least three alternatives, and the cost-effectiveness of each.

SCOPE OF WORK

This scope of work includes drilling four exploratory soil borings, to obtain soil samples for hydrocarbon contamination. We feel that four borings will be sufficient to estimate the vertical and lateral extent of soil contamination, and will provide information to select a cleanup strategy. If one of the perimeter borings detects high diesel concentrations, additional borings may be required to define the extent of contamination.

The proposed boring locations are shown on the attached site map. The tasks involved are described in greater detail below.

Task 1 - Pre-field Services

Prior to drilling, a site health and safety plan should be completed, underground utilities should be located, and the workplan should be reviewed and approved in writing by the Santa Clara Valley Water District.

Task 2 - Drilling and Soil Sampling

Four soil borings to a depth of approximately 30 feet are proposed. The exploratory borings will be drilled using hollow-stem augers, to avoid the use of drilling fluids. Soil samples will be collected at 5-foot intervals, or as needed, using a California split spoon sampler. Continuous soil samples will be collected from 15-25 feet, to discern soil stratigraphy and potential lateral migration paths. Borings will be carefully logged by a California Registered

Geologist, using samples and cutting returns. Soil samples will be selected for chemical analysis based on saturation and stratigraphy. If groundwater is encountered, a sample will be collected from the first saturated soil zone. Previous borings at the site encountered groundwater deeper than 60 feet, and groundwater is not expected in the proposed borings.

Soil samples for chemical analysis will be collected in clean brass sleeves, capped and sealed with tape, and packed on ice for transport to the laboratory with the appropriate chain of custody documentation. Drill cuttings generated during the drilling procedure will be temporarily stored on site to await the results of chemical analysis. A single composite soil sample will be collected from the soil cuttings to characterize them for disposal.

An Organic Vapor Analyzer (OVA) calibrated for benzene will be used in the field to detect the presence of organic vapors. This instrument is a helpful tool for field screening samples and selecting samples for laboratory analysis.

Completed borings will be backfilled with cement grout to prevent creation of a vertical conduit for contaminant transport.

Task 3 - Laboratory Analysis

Up to two soil samples from each boring will be analyzed for gasoline components of benzene, toluene, xylene, and ethyibenzene (BTEX), and/or for total petroleum hydrocarbons as diesel. Analysis of soil samples will be performed in a DHS certified lab.

Task 4 - Report and Corrective Action Plan Preparation

Following receipt of analytic results, a written report will be prepared summarizing the results of the investigation and presenting recommendations for further action. This report will include boring logs and analytical results. In addition, this report should include a Corrective Action Plan (CAP) which meets the requirements of Article 11, Chapter 16, of California Underground Storage Tank regulations. This CAP should include a statement of remedial objectives, a review of at least three alternatives, and a review of the cost-effectiveness of each alternative. Likely alternatives include natural biodegradation, soil excavation and treatment, or in-situ treatment.

Please contact us if you have any questions regarding this workplan.

Sincerely,
Weber, Hayes and Associates

Mr. Tony Warman
Granite Rock Company
P.O. Box 50001
Watsonville, CA 95076

Dear Mr. Warman:

Subject: Underground Storage Tank Case Closure--Granite Rock Capitol Plant, 100 Granite Rock Way, San Jose, CA; Case No. 07S1E34J01f; Underground Storage Tank Cleanup Fund No. 1925

This letter confirms the completion of site investigation and remedial action for the underground storage tank(s) formerly located at the above-described location. Enclosed is the Case Closure Summary for the referenced site for your records.

Based upon the available information, including the current land use, and with the provision that the information provided to this agency was accurate and representative of site conditions, no further action related to the underground storage tank release is required.

This notice is issued pursuant to a regulation contained in Title 23, California Code of Regulations, Division 3, Chapter 16, Section 2721(e). If a change in land use is proposed, the owner must promptly notify this agency. Please refer to the enclosed closure summary for site management requirements.

Please contact Ms. Christine Tulloch at the Santa Clara Valley Water District's Camden Office, (408) 927-0710, extension 2636, if you have any questions in this matter.

Sincerely,

CASE CLOSURE SUMMARY
LEAKING UNDERGROUND FUEL STORAGE TANK PROGRAM

Date: November 6, 1996

I. AGENCY INFORMATION

Agency Name: Santa Clara Valley Water District	Address: 5750 Almaden Expressway
City/State/Zip: San Jose, CA 95118	Phone: (408) 265-2600
Responsible Staff Person: Christine A. Tulloch	Title: Water Quality Specialist

II. CASE INFORMATION

Site Facility Name: Granite Rock Capitol Plant		
Site Facility Address: 100 Granite Rock Way, San Jose, CA		
RB LUSTIS Case No.: –	Local Case No.: 07S1E34J01f	LOP Case No.: –
URF Filing Date: 01/15/92	SWEEPS No.: –	APN: 462-17-016

Responsible Parties	Addresses	Phone Numbers
Mr. Tony Warman--Granite Rock Company	P.O. Box 50001, Watsonville, CA 95076	(408) 724-5621

Tank I.D. No	Size in Gallons	Contents	Closed In-Place/Removed?	Date
1, 2, 3	Unknown	Diesel	Removed	08/16/91
Piping			Removed	08/16/91

III. RELEASE AND SITE CHARACTERIZATION INFORMATION

Cause and Type of Release: Piping		
Site characterization complete? Yes	Date Approved By Oversight Agency: November 1995	
Monitoring wells installed? No	Number: –	Proper screened interval? Yes No
GW Depth Below Ground Surface: 63	Lowest Depth: –	Flow Direction: –
Most Sensitive Current Use: Potential drinking water		

Summary of Production Wells in Vicinity: Not assessed due to localized soil only pollution.	
Are drinking water wells affected? No	Aquifer Name: Santa Clara Valley Basin
Is surface water affected? No	Nearest SW Name: Canoas Creek
Off-Site Beneficial Use Impacts (Addresses/Locations): None reported	
Reports on file? Yes	Where are reports filed? Santa Clara Valley Water District

TREATMENT AND DISPOSAL OF AFFECTED MATERIAL

Tank	Unknown	Unknown	—
Piping	Unknown	Unknown	—
Free Product	—	—	
Soil	Unknown	Unknown	—
Groundwater	—	—	—
Barrels	—	—	—

MAXIMUM DOCUMENTED CONTAMINANT CONCENTRATIONS—BEFORE AND AFTER CLEANUP									
Contaminant	Soil (ppm)		Water (ppb)		Contaminant	Soil (ppm)		Water (ppb)	
	Before*	After	Before	After		Before	After	Before	After
TPH (Gas)	NA	NA	NA	NA	Xylene	NA	NA	NA	NA
TPH (Diesel)	12,000	53,000	NA	NA	Ethylbenzene	NA	NA	NA	NA
Benzene	NA	NA	NA	NA	Oil & Grease	NA	NA	NA	NA
Toluene	NA	NA	NA	NA	Heavy Metals	NA	NA	NA	NA
Other (8240/8270)	NA	NA	NA	NA	Other	NA	NA	NA	NA

Description of Interim Remediation Activities: Overexcavation to 25 feet below ground surface (bgs) was reportedly performed near the pump island. Borings were drilled to define the extent of contamination. One sample contained 53,000 parts per million (ppm) Total Petroleum Hydrocarbons as Diesel (TPHD). All other soil samples from nine borings were nondetectable.

*Highest detected during overexcavtion at 17 feet bgs near the pump island.

IV. CLOSURE

Does completed corrective action protect existing beneficial uses per the Regional Board Basin P		
Does completed corrective action protect potential beneficial uses per the Regional Board Basin Plan. Yes		
Does corrective action protect public health for current land use? Santa Clara Valley Water District staff does not make specific determinations concerning public health risk. However, it does not appear that the release would present a risk to human health under current conditions. If an exposure pathway is completed to the residual soil pollution at ≈20 feet bgs at SB-2, a health and safety plan should be prepared before conducting subsurface work.		
Site Management Requirements: See above.		
Should corrective action be reviewed if land use changes? Yes		
Monitoring Wells Decommissioned: No	Number Decommissioned: —	Number Retained: —
List Enforcement Actions Taken: None		
List Enforcement Actions Rescinded: None		

V. ADDITIONAL COMMENTS, DATA, ETC.

Considerations and/or Variances: A localized area of diesel pollution in soil was detected around the pump island between 12 feet and 20 feet bgs. Some of the significantly affected soil was removed. However, 53,000 ppm TPHD was detected at SB-2 at ≈20 feet bgs.

Conclusion: The extent of pollution was defined and is very localized. A 40-foot buffer zone of apparently unaffected soil exists between the pollution and groundwater. This buffer zone includes a 10-foot clay layer. Therefore, Santa Clara Valley Water District staff has determined that beneficial uses of groundwater are not threatened.

VI. LOCAL AGENCY REPRESENTATIVE DATA

Prepared by: Christine A. Tulloch	Title: Water Quality Specialist
Signature:	Date: 11/1/96
Approved by: James S. Crowley, P.E.	Title: Associate Civil Engineer
Signature:	Date: 11/4/96

This closure approval is based upon the available information and with the provision that the information provided to this agency was accurate and representative of site conditions.

Attachment: Site Vicinity Map

This document and the related CASE CLOSURE LETTER, shall be retained by the lead agency as part of the official site file.

Dear Mr. Firth:

Subject: Fuel Leak at Graniterock—Capitol Branch, 100 Granite Rock Way, San Jose, CA

Our records indicate that there has been a subsurface release of petroleum hydrocarbons at the above site. We are currently reviewing our files on this case; however, in order to proceed, we find it necessary to request your assistance on the matter. Please send us a copy of the tank closure report and the certified analyticals. If you have additional information which will assist us in evaluating any threat to surface or groundwater, please include it in the package. If you have any questions, please contact Deanna Hoppe at (408) 927-0710, extension 2648.

Sincerely,

Terra
Services

October 6, 1993

Santa Fe Pacific Pipeline Partners, L.P.
Environmental Engineering Department
888 South Figueroa
Los Angeles, California 90017

ATTENTION: Mr. Tom Danaher

SUBJECT: **GROUND WATER MONITORING REPORT**
Third Quarter, 1993
San Jose Terminal

Dear Mr. Danaher:

This letter report presents the results of ground-water monitoring conducted by TerraServices, Inc. (TSI) on July 23 through 26, 1993 at the San Jose Terminal for Santa Fe Pacific Pipeline Partners, L.P. (SFPP).

Scheduled field work included measuring fluid levels and sampling ground-water in 32 wells, numbered MW-1 through MW-32. A non-aqueous phase hydrocarbon (NAPH, or "free product") layer prevented ground-water sampling in eight wells. Two wells were dry (MW-1 and MW-6). Ground-water samples were collected from 22 wells, numbered MW-4, MW-8 through MW-11, MW-14, MW-[illegible] through MW-22, and MW-24 through MW-32.

SITE DESCRIPTION

The San Jose Terminal is located at 2150 Kruse Drive, San Jose, California. The terminal is a storage and trucking facility for refined petroleum products transported in an SFPP pipeline. The site location is shown in Figure 1. Locations of monitoring wells and five product recovery wells (RW-1 through RW-5) are shown in Figure 2. The depth to ground-water or free product has ranged from 2 to 21 feet in the database record included in this report.

SAMPLING AND ANALYTICAL PROTOCOL

The sampling protocol is described in Appendix A. Chemical analyses were conducted by Apollo Analytics, Inc., in Costa Mesa, California. Apollo Analytics is certified by the California Department of Health Services. All ground-water samples were analyzed by:

[1] EPA Method 5030\8020 for Benzene, Toluene, Ethylbenzene, and total Xylenes (BTEX) compounds;
[2] EPA Method 5030\8015-Modified for Total Volatile Petroleum Hydrocarbons (TVPH) as gasoline;
[3] EPA Method 3550\8015-Modified for Total Extractable Petroleum Hydrocarbons (TEPH) as diesel;
[4] EPA Method 418.1 for Total Recoverable Petroleum Hydrocarbons (TRPH);
[5] EPA Method 239.1 for Total Organic Lead; and
[6] EPA Method 239.2 for Total Lead (filtered and unfiltered).

Quality Assurance\Quality Control (QA\QC) procedures included method blank, matrix spike, and matrix spike duplicate samples. Field QA\QC procedures included one equipment blank and one duplicate sample.

FLUID LEVEL DATA

Fluid levels were measured in all wells within one field day and are presented in Table 1, which includes two years of historical data. Fluid level data collected prior to 1993 was provided by SFPP. Figure 3 shows a ground-water elevation map based on fluid level measurements for this monitoring period. A corrected

RE: QUARTERLY GROUNDWATER MONITORING REPORT
SAN JOSE TERMINAL

Dear Mr. Ritchie:

Attached is a copy of the Third Quarter Groundwater Monitoring Report for 1993 for the Santa Fe Pacific Pipeline Partners, L.P. (SFPP) San Jose Terminal. The fourth quarterly monitoring event was conducted during November, 1993 and the report will be issued during February 15, 1993.

As part of the Site Cleanup Requirement provisions, a summary of the ongoing environmental activities at SFPP's San Jose Terminal is required. Below is a summary of activities that occurred in July, August, and September:

- Santa Clara Valley Water District (SCVWD) installed several soil borings between Coyote Creek and SFPP's San Jose Terminal property line. SFPP has requested a copy of the report generated from any analytical work performed on soil samples collected from these borings.

- The groundwater extraction system operated intermittently during these three (3) months. Modifications were made to pumps and the treatment system to accommodate the increased water flow.

- Discussions and a meeting with RWQCB personnel included the investigation work completed to date which has defined the extent of petroleum hydrocarbons onsite and offsite. Concerns were raised regarding the potential groundwater impact to waters migrating in the direction of Coyote Creek as related to the construction of MW-9 and MW-10. SFPP has agreed to install a third well in the area with a modified design to address RWQCB concerns. A Right of Entry Agreement from the SCVWD will be required prior to the well installation.

- Soils generated from the installation of the new monitoring and soil borings have been analyzed and are considered non-hazardous. With the approval of the RWQCB soils generated from the new well installation were used as aggregate base for asphalt manufacturing and used onsite for the construction of roads or parking lot areas.

- The Remedial Action Plan is being drafted during the next quarter activities and will be submitted to the RWQCB in early 1994.

Should you have any questions or comments, please contact me at (213) 486-7785 or Scott Kilkenny at (213) 486-7879.

Sincerely,

S. M. Ferrara

ground-water elevation was calculated for all wells with a NAPH layer using available specific gravity data.

WATER QUALITY DATA

Water quality chemical data is summarized in Tables 2 and 3, which include two years of historical data. Water quality data collected prior to 1993 was provided by SFPP. Ground-water sampling measurements are provided in the SFPP Field Data Sheets in Appendix B. Laboratory analytical reports and chain-of-custody records are provided in Appendix C. A concentration map of dissolved BTEX compounds is shown in Figure 4.

GROUND-WATER MONITORING RESULTS

Ground-Water Flow: The direction of ground-water flow is primarily northeast. The average hydraulic gradient is approximately 0.005 feet per foot between the 25.00 and 23.00 feet potentiometric contours. Fluid levels have fallen an average of 1.43 feet since the last monitoring period.

Non-Aqueous Phase Hydrocarbons: A NAPH layer ranging from approximately 0.01 to 1.61 feet thick was detected in wells MW-2, MW-3, MW-5 to MW-7, MW-12, MW-13, MW-15, and MW-23 which are located near the recovery wells.

Dissolved BTEX Compounds: BTEX concentrations in ground water were identified in two areas as shown in Figure 4. BTEX compounds were not detected in any wells located along the property perimeter.

Total Petroleum Hydrocarbons: TVPH as gasoline was detected in two wells (MW-4, and MW-11) in concentrations ranging from 1.6 milligrams per liter (mg/L) to 4.7 mg/L. TEPH as diesel and TRPH was not detected in any water sample.

Lead: Total lead was not detected in filtered water samples. Seven wells (MW-4, MW-9 through MW-11, MW-17, MW-19, and MW-21) had total lead concentrations ranging from 0.012 mg/L to 0.26 mg/L in unfiltered water samples. Organic lead was not detected in any water sample.

Analytical QA\QC: No deviations from standard procedures occurred during this monitoring period. Laboratory quality control tests were within laboratory performance quidelines. No BTEX compounds were detected in the pump equipment blank collected to assess the effectiveness of field decontamination procedures. A duplicate water-quality sample was collected at monitoring well MW-11 and labeled MW-34. Duplicate sample results were not within 20 percent of well MW-11 analytical results.

If you have any questions regarding the contents of this report, please contact us at your convenience. The next monitoring event is scheduled for October 10 to 21, 1993.

Very truly yours,

Re: Underground Storage Tank Removal at 100 Granite Rock Way, San Jose, CA on May 8, 1992

Dear Mr. Catunao:

I acknowledge receipt of your July 24, 1992 letter to Mr. Doug Tolbert.

In response to your letter, I submit the soil sample chain of custody form and the soil analysis results.

If you have any questions or comments, please feel free to contact me at 408/724-5611.

Sincerely,

GRANITE ROCK COMPANY

Attention: GARY SMITH

This is the **CERTIFICATE OF ANALYSIS** for the following samples as received.

Client Project ID:	GRANITE ROCK - SAN JOSE
Date Received by Lab:	Aug 16, 1991
Total Number of Samples:	6
Sample Matrix:	SOIL

BTEX is analyzed in accordance with EPA Test Methods for Evaluating Solid Waste, (SW846), Third edition, November 1986. Method 5030 (Purge and Trap) is used for the sample preparation/introduction, and Method 8020 (Aromatic Volatile Organics) is used for the analysis.

Total Volatile Petroleum Hydrocarbons as Gasoline is analyzed in accordance with the California State Water Resources Control Board Leaking Underground Fuel Tank (LUFT) Field Manual, Last Revision October 1989. Method 5030 (Purge and Trap) is used for the sample preparation and introduction.

Total Semi & Non-volatile Petroleum Hydrocarbons as Diesel is analyzed in accordance with the California State Water Resources Control Board Leaking Underground Fuel Tank (LUFT) Field Manual, Last Revision October 1989. EPA Method 3550 (Sonication) is used for sample extraction/preparation.

AN/EN, Inc. is accredited by the California Department of Health Services; Certificate Number 1183, issued May 7,1990. The DHS-Environmental Laboratory Accreditation Program can be reached at (415) 540-2800.

Good afternoon, Adrian.

Thank you for your recent record request received on 03.22.22 for the following address in SAN JOSE:

- 120 Granite Rock Way

Please note: electronically stored documents (eDocs) have been attached for your review.

Additional electronic documents may be found on the following:

- Local Oversight Program (LOP)
- GEOTracker (GT)
- Spill Reports Website – California Office of Emergency Services (Cal OES)

Please be advised that in some cities, other participating agencies may be responsible for maintaining the type of files you requested. This link may be of assistance in determining who will have the documents you are looking for in the future:

Submittal was ***Accepted***; Processed on 2/8/2022 by *Robin Ward* for Santa Clara County Environmental Health

Hazardous Materials

Does your facility have on site (for any purpose) at any one time, hazardous materials at or above 55 gallons for liquids, 500 pounds for solids, or 200 cubic feet for compressed gases (include liquids in ASTs and USTs); or is regulated under more restrictive inventory local reporting requirements (shown below if present); or the applicable Federal threshold quantity for an extremely hazardous substance specified in 40 CFR Part 355, Appendix A or B; or handle radiological materials in quantities for which an emergency plan is required pursuant to 10 CFR Parts 30, 40 or 70?	**Yes**

Underground Storage Tank(s) (UST)

Does your facility own or operate underground storage tanks?	**Yes**

Hazardous Waste

Is your facility a Hazardous Waste Generator?	**Yes**
Does your facility treat hazardous waste on-site?	**No**
Is your facility's treatment subject to financial assurance requirements (for Permit by Rule and Conditional Authorization)?	**No**
Does your facility consolidate hazardous waste generated at a remote site?	**No**
Does your facility need to report the closure/removal of a tank that was classified as hazardous waste and cleaned on-site?	**No**
Does your facility generate in any single calendar month 1,000 kilograms (kg) (2,200 pounds) or more of federal RCRA hazardous waste, or generate in any single calendar month greater than 1 kg (2.2 pounds) of RCRA acute hazardous waste; or generate more than 100 kg (220 pounds) of spill cleanup materials contaminated with RCRA acute hazardous waste.	**No**
Is your facility a Household Hazardous Waste (HHW) Collection site?	**No**

Excluded and/or Exempted Materials

Does your facility recycle more than 100 kg/month of excluded or exempted recyclable materials (per HSC 25143.2)?	**No**
Does your facility own or operate ASTs above these thresholds? Store greater than 1,320 gallons of petroleum products (new or used) in aboveground tanks or containers.	**No**
Does your facility have Regulated Substances stored onsite in quantities greater than the threshold quantities established by the California Accidental Release prevention Program (CalARP)?	**No**

Additional Information

No additional comments provided.

CERTIFICATION OF FINANCIAL RESPONSIBILITY

FOR UNDERGROUND STORAGE TANKS CONTAINING PETROLEUM

A. I am required to demonstrate Financial Responsibility in the required amounts as specified in Section 2807, Chapter 18, Div. 3, Title 23, CCR

☐ 500,000 dollars per occurrence or ☒ 1 million dollars per occurrence

AND

☒ 1 million dollars annual aggregate or ☐ 2 million dollars annual aggregate

B. Granite Rock Company (Name of tank Owner or Operator) hereby certifies that it is in compliance with the requirements of Section 2807, Article 3, Chapter 18, Division 3, Title 23, California Code of Regulations.

The mechanisms used to demonstrate financial responsibility as required by Section 2807 are as follows:

C. Mechanism Type	Name and Address of Issuer	Mechanism Number	Coverage Amount	Coverage Period	Corrective Action	Third Party Compensation
Chief Financial Officer Letter	Graniterock 350 Technology Way PO Box 50001 Watsonville, CA 95077	N/A	$10,000 Per Occurrence and Annual Aggregate	Continuous	Yes	Yes
State UST Cleanup Fund	UST Cleanup Fund PO Box 944212 Sacramento CA 94244	N/A	$990,000 Per Occurrence and Annual Aggregate	Continuous	Yes	Yes

Note: If you are using the State Fund as any part of your demonstration of financial responsibility, your execution and submission of this certification also certifies that you are in compliance with all conditions for participation in the Fund.

D. Facility Name	Facility Address
Graniterock - Watsonville Concrete and Building Materials	540 Beach St. Watsonville, CA 95076
Graniterock - Santa Cruz Concrete and Building Materials	303 Coral St. Santa Cruz, CA 95060

E. Signature of Tank Owner or Operator — Date: 12/11/2020 — Name and Title of Tank Owner or Operator: Thomas Squeri CEO

Signature of Witness or Notary — Date: 12/11/2020 — Name of Witness or Notary: Joshua Basanese

Submit original to local UST regulatory agency. Keep a copy at each UST facility.

UNDERGROUND STORAGE TANK RESPONSE PLAN

For use by Unidocs Member Agencies or where approved by your Local Jurisdiction
Authority Cited: Title 23 California Code of Regulations §§2632(d)(2) and 2641(h)

REASON FOR SUBMITTING THIS FORM (Check One) ☐ New Plan ☐ Change of Information

A PDF copy of this completed plan must be electronically submitted via either the California Environmental Reporting System (CERS) website or an equivalent local agency electronic reporting portal along with other required underground storage tank (UST) information. The plan must be revised and resubmitted electronically within 30 days of any significant change in the information it contains. Use of this form is optional. You may use another format provided that it contains all required information.

A. FACILITY IDENTIFICATION

FACILITY NAME		CERS ID
SITE ADDRESS		
CITY	**CA**	ZIP CODE

B. SPILL CONTROL AND CLEANUP METHODS

This plan addresses unauthorized releases from UST systems and supplements the emergency response plans and procedures in the facility's Hazardous Materials Business Plan (HMBP).

- If safe to do so, facility personnel will take immediate measures to control or stop any release (e.g., activate pump shut-off, etc.) and, if necessary, safely remove remaining hazardous material from the UST system.
- Any release to secondary containment will be pumped or otherwise removed within a time consistent with the ability of the secondary containment system to contain the hazardous material, but not greater than 30 calendar days, or sooner if required by the local agency. Recovered hazardous materials, unless still suitable for their intended use, will be managed as hazardous waste.
- Absorbent material will be used to contain and clean up manageable spills of hazardous materials. Absorbent material which has become too saturated to be effective or which is no longer intended for use will be managed as hazardous waste unless a waste determination in accordance with 22 CCR §66262.11 finds that it is non-hazardous. Used absorbent material, reusable or waste, will be stored in a properly labeled and sealed container. Waste material shall be disposed of appropriately.
- Facility personnel will determine whether any water removed from secondary containment systems, or from clean-up activity, has been in contact with any hazardous material. If the water is contaminated, it will be managed as hazardous waste unless a hazardous waste determination in accordance with 22 CCR §66262.11 finds that it is non-hazardous. If the water has a petroleum sheen (i.e., rainbow colors), it is contaminated. A thick floating petroleum layer may not necessarily display rainbow colors. Water (hazardous or non-hazardous) from sumps, spill containers, etc. will not be disposed to storm water systems.
- We will review secondary containment systems for possible deterioration if any of the following conditions occur:
  1. Hazardous material in contact with secondary containment is not compatible with the material used for secondary containment;
  2. Secondary containment is prone to damage from any equipment used to remove or clean up hazardous material collected in secondary containment;
  3. Hazardous material, other than the product/waste stored in the primary containment system, is placed inside secondary containment to treat or neutralize released product/waste, and the added material or resulting material from such a combination is not compatible with secondary containment.

C. SPILL CONTROL AND CLEANUP EQUIPMENT

PERIODIC MAINTENANCE: Spill control and clean-up equipment kept permanently on-site is listed in the facility's HMBP. This equipment is inspected at least monthly, and after each use, supplies are replenished as needed. Defective equipment is repaired or replaced as necessary.

EQUIPMENT NOT NORMALLY ON-SITE (BUT AVAILABLE FOR USE IF NEEDED): *(Complete only if applicable)*

EQUIPMENT TYPE	EQUIPMENT LOCATION (Off-Site)	EQUIPMENT AVAILABILITY

D. RESPONSIBLE PERSONS

THE FOLLOWING PERSON(S) IS/ARE RESPONSIBLE FOR AUTHORIZING ANY WORK NECESSARY UNDER THIS RESPONSE PLAN:

	RESPONSIBLE PERSON NAME	RESPONSIBLE PERSON TITLE
1.		
2.		
3.		
4.		

(Attach additional pages if necessary)

E. MONITORING INDICATORS

IF MONITORING INDICATES A POSSIBLE UNAUTHORIZED RELEASE, STEPS TO VERIFY THE RELEASE WILL BE MADE AS FOLLOWS:

☐ Additional System Testing or Data Collection ☐ Inspection By Qualified Persons ☐ Recalibration of Equipment
☐ Other (Specify):

F. REPORTING AND RECORD KEEPING

We will report/record any overfill, spill, or unauthorized release from a UST system as indicated in this plan.

Recordable Releases: Any unauthorized release from primary containment which the UST operator is able to clean up within eight (8) hours after the release was detected or should reasonably have been detected, and which does not escape from secondary containment, does not increase the hazard of fire or explosion, and does not cause any deterioration of secondary containment, must be recorded in the facility's monitoring records. Monitoring records must include:

- The UST operator's name and telephone number;
- A list of the types, quantities, and concentrations of hazardous substances released;
- A description of the actions taken to control and clean up the release;
- The method and location of disposal of the released hazardous substances, and whether a hazardous waste manifest was or will be used;
- A description of actions taken to repair the UST and to prevent future releases;
- A description of the method used to reactivate interstitial monitoring after replacement or repair of primary containment.

Reportable Releases: Any overfill, spill, or unauthorized release which escapes from secondary containment (or primary containment if no secondary containment exists), increases the hazard of fire or explosion, or causes any deterioration of secondary containment, is a reportable release. Reportable releases are also recordable.

Within 24 hours after a reportable release has been detected, or should have been detected, we will notify the local agency administering the UST program of the release, investigate the release, and take immediate measures to stop the release. If necessary, or if required by the local agency, remaining stored product/waste will be removed from the UST to prevent further releases or facilitate corrective action. If an emergency exists, we will notify the California Office of Emergency Services (OES) at (800) 852-7550.

Within five (5) working days of a reportable release, we will submit to the local agency a full written report containing all of the following information to the extent that the information is known at the time of filing the report:

- The UST owner's or operator's name and telephone number;
- A list of the types, quantities, and concentrations of hazardous materials released;
- The approximate date of the release;
- The date on which the release was discovered;
- The date on which the release was stopped;
- A description of actions taken to control and/or stop the release;
- A description of corrective and remedial actions, including investigations which were undertaken and will be conducted to determine the nature and extent of soil, ground water or surface water contamination due to the release;
- The method(s) of cleanup implemented to date, proposed cleanup actions, and a schedule for implementing the proposed actions;
- The method(s) and location(s) of disposal of released hazardous materials and any contaminated soils, groundwater, or surface water.
- Copies of any hazardous waste manifests used for off-site transport of hazardous wastes associated with clean-up activity;
- A description of proposed methods for any repair or replacement of UST system primary/secondary containment systems;
- A description of additional actions taken to prevent future releases.

We will follow the reporting procedures described above if any of the following conditions occur:

- A recordable unauthorized release can not be cleaned up or is still under investigation within eight (8) hours of detection;
- Released hazardous substances are discovered at the UST site or in the surrounding area;
- Unusual operating conditions are observed, including erratic behavior of product dispensing equipment, sudden loss of product, or the unexplained presence of water in the tank, unless system equipment is found to be defective and is immediately repaired or replaced, and no leak has occurred;
- Monitoring results from UST system monitoring equipment/methods indicate that a release may have occurred, unless the monitoring equipment is found to be defective and is immediately repaired, recalibrated, or replaced, and additional monitoring does not confirm the initial results.

Record Retention: Monitoring records and written reports of unauthorized releases must be maintained on-site (or off-site at a readily available location, if approved by the local agency) for at least 3 years. Hazardous waste shipping/disposal records (e.g., manifests) must be maintained for at least 3 years from the date of shipment.

LETTER FROM CHIEF FINANCIAL OFFICER

I am the Chief Financial Officer for Granite Rock Company, 350 Technology Dr. Watsonville, CA 95076.

This letter is in support of the use of the **Underground Storage Tank Cleanup Fund** to demonstrate financial responsibility for taking corrective action and/or compensating third parties for bodily injury and property damage caused by an unauthorized release of petroleum in the amount of at least $1,000,000 per occurrence and $1,000,000 annual aggregate coverage. Coverage granted by this letter shall remain in effect from the date of submittal, through April 15th, 2022. An updated letter will be provided on, or prior to, April 15th, 2022.

Underground storage tanks at the following facilities are assured by this letter:

Graniterock – Watsonville Building Materials, 540 W. Beach St. Watsonville, CA 95076

Graniterock – Santa Cruz Concrete & Building Materials, 303 Coral St. Santa Cruz, CA 95060

Graniterock – Salinas Concrete & Building Materials, 400 Work St. Salinas, CA 93901

Graniterock – Monterey Concrete & Building Materials, 1755 Del Monte Blvd. Seaside, CA 93955

Graniterock – Construction Central Office, 120 Graniterock Way, San Jose, CA 95136

Graniterock – San Jose Concrete, 11711 Berryessa Rd. San Jose, CA 95133

The below figures represent Assets, Liabilities, and Tangible Net Worth, as of 12/31/2020:

1.	Amount of annual aggregate coverage being assured by this letter	$10,000
2.	Total Tangible assets	$301,476,000
3.	Total Liabilities	$117,872,000
4.	Tangible net worth	$183,604,000

I hereby certify that the wording of this letter is identical to the wording specified in subsection 2808.1(d)(1), Chapter 18, Division 3, Title 23 of the California Code of Regulations.

I declare under penalty of perjury that the foregoing is true and correct to the best of my knowledge and belief.

Executed at Watsonville, CA

On April 13th, 2021

UNDERGROUND STORAGE TANK
DESIGNATED UNDERGROUND STORAGE TANK OPERATOR IDENTIFICATION FORM (Page 1 of 1)

Every underground storage tank (UST) facility must have at least one designated UST operator. A copy of this completed form must be electronically submitted via either the California Environmental Reporting System (CERS) or an equivalent local Unified Program Agency electronic reporting portal within 30 days of: 1) an installation of a UST; 2) a change in owner or operator of the UST; or 3) an addition or change of an individual performing designated UST operator inspections or facility employee training at this facility. [California Code of Regulations, Title 23, Division 3, Chapter 16, Section 2715(a).]

Type of Action ☐ New UST Installation ☐ Change of Owner or Operator ☐ New or Change of Designated UST Operator

I. FACILITY INFORMATION

Business Name *(Same as Facility Name or DBA-Doing Business As)*	CERS ID

Business Site Address	City	ZIP Code

The individual(s) listed below will conduct and document the facility inspections and facility employee training for the facility listed above in accordance with California Code of Regulations, Title 23, Division 3, Chapter 16, Sections 2715(c) and 2716.

II. DESIGNATED UNDERGROUND STORAGE TANK OPERATOR(S) INFORMATION

All violations must be corrected within 30 days of the inspection date unless noted otherwise, above. Section 25187.8 of the State Health and Safety Code (H&SC) requires that you write a brief description of the corrective actions you have taken to bring this facility into compliance and submit it to this Department within 5 days of achieving compliance, or within 35 days of the inspection date, whichever comes first. *(Note: Detailed instructions on actions you must take are printed on the reverse side of this page.)*

Certification: I certify under penalty of perjury that this facility has complied with directives specified in this Notice to Comply.

Signature of Owner/Operator: _____ Title: Equipment Superintendent Date: 6/19/02

FACILITY SENDS YELLOW COPY TO AGENCY, KEEPS PINK COPY.

THE OFFICIAL NOTICE OF INSPECTION EXPLAINED

This Official Notice of Inspection (Notice of Inspection) describes the findings made during the inspection, including all violations and any actions that must be taken by the facility to correct the violations. All violations must be corrected within 30 days of the inspection date unless noted otherwise by the inspector.

Within five working days of achieving compliance, or within 35 days of the inspection, whichever comes first, you must submit a written response which describes the corrective actions you have taken or - for those violations which are impossible to correct within 30 days - propose to take in order to bring your facility into compliance. Where proposed corrective actions are described, you must specify a date by which you expect each violation to be corrected. After you have addressed each violation, complete the certification box located at the bottom of page 1 of the Notice of Inspection. Your description of corrective actions taken, along with your signed certification of the Notice of Inspection and any required supporting documents, will serve as your written response to the inspection. Your response must be mailed to the Santa Clara County Hazardous Materials Compliance Division (HMCD) at P.O. Box 28070, San Jose, CA 95159-8070.

What Does the Information in Each Column Mean?

Violation Code: Codes listed in this column identify specific violations of laws, regulations, or codes which were observed during this inspection. Definitions of Violation Codes are listed on the attached Violation Codes document(s).

Summary of Violations, Notice to Comply, Observations, and Required Corrective Actions: Information noted in this column describes the circumstances of any violations noted in the first column and describes how the violations may be corrected. Additionally, the inspector may use this space to note any additional observations resulting from the inspection.

Corrective Actions Taken: This column on the Notice of Inspection has been provided so that you can note how you have corrected or propose to correct each violation. Where proposed corrective actions are described, you must specify a date by which you expect each violation to be corrected. If more space is needed, attach additional pages.

Why Were Two Copies of the Notice of Inspection Given to Me?

You have been given two copies so you will have a copy for your own records after you submit your written response to HMCD. Do not separate the copies until you have described all of your corrective actions and signed the certification box on page 1. The yellow copy of each page must be submitted to HMCD. The pink copy is for your records.

What if I Disagree With a Violation Noted on the Notice of Inspection?

If you disagree with any violation listed in this Notice of Inspection, you must submit a written Notice of Disagreement, within 35 days of the inspection date, to the inspector who cited the violation. In your Notice of Disagreement, you must explain in detail why the violation does not exist. If there is sufficient space, you may use the "Corrective Actions Taken" column of this Notice of Inspection to dispute violations.

What About Photographs or Samples Taken During the Inspection?

Since this Notice of Inspection was prepared and given to you at the end of the inspection, any photographs and sampling or laboratory results associated with the inspection were not yet available. A copy of any photographs and/or analytical results from sampling taken during this inspection will be provided to you upon written request. Other pertinent information derived from the inspection is attached to this Notice of Inspection. Photographs and sample results may be withheld in the event of a criminal investigation or other ongoing investigation.

****

Hazardous Waste Violations

- **Per H&SC, Section 25187.8(g)(1), failure to sign the certification on this Notice of Inspection and return it to this Department is a violation of State law.**
- **Per H&SC, Section 25191, a false statement that compliance has been achieved is a violation of State law punishable by a fine of not less than $2,000 or more than $25,000 and/or imprisonment in the county jail for up to one year.**
- **Per H&SC, Section 25187.8(j), this Department has the right to acquire the submittal of reasonable and necessary documentation in support of any claim of compliance made by your facility.**

Summary of Violations & Notice to Comply

Program: PR0379140 - HAZARDOUS WASTE GENERATOR - 2205
Inspection Type: ROUTINE INSPECTION-COMPLETED

VC	Class	Violation	Corrective Actions Taken
G010	II	**HAZARDOUS WASTE DETERMINATION** Facility failed to determine whether a waste is a hazardous waste and/or keep copies of test results, waste analyses or other hazardous waste determination records. ***SHOP PARTS, AND EQUIPMENT ARE BEING WASHED IN THE WASH RACK THAT IS TREATED WITH A BIOLOGICAL AGENT THAT AIDS IN THE PROCESSING. THE BYPRODUCT IS REUSED BUT UNCLEAR AS TO HOW THIS IS ACCOMPLISHED.*** Determine whether the waste is hazardous using generator knowledge, or by having the waste analyzed by a state-certified environmental laboratory. Submit the results of your determination, including any laboratory reports, to HMCD. A list of state-certified laboratories is available at www.dhs.ca.gov/ps/ls/elap/. Cease any disposal of the waste as non-hazardous waste until the determination is complete. Keep all hazardous waste determination documents for at least 3 years from the date the waste was last shipped. [CCR 66262.11, 66262.40(c)]	See Attached Paperwork
G020	M	**MARKING OF HAZARDOUS WASTE** Facility failed to properly mark a hazardous waste tank and/or container. ***THE FOLLOWING CONTAINERS WERE MISSING THE REQUIRED HAZARDOUS WASTE MARKINGS:*** ***=5 G CONTAINER USED TO COLLECT THE USED OIL FROM THE CRUSHED FILTERS-NO MARKINGS (CORRECTED ON SITE)*** ***=55 G CONTAINER OF SATURATED ABSORBENT-NO ACCUMULATION START DATE (CORRECTED ON SITE)*** Mark all hazardous waste tanks with the words "HAZARDOUS WASTE" and the accumulation start date. Mark all hazardous waste containers and portable tanks with the words "HAZARDOUS WASTE;" the accumulation start date; the name and address of the generator; and the composition, physical state, and hazardous properties of the waste. Additionally, mark used oil containers, aboveground tanks, and fill pipes for underground tanks with the words "USED OIL." [CCR 66262.34(f), 66279.21(b)]	See Attached Paperwork
G110	M	**MAINTENANCE AND OPERATION OF FACILITY** Facility is not maintained or operated in a manner to minimize the possibility of a fire, explosion, or any unplanned release of hazardous waste to air, soil, or surface water that could threaten human health or the environment. ***=OBSERVED USED OIL IN THE SECONDARY CONTAINMENT FOR THE USED OIL DRAIN PANS.*** ***=OBSERVED SATURATED ABSORBENT IN THE SECONDARY CONTAINMENT FOR THE USED OIL TANK.*** Maintain and operate the facility in a manner that minimizes potential emergencies and unplanned releases. [CCR 66265.31, CFR 265.31]	See Attached Paperwork

OFFICIAL NOTICE OF INSPECTION

Facility ID: FA0258851 **Inspection Date:** 8/16/2011
Facility Name: GRANITE ROCK COMPANY-PAVEX CENTRAL
Site Address: 120 GRANITE ROCK WY
SAN JOSE, CA 95136

VC	Class	Violation	Corrective Actions Taken
G340	II	**TANK SYSTEM ASSESSMENT** Facility failed to obtain or keep on file a current and complete written hazardous waste tank system assessment. ***FACILITY FAILED TO CONDUCT A WRITTEN TANK ASSESSMENT FOR THE USED OIL TANK. THIS VIOLATION WAS NOTED IN 2008 AND NOT CORRECTED.*** Make arrangements to have the tank system assessed by an appropriate Professional Engineer (PE) who is knowledgeable of hazardous waste tank system requirements. Provide a specific date by which the assessment is expected to be completed. Upon completion of the assessment, submit a copy of the final report to HMCD. [CCR 66265.191(a), 66265.192(h)]	See Attached Paperwork
G343	M	**TANK INSPECTIONS** Facility could not demonstrate that hazardous waste tanks are being inspected daily as required. ***DAILY TANK INSPECTIONS ARE NOT BEING CONDUCTED OR RECOREDED.*** Perform and document hazardous waste tank inspections daily. Inspections must cover: 1) overfill/spill control equipment; 2) aboveground portions of the tank system; 3) data gathered from monitoring and leak detection equipment; 4) construction materials and the area immediately surrounding the tank system; and 5) the level of waste in the tank, for uncovered tanks. [CCR 66265.195]	See Attached Paperwork
Comments: ***THE INSPECTION COMMENCED AUGUST 11, 2011 AND CONCLUDED TODAY.***			

Program: PR0395982 - UNDERGROUND STORAGE TANK - 2399
Inspection Type: ROUTINE INSPECTION-COMPLETED

VC	Class	Violation	Corrective Actions Taken
U034		**DUSTO MONTHLY INSPECTIONS** UST owner/operator failed to ensure that a qualified Designated UST Operator (DUSTO) has been performing and documenting monthly inspections of the UST system(s) as required and/or failed to maintain copies of DUSTO inspection records. ***THE PNEUMACATOR LC1000 IS UNABLE TO PRINT OUT AN ALARM HISTORY BUT THE D.O FAILED TO KEEP A LOG TO TRACK AND RECORD MONTHLY ALARMS AND ATTACH THEM TO THE MONTHLY REPORT.*** Ensure that a qualified DUSTO performs and documents inspections of the UST system(s) every month. Inspections can be documented by properly completing all items on the Underground Storage Tank System Designated UST Operator Monthly Inspection Report form. The form (UN-057) is available at www.EHinfo.org/hazmat. Keep on-site a copy of DUSTO inspection records and required attachments for the previous 12 months. Each DUSTO must be certified by the International Code Council (ICC) as a California UST System Operator and renew their certification every 24 months. To confirm ICC certification information, go to www.iccsafe.org/CertSearch. [23 CCR 2715(c)&(e)]	See Attached Paperwork
U180		**PIPE MONITORING: PRESSURIZED PIPING TIGHTNESS TEST** Underground pressurized piping in a UST system installed prior to 7/1/2004 has not been tightness tested annually. ***THE DIESEL PRESSURIZED SYSTEM DID NOT PERFORM THE POSITIVE SHUT DOWN, FAIL SAFE AS NOTED ON THE MONITORING PLAN.*** Have the piping tightness tested by a State-licensed tank tester within 30 days and every 12 months thereafter. Notify HMCD at least 48 hours prior to testing, and submit a copy of the test report within 30 days of completion of testing. Alternately, you may either: 1) Install approved electronic line leak detectors (ELLD) programmed to perform annual 0.1 gallon-per-hour leak tests; or 2) Have a qualified UST Service Technician retrofit the UST monitoring system to meet the double-wall piping fail-safe pump shut-down exemption specified in 23 CCR 2636(f)(5). If you choose either of the two alternatives to using a licensed tank tester, contact HMCD regarding plan check and permit requirements prior to making any changes to monitoring equipment. [HSC 25290.2(g), 25291(f), 25292(e)(1), 25292(e)(2); 23 CCR 2636(f)(4)]	See Attached Paperwork

Facility Name: GRANITE ROCK COMPANY-PAVEX CENTRAL
Site Address: 120 GRANITE ROCK WY
SAN JOSE, CA 95136

Inspection Date: 8/16/2011

VC	Class	Violation	Corrective Actions Taken
U330		**PRODUCT-TIGHT SECONDARY CONTAINMENT** UST and/or regulated piping secondary containment is not product-tight. ***THE UNDER DISPENSER CONTAINMENT WAS BUBBLING DURING THE SB989 TESTING INDICATING A LEAK.*** Immediately cease storing hazardous materials in the UST. Contact the tank/piping manufacturers or the manufacturers' authorized representatives to determine how badly the tank system has been damaged and whether it can be repaired. If repair is possible, you must submit plans to, and obtain approval from, HMCD prior to beginning work. If the tank system cannot be repaired, apply for a UST Closure Permit within 90 days and complete closure of the tank system within 6 months. Keep HMCD advised of any determinations made regarding the status of the tank. UST closure guidelines, plan submittal requirements, permit application forms, and the fee schedule are available at www.EHinfo.org/hazmat. [HSC 25290.1(c)(2), 25290.2(c)(2), 25291(a)(2)]	See Attached Paperwork

OFFICIAL NOTICE OF INSPECTION

Facility ID: FA0258851
Facility Name: GRANITE ROCK COMPANY-PAVEX CENTRAL
Site Address: 120 GRANITE ROCK WY
SAN JOSE, CA 95136

Inspection Date: 8/16/2011

Certification of Compliance

I certify under penalty of perjury that this facility has complied with directives specified in this Notice to Comply.

Signature of Owner/Operator — Date: 9/14/11

Samuel Coffeth — Printed Name of Owner/Operator

Environmental Specialist — Title

Corrective Actions Taken in response to Official Notice of Inspection by the County of Santa Clara dated 8/16/11.

Hazardous Waste Determination VC G010: The parts cleaner on-site has been repaired and parts washing in the wash rack has ceased. The material in the wash rack is being tested in accordance with applicable disposal requirements and per Republic Services instructions. Currently we are waiting for one last analysis before Republic Services hauls the material off site for disposal.

Maintenance and Operation of Facility VC G110: The used oil observed in the secondary containment for the used oil drain pans has been removed. The saturated absorbent in the secondary containment for the used oil tank has been removed of and disposed of as oily debris.

Tank System Assessment VC G340: The used oil tank installation permit was completed with the City of San Jose Fire Department on 7/22/10. The installation permitting required an assessment of the tank. Currently we are working with Michael Lepisto at the City to have the Temporary Exemption paper work filled out and back dated to the permit installation date. An extension of this task was granted on 9/13/11.

Tank Inspection VC G343: Daily tank inspections that were being conducted and have been refined so that all requirements of inspection located in CCR 66265.195 are documented. A copy of the new inspection form has been attached.

DUSTO Monthly Inspections VC U034: An alarm history log has been created because the monitoring system cannot print out a monthly log. A copy of the alarm log has been attached.

Pipe Monitoring: Pressurized Piping Tightness Test VC U180: The diesel pressurized systems positive shut down fail safe was repaired by Petrotek on 9/9/11. Currently we have requested a copy of the repair information and will forward it to the County upon receipt.

Product Tight Secondary Containment VC U330: The Under Dispenser Containment was bubbling during the secondary piping pressurized test. Petrotek has been contracted to complete the repairs at the facility. They will be pulling the permits to complete the repairs, if necessary. As of 9/13/11 the repairs have been delayed to 9/19/11 because Petrotek has had delays on other jobs, the County was emailed immediately upon notification of delays. Currently the repairs are scheduled for 9/19/2011.

Attn: Socorro Guzman1555 Berger Drive, Suite 300
San Jose, Ca 95112

Dear Mrs. Guzman,

I'd like to thank you for your assistance and thorough explanation of the requirements noted in the inspection document. Your assistance with clarifying the new roles of the City and the County in terms of the Hazardous Materials Program and the Fire Programs has been very valuable. As you know we work very hard to protect the environment and aim to work with all environmental agencies to this end. We would like to respond to the Tank System Assessment Class II violation and present some more facts that we believe will reduce the Class II to violation to a Class I or Minor violation.

Tank System Assessment VC G340: The Inspection document states that Graniterock is in violation of CCR 66265.191(a), 66265.192(h). These codes are summarized within the inspection document. The facility began the permitting process after the original minor violation was written for the tank in this section, during the 2008 inspection as referenced in the Official Notice of Inspection. Permitting was an ongoing process with Graniterock and the City San Jose Fire Department (SJFD) beginning immediately after the 2008 inspection. A tank inspection and assessment was part of the permitting handled by SJFD's Michael Lepisto and Michael Randolph. This violation remained a minor violation until the installation permit was finalized with the City in July 2010. Follow up to the June 2010 inspection, preformed by Michael Randolph, shows the minor violation was corrected on 7/23/10. The permit number is 07-014114 and was finalized on 7/22/10.

The paperwork for the Tank Assessment Exemption form was not on site during the inspection, and we are currently working with Michael Lepisto /SJFD to obtain a Tank Assessment Exemption form in accordance with the installation permit requirements. (None has been received by Graniterock to date.) We understand that all of the paperwork from the City may not have been transferred over during the recent changes between the City and County, and we are available to assist in providing inspection documents the County may be missing. The nature of the violation being that the Tank Assessment Exemption form was not filled out but the assessment was completed during the permitting process, as required by the UNIDOCS form UN-073-1/1, makes it appear as though the violation may be a minor violation and not a Class II major. Graniterock requests the Official Notice of Inspection be revised.

Sincerely,

Samuel LoForti
Graniterock-Environmental Specialist

HAZARDOUS WASTE TANK SYSTEM WRITTEN ASSESSMENT TEMPORARY EXEMPTION APPLICATION

For use by Unidocs Member Agencies or where approved by your Local Jurisdiction
Authority Cited: Title 22 California Code of Regulations (CCR), Section 66265.192(j)

California hazardous waste regulations require that a hazardous waste tank system operated by large quantity generator or onsite hazardous waste treatment facility have a written assessment certified by professional engineer (PE) prior to being placed in service. The owner/operator of an aboveground tank system that is either RCRA-exempt or holds non-RCRA hazardous waste may apply to the local Certified Unified Program Agency (CUPA) for an extension of up to 36 months to the deadline for submittal of the written assessment. This form must be used to apply for such an extension. You should first review the Unidocs document titled "Hazardous Waste Tank System Requirements for Large Quantity Generators and Onsite Treatment Facilities." That document and CUPA/local HazMat agency jurisdiction and contact information are available at **www.unidocs.org**. Complete a separate form for each tank system. If the local CUPA and Fire Marshal authority are not the same agency, you must first obtain sign-off from the Fire Marshal or his/her authorized representative in Section 7, below, then forward the application to the CUPA.

1. Facility Name (Tank Site): **Granite Rock Company- Pavex Central** EPA ID No.: **CAL000 291 556**
   Address: **120 Granite Rock Way** City: **San Jose** Zip: **95136**
2. What is the tank volume in gallons? **500**
3. What type of waste does this tank hold? ☒ Used oil; ☐ Used Antifreeze; ☐ Other *(Specify)*:
4. Does this tank system have secondary containment capable of containing 100% of the contents of the tank and ancillary piping volume? ☒ Yes; ☐ No.
5. Is this tank system exposed to precipitation? ☐ Yes; ☒ No. If "Yes," does the secondary containment system have sufficient capacity, in addition to that required above, to contain infiltration from a 25-year, 24-hour rainfall event? ☐ Yes; ☐ No.
6. Is the tank system secondary containment provided with a leak detection system designed and operated so that it will detect either the failure of the primary and secondary containment structure or any release of hazardous waste or accumulated liquid in the secondary containment system within 24 hours? ☒ Yes; ☐ No.
7. **FIRE MARSHAL APPROVAL: Our agency has approved the design and installation of this tank system.** 2007-014114-HZ for Title 24 Part 9 requirements only

Michael P. Lepisto		29Sep11
Fire Marshal or Representative's Name (Print)	Fire Marshal or Representative's Signature	Date

APPLICANT CERTIFICATION: I have read the Unidocs "Hazardous Waste Tank System Requirements for Large Quantity Generators and Onsite Treatment Facilities." I certify that the tank system for which this exemption is being requested is an aboveground tank (i.e., 90% or more of the total system volume is above-grade) and the tank system is either RCRA-exempt or the waste it holds is a non-RCRA hazardous waste. I have attached a drawing of the layout of the tank facility (e.g., Hazardous Materials Business Plan Site Plan/Storage Map) with the location of this tank and any associated piping runs (other than vent lines and vertical fill tubes) clearly identified. I declare that the above information is correct to the best of my knowledge. I agree to comply with all applicable state laws and regulations relating to the operation and management of this tank system. I represent the: ☒ Tank Owner; ☐ Tank Operator

Samuel LoForti		9/28/2011
Exemption Requester's Name (Print)	Exemption Requester's Signature	Date

Summary of Violations & Notice to Comply

Program: PR0379140 - HAZARDOUS WASTE GENERATOR - 2205
Inspection Type: ROUTINE INSPECTION-COMPLETED

VC	Class	Violation	Corrective Actions Taken
G010	II	**HAZARDOUS WASTE DETERMINATION** Facility failed to determine whether a waste is a hazardous waste and/or keep copies of test results, waste analyses or other hazardous waste determination records. ***SHOP PARTS, AND EQUIPMENT ARE BEING WASHED IN THE WASH RACK THAT IS TREATED WITH A BIOLOGICAL AGENT THAT AIDS IN THE PROCESSING. THE BYPRODUCT IS REUSED BUT UNCLEAR AS TO HOW THIS IS ACCOMPLISHED.*** Determine whether the waste is hazardous using generator knowledge, or by having the waste analyzed by a state-certified environmental laboratory. Submit the results of your determination, including any laboratory reports, to HMCD. A list of state-certified laboratories is available at www.dhs.ca.gov/ps/ls/elap/. Cease any disposal of the waste as non-hazardous waste until the determination is complete. Keep all hazardous waste determination documents for at least 3 years from the date the waste was last shipped. [CCR 66262.11, 66262.40(c)]	
G020	M	**MARKING OF HAZARDOUS WASTE** Facility failed to properly mark a hazardous waste tank and/or container. ***THE FOLLOWING CONTAINERS WERE MISSING THE REQUIRED HAZARDOUS WASTE MARKINGS:*** ***=5 G CONTAINER USED TO COLLECT THE USED OIL FROM THE CRUSHED FILTERS-NO MARKINGS (CORRECTED ON SITE)*** ***=55 G CONTAINER OF SATURATED ABSORBENT-NO ACCUMULATION START DATE (CORRECTED ON SITE)*** Mark all hazardous waste tanks with the words "HAZARDOUS WASTE" and the accumulation start date. Mark all hazardous waste containers and portable tanks with the words "HAZARDOUS WASTE;" the accumulation start date; the name and address of the generator; and the composition, physical state, and hazardous properties of the waste. Additionally, mark used oil containers, aboveground tanks, and fill pipes for underground tanks with the words "USED OIL." [CCR 66262.34(f), 66279.21(b)]	
G110	M	**MAINTENANCE AND OPERATION OF FACILITY** Facility is not maintained or operated in a manner to minimize the possibility of a fire, explosion, or any unplanned release of hazardous waste to air, soil, or surface water that could threaten human health or the environment. ***=OBSERVED USED OIL IN THE SECONDARY CONTAINMENT FOR THE USED OIL DRAIN PANS.*** ***=OBSERVED SATURATED ABSORBENT IN THE SECONDARY CONTAINMENT FOR THE USED OIL TANK.*** Maintain and operate the facility in a manner that minimizes potential emergencies and unplanned releases. [CCR 66265.31, CFR 265.31]

VC	Class	Violation	Corrective Actions Taken
G340	II	**TANK SYSTEM ASSESSMENT** Facility failed to obtain or keep on file a current and complete written hazardous waste tank system assessment. ***FACILITY FAILED TO CONDUCT A WRITTEN TANK ASSESSMENT FOR THE USED OIL TANK. THIS VIOLATION WAS NOTED IN 2008 AND NOT CORRECTED.*** Make arrangements to have the tank system assessed by an appropriate Professional Engineer (PE) who is knowledgeable of hazardous waste tank system requirements. Provide a specific date by which the assessment is expected to be completed. Upon completion of the assessment, submit a copy of the final report to HMCD. [CCR 66265.191(a), 66265.192(h)]	
G343	M	**TANK INSPECTIONS** Facility could not demonstrate that hazardous waste tanks are being inspected daily as required. ***DAILY TANK INSPECTIONS ARE NOT BEING CONDUCTED OR RECOREDED.*** Perform and document hazardous waste tank inspections daily. Inspections must cover: 1) overfill/spill control equipment; 2) aboveground portions of the tank system; 3) data gathered from monitoring and leak detection equipment; 4) construction materials and the area immediately surrounding the tank system; and 5) the level of waste in the tank, for uncovered tanks. [CCR 66265.195]	

Comments:
THE INSPECTION COMMENCED AUGUST 11, 2011 AND CONCLUDED TODAY.

Program: PR0395982 - UNDERGROUND STORAGE TANK - 2399
Inspection Type: ROUTINE INSPECTION-COMPLETED

VC	Class	Violation	Corrective Actions Taken
U034		**DUSTO MONTHLY INSPECTIONS** UST owner/operator failed to ensure that a qualified Designated UST Operator (DUSTO) has been performing and documenting monthly inspections of the UST system(s) as required and/or failed to maintain copies of DUSTO inspection records. ***THE PNEUMACATOR LC1000 IS UNABLE TO PRINT OUT AN ALARM HISTORY BUT THE D.O FAILED TO KEEP A LOG TO TRACK AND RECORD MONTHLY ALARMS AND ATTACH THEM TO THE MONTHLY REPORT.*** Ensure that a qualified DUSTO performs and documents inspections of the UST system(s) every month. Inspections can be documented by properly completing all items on the Underground Storage Tank System Designated UST Operator Monthly Inspection Report form. The form (UN-057) is available at www.EHinfo.org/hazmat. Keep on-site a copy of DUSTO inspection records and required attachments for the previous 12 months. Each DUSTO must be certified by the International Code Council (ICC) as a California UST System Operator and renew their certification every 24 months. To confirm ICC certiifcation information, go to www.iccsafe.org/CertSearch. [23 CCR 2715(c)&(e)]	
U180		**PIPE MONITORING: PRESSURIZED PIPING TIGHTNESS TEST** Underground pressurized piping in a UST system installed prior to 7/1/2004 has not been tightness tested annually. ***THE DIESEL PRESSURIZED SYSTEM DID NOT PERFORM THE POSITIVE SHUT DOWN, FAIL SAFE AS NOTED ON THE MONITORING PLAN.*** Have the piping tightness tested by a State-licensed tank tester within 30 days and every 12 months thereafter. Notify HMCD at least 48 hours prior to testing, and submit a copy of the test report within 30 days of completion of testing. Alternately, you may either: 1) Install approved electronic line leak detectors (ELLD) programmed to perform annual 0.1 gallon-per-hour leak tests; or 2) Have a qualified UST Service Technician retrofit the UST monitoring system to meet the double-wall piping fail-safe pump shut-down exemption specified in 23 CCR 2636(f)(5). If you choose either of the two alternatives to using a licensed tank tester, contact HMCD regarding plan check and permit requirements prior to making any changes to monitoring equipment. [HSC 25290.2(g), 25291(f), 25292(e)(1), 25292(e)(2); 23 CCR 2636(f)(4)]

THE OFFICIAL NOTICE OF INSPECTION EXPLAINED

This Official Notice of Inspection (NOI) describes the findings made during the inspection, including all violations and any actions that must be taken by the facility to correct the violations. All violations must be corrected within 30 days of the inspection date unless noted otherwise by the inspector.

Within five working days of achieving compliance, or within 35 days of the inspection, whichever comes first, you must submit a written response which describes the corrective actions you have taken or — for those violations which are impossible to correct within 30 days — propose to take in order to bring your facility into compliance. Where proposed corrective actions are described, you must specify a date by which you expect each violation to be corrected. After you have addressed each violation, complete the certification box located at the bottom of page 1 of the NOI. **Your description of corrective actions taken, along with your signed certification of the NOI and any required supporting documents, will serve as your written response to this Notice to Comply.** Your response must be mailed to Santa Clara County Hazardous Materials Compliance Division (HMCD) at 1555 Berger Drive, Suite 300, San Jose, CA 95112-2716. The effective date of the certification that any violation has been corrected is the date that it is postmarked.

What Does the Information in Each Column Mean?

Violation Code: Codes listed in this column identify specific violations of laws, regulations, or codes which were observed during this inspection. Definitions of Violation Codes are listed on the attached Violation Codes document(s).

Summary of Violations, Notice to Comply, Observations, and Required Corrective Actions: Information noted in this column describes the circumstances of any violations noted in the first column and describes how the violations may be corrected. Additionally, the inspector may use this space to note any additional observations resulting from the inspection.

Corrective Actions Taken: This column on the NOI has been provided so that you can note how you have corrected or propose to correct each violation. Where proposed corrective actions are described, you must specify a date by which you expect each violation to be corrected. If more space is needed, attach additional pages.

Why Were Two Copies of the Notice of Inspection Given to Me?

You have been given two copies so you will have a copy for your own records after you submit your written response to HMCD. **Do not separate the copies until you have described all of your corrective actions and signed the certification box on page 1. The yellow copy of each page must be returned to HMCD. The pink copy is for your records.**

What if I Disagree With a Violation Noted on the Notice of Inspection?

If you disagree with any violation listed in this NOI, you must submit a written Notice of Disagreement to HMCD within 30 days of the inspection date. Address such notices to the attention of the inspector who cited the violation. In your Notice of Disagreement, you must explain in detail why you believe the violation does not exist. If there is sufficient space, you may use the "Corrective Actions Taken" column of this NOI to dispute violations.

What About Photographs or Samples Taken During the Inspection?

If samples were taken, split samples will be given to you upon request. Since this NOI was prepared and given to you at the end of the inspection, any photographs and sampling or laboratory results associated with the inspection were not yet available. A copy of any photographs and/or analytical results from sampling taken during this inspection will be provided to you upon written request. Other pertinent information derived from the inspection is attached to this NOI. Photographs and sample results may be withheld in the event of a criminal investigation or other ongoing investigation.

****

- **Per HSC §§25187.8(b) and 25404.1.2(c), failure to sign the certification on this Notice to Comply and return it to HMCD is a violation of State law.**
- **Per HSC §25404.1.2(c)(2), a false statement that compliance has been achieved is a misdemeanor.**
- **Per HSC §25191(b), a false statement that hazardous waste compliance has been achieved is a violation of State law punishable by a fine of not less than $2,000 or more than $25,000 and/or imprisonment in the county jail for up to one year.**
- **Per HSC §§25299(a)(8) and (b)(7), a false statement that underground storage tank compliance has been achieved is a violation of State law punishable by a fine of not less than $500 or more than $5,000.**
- **Per HSC §§25187.8(i), HMCD has the right to require the submittal of reasonable and necessary documentation in support of any claim of compliance made by your facility.**

VIOLATIONS: Codes noted below in the "Violation Codes" column represent specific violations of State law and/or local Ordinance. These codes are defined in the attached Violation Codes document(s). Time granted for correction of violations does not preclude any enforcement action by this Department or other agencies.
This facility may be subject to reinspection at any time. Consent to Inspect Given By: Chuck Barnett

Violation Codes	Summary of Violations, Notice to Comply, Observations, and Required Corrective Actions	Corrective Actions Taken
	Conducted a routine hazardous waste inspection on 2/27/08. Inspection report was submitted today.	
G001	Currently this facility is storing, transporting and disposing of hazardous waste with an inactive EPA ID number of CAL000291556. Re-activate your EPA ID# with the State. Form was provided.	
G020	(Oil Room) - The following containers were storing hazardous waste and were missing a hazardous waste label: - 1x30 gal. waste oily-debris drums - 2x55 gal. waste coolant drums Label all containers as required on the attached violation codesheet. Labels were provided.	

All violations must be corrected within 30 days of the inspection date unless noted otherwise, above. Section 25404.1.2(c)(1) of California Health and Safety Code (HSC) requires that you write a brief description of the corrective actions you have taken to bring this facility into compliance and submit it to HMCD within 5 days of achieving compliance, or within 35 days of the inspection date, whichever comes first. ***(Note: Detailed instructions on actions you must take are printed on the reverse side of this page.)***

Received by: _____ Inspected by: _____ Entered by: 10071

Certification: I certify under penalty of perjury that this facility has complied with directives specified in this Notice to Comply.

Signature of Owner/Operator: _____ Title: _____ Date: ___/___/___

FACILITY SENDS YELLOW COPY TO AGENCY, KEEPS PINK COPY.

THE OFFICIAL NOTICE OF INSPECTION EXPLAINED

This Official Notice of Inspection (NOI) describes the findings made during the inspection, including all violations and any actions that must be taken by the facility to correct the violations. All violations must be corrected within 30 days of the inspection date unless noted otherwise by the inspector.

Within five working days of achieving compliance, or within 35 days of the inspection, whichever comes first, you must submit a written response which describes the corrective actions you have taken or — for those violations which are impossible to correct within 30 days — propose to take in order to bring your facility into compliance. Where proposed corrective actions are described, you must specify a date by which you expect each violation to be corrected. After you have addressed each violation, complete the certification box located at the bottom of page 1 of the NOI. **Your description of corrective actions taken, along with your signed certification of the NOI and any required supporting documents, will serve as your written response to this Notice to Comply.** Your response must be mailed to Santa Clara County Hazardous Materials Compliance Division (HMCD) at 1555 Berger Drive, Suite 300, San Jose, CA 95112-2716. The effective date of the certification that any violation has been corrected is the date that it is postmarked.

What Does the Information in Each Column Mean?

Violation Code: Codes listed in this column identify specific violations of laws, regulations, or codes which were observed during this inspection. Definitions of Violation Codes are listed on the attached Violation Codes document(s).

Summary of Violations, Notice to Comply, Observations, and Required Corrective Actions: Information noted in this column describes the circumstances of any violations noted in the first column and describes how the violations may be corrected. Additionally, the inspector may use this space to note any additional observations resulting from the inspection.

Corrective Actions Taken: This column on the NOI has been provided so that you can note how you have corrected or propose to correct each violation. Where proposed corrective actions are described, you must specify a date by which you expect each violation to be corrected. If more space is needed, attach additional pages.

Why Were Two Copies of the Notice of Inspection Given to Me?

You have been given two copies so you will have a copy for your own records after you submit your written response to HMCD. **Do not separate the copies until you have described all of your corrective actions and signed the certification box on page 1. The yellow copy of each page must be returned to HMCD. The pink copy is for your records.**

What if I Disagree With a Violation Noted on the Notice of Inspection?

If you disagree with any violation listed in this NOI, you must submit a written Notice of Disagreement to HMCD within 30 days of the inspection date. Address such notices to the attention of the inspector who cited the violation. In your Notice of Disagreement, you must explain in detail why you believe the violation does not exist. If there is sufficient space, you may use the "Corrective Actions Taken" column of this NOI to dispute violations.

What About Photographs or Samples Taken During the Inspection?

If samples were taken, split samples will be given to you upon request. Since this NOI was prepared and given to you at the end of the inspection, any photographs and sampling or laboratory results associated with the inspection were not yet available. A copy of any photographs and/or analytical results from sampling taken during this inspection will be provided to you upon written request. Other pertinent information derived from the inspection is attached to this NOI. Photographs and sample results may be withheld in the event of a criminal investigation or other ongoing investigation.

****

- **Per HSC §§25187.8(b) and 25404.1.2(c), failure to sign the certification on this Notice to Comply and return it to HMCD is a violation of State law.**
- **Per HSC §25404.1.2(c)(2), a false statement that compliance has been achieved is a misdemeanor.**
- **Per HSC §25191(b), a false statement that hazardous waste compliance has been achieved is a violation of State law punishable by a fine of not less than $2,000 or more than $25,000 and/or imprisonment in the county jail for up to one year.**
- **Per HSC §§25299(a)(8) and (b)(7), a false statement that underground storage tank compliance has been achieved is a violation of State law punishable by a fine of not less than $500 or more than $5,000.**
- **Per HSC §§25187.8(i), HMCD has the right to require the submittal of reasonable and necessary documentation in support of any claim of compliance made by your facility.**

Facility Name: Granite Rock Co. – Pavex Construction **Inspection Date:** 2/28/08

Violation Codes	Summary of Violations, Notice to Comply, Observations, and Required Corrective Actions	Corrective Actions Taken
G114	I was unable to inspect the condition of the waste coolant drum stored in the oil room; there was no aisle space to get to the waste drum. Aisle space must be maintained for movement of personnel and response equipment; hazardous waste drums must be accessible for inspections. Relocate waste coolant drum to a different area and in the future maintain aisle space.	
G101	Weekly inspection logs of the hazardous waste storage areas are not being maintained. Conduct weekly inspections and keep records of these inspections. A sample form was provided.	
G110 G130	Observed used oil inside the secondary containment of the used oil tank along with saturated shop rags. Clean up secondary containment immediately and in the future keep secondary containment free from liquids. Additionally saturated oily rags must be disposed of as hazardous waste; they cannot be laundered.

	☐ Recycled on-site. ☐ Treated on-site. ☐ Shipped off-site for recycling/treatment/disposal.	☐ gal. ☐ lbs.

* *Solids must be reported in pounds. Liquids may be reported in either pounds or gallons.*

The undersigned hereby applies for a hazardous waste generator permit from the County of Santa Clara. I hereby certify that the submitted information is true, accurate, and complete. I understand that a new application will be required if this facility changes ownership, moves, or begins generating hazardous wastes which are not listed on this application.

Signature of Owner/Operator: _____ Title: _____ Date: ___/___/___.

Definitions of Treatment/Disposal Methods

Recycled on-site: The facility takes the waste or any constituent of the waste, treated or not, and reuses it on-site or ships it off-site as an Excluded Recyclable Material.

Treated on-site: The facility employs any method, technique, or process which changes or is designed to change the physical, chemical, or biological character or composition of the hazardous waste or any material contained therein, or removes or reduces its harmful properties or characteristics for any purpose including, but not limited to, energy recovery, material recovery, or reduction in volume *(e.g. pH adjustment, evaporation, precipitation, filtration, distillation, compacting, etc.)*. If, after treatment, the material is reused at the facility, the "Recycled on-site" box in the waste inventory table should be checked.

Shipped off-site for recycling/treatment/disposal: The facility sends the waste, or any hazardous treatment residual, to an off-site permitted treatment, storage, or disposal facility (TSDF).

Note: Depending on how a waste or its constituents are recycled and/or treated, more than one treatment/disposal category may apply. All applicable boxes in column 2 of the waste inventory table should be checked.
Note to medical facilities: Do not list medical (i.e. red bag) wastes on this form.

TANK CAPACITY IN GALLONS 436.: 5,000
NUMBER OF COMPARTMENTS IN THE UNIT 437.: 2

III. TANK USE AND CONTENTS

TANK USE 439.
☒ 1a. MOTOR VEHICLE FUELING ☐ 1b. MARINA FUELING ☐ 1c. AVIATION FUELING
☐ 3. CHEMICAL PRODUCT STORAGE ☐ 4. HAZARDOUS WASTE (Includes Used Oil) ☐ 5. EMERGENCY GENERATOR FUEL [HSC §25281.5(c)]
☐ 6. OTHER GENERATOR FUEL ☐ 95. UNKNOWN ☒ 99. OTHER (Specify): ~~Fleet Vehicle Fueling~~ 439a.

CONTENTS 440.
PETROLEUM: ☒ 1a. REGULAR UNLEADED ☐ 1c. MIDGRADE UNLEADED ☐ 1b. PREMIUM UNLEADED
☐ 3. DIESEL ☐ 5. JET FUEL ☐ 6. AVIATION GAS
☐ 8. PETROLEUM BLEND FUEL ☐ 9. OTHER PETROLEUM (Specify): 440a.
NON-PETROLEUM: ☐ 7. USED OIL ☐ 10. ETHANOL
☐ 11. OTHER NON-PETROLEUM (Specify): 440b.

IV. TANK CONSTRUCTION

TYPE OF TANK 443.
☐ 1. SINGLE WALL ☒ 2. DOUBLE WALL ☐ 95. UNKNOWN

PRIMARY CONTAINMENT 444.
☒ 1. STEEL ☐ 3. FIBERGLASS ☐ 6. INTERNAL BLADDER
☐ 7. STEEL + INTERNAL LINING ☐ 95. UNKNOWN ☒ 99. OTHER (Specify): ~~Steel + fiberglasscoat~~ 444a.

SECONDARY CONTAINMENT 445.
☐ 1. STEEL ☒ 3. FIBERGLASS ☐ 6. EXTERIOR MEMBRANE LINER ☐ 7. JACKETED
☐ 90. NONE ☐ 95. UNKNOWN ☒ 99. OTHER (Specify): ~~Steel with fiberglass coating~~ 445a.

OVERFILL PREVENTION 452.
☐ 1. AUDIBLE & VISUAL ALARMS ☐ 2. BALL FLOAT ☒ 3. FILL TUBE SHUT-OFF VALVE
☐ 4. TANK MEETS REQUIREMENTS FOR EXEMPTION FROM OVERFILL PREVENTION EQUIPMENT

V. PRODUCT / WASTE PIPING CONSTRUCTION

PIPING CONSTRUCTION 460.
☐ 1. SINGLE WALL ☒ 2. DOUBLE WALL ☐ 99. OTHER

SYSTEM TYPE 458.
☐ 1. PRESSURE ☐ 2. GRAVITY ☒ 3. CONVENTIONAL SUCTION ☐ 4. SAFE SUCTION [23 CCR §2636(a)(3)]

PRIMARY CONTAINMENT 464.
☐ 1. STEEL ☒ 4. FIBERGLASS ☐ 8. FLEXIBLE ☐ 10. RIGID PLASTIC
☐ 90. NONE ☐ 95. UNKNOWN ☐ 99. OTHER (Specify): 464a.

SECONDARY CONTAINMENT 464b.
☐ 1. STEEL ☒ 4. FIBERGLASS ☐ 8. FLEXIBLE ☐ 10. RIGID PLASTIC
☐ 90. NONE ☐ 95. UNKNOWN ☐ 99. OTHER (Specify): 464c.

PIPING/TURBINE CONTAINMENT SUMP TYPE 464d.
☒ 1. SINGLE WALL ☐ 2. DOUBLE WALL ☐ 90. NONE

VI. VENT, VAPOR RECOVERY (VR) AND RISER / FILL PIPE PIPING CONSTRUCTION

VENT PRIMARY CONTAINMENT 464e.	☒ 1. STEEL	☐ 4. FIBERGLASS	☐ 10. RIGID PLASTIC	☐ 90. NONE	☐ 99. OTHER (Specify):	464e1.
VENT SECONDARY CONTAINMENT 464f.	☐ 1. STEEL	☐ 4. FIBERGLASS	☐ 10. RIGID PLASTIC	☒ 90. NONE	☐ 99. OTHER (Specify):	464f1.
VR PRIMARY CONTAINMENT 464g.	☒ 1. STEEL	☐ 4. FIBERGLASS	☐ 10. RIGID PLASTIC	☐ 90. NONE	☐ 99. OTHER (Specify):	464g1.
VR SECONDARY CONTAINMENT 464h.	☐ 1. STEEL	☐ 4. FIBERGLASS	☐ 10. RIGID PLASTIC	☒ 90. NONE	☐ 99. OTHER (Specify):	464h1.
VENT PIPING TRANSITION SUMP TYPE 464i.		☐ 1. SINGLE WALL	☐ 2. DOUBLE WALL	☒ 90. NONE		
RISER PRIMARY CONTAINMENT 464j.	☒ 1. STEEL	☐ 4. FIBERGLASS	☐ 10. RIGID PLASTIC	☐ 90. NONE	☐ 99. OTHER (Specify):	464j1.
RISER SECONDARY CONTAINMENT 464k.	☐ 1. STEEL	☐ 4. FIBERGLASS	☐ 10. RIGID PLASTIC	☒ 90. NONE	☐ 99. OTHER (Specify):	464k1.

FILL COMPONENTS INSTALLED 451a-c.
☒ 1. SPILL BUCKET ☐ 3. STRIKER PLATE/BOTTOM PROTECTOR ☐ 4. CONTAINMENT SUMP

VII. UNDER DISPENSER CONTAINMENT (UDC)

CONSTRUCTION TYPE 469a.
☒ 1. SINGLE WALL ☐ 2. DOUBLE WALL ☐ 3. NO DISPENSERS ☐ 90. NONE

CONSTRUCTION MATERIAL 469b. 469c.
☐ 1. STEEL ☒ 4. FIBERGLASS ☐ 10. RIGID PLASTIC ☐ 99. OTHER (Specify)

VIII. CORROSION PROTECTION

STEEL COMPONENT PROTECTION 448.
☐ 2. SACRIFICIAL ANODE(S) ☐ 4. IMPRESSED CURRENT ☒ 6. ISOLATION

IX. APPLICANT SIGNATURE

CERTIFICATION: I certify that this UST system is compatible with the hazardous substance stored and that the information provided herein is true, accurate, and in full compliance with legal requirements.

For use by Unidocs Member Agencies or where approved by your Local Jurisdiction
Authority Cited: Title 23 CCR, Sections 2632(d)(1), 2634(d)(2), and 2641(h)

TYPE OF ACTION ☐ 1. NEW PLAN ☒ 2. CHANGE OF INFORMATION M01.

PLAN TYPE (Check one item only) ☒ MONITORING IS IDENTICAL FOR ALL USTs AT THIS FACILITY. M02.
☐ THIS PLAN COVERS ONLY THE FOLLOWING UST SYSTEM(S): _____

I. FACILITY INFORMATION

FACILITY ID # *(Agency Use Only)* _____

FACILITY NAME Graniterock Company M03.

FACILITY SITE ADDRESS 120 Granite Rock Way M04. CITY San Jose M05.

II. EQUIPMENT TESTING AND PREVENTIVE MAINTENANCE

State law requires that testing, preventive maintenance, and calibration of monitoring equipment (e.g., sensors, probes, line leak detectors, etc.) be performed in accordance with the equipment manufacturers' instructions, or annually, whichever is more frequent. Such work must be performed by qualified personnel. M06.

MONITORING EQUIPMENT IS SERVICED ☒ 1. ANNUALLY ☐ 99. OTHER (Specify): _____ M07.

III. MONITORING LOCATIONS

This monitoring plan must include a Site Plan showing the general tank and piping layouts and the locations where monitoring is performed (i.e., location of each sensor, line leak detector, monitoring system control panel, etc.). If you already have a diagram (e.g., current UST Monitoring Site Plan from a Monitoring System Certification form, Hazardous Materials Business Plan map, etc.) which shows all required information, include it with this plan.

IV. TANK MONITORING

MONITORING IS PERFORMED USING THE FOLLOWING METHOD(S): (Check all that apply) M10.

☒ 1. CONTINUOUS ELECTRONIC MONITORING OF TANK ANNULAR (INTERSTITIAL) SPACE(S) OR SECONDARY CONTAINMENT VAULT(S)

SECONDARY CONTAINMENT IS: ☒ a. DRY ☐ b. LIQUID FILLED ☐ c. UNDER PRESSURE ☐ d. UNDER VACUUM M11.

PANEL MANUFACTURER: Pneumercator M12. MODEL #: LC 1000 M13.

LEAK SENSOR MANUFACTURER: Pneumercator M14. MODEL #(S): LS 600 M15.

☐ 2. AUTOMATIC TANK GAUGING (ATG) SYSTEM USED TO MONITOR SINGLE WALL TANK(S)

PANEL MANUFACTURER: _____ M16. MODEL #: _____ M17.

IN-TANK PROBE MANUFACTURER: _____ M18. MODEL #(S): _____ M19.

LEAK TEST FREQUENCY: ☐ a. CONTINUOUS ☐ b. DAILY/NIGHTLY ☐ c. WEEKLY ☐ d. MONTHLY M20.

PROGRAMMED TESTS: ☐ a. 0.1 g.p.h. ☐ b. 0.2 g.p.h. ☐ e. OTHER (Specify): _____ M21.

☐ 3. INVENTORY RECONCILIATION ☐ a. MANUAL PER 23 CCR §2646 ☐ c. OTHER (Specify): _____ M22. M23.

☐ 4. WEEKLY MANUAL TANK GAUGING (MTG) PER 23 CCR §2645 ☐ b. STATISTICAL PER 23 CCR §2646.1 M24.

TESTING PERIOD: ☐ a. 36 HOURS ☐ b. 60 HOURS

☐ 5. INTEGRITY TESTING PER 23 CCR §2643.1 M25.

TEST FREQUENCY: ☐ a. ANNUALLY ☐ b. BIENNIALLY ☐ c. OTHER (Specify): _____

☐ 6. VISUAL MONITORING DONE: ☐ a. DAILY ☐ b. WEEKLY (Requires agency approval) M26. M27.

☐ 99. OTHER (Specify): _____ M28.

V. PIPE MONITORING

MONITORING IS PERFORMED USING THE FOLLOWING METHOD(S) (Check all that apply) M30.

☒ 1. CONTINUOUS ELECTRONIC MONITORING OF PIPING SUMP(S)/TRENCH(ES) AND OTHER SECONDARY CONTAINMENT

SECONDARY CONTAINMENT IS: ☒ a. DRY ☐ b. LIQUID FILLED ☐ c. UNDER PRESSURE ☐ d. UNDER VACUUM M31.

PANEL MANUFACTURER: Pneumercator M32. MODEL #: LC 1000 M33.

LEAK SENSOR MANUFACTURER: Pneumercator M34. MODEL #(S): LS 600 M35.

WILL A PIPING LEAK ALARM TRIGGER AUTOMATIC PUMP (i.e., TURBINE) SHUTDOWN? WILL FAILURE/DISCONNECTION OF THE MONITORING SYSTEM TRIGGER AUTOMATIC PUMP SHUTDOWN? ☒ a. YES ☐ b. NO M36.

☐ 2. MECHANICAL LINE LEAK DETECTOR (MLLD) THAT ROUTINELY PERFORMS 3.0 g.p.h. LEAK TESTS AND RESTRICTS OR SHUTS OFF PRODUCT FLOW WHEN A LEAK IS DETECTED ☒ a. YES ☐ b. NO M37.

MLLD MANUFACTURER(s): _____ M38. MODEL #(S): _____ M39.

☒ 3. ELECTRONIC LINE LEAK DETECTOR (ELLD) THAT ROUTINELY PERFORMS 3.0 g.p.h. LEAK TESTS

ELLD MANUFACTURER: Vaporless M40. MODEL #: LD2000 M41.

PROGRAMMED LINE INTEGRITY TESTS: ☐ a. MINIMUM MONTHLY 0.2 g.p.h. ☐ b. MINIMUM ANNUAL 0.1 g.p.h. M42.

WILL ELLD DETECTION OF A PIPING LEAK TRIGGER AUTOMATIC PUMP SHUTDOWN? ☒ a. YES ☐ b. NO M43.

WILL ELLD FAILURE/DISCONNECTION TRIGGER AUTOMATIC PUMP SHUTDOWN? ☒ a. YES ☐ b. NO M44.

☐ 4. INTEGRITY TESTING

TEST FREQUENCY: ☐ a. ANNUALLY ☐ b. EVERY 3 YEARS ☐ c. OTHER (Specify) _____

☐ 5. VISUAL MONITORING DONE: ☐ a. DAILY ☐ b. WEEKLY* ☐ c. MIN. MONTHLY & EACH TIME SYSTEM OPERATED** M45. M46.

* Requires agency approval ** Allowed for monitoring of unburied emergency generator fuel piping only per HSC §25281.5(b)(3) M47.

☐ 6. PIPING IS SUCTION PIPING MEETING ALL REQUIREMENTS FOR EXEMPTION FROM MONITORING PER 23 CCR §2636(a)(3)

☐ 7. NO PRODUCT OR REMOTE FILL PIPING IS CONNECTED TO THE UST(s)

☐ 99. OTHER (Specify) _____ M48.

VI. DISPENSER MONITORING

MONITORING OF AREAS BENEATH DISPENSER(S) IS PERFORMED USING THE FOLLOWING METHOD(S) (Check all that apply) M50.

☒ 1. CONTINUOUS ELECTRONIC MONITORING OF UNDER DISPENSER CONTAINMENT (UDC)

PANEL MANUFACTURER: ~~Pneumercator~~ M51. MODEL #: ~~LG1000~~ M52.

LEAK SENSOR MANUFACTURER: Veeder-Root (stand alone) M53. MODEL #(S): 330212 M54.

WILL DETECTION OF A LEAK INTO THE UDC TRIGGER AUDIBLE AND VISUAL ALARMS? ☒ a. YES ☐ b. NO M55.

WILL A UDC LEAK ALARM TRIGGER AUTOMATIC PUMP SHUTDOWN? ☒ a. YES ☐ b. NO M56.

WILL FAILURE/DISCONNECTION OF UDC MONITORING SYSTEM TRIGGER AUTOMATIC PUMP SHUTDOWN? ☒ a. YES ☐ b. NO M57.

☒ 2. MECHANICAL ASSEMBLY (e.g., FLOAT AND CHAIN ASSEMBLY) IN UDC TRIPS SHEAR VALVE IN CASE OF LEAK

ASSEMBLY MANUFACTURER: Bravo M58. MODEL #(S): FT8000 M59.

☐ 3. VISUAL MONITORING DONE: ☐ a. DAILY ☐ b. WEEKLY (Requires agency approval) M60.

☐ 4. NO DISPENSERS

☐ 99. OTHER (Specify) _____ M61.

VII. ENHANCED LEAK DETECTION

☐ 1. WE HAVE BEEN NOTIFIED BY THE STATE WATER RESOURCES CONTROL BOARD THAT WE MUST IMPLEMENT ENHANCED LEAK DETECTION (ELD) FOR THE UST(S) COVERED BY THIS PLAN. PER 23 CCR §2644.1, ELD IS PERFORMED EVERY 36 MONTHS AS REQUIRED M70.

VIII. TRAINING

REFERENCE DOCUMENTS MAINTAINED AT FACILITY☐ (Check all that apply) M80.

1. ☒ THIS UNDERGROUND STORAGE TANK MONITORING PLAN **(Required)**
2. ☒ OPERATING MANUALS FOR ELECTRONIC MONITORING EQUIPMENT **(Required)**
3. ☒ THE FACILITY'S BEST MANAGEMENT PRACTICES **(Required as of January 1, 2005)**
4. ☐ CALIFORNIA UNDERGROUND STORAGE TANK REGULATIONS
5. ☐ CALIFORNIA UNDERGROUND STORAGE TANK LAW
6. ☐ STATE WATER RESOURCES CONTROL BOARD (SWRCB) PUBLICATION: "HANDBOOK FOR TANK OWNERS - MANUAL AND STATISTICAL INVENTORY RECONCILIATION"
7. ☐ SWRCB PUBLICATION: "WEEKLY MANUAL TANK GAUGING FOR SMALL UNDERGROUND STORAGE TANKS"

99. ☐ OTHER (Specify): _____ M81.

Personnel with UST monitoring responsibilities are familiar with all of the above documents relevant to their job duties and can access those documents when needed. By January 1, 2005, this facility will have a "Designated UST Operator" who has passed the California UST Sytem Operator Exam administered by the International Code Council (ICC). By July 1, 2005, and annually thereafter, the "Designated UST Operator" will train facility employees in the proper operation and maintenance of the UST systems. This training will include, but is not limited to, the following:

- Operation of the UST systems in a manner consistent with the facility's best management practices.
- The facility employee's role with regard to the leak detection equipment.
- The facility employee's role with regard to spills and overfills.
- Whom to contact for emergencies and leak detection alarms.

For facility employees hired on or after July 1, 2005, the initial training will be conducted within 30 days of the date of hire.

IX. COMMENTS/ADDITIONAL INFORMATION

Please use this section to include any additional UST system monitoring-related information (e.g., additional information required by your local agency): M85.

Note regarding Section X. Pending certification of a Designated UST Operator, the following person has authority for performing the monitoring activities and maintaining leak detection equipment covered by this plan. NAME: JOB TITLE:

X. PERSONNEL RESPONSIBILITIES

AS OF JANUARY 1, 2005, THE "DESIGNATED UST OPERATOR" IDENTIFIED IN SECTION III OF THE CURRENT UST OPERATING PERMIT APPLICATION – FACILITY FORM WILL HAVE ULTIMATE AUTHORITY FOR PERFORMING THE MONITORING ACTIVITIES AND MAINTAINING LEAK DETECTION EQUIPMENT COVERED BY THIS PLAN, AND WILL PERFORM AND DOCUMENT MINIMUM MONTHLY VISUAL INSPECTIONS OF THE FACILITY'S UST SYSTEMS IN ACCORDANCE WITH 23 CCR § 2715(b).

XI. OWNER/OPERATOR SIGNATURE

CERTIFICATION: I certify that the information provided herein is true and accurate to the best of my knowledge.

UNDERGROUND STORAGE TANK

RESPONSE PLAN – PAGE 1

(One form per facility)

TYPE OF ACTION ☐ 1. NEW PLAN ☒ 2. CHANGE OF INFORMATION R01.

I. FACILITY INFORMATION

FACILITY ID # *(Agency Use Only)* 1.

BUSINESS NAME (Same as FACILITY NAME) 3.

Granite Rock Company-Pavex Central

BUSINESS SITE ADDRESS 103.	BUSINESS SITE CITY 104.
120 Granite Rock Way	**San Jose**

II. SPILL CONTROL AND CLEANUP METHODS

This plan addresses unauthorized releases from UST systems and supplements the emergency response plans and procedures in the facility's Hazardous Materials Business Plan (HMBP).

- If safe to do so, facility personnel will take immediate measures to control or stop any release (e.g., activate pump shut-off, etc.) and, if necessary, safely remove remaining hazardous material from the UST system.
- Any release to secondary containment will be pumped or otherwise removed within a time consistent with the ability of the secondary containment system to contain the hazardous material, but not greater than 30 calendar days, or sooner if required by the local agency. Recovered hazardous materials, unless still suitable for their intended use, will be managed as hazardous waste.
- Absorbent material will be used to contain and clean up manageable spills of hazardous materials. Absorbent material which has become too saturated to be effective or which is no longer intended for use will be managed as hazardous waste unless a waste determination in accordance with 22 CCR §66262.11 finds that it is non-hazardous. Used absorbent material, reusable or waste, will be stored in a properly labeled and sealed container. Waste material shall be disposed of appropriately.
- Facility personnel will determine whether any water removed from secondary containment systems, or from clean-up activity, has been in contact with any hazardous material. If the water is contaminated, it will be managed as hazardous waste unless a hazardous waste determination in accordance with 22 CCR §66262.11 finds that it is non-hazardous. If the water has a petroleum sheen (i.e., rainbow colors), it is contaminated. A thick floating petroleum layer may not necessarily display rainbow colors. Water (hazardous or non-hazardous) from sumps, spill containers, etc. will not be disposed to storm water systems.
- We will review secondary containment systems for possible deterioration if any of the following conditions occur:
  1. Hazardous material in contact with secondary containment is not compatible with the material used for secondary containment;
  2. Secondary containment is prone to damage from any equipment used to remove or clean up hazardous material collected in secondary containment;
  3. Hazardous material, other than the product/waste stored in the primary containment system, is placed inside secondary containment to treat or neutralize released product/waste, and the added material or resulting material from such a combination is not compatible with secondary containment.

III. SPILL CONTROL AND CLEAN-UP EQUIPMENT

PERIODIC MAINTENANCE: Spill control and clean-up equipment kept permanently on-site is listed in the facility's Hazardous Materials Business Plan. This equipment is inspected at least monthly, and after each use, supplies are replenished as needed. Defective equipment is repaired or replaced as necessary.

EQUIPMENT NOT PERMANENTLY ON-SITE, BUT AVAILABLE FOR USE IF NEEDED: *(Complete only if applicable)*

EQUIPMENT	LOCATION	AVAILABILITY
R10.	R20.	R30.
R11.	R21.	R31.
R12.	R22.	R32.
R13.	R23.	R33.
R14.	R24.	R34.
R15.	R25.	R35.

IV. RESPONSIBLE PERSONS

THE FOLLOWING PERSON(S) IS/ARE RESPONSIBLE FOR AUTHORIZING ANY WORK NECESSARY UNDER THIS RESPONSE PLAN:

NAME	TITLE
R40. **Elden Davis**	R50. **Equipment Manager**
R41. **Kenny Nott**	R51. **Equipment Superintendent**
R42. **Elias Lanuza**	R52. **Maintenance Planner**
R43.	R53.

V. MONITORING INDICATORS

IF MONITORING INDICATES A POSSIBLE UNAUTHORIZED RELEASE, STEPS TO VERIFY THE RELEASE WILL BE MADE AS FOLLOWS:

☒ 1. ADDITIONAL SYSTEM TESTING OR DATA COLLECTION ☒ 2. INSPECTION BY QUALIFIED PERSONS ☐ 3. RECALIBRATION OF EQUIPMENT R60.

☐ 99. OTHER (Specify): R61.

For State Use Only

CERTIFICATION OF FINANCIAL RESPONSIBILITY

FOR UNDERGROUND STORAGE TANKS CONTAINING PETROLEUM

A. I am required to demonstrate Financial Responsibility in the required amounts as specified in Section 2807, Chapter 18, Div. 3, Title 23, CCR:

☐ 500,000 dollars per occurrence
or
☒ 1 million dollars per occurrence

AND

☒ 1 million dollars annual aggregate
or
☐ 2 million dollars annual aggregate

B. Graniterock
(Name of tank Owner or Operator)

hereby certifies that it is in compliance with the requirements of Section 2807, Article 3, Chapter 18, Division 3, Title 23, California Code of Regulations.

The mechanisms used to demonstrate financial responsibility as required by Section 2807 are as follows:

C. Mechanism Type	Name and Address of Issuer	Mechanism Number	Coverage Amount	Coverage Period	Corrective Action	Third Party Compensation
Chief Financial Officer Letter	Graniterock 350 Technology Way PO Box 50001 Watsonville, CA 95077	N/A	$10,000	Continuous	Yes	Yes
State UST Cleanup Fund Graniterock UST BOE No. 44-014738	UST Cleanup Fund P.O. Box 944212 Sacramento, CA 94244-2120	N/A	$990,000	Continuous	Yes	Yes

Note: If you are using the State Fund as any part of your demonstration of financial responsibility, your execution and submission of this certification also certifies that you are in compliance with all conditions for participation in the Fund.

D. Facility Name	Facility Address
Graniterock - Watsonville Concrete and Building Materials	540 Beach St. Watsonville, CA 95076
Graniterock - Santa Cruz Concrete and Building Materials	303 Coral St. Santa Cruz, CA 95060

Summary of Violations & Notice to Comply

Program: PR0395982 - UNDERGROUND STORAGE TANK - 2399
Inspection Type: ROUTINE INSPECTION-COMPLETED

VC	Class	Violation	Corrective Actions Taken
U002	C	**UST PERMIT AMENDMENT** UST permit holder failed to notify HMCD within 30 calendar days of a change in permit information (e.g., change in operator, substance stored, monitoring methods). ***Operating permit presented was incorrect, did not reflect upgrade to unleaded UDC. Forms were updated and provided on the day of the inspection. NO CORRECTIVE ACTION REQUIRED.*** Within 30 days, submit to HMCD updated UPCF UST Operating Permit Application forms. UST permit forms are available at www.EHinfo.org/hazmat. [HSC 25284(a)(3)(C), 25286(a), 25286(d)]	U015	C	**UST MONITORING PLAN** The facility failed to submit or keep current a UST Monitoring Plan. ***The monitoring plan presented was incorrect, did not reflect upgrade to monitoring of unleaded UDC. Forms were updated and provided on the day of the inspection. NO CORRECTIVE ACTION REQUIRED.*** Submit to HMCD a UPCF UST Monitoring Plan form (UST-D), available at www.EHinfo.org/hazmat. In addition to the information on the UPCF form, the monitoring plan must include a plot plan that accurately indicates the location of the UST(s), piping, dispensers, monitoring consoles, leak detection sensors, line leak detectors, and (for single-wall tanks) automatic tank gauging probes. Keep a copy of the current monitoring plan on-site. [23 CCR 2632(d)(1), 2641(h)]	U100	C	**MONITORING: DETECTION AT EARLIEST OPPORTUNITY** UST monitoring equipment/procedures are not capable of detecting a leak from all portions of the UST system at the earliest possible opportunity. ***Float and chain assembly in the diesel dispenser failed to trip shear valve when water first introduced. Water was noted in the float. Float drained of water, sealed, and reinstalled. After repair, operated as designed. NO CORRECTIVE ACTION REQUIRED.*** Upgrade monitoring equipment and/or procedures to be capable of detecting a leak from all portions of the UST systems at the earliest possible opportunity. All monitoring system consoles, leak sensors, and probes must be listed in the current edition of the State Water Resources Control Board's Local Guidance (LG) Letter LG-113, available at www.swrcb.ca.gov/water_issues/programs/ust/. A permit is required prior to installing new monitoring equipment. See the handout entitled Plan Submittal Requirements for Hazardous Materials Systems (HMCD-004) for details. The handout is available at www.EHinfo.org/hazmat. [23 CCR 2630(d), 2641(a)]	
Comments: ***Inspection took place 8/8/2012, report delivered 8/13/2012.***

Monitoring system certification conducted by Service Station Systems, technician Israel Santillan. Mr. Santillan held current certifications for ICC, Veeder Root and Pnuemercator (#10999, 6/29/14)
System includes one diesel UST system (pressurized piping) and one unleaded UST system (suction piping) that share a divided tank.
Shared annular sensor provided audible and visual alarm at local Pnuemercator monitoring panel.
Diesel STP sump sensor provided audible and visual alarms and positive shutdown.
Unleaded sump sensor provided audible and visual alarms. Suction system, no positive shutdown required.
Unleaded UDC stand-alone sensor tested and provided pump shutdown.
LLD tested at simulated 3gph, 10psi leak. LLD able to detect leak and provide slow flow.

OFFICIAL NOTICE OF INSPECTION

Facility ID: FA0258851
Facility Name: GRANITE ROCK COMPANY-PAVEX CENTRAL
Site Address: 120 GRANITE ROCK WY
SAN JOSE, CA 95136

Inspection Date: 8/13/2012

Spill buckets tested with water, held for one hour without loss.
E-stop provided shutdown of both pump systems.

Reviewed the following paperwork:
DUSTO monthly inspections (including alarm logs)
FR documents (CFO letter) - located at Berryessa Road site
Training logs - located at Berryessa Road site
Forms A/B, monitoring plan and response plan
SB 989 results

NOTE: Pnuemercator does not have printer to allow for system set up report or alarm history.

Program: PR0395983 - HAZMAT BUSINESS PLAN - BP05
Inspection Type: ROUTINE INSPECTION-COMPLETED

VC	Class	Violation	Corrective Actions Taken
		No violations were observed during this inspection.	

Comments: *Copy of current HMBP provided. Spot checked chemical inventory with no discrepancies noted. HMBP updated with past year (8/2011).*

Immediately correct any violation designated as a Class I or Class II violation. Correct all other violations no later than 09/12/2012, unless otherwise noted by the inspector.

Using the space provided, write a brief description of the actions taken by the facility to correct each violation. Attach additional pages if more space is needed. Within 5 days of achieving compliance or within 35 days of the inspection date, whichever comes first, sign the certification statement below and return a copy of this report to HMCD. Time granted for correction of violations does not preclude any enforcement action by HMCD or other agencies. This facility may be subject to reinspection at any time. [Authority: HSC 25185(c), 25187.8, 25404.1.2(c)]

Received By: SAM LOFORTI

Inspected By: MICKEY PIERCE - EE0010235
CA UST Inspector #8016994, Exp. 08/26/2012

Certification of Compliance

I certify under penalty of perjury that this facility has complied with directives specified in this Notice to Comply.

Comments / Observations

ON SITE WITH JIM RUBLE, EDDIE MARTINEZ FROM PETROTEK, AND JONNE TRACEY WITH SANTA CLARA COUNTY DEH FOR THE TESTING OF THE UDC STAND ALONE SENSOR AS WELL AS THE FAIL SAFE AND POSITIVE SHUT DOWN.

THE STAND ALONE WAS TESTED AND SHUT DOWN THE DISPENSER.

THE POSITIVE SHUT DOWN AND FAIL SAFE WERE TESTED AND PASSED.

Comments / Observations

ON SITE WITH JIM RUBLE FROM PETROTEK, AND JOANNE TRACEY WITH SANTA CLARA COUNTY DEH FOR THE TESTING OF THE SECONDARY PIPING, UNDER DISPENSER CONTAINMENT HYDROSTATIC TEST AND THE RE-TEST OF THE VAPOR RECOVERY BUCKET.

THE PIPING WAS TESTED AT 5.5 PSI FOR 60 MINUTES.

THE UDC WAS TESTED HYDROSTATICALLY FOR 15 MINUTES USING THE INCON.

THE VAPOR RECOVERY BUCKET WAS TESTED FOR 15 MINUTES USING THE INCON.

*THE FINAL INSPECTION WILL CONSIST OF THE STAND ALONE SENSOR IN THE UDC , THE POSITIVE SHUT DOWN AND FAIL SAFE OF THE PRESSURIZED SYSTEM.

THE CONTRACTOR CHANGED THE PIPING AS ORIGINALLY NOTED IN THE PERMIT SUBMITTAL.
-CUT SHEETS WILL BE REQUIRED BEFORE THE FINAL INSPECTION

A VEEDER-ROOT STAND ALONE SENSOR WILL BE INSTALLED AT THE UDC BUT CUT SHEET WERE NOT SUBMITTED WITH THE ORIGINAL PERMIT SUBMITTAL.
-CUT SHEETS WILL BE REQUIRED BEFORE THE FINAL INSPECTION.

THE PROPER CERTIFICATIONS WERE NOT AVAILABLE FOR THE INCON TESTING
-CERTIFICATION WILL BE REQUIRED PRIOR TO THE FINAL INSPECTION.

OKAY TO PROCEED WITH THE WORK.

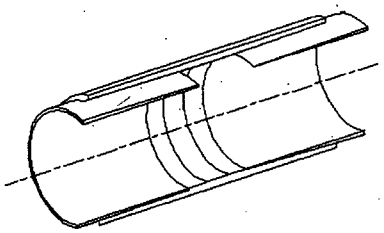
Testing ?
Red & Green Color Piping ?

Dualoy® 3000/L Product Data

FIBERGLASS-COMPOSITE PIPE GROUP



Dualoy 3000/L Fiberglass Pipe and Fittings

nonmetallic underground piping for Motor Vehicle (MV), High Blend (HB) Concentrated (CT) and Aviation and Marine (A&M) fuels

• 1° 10psi ok to test
2° 30-40psi
• Red & Green

Mike Chavez an Engineer with Ameron stated that the Red was a color that was previously used phased out to green but it's the same product.

Uses and applications

Service station product, vent and vapor recovery piping
Bulk plant terminals and fueling terminals
Central fuel oil systems
Marinas and marine terminals (onshore only)
All piping systems requiring UL or ULC Listing for MV, HB, CT and A&M Fuels.

Performance

Operating pressures to 300 psig (20 bar)
Continuous operating temperatures to 150°F (66°C)
Individual system components may not have the same ratings as the pipe. Refer to the detailed product information for the specific components to determine the pressure rating for the system as a whole.

Listings

Underwriters Laboratories Inc.®

Dualoy 3000/L is Listed with Underwriters Laboratories Standard 971-2004 for nonmetallic underground piping for motor vehicle (MV), high blend (HB), concentrated (CT) and aviation and marine (A&M) fuels (File MH9162). Dualoy 3000/L pipe and fittings are also Listed with Underwriters Laboratories of Canada (File CMH 715). In Great Britain the Dualoy 3000/L system has been tested and accepted by the London Fire and Civil Defence Authority. Dualoy 3000/L has been issued a Certificate of Compliance to the Institute of Petroleum (IP) Specification by ERA Technology, Ltd.

Composition

Pipe — Filament-wound fiberglass reinforced epoxy pipe with integral epoxy liner and exterior coating. When classified in accordance with ASTM D2310 and ASTM D2996, the pipe meets the following cell limits: RTRP 11CX-5430.

Fittings — Compression-molded and filament-wound fiberglass reinforced epoxy

Adhesive — Ameron PSX•20 ambient-cure, two-part epoxy for all services (including alcohols)

Joining system

Bell and spigot taper/taper adhesive-bonded joint

Pipe lengths

Standard 6.1 m (20-ft) random lengths 5.2 to 6.4 m (17 to 21 ft)

Other lengths available on request

Fittings

Adapters: bell x NPT male[1]
Adapters: bell x NPT female[2]

Typical pipe dimensions and weights

Nominal Pipe Size		Pipe OD[1]		Pipe ID		Wall Thickness Total		Wall Thickness Structural		Unit Volume		Pipe Weight	
(in)	(mm)	(in)	(mm)	(in)	(mm)	(in)	(mm)	(in)	(mm)	(gal/ft)	(l/m)	(lb/ft)	(kg/m)
2	50	2.37	60	2.21	56	0.080	2.0	0.060	1.5	0.20	2.5	0.47	3.5
3	80	3.50	89	3.32	84	0.085	2.2	0.065	1.6	0.45	5.6	0.72	5.2
4	100	4.50	115	4.33	110	0.087	2.2	0.070	1.8	0.77	9.6	1.00	7.2
6	150	6.63	168	6.39	162	0.120	3.1	0.100	2.5	1.67	20.7	2.10	15.2

1) Typical outside diameters of 2 through 6-inch pipe are within API, ASTM and ANSI fiberglass and steel pipe dimensions.

Typical pipe performance

Nominal Pipe Size		Pressure Rating[1]		Ultimate Internal Pressure[1]		Ultimate Collapse Pressure[2]	
(in)	(mm)	(psig)	(MPa)	(psig)	(MPa)	(psig)	(MPa)
2	50	300	2.07	3200	22.1	153	1.05
3	80	200	1.38	2400	16.5	90	0.62
4	100	175	1.21	2000	13.8	39	0.27
6	150	175	1.21	2000	13.8	38	0.26

1) At 150°F (66°C).
2) At 80°F (27°C). For continuous service do not exceed 75% of these values.

Fittings pressure performance

For dimensions of fittings, consult Ameron publication DUALOY 3000/L FITTINGS DIMENSIONS, FP266. Pressure ratings of fittings without UL listing are available on request.

Nominal Pipe Size		All fittings[1]	
(in)	(mm)	(psig)	(MPa)
2	50	250	1.72
3	80	150	1.03
4	100	125	0.86
6	150	100	0.69

1) Some fittings have higher pressure ratings than shown.

Typical physical properties

Dualoy 3000/L piping systems are designed to function at temperatures ranging from -40 to 150°F (-40 to 66°C) at service pressures between -1 and 20 bar. Dualoy 3000/L pipe conforms to ASTM D2310, D2517 and D2996.

Pipe Property[1]	Units	Value	Method ASTM	Method ATM[1]
Thermal conductivity	Btu·in/(h·ft²·°F) W/m·°C	1.7 7.6	C177	23
Linear thermal expansion	10^{-6} in/in/°F 10^{-6} cm/cm/°C	8.5 15.3	D696	21
Friction factor	Hazen-Williams	150	—	156
Absolute roughness	10^{-6} ft 10^{-6} m	50 15	—	—
Specific gravity	—	1.81	D792	
Barcol Hardness	Impressor 934-1	65	D2583	—

1) Ameron test method.

Typical mechanical properties

Pipe Property[1]	Units	Value[1]	Method ASTM	Method ATM[2]
Tensile strength				
Longitudinal	10^3 psi MPa	35.0 241	D2105	161
Circumferential	10^3 psi MPa	70.0 483	D1599	151
Tensile modulus				
Longitudinal	10^6 psi GPa	3.0 20.7	D2105	161
Circumferential	10^6 psi GPa	4.2 29.0	—	—
Compressive strength				
Longitudinal	10^3 psi MPa	35.0 241	—	142
Compressive modulus				
Longitudinal	10^6 psi GPa	3.0 20.7	—	142
Long-term hydrostatic design basis				
Static	10^3 psi MPa	31.5 217	D2992(B)	—
Cyclic	10^3 psi MPa	8.0 55	D2992(A)	—
Poisson's ratio[3]				
n_{yx}	–	0.16	—	—
n_{xy}	–	0.26	—	—

1) Based on structural wall thickness.
2) Ameron test method.
3) The first subscript denotes the direction of contraction and the second that of the applied stress.
x denotes longitudinal direction.
y denotes circumferential direction.

Nominal Pipe Size (in)	(mm)	Stiffness Factor[1] (lb·in³/in²)	(N·m)
2	50	45	5.1
3	80	75	8.5
4	100	60	6.8
6	150	275	31.1

1) At 5% deflection.

Bending radius

Nominal Pipe Size		Minimum Bending Radius[1]		Maximum Deflection per 20-ft Joint	Minimum Length Required for 10° Change	
(in)	(mm)	(ft)	(m)	(deg)	(ft)	(m)
2	50	75	23	15	13	4
3	80	100	30	10	20	6
4	100	150	46	7.5	27	8
6	150	200	61	5	40	12

1) At rated pressure. Sharper bends may create excessive stress concentrations. **Do not** bend pipe until adhesive has cured.

Conversions

1 psi = 6895 Pa = 0.07031 kg/cm^2
1 bar = 10^5 Pa = 14.5 psi = 1.02 kg/cm^2
1 MPa = 10^6 Pa = 145 psi = 10.2 kg/cm^2
1 GPa = 10^9 Pa = 145,000 psi = 10,200 kg/cm^2
1 in = 25.4 mm
1 ft = 0.3048 m
1 lb·in = 0.113 N·m
°C = $^5/_9$ (°F - 32)

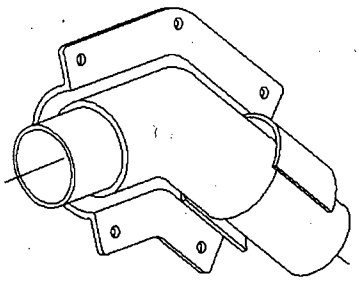
FIBERGLASS - COMPOSITE PIPE GROUP



Dualoy 3000/L Secondary Containment Pipe and Fittings

UL-Listed nonmetallic underground containment piping for Motor Vehicle (MV), High Blend (HB), Concentrated (CT) and Aviation and Marine (A&M) fuels

Uses and applications

Service station product, vent and vapor recovery piping
Bulk plant terminals and fueling terminals
Central fuel oil systems
Marinas and marine terminals (onshore only)
All piping systems requiring UL or ULC listing for MV, HB, CT and A&M fuels
Containment piping for all of the above

Description

Dualoy 3000/L secondary containment systems employ pipe one size larger than the primary and specially designed fittings. The system provides complete enclosure of UL- and ULC-listed Ameron primary piping used in product lines and vapor recovery lines from the sump at the product storage tank to the shear valve at the dispenser, and vent lines from the tank. Dualoy containment systems have been sized for close make-up and ease of installation.

Features of Ameron Dualoy 3000/L containment systems include:

- Filament-wound, fiberglass-reinforced pipe with integral liner;
- Compact fittings dimensions to minimize trench excavation;
- Smooth exterior pipe surface that eliminates the need for special end preparation tools;
- Ready accessability to and complete inspectability of primary fittings prior to closure of the containment;
- Complete testability during installation and at any other time thereafter;
- Rapid joint makeup with pre-inserted nuts and ambient cure adhesive.

Listings

Underwriters Laboratories Inc.

Dualoy 3000/L is Listed in the United States with Underwriters Laboratories Standard 971-2004 for nonmetallic underground piping for motor vehicle (MV), high blend (HB), concentrated (CT) and aviation and marine (A&M) fuels for both primary (File MH9162) and containment (File MH15596) piping systems. Dualoy 3000/L pipe and fittings are also Listed with Underwriters' Laboratories of Canada (File CMH 715). In Great Britain the Dualoy 3000/L system has been tested and accepted by the London Fire and Civil Defence Authority. Dualoy 3000/L has been issued a Certificate of Compliance to the Institute of Petroleum (IP) Specification by ERA Technology, Ltd.

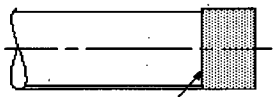
Performance

Operating pressures to 100 psig
Continuous operating temperatures to 150°F (66°C)
Individual system components may not have the same ratings as the pipe. Refer to the detailed product information for the specific components to determine the pressure rating for the system as a whole.

Piping system characteristics

Secondary employs full-performance pipe — Many contained fuel handling systems employ materials in the secondary that fall far short of the primary piping in regards to chemical resistance and mechanical strength. By contrast, Dualoy 3000/L systems employ the same type of high-performance fiberglass-reinforced pipe in the secondary as in the primary. Thus, Dualoy 3000/L containment systems easily withstand both high external loads from backfill and traffic as well as internal pressures as high as 100 psig.

Compact containment fittings — Dualoy 3000/L containment fittings are more compact than competitive clam-shell type closure pieces. As a result, crossovers in a Dualoy 3000/L system occupy less space, so less excavation is required than with competing rigid-wall containment systems.



Only end prep required is the removal by light sanding of surface gloss.

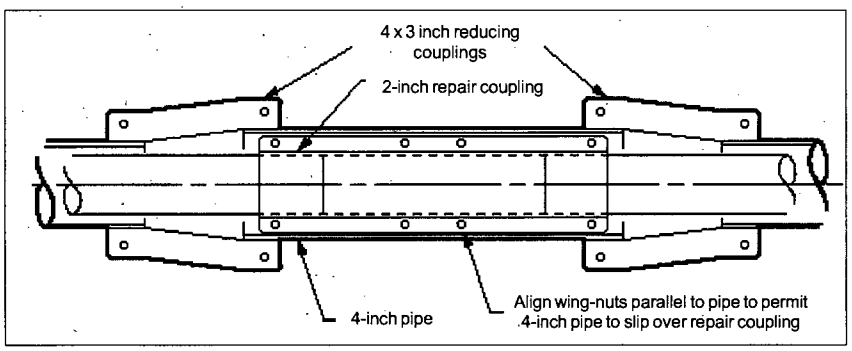
Precision pipe exterior eliminates scarfing — Dualoy pipe is manufactured in a proprietary continuous winding process that provides an extremely precise, consistent outside diameter. No scarfing of the pipe end is required to achieve a proper fit of the secondary pipe inside closure pieces. Light sanding of the pipe end to remove the surface gloss and obtain a suitable bonding surface is the only end prep required.

Easy containment fitting assembly — Dualoy 3000/L containment fitting clamshells are supplied in matched pairs. One half of each pair is fitted with pre-inserted propeller nuts, allowing the fitting to be assembled from one side, using the bolts provided.

Complete retestability — Dualoy 3000/L containment employs rigid-wall pipe and fittings that maintain their shape during the entire service life of the station. When installed with isolating penetration fittings (see page 4), Dualoy 3000/L containment piping can be repeatedly retested whenever desired.

Convenient repair capability — Contained piping systems are occasionally damaged after installation. Damage is generally caused by paving or excavation operations. Dualoy 3000/L contained piping systems are designed so that only the damaged stretch need be replaced instead of the entire line. The 2-inch Dualoy repair coupling is sized so that it can be contained within 4-inch Dualoy 3000/L containment pipe.

Two-inch primary pipe contained within 3-inch containment pipe can be repaired with a UL-listed 2-inch repair coupling. The containment is restored by replacement of a section of the existing containment pipe with a 4-inch containment nipple. The 4-inch replacement nipple is then joined to the existing containment pipe with Dualoy reducing couplings.



Containment pipe and fittings dimensions

	Nominal Pipe Size		A	B	C	X_2	No. of Bolt Holes	Wt.

Sump penetration fittings

Ameron sump penetrations are designed for use at turbine sumps and dispenser pans. Plain sump penetration fittings permit the annular space between the primary and secondary lines to communicate with the interior of the sump or pan. Penetration fittings with factory-installed centralizers, sleeve couplings and monitoring ports may be used to isolate the pipe annular space from the sump or pan. When the annular space is so isolated, the secondary containment line can be retested at any time and as often as desired.

Stand-Alone Dispenser Pan Sensor

Veeder-Root's Stand-Alone Dispenser Pan Sensors immediately shut down AC power to the dispenser when fluid is detected in the dispenser pan. Fail-safe design features eliminate the possibility of missing a leak condition.

Easily installed in most dispenser pans and dispenser sumps*, the Stand-Alone Sensors function with most manufacturers' dispensers. The sensors control and shut down power to the dispenser without the need for additional relays, circuitry or wiring. The sensors' control interface ensures the intrinsically safe integrity in a Class I Division II hazardous area.

Accurate and reliable, the Stand-Alone Dispenser Pan Sensors withstand the harshest environments. Stand-Alone Dispenser Pan Sensors are warranted to be free from detects for a period of one year from the date of installation or 15 months from the date of invoice.

Detection Capabilities

Float Switch Dispenser Pan Sensor shuts down dispenser when it detects:
-1-1/2" of liquid at the base of the sensor

Discriminating Dispenser Pan Sensor shuts down dispenser when it detects:
-1/32" of hydrocarbons floating on liquid at any height on the sensor
-1/8" of hydrocarbon liquid at the base of the sensor
-6-1/2" of liquid from the base of the sensor

Operating Capabilities

Operating Temperature Range: 0C to +70C (for freezing liquids); -25C to 70C (for hydrocarbons)
Storage Temperature Range: -40C to 70C
Cable Length: 5 feet
Sensor Dimensions: 11.53" high, 2.13" diameter
Control Interface Dimensions: 9.350" high, 2.17" diameter

EXAMINATION RESULT: **PASS**

Congratulations! You have passed the above named examination. Your wallet card will be forwarded to you by ICC within six weeks from the last day of the month in which you tested. This certificate is current for two years.

You may request a wall certificate from ICC as well. Throughout 2011, this certificate will be provided at no cost to you, if you request it within 90 days of your exam. Only one wall certificate per exam passed will be provided to you at no charge. For more information on requesting a wall certificate, go to www.iccsafe.org/inspector.

It is extremely important that you notify Pearson VUE and ICC of any changes in name and/or address to avoid the possibility of your wallet card and/or certificate not being received. Please contact Pearson VUE at 800-275-8301 and ICC at certexam@iccsafe.org with changes to your name and address (name changes may require additional documentation). There may be an additional fee if a certification is re-issued due to a misspelled name or incorrect address.

Re: Plan Check Review: SR0837887;
Facility Name: Granite Rock Company-Pavex Central
Project Location: 120 Granite Rock Way, San Jose
Project Description: Replace UDC and associated piping (5ft) and upgrade the UDC sensor.

Santa Clara County Hazardous Materials Program has reviewed the submittal for the project referenced above and **approves the plans with the following conditions**:

1. Systems shall be configured as described in the enclosed approved Hazardous Materials Construction Permit Application, Hazardous Materials Tank System Installation/Upgrade Equipment List, and plans.
2. Contact HMCD a minimum of 2 working days in advance to schedule the following inspection(s):
   - ☐ Pressure/vacuum testing of tank primary and secondary containment;
   - **X** Pressure testing of primary and secondary piping;
   - **X** Lake testing of under dispenser containment (UDC)
   - **X** Functional testing- positive shut down for the pressurized system.
3. The following conditions shall also be met for final approval:
   - Updated Monitoring Plan

Any substitution of equipment or reconfiguration of systems as described in approved plans requires prior approval from this Department. Be advised that plan check review and approval by the San Jose Fire Department may also be required prior to beginning work. A copy of this letter and one set of approved plans shall remain on the job site until final inspection.

Should you have any questions, contact the undersigned inspector at (408) 918-1946.

I. General Information

This document must be completed by any person who applies for a permit from the Hazardous Materials Compliance Division (HMCD) to install, retrofit, or upgrade a hazardous materials storage system/area (tier, fuel tank, dry cleaning machine, laboratory, etc.). If the project involves the installation or retrofitting of a hazardous materials storage tank system, you must also submit a completed Hazardous Materials Tank System Installation/Upgrade Equipment List form. Refer to HMCD's Plan Submittal Requirements for Hazardous Materials Systems for additional requirements. Documents are available at **www.EHinfo.org/hazmat**.

V. Scope of Work *[Briefly describe the project]*

Replace the failed steel shallow Bravo box with a fibeglass Bravo UDC, install a Veeder-Root "stand alone" UDC sensor. The existing Smith Red Thread II product pipe will be cut back and extended into the new UDC using a Bravo fiberglass penetration fitting. Electrical will not penetrate the UDC. A new "Flex-ing" flex line will be installed. The existing shear valve will be reused.

HAZARDOUS MATERIALS TANK SYSTEM INSTALLATION/UPGRADE EQUIPMENT LIST

For Use Within the Cities of Los Altos, Los Altos Hills, Monte Sereno, Saratoga, and in Unincorporated Areas of Santa Clara County

I. General Information

This form serves as a construction/upgrade permit application. One copy of this completed form shall be submitted to the Hazardous Materials Compliance Division (HMCD) along with the Scope of Work, equipment specifications, and project plans.

II. Project Information

This document covers the: ☐ Installation ☒ Upgrading of ☐ Aboveground Tank(s) ☒ Underground Tank(s)

Provide the following information:

Facility Name (Tank Site): **Grainite Rock** Bldg. No.: **na**

Address: **120 Granite Rock Way** City: **San Jose** Zip: **95136**

Project Contact Name: **Jim Ruble** Phone No.: **(408)683-4537** ext. **102**

Plan Check No.: _____ Date of Plan Submittal to HMCD: _____

III. Equipment Information

In the table below, **list the manufacturer name and specific model number** for each type of equipment listed in the second column. If an item is not applicable to this project, check the "N/A" box in the "Name of Equipment Manufacturer" column. Brochures and/or manufacturers' cut sheets showing listings (e.g., UL) and other applicable technical information for **all equipment listed** shall be submitted with this form.

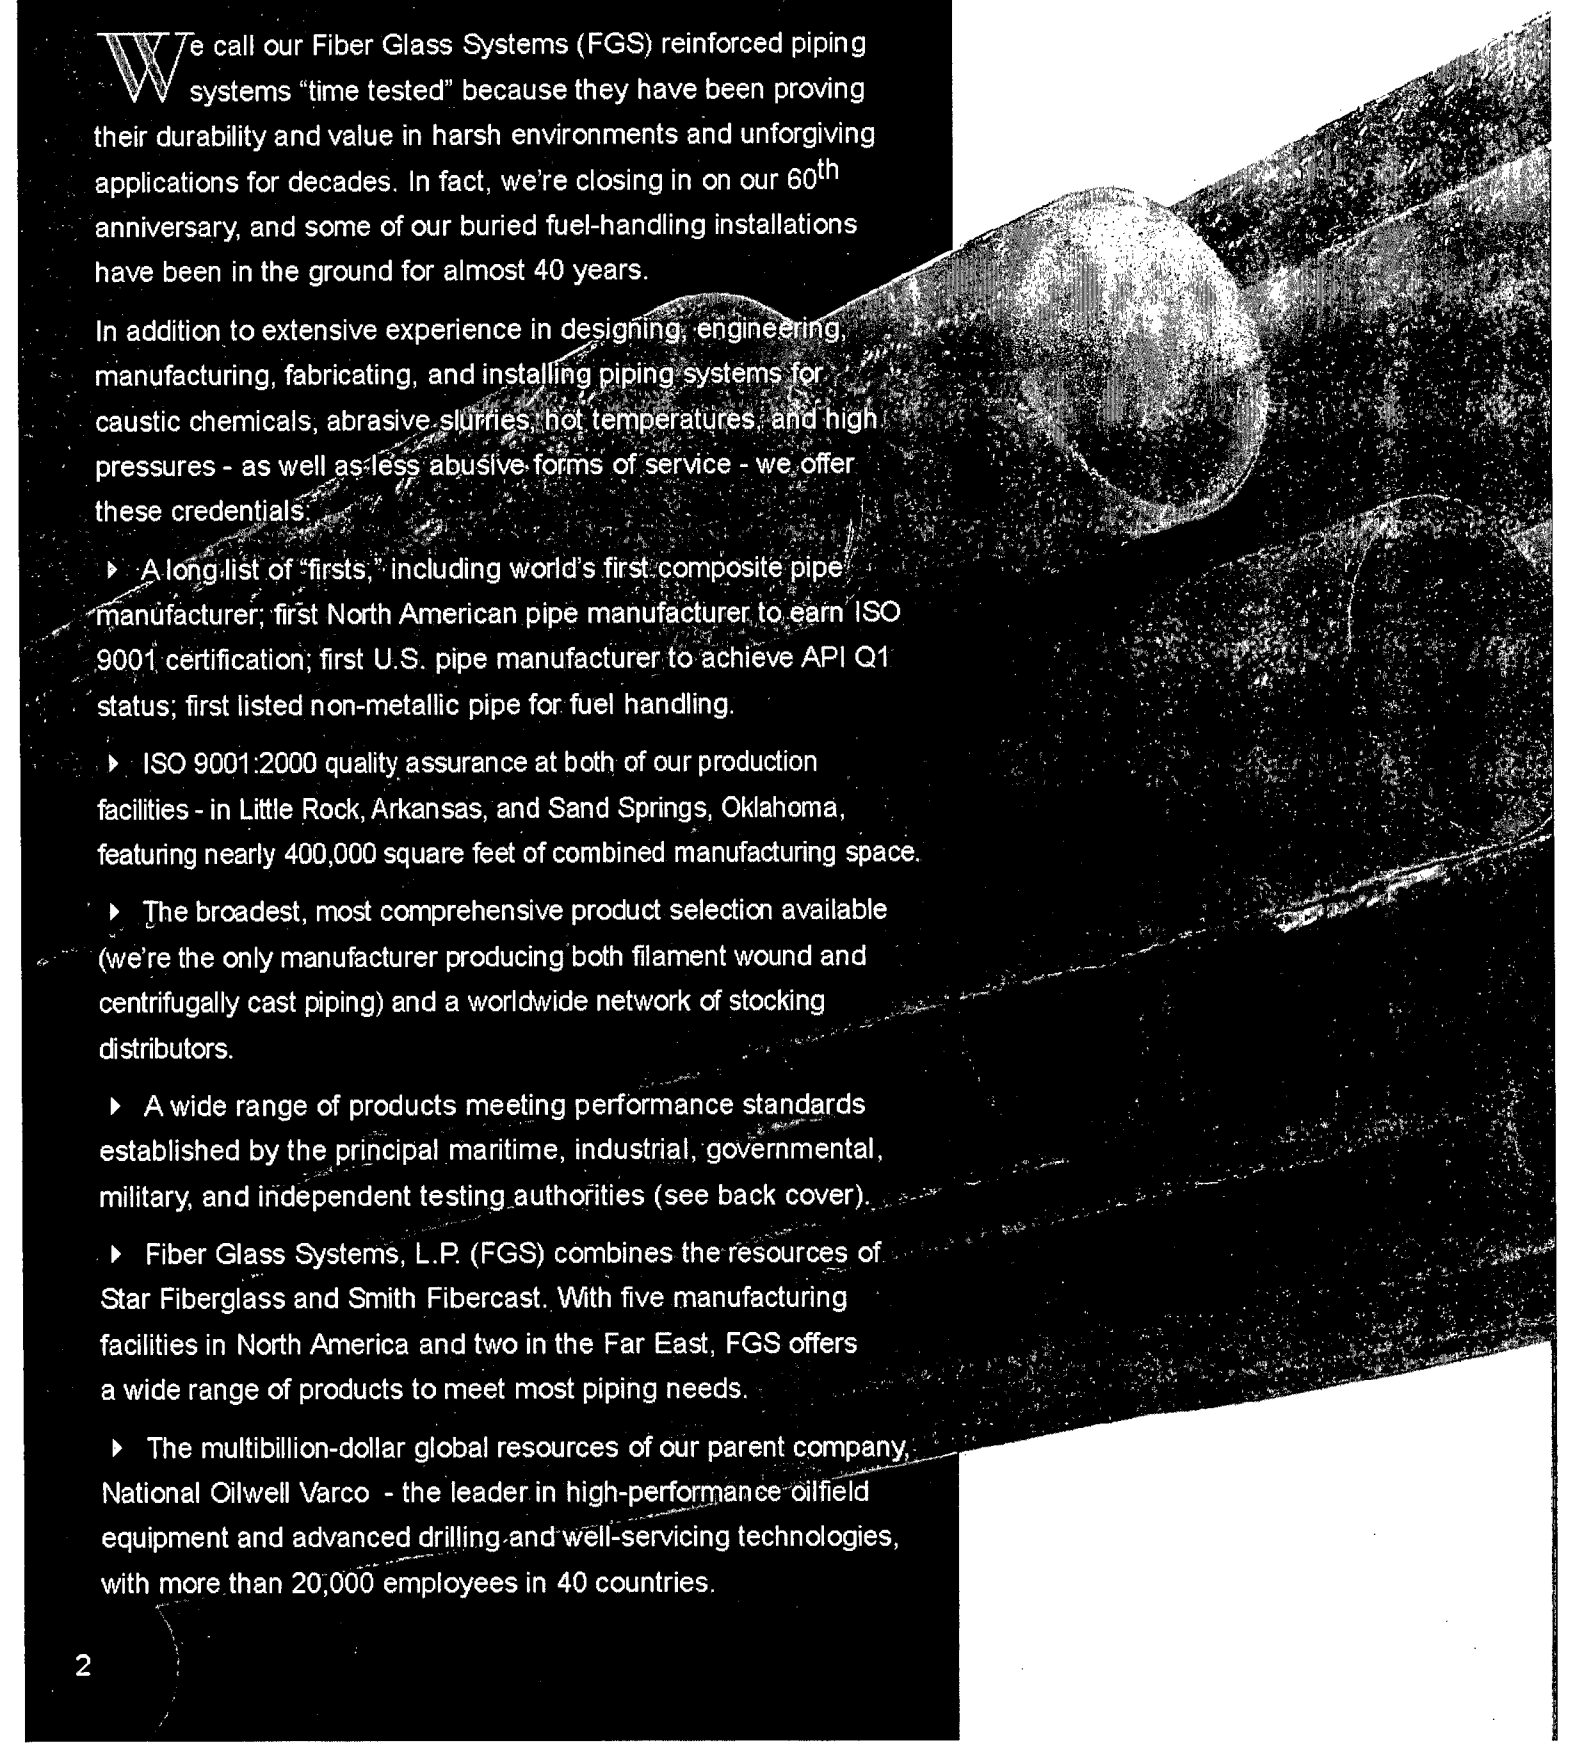
FIBER GLASS SYSTEMS

Worldwide Leader in Composite Piping

We call our Fiber Glass Systems (FGS) reinforced piping systems "time tested" because they have been proving their durability and value in harsh environments and unforgiving applications for decades. In fact, we're closing in on our 60th anniversary, and some of our buried fuel-handling installations have been in the ground for almost 40 years.

In addition to extensive experience in designing, engineering, manufacturing, fabricating, and installing piping systems for caustic chemicals, abrasive slurries, hot temperatures, and high pressures - as well as less abusive forms of service - we offer these credentials:

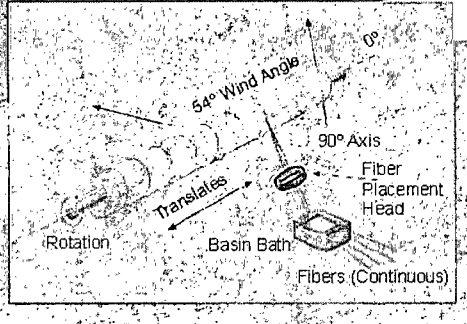
- A long list of "firsts," including world's first composite pipe manufacturer; first North American pipe manufacturer to earn ISO 9001 certification; first U.S. pipe manufacturer to achieve API Q1 status; first listed non-metallic pipe for fuel handling.
- ISO 9001:2000 quality assurance at both of our production facilities - in Little Rock, Arkansas, and Sand Springs, Oklahoma, featuring nearly 400,000 square feet of combined manufacturing space.
- The broadest, most comprehensive product selection available (we're the only manufacturer producing both filament wound and centrifugally cast piping) and a worldwide network of stocking distributors.
- A wide range of products meeting performance standards established by the principal maritime, industrial, governmental, military, and independent testing authorities (see back cover).
- Fiber Glass Systems, L.P. (FGS) combines the resources of Star Fiberglass and Smith Fibercast. With five manufacturing facilities in North America and two in the Far East, FGS offers a wide range of products to meet most piping needs.
- The multibillion-dollar global resources of our parent company, National Oilwell Varco - the leader in high-performance oilfield equipment and advanced drilling and well-servicing technologies, with more than 20,000 employees in 40 countries.

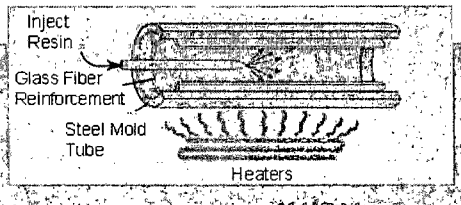


Resins, Compositions, and Sizes for All Applications

As the pages that follow will reveal, FGS piping systems employ a variety of epoxy and polyester resins and, where necessary, corrosion barriers to achieve the optimum performance characteristics for virtually any application. Temperature capabilities to 275 degrees Fahrenheit. Pressure capabilities of up to 4,000 pounds per square inch or more. Diameters from 1 inch to 72 inches. And our unique ability to produce pipe by either filament winding or centrifugal casting allows us to best match pipe to the requirements of your specific application.

Six joining systems (page 7) and a wider selection of fittings than you'll find available for any other piping material, including steel, ensure precision installation, optimum system performance, and unbeatable ease of assembly.





Mold Rotates at High Speeds Creating Centrifugal Force

Filament Winding Process

Resin-impregnated glass fibers are wound onto a mandrel in a predetermined pattern under controlled tension. Repeated passes create a strong layered wall of the desired thickness. This process results in a pipe that is at least 75% glass-reinforced for optimum internal pressure capability.

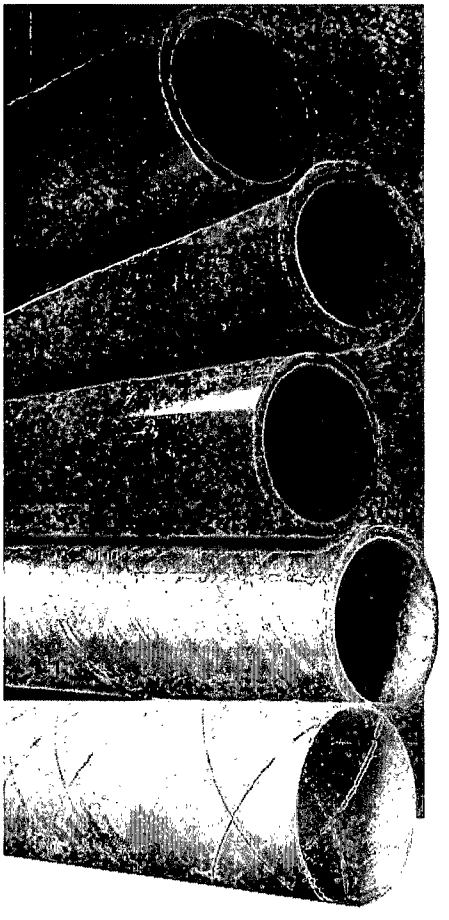
Centrifugal Casting Process

Woven glass fiber (or fabric) in a motor-driven steel tube is saturated with resin while the tube rotates at high speed. Centrifugal force displaces air from the resin and glass, producing a dense, void-free laminate. Fiber reinforcement in both the hoop and axial directions affords excellent thermal expansion and beam-bending properties.

Epoxy Piping Systems

When selecting a fiberglass piping system, operating temperature and chemical resistance usually dictate the appropriate resin system. Epoxy resins perform best in the presence of caustics, solvents, brines, petroleum products, and certain acids. Proprietary epoxies offer the highest temperature ratings, 275 degrees. Aromatic-amine cured epoxies offer ratings up to 250 degrees Fahrenheit. Aliphatic-amine cured epoxies have temperature ratings up to 200 degrees.

Visit www.fgspipe.com or contact your distributor to obtain our Chemical Resistance Guide (E5615). For applications not listed in the guide, or for those involving multiple chemicals, contact Fiber Glass Systems for assistance.



Z-Core®
Capable of handling high concentrations of corrosive acids, alkalis, and solvents; exceeds the corrosion resistance of lined steel and alloys.

Centricast Plus® RB-2530
Recommended for most caustics, salts, solvents, and many acids and chemical process solutions; can also handle many abrasive slurries.

Centricast® RB-1520
Primary uses include chemical process solutions, solvents, acids, caustics, and salt solutions.

Green Thread®
Especially suitable for dilute acids and caustics; hot-water and condensate return.

Red Thread® II
Extensively used for water and saltwater handling, CO_2, crude oil, natural gas, and light chemical services including salts, solvents, and pH 2-13 solutions that corrode traditional metallic piping systems.

Red Thread® IIA
UL 971 Listed primary and secondary piping systems for all UL identified fuels, including 100% ethanol or methanol; compatible with bio-diesel and E85.

Pipe	Size Range (in.)	Resin	Pressure Rating (psig)	Inner Corrosion Barrier Thickness (in.)	Temperature Rating	Joint Types	RTRP Classification (ASTM D2310)	Product/ Installation Manuals

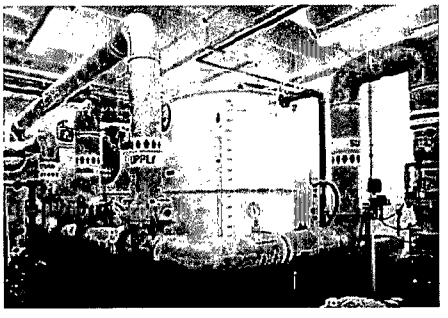
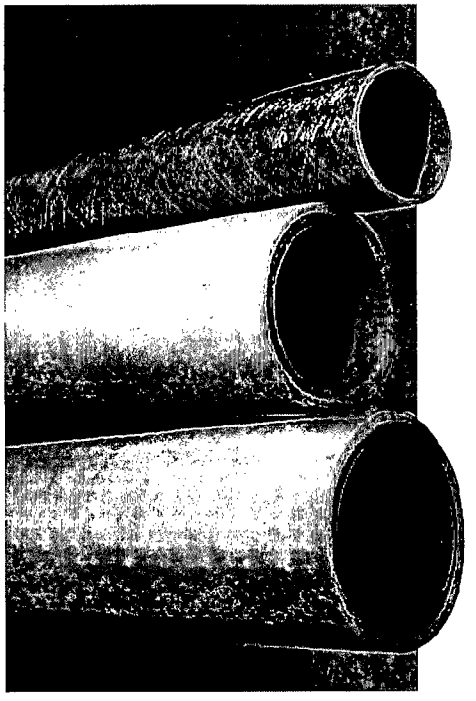
Vinyl Ester Piping Systems

Vinyl ester resin systems provide outstanding performance in mineral acid, chlorine, and oxidizing-agent applications. Premium vinyl ester systems handle temperatures as high as 225 degrees Fahrenheit.





F-Chem®
Custom piping - ideal for strong mineral acids and bleaching solutions and many chemical waste streams. Premium and fire retardant resins available.

Centricast Plus® CL-2030
Recommended for strong acids, chlorine, oxidizing agents, and chemical mixtures.

Centricast® CL-1520
Used extensively for a wide range of process solutions including acids, chlorine, and oxidizing agents.

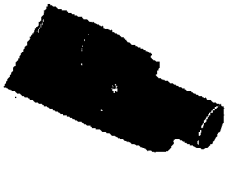
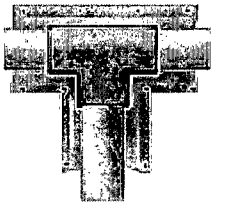
Secondary Containment

Fiber Glass Systems offers several solutions for handling environmentally sensitive chemical applications.





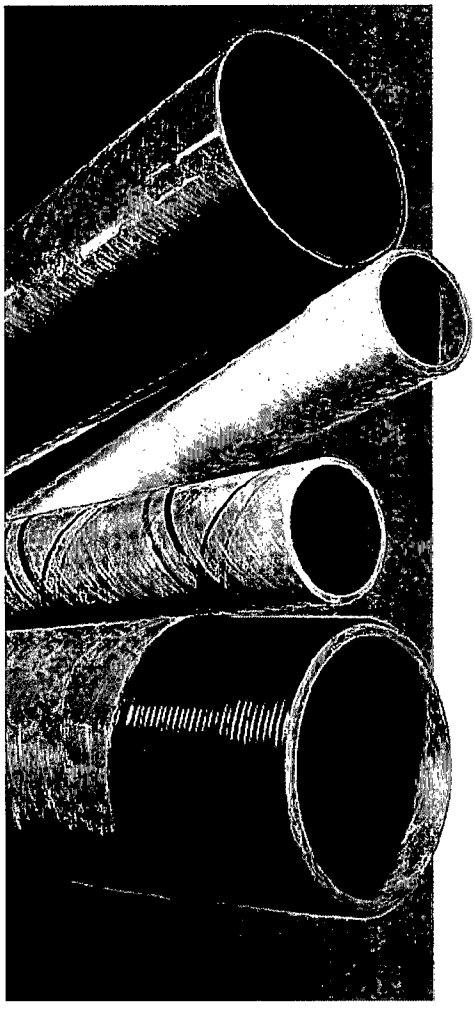
Two piece secondary containment fittings are available in 3"-16" for primary pipe sizes up to 14". The system is designed for maximum field flexibility, ease of installation and the ability to use one size larger containment.

When higher pressure, larger diameter or severe temperature changes are required, Fiber Glass Systems can provide special fittings to handle the added requirements.

Specialty Piping Systems

Fiber Glass Systems completes the gamut of piping requirements with a variety of special-purpose systems offering unsurpassed performance, longevity, and cost-saving value.

Visit www.fgspipe.com or contact your distributor to obtain our Chemical Resistance Guide (E5615). For applications not listed in the guide, or for those involving multiple chemicals, contact FGS Smith Fibercast for assistance.



Ceram Core®

For applications requiring heavy-duty abrasion resistance, including bottom ash, dredge lines, wet process slurries, heavy salt slurries, and more.

Silver Streak®

Provides medium-duty abrasive resistance for flue-gas desulfurization scrubber applications such as limestone and gypsum slurries, and similar uses.

Marine/Offshore

Green Thread products for the gamut of applications, including firewater systems, cooling systems, drain lines, dry-deluge fire piping, column piping, process water, potable water, ballast piping, sounding tubes, and vent lines.

Star High Pressure

Up to 4,000 psi internal pressure capability for injection, flow, and gathering lines in crude-oil, natural gas, saltwater, and freshwater applications; and corrosive oil field service including CO_2 and H_2S.

Pipe	Size Range (in.)	Resin	Pressure Rating (psig)	Inner Corrosion/ Abrasion Barrier Thickness (in.)	Temperature Rating	Joint Types	RTRP Classification (ASTM D2310)	Product/ Installation Manuals

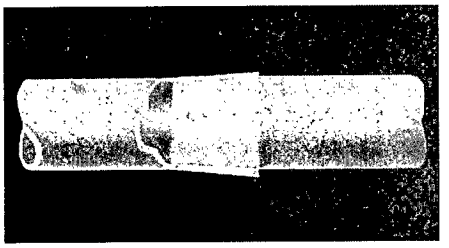
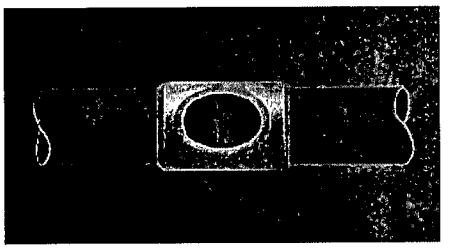
** Available through Fiber Glass Systems, A National Oilwell Varco Company, San Antonio, Texas, www.starfiberglass.com.*

Joining Systems



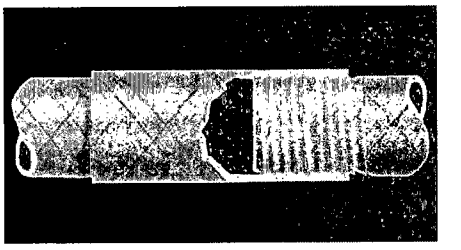
Bell & Spigot

A matched-taper joint secured with epoxy adhesive. Stronger than the pipe itself, in both internal-pressure and axial-tension capability. Resists movement, facilitating joining long runs of pipe without waiting for the adhesive to cure. Can be used with 1-inch to 24-inch pipe diameters.



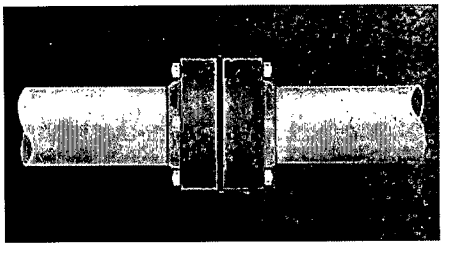
Socket

Positive stop lands simplify precise makeup of complex piping configurations. For pipe diameters of 1 inch to 14 inches.



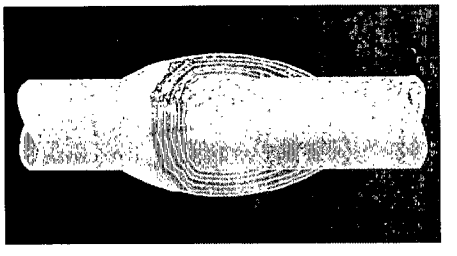
T.A.B.™

The ultra-reliable FGS threaded and bonded joining system. Double-lead threading ensures an extra secure adhesive connection during installation. Available for 2-inch through 6-inch pipe diameters (larger sizes available by special quotation).



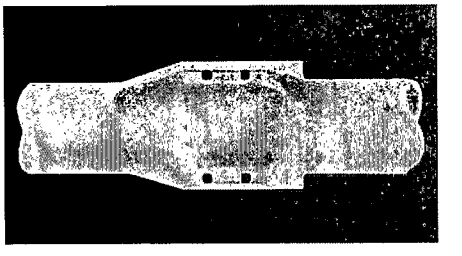
Flanged

Available for all piping systems and diameters; factory assembled or shipped loose for assembly in the field. Self-aligning flanges for Ceram Core systems ensure proper alignment of inside diameters for optimum wear resistance.



Butt & Wrap

Plain-end pipes or pipe and fittings butted together and wrapped with multiple layers of resin-saturated mat or woven roving. Can be used with all piping systems and diameters.



O-Ring Bell & Spigot

Mechanical, O-ring sealed joint, especially useful for buried installations. Available for 10-inch through 72-inch diameters, with the choice of either single or double O-rings in most sizes.

Fiber Glass Systems Support

To help ensure timely, trouble-free, and above all economical installations of time-tested Fiber Glass Systems piping systems, we offer unrivaled customer support to go with our unrivaled product lineup. Call FGS for full information about all of the following and more:

- Turn-key design and engineering assistance
- On-site installation training by Fiber Glass Systems field technicians
- Free FGS piping-design CD-ROM programs for the Chemical & Industrial, Marine-Offshore, and UL-Listed Fuel Piping markets; including the *Success by Design* engineering program, complete with pipe specifications and chemical guidelines (also available for download from our Web site)
- Factory fabrication services to reduce field joints and installation costs
- The worldwide network of FGS stocking distributors and certified fabricators

Product Certifications

Fiber Glass Systems offers a wide range of products to meet the specifications of these and other distinguished regulatory entities.

Call for information about the time-tested piping products available to fulfill your project's compliance requirements.

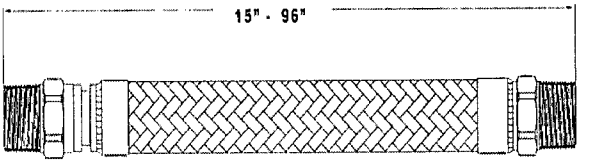
FIREFLEX FLEXIBLE CONNECTORS

2828 Fallon Drive
Sherman, Texas 75090
Phone: 1.800.333.3599 / 1.903.892.8983
Fax: 1.800.765.4801 / 1.903.893.9576

Description —

FLEX-ING's premiere above and below ground fire rated flex connector.

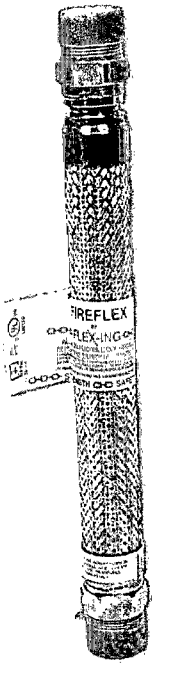


Application —

Connects the shear valve with primary piping in a fuel dispenser sump system.

Features —

SB 989 Compliant	Successful Praxair/Tracer Testing
Metal construction	All metal construction means one flex-connector for both above and below ground applications.
Full Vacuum	Testable under full vacuum.
UL Listed	UL Listed for above and below ground installation.
Long service life	An 18-8 alloy with titanium, 321 Stainless Steel inner core provides a long service life.
Greater flexibility	Standard wall thickness with close pitch corrugations gives more flexibility.
Multi-seal design	The 346 Integral Male Swivel* ensures ease of installation with a multi-seal design.
Schedule 80 construction	Thick, schedule 80 hex end fittings protect against deformation of the ends.
Quality tested	100% pressure tested to assure quality.
Superior working pressure	350 psi working pressure assembly exceeds UL 50 psi requirement on 3/4" - 3". 225 psi on 4"
Minimum Bend Radius from Centerline of Hose	6" - Hose up to 2" 9" - Hose up to 3" 13" - Hose up to 4"



NFPA® MEMBER 2009-2010

See Requirements and Installation Instructions on Page 2

FLEX-ING™

www.flex-ing.com

FIREFLEX FLEXIBLE CONNECTORS

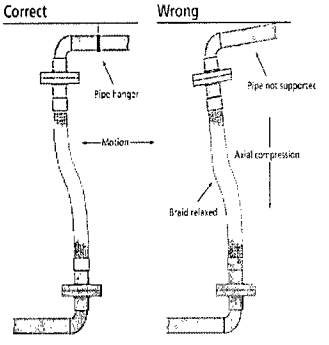
Requirements —

- Must be used in a liquid tight sump
- Must be used with operational leak detection
- Must not come in contact with Brine, Saltwater, Saltwater splash, saltwater spray and/or chlorine
- You must visually inspect the flex connector for any defect or damage that may have occurred during shipping
- If you find a damaged flex connector, you must return it to FLEX-ING or the authorized distributor
- Flex connectors must be replaced when the dispenser has been hit or disrupted
- Replace the flex connector if the shear valve has broken. Shear valve must remain properly mounted
- Tags are an integral part of the connector and must remain intact
- Do not remove tags or labels
- Never coat a flex connector with a non-approved coating
- Do Not torque flex connector
- Install in one plane of motion
- Do Not exceed minimum bend radius
- Do Not compress or deform
- You must be OSHA trained and have OSHA approved equipment

Installation Instructions —

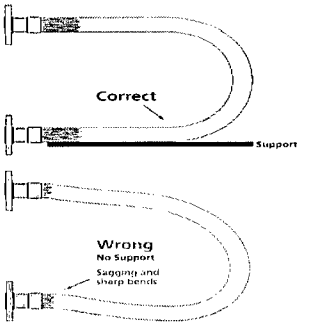
DO NOT COMPRESS OR EXTEND AXIALLY

Corrugated metal hose installed in-line with the longitudinal axis of the piping should not be subject to axial movement.



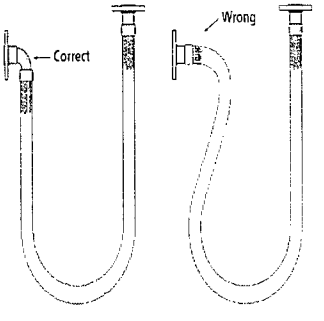
PROVIDE SUPPORT

When installing the assembly in a horizontal loop, provide support for the arms to prevent the hose from sagging.



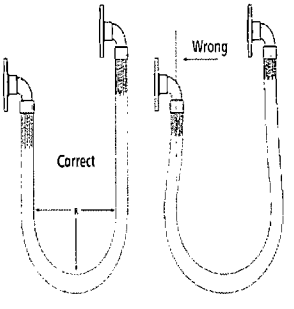
AVOID SHARP BENDS

Use elbows to avoid sharp bends near the end of the metal hose assembly.



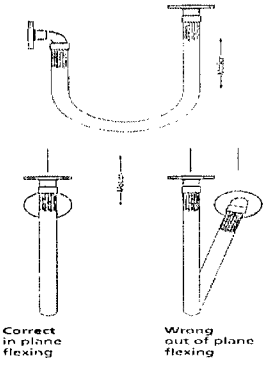
MAINTAIN MINIMUM CENTERLINE BEND RADIUS

Flex connectors must be used in a liquid tight sump with operational leak detection.



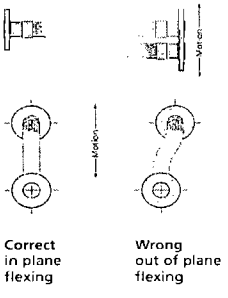
DO NOT ALLOW MOVEMENT IN MULTIPLE PLANES

Flexing a metal hose in two separate planes of movement will torque the hose assembly. Always install the metal hose assembly so that flexing occurs in one plane only, the plane in which bending occurs.



DO NOT TORQUE DURING INSTALLATION

Do not use to compensate for bolt hole misalignment. Floating flanges will help to minimize twisting of the metal hose. Pipe unions will help to reduce twisting during connection to the piping. The use of two wrenches will help to keep the hose from twisting when tightening the pipe union.



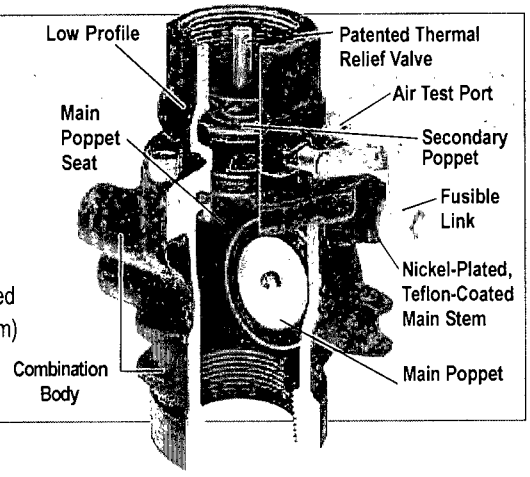
Installation Instruction Tags are an integral part of the flex connector. If you receive a Flex-connector without an installation tag contact us immediately at 1-800-333-3599. Removal of this tag voids the warranty and the UL Listing.

All metal hose assemblies are custom made. We do have standard catalog products but they are considered non-stock. All returns require a Return Goods Authorization number and a re-stocking charge will be applied. Some products may be non-returnable.

#3

Materials

Top: Cast iron
Body: Cast iron
Disc: M-19
Carrier: Zinc-plated steel
Stem: Copper-nickel-chrome-plated brass
Poppet spring: Stainless steel
Seal: M-19 O-Ring
Packing nut: Brass, Teflon®-coated
Inlet and outlet thread: 1½" (4 cm) NPT (British threads available)
*With black Duragard® E-Coating



Features

- **High Flow Capacity** – the primary poppet is held out of the flow stream while the secondary poppet is held normally open to minimize head loss across the valve and to protect the poppet seals from damage and erosion. True 1½" (4 cm) and 2" (5 cm) body sizes ensure maximum flow.
- **Fire Protection** – a fusible link trips the valve closed at 165° F to shut off fuel supply to the dispenser.
- **Main Poppet Seat Integral to the Top Assembly** – having the main poppet seat as an integral part of the valve top ensures a new, clean seating surface is installed each time the top is replaced. This design also ensures that the integrity of the seal between the valve top and bottom is verified during line testing and allows full inspection of the main poppet when the top is removed.
- **Duragard®-Coat Finish** – provides superior corrosion resistance.
- **Reliable Shut-off** – a stainless steel main spring, a teflon-coated brass packing nut and a copper/nickel/chrome-plated brass stem are designed to prevent tar build-up and corrosion from interfering with poppet operation after long periods of normal service without activation.
- **Integral Test Port** – a ⅜" (9.5 mm) test port allows the piping system to be air-tested without breaking any piping connections.
- **Patented Thermal Relief Valve** – relieves excessive pressure over 25 psi caused by thermal expansion of fuel in the dispenser piping system in the event of fire (double-poppet models only).
- **Low-Profile Tops** – female and union-top double-poppet valves have a low-profile top to allow upgrading from OPW single-poppet valves without changing existing piping.
- **Multiple Mounting Options** – valves are boss-mounted to stabilizer bars in sumps and pans or mounted to bars embedded in the island with optional U-Bolt kits 10UBK-015 (not included). Versatile Combination Body (boss mount/U-Bolt mount) models are available to accommodate most mounting applications with one valve style.
- **Underwriters Laboratories** – listed for use with gasoline and 85% and 100% methanol. All OPW 10 Emergency Shut-Off Valves meet requirements of UL STANDARD 842.
- **Compatible with 85% ethanol (E85)**

PA15 Offset Adaptor

The OPW PA15 Offset Adaptor is designed for adjusting misalignment of pipe in dispenser sumps and suction stubs. The PA15 has a low profile feature, and is designed for maximum flow.

OPW 10 Series Emergency Shut-Off Valves

OPW 10 Series Emergency Shut-off Valves are installed on fuel supply lines beneath dispensers at grade level to minimize hazards associated with collision or fire at the dispenser. If the dispenser is pulled over or dislodged by collision, the top of the valve breaks off at the integral shear groove, activating poppets and shutting off the flow of fuel. Single-poppet models shut off supply flow, while double-poppet models shut off supply as well as prevent release of fuel from the dispenser's internal piping. The base of the emergency valve is securely anchored to the concrete dispenser island through a stabilizer bar system within the dispenser sump or pan to ensure proper shearing action. The valve base is secured to the stabilizer bar using a three-point boss mount system or a U-Bolt Kit (not included) 10UBK-015 (1-1/2") and 10URK-0200 (2 sold separately). Valve inlet (bottom) connections are female pipe threads and outlet (top) connections are available with female threads, male threads or a union fitting. Other options include suction system models with a normally closed secondary poppet which maintains prime, and models with external threads on the inlet body which connect to secondary containment systems.

10RUP-2006	2	5	NPT	Double	Pressure	10RUTCP-5972

Note: All BSPP Thread Shear Valves must be ordered through Europe or China office.

IMPORTANT NOTICE:

When mounting the OPW 10 Series Emergency Shut-off Valves, the anchoring system employed must withstand a force greater than 650 ft. pounds per valve.
NFPA Code 30A, Automotive and Marine Service Station Code, requires that the automatic closing feature of emergency shut-off valves be checked at least once per year by manually tripping the hold-open linkage. OPW recommends the use of Flexworks Stabilizer Bar Support System for proper mounting of 10 Series Valves.

NOTICE:

As per NFPA 30A, electrical supply to the submersible pump must always be disconnected before servicing meters, dispensers or emergency shut-off valves.

Stand-Alone Dispenser Pan Sensor

Veeder-Root's Stand-Alone Dispenser Pan Sensors immediately shut down AC power when fluid is detected in the dispenser pan. Fail-safe design features eliminate the missing a leak condition.

Easily installed in most dispenser pans and dispenser sumps*, the Stand-Alone Sens most manufacturers' dispensers. The sensors control and shut down power to the the need for additional relays, circuitry or wiring. The sensors' control interface ensu intrinsically safe integrity in a Class I Division II hazardous area.

Accurate and reliable, the Stand-Alone Dispenser Pan Sensors withstand the harshes Stand-Alone Dispenser Pan Sensors are warranted to be free from detects for a peri from the date of installation or 15 months from the date of invoice.

Detection Capabilities

Float Switch Dispenser Pan Sensor shuts down dispenser when it detects:
-1-1/2" of liquid at the base of the sensor

Discriminating Dispenser Pan Sensor shuts down dispenser when it detects:
-1/32" of hydrocarbons floating on liquid at any height on the sensor
-1/8" of hydrocarbon liquid at the base of the sensor
-6-1/2" of liquid from the base of the sensor

Operating Capabilities

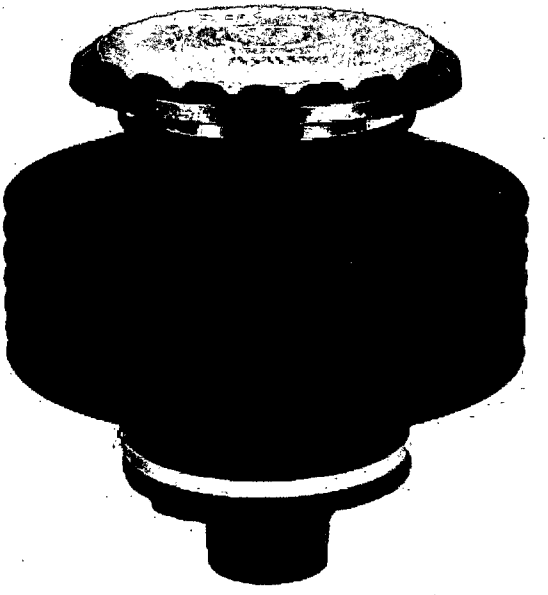
OPW

A DOVER COMPANY

OPW 1-2100-EVR Series Thread-On Spill Containers (1-2100 1-2115 1-2100E)



OPW and Pomeco Spill Containment Manholes are designed to prevent spilled product from entering the soil near the fill and vapor return riser connections on underground storage tanks during normal tank filling operation, or in the event of tank overfill. The spill containers catch spillage to help prevent soil contamination and groundwater pollution. OPW Thread-On Spill Containment Manholes are generally used on new tank or riser pipe installations.

Table of Contents:

1. Features
2. Ordering Specifications
3. Replacement Parts
4. Certifications and Listings
5. Additional Resources

Features:

- Easy Installation - Reduces job-site time and installation costs. OPW Thread-On Spill Containers screw directly onto 4" NPT or BSPT risers. No external connections to make; adjust the final grade height and support the unit with backfill.
- Integral Pull-to-Open Drain Valve - Allows high-speed drainage of excess product into the tank. Designed with a convenient self-cleaning seal and removable screen for easier component cleaning.
- Capacity - Available in a true 5-gallon capacity as well as 15-gallon capacity. Deep bucket 7.5-gallon models (1-2100E and 1C-2100E) are also available to provide additional clearance for threaded-top OPW 61TNG Overfill Valve installations. Note: Available in Europe.
- Rain-Shedding Cover - Available in either cast aluminum or cast iron, this unique design incorporates a seal in the underside of the cover. The seal seats between two dams on the mounting ring to prevent surface water from entering the spill container.
- Fuel Compatibility - Designed to accommodate the fuels of the future, including methanol, ethanol and fuels with MTBE additives.
- Product Identification Tags - Available for both the cover and bucket to positively identify the product contained in the UST with standard API symbols. (See product I.D. tag specification page for more information)
- Heavy-Duty Mounting Ring - The angled ramp design offers superior protection against snow plow and traffic damage, and provides for secure concrete anchoring.
- Duratuff® II or Cast Iron Base - Composite Duratuff® II material is lightweight, durable, and conductive. A rugged optional cast iron base is also available.
- Highway 20 Rated (H20) - All OPW spill containers and manholes exceed the requirements of the Highway 20 rating.

Materials:

Cover: cast aluminum or cast iron
Mounting ring: Duragard® coated cast iron
Bellows: polyethylene
Base: Duratuff® II or cast iron
Clamps: stainless steel
Seals: Buna-N

NOTICE

- Closely adhere to all directions and warnings indicated on the product or contained in these instructions.

- Warranty is void if there is any evidence of modification, abuse, negligence or improper installation.

- For assistance please call Bravo for technical support at (800) 28-BRAVO. Outside the U.S.A. please call (323) 888-4133.

SAFETY FIRST! S. Bravo Systems, Inc. urges you to carefully adhere to the normal safety procedures and precautions followed by your company. Please follow the mandates and compliances decreed by OSHA, local, State and federal regulations regarding the use of this product.

WARRANTY

All containment systems sold by S. Bravo Systems, Inc. are warranted to be free from defects in material and workmanship for a period of one year from date of purchase. This warranty will be limited to the repair and replacement of Bravo parts only and will exclude all claims for labor or consequential damage. No other express warranties given and no affirmation of S. Bravo Systems, Inc., or its agents and/or representatives, by words or action, will constitute a warranty. IT IS EXPRESSLY AGREED THAT THIS WARRANTY WILL BE IN LIEU OF ALL WARRANTIES OF FITNESS AND IN LIEU OF THE WARRANTY OF MERCHANTABILITY.

This warranty is void if there is any evidence of modification, abuse, negligence, or improper installation. If any fittings or components, other than S. Bravo Systems approved fittings or components, are used in conjunction with any S. Bravo Systems product, the warranty pertaining to these products is immediately void.

UPON ARRIVAL

Inspect your sumps for damage, which would be visible as bright white areas of fiberglass.

A) LEVELING ANDPENETRATIONS

A.1) Determine your dispenser grade, run & secure a grade line.

A.2) With your island form in place, use angle stock (NOT Provided) to span the width of the island. Hang the UDC from the metal frame on both sides & secure it's position. Always set box at a minimum 1/4" above island level. **IF NO ISLAND WILL BE INSTALLED**, ensure the box is set at a minimum of 1" above grade. **(See Fig. A.2)**

A.3) Shovel a wide bed of peagravel under the UDC to support it fully.

A.4) Install your brackets, shear valves and flexes. Mark sump for penetration fittings.

A.5) Install all product Fittings and piping to the bottom Sump. Measure your fittings overall diameters. Using these measurements, plan your penetrations so that the fittings are 1" away from all edges and corners. **DO NOT WATER TEST AT THIS TIME.** Allow a full cure time for all penetration fittings.

A.6) Seal your piping system and test your primary and secondary lines (if applicable).

A.7) Only after your piping system has passed its tests, proceed to seal your pipe lines to your penetration fittings (if applicable).

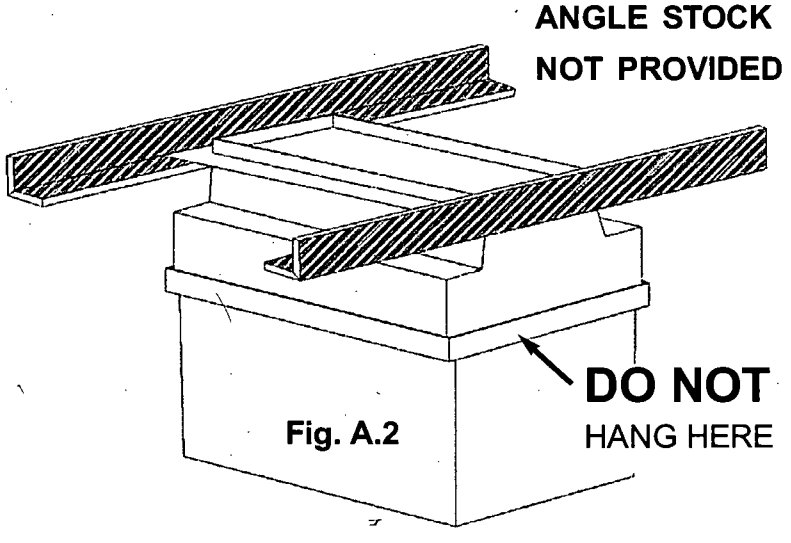

Fig. A.2

Rest Angle Stock across your island form to secure the assembled sump to the correct position and grade

DO NOT HANG SUMP DURING WATER TESTING

B) WATER TESTING

Sump must be supported from the bottom. Fill with water to no more than 2" above the factory sealed joint and monitor for one hour. Look for leaks at the sealed joint, fittings, and all edges and corners. If any leaks are found at the sealed joint or on fiberglass walls, see **Step B.3** for repair instructions. **All local regulations precede these instructions.**

B.1) Seal any/all gaps between the fiberglass and the metal frame with Vulkem. Apply approximately 1/8" thick on the outside along the joint at the bottom edge of the frame, then seal any gaps from the inside as necessary. **(Fig. B.1)**

B.2) Install your Concrete Anchor Bolts to your dispenser frame as shown in **Fig. B.2**.

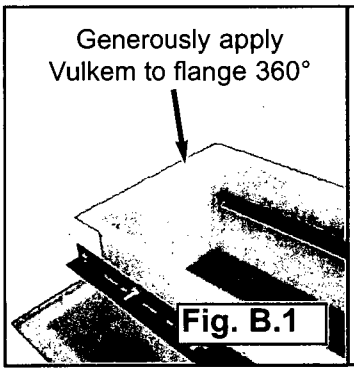

Fig. B.1

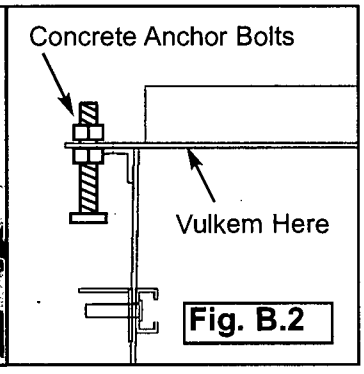

Fig. B.2

B.3) - Repair instructions for your sump, For Pinhole Leaks

Focus on edges, corners and All Penetrations. **For large leaks, consult factory.**

A: Locate leak point(s) and mark with marker so you can locate it / monitor it.

B: Repair or reinstall penetration fittings according to your penetration fitting manufacturers' Installation / Maintenance Instructions.

C: Abrade a 3" diameter area centered on the leak point until natural resin/fiberglass material can be seen. Dust with shop brush or compressed air and do not use shop towels or acetone on the abraded area(s). Then apply a 3-layer strip of 2" x 2" resin-saturated fiberglass mat squarely on the abraded area.

D: Roll out any air bubbles with a ***chamfer (metallic fiberglass) roller***. Let cure.

E: After cure, knock down fiberglass hairs, and apply another flow coat of resin only. Let cure.

ALLOW ANY REPAIRS TO FULLY CURE BEFORE TESTING SUMP AGAIN

B.4) Backfill your site with your available backfill material, in preparation of concrete pouring.

B.5) Make sure your sump is properly secured to the island supports so that it will not interfere with your Concrete pour. When secure, proceed to pour concrete around UDC.

C) BRAVO ELECTRICAL OFFSET FRAME INSTALLATION INSTRUCTIONS

IMPORTANT Make sure all electrical conduits and piping are clear of any equipment or other obstructions in the dispenser. Physically check your hydraulic cabinet for obstructions before any installation begins.

BRAVO UNDER DISPENSER CONTAINMENT ELECTRICAL OFFSET INSTRUCTIONS

C.1) The Frame should be fully installed and sealed with Vulkem before conduit installation.

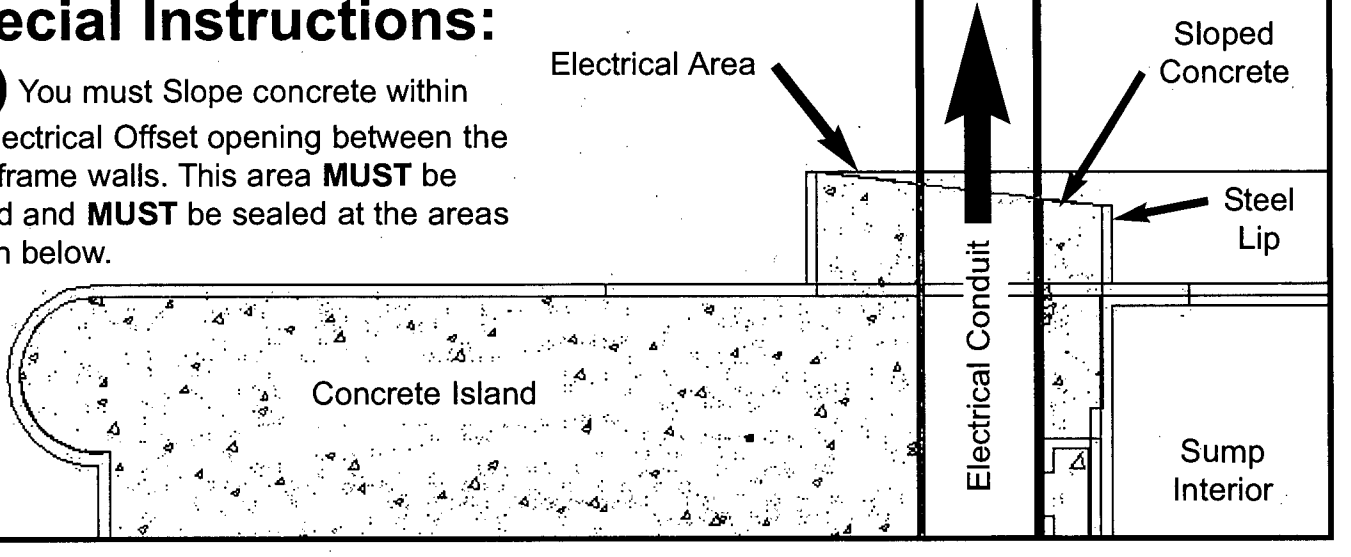
C.2) Make sure all electrical conduits (piping) are clear of any equipment in the dispenser. Physically check your hydraulic cabinet for obstructions before any installation begins.

C.3) Conduits must be run and tightly secured to the sump.

C.4) Pour concrete around outside of Dispenser Sump per Bravo Installation Instructions.

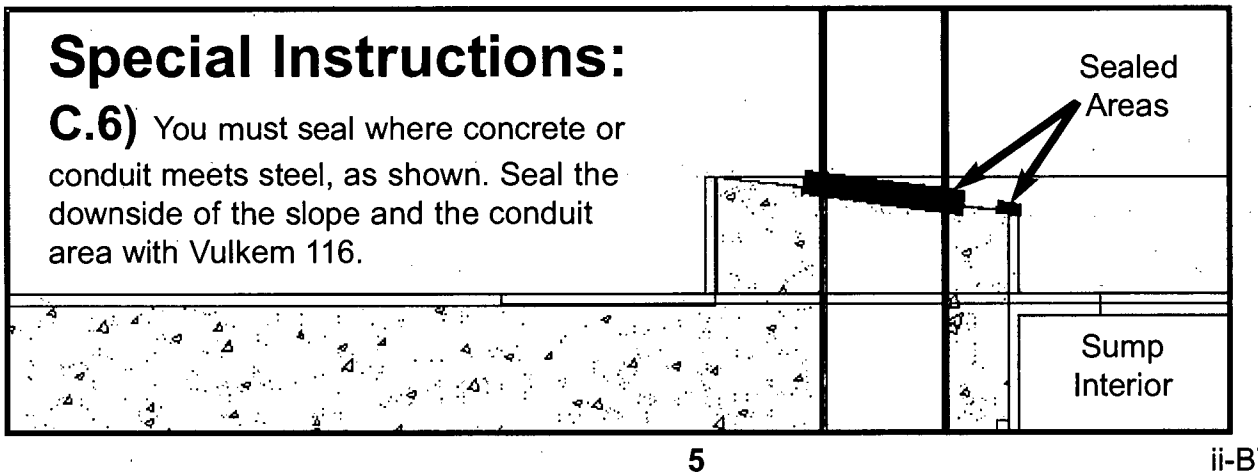
Special Instructions:

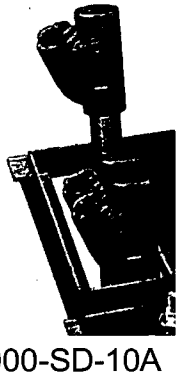
C.5) You must Slope concrete within the Electrical Offset opening between the steel frame walls. This area **MUST** be sloped and **MUST** be sealed at the areas shown below.



Special Instructions:

C.6) You must seal where concrete or conduit meets steel, as shown. Seal the downside of the slope and the conduit area with Vulkem 116.

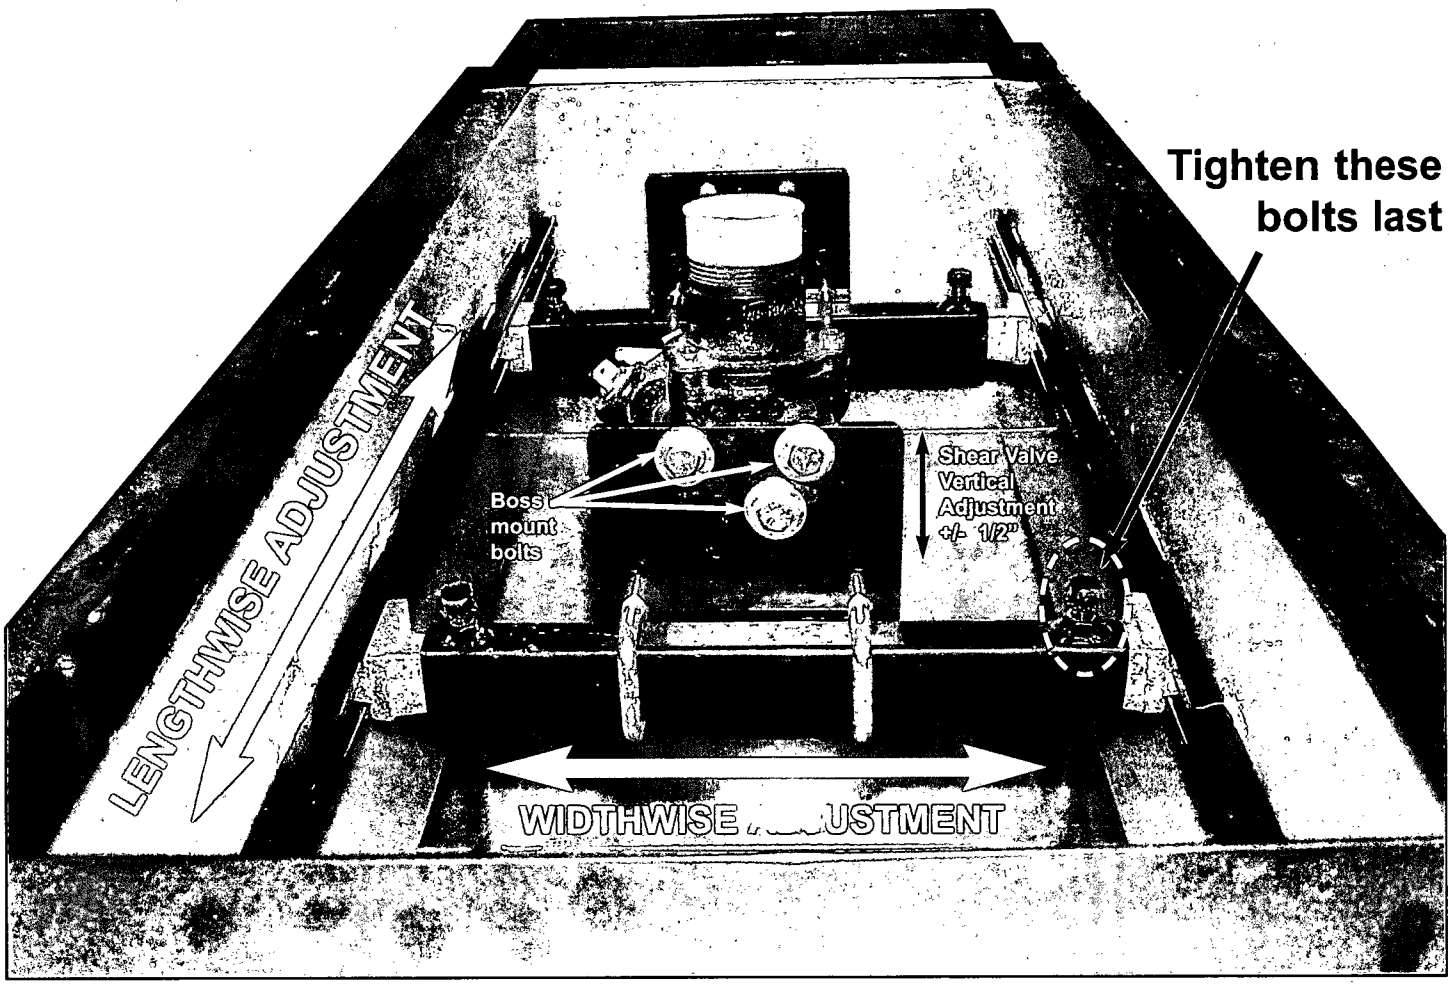




FOR WAYNE-VAC ELECTRICAL OFFSET

Mark the medallions you need to penetrate with conduit and use a centralized hole saw centered in the middle of the raised medallion to cut the ones you need. Only use a hole saw that matches your conduit size and hand sand the hole edge if the conduit does not cleanly fit through. After target elevation, seal-offs and other conduit components have been installed, seal the open edge with Vulkem 116 polyurethane sealant. This sealant comes in a standard size caulk tube and is provided by Bravo with your sump.

D - ADJUSTING THE PRODUCT SHEAR VALVE



D.1 - When the dispenser is anchored properly, the dispenser inlet or pump inlet should be plumb with the product shear valve. If the product shear valves are positioned correctly, connect them with a union.

D.2 - If the valve and inlet are not aligned, determine the distance necessary for the valve to be moved. To adjust the valve lengthwise and/or widthwise, loosen the 3/8" bolts on the bracket ends and on the bracket inserts. Align valve to dispenser inlet and retighten bolts.

D.3 - Connect dispenser riser pipe to the product shear valve. A nipple may be required to extend the dispenser riser. If product shear valves are positioned correctly, connect them with a union.

IMPORTANT **For rigid piping apply a UL classified pipe sealant for use and handling of gasoline and petroleum oils to externally threaded connections.**

D.4 - Now retighten bolts and/or nuts attaching the shear valves to the bracket. Use provided washers. Tighten the top bolts for the brackets last, as this can restrict adjustability if tightened early.

D.5 - Connect electrical and vapor lines to the dispenser as required by local regulations. Always follow electrical and vapor component manufacturers' Installation Instructions.

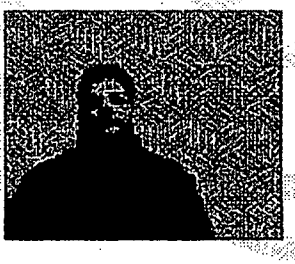
INTERNATIONAL CODE COUNCIL

UST Installation/Retrofitting



Candidate ID: XX4341015422

Name: ANTHONY MENDEZ Date: 12/21/2010

Address: PO BOX 1137 Birth Date: 1/7/1964

SAN MARTIN CA 95046

EXAMINATION RESULT: **PASS**

Congratulations! You have passed the above named examination. Your wallet card will be forwarded to you by ICC within six weeks from the last day of the month in which you tested. This certificate is current for two years.

You may request a wall certificate from ICC as well. Throughout 2010, this certificate will be provided at no cost to you, if you request it within 90 days of your exam. Only one wall certificate per exam passed will be provided to you at no charge. For more information on requesting a wall certificate, go to www.iccsafe.org/inspector.

It is extremely important that you notify Pearson VUE and ICC of any changes in name and/or address to avoid the possibility of your wallet card and/or certificate not being received. Please contact Pearson VUE at 800-275-8301 and ICC at certexam@iccsafe.org with changes to your name and address (name changes may require additional documentation). There may be an additional fee if a certification is re-issued due to a misspelled name or incorrect address.

TO VERIFY AUTHENTICITY OF THIS DOCUMENT YOU MUST TURN [illegible] AND RUB THE PEARSON VUE LOGO WITH FINGER. AUTHENTIC [illegible] MENT WILL CHANGE COLOR FROM ORANGE TO YELLOW

practice developed in accordance with voluntary consensus standards. The owner or operator shall certify that the piping was installed in accordance with the above requirements of section 2635(d). The certification shall be made on the "Underground Storage Tank Certification of Installation/Modification" form in Title 27, Division 3, Subdivision 1, Chapter 6.

(d) Lined trench systems used as part of a secondary containment system shall be designed and constructed according to a code of practice or engineering standard approved by a state registered professional engineer. The following requirements shall also apply:

(1) All trench materials shall be compatible with the substance stored and evaluated by an independent testing organization for their compatibility or adequacy of the trench design, construction, and application.

(2) The trench shall be covered and capable of supporting any expected vehicular traffic.

(e) All new primary piping and secondary containments systems shall be tested for tightness after installation in accordance with manufacturer's guidelines. Primary pressurized piping shall be tested for tightness hydrostatically at 150 percent of design operating pressure or pneumatically at 110 percent of design operating pressure. If the calculated test pressure for pressurized piping is less than 40 psi, 40 psi shall be used as the test pressure. The pressure shall be maintained for a minimum of 30 minutes and all joints shall be soap tested. A failed test, as evidenced by the presence of bubbles, shall require appropriate repairs and retesting. if there are no manufacturer's guidelines, secondary containment systems shall be tested using an applicable method specified in an industry code or engineering standard. Suction piping and gravity flow piping which cannot be isolated from the tank shall be tested after installation in conjunction with an overfilled volumetric tank integrity test or other test method meeting the requirements of section 2643(f), if approved by the local agency.

(f) Underground piping with secondary containment, including under-dispenser piping with secondary containment, shall be equipped and monitored with monitoring systems as follows:

(1) All secondary containment, including under-dispenser containment, and under-dispenser spill control or containment systems shall be equipped with a continuous monitoring system that either activates an audible and visual alarm or stops the flow of product at the dispenser when it detects a leak.

(2) Automatic line leak detectors shall be installed on underground pressurized piping and shall be capable of detecting a 3-gallon per hour leak rate at 10 psi within 1 hour with a probability of detection of at least 95 percent and a probability of false alarm no greater than 5 percent, and shall restrict or shut off the flow of product through the piping when a leak is detected.

[Editor's note – Version of (f)(3) in effect prior to 1/17/2008]
(3) Until November 9, 2004, other monitoring methods may be used in lieu of the requirement in subdivision (2) if it is demonstrated to the satisfaction of the local agency that the alternate method is as effective as the methods otherwise required by this section. Continuous monitoring systems as described in subdivision (1), which shut down the pump in addition to either activating the audible and visual alarm or stopping the flow of product at the dispenser, satisfy the automatic line leak detector requirement of subdivision (2).

[Editor's note – Version of (f)(3) in effect 1/17/2008]
(3) Until November 9, 2004, other monitoring methods may be used in lieu of the requirement in subdivision (2) if it is demonstrated to the satisfaction of the local agency that the alternate method is as effective as the methods otherwise required by this section. As an example, continuous monitoring systems as described in subdivision (1), which shut down the pump in addition to either activating the audible and visual alarm or stopping the flow of product at the dispenser, satisfy the automatic line leak detector requirement of subdivision (2), for purposes of this subdivision (f)(3).

(4) Monitoring shall be conducted on all underground pressurized piping with secondary containment at least annually at a pressure designated by the equipment manufacturer, provided that the method is capable of detecting a minimum release equivalent to 0.1 gallon per hour defined at 150 percent of the normal operating pressure of the product piping system at the test pressure with at least a 95 percent probability of detection and not more than a 5 percent probability of false alarm.

(5) Continuous monitoring systems as described in subdivision (f)(1) satisfy the annual tightness testing requirement of subdivision (f)(4) if both of the following conditions are met:

FAO 258851

UNDERGROUND STORAGE TANK
RESPONSE PLAN – PAGE 1

(One form per facility)

TYPE OF ACTION ☐ 1. NEW PLAN ☒ 2. CHANGE OF INFORMATION R01.

I. FACILITY INFORMATION

FACILITY ID # *(Agency Use Only)* | | | — | | | | — | | | | | | | 1.

BUSINESS NAME (Same as FACILITY NAME) 3.

Granite Rock Company-Pavex Central

BUSINESS SITE ADDRESS 103.	BUSINESS SITE CITY 104.
120 Granite Rock Way	**San Jose**

II. SPILL CONTROL AND CLEANUP METHODS

This plan addresses unauthorized releases from UST systems and supplements the emergency response plans and procedures in the facility's Hazardous Materials Business Plan (HMBP).

- If safe to do so, facility personnel will take immediate measures to control or stop any release (e.g., activate pump shut-off, etc.) and, if necessary, safely remove remaining hazardous material from the UST system.
- Any release to secondary containment will be pumped or otherwise removed within a time consistent with the ability of the secondary containment system to contain the hazardous material, but not greater than 30 calendar days, or sooner if required by the local agency. Recovered hazardous materials, unless still suitable for their intended use, will be managed as hazardous waste.
- Absorbent material will be used to contain and clean up manageable spills of hazardous materials. Absorbent material which has become too saturated to be effective or which is no longer intended for use will be managed as hazardous waste unless a waste determination in accordance with 22 CCR §66262.11 finds that it is non-hazardous. Used absorbent material, reusable or waste, will be stored in a properly labeled and sealed container. Waste material shall be disposed of appropriately.
- Facility personnel will determine whether any water removed from secondary containment systems, or from clean-up activity, has been in contact with any hazardous material. If the water is contaminated, it will be managed as hazardous waste unless a hazardous waste determination in accordance with 22 CCR §66262.11 finds that it is non-hazardous. If the water has a petroleum sheen (i.e., rainbow colors), it is contaminated. A thick floating petroleum layer may not necessarily display rainbow colors. Water (hazardous or non-hazardous) from sumps, spill containers, etc. will not be disposed to storm water systems.
- We will review secondary containment systems for possible deterioration if any of the following conditions occur:
  1. Hazardous material in contact with secondary containment is not compatible with the material used for secondary containment;
  2. Secondary containment is prone to damage from any equipment used to remove or clean up hazardous material collected in secondary containment;
  3. Hazardous material, other than the product/waste stored in the primary containment system, is placed inside secondary containment to treat or neutralize released product/waste, and the added material or resulting material from such a combination is not compatible with secondary containment.

III. SPILL CONTROL AND CLEAN-UP EQUIPMENT

PERIODIC MAINTENANCE: Spill control and clean-up equipment kept permanently on-site is listed in the facility's Hazardous Materials Business Plan. This equipment is inspected at least monthly, and after each use, supplies are replenished as needed. Defective equipment is repaired or replaced as necessary.

EQUIPMENT NOT PERMANENTLY ON-SITE, BUT AVAILABLE FOR USE IF NEEDED: *(Complete only if applicable)*

EQUIPMENT	LOCATION	AVAILABILITY
R10.	R20.	R30.
R11.	R21.	R31.
R12.	R22.	R32.
R13.	R23.	R33.
R14.	R24.	R34.
R15.	R25.	R35.

IV. RESPONSIBLE PERSONS

THE FOLLOWING PERSON(S) IS/ARE RESPONSIBLE FOR AUTHORIZING ANY WORK NECESSARY UNDER THIS RESPONSE PLAN:

NAME	TITLE
R40. **Elden Davis**	R50. **Equipment Manager**
R41. **Ken Nott**	R51. **Equipment Superintendent**
R42. **Elias Lanuza**	R52. **Maintenance Planner**
R43.	R53.

V. MONITORING INDICATORS

IF MONITORING INDICATES A POSSIBLE UNAUTHORIZED RELEASE, STEPS TO VERIFY THE RELEASE WILL BE MADE AS FOLLOWS:

☒ 1. ADDITIONAL SYSTEM TESTING OR DATA COLLECTION ☒ 2. INSPECTION BY QUALIFIED PERSONS ☐ 3. RECALIBRATION OF EQUIPMENT R60.

☐ 99. OTHER (Specify): R61.

UNDERGROUND STORAGE TANK

RESPONSE PLAN – PAGE 2

VI. REPORTING AND RECORD KEEPING

We will report/record any overfill, spill, or unauthorized release from a UST system as indicated in this plan.

Recordable Releases: Any unauthorized release from primary containment which the UST operator is able to clean up within eight (8) hours after the release was detected or should reasonably have been detected, and which does not escape from secondary containment, does not increase the hazard of fire or explosion, and does not cause any deterioration of secondary containment, must be recorded in the facility's monitoring records. Monitoring records must include:

- The UST operator's name and telephone number;
- A list of the types, quantities, and concentrations of hazardous substances released;
- A description of the actions taken to control and clean up the release;
- The method and location of disposal of the released hazardous substances, and whether a hazardous waste manifest was or will be used;
- A description of actions taken to repair the UST and to prevent future releases;
- A description of the method used to reactivate interstitial monitoring after replacement or repair of primary containment.

Reportable Releases: Any overfill, spill, or unauthorized release which escapes from secondary containment (or primary containment if no secondary containment exists), increases the hazard of fire or explosion, or causes any deterioration of secondary containment, is a reportable release. Reportable releases are also recordable.

Within 24 hours after a reportable release has been detected, or should have been detected, we will notify the local agency administering the UST program of the release, investigate the release, and take immediate measures to stop the release. If necessary, or if required by the local agency, remaining stored product/waste will be removed from the UST to prevent further releases or facilitate corrective action. If an emergency exists, we will notify the California Emergency Management Agency at (800) 852-7550.

Within five (5) working days of a reportable release, we will submit to the local agency a full written report containing all of the following information to the extent that the information is known at the time of filing the report:

- The UST owner's or operator's name and telephone number;
- A list of the types, quantities, and concentrations of hazardous materials released;
- The approximate date of the release;
- The date on which the release was discovered;
- The date on which the release was stopped;
- A description of actions taken to control and/or stop the release;
- A description of corrective and remedial actions, including investigations which were undertaken and will be conducted to determine the nature and extent of soil, ground water or surface water contamination due to the release;
- The method(s) of cleanup implemented to date, proposed cleanup actions, and a schedule for implementing the proposed actions;
- The method(s) and location(s) of disposal of released hazardous materials and any contaminated soils, groundwater, or surface water.
- Copies of any hazardous waste manifests used for off-site transport of hazardous wastes associated with clean-up activity;
- A description of proposed methods for any repair or replacement of UST system primary/secondary containment systems;
- A description of additional actions taken to prevent future releases.

We will follow the reporting procedures described above if any of the following conditions occur:

- A recordable unauthorized release can not be cleaned up or is still under investigation within eight (8) hours of detection;
- Released hazardous substances are discovered at the UST site or in the surrounding area;
- Unusual operating conditions are observed, including erratic behavior of product dispensing equipment, sudden loss of product, or the unexplained presence of water in the tank, unless system equipment is found to be defective and is immediately repaired or replaced, and no leak has occurred;
- Monitoring results from UST system monitoring equipment/methods indicate that a release may have occurred, unless the monitoring equipment is found to be defective and is immediately repaired, recalibrated, or replaced, and additional monitoring does not confirm the initial results.

Record Retention: Monitoring records and written reports of unauthorized releases must be maintained on-site (or off-site at a readily available location, if approved by the local agency) for at least 3 years. Hazardous waste shipping/disposal records (e.g., manifests) must be maintained for at least 3 years from the date of shipment.

VII. OWNER/OPERATOR SIGNATURE

Two compartments share a common Annular Space [one test covers both fuels]

[1] Secondary containment systems where the continuous monitoring automatically monitors both the primary and secondary containment, such as systems that are hydrostatically monitored or under constant vacuum, are exempt from periodic containment testing. {California Code of Regulations, Title 23, Section 2637(a)(6)}

SECONDARY PIPE TESTING

Test Method Developed By: ☒ Industry Standard	Test Method Used: ☒ Pressure
Test Equipment Used: Pressure Gage 0 – 15 psig	Equipment Resolution: +/- 0.5 psig

	Diesel Piping Run	Gasoline Piping Run
Piping Material:	Fiberglass	Fiberglass
Piping Manufacturer:	Ameron	Ameron
Piping Diameter:	3"x2"	3"x2"
Pipe Run Length:	21 feet	18 feet
Product Stored:	Diesel Fuel	Gasoline
Method/location of pipe isolation:	Test boot in sump	Test boot in sump
Wait to start Test:	5 minutes	5 minutes
Test Start Time:	8:45 AM	9:15 AM
Initial Reading (R_I):	5 ½ psig	0 psig
Test End Time:	9:45 AM	9:20 AM
Final Reading (R_F):	5 ½ psig	0 psig
Test Duration:	60 minutes	5 minutes
Change (R_F-R_I):	0 psig	0 psig
Pass/Fail Criteria:	+/- 0 psig	+/- 0 psig
Test Result:	☒Pass ☐Fail	☐Pass ☒Fail

Comments – *(include information on repairs made and recommended follow-up for failed tests)*

Observed bubbles coming from compression fitting in gasoline UDC during test of UDC.

PIPING SUMP TESTING

Test Method Developed By: Industry Standard	Test Method Used: Hydrostatic
Test Equipment Used: INCON TS-STS-3K	Equipment Resolution: +/-0.0001"

	Diesel Sump	Gasoline Sump
Product Stored:	Diesel Fuel	Gasoline
Sump Manufacturer:	Western Fiberglass	Western Fiberglass
Sump Diameter:	42"	42"
Sump Depth:	51"	44 ½"
Sump Material:	Fiberglass	Fiberglass
Height from Tank to Top of Highest Piping Penetration:	19 ½"	23"
Height from Tank to Lowest Electrical Penetration:	21 ½"	35 ½"
Sump Condition before test:	Clean/Dry	Clean/Dry
Portion of Sump Tested[1]	23"	23"
Does turbine shut down if sump sensor detects liquid?*	☐Yes ☐ No ☒NA	☐Yes ☐ No ☒NA
Turbine shutdown response time	☐Yes ☐ No ☒NA	☐Yes ☐ No ☒NA
Is system programmed for fail-safe shutdown?*	☐Yes ☐ No ☒NA	☐Yes ☐ No ☒NA
Was fail-safe verified to be operational?*	☐Yes ☐ No ☒NA	☐Yes ☐ No ☒NA
Wait time between pressurizing and start:	5 minutes	10 minutes
Test Start Time:	10:55 AM	11:48 AM
Initial Reading (R_I):	3.0826"	3.7466"
Test End Time:	11:10 AM	12:04 PM
Final Reading (R_F):	3.0828"	3.7466"
Test Duration:	15 minutes	15 minutes
Change in Reading (R_F-R_I):	+0.0002	0.0000
Pass/Fail Criteria:	+0.004/-0.002"	+0.004/-0.002"
Test Result:	☒Pass ☐Fail	☒Pass ☐Fail
Sensor removed for testing?	☒Yes ☐ No ☐NA	☒Yes ☐ No ☐NA
Sensor replaced and verified functional after testing?	☒Yes ☐ No ☐NA	☒Yes ☐ No ☐NA

Comments – *(include information on repairs made and recommended follow-up for failed tests)*

[1] If the entire depth of the sump is not tested, specify how much was tested. If the answer to any of the questions indicated with an asterisk (*) is "NO" or "NA", the entire sump must be tested. (See SWRCB LG-160)

UNDER-DISPENSER CONTAINMENT (UDC) TEST

Test Method Developed By: Industry Standard	Test Method Used: Hydrostatic
Test Equipment Used: INCON TS-STS-3K	Equipment Resolution: +/-0.0001"

	Gasoline UDC	Diesel UDC	HiFlo Diesel UDC
UDC Manufacturer:	Bravo	Bravo	Bravo
UDC Material:	Powder Coated Steel	Powder Coated Steel	Powder Coated Steel
UDC Depth:	8"	8"	9"
Product(s) Dispensed:	Gasoline	Diesel	Diesel
Height of UDC to Top of Piping Penetration:	Bottom Penetration	Bottom Penetration	Bottom Penetration
Height of UDC to Lowest Electrical Penetration:	Bottom Penetration	Bottom Penetration	Bottom Penetration
UDC Condition:	Clean/Dry	Clean/Dry	Clean/Dry
Portion of UDC Tested[1]	5"	6"	6"
Does turbine shut down when sensor detects any liquid?*	☐Yes ☐ No ☒NA	☐Yes ☐ No ☒NA	☐Yes ☐ No ☒NA
Turbine shutdown response time	☐Yes ☐ No ☒NA	☐Yes ☐ No ☒NA	☐Yes ☐ No ☒NA
Is system programmed for fail-safe shutdown?*	☐Yes ☐ No ☒NA	☐Yes ☐ No ☒NA	☐Yes ☐ No ☒NA
Was fail-safe verified to be operational?*	☐Yes ☐ No ☒NA	☐Yes ☐ No ☒NA	☐Yes ☐ No ☒NA
Wait between placing water and starting test	5 minutes	5 minutes	5 minutes
Test Start Time:	10:04 AM	10:55 AM	10:04 AM
Initial Reading (R_I):	2.0389"	0.5331"	0.5733"
Test End Time:	10:19 AM	11:10 AM	10:19 AM
Final Reading (R_F):	2.0400"	0.5326"	0.5730"
Test Duration:	15 minutes	15 minutes	15 minutes
Change in Reading (R_F-R_I):	+0.0011"	-0.0005"	-0.0003"
Pass/Fail Criteria:	+0.004/-0.002"	+0.004/-0.002"	+0.004/-0.002"
Test Result:	☒Pass ☐Fail	☒Pass ☐Fail	☒Pass ☐Fail
Sensor removed for test?	☐Yes ☐ No ☒NA	☐Yes ☐ No ☒NA	☐Yes ☐ No ☒NA
Sensor replaced and functional after test?	☐Yes ☐ No ☒NA	☐Yes ☐ No ☒NA	☐Yes ☐ No ☒NA

Comments – *(include information on repairs made and recommended follow-up for failed tests)*

[1] If the entire depth of the UDC is not tested, specify how much was tested. If the answer to any of the questions indicated with an asterisk (*) is "NO" or "NA", the entire UDC must be tested. (See SWRCB LG-160)

INTERNATIONAL CODE COUNCIL

UST Installation/Retrofitting

Candidate ID: XX4341015472

Name: ANTHONY MENDEZ Date: 12/21/2010

Address: PO BOX 1137 Birth Date: 1/7/1964

SAN MARTIN CA 95046

EXAMINATION RESULT: **PASS**

Congratulations! You have passed the above named examination. Your wallet card will be forwarded to you by ICC within six weeks from the last day of the month in which you tested. This certificate is current for two years.

You may request a wall certificate from ICC as well. Throughout 2010, this certificate will be provided at no cost to you, if you request it within 90 days of your exam. Only one wall certificate per exam passed will be provided to you at no charge. For more information on requesting a wall certificate, go to www.iccsafe.org/inspector.

It is extremely important that you notify Pearson VUE and ICC of any changes in name and/or address to avoid the possibility of your wallet card and/or certificate not being received. Please contact Pearson VUE at 800-275-8301 and ICC at certexam@iccsafe.org with changes to your name and address (name changes may require additional documentation). There may be an additional fee if a certification is re-issued due to a misspelled name or incorrect address.

Granite Rock - Graniterock Way - 2011

MONITORING SYSTEM CERTIFICATION

For Use By All Jurisdictions within California - Authority: Chapter 6.7, H&S Code; Chap 16, Div 3, Title 23, CCR

This form is to document test and service of monitor equipment. A separate certificate must be used for each monitor system. A copy of this form is to be provided to tank system operator. The operator must submit this form to the local agency regulating UST systems within 30 days.

General Information

Facility: Granite Rock Company 120 Graniterock Way, San Jose, CA 95136
Facility Contact: Eli Lanuza Phone No: (408) 574-1497

Results of Testing/Servicing

Software Version Installed: Pneumercator LC 1000

Complete the following checklist:

☒ Yes	☐ No*	Is the audible alarm operational?
☒ Yes	☐ No*	Is the visual alarm operational?
☒ Yes	☐ No*	Were sensors inspected, tested, and confirmed operational?
☒ Yes	☐ No*	Were all sensors installed at lowest point of secondary containment and positioned so that other equipment will not interfere with their proper operation?
☐ Yes	☐ No* ☒ N/A	If alarms are relayed to a remote monitoring station, is all communications equipment (e.g. modem) operational?
☐ Yes	☐ No* ☒ N/A	For pressure systems, does turbine automatically shut down if the piping monitor system detects a leak, fails to operate, or is electrically disconnected? If yes: which sensors initiate positive shut-down? ☐Sump; ☐UDC. Did you confirm positive shut-down due to leaks, sensor failure, disconnection? ☐Yes; ☐No.
☐ Yes	☐ No* ☒ N/A	For tank systems that use the monitor system as the primary overfill warning (ie. no mechanical overfill prevention valve), is the overfill warning alarm visible and audible at tank fill point(s) and operating properly? If so, at what percent of capacity does alarm trigger? _____%
☐Yes*	☒ No	Was any monitor equipment replaced? If yes, identify specific sensors, probes, or other equipment replaced and list manufacturer and model for replacement parts below.
☐Yes*	☒ No	Was liquid found inside secondary containment designed as dry systems? ☐ Product; ☐ Water. If yes, describe below.
☒ Yes	☐ No*	Was monitoring system set-up reviewed to ensure proper settings? Attach reports, if applicable
☒ Yes	☐ No*	Is monitor operational per manufacturer's specifications?

* In Section below, describe how and when these deficiencies were or will be corrected.

Comments: NO POSITIVE SHUT DOWN ON DIESEL TURBINE

Monitoring System Certification

InTank Gage/SIR Equipment: ☒ Check this box if tank gage is only for inventory control.
☐ Check this box if no tank gage/SIR equipment is installed.

Complete this section if in-tank gage equipment is used as leak detection monitor.
Complete the following checklist:

☐ Yes	☐ No*	Has all input wiring been inspected for proper entry and termination, including testing for ground faults?
☐ Yes	☐ No*	Were tank gauge probes inspected for damage & residue?
☐ Yes	☐ No*	Was accuracy of system product level readings tested?
☐ Yes	☐ No*	Was accuracy of system water level readings tested?
☐ Yes	☐ No*	Were all probes reinstalled properly?
☐ Yes	☐ No*	Were all items on manufacturer's maintenance list completed?

* In the Section below, describe how and when these deficiencies were or will be corrected.

Line Leak Detectors (LLD): ☒ Check this box if LLDs are not installed.
Complete the following checklist:

☐ Yes	☐ No* ☐ N/A	For equipment start-up/certification, was leak simulated to verify performance? Simulated rate: ☐ 3 gph ☐ 0.1 gph ☐ 0.2 gph
☐ Yes	☐ No*	Were all LLDs confirmed operational/accurate per regulations?
☐ Yes	☐ No*	Was the testing apparatus properly calibrated?
☐ Yes	☐ No* ☐ N/A	For mechanical LLDs, does the LLD restrict product flow if it detects a leak?
☐ Yes	☐ No* ☐ N/A	For electronic LLDs, does the turbine automatically shut off if the LLD detects a leak?
☐ Yes	☐ No* ☐ N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system is disabled or disconnected?
☐ Yes	☐ No* ☐ N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system malfunctions or fails a test?
☐ Yes	☐ No* ☐ N/A	For electronic LLDs, have all accessible wiring connections been visually inspected?
☐ Yes	☐ No*	Were all items on manufacturer's maintenance list completed?

* In the Section below, describe how and when these deficiencies were or will be corrected.

D. Results of Testing/Servicing

Software Version Installed: _____

YES	NO	NA	
☒	☐		Is the audible alarm operational?
☒	☐		Is the visual alarm operational?
☒	☐		Were all sensors visually inspected, functionally tested, and confirmed operational?
☒	☐	☐	Were all sensors installed at lowest point of secondary containment and positioned so that other equipment will not interfere with their proper operation?
☐	☐	☒	If alarms are relayed to a remote monitoring station, is all communications equipment (e.g. modem) operational?
☐	☒	☐	For pressurized piping systems, does the turbine automatically shut down if the piping secondary containment monitoring system detects a leak, fails to operate, or is electrically disconnected? If yes: which sensors initiate positive shut-down? *(Check all that apply)* ☐ Sump/Trench Sensors ☐ Dispenser Containment Sensors Did you confirm positive shut-down due to leaks and sensor failure/disconnection? ○ Yes ◉ No
☐	☐	NA	For tank systems that utilize the monitoring system as the primary tank overfill warning device (i.e. no mechanical overfill prevention valve is installed), is the overfill warning alarm visible and audible at the tank fill point(s) and operating properly? If so, at what percent of tank capacity does the alarm trigger? ____ %
☐	☒		Was any monitoring equipment replaced? If yes, identify specific sensors, probes, or other equipment replaced and list the manufacturer name and model for all replacement parts in Section E, below.
☐	☒		Was liquid found inside any secondary containment systems designed as dry systems? *(Check all that apply)* ☐ Product ☐ Water. If yes, describe causes in Section E, below.
☒	☐		Was monitoring system set-up reviewed to ensure proper settings? Attach set up reports, if applicable
☒	☐		Is all monitoring equipment operational per manufacturer's specifications?

D. Comments: There was no positive shut-down for the Diesel system. The 87 system is a suction system.

E. In-Tank Gauging / SIR Equipment:

☐ Tank gauging is used only for inventory control.
☒ No tank gauging or SIR equipment is installed.

This section must be completed if in-tank gauging equipment is used to perform leak detection monitoring.

YES	NO	
☐	☐	Has all input wiring been inspected for proper entry and termination, including testing for ground faults?
☐	☐	Were all tank gauging probes visually inspected for damage and residue buildup?
☐	☐	Was accuracy of system product level readings tested?
☐	☐	Was accuracy of system water level readings tested?
☐	☐	Were all probes reinstalled properly?
☐	☐	Were all items on the equipment manufacturer's maintenance checklist completed?

F. Line Leak Detectors (LLD): ☐ LLDs are not installed.

YES	NO	NA	
☒	☐	☐	For equipment start-up or annual equipment certification, was a leak simulated to verify LLD performance? *(Check all that apply)* Simulated leak rate: ☒ 3 g.p.h. ☐ 0.1 g.p.h ☐ 0.2 g.p.h.
☒	☐		Were all LLDs confirmed operational and accurate within regulatory requirements?
☒	☐		Was the testing apparatus properly calibrated?
☒	☐	☐	For mechanical LLDs, does the LLD restrict product flow if it detects a leak?
☐	☐	☒	For electronic LLDs, does the turbine automatically shut off if the LLD detects a leak?
☐	☐	☒	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system is disabled or disconnected?
☐	☐	☒	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system malfunctions or fails a test?
☐	☐	☒	For electronic LLDs, have all accessible wiring connections been visually inspected?
☒	☐	☐	Were all items on the equipment manufacturer's maintenance checklist completed?

G. Comments: Suction system for unleaded 87, no LLD. The MLLD for the Diesel Turbine was replaced.

H. **Certification** - I certify that the equipment identified in this document was inspected/serviced in accordance with the manufacturers' guidelines. Attached to this Certification is information (e.g. manufacturers' checklists) necessary to verify that this information is correct and a Plot Plan showing the layout of monitoring equipment. For any equipment capable of generating such reports, I have also attached a copy of the report; *(check all that apply)*: ☐ System set-up ☐ Alarm history report

D. Results of Testing/Servicing

Software Version Installed: _____

YES	NO	NA	
☒	☐		Is the audible alarm operational?
☒	☐		Is the visual alarm operational?
☒	☐		Were all sensors visually inspected, functionally tested, and confirmed operational?
☒	☐	☐	Were all sensors installed at lowest point of secondary containment and positioned so that other equipment will not interfere with their proper operation?
☐	☐	☒	If alarms are relayed to a remote monitoring station, is all communications equipment (e.g. modem) operational?
☐	☐	☒	For pressurized piping systems, does the turbine automatically shut down if the piping secondary containment monitoring system detects a leak, fails to operate, or is electrically disconnected? If yes: which sensors initiate positive shut-down? *(Check all that apply)* ☐ Sump/Trench Sensors ☐ Dispenser Containment Sensors Did you confirm positive shut-down due to leaks and sensor failure/disconnection? ○ Yes ◉ No
☐	☐	NA	For tank systems that utilize the monitoring system as the primary tank overfill warning device (i.e. no mechanical overfill prevention valve is installed), is the overfill warning alarm visible and audible at the tank fill point(s) and operating properly? If so, at what percent of tank capacity does the alarm trigger? [ ] %
☐	☒		Was any monitoring equipment replaced? If yes, identify specific sensors, probes, or other equipment replaced and list the manufacturer name and model for all replacement parts in Section E, below.
☐	☒		Was liquid found inside any secondary containment systems designed as dry systems? *(Check all that apply)* ☐ Product ☐ Water. If yes, describe causes in Section E, below.
☒	☐		Was monitoring system set-up reviewed to ensure proper settings? Attach set up reports, if applicable
☒	☐		Is all monitoring equipment operational per manufacturer's specifications?

D. Comments:

E. In-Tank Gauging / SIR Equipment:

☐ Tank gauging is used only for inventory control.
☒ No tank gauging or SIR equipment is installed.

This section must be completed if in-tank gauging equipment is used to perform leak detection monitoring.

YES	NO	
☐	☐	Has all input wiring been inspected for proper entry and termination, including testing for ground faults?
☐	☐	Were all tank gauging probes visually inspected for damage and residue buildup?
☐	☐	Was accuracy of system product level readings tested?
☐	☐	Was accuracy of system water level readings tested?
☐	☐	Were all probes reinstalled properly?
☐	☐	Were all items on the equipment manufacturer's maintenance checklist completed?

F. Line Leak Detectors (LLD): ☐ LLDs are not installed.

YES	NO	NA	
☒	☐	☐	For equipment start-up or annual equipment certification, was a leak simulated to verify LLD performance? *(Check all that apply)* Simulated leak rate: ☒ 3 g.p.h. ☐ 0.1 g.p.h ☐ 0.2 g.p.h.
☒	☐		Were all LLDs confirmed operational and accurate within regulatory requirements?
☒	☐		Was the testing apparatus properly calibrated?
☒	☐	☐	For mechanical LLDs, does the LLD restrict product flow if it detects a leak?
☐	☐	☒	For electronic LLDs, does the turbine automatically shut off if the LLD detects a leak?
☐	☐	☒	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system is disabled or disconnected?
☐	☐	☒	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system malfunctions or fails a test?
☐	☐	☒	For electronic LLDs, have all accessible wiring connections been visually inspected?
☒	☐	☐	Were all items on the equipment manufacturer's maintenance checklist completed?

G. Comments: Suction system for unleaded 87, no LLD.

H. Certification - I certify that the equipment identified in this document was inspected/serviced in accordance with the manufacturers' guidelines. Attached to this Certification is information (e.g. manufacturers' checklists) necessary to verify that this information is correct and a Plot Plan showing the layout of monitoring equipment. For any equipment capable of generating such reports, I have also attached a copy of the report; *(check all that apply)*: ☐ System set-up ☐ Alarm history report

Re: Testing at **Graniterock - Graniterock Way**
120 Graniterock Way
San Jose, CA

401659 "G"

Dear Inspector:

Triton Construction will be performing SB989 testing at the above site starting Monday, August 25 at 8am. Triton Construction is licensed to perform this testing and is currently listed in your database with regards to licensing and required insurance. Our testing protocol is available for your review and will be on site during the testing. The testing results will be submitted to your agency on appropriate forms.

Please contact me at 831.227.4730 if you have any questions.

Sincerely,

Frank Bohnet

D. Results of Testing/Servicing

Software Version Installed: _____

YES	NO	NA	
☒	☐		Is the audible alarm operational?
☒	☐		Is the visual alarm operational?
☒	☐		Were all sensors visually inspected, functionally tested, and confirmed operational?
☒	☐	☐	Were all sensors installed at lowest point of secondary containment and positioned so that other equipment will not interfere with their proper operation?
☐	☐	☒	If alarms are relayed to a remote monitoring station, is all communications equipment (e.g. modem) operational?
☐	☐	☒	For pressurized piping systems, does the turbine automatically shut down if the piping secondary containment monitoring system detects a leak, fails to operate, or is electrically disconnected? If yes: which sensors initiate positive shut-down? *(Check all that apply)* ☐ Sump/Trench Sensors ☐ Dispenser Containment Sensors Did you confirm positive shut-down due to leaks and sensor failure/disconnection? ◉ Yes ○ No
☐	☐	NA	For tank systems that utilize the monitoring system as the primary tank overfill warning device (i.e. no mechanical overfill prevention valve is installed), is the overfill warning alarm visible and audible at the tank fill point(s) and operating properly? If so, at what percent of tank capacity does the alarm trigger? [ ] %
☐	☒		Was any monitoring equipment replaced? If yes, identify specific sensors, probes, or other equipment replaced and list the manufacturer name and model for all replacement parts in Section E, below.
☐	☒		Was liquid found inside any secondary containment systems designed as dry systems? *(Check all that apply)* ☐ Product ☐ Water. If yes, describe causes in Section E, below.
☒	☐		Was monitoring system set-up reviewed to ensure proper settings? Attach set up reports, if applicable
☒	☐		Is all monitoring equipment operational per manufacturer's specifications?

D. Comments:

E. In-Tank Gauging / SIR Equipment:

☐ Tank gauging is used only for inventory control.
☒ No tank gauging or SIR equipment is installed.

This section must be completed if in-tank gauging equipment is used to perform leak detection monitoring.

YES	NO	
☐	☐	Has all input wiring been inspected for proper entry and termination, including testing for ground faults?
☐	☐	Were all tank gauging probes visually inspected for damage and residue buildup?
☐	☐	Was accuracy of system product level readings tested?
☐	☐	Was accuracy of system water level readings tested?
☐	☐	Were all probes reinstalled properly?
☐	☐	Were all items on the equipment manufacturer's maintenance checklist completed?

F. Line Leak Detectors (LLD): ☐ LLDs are not installed.

YES	NO	NA	
☒	☐	☐	For equipment start-up or annual equipment certification, was a leak simulated to verify LLD performance? *(Check all that apply)* Simulated leak rate: ☒ 3 g.p.h. ☐ 0.1 g.p.h ☐ 0.2 g.p.h.
☒	☐		Were all LLDs confirmed operational and accurate within regulatory requirements?
☒	☐		Was the testing apparatus properly calibrated?
☒	☐	☐	For mechanical LLDs, does the LLD restrict product flow if it detects a leak?
☐	☐	☐	For electronic LLDs, does the turbine automatically shut off if the LLD detects a leak?
☐	☐	☒	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system is disabled or disconnected?
☐	☐	☒	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system malfunctions or fails a test?
☐	☐	☒	For electronic LLDs, have all accessible wiring connections been visually inspected?
☒	☐	☐	Were all items on the equipment manufacturer's maintenance checklist completed?

G. Comments: Diesel has LLD. Gasoline is suction, no LLD

Secondary Containment Testing Report Form

This form is intended for use by contractors performing periodic testing of UST secondary containment systems. Use the appropriate pages of this form to report results for all components tested. The completed form, written test procedures, and printouts from tests (if applicable), should be provided to the facility owner/operator for submittal to the local regulatory agency.

1. FACILITY INFORMATION

Summary of Violations & Notice to Comply

Program: PR0395983 - HAZARDOUS MATERIALS BUSINESS PLAN - BP05
Inspection Type: ROUTINE INSPECTION

VC	Class	Violation	Corrective Actions Taken
B106	**M**	**HMBP INVENTORY INFORMATION MISSING / INCOMPLETE [1010004]** Facility operator failed to electronically submit accurate and complete Hazardous Materials Inventory information for all hazardous materials on-site that are required to be reported in the facility's Hazardous Materials Business Plan (HMBP). ***Facility inventory reported in CERS does not match the amounts observed onsite. See comments section for a list of reportable inventory. Items marked with an * are reported incorrectly, with comments on currently reported amounts. Revise all inventory items marked with a *. To avoid unnecessary permit increases, remove items that are no longer stored onsite.*** Within 30 days, electronically submit an HMBP, including an accurate Hazardous Materials Inventory, through the California Environmental Reporting System (https://cers.calepa.ca.gov). Be sure to submit all of the elements that comprise a complete HMBP (i.e., Facility Information, Hazardous Materials Inventory, and Emergency Response and Training Plans). See www.sccgov.org/sites/hazmat/programs/Pages/ereporting.aspx for more details on electronic reporting. [HSC 25505(a)(1), HSC 25506, HSC 25508(a)(1), HSC 25508(a)(3), 19 CCR 2652]	
B107	**M**	**HMBP SITE MAP MISSING / INCOMPLETE [1010005]** Facility operator failed to electronically submit a Site Map with all required content as part of the facility's Hazardous Materials Business Plan (HMBP). ***Site map lists address as 100 Granite Rock Way.*** Within 30 days, electronically submit an HMBP, including accurate facility Site Map(s), through the California Environmental Reporting System (https://cers.calepa.ca.gov). Be sure to submit all of the elements that comprise a complete HMBP (i.e., Facility Information, Hazardous Materials Inventory, and Emergency Response and Training Plans). See www.sccgov.org/sites/hazmat/programs/Pages/ereporting.aspx for more details on electronic reporting. The map must contain a north orientation, loading areas, internal roads, adjacent streets, storm and sewer drains, access and exit points, emergency shutoffs, evacuation staging areas, hazardous material handling and storage areas, and emergency response equipment. [HSC 25505(a)(2), HSC 25508(a)(1), HSC 25508(a)(3), 19 CCR 2652(a)(3)]	

OFFICIAL NOTICE OF INSPECTION

Facility ID: FA0258851
Facility Name: GRANITE ROCK COMPANY-PAVEX CENTRAL
Site Address: 120 GRANITE ROCK WY, SAN JOSE, CA 95136
Inspection Date: 02/08/2022

Summary of Violations & Notice to Comply

VC	Class	Violation	Corrective Actions Taken
B130	II	**HMBP EMERGENCY RESPONSE TRAINING DOCUMENTATION [1020002]** Facility operator failed to provide initial and annual training to all employees in emergency response and safety procedures or failed to document and maintain training records for a minimum of three years. ***Emergency response plan does not include information about the emergency assembly point or mark yes to "hazardous waste". In addition, the CUPA phone number is not correct. The correct CUPA phone number is 408-918-3400. Update this information and resubmit.*** Provide initial training for new employees and annual refresher training for all employees. The training shall cover emergency and safety procedures in the event of a release or threatened release of a hazardous material, as described in the facility's Hazardous Materials Business Plan. Training must be documented electronically or by hard copy. Make a minimum of three years of training records available for inspection by HMCD. [HSC 25505(a)(4), 19 CCR 19 CCR 2659]	

Comments: Inspection commenced on 1/27/2022 and concluded today. Onsite to conduct an inspection for the Hazardous Materials Business Plan (HMBP) program. Business is the property owner. Facility employees are trained annually in emergency response and chemical hazards as part of annual DUSTO training, and all training is logged on the same form. Facility last submitted their HMBP via CERS ID 10344856 on 2/22/2021.

Observed the following reportable hazardous materials:
1. 110 gallons of 5W40*
2. 6560 gallons of gasoline fuel (4500 in an underground storage tank, 1500 in a mobile refueler)
3. 110 gallons of 5W30*
4. 240 gallons of 15W40CK4 castoil*
5. 240 gallons of tractor fluid*
6. 150 gallons of radicool SF OPE mix*
7. 260 gallons of used antifreeze* (reported as 250 gallons)l
8. 13500 gallons of clear diesel fuel (in an underground storage tank)
9. >500 lbs of grease (4x15 gallon drums, 4x55 gallon drums)
10. 640 gallons of used oil
11. >500 lbs of used oil filters (2x55 gallon drums of crushed filters)* (currently reported as 110 gallons)
12. >500 lbs of contaminated oily solids (2x55 gallon drums of crushed filters)
13. 55 gallons of break cleaner
14. 75 gallons of parts washing liquids*
15. 2452 cf of acetylene gas* (reported as 1500 cf)
16. 4401 cf of oxygen gas* (reported as 4000 cf)
17. 1580 cf of argon and carbon dioxide gas* (reported as 800 cf)
18. 275 gallons of HaloKlear BHR-P50 cleaner*
19. 540 gallons of liquid propane gas* (reported as 499 cf)
20. 165 gallons of R2K Grr Cleaner*
21. >55 gallons of lead acid batteries (in 10 portable light fixtures, and in the shop area)*
22. 275 gallons of Polarset*
23. 60 gallons of hydraulic oil (on a mobile refueler)*
24. 550 gallons of Daraset 400*

Facility has the following materials below reporting thresholds:
450 gallons of diesel exhaust fluid
20 gallons of chevron soluble oil
<55 gallons per type of other misc. oils
<55 gallons per type of misc. paints and aerosols
15 gallons of 75W90 oil
20 gallons of spraymaster liquid

OFFICIAL NOTICE OF INSPECTION

Facility ID: FA0258851
Facility Name: GRANITE ROCK COMPANY-PAVEX CENTRAL
Site Address: 120 GRANITE ROCK WY, SAN JOSE, CA 95136
Inspection Date: 02/08/2022

Summary of Violations & Notice to Comply

UNRESOLVED ISSUE: Respond in writing to the following unresolved issues within 30 days.
1. Within 30 days, schedule a date for reinspection to allow for access to Storage lockers on the side of the facility, including 15 shipping containers (1-5, A-D, and 7 extra containers) and 4 storage bays.
2. Provide the capacity of the oil water separator and add to inventory list if reportable.
3. Observed 5 white and 8 black portable fuel tanks (estimated to be greater than 55 gallons each). Provide the capacity of each and add to inventory list above.
4. Observed 1x55 gallon drum labeled as hazardous waste with no contents marked. Provide details on the contents and add to the inventory reported in CERS.

NOTE: Facility is currently permitted for 21 reportable chemicals, but currently stores over 34 reportable chemicals. A subsequent permit increase will be billed on the next billing cycle. New permit (BP08) will allow for storage of up to 39 reportable chemicals.

OFFICIAL NOTICE OF INSPECTION

Facility ID: FA0258851
Facility Name: GRANITE ROCK COMPANY-PAVEX CENTRAL
Site Address: 120 GRANITE ROCK WY, SAN JOSE, CA 95136
Inspection Date: 02/08/2022

Summary of Violations & Notice to Comply

Program: PR0379140 - HAZARDOUS WASTE GENERATOR - 2205
Inspection Type: ROUTINE INSPECTION

VC	Class	Violation	Corrective Actions Taken
G010	II	**HAZARDOUS WASTE DETERMINATION [3030005]** Facility failed to determine whether a waste is a hazardous waste. ***Also observed 1x55 gallon drum of hazardous waste outside in the yard with no contents. Determine the contents of this drum. Observed 1x5 gallon container of unlabeled crack sealer in the hazardous waste shed. Determine if this is a hazardous waste, and if so, ensure proper labeling and management.*** Determine whether the waste is hazardous using generator knowledge, or by having the waste analyzed by a state-certified environmental laboratory. Submit the results of your determination, including any laboratory reports, to HMCD. A list of state-certified laboratories is available at www.waterboards.ca.gov/drinking_water/certlic/labs/documents/elap_certified_hazardous_waste_labs.pdf . Cease any disposal of the waste as non-hazardous waste until the determination is complete. Keep all hazardous waste determination documents for at least 3 years from the date the waste was last shipped. [CCR 66262.11, 66262.40]	
G015	II	**ILLEGAL DISPOSAL OF HAZARDOUS WASTE [3050002]** Facility disposed of hazardous waste at an unpermitted facility or at an unauthorized location, such as the sewer, storm drain, trash can, trash dumpster, or ground. ***Observed non-empty oil quart containers and saturated oily rags in trashcans inside the autoshop. The bottles were removed at the time of inspection.*** Immediately cease illegal disposal activities. Make arrangements for the proper disposal of all hazardous waste. [HSC 25189.5(a)]	
G020	M	**MARKING OF HAZARDOUS WASTE [3030007]** Facility failed to properly mark a hazardous waste tank and/or container. ***Observed 1x55 gallon container of used oil and a small container under the oil filter crusher holding waste at the time of inspection with no hazardous characteristics marked and no accumulation start date. Observed 1x15 gallon mobile oil roller holding waste with no markings. Observed 5 gallon container of used DEF with no labels in the hazardous waste shed.*** Mark all hazardous waste tanks with the words "HAZARDOUS WASTE" and the accumulation start date. Mark all hazardous waste containers and portable tanks with the words "HAZARDOUS WASTE;" the accumulation start date; the name and address of the generator; and the composition, physical state, and hazardous properties of the waste. If they contain used oil, mark used oil containers, aboveground tanks, and fill pipes for underground tanks with the words "USED OIL." [CCR 66262.16(b)(6), 66262.17(a)(5), 66279.21(b)]	

OFFICIAL NOTICE OF INSPECTION

Facility ID: FA0258851
Facility Name: GRANITE ROCK COMPANY-PAVEX CENTRAL
Site Address: 120 GRANITE ROCK WY, SAN JOSE, CA 95136
Inspection Date: 02/08/2022

Summary of Violations & Notice to Comply

VC	Class	Violation	Corrective Actions Taken
G023	M	**CONTAINER OPEN [3030017]** Facility failed to keep a hazardous waste container closed at a time when it was not necessary to add or remove waste. ***Observed 1x55 gallon drum of used oil holding waste at the time of inspection, and open while not in use. Remove the drain board and close between uses.*** ***Observed 2x55 gallon containers of used oily rags and absorbent open at the time of inspection.*** Tightly close all hazardous waste containers. Ensure that they remain closed, except when it is necessary to add or remove waste. Containers are considered closed when all lids, gaskets, and locking rings are in place and secured. [CCR 66262.16(b)(2)(C)1, 66262.17(a)(1)(D)1, 66262.15(a)(4)]	
G110	M	**MAINTENANCE AND OPERATION OF FACILITY [3030030]** Facility is not maintained or operated in a manner to minimize the possibility of a fire, explosion, or any unplanned release of hazardous waste to air, soil, or surface water that could threaten human health or the environment. ***Observed that used antifreeze and used oil tanks have a remote feed system but no overfill protection. The used oil tank has been overfilled based on oil staining at the top of the tank. Observed oil in the secondary containment. Cleanup released used oil and determine if the berm is capable of containing releases in the future. Also observed used antifreeze on the shop floor dripping from remote feed hoses. Observed that a large piece of equipment in the parking lot onsite is leaking oily fluid to the dirt. Immediately contain this spill and prevent further releases to the ground.*** Maintain and operate the facility to minimize the possibility of a fire, explosion, or unplanned release of hazardous waste to air, soil, or surface water. [CCR 66262.16(b)(8), 66262.251, 66262.15(a)(7)]	
G321	M	**RECORDS: HAZARDOUS WASTE TRAINING [3020002]** Hazardous waste training records are incomplete or are not being kept as required. ***Facility failed to provide training records that meet large quantity generator requirements. All records are in the form of logs with only names of employees, class titles, and dates.*** Maintain training records that include: 1) the name and job title of each person in a position that has hazardous waste management responsibility; 2) a written job description that includes the duties, skills, education, or other qualifications required for each position described above; 3) a description of the type and amount of introductory and continuing training that will be given for each position; and 4) documentation that this training was completed by facility personnel. Keep current employee training records until facility closure. Keep records on former employee for at least 3 years from the date the employee last worked at the facility. [CCR 66262.17(C-E)]	

OFFICIAL NOTICE OF INSPECTION

Facility ID: FA0258851
Facility Name: GRANITE ROCK COMPANY-PAVEX CENTRAL
Site Address: 120 GRANITE ROCK WY, SAN JOSE, CA 95136
Inspection Date: 02/08/2022

Summary of Violations & Notice to Comply

VC	Class	Violation	Corrective Actions Taken
G339	II	**TANK SYSTEM ASSESSMENT: PERIODIC RE-ASSESSMENT [3010032]** Facility's tank assessment does not address all of the required element of a "new tank facility" which handles RCRA hazardous waste. ***Facility has not conducted tank system assessments on hazardous waste tanks onsite.*** Make arrangements to have the tank system assessed by an appropriate Professional Engineer (PE) who is knowledgeable of hazardous waste tank system requirements. Ensure that the assessment is conducted to meet the requirements of 66265.192(k). Provide a specific date by which the assessment is expected to be completed. Upon completion of the assessment, submit a copy of the final report to HMCD. [CCR 66265.191(a), 66265.192(h)]	
G351	M	**REPORTING: SOURCE REDUCTION REPORT (SB 14 PLAN) [3010021]** Facility failed to complete a Source Reduction report in accordance with and addressing all of the information contained in 22 CCR, sections 67100.4 and 67100.8. ***Facility failed to provide waste minimization and biennial reports.*** Complete a Source Reduction Report that provides information to clearly understand the hazardous waste management approaches used at the site. Guidance can be found at https://dtsc.ca.gov/wp-content/uploads/sites/31/2017/05/GuidanceManualRevised-2.pdf . [CCR 67100.2(j), 67100.8, 67100.4; HSC 25244.19, 25244.21]	
G405	M	**MARKING: CONTAMINATED CONTAINERS [3030058]** Facility did not mark an empty hazardous material/waste container larger than 5 gallons in capacity with the date it was emptied. ***Observed 2x55 gallon empty antifreeze containers and 1x275 hazardous material IBC tote with no marking declaring the date they were emptied.*** Mark each empty hazardous material/waste container larger than 5 gallons in capacity with the date it was emptied. [CCR 66261.7(f)]	
G600	II	**ILLEGAL DISPOSAL OF UNIVERSAL WASTE [3050003]** Facility disposed of Universal Waste to an unauthorized facility or at an unauthorized location, such as the sewer, storm drain, trash can, trash dumpster, or ground. ***Observed non-empty aerosol cans (1) in trashcans outside the autoshop. Can was removed at the time of inspection.*** Immediately cease illegal disposal activities. Make arrangements to transfer the waste to another Universal Waste handler or an appropriate recycling or disposal facility. For assistance in locating an appropriate destination facility, visit www.hhw.org. [CCR 66273.31(a), 66273.8(b)]	

OFFICIAL NOTICE OF INSPECTION

Facility ID: FA0258851
Facility Name: GRANITE ROCK COMPANY-PAVEX CENTRAL
Site Address: 120 GRANITE ROCK WY, SAN JOSE, CA 95136
Inspection Date: 02/08/2022

Summary of Violations & Notice to Comply

VC	Class	Violation	Corrective Actions Taken
G613	II	**CONTAINER REQUIREMENTS: UNIVERSAL WASTE AEROSOL CANS [3030051]** Facility failed to meet the accumulation standards for universal waste aerosol cans. ***Observed 1 box of non-empty used aerosol cans with no labels in the hazardous waste shed.*** Ensure that containers holding UW aerosol cans are labeled or marked clearly with one of the following phrases: "Universal Waste-Aerosol Cans", "Waste Aerosol Cans", or "Used Aerosol Cans"; structurally sound, and compatible with the contents of the universal waste aerosol can; show no evidence of leakage, spillage, or damage that could cause leakage under reasonably foreseeable conditions; are provided with a lid so that the container can (and shall) be covered at the end of each workday; are placed in a location that has sufficient ventilation to avoid formation of an explosive atmosphere; and are placed on or above a floor or other surface that is free of cracks or gaps and is sufficiently impervious and bermed to contain leaks and spills. If holding flammable wastes shall be kept at a safe distance from heat and open flames. Incompatible materials shall be kept segregated and managed appropriately in separate containers. [HSC 25201.16(f)]	

Comments: Inspection commenced on 1/27/2022 and concluded today. Onsite to conduct an inspection for the Hazardous Waste Generator permit. Facility is a concrete plant that generates waste related to vehicle maintenance and truck washing. Facility is a small quantity hazardous waste generator. Rags are commercially laundered, and batteries are disposed of via core exchange. EPA ID CAL000291556 is currently active. Fire extinguishers and spill kit are adequate. Facility truck wash waste flows to a clarifier system and sludge is managed as hazardous waste. Facility is a large quantity generator and generates greater than 1000 kg per month.
Inspection included review of 3 years of hazardous waste disposal records, training logs, universal waste and hazardous waste management training content, and contingency plan.

Immediately correct any violation designated as a Class I or Class II violation. Correct all other violations no later than 03/10/2022, unless otherwise noted by the inspector.

Using the space provided, write a brief description of the actions taken by the facility to correct each violation. Attach additional pages if more space is needed. Within 5 days of achieving compliance or within 35 days of the inspection date, whichever comes first, sign the certification statement below and return a copy of this report to HMCD. Time granted for correction of violations does not preclude any enforcement action by HMCD or other agencies. This facility may be subject to reinspection at any time. [Authority: HSC 25185(c), 25187.8, 25404.1.2(c)]

Inspected By: EE0010436 - ROBIN WARD
CA UST Inspector #8869494, Exp. 01/19/2024

Certification of Compliance

I certify under penalty of perjury that this facility has complied with directives specified in this Notice to Comply.

Signature of Owner/Operator **Date**

Printed Name of Owner/Operator **Title**

OFFICIAL NOTICE OF INSPECTION - SUPPLEMENTAL INFORMATION

This Official Notice of Inspection (NOI) documents the results of an inspection by HMCD, including a list of alleged violations, evidence in support of the alleged violations, corrective actions that must be taken by the facility, and general observations.

What am I supposed to do upon receiving a NOI?

- Correct the violations within 30 days of the inspection date, unless otherwise noted.
- In the "Corrective Actions Taken" column, write a brief description of the actions taken by the facility to correct each violation. Attach additional pages if more space is needed.
- Certify that the facility has returned to compliance by signing and dating the certification statement at the end of the report.
- Make a photocopy of the NOI and any attachments for your records.
- Within 5 days of achieving compliance or 35 days of the inspection date, whichever comes first, return the original copy of the report and any attachments to HMCD at 1555 Berger Drive, Suite 300, San Jose, CA 95112-2716 or via e-mail to the inspector noted on the "Inspected By" line of the report.

What if there are violations that cannot be corrected within 30 days?

For each violation that cannot be corrected within 30 days, submit a written Compliance Plan describing the corrective actions you propose to take and the date by which the actions will be completed. State law grants up to 30 days to correct minor violations without penalty. Minor violations that are uncorrected after 30 days, and class I and II violations may be subject to enforcement action. To lessen the possibility of enforcement action, correct all violations as soon as possible.

What if I disagree with a violation on the NOI?

If you disagree with any violation listed in this NOI, you must submit a written Notice of Disagreement to HMCD within 30 days of the inspection date. Address such notices to the attention of the inspector who cited the violation. In your Notice of Disagreement, explain in detail why you believe the alleged violation was incorrectly cited.

What about photographs or samples taken during the inspection?

A co-located sample will be given to you upon request if adequate sample volume is available. Photographs and sample analytical results will not generally be available until after the inspection has been concluded. A copy of photographs and/or analytical results will be provided to you upon written request. Photographs and sample analytical results may be withheld in the event of a criminal investigation or other ongoing investigation.

Key to Acronyms and Regulatory Terms

XX CCR	California Code of Regulations, Title XX
XX CFR	Code of Federal Regulations, Title XX
Class	Violation classification: I = Class I violation, II = Class II violation, M = Minor violation, C = Corrected minor violation [HSC §25110.8.5, HSC §25117.6, CCR §66260.10]
CERS	California Environmental Reporting System (cers.calepa.ca.gov)
DTSC	California Department of Toxic Substances Control
EPA	U.S. Environmental Protection Agency
HMCD	County of Santa Clara, Department of Environmental Health, Hazardous Materials Compliance Division
HSC	California Health and Safety Code
RCRA	Resource Conservation and Recovery Act
SCCO	Santa Clara County Ordinance Code
TSDF	Hazardous waste treatment, storage or disposal facility
UST	Underground storage tank
VC	HMCD violation code

Warning:

- It is a violation of State law to make a false statement that a facility has returned to compliance [HSC §25404.1.2(c)(2)].
- Making a false statement regarding a hazardous waste violation is punishable by a fine of not less than $2,000 or more than $50,000 and/or imprisonment in the county jail for up to one year [HSC §25191(b)].
- Making a false statement regarding an underground storage tank violation is punishable by a fine of not less than $500 or more than $5,000 [HSC §§25299(a)(8), 25299(b)(7)].
- HMCD has the right to require the submittal of reasonable and necessary documentation in support of any claim of compliance made by your facility [HSC §25187.8(i), 25289(b)].

NOTE: If you check YES to any part of this list, please submit the Business Owner/Operator Identification page.

Does your facility…	If Yes, please complete these pages of the UPCF…	
A. HAZARDOUS MATERIALS Have on site (for any purpose) at any one time, hazardous materials at or above 55 gallons for liquids, 500 pounds for solids, or 200 cubic feet for compressed gases (include liquids in ASTs and USTs); or the applicable Federal threshold quantity for an extremely hazardous substance specified in 40 CFR Part 355, Appendix A or B; or handle radiological materials in quantities for which an emergency plan is required pursuant to 10 CFR Parts 30, 40 or 70?	☒ YES ☐ NO 4.	HAZARDOUS MATERIALS INVENTORY – CHEMICAL DESCRIPTION
B. REGULATED SUBSTANCES Have Regulated Substances stored onsite in quantities greater than the threshold quantities established by the California Accidental Release Prevention Program (CalARP)?	☐ YES ☒ NO 4a.	Coordinate with your local agency responsible for CalARP.
C. UNDERGROUND STORAGE TANKS (USTs) Own or operate underground storage tanks?	☒ YES ☐ NO 5.	UST OPERATING PERMIT APPLICATION – FACILITY INFORMATION UST OPERATING PERMIT APPLICATION – TANK INFORMATION
D. ABOVE GROUND PETROLEUM STORAGE Own or operate ASTs above these thresholds: Store greater than 1,320 gallons of petroleum products (new or used) in aboveground tanks or containers?	☐ YES ☒ NO 8.	No form required to CUPAs
E. HAZARDOUS WASTE Generate hazardous waste?	☒ YES ☐ NO 9.	EPA ID NUMBER – provide at top of this page
Recycle more than 100 kg/month of excluded or exempted recyclable materials (per HSC §25143.2)?	☐ YES ☒ NO 10.	RECYCLABLE MATERIALS REPORT (one per recycler)
Treat hazardous waste onsite?	☐ YES ☒ NO 11.	ONSITE HAZARDOUS WASTE TREATMENT NOTIFICATION – FACILITY PAGE ONSITE HAZARDOUS WASTE TREATMENT NOTIFICATION – UNIT PAGE (one page per unit)
Perform treatment subject to financial assurance requirements (for Permit by Rule and Conditional Authorization)?	☐ YES ☒ NO 12.	CERTIFICATION OF FINANCIAL ASSURANCE
Consolidate hazardous waste generated at a remote site?	☐ YES ☒ NO 13.	REMOTE WASTE CONSOLIDATION SITE ANNUAL NOTIFICATION
Need to report the closure/removal of a tank that was classified as hazardous waste and cleaned onsite?	☐ YES ☒ NO 14.	HAZARDOUS WASTE TANK CLOSURE CERTIFICATION
Generate in any single calendar month 1,000 kilograms (kg) (2,200 pounds) or more of federal RCRA hazardous waste, or generate in any single calendar month, or accumulate at any time, 1 kg (2.2 pounds) of RCRA acute hazardous waste; or generate or accumulate at any time more then 100 kg (220 pounds) of spill cleanup materials contaminated with RCRA acute hazardous waste?	☐ YES ☒ NO 14a.	Obtain federal EPA ID Number, file Biennial Report (EPA Form 8700-13A/B), and satisfy requirements for RCRA Large Quantity Generator.
Serve as a Household Hazardous Waste (HHW) Collection site?	☐ YES ☒ NO 14b.	See CUPA for required forms.

Emergency Response/Contingency Plan

(Hazardous Materials Business Plan Module)

Authority Cited: HSC§ 25504(b); 19 CCR §2731; 22 CCR §66262.34(a)(4)

All facilities that handle hazardous materials in HMBP quantities must have a written emergency response plan. In addition, facilities that generate 1,000 kilograms or more of hazardous waste (or more than 1 kilogram of acutely hazardous waste or 100 kilograms of debris resulting from the spill of an acutely hazardous waste) per month, or accumulate more than 6,000 kilograms of hazardous waste on-site at any one time, must prepare a hazardous waste contingency plan. Because the requirements are similar, they have been combined in a single document, provided below, for your convenience. This plan is a required module of the Hazardous Materials Business Plan (HMBP). **If you already have a plan that meets these requirements, you should not complete the blank plan, below, but you must include a copy of your existing plan as part of your HMBP.**

This site-specific Emergency Response/Contingency Plan is the facility's plan for dealing with emergencies and shall be implemented immediately whenever there is a fire, explosion, or release of hazardous materials that could threaten human health and/or the environment. **At least one copy of the plan shall be maintained at the facility for use in the event of an emergency and for inspection by the local agency.** A copy of the plan and any revisions must be provided to any contractor, hospital, or agency with whom special (i.e., contractual) emergency services arrangements have been made *(see section 3, below)*.

1. Evacuation Plan:

a. The following alarm signal(s) will be used to begin evacuation of the facility *(check all that apply)*:

☐ Bells; ☐ Horns/Sirens; ☒ Verbal *(i.e., shouting)*; ☐ Other *(specify* _____

b. ☒ Evacuation map is prominently displayed throughout the facility.

Note: A properly completed HMBP Site Plan satisfies contingency plan map requirements. This drawing (or any other drawing that shows primary and alternate evacuation routes, emergency exits, and primary and alternate staging areas) must be prominently posted throughout the facility in locations where it will be visible to employees and visitors.

2. a. Emergency Contacts:*

Fire/Police/Ambulance	Phone No.: **911**
California Emergency Management Agency	Phone No.: **(800) 852-7550**

b. Post-Incident Contacts:*

Certified Unified Program Agency (CUPA)	Phone No.: **(408) 918-3411**
Local Hazardous Materials Program	Phone No.: **(408) 277-4659**
California Department of Toxic Substances Control (DTSC)	Phone No.: **(510) 540-3739**
Cal/OSHA Division of Occupational Safety and Health	Phone No.: **(408) 452-7288**
Air Quality Management District	Phone No.: **(415) 771-6000**
Regional Water Quality Control Board	Phone No.: **(510) 622-2300**

*** Phone numbers for agencies in Unidocs Member Agency geographic jurisdictions are available at www.unidocs.org.**

c. Emergency Resources:

Poison Control Center* Phone No.: **(800) 876-4766**

Nearest Hospital: Name: **Santa Clara Valley Medical** Phone No.: **(408) 885-5000**

Address: **751 South Bascom Ave** City: **San Jose**

3. Arrangements With Emergency Responders:

If you have made special (i.e., contractual) arrangements with any police department, fire department, hospital, contractor, or State or local emergency response team to coordinate emergency services, describe those arrangements below:

4. Emergency Procedures:

Emergency Coordinator Responsibilities:

a. Whenever there is an imminent or actual emergency situation such as a explosion, fire, or release, the emergency coordinator *(or his/her designee when the emergency coordinator is on call)* shall:
   i. Identify the character, exact source, amount, and areal extent of any released hazardous materials.
   ii. Assess possible hazards to human health or the environment that may result from the explosion, fire, or release. This assessment must consider both direct and indirect effects *(e.g., the effects of any toxic, irritating, or asphyxiating gases that are generated, the effects of any hazardous surface water run-off from water or chemical agents used to control fire, etc.)*.
   iii. Activate internal facility alarms or communications systems, where applicable, to notify all facility personnel.
   iv. Notify appropriate local authorities *(i.e., call 911)*.
   v. Notify the California Emergency Management Agency at (800) 852-7550.
   vi. Monitor for leaks, pressure build-up, gas generation, or ruptures in valves, pipes, or other equipment shut down in response to the incident.
   vii. Take all reasonable measures necessary to ensure that fires, explosions, and releases do not occur, recur, or spread to other hazardous materials at the facility.

b. Before facility operations are resumed in areas of the facility affected by the incident, the emergency coordinator shall:
   i. Provide for proper storage and disposal of recovered waste, contaminated soil or surface water, or any other material that results from a explosion, fire, or release at the facility.
   ii. Ensure that no material that is incompatible with the released material is transferred, stored, or disposed of in areas of the facility affected by the incident until cleanup procedures are completed.
   iii. Ensure that all emergency equipment is cleaned, fit for its intended use, and available for use.
   iv. Notify the California Department of Toxic Substances Control, the local CUPA, and the local fire department's hazardous materials program that the facility is in compliance with requirements b-i and b-ii, above.

Responsibilities of Other Personnel:

On a separate page, list any emergency response functions not covered in the "Emergency Coordinator Responsibilities" section, above. Next to each function, list the job title or name of each person responsible for performing the function. Number the page(s) appropriately.

5. Post-Incident Reporting/Recording:

The time, date, and details of any hazardous materials incident that requires implementation of this plan shall be noted in the facility's operating record.

Within 15 days of any hazardous materials emergency incident or threatened hazardous materials emergency incident that triggers implementation of this plan, a written Emergency Incident Report, including, but not limited to a description of the incident and the facility's response to the incident, must be submitted to the California Department of Toxic Substances Control, the local CUPA, and the local fire department's hazardous materials program. The report shall include:

a. Name, address, and telephone number of the facility's owner/operator;
b. Name, address, and telephone number of the facility;
c. Date, time, and type of incident *(e.g., fire, explosion, etc.)*;
d. Name and quantity of material(s) involved;
e. The extent of injuries, if any;
f. An assessment of actual or potential hazards to human health or the environment, where this is applicable;
g. Estimated quantity and disposition of recovered material that resulted from the incident;
h. Cause(es) of the incident;
i. Actions taken in response to the incident;
j. Administrative or engineering controls designed to prevent such incidents in the future.

6. Earthquake Vulnerability: [19 CCR §2731(c)]

As an attachment to this plan, you must identify any areas of the facility and mechanical or other systems that require immediate inspection or isolation because of their vulnerability to earthquake-related ground motion.

7. Hazard Mitigation/Prevention/Abatement [19 CCR §2731(c)]

As an attachment to this plan, you must include procedures that provide for mitigation, prevention, or abatement of hazards to persons, property, or the environment. These procedures must be scaled appropriately for the size and nature of the business, the nature of the damage potential of the hazardous materials handled, and the proximity of the business to residential areas and other populations.

8. Emergency Equipment:

22 CCR §66265.52(e) [as referenced by 22 CCR §66262.34(a)(4)] requires that emergency equipment at the facility be listed. Completion of the following Emergency Equipment Inventory Table meets this requirement.

EMERGENCY EQUIPMENT INVENTORY TABLE

1. Equipment Category	2. Equipment Type	3. Locations *	4. Description**
Personal Protective Equipment, Safety Equipment, and First Aid Equipment	☐ Cartridge Respirators		
	☐ Chemical Monitoring Equipment *(describe)*		
	☐ Chemical Protective Aprons/Coats

	☐		
	☐		

* *Use the map and grid numbers from the Storage Map prepared earlier for your HMBP.*

** *Describe the equipment and its capabilities. If applicable, specify any testing/maintenance procedures/intervals. Attach additional pages, numbered appropriately, if needed.*

Employee Training Plan

(Hazardous Materials Business Plan Module)

Authority Cited: HSC, Section 25504(c); 22 CCR §66262.34(a)(4)

All facilities that handle hazardous materials in HMBP quantities must have a written employee training plan. This plan is a required module of the Hazardous Materials Business Plan (HMBP). A blank plan has been provided below for you to complete and submit if you do not already have such a plan. **If you already have a brief written description of your training program that addresses all subjects covered below, you are not required to complete the blank plan, below, but you must include a copy of your existing document as part of your HMBP.**

Check all boxes that apply. *[Note: Items marked with an asterisk (*) are required.]*:

1. **Personnel** are trained in the following procedures:

☒	Internal alarm/notification *
☒	Evacuation/re-entry procedures & assembly point locations*
☐	Emergency incident reporting
☐	External emergency response organization notification
☒	Location(s) and contents of Emergency Response/Contingency Plan
☐	Facility evacuation drills, that are conducted at least *(specify)*: *(e.g., "Quarterly", etc.)*

2. **Chemical Handlers** are additionally trained in the following:

☒	Safe methods for handling and storage of hazardous materials *
☒	Location(s) and proper use of fire and spill control equipment
☒	Spill procedures/emergency procedures
☒	Proper use of personal protective equipment *
☒	Specific hazard(s) of each chemical to which they may be exposed, including routes of exposure *(i.e., inhalation, ingestion, absorption)* *
☒	**Hazardous Waste Handlers/Managers** are trained in all aspects of hazardous waste management specific to their job duties *(e.g., container accumulation time requirements, labeling requirements, storage area inspection requirements, manifesting requirements, etc.)* *

3. **Emergency Response Team Members** are capable of and engaged in the following:

Complete this section only if you have an in-house emergency response team

☐	Personnel rescue procedures
☐	Shutdown of operations
☐	Liaison with responding agencies
☐	Use, maintenance, and replacement of emergency response equipment
☒	Refresher training, which is provided at least annually *
☐	Emergency response drills, which are conducted at least *(specify)*: *(e.g., "Quarterly", etc.)*

Record Keeping

(Hazardous Materials Business Plan Module)

All facilities that handle hazardous materials must maintain records associated with their management. A summary of your record keeping procedures is a required module of the Unidocs Hazardous Materials Business Plan (HMBP). A blank summary has been provided below for you to complete and submit if you do not already have such a document. **If you already have a brief written description of your hazardous materials record keeping systems that addresses all subjects covered below, you are not required to complete this page, but you must include a copy of your existing document as part of your HMBP.**

Check all boxes that apply. The following records are maintained at the facility. *[Note: Items marked with an asterisk (*) are required.]*:

☒	Current employees' training records *(to be retained until closure of the facility)* *
☒	Former employees' training records *(to be retained at least three years after termination of employment)* *
☒	Training Program(s) *(i.e., written description of introductory and continuing training)* *
☒	Current copy of this Emergency Response/Contingency Plan *
☒	Record of recordable/reportable hazardous material/waste releases *
☒	Record of hazardous material/waste storage area inspections *
☒	Record of hazardous waste tank daily inspections *
☐	Description and documentation of facility emergency response drills

Note: The above list of records does not necessarily identify every type of record required to be maintained by the facility.

Note: The following section applies where local agencies require facility owners/operators to perform and document routine facility self-inspections:

A copy of the Inspection Check Sheet(s) or Log(s) used in conjunction with required routine self-inspections of your facility must be submitted with your HMBP. *[Exception: Unidocs provides a Hazardous Materials/Waste Storage Area Inspection Form that you may use if you do not already have your own form. If you use the Unidocs form (available at* **www.unidocs.org***), you do not need to attach a copy.]*

Check the appropriate box:

☒	We will use the Unidocs "Hazardous Materials/Waste Storage Area Inspection Form" to document inspections.
☐	We will use our own documents to record inspections. ***(A blank copy of each document used must be attached to this HMBP.)***

Facility Site Plan and Storage Map Instructions

(Hazardous Materials Business Plan Module)

A Site Plan (public document) and Storage Map (confidential document) must be included with your HMBP. For relatively small facilities, these documents may be combined into one drawing. However, if combined, the combined Site Plan/Storage Map will become a public document. If you are concerned about displaying the storage locations of hazardous materials to the public, you must provide a separate facility Storage Map. Since these drawings are intended for use in emergency response situations, larger facilities *(generally those with complex and/or multiple buildings)* should provide an overall site plan and a separate storage map for each building/storage area. A blank Facility Site Plan/Storage Map sheet has been provided on the following page. You may complete that page or attach any other drawing(s) that contain(s) the information required below:

1. **Site Plan (public document):** This drawing shall contain, at a minimum, the following information:

   a. An indication of North Direction;
   b. Approximate scale *(e.g., "1 inch = 10 feet".)*;
   c. Date the map was drawn;
   d. All streets bordering the facility;
   e. Locations of all buildings and other structures;
   f. Parking lots and internal roads;
   g. Hazardous materials loading/unloading areas;
   h. Outside hazardous materials storage or use areas;
   i. Storm drain and sanitary sewer drain inlets;
   j. Wells for monitoring of underground tank systems;
   k. Primary and alternate evacuation routes, emergency exits, and primary and alternate staging areas.

2. **Storage Map (confidential):** The map(s) shall contain, at a minimum, the following information:

   a. General purpose of each section/area within each building *(e.g., "Office Area", "Manufacturing Area", etc.)*;
   b. Location of each hazardous material/waste storage, dispensing, use, or handling area *(e.g., individual underground tanks, aboveground tanks, storage rooms, paint booths, etc.)*. Each area shall be identifiable by a Grid Number, to be used in item 204 on the Hazardous Materials Inventory - Chemical Description pages of the Business Plan;
   c. For tanks, the capacity limit in gallons and common name of the hazardous material contained in each tank;
   d. Entrances to and exits from each building and hazardous material/waste room/area;
   e. Location of each utility emergency shut-off point *(i.e., gas, water, electric.)*;
   f. Location of each monitoring system control panel *(e.g., underground tank monitoring, toxic gas monitoring, etc.)*.

Emergency Response/Contingency Plan

(Hazardous Materials Business Plan Module)

Authority Cited: HSC§ 25504(b); 19 CCR §2731; 22 CCR §66262.34(a)(4)

All facilities that handle hazardous materials in HMBP quantities must have a written emergency response plan. In addition, facilities that generate 1,000 kilograms or more of hazardous waste (or more than 1 kilogram of acutely hazardous waste or 100 kilograms of debris resulting from the spill of an acutely hazardous waste) per month, or accumulate more than 6,000 kilograms of hazardous waste on-site at any one time, must prepare a hazardous waste contingency plan. Because the requirements are similar, they have been combined in a single document, provided below, for your convenience. This plan is a required module of the Hazardous Materials Business Plan (HMBP). **If you already have a plan that meets these requirements, you should not complete the blank plan, below, but you must include a copy of your existing plan as part of your HMBP.**

This site-specific Emergency Response/Contingency Plan is the facility's plan for dealing with emergencies and shall be implemented immediately whenever there is a fire, explosion, or release of hazardous materials that could threaten human health and/or the environment. **At least one copy of the plan shall be maintained at the facility for use in the event of an emergency and for inspection by the local agency.** A copy of the plan and any revisions must be provided to any contractor, hospital, or agency with whom special (i.e., contractual) emergency services arrangements have been made *(see section 3, below)*.

1. Evacuation Plan:

a. The following alarm signal(s) will be used to begin evacuation of the facility *(check all that apply)*:

☐ Bells; ☐ Horns/Sirens; ☒ Verbal *(i.e., shouting)*; ☐ Other *(specify)* _____

b. ☒ Evacuation map is prominently displayed throughout the facility.

Note: A properly completed HMBP Site Plan satisfies contingency plan map requirements. This drawing (or any other drawing that shows primary and alternate evacuation routes, emergency exits, and primary and alternate staging areas) must be prominently posted throughout the facility in locations where it will be visible to employees and visitors.

2. a. Emergency Contacts:*

Fire/Police/Ambulance	Phone No.:	**911**
California Emergency Management Agency	Phone No.:	**(800) 852-7550**

b. Post-Incident Contacts:*

Certified Unified Program Agency (CUPA)	Phone No.:	**(408) 918-3400**
Local Hazardous Materials Program	Phone No.:	**(408) 277-4659**
California Department of Toxic Substances Control (DTSC)	Phone No.:	**(510) 540-3739**
Cal/OSHA Division of Occupational Safety and Health	Phone No.:	**(408) 452-7288**
Air Quality Management District	Phone No.:	**(415) 771-6000**
Regional Water Quality Control Board	Phone No.:	**(510) 622-2300**

*** Phone numbers for agencies in Unidocs Member Agency geographic jurisdictions are available at www.unidocs.org.**

c. Emergency Resources:

Poison Control Center*	Phone No.:	**(800) 876-4766**
Nearest Hospital: Name: **Santa Clara Valley Medical**	Phone No.:	**(408) 885-5000**
Address: **751 South Bascom Ave**	City:	**San Jose**

3. Arrangements With Emergency Responders:

If you have made special (i.e., contractual) arrangements with any police department, fire department, hospital, contractor, or State or local emergency response team to coordinate emergency services, describe those arrangements below:

4. Emergency Procedures:

Emergency Coordinator Responsibilities:

a. Whenever there is an imminent or actual emergency situation such as a explosion, fire, or release, the emergency coordinator *(or his/her designee when the emergency coordinator is on call)* shall:
   i. Identify the character, exact source, amount, and areal extent of any released hazardous materials.
   ii. Assess possible hazards to human health or the environment that may result from the explosion, fire, or release. This assessment must consider both direct and indirect effects *(e.g., the effects of any toxic, irritating, or asphyxiating gases that are generated, the effects of any hazardous surface water run-off from water or chemical agents used to control fire, etc.).*
   iii. Activate internal facility alarms or communications systems, where applicable, to notify all facility personnel.
   iv. Notify appropriate local authorities *(i.e., call 911).*
   v. Notify the California Emergency Management Agency at (800) 852-7550.
   vi. Monitor for leaks, pressure build-up, gas generation, or ruptures in valves, pipes, or other equipment shut down in response to the incident.
   vii. Take all reasonable measures necessary to ensure that fires, explosions, and releases do not occur, recur, or spread to other hazardous materials at the facility.

b. Before facility operations are resumed in areas of the facility affected by the incident, the emergency coordinator shall:
   i. Provide for proper storage and disposal of recovered waste, contaminated soil or surface water, or any other material that results from a explosion, fire, or release at the facility.
   ii. Ensure that no material that is incompatible with the released material is transferred, stored, or disposed of in areas of the facility affected by the incident until cleanup procedures are completed.
   iii. Ensure that all emergency equipment is cleaned, fit for its intended use, and available for use.
   iv. Notify the California Department of Toxic Substances Control, the local CUPA, and the local fire department's hazardous materials program that the facility is in compliance with requirements b-i and b-ii, above.

Responsibilities of Other Personnel:

On a separate page, list any emergency response functions not covered in the "Emergency Coordinator Responsibilities" section, above. Next to each function, list the job title or name of each person responsible for performing the function. Number the page(s) appropriately.

5. Post-Incident Reporting/Recording:

The time, date, and details of any hazardous materials incident that requires implementation of this plan shall be noted in the facility's operating record.

Within 15 days of any hazardous materials emergency incident or threatened hazardous materials emergency incident that triggers implementation of this plan, a written Emergency Incident Report, including, but not limited to a description of the incident and the facility's response to the incident, must be submitted to the California Department of Toxic Substances Control, the local CUPA, and the local fire department's hazardous materials program. The report shall include:

a. Name, address, and telephone number of the facility's owner/operator;
b. Name, address, and telephone number of the facility;
c. Date, time, and type of incident *(e.g., fire, explosion, etc.)*;
d. Name and quantity of material(s) involved;
e. The extent of injuries, if any;
f. An assessment of actual or potential hazards to human health or the environment, where this is applicable;
g. Estimated quantity and disposition of recovered material that resulted from the incident;
h. Cause(es) of the incident;
i. Actions taken in response to the incident;
j. Administrative or engineering controls designed to prevent such incidents in the future.

6. Earthquake Vulnerability: [19 CCR §2731(e)]

As an attachment to this plan, you must identify any areas of the facility and mechanical or other systems that require immediate inspection or isolation because of their vulnerability to earthquake-related ground motion.

7. Hazard Mitigation/Prevention/Abatement [19 CCR §2731(c)]

As an attachment to this plan, you must include procedures that provide for mitigation, prevention, or abatement of hazards to persons, property, or the environment. These procedures must be scaled appropriately for the size and nature of the business, the nature of the damage potential of the hazardous materials handled, and the proximity of the business to residential areas and other populations.

8. Emergency Equipment:

22 CCR §66265.52(e) [as referenced by 22 CCR §66262.34(a)(4)] requires that emergency equipment at the facility be listed. Completion of the following Emergency Equipment Inventory Table meets this requirement.

EMERGENCY EQUIPMENT INVENTORY TABLE

Employee Training Plan

(Hazardous Materials Business Plan Module)

Authority Cited: HSC, Section 25504(c); 22 CCR §66262.34(a)(4)

All facilities that handle hazardous materials in HMBP quantities must have a written employee training plan. This plan is a required module of the Hazardous Materials Business Plan (HMBP). A blank plan has been provided below for you to complete and submit if you do not already have such a plan. **If you already have a brief written description of your training program that addresses all subjects covered below, you are not required to complete the blank plan, below, but you must include a copy of your existing document as part of your HMBP.**

Check all boxes that apply. *[Note: Items marked with an asterisk (*) are required.]*:

1. **Personnel** are trained in the following procedures:

☒	Internal alarm/notification *
☒	Evacuation/re-entry procedures & assembly point locations*
☐	Emergency incident reporting
☐	External emergency response organization notification
☒	Location(s) and contents of Emergency Response/Contingency Plan
☐	Facility evacuation drills, that are conducted at least *(specify)*: *(e.g., "Quarterly", etc.)*

2. **Chemical Handlers** are additionally trained in the following:

☒	Safe methods for handling and storage of hazardous materials *
☒	Location(s) and proper use of fire and spill control equipment
☒	Spill procedures/emergency procedures
☒	Proper use of personal protective equipment *
☒	Specific hazard(s) of each chemical to which they may be exposed, including routes of exposure *(i.e., inhalation, ingestion, absorption)* *
☒	**Hazardous Waste Handlers/Managers** are trained in all aspects of hazardous waste management specific to their job duties *(e.g., container accumulation time requirements, labeling requirements, storage area inspection requirements, manifesting requirements, etc.)* *

3. **Emergency Response Team Members** are capable of and engaged in the following:

Complete this section only if you have an in-house emergency response team

☐	Personnel rescue procedures
☐	Shutdown of operations
☐	Liaison with responding agencies
☐	Use, maintenance, and replacement of emergency response equipment
☒	Refresher training, which is provided at least annually *
☐	Emergency response drills, which are conducted at least *(specify)*: *(e.g., "Quarterly", etc.)*

Record Keeping

(Hazardous Materials Business Plan Module)

All facilities that handle hazardous materials must maintain records associated with their management. A summary of your record keeping procedures is a required module of the Unidocs Hazardous Materials Business Plan (HMBP). A blank summary has been provided below for you to complete and submit if you do not already have such a document. **If you already have a brief written description of your hazardous materials record keeping systems that addresses all subjects covered below, you are not required to complete this page, but you must include a copy of your existing document as part of your HMBP.**

Check all boxes that apply. The following records are maintained at the facility. *[Note: Items marked with an asterisk (*) are required.]*:

☒	Current employees' training records *(to be retained until closure of the facility)* *
☒	Former employees' training records *(to be retained at least three years after termination of employment)* *
☒	Training Program(s) *(i.e., written description of introductory and continuing training)* *
☒	Current copy of this Emergency Response/Contingency Plan *
☒	Record of recordable/reportable hazardous material/waste releases *
☒	Record of hazardous material/waste storage area inspections *
☒	Record of hazardous waste tank daily inspections *
☐	Description and documentation of facility emergency response drills

Note: The above list of records does not necessarily identify every type of record required to be maintained by the facility.

Note: The following section applies where local agencies require facility owners/operators to perform and document routine facility self-inspections:

A copy of the Inspection Check Sheet(s) or Log(s) used in conjunction with required routine self-inspections of your facility must be submitted with your HMBP. *[Exception: Unidocs provides a Hazardous Materials/Waste Storage Area Inspection Form that you may use if you do not already have your own form. If you use the Unidocs form (available at* **www.unidocs.org***), you do not need to attach a copy.]*

Check the appropriate box:

☒	We will use the Unidocs "Hazardous Materials/Waste Storage Area Inspection Form" to document inspections.
☐	We will use our own documents to record inspections. ***(A blank copy of each document used must be attached to this HMBP.)***

II. ACTIVITIES DECLARATION

NOTE: If you check YES to any part of this list, please submit the Business Owner/Operator Identification page.

Does your facility...		If Yes, please complete these pages of the UPCF...
A. HAZARDOUS MATERIALS Have on site (for any purpose) at any one time, hazardous materials at or above 55 gallons for liquids, 500 pounds for solids, or 200 cubic feet for compressed gases (include liquids in ASTs and USTs); or the applicable Federal threshold quantity for an extremely hazardous substance specified in 40 CFR Part 355, Appendix A or B; or handle radiological materials in quantities for which an emergency plan is required pursuant to 10 CFR Parts 30, 40 or 70?	☒ YES ☐ NO 4.	HAZARDOUS MATERIALS INVENTORY – CHEMICAL DESCRIPTION
B. REGULATED SUBSTANCES Have Regulated Substances stored onsite in quantities greater than the threshold quantities established by the California Accidental Release Prevention Program (CalARP)?	☐ YES ☒ NO 4a.	Coordinate with your local agency responsible for CalARP.
C. UNDERGROUND STORAGE TANKS (USTs) Own or operate underground storage tanks?	☒ YES ☐ NO 5.	UST OPERATING PERMIT APPLICATION – FACILITY INFORMATION UST OPERATING PERMIT APPLICATION – TANK INFORMATION
D. ABOVE GROUND PETROLEUM STORAGE Own or operate ASTs above these thresholds: Store greater than 1,320 gallons of petroleum products (new or used) in aboveground tanks or containers?	☐ YES ☒ NO 8.	No form required to CUPAs
E. HAZARDOUS WASTE Generate hazardous waste?	☒ YES ☐ NO 9.	EPA ID NUMBER – provide at top of this page
Recycle more than 100 kg/month of excluded or exempted recyclable materials (per HSC §25143.2)?	☐ YES ☒ NO 10.	RECYCLABLE MATERIALS REPORT (one per recycler)
Treat hazardous waste onsite?	☐ YES ☒ NO 11.	ONSITE HAZARDOUS WASTE TREATMENT NOTIFICATION – FACILITY PAGE ONSITE HAZARDOUS WASTE TREATMENT NOTIFICATION – UNIT PAGE (one page per unit)
Perform treatment subject to financial assurance requirements (for Permit by Rule and Conditional Authorization)?	☐ YES ☒ NO 12.	CERTIFICATION OF FINANCIAL ASSURANCE
Consolidate hazardous waste generated at a remote site?	☐ YES ☒ NO 13.	REMOTE WASTE CONSOLIDATION SITE ANNUAL NOTIFICATION
Need to report the closure/removal of a tank that was classified as hazardous waste and cleaned onsite?	☐ YES ☒ NO 14.	HAZARDOUS WASTE TANK CLOSURE CERTIFICATION
Generate in any single calendar month 1,000 kilograms (kg) (2,200 pounds) or more of federal RCRA hazardous waste, or generate in any single calendar month, or accumulate at any time, 1 kg (2.2 pounds) of RCRA acute hazardous waste; or generate or accumulate at any time more then 100 kg (220 pounds) of spill cleanup materials contaminated with RCRA acute hazardous waste?	☐ YES ☒ NO 14a.	Obtain federal EPA ID Number, file Biennial Report (EPA Form 8700-13A/B), and satisfy requirements for RCRA Large Quantity Generator.
Serve as a Household Hazardous Waste (HHW) Collection site?	☐ YES ☒ NO 14b.	See CUPA for required forms.
F. LOCAL REQUIREMENTS (You may also be required to provide additional information by your CUPA or local agency.)		15.

Emergency Response/Contingency Plan

(Hazardous Materials Business Plan Module)

Authority Cited: HSC§ 25504(b); 19 CCR §2731; 22 CCR §66262.34(a)(4)

All facilities that handle hazardous materials in HMBP quantities must have a written emergency response plan. In addition, facilities that generate 1,000 kilograms or more of hazardous waste (or more than 1 kilogram of acutely hazardous waste or 100 kilograms of debris resulting from the spill of an acutely hazardous waste) per month, or accumulate more than 6,000 kilograms of hazardous waste on-site at any one time, must prepare a hazardous waste contingency plan. Because the requirements are similar, they have been combined in a single document, provided below, for your convenience. This plan is a required module of the Hazardous Materials Business Plan (HMBP). **If you already have a plan that meets these requirements, you should not complete the blank plan, below, but you must include a copy of your existing plan as part of your HMBP.**

This site-specific Emergency Response/Contingency Plan is the facility's plan for dealing with emergencies and shall be implemented immediately whenever there is a fire, explosion, or release of hazardous materials that could threaten human health and/or the environment. **At least one copy of the plan shall be maintained at the facility for use in the event of an emergency and for inspection by the local agency.** A copy of the plan and any revisions must be provided to any contractor, hospital, or agency with whom special (i.e., contractual) emergency services arrangements have been made *(see section 3, below)*.

1. Evacuation Plan:

a. The following alarm signal(s) will be used to begin evacuation of the facility *(check all that apply)*:

☐ Bells; ☐ Horns/Sirens; ☒ Verbal *(i.e., shouting)*; ☐ Other *(specify* _____

b. ☒ Evacuation map is prominently displayed throughout the facility.

Note: A properly completed HMBP Site Plan satisfies contingency plan map requirements. This drawing (or any other drawing that shows primary and alternate evacuation routes, emergency exits, and primary and alternate staging areas) must be prominently posted throughout the facility in locations where it will be visible to employees and visitors.

2. a. Emergency Contacts:*

Fire/Police/Ambulance Phone No.: **911**

California Emergency Management Agency Phone No.: **(800) 852-7550**

b. Post-Incident Contacts:*

Certified Unified Program Agency (CUPA) Phone No.: **(408) 918-3411**

Local Hazardous Materials Program Phone No.: **(408) 277-4659**

Air Quality Management District Phone No.: **(415) 771-6000**

Regional Water Quality Control Board Phone No.: **(510) 622-2300**

*** Phone numbers for agencies in Unidocs Member Agency geographic jurisdictions are available at www.unidocs.org.**

c. Emergency Resources:

Poison Control Center* Phone No.: **(800) 876-4766**

Nearest Hospital: Name: **Santa Clara Valley Medical** Phone No.: **(408) 885-5000**

Address: **751 South Bascom Ave** City: **San Jose**

3. Arrangements With Emergency Responders:

If you have made special (i.e., contractual) arrangements with any police department, fire department, hospital, contractor, or State or local emergency response team to coordinate emergency services, describe those arrangements below:

4. Emergency Procedures:

Emergency Coordinator Responsibilities:

a. Whenever there is an imminent or actual emergency situation such as a explosion, fire, or release, the emergency coordinator *(or his/her designee when the emergency coordinator is on call)* shall:
   i. Identify the character, exact source, amount, and areal extent of any released hazardous materials.
   ii. Assess possible hazards to human health or the environment that may result from the explosion, fire, or release. This assessment must consider both direct and indirect effects *(e.g., the effects of any toxic, irritating, or asphyxiating gases that are generated, the effects of any hazardous surface water run-off from water or chemical agents used to control fire, etc.)*.
   iii. Activate internal facility alarms or communications systems, where applicable, to notify all facility personnel.
   iv. Notify appropriate local authorities *(i.e., call 911)*.
   v. Notify the California Emergency Management Agency at (800) 852-7550.
   vi. Monitor for leaks, pressure build-up, gas generation, or ruptures in valves, pipes, or other equipment shut down in response to the incident.
   vii. Take all reasonable measures necessary to ensure that fires, explosions, and releases do not occur, recur, or spread to other hazardous materials at the facility.

b. Before facility operations are resumed in areas of the facility affected by the incident, the emergency coordinator shall:
   i. Provide for proper storage and disposal of recovered waste, contaminated soil or surface water, or any other material that results from a explosion, fire, or release at the facility.
   ii. Ensure that no material that is incompatible with the released material is transferred, stored, or disposed of in areas of the facility affected by the incident until cleanup procedures are completed.
   iii. Ensure that all emergency equipment is cleaned, fit for its intended use, and available for use.
   iv. Notify the California Department of Toxic Substances Control, the local CUPA, and the local fire department's hazardous materials program that the facility is in compliance with requirements b-i and b-ii, above.

Responsibilities of Other Personnel:

On a separate page, list any emergency response functions not covered in the "Emergency Coordinator Responsibilities" section, above. Next to each function, list the job title or name of each person responsible for performing the function. Number the page(s) appropriately.

5. Post-Incident Reporting/Recording:

The time, date, and details of any hazardous materials incident that requires implementation of this plan shall be noted in the facility's operating record.

Within 15 days of any hazardous materials emergency incident or threatened hazardous materials emergency incident that triggers implementation of this plan, a written Emergency Incident Report, including, but not limited to a description of the incident and the facility's response to the incident, must be submitted to the California Department of Toxic Substances Control, the local CUPA, and the local fire department's hazardous materials program. The report shall include:
   a. Name, address, and telephone number of the facility's owner/operator;
   b. Name, address, and telephone number of the facility;
   c. Date, time, and type of incident *(e.g., fire, explosion, etc.)*;
   d. Name and quantity of material(s) involved;
   e. The extent of injuries, if any;
   f. An assessment of actual or potential hazards to human health or the environment, where this is applicable;
   g. Estimated quantity and disposition of recovered material that resulted from the incident;
   h. Cause(es) of the incident;
   i. Actions taken in response to the incident;
   j. Administrative or engineering controls designed to prevent such incidents in the future.

6. Earthquake Vulnerability: [19 CCR §2731(e)]

As an attachment to this plan, you must identify any areas of the facility and mechanical or other systems that require immediate inspection or isolation because of their vulnerability to earthquake-related ground motion.

7. Hazard Mitigation/Prevention/Abatement [19 CCR §2731(e)]

As an attachment to this plan, you must include procedures that provide for mitigation, prevention, or abatement of hazards to persons, property, or the environment. These procedures must be scaled appropriately for the size and nature of the business, the nature of the damage potential of the hazardous materials handled, and the proximity of the business to residential areas and other populations.

8. Emergency Equipment:

22 CCR §66265.52(e) [as referenced by 22 CCR §66262.34(a)(4)] requires that emergency equipment at the facility be listed. Completion of the following Emergency Equipment Inventory Table meets this requirement.

EMERGENCY EQUIPMENT INVENTORY TABLE

1. Equipment Category	2. Equipment Type	3. Locations *	4. Description**
Personal Protective Equipment, Safety Equipment, and First Aid Equipment	☐ Cartridge Respirators		
	☐ Chemical Monitoring Equipment *(describe)*		
	☐ Chemical Protective Aprons/Coats

** *Describe the equipment and its capabilities. If applicable, specify any testing/maintenance procedures/intervals. Attach additional pages, numbered appropriately, if needed.*

Employee Training Plan

(Hazardous Materials Business Plan Module)

Authority Cited: HSC, Section 25504(c); 22 CCR §66262.34(a)(4)

All facilities that handle hazardous materials in HMBP quantities must have a written employee training plan. This plan is a required module of the Hazardous Materials Business Plan (HMBP). A blank plan has been provided below for you to complete and submit if you do not already have such a plan. **If you already have a brief written description of your training program that addresses all subjects covered below, you are not required to complete the blank plan, below, but you must include a copy of your existing document as part of your HMBP.**

Check all boxes that apply. *[Note: Items marked with an asterisk (*) are required.]*:

1. **Personnel** are trained in the following procedures:

☒	Internal alarm/notification *
☒	Evacuation/re-entry procedures & assembly point locations*
☐	Emergency incident reporting
☐	External emergency response organization notification
☒	Location(s) and contents of Emergency Response/Contingency Plan
☐	Facility evacuation drills, that are conducted at least *(specify)*: *(e.g., "Quarterly", etc.)*

2. **Chemical Handlers** are additionally trained in the following:

☒	Safe methods for handling and storage of hazardous materials *
☒	Location(s) and proper use of fire and spill control equipment
☒	Spill procedures/emergency procedures
☒	Proper use of personal protective equipment *
☒	Specific hazard(s) of each chemical to which they may be exposed, including routes of exposure *(i.e., inhalation, ingestion, absorption)* *
☒	**Hazardous Waste Handlers/Managers** are trained in all aspects of hazardous waste management specific to their job duties *(e.g., container accumulation time requirements, labeling requirements, storage area inspection requirements, manifesting requirements, etc.)* *

3. **Emergency Response Team Members** are capable of and engaged in the following:

Complete this section only if you have an in-house emergency response team

☐	Personnel rescue procedures
☐	Shutdown of operations
☐	Liaison with responding agencies
☐	Use, maintenance, and replacement of emergency response equipment
☒	Refresher training, which is provided at least annually *
☐	Emergency response drills, which are conducted at least *(specify)*: *(e.g., "Quarterly", etc.)*

Record Keeping

(Hazardous Materials Business Plan Module)

All facilities that handle hazardous materials must maintain records associated with their management. A summary of your record keeping procedures is a required module of the Unidocs Hazardous Materials Business Plan (HMBP). A blank summary has been provided below for you to complete and submit if you do not already have such a document. **If you already have a brief written description of your hazardous materials record keeping systems that addresses all subjects covered below, you are not required to complete this page, but you must include a copy of your existing document as part of your HMBP.**

Check all boxes that apply. The following records are maintained at the facility. *[Note: Items marked with an asterisk (*) are required.]*:

☒	Current employees' training records *(to be retained until closure of the facility)* *
☒	Former employees' training records *(to be retained at least three years after termination of employment)* *
☒	Training Program(s) *(i.e., written description of introductory and continuing training)* *
☒	Current copy of this Emergency Response/Contingency Plan *
☒	Record of recordable/reportable hazardous material/waste releases *
☒	Record of hazardous material/waste storage area inspections *
☒	Record of hazardous waste tank daily inspections *
☐	Description and documentation of facility emergency response drills

Note: The above list of records does not necessarily identify every type of record required to be maintained by the facility.

Note: The following section applies where local agencies require facility owners/operators to perform and document routine facility self-inspections:

A copy of the Inspection Check Sheet(s) or Log(s) used in conjunction with required routine self-inspections of your facility must be submitted with your HMBP. *[Exception: Unidocs provides a Hazardous Materials/Waste Storage Area Inspection Form that you may use if you do not already have your own form. If you use the Unidocs form (available at* **www.unidocs.org***), you do not need to attach a copy.]*

Check the appropriate box:

☒	We will use the Unidocs "Hazardous Materials/Waste Storage Area Inspection Form" to document inspections.
☐	We will use our own documents to record inspections. ***(A blank copy of each document used must be attached to this HMBP.)***

Facility Site Plan and Storage Map Instructions
(Hazardous Materials Business Plan Module)

A Site Plan (public document) and Storage Map (confidential document) must be included with your HMBP. For relatively small facilities, these documents may be combined into one drawing. However, if combined, the combined Site Plan/Storage Map will become a public document. If you are concerned about displaying the storage locations of hazardous materials to the public, you must provide a separate facility Storage Map. Since these drawings are intended for use in emergency response situations, larger facilities *(generally those with complex and/or multiple buildings)* should provide an overall site plan and a separate storage map for each building/storage area. A blank Facility Site Plan/Storage Map sheet has been provided on the following page. You may complete that page or attach any other drawing(s) that contain(s) the information required below:

1. **Site Plan (public document):** This drawing shall contain, at a minimum, the following information:

   a. An indication of North Direction;
   b. Approximate scale *(e.g., "1 inch = 10 feet".)*;
   c. Date the map was drawn;
   d. All streets bordering the facility;
   e. Locations of all buildings and other structures;
   f. Parking lots and internal roads;
   g. Hazardous materials loading/unloading areas;
   h. Outside hazardous materials storage or use areas;
   i. Storm drain and sanitary sewer drain inlets;
   j. Wells for monitoring of underground tank systems;
   k. Primary and alternate evacuation routes, emergency exits, and primary and alternate staging areas.

2. **Storage Map (confidential):** The map(s) shall contain, at a minimum, the following information:

   a. General purpose of each section/area within each building *(e.g., "Office Area", "Manufacturing Area", etc.)*;
   b. Location of each hazardous material/waste storage, dispensing, use, or handling area *(e.g., individual underground tanks, aboveground tanks, storage rooms, paint booths, etc.)*. Each area shall be identifiable by a Grid Number, to be used in item 204 on the Hazardous Materials Inventory - Chemical Description pages of the Business Plan;
   c. For tanks, the capacity limit in gallons and common name of the hazardous material contained in each tank;
   d. Entrances to and exits from each building and hazardous material/waste room/area;
   e. Location of each utility emergency shut-off point *(i.e., gas, water, electric.)*;
   f. Location of each monitoring system control panel *(e.g., underground tank monitoring, toxic gas monitoring, etc.)*.

HAZARDOUS MATERIALS BUSINESS PLAN CERTIFICATION FORM

For Use by Unidocs Member Agencies or where approved by your Local Jurisdiction
Authority Cited: Health and Safety Code §25503.3(c); 19 CCR §2729.5(c)

To: Agency Name: **Santa Clara County Department of Environmental Health**
Agency Mailing Address: **1555 Berger Drive Suite 300**
San Jose CA 95112-2716

Pursuant to Section 25503.3(c) of California Health and Safety Code (HSC), the Hazardous Materials Business Plan (HMBP) certification described below is hereby submitted for the following facility:

Facility Name: **Granite Rock Co. - Pavex Central**

Facility Street Address: **120 Granite Rock Way** City: **San Jose**

Date of Current HMBP: **8/23/2011**

I certify that: *(Check the appropriate box.)*

☒ I have personally reviewed the Hazardous Materials Business Plan currently on file with your agency and certify that the HMBP is complete and accurate. *(See bottom of page for details.)* If this facility is subject to Federal Emergency Planning and Community Right to Know Act (EPCRA) reporting requirements, I have submitted the following documents with this Certification Form: Unified Program Consolidated Form (UPCF) Business Activities page; UPCF Business Owner/Operator Identification page with current signature and date; Hazardous Materials Inventory Statement page(s) with an original signature, photocopy of an original signature, or signature stamp on each page for all Extremely Hazardous Substances (EHS) handled at or above their Federal Threshold Planning Quantity (TPQ) or 500 pounds, whichever is less.

or

☐ Revisions to the Hazardous Materials Business Plan are necessary. The HMBP as revised is complete and accurate and is being implemented. A copy of the revisions has been electronically submitted or is enclosed with this Certification along with a signed UPCF Business Owner/Operator Identification page and UPCF Business Activities page if the HMBP revision include changes to the Hazardous Materials Inventory Statement.

OWNER/OPERATOR CERTIFICATION: I hereby certify under penalty of law that, based upon my inquiry of those individuals responsible for obtaining the information reported above, I believe that the submitted information is true, accurate, and complete. I understand that a revised HMBP must be submitted within 30 days of any change in this facility's storage or handling of hazardous materials that would require updating of the HMBP.

Name of Owner/Operator *(Print)*: **Samuel LoForti-Granite Rock** Title: **Environmental Specialist**

Phone: **831-768-2009** Signature: Date: **8/8/2012**

By checking the upper box on this form, you are certifying that:

- The information contained in the HMBP most recently submitted is complete, accurate, and up-to-date; **and**
- There has been no change in the quantity of any hazardous material as reported in the most recently submitted Hazardous Materials Inventory forms; **and**
- The facility has not begun handling any hazardous material in a HMBP reportable quantity that is not currently listed in the Hazardous Materials Inventory; **and**
- The most recently submitted HMBP contains the information required by Section 11022 of Title 42 of the United States Code; **and**
- There have been no substantial changes in the facility's operations that would require revision of the current HMBP.

Summary of Violations & Notice to Comply

Program: PR0395982 - UNDERGROUND STORAGE TANK - 2399
Inspection Type: ROUTINE INSPECTION-COMPLETED

VC	Class	Violation	Corrective Actions Taken
U002	C	**UST PERMIT AMENDMENT** UST permit holder failed to notify HMCD within 30 calendar days of a change in permit information (e.g., change in operator, substance stored, monitoring methods). ***Operating permit presented was incorrect, did not reflect upgrade to unleaded UDC. Forms were updated and provided on the day of the inspection. NO CORRECTIVE ACTION REQUIRED.*** Within 30 days, submit to HMCD updated UPCF UST Operating Permit Application forms. UST permit forms are available at www.EHinfo.org/hazmat. [HSC 25284(a)(3)(C), 25286(a), 25286(d)]	U015	C	**UST MONITORING PLAN** The facility failed to submit or keep current a UST Monitoring Plan. ***The monitoring plan presented was incorrect, did not reflect upgrade to monitoring of unleaded UDC. Forms were updated and provided on the day of the inspection. NO CORRECTIVE ACTION REQUIRED.*** Submit to HMCD a UPCF UST Monitoring Plan form (UST-D), available at www.EHinfo.org/hazmat. In addition to the information on the UPCF form, the monitoring plan must include a plot plan that accurately indicates the location of the UST(s), piping, dispensers, monitoring consoles, leak detection sensors, line leak detectors, and (for single-wall tanks) automatic tank gauging probes. Keep a copy of the current monitoring plan on-site. [23 CCR 2632(d)(1), 2641(h)]	U100	C	**MONITORING: DETECTION AT EARLIEST OPPORTUNITY** UST monitoring equipment/procedures are not capable of detecting a leak from all portions of the UST system at the earliest possible opportunity. ***Float and chain assembly in the diesel dispenser failed to trip shear valve when water first introduced. Water was noted in the float. Float drained of water, sealed, and reinstalled. After repair, operated as designed. NO CORRECTIVE ACTION REQUIRED.*** Upgrade monitoring equipment and/or procedures to be capable of detecting a leak from all portions of the UST systems at the earliest possible opportunity. All monitoring system consoles, leak sensors, and probes must be listed in the current edition of the State Water Resources Control Board's Local Guidance (LG) Letter LG-113, available at www.swrcb.ca.gov/water_issues/programs/ust/. A permit is required prior to installing new monitoring equipment. See the handout entitled Plan Submittal Requirements for Hazardous Materials Systems (HMCD-004) for details. The handout is available at www.EHinfo.org/hazmat. [23 CCR 2630(d), 2641(a)]	
Comments: ***Inspection took place 8/8/2012, report delivered 8/13/2012.***

Monitoring system certification conducted by Service Station Systems, technician Israel Santillan. Mr. Santillan held current certifications for ICC, Veeder Root and Pnuemercator (#10999, 6/29/14)
System includes one diesel UST system (pressurized piping) and one unleaded UST system (suction piping) that share a divided tank.
Shared annular sensor provided audible and visual alarm at local Pnuemercator monitoring panel.
Diesel STP sump sensor provided audible and visual alarms and positive shutdown.
Unleaded sump sensor provided audible and visual alarms. Suction system, no positive shutdown required.
Unleaded UDC stand-alone sensor tested and provided pump shutdown.
LLD tested at simulated 3gph, 10psi leak. LLD able to detect leak and provide slow flow.

OFFICIAL NOTICE OF INSPECTION

Facility ID: FA0258851
Facility Name: GRANITE ROCK COMPANY-PAVEX CENTRAL
Site Address: 120 GRANITE ROCK WY
SAN JOSE, CA 95136

Inspection Date: 8/13/2012

Spill buckets tested with water, held for one hour without loss.
E-stop provided shutdown of both pump systems.

Reviewed the following paperwork:
DUSTO monthly inspections (including alarm logs)
FR documents (CFO letter) - located at Berryessa Road site
Training logs - located at Berryessa Road site
Forms A/B, monitoring plan and response plan
SB 989 results

NOTE: Pnuemercator does not have printer to allow for system set up report or alarm history.

Program: PR0395983 - HAZMAT BUSINESS PLAN - BP05
Inspection Type: ROUTINE INSPECTION-COMPLETED

VC	Class	Violation	Corrective Actions Taken
		No violations were observed during this inspection.	

Comments: *Copy of current HMBP provided. Spot checked chemical inventory with no discrepancies noted. HMBP updated with past year (8/2011).*

Immediately correct any violation designated as a Class I or Class II violation. Correct all other violations no later than 09/12/2012, unless otherwise noted by the inspector.

Using the space provided, write a brief description of the actions taken by the facility to correct each violation. Attach additional pages if more space is needed. Within 5 days of achieving compliance or within 35 days of the inspection date, whichever comes first, sign the certification statement below and return a copy of this report to HMCD. Time granted for correction of violations does not preclude any enforcement action by HMCD or other agencies. This facility may be subject to reinspection at any time. [Authority: HSC 25185(c), 25187.8, 25404.1.2(c)]

Program: PR0395983 - HAZARDOUS MATERIALS BUSINESS PLAN - BP05
Inspection Type: ROUTINE INSPECTION-COMPLETED

VC	Class	Violation	Corrective Actions Taken
S115	M	**ANNUAL INVENTORY REPORT/CERTIFICATION** Facility failed to annually report or certify their hazardous materials inventory. ***HMBP last certified 8/8/2012. Submit a complete HMBP in CERS.*** ***DISREGARD CORRECTIVE ACTION TEXT, BELOW REGARDING SUBMITTAL OF HARD COPY FORMS. SEE www.EHinfo.org/hazmat FOR DETAILS REGARDING ELECTRONIC REPORTING REQUIREMENTS. A FACILITY RECORD FOR THIS SITE HAS ALREADY BEEN CREATED ON THE CALIFORNIA ENVIRONMENTAL REPORTING SYSTEM (CERS) WEBSITE AT http://cers.calepa.ca.gov. REQUEST ACCESS TO THAT CERS RECORD AND SUBMIT A CURRENT HMBP WITHIN 30 DAYS.*** Review the facility's hazardous materials inventory and amend it as necessary. If no amendments are made, submit to HMCD the Hazardous Materials Business Plan Certification Form (UN-039). If amendments are made, submit either a complete Hazardous Materials Business Plan (UN-020) or all of the following: Hazardous Materials Business Plan Certification Form, Business Activities Page, Owner Operator Identification Page, and amended portions of the hazardous materials inventory. The forms are available at www.EHinfo.org/hazmat. Ensure that future inventory reports or certifications are made annually. [HSC 25505(d)]	

Comments: HMBP will be reviewed after submittal to CERS and verified in a subsequent inspection.

Program: PR0395982 - UNDERGROUND STORAGE TANK - 2399
Inspection Type: ROUTINE INSPECTION-COMPLETED

VC	Class	Violation	Corrective Actions Taken
		No violations were observed during this inspection.	

Comments: On-site to witness the annual monitoring system certification and spill bucket test performed by Mr. Israel Santillan (ICC #8057571-UT, exp. 10/24/2013; VR #B33310, exp. 11/16/2013; VMI #2346, exp. 7/11/2013, Pnumercator #10999, exp 6/29/2014) of Service Station Systems.

Site consists of one Diesel tank with pressurized piping feeding one standard dispenser and one highflow dispenser as well as one Gasoline tank with suction piping and one dispenser. Both tanks share secondary containment. Tank annular space and sumps are monitored by Pnuemercator LS1000 panel. Panel showed no alarms on arrival.

The Pneumercator LS600 sensors were tested in water and provided audible and visible alarms. The Diesel sensor also caused positive shutdown. Sensor out and power out (fail safe) triggered positive shutdown of the diesel turbine pump.
The VMI LD200 LLD on the Diesel pump was tested and detected a 3.0gph leak @ 10psi and held slow flow.
The Bravo float and chains in the diesel dispensers were tested with water and functioned properly. Note: The high flow dispenser was observed to be tripped with diesel in the UDC. The hose and nozzle were replaced recently and may have been the cause of the release to the UDC. The gasoline dispenser has a Veeder Root stand alone sensor (VR 330212) that was tested with water and caused the dispenser to shut down.
Overfill protection is provided in all tanks by a flapper valve in the fill riser.
The spill buckets are direct-buried and were hydrostatically tested for one hour with no loss of liquid.
The emergency shut off switch functioned and shut down all turbine pumps.

OFFICIAL NOTICE OF INSPECTION

Facility ID: FA0258851 **Inspection Date:** 08/08/2013
Facility Name: GRANITE ROCK COMPANY-PAVEX CENTRAL
Site Address: 120 GRANITE ROCK WY, SAN JOSE, CA 95136

Summary of Violations & Notice to Comply

Documentation was reviewed and in good order. Training records kept as an e-document. Hazardous Materials and Waste training contains UST section and is refreshed yearly. Monitoring certificaions kept electronically. NOTE: Financial Responsibility form expires today, 8/8/2013. Ensure to upload current version with the rest of the UST information in CERS.

Submit a copy of the Monitoring Certification and Spill Bucket Test forms to HMCD within 30 days and keep a copy on-site for review.

EFFECTIVE JANUARY 1, 2013, STATE LAW REQUIRES THAT HAZARDOUS MATERIALS BUSINESS PLAN (HMBP), HAZARDOUS WASTE TIERED PERMIT, AND CERTAIN UNDERGROUND STORAGE TANK (UST) SUBMITTALS (i.e., OPERATING PERMIT APPLICATIONS AND UST MONITORING PLANS) BE SUBMITTED ELECTRONICALLY VIA THE CALIFORNIA ENVIRONMENTAL REPORTING SYSTEM (CERS) WEBSITE AT http://cers.calepa.ca.gov. HARD COPIES ARE NO LONGER ALLOWED FOR THOSE SUBMITTALS, SO PLEASE DISREGARD ANY PRE-PRINTED CORRECTIVE ACTION TEXT IN THIS NOTICE OF INSPECTION REGARDING HARD COPY FORMS. FACILITY RECORDS HAVE ALREADY BEEN CREATED IN CERS FOR MANY BUSINESSES. PLEASE SEARCH CERS AND REQUEST ACCESS TO THAT RECORD BEFORE CREATING A NEW FACILITY RECORD. SEE www.EHinfo.org/hazmat FOR MORE DETAILS REGARDING ELECTRONIC REPORTING REQUIREMENTS.

Immediately correct any violation designated as a Class I or Class II violation. Correct all other violations no later than 09/07/2013, unless otherwise noted by the inspector.

Using the space provided, write a brief description of the actions taken by the facility to correct each violation. Attach additional pages if more space is needed. Within 5 days of achieving compliance or within 35 days of the inspection date, whichever comes first, sign the certification statement below and return a copy of this report to HMCD. Time granted for correction of violations does not preclude any enforcement action by HMCD or other agencies. This facility may be subject to reinspection at any time. Summary of Violations & Notice to Comply

Program: PR0395982 - UNDERGROUND STORAGE TANK - 2399
Inspection Type: ROUTINE INSPECTION-COMPLETED

VC	Class	Violation	Corrective Actions Taken
		No violations were observed during this inspection.	

Comments: On-site to witness the annual monitoring system certification and spill bucket test performed by Mr. Israel Santillan of Service Station Systems.

The Pneumercator LS600 sensors were tested in water and provided audible and visible alarms. The Diesel sensor also caused positive shutdown. Sensor out (disconnect the brown wire under the left hand cover to test sensor out) and power out (use circuit breaker #29 Bottom switch to test fail safe) triggered positive shutdown of the diesel turbine pump.
The VMI LD200 MLLD on the Diesel pump was tested and detected a 3.0gph leak at 10psi and held slow flow.
The Bravo float and chains in the diesel dispensers were tested with water and functioned properly. NOTE: It would be helpful for UDC testing to have an access port on the back side of the high flow diesel dispenser. The gasoline dispenser has a Veeder Root stand alone sensor (VR 330212) that was tested with water and caused the dispenser to shut down.
Overfill protection is provided in all tanks by a flapper valve in the fill riser.
The spill buckets are direct-buried and were hydrostatically tested for one hour with no loss of liquid.

CERS submittal on 8/8/2014 complete. Training records kept as an e-document. Hazardous Materials and Waste training contains UST section and is refreshed yearly. Monitoring certifications kept electronically. NOTE: Chief Financial Officer letter dated 8/9/2013. Ensure the letter is updated within 150 days of the end of your fiscal year.

Submit a copy of the Monitoring Certification and Spill Bucket Test forms to HMCD within 30 days and keep a copy on-site for review.

Immediately correct any violation designated as a Class I or Class II violation. Correct all other violations no later than 09/07/2014, unless otherwise noted by the inspector.

The map must contain north orientation, loading areas, internal roads, adjacent streets, storm and sewer drains, access and exit points, emergency shutoffs, evacuation staging areas, hazardous material handling and storage areas, and emergency response equipment. [HSC 25505(a)(2), 25508(a)(1)]	
B110	M	**HMBP AMENDMENT: CHANGE IN INVENTORY, ADDRESS, OWNERSHIP, OR BUSINESS NAME [1010006]** Facility operator failed to amend and resubmit their Hazardous Materials Business Plan (HMBP) within 30 days of an event requiring plan amendment, including any of the following: 1) a 100% or more increase in the quantity of a previously disclosed material, 2) any handling of a previously undisclosed hazardous material subject to HMBP-reporting, 3) a change of business address, 4) a change of business ownership, or 5) a change of business name. ***Observed unreported hazardous materials and increased quantities stored at the facility. Add the Acetylene (largest 250 cf x5), Propane (largest 20 gallons x2), 25% Carbon Dioxide/75% Argon (largest 376 cf x2) and Oxygen (largest 281 cf x4) to the small tools area. Add the Grace Daraset 250 gallon tote and Adva 55 gallon drum to the west yard area. Add 25% Carbon Dioxide/75% Argon (376 cf x2) to the Shop and update the Oxygen to largest container 281 cf and 4000 cf for maximum quantity. Add motor oil (55 gallons x2) to the waste oil room.*** Within 30 days, amend and electronically resubmit the HMBP via the California Environmental Reporting System (CERS) website at http://cers.calepa.ca.gov. See www.sccgov.org/sites/deh/hmcd/hazmat/pages/electronic_reporting.aspx for more details on electronic reporting. [HSC 25508.1(a)-(e)]	

Comments: Vehicle maintenance and fueling operations. CERS submittal 8/8/2013. NOTE: Oxygen stored near flammable gasses (acetylene and propane) in the small tools area. Ensure proper segregation of incompatible materials.

Program: PR0379140 - HAZARDOUS WASTE GENERATOR - 2205
Inspection Type: ROUTINE INSPECTION-COMPLETED

VC	Class	Violation	Corrective Actions Taken

OFFICIAL NOTICE OF INSPECTION

Facility ID: FA0258851 **Inspection Date:** 08/22/2014
Facility Name: GRANITE ROCK COMPANY-PAVEX CENTRAL
Site Address: 120 GRANITE ROCK WY, SAN JOSE, CA 95136

Summary of Violations & Notice to Comply

VC	Class	Violation	Corrective Actions Taken
G020	M	**MARKING OF HAZARDOUS WASTE** Facility failed to properly mark a hazardous waste tank and/or container. _____ ***One rolling cart for used oil collection was not marked. Properly mark the container. Ensure all hazardous waste containers are marked with the required information.*** _____ Mark all hazardous waste tanks with the words "HAZARDOUS WASTE" and the accumulation start date. Mark all hazardous waste containers and portable tanks with the words "HAZARDOUS WASTE;" the accumulation start date; the name and address of the generator; and the composition, physical state, and hazardous properties of the waste. Additionally, mark used oil containers, aboveground tanks, and fill pipes for underground tanks with the words "USED OIL." [CCR 66262.34(f), 66279.21(b)]	
G043	M	**MANIFEST RETENTION** Facility failed to retain the original and/or treatment/storage/disposal facility (TSDF) -signed copy of a Uniform Hazardous Waste Manifest. _____ ***The manifests noted did not have their TSDF-signed copy. Obtain copies and maintain for three years from the ship date. Submit copies with the response to this Notice of Inspection. Manifest #s: 009436513JJK (2012); 011575008JJK and 001575165JJK (2013).*** _____ Obtain a copy of each missing manifest. Keep the original manifest copy until you receive the TSDF-signed copy of that manifest. Keep the TSDF-signed copy for 3 years from the date of waste shipment. [CCR 66262.40(a)]	
G051	M	**CONSOLIDATED MANIFESTING: INCOMPLETE RECEIPT** Facility allowed an eligible hazardous waste to be shipped using a consolidated manifest without receiving a properly completed receipt. _____ ***Safety Kleen consolidated manifests do not include the generator's statement of waste minimization efforts. Ensure all consolidated manifests signed by the facility include this information.*** _____ Do not allow eligible hazardous wastes to be removed from the facility without obtaining a proper receipt from your hauler. The receipt must contain: 1) the name, address, EPA ID, contact person, telephone number, and signature of the generator; 2) the date of shipment; 3) the manifest number; 4) the type of waste, DOT proper shipping name, California and RCRA waste codes, and quantity shipped for each waste stream; 5) the name, address, and EPA ID of the receiving facility; 6) the name, address, and EPA ID of the transporter; 7) the driver's signature; and 8) a statement signed by the generator, certifying that the generator has established a program to reduce the volume or quantity and toxicity of the hazardous waste to the degree, as determined by the generator, to be economically practicable. [HSC 25160.2(b)(4)]	

OFFICIAL NOTICE OF INSPECTION

Facility ID: FA0258851 **Inspection Date:** 08/22/2014
Facility Name: GRANITE ROCK COMPANY-PAVEX CENTRAL
Site Address: 120 GRANITE ROCK WY, SAN JOSE, CA 95136

Summary of Violations & Notice to Comply

VC	Class	Violation	Corrective Actions Taken
G321	M	**RECORDS: HAZARDOUS WASTE TRAINING** Hazardous waste training records are incomplete or are not being kept as required. ***Training records do not include Job Title, Job Description, and type of introductory and continuing training. Update the training records with this information and the names of each person in that job title.*** Maintain training records that include: 1) the name and job title of each person in a position that has hazardous waste management responsibility; 2) a written job description that includes the duties, skills, education, or other qualifications required for each position described above; 3) a description of the type and amount of introductory and continuing training that will be given for each position; and 4) documentation that this training was completed by facility personnel. Keep current employee training records until facility closure. Keep records on former employee for at least 3 years from the date the employee last worked at the facility. [CCR 66265.16(e)]	
G402	M	**CONTAINER MARKING: CONTAMINATED CONTAINERS** Facility did not mark an empty hazardous material/waste container larger than 5 gallons in capacity with the date it was emptied. ***2x 55 gallon drums formerly containing motor oil were not marked as empty with the date. Properly mark the containers. Ensure empty hazardous materials containers are properly marked and manged within one year.*** Mark each empty hazardous material/waste container larger than 5 gallons in capacity with the date it was emptied. [CCR 66261.7(f)]	

Comments: EPA ID #CAL000291556 is active. Vehicle maintenance activities. Training records stored electronically. NOTE: 3 year extension for waste oil tank assessment expires in October of this year. I will be in contact with you to discuss your options for this matter.

Immediately correct any violation designated as a Class I or Class II violation. Correct all other violations no later than 09/21/2014, unless otherwise noted by the inspector.

Using the space provided, write a brief description of the actions taken by the facility to correct each violation. Attach additional pages if more space is needed. Within 5 days of achieving compliance or within 35 days of the inspection date, whichever comes first, sign the certification statement below and return a copy of this report to HMCD. Time granted for correction of violations does not preclude any enforcement action by HMCD or other agencies. This facility may be subject to reinspection at any time. [Authority: HSC 25185(c), 25187.8, 25404.1.2(c)]

Certification of Compliance

I certify under penalty of perjury that this facility has complied with directives specified in this Notice to Comply.

Signature of Owner/Operator **Date**

Printed Name of Owner/Operator **Title**

R101DAXC0HNNQ

OFFICIAL NOTICE OF INSPECTION – SUPPLEMENTAL INFORMATION

This Official Notice of Inspection (NOI) documents the results of an inspection by HMCD, including a list of alleged violations, evidence in support of the alleged violations, corrective actions that must be taken by the facility, and general observations.

What am I supposed to do upon receiving a NOI?

- Correct the violations within 30 days of the inspection date, unless otherwise noted.
- In the "Corrective Actions Taken" column, write a brief description of the actions taken by the facility to correct each violation. Attach additional pages if more space is needed.
- Certify that the facility has returned to compliance by signing the certification statement at the end of the report.
- Make a photocopy of the NOI and any attachments for your records.
- Within 5 days of achieving compliance or 35 days of the inspection date, whichever comes first, return the original copy of the report and any attachments to HMCD at 1555 Berger Drive, Suite 300, San Jose, CA 95112-2716.

What if there are violations that cannot be corrected within 30 days?

For each violation that cannot be corrected within 30 days, submit a written Compliance Plan describing the corrective actions you propose to take and the date by which the actions will be completed. State law grants up to 30 days to correct minor violations without penalty. Minor violations that are uncorrected after 30 days, and class I and II violations may be subject to enforcement action. To lessen the possibility of enforcement action, correct all violations as soon as possible.

What if I disagree with a violation on the NOI?

If you disagree with any violation listed in this NOI, you must submit a written Notice of Disagreement to HMCD within 30 days of the inspection date. Address such notices to the attention of the inspector who cited the violation. In your Notice of Disagreement, explain in detail why you believe the alleged violation was incorrectly cited.

What about photographs or samples taken during the inspection?

A co-located sample will be given to you upon request if adequate sample volume is available. Photographs and sample analytical results will not generally be available until after the inspection has been concluded. A copy of photographs and/or analytical results will be provided to you upon written request. Photographs and sample analytical results may be withheld in the event of a criminal investigation or other ongoing investigation.

Summary of Violations & Notice to Comply

Program: SR0847555 - UNDERGROUND STORAGE TANK - 2314
Inspection Type: ONGOING CONSTRUCTION/EQUIPMENT INSPECTION

VC	Class	Violation	Corrective Actions Taken
		No violations were observed during this inspection.	

Comments: Underground storage tank (UST) monitoring system replacement. All sensors tested in water by Mr. Israel Santillan (certifications current) of Service Station Systems and produced audible and visible alarms. Positive shutdown confirmed. Sensor out is positive shutdown properly functional. Power out (also required for Fail Safe) not properly configured.

Contact me for testing of fail safe for final sign off.

Program: PR0395982 - UNDERGROUND STORAGE TANK - 2399
Inspection Type: ROUTINE INSPECTION-COMPLETED

VC	Class	Violation	Corrective Actions Taken
T320	**II**	**PIPE MONITORING: INTERSTITIAL MONITORING NON-FUNCTIONAL (TANK INSTALLED 1/2/84 - 6/30/04) [2030018]** Leak detection equipment monitoring piping secondary containment (e.g., submersible turbine sump, piping sump, vapor pot) in an Underground storage tank (UST) system installed between 1/2/1984 and 6/30/2004 failed to function properly when tested or is otherwise non-functional. _____ ***The exterior visible alarm is connected to a outdoor light switch and does not indicate when an alarm is active. Also, there is not an external (the monitoring panel is inside a protective enclosure) audible alarm. Reconfigure the visible alarm to activate only when there is an active alarm and install an external audible alarm. This will be done in conjunction with the open project for the installation (SR0847555).*** _____ All secondary piping and sumps that provide secondary containment for regulated piping systems must be continuously monitored by a method that either activates audible and visual alarms or shuts down the flow of product at the dispenser when a leak is detected. Have a qualified UST Service Technician replace the non-functional leak detection equipment as soon as possible and submit documentation of the repair and startup testing results with your written response to this Notice to Comply. No permit is required from HMCD for like-for-like replacement (same manufacturer and model number) of sensors. If sensor replacement will not be like-for-like, or if the monitoring system console must be replaced, apply for a UST retrofit/repair permit from HMCD. Plans must be submitted in accordance with HMCD's "Plan Submittal Requirements for Hazardous Materials Systems" (HMCD-004) available at www.EHinfo.org/hazmat. Upon plan check approval, have the work done per the approved plans as soon as possible and schedule an inspection so HMCD can witness functional testing of the monitoring equipment. [23 CCR 2636(f)(1)]	

Summary of Violations & Notice to Comply

VC	Class	Violation	Corrective Actions Taken
T600	II	**UST INSTALLATION / MODIFICATION PERMIT [2060009]** Underground storage tank (UST) owner/operator failed to obtain a permit from HMCD prior to installing, replacing, repairing, or modifying a UST system. _____ ***New UST monitoring system (panel, sensors, exterior visible alarm) installed with out first obtaining a permit. A retroactive permit has been applied for (SR0847555). Ensure you check with our office before performing work on the UST system to verify what work will require a permit. Underground Storage Tank Installation, Repair, and Upgrade Permit Requirements (HMCD-101) attached for reference.*** _____ Within 30 days, submit plans to and apply for a retroactive permit from HMCD for the work that was done. Include with your submittal plans demonstrating that: 1) The UST is structurally sound; 2) The method(s) of repair or upgrade will prevent unauthorized releases due to structural failure or corrosion during the remaining operating life of the UST system; and 3) Materials used in the repair or upgrade are compatible with the existing UST system materials and will not be subject to deterioration due to contact with the hazardous materials being stored. Plan submittal requirements, permit application forms, and fee schedule are available at www.EHinfo.org/hazmat. [HSC 25299(a)(2), 25299(b)(4); 23 CCR 2661(b), 2662(a)]	
T850	M	**EXEMPTION CONDITIONS: FAIL SAFE SHUTDOWN [2030017]** Underground storage tank (UST) owner/operator failed to meet requirements for exempting underground pressurized piping from the requirement to be tightness tested annually by a State-licensed tank tester or by an electronic line leak detector (ELLD) programmed to perform an annual 0.1 gallon-per-hour leak test. _____ ***Sensor out condition caused positive shutdown, but power out did not. Either reconfigure the monitoring system to shut down power to the diesel turbine when it loses power or begin performing annual 0.1 gph line tightness tests, as required.*** _____ Have a qualified UST Service Technician repair the secondary containment monitoring system so it shuts down the pump or stops the flow of product at the dispenser when a leak is detected in the under-dispenser containment (UDC) and, for all pressurized product piping not contained in the UDC, provides fail-safe shutdown of the pump/turbine. No permit from HMCD is required for replacement of sensors or relays provided that they are replaced like-for-like. You may implement annual line tightness testing within 30 days rather than making the above repairs. If you do so, notify HMCD at least 2 working days prior to the test date and electronically submit a revised UST Monitoring Plan via the California Environmental Reporting System (CERS) at cers.calepa.ca.gov within 30 days. Submit a copy of the line tightness test report within 30 days of the testing date. [23 CCR 2636(f)(5)]	

Comments: On-site to witness the annual monitoring system certification and spill bucket test performed by Mr. Israel Santillan (certifications current) of Service Station Systems.

Split tank, diesel is pressurized, gasoline is conventional suction. Tank annular and sump sensors tested in water and provided audible and visible alarms at the panel. The diesel sump sensor also provided positive shutdown. Diesel under dispenser containment (UDC) monitored by float and chain assemblies. Float and chain assemblies tested with water and functioned properly. The gasoline UDC is monitored by a stand-alone sensor. The sensor was tested in water and shut down the dispenser pump.

Overfill protection is provided in all tanks by a flapper valve in the fill riser.
The spill buckets are direct buried and were hydrostatically tested for one hour with no loss.
The emergency shut off switch was tested and shut down the diesel turbine.

The VMI LD 2000 mechanical line leak detector (MLLD) detected a simulated 3 gph leak at 10 PSI and held slow flow.

Summary of Violations & Notice to Comply

Reviewed DUSTO Monthly Reports, DUSTO Training records, testing reports and maintenance documentation.

Tank and monitoring system information submitted to the California Environmental Reporting System (CERS) on 7/21/2015 will need to be updated to reflect new monitoring equipment.

Permit valid through 10/31/2019.

Submit a copy of the Monitoring Certification and Spill Bucket Test reports to our office within 30 days and keep a copy available for review for at least 3 years. Reports may be sent via email to USTinspector@deh.sccgov.org.

Immediately correct any violation designated as a Class I or Class II violation. Correct all other violations no later than 09/06/2015, unless otherwise noted by the inspector.

Using the space provided, write a brief description of the actions taken by the facility to correct each violation. Attach additional pages if more space is needed. Within 5 days of achieving compliance or within 35 days of the inspection date, whichever comes first, sign the certification statement below and return a copy of this report to HMCD. Time granted for correction of violations does not preclude any enforcement action by HMCD or other agencies. This facility may be subject to reinspection at any time. [Authority: HSC 25185(c), 25187.8, 25404.1.2(c)]

OFFICIAL NOTICE OF INSPECTION - SUPPLEMENTAL INFORMATION

This Official Notice of Inspection (NOI) documents the results of an inspection by HMCD, including a list of alleged violations, evidence in support of the alleged violations, corrective actions that must be taken by the facility, and general observations.

What am I supposed to do upon receiving a NOI?

- Correct the violations within 30 days of the inspection date, unless otherwise noted.
- In the "Corrective Actions Taken" column, write a brief description of the actions taken by the facility to correct each violation. Attach additional pages if more space is needed.
- Certify that the facility has returned to compliance by signing and dating the certification statement at the end of the report.
- Make a photocopy of the NOI and any attachments for your records.
- Within 5 days of achieving compliance or 35 days of the inspection date, whichever comes first, return the original copy of the report and any attachments to HMCD at 1555 Berger Drive, Suite 300, San Jose, CA 95112-2716.

What if there are violations that cannot be corrected within 30 days?

For each violation that cannot be corrected within 30 days, submit a written Compliance Plan describing the corrective actions you propose to take and the date by which the actions will be completed. State law grants up to 30 days to correct minor violations without penalty. Minor violations that are uncorrected after 30 days, and class I and II violations may be subject to enforcement action. To lessen the possibility of enforcement action, correct all violations as soon as possible.

What if I disagree with a violation on the NOI?

If you disagree with any violation listed in this NOI, you must submit a written Notice of Disagreement to HMCD within 30 days of the inspection date. Address such notices to the attention of the inspector who cited the violation. In your Notice of Disagreement, explain in detail why you believe the alleged violation was incorrectly cited.

What about photographs or samples taken during the inspection?

A co-located sample will be given to you upon request if adequate sample volume is available. Photographs and sample analytical results will not generally be available until after the inspection has been concluded. A copy of photographs and/or analytical results will be provided to you upon written request. Photographs and sample analytical results may be withheld in the event of a criminal investigation or other ongoing investigation.

OFFICIAL NOTICE OF INSPECTION

Facility ID: FA0258851
Facility Name: GRANITE ROCK COMPANY-PAVEX CENTRAL
Site Address: 120 GRANITE ROCK WY, SAN JOSE, CA 95136
Inspection Date: 08/12/2016

Summary of Violations & Notice to Comply

VC	Class	Violation	Corrective Actions Taken
T180	II	**INTERSTITIAL MONITORING: AUDIBLE & VISUAL ALARMS [2030003]** Underground storage tank (UST) continuous monitoring system does not have functional audible and visual alarms. ***Due to the nature of the site and the location of the alarm panel (outside in the yard with heavy equipment driving by and inside a closed panel box) while the audible and visible alarms function at the panel, it would be difficult for employees to observe them. Either have the alarms forwarded to a staffed location (the panel sends inventory information wirelessly to the office) or install an external strobe and horn of sufficient volume to attract employee's attention.*** UST monitoring systems must have audible and visual alarms that activate when a leak of hazardous materials from primary containment into secondary containment occurs and when water intrusion into secondary containment is detected. Have the continuous monitoring system repaired as soon as possible by a qualified UST Service Technician so the audible and visual alarms function properly. No permit from HMCD is required for this repair. Submit with your written response to this Notice to Comply documentation showing that the repair has been made and that the audible and visual alarms work (e.g., copy of work order). If the monitoring system cannot be repaired, it must be replaced with an approved system (i.e., equipment listed in Local Guidance Letter LG-113 at www.waterboards.ca.gov/water_issues/programs/ust/leak_prevention/index.shtml). You must obtain a UST retrofit permit from HMCD prior to replacing monitoring equipment. Plans must be submitted in accordance with HMCD's "Plan Submittal Requirements for Hazardous Materials Systems" (HMCD-004) available at www.EHinfo.org/hazmat. Upon plan check approval, have the work done per the approved plans as soon as possible and schedule an inspection for HMCD to witness functional testing of the monitoring equipment by the UST Service Technician. [23 CCR 2632(c)(2)(B), 2636(f)(1), 2666(a)]	
T320	II	**PIPE MONITORING: INTERSTITIAL MONITORING NON-FUNCTIONAL (TANK INSTALLED 1/2/84 - 6/30/04) [2030018]** Leak detection equipment monitoring piping secondary containment (e.g., submersible turbine sump, piping sump, vapor pot) in an Underground storage tank (UST) system installed between 1/2/1984 and 6/30/2004 failed to function properly when tested or is otherwise non-functional. ***The float and chain in the high flow UDC did not function when initially tested. After adjustment the float and chain functioned as required. No further corrective actions required.*** All secondary piping and sumps that provide secondary containment for regulated piping systems must be continuously monitored by a method that either activates audible and visual alarms or shuts down the flow of product at the dispenser when a leak is detected. Have a qualified UST Service Technician replace the non-functional leak detection equipment as soon as possible and submit documentation of the repair and startup testing results with your written response to this Notice to Comply. No permit is required from HMCD for like-for-like replacement (same manufacturer and model number) of sensors. If sensor replacement will not be like-for-like, or if the monitoring system console must be replaced, apply for a UST retrofit/repair permit from HMCD. Plans must be submitted in accordance with HMCD's "Plan Submittal Requirements for Hazardous Materials Systems" (HMCD-004) available at www.EHinfo.org/hazmat. Upon plan check approval, have the work done per the approved plans as soon as possible and schedule an inspection so HMCD can witness functional testing of the monitoring equipment. Summary of Violations & Notice to Comply

VC	Class	Violation	Corrective Actions Taken
T500	II	**PRIMARY CONTAINMENT NOT PRODUCT-TIGHT [2060027]** Underground storage tank (UST) and/or regulated piping primary containment is not made of (or, if single-walled, lined with) a material that is product-tight and compatible with the substance stored. ***The diesel piping in the dispenser is leaking and there was diesel accumulating in the UDC. Have the piping repaired to maintain primary containment. Retain the repair documentation.*** Immediately cease storing hazardous materials in the UST and remove any released hazardous material from secondary containment. Contact the tank/piping manufacturer or the manufacturers' authorized representatives to determine how badly the tank system has been damaged and whether it can be repaired. If repair is possible, you must submit plans to, and obtain approval from, HMCD prior to beginning work. If the tank system cannot be repaired, apply for a UST Closure Permit within 90 days and complete closure of the tank system within 6 months. Keep HMCD advised of any determinations made regarding the status of the tank. UST closure guidelines, plan submittal requirements, permit application forms, and the fee schedule are available at www.EHinfo.org/hazmat. [HSC 25290.1(c)(1), 25290.2(c)(1), 25291(a)(1); 23 CCR 2631.1(a), 2660(m)]	
T900	II	**RESPONSE TO UST NOTICE OF VIOLATION [2030073]** Underground storage tank (UST) permit holder failed to implement corrective actions within 30 calendar days of receiving an Official Notice of Inspection (Notice to Comply) from HMCD citing violations of UST law or regulations. ***The response to the 8/7/2015 inspection report was not received by our office. Submit the completed inspection report with the response to this current report. Ensure the violations noted are corrected in a timely manner and the response is returned to our office.*** Correct all outstanding violations. Submit to HMCD the previous Official Notice(s) of Inspection with the Corrective Actions Taken" column and "Certification of Compliance" signature section completed. If any violation has not yet been corrected, describe the corrective actions that will be taken and provide a specific date by which those actions will be completed. [23 CCR 2712(f)]	

Comments: On-site to witness the annual monitoring system certification and spill bucket test performed by Mr. Israel Santillan (certifications current) of Service Station Systems.

Split tank, diesel is pressurized, gasoline is conventional suction. Tank annular and sump sensors tested in water and provided audible and visible alarms at the panel. The diesel sump sensor also provided positive shutdown. Fail safe (sensor out and power out) was tested and functioned as required.

Diesel under dispenser containment (UDC) monitored by float and chain assemblies. Float and chain assemblies tested with water and functioned properly. The gasoline UDC is monitored by a stand-alone sensor. The sensor was tested in water and shut down the dispenser pump.

Overfill protection is provided in all tanks by a flapper valve in the fill riser.
The spill buckets are direct buried and were hydrostatically tested for one hour with no loss.
The VMI LD 2000 mechanical line leak detector (MLLD) detected a simulated 3 gph leak at 10 PSI and held slow flow.

Permit valid through 10/31/2019.

NOTE: There is a false "Theft Alarm" that comes up often. It is recommended that this is repaired to ensure leak alarms are noticed at the earliest opportunity and not dismissed as a false alarm.
-Secondary containment (SB989) testing is due next August (8/2017).

OFFICIAL NOTICE OF INSPECTION

Facility ID: FA0258851
Facility Name: GRANITE ROCK COMPANY-PAVEX CENTRAL
Site Address: 120 GRANITE ROCK WY, SAN JOSE, CA 95136

Inspection Date: 08/12/2016

Summary of Violations & Notice to Comply

Submit a copy of the Monitoring Certification and Spill Bucket Test reports to our office within 30 days and keep a copy available for review for at least 3 years. Reports may be sent via email to USTinspector@deh.sccgov.org.

Immediately correct any violation designated as a Class I or Class II violation. Correct all other violations no later than 09/11/2016, unless otherwise noted by the inspector.

Using the space provided, write a brief description of the actions taken by the facility to correct each violation. Attach additional pages if more space is needed. Within 5 days of achieving compliance or within 35 days of the inspection date, whichever comes first, sign the certification statement below and return a copy of this report to HMCD. Time granted for correction of violations does not preclude any enforcement action by HMCD or other agencies. This facility may be subject to reinspection at any time. [Authority: HSC 25185(c), 25187.8, 25404.1.2(c)]

Certification of Compliance

I certify under penalty of perjury that this facility has complied with directives specified in this Notice to Comply.

Signature of Owner/Operator **Date**

Printed Name of Owner/Operator **Title**

OFFICIAL NOTICE OF INSPECTION - SUPPLEMENTAL INFORMATION

This Official Notice of Inspection (NOI) documents the results of an inspection by HMCD, including a list of alleged violations, evidence in support of the alleged violations, corrective actions that must be taken by the facility, and general observations.

What am I supposed to do upon receiving a NOI?

- Correct the violations within 30 days of the inspection date, unless otherwise noted.
- In the "Corrective Actions Taken" column, write a brief description of the actions taken by the facility to correct each violation. Attach additional pages if more space is needed.
- Certify that the facility has returned to compliance by signing and dating the certification statement at the end of the report.
- Make a photocopy of the NOI and any attachments for your records.
- Within 5 days of achieving compliance or 35 days of the inspection date, whichever comes first, return the original copy of the report and any attachments to HMCD at 1555 Berger Drive, Suite 300, San Jose, CA 95112-2716.

What if there are violations that cannot be corrected within 30 days?

For each violation that cannot be corrected within 30 days, submit a written Compliance Plan describing the corrective actions you propose to take and the date by which the actions will be completed. State law grants up to 30 days to correct minor violations without penalty. Minor violations that are uncorrected after 30 days, and class I and II violations may be subject to enforcement action. To lessen the possibility of enforcement action, correct all violations as soon as possible.

What if I disagree with a violation on the NOI?

If you disagree with any violation listed in this NOI, you must submit a written Notice of Disagreement to HMCD within 30 days of the inspection date. Address such notices to the attention of the inspector who cited the violation. In your Notice of Disagreement, explain in detail why you believe the alleged violation was incorrectly cited.

What about photographs or samples taken during the inspection?

A co-located sample will be given to you upon request if adequate sample volume is available. Photographs and sample analytical results will not generally be available until after the inspection has been concluded. A copy of photographs and/or analytical results will be provided to you upon written request. Photographs and sample analytical results may be withheld in the event of a criminal investigation or other ongoing investigation.

Summary of Violations & Notice to Comply

Program: PR0395982 - UNDERGROUND STORAGE TANK - 2399
Inspection Type: UST SECONDARY CONTAINMENT TESTING

VC	Class	Violation	Corrective Actions Taken
T530	II	**SECONDARY CONTAINMENT [2030047]** Underground storage tank (UST) and/or regulated piping is not equipped with secondary containment, or secondary containment is not product-tight (e.g., as evidenced by failure of secondary containment testing). ***The diesel sump and the diesel regular flow UDC failed to pass the Incon accelerated testing. Investigate the source of the failures and repair and retest the sump and UDC. Once the source of the failure is determined, contact our office for permit requirements for the repair.*** Have a properly licensed and trained contractor install or repair secondary containment as soon as possible. Submit plans to, and obtain approval from, HMCD prior to beginning work. If the tank system cannot be repaired, apply for a UST Closure Permit within 90 days and complete closure of the tank system within 6 months. Keep HMCD advised of any determinations made regarding the status of the tank. UST closure guidelines, plan submittal requirements, permit application forms, and the fee schedule are available at www.EHinfo.org/hazmat. [HSC 25290.1(c)(2), 25290.2(c)(2), 25291(a)(2), 25292(e); 23 CCR 2662]	

Comments: On-site to witness secondary containment testing performed by Mr. Erik Salinger (certifications current) of Able Maintenance.

Site has two tanks (gas, diesel), compartmentalized in one annular space, two piping sumps, and 3 dispensers (one gas, one regular flow diesel and one high flow diesel).

The annular space and diesel secondary piping were tested before my arrival and stated to have passed.

The gas secondary piping was tested at 5 psi for one hour with no loss.

The sumps, under dispenser containment (UDC) and the three spill buckets (diesel fill, gas fill and gas vapor) were tested with the Incon Accelerated testing apparatus. The 87 sump, all three spill buckets, the gasoline UDC and high flow diesel UDC showed a passing result.

Submit a copy of the Secondary Containment and Spill Bucket Test reports to our office within 30 days and keep a copy available for review for at least 3 years. Reports may be sent via email to USTinspector@deh.sccgov.org.

Immediately correct any violation designated as a Class I or Class II violation. Correct all other violations no later than 09/15/2017, unless otherwise noted by the inspector.

OFFICIAL NOTICE OF INSPECTION - SUPPLEMENTAL INFORMATION

This Official Notice of Inspection (NOI) documents the results of an inspection by HMCD, including a list of alleged violations, evidence in support of the alleged violations, corrective actions that must be taken by the facility, and general observations.

What am I supposed to do upon receiving a NOI?

- Correct the violations within 30 days of the inspection date, unless otherwise noted.
- In the "Corrective Actions Taken" column, write a brief description of the actions taken by the facility to correct each violation. Attach additional pages if more space is needed.
- Certify that the facility has returned to compliance by signing and dating the certification statement at the end of the report.
- Make a photocopy of the NOI and any attachments for your records.
- Within 5 days of achieving compliance or 35 days of the inspection date, whichever comes first, return the original copy of the report and any attachments to HMCD at 1555 Berger Drive, Suite 300, San Jose, CA 95112-2716.

What if there are violations that cannot be corrected within 30 days?

For each violation that cannot be corrected within 30 days, submit a written Compliance Plan describing the corrective actions you propose to take and the date by which the actions will be completed. State law grants up to 30 days to correct minor violations without penalty. Minor violations that are uncorrected after 30 days, and class I and II violations may be subject to enforcement action. To lessen the possibility of enforcement action, correct all violations as soon as possible.

What if I disagree with a violation on the NOI?

If you disagree with any violation listed in this NOI, you must submit a written Notice of Disagreement to HMCD within 30 days of the inspection date. Address such notices to the attention of the inspector who cited the violation. In your Notice of Disagreement, explain in detail why you believe the alleged violation was incorrectly cited.

What about photographs or samples taken during the inspection?

A co-located sample will be given to you upon request if adequate sample volume is available. Photographs and sample analytical results will not generally be available until after the inspection has been concluded. A copy of photographs and/or analytical results will be provided to you upon written request. Photographs and sample analytical results may be withheld in the event of a criminal investigation or other ongoing investigation.

VC	Class	Violation	Corrective Actions Taken
B110	**II**	**HMBP AMENDMENT [1010006]** Facility operator failed to amend and electronically resubmit their Hazardous Materials Business Plan (HMBP) within 30 days of an event requiring plan amendment, including any of the following: 1) a 100% or more increase in the quantity of a previously disclosed material, 2) any handling of a previously undisclosed hazardous material subject to HMBP reporting, 3) a change of business address, 4) a change of business ownership, 5) a change of business name, or 6) a substantial change in the handler's operations. ***Significant changes to the chemical inventory have been made at the facility and the HMBP was not updated. Update and submit the HMBP within 30 days of significant changes are made. Observed 3 new oil tanks, 1 hydraulic oil tank, 3x 55 gallon Gear Lube (Syngear 165), Brake Cleaner (Wurth) 55 gallons, 3x 275 gallon totes of Diesel Exhaust Fluid, and an addtional 3 totes of Daraset. Also observed that Oxygen and Argon/Carbon Dioxide is no longer being stored in the small tools area and the location of the other gases have been moved from directly behind the shop to behind the office trailers. Ensure the chemical inventory and storage map is kept up to date as required.*** Within 30 days, amend and electronically resubmit the HMBP through either the Santa Clara County CUPA electronic reporting portal (http://FrontCounter.sccgov.org) or the California Environmental Reporting System (http://cers.calepa.ca.gov). Be sure to submit all of the elements that comprise a complete HMBP (i.e., Facility Information, Hazardous Materials Inventory, and Emergency Response and Training Plans). See www.sccgov.org/sites/hazmat/programs/Pages/ereporting.aspx for more details on electronic reporting. [HSC 6.95 25508.1(a)-(f)]	

Comments: Facility is a construction/materials company equipment maintenance and storage yard. Property owner and operator are the same. Walk through encompassed the entire facility. Hazardous materials stored are used for equipment repair and maintenance and for construction activities. Emergency equipment available and properly maintained. Training documentation kept on company intranet. Last full HMBP submittal to CERS was done 6/17/2017. Ensure a detailed and accurate accounting of all petroleum containers 55 gallons and above is made as the additions of the motor oil and hydraulic oil tanks may qualify the facility for the APSA program (more than 1320 gallons total).

Program: PR0379140 - HAZARDOUS WASTE GENERATOR - 2205
Inspection Type: ROUTINE INSPECTION

VC	Class	Violation	Corrective Actions Taken

OFFICIAL NOTICE OF INSPECTION

Facility ID: FA0258851 **Inspection Date:** 06/28/2018
Facility Name: GRANITE ROCK COMPANY-PAVEX CENTRAL
Site Address: 120 GRANITE ROCK WY, SAN JOSE, CA 95136

Summary of Violations & Notice to Comply

VC	Class	Violation	Corrective Actions Taken
G020	M	**MARKING OF HAZARDOUS WASTE [3030007]** Facility failed to properly mark a hazardous waste tank and/or container. ***The waste antifreeze was not properly marked (only labeled "used"). Ensure all hazardous waste containers have all of the required markings.*** Mark all hazardous waste tanks with the words "HAZARDOUS WASTE" and the accumulation start date. Mark all hazardous waste containers and portable tanks with the words "HAZARDOUS WASTE;" the accumulation start date; the name and address of the generator; and the composition, physical state, and hazardous properties of the waste. Additionally, mark used oil containers, aboveground tanks, and fill pipes for underground tanks with the words "USED OIL." [CCR 66262.34(f), 66279.21(b)]	
G043	M	**MANIFEST RETENTION [3010010]** Facility failed to retain the original and/or treatment/storage/disposal facility (TSDF) -signed copy of a Uniform Hazardous Waste Manifest. ***The facility did not have the TSDF copy for the manifests listed below. Obtain copies of the TSDF signed manifests. If they cannot be obtained, submit an exception report to DTSC (see DTSC's manifest website for details) for any that are over 45 days past the shipment. 006338669SKS; 0066490614SKS; 0063180875SKS; 006162941SKS; 006106373SKS; 010221191FLE.*** Obtain a copy of each missing manifest. Keep the original manifest copy until you receive the TSDF-signed copy of that manifest. Keep the TSDF-signed copy for 3 years from the date of waste shipment. [CCR 66262.40(a)]	
G114	M	**EMERGENCY AISLE SPACE [3030036]** Facility failed to maintain sufficient aisle space to permit the unobstructed movement of personnel and equipment to all areas of facility operation in case of an emergency. ***4 rolling carts containing 55 gallon gear lube drums are parked in front of the waste antifreeze tank. Provide enough aisle space for first responders and their equipment to reach the antifreeze waste.*** Maintain aisle space to all areas of facility operation. [CCR 66265.35, CFR 265.35]	
G300	II	**ACCUMULATION TIME [3030012]** Facility accumulated hazardous waste on-site for longer than the allowed time limit. ***The most recent receipt for the pick up of the waste antifreeze was dated 5/8/2017. Have the waste picked up and provide the receipt or submit documentation that the waste has been picked up within the proper time frame (90 days).*** Make arrangements for the immediate removal of the waste. Submit to HMCD a copy of the manifest(s) or consolidated manifest receipt(s) demonstrating that the waste has been removed. Ensure that hazardous wastes are not accumulated on-site for longer than 90 days. [CCR 66262.34(a)]

Facility ID: FA0258851
Facility Name: GRANITE ROCK COMPANY-PAVEX CENTRAL
Site Address: 120 GRANITE ROCK WY, SAN JOSE, CA 95136
Inspection Date: 06/28/2018

Summary of Violations & Notice to Comply

VC	Class	Violation	Corrective Actions Taken
G343	II	**TANK INSPECTIONS [3030029]** Facility could not demonstrate that hazardous waste tanks are being inspected daily as required. ***Facility could not provide daily inspection logs for the tank. Begin documenting the inspections and note the required elements below.*** Perform and document hazardous waste tank inspections daily. Inspections must cover: 1) overfill/spill control equipment; 2) aboveground portions of the tank system; 3) data gathered from monitoring and leak detection equipment; 4) construction materials and the area immediately surrounding the tank system; and 5) the level of waste in the tank, for uncovered tanks. [CCR 66265.195]	
G444	M	**CONTAINER REQUIREMENTS: UNIVERSAL WASTE [3030]** Facility failed to contain Universal Waste in a manner that prevents breakage and the release of Universal Waste or waste residues. ***Observed electronic waste (CRT monitors/TVs) that were stored in a way that might cause a release. Properly situate electronic waste to avoid breakage and release of hazardous materals.*** Properly contain the waste, as required for the type of Universal Waste. Container requirements are summarized in the Universal Waste Management Requirements document (HMCD-108) available at www.ehinfo.org/hazmat. [CCR 66273.33, 66273.33.5, HSC 25201.16(f)-(g)]	

Comments: Facility is a construction/materials maintenance and equipment storage yard. EPA ID# CAL000291556 is active. Facility generates mainly used oil from the maintenance activities as well as oily absorbents, used filters, parts washer and antifreeze waste. Observed emergency equipment throughout the facility that was properly maintained. Emergency procedures posted with current employees. Reviewed manifests and consolidated manifests for waste shipments. Training documentation is stored on company intranet. Contingency plan is filed in CERS with the HMBP documentation.

Immediately correct any violation designated as a Class I or Class II violation. Correct all other violations no later than 07/28/2018, unless otherwise noted by the inspector.

Using the space provided, write a brief description of the actions taken by the facility to correct each violation. Attach additional pages if more space is needed. Within 5 days of achieving compliance or within 35 days of the inspection date, whichever comes first, sign the certification statement below and return a copy of this report to HMCD. Time granted for correction of violations does not preclude any enforcement action by HMCD or other agencies. This facility may be subject to reinspection at any time. [Authority: HSC 25185(c), 25187.8, 25404.1.2(c)]

Certification of Compliance

I certify under penalty of perjury that this facility has complied with directives specified in this Notice to Comply.

Signature of Owner/Operator **Date**

Printed Name of Owner/Operator **Title**

DocuSign Envelope ID: 23343B87-A6D6-427D-BD41-0C402FA06563

OFFICIAL NOTICE OF INSPECTION - SUPPLEMENTAL INFORMATION

This Official Notice of Inspection (NOI) documents the results of an inspection by HMCD, including a list of alleged violations, evidence in support of the alleged violations, corrective actions that must be taken by the facility, and general observations.

What am I supposed to do upon receiving a NOI?

- Correct the violations within 30 days of the inspection date, unless otherwise noted.
- In the "Corrective Actions Taken" column, write a brief description of the actions taken by the facility to correct each violation. Attach additional pages if more space is needed.
- Certify that the facility has returned to compliance by signing and dating the certification statement at the end of the report.
- Make a photocopy of the NOI and any attachments for your records.
- Within 5 days of achieving compliance or 35 days of the inspection date, whichever comes first, return the original copy of the report and any attachments to HMCD at 1555 Berger Drive, Suite 300, San Jose, CA 95112-2716 or via e-mail to the inspector noted on the "Inspected By" line of the report.

What if there are violations that cannot be corrected within 30 days?

For each violation that cannot be corrected within 30 days, submit a written Compliance Plan describing the corrective actions you propose to take and the date by which the actions will be completed. State law grants up to 30 days to correct minor violations without penalty. Minor violations that are uncorrected after 30 days, and class I and II violations may be subject to enforcement action. To lessen the possibility of enforcement action, correct all violations as soon as possible.

What if I disagree with a violation on the NOI?

If you disagree with any violation listed in this NOI, you must submit a written Notice of Disagreement to HMCD within 30 days of the inspection date. Address such notices to the attention of the inspector who cited the violation. In your Notice of Disagreement, explain in detail why you believe the alleged violation was incorrectly cited.

What about photographs or samples taken during the inspection?

A co-located sample will be given to you upon request if adequate sample volume is available. Photographs and sample analytical results will not generally be available until after the inspection has been concluded. A copy of photographs and/or analytical results will be provided to you upon written request. Photographs and sample analytical results may be withheld in the event of a criminal investigation or other ongoing investigation.

Program: PR0395982 - UNDERGROUND STORAGE TANK - 2399
Inspection Type: ROUTINE INSPECTION

VC	Class	Violation	Corrective Actions Taken
T012	II	**UST MONITORING SITE PLAN [2030041]** Underground storage tank (UST) owner/operator failed to submit or keep current a UST monitoring site plan. ***This is a repeat violation. It has been elevated to Class II. Update the monitoring site plan (monitoring system map) with the new monitoring system information in CERS and resubmit.*** Within 30 days, upload and electronically submit a PDF file containing a UST Monitoring Site Plan via the California Environmental Reporting System (CERS) website at http://cers.calepa.ca.gov. The Site Plan must show the tank and piping layouts and the locations where monitoring is performed (i.e., location of sensors, line leak detectors, monitoring system control panel, ATG probes for single-wall tanks, etc.). Site Plans for facilities using vacuum monitoring must clearly identify vacuum zones. Keep a copy of the current Site Plan on-site at this facility. The Site Plan must be revised and resubmitted within 30 days of changes in the information it contains. [23 CCR 2632(d)(1)(C), 2641(h), 2711(a)(8)]	
T016	II	**UST MONITORING PLAN NOT APPROVED [2010013]** Underground storage tank (UST) owner/operator failed to submit or keep current an accurate and complete UST Monitoring Plan, or the UST Monitoring Plan submitted is not approved by HMCD. ***This is a repeat violation. It has been elevated to Class II. Update the monitoring plan with the new monitoring system information in CERS and resubmit.*** Within 30 days, electronically submit a UST Monitoring Plan via the California Environmental Reporting System (CERS) website at http://cers.calepa.ca.gov. Keep a copy of the current UST Monitoring Plan on-site at this facility. The plan must be revised and resubmitted within 30 days of changes in the information it contains. [23 CCR 2632(d)(1), 2641(h)]	

OFFICIAL NOTICE OF INSPECTION

Facility ID: FA0258851
Facility Name: GRANITE ROCK COMPANY-PAVEX CENTRAL
Site Address: 120 GRANITE ROCK WY, SAN JOSE, CA 95136

Inspection Date: 08/30/2018

Summary of Violations & Notice to Comply

VC	Class	Violation	Corrective Actions Taken
T032	M	**DUSTO IDENTIFICATION NOTIFICATION [2010003]** Underground storage tank (UST) owner failed to notify HMCD of the identification of the facility's Designated UST Operator(s) (DUSTO) or failed to notify HMCD within 30 days of a change in the facility's DUSTO. ***CERS submittal on 6/27/2018 did not have the DUSTO identification form uploaded. The new Certification of Financial Responsibility (CFR) form was uploaded there. Upload the DUSTO identification form and ensure the new CFR is also uploaded to the proper section and re-submit.*** Within 30 days, electronically submit notification identifying the facility's Designated UST Operator(s) via the California Environmental Reporting System (CERS) website at http://cers.calepa.ca.gov. The "Designated Underground Storage Tank Operator Notification Form" (UN-062) is available at www.EHinfo.org/hazmat. Notify HMCD within 30 days of future DUSTO changes. Each DUSTO must be certified by the International Code Council (ICC) as a California UST System Operator and renew their certification every 24 months. To confirm ICC certification information, go to www.iccsafe.org/CertSearch. [23 CCR 2715(a)]	
T530	II	**SECONDARY CONTAINMENT [2030047]** Underground storage tank (UST) and/or regulated piping is not equipped with secondary containment, or secondary containment is not product-tight (e.g., as evidenced by failure of secondary containment testing). ***No action has been taken to repair the failures observed at the 8/16/2017 secondary containment testing. Provide details on what steps will be taken with completion dates to ensure the repairs are made. Contact our office for permit requirements for the repairs prior to beginning work.*** Have a properly licensed and trained contractor install or repair secondary containment as soon as possible. Submit plans to, and obtain approval from, HMCD prior to beginning work. If the tank system cannot be repaired, apply for a UST Closure Permit within 90 days and complete closure of the tank system within 6 months. Keep HMCD advised of any determinations made regarding the status of the tank. UST closure guidelines, plan submittal requirements, permit application forms, and the fee schedule are available at www.EHinfo.org/hazmat. [HSC 25290.1(c)(2), 25290.2(c)(2), 25291(a)(2), 25292(e); 23 CCR 2662]	
T901	II	**RESPONSE TO UST NOTICE OF VIOLATION [2030073]** Underground storage tank (UST) permit holder failed to implement corrective actions within 30 calendar days of receiving an Official Notice of Inspection (Notice to Comply) from HMCD citing violations of UST law or regulations. ***Facility has not submitted responses to the 8/16/2017 and 8/25/2017 inspection reports. Submit the responses to those reports. Ensure all violations noted are addressed and a written response is submitted within the proper timeframe.*** Correct all outstanding violations. Submit to HMCD the previous Official Notice(s) of Inspection with the Corrective Actions Taken" column and "Certification of Compliance" signature section completed. If any violation has not yet been corrected, describe the corrective actions that will be taken and provide a specific date by which those actions will be completed. [23 CCR 2712(f)]	

Comments: Inspection began on 8/24/2018 with functional testing and document review and concluded today with report delivery.

On-site to witness the annual monitoring system certification and spill bucket test performed by Mr. Steve Parmenter (certifications current) of Service Station Systems.

OFFICIAL NOTICE OF INSPECTION

Facility ID: FA0258851
Facility Name: GRANITE ROCK COMPANY-PAVEX CENTRAL
Site Address: 120 GRANITE ROCK WY, SAN JOSE, CA 95136

Inspection Date: 08/30/2018

Summary of Violations & Notice to Comply

Split tank, diesel is pressurized, gasoline is conventional suction. Tank annular and sump sensors tested in water and provided audible and visible alarms at the panel. The diesel sump sensor also provided positive shutdown. Fail safe (sensor out and power out) was tested and functioned as required.

Diesel under dispenser containment (UDC) monitored by float and chain assemblies. Float and chain assemblies tested with water and functioned properly. The gasoline UDC is monitored by a stand-alone sensor. The sensor was tested in water and shut down the dispenser pump.

Overfill protection is provided in both tanks by a flapper valve in the fill riser.

The spill buckets are direct buried and were hydrostatically tested for one hour with no loss.

The VMI LD 2000 mechanical line leak detector (MLLD) detected a simulated 3 gph leak at 10 PSI and held slow flow.

Reviewed DUSTO Monthly Reports, DUSTO Training records, testing reports and maintenance documentation.

Permit valid through 10/31/2019.

Submit a copy of the Monitoring Certification and Spill Bucket Test reports to our office within 30 days and keep a copy available for review for at least 3 years. Reports may be sent via email to USTinspector@deh.sccgov.org.

Immediately correct any violation designated as a Class I or Class II violation. Correct all other violations no later than 09/29/2018, unless otherwise noted by the inspector.

Using the space provided, write a brief description of the actions taken by the facility to correct each violation. Attach additional pages if more space is needed. Within 5 days of achieving compliance or within 35 days of the inspection date, whichever comes first, sign the certification statement below and return a copy of this report to HMCD. Time granted for correction of violations does not preclude any enforcement action by HMCD or other agencies. This facility may be subject to reinspection at any time. [Authority: HSC 25185(c), 25187.8, 25404.1.2(c)]

Certification of Compliance

I certify under penalty of perjury that this facility has complied with directives specified in this Notice to Comply.

Signature of Owner/Operator **Date**

Printed Name of Owner/Operator **Title**

OFFICIAL NOTICE OF INSPECTION - SUPPLEMENTAL INFORMATION

This Official Notice of Inspection (NOI) documents the results of an inspection by HMCD, including a list of alleged violations, evidence in support of the alleged violations, corrective actions that must be taken by the facility, and general observations.

What am I supposed to do upon receiving a NOI?

- Correct the violations within 30 days of the inspection date, unless otherwise noted.
- In the "Corrective Actions Taken" column, write a brief description of the actions taken by the facility to correct each violation. Attach additional pages if more space is needed.
- Certify that the facility has returned to compliance by signing and dating the certification statement at the end of the report.
- Make a photocopy of the NOI and any attachments for your records.
- Within 5 days of achieving compliance or 35 days of the inspection date, whichever comes first, return the original copy of the report and any attachments to HMCD at 1555 Berger Drive, Suite 300, San Jose, CA 95112-2716 or via e-mail to the inspector noted on the "Inspected By" line of the report.

What if there are violations that cannot be corrected within 30 days?

For each violation that cannot be corrected within 30 days, submit a written Compliance Plan describing the corrective actions you propose to take and the date by which the actions will be completed. State law grants up to 30 days to correct minor violations without penalty. Minor violations that are uncorrected after 30 days, and class I and II violations may be subject to enforcement action. To lessen the possibility of enforcement action, correct all violations as soon as possible.

What if I disagree with a violation on the NOI?

If you disagree with any violation listed in this NOI, you must submit a written Notice of Disagreement to HMCD within 30 days of the inspection date. Address such notices to the attention of the inspector who cited the violation. In your Notice of Disagreement, explain in detail why you believe the alleged violation was incorrectly cited.

What about photographs or samples taken during the inspection?

A co-located sample will be given to you upon request if adequate sample volume is available. Photographs and sample analytical results will not generally be available until after the inspection has been concluded. A copy of photographs and/or analytical results will be provided to you upon written request. Photographs and sample analytical results may be withheld in the event of a criminal investigation or other ongoing investigation.

T415	II	**INSPECTION OF OVERFILL PREVENTION EQUIPMENT [2030036]** Underground storage tank (UST) owner/operator failed to have overfill prevention equipment inspected by 10/13/2018 and every 36 months thereafter, upon installation, or within 30 days after a repair; or failed to maintain copies of overfill prevention equipment inspection records as required. ***Overfill prevention equipment (flapper valve) has not been inspected. Inspection was required no later than 10-13-2018. Ensure overfill prevention equipment is tested as soon as possible.*** Have an inspection performed by a qualified UST Service Technician within 30 days. Notify HMCD at least 2 working days prior to the inspection. The inspection must be done per the manufacturer's guidelines or standards or, if there are no manufacturer's guidelines or standards, per an applicable industry code or engineering standard. Submit a copy of the Overfill Prevention Equipment Inspection Report Form and required attachments within 30 days of inspection. Schedule the next inspection to occur 36 months from when the missed inspection was originally required to occur. Ensure that inspections are done every 36 months and within 30 days of installation or repair. Keep inspection records onsite for at least 36 months. [23 CCR 2637.2, 2712(b)(1)(G)]	
T850	M	**EXEMPTION CONDITIONS: FAIL-SAFE SHUTDOWN [2030017]** Underground storage tank (UST) owner/operator failed to meet requirements for exempting underground pressurized piping from the requirement to be tightness tested every 12 months by a State-licensed tank tester or by an electronic line leak detector (ELLD) programmed to perform a 0.1 gallon-per-hour leak test. ***Upon removal of Diesel STP sensor from monitoring panel, turbine remained energized.*** Have a qualified UST Service Technician repair the secondary containment monitoring system so it shuts down the pump or stops the flow of product at the dispenser when a leak is detected in the under-dispenser containment (UDC) and, for all pressurized product piping not contained in the UDC, provides fail-safe pump/turbine shutdown. No permit from HMCD is required for like-for-like replacement of sensors or replacement of relays. Submit with your written response to this Notice to Comply repair documentation from the UST Service Technician showing that automatic pump shutdown is functioning properly. [23 CCR 2636(f)(4)]	

Comments: On-site to witness the annual monitoring system certification and spill bucket test performed by Mr. Steve Parmenter (certifications current) of Service Station Systems.

Split tank, diesel is pressurized, gasoline is conventional suction. Tank annular and sump sensors tested in water and provided audible and visible alarms at the panel. The diesel sump sensor also provided positive shutdown. Fail safe (power out and sensor out) was tested and functioned as required.

Diesel under dispenser containment (UDC) monitored by float and chain assemblies. Float and chain assemblies tested with water and functioned properly. The gasoline UDC is monitored by a stand-alone sensor. The sensor was tested in water and shut down the dispenser pump.

Overfill protection is provided in both tanks by a flapper valve in the fill riser.

The spill buckets are direct buried and were hydrostatically tested for one hour with no loss.

The VMI LD 2000 mechanical line leak detector (MLLD) detected a simulated 3 gph leak at 10 PSI and held slow flow.

OFFICIAL NOTICE OF INSPECTION

Facility ID: FA0258851 **Inspection Date:** 09/13/2019
Facility Name: GRANITE ROCK COMPANY-PAVEX CENTRAL
Site Address: 120 GRANITE ROCK WY, SAN JOSE, CA 95136

Summary of Violations & Notice to Comply

Response Plan
Monitoring site map
CFR & CFO Letter

NOTE 1: Binder containing UST related documents was not available at time of inspection and determined to be located in an employee's vehicle. Within 7 days, provide the County with the following documentaiton: Monthly DO inspections for last 12 months, Employee UST training, any financial assurance documents or mechanisms that are more current than what is provided in CERS on 7-2-2019.

NOTE 2: Monitoring panel indicates a sensor alarm in the 87 sump and is dated 7-30-2019. Ensure this alarm is adequately addressed. Water was observed in the sump and the likely cause of the alarm.

Immediately correct any violation designated as a Class I or Class II violation. Correct all other violations no later than 10/13/2019, unless otherwise noted by the inspector.

Using the space provided, write a brief description of the actions taken by the facility to correct each violation. Attach additional pages if more space is needed. Within 5 days of achieving compliance or within 35 days of the inspection date, whichever comes first, sign the certification statement below and return a copy of this report to HMCD. Time granted for correction of violations does not preclude any enforcement action by HMCD or other agencies. This facility may be subject to reinspection at any time. [Authority: HSC 25185(c), 25187.8, 25404.1.2(c)]

Certification of Compliance

I certify under penalty of perjury that this facility has complied with directives specified in this Notice to Comply.

Signature of Owner/Operator **Date**

Printed Name of Owner/Operator **Title**

OFFICIAL NOTICE OF INSPECTION - SUPPLEMENTAL INFORMATION

This Official Notice of Inspection (NOI) documents the results of an inspection by HMCD, including a list of alleged violations, evidence in support of the alleged violations, corrective actions that must be taken by the facility, and general observations.

What am I supposed to do upon receiving a NOI?

- Correct the violations within 30 days of the inspection date, unless otherwise noted.
- In the "Corrective Actions Taken" column, write a brief description of the actions taken by the facility to correct each violation. Attach additional pages if more space is needed.
- Certify that the facility has returned to compliance by signing and dating the certification statement at the end of the report.
- Make a photocopy of the NOI and any attachments for your records.
- Within 5 days of achieving compliance or 35 days of the inspection date, whichever comes first, return the original copy of the report and any attachments to HMCD at 1555 Berger Drive, Suite 300, San Jose, CA 95112-2716 or via e-mail to the inspector noted on the "Inspected By" line of the report.

What if there are violations that cannot be corrected within 30 days?

For each violation that cannot be corrected within 30 days, submit a written Compliance Plan describing the corrective actions you propose to take and the date by which the actions will be completed. State law grants up to 30 days to correct minor violations without penalty. Minor violations that are uncorrected after 30 days, and class I and II violations may be subject to enforcement action. To lessen the possibility of enforcement action, correct all violations as soon as possible.

What if I disagree with a violation on the NOI?

If you disagree with any violation listed in this NOI, you must submit a written Notice of Disagreement to HMCD within 30 days of the inspection date. Address such notices to the attention of the inspector who cited the violation. In your Notice of Disagreement, explain in detail why you believe the alleged violation was incorrectly cited.

What about photographs or samples taken during the inspection?

A co-located sample will be given to you upon request if adequate sample volume is available. Photographs and sample analytical results will not generally be available until after the inspection has been concluded. A copy of photographs and/or analytical results will be provided to you upon written request. Photographs and sample analytical results may be withheld in the event of a criminal investigation or other ongoing investigation.

Key to Acronyms and Regulatory Terms

XX CCR	California Code of Regulations, Title XX
XX CFR	Code of Federal Regulations, Title XX
Class	Violation classification: I = Class I violation, II = Class II violation, M = Minor violation, C = Corrected minor violation [HSC §25110.8.5, HSC §25117.6, CCR §66260.10]
CERS	California Environmental Reporting System (cers.calepa.ca.gov)

(No further action required.)*** ***-Inspection report was not submitted with the required OPW appendix and EMCO worksheets to show actual measurements taken during testing. Submit these worksheets to inspector.*** A Overfill Prevention Equipment Inspection Report Form and required attachments must be submitted to HMCD within 30 days of installation, repair, and every-36-month testing of UST overfill prevention equipment. Submit the missing form(s) and attachments within 30 days and ensure that future inspection documentation is submitted as required. [23 CCR 2637.2(d), 2637.2(e), 2665(a), 2665(b)]	

Comments: Inspection commenced on 9/17/2020 with site visit to perform deferred annual underground storage tank (UST) compliance inspection and ended today with issuance of this report. Yesterday's visit was coordinated with the periodic inspection by the facility's Designated UST Operator, Nikhita Jingar, Environmental Engineer for Granite Rock. A visual inspection of the UST spill buckets, fill pipes, and under-dispenser containment was performed.

On-site and in-office review of documents included review of Designated UST Operator inspection reports for the past 12 months, the current UST Facility Employee Training Certificates, and the past 5 years of UST system maintenance records. Monitoring system certification testing and spill container testing were performed by Service Station Systems on 8/25/2020. This was not witnessed by HMCD due to air quality restrictions during the 2020 wildfires. The Monitoring System Certification Form and Spill Container Testing Report Form and all attachments to those reports were reviewed.

The most recent electronic submittal of UST information was made via the California Environmental Reporting System (CERS

ID 10344856) was submitted on 6/29/2020. The information was reviewed and is not accepted.

Last secondary containment testing was completed on 8/18/2020.

DS RC

UNRESOLVED ISSUES:
Respond to the following unresolved issue in writing by emailing the inspector at robin.ward@cep.sccgov.org.
1. DUSTO monthly visual inspection reports indicate that the last Overfill Prevention Inspection Report was completed on 8/18/2020 but was not available onsite and has not been provided to HMCD. Determine if this report was completed on this date and provide the complete document to HMCD for review. If inspection was not conducted on this date, update the corrected date on future monthly visual inspection reports.

DS RC

ACTION ITEMS:
1. Correct all violations noted above and submit documentation of corrective actions taken as soon as possible (see last page of this report for instructions).

Immediately correct any violation designated as a Class I or Class II violation. Correct all other violations no later than 10/22/2020, unless otherwise noted by the inspector.

Using the space provided, write a brief description of the actions taken by the facility to correct each violation. Attach additional pages if more space is needed. Within 5 days of achieving compliance or within 35 days of the inspection date, whichever comes first, sign the certification statement below and return a copy of this report to HMCD. Time granted for correction of violations does not preclude any enforcement action by HMCD or other agencies. This facility may be subject to reinspection at any time. Printed Name of Owner/Operator | **Title**

DocuSign Envelope ID: 2C995763-CDA9-4A4C-8BF0-37F5DF5BC5D3

OFFICIAL NOTICE OF INSPECTION - SUPPLEMENTAL INFORMATION

This Official Notice of Inspection (NOI) documents the results of an inspection by HMCD, including a list of alleged violations, evidence in support of the alleged violations, corrective actions that must be taken by the facility, and general observations.

What am I supposed to do upon receiving a NOI?

- Correct the violations within 30 days of the inspection date, unless otherwise noted.
- In the "Corrective Actions Taken" column, write a brief description of the actions taken by the facility to correct each violation. Attach additional pages if more space is needed.
- Certify that the facility has returned to compliance by signing and dating the certification statement at the end of the report.
- Make a photocopy of the NOI and any attachments for your records.
- Within 5 days of achieving compliance or 35 days of the inspection date, whichever comes first, return the original copy of the report and any attachments to HMCD at 1555 Berger Drive, Suite 300, San Jose, CA 95112-2716 or via e-mail to the inspector noted on the "Inspected By" line of the report.

What if there are violations that cannot be corrected within 30 days?

For each violation that cannot be corrected within 30 days, submit a written Compliance Plan describing the corrective actions you propose to take and the date by which the actions will be completed. State law grants up to 30 days to correct minor violations without penalty. Minor violations that are uncorrected after 30 days, and class I and II violations may be subject to enforcement action. To lessen the possibility of enforcement action, correct all violations as soon as possible.

What if I disagree with a violation on the NOI?

If you disagree with any violation listed in this NOI, you must submit a written Notice of Disagreement to HMCD within 30 days of the inspection date. Address such notices to the attention of the inspector who cited the violation. In your Notice of Disagreement, explain in detail why you believe the alleged violation was incorrectly cited.

What about photographs or samples taken during the inspection?

A co-located sample will be given to you upon request if adequate sample volume is available. Photographs and sample analytical results will not generally be available until after the inspection has been concluded. A copy of photographs and/or analytical results will be provided to you upon written request. Photographs and sample analytical results may be withheld in the event of a criminal investigation or other ongoing investigation.

Summary of Violations & Notice to Comply

Program: PR0395983 - HAZARDOUS MATERIALS BUSINESS PLAN - BP05
Inspection Type: ROUTINE INSPECTION

VC	Class	Violation	Corrective Actions Taken
B106	**M**	**HMBP INVENTORY INFORMATION MISSING / INCOMPLETE [1010004]** Facility operator failed to electronically submit accurate and complete Hazardous Materials Inventory information for all hazardous materials on-site that are required to be reported in the facility's Hazardous Materials Business Plan (HMBP). ***Facility inventory reported in CERS does not match the amounts observed onsite. See comments section for a list of reportable inventory. Items marked with an * are reported incorrectly, with comments on currently reported amounts. Revise all inventory items marked with a *. To avoid unnecessary permit increases, remove items that are no longer stored onsite.*** Within 30 days, electronically submit an HMBP, including an accurate Hazardous Materials Inventory, through the California Environmental Reporting System (https://cers.calepa.ca.gov). Be sure to submit all of the elements that comprise a complete HMBP (i.e., Facility Information, Hazardous Materials Inventory, and Emergency Response and Training Plans). See www.sccgov.org/sites/hazmat/programs/Pages/ereporting.aspx for more details on electronic reporting. [HSC 25505(a)(1), HSC 25506, HSC 25508(a)(1), HSC 25508(a)(3), 19 CCR 2652]	
B107	**M**	**HMBP SITE MAP MISSING / INCOMPLETE [1010005]** Facility operator failed to electronically submit a Site Map with all required content as part of the facility's Hazardous Materials Business Plan (HMBP). ***Site map lists address as 100 Granite Rock Way.*** Within 30 days, electronically submit an HMBP, including accurate facility Site Map(s), through the California Environmental Reporting System (https://cers.calepa.ca.gov). Be sure to submit all of the elements that comprise a complete HMBP (i.e., Facility Information, Hazardous Materials Inventory, and Emergency Response and Training Plans). See www.sccgov.org/sites/hazmat/programs/Pages/ereporting.aspx for more details on electronic reporting. The map must contain a north orientation, loading areas, internal roads, adjacent streets, storm and sewer drains, access and exit points, emergency shutoffs, evacuation staging areas, hazardous material handling and storage areas, and emergency response equipment. [HSC 25505(a)(2), HSC 25508(a)(1), HSC 25508(a)(3), 19 CCR 2652(a)(3)]	

DocuSign Envelope ID: 33DFADE8-87ED-49A7-8EEB-F7CA5FE6C7DA

OFFICIAL NOTICE OF INSPECTION

Facility ID: FA0258851
Facility Name: GRANITE ROCK COMPANY-PAVEX CENTRAL
Site Address: 120 GRANITE ROCK WY, SAN JOSE, CA 95136
Inspection Date: 02/08/2022

Summary of Violations & Notice to Comply

VC	Class	Violation	Corrective Actions Taken
B130	II	**HMBP EMERGENCY RESPONSE TRAINING DOCUMENTATION [1020002]** Facility operator failed to provide initial and annual training to all employees in emergency response and safety procedures or failed to document and maintain training records for a minimum of three years. ***Emergency response plan does not include information about the emergency assembly point or mark yes to "hazardous waste". In addition, the CUPA phone number is not correct. The correct CUPA phone number is 408-918-3400. Update this information and resubmit.*** Provide initial training for new employees and annual refresher training for all employees. The training shall cover emergency and safety procedures in the event of a release or threatened release of a hazardous material, as described in the facility's Hazardous Materials Business Plan. Training must be documented electronically or by hard copy. Make a minimum of three years of training records available for inspection by HMCD. [HSC 25505(a)(4), 19 CCR 19 CCR 2659]	

Comments: Inspection commenced on 1/27/2022 and concluded today. Onsite to conduct an inspection for the Hazardous Materials Business Plan (HMBP) program. Business is the property owner. Facility employees are trained annually in emergency response and chemical hazards as part of annual DUSTO training, and all training is logged on the same form. Facility last submitted their HMBP via CERS ID 10344856 on 2/22/2021.

Observed the following reportable hazardous materials:
1. 110 gallons of 5W40*
2. 6560 gallons of gasoline fuel (4500 in an underground storage tank, 1500 in a mobile refueler)
3. 110 gallons of 5W30*
4. 240 gallons of 15W40CK4 castoil*
5. 240 gallons of tractor fluid*
6. 150 gallons of radicool SF OPE mix*
7. 260 gallons of used antifreeze* (reported as 250 gallons)l
8. 13500 gallons of clear diesel fuel (in an underground storage tank)
9. >500 lbs of grease (4x15 gallon drums, 4x55 gallon drums)
10. 640 gallons of used oil
11. >500 lbs of used oil filters (2x55 gallon drums of crushed filters)* (currently reported as 110 gallons)
12. >500 lbs of contaminated oily solids (2x55 gallon drums of crushed filters)
13. 55 gallons of break cleaner
14. 75 gallons of parts washing liquids*
15. 2452 cf of acetylene gas* (reported as 1500 cf)
16. 4401 cf of oxygen gas* (reported as 4000 cf)
17. 1580 cf of argon and carbon dioxide gas* (reported as 800 cf)
18. 275 gallons of HaloKlear BHR-P50 cleaner*
19. 540 gallons of liquid propane gas* (reported as 499 cf)
20. 165 gallons of R2K Grr Cleaner*
21. >55 gallons of lead acid batteries (in 10 portable light fixtures, and in the shop area)*
22. 275 gallons of Polarset*
23. 60 gallons of hydraulic oil (on a mobile refueler)*
24. 550 gallons of Daraset 400*

Facility has the following materials below reporting thresholds:
450 gallons of diesel exhaust fluid
20 gallons of chevron soluble oil
<55 gallons per type of other misc. oils
<55 gallons per type of misc. paints and aerosols
15 gallons of 75W90 oil
20 gallons of spraymaster liquid

DocuSign Envelope ID: 33DFADE8-87ED-49A7-8EEB-F7CA5FE6C7DA

OFFICIAL NOTICE OF INSPECTION

Facility ID: FA0258851
Facility Name: GRANITE ROCK COMPANY-PAVEX CENTRAL
Site Address: 120 GRANITE ROCK WY, SAN JOSE, CA 95136

Inspection Date: 02/08/2022

Summary of Violations & Notice to Comply

DS NJ

UNRESOLVED ISSUE: Respond in writing to the following unresolved issues within 30 days.
1. Within 30 days, schedule a date for reinspection to allow for access to Storage lockers on the side of the facility, including 15 shipping containers (1-5, A-D, and 7 extra containers) and 4 storage bays.
2. Provide the capacity of the oil water separator and add to inventory list if reportable.
3. Observed 5 white and 8 black portable fuel tanks (estimated to be greater than 55 gallons each). Provide the capacity of each and add to inventory list above.
4. Observed 1x55 gallon drum labeled as hazardous waste with no contents marked. Provide details on the contents and add to the inventory reported in CERS.

DS NJ

NOTE: Facility is currently permitted for 21 reportable chemicals, but currently stores over 34 reportable chemicals. A subsequent permit increase will be billed on the next billing cycle. New permit (BP08) will allow for storage of up to 39 reportable chemicals.

OFFICIAL NOTICE OF INSPECTION

Facility ID: FA0258851
Facility Name: GRANITE ROCK COMPANY-PAVEX CENTRAL
Site Address: 120 GRANITE ROCK WY, SAN JOSE, CA 95136
Inspection Date: 02/08/2022

Summary of Violations & Notice to Comply

Program: PR0379140 - HAZARDOUS WASTE GENERATOR - 2205
Inspection Type: ROUTINE INSPECTION

VC	Class	Violation	Corrective Actions Taken
G010	II	**HAZARDOUS WASTE DETERMINATION [3030005]** Facility failed to determine whether a waste is a hazardous waste. ***Also observed 1x55 gallon drum of hazardous waste outside in the yard with no contents. Determine the contents of this drum.*** ***Observed 1x5 gallon container of unlabeled crack sealer in the hazardous waste shed. Determine if this is a hazardous waste, and if so, ensure proper labeling and management.*** Determine whether the waste is hazardous using generator knowledge, or by having the waste analyzed by a state-certified environmental laboratory. Submit the results of your determination, including any laboratory reports, to HMCD. A list of state-certified laboratories is available at www.waterboards.ca.gov/drinking_water/certlic/labs/documents/elap_certified_hazardous_waste_labs.pdf . Cease any disposal of the waste as non-hazardous waste until the determination is complete. Keep all hazardous waste determination documents for at least 3 years from the date the waste was last shipped. [CCR 66262.11, 66262.40]	
G015	II	**ILLEGAL DISPOSAL OF HAZARDOUS WASTE [3050002]** Facility disposed of hazardous waste at an unpermitted facility or at an unauthorized location, such as the sewer, storm drain, trash can, trash dumpster, or ground. ***Observed non-empty oil quart containers and saturated oily rags in trashcans inside the autoshop. The bottles were removed at the time of inspection.*** ***Observed non-empty aerosol cans (1) in trashcans outside the autoshop. Can was removed at the time of inspection.*** Immediately cease illegal disposal activities. Make arrangements for the proper disposal of all hazardous waste. [HSC 25189.5(a)]	
G020	M	**MARKING OF HAZARDOUS WASTE [3030007]** Facility failed to properly mark a hazardous waste tank and/or container. ***Observed 1x55 gallon container of used oil and a small container under the oil filter crusher holding waste at the time of inspection with no hazardous characteristics marked and no accumulation start date.*** ***Observed 1x15 gallon mobile oil roller holding waste with no markings.*** ***Observed 5 gallon container of used DEF with no labels in the hazardous waste shed.*** Mark all hazardous waste tanks with the words "HAZARDOUS WASTE" and the accumulation start date. Mark all hazardous waste containers and portable tanks with the words "HAZARDOUS WASTE;" the accumulation start date; the name and address of the generator; and the composition, physical state, and hazardous properties of the waste. If they contain used oil, mark used oil containers, aboveground tanks, and fill pipes for underground tanks with the words "USED OIL." [CCR 66262.16(b)(6), 66262.17(a)(5), 66279.21(b)]	

OFFICIAL NOTICE OF INSPECTION

Facility ID: FA0258851
Facility Name: GRANITE ROCK COMPANY-PAVEX CENTRAL
Site Address: 120 GRANITE ROCK WY, SAN JOSE, CA 95136
Inspection Date: 02/08/2022

Summary of Violations & Notice to Comply

VC	Class	Violation	Corrective Actions Taken
G023	M	**CONTAINER OPEN [3030017]** Facility failed to keep a hazardous waste container closed at a time when it was not necessary to add or remove waste. ***Observed 1x55 gallon drum of used oil holding waste at the time of inspection, and open while not in use. Remove the drain board and close between uses.*** ***Observed 2x55 gallon containers of used oily rags and absorbent open at the time of inspection.*** Tightly close all hazardous waste containers. Ensure that they remain closed, except when it is necessary to add or remove waste. Containers are considered closed when all lids, gaskets, and locking rings are in place and secured. [CCR 66262.16(b)(2)(C)1, 66262.17(a)(1)(D)1, 66262.15(a)(4)]	
G110	M	**MAINTENANCE AND OPERATION OF FACILITY [3030030]** Facility is not maintained or operated in a manner to minimize the possibility of a fire, explosion, or any unplanned release of hazardous waste to air, soil, or surface water that could threaten human health or the environment. ***Observed that used antifreeze and used oil tanks have a remote feed system but no overfill protection. The used oil tank has been overfilled based on oil staining at the top of the tank. Observed oil in the secondary containment. Cleanup released used oil and determine if the berm is capable of containing releases in the future. Also observed used antifreeze on the shop floor dripping from remote feed hoses. Observed that a large piece of equipment in the parking lot onsite is leaking oily fluid to the dirt. Immediately contain this spill and prevent further releases to the ground.*** Maintain and operate the facility to minimize the possibility of a fire, explosion, or unplanned release of hazardous waste to air, soil, or surface water. [CCR 66262.16(b)(8), 66262.251, 66262.15(a)(7)]	
G321	M	**RECORDS: HAZARDOUS WASTE TRAINING [3020002]** Hazardous waste training records are incomplete or are not being kept as required. ***Facility failed to provide training records that meet large quantity generator requirements. All records are in the form of logs with only names of employees, class titles, and dates.*** Maintain training records that include: 1) the name and job title of each person in a position that has hazardous waste management responsibility; 2) a written job description that includes the duties, skills, education, or other qualifications required for each position described above; 3) a description of the type and amount of introductory and continuing training that will be given for each position; and 4) documentation that this training was completed by facility personnel. Keep current employee training records until facility closure. Keep records on former employee for at least 3 years from the date the employee last worked at the facility. [CCR 66262.17(C-E)]	

OFFICIAL NOTICE OF INSPECTION

Facility ID: FA0258851
Facility Name: GRANITE ROCK COMPANY-PAVEX CENTRAL
Site Address: 120 GRANITE ROCK WY, SAN JOSE, CA 95136
Inspection Date: 02/08/2022

Summary of Violations & Notice to Comply

VC	Class	Violation	Corrective Actions Taken
G339	II	**TANK SYSTEM ASSESSMENT: PERIODIC RE-ASSESSMENT [3010032]** Facility's tank assessment does not address all of the required element of a "new tank facility" which handles RCRA hazardous waste. ***Facility has not conducted tank system assessments on hazardous waste tanks onsite.*** Make arrangements to have the tank system assessed by an appropriate Professional Engineer (PE) who is knowledgeable of hazardous waste tank system requirements. Ensure that the assessment is conducted to meet the requirements of 66265.192(k). Provide a specific date by which the assessment is expected to be completed. Upon completion of the assessment, submit a copy of the final report to HMCD. [CCR 66265.191(a), 66265.192(h)]	
G405	M	**MARKING: CONTAMINATED CONTAINERS [3030058]** Facility did not mark an empty hazardous material/waste container larger than 5 gallons in capacity with the date it was emptied. ***Observed 2x55 gallon empty antifreeze containers and 1x275 hazardous material IBC tote with no marking declaring the date they were emptied.*** Mark each empty hazardous material/waste container larger than 5 gallons in capacity with the date it was emptied. [CCR 66261.7(f)]	
G613	II	**CONTAINER REQUIREMENTS: UNIVERSAL WASTE AEROSOL CANS [3030051]** Facility failed to meet the accumulation standards for universal waste aerosol cans. ***Observed 1 box of non-empty used aerosol cans with no labels in the hazardous waste shed.*** Ensure that containers holding UW aerosol cans are labeled or marked clearly with one of the following phrases: "Universal Waste-Aerosol Cans", "Waste Aerosol Cans", or "Used Aerosol Cans"; structurally sound, and compatible with the contents of the universal waste aerosol can; show no evidence of leakage, spillage, or damage that could cause leakage under reasonably foreseeable conditions; are provided with a lid so that the container can (and shall) be covered at the end of each workday; are placed in a location that has sufficient ventilation to avoid formation of an explosive atmosphere; and are placed on or above a floor or other surface that is free of cracks or gaps and is sufficiently impervious and bermed to contain leaks and spills. If holding flammable wastes shall be kept at a safe distance from heat and open flames. Incompatible materials shall be kept segregated and managed appropriately in separate containers. [HSC 25201.16(f)]	

Comments: Inspection commenced on 1/27/2022 and concluded today. Onsite to conduct an inspection for the Hazardous Waste Generator permit. Facility is a concrete plant that generates waste related to vehicle maintenance and truck washing. Facility is a large quantity hazardous waste generator. Rags are commercially laundered, and batteries are disposed of via core exchange. EPA ID CAL000291556 is currently active. Fire extinguishers and spill kit are adequate. Facility truck wash waste flows to a clarifier system and sludge is managed as hazardous waste. Facility is a large quantity generator and generates greater than 1000 kg per month.
Inspection included review of 3 years of hazardous waste disposal records, training logs, universal waste and hazardous waste management training content, and contingency plan.

OFFICIAL NOTICE OF INSPECTION

Facility ID: FA0258851
Facility Name: GRANITE ROCK COMPANY-PAVEX CENTRAL
Site Address: 120 GRANITE ROCK WY, SAN JOSE, CA 95136
Inspection Date: 02/08/2022

Summary of Violations & Notice to Comply

Immediately correct any violation designated as a Class I or Class II violation. Correct all other violations no later than 03/10/2022, unless otherwise noted by the inspector.

Using the space provided, write a brief description of the actions taken by the facility to correct each violation. Attach additional pages if more space is needed. Within 5 days of achieving compliance or within 35 days of the inspection date, whichever comes first, sign the certification statement below and return a copy of this report to HMCD. Time granted for correction of violations does not preclude any enforcement action by HMCD or other agencies. This facility may be subject to reinspection at any time. [Authority: HSC 25185(c), 25187.8, 25404.1.2(c)]

Certification of Compliance

I certify under penalty of perjury that this facility has complied with directives specified in this Notice to Comply.

Signature of Owner/Operator | **Date**

Printed Name of Owner/Operator | **Title**

DocuSign Envelope ID: 33DFADE8-87ED-49A7-8EEB-F7CA5FE6C7DA

OFFICIAL NOTICE OF INSPECTION - SUPPLEMENTAL INFORMATION

This Official Notice of Inspection (NOI) documents the results of an inspection by HMCD, including a list of alleged violations, evidence in support of the alleged violations, corrective actions that must be taken by the facility, and general observations.

What am I supposed to do upon receiving a NOI?

- Correct the violations within 30 days of the inspection date, unless otherwise noted.
- In the "Corrective Actions Taken" column, write a brief description of the actions taken by the facility to correct each violation. Attach additional pages if more space is needed.
- Certify that the facility has returned to compliance by signing and dating the certification statement at the end of the report.
- Make a photocopy of the NOI and any attachments for your records.
- Within 5 days of achieving compliance or 35 days of the inspection date, whichever comes first, return the original copy of the report and any attachments to HMCD at 1555 Berger Drive, Suite 300, San Jose, CA 95112-2716 or via e-mail to the inspector noted on the "Inspected By" line of the report.

What if there are violations that cannot be corrected within 30 days?

For each violation that cannot be corrected within 30 days, submit a written Compliance Plan describing the corrective actions you propose to take and the date by which the actions will be completed. State law grants up to 30 days to correct minor violations without penalty. Minor violations that are uncorrected after 30 days, and class I and II violations may be subject to enforcement action. To lessen the possibility of enforcement action, correct all violations as soon as possible.

What if I disagree with a violation on the NOI?

If you disagree with any violation listed in this NOI, you must submit a written Notice of Disagreement to HMCD within 30 days of the inspection date. Address such notices to the attention of the inspector who cited the violation. In your Notice of Disagreement, explain in detail why you believe the alleged violation was incorrectly cited.

What about photographs or samples taken during the inspection?

A co-located sample will be given to you upon request if adequate sample volume is available. Photographs and sample analytical results will not generally be available until after the inspection has been concluded. A copy of photographs and/or analytical results will be provided to you upon written request. Photographs and sample analytical results may be withheld in the event of a criminal investigation or other ongoing investigation.

Key to Acronyms and Regulatory Terms

XX CCR	California Code of Regulations, Title XX
XX CFR	Code of Federal Regulations, Title XX
Class	Violation classification: I = Class I violation, II = Class II violation, M = Minor violation, C = Corrected minor violation [HSC §25110.8.5, HSC §25117.6, CCR §66260.10]
CERS	California Environmental Reporting System (cers.calepa.ca.gov)
DTSC	California Department of Toxic Substances Control
EPA	U.S. Environmental Protection Agency
HMCD	County of Santa Clara, Department of Environmental Health, Hazardous Materials Compliance Division
HSC	California Health and Safety Code
RCRA	Resource Conservation and Recovery Act
SCCO	Santa Clara County Ordinance Code
TSDF	Hazardous waste treatment, storage or disposal facility
UST	Underground storage tank
VC	HMCD violation code

Warning:

- It is a violation of State law to make a false statement that a facility has returned to compliance [HSC §25404.1.2(c)(2)].
- Making a false statement regarding a hazardous waste violation is punishable by a fine of not less than $2,000 or more than $50,000 and/or imprisonment in the county jail for up to one year [HSC §25191(b)].
- Making a false statement regarding an underground storage tank violation is punishable by a fine of not less than $500 or more than $5,000 [HSC §§25299(a)(8), 25299(b)(7)].
- HMCD has the right to require the submittal of reasonable and necessary documentation in support of any claim of compliance made by your facility [HSC §25187.8(i), 25289(b)].

Summary of Violations & Notice to Comply

Program: PR0379140 - HAZARDOUS WASTE GENERATOR - 2205
Inspection Type: FOLLOW-UP INSPECTION

Comments: A site inspection of this facility took place on 1/27/22, with the report issued on 2/8/22. During that inspection, several CONEX boxes used as storage space for the facility could not be accessed. Some of these CONEX boxes had NFPA diamonds indicating potential hazardous materials storage. A follow-up inspection commenced on 3/7/22 to inspect these storage areas. The follow-up inspection concluded with the issuance of this report on 3/15/22.

Note: The storage area for portable generators contained large, dark stains, indicating potential releases of oil. Address this issue to ensure that any hazardous wastes, including used oil, is properly contained and disposed of.

Program: PR0395983 - HAZARDOUS MATERIALS BUSINESS PLAN - BP06
Inspection Type: FOLLOW-UP INSPECTION

Comments: Observed the following materials:
- 27x 5-gallon containers of waterborne traffic paint *
- 9x 50-lbs bags of concrete mix *
- 10x 50-lbs bags of HOLEPLUG *
- ~20 gallons of miscellaneous paints
- 10 gallons of IPA
- 5x ~5-gallons of diesel in portable generators *

For materials above marked with asterisks, determine whether the quantities that may be found onsite at any one time meet HMBP reportable thresholds, and update CERS as necessary. If materials are determined not to meet reportable thresholds, please state how this determination was made and include any supporting documentation (e.g., Safety Data Sheets). Remember to include all onsite inventory, even if not included in list above.

Summary of Violations & Notice to Comply

Program: PR0395983 - HAZARDOUS MATERIALS BUSINESS PLAN - BP05
Inspection Type: ROUTINE INSPECTION-COMPLETED

VC	Class	Violation	Corrective Actions Taken
B107 ✓	M	**HMBP SITE MAP MISSING / INCOMPLETE [1010005]** Facility operator failed to submit and/or maintain an accurate and complete Site Map with the facility's Hazardous Materials Business Plan (HMBP). ***Add the storage area near small tools to the storage map.*** Within 30 days, electronically submit the Site Map(s) via the California Environmental Reporting System (CERS) website at http://cers.calepa.ca.gov. The map must contain north orientation, loading areas, internal roads, adjacent streets, storm and sewer drains, access and exit points, emergency shutoffs, evacuation staging areas, hazardous material handling and storage areas, and emergency response equipment. [HSC 25505(a)(2), 25508(a)(1)]	A new site map with the storage area near small tools expanded to accurately represent the conditions at the facility.
B110 ✓	M	**HMBP AMENDMENT: CHANGE IN INVENTORY, ADDRESS, OWNERSHIP, OR BUSINESS NAME [1010006]** Facility operator failed to amend and resubmit their Hazardous Materials Business Plan (HMBP) within 30 days of an event requiring plan amendment, including any of the following: 1) a 100% or more increase in the quantity of a previously disclosed material, 2) any handling of a previously undisclosed hazardous material subject to HMBP-reporting, 3) a change of business address, 4) a change of business ownership, or 5) a change of business name. ***Observed unreported hazardous materials and increased quantities stored at the facility. Add the Acetylene (largest 250 cf x5), Propane (largest 20 gallons x2), 25% Carbon Dioxide/75% Argon (largest 376 cf x2) and Oxygen (largest 281 cf x4) to the small tools area. Add the Grace Daraset 250 gallon tote and Adva 55 gallon drum to the west yard area. Add 25% Carbon Dioxide/75% Argon (376 cf x2) to the Shop and update the Oxygen to largest container 281 cf and 4000 cf for maximum quantity. Add motor oil (55 gallons x2) to the waste oil room.*** Within 30 days, amend and electronically resubmit the HMBP via the California Environmental Reporting System (CERS) website at http://cers.calepa.ca.gov. See www.sccgov.org/sites/deh/hmcd/hazmat/pages/electronic_reporting.aspx for more details on electronic reporting. [HSC 25508.1(a)-(e)]	Amended and re-submitted the HMBP reported hazardous materials and quantities.

Comments: Vehicle maintenance and fueling operations. CERS submittal 8/8/2013. NOTE: Oxygen stored near flammable gasses (acetylene and propane) in the small tools area. Ensure proper segregation of incompatible materials.

Program: PR0379140 - HAZARDOUS WASTE GENERATOR - 2205
Inspection Type: ROUTINE INSPECTION-COMPLETED

VC	Class	Violation	Corrective Actions Taken

OFFICIAL NOTICE OF INSPECTION

Facility ID: FA0258851
Facility Name: GRANITE ROCK COMPANY-PAVEX CENTRAL
Site Address: 120 GRANITE ROCK WY, SAN JOSE, CA 95136
Inspection Date: 08/22/2014

Summary of Violations & Notice to Comply

VC	Class	Violation	Corrective Actions Taken
G020 ✓	M	**MARKING OF HAZARDOUS WASTE** Facility failed to properly mark a hazardous waste tank and/or container. ***One rolling cart for used oil collection was not marked. Properly mark the container. Ensure all hazardous waste containers are marked with the required information.*** Mark all hazardous waste tanks with the words "HAZARDOUS WASTE" and the accumulation start date. Mark all hazardous waste containers and portable tanks with the words "HAZARDOUS WASTE;" the accumulation start date; the name and address of the generator; and the composition, physical state, and hazardous properties of the waste. Additionally, mark used oil containers, aboveground tanks, and fill pipes for underground tanks with the words "USED OIL." [CCR 66262.34(f), 66279.21(b)]	Rolling carts used for waste oil were marked with hazardous waste labels.
G043 ✓	M	**MANIFEST RETENTION** Facility failed to retain the original and/or treatment/storage/disposal facility (TSDF) -signed copy of a Uniform Hazardous Waste Manifest. ***The manifests noted did not have their TSDF-signed copy. Obtain copies and maintain for three years from the ship date. Submit copies with the response to this Notice of Inspection. Manifest #s: 009436513JJK (2012); 011575008JJK and 001575165JJK (2013).*** Obtain a copy of each missing manifest. Keep the original manifest copy until you receive the TSDF-signed copy of that manifest. Keep the TSDF-signed copy for 3 years from the date of waste shipment. [CCR 66262.40(a)]	Graniterock personnel are working with Safety Kleen to retrieve the manifests.
G051 ✓	M	**CONSOLIDATED MANIFESTING: INCOMPLETE RECEIPT** Facility allowed an eligible hazardous waste to be shipped using a consolidated manifest without receiving a properly completed receipt. ***Safety Kleen consolidated manifests do not include the generator's statement of waste minimization efforts. Ensure all consolidated manifests signed by the facility include this information.*** Do not allow eligible hazardous wastes to be removed from the facility without obtaining a proper receipt from your hauler. The receipt must contain: 1) the name, address, EPA ID, contact person, telephone number, and signature of the generator; 2) the date of shipment; 3) the manifest number; 4) the type of waste, DOT proper shipping name, California and RCRA waste codes, and quantity shipped for each waste stream; 5) the name, address, and EPA ID of the receiving facility; 6) the name, address, and EPA ID of the transporter; 7) the driver's signature; and 8) a statement signed by the generator, certifying that the generator has established a program to reduce the volume or quantity and toxicity of the hazardous waste to the degree, as determined by the generator, to be economically practicable. [HSC 25160.2(b)(4)]	Graniterock personnel advised Safety Kleen of the deficiency. Graniterock will not be using the consolidated manifests per the large generator requirement.

OFFICIAL NOTICE OF INSPECTION

Facility ID: FA0258851
Facility Name: GRANITE ROCK COMPANY-PAVEX CENTRAL
Site Address: 120 GRANITE ROCK WY, SAN JOSE, CA 95136
Inspection Date: 08/22/2014

Summary of Violations & Notice to Comply

VC	Class	Violation	Corrective Actions Taken
G321 ✓	M	**RECORDS: HAZARDOUS WASTE TRAINING** Hazardous waste training records are incomplete or are not being kept as required. ***Training records do not include Job Title, Job Description, and type of introductory and continuing training. Update the training records with this information and the names of each person in that job title.*** Maintain training records that include: 1) the name and job title of each person in a position that has hazardous waste management responsibility; 2) a written job description that includes the duties, skills, education, or other qualifications required for each position described above; 3) a description of the type and amount of introductory and continuing training that will be given for each position; and 4) documentation that this training was completed by facility personnel. Keep current employee training records until facility closure. Keep records on former employee for at least 3 years from the date the employee last worked at the facility. [CCR 66265.16(e)]	Hazardous Waste and UST safety training document has been up-dated to contain the required information.
G402 ✓	M	**CONTAINER MARKING: CONTAMINATED CONTAINERS** Facility did not mark an empty hazardous material/waste container larger than 5 gallons in capacity with the date it was emptied. ***2x 55 gallon drums formerly containing motor oil were not marked as empty with the date. Properly mark the containers. Ensure empty hazardous materials containers are properly marked and manged within one year.*** Mark each empty hazardous material/waste container larger than 5 gallons in capacity with the date it was emptied. [CCR 66261.7(f)]	All empty drums larger than 5 gallons was marked and dated as such. Storage and disposal requirements were reviewed with Graniterock personnel

Comments: EPA ID #CAL000291556 is active. Vehicle maintenance activities. Training records stored electronically. NOTE: 3 year extension for waste oil tank assessment expires in October of this year. I will be in contact with you to discuss your options for this matter.

Immediately correct any violation designated as a Class I or Class II violation. Correct all other violations no later than 09/21/2014, unless otherwise noted by the inspector.

Using the space provided, write a brief description of the actions taken by the facility to correct each violation. Attach additional pages if more space is needed. Within 5 days of achieving compliance or within 35 days of the inspection date, whichever comes first, sign the certification statement below and return a copy of this report to HMCD. Time granted for correction of violations does not preclude any enforcement action by HMCD or other agencies. This facility may be subject to reinspection at any time. Summary of Violations & Notice to Comply

Program: SR0847555 - UNDERGROUND STORAGE TANK - 2314
Inspection Type: ONGOING CONSTRUCTION/EQUIPMENT INSPECTION

VC	Class	Violation	Corrective Actions Taken
		No violations were observed during this inspection.	

Comments: Underground storage tank (UST) monitoring system replacement. All sensors tested in water by Mr. Israel Santillan (certifications current) of Service Station Systems and produced audible and visible alarms. Positive shutdown confirmed. Sensor out is positive shutdown properly functional. Power out (also required for Fail Safe) not properly configured.

Contact me for testing of fail safe for final sign off.

Program: PR0395982 - UNDERGROUND STORAGE TANK - 2399
Inspection Type: ROUTINE INSPECTION-COMPLETED

VC	Class	Violation	Corrective Actions Taken
T320 ✔	II	**PIPE MONITORING: INTERSTITIAL MONITORING NON-FUNCTIONAL (TANK INSTALLED 1/2/84 - 6/30/04) [2030018]** Leak detection equipment monitoring piping secondary containment (e.g., submersible turbine sump, piping sump, vapor pot) in an Underground storage tank (UST) system installed between 1/2/1984 and 6/30/2004 failed to function properly when tested or is otherwise non-functional. ***The exterior visible alarm is connected to a outdoor light switch and does not indicate when an alarm is active. Also, there is not an external (the monitoring panel is inside a protective enclosure) audible alarm. Reconfigure the visible alarm to activate only when there is an active alarm and install an external audible alarm. This will be done in conjunction with the open project for the installation (SR0847555).*** All secondary piping and sumps that provide secondary containment for regulated piping systems must be continuously monitored by a method that either activates audible and visual alarms or shuts down the flow of product at the dispenser when a leak is detected. Have a qualified UST Service Technician replace the non-functional leak detection equipment as soon as possible and submit documentation of the repair and startup testing results with your written response to this Notice to Comply. No permit is required from HMCD for like-for-like replacement (same manufacturer and model number) of sensors. If sensor replacement will not be like-for-like, or if the monitoring system console must be replaced, apply for a UST retrofit/repair permit from HMCD. Plans must be submitted in accordance with HMCD's "Plan Submittal Requirements for Hazardous Materials Systems" (HMCD-004) available at www.EHinfo.org/hazmat. Upon plan check approval, have the work done per the approved plans as soon as possible and schedule an inspection so HMCD can witness functional testing of the monitoring equipment. [23 CCR 2636(f)(1)]	This item is planned to be completed during 1st Quarter of 2017.

Summary of Violations & Notice to Comply

VC	Class	Violation	Corrective Actions Taken
T600	II	**UST INSTALLATION / MODIFICATION PERMIT [2060009]** Underground storage tank (UST) owner/operator failed to obtain a permit from HMCD prior to installing, replacing, repairing, or modifying a UST system. ***New UST monitoring system (panel, sensors, exterior visible alarm) installed with out first obtaining a permit. A retroactive permit has been applied for (SR0847555). Ensure you check with our office before performing work on the UST system to verify what work will require a permit. Underground Storage Tank Installation, Repair, and Upgrade Permit Requirements (HMCD-101) attached for reference.*** Within 30 days, submit plans to and apply for a retroactive permit from HMCD for the work that was done. Include with your submittal plans demonstrating that: 1) The UST is structurally sound; 2) The method(s) of repair or upgrade will prevent unauthorized releases due to structural failure or corrosion during the remaining operating life of the UST system; and 3) Materials used in the repair or upgrade are compatible with the existing UST system materials and will not be subject to deterioration due to contact with the hazardous materials being stored. Plan submittal requirements, permit application forms, and fee schedule are available at www.EHinfo.org/hazmat. [HSC 25299(a)(2), 25299(b)(4); 23 CCR 2661(b), 2662(a)]	A retroactive permit was applied for and received in 2015
T850	M	**EXEMPTION CONDITIONS: FAIL SAFE SHUTDOWN [2030017]** Underground storage tank (UST) owner/operator failed to meet requirements for exempting underground pressurized piping from the requirement to be tightness tested annually by a State-licensed tank tester or by an electronic line leak detector (ELLD) programmed to perform an annual 0.1 gallon-per-hour leak test. ***Sensor out condition caused positive shutdown, but power out did not. Either reconfigure the monitoring system to shut down power to the diesel turbine when it loses power or begin performing annual 0.1 gph line tightness tests, as required.*** Have a qualified UST Service Technician repair the secondary containment monitoring system so it shuts down the pump or stops the flow of product at the dispenser when a leak is detected in the under-dispenser containment (UDC) and, for all pressurized product piping not contained in the UDC, provides fail-safe shutdown of the pump/turbine. No permit from HMCD is required for replacement of sensors or relays provided that they are replaced like-for-like. You may implement annual line tightness testing within 30 days rather than making the above repairs. If you do so, notify HMCD at least 2 working days prior to the test date and electronically submit a revised UST Monitoring Plan via the California Environmental Reporting System (CERS) at cers.calepa.ca.gov within 30 days. Submit a copy of the line tightness test report within 30 days of the testing date. [23 CCR 2636(f)(5)]	The fail-safe for power-out was tested and passed in 2016.

Comments: On-site to witness the annual monitoring system certification and spill bucket test performed by Mr. Israel Santillan (certifications current) of Service Station Systems.

Split tank, diesel is pressurized, gasoline is conventional suction. Tank annular and sump sensors tested in water and provided audible and visible alarms at the panel. The diesel sump sensor also provided positive shutdown. Diesel under dispenser containment (UDC) monitored by float and chain assemblies. Float and chain assemblies tested with water and functioned properly. The gasoline UDC is monitored by a stand-alone sensor. The sensor was tested in water and shut down the dispenser pump.

Overfill protection is provided in all tanks by a flapper valve in the fill riser.
The spill buckets are direct buried and were hydrostatically tested for one hour with no loss.
The emergency shut off switch was tested and shut down the diesel turbine.

The VMI LD 2000 mechanical line leak detector (MLLD) detected a simulated 3 gph leak at 10 PSI and held slow flow.

Summary of Violations & Notice to Comply

Reviewed DUSTO Monthly Reports, DUSTO Training records, testing reports and maintenance documentation.

Tank and monitoring system information submitted to the California Environmental Reporting System (CERS) on 7/21/2015 will need to be updated to reflect new monitoring equipment.

Permit valid through 10/31/2019.

Submit a copy of the Monitoring Certification and Spill Bucket Test reports to our office within 30 days and keep a copy available for review for at least 3 years. Reports may be sent via email to USTinspector@deh.sccgov.org.

Immediately correct any violation designated as a Class I or Class II violation. Correct all other violations no later than 09/06/2015, unless otherwise noted by the inspector.

Using the space provided, write a brief description of the actions taken by the facility to correct each violation. Attach additional pages if more space is needed. Within 5 days of achieving compliance or within 35 days of the inspection date, whichever comes first, sign the certification statement below and return a copy of this report to HMCD. Time granted for correction of violations does not preclude any enforcement action by HMCD or other agencies. This facility may be subject to reinspection at any time. [Authority: HSC 25185(c), 25187.8, 25404.1.2(c)]

Program: PR0395982 - UNDERGROUND STORAGE TANK - 2399
Inspection Type: ROUTINE INSPECTION

VC	Class	Violation	Corrective Actions Taken
T020 ✓	II	**UST FINANCIAL RESPONSIBILITY [2010007]** Petroleum underground storage tank (UST) owner/operator failed to submit or keep current evidence of UST financial responsibility for taking corrective action and for compensating third parties for bodily injury and property damage caused by a release. ***Update the Financial Responsibility information and submit it to CERS.*** Within 30 days, upload and electronically submit a UST Certification of Financial Responsibility (CFR) form via the California Environmental Reporting System (CERS) website at http://cers.calepa.ca.gov. Keep a copy of the CFR form and all required supporting documentation at this facility or at your place of business. If the State UST Cleanup Fund is used as a financial responsibility mechanism, update the chief financial officer (CFO) letter annually, within 150 days after the close of each fiscal year. If a financial test of self-insurance, guarantee, or local government financial test is used, update the CFO letter annually, within 120 days after the close of each fiscal year. If an insurance policy is used, ensure that it contains endorsement language meeting the requirements of 40 CFR 280.97. The "Certification of Financial Responsibility for Underground Storage Tanks Containing Petroleum" form (UN-049) and Petroleum UST Financial Responsibility Guide are available at www.EHinfo.org/hazmat. [HSC 25292.2(a), 25292.2, 25299.30-25299.34; 23 CCR 2711(a)(11), 2808.1, 2809-2809.2]	The Financial Assurance Document for 2016 was submitted 11/17/2016
T050 ✓	M	**RECORD KEEPING: DUSTO MONTHLY INSPECTION REPORTS [2010004]** Underground storage tank (UST) owner/operator failed to keep copies of the Designated UST Operator (DUSTO) monthly inspection records on-site available for inspection. ***DUSTO reports were disposed of by facility employees. Ensure employees maintain the DUSTO reports and keep them available for review. Consider keeping backup copies of reports left on site.*** Keep a copy of each DUSTO inspection record and required attachments for the most recent 12 months on-site and available for inspection. Inspections can be documented by properly completing all items on the "Underground Storage Tank System Designated UST Operator Monthly Inspection Report" form (UN-057), available at www.EHinfo.org/hazmat. [23 CCR 2715(e)]	Graniterock has established a new DUSTO binder with records beginning in 9/2016. Records will be maintained for 3 years.

OFFICIAL NOTICE OF INSPECTION

Facility ID: FA0258851
Facility Name: GRANITE ROCK COMPANY-PAVEX CENTRAL
Site Address: 120 GRANITE ROCK WY, SAN JOSE, CA 95136
Inspection Date: 08/12/2016

Summary of Violations & Notice to Comply

VC	Class	Violation	Corrective Actions Taken
T180	II	**INTERSTITIAL MONITORING: AUDIBLE & VISUAL ALARMS [2030003]** Underground storage tank (UST) continuous monitoring system does not have functional audible and visual alarms. ***Due to the nature of the site and the location of the alarm panel (outside in the yard with heavy equipment driving by and inside a closed panel box) while the audible and visible alarms function at the panel, it would be difficult for employees to observe them. Either have the alarms forwarded to a staffed location (the panel sends inventory information wirelessly to the office) or install an external strobe and horn of sufficient volume to attract employee's attention.*** UST monitoring systems must have audible and visual alarms that activate when a leak of hazardous materials from primary containment into secondary containment occurs and when water intrusion into secondary containment is detected. Have the continuous monitoring system repaired as soon as possible by a qualified UST Service Technician so the audible and visual alarms function properly. No permit from HMCD is required for this repair. Submit with your written response to this Notice to Comply documentation showing that the repair has been made and that the audible and visual alarms work (e.g., copy of work order). If the monitoring system cannot be repaired, it must be replaced with an approved system (i.e., equipment listed in Local Guidance Letter LG-113 at www.waterboards.ca.gov/water_issues/programs/ust/leak_prevention/index.shtml). You must obtain a UST retrofit permit from HMCD prior to replacing monitoring equipment. Plans must be submitted in accordance with HMCD's "Plan Submittal Requirements for Hazardous Materials Systems" (HMCD-004) available at www.EHinfo.org/hazmat. Upon plan check approval, have the work done per the approved plans as soon as possible and schedule an inspection for HMCD to witness functional testing of the monitoring equipment by the UST Service Technician. [23 CCR 2632(c)(2)(B), 2636(f)(1), 2666(a)]	Graniterock plans to utilize the existing flashing red light to indicate an alarm, currently the red light flashes to warn employees of the location of the UST dispenser. This work is planned to be completed by the end of 1st Quarter 2016. If necessary we will plan on installing an audible alarm as well.
T320	II	**PIPE MONITORING: INTERSTITIAL MONITORING NON-FUNCTIONAL (TANK INSTALLED 1/2/84 - 6/30/04) [2030018]** Leak detection equipment monitoring piping secondary containment (e.g., submersible turbine sump, piping sump, vapor pot) in an Underground storage tank (UST) system installed between 1/2/1984 and 6/30/2004 failed to function properly when tested or is otherwise non-functional. ***The float and chain in the high flow UDC did not function when initially tested. After adjustment the float and chain functioned as required. No further corrective actions required.*** All secondary piping and sumps that provide secondary containment for regulated piping systems must be continuously monitored by a method that either activates audible and visual alarms or shuts down the flow of product at the dispenser when a leak is detected. Have a qualified UST Service Technician replace the non-functional leak detection equipment as soon as possible and submit documentation of the repair and startup testing results with your written response to this Notice to Comply. No permit is required from HMCD for like-for-like replacement (same manufacturer and model number) of sensors. If sensor replacement will not be like-for-like, or if the monitoring system console must be replaced, apply for a UST retrofit/repair permit from HMCD. Plans must be submitted in accordance with HMCD's "Plan Submittal Requirements for Hazardous Materials Systems" (HMCD-004) available at www.EHinfo.org/hazmat. Upon plan check approval, have the work done per the approved plans as soon as possible and schedule an inspection so HMCD can witness functional testing of the monitoring equipment. [23 CCR 2636(f)(1)]

Summary of Violations & Notice to Comply

VC	Class	Violation	Corrective Actions Taken
T500 ✓	II	**PRIMARY CONTAINMENT NOT PRODUCT-TIGHT [2060027]** Underground storage tank (UST) and/or regulated piping primary containment is not made of (or, if single-walled, lined with) a material that is product-tight and compatible with the substance stored. ***The diesel piping in the dispenser is leaking and there was diesel accumulating in the UDC. Have the piping repaired to maintain primary containment. Retain the repair documentation.*** Immediately cease storing hazardous materials in the UST and remove any released hazardous material from secondary containment. Contact the tank/piping manufacturer or the manufacturers' authorized representatives to determine how badly the tank system has been damaged and whether it can be repaired. If repair is possible, you must submit plans to, and obtain approval from, HMCD prior to beginning work. If the tank system cannot be repaired, apply for a UST Closure Permit within 90 days and complete closure of the tank system within 6 months. Keep HMCD advised of any determinations made regarding the status of the tank. UST closure guidelines, plan submittal requirements, permit application forms, and the fee schedule are available at www.EHinfo.org/hazmat. [HSC 25290.1(c)(1), 25290.2(c)(1), 25291(a)(1); 23 CCR 2631.1(a), 2660(m)]	This deficiency has been remedied, the dispenser pan float was reset and is currently monitored by site employees.
T900 ✓	II	**RESPONSE TO UST NOTICE OF VIOLATION [2030073]** Underground storage tank (UST) permit holder failed to implement corrective actions within 30 calendar days of receiving an Official Notice of Inspection (Notice to Comply) from HMCD citing violations of UST law or regulations. ***The response to the 8/7/2015 inspection report was not received by our office. Submit the completed inspection report with the response to this current report. Ensure the violations noted are corrected in a timely manner and the response is returned to our office.*** Correct all outstanding violations. Submit to HMCD the previous Official Notice(s) of Inspection with the Corrective Actions Taken" column and "Certification of Compliance" signature section completed. If any violation has not yet been corrected, describe the corrective actions that will be taken and provide a specific date by which those actions will be completed. [23 CCR 2712(f)]	The responses to the 2015 inspection are attached with this report

Comments: On-site to witness the annual monitoring system certification and spill bucket test performed by Mr. Israel Santillan (certifications current) of Service Station Systems.

Split tank, diesel is pressurized, gasoline is conventional suction. Tank annular and sump sensors tested in water and provided audible and visible alarms at the panel. The diesel sump sensor also provided positive shutdown. Fail safe (sensor out and power out) was tested and functioned as required.

Diesel under dispenser containment (UDC) monitored by float and chain assemblies. Float and chain assemblies tested with water and functioned properly. The gasoline UDC is monitored by a stand-alone sensor. The sensor was tested in water and shut down the dispenser pump.

Overfill protection is provided in all tanks by a flapper valve in the fill riser.
The spill buckets are direct buried and were hydrostatically tested for one hour with no loss.
The VMI LD 2000 mechanical line leak detector (MLLD) detected a simulated 3 gph leak at 10 PSI and held slow flow.

Permit valid through 10/31/2019.

NOTE: There is a false "Theft Alarm" that comes up often. It is recommended that this is repaired to ensure leak alarms are noticed at the earliest opportunity and not dismissed as a false alarm.
-Secondary containment (SB989) testing is due next August (8/2017).

Summary of Violations & Notice to Comply

Program: PR0395982 - UNDERGROUND STORAGE TANK - 2399
Inspection Type: UST SECONDARY CONTAINMENT TESTING

VC	Class	Violation	Corrective Actions Taken
T530 ✔	**II**	**SECONDARY CONTAINMENT [2030047]** Underground storage tank (UST) and/or regulated piping is not equipped with secondary containment, or secondary containment is not product-tight (e.g., as evidenced by failure of secondary containment testing). ***The diesel sump and the diesel regular flow UDC failed to pass the Incon accelerated testing. Investigate the source of the failures and repair and retest the sump and UDC. Once the source of the failure is determined, contact our office for permit requirements for the repair.*** Have a properly licensed and trained contractor install or repair secondary containment as soon as possible. Submit plans to, and obtain approval from, HMCD prior to beginning work. If the tank system cannot be repaired, apply for a UST Closure Permit within 90 days and complete closure of the tank system within 6 months. Keep HMCD advised of any determinations made regarding the status of the tank. UST closure guidelines, plan submittal requirements, permit application forms, and the fee schedule are available at www.EHinfo.org/hazmat. [HSC 25290.1(c)(2), 25290.2(c)(2), 25291(a)(2), 25292(e); 23 CCR 2662]	Secondary Containment repairs are scheduled to be completed by Abel Maintenance on 1/21/2019. Repair permits have been acquired.

Comments: On-site to witness secondary containment testing performed by Mr. Erik Salinger (certifications current) of Able Maintenance.

Site has two tanks (gas, diesel), compartmentalized in one annular space, two piping sumps, and 3 dispensers (one gas, one regular flow diesel and one high flow diesel).

The annular space and diesel secondary piping were tested before my arrival and stated to have passed.

The gas secondary piping was tested at 5 psi for one hour with no loss.

The sumps, under dispenser containment (UDC) and the three spill buckets (diesel fill, gas fill and gas vapor) were tested with the Incon Accelerated testing apparatus. The 87 sump, all three spill buckets, the gasoline UDC and high flow diesel UDC showed a passing result.

Submit a copy of the Secondary Containment and Spill Bucket Test reports to our office within 30 days and keep a copy available for review for at least 3 years. Reports may be sent via email to USTinspector@deh.sccgov.org.

Immediately correct any violation designated as a Class I or Class II violation. Correct all other violations no later than 09/15/2017, unless otherwise noted by the inspector.

Using the space provided, write a brief description of the actions taken by the facility to correct each violation. Attach additional pages if more space is needed. Within 5 days of achieving compliance or within 35 days of the inspection date, whichever comes first, sign the certification statement below and return a copy of this report to HMCD. Time granted for correction of violations does not preclude any enforcement action by HMCD or other agencies. This facility may be subject to reinspection at any time. [Authority: HSC 25185(c), 25187.8, 25404.1.2(c)]

OFFICIAL NOTICE OF INSPECTION

OFFICIAL NOTICE OF INSPECTION - SUPPLEMENTAL INFORMATION

This Official Notice of Inspection (NOI) documents the results of an inspection by HMCD, including a list of alleged violations, evidence in support of the alleged violations, corrective actions that must be taken by the facility, and general observations.

What am I supposed to do upon receiving a NOI?

- Correct the violations within 30 days of the inspection date, unless otherwise noted.
- In the "Corrective Actions Taken" column, write a brief description of the actions taken by the facility to correct each violation. Attach additional pages if more space is needed.
- Certify that the facility has returned to compliance by signing and dating the certification statement at the end of the report.
- Make a photocopy of the NOI and any attachments for your records.
- Within 5 days of achieving compliance or 35 days of the inspection date, whichever comes first, return the original copy of the report and any attachments to HMCD at 1555 Berger Drive, Suite 300, San Jose, CA 95112-2716.

What if there are violations that cannot be corrected within 30 days?

For each violation that cannot be corrected within 30 days, submit a written Compliance Plan describing the corrective actions you propose to take and the date by which the actions will be completed. State law grants up to 30 days to correct minor violations without penalty. Minor violations that are uncorrected after 30 days, and class I and II violations may be subject to enforcement action. To lessen the possibility of enforcement action, correct all violations as soon as possible.

What if I disagree with a violation on the NOI?

If you disagree with any violation listed in this NOI, you must submit a written Notice of Disagreement to HMCD within 30 days of the inspection date. Address such notices to the attention of the inspector who cited the violation. In your Notice of Disagreement, explain in detail why you believe the alleged violation was incorrectly cited.

What about photographs or samples taken during the inspection?

A co-located sample will be given to you upon request if adequate sample volume is available. Photographs and sample analytical results will not generally be available until after the inspection has been concluded. A copy of photographs and/or analytical results will be provided to you upon written request. Photographs and sample analytical results may be withheld in the event of a criminal investigation or other ongoing investigation.

Key to Acronyms and Regulatory Terms

XX CCR	California Code of Regulations, Title XX

Summary of Violations & Notice to Comply

Program: PR0395983 - HAZARDOUS MATERIALS BUSINESS PLAN - BP05
Inspection Type: ROUTINE INSPECTION

VC	Class	Violation	Corrective Actions Taken
B115	**M**	**HMBP ANNUAL CERTIFICATION [1010008]** Facility operator failed to annually review the the facility's Hazardous Materials Business Plan (HMBP) and electronically certify that it is complete and accurate. ***Prior to 6/19/2017 submittal the most recent HMBP submittal was 9/2015. Ensure the HMBP is reviewed and resubmitted at least annually. No further corrective actions required.*** Within 30 days, review and electronically resubmit a complete HMBP through either the Santa Clara County CUPA electronic reporting portal (http://FrontCounter.sccgov.org) or the California Environmental Reporting System (http://cers.calepa.ca.gov). Be sure to submit all of the elements that comprise a complete HMBP (i.e., Facility Information, Hazardous Materials Inventory, and Emergency Response and Training Plans). See www.sccgov.org/sites/hazmat/programs/Pages/ereporting.aspx for more details on electronic reporting. Ensure that future certifications are submitted no more than 12 months from your last complete HMBP submittal date.[HSC 25508(a)(1)(A)(B), 25508.2]	
Comments: Facility is a maintenance and staging yard for a concrete construction and materials company. CERS submittal 6/19/2017 is accurate as observed for hazardous materials storage. Property owner is the operator. Training is documented in the company's online system. Emergency equipment available and properly maintained.

Program: PR0395982 - UNDERGROUND STORAGE TANK - 2399
Inspection Type: ROUTINE INSPECTION

VC	Class	Violation	Corrective Actions Taken
T012	**M**	**UST MONITORING SITE PLAN [2030041]** Underground storage tank (UST) owner/operator failed to submit or keep current a UST monitoring site plan. ***The UST Monitoring Site Plan needs to be updated to reflect the current monitoring system.*** Within 30 days, upload and electronically submit a PDF file containing a UST Monitoring Site Plan via the California Environmental Reporting System (CERS) website at http://cers.calepa.ca.gov. The Site Plan must show the tank and piping layouts and the locations where monitoring is performed (i.e., location of sensors, line leak detectors, monitoring system control panel, ATG probes for single-wall tanks, etc.). Site Plans for facilities using vacuum monitoring must clearly identify vacuum zones. Keep a copy of the current Site Plan on-site at this facility. The Site Plan must be revised and resubmitted within 30 days of changes in the information it contains. [23 CCR 2632(d)(1)(C), 2641(h), 2711(a)(8)]	The UST Monitoring Site plan was last submitted 12/5/2018.

OFFICIAL NOTICE OF INSPECTION

Facility ID: FA0258851
Facility Name: GRANITE ROCK COMPANY-PAVEX CENTRAL
Site Address: 120 GRANITE ROCK WY, SAN JOSE, CA 95136
Inspection Date: 08/25/2017

Summary of Violations & Notice to Comply

VC	Class	Violation	Corrective Actions Taken
T016 ✓	M	**UST MONITORING PLAN NOT APPROVED [2010013]** Underground storage tank (UST) owner/operator failed to submit or keep current an accurate and complete UST Monitoring Plan, or the UST Monitoring Plan submitted is not approved by HMCD. ***The UST monitoring plan needs to be updated to reflect the current monitoring system.*** Within 30 days, electronically submit a UST Monitoring Plan via the California Environmental Reporting System (CERS) website at http://cers.calepa.ca.gov. Keep a copy of the current UST Monitoring Plan on-site at this facility. The plan must be revised and resubmitted within 30 days of changes in the information it contains. [23 CCR 2632(d)(1), 2641(h)]	The UST Monitoring Plan was last submitted 12/5/2018.
T100 ✓	M	**INSTALLATION,CALIBRATION,OPERATIONANDMAINTENANCEOFUST MONITORING EQUIPMENT [2030043 RD]** Underground storage tank (UST) owner/operator failed to ensure that UST system leak detection equipment is installed, calibrated, operated and maintained in accordance with manufacturer's instructions. ***There is a false "Theft Alarm" that comes up every night between 12:00 and 2:00. Have the issue repaired to ensure leak alarms are noticed at the earliest opportunity and not dismissed as a false alarm.*** Ensure that UST system leak detection equipment is installed, calibrated, operated and maintained in accordance with manufacturer's instructions. [23 CCR 2638(a), 2641(j)]	The UST program installers- TriCali will accompany the secondary containment repairs on 1/21/2019 to try and repair the false "theft alarm." They are doing research now to combat the issue.

Comments: On-site to witness the annual monitoring system certification and spill bucket test performed by Mr. Israel Santillan (certifications current) of Service Station Systems.

Split tank, diesel is pressurized, gasoline is conventional suction. Tank annular and sump sensors tested in water and provided audible and visible alarms at the panel. The diesel sump sensor also provided positive shutdown. Fail safe (sensor out and power out) was tested and functioned as required.

Diesel under dispenser containment (UDC) monitored by float and chain assemblies. Float and chain assemblies tested with water and functioned properly. The gasoline UDC is monitored by a stand-alone sensor. The sensor was tested in water and shut down the dispenser pump.

Overfill protection is provided in both tanks by a flapper valve in the fill riser.

The spill buckets are direct buried and were hydrostatically tested for one hour with no loss.

The VMI LD 2000 mechanical line leak detector (MLLD) detected a simulated 3 gph leak at 10 PSI and held slow flow.

Reviewed DUSTO Monthly Reports, DUSTO Training records, testing reports and maintenance documentation.

Permit valid through 10/31/2019.

Submit a copy of the Monitoring Certification and Spill Bucket Test reports to our office within 30 days and keep a copy available for review for at least 3 years. Reports may be sent via email to USTinspector@deh.sccgov.org.

Immediately correct any violation designated as a Class I or Class II violation. Correct all other violations no later than 09/24/2017, unless otherwise noted by the inspector.

Using the space provided, write a brief description of the actions taken by the facility to correct each violation. Attach additional pages if more space is needed. Within 5 days of achieving compliance or within 35 days of the inspection date, whichever comes first, sign the certification statement below and return a copy of this report to HMCD. Time granted for correction of violations does not preclude any enforcement action by HMCD or other agencies. This facility may be subject to reinspection at any time. [Authority: HSC 25185(c), 25187.8, 25404.1.2(c)]

OFFICIAL NOTICE OF INSPECTION - SUPPLEMENTAL INFORMATION

This Official Notice of Inspection (NOI) documents the results of an inspection by HMCD, including a list of alleged violations, evidence in support of the alleged violations, corrective actions that must be taken by the facility, and general observations.

What am I supposed to do upon receiving a NOI?

- Correct the violations within 30 days of the inspection date, unless otherwise noted.
- In the "Corrective Actions Taken" column, write a brief description of the actions taken by the facility to correct each violation. Attach additional pages if more space is needed.
- Certify that the facility has returned to compliance by signing and dating the certification statement at the end of the report.
- Make a photocopy of the NOI and any attachments for your records.
- Within 5 days of achieving compliance or 35 days of the inspection date, whichever comes first, return the original copy of the report and any attachments to HMCD at 1555 Berger Drive, Suite 300, San Jose, CA 95112-2716.

What if there are violations that cannot be corrected within 30 days?

For each violation that cannot be corrected within 30 days, submit a written Compliance Plan describing the corrective actions you propose to take and the date by which the actions will be completed. Summary of Violations & Notice to Comply

Program: PR0395983 - HAZARDOUS MATERIALS BUSINESS PLAN - BP05
Inspection Type: ROUTINE INSPECTION

VC	Class	Violation	Corrective Actions Taken
B110 ✓	**II**	**HMBP AMENDMENT [1010006]** Facility operator failed to amend and electronically resubmit their Hazardous Materials Business Plan (HMBP) within 30 days of an event requiring plan amendment, including any of the following: 1) a 100% or more increase in the quantity of a previously disclosed material, 2) any handling of a previously undisclosed hazardous material subject to HMBP reporting, 3) a change of business address, 4) a change of business ownership, 5) a change of business name, or 6) a substantial change in the handler's operations. ***Significant changes to the chemical inventory have been made at the facility and the HMBP was not updated. Update and submit the HMBP within 30 days of significant changes are made. Observed 3 new oil tanks, 1 hydraulic oil tank, 3x 55 gallon Gear Lube (Syngear 165), Brake Cleaner (Wurth) 55 gallons, 3x 275 gallon totes of Diesel Exhaust Fluid, and an addtional 3 totes of Daraset. Also observed that Oxygen and Argon/Carbon Dioxide is no longer being stored in the small tools area and the location of the other gases have been moved from directly behind the shop to behind the office trailers. Ensure the chemical inventory and storage map is kept up to date as required.*** Within 30 days, amend and electronically resubmit the HMBP through either the Santa Clara County CUPA electronic reporting portal (http://FrontCounter.sccgov.org) or the California Environmental Reporting System (http://cers.calepa.ca.gov). Be sure to submit all of the elements that comprise a complete HMBP (i.e., Facility Information, Hazardous Materials Inventory, and Emergency Response and Training Plans). See www.sccgov.org/sites/hazmat/programs/Pages/ereporting.aspx for more details on electronic reporting. [HSC 6.95 25508.1(a)-(f)]	The HMBP for this site was updated and last submitted 12/5/2018.

Comments: Facility is a construction/materials company equipment maintenance and storage yard. Property owner and operator are the same. Walk through encompassed the entire facility. Hazardous materials stored are used for equipment repair and maintenance and for construction activities. Emergency equipment available and properly maintained. Training documentation kept on company intranet. Last full HMBP submittal to CERS was done 6/17/2017. Ensure a detailed and accurate accounting of all petroleum containers 55 gallons and above is made as the additions of the motor oil and hydraulic oil tanks may qualify the facility for the APSA program (more than 1320 gallons total).

Program: PR0379140 - HAZARDOUS WASTE GENERATOR - 2205
Inspection Type: ROUTINE INSPECTION

VC	Class	Violation	Corrective Actions Taken

OFFICIAL NOTICE OF INSPECTION

Facility ID: FA0258851
Facility Name: GRANITE ROCK COMPANY-PAVEX CENTRAL
Site Address: 120 GRANITE ROCK WY, SAN JOSE, CA 95136
Inspection Date: 06/28/2018

Summary of Violations & Notice to Comply

VC	Class	Violation	Corrective Actions Taken
G020 ✓	M	**MARKING OF HAZARDOUS WASTE [3030007]** Facility failed to properly mark a hazardous waste tank and/or container. ***The waste antifreeze was not properly marked (only labeled "used"). Ensure all hazardous waste containers have all of the required markings.*** Mark all hazardous waste tanks with the words "HAZARDOUS WASTE" and the accumulation start date. Mark all hazardous waste containers and portable tanks with the words "HAZARDOUS WASTE;" the accumulation start date; the name and address of the generator; and the composition, physical state, and hazardous properties of the waste. Additionally, mark used oil containers, aboveground tanks, and fill pipes for underground tanks with the words "USED OIL." [CCR 66262.34(f), 66279.21(b)]	The waste antifreeze has proper "Hazardous Waste" stickers in place with proper accumulation start date affixed to the front of the containment. See Image 1 Attached.
G043 ✓	M	**MANIFEST RETENTION [3010010]** Facility failed to retain the original and/or treatment/storage/disposal facility (TSDF) -signed copy of a Uniform Hazardous Waste Manifest. ***The facility did not have the TSDF copy for the manifests listed below. Obtain copies of the TSDF signed manifests. If they cannot be obtained, submit an exception report to DTSC (see DTSC's manifest website for details) for any that are over 45 days past the shipment. 006338669SKS; 0066490614SKS; 0063180875SKS; 006162941SKS; 006106373SKS; 010221191FLE.*** Obtain a copy of each missing manifest. Keep the original manifest copy until you receive the TSDF-signed copy of that manifest. Keep the TSDF-signed copy for 3 years from the date of waste shipment. [CCR 66262.40(a)]	All listed signed manifests have been obtained and are attached below.
G114 ✓	M	**EMERGENCY AISLE SPACE [3030036]** Facility failed to maintain sufficient aisle space to permit the unobstructed movement of personnel and equipment to all areas of facility operation in case of an emergency. ***4 rolling carts containing 55 gallon gear lube drums are parked in front of the waste antifreeze tank. Provide enough aisle space for first responders and their equipment to reach the antifreeze waste.*** Maintain aisle space to all areas of facility operation. [CCR 66265.35, CFR 265.35]	Rolling carts have been relocated out of the way of the antifreeze tank with proper aisle space for first responders. See Image 2 attached.
G300 ✓	II	**ACCUMULATION TIME [3030012]** Facility accumulated hazardous waste on-site for longer than the allowed time limit. ***The most recent receipt for the pick up of the waste antifreeze was dated 5/8/2017. Have the waste picked up and provide the receipt or submit documentation that the waste has been picked up within the proper time frame (90 days).*** Make arrangements for the immediate removal of the waste. Submit to HMCD a copy of the manifest(s) or consolidated manifest receipt(s) demonstrating that the waste has been removed. Ensure that hazardous wastes are not accumulated on-site for longer than 90 days. [CCR 66262.34(a)]	Antifreeze was last picked up from this site on 8/23/2018. The pickup of antifreeze is scheduled with Safety-Kleen to be removed from the site every 12 weeks. The next pick up is scheduled for 1/21/2018.

OFFICIAL NOTICE OF INSPECTION

Facility ID: FA0258851 **Inspection Date:** 06/28/2018
Facility Name: GRANITE ROCK COMPANY-PAVEX CENTRAL
Site Address: 120 GRANITE ROCK WY, SAN JOSE, CA 95136

Summary of Violations & Notice to Comply

VC	Class	Violation	Corrective Actions Taken
G343 ✔	II	**TANK INSPECTIONS [3030029]** Facility could not demonstrate that hazardous waste tanks are being inspected daily as required. ***Facility could not provide daily inspection logs for the tank. Begin documenting the inspections and note the required elements below.*** Perform and document hazardous waste tank inspections daily. Inspections must cover: 1) overfill/spill control equipment; 2) aboveground portions of the tank system; 3) data gathered from monitoring and leak detection equipment; 4) construction materials and the area immediately surrounding the tank system; and 5) the level of waste in the tank, for uncovered tanks. [CCR 66265.195]	The facility inspects the hazardous materials storage area daily and a copy of those daily inspections is attached here as Image 3.
G444 ✔	M	**CONTAINER REQUIREMENTS: UNIVERSAL WASTE [3030]** Facility failed to contain Universal Waste in a manner that prevents breakage and the release of Universal Waste or waste residues. ***Observed electronic waste (CRT monitors/TVs) that were stored in a way that might cause a release. Properly situate electronic waste to avoid breakage and release of hazardous materals.*** Properly contain the waste, as required for the type of Universal Waste. Container requirements are summarized in the Universal Waste Management Requirements document (HMCD-108) available at www.ehinfo.org/hazmat. [CCR 66273.33, 66273.33.5, HSC 25201.16(f)-(g)]	Upon inspection for electronic waste for clean up to complete this action item, I was unable to locate any electronic waste. This waste has been properly removed from the site.

Comments: Facility is a construction/materials maintenance and equipment storage yard. EPA ID# CAL000291556 is active. Facility generates mainly used oil from the maintenance activities as well as oily absorbents, used filters, parts washer and antifreeze waste. Observed emergency equipment throughout the facility that was properly maintained. Emergency procedures posted with current employees. Reviewed manifests and consolidated manifests for waste shipments. Training documentation is stored on company intranet. Contingency plan is filed in CERS with the HMBP documentation.

Immediately correct any violation designated as a Class I or Class II violation. Correct all other violations no later than 07/28/2018, unless otherwise noted by the inspector.

Using the space provided, write a brief description of the actions taken by the facility to correct each violation. Attach additional pages if more space is needed. Within 5 days of achieving compliance or within 35 days of the inspection date, whichever comes first, sign the certification statement below and return a copy of this report to HMCD. Time granted for correction of violations does not preclude any enforcement action by HMCD or other agencies. This facility may be subject to reinspection at any time. [Authority: HSC 25185(c), 25187.8, 25404.1.2(c)]

Received By: Reed Carter
Environmental Projects Manager

Inspected By: EE0010323 - MATTHEW BURGE
CA UST Inspector #8143782, Exp. 01/27/2020

Certification of Compliance

I certify under penalty of perjury that this facility has complied with directives specified in this Notice to Comply.

Ashlyn W — **Signature of Owner/Operator**
1/9/2019 — **Date**
Ashlyn Wenger — **Printed Name of Owner/Operator**
Environmental Engineer — **Title**

OFFICIAL NOTICE OF INSPECTION - SUPPLEMENTAL INFORMATION

This Official Notice of Inspection (NOI) documents the results of an inspection by HMCD, including a list of alleged violations, evidence in support of the alleged violations, corrective actions that must be taken by the facility, and general observations.

What am I supposed to do upon receiving a NOI?

- Correct the violations within 30 days of the inspection date, unless otherwise noted.
- In the "Corrective Actions Taken" column, write a brief description of the actions taken by the facility to correct each violation. Attach additional pages if more space is needed.
- Certify that the facility has returned to compliance by signing and dating the certification statement at the end of the report.
- Make a photocopy of the NOI and any attachments for your records.
- Within 5 days of achieving compliance or 35 days of the inspection date, whichever comes first, return the original copy of the report and any attachments to HMCD at 1555 Berger Drive, Suite 300, San Jose, CA 95112-2716 or via e-mail to the inspector noted on the "Inspected By" line of the report.

What if there are violations that cannot be corrected within 30 days?

For each violation that cannot be corrected within 30 days, submit a written Compliance Plan describing the corrective actions you propose to take and the date by which the actions will be completed. State law grants up to 30 days to correct minor violations without penalty. Minor violations that are uncorrected after 30 days, and class I and II violations may be subject to enforcement action. To lessen the possibility of enforcement action, correct all violations as soon as possible.

What if I disagree with a violation on the NOI?

If you disagree with any violation listed in this NOI, you must submit a written Notice of Disagreement to HMCD within 30 days of the inspection date. Address such notices to the attention of the inspector who cited the violation. In your Notice of Disagreement, explain in detail why you believe the alleged violation was incorrectly cited.

What about photographs or samples taken during the inspection?

A co-located sample will be given to you upon request if adequate sample volume is available. Photographs and sample analytical results will not generally be available until after the inspection has been concluded. A copy of photographs and/or analytical results will be provided to you upon written request. Photographs and sample analytical results may be withheld in the event of a criminal investigation or other ongoing investigation.

Key to Acronyms and Regulatory Terms

XX CCR	California Code of Regulations, Title XX
XX CFR	Code of Federal Regulations, Title XX
Class	Violation classification: I = Class I violation, II = Class II violation, M = Minor violation, C = Corrected minor violation [HSC §25110.8.5, HSC §25117.6, CCR §66260.10]
CERS	California Environmental Reporting System (cers.calepa.ca.gov)
DTSC	California Department of Toxic Substances Control
EPA	U.S. Environmental Protection Agency
HMCD	County of Santa Clara, Department of Environmental Health, Hazardous Materials Compliance Division
HSC	California Health and Safety Code
RCRA	Resource Conservation and Recovery Act
SCCO	Santa Clara County Ordinance Code
TSDF	Hazardous waste treatment, storage or disposal facility
UST	Underground storage tank
VC	HMCD violation code

Warning:

- It is a violation of State law to make a false statement that a facility has returned to compliance [HSC §25404.1.2(c)(2)].
- Making a false statement regarding a hazardous waste violation is punishable by a fine of not less than $2,000 or more than $50,000 and/or imprisonment in the county jail for up to one year [HSC §25191(b)].
- Making a false statement regarding an underground storage tank violation is punishable by a fine of not less than $500 or more than $5,000 [HSC §§25299(a)(8), 25299(b)(7)].
- HMCD has the right to require the submittal of reasonable and necessary documentation in support of any claim of compliance made by your facility [HSC §25187.8(i), 25289(b)].

Summary of Violations & Notice to Comply

Program: PR0395982 - UNDERGROUND STORAGE TANK - 2399
Inspection Type: ROUTINE INSPECTION

VC	Class	Violation	Corrective Actions Taken
T012 ✓	II	**UST MONITORING SITE PLAN [2030041]** Underground storage tank (UST) owner/operator failed to submit or keep current a UST monitoring site plan. ***This is a repeat violation. It has been elevated to Class II. Update the monitoring site plan (monitoring system map) with the new monitoring system information in CERS and resubmit.*** Within 30 days, upload and electronically submit a PDF file containing a UST Monitoring Site Plan via the California Environmental Reporting System (CERS) website at http://cers.calepa.ca.gov. The Site Plan must show the tank and piping layouts and the locations where monitoring is performed (i.e., location of sensors, line leak detectors, monitoring system control panel, ATG probes for single-wall tanks, etc.). Site Plans for facilities using vacuum monitoring must clearly identify vacuum zones. Keep a copy of the current Site Plan on-site at this facility. The Site Plan must be revised and resubmitted within 30 days of changes in the information it contains. [23 CCR 2632(d)(1)(C), 2641(h), 2711(a)(8)]	The UST Monitoring Site plan was last submitted 12/5/2018.
T016 ✓	II	**UST MONITORING PLAN NOT APPROVED [2010013]** Underground storage tank (UST) owner/operator failed to submit or keep current an accurate and complete UST Monitoring Plan, or the UST Monitoring Plan submitted is not approved by HMCD. ***This is a repeat violation. It has been elevated to Class II. Update the monitoring plan with the new monitoring system information in CERS and resubmit.*** Within 30 days, electronically submit a UST Monitoring Plan via the California Environmental Reporting System (CERS) website at http://cers.calepa.ca.gov. Keep a copy of the current UST Monitoring Plan on-site at this facility. The plan must be revised and resubmitted within 30 days of changes in the information it contains. [23 CCR 2632(d)(1), 2641(h)]	The UST Monitoring Plan was last submitted 12/5/2018.

OFFICIAL NOTICE OF INSPECTION

Facility ID: FA0258851 **Inspection Date:** 08/30/2018
Facility Name: GRANITE ROCK COMPANY-PAVEX CENTRAL
Site Address: 120 GRANITE ROCK WY, SAN JOSE, CA 95136

Summary of Violations & Notice to Comply

VC	Class	Violation	Corrective Actions Taken
T032	M	**DUSTO IDENTIFICATION NOTIFICATION [2010003]** Underground storage tank (UST) owner failed to notify HMCD of the identification of the facility's Designated UST Operator(s) (DUSTO) or failed to notify HMCD within 30 days of a change in the facility's DUSTO. ***CERS submittal on 6/27/2018 did not have the DUSTO identification form uploaded. The new Certification of Financial Responsibility (CFR) form was uploaded there. Upload the DUSTO identification form and ensure the new CFR is also uploaded to the proper section and re-submit.*** Within 30 days, electronically submit notification identifying the facility's Designated UST Operator(s) via the California Environmental Reporting System (CERS) website at http://cers.calepa.ca.gov. The "Designated Underground Storage Tank Operator Notification Form" (UN-062) is available at www.EHinfo.org/hazmat. Notify HMCD within 30 days of future DUSTO changes. Each DUSTO must be certified by the International Code Council (ICC) as a California UST System Operator and renew their certification every 24 months. To confirm ICC certification information, go to www.iccsafe.org/CertSearch. [23 CCR 2715(a)]	An updated DUSTO identification form was submitted 1/9/2018.
T530	II	**SECONDARY CONTAINMENT [2030047]** Underground storage tank (UST) and/or regulated piping is not equipped with secondary containment, or secondary containment is not product-tight (e.g., as evidenced by failure of secondary containment testing). ***No action has been taken to repair the failures observed at the 8/16/2017 secondary containment testing. Provide details on what steps will be taken with completion dates to ensure the repairs are made. Contact our office for permit requirements for the repairs prior to beginning work.*** Have a properly licensed and trained contractor install or repair secondary containment as soon as possible. Submit plans to, and obtain approval from, HMCD prior to beginning work. If the tank system cannot be repaired, apply for a UST Closure Permit within 90 days and complete closure of the tank system within 6 months. Keep HMCD advised of any determinations made regarding the status of the tank. UST closure guidelines, plan submittal requirements, permit application forms, and the fee schedule are available at www.EHinfo.org/hazmat. [HSC 25290.1(c)(2), 25290.2(c)(2), 25291(a)(2), 25292(e); 23 CCR 2662]	Secondary Containment Repairs are permitted and scheduled for 1/21/2019 with Abel Maintenance.
T901	II	**RESPONSE TO UST NOTICE OF VIOLATION [2030073]** Underground storage tank (UST) permit holder failed to implement corrective actions within 30 calendar days of receiving an Official Notice of Inspection (Notice to Comply) from HMCD citing violations of UST law or regulations. ***Facility has not submitted responses to the 8/16/2017 and 8/25/2017 inspection reports. Submit the responses to those reports. Ensure all violations noted are addressed and a written response is submitted within the proper timeframe.*** Correct all outstanding violations. Submit to HMCD the previous Official Notice(s) of Inspection with the Corrective Actions Taken" column and "Certification of Compliance" signature section completed. If any violation has not yet been corrected, describe the corrective actions that will be taken and provide a specific date by which those actions will be completed. [23 CCR 2712(f)]	Responses to violation reports from 8/16/2017 and 8/25/2017 have been completed and attached alongside this response.

Comments: Inspection began on 8/24/2018 with functional testing and document review and concluded today with report delivery.

On-site to witness the annual monitoring system certification and spill bucket test performed by Mr. Steve Parmenter (certifications current) of Service Station Systems.

OFFICIAL NOTICE OF INSPECTION

Facility ID: FA0258851 **Inspection Date:** 08/30/2018
Facility Name: GRANITE ROCK COMPANY-PAVEX CENTRAL
Site Address: 120 GRANITE ROCK WY, SAN JOSE, CA 95136

Summary of Violations & Notice to Comply

Split tank, diesel is pressurized, gasoline is conventional suction. Tank annular and sump sensors tested in water and provided audible and visible alarms at the panel. The diesel sump sensor also provided positive shutdown. Fail safe (sensor out and power out) was tested and functioned as required.

Diesel under dispenser containment (UDC) monitored by float and chain assemblies. Float and chain assemblies tested with water and functioned properly. The gasoline UDC is monitored by a stand-alone sensor. The sensor was tested in water and shut down the dispenser pump.

Overfill protection is provided in both tanks by a flapper valve in the fill riser.

The spill buckets are direct buried and were hydrostatically tested for one hour with no loss.

The VMI LD 2000 mechanical line leak detector (MLLD) detected a simulated 3 gph leak at 10 PSI and held slow flow.

Reviewed DUSTO Monthly Reports, DUSTO Training records, testing reports and maintenance documentation.

Permit valid through 10/31/2019.

Submit a copy of the Monitoring Certification and Spill Bucket Test reports to our office within 30 days and keep a copy available for review for at least 3 years. Reports may be sent via email to USTinspector@deh.sccgov.org.

Immediately correct any violation designated as a Class I or Class II violation. Correct all other violations no later than 09/29/2018, unless otherwise noted by the inspector.

Using the space provided, write a brief description of the actions taken by the facility to correct each violation. Attach additional pages if more space is needed. Within 5 days of achieving compliance or within 35 days of the inspection date, whichever comes first, sign the certification statement below and return a copy of this report to HMCD. Time granted for correction of violations does not preclude any enforcement action by HMCD or other agencies. This facility may be subject to reinspection at any time. [Authority: HSC 25185(c), 25187.8, 25404.1.2(c)]

OFFICIAL NOTICE OF INSPECTION - SUPPLEMENTAL INFORMATION

This Official Notice of Inspection (NOI) documents the results of an inspection by HMCD, including a list of alleged violations, evidence in support of the alleged violations, corrective actions that must be taken by the facility, and general observations.

What am I supposed to do upon receiving a NOI?

- Correct the violations within 30 days of the inspection date, unless otherwise noted.
- In the "Corrective Actions Taken" column, write a brief description of the actions taken by the facility to correct each violation. Attach additional pages if more space is needed.
- Certify that the facility has returned to compliance by signing and dating the certification statement at the end of the report.
- Make a photocopy of the NOI and any attachments for your records.
- Within 5 days of achieving compliance or 35 days of the inspection date, whichever comes first, return the original copy of the report and any attachments to HMCD at 1555 Berger Drive, Suite 300, San Jose, CA 95112-2716 or via e-mail to the inspector noted on the "Inspected By" line of the report.

What if there are violations that cannot be corrected within 30 days?

For each violation that cannot be corrected within 30 days, submit a written Compliance Plan describing the corrective actions you propose to take and the date by which the actions will be completed. State law grants up to 30 days to correct minor violations without penalty. Minor violations that are uncorrected after 30 days, and class I and II violations may be subject to enforcement action. To lessen the possibility of enforcement action, correct all violations as soon as possible.

What if I disagree with a violation on the NOI?

If you disagree with any violation listed in this NOI, you must submit a written Notice of Disagreement to HMCD within 30 days of the inspection date. Address such notices to the attention of the inspector who cited the violation. In your Notice of Disagreement, explain in detail why you believe the alleged violation was incorrectly cited.

What about photographs or samples taken during the inspection?

A co-located sample will be given to you upon request if adequate sample volume is available. Photographs and sample analytical results will not generally be available until after the inspection has been concluded. A copy of photographs and/or analytical results will be provided to you upon written request. Photographs and sample analytical results may be withheld in the event of a criminal investigation or other ongoing investigation.

Summary of Violations & Notice to Comply

Program: PR0395982 - UNDERGROUND STORAGE TANK - 2399
Inspection Type: ROUTINE INSPECTION

VC	Class	Violation	Corrective Actions Taken
T016	II	**UST MONITORING PLAN [2010013]** Underground storage tank (UST) owner/operator failed to submit or failed to keep current an accurate and complete UST Monitoring Plan; or the UST Monitoring Plan submitted is not approved by HMCD. ***The monitoring plan most recently submitted on 7-2-2019 has the following inaccuracies:*** ***Monitoring Plan for Gasoline Tank (suction) identified having a line leak detector (LD-2000). Remove this information.*** ***Monitoring Plan for both Gasoline and Diesel tank identify the monitoring panel manufacturer as a Pneumercator, and annular sensor as LS-6000. Identify Monitoring Panel as Incon TS 750, and annular sensor as Incon TSP-ULS.*** ***Monitoring Plan for both gasoline and diesel tank indicate tank integrity testing is performed annually, however it is not.*** ***REPEAT VIOLATION FROM PREVIOUS INSPECTIONS. CLASS II VIOLATION.*** Within 30 days, electronically submit an accurate and complete UST Monitoring Plan for each UST via the California Environmental Reporting System (CERS) at http://cers.calepa.ca.gov. Keep a copy of the plan(s) onsite or provide onsite access to CERS for facility employees. The plan must be revised and resubmitted within 30 days of changes in the information it contains. [23 CCR 2632(d)(1), 2641(h)]	These inaccuracies have been corrected on CERS Business. The most recent submittal is 11/25/2019 and is still pending acceptance.

OFFICIAL NOTICE OF INSPECTION

Facility ID: FA0258851
Facility Name: GRANITE ROCK COMPANY-PAVEX CENTRAL
Site Address: 120 GRANITE ROCK WY, SAN JOSE, CA 95136
Inspection Date: 09/13/2019

Summary of Violations & Notice to Comply

VC	Class	Violation	Corrective Actions Taken
T020	II	**UST FINANCIAL RESPONSIBILITY [2010007]** Petroleum underground storage tank (UST) owner/operator failed to submit or keep current accurate and complete evidence of UST financial responsibility. ***Certification of Financial responsibility most recently submitted on CERS on 7-2-2019 does not have a completed section A (annual aggregate amount is blank). Additionally, coverage being provided in CFR letter indicates $2,000,000 is being provided by the CFO letter, whereas the CFO letter indicates $10,000 of annual aggregate coverage.*** ***Additionally, most recent CFO letter dated 6-13-2018 has contradicting coverage amounts, indicating $500,000 per occurrence and $1,000,000 annual aggregate coverage, but down below in line 1 (annual aggregate coverage) indicates $10,000.*** ***Lastly, CFO letter has not been updated within 150 days of close out fiscal year (December 31st).*** Financial responsibility must be demonstrated by the UST owner or UST operator. Within 30 days, upload and electronically submit a UST Certification of Financial Responsibility (CFR) via the California Environmental Reporting System (CERS) at http://cers.calepa.ca.gov. Keep a copy of the CFR and all required supporting documentation onsite. If the State UST Cleanup Fund is used as a mechanism, update your chief financial officer (CFO) letter every 12 months, within 150 days after the close of each fiscal year. If a financial test of self-insurance, guarantee, or local government financial test is used, update the CFO letter every 12 months, within 120 days after the close of each fiscal year. If insurance is used, the policy or endorsement must be worded exactly as specified in 40 CFR 280.97. The "Certification of Financial Responsibility for Underground Storage Tanks Containing Petroleum" form (UN-049) and Petroleum UST Financial Responsibility Guide are available at www.EHinfo.org/hazmat. [HSC 25292.2(a), 25292.2, 25299.30-25299.34; 23 CCR 2711(a)(11), 2808.1, 2809-2809.2]	A new CFO letter has been drafted and submitted via CERS Business.
T400	II	**TESTING AND CERTIFICATION OF MONITORING EQUIPMENT [2030002]** Underground storage tank (UST) owner/operator failed to have UST monitoring equipment tested and certified by a qualified UST Service Technician every 12 months for operability, proper operating condition, and proper calibration. ***Facility failed to ensure the UST monitoring equipment is tested and certified every 12 months. Anniversary testing month is August. Last annual monitoring certification was performed on 8-30-2018.*** Have testing done by a qualified UST Service Technician within 30 days. Notify HMCD at least 2 working days prior to testing. Submit a copy of the "Monitoring System Certification Form" and required attachments within 30 days of testing. Schedule the next testing to occur 12 months from when the missed testing was originally required to occur. Ensure that all UST system leak detection equipment is tested and certified every 12 months and within 30 days of installation or repair. [23 CCR 2638(a) & (b), 2641(j), 2715(f)]	These results were released to Granite Rock as of 10/11/2019 and are attached to the email.

OFFICIAL NOTICE OF INSPECTION

Facility ID: FA0258851
Facility Name: GRANITE ROCK COMPANY-PAVEX CENTRAL
Site Address: 120 GRANITE ROCK WY, SAN JOSE, CA 95136

Inspection Date: 09/13/2019

Summary of Violations & Notice to Comply

VC	Class	Violation	Corrective Actions Taken
T415	II	**INSPECTION OF OVERFILL PREVENTION EQUIPMENT [2030036]** Underground storage tank (UST) owner/operator failed to have overfill prevention equipment inspected by 10/13/2018 and every 36 months thereafter, upon installation, or within 30 days after a repair; or failed to maintain copies of overfill prevention equipment inspection records as required. ***Overfill prevention equipment (flapper valve) has not been inspected. Inspection was required no later than 10-13-2018. Ensure overfill prevention equipment is tested as soon as possible.*** Have an inspection performed by a qualified UST Service Technician within 30 days. Notify HMCD at least 2 working days prior to the inspection. The inspection must be done per the manufacturer's guidelines or standards or, if there are no manufacturer's guidelines or standards, per an applicable industry code or engineering standard. Submit a copy of the Overfill Prevention Equipment Inspection Report Form and required attachments within 30 days of inspection. Schedule the next inspection to occur 36 months from when the missed inspection was originally required to occur. Ensure that inspections are done every 36 months and within 30 days of installation or repair. Keep inspection records onsite for at least 36 months. [23 CCR 2637.2, 2712(b)(1)(G)]	The overfill prevention equipment was inspected by Service Station Systems as of 10/7/2019. Inspection report attached to email.
T850	M	**EXEMPTION CONDITIONS: FAIL-SAFE SHUTDOWN [2030017]** Underground storage tank (UST) owner/operator failed to meet requirements for exempting underground pressurized piping from the requirement to be tightness tested every 12 months by a State-licensed tank tester or by an electronic line leak detector (ELLD) programmed to perform a 0.1 gallon-per-hour leak test. ***Upon removal of Diesel STP sensor from monitoring panel, turbine remained energized.*** Have a qualified UST Service Technician repair the secondary containment monitoring system so it shuts down the pump or stops the flow of product at the dispenser when a leak is detected in the under-dispenser containment (UDC) and, for all pressurized product piping not contained in the UDC, provides fail-safe pump/turbine shutdown. No permit from HMCD is required for like-for-like replacement of sensors or replacement of relays. Submit with your written response to this Notice to Comply repair documentation from the UST Service Technician showing that automatic pump shutdown is functioning properly. [23 CCR 2636(f)(4)]	Diesel STP sensor wiring was repaired by Service Station Systems on 11/22/2019. Work order attached to email.

Comments: On-site to witness the annual monitoring system certification and spill bucket test performed by Mr. Steve Parmenter (certifications current) of Service Station Systems.

Split tank, diesel is pressurized, gasoline is conventional suction. Tank annular and sump sensors tested in water and provided audible and visible alarms at the panel. The diesel sump sensor also provided positive shutdown. Fail safe (power out and sensor out) was tested and functioned as required.

Diesel under dispenser containment (UDC) monitored by float and chain assemblies. Float and chain assemblies tested with water and functioned properly. The gasoline UDC is monitored by a stand-alone sensor. The sensor was tested in water and shut down the dispenser pump.

Overfill protection is provided in both tanks by a flapper valve in the fill riser.

The spill buckets are direct buried and were hydrostatically tested for one hour with no loss.

The VMI LD 2000 mechanical line leak detector (MLLD) detected a simulated 3 gph leak at 10 PSI and held slow flow.

OFFICIAL NOTICE OF INSPECTION - SUPPLEMENTAL INFORMATION

This Official Notice of Inspection (NOI) documents the results of an inspection by HMCD, including a list of alleged violations, evidence in support of the alleged violations, corrective actions that must be taken by the facility, and general observations.

What am I supposed to do upon receiving a NOI?

- Correct the violations within 30 days of the inspection date, unless otherwise noted.
- In the "Corrective Actions Taken" column, write a brief description of the actions taken by the facility to correct each violation. Attach additional pages if more space is needed.
- Certify that the facility has returned to compliance by signing and dating the certification statement at the end of the report.
- Make a photocopy of the NOI and any attachments for your records.
- Within 5 days of achieving compliance or 35 days of the inspection date, whichever comes first, return the original copy of the report and any attachments to HMCD at 1555 Berger Drive, Suite 300, San Jose, CA 95112-2716 or via e-mail to the inspector noted on the "Inspected By" line of the report.

What if there are violations that cannot be corrected within 30 days?

For each violation that cannot be corrected within 30 days, submit a written Compliance Plan describing the corrective actions you propose to take and the date by which the actions will be completed. State law grants up to 30 days to correct minor violations without penalty. Minor violations that are uncorrected after 30 days, and class I and II violations may be subject to enforcement action. To lessen the possibility of enforcement action, correct all violations as soon as possible.

What if I disagree with a violation on the NOI?

If you disagree with any violation listed in this NOI, you must submit a written Notice of Disagreement to HMCD within 30 days of the inspection date. Address such notices to the attention of the inspector who cited the violation. In your Notice of Disagreement, explain in detail why you believe the alleged violation was incorrectly cited.

What about photographs or samples taken during the inspection?

A co-located sample will be given to you upon request if adequate sample volume is available. Photographs and sample analytical results will not generally be available until after the inspection has been concluded. A copy of photographs and/or analytical results will be provided to you upon written request. Photographs and sample analytical results may be withheld in the event of a criminal investigation or other ongoing investigation.

Summary of Violations & Notice to Comply

Program: PR0395982 - UNDERGROUND STORAGE TANK - 2399
Inspection Type: ROUTINE INSPECTION

VC	Class	Violation	Corrective Actions Taken
T004	M	**UST PERMIT APPLICATION [2010010]** Underground storage tank (UST) owner/operator failed to submit or failed to maintain accurate and complete UST Operating Permit Application Information. ***CERS account lists incorrect information. UST Tank Information Page in CERS requires the following corrections:*** ***-Tank 1 Piping System Type is listed as "conventional suction" and must be changed to "Pressure".*** Within 30 days, electronically submit accurate and complete UST Facility Operating Permit Application data and UST Tank information data via the California Environmental Reporting System (CERS) website at http://cers.calepa.ca.gov. Ensure that future electronic submittals are made within 30 days of any significant change in information. [HSC 25284(a)(3)(C), 25286(a), 25286(d); 23 CCR 2711]	Corrected in CERS
T016	M	**UST MONITORING PLAN [2010013]** Underground storage tank (UST) owner/operator failed to submit or failed to keep current an accurate and complete UST Monitoring Plan; or the UST Monitoring Plan submitted is not approved by HMCD. ***Monitoring Plan page in the CERS Underground Storage Tank submittal has incorrect information. Update the following and resubmit:*** ***- Tank 1 UCD Leak Sensor Model is listed as "330212" and must be listed as "330212-001"*** ***- Tank 1 and Tank 2- All other fields in the Under Dispenser Containment (UDC) Monitoring section must be marked as No, Not applicable, or None as necessary.*** ***- Tank 1 and Tank 2 "Equipment Maintenance and Calibration Records" must be marked as "Yes"*** ***- Tank 1 must list that mechanical line leak detectors (VMI LD200) are set to detect a leak of 3 GPH.*** ***- Tank 2 UDC Leak Sensor Manufacturer is blank and must be changed to "S. Bravo Systems".*** ***- Tank 2 UDC Leak Sensor Model is blank and must be changed to "B2000".*** Within 30 days, electronically submit an accurate and complete UST Monitoring Plan for each UST via the California Environmental Reporting System (CERS) at http://cers.calepa.ca.gov. Keep a copy of the plan(s) onsite or provide onsite access to CERS for facility employees. The plan must be revised and resubmitted within 30 days of changes in the information it contains. [23 CCR 2632(d)(1), 2641(h)]	Corrected in CERS

Inspection Date: 09/22/2020

Summary of Violations & Notice to Comply

VC	Class	Violation	Corrective Actions Taken
T034	M	**DUSTO FACILITY INSPECTIONS [2030013]** Underground storage tank (UST) owner/operator failed to ensure that a qualified Designated UST Operator (DUSTO) has been performing inspections of the UST system(s) as required. ***Records of monthly visual DUSTO inspections were observed to have the following completion errors:*** ***- Inspection on 6/22/2020 does not list any testing dates on page 2.*** ***- Inspections completed on 5/28/2020, 4/38/2020, and 3/31/2020 were completed on outdated forms.*** ***- Dates for most recent secondary containment testing are being recorded incorrectly on 11 of 12 forms.*** Ensure that a qualified DUSTO has performed an inspection of the UST system(s) at least once every 30 days. Each inspection must address all required items and be documented on a properly completed "Designated Underground Storage Tank Operator Visual Inspection Report" form with an attached copy of an alarm history report or log documenting leak detection alarms since the previous inspection and copies of documentation demonstrating action taken in response to each alarm since the previous visual inspection. [23 CCR 2716(a) through (d)]	Correct form has been used since June inspection and is being used moving forward. Dates for all inspections were confirmed and correctly recorded on inspection form.
T053	M	**RECORD KEEPING: FACILITY EMPLOYEE TRAINING RECORDS [2010015]** Underground storage tank (UST) owner/operator failed to keep documentation of training provided to facility employees by the Designated UST Operator (DUSTO) as required. ***Previous 12 months of employee training records for Designated Operator Training were not completed on the latest forms that are required by California Code of Regulations, Title 23, Appendix XII.*** Each "Underground Storage Tank Facility Employee Training Certificate" form must be kept onsite and available for at least 12 months from the date of training. [23 CCR 2715(c)(3), 2715(c)(4)]	Using the latest form to track training moving forward. Copy from 2020 training kept on site.
T054	M	**RECORD KEEPING: RELEASE DETECTION MONITORING AND MAINTENANCE RECORDS [2030001]** Underground storage tank (UST) owner/operator failed to maintain UST monitoring records or records associated with maintenance and performance of monitoring equipment as required. ***Facility could not provide copies of the 2015-2020 Monitoring System Certification Forms or the past 5 years of work orders at the time of inspection.*** Obtain copies of any missing records. All leak alarms must be documented [e.g., by using the "Underground Storage Tank System Leak Alarm Log" form (UN-102) available at www.EHinfo.org/hazmat]. Visual inspection records and alarm logs, including documentation of follow-up actions must be kept onsite and available for at least 36 months. Written performance claims pertaining to release detection systems, and calibration and maintenance records (e.g., Monitoring System Certification Forms and required attachments) must be kept onsite and available for at least 60 months. [23 CCR 2712(b)(1) and (2)]	Obtained copies of 2016-2020 Monitoring System Certification Form. Last year of work orders provided to inspector.

OFFICIAL NOTICE OF INSPECTION

Facility ID: FA0258851
Facility Name: GRANITE ROCK COMPANY-PAVEX CENTRAL
Site Address: 120 GRANITE ROCK WY, SAN JOSE, CA 95136
Inspection Date: 09/22/2020

Summary of Violations & Notice to Comply

VC	Class	Violation	Corrective Actions Taken
T415	II	**INSPECTION OF OVERFILL PREVENTION EQUIPMENT [2030036]** Underground storage tank (UST) owner/operator failed to have overfill prevention equipment inspected by 10/13/2018 and every 36 months thereafter, upon installation, or within 30 days after a repair; or failed to maintain copies of overfill prevention equipment inspection records as required. ***Observed the following deficiencies with the required overfill prevention inspection completed on 10/7/2019:*** ***-Facility failed to conduct inspections of overfill prevention equipment on or before 10/13/2018. (NOTE: Next inspection of overfill prevention equipment is required in or before October of 2021, 36 months from the initial date that inspection was required.)*** Have an inspection performed by a qualified UST Service Technician within 30 days. Notify HMCD at least 2 working days prior to the inspection. The inspection must be done per the manufacturer's guidelines or standards or, if there are no manufacturer's guidelines or standards, per an applicable industry code or engineering standard. Submit a copy of the Overfill Prevention Equipment Inspection Report Form and required attachments within 30 days of inspection. Schedule the next inspection to occur 36 months from when the missed inspection was originally required to occur. Ensure that inspections are done every 36 months and within 30 days of installation or repair. Keep inspection records onsite for at least 36 months. [23 CCR 2637.2, 2712(b)(1)(G)]	Observed. Next inspection to be completed before October 2021.
T417	M	**SUBMITTAL OF OVERFILL PREVENTION EQUIPMENT INSPECTION REPORT FORM [2010018]** Underground storage tank (UST) owner/operator failed to submit one or more Overfill Prevention Equipment Inspection Report Forms and attachments as required. ***Observed the following deficiencies with the required overfill prevention inspection completed on 10/7/2019:*** ***-Inspection report did not include the required tank charts. Revised tank charts were provided on 12/27/2019 after a request via email. (No further action required.)*** ***-Inspection report was not submitted with the required OPW appendix and EMCO worksheets to show actual measurements taken during testing. Submit these worksheets to inspector.*** A Overfill Prevention Equipment Inspection Report Form and required attachments must be submitted to HMCD within 30 days of installation, repair, and every-36-month testing of UST overfill prevention equipment. Submit the missing form(s) and attachments within 30 days and ensure that future inspection documentation is submitted as required. [23 CCR 2637.2(d), 2637.2(e), 2665(a), 2665(b)]	Technician no longer has measurement worksheet from 10/7/2019 inspection. Ensure next test has all required documents.

Comments: Inspection commenced on 9/17/2020 with site visit to perform deferred annual underground storage tank (UST) compliance inspection and ended today with issuance of this report. Yesterday's visit was coordinated with the periodic inspection by the facility's Designated UST Operator, Nikhita Jingar, Environmental Engineer for Granite Rock. A visual inspection of the UST spill buckets, fill pipes, and under-dispenser containment was performed.

On-site and in-office review of documents included review of Designated UST Operator inspection reports for the past 12 months, the current UST Facility Employee Training Certificates, and the past 5 years of UST system maintenance records. Monitoring system certification testing and spill container testing were performed by Service Station Systems on 8/25/2020. This was not witnessed by HMCD due to air quality restrictions during the 2020 wildfires. The Monitoring System Certification Form and Spill Container Testing Report Form and all attachments to those reports were reviewed.

The most recent electronic submittal of UST information was made via the California Environmental Reporting System (CERS

ID 10344856) was submitted on 6/29/2020. The information was reviewed and is not accepted.

Last secondary containment testing was completed on 8/18/2020.

DS RC

UNRESOLVED ISSUES:
Respond to the following unresolved issue in writing by emailing the inspector at robin.ward@cep.sccgov.org.
1. DUSTO monthly visual inspection reports indicate that the last Overfill Prevention Inspection Report was completed on 8/18/2020 but was not available onsite and has not been provided to HMCD. Determine if this report was completed on this date and provide the complete document to HMCD for review. If inspection was not conducted on this date, update the corrected date on future monthly visual inspection reports.

DS RC

ACTION ITEMS:
1. Correct all violations noted above and submit documentation of corrective actions taken as soon as possible (see last page of this report for instructions).

Immediately correct any violation designated as a Class I or Class II violation. Correct all other violations no later than 10/22/2020, unless otherwise noted by the inspector.

Using the space provided, write a brief description of the actions taken by the facility to correct each violation. Attach additional pages if more space is needed. Within 5 days of achieving compliance or within 35 days of the inspection date, whichever comes first, sign the certification statement below and return a copy of this report to HMCD. Time granted for correction of violations does not preclude any enforcement action by HMCD or other agencies. This facility may be subject to reinspection at any time. LETTER FROM CHIEF FINANCIAL OFFICER

I am the Chief Financial Officer for Granite Rock Company, 350 Technology Dr. Watsonville, CA 95076.

This letter is in support of the use of the **Underground Storage Tank Cleanup Fund** to demonstrate financial responsibility for taking corrective action and/or compensating third parties for bodily injury and property damage caused by an unauthorized release of petroleum in the amount of at least $1,000,000 per occurrence and $1,000,000 annual aggregate coverage. Coverage granted by this letter shall remain in effect from the date of submittal, through April 15th, 2021. An updated letter will be provided on, or prior to, April 15th, 2021.

Underground storage tanks at the following facilities are assured by this letter:

Graniterock – Watsonville Building Materials, 540 W. Beach St. Watsonville, CA 95076

Graniterock – Santa Cruz Concrete & Building Materials, 303 Coral St. Santa Cruz, CA 95060

Graniterock – Salinas Concrete & Building Materials, 400 Work St. Salinas, CA 93901

Graniterock – Monterey Concrete & Building Materials, 1755 Del Monte Blvd. Seaside, CA 93955

Graniterock – Construction Central Office, 120 Graniterock Way, San Jose, CA 95136

Graniterock – San Jose Concrete, 11711 Berryessa Rd. San Jose, CA 95133

The below figures represent Assets, Liabilities, and Tangible Net Worth, as of 12/31/2019:

1.	Amount of annual aggregate coverage being assured by this letter	$10,000
2.	Total Tangible assets	$260,422,000
3.	Total Liabilities	$111,071,000
4.	Tangible net worth	$149,351,000

I hereby certify that the wording of this letter is identical to the wording specified in subsection 2808.1(d)(1), Chapter 18, Division 3, Title 23 of the California Code of Regulations.

I declare under penalty of perjury that the foregoing is true and correct to the best of my knowledge and belief.

Executed at Watsonville, CA

On December 10th, 2020

For State Use Only

CERTIFICATION OF FINANCIAL RESPONSIBILITY

FOR UNDERGROUND STORAGE TANKS CONTAINING PETROLEUM

A. I am required to demonstrate Financial Responsibility in the required amounts as specified in Section 2807, Chapter 18, Div. 3, Title 23, CCR

☐ 500,000 dollars per occurrence or ☒ 1 million dollars per occurrence

AND

☒ 1 million dollars annual aggregate or ☐ 2 million dollars annual aggregate

B. Granite Rock Company (Name of tank Owner or Operator) hereby certifies that it is in compliance with the requirements of Section 2807, Article 3, Chapter 18, Division 3, Title 23, California Code of Regulations.

The mechanisms used to demonstrate financial responsibility as required by Section 2807 are as follows:

C. Mechanism Type	Name and Address of Issuer	Mechanism Number	Coverage Amount	Coverage Period	Corrective Action	Third Party Compensation
Chief Financial Officer Letter	Graniterock 350 Technology Way PO Box 50001 Watsonville, CA 95077	N/A	$10,000 Per Occurrence and Annual Aggregate	Continuous	Yes	Yes
State UST Cleanup Fund	UST Cleanup Fund PO Box 944212 Sacramento CA 94244	N/A	$990,000 Per Occurrence and Annual Aggregate	Continuous	Yes	Yes

Note: If you are using the State Fund as any part of your demonstration of financial responsibility, your execution and submission of this certification also certifies that you are in compliance with all conditions for participation in the Fund.

D. Facility Name	Facility Address
Graniterock - Watsonville Concrete and Building Materials	540 Beach St. Watsonville, CA 95076
Graniterock - Santa Cruz Concrete and Building Materials	303 Coral St. Santa Cruz, CA 95060
Graniterock - Salinas Concrete and Building Materials	400 Work Street Salinas, CA 93901
Graniterock - Monterey Concrete and Building Materials	1755 Del Monte Blvd. Seaside, CA 93955
Granite Rock Company - Construction Central Office	120 Graniterock Way, San Jose, CA 95136
Graniterock - San Jose Concrete	11711 Berryessa Rd. San Jose, CA 95133

E. Signature of Tank Owner or Operator — Date: 12/11/2020 — Name and Title of Tank Owner or Operator: Thomas Squeri CEO

Signature of Witness or Notary — Date: 12/11/2020 — Name of Witness or Notary: Joshua Basanese

Submit original to local UST regulatory agency. Keep a copy at each UST facility.

T415	II	**INSPECTION OF OVERFILL PREVENTION EQUIPMENT [2030036]** Underground storage tank (UST) owner/operator failed to have overfill prevention equipment inspected by 10/13/2018 and every 36 months thereafter, upon installation, or within 30 days after a repair; or failed to maintain copies of overfill prevention equipment inspection records as required. ***Observed the following deficiencies with the required overfill prevention inspection completed on 10/7/2019:*** ***-Facility failed to conduct inspections of overfill prevention equipment on or before 10/13/2018. (NOTE: Next inspection of overfill prevention equipment is required in or before October of 2021, 36 months from the initial date that inspection was required.)*** Have an inspection performed by a qualified UST Service Technician within 30 days. Notify HMCD at least 2 working days prior to the inspection. The inspection must be done per the manufacturer's guidelines or standards or, if there are no manufacturer's guidelines or standards, per an applicable industry code or engineering standard. Submit a copy of the Overfill Prevention Equipment Inspection Report Form and required attachments within 30 days of inspection. Schedule the next inspection to occur 36 months from when the missed inspection was originally required to occur. Ensure that inspections are done every 36 months and within 30 days of installation or repair. Keep inspection records onsite for at least 36 months. [23 CCR 2637.2, 2712(b)(1)(G)]	Observed. Next inspection to be completed before October 2021.
T417	M	**SUBMITTAL OF OVERFILL PREVENTION EQUIPMENT INSPECTION REPORT FORM [2010018]** Underground storage tank (UST) owner/operator failed to submit one or more Overfill Prevention Equipment Inspection Report Forms and attachments as required. ***Observed the following deficiencies with the required overfill prevention inspection completed on 10/7/2019:*** ***-Inspection report did not include the required tank charts. Revised tank charts were provided on 12/27/2019 after a request via email. (No further action required.)*** ***-Inspection report was not submitted with the required OPW appendix and EMCO worksheets to show actual measurements taken during testing. Submit these worksheets to inspector.*** A Overfill Prevention Equipment Inspection Report Form and required attachments must be submitted to HMCD within 30 days of installation, repair, and every-36-month testing of UST overfill prevention equipment. Submit the missing form(s) and attachments within 30 days and ensure that future inspection documentation is submitted as required. [23 CCR 2637.2(d), 2637.2(e), 2665(a), 2665(b)]	Technician no longer has measurement worksheet from 10/7/2019 inspection. Ensure next test has all required documents.

Comments: Inspection commenced on 9/17/2020 with site visit to perform deferred annual underground storage tank (UST) compliance inspection and ended today with issuance of this report. Yesterday's visit was coordinated with the periodic inspection by the facility's Designated UST Operator, Nikhita Jingar, Environmental Engineer for Granite Rock. A visual inspection of the UST spill buckets, fill pipes, and under-dispenser containment was performed.

On-site and in-office review of documents included review of Designated UST Operator inspection reports for the past 12 months, the current UST Facility Employee Training Certificates, and the past 5 years of UST system maintenance records. Monitoring system certification testing and spill container testing were performed by Service Station Systems on 8/25/2020. This was not witnessed by HMCD due to air quality restrictions during the 2020 wildfires. The Monitoring System Certification Form and Spill Container Testing Report Form and all attachments to those reports were reviewed.

The most recent electronic submittal of UST information was made via the California Environmental Reporting System (CERS

ID 10344856) was submitted on 6/29/2020. The information was reviewed and is not accepted.

Last secondary containment testing was completed on 8/18/2020.

DS RC

UNRESOLVED ISSUES:
Respond to the following unresolved issue in writing by emailing the inspector at robin.ward@cep.sccgov.org.
1. DUSTO monthly visual inspection reports indicate that the last Overfill Prevention Inspection Report was completed on 8/18/2020 but was not available onsite and has not been provided to HMCD. Determine if this report was completed on this date and provide the complete document to HMCD for review. If inspection was not conducted on this date, update the corrected date on future monthly visual inspection reports.

DS RC

ACTION ITEMS:
1. Correct all violations noted above and submit documentation of corrective actions taken as soon as possible (see last page of this report for instructions).

Immediately correct any violation designated as a Class I or Class II violation. Correct all other violations no later than 10/22/2020, unless otherwise noted by the inspector.

Using the space provided, write a brief description of the actions taken by the facility to correct each violation. Attach additional pages if more space is needed. Within 5 days of achieving compliance or within 35 days of the inspection date, whichever comes first, sign the certification statement below and return a copy of this report to HMCD. Time granted for correction of violations does not preclude any enforcement action by HMCD or other agencies. This facility may be subject to reinspection at any time. Summary of Violations & Notice to Comply

VC	Class	Violation	Corrective Actions Taken
T320	II	**PIPE MONITORING: INTERSTITIAL MONITORING NON-FUNCTIONAL (TANK INSTALLED 1/2/84 - 6/30/04) [2030018]** Leak detection equipment monitoring underground storage tank (UST) regulated piping secondary containment failed to function properly when tested or is otherwise non-functional. [Note: This requirement applies to all regulated piping connected to any UST system installed between 1/2/1984 and 6/30/2004; and buried piping in a UST system installed on or before 1/1/1984 if that piping is repaired or replaced on or after 10/1/2018 and is not verified "safe suction" piping as described in 23 CCR 2636(a)(3).] ***The Power Out test showed to me that the UST pump is wired to bypass the monitoring system.*** ***The STPs did not shut down when power to the monitoring system was turned off at the breaker box in the maintenance building.*** Have a qualified UST Service Technician repair or replace the non-functional equipment as soon as possible and submit documentation of the repair and startup testing results with your written response to this Notice to Comply. No permit is required for like-for-like replacement of sensors. If sensor replacement will not be like-for-like, or if the monitoring system console must be replaced, you must obtain a UST repair/retrofit permit from HMCD before beginning work. Plans must be submitted in accordance with HMCD's "Plan Submittal Requirements for Hazardous Materials Systems" (HMCD-004) available at www.EHinfo.org/hazmat. Upon plan check approval, have the work done as soon as possible and schedule an inspection so HMCD can witness testing. [23 CCR 2636(f)(1), 2666(b)(2)]	Service Station Systems identified how to shut down power to monitoring system. Power switch located in monitoring panel.
T560	II	**SPILL CONTAINMENT [2060020]** One or more underground storage tank (UST) fill openings is not equipped with a spill container, or spill containment is not liquid-tight, or spill containment does not have the required minimum 5 gallon liquid capacity. ***The Diesel Spill Containment bucket was not holding water while testing today.*** Immediately cease filling the tank(s) at any fill location that cannot prevent the escape of hazardous substances into backfill. Have a qualified UST Service Technician repair and retest the spill containment. Submit a copy of the “Underground Storage Tank Spill Container Testing Report Form” within 30 days of testing. No permit is required to repair or replace drain valves or other internal components. If repair is not possible and replacement is necessary, obtain a UST minor repair/retrofit permit from HMCD as soon as possible. Permit application forms, guidance documents and the fee schedule are available at www.EHinfo.org/hazmat. Upon plan check approval, have the work done as soon as possible and schedule an inspection for HMCD to witness the installation testing per 23 CCR 2637.1. [23 CCR 2635(b), 2665(a), 2665(b)]	Service Station Systems to repair once cost is approved. Update to be provided once corrected.

Comments: I am on site at 120 Granite Rock Way for the 2021 UST Operating Permit Inspection. Nikhita Jingar, Engineer, DUSTO, Graniterock Co. is on site to allow facility access and records review. njingar@graniterock.com

Reed Carter, Environmental Manager, Graniterock Co. CERS Environmental Contact, rcarter@graniterock.com is not on site but available as needed.

Marcus Garcia. UST Service Tech, Service Station Systems, is on site to conduct the 2021 UST Monitoring System Test and Certification.
ICC, Incon, and all Certs OK.

OFFICIAL NOTICE OF INSPECTION

Facility ID: FA0258851 **Inspection Date:** 08/23/2021
Facility Name: GRANITE ROCK COMPANY-PAVEX CENTRAL
Site Address: 120 GRANITE ROCK WY, SAN JOSE, CA 95136

Summary of Violations & Notice to Comply

Incon Monitoring System, The System Set-up and Alarm History was provided. This record shows a problem with the system as for unexplained reasons, the alarm shows "Theft detected". Alarm History shows Theft Detected multiple times. This may be due to wiring issues. Work orders———.
Sump sensor in alarm from water truck yesterday .
Alarm visuals unable to clear

Alarm History shows Theft Detected multiple times. This may be due to wiring issues. Work orders———.
The Power Out test showed to me that the UST pump is wired to bypass the monitoring system. The STPs did not shut down when power to the monitoring system was turned off at the breaker box in the maintenance building.
The visual alarms are unable to be cleared. Both the yellow and red blinking lights, and the red outside light above the center island vent stacks.
The Audible alarm is faint and hard to hear at the panel/dispenser island. There is NO other alrm or Dial-Out to a monitored line.
The Alarm Notifications do not get to a responding number, address, or person in a timely manner. The alarm from yesterday, Sunday 8/22 at 1:08 was not discovered by Graniterock until today while I was on site.
The "Paper Out" display was able to be corrected with new paper in panel.

These are 2 USTs inside a compartmented unit, a common outer containment. A dry system.

The 87 Octane tank STP sump sensor was in alarm, Tank ID #401659-000010, CERS Tank ID #10344856-001. There was approximately 6 inches or more of water in the sump. The Visual (red light) is blinking but will not shut off. The sump sensor is in alarm. It was most likely the water truck yesterday driving over the deck. Monitoring System FAIL
The 87 Octane system is a conventional suction system with a Stand-a-lone sensor in the UDC that Shuts off dispenser pump. OK

The Diesel Spill Containment bucket was not holding water a couple if inches below the cap. Diesel Spill Container FAIL.
Diesel, STP in sump with 2 dispensers. fiberglass piping going to #2, a standard dispenser and #3, a second larger capacity dispenser.
The Float and Chains in older Bravo B-2000 UDCs. The larger dispenser has a flow direction device to direct any diesel from the meter and related piping to the Bravo Box.

NOTE: All 3 filters are outside the dispenser bodies/boxes.

Records Review;
DUSTO, OK
DUSTO Reports, The same signature is on section on DUSTO report for both sections. NOTE: This may be not be a violation but it is not recommended. Have a second person with management responsibilities at Graniterock Co., representing the Owner/Operator complete the form as required.
Training OK
Financial Responibility and CFO letter, OK

CERS Review;
The UST submitted for CERS ID 10344856 was on 4/13/2021.
This submittal was Not Accepted on 8/23/2021.
The Permit Application,
Update the Tank Information for both USTs and identify the Installation Date for these USTs.
The Date of Installation for both tanks, Tank ID #401659-000010 and Tank ID #401659-000009 is 11/1991.
The UST Response Plan,
Review and confirm or update the UST Response Plan.

Certification of Compliance

I certify under penalty of perjury that this facility has complied with directives specified in this Notice to Comply.

Signature of Owner/Operator | **Date**

Printed Name of Owner/Operator | **Title**

OFFICIAL NOTICE OF INSPECTION - SUPPLEMENTAL INFORMATION

This Official Notice of Inspection (NOI) documents the results of an inspection by HMCD, including a list of alleged violations, evidence in support of the alleged violations, corrective actions that must be taken by the facility, and general observations.

What am I supposed to do upon receiving a NOI?

- Correct the violations within 30 days of the inspection date, unless otherwise noted.
- In the "Corrective Actions Taken" column, write a brief description of the actions taken by the facility to correct each violation. Attach additional pages if more space is needed.
- Certify that the facility has returned to compliance by signing and dating the certification statement at the end of the report.
- Make a photocopy of the NOI and any attachments for your records.
- Within 5 days of achieving compliance or 35 days of the inspection date, whichever comes first, return the original copy of the report and any attachments to HMCD at 1555 Berger Drive, Suite 300, San Jose, CA 95112-2716 or via e-mail to the inspector noted on the "Inspected By" line of the report.

What if there are violations that cannot be corrected within 30 days?

For each violation that cannot be corrected within 30 days, submit a written Compliance Plan describing the corrective actions you propose to take and the date by which the actions will be completed. State law grants up to 30 days to correct minor violations without penalty. Minor violations that are uncorrected after 30 days, and class I and II violations may be subject to enforcement action. To lessen the possibility of enforcement action, correct all violations as soon as possible.

What if I disagree with a violation on the NOI?

If you disagree with any violation listed in this NOI, you must submit a written Notice of Disagreement to HMCD within 30 days of the inspection date. Address such notices to the attention of the inspector who cited the violation. In your Notice of Disagreement, explain in detail why you believe the alleged violation was incorrectly cited.

What about photographs or samples taken during the inspection?

A co-located sample will be given to you upon request if adequate sample volume is available. Photographs and sample analytical results will not generally be available until after the inspection has been concluded. A copy of photographs and/or analytical results will be provided to you upon written request. Photographs and sample analytical results may be withheld in the event of a criminal investigation or other ongoing investigation.

Key to Acronyms and Regulatory Terms

XX CCR	California Code of Regulations, Title XX
XX CFR	Code of Federal Regulations, Title XX
Class	Violation classification: I = Class I violation, II = Class II violation, M = Minor violation, C = Corrected minor violation [HSC §25110.8.5, HSC §25117.6, CCR §66260.10]
CERS	California Environmental Reporting System (cers.calepa.ca.gov)
DTSC	California Department of Toxic Substances Control
EPA	U.S. Environmental Protection Agency
HMCD	County of Santa Clara, Department of Environmental Health, Hazardous Materials Compliance Division
HSC	California Health and Safety Code
RCRA	Resource Conservation and Recovery Act
SCCO	Santa Clara County Ordinance Code
TSDF	Hazardous waste treatment, storage or disposal facility
UST	Underground storage tank
VC	HMCD violation code

Warning:

- It is a violation of State law to make a false statement that a facility has returned to compliance [HSC §25404.1.2(c)(2)].
- Making a false statement regarding a hazardous waste violation is punishable by a fine of not less than $2,000 or more than $50,000 and/or imprisonment in the county jail for up to one year [HSC §25191(b)].
- Making a false statement regarding an underground storage tank violation is punishable by a fine of not less than $500 or more than $5,000 [HSC §§25299(a)(8), 25299(b)(7)].
- HMCD has the right to require the submittal of reasonable and necessary documentation in support of any claim of compliance made by your facility [HSC §25187.8(i), 25289(b)].

III. TANK USE AND CONTENTS

TANK USE 439.
☐ 1a. MOTOR VEHICLE FUELING ☐ 1b. MARINA FUELING ☐ 1c. AVIATION FUELING
☐ 3. CHEMICAL PRODUCT STORAGE ☐ 4. HAZARDOUS WASTE (Includes Used Oil) ☐ 5. EMERGENCY GENERATOR FUEL [HSC §25281.5(c)]
☐ 6. OTHER GENERATOR FUEL ☐ 95. UNKNOWN ☒ 99. OTHER (Specify): Fleet Vehicle Fueling 439a.

CONTENTS 440.
PETROLEUM: ☒ 1a. REGULAR UNLEADED ☐ 1c. MIDGRADE UNLEADED ☐ 1b. PREMIUM UNLEADED
☐ 3. DIESEL ☐ 5. JET FUEL ☐ 6. AVIATION GAS
☐ 8. PETROLEUM BLEND FUEL ☐ 9. OTHER PETROLEUM (Specify): 440a
NON-PETROLEUM: ☐ 7. USED OIL ☐ 10. ETHANOL
☐ 11. OTHER NON-PETROLEUM (Specify): 440b.

IV. TANK CONSTRUCTION

TYPE OF TANK ☐ 1. SINGLE WALL ☒ 2. DOUBLE WALL ☐ 95. UNKNOWN 443.

PRIMARY CONTAINMENT 444.
☐ 1. STEEL ☐ 3. FIBERGLASS ☐ 6. INTERNAL BLADDER
☐ 7. STEEL + INTERNAL LINING ☐ 95. UNKNOWN ☒ 99. OTHER (Specify): Steel + fiberglasscoat 444a

SECONDARY CONTAINMENT 445.
☐ 1. STEEL ☐ 3. FIBERGLASS ☐ 6. EXTERIOR MEMBRANE LINER ☐ 7. JACKETED
☐ 90. NONE ☐ 95. UNKNOWN ☒ 99. OTHER (Specify): Steel with fiberglass coating 445a

OVERFILL PREVENTION 452.
☐ 1. AUDIBLE & VISUAL ALARMS ☐ 2. BALL FLOAT ☒ 3. FILL TUBE SHUT-OFF VALVE
☐ 4. TANK MEETS REQUIREMENTS FOR EXEMPTION FROM OVERFILL PREVENTION EQUIPMENT

V. PRODUCT / WASTE PIPING CONSTRUCTION

PIPING CONSTRUCTION ☐ 1. SINGLE WALL ☒ 2. DOUBLE WALL ☐ 99. OTHER 460.

SYSTEM TYPE ☐ 1. PRESSURE ☐ 2. GRAVITY ☒ 3. CONVENTIONAL SUCTION ☐ 4. SAFE SUCTION [23 CCR §2636(a)(3)] 458.

PRIMARY CONTAINMENT 464.
☐ 1. STEEL ☒ 4. FIBERGLASS ☐ 8. FLEXIBLE ☐ 10. RIGID PLASTIC
☐ 90. NONE ☐ 95. UNKNOWN ☐ 99. OTHER (Specify): 464a

SECONDARY CONTAINMENT 464b
☐ 1. STEEL ☒ 4. FIBERGLASS ☐ 8. FLEXIBLE ☐ 10. RIGID PLASTIC
☐ 90. NONE ☐ 95. UNKNOWN ☐ 99. OTHER (Specify): 464c

PIPING/TURBINE CONTAINMENT SUMP TYPE ☒ 1. SINGLE WALL ☐ 2. DOUBLE WALL ☐ 90. NONE 464d.

VI. VENT, VAPOR RECOVERY (VR) AND RISER / FILL PIPE PIPING CONSTRUCTION

CERTIFICATION: I certify that this UST system is compatible with the hazardous substance stored and that the information provided herein is true, accurate, and in full compliance with legal requirements.

APPLICANT SIGNATURE [signature] DATE 8/8/2012 470

APPLICANT NAME (print) Samuel LoForti, Graniterock 471 APPLICANT TITLE Environmental Specialist 472

County of Santa Clara
Department of Environmental Health
Hazardous Materials Compliance Division (HMCD)
1555 Berger Drive, Suite 300, San Jose, CA 95112-2716
Phone (408)918-3400 Fax (408)280-6479 www.EHinfo.org/hazmat

OFFICIAL NOTICE OF INSPECTION

Facility Name: GRANITE CONSTRUCTION CO
Site Address: 120 GRANITE ROCK WAY
SAN JOSE,CA 95136

Inspection Date: 4/4/2012

Record ID: SR0837887
Program: A/G HAZMAT CONSTRUCTION/REMODEL - 1811
Inspection Type: CONSTRUCTION/EQUIPMENT INSPECTION-FINAL
Consent to Inspect Granted By: ELIAS LANUZA, EQ. MAINTENANCE PLANNER

☐ **Pictures Taken**
☐ **Samples Taken**

Comments / Observations

ON SITE WITH JIM RUBLE, EDDIE MARTINEZ FROM PETROTEK, AND JONNE TRACEY WITH SANTA CLARA COUNTY DEH FOR THE TESTING OF THE UDC STAND ALONE SENSOR AS WELL AS THE FAIL SAFE AND POSITIVE SHUT DOWN.

THE STAND ALONE WAS TESTED AND SHUT DOWN THE DISPENSER.

THE POSITIVE SHUT DOWN AND FAIL SAFE WERE TESTED AND PASSED.

Comments / Observations

ON SITE WITH JIM RUBLE FROM PETROTEK, AND JOANNE TRACEY WITH SANTA CLARA COUNTY DEH FOR THE TESTING OF THE SECONDARY PIPING, UNDER DISPENSER CONTAINMENT HYDROSTATIC TEST AND THE RE-TEST OF THE VAPOR RECOVERY BUCKET.

THE PIPING WAS TESTED AT 5.5 PSI FOR 60 MINUTES.

THE UDC WAS TESTED HYDROSTATICALLY FOR 15 MINUTES USING THE INCON.

THE VAPOR RECOVERY BUCKET WAS TESTED FOR 15 MINUTES USING THE INCON.

*THE FINAL INSPECTION WILL CONSIST OF THE STAND ALONE SENSOR IN THE UDC , THE POSITIVE SHUT DOWN AND FAIL SAFE OF THE PRESSURIZED SYSTEM.

THE CONTRACTOR CHANGED THE PIPING AS ORIGINALLY NOTED IN THE PERMIT SUBMITTAL.
-CUT SHEETS WILL BE REQUIRED BEFORE THE FINAL INSPECTION

A VEEDER-ROOT STAND ALONE SENSOR WILL BE INSTALLED AT THE UDC BUT CUT SHEET WERE NOT SUBMITTED WITH THE ORIGINAL PERMIT SUBMITTAL.
-CUT SHEETS WILL BE REQUIRED BEFORE THE FINAL INSPECTION.

THE PROPER CERTIFICATIONS WERE NOT AVAILABLE FOR THE INCON TESTING
-CERTIFICATION WILL BE REQUIRED PRIOR TO THE FINAL INSPECTION.

OKAY TO PROCEED WITH THE WORK.

X

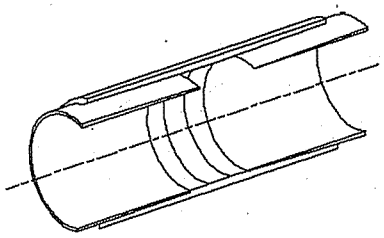
Testing ?
Red & Green Color Piping ?

AMERON INTERNATIONAL

Dualoy® 3000/L Product Data

FIBERGLASS-COMPOSITE PIPE GROUP



Dualoy 3000/L Fiberglass Pipe and Fittings

nonmetallic underground piping for Motor Vehicle (MV), High Blend (HB) Concentrated (CT) and Aviation and Marine (A&M) fuels

- 1" 10psi ok to test
- 2" 30-40 psi
- Red & Green

Mike Chavez an Engineer with Ameron stated that the Red was a color that was previously used phased out to green but it's the same product

Uses and applications	Service station product, vent and vapor recovery piping Bulk plant terminals and fueling terminals Central fuel oil systems Marinas and marine terminals (onshore only) All piping systems requiring UL or ULC Listing for MV, HB, CT and A&M Fuels.
Performance	Operating pressures to 300 psig (20 bar) Continuous operating temperatures to 150°F (66°C) Individual system components may not have the same ratings as the pipe. Refer to the detailed product information for the specific components to determine the pressure rating for the system as a whole.
Listings Underwriters Laboratories Inc.®	Dualoy 3000/L is Listed with Underwriters Laboratories Standard 971-2004 for nonmetallic underground piping for motor vehicle (MV), high blend (HB), concentrated (CT) and aviation and marine (A&M) fuels (File MH9162). Dualoy 3000/L pipe and fittings are also Listed with Underwriters Laboratories of Canada (File CMH 715). In Great Britain the Dualoy 3000/L system has been tested and accepted by the London Fire and Civil Defence Authority. Dualoy 3000/L has been issued a Certificate of Compliance to the Institute of Petroleum (IP) Specification by ERA Technology, Ltd.
Composition	**Pipe** — Filament-wound fiberglass reinforced epoxy pipe with integral epoxy liner and exterior coating. When classified in accordance with ASTM D2310 and ASTM D2996, the pipe meets the following cell limits: RTRP 11CX-5430. **Fittings** — Compression-molded and filament-wound fiberglass reinforced epoxy **Adhesive** — Ameron PSX•20 ambient-cure, two-part epoxy for all services (including alcohols)
Joining system	Bell and spigot taper/taper adhesive-bonded joint
Pipe lengths	Standard 6.1 m (20-ft) random lengths 5.2 to 6.4 m (17 to 21 ft) Other lengths available on request

Typical pipe dimensions and weights

Nominal Pipe Size		Pipe OD[1]		Pipe ID		Wall Thickness Total		Wall Thickness Structural		Unit Volume		Pipe Weight	
(in)	(mm)	(in)	(mm)	(in)	(mm)	(in)	(mm)	(in)	(mm)	(gal/ft)	(l/m)	(lb/ft)	(kg/m)
2	50	2.37	60	2.21	56	0.080	2.0	0.060	1.5	0.20	2.5	0.47	3.5
3	80	3.50	89	3.32	84	0.085	2.2	0.065	1.6	0.45	5.6	0.72	5.2
4	100	4.50	115	4.33	110	0.087	2.2	0.070	1.8	0.77	9.6	1.00	7.2
6	150	6.63	168	6.39	162	0.120	3.1	0.100	2.5	1.67	20.7	2.10	15.2

1) Typical outside diameters of 2 through 6-inch pipe are within API, ASTM and ANSI fiberglass and steel pipe dimensions.

Typical pipe performance

Nominal Pipe Size		Pressure Rating[1]		Ultimate Internal Pressure[1]		Ultimate Collapse Pressure[2]	
(in)	(mm)	(psig)	(MPa)	(psig)	(MPa)	(psig)	(MPa)
2	50	300	2.07	3200	22.1	153	1.05
3	80	200	1.38	2400	16.5	90	0.62
4	100	175	1.21	2000	13.8	39	0.27
6	150	175	1.21	2000	13.8	38	0.26

1) At 150°F (66°C).
2) At 80°F (27°C). For continuous service do not exceed 75% of these values.

Fittings pressure performance

For dimensions of fittings, consult Ameron publication DUALOY 3000/L FITTINGS DIMENSIONS, FP266. Pressure ratings of fittings without UL listing are available on request.

Nominal Pipe Size		All fittings[1]	
(in)	(mm)	(psig)	(MPa)
2	50	250	1.72
3	80	150	1.03
4	100	125	0.86
6	150	100	0.69

1) Some fittings have higher pressure ratings than shown.

Typical physical properties

Dualoy 3000/L piping systems are designed to function at temperatures ranging from -40 to 150°F (-40 to 66°C) at service pressures between -1 and 20 bar. Dualoy 3000/L pipe conforms to ASTM D2310, D2517 and D2996.

Pipe Property[1]	Units	Value	Method ASTM	Method ATM[1]
Thermal conductivity	Btu·in/(h·ft²·°F) W/m·°C	1.7 7.6	C177	23
Linear thermal expansion	10^{-6} in/in/°F 10^{-6} cm/cm/°C	8.5 15.3	D696	21
Friction factor	Hazen-Williams	150	—	156
Absolute roughness	10^{-6} ft 10^{-6} m	50 15	—	—
Specific gravity	—	1.81	D792	
Barcol Hardness	Impressor 934-1	65	D2583	—

1) Ameron test method.

Typical mechanical properties

Pipe Property[1]	Units	Value[1]	Method ASTM	Method ATM[2]
Tensile strength				
Longitudinal	10^3 psi MPa	35.0 241	D2105	161
Circumferential	10^3 psi MPa	70.0 483	D1599	151
Tensile modulus				
Longitudinal	10^6 psi GPa	3.0 20.7	D2105	161
Circumferential	10^6 psi GPa	4.2 29.0	—	—
Compressive strength				
Longitudinal	10^3 psi MPa	35.0 241	—	142
Compressive modulus				
Longitudinal	10^6 psi GPa	3.0 20.7	—	142
Long-term hydrostatic design basis				
Static	10^3 psi MPa	31.5 217	D2992(B)	—
Cyclic	10^3 psi MPa	8.0 55	D2992(A)	—
Poisson's ratio[3]				
n_{yx}	–	0.16	—	—
n_{xy}	–	0.26	—	—

1) Based on structural wall thickness.
2) Ameron test method.
3) The first subscript denotes the direction of contraction and the second that of the applied stress.
x denotes longitudinal direction.
y denotes circumferential direction.

Nominal Pipe Size (in)	Nominal Pipe Size (mm)	Stiffness Factor[1] (lb·in³/in²)	Stiffness Factor[1] (N·m)
2	50	45	5.1
3	80	75	8.5
4	100	60	6.8
6	150	275	31.1

1) At 5% deflection.

Bending radius

Nominal Pipe Size (in)	Nominal Pipe Size (mm)	Minimum Bending Radius[1] (ft)	Minimum Bending Radius[1] (m)	Maximum Deflection per 20-ft Joint (deg)	Minimum Length Required for 10° Change (ft)	Minimum Length Required for 10° Change (m)
2	50	75	23	15	13	4
3	80	100	30	10	20	6
4	100	150	46	7.5	27	8
6	150	200	61	5	40	12

1) At rated pressure. Sharper bends may create excessive stress concentrations. **Do not** bend pipe until adhesive has cured.

Conversions

1 psi = 6895 Pa = 0.07031 kg/cm^2
1 bar = 10^5 Pa = 14.5 psi = 1.02 kg/cm^2
1 MPa = 10^6 Pa = 145 psi = 10.2 kg/cm^2
1 GPa = 10^9 Pa = 145,000 psi = 10,200 kg/cm^2
1 in = 25.4 mm
1 ft = 0.3048 m
1 lb·in = 0.113 N·m
°C = 5/9 (°F - 32)

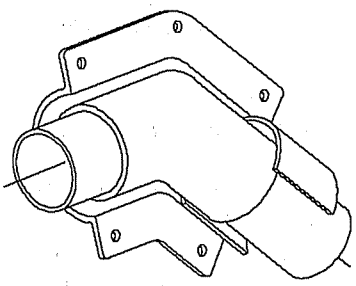
FIBERGLASS - COMPOSITE PIPE GROUP



Dualoy 3000/L Secondary Containment Pipe and Fittings

UL-Listed nonmetallic underground containment piping for Motor Vehicle (MV), High Blend (HB), Concentrated (CT) and Aviation and Marine (A&M) fuels

Uses and applications

Service station product, vent and vapor recovery piping
Bulk plant terminals and fueling terminals
Central fuel oil systems
Marinas and marine terminals (onshore only)
All piping systems requiring UL or ULC listing for MV, HB, CT and A&M fuels
Containment piping for all of the above

Description

Dualoy 3000/L secondary containment systems employ pipe one size larger than the primary and specially designed fittings. The system provides complete enclosure of UL- and ULC-listed Ameron primary piping used in product lines and vapor recovery lines from the sump at the product storage tank to the shear valve at the dispenser, and vent lines from the tank. Dualoy containment systems have been sized for close make-up and ease of installation.

Features of Ameron Dualoy 3000/L containment systems include:

- Filament-wound, fiberglass-reinforced pipe with integral liner;
- Compact fittings dimensions to minimize trench excavation;
- Smooth exterior pipe surface that eliminates the need for special end preparation tools;
- Ready accessability to and complete inspectability of primary fittings prior to closure of the containment;
- Complete testability during installation and at any other time thereafter;
- Rapid joint makeup with pre-inserted nuts and ambient cure adhesive.

Listings

ULC UL Underwriters Laboratories Inc.®

Dualoy 3000/L is Listed in the United States with Underwriters Laboratories Standard 971-2004 for nonmetallic underground piping for motor vehicle (MV), high blend (HB), concentrated (CT) and aviation and marine (A&M) fuels for both primary (File MH9162) and containment (File MH15596) piping systems. Dualoy 3000/L pipe and fittings are also Listed with Underwriters' Laboratories of Canada (File CMH 715). In Great Britain the Dualoy 3000/L system has been tested and accepted by the London Fire and Civil Defence Authority . Dualoy 3000/L has been issued a Certificate of Compliance to the Institute of Petroleum (IP) Specification by ERA Technology, Ltd.

Performance

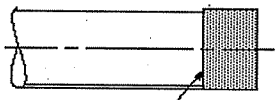
Operating pressures to 100 psig
Continuous operating temperatures to 150°F (66°C)
Individual system components may not have the same ratings as the pipe. Refer to the detailed product information for the specific components to determine the pressure rating for the system as a whole.

CERTIFIED QUALITY MANAGEMENT SYSTEM ISO 9001:2000 DNV

Piping system characteristics

Secondary employs full-performance pipe — Many contained fuel handling systems employ materials in the secondary that fall far short of the primary piping in regards to chemical resistance and mechanical strength. By contrast, Dualoy 3000/L systems employ the same type of high-performance fiberglass-reinforced pipe in the secondary as in the primary. Thus, Dualoy 3000/L containment systems easily withstand both high external loads from backfill and traffic as well as internal pressures as high as 100 psig.

Compact containment fittings — Dualoy 3000/L containment fittings are more compact than competitive clam-shell type closure pieces. As a result, crossovers in a Dualoy 3000/L system occupy less space, so less excavation is required than with competing rigid-wall containment systems.



Only end prep required is the removal by light sanding of surface gloss.

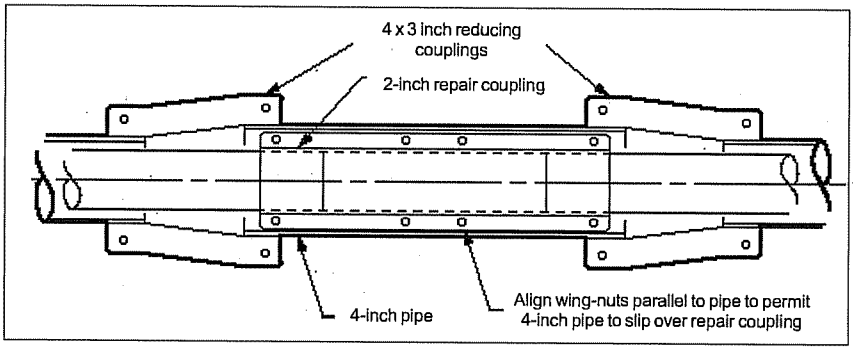
Precision pipe exterior eliminates scarfing — Dualoy pipe is manufactured in a proprietary continuous winding process that provides an extremely precise, consistent outside diameter. No scarfing of the pipe end is required to achieve a proper fit of the secondary pipe inside closure pieces. Light sanding of the pipe end to remove the surface gloss and obtain a suitable bonding surface is the only end prep required.

Easy containment fitting assembly — Dualoy 3000/L containment fitting clamshells are supplied in matched pairs. One half of each pair is fitted with pre-inserted propeller nuts, allowing the fitting to be assembled from one side, using the bolts provided.

Complete retestability — Dualoy 3000/L containment employs rigid-wall pipe and fittings that maintain their shape during the entire service life of the station. When installed with isolating penetration fittings (see page 4), Dualoy 3000/L containment piping can be repeatedly retested whenever desired.

Convenient repair capability — Contained piping systems are occasionally damaged after installation. Damage is generally caused by paving or excavation operations. Dualoy 3000/L contained piping systems are designed so that only the damaged stretch need be replaced instead of the entire line. The 2-inch Dualoy repair coupling is sized so that it can be contained within 4-inch Dualoy 3000/L containment pipe.

Two-inch primary pipe contained within 3-inch containment pipe can be repaired with a UL-listed 2-inch repair coupling. The containment is restored by replacement of a section of the existing containment pipe with a 4-inch containment nipple. The 4-inch replacement nipple is then joined to the existing containment pipe with Dualoy reducing couplings.



Containment pipe and fittings dimensions

	Nominal Pipe Size		A	B	C	X_2	No. of Bolt Holes	Wt.

1) Ported reducer.

Sump penetration fittings

Ameron sump penetrations are designed for use at turbine sumps and dispenser pans. Plain sump penetration fittings permit the annular space between the primary and secondary lines to communicate with the interior of the sump or pan. Penetration fittings with factory-installed centralizers, sleeve couplings and monitoring ports may be used to isolate the pipe annular space from the sump or pan. When the annular space is so isolated, the secondary containment line can be retested at any time and as often as desired.

Stand-Alone Dispenser Pan Sensor

Veeder-Root's Stand-Alone Dispenser Pan Sensors immediately shut down AC power to the dispenser when fluid is detected in the dispenser pan. Fail-safe design features eliminate the possibility of missing a leak condition.

Easily installed in most dispenser pans and dispenser sumps*, the Stand-Alone Sensors function with most manufacturers' dispensers. The sensors control and shut down power to the dispenser without the need for additional relays, circuitry or wiring. The sensors' control interface ensures the intrinsically safe integrity in a Class I Division II hazardous area.

Accurate and reliable, the Stand-Alone Dispenser Pan Sensors withstand the harshest environments. Stand-Alone Dispenser Pan Sensors are warranted to be free from detects for a period of one year from the date of installation or 15 months from the date of invoice.

Detection Capabilities

Float Switch Dispenser Pan Sensor shuts down dispenser when it detects:
-1-1/2" of liquid at the base of the sensor

Discriminating Dispenser Pan Sensor shuts down dispenser when it detects:
-1/32" of hydrocarbons floating on liquid at any height on the sensor
-1/8" of hydrocarbon liquid at the base of the sensor
-6-1/2" of liquid from the base of the sensor

Operating Capabilities

Operating Temperature Range: 0C to +70C (for freezing liquids); -25C to 70C (for hydrocarbons)
Storage Temperature Range: -40C to 70C
Cable Length: 5 feet
Sensor Dimensions: 11.53" high, 2.13" diameter
Control Interface Dimensions: 9.350" high, 2.17" diameter
Standard Models

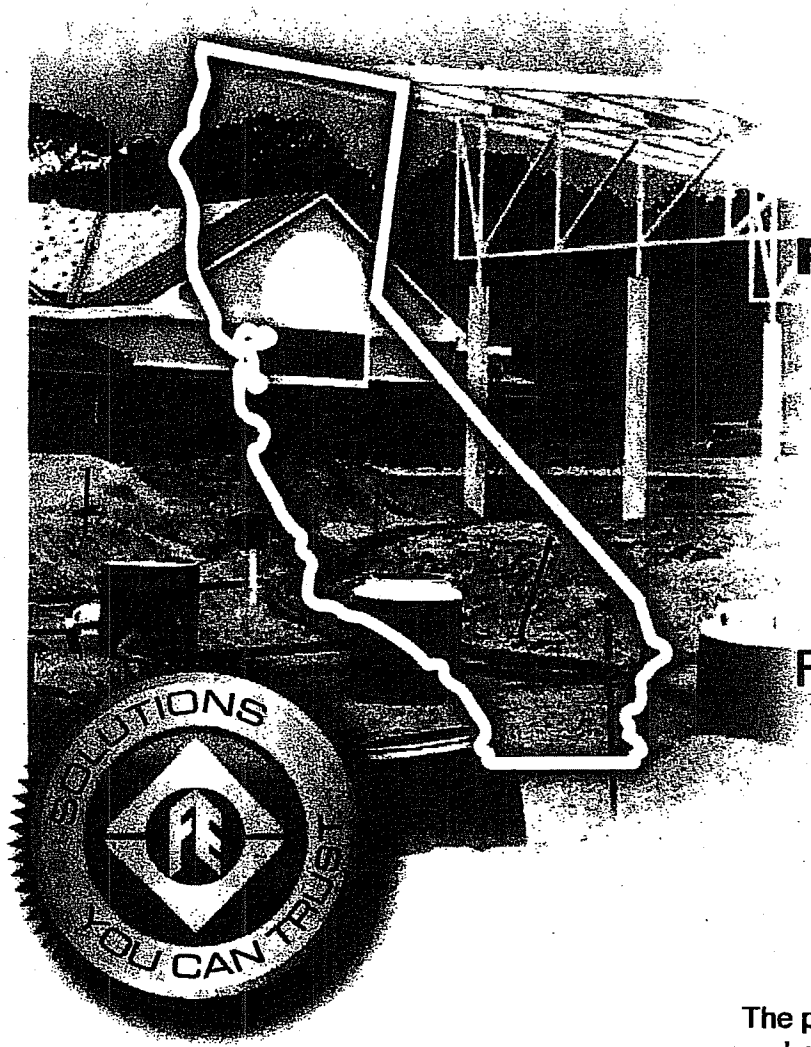
EXAMINATION RESULT: **PASS**

Congratulations! You have passed the above named examination. Your wallet card will be forwarded to you by ICC within six weeks from the last day of the month in which you tested. This certificate is current for two years.

You may request a wall certificate from ICC as well. Throughout 2011, this certificate will be provided at no cost to you, if you request it within 90 days of your exam. Only one wall certificate per exam passed will be provided to you at no charge. For more information on requesting a wall certificate, go to www.iccsafe.org/inspector.

It is extremely important that you notify Pearson VUE and ICC of any changes in name and/or address to avoid the possibility of your wallet card and/or certificate not being received. Please contact Pearson VUE at 800-275-8301 and ICC at certexam@iccsafe.org with changes to your name and address (name changes may require additional documentation). There may be an additional fee if a certification is re-issued due to a misspelled name or incorrect address.

Certificate Of Completion



Code: gX3oEI0DzL

Franklin Fueling Systems

This is to certify that

jim ruble

Petrotek

has been certified in:

FMS Programming - INCON Level 2

Training Date: November 4, 2010

Certification # 1486423702

Expiration Date: November 4, 2012

The person named on this certificate of completion has demonstrated knowledge of the listed products and installation procedures by completing an exam provided by Franklin Fueling Systems techLAB. This certification is valid for two years from the training date listed.

Re: Plan Check Review: SR0837887;
Facility Name: Granite Rock Company-Pavex Central
Project Location: 120 Granite Rock Way, San Jose
Project Description: Replace UDC and associated piping (5ft) and upgrade the UDC sensor.

Santa Clara County Hazardous Materials Program has reviewed the submittal for the project referenced above and **approves the plans with the following conditions:**

1. Systems shall be configured as described in the enclosed approved Hazardous Materials Construction Permit Application, Hazardous Materials Tank System Installation/Upgrade Equipment List, and plans.
2. Contact HMCD a minimum of 2 working days in advance to schedule the following inspection(s):
   - ☐ Pressure/vacuum testing of tank primary and secondary containment;
   - X Pressure testing of primary and secondary piping;
   - X Lake testing of under dispenser containment (UDC)
   - X Functional testing- positive shut down for the pressurized system.
3. The following conditions shall also be met for final approval:
   - Updated Monitoring Plan

Any substitution of equipment or reconfiguration of systems as described in approved plans requires prior approval from this Department. Be advised that plan check review and approval by the San Jose Fire Department may also be required prior to beginning work. A copy of this letter and one set of approved plans shall remain on the job site until final inspection.

Should you have any questions, contact the undersigned inspector at (408) 918-1946.

HAZARDOUS MATERIALS CONSTRUCTION PERMIT APPLICATION

For Use Within the Cities of Los Altos Hills, Monte Sereno, Saratoga, and in Unincorporated Areas of Santa Clara County, Including Moffett Field, San Martin, and Stanford

RECEIVED BY SANTA CLARA COUNTY DEPT. OF ENVIRONMENTAL HEALTH 2011 DEC 29 PM 2:17

I. General Information

This document must be completed by any person who applies for a permit from the Hazardous Materials Compliance Division (HMCD) to install, retrofit, or upgrade a hazardous materials storage system/area (i.e., fuel tank, dry cleaning machine, laboratory, etc.). If the project involves the installation or retrofitting of a hazardous materials storage tank system, you must also submit a completed Hazardous Materials Tank System Installation/Upgrade Equipment List form. Refer to HMCD's Plan Submittal Requirements for Hazardous Materials Systems for additional requirements. Documents are available at **www.EHinfo.org/hazmat**.

V. Scope of Work *[Briefly describe the project]*

Replace the failed steel shallow Bravo box with a fibeglass Bravo UDC, install a Veeder-Root "stand alone" UDC sensor. The existing Smith Red Thread II product pipe will be cut back and extended into the new UDC using a Bravo fiberglass penetration fitting. Electrical will not penetrate the UDC. A new "Flex-ing" flex line will be installed. The existing shear valve will be reused.

HAZARDOUS MATERIALS TANK SYSTEM INSTALLATION/UPGRADE EQUIPMENT LIST

For Use Within the Cities of Los Altos, Los Altos Hills, Monte Sereno, Saratoga, and in Unincorporated Areas of Santa Clara County

I. General Information

This form serves as a construction/upgrade permit application. One copy of this completed form shall be submitted to the Hazardous Materials Compliance Division (HMCD) along with the Scope of Work, equipment specifications, and project plans.

II. Project Information

This document covers the: ☐ Installation ☒ Upgrading of ☐ Aboveground Tank(s) ☒ Underground Tank(s)

Provide the following information:

Facility Name (Tank Site): **Grainite Rock** Bldg. No.: **na**

Address: **120 Granite Rock Way** City: **San Jose** Zip: **95136**

Project Contact Name: **Jim Ruble** Phone No.: **(408)683-4537** ext. **102**

Plan Check No.: _____ Date of Plan Submittal to HMCD: _____

III. Equipment Information

In the table below, **list the manufacturer name and specific model number** for each type of equipment listed in the second column. If an item is not applicable to this project, check the "N/A" box in the "Name of Equipment Manufacturer" column. Brochures and/or manufacturers' cut sheets showing listings (e.g., UL) and other applicable technical information for **all equipment listed** shall be submitted with this form.

TIME-TESTED FIBERGLASS PIPING SYSTEMS FROM FIBER GLASS SYSTEMS

NPV Fiber Glass Systems

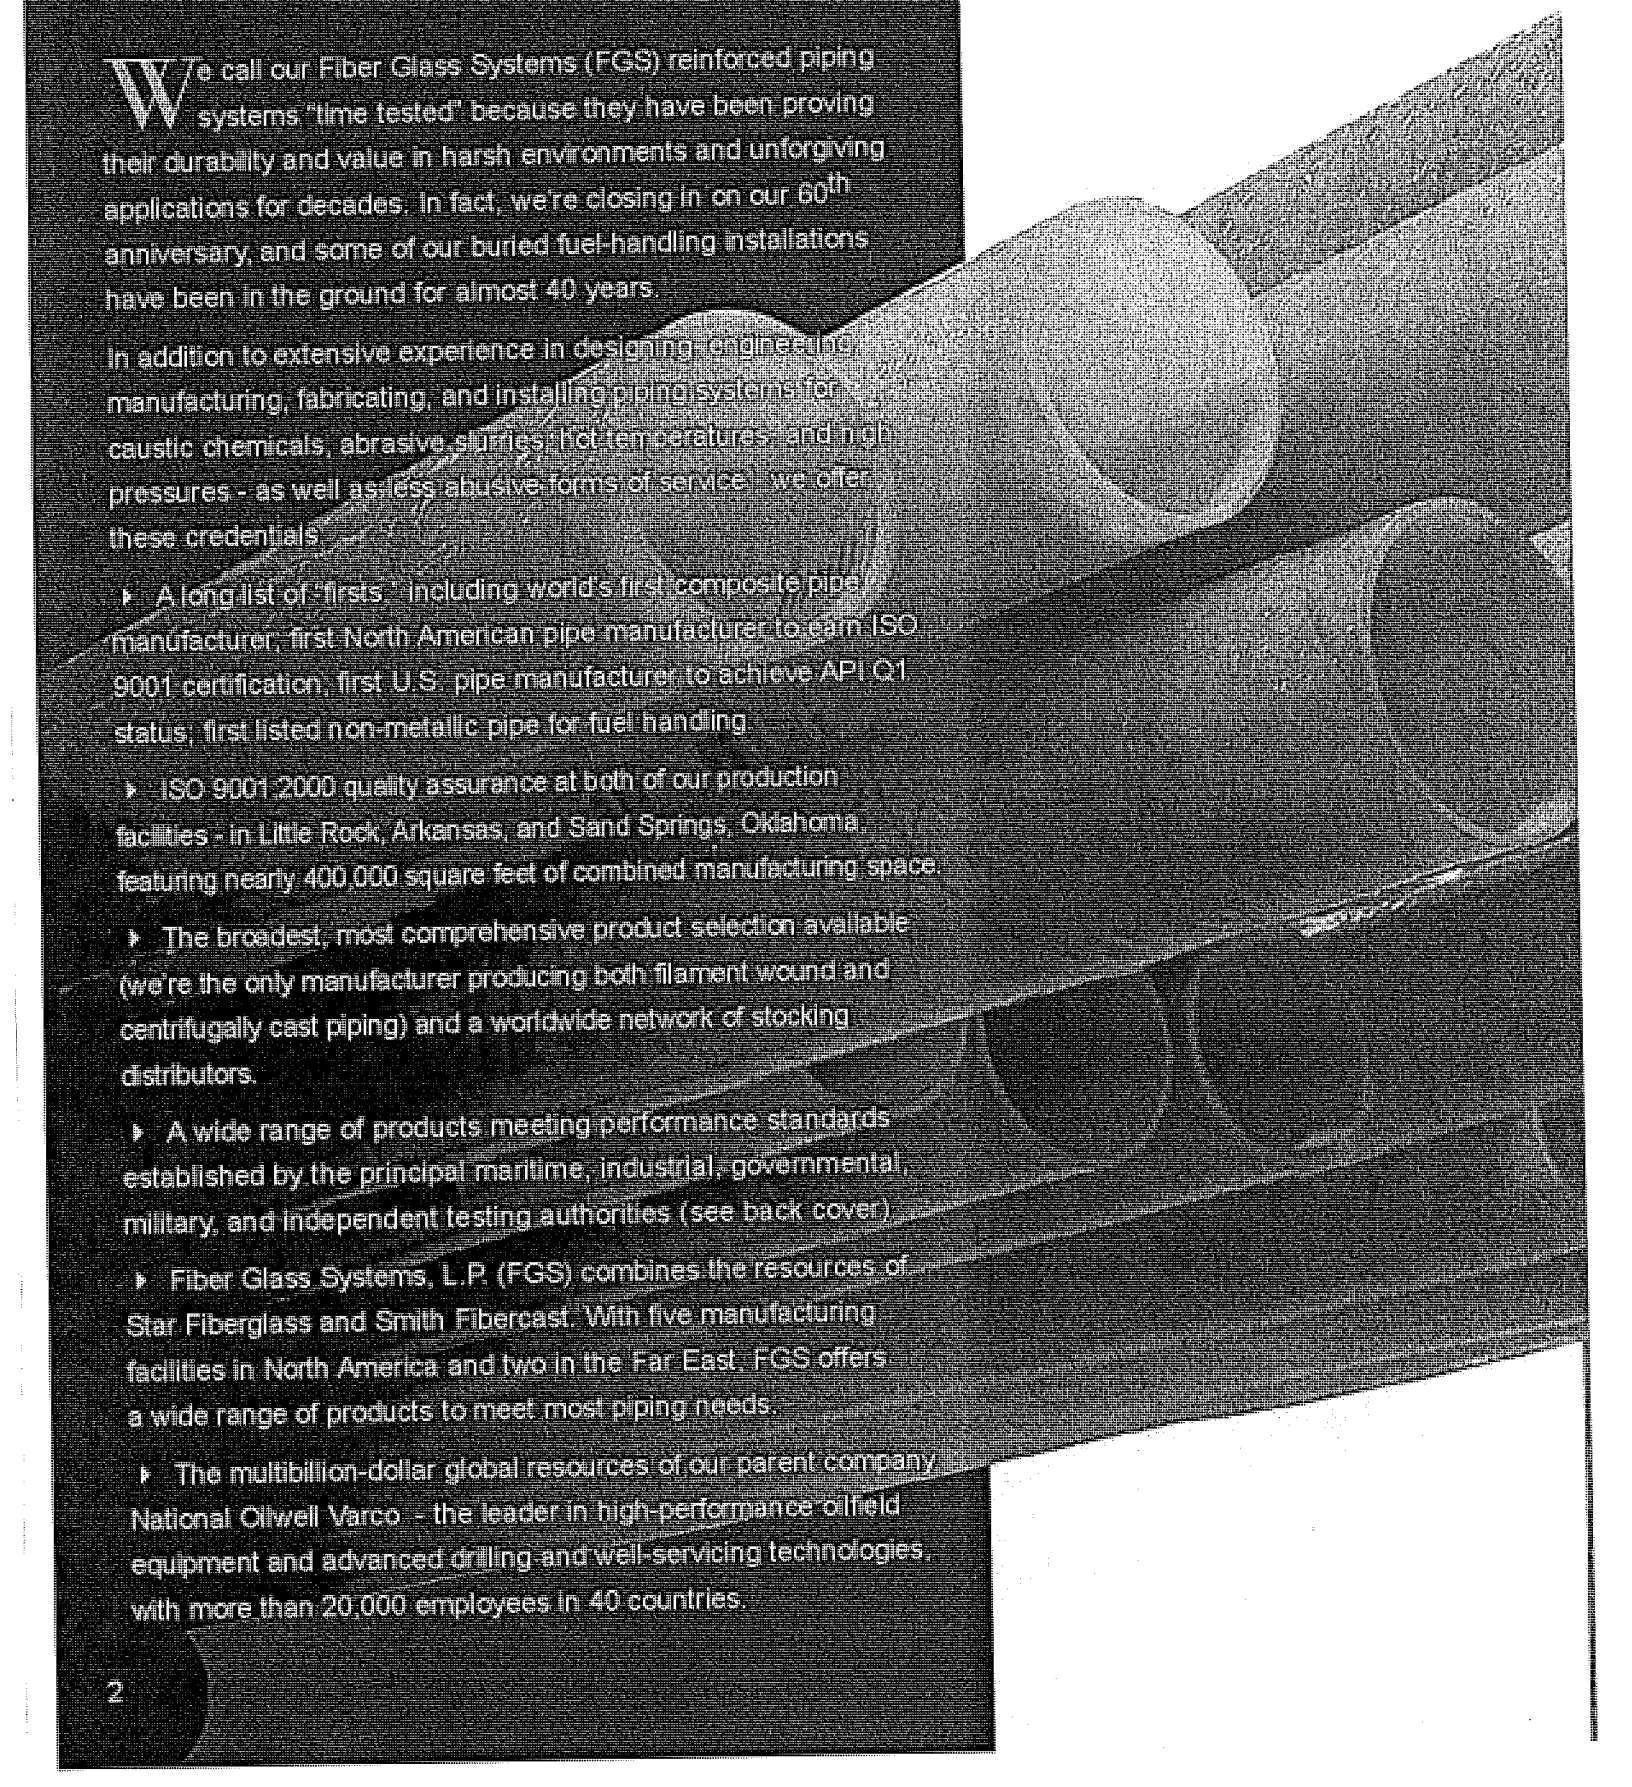
FIBER GLASS SYSTEMS

Worldwide Leader in Composite Piping

We call our Fiber Glass Systems (FGS) reinforced piping systems "time tested" because they have been proving their durability and value in harsh environments and unforgiving applications for decades. In fact, we're closing in on our 60th anniversary, and some of our buried fuel-handling installations have been in the ground for almost 40 years.

In addition to extensive experience in designing, engineering, manufacturing, fabricating, and installing piping systems for [illegible] caustic chemicals, abrasive slurries, hot temperatures, and high pressures - as well as less abusive forms of service - we offer these credentials:

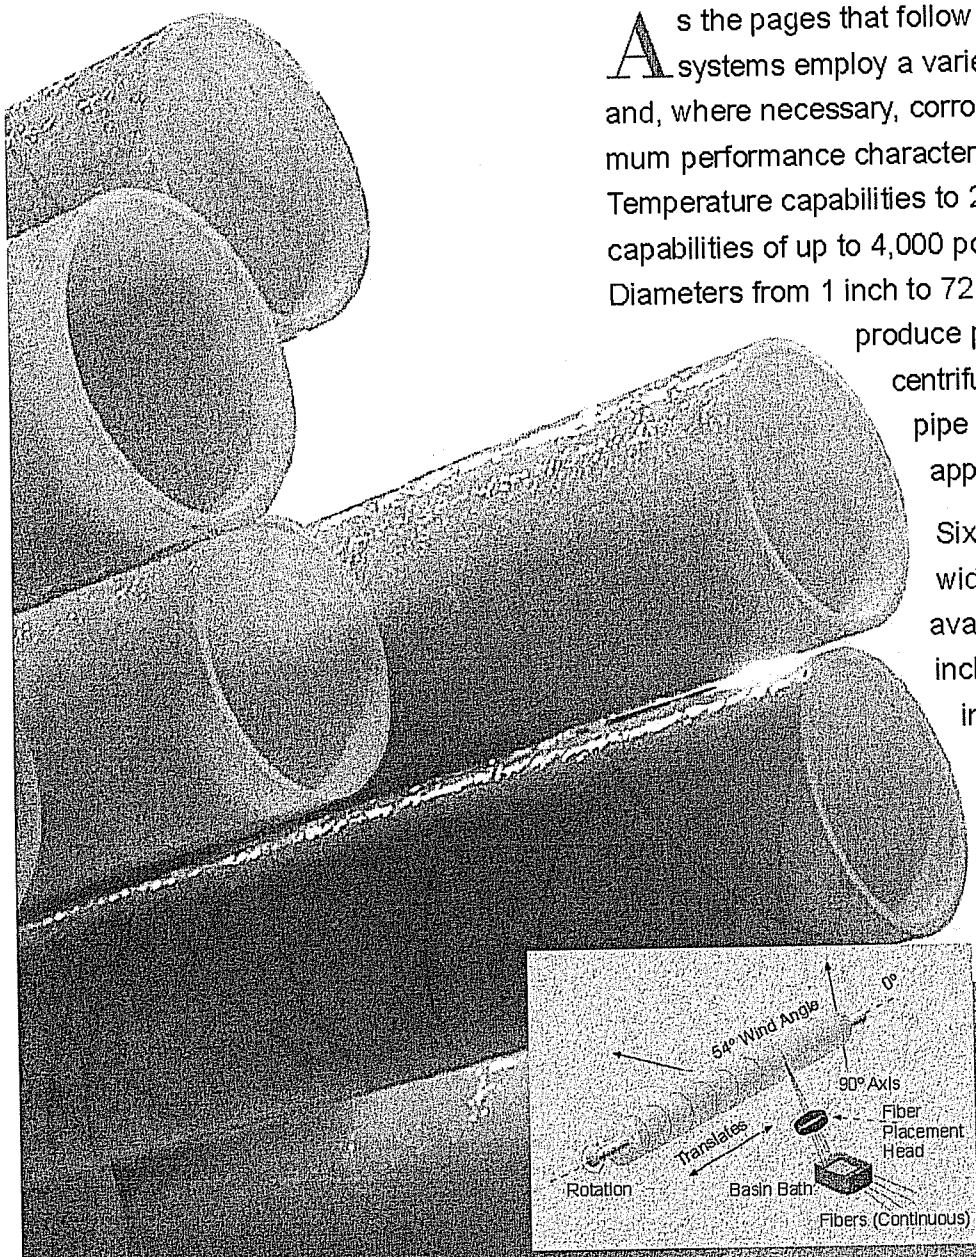
- A long list of "firsts," including world's first composite pipe manufacturer, first North American pipe manufacturer to earn ISO 9001 certification, first U.S. pipe manufacturer to achieve API Q1 status, first listed non-metallic pipe for fuel handling.
- ISO 9001:2000 quality assurance at both of our production facilities - in Little Rock, Arkansas, and Sand Springs, Oklahoma, featuring nearly 400,000 square feet of combined manufacturing space.
- The broadest, most comprehensive product selection available (we're the only manufacturer producing both filament wound and centrifugally cast piping) and a worldwide network of stocking distributors.
- A wide range of products meeting performance standards established by the principal maritime, industrial, governmental, military, and independent testing authorities (see back cover).
- Fiber Glass Systems, L.P. (FGS) combines the resources of Star Fiberglass and Smith Fibercast. With five manufacturing facilities in North America and two in the Far East, FGS offers a wide range of products to meet most piping needs.
- The multibillion-dollar global resources of our parent company, National Oilwell Varco - the leader in high-performance oilfield equipment and advanced drilling and well-servicing technologies, with more than 20,000 employees in 40 countries.



Resins, Compositions, and Sizes for All Applications

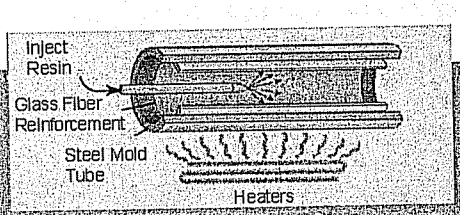
As the pages that follow will reveal, FGS piping systems employ a variety of epoxy and polyester resins and, where necessary, corrosion barriers to achieve the optimum performance characteristics for virtually any application. Temperature capabilities to 275 degrees Fahrenheit. Pressure capabilities of up to 4,000 pounds per square inch or more. Diameters from 1 inch to 72 inches. And our unique ability to produce pipe by either filament winding or centrifugal casting allows us to best match pipe to the requirements of your specific application.

Six joining systems (page 7) and a wider selection of fittings than you'll find available for any other piping material, including steel, ensure precision installation, optimum system performance, and unbeatable ease of assembly.



Filament Winding Process

Resin-impregnated glass fibers are wound onto a mandrel in a predetermined pattern under controlled tension. Repeated passes create a strong, layered wall of the desired thickness. This process results in a pipe that is at least 75% glass-reinforced for optimum internal pressure capability.



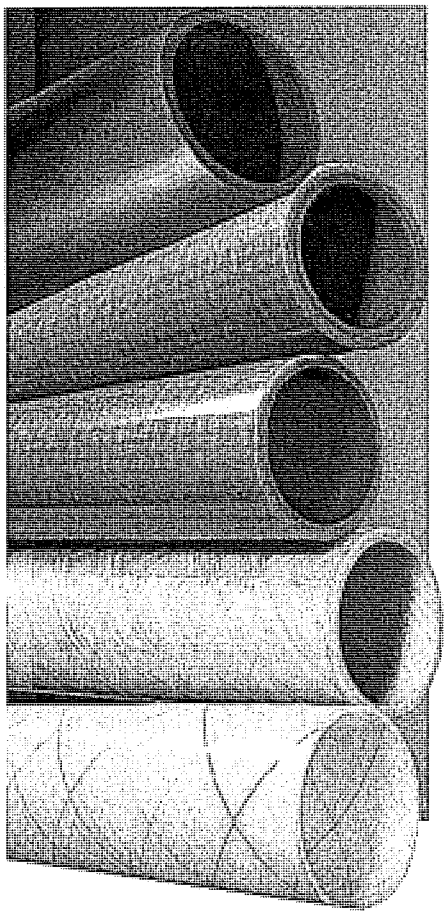
Centrifugal Casting Process

Woven glass fiber (or fabric) in a motor-driven steel tube is saturated with resin while the tube rotates at high speed. Centrifugal force displaces air from the resin and glass, producing a dense, void-free laminate. Fiber reinforcement in both the hoop and axial directions affords excellent thermal expansion and beam-bending properties.

Epoxy Piping Systems

When selecting a fiberglass piping system, operating temperature and chemical resistance usually dictate the appropriate resin system. Epoxy resins perform best in the presence of caustics, solvents, brines, petroleum products, and certain acids. Proprietary epoxies offer the highest temperature ratings, 275 degrees. Aromatic-amine cured epoxies offer ratings up to 250 degrees Fahrenheit. Aliphatic-amine cured epoxies have temperature ratings up to 200 degrees.

Visit www.fgspipe.com or contact your distributor to obtain our Chemical Resistance Guide (E5615). For applications not listed in the guide, or for those involving multiple chemicals, contact Fiber Glass Systems for assistance.



Z-Core®
Capable of handling high concentrations of corrosive acids, alkalis, and solvents; exceeds the corrosion resistance of lined steel and alloys.

Centricast Plus® RB-2530
Recommended for most caustics, salts, solvents, and many acids and chemical process solutions; can also handle many abrasive slurries.

Centricast® RB-1520
Primary uses include chemical process solutions, solvents, acids, caustics, and salt solutions.

Green Thread®
Especially suitable for dilute acids and caustics; hot-water and condensate return.

Red Thread® II
Extensively used for water and saltwater handling, CO_2, crude oil, natural gas, and light chemical services including salts, solvents, and pH 2-13 solutions that corrode traditional metallic piping systems.

Red Thread® IIA
UL 971 Listed primary and secondary piping systems for all UL identified fuels, including 100% ethanol or methanol; compatible with bio-diesel and E85.

Pipe	Size Range (in.)	Resin	Pressure Rating (psig)	Inner Corrosion Barrier Thickness (in.)	Temperature Rating	Joint Types	RTRP Classification (ASTM D2310)	Product/ Installation Manuals

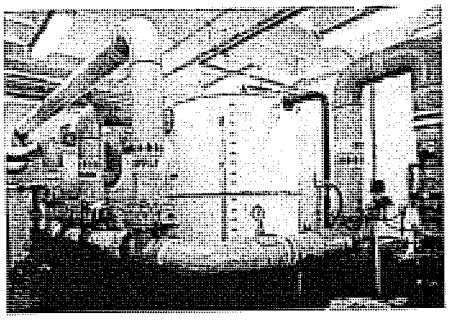
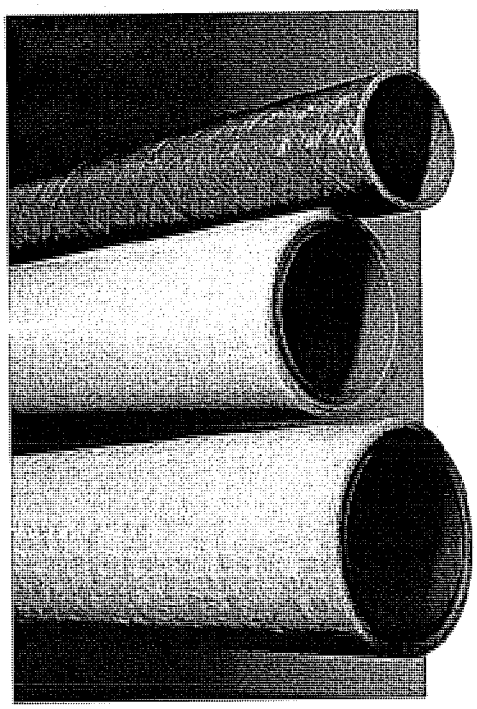
Vinyl Ester Piping Systems

Vinyl ester resin systems provide outstanding performance in mineral acid, chlorine, and oxidizing-agent applications. Premium vinyl ester systems handle temperatures as high as 225 degrees Fahrenheit.





F-Chem®
Custom piping - ideal for strong mineral acids and bleaching solutions and many chemical waste streams. Premium and fire retardant resins available.

Centricast Plus® CL-2030
Recommended for strong acids, chlorine, oxidizing agents, and chemical mixtures.

Centricast® CL-1520
Used extensively for a wide range of process solutions including acids, chlorine, and oxidizing agents.

Pipe	Size Range (in.)	Resin	Pressure Rating (psig)	Inner Corrosion Barrier Thickness (in.)	Temperature Rating	Joint Types	RTRP Classification (ASTM D2310)	Product/ Installation Manuals

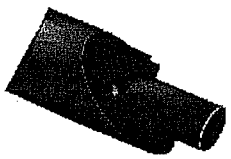
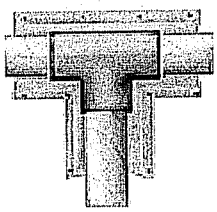
Secondary Containment

Fiber Glass Systems offers several solutions for handling environmentally sensitive chemical applications.





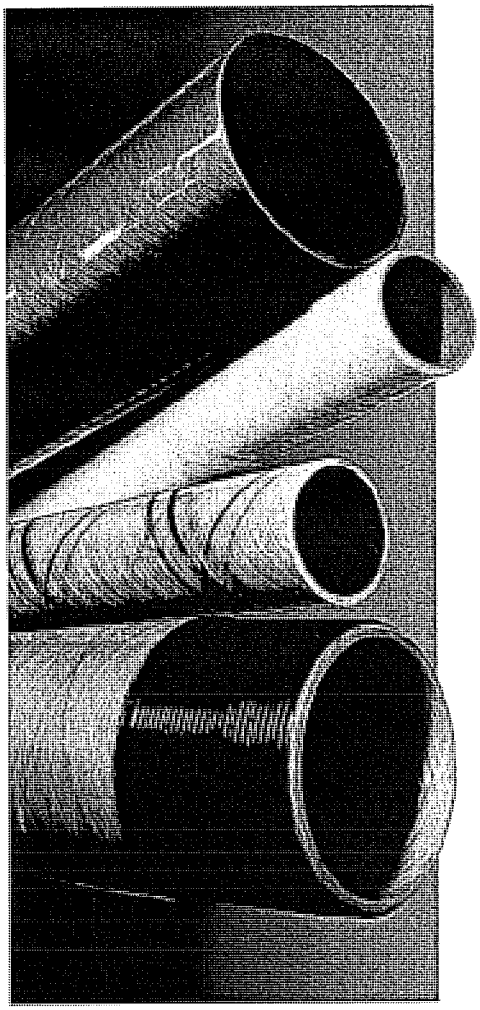
Two piece secondary containment fittings are available in 3"-16" for primary pipe sizes up to 14". The system is designed for maximum field flexibility, ease of installation and the ability to use one size larger containment.

When higher pressure, larger diameter or severe temperature changes are required, Fiber Glass Systems can provide special fittings to handle the added requirements.

Specialty Piping Systems

Fiber Glass Systems completes the gamut of piping requirements with a variety of special-purpose systems offering unsurpassed performance, longevity, and cost-saving value.

Visit www.fgspipe.com or contact your distributor to obtain our Chemical Resistance Guide (E5615). For applications not listed in the guide, or for those involving multiple chemicals, contact FGS Smith Fibercast for assistance.



Ceram Core®

For applications requiring heavy-duty abrasion resistance, including bottom ash, dredge lines, wet process slurries, heavy salt slurries, and more.

Silver Streak®

Provides medium-duty abrasive resistance for flue-gas desulfurization scrubber applications such as limestone and gypsum slurries, and similar uses.

Marine/Offshore

Green Thread products for the gamut of applications, including firewater systems, cooling systems, drain lines, dry-deluge fire piping, column piping, process water, potable water, ballast piping, sounding tubes, and vent lines.

Star High Pressure

Up to 4,000 psi internal pressure capability for injection, flow, and gathering lines in crude-oil, natural gas, saltwater, and freshwater applications; and corrosive oil field service including CO_2 and H_2S.

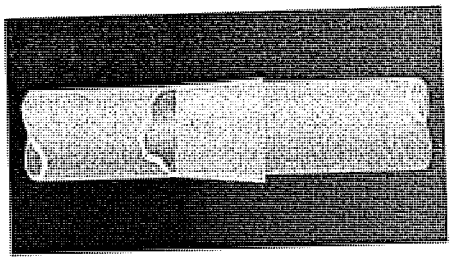
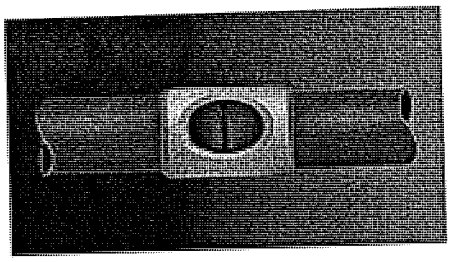
** Available through Fiber Glass Systems, A National Oilwell Varco Company, San Antonio, Texas, www.starfiberglass.com.*

Joining Systems



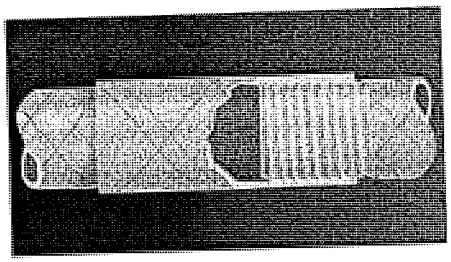
Bell & Spigot

A matched-taper joint secured with epoxy adhesive. Stronger than the pipe itself, in both internal-pressure and axial-tension capability. Resists movement, facilitating joining long runs of pipe without waiting for the adhesive to cure. Can be used with 1-inch to 24-inch pipe diameters.



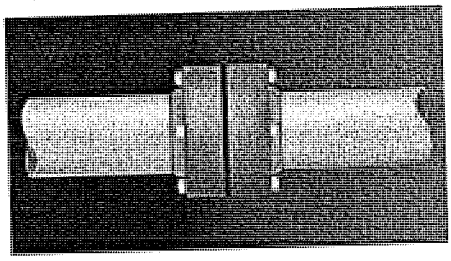
Socket

Positive stop lands simplify precise makeup of complex piping configurations. For pipe diameters of 1 inch to 14 inches.



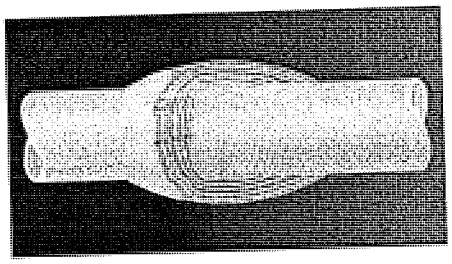
T.A.B.™

The ultra-reliable FGS threaded and bonded joining system. Double-lead threading ensures an extra secure adhesive connection during installation. Available for 2-inch through 6-inch pipe diameters (larger sizes available by special quotation).



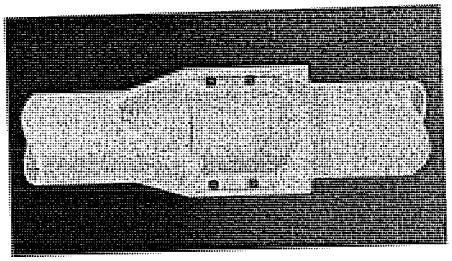
Flanged

Available for all piping systems and diameters; factory assembled or shipped loose for assembly in the field. Self-aligning flanges for Ceram Core systems ensure proper alignment of inside diameters for optimum wear resistance.



Butt & Wrap

Plain-end pipes or pipe and fittings butted together and wrapped with multiple layers of resin-saturated mat or woven roving. Can be used with all piping systems and diameters.



O-Ring Bell & Spigot

Mechanical, O-ring sealed joint, especially useful for buried installations. Available for 10-inch through 72-inch diameters, with the choice of either single or double O-rings in most sizes.

Fiber Glass Systems Support

To help ensure timely, trouble-free, and above all economical installations of time-tested Fiber Glass Systems piping systems, we offer unrivaled customer support to go with our unrivaled product lineup. Call FGS for full information about all of the following and more:

- Turn-key design and engineering assistance
- On-site installation training by Fiber Glass Systems field technicians
- Free FGS piping-design CD-ROM programs for the Chemical & Industrial, Marine-Offshore, and UL-Listed Fuel Piping markets; including the *Success by Design* engineering program, complete with pipe specifications and chemical guidelines (also available for download from our Web site)
- Factory fabrication services to reduce field joints and installation costs
- The worldwide network of FGS stocking distributors and certified fabricators

Product Certifications

Fiber Glass Systems offers a wide range of products to meet the specifications of these and other distinguished regulatory entities.

Call for information about the time-tested piping products available to fulfill your project's compliance requirements.

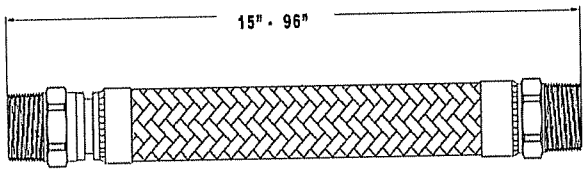
FLEX-ING
www.flex-ing.com

FIREFLEX
FLEXIBLE CONNECTORS

2828 Fallon Drive
Sherman, Texas 75090
Phone: 1.800.333.3599 / 1.903.892.8983
Fax: 1.800.765.4801 / 1.903.893.9576

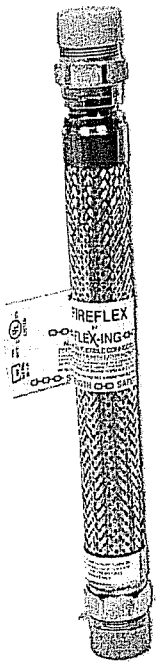
Description —
FLEX-ING's premiere above and below ground fire rated flex connector.



Application —
Connects the shear valve with primary piping in a fuel dispenser sump system.

Features —

SB 989 Compliant	Successful Praxair/Tracer Testing
Metal construction	All metal construction means one flex-connector for both above and below ground applications.
Full Vacuum	Testable under full vacuum.
UL Listed	UL Listed for above and below ground installation.
Long service life	An 18-8 alloy with titanium, 321 Stainless Steel inner core provides a long service life.
Greater flexibility	Standard wall thickness with close pitch corrugations gives more flexibility.
Multi-seal design	The 346 Integral Male Swivel* ensures ease of installation with a multi-seal design.
Schedule 80 construction	Thick, schedule 80 hex end fittings protect against deformation of the ends.
Quality tested	100% pressure tested to assure quality.
Superior working pressure	350 psi working pressure assembly exceeds UL 50 psi requirement on 3/4" - 3". 225 psi on 4"
Minimum Bend Radius from Centerline of Hose 6" - Hose up to 2" 9" - Hose up to 3" 13" - Hose up to 4"	



NFPA® MEMBER 2009-2010

See Requirements and Installation Instructions on Page 2

FLEX-ING™
www.flex-ing.com

FIREFLEX FLEXIBLE CONNECTORS

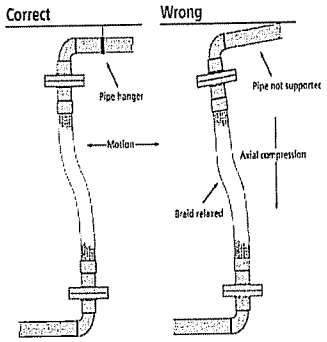
Requirements —

- Must be used in a liquid tight sump
- Must be used with operational leak detection
- Must not come in contact with Brine, Saltwater, Saltwater splash, saltwater spray and/or chlorine
- You must visually inspect the flex connector for any defect or damage that may have occurred during shipping
- If you find a damaged flex connector, you must return it to FLEX-ING or the authorized distributor
- Flex connectors must be replaced when the dispenser has been hit or disrupted
- Replace the flex connector if the shear valve has broken. Shear valve must remain properly mounted
- Tags are an integral part of the connector and must remain intact
- Do not remove tags or labels
- Never coat a flex connector with a non-approved coating
- Do Not torque flex connector
- Install in one plane of motion
- Do Not exceed minimum bend radius
- Do Not compress or deform
- You must be OSHA trained and have OSHA approved equipment

Installation Instructions —

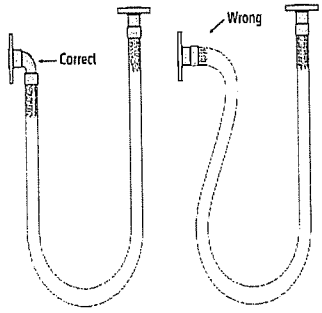
DO NOT COMPRESS OR EXTEND AXIALLY

Corrugated metal hose installed in-line with the longitudinal axis of the piping should not be subject to axial movement.



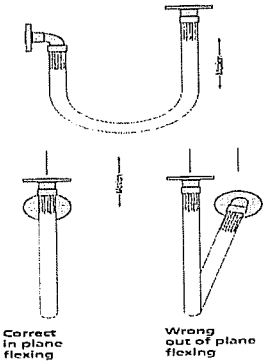
AVOID SHARP BENDS

Use elbows to avoid sharp bends near the end of the metal hose assembly.



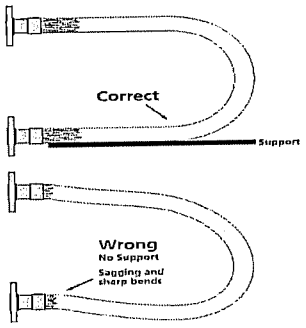
DO NOT ALLOW MOVEMENT IN MULTIPLE PLANES

Flexing a metal hose in two separate planes of movement will torque the hose assembly. Always install the metal hose assembly so that flexing occurs in one plane only, the plane in which bending occurs.



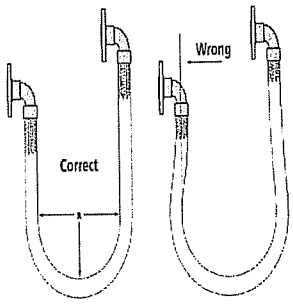
PROVIDE SUPPORT

When installing the assembly in a horizontal loop, provide support for the arms to prevent the hose from sagging.



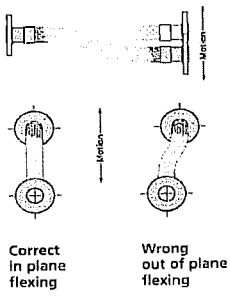
MAINTAIN MINIMUM CENTERLINE BEND RADIUS

Flex connectors must be used in a liquid tight sump with operational leak detection.



DO NOT TORQUE DURING INSTALLATION

Do not use to compensate for bolt hole misalignment. Floating flanges will help to minimize twisting of the metal hose. Pipe unions will help to reduce twisting during connection to the piping. The use of two wrenches will help to keep the hose from twisting when tightening the pipe union.



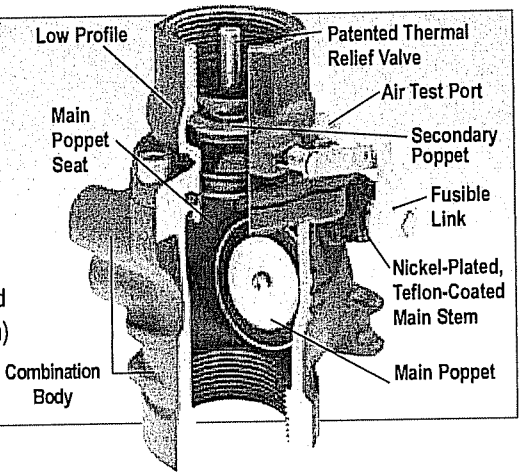
Installation Instruction Tags are an integral part of the flex connector. If you receive a Flex-connector without an installation tag contact us immediately at 1-800-333-3599. Removal of this tag voids the warranty and the UL Listing.

All metal hose assemblies are custom made. We do have standard catalog products but they are considered non-stock. All returns require a Return Goods Authorization number and a re-stocking charge will be applied. Some products may be non-returnable.

#3

Materials

Top: Cast iron
Body: Cast iron
Disc: M-19
Carrier: Zinc-plated steel
Stem: Copper-nickel-chrome-plated brass
Poppet spring: Stainless steel
Seal: M-19 O-Ring
Packing nut: Brass, Teflon®-coated
Inlet and outlet thread: 1½" (4 cm) NPT (British threads available)
*With black Duragard® E-Coating



Features

- **High Flow Capacity** – the primary poppet is held out of the flow stream while the secondary poppet is held normally open to minimize head loss across the valve and to protect the poppet seals from damage and erosion. True 1½" (4 cm) and 2" (5 cm) body sizes ensure maximum flow.
- **Fire Protection** – a fusible link trips the valve closed at 165° F to shut off fuel supply to the dispenser.
- **Main Poppet Seat Integral to the Top Assembly** – having the main poppet seat as an integral part of the valve top ensures a new, clean seating surface is installed each time the top is replaced. This design also ensures that the integrity of the seal between the valve top and bottom is verified during line testing and allows full inspection of the main poppet when the top is removed.
- **Duragard®-Coat Finish** – provides superior corrosion resistance.
- **Reliable Shut-off** – a stainless steel main spring, a teflon-coated brass packing nut and a copper/nickel/chrome-plated brass stem are designed to prevent tar build-up and corrosion from interfering with poppet operation after long periods of normal service without activation.
- **Integral Test Port** – a ⅜" (9.5 mm) test port allows the piping system to be air-tested without breaking any piping connections.
- **Patented Thermal Relief Valve** – relieves excessive pressure over 25 psi caused by thermal expansion of fuel in the dispenser piping system in the event of fire (double-poppet models only).
- **Low-Profile Tops** – female and union-top double-poppet valves have a low-profile top to allow upgrading from OPW single-poppet valves without changing existing piping.
- **Multiple Mounting Options** – valves are boss-mounted to stabilizer bars in sumps and pans or mounted to bars embedded in the island with optional U-Bolt kits 10UBK-015 (not included). Versatile Combination Body (boss mount/U-Bolt mount) models are available to accommodate most mounting applications with one valve style.
- **Underwriters Laboratories** – listed for use with gasoline and 85% and 100% methanol. All OPW 10 Emergency Shut-Off Valves meet requirements of UL STANDARD 842.
- **Compatible with 85% ethanol (E85)**

PA15 Offset Adaptor

The OPW PA15 Offset Adaptor is designed for adjusting misalignment of pipe in dispenser sumps and suction stubs. The PA15 has a low profile feature, and is designed for maximum flow.

OPW 10 Series Emergency Shut-Off Valves

OPW 10 Series Emergency Shut-off Valves are installed on fuel supply lines beneath dispensers at grade level to minimize hazards associated with collision or fire at the dispenser. If the dispenser is pulled over or dislodged by collision, the top of the valve breaks off at the integral shear groove, activating poppets and shutting off the flow of fuel. Single-poppet models shut off supply flow, while double-poppet models shut off supply as well as prevent release of fuel from the dispenser's internal piping. The base of the emergency valve is securely anchored to the concrete dispenser island through a stabilizer bar system within the dispenser sump or pan to ensure proper shearing action. The valve base is secured to the stabilizer bar using a three-point boss mount system or a U-Bolt Kit (not included) 10UBK-015 (1-1/2") and 10URK-0200 (2 sold separately). Valve inlet (bottom) connections are female pipe threads and outlet (top) connections are available with female threads, male threads or a union fitting. Other options include suction system models with a normally closed secondary poppet which maintains prime, and models with external threads on the inlet body which connect to secondary containment systems.

10RUP-2006	2	5	NPT	Double	Pressure	10RUTCP-5972

Note: All BSPP Thread Shear Valves must be ordered through Europe or China office.

IMPORTANT NOTICE:

When mounting the OPW 10 Series Emergency Shut-off Valves, the anchoring system employed must withstand a force greater than 650 ft. pounds per valve.
NFPA Code 30A, Automotive and Marine Service Station Code, requires that the automatic closing feature of emergency shut-off valves be checked at least once per year by manually tripping the hold-open linkage. OPW recommends the use of Flexworks Stabilizer Bar Support System for proper mounting of 10 Series Valves.

NOTICE:

As per NFPA 30A, electrical supply to the submersible pump must always be disconnected before servicing meters, dispensers or emergency shut-off valves.

Stand-Alone Dispenser Pan Sensor

Veeder-Root's Stand-Alone Dispenser Pan Sensors immediately shut down AC power when fluid is detected in the dispenser pan. Fail-safe design features eliminate the p missing a leak condition.

Easily installed in most dispenser pans and dispenser sumps*, the Stand-Alone Sens most manufacturers' dispensers. The sensors control and shut down power to the d the need for additional relays, circuitry or wiring. The sensors' control interface ensu intrinsically safe integrity in a Class I Division II hazardous area.

Accurate and reliable, the Stand-Alone Dispenser Pan Sensors withstand the harshes Stand-Alone Dispenser Pan Sensors are warranted to be free from detects for a peri from the date of installation or 15 months from the date of invoice.

Detection Capabilities

Float Switch Dispenser Pan Sensor shuts down dispenser when it detects:
-1-1/2" of liquid at the base of the sensor

Discriminating Dispenser Pan Sensor shuts down dispenser when it detects:
-1/32" of hydrocarbons floating on liquid at any height on the sensor
-1/8" of hydrocarbon liquid at the base of the sensor
-6-1/2" of liquid from the base of the sensor

Operating Capabilities

OPW

A DOVER COMPANY

OPW 1-2100-EVR Series Thread-On Spill Containers (1-2100 1-2115 1-2100E)

OPW and Pomeco Spill Containment Manholes are designed to prevent spilled product from entering the soil near the fill and vapor return riser connections on underground storage tanks during normal tank filling operation, or in the event of tank overfill. The spill containers catch spillage to help prevent soil contamination and groundwater pollution. OPW Thread-On Spill Containment Manholes are generally used on new tank or riser pipe installations.

Table of Contents:

1. Features
2. Ordering Specifications
3. Replacement Parts
4. Certifications and Listings
5. Additional Resources

Features:

- Easy Installation - Reduces job-site time and installation costs. OPW Thread-On Spill Containers screw directly onto 4" NPT or BSPT risers. No external connections to make; adjust the final grade height and support the unit with backfill.
- Integral Pull-to-Open Drain Valve - Allows high-speed drainage of excess product into the tank. Designed with a convenient self-cleaning seal and removable screen for easier component cleaning.
- Capacity - Available in a true 5-gallon capacity as well as 15-gallon capacity. Deep bucket 7.5-gallon models (1-2100E and 1C-2100E) are also available to provide additional clearance for threaded-top OPW 61TNG Overfill Valve installations. Note: Available in Europe.
- Rain-Shedding Cover - Available in either cast aluminum or cast iron, this unique design incorporates a seal in the underside of the cover. The seal seats between two dams on the mounting ring to prevent surface water from entering the spill container.
- Fuel Compatibility - Designed to accommodate the fuels of the future, including methanol, ethanol and fuels with MTBE additives.
- Product Identification Tags - Available for both the cover and bucket to positively identify the product contained in the UST with standard API symbols. (See product I.D. tag specification page for more information)
- Heavy-Duty Mounting Ring - The angled ramp design offers superior protection against snow plow and traffic damage, and provides for secure concrete anchoring.
- Duratuff® II or Cast Iron Base - Composite Duratuff® II material is lightweight, durable, and conductive. A rugged optional cast iron base is also available.
- Highway 20 Rated (H20) - All OPW spill containers and manholes exceed the requirements of the Highway 20 rating.

Materials:

Cover: cast aluminum or cast iron
Mounting ring: Duragard® coated cast iron
Bellows: polyethylene
Base: Duratuff® II or cast iron
Clamps: stainless steel
Seals: Buna-N

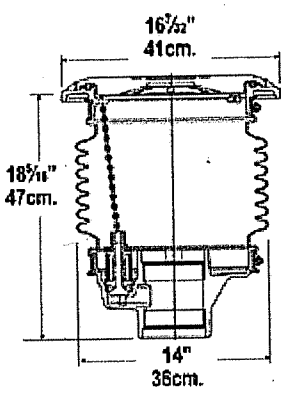
Part No.	Description
H12806M	4" NPT Nipple, 5- 1/2 Length (Fill Bucket)
H15114M	4" NPT Nipple, 4" Length (Vapor Bucket)

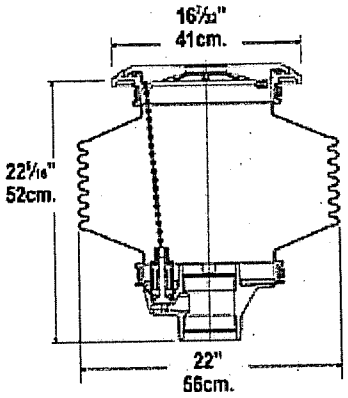
Sealant & Undercoatings

Part No.	Description
SL-1100	PISCES TM Urethane Sealant (10.3 oz.)
H15002M	Black Rubberized Undercoating (19.75 oz.)

Dimensions

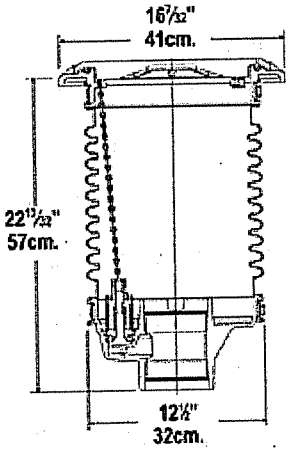


OPW 1-2100, 5-Gallon



OPW 1-2115, 15-Gallon

*Subtract 2" from height dimension for Cast Iron Base Models.



OPW 1-2100E, 7.5-Gallon
(Deep Bucket Model)

Replacement Parts

Part No.	Description
1DK-2100-EVR	Drain Valve Kit
1-21AC	Aluminum Cover w/ Seal
1-21CC	Cast Iron Cover w/ Seal
H12229M	Cover Seal
1PPK-2100	Hand Pump & Plug Kit for 1-2100
1DP-2100	Replacement Drain Plug Kit for 1-2100

CARB Certifications and Listings

(for 1-21---EVR and 1SC_2100 EVR series spill containers)

1c-2115

W.R.C.B. Compliance

The following prducts are in compliance with California Water Resources Control Board (W.R.C.B.) for coating of buried metal components, such as stainless steel clamps or entire Spill Containment Bucket bottoms.

Products

Part No.	Description
SL-1100	PISCES® Urethane Sealant (10.3 oz.)
H15002M	Black Rubberized Undercoating (19.75 oz.)

W.R.C.B. approved CCR Title 23, Div. 16, Sec. 1631 & 2636

Certified

Instruction Manual

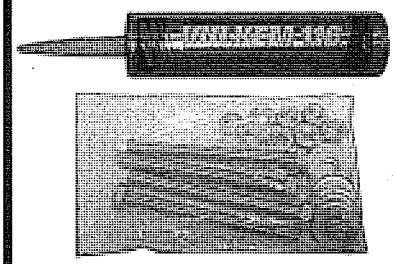
h12295pa-1-2100-091203.pdf

INSTALLATION INSTRUCTIONS
B7000 REVOLUTION SERIES

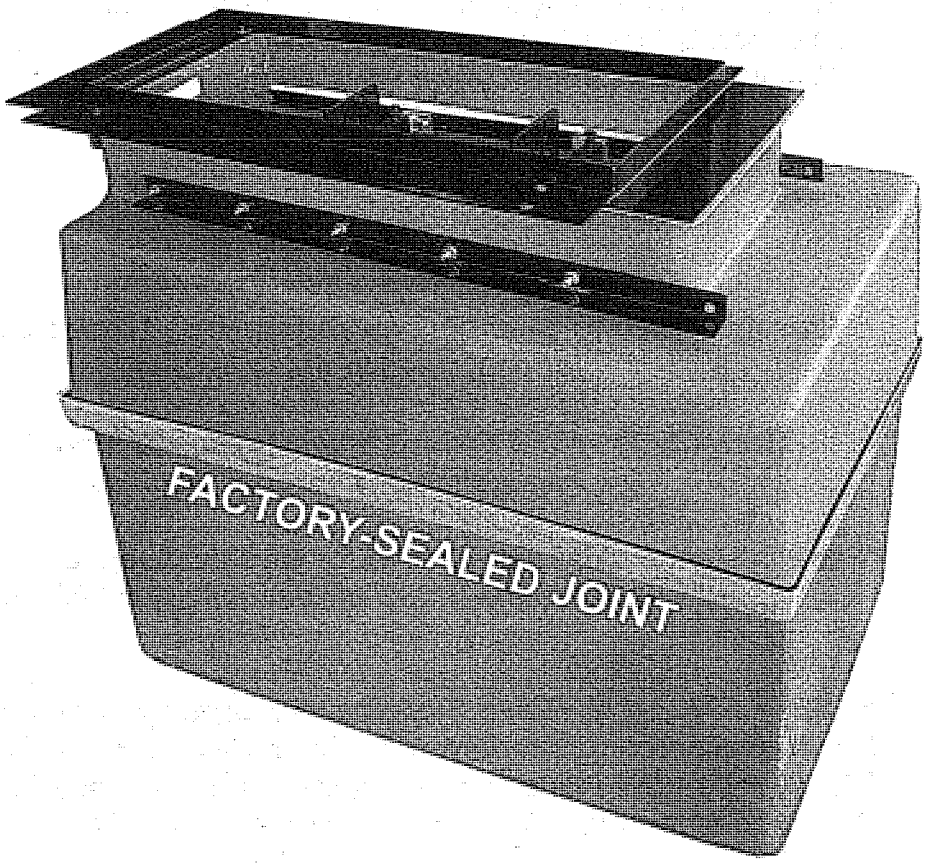
SOLID (factory sealed) DISPENSER CONTAINMENT

FACTORY-PROVIDED

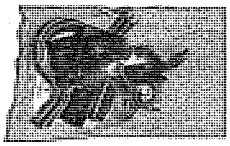
DISPENSER FRAME



1x Vulkem Sealant, 4x 1/2" bolts, 8x washers and 8x nuts are affixed to the Frame



PACKAGE FOR OPTIONAL EO



3x 3/4" clamps,
3x 1" clamps,
8x screw mounts
and 8x nuts

TOOLS

(NOT PROVIDED)

Acetone, air grinder, air drill, safety equipment

REQUIRED

Standard Caulk Gun

BRAVO SYSTEMS

B) Water testing sump joint and penetrations.....p. 4
C) Concrete instructions for Electrical Offset.....p. 5
D) Adjusting the product shear valve..... p. 6

NOTICE

- Closely adhere to all directions and warnings indicated on the product or contained in these instructions.

- Warranty is void if there is any evidence of modification, abuse, negligence or improper installation.

- For assistance please call Bravo for technical support at (800) 28-BRAVO. Outside the U.S.A. please call (323) 888-4133.

SAFETY FIRST! S. Bravo Systems, Inc. urges you to carefully adhere to the normal safety procedures and precautions followed by your company. Please follow the mandates and compliances decreed by OSHA, local, State and federal regulations regarding the use of this product.

WARRANTY

All containment systems sold by S. Bravo Systems, Inc. are warranted to be free from defects in material and workmanship for a period of one year from date of purchase. This warranty will be limited to the repair and replacement of Bravo parts only and will exclude all claims for labor or consequential damage. No other express warranties given and no affirmation of S. Bravo Systems, Inc., or its agents and/or representatives, by words or action, will constitute a warranty. IT IS EXPRESSLY AGREED THAT THIS WARRANTY WILL BE IN LIEU OF ALL WARRANTIES OF FITNESS AND IN LIEU OF THE WARRANTY OF MERCHANTABILITY.

This warranty is void if there is any evidence of modification, abuse, negligence, or improper installation. If any fittings or components, other than S. Bravo Systems approved fittings or components, are used in conjunction with any S. Bravo Systems product, the warranty pertaining to these products is immediately void.

UPON ARRIVAL

Inspect your sumps for damage, which would be visible as bright white areas of fiberglass.

A) LEVELING ANDPENETRATIONS

A.1) Determine your dispenser grade, run & secure a grade line.

A.2) With your island form in place, use angle stock (NOT Provided) to span the width of the island. Hang the UDC from the metal frame on both sides & secure it's position. Always set box at a minimum 1/4" above island level. **IF NO ISLAND WILL BE INSTALLED**, ensure the box is set at a minimum of 1" above grade. **(See Fig. A.2)**

A.3) Shovel a wide bed of peagravel under the UDC to support it fully.

A.4) Install your brackets, shear valves and flexes. Mark sump for penetration fittings.

A.5) Install all product Fittings and piping to the bottom Sump. Measure your fittings overall diameters. Using these measurements, plan your penetrations so that the fittings are 1" away from all edges and corners. **DO NOT WATER TEST AT THIS TIME.** Allow a full cure time for all penetration fittings.

A.6) Seal your piping system and test your primary and secondary lines (if applicable).

A.7) Only after your piping system has passed its tests, proceed to seal your pipe lines to your penetration fittings (if applicable).

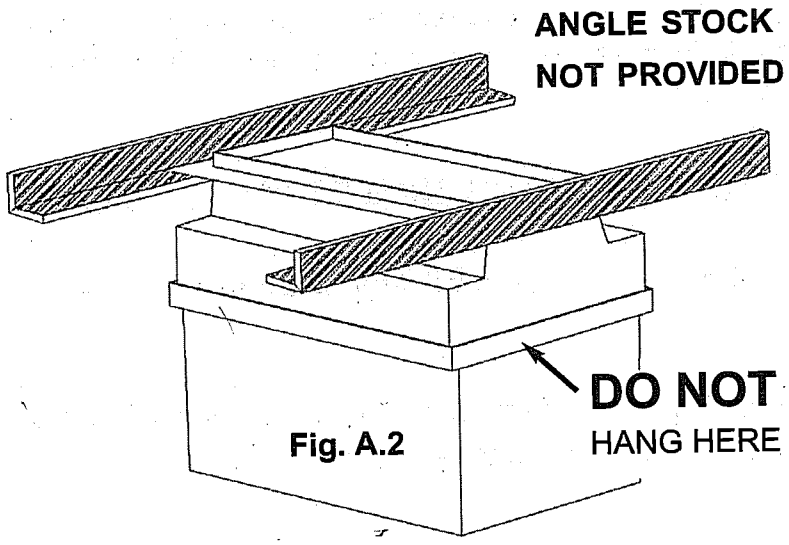

Fig. A.2

Rest Angle Stock across your island form to secure the assembled sump to the correct position and grade

DO NOT HANG SUMP DURING WATER TESTING

B) WATER TESTING

Sump must be supported from the bottom. Fill with water to no more than 2" above the factory sealed joint and monitor for one hour. Look for leaks at the sealed joint, fittings, and all edges and corners. If any leaks are found at the sealed joint or on fiberglass walls, see **Step B.3** for repair instructions. **All local regulations precede these instructions.**

B.1) Seal any/all gaps between the fiberglass and the metal frame with Vulkem. Apply approximately 1/8" thick on the outside along the joint at the bottom edge of the frame, then seal any gaps from the inside as necessary. **(Fig. B.1)**

B.2) Install your Concrete Anchor Bolts to your dispenser frame as shown in **Fig. B.2**.

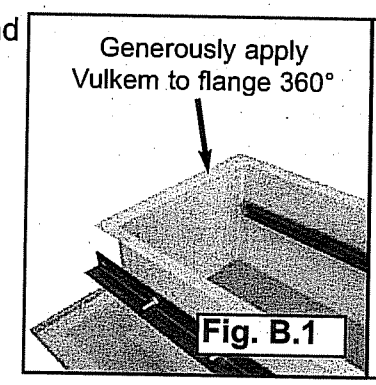

Fig. B.1

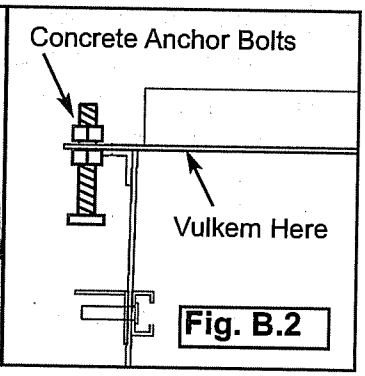

Fig. B.2

B.3) - Repair instructions for your sump, For Pinhole Leaks

Focus on edges, corners and All Penetrations. **For large leaks, consult factory.**

A: Locate leak point(s) and mark with marker so you can locate it / monitor it.

B: Repair or reinstall penetration fittings according to your penetration fitting manufacturers' Installation / Maintenance Instructions.

C: Abrade a 3" diameter area centered on the leak point until natural resin/fiberglass material can be seen. Dust with shop brush or compressed air and do not use shop towels or acetone on the abraded area(s). Then apply a 3-layer strip of 2" x 2" resin-saturated fiberglass mat squarely on the abraded area.

D: Roll out any air bubbles with a ***chamfer (metallic fiberglass) roller***. Let cure.

E: After cure, knock down fiberglass hairs, and apply another flow coat of resin only. Let cure.

ALLOW ANY REPAIRS TO FULLY CURE BEFORE TESTING SUMP AGAIN

B.4) Backfill your site with your available backfill material, in preparation of concrete pouring.

B.5) Make sure your sump is properly secured to the island supports so that it will not interfere with your Concrete pour. When secure, proceed to pour concrete around UDC.

C) BRAVO ELECTRICAL OFFSET FRAME INSTALLATION INSTRUCTIONS

IMPORTANT Make sure all electrical conduits and piping are clear of any equipment or other obstructions in the dispenser. Physically check your hydraulic cabinet for obstructions before any installation begins.

BRAVO UNDER DISPENSER CONTAINMENT ELECTRICAL OFFSET INSTRUCTIONS

C.1) The Frame should be fully installed and sealed with Vulkem before conduit installation.

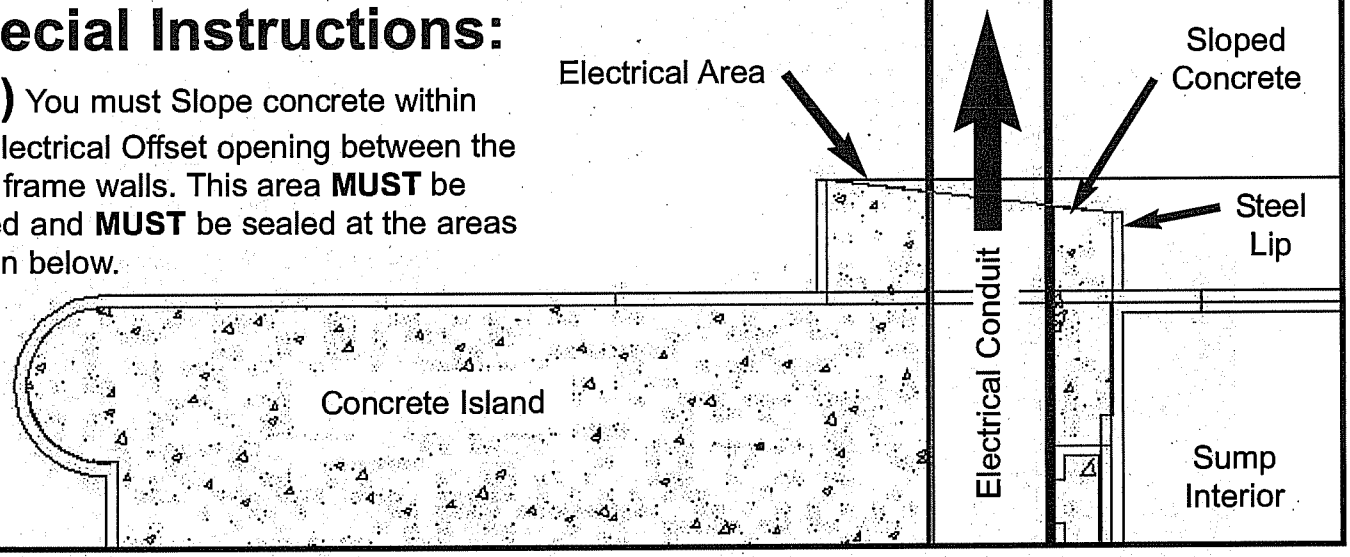
C.2) Make sure all electrical conduits (piping) are clear of any equipment in the dispenser. Physically check your hydraulic cabinet for obstructions before any installation begins.

C.3) Conduits must be run and tightly secured to the sump.

C.4) Pour concrete around outside of Dispenser Sump per Bravo Installation Instructions.

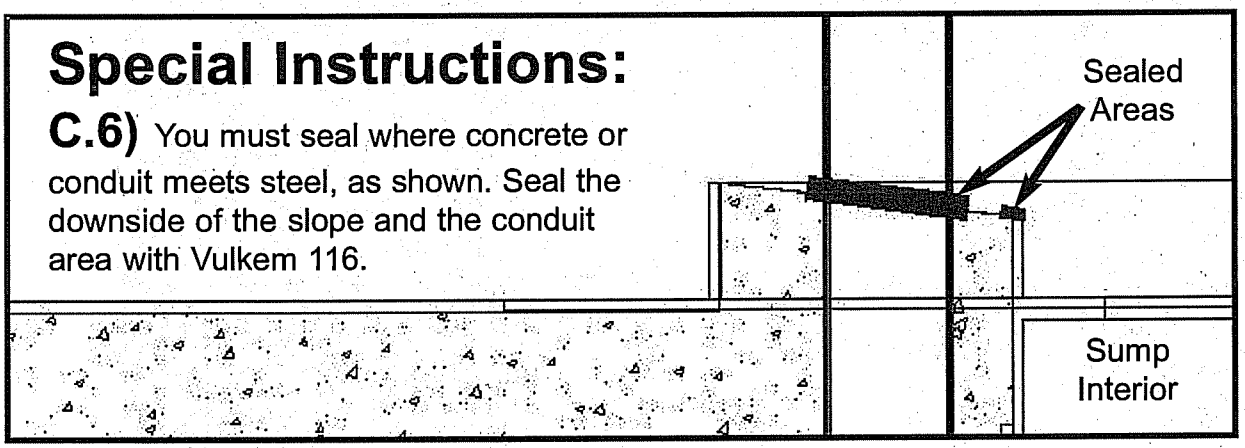
Special Instructions:

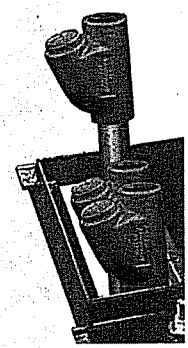
C.5) You must Slope concrete within the Electrical Offset opening between the steel frame walls. This area **MUST** be sloped and **MUST** be sealed at the areas shown below.



Special Instructions:

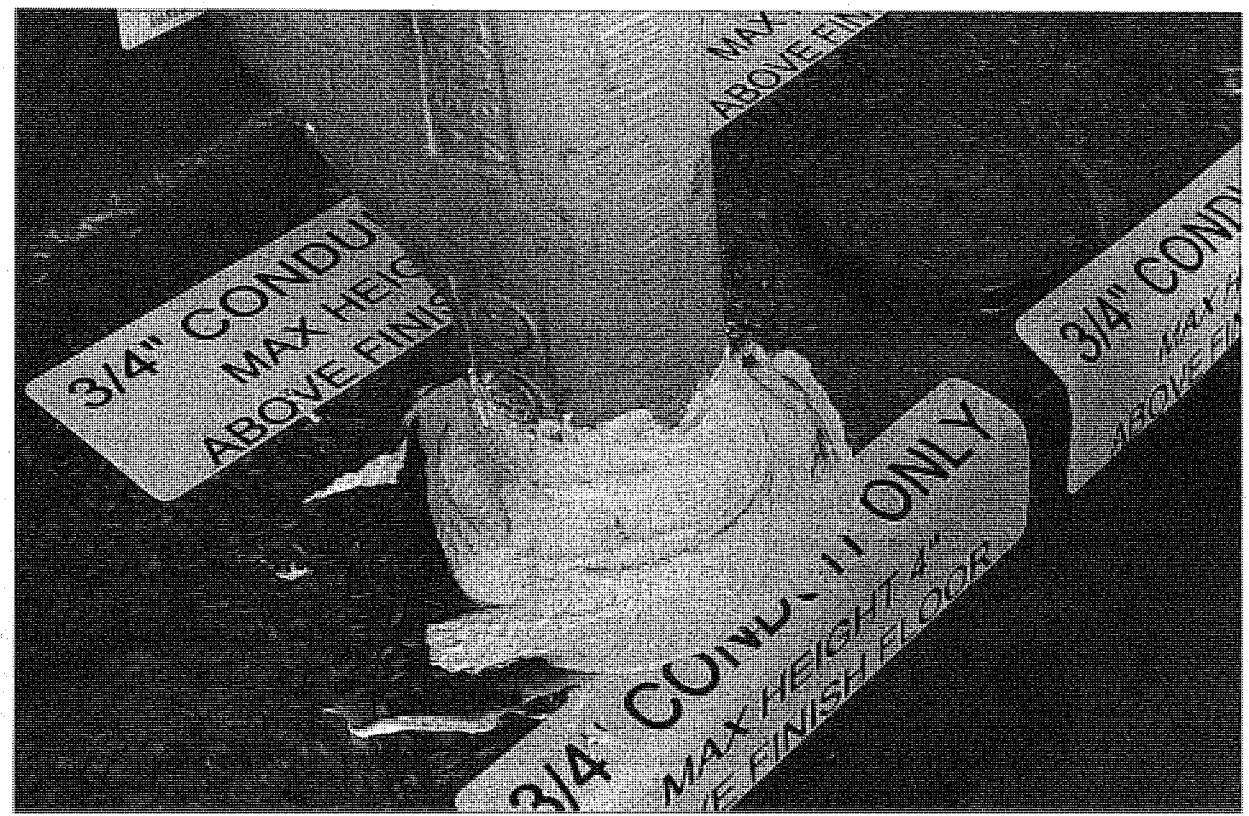
C.6) You must seal where concrete or conduit meets steel, as shown. Seal the downside of the slope and the conduit area with Vulkem 116.



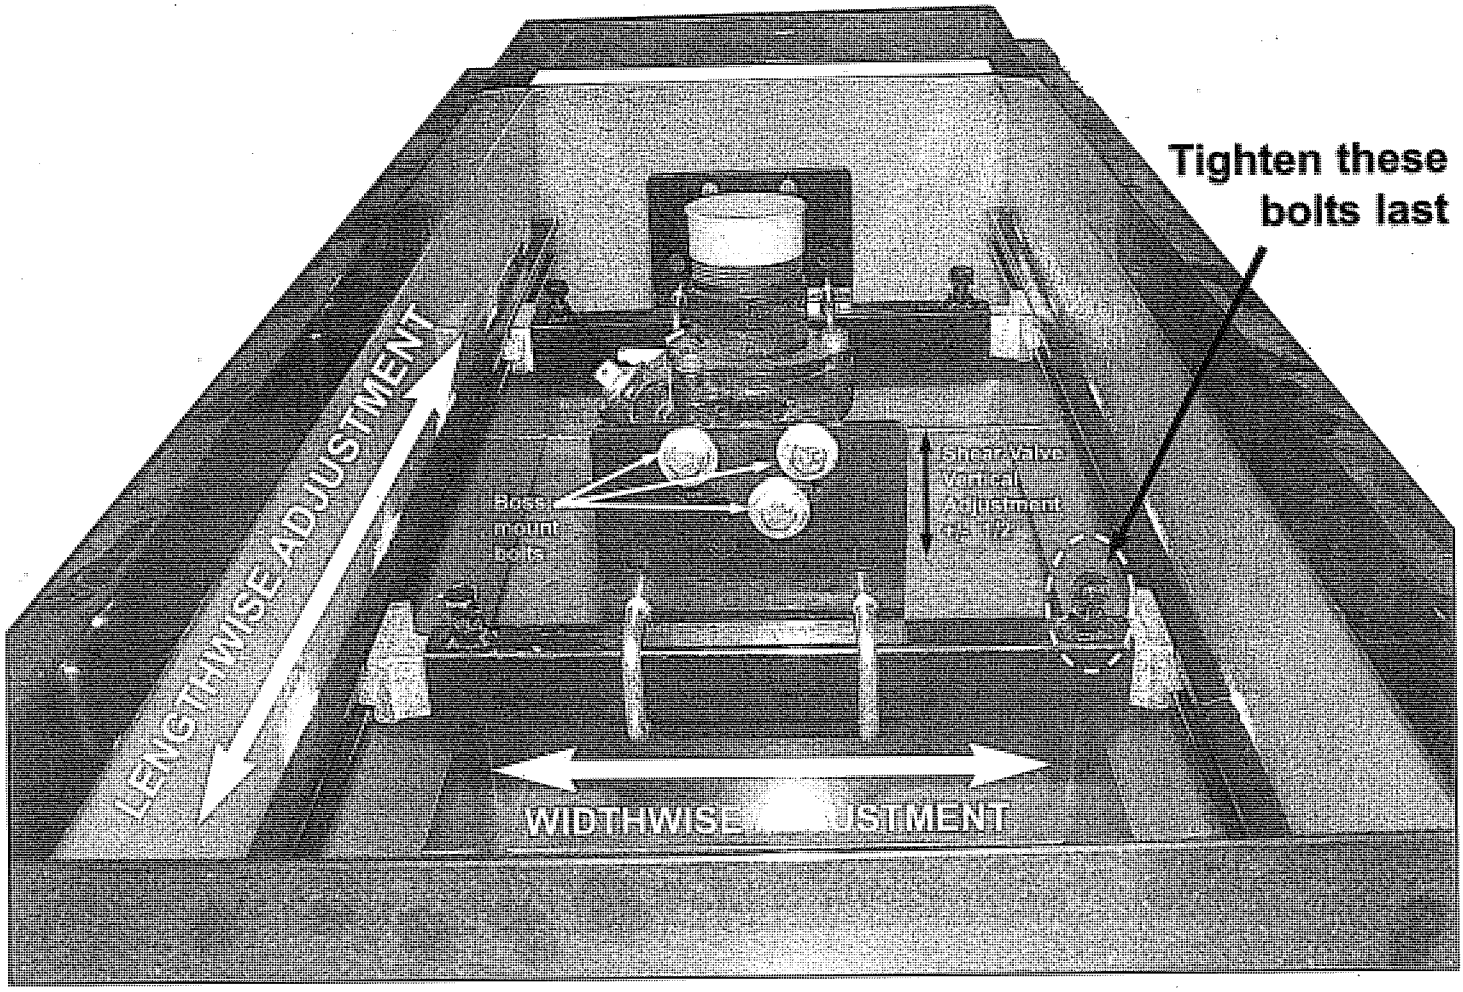


FOR WAYNE-VAC ELECTRICAL OFFSET

Mark the medallions you need to penetrate with conduit and use a centralized hole saw centered in the middle of the raised medallion to cut the ones you need. Only use a hole saw that matches your conduit size and hand sand the hole edge if the conduit does not cleanly fit through. After target elevation, seal-offs and other conduit components have been installed, seal the open edge with Vulkem 116 polyurethane sealant. This sealant comes in a standard size caulk tube and is provided by Bravo with your sump.



D - ADJUSTING THE PRODUCT SHEAR VALVE



D.1 - When the dispenser is anchored properly, the dispenser inlet or pump inlet should be plumb with the product shear valve. If the product shear valves are positioned correctly, connect them with a union.

D.2 - If the valve and inlet are not aligned, determine the distance necessary for the valve to be moved. To adjust the valve lengthwise and/or widthwise, loosen the 3/8" bolts on the bracket ends and on the bracket inserts. Align valve to dispenser inlet and retighten bolts.

D.3 - Connect dispenser riser pipe to the product shear valve. A nipple may be required to extend the dispenser riser. If product shear valves are positioned correctly, connect them with a union.

IMPORTANT **For rigid piping apply a UL classified pipe sealant for use and handling of gasoline and petroleum oils to externally threaded connections.**

D.4 - Now retighten bolts and/or nuts attaching the shear valves to the bracket. Use provided washers. Tighten the top bolts for the brackets last, as this can restrict adjustability if tightened early.

D.5 - Connect electrical and vapor lines to the dispenser as required by local regulations. Always follow electrical and vapor component manufacturers' Installation Instructions.

SAN MARTIN CA 95046

EXAMINATION RESULT: **PASS**

Congratulations! You have passed the above named examination. Your wallet card will be forwarded to you by ICC within six weeks from the last day of the month in which you tested. This certificate is current for two years.

You may request a wall certificate from ICC as well. Throughout 2010, this certificate will be provided at no cost to you, if you request it within 90 days of your exam. Only one wall certificate per exam passed will be provided to you at no charge. For more information on requesting a wall certificate, go to www.iccsafe.org/inspector.

It is extremely important that you notify Pearson VUE and ICC of any changes in name and/or address to avoid the possibility of your wallet card and/or certificate not being received. Please contact Pearson VUE at 800-275-8301 and ICC at certexam@iccsafe.org with changes to your name and address (name changes may require additional documentation). There may be an additional fee if a certification is re-issued due to a misspelled name or incorrect address.

TO VERIFY AUTHENTICITY OF THIS DOCUMENT YOU MUST TURN OVER AND RUB THE PEARSON VUE LOGO WITH FINGER. AUTHENTIC DOCUMENT WILL CHANGE COLOR FROM ORANGE TO YELLOW

practice developed in accordance with voluntary consensus standards. The owner or operator shall certify that the piping was installed in accordance with the above requirements of section 2635(d). The certification shall be made on the "Underground Storage Tank Certification of Installation/Modification" form in Title 27, Division 3, Subdivision 1, Chapter 6.

(d) Lined trench systems used as part of a secondary containment system shall be designed and constructed according to a code of practice or engineering standard approved by a state registered professional engineer. The following requirements shall also apply:

(1) All trench materials shall be compatible with the substance stored and evaluated by an independent testing organization for their compatibility or adequacy of the trench design, construction, and application.

(2) The trench shall be covered and capable of supporting any expected vehicular traffic.

(e) All new primary piping and secondary containments systems shall be tested for tightness after installation in accordance with manufacturer's guidelines. Primary pressurized piping shall be tested for tightness hydrostatically at 150 percent of design operating pressure or pneumatically at 110 percent of design operating pressure. If the calculated test pressure for pressurized piping is less than 40 psi, 40 psi shall be used as the test pressure. The pressure shall be maintained for a minimum of 30 minutes and all joints shall be soap tested. A failed test, as evidenced by the presence of bubbles, shall require appropriate repairs and retesting. if there are no manufacturer's guidelines, secondary containment systems shall be tested using an applicable method specified in an industry code or engineering standard. Suction piping and gravity flow piping which cannot be isolated from the tank shall be tested after installation in conjunction with an overfilled volumetric tank integrity test or other test method meeting the requirements of section 2643(f), if approved by the local agency.

(f) Underground piping with secondary containment, including under-dispenser piping with secondary containment, shall be equipped and monitored with monitoring systems as follows:

(1) All secondary containment, including under-dispenser containment, and under-dispenser spill control or containment systems shall be equipped with a continuous monitoring system that either activates an audible and visual alarm or stops the flow of product at the dispenser when it detects a leak.

(2) Automatic line leak detectors shall be installed on underground pressurized piping and shall be capable of detecting a 3-gallon per hour leak rate at 10 psi within 1 hour with a probability of detection of at least 95 percent and a probability of false alarm no greater than 5 percent, and shall restrict or shut off the flow of product through the piping when a leak is detected.

[Editor's note – Version of (f)(3) in effect prior to 1/17/2008]
(3) Until November 9, 2004, other monitoring methods may be used in lieu of the requirement in subdivision (2) if it is demonstrated to the satisfaction of the local agency that the alternate method is as effective as the methods otherwise required by this section. Continuous monitoring systems as described in subdivision (1), which shut down the pump in addition to either activating the audible and visual alarm or stopping the flow of product at the dispenser, satisfy the automatic line leak detector requirement of subdivision (2).

[Editor's note – Version of (f)(3) in effect 1/17/2008]
(3) Until November 9, 2004, other monitoring methods may be used in lieu of the requirement in subdivision (2) if it is demonstrated to the satisfaction of the local agency that the alternate method is as effective as the methods otherwise required by this section. As an example, continuous monitoring systems as described in subdivision (1), which shut down the pump in addition to either activating the audible and visual alarm or stopping the flow of product at the dispenser, satisfy the automatic line leak detector requirement of subdivision (2), for purposes of this subdivision (f)(3).

(4) Monitoring shall be conducted on all underground pressurized piping with secondary containment at least annually at a pressure designated by the equipment manufacturer, provided that the method is capable of detecting a minimum release equivalent to 0.1 gallon per hour defined at 150 percent of the normal operating pressure of the product piping system at the test pressure with at least a 95 percent probability of detection and not more than a 5 percent probability of false alarm.

(5) Continuous monitoring systems as described in subdivision (f)(1) satisfy the annual tightness testing requirement of subdivision (f)(4) if both of the following conditions are met:

Summary of Violations & Notice to Comply

Program: PR0395982 - UNDERGROUND STORAGE TANK - 2399
Inspection Type: ROUTINE INSPECTION

VC	Class	Violation	Corrective Actions Taken
T020	**II**	**UST FINANCIAL RESPONSIBILITY [2010007]** Petroleum underground storage tank (UST) owner/operator failed to submit or keep current evidence of UST financial responsibility for taking corrective action and for compensating third parties for bodily injury and property damage caused by a release. ***Update the Financial Responsibility information and submit it to CERS.*** Within 30 days, upload and electronically submit a UST Certification of Financial Responsibility (CFR) form via the California Environmental Reporting System (CERS) website at http://cers.calepa.ca.gov. Keep a copy of the CFR form and all required supporting documentation at this facility or at your place of business. If the State UST Cleanup Fund is used as a financial responsibility mechanism, update the chief financial officer (CFO) letter annually, within 150 days after the close of each fiscal year. If a financial test of self-insurance, guarantee, or local government financial test is used, update the CFO letter annually, within 120 days after the close of each fiscal year. If an insurance policy is used, ensure that it contains endorsement language meeting the requirements of 40 CFR 280.97. The "Certification of Financial Responsibility for Underground Storage Tanks Containing Petroleum" form (UN-049) and Petroleum UST Financial Responsibility Guide are available at www.EHinfo.org/hazmat. [HSC 25292.2(a), 25292.2, 25299.30-25299.34; 23 CCR 2711(a)(11), 2808.1, 2809-2809.2]	
T050	**M**	**RECORD KEEPING: DUSTO MONTHLY INSPECTION REPORTS [2010004]** Underground storage tank (UST) owner/operator failed to keep copies of the Designated UST Operator (DUSTO) monthly inspection records on-site available for inspection. ***DUSTO reports were disposed of by facility employees. Ensure employees maintain the DUSTO reports and keep them available for review. Consider keeping backup copies of reports left on site.*** Keep a copy of each DUSTO inspection record and required attachments for the most recent 12 months on-site and available for inspection. Inspections can be documented by properly completing all items on the "Underground Storage Tank System Designated UST Operator Monthly Inspection Report" form (UN-057), available at www.EHinfo.org/hazmat. [23 CCR 2715(e)]	

OFFICIAL NOTICE OF INSPECTION

Facility ID: FA0258851
Facility Name: GRANITE ROCK COMPANY-PAVEX CENTRAL
Site Address: 120 GRANITE ROCK WY, SAN JOSE, CA 95136
Inspection Date: 08/12/2016

Summary of Violations & Notice to Comply

VC	Class	Violation	Corrective Actions Taken
T180	II	**INTERSTITIAL MONITORING: AUDIBLE & VISUAL ALARMS [2030003]** Underground storage tank (UST) continuous monitoring system does not have functional audible and visual alarms. ***Due to the nature of the site and the location of the alarm panel (outside in the yard with heavy equipment driving by and inside a closed panel box) while the audible and visible alarms function at the panel, it would be difficult for employees to observe them. Either have the alarms forwarded to a staffed location (the panel sends inventory information wirelessly to the office) or install an external strobe and horn of sufficient volume to attract employee's attention.*** UST monitoring systems must have audible and visual alarms that activate when a leak of hazardous materials from primary containment into secondary containment occurs and when water intrusion into secondary containment is detected. Have the continuous monitoring system repaired as soon as possible by a qualified UST Service Technician so the audible and visual alarms function properly. No permit from HMCD is required for this repair. Submit with your written response to this Notice to Comply documentation showing that the repair has been made and that the audible and visual alarms work (e.g., copy of work order). If the monitoring system cannot be repaired, it must be replaced with an approved system (i.e., equipment listed in Local Guidance Letter LG-113 at www.waterboards.ca.gov/water_issues/programs/ust/leak_prevention/index.shtml). You must obtain a UST retrofit permit from HMCD prior to replacing monitoring equipment. Plans must be submitted in accordance with HMCD's "Plan Submittal Requirements for Hazardous Materials Systems" (HMCD-004) available at www.EHinfo.org/hazmat. Upon plan check approval, have the work done per the approved plans as soon as possible and schedule an inspection for HMCD to witness functional testing of the monitoring equipment by the UST Service Technician. [23 CCR 2632(c)(2)(B), 2636(f)(1), 2666(a)]	
T320	II	**PIPE MONITORING: INTERSTITIAL MONITORING NON-FUNCTIONAL (TANK INSTALLED 1/2/84 - 6/30/04) [2030018]** Leak detection equipment monitoring piping secondary containment (e.g., submersible turbine sump, piping sump, vapor pot) in an Underground storage tank (UST) system installed between 1/2/1984 and 6/30/2004 failed to function properly when tested or is otherwise non-functional. ***The float and chain in the high flow UDC did not function when initially tested. After adjustment the float and chain functioned as required. No further corrective actions required.*** All secondary piping and sumps that provide secondary containment for regulated piping systems must be continuously monitored by a method that either activates audible and visual alarms or shuts down the flow of product at the dispenser when a leak is detected. Have a qualified UST Service Technician replace the non-functional leak detection equipment as soon as possible and submit documentation of the repair and startup testing results with your written response to this Notice to Comply. No permit is required from HMCD for like-for-like replacement (same manufacturer and model number) of sensors. If sensor replacement will not be like-for-like, or if the monitoring system console must be replaced, apply for a UST retrofit/repair permit from HMCD. Plans must be submitted in accordance with HMCD's "Plan Submittal Requirements for Hazardous Materials Systems" (HMCD-004) available at www.EHinfo.org/hazmat. Upon plan check approval, have the work done per the approved plans as soon as possible and schedule an inspection so HMCD can witness functional testing of the monitoring equipment. [23 CCR 2636(f)(1)]	
OFFICIAL NOTICE OF INSPECTION

Facility ID: FA0258851 **Inspection Date:** 08/12/2016
Facility Name: GRANITE ROCK COMPANY-PAVEX CENTRAL
Site Address: 120 GRANITE ROCK WY, SAN JOSE, CA 95136

Summary of Violations & Notice to Comply

VC	Class	Violation	Corrective Actions Taken
T500	II	**PRIMARY CONTAINMENT NOT PRODUCT-TIGHT [2060027]** Underground storage tank (UST) and/or regulated piping primary containment is not made of (or, if single-walled, lined with) a material that is product-tight and compatible with the substance stored. ***The diesel piping in the dispenser is leaking and there was diesel accumulating in the UDC. Have the piping repaired to maintain primary containment. Retain the repair documentation.*** Immediately cease storing hazardous materials in the UST and remove any released hazardous material from secondary containment. Contact the tank/piping manufacturer or the manufacturers' authorized representatives to determine how badly the tank system has been damaged and whether it can be repaired. If repair is possible, you must submit plans to, and obtain approval from, HMCD prior to beginning work. If the tank system cannot be repaired, apply for a UST Closure Permit within 90 days and complete closure of the tank system within 6 months. Keep HMCD advised of any determinations made regarding the status of the tank. UST closure guidelines, plan submittal requirements, permit application forms, and the fee schedule are available at www.EHinfo.org/hazmat. [HSC 25290.1(c)(1), 25290.2(c)(1), 25291(a)(1); 23 CCR 2631.1(a), 2660(m)]	
T900	II	**RESPONSE TO UST NOTICE OF VIOLATION [2030073]** Underground storage tank (UST) permit holder failed to implement corrective actions within 30 calendar days of receiving an Official Notice of Inspection (Notice to Comply) from HMCD citing violations of UST law or regulations. ***The response to the 8/7/2015 inspection report was not received by our office. Submit the completed inspection report with the response to this current report. Ensure the violations noted are corrected in a timely manner and the response is returned to our office.*** Correct all outstanding violations. Submit to HMCD the previous Official Notice(s) of Inspection with the Corrective Actions Taken" column and "Certification of Compliance" signature section completed. If any violation has not yet been corrected, describe the corrective actions that will be taken and provide a specific date by which those actions will be completed. [23 CCR 2712(f)]	

Comments: On-site to witness the annual monitoring system certification and spill bucket test performed by Mr. Israel Santillan (certifications current) of Service Station Systems.

Split tank, diesel is pressurized, gasoline is conventional suction. Tank annular and sump sensors tested in water and provided audible and visible alarms at the panel. The diesel sump sensor also provided positive shutdown. Fail safe (sensor out and power out) was tested and functioned as required.

Diesel under dispenser containment (UDC) monitored by float and chain assemblies. Float and chain assemblies tested with water and functioned properly. The gasoline UDC is monitored by a stand-alone sensor. The sensor was tested in water and shut down the dispenser pump.

Overfill protection is provided in all tanks by a flapper valve in the fill riser.
The spill buckets are direct buried and were hydrostatically tested for one hour with no loss.
The VMI LD 2000 mechanical line leak detector (MLLD) detected a simulated 3 gph leak at 10 PSI and held slow flow.

Permit valid through 10/31/2019.

NOTE: There is a false "Theft Alarm" that comes up often. It is recommended that this is repaired to ensure leak alarms are noticed at the earliest opportunity and not dismissed as a false alarm.
-Secondary containment (SB989) testing is due next August (8/2017).

OFFICIAL NOTICE OF INSPECTION

Facility ID: FA0258851
Facility Name: GRANITE ROCK COMPANY-PAVEX CENTRAL
Site Address: 120 GRANITE ROCK WY, SAN JOSE, CA 95136

Inspection Date: 08/12/2016

Summary of Violations & Notice to Comply

Submit a copy of the Monitoring Certification and Spill Bucket Test reports to our office within 30 days and keep a copy available for review for at least 3 years. Reports may be sent via email to USTinspector@deh.sccgov.org.

Immediately correct any violation designated as a Class I or Class II violation. Correct all other violations no later than 09/11/2016, unless otherwise noted by the inspector.

Using the space provided, write a brief description of the actions taken by the facility to correct each violation. Attach additional pages if more space is needed. Within 5 days of achieving compliance or within 35 days of the inspection date, whichever comes first, sign the certification statement below and return a copy of this report to HMCD. Time granted for correction of violations does not preclude any enforcement action by HMCD or other agencies. This facility may be subject to reinspection at any time. Program: SR0847555 - UNDERGROUND STORAGE TANK - 2314
Inspection Type: ONGOING CONSTRUCTION/EQUIPMENT INSPECTION

VC	Class	Violation	Corrective Actions Taken
		No violations were observed during this inspection.	

Comments: Underground storage tank (UST) monitoring system replacement. All sensors tested in water by Mr. Israel Santillan (certifications current) of Service Station Systems and produced audible and visible alarms. Positive shutdown confirmed. Sensor out is positive shutdown properly functional. Power out (also required for Fail Safe) not properly configured.

Contact me for testing of fail safe for final sign off.

Program: PR0395982 - UNDERGROUND STORAGE TANK - 2399
Inspection Type: ROUTINE INSPECTION-COMPLETED

VC	Class	Violation	Corrective Actions Taken
T320	**II**	**PIPE MONITORING: INTERSTITIAL MONITORING NON-FUNCTIONAL (TANK INSTALLED 1/2/84 - 6/30/04) [2030018]** Leak detection equipment monitoring piping secondary containment (e.g., submersible turbine sump, piping sump, vapor pot) in an Underground storage tank (UST) system installed between 1/2/1984 and 6/30/2004 failed to function properly when tested or is otherwise non-functional. _____ ***The exterior visible alarm is connected to a outdoor light switch and does not indicate when an alarm is active. Also, there is not an external (the monitoring panel is inside a protective enclosure) audible alarm. Reconfigure the visible alarm to activate only when there is an active alarm and install an external audible alarm. This will be done in conjunction with the open project for the installation (SR0847555).*** _____ All secondary piping and sumps that provide secondary containment for regulated piping systems must be continuously monitored by a method that either activates audible and visual alarms or shuts down the flow of product at the dispenser when a leak is detected. Have a qualified UST Service Technician replace the non-functional leak detection equipment as soon as possible and submit documentation of the repair and startup testing results with your written response to this Notice to Comply. No permit is required from HMCD for like-for-like replacement (same manufacturer and model number) of sensors. If sensor replacement will not be like-for-like, or if the monitoring system console must be replaced, apply for a UST retrofit/repair permit from HMCD. Plans must be submitted in accordance with HMCD's "Plan Submittal Requirements for Hazardous Materials Systems" (HMCD-004) available at www.EHinfo.org/hazmat. Upon plan check approval, have the work done per the approved plans as soon as possible and schedule an inspection so HMCD can witness functional testing of the monitoring equipment. [23 CCR 2636(f)(1)]	

Summary of Violations & Notice to Comply

VC	Class	Violation	Corrective Actions Taken
T600	II	**UST INSTALLATION / MODIFICATION PERMIT [2060009]** Underground storage tank (UST) owner/operator failed to obtain a permit from HMCD prior to installing, replacing, repairing, or modifying a UST system. _____ ***New UST monitoring system (panel, sensors, exterior visible alarm) installed with out first obtaining a permit. A retroactive permit has been applied for (SR0847555). Ensure you check with our office before performing work on the UST system to verify what work will require a permit. Underground Storage Tank Installation, Repair, and Upgrade Permit Requirements (HMCD-101) attached for reference.*** _____ Within 30 days, submit plans to and apply for a retroactive permit from HMCD for the work that was done. Include with your submittal plans demonstrating that: 1) The UST is structurally sound; 2) The method(s) of repair or upgrade will prevent unauthorized releases due to structural failure or corrosion during the remaining operating life of the UST system; and 3) Materials used in the repair or upgrade are compatible with the existing UST system materials and will not be subject to deterioration due to contact with the hazardous materials being stored. Plan submittal requirements, permit application forms, and fee schedule are available at www.EHinfo.org/hazmat. [HSC 25299(a)(2), 25299(b)(4); 23 CCR 2661(b), 2662(a)]	
T850	M	**EXEMPTION CONDITIONS: FAIL SAFE SHUTDOWN [2030017]** Underground storage tank (UST) owner/operator failed to meet requirements for exempting underground pressurized piping from the requirement to be tightness tested annually by a State-licensed tank tester or by an electronic line leak detector (ELLD) programmed to perform an annual 0.1 gallon-per-hour leak test. _____ ***Sensor out condition caused positive shutdown, but power out did not. Either reconfigure the monitoring system to shut down power to the diesel turbine when it loses power or begin performing annual 0.1 gph line tightness tests, as required.*** _____ Have a qualified UST Service Technician repair the secondary containment monitoring system so it shuts down the pump or stops the flow of product at the dispenser when a leak is detected in the under-dispenser containment (UDC) and, for all pressurized product piping not contained in the UDC, provides fail-safe shutdown of the pump/turbine. No permit from HMCD is required for replacement of sensors or relays provided that they are replaced like-for-like. You may implement annual line tightness testing within 30 days rather than making the above repairs. If you do so, notify HMCD at least 2 working days prior to the test date and electronically submit a revised UST Monitoring Plan via the California Environmental Reporting System (CERS) at cers.calepa.ca.gov within 30 days. Submit a copy of the line tightness test report within 30 days of the testing date. [23 CCR 2636(f)(5)]	

Comments: On-site to witness the annual monitoring system certification and spill bucket test performed by Mr. Israel Santillan (certifications current) of Service Station Systems.

Split tank, diesel is pressurized, gasoline is conventional suction. Tank annular and sump sensors tested in water and provided audible and visible alarms at the panel. The diesel sump sensor also provided positive shutdown. Diesel under dispenser containment (UDC) monitored by float and chain assemblies. Float and chain assemblies tested with water and functioned properly. The gasoline UDC is monitored by a stand-alone sensor. The sensor was tested in water and shut down the dispenser pump.

Overfill protection is provided in all tanks by a flapper valve in the fill riser.
The spill buckets are direct buried and were hydrostatically tested for one hour with no loss.
The emergency shut off switch was tested and shut down the diesel turbine.

The VMI LD 2000 mechanical line leak detector (MLLD) detected a simulated 3 gph leak at 10 PSI and held slow flow.

Summary of Violations & Notice to Comply

Reviewed DUSTO Monthly Reports, DUSTO Training records, testing reports and maintenance documentation.

Tank and monitoring system information submitted to the California Environmental Reporting System (CERS) on 7/21/2015 will need to be updated to reflect new monitoring equipment.

Permit valid through 10/31/2019.

Submit a copy of the Monitoring Certification and Spill Bucket Test reports to our office within 30 days and keep a copy available for review for at least 3 years. Reports may be sent via email to USTinspector@deh.sccgov.org.

Immediately correct any violation designated as a Class I or Class II violation. Correct all other violations no later than 09/06/2015, unless otherwise noted by the inspector.

Using the space provided, write a brief description of the actions taken by the facility to correct each violation. Attach additional pages if more space is needed. Within 5 days of achieving compliance or within 35 days of the inspection date, whichever comes first, sign the certification statement below and return a copy of this report to HMCD. Time granted for correction of violations does not preclude any enforcement action by HMCD or other agencies. This facility may be subject to reinspection at any time. [Authority: HSC 25185(c), 25187.8, 25404.1.2(c)]

Re: Plan Check Review: SR0847555
Facility Name: Granite Rock
Project Location: 120 Granite Rock Way, San Jose
Project Description: Install Incon monitoring panel and 3 sensors (1 annular and 2 sumps).

Santa Clara County Hazardous Materials Program has reviewed the submittal for the project referenced above and **approves the plans with the following conditions**:

1. Systems shall be configured as described in the enclosed approved Hazardous Materials Construction Permit Application, Hazardous Materials Tank System Installation/Upgrade Equipment List, and plans.
2. Contact HMCD a minimum of 2 working days in advance to schedule the following inspection(s):
   - ☐ Pressure/vacuum testing of tank primary and secondary containment.
   - ☐ Pressure testing of primary and secondary piping.
   - ☐ Lake testing of sump(s), under dispenser containment (UDC), secondary containment berm(s), and spill containment.
   - ☒ Functional testing of leak detection monitoring equipment.
3. The following conditions shall also be met for final approval: N/A

Any substitution of equipment or reconfiguration of systems as described in approved plans requires prior approval from this Department. Be advised that plan check review and approval by San Jose Building Department and/or San Jose Fire Department may also be required prior to beginning work. A copy of this letter and one set of approved plans shall remain on the job site until final inspection.

Should you have any questions, contact the undersigned inspector at (408) 918-3458.

HAZARDOUS MATERIALS CONSTRUCTION PERMIT APPLICATION

For Use Within the Cities of Los Altos Hills, Monte Sereno, and Saratoga, and in Unincorporated Areas of Santa Clara County, Including Moffett Field, San Martin, and Stanford; and for Underground Storage Tank Systems Only in the Cities of Los Altos, Palo Alto, and San Jose

I. General Information

This document must be completed by any person who applies for a permit from the Hazardous Materials Compliance Division (HMCD) to install, retrofit, or upgrade a hazardous materials storage system/area (i.e., fuel tank, dry cleaning machine, laboratory, etc.). If the project involves the installation or retrofitting of a hazardous materials storage tank system, you must also submit a completed Hazardous Materials Tank System Installation/Upgrade Equipment List form. Refer to HMCD's Plan Submittal Requirements for Hazardous Materials Systems for additional requirements. Documents are available at **www.EHinfo.org/hazmat**.

II. Project Location Information

Facility Name: **Granite Rock Company** Bldg. No.:
Site Address: **120 Granite Rock Way** City: **San Jose** Zip: **95136**

HAZARDOUS MATERIALS TANK SYSTEM INSTALLATION/UPGRADE EQUIPMENT LIST

For Use Within the Cities of Los Altos, Los Altos Hills, Monte Sereno, Palo Alto, San Jose, Saratoga, and in Unincorporated Areas of Santa Clara County

I. General Information

One copy of this completed form shall be submitted to the Hazardous Materials Compliance Division (HMCD) along with the Hazardous Materials Construction Permit Application, equipment cut sheets, and project plans.

II. Project Information

This document covers the: ☐ Installation ☒ Upgrading ☐ Repair of ☐ Aboveground Tank(s) ☒ Underground Tank(s)

Provide the following information:

Facility Name (Tank Site): **Granite Rock Company - Construction Central Office** Bldg. No.:_____

Address: **120 Granite Rock Way** City: **San Jose**

III. Equipment Information

In the table below, **list the manufacturer name and specific model number** for each type of equipment listed in the second column. If an item is not applicable to this project, check the "N/A" box in the "Name of Equipment Manufacturer" column. Brochures and/or manufacturers' cut sheets showing listings (e.g., UL) and other applicable technical information for **all equipment listed** shall be submitted with this form.

TS-750

Fixed Feature Tank Monitoring and Compliance Kits

The TS-750 kit is a complete, easy to order and cost-effective solution for your environmental compliance needs. It provides inventory control and leak detection for sites with up to four underground storage tanks.

Highlights

TS-750 compliance tank gauge includes printer and optional continuous 24 hour leak testing (SCALD). Capable of multiple alarm modes.

Uses magnetostrictive technology probes for unparalleled accuracy.

Reports product and water levels in tank.

Temperature compensated.

Will accommodate tanks up to 12 feet in diameter.

Kits provide for easy ordering and great value.

Specs

Number of tanks monitored: 1, 2, 3 or 4.

Output only channels: 2.

Sensor inputs: 8.

Dimensions: 12" × 11" × 4".

Display type: alphanumeric LCD.

Applicable liquids: petroleum.

Level units: inches or millimeters.

Volume units: gallons or liters.

Temperature units: degrees Fahrenheit or Celsius.

Display size: 2 lines of 40 characters.

Power requirements:

115 VAC - +15%, -10%, 100 Watts maximum, 1 Amp maximum.

230 VAC - +15%, -10%, 100 Watts maximum, 0.5 Amp maximum.

Operating temperature: 32° to 122 °F (0° to 50 °C).

Storage temperature: -4° to 140 °F (-20° to 60 °C).

Printer type: 24 column thermal.

Capabilities

Provides real-time, accurate inventory and delivery information for each tank monitored.
Can accommodate up to 8 sensors and 4 probes.
Can control remote visual and audible alarms.
Delivers cost-effective environmental compliance.
Easily programmed to meet site-specific criteria.
Consoles can be field upgraded to add SCALD or internal modem but not increase tanks.

Approvals

UL, cUL, ATEX
Third party certification of leak detection capabilities

Order Info

The TS-750 kit consists of the TS-750 compliance monitor, probe(s), float(s) and installation kit. Please specify the diameter of each tank and the product stored in each tank when ordering. The following kits are currently available.

TS-750 110 VAC Models

Model	Description
T750P/1	Single tank kit with 8 sensor inputs and printer
T750P/1S	Single tank kit with 8 sensor inputs, printer and SCALD
T750P/2	Two tank kit with 8 sensor inputs and printer
T750P/2S	Two tank kit with 8 sensor inputs, printer and SCALD
T750P/3	Three tank kit with 8 sensor inputs and printer
T750P/3S	Three tank kit with 8 sensor inputs, printer and SCALD
T750P/4	Four tank kit with 8 sensor inputs and printer
T750P/4S	Four tank kit with 8 sensor inputs, printer and SCALD

TS-750 Console Ordering Guide

The TS-750 is designed specifically for underground fuel storage tanks. When ordering, specify the number of tanks, the diameter of each tank and the product type for each tank. INCON will provide the appropriate TS-750 tank gauge, probes, floats and installation kits for each site. Console model, software and hardware options can be listed separately or combined when ordering. Systems shipped from the factory will list the combined part number. Complete console part numbers have a specific order and are created using the following guidelines:

XXXX PM / Y A B C

XXXX = Model
T750 = TS-750, 120 VAC.
PM = Hardware Options

P = Printer, standard.

M = Internal modem.

Y A B C = Software Options

Y = 1, 2, 3 or 4 tanks.

A = S, SCALD.

B* = D - data, F - fax/data software.

C = Continental version.

** Data and fax/data modem options are mutually exclusive.*

Safety

Warning **Always lock out and tag electrical circuit breakers while installing or servicing this equipment and any related equipment. A potentially lethal electrical shock hazard and the possibility of an explosion or fire from a spark can result if the electrical circuit breakers are accidentally turned on during installation or servicing. Please refer to the Installation and Owner's Manual for this equipment, and the appropriate documentation for any other related equipment, for complete installation and safety information.**

Warning **Follow all federal, state and local laws governing the installation of this product and its associated systems. When no other regulations apply, follow NFPA codes 30, 30A and 70 from the National Fire Protection Association. Failure to follow these codes could result in severe injury, death, serious property damage and/or environmental contamination.**

Warning **Always secure the work area from moving vehicles. The equipment in this manual is usually mounted underground, so reduced visibility puts service personnel working on this equipment in danger from moving vehicles entering the work area. To help eliminate these unsafe conditions, secure the area by using a service truck to block access to the work environment, or by using any other reasonable means available to ensure the safety of service personnel.**

Warning **When the console system is used to monitor tanks containing gasoline or other flammable substances, you may create an explosion hazard if you do not follow the requirements in this manual carefully.**

Warning **All wiring must enter the console's enclosure through the designated knockouts. An explosion hazard may result if other openings are used.**

Warning **All wiring from probes to the console must be run in conduit separate from all other wiring. Failure to do so will create an explosion hazard.**

Overview of LL2 Probe

The INCON LL2 probes are advanced instruments that use magnetostrictive position measurement technology to accurately report inventory levels in storage tanks

The probes are installed in USTs (underground Storage Tanks) and ASTs (above ground storage tanks). Leak Detection probes are suspended by a chain from a cap on the riser pipe. Inventory probes may be suspended by a chain and cap or alternatively be mounted on the bottom of the tank. Bottom mount hardware is provided on all inventory probes.

Types of Probes

- Leak Detection
- Inventory Specific

Length of Probes

The probe model number indicates its length. The model numbers are in the form TSP-LL2-*xxx*, where xxx = the tank diameter in inches plus 5.

For example, the TSP-LL2-101 is for 8' (96") tanks.

TSP-LL2-*xxx*, Leak Detection and Inventory probes are available in lengths up to 12' tanks.

TSP-LL2-*xxx*-I, Inventory Specific probes are available in lengths up to 18' tanks.

TSP-MLGK-*xx*, Moorman Level Gauge Kits are available for tanks up to 35' and up to 50'. Refer to manual 000-2033 for Moorman Gauge installation.

Float Kits Available

Model	Description
TSP-IDF2	2" float set for diesel tanks
TSP-IGF2	2" float set for gasoline tanks
TSP-IDF3	3" float set for diesel tanks
TSP-IGF3	3" float set for gasoline tanks
TSP-IDF4	4" float set for diesel tanks
TSP-IGF4	4" float set for gasoline tanks
TSP-LPGF	2" float for LPG tanks, with or without isolation sleeve. See manual 000-0251 for more information.
TSP-SSP	2-1/16" OD, #316 stainless steel float for chemical applications only

Each float kit includes a product and water float. Order one float set for each LL2 Mag probe.

- Product floats are white (clear)
- Gasoline water floats are red.
- Diesel water floats are blue

Probe Installation Kits

Suspended Probe Kits

Model	Description
TSP-K2A	Mag Probe install kit for 2" riser pipe
TSP-K2B	Mag Probe install kit for 2" riser pipe with BSP threads
TSP-K4A	Mag Probe install kit for 4" riser pipe
TSP-K4B	Mag Probe install kit for 4" riser pipe with BSP threads
TSP-K4AS	#316 Stainless Steel mag probe install kit for 4" riser pipes
TSP-LPGK	LPG Probe install kit, 149" maximum LL2 probe length

Inventory Control Probe Caps and Adapters (for bottom-mounted probes)

Model	Description
TSP-C2A	Inventory Probe 2" Riser Cap and Adaptor
TSP-C2B	Inventory Probe 2" Riser Cap and Adaptor with BSP threads
TSP-C4A	Inventory Probe 4" Riser Cap and Adaptor
TSP-C4B	Inventory Probe 4" Riser Cap and Adaptor with BSP threads

A locally supplied riser cap for Inventory Control Probes should meet all applicable codes and approvals. The cord grip must be for use with a cable diameter of 0.19 inches (4.8mm) and must also be compatible with the liquid installed in the tank.

Density Floats

Density floats are two-part floats. The inner and outer float are calibrated at manufacture and must be used together.

Model	Description
TSP-IDF4D	Diesel/Fuel Oil Density Kit
TSP-IGF4D	Gasoline density float kit

Refer to manual 000-0527 for more information about density float installation.

Riser Pipe

Below is a example for determining riser length.

	92" Tank	96" Tank
TSP-LL2-101 Probe Overall Length	+111	+111
Suspension chain allowance	+5	+5
Total	+116	+116
Tank Diameter	-92	-96
Minimum Riser Length	24	20

Installing Floats

For TSP-LL2 probes the float(s) will need to be installed on the probe.

1. Carefully remove the E-Clip and washer/bottom mount foot.
2. Install the floats as shown in figure 2.
3. Reinstall the Washer/bottom-mount foot and E-Clip.

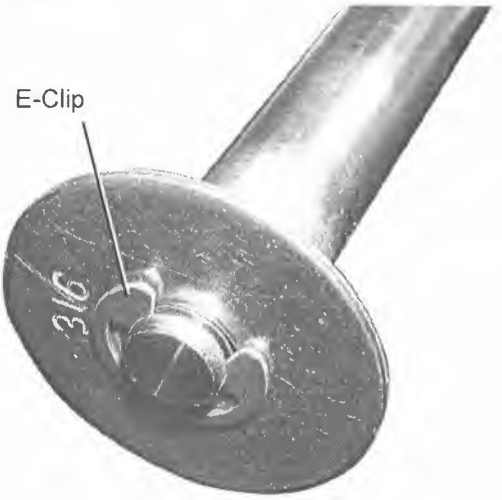

Figure 1: Probe C-Clip and Washer

Float orientation

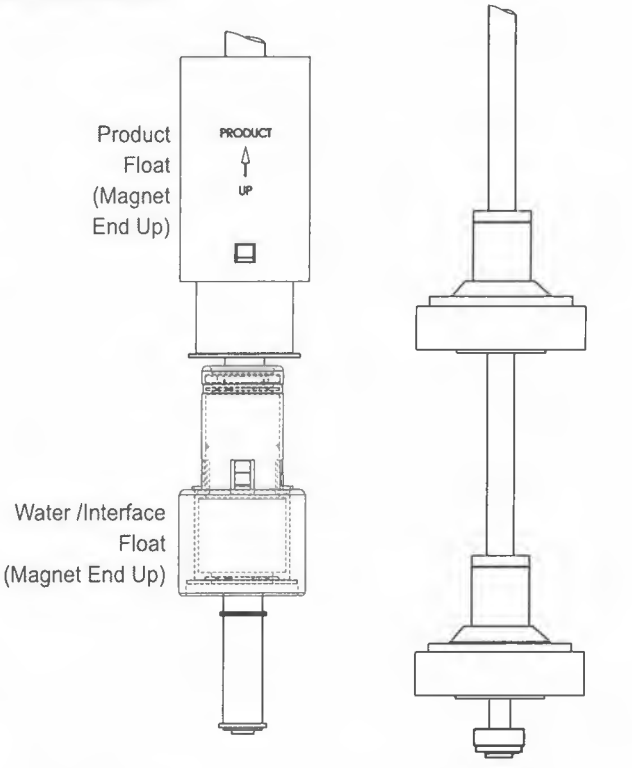

Figure 2: Float Orientation

Suspended Probe Installation

This procedure must be done with leak detection probes and is optional for inventory probes. Before starting the probe installation, be sure that you have the necessary hardware:

- Level probe(s)
- Product and water floats,
- Probe installation kit.

For each tank, locate the following:

- LL2 level probe
- Product float
- Water float-optional, is identified by color: (Blue–Diesel, Red–Gasoline)
- Threaded adjustment eye bolt and suspension chain (with wing nut and split ring attached)*
- Steel support plate (with rubber grommet and insulating washer installed)*
- Four Inch NPT riser adaptor*
- Riser cap*
- Compression gland seal fitting (cord grip)*
- (3) Moisture resistant, no strip, electrical wire splice connector*

* Included in the TS-K4A probe installation kit.

Installation

1. Measure from the top of the riser pipe to the bottom of the tank-record value in inches.
2. Measure the overall length of Probe.
3. Subtract the probe length from the distance measured from the top of the riser pipe to the bottom of the tank, and then add 1/2 inch to this distance. This value is the **TOTAL LENGTH OF THE CHAIN INCLUDING THE SPLIT RING AND ADJUSTMENT EYEBOLT.**
4. The suspension chain must be cut to the exact length required.
5. Remove the split ring from the end of the chain and cut the chain to the correct length.
6. Reattach the split ring to its end and measure the total overall length to make certain that it is within one half inch of correct value.

Note; When using a 2" or 3" riser you will replace the bottom spacer with the 3" spacer included in the float kit. When using a 2" riser, cut back the spacer at the marks. The 4" probes are installed with no modification.

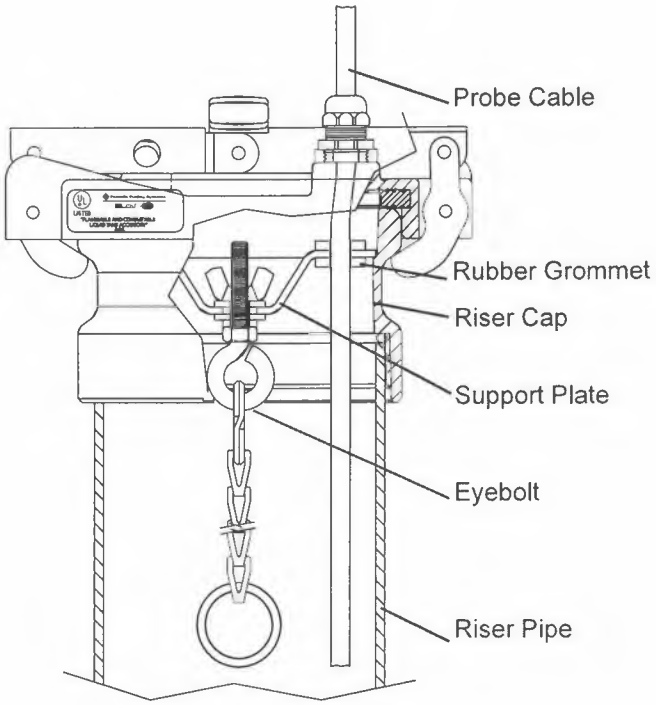

Figure 3: Installation of Suspended Probe

7. Apply pipe sealant to the male riser threads.
8. Screw the riser cap adapter into the top of the riser pipe. Tighten to 20-25 ft-lbs.
9. Connect the probe to the split ring on the chain.
10. Carefully position the steel support plate containing the rubber grommet and insulating shoulder washer into the riser cap.
11. Guide the probe cable through the rubber grommet.
12. Unscrew the adjusting eyebolt so the probe just touches the bottom of the tank.
13. Turn the wing nut clockwise, 4 full turns (only). This will raise the probe approximately ¼" above the bottom of the tank.
14. Push the probe cable through the compression fitting on the probe cap.
15. Install the probe cap on the riser cap adapter such that the compression fitting is aligned with the rubber grommet.
16. Tighten the compression fitting to make a watertight seal.

Adjusting the probe height (¼" off the bottom of tank)
Make sure the probe is sitting on the bottom of the tank by loosening the wing nut until you feel slack in the chain (the probe is resting on the bottom of the tank).Then turn the wing nut clockwise until you feel that there is no slack in the suspension chain. Hold the end of adjustment rod and turn the wing nut clockwise, 4 full turns (only). This will raise the probe approximately ¼ of an inch above the bottom of the tank.

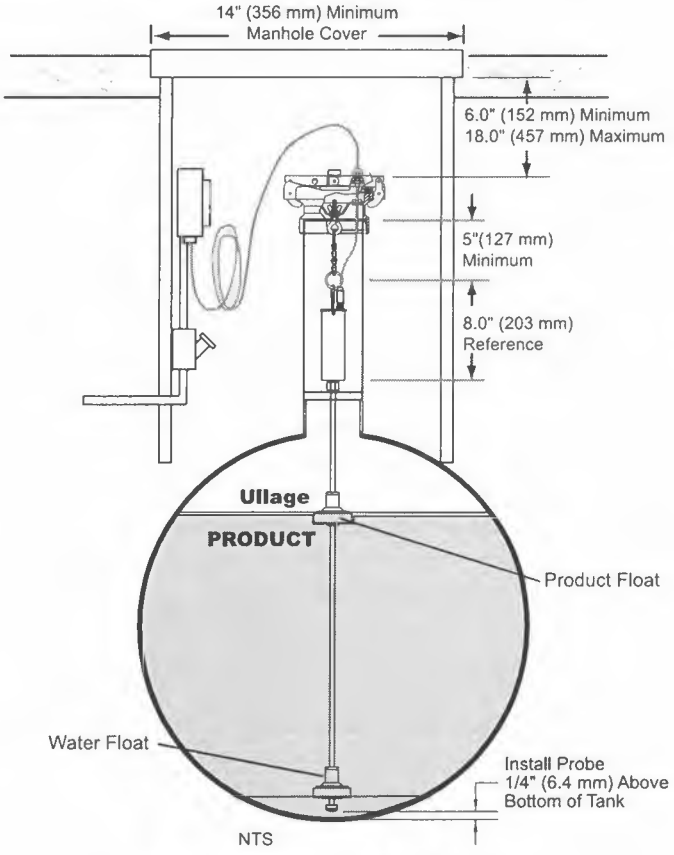

Figure 4: Suspended Probe Installed

Final Suspended Probe Installation Steps

1. Push the probe's cable though the compression gland fitting at the waterproof junction box. Make sure that you leave enough cable from the level probe to the junction box (tie-wrap a coiled service loop) so that the probe can be easily removed and reinstalled without rewiring and splicing.
2. Tighten the compression gland fitting at the junction box so that it grips the cable tightly and creates a watertight seal.
3. Position the lockable TSP-K4A probe cap on the riser cap adapter such that the compression fitting is aligned with the rubber grommet and snap it in place.
4. Tighten the riser cap compression fitting so that it grips the cable tightly and forms a watertight seal

Note: When removing the probe, loosen the cable compression fitting.

Bottom-Mount Probe Installation

The bottom-mount probe option is for inventory control probes. Tank leak testing and density probes need to be suspended from the riser cap.

The bottom-mount assembly consists of:

- Top spacer on the top of the probe head for 3" or 4" probes
- Bottom spacer below the probe head
- Probe foot mounts at the bottom of the probe shaft

The foot is ¼" thick so when installed the probe end will be ¼" off the bottom of the tank.

When using a 2" riser you will remove the top spacer and replace the bottom spacer with the 2" spacer included in the float kit. When using a 3" riser, cut back the top spacer and replace the bottom spacer with one included in the float kit. The 4" probes are installed with no modification. This is solely for the I-probes, all leak detection and density probes MUST BE Suspended.

Single Thermistor Probe

The probe will have one RTD near the bottom of the probe shaft. The Net Volume will be based on the one temperature reading vs. the average of the 5 RTDs in current Inventory probes.

Note: The Inventory Probes MUST NOT be used for Leak Detection.

A sticker on the head of the I-probe indicates that it is for inventory use only. An extra sticker is provided to be kept near the console for gradient programming. Installers must be aware of the probe type in sites that have a mix of inventory-specific and leak detection probes.

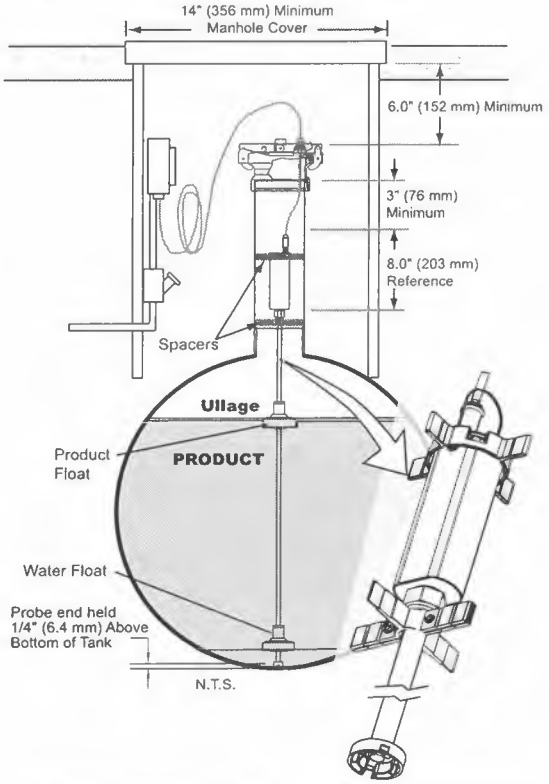

Figure 5: Bottom-Mount (I-Probe) Installed

Above Riser Probes

For above-riser probes or ASTs, install the stainless steel TSP-K4AS riser adapter by tightening the lower swage lock fitting. (Figure 6)

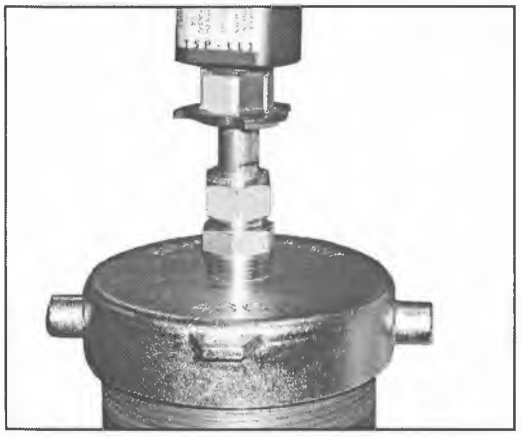

Figure 6: TSP-K4AS cap with Swage-Lock Fitting

Slide the floats onto the probe shaft after the probe has been inserted through the cap. Refer to manual 000-0113, TSP-K4AS with TSP-UVPK Installation Instructions for more information about mounting probes above the riser cap.

Recording Probe Information:

Gradient, Model # and Serial Number

For each tank, record the probe model number, serial number, and the probe gradient value (propagation constant), The TS-LL2 has two labels. The label included with the splice kit in the shipping tube contains the same information that is on the probe head label:

- Model (TSP-LL2-X)
- Serial #
- Gradient
- Probe length
- Max. Tank size
- Temperature sensor locations

For every installed probe, use indelible ink pen and mark the tank number where it was installed on each label. Save labels and make sure they are kept near the tank monitor for correct programming.

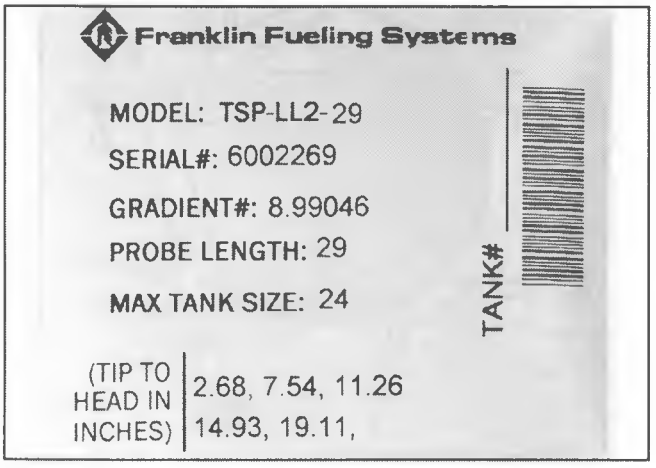

Figure 7: Sample Probe Information Label

Probe Wiring

LL2 Probe Splice Kit – Installation Instructions

The Liquid Level Probe Splice Kit includes 2 Electrical Connectors for installation inside the manhole junction box only. It is not intended for direct burial applications.

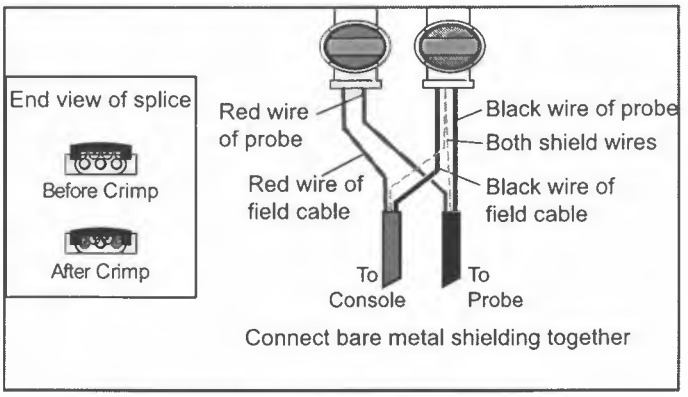

Figure 8: Splice Kit for Probe Wiring

1. Use 2 moisture-resistant connectors (provided) for each probe installation.
2. Insert 2 red *unstripped* wires into two separate openings of the first connector. Make sure the wires are fully inserted and seated at the end of the connector.

Note: Belden *cable # 89182 (for runs longer than 400 feet) has a yellow wire.* Wire the YEL wire to the + (RED) probe terminal inside the console.

3. Insert 2 black *unstripped* wires into two separate openings of the second connector and then insert the 2 shield wires into the remaining opening of the second connector. Make sure the wires are fully inserted and seated at the end of the connector.
4. The white wire inside the yellow probe cable is not used. Do not insert it into any connector. Cut the white wire back flush to the jacket of the yellow probe cable.
5. Use 8" slip-joint pliers and squeeze each connector together (position the plier's jaws on the connector perpendicular to the wires and drive the black cap down almost flush to the edge of the connector body).

For a supply of moisture-resistant splice connectors, Order:

- TSPKW30 for a pack of 30 splices.

For direct burial cable applications or for applications that don't use a junction box, order:

- TSP-DB1 for a single kit
- TSP-DB10 for 10 kits.

For information about direct-burial applications, refer to manual 000-1041, Direct Burial Cable Installation Instructions and 000-1133, Direct Burial Splice Kit Installation Guide.

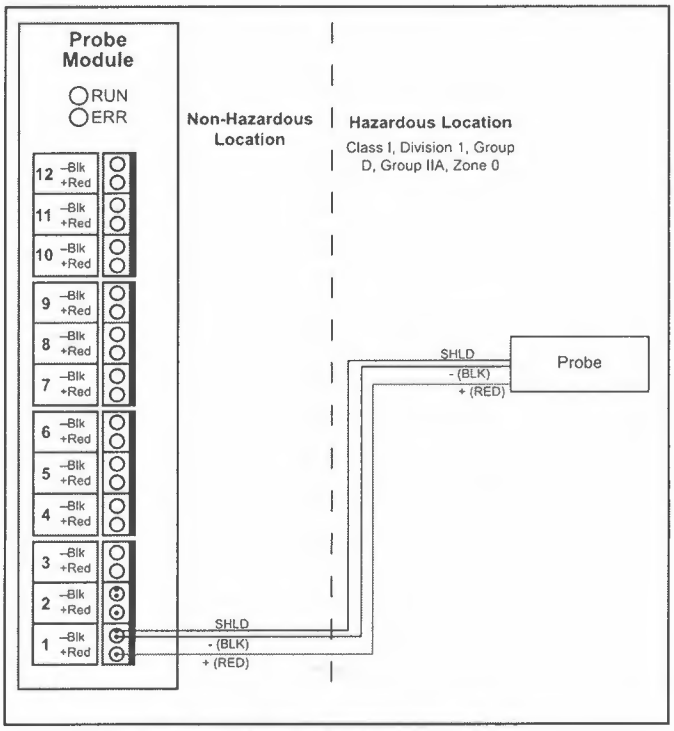

Figure 9: Probe Module Wiring

Refer to manual 000-2142, Fuel Management System Programming guide and 000-2150 Fuel Management System Installation guide for information about setting up the probe with the tank gauge.

For Colibri Tank Gauge Consoles, refer to manual 000-2153, Colibri Automatic tank Gauge Installation Guide, and 000-2155, Colibri Set-Up and Operation Guide. For Colibri manuals on the web, go to: www.franklinfueling.com/colibri/literature.aspx

Tank Tilt/ Offset Calculations

If the data to calculate tank tilt is not known, or if the tank is not seriously tilted, then use +/– offsets to adjust the probe readings to match the stick readings at fill.

Figure 10 shows the tank tilt formula to use when the fill tube and probe are on opposite sides of the tank center-line. Figure 11 shows the formula to use when the fill tube and probe are on the same side of the tank center-line.

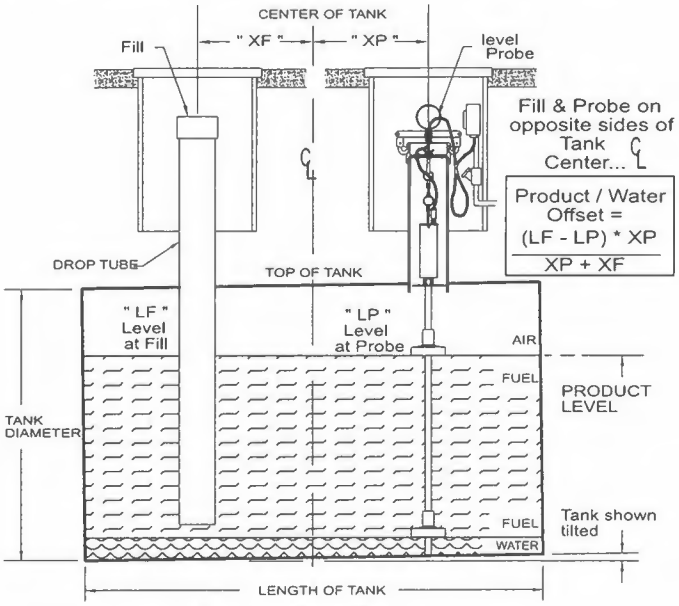

Figure 10: Tank Tilt Calculation
Probe and Fill on Opposite Sides

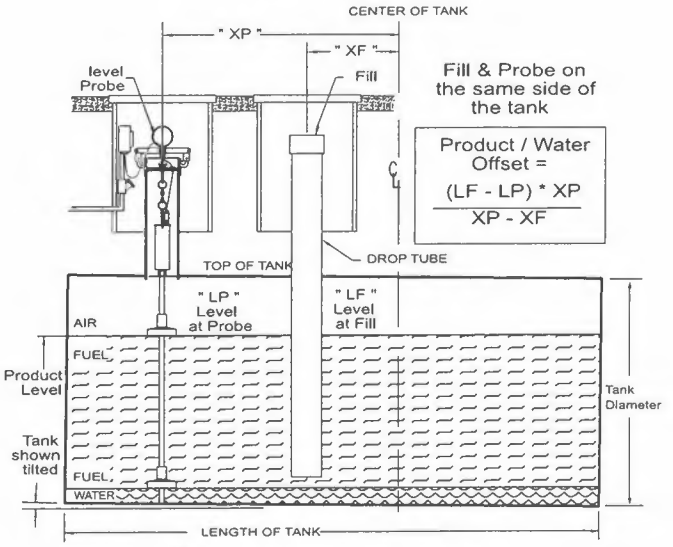

Figure 11: Tank Tilt Calculation
Probe and Fill on Same Side

Troubleshooting

When troubleshooting a probe problem, it is important not to presume any particular cause. Follow the steps outlined below to properly and quickly troubleshoot probes:

Note: Do not start troubleshooting by swapping probes. It may cause confusion in the process of identifying the problem.

Float Missing:

1. Check programming of probe for correct number of floats
2. Look for active High water or Float Missing Alarms in the run status at the ATG.
3. If possible, have the technician stick the tank and compare the measurement with the level reported by the ATG.
4. Is the level correct? If not, is the ATG measuring in reverse (the lower the actual product level the higher it reads on the ATG)? Verify the Probe ratio is programmed correctly. If programming is correct it may be a probe issue, continue with the next steps.
5. Check the water level does the ATG list it as float missing? If it is listed as missing, it could be a probe issue, but again continue to troubleshoot.
6. Try to cycle power. If previously noted, check to see if High water alarm or float missing alarm changed from "ACTIVE" to "CLEARED". If they clear, again this could be a probe issue, but acknowledge and continue to troubleshoot.
7. After completing the above steps, replace the probe.

No Probe, Probe Sync and Unstable Probe

(New Install or Replacement Probe)

1. Check Wiring. Ensure that the Red, Black and Shield wires are connected to the correct terminals to the ATG. There should be two connections in the junction box, (refer to figure 8).

(Probe Alarms on Multiple Channels or Only One Probe Connected)

2. Check Main Board Power Supply. There should be approximately 21 VDC loaded (probe connected) and 24 VDC unloaded across the Red and Black terminals of the probe channel in the ATG.
3. Check Field Wiring. Ensure that the voltage is getting to the probe by checking at the junction box splice or quick disconnect pigtail. With the pigtail end facing you, keyslot up, there should be 24 VDC across the two bottom pins. Test field wiring for a short or open.
4. Remake Splice. Cutback and remake the splice connection in the junction box using the approved seal pack and connectors.

(Quick Disconnect Pigtail)

5. Try a New Pigtail. If this probe has a quick disconnect pigtail, try replacing it.
6. Try another Probe Channel. Once the field wiring has been checked and the junction box connection remade, try moving the field wiring to another channel.
7. Connect the Probe Directly to the ATG. If possible, bring the probe inside and wire directly to the ATG. (If this probe has a quick disconnect pigtail then the white wire should be connected to shield or ground).

Listed below are additional steps for troubleshooting the probe. For missing float or incorrect level problems, consider the following actions:

- Pull probe from tank and manually raise and lower floats. Does the ATG accurately report the change in level?
- Are the right number of floats installed on the probe (verify number of floats programming)
- Is float too close to the end of the probe? (Was tank overfilled or is the float stuck in riser)? If float is too close to the probe head a float missing alarm will occur.
- Is there debris on the magnets? If so, clean debris from magnet and check operation of ATG.
- Are the magnets cracked or broken? If so replace float
- Are the floats installed correctly? Product float on top, closest to the probe head. Product float will have a white collar. Water floats have colored collars (Red for use in gasoline, blue for use in diesel)
- Is the probe shaft clean? If dirty use an abrasive pad to clean the probe shaft.
- Check that wire connections from probe cable to field wiring are good and dry.
- Are the floats compatible with the probe? LL and LL2 floats are NOT interchangeable.

INCON®
Franklin Fueling Systems

TSP-ULS (Standard Sensor)

Universal Liquid Sensor

Installation Instructions

CAUTION

SENSITIVE INSTRUMENT

When installing this sensor, carefully lower it into position and DO NOT DROP it into the sump or tank

Franklin Fueling Systems • 3760 Marsh Rd. • Madison, WI 53718 USA
Tel: +1 608 838 8786 • 800 225 9787 • Fax: +1 608 838 6433 • www.franklinfueling.com

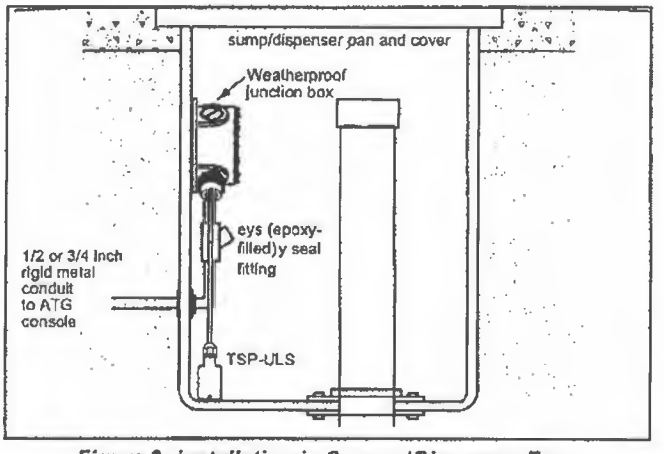

Figure 3: Installation in Sumps/Dispenser Pans

6. Power up Console for next step.
7. Test sensor (verify that an alarm is produced at ATG console), if it does produce an alarm, seal EYS seal fittings and electrical connectors with epoxy.
8. Turn off power again if other devices are to be installed (Repeat Step 3).
9. Reinstall all safety covers and guards, junction box gasket and covers – use pipe-dope to seal all fitting threads.
10. Install the manhole cover.
11. Record the location where the sensor was installed on the chart on the last page of these instructions. This information will be needed when programming the ATG.
12. Turn on power and program the ATG – Ref: all relating to Sensors in the Setup/Programming Guide manual.

General Installation Notes

* Steel double-walled tanks are equipped with a pipe that allows direct access to the bottom of the interstitial (annular) space. When installing a riser pipe in a steel tank, codes may require a non-conductive isolation bushing be installed between the tank and riser pipe.

Warning **It is the installer's responsibility to comply with all applicable federal, state and local codes. Failure to do so may create an Environmental Hazard.**

* Fill the bottom of the manhole with crushed stone to facilitate drainage when the TSP-ULS is installed in the interstitial space of a steel tank. Do not cover the top of the riser with fill material, it must remain accessible for service and for sensor installation.

Plan your conduit routing. Dig trenches as necessary to install rigid threaded conduit (RMC) from each manhole junction box to the Intrinsically Safe (I.S.) knockouts at the ATG console. The conduit may enter the manhole either from its bottom or through its side. A junction box inside of the building as a pull box to combine several sensor cables. If this is done, then only one I.S. conduit knockout will be used.

Warning **Conduits must have EYS seal fittings installed in accordance with NFPA 70 (National Electric Code) and NFPA 30A (Automotive and Marine Service Station Code). Failure to seal conduits in accordance with NFPA 30A, and NFPA 70 could allow flammable vapors to travel through the conduit in the ATG console. An explosion could result causing serious injury, property loss, or death.**

You must install a weatherproof, electrical junction box inside each manhole. The junction box should be installed high on the manhole wall to prevent it from being submerged during heavy rains.

Caution **Seal all threaded fittings and conduit threads to produce a weatherproof seal during installation/maintenance.**

Electrical Wiring

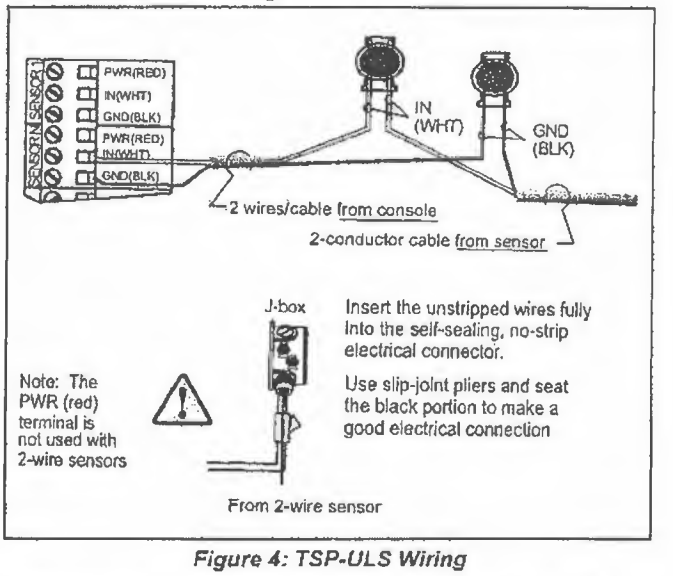

Figure 4: TSP-ULS Wiring

Reference the ATG Installation Manual and see Figure 4 (above) for TSP-ULS sensor wiring details. The two-wire TSP-ULS sensor does not have a red (power) conductor, therefore, the PWR (RED) interface terminal at the console is not used. When a 3-conductor Alpha cable is used, the red conductor can be clipped or taped back on both ends.

Testing the TSP-ULS

Testing this device is a matter of rotating the sensor 180 degrees with the bottom up, to cause an alarm at the ATG console. Test the sensor for proper operation on a yearly basis, or more frequently per local code.

Overview

The TSP-ULS is a Standard sensor that is used to detect the presence of a liquid in the normally dry Class 1, Division 1, Group D Hazardous Areas of: sumps, dispenser-pans, and interstitial areas of double-wall steel storage tanks. The sensor is supplied with electrical connectors, 25 feet of cable, and a cord-grip fitting (see diagrams). The TSP-ULS uses magnetic-float/reed-switch technology (the sensor must be suspended vertically (See Figure 1) so the float can rise freely with the level of a liquid).

When the float rises more than 1/2 of an inch, the magnetically sensitive reed switch will open (see internal float in Figure 1). An open circuit is recognized as an alarm-condition at the intrinsically safe (I.S) leak detection circuits of the FFS (Franklin Fueling Systems) ATG console.

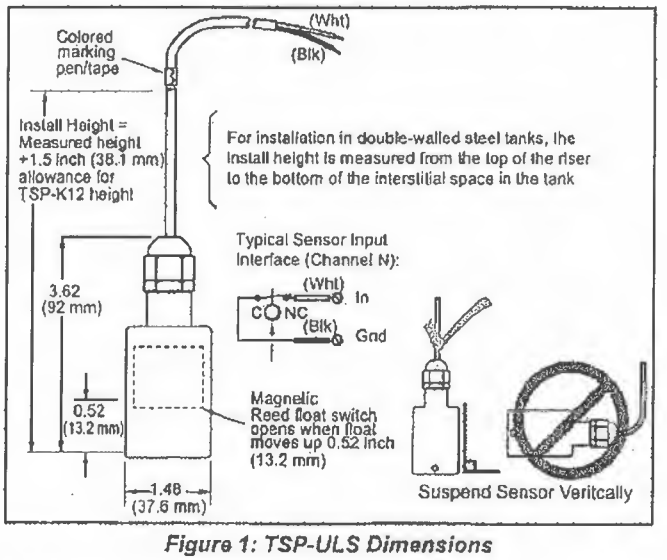

Figure 1: TSP-ULS Dimensions

Materials Required

- Optional – TSP-DB1 Epoxy Seal kit for no-strip electrical connectors – recommended for sites: within flood zones, high groundwater tables, with poor drainage, or when junction boxes are not used.
- 1/2 or 3/4 inch NPT (National Pipe Thread, tapered), Rigid Metal Conduit (RMC) or nonmetallic (PVC) conduit if allowed by local codes.
- EYS Seal fittings and Epoxy to fill the fitting after operational testing is completed.
- Weatherproof junction Box, gasket, and cover, plus a 3/4 to 1/2 inch NPT reducing bushing if 1/2 inch RMC is used – see the ATG Installation Guide for recommended electrical Junction Boxes.
- Wire: THHN, TFFN or THWN, 18 AWG, White & Black, or Alpha Cable # 58411, 0.114 O.D. – 1,500 feet (457 meters) max. length. Alpha cable #58411 must be use with nonmettalic conduit.
- Slip joint pliers to seat the no-strip, self-sealing wire connectors – connectors are supplied with the sensor.
- UL Classified Thread Sealant or pipe dope.
- *TSP-KI2 Riser Cap for 2-inch riser pipes, includes a pre-installed 1/2 inch NPT compression gland (cord grip) fitting. Other riser caps are available for different riser pipe sizes – consult your factory rep.
- * Riser pipe – 2 inch diameter (OD), threaded at one end (NPT-14) with all rough edges removed/deburred from the inner edges.

* = Needed for installation in UST interstitial areas (Figure 2)

Installation Sequence

1. Install Riser Pipe, Manhole.
2. Install conduit, EYS fittings, and weatherproof junction box.
3. Shut off power.

ELECTRICAL DANGER Avoid electrical shock hazards: ensure all power going to the ATG console is turned off, tagged, and locked-out at the power panel before doing any maintenance or installation work at the ATG console.

4. Interstitial installation – see Figure 1 & 2, measure the INSTALL HEIGHT needed and add 1.5 inches = total height. Mark the total height on the sensor cable as shown in Figure 1, pull the cable through the TSP-KI2 Riser Cap and cord-grip until the mark shows at the top of the cord grip fitting. Tighten the fitting and lower the sensor into the interstitial area of the tank as shown in Figure 2.

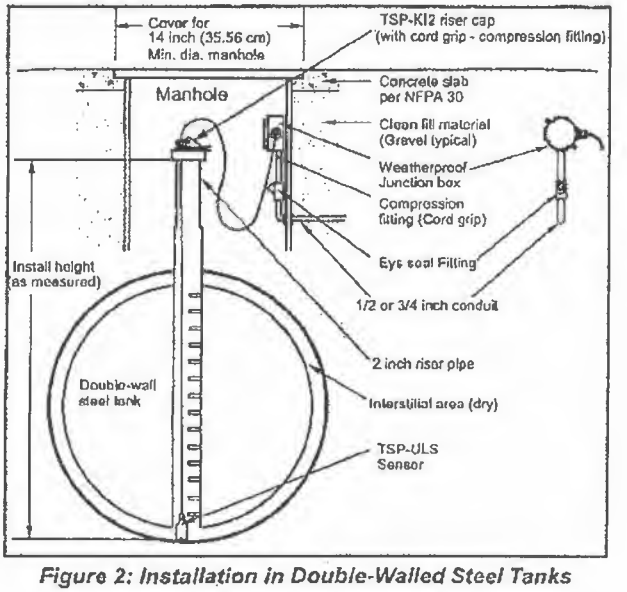

Figure 2: Installation in Double-Walled Steel Tanks

5. Pull the sensor cable through the cord grip fitting at the junction box (also see Figure 3 for installation within a sump) and tighten all remaining cord-grip fittings. Trim wire/cables to a 6 or 8 inch (15 or 20 cm) service-loop, and splice the sensor and console cable/wires together as shown in Figure 4.

OFFICIAL NOTICE OF INSPECTION

Facility ID: FA0258851 **Inspection Date:** 03/12/2019
Facility Name: GRANITE ROCK COMPANY-PAVEX CENTRAL
Site Address: 120 GRANITE ROCK WY, SAN JOSE, CA 95136

HW Generator Type:
Consent to Inspect Granted By: ASHLYN WENGER, ENVIRONMENTAL ENGINEER

☐ **RCRA LQG**
☐ **Pictures Taken**
☐ **Samples Taken**

Summary of Violations & Notice to Comply

Program: SR0858739 - UNDERGROUND STORAGE TANK - 2314
Inspection Type: FINAL PERMIT ACTIVITY

Comments / Observations

On-site to witness testing for repairs that were done at this site for the above permit. Testing was conducted by; Michael Mc Carter #ICC8819839 exp., 10/25/19 and INCON-Level 4 exp., 9/24/2020.

The following components were tested and passed;
- Diesel STP hydrodostatic accelerated 15 minutes test.
- UDC 1/2 hydrostatic accelerated 15 minutes test.
- Diesel secondary line was pressurized at 5.0 p.s.i for 60 minutes. Observed the gauge returned back down to zero without any loss in pressure.
- 87 secondary line was pressurized at 5.0 p.s.i for 60 minutes. Observed the gauge returned back down to zero without any loss in pressure.

The following repairs under this permit were made as follows;
- Diesel STP; 4 ICON conduit penetrations were installed and 1 product penetration was installed.
- 87 STP; Reducer fittings were replaced.
- No ICON penetrations were installed inside UDC 1/2.

Notes:
1) Within 30 days provide a copy of today's testing report to our office.
2) This inspection closes out this permit with our Department.

Re: Plan Check Review: SR0858739
Facility Name: Granite Rock Company-Pavex Central
Project Location: 120 Granite Rock Way., San Jose
Project Description: Install ICON penetration fittings at Diesel STP sump and UDC #1-2.

Santa Clara County Hazardous Materials Program has reviewed the submittal for the project referenced above and **approves the plans with the following conditions**:

1. Systems shall be configured as described in the enclosed approved Hazardous Materials Construction Permit Application and Equipment List for Underground Storage Tank Systems.
2. The installation contractor shall follow manufacturers' installation, inspection, and testing requirements.
3. Installation shall be performed or directly supervised by an individual with current ICC UST Installation / Retrofitting certification and manufacturers' training certifications.
4. Contact inspector Ana Bui at (408) 918-1952 or Ana.Bui@cep.sccgov.org to schedule the required inspection to witness the following:
   a. Hydrostatic testing of all 1 STP sump and UDC #1-2 to confirm that they are product-tight.
   b. Pressure testing of secondary product line for the Diesel tank.

Any substitution of equipment or reconfiguration of systems as described in approved plans requires prior approval from HMCD. Be advised that plan check approval by San Jose Building Department and San Jose Fire Department may also be required prior to beginning work. A copy of this letter and one set of approved plans shall remain on the job site until final inspection approval by HMCD.

Should you have any questions, contact the undersigned inspector at (408) 918-1952.

HAZARDOUS MATERIALS CONSTRUCTION PERMIT APPLICATION

For Aboveground Projects Within the Cities of Los Altos Hills, Monte Sereno, or Saratoga, or in Unincorporated Areas of Santa Clara County; and for Underground Storage Tank System Projects In Those Areas or Within the Cities of Los Altos, Morgan Hill, Palo Alto, or San Jose.*

I. General Information

HMCD plan review and approval for regulatory compliance is required before installing or modifying hazardous materials storage or handling systems. One completed copy of this form is required with each plan review submittal. When completing Section V, limit the description to work that directly involves or impacts hazardous materials storage or handling systems (e.g., backup power battery systems for communications sites; dry cleaning machines; fuel tanks, piping and dispensing systems; leak detection systems; etc.).

II. Project Location

Facility Name: Granite Rock ~~#120~~ COMPANY - PAVEX CENTRAL CERS ID: _____

Site Address: 120 Granite Rock Way City: San Jose Zip: 95136

County Plan Check No. (if applicable): _____ Assessor's Parcel No. (APN): _____

III. Contractor *[Must be licensed by the Contractor State License Board (CSLB)]*

Business Name as Registered with CSLB: Able Maintenance Inc Lic. No.: 312844

Mailing Address: 680 Quinn Ave City: San Jose Zip: 95112

V. Project Type and Scope of Work

Check one box: ☒ Underground Tank; ☐ Aboveground Tank/Facility; ☐ Toxic Gas; ☐ Communications Site; ☐ Other

Check one box: ☐ New Facility/Equipment; ☐ Repair/Retrofit; ☒ Minor Repair/Retrofit**

address SB 989 failures at the site including in the diesel STP and UDC #1-2

* Unincorporated areas are locations not within any city limits, including Coyote, Moffett Field, San Martin, and Stanford.
** Minor retrofit/repair projects are limited to 2 hours total project time, including plan review, consultation, and one inspection.

VI. Attachments

HMCD forms and guidance are available at www.EHinfo.org/hazmat.

Plan review will not be performed until all required information is submitted.

Check the box(es) to identify attachments submitted with this application:

- ☒ Plan review fee [Required for ALL projects.]
- ☐ Equipment List for Aboveground Storage Tank Systems (form HMCD-024A) [Required for projects involving installation, retrofit, or repair of aboveground tank systems.]
- ☐ Equipment List for Underground Storage Tank Systems (form HMCD-024U) [Required for projects involving installation, retrofit, or repair of UST systems (other than monitoring system "cold starts").]
- ☐ Hazardous Materials Clearance Form (form HMCD-028) [Required for projects in unincorporated areas.]
- ☐ Drawings [2 sets required for construction/installation; and retrofits involving tanks, piping, sumps, under dispenser containment.]
- ☐ Manufacturers' Cut Sheets/Specifications [1 set required for projects other than monitoring system "cold starts."]
- ☒ ICC UST Installation/Retrofitting certification, ICC California UST Service Technician certification, and equipment manufacturers' training certifications for person(s) who will oversee installation and/or testing of UST system components [1 copy required for underground storage tank projects.]

VII. Authorization and Certification *[Note: Owner and applicant signatures are both required.]*

OWNER: I am the property owner or the owner of the business that operates the facility identified in Section II of this application. I am aware of the proposed work described in Section V, and hereby authorize the party identified in Section IV to apply for this permit on my behalf. I understand that all eMail and written correspondence during the course of plan review, and the plan approval letter, will be sent to the contact person identified in Section IV.

Fr: Marty Weithman, Service Station Systems, Inc/Able Maintenance, Inc.

Re: Granite Rock, 120 Granite Rock Way, San Jose

I am sending you the permit application, check and other required documentation for the anticipated sump and UDC repairs at the above listed site. The repairs are designed to address the failed SB-989 test. The scope includes the replacement of penetration fittings in the diesel STP sump and UDC #1-2. Standard ICON penetration fittings replacements are anticipated. No excavation is required.

If you need any additional information or have any questions, please call me. Please send me a copy of the permit at the address or email address below.

Thank you for your help in this matter. Your prompt consideration of this matter is greatly appreciated.

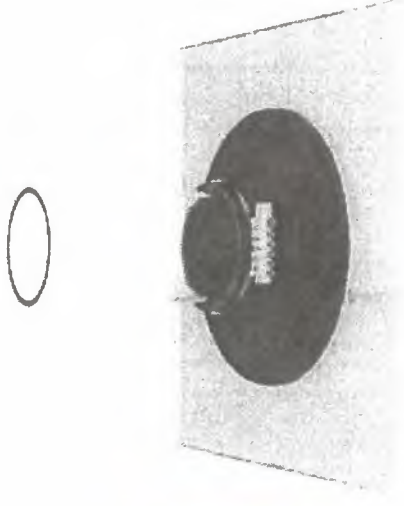
Containment Solutions

8 & 10 Bolt Split-Repair Shallow Pan Fittings

Icon's 8 & 10 bolt Split-Flanged Repair Fitting Series is designed for the direct replacement of failing entry boots with a 5 or 6 bolt pattern. These fittings are easily installed with FastFuse bonder without disconnecting pipes or breaking concrete.

FEATURES BENEFITS

- No disconnecting of pipe necessary
- No excavating or breaking concrete
- Permanently bonded with FastFuse in 40 minutes
- No filler required
- Works on curved or flat sump walls
- Testing can proceed immediately after installation
- Ethanol compatible
- 3 Year Warranty



IRF 8B2.5

The Icon Repair Fitting (IRF) series offers a solution for every size of pipe and fitting combination in the field. It can be an effective part of any continuing sump maintenance program. Icon Repair Inserts (IRI Series) are ordered seperately and can be used with the fittings to easily reduce them to a desired pipe dimension.

Re: Plan Check Review: SR0867404

Facility Name: Granite Rock Company- Pavex Central
Project Location: 120 Granite Rock Wy, San Jose
Project Description: Replace Tank Fill Spill Containment for Diesel UST

Santa Clara County Hazardous Materials Program has reviewed the submittal for the project referenced above and **approves the plans with the following conditions**:

1. Equipment shall be configured as described in the enclosed approved Hazardous Materials Construction Permit Application and Equipment List for Underground Storage Tank Systems.
2. The contractor shall follow the manufacturer's installation requirements.
3. Installation and testing of spill containment shall be performed or directly supervised by an individual with current ICC California UST Service Technician certification and manufacturers' training certifications. Installation of direct-buried spill containment must be performed or directly supervised by an individual with current ICC UST Installation/Retrofitting certification and manufacturers' training certifications.
4. The contractor shall demonstrate, at the time of final inspection, that new spill containment meets the required minimum 5-gallon liquid capacity.
5. A Spill Container Testing Report Form shall be submitted via email to USTinspector@deh.sccgov.org within 30 days of the installation inspection/testing.
6. Contact inspector **Michelle Santos** a minimum of 2 working days in advance at **(408) 918-1981** or **Michelle.Santos@cep.sccgov.org** to schedule an inspection to witness the following:
   a. Installation testing of new spill containment in accordance with 23 CCR §2637.1.
7. During the COVID-19 health emergency, businesses and residents must ensure that their activities are in compliance with all current shelter in place orders (Orders), including the applicable Construction Project Safety Protocol and social distancing requirements. Businesses shall remain alert to changes and modify actions as necessary to maintain compliance with the Orders. Failure to comply with the Orders is a violation of law. Current Orders and FAQs are available at www.sccgov.org/sites/phd.

Board of Supervisors: Mike Wasserman, Cindy Chavez, Dave Cortese, Susan Ellenberg, Joe Simitian
County Executive: Jeffrey V. Smith

A copy of this letter and all attachments shall remain on the job site until final inspection sign-off by HMCD.

Any substitution of equipment as described in approved plans requires prior approval from HMCD.

Plan check approval by the City of San Jose Building Department and San Jose Fire Department may also be required prior to beginning work.

A copy of this letter and all attachments shall remain on the job site until final inspection sign-off by HMCD.

Should you have any questions, please contact the undersigned inspector at (408) 918-1981 or Michelle.Santos@cep.sccgov.org.

OPW 1-2100 Series Thread-On Spill Containers

OPW Spill Containment Manholes are designed to prevent spilled product from entering the soil near the fill and vapor return riser connections on underground storage tanks during normal tank filling operation, or in the event of tank overfill. The spill containers catch spillage to help prevent soil contamination and groundwater pollution.
OPW Thread-On Spill Containment Manholes are generally used on new tank or riser pipe installations.

Materials

Cover: Cast aluminum or cast iron
Mounting Ring: Cast iron E-coating
Bellows: Polyethylene
Base: Cast iron E-coating or Duratuff II
Clamps: Stainless steel
Seals: Nitrile

Features

- **Easy Installation** – reduces job-site time and installation costs. OPW Thread-On Spill Containers screw directly onto 4" NPT riser. No external connections to make; adjust the final grade height and support the unit with backfill.
- **Integral Pull-to-Open Drain Valve** – allows high-speed drainage of excess product into the tank. Designed with a convenient self-cleaning seal and removable screen for easier component cleaning.
- **Capacity** – available in a true 5-gallon capacity as well as 15-gallon capacity.
- **Rain-Shedding Cover** – available in either cast aluminum or cast iron, this unique design incorporates a seal in the underside of the cover. The seal seats between two dams on the mounting ring to prevent surface water from entering the spill container.
- **Fuel Compatibility** – designed to accommodate the fuels of the future, including methanol, ethanol and fuels with MTBE additives.
- **Product Identification Tags** – available for both the cover and bucket to positively identify the product contained in the UST with standard API symbols. (See product I.D. tag specification page for more information: page 74.)
- **Heavy-Duty Mounting Ring** – the angled ramp design offers superior protection against snow plow and traffic damage, and provides for secure concrete anchoring.
- **Corrugated Bellows** – can be adjusted +/- 1 inch for desired grade level.
- **Duratuff® II or Cast Iron Base** – composite Duratuff® II material is lightweight, durable, and conductive. A rugged, optional, cast-iron base is also available.
- **Highway 20 Rated (H20)** – all OPW spill containers and manholes exceed the requirements of the Highway 20 rating.

DEVR Models – Fill Port with Drain Valve

Duratuff® II Base with Drain Valve Models

Model #	Gal.	Liter	Cover	lbs.	kg
1-2100-DEVR	5	19	Aluminum	40	18
1C-2100-DEVR	5	19	Cast Iron	53	24
1-2115-DEVR	15	57	Aluminum	47	21
1C-2115-DEVR	15	57	Cast Iron	60	27

Cast Iron Base with Drain Valve Models

Model #	Gal.	Liter	Cover	lbs.	kg
1-2100C-DEVR	5	19	Aluminum	40	18
----> 1C-2100C-DEVR	5	19	Cast Iron	53	24
1-2115C-DEVR	15	57	Aluminum	47	21
1C-2115C-DEVR	15	57	Cast Iron	60	27

PEVR Models – Vapor Port with Plug

Duratuff® II Base with Plug Models

Model #	Gal.	Liter	Cover	lbs.	kg
1-2100-PEVR	5	19	Aluminum	40	18
1C-2100-PEVR	5	19	Cast Iron	53	24

Cast Iron Base with Plug Models

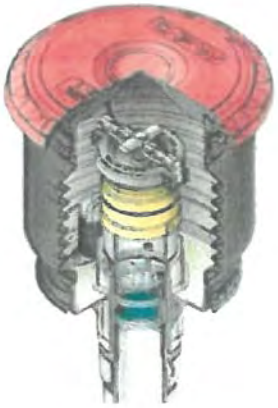
Model #	Gal.	Liter	Cover	lbs.	kg
1-2100C-PEVR	5	19	Aluminum	40	18
1C-2100C-PEVR	5	19	Cast Iron	53	24

4" Threaded Nipples for Mating Spill Bucket to Adaptor

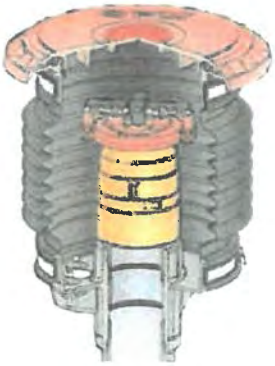
Part #	Description
TC-400	4" Torque Cap
H15144M	4" NPT Nipple, 4" Length
H12806M	4" NPT Nipple, 5" Length
VPN4X7	4" NPT Nipple, 7" Length
H15271M	4" NPT Nipple, 8" Length
H15268M	4" NPT Nipple, 10" Length

Replacement Parts

Part #	Description
1DK-2100-EVR	Drain Valve Kit
1-21AC	Aluminum Cover w/ Seal
1-21CC	Cast Iron Cover w/ Seal
H12229M	Cover Seal
1PPK-2100	Hand Pump & Plug Kit for 1-2100
1DP-2100	Replacement Drain Plug Kit for 1-2100

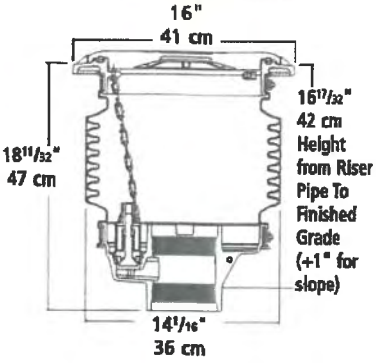


1-2100-DEVR Series
Product Fill Spill Container

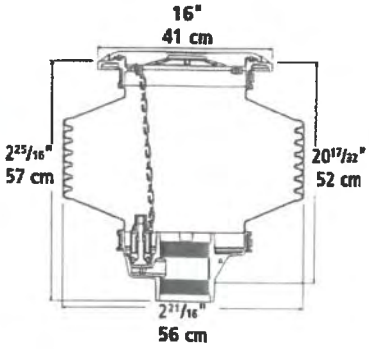


1-2100-PEVR Series
Vapor Recovery Spill Container

OPW 1-2100, 5-Gallon

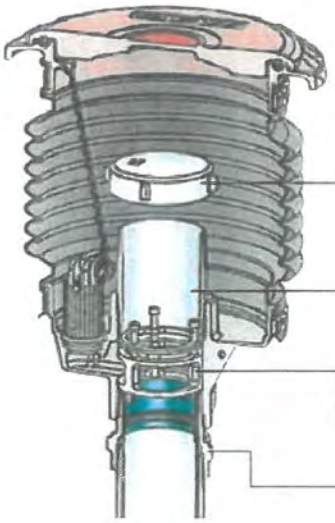


OPW 1-2115, 15-Gallon



*Subtract 2" from height dimension for Cast Iron Base Models.

NOTE: 20 17/32" dimension is height from riser pipe to finish grade (+1" for slope)



TC-400 Torque Cap

Provides an easy means of threading a 4" NPT nipple into a spill container. The OPW TC-400 coupled with the OPW 61SA-TOOL can provide the necessary torque requirements for installing adaptor nipples for spill containers. The TC-400 can easily be removed without disturbing the installed threaded nipple. The TC-400 also eliminates the need for a strap or chain wrench.

4" Threaded Pipe Nipple

OPW pipe nipples are CNC machined, providing a smooth sealing surface where a gasket seal exists. Available in various lengths to custom fit the necessary height requirements for Fill and Vapor Adaptors.

61JSK Jack Screw Device

See page 57 for detailed information.

FSA-400 Face Seal Adaptor

See page 57 for detailed information.

The following products are in compliance with California Water Resources Control Board (W.R.C.B.) for coating of buried metal components, such as stainless steel dumps or entire Spill Containment Bucket bottoms.

Part #	Description
SL-1100	Urethane Sealant (10.3 oz.)
H15602M	Black Rubberized Undercoating (19.75 oz.)

W.R.C.B. approved CCR Title 23, Div. 16, Sec. 1631 & 2636

ICC INTERNATIONAL CODE COUNCIL®

INTERNATIONAL CODE COUNCIL

JONATHAN OCKER

The International Code Council attests that the individual named on this certificate has satisfactorily demonstrated knowledge as required by the International Code Council by successfully completing the prescribed written examination based on codes and standards then in effect, and is hereby issued this certification as:

California UST Service Technician

Given this day August 28, 2020

Certificate No. 8881568

Greg Wheeler, CBO
President, Board of Directors

Dominic Sims, CBO
Chief Executive Officer

INTERNATIONAL CODE COUNCIL, INC. CERTIFIED

This certificate is the property of ICC and must be returned to ICC in the event of suspension or revocation of the certificate.

OPW

Installer Attestation No. 100870

VR-102

Jonathan Ocker
Triton Construction

EVR UST Certification Course

On: 4/10/2020 **Exp Date:** 04/10/2022

Completion of this training course does not create a warranty or guaranty by OPW of your installation and/or maintenance of nozzles, vapor recovery systems and EVR PHASE I systems. This training course does not eliminate the need to strictly adhere to manufacturer instructions and procedures when installing and maintaining nozzles, vapor recovery systems and EVR PHASE I Systems. All nozzles, vapor recovery systems and EVR PHASE I Systems must be installed and maintained in accordance with manufacturer instructions and procedures. Attestation applies ONLY to tested named individual.

RRM & Triton Construction

COVID–19 SITE-SPECIFIC

SAFETY PLAN

I. Responsibilities of Managers and Supervisors

a. All managers and supervisors must be familiar with this plan and be ready to answer questions from employees. Managers and supervisors must set a good example by following this plan at all times. This involves practicing good personal hygiene and jobsite safety practices to prevent the spread of the virus.

b. The contractor will ensure compliance with all applicable and current laws and regulations including but not limited to OSHA and Cal/OSHA. If there is a conflict, difference, or discrepancy between or among appliable laws and regulations the stricter standard will apply

II. Responsibilities of Employees – as set forth below, the Company has instituted various housekeeping, social distancing, and other best practices at our jobsites. All employees must follow these. In addition, employees are expected to report to their managers or supervisors if they are experiencing signs or symptoms of COVID-19. If employees have questions or concerns they should contact the project manager or field forman.

OSHA, Cal/OSHA and the CDC have provided the following control and preventative guidance for all workers:

- Frequently wash your hands with soap and water for at least 20 seconds. When soap and water are unavailable, use an alcohol-based hand rub with at least 60% alcohol.
- Avoid touching your eyes, nose, or mouth with unwashed hands
- Follow appropriate respiratory etiquette, which includes covering for coughs and sneezes
- Avoid close contact with people who are sick

In addition, employees must familiarize themselves with the symptoms of COVID-19 which include: coughing, fever, shortness of breath, difficulty in

breathing, loss of taste, chills, body aches, sore throat, headache, diarrhea, nausea/vomiting and runny nose

If an employee develops a fever and symptoms of respiratory illness, DO NOT GO TO WORK, and call your healthcare provider and supervisor immediately. Likewise, if you come into close contact with someone showing these symptoms, call your supervisor and healthcare provider immediately.

III. Jobsite Protective Measures

a. General Safety Policies and Rules

i. The contractor will establish a daily screening protocol for arriving staff to ensure that potentially infected staff do not enter the jobsite. If workers leave the jobsite and return the same day, establish a cleaning and decontamination protocol prior to entry and exit of the jobsite. Post the daily screening protocol at all entrances and exits to the jobsite.

ii. A safety tailgate meeting shall be held each day at the beginning of each work shift which addresses key issues related to COVID-19. Social distancing must be observed at each tailgate session, and attendance will be communicated verbally, and the trainer will sign in each attendee – attendance will not be tracked through passed-around sign-in sheets or mobile devices.

iii. A social distancing protocol be implemented and monitored to ensure the safety of all workers, contractors, vendors and visitors to the jobsite.

iv. Any employee/contractor/visitor showing symptoms of COVID-19 will be asked to leave the jobsite and return home

v. If safety meetings are conducted in-person, attendance will be collected verbally and the supervisor/superintendent will sign-in each employee. Attendance will not be tracked through passed-around sign-in sheets or mobile devices. Maintain social distancing of at least 6 feet for all attendees.

vi. Employees must avoid physical contact with others and shall direct others (co-workers/contractors/visitors) to increase personal space to at least 6 feet, where possible. Where work trailers are used, only necessary employees should enter the trailer and all employees should maintain social distancing and wear face coverings

vii. All in-person meetings will be limited and social distancing will be observed To the extent possible, meetings will be conducted by telephone.

viii. Employees will be encouraged to stagger breaks and lunches, if practicable, to reduce the size of any group.

ix. Access to running water for hand washing may not be available. Employees should be provided with alcohol-based hand sanitizers and/or wipes.

x. Employees should limit the use of co-workers tools and equipment. To the extent tools must be shared, the contractor will provide alcohol-based wipes to clean tools before and after use.
xi. Unless required by a specific Cal/OSHA regulation, N-95 or other medical-grade respirators must not be used.
xii. Prohibit all carpooling to and from the jobsite except by workers living within the same household unit, or as necessary for workers who have no alternative means of transportation (in those circumstances, wear a mask and maintain maximum distance)
xiii. Employees must not share phones, digital devices, or food or beverages.
xiv. In lieu of a common source of drinking water, such as a cooler, employees should use individual water bottles.

b. Jobsite Visitors
    i. The number of visitors to the jobsite, including the trailer or office, will be limited to only those necessary for the work
    ii. All visitors will be screened in advance of arriving on the jobsite. If a visitor answers 'yes" to any of the following questions, he/she should not be permitted access to the jobsite:
        1. Have you been confirmed positive for COVID-19?
        2. Are you currently experiencing, or recently experienced, any acute respiratory illness symptoms such as fever, cough, or shortness of breath?
        3. Have you been in close contact with any persons who has been confirmed positive for COVID-19?
        4. Have you been in close contact with any persons who have traveled and are also exhibiting respiratory illness symptoms?
    iii. Site deliveries will be permitted but should be properly coordinated in line with the employer's minimal contact and cleaning protocols. Delivery personnel should remain in their vehicles if at all possible.
c. Personal Protective Equipment and Work Practice Controls
    i. In addition to regular PPE for workers engaged in various tasks (fall protection, hard hats, safety glasses etc.) the company will also provide:
        1. Gloves, goggles, face shields, and face coverings as appropriate for the activity being performed. Gloves should be worn at all times while on-site. The type of glove worn should be appropriate to the task.
        2. At no time may a contractor secure or use medical grade PPE, unless required by a specific Cal/OSHA regulation
        3. Face coverings must be worn pursuant to the various Notices
        4. Ensure that employees are trained in the use of PPE.

5. Prohibit sharing of PPE

ii. Institute a rigorous housekeeping program to reduce dust levels on the jobsite

IV. Jobsite cleaning and disinfecting – the contractor has instituted regular housekeeping practices, which include cleaning and disinfecting frequently used tools and equipment, and other elements of the jobsite. Employees should regularly do the same in their assigned work areas.

a. Jobsite trailers and break/lunchroom areas will be cleaned at least once per day. Employees performing cleaning will be issued proper personal protective equipment (PPE), such as nitrile, latex, or vinyl gloves, etc, as recommended by CDC
b. Any trash collected from the jobsite must be changed frequently by someone wearing nitrile, latex or vinyl gloves
c. Any portable jobsite toilets should be cleaned by the leasing company at least twice per week and disinfected on the inside. The contractor will ensure that hand sanitizer dispensers are always filled. Frequently touched items (such as door pulls, toilet seats) will be disinfected frequently
d. Vehicles and equipment/tools should be cleaned at least once per day and before change in operator or rider
e. The contractor will have cleaned those areas of the jobsite that a confirmed-positive individual may have contacted and it will do so before employees can access that work space again.
f. The contractor will ensure that any disinfection shall be conducted using one of the following:
    i. Common EPS-registered household disinfectant
    ii. Alcohol solution with at least 60% alcohol; or
    iii. Diluted household bleach solutions (ensure this use is compatible with the surface to be disinfected)
g. The contractor will maintain Safety Data Sheets for all disinfectants used on site.

V. Jobsite exposure situations

a. Employee exhibits COVID-19 symptoms – if an employee exhibits symptoms, the employee must remain home until he or she is symptom free for 72 hours (3 full days) without the use of fever-reducing or other symptom-altering medications such as cough suppressants. The contractor will require an employee who reports to work with symptoms to return home until he or she is symptom free for 72 hours (3 full days). Employees may be required to obtain a doctor's note clearing them to return to work
b. Employee tests positive for COVID-19 – any employee testing positive for the virus will be directed to self-quarantine away from work. Employees that test positive and are symptom free may return to work when at least

seven (7) days have passed since the date of his or her first positive test, and have not had a subsequent illness. Employees who test positive and are directed to care for themselves at home may return to work when: (1) at least 72 hours (3 full days) have passed since recovery, and (2) at least seven (7) days have passed since symptoms first appeared. Employees who test positive and have been hospitalized may return to work when directed to do so by their medical care providers. The contractor will require an employee to provide documentation clearing his or her return to work.

c. Employee has close contact with an individual who has tested positive for the virus – employees who have come into close contact with an individual who has tested positive for COVID-19 (co-worker or other person) will be directed to self-quarantine for 14 days from the last date of close contact with that individual. Close contact is defined as 6 feet for a prolonged period of time. If the contractor determines that an employee has tested positive, they will conduct an investigation to determine co-workers who may have had close contact with the confirmed-positive employee to self-quarantine for 14 days from the last date of close contact with that employee. If appropriate, the contractor will also notify any sub-contractors, vendors/suppliers or visitors who may have had close contact with the confirmed-positive employee. If an employee learns that he or she has come into close contact with a confirmed-positive individual outside of the workplace, he/she must alert a manager or supervisor of the close contact and self-quarantine for 14 days from the last date of close contact with that individual.

SITE-SPECIFIC HEALTH AND SAFETY PLAN

1.0 INTRODUCTION

A. Overview

Triton Construction is providing this site safety plan to address various health and safety issues regarding work at the site and to disseminate information about Triton Construction health and safety goals, procedures, and policies.

B. Scope of Work

This Site Health and Safety Plan was created for fieldwork being performed at Granite Rock Way, located at 120 Granite Rock Way, San Jose, California 95136, fieldwork entails replacement of existing spill box for one diesel tank.

2.0 PROJECT SAFETY AUTHORITY

A. On-Site Project Safety

Personnel responsible for the project safety are:

Anthony Spielman	Project Safety Officer
Robert Giattino	Company Safety Officer

The Project Safety Officer and Company Safety Officer have the authority to upgrade or downgrade the provisions of this Site Safety Plan as site conditions change. In addition, the Project Safety Officer shall be responsible for the following:

- Safety Supplies & Equipment Inventory for the Project Site
- Accident/Incident Reporting
- Decontamination/Contamination Reduction Procedures.

B. TRITON Safety Officer

The Company Safety Officer is responsible for assuring on-site safety and loss prevention functions. These responsibilities include:

- Health surveillance of all Triton employees.
- Assuring that safety procedures in effect follow all appropriate federal, state, and company regulations.
- Maintenance of personnel exposure monitoring records.
- Assuring appropriate personal protective equipment is adequate for actual hazards of on-site conditions.
- Assuring appropriate exclusion areas are identified and delineated.

3.0 JOB HAZARD ANALYSIS

A. Inhalation Hazards

Gasoline

Gasoline is a clear liquid with a characteristic odor. Inhalation or absorption of gasoline can cause irritation of the eyes, skin, and mucous membranes, dermatitis, headache, fatigue, slurred speech, confusion, and convulsions.

The California Occupational Safety and Health Administration (Cal-OSHA) Permissible Exposure Limit (PEL) (the maximum permitted 8-hour time-weighted average concentration of an airborne contaminant) for gasoline is 300 parts per million (ppm). The Short-Term Exposure Limit (STEL) (the maximum permitted 15-minute time weighted exposure) for gasoline is 500 ppm.

Diesel Fuel

Diesel fuel is a clear liquid with an aromatic odor. Absorption of diesel fuel can cause irritation and dermatitis.

Due to its low vapor pressure, Cal-OSHA PELs and STELs have not been established for diesel fuel.

Benzene

Benzene is a colorless to light-yellow liquid with an aromatic odor. Inhalation or absorption of benzene can cause irritation of the eyes, skin, nose and respiratory system. Prolonged exposure can cause giddiness, headache, nausea, staggered gait, and fatigue.

The Cal-OSHA PEL for benzene is 1 ppm; the STEL for benzene is 5 ppm.

Toluene

Toluene is a colorless liquid with a sweet, pungent odor. Inhalation or absorption of toluene can cause irritation to the eyes and nose, fatigue, weakness, dizziness, headache, dermatitis, liver, and kidney damage.

The Cal-OSHA PEL for toluene is 100 ppm; the STEL for toluene is 150 ppm. The ceiling limit (the maximum concentration of an airborne contaminant to which an employee may be exposed at any time) for toluene is 500 ppm.

Ethyl benzene

Ethyl benzene is a colorless liquid with an aromatic odor. Inhalation or absorption of ethyl benzene can cause irritation to the eyes, skin, mucous membranes, headache, dermatitis, narcosis, and coma.

The Cal-OSHA PEL for ethyl benzene is 100 ppm; the STEL for ethyl benzene is 125 ppm.

Xylene Compounds

Xylene compounds (ortho-, meta-, and para-xylene) are colorless liquids with aromatic odors. Inhalation or absorption of xylene compounds can cause irritation to the eyes, skin nose, throat, dizziness, drowsiness, nausea, vomiting, and dermatitis.

The Cal-OSHA PEL for xylene compounds is 100 ppm; the STEL for xylene compounds is 300 ppm.

4.0 RISK ASSESSMENT SUMMARY

It is anticipated that there will be no significant or major potential source of exposures due to the scope of work to be performed on this project. An analysis of site-specific hazards with respect to chemical and physical hazards are discussed below.

In general, the principal routes of exposure on any site include inhalation, absorption, dermal contact, and ingestion. With respect to the scope of work to be performed, the potential routes of exposure include inhalation, absorption, and dermal contact. General safe work practices should adequately address the potential for exposure via absorption or dermal contact.

The potential for exposure due to inhalation would probably originate from airborne vapors, gas, or dusts. Due to the nature of this project, it is necessary to perform excavation activities at the site. Dust suppression measures may be required if it is deemed that airborne materials pose a hazard. These measures will include slowing the pace of work to minimize agitation of possible airborne materials and water saturation to minimize airborne materials.

With respect to direct contact, personal protective equipment such as gloves, eye protection, and skin protection will provide protection from potential exposure. Further, the amount of direct contact with potential contaminants, other than airborne dusts, will be limited.

Should respiratory irritation occur, appropriate air-purifying respiratory protective devices will be worn, with organic vapor cartridges and dust pre-filters, or with high efficiency organic vapor/HEPA stack-type cartridge. Typically, the cartridge will require replacement daily. Should direct contact occur more than what is anticipated through sample preservation procedures, appropriate protective clothing will be worn.

Physical hazards on-site have been identified as hazards associated with fire and explosion due to the presence of petroleum hydrocarbons, and general safety hazards.

5.0 AIR MONITORING PLAN

A. General

An air quality-monitoring program may be implemented to provide baseline and on-going air quality data for site operations. If deemed necessary, this program shall include an on-going evaluation of on-site atmospheric contaminant concentrations during work site activities that involve significant surface disturbances using organic vapor detection instruments and detector tubes.

If necessary, the program may include a preliminary survey of existing air quality conditions, prior to any surface disturbances and, if possible, under anticipated "worst case" weather conditions, to be used to establish baseline levels for input into the respiratory protection selection process. The Project Safety Officer may also decide to perform perimeter monitoring of downwind air quality conditions during significant surface disturbances.

6.0 PERSONAL PROTECTIVE EQUIPMENT

A. Introduction

It is important that personal protective equipment and safety requirements be appropriate to protect against the potential hazards at the site. Protective equipment will be selected based on the contaminant type(s), concentration(s), and route of entry. In situations where the type of materials and possibilities of contact are unknown or the hazards are not clearly identifiable, a more subjective determination must be made of the personal protective equipment.

A minimum of modified Level D safety equipment and clothing will be required for all workers and visitors on the site. All personnel must be prepared to step up to higher levels of protective equipment as conditions warrant.

B. Levels of Protection

The basic required work uniform for the site is modified Level D protection, which will include:

- Hard hat
- Steel toed boots
- Safety glasses
- Polyvinyl gloves for handling soil or liquid samples
- Neoprene over gloves for handling augers or other contaminated items

If Level C protection is deemed necessary by the Site Safety Officer based on field conditions, the protective equipment will include:

- Modified Level D equipment including gloves and polycoated Tyvek coveralls,
- Respiratory protection, which may include half face respirator with organic vapor cartridges depending on respiratory action levels, listed above.

The necessity for Level A or Level B protection is not expected to be encountered on this or other Triton sites. If site conditions indicate that Level C protection is inadequate, all site activities are to be ceased pending further review by the Company Safety Officer and Triton Senior Management.

7.0 WORK ZONES AND SECURITY MEASURES

A. General

A site must be controlled to reduce the possibility of exposure to any contaminants present and their transport by personnel or equipment from the site.

The possibility of exposure or translocation of contaminants can be reduced or eliminated in several ways, including:

- Setting up security or physical barriers to exclude unnecessary personnel from the general area
- Minimizing the number of personnel and equipment on-site consistent with effective operations
- Establishing work zones within the site
- Conducting operations in a manner to reduce the exposure of personnel and equipment
- Minimizing the airborne dispersion of contaminants

- Implementing the appropriate personnel and equipment decontamination procedures

B. Field Operations Work Area

Work areas (zones) will be established based on anticipated contamination. Within these zones prescribed operations will occur utilizing appropriate personal protective equipment. The planned zones are:

1. Exclusion Area (contaminated). The actual areas where work is being performed are the exclusion areas. Access to these areas will be strictly limited to the personnel needed to conduct the work being performed.

2. Contamination Reduction Area. An area near each active work zone will be designated as the contamination reduction area. Disposable protective gear will be removed and placed in garbage bags prior to leaving the reduction zone. Heavy equipment and non-disposable gear will be cleaned at a decontamination area within this zone.

3. Support Area (non-contaminated). Areas located away from active work areas and out of the zone of potential impact of hazards will be used for staging and support of the work being performed on site. Any materials, equipment, or clothing of personnel must be fully decontaminated prior to entering these areas.

8.0 DECONTAMINATION PROCEDURES

As part of the system to prevent or reduce the physical transfer of contaminants by people and/or equipment from on-site, procedures will be instituted for decontaminating anything leaving the Exclusion Area and Contamination Reduction Area. These procedures include the decontamination of personnel, protective equipment, monitoring equipment, clean-up equipment, etc. In cases where the Contamination Reduction Zone is not directly adjacent to the Exclusion Area, gross decontamination will occur in the Exclusion Area, followed by more detailed cleaning in the Contaminant Reduction Area. This gross decontamination will be performed to the extent necessary to keep contaminants from spreading to other "clean" areas of the site. In general, decontamination at the site consists of rinsing equipment, personnel, etc., with copious amounts of water and washing with detergent water solutions. The spent solution, brushes, sponges, containers, stands, etc., used in the decontamination process must be properly disposed.

9.0 GENERAL SAFE WORK PRACTICES

The project operations shall be conducted with the following minimum safety requirements employed:

1. Eating, drinking, chewing gum or tobacco, smoking, or any practice that increases the probability of hand to mouth transfer and ingestion of materials is prohibited in any area where the possibility of contamination exists.

2. Hands must be thoroughly washed upon leaving a contaminated or suspected contaminated area before eating, drinking, or any other activities transpire.

3. Legible and understandable precautionary labels shall be prominently affixed to containers of raw materials, intermediates, products, mixtures, scrap, waste, debris, and contaminated clothing.

4. Contaminated protective equipment shall not be removed from the regulated area until it has been cleaned or properly packaged and labeled.

5. Removal of materials from protective clothing or equipment by blowing, shaking, or any other means which may disperse materials into the air is prohibited.

6. Personnel on-site must use the "buddy" system when wearing any respiratory protective devices. Communications between members must be always maintained. Emergency communications shall be prearranged in case of encountering unexpected situations. Visual contact must be maintained between "pairs" on-site, and each team should remain in closed proximity to assist each other if necessary.

7. Personnel should be cautioned to inform each other of subjective symptoms of chemical exposure such as headache, dizziness, nausea, and irritation of the respiratory tract.

8. No excessive facial hair that interferes with a satisfactory fit of the face piece-to-face seal will be allowed on personnel required to wear respiratory protective equipment.

9. All respiratory protection selection, use, and maintenance shall meet the requirements of established RRM procedures, recognized consensus standards (AIHA, ANSI, NIOSH), and shall comply with the requirements set forth in CFR 1910.134.

10. Contact with surface and groundwater shall be minimized.

In addition, the following precautions shall be implemented for all personnel working on the project:

- Gross decontamination and removal of all personal protective equipment shall be performed prior to exiting the facility. Contaminated personal

protective clothing of worn, will be removed, and collected for proper disposal.

- Field operations personnel shall be cautioned to inform each other of non-visual effects of the presence of toxins, such as: headaches, dizziness, or nausea.
- On-site personnel shall be aware of symptoms related to heat and cold stress.

10.0 STANDARD OPERATING PROCEDURES

A. Respiratory Protection Program Guidelines

Triton will provide respirators when such equipment is deemed necessary to protect the health of Triton employees. Triton shall provide respirators, which are applicable and suitable for the purpose intended. The employer shall be responsible for the establishment and maintenance of this respiratory protection program. The Company Safety Officer will approve the selection, purchase, and inspection of the models and types of respiratory protective devices.

A medical evaluation is required prior to wearing any respirator, except where emergency escape respirators are provided. The contract physician shall determine if any health or physical conditions exist which would prohibit a worker from being assigned to an area requiring respiratory protection.

Respirators shall not be worn when conditions prevent a face piece-to-face seal. Such conditions as facial hair, scars, wrinkles, facial diseases, dentures removal, or other disorders could prevent a proper face piece-to-face seal. In these cases, corrective action will be taken to ensure a proper seal.

For the safe use of any respirator, it is essential that the user be properly instructed in its operation and maintenance. Both supervisors and employees shall be so instructed. Employees shall be instructed and trained in the proper selection and use of respirators and their limitations. The employee shall use the provided respirator in accordance with instructions and training received. All training shall be documented with records retained in the employee's training files. Refer to the RRM Respiratory Protection Program for additional information regarding respiratory protection.

11.0 EMERGENCY PROCEDURES

A. Site Emergency Warnings

Several warning systems may be utilized depending on the work site conditions or emergency involved:

1. Verbal Communications

2. Vehicle Horns

Verbal instructions between crew members are typically adequate to communicate steps that are required in emergency situations. In cases where parts of the crew are distant from the center of activity, vehicle horns may be necessary to indicate site emergencies. This type of communication needs to be followed by verbal instructions on necessary emergency actions.

The field worker should also present any other field personnel with Triton's telephone number and address. Location of the nearest telephone should be within reasonable distance of the field worker. Triton will provide the field worker with a field phone if the nearest telephone is not readily available.

B. Emergency Equipment

The following equipment comprises the basic elements for emergency preparedness. All or some of these items will be available at the work site:

1. Fire extinguishers - dry chemical

2. First aid kits

C. General Emergency Procedures

In case of an emergency or hazardous situation, the person that observes this condition shall immediately sound the alarm.

1. Upon hearing an alarm, all non-emergency communications will cease and the person giving the alarm will proceed to give the Project Safety Officer all pertinent information.

2. Power equipment will be shut down and operators will stand by for instruction.

3. Injured personnel will be transported outside of the Exclusion Zone (if applicable).

4. The Triton office will be notified immediately.

5. In case of a fire, explosion, or hazard alarm, personnel will immediately proceed to assigned pre-arranged safe locations.

6. Upon arrival at the safe locations, a complete head count will be taken by the Project Safety Officer and personnel will stay at the safe locations until the area is secured.

7. Directions to the nearest medical clinic or hospital as well as their telephone numbers will be made available to on-site personnel.

When a field worker is alone in an emergency or hazardous situation, outside contact should be made immediately. The field worker should then attempt to deactivate power equipment and contact the Company Safety Officer.

D. Personal Injury

If an injury occurs due to an accident or exposure to a hazardous substance, the Triton office will be notified. The Company Safety Officer will be given all appropriate information concerning the nature and cause of the injury so that treatment preparations can be initiated. The injured person will be transported to the Contamination Reduction line where appropriate first aid and treatment can begin. The Project Manager will be informed and will investigate the cause of the injury and make any necessary changes in work procedures.

In the event of an accident resulting in physical injury, first aid will be administered, and the injured worker will be transported to for emergency treatment.

EMERGENCY CONTACT LISTING

Nature of Emergency	Phone Number
Ambulance	911
Fire	911
Police	911
Poison Control Center	(800) 662-9886
Chemical Spills	(800) 852-7550
Hospital	911
TRITON	(831) 475-8141

12.0 TRAINING REQUIREMENTS

All personnel assigned to this project will be required to demonstrate that they have completed the Initial Training Requirements (40 hours). An annual 8-hour refresher course is also required in accordance with 29 CFR 1910.

Field personnel from Triton and their sub-contractors will attend a project briefing for safety issues and project work task review before beginning work. All Triton site personnel shall have completed training relative to the project operations plans, and the materials to be encountered during the project.

13.0 MEDICAL SURVEILLANCE

Triton personnel and sub-contractors engaged in project operations shall be participants in the Medical Surveillance program and must be cleared by the examining physician(s) to wear respiratory protection devices and protective clothing for working with hazardous materials. The applicable requirements under code 29 CFR 1910 will be observed.

A. Examination Requirements

All Triton personnel on-site shall have successfully completed a pre-placement or periodic medical examination in accordance with established Triton policies and procedures, and consistent with the provisions of the OSHA standards. This examination shall include a complete medical and occupational history, physical examination, and selected biological sampling. Laboratory studies include a complete blood count (CBC), urinalysis, chemistry panel (SMAC), pulmonary function (FEV and FVC), chest X-ray, audiometry, and vision screening.

14.0 RECORDKEEPING

A. General

Record keeping shall be consistent with OSHA regulations in all respects. The following permanent records will be maintained in the Triton offices:

1. Safety Inspection Reports
2. Personnel Exposure Monitoring Records
3. OSHA 200 Form - Current to within 90 days
4. Accident reports consistent with established Triton procedures

B. Medical Records

Permanent medical records shall be maintained in confidential files by the contract physician/medical clinic. The physician will supply Triton with a medical status document, certifying that the personnel assigned to the project are physically capable of performing their individual work tasks.

State of California
State Water Resources Control Board
Division of Clean Water Programs
P.O. Box 944212
Sacramento, CA 94244-2120

For State Use Only

CERTIFICATION OF FINANCIAL RESPONSIBILITY

FOR UNDERGROUND STORAGE TANKS CONTAINING PETROLEUM

A. I am required to demonstrate Financial Responsibility in the required amounts as specified in Section 2807, Chapter 18, Div. 3, Title 23, CCR:

☐ 500,000 dollars per occurrence
or
☒ 1 million dollars per occurrence

AND

☒ 1 million dollars annual aggregate
or
☐ 2 million dollars annual aggregate

B. Graniterock
(Name of tank Owner or Operator)

hereby certifies that it is in compliance with the requirements of Section 2807, Article 3, Chapter 18, Division 3, Title 23, California Code of Regulations.

The mechanisms used to demonstrate financial responsibility as required by Section 2807 are as follows:

C. Mechanism Type	Name and Address of Issuer	Mechanism Number	Coverage Amount	Coverage Period	Corrective Action	Third Party Compensation
Chief Financial Officer Letter	Graniterock 350 Technology Way PO Box 50001 Watsonville, CA 95077	N/A	$10,000	Continuous	Yes	Yes
State UST Cleanup Fund Graniterock UST BOE No. 44-014738	UST Cleanup Fund P.O. Box 944212 Sacramento, CA 94244-2120	N/A	$990,000	Continuous	Yes	Yes

Note: If you are using the State Fund as any part of your demonstration of financial responsibility, your execution and submission of this certification also certifies that you are in compliance with all conditions for participation in the Fund.

D. Facility Name	Facility Address
Graniterock - Watsonville Concrete and Building Materials	540 Beach St. Watsonville, CA 95076
Graniterock - Santa Cruz Concrete and Building Materials	303 Coral St. Santa Cruz, CA 95060
Graniterock - Salinas Concrete and Building Materials	400 Work Street Salinas, CA 93901
Graniterock - Monterey Concrete and Building Materials	1755 Del Monte Blvd. Seaside, CA 93955
Graniterock - Gilroy Concrete and Building Materials	6475 Chestnut Street Gilroy, CA 95020
Graniterock - San Jose Concrete	11711 Berryessa Rd. San Jose, CA 95133
Granite Rock Company - Pavex Central Office	120 Graniterock Way, San Jose, CA 95136

E. Signature of Tank Owner or Operator / Date	Name and Title of Tank Owner or Operator
8/8/12	Thomas Squeri-President and CEO
Signature of Witness or Notary / Date	Name of Witness or Notary
Janice Shaffer	JANICE SHAFFER

Submit original to local UST regulatory agency. Keep a copy at each UST facility.

Monitoring System Equipment Certification

For Use By All Jurisdictions Within The State of California

Authority Cited: Chapter 6.7, Health and Safety Code; Chapter 16, Division 3, Title 23, California Code of Regulations

This form must be used to document testing and servicing of monitoring equipment. A separate certification or report must be prepared for each monitoring system control panel by the technician who performs the work. A copy of this form must be provided to the tank system owner/operator. The owner/operator must submit a copy of this form to the local agency regulating UST system within 30 days of test date.

A. General Information

Facility Name: **Granite Rock** Bldg. No.:

Site Address: **120 Granite Rock Way** City: **San Jose, CA** Zip: **95136-**

Facility Contact Person: **Manager** Contact Phone No.: **(408) 574-1497**

Make/Model of Monitoring System: **Pneumercator LC 1000** Date of Testing/Servicing: **8/8/12**

B. Inventory of Equipment Tested/Certified

Check the appropriate boxes to indicate specific equipment inspected/serviced:

Tank ID: 01-Regu

- ☐ In - Tank Gauging Probe. Model:
- ☒ Annular Space or Vault Sensor. Model: Misc LS600 - LD
- ☒ Piping Sump \ Trench Sensor (s). Model: Misc LS600 - LD
- ☐ Fill Sump Sensor (s). Model:
- ☐ Mechanical Line Leak Detector. Model:
- ☐ Electronic Line Leak Detector. Model:
- ☐ Tank Overfill \ High-Level Sensor. Model:
- ☐ Other (specify equipment type and model in Section E on Page 2).

Tank ID: 02-Diesel

- ☐ In - Tank Gauging Probe. Model:

- ☐ Dispenser Containment Float (s) and Chain (s).

Dispenser ID:

- ☐ Dispenser Containment Sensor (s). Model:
- ☐ Shear Valve (s).
- ☐ Dispenser Containment Float (s) and Chain (s).

*If the facility contains more tanks or dispensers, copy this form. Include information for every tank and dispenser at the facility

C. Certification -

I certify that the equipment identified in this document was inspected/serviced in accordance with the manufacturer's guidelines. Attached to this Certification is information (e.g. manufactures' checklists) necessary to verify that this information is correct and a Plot Plan showing the layout of monitoring equipment. For any equipment capable of generating such reports, I have also attached a copy of the; ***(check all that apply):*** ☐ **System set-up** ☐ **Alarm history report**

Technician Name (print): **Israel Santillan** Signature:

Mfg. Cert.#.: **10999** ICC# **8057571-UT** License. No.: **485184**

Testing Company Name: **Service Station Systems** Phone No.: **(408) 971-2445**

Testing Company Address: **680 Quinn Ave., San Jose, CA 95112** Date of Testing/Servicing: **8/8/12**

Site Address: **120 Granite Rock Way** Date of Testing/Servicing: **8/8/12**

D. Results of Testing / Servicing

Software Version Installed: **N/A**

Complete the following checklist:

☒ Yes	☐ No*	Is the audible alarm operational?
☒ Yes	☐ No*	Is the visual alarm operational?
☒ Yes	☐ No*	Were all sensors visually inspected, functionally tested, and confirmed operational?
☒ Yes	☐ No*	Were all sensors installed at lowest point of secondary containment and positioned so that other equipment will not interfere with their proper operation?
☐ Yes	☐ No* ☒ N/A	If alarms are relayed to a remote monitoring station, is all communications equipment (e.g. modem) operational?
☐ Yes	☐ No* ☒ N/A	For pressurized piping systems, does the turbine automatically shut down if the piping secondary containment monitoring system detects a leak, fails to operate, or is electrically disconnected? If yes: which sensors initiate positive shut-down? *(Check all that apply)* ☐ Sump/Trench Sensors; ☐ Dispenser Containment Sensors. Did you confirm positive shut-down due to leaks and sensor failure/disconnection? ☐ Yes ☐ No
☐ Yes	☐ No* ☒ N/A	For tank systems that utilize the monitoring system as the primary tank overfill warning device (i.e. no mechanical overfill prevention valve is installed), is the overfill warning alarm visible and audible at the tank fill point(s) and operating properly? If so, at what percent of tank capacity does the alarm trigger? 0 %
☐ Yes*	☒ No	Was any monitoring equipment replaced? If yes, identify specific sensors, probes, or other equipment replaced and list the manufacturer name and model for all replacement parts in Section E, below.
☐ Yes*	☒ No	Was liquid found inside any secondary containment systems designed as dry systems? *(Check all that apply)* ☐ Product; ☐ Water. If yes, describe causes in Section E, below.
☐ Yes	☒ No*	Was monitoring system set-up reviewed to ensure proper settings? *(Attach set-up reports, if applicable.)*
☒ Yes	☐ No*	Is all monitoring equipment operational per manufacturer's specifications?

*** In Section E below, describe how and when these deficiencies were or will be corrected.**

E. Comments:

Site has no printer & no system to determine if set up is correct.

87 & Diesel are split tanks and share Annular.

Adjustment made to Diesel Dispenser Float & Chain.

87 has Suction System.

Site Address: **120 Granite Rock Way** Date of Testing/Servicing: **8/8/12**

F. In - Tank Gauging / SIR Equipment:

☐ Check this box if tank gauging is used only for inventory control.
☒ Check this box if no tank gauging or SIR equipment is installed.

This section must be completed if in-tank gauging equipment is used to perform leak detection monitoring.

Complete the following checklist:

☐ Yes	☐ No*	Has all input wiring been inspected for proper entry and termination, including testing for ground faults?
☐ Yes	☐ No*	Were all tank gauging probes visually inspected for damage and residue buildup?
☐ Yes	☐ No*	Was accuracy of system product level readings tested?
☐ Yes	☐ No*	Was accuracy of system water level readings tested?
☐ Yes	☐ No*	Were all probes reinstalled properly?
☐ Yes	☐ No*	Were all items on the equipment manufacturer's maintenance checklist completed?

*** In Section H below, describe how and when these deficiencies were or will be corrected.**

G. Line Leak Detectors (LLD):

☐ Check this box if LLD's are not installed.

Complete the following checklist:

☒ Yes	☐ No* ☐ N/A	For equipment start-up or annual equipment certification was a leak simulated to verify LLD performance? *(Check all that apply)* Simulated leak rate: ☒ 3 g.p.h. (1.); ☐ 0.1 g.p.h. (2.); ☐ 0.2 g.p.h. (2.). Notes: 1. Required for equipment start-up certification and annual certification. 2. Unless mandated by local agency, certification required only for electronic LLD start-up.
☒ Yes	☐ No*	Were all LLD's confirmed operational and accurate within regulatory requirements?
☒ Yes	☐ No*	Was the testing apparatus properly calibrated?
☒ Yes	☐ No* ☐ N/A	For mechanical LLD's, does the LLD restrict product flow if it detects a leak?
☐ Yes	☐ No* ☒ N/A	For electronic LLD's, does the turbine automatically shut off if the LLD detects a leak?
☐ Yes	☐ No* ☒ N/A	For electronic LLD's, does the turbine automatically shut off if any portion of the monitoring system is disabled or disconnected?
☐ Yes	☐ No* ☒ N/A	For electronic LLD's, does the turbine automatically shut off if any portion of the monitoring system malfunctions or fails a test?
☐ Yes	☐ No* ☒ N/A	For electronic LLD's, have all accessible wiring connections been visually inspected?
☒ Yes	☐ No*	Were all items on the equipment manufacturer's maintenance checklist completed?

*** In Section H below, describe how and when these deficiencies were or will be corrected.**

H. Comments:

SWRCB, January 2006

Spill Bucket Testing Report Form

This form is intended for use by contractors performing annual testing of UST spill containment structures. The completed form and printouts from tests (if applicable), should be provided to the facility owner/operator for submittal to the local regulatory agency.

1. FACILITY INFORMATION

Facility Name: Granite Rock	Date of Testing: 8/8/12
Facility Address: 120 Granite Rock Way San Jose, CA 95136-	
Facility Contact: Elias (408) 574-1497	
Date Local Agency Was Notified of Testing: 8/2/12	
Name of Local Agency Inspector *(if present during testing):* Mickey Pierce	

2. TESTING CONTRACTOR INFORMATION

Company Name: Service Station Systems
Technician Conducting Test: Israel Santillan
Credentials[1]: ☒ CSLB Contractor ☒ ICC Service Tech. ☐ SWRCB Tank Tester ☐ Other *(Specify)*
License Number(s): License: 485184 ICC:8057571-UT

3. SPILL BUCKET TESTING INFORMATION

Test Method Used:	☒ Hydrostatic	☐ Vacuum	☐ Other	
Test Equipment Used: Measuring Tape			Equipment Resolution: 1/16 in.

D. Results of Testing / Servicing

Software Version Installed: **N/A**

Complete the following checklist:

☒ Yes	☐ No*	Is the audible alarm operational?
☒ Yes	☐ No*	Is the visual alarm operational?
☒ Yes	☐ No*	Were all sensors visually inspected, functionally tested, and confirmed operational?
☒ Yes	☐ No*	Were all sensors installed at lowest point of secondary containment and positioned so that other equipment will not interfere with their proper operation?
☐ Yes	☐ No* ☒ N/A	If alarms are relayed to a remote monitoring station, is all communications equipment (e.g. modem) operational?
☒ Yes	☐ No* ☐ N/A	For pressurized piping systems, does the turbine automatically shut down if the piping secondary containment monitoring system detects a leak, fails to operate, or is electrically disconnected? If yes: which sensors initiate positive shut-down? *(Check all that apply)* ☒ Sump/Trench Sensors; ☐ Dispenser Containment Sensors. Did you confirm positive shut-down due to leaks and sensor failure/disconnection? ☒ Yes ☐ No
☐ Yes	☐ No* ☒ N/A	For tank systems that utilize the monitoring system as the primary tank overfill warning device (i.e. no mechanical overfill prevention valve is installed), is the overfill warning alarm visible and audible at the tank fill point(s) and operating properly? If so, at what percent of tank capacity does the alarm trigger? 0 %
☐ Yes*	☒ No	Was any monitoring equipment replaced? If yes, identify specific sensors, probes, or other equipment replaced and list the manufacturer name and model for all replacement parts in Section E, below.
☐ Yes*	☒ No	Was liquid found inside any secondary containment systems designed as dry systems? *(Check all that apply)* ☐ Product; ☐ Water. If yes, describe causes in Section E, below.
☐ Yes	☒ No*	Was monitoring system set-up reviewed to ensure proper settings? *(Attach set-up reports, if applicable.)*
☒ Yes	☐ No*	Is all monitoring equipment operational per manufacturer's specifications?

*** In Section E below, describe how and when these deficiencies were or will be corrected.**

E. Comments:

Site has no printer & no system to determine if set up is correct.

87 & Diesel are split tanks and share Annular.

87 Dispenser has Suction System & has a sensor that shuts down Dispenser.

Only Diesel STP has a sensor that shuts down Turbine.

Site Address: **120 Granite Rock Way** Date of Testing/Servicing: **8/8/13**

F. In - Tank Gauging / SIR Equipment:

☐ Check this box if tank gauging is used only for inventory control.
☒ Check this box if no tank gauging or SIR equipment is installed.

This section must be completed if in-tank gauging equipment is used to perform leak detection monitoring.

Complete the following checklist:

☐ Yes	☐ No*	Has all input wiring been inspected for proper entry and termination, including testing for ground faults?
☐ Yes	☐ No*	Were all tank gauging probes visually inspected for damage and residue buildup?
☐ Yes	☐ No*	Was accuracy of system product level readings tested?
☐ Yes	☐ No*	Was accuracy of system water level readings tested?
☐ Yes	☐ No*	Were all probes reinstalled properly?
☐ Yes	☐ No*	Were all items on the equipment manufacturer's maintenance checklist completed?

*** In Section H below, describe how and when these deficiencies were or will be corrected.**

G. Line Leak Detectors (LLD):

☐ Check this box if LLD's are not installed.

Complete the following checklist:

☒ Yes	☐ No* ☐ N/A	For equipment start-up or annual equipment certification was a leak simulated to verify LLD performance? *(Check all that apply)* Simulated leak rate: ☒ 3 g.p.h. (1.); ☐ 0.1 g.p.h. (2.); ☐ 0.2 g.p.h. (2.). Notes: 1. Required for equipment start-up certification and annual certification. 2. Unless mandated by local agency, certification required only for electronic LLD start-up.
☒ Yes	☐ No*	Were all LLD's confirmed operational and accurate within regulatory requirements?
☒ Yes	☐ No*	Was the testing apparatus properly calibrated?
☒ Yes	☐ No* ☐ N/A	For mechanical LLD's, does the LLD restrict product flow if it detects a leak?
☐ Yes	☐ No* ☒ N/A	For electronic LLD's, does the turbine automatically shut off if the LLD detects a leak?
☐ Yes	☐ No* ☒ N/A	For electronic LLD's, does the turbine automatically shut off if any portion of the monitoring system is disabled or disconnected?
☐ Yes	☐ No* ☒ N/A	For electronic LLD's, does the turbine automatically shut off if any portion of the monitoring system malfunctions or fails a test?
☐ Yes	☐ No* ☒ N/A	For electronic LLD's, have all accessible wiring connections been visually inspected?
☒ Yes	☐ No*	Were all items on the equipment manufacturer's maintenance checklist completed?

*** In Section H below, describe how and when these deficiencies were or will be corrected.**

CERTIFICATION OF TECHNICIAN RESPONSIBLE FOR CONDUCTING THIS TESTING

I hereby certify that all the information contained in this report is true, accurate,and in full compliance with legal requirements.

Technician's Signature: Israel Santillan Date: 8/8/13

[1] State laws and regulations do not currently require testing to be performed by a qualified contractor. However, local requirements may be more stringent.

Monitoring System Equipment Certification

For Use By All Jurisdictions Within The State of California

Authority Cited: Chapter 6.7, Health and Safety Code; Chapter 16, Division 3, Title 23, California Code of Regulations

This form must be used to document testing and servicing of monitoring equipment. A separate certification or report must be prepared for each monitoring system control panel by the technician who performs the work. A copy of this form must be provided to the tank system owner/operator. The owner/operator must submit a copy of this form to the local agency regulating UST system within 30 days of test date.

A. General Information

Facility Name: **Granite Rock** Bldg. No.:

Site Address: **120 Granite Rock Way** City: **San Jose, CA** Zip: **95136-**

Facility Contact Person: **Manager** Contact Phone No.: **(408) 574-1427**

Make/Model of Monitoring System: **Pneumercator LC 1000** Date of Testing/Servicing: **8/8/14**

B. Inventory of Equipment Tested/Certified

Check the appropriate boxes to indicate specific equipment inspected/serviced:

Tank ID: 01-Regu

- ☐ In - Tank Gauging Probe. Model:
- ☒ Annular Space or Vault Sensor. Model: Misc LS600
- ☒ Piping Sump \ Trench Sensor (s). Model: Misc LS600
- ☐ Fill Sump Sensor (s). Model:
- ☐ Mechanical Line Leak Detector. Model:
- ☐ Electronic Line Leak Detector. Model:
- ☐ Tank Overfill \ High-Level Sensor. Model:
- ☐ Other (specify equipment type and model in Section E on Page 2).

Tank ID: 02-Diesel

- ☐ In - Tank Gauging Probe. Model:
- ☒ Annular Space or Vault Sensor. Model: Misc LS600
- ☒ Piping Sump \ Trench Sensor (s). Model: Misc LS600
- ☐ Fill Sump Sensor (s). Model:
- ☒ Mechanical Line Leak Detector. Model: Vaporless LD2000
- ☐ Electronic Line Leak Detector. Model:
- ☐ Tank Overfill \ High-Level Sensor. Model:
- ☐ Other (specify equipment type and model in Section E on Page 2).

Tank ID:

- ☐ In - Tank Gauging Probe. Model:
- ☐ Annular Space or Vault Sensor. Model:
- ☐ Piping Sump \ Trench Sensor (s). Model:
- ☐ Fill Sump Sensor (s). Model:
- ☐ Mechanical Line Leak Detector. Model:
- ☐ Electronic Line Leak Detector. Model:
- ☐ Tank Overfill \ High-Level Sensor. Model:
- ☐ Other (specify equipment type and model in Section E on Page 2).

Tank ID:

- ☐ In - Tank Gauging Probe. Model:
- ☐ Annular Space or Vault Sensor. Model:
- ☐ Piping Sump \ Trench Sensor (s). Model:
- ☐ Fill Sump Sensor (s). Model:
- ☐ Mechanical Line Leak Detector. Model:
- ☐ Electronic Line Leak Detector. Model:
- ☐ Tank Overfill \ High-Level Sensor. Model:

- ☐ Dispenser Containment Sensor (s). Model:
- ☒ Shear Valve (s).
- ☒ Dispenser Containment Float (s) and Chain (s).

Dispenser ID: 03

- ☐ Dispenser Containment Sensor (s). Model:
- ☒ Shear Valve (s).
- ☒ Dispenser Containment Float (s) and Chain (s).

Dispenser ID:

- ☐ Dispenser Containment Sensor (s). Model:
- ☐ Shear Valve (s).
- ☐ Dispenser Containment Float (s) and Chain (s).

Dispenser ID:

- ☐ Dispenser Containment Sensor (s). Model:
- ☐ Shear Valve (s).
- ☐ Dispenser Containment Float (s) and Chain (s).

Dispenser ID:

- ☐ Dispenser Containment Sensor (s). Model:
- ☐ Shear Valve (s).
- ☐ Dispenser Containment Float (s) and Chain (s).

*If the facility contains more tanks or dispensers, copy this form. Include information for every tank and dispenser at the facility

C. Certification - I certify that the equipment identified in this document was inspected/serviced in accordance with the manufacturer's guidelines. Attached to this Certification is information (e.g. manufactures' checklists) necessary to verify that this information is correct and a Plot Plan showing the layout of monitoring equipment. For any equipment capable of generating such reports, I have also attached a copy of the; *(check all that apply):* ☐ System set-up ☐ Alarm history report

Technician Name (print): **Israel Santillan** Signature: Israel Santillan

Mfg. Cert.#.: **10999** ICC# **8057571-UT** License. No.: **485184**

Testing Company Name: **Service Station Systems** Phone No.: **(408) 971-2445**

Testing Company Address: **680 Quinn Ave., San Jose, CA 95112** Date of Testing/Servicing: **8/8/14**

Site Address: **120 Granite Rock Way** Date of Testing/Servicing: **8/8/14**

D. Results of Testing / Servicing

Software Version Installed: **N/A**

Complete the following checklist:

☒ Yes	☐ No*	Is the audible alarm operational?
☒ Yes	☐ No*	Is the visual alarm operational?
☒ Yes	☐ No*	Were all sensors visually inspected, functionally tested, and confirmed operational?
☒ Yes	☐ No*	Were all sensors installed at lowest point of secondary containment and positioned so that other equipment will not interfere with their proper operation?
☐ Yes	☐ No* ☒ N/A	If alarms are relayed to a remote monitoring station, is all communications equipment (e.g. modem) operational?
☒ Yes	☐ No* ☐ N/A	For pressurized piping systems, does the turbine automatically shut down if the piping secondary containment monitoring system detects a leak, fails to operate, or is electrically disconnected? If yes: which sensors initiate positive shut-down? *(Check all that apply)* ☒ Sump/Trench Sensors; ☐ Dispenser Containment Sensors. Did you confirm positive shut-down due to leaks and sensor failure/disconnection? ☒ Yes ☐ No
☐ Yes	☐ No* ☒ N/A	For tank systems that utilize the monitoring system as the primary tank overfill warning device (i.e. no mechanical overfill prevention valve is installed), is the overfill warning alarm visible and audible at the tank fill point(s) and operating properly? If so, at what percent of tank capacity does the alarm trigger? 0 %
☐ Yes*	☒ No	Was any monitoring equipment replaced? If yes, identify specific sensors, probes, or other equipment replaced and list the manufacturer name and model for all replacement parts in Section E, below.
☐ Yes*	☒ No	Was liquid found inside any secondary containment systems designed as dry systems? *(Check all that apply)* ☐ Product; ☐ Water. If yes, describe causes in Section E, below.
☐ Yes	☒ No*	Was monitoring system set-up reviewed to ensure proper settings? *(Attach set-up reports, if applicable.)*
☒ Yes	☐ No*	Is all monitoring equipment operational per manufacturer's specifications?

*** In Section E below, describe how and when these deficiencies were or will be corrected.**

E. Comments: **Site has no printer & no system to determine if set up is correct.**

87 & Diesel are split tanks and share Annular.

87 Dispenser has Suction System & Stand Alone Sensor that shuts down Dispenser (330212-001).

Only Diesel STP has a sensor that shuts down Turbine.

Site Address: **120 Granite Rock Way** Date of Testing/Servicing: **8/8/14**

F. In - Tank Gauging / SIR Equipment:

☐ Check this box if tank gauging is used only for inventory control.
☒ Check this box if no tank gauging or SIR equipment is installed.

This section must be completed if in-tank gauging equipment is used to perform leak detection monitoring.

Complete the following checklist:

☐ Yes	☐ No*	Has all input wiring been inspected for proper entry and termination, including testing for ground faults?
☐ Yes	☐ No*	Were all tank gauging probes visually inspected for damage and residue buildup?
☐ Yes	☐ No*	Was accuracy of system product level readings tested?
☐ Yes	☐ No*	Was accuracy of system water level readings tested?
☐ Yes	☐ No*	Were all probes reinstalled properly?
☐ Yes	☐ No*	Were all items on the equipment manufacturer's maintenance checklist completed?

*** In Section H below, describe how and when these deficiencies were or will be corrected.**

G. Line Leak Detectors (LLD):

☐ Check this box if LLD's are not installed.

Complete the following checklist:

☒ Yes	☐ No* ☐ N/A	For equipment start-up or annual equipment certification was a leak simulated to verify LLD performance? *(Check all that apply)* Simulated leak rate: ☒ 3 g.p.h. (1.); ☐ 0.1 g.p.h. (2.); ☐ 0.2 g.p.h. (2.). Notes: 1. Required for equipment start-up certification and annual certification. 2. Unless mandated by local agency, certification required only for electronic LLD start-up.
☒ Yes	☐ No*	Were all LLD's confirmed operational and accurate within regulatory requirements?
☒ Yes	☐ No*	Was the testing apparatus properly calibrated?
☒ Yes	☐ No* ☐ N/A	For mechanical LLD's, does the LLD restrict product flow if it detects a leak?
☐ Yes	☐ No* ☒ N/A	For electronic LLD's, does the turbine automatically shut off if the LLD detects a leak?
☐ Yes	☐ No* ☒ N/A	For electronic LLD's, does the turbine automatically shut off if any portion of the monitoring system is disabled or disconnected?
☐ Yes	☐ No* ☒ N/A	For electronic LLD's, does the turbine automatically shut off if any portion of the monitoring system malfunctions or fails a test?
☐ Yes	☐ No* ☒ N/A	For electronic LLD's, have all accessible wiring connections been visually inspected?
☒ Yes	☐ No*	Were all items on the equipment manufacturer's maintenance checklist completed?

*** In Section H below, describe how and when these deficiencies were or will be corrected.**

H. Comments:

SWRCB, January 2006

Spill Bucket Testing Report Form

This form is intended for use by contractors performing annual testing of UST spill containment structures. The completed form and printouts from tests (if applicable), should be provided to the facility owner/operator for submittal to the local regulatory agency.

1. FACILITY INFORMATION

Facility Name: Granite Rock	Date of Testing: 08/08/14
Facility Address: 120 Granite Rock Way San Jose, CA 95136-	
Facility Contact: Elden Davis (408) 574-1427	
Date Local Agency Was Notified of Testing: 7/29/14	
Name of Local Agency Inspector *(if present during testing)*: Matthew Burge	

2. TESTING CONTRACTOR INFORMATION

Company Name: Service Station Systems
Technician Conducting Test: Israel Santillan
Credentials[1]: ☒ CSLB Contractor ☒ ICC Service Tech. ☐ SWRCB Tank Tester ☐ Other *(Specify)*
License Number(s): License: 485184 ICC: 8057571-UT

*If the facility contains more tanks or dispensers, copy this form. Include information for every tank and dispenser at the facility

C. Certification - I certify that the equipment identified in this document was inspected/serviced in accordance with the manufacturer's guidelines. Attached to this Certification is information (e.g. manufactures' checklists) necessary to verify that this information is correct and a Plot Plan showing the layout of monitoring equipment. For any equipment capable of generating such reports, I have also attached a copy of the;

(check all that apply): ☐ System set-up ☐ Alarm history report

Technician Name (print): **Israel Santillan** Signature: Israel Santillan

Mfg. Cert.#.: **7258503702** ICC# **8057571-UT** License. No.: **485184**

Testing Company Name: **Service Station Systems** Phone No.: **(408) 971-2445**

Testing Company Address: **680 Quinn Ave., San Jose, CA 95112** Date of Testing/Servicing: **8/12/16**

Site Address: **120 Granite Rock Way** Date of Testing/Servicing: **8/12/16**

D. Results of Testing / Servicing

Software Version Installed: **N/A**

Complete the following checklist:

☒ Yes	☐ No*	Is the audible alarm operational?
☒ Yes	☐ No*	Is the visual alarm operational?
☒ Yes	☐ No*	Were all sensors visually inspected, functionally tested, and confirmed operational?
☒ Yes	☐ No*	Were all sensors installed at lowest point of secondary containment and positioned so that other equipment will not interfere with their proper operation?
☐ Yes	☐ No* ☒ N/A	If alarms are relayed to a remote monitoring station, is all communications equipment (e.g. modem) operational?
☒ Yes	☐ No* ☐ N/A	For pressurized piping systems, does the turbine automatically shut down if the piping secondary containment monitoring system detects a leak, fails to operate, or is electrically disconnected? If yes: which sensors initiate positive shut-down? *(Check all that apply)* ☒ Sump/Trench Sensors; ☐ Dispenser Containment Sensors. Did you confirm positive shut-down due to leaks and sensor failure/disconnection? ☒ Yes ☐ No
☐ Yes	☐ No* ☒ N/A	For tank systems that utilize the monitoring system as the primary tank overfill warning device (i.e. no mechanical overfill prevention valve is installed), is the overfill warning alarm visible and audible at the tank fill point(s) and operating properly? If so, at what percent of tank capacity does the alarm trigger? 0 %
☐ Yes*	☒ No	Was any monitoring equipment replaced? If yes, identify specific sensors, probes, or other equipment replaced and list the manufacturer name and model for all replacement parts in Section E, below.
☒ Yes*	☐ No	Was liquid found inside any secondary containment systems designed as dry systems? *(Check all that apply)* ☒ Product; ☐ Water. If yes, describe causes in Section E, below.
☒ Yes	☐ No*	Was monitoring system set-up reviewed to ensure proper settings? *(Attach set-up reports, if applicable.)*
☒ Yes	☐ No*	Is all monitoring equipment operational per manufacturer's specifications?

*** In Section E below, describe how and when these deficiencies were or will be corrected.**

E. Comments: **Diesel and 87 are split tank and share annular.**

87 Dispenser is Stand Alone.

Removed small amount of product from Disp 2 Sump.

Only the Diesel has pressurized piping

Site Address: **120 Granite Rock Way** Date of Testing/Servicing: **8/12/16**

F. In - Tank Gauging / SIR Equipment:

☒ Check this box if tank gauging is used only for inventory control.
☐ Check this box if no tank gauging or SIR equipment is installed.

This section must be completed if in-tank gauging equipment is used to perform leak detection monitoring.

Complete the following checklist:

☐ Yes	☐ No*	Has all input wiring been inspected for proper entry and termination, including testing for ground faults?
☐ Yes	☐ No*	Were all tank gauging probes visually inspected for damage and residue buildup?
☐ Yes	☐ No*	Was accuracy of system product level readings tested?
☐ Yes	☐ No*	Was accuracy of system water level readings tested?
☐ Yes	☐ No*	Were all probes reinstalled properly?
☐ Yes	☐ No*	Were all items on the equipment manufacturer's maintenance checklist completed?

*** In Section H below, describe how and when these deficiencies were or will be corrected.**

G. Line Leak Detectors (LLD):

☐ Check this box if LLD's are not installed.

Complete the following checklist:

☒ Yes	☐ No* ☐ N/A	For equipment start-up or annual equipment certification was a leak simulated to verify LLD performance? *(Check all that apply)* Simulated leak rate: ☒ 3 g.p.h. (1.); ☐ 0.1 g.p.h. (2.); ☐ 0.2 g.p.h. (2.). Notes: 1. Required for equipment start-up certification and annual certification. 2. Unless mandated by local agency, certification required only for electronic LLD start-up.
☒ Yes	☐ No*	Were all LLD's confirmed operational and accurate within regulatory requirements?
☒ Yes	☐ No*	Was the testing apparatus properly calibrated?
☒ Yes	☐ No* ☐ N/A	For mechanical LLD's, does the LLD restrict product flow if it detects a leak?
☐ Yes	☐ No* ☒ N/A	For electronic LLD's, does the turbine automatically shut off if the LLD detects a leak?
☐ Yes	☐ No* ☒ N/A	For electronic LLD's, does the turbine automatically shut off if any portion of the monitoring system is disabled or disconnected?
☐ Yes	☐ No* ☒ N/A	For electronic LLD's, does the turbine automatically shut off if any portion of the monitoring system malfunctions or fails a test?
☐ Yes	☐ No* ☒ N/A	For electronic LLD's, have all accessible wiring connections been visually inspected?
☒ Yes	☐ No*	Were all items on the equipment manufacturer's maintenance checklist completed?

*** In Section H below, describe how and when these deficiencies were or will be corrected.**

H. Comments: **Only the Diesel had a LLD to test**

SWRCB, January 2006

Spill Bucket Testing Report Form

This form is intended for use by contractors performing annual testing of UST spill containment structures. The completed form and printouts from tests (if applicable), should be provided to the facility owner/operator for submittal to the local regulatory agency.

1. FACILITY INFORMATION

Facility Name: Granite Rock	Date of Testing: 08/12/16
Facility Address: 120 Granite Rock Way San Jose, CA 95136-	
Facility Contact: Elden Davis (408) 574-1424	
Date Local Agency Was Notified of Testing: 7/28/16	
Name of Local Agency Inspector *(if present during testing)*: Matt Burge	

2. TESTING CONTRACTOR INFORMATION

Company Name: Service Station Systems	
Technician Conducting Test: Israel Santillan	
Credentials[1]: ☒ CSLB Contractor ☒ ICC Service Tech. ☐ SWRCB Tank Tester ☐ Other *(Specify)*	
License Number(s): License: 485184	ICC: 8057571-UT

3. SPILL BUCKET TESTING INFORMATION

Test Method Used:	☒ Hydrostatic	☐ Vacuum	☐ Other
Test Equipment Used: Measuring Tape			Equipment Resolution: 1/16 in.

Identify Spill Bucket *(By Tank Number, Stored Product, etc.)*	1 Fill Bucket 01 - Diesel	2 Fill Bucket 02 - Regu	3	4
Bucket Installation Type:	☒ Direct Bury ☐ Contained in Sump	☒ Direct Bury ☐ Contained in Sump	☐ Direct Bury ☐ Contained in Sump	☐ Direct Bury ☐ Contained in Sump
Bucket Diameter:	12.00 in.	12.00 in.		
Bucket Depth:	16.00 in.	14.00 in.		
Wait time between applying vacuum/water and start of test:	10 min.	10 min.		
Test Start Time (T_I):	8:45am	8:45am

☐ Check this box if LLD's are not installed.

Complete the following checklist:

☒ Yes	☐ No* ☐ N/A	For equipment start-up or annual equipment certification was a leak simulated to verify LLD performance? *(Check all that apply)* Simulated leak rate: ☒ 3 g.p.h. (1.); ☐ 0.1 g.p.h. (2.); ☐ 0.2 g.p.h. (2.). Notes: 1. Required for equipment start-up certification and annual certification. 2. Unless mandated by local agency, certification required only for electronic LLD start-up.
☒ Yes	☐ No*	Were all LLD's confirmed operational and accurate within regulatory requirements?
☒ Yes	☐ No*	Was the testing apparatus properly calibrated?
☒ Yes	☐ No* ☐ N/A	For mechanical LLD's, does the LLD restrict product flow if it detects a leak?
☐ Yes	☐ No* ☒ N/A	For electronic LLD's, does the turbine automatically shut off if the LLD detects a leak?
☐ Yes	☐ No* ☒ N/A	For electronic LLD's, does the turbine automatically shut off if any portion of the monitoring system is disabled or disconnected?
☐ Yes	☐ No* ☒ N/A	For electronic LLD's, does the turbine automatically shut off if any portion of the monitoring system malfunctions or fails a test?
☐ Yes	☐ No* ☒ N/A	For electronic LLD's, have all accessible wiring connections been visually inspected?
☒ Yes	☐ No*	Were all items on the equipment manufacturer's maintenance checklist completed?

*** In Section H below, describe how and when these deficiencies were or will be corrected.**

H. Comments: **Only the Diesel had a LLD to test**

SWRCB, January 2006

Spill Bucket Testing Report Form

This form is intended for use by contractors performing annual testing of UST spill containment structures. The completed form and printouts from tests (if applicable), should be provided to the facility owner/operator for submittal to the local regulatory agency.

1. FACILITY INFORMATION

Facility Name: Granite Rock	Date of Testing: 08/24/18
Facility Address: 120 Granite Rock Way San Jose, CA 95136-	
Facility Contact: Elden Davis (408) 574-1424	
Date Local Agency Was Notified of Testing: 8/16/18	
Name of Local Agency Inspector *(if present during testing)*: Matthew Burge	

2. TESTING CONTRACTOR INFORMATION

Company Name: Service Station Systems...
Technician Conducting Test: Steve Parmenter
Credentials[1]: ☒ CSLB Contractor ☒ ICC Service Tech. ☐ SWRCB Tank Tester ☐ Other *(Specify)*
License Number(s): License: 485184 ICC: 5311561-UT

3. SPILL BUCKET TESTING INFORMATION

Test Method Used:	☒ Hydrostatic	☐ Vacuum	☐ Other	
Test Equipment Used: Measuring Tape			Equipment Resolution: 1/16 in.

Test Result:	☒ Pass ☐ Fail	☒ Pass ☐ Fail	☐ Pass ☐ Fail	☐ Pass ☐ Fail

Comments: Include information on repairs made prior to testing, and recommended follow-up for failed tests.

CERTIFICATION OF TECHNICIAN RESPONSIBLE FOR CONDUCTING THIS TESTING

I hereby certify that all the information contained in this report is true, accurate,and in full compliance with legal requirements.

Technician's Signature: _____ Date: 08/24/18

[1] State laws and regulations do not currently require testing to be performed by a qualified contractor. However, local requirements may be more stringent.

UNDERGROUND STORAGE TANK
MONITORING SYSTEM CERTIFICATION FORM (Page 1 of 6)

This form must be used to document testing and servicing of underground storage tank (UST) monitoring equipment. A copy of this form must be provided to the UST owner or operator. The owner or operator must submit a copy of this form to the local agency regulating the USTs within 30 days of the date of the monitoring system certification.

I. FACILITY INFORMATION

III. RESULTS OF TESTING / SERVICING

Indicate and attach the following reports if the monitoring equipment is capable of generating either.
☐ Monitoring System Set-up ☐ Alarm History Report

	Y	N	NA
Was any monitoring equipment replaced? *(If "Yes," identify the specific devices replaced and list the manufacturer and model for all replacement parts in section IV below.)*	☐	☑	☐
Was damage, debris, or liquid found inside any secondary containment systems? *(If "Yes," describe what was found in section IV below.)*	☑	☐	☐
Is all monitoring equipment operational per manufacturer's specifications? *(If "No," describe why in section IV below.)*	☐	☑	☐

IV. COMMENTS

If directed to use this section, describe how and when the issues were or will be corrected.

Removed Liquid from 87 Sump into drum on site.

Also Incon printer would not print out setup or history.

Diesel STP will not shutdown when conducting sensor out.

V. CERTIFICATION BY UST SERVICE TECHNICIAN CONDUCTING THIS TESTING

I hereby certify that the equipment identified in this document was inspected/serviced in accordance with California Code of Regulations, Title 23, Division 3, Chapter 16, Section 2638 and all information contained herein is true and accurate. Attached to this certification is information (e.g., manufacturers' checklists, monitoring system set-up, alarm history report, etc.) necessary to verify that this information and the site plan showing the layout of UST system is complete and accurate.

Include information for every underground storage tank component monitored by this monitoring system control panel. If the monitoring system control panel monitors more components than this form accommodates, additional copies of these pages may be attached.

VII. COMMENTS

Use this section to provide additional comments about the inventory of the equipment certified.

Diesel and 87 are Split Tank and Share Annular.

87 Dispenser is Stand Alone.

Only the Diesel has pressurized piping.

ID = Identification, VPH = Vacuum/Pressure/Hydrostatic, UDC = Under-Dispenser Containment

UNDERGROUND STORAGE TANK
MONITORING SYSTEM CERTIFICATION FORM (Page 4 of 6)

VIII. MONITORING SYSTEM AND PROGRAMMING

This section must be completed if a monitoring panel is used to perform leak detection monitoring.	Y	N	NA
Are the visual and audible alarms operational?	☑	☐	☐
Were all sensors visually inspected for kinks and breaks in the cables and for residual buildup to ensure that floats move freely, functionally tested, and confirmed operational?	☑	☐	☐
Were all sensors installed at lowest point of secondary containment and positioned so that other equipment will not interfere with their proper operation?	☑	☐	☐
Was monitoring system set-up reviewed to ensure proper settings?	☐	☐	☑
Was the monitoring panel's backup battery visually inspected, functionally tested, and confirmed operational?	☐	☐	☑
Does the flow of fuel stop at the dispenser if a leak is detected in the under-dispenser containment?	☐	☐	☑
Does the turbine automatically shut down if the piping secondary containment monitoring system fails to operate or is electrically disconnected?	☐	☑	☐
Does the turbine automatically shut down if the piping secondary containment monitoring system detects a leak? Which sensors initiate positive shut down? *(Check all that apply.)* ☑ Sump ☐ Under-Dispenser Containment	☑	☐	☐
If alarms are relayed to a remote monitoring station, is all communications equipment (e.g., modem) operational?	☐	☐	☑

For any answer of "N" above, describe in Section IX how and when these deficiencies were or will be corrected.

IX. COMMENTS

Diesel STP will not shutdown when conducting sensor out.

X. IN-TANK GAUGING TESTING

☑ Check this box if tank gauging is used only for inventory control. *(Do not complete this section.)*
☐ Check this box if **NO** tank gauging equipment is installed. *(Do not complete this section.)*

This section must be completed if in-tank gauging is used to perform leak detection monitoring.	Y	N	NA
Has all input wiring been inspected for kinks and breaks in the cables and for proper entry and termination, including testing for ground faults?	☐	☐	☐
Were all in-tank gauging probes visually inspected for damage and residue buildup to ensure that floats move freely, functionally tested, and confirmed operational?	☐	☐	☐
Was accuracy of system's product level readings tested?	☐	☐	☐
Was accuracy of system's water level readings tested?	☐	☐	☐
Were all probes reinstalled properly?	☐	☐	☐
Were all items on the equipment manufacturer's maintenance checklist completed?	☐	☐	☐

For any answer of "N" above, describe in Section XI how and when these deficiencies were or will be corrected.

XI. COMMENTS

Y = Yes, N = No, NA = Not Applicable

UNDERGROUND STORAGE TANK
MONITORING SYSTEM CERTIFICATION FORM (Page 5 of 6)

XII. LINE LEAK DETECTOR TESTING

☐ Check this box if line leak detectors (LLD) are **NOT** installed. *(Do not complete this section.)* **This section must be completed if LLDs are installed.**	Y	N	NA
Was a leak simulated to verify LLD performance? *(Check all that apply.)* Simulated leak rate verified: ☑ 3 GPH ☐ 0.1 GPH ☐ 0.2 GPH	☑	☐	☐
Was the testing apparatus properly calibrated?	☑	☐	☐
For emergency generator tank systems, does the LLD create an audible and visual alarm when a leak is detected?	☐	☐	☑
For mechanical LLDs, does the LLD restrict the flow through the pipe when a leak is detected?	☑	☐	☐
For electronic LLDs, does the turbine automatically shut off when a leak is detected?	☐	☐	☑
For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system is disabled or disconnected?	☐	☐	☑
For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system malfunctions or fails a test?	☐	☐	☑
For electronic LLDs, have all accessible wiring connections been visually inspected for kinks and breaks?	☐	☐	☑
Were all items on the equipment manufacturer's maintenance checklist completed?	☑	☐	☐
Were all LLDs confirmed operational within regulatory requirements?	☑	☐	☐

For any answer of "N" above, describe in Section XIII how and when these issues were or will be corrected.

XIII. COMMENTS

Only the Diesel had a LLD to test.

XIV. VACUUM / PRESSURE / HYDROSTATIC MONITORING EQUIPMENT TESTING

☑ Check this box if VPH monitoring is **NOT** used. *(Do not complete this section.)*

This section must be completed if VPH monitoring is used to perform leak detection monitoring.

System Type (Mark all that apply.) ☐ Vacuum ☐ Pressure ☐ Hydrostatic

Sensor ID	Component(S) Monitored By This Sensor	Sensor Functionality Test	Interstitial Communication Test
		☐ Pass ☐ Fail	☐ Pass ☐ Fail
		☐ Pass ☐ Fail	☐ Pass ☐ Fail
		☐ Pass ☐ Fail	☐ Pass ☐ Fail
		☐ Pass ☐ Fail	☐ Pass ☐ Fail
		☐ Pass ☐ Fail	☐ Pass ☐ Fail
		☐ Pass ☐ Fail	☐ Pass ☐ Fail
		☐ Pass ☐ Fail	☐ Pass ☐ Fail
		☐ Pass ☐ Fail	☐ Pass ☐ Fail
		☐ Pass ☐ Fail	☐ Pass ☐ Fail
		☐ Pass ☐ Fail	☐ Pass ☐ Fail
		☐ Pass ☐ Fail	☐ Pass ☐ Fail
		☐ Pass ☐ Fail	☐ Pass ☐ Fail

How was interstitial communication verified? ☐ Simulated Leak at Far Ends of the Interstitial Space ☐ Visual Inspection ☐ Other *(Describe the method in section XV below.)* ☐ Gauge

Was the vacuum or pressure restored to operating levels in all interstitial spaces? ☐ Yes ☐ No *(Describe the reason in section XV below.)*

For any answer of "Fail" above, describe in Section XV how and when these issues were or will be corrected.

XV. COMMENTS

GPH = Gallons Per Hour, Y = Yes, N = No, NA = Not Applicable, VPH = Vacuum/Pressure/Hydrostatic, ID = Identification

ONE COMPANY. ONE WORLD. ONE SOURCE™

OPW®

A DOVER COMPANY

PHASE I ENHANCED VAPOR RECOVERY SYSTEM

INSTALLATION AND MAINTENANCE MANUAL

November 14, 2007

Section 1

OPW 1-2100 Series Thread-On Grade Level Spill Containers

Figure 2

Step 8: (See Figure 3 & 4)
Install adjusting system beneath tabs on mounting ring. See Figure 3 for standard cover models. See Figure 4 for sealable cover models. Add shims as needed and adjust with screw. (Shims must be cut to size for sealable cover models.) The height can be increased up to 1" (2.5cm).
Note: The adjustment should not be more than 1" from the initial length of the unit.

Step 9:
Upon preliminary installation perform the California Test Procedures TP-201.1C or equivalent. Their Test Procedures will check the seals between the drain valve, nipple and rotatable adapter. To test the spill containers base and bellows fill the container with water. A drop in the water level of 1/16" or greater after one hour means that a leak exists. To determine where the leak is, look for a steady stream of bubbles coming from one of the joints or water leaking on the outside of the bucket.
NOTE: Do not drain the water into the UST after the test is complete. Water must be disposed of per local requirements for hazardous waste. If the leak cannot be corrected the spill container should be replaced with another.

Step 10: (See Figure 2)
Before pouring concrete, place plastic over the cover and mounting ring protecting them from concrete splash. Double check that the unit is level and at proper grade height. Pour concrete per figure 2. Ramp or dome the concrete away from the mounting ring. There should be a minimum of 1" slope to finish grade. The concrete surface should start at the bottom edge of the watershed slots and tapered down to grade level.
NOTE: Do not stand on spill container before concrete sets up.
Remove plastic from cover after concrete has dried. Remove adjustment system. Adaptor and tight fill cap can now be installed in sealable cover models. Re-test the spill containers for leaks as described in step 9, after the concrete has set up.

Operation and Maintenance:

Annually: Inspect and clean the interior of the spill container and drain valve screen. Remove accumulated dirt and grit. Test the drain valve using CARB procedure TP-201.1C or TP-201.1D. If the drain valve passes testing no further maintenances required. If the drain valve fails testing, remove the valve, soak in water and use high-pressure air, if needed, to clean. Reinstall the drain valve to its proper position and test the valve with CARB procedure TP-201.1C or TP-201.1D. If problems persist, replace the drain valve with P/N 1DK-2100-EVR (specified torque 11.5 ft-lbs min to 13.5 ft-lbs max, 5/16-18 UN thread). The sealable cover (1SC) adjustment nut is set at the factory, but due to environmental conditions it may be necessary to adjust it to either improve sealing or ease cover removal.

Important: Leave these instructions with Station Operator.

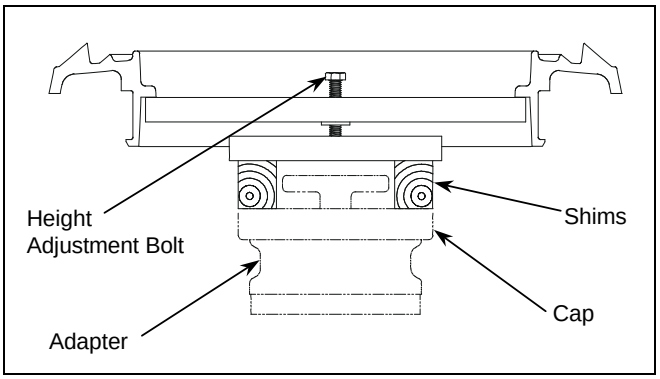

Figure 3 – Standard Cover Model Height Adjustment

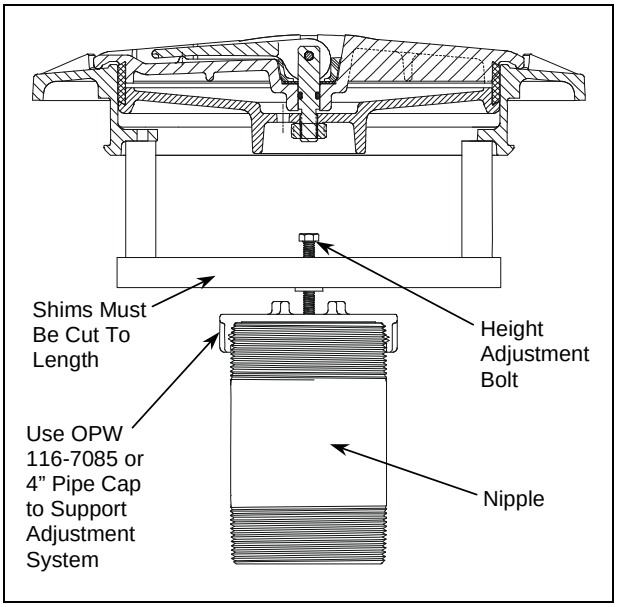

Figure 4 – Sealable Cover Model height adjustment

UNDERGROUND STORAGE TANK
MONITORING SYSTEM CERTIFICATION FORM (Page 1 of 6)

This form must be used to document testing and servicing of underground storage tank (UST) monitoring equipment. A copy of this form must be provided to the UST owner or operator. The owner or operator must submit a copy of this form to the local agency regulating the USTs within 30 days of the date of the monitoring system certification.

Include information for every underground storage tank component monitored by this monitoring system control panel. If the monitoring system control panel monitors more components than this form accommodates, additional copies of these pages may be attached.

VII. COMMENTS

Use this section to provide additional comments about the inventory of the equipment certified.

N/A

ID = Identification, VPH = Vacuum/Pressure/Hydrostatic, UDC = Under-Dispenser Containment

VIII. MONITORING SYSTEM AND PROGRAMMING

This section must be completed if a monitoring panel is used to perform leak detection monitoring.	Y	N	NA
Are the visual and audible alarms operational?	☑	☐	☐
Were all sensors visually inspected for kinks and breaks in the cables and for residual buildup to ensure that floats move freely, functionally tested, and confirmed operational?	☑	☐	☐
Were all sensors installed at lowest point of secondary containment and positioned so that other equipment will not interfere with their proper operation?	☑	☐	☐
Was monitoring system set-up reviewed to ensure proper settings?	☐	☐	☑
Was the monitoring panel's backup battery visually inspected, functionally tested, and confirmed operational?	☐	☐	☑
Does the flow of fuel stop at the dispenser if a leak is detected in the under-dispenser containment?	☐	☐	☑
Does the turbine automatically shut down if the piping secondary containment monitoring system fails to operate or is electrically disconnected?	☑	☐	☐
Does the turbine automatically shut down if the piping secondary containment monitoring system detects a leak? Which sensors initiate positive shut down? *(Check all that apply.)* ☑ Sump ☐ Under-Dispenser Containment	☑	☐	☐
If alarms are relayed to a remote monitoring station, is all communications equipment (e.g., modem) operational?	☐	☐	☑

For any answer of "N" above, describe in Section IX how and when these deficiencies were or will be corrected.

IX. COMMENTS

Test Diesel STP only - All Passed.

X. IN-TANK GAUGING TESTING

☑ Check this box if tank gauging is used only for inventory control. *(Do not complete this section.)*
☐ Check this box if **NO** tank gauging equipment is installed. *(Do not complete this section.)*

This section must be completed if in-tank gauging is used to perform leak detection monitoring.	Y	N	NA
Has all input wiring been inspected for kinks and breaks in the cables and for proper entry and termination, including testing for ground faults?	☐	☐	☐
Were all in-tank gauging probes visually inspected for damage and residue buildup to ensure that floats move freely, functionally tested, and confirmed operational?	☐	☐	☐
Was accuracy of system's product level readings tested?	☐	☐	☐
Was accuracy of system's water level readings tested?	☐	☐	☐
Were all probes reinstalled properly?	☐	☐	☐
Were all items on the equipment manufacturer's maintenance checklist completed?	☐	☐	☐

For any answer of "N" above, describe in Section XI how and when these deficiencies were or will be corrected.

XI. COMMENTS

XII. LINE LEAK DETECTOR TESTING

☐ Check this box if line leak detectors (LLD) are **NOT** installed. *(Do not complete this section.)* **This section must be completed if LLDs are installed.**	Y	N	NA
Was a leak simulated to verify LLD performance? *(Check all that apply.)* Simulated leak rate verified: ☐ 3 GPH ☐ 0.1 GPH ☐ 0.2 GPH	☐	☐	☐
Was the testing apparatus properly calibrated?	☐	☐	☐
For emergency generator tank systems, does the LLD create an audible and visual alarm when a leak is detected?	☐	☐	☐
For mechanical LLDs, does the LLD restrict the flow through the pipe when a leak is detected?	☐	☐	☐
For electronic LLDs, does the turbine automatically shut off when a leak is detected?	☐	☐	☐
For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system is disabled or disconnected?	☐	☐	☐
For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system malfunctions or fails a test?	☐	☐	☐
For electronic LLDs, have all accessible wiring connections been visually inspected for kinks and breaks?	☐	☐	☐
Were all items on the equipment manufacturer's maintenance checklist completed?	☐	☐	☐
Were all LLDs confirmed operational within regulatory requirements?	☐	☐	☐

For any answer of "N" above, describe in Section XIII how and when these issues were or will be corrected.

XIII. COMMENTS

N/A

XIV. VACUUM / PRESSURE / HYDROSTATIC MONITORING EQUIPMENT TESTING

☑ Check this box if VPH monitoring is **NOT** used. *(Do not complete this section.)*

This section must be completed if VPH monitoring is used to perform leak detection monitoring.

System Type (Mark all that apply.) ☐ Vacuum ☐ Pressure ☐ Hydrostatic

Sensor ID	Component(S) Monitored By This Sensor	Sensor Functionality Test	Interstitial Communication Test
		☐ Pass ☐ Fail	☐ Pass ☐ Fail
		☐ Pass ☐ Fail	☐ Pass ☐ Fail
		☐ Pass ☐ Fail	☐ Pass ☐ Fail
		☐ Pass ☐ Fail	☐ Pass ☐ Fail
		☐ Pass ☐ Fail	☐ Pass ☐ Fail
		☐ Pass ☐ Fail	☐ Pass ☐ Fail
		☐ Pass ☐ Fail	☐ Pass ☐ Fail
		☐ Pass ☐ Fail	☐ Pass ☐ Fail
		☐ Pass ☐ Fail	☐ Pass ☐ Fail
		☐ Pass ☐ Fail	☐ Pass ☐ Fail
		☐ Pass ☐ Fail	☐ Pass ☐ Fail
		☐ Pass ☐ Fail	☐ Pass ☐ Fail

How was interstitial communication verified? ☐ Simulated Leak at Far Ends of the Interstitial Space ☐ Visual Inspection ☐ Other *(Describe the method in section XV below.)* ☐ Gauge

Was the vacuum or pressure restored to operating levels in all interstitial spaces? ☐ Yes ☐ No *(Describe the reason in section XV below.)*

For any answer of "Fail" above, describe in Section XV how and when these issues were or will be corrected.

XV. COMMENTS

III. RESULTS OF TESTING / SERVICING

Indicate and attach the following reports if the monitoring equipment is capable of generating either.
☐ Monitoring System Set-up ☑ Alarm History Report

	Y	N	NA
Was any monitoring equipment replaced? *(If "Yes," identify the specific devices replaced and list the manufacturer and model for all replacement parts in section IV below.)*	☐	☑	☐
Was damage, debris, or liquid found inside any secondary containment systems? *(If "Yes," describe what was found in section IV below.)*	☐	☑	☐
Is all monitoring equipment operational per manufacturer's specifications? *(If "No," describe why in section IV below.)*	☑	☐	☐

IV. COMMENTS

If directed to use this section, describe how and when the issues were or will be corrected.

V. CERTIFICATION BY UST SERVICE TECHNICIAN CONDUCTING THIS TESTING

I hereby certify that the equipment identified in this document was inspected/serviced in accordance with California Code of Regulations, Title 23, Division 3, Chapter 16, Section 2638 and all information contained herein is true and accurate. Attached to this certification is information (e.g., manufacturers' checklists, monitoring system set-up, alarm history report, etc.) necessary to verify that this information and the site plan showing the layout of UST system is complete and accurate.

UNDERGROUND STORAGE TANK MONITORING PLAN

For use by Unidocs Member Agencies or where approved by your Local Jurisdiction
Authority Cited: Title 23 CCR, Sections 2632(d)(1), 2634(d)(2), and 2641(h)

TYPE OF ACTION ☐ 1. NEW PLAN ☒ 2. CHANGE OF INFORMATION M01.

PLAN TYPE (Check one item only) ☒ MONITORING IS IDENTICAL FOR ALL USTs AT THIS FACILITY. M02.
☐ THIS PLAN COVERS ONLY THE FOLLOWING UST SYSTEM(S): _____

I. FACILITY INFORMATION

FACILITY ID # *(Agency Use Only)* _____

FACILITY NAME Graniterock Company M03.

FACILITY SITE ADDRESS 120 Granite Rock Way M04. CITY San Jose M05.

II. EQUIPMENT TESTING AND PREVENTIVE MAINTENANCE

State law requires that testing, preventive maintenance, and calibration of monitoring equipment (e.g., sensors, probes, line leak detectors, etc.) be performed in accordance with the equipment manufacturers' instructions, or annually, whichever is more frequent. Such work must be performed by qualified personnel. M06.

MONITORING EQUIPMENT IS SERVICED ☒ 1. ANNUALLY ☐ 99. OTHER (Specify): _____ M07.

III. MONITORING LOCATIONS

This monitoring plan must include a Site Plan showing the general tank and piping layouts and the locations where monitoring is performed (i.e., location of each sensor, line leak detector, monitoring system control panel, etc.). If you already have a diagram (e.g., current UST Monitoring Site Plan from a Monitoring System Certification form, Hazardous Materials Business Plan map, etc.) which shows all required information, include it with this plan.

IV. TANK MONITORING

MONITORING IS PERFORMED USING THE FOLLOWING METHOD(S): (Check all that apply) M10.

☒ 1. CONTINUOUS ELECTRONIC MONITORING OF TANK ANNULAR (INTERSTITIAL) SPACE(S) OR SECONDARY CONTAINMENT VAULT(S)
SECONDARY CONTAINMENT IS: ☒ a. DRY ☐ b. LIQUID FILLED ☐ c. UNDER PRESSURE ☐ d. UNDER VACUUM M11.
PANEL MANUFACTURER: Pneumercator M12. MODEL #: LC 1000 M13.
LEAK SENSOR MANUFACTURER: Pneumercator M14. MODEL #(S): LS 600 M15.

☐ 2. AUTOMATIC TANK GAUGING (ATG) SYSTEM USED TO MONITOR SINGLE WALL TANK(S)
PANEL MANUFACTURER: _____ M16. MODEL #: _____ M17.
IN-TANK PROBE MANUFACTURER: _____ M18. MODEL #(S): _____ M19.
LEAK TEST FREQUENCY: ☐ a. CONTINUOUS ☐ b. DAILY/NIGHTLY ☐ c. WEEKLY ☐ d. MONTHLY ☐ e. OTHER (Specify): _____ M20. M21.
PROGRAMMED TESTS: ☐ a. 0.1 g.p.h. ☐ b. 0.2 g.p.h. ☐ c. OTHER (Specify): _____ M22. M23.

☐ 3. INVENTORY RECONCILIATION ☐ a. MANUAL PER 23 CCR §2646 ☐ b. STATISTICAL PER 23 CCR §2646.1 M24.

☐ 4. WEEKLY MANUAL TANK GAUGING (MTG) PER 23 CCR §2645
TESTING PERIOD: ☐ a. 36 HOURS ☐ b. 60 HOURS M25.

☐ 5. INTEGRITY TESTING PER 23 CCR §2643.1
TEST FREQUENCY: ☐ a. ANNUALLY ☐ b. BIENNIALLY ☐ c. OTHER (Specify): _____ M26. M27.

☐ 6. VISUAL MONITORING DONE: ☐ a. DAILY ☐ b. WEEKLY (Requires agency approval)

☐ 99. OTHER (Specify): _____ M28.

V. PIPE MONITORING

MONITORING IS PERFORMED USING THE FOLLOWING METHOD(S) (Check all that apply) M30

☒ 1. CONTINUOUS ELECTRONIC MONITORING OF PIPING SUMP(S)/TRENCH(ES) AND OTHER SECONDARY CONTAINMENT
SECONDARY CONTAINMENT IS: ☒ a. DRY ☐ b. LIQUID FILLED ☐ c. UNDER PRESSURE ☐ d. UNDER VACUUM M31.
PANEL MANUFACTURER: Pneumercator M32. MODEL #: LC 1000 M33.
LEAK SENSOR MANUFACTURER: Pneumercator M34. MODEL #(S): LS 600 M35.
WILL A PIPING LEAK ALARM TRIGGER AUTOMATIC PUMP (i.e., TURBINE) SHUTDOWN? ☒ a. YES ☐ b. NO M36.

☐ 2. MECHANICAL LINE LEAK DETECTOR (MLLD) THAT ROUTINELY PERFORMS 3.0 g.p.h. LEAK TESTS AND RESTRICTS OR SHUTS OFF PRODUCT FLOW WHEN A LEAK IS DETECTED
WILL FAILURE/DISCONNECTION OF THE MONITORING SYSTEM TRIGGER AUTOMATIC PUMP SHUTDOWN? ☒ a. YES ☐ b. NO M37.
MLLD MANUFACTURER(s): _____ M38. MODEL #(S): _____ M39.

☒ 3. ELECTRONIC LINE LEAK DETECTOR (ELLD) THAT ROUTINELY PERFORMS 3.0 g.p.h. LEAK TESTS
ELLD MANUFACTURER: Vaporless M40. MODEL #: LD2000 M41.
PROGRAMMED LINE INTEGRITY TESTS: ☐ a. MINIMUM MONTHLY 0.2 g.p.h. ☐ b. MINIMUM ANNUAL 0.1 g.p.h. M42.
WILL ELLD DETECTION OF A PIPING LEAK TRIGGER AUTOMATIC PUMP SHUTDOWN? ☒ a. YES ☐ b. NO M43.
WILL ELLD FAILURE/DISCONNECTION TRIGGER AUTOMATIC PUMP SHUTDOWN? ☒ a. YES ☐ b. NO M44.

☐ 4. INTEGRITY TESTING
TEST FREQUENCY: ☐ a. ANNUALLY ☐ b. EVERY 3 YEARS ☐ c. OTHER (Specify) _____ M45. M46.

☐ 5. VISUAL MONITORING DONE: ☐ a. DAILY ☐ b. WEEKLY* ☐ c. MIN. MONTHLY & EACH TIME SYSTEM OPERATED** M47.
* Requires agency approval ** Allowed for monitoring of unburied emergency generator fuel piping only per HSC §25281.5(b)(3)

☐ 6. PIPING IS SUCTION PIPING MEETING ALL REQUIREMENTS FOR EXEMPTION FROM MONITORING PER 23 CCR §2636(a)(3)

☐ 99. OTHER (Specify) _____ M48.

VI. DISPENSER MONITORING

MONITORING OF AREAS BENEATH DISPENSER(S) IS PERFORMED USING THE FOLLOWING METHOD(S) (Check all that apply) M50

☒ 1. CONTINUOUS ELECTRONIC MONITORING OF UNDER DISPENSER CONTAINMENT (UDC)

PANEL MANUFACTURER: Pneumercator M51. MODEL #: ~~LC1000~~ M52.

LEAK SENSOR MANUFACTURER: Veeder-Root (Stand alone) M53. MODEL #(S): 330212 M54.

WILL DETECTION OF A LEAK INTO THE UDC TRIGGER AUDIBLE AND VISUAL ALARMS? ☒ a. YES ☐ b. NO M55.

WILL A UDC LEAK ALARM TRIGGER AUTOMATIC PUMP SHUTDOWN? ☒ a. YES ☐ b. NO M56.

WILL FAILURE/DISCONNECTION OF UDC MONITORING SYSTEM TRIGGER AUTOMATIC PUMP SHUTDOWN? ☒ a. YES ☐ b. NO M57.

☒ 2. MECHANICAL ASSEMBLY (e.g., FLOAT AND CHAIN ASSEMBLY) IN UDC TRIPS SHEAR VALVE IN CASE OF LEAK

ASSEMBLY MANUFACTURER: Bravo M58. MODEL #(S): FT8000 M59.

☐ 3. VISUAL MONITORING DONE: ☐ a. DAILY ☐ b. WEEKLY (Requires agency approval) M60.

☐ 4. NO DISPENSERS

☐ 99. OTHER (Specify) _____ M61.

VII. ENHANCED LEAK DETECTION

☐ 1. WE HAVE BEEN NOTIFIED BY THE STATE WATER RESOURCES CONTROL BOARD THAT WE MUST IMPLEMENT ENHANCED LEAK DETECTION (ELD) FOR THE UST(S) COVERED BY THIS PLAN. PER 23 CCR §2644.1, ELD IS PERFORMED EVERY 36 MONTHS AS REQUIRED M70.

VIII. TRAINING

REFERENCE DOCUMENTS MAINTAINED AT FACILITY☐ (Check all that apply) M80.

1. ☒ THIS UNDERGROUND STORAGE TANK MONITORING PLAN **(Required)**
2. ☒ OPERATING MANUALS FOR ELECTRONIC MONITORING EQUIPMENT **(Required)**
3. ☒ THE FACILITY'S BEST MANAGEMENT PRACTICES **(Required as of January 1, 2005)**
4. ☐ CALIFORNIA UNDERGROUND STORAGE TANK REGULATIONS
5. ☐ CALIFORNIA UNDERGROUND STORAGE TANK LAW
6. ☐ STATE WATER RESOURCES CONTROL BOARD (SWRCB) PUBLICATION: "HANDBOOK FOR TANK OWNERS - MANUAL AND STATISTICAL INVENTORY RECONCILIATION"
7. ☐ SWRCB PUBLICATION: "WEEKLY MANUAL TANK GAUGING FOR SMALL UNDERGROUND STORAGE TANKS"
99. ☐ OTHER (Specify): _____ M81.

Personnel with UST monitoring responsibilities are familiar with all of the above documents relevant to their job duties and can access those documents when needed. By January 1, 2005, this facility will have a "Designated UST Operator" who has passed the California UST Sytem Operator Exam administered by the International Code Council (ICC). By July 1, 2005, and annually thereafter, the "Designated UST Operator" will train facility employees in the proper operation and maintenance of the UST systems. This training will include, but is not limited to, the following:

- Operation of the UST systems in a manner consistent with the facility's best management practices.
- The facility employee's role with regard to the leak detection equipment.
- The facility employee's role with regard to spills and overfills.
- Whom to contact for emergencies and leak detection alarms.

For facility employees hired on or after July 1, 2005, the initial training will be conducted within 30 days of the date of hire.

IX. COMMENTS/ADDITIONAL INFORMATION

Please use this section to include any additional UST system monitoring-related information (e.g., additional information required by your local agency): M85.
Note regarding Section X. Pending certification of a Designated UST Operator, the following person has authority for performing the monitoring activities and maintaining leak detection equipment covered by this plan. NAME: JOB TITLE:

X. PERSONNEL RESPONSIBILITIES

AS OF JANUARY 1, 2005, THE "DESIGNATED UST OPERATOR" IDENTIFIED IN SECTION III OF THE CURRENT UST OPERATING PERMIT APPLICATION – FACILITY FORM WILL HAVE ULTIMATE AUTHORITY FOR PERFORMING THE MONITORING ACTIVITIES AND MAINTAINING LEAK DETECTION EQUIPMENT COVERED BY THIS PLAN, AND WILL PERFORM AND DOCUMENT MINIMUM MONTHLY VISUAL INSPECTIONS OF THE FACILITY'S UST SYSTEMS IN ACCORDANCE WITH 23 CCR § 2715(b).

XI. OWNER/OPERATOR SIGNATURE

CERTIFICATION: I certify that the information provided herein is true and accurate to the best of my knowledge.

OWNER/OPERATOR SIGNATURE	REPRESENTING	DATE: M91.
	☒ Owner M90. ☒ Operator	8/8/12
OWNER/OPERATOR NAME (print): M92. ~~Tina Lau~~ Samuel LoForti		OWNER/OPERATOR TITLE: M93. Environmental Services Specialist

UNDERGROUND STORAGE TANK
OVERFILL PREVENTION EQUIPMENT INSPECTION REPORT FORM (Page 1 of 1)

Type of Action ☐ Installation Inspection ☐ Repair Inspection ☑ 36 Month Inspection

I. FACILITY INFORMATION

CERS ID	Date of Overfill Prevention Equipment Inspection
10344856	10/7/19

Business Name *(Same as Facility Name or DBA-Doing Business As)*: Granite Rock

Business Site Address	City	ZIP Code
120 Granite Rock	San Jose	95136

II. UNDERGROUND STORAGE TANK SERVICE TECHNICIAN INFORMATION

Name of UST Service Technician Performing the Inspection *(Print as shown on the ICC Certification.)*	Phone #
Steve Parmenter	(408) 971-2445

Contractor / Tank Tester License #	ICC Certification #	ICC Certification Expiration Date
485184	8818846	2/24/21

Overfill Prevention Equipment Inspection Training and Certifications *(List applicable certifications.)*
F.F. # 1002603708
OPW/EMCO # 100604 / 3485

III. OVERFILL PREVENTION EQUIPMENT INSPECTION INFORMATION

Inspection Method Used:
- ☑ Manufacturer Guidelines *(Specify)*: OPW / Emco
- ☐ Industry Code or Engineering Standard *(Specify)*:
- ☐ Engineered Method *(Specify)*:

Attach the inspection procedures and all documentation required to determine the results. # of Attached Pages:

TANK ID: *(By tank number, stored product, etc.)*	87	Diesel		
What is the tank inside diameter? *(Inches)*	114	114		
Is the fill piping secondarily contained?	☐ Yes ☑ No	☐ Yes ☑ No	☐ Yes ☐ No	☐ Yes ☐ No
Is the vent piping secondarily contained?	☐ Yes ☑ No	☐ Yes ☑ No	☐ Yes ☐ No	☐ Yes ☐ No
Overfill Prevention Equipment Manufacturer(s)	OPW	Emco		
What is the overfill prevention equipment response when activated? *(Check all that apply.)*	☑ Shuts Off Flow ☐ Restricts Flow ☐ A/V Alarm	☑ Shuts Off Flow ☐ Restricts Flow ☐ A/V Alarm	☐ Shuts Off Flow ☐ Restricts Flow ☐ A/V Alarm	☐ Shuts Off Flow ☐ Restricts Flow ☐ A/V Alarm
Are flow restrictors installed on vent piping?	☐ Yes ☑ No	☐ Yes ☑ No	☐ Yes ☐ No	☐ Yes ☐ No
At what level in the tank is the overfill prevention set to activate? *(Inches from bottom of tank.)*	95.50	96.50		
What is the percent capacity of the tank at which the overfill prevention equipment activates?	83.78%	84.70%		
Is the overfill prevention in proper operating condition to respond when the substance reaches the appropriate level?	☑ Yes ☐ No *(Specify in V.)*	☑ Yes ☐ No *(Specify in V.)*	☐ Yes ☐ No *(Specify in V.)*	☐ Yes ☐ No *(Specify in V.)*

IV. SUMMARY OF INSPECTION RESULTS

Overfill Prevention Inspection Results	☑ Pass ☐ Fail	☑ Pass ☐ Fail	☐ Pass ☐ Fail	☐ Pass ☐ Fail

V. COMMENTS

Any items marked "Fail" must be explained in this section. Any additional comments may also be provided here.

GB: Inspection done late (due 10/13/2018). Neither manufacturer has an inspection procedure that addresses both proper activation level and functionality of their flapper valves, so inspection procedure defaults to industry standard (RP-12000). This is reportedly a Modern Welding double-wall steel compartmented UST with a 5k Gasoline compartment and a 10k Diesel compartment. Tank chart submitted with this report for the Gas compartment is a website-generated chart that roughly corresponds to a Modern Welding chart for a 114" x 114" standalone tank, except Modern Welding tanks have 113.75" internal diameter. Not clear how 83.78% shutoff level was determined (using tank chart provided with report, shutoff @ 95.5" is about 89.5%). Insufficient supporting information has been submitted: OPW Appendix B was not submitted for the Gas tank flapper valve; No tank chart was submitted for the Diesel compartment (2 copies of the 5k chart were provided); measurements (riser pipe length, length of upper drop tube) were not provided for the Diesel tank's flapper valve. Not clear why 2 extra pages of the inspection report were submitted.

Division 3, Chapter 16, Section 2637.2 and all the information contained herein is accurate.

A1100EVR GUARDIAN

OVERFILL PREVENTION VALVE WITH THREADED BOTTOM

INSTALLATION INSTRUCTIONS

Packing List:

(1) Collar #566679 (or #566679A) with:
  (1) O-ring #480049 installed
  (1) Drop Tube O-ring #569461 installed
(1) Warning Plate #564420
(1) Drill Fixture #572719
(1) Tube, Seals-All Sealant #566726
(1) Counter Sink Indenter #564416
(4) Rivets #564412
(1) Extension Spring #572786

Permanent Identification:

Service Tool Required:

- 13/64" Drill Bit
- Rivet Gun
- Power Drill
- Tape Measure
- Hacksaw w/ fine tooth
- Hand file w/ fine blade
- Marker
- Hammer
- Pipe Thread Sealant Compound
- 150 Grit Size Emery Cloth
- De-burring Tool w/ #10 Blade
- Fabric Strap Wrench (2)
- EMCO Drill Fixture p/n 566675
  Disposable drill fixture included in collar kit

CAUTION:

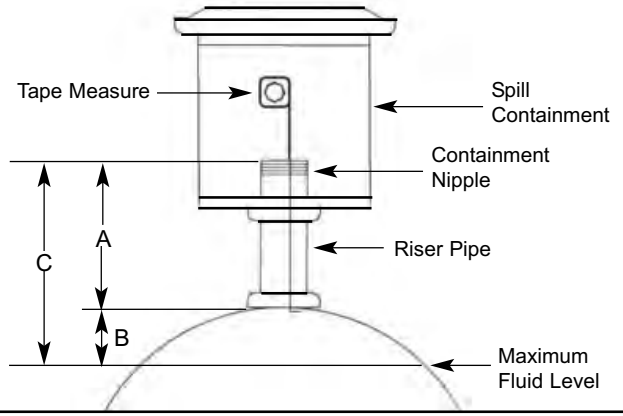
1. Always barricade to keep pedestrians and vehicles from accessing the storage tank area during preventive maintenance and/ or compliance testing of the EMCO phase I EVR system.
2. If the underground storage tank is equipped with a ball float vent valve, make sure it does not extend below the positive shut-off point of the A1100EVR overfill prevention valve. If so, the ball float valve must be removed to allow proper operation of the A1100EVR overfill prevention valve.
3. Never disconnect the delivery elbow from the fill adapter when the A1100EVR overfill prevention valve has reached the positive shut-off point of 95% total capacity. Note the tank delivery hose is full and must not be disconnected until enough fuel has been evacuated from the underground storage tank. This will allow the tank delivery hose to drain, and to safely disconnect from the fill adapter. Premature disconnection will result in a hazardous spill and/or a potential for personal injury and property damage.
4. Once the A1100EVR overfill prevention valve is completely assembled, **the Seals-All Sealant must cure for a minimum of 24 hours before installing into the underground storage tank.**

A1100EVR Overfill Prevention Valve Top Drop Tube Cut Length

1. Find measurement A, the distance from the inside top of the tank to the top edge of the riser pipe as shown in Figure 1.
   If the tank has a manway (Figure 3), make sure to include the height of the manway when finding measurement A as shown in Figure 2, A = J + H. Consult your tank diagram to determine the proper H dimension. If this dimension cannot be found, use 6" as the H dimension (typical manway height is 5"-7").

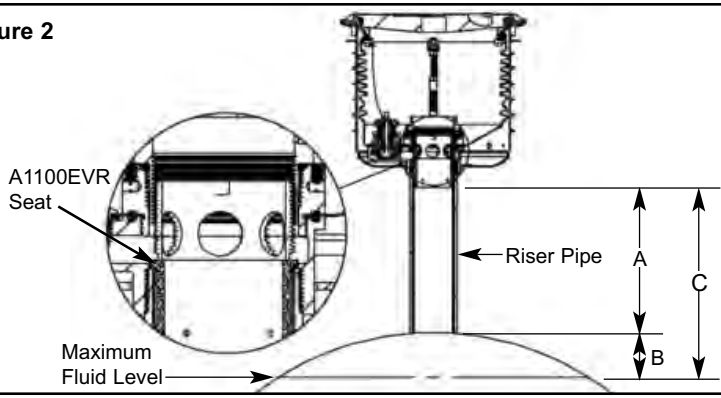
   When installing the A1100EVR overfill prevention valve below the spill containment drain valve, measurement A is the distance between the inside top of the tank to the top edge of the A1100EVR overfill prevention valve seat as shown in Figure 2.

Figure 1



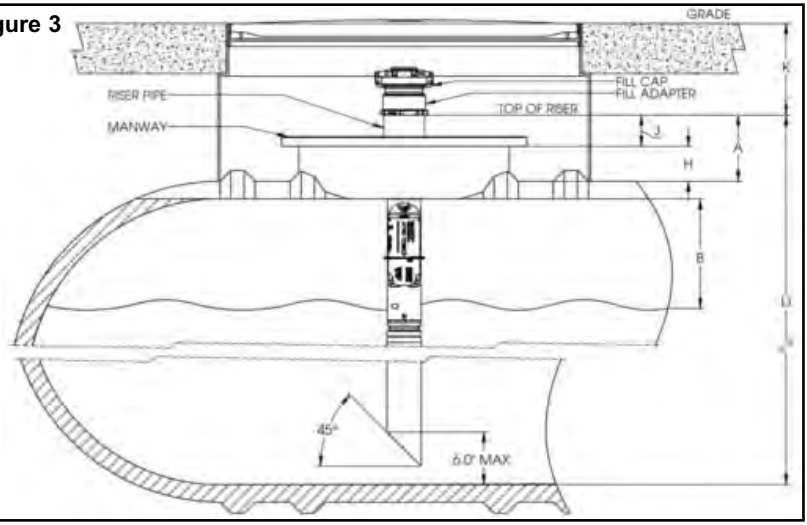
A1100EVR Overfill Prevention Valve Installed Above Drain Valve
Conventional, Non-EVR Application

Figure 2



A1100EVR Overfill Prevention Valve Installed Below Drain Valve
EVR Application

Figure 3



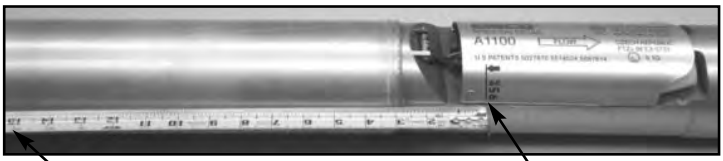
2. Find measurement B from the chart below, the distance from the maximum fluid level allowed to the inside top of the tank. The calculations are based on cylindrical tanks with flat ends. For exact dimensions, consult the manufacturer's tank charts. Use the actual capacity of the tank for calculations. NFPA30 Guidelines limit tank fill to 95%.

Tank Diameter		**95% Shut-off B Dimension**	
Feet	Meters	Inches	mm
6.5'	1.98	7.5"	190
7.0'	2.13	8.0"	203
7.6'	2.29	9.0"	229
8.0'	2.44	9.5"	241
8.2'	2.50	9.5"	241
8.5'	2.59	10.0"	254
9.0'	2.74	10.5"	267
9.5'	2.90	11.0"	279
10.0'	3.05	11.5"	292
12.0'	3.66	14.0"	336

IMPORTANT: The A1100EVR overfill prevention valve is not recommended for tanks under 6.5 feet in diameter.

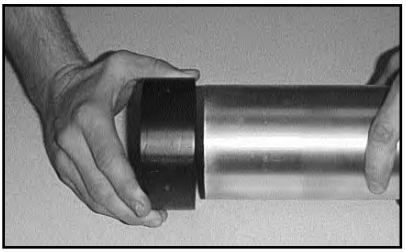
3. **Top Tube Cut Location, Measurement C:** Add measurements A and B. Place tape measure at the 95% fill mark on the valve and measure up the tube as shown. Mark and cut the tube at the C measurement length.

Example: Top drop tube cut length, C = A + B

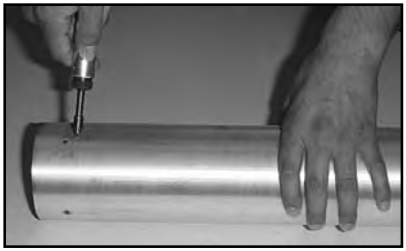


4. Carefully cut the top drop tube to the required length. Use a hacksaw equipped with a fine tooth blade to ensure a straight 90-degree cut.

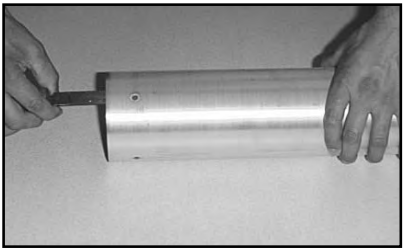
IMPORTANT: Do not use a power saw, pipe or tubing cutter as this may result in damage to the top drop tube, voiding warranty.



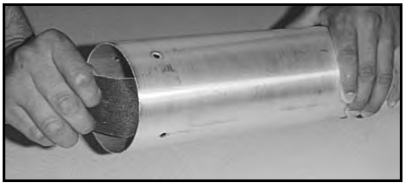
5. Slide the EMCO Drill Fixture onto the end of the top drop tube until the edge bottoms out against the inside ridge.



6. Drill four 13/64 diameter holes through the top drop tube. Remove the drill fixture from the top drop tube. Using a de-burring tool equipped with a #10 blade, remove any sharp burrs around the inside area of the mounting holes.



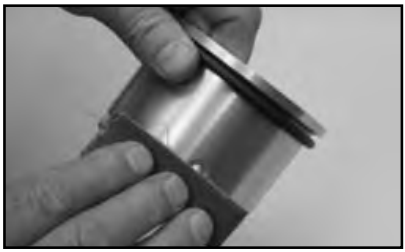
7. Using a fine blade hand file, remove all burrs from the inside and outside edge of the top drop tube. File the edge of the top drop tube square. File the inside surface of the holes. Remove all rough edges.



8. Using a de-burring tool equipped with a #10 blade, remove the sharp cutting ring from the inside edge of the top drop tube. Lightly sand the inside area of the top drop tube and mounting holes using 150-grit size emery cloth. Clean and remove any sanding debris.

IMPORTANT: Failure to perform this procedure will damage the o-ring seal during the installation of the A1100EVR collar, voiding warranty.

A1100EVR Collar to Top Drop Tube

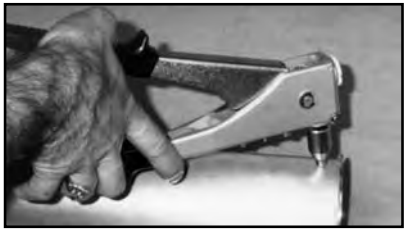


9. Remove the o-ring (p/n 480049) from the A1100EVR collar groove. Lightly sand the outside area using 150-grit emery cloth. Clean and remove any sanding debris. Re-install o-ring.

10. Apply a 1/2 inch bead of Seal-All Sealant around the 480049 o-ring and outside area of the A1100EVR collar. Verify the o-ring is properly secured inside the machined groove. Do not apply sealant to the 569461 drop tube o-ring.

11. Slide the A1100EVR collar inside the top end of the drop tube and align the four holes.

12. Using the indenter tool and a hammer, apply a sharp blow to counter sink each individual hole before attempting to install the mounting rivets.



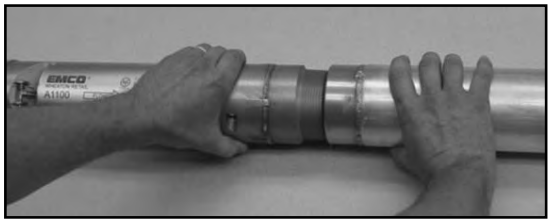
13. Using only the factory supplied rivets, apply a good amount of the Seals-All Sealant around the base of each rivet before installing into each of the four holes. Using the rivet gun, permanently fasten the A1100EVR collar to the top of the drop tube.

14. Once finished with steps 11 through 13, clean and remove all excess sealant around the top of the A1100EVR collar and rivets.

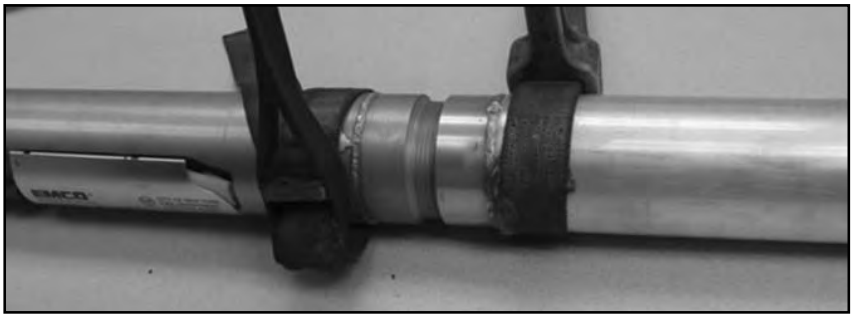
IMPORTANT: The Seal-All sealant must cure for a minimum of 24 hours before installing into the underground storage tank.

A1100EVR Overfill Prevention Valve to Lower Drop Tube

15. Apply pipe thread sealant compound to the male threads of the A1100EVR base.



16. Manually tighten both top and bottom drop tubes to avoid cross threading.



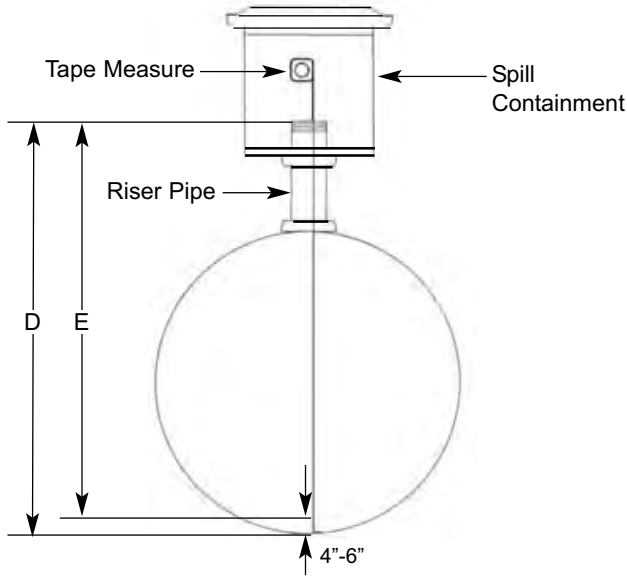
17. Use two fabric strap wrenches to permanently tighten.

IMPORTANT: Once the Seals-All sealant has cured for a minimum of 24 hours and before installing the A1100EVR overfill prevention valve into the underground storage tank, a leak tightness integrity test must be performed.

18. Test the A1100EVR overfill prevention valve by sealing both ends with inflatable plumber's plugs. Apply a maximum pressure of 2 inches of water column. Should the leak rate exceed the allowable limit of 0.17 CFH, locate the leak point by spraying soap solution along the outside of the A1100EVR overfill prevention valve.

IMPORTANT: Do not exceed the maximum presssure of 2 inches of water column. This will damage the A1100EVR overfill prevention valve and result in voiding the warranty.

Figure 4

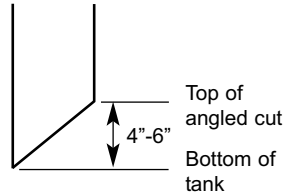


19. **Bottom Tube Cut Location, Measurement E:** Find measurement D, the distance between the top of the riser pipe and the bottom of the tank as shown in Figure 3.
PEI Recommended Practice suggests 4”-6”.

Cut Length E = D - 5”

Place tape measure at the end of the top tube (riser collar) and measure down to distance E. Carefully cut the drop tube to the required length. Use a hacksaw equipped with a fine tooth blade to ensure a straight 90-degree cut.

An angled cut is permissable, but the 4”-6” distance from the bottom of the tank must correspond to the top of the cut as shown.



IMPORTANT: Do not use a power saw, pipe or tubing cutter as this may result in damage to the bottom of the lower drop tube, voiding warranty.

A1100EVR Overfill Prevention Valve to Tank Fill Riser

20. Remove all metal chips or debris left from cutting or drilling. Shake the A1100EVR overfill prevention valve in a vertical position. Verify that the A1100EVR drop tube o-ring is installed properly. Locate the A1100EVR overfill prevention valve over the tank fill riser opening with the A1100EVR collar pointing upward. Carefully lower the A1100EVR overfill prevention valve into the tank until the A1100EVR collar is resting on the riser pipe.

21. Install warning plate on the riser using the extension spring provided.

PREVENTIVE MAINTENANCE

1. Annually, conduct a visual inspection of the flapper valve located inside the A1100EVR overfill prevention valve. Begin by removing the spill containment lid and fill adapter cap. Looking down over the tank fill riser opening, verify that the flapper valve is open and free of any foreign objects that can block or restrict the flow of gasoline into the underground storage tank during a fuel delivery.

2. Annually, verify leak tightness integrity of the A1100EVR overfill prevention valve by performing ARB test procedure TP-201.1D.

3. If the A1100EVR overfill prevention valve fails to pass the leak tightness integrity test, replace the drop tube o-ring with the EMCO o-ring kit p/n 569461.

PERFORMANCE SPECIFICATIONS

This component was factory tested to, and met, the following specifications.

1. TP-201.1D - Meets or exceeds the allowable maximum leakrate of 0.17 CFH @ 2.00 inches of water.

IMPORTANT: Leave these installation instructions, product warranty registration card and the warranty tag with the station owner and/or operator.

Underground Storage Tank Permit to Operate

Permit Number: **258851-395982**
Effective Date: **8/5/2015**
Expiration Date: **10/31/2019**
Facility ID Number: **FA0258851**

Facility Name: **Granite Rock Company- Pavex Central**
Site Address: **120 Granite Rock Wy., San Jose, CA 95136**
Tank Owner: **Granite Rock Company, Inc.**
Tank Operator: **Granite Rock Company, Inc.**

Permit Holder: **Granite Rock Company, Inc. (Tank Owner)**
PO Box 50001
Watsonville, CA 95076

The following underground storage tanks are covered by this permit:

Tank Identification Number	Capacity (gal.)	Tank Contents	Permittee's Tank ID
TA0368167	**15,000**	**Regular Unleaded Gasoline**	**401659-000010**
TA0368168	**10,000**	**Diesel**	**401659-000009**

Permit Conditions

1. In order to maintain this UST permit to operate, the permit holder shall comply with Health and Safety Code, Division 20, Chapters 6.7 and 6.75; and California Code of Regulations (CCR), Title 23, Division 3, Chapters 16 and 18.
2. In the event of a spill, leak, or other unauthorized release, the permittee shall comply with the requirements of 23 CCR, Chapter 16, Article 5. Additionally, the permittee shall operate according to a UST Response Plan approved by the County of Santa Clara, Department of Environmental Health, Hazardous Materials Compliance Division (HMCD).
3. The permittee shall comply with the monitoring procedures described in a UST Monitoring Plan and UST system Plot Plan approved by HMCD.
4. The permittee shall notify, and receive approval from, HMCD prior to making any changes in monitoring procedures and/or equipment. The permittee shall notify HMCD within 30 days of any change in the usage of any UST, including changes in hazardous substances stored or change of UST owner and/or operator.
5. The permittee shall perform testing and preventive maintenance on all leak detection monitoring equipment annually, or more frequently if specified by the equipment manufacturer, and maintain documentation of such servicing on-site. The permittee shall ensure that monitoring system certification testing is scheduled to occur during HMCD's annual UST compliance inspection.
6. The permittee shall obtain approval from HMCD and Fire and Building authorities prior to modifying any UST system.
7. Written records of all monitoring performed shall be maintained on-site by the operator and be available for inspection for a period of at least three years from the date the monitoring was performed.
8. The permittee shall submit annual permit fees and State UST surcharges. Penalties for late payment will be assessed at 25%.
9. Copies of this permit and the approved UST monitoring, response, and plot plans shall be maintained at the tank site.
10. Violation of any of the above conditions may be cause for revocation of this UST permit to operate.

Re: Permit No. 258851-395982, Underground Storage Tank Permit to Operate.

Dear Reed Carter:

Santa Clara County Department of Environmental Health's Hazardous Materials Compliance Division (HMCD) is the local agency which regulates underground storage tanks (UST) at your facility, **Granite Rock Company- Pavex Central**, located at **120 Granite Rock Wy., San Jose, CA**. The UST operating permit for that facility is enclosed. This permit must be posted at the tank site.

Please carefully review the permit information and Permit Conditions. Although the permit term is five years, fees will be assessed annually. Should you have any questions, please do not hesitate to contact the undersigned at (408) 918-1978.

Sincerely,

Jennifer Kaahaaina
Hazardous Materials Program Manager
Hazardous Materials Compliance Division

UNDERGROUND STORAGE TANK
RESPONSE PLAN – PAGE 1

(One form per facility)

TYPE OF ACTION ☐ 1. NEW PLAN ☒ 2. CHANGE OF INFORMATION R01

I. FACILITY INFORMATION

FACILITY ID # *(Agency Use Only)* | | | – | | | | – | | | | | | | | 1.

BUSINESS NAME (Same as FACILITY NAME) 3.

Granite Rock Company-Pavex Central

BUSINESS SITE ADDRESS 103	BUSINESS SITE CITY 104.
120 Granite Rock Way	**San Jose**

II. SPILL CONTROL AND CLEANUP METHODS

This plan addresses unauthorized releases from UST systems and supplements the emergency response plans and procedures in the facility's Hazardous Materials Business Plan (HMBP).

- If safe to do so, facility personnel will take immediate measures to control or stop any release (e.g., activate pump shut-off, etc.) and, if necessary, safely remove remaining hazardous material from the UST system.
- Any release to secondary containment will be pumped or otherwise removed within a time consistent with the ability of the secondary containment system to contain the hazardous material, but not greater than 30 calendar days, or sooner if required by the local agency. Recovered hazardous materials, unless still suitable for their intended use, will be managed as hazardous waste.
- Absorbent material will be used to contain and clean up manageable spills of hazardous materials. Absorbent material which has become too saturated to be effective or which is no longer intended for use will be managed as hazardous waste unless a waste determination in accordance with 22 CCR §66262.11 finds that it is non-hazardous. Used absorbent material, reusable or waste, will be stored in a properly labeled and sealed container. Waste material shall be disposed of appropriately.
- Facility personnel will determine whether any water removed from secondary containment systems, or from clean-up activity, has been in contact with any hazardous material. If the water is contaminated, it will be managed as hazardous waste unless a hazardous waste determination in accordance with 22 CCR §66262.11 finds that it is non-hazardous. If the water has a petroleum sheen (i.e., rainbow colors), it is contaminated. A thick floating petroleum layer may not necessarily display rainbow colors. Water (hazardous or non-hazardous) from sumps, spill containers, etc. will not be disposed to storm water systems.
- We will review secondary containment systems for possible deterioration if any of the following conditions occur:
  1. Hazardous material in contact with secondary containment is not compatible with the material used for secondary containment;
  2. Secondary containment is prone to damage from any equipment used to remove or clean up hazardous material collected in secondary containment;
  3. Hazardous material, other than the product/waste stored in the primary containment system, is placed inside secondary containment to treat or neutralize released product/waste, and the added material or resulting material from such a combination is not compatible with secondary containment.

III. SPILL CONTROL AND CLEAN-UP EQUIPMENT

PERIODIC MAINTENANCE: Spill control and clean-up equipment kept permanently on-site is listed in the facility's Hazardous Materials Business Plan. This equipment is inspected at least monthly, and after each use, supplies are replenished as needed. Defective equipment is repaired or replaced as necessary.

EQUIPMENT NOT PERMANENTLY ON-SITE, BUT AVAILABLE FOR USE IF NEEDED: *(Complete only if applicable)*

EQUIPMENT	LOCATION	AVAILABILITY
R10.	R20.	R30.
R11.	R21.	R31.
R12.	R22.	R32.
R13.	R23.	R33.
R14.	R24.	R34.
R15.	R25.	R35.

IV. RESPONSIBLE PERSONS

THE FOLLOWING PERSON(S) IS/ARE RESPONSIBLE FOR AUTHORIZING ANY WORK NECESSARY UNDER THIS RESPONSE PLAN:

NAME	TITLE
R40. **Elden Davis**	R50. **Equipment Manager**
R41. **Ken Nott**	R51. **Equipment Superintendent**
R42. **Elias Lanuza**	R52. **Maintenance Planner**
R43.	R53

V. MONITORING INDICATORS

IF MONITORING INDICATES A POSSIBLE UNAUTHORIZED RELEASE, STEPS TO VERIFY THE RELEASE WILL BE MADE AS FOLLOWS:

☒ 1. ADDITIONAL SYSTEM TESTING OR DATA COLLECTION ☒ 2. INSPECTION BY QUALIFIED PERSONS ☐ 3. RECALIBRATION OF EQUIPMENT R60.

☐ 99. OTHER (Specify): R61.

UNDERGROUND STORAGE TANK

RESPONSE PLAN – PAGE 2

VI. REPORTING AND RECORD KEEPING

We will report/record any overfill, spill, or unauthorized release from a UST system as indicated in this plan.

Recordable Releases: Any unauthorized release from primary containment which the UST operator is able to clean up within eight (8) hours after the release was detected or should reasonably have been detected, and which does not escape from secondary containment, does not increase the hazard of fire or explosion, and does not cause any deterioration of secondary containment, must be recorded in the facility's monitoring records. Monitoring records must include:

- The UST operator's name and telephone number;
- A list of the types, quantities, and concentrations of hazardous substances released;
- A description of the actions taken to control and clean up the release;
- The method and location of disposal of the released hazardous substances, and whether a hazardous waste manifest was or will be used;
- A description of actions taken to repair the UST and to prevent future releases;
- A description of the method used to reactivate interstitial monitoring after replacement or repair of primary containment.

Reportable Releases: Any overfill, spill, or unauthorized release which escapes from secondary containment (or primary containment if no secondary containment exists), increases the hazard of fire or explosion, or causes any deterioration of secondary containment, is a reportable release. Reportable releases are also recordable.

Within 24 hours after a reportable release has been detected, or should have been detected, we will notify the local agency administering the UST program of the release, investigate the release, and take immediate measures to stop the release. If necessary, or if required by the local agency, remaining stored product/waste will be removed from the UST to prevent further releases or facilitate corrective action. If an emergency exists, we will notify the California Emergency Management Agency at (800) 852-7550.

Within five (5) working days of a reportable release, we will submit to the local agency a full written report containing all of the following information to the extent that the information is known at the time of filing the report:

- The UST owner's or operator's name and telephone number;
- A list of the types, quantities, and concentrations of hazardous materials released;
- The approximate date of the release;
- The date on which the release was discovered;
- The date on which the release was stopped;
- A description of actions taken to control and/or stop the release;
- A description of corrective and remedial actions, including investigations which were undertaken and will be conducted to determine the nature and extent of soil, ground water or surface water contamination due to the release;
- The method(s) of cleanup implemented to date, proposed cleanup actions, and a schedule for implementing the proposed actions;
- The method(s) and location(s) of disposal of released hazardous materials and any contaminated soils, groundwater, or surface water.
- Copies of any hazardous waste manifests used for off-site transport of hazardous wastes associated with clean-up activity;
- A description of proposed methods for any repair or replacement of UST system primary/secondary containment systems;
- A description of additional actions taken to prevent future releases.

We will follow the reporting procedures described above if any of the following conditions occur:

- A recordable unauthorized release can not be cleaned up or is still under investigation within eight (8) hours of detection;
- Released hazardous substances are discovered at the UST site or in the surrounding area;
- Unusual operating conditions are observed, including erratic behavior of product dispensing equipment, sudden loss of product, or the unexplained presence of water in the tank, unless system equipment is found to be defective and is immediately repaired or replaced, and no leak has occurred;
- Monitoring results from UST system monitoring equipment/methods indicate that a release may have occurred, unless the monitoring equipment is found to be defective and is immediately repaired, recalibrated, or replaced, and additional monitoring does not confirm the initial results.

Record Retention: Monitoring records and written reports of unauthorized releases must be maintained on-site (or off-site at a readily available location, if approved by the local agency) for at least 3 years. Hazardous waste shipping/disposal records (e.g., manifests) must be maintained for at least 3 years from the date of shipment.

Technician Certifications

ICC
INTERNATIONAL CODE COUNCIL

California UST Service Technician

Candidate ID: ICC00015422

Name: ANTHONY MENDEZ Date: 2/13/2014

Address: PO BOX 1137

SAN MARTIN CA 95046

EXAMINATION RESULT: **PASS**

Congratulations! You have passed the above named examination. Your wallet card will be forwarded to you by ICC within six weeks from the last day of the month in which you tested. This certificate is current for two years.

You may request a wall certificate from ICC as well. This certificate will be provided at no cost to you, if you request it within 90 days of your exam. Only one wall certificate per exam passed will be provided to you at no charge. For more information on requesting a wall certificate, go to www.iccsafe.org/inspector.

It is extremely important that you notify Pearson VUE and ICC of any changes in name and/or address to avoid the possibility of your wallet card and/or certificate not being received. Please contact Pearson VUE at 800-275-8301 and ICC at certexam@iccsafe.org with changes to your name and address (name changes may require additional documentation). There may be an additional fee if a certification is re-issued due to a misspelled name or incorrect address.

Secondary Containment Testing Report Form

This form is intended for use by contractors performing periodic testing of UST secondary containment systems. Use the appropriate pages of this form to report results for all components tested. The completed form, written test procedures, and printouts from tests (if applicable), should be provided to the facility owner/operator for submittal to the local regulatory agency.

1. FACILITY INFORMATION

Facility Name: Granite Rock #120		Date of Testing: 08/16/17	
Facility Address: 120 Granite Rock Way, San Jose CA 95136			
Facility Contact:	Phone (408) 574-1424	☐ Initial	☐ Repair Test
Date Local Agency Was Notified of Testing: 07/28/17		☐ 6 Month	☐Other
Name of Local Agency Inspector *(if present during testing)*:		☑ Triennial	

2. TESTING CONTRACTOR INFORMATION

Company Name: ABLE Maintenance, Inc.		
Technician Conducting Test: Eric Salinger / I.C.C. #8729425		
Credentials: ☑ CSLB Licensed Contractor	☐ SWRCB Licensed Tank Tester	☑ ICC UST Service Technician
License Type: A,B, HAZ., C10	License Number: 312844	

Manufacturer Training

Manufacturer	Component(s)	Date Training Expires
Available upon request

If hydrostatic testing was performed, describe what was done with the water after completion of tests:

Used Pump Test Truck

For any equipment capable of generating a print out of test results, you must attach a copy of the test report to this certification ☐ System printout attached.

CERTIFICATION OF TECHNICIAN RESPONSIBLE FOR CONDUCTING THIS TESTING

To the best of my knowledge, the facts stated in this document are accurate and in full compliance with legal requirements

Technician's Signature: Date: 08/16/17

4. TANK ANNULAR TESTING

Test Method Developed By:	☐ Tank Manufacturer	☑ Industry Standard	☐ Professional Engineer	☐ Other *(Specify)*
Test Method Used:	☐ Pressure	☑ Vacuum	☐ Hydrostatic	☐ Other *(Specify)*
Test Equipment Used: Test plugs, venturi pump and guages			Equipment Resolution: 0.5% of Span inHg	

	Tank # 87	**Tank #** Diesel	**Tank #**	**Tank #**
Is Tank Exempt From Testing?[1]	☐Yes ☑No	☐Yes ☑No	☐Yes ☐No	☐Yes ☐No
Tank Capacity:	5k	15K		
Tank Material:	Fiberglass	Fiberglass		
Tank Manufacturer:	Xerxes	Xerxes		
Product Stored:	Gasoline	Diesel		
Wait time between applying pressure/vacuum/water and starting test:	10 Minutes	10 Minutes	10 Minutes	10 Minutes
Test Start Time:	7:30AM	7:15AM		
Initial Reading (R_I):	7 inHg	7 inHg	inHg	inHg
Test End Time:	8:30AM	8:15AM		
Final Reading (R_F):	7 inHg	7 inHg	inHg	inHg
Test Duration:	1 hour	1 hour	1 hour	1 hour
Change in Reading (R_F-R_I):	0	0		
Pass/Fail Threshold or Criteria:	0	0	0	0
Test Result:	☑ **Pass** ☐ **Fail**	☑ **Pass** ☐ **Fail**	☐ **Pass** ☐ **Fail**	☐ **Pass** ☐ **Fail**
Was sensor removed for testing?	☑Yes ☐No ☐NA	☑Yes ☐No ☐NA	☐Yes ☐No ☐NA	☐Yes ☐No ☐NA
Was sensor properly replaced and verified functional after testing?	☑Yes ☐No ☐NA	☑Yes ☐No ☐NA	☐Yes ☐No ☐NA	☐Yes ☐No ☐NA

Comments – *(include information on repairs made prior to testing, and recommended follow-up for failed tests)*

"Sensor functionality was not confirmed. This procedure is not part of the Secondary Containment testing scope of work".

[1] Secondary containment systems where the continuous monitoring automatically monitors both the primary and secondary containment, such as systems that are hydrostatically monitored or under constant vacuum, are exempt from periodic containment testing. {California Code of Regulations, Title 23, Section 2637(a)(6)}

5. SECONDARY PIPE TESTING

Test Method Developed By:	☐ Piping Manufacturer	☑ Industry Standard	☐ Professional Engineer
	☐ Other *(Specify)*		
Test Method Used:	☑ Pressure	☐ Vacuum	☐ Hydrostatic
	☐ Other *(Specify)*		
Test Equipment Used: Test reducer boots, Nigrogen and gauges		Equipment Resolution: 0.5% of span PSI	

	Piping Run # 87 Product	**Piping Run #** 87 Vapor Return	**Piping Run #** Diesel Product	**Piping Run #**
Piping Material:	Fiberglass	Fiberglass	Fiberglass	
Piping Manufacturer:	Ameron	Ameron	Ameron	
Piping Diameter:	3"	3"	3"	
Length of Piping Run:	60'	60'	65'	
Product Stored:	Gasoline	N/A	Diesel	
Method and location of piping-run isolation:	Reducer Boots/Fittings	Reducer Boots/Fittings	Reducer Boots/Fittings	Reducer Boots/Fittings
Wait time between applying pressure/vacuum/water and starting test:	10 Minutes	10 Minutes	10 Minutes	10 Minutes
Test Start Time:	8:40AM	8:40AM	8:45AM	
Initial Reading (R_I):	5 PSI	5 PSI	5 PSI	PSI
Test End Time:	9:40AM	9:40AM	9:45AM	
Final Reading (R_F):	5 PSI	4 PSI	4 PSI	PSI
Test Duration:	1 hour	1 hour	1 hour	1 hour
Change in Reading (R_F-R_I):	0	1	1	
Pass/Fail Threshold or Criteria:	0	0	0	0
Test Result:	☑ **Pass** ☐ **Fail**	☐ **Pass** ☑ **Fail**	☐ **Pass** ☑ **Fail**	☐ **Pass** ☐ **Fail**

Comments – *(include information on repairs made prior to testing, and recommended follow-up for failed tests)*

87 Vapor Return and Diesel Product Lines Failed, Need investigation. Not leaking in UDC or Sumps.

6. PIPING SUMP TESTING

Test Method Developed By:	☐ Sump Manufacturer	☑ Industry Standard	☐ Professional Engineer	☐ Other *(Specify)*
Test Method Used:	☐ Pressure	☐ Vacuum	☑ Hydrostatic	☐ Other *(Specify)*
Test Equipment Used: Incon Sump Tester			Equipment Resolution: +/- 0.002 Inches	

	Sump # 87	**Sump #** Diesel	**Sump #**	**Sump #**
Sump Diameter:	42"	42"		
Sump Depth:	53"	55"		
Sump Material:	Fiberglass	fiberglass		
Height from Tank Top to Top of Highest Piping Penetration:	24"	24"		
Height from Tank Top to Lowest Electrical Penetration:	41"	42"		
Condition of sump prior to testing:	Good	Good		
Portion of Sump Tested[1]	2" Above Piping	2" Above Piping		
Does turbine shut down when sump sensor detects liquid (both product and water)?*	☐Yes ☐No ☑NA	☐Yes ☐No ☑NA	☐Yes ☐ No ☐NA	☐ Yes ☐No ☐NA
Turbine shutdown response time	N/A	N/A	N/A	N/A
Is system programmed for fail-safe shutdown?*	☐Yes ☐No ☑NA	☐Yes ☐No ☑NA	☐ Yes☐ No ☐NA	☐ Yes ☐No ☐NA
Was fail-safe verified to be operational?*	☐Yes ☐No ☑NA	☐ Yes ☐No ☑NA	☐Yes ☐No ☐NA	☐ Yes ☐No ☐NA
Wait time between applying pressure/vacuum/water and starting test:	30 Minutes	30 Minutes	30 Minutes	30 Minutes
Test Start Time:	9:33AM	9:51AM		
Initial Reading (R_I):	6.8212 Inches	3.3997 Inches	Inches	Inches
Test End Time:	9:48AM	10:08AM		
Final Reading (R_F):	6.8211 Inches	3.3929 Inches	Inches	Inches
Test Duration:	15 Minutes	16 Minutes		
Change in Reading (R_F-R_I):	0.0001	0.0068		
Pass/Fail Threshold or Criteria:	0.002	0.002	0.002	0.002
Test Result:	☑**Pass** ☐**Fail**	☐**Pass** ☑**Fail**	☐**Pass** ☐**Fail**	☐**Pass** ☐**Fail**
Was sensor removed for testing?	☑Yes ☐No ☐NA	☑Yes ☐No ☐NA	☐Yes ☐No ☐NA	☐ Yes ☐No ☐NA
Was sensor properly replaced and verified functional after testing?	☑Yes ☐No ☐NA	☑ Yes ☐No ☐NA	☐Yes ☐No ☐NA	☐ Yes ☐No ☐NA

Comments – *(include information on repairs made prior to testing, and recommended follow-up for failed tests)*

"Sensor functionality was not confirmed. This procedure is not part of the Secondary Containment testing scope of work".

Diesel STP Failed Needs Further investigation, conduit penetration packed with sealant all around the hard fitting, sealant all packed around diesel vent penetration.

7. UNDER-DISPENSER CONTAINMENT (UDC) TESTING

Test Method Developed By:	☐ UDC Manufacturer	☑ Industry Standard	☐ Professional Engineer
	☐ Other *(Specify)*		
Test Method Used:	☐ Pressure	☐ Vacuum	☑ Hydrostatic
	☐ Other *(Specify)*		
Test Equipment Used: Incon Sump Tester		Equipment Resolution: +/-0.002 Inches

FOREWORD

These *Recommended Practices for the Testing and Verification of Spill, Overfill, Leak Detection and Secondary Containment Equipment at UST Facilities* have been prepared as an industry service by the Petroleum Equipment Institute. The text represents the consensus views of the PEI Overfill, Release Detection and Release Prevention Equipment Testing Committee, comprised of the following members:

Edward S. Kubinsky, Jr., Chairman
CROMPCO, LLC
Plymouth Meeting, Pennsylvania

Matt Bjornson
Bjornson Oil Co.
Cavalier, North Dakota

Scott C. Boorse
Wawa Inc.
Wawa, Pennsylvania

1. INTRODUCTION

1.1 Origin. The Petroleum Equipment Institute (PEI) has produced this document as an industry service. It has been prepared in response to requests from underground storage tank (UST) system operators, tank testers and regulators for a single authoritative source of information.

The recommended practices described herein represent a synthesis of industry procedures and manufacturers' recommendations relating to spill, overfill, leak detection and secondary containment equipment. These practices are the consensus recommendations of the PEI Overfill, Release Detection and Release Prevention Equipment Testing Committee. The Committee is made up of representatives from equipment suppliers, tank owners, leak detection and release prevention testers, industry-related associations and the regulatory community. In addition, the Committee has had the benefit of comments submitted by parties interested in leak detection and release prevention equipment.

In instances where there were differences or omissions in material available from existing sources, the PEI Overfill, Release Detection and Release Prevention Equipment Testing Committee has included its own consensus recommendations based on the practical experience of committee members.

1.2 Background. Spill, overfill, leak detection and secondary containment equipment is currently employed at UST facilities as required by local, state and federal regulations. For this equipment to be operated effectively and safely, it must be maintained, inspected and tested for proper operation on an ongoing basis.

1.3 Purpose. The purpose of this document is to provide a concise summary of general guidelines for the inspection and testing of spill, overfill, leak detection, secondary containment equipment, shear valves and emergency stops at UST facilities. This information has been assembled from published and unpublished sources provided by equipment suppliers, experienced testing contractors, UST owners/operators and authorities having jurisdiction (AHJs). The intent is to provide recommended practices to facility operators and testing personnel that:

- protect the environment;
- promote the safe and reliable operation of systems;
- prevent spills and overfills associated with deliveries to a UST;
- prevent damage to property and equipment.

This document is not intended to:

- endorse or recommend particular materials, equipment, suppliers or manufacturers;
- discourage the development or installation of new equipment or overfill prevention and leak detection devices;
- discourage the development of new or improved testing procedures and equipment.

1.4 Scope. These recommended practices apply to facilities that are equipped with USTs used for the storage of motor fuels, jet fuels, distillate fuel oils, residual fuel oils, lubricants, petroleum solvents, oils and other petroleum products.

These recommended practices apply to:

- USTs;
- connected underground piping;
- underground ancillary equipment and containment systems;
- equipment from the dispenser shear valve and below.

These recommended practices do not apply to:

- mobile tank fuel dispensing systems (e.g., truck-mounted refuelers);
- aboveground storage tanks;
- tanks containing refrigerated liquids, liquefied petroleum gases, liquefied natural gases or compressed natural gases;
- dispensing equipment above the shear valve.

These recommended practices are not intended to address the design, installation or day-to-day operation of UST systems. Nonetheless, it is important to consider the design and operational characteristics of an underground tank system when specifying overfill prevention, release prevention and leak detection equipment.

The test methods in this recommended practice relative to integrity testing of spill buckets, containment sumps and secondary containment are based on current industry practices and are intended to demonstrate that a leak from the primary containment will be detected before it reaches the environment.

If an AHJ requires components to meet specific leak detection standards, follow the requirements in the AHJ's regulation.

This document is not meant to provide interpretation of regulatory or legislative requirements related to UST systems.

1.5 Use of Other PEI Recommended Practices. œThere are many aspects of UST systems that are not described in this document. Refer to the following PEI documents for additional recommended practices and procedures related to UST systems:

- PEI/RP100, *Recommended Practices for Installation of Underground Liquid Storage Systems;*
- PEI/RP300, R*ecommended Practices for Installation and Testing of Vapor Recovery Systems at Vehicle Fueling Sites;*
- PEI/RP500, *Recommended Practices for Inspection and Maintenance of Motor Fuel Dispensing Equipment;*
- PEI/RP900, *Recommended Practices for the Inspection and Maintenance of UST Systems.*

1.6 Regulations and Codes. USTs and the ancillary equipment discussed in these recommended practices are usually regulated by federal, state or local agencies. While the general requirements of the regulations are similar, specific requirements may vary from jurisdiction to jurisdiction. The PEI Overfill, Release Detection and Release Prevention Equipment Testing Committee has not attempted to describe or interpret specific regulations in this document. Where there are differences between applicable regulations and the recommendations in the publication, the more stringent requirements should be followed.

UST owners and operators need to verify that UST systems meet all applicable regulatory requirements. In some jurisdictions, equipment may require the approval of fire departments, environmental agencies or AHJs, or listing by a nationally recognized testing laboratory. AHJs also may require technicians to meet specific qualifications prior to working on UST systems.

1.7 Importance of Competent Technicians. In addition to proper system design and operation, the use of skilled, professional service technicians with experience in UST systems is an important factor in ensuring that a tank system will operate safely and effectively throughout its working life. The use of technicians who have the experience and integrity to do the job correctly provides the greatest assurance that spill, overfill, leak detection and secondary containment equipment will operate as designed and installed. Equipment manufacturers and/or AHJs also may require technicians to meet specific qualifications prior to working on underground tank systems.

1.8 Notifications. Federal, state and local agencies have reporting requirements for certain environmental incidents. When a test procedure in the recommended practice indicates a failure of a system or component, identify the "appropriate person" or AHJ who should be notified.

2. DEFINITIONS

When used in this document, the terms listed below have the following meanings:

2.1 Appropriate Person. The individual or organization designated by the facility owner or operator to receive notification of any problems or defects noted during any routine inspection procedure described in this recommended practice. It is the responsibility of the "appropriate person" to assess the nature of the problem or defect and initiate appropriate action.

2.2 Authority Having Jurisdiction (AHJ). An organization, office or individual responsible for enforcing the requirements of a code or standard, or for approving equipment, materials, an installation or a procedure.

2.3 Automatic Tank Gauge (ATG). An electronic device that consists of a probe that measures liquid level and a console that calculates the liquid volume in that underground storage tank (UST). By monitoring the liquid level, the ATG can conduct leak tests of the underground tank. Accessory devices that monitor pressurized piping, interstitial spaces and containment sumps also can be connected to the ATG console.

2.4 Ball Float Valve. An overfill prevention device that operates by restricting the vent opening in a UST, thus limiting the flow of fuel into the tank.

2.5 Class I, Division 1. Part of a classification system used in the National Electrical Code (NFPA 70) published by the National Fire Protection Association (NFPA) to describe the fire or explosion hazard present in a specific area. A Class I, Division 1 area is a location where flammable gases, flammable liquid-produced vapors or combustible liquid-produced vapors:

- can exist at ignitable concentrations under normal operating conditions;
- may frequently exist at ignitable concentrations because of repair or maintenance operations or because of leakage;
- might be released in ignitable concentrations by the breakdown or faulty operation of equipment or processes that might also cause the simultaneous failure of electrical equipment.

For example, the area inside a fuel dispenser that contains product piping and most spaces beneath the access covers of a UST are Class I, Division 1 areas.

2.6 Classified Area. A general term for a location where fire or explosion hazards may exist due to the presence of flammable gases, flammable liquid-produced vapors or combustible liquid-produced vapors. Classified areas are described in national fire and electrical codes. For example, see the definition for Class I, Division 1 in this chapter.

2.7 Containment Sump. A liquid-tight container that protects the environment by containing leaks and spills from piping, dispensers, pumps and related components. Containment sumps may be single-walled or double-walled. Typical locations include the top of a tank (fill sump or submersible turbine pump sump), underneath the dispenser (under-dispenser sump), or at other points in the piping run (transition or intermediate sump).

2.8 Discriminating Sensor. See "Sensor."

2.9 Dispenser Sump. See "Containment Sump."

2.10 Drop Tube. A tube installed in the fill pipe of a UST that extends from the top of the fill pipe to within 4 to 6 inches of the bottom of the tank. The drop tube increases the delivery flow rate and reduces the volume of vapors generated during a delivery.

2.11 Drop Tube Shutoff Valve. A mechanism installed in a drop tube designed to prevent the overfill of a UST by shutting off product delivery when the tank is nearly full. Drop tube shutoff valves are frequently referred to as "flapper valves."

2.12 Emergency Stop. A clearly identified switch or button that disconnects all power to dispensers, pumps and electrical equipment in the area surrounding fuel dispensers. The switch or button may be inside or outside a building. Also known as an "E-Stop," "emergency shut-off switch" or "ESO."

2.13 Interstitial Space. The area between the primary and secondary containment of a double-walled tank, double-walled piping or other double-walled component. Also known as the "interstice" or "annular space".

2.14 Intrinsically Safe Circuit. A circuit in which any spark or thermal effect is not capable of causing ignition of a mixture of flammable or combustible material under prescribed test conditions. In general, an intrinsically safe circuit is a low-energy electrical circuit that cannot generate enough heat or produce a spark large enough to ignite fuel vapors.

2.15 Leak Detection. Any procedure or equipment that can be used to determine whether an underground

storage system is releasing product to the outside of the primary containment in an uncontrolled manner. Leak detection methods include inventory control, tank and line testing, and interstitial monitoring. Leak detection is also known as "release detection."

2.16 Lockout/Tagout. Procedures designed to safeguard workers from exposure to electrical hazards, the unexpected startup of machinery, or the release of fuel while equipment is being serviced. This requires, in part, that a designated individual turns off and isolates the equipment from its energy source(s) before performing service or maintenance. The designated individual either locks or tags the breaker(s) or valve(s) and takes steps to verify that the equipment has been isolated effectively.

2.17 Overfill Alarm. An audible and/or visual warning device that alerts a fuel delivery operator that a storage tank is nearly full and the delivery should be stopped.

2.18 Penetration Fitting. A fitting designed to provide a liquid-tight seal around piping or conduit that passes through the wall of a containment sump.

2.19 Personal Protective Equipment (PPE). Equipment designed to protect workers from workplace injuries or illnesses resulting from contact with chemical, physical, electrical, mechanical or other workplace hazards. Examples of PPE include safety shoes, hard hats, safety glasses, coveralls, gloves, high-visibility vests, hearing protection and respirators.

2.20 Probe. An electronic measuring device installed in an underground tank. Probes typically measure product level, water level and product temperature, and communicate this information to an ATG console.

2.21 Riser. A generic term for a vertical length of pipe in an underground storage system. Risers include:

- fill, vapor recovery, tank gauge and interstitial risers located on the top of the tank;
- fuel dispenser risers located beneath fuel dispensing equipment;
- vent risers that extend above grade to allow an underground tank to exhaust vapors or take in fresh air as necessary to maintain the tank at or near atmospheric pressure.

2.22 Safety Data Sheet (SDS). Information supplied by the manufacturer of chemical substance to individuals who use or come into contact with the substance. The SDS includes information on how to use, transport and store a chemical safely, as well as what to do in case of emergency.

2.23 Sensor. An electronic or mechanical device that can detect the presence of water, liquid product, product vapors or a loss of pressure or vacuum in the interstitial space of a tank, piping, a tank-top sump, a fuel dispenser sump or an observation well. Sensors are available to detect only water, only petroleum products, or to detect both water and petroleum products and differentiate between the two.

2.24 Shear Valve. A mechanical device installed at the base of a fuel dispenser when the fuel supply piping operates under pressure. The valve is designed to automatically shut off the flow of fuel to the dispenser in the event of a severe impact to the fuel dispenser or a fire inside the fuel dispenser. This device is also known as a "crash valve," "impact valve" or "emergency shutoff valve."

2.25 Spill Bucket. A liquid-tight container placed around the fill pipe or Stage I vapor recovery riser of a UST designed to capture small spills that might occur when the delivery hose is disconnected. A spill bucket may contain a drain valve to drain liquids into the tank or a small pump to remove liquids. Also referred to as a "spill catchment basin."

2.26 STP. See "Submersible Turbine Pump."

2.27 Submersible Turbine Pump. A pumping unit located inside a UST designed to supply fuel to one or more fuel dispensers. The pump intake is positioned approximately 4 to 6 inches from the bottom of the tank, where it is submerged in the fuel. A submersible turbine pump may also be called a "submersible pump" or an "STP."

2.28 Test Boot. A donut- or tube-shaped device made of flexible material that can be used to seal off the interstitial space in a double-walled piping system. With the test boot in place, the interstitial space of the piping can be isolated for integrity testing purposes.

3. SAFETY

WARNING: Failure to comply with the following warnings could result in property damage, injury or death.

- **Motor fuel can be harmful or fatal if swallowed.**
- **Avoid breathing vapors by ventilating work areas.**
- **Keep fuel away from skin and eyes by wearing appropriate personal protective equipment (PPE).**

3.1 General. This chapter is intended to provide an overview of some of the safety issues that should be considered when spill, overfill, leak detection, secondary containment equipment and shear valves are inspected or tested. This chapter is not intended to provide safety training for personnel involved in the inspection or testing of this equipment, nor for personnel engaged in fuel transfer activities.

The test methods and procedures in this recommended practice involve working with liquids in underground storage tanks (USTs). Inspecting, testing and working around equipment that stores and handles these liquids involves situations in which flammable liquids and vapors can be present.

Only properly trained individuals should inspect or test overfill, leak detection and release prevention equipment. These individuals are responsible for their own safety, and should take reasonable precautions to ensure the safety of facility employees, customers and any other personnel in the work area. Refer to Appendix D for related safety publications.

3.2 Chemical Hazards. Petroleum products are complex mixtures of chemicals, many of which are toxic. Before working with dispensers and tank components, workers should read and understand the relevant material Safety Data Sheets (SDSs) for the products being stored, and receive appropriate fuel handling safety and first-aid training. Appropriate PPE should be worn to minimize the risk of exposure.

The following are some basic guidelines regarding liquids stored in USTs. Refer to the appropriate SDS for further information. Employers should maintain in the workplace copies of the required SDSs for each hazardous chemical that may be used.

- Do not clean hands with motor fuels. Wear appropriate chemical-resistant gloves when performing activities that may result in contact with motor fuel. Remove fuel-soaked clothing as soon as possible. Wash the area thoroughly with soap and clean water. Launder contaminated clothing before reuse.
- If motor fuel comes into contact with eye tissue, flush immediately with large amounts of water for at least 15 minutes and seek medical attention.
- Take appropriate precautions to minimize inhalation of fuel vapors. Make sure that the work area is well ventilated before beginning any activities that may release fuel vapors. Inhalation may cause personal injury or death.
- The ingestion of petroleum fuels may cause unconsciousness and/or burns to internal organs. If motor fuels are swallowed, do not induce vomiting. Seek medical attention immediately.

3.3 Electrical Hazards. Wiring for alarms and liquid level sensors should conform to applicable electrical code requirements and the specifications of the equipment manufacturer. Improperly wired, worn or unprotected electrical equipment can create fire, explosion or electrical shock hazards.

Any activity or procedure requiring access to electrical equipment, wire or electronic components requires complete electrical shutoff of all circuits within that component by qualified personnel. Use the appropriate circuit breaker or switch at the facility power panel to disconnect power to individual devices. Qualified persons must understand and comply with lockout/tagout requirements to ensure safety while servicing equipment. Refer to applicable procedures, codes and regulations (e.g., OSHA Standard 29 CFR 1919.147) for further description of lockout/tagout requirements.

3.4 Fire and Explosion Hazards. Gasoline and gasoline/ethanol blends are examples of liquids that generate large quantities of vapors that are easily ignited. Be especially careful when gasoline or gasoline/ethanol blends are present in an open container, spilled on the ground, or when working in or around enclosed spaces where gasoline or gasoline/ethanol blend vapors may be present.

When working on a dispenser, open both sides of the cabinet to allow any vapors inside to dissipate before proceeding with interior inspection, maintenance or testing. Similar precautions should be taken when working in confined spaces, such as containment sumps.

WARNING: FIRE HAZARD

- **Extinguish all smoking materials and open flames.**
- **Do not start or operate vehicles.**
- **Do not operate electric power tools in classified areas.**
- **Do not wear clothing that can generate static charges.**
- **Discharge personal static by touching a grounded metallic object before entering a classified area.**
- **Remove from service any tank system or dispenser that is leaking fuel or vapor.**

Observe the following precautions when working in a classified area or in any area where fuel vapors may be present.

- Open flames from matches or cigarette lighters, burning cigarettes, cigars or pipes can ignite fuel vapors and should never be allowed in the vicinity of fuel dispensing equipment or open containment sumps.
- Sparks from vehicle ignition systems, starting the vehicle, using the battery or from AC-powered tools and devices, such as work lights or flashlights, can ignite fuel vapors. Use explosion-proof equipment or non-sparking tools when working in areas where fuel vapors may be present.
- Static electricity generated by friction on articles of clothing or vehicle upholstery can cause a spark sufficient to ignite fuel vapors. Wear clothing that does not accumulate static charges. Individuals should discharge static electricity by touching a grounded metallic object well outside a classified area before reaching into a space wherever flammable vapors may be present.
- Be familiar with the location and operation of appropriate fire extinguishers or fire suppression systems at the facility before beginning any inspection, test or maintenance task.
- A UST system component or dispenser that is leaking fuel or vapor should not remain in service. If a leak is discovered, deactivate the system or component, label it "Out of Service" and notify the appropriate person.

3.5 People Hazards. Other personnel present at a facility may cause significant hazards. Customers operating vehicles, facility managers or operators who re-energize electrical circuits that have been turned off, or clerks who authorize sales at dispensers that are being serviced are hazards that must be anticipated and addressed.

Always advise personnel in charge of point-of-sale systems and the facility management of work to be done. Take note of traffic patterns. Note the activities of any other workers at the facility and discuss with them ways of minimizing or eliminating any hazards that may be presented by their activities.

Use traffic barriers, PPE, lock-out/tagout procedures, fuel shutoff valves and pump electrical disconnects as necessary to ensure safety during dispenser and tank system inspection, testing and maintenance activities.

3.6 Test Equipment. Use equipment intended for testing spill, overfill, leak detection and secondary containment equipment.

For tests that impose a vacuum on a containment volume or interstitial space, use only an air-operated vacuum source or a vacuum pump powered by an explosion-proof motor. Vacuum pumps with electric motors that are not explosion-proof may ignite flammable vapors. If a portable air compressor is used, it should be located at least 20 feet away from the venturi-eductor or outside any Class I, Division 1 area.

3.7 Confined Space Entry. UST system containment sumps may be large enough to present hazards associated with confined space entry. Refer to OSHA 1910.146 for further guidance on confined space entry procedures.

3.8 Use of Water Versus Product for Testing. Do not use gasoline, gasoline/ethanol blends, diesel fuel or other stored liquids to test the integrity of spill buckets and containment sump walls. Use water or other approved monitoring liquid for tests requiring a test liquid. A release of product from a leaking system presents a safety hazard and could cause environmental damage.

Follow the guidelines in Section 6.7 for proper disposal of water used in testing.

3.9 Responding to Spills. Spills may occur during maintenance, testing or repair activities. Follow the spill response procedure specified by the facility owner or operator. A spill kit should be readily available at the facility.

Avoid igniting spilled fuel. Immediately remove people from the area and verify that no open flames or other ignition sources are in the area of the spill. Do not allow the starting of vehicles in the area.

Handle and dispose of used spill cleanup and sorbent materials according to instructions provided by the owner or operator of the facility. Do not store contaminated materials inside a building.

The owner or operator should report any spill or discharges to the authority having jurisdiction (AHJ) as required by law. In some locations, reporting to more than one authority may be required.

3.10 Vehicle Hazards. Vehicles can present one of the more serious and common safety hazards while working at dispenser islands and areas where traffic is present at UST facilities. Drivers often are distracted and inattentive at UST facilities, and may not notice personnel conducting testing, maintenance or repair activities.

Take appropriate safety precautions prior to performing any inspection, testing or maintenance of overfill, leak detection and release prevention equipment.

Workers should wear high-visibility safety clothing while working in areas where vehicle traffic may be present. Use safety cones, barricades, warning signs and/or barrier tape to designate and isolate work areas. Take care not to place tools or equipment outside the designated area. Do not remove safety equipment, barricades or signs until all work is completed and equipment is ready to be returned to service.

4. TANK SECONDARY CONTAINMENT INTEGRITY TESTING

4.1 General. Double-walled tanks have interstitial spaces that can be tested for integrity.

There are two methods for testing the integrity of tank secondary containment systems: dry and wet. Dry test methods use a partial vacuum to determine the integrity of the containment. To perform a wet test on an existing liquid-filled tank interstitial space, the liquid level in the interstitial space is raised and is monitored for a specified period of time to determine if the containment has integrity.

A tank secondary containment integrity test does not necessarily determine whether the primary tank is tight because portions of the primary tank, such as tank fittings and manway openings, may not be included in the containment integrity test.

4.2 Tank Secondary Containment Integrity Testing — Dry Test Method

4.2.1 Purpose. This method is used to test the integrity of the dry secondary containment of a UST.

4.2.2 Description of Test. A partial vacuum is drawn on the interstitial space and it is monitored for a specified period of time. If the vacuum level is maintained, the containment system has passed the test. The vacuum test time depends on the volume of the annular space and site conditions.

4.2.3 Test Conditions. The primary tank may contain any level of product. No bulk deliveries shall occur during the test.

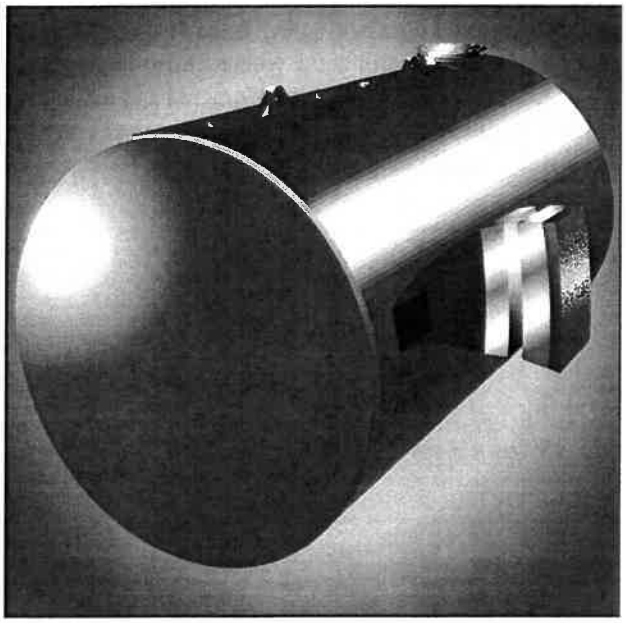

FIGURE 4-1. *A cutaway view of a double-walled tank.*

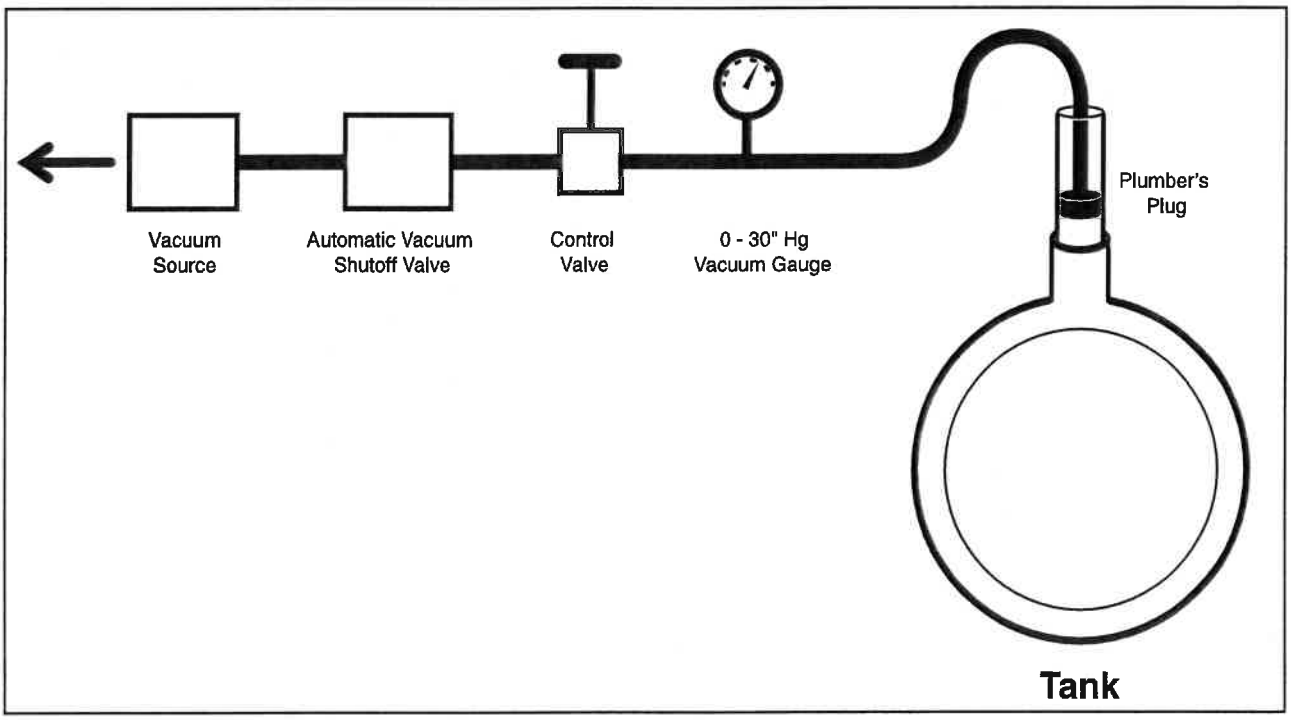

FIGURE 4-2. *Schematic of the dry test method apparatus.*

CAUTION: Use only an air-operated vacuum source or a vacuum pump powered by an explosion-proof motor. Vacuum pumps with electric motors that are not explosion-proof may ignite flammable vapors. If a portable air compressor is used, it should be located at least 20 feet away from the venturi-eductor or outside any Class I, Division 1 area.

4.2.4 Preparation. The procedures in this section are general in nature and reflect the suggested vacuum levels and hold times for testing tank secondary containment areas. Consult tank manufacturer and authority having jurisdiction (AHJ) guidelines before performing these tests, as their requirements may differ.

Determine if there is liquid present in the interstitial space. If liquid is found, determine if the fluid is water or product, and remove it to the extent practicable.

The hydrostatic pressure from a high water table imposes inward pressure on the outer wall of a UST. Applying a vacuum to the interstitial space of the tank creates additional pressure on the outer wall. These combined forces can damage the secondary tank wall when there is a large defined space between the primary and secondary tanks. Consequently, to prevent damage to the tank, it is important to observe the water table and associated recommended vacuum levels when testing.

Vent the primary tank to atmosphere during the test.

In some installations, the tank interstitial space may be vented to minimize the buildup of condensation. In these cases, seal off any vent lines to the tank interstitial space prior to testing.

Determine the volume of the tank. This information is available from facility records or the automatic tank gauge (ATG) readout.

4.2.5 Steel Tanks. Determine if the interstitial space is a "tight-wrap" design or a "110% containment" design. Tanks with a 110% containment design should use the latest version of Steel Tank Institute's (STI) R012, *Recommended Practice for Interstitial Tightness Testing of Existing Underground Double Wall Steel Tanks* for testing.

For tight-wrap tanks, use the test method in this section.

4.2.6 Fiberglass Tanks. Determine if the interstitial space is a "tight-wrap" design or a "110% containment" design. Either type of fiberglass tank may use this test or the latest version of Fiberglass Tank & Pipe Institute's (FTPI) RP 2007, *Field Test Protocol for Testing the Annular Space of Installed*

FIGURE 4-3. *The vacuum gauge and control valve used for tank interstitial testing.*

FIGURE 4-4. *The plumber's plug provides a leak-tight connection to draw a vacuum on the tank interstitial space.*

Underground Fiberglass Double and Triple-Wall Tanks With Dry Annular Space FTPI 4/01/07.

4.2.7 Test Equipment. Test equipment shall include:

- a vacuum-generating device that can be used in a Class I, Division 1 area capable of pulling 15 inches of mercury (Hg) vacuum;
- an automatic vacuum shutoff valve or vacuum regulator (The shutoff valve can be set to close at a predetermined safe level, preventing the possibility of accidentally imposing a high vacuum that could damage the tank. The use of the valve is recommended because it limits the vacuum that can be applied to the interstitial space.);
- vacuum gauge with a range of 0 inches to 30 inches Hg graduated in increments of 0.5 inches Hg or less;
- toggle valve and vacuum hose;
- stopwatch or other time measurement device capable of measuring a 1-second increment;
- plumber's plug.

4.2.8 Test Procedure.

1. Install the plumber's plug in the interstitial riser(s) below any tees.
2. Connect the vacuum gauge, valve and the vacuum-generating device to the fitting on the plumber's plug. The valve should be between the vacuum source inlet and the pressure gauge. The gauge should be between the valve and the fitting so it will read the interstitial vacuum when the valve is closed. The automatic vacuum shutoff valve is located at the inlet of the vacuum-producing device and should be set at a minimum of 10 percent and no more than 2 inches Hg above the test vacuum.
3. Ensure all connections are airtight.
4. Start the vacuum-generating device, and open the valve.
5. Pull the vacuum to 10 inches Hg. Close the valve.
6. Allow the vacuum to stabilize for a minimum of 5 minutes at the specified vacuum level. If a stable vacuum cannot be maintained, test equipment shall be inspected for leakage. Repeat steps 4 and 5 until a stable vacuum is achieved. If a stable vacuum cannot be maintained, the tank secondary containment integrity test fails.
7. When the vacuum level stabilizes, record the vacuum level and the test start time.
8. Observe the vacuum level for the period of time shown in Table 4-1.
9. Record the final time and vacuum level.
10. Check the interstitial space for accumulation of liquids.

TABLE 4-1

Vacuum, inches Hg	Capacity, gallons	Duration, hours
10	<20,000	1
	20,000+	2

4.2.9 Pass/Fail Criteria. If there is no loss in vacuum level, no liquids are drawn into the interstitial space during the test duration shown in Table 4.1, and the tank secondary containment area has no additional fluid than at the start of the test, then the tank secondary containment passes the test.

If there is any vacuum lost during the test or liquids are drawn into the interstitial space, then the tank secondary containment fails the test.

4.3 Tank Secondary Containment Integrity Testing — Liquid-Filled Test Method.

4.3.1 General. This test method tests the integrity of the liquid-filled interstitial space. There are a number of variables that affect this test, such as interstitial space volume, temperature, water table and product level in the primary tank. Refer to Appendix A for specific manufacturers' test procedures.

4.3.2 Purpose. This general method is used to test the integrity of the liquid-filled secondary containment of a UST.

4.3.3 Description of Test. Liquid is added to the interstitial space of the tank and the level is brought up into the interstitial riser. The liquid level is monitored for a specified period of time. If the liquid level is maintained, then the containment system has passed the test.

4.3.4 Test Conditions. The primary containment may contain any level of product. Determine whether the groundwater depth is above the bottom of the tank. Consult specific manufacturer's procedures in regards to groundwater and performing the test. No bulk deliveries shall occur within 8 hours prior to conducting or during the test. No dispensing may occur during the test.

4.3.5 Preparation. Determine the volume of the tank and identify the test being performed. Tank volume information is available from facility records or the ATG readout. Prepare a monitoring fluid solution to add to the interstitial space.

4.3.6 Steel Tanks. Liquid-filled (hydrostatic) tests on steel tanks require the same fluid as the monitoring fluid. Contact the manufacturer for instructions.

4.3.7 Fiberglass Tanks. Determine tank size and diameter and apply the appropriate method.

4.3.8 Test Equipment. Test equipment shall include:

- monitoring fluid;
- stopwatch or other time-measurement device capable of measuring a 1-second increment;
- tape measure.

4.3.9 Test Procedure.

1. Remove any sensor that may be installed in the tank interstitial space.
2. Determine and record the groundwater level.
3. Add test liquid to the tank interstitial space, bringing the fluid level into the riser (standpipe) to the appropriate level based on the manufacturer's written procedure.
4. Document the starting level and start time of the test.
5. Start the time-measurement device.
6. Wait the appropriate time according to the manufacturer's test procedure.
7. Document the ending level and ending time of the test.
8. Determine and record the groundwater level.
9. Remove liquid added to the tank interstitial space, and restore the liquid level in the tank interstitial to normal operating condition.
10. Reinstall the sensor so that it is installed within manufacturer's specifications.

4.3.10 Pass/Fail Criteria. Compare the data to the manufacturer's pass/fail criteria in Appendix A to determine if the tank has passed the test.

5. PIPING SECONDARY CONTAINMENT INTEGRITY TESTING

5.1 General. Underground product piping is available with single and double walls. Double-walled piping provides containment for leaks from primary containment and must be leak-free to prevent release of product into the environment.

5.2 Purpose. This method is used to test the integrity of piping interstitial space(s).

5.3 Testing Piping Under Pressure.

5.3.1 Description of Test. The interstitial space is sealed at the ends and is pressurized with an inert gas. The pressure is monitored for 1 hour. If any pressure drop occurs, the secondary containment fails the test.

5.3.2 Test Conditions. The primary pipe may contain fuel, and dispensing activities may continue during the test without affecting test results.

5.3.3 Preparation. If the interstitial space contains product, ensure that the interstice is open to the atmosphere and perform a precision test on the primary piping before conducting a test on the secondary containment piping.

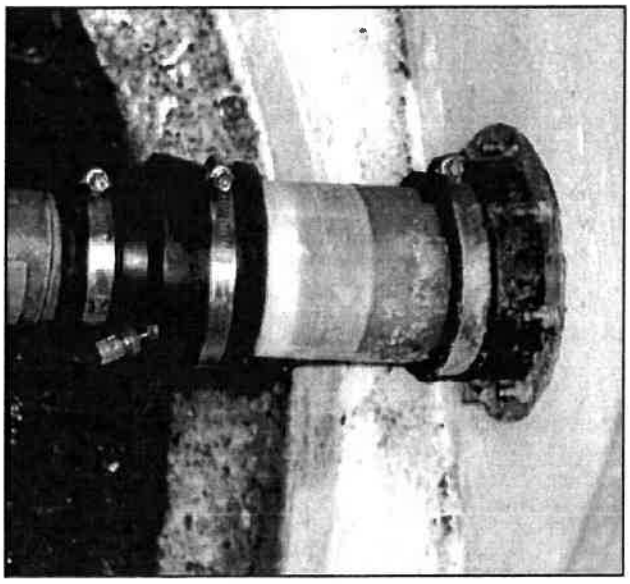

FIGURE 5-1. *Boots on piping transitions and through sump walls must be leak-tight when piping secondary containment integrity testing is performed.*

Termination fittings must be sealed at all piping terminations, and test fittings must be accessible to perform the test.

Check with the piping manufacturer regarding testing procedures and the proper pressure before testing. Testing requirements stated in this recommended practice are general statements and may vary. Recommended pressure levels and test durations are addressed in Section 5.3.5. Piping manufacturers' test procedures may differ.

This test can be conducted in sections or as one continuous pipe depending on the installation. Care should be taken to ensure that the entire secondary containment of the piping system is tested.

5.3.4 Test Equipment. Test equipment shall include:

- inert gas source (nitrogen, helium, etc.);
- stopwatch or other time-measurement device capable of measuring a 1-second increment;
- test tubing assemblies (Tubing assemblies provide access to the beginning and end of the interstitial space.);
- pressure gauge with a 15 psig maximum pressure reading with 0.5 increments.

5.3.5 Test Procedure.

1. If necessary, re-install termination (test) boots at piping terminations.
2. If necessary, connect the tubing assemblies to the secondary containment termination fitting on each end of the section of piping to be tested.
3. Connect the inert gas source and pressure gauge.
4. Gradually pressurize the interstitial space to 5 psig. Close the valve and allow the pressure to stabilize. Repressurize to the specified test pressure if necessary.
5. Observe the pressure for a period of 1 hour.
6. If the piping pressure after 1 hour is less than the test pressure, check termination fittings and test assemblies for leaks.
7. Release the pressure on the system slowly.
8. Remove the test equipment.
9. Restore the piping to its normal operating condition.

5.3.6 Pass/Fail Criteria. If no pressure change occurs during the test period, the piping system passes the secondary containment integrity test. If there is any drop in pressure over the test period, the piping fails the secondary containment integrity test. If there is any increase in pressure over the test period, repeat the test.

6. SPILL BUCKET AND CONTAINMENT SUMP TESTING

6.1 General. Spill buckets and containment sumps for tank systems are neither intended nor designed for the storage of petroleum products, but rather to contain small leaks and spills for short periods of time. This section describes the procedures used to test the integrity of spill buckets and containment sumps to ensure that they do not leak.

6.2 Spill Bucket Integrity Testing — Hydrostatic Test Method.

WARNING: Do not use fuels such as gasoline, E85 or diesel as a test fluid because they present a serious fire and safety hazard. Gasoline vapors are flammable and can explode if exposed to an ignition source such as a spark or open flame. If a tank or containment area is not tight, using fuel as the test fluid will cause a release into the soil or groundwater.

6.2.1 Purpose. This method is used to test the integrity of single-walled spill buckets or the primary containment of secondarily contained spill buckets.

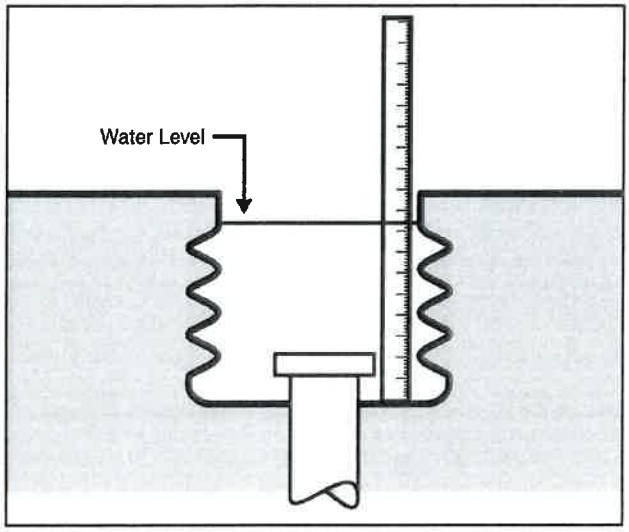

FIGURE 6-1. *The hydrostatic method of determining spill bucket integrity uses water to detect leaks. The measuring stick must be placed in the same location at the beginning and end of the test period to ensure accurate water level readings.*

6.2.2 Description of Test. The spill bucket is filled with water. The water level is measured at the beginning and end of the test.

6.2.3 Test Equipment. Test equipment shall include:

- water;
- measuring stick that is accurate to within 1/16 (0.063) inch and of sufficient length;
- plumber's plug (appropriate size, if used);
- stopwatch or other time-measurement device capable of measuring a 1-second increment.

6.2.4 Preparation.

1. Care should be taken when conducting the test in the rain or during freezing weather conditions.
2. Remove and properly dispose of any liquid and debris (leaves, sediment and trash) in the spill bucket. Clean the spill bucket and examine it for damage, defects or improperly installed components. If there are loose components (e.g., loose band clamps or bolts), tighten these items before conducting the integrity test. If there are items that must be repaired or replaced (e.g., deteriorated gaskets/seals or drain valves), notify the owner/operator.
3. Examine the fill cap and adapter fitting for loose, missing or damaged parts, and make necessary repairs. Complete any repairs before putting water in the spill bucket. Make sure that the seal on the fill cap is present and in good condition. The cap must fit securely and be leak-tight on the riser. The water level during the test typically will be above the cap, so a leaking cap will result in a failed test. As an alternative to a tight-fill cap, use a plumber's plug in the fill riser if approved by the authority having jurisdiction (AHJ) and tank owner.
4. The spill bucket drain valve, if present, must be leak-tight to pass the test. If it is not leak-tight, it may be possible to simply remove and permanently plug the drain valve. However, if you choose to permanently plug, ensure that the local regulations allow this modification.
5. If the spill bucket is found to have cracks, loose parts or separation of the bucket from the fill pipe, it is not considered to be liquid-tight. This visually indicates a test failure.

NOTE: If the fill cap is not included in the spill bucket test and/or the cap is not tight, it could be the source of potential fuel contamination from water intrusion.

NOTE: Before permanently plugging, ensure that local regulations allow the drain valve to be permanently plugged.

6.2.5 Test Procedure.

1. Add water to the spill bucket to a level within 1.5 inches of the top of the spill bucket. Allow the water to settle for 5 minutes before the initial water level measurement is taken.
2. Place the measuring stick vertically at the lowest point in the spill bucket and extending above the water level to allow for an accurate measurement to be taken. The location of the measuring stick must remain the same for each water level measurement. Document the initial water level measurement as measured from the bottom of the spill bucket. Alternative measurement methods may be used provided that measurement to 1/16 (0.063) inch can be made.
3. Take all precautions to prevent the water level from being disturbed during the duration of the test.
4. After 1 hour, document the ending water level measurement.
5. Upon completion of the test, remove and dispose of the water according to Section 6.7, and dry the inside of the spill bucket before returning it to service.

6.2.6 Pass/Fail Criteria. If the water level has dropped less than 1/8 (0.125) inch, the spill bucket passes the integrity test.

If the water level has dropped 1/8 (0.125) inch or greater, the spill bucket fails the integrity test.

6.3 Spill Bucket Integrity Testing — Vacuum Test Method.

6.3.1 Purpose. This method is used to test the integrity of single-walled spill buckets or the primary containment of secondarily contained spill buckets.

6.3.2 Description of Test. Using a specially equipped test cover, a partial vacuum is applied to the spill bucket. The vacuum level is monitored for a 1-minute period.

6.3.3 Test Equipment. Test equipment shall include:

- vacuum test apparatus (The test apparatus may be available from the spill bucket manufacturer. It includes an air pressure regulator, a vacuum source, a vacuum gauge with a minimum 0-50 inch water column range and a control valve. The control valve is used to adjust the vacuum level.);
- test cover (The cover is equipped with a test fitting.);
- plumber's plug (appropriate size, if used);
- stopwatch or other time-measurement device capable of measuring a 1-second increment;
- gasketing material (The purpose of the gasketing material is to provide an air-tight seal between the test cover and the spill bucket.).

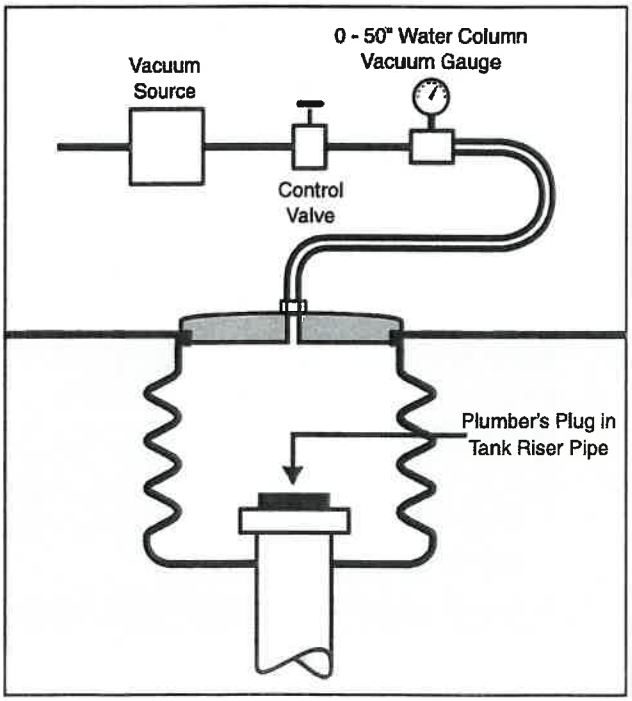

FIGURE 6-2. *The cover must make a tight seal with the spill bucket to prevent leakage when the vacuum is pulled during the test.*

WARNING: Use only an air-operated vacuum source or a vacuum pump powered by an explosion-proof motor. Vacuum pumps with electric motors that are not

explosion-proof may ignite flammable vapors. If a portable air compressor is used, it should be located at least 20 feet away from the venturi-eductor or outside any Class I, Division 1 area.

6.3.4 Preparation.

1. Remove and properly dispose of any liquid and debris (leaves, sediment and trash) in the spill bucket. Clean the spill bucket and examine it for damage, defects or improperly installed components. If there are loose components (e.g., loose band clamps or bolts), tighten these items before performing the integrity test. If there are items that must be repaired or replaced (e.g., deteriorated gaskets/seals or drain valves), notify the owner/operator to obtain approval before proceeding with the needed repairs.
2. Examine the fill cap and adapter fitting for loose, missing or damaged parts and make necessary repairs. Make sure that the seal on the fill cap is present and in good condition. The cap must fit securely and be leak-tight on the riser. A leaking cap will result in a failed test. As an alternative to a tight-fill cap, use a plumber's plug in the fill riser.
3. The spill bucket drain valve, if present, must be leak-tight to pass the test. If the drain valve is not leak-tight, it may be removed and permanently plugged.

NOTE: Before permanently plugging, ensure that local regulations allow the drain valve to be permanently plugged.

4. Clean any contamination from the top surface of the spill bucket where the cover makes a seal and line it with gasketing material.
5. Place the test cover on the spill bucket, confirming that it makes a tight seal with the gasketing material.
6. Connect the line from the vacuum source to the adapter on the cover.
7. If the spill bucket is found to have cracks, loose parts or separation of the bucket from the fill pipe, it is not considered to be liquid-tight. This visually indicates a test failure.

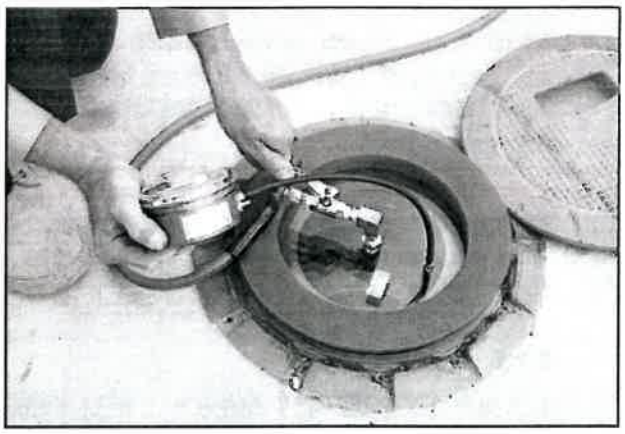

FIGURE 6-3. *The vacuum test method can detect a spill bucket leak by measuring the change in vacuum level during the test.*

6.3.5 Test Procedure.

1. Slowly apply a vacuum of 30 inches water column to the spill bucket and close the valve. If a 30-inch water column vacuum cannot be attained, the spill bucket fails the test. See Appendix B for pressure and vacuum conversions.
2. Start the time-measurement device and record the initial vacuum level shown on the gauge.
3. After 1 minute, record the ending vacuum level.

Upon completion of the test, release the vacuum, remove the test apparatus and the gasketing material from the spill bucket and replace the original cover.

6.3.6 Pass/Fail Criteria. If the ending vacuum level is 26 inches water column or greater, the spill bucket passes the test.

If the ending vacuum level is less than 26 inches water column, the spill bucket fails the test.

6.4 Double-Walled Spill Bucket Integrity Testing — Vacuum Test Method.

6.4.1 Purpose. This method is used to test the integrity of the primary and secondary containment of the double-walled spill bucket.

6.4.2 Description of Test. A partial vacuum is applied to the interstitial space between the primary and secondary containment. The vacuum level is monitored for a 1-minute period.

6.4.3 Test Equipment. Test equipment shall include:

- vacuum test apparatus (The test apparatus may be available from the spill-bucket manufacturer. It includes an air pressure regulator, a vacuum source, a vacuum gauge with a minimum 0-30 inch water column range, a test fitting and a control valve. The control valve is used to adjust the vacuum level.);
- stopwatch or other time-measurement device capable of measuring a 1-second increment.

WARNING: Use only an air-operated vacuum source or a vacuum pump powered by an explosion-proof motor. Vacuum pumps with electric motors that are not explosion-proof may ignite flammable vapors. If a portable air compressor is used, it should be located at least 20 feet away from the venturi-eductor or outside any Class I, Division 1 area.

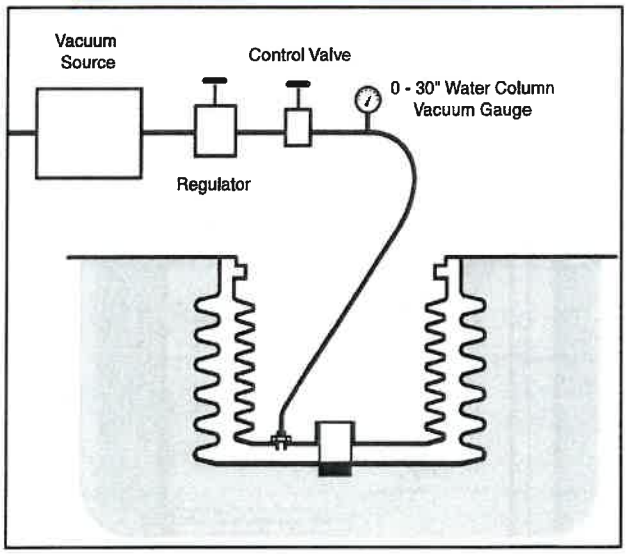

FIGURE 6-4. *Check lines and connections to ensure that they are leak-tight before starting the test.*

6.4.4 Preparation.

1. Remove and properly dispose of any liquid and debris (leaves, sediment and trash) in the spill bucket.
2. Clean the spill bucket and examine it for damage. Make sure that it is free of cracks, loose parts or separation of the bucket from the fill pipe. If the spill bucket is damaged, notify the owner/operator.
3. Attach the test apparatus to the test port.
4. Connect the line from the vacuum source to the test apparatus.
5. If the spill bucket is found to have cracks, loose parts or separation of the bucket from the fill pipe, it is not considered to be liquid-tight. This visually indicates a test failure.

6.4.5 Test Procedure.

1. Slowly apply a vacuum of 15 inches water column to the spill bucket interstitial space and close the control valve. If a 15-inch water column vacuum cannot be attained, the spill bucket fails the test. See Appendix B for pressure and vacuum conversions.
2. Start the time-measurement device and record the initial vacuum level shown on the gauge.
3. After 1 minute, record the ending vacuum level.

   Upon completion of the test, release the vacuum, remove the test apparatus and restore the spill bucket to its normal operating condition.

6.4.6 Pass/Fail Criteria. If the ending vacuum level is 12 inches water column or greater, the spill bucket passes the test.

If the ending vacuum level is less than 12 inches water column, the spill bucket fails the test.

6.5 Containment Sump Integrity Testing.

CAUTION: Gaining access to the containment sump requires removing the lid, cover or dispenser panel that is in place to protect the equipment in the sump. These components can be heavy. They may require special handling and more than one person to remove them. Use caution when moving and replacing them when testing is complete. During the test, put the covers and panels in a safe location where they are secure and isolated from vehicle and customer traffic.

6.5.1 General. Containment sumps are liquid-tight structures designed to temporarily contain leaks or spills. In addition, containment sumps often serve as the leak detection monitoring location for double-walled piping systems. Leakage from the primary containment typically flows by gravity inside the secondary containment to the

sump, where it can be easily observed or detected by a sensor.

This section describes a hydrostatic test method. There are vacuum test methods available for containment sumps. Consult the manufacturer before performing a vacuum test.

NOTE: Follow the manufacturer's instructions when testing the interstitial spaces of double-walled containment sumps.

6.5.2 Purpose. This section describes the preparation and procedures to test the integrity of containment sumps to ensure that they do not leak.

6.5.3 Description of Test. The containment sump is filled to the proper level with water. The water level is measured at the beginning and end of the test.

6.5.4 Test Equipment. Test equipment shall include:

- water;
- measuring stick that is accurate to within 1/16 (0.063) inch and of sufficient length;
- stopwatch or other time-measurement device capable of measuring a 1-second increment.

6.5.5 Preparation.

1. Care should be taken when conducting the test in the rain or during freezing weather conditions.
2. Remove and properly dispose of any liquid and debris (leaves, sediment and trash) in the containment sump.
3. Inspect the containment sump for damage. Examine all penetration fittings, conduits, junction boxes, caps and risers (if present), and sidewall seams for defects, damage or improperly installed components. If there are loose components (e.g., loose penetration fitting clamps or missing interstitial space caps), correct these items before performing the integrity test. If there are items that must be repaired or replaced (e.g., deteriorated penetration fitting boots), notify the owner/operator and obtain approval prior to proceeding with repairs.
4. Test boots or secondary containment termination fittings must be present on the piping penetrating the sump. During testing, these fittings prevent water from entering the interstitial space of double-walled piping. Without these fittings, the integrity of the sump cannot be tested using this method.
5. If interstitial monitoring sensors are present within the containment sumps, temporarily remove them before conducting the test. If the sensor is removed, reposition after testing to appropriate position according to the manufacturer's instructions.
6. If the containment sump is found to have cracks, loose parts or separation of any joints or penetration fittings, it is not considered to be liquid-tight. This visually indicates a test failure.

CAUTION: Water can damage electrical connections. Ensure that there are no components that can be damaged by the addition of water to the sump. If such components are present, take appropriate precautions when performing the test or use an alternative test method.

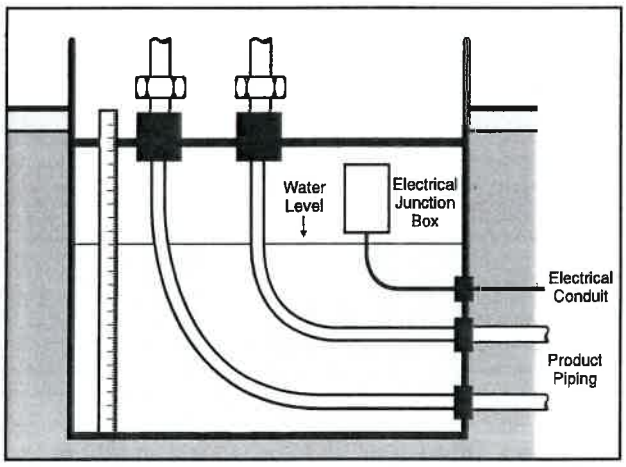

FIGURE 6-5. *The test fluid level in the under dispenser containment (UDC) must be at least 4 inches above the highest sump penetration or sidewall seam.*

6.5.6 Test Procedure.

1. Begin the test by adding water to the sump to a minimum of 4 inches above the highest sump penetration or sump sidewall seam, whichever is higher. To compensate for sump deflection, the water must be allowed to settle a minimum of 15 minutes before taking the initial test measurement. If the highest sump penetration or sump sidewall seam is less than 4 inches from the top

of the sump, add water to within 1 inch of the top of the sump.

2. Place the measuring stick vertically at the lowest point in the sump and extending above the water level in the sump to allow for an accurate measurement to be taken. The location of the measuring stick must remain the same for each water level measurement. Document the initial water level measurement as measured from the bottom of the sump. Alternative measurement methods may be used provided that the measurement to 1/16 (0.063) inch can be made.
3. Take all precautions to prevent the water level from being disturbed during the duration of the test.
4. After 1 hour, document the ending water level measurement.
5. Upon completion of the test:

- remove all water and properly dispose of it according to Section 6.7;
- reinstall any interstitial monitoring sensors in their proper positions;
- return the test boots or secondary containment fittings to their pre-test operating configurations;
- inspect and reinstall all containment sump lids, gaskets and covers.

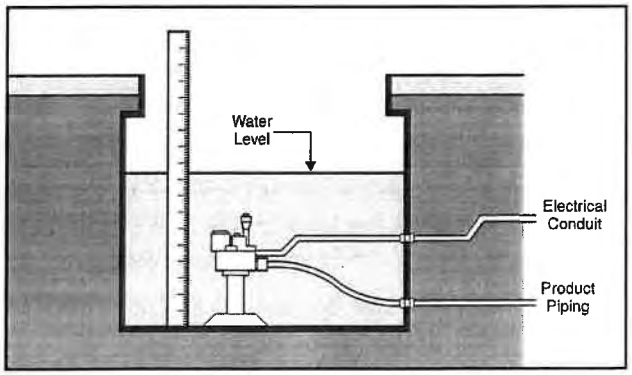

FIGURE 6-6. *To prevent leakage, check all penetration fittings before adding water to ensure they make a tight seal.*

6.5.7 Pass/Fail Criteria. If the water level changes less than 1/8 (0.125) inch, the containment sump passes the integrity test.

If the water level changes 1/8 (0.125) inch or greater, the containment sump fails the integrity test.

6.6 Accelerated Precision Hydrostatic Test for Spill Buckets and Containment Sumps. Electronic precision test equipment can be utilized to test spill buckets and containment sumps. It incorporates more sensitive equipment that permits a test to be conducted in a shorter period of time. The procedures use the same test fluid and tests the same volume as other methods outlined in this chapter. The manufacturer of the measurement equipment should specify the precision and duration of the test and the pass/fail criteria. However, pass/fail criteria should not be less stringent than those prescribed for the 1-hour test in Section 6.5.7.

The data sheet for Sections 6.2 or 6.5 may be used for this test. Refer to Appendix D.

6.7 Proper Handling of Test Liquids. Test liquids must be handled properly. Check with the AHJ regarding requirements.

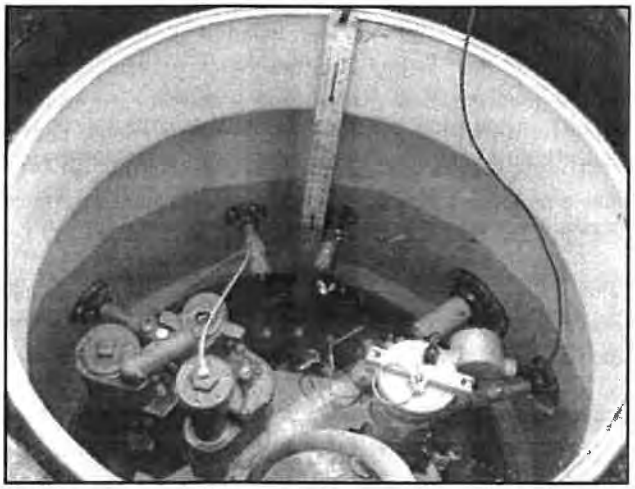

FIGURE 6-7. *The test fluid level in the tank sump must be at least 4 inches above the highest sump penetration or sidewall seam.*

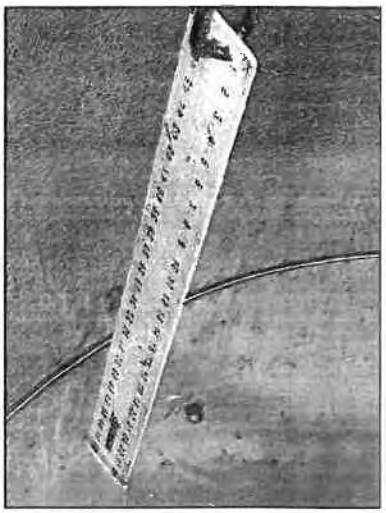

FIGURE 6-8. *Measuring sticks used to measure the water level should be securely mounted to ensure that they do not move during the test.*

7. UST OVERFILL EQUIPMENT VERIFICATION, INSPECTION AND TESTING

Although the effectiveness of overfill prevention devices can be tested by attempting to overfill an underground storage tank (UST) with product and determining how well the device functions, this approach is not recommended. Any malfunction in the overfill prevention device could result in a product release that could result in a threat to public health and safety and environmental damage.

Federal UST rules require that overfill prevention equipment automatically restrict flow or alert the transfer operator when the tank is no more than 90 percent full or shut off flow into a tank when it is no more than 95 percent full. Other alternatives to prevent overfills are the restriction of flow during a delivery 30 minutes prior to overfilling; alerting the operator 1 minute before overfilling may occur; or automatically shutting off flow into a tank so that none of the fittings located on top of the tank are exposed to product due to overfilling.

The PEI Overfill, Release Detection and Release Prevention Equipment Testing Committee has written the recommended practices for automatic shutoff devices to reflect that the devices must be set to shut off flow when the tank is no more than 95 percent full, and flow restriction and overfill alarm devices must automatically restrict flow or alert the transfer operator when the tank is no more than 90 percent full. This approach reflects the more conservative application of the rules.

7.1 Automatic Shutoff Devices.

7.1.1 General. Automatic shutoff devices, sometimes called flappers or flapper valves, are an integral part of the drop tube assembly installed within the tank fill riser. They are designed to initially restrict and subsequently completely shut off flow when product has reached predetermined levels during a delivery. Automatic shutoff valves need to be properly positioned and operate freely to control flow and prevent tank overfills.

7.1.2 Purpose. The purpose of this inspection is to verify the automatic shutoff valve is installed properly, operates as designed and is set to completely shut off flow when the tank is no more than 95 percent full.

7.1.3 Description of Inspection. After a preliminary inspection of the automatic shutoff installation, the drop tube is removed from the tank. The automatic shutoff is checked for proper operation, and its placement is measured to verify that it is properly located to completely shut off flow when the tank is no more than 95 percent full.

7.1.4 Preparation. Refer to the tank manufacturer's calibration chart for the capacity in gallons, the diameter and the volume of product with respect to product level.

If the automatic shutoff device has a float that extends from the drop tube in the shutoff (closed) position, verify the proper orientation of the float mechanism. The float mechanism should be oriented away from any obstructions (ball float, submersible turbine pump [STP], tank wall, tank gauge probe, etc.) If the movement of the float mechanism is restricted, it will not function as designed.

Use this procedure in conjunction with the manufacturer's installation and maintenance instructions.

7.1.5 Inspection Equipment. Test equipment shall include:

- tools for removal of the drop tube;
- tape measure;
- tools for inspection of the automatic shutoff.

7.1.6 Inspection Procedure.

1. Remove the drop tube from the tank.
2. Visually inspect the automatic shut off valve and float mechanism for any damage or corrosion that inhibits the functionality of the device, and remove any debris and foreign objects.
3. Manually move the float mechanism to ensure it moves freely.
4. With the float mechanism in the shutoff (closed) position, visually inspect the drop tube and verify that the shutoff valve is released and will move into the product flow path.
5. If possible, verify that the bypass valve in the drop tube is open and free of blockage.
6. If problems with the shutoff valve are found and defective components need repair or replacement, notify the appropriate person.

7. Using the automatic shutoff device manufacturer's suggested procedure, examine the drop tube and shutoff valve to determine if product flow will be completely shut off at 95 percent of tank capacity. Make any adjustments necessary to ensure that flow will be completely shut off when the tank is no more than 95 percent full.
8. After inspection of the automatic shutoff device, reinstall the drop tube.

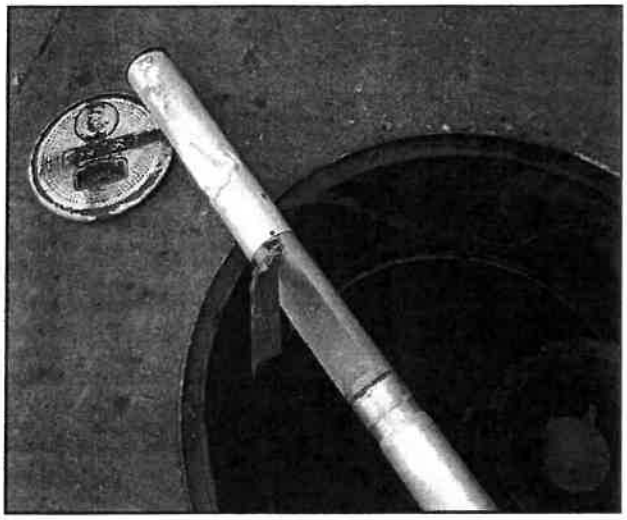

FIGURE 7-1. *Check the drop tube and flapper for damage. Make sure that the flapper moves freely and will move into the product flow path.*

7.1.7 Pass/Fail Criteria. If the automatic shutoff device functions as designed and complete shutoff of product flow is able to occur when the tank is no more than 95 percent full, the automatic shutoff device passes the inspection.

If the automatic shutoff device does not function as designed or complete shutoff of product flow is unable to occur until the tank is more than 95 percent full, the automatic shutoff device fails the inspection.

7.2 Ball Float Valves. The committee recommends that ball floats be removed from USTs as overfill prevention devices and another method of overfill prevention be installed.

7.2.1 General. Ball float valves are designed to restrict product flow when product in the tank reaches a certain level by restricting vapor flow from the tank ullage. When vapor flow is restricted, pressure builds in the tank ullage, slowing the flow of product into the tank.

To operate properly, the ball float valve must be properly installed, positioned at the correct height inside the tank and compatible with UST configuration.

7.2.2 Purpose. The purpose of this inspection is to verify that the ball float valve is installed properly, operates as designed, and is set to restrict flow when the tank is no more than 90 percent full.

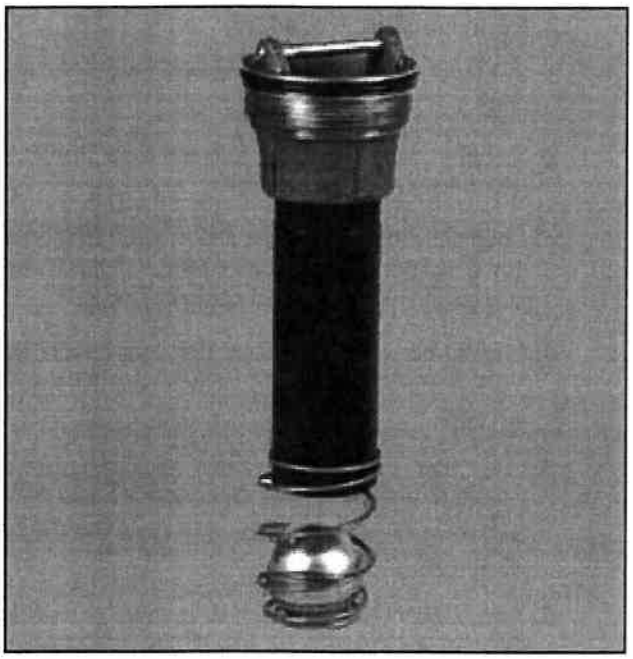

FIGURE 7-2. *Ball float assembly showing the ball in the open position. The ball will float and cover the vapor path if the product rises above the level of the cage.*

7.2.3 Inspection Equipment. Test equipment shall include:

- equipment to remove the vent restriction device;
- tape measure.

7.2.4 Description of Inspection. The ball float valve assembly is removed from the tank, inspected for proper operation and measured to ensure that the ball float assembly is the proper dimension to restrict flow into the tank when it is no more than 90 percent full.

7.2.5 Preparation. Refer to the manufacturer's tank chart for the capacity in gallons, the diameter and the volume of product with respect to product level.

Use this test procedure in conjunction with the manufacturer's installation and maintenance instructions.

Visually verify that all tank-top fittings are leak-free and vapor-tight before starting the test procedure. If any fittings are loose, the ball float valve will not restrict flow.

Inspect the drop tube to ensure that it does not have an automatic shut off device.

7.2.6 Inspection Procedure.

1. Remove the ball float valve assembly from the tank.
2. Visually inspect the ball float and cage. Remove any debris or foreign objects.
3. Check the ball for holes and cracks. It should move freely in the cage. Check for corrosion that affects the operation of the ball float.
4. Check the vent orifice in the vent-restriction pipe. It must be open and located near the top of the tank.
5. Use the ball float valve manufacturer's installation procedure to determine if vapor flow will be restricted when the tank is no more than 90 percent full.
6. After inspection of the ball float valve assembly, reinstall it following the manufacturer's installation instructions.

7.2.7 Pass/Fail Criteria. The ball float valve passes the inspection if the ball float valve functions as designed, flow restriction occurs when the tank is no more than 90 percent full, and the tank-top fittings are vapor-tight.

FIGURE 7-3. *To avoid damage when removing or reinstalling the ball float, use an extractor tool recommended by the ball float manufacturer.*

If any of the following configurations exist, the overfill prevention system fails the inspection:

- ball float valves are installed in storage systems that are equipped with suction pumps and air eliminators;
- the ball is cracked or damaged;
- the ball float cannot be removed;
- the orifice is not at the top of the assembly, or is clogged with debris or corroded, which would prevent proper air flow after activation;
- ball float valves are installed with coaxial Stage I vapor recovery;
- ball float valves are used on tanks equipped with remote-fill pipes and gauge openings without the use of "trap door" devices; or
- ball float valves are installed in storage systems that also are equipped with automatic shutoff devices and the ball float valve is set to restrict flow before the tank is 95 percent full.

If the ball float valve does not function as designed, flow restriction does not occur until the tank is more than 90 percent full, or the tank-top fittings are not vapor-tight, the ball float valve fails the inspection.

NOTE: When permanently removing a ball float, ensure that the entire assembly is removed so as not to interfere with other methods of overfill prevention.

7.3 Overfill Alarms.

7.3.1. General. Overfill alarms provide an audible and/or visible warning to the fuel delivery driver if the product level in the UST reaches the 90 percent level during a delivery. They are often an integral part of the automatic tank gauge (ATG) system. An overfill alarm does not stop or restrict product flow.

7.3.2 Purpose. The purpose of this inspection is to verify that the overfill alarm is operating correctly and is set to provide a warning when the tank is no more than 90 percent full.

7.3.3 Description of Test. The procedures in this test are for overfill alarms that are an integral part of a typical ATG that uses magnetostrictive probes for fuel level measurements in the UST. The ATG probe is removed from the tank. When the product float is moved to the position corresponding to the 90 percent fill level, the alarm should activate.

7.3.4 Preparation. Use this test procedure in conjunction with the monitoring system manufacturer's installation and maintenance instructions.

Refer to the tank manufacturer's tank chart for the capacity in gallons, the diameter and the volume of product that corresponds to the product level.

When possible, print out the system setup to verify the proper configuration of the ATG.

7.3.5 Test Equipment. Test equipment shall include:

- tools for the removal of the ATG probe;
- tape measure or gauge stick.

7.3.6 Test Procedure.

1. Measure the product level in the tank riser where the ATG probe has been removed and compare to the console reading to confirm ATG accuracy. If the reading does not agree, contact the appropriate person.
2. Verify that the overfill alarm on the ATG is set to provide a warning when the tank is no more than 90 percent full. Consult the tank chart for the inch-level setting for 90 percent tank volume.
3. Verify on the ATG console that the overfill alarm circuit is operational.
4. Activate the overfill alarm warning to verify its operation. If found defective, contact the appropriate person.
5. Remove the ATG probe cap and disconnect the cable from the ATG.
6. Remove the ATG probe from the tank. Use care to ensure that the product float on the stem does not catch on the bottom of the riser during removal.
7. Inspect the probe. The floats must move freely on the stem without binding.
8. Reconnect the probe cable and turn on power to monitor.
9. Set the fuel float in the middle of the probe and verify that it is showing the correct inch reading on the monitoring panel.
10. Slowly move the fuel float up the probe until the overfill alarm is triggered. If the float is moved too quickly, it may not trigger the alarm.
11. Measure the distance from the bottom of the probe to the bottom of the fuel float (confirm different manufacturers point of measurement on the float) when the float first triggers the alarm.
12. On the tank chart, find the volume that corresponds to the height of the float and determine the percent of tank capacity.

    Use this formula to determine the percent of tank capacity at which the alarm was triggered:

    Percent Tank Capacity = (product volume when 90 percent alarm triggered/total tank volume) × 100
13. Clear the alarm condition.
14. Compare the measurements in Steps 11 and 12 to the values programmed into the console.
15. Reinstall the ATG probe.

7.3.7 Pass/Fail Criteria.

- If the overfill alarm(s) activates when the tank is no more than 90 percent full, the overfill alarm passes the test.
- If the fuel level on the console does not agree with the gauge stick reading, the system fails the test.
- If the overfill alarm(s) does not activate in the test mode, it fails the test.
- If the overfill alarm(s) does not activate or activates at any product level above 90 percent tank capacity, it fails the test.

8. ELECTRONIC MONITORING SYSTEM INSPECTION AND TESTING

8.1 General. Electronic underground storage tank (UST) monitoring systems provide a warning or alarm when a leak in the UST system occurs. The monitoring system and sensors need to be programmed to reflect the conditions for each individual site to ensure proper operation. For the remainder of this section, the term "ATG" shall be used to refer to all electronic UST monitoring systems whether they have an automatic tank gauge probe or are solely an electronic alarm for sensors installed. "ATG" is a general industry term that is used to identify all electronic tank monitoring equipment.

Before starting any testing, print out the system configuration on the ATG console (if equipped with a printer) and verify that site setup parameters are correct. Make sure that the sensors are correctly labeled to indicate their location.

Keep completed compliance tests on file to confirm that during the test:

- the system was continuously powered and monitored for the data collection period;
- tank probes and leak sensors were functioning properly.

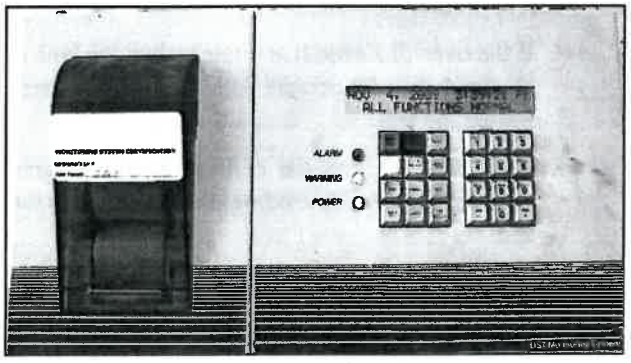

FIGURE 8-1. *The indicator lights and the LCD display on the monitoring console show the status of the UST system.*

8.2 ATG Probes. ATG probes continuously measure the product level in a UST using an in-tank probe connected to a console. To properly evaluate its condition, the probe needs to be removed from the tank and visually inspected.

ATGs monitor the product level in storage tanks and can be programmed to perform compliance tests that include 0.2 gph static and dynamic ("continuous") leak tests, and 0.1 gph ("precision") tests.

8.2.1 ATG Functionality Test.

8.2.1.1 General. The ATG must be programmed using site-specific parameters for the UST system to ensure proper operation. Tester should confirm the required setup and testing parameters with the owner/operator.

On dual float systems, the second float indicates the level of water in the tank.

8.2.1.2 Purpose. The purpose of this test is to:

- determine whether the ATG shows the correct product level on the console;
- determine whether the ATG shows the correct water level on the console;
- verify that the water alarm is operating correctly and provides a warning at the programmed set point.

WARNING: Water ingress into tanks containing ethanol-blended gasoline may not be detected using water floats designed for non-ethanol-blended gasoline.

8.2.1.3 Description of Test. The procedures in this test are for a probe, properly installed per manufacturer's instructions, equipped with floats having a range inside the tank that extends from the bottom to the top of the tank.

The ATG probe is removed from the tank. The product float and water float positions are compared with the console readout.

8.2.1.4 Preparation. Use this test procedure in conjunction with the monitoring system manufacturer's installation and maintenance instructions.

Refer to the tank manufacturer's tank chart for the capacity in gallons, the diameter and the volume of product that corresponds to the product level.

Verify that the console has no active or recurring history of leak detection-related warnings or alarms. In the event of any such warnings or alarms, notify the appropriate person before continuing the test.

Where possible print out the system setup and any alarm histories from the console. Save the printout for facility records or make an electronic copy.

8.2.1.5 Test Equipment. Test equipment shall include:

- tools for the removal of the ATG probe and sensors;
- tape measure or gauge stick;
- water-finding paste.

8.2.1.6 Test Procedure.

1. Measure the product and water level in the tank and compare to the console readings to confirm ATG accuracy. If the readings do not agree, contact the appropriate person.
2. Remove the ATG probe cap and disconnect the cable from the ATG.
3. Remove the ATG probe from the tank. Use care to ensure that the floats on the stem do not catch on the bottom of the riser during removal.
4. Inspect the probe. The floats must move freely on the stem without binding. If any parts are damaged or missing, contact the appropriate person.
5. Reconnect the probe cable.
6. Set the fuel float in the middle of the probe and verify that it is showing the correct inch reading on the console.
7. Slowly move the fuel float up the probe until the high product alarm is triggered on the console. If the system does not alarm at the pre-set level, contact the appropriate person.
8. Measure the distance from the bottom of the probe to the fuel float when the float first triggers the high product alarm.

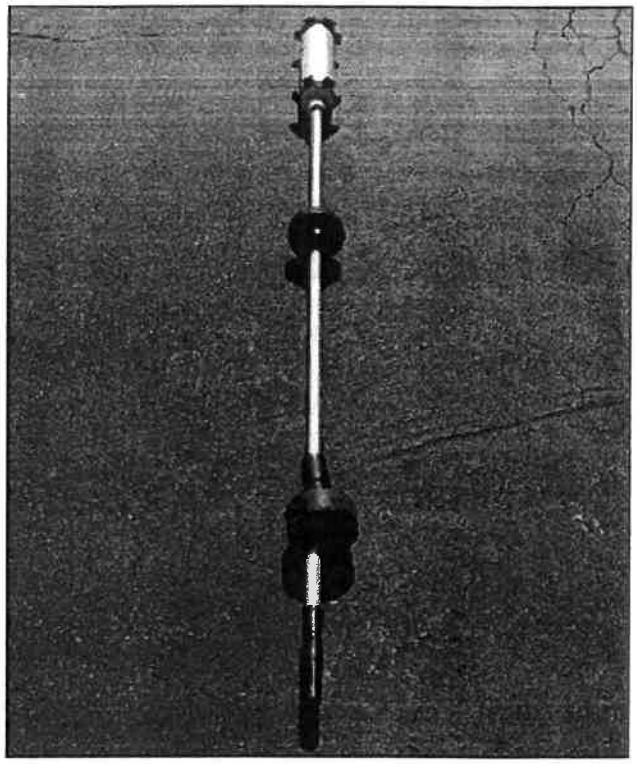

FIGURE 8-2. *When removing and replacing the ATG probe, be careful to avoid damaging any of the components.*

9. Clear the alarm conditions.
10. For the water float, slowly move the float up the probe until the water alarm is triggered.
11. Measure the distance from the bottom of the probe to the water float when the float first triggers the water alarm.
12. Compare the measurements for product float and the water float in Steps 8 and 11 to the values programmed into the console.

8.2.1.7 Pass/Fail Criteria. If the measurements for the product and water floats match the values programmed in the console and the console acknowledges the high product and water level alarms, the ATG probe passes the test.

If the measurements for the product and water floats do not match the values programmed in the console or the console does not acknowledge the high product or water level alarms, the ATG probe fails the test.

8.3 Sensor Functionality Testing.

8.3.1 General. Sensor functionality tests are used to confirm the operation of the liquid detecting sensors that are located in the interstitial spaces of UST systems. Sensors that detect the presence of liquid are placed at the lowest point of the containment so that any release that drains down will be detected. Discriminating sensors can identify the presence of liquid product or water. Non-discriminating sensors can only determine the presence of liquid—product or water—but cannot discriminate between the two. Sensors are connected to the leak-monitoring console, which provides a warning if liquid is detected. Sensor and console features may vary among manufacturers.

There are a number of types of sensors in use in the field, including float switches, optical sensors, pressure/vacuum monitoring devices and electrical resistance sensors. The most common sensor type in use is a float switch. Consequently, the test procedure in this section is for the float switch type. For other types of sensors, consult the manufacturer's test procedures. The information presented here should not supersede sensor manufacturers' testing procedures and requirements.

8.3.2 Purpose. The purpose of the test is to determine if a sensor can detect the presence of liquid and is properly positioned. It can be used for either discriminating or non-discriminating sensors.

8.3.3 Description of Test. The liquid detecting sensor is removed from the tank or piping interstitial space, an alarm condition is triggered and the appropriate response is observed.

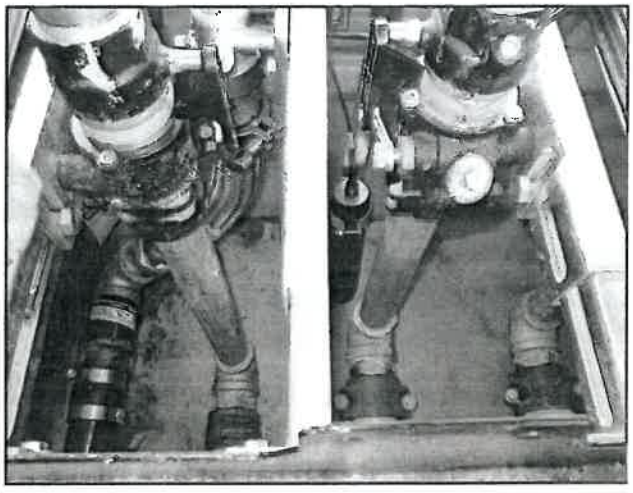

FIGURE 8-3. *The sensor needs to be properly positioned to detect the presence of liquid in sumps.*

8.3.4 Test Equipment. Test equipment shall include:

- a test container to immerse the sensor;
- water;
- product (if appropriate).

8.3.5 Preparation. Review the sensor manufacturer's literature for testing guidelines. Use the manufacturer's guidelines if they differ from the procedures in this section.

NOTE: Some sensors are programmed to have positive shutdown when the sensor goes into alarm mode. For these systems, ensure that the dispensing system shuts down when the sensor alarms.

Verify that the console has no active or recurring history of leak sensor warnings or alarms. In the event of any such warning or alarms, notify the appropriate person before continuing with the test.

Verify on the console that the sensor alarm circuit is operational.

If the console is equipped with a printer, print out the system status, sensor configuration and any alarm histories from the console. Save the printout for facility records.

Carefully remove the sensor from the containment area. This may produce an alarm on the console indicating that the sensor is no longer properly positioned.

Inspect the sensor for damage. Refer to the manufacturer's literature for information about how to identify damage to the sensor housing and the cable. If it is damaged, notify the appropriate person.

8.3.6 Test Procedure.

1. Fill the test container with the appropriate liquid.
2. Place the sensor into the liquid in the operating position. The alarm should be triggered.
3. Verify the alarm condition and make sure the sensor label is correctly identified on the

console. If the label is incorrect, contact the appropriate person. If no alarm is triggered, remove the sensor from the container, check the connections, allow the liquid to drain from the sensor and immerse it into the liquid again. If the sensor is replaced, repeat the test procedure.

4. Remove the sensor from the test container and allow the liquid to drain to clear the alarm. If product is used as the test liquid, follow the manufacturer's instructions for cleaning the sensor before it is replaced.
5. Reinstall the sensor in the proper location and position.
6. Clear the alarm condition on the console. If equipped with a printer, print the alarm report for facility records and indicate that a sensor functionality test was conducted.
7. Dispose of product-contaminated water according to the guidelines in Section 6.7.

8.3.7 Pass/Fail Criteria. If a sensor triggers an alarm when the alarm condition is simulated, and the sensor is correctly identified on the console, the sensor passes the test.

If the sensor does not trigger an alarm when the alarm condition is simulated, the sensor fails the test. If the sensor is not correctly identified on the console, notify the appropriate person to obtain authorization to correct the sensor identification.

8.4 Discriminating Sensors. The functionality of discriminating liquid sensors can be determined with the test method described in Section 8.3.6 and substituting the appropriate product for water.

9. AUTOMATIC LINE LEAK DETECTORS

Automatic line leak detectors (ALLD) are used with submersible turbine pump (STP) systems to detect catastrophic leaks in pressurized product piping systems. Automatic line leak detectors may be either mechanical or electronic.

ALLDs must be able to detect a leak in a product line that is equivalent to 3 gph at 10 psig. Therefore, the test apparatus that is utilized to conduct this test must accurately simulate a leak that is equivalent to 3 gph at 10 psig. This is accomplished by adjusting the size of the orifice in the test apparatus until the required flow rate is achieved. The calibration of the test apparatus leak orifice may be accomplished either with or without the use of a pressure regulator. The procedure for calibration with a pressure regulator is described in Section 9.1.6. The procedure for calibration without the use of a pressure regulator is described in Section 9.2.6. Either procedure may be used to accomplish calibration of the test apparatus leak orifice.

NOTE: In order for a line leak detector to function properly, the STP must properly cycle on/off. Confirm that the STP properly cycles on/off as it would during normal fueling operations and visually inspect the STP electrical relay switches (also known as "contactors") to ensure that the contacts are in good condition. If the contacts show visible signs of excess arcing, damage or wear, notify the appropriate person to obtain authorization to replace the defective relays. If the STP does not properly cycle on/off, the line leak detector may not detect a leak from the piping, and fails the test.

NOTE: Piping configurations with multiple STPs and manifolded lines or those systems having master/satellite fuel dispensers must be installed properly for automatic line leak detectors to function correctly. Consult manufacturer's literature regarding proper installation and operation.

NOTE: Testing of ALLDs involves creating a simulated leak from the piping system and activating the STP at specific times to pressurize the system. These activities can be hazardous if done improperly. To prevent unsafe conditions from developing, follow the safety precautions described in Section 3 and lockout/tagout procedures.

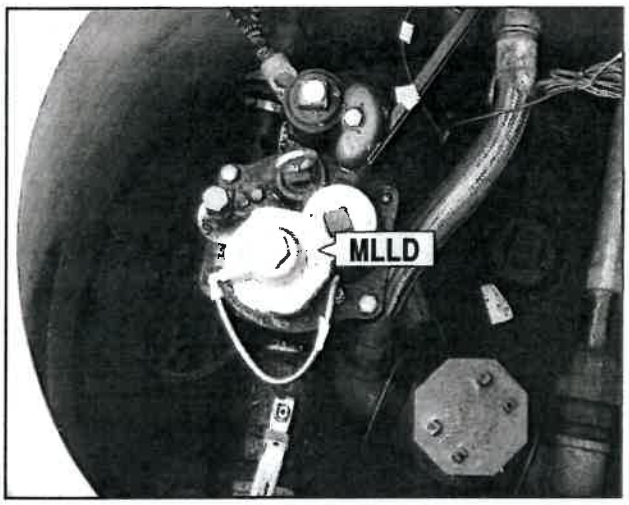

FIGURE 9-1. *The MLLD mounted on the submersible turbine pump will restrict flow when a leak is detected.*

9.1 Mechanical Line Leak Detectors (MLLDs).

9.1.1 General. MLLDs are commonly installed at the STP and can detect a leak in product piping between the MLLD and the solenoid valve inside product dispensers. MLLDs restrict product flow if a leak is detected.

Use this test procedure in conjunction with the MLLD manufacturer's installation and maintenance instructions.

9.1.2 Purpose. This test method is used to determine if an MLLD can detect a product line leak equivalent to 3 gph at 10 psig.

9.1.3 Description of Test. A test apparatus is typically connected to the test port of the shear valve inside a dispenser to simulate a leak in the product line equivalent to 3 gph at 10 psig. The performance of the line leak detector is observed to see if it can detect the simulated leak.

9.1.4 Test Equipment. Test equipment shall include:

- test apparatus that includes a pressure gauge with a minimum range of 0-60 psig, a pressure regulator and an adjustable orifice that can simulate a leak rate equivalent to 3 gph at 10 psig;

- stopwatch or other time-measurement device capable of measuring a 1-second increment;
- graduated cylinder for measuring leak rate;
- 5-gallon metal gas test can.

9.1.5 Preparation.

NOTE:: At some locations with master/satellite fuel dispensing installations, the satellite may not be protected by the MLLD. At sites with a master/satellite fueling location, the test should be performed at the most distant satellite dispenser so the entire piping system is included.

Conduct the test at the dispenser that has the highest elevation in the system. If there is no difference in elevation between dispensers, conduct the test using the dispenser farthest from the STP.

Remove from service all dispensers connected to the STP being tested. Verify that the STP relays are operating properly to ensure that the pump cycles on and off correctly.

9.1.6 MLLD Test Procedure.

NOTE:: This procedure describes calibration of the test apparatus leak orifice with the use of a pressure regulator. If you prefer not to use a pressure regulator, refer to the calibration procedure described in Section 9.2.6.

1. Visually inspect the vent tube. Verify that it is connected at both ends to the appropriate locations and that the vent tube is not broken, kinked, twisted or leaking. If the vent tube is not properly connected or is broken, kinked, twisted or leaking, notify the appropriate person.
2. Visually inspect the submersible pump area for leakage while it is operating.
3. Shut off power to the pump and perform lockout/tagout procedures on the circuit breakers.
4. Bleed line pressure to zero by activating the dispenser and opening the nozzle, allowing fuel to drain into the test can. After all line pressure has been bled off, hang up the nozzle and close the shear valve.
5. Connect the test apparatus to the shear valve test port at the appropriate dispenser. If there is no elevation change, connect the test apparatus at the farthest dispenser.

NOTE:: If the piping has master/satellite dispensers, the test apparatus must be connected to the farthest satellite dispenser.

6. Reestablish power to the pump. Open the shear valve and pressurize the line by activating the pump. Confirm that no leaks are present in the test apparatus or the connection to the shear valve test port.
7. Dispense product from the dispenser nozzle into the test can to remove all air from the line.
8. Close the dispenser nozzle and allow the line to fully pressurize. Record this as the full pump pressure.
9. Shut off the pump, close the shear valve and allow line pressure to decay until it stabilizes. Record this as the check valve holding pressure. If the line pressure does not stabilize, this may prevent the MLLD from operating properly.
10. Bleed line pressure to zero by opening the test apparatus leak orifice and allowing fluid to drain into a graduated cylinder. Record the volume of fluid in the graduated cylinder as the line resiliency. Close the test apparatus leak orifice, turn pump back on and observe pressure gauge. Pressure should rise quickly and pause for approximately 2 to 5 seconds before building to full pump pressure. If the line pressure reaches full pump pressure without pausing, this indicates that the leak detector did not "trip" (i.e., move to the leak search position). If the leak detector did not move to the leak search position, repeat Step 8. If the leak detector still does not move to the leak search position, the leak detector fails the test.
11. Observe the line pressure when it pauses and record this as the metering pressure.
12. Measure the length of time it takes from pausing at the metering pressure until full pump pressure is achieved. Record this as the opening time. If the opening time is greater than 5 seconds, this may indicate that air is trapped in the line, the piping has high resiliency or a leak smaller than the leak detector is capable of detecting may exist in the piping.

NOTE: Pay close attention to the pressure gauge while measuring the opening time, as this happens rather quickly.

13. With the STP on and full pump pressure indicated, slowly open the test apparatus leak orifice and direct the fuel flow into a test can.

14. Ensure that fluid flow is passing through the pressure regulator to the leak orifice. With the pressure regulator, adjust the line pressure to 10 psig. Direct the fluid flow into a graduated cylinder and time for 60 seconds. Adjust the size of the test apparatus leak orifice until the desired leak rate of 189 ml/min is achieved while maintaining a line pressure of 10 psig. It may be necessary to readjust the pressure regulator and/or the test apparatus leak orifice several times in order to correctly set the leak rate at 189 ml/min at a line pressure of 10 psig. To expedite calibration, make coarse adjustments by measuring the volume of fluid that corresponds to 15 seconds (47 ml). The final calibration of the test apparatus leak orifice must be conducted by measuring a fluid volume of 189 ml over the full 60-second time frame.

15. Turn the pump off and allow the line pressure to bleed off completely (0 psig) through the test apparatus leak orifice. This should cause the leak detector to "trip" (move into the leak sensing position). Do not change the size of the test apparatus leak orifice after it has been properly calibrated in Step 14.

16. Redirect fluid flow to bypass the pressure regulator, and turn the pump on to allow the simulated leak to occur through the calibrated test apparatus leak orifice.

17. Observe that the line pressure rises to the metering pressure determined in Step 11 and remains there indefinitely with the pump running and the simulated leak occurring through the calibrated test apparatus leak orifice. The metering pressure must remain for a minimum of 60 seconds. If the line pressure rises to the full pump pressure at any time during the test, this indicates that the leak detector has fully opened and fails the test.

9.1.7 Pass/Fail Criteria. If line pressure does not increase above the metering pressure for the duration of the test with the simulated leak occurring, then the MLLD passes the test.

If the line pressure increases to full pump pressure while the simulated leak is occurring, the MLLD fails the test.

If the leak detector does not reset (trip) when the line pressure is bled off to zero, the MLLD fails the test.

If the STP does not properly cycle on/off under normal fuel system operating conditions, the MLLD fails the test.

NOTE: If the leak detector initially fails, the test procedure should be repeated to confirm the initial result.

9.1.8 Restore System to Operational Condition. Upon completion of the test:

- Shut off power to the STP and perform lockout/tagout procedures on the circuit breakers. Allow line pressure to bleed off to zero and close the shear valve.
- Remove the test apparatus from the shear valve body and properly reinstall the plug into the shear valve test port.
- Reestablish power to the STP, turn dispenser on and confirm that no leaks are present in the system.
- Dispense product into the test can to remove any air from the line and confirm that full product flow is achieved.

9.2 Electronic Line Leak Detectors (ELLDs). ELLDs are commonly installed at the STP and can detect a leak in product piping between the ELLD and the solenoid valve inside product dispensers. ELLDs trigger an alarm and may shut down the STP if a leak is detected.

9.2.1 General. Use this test procedure in conjunction with the ELLD manufacturer's installation and maintenance instructions.

9.2.2 Purpose. This test method is used to determine if an ELLD can detect a product line leak equivalent to 3 gph at 10 psig.

9.2.3 Description of Test. A test apparatus is typically connected to the test port on the shear valve inside a dispenser to simulate a leak in the product line equivalent to 3 gph at 10 psig. The performance of the line leak detector is observed to see if it detects the simulated leak.

9.2.4 Test Equipment. Test equipment shall include:

- a test apparatus that includes a pressure gauge

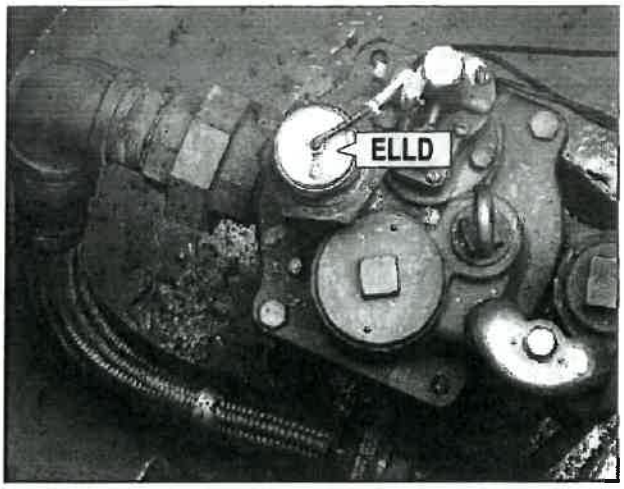

FIGURE 9-2. *The ELLD mounted in the submersible turbine pump will alarm on the console when a leak is detected.*

with a minimum range of 0-60 psig that can measure STP pressure and an adjustable orifice to simulate a leak rate equivalent to 3 gph at 10 psig;

- time-measurement device capable of measuring a 1-second increment;
- graduated cylinder for measuring leak rate;
- 5-gallon metal test can.

9.2.5 Preparation.

NOTE: At locations with master/satellite fuel dispensing installations, the satellite may not be protected by the ELLD. At locations with a master/satellite fueling location, the test should be performed at the most distant satellite dispenser so the entire piping system is included.

NOTE ELLDs will turn the STP on and off multiple times while testing the simulated leak. Ensure the test can will not overflow during the test time.

Conduct the test at the dispenser that has the highest elevation in the system. If there is no difference in elevation between dispensers, conduct the test using the dispenser farthest from the STP.

Remove from service all dispensers connected to the STP being tested.

Verify that the STP relays are operating properly to ensure that the pump cycles on and off correctly.

Verify that the system setup parameters are correct (e.g., pipe diameter, pipe length, pipe material of construction, etc.). If any of the setup parameters are not correct, make any necessary changes to bring the system settings within specifications.

9.2.6 ELLD Test Procedure.

NOTE This procedure describes calibration of the test apparatus leak orifice without the use of a pressure regulator. If you prefer to calibrate the leak orifice with the use of a pressure regulator, refer to the procedure described in Section 9.1.6.

1. Shut off power to pump and perform lockout/tagout procedures on the circuit breakers.
2. Bleed line pressure to zero by activating the dispenser and opening the nozzle, allowing fuel to drain into the test can. After all line pressure has been bled off, hang up the nozzle and close the shear valve.
3. Connect the test apparatus to the shear valve test port at the highest dispenser. If there is no elevation change, connect the test apparatus at the farthest dispenser.

NOTE: If the piping has master/satellite dispensers, the test apparatus must be connected to the farthest satellite dispenser.

4. Reestablish power to the pump. Open the shear valve and pressurize the line by activating the pump. Confirm that no leaks are present in the test apparatus or the connection to the shear valve test port.
5. Dispense product from the dispenser nozzle into the test can to remove all air from the line.
6. Close the dispenser nozzle and allow the line to fully pressurize. Confirm that the line pressure observed is the full pump pressure.
7. Referencing the full pump pressure observed in Step 6, determine from Table 9-1 the volume of fluid that must be discharged in 60 seconds at full pump pressure to simulate a leak equivalent to 3 gph at 10 psig.
8. With the pump running and the line at full pump pressure, slowly open the test apparatus leak orifice and adjust until the flow rate determined in Table 9-1 has been achieved.

NOTE: To do this, direct the fluid flow into a graduated cylinder while timing for 60 seconds.

9. Continue to adjust the size of the test apparatus leak orifice until the desired volume is achieved. To expedite calibration, make coarse adjustments by measuring the volume of fluid that corresponds to the 15-second time interval indicated in Table 9-1. The final calibration of the test apparatus leak orifice must be conducted by measuring the appropriate volume of fluid over the full 60-second timeframe.
10. Without adjusting the test apparatus leak orifice after it has been properly calibrated in Step 9, hang up the dispenser nozzle, allowing the pump to turn off.
11. While directing the fluid flow from the leak test apparatus into the test can, observe that the ELLD turns the pump on and pressurizes the line.
12. Confirm that the simulated leak condition causes the electronic line leak detector to alarm and/or shut down the pump.

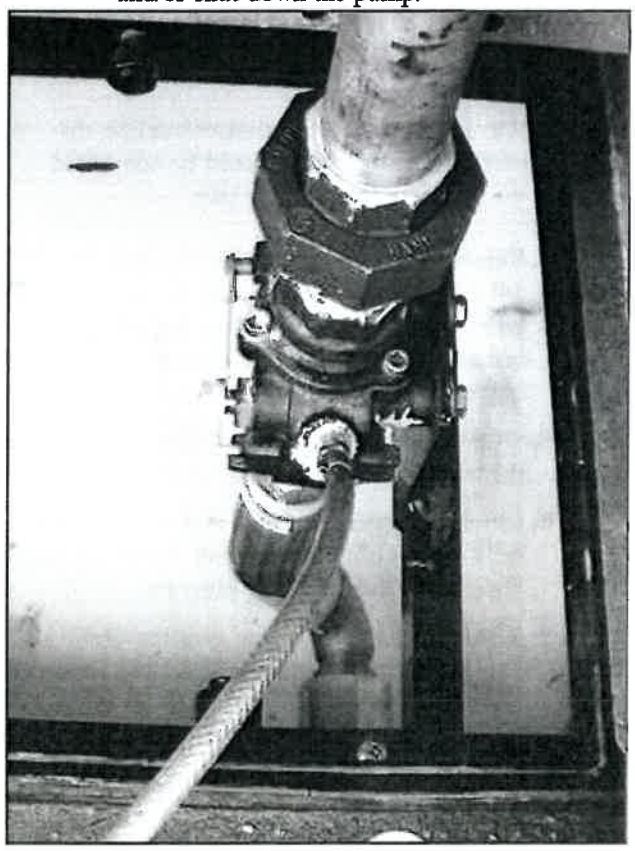

FIGURE 9-3. *The test port on the shear valve under the dispenser provides a location to simulate a leak in the underground piping system.*

NOTE The ELLD may cycle the pump on/off several times before alarming or shutting down the pump.

13. Record the number of test cycles observed before alarm/shut down occurs.

NOTE: When required, perform a 0.2 gph or 0.1 gph simulated leak test on ELLDs. Follow the manufacturer's test parameters. The ELLD safety and test set up procedures for 3.0 gph simulated leak test should be followed.

9.2.7 Pass/Fail Criteria. If the ELLD has identified the simulated leak by generating an alarm and, if applicable, shutting down the STP, the ELLD passes the test.

If the ELLD has not identified the simulated leak by generating an alarm and, if applicable, shutting down the STP, the ELLD fails the test.

If the STP does not properly cycle on/off under normal fuel system operating conditions, the ELLD fails the test.

NOTE: If the leak detector initially fails the test, repeat the test procedure before declaring the test result as "fail."

9.2.8 Restore the System to Operational Condition. Upon completion of the test:

- Shut off power to the STP and perform lockout/tagout procedures on the circuit breakers. Allow line pressure to bleed off to zero and close the shear valve.
- Remove the test apparatus from the shear valve body and properly reinstall the plug into the shear valve test port.
- Reestablish power to the STP, turn dispenser on and confirm that no leaks are present in the system.
- Dispense product into the test can to remove any air from the line and confirm that full product flow is achieved.

TABLE 9-1.
VOLUME THAT MUST BE DISCHARGED WITHIN THE INDICATED TIME FRAME TO BE EQUIVALENT TO A LEAK RATE OF 3 GPH AT 10 PSIG.

Line Pressure	15 seconds	60 seconds
8 psig	42 ml	169 ml
9 psig	45 ml	179 ml
10 psig	47 ml	189 ml
11 psig	50 ml	198 ml
12 psig	52 ml	207 ml
13 psig	54 ml	216 ml
14 psig	56 ml	224 ml
15 psig	58 ml	232 ml
16 psig	60 ml	239 ml
17 psig	62 ml	247 ml
18 psig	64 ml	254 ml
19 psig	65 ml	261 ml
20 psig	67 ml	268 ml
21 psig	69 ml	274 ml
22 psig	70 ml	281 ml
23 psig	72 ml	287 ml

39 psig	94 ml	374 ml
40 psig	95 ml	378 ml
41 psig	96 ml	383 ml
42 psig	97 ml	388 ml
43 psig	98 ml	392 ml
44 psig	99 ml	397 ml
45 psig	100 ml	401 ml
46 psig	102 ml	406 ml
47 psig	103 ml	410 ml
48 psig	104 ml	415 ml
49 psig	105 ml	419 ml
50 psig	106 ml	423 ml

Adjust size of test apparatus leak orifice until the indicated flow rate is achieved.

10. SHEAR VALVE INSPECTION AND TESTING

10.1 General. Shear valves are also known as emergency shutoff valves, crash valves or impact valves. They are located on the product lines and sometimes on the vapor lines inside each dispenser. They must be located at grade level and securely anchored to function as intended. They immediately block fuel or vapor flow if a dispenser is displaced from its regular position or if a fire occurs inside the dispenser.

> **NOTE** Authorities having jurisdiction (AHJs) may require shear valves to be inspected and tested regularly. Furthermore, if a dispenser is dislodged from its normal position on the island after being hit by a vehicle or after a drive-off occurs, the shear valve should be inspected and tested for proper operation.

If product is dispensed using a submersible pump, a shear valve must be present on each product riser at the base of the dispenser.

10.2 Product Shear Valves.

10.2.1 Purpose. The purpose of this test and inspection is to verify that the product shear valves are properly installed per manufacturer's specification and verify that product will no longer flow through a product shear valve that is in the closed position.

10.2.2 Description of Test. The product shear valve is inspected for proper installation per the manufacturer. The product shear valve arm is then tripped to stop the flow of fuel into the dispenser. An attempt is made to pump product through the nozzle with the shear valve in the closed position.

10.2.3 Preparation. Barricade the entire dispenser that is to be inspected and tested so that no customers will attempt to pump fuel. Open the dispenser cover to access the inside of the dispenser.

10.2.4 Test Equipment. Test equipment shall include:

- 5-gallon metal test can;
- 11/16 -inch box wrench or properly sized wrench.

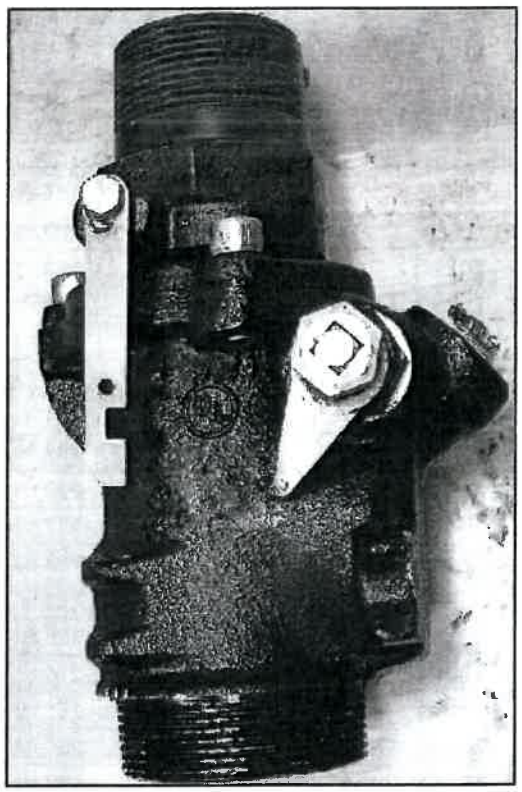

FIGURE 10-1. *When activated by fire or impact, the shear valve closes and blocks fuel flow from the dispenser supply lines. The shear valve shown is in the closed position.*

10.2.5 Test Procedure.

1. Inspect the product shear valve for proper installation and anchoring. The portion of the shear valve located below the shear section must be rigidly anchored to the dispenser box frame or the concrete dispenser island using hardware and materials specifically designed for this purpose. If the shear valve is not properly anchored, close the shear valve, remove the dispenser from service and notify the appropriate person to have it repaired.
2. Trip the product shear valve.
3. Attempt to pump fuel through the nozzle into the test can.
4. Using the wrench, reset the product shear valve arm into the open position.
5. Place the cover back on the dispenser and remove barricades.

10.2.6 Pass/Fail Criteria. If a product shear valve meets all of the following criteria, it passes the test:

- properly anchored to the dispenser box frame or dispenser island;
- shear section located between ½ inch above and ½ inch below the level of the top surface of the dispenser island;
- lever arm free to rotate and able to snap the poppet valve shut/closed;
- appropriate plug properly installed in the test port;
- no fuel flow from the dispensing nozzle when the product shear valve is closed.

If any one of the passing criteria noted above is not met, then the shear valve fails the test.

10.3 Vapor Shear Valves.

10.3.1 Purpose. The purpose of this test and inspection is to verify that the vapor shear valves, if present, are properly installed per manufacturer's specification.

10.3.2 Description of Test. The vapor shear valve is inspected for proper installation per the manufacturer.

10.3.3 Preparation. Barricade the entire dispenser that is to be inspected and tested so that no customers will attempt to pump fuel. Open the dispenser cover to access the inside of the dispenser.

10.3.4 Test Equipment. None, this is a visual inspection.

10.3.5 Test Procedure.

1. Inspect the vapor shear valve for proper installation and anchoring. The portion of the shear valve located below the shear section must be rigidly anchored to the dispenser box frame or the concrete dispenser island using hardware and materials specifically designed for this purpose. The portion above the shear section must be rigidly mounted to the inside of the dispenser. If the shear valve is not properly anchored, notify the appropriate person to have it repaired.
2. Place the cover back on the dispenser and remove barricades.

10.3.6 Pass/Fail Criteria. If a vapor shear valve meets all of the following criteria, it passes the test:

- properly anchored to the dispenser box frame or dispenser island;
- shear section located between ½ inch above and ½ inch below the level of the top surface of the dispenser island.

If any one of the passing criteria noted above is not met, then the shear valve fails the test.

11. EMERGENCY STOP

WARNING: FIRE AND SPILL HAZARD

- **"Stop" buttons on the point-of-sale console do not shut off all power to the fuel dispensing system.**
- **In an emergency, activate the dedicated and stand-alone emergency stop switch/button.**

11.1 General. The emergency stop (E-stop) switch also is called the emergency shutoff switch. When activated, the switch disconnects power to:

- all dispensing devices on all islands;
- all submersible pumps for all fuel grades that serve dispensing devices;
- all power, control and signal circuits associated with the dispensing devices and the submersible pumps;
- all other non-intrinsically safe electrical equipment in the classified areas surrounding fuel dispensing devices.

If more than one E-stop switch is present, test each switch separately for proper operation.

NOTE: Intrinsically safe tank system monitoring electrical equipment should not be disconnected by the E-stop.

11.2 Purpose. This test is performed to determine whether every E-stop switch that is installed at a facility is functioning as designed.

11.3 Description of Test. Each E-stop switch is activated and the entire fueling system is checked to verify that power has been disconnected to:

- all dispensing devices on all islands;
- all submersible pumps for all fuel grades that serve dispensing devices;
- all power, control and signal circuits associated with the dispensing devices and the submersible pumps;
- all other non-intrinsically safe electrical equipment in the classified areas surrounding fuel dispensing devices.

11.4 Preparation. Ensure that all customer fueling operations have been discontinued.

FIGURE 11-1. *The E-stop should be clearly labeled and located where it is easily accessible.*

11.5 Test Equipment. None needed. Observations are made as to whether the equipment has power or does not have power.

11.6 Test Procedure.

1. Ensure that the system is fully powered in normal operating condition.
2. Depress the E-stop switch.
3. Ensure that power has been disconnected from:
   - all dispensing devices on all islands;
   - all submersible pumps for all fuel grades that serve dispensing devices;
   - all power, control and signal circuits associated with the dispensing devices and the submersible pumps;
   - all other non-intrinsically safe electrical equipment in the classified areas surrounding fuel dispensing devices.

4. Reset the E-stop that was just tested.
5. Ensure that power has been reestablished to normal operating condition.
6. Continue to test each E-stop switch at the entire facility.
7. Once every E-stop switch has been tested for proper operation, ensure that power has been reestablished to the entire facility and allow normal pumping operations to resume.

11.7 Pass/Fail Criteria. If all E-stop switches/buttons disconnect power to the following, the system passes the test:

- all dispensing devices on all islands;
- all submersible pumps for all fuel grades that serve dispensing devices;
- all power, control and signal circuits associated with the dispensing devices and the submersible pumps;
- all other non-intrinsically safe electrical equipment in the classified areas surrounding fuel dispensing devices.

If any one of the passing criteria noted above is not met, then the E-stop switches/buttons fail the test.

12. DOCUMENTATION

12.1 General. Documentation showing the date and type of testing done to verify spill, overfill, leak detection, secondary containment equipment, shear valve and emergency stop operation should be available for review according to the requirements of the authority having jurisdiction (AHJ).

12.2 Purpose. Testers and inspectors shall provide adequate documentation of the services that have been performed on underground storage tank (UST) systems. All test results should include a detailed description of the tests and inspections performed to back up the pass/fail criteria. This includes but is not limited to: test start and stop times; vacuum levels; liquid levels; data gathered while conducting tests and inspections; and photos when applicable. In addition, test and inspection results shall be made available to the responsible persons for the UST systems in a timely manner and within time frames required by the AHJ. Results shall be maintained for appropriate time frames by the tester/inspector as well as by the owner/operator. Electronic data can be maintained indefinitely and should not be discarded.

12.3 Procedure.

1. Perform test and/or inspection services.
2. Document results.
3. Review and approve results for accuracy.
4. Provide results to customer in accordance with time frames set by the AHJ.
5. Store results electronically, and make them easily available for inspection and backup systems accordingly.

Sample forms are provided in Appendix C of this document.

APPENDIX A
FRP TANK MANUFACTURERS' TEST CHECKLISTS/DATA LOGS

Appendix A contains fiberglass-reinforced plastic (FRP) tank manufacturers' test data sheets that can be used when conducting secondary containment integrity testing of fiberglass tanks at UST facilities. Electronic versions of the forms also are available at **www.pei.org/rp1200.**

Appendix A (pages 40 – 42) contains the following:

- Appendix A-1: Containment Solutions
  HYDROSTATIC PRECISION TANK TEST CHECKLIST
- Appendix A-2: Xerxes Corporation
  TRUCHEK DATA LOG
  TRUCHEK Tank-Tightness Testing Procedure

APPENDIX A-1

CONTAINMENT SOLUTIONS

HYDROSTATIC STAND PIPE TANK TEST CHECKLIST

Job Name: _____

Address: _____ City: _____ State: _____

_____ / _____ Record date / time when tank was last filled (wait 24 hours from last delivery)
_____ / _____ Record today's date / time

Time	Testing Procedures	Groundwater Level	Tank #1	Tank #2
	Record tank U.L. number (if known)		_____	_____
	Product stored		_____	_____
	Tank nominal capacity (gallons)*		_____	_____
	Preparation:			
	1. Measure and record groundwater table level.	_____		
	2. Fill reservoir riser pipe approximately 12" over reservoir top. The level in the riser pipe must be at least 12" higher than the groundwater table.			
	3. Diameter of reservoir riser pipe.		_____	_____
	4. Inspect all exposed monitoring fitting plugs for leaks.		_____	_____
	Begin test:			
_____	5. Record time (wait 3 hours after step #2).			
	6. Measure and record liquid level in reservoir riser pipe.		_____	_____
	7A. Measure and record groundwater table level.	_____		
	7B. Record dispenser meter readings.		_____	_____
_____	8. Record time (after steps #6 and #7, wait 4 hrs for 4',6',8' tanks or 6 hrs for 10' dia. tanks).			
	9. Measure and record liquid level in reservoir riser pipe.		_____	_____
	10A. Measure and record groundwater table level.	_____		
	10B. Record dispenser meter reading.		_____	_____
	End test:			
	Calculate changes:			
	11A. Reservoir riser pipe level (step#6 minus step #9).		_____	_____
	11B. Groundwater level (step #7 minus step #10A).	_____		
	11C. Dispensed product (step #7 minus step #10B).		_____	_____

Results Interpretation - The calculated changes (lines 11A, 11B, and 11C) must meet all of the criteria in column "B" below to pass the tightness test of .05 gallons per hour with a 95% probability of detection and a 5% probability of false alarm:

(A) Criteria	(B) Tank passes test if...	(C) Tank test is inconclusive if...
Line #11A	Less than 1"	More than 1" ***
Line #11B	and less than 10"	or more than 10" **
Line #11C	and less than 600 gallons	or more than 600 gallons ***

You can use a tape measure and water/brine finding paste to determine accurate liquid levels in site wells and the reservoir.

_____ / _____ / _____
Date

_____
Technician's Name

* Max tank diameter 10', Max capacity 30,000 gallons
** Repeat test steps 6-11
*** To improve test accuracy, discontinue dispensing, then repeat test steps 6-11
Note: A 99.9% PD and 1.2% PFA tightness test without dispensing is available by contacting CSI Field Service

TRUCHEK®
DATA LOG

TANK-TIGHTNESS TESTING PROCEDURE

1. Pre-Test Notes:

1.1. Do not conduct this TRUCHEK tank-tightness test until after the tank is installed and has backfill placed to at least the top of the tank.

1.2. If the tank contains water or product, do not start the test until at least 24 hours after product has been delivered to the tank in order to equalize the temperature in the tank. **Note: The test can also be conducted when the tank is empty.**

1.3. If monitoring wells are in place, ascertain water-table levels prior to and after the tank-tightness test to assure there is no extreme water-table fluctuation during the test. **Note: Extreme water-table fluctuations during the test period may affect the results of the tank-tightness test.**

1.4. The test is considered invalid and should be repeated when testing a 4-foot-, 6-foot- or 8-foot-diameter tank if:
- The groundwater level is above the bottom of the tank but below the top of the tank AND if the groundwater level increases by more than 3 inches during the 4-hour test or more than 7 inches during the 10-hour test; OR
- The groundwater level is above the top of the tank AND the water level rises 2 inches during the 4-hour test or more than 5 inches during the 10-hour test.

1.5. The test is considered invalid and should be repeated when testing a 10-foot-diameter tank if:
- The groundwater level is above the bottom of the tank but below the top of the tank AND if the groundwater level increases by more than 4 inches during the 6-hour test or more than 7 inches during the 10-hour test; OR
- The groundwater level is above the top of the tank AND the water level rises 3 inches during the 6-hour test or more than 5 inches during the 10-hour test.

2. Test Instructions:

2.1. If it was not previously installed, install a 4-inch NPT threaded standpipe to the factory-supplied reservoir. Check to see that the threaded connection is tight. Confirm that the standpipe remains vented to the atmosphere at all times. (At the owner's discretion, the standpipe can remain as part of the tank apparatus so the electronic reservoir-monitoring probe can be checked and future tank-tightness tests can be performed. However, the standpipe is not used in continuous monitoring of the tank, is not part of the monitoring system and is not provided by Xerxes.)

2.2. Remove the electronic reservoir-monitoring probe through the standpipe. Check to see that the probe functions correctly and carefully put it in a safe place.

2.3. Prepare a monitoring-fluid solution of 30% calcium-chloride mix. Eight to 10 gallons of monitoring fluid should be all that is necessary to top off the reservoir and to raise the fluid level. Pour the monitoring fluid through the standpipe in 1-gallon increments. (If calcium-chloride flakes are available, mix at 5.22 pounds of flakes to 1 gallon of water.)
Caution: Raising the monitoring-fluid level into the standpipe is temporary and performed only to determine tank tightness. In normal use, the monitoring fluid will not rise to the level of the standpipe, which serves only as an access to the reservoir. Leaving the monitoring fluid at a raised level may cause excessive pressure and damage the tank.

2.4. If the connection is visible, check to see there are no monitoring-fluid leaks at the standpipe/reservoir connection.

2.5. Using a dipstick or ruler marked with 1/8-inch increments, raise the monitoring-fluid level into the standpipe approximately 6 to 12 inches. Do not overfill the standpipe.
Caution: The tank may be damaged by excessive hydrostatic pressure. To increase the accuracy of the tank-tightness test, use water-finding paste to pinpoint the calibrated-dipstick measurements.

2.6. If performing the 95%-5% test and dispensing product during the test, record the meter reading(s) for the dispenser(s) connected to the tank being tested.

2.7. Check the monitoring-fluid level and record it on line 1a or line 1b on the Data Log form on the other side of these instructions. The more accurate the measurement, the more accurate the tank-tightness test will be.

2.8. If performing the 95%-5% test, wait 4 hours (6 hours for 10-foot-diameter tanks). Then check the monitoring-fluid level again and record it on line 2a. **Note: See the maximum allowable dispensing volume for product in the test boxes on Data Log form.**

2.9. If performing the 99%-1% test, wait 10 hours after the initial measurement. Then check the monitoring-fluid level again and record it on line 2b. **Note: No dispensing of product is allowed during this extended test.**

2.10. Subtract line 2a from line 1a, or line 2b from 1b. Enter the figure on line 3.

2.11. Multiply the figure on line 3 by the calibration factor on line 4 and enter the result on line 5.

2.12. Divide the line 5 figure by the number of hours in the test (as noted in line 6).

2.13. Enter the result of dividing line 5 by line 6 on line 7. If the figure is 0.05 gallon/hour or less, the tank has passed the test.

2.14. Record reading(s) of dispenser(s) after conducting the tank-tightness test. Compare these to the readings taken prior to the test to verify that you have not exceeded the maximum product-dispensing rate for the specific tank as noted on the TRUCHEK Data Log form.

2.15. If the tank test fails, repeat the test to confirm that you made no errors in the testing procedures. **Note: See Points 1.4. and 1.5. in this procedure for explanation for invalid tests. If the test fails again, immediately contact technical support at Xerxes' corporate office for further instructions.**

2.16. After the test is completed:
- Remove the additional monitoring fluid with a pump and adjust the level of the monitoring fluid in the reservoir to the level stated in Monitoring Section of the current Xerxes Installation Manual and Operating Guidelines for Single- Wall and Double-Wall Fiberglass Underground Storage Tanks; and
- Carefully replace the electronic probe system and check the positions of the high-fluid-level and low-fluid-level sensors.

2.17. Maintain the Data Log form as a permanent record and submit it to any jurisdiction that requires it.

7901 Xerxes Avenue South, Minneapolis, MN 55431-1288 | (952) 887-1890 | FAX (952) 887-1882 | www.xerxes.com

APPENDIX B
PRESSURE AND VACUUM CONVERSION TABLES

Table B-1.

Pressure Conversions for Different Units

The pressures readings in RP1200 are given in pounds per square inch gauge pressure (psig). Use Table B-1 to convert psig to pressures in different units.

PSIG	Inches Hg	Mbar (gauge pressure)	Bar (gauge pressure)
0	0	0	0
1	2.0	69	0.07
2	4.1	138	0.14
3	6.1	207	0.21
4	8.1	276	0.28
5	10.2	345	0.34
6	12.2	414	0.41
7	14.3	483	0.48
8	16.3	552	0.55
9	18.3	620	0.62
10	20.4	689	0.69
11	22.4	758	0.76
12	24.4	827	0.83
13	26.5	896	0.90
14	28.5	965	0.97
15	30.5	1034	1.03
16	32.6	1103	1.10
17	34.6	1172	1.17
18	36.6	1241	1.24
19	38.7	1310	1.31
20	40.7	1379	1.38
21	42.8	1448	1.45
22	44.8	1517	1.52
23	46.8	1586	1.59
24	48.9	1655	1.65
25	50.9	1724	1.72
26	52.9	1792	1.79
27	55.0	1861	1.86
28	57.0	1930	1.93
29	59.0	1999	2.00
30	61.1	2068	2.07

Inches Hg = inches of mercury
mbar × millibars

Table B-2.

Vacuum Conversions — Inches Water Column for Different Units

Use Table B-2 for converting vacuum readings in "inches water column" to other units.

Inches Water Column	Inches Hg	PSIG	Mbar (gauge pressure)	Bar (gauge pressure)
0	0	0	0	0

APPENDIX C
SAMPLE TEST DATA SHEETS

Appendix C contains sample test data sheets that can be used when conducting testing and verification of spill, overfill, leak detection and secondary containment equipment, shear valves and emergency stops at underground storage tank (UST) facilities. Electronic versions of the forms also are available at www.pei.org/rp1200.

Appendix C (pages 46 – 56) contains the following data sheets:

- Appendix C-1: Tank Secondary Containment Integrity Testing Dry Test Method
- Appendix C-2: Piping Secondary Containment Integrity Testing
- Appendix C-3: Spill Bucket Integrity Testing Hydrostatic Test Method Single- and Double-Walled Vacuum Test Method
- Appendix C-4: Containment Sump Integrity Testing Hydrostatic Testing Method
- Appendix C-5: UST Overfill Equipment Inspection Automatic Shutoff Device and Ball Float Valve
- Appendix C-6: Overfill Alarm Operation Inspection
- Appendix C-7: Automatic Tank Gauge Operation Inspection
- Appendix C-8: Liquid Sensor Functionality Testing
- Appendix C-9: Mechanical and Electronic Line Leak Detectors Performance Tests
- Appendix C-10: Shear Valve Operation Inspection
- Appendix C-11: Emergency Stop Switch Operation Inspection

APPENDIX C-1

TANK SECONDARY CONTAINMENT INTEGRITY TESTING DRY TEST METHOD

Facility Name:			Owner:			
Address:			Address:

SPILL BUCKET INTEGRITY TESTING HYDROSTATIC TEST METHOD SINGLE- AND DOUBLE-WALLED VACUUM TEST METHOD

Facility Name:	Owner:	
Address:	Address:	
City, State, Zip Code:	City, State, Zip Code:	
Facility I.D. #:	Phone #:	
Testing Company:	Phone #:	Date:

This procedure is to test the leak integrity of single- and double-walled spill buckets. See PEI/RP1200 Section 6.2 for hydrostatic test method, Section 6.3 for single-walled vacuum test method and Section 6.4 for double-walled vacuum test method.

Tank Number						
Product Stored						
Spill Bucket Capacity						
Manufacturer						
Construction	☐ Single-walled ☐ Double-walled	☐ Single-walled ☐ Double-walled	☐ Single-walled ☐ Double-walled	☐ Single-walled ☐ Double-walled	☐ Single-walled ☐ Double-walled	☐ Single-walled ☐ Double-walled
Test Type	☐ Hydrostatic ☐ Vacuum ☐ Single-walled ☐ Double-walled	☐ Hydrostatic ☐ Vacuum ☐ Single-walled ☐ Double-walled	☐ Hydrostatic ☐ Vacuum ☐ Single-walled ☐ Double-walled	☐ Hydrostatic ☐ Vacuum ☐ Single-walled ☐ Double-walled	☐ Hydrostatic ☐ Vacuum ☐ Single-walled ☐ Double-walled	☐ Hydrostatic ☐ Vacuum ☐ Single-walled ☐ Double-walled
Spill Bucket Type	☐ Product ☐ Vapor	☐ Product ☐ Vapor	☐ Product ☐ Vapor	☐ Product ☐ Vapor	☐ Product ☐ Vapor	☐ Product ☐ Vapor
Liquid and debris removed from spill bucket?*	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No
Visual Inspection (No cracks, loose parts or separation of the bucket from the fill pipe.)	☐ Pass ☐ Fail	☐ Pass ☐ Fail	☐ Pass ☐ Fail	☐ Pass ☐ Fail	☐ Pass ☐ Fail	☐ Pass ☐ Fail
Tank riser cap included in test?	☐ Yes ☐ No ☐ NA	☐ Yes ☐ No ☐ NA	☐ Yes ☐ No ☐ NA	☐ Yes ☐ No ☐ NA	☐ Yes ☐ No ☐ NA	☐ Yes ☐ No ☐ NA
Drain valve included in test?	☐ Yes ☐ No ☐ NA	☐ Yes ☐ No ☐ NA	☐ Yes ☐ No ☐ NA	☐ Yes ☐ No ☐ NA	☐ Yes ☐ No ☐ NA	☐ Yes ☐ No ☐ NA
Starting Level						
Test Start Time						
Ending Level						
Test End Time						
Test Period						
Level Change						

Pass/fail criteria: Must pass visual inspection. Hydrostatic: Water level drop of less than 1/8 inch; Vacuum single-walled only: Maintain at least 26 inches water column; Vacuum double-walled: maintain at least 12 inches water column.

Test Results	☐ Pass ☐ Fail	☐ Pass ☐ Fail	☐ Pass ☐ Fail	☐ Pass ☐ Fail	☐ Pass ☐ Fail	☐ Pass ☐ Fail

Comments:

*All liquids and debris must be disposed of properly.

Tester's Name (print)_____ Tester's Signature _____

APPENDIX C-4

CONTAINMENT SUMP INTEGRITY TESTING HYDROSTATIC TESTING METHOD

Facility Name:			Owner:			
Address:			Address:			
City, State, Zip Code:			City, State, Zip Code:			
Facility I.D. #:			Phone #:			
Testing Company:			Phone #:		Date:	
This procedure is to test the leak integrity of containment sumps. See PEI/RP1200 Section 6.5 for the test method.						
Containment Sump ID						
Containment Sump Material						
Liquid and debris removed from sump?*	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No
Visual Inspection (No cracks, loose parts or separation of the containment sump.)	☐ Pass ☐ Fail	☐ Pass ☐ Fail	☐ Pass ☐ Fail	☐ Pass ☐ Fail	☐ Pass ☐ Fail	☐ Pass ☐ Fail
Containment Sump Depth

UST OVERFILL EQUIPMENT INSPECTION
AUTOMATIC SHUTOFF DEVICE AND BALL FLOAT VALVE

Facility Name:			Owner:			
Address:			Address:			
City, State, Zip Code:			City, State, Zip Code:			
Facility I.D. #:			Phone #:			
Testing Company:			Phone #:		Date:	
This data sheet is for inspecting automatic shutoff devices and ball float valves. See PEI/RP1200 Section 7 for inspection procedures.						
Product Grade						
Tank Number						
Tank Volume, gallons						
Tank Diameter, inches						
Overfill Prevention Device Brand						
Type	☐ Automatic Shutoff Device ☐ Ball Float Valve	☐ Automatic Shutoff Device ☐ Ball Float Valve	☐ Automatic Shutoff Device ☐ Ball Float Valve	☐ Automatic Shutoff Device ☐ Ball Float Valve	☐ Automatic Shutoff Device ☐ Ball Float Valve	☐ Automatic Shutoff Device ☐ Ball Float Valve
AUTOMATIC SHUTOFF DEVICE INSPECTION						
1. Drop tube removed from tank?	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No
2. Drop tube and float mechanisms free of debris?	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No
3. Float moves freely without binding and poppet moves into flow path?	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No
4. Bypass valve in the drop tube open and free of blockage (if present)?	☐ Yes ☐ No ☐ Not Present	☐ Yes ☐ No ☐ Not Present	☐ Yes ☐ No ☐ Not Present	☐ Yes ☐ No ☐ Not Present	☐ Yes ☐ No ☐ Not Present	☐ Yes ☐ No ☐ Not Present
5. Flapper adjusted to shut off flow at 95% capacity?*	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No
A "No" to any item in Lines 1-5 indicates a test failure.						
BALL FLOAT VALVE INSPECTION**						
1. Tank top fittings vapor- tight and leak-free?	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No
2. Ball float cage free of debris?		☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No
3. Ball free of holes and cracks and moves freely in cage?	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No
4. Vent hole in pipe open and near top of tank?	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No
5. Ball float pipe proper length to restrict flow at 90% capacity?***	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No
A "No" to any item in Lines 1-5 indicates a test failure.						
Test Results	☐ Pass ☐ Fail	☐ Pass ☐ Fail	☐ Pass ☐ Fail	☐ Pass ☐ Fail	☐ Pass ☐ Fail	☐ Pass ☐ Fail
Comments:						

* Use manufacturer's suggested procedure for determining if automatic shutoff device will shut off flow at 95% capacity.

** If a ball float is found to fail the inspection, another method of overfill must be used.

*** Use manufacturer's suggested procedure for determining if flow restriction device will restrict flow at 90% capacity.

Tester's Name (print)_____ Tester's Signature _____

APPENDIX C-6

OVERFILL ALARM OPERATION INSPECTION

Facility Name:		Owner:		
Address:		Address:		
City, State, Zip Code:		City, State, Zip Code:		
Facility I.D. #:		Phone #:		
Testing Company:		Phone #:	Date:	

This procedure is to determine whether the high level alarm is operational and will trigger when the tank is no more than 90% full. See PEI/RP1200 Section 7.3 for the inspection procedure. This procedure is applicable to tank level monitor stems that touch the bottom of the tank when in place.

Tank Number				
Product Stored				
Tank Level Monitor Brand and Model				
1. Tank Volume, gallons				
2. Tank Diameter, inches				
3. Overfill alarm activates in the test mode at the console?	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No
4. When activated, overfill alarm can be heard or seen while delivering to the tank?	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No
5. After removing the probe from the tank, it has been inspected and any damaged or missing parts replaced?	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No
6. Float moves freely on the stem without binding?	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No
7. Moving product level float up the stem trigger alarm?	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No
8. Inch level from bottom of stem when 90% alarm is triggered.				
9. Tank volume at inch level in Line 8.				
10. Calculate (Line 9 / Line 1) x 100				
11. Is Line 10 less than 90%?	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No
12. Fuel float level on the console agrees with the gauge stick reading?	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes No
13. Overfill alarm activates at any product level above 90% tank capacity?	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No
If any answers in Lines 3, 4, 5, 6, 7 or 11 are "No," or Line 13 is "Yes," the system has failed the test.				
Test Results	☐ Pass ☐ Fail	☐ Pass ☐ Fail	☐ Pass ☐ Fail	☐ Pass ☐ Fail
Comments:				

Tester's Name (print)_____ Tester's Signature _____

APPENDIX C-7

AUTOMATIC TANK GAUGE OPERATION INSPECTION

Facility Name:	Owner:	
Address:	Address:	
City, State, Zip Code:	City, State, Zip Code:	
Facility I.D. #:	Phone #:	
Testing Company:	Phone #:	Date:

This procedure is to determine whether the automatic tank guage (ATG) is operating properly. See PEI/RP1200 Section 8.2 for the inspection procedure. This procedure is applicable to tank level monitor stems that touch the bottom of the tank when in place.

Tank Number				
Product Stored				
ATG Brand and Model				
1. Tank Volume, gallons				
2. Tank Diameter, inches				
3. After removing the ATG from the tank, it has been inspected and any damaged or missing parts replaced?	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No
4. Float moves freely on the stem without binding?	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No
5. Fuel float level agrees with the value programmed into the console?	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No
6. Water float level agrees with the value programmed into the console?	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No
7. Inch level from bottom of stem when 90% alarm is triggered.				
8. Inch level at which the overfill alarm activates corresponds with value programmed in the gauge?	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No
9. Inch level from the bottom when the water float first triggers an alarm.				
10. Inch level at which the water float alarm activates corresponds with value programmed in the gauge?	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No
If any answers in Lines 3, 4, 5, or 6 are "No," the system has failed the test.				
Test Results	☐ Pass ☐ Fail	☐ Pass ☐ Fail	☐ Pass ☐ Fail	☐ Pass ☐ Fail

MECHANICAL AND ELECTRONIC LINE LEAK DETECTORS PERFORMANCE TESTS

Facility Name:	Owner:	
Address:	Address:	
City, State, Zip Code:	City, State, Zip Code:	
Facility I.D. #:	Phone #:	
Testing Company:	Phone #:	Date:

This data sheet can be used to test mechanical line leak detectors (MLLD) and electronic line leak detectors (ELLD) with submersible turbine pump (STP) systems. See PEI/RP1200 Sections 9.1 and 9.2 for test procedures.

Line Number						
Product Stored						
Leak Detector Manufacturer						
Leak Detector Model						
Type of Leak Detector	☐ MLLD ☐ ELLD	☐ MLLD ☐ ELLD	☐ MLLD ☐ ELLD	☐ MLLD ☐ ELLD	☐ MLLD ☐ ELLD	☐ MLLD ☐ ELLD
MLLD (ALL PRESSURE MEASUREMENTS ARE MADE IN PSIG)						
STP Full Operating Pressure						
Check Valve Holding Pressure						
Line Resiliency (ml) (line bleed back volume as measured from check valve holding pressure to 0 psig)						
Step Through Time in Seconds (time the MLLD hesitates at metering pressure before going to full operating pressure as measured from 0 psig with no leak induced on the line)						
Metering Pressure (STP pressure when simulated leak rate 3 gph at 10 psig)						
Opening Time in Seconds (the time the MLLD opens to allow full pressure after simulated leak is stopped)						
Does the STP pressure remain at or below the metering pressure for at least 60 seconds when the simulated leak is induced?	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No
Does the leak detector reset (trip) when the line pressure is bled off to zero psig?	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No
Does the STP properly cycle on/off under normal fuel system operation conditions?	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No
A "No" answer to either of the above questions indicates the MLLD fails the test.						
ELLD (ALL PRESSURE MEASUREMENTS ARE MADE IN PSIG)						
STP Full Operating Pressure						
How many test cycles are observed before alarm/shutdown occurs?						
Does the simulated leak cause an alarm?	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No
A "No" answer to the above question indicates the ELLD fails the test.						
Does the simulated leak cause an STP shutdown?	☐ Yes ☐ No ☐ NA	☐ Yes ☐ No ☐ NA	☐ Yes ☐ No ☐ NA	☐ Yes ☐ No ☐ NA	☐ Yes ☐ No ☐ NA	☐ Yes ☐ No ☐ NA
Test Results	☐ Pass ☐ Fail	☐ Pass ☐ Fail	☐ Pass ☐ Fail	☐ Pass ☐ Fail	☐ Pass ☐ Fail	☐ Pass ☐ Fail
Comments:

EMERGENCY STOP SWITCH OPERATION INSPECTION

Facility Name:	Owner:	
Address:	Address:	
City, State, Zip Code:	City, State, Zip Code:	
Facility I.D. #:	Phone #:	
Testing Company:	Phone #:	Date:

This procedure is to verify the operation of all emergency stop switches/buttons (E-stops). Each E-stop must disconnect power to dispensers, submersible turbine pumps (STPs) and all non-intrinsically safe electrical equipment in classified areas. Test each E-stop separately. See PEI/RP1200 Section 11 for the inspection procedure.

E-stop Number or ID						
Location						
1. E-stops labeled and located where easily accessible?	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No
2. System fully powered and in normal operating condition?	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No
3. After activating E-stop, power disconnected from:						
3a. All dispensing devices on all islands?	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No
3b. All STPs for all fuel grades?	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No
3c. All power, control and signal circuits associated with the dispensing devices and the STPs?	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No
3d. All other non-intrinsically safe electrical equipment in classified areas surrounding fuel dispensing devices?	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No
4. All intrinsically safe electrical equipment remains energized after E-stop activation?	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No
5. After testing, E-stop has been reset and power reestablished to normal operating condition?	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No	☐ Yes ☐ No
A "No" to lines 3a-3d indicates a test failure.

Program: SR0867404 - UNDERGROUND STORAGE TANK - 2314
Inspection Type: FINAL PERMIT ACTIVITY

Comments: On-site to conduct a final inspection for permit #SR0867404 with our Department. Testing was conducted by; Jonathan Ocker with Triton Construction. Mr. Ocker has the following certifications; ICC#8881568 exp., 08/28/2022; FFS-Incon Level-4 Tester #1017613708 exp., 12/07/2022; and OPW#100870 exp., 04/10/2022.

The following components was tested and passed during this inspection;
- 5 gallon., Diesel Spill bucket was hydrostatically tested using the accelerated INCON tester (15 minutes test) and it passed.

Notes;
1) Direct bury diesel spill bucket was replaced with a OPW 1-2100 Series 5- gallon model#1C-2100C-DEVR
2) This inspection closes out permit # SR0867404 with our Department.
3) Within 30 days provide to our office in writing a copy of the test report for today's test.

Subject: Public Records Request - 120 Granite Rock Way

[External Email]

Good Afternoon SJFD:

This FOIA request pertains to the following address in San Jose, CA:

- 120 Granite Rock Way

I am requesting review of copies of any documents relating to hazardous materials, including files regarding dry cleaners, gas stations, hazardous materials inventories, official site inspections, notice of violations, environmental investigations, cleanups, and wells/soil borings.

Thank you kindly.

ORDER TO COMPLY:

As such conditions are contrary to law, you are hereby required to correct said conditions immediately upon receipt of this notice.

An inspection to determine whether or not you have complied with this notice will be conducted on or after 14 days.

Failure to comply with the foregoing order by the date of reinspection may cause a **CITATION** to be issued for the penalties provided by law for such violations and may also render you liable for all suppression costs that might occur in the event of a fire.

Emergency Response/Contingency Plan

(Hazardous Materials Business Plan Module)

Authority Cited: H&SC, Section 25504(b); Title 22, Div. 4.5, Ch. 12, Art. 3 CCR

All facilities that handle hazardous materials in specified quantities must have a written emergency response plan. In addition, facilities that generate 1,000 kilograms or more of hazardous waste per month, or accumulate more than 6,000 kilograms of hazardous waste on-site at any one time, must prepare a contingency plan. Because the requirements are similar, they have been combined in a single document, provided below, for your convenience. This plan is a required module of the Hazardous Materials Business Plan (HMBP). If you already have a plan that meets these requirements, you should not complete the blank plan, below, but you must include a copy of your existing plan as part of your HMBP.

This site-specific Emergency Response/Contingency Plan is the facility's plan for dealing with emergencies and shall be implemented immediately whenever there is a fire, explosion, or release of hazardous materials that could threaten human health and/or the environment. **At least one copy of the plan shall be maintained at the facility for use in the event of an emergency and for inspection by the local agency.** Within Santa Clara County, hospitals and police agencies have delegated receipt of these plans to the local agencies administering Hazardous Materials Business Plans, so additional copies need not be submitted. However, a copy of the plan and any revisions must be provided to any contractor, hospital, or agency with whom special (i.e. contractual) emergency services arrangements have been made *(see section 3, below)*.

1. Evacuation Plan:

a. The following alarm signal(s) will be used to begin evacuation of the facility *(check all that apply)*:

☐ Bells; ☐ Horns/Sirens; ☒ Verbal *(i.e. shouting)*; ☒ Other *(specify)* **RADIO DISPATCH AND OFFICE INTERCOM**

b. ☐ Evacuation map is prominently displayed throughout the facility.

Note: A properly completed HMBP Site Plan satisfies contingency plan map requirements. This drawing (or any other drawing that shows primary and alternate evacuation routes, emergency exits, and primary and alternate staging areas) must be prominently posted throughout the facility in locations where it will be visible to employees and visitors.

2. a. Emergency Contacts*:

Fire/Police/Ambulance ..... Phone No. **911**

State Office of Emergency Services ..... Phone No. **(800) 852-7550**

b. Post-Incident Contacts*:

Fire Department Hazardous Materials Program ..... Phone No.: **(408) 277-4659**

Santa Clara County Hazardous Materials Compliance Division ..... Phone No. **(408) 299-6930**

California EPA Department of Toxic Substances Control ..... Phone No. **(510) 540-3739**

Cal-OSHA Division of Occupational Safety and Health ..... Phone No. **(408) 452-7288**

Bay Area Air Quality Management District ..... Phone No. **(415) 771-6000**

Regional Water Quality Control Board ..... Phone No. **(510) 622-2300**

** These telephone numbers are provided as a general aid to emergency notification. Be advised that additional agencies may be required to be notified.*

c. Emergency Resources:

Poison Control Center ..... Phone No. **(800) 876-4766**

Nearest Hospital: Name: **SANTA TERESA COMMUNITY HOSPITAL** Phone No.: **(408) 972-7777**

Address: **250 HOSPITAL PKWY.** City: **SAN JOSE**

3. Arrangements With Emergency Responders:

If you have made special (i.e. contractual) arrangements with any police department, fire department, hospital, contractor, or State or local emergency response team to coordinate emergency services, describe those arrangements below:

6. Emergency Equipment:

22 CCR §66265.52(e) [as referenced by 22 CCR §66262.34(a)(4)] and the Hazardous Materials Storage Ordinance require that emergency equipment at the facility be listed. Completion of the following Emergency Equipment Inventory Table meets this requirement.

EMERGENCY EQUIPMENT INVENTORY TABLE

1. Equipment Category	2. Equipment Type	3. Locations *	4. Description**
Personal Protective Equipment, Safety Equipment, and First Aid Equipment	☐ Cartridge Respirators		
	☐ Chemical Monitoring Equipment *(describe)*		
	☐ Chemical Protective Aprons/Coats

* *Use the map and grid numbers from the Storage Map prepared earlier for your HMBP.*

** *Describe the equipment and its capabilities. If applicable, specify any testing/maintenance procedures/intervals. Attach additional pages, numbered appropriately, if needed.*

Employee Training Plan

(Hazardous Materials Business Plan Module)

Authority Cited: H&SC, Section 25504(c); Title 22, Div. 4.5, Ch. 12, Art. 3 CCR

All facilities that handle hazardous materials must have a written employee training plan. This plan is a required module of the Hazardous Materials Business Plan (HMBP). A blank plan has been provided below for you to complete and submit if you do not already have such a plan. If you already have a training plan, you are not required to complete the blank plan, below, but you must include a copy of your existing plan as part of your HMBP.

Check all boxes that apply. *[Note: Items marked with an asterisk (*) are required.]*:

1. **Personnel** are trained in the following procedures:

- ☒ Internal alarm/notification *
- ☒ Evacuation/re-entry procedures & assembly point locations*
- ☐ Emergency incident reporting
- ☐ External emergency response organization notification
- ☒ Location(s) and contents of Emergency Response/Contingency Plan
- ☒ Facility evacuation drills, that are conducted at least *(specify)* ANNUALLY *(e.g. "Quarterly", etc.)*

2. **Chemical Handlers** are additionally trained in the following:

- ☒ Safe methods for handling and storage of hazardous materials *
- ☒ Location(s) and proper use of fire and spill control equipment
- ☒ Spill procedures/emergency procedures
- ☒ Proper use of personal protective equipment *
- ☒ Specific hazard(s) of each chemical to which they may be exposed, including routes of exposure *(i.e. inhalation, ingestion, absorption)* *
- ☐ **Hazardous Waste Handlers/Managers** are trained in all aspects of hazardous waste management specific to their job duties *(e.g. container accumulation time requirements, labeling requirements, storage area inspection requirements, manifesting requirements etc.)* *

3. **Emergency Response Team Members** are capable of and engaged in the following:

- ☐ Personnel rescue procedures
- ☒ Shutdown of operations
- ☐ Liaison with responding agencies
- ☐ Use, maintenance, and replacement of emergency response equipment
- ☒ Refresher training, which is provided at least annually *
- ☒ Emergency response drills, which are conducted at least *(specify)* ANNUALLY *(e.g. "Quarterly", etc.)*

Recordkeeping

(Hazardous Materials Business Plan Module)

All facilities that handle hazardous materials must maintain records associated with their management. A summary of your recordkeeping procedures is a required module of the Hazardous Materials Business Plan (HMBP). A blank summary has been provided below for you to complete and submit if you do not already have such a document. If you already have a brief written description of your hazardous materials recordkeeping systems that addresses all subjects covered below, you are not required to complete this page, but you must include a copy of your existing - part of your HMBP.

Check all boxes that apply. The following records are maintained at the facility. *[Note: Items marked with an asterisk (*) are required.]*:

☒	Current employees' training records *(to be retained until closure of the facility)* *
☒	Former employees' training records *(to be retained at least three years after termination of employment)* *
☒	Training Program(s) *(i.e. written description of introductory and continuing training)* *
☒	Current copy of this Emergency Response/Contingency Plan *
☒	Record of recordable/reportable hazardous material/waste releases *
☒	Record of hazardous material/waste storage area inspections *
☒	Record of hazardous waste tank daily inspections *
☐	Description and documentation of facility emergency response drills

Note: The above list of records does not necessarily identify every type of record required to be maintained by the facility.

A copy of the Inspection Check Sheet(s) or Log(s) used in conjunction with required routine self-inspections of your facility must be submitted with your HMBP. *(Exception: Available from your local agency is a Hazardous Materials/Waste Storage Area Inspection Form that you may use if you do not already have your own form. If you use the example provided, you do not need to attach a copy.)*

Check the appropriate box:

☒	We will use the "Hazardous Materials/Waste Storage Area Inspection Form" (Document No. UN-023) to document inspections.
☐	We will use our own documents to record inspections. *(A blank copy of each document used must be attached to this HMBP.)*

GRANITE CONSTRUCTION INCORPORATED

April 18, 2000

I am the Chief Financial Officer of Granite Construction Incorporated, P. O. Box 50085, Watsonville, CA 95077-5085. This letter is in support of the use of the financial test of self-insurance to demonstrate financial responsibility for taking corrective action and/or compensating third parties for bodily injury and property damage caused by sudden accidental releases and/or non-sudden accidental releases in the amount of at least One Million Dollars ($1,000,000) per occurrence and one Million Dollars ($1,000,000) annual aggregate arising from operating underground storage tanks. Underground storage tanks at the following facilities are assured by this financial test or a financial test under an authorized State program by this Granite Construction Incorporated:

Bakersfield – San Emidio Plant
Hwy. 166 – 2 Miles W. of Old River Road
Maricopa, CA

Indio Yard
38155 Monroe Street
Indio, CA 92201

Sacramento Yard
4001 Bradshaw Road
Sacramento, CA 95827

San Jose Yard
120 Granite Rock Way
San Jose, CA 95136

Santa Barbara Yard
5335 Debbie Lane
Santa Barbara, CA 93111

Stockton Yard
10500 S. Harlan Road
French Camp, CA 95231

Tracy Plant
30909 S. Tracy Blvd.
Tracy, CA 95231

Watsonville Yard
600 West Beach Street
Watsonville, CA 95076

Box 50085
Watsonville, CA 95077-5085
Phone 831/724-1011
FAX 831/722-9657

A financial test is also used by this Granite Construction Incorporated to demonstrate evidence of financial responsibility in the following amounts under other than EPA regulations or state programs authorized by EPA under 40 CFR Parts 271 and 145:

SPA Regulations	Amount
Closure (264.143 and 265.143)	$ N/A
Post-Closure Care (264.145 and 265.145)	$ N/A
Liability Coverage (264.147 and 265.147)	$ N/A
Corrective Action (264.101(b))	$ N/A
Plugging and Abandonment (144.63)	$ N/A
Closure	$ N/A
Post-Closure Care	$ N/A
Liability Coverage	$ N/A
Corrective Action	$ N/A
Plugging and Abandonment	$ N/A
Total	$ N/A

This Granite Construction Incorporated has not received an adverse opinion, a disclaimer of opinion, or a "going concern" qualification from an independent auditor on his financial statements for the latest completed fiscal year.

1.	Amount of annual UST aggregate coverage being assured by a financial test	$1,000,000
2.	Amount of corrective action, closure and post-closure care costs, liability coverage, and plugging and abandonment costs covered by financial test	$1,000,000
3.	Sum of line 1 and 2	$2,000,000
4.	Total tangible assets	$678,472,041
5.	Total liabilities	$351,840,000
6.	Tangible net worth	$326,632,041

		YES	NO
7.	Is line 6 at least $10 million?	X	
8.	Is line 6 at least 10 times line 3?	X	
9.	Have financial statements for the latest fiscal year been filed with the Securities and Exchange Commission?	X	
10.	Have financial statements for the latest fiscal year been filed with the Energy Information Administration?		X
11.	Have financial statements from the latest fiscal year been filed with the Rural Electrification Administration?		X
12.	Has financial information been provided to Dunn and Bradstreet, and has Dunn and Bradstreet provided a financial strength rate of 4A or 5A?	X	

I hereby certify that the wording of this letter is identical to the wording specified in 40 CFR Par 280.95(d) as such regulations were constituted on the date shown immediately below.

g. Leak Detection Equipment is Annually Maintained or Calibrated?	✓					
5. Pipe Monitoring or Other Records Indicate:						
a. Mechanical Line Leak Detector Installed?	✓					
b. Electronic Line Leak Detector Installed?		✓				
c. Continuous Pipe Monitoring in Sump?	✓					
d. Automatic Pump Shut-off Capability?	✓					
6. Other Requirements:						
a. Leak Detection Equipment and Test Methods Listed in LG-113?	✓					
b. Cathodic Protection Inspected on Required Schedule?	✓					
c. Releases Recorded and/or Reported Within 24 Hours?	✓					
d. UST System Repairs/Upgrades Approved By the Local Agency?	✓					
e. Monitoring Wells Secured?		✓				

Facility ID Number 401654 APPENDIX F Date: 9-7-00

Interstitial Monitoring Inspection Form

For use by the agency inspector or a tank owner or operator.

Instructions: Use one form per type of interstitial monitor.
This form may apply to multiply tanks if the method of interstitial monitoring is the same for each tank.
Fill in each section below as applicable.

If Secondary Containment Is Provided By	Interstitial Space is Monitored:	Interstitial Space Is:
✓ Double-walled tank	✓ Continuously	___ Liquid ___ Dry
___ Single-walled tank with an internal bladder	___ Continuously	___ Under a vacuum
___ Single-walled tank in a lined excavation	___ Continuously ___ With daily dipsticking	___ Backfilled
___ Single-walled tank in a vault	___ Continuously ___ Visually daily	___ Backfilled ___ Dry
___ Other (specify)	___	___

Method of detection: ___ Liquid level indicator ___ Liquid sensor ___ Vapor sensor ___ Pressure or vacuum loss detector

For Continuous Interstitial Monitors

Manufacturer: Pneumercator

Model name and number: L-1003

Questions Apply To Continuous, Daily, and Visual Monitoring

1. Are the sensors functioning properly and is the monitoring box operational?	(Yes)	No	N/A
2. Is there a continuous audible and visual alarm?	(Yes)	No	N/A
3. If so, is the continuous audible and visual alarm operational?	(Yes)	No	N/A
4. Can the system print out a leak alarm history?	(Yes)	No	N/A
5. Is there documentation showing leak alarms were recorded and/or reported to the local agency?	(Yes)	No	N/A
6. Do records show routine maintenance and service checks are performed every 12 months?	(Yes)	No	N/A
7. If the interstitial monitor is installed after May 5, 1994, is it third-party certified?	Yes	No	(N/A)
8. If monitoring wells are part of the leak detection system, are they clearly marked and secured to avoid unauthorized access and tampering?	Yes	No	(N/A)
9. If daily readings are taken, is the necessary equipment on-site and functional?	Yes	No	(N/A)
10. For visual monitoring, is there daily documentation for the last 36 months?	Yes	No	(N/A)

Comments: _____

Facility ID Number 4 01659 Date: APPENDIX F

AUTOMATIC TANK GAUGE INSPECTION CHECKLIST

For Inspectors and Tank Owners

System Manufacturer: Pneumercator

System name and model number: 1003

1. Is the automatic tank gauge listed in LG-113?	Yes ☑	No ☐
2. Is there an operation/maintenance manual available?	Yes ☑	No ☐
3. Are there any alarm lights flashing?	Yes ☐	No ☑
4. Does the system print hard copies of test reports?	Yes ☑	No ☐
5. Does the system's test report include:		
a. tank identification?	Yes ☑	No ☐
b. time and date of the test?	Yes ☑	No ☐
c. product depth?	Yes ☑	No ☐
d. product volume?	Yes ☑	No ☐
e. water depth?	Yes ☐	No ☐
f. product temperature?	Yes ☑	No ☐
g. duration of the test?	Yes ☑	No ☐
h. calculated leak rate? (Required for systems installed after 1/1/95)	Yes ☑	No ☐
l. leak threshold? (Required for systems installed after 1/1/95)	Yes ☐	No ☐
j. test results (i.e., "PASS" or "FAIL")?	Yes ☐	No ☐
6. Does the leak threshold meet the specifications in LG-113?	Yes ☑	No ☐
7. Are the calculated leak rates (absolute value) less than the leak threshold?	Yes ☐	No ☐
8. Was each tank tested above the minimum product levels?[1]	Yes ☑	No ☐
9. Was each tank tested at least once every month?	Yes ☑	No ☐
10. Did waiting times between product delivery and testing meet LG 113 specifications?	Yes ☐	No ☐
11. Did the test period meet the specifications in LG-113?	Yes ☐	No ☐
12. Does the tank size meet the specifications in LG-113?	Yes ☑	No ☐
13. Is there documentation to show that failed tests were recorded and/or reported to the local agency?	Yes ☐	No ☑
14. Were all high water alarms documented and investigated?	Yes ☐	No ☑
15. Is ground water present around the tank?[2]	Yes ☐	No ☑
16. Are monthly test records maintained for at least 3 years?	Yes ☑	No ☐
17. Is documentation available showing that the system was installed, calibrated, and maintained in accordance with manufacturers instructions, including routine maintenance and service checks at least once per calendar year?	Yes ☑ Last Annual Check: _____	No ☐

Piping Inspection Checklist

Pressurized Piping

Name of line leak detector: (mechanical) _____

(electronic) N/A

Name of line tightness test method: _____

Name of line tightness tester: _____

License number of line tightness tester: _____

Address of line tightness tester: _____

- Has tank tester complied with all State license requirements? Y N
- Are the test equipment and methods listed in LG-113 series? Y N
- Do the equipment and line tightness test methods meet the testing criteria specifications given in the LG-113 series? Y N
- Was the mechanical line leak detector serviced in last 12 months? Y N
- Was the electronic line leak detector serviced in last 12 months? Y N N/A
- Was the continuous interstitial monitoring system serviced in last 12 months? Y N N/A

For piping for each tank, answer the questions in Set 1 or Set 2. (Questions answered by "No" may require follow-up actions.)	Tank 1	Tank 2	Tank 3	Tank 4
Set 1				
1. Is there a mechanical line leak detector with automatic flow restrictor?	yes			
2. Is there an electronic line leak detector?	NC			
3. Is there automatic pump shut-off capability?	yes			
4. Is there a continuous audible and visual alarm system?	yes			
Set 2				
5. Date of last annual line tightness test, if applicable:	N/A			
6. For piping tests conducted on an annual basis, were the lines tested at 150% the normal operating pressure?	↓			
7. Did lines pass test? If not, specify in comments section below the status of the tank and piping and what actions have been taken (e.g., has the local agency been notified?).	↓			
8. Is there interstitial sump monitoring for double-walled piping?	yes			
9. For continuous sump monitoring, is the system designed to detect releases from any portion of product piping?	↓			
10. For continuous interstitial sump monitoring, is the monitoring box operational?	↓			
For vapor or ground water monitoring:				
11. For ground water or vapor monitoring, is documentation of monthly monitoring available for last 36 months?	N/A			

MONITORING SYSTEM EQUIPMENT CERTIFICATION

For use by All Jurisdictions

Authority Cited: Title 23, Division 3, Chapter 16 California Code of Regulations: Hazardous Materials Storage Ordinance

State and local laws/regulations require that equipment which monitors tanks and/or piping systems containing hazardous materials be tested/serviced annually on a schedule specified by the manufacturer, whichever is more frequent. This form, or a service report with equivalent information, must be used to document testing and servicing of monitoring equipment. If more than one monitoring system (e.g. Veeder-Root TLS-350, Ronan X76S, etc.) is installed at the facility, a separate certification or report must be prepared for each monitoring system by the technician who performs the work.

Date of Testing/Servicing: 9 / 12 / 02 Facility Name: Granite Construction

Facility Contact Person: Hiram / Frank Francisco's Contact Phone No: (408) 281-6531

Make/Model of Monitoring System: Pneumercator 2100 Location of Control Panel: fuel island

Make/Model of Line Leak Detector (LLD): ~~red jacket~~ N/A LLD Leak Threshold: N/A g.p.m.

Complete the following checklist:

☒ Yes	☐ No*	Monitoring system is operable per manufacturer's specifications?
☒ Yes	☐ No*	Audible alarm is operational?
☒ Yes	☐ No*	Visual alarm is operational?
☒ Yes	☐ No*	Monitoring system is secured from unauthorized tampering?
☐ Yes	☐ No* ☒ N/A	For pressurized piping systems, do the turbines automatically shut down if the monitoring systems detects a leak, fails to operate, or is electrically disconnected? If yes, which monitoring devices initiate positive shut-down?
☐ Yes	☐ No* ☒ N/A	For monitoring systems which serve as tank overfill warning devices, does the overfill warning function operate properly? If so, at what percent of tank capacity does the alarm trigger? _____ %

*In the comments section below, describe how and when these deficiencies will be corrected.

Check the appropriate boxes to indicate specific equipment inspected/serviced:

Tank ID No: Spit Tank	Tank ID No: _____	Tank ID No: _____	Tank ID No: _____
☒ Annular Space Sensor ☐ Piping Sump Sensor ☐ In-Tank Gauging Probe ☐ Dispenser Containment Sensor(s) ☑ Mechanical Line Leak detector ☐ Electronic Line Leak Detector	☐ Annular Space Sensor ☐ Piping Sump Sensor ☐ In-Tank Gauging Probe ☐ Dispenser Containment Sensor(s) ☐ Mechanical Line Leak Detector ☐ Electronic Line Leak Detector	☐ Annular Space Sensor ☐ Piping Sump Sensor ☐ In-Tank Gauging Probe ☐ Dispenser Containment Sensor(s) ☐ Mechanical Line Leak Detector ☐ Electronic Line Leak Detector	☐ Annular Space Sensor ☐ Piping Sump Sensor ☐ In-Tank Gauging Probe ☐ Dispenser Containment Sensor(s) ☐ Mechanical Line Leak Detector ☐ Electronic Line Leak Detector

Comments: Vent Cap, Overfill Bucket, Also overfill Valve

I certify that the equipment identified above was inspected/serviced in accordance with manufacturer's guidelines. Attached to this Certification is information (e.g. manufacturer's checklist, etc.) Necessary to verify that the above information is correct and to describe any repairs, replacement, or recalibration of equipment.

HAZARDOUS MATERIALS MANAGEMENT PLAN/BUSINESS PLAN
CERTIFICATION OF REVIEW

I have reviewed the current Hazardous Materials Management Plan/Business Plan for:

Granite Construction Co
Facility Name

120 Granite Rock Way
Facility Address

3-6-97
Date of Current Plan

I certify that:

[✓] (1) I have personally reviewed the Plan and certify that the Plan is complete, accurate, and is being implemented.

[ ] (2) Revisions to the Plan are necessary. The Plan as revised is being implemented. A copy of the revisions is enclosed.

[ ] (3) A new Plan is being implemented. A copy of the new Plan is enclosed.

NOTE: After review and acceptance of the HMMP or HMMP revisions by the Hazardous Materials Division, you will be required to provide one additional copy of the HMMP for use by the City's Hazardous Incident Team.

ORDER TO COMPLY:

As such conditions are contrary to law, you are hereby required to correct said conditions immediately upon receipt of this notice.

An inspection to determine whether or not you have complied with this notice will be conducted on or after 5 days.

Failure to comply with the foregoing order by the date of reinspection may cause a **CITATION** to be issued for the penalties provided by law for such violations and may also render you liable for all suppression costs that might occur in the event of a fire.
