Subject: **Phase I Environmental Site Assessment**
120 Granite Rock Way
San Jose, California 95136
AEI Project No. 458507
Client Reference No. 18-065

Dear Shannon George:

AEI Consultants is pleased to provide the *Phase I Environmental Site Assessment* of the above referenced property. This assessment was authorized and performed in accordance with the scope of services engaged.

We appreciate the opportunity to provide services to you. If you have any questions concerning this report, or if we can assist you in any other matter, please contact me at (408) 559-7600 or TGolino@aeiconsultants.com.

Sincerely,

Tory Golino
Senior Vice President
AEI Consultants

PROJECT SUMMARY

EXECUTIVE SUMMARY

AEI Consultants (AEI) was retained by David J. Powers & Associates to conduct a Phase I ESA in conformance with AEI's contract and the scope and limitations of ASTM Standard Practice E1527-13 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) for the property located at 120 Granite Rock Way, San Jose, Santa Clara County, California (the "subject property"). Any exceptions to, or deletions from, this practice are described in Sections 1.4, 1.5, and 1.6 of this report.

Pertinent subject property information is noted below:

PROPERTY INFORMATION	
Site Address(es)	120 Granite Rock Way, San Jose, Santa Clara County, California 95136
Property ID (APN or Block/Lot)	462-17-024 and 462-17-025
Location	Terminus of Granite Rock Way
Property Type	Industrial/Manufacturing
SITE AND BUILDING INFORMATION	
Approximate Site Acreage/Source	22.48/Santa Clara County Assessor
Number of Buildings	4
Building Construction Date(s)/Source	1979/Santa Clara County Planning Department
Building Square Footage (SF)/Source	12,500/Client provided
Number of Floors/Stories	1
Basement or Subgrade Area(s)	None identified
Number of Units	1
Additional Improvements	Rock-processing equipment, recycling equipment, metal canopies, truck weight scale, asphalt-paved parking areas and associated landscaping
On-site Occupant(s)	Granite Rock Company Capitol Construction and Recycling
Current On-site Operations/Use	Aggregate storage and transfer, concrete plant, concrete and asphalt recycling, auto and construction equipment repair, construction equipment and material storage, and associated administrative activities
Current Use of Hazardous Substances	Yes; refer to Section 7.1
REGULATORY INFORMATION	
Regulatory Database Listing(s)	RGA LUST (x3), LUST, HIST LUST, UST, SWEEPS UST (x2), HIST UST, AST (x2), US MINES, HAZNET (x5), HWTS (x8), CERS HAZ WASTE (x2), CERS TANKS (x2), CUPA LISTINGS (x3), CERS (x5), HAULERS, EMI (x4), FINDS (x8), ECHO (x3), HAZMAT (x2), RCRA NONGEN/NLR (x2), CIWQS (x2), CORTESE, HIST CORTESE, NPDES (x2), WDS

A chronological summary of historical subject property information is as follows:

Date Range	Subject Property Description and Occupancy (Historical Addresses)	Source(s)
Prior to 1939	Unknown use/Data failure; refer to Section 1.6.1	Aerial photographs, topographic maps
1939-1974	Agricultural land	Aerial photographs
1979/ 1980-1987	Buildings 1, 2, 3, and 4 constructed for industrial use Former industrial warehouse structures present along southwest property boundary, former office structures present near south corner The following tenants were identified: • Piazza Construction Co. (1979-1986) • SJ Brick (1980-1987); and • Granite Rock Co. (1985-1987).	Aerial photographs, agency records, city directories, interviews
1998-2018	Buildings 1, 2, 3, and 4, as well as southern office structures, remain Former industrial warehouse structures present along southwest property boundary no longer present The following tenants were identified: • Granite Rock Co./Pavex Construction (1999-2017).	Aerial photographs, agency records, city directories, interviews
2019-Present	Buildings 1, 2, 3, and 4 remain Former office structures near south corner no longer present The following tenants were identified: • Granite Rock Co. (2019-Present).	Aerial photographs, agency records, city directories, interviews, site observation

The immediately surrounding properties consist of the following:

Direction	Tenant/Use (Address)	Regulatory Database Listing(s)
North	Concrete Ready Mix (33 Hillsdale Avenue) Southern Pacific Railroad Tracks followed by: Milagros Auto Sales, Giant Car Sales (3107-3145 Monterey Road)	CERS HAZ WASTE, CUPA LISTINGS, EMI, HAZMAT, CERS, RCRA NONGEN/ NLR (33 Hillsdale Avenue)
Northeast	Southern Pacific Railroad Tracks (3495 Monterey Road) and Monterey Road followed by: Residences (309-339 Kenbrook Circle) Clarion Inn (3200 Monterey Road)	CUPA LISTINGS (3200 Monterey Road) CUPA LISTINGS (Monterey Highway and Fehren Drive)

Direction	Tenant/Use (Address)	Regulatory Database Listing(s)
	Southern Kitchen Restaurant (3378 Monterey Road) Capitol Hill Inn (3382 Monterey Road) Cal-Train Parking Lot (3390 Monterey Road) CarMommy Used Cars (3410 Monterey Road) Parking Lot (3402 Monterey Road) Kowloon Auto Sales (3600-3840 Monterey Road)	LUST, HIST LUST, CORTESE, CERS, EDR HIST AUTO, HIST CORTESE (3400 Monterey Road) CERS HAZ WASTE, CERS, HAZNET, HAZMAT, HWTS, RCRA NONGEN/ NLR (3600 Monterey Road)
Southeast	West Wind Capitol Drive-In Theater (3630 Hillcap Avenue)	HAZMAT, CUPA LISTINGS (3630 Hillcap Avenue)
Southwest	United Site Services/construction contractor and storage yard (3408 Hillcap Avenue) Pacific Bell/telecommunicators provider and parking lot (3598 Hillcap Avenue) Snell Mini Storage (3616 Hillcap Avenue)	LUST, HIST LUST, CERS HAZ WASTE, CORTESE, HIST CORTESE, HAZMAT, CIWQS, CERS, AST, CUPA LISTINGS, CERS TANKS, HIST UST, RCRA-VSQG, RCRA NONGEN/NLR (3408 Hillcap Avenue) LUST, SWEEPS UST , FID UST, RCRA-LQG, FINDS, ECHO, CORTESE, CERS HAZ WASTE, CERS, HAZMAT, HAZNET, CUPA LISTINGS, HWTS (3598 Hillcap Avenue) CUPA LISTINGS, HAZMAT, EMI, CERS (3616 Hillcap Avenue)
West	United Site Services/construction contractor and storage yard (3200 Hillcap Avenue)	None identified

If the surrounding properties are listed in the regulatory database, please refer to Section 5.1 for discussion.

FINDINGS

Recognized Environmental Condition (REC) is defined by the ASTM Standard Practice E1527-13 as the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.

- According to historical sources, the subject property has been occupied by various industrial tenants, including Piazza Construction Co., SJ Brick, and most recently Granite Rock Co. Aggregate storage and transfer, concrete plant operations, asphalt recycling, auto and construction equipment repair, and construction equipment storage appears to have been conducted on-site by these tenants. Based on the former and current natures of use, various quantities of hazardous substances and/or petroleum products were stored on site. Some of the businesses operated at a time that pre-dates modern

regulatory oversight of hazardous substances and petroleum products, since consistent Santa Clara County Department of Environmental Health and San Jose Fire Department records only date back to 2002 and 1990, respectively. Hazardous substances stored as part of on-site facility operations by Granite Rock Co. were identified to consist of acetylene, antifreeze, compressed air, oxygen, grease, kerosene, motor oil, hydraulic fluid, used motor oil, nitrogen, Zeps Parts Cleaner (water-based cleaner), SystemOne Qsol 100 parts cleaner (aliphatic petroleum distillate), Super Slick Bio (non-hazardous), used oil filters, diesel fuel, used antifreeze, Asphalt Cleaner, latex paint, propane, Zep Dyna Green-Water based Parts Cleaner, Citra Clean 34, Zep Split Vehicle Wash, 2420 BTU Diesel Supplement, and gasoline. Hazardous wastes generated as part of on-site facility operations were identified to consist of liquids with pH <= 2, unspecified oil-containing waste, aqueous solution with total organic residues 10 percent or more, waste and mixed oil, aqueous solution with total organic residues less than 10 percent, off-specification, aged or surplus organics, alkaline solution without metals pH >= 12.5, latex waste, and hydrocarbon solvents (benzene, hexane, Stoddard, Etc.). During the site reconnaissance, four one-gallon glass jars of trichloroethene (TCE) were observed within a flammable storage closet within Building 4. Chlorinated solvents like TCE are highly mobile chemicals that can easily accumulate in soil and soil gas, and migrate to groundwater beneath a facility. These solvents, even when properly stored and handled, can readily migrate into the subsurface as a result of small releases associated with on-site operations. Based on the length of time that the subject property had been utilized for industrial purposes, it is possible that petroleum hydrocarbons and/ or VOCs may have impacted the subsurface of the subject property. Therefore, this information represents a REC.

- The subject property is currently equipped with one 5,000 gallon gasoline UST and one 15,000 gallon diesel UST which were installed in 1991. The USTs are constructed of double-walled steel with reinforced fiberglass and equipped with a leak-detection system. The product piping is double-walled fiberglass and equipped with a leak-detection system. The USTs are indicated as sharing the same secondary containment. The review of reasonably ascertainable information pertinent to the status and operation of the storage tank system which included Monitoring System Equipment Certifications from 2005 to 2021, did not reveal any reported discharges or gross compliance deficiencies. Based on the age of the USTs and lack of continual/consistent documentation regarding historical testing results and operational status of the system dating back to 1991, AEI is unable to rule out the potential that a release from the USTs has affected the subsurface of the subject property. On this basis, the storage of petroleum products in a USTs at the subject property is considered a REC.
- According to the regulatory database, Granite Rock Company is associated with two 10,000 gallon diesel USTs and one 1,000 gallon diesel UST; it is believed that these USTs were removed as part of the closed LUST case (further discussed below). The subject property is also listed as being associated with one 15,000 gallon diesel UST, two 5,000 gallon gasoline USTs, eight 3,000 gallon gasoline USTs, one 10,000 gallon gasoline UST, two 10,000 gallon diesel USTs, one 550 gallon "chemical" UST, one 1,000 gallon "chemical" UST, one 500 gallon waste oil UST, and one 500 gallon "chemical" UST. The 15,000 gallon diesel and two 5,000 gallon gasoline USTs are indicated as active. Per the HIST UST listings, Piazza Construction Co. is associated with three 10,000

gallon diesel USTs, one 3,000 gallon gasoline UST, and 500 gallon product UST, all installed in 1979, and San Jose Brick is associated with one 10,000 gallon diesel UST and two 8,000 gallon diesel USTs. Per the UST listing, Granite Rock Co.-Pavex Central is associated with permitted UST(s) with the SCCDEH. The potential exists that additional historical USTs may exist on-site. No information pertinent to the status and operation of these UST systems and/or the removal of these USTs was on file with the regulatory agencies. In addition, no documentation was available indicating whether soil and/ or other subsurface media samples were collected and analyzed for the presence of petroleum hydrocarbon in the subsurface media. It should also be noted that building permits dated 1979 were on file for the construction of a "vault" at 120 Granite Rock Way on behalf of Piazza Construction. The use and existing use of this vault was not ascertained during the assessment. The potential existence of remaining USTs/ subsurface features of concern constitutes a REC for the subject property.

- An exterior wash pad is located northeast of Building 1 and consists of an uncovered concrete slab with a drain at the center, a high pressure sprayer and a vacuum. The drain is equipped with a grit trap in which sediments settle, and are pumped to aboveground wastewater tank traps. The effluent from the grit trap is treated and discharged to the sanitary sewer. According to the key site contact, the grit trap is periodically cleaned out by a contractor. AEI was unable to confirm the age of the system, and if equipment or other machines aside from fleet trucks are washed in this area. Due to their subsurface nature, collection drains, grit traps, and their associated piping can act as preferential pathways for contaminants such as oil, grease, fuel, or cleaning solvents discharged or released during on-site activities. Consequently, the potential exists that the operation of the on-site system may have resulted in an impact to the subsurface of the subject property and therefore represents a REC.

Controlled Recognized Environmental Condition (CREC) is defined by the ASTM Standard Practice E1527-13 as a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

- Granite Rock Capitol Plant at 100 Granite Rock Way is listed as a LUST case with a status of "Completed - Case Closed" as of November 8, 1996. In August 1991, three unknown-sized diesel USTs were excavated and removed from the subject property. It should be noted that based on the lack of detail provided in the available site plans, the locations of the former UST excavation and associated soil borings are unknown. A total of six confirmation soil samples were collected and analyzed for Total Petroleum Hydrocarbons (TPH) as diesel (TPHd); diesel was reported in soil at a maximum concentration of 1,300 parts per million (ppm). Subsequent investigations and excavations were performed which revealed that the release of TPHd was localized in extent and had not impacted groundwater. Based on the site conditions and the current land use, the LUST case was granted closure with no further action required by the SCVWD in a letter dated November 8, 1996. At the time of closure, a maximum of TPHd at a concentration of 53,000 was reported to residually exist in on-site soils. Based on this information, the closed LUST case represents a CREC. However, it should be noted that

BTEX and fuel oxygenates (MTBE) were not screened as part of the closure process; should the User of this report desire a greater degree of certainty regarding the potential for remaining contamination that was not investigated, subsurface sampling would be required.

Historical Recognized Environmental Condition (HREC) is defined by the ASTM Standard Practice E1527-13 as a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls.

- AEI did not identify evidence of HRECs during the course of this assessment.

Other Environmental Considerations (OEC) warrant discussion, but do not qualify as RECs as defined by the ASTM Standard Practice E1527-13. These include, but are not limited to, de minimis conditions and/or environmental considerations such as the presence of ACMs, LBP, radon, mold, and lead in drinking water, which can affect the liabilities and financial obligations of the client, the health and safety of site occupants, and the value and marketability of the subject property. A de minimis condition is defined by the ASTM Standard as a condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

- Two "other-active" groundwater monitoring wells, identified as MW-1 (Well 07S01E34H002) and MW-2 (Well 07S01E34H003), are depicted on the west portion of the subject property according to Valley Water (VW). The wells are indicated as drilled to depths ranging from 15 to 45 feet bgs with casing depths of 15 feet bgs. According to the LUST case closure letter, no monitoring wells were installed at the subject property during the LUST investigations. AEI requested additional information regarding the wells with VW, however AEI has not received a response as of this report date. If the wells are not planned for future use, AEI recommends that all on-site monitoring wells be decommissioned according to federal and local regulations.
- Based on a review of historical sources, the subject property was historically used for agricultural purposes. There is potential that agricultural chemicals, such as pesticides, herbicides and fertilizers, were used on site, and that the subject property has been impacted by the use of such agricultural chemicals. In general, historical agricultural use is not the subject of environmental enforcement actions by regulatory agencies, and therefore, could be considered a de minimis condition. However, AEI understands that the subject property is slated for commercial redevelopment. Consequently, it would be prudent for the owner of the subject property to determine whether sampling relating to the former agricultural use of the subject property is required by the local planning department or other applicable oversight agency prior to the commencement of redevelopment activities.
- Due to the age of the subject property buildings, there is a potential that ACMs are present. The observed suspect ACMs at the subject property were in good condition at the time of the site reconnaissance and are not expected to pose a health and safety concern to the occupants of the subject property at this time. In the event that building

renovation or demolition activities are planned, a thorough asbestos survey to identify asbestos-containing building materials is required in accordance with the EPA NESHAP 40 CFR Part 61 prior to demolition or renovation activities that may disturb suspect ACMs.

CONCLUSIONS, OPINIONS, AND RECOMMENDATIONS

We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Standard Practice E1527-13 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) of 120 Granite Rock Way, San Jose, Santa Clara County, California, the *subject property*. Any exceptions to, or deletions from, this practice are described in Sections 1.4, 1.5, and 1.6 of this report.

AEI did not identify evidence of RECs or CRECs in connection with the property except for those previously identified in the Findings section. AEI recommends the following:

- Subsurface Investigation

1.0 INTRODUCTION

This report documents the methods and findings of the Phase I Environmental Site Assessment performed in conformance with AEI's contract and scope and limitations of ASTM Standard Practice E1527-13 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) for the property located at 120 Granite Rock Way, San Jose, Santa Clara County, California (Appendix A: Figures and Appendix B: Property Photographs).

1.1 SCOPE OF WORK

The purpose of the Phase I ESA is to assist the client in identifying potential RECs, in accordance with ASTM E1527-13, associated with the presence of any hazardous substances or petroleum products, their use, storage, and disposal at and in the vicinity of the subject property. Property assessment activities focused on: 1) a review of federal, state, tribal, and local databases that identify and describe underground fuel tank sites, leaking underground fuel tank sites, hazardous waste generation sites, and hazardous waste storage and disposal facility sites within the ASTM approximate minimum search distance; 2) a property and surrounding site reconnaissance, and interviews with the past and present owners and current occupants and operators to identify potential environmental contamination; and 3) a review of historical sources to help ascertain previous land use at the site and in the surrounding area.

1.2 ADDITIONAL SERVICES

Other Environmental Considerations such as ACMs, LBP, lead in drinking water, radon, mold, and wetlands can result in business environmental risks for property owners which may disrupt current or planned operations or cash flow and are generally beyond the scope of a Phase I assessment as defined by ASTM E1527-13. Based upon the agreed-on scope of services this ESA did not include subsurface or other invasive assessments, business environmental risks, or other services not specifically identified and discussed herein.

1.3 SIGNIFICANT ASSUMPTIONS

The following assumptions are made by AEI in this report. AEI relied on information derived from secondary sources including governmental agencies, the client, designated representatives of the client, property contact, property owner, property owner representatives, computer databases, and personal interviews. AEI has reviewed and evaluated the thoroughness and reliability of the information derived from secondary sources including government agencies, the client, designated representatives of the client, property contact, property owner, property owner representatives, computer databases, or personal interviews. It appears that all information obtained from outside sources and reviewed for this assessment is thorough and reliable. However, AEI cannot guarantee the thoroughness or reliability of this information.

Groundwater flow, unless otherwise specified by on-site well data or well data from the subject property or nearby sites, is inferred from contour information depicted on the USGS topographic maps. AEI assumes the property has been correctly and accurately identified by the client, designated representative of the client, property contact, property owner, and property owner's representatives.

1.4 LIMITATIONS

Property conditions, as well as local, state, tribal, and federal regulations can change significantly over time. Therefore, the recommendations and conclusions presented as a result of this assessment apply strictly to the environmental regulations and property conditions existing at the time the assessment was performed. Available information has been analyzed using currently accepted assessment techniques and it is believed that the inferences made are reasonably representative of the property. AEI makes no warranty, expressed or implied, except that the services have been performed in accordance with generally accepted environmental property assessment practices applicable at the time and location of the assessment.

Considerations identified by ASTM as beyond the scope of a Phase I ESA that may affect business environmental risk at a given property include the following: ACMs, radon, LBP, lead in drinking water, wetlands, regulatory compliance, cultural and historical resources, industrial hygiene, health and safety, ecological resources, endangered species, indoor air quality, mold, and high voltage lines. These environmental issues or conditions may warrant assessment based on the type of the property transaction; however, they are considered non-scope issues under ASTM Standard Practice E1527-13.

If requested by the client, these non-scope issues are discussed herein. Otherwise, the purpose of this assessment is solely to satisfy one of the requirements for qualification of the innocent landowner defense, contiguous property owner or bona fide prospective purchaser under CERCLA. ASTM Standard Practice E1527-13 and the United States EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) constitute the "all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice" as defined in:

1. 42 U.S.C. § 9601(35)(B), referenced in the ASTM Standard Practice E1527-13.
2. Sections 101(35)(B) (ii) and (iii) of CERCLA and referenced in the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312).
3. 42 U.S.C. § 9601(40) and 42 U.S.C. § 9607(q).

The Phase I Environmental Site Assessment is not, and should not be construed as, a warranty or guarantee about the presence or absence of environmental contaminants that may affect the property. Neither is the assessment intended to assure clear title to the property in question. The sole purpose of assessment into property title records is to ascertain a historical basis of prior land use. All findings, conclusions, and recommendations stated in this report are based upon facts, circumstances, and industry-accepted procedures for such services as they existed at the time this report was prepared (i.e., federal, state, and local laws, rules, regulations, market conditions, economic conditions, political climate, and other applicable matters). All findings, conclusions, and recommendations stated in this report are based on the data and information provided, current subject property use, and observations and conditions that existed on the date and time of the property reconnaissance.

Responses received from local, state, or federal agencies or other secondary sources of information after the issuance of this report may change certain facts, findings, conclusions, or circumstances to the report. A change in any fact, circumstance, or industry-accepted procedure upon which this report was based may adversely affect the findings, conclusions, and recommendations expressed in this report.

AEI's limited radon screening, if included, is intended to provide a preliminary screening to evaluate the potential presence of elevated radon concentrations at the site. The proposed scope is not intended to define the full extent of the presence of radon at the subject property. As such, the results should be used for lending purposes only. The recommendations and conclusions presented as a result of the limited preliminary radon screening apply strictly to the property conditions existing at the time the sampling was performed. The sample analytical results are only valid for the time, place, and condition of the site at the time of collection and AEI does not warrant that the results will be repeatable or are representative of past or future conditions.

1.5 LIMITING CONDITIONS/DEVIATIONS

The performance of this assessment was limited by the following:

- While additional assessments may have been conducted on the subject property, these documents must be provided for AEI's review in order for the information to be summarized/included in this report. Please refer to Section 6.3 for a summary of previous reports and other documentation provided to AEI during this assessment.
- The subject property owner was not interviewed during this assessment. Based on information obtained from other sources, including the key site manager, this limiting condition is not expected to alter the overall findings of this assessment.
- On March 22, 2022, the Bay Area Air Quality Management District was contacted for information on the subject property in order to identify historical tenants/use, property development, and/or hazardous substance/petroleum product handling. Due to the time frame of this assessment, records at the agency were not available for review. However, based on the quality of information obtained from other sources including the SCCDEH and SJFD, this limitation is not expected to significantly alter the findings of this assessment.
- AEI was not granted access to Building 4, as the keys were not available during the site visit. Mr. Pat Mapelli of Granite Rock Co., key site manager, was not aware of any hazardous materials stored within this structure. Based on the quality of information obtained from other sources including interviews, this limitation is not expected to significantly alter the findings of this assessment.

- Due to the large volume of materials within portions of the building as well as exterior storage areas and vehicles parked within exterior areas, direct visual observation of many of the floor and wall areas of the building and exterior ground surfaces was not possible. Features may be present that were not observed during AEI's field reconnaissance.

1.6 Data Failure and Data Gaps

According to ASTM E1527-13, data gaps occur when the Environmental Professional is unable to obtain information required by the Standard, despite good faith efforts to gather such information. Pursuant to ASTM E1527-13, only significant data gaps, defined as those that affect the ability of the Environmental Professional to identify RECs, need to be documented.

Data failure is one type of data gap. According to ASTM E1527-13, data failure occurs when all of the standard historical sources that are reasonably ascertainable and likely to be useful have been reviewed and yet the objectives have not been met. Pursuant to ASTM E1527-13, historical sources are required to document property use back to the property's first developed use or back to 1940, whichever is earlier, or periods of five years or greater.

1.6.1 Data Failure

The following data failure was identified during the course of this assessment:

Data Failure	The earliest historical resource obtained during this assessment was an aerial photograph from 1939 indicating that the subject property was developed agriculturally. The lack of historical sources for the subject property dating back to first developed use represents historical data source failure. However, as it is assumed that the subject property would have been previously used for agricultural purposes, if not undeveloped, this data failure is not expected to significantly alter the findings of this assessment.
Information/Sources Consulted	Aerial photographs

1.6.2 Significant Data Gaps

AEI did not identify significant data gaps which affected our ability to identify RECs.

1.7 Reliance

All reports, both verbal and written, are for the benefit of David J. Powers & Associates. This report has no other purpose and may not be relied upon by any other person or entity without the written consent of AEI. Either verbally or in writing, third parties may come into possession of this report or all or part of the information generated as a result of this work. In the absence of a written agreement with AEI granting such rights, no third parties shall have rights of recourse or recovery whatsoever under any course of action against AEI, its officers, employees, vendors, successors or assigns. Reliance is provided in accordance with AEI's contract and Terms and Conditions executed by David J. Powers & Associates on March 9, 2022. The limitation of liability defined in the Terms and Conditions is the aggregate limit of AEI's liability to the client and all relying parties.

2.0 SITE AND VICINITY DESCRIPTION

2.1 SITE LOCATION AND DESCRIPTION

PROPERTY INFORMATION	
Site Address(es)	120 Granite Rock Way, San Jose, Santa Clara County, California 95136
Property ID (APN or Block/Lot)	462-17-024 and 462-17-025
Location	Terminus of Granite Rock Way
Property Type	Industrial/Manufacturing
SITE AND BUILDING INFORMATION	
Approximate Site Acreage/Source	22.48/Santa Clara County Assessor
Number of Buildings	4
Building Construction Date(s)/Source	1979/Santa Clara County Planning Department
Building Square Footage (SF)/Source	12,500/Client provided
Number of Floors/Stories	1
Basement or Subgrade Area(s)	None identified
Number of Units	1
Additional Improvements	Rock-processing equipment, recycling equipment, metal canopies, truck weight scale, asphalt-paved parking areas and associated landscaping
On-site Occupant(s)	Granite Rock Company Capitol Construction and Recycling
Current On-site Operations/Use	Aggregate storage and transfer, concrete plant, concrete and asphalt recycling, auto and construction equipment repair, construction equipment and material storage, and associated administrative activities
Current Use of Hazardous Substances	Yes; refer to Section 7.1
REGULATORY INFORMATION	
Regulatory Database Listing(s)	RGA LUST (x3), LUST, HIST LUST, UST, SWEEPS UST (x2), HIST UST, AST (x2), US MINES, HAZNET (x5), HWTS (x8), CERS HAZ WASTE (x2), CERS TANKS (x2), CUPA LISTINGS (x3), CERS (x5), HAULERS, EMI (x4), FINDS (x8), ECHO (x3), HAZMAT (x2), RCRA NONGEN/NLR (x2), CIWQS (x2), CORTESE, HIST CORTESE, NPDES (x2), WDS

2.2 ON-SITE UTILITIES

Utility	Source/System Information
Heating System	Natural gas
Cooling System	Electricity
Potable Water	City of San Jose/San Jose Water
Sewage Disposal/Treatment	City of San Jose Public Works/Sanitary Sewer

Utility source/system information listed in the table above is provided by Mr. Pat Mapelli, Land Use Manager, Granite Rock Company, unless otherwise noted above.

2.3 SITE AND VICINITY CHARACTERISTICS

The subject property is located in a mixed commercial, industrial, and residential area of San Jose, California. The immediately surrounding properties consist of the following:

Direction	Tenant/Use (Address)	Regulatory Database Listing(s)
North	Concrete Ready Mix (33 Hillsdale Avenue) Southern Pacific Railroad Tracks followed by: Milagros Auto Sales, Giant Car Sales (3107-3145 Monterey Road)	CERS HAZ WASTE, CUPA LISTINGS, EMI, HAZMAT, CERS, RCRA NONGEN/ NLR (33 Hillsdale Avenue)
Northeast	Southern Pacific Railroad Tracks (3495 Monterey Road) and Monterey Road followed by: Residences (309-339 Kenbrook Circle) Clarion Inn (3200 Monterey Road) Southern Kitchen Restaurant (3378 Monterey Road) Capitol Hill Inn (3382 Monterey Road) Cal-Train Parking Lot (3390 Monterey Road) CarMommy Used Cars (3410 Monterey Road) Parking Lot (3402 Monterey Road) Kowloon Auto Sales (3600-3840 Monterey Road)	CUPA LISTINGS (3200 Monterey Road) CUPA LISTINGS (Monterey Highway and Fehren Drive) LUST, HIST LUST, CORTESE, CERS, EDR HIST AUTO, HIST CORTESE (3400 Monterey Road) CERS HAZ WASTE, CERS, HAZNET, HAZMAT, HWTS, RCRA NONGEN/ NLR (3600 Monterey Road)
Southeast	West Wind Capitol Drive-In Theater (3630 Hillcap Avenue)	HAZMAT, CUPA LISTINGS (3630 Hillcap Avenue)
Southwest	United Site Services/construction contractor and storage yard (3408 Hillcap Avenue) Pacific Bell/telecommunicators provider and parking lot (3598 Hillcap Avenue) Snell Mini Storage (3616 Hillcap Avenue)	LUST, HIST LUST, CERS HAZ WASTE, CORTESE, HIST CORTESE, HAZMAT, CIWQS, CERS, AST, CUPA LISTINGS, CERS TANKS, HIST UST, RCRA-VSQG, RCRA NONGEN/NLR (3408 Hillcap Avenue) LUST, SWEEPS UST , FID UST, RCRA-LQG, FINDS, ECHO, CORTESE, CERS HAZ WASTE, CERS, HAZMAT, HAZNET, CUPA LISTINGS, HWTS (3598 Hillcap Avenue) CUPA LISTINGS, HAZMAT, EMI, CERS (3616 Hillcap Avenue)
West	United Site Services/construction contractor and storage yard (3200 Hillcap Avenue)	None identified

If the surrounding properties are listed in the regulatory database, please refer to Section 5.1 for discussion.

2.4 PHYSICAL SETTING

Geologic Unit: Description/Source	Qa: Alluvial gravel, sand and clay, includes alluvial fan deposits (Holocene)/Geological Map of the Milpitas Quadrangle, Alameda & Santa Clara Counties, California (2005)
Soil Series: Description/Source	180 - Urbanland-Newpark complex, 0 to 2 percent slopes. The Urban land designation indicates that more than 85 percent of the original soils have been disturbed or covered by paved surfaces, buildings or other structures; due to the variability of the soil material, on-site investigation would be required to determine the specific soil composition at the subject property/USDA Soil Survey
Groundwater Flow Direction/Source	North/Topographic map interpretation
Estimated Depth to Groundwater/ Source	63 feet bgs/1991 on-site subsurface investigation
Surface waters on the subject property or adjoining sites	None
Additional notes	None

Note: Groundwater flow direction can be influenced locally and regionally by the presence of local wetland features, surface topography, recharge and discharge areas, horizontal and vertical inconsistencies in the types and location of subsurface soils, and proximity to water pumping wells. Depth and gradient of the water table can change seasonally in response to variation in precipitation and recharge, and over time, in response to urban development such as storm water controls, impervious surfaces, pumping wells, cleanup activities, dewatering, seawater intrusion barrier projects near the coast, and other factors.

3.0 HISTORICAL REVIEW OF SITE AND VICINITY

Reasonably ascertainable standard historical sources as outlined in ASTM Standard E1527-13 were used to determine previous uses and occupancies of the subject property that are likely to have led to RECs in connection with the subject property. A chronological summary of historical data found, including but not limited to aerial photographs, historical city directories, Sanborn fire insurance maps, and agency records, is as follows:

Date Range	Subject Property Description and Occupancy (Historical Addresses)	Source(s)
Prior to 1939	Unknown use/Data failure; refer to Section 1.6.1	Aerial photographs, topographic maps
1939-1974	Agricultural land	Aerial photographs
1979/ 1980-1987	Buildings 1, 2, 3, and 4 constructed for industrial use Former industrial warehouse structures present along southwest property boundary, former office structures present near south corner The following tenants were identified: • Piazza Construction Co. (1979-1986) • SJ Brick (1980-1987); and • Granite Rock Co. (1985-1987).	Aerial photographs, agency records, city directories, interviews
1998-2018	Buildings 1, 2, 3, and 4, as well as southern office structures, remain Former industrial warehouse structures present along southwest property boundary no longer present The following tenants were identified: • Granite Rock Co./Pavex Construction (1999-2017).	Aerial photographs, agency records, city directories, interviews
2019-Present	Buildings 1, 2, 3, and 4 remain Former office structures near south corner no longer present The following tenants were identified: • Granite Rock Co. (2019-Present).	Aerial photographs, agency records, city directories, interviews, site observation

Based on available historical sources, the subject property was identified as developed with agricultural land as early as 1939 through 1974. The existing structures, as well as former office and industrial structures along the southwest property boundary and near south corner, were constructed in 1979. By 1998, the former structures along the southwest property boundary are no longer visible, and by late 2018 the former office structures near the south corner of

the property are no longer visible. Aggregate storage and transfer, concrete plant operations, asphalt recycling, auto and construction equipment repair, and construction equipment storage appear to have been conducted on-site since at least 1979.

The following addresses were identified for the subject property during the course of the assessment: 100, 110, and 120 Granite Rock Way. These addresses were also researched as part of this assessment.

AEI understands that planning is underway to allow the expansion and modernization of the existing concrete and asphalt recycling, manufacturing and distribution facility. A 12,800 square foot square is to be demolished and a 40,000 square foot materials warehouse and storage facility, installation of a truck wash system, and construction of a new Qa/Qc facility are to be developed.

Prior and Current Industrial Uses

According to historical sources, the subject property has been occupied by various industrial tenants since 1979, including Piazza Construction Co., SJ Brick, and most recently Granite Rock Co. Based on the former and current natures of use, various quantities of hazardous substances and/or petroleum products were stored on site. Some of the businesses operated at a time that pre-dates modern regulatory oversight of hazardous substances and petroleum products, since consistent Santa Clara County Department of Environmental Health and San Jose Fire Department records only date back to 2002 and 1990, respectively. Hazardous substances stored as part of on-site facility operations by Granite Rock Co. were identified to consist of acetylene, antifreeze, compressed air, oxygen, grease, kerosene, motor oil, hydraulic fluid, used motor oil, nitrogen, Zeps Parts Cleaner (water-based cleaner), SystemOne Qsol 100 parts cleaner (aliphatic petroleum distillate), Super Slick Bio (non-hazardous), used oil filters, diesel fuel, used antifreeze, Asphalt Cleaner, latex paint, propane, Zep Dyna Green-Water based Parts Cleaner, Citra Clean 34, Zep Split Vehicle Wash, 2420 BTU Diesel Supplement, and gasoline. Hazardous wastes generated as part of on-site facility operations were identified to consist of liquids with pH <= 2, unspecified oil-containing waste, aqueous solution with total organic residues 10 percent or more, waste and mixed oil, aqueous solution with total organic residues less than 10 percent, off-specification, aged or surplus organics, alkaline solution without metals pH >= 12.5, latex waste, and hydrocarbon solvents (benzene, hexane, Stoddard, Etc.). During the site reconnaissance, four one-gallon glass jars of trichloroethene (TCE) were observed within a flammable storage closet within Building 4. Chlorinated solvents like TCE are highly mobile chemicals that can easily accumulate in soil and soil gas, and migrate to groundwater beneath a facility. These solvents, even when properly stored and handled, can readily migrate into the subsurface as a result of small releases associated with on-site operations. Based on the length of time that the subject property had been utilized for industrial purposes, it is possible that petroleum hydrocarbons and/or VOCs may have impacted the subsurface of the subject property. Therefore, this information represents a REC.

Prior Agricultural Land Use

Based on a review of historical sources, the subject property was historically used for agricultural purposes. There is potential that agricultural chemicals, such as pesticides, herbicides and fertilizers, were used on site, and that the subject property has been impacted by the use

of such agricultural chemicals. In general, historical agricultural use is not the subject of environmental enforcement actions by regulatory agencies, and therefore, could be considered a de minimis condition. However, AEI understands that the subject property is slated for commercial redevelopment. Consequently, it would be prudent for the owner of the subject property to determine whether sampling relating to the former agricultural use of the subject property is required by the local planning department or other applicable oversight agency prior to the commencement of redevelopment activities.

If available, copies of historical sources are provided in Appendix D.

3.1 AERIAL PHOTOGRAPHS

AEI reviewed aerial photographs of the subject property and surrounding area. A search was made of the EDR collection of aerial photographs. Aerial photographs were reviewed for the following years:

Year(s)	Subject Property Description	Adjoining Site Descriptions
1939, 1948, 1950	Appears to be developed with agricultural land	NORTH: Appears to be developed with several small warehouse structures and railroad tracks, unimproved land is also visible NORTHEAST: Appears to be developed with railroad tracks and roads followed by agricultural and unimproved land SOUTHEAST: Appears to be developed with agricultural land and a farmstead with associated warehouse structures SOUTHWEST: Appears to be developed with agricultural land and a farmstead WEST: Appears to be developed with a road and railroad tracks followed by unimproved land
1956	No significant changes visible	NORTH: No significant changes visible NORTHEAST: Appears to be developed with railroad tracks and roads followed by what appear to be motel and gas station-related facilities, remainder appears as unimproved land SOUTHEAST: Appears to be developed with agricultural land, livestock-related warehouse structures and yards are also visible SOUTHWEST: Appears to be developed with agricultural land WEST: No significant changes visible
1963, 1968	No significant changes visible	NORTH: Appears to be developed with an industrial facility with rigging, a warehouse, and railroad tracks and a rail spur, followed by a small structure and a parking lot NORTHEAST: Appears to be developed with railroad tracks and roads followed by what appear to be three motel and three gas station-related facilities, remainder appears as

Year(s)	Subject Property Description	Adjoining Site Descriptions
		unimproved land SOUTHEAST: No significant changes visible SOUTHWEST: No significant changes visible WEST: No significant changes visible
1974	No significant changes visible	NORTH: Appears to be developed with an industrial facility with rigging, a warehouse, and railroad tracks and a rail spur, followed by several warehouse structures NORTHEAST: Appears to be developed with railroad tracks and roads followed by what appear to be motel and two gas station-related facilities and several warehouses, remainder appears as unimproved land SOUTHEAST: Appears to be developed with existing drive-in theater SOUTHWEST: Appears to be developed with an existing warehouse and parking lot WEST: Appears to be developed with a road and railroad tracks followed by a quarry facility and vacant land
1980*, 1982, 1987	Appears to be developed with portions of the existing facility, including overhead material processing equipment on north portion of property as well as Buildings 1 and 4, what appear to be ASTs that are visible northwest of Building 1, several partitioned rock material storage areas are visible along eastern portion of property Appears to be developed with a former office or warehouse structure, a parking lot, and storage yard are visible on southern portion of property The southwest portion of the property appears to be developed with six warehouse structures, including existing Building 3, along with storage yards	NORTH: Appears to be developed with an industrial facility, a warehouse, and railroad tracks and a rail spur, followed by several warehouse structures NORTHEAST: Appears to be developed with railroad tracks and roads followed by what appear to be motel-related facilities and auto dealerships, remainder appears as unimproved land SOUTHEAST: No significant changes visible SOUTHWEST: No significant changes visible with exception that existing structures are visible by 1987 WEST: No significant changes visible
1998,	Appears to be developed largely with existing facility configuration, including Buildings 1, 2, 3, and 4 Former office or warehouse structure(s), a parking lot, and storage yard remain visible on southern portion of property	NORTH: Appears to be developed with existing developments NORTHEAST: Appears to be developed with existing developments SOUTHEAST: No significant changes visible SOUTHWEST: No significant changes visible WEST: Appears to be developed with a road, railroad tracks, and a storage yard followed by a quarry facility

Year(s)	Subject Property Description	Adjoining Site Descriptions
	The southwest portion of the property appears to be developed with former warehouse structures on southwest portion of property are no longer visible with exception of existing Building 3	
2002*, 2006, 2009, 2012	No significant changes visible	NORTH: No significant changes visible NORTHEAST: No significant changes visible SOUTHEAST: No significant changes visible SOUTHWEST: Appears to be developed with existing developments WEST: Appears to be developed with existing developments
2016, 2018	Appears to be developed largely with existing facility configuration, including existing canopies	NORTH: No significant changes visible NORTHEAST: No significant changes visible SOUTHEAST: No significant changes visible SOUTHWEST: No significant changes visible WEST: No significant changes visible

*Due to copyright restrictions, copies of the aerial photographs reviewed are not included in the appendices, but can be viewed online at historicaerials.com, PropertyShark.com and through Google Earth.

Environmental concerns associated with the former agricultural uses and current industrial uses are further discussed in Section 3.0.

Environmental concerns associated with the former adjoining gas stations to the northeast are further discussed in Section 5.1.

3.2 Sanborn Fire Insurance Maps

Sanborn Fire Insurance maps were developed in the late 1800s and early 1900s for use as an assessment tool for fire insurance rates in urbanized areas. A search was made of the EDR collection of Sanborn Fire Insurance maps.

Sanborn map coverage was not available for the subject property.

3.3 City Directories

A search of historical city directories was conducted for the subject property utilizing EDR. Directories were reviewed in approximate five-year increments from 1922 to 2017. The first listing for the subject property appeared in 1980. The following table summarizes the results of the city directory search.

Year(s)	Address - Occupant Listed
1922-1978 (non-inclusive)	Subject property not listed
1980	110 Granite Rock Way - San Jose Brick
1982	Subject property not listed
1985	100 Granite Rock Way - Granite Rock Concrete Office

Year(s)	Address - Occupant Listed
	110 Granite Rock Way - San Jose Brick 120 Granite Rock Way - Piazza Construction Co., Davis CS
1986	100 Granite Rock Way - Granite Rock Capital Express Plant 110 Granite Rock Way - San Jose Brick 120 Granite Rock Way - Piazza Construction Co., Davis CS
1991	100 Granite Rock Way - Granite Rock Capital Express Plant, Granite Rock Financial 120 Granite Rock Way - Granite Construction
1994	100 Granite Rock Way - Granite Rock, Granite Rock Recycling 120 Granite Rock Way - Granite Construction
1996	100 Granite Rock Way - GA Rasmussen Inc. 120 Granite Rock Way - Granite Construction
1999	100 Granite Rock Way - GA Rasmussen Inc., Granite Rock San Jose Recycling Center, Granite Rock San Jose Road Materials and Asphalt 120 Granite Rock Way - Granite Construction
2000	100 Granite Rock Way - Granite Rock San Jose Recycling Center, Scalehouse, Baserock 110 Granite Rock Way - no current listing 120 Granite Rock Way - Granite Construction
2001	Subject property not listed
2004	100 Granite Rock Way - Pavex Construction, Spirit Road Oils Spreading, Occupant Unknown 120 Granite Rock Way - Granite Construction
2006	100 Granite Rock Way - Granite Rock Baserock Sales
2009	100 Granite Rock Way - Granite Rock Pavex Recycling Service, Pavex 120 Granite Rock Way - Granite Construction
2014	Subject property not listed
2017	100 Granite Rock Way - Granite Rock 120 Granite Rock Way - Granite Construction

If listed above, XXXX indicates that the address is valid but there is no occupancy information available.

Environmental concerns identified for the long-term industrial uses of the subject property are discussed in Section 3.0.

3.4 HISTORICAL TOPOGRAPHIC MAPS

A search of historical topographic maps was conducted for the subject property utilizing NETR Online (www.historicaerials.com). Topographic maps were reviewed for the following years:

Year(s)	Subject Property Description	Adjoining Site Descriptions
1897, 1899, 1901, 1905, 1909, 1913, 1926, 1939, 1946	No features depicted	NORTH: Depicted with a small structure and railroad tracks NORTHEAST: Depicted with railroad tracks and a road followed by no features SOUTHEAST: No features depicted SOUTHWEST: No features depicted WEST: Depicted with railroad tracks followed by no features
1955, 1959	No features depicted	NORTH: Depicted with several small structures and railroad tracks NORTHEAST: Depicted with railroad tracks and a road followed by L-shaped structure SOUTHEAST: No features depicted SOUTHWEST: No features depicted WEST: No significant changes depicted
1962, 1963, 1967, 1969, 1975	No features depicted	NORTH: No significant changes depicted NORTHEAST: Depicted with railroad tracks and a road followed by several rectangular and square structures SOUTHEAST: No features depicted SOUTHWEST: No features depicted WEST: No significant changes depicted
1980	No features depicted	NORTH: No significant changes depicted NORTHEAST: No significant changes depicted SOUTHEAST: No features depicted SOUTHWEST: Depicted with existing warehouse structure WEST: Depicted with railroad tracks followed by an area shaded as to depict mining operations
2012, 2016, 2018	No features depicted	NORTH: No features depicted besides road(s) NORTHEAST: No features depicted besides road(s) SOUTHEAST: No features depicted besides road(s) SOUTHWEST: No features depicted WEST: No features depicted besides road(s)

AEI did not identify potential environmental concerns in association with the historical use of the subject property during the historic topographic map review.

3.5 CHAIN OF TITLE

Based on the quality of information obtained from other sources, a chain of title search was not performed as part of this assessment.

4.0 REGULATORY AGENCY RECORDS REVIEW

Local and state agencies, such as environmental health departments, fire prevention bureaus, and building and planning departments are contacted to identify any current or previous reports of hazardous substance use, storage, and/or unauthorized releases that may have impacted the subject property. In addition, information pertaining to AULs, defined as legal or physical restrictions, or limitations on the use of, or access to, a site or facility, is requested.

4.1 LOCAL ENVIRONMENTAL HEALTH DEPARTMENT AND/OR STATE ENVIRONMENTAL AGENCY

Agency	Date Contacted	Method of Contact	Name & Title of Contact	Agency Response
Santa Clara County Department of Environmental Health (SCCDEH)	March 22, 2021	Website	Ms. Melissa Belloso, SCCDEH Staff	Records discussed below

Records Summary

Date	Occupant	Document Type	Document Notes/Violations
05/21/2002	Granite Construction Co. (120 Granite Rock Way)	SCCDEH Official Notice of Inspection	This was a complaint investigation regarding rinsing hazardous waste from equipment to storm drain(s). No hazardous waste was observed in the areas of the storm drain. Violations were issued for improper labeling of tank and containers, observed open hazardous containers next to waste oil tank, employee PPE/lack of training and paperwork deficiencies, and lack of daily inspections of the waste oil tank. The violations are listed as having been subsequently corrected.
08/08/2005	Granite Rock Co. (120 Granite Rock Way)	Secondary Containment Testing Report and Monitoring System Certification	Tests passed.
11/17/2005	Granite Rock Co./Pavex Construction (120 Granite Rock Way)	Hazardous Materials Waste Generator Permit Application	The following hazardous wastes and respective annual generated quantities were declared: 6,000 gallons used motor oil and 2,400 gallons used oil filters.
10/15/2007	Granite Rock Co. (120 Granite Rock Way)	Secondary Containment Testing Report and Monitoring System Certification	Tests passed.
02/28/2008	Granite Rock Co./Pavex Central (120 Granite Rock Way)	SCCDEH Official Notice of Inspection	The facility was noted as storing, transporting, and disposing of hazardous waste. The following violations were issued: 1) lack of

Date	Occupant	Document Type	Document Notes/Violations
			active EPA ID for transport of haz waste, 2) lack of proper labeling of containers, 3) lack of weekly inspection of haz waste storage areas, 4) observed used oil within secondary containment area of used oil tank along with saturated shop rags, 5) accumulation and storage of haz waste longer than 90 days, 6) lack of up to date contingency plan, 7) lack of employee training records, 8) lack of on-site written tank system assessment for used oil AST, 9) no written policy or mechanical device in place for overfill protection for the used oil AST, and 10) lack of daily inspections of the used oil AST. In addition, during the site visit, various waste oily-debris drums and waste coolant drums were observed on-site. The violations are listed as having been subsequently corrected. As part of a Hazardous Materials Waste Generator Permit Application, the following hazardous wastes and respective annual generated quantities were declared: 6,000 gallons used oil, 2,400 gallons used oil filters, 250 gallons waste coolant, 400 gallons used oily-debris, and 90 gallons waste paint.
06/05/2008	Granite Rock Co./Pavex Central (120 Granite Rock Way)	SCCDEH Official Notice of Inspection	A violation was issued for lack of written tank system assessment for the aboveground used oil tank. There was an additional aboveground used oil tank in use.
08/2009	Granite Rock Co. (120 Granite Rock Way)	Secondary Containment Testing Report and Monitoring System Certification	Tests passed.
09/02/2010	Granite Rock Co. (120 Granite Rock Way)	Secondary Containment Testing Report and Monitoring System Certification	Tests passed.

Date	Occupant	Document Type	Document Notes/Violations
08/11/2011	Granite Rock Co. (120 Granite Rock Way)	Secondary Containment Testing Report and Monitoring System Certification	All tests passed with exception of the gasoline secondary piping run. Bubbling was observed coming from compression fitting in gasoline UDC during test of the UDC.
08/16/2011	Granite Rock Co./Pavex Central (120 Granite Rock Way)	SCCDEH Official Notice of Inspection	The following violations were issued relating to the Hazardous Waste Generator Program: 1) hazardous waste determination (shop parts and equipment were washed in the wash rack that were treated with a biological agent that aids in processing, the byproduct is reused by unclear how this was accomplished), 2) marking of hazardous waste, 3) maintenance and operation of a facility (used oil was observed in the secondary containment for the used oil drain pans and saturated absorbent was observed in the secondary containment for the used oil drain pans), 4) facility failed to conduct a written tank assessment for the used oil tank, and 5) facility could not demonstrate that hazardous waste tanks were inspected on a daily basis. The following violations were issued relating to the UST Program: 1) lack of monthly UST inspections, 2) the diesel UST pressurized system did not perform the positive shut down, fail safe as noted on the monitoring plan, and 3) the under dispenser containment was bubbling, indicating a leak. No violations were issued as part of the Hazardous Materials Business Plan Program inspection. The aforementioned violations are indicated as having been subsequently corrected. Per the correction notes, the parts cleaner had been repaired and parts washing in the wash rack had ceased. In addition, repairs for the

Date	Occupant	Document Type	Document Notes/Violations
			under dispenser containment were to be corrected in the near future.
08/2011	Granite Rock Co./Pavex Central (120 Granite Rock Way)	Hazardous Materials Business Plan (HMBP)	As part of the HMPB, the facility declared usage of the following average daily quantities of hazardous substances: various quantities of compressed gases, 499 cf propane, 30 gallons Zep Dyna Green-Parts Cleaner, 275 gallons Zep Split Vehicle Wash and Zep R-6960 Asphalt Cleaner, 30 gallons latex paint, 30 gallons soluble oil, 2250 gallons gasoline, 6750 gallons diesel fuel, and 55 gallons used antifreeze, 55 gallons antifreeze, 365 gallons grease, 30 gallons BTU Diesel Supplement, 30 gallons kersone, 30 gallons Citra Clean 34, and 30 used oil filters.
01/27/2012	Granite Construction Co. (120 Granite Rock Way)	SCCDEH Letter	The letter approved planning for replacement/remodeling of UDC and associated piping (5 feet) and upgrade the UDC sensor. Replace the failed steel shallow Bravo box with a fiberglass Bravo UDC, install a Veeder- Root "stand aIone" UDC sensor. The existing Smith Red Thread 11 product pipe will be cut back and extended into the new UDC using a Bravo fiberglass penetration fitting. Electrical will not penetrate the UDC. A new "Flex-ing" flex line will be installed. The existing shear valve will be reused.
03/16/2012	Granite Construction Co. (120 Granite Rock Way)	SCCDEH Official Notice of Inspection	Performed as part of hazmat construction/remodeling. On-site for testing of the primary piping test connected to the UDCD and the spill bucket for the fill and vapor recovery.
03/22/2012	Granite Construction Co. (120 Granite Rock Way)	SCCDEH Official Notice of Inspection	Performed as part of hazmat construction/remodeling. On-site for testing of the secondary piping, under dispenser containment hydrostatic test and the re-test of the vapor recovery bucket.

Date	Occupant	Document Type	Document Notes/Violations
04/04/2012	Granite Construction Co. (120 Granite Rock Way)	SCCDEH Official Notice of Inspection	Performed as part of hazmat construction/remodeling. On-site to witness the testing of the UDC stand alone sensor as well as the fail sale and positive shut down. All tests passed.
08/08/2012	Granite Construction Co. (120 Granite Rock Way)	Monitoring System Equipment Certification/ Spill Bucket Testing Form	Tests passed.
08/13/2012	Granite Rock Co./Pavex Central (120 Granite Rock Way)	SCCDEH Official Notice of Inspection	The UST system was indicated as consisting of one diesel UST (pressurized piping) and one unleaded gasoline UST (suction piping) that share a divided tank. The following violations were issued relating to the UST Program: 1) float and chain assembly in the diesel dispenser failed to trip shear valve when water introduced, water was noted in the float, the float was drained of water, 2) failure to keep current UST monitoring plan, and 3) incorrect operating permit. No corrective actions were required. No violations were issued as part of the Hazardous Materials Business Plan Program inspection.
08/08/2013	Granite Rock Co./Pavex Central (120 Granite Rock Way)	SCCDEH Official Notice of Inspection	As part of a HMBP Program inspection, a violation was issued for failure to annually report or certify their hazardous materials inventory. No violations were issued as part of the UST Program.
08/08/2013	Granite Construction Co. (120 Granite Rock Way)	Monitoring System Equipment Certification/ Spill Bucket Testing Form	Tests passed.
06/14/2014	Granite Rock Co. (120 Granite Rock Way)	UST Secondary Containment Testing	Tests passed with exception of diesel UDC, needs to be repaired and re-tested.
08/08/2014	Granite Rock Co./Pavex Central (120 Granite Rock Way)	SCCDEH Official Notice of Inspection	The following violations were issued relating to the HMBP Program: 1) failure to maintain an accurate and HMBP, 2) failure to notify in change of inventory, address, ownership, or

Date	Occupant	Document Type	Document Notes/Violations
			business name, 3) failure to properly mark a hazardous waste tank and/or container, and 4) failure to retain waste manifests, incomplete hazardous waste training. No violations were issued as part of the UST Program.
08/08/2014	Granite Construction Co. (120 Granite Rock Way)	Monitoring System Equipment Certification/ Spill Bucket Testing Form	Tests passed.
08/22/2014	Granite Rock Co./Pavex Central (120 Granite Rock Way)	SCCDEH Official Notice of Inspection	The following violations were issued relating to the HMBP Program: 1) failed to submit or maintain an accurate and complete HMBP, 2) failure to notify in change of inventory, address, ownership, or business name, 3) failure to properly mark a hazardous waste tank and/or container, and 4) failure to retain waste manifests, incomplete hazardous waste training. The violations are listed as having been subsequently corrected.
07/29/2015	Granite Rock Co. (120 Granite Rock Way)	SCCDEH Hazardous Materials Construction Permit Application	Application for the following: upgrade of existing 15,000-galion underground manifolded-gas and diesel-tank, upgrade includes new product level sensor, overfill alarms, and monitoring system.
08/07/2015	Granite Rock Co./Pavex Central (120 Granite Rock Way)	SCCDEH Official Notice of Inspection	The following violations were issued relating to the UST Program: 1) leak detection equipment monitoring piping secondary containment (e.g., submersible turbine sump, piping sump, vapor pot) in an Underground storage tank (UST) system installed between 1/2/1984 and 6/30/2004 failed to function properly when tested or is otherwise non functional, 2) UST owner/operator failed to obtain a permit from HMCD prior to installing, replacing, repairing, or modifying a UST system, 3) and fail safe sensor out condition caused positive shutdown, but power out did

Date	Occupant	Document Type	Document Notes/Violations
			not. VMI LD 2000 mechanical line leak detector (MLLD) detected a simulated 3 gph leak at 10 PSI and held slow flow. The violations are listed as having been subsequently corrected.
08/07/2015	Granite Rock Co. (120 Granite Rock Way)	Monitoring System Equipment Certification/ Spill Bucket Testing Form	Tests passed with exception of Fail Safe.
08/12/2016	Granite Rock Co./Pavex Central (120 Granite Rock Way)	SCCDEH Official Notice of Inspection	The following violations were issued relating to the UST Program: 1) update the Financial Responsibility information and submit it to CERS, 2) DUSTO reports were disposed of by facility employees, ensure employees maintain the DUSTO reports and keep them available for review, 3) due to the nature of the site and the location of the alarm panel (outside in the yard with heavy equipment driving by and inside a closed panel box) while the audible and visible alarms function at the panel, it would be difficult for employees to observe them, 4) float and chain in the high flow UDC did not function when initially tested, after adjustment the float and chain functioned as required, 5) the diesel piping in the dispenser was leaking and there was diesel accumulating in the UDC, have the piping repaired to maintain primary containment, and 6) the response to the 8/7/2015 inspection report was not received by our office. The violations are listed as having been subsequently corrected.
08/12/2016	Granite Rock Co. (120 Granite Rock Way)	Monitoring System Equipment Certification/ Spill Bucket Testing Form	Tests passed. Removed small amount of product from dispenser 2 sump.
08/2017	Granite Rock Co./Pavex Central (120 Granite Rock Way)	SCCDEH Official Notice of Inspection	As part of the UST Program, the following violation was issued: 1) the diesel sump and the diesel regular flow UDC failed to pass the Incon accelerated testing, investigate the source of the failures and repair and

Date	Occupant	Document Type	Document Notes/Violations
			retest the sump and UDC and 2) the UST Monitoring Site Plan needs to be updated to reflect the current monitoring system, and 3) there was a false "Theft Alarm" that comes up every night between 12:00 and 2:00, have the issue repaired to ensure leak alarms are noticed at the earliest opportunity and not dismissed as a false alarm. As part of the HMBP Program, the following violation was issued: prior to 6/19/2017 submittal the most recent HMBP submittal was 9/ 2015., ensure the HMBP is reviewed and resubmitted at least annually. The violations are listed as having been subsequently corrected.
08/16/2017	Granite Rock Co. (120 Granite Rock Way)	UST Secondary Containment Testing Report Form	Tests passed with exception of diesel turbine sump, 87 vapor return (need investigation. Not leaking in UDC or Sumps), diesel product secondary, and UDC 2. Diesel STP Failed Needs Further investigation, conduit penetration packed with sealant all around the hard fitting, sealant all packed around diesel vent penetration. UDC 1/2 failed, possible conduit/ penetration boot. Need to further investigate.
08/25/2017	Granite Rock Co. (120 Granite Rock Way)	Monitoring System Equipment Certification/ Spill Bucket Testing Form	Tests passed.
06/28/2018	Granite Rock Co./Pavex Central (120 Granite Rock Way)	SCCDEH Official Notice of Inspection	The following violations were issued relating to the Hazardous Materials Business Plan (HMBP) Program: 1) significant changes to the chemical inventory have been made at the facility and the HMBP was not updated, update and submit the HMBP within 30 days of significant changes are made, ensure the chemical inventory and storage map is kept up to date as required, 2) facility failed to properly mark a hazardous waste tank and/or container, 3) facility

Date	Occupant	Document Type	Document Notes/Violations
			failed to retain the original and/or treatment/storage/disposal facility (TSDF) -signed copy of a Uniform Hazardous Waste Manifest, 4) facility failed to maintain sufficient aisle space to permit the unobstructed movement of personnel and equipment to all areas of facility operation in case of an emergency, 5) facility accumulated hazardous waste on-site for longer than the allowed time limit, 6) facility could not provide daily inspection logs for the tank, and 7) observed electronic waste (CRT monitors/TVs) that were stored in a way that might cause a release. The violations are listed as having been subsequently corrected. During the site visit the inspector observed 3 new oil tanks, 1 hydraulic oil tank, 3x 55 gallon Gear Lube (Syngear 165), Brake Cleaner (Wurth) 55 gallons, 3x 275 gallon totes of Diesel Exhaust Fluid, and an additional 3 totes of Daraset. Also observed that Oxygen and Argon/Carbon Dioxide is no longer being stored in the small tools area and the location of the other gases have been moved from directly behind the shop to behind the office trailers.
08/24/2018	Granite Rock Co. (120 Granite Rock Way)	Monitoring System Equipment Certification/ Spill Bucket Testing Form	Tests passed.
08/30/2018	Granite Rock Co./Pavex Central (120 Granite Rock Way)	SCCDEH Official Notice of Inspection	The following violations were issued relating to the UST Program: 1) UST owner/operator failed to submit or keep a current UST monitoring site plan, 2) failure to have UST monitoring plan approved, facility failed to notify HMCD of DUSTO, 3), no action had been taken to repair the failures observed at the 08/16/2017

Date	Occupant	Document Type	Document Notes/Violations
			secondary containment testing, and 4) failure to respond to 08/16/2017 and 08/25/2017 inspection reports. The violations are listed as having been subsequently corrected.
11/02/2018	Granite Rock Co./Pavex Central (120 Granite Rock Way)	SCCDEH Hazardous Materials Construction Permit Application	Application to address S8 989 failures at the site including in the diesel STP and UDC #1-2.
03/12/2019	Granite Rock Co./Pavex Central (120 Granite Rock Way)	SCCDEH Official Notice of Inspection	On-site to witness testing for repairs that were done at this site for the above permit. The following components were tested and passed; - Diesel STP hydrodostatic accelerated 15 minutes test. - UDC 112 hydrostatic accelerated 15 minutes test. - Diesel secondary line was pressurized at 5.0 p.s.ifor 60 minutes. Observed the gauge returned back down to zero without any loss in pressure. - 87 secondary line was pressurized at 5.0 p.s.i for 60 minutes. Observed the gauge returned back down to zero without any loss in pressure. The following repairs under this permit were made as follows; - Diesel STP; 4 ICON conduit penetrations were installed and 1 product penetration was installed. - 87 STP; Reducer fittings were replaced. - No ICON penetrations were installed inside UDC 112.
03/12/2019	Granite Rock Co. (120 Granite Rock Way)	UST Secondary Containment Testing Report Form	Replaced conduit penetration boot to diesel product piping and diesel STP sump. Tightened conduit penetration clamps in UDC 1/2. Tests passed.
09/13/2019	Granite Rock Co./Pavex Central (120 Granite Rock Way)	SCCDEH Official Notice of Inspection	The following violations were issued relating to the UST Program: 1) the monitoring plan submitted on 7-2 2019 had the following inaccuracies: Monitoring Plan for Gasoline Tank (suction) identified having a line leak detector

Date	Occupant	Document Type	Document Notes/Violations
			(LD-2000), monitoring Plan for both Gasoline and Diesel tank identify the monitoring panel manufacturer as a Pneumercator, and annular sensor as LS-6000, identify Monitoring Panel as Incon TS 750, and annular sensor as Incon TSP-ULS, Monitoring Plan for both gasoline and diesel tank indicate tank integrity testing is performed annually, however it is not, 2) petroleum UST owner/ operator failed to submit or keep current accurate and complete evidence of UST financial responsibility, 3) facility failed to ensure the UST monitoring equipment is tested and certified every 12 months, 4) overfill prevention equipment (flapper valve) had not been inspected, inspection was required no later than 10-13-2018, ensure overfill prevention equipment tested as soon as possible, and 5) upon removal of Diesel STP sensor from monitoring panel, turbine remained energized. The violations are listed as having been subsequently corrected.
09/13/2019	Granite Rock Co. (120 Granite Rock Way)	UST Monitoring Certification Form	Tests passed. Removed liquid from 87 sump into drum on-site. Diesel STP would not shutdown when conducting sensor out.
08/18/2020	Granite Rock Co. (120 Granite Rock Way)	UST Secondary Containment Testing Report Form	Tests passed with exception of UDC 2 testing, needs further investigation.
09/09/2020	Granite Rock Co. (120 Granite Rock Way)	UST Secondary Containment Testing Report Form	Tightened Bravo hub and sealed around hub. Tests passed.
08/25/2020	Granite Rock Co./Pavex Central (120 Granite Rock Way)	UST Monitoring Certification Form	Tests passed.
09/22/2020	Granite Rock Co./Pavex Central (120 Granite Rock Way)	SCCDEH Official Notice of Inspection	The following violations were issued relating to the UST Program: 1) UST owner/operator failed to submit or failed to maintain accurate and complete UST Operating Permit Application Information, 2) UST owner/

Date	Occupant	Document Type	Document Notes/Violations
			operator failed to submit or failed to keep current an accurate and complete UST Monitoring Plan; or the UST Monitoring Plan submitted is not approved by HMCD, 3) petroleum UST owner/operator failed to submit or keep current accurate and complete evidence of UST financial responsibility, 4) UST owner/operator failed to ensure that a qualified Designated UST Operator (DUSTO) has been performing inspections of the UST system(s) as required, 5) UST owner/operator failed to keep documentation of training provided to facility employees by the Designated UST Operator (DUSTO) as required, 6) UST owner/operator failed to maintain UST monitoring records or records associated with maintenance and performance of monitoring equipment as required, 7) facility failed to conduct inspections of overfill prevention equipment on or before 10/13/ 2018, 8) UST owner/operator failed to submit one or more Overfill Prevention Equipment Inspection Report Forms and attachments as required. The violations are listed as having been subsequently corrected.
10/07/2019	Granite Rock Co. (120 Granite Rock Way)	UST Overfill Prevention Equipment Inspection Report Form	Tests passed.
11/22/2019	Granite Rock Co. (120 Granite Rock Way)	UST Monitoring Certification Form	Corrected Wiring Issue & Retested for Positive Shut Down - Tested & Passed.
05/24/2021	Granite Rock Co./Pavex Central (120 Granite Rock Way)	UST Monitoring Certification Form	Tests passed.
11/23/2021	Granite Rock Co./Pavex Central (120 Granite Rock Way)	UST Spill Container Testing Report Form	Tests passed.
11/23/2021	Granite Rock Co./Pavex Central (120 Granite Rock Way)	SCCDEH Official Notice of Inspection	On-site to conduct a final inspection for permit #SR0867404. The following components was tested and passed during this

Date	Occupant	Document Type	Document Notes/Violations
			inspection: - 5 gallon. Diesel Spill bucket was hydrostatically tested using the accelerated INCON tester (15 minutes test) and it passed.
08/23/2021	Granite Rock Co./Pavex Central (120 Granite Rock Way)	SCCDEH Official Notice of Inspection	The following violations were issued relating to the UST Program: 1) the UST permit application, tank information for both USTs do not identify the installation date for the USTs, 2) the UST Response Plan has persons identified that may not be the correct persons to be responding at this time, 3) Granite Rock did not respond to UST-related alarm on Sunday 8/22, at 108:00 in a timely manner, it was not discovered by Granite rock until the 10:00 hour on 8/23, 4) records show a problem with the system as for unexplained reasons, the alarm shows "Theft detected", the alarm history shows theft detected multiple times, 5) the UST alarm system shall have communication established to notify an appropriate person on site or remotely in a timely manner, 6) the Power Out test showed to me that the UST pump is wired to bypass the monitoring system, and 7) the Diesel Spill Containment bucket was not holding water while testing today. The violations are listed as having been subsequently corrected.
08/27/2021	Granite Rock Co./Pavex Central (120 Granite Rock Way)	SCCDEH Official Notice of Inspection	On-site to witness Overfill Equipment inspection. All testing passed.
08/27/2021	Granite Rock Co. (120 Granite Rock Way)	UST Overfill Prevention Equipment Inspection Report Form	Tests passed.
11/10/2021	Granite Rock Co./Pavex Central (120 Granite Rock Way)	SCCDEH Hazardous Materials Construction Permit Application	Application for replacement of existing spill box for one diesel tank.
02/08/2022	Granite Rock Co./Pavex Central (120 Granite Rock Way)	SCCDEH Official Notice of Inspection	The following violations were issued relating to the Hazardous Materials Business Plan (HMBP) Program: 1) missing or incomplete inventory information, 2) missing or

Date	Occupant	Document Type	Document Notes/Violations
			incomplete site map, and 3) lack of emergency response training documentation. The following violations were issued relating to the Hazardous Waste Generator Program: 1) observed 1x55 gallon drum of hazardous waste outside in the yard with no contents, determine the contents of this drum, 2) observed non-empty oil quart containers and saturated oily rags in trashcans inside the auto shop, the bottles were removed at the time of inspection, 3) lack of proper marking of hazardous waste, 4) open hazardous waste containers, 5) observed that used antifreeze and used oil tanks have a remote feed system but no overfill protection, the used oil tank has been overfilled based on oil staining at the top of the tank, observed oil in the secondary containment, 6) lack of hazardous waste training documentation, 7) facility had not conducted tank system assessments on hazardous waste tanks onsite, 8) facility failed to provide waste minimization and biennial reports, 9) facility did not mark an empty hazardous material/ waste container larger than 5 gallons in capacity with the date it was emptied, and 10) illegal disposal of hazardous waste (observed non-empty aerosol cans(1) in trashcans outside the auto shop, can was removed at the time of inspection). The inspector observed the following reportable hazardous materials: 110 gallons of 5W40, 6560 gallons of gasoline fuel (4500 in an underground storage tank, 1500 in a mobile refueler), 110 gallons of 5W30, 240 gallons of 15W40CK4 castoil, 240 gallons of tractor fluid, 150 gallons of radicool SF OPE mix, 260 gallons of used

Date	Occupant	Document Type	Document Notes/Violations
			antifreeze (reported as 250 gallons), 13500 gallons of clear diesel fuel (in an underground storage tank), >500 lbs of grease (4x15 gallon drums, 4x55 gallon drums), 640 gallons of used oil, >500 lbs of used oil filters (2x55 gallon drums of crushed filters) (reported as 110 gallons), >500 lbs of contaminated oily solids (2x55 gallon drums of crushed filters), 55 gallons of break cleaner, 75 gallons of parts washing liquids, 2452 cf of acetylene gas (reported as 1500 cf), 4401 cf of oxygen gas (reported as 4000 cf), 1580 cf of argon and carbon dioxide gas (reported as 800 cf), 275 gallons of HaloKlear BHR-P50 cleaner, 540 gallons of liquid propane gas (reported as 499 cf), 65 gallons of R2K Grr Cleaner, >55 gallons of lead acid batteries (in 10 portable light fixtures, and in the shop area), 275 gallons of Polarset, 60 gallons of hydraulic oil (on a mobile refueler), and 550 gallons of Daraset 400 Facility had the following materials below reporting thresholds: 450 gallons of diesel exhaust fluid, 20 gallons of chevron soluble oil, <55 gallons per type of other misc. oils, <55 gallons per type of misc. paints and aerosols, 15 gallons of 75W90 oil, and 20 gallons of spraymaster liquid.
03/15/2022	Granite Rock Co./Pavex Central (120 Granite Rock Way)	SCCDEH Official Notice of Inspection	A site inspection of this facility took place on 1/27/22, with the report issued on 2/8/22. During that inspection, several CONEX boxes used as storage space for the facility could not be accessed. Some of these CONEX boxes had NFPA diamonds indicating potential hazardous materials storage. A follow-up inspection commenced on 3/7/22 to inspect these storage areas. The follow-up inspection

Date	Occupant	Document Type	Document Notes/Violations
			concluded with the issuance of this report on 3/15/22. The storage area for portable generators contained large, dark stains, indicating potential releases of oil. Address this issue to ensure that any hazardous wastes, including used oil, is properly contained and disposed of. The inspector observed the following materials: 27x 5-gallon containers of waterborne traffic paint, 9x 50-lbs bags of concrete mix, 10x 50-lbs bags of HOLEPLUG, ~20 gallons of miscellaneous paints, 10 gallons of IPA, and 5x ~5-gallons of diesel in portable generators.

Other forwarded documents included California Environmental Reporting System (CERS), Certification of Financial Responsibility for Granite Rock, Hazardous Materials Business Plans (HMBPs), UST Monitoring Plans, UST Response Plans, tenant/agency letter correspondence, invoices, product manuals and specifications, and associated administrative documents.

Also included were waste manifests for the off-site disposal of 600 tons of non-RCRA hazardous petroleum hydrocarbon solid waste in 2017 and 200 tons of the same waste in 2018.

Environmental concerns identified for the subject property are discussed in Section 3.0.

Agency	Date Contacted	Method of Contact	Name & Title of Contact	Agency Response
California Environmental Protection Agency (CalEPA)	March 28, 2022	Website	N/A	Records discussed below

Granite Rock Capitol Plant, 100 Granite Rock Way, is listed as a Leaking Underground Storage Tank (LUST) site with an environmental interest start date of 04/21/1995 and an environmental interest end date of 11/08/1996, as well as a Toxic Release Inventory (TRI) site with a date of last tri submission of 12/01/2021. The LUST case is further discussed in Section 4.6. Per the TRI program, facilities must report annually how much of each regulated chemical is released to to the environmental and/or managed through recycling, energy recovery, and treatment.

Graniterock Capitol Site, 100 Granite Rock Way, is listed as an Industrial Storm Water Facility with an environmental interest start date of 11/23/1992.

Granite Rock Co., 100 Granite Rock Way, is listed as a hazardous waste generator and chemical storage with AST(s) with an environmental interest start date of 07/10/2013 and a last inspected date of 05/08/2018, as well as in the US EPA Air Emission Inventory System as large stationary sources of air point pollution emitters. Various violations were issued to the facility by a

local agency during AST, Hazardous Waste Generator, and HMBP Program compliance site inspections performed between 2014 and 2018; refer to Sections 4.1 and 4.2 for further discussion regarding violations. The facility is listed as storing various quantities of the following chemicals on-site: Zyla 625, WRDA 64, Recover, Masterlife SRA 20, Master Pozzolith 322, Master Glenium, Delvo Stabilizer, DCI Corrosion Inhibitor, Daravair 1000, Daraset 1400, and ADVA 190 Concrete Admixtures.

Central Concrete Supply and Granite Rock Co., 110 Granite Rock Way, are both listed in the US EPA Air Emission Inventory System as large stationary sources of air point pollution emitters.

Granite Rock Company-Pavex Capital, 120 Granite Rock Way, is listed as a hazardous waste generator and a chemical storage facility with UST(s) with an environmental interest start date of 07/10/2013. Various violations were issued to the facility by a local agency during UST, Hazardous Waste Generator, and HMBP Program compliance site inspections performed between 2013 and 2021; refer to Sections 4.1 and 4.2 for further discussion regarding violations. The facility is listed as storing various quantities of the following chemicals on-site: waste ethylene glycol, tractor fluid, rinse water, R2K Grr Cleaner, propane, portable fuel tanks, parts washing liquid, oxygen, used lubricating oils, lead acid batteries, hydrocarbons, HaloKlear BHR-P50, grease, gasoline, ethylene glycol, drained used oil filters, diesel, CO2, argon mixture with CO2, argon isotope of mass 37, acetylene, and 15W40 CK4 Castoil.

Environmental concerns identified for the subject property are discussed in Section 3.0.

4.2 FIRE DEPARTMENT

Agency	Date Contacted	Method of Contact	Name & Title of Contact	Agency Response
San Jose Fire Department (SJFD)	Ms. Loretta Worthy, SJFD Staff	Email	Ms. Loretta Worthy, SJFD Staff	Records discussed below

Records Summary

Date	Occupant	Document Type	Document Notes/Violations
09/14/1979	Piazza Construction (120 Granite Rock Way)	SJFD Flammable Liquid Tank Application	Approved application for the construction of one 1,000 gallon motor oil and one 500 gallon motor oil UST.
04/27/1990	Granite Construction (120 Granite Rock Way)	SJFD Record of Inspection	The business was listed as a hazmat storage, welding/cutting, and flammable/combustible liquids/ tank facility. Various minor violations were issued which were subsequently corrected.
07/08/1991	Granite Construction (120 Granite Rock Way)	SJFD Record of Inspection	The business was listed as a hazmat storage, welding/cutting, and flammable/combustible liquids/ tank facility. The following violations were issued: 1) provide HMBP, 2) cleanup waste oil drums, diesel, and solvent etc.), 3) provide secondary containment for used

Date	Occupant	Document Type	Document Notes/Violations
			batteries, and 4) cleanup misc. trash etc. in rear yard. The violations are indicated as having been subquently corrected.
09/03/1991	Granite Construction (120 Granite Rock Way)	Water Board UST Permit Application Information	A 20,000 gallon bulkheaded motor vehicle fuel UST, installed in 1991, was noted on-site, with an electronic monitoring system.
11/10/1992	Granite Construction (120 Granite Rock Way)	SJFD Record of Inspection	The business was listed as a hazmat storage, welding/cutting, and flammable/combustible liquids/ tank facility. No violations were issued during this inspection.
11/11/1993	Granite Construction (120 Granite Rock Way)	SJFD Record of Inspection	The business was listed as a hazmat storage, welding/cutting, and flammable/combustible liquids/ tank facility. The following violations were issued: 1) provide secondary containment for waste batteries, 2) separate gases, 3) replace missing electrical covers, 4) improper use of extension cords, 5) secure compressed gas cylinders, and 6) secure fire extinguishers. The violations are indicated as having been subquently corrected.
03/06/1997	Granite Construction (120 Granite Rock Way)	Hazardous Substance Inventory Matrices	As part of a HMBP, various quantities of the following chemicals were declared on-site: diesel fuel, gasoline, refined petroleum oils, used motor oil, grease duraplex, acetylene, propane, degreaser (para menthadiene), solvent (aliphatic naphtha), spray, and oxygen.
08/01/1997	Granite Construction (120 Granite Rock Way)	SJFD Record of Inspection	The business was listed as a compressed gas, hazardous material, motor vehicle fueling station, repair garage, and welding/ cutting facility. The following violations were issued: 1) provide annual test for tanks, 2) maintain monthly records, 3) secondary containment for used oil in shop, 4) no smoking, and 5) mount fire extinguishers.
04/05/1999	Granite Construction (120 Granite Rock Way)	SJFD Record of Inspection	The business was listed as a compressed gas, hazardous material, motor vehicle fueling station, repair garage, and welding/

Date	Occupant	Document Type	Document Notes/Violations
			cutting facility. The following violations were issued: 1) provide annual monitoring certification, 2) provide cover plate for electrical outlet, 3) no extension cords used for permanent wiring, 4) mount fire extinguishers in hall, and 5) provide separation containment and monitoring plan.
04/13/1999	Granite Construction (120 Granite Rock Way)	UST Monitoring System Equipment Certification	Tests passed.
09/06/2000	Granite Construction (120 Granite Rock Way)	SJFD Record of Inspection	The business was listed as a compressed gas, hazardous material, hotworks, motor vehicle fueling station, and repair garage facility. The following violations were issued: 1) provide extinguisher for welding cart, 2) provide secondary containment for used batteries, 3) provide annual monitoring certification, and 4) provide HMBP.
09/12/2000	Granite Construction Co. (120 Granite Rock Way)	UST Monitoring System Equipment Certification	Tests passed. Included site plans depict a 10,000 gallon and 5,000 gallon diesel split UST with 3 dispensers.
09/15/2000	Granite Construction Co. (120 Granite Rock Way)	Hazardous Materials Business Plan (HMBP)	As part of the HMBP, various average annual quantities of the following was noted on-site: diesel fuel, gasoline, refined petroleum oils and motor oils, grease dupralex, acetylene, propane, para menthadene, aliphatic naphtha, nontonic, oxygen, used motor oil, ethylene, and safety kleen. The existing gasoline and diesel USTs and associated dispensers are depicted on an included site plan, as well as a 1,000 gallon waste oil "tank" depicted immediately north of Building 1. A site plan showing the interior of Building 1 depicts equipment repair, propane storage, parts storage, tool storage, and general storage areas, as well as a "work pit." Another included site plan depicts what appear to be the former southern structures used as offices.

Date	Occupant	Document Type	Document Notes/Violations
06/13/2003	Granite Construction Co. (120 Granite Rock Way)	UST Monitoring System Equipment Certification	Tests passed.
06/19/2003	Granite Construction Co. (120 Granite Rock Way)	SJFD Record of Inspection	The business was listed as a compressed gas, hazardous material, hotworks, motor vehicle fueling station, and repair garage facility. No violations were noted during this inspection.
08/06/2004	Granitrock Co. (120 Granite Rock Way)	UST Monitoring System Equipment Certification	Tests passed.
08/18/2004	Granite Rock Co. (120 Granite Rock Way)	SJFD Record of Inspection	Several minor violations were issued which were subsequently corrected.
10/20/2004	Granitrock Co. (120 Granite Rock Way)	Hazardous Materials Business Plan (HMBP)	As part of the HMBP, maximum daily quantities of the following were noted on-site: 15,000 gallons of diesel fuel and 5,000 gallon of gasoline in UST.
08/04/2005	Granitrock Co./Pavex (120 Granite Rock Way)	Hazardous Materials Business Plan (HMBP)	As part of the HMBP, various average annual quantities of the following was noted on-site: acetylene, ethylene glycol, modified alkylated compounds, oxygen, grease, motor oil, hydraulic fluid, used motor oil, nitrogen, SystemOne Qsol 100 parts cleaner (aliphatic petroleum distillate), Super Slick Bio, and used oil filters. An included overall site plan depicts a shop building (Building 1), fuel islands, a 5,000 gallon diesel UST, a 15-gallon gasoline UST, a 1,000 gallon waste oil tank, and storage sheds. An included site plan of Building 1 depicts parts storage, a parts washer, grease and oil storage areas, and an "oil pit."
08/08/2005	Graniterock Co. (120 Granite Rock Way)	UST Monitoring System Equipment Certification	Tests passed.
01/27/2007	Graniterock Co./Pavex (120 Granite Rock Way)	Hazardous Materials Business Plan (HMBP)	As part of the HMBP, various average annual quantities of the following was noted on-site: acetylene, antifreeze, modified alkylated compounds, oxygen, grease, motor oil, hydraulic fluid, used motor oil, nitrogen, SystemOne Qsol 100 parts cleaner (aliphatic petroleum distillate), Super Slick Bio, used oil filters, diesel fuel, and gasoline. An

Date	Occupant	Document Type	Document Notes/Violations
			included site plan of Building 1 depicts parts storage, a parts washer, grease and oil storage areas, and an "oil pit."
01/29/2007	Granite Rock Co. (120 Granite Rock Way)	SJFD Record of Inspection	The business was listed as a compressed gas, hazardous material, hotworks, motor vehicle fueling station, flammable/ combustible, and repair garage facility. Minor violations were issued which were subsequently corrected.
10/15/2007	Graniterock Co./Pavex (120 Granite Rock Way)	UST Monitoring System Equipment Certification	Tests passed.
03/28/2008	Graniterock Co./Pavex (120 Granite Rock Way)	Hazardous Materials Business Plan (HMBP)	As part of the HMBP, various average annual quantities of the following was noted on-site: acetylene, antifreeze, compressed air, oxygen, grease, motor oil, hydraulic fluid, used motor oil, nitrogen, SystemOne Qsol 100 parts cleaner (aliphatic petroleum distillate), Super Slick Bio (non-hazardous), used oil filters, diesel fuel, used antifreeze, Asphalt Cleaner, BTU Diesel Supplement and Cleaner, latex paint, waste coolant, latex paint, and propane.
08/25/2008	Graniterock Co. (120 Granite Rock Way)	UST Monitoring System Equipment Certification	Tests passed.
08/28/2008	Graniterock Co. (120 Granite Rock Way)	SJFD Record of Inspection	A violation was issued for construction permits for canopies.
02/19/2009	Graniterock Co./Pavex (120 Granite Rock Way)	Hazardous Materials Business Plan (HMBP)	As part of the HMBP, various average annual quantities of the following was noted on-site: acetylene, antifreeze, compressed air, oxygen, grease, kersone, motor oil, hydraulic fluid, used motor oil, nitrogen, Zeps Parts Cleaner (water-based cleaner), SystemOne Qsol 100 parts cleaner (aliphatic petroleum distillate), Super Slick Bio (non-hazardous), used oil filters, diesel fuel, used antifreeze, Asphalt Cleaner, latex paint, propane, Zep Dyna Green-Water based Parts Cleaner, Citra Clean 34, Zep Split Vehicle Wash, 2420 BTU Diesel Supplement, and gasoline.

Date	Occupant	Document Type	Document Notes/Violations
02/20/2009	Graniterock Co. (120 Granite Rock Way)	BAAQMD Authority to Construct Letter	Authority by BAAQMD to construct GDF Modification - Phase II Removal/ORVR Exemption, resulting in one 10,000 gallon diesel tank with one nozzle, one 5,000 gallon gasoline tank, and one conventional nozzle, with Phase I Vapor Recovery Equipment.
08/04/2009	Graniterock Co. (120 Granite Rock Way)	SJFD Record of Inspection	The business was listed as a compressed gas, hazardous material, hotworks, motor vehicle fueling station, flammable/ combustible, and repair garage facility. A violation was issued to install or repair UDCs. Other minor violations were also issued. The violations were subquently corrected.
09/02/2010	Graniterock Co. (120 Granite Rock Way)	UST Monitoring System Equipment Certification	Tests passed.
09/02/2010	Graniterock Co. (120 Granite Rock Way)	SJFD Record of Inspection	Minor violations were issued which were subsequently corrected.
08/02/2011	Granite Rock Co./Pavex (120 Granite Rock Way)	Hazardous Materials Business Plan (HMBP)	As part of the HMBP, various average annual quantities of the following was noted on-site: gasoline, diesel fuel, used oil, used antifreeze, compressed air, grease, acetylene, oxygen, propane, Zep Dyna Green-Parts Cleaner, Zep Split Vehicle Wash, Zep R Asphalt Cleaner, latex paint, soluble oil, kerosene, and Citra Clean 34.
08/08/2014	Granite Rock Co. (120 Granite Rock Way)	UST Monitoring System Equipment Certification	Tests passed.
09/22/2014	Granite Rock Co. (120 Granite Rock Way)	Hazardous Materials Inventory Matrices	Various average annual quantities of the following was noted on-site: air, gasoline, diesel fuel, Zep Dyna Green-Parts Cleaner, Zep Split Vehicle Wash, Zep R Asphalt Cleaner, liquified petroluem gas, antifreeze, grease, BTU Diesle Supplement, latex paint, soluble oil, used lubricating oils, CO2, argon-CO2 mixture, acetylene, oxygen, DSX Drag Slate Cleaner, argon-37, Grace Adva (concrete admixture), and Grace Daraset (calcium nitrate, mixture).
08/19/2015	Granite Rock Co. (120 Granite Rock Way)	Hazardous Materials Inventory Matrices	Various average annual quantities of the following was noted on-site: air, gasoline, diesel fuel, Zep Dyna

Date	Occupant	Document Type	Document Notes/Violations
			Green-Parts Cleaner, Zep Split Vehicle Wash, Zep R Asphalt Cleaner, liquified petroluem gas, antifreeze, grease, BTU Diesle Supplement, latex paint, soluble oil, used lubricating oils, CO2, argon-CO2 mixture, acetylene, oxygen, DSX Drag Slate Cleaner, argon-37, Grace Adva (concrete admixture), and Grace Daraset (calcium nitrate, mixture).

Other documents included California Environmental Reporting System (CERS) documents, SJFD UST Operation Permits, HMBPs, UST Monitoring Plans, Certification of Financial Responsibility forms, HMBP Certification documents, associated violation notices, associated fire prevention inspection forms, associated permit applications, and associated administrative documents.

Environmental concerns identified for the subject property are discussed in Section 3.0.

4.3 BUILDING DEPARTMENT

Agency	Date Contacted	Method of Contact	Name & Title of Contact	Agency Response
San Jose Building Department (SJBD)	March 28, 2022	Website	N/A	Records discussed below

Building permits dated 1979 were on file for the construction of a "vault" and one-story industrial building (to be used as offices, occupied by a paving contractor) at 120 Granite Rock Way on behalf of Piazza Construction. Other building permits included various mechanical, plumbing, electrical, and interior partition improvements.

A building permit was issued for the construction of a 2,500 square foot truck wash bay facility in 2007. The southern former office structure(s) appear to have been demolished in late 2018.

Other documents included building inspection notices, drainage plans, various permit applications, fire prevention inspection forms, structural/seismic calculations, product manuals and specifications, agency/tenant letter correspondence, and associated administrative documents.

Environmental concerns identified for the subject property are discussed in Section 3.0.

4.4 PLANNING DEPARTMENT

Agency	Date Contacted	Method of Contact	Name & Title of Contact	Agency Response
San Jose Planning Department (SJPD)	March 28, 2022	Website	N/A	The subject property is zoned Planned Development (Industrial Park Base District, IP-PB) and Industrial Park (IP) by the City of San Jose. No evidence indicating the existence of AULs on file for the subject property

4.5 ASSESSOR'S OFFICE

Agency	Date Contacted	Method of Contact	Name & Title of Contact	Agency Response
Santa Clara County Assessor's Office	March 28, 2022	Website	N/A	Information obtained is discussed below

Records Summary

APN	462-17-024 and 462-17-025
Acreage	22.48 acres
Construction Date	Not provided
Building Square Footage	Not provided
Current Owner	Not provided
Additional Information	According to information provided by the client, current property ownership is vested in Granite Rock Co. for at least 50 years.

4.6 OTHER AGENCIES SEARCHED

Agency	Date Contacted	Method of Contact	Name & Title of Contact	Agency Response
CA State Water Resources Control Board (SWRCB) GeoTracker	March 29, 2022	Website	N/A	Records discussed below
SWRCB GeoTraker Historical Hazardous Substance Storage Information	March 29, 2022	Website	N/A	Records discussed below
CA Department of Toxic Substances Control (DTSC) Hazardous Waste Tracking System (HWTS)	March 29, 2022	Website	N/A	Records discussed below
CA DTSC EnviroStor	March 29, 2022	Website	N/A	No records on file
Bay Air Quality Management District (BAAQMD)	March 22, 2022	Email	Ms. Rochele Henderson, Public Records Section	Response pending, refer to Section 1.5
Valley Water (formerly Santa Clara Valley Water District)	March 29, 2022	Website	N/A	Records discussed below

SWRCB GeoTracker online database

Granite Rock Capitol Plant, 100 Granite Rock Way, is listed as a closed diesel LUST case with a status of "Completed - Case Closed as of 11/08/1996. The following information regarding the case is based on information available on the Geotracker online database.

In August 1991, three unknown-sized diesel USTs were excavated and removed from the subject property. A total of six confirmation soil samples were collected and analyzed for Total Petroleum Hydrocarbons (TPH) as diesel (TPHd); diesel was reported in soil at a maximum concentration of 1,300 parts per million (ppm).

In October 1991, soil excavation was performed to a depth of approximately 17 feet bgs in the corner of the original excavation where the diesel was detected. Diesel odor was evident in soil from 17 feet bgs, especially beneath the former pump location. A total of three confirmation soil samples were collected from the excavation and analyzed for TPHd. The excavation was backfilled to the level of the rest of the tank excavation (approximately 14 feet bgs).

In November 1991, additional excavation to a depth of 25 feet bgs was performed. The trench was backfilled to the level of the rest of the tank excavation (approximately 14 feet bgs).

In December 1991, an exploratory soil boring (SB-1) was drilled on the margin of the excavation to a depth of 25 feet bgs. A total of 2 soil samples were collected from 20 and 25 feet bgs; no TPHd was detected. Drilling access into the excavation was not possible, and the drill rig was unable to drill angle borings, so additional drilling beneath the excavation was postponed. Later that month, an additional exploratory soil boring (SB-2) was drilled at an angel, passing directly below the excavation, collecting continuous soil samples from 30 to 40 feet bgs. This boring determined the depth of soil contamination and the depth to first groundwater. A thick clay layer was encountered between 29 to 40 feet bgs, above the groundwater table, which was encountered at a depth of 63 feet bgs. A total of 6 soil samples were analyzed for TPHd. Diesel contamination in soil samples were limited to less than 30 feet bgs. No TPHd was detected in samples at 30 feet bgs, or in any deeper samples.

In October 1995, six exploratory soil borings were drilled to 30 feet bgs and one drilled to 15 feet bgs in the approximately area of the former fuel pump island. Groundwater was not encountered in any of the soil borings. TPHd, benzene, toluene, ethylbenzene, and xylenes were not detected in any of the samples analyzed.

Following the investigative and remedial efforts, the Santa Clara Valley Water District (now Valley Water), concluded that the extent of pollution was defined and very localized. A 40 foot buffer zone of apparently unaffected soil was found to exist between the pollution and groundwater.

Based on the site conditions and the current land use, the LUST case was granted closure with no further action required by the SCVWD in a letter dated November 8, 1996. At the time of closure, a maximum of TPHd at a concentration of 53,000 was reported to residually exist in on-site soils.

Based on this information, the closed LUST case represents a CREC. However, it should be noted that BTEX and fuel oxygenates (MTBE) were not screened as part of the closure process; should the User of this report desire a greater degree of certainty regarding the potential for remaining contamination that was not investigated, subsurface sampling would be required.

It should be noted that based on the lack of detail provided in the available site plans, the locations of the former UST excavation and associated soil borings are unknown.

SWRCB GeoTraker Historical Hazardous Substance Storage Information online database

Piazza Construction Co., 120 Granite Rock Way, is associated with the following USTs reportedly installed in 1979: three 10,000 gallon diesel, one 3,000 gallon unleaded gasoline, one 1,000 gallon motor oil, and one 500 gallon motor oil. Refer to Section 5.1 for further discussion.

DTSC Hazardous Waste Tracking System online database

Capitol Asphalt/Granite Rock Co., 100 Granite Rock Way, manifested various quantities of the following hazardous wastes between 1995 and 2021: UNSPECIFIED AQUEOUS SOLUTION (2 < PH < 12.5), WASTE OIL AND MIXED OIL, UNSPECIFIED OIL-CONTAINING WASTE, OFF-SPEC, AGED, OR SURPLUS ORGANICS, ORGANIC LIQUIDS WITH METALS(SEE 121), OTHER ORGANIC SOLIDS, and OTHER EMPTY CONTAINERS >= 30 GALLONS.

Spirit Road Oils, 100 Granite Rock Way, obtained an EPA ID for the transport of hazardous waste in October 2002; however, no waste manifest data was available.

SJ Brick, 110 Granite Rock Way, obtained an EPA ID for the transport of hazardous waste in January 1991; however, no waste manifest data was available.

Graniterock Co., 120 Granite Rock Way, manifested various quantities of the following hazardous wastes between 1995 and 2021: ALKALINE SOLUTION (PH>=12.5) W/ & WO/ METALS, AQ SOL (2 < PH < 12.5) W ORG RESIDUES >= 10%, AQ SOL (2 < PH < 12.5) W ORG RESIDUES < 10%, UNSPECIFIED AQUEOUS SOLUTION (2 < PH < 12.5), OFF-SPEC, AGED, OR SURPLUS INORGANICS, ASBESTOS-CONTAINING WASTE, HYDROCARBON SOLVENTS, UNSPECIFIED SOLVENT MIXTURE, UNSPECIFIED OIL-CONTAINING WASTE, LATEX WASTE, OFF-SPEC, AGED, OR SURPLUS ORGANICS, OTHER ORGANIC SOLIDS, and LIQUIDS W PH<=2.

Refer to Sections 3.0 and 5.1 for further discussion.

Valley Water online database

Two "other-active" groundwater monitoring wells, identified as MW-1 (Well 07S01E34H002) and MW-2 (Well 07S01E34H003), are depicted on the west portion of the subject property. The wells are indicated as drilled to depths ranging from 15 to 45 feet bgs with casing depths of 15 feet bgs. According to the LUST case closure letter, no monitoring wells were installed at the subject property during the LUST investigations. AEI requested additional information regarding the wells with VW, however AEI has not received a response as of this report date. If the wells are not planned for future use, AEI recommends that all on-site monitoring wells be decommissioned according to federal and local regulations.

4.7 Oil and Gas Wells

Agency	Date Referenced	Resource	Oil or gas wells located within 500 feet of the subject property
California Geologic Energy Management District (CalGEM)	March 28, 2022	CalGEM Map	No

4.8 Oil and Gas Pipelines

Agency	Date Referenced	Resource	Pipelines located within 500 feet of the subject property
National Pipeline Mapping System (NPMS)	March 28, 2022	NPMS Public Map Viewer	No

4.9 State Environmental Superliens

In accordance with our approved scope of services, AEI did not assess whether the subject property is subject to any state environmental superliens.

4.10 State Property Transfer Laws

In accordance with our approved scope of services, AEI did not assess whether the subject property is subject to any state property transfer laws.

5.0 REGULATORY DATABASE RECORDS REVIEW

AEI contracted EDR to conduct a search of publicly available information from federal, state, tribal, and local databases containing known and suspected sites of environmental contamination and sites of potential environmental significance. Data gathered during the current regulatory database search is compiled by EDR into one regulatory database report. Location information for listed sites is designated using geocoded information provided by federal, state, or local agencies and commonly used mapping databases with the exception of "Orphan" sites. Due to poor or inadequate address information, Orphan sites are identified but not geocoded/mapped by EDR, rather, information is provided based upon vicinity zip codes, city name, and state. The minimum search distance from the federal and state environmental records database listings specified in the current ASTM Standard E1527 is included in Section 5.1. A copy of the regulatory database report, which includes detailed descriptions of the databases noted below as well as the total number of sites identified, is included in Appendix C of this report.

In determining if a listed site is a potential environmental concern to the subject property, AEI generally applies the following criteria to classify the site as lower potential environmental concern: 1) the site only holds an operating permit (which does not imply a release), 2) the site's distance from, and/or topographic position relative to, the subject property, and/or 3) the site has recently been granted "No Further Action" by the appropriate regulatory agency.

Regulatory database listings associated with the subject property, adjoining site(s) and/or nearby sites of concern that were determined to warrant additional discussion are identified and further discussed in Section 5.1.

5.1 RECORDS SUMMARY

Database	Search Distance (Miles)	Subject Property	Adjoining Site(s)	Other Nearby Sites of Concern

Facility Name	Granite Rock Capitol, Granite Construction, Granite Rock Col, SJ Brick, Spirit Road Oils, Central Concrete Supply, Capital Asphalt, Capitol Plant, Santa Clara Valley Transportation Authority
Address	100, 110, 120 Granite Rock Way, San Jose
Distance & Direction	Subject Property
Hydrologic Position	N/A
Databases Listed	RGA LUST (x3), LUST, HIST LUST, UST, SWEEPS UST (x2), HIST UST, AST (x2), US MINES, HAZNET (x5), HWTS (x8), CERS HAZ WASTE (x2), CERS TANKS (x2), CUPA LISTINGS (x3), CERS (x5), HAULERS, EMI (x4), FINDS (x8), ECHO (x3), HAZMAT (x2), RCRA NONGEN/NLR (x2), CIWQS (x2), CORTESE, HIST CORTESE, NPDES (x2), WDS
Comments	*Closed LUST Case* Granite Rock Capitol, 100 Granite Rock Way, is listed as a closed diesel LUST case with a status of "Completed - Case Closed as of 11/08/1996. The closed LUST case is further discussed in Section 4.6. *Other Listings* Per the SWEEPS UST listings, Granite Rock Company, 100 Granite Rock Way, is associated with two 10,000 gallon diesel USTs and one 1,000 gallon diesel UST; it is believed that these USTs were removed as part of the closed LUST case discussed in Section 4.6. Granite Construction Co., 120 Granite Rock Way, is associated with one 15,000 gallon diesel UST, two 5,000 gallon gasoline USTs, eight 3,000 gallon gasoline USTs, one 10,000 gallon gasoline UST, two 10,000 gallon diesel USTs, one 550 gallon "chemical" UST, one 1,000 gallon "chemical" UST, one 500 gallon waste oil UST, and one 500 gallon "chemical" UST. The 15,000 gallon diesel and two 5,000 gallon gasoline USTs are indicated as active. Per the HIST UST listings, Piazza Construction Co. is associated with three 10,000 gallon diesel USTs, one 3,000 gallon gasoline UST, and 500 gallon product UST, all installed in 1979, and San Jose Brick is associated with one 10,000 gallon diesel UST and two 8,000 gallon diesel USTs. Per the UST listing, Granite Rock Co.-Pavex Central, 120 Granite Rock Way, is associated with permitted UST(s) with the SCCDEH.

	Granite Rock Company, 100, 120 Granite Rock Way, is listed as enrolled SCCDEH's Hazardous Waste Generator (for the generation of waste oil only and between 100 kilograms to less than 5 tons per year) and Hazardous Materials (for the storage of 16-21 chemicals with aboveground and belowground petroleum storage) Programs, as well as enrolled in the City of San Jose Hazardous Materials Program. The facility is listed as discharging particulate matter to the atmosphere under BAAQMD permit between 1987 and 2019. The facility is listed as associated with an AST(s) of unknown size and contents. Various violations were issued to the facility by the SCCDEH during compliance site inspections performed between 2013 and 2020; refer to Sections 4.1 and 4.2 for inspection violation detail. The facility is listed as an active hauler. The facility manifested the following wastes between 1995 and 2019, which are listed as having been off-hauled for processing: liquids with pH <= 2, unspecified oil-containing waste, aqueous solution with total organic residues 10 percent or more, waste and mixed oil, aqueous solution with total organic residues less than 10 percent, off-specification, aged or surplus organics, alkaline solution without metals pH >= 12.5, latex waste, and hydrocarbon solvents (benzene, hexane, Stoddard, Etc.). Granite Rock Capitol Site, 100 Granite Rock Way, is listed as possessing an active NPDES permit for industrial stormwater discharge; the facility is identified as a minor threat to water quality and no violation within 5 year. Granite Rock Capitol Site, 100 Granite Rock Way, is listed as associated with a 90,000 gallon AST of unknown contents. SJ Brick and Spirit Road Oils, 100 Granite Rock Way, are listed as obtaining an EPA ID for the transport of hazardous waste in 1990 and 2005, respectively; however, no waste manifest data was available. Central Concrete Supply, 110 Granite Rock Way, is listed as discharging particulate matter to the atmosphere under BAAQMD permit between 2006 and 2009. Granite Construction, 120 Granite Rock Way, is listed as enrolled SCCDEH's Hazardous Waste Generator (for the generation of between 100 kilograms and less than 5 tons of waste per year) Program. The facility is listed as an active hauler. The facility manifested the following wastes between 1991 and 2005, which are listed as having been off-hauled for processing: unspecified organic liquid mixture, hydrocarbon solvents (benzene, hexane, Stoddard, Etc.), and empty containers less than 30 gallons. Santa Clara Valley Transportation Authority, 120 Granite Rock Way, manifested 0.4 tons of asbestos in 2013 which was off-hauled for disposal at a landfill. Per the US Mines Listing, Granite Construction Co., identified as Freeman Quarry, is listed as a sand and gravel mine. Environmental concerns identified for the subject property are discussed in Section 3.0.

Facility Name	Concrete Ready Mix
Address	33 Hillsdale Avenue, San Jose

Distance & Direction	Adjoining to the north
Hydrologic Position	Cross-gradient
Databases Listed	CERS HAZ WASTE, CUPA LISTINGS, EMI, HAZMAT, CERS, RCRA NONGEN/NLR
Comments	Concrete Ready Mix is listed as enrolled in the SCCDEH Hazardous Waste Generator (between 100 kilograms and less than 5 tons of waste per year) and Hazardous Materials Program (for storage of 16-21 chemicals), as well as being in the City of San Jose Hazardous Materials Program. The facility is listed as discharging organic gases to the atmosphere under BAAQMD permit in 1987. Furthermore the facility is listed as "not a generator, verified" in 2002. No releases are associated with the facility name or any regulated wastes. Based on the lack of a documented release, the review of regulatory agency files for this site was not deemed necessary, and the site is not expected to represent a significant environmental concern.

Facility Name	Clarian Hotel
Address	3200 Monterey Road, San Jose
Distance & Direction	Adjoining to the northeast across Monterey Road
Hydrologic Position	Down-gradient
Databases Listed	CUPA LISTINGS
Comments	Clarian Hotel is listed as enrolled in the SCCDEH Hazardous Materials Program (for storage of 1-3 chemicals). No releases are associated with the facility name or any regulated wastes. Based on the lack of a documented release, the review of regulatory agency files for this site was not deemed necessary, and the site is not expected to represent a significant environmental concern.

Facility Name	SCC HHW Site - Capitol CalTrain Station
Address	Monterey Highway and Fehren Drive, San Jose
Distance & Direction	Adjoining to the northeast across Monterey Road
Hydrologic Position	Down-gradient
Databases Listed	CUPA LISTINGS
Comments	SCC HHW Site - Capitol CalTrain Station is listed as a SCCDEH HHW Temporary Facility. No releases are associated with the facility name or any regulated wastes. Based on the lack of a documented release, the review of regulatory agency files for this site was not deemed necessary, and the site is not expected to represent a significant environmental concern.

Facility Name	Petrol Stops Northwest Inc., SCCTA- Capitol Park and Ride
Address	3400 Monterey Road, San Jose
Distance & Direction	Adjoining to the northeast across Monterey Road

Hydrologic Position	Cross-gradient
Databases Listed	LUST, HIST LUST, CORTESE, CERS, EDR HIST AUTO, HIST CORTESE
Comments	Per the EDR HIST AUTO listing, Petrol Stops Northwest Inc. is identified as a gasoline service station from 1972 to 1977. SCCTA- Capitol Park and Ride is listed as associated with a former LUST case closed in 2000 with a status of "Completed - Case Closed." The following information regarding the LUST case is based on documents available on the GeoTracker online database. November 1989 - three gasoline underground storage tanks (UST) were removed at the site. The capacities of the tanks were 10,000; 5,000; and 3,000 gallons. Soil samples were collected underneath the tanks. Analytical results indicated up to 5,600 parts per million (ppm) Total Petroleum Hydrocarbons as Gasoline (TPHg), 0.32 ppm Benzene, 1.2 ppm Toluene, 14 ppm Ethylbenzene, and 31 ppm Xylenes. The tank excavation was reported to extend to approximately 25 feet bgs. During the removal of the three gasoline tanks, an additional underground waste oil tank was discovered. December 1989 - the waste oil tank was removed. Soil samples were collected underneath the tank. Results of the analyses were not available. January 23 and 24, 1991-Three soil borings (SB!, SB2, and SB3) were drilled. Soil and grab groundwater samples were collected for laboratory analysis. Each boring was drilled to encounter the shallowest groundwater. SB I was drilled to a total depth of 80 feet bgs. Soil borings SB2 and SB3 were terminated at approximately 50 feet. One soil sample was selected for laboratory analysis from each of the three borings at the depth closest to, but above the respective static water level. One additional soil sample was selected for analysis in boring SB I between 50 to 55 feet bgs. No detectable concentrations of TPHG or Benzene, Toluene, Ethylbenzene, and Xylenes (BTEX) were found in the soil samples. Results indicated very low levels of petroleum hydrocarbon constituents (0.7 parts per billion [ppb] Benzene, I ppb Toluene, and 0.8 ppb Xylenes) in the groundwater sample collected from SB1. March 1991-three monitoring wells, MW-1,MW-2, and MW-7, were installed to a depth of between 21 and 24 feet. MW-5 and MW-6 were installed. Both wells were installed to a total depth of approximately 80 feet. MW-1, MW-2, and MW-7 were developed. Groundwater samples did not contain detectable concentrations of TPH or BTEX. MW-5 and MW-6 were developed. Groundwater samples did not contain detectable concentrations of TPH or BTEX. November 1991 - soil samples were collected from on-site soil stockpiles and the open excavation. Samples from the stockpiles were collected from a depth of approximately I foot bgs. Sample EX-I was collected near the base of the excavation at a depth of approximately 10 feet. Sample EX-2 was collected near an exposed product line entering the excavation approximately 2 feet bgs. The soil samples collected from the open excavation contained up to 28.5 ppm Total Petroleum Hydrocarbons as Diesel, 2.9 ppm TPH as Motor Oil, and 82 ppm Lead.

	September 1992 - two soil borings (EB-I and EB-2) were drilled on site. Soil samples were obtained and screened in the field for organic vapors using an organic vapor analyzer. EB-1 was terminated at 30.5 feet bgs while EB-2 was terminated at 40 feet bgs. Groundwater was not encountered in either boring. Selected soil samples were analyzed. Analytical results indicated up to 160 ppm TPHG, 0.57 ppm Toluene, 0.74 ppm Ethylbenzene, 2.3 ppm Xylenes, and 14 ppm Lead. October 1994 - two borings (MW-8 and MW-9) were drilled within 30 feet southwest and north, respectively, of the former UST excavation. MW-8 and MW-9 were drilled to a depth of 71.5 and 56.5 feet, respectively. The two borings were converted to groundwater monitoring wells. Analytical results for soil samples collected at MW-9 did not detect TPH or BTEX. Analytical results for soil samples collected at MW-8 indicated up to 8.9 ppm TPHG. No TPHG or BTEX were detected in the groundwater samples collected at MW-8 and MW-9. 1995 through 1999 - Groundwater monitoring. MW-1, MW-2, and MW-7 had been dry since February 1995. MW-5, MW-6, MW-8, and MW-9 had been monitored. The LUST case was granted closure by the SCVWD in a letter dated January 19, 2000. Groundwater levels were reported to exist between 22 and 59 feet bgs, with a reported groundwater flow direction to the north. At the time of closure, no detectable contaminants of concern were reported in groundwater. Based on the closed regulatory status of the LUST case, reported groundwater flow direction (expected cross-gradient direction relative to the subject property), lack of apparent impact to groundwater, and time elapsed since closure, the closed LUST case is not expected to represent a significant environmental concern at this time.

Facility Name	Kowloon Auto Sales, Texas Tea Services Inc.
Address	3600 Monterey Road, San Jose
Distance & Direction	Adjoining to the northeast across Monterey Road
Hydrologic Position	Down-gradient
Databases Listed	CERS HAZ WASTE, CERS, HAZNET, HAZMAT, HWTS, RCRA NONGEN/NLR
Comments	Kowloon Auto Sales is listed as enrolled in the SCCDEH Hazardous Waste Generator (generating oil waste only) and Hazardous Waste Programs (for the storage of 1-3 chemicals), as well as enrolled in the City of San Jose Hazardous Materials Program. Minor violations were issued to the facility during compliance site inspections performed by the SCCDEH in 2017 and 2019 which were subsequently corrected. Texas Tea Services Inc. manifested various quantities of unspecified oil-containing waste and aqueous solution with total organic residues less than 10 percent in 2000 and 2001 which were off-hauled for processing. No releases are associated with the facility names or any regulated wastes. Based on the lack of a documented release, the review of regulatory agency files for this site was not deemed necessary, and the site is not expected to represent a significant environmental concern.

Facility Name	Capitol Flea Market, Out of Business, Nextel-Site CA1139, MetroPCS
Address	3630 Hillcap Avenue, San Jose
Distance & Direction	Adjoining to the southeast
Hydrologic Position	Down-gradient
Databases Listed	HAZMAT, CUPA LISTINGS
Comments	Capitol Flea Market is listed as enrolled in the Hazardous Waste Program (for the storage of 1-3 chemicals). Out of Business, MetroPCS, and and Sprint are listed as enrolled in the City of San Jose Hazardous Materials Program. No releases are associated with the facility names or any regulated wastes. Based on the lack of a documented release, the review of regulatory agency files for this site was not deemed necessary, and the site is not expected to represent a significant environmental concern.

Facility Name	United Site Services, Penske Truck Leasing Co., Banner Container Corp.
Address	3408 Hillcap Avenue, San Jose
Distance & Direction	Adjoining to the southwest
Hydrologic Position	Up-to cross-gradient
Databases Listed	LUST, HIST LUST, CERS HAZ WASTE, CORTESE, HIST CORTESE, HAZMAT, CIWQS, CERS, AST, CUPA LISTINGS, CERS TANKS, HIST UST, RCRA-VSQG, RCRA NONGEN/NLR
Comments	*Closed LUST Case* United Site Services is listed as associated with a former LUST case closed in 1992 with a status of "Completed - Case Closed." The following information regarding the LUST case is based on documents available on the CSWRCB Geotracker online database. A 1,000 gallon gasoline UST was removed from the site in 1988 which impacted soil only up to a concentration of 180 ppm TPHg. Based on the minor concentrations of pollution detected and lack of groundwater impact, the LUST case was granted closure by the SCVWD in a letter dated January 22, 1992. Based on the closed regulatory status of the LUST case, lack of apparent impact to groundwater, and time elapsed since closure, the closed LUST case is not expected to represent a significant environmental concern at this time. *Other Listings* United Site Services is listed as a hazardous waste generator and a chemical storage facility with aboveground petroleum storage, as well as enrolled in the City of San Jose Hazardous Materials Program. The facility is associated with a terminated NPDES permit for industrial stormwater discharge, with no noted violation within 5 years. The facility is associated with a 1,320 gallon capacity AST of unknown content. Minor violations were issued to the facility during a compliance site inspection performed by the SCCDEH in 2017. Penske Truck Leasing Co. is listed as enrolled in the SCCDEH Hazardous Waste Generator (between 100 kilograms to less than 5 tons of waste per year) and

	Hazardous Materials (storage of 4-6 chemicals) Programs, and listed as a conditionally-exempt small-quantity generator (RCRA-VSQG), filed in April 2020, with no noted evaluations or violations. Per the RCRA-VSQG listing, the facility is associated with the following waste streams: ignitable waste, reactive waste, barium, cadmium, chromium, lead, benzene, tetrachloroethene, and trichloroethene. Banner Container Corp. is associated with a 1,000 gallon gasoline UST installed in 1968. It is believed that this UST is related to the UST removed as part of the closed LUST case discussed above. Aside from the closed LUST case, no releases are associated with the facility names or any regulated wastes. Based on the lack of a documented release, the review of regulatory agency files for this site was not deemed necessary, and the site is not expected to represent a significant environmental concern.

Facility Name	Pacific Bell dba AT&T California
Address	3598 Hillcap Avenue, San Jose
Distance & Direction	Adjoining to the southwest
Hydrologic Position	Up- to cross-gradient
Databases Listed	LUST, SWEEPS UST , FID UST, RCRA-LQG, FINDS, ECHO, CORTESE, CERS HAZ WASTE, CERS, HAZMAT, HAZNET, CUPA LISTINGS, HWTS
Comments	*Closed LUST Case* SBC/PACBELL is listed as associated with a former LUST case closed in 2005 with a status of "Completed - Case Closed." The following information regarding the LUST case is based on documents available on the CSWRCB Geotracker online database. A 10,000 gallon gasoline UST was removed from the site in 2003 which impacted soil only. Based on the minor concentrations of pollution detected and lack of groundwater impact, the LUST case was granted closure by the SCVWD in a letter dated June 23, 2005. Based on the closed regulatory status of the LUST case and lack of apparent impact to groundwater, the closed LUST case is not expected to represent a significant environmental concern at this time. *Other Listings* The facility is listed as a large-quantity generator of hazardous waste (RCRA-LQG), filed in January 1981, with no noted evaluations or violations. Per the HIST UST listing, the facility is associated with one 10,000 gallon gasoline UST. It is believed that this UST is related to the UST removed as part of the closed LUST case discussed above. The facility is listed as enrolled in the SCCDEH Hazardous Waste Generator (between 100 kilograms and less than 5 tons of waste per year) and Hazardous Materials (storage of 1-3 chemicals) Programs, as well as enrolled in the City of San Jose Hazardous Materials Program. The facility manifested various quantities of the following between 1998 and 2019 which were off-hauled for processing: off-specification, aged or surplus organics, other organic solids, unspecified oil-containing waste,

	asbestos-containing waste, and hydrocarbon solvents (benzene, hexane, Stoddard, etc.). Minor violations were issued to the facility during a compliance site inspection performed in 2015 which were corrected. Aside from the closed LUST case, no releases are associated with the facility names or any regulated wastes. Based on the lack of a documented release, the review of regulatory agency files for this site was not deemed necessary, and the site is not expected to represent a significant environmental concern.

Facility Name	Verizon Wireless, AT&T Mobility-Hellyer
Address	3616 Hillcap Avenue, San Jose
Distance & Direction	Adjoining to the southwest
Hydrologic Position	Up- to cross-gradient
Databases Listed	CUPA LISTINGS, HAZMAT, EMI, CERS
Comments	The facilities are listed as enrolled in the SCCDEH Hazardous Materials (storage of 1-3 chemicals) Programs, as well as enrolled in the City of San Jose Hazardous Materials Programs. Verizon is listed as discharging gases and particulate matter to the atmosphere under BAAQMD permit between 2011 and 2019. No releases are associated with the facility names or any regulated wastes. Based on the lack of a documented release, the review of regulatory agency files for this site was not deemed necessary, and the site is not expected to represent a significant environmental concern.

5.2 VAPOR MIGRATION

AEI reviewed reasonably ascertainable information for the subject and nearby properties, including a regulatory database, files for nearby release sites, and/or historical documentation, to determine if potential vapor-phase migration concerns may be present which could impact the subject property.

Potential vapor migration concerns for the subject property are discussed in Section 3.0.

6.0 INTERVIEWS AND USER PROVIDED INFORMATION

6.1 INTERVIEWS

Pursuant to ASTM E1527-13, the following interviews were performed during this assessment in order to obtain information indicating RECs in connection with the subject property.

6.1.1 OWNER AND KEY SITE MANAGER

Relation to Property	Name	Date Interviewed	Method of Contact	Year First Associated w/ Property	Notes
Owner/Owner Representative	Granite Rock Company	N/A	N/A	1970s	Not interviewed; refer to Section 1.5
Key Site Manager	Mr. Pat Mapelli, Land Use Manager, Granite Rock	March 23 and 25, 2022	In Person and email	2016	Interviewed; see Interview Summary table below

Interview Summary

Question	Owner (Representative) Response/ Comment	Key Site Manager Response/Comment
Do you have any knowledge of USTs, clarifiers or oil/water separators, sumps, or other subsurface features?	N/A	Yes; Mr. Mapelli was aware of two on-site USTs (gas and diesel), a car wash pad, car wash discharge collection system, and a stormwater discharge treatment system
Do you have any knowledge of previous environmental investigations conducted on site?	N/A	No
Do you have any knowledge of current or past industrial operations and/or other operations which would involve the use of hazardous substances and/or petroleum products?	N/A	Yes; Mr. Mapelli indicated that auto repair activities have been performed on-site for several decades
Are you aware of any known plans for site redevelopment or change in site use?	N/A	Yes; Mr. Mapelli indicated that planning to allow the expansion and modernization of the existing concrete and asphalt recycling, manufacturing and distribution facility. A 12,800 square foot square is to be demolished and a 40,000 square foot materials warehouse and storage facility, installation of a truck wash system, and construction of a new Qa/Qc facility are to be developed.

Question	Owner (Representative) Response/ Comment	Key Site Manager Response/Comment
Are you aware of any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the property?	N/A	Yes; "Unpermitted storage of parts cleaning solvents. Issue is being addressed"
Are you aware of any pending, threatened or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the property?	N/A	No
Are you aware of any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products?	N/A	Yes; "Stormwater discharge violation. Issue has been addressed with a stormwater treatment system"
Are you aware of any incidents of flooding, leaks, or other water intrusion, and/or complaints related to indoor air quality?	N/A	No
Additional information provided:	N/A	None

6.1.2 Past Owners, Operators, and Occupants

AEI did not attempt to interview past owners, operators, and occupants of the subject property because information from these sources would likely be duplicative of information already obtained from other sources.

6.1.3 Interview with Others

Information obtained during interviews with local government officials is incorporated into the appropriate segments of this report.

6.2 User Provided Information

User provided information is intended to help identify the possibility of RECs in connection with the subject property. According to ASTM E1527-13 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), certain items should be researched by the prospective

landowner or grantee, and the results of such inquiries may be provided to the Environmental Professional. The responsibility for qualifying for LLPs by conducting the inquiries ultimately rests with the User, and providing the information to the Environmental Professional would be prudent if such information is available.

The User Questionnaire was completed by Mr. Pat Mapelli, Key Site Contact for Granite Rock. The following table represents information contained therein.

Question	Response/ Comment
1. Environmental liens that are filed or recorded against the property (40 CFR 312.25) Did a search of recorded land title records (or judicial records where appropriate) identify any environmental liens filed or recorded against the property under federal, tribal, state or local law?	Information not provided
2. Activity and use limitations that are in place on the property or that have been filed or recorded against the property (40 CFR 312.26(a)(1)(v) and vi)). Did a search of recorded land title records (or judicial records where appropriate) identify any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the property and/or have been filed or recorded against the property under federal, tribal, state or local law?	Information not provided
3. Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28). Do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?	Yes; "There is a concrete and construction materials recycle operation next door"
4. Relationship of the purchase price to the fair market value of the property if it were not contaminated (40 CFR 312.29). Does the purchase price being paid for this property reasonably reflect the fair market value of the property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?	Information not provided
5. Commonly known or reasonably ascertainable information about the property (40 CFR 312.30). Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example: (a) Do you know the past uses of the property? (b) Do you know of specific chemicals that are present or once were present at the property? (c) Do you know of spills or other chemical releases that have taken place at the property? (d) Do you know of any environmental cleanups that have taken place at the property?	No; Yes; No; No; "Fuel"

Question	Response/ Comment
6. The degree of obviousness of the presence or likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31). Based on your knowledge and experience related to the property, are there any obvious indicators that point to the presence or likely presence of contamination at the property?	No

6.3 Previous Reports and Other Provided Documentation

No prior reports or other relevant documentation in association with the subject property was made available to AEI during the course of this assessment.

6.4 Environmental Lien Search

In accordance with our approved scope of services, an environmental lien search was not performed as part of this assessment.

7.0 SITE RECONNAISSANCE

Site Reconnaissance Date	March 25, 2022
AEI Site Assessor(s)	Adrian Angel
Property Escort(s)/ Relationship(s) to Property	Mr. Pat Mapelli, Land Use Manager, Granite Rock/Key Site Contact
Units/Areas Observed	Representative interiors and exteriors of the subject property
Area(s) not accessed and reason(s)	Interior of Building 3 Refer to Section 1.5 for discussion of limiting condition(s)
Other Physical Constraints	Volume of materials Refer to Section 1.5 for discussion of limiting condition(s)

Reconnaissance Findings Summary

Feature	Observed on Subject Property (see Section 7.1)	Observed on Adjoining Property (see Section 7.2)
Regulated Hazardous Substances/Wastes and/or Petroleum Products in Connection with Property Use	✔	
Aboveground/Underground Hazardous Substance or Petroleum Product Storage Tanks (ASTs/USTs)	✔	
Hazardous Substance and Petroleum Product Containers Not in Connection with Property Use		
Unidentified Substance Containers		
Electrical or Mechanical Equipment Likely to Contain Fluids	✔	✔
Interior Stains or Corrosion	✔	
Strong, Pungent, or Noxious Odors		
Pools of Liquid		
Drains, Sumps, and Clarifiers	✔	✔
Pits, Ponds, and Lagoons		
Stained Soil or Pavement		
Stressed Vegetation		
Solid Waste Disposal or Evidence of Fill Materials		
Waste Water Discharges	✔	
Wells	✔	
Septic Systems		
Biomedical Wastes		
Other	✔	

7.1 SUBJECT PROPERTY RECONNAISSANCE FINDINGS

During the site reconnaissance, AEI observed the items listed in the above Reconnaissance Findings Summary table, which are further discussed below.

7.1.1 Regulated Hazardous Substances/Wastes and/or Petroleum Products in Connection with Property Use

Substance/Waste (size/quantity)	Location	Operations Associated with Material	Disposal Method/ Frequency	Secondary Containment	Staining/ Spills
New oil (5-gallon or less retail containers/ numerous)	Building 1, Oil and Parts Rooms, Repair Bay	Auto maintenance	Consumed on-site	No	Minor staining on concrete in Oil Room and Repair Bay
Waste oil (55-gallon drums/6)	Building 1, Oil Room, Repair Bay	Auto maintenance	Third-Party/ As-Needed	Partial	Minor staining on concrete in Oil Room
New antifreeze (5-gallon or less retail containers to 55-gallon drums/ numerous)	Building 1, Oil and Parts Rooms, Repair Bay	Auto maintenance	Consumed on-site	No	No
Waste antifreeze (55-gallon drum/4)	Building 1, Oil Room, Repair Bay	Auto maintenance	Third-Party/ As-Needed	No	No
Compressed gases (120-lbs cylinders or less/ numerous)	Buildings 1 and 4	Auto maintenance	Consumed on-site	No	No
10% VOC brake and parts cleaner (55-gallon drum/1)	Building 1 Repair Bay	Parts washing	Consumed on-site	No	No
New and spent auto batteries (approximately 50)	Building 1 Parts Room and Repair Bay	Auto maintenance	Consumed on-site or Third-Party/ As-Needed	No	No
Propane (20-lbs canisters/10)	Building 1, Oil and Parts Rooms, Repair Bay	Forklifts	Consumed on-site	No	No
New gasoline (10 gallon cans/10)	Buildings 1 and 2	Auto maintenance	Consumed on-site	No	No
Trichloroethene (1 gallon/4)	Building 4 Shop Area	Material testing	Consumed on-site	No	No

Some evidence of staining associated with leakage from the containers was observed. However, no storm drains were located in the immediate vicinity of the stains. Refer to Section 3.0 for further discussion.

7.1.2 Aboveground/Underground Hazardous Substance or Petroleum Product Storage Tanks (ASTs/USTs)

AST(s)

Size (gallons)	Contents	Installation Date	AST Condition	Location	Construction/ Secondary Containment	Product Piping	Staining/ Spills
100	Diesel Exhaust Fluid (DEF)	Unknown	Good	Diesel Exhaust Fluid (DEF) shed, near fuel dispensers	None	Aboveground	None
500	New oil	Unknown	Good	Building 1 Oil Room	Single-walled	None	Minor staining on concrete
500	New oil	Unknown	Good	Building 1 Oil Room	Single-walled	None	Minor staining on concrete
1000	Waste oil	Unknown	Good	Building 1 Oil Room	Single-walled	None	Minor staining on concrete
100	Bulk Radicool SF-O Premix	Unknown	Good	Building 1 Oil Room	Single-walled	None	None
100	Used Radicool SF-O Premix	Unknown	Good	Building 1 Oil Room	Single-walled	None	None
100-500 gallons (x4)	Car wash sump discharge fluids	Unknown	Good	Car wash area	Single-walled	Aboveground	None
1,000-10,000 gallons (x6)	Empty	Unknown	Good	Adjacent to and southeast of Building 2	Single-walled	None	None
1,000	Propane	Unknown	Good	Adjacent to Building 1	Single-walled	None	None

Based on the good condition of the equipment and the absence of staining or conduits to the subsurface, the presence of the ASTs is not expected to represent a significant environmental concern.

UST(s)

	UST #1	UST #2
Tank Capacity (Gallons)	5,000	15,000
Tank Contents	Gasoline	Diesel

	UST #1	UST #2
Tank Installation Date	1991	1991
Tank Material	Steel	Steel
Tank Construction	Double Wall	Double Wall
Piping Installation Date	1991	1991
Piping Material	Fiberglass	Fiberglass
Piping Construction	Double Wall	Double Wall
Cathodic Protection Present	No	No
Spill/Overfill Protection Present	Yes	Yes
Tank Release Detection Method	Veeder Root	Veeder Root
Piping Release Detection Method	Veeder Root	Veeder Root
Date of Last UST Monitoring Equipment Certification	05/24/2021	05/24/2021
Test Results Passed	Yes	Yes
Permitting Agency	SCCDEH	SCCDEH
Permit/Registration Confirmed	No	No
Permit Expiration Date	Unknown	Unknown
UST Testing Requirements	Yearly	Yearly
Additional Information	N/A	N/A

The subject property is currently equipped with one 5,000 gallon gasoline UST and one 15,000 gallon diesel UST which were installed in 1991. The USTs are constructed of double-walled steel with reinforced fiberglass and equipped with a leak-detection system. The product piping is double-walled fiberglass and equipped with a leak-detection system. The USTs are indicated as sharing the same secondary containment. The review of reasonably ascertainable information pertinent to the status and operation of the storage tank system which included Monitoring System Equipment Certifications from 2005 to 2021, did not reveal any reported discharges or gross compliance deficiencies. Based on the age of the USTs and lack of continual/consistent documentation regarding historical testing results and operational status of the system dating back to 1991, AEI is unable to rule out the potential that a release from the USTs has affected the subsurface of the subject property. On this basis, the storage of petroleum products in a USTs at the subject property is considered a REC.

7.1.3 Electrical or Mechanical Equipment Likely to Contain Fluids

Toxic PCBs were commonly used historically in electrical equipment such as transformers, fluorescent lamp ballasts, and capacitors. According to United States EPA regulation 40 CFR Part 761, there are three categories for classifying such equipment: <50 ppm of PCBs is considered

"Non-PCB"; between 50 and 500 ppm is considered "PCB-Contaminated"; and >500 ppm is considered "PCB-Containing." Pursuant to 15 U.S.C. 2605(e)(2)(A), the manufacture, process, or distribution in commerce or use of any polychlorinated biphenyl in any manner other than in a totally enclosed manner was prohibited after January 1, 1977.

Transformers

Type	Quantity	Owner	Presumed Date of Installation	Spills or Stains Observed (Yes/No)	Non-PCB Label (Yes/ No)
Pad-Mounted	3	Pacific Gas and Electric	1979	No	No

The management of potential PCB-containing transformers is the responsibility of the local utility or the transformer owner. Actual material samples need to be collected to determine if transformers are PCB-containing.

Transformers installed prior to 1977 may be PCB containing while transformers installed after 1977 are unlikely to be PCB containing. Federal Regulations (40 CFR 761 Subpart G) require any release of material containing >50 ppm PCB and occurring after May 4, 1987, be cleaned up by the transformer owner following the United States EPA's PCB spill cleanup policy.

AEI did not observe evidence of spills, staining, or leaks on or around the transformers. Based on the good condition of the equipment, the transformers are not expected to represent a significant environmental concern.

Hydraulic Lifts

The repair bay of Building 1 is equipped with two aboveground lifts. Each lift is equipped with a small aboveground reservoir of hydraulic fluid. No evidence of stains or leakage from the units was observed, and the lifts are therefore not expected to represent a significant environmental concern.

Air Compressors

Multiple air compressors were observed on the subject property. The air compressors contain small amounts of hydraulic oil. No spills, staining or leaks were observed on or around the compressors. Based on the good condition of the equipment, the compressors are not expected to represent a significant environmental concern.

7.1.4 Interior Stains or Corrosion

Minor amounts of oily surface staining were observed within the Repair Bay and Oil Room of Building 1 and on concrete underneath several canopies. The staining was located on concrete, and no drains were observed in the vicinity. Based on the small size and surficial nature of the staining, it is not expected to represent a significant environmental concern.

7.1.5 Drains, Sumps, and Clarifiers

Storm drains were observed in the parking area of the subject property. Several drains discharge to the on-site storm water treatment system. AEI did not observe evidence of hazardous substances or petroleum products in the vicinity of the drains. Based on the use of the drains solely for storm water runoff, the presence of the drains is not expected to represent a significant environmental concern.

An exterior wash pad is located northeast of Building 1 and consists of an uncovered concrete slab with a drain at the center, a high pressure sprayer and a vacuum. The drain is equipped with a grit trap in which sediments settle, and are pumped to aboveground wastewater tank traps. The effluent from the grit trap is treated and discharged to the sanitary sewer. According to the key site contact, the grit trap is periodically cleaned out by a contractor. AEI was unable to confirm the age of the system, and if equipment or other machines aside from fleet trucks are washed in this area. Due to their subsurface nature, collection drains, grit traps, and their associated piping can act as preferential pathways for contaminants such as oil, grease, fuel, or cleaning solvents discharged or released during on-site activities. Consequently, the potential exists that the operation of the on-site system may have resulted in an impact to the subsurface of the subject property and therefore represents a REC.

7.1.6 Waste Water Discharges

Refer to Section 7.1.5 for further discussion.

7.1.7 Wells

According to information on the Valley Water online well database, two groundwater monitoring wells, identified as MW-1 and MW-2, and indicated as active, are depicted on the west portion of the subject property; refer to Section 4.6 for further discussion.

7.1.8 Other

Small quantities of cleaning supplies, building maintenance supplies, lubricating oils, grease, detergents, and car wash supplies are stored in various parts of the subject property. Based on the nature of these materials, the presence of cleaning supplies at the subject property is not expected to represent a significant environmental concern.

7.2 Adjoining Property Reconnaissance Findings

During the site reconnaissance, AEI observed the items listed in the above Reconnaissance Findings Summary table, which are further discussed below.

7.2.1 Electrical or Mechanical Equipment Likely to Contain Fluids

Transformers

Pole-mounted and pad-mounted transformers were observed on the adjoining sites during the site reconnaissance. No spills, staining, or leaks were observed on or around the transformers. Based on the good condition of the equipment, the transformers are not expected to represent a significant environmental concern.

7.2.2 DRAINS, SUMPS, AND CLARIFIERS

Several storm drains were observed in the parking areas of the adjoining properties and adjoining roadways. AEI did not observe evidence of hazardous substances or petroleum products in the vicinity of the drains. Based on the use of the drains solely for storm water runoff, the presence of the drains is not expected to represent a significant environmental concern.

8.0 NON-ASTM SERVICES

8.1 ASBESTOS-CONTAINING BUILDING MATERIALS

Asbestos is the name for a group of naturally occurring silicate minerals that can be separated into fibers. The fibers are strong, durable, and resistant to heat and fire. They are also long, thin and flexible, so they can even be woven into cloth. Because of these qualities, asbestos has been used in thousands of consumer, industrial, maritime, automotive, scientific and building products. During the 20th century, some 30 million tons of asbestos have been used in industrial sites, homes, schools, shipyards and commercial buildings in the United States. Commercial use of ACM began in the early 1900s and peaked in the period between 1940 and into the 1970s. Common ACMs include pipe-covering, insulating cement, insulating block, refractory and boiler insulation materials, transite board, fireproofing spray, joint compound, vinyl floor tile, ceiling tile, mastics, roofing products, and duct insulation for HVAC applications. Inhalation of asbestos fibers can result in deleterious health effects.

The potential for ACM was evaluated based the United States EPA Guidance Document: Managing Asbestos in Place - A Building Owner's Guide to Operations and Maintenance Programs for Asbestos-Containing Materials (the Green Book). In 1973 the NESHAPS banned the use of most spray-applied surfacing ACM, specifically asbestos containing spray-on fireproofing and insulation. Subsequent revisions to this regulation in 1975 and 1978 effectively eliminated the use of friable pre-molded pipe, boiler, turbine, and duct insulation; and the spray application of friable asbestos-containing materials for all uses in buildings. In 1989 the EPA issued regulations to ban some asbestos-containing products and phase out most others over a multi-year period. The "Ban and Phase-Down" rule was challenged in court and the regulation remanded to the agency. As a result, any asbestos-containing products then "in commerce" would not be banned. Those not in commerce would be banned. Those materials "banned" could not be sold. It did not affect such materials already installed, or in use. Most US firms voluntarily ceased production of asbestos containing building materials not covered by the aforementioned Federal bans by the mid-1980s. In 1994, the OSHA determined that employers and building owners are required to treat installed thermal system installation and sprayed on and troweled-on surfacing materials, as well as vinyl or asphalt flooring material, as ACM in buildings constructed no later than 1980 until tested by laboratory analysis to prove otherwise.

The information below is for general informational purposes only and does not constitute an asbestos survey. In addition, the information is not intended to comply with federal, state or local regulations in regards to ACM.

Due to the age of the subject property buildings, there is a potential that ACMs are present. A limited list of typical suspect ACMs is included in the following table:

Material Type	Location
Plaster (acoustical and smooth)	Walls and ceilings
Ceiling tile	Ceiling systems
Thermal systems insulations, packings, and gaskets	Heating systems, cooling systems, domestic and heating and cooling piping, ductwork, and other equipment
Floor tile and associate mastics, flooring felts, and papers (under hardwood/other)	Floors
Vinyl sheet flooring and adhesives	Floors
Cove base and associated mastics	Walls
Ceramic tile adhesives and grouts	Walls, floors, and ceilings
All adhesives	Mirrors, wall coverings, construction, etc.
Grout and caulking	Windows and doors
Gypsum board, tape, and joint compound	Wall and ceiling systems
Insulation materials	Walls, ceilings, and attic spaces
Roofing materials (felts, rolled, shingle, flashings, adhesives, tar, and insulations)	Roof and parapet wall systems
Brick and block, mortars	Walls

The observed suspect ACMs at the subject property were in good condition at the time of the site reconnaissance and are not expected to pose a health and safety concern to the occupants of the subject property at this time. In the event that building renovation or demolition activities are planned, a thorough asbestos survey is required in accordance with the EPA NESHAP 40 CFR Part 61 prior to demolition or renovation activities that may disturb suspect ACMs.

8.2 Lead-Based Paint

Lead-based paint (LBP) is defined as any paint, varnish, stain, or other applied coating that has ≥1 mg/cm² (5,000 µg/g or 5,000 ppm) or more of lead by federal guidelines; state and local definitions may differ from the federal definitions in amounts ranging from 0.5 mg/cm² to 2.0 mg/cm². Section 1017 of the Housing and Urban Development (HUD) Guidelines, Residential Lead-Based Paint Hazard Reduction Act of 1992, otherwise known as "Title X," defines a LBP hazard as "any condition that causes exposure to lead that would result in adverse human health effects" resulting from lead-contaminated dust, bare, lead-contaminated soil, and/or lead-contaminated paint that is deteriorated or present on accessible, friction, or impact surfaces. Therefore, under Title X, intact LBP on most walls and ceilings would not be considered a "hazard," although the paint should be maintained and its condition monitored to ensure that it does not deteriorate and become a hazard. Additionally, Section 1018 of this law directed HUD and EPA to require the disclosure of known information on LBP and LBP hazards before the sale or lease of most housing built before 1978. Most private housing, public housing, or federally owned or subsidized housing is affected by this rule.

Under OSHA, lead-containing paint (LCP) is defined as any paint with any detectable amount of lead present in it. Therefore, all LBP is considered LCP. Conversely, LCP may not meet the criteria to be considered LBP in accordance with HUD guidelines or some states' definition of LBP.

It is important to note that LCP may create a lead hazard when being removed. The condition of these materials must be monitored when they are being disturbed. In the event LCP is subject to abrading, sanding, torching, and/or cutting during demolition or renovation activities, there may be regulatory issues that must be addressed.

The information below is for general informational purposes only and does not constitute a lead hazard evaluation. In addition, the information is not intended to comply with federal, state, or local regulations in regards to LBP.

In buildings constructed after 1978, it is unlikely that LBP is present; however, some paints utilized after 1978 will be LCP under OSHA. Structures built prior to 1978 and especially prior to the 1960s should be expected to contain LBP.

Due to the age of the subject property buildings, it is unlikely that LBP is present; however, LCP may be present. Based on the good condition of the observed painted surfaces, potential LCP is not considered a significant environmental concern at this time.

8.3 RADON

Radon is a naturally-occurring, odorless, and invisible gas. Natural radon levels vary and are closely related to geologic formations. Radon may enter buildings through basement sumps or other openings.

The United States EPA has prepared a map to assist National, State, and local organizations to target their resources and to implement radon-resistant building codes. The map divides the country into three radon zones, with Zone 1 being those areas with the average predicted indoor radon concentration in residential dwellings exceeding the EPA Action Limit of 4.0 pCi/L. It is important to note that the EPA has found homes with elevated levels of radon in all three zones, and the EPA recommends site specific testing in order to determine radon levels at a specific location. However, the map does give a valuable indication of the propensity of radon gas accumulation in structures.

Radon sampling was not requested as part of this assessment. According to the US EPA, the radon zone level for the area is Zone 2, which has a predicted average indoor screening level between 2 pCi/L and 4 pCi/L, equal to or below the action level of 4 pCi/L set forth by the US EPA.

8.4 MOLD

Molds are simple microscopic organisms which can often be seen in the form of discoloration, frequently green, gray, white, brown, or black. When excessive moisture or water accumulates indoors, mold growth may occur, particularly if the moisture problem remains undiscovered or unaddressed. As such, interior areas of buildings characterized by poor ventilation and high humidity are the most common locations of mold growth. Building materials, including drywall, wallpaper, baseboards, wood framing, insulation, and carpeting, often play host to such growth. Mold spores primarily cause health problems through the inhalation of spores or the toxins they emit when they are present in large numbers. This can occur when there is active mold growth within places where people live or work.

Mold, if present, may or may not visually manifest itself. Neither the individual completing this inspection, nor AEI has any liability for the identification of mold-related concerns except as defined in applicable industry standards. In short, this Phase I ESA should not be construed as a mold survey or inspection.

This activity was not designed to discover all areas which may be affected by mold growth on the subject property. Rather, it is intended to give the client an indication if significant (based on observed areas) mold growth is present at the subject property. Potential areas of mold growth, such as in pipe chases, HVAC systems, and behind enclosed walls and ceilings, were not observed as part of this limited assessment.

AEI observed interior areas of the subject property buildings to identify the potential presence of mold. AEI did not note obvious visual or olfactory indications of the presence of mold, nor did AEI observe obvious indications of significant water damage. As such, no bulk sampling of suspect surfaces was conducted as part of this assessment and no additional action with respect to suspect mold appears to be warranted at this time.

9.0 SIGNATURE OF ENVIRONMENTAL PROFESSIONALS

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in § 312.10 of 40 CFR Part 312.

We have the specific qualifications based on education, training, and experience to assess a property of the nature, history and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527-21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal RCRA generators

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 09/13/2021 has revealed that there are 2 RCRA-LQG sites within approximately 0.25 miles of the target property.

PG AND E GTP - 1 RAN EPA ID:: CAP000253450	1 RANCH DR, PG&E GTP	ESE 0 - 1/8 (0.118 mi.)	79	334

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 09/13/2021 has revealed that there are 6 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 09/13/2021 has revealed that there is 1 RCRA-VSQG site within approximately 0.25 miles of the target property.

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 10/25/2021 has revealed that there are 9 ENVIROSTOR sites within approximately 1 mile of the target property.

Local Lists of Registered Storage Tanks

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 4 SWEEPS UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 09/13/2021 has revealed that

there are 16 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

Cleanup Status: COMPLETED - CASE CLOSED

CUPA Listings: A listing of sites included in the county's Certified Unified Program Agency database. California's Secretary for Environmental Protection established the unified hazardous materials and hazardous waste regulatory program as required by chapter 6.11 of the California Health and Safety Code. The Unified Program consolidates the administration, permits, inspections, and enforcement activities.

A review of the CUPA Listings list, as provided by EDR, has revealed that there are 36 CUPA Listings sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there is 1 EDR Hist Auto site within approximately 0.125 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
PETROL STOPS NORTHWE	3400 MONTEREY RD	NE 0 - 1/8 (0.036 mi.)	C49	214

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there is 1 EDR Hist Cleaner site within approximately 0.125 miles of the target property.

Violations:
Site ID: 394076
Site Name: GRANITE ROCK COMPANY-PAVEX CENTRAL
Violation Date: 06-28-2018
Citation: HSC 6.95 25508.1(a)-(f) - California Health and Safety Code, Chapter 6.95, Section(s) 25508.1(a)-(f)
Violation Description: Failure to electronically update business plan within 30 days of any one of the following events: A 100 percent or more increase in the quantity of a previously disclosed material. Any handling of a previously undisclosed hazardous materials at or above reportable quantities. A change of business address, business ownership, or business name. A substantial change in the handler's operations that requires modification to any portion of the business plan.
Violation Notes: Significant changes to the chemical inventory have been made at the facility and the HMBP was not updated. Update and submit the HMBP within 30 days of significant changes are made. Observed 3 new oil tanks, 1 hydraulic oil tank, 3x 55 gallon Gear Lube (Syngear 165), Brake Cleaner (Wurth) 55 gallons, 3x 275 gallon totes of Diesel Exhaust Fluid, and an addtional 3 totes of Daraset. Also observed that Oxygen and Argon/Carbon Dioxide is no longer being stored in the small tools area and the location of the other gases have been moved from directly behind the shop to behind the office trailers. Ensure the chemical inventory and storage map is kept up to date as required.

Violation Description:	Failure of the leak detection equipment to have an audible and visual alarm as required.
Violation Notes:	Returned to compliance on 11/17/2016. Due to the nature of the site and the location of the alarm panel (outside in the yard with heavy equipment driving by and inside a closed panel box) while the audible and visible alarms function at the panel, it would be difficult for employees to observe them. Either have the alarms forwarded to a staffed location (the panel sends inventory information wirelessly to

GRANITE ROCK COMPANY-PAVEX CENTRAL (Continued) **S108748034**

the office) or install an external strobe and horn of sufficient volume to attract employee's attention.

Violation Date: 09-22-2020
Citation: 23 CCR 16 2716(e) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2716(e)
Violation Description: For designated operator (DO) monthly inspections conducted before October 1, 2018, failure to comply with one or more of the following requirements: Be performed by an ICC certified DO. Inspect monthly alarm history report, check that alarms are documented and responded to appropriately, and attach a copy. Inspect for the presence of liquid/debris in spill containers. Inspect for the presence of liquid/debris in under dispenser containment (UDC) and ensure that the monitoring equipment is positioned correctly. Inspect for liquid or debris in containment sumps where an alarm occurred with no service visit. Check that all testing and maintenance has been completed and documented. Verify that all facility employees have been trained in accordance with 23 CCR 2715(c). For designated operator (DO) 30 day inspections conducted on and after October 1, 2018, failure to conduct the designated UST operator visual inspection at least once every 30 days.
Violation Notes: Returned to compliance on 11/19/2020. Records of monthly visual DUSTO inspections were observed to have the following completion errors: - Inspection on 6/22/2020 does not list any testing dates on page 2. - Inspections completed on 5/28/2020, 4/38/2020, and 3/31/2020 were completed on outdated forms. - Dates for most recent secondary containment testing are being recorded incorrectly on 11 of 12 forms.

Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 08-08-2014
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: On-site to witness the annual monitoring system certification and spill bucket test performed by Mr. Israel Santillan of Service Station Systems. The Pneumercator LS600 sensors were tested in water and provided audible and visible alarms. The Diesel sensor also caused positive shutdown. Sensor out (disconnect the brown wire under the left hand cover to test sensor out) and power out (use circuit breaker #29 Bottom switch to test fail safe) triggered positive shutdown of the diesel turbine pump. The VMI LD200 MLLD on the Diesel pump was tested and detected a 3.0gph leak at 10psi and held slow flow. The Bravo float and chains in the diesel dispensers were tested with water and functioned properly. NOTE: It would be helpful for UDC testing to have an access port on the back side of the high flow diesel dispenser. The gasoline dispenser has a Veeder Root stand alone sensor (VR 330212) that was tested with water and caused the dispenser to shut down. Overfill protection [Truncated]

Eval General Type: Other/Unknown
Eval Date: 08-16-2017
Violations Found: Yes
Eval Type: Other, not routine, done by local agency
Eval Notes: On-site to witness secondary containment testing performed by Mr. Erik Salinger (certifications current) of Able Maintenance. Site has two tanks (gas, diesel), compartmentalized in one annular space, two piping sumps, and 3 dispensers (one gas, one regular flow diesel and one high flow diesel). The annular space and diesel secondary piping were tested before my arrival and stated to have passed. The gas secondary piping was tested at 5 psi for one hour with no loss. The sumps, under dispenser containment (UDC) and the three spill buckets (diesel fill, gas fill and gas vapor) were tested with the Incon Accelerated testing apparatus. The 87 sump, all three spill buckets, the gasoline UDC and high flow diesel UDC showed a passing result. Submit a copy of the Secondary Containment and Spill Bucket Test reports to our office within 30 days and keep a copy available for review for at least 3 years. Reports may be sent via email to USTinspector@deh.sccgov.org.

Eval Type: Other, not routine, done by local agency
Eval Notes: On site to witness secondary containment testing performed by Tony McCarter of Able Maintenance. Mr. McCarter has current ICC UST Service

GRANITE ROCK COMPANY-PAVEX CENTRAL (Continued) **S108748034**

Technician and Incon Lvl 4 certifications. The following components were tested at the time of inspection and passed: 87/Diesel annular space was tested under 10mmhg of vacuum for 60 minutes with no loss observed. Vacuum was released at the end of testing to verify functionality of gauge. UDC sumps for dispensers 1 and 3 were tested using Incon accelerated test for 15 minutes with no liquid level loss observed. 87 grade piping sump was tested using Incon accelerated test for 15 minutes with no liquid level loss observed. The following components were undergoing testing or had not yet been tested at the time of inspection: - Diesel STP sump - 87 and Diesel product piping With 30 days, have secondary containment testing results submitted to ustinspector@deh.sccgov.org.

Eval Type: Routine done by local agency
Eval Notes: Inspection began on 8/24/2018 with functional testing and document review and concluded today with report delivery. On-site to witness the annual monitoring system certification and spill bucket test performed by Mr. Steve Parmenter (certifications current) of Service Station Systems. Split tank, diesel is pressurized, gasoline is conventional suction. Tank annular and sump sensors tested in water and provided audible and visible alarms at the panel. The diesel sump sensor also provided positive shutdown. Fail safe (sensor out and power out) was tested and functioned as required. Diesel under dispenser containment (UDC) monitored by float and chain assemblies. Float and chain assemblies tested with water and functioned properly. The gasoline UDC is monitored by a stand-alone sensor. The sensor was tested in water and shut down the dispenser pump. Overfill protection is provided in both tanks by a flapper valve in the fill riser. The spill buckets are direct [Truncated]

Eval Notes: Facility is a construction/materials maintenance and equipment storage yard. EPA ID# CAL000291556 is active. Facility generates mainly used oil from the maintenance activities as well as oily absorbents, used filters, parts washer and antifreeze waste. Observed emergency equipment throughout the facility that was properly maintained. Emergency procedures posted with current employees. Reviewed manifests and consolidated manifests for waste shipments. Training documentation is stored on company intranet. Contingency plan is filed in CERS with the HMBP documentation.

Year:	2019
Gepaid:	CAL000291556
TSD EPA ID:	UTD981552177
CA Waste Code:	791 - Liquids with pH <= 2
Disposal Method:	H040 - Incineration--Thermal Destruction Other Than Use As A Fuel
Tons:	0.02500
Year:	2019
Gepaid:	CAL000291556
TSD EPA ID:	UTD991301748
CA Waste Code:	223 - Unspecified oil-containing waste
Disposal Method:	H132 - Landfill Or Surface Impoundment That Will Be Closed As Landfill(To Include On-Site Treatment And/Or Stabilization)
Tons:	0.70000
Year:	2019
Gepaid:	CAL000291556
TSD EPA ID:	CAD044429835
CA Waste Code:	133 - Aqueous solution with total organic residues 10 percent or more
Disposal Method:	H141 - Storage, Bulking, And/Or Transfer Off Site--No Treatment/Reovery (H010-H129) Or (H131-H135)
Tons:	0.07500
Year:	2019
Gepaid:	CAL000291556
TSD EPA ID:	UTD981552177
CA Waste Code:	134 - Aqueous solution with total organic residues less than 10 percent
Disposal Method:	H040 - Incineration--Thermal Destruction Other Than Use As A Fuel
Tons:	0.40000
Year:	2019
Gepaid:	CAL000291556

GRANITEROCK COMPANY (Continued) **S113136124**

TSD EPA ID: NED981723513
CA Waste Code: 331 - Off-specification, aged or surplus organics
Disposal Method: H040 - Incineration--Thermal Destruction Other Than Use As A Fuel
Tons: 1.50000

Year: 2019
Gepaid: CAL000291556
TSD EPA ID: CAD980675276
CA Waste Code: 122 - Alkaline solution without metals pH >= 12.5
Disposal Method: H132 - Landfill Or Surface Impoundment That Will Be Closed As Landfill(To Include On-Site Treatment And/Or Stabilization)
Tons: 0.01000

Year: 2019
Gepaid: CAL000291556
TSD EPA ID: UTD991301748
CA Waste Code: 291 - Latex waste
Disposal Method: H132 - Landfill Or Surface Impoundment That Will Be Closed As Landfill(To Include On-Site Treatment And/Or Stabilization)
Tons: 2.20000

Year: 2019
Gepaid: CAL000291556
TSD EPA ID: NED981723513
CA Waste Code: 223 - Unspecified oil-containing waste
Disposal Method: H141 - Storage, Bulking, And/Or Transfer Off Site--No Treatment/Reovery (H010-H129) Or (H131-H135)
Tons: 0.30000

Year: 2019
Gepaid: CAL000291556
TSD EPA ID: NED981723513
CA Waste Code: 213 - Hydrocarbon solvents (benzene, hexane, Stoddard, Etc.)
Disposal Method: H040 - Incineration--Thermal Destruction Other Than Use As A Fuel
Tons: 0.67500

Year: 2019
Gepaid: CAL000291556
TSD EPA ID: NED981723513
CA Waste Code: 134 - Aqueous solution with total organic residues less than 10 percent
Disposal Method: H040 - Incineration--Thermal Destruction Other Than Use As A Fuel
Tons: 0.42500

Environmental Interest/Information System:
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Violation Date: 04-27-2018
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description: Failure to annually review and electronically certify that the business plan is complete and accurate on or before the annual due date.
Violation Notes: The facility last submitted a complete HMBP to CERS in 2013. Two partial submittals were made in 2015 and a full submittal was made on 6/19/2017. Ensure the HMBP is reviewed and all three sections (Facility Information, Hazardous Materials Inventory, and Emergency Response and Training Plans) are submitted at least annually.
Violation Division: Santa Clara County Environmental Health
Violation Program: HMRRP
Violation Source: CERS,

Site ID: 34174
Site Name: GRANITE ROCK COMPANY
Violation Date: 01-06-2015
Citation: HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)
Violation Description: Failure to comply with all of the following requirements: 1. Failure to conduct inspections and tests in accordance with written procedures that you or a certifying engineer have developed for the facility. 2. Failure to sign written procedures and/or a record of inspections and/or customary business records by the appropriate supervisor or inspector. 3. Failure to keep written procedures and/or a record of inspections and/or customary business records with the plan. AND 4. Failure to maintain written procedures and/or a record of inspections and/or customary business records for three years.
Violation Notes: Returned to compliance on 02/03/2015. December 2014 monthly inspection was not completed.
Violation Division: Santa Clara County Environmental Health
Violation Program: APSA
Violation Source: CERS,

Site ID: 34174

GRANITE ROCK COMPANY (Continued) **S105937941**

Site Name:	GRANITE ROCK COMPANY
Violation Date:	04-27-2018
Citation:	HSC 6.95 25508.1(a)-(f) - California Health and Safety Code, Chapter 6.95, Section(s) 25508.1(a)-(f)
Violation Description:	Failure to electronically update business plan within 30 days of any one of the following events: A 100 percent or more increase in the quantity of a previously disclosed material. Any handling of a previously undisclosed hazardous materials at or above reportable quantities. A change of business address, business ownership, or business name. A substantial change in the handler's operations that requires modification to any portion of the business plan.
Violation Notes:	The concrete plant was re-activated since the last inspection and the associated chemicals were not added to the hazardous materials inventory. The diesel tank was also emptied and is not in service. Ensure the HMBP is updated within 30 days whenever new materials are added over the threshold quantities or other hazardous materials are removed or reduced below threshold levels. Revise the inventory to include the following: 75% Argon, 25% Carbon Dioxide 1125 cuft in the shop At the concrete plant: Master Pozzolith 322, 800 gallons Recover, 500 gallons Daravair 1000, 500 gallons Masterlife SRA 20, 800 gallons Delvo Stabilizer, 800 gallons Master Glenium 7500, 800 gallons Adva 190, 1400 gallons Daraset 400, 1400 gallons WRDA 64, 1400 gallons Zyla 625, 1000 gallons DCI Corrosion inhibitor, 1600 gallons
Violation Division:	Santa Clara County Environmental Health
Violation Program:	HMRRP
Violation Source:	CERS,
Site ID:	34174
Site Name:	GRANITE ROCK COMPANY
Violation Date:	05-08-2018
Citation:	HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)
Violation Description:	Failure to cap or blank-flange the terminal connection at the transfer point and mark it as to origin when piping is not in service or is in standby service for an extended time.
Violation Notes:	FOUR PETROLEUM EMULSION AND ASPHALT CEMENT (AR) ABOVEGROUND STORAGE TANKS IN AREA 1 THAT WERE EMPTY WERE NOT MARKED AS PERMANENTLY CLOSED AND DATED. THE CONNECTING LINES WERE NOT DISCONNECTED AND BLANKED OFF, AND CLOSED AND LOCKED.
Violation Division:	Santa Clara County Environmental Health
Violation Program:	APSA
Violation Source:	CERS,
Site ID:	34174
Site Name:	GRANITE ROCK COMPANY
Violation Date:	08-22-2014
Citation:	49 CFR 1 172.201(e) - U.S. Code of Federal Regulations, Title 49, Chapter 1, Section(s) 172.201(e)
Violation Description:	Failure of the universal waste handler to properly package, label, mark, placard, or prepare and retain shipping papers for all universal waste being shipped to another universal waste handler, destination facility, or foreign facility.
Violation Notes:	Returned to compliance on 09/22/2014. Four waste fluorescent tubes were observed outside of any container in the electrical room of the RTS Lab. Properly contain the tubes and ensure they are managed properly.

Violation Division: Santa Clara County Environmental Health
Violation Program: HW
Violation Source: CERS,

Site ID: 34174
Site Name: GRANITE ROCK COMPANY
Violation Date: 08-22-2014
Citation: 22 CCR 16 66266.130 - California Code of Regulations, Title 22, Chapter 16, Section(s) 66266.130
Violation Description: Failure to properly handle, manage, label, and recycle used oil and fuel filters.
Violation Notes: Returned to compliance on 09/22/2014. The drum near the waste oil tank had two oil filters in it but was not marked. Properly mark the container or remove the filters and place them in a properly marked container.

Violation Division: Santa Clara County Environmental Health
Violation Program: HW
Violation Source: CERS,

Site ID: 34174
Site Name: GRANITE ROCK COMPANY
Violation Date: 08-22-2014
Citation: HSC 6.5 Multiple Sections - California Health and Safety Code, Chapter 6.5, Section(s) Multiple Sections
Violation Description: Haz Waste Generator Program - Operations/Maintenance - General
Violation Notes: Returned to compliance on 09/22/2014. The drums holding the grease and grease liner waste near the shop were not properly closed to prevent spillage. Properly close the containers.

Violation Division: Santa Clara County Environmental Health
Violation Program: HW
Violation Source: CERS,

Site ID: 34174
Site Name: GRANITE ROCK COMPANY
Violation Date: 04-27-2018
Citation: 22 CCR 12 66262.11 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.11
Violation Description: Failure to determine if wastes generated are hazardous waste by using generator knowledge or applying testing method.
Violation Notes: A container labeled as waste antifreeze behind the shop contained a biphasic liquid (black on top and clear brown underneath). The container was observed open. Also, three drums of unknown contents were observed in the secondary containment for the mothballed asphalt plant. Make a hazardous waste determination on the materials in the containers. Properly manage the materials once the contents have been determined.

Evaluation:

Eval General Type:	Compliance Evaluation Inspection
Eval Date:	04-27-2018
Violations Found:	Yes
Eval Type:	Routine done by local agency
Eval Notes:	Inspection began on 4/25/2018 with facility walk through and documentation review and concluded today with delivery of the report. Also present during the walk through was Ruben Williams, Senior Hazardous Materials Specialist, HMCD. Facility is a concrete plant and recycling operation. Asphalt plant is currently mothballed. Minor vehicle and equipment maintenance is also occasionally performed by mobile mechanics. Property owner and operator are the same. Reviewed emergency response training records on the company's online intranet. Observed emergency response equipment throughout the facility and it was properly maintained. Due to the addition of the cement plant chemicals, the permit category will be changed to BP05, 16-21 chemicals.

Eval Notes:	Inspection began on 4/25/2018 with facility walk through and documentation review and concluded today with delivery of the report. Also present during the walk through was Ruben Williams, Senior Hazardous Materials Specialist, HMCD. Facility generates small quantities of hazardous waste from occasional maintenance of vehicles and equipment by mobile mechanics. Vehicle fluid waste and filters are typically transported to the facility at 120 Granite Rock Way, which qualifies as a contiguous facility as there is access to both facilities from driveways directly across from each other. EPA ID# CAL000035141 is active. No waste has been shipped from this site in the past three years so there are no waste disposal records. Wastes from facility clean up of old materials would be shipped directly from this location per the facility representative. Hazardous waste training records reviewed on the company's online intranet. Emergency procedures posted. Emergency equipment and [Truncated]

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 04-27-2018
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Inspection began on 4/25/2018 with facility walk through and documentation review and concluded today with delivery of the report. Also present during the walk through was Ruben Williams, Senior Hazardous Materials Specialist, HMCD. Facility is a concrete plant and recycling operation. Asphalt plant is currently mothballed. Minor vehicle and equipment maintenance is also occasionally performed by mobile mechanics. Property owner and operator are the same. Reviewed emergency response training records on the company's online intranet. Observed emergency response equipment throughout the facility and it was properly maintained. Due to the addition of the cement plant chemicals, the permit category will be changed to BP05, 16-21 chemicals.

Eval General Type: Compliance Evaluation Inspection
Eval Date: 04-27-2018
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Inspection began on 4/25/2018 with facility walk through and documentation review and concluded today with delivery of the report. Also present during the walk through was Ruben Williams, Senior Hazardous Materials Specialist, HMCD. Facility generates small quantities of hazardous waste from occasional maintenance of vehicles and equipment by mobile mechanics. Vehicle fluid waste and filters are typically transported to the facility at 120 Granite Rock Way, which qualifies as a contiguous facility as there is access to both facilities from driveways directly across from each other. EPA ID# CAL000035141 is active. No waste has been shipped from this site in the past three years so there are no waste disposal records. Wastes from facility clean up of old materials would be shipped directly from this location per the facility representative. Hazardous waste training records reviewed on the company's online intranet. Emergency procedures posted. Emergency equipment and [Truncated]

Eval General Type:	Compliance Evaluation Inspection
Eval Date:	08-22-2014
Violations Found:	No
Eval Type:	Routine done by local agency
Eval Notes:	Asphalt and concrete plants are inactive. Facility is draining the remaining diesel in the aboveground tank in preparation for closure. Aboveground waste oil tank is empty and no longer used. All vehicle maintenance is done by mobile maintenance techs from 120 Granite Rock Way. CERS submittal 12/31/13. Minor changes needed to amounts (largest container sizes) in hazardous materials inventory but overall correct as observed. NOTE: Fire extinguisher in RTS Lab was overdue for maintenance. Not currently storing hazardous materials in RTS Lab.

Violation Date: 11-16-2017
Citation: HSC 6.95 25505(c) - California Health and Safety Code, Chapter 6.95, Section(s) 25505(c)
Violation Description: Failure to have a business plan readily available to personnel of the business or the unified program facility with responsibilities for emergency response or training.
Violation Notes: Returned to compliance on 01/30/2018. A current copy of the HMBP was not readily available for review during this inspection. A current copy of the HMBP must be made available during an inspection.
Violation Division: Santa Clara County Environmental Health
Violation Program: HMRRP
Violation Source: CERS,

Site ID: 164736
Site Name: UNITED SITE SERVICES
Violation Date: 11-16-2017
Citation: 40 CFR 1 265.201(c)(3) - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.201(c)(3)
Violation Description: Failure to inspect hazardous waste tanks at least once each operating day for the following, when present: (1) Discharge control equipment (e.g., waste feed cutoff systems, by-pass systems, and drainage systems) to ensure that it is in good working order; (2) Data gathered from monitoring equipment (e.g., pressure and temperature gauges) to ensure that the tank is being operated according to its design; (3) The level of waste in the tank.
Violation Notes: Returned to compliance on 12/15/2017. THe aboveground used oil tank is not being inspected on a daily basis. Ensure that this tank is being inspected at the frequency required of once a day. Records should be kept of these daily inspections.

Violation Source:	CERS,
Site ID:	164736
Site Name:	UNITED SITE SERVICES
Violation Date:	11-16-2017
Citation:	HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)
Violation Description:	Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes:	Returned to compliance on 12/15/2017. Observed 1x55 gal., waste coolant drum with an accumulation date on the label of; 05/6/16. Additionally, observed 1x 55 gal., oily-solid debris drum that according to shop manager is managed as hazardous waste. Based on my record review there were no hazardous waste disposal receipts for either of these wastes for the past 3 years. This exceeds the accumulation time limit of 180 days. Within 30 days, dispose of this waste and provide a copy of the hazardous waste disposal receipt to our office. In the future do not exceed the accumulation time limit of 180 days for all hazardous wastes.
Violation Division:	Santa Clara County Environmental Health

Violation Division:	Santa Clara County Environmental Health
Violation Program:	HMRRP
Violation Source:	CERS,
Site ID:	164736
Site Name:	UNITED SITE SERVICES
Violation Date:	11-16-2017
Citation:	HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)
Violation Description:	Failure to adequately describe in the SPCC Plan, overfill prevention methods, including a description of the systems or procedures used to prevent overfills for each container.
Violation Notes:	Returned to compliance on 12/15/2017. Unable to determined if all of the aboveground containers and tanks are equipped with an overfill prevention or procedures set in place to prevent overfills from happening. THis would include, the aboveground emergency generator, aboveground tanks, and drums. The template does not mention overfill from the used oil tank (when used oil is being removed) or overfill for the emergency generator.

Violation Date:	11-16-2017
Citation:	40 CFR 1 262.34(d)(5)(ii) - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 262.34(d)(5)(ii)
Violation Description:	Failure to post the following information next to the telephone: (A) The name and telephone number of the emergency coordinator; (B) Location of fire extinguishers and spill control material, and, if present, fire alarm; and (C) The telephone number of the fire department, unless the facility has a direct alarm.
Violation Notes:	Returned to compliance on 12/15/2017. Simplified emergency procedures were not found.
Violation Division:	Santa Clara County Environmental Health
Violation Program:	HW
Violation Source:	CERS,
Site ID:	164736

Violation Date:	11-16-2017
Citation:	HSC 6.5 25250.22 - California Health and Safety Code, Chapter 6.5, Section(s) 25250.22
Violation Description:	Failure to properly manage used oil and/or fuel filters in accordance with the requirements.
Violation Notes:	Returned to compliance on 12/15/2017. Currently the paper/plastic drained used oil filters are being comingled in the same drum with the metal drained used oil filters. The plastic/paper drained used oil filters do not meet the metal reclamation that the metal drained used oil filters meet. The paper/plastic drained used oil filters must be managed as hazardous waste (solid oily-debris) and must collected in a separate drum. Begin separating these drained used oil filters and managed them accordingly.

Evaluation:

Eval General Type:	Compliance Evaluation Inspection
Eval Date:	11-16-2017
Violations Found:	Yes
Eval Type:	Routine done by local agency
Eval Notes:	On-site to conduct a routine inspection. Facility walk-through was conducted on 11/14/17 and inspection report was issued today. Present during this inspection were the following; Chris Vasconcelos- Shop Manager, Lori Garcia-Office Manager and Xavier Dupree- Hazardous Materials Technician with County of Santa Clara-Department of Environmental Health. Notes; 1) A monthly log is being conducted by the facility. This log must include everything that is noted on the SPCC Plan. This was reviewed during this inspection.

Eval Notes:	On-site to conduct a routine inspection. Facility walk-through was conducted on 11/14/17 and inspection report was issued today. Present during this inspection were the following; Chris Vasconcelos- Shop Manager, Lori Garcia-Office Manager and Xavier Dupree- Hazardous Materials Technician with County of Santa Clara-Department of Environmental Health. NOTES: 1) VC22G20- Marking of Hazardous Waste (CORRECTED)- Observed 2 x 55 gal drums storing hazardous waste that were missing the accumulation start date. These drums were labeled during this inspection. 2) This facility is small quantity generator (SQG) of hazardous waste. Your accumulation time limit for all hazardous waste is 180 days. This facility is no longer generating large amounts of hazardous waste as they have been leasing trucks since 2012 and those trucks are being maintained (i.e., oil changes, etc.,) by the dealership. 3) Waste latex paint can be taken to a Paint care program recycling store such as; [Truncated]

Violations:

Site ID:	385835
Site Name:	AT&T California - N2541
Violation Date:	03-31-2015
Citation:	HSC 6.11 25404.1 - California Health and Safety Code, Chapter 6.11, Section(s) 25404.1
Violation Description:	Failure to obtain and/or maintain an active hazardous waste generator permit.
Violation Notes:	Returned to compliance on 06/01/2015.

AT&T CALIFORNIA - N2541 (Continued) **S121771115**

FACILITY DOES NOT HAVE A REQUIRED HAZARDOUS WASTE PERMIT WITH OUR AGENCY. AS A RESULT OF THIS PERMIT INVESTIGATION, A PERMIT INVOICE WILL BE GENERATED AND MAILED-OUT. UPON PAYMENT, THE PERMIT WILL BE ISSUED TO YOUR FACILITY.

Violation Division: Santa Clara County Environmental Health
Violation Program: HW
Violation Source: CERS,

Evaluation:
Eval General Type: Other/Unknown
Eval Date: 03-31-2015
Violations Found: Yes
Eval Type: Other, not routine, done by local agency
Eval Notes: On-site to conduct a hazardous waste permit investigation. Observed the following hazardous waste on-site: -1 x 55 gallon drum of waste aerosol cans -1 x 55 gallon drum of "HAZARDOUS WASTES - MISCELLANEOUS CHEMICAL PRODUCTS" -1 x UN Box of electronic waste -1 x app. 3 gallon bucket of mixed batteries -1 x 5-tier shelf containing small lead-acid/gel cell batteries
Eval Division: Santa Clara County Environmental Health
Eval Program: HW
Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 02-08-2018
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: EPA ID CAT080024797 is active. Hazardous Waste tracking System (HWTS) data and hazardous waste and Universal Waste records for the past 36 months were reviewed and are in order. Facility manifests hazardous waste lab packs (primarily off-specification or surplus epoxy resin), non-empty aerosol cans, and compressed gas cylinders; and generates Universal Wastes (UW) including UW Batteries and UW Electronic Devices. Note: This facility's Hazardous Waste generator permit is for generation of less than 100 kilograms of hazardous waste per year. The permit will be adjusted upward to reflect the fact that the actual quantity of waste generated is greater than 200 kilograms but less than 5 tons per year.
Eval Division: Santa Clara County Environmental Health
Eval Program: HW
Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 02-08-2018
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Submittal of Hazardous Materials Business Plan (HMBP) information via California Environmental Reporting System (CERS) website on 1/17/2018 was reviewed and Accepted. Notes: 1. Facility is located inside San Jose city limits. 2. Hazardous materials handled at the facility are Propane, Hazardous Waste lab packs and Universal Wastes.
Eval Division: Santa Clara County Environmental Health
Eval Program: HMRRP
Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection

AT&T CALIFORNIA - N2541 (Continued) **S121771115**

Eval Date:	05-14-2015
Violations Found:	No
Eval Type:	Routine done by local agency
Eval Notes:	On-site to conduct a hazardous waste inspection with Ray Maiden of HMCD. Conducted a walk-through of hazardous waste storage area with Rose Blackmer, Gary Chimienti, Jim Henderson, and Lynn Perez of AT&T. Observed the following hazardous waste: -Hazardous Waste (Lab Pack): 2 x 55 gallon drum -E-waste: 1 x UN box -Waste Aerosols (Universal Waste): 1 x 55 gallon drum -Waste Batteries (Universal Waste): 2 x 3 gallon bucket -Waste Lead-Acid batteries: 1 x shelf NOTES: -This inspection was not conducted as part of consent judgment (RG 14748856). -Spill kit was available in hazardous waste storage area.

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERS ID: 10654435
CERS Description: Chemical Storage Facilities

Violations:

Site ID: 362592
Site Name: HAIG PRECISION MFG CORP
Violation Date: 10-12-2018
Citation: 40 CFR 1 262.34(d)(5)(ii) - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 262.34(d)(5)(ii)
Violation Description: Failure to post the following information next to the telephone: (A) The name and telephone number of the emergency coordinator; (B) Location of fire extinguishers and spill control material, and, if present, fire alarm; and (C) The telephone number of the fire department, unless the facility has a direct alarm.
Violation Notes: Post simplified emergency procedures as required next to a map. A sample form was provided during this inspection.
Violation Division: Santa Clara County Environmental Health
Violation Program: HW
Violation Source: CERS,

Site ID: 362592
Site Name: HAIG PRECISION MFG CORP
Violation Date: 10-12-2018
Citation: 22 CCR 12 66262.11 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.11
Violation Description: Failure to determine if wastes generated are hazardous waste by using generator knowledge or applying testing method.
Violation Notes: Hazardous waste storage area- Observed the following containers; 1 x 55 gal. of used oily-debris, 1 x55 gal., unknown material drum, and about 6 x 5 gal. buckets of unknown material. Additionally, observed various small pint and gallon size materials of various types; ie., oil, paints, etc. Within 30 days make a hazardous waste determination on all of the items mentioned above. If they are hazardous wastes, provide a hazardous waste disposal receipt to our office. If the items are still good and can be re-used provide a written explanation on the final disposition of the materials in question.
Violation Division: Santa Clara County Environmental Health
Violation Program: HW
Violation Source: CERS,

Site ID: 362592
Site Name: HAIG PRECISION MFG CORP
Violation Date: 10-12-2018
Citation: HSC 6.95 25505(a)(4) - California Health and Safety Code, Chapter 6.95, Section(s) 25505(a)(4)
Violation Description: Failure to provide initial and annual training to all employees in safety procedures in the event of a release or threatened release of a hazardous material or failure to document and maintain training records for a minimum of three years.
Violation Notes: A list of employees last trained in emergency response and safety procedures was not available for review during this inspection. Within 30 days provide the required annual training to all employees at this facility. Provide a copy of a list of the employees that have been trained.
Violation Division: Santa Clara County Environmental Health
Violation Program: HMRRP
Violation Source: CERS,

HAIG PRECISION MFG CORP (Continued) **S121766991**

Site ID:	362592
Site Name:	HAIG PRECISION MFG CORP
Violation Date:	10-12-2018
Citation:	40 CFR 1 265.32 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.32
Violation Description:	Failure of the facility to maintain the following emergency equipment or equivalents: 1) An internal communications or alarm system; 2) A device, such as a telephone (immediately available at the scene of Operations/ Maintenance) or a hand-held two-way radio, capable of summoning emergency assistance from local police departments, fire departments, or State or local emergency response teams; 3) Portable fire extinguishers, fire control equipment, spill control equipment, and decontamination equipment; and 4) Water at adequate volume and pressure to supply water hose streams, or foam producing equipment, or automatic sprinklers, or water spray systems.
Violation Notes:	Absorbent pads or materials was not available at the hazardous waste storage areas found outside the building. Ensure that spill control material is available at the facility where hazardous wastes are stored.
Violation Division:	Santa Clara County Environmental Health
Violation Program:	HW
Violation Source:	CERS,

Site ID:	362592
Site Name:	HAIG PRECISION MFG CORP
Violation Date:	10-12-2018
Citation:	HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description:	Failure to annually review and electronically certify that the business plan is complete and accurate on or before the annual due date.
Violation Notes:	The last time the Hazardous Materials Business Plan (HMBP) was last submitted via CERS was on 09/06/2017 an annual certification hasn't been submitted yet. Within 30 days electronically resubmit a complete HMBP via CERS.
Violation Division:	Santa Clara County Environmental Health
Violation Program:	HMRRP
Violation Source:	CERS,

Site ID:	362592
Site Name:	HAIG PRECISION MFG CORP
Violation Date:	10-12-2018
Citation:	HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description:	Failure to establish and electronically submit an adequate emergency response plan and procedures for a release or threatened release of a hazardous material.
Violation Notes:	The emergency response and contingency plan currently found on CERS is missing the following information; Section C. Emergency Communications, Phone numbers and notifications is incomplete and is missing some of the agencies phone numbers. Section H. Earthquake vulnerability has been left blank. Update this section to include all hazardous materials area, buildings, etc., that need to be included in this section. Section K. The plan has not been certified by the responsible individual. Within 30 days update the contingency plan found on CERS to include all of the above information.
Violation Division:	Santa Clara County Environmental Health

HAIG PRECISION MFG CORP (Continued) **S121766991**

Violation Program: HMRRP
Violation Source: CERS,

Site ID: 362592
Site Name: HAIG PRECISION MFG CORP
Violation Date: 10-12-2018
Citation: HSC 6.95 25508.1(a)-(f) - California Health and Safety Code, Chapter 6.95, Section(s) 25508.1(a)-(f)
Violation Description: Failure to electronically update business plan within 30 days of any one of the following events: A 100 percent or more increase in the quantity of a previously disclosed material. Any handling of a previously undisclosed hazardous materials at or above reportable quantities. A change of business address, business ownership, or business name. A substantial change in the handler's operations that requires modification to any portion of the business plan.
Violation Notes: The hazardous materials inventory currently found on CERS has not been amended to include the following; - Argon, liquid dewar- about 2,000 gallons (must be reported in gallons) - Propane gas- 100 gallons (must be reported in gallons) - Waste oily-coolant- 250 gallons (shop area) - 1 x 55 gal., waste solvent (Outside hazardous waste storage area) - 2 x 55 gal., used oil (waste hydraulic) (Outside hazardous waste storage area) - 1 x 55 gal., new hydraulic oil drum (Outside hazardous waste storage area) - 1 x 55 gal., new SURCOAT SW20- Phosphoric acid (Outside hazardous waste storage area) - 2 x 55 gal., new hydraulic oil (Outside hazardous waste storage area). - 1 x 55 gal., Power Striper-Miles 8641 Within 30 days, amend your hazardous materials inventory to include all of the above hazardous materials.
Violation Division: Santa Clara County Environmental Health
Violation Program: HMRRP
Violation Source: CERS,

Site ID: 362592
Site Name: HAIG PRECISION MFG CORP
Violation Date: 10-12-2018
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description: Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes: The following hazardous waste were missing the required markings on the container/or tank; - 1 X 250 gal., AGT of waste oily-coolant - 1 x 55 gal., waste solvent - 2 x 55 gal. of waste hydraulic oil - 2 x 5 gal., of waste solvent Label all of the containers and tank as required. Labels were provided during this inspection.

Violation Program: HW
Violation Source: CERS,

Site ID: 362592
Site Name: HAIG PRECISION MFG CORP
Violation Date: 10-12-2018
Citation: HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)
Violation Description: Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200

HAIG PRECISION MFG CORP (Continued) **S121766991**

miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.

Violation Notes: Based on records review within the past 3 years there were no records to show that waste solvent was ever disposed of. This exceeds the accumulation time limit of 180 days for all hazardous waste. Additionally, based on records review within the last pick-up in 2017 (06/28/17) and the pick-up in 2018 (5/10/18) of the oily-water waste there was a delay of about 10 months in getting this waste picked up. Within 30 days dispose of the waste solvent and provide a copy of the disposal receipt to my office. Additionally, in the future, do not exceed the accumulation time limit of 180 days for all hazardous wastes. Ensure that the waste oily-water gets picked up no later than 11/10/18.

Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description: Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.
Violation Notes: Returned to compliance on 07/16/2019. Observed the following reportable hazardous materials that were not included in the most recent electronic submission of the hazardous materials inventory on 10-25-18: Liquid Nitrogen (230 L) Waylube oil (Oemeta Hycut SW68) (2x55 gal)
Violation Division: Santa Clara County Environmental Health
Violation Program: HMRRP
Violation Source: CERS,

KETTMANN MACHINING INC (Continued) **S124438600**

Site ID:	523567
Site Name:	KETTMANN MACHINING INC
Violation Date:	09-18-2018
Citation:	HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description:	Failure to complete and electronically submit a business plan when storing/handling a hazardous material at or above reportable quantities.
Violation Notes:	Returned to compliance on 10/25/2018. A Hazardous Materials Business Plan (HMBP) is required to be electronically submitted within 30 days via the California Environmental Reporting System (CERS) at cers.calepa.ca.gov or Santa Clara County FrontCounter at frontcounter.sccgov.org. For assistance with this, please contact me at xavier.dupree@cep.sccgov.org or 408-918-4674.
Violation Division:	Santa Clara County Environmental Health
Violation Program:	HMRRP
Violation Source:	CERS,

Site ID:	523567
Site Name:	KETTMANN MACHINING INC
Violation Date:	06-14-2019
Citation:	HSC 6.95 25508.1(a)-(f) - California Health and Safety Code, Chapter 6.95, Section(s) 25508.1(a)-(f)
Violation Description:	Failure to electronically update business plan within 30 days of any one of the following events: A 100 percent or more increase in the quantity of a previously disclosed material. Any handling of a previously undisclosed hazardous materials at or above reportable quantities. A change of business address, business ownership, or business name. A substantial change in the handler's operations that requires modification to any portion of the business plan.
Violation Notes:	Returned to compliance on 07/16/2019. Facility failed to amend the inventory within 30 days of a 100% or more increase in a previously disclosed material (used oil/coolant). Most recent inventory indicates a maximum of 165 gallons; however, observed 6x55 gal drums of waste oil/coolant at time of inspection. Additionally, reviewed multiple disposal receipts (dated 2-4-19 and 4-24-19) that document removal of 330 gallons within the past year.
Violation Division:	Santa Clara County Environmental Health
Violation Program:	HMRRP
Violation Source:	CERS,

Evaluation:

Eval General Type:	Compliance Evaluation Inspection
Eval Date:	06-14-2019
Violations Found:	No
Eval Type:	Routine done by local agency
Eval Notes:	State ID # CAL000437343 is active. Facility began operations at this location in approximately June of 2018. Facility performs machining primarily for the medical device industry and machines mainly plastics (~95% of all machining). No high pressure or fine misting CNC machines used. PARTS CLEANING: Some machine parts are cleaned via an ultrasonic cleaner using Bruin detergent. Cleaning is done exclusively on plastic parts. DEBURR: Facility does not perform an tumbling of media blasting. Some manual deburring is performed using hand tools. Reviewed last 3 years worth of consolidated manifest receipts documenting removal of used oil/coolant. Shipments occur approximately every other month and averages about 300 gallons. Facility also

KETTMANN MACHINING INC (Continued) **S124438600**

collects an oily debris/solids waste stream. MINOR VIOLATIONS CORRECTED AT TIME OF INSPECTION: 6x55 gal drums of used oil/coolant - no contents provided. MARKED.

Eval Division: Santa Clara County Environmental Health
Eval Program: HW
Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 06-14-2019
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Facility most recently electronically submitted a Hazardous Materials Business Plan (HMBP) on 10-25-2018. Reportable hazardous materials include: New coolant (Blaser Swisslube) New way oil (Oemetas Hycut SW68) Used oil/coolant Nitrogen (liquid) (230 L) Facility employees receive monthly training on topics including: illness & injury prevention, working safety, fire extinguisher safety, evacuation procedures, chemicals and waste etc. Training is documented for each employee and no less than annually for most topics. NOTE: Facility General Manager, Bernie Martin, has indicated that property owner has been provided a full copy of the HMBP while going through plan check after moving to this location. Recommend sending a property owner notification letter that will be provided with the inspection report to more clearly identify that the written notification requirement has been satisfied.

Eval Division: Santa Clara County Environmental Health
Eval Program: HMRRP
Eval Source: CERS,

Eval General Type: Other/Unknown
Eval Date: 09-18-2018
Violations Found: Yes
Eval Type: Other, not routine, done by local agency
Eval Notes: On site to perform a permit investigation as a result of Kettmann Machining notifying HMCD that they have moved to a new location. Kettmann Machining Incorporated is owned by Kettmann Machining Incorporated, and began operation at the new location at the end of June 2018. A facility walk-through was conducted with the Facilities Engineer Edward Kettmann. The following reportable hazardous materials were observed: 3 x 55gal drums of used coolant 2 x 55gal drums of new coolant 1 x 55gal drum of waste liquid (oily water) Below threshold chemicals: 1 x 55gal drum of vascomill Based on these observations this facility will be permitted for having between 1-3 reportable hazardous materials chemicals (BP01). This facility will also be permitted for hazardous waste generation. Notes: EPA ID CAL0000437343 is active Email:ed@kettmanmachining.com

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

CALIBER COLLISION CENTERS - SOUTH SAN JOSE (Continued) **S121737406**

CERS ID: 10352143
CERS Description: Hazardous Waste Generator

CERS:
Name: CALIBER COLLISION CENTERS - SOUTH SAN JOSE
Address: 3517 HILLCAP AV
City,State,Zip: SAN JOSE, CA 95136
Site ID: 102887
CERS ID: 10352143
CERS Description: Chemical Storage Facilities

Violations:
Site ID: 102887
Site Name: Caliber Collision Centers - South San Jose
Violation Date: 07-31-2017
Citation: HSC 6.5 25250.22 - California Health and Safety Code, Chapter 6.5, Section(s) 25250.22
Violation Description: Failure to properly manage used oil and/or fuel filters in accordance with the requirements.
Violation Notes: Observed used filters in an open 5-gallon plastic bucket.
Violation Division: Santa Clara County Environmental Health
Violation Program: HW
Violation Source: CERS,

Site ID: 102887
Site Name: Caliber Collision Centers - South San Jose
Violation Date: 07-31-2017
Citation: 40 CFR 1 265.35 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.35
Violation Description: Failure to maintain aisle space to allow the unobstructed movement of personnel, fire protection equipment, spill control equipment, and decontamination equipment to any area of facility operation in an emergency, unless aisle space is not needed for any of these purposes.
Violation Notes: Observed the following items blocking access to the hazardous waste storage drums: - approximately ten 2 gallon containers of used oil spread out on ground - six empty 55 gallon drums
Violation Division: Santa Clara County Environmental Health
Violation Program: HW
Violation Source: CERS,

Site ID: 102887
Site Name: Caliber Collision Centers - South San Jose
Violation Date: 07-31-2017
Citation: HSC 6.95 25505(a)(4) - California Health and Safety Code, Chapter 6.95, Section(s) 25505(a)(4)
Violation Description: Failure to provide initial and annual training to all employees in safety procedures in the event of a release or threatened release of a hazardous material or failure to document and maintain training records for a minimum of three years.
Violation Notes: Not reported
Violation Division: Santa Clara County Environmental Health
Violation Program: HMRRP
Violation Source: CERS,

Site ID: 102887
Site Name: Caliber Collision Centers - South San Jose
Violation Date: 07-31-2017

CALIBER COLLISION CENTERS - SOUTH SAN JOSE (Continued) **S121737406**

Citation:	22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description:	Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes:	The following containers were not properly labeled: - 55 gallon drum of used oil is missing the accumulation start date - approximately ten 2 gallon containers of used oil on ground in the hazardous waste storage area were not labeled as hazardous waste
Violation Division:	Santa Clara County Environmental Health
Violation Program:	HW
Violation Source:	CERS,
Site ID:	102887
Site Name:	Caliber Collision Centers - South San Jose
Violation Date:	07-31-2017
Citation:	40 CFR 1 265.33 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.33
Violation Description:	Failure to test and maintain as necessary all facility communications or alarm systems, fire protection equipment, spill control equipment, and decontamination equipment to assure its proper operation in time of emergency.
Violation Notes:	The following equipment was missing documentation showing required inspections have been completed: - the fire extinguisher located next to the mixing room does not have a an inspection date on the tag - the two eye wash stations are covered in dust and the inspection log shows the last weekly inspection was the second week of June
Violation Division:	Santa Clara County Environmental Health
Violation Program:	HW
Violation Source:	CERS,
Site ID:	102887
Site Name:	Caliber Collision Centers - South San Jose
Violation Date:	07-31-2017
Citation:	40 CFR 1 265.173 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.173
Violation Description:	Failure to meet the following container management requirements: (a) A container holding hazardous waste must always be closed during storage, except when it is necessary to add or remove waste. (b) A container holding hazardous waste must not be opened, handled, or stored in a manner which may rupture the container or cause it to leak.
Violation Notes:	Observed the following hazardous material containers in the hazardous waste storage area without proper lids: - pan of used oil - pan of waste antifreeze - 5 gallon bucket of used oil
Violation Division:	Santa Clara County Environmental Health
Violation Program:	HW
Violation Source:	CERS,

Evaluation:

Eval General Type:	Compliance Evaluation Inspection
Eval Date:	08-01-2017
Violations Found:	Yes
Eval Type:	Routine done by local agency
Eval Notes:	This inspection began on 7/31/17 and concluded today. EPA ID:

CALIBER COLLISION CENTERS - SOUTH SAN JOSE (Continued) **S121737406**

CAL000406871 Reviewed manifests for hazardous waste disposal for the last three years. Based on disposal receipts facility is a small quantity hazardous waste generator. Observed the following emergency response equipment: portable fire extinguishers, eye wash stations and first aid kit. Shop towel service is provided by Aramark.

Eval Division: Santa Clara County Environmental Health
Eval Program: HW
Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 08-01-2017
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: The Hazardous Materials Business Plan (HMBP) was last submitted on 2/22/17. Actions needed: 1. Update the Business Owner Operator page of your HMBP to include the property owner information. 2. If the property is not owned by Caliber Collision Centers you are required to notify the property owner in writing that the facility is subject to and in compliance with Hazardous Materials Business Plan (HMBP) requirements. Keep a copy of the notification in your records available for review by HMCD. 3. In addition to the training documentation that was provided, start HMBP specific training documentation that shows employees receive training as follows: initial training for new employees and annual refresher training for all employees. The training shall cover emergency and safety procedures in the event of a release or threatened release of a hazardous material, as described in the facility's Hazardous Materials Business Plan. Training must be documented electronically or [Truncated]

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
HAZARDOUS AIR POLLUTANT MAJOR
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Violation Date: 02-21-2017
Citation: 23 CCR 16 2632, 2634, 2712(b) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2632, 2634, 2712(b)
Violation Description: Failure to maintain monitoring and maintenance records (e.g., alarm logs) and/or maintain records of appropriate follow-up actions.
Violation Notes: Returned to compliance on 04/13/2017. The April 2016 DO report noted that the liquid alarms for (L7:Sensor Out, L8: Sensor Out, L11: Sensor Out) on 3/29/16 were caused by "construction". There was no support documentation to explain what was meant by "construction". Additionally, the following liquid alarms for (L6: Sensor Out and Fuel Alarm) on 3/24/16 and (L10: Fuel Alarm) on 3/11/16 were not documented on any DO report. Provide a detailed narrative as to the cause of the noted alarms and include copies of all maintenance records documenting any repairs or testing.

Violation Date: 02-20-2020
Citation: 23 CCR 16 2665(b) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2665(b)
Violation Description: "Failure to submit a copy of the overfill prevention equipment inspection results on the Overfill Prevention Equipment Inspection Report Form to the UPA within 30 days after the inspection. "
Violation Notes: Returned to compliance on 09/04/2020. UST permit Application UST Tank forms state that fill tube shutoff valves are used for overfill prevention and that the vent lines have secondary containment. The 2/15/2019 Overfill Prevention Inspection Report Form indicates that the facility is using both flapper valves and audible visual alarms, but states that the vent lines do not have secondary containment. Confirm whether the underground vent lines are single-walled or double-walled. (Facility must have double-walled vent piping to use audible and visual alarms as overfill prevention). Tank capacities noted in the Overfill Prevention Equipment Inspection Report (12,062 and 15,146 gallons) do not match tank capacities programmed into the TLS 350 console s In-Tank Setup (12,029 and 15,036 gallons) so the results reported for the alarms are not accurate. These numbers must be consistent. Inspection report also does not include calculations or measurements used to determine flapper valve shutoff level as provided in [Truncated]

Violation Date: 02-10-2015
Citation: 23 CCR 16 2715 - California Code of Regulations, Title 23, Chapter 16, Section(s) 2715
Violation Description: Failure to comply with one or more of the designated operator monthly inspection requirements: failed to inspect the monthly alarm history report; attach a copy of the alarm history; failed to inspect for the presence of liquid or debris in the spill container/spill bucket and under dispenser containment; failed to inspect the under dispenser containment to ensure that monitoring equipment is placed in the proper position; failure to inspect for liquid or debris in the containment sump where an alarm occurred or for which there is no record of a service visit; or failure to check that all testing and maintenance has been completed and documented.
Violation Notes: Returned to compliance on 02/11/2015. The date of the last secondary containment test is incorrectly recorded in the Designated Operator's monthly reports for August 2014 through January 2015. (Wrong dates listed in the reports are as follows: August: 8/29/14, September: 8/12/14, October: 9/28/11, November: 8/12/14, December: 8/12/14, January: 8/12/14). The correct date of the secondary containment test shown on the report from Able Maintenance is 8/20/14. Ensure that the Designated Operator is entering the correct date of the test.

Citation:	23 CCR 16 2641(j) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2641(j)
Violation Description:	Failure of the leak detection equipment to be installed, calibrated, operated, and/or maintained properly.
Violation Notes:	Returned to compliance on 02/21/2017. The Veeder-Root sensor (7794390-420) in the diesel STP sump was fully submerged upon arrival and the monitoring panel had not recorded this condition. The sensor was removed from the sump and tested in water by the service technician. The sensor functioned as required when tested. To verify that the volume of water observed in the sump was high enough to activate the sensor, the sensor was placed in the sump and the sensor functioned as required. The technician removed the liquid in the sump and placed the sensor at the lowest point to detect liquid. This violation was corrected during today's inspection; no further action is required for this violation.

Violation Date: 02-20-2020
Citation: 23 CCR 16 2716(e) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2716(e)
Violation Description: For designated operator (DO) monthly inspections conducted before October 1, 2018, failure to comply with one or more of the following requirements: Be performed by an ICC certified DO. Inspect monthly alarm history report, check that alarms are documented and responded to appropriately, and attach a copy. Inspect for the presence of liquid/debris in spill containers. Inspect for the presence of liquid/debris in under dispenser containment (UDC) and ensure that the monitoring equipment is positioned correctly. Inspect for liquid or debris in containment sumps where an alarm occurred with no service visit. Check that all testing and maintenance has been completed and documented. Verify that all facility employees have been trained in accordance with 23 CCR 2715(c). For designated operator (DO) 30 day inspections conducted on and after October 1, 2018, failure to conduct the designated UST operator visual inspection at least once every 30 days.
Violation Notes: Returned to compliance on 09/04/2020. Records of monthly visual DUSTO inspections were observed to have the following completion errors: 15 forms between 1/14/19 and 1/30/20 incorrectly note the date of the last secondary containment testing as 7/25/18 instead of 7/25/17. 4 forms between 4/1/19 and 5/24/19 note an incorrect date for the last monitoring system certification of 22/19/19 . 1/14/19 and 2/13/19 DUSTO inspection forms note that no Overfill Prevention Inspection had been completed in the last 36 months but the DUSTO failed to note this as a compliance issue.

Citation: 23 CCR 16 2712(b)(1)(G) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)(1)(G)
Violation Description: Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five

ROTTEN ROBBIE (Continued) **S104162830**

	minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1, 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October 1, 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.
Violation Notes:	No copy of the 2/15/19 Overfill Prevention Equipment Inspection Form was available on-site. Keep inspection records for past 36 months on-site.

Violation Date:	02-19-2019
Citation:	23 CCR 16 2716(e) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2716(e)
Violation Description:	For designated operator (DO) monthly inspections conducted before October 1, 2018, failure to comply with one or more of the following requirements: Be performed by an ICC certified DO. Inspect monthly alarm history report, check that alarms are documented and responded to appropriately, and attach a copy. Inspect for the presence of liquid/debris in spill containers. Inspect for the presence of liquid/debris in under dispenser containment (UDC) and ensure that the monitoring equipment is positioned correctly. Inspect for liquid or debris in containment sumps where an alarm occurred with no service visit. Check that all testing and maintenance has been completed and documented. Verify that all facility employees have been trained in accordance with 23 CCR 2715(c). For designated operator (DO) 30 day inspections conducted on and after October 1, 2018, failure to conduct the designated UST operator visual inspection at least once every 30 days.
Violation Notes:	Returned to compliance on 02/19/2020. The DUSTO, Walt Mullen failed to note the "NO" response for the site not completing the required overfill prevention equipment inspection been completed within the past 36 months in Section III Compliance Issues on DUSTO reports dated: 2/16/19, 1/14/19, 12/21/18 and 11/1/18.

ROTTEN ROBBIE (Continued) **S104162830**

	Section(s) 25291
Violation Description:	Failure to maintain under-dispenser containment, sumps, and/or other secondary containment in good condition and/or free of debris/liquid.
Violation Notes:	Returned to compliance on 02/09/2016. Approximately 1/2 gallon of liquid was removed from the 89-grade STP sump and placed in waste drum during today's inspection. The tank was installed 5/5/1995. This violation was corrected during today's inspection; no further action is required.

Violation Date:	02-09-2016
Citation:	23 CCR 16 2636(f)(5) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2636(f)(5)
Violation Description:	Failure to maintain all product piping outside the dispenser to be fail-safe and shut down the pump when a leak is detected and the monitoring system shuts down the pump or flow restriction occurs when a leak is detected in the under dispenser containment.
Violation Notes:	Returned to compliance on 02/09/2016. Float & chain assemblies located at the following dispensers failed to activate the shear valves: Diesel at 1/2, Diesel & 89-grade at 3/4, 89-grade at 7/8, 87-grade at 9/10 and all grades at 11/12. The retraining clips for all grades at dispenser 11/12 were positioned on the incorrect side of the shear valve that allowed the ball-chain to become slack. All float & chain assemblies were repaired and retested with water; all functioned as required. This violation was corrected during today's inspection; no further action is required.

Violation Description: Failure to maintain monitoring and maintenance records (e.g., alarm logs) and/or maintain records of appropriate follow-up actions.

ROTTEN ROBBIE (Continued) **S104162830**

Violation Notes:	Returned to compliance on 04/13/2017. The April 2016 DO report noted that the liquid alarms for (L7:Sensor Out, L8: Sensor Out, L11: Sensor Out) on 3/29/16 were caused by "construction". There was no support documentation to explain what was meant by "construction". Additionally, the following liquid alarms for (L6: Sensor Out and Fuel Alarm) on 3/24/16 and (L10: Fuel Alarm) on 3/11/16 were not documented on any DO report. Provide a detailed narrative as to the cause of the noted alarms and include copies of all maintenance records documenting any repairs or testing.

Violation Description:	"Failure to submit a copy of the overfill prevention equipment inspection results on the Overfill Prevention Equipment Inspection Report Form to the UPA within 30 days after the inspection. "
Violation Notes:	Returned to compliance on 09/04/2020. UST permit Application UST Tank forms state that fill tube shutoff valves are used for overfill prevention and that the vent lines have secondary containment. The 2/15/2019 Overfill Prevention Inspection Report Form indicates that the facility is using both flapper valves and audible visual alarms, but states that the vent lines do not have secondary containment. Confirm whether the underground vent lines are single-walled or double-walled. (Facility must have double-walled vent piping to use audible and visual alarms as overfill prevention). Tank capacities noted in the Overfill Prevention Equipment Inspection Report (12,062 and 15,146 gallons) do not match tank capacities programmed into the TLS 350 console s In-Tank Setup (12,029 and 15,036 gallons) so the results reported for the alarms are not accurate. These numbers must be consistent. Inspection report also does not include calculations or measurements used to determine flapper valve shutoff level as provided in [Truncated]

Violation Description: Failure of the leak detection equipment to be installed, calibrated, operated, and/or maintained properly.
Violation Notes: Returned to compliance on 02/21/2017. The Veeder-Root sensor (7794390-420) in the diesel STP sump was fully submerged upon arrival and the monitoring panel had not recorded this condition. The sensor was removed from the sump and tested in water by the service technician. The sensor functioned as required when tested. To verify that the volume of water observed in the sump was high enough to activate the sensor, the sensor was placed in the sump and the sensor functioned as required. The technician removed the liquid in the sump and placed the sensor at the lowest point to detect liquid. This violation was corrected during today's inspection; no further action is required for this violation.

Violation Date: 02-09-2016

Citation: HSC 6.7 25291 - California Health and Safety Code, Chapter 6.7, Section(s) 25291

Violation Description: Failure to maintain under-dispenser containment, sumps, and/or other secondary containment in good condition and/or free of debris/liquid.

Violation Notes: Returned to compliance on 02/09/2016. Approximately 1/2 gallon of liquid was removed from the 89-grade STP sump and placed in waste drum during today’s inspection. The tank was installed 5/5/1995. This violation was corrected during today’s inspection; no further action is required.

Citation: 23 CCR 16 2636(f)(5) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2636(f)(5)

Violation Description: Failure to maintain all product piping outside the dispenser to be fail-safe and shut down the pump when a leak is detected and the monitoring system shuts down the pump or flow restriction occurs when a leak is detected in the under dispenser containment.

Violation Notes: Returned to compliance on 02/09/2016. Float & chain assemblies located at the following dispensers failed to activate the shear valves: Diesel at 1/2, Diesel & 89-grade at 3/4, 89-grade at 7/8, 87-grade at 9/10 and all grades at 11/12. The retraining clips for all grades at dispenser 11/12 were positioned on the incorrect side of the shear valve that allowed the ball-chain to become slack. All float & chain assemblies were repaired and retested with water; all functioned as

Citation:	23 CCR 16 2632(d)(1)(C), 2641(h), 2711(a)(8) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2632(d)(1)(C), 2641(h), 2711(a)(8)
Violation Description:	Failure to submit or update a plot plan.
Violation Notes:	. The UST Monitoring System Site Map is incomplete. See instructions on form as submitted in CERS. .
Violation Division:	Santa Clara County Environmental Health
Violation Program:	UST
Violation Source:	CERS,
Site ID:	389327
Site Name:	CAPITOL CHEVRON
Violation Date:	10-07-2020
Citation:	HSC 6.95 25508(a)(3) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(3)
Violation Description:	Failure to complete and electronically submit a site map with all required content.
Violation Notes:	Returned to compliance on 11/24/2020. The Site Map was latst updated in 12/3/1991. The Site Map was last loaded into CERS as the Site Map in 12/30/2013. The Hazardous Materials Inventory and Site Map submittal was most recently submitted for CERS ID 10347655 on 11/17/2017 by Mike Atkar of CAPITOL CHEVRON (SAN JOSE, CA). This was to be updated at the time of UST Closure or Removal or discovery that the Site Map needs to be updated. The Site Map includes a 1000 gallon UST in the back of the service bay. You shall update the Site Map or confirm there is a Fourth Underground Storage Tank on this site and manage it properly in order to correct this violation. This is no longer a Minor Violation, but has been stepped up to a Class II violation. .
Violation Division:	Santa Clara County Environmental Health
Violation Program:	HMRRP
Violation Source:	CERS,
Site ID:	389327
Site Name:	CAPITOL CHEVRON
Violation Date:	10-08-2019
Citation:	23 CCR 16 2636(f)(2) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2636(f)(2)
Violation Description:	Failure of the functional line leak detector (LLD) monitoring pressurized piping to meet one or more of the following requirements: Monitored at least hourly with the capability of detecting a release of 3.0 gallons per hour leak at 10 pounds per square inch and restrict or shut off the flow of product through the piping when a leak is detected.
Violation Notes:	Returned to compliance on 11/24/2020. The diesel float and chain mechanism failed to trip the shear valve when tested with water. The service technician adjusted the mechanism and retested. The float and chain mechanism functioned as required. No further action is required.

Eval Notes:	On-site to oversee an annual monitoring system certification and overfill prevention inspection. Testing was conducted by Tony Fontana with U.S.T. Compliance Testing. Mr. Fontana has the following certifications; ICC#1064273 exp., 05/01/2020; VR#A23686 exp., 07/29/19; VMI#2333 exp., 06/07/19. Prior to and after completion of today's testing there were no active alarms at the veeder root panel. The following components were tested and passed during this inspection; - 3 STP sump sensors provided a positive shut-down condition at the turbine. - 3 annular sensors provided an audible/visual alarm at the panel - Fail safe and sensor out were verified during this inspection. - 3 MLLD's were tested during this inspection and provided a slow flow condition at the pump. - 4 UDC's float and chain mechanism were tested during this inspection and passed. - 3 spill buckets were hydrostatically tested for 60 minutes and passed. - 3 overfill prevention drop tubes with valves [Truncated]

Eval Notes:	On site, 175 W. Capitol Expy, Capitol Chevron, to assess conditions of 87 Octane primary piping leak at dispenser 5/6. This was first reported to this office by Darren Thomas, Franzen-Hill Contractor via email 8/8/2016, 5:07 pm to myself and HMS-II Joanne Tracey. Mark Williams, Franzen-Hill, on site conducting primary pipe failure investigation. ICC #8198890, UST Installation/Retrofitting (expires 8/29/2016). While on site I observed the piping below dispenser 5/6 and 7/8. The secondary containment boot on the 87 Octane pipe, below dispenser 5/6, was pulled back, away from the Bravo fitting. Upon discovery by Mark, the boot was loose at its lower fitting. Fuel was

CHEVRON #9-5921 (Continued) **S103881136**

discovered in the secondary containment boot at this location as well as at dispenser 7/8. The 87 Octane pipe was observed to have a reverse fall at dispenser 5/6 and 7/8. This has created low points between the Bravo UDC and the pipe back at the Sump. The extent of this revers fall is unknown, [Truncated]

Eval Notes: THIS REPORTS COVERS INSPECTIONS OF TWO SEPARATE DATES. INSPECTION REPORT WAS ISSUED TODAY TO MR. ATKAR VIA E-MAIL. 8/26/16: ON-SITE AT 9:34AM TO OVERSEE PRESSURE TESTING OF THE PRIMARY 87 AND 91 PRIMARY PRODUCT PIPING LINES. TESTING WAS CONDUCTED BY ALEX PUENTES, FRANZEN-HILL TECHNICIAN. INSPECTOR JAMIE HERNANDEZ WITH CITY OF SAN JOSE FIRE DEPARTMENT WAS PRESENT DURING THIS INSPECTION. REPAIRS WERE DONE FOR THE 87 AND 91 LINES AS IT WAS OBSERVED ON A PREVIOUS INSPECTION (8/24/16) THAT UNAPPROVED GALVANIZED THREADED FITTINGS WERE BEING USED BETWEEN THE FIBERGLASS PIPE AND THE STAINLESS FLEX PIPE CONNECTOR. THESE WERE REPLACED WITH COUPLINGS AND FITTINGS APPROVED BY AO SMITH AND FFS FIREFLEX. THE 87 PRODUCT PIPING PRIMARY LINE FAILED WHEN IT WAS TESTED THE FIRST TIME. TECHNICIAN FOUND A LEAK AT DISPENSER 1/2. TECHNICIAN FIXED THE LEAK AND RE-PRESSURIZED THE LINE. THE PRIMARY PRODUCT LINE WAS RE-PRESSURIZED AT 50.1 PSI FOR 60 MINUTES. ALL JOINTS AND CONNECTIONS WERE [Truncated]

Eval Notes: On site at 12:30 pm to observe pressure test of the 91 octane primary product piping. Alex, Puentes, Franzen-Hill Contractor, on site performing piping work and work crew oversight. The 91 Octane pipe work is not complete at the time of my arrival. I inspected the 91 octane primary pipe and discovered an unnaproved galvanized threaded fitting between the fiberglass pipe and the stainless flex pipe. This set-up is not approved for use in this system and shall be removed, then replaced with a correct configuration and approved equipment. See the installation guidelines from the manufacturers, AO Smith and FFS Fireflex. Remove all galvanized fittings from all connections, both 87 octane piping and 91 octane piping at both dispensers, 5/6 and 7/8. Re-connect in an approved manner meeting manufacturer and code requirements. Soil sampling requirements were discussed with Mike Atkar. The details of soil sampling company, state certified lab, and sampling [Truncated]

Violation Date:	05-15-2019
Citation:	HSC 6.95 25505(a)(4) - California Health and Safety Code, Chapter 6.95, Section(s) 25505(a)(4)
Violation Description:	Failure to provide initial and annual training to all employees in safety procedures in the event of a release or threatened release of a hazardous material or failure to document and maintain training records for a minimum of three years.
Violation Notes:	Returned to compliance on 05/19/2019. Facility has not conducted or documented emergency response or hazardous materials handling training for relevant employees. The HMBP Employee Training template was provided to the facility. Ensure that training is conducted annually, documented and retained for future inspections. Provide the inspector documentation of training in accordance with the requirements found in this section.

Citation:	HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)
Violation Description:	Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes:	Returned to compliance on 05/19/2019. Facility disposed of used antifreeze on 11/21/2016 and 3/12/2018, for a total of 476 days between disposals. As per Mr. Luu,.....

Evaluation:

Eval General Type:	Compliance Evaluation Inspection
Eval Date:	05-15-2019
Violations Found:	Yes
Eval Type:	Routine done by local agency
Eval Notes:	Conducted a Hazardous Waste Generator Routine Inspection with Ruben Williams from Hazardous Materials Compliance Division. EPA ID CAL000284142 is currently active. This facility is an auto repair shop and was observed generating or has the potential to generate the following hazardous wastes: -Used oil -Used antifreeze -Used oil/fuel filters -Oil-saturated solids Based on the observed waste generation

CHEVRON #9-5921 (Continued) **S103881136**

amount, the facility is a small quantity hazardous waste generator. The following violations were corrected at the time of inspection: 1. G211 Emergency Information Posted: The facility did not have emergency procedures or contact information posted. A template was provided during the inspection. 2. G405 Contaminated Container: Marking- I observed an empty 55 gallon plastic drum that previously held concentrated car wash soap, as per Mr. Luu. An "EMPTY" label was affixed with an accumulation start date during the inspection. 3. G023 Container Open: I [Truncated]

Citation:	23 CCR 16 2636(f)(1) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2636(f)(1)
Violation Description:	Failure of the double wall pressurized piping in the turbine sump to be continuously monitored with a system that activates an audible and visual alarm or restricts or stops flow at dispenser when a leak is

CAPITOL VALERO (Continued) **S121748578**

detected.
Violation Notes: Returned to compliance on 08/18/2015. Sensor in the 87 aux STP sump failed to respond to initial submersion in water. SENSOR WAS SHAKEN TO CLEAR FLOAT, AND RE-TESTED. SENSOR WAS SHOWN TO OPERATIONAL, AND PASSED INITIAL TEST AFTER COLD START. NO CORRECTIVE ACTION REQUIRED, VIOLATION WAS ABATED DURING THE INSPECTION.
Violation Division: Santa Clara County Environmental Health
Violation Program: UST
Violation Source: CERS,

Site ID: 16328
Site Name: Capitol Valero
Violation Date: 08-16-2016
Citation: 23 CCR 16 2636(f)(1) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2636(f)(1)
Violation Description: Failure of the double-walled pressurized piping to be continuously monitored with a system that activates an audible and visual alarm or stops flow at the dispenser when a leak is detected.
Violation Notes: Returned to compliance on 08/16/2016. The Veeder-Root sensor 794380-208 did not function when tested with water. A like-for-like sensor was installed and tested, which produced an audible and visual alarm at the monitoring panel. This violation was corrected during today's inspection and no further action is required.
Violation Division: Santa Clara County Environmental Health

Citation:	23 CCR 16 2636(f)(5) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2636(f)(5)
Violation Description:	Failure to maintain all product piping outside the dispenser to be fail-safe and shut down the pump when a leak is detected and the monitoring system shuts down the pump or flow restriction occurs when a leak is detected in the under dispenser containment.
Violation Notes:	Returned to compliance on 08/19/2014. TLS-350 programming was incorrect. Since piping is manifolded, shutdown of both 87 turbines must occur when either of the 87 STP sump sensors is in alarm. Each turbine was programmed to shut down for STP sump alarms only when the sensor in its own STP sump alarmed. Programming was corrected during this inspection. 87 turbines now both shut down for alarms from sensors L4, L7, L13 through L16. No further corrective action is required.

Citation: 23 CCR 16 2636(f)(1) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2636(f)(1)
Violation Description: Failure of the double-walled pressurized piping to be continuously monitored with a system that activates an audible and visual alarm or stops flow at the dispenser when a leak is detected.
Violation Notes: Returned to compliance on 08/14/2018. The sensor (VR 208) located in the 87 STP sump did not go into alarm when tested. The service technician shook the sensor and freed the stuck float. This sensor was retested and functioned as required. No further action is needed.

Citation: 23 CCR 16 2712(b)(1)(G) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)(1)(G)
Violation Description: Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1, 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October 1, 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.
Violation Notes: This site has not done their overfill testing requirement. This was completed today. Your next overfill inspection is due by October 2021.

File Location:	Local Agency
Local Case Number:	07S1E34R04f
Potential Media Affect:	Aquifer used for drinking water supply
Potential Contaminants of Concern:	MTBE / TBA / Other Fuel Oxygenates, Gasoline
Site History:	1998 During tank system upgrade activities in July of 1998, four soil shallow samples were collected (SD-1 through SD-4) beneath the dispensers. Petroleum hydrocarbons were detected in each of the four samples and a summary report was submitted to the City of San Jose Fire Department. It was reported that 18.6 tons of soil was excavated during these activities, however documentation of disposal was not provided. 1999 February An unauthorized release report was filed by the City of San Jose Fire Department based on the results of the shallow soil sampling. March The fuel leak investigation case was opened. June A preliminary site assessment was performed and three groundwater monitoring wells were installed. MTBE was detected in each of the monitoring wells which prompted further investigation.

SHELL SERVICE STATION (Continued) **1004677622**

October Nine additional soil borings were completed and a soil vapor extraction test was performed which indicated a very small radius of influence (less than 5 feet). 2000-2001 Quarterly groundwater monitoring was completed and three additional site assessments were performed to delineate and characterize the extent of contamination. November 2001 A remedial action work plan was submitted proposing additional aquifer testing and groundwater extraction and treatment in the upper water bearing zone. 2002 Eight groundwater extraction wells were installed and groundwater extraction and treatment commenced. The groundwater extraction system operated between December 2002 and November 2004 during which approximately 1,841,731 gallons of groundwater was extracted and treated. 2003-2006 A corrective action plan was submitted in April 2003. Groundwater extraction was suspended in late 2004. Quarterly groundwater monitoring was performed continuously. March 2006 A 550 gallon waste oil UST was removed from the site. Soil samples collected during the removal indicated contamination below the UST. A second unauthorized release report was filed. 2006-2009 Quarterly groundwater monitoring was continuous. 2009-2010 Groundwater monitoring was changed from quarterly to semi-annually. The most recent groundwater monitoring event occurred on August 6, 2010. September 2010 Present No activity occurred on the site. A no further action letter was issued in January 2011. A second no further action letter was issued in October 2012.

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Inspection began on 8/22/13 and concluded on 9/12/13. EFFECTIVE JANUARY 1, 2013, STATE LAW REQUIRES THAT HAZARDOUS MATERIALS BUSINESS PLAN (HMBP), HAZARDOUS WASTE TIERED PERMIT, AND CERTAIN UNDERGROUND STORAGE TANK (UST) SUBMITTALS (i.e., OPERATING PERMIT APPLICATIONS AND UST MONITORING PLANS) BE SUBMITTED ELECTRONICALLY VIA THE CALIFORNIA ENVIRONMENTAL REPORTING SYSTEM (CERS) WEBSITE AT http://cers.calepa.ca.gov. HARD COPIES ARE NO LONGER ALLOWED FOR THOSE SUBMITTALS, SO PLEASE DISREGARD ANY PRE-PRINTED CORRECTIVE ACTION TEXT IN THIS NOTICE OF INSPECTION REGARDING HARD COPY FORMS. FACILITY RECORDS HAVE ALREADY BEEN CREATED IN CERS FOR MANY BUSINESSES. PLEASE SEARCH CERS AND REQUEST ACCESS TO THAT RECORD BEFORE CREATING A NEW FACILITY RECORD. SEE www.EHinfo.org/hazmat FOR MORE DETAILS REGARDING ELECTRONIC REPORTING REQUIREMENTS.
Eval Division: Santa Clara County Environmental Health
Eval Program: HMRRP
Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 08-22-2017
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Observed the following hazardous materials onsite: Motor oil, 2 x 100 gallons + 1 x 55 gallons Used Oil, 3 x 55 gallons Used Filters, 2 x 55 gallons Used Coolant, 10 gallons Used absorbent, 5 gallons
Eval Division: Santa Clara County Environmental Health

CULLIGAN WATER CONDITIONING (Continued) **S118409047**

Site Name:	DK TEST & REPAIR
Violation Date:	04-02-2019
Citation:	22 CCR 16 66266.81(a)(4)(B) - California Code of Regulations, Title 22, Chapter 16, Section(s) 66266.81(a)(4)(B)
Violation Description:	Failure to retain for at least three years a legible copy of each manifest or bill of lading which identifies spent lead-acid storage batteries shipped to a person who stores the batteries or who uses, reuses, recycles or reclaims the batteries or their components.
Violation Notes:	Returned to compliance on 04/05/2019. Mr. Lieu stated that spent batteries are exchanged, but could not provide any receipts at the time of inspection.
Violation Division:	Santa Clara County Environmental Health
Violation Program:	HW
Violation Source:	CERS,
Site ID:	25566
Site Name:	DK TEST & REPAIR
Violation Date:	08-11-2016
Citation:	HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description:	Failure to complete and electronically submit a business plan when storing/handling a hazardous material at or above reportable quantities.
Violation Notes:	Returned to compliance on 10/31/2017. Facility has not electronically submitted a complete Hazardous Materials Business Plan (HMBP) through the California Environmental Reporting System (CERS) or FrontCounter, the local portal. For assistance with this, please contact me at michelle.santos@cep.sccgov.org.

Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 05-13-2019
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: State Identification # CAL000288737 is active. Walk-through performed with Charlie Valera. Facility provides engineering services that include but are not limited to: Post-tensioning cables, bridge erection related activities, structural retrofits/strengthening, turnkey transit systems design and building. Reviewed some hazardous waste disposal receipts for 2017, 2018, and 2019 that include used oil, paint, diesel, grease, etc. Facility's only routine hazardous waste stream consists of used oil; however, periodic clean-ups are performed that may include other hazardous waste as well such as solvent parts washer waste, diesel, and paint.

Potential Media Affect:	Aquifer used for drinking water supply
Potential Contaminants of Concern:	MTBE / TBA / Other Fuel Oxygenates, Gasoline
Site History:	In late 1985 or early 1986, 3 steel gasoline USTs were removed from

MOBIL/BP 11209 (Continued) **S100931040**

the site. Soil samples collected from beneath the UST cavity indicated the presence of TPHg up to 290 ppm near the southeast corner of the excavation at a depth of approximately 15 feet below ground surface (ft bgs). According to referenced sources, the replacement USTs consisting of one 12,000-gallon capacity and two 10,000-gallon capacity double-walled fiberglass USTs were installed at the site sometime in 1986. Jul. 86, 1 soil boring (EB-1) was advanced to 45 ft bgs west of the USTs. Groundwater was not encountered in the boring, and petroleum odor was present in soil at depths of 13 and 20 ft bgs. TPH were detected in soil up to a concentration of 1.0 ppm. In Sept. 1992, 5 soil borings were advanced to depths of 31-46 ft bgs in the vicinity of the USTs (B-1 and B-2) and pump islands (B-3 through B-5). Groundwater was not encountered within the borings. Results of soil sampling indicated the presence of benzene up to 0.088 ppm, and relatively low levels of toluene, ethylbenzene, and xylenes. A suspected concentration of methyl tertiary butyl ether (MTBE, 0.3 ppm) was detected in the 16-foot sample from boring B-2. Oct. 1994, 2 cone penetrometer testing (CPT) borings were advanced near the USTs (THP-1 and THP-2); 1 CPT boring was drilled in the area of the pump islands (THP-3); 2 CPT borings were drilled near the former pump islands (TB-1 and TB-2); and 2 grab samples were collected from approximately 0.5 ft bgs beneath the current pump islands (TD-1 and TD-3). The CPT borings were drilled to 25 ft bgs. Maximum concentrations of TPHg (3,600 ppm) and benzene (5.6 ppm) were detected in a sample collected near the northwest corner of the USTs (THP-1), and a maximum concentration of TPHd (10,000 ppm) was detected beneath the northeastern dispenser island (TB-2). Nov. 1995, the product lines, fuel dispensers, and the Stage II vapor recovery system were replaced at the site. 6 soil samples were collected from beneath the new product lines. Results indicated the presence of TPHg at 2 locations up to a maximum concentration of 22 ppm. Benzene concentrations were non-detectable at or above laboratory method reporting limits (MRLs). The presence of MTBE was not evaluated. Dec. 1998, 3 CPT borings were advanced near the NW corner of the USTs (CPT-1, CPT-2, and CPT-4) to depths of 20-35 ft bgs, and 1 CPT soil boring (CPT-3) in the vicinity of the NE dispenser island to 15 ft bgs. Groundwater was encountered at approximately 15 ft bgs. Soil samples from each of the borings contained TPHg, benzene, and MTBE (EPA Method 8020) at maximum concentrations of 85 ppm, 0.18 ppm, and 120 ppm, respectively. Grab groundwater samples collected from each of the borings contained elevated levels of TPHg, benzene, and MTBE (EPA Method 8260), with the highest detections present in CPT-1 (720,000 ppb TPHg, 2,800 ppb benzene, and 700,000 ppb MTBE). Sept. 1999, 15 Geoprobe borings (DP-1 through DP-12) were advanced in the vicinity of the USTs, and adjacent to the site to the west/southwest on the property occupied by Jimmy s Restaurant to depths of 20-45 ft bgs. 3 borings were completed as groundwater monitoring wells (MW-1, MW-2, and MW-3) on-site. Groundwater was encountered beneath the site between approximately 15-20 ft bgs. The highest concentrations of TPHg and MTBE in soil were detected between 6-25 ft bgs. Maximum concentrations of dissolved TPHg and benzene were present at 91,000 ppb(DP-11) and 3,000 ppb (DP-2). With the exception of well MW-1, elevated concentrations of MTBE ranging from 1,500 ppb to 730,000 ppb (EPA Method 8260, DP-2) were detected in each of the soil borings and groundwater monitoring wells. A step-drawdown test, followed by a constant-discharge pumping test at well MW-3 were completed to

MOBIL/BP 11209 (Continued) **S100931040**

determine aquifer properties beneath the site. Transmissivity and hydraulic conductivity values were calculated at 4.25 x 10-3 square feet per minute, and 0.0014 feet per minute, respectively. Groundwater velocity was also calculated at 0.31 feet per day. Results of aquifer testing indicated that pumping from well MW-3 showed difficulty in influencing the water-bearing zone beneath the site. IT indicated that based on the survey of utilities and wells in the area, historical research of the site area, investigation findings, results of aquifer testing, and geologic and hydrogeologic properties beneath the site, the dissolved petroleum hydrocarbon and MTBE plumes do not pose a threat to deep drinking water sources based on: (1) the presence of the majority of the mass at less than 30 ft bgs; (2) limited vertical groundwater movement beneath the site due to the thick clay/silt deposits extending from approximately 25-55 ft bgs beneath the site; (3) limited lateral movement of groundwater within the thin silty sand zone within the upper clay; and (4) the lack of public or municipal water supply wells in the immediate vicinity of the site. IT proposed the implementation of interim remedial action consisting of the periodic extraction of groundwater from well MW-3. Jan. 2000, 6 soil borings (DP-13 through DP-18) were advanced on the adjacent property occupied by Jimmy s Restaurant. Results further indicated that petroleum hydrocarbons and MTBE had migrated off-site to the west-southwest. An MTBE concentration of 68,000 ppb was detected in boring DP-18, which was drilled approximately 145 feet southwest of the site. Assessment of the geology encountered within borings DP-13 through DP-16 indicated the presence of a deeper water-bearing zone beneath the site at approximately 40-44 ft bgs. Apr. 2000, 5 soil borings (DP-19 through DP-23) were advanced using direct push drilling equipment west-southwest of the site within the right-of-way of Capitol Expressway. The borings were continuously cored to a total depth of 45 feet bgs. The presence of a deeper water-bearing zone from approximately 40-44 ft bgs was not observed in borings DP-19 through DP-23. Soil and groundwater samples were shipped to a laboratory for analysis; however, due to a shipping oversight, some of the samples were lost in transit. Available soil and groundwater samples collected in April 2000 were analyzed out of holding time for the presence of TPHg, BTEX, and MTBE. With the exception of relatively minor levels of TPHg (0.140 ppm) and MTBE (0.270 ppm, EPA Method 8260B) in soil collected from 25-25.5 ft bgs from boring DP-21, TPHg and MTBE were not detected in soil. The groundwater sample from boring DP-21 contained TPHg and MTBE (EPA Method 8260B) at concentrations of 1,400 ppb and 11,000 ppb, respectively. In May and June 2000 efforts were made to repeat the April 2000 assessment, and re-drilled borings DP- 19 through DP-23 along with new boring (DP-24), which was advanced in Capitol Expressway. During drilling, an intermediate water-bearing zone was observed within boring DP-24 between 33-37 ft bgs. With the exception of a relatively minor concentration of MTBE in groundwater from re-drilled boring DP-21 (1.5 ppb, EPA Method 8260B), soil and groundwater samples did not contain TPHg and MTBE. Based on the results of assessment between April and June 2000, IT concluded that the lateral and vertical extent of TPHg and MTBE had been defined, and recommended the installation of additional groundwater monitoring wells at the site. May 2000, a dual-phase extraction (DPE) feasibility test was conducted at the site utilizing well EW-1. Three wells (P-1 through P-3) were installed in the vicinity of well EW-1 to 25 ft bgs, and

MOBIL/BP 11209 (Continued) **S100931040**

were used as observation wells. Results of testing included that the application of DPE did not enhance the GWE rate when the well was under vacuum, and that an estimated long-term sustainable pumping rate would be less than 0.27 gpm. An estimated SVE radius of influence of 13.8 feet was calculated for well EW-1 at SVE flow rates ranging from 7.3 standard cubic feet per minute (scfm) to 43 scfm at vacuum pressures ranging from 7 inches of mercury to 18 inches of mercury. Based on an evaluation of DPE alternatives, IT recommended the performance of cyclical SVE and GWE from 7 on-site wells (5 wells simultaneously). Jan. and Feb. 2001, 7 off-site groundwater monitoring wells (MW-4 through MW-10) were installed for the purpose of monitoring dissolved TPHg and MTBE in the vicinity of the site. Well MW-4 was completed to 26 ft bgs, and wells MW-5 through MW-10 were completed to 30 ft bgs. Dissolved impacts were present in wells MW-5, MW-7, and MW-9, with the highest concentrations of TPHg (1,800 ppb) and MTBE (1,970 ppb) present in well MW-5. Petroleum hydrocarbons and MTBE were not detected in wells MW-4, MW-6, and MW-10 at or above laboratory MRLs. IT concluded that the dissolved MTBE plume was defined to the north by well MW-7, to the west by wells MW-8, MW-9, and MW-10, and to the south by wells MW-1, MW-4, and MW-6. Jun. 2001, the groundwater sampling technician discovered that well MW-5 was apparently covered by landscaping of the adjacent property. The well was located after excavating the area and found to be damaged beyond repair. The original well was drilled out and replaced on 10/18/01. In Nov. 2001, deep zone groundwater monitoring wells were installed on-site (MW-12) and in the vicinity of the site (MW-11 and MW-13) to depths of 45 ft (MW-11 and MW-13) and 50 ft bgs (MW-12) to evaluate the vertical extent of dissolved TPHg and MTBE. 2 additional shallow wells (MW-14 and MW-15) were completed at depths of 30 ft bgs to further evaluate off-site dissolved impacts SW of the USTs. Maximum concentrations of TPHg and MTBE were detected in soil from boring MW-14 at 2.1 ppm and 1.7 ppm, respectively. Elevated concentrations of TPHg, benzene (MW-14 only), and MTBE were detected in wells MW-14 and MW-15 at maximum concentrations of 150,000 ppb, 420 ppb, and 115,000 ppb, respectively. With the exception of occasional low levels of TPHg and MTBE in soil, and MTBE in groundwater from well MW-12 (8.5 ppb), TPHg and MTBE were not detected in soil and groundwater from deep zone wells MW-11 through MW-13. The direction of groundwater flow within the shallow zone was northerly on-site, and southwesterly off-site, and the direction of groundwater flow within the deep zone was northeasterly. Interim batch GWE using a vacuum truck occurred between Jul. 2000 - Nov. 2001. Approximately 60,000 gallons of groundwater were extracted from wells EW-1 and MW-3. An estimated 172 pounds of MTBE, 39 pounds of TPHg, and 0.2 pounds of benzene were removed from beneath the site. Jan. 2002, Tosco conducted an enhanced leak detection tracer test on the UST system. The results of the tracer test indicated a moderate-level release from the 10,000-gallon super unleaded UST. The fill and vapor recovery riser areas of the UST were noted as possible source areas. Tosco completed repairs, and proposed to retest the UST system. Feb. 2002, a CAP was submitted, which proposed installation of a dual GWE/SVE system at the site. In November 2002, a dual GWE/SVE system was installed and started-up at the site. Apr. 2003, 1 groundwater extraction well (MW-3A) was installed at the site to replace nearby groundwater extraction well MW-3, which had been filled with silt due to poor well construction and had not been yielding groundwater for extraction and treatment. Well MW-3A was

MOBIL/BP 11209 (Continued) **S100931040**

completed to 35 ft bgs. Soil samples did not contain petroleum hydrocarbons and MTBE at or above laboratory MRLs. Well MW-3A was connected to the remediation system on 4/11/03. Dec. 2005, a request was made to reduce reporting requirements associated with the GWE/SVE system. Based on the effectiveness and successful operation of the GWE/SVE system since Superior Court of California, County of Santa Clara Injunction Order No. CV12069 (injunction order) has been in place, and data trends verifying the establishment of generally stable plume conditions, it was proposed that the frequency of reporting the status of the remediation system be reduced from monthly to quarterly. The letter also included a proposal to discontinue monthly gauging of the monitoring well network for the purpose of constructing monthly groundwater elevation contour maps that have historically been included in the monthly remediation system status reports. The operation and performance of the remediation system will be evaluated quarterly, and will be documented in future quarterly monitoring reports. A combined SVE and GWE system had been operational at the site since November 18, 2002. Well MW-15 was taken off-line in early June 2005. Groundwater discharge under the NPDES permit was discontinued in Jan. 2006 due to permit compliance issues related to pH levels in the effluent discharge. The GWE system was modified during the 4th quarter 2006 and currently consists of 3 groundwater extraction wells that pump into an influent settling tank and then into a storage tank. The NPDES permit was canceled Jun. 2006. To maintain the same extracted groundwater flow rate and hydraulic capture zone as during previous system operations, the pumps were not modified. To prevent overfilling, the holding tank is equipped with an automatic level sensor to shut the pumps down when the tank reaches capacity. The SVE system is constructed to have the ability to extract soil vapor from extraction wells MW-3A, MW-14, and EW-1. GWE ceased 11/09. Rebound monitoring underway.

Case Worker:	GOR
RB Case Number:	Not reported
Local Agency:	SANTA CLARA COUNTY LOP
File Location:	All Files are on GeoTracker or in the Local Agency Database
Local Case Number:	7S1E27Q01f
Potential Media Affect:	Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern:	Gasoline
Site History:	Two USTs (10,000 gal, 12,000 gal) previously containing gasoline were closed in place August 2004. Soil samples (B2 (23') collected in August 2006 showed high levels of TPHg and BTEX contamination. Three monitoring wells were constructed June 2007. High concentrations of petroleum contaminants exists in the soil: 4800 ppm TPHg and 9.8 ppm Benzene were detected in boring LAS5 at a depth of 50 ft bgs. The depth to groundwater water fluctuates and has been reported as shallow as 49.6 ft bgs during the May 2007 gauging event. Groundwater sampling and gauging ocurred in May 2007 and May of 2009. The monitoring wells were reported to be dry during other potential gauging opportunities. Four quarters of groundwater gauging and sampling are required to be completed to establish gradient and to assess groundwater quality.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Lead Agency Case Number:	07S1E35L05s
Latitude:	37.2793629153467
Longitude:	-121.8343770504
Case Type:	Cleanup Program Site
Case Worker:	TLF
Local Agency:	SANTA CLARA COUNTY LOP
RB Case Number:	Not reported
File Location:	All Files are on GeoTracker or in the Local Agency Database
Potential Media Affected:	Other Groundwater (uses other than drinking water), Soil Vapor
Potential Contaminants of Concern:	Tetrachloroethylene (PCE), Trichloroethylene (TCE)
Site History:	Former dry cleaner; dry cleaning operations onsite from 1960's to 2011 when the dry cleaning machines were removed. The site is located in the Monterey Road Shopping Center and is surrounded by light commercial and residential neighborhoods. Phase II investigation was conducted in November 2011 and reported the presence of PCE and its daughter products in soil vapor, but not soil. Groundwater monitoring wells installed and PCE found in be present in groundwater.

Hazardous Waste Summary:
Waste Code: D002
Waste Description: CORROSIVE WASTE

Waste Code: D008
Waste Description: LEAD

Waste Code: F006
Waste Description: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS, EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC, AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

Waste Code: F007
Waste Description: SPENT CYANIDE PLATING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS.

Site Name: United #5444
Violation Date: 11-29-2017
Citation: 23 CCR 16 2636(f)(2) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2636(f)(2)
Violation Description: Failure of the functional line leak detector (LLD) monitoring pressurized piping to meet one or more of the following requirements: Monitored at least hourly with the capability of detecting a release of 3.0 gallons per hour leak at 10 p.s.i.g. and restrict or shut off the flow of product through the piping when a leak is detected.
Violation Notes: Returned to compliance on 11/29/2017. The VMI 99LD-2000 mechanical line leak detector for the Premium-grade UST system failed to restrict the flow of product when a 3.0 gph leak at 10 p.s.i.g. was simulated. The leak detector was adjusted and re-tested. Upon re-testing, the leak detector restricted the flow of product as required and passed functional testing. This violation was corrected at the time of inspection. NO FURTHER ACTION IS NEEDED.

Violation Description:	Failure to maintain secondary containment (e.g. failure of secondary containment testing).
Violation Notes:	Returned to compliance on 09/15/2017. 1) The 87- secondary piping run, 89-secondary piping run, and the diesel piping run immediately failed to hold 5psi for 60 minutes. The failures are suspected to have occurred due to broken test boots at UDC 1/2 (for 89-piping), UDC 3/4 (for 87-piping), and UDC 7/8 (for diesel piping), but further evaluation is needed. 2) UDC pans 1/2, 3/4 and 7/8 immediately failed testing today. Immediately after testing began, UDC pan 1/2 s liquid level dropped one inch, UDC pan 3/4 s liquid level dropped 3-4 inches, and UDC pan 7/8 s liquid level dropped one inch. The failures are suspected to have occurred due to the above-identified UDC test boots, but further evaluation is needed. Also, when test boots were removed from the secondary piping runs in the pipe monitoring sump, only the diesel line discharged test water into the sump from the UDC pan. It is unclear as to where the water from UDC 1/2 and and 3/4 went, but the service technician suspects that there may be a breach [Truncated]

Eval Notes: On-site today to observe the annual monitoring certification. Testing today was performed by Richard Thomas from Tank-Tek Environmental Corp. Mr. Thomas has current ICC, VR, and VMI certifications. Site Set-up: 4-double wall steel tanks (87,89,91, and Diesel) UDCs are single walled and monitored by Veeder-Root 208 sensors in the UDC pan. Piping Secondary containment is monitored by Veeder-Root 208 sensors in the sumps. Annular spaces of tanks are dry and monitored by Veeder-Root 420 sensors. VMI Mechanical line leak detectors are used to restrict flow if a leak of 3gph at 10 PSI or greater is detected. Overfill prevention is provided by flapper valves. Spill protection is provided by spill buckets. System is configured so that a disconnection of a sensor and a loss of power to the monitoring system results in a positive shutdown of the turbines. Testing: All sensors were tested using water Spill buckets were hydrostatically tested for 1 hour Mechanical [Truncated]

Citation: 40 CFR 1 262.34(d)(5)(iii) - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 262.34(d)(5)(iii)
Violation Description: Failure to ensure that all employees are thoroughly familiar with proper waste handling and emergency procedures, relevant to their responsibilities during normal facility operations and emergencies.
Violation Notes: Returned to compliance on 09/15/2019. Nature and number of violations noted during todays inspection suggest that employees are not familiar with proper waste handling and emergency response procedures. Santa Clara County offers free hazardous waste training. Visit ehinfo.org/hazmat for more information.

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for

RAISCH PROD (Continued) **1000378085**

generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Citation:	HSC 6.67 25270.4.5 (a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5 (a)
Violation Description:	Failure to amend the SPCC Plan within 6 months: 1. When the facility has had a change in design, construction, operation, or maintenance which affects the facility s discharge potential. AND/OR 2. To include more effective proven technology at the time of the 5-year SPCC Plan review and evaluation.
Violation Notes:	The current copy of the SPCC Plan provided during this inspection for review was issued on 12/28/2006 and prepared by Golder Associates, Inc. The plan has significant deficiencies such as; - Aboveground tanks for diesel is gasoline is new and is now a compartmentalize tank. - Locations of above ground tanks have also changed and need to be reflected on the map. - The volumes of the aboveground petroleums needs to be revised to reflect what it is currently found at this location. - The general manager and the Safety Coordinator have changed. Update the SPCC plan to reflect the changes above and any other changes that may have occurred.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 05/22/2012
Comments: DTSC approved the Executive Data Summary Report, which presents a summary of the history, previous investigations, and current conditions of the site. Total petroleum hydrocarbons and metals are present above unrestricted use levels and will require remediation in order for site to be developed for the proposed high-density residental use.

Completed Area Name: Lennar Savona II (Lot 4)
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 07/15/2014
Comments: Engeo completed the removal actions work as identified in the approved Response Plan. Approximately 10,135 cubic yards of contaminated soil was encapsulated on-site. All confirmation samples confirms that cleanup was achieved and the Site is suitable for future residential redevelopment.

Completed Area Name: Lennar Savona II (Lot 4)
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 09/01/2014
Comments: Lennar has completed the fieldwork activities for Savona II Lot 4.

THE MONTECITO VISTA PROJECT (Continued) **S111418024**

All the contaminated soil was encapsulated in the common areas in the proposed development.

Completed Area Name: Taylor Morrison (Lots 1, 2, 5, 6, and 7)
Completed Sub Area Name: Not reported
Completed Document Type: Work Notice
Completed Date: 02/10/2015
Comments: A work notice was distributed to inform the community about cleanup activities on The Montecito Vista II Project Lots 1, 2, 5, 6, and 7 scheduled to start February 16, 2015 and expected to last approximately 3 to 4 weeks. The remediation is encapsulation of total petroleum hydrocarbon-contaminated soil with the potential for off-site disposal if encapsulation is not possible due to capacity limitations. Development is to begin right after the completion of the remediation.

Completed Area Name: Taylor Morrison (Lots 1, 2, 5, 6, and 7)
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 06/15/2015
Comments: The removal actions for Lots 1, 2, 5, 6, and 7 were completed. Contaminated soil was excavated, consolidated, and capped on site in the planned common areas for the residential development.

Completed Date: 04/30/2012
Comments: The Montecito Vista Phase I Environmental Site Assessment was submitted as part of the California Land Reuse and Revitalization Act (CLRRA) application to meet the All Appropriate Inquiries (AAI) to provide the necessary information in order for DTSC to approve the CLRRA on April 30, 2012.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: AB 389 Response Plan
Completed Date: 10/11/2012

THE MONTECITO VISTA PROJECT (Continued) **S111418024**

Comments: Not reported

Completed Area Name: Lennar Savona II (Lot 4)
Completed Sub Area Name: Not reported
Completed Document Type: Work Notice
Completed Date: 01/23/2014
Comments: The work notice announced the start of remediation. The field activities are scheduled to begin February 10, 2014 and will take approximately 8 weeks to complete. The remediation consists of excavating contaminated soil and encapsulating it on-site.

Completed Area Name: Lennar Savona II (Lot 4)
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 11/13/2014
Comments: The Completion Report documents the implementation of the response action at the Savona II Lennar operable unit of the site. Contaminated soil was encapsulated within the common areas of the planned townhomes development. As part of the remediation, a land use covenant will be recorded with the Santa Clara County Recorder to restrict certain uses and activities within the encapsulation areas. An Operation and Maintenance Agreement/Plan will be in put in place for long-term inspection and maintenance of the encapsulation areas.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fact Sheets
Completed Date: 08/14/2012
Comments: The fact sheet describes the site history and background, investigations completed at the site, and the cleanup alternative proposed in the Draft Response Plan. The fact sheet also announces the public comment period for the Draft Response Plan from August 20th through September 27, 2012.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Public Notice
Completed Date: 08/14/2012
Comments: DTSC announced the start of the public comment period for the Draft Reponse Plan.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Community Profile
Completed Date: 07/19/2012
Comments: Not reported

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 05/22/2012
Comments: DTSC approved the Executive Data Summary Report, which presents a summary of the history, previous investigations, and current conditions of the site. Total petroleum hydrocarbons and metals are present above unrestricted use levels and will require remediation in order for site to be developed for the proposed high-density residental use.

THE MONTECITO VISTA PROJECT (Continued) **S111418024**

Completed Area Name: Lennar Savona II (Lot 4)
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 07/15/2014
Comments: Engeo completed the removal actions work as identified in the approved Response Plan. Approximately 10,135 cubic yards of contaminated soil was encapsulated on-site. All confirmation samples confirms that cleanup was achieved and the Site is suitable for future residential redevelopment.

Completed Area Name: Lennar Savona II (Lot 4)
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 09/01/2014
Comments: Lennar has completed the fieldwork activities for Savona II Lot 4. All the contaminated soil was encapsulated in the common areas in the proposed development.

Completed Area Name: Taylor Morrison (Lots 1, 2, 5, 6, and 7)
Completed Sub Area Name: Not reported
Completed Document Type: Work Notice
Completed Date: 02/10/2015
Comments: A work notice was distributed to inform the community about cleanup activities on The Montecito Vista II Project Lots 1, 2, 5, 6, and 7 scheduled to start February 16, 2015 and expected to last approximately 3 to 4 weeks. The remediation is encapsulation of total petroleum hydrocarbon-contaminated soil with the potential for off-site disposal if encapsulation is not possible due to capacity limitations. Development is to begin right after the completion of the remediation.

Completed Area Name: Taylor Morrison (Lots 1, 2, 5, 6, and 7)
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 06/15/2015
Comments: The removal actions for Lots 1, 2, 5, 6, and 7 were completed. Contaminated soil was excavated, consolidated, and capped on site in the planned common areas for the residential development.

Future Area Name: Lennar Savona II (Lot 4)
Future Sub Area Name: Not reported
Future Document Type: Certification
Future Due Date: 2022
Schedule Area Name: Lennar Savona II (Lot 4)
Schedule Sub Area Name: Not reported
Schedule Document Type: Land Use Restriction

Local Case Number:	07S1E26L01f
Potential Media Affect:	Aquifer used for drinking water supply, Other Groundwater (uses other than drinking water), Soil, Soil Vapor
Potential Contaminants of Concern:	Benzene, Toluene, Xylene, MTBE / TBA / Other Fuel Oxygenates, Gasoline
Site History:	Numerous site investigations have been performed at the site, including advancing soil borings, sampling soil and groundwater and installing groundwater wells both on and off-site. In May 1989, EMCON drilled eight exploratory borings (B-1 through B-4, and A-2 through A-5). Borings A-2 through A-5 were converted to groundwater monitoring wells (Figure 2). Analytical tests revealed hydrocarbon-impacted soil and groundwater. TPH-g and benzene in soil were detected at maximum concentration of 7,100 ppm and 140 ppm, respectively. TPH-g and benzene in groundwater were detected at maximum concentration of 220 ppm and 38 ppm, respectively (EMCON, 1989). In October 1989, monitoring well A-1 was decommissioned due to the removal and replacement of the second UST complex (EMCON, 1990). In January 1991, EMCON drilled six on-site vadose monitoring wells (VW-1 through VW-6), two groundwater extraction wells (EW-1 and EW-2) and six off-site groundwater monitoring wells (A-6 through A-11) to further define the extent of petroleum hydrocarbons in soil and groundwater. The vadose zo ne wells were also installed to serve as vapor extraction and observation wells during soil vapor extraction (SVE) testing and future SVE remediation (EMCON, 1991a). In February 1991, EMCON performed a pilot scale SVE test at the Site. Vacuum measurements indicated a radius of influence of over 80 feet and removal rates of 80 pounds of total petroleum hydrocarbons as gasoline (TPH-g) per hour from the vapor extraction wells (EMCON, 1991a). In October 1991, EMCON installed three off-site groundwater monitoring wells (A-12, A-13 and A-14) to define the cross-gradient

ARCO #6044 (Continued) **S100179327**

extent of dissolved and free product hydrocarbons in the groundwater. Dissolved TPH- g was detected at concentrations ranging from 1,800 to 15,000 parts per billion (ppb) (EMCON, 1991b). In May 1994 EMCON installed off-site groundwater monitoring well A-15 to define the downgradient extent of free product and dissolved hydrocarbons detected in the groundwater at monitoring well A-10. Analytical results of groundwater samples indicated no detectable concentrations of TPH-g in well A-15. In March 1991, a weekly floating product recovery program was initiated on wells EW-1, EW-2, A-2, A-3, A-5 and A-10 to control product migration. Since inception of the recovery program, the frequency was modified on an as needed basis from continuous monitoring and removal (product recovery system using product kimmer) to monthly monitoring and manual removal, if necessary. To date, approximately 352 gallons of free product have been recovered from the site. The majority of the free product was recovered before 1996 (Appendix B). A sheen was last observed in wells A-4, A-10 and EW-2 during the third quarter 2002 groundwater monitoring event (URS, 2002). Measurable amounts of free product have not been detected at the site since the fourth quarter 1998 when 0.2 gallons were extracted from the site (Pinnacle, 1999). A SVE feasibility test was performed in February 1991 and an interim SVE system was installed by EMCON in September 1992. From start-up until July 1995, a King Buck Thermal Oxidizer was used for the abatement of hydrocarbons. From July 1995 to the present, a Term Tech Model Vac-10 thermal/catalytic oxidizer has been used for hydrocarbon abatement. The SVE system is connected to wells VW-1 through VW-6, EW-1, EW-2 and A-2 through A-5.In March 1991, a weekly floating product recovery program was initiated on wells EW-1, EW-2, A-2, A-3, A-5 and A-10 to control product migration. Since inception of the recovery program, the frequency was modified on an as needed basis from continuous monitoring and removal (product recovery system using product skimmer) to monthly monitoring and manual removal, if necessary. To date, approximately 352 gallons of free product have been recovered from the site. The majority of the free product was recovered before 1996 (Appendix B). A sheen was last observed inwells A-4, A-10 and EW-2 during the third quarter 2002 groundwater monitoring event (URS, 2002). Measurable amounts of free product have not been detected at the site since the fourth quarter 1998 when 0.2 gallons were extracted from the site (Pinnacle, 1999). A SVE feasibility test was performed in February 1991 and an interim SVE system was installed by EMCON in September 1992. From start-up until July 1995, a King Buck Thermal Oxidizer was used for the abatement of hydrocarbons. From July 1995 to the present, a Term Tech Model Vac-10 thermal/catalytic oxidizer has been used for hydrocarbon abatement. The SVE system is connected to wells VW-1 through VW-6, EW-1, EW-2 and A-2 through A-5. In March 1991, a weekly floating product recovery program was initiated on wells EW-1, EW-2, A-2, A-3, A-5 and A-10 to control product igration. Since inception of the recovery program, the frequency was modified on an as needed basis from continuous monitoring and removal (product recovery system using product skimmer) to monthly monitoring and manual removal, if necessary. To date, approximately 352 gallons of free product have been recovered from the site. The majority of the free product was recovered before 1996 (Appendix B). A sheen was last observed in wells A-4, A-10 and EW-2 during the third quarter 2002 groundwater monitoring event (URS, 2002). Measurable amounts of free product have not been detected at the site since the fourth quarter 1998 when 0.2 gallons were

ARCO #6044 (Continued) **S100179327**

extracted from the site (Pinnacle, 1999). A SVE feasibility test was performed in February 1991 and an interim SVE system was installed by EMCON in September 1992. From start-up until July 1995, a King Buck Thermal Oxidizer was used for the abatement of hydrocarbons. From July 1995 to the present, a Term Tech Model Vac-10 thermal/catalytic oxidizer has been used for hydrocarbon abatement. The SVE system is connected to wells VW-1 through VW-6, EW-1, EW-2 and A-2 through A-5.In September 1994, EMCON performed a 5-day SVE feasibility test on off- site monitoring well A-10. The test results indicated that extracting vapors from off- site monitoring wells was not practical given the limited vertical zone of impact (2-5 feet) and the elevation of the groundwater. Furthermore, analytical results of air sampling indicated hydrocarbons removal rates were not sustainable over a long extraction period (EMCON 1995a). In October 1994, EMCON modified the existing SVE system by installing airlines to wells EW-1, EW-2 and A-2 through A-5 (EMCON 1995b). This was done with the intent to stimulate bioremediation by increasing the dissolved oxygen (DO) concentrations present in the groundwater. In July 1996 the air bubbling (AB) system was started and compressed air was released into the bottom of each well at relatively low flow rates ranging from 0.5 to 4 standard cubic feet per minute (scfm). In December 1996, EMCON submitted a CAP in which they proposed to continue with the operation of the interim SVE/AB system. An addendum to the CAP was submitted by EMCON in August 1997, in which they provided numerical objectives and evaluated potential system modifications. EMCON also proposed a feasibility test for pure oxygen injection. However, no further documentation regarding the CAP or the feasibility test could be found at this time. The AB system was operated intermittently from start- up (July 1996) until the system was shutdown in April 1998. During this time, the system flow rates were adjusted in order to maximize the hydrocarbon removal. In April 1998 the system was shutdown due to mechanical problems. However, the system was not restarted because it did not appear to have a large impact on the overall site. Historical Soil Vapor Extraction Operational data is provided in Appendix B. Current Remedial Activities To date, the SVE system continues to operate at the Site and has removed a total of 130,360 pounds of TPH-g/GRO1. During the first quarter 2004, the system operation was changed from continuous to intermittent due to low concentrations in the system influent (Table 1, Figure 3). Moreover the mass removal from the SVE system appears to have reached asymptotic levels (Table 1, Figure 3). Operation and maintenance of the equipment is being conducted on a weekly basis.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 01/25/2022
Date Data Arrived at EDR: 02/03/2022
Date Made Active in Reports: 02/22/2022
Number of Days to Update: 19

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 01/25/2022

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WDR: Waste Discharge Requirements Listing
In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

CERS: CalEPA Regulated Site Portal Data

The CalEPA Regulated Site Portal database combines data about environmentally regulated sites and facilities in California into a single database. It combines data from a variety of state and federal databases, and provides an overview of regulated activities across the spectrum of environmental programs for any given location in California. These activities include hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

LOS ANGELES CO LF METHANE: Methane Producing Landfills

This data was created on April 30, 2012 to represent known disposal sites in Los Angeles County that may produce and emanate methane gas. The shapefile contains disposal sites within Los Angeles County that once accepted degradable refuse material. Information used to create this data was extracted from a landfill survey performed by County Engineers (Major Waste System Map, 1973) as well as historical records from CalRecycle, Regional Water Quality Control Board, and Los Angeles County Department of Public Health

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.
