What I conclude from from your Table is that, rail users will take longer to get to their destinations (based on MY roll up of extra time vs driving), but due to reduced congestion on the road due to fewer drivers, a very large number of drivers will save bits of time which, when summed, are greater than the extra time rail riders have to endure.

Question: Can you show me a budget, a breakdown of components which sum to your User Benefit per project trip of 22.6 minutes, one component being similar to my sum of a typical train rider needing 50 min/trip to get to/from train/destination? 366-4

Question: What is your estimate of the uncertainty (and at what confidence level) in the values you report in Tables 3.1 and 3.2. The context in which I ask is that, current Metro rail ridership is less than half pre-pandemic values despite historically low unemployment: did your model predicted that? 366-5

Subject: RE: Ridership Summary Report: User Benefits per Project Trip (minutes)

Below are answers from our technical team in Red:

Submission 366

Reference Table 3.1, column 1, bottom cell, "User Benefits per Project Trip (minutes)"

Do the values in that row include the time riders have to use to ride the train versus drive a car?
User Benefits is not just travel time but a composite measure of all components of travel. The Federal Transit Administration (*https://www.transit.dot.gov/sites/fta.dot.gov/files/docs/FY12_Evaluation_Process(2).pdf*) defines as "Transportation system User Benefits reflect the improvements in regional mobility (as measured by the weighted in- and out-of-vehicle changes in travel-time to users of the regional transit system) caused by the implementation of the proposed New Starts or Small Starts project".

When you drive a car, you get in the car and go.

Let's just play with some numbers to estimate how much extra time is required to take a train versus a car.

1. To take the train, you must get to the train. That takes time to walk or drive and park. Neither of the two proposed train stations is close to residences (of course, your trains run as close as 50 feet along the ROW). I think your literature says that potential riders live within a mile of stations. So if the average walker has to walk a half mile, that takes, 8 minutes? To and from the train. Would driving to the station, parking, then walking to the kiosk be any faster? 16 minutes per round trip(RT)

2. Once arriving at the train station, you must visit the kiosk to buy and/or load a tap card, unless you have pre-loaded your card, which takes some time sometime. I'll budget a minute, each end, 2 minutes total per RT (it takes me longer).

3. Then you have to get on the train platform and wait for the train. 2 minutes each end, 4 minutes/RT

4. Then you have to wait for the train. The Green Line Eastbound, weekdays, starts at 3:41 AM and 96 trains run until 11:59PM. That is 20 hours, 18 minutes, 1218 minutes. That is an average wait between trains of 12.7 minutes, on each end of the trip. So it's reasonable to assume an average round trip would require 12 minutes waiting on the train platform (I rounded down for more popular transit times).

5. When you arrive at your destination station, you have to walk to your destination. If you were in your car, you would park at your destination's parking lot. If you consider 1 mile to be within likely ridership walking range, average 1/2 mile/ walker, that would be another 16 minutes/RT.

Total extra time per round trip taking train vs car is 16 + 2 + 4 + 12 + 16 = 50 minutes. And that is if you do not require any connections to other transit, which I think all your scenarios do (I do not really understand those).

In my view, you need to subtract 50 minutes or more from the "User Benefits per Project Trip (minutes)" for train use. For the ROW train, scenario C1, that number should be negative 27.4 minutes, a longer trip. That is reasonably consistent with my experience riding buses within about 1/2 mile of my home and destination. The "User Benefit (travel time savings in hours)" would be a loss of 4725 hours/day.

This is why taking the train only makes sense for long trips and/or destinations (because it might be faster/cheaper than driving) where there is not adequate, affordable parking, like LAX and the Inglewood Hollywood Park Complex.
As stated earlier user benefits considers all the components of travel – drive time, access time, wait time, time in the vehicle, egress time, etc. Total region or systemwide changes in are estimated and expresses as minutes of system user benefits. As an example, the systemwide composite mobility improvements for ROW Operating Plan C-1 is about 3,895 hours for an average weekday.

Subject: DEIR Community Response Series from Right of Say/Redondo Beach Quality of Life Installment #7

Dear Metro and Metro Board of Directors,

After having a chance to review the Draft Environmental Impact Report, please consider the following as our seventh DEIR group response for the record. We are responding in joint installments submitted by group members to ensure each concern is highlighted and expressed so it represents the breadth of our combined communities. We previously highlighted Lawndale, this installment is regarding the Noise factor in the most overlooked and highly impacted ROW West community in Redondo Beach.

As residents and homeowners along the WEST side of the ROW. The following is one of our many concerns. A large number of us are retired seniors in very close proximity right next to the corridor and others have noise sensitivities. Some have young children in school and some kids have spectrum issues so this will be disruptive to sleep and extremely problematic for all of us. 367-1

Please take note of the city noise ordinance for residential zoning in the community, which in Redondo Beach is to 45 decibels after 10pm and 50 after 7am as shown in the city ordinance chart below. 367-2

4-24.301 Maximum permissible sound levels by land use categories.
The noise standards for the various categories of land use districts identified shall be the higher of either the presumed or actual measured ambient and shall apply to all such property within a designated category as follows:

Receiving Land Use District Category	Time Period	Presumed Ambient Level (dBA)
Low Density	10:00 p.m. to 7:00 a.m.	45
Residential R-1-A, R-1, R-2, P-D-R,	7:00 a.m. to 10:00 p.m.	50

The Draft Environmental Impact Report, also in presentations and direct conversations with Metro team members and contracted engineers, do not and have not adequately addressed the noise issues this project would present to us being only 12 - 25 feet from the freight track if it were relocated and shifted to the west. In fact, "noise mitigations" that have been proposed by everyone on the Metro team will only make matters worse for those of us on the west side of the corridor. 367-3

A sound wall built on the east side of the corridor, which has been confirmed over and over again as the mitigation for noise south of 182nd St, will obviously bounce the noise back at us on the west side. This makes no sense and nobody here can understand why this is even being proposed as a "mitigation" for us. Another hard to digest proposed noise 367-4

mitigation was air conditioners. We are a coastal climate with ocean breeze, not to mention that added cost in energy bills would be impossible to manage. Both suggestions are not only counterintuitive, they just don't make any sense. 367-4

Furthermore, may we point out in the DEIR, the monitoring table 3.6-11 fails to include ANY residential neighborhoods on the west side of the ROW south of Artesia Blvd in Redondo Beach who share property lines. This would and should include; south of Artesia Blvd on Ruxton Ave, south of 182nd St on Firmona Ave, Fisk Ct, Fisk Ln and Spreckles Ct. It is unacceptable that the neighborhoods in closest proximity sharing property lines with the ROW are completely disregarded in this study. Metro needs to do better. 367-5

Table 3.6-11. Noise Monitoring Locations and Measured Ambient Noise Levels

Noise Site	Monitoring Type	Location	Ambient Noise Level (dBA)	
			Hourly (L_{eq})	24-hour (L_{dn})
1	Long-Term	Hilton Garden Inn (2410 Marine Ave., Redondo Beach)	-	67.1
2	Short-Term	Iglesia Cristiana Lluvia de Gracia (464 Manhattan Beach Blvd., Lawndale)	71.2	-
3	Long-Term	Residence (4721 159th St., Lawndale)	-	65.0
4	Long-Term	Residence (4529 160th St., Lawndale)	-	62.2

25	Long-Term	South Bay Estates on Hawthorne Blvd. (18801 Hawthorne Blvd., Torrance)	-	75.1
26	Short-Term	Residences (4237 to 4345 190th St., Torrance)	74.9	
27	Long-Term	Residence (607 Pine Dr., Torrance)	-	69.6

Source: TAHA, 2022

"A general rule of thumb is that a 10 decibel change in the sound level is perceived by humans to be a doubling of the loudness"—Hugh Saurenman, ATS Consulting,
"Any system that has a steel wheel and a steel rail will have rolling noise"—Briony Croft, Acoustics, SLR Consulting (Canada) Ltd.

"12 light rail transit trains traveling 40 miles per hour generate a noise level of 65 dBA Leq at 50 feet. These same light rail transit trains generate a noise level of 57 dBA Leq at 20 miles per hour at 50 feet (FTA 2006)."

Another suggested "mitigation" of designating a quiet zone would merely stop the usage of bells at an at grade crossing, it will not change the level of decibels emitted from a passing light rail. Due to the presence and need of the McCormick ambulance facility to have free life saving access one block east of the 182nd St crossing, there cannot be an at grade crossing therefore the point is moot anyway. 376-6

According to the Noise Impact Criteria 3.6-3 for Redondo Beach's nighttime R1 zoning for residential would suffer "moderate to severe impacts" according to the table below: 376-7

Table 3.6-3. Noise Impact Criteria for Transit Operations

Existing Noise Exposure L_{eq} or L_{dn} (dBA)	Project Noise Impact Exposure, L_{eq} (h) or L_{dn} (dBA)					
	Category 1 or 2 Sites			Category 3 Sites		
	No Impact	Moderate Impact	Severe Impact	No Impact	Moderate Impact	Severe Impact
<43	< Ambient + 10	Ambient + 10 to 15	>Ambient + 15	< Ambient + 15	Ambient + 15 to 20	>Ambient + 20
43	<52	52-58	>58	<57	57-63	63
44	<52	52-58	>58	<57	57-63	63

61	<59	59-64	>64	<64	64-69	69
62	<59	59-64	>64	<64	64-69	69
63	<60	60-65	>65	<65	65-70	70
64	<61	61-65	>65	<66	66-70	70
65	<61	61-66	>66	<66	66-71	71
66	<62	62-67	>67	<67	67-72	72
67	<63	63-67	>67	<68	68-72	72
68	<63	63-68	>68	<68	68-73	73
69	<64	64-69	>69	<69	69-74	74

With all of the aforementioned points and concerns, the only realistic mitigation is to use the Hawthorne Blvd. Elevated alignment. If the funding for this is not possible, the next alternative should be High Frequency Buses. 376-8

Thank you for your consideration in this crucial matter.

Respectfully,
Right of Say/Redondo Beach Quality of Life Coalition

Subject: DEIR

Greetings To All,

It is with utter confusion and fear for the wellbeing of my family that brings me to write this today.

Having the proposed C-Line current path, METRO'S ROW, my serene Lawndale neighborhood, whether it be subgrade/trenched, grade level or elevated, the disturbance impact would be detrimental to not only my family but the friends and neighbors who reside near on next to the ROW. 368-1

We live about 10 houses from the tracks. Currently, the nostalgic freight train travels maybe 2 times a day. In comparison, METRO's estimated "Light Rail", passing an unfathomable ***200-300 times a day in a 20 hour period*** ***right in the middle of our residential neighborhood!!!*** 368-2
EVERY 4 to 6 MINUTES?!

Honestly, are we not just trading profitable commuter lives over residential family lives??? 368-3

HAWTHORNE is the obvious choice. 368-4
NOT ENOUGH FUNDING? This project has been on the back burner for a long time, decades as far as I have been told. 368-5
-

I have worked hard to provide for my family a true quality of life here in Lawndale and continue to do so with my 3rd generation, my grandson. 368-6

The continual and detrimental health and disturbance from the NOISE and VIBRATIONS, the ROW path will subject my 8 year old grandson to continual disruption concentration during school studies, of my business duties, of which, require substantial concentration and sleep deprivation of the entire family. 368-7
I can't imagine how the families that live along the tracks will be affected. 200-300 times a day in a 20 hour period! 368-8

Subject: Green line extension

I'm writing this note, seeking your approval of the green line extension to go down Hawthorne Boulevard as it was many decades ago with the red car. The pow proposal is far too disruptive to the neighborhood. It would cause too much noise and destroy the peaceful neighborhood that exists now. Thank you for your consideration. 369-1

Subject: green line extension

I'm writing regarding the green line extension that will be decided shortly. I am requesting that the extension goes down Hawthorne Boulevard and not the pow. I am concerned about the gas pipes that are under the current rail and the danger that it poses to the neighborhood. Please remember that the old red cars, decades ago had a rail going down Hawthorne Boulevard. Let's continue the tradition. Thank you. 370-1

Hi I'm Yumiko Omatsu.

I'm living in Breakwater Village in Redondo Beach.

I want to say NO to ROW.

There is not enough space for the Metro.

And also there are so many pipelines.

That's too dangerous to our lives.

It's too close to the residential area.

We can't live with the noise ,vibration, dust, air pollution etc.

That's a life threatening plan.

371-1

Sincerely,

Yumiko

Subject: C line extension to TORRANCE DEIR

Dear Supervisor Mitchell and support staff,

My name is Adam Karp, and I am a homeowner in the Ruxton Ridge townhome complex that borders the train tracks on the possible Right of Way (ROW) option Redondo Beach. I emphatically request that you advocate for the Hawthorne Blvd. option for the Green Line Extension through the South Bay. 372-1

My wife and I purchased our home in 2020 right before the pandemic and had no knowledge of this proposed extension that would greatly impact our livelihood, our kids, and potential value of our property. This would also be a huge safety issue and quality of life change to our family, home, and neighborhood. 372-2

Just a few of my concerns:

1. **Safety issues of freight and passenger trains in such proximity to each other**. As we have seen in recent news there have been a number of Train and freight crashes that have caused severe environmental damage. How can Metro possibly guarantee safety to the many thousands of residents living just a few feet away from these train tracks along the ROW? If there were to be a crash or derailment, how would Metro prevent damage to the homes that are practically arm's length away? 372-3
2. **Disruption of unstable soil and movement/placement of natural gas pipelines.** Our neighbors in the Ruxton Place townhome complex have been dealing with sinkhole issues for years due to the pipelines running near our homes. I can't imagine the level of disruption to the soil in this neighborhood if Metro were to need to move those pipelines, dig trenches, and build retaining walls to accommodate the additional trains. And where, exactly, would those natural gas pipelines go? Closer to our homes? The trenching option would likely exacerbate any soil and pipeline issues, making the project more expensive and complicated - and would put our property in danger. 372-4
3. **Construction of retaining walls.** I again worry about the detrimental effects of soil instability, loss of natural light, and the overall eyesores that huge retaining walls would have to our neighborhood. What about very rainy days like what we just had in January? Our complex's sump pumps were working extra hard, and with retaining walls preventing natural water drainage and absorption, I worry about stability for all the homes near and below the walls. 372-5
4. **Noise pollution.** My neighbor spoke with a sound engineer at the open house last year at Adams Middle School. When She asked about ways Metro would mitigate noise to the thousands of residents along the Right of Way, he talked about at-grade noise mitigation. She explained to him that our 3-story townhome looks down onto the tracks (including my bedroom window), and he admitted there was nothing they could do to mitigate noise above the tracks. He talked about the "quiet" hours from midnight to 5 am in the middle of the night and that they would also "possibly" explore double-paned windows. That would only make a difference, if at all, INSIDE my home – but what does that do to mitigate noise in our yards? I have a toddler and many other young neighbors who utilize the common space between our buildings for outdoor play. 372-6

Trains whizzing by every few minutes would be a huge nuisance. And of course, what will that do to impact my childs sleep – and mine? That noise would be far from the peaceful environment we currently enjoy. 372-6

5. **Traffic.** Our little neighborhood will be negatively impacted by the train traffic at lights, particularly 182nd. Our childs school and Child Development Center are a block away at the end of 182nd; I can't imagine the additional traffic issues during both morning and evening rush hour in our quiet residential neighborhoods, nor access for emergency vehicles. 372-7
6. **Change to the community.** My wife and I chose to start our family in Redondo Beach partly because we wanted to live life outdoors, really get to know our neighbors, and build community here. During the pandemic, I'm proud to say that we grew closer than ever to our neighbors and have developed deep friendships. We did that by spending afternoons and evenings outdoors. I worry what the constant noise and traffic of the Green Line would mean to our little community, our older neighbors at Breakwater Village (a 55+ community), our neighbors at Ruxton Place (with ongoing sinkhole issues), and other neighborhoods all along the ROW in Redondo Beach and Lawndale. This possible ROW extension goes against so much of why we bought our home where we did. We wanted to walk to school, spend time with our kids and neighbors outside, and live a peaceful life. If we wanted an urban lifestyle, we would have chosen that – but this might be forced upon us, and we'd be devastated. 372-8
7. BUDGET- lastly the million dollar difference in budget to put on ROW versus down Hawthorne in the grand scheme of things is nothing compared to the funds, grants, and spend metro in the city experiences year after year. To impact so many residential buildings and peoples livelihood and the environmental impact to save a few dollars is not right and unethical. 372-9

Extending the Green line along Hawthorne Blvd. would make so much sense for safety, traffic, and commercial revitalization purposes. Sticking high-speed trains in the backyards of thousands of homes does not. I urge you to use your influence to select the Hawthorne Blvd. option and NOT the residential ROW option. I would be happy to answer any questions you might have regarding my concerns. 372-10

Thank you so much, and kindest regards,

Adam Karp

Subject:	DEIR Stakeholder Response - Construction
Date:	Sunday, March 12, 2023 12:24:56 AM

Dear Metro and Metro Board of Directors,

I am a Redondo Beach homeowner sharing a property line with the ROW. Below are my concerns regarding the construction aspect of both iterations of the ROW alternative.

The DEIR acknowledges construction of the Proposed Project would take place over the course of approximately five or probably more years at my back wall. I am currently 64 years old with a compromised immune system and sensory sensitivities. My grown daughter has sensory integration dysfunction on the autism spectrum. 5+ years of construction would last well past my 70th birthday, if I could make it that far. In order to survive this colossal intrusion my daughter and I would need to be relocated, which is economically impossible for me in these times also considering my age and medical condition. The stress and anxiety this has put upon me along with my family is insurmountable. 373-1

The DEIR makes it clear that the construction impacts are SIGNIFICANT AND UNAVOIDABLE on both ROW options. This would constitute a deliberate and knowing assault on my health, my household and for the rest of my community along the ROW. 373-2

VIBRATION:

3.6-4.1.1 Construction Impacts

Significant and Unavoidable Impact.

The Proposed Project would be located in a fully built-out urban environment and construction activities would occur in close proximity to sensitive land uses, including residences..... throughout the corridor, and may occur during daytime or nighttime hours.

Vibration can be a serious concern, causing buildings to shake and rumbling sounds to be heard. Some common sources of vibration are .....construction activities, such as blasting, pile driving, and heavy earth-moving equipment.

NOISE:

3.6-14. Construction Noise by Pile Installation Method

While MM-NOI-1 would include measures that reduce construction noise levels, in some instances the FTA construction impact criteria may still be exceeded. There are no additional feasible mitigation measures that could be implemented to further reduce construction noise levels. Therefore, construction of the Proposed Project would result in noise levels that would exceed FTA's criteria, and the impact would be **significant and unavoidable**.

All impacts as deemed in the DEIR as "SIGNIFICANT AND UNAVOIDABLE" on the ROW are indeed avoidable by protecting citizen residents and homeowners by means of selecting the Hawthorne Blvd Elevated alignment for the greater good. 373-3

GEOLOGY/SOILS:

The DEIR acknowledges damage can occur to surrounding buildings due to seismic vibration of construction. We already know routine pipeline maintenance on the ROW triggered a sinkhole just north of us at Ruxton Place, crossed the property line into private residences which caused damages occurred to homes that took 2 & 1/2 years to repair. We know of other problems like a sinkhole near 190th Street 373-4

on the ROW which was triggered by construction of newer housing along the corridor. Also, roughly 20 years ago on the ROW near Manhattan Beach Blvd. a house had to be condemned due to soils issues with clay elements causing problems to the foundation. Because of that the City of Lawndale had to implement newer standards for depth of foundations.
All housing along the corridor was added incrementally after the tracks without consideration of the geology/soils conditions and we all are on top of the same land. Logic dictates that hundreds of homes will no doubt be put at risk due to the construction of this project proposal on the ROW alignment. this is extremely unsettling as a homeowner here.

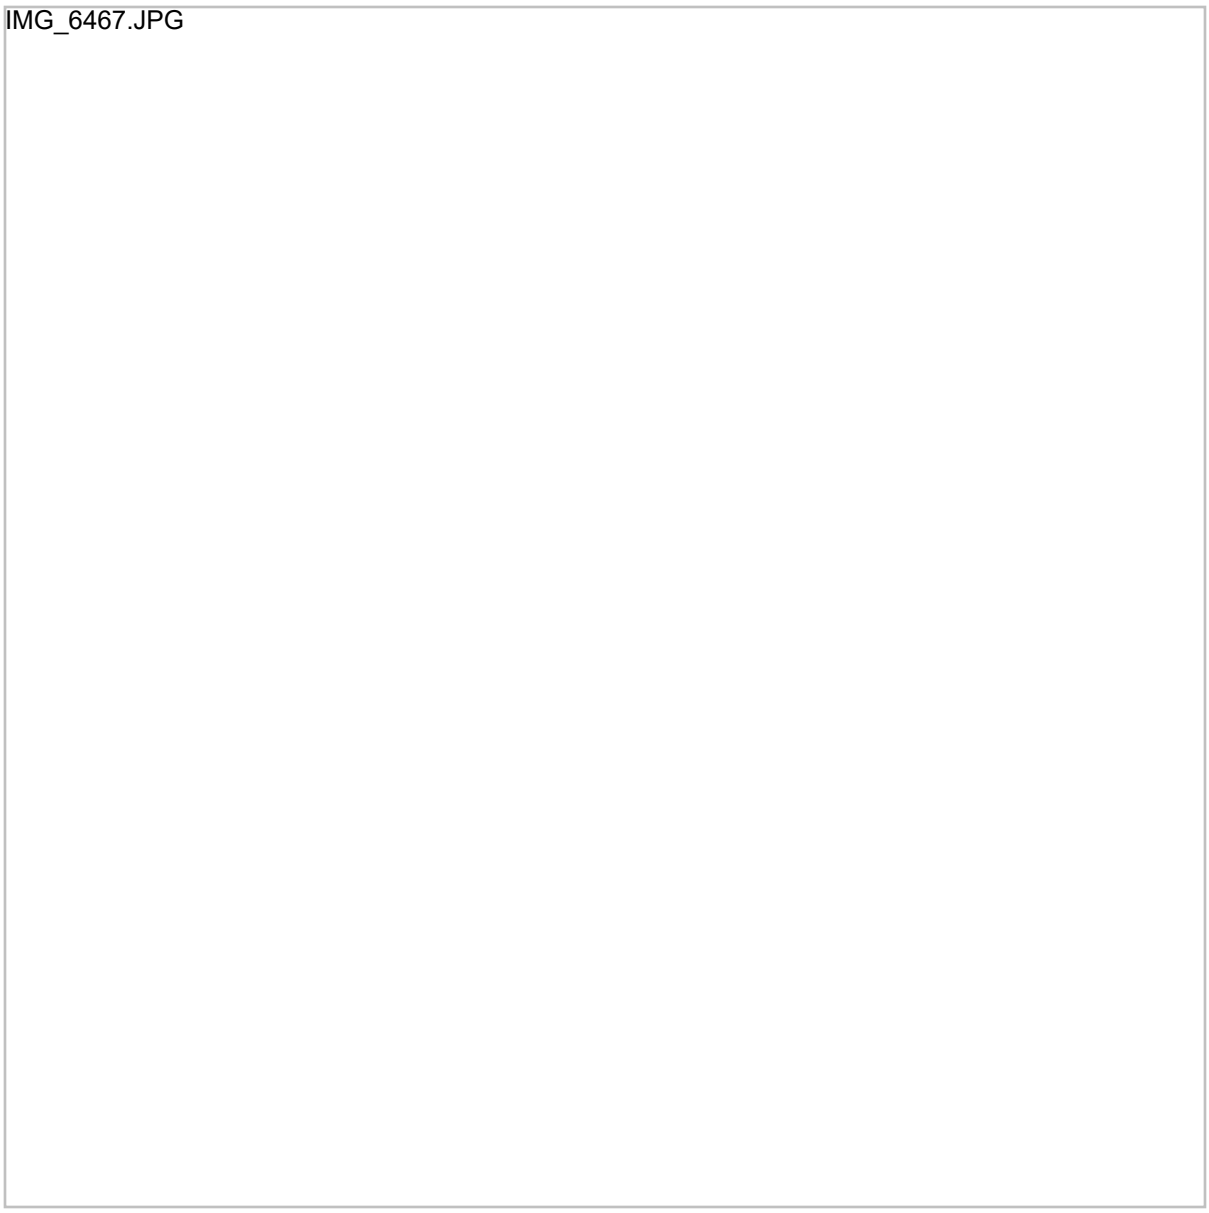
373-4

373-5

PRIVACY:
The DEIR fails to mention loss of privacy during construction. There is a berm directly behind my back wall that would have to have construction workers and heavy equipment working on top of in order to relocate the freight. This would mean construction workers would have full view of me and whoever else is in my backyard or kitchen to see whatever it is I'm doing. My laundry, workshop, swimming pool and garden activities are not for public viewing. Conversations between workers will echo in my backyard like a fishbowl. Same will be the case for workers at the pipelines which are 8 feet from my back wall. They will hear my family and me as though they are on my property, and we will hear them along with their machinery and tools.
This photo demonstrates height of berm and proximity. Conductor frequently peers into our private property and although rare for him to go even further, will wave at me. This is uncomfortable at best, especially when I'm trying to relax in privacy at my pool.

373-6

IMG_6467.JPG



The C-L Green proposed project would require heavy construction activity right against my back wall, squeezed into the narrow ROW corridor. There would be virtually no distance between my home, heavy equipment such as but not limited to the below captured excavator plus 101 dump trucks per day not to mention the workers on a higher grade berm than my wall.
There will be NO PRIVACY for more than 5 years, and that is PRE-OPERATIONS.

373-7

373-8

fullsizeoutput_1111.jpeg

Please protect my health, my family and community by making the decision to instead use the commercial corridor along Hawthorne Blvd as historically intended for the Red Car line.
Thank you for your time and attention to this matter.

373-9

Sincerely,
Monique Negrete-Mitchell

Subject: Response to DEIR for Metro Row (C Line Extension) – Private Property

To: Metro and Metro Board of Directors

On pages 2-44 – 2-45 (pages 115-116), Section 2.3 -4.4.2 Traction Power Substations, states that, "The TPSSs are enclosed structures that would be spaced approximately one mile apart along the alignment and would require approximately 4,800 square feet of land." How many of the TPSSs will be on private property for the Proposed Project and Trench option?

Those that will be on private property, where exactly will these TPSSs be located? Are any of them residential homes?

374-1

Thank you in advance for addressing our concerns with the Metro Row in Lawndale.

- Angelica Vicente, Concerned Lawndale Resident

Subject:	DEIR Question on Vibration (during Construction) Section 3.6-4.3.1 (OSB Q. No. 2 corrected)
Date:	Sunday, March 12, 2023 9:55:23 PM

Note to Mr Dierking:
I had to correct something for the DEIR comments: the company fixing the broken pipeline on the ROW was SHELL, not Chevron. It is correct in this version.
Thank you.
Holly Osborne

Dear Metro:.

This is a follow up to comments I made in the first comment period in Lawndale on February 25. I am sending these comments in case the transcriber did not get them all down.

This has do do with Vibration during Construction.

DEIR Question: (Page ES- 23 and ES-24) under **Environmental Impact, Noise and Vibration.**
. "Would the Project result in generation of excessive ground-borne vibration?"

Problem: This question has two parts: **construction** and **operation**.
During **construction,** your table summaries count residential *structures.*
During operation, you said you count individual *residences*.

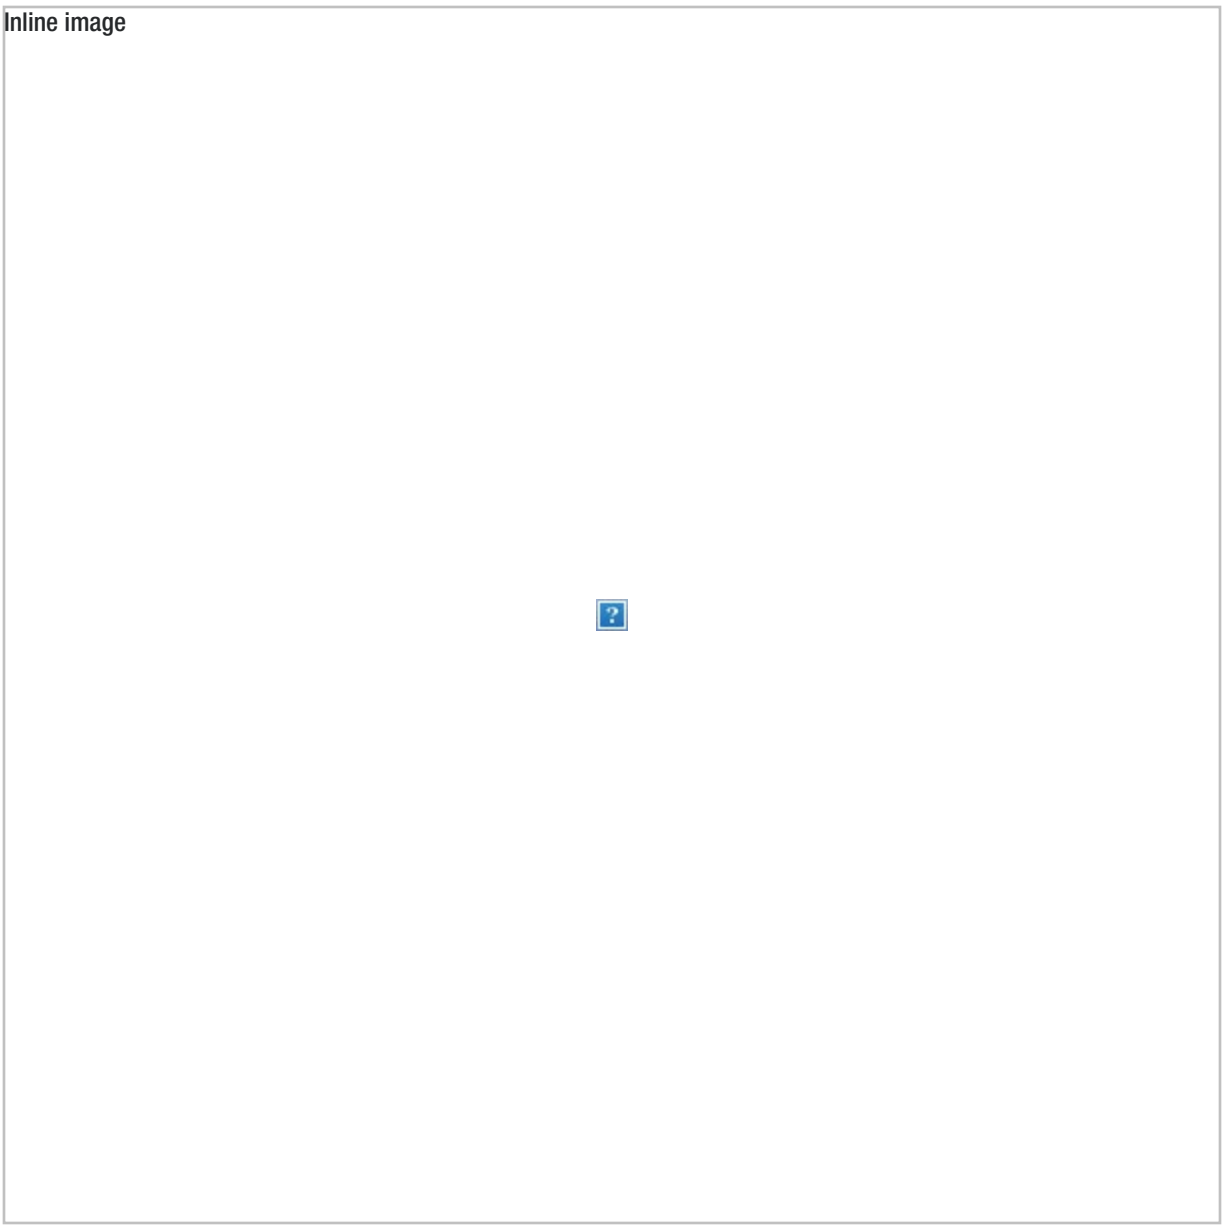
Counting "structures" can vastly undercount the number of residences and people affected when you count condominium complexes as only two or three "structures." For example you count the 191-unit Breakwater complex on the West side of the ROW (south of Artesia) as only 2 "structures." Another smaller example is counting 3 adjoining townhomes facing the ROW, north of Artesia, as only 2 units. 375-1

I will look at the tables first, and then the pictures.

Detailed Analysis: Vibration Noise for Construction.

The numbers of residential "structures" negatively affected by vibration during construction is shown below for both the ROW and HB (Hawthorne Boulevard options:

Inline image



The table clearly shows that many more "structures" are impacted during the construction phase with the ROW option as compared to the Hawthorne option**: 133 affected on the ROW, vs 11 affected by the Hawthorne option.**

The information for the above table was obtained by combining the following two tables in the DEIR.

The Following Table 3.6-20 is from page 3.6-88.

375-1

Submission 375

Inline image

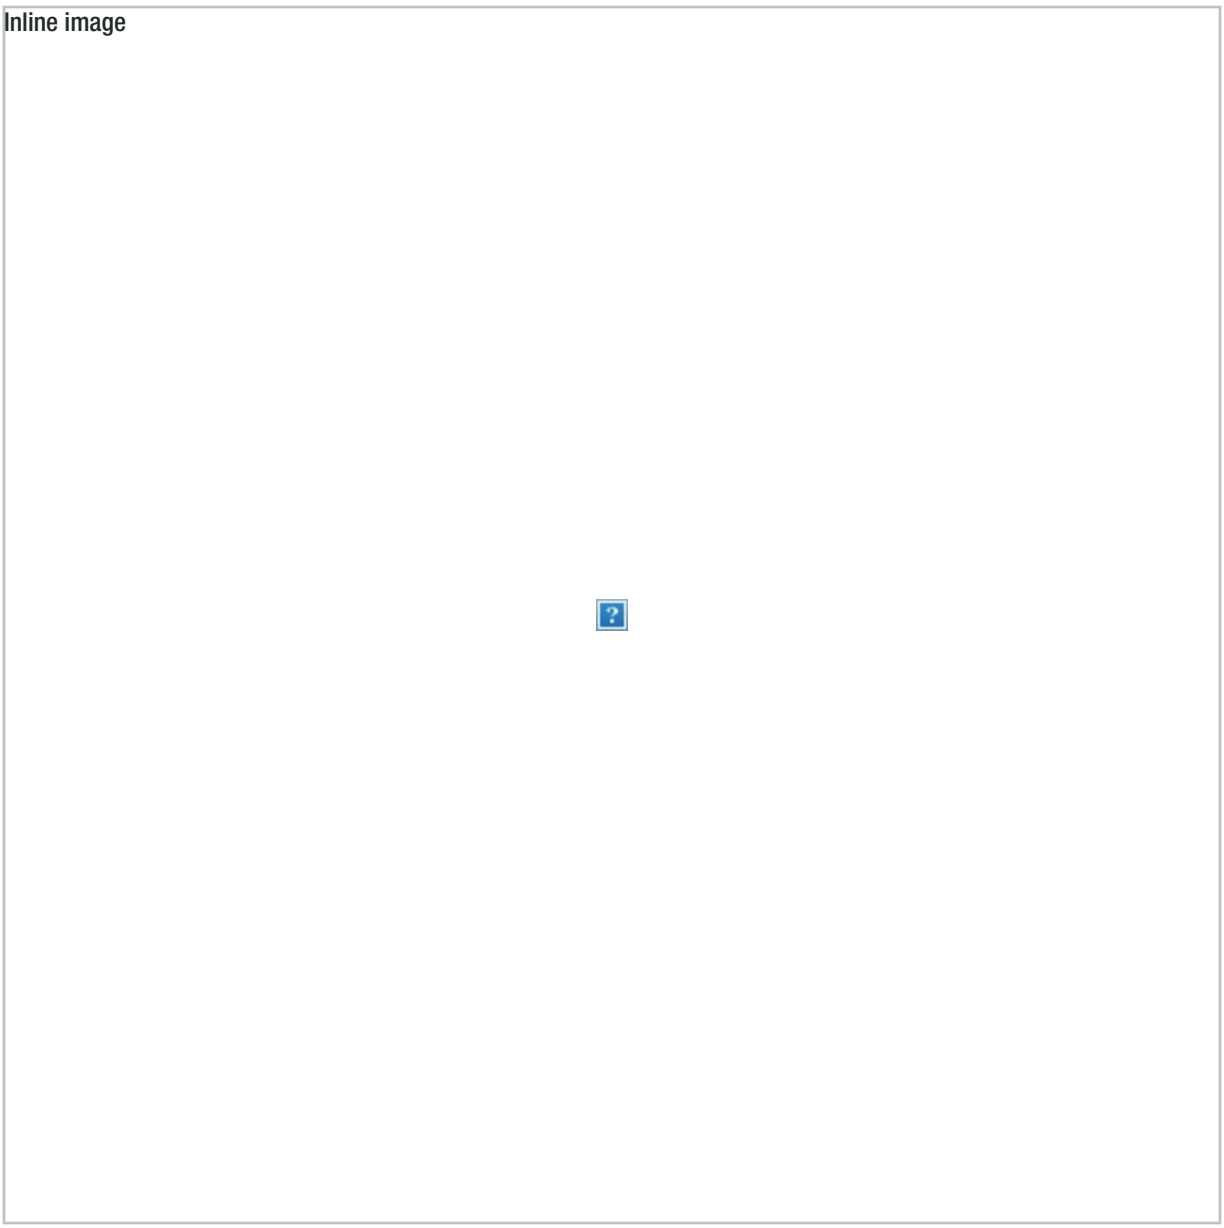
375-1

The DEIR says (page 3.6-88)

"Construction of the Proposed Project would have a significant impact on 133 residential structures related to damage caused by excessive ground-borne vibration levels, and mitigation would be required."

For the Hawthorne Option, there are 11 structures affected by Vibration damage, according to your Table 3.6-22. :

Inline image



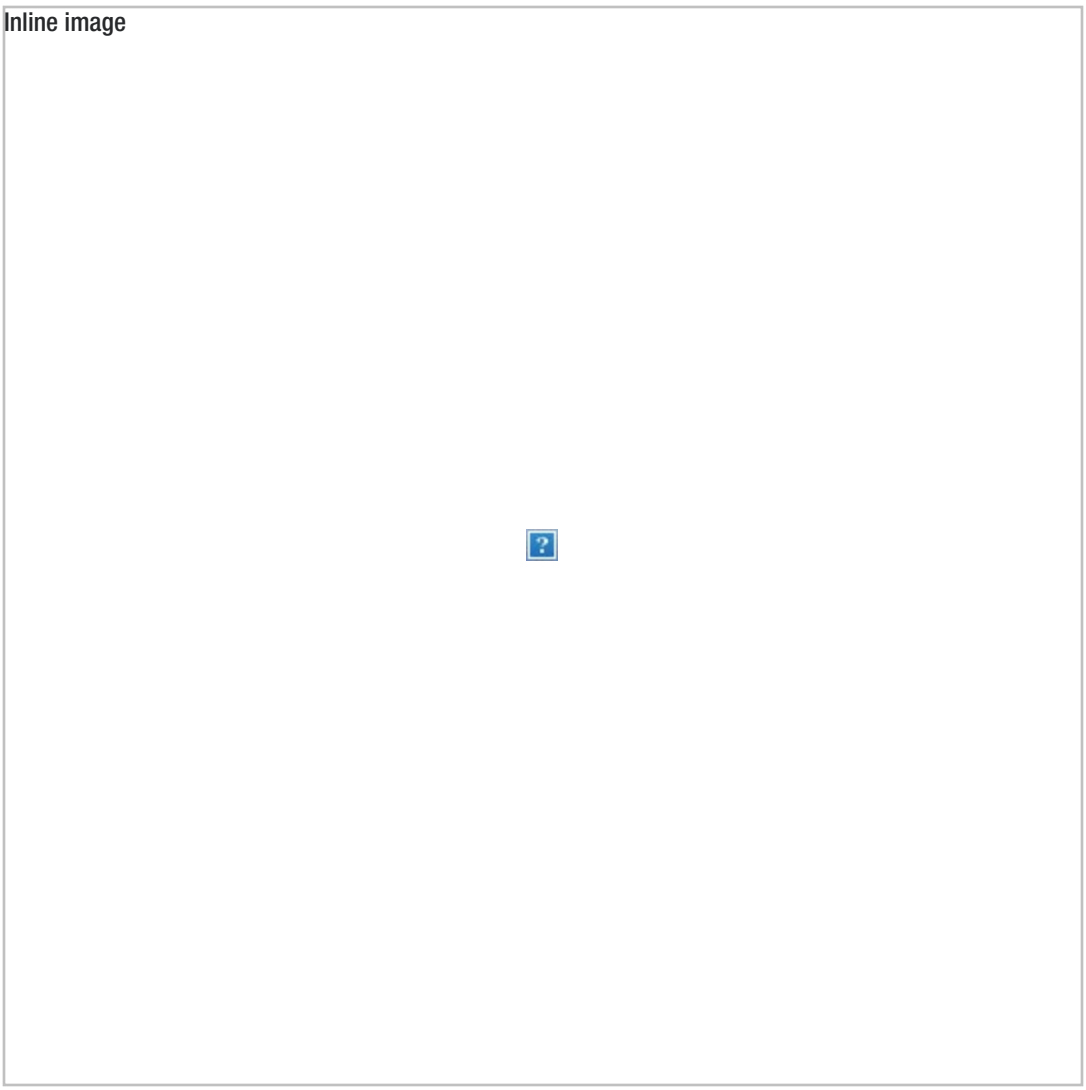
375-1

Now look at two pictures:

The pictures are all taken from the "**Appendix 3.06-C: Vibration Detail Maps.pdf**"
The green dots indicate a structure affected by noise during construction.

1. Here is the larger picture that contains the Town House (just north of 172nd St.), from Figure 3.6-C11.

Inline image



375-1

Here is the expanded version of the town house. There are 3 town houses north of 172nd; yet you have counted only two. There are only two green dots. What is the reason for that?

375-2

2. Now look at the Redondo condos west of the ROW, in the Figure below.. (This is South of Artesia.)

You have counted a grand total of 7 "structures " on the West side of the ROW. You counted only "2" areas affected for the 191 unit Breakwater Village complex, on the West side of the ROW, and 2 for the 18 unit Ruxton Ridge Condos, and 3 for the 27 unit Ruxton Place Condos. What is incredulous about the 3 for the Ruxton Place Condos (which had 3 "structures"; see southern most set of condos) is **that there was damage to 3 units during in one structure alone during digging by Shell for pipe maintenance, a**nd it took over 2 and 1/2 years for the damage to be repaired.

375-3

It seems that your system of counting "structures" is an attempt to minimize the damage estimate along the ROW;

375-4

minimize people who live in multi-unit housing, and intentionally or not, minimize the damage effects to a Sr./Affordable housing complex (Breakwater Village.)

375-4

Inline image

Summary: , even with the apparent "minimization", **it is clear that with 133 structures subject to damage in the ROW option, vs 11 in the Hawthorne Option, that the Hawthorne option is the better choice.**

375-5

However, the tables still need to be redone, with a more accurate count done regarding homeowners/renters who will be affected.

375-6

Respectfully submitted,
Holly Osborne

Subject: Send metro green line down Hawthorne Blvd. not down the ROW.

Dear Metro Board Members,

The noise of the train will cause so much pain and illness to everyone. Send the train down Hawthorne where people are not sleeping!! Also the vibrations of the train will shake out house. 377-1

I am writing to express my strong disapproval for routing the proposed C (Green) Line extension down the current Metro right of way through residential neighborhoods in Lawndale and Redondo Beach. I am urging you and the board to choose the Hawthorne Boulevard elevated option instead for the following reasons: 377-2

- NEIGHBORHOOD QUALITY OF LIFE: The ROW option would send 200-300 trains per day through quiet residential neighborhoods from 4 AM until Midnight. This will permanently affect the quality of life for more than 1,000 families in Lawndale and North Redondo Beach. Metro's own environmental impact report states increases in NOISE and VIBRATION will be "Significant" and "Unavoidable." This is in addition to 3-5 years of significant construction-related impacts to the neighborhood. 377-3

- SAFETY: In some spots, the ROW option will move an existing freight track to within 8-10 feet of fence lines. This track currently sees trains carrying highly flammable and dangerous petroleum products between two oil refineries. Even a minor derailment -- even at slow speeds -- would put petroleum tanker cars into homes and backyards. This freight line already has a history of previous derailments. 377-4

In addition, the ROW has multiple high-pressure petroleum pipelines buried in unstable soil. Construction of the C Line down the ROW presents a danger to those pipelines even if all safety protocols are followed. Even one slip-up could be catastrophic to the neighborhood. 377-5

- LOSS OF GREEN SPACE: The ROW -- for better or worse -- is utilized as much-needed green space in the City of Lawndale. Not only that, it offers a respite from urban sprawl with tall, mature trees and views of the San Gabriel Mountains in the distance. What is now a park-like community along the ROW will be replaced with giant walls that will bounce train noise and destroy views of the horizon. 377-6

- RIDERSHIP: Routing the Metro C Line down Hawthorne Boulevard would see more ridership than the ROW option as it passes by businesses and landmarks people want to visit. This includes a station in front of a planned mixed-use residential development at the South Bay Galleria. 377-7

I implore you to listen to the voices of the community when selecting which option to build. This is a 100-year project that will have PERMANENT impacts on a community already disadvantaged compared to neighboring South Bay cities. When considering costs, look at not only the financial costs, but the societal and environmental costs as well. Do the right thing, get it right for future generations and choose HAWTHORNE BOULEVARD for the Metro C Line Extension. 377-8

Thank you,

Subject: DEIR Community Response Series from Right of Say/Redondo Beach Quality of Life Installment #2

Dear Metro and Metro Board Members,

I support the Right of Say/Redondo Beach group to not build the metro extension on the ROW and share these concerns with follow Redondo Beach Residents, please replay back with additional details of why Metro thinks that building a line next to gas pipelines is "less significant impact then other options within DIER P1/18 Utilities statement." I highly encourage this assessment to be changed from less to greater impact then other options due to the safety issues of the pipeline. There have been many news stories about exploding pipelines across the country, this is a big concern and adding additional stress to these pipelines needs to be address properly in the DEIR and the DEIR should strongly consider adding the recommendation to remove these pipelines if the project were to go forward. 378-1

DEIR Community Response Series from Right of Say/Redondo Beach Quality of Life Installment #2

After having a chance to review the Draft Environmental Impact Report, please consider the following as our second group response for the record. We are taking this huge endeavor very seriously and by section as a group in hopes of ensuring attention to all of our concerns. This installment is concerning the Utilities chapter. The authors of this submission requested having their contact information included which you'll find at the bottom of this email.

We strongly disagree with the DEIR's assessment regarding P1 /18 Utilities. It states that the numerous privately owned pipelines will have a less than significant impact. 378-2

Excavations are the most common cause of pipeline explosions 24% (geospatial.blog.com).

Statistics from Frac Tracker between 1/2010 and 11/2018 paint a grim picture. During this period, there have been 5,500 pipeline incidents, 600 injuries, 125 fatalities, and 300 explosions.
Most alarming, 30,000 people had to be evacuated. 378-3

Human errors are unpredictable even with safeguards. There will be numerous opportunities for human mistakes. The excavation process will entail an enormous amount of digging for an extended period of time .
This puts Lawndale residents in peril.

Every day this construction will target our high density neighborhood with the possibility of a hazardous calamity. 378-4

We are diverse community of blue collar workers, seniors, young children, and our very large Latino community. English is a second language to many.

This project seals off the ROW from the rest of our community in Lawndale. Many have families on the other side of the ROW. 378-5

In 1951, there was a huge explosion affecting a wide area of Lawndale with 21 casualties. Unfortunately, 3 died. Windows were blown out one mile from the explosion site. This fire ball was caused by a minor plumbing job that damaged a gas pipeline. While the DEIR minimized the risk, our fears are based on reality.

The city of Lawndale and 99% of the residents are against this project. This is grossly unfair to our community to burden us with this enormous hardship and mental anguish. 378-6

This is an anti social justice attack on our neighborhood. There isn't one ounce of equity in this project. 378-7

Michael Sullivan (Member of Right of Say/Redondo Beach)
Redondo Beach Resident

Subject: Draft EIR Comment

Hello Metro Project Managers,

This is a comment for the Draft Environmental Impact Report (DEIR) for the C Line (Green) Extension to Torrance.

I am a resident of North Redondo Beach writing to support the C Line (Green) Extension to Torrance. Between the alignments, I support whichever alignment Metro determines to be better according to your studies. You are the experts. Personally, I prefer the Redondo Beach Transit Center alignment because of better accessibility for me. However I am concerned about worse bus connections compared with the South Bay Galleria alignments. Last, please remember that although local politicians are elected by some residents, they do not speak for all residents. It is your job to choose the best alignment, not the politician's. I look forward to the opening of the extension. 379-1

David

Subject: Choose Hawthorne Blvd for the Metro C Line / Green Line Extension

Dear Metro Board Members,

The noise pollution. …
I am writing to express my strong disapproval for routing the proposed C (Green) Line extension down the current Metro right of way through residential neighborhoods in Lawndale and Redondo Beach. I am urging you and the board to choose the Hawthorne Boulevard elevated option instead for the following reasons: 380-1

- NEIGHBORHOOD QUALITY OF LIFE: The ROW option would send 200-300 trains per day through quiet residential neighborhoods from 4 AM until Midnight. This will permanently affect the quality of life for more than 1,000 families in Lawndale and North Redondo Beach. Metro's own environmental impact report states increases in NOISE and VIBRATION will be "Significant" and "Unavoidable." This is in addition to 3-5 years of significant construction-related impacts to the neighborhood. 380-2

- SAFETY: In some spots, the ROW option will move an existing freight track to within 8-10 feet of fence lines. This track currently sees trains carrying highly flammable and dangerous petroleum products between two oil refineries. Even a minor derailment -- even at slow speeds -- would put petroleum tanker cars into homes and backyards. This freight line already has a history of previous derailments. 380-3

In addition, the ROW has multiple high-pressure petroleum pipelines buried in unstable soil. Construction of the C Line down the ROW presents a danger to those pipelines even if all safety protocols are followed. Even one slip-up could be catastrophic to the neighborhood. 380-4

- LOSS OF GREEN SPACE: The ROW -- for better or worse -- is utilized as much-needed green space in the City of Lawndale. Not only that, it offers a respite from urban sprawl with tall, mature trees and views of the San Gabriel Mountains in the distance. What is now a park-like community along the ROW will be replaced with giant walls that will bounce train noise and destroy views of the horizon. 380-5

- RIDERSHIP: Routing the Metro C Line down Hawthorne Boulevard would see more ridership than the ROW option as it passes by businesses and landmarks people want to visit. This includes a station in front of a planned mixed-use residential development at the South Bay Galleria. 380-6

I implore you to listen to the voices of the community when selecting which option to build. This is a 100-year project that will have PERMANENT impacts on a community already disadvantaged compared to neighboring South Bay cities. When considering costs, look at not only the financial costs, but the societal and environmental costs as well. Do the right thing, get it right for future generations and choose HAWTHORNE BOULEVARD for the Metro C Line Extension. 380-7

Subject: The Hawthorne Blvd elevated route is the best option for the C-Line extension

To Metro:

As a North Redondo Beach resident, I ask that you select the Hawthorne Blvd elevated route for the C-Line extension. A review of your DEIR indicates that a Metro station at Hawthorne & Artesia, adjacent to the South Bay Social District, formerly The South Bay Galleria, will have the residents of 300 apartments and a hotel anxiously awaiting the opportunity to ride the light rail lines to popular commercial destinations and work-centers in El Segundo and points north, as well as to Torrance to the south. Ridership is clearly your main goal and this route down Hawthorne and this station at Artesia will deliver many people eager to leave their cars behind when the train goes to their daily destinations. 381-1

The added ridership of people coming into the South Bay to shop, dine and be entertained at the region's newest and most attractive venue, the South Bay Social District, will also provide significant ridership. This is your best bet on making the C-Line extension a success. 381-2

Thank you for your attention to this matter.

Sincerely,

Doug Boswell
Redondo Beach resident since 1989

Subject: Dont Railroad Our Neighborhood

I am sending this email in regards to the proposed rail train that is being considered to be put in place to run through the city of Lawndale and Redondo Beach neighborhoods. I am a resident in the City of Lawndale and find this project has a big impact on our lives every day. Not only will the sound of this train be a nuisance but this will also be a safety issue for children walking to and from School 5 days a week. On the weekend there are multiple families and dog walkers that walk along this path (the row), including myself and my family, this decision is just not a safe option. Putting this train down Hawthorne Blvd will not impact Families, Homeowners AND CHILDREN IN THIS COMMUNITY. There are so many other reasons why this is just not the right place for this project, I truly hope that you all really think about this decision and how this is impacting hard working families in this community. 382-1

Thank you,
Frank Fuentes

To: greenlineextension@metro.net; jbutts@cityofinglewood.org; anajarian@glendaleca.gov; mayor.helpdesk@lacity.org; firstdistrict@bos.lacounty.gov; HollyJMitchell@bos.lacounty.gov; jdupontw@aol.com; FourthDistrict@bos.lacounty.gov; councilmember.yaroslavsky@lacity.org; Kathryn@bos.lacounty.gov; ThirdDistrict@bos.lacounty.gov; fdutra@cityofwhittier.org; info@timsandoval.com; paul.Krekorian@lacity.org
Subject: Vote against running Metro trains through Lawndale

I am not going to go into extensive details. Bottom line, children live along that train line. They go to sleep starting at 8 PM and sleep until 8 AM. This window of time is absolutely off limits. Police will stop parties in the neighborhood during these hours, so it isn't acceptable to run a train through the same area at those hours. 383-1

If you want to run the trains between 8 AM and 8 PM, just be prepared to explain your decision to the national media (and social media) when a 5 year old girl gets hit by one and dies. Because I am very convinced that will happen, as the train tracks are not guarded from the houses during most of the stretch through Lawndale. Have you walked the tracks? If not, you should. You should understand the political and social risks you are taking on by running a metro through a suburban town with no safeguards. 383-2

Thank you,
Dr. Ian Stern

Submission 384

From: Ignatius Lin [redacted]
Sent: Thursday, March 23, 2023 10:49 PM
To: greenlineextension@metro.net
Subject: Draft EIR Comment

I strongly support having a metro station in Lawndale. Many residents feel this way; read their comments on Youtube and elsewhere. But our voices are drowned out. 384-1

As for the routes, having the section in Lawndale completely underground is my preferred choice, which disappointingly is not one of the options. Lawndale is too small to accommodate an open trench or above ground option. 384-2

Given the current options, my #1 choice is down Hawthorne Blvd. My #2 choice is the ROW trench. I am against the ROW at-grade/elevated option. 384-3

Yours,

Ignatius "Nash" Lin

Submission 385

From: James Hill [redacted]
Sent: Thursday, March 23, 2023 8:58 PM
To: greenlineextension@metro.net
Subject: I Support the Metro Board's Proposed Project Option for the C-Line Extension

The Metro Board
One Gateway Plaza
Los Angeles, CA 90012-2952
Sent via email to: greenlineextension@metro.net

Dear Metro Board,

Thank you for the opportunity to comment on the Metro's C-Line Extension. I'm a resident of Torrance, and I'm writing to express support for the C-Line Extension that utilizes the existing railroad right of way (ROW) between the Marine Station in Redondo Beach to the Mary Giordano Regional Transit Center in Torrance, also known as the Proposed Project. 385-1

As evidenced by the Board's Draft Environmental Impact Review (EIR), the Proposed Project that utilizes the ROW is the least impactful to Torrance residents, businesses, and current and future surface street traffic. It is also the least costly option that also provides the fastest pathway to starting construction. The Proposed Project has the best chance of being completed in time for the 2028 Olympics, which, with a robust and well connected Metro system, can be an economic and cultural boon for Torrance's economy. Lastly, the Proposed Project will connect the two transit centers that have already been built in the Cities of Redondo and Torrance–transit centers that were built for the purpose of connecting to the Metro line expansion. 385-2

I am opposed to the option of extending the C-Line along Hawthorne Boulevard. This option requires elevation, causing significant disturbance and devastation to neighborhoods and businesses along that popular corridor. Furthermore, the option requires the Metro Board using eminent domain, which is unnecessary considering the Board has the rights of way for the Proposed Project. Locating light rail on Hawthorne Boulevard, whether elevated or at grade, would negatively impact Torrance residents and would be devastating to Torrance commercial properties that line Hawthorne Boulevard. 385-3

The Torrance Transit team estimates that the majority of riders on the new C-Line Expansion will travel in and out of Torrance, with projected daily trips of up to 16,000! I hope that the City's significant ridership contribution will contribute heavily in your decision to support the Proposed Project–the same position unanimously approved by the Torrance City Council. 385-4

Thank you for the opportunity to share my position. I appreciate all the hard work the Metro employees do every day.

Sincerely,
James Hill

Submission 387

From: Jeanette [redacted]
Sent: Thursday, March 23, 2023 5:00 PM
To: greenlineextension@metro.net
Subject: From a concerned resident…

I am writing this to convey my opinion and concern about the route of the Green Line Metro extension that's in the planning stage.

I own a small condo in Breakwater Village, which is a 190+ unit complex.
Residents must be over 55 years old, and many have bought here in their 70's to downsize and be able to extend their life in a safe and friendly environment.

The ROW route would extremely disrupt our living conditions AND the investment in our limited future! The proposed track would be 20 feet from some condo walls, and trains would run every 10 to 20 minutes, resulting in physical and audio disruption. This addresses the discomfort problem, but even more urgent (in my opinion) are the possibilities of sinkholes and ground instability that is common to this area. There are underground pipes that move toxins and flammables around the area, even on our property. We are already warned to not dig on the property and to report odd smells. 387-1

We, as a community, are protesting the extension location. There are alternatives that make much more sense, among them the one on Hawthorne Blvd, which would favor the businesses there with easy access. 387-2

Please consider how this portion of the extension will negatively affect the communities it will serve. Thank you. 387-3

Subject: I Support the Metro Board's Proposed Project Option for the C-Line Extension

The Metro Board
One Gateway Plaza
Los Angeles, CA 90012-2952
Sent via email to: greenlineextension@metro.net
Dear Metro Board,
Thank you for the opportunity to comment on the Metro's C-Line Extension. I'm a resident of Torrance, and I'm writing to **express support for the C-Line Extension that utilizes the existing railroad right of way (ROW) between the Marine Station in Redondo Beach to the Mary Giordano Regional Transit Center in Torrance, also known as the Proposed Project.** 388-1
As evidenced by the Board's Draft Environmental Impact Review (EIR), the Proposed Project that utilizes the ROW is the least impactful to Torrance residents, businesses, and current and future surface street traffic. It is also the least costly option that also provides the fastest pathway to starting construction. The Proposed Project has the best chance of being completed in time for the 2028 Olympics, which, with a robust and well connected Metro system, can be an economic and cultural boon for Torrance's economy. Lastly, the Proposed Project will connect the two transit centers that have already been built in the Cities of Redondo and Torrance–transit centers that were built for the purpose of connecting to the Metro line expansion. 388-2
I am opposed to the option of extending the C-Line along Hawthorne Boulevard. This option requires elevation, causing significant disturbance and devastation to neighborhoods and businesses along that popular corridor. Furthermore, the option requires the Metro Board using eminent domain, which is unnecessary considering the Board has the rights of way for the Proposed Project. Locating light rail on Hawthorne Boulevard, whether elevated or at grade, would negatively impact Torrance residents and would be devastating to Torrance commercial properties that line Hawthorne Boulevard. 388-3
The Torrance Transit team estimates that the majority of riders on the new C-Line Expansion will travel in and out of Torrance, with projected daily trips of up to 16,000! I hope that the City's significant ridership contribution will contribute heavily in your decision to support the Proposed Project–the same position unanimously approved by the Torrance City Council. 388-4
Thank you for the opportunity to share my position. I appreciate all the hard work the Metro employees do every day.
Sincerely,
Jennifer Chung

Hello,

Thank you for your email and interest in Metro's C Line (Green) Extension to Torrance project. We have recorded your comment and added your contact information to our project email list.

Metro has prepared a Draft Environmental Impact Report (DEIR) to describe the three alignments under study and evaluate the potential environmental impacts per California Environmental Quality Act (CEQA). The DEIR is available for public review from January 26 through March 27, 2023. During the review period, the public will have an opportunity to comment on the Draft EIR and attend virtual and in-person public hearings.

The DEIR and other project documents can be found on the project website by visiting the documents section or go directly to metro.net/clineext/#documents. A 3D simulation video of the three alignments under evaluation is available at bit.ly/cletvideo. Please visit the project StoryMap for additional information at bit.ly/cletstory.

To access the Draft EIR and other project information, please reference the direct links below.

- Draft EIR (Full Document)
- Draft EIR (By Chapter)
- Draft EIR Appendices (By Appendix)

- Other Project Information Reports

We will add you to our project database to receive updates on the project and additional information on ways to stay involved.

Thank you again for your interest in the project.

Subject: DEIR

Greetings To All,

It is with utter confusion and fear for the wellbeing of my family that brings me to write this today.

Having the proposed C-Line current path, METRO'S ROW, my serene Lawndale neighborhood, whether it be subgrade/trenched, grade level or elevated, the disturbance impact would be detrimental to not only my family but the friends and neighbors who reside near on next to the ROW. 390-6

We live about 10 houses from the tracks. Currently, the nostalgic freight train travels maybe 2 times a day. In comparison, METRO's estimated "Light Rail", passing an unfathomable ***200-300 times a day in a 20 hour period*** ***right in the middle of our residential neighborhood!!!*** 390-7

EVERY 4 to 6 MINUTES?!

Honestly, are we not just trading profitable commuter lives over residential family lives??? 390-8

HAWTHORNE is the obvious choice. 390-9

NOT ENOUGH FUNDING? This project has been on the back burner for a long time, decades as far as I have been told. 390-10

-

I have worked hard to provide for my family a true quality of life here in Lawndale and continue to do so with my 3rd generation, my grandson.

The continual and detrimental health and disturbance from the NOISE and VIBRATIONS, the ROW path will subject my 8 year old grandson to continual disruption concentration during school studies, of my business duties, of which, require substantial concentration and sleep deprivation of the entire family. 390-11

I can't imagine how the families that live along the tracks will be affected. 200-300 times a day in a 20 hour period! 390-12

Subject: Choose Hawthorne Blvd for the Metro C Line / Green Line Extension

Dear Metro Board Members,

I am writing to express my strong disapproval for routing the proposed C (Green) Line extension down the current Metro right of way through residential neighborhoods in Lawndale and Redondo Beach. I am urging you and the board to choose the Hawthorne Boulevard elevated option instead for the following reasons: 391-1

- NEIGHBORHOOD QUALITY OF LIFE: The ROW option would send 200-300 trains per day through quiet residential neighborhoods from 4 AM until Midnight. This will permanently affect the quality of life for more than 1,000 families in Lawndale and North Redondo Beach. Metro's own environmental impact report states increases in NOISE and VIBRATION will be "Significant" and "Unavoidable." This is in addition to 3-5 years of significant construction-related impacts to the neighborhood. The environmental pollution would also reduce quality of life for residents near the C (green) line. 391-2

I implore you to listen to the voices of the community when selecting which option to build. This is a 100-year project that will have PERMANENT impacts on a community already disadvantaged compared to neighboring South Bay cities. When considering costs, look at not only the financial costs, but the societal and environmental costs as well. Do the right thing, get it right for future generations and choose HAWTHORNE BOULEVARD for the Metro C Line Extension. 391-3

Thank you,
Kayla Mangione

Subject: Draft EIR Comment

To whom it may concern,

After review of the DEIR it is pretty clear that building the Light rail is a complete waste of tax payer money. 392-1
Considering the following:

1. Light rail will never be utilized in Southern California it's just not part of our culture and you can't change culture unless there is a willingness to do so.
2. There is no demand for light rail or even mass transit. Over the past years there has been a steady decline of users. You can't even fill your bus lines. 392-2
3. Electrical vehicles including electric bicycles is going to increase the desire to use privately owned vehicles.
4. COVID and COVID like viruses is also reinforcing the use of private vehicles.
5. California residents never voted for this; in fact, it should be illegal to vote for issuing a blank check to be used indiscriminately.
6. Because of the above facts any conscientious business would pull funding before it is to late to go back. 392-3

I suggest you go back to the drawing board and figure a better use for our taxpayers' money. We don't pay taxes to keep you employed.

The above comments are my own and not the opinion of the company for which I am employed.

Regards,

Ken PRINZI

Manufacturing Engineer

Submission 393

THE METROPOLITAN WATER DISTRICT
OF SOUTHERN CALIFORNIA

Office of the General Manager

March 23, 2023 EMAIL

Georgia Sheridan, Project Manager
Los Angeles County Metropolitan Transportation Authority
One Gateway Plaza, Mail Stop: 99-22-3
Los Angeles, California 90012

Dear Ms. Sheridan:

Notice of Availability
of a Draft Environmental Impact Report for the Green Line Extension to Torrance

The Metropolitan Water District of Southern California (Metropolitan) has reviewed the Notice of Availability of a Draft Environmental Impact Report for the Green Line Extension to Torrance. Metro proposes to implement a light rail transit Project that would extend the C Line (Green) from the existing Redondo Beach (Marine) Station to the Torrance Transit Center. The Draft EIR evaluated the Proposed Project, which would be an elevated or at-grade alignment within the existing Metro-owned right-of-way (ROW) for the entire 4.5-mile length. Two options are considered for the northern segment of the Project area between the Redondo Beach (Marine) Station and 190th Street: 1) Trench Option, which travels along the Metro ROW with the light rail located within a below grade trench, and 2) Hawthorne Option, with the light rail in an elevated configuration traveling parallel to the I-405 Freeway and within the median of Hawthorne Boulevard.

Metropolitan owns and operates facilities within and adjacent to the proposed Project Limits. Metropolitan's West Basin Feeder between Sta. 288+00 to 290+00 and Sta. 296+00 to 299+00 are located along Manhattan Blvd. and adjacent to I-405 within the Metropolitan easement along and or within the Project boundary. Metropolitan is concerned with potential impacts to these facilities and rights-of-way that may result from implementation of the proposed Project. 393-1

Metropolitan must be allowed to maintain its rights-of-way and access to its facilities and properties at all times, in order to repair and maintain the current condition of those facilities. In order to avoid potential conflicts with Metropolitan's rights-of-way, we require that any design plans for any activity in the area of Metropolitan's pipelines or facilities be submitted for our review and written approval. Metropolitan will not permit procedures that could subject the pipes to excessive vehicle, impact, or vibratory loads. Any future design plans associated with this Project should be submitted to the attention of Metropolitan's Substructures Team. Approval 393-2

DocuSign Envelope ID: A6245D3B-F730-4CC3-905F-C9C36C714715
Submission 393

of the Project should be contingent on Metropolitan's approval of design plans for portions of the proposed Project that could impact its facilities. 393-2

Detailed prints of drawings of Metropolitan's pipelines and rights-of-way may be obtained by contacting Metropolitan's Substructures Team at EngineeringSubstructures@mwdh2o.com. To assist Metro in preparing plans that are compatible with Metropolitan's facilities and rights-of-way, enclosed is a copy of Substructure's review of the available plans in the DEIR. Please note that Metropolitan's facilities and rights-of-way must be fully shown and identified as Metropolitan's on all designs or plans submitted. 393-3

Additionally, appropriate property rights must be obtained from Metropolitan for any project activities within Metropolitan's property, such as the granting of a road easement or license. The granting of property rights may be subject to Metropolitan's Board of Director's approval. No work must be done including potholing or any studies within Metropolitan's property prior to the execution of an appropriate agreement. Please contact Metropolitan's Real Property Group regarding the process for obtaining access or property rights at RealEstateServices@mwdh2o.com. Metropolitan recommends that the EIR include reference to Metropolitan's property and granting of an agreement, and also acknowledge Metropolitan as a potential responsible agency "expected to use the EIR in their decision-making" per CEQA Guidelines Section 15124(d)(A). 393-4

Metropolitan encourages projects within its service area to include water conservation measures. While Metropolitan continues to build new supplies and develop means for more efficient use of current resources, projected population and economic growth will increase demands on the current system. Water conservation, reclaimed water use, and groundwater recharge programs are integral components to regional water supply planning. Metropolitan supports mitigation measures such as using water efficient fixtures, drought tolerant landscaping, and reclaimed water to offset any increase in water use associated with the proposed Project. 393-5

We appreciate the opportunity to provide input to your planning process and look forward to receiving future plans and documentation for this Project. If we can be of further assistance, please contact Liz Florence at (213) 217-7193 or at eflorence@mwdh2o.com.

Very truly yours,

Subject: West Basin Feeder
Sta. 288+00 to 290+00 and
Sta. 296+00 to 299+00
Substructures Job No. 2020-20-001

Refence is made to your email dated February 9, 2023, forwarding a link for MTA's proposed Green Line extension (Line C) project connection from existing Redondo Beach (Marine) station to the Torrance Transit station in the South Bay area of Los Angeles County. Included in the link to the DEIR documents were prints of the conceptual plans (Pages 1 through 213).

We have reviewed the submitted conceptual plans, and our comments and requirements are as follows:

1. The location of our 45-inch-inside-diameter precast concrete West Basin Feeder pipeline, as shown on Pages 46 (Drawing TC-102), 76 (Drawing TC-202), 130 (Drawing T-704), 143 (Drawing GX-120), and 152 (Drawing GX-220), is generally in agreement with our records. However, we request that our pipeline and accompanying 10-foot-wide permanent easement right-of-way also be shown and identified as Metropolitan's on all pertinent sheets of your plans. Enclosed is a copy of our Right-of-Way Map 1418-5 for your information and use.

   We request that the final alternative detail plans and sections showing the exact locations of the proposed trench/new piles/at-grade proposal in relation to our pipeline be submitted for our review and written approval. In addition, all the pipeline appurtenances such as manholes within the footprint of the proposed project must shown and identified as "protect in place".

   Metropolitan's Drawings A-2755 and B-8289 are enclosed, to convert elevation from NGVD29 to NAVD88 datum, use the following formula:

393-6

393-7

DocuSign Envelope ID: A6245D3B-F730-4CC3-905F-C9C36C71473C
Submission 393

$$Elevation_{NAVD88} = Elevation_{NGVD29} + 1.45 \text{ feet}$$

Trench Option

2. The proposed "grade-separation" design, as shown on Pages 76 (Drawing TC-202), 81 (Drawing T-204), and 152 (Drawing GX-220), will require relocation of Metropolitan's existing pipeline at Manhattan Beach Boulevard. However, we will need to further evaluate design criteria for the alignment for the final length, depth, and size due to utility conflict constraints. Please note that our air release and vacuum valve structure may need to be redesigned and introducing a new air release and pumpwell manhole structures if the proposed alignment results in a new high or low point. 393-8

   This proposal to relocate portion of our pipeline could run up to millions of dollars. All costs associated with the modification design, protection, and inspection of our facilities to accommodate this project must be borne by the project proponent. Please note that general cost estimate includes Metropolitan's design, inspection, administration and any required shutdown and dewatering. The cost may vary, depending on the actual site conditions. The relocation must be designed and constructed in accordance with Metropolitan's standard specifications and design criteria. 393-9

   In order for Metropolitan to determine a detailed scope, we require a deposit in the amount of $100,000 to apply toward the cost of our review of your project plans, establish a utility agreement, and to prepare a detailed cost estimate for the proposed protection and modification design of our facility. Please note that general cost estimate includes Metropolitan's design, inspection, administration and any required shutdown and dewatering. The cost may vary, depending on the actual site conditions.

   Regarding the schedule of work, the relocation of our pipeline would typically take 12 to 18 months from preliminary to final design and construction, and shutdowns and dewatering of our pipeline would only take place between the months of November and March. 393-10

Elevated and/or At-Grade Options

3. To evaluate the feasibility of the proposed options, we will need a comprehensive and substantial technical analysis be submitted for our review and written approval to demonstrate and ensure that there will be no adverse impacts that would compromise the operation, continuity, and long-term reliability of our water conveyance system. As such, we are requesting the following information for our review: 393-11

DocuSign Envelope ID: A6245D3B-F730-4CC3-905F-C9C36C7147EC
Submission 393

- Based on Page 130 (Drawing T-704), please provide a site-specific geotechnical report with borings where the 8-foot-diameter CIDH pile at your Station 438+50 is the closest one to our pipeline, which runs along the Manhattan Beach Boulevard. 393-12

- Please include a vertical section normal to the pipeline alignment while crossing the 8-foot-diameter CIDH pile at your Station 438+50. Please also show the foundation stratigraphy using the closest borings, section of the pipeline, and horizontal clearance between the CIDH pipe and the pipeline. 393-13

- If groundwater drawdown is required to construct the 8-foot-diameter CIDH pile at your Station 438+50, the cone of depression expands and deepens during pumping until the flow in the aquifer is equal to the pumping rate. When the cone stops expanding, equilibrium exists and its configuration in terms of its radius and depth should be determined. If our pipeline alignment crosses the cone of depression, then settlement/lateral deflection profiles along the affected reach of the pipeline are required, as referenced in Metropolitan's Geotechnical Guidelines, copy attached. 393-14

- A contingency plan must be in place in the event of encountering perch water/running soil/unstable soil during the CIDH excavation at your Station 438+50 since the proposed pile at this location is closet to our pipeline. Please note that encountering running soil during the CIDH excavation would potentially undermine the pipeline, thereby adversely affecting its structural integrity and compromising the reliability and continuity of Metropolitan's conveyance and distribution system. 393-15

4. Our pipeline is a precast concrete pipe installed within a jacked casing from Station 297+13 to Station 297+53 with a 10-foot-wide concrete encasement at each end of the jacked casing, as shown on our Drawing A-2755, copy enclosed.

   The plans show that the proposed future at-grade rail tracks may cross over and outside the existing concrete encasement designed to carry the railroad loads. Outside the existing concrete encasement, our pipeline is not designed to carry the proposed railroad loads; therefore, a permanent concrete protective slab or a bridge structure must be placed over our pipeline to protect from excess loads. 393-16

   Please submit the live load per American Railway Engineering Association (equivalent Cooper E-xx loading) for the railway at-grade proposal.

DocuSign Envelope ID: A6245D3B-F730-4CC3-905F-C9C36C714716
Submission 393

5. Cast-in-driven hole piles and piles support structures may impose vertical and/or lateral load on our pipeline. The structural calculations of the piles adjacent to our pipeline must be submitted for our review and written approval.

393-17

Furthermore, a settlement and/or lateral deformation study may be required for pile installations within 50 feet of our pipeline. The use of driven piles within 20 feet of the centerline of our pipeline is not permitted. Before construction commences, our pipeline must be located by potholing, under Metropolitan's supervision.

6. If the proposed grading exceeds 2 feet of cut or fill over our pipeline, a soil report showing the predicted settlement of our pipeline at 10-foot intervals must be submitted. This data must be carried past the point of zero change in each direction and the actual size and varying depth of the fill must be considered when determining the settlement/rebound.

393-18

Any grading that could result in a significant settlement of the pipeline will not be acceptable. If the pipeline settles or rebounds, deflection at the pipe joints will occur. This could result in cracking or chipping of the cement mortar and cement grout joint filler. It could also result in cracking or chipping of the mortar coating. This will allow corrosion to begin at the bells and spigot joints. Excessive settlement/rebound will cause the wall of the pipe to fail catastrophically.

7. Excavation for the proposed project could affect Metropolitan's facilities. Therefore, we request that the contractor submit an engineered shoring design to Metropolitan for review and acceptance a minimum of 30 days before the scheduled start of excavation. Excavation must not begin until the shoring design is accepted by Metropolitan. The submittal must include all required trenches, pits, and related calculations. The use of driven piles within 20 feet of the centerline of our pipeline will not be permitted. Before beginning construction, our pipeline and appurtenances should be located by potholing

393-19

under Metropolitan's supervision. There must be a minimum of 2- and 5-feet of clearance between our pipeline and the edge of the drilled hole for temporary and permanent piles, if applicable. There must be a minimum of 1-foot of clearance between any part of the shoring and Metropolitan's pipeline.

8. Procedures and specifications of construction equipment to be used for the removal and placement of soil in proximity to Metropolitan's pipeline must be submitted to Metropolitan for review and approval a minimum of 30 days prior to starting work in the vicinity of Metropolitan's pipeline. The submittal must include the equipment and procedures to be used for the placement and compaction of soil over and adjacent to Metropolitan's pipeline and meter vault. Metropolitan will not permit procedures, which could subject the pipe and meter vault to excessive

393-20

DocuSign Envelope ID: A6245D3B-F730-4CC3-905F-C9C36C71471C Submission 393

vehicle, impact, or vibratory loads. Procedures for the removal and placement of soil over our pipeline must be such that excessive unbalanced loads are not imposed on the pipeline. 393-20

Storing of equipment or spoils over the footprint of our pipeline is not allowed. 393-21

Vehicles that impose a load no greater than that imposed by an AASHTO H20 vehicle may be used when the cover is between 4 feet and 11 feet. When the cover over Metropolitan's pipeline is less than 4-feet Metropolitan's pipeline loading restrictions must apply. 393-22

No vibratory compaction equipment in vibratory mode must be used within 25 feet of the centerline of our pipeline. 393-23

9. We request that a stipulation be added to your plans and/or specifications to notify Daniel Diaz of our Water System Operations Team at (323) 276-7623 or cell (760) 792-2573, at least two working days prior to starting any work (including potholing) in the vicinity of our facilities. 393-24

We are returning prints of the Pages 46 (Drawing TC-102), 76 (Drawing TC-202), 130 (Drawing T-704), 143 (Drawing GX-120), and 152 (Drawing GX-220), stamped "REVIEWED — CORRECTIONS NOTED — RESUBMITTAL REQUIRED." 393-25

If you have any questions regarding this matter, please contact Ken Chung at 77670.

Submission 394

From: Megan's Yahoo [redacted]
Sent: Thursday, March 23, 2023 6:24 PM
To: greenlineextension@metro.net; anajarian@glendaleca.gov; firstdistrict@bos.lacounty.gov; HollyJMitchell@bos.lacounty.gov; jdupontw@aol.com; mayor.helpdesk@lacity.org; FourthDistrict@bos.lacounty.gov; kathryn@bos.lacounty.gov; thirddistrict@bos.lacounty.gov; jbutts@cityofinglewood.org
Subject: Choose Hawthorne Blvd for the Metro C Line / Green Line Extension

Dear Metro Board Members,

I am writing to express my strong disapproval for routing the proposed C (Green) Line extension down the current Metro right of way through residential neighborhoods in Lawndale and Redondo Beach. I am urging you and the board to choose the Hawthorne Boulevard elevated option instead for the following reasons: 394-1

- NEIGHBORHOOD QUALITY OF LIFE: The ROW option would send 200-300 trains per day through quiet residential neighborhoods from 4 AM until Midnight. This will permanently affect the quality of life for more than 1,000 families in Lawndale and North Redondo Beach. Metro's own environmental impact report states increases in NOISE and VIBRATION will be "Significant" and "Unavoidable." This is in addition to 3-5 years of significant construction-related impacts to the neighborhood. 394-2

- SAFETY: In some spots, the ROW option will move an existing freight track to within 8-10 feet of fence lines. This track currently sees trains carrying highly flammable and dangerous petroleum products between two oil refineries. Even a minor derailment -- even at slow speeds -- would put petroleum tanker cars into homes and backyards. This freight line already has a history of previous derailments. 394-3

In addition, the ROW has multiple high-pressure petroleum pipelines buried in unstable soil. Construction of the C Line down the ROW presents a danger to those pipelines even if all safety protocols are followed. Even one slip-up could be catastrophic to the neighborhood. 394-4

- LOSS OF GREEN SPACE: The ROW -- for better or worse -- is utilized as much-needed green space in the City of Lawndale. Not only that, it offers a respite from urban sprawl with tall, mature trees and views of the San Gabriel Mountains in the distance. What is now a park-like community along the ROW will be replaced with giant walls that will bounce train noise and destroy views of the horizon. 394-5

- RIDERSHIP: Routing the Metro C Line down Hawthorne Boulevard would see more ridership than the ROW option as it passes by businesses and landmarks people want to visit. This includes a station in front of a planned mixed-use residential development at the South Bay Galleria. 394-6

I implore you to listen to the voices of the community when selecting which option to build. This is a 100-year project that will have PERMANENT impacts on a community already disadvantaged compared to neighboring South Bay cities. When considering costs, look at not only the financial costs, but the societal and environmental costs as well. Do the right thing, get it right for future generations and choose HAWTHORNE BOULEVARD for the Metro C Line Extension. 394-7

Thank you,

Sent from my iPhone

Subject: DEIR Community Response Series from Right of Say/Redondo Beach Quality of Life Installment #3

Dear Metro and Metro Board of Directors,

I support the Right of Say/Redondo Beach group to not build the metro extension on the ROW and share these concerns with follow Redondo Beach Residents, please replay back with additional details of how the Metro will guarantee safety if the extension is built on the ROW. This option is proposing to move the existing train 7-25 feet closer to homes and add additional two rails into a very cramped space down the ROW, please read the below and look at photos of how close the current configuration is already, and keep in mind the 100+ metro trains that will run past these homes per day and the impact of homeowner's welfare and lives. 395-1

DEIR Community Response Series from Right of Say/Redondo Beach Quality of Life Installment #3

After having a chance to review the Draft Environmental Impact Report, please consider the following as our third DEIR group response for the record. All of the potential risks are something to be taken very seriously and above all, judiciously.

As a group we are addressing this matter by section in hopes of ensuring attention to all of our concerns. This installment is concerning the relocation of freight rail closer to homes which will pose a colossal hazard an average of 15 - 20 feet from residential properties belonging to young families with children, retirees and those preparing to retire. 395-2

As property owners with families living adjacent to this proposed project, those of us sharing property lines with this project will bear an excessive and unnecessary burden when there are better, safer and more long term economically favorable options being considered. Both during construction and post-construction, our safety, our health, property values, and our way-of-life, will all be severely compromised. For some of us this means our retirement, some of us are older and/or disabled, others of us are working remotely from home and yet others are raising young children in school. 395-3

• DEIR proposes to add 2 additional “light-rail” lines to the existing 80+ year freight line currently being used to transport Liquid Petroleum from the harbor to El Segundo for refinement. This train makes one round trip per day, passing by only twice, usually late morning to midday. Our safety is put at risk due to this activity (see linked video below). 395-4

• To accommodate space for the added rails, the proposed project, at grade or trenched, would move the existing freight 7 - 25 feet closer to the rear wall of private residential properties, for a few it would happen within feet in front of their property. All private residences sharing property lines with the ROW will suffer this encroachment. 395-5

As our property already is subject to Noise and Vibration, the DEIR has no real way to mitigate the effects of this expansion and have stated as much in the DEIR: 395-6

DURING CONSTRUCTION ((Page3.6-34): “While MM-NOI-1 would include measures that reduce construction noise levels, in some instances the FTA construction impact criteria may still be exceeded. There are no additional feasible mitigation measures that could be implemented to further reduce construction noise levels. Therefore, construction of the Proposed Project would result in noise levels that would exceed FTA’s criteria, and the impact would be **significant and unavoidable**.”

OPERATIONAL IMPACTS (Page 3.6-46): Overall, the Proposed Project would have a **significant and unavoidable impact** for light rail and for combined freight and light rail noise…"

Moving the freight train closer to our properties to add two additional rail lines, violates our space to live peacefully, makes it difficult work, and presents foreseeable hardships and damage to infrastructure considering the property damage we see due to seismic vibration and utility maintenance digging. Extended years of heavy construction just feet from our homes puts our health unduly at risk. 395-7

Please do not use the ROW for the C Line Expansion. 395-8

Video of freight 30 feet away from back wall of private residential property, proposed to be moved closer with no retaining wall: https://youtu.be/UL_FPZT629I

View from back door to outdoor living space demonstrating close proximity and lack of personal privacy: 395-9

Subject: DEIR Community Response Series from Right of Say/Redondo Beach Quality of Life Installment #4

Dear Metro and Metro Board Members,

I support the Right of Say/Redondo Beach group to not build the metro extension on the ROW and share these concerns with follow Redondo Beach Residents, please change the Draft DEIR in section 3.2-4.1.1 (Construction Impacts) & 3.2-4.1.1 (Operational Impacts) from less than significant impact to more than significant impact. The impact on the community to build on the ROW is greater than other options such as to build down Hawthorne Blvd, by building on the ROW you are significantly damage residential community's vs other options that mainly impact commercial areas. If this is not changed in the DEIR please respond back with detailed explanations. 396-1

DEIR Community Response Series from Right of Say/Redondo Beach Quality of Life Installment #4

Lawndale has one of the highest population density in Los Angeles County at **16,380** people per sq. mile. On the opposite end of the spectrum, Lawndale also has the least amount of park space of any city in the South Bay.

The ROW is our very limited green space. This area is very peaceful. Homes line both sides and many residents enjoy their morning jog or others stroll listening to the sound of singing birds that inhabit the trees. Lawndale is a very dog friendly community and this path is also utilized for residents walking their dogs and socializing with one another. Extended families live near one another and some on opposite sides of the ROW where they can gather on the grassy area between their homes and enjoy the parklike atmosphere together. Mature trees also provide much needed shade and are beneficial to our air quality. The Lawndale community desperately needs this tranquil green space. 396-2

Metro's ROW option will destroy our unique close-knit neighborhood. Lawndale is a melting pot of many ethnic groups, predominantly of blue working class, a rare mix for the county. What this community lacks in high income, is very rich in diversity. Any iteration of the proposed project will be a living nightmare beginning with 5+ years of construction through operation with the light rail train racing by every 6 - 12 minutes, 20 hours per day. 396-3

Stated in the DEIR for both iterations of the ROW option:

3.2-4.1 Would the Proposed Project physically divide an established community?

3.2-4.1.1 Construction Impacts **- <u>Less than Significant Impact</u>**

3.2-4.1.2 *Operational Impacts* - <u>Less than Significant Impact</u>

These claims are arbitrary and made without close, earnest consideration of the tradition and character of this community that many families call home and enjoy together.
A simple comparison of the **Proposed Project** with the current neighborhood reveals the level of the division that this industrial project will inflict on communities. Commuter trains, routed through what now serves as a parkway, will destroy the relief from city density that this area currently enjoys. 396-4

A few of the many concerns being voiced by the Lawndale community.:

• Safety…The risk of a gas pipeline explosion. This will be a drastic change of constant ground movement unlike previously. 396-5

• William Green School is within about 350 ft. of the ROW. 396-6

• Isolation…our community will become completely sealed off from the rest of Lawndale from 162nd St to 170th St. 396-7

• Evacuation: route is eliminated by any iteration of the proposed project with walls and fences. 396-8

This is not an equitable solution. While they are not being offered any concessions, such as a stop or other benefits, Lawndale residents are being exploited for another city's benefit. Properties were bought under one set of rules and without the waivers to CEQA this would not be happening. Relaxed rail regulations being compromise the safety of the entire community. 396-9

Hawthorne Blvd historically was and still is a transportation hub. The elevated alignment through that commercial corridor makes the most sense. 396-10
Metro has adopted more equitable objectives. Please do not uproot this diverse community as many long time residents with generations of family ties will be compromised effectively killing their strong spirit. 396-11

Thank you for your attention to this matter.

Subject: DEIR Community Response Series from Right of Say/Redondo Beach Quality of Life Installment #6

Dear Metro and Metro Board of Directors,

I support the Right of Say/Redondo Beach group to not build the metro extension on the ROW and share these concerns with follow Redondo Beach Residents, please consider updating the DEIR to add HazMat 3.9-1.1 Federal Regulations to section to the assessment, this needs to be addressed in greater detail in the DEIR for safety concerns that both residents near the expansion and ridership of metro passengers will be in danger of pressurized petroleum pipelines that will be at increase levels of stress due to the choosing of this option. If not added to final DEIR report, please respond with detailed explanations on why this wasn't properly evaluated in the report. Please read the below email from Right of Say: 397-1

DEIR Community Response Series from Right of Say/Redondo Beach Quality of Life Installment #6

After having a chance to review the Draft Environmental Impact Report, please consider the following as our sixth* DEIR group response for the record. We are responding in joint installments submitted by group members. This installment is regarding Overall SAFETY.

As a lot of us are homeowners who share property lines on the west side of the ROW corridor, we have grave concerns for our safety, to our health, our property and our persons. 397-2

SAFETY:

Is it even possible to guarantee that crowding THREE rails into a narrow corridor in between 1,100 homes and with passengers in such close proximity to liquid petroleum fuel tankers 12-25' away from densely occupied housing above 7 highly pressurized petroleum pipelines at some points rounding a curve and others 30 feet above occupied trenched light rails "safe"? 397-3

Please refer to federal guidelines which pertain to impacted residents as well as light rail passenger commuters. 397-4

HazMat chapter pg 2:

3.9-1.1 Federal Regulations

Hazardous Materials Transportation Act (49 United States Code Section 5101 et seq. and 49 Code of Federal Regulations Parts 101, 106, 107, and 171-180)

The Hazardous Materials Transportation Act regulates the transportation of hazardous materials. The objective is to provide adequate protection against the risks to life and property inherent in the transportation of hazardous materials in commerce, by improving the regulatory and enforcement authority of the Secretary of Transportation.

There have been numerous derailments and/or crash incidents daily in the past 3 months. We have since learned rail regulations had been relaxed federally on an incremental basis due to the rail industry lobby. 397-5

We are strongly urging Metro and the Metro Board of Directors to deeply consider the safety of the highly impacted 1,100 households between Lawndale and Redondo Beach. 397-6

Thank you for your attention to this matter.

Subject: DEIR Question on Vibration (during Construction) Section 3.6-4.3.1 (OSB Q. No. 2)
Date: Sunday, March 12, 2023 6:37:09 PM

Dear Metro:

This is a follow up to comments I made in the first comment period in Lawndale on February 25. I am sending these comments in case the transcriber did not get them all down.

This has do do with Vibration during Construction.

DEIR Question: (Page ES- 23 and ES-24) under **Environmental Impact, Noise and Vibration.**
. "Would the Project result in generation of excessive ground-borne vibration?"

Problem: This question has two parts: **construction** and **operation**.
During **construction,** your table summaries count residential *structures.*
During operation, you said you count individual *residences*.

Counting "structures" can vastly undercount the number of residences and people affected when you count condominium complexes as only two or three "structures." For example you count the 191-unit Breakwater complex on the West side of the ROW (south of Artesia) as only 2 "structures." Another smaller example is counting a 3 adjoining townhomes facing the ROW, north of Artesia, as only 2 units. 398-1

I will look at the tables first, and then the pictures.

Detailed Analysis: Vibration Noise for Construction.

The numbers of residential "structures" negatively affected by vibration during construction is shown below for both the ROW and HB (Hawthorne Boulevard options:

Inline image

398-1

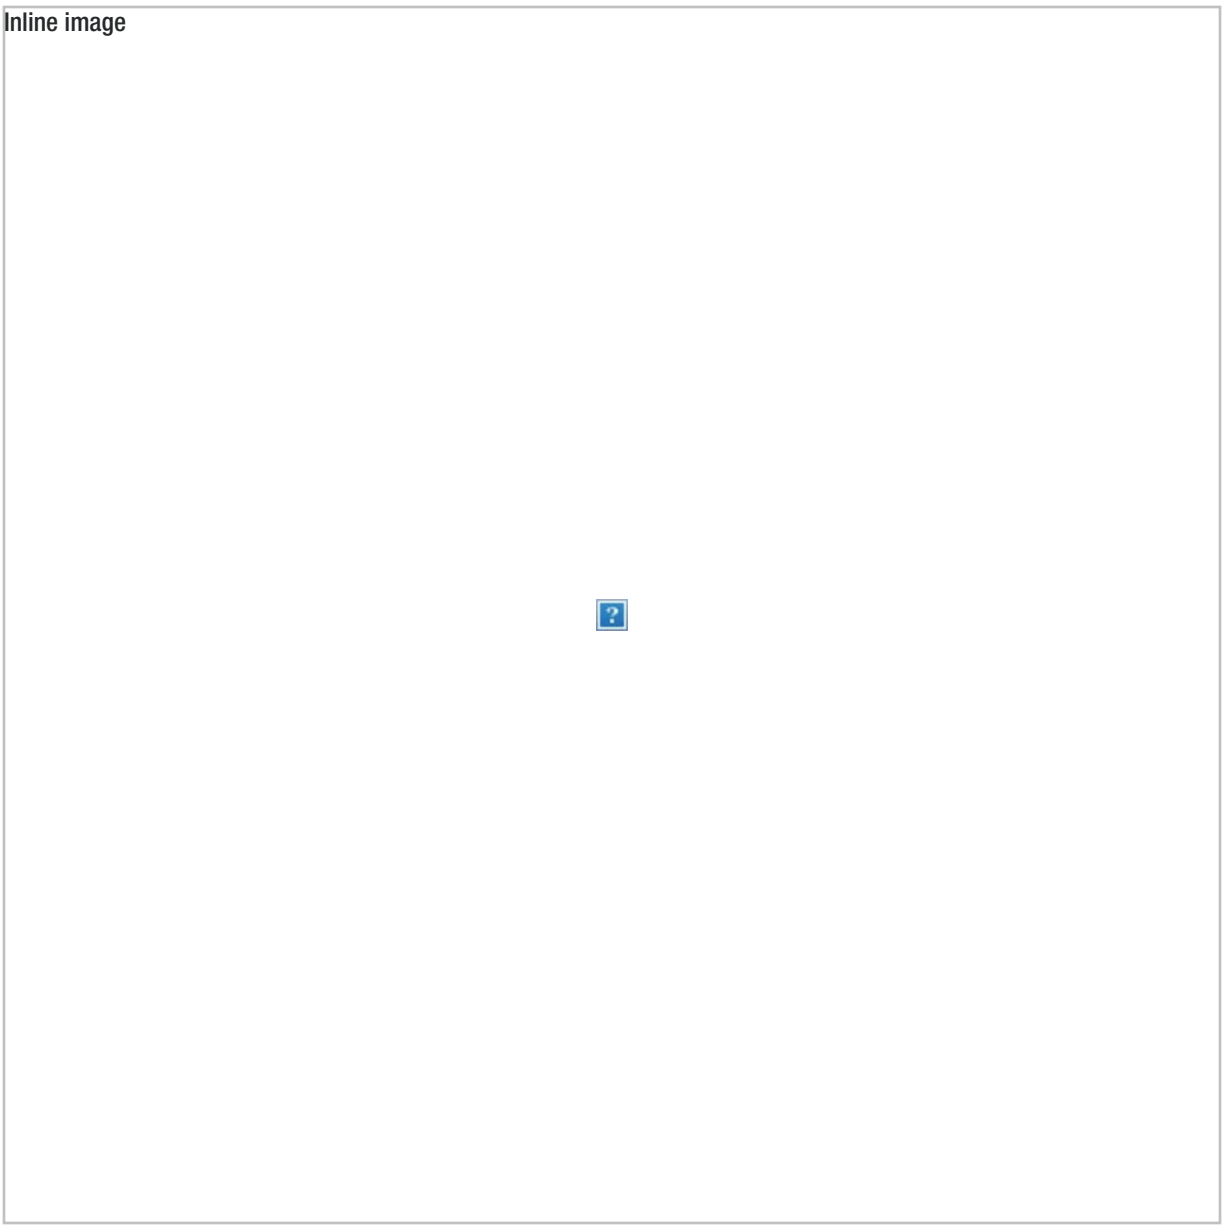
The table clearly shows that many more "structures" are impacted during the construction phase with the ROW option as compared to the Hawthorne option**: 133 affected on the ROW, vs 11 affected by the Hawthorne option.**

The information for the above table was obtained by combining the following two tables in the DEIR.

The Following Table 3.6-20 is from page 3.6-88.

Submission 398

Inline image



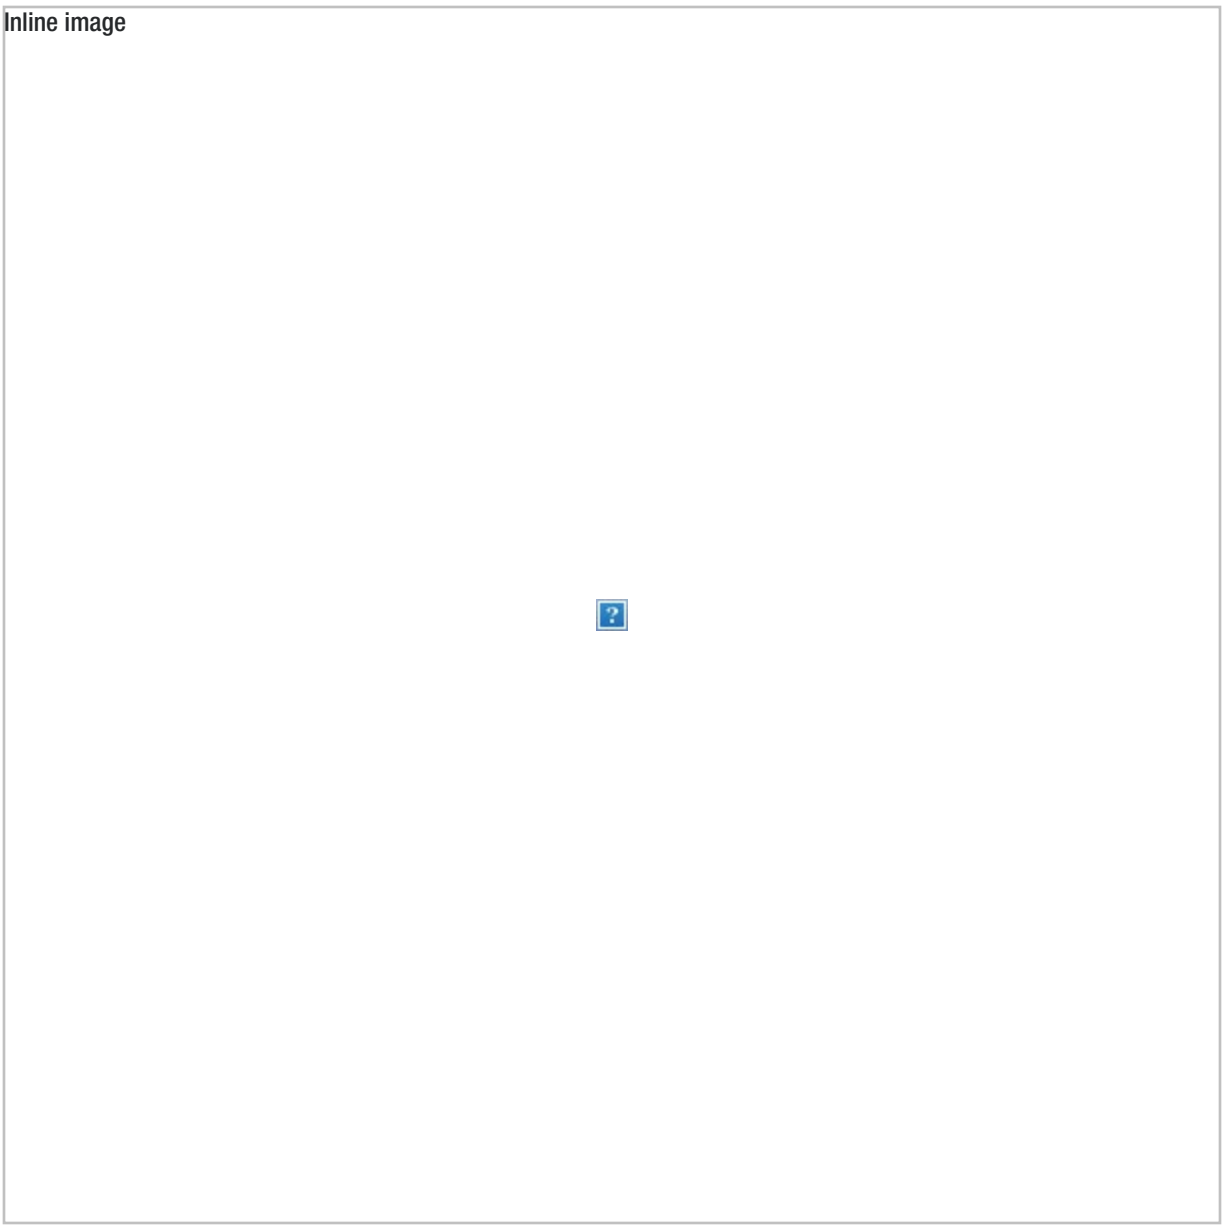
398-1

The DEIR says (page 3.6-88)

"Construction of the Proposed Project would have a significant impact on 133 residential structures related to damage caused by excessive ground-borne vibration levels, and mitigation would be required."

For the Hawthorne Option, there are 11 structures affected by Vibration damage, according to your Table 3.6-22. :

Inline image



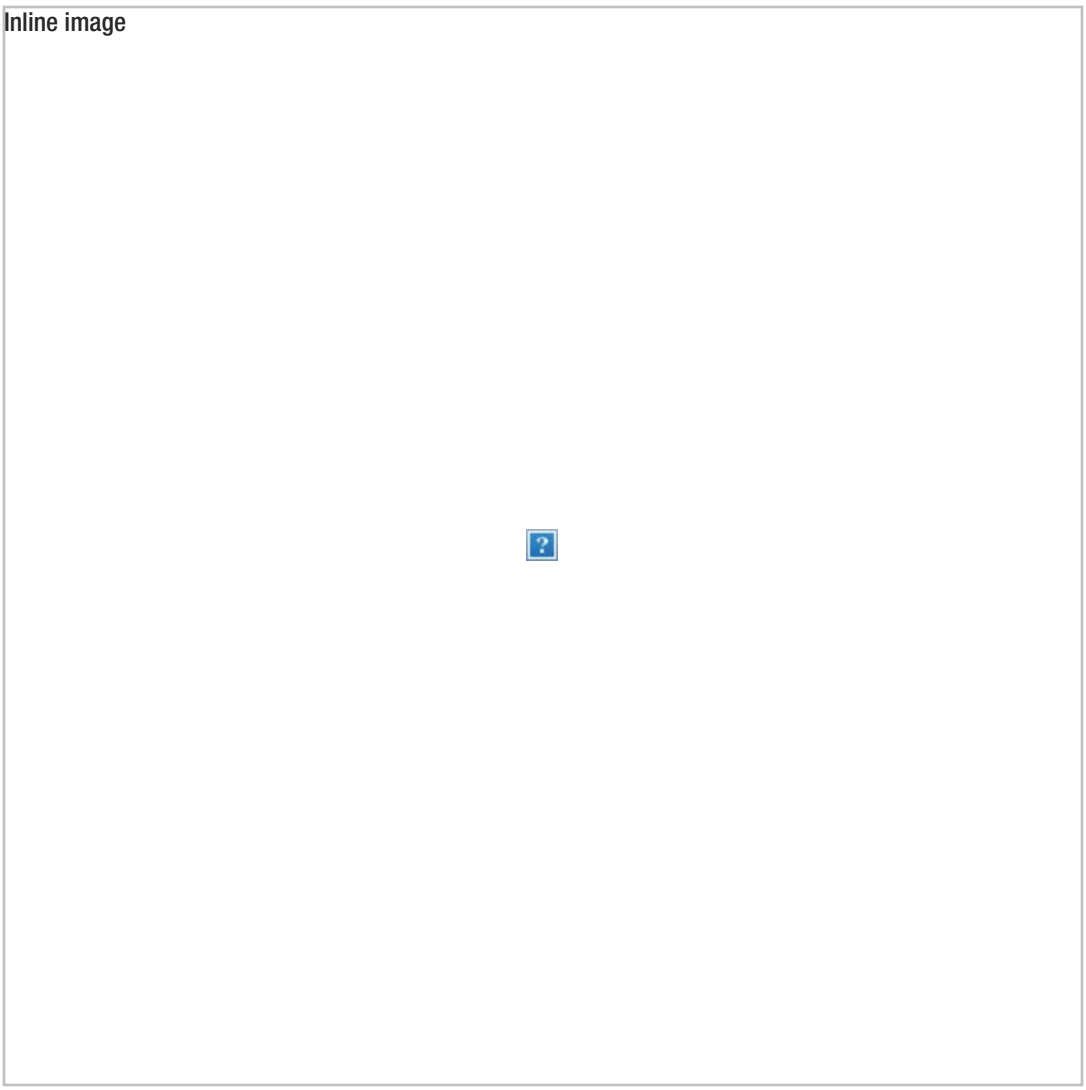
398-1

Now look at two pictures:

The pictures are all taken from the "**Appendix 3.06-C: Vibration Detail Maps.pdf**"
The green dots indicate a structure affected by noise during construction.

1. Here is the larger picture that contains the Town House (just north of 172nd St.), from Figure 3.6-C11.

Inline image



398-1

Here is the expanded version of the town house. There are 3 town houses north of 172nd; yet you have counted only two. There are only two green dots. What is the reason for that?

398-2

2. Now look at the Redondo condos west of the ROW, in the Figure below.. (This is South of Artesia.)

You have counted a grand total of 7 "structures ' on the West side of the ROW. You counted only "2" areas affected for the 191 unit Breakwater Village complex, on the West side of the ROW, and 2 for the 18 unit Ruxton Ridge Condos, and 3 for the 27 unit Ruxton Place Condos. What is incredulous about the 3 for the Ruxton Place Condos (which had 3 "structures"; see southern most set of condos) is **that there was damage to 3 units during in one structure alone during digging by Chevron for pipe maintenance, a**nd it took over 2 and 1/2 years for the damage to be repaired.

398-3

It seems that your system of counting "structures" is an attempt to minimize the damage estimate along the ROW;

398-4

minimize people who live in multi-unit housing, and intentionally or not, minimize the damage effects to a Sr./Affordable housing complex (Breakwater Village.)

398-4

Inline image

Summary: , even with the apparent "minimization", **it is clear that with 133 structures subject to damage in the ROW option, vs 11 in the Hawthorne Option, that the Hawthorne option is the better choice.**

398-5

However, the tables still need to be redone, with a more accurate count done regarding homeowners/renters who will be affected.

398-6

Respectfully submitted
Holly Osborne

ON BEHALF OF THE LAWNDALE COMMUNITY

After having a chance to review the Draft Environmental Impact Report, please consider the following as our fifth DEIR group response for the record. We are making this a series of installments by group submissions to ensure proper attention to various issues of concern.

Lawndale has one of the highest population density in Los Angeles County at **16,380** people per sq. mile. On the opposite end of the spectrum, Lawndale also has the least amount of park space of any city in the South Bay. 399-1

The ROW is our very limited green space. This area is very peaceful. Homes line both sides and many residents enjoy their morning jog or others stroll listening to the sound of singing birds that inhabit the trees. Lawndale is a very dog friendly community and this path is also utilized for residents walking their dogs and socializing with one another. Extended families live near one another and some on opposite sides of the ROW where they can gather on the grassy area between their homes and enjoy the parklike atmosphere together. Mature trees also provide much needed shade and are beneficial to our air quality. The Lawndale community desperately needs this tranquil green space. 399-2

Metro's ROW option will destroy our unique close-knit neighborhood. Lawndale is a melting pot of many ethnic groups, predominantly of blue working class, a rare mix for the county. What this community lacks in high income, is very rich in diversity. Any iteration of the proposed project will be a living nightmare beginning with 5+ years of construction through operation with the light rail train racing by every 6 - 12 minutes, 20 hours per day. 399-3

Stated in the DEIR for both iterations of the ROW option:

3.2-4.1 Would the Proposed Project physically divide an established community?

3.2-4.1.1 Construction Impacts **- Less than Significant Impact**

3.2-4.1.2 ***Operational Impacts*** **- Less than Significant Impact**

These claims are arbitrary and made without close, earnest consideration of the tradition and character of this community that many families call home and enjoy together.
A simple comparison of the **Proposed Project** with the current neighborhood reveals the level of the division that this industrial project will inflict on communities. Commuter trains, routed through what now serves as a parkway, will destroy the relief from city density that this area currently enjoys. 399-4

DEIR Community division screenshot.png

A few of the many concerns being voiced by the Lawndale community.:

• Safety…The risk of a gas pipeline explosion. This will be a drastic change of constant ground movement unlike previously. 399-5

• William Green School is within about 350 ft. of the ROW. 399-6

• Isolation…our community will become completely sealed off from the rest of Lawndale from 162nd St to 170th St. 399-7

• Evacuation: route is eliminated by any iteration of the proposed project with walls and fences. 399-8

This is not an equitable solution. While they are not being offered any concessions, such as a stop or other benefits, Lawndale residents are being exploited for another city's benefit. Properties were bought under one set of rules and without the waivers to CEQA this would not be happening. Relaxed rail regulations being compromise the safety of the entire community. 399-9

Hawthorne Blvd historically was and still is a transportation hub. The elevated alignment through that commercial corridor makes the most sense. 399-10
Metro has adopted more equitable objectives. Please do not uproot this diverse community as many long time residents with generations of family ties will be compromised effectively killing their strong spirit. 399-11

Thank you for your attention to this matter.

Submission 400

From: Jeanne Bellemin
To: GreenlineExtension
Subject: Suggestions for the Green Line Extension Project
Date: Friday, March 10, 2023 1:40:38 PM
Attachments: letter to Metro Extention, Mar 10,2023.docx

Hello Mark Dierkling,

I have composed a letter outlining my thoughts about landscaping plants for the Green Line Extension.

Submission 400

March 10, 2023

Mark Dierking

Community Relations Manager, Metro

One Gateway Plaza, MS 99-13-1

Los Angeles, CA 90012

Dear Mr. Dierking,

I am writing because there exists a great opportunity to promote landscaping using native California plants, with the anticipated extension of the Green Line. The endemic vegetation of the Los Angeles Basin also provides food and shelter for the wildlife that occupied the region before the presence of 9 million people. The birds, mammals, reptiles, bees, butterflies and multiple species of other insects still survive here enriching our lives, despite dwindling food resources in the urban environment. 400-1

As a life-long advocate for native California plants in the urban landscape, I have come to realize their many benefits:

1. Native plants, once established, require less water since they have adapted over time to our local climate regime.
2. Native plants thrive in our soil and need no additional fertilizer to enhance their growth.
3. Many native shrubs, like *Ceanothus*, Toyon or the sages, are evergreen and are impressive when they flower or fruit.
4. Native plants are the original food source for our endemic birds. The birds in turn help reduce insect pests, such as mosquitoes, by feasting on them.
5. Pollinators, especially our numerous species of native bees (not just introduced honeybees) depend on the wildflowers with which they have evolved. When we loose our native flora, we loose their specialized pollinators. Planting native vegetation would encourage our native pollinators.
6. Native plants around our Metro Stations would impart a uniquely Southern California character. Imagine a stately Oak or Sycamore, or any of the blue, black or white sages. A beautiful *Fremontia* in bloom is also quite impressive.

400-2

An example of mid-city native plants can be seen at the native garden that replaced the old parking lot at the Los Angeles Natural History Museum. It is a haven for urban wildlife of which we can be very proud. I realize that each Metro station does not present a large footprint, but an effort could be made to incorporate a variety of native plants at each one. 400-3

400-4

Having lived in Redondo Beach for nearly 50 years, my own garden is filled with beautiful native vegetation that supports many birds and butterflies.

I am now retired from El Camino College where I was a Professor of Zoology for nearly 40 years. In 1998 I gave my students an opportunity to learn about and experience the joy of native plant gardening, by starting one on the island in the lake at Alondra Park. I continue to hold monthly workdays on the site.

A useful resource for choosing native plants is the California Native Plant Society tool called Calscape. (Calscape.org) It allows one to select plants for the region, and also suggests plants for specific challenges like groundcover, bank stabilization, or shade versus full sunlight.

Sincerely,

Jeanne Bellemin,

Professor of Zoology, El Camino College, retired.

Director of the Alondra Park Native Plant Garden.

Subject:	C-line (Greenline) DEIR Public Comments
Date:	Friday, March 10, 2023 9:43:55 AM

Dear Metro,

Please add my comments below expressing my concerns with the DEIR.

The Chapter on Hazards/Hazardous Materials does not adequately address the impact to vulnerable senior communities if an accident between the Metro and the petroleum carrying freight train might occur. 401-1

I am a resident of Breakwater Village, a 55 plus community in Redondo Beach. The complex of 190 condominium units housing nearly 300 residents is located adjacent to the R.O.W.. Approximately 30% of the residents are mobility restricted or disabled. A consequential C-Line accident, especially fire/explosion, can quickly become a significant human tragedy as many Breakwater Village residents may not be able to get out. Of those that do, if there is extensive Breakwater Village damage, many have nowhere else to go at this late life-stage. 401-2

Thank you for your attention to this matter.

From: Eugene Balfour
To: GreenlineExtension
Subject: Metro C Line Extension: Hawthorne Blvd Option
Date: Monday, January 30, 2023 10:06:50 PM

To whom this may concern, I believe the Hawthorne Blvd option will provide more benefit to the LA region than the other two options. Hawthorne Blvd used to carry Pacific Electric streetcar lines in it's huge median, and as such, it is the center of commerical activity in the neighborhoods it passes through. The South Bay Galleria, as well as commerical establishments that people visit while running errands, will be huge trip generators. 402-1

Having a majority elevated alignment allows for speeds of 55 mph+, and less service disruptions causes by intersection mishaps. So I agree that the Hawthorne alignement is the best possible choice. 402-2

Thank you,
Eugene Balfour
Lancaster, CA

Subject: RE: GREENLINE EXTENSION

This location is under consideration if the Trench Option along the right of way is selected for the project to host a sump pump and TPSS. Due to the depth of the trench and high ground water levels, a sump pump is needed for the Trench. In addition, Metro is looking at potential sites for TPSS (traction power stations). Once we enter the next stage of design (preliminary engineering), we will have a better understanding of what is needed, but yes this parcel is under consideration for the Trench Option.

Mark,

I was just looking over the DIR and the real estate acquisitions page 34.

ID number 13, 4637 Manhattan Beach , Permanent _TPPS and Pump Station Note: Trench Option only

That property belongs to us. That's our storage yard, mechanic building and truck parking. This is the first time I've ever seen this property mentioned in any of your previous meetings or presentations. This property isn't along the ROW. This isn't going to work. Any encroachment on us will force us to relocate.
This is another reason if the ROW is chosen, I would prefer seeing it go overhead form Inglewood Ave the southside of Manhattan Beach.

Dear Metro,

Please add my comments below expressing my concerns with Dear.

Chapter on Aesthetics does not adequately address the study of moving current freight train closer to households:
Single-family properties (backyard experiences)
Two retirement communities (relaxation in common spaces)
Impact of frequency of light rail on adjacent properties.

406-1

Thank you for your attention to this matter.

Submission 409

From: chris ng
To: GreenlineExtension
Subject: Feedback for C Line (Green) Extension to Torrance
Date: Friday, March 3, 2023 6:57:45 PM

Dear Metro,

I have been a Redondo Beach home owner for the past 35 years and have always wanted more public transportation to reduce the number of cars on our roads.

I like the Elevated Hawthorne Alignment best. Although it is the most expensive, it is also most beneficial in the long-term giving access to businesses on both sides of Hawthorne Blvd and Artesia Blvd. The path underneath the platform could also provide a shaded bike path and more greenery. I would like to suggest replacing the pedestrian crosswalk between the station to the Galleria Mall by pedestrian bridges over these busy streets. Train riders entering and exiting the station can then avoid crossing the fast-moving cars on Hawthorne Blvd or Artesia Blvd. 409-1

My next preference is the trench Metro ROW. This option does not interfere with pedestrian or car traffic, and provides a good sound barrier to near-by homes. The freight rail should also be in the trenches for the same reasons. 409-2

Thank you for considering my comments.
Chris Ng

Dear Metro,

Please add my comments below expressing my concerns with the DEIR.

The chapter on Hazards/Harzadous Materials does not adequately address the severe impact of moving the current freight line closer to the Breakwater Village Senior Complex as well as other residences adjacent to the ROW. Also how will the safety of the residents be assured of if the extension is built on the ROW. Please consider the Hawthorne project for the extension.

410-1

Thank you for your attention to this matter.

Date:	Friday, March 3, 2023 11:10:12 AM

To the Metro Board of Directors Members:

As a resident of Breakwater Village (a 55+ Senior Community) in Redondo Beach I am writing to implore you to support the Hawthorne Boulevard alternative.

This option will :

1. Support and revitalize the businesses on that vital commerce corridor, including the South Bay Galleria's redesign 411-1
2. Utilize infrastructure which was designed for and previously contained a commuter railway track (the Pacific Electric Red Cars) 411-2
3. Avoid devastating impacts to residents like me - no constant vibration damage, no noise pollution disrupting our peaceful way of life, no disastrous impact to property values, no visual impacts (my balcony looks DIRECTLY AT THE HARBOR RIGHT OF WAY!) 411-3

The residents of our community and others appreciate your thoughtful consideration and support for Alternative 2e, Hawthorne Boulevard! 411-4

Sincerely,

Jeanne Merchant

Dear Metro

I am 86 years old and a Resident at Breakwater Village [redacted] I read the DEIR and have some concerns regarding the NOISE AND VIBRATION

CURRENTLY the train comes by two times a day. The vibration moves my pictures so they are not straight. The vibration causes my bulbs In ceiling fixtures to become loose. We will have a significant amount of noise during the project and when it is completed. 414-1

We have had structure damage to our building already. I am concerned about more structural damage with trains running at 15 minute intervals. 414-2

I will not be able to keep my doors and windows open due to the noise 414-3

Thank you for the attention to this matter

Angeline Souza

Hi Metro,

My name is Alan and I am a resident of the South Bay. I used to be a frequent commuter on the metro when I used to take it to school. I am voicing my support for the Hawthorne Alignment. I believe it will greatly impact commuters for the better. It has the most direct access to the South Bay Galleria mall and by having it on Hawthorne it will allow for greater density and lead to more people commuting in the long run.

415-1

Thanks,
Alan

Subject:	Metro Greenline Extention Noise
Date:	Thursday, March 9, 2023 7:59:11 PM

March 4, 2023

Dear Metro and Metro Board Members,

I am a homeowner on 163rd Street in Lawndale. I am adamantly opposed to the Metro going through the (Right Of Way) ROW. The Metro belongs on a commercial corridor not in a residential neighborhood where it would negatively affect the health and wellbeing of hundreds of residents. We currently have one or two trains per day running through the neighborhoods of Lawndale and Redondo Beach but if the Metro was here that would increase by 200-300 per day! In addition to the structural damage this could cause to our homes from the vibration, the increase in noise has the potential to seriously harm the health of the residents. The Draft Environmental Impact Report, (DEIR) says the noise would be substantial and unavoidable (3.6-2). There are several recent studies linking serious health risks to living near this type of noise. These risks include Noise induced hearing loss (NIHL), increased risk of heart attack, high blood pressure, chronic stress, sleep disturbances, and anxiety. Children living with high levels of noise pollution can develop stress, impairments in memory, attention, and reading skills. It is unacceptable to expose the hundreds of families living along the ROW (Right of Way) to these serious health risks. I have attached two articles that outline some of the dangers of noise pollution. Please do not run the Metro through our peaceful residential neighborhood.

416-1

Submission 417

From: Ints Luters
To: GreenlineExtension
Subject: Redondo transit center station
Date: Saturday, March 4, 2023 6:53:55 PM

Hello,
I grew up next to ElNido park and would be a user of the planned metro extension to torrance.
Even with the challenge of running parallel to a freight line, the lack of connectivity to Inglewood boulevard and the neighborhoods and schools to the west of the proposed station is a huge missed opportunity.
A right in-right out drop off lane from Inglewood north of the Pacific Crest Cemetery and out again to 182nd could help provide access to the west side of the station. Depending on the station elevation, the re could be pedestrian connections from this drop off, allowing a much more usable connection, by using both the East and west sides of a proposed station. This will confirm your commitment to pedestrian oriented transit by including the complete walkshed. 417-1
I understand that there are two station options - the existing rail alignment and the Hawthorne Blvd. alignment - but my vote is definitely for the existing rail alignment with trenching where feasible. 417-2
Thanks for your time and consideration of my comments regarding this long overdue extension of the Metro network.

Regards.
Ints Luters

Date:	Sunday, March 5, 2023 12:07:27 PM

Dear Metro,

Please add my comments below expressing my concerns with the DEIR.

The Chapter on Noise and Vibration does not adequately address how Metro will mitigate the onslaught of commuter trains through residential neighborhoods.

At a previous meeting with Metro I asked Mr. Dierking and another Metro employee if they had walked the R.O.W. corridor and the response was yes. However, if they had walked the corridor from 190th St. north to Manhattan Beach Blvd., they would have noticed a modular home park, apartment buildings, a tiny home village for the unhoused, single family homes, two senior complexes and townhomes. My question is how will Metro help these residents, if construction of a future rail on the R.O.W. is selected? The answer is simple: NOT ON The R.O.W.

Subject:	C Line (Green) Extension to Torrance
Date:	Sunday, March 5, 2023 12:41:19 PM

Dear Committee Members,
While consideration and review is still in process for this extension, please know that the residents and occupants of the neighborhood in the where the green line is proposed and particularly where it would go through the neighborhood of Franklin Park are of the utmost concern about 192 trains coming practically throught their backyards, creating loud, industrial noises and vibrations, and large trains banging above the residents' and childrens' heads. These photos show in the green space behind these homes on Firmona where the tracks run right up above families' yards. Please kindly consider the Hawthorne option. This would still provide a viable means of efficient travel to Torrance for those who need it.
Thank you.

419-1

419-2

Sincerely,
Lillian Katzenmeyer

Subject: DEIR Participated in Right of Say/Redondo Beach Quality of Life Installment #1

Dear Metro and Metro Board of Directors,

I support the Right of Say/Redondo Beach group to not build the metro extension on the ROW and share these concerns with follow Redondo Beach Residents, please replay back with additional details of how Metro will safety maintain the routine gas pipeline and deal with potential Sinkhole issues if the Metro is built on the Redondo Beach ROW, how are these additional costs forecasted by the Metro in their forecast of operational expense for this option? 420-1

DEIR Community Response Series from Right of Say/Redondo Beach Quality of Life Installment #1

After having a chance to review the Draft Environmental Impact Report, please consider the following as our first group response for the record with very minor edit. Substance contained herein has not changed. We are taking this huge endeavor by section and as a group in hopes of ensuring attention to all of our concerns.

Firstly, this is in reference to the Geology and Soils chapter. Brief local history: In July 2020 Shell Pipeline Co. attempted to perform routine gas pipeline maintenance in the Redondo Beach ROW which opened a sinkhole that crossed property lines from inside the ROW into the private townhome complex there. Homeowners have been unable to access their outdoor space with a dangerous unstable retaining wall above the open sinkhole complete with barricades. 2 and 1/2 years later this has not been fixed. In addition, the 191 unit Breakwater Village senior retirement condominium complex has sustained **known cracked retainer walls which separates their large building from the ROW and concerns about future foundational damage due to the seismic vibrations caused by the one daily passing freight train round trip just a few feet away.(1) 420-2

DEIR Claim:
3.8-3.12 Subsidence and Settlement

According to the City of Redondo Beach Geological Hazards section of the General Plan (1993f), no areas were identified as being prone to subsidence.

The Draft EIR references expansive soils as risk.

DEIR Description of Significant Risk Potential:

3.8-2.4 Significance Thresholds

Based upon the thresholds of significance contained in Appendix G of the CEQA Guidelines, implementation of the Proposed Project would result in a significant impact if the Proposed Project would result in any of the following: 420-3

d. Be located on expansive soil as defined in Section 1803.5.3 of the California Building Code (CBC, 2019) **creating substantial risks to life or property**.

Our Issue With this:

Expansive soils are **those with excessive swelling clay minerals**. The presence of expansive clay minerals in soils can cause excessive swelling when the soil comes into contact with water and also shrinkage when it undergoes drying. Cited here: Expansive Soil - an overview | ScienceDirect Topics

Expansive Soil - an overview | ScienceDirect Topics

The DEIR says if when they arrive to build location and test the ground they find expansive soils that they would simply DIG OUT that soil and replace it which would bring the impacts to a “less than significant” designation. However, the existing housing developments are already sustaining damages from simple routine pipeline maintenance digging, so digging out more soil in that area will very likely cause more damage to the surrounding buildings. 420-4

Furthermore, the entire North Redondo community is built on the same soil which contains clay. Three units at Ruxton Place are already blockaded from their front outdoor space and one homeowner and their family can’t even enter through the front door and are forced to use the garage for the past 2.5 years since attempts at filling the sinkhole beyond and to 30' deep just kept uncovering more loose dirt leaving the residents with dangerous conditions. Two complexes up the street there is foundational damage and cracked retainer walls at the Breakwater Village senior housing.

If they attempt to build on this land south of Artesia in the ROW it is not hard to draw the conclusion that there will very likely be further building damages to the townhome, senior condominiums and single family homes that share property lines with the ROW. If this were to occur, this could result in HUNDREDS of displacements, **including retired seniors** if these housing developments ended up being condemned as damaged beyond repair. 420-5

You will find pictures below documenting the sinkhole.

Please take this all to heart per the County of Los Angeles General Plan – Chapter 12 Safety Element (County of Los Angeles 2015b; 2021) as referenced on page 3 of the Geology and Soils chapter.

Thank you for your consideration on this matter. 420-6

Subject: DEIR Community Response Series from Right of Say/Redondo Beach Quality of Life Installment #5

Dear Metro and Metro Board Members,

I support the Right of Say/Redondo Beach group to not build the metro extension on the ROW and share these concerns with follow Redondo Beach Residents, please consider updating the DEIR report to state that the extension option to go down the ROW will highly impact vibration levels and negatively impact quality of life on those near the project, if this is not incorporated, please reply back to reasons why this was not incorporated. Please read the below email on impact to noise and highly consider this in your decision making. 421-1

DEIR Community Response Series from Right of Say/Redondo Beach Quality of Life Installment #5

After having a chance to review the Draft Environmental Impact Report, please consider the following as our fifth DEIR group response for the record. We are responding in joint installments submitted by group members. This installment is regarding Vibration.

When the freight train passes by on its once per day round trip, the several liquid petroleum tankers are full of jet fuel on the trip north, get emptied at their destination and returns headed south after dropping the fuel off. The jet fuel is highly flammable, and so would be the emptied tankers. 421-2

The DEIR states the "proposed project", both ROW alignments, would require shifting the freight to the west bringing it 7 - 25 feet closer to residential properties on the west side of the ROW. What are the safety protocols to guarantee no more structural damage will occur to our homes with the added wear and tear of 200 - 300 new commuter trains over 20 hours per day? 421-3

There is very significant seismic vibration as the train passes daily. Glasses, dishes, bottles, shake and move toward the edge of the shelves. They have to be moved back. Walls shake both indoor and outdoor showing cracks from wear and tear, artwork moves and either falls or needs adjusting. A heated chemical bath in a crock pot rattles vigorously. See video which clearly demonstrates this happening, link here: https://youtu.be/OtvWR7xzcYM 421-4

The DEIR states:
3.6-4.1.1 Construction Impacts
Significant and Unavoidable Impact. The Proposed Project would be located in a fully built-out urban environment and construction activities would occur in close proximity to sensitive land uses, including residences, parks, religious uses, and schools throughout the corridor, and may occur during daytime or nighttime hours.
Construction of the Proposed Project would take place over the course of approximately five years.It is anticipated that several construction phases would occur simultaneously along the Proposed Project alignment, accommodating activities requiring lengthy construction times such as utility relocation.

Construction of the Proposed Project would take place over the course of approximately five years.

VdB in vibration definition as taken from MetroCouncil.org:

*Level: Vibration is expressed in **vibration decibels** (VdB). The level of vibration represents how much the ground is moving. The threshold of human perception to LRT and freight rail vibration is approximately 65 VdB and annoyance begins to occur for frequent events at vibration levels over 70 VdB.*

421-5

According to well documented studies, we have known geology issues of loose dirt, sand, silt and sandy clay which raises concerns that vibration from the proposed construction is highly risky to surrounding buildings. More significant seismic vibration activity coupled with longevity of construction, then subsequent frequency of operations activity 20 hours per day will most certainly be unbearable to residents and puts the infrastructure of our homes at risk.
Table 3.6-12 demonstrating the higher than predicted vibration levels that are well above the defined level of over 70. This plus 20 hours per day light rail every 5 - 12 minutes cannot be allowed.

Table 3.6-12 Measured Train Pass-by Vibration Levels at 50 feet

Date	Time	Location	Train Consist	Ground Type	Train Speed (mph)	Measured Level (VdB)	Predicted Level (VdB)	Level Difference	Comment
11/18/20	11:37 AM	Condon Ave	2+40	Flat	20	75.9	76.7	0.8	Good Agreement
11/18/20	3:04 PM	El Nido Park	2+12	Berm	20	89.0	76.7	-12.3	Higher than predicted
11/19/20	12:45 PM	El Nido Park	2+17	Berm	20	91.5	76.7	-14.8	Higher than predicted
11/1/20	2:55 PM	Condon Ave	2+8	Flat	21	76.5	77.1	0.6	Good Agreement

Source: AECOM, 2020

421-6

There is confusion in the DEIR about "inconsistent (vibration) readings" at El Nido Park. That happened because the earlier northbound tankers are full of liquid petroleum (flammable), then later on the trip back south the tankers have been emptied so the weight difference would cause different levels of vibration.

421-7

It's stunning to us that there isn't even a question about this risk. The threat it poses can't be proven. Metro would be rolling the dice at our communities' peril. The only real mitigation is to build the elevated profile on Hawthorne Blvd.

Too much humanity is at stake. Please take this to heart and decide accordingly. Thank you for your attention to this matter.

Respectfully,

Redondo Beach and Lawndale members of Right of Say/RBQOL

Michael Sullivan (Member of Right of Say/Redondo Beach)
Redondo Beach Resident

Submission 422

To: GreenlineExtension
Subject: please recommend the 'no rail' option to the Metro board

Hello,

I read in last week's Metro train ridership report that ridership on the Los Angeles Metro rail system is half of where it was precovid. I can't see why Metro continues to build and expand commuter train lines when the riders are not there. Case in point is the C line extension to the Torrance bus depot next door to the Torrance refinery for $2-3 billion. 422-1

Don't see waiting for a bus or train next to a refinery belching toxic fumes as a good way to start or end a day! The Torrance bust depot is desolate and empty at night and please consider the higher possiblity for crime/ physical safety issues for any riders getting off a later train and need to walk or ride a bicycle to get to their destination. Seems like the funding could be better used for Metro rail projects that actually go to a destination such as a rail extension to SoFi stadium. 422-2

please recommend the 'no rail' option for the upcoming vote on the C Line extension to Torrance. This proposal to add rail to the C Line to Torrance will not improve Metro's ridership metrics nor will it serve the South Bay communities. 422-3

Michael Kim

Well said!

On Wed, Mar 22, 2023 at 9:51 PM RightOfSay/RBQoL <info@rightofsay.com> wrote:

> Dear Metro and Metro Board of Directors,
>
> After having a chance to review the Draft Environmental Impact Report, please consider the following as our seventh DEIR group response for the record. We are responding in joint installments submitted by group members to ensure each concern is highlighted and expressed so it represents the breadth of our combined communities. We previously highlighted Lawndale, this installment is regarding the Noise factor in the most overlooked and highly impacted ROW West community in Redondo Beach.
>
> As residents and homeowners along the WEST side of the ROW. The following is one of our many concerns. A large number of us are retired seniors in very close proximity right next to the corridor and others have noise sensitivities. Some have young children in school and some kids have spectrum issues so this will be disruptive to sleep and extremely problematic for all of us. 423-1
>
> Please take note of the city noise ordinance for residential zoning in the community, which in Redondo Beach is to 45 decibels after 10pm and 50 after 7am as shown in the city ordinance chart below. 423-2

4-24.301 Maximum permissible sound levels by land use categorie

The noise standards for the various categories of land use districts i the higher of either the presumed or actual measured ambient and shal such property within a designated category as follows:

Receiving Land Use District Category	Time Period	Presumed Ambient Level (dBA)
Low Density	10:00 p.m. to 7:00 a.m.	45
Residential R-1-A, R-1, R-2, P-D-R,	7:00 a.m. to 10:00 p.m.	50

The Draft Environmental Impact Report, also in presentations and direct conversations with Metro team members and contracted engineers, do not and have not adequately addressed the noise issues this project would present to us being only 12 - 25 feet from the freight track if it were relocated and shifted to the west. In fact, "noise mitigations" that have been proposed by everyone on the Metro team will only make matters worse for those of us on the west side of the corridor. 423-3

A sound wall built on the east side of the corridor, which has been confirmed over and over again as the mitigation for noise south of 182nd St, will obviously bounce the noise back at us on the west side. This makes no sense and nobody here can understand why this is even being proposed as a "mitigation" for us. Another hard to digest proposed noise mitigation was air conditioners. We are a coastal climate with ocean breeze, not to mention that added cost in energy bills would be impossible to manage. Both suggestions are not only counterintuitive, they just don't make any sense. 423-4

Furthermore, may we point out in the DEIR, the monitoring table 3.6-11 fails to include ANY residential neighborhoods on the west side of the ROW south of Artesia Blvd in Redondo Beach who share property lines. This would and should include; south of Artesia Blvd on Ruxton Ave, south of 182nd St on Firmona Ave, Fisk Ct, Fisk Ln and Spreckles Ct. It is unacceptable that the neighborhoods in closest proximity sharing property lines with the ROW are completely disregarded in this study. Metro needs to do better. 423-5

Table 3.6-11. Noise Monitoring Locations and Measured Ambient Noise Levels

Noise Site	Monitoring Type	Location	Ambient Noise Level (dBA)	
			Hourly (L_{eq})	24-hour (L_{dn})

27	Long-Term	Residence (607 Pine Dr., Torrance)	-	68.6

Source: TAHA, 2022

"A general rule of thumb is that a 10 decibel change in the sound level is perceived by humans to be a doubling of the loudness"—Hugh Saurenman, ATS Consulting,
"Any system that has a steel wheel and a steel rail will have rolling noise"—Briony Croft, Acoustics, SLR Consulting (Canada) Ltd.

"12 light rail transit trains traveling 40 miles per hour generate a noise level of 65 dBA Leq at 50 feet. These same light rail transit trains generate a noise level of 57 dBA Leq at 20 miles per hour at 50 feet (FTA 2006)."

Another suggested "mitigation" of designating a quiet zone would merely stop the usage of bells at an at grade crossing, it will not change the level of decibels emitted from a passing light rail. Due to the presence and need of the McCormick ambulance facility to have free life saving access one block east of the 182nd St crossing, there cannot be an at grade crossing therefore the point is moot anyway. 423-6

According to the Noise Impact Criteria 3.6-3 for Redondo Beach's nighttime R1 zoning for residential would suffer "moderate to severe impacts" according to the table below: 423-7

Table 3.6-3. Noise Impact Criteria for Transit Operations

Existing Noise Exposure L_{eq} or L_{dn} (dBA)	Project Noise Impact Exposure, L_{eq} (h) or L_{dn} (dBA)					
	Category 1 or 2 Sites			Category 3 Sites

57	<57	57-62	>62	<62	62-67	67
58	<57	57-62	>62	<62	62-67	67
59	<58	58-63	>63	<63	63-68	68
60	<58	58-63	>63	<63	63-68	68
61	<59	59-64	>64	<64	64-69	69
62	<59	59-64	>64	<64	64-69	69
63	<60	60-65	>65	<65	65-70	70
64	<61	61-65	>65	<66	66-70	70
65	<61	61-66	>66	<66	66-71	71
66	<62	62-67	>67	<67	67-72	72
67	<63	63-67	>67	<68	68-72	72
68	<63	63-68	>68	<68	68-73	73
69	<64	64-69	>69	<69	69-74	74

With all of the aforementioned points and concerns, the only realistic mitigation is to use the Hawthorne Blvd. Elevated alignment. If the funding for this is not possible, the next alternative should be High Frequency Buses. 423-8

Thank you for your consideration in this crucial matter.

Respectfully,
Right of Say/Redondo Beach Quality of Life Coalition

Subject: Metro C Line (Green) Extension to Torrance Project, Draft Environmental Impact Report, SCH #2021010269, Los Angeles County Metropolitan Transportation Authority, Los Angeles County

Dear Ms. Sheridan,

The California Department of Fish and Wildlife (CDFW) has reviewed the Draft Environmental Impact Report (DEIR) from the Los Angeles County Metropolitan Transportation Authority (Metro) for the Metro C Line (Green) Extension to Torrance Project (Project). CDFW appreciates the opportunity to provide comments regarding aspects of the Project that could affect fish and wildlife resources and be subject to CDFW's regulatory authority under the Fish and Game Code.

CDFW's Role

CDFW is California's Trustee Agency for fish and wildlife resources and holds those resources in trust by statute for all the people of the State [Fish & G. Code, §§ 711.7, subdivision (a) & 1802; Pub. Resources Code, § 21070; California Environmental Quality Act (CEQA) Guidelines, § 15386, subdivision (a)]. CDFW, in its trustee capacity, has jurisdiction over the conservation, protection, and management of fish, wildlife, native plants, and habitat necessary for biologically sustainable populations of those species (Id., § 1802). Similarly, for purposes of CEQA, CDFW is charged by law to provide, as available, biological expertise during public agency environmental review efforts, focusing specifically on projects and related activities that have the potential to adversely affect State fish and wildlife resources.

CDFW is also submitting comments as a Responsible Agency under CEQA (Pub. Resources Code, § 21069; CEQA Guidelines, § 15381). CDFW expects that it may need to exercise regulatory authority as provided by the Fish and Game Code, including lake and streambed alteration regulatory authority (Fish & G. Code, § 1600 *et seq*.). Likewise, to the extent implementation of the Project as proposed may result in "take", as defined by State law, of any species protected under the California Endangered Species Act (CESA) (Fish & G. Code, § 2050 *et seq.*), or CESA-listed rare plant pursuant to the Native Plant Protection Act (NPPA; Fish & G. Code, §1900 *et seq.*), CDFW recommends the Project Applicant obtain appropriate authorization under the Fish and Game Code.

424-1

DocuSign Envelope ID: 10A880E5-CDF6-46FB-A7B7-AAB4394A8DDB

Project Description and Summary

Objective: The Project proposes to extend Metro C (Green) Line approximately 4.5 miles from the City of Redondo Beach to the City of Torrance. The extension would start from the existing Redondo Beach (Marine) Metro C Line Station and travel southeast to the City of Torrance. Two new stations would be constructed: Redondo Beach Transit Center Station and Torrance Transit Center Station. Both stations would be adjacent to recently built bus transit centers in both cities. The extended 4.5-mile two track line would consist of a combination of elevated and at-grade segments. Light rail tracks would start on an elevated structure and run above street level for approximately 1.1 miles. Then, light rail tracks would come down to street level for approximately 3.5 miles with two at-grade crossings at 170th and 182nd streets in the City of Redondo Beach. To support light rail vehicle operations, six traction power substations would be constructed. Access to each substation would be provided via maintenance access roads. Access roads would be shielded with landscaping where possible. The Project would not include new or modified maintenance facilities. Light rail vehicles would be maintained and stored at existing Metro facilities.

Burlington Northern Santa Fe, LLC (Burlington) operates an existing freight track between Redondo Beach (Marine) Station and 190th Street within the Metro right-of-way (ROW). The Project would relocate the freight track in some areas. The freight track would remain at-grade throughout the length of the corridor. South of 190th Street, Burlington and Metro share ownership of the freight corridor. Metro owns approximately 15 feet in width and would acquire or lease additional ROW from Burlington to accommodate the Project between 190th Street and the Torrance Transit Center Station.

The Project would include multi-use paths along Metro ROW where there is space to create recreational space for walking and cycling. Multi-use paths would be located between 159th Street and Condon Avenue, and between Grant Avenue and 182nd Street.

Location: The Project would follow the existing Metro ROW. The Project area forms roughly a one-mile buffer around the Metro ROW. The Project area would include portions of the cities of Hawthorne, Lawndale, Redondo Beach, and Torrance. The Project area includes single family and multi-family residential areas, industrial and institutional uses, as well as commercial and recreational areas. The Project area also includes major activity centers such as the South Bay Galleria, and high-capacity bus transit centers, such as the Redondo Beach Transit Center and Torrance Transit Center.

Comments and Recommendations

On March 20, 2023, CDFW met with the City of Torrance to discuss an existing Southern Tarplant Open Space Preserve (Preserve) located adjacent to the Metro ROW. Based on our meeting with the City of Torrance and review of the Project's CEQA document, CDFW offers the comments and recommendations below to assist Metro in adequately identifying, avoiding, and/or mitigating the Project's significant, or potentially significant, direct, and indirect impacts on fish and wildlife (biological) resources. CDFW recommends the measures or revisions below be included in a science-based monitoring program that contains adaptive management strategies as part of the Project's CEQA mitigation, monitoring, and reporting program (Pub. Resources Code, § 21081.6; CEQA Guidelines, § 15097).

DocuSign Envelope ID: 10A880E5-CDF6-46FB-A7B7-AAB4394A8DDB

Specific Comments

Comment #1: Impacts on Southern Tarplant

Issue: The Project may have a significant impact on southern tarplant (*Centromadia parryi* ssp. *australis*) protected within an established two-acre Preserve. Southern tarplant is a rare plant with a California Rare Plant Rank (CRPR) of 1B.1.

Specific impacts: The Project could result in population decline of southern tarplant and/or local extirpation of a remnant population of southern tarplant within the City of Torrance. In addition, the Project could impact a Preserve created a mitigation for a separate project.

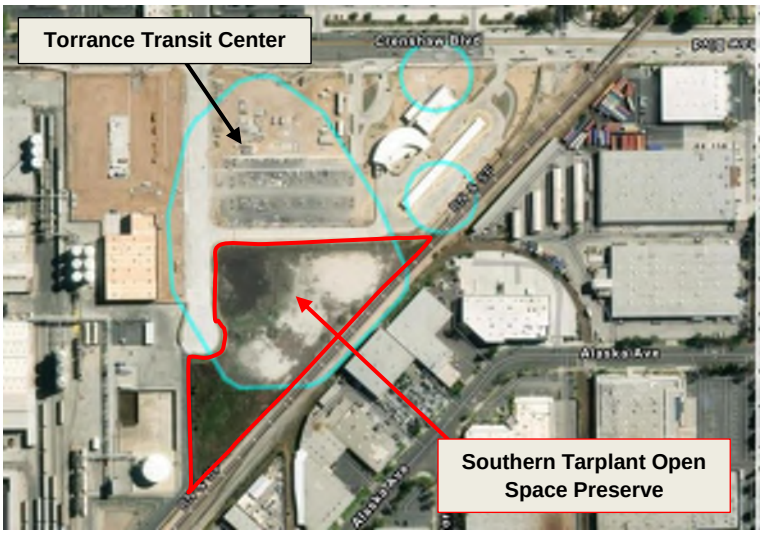
Why impacts would occur: The DEIR states that the existing two-acre Preserve near the Torrance Transit Center was established to offset impacts resulting from the 2014 Torrance Transit Center Project[1] (Figure 1). The DEIR states, "Construction of the Proposed Project would not disturb the [Southern Tarplant] Open Space Preserve that has been established adjacent to the Torrance TC [Transit Center], as this area has been designated as a protected space by the City of Torrance." However, CDFW is concerned that the Project would temporarily and permanently disturb the Preserve and impact a rare plant species and habitat.

424-2

Figure 1. Southern Tarplant Open Space Preserve (illustrative purposes only). The Torrance Transit Center Project (SCH No. 2014121003) impacted southern tarplant populations (blue). Imagery and data from the California Natural Diversity Database (CDFW 2023a).

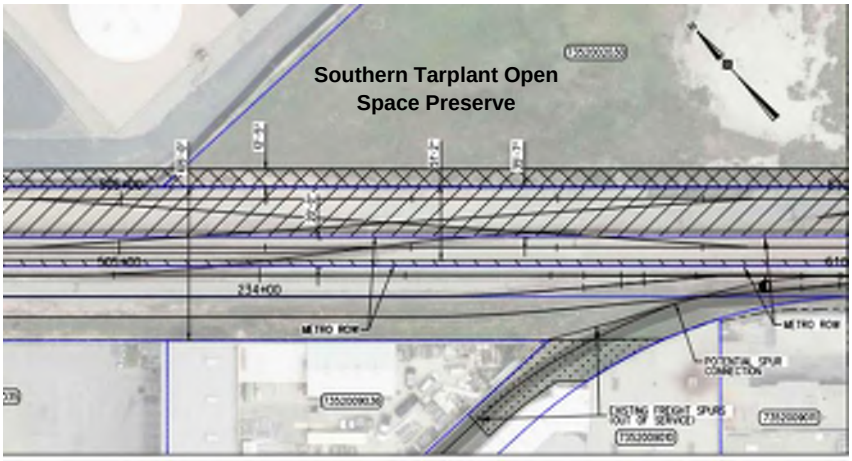
[1] Torrance Transit Park and Ride Regional Terminal (or Torrance Regional Transit Center project), SCH No. 2014121003, Mitigated Negative Declaration certified by the City of Torrance (Lead Agency) in 2014. Environmental documents available from: https://www.torranceca.gov/our-city/community-development/planning/transit-project-2014. According to the Mitigated Negative Declaration (MND), the Torrance Regional Transit Center project developed 6.95 acres of a 15-acre project site. Construction of the Torrance Regional Transit Center was expected to result in direct impacts to "the majority of the estimated 350 to 400 southern tarplant individuals on site." To offset these impacts, two acres was preserved for southern tarplant (Southern Tarplant Open Space Preserve). According to the MND, the two acre Southern Tarplant Open Space Preserve was supposed to be enhanced by establishing appropriate grades to promote seasonal ponding and seeding the area with southern tarplant collected prior to construction of the Torrance Regional Transit Center; designated as open space and placed within a protective easement for conservation purposes such as a restrictive covenant or conservation easement; and managed in perpetuity with long-term management funding provided by the City or successors.

DocuSign Envelope ID: 10A880E5-CDF6-46FB-A7B7-AAB4394A8DDB



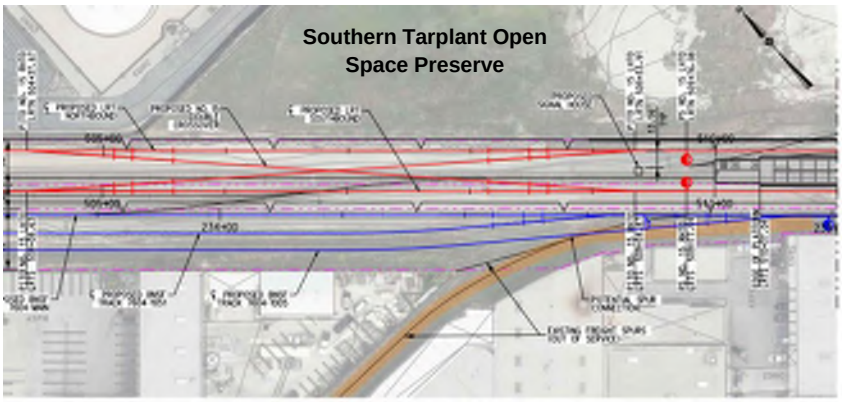
Per CDFW's meeting with the City of Torrance, the Project would need to encroach onto the Preserve by 12 to 20 feet. That could result in development and loss of between 15,000 to 20,000 square feet of the Preserve and loss of an unknown number of individual southern tarplant. In addition, drawing numbers RW-120 and T-120 in the Advanced Conceptual Engineering Drawings for the Project (Appendix 2-A) shows the Project and Metro ROW, but it is not entirely clear from the drawings if, where, and by how much the Project would encroach on to the Preserve (Figure 2). Finally, according to a Metro-produced video simulating the Project, the Metro C Line rendering at 10 minutes and seven seconds appears to show that the Preserve would be developed as part of "City of Torrance Future Development" (Metro Los Angeles 2023). Encroaching onto and/or developing the Preserve would impact southern tarplant and habitat.

Figure 2. Advanced Conceptual Engineering Drawings for the Project (Appendix 2-A), drawings RW-120 (top) and T-120 (bottom). "Southern Tarplant Open Space Preserve" label added by CDFW to identify location of the preserve. CDFW is concerned that the Project would encroach onto the two-acre preserve and impact southern plants through loss of individuals and habitat loss and degradation.



424-2
424-3
424-4
424-5

DocuSign Envelope ID: 10A880E5-CDF6-46FB-A7B7-AAB4394A8DDB



424-5

The Project could encroach onto the Preserve during construction. Page 3.7-26 in the DEIR states, “Potential direct impacts to the southern tarplant may include the loss of individual plants as a result of removal or crushing due to construction related activities (i.e., equipment or employees inadvertently working in an unauthorized area). Potential indirect impacts may include soil and contaminant runoff in the wet season, dust in the dry season during excavation, and the introduction of non-native/invasive species that have potential to degrade habitat and outcompete southern tarplant for critical resources.” Adding to this, CDFW is concerned that loss of individual plants may also result from burial from stockpiles and spoils. The Project could have permanent impacts on southern tarplant and habitat. Permanent loss of individual tarplant and habitat supporting tarplant could occur if the Project develops any portion of the Preserve.

The DEIR discloses that the Project would have a significant impact on southern tarplant only during construction, and states that impacts would be less than significant through implementation of Mitigation Measure BIO-1. Mitigation Measure BIO-1would require delineating construction work limits and installation of temporary fencing or markers in order to avoid and minimize impacts. Mitigation Measure BIO-1 addresses the Project’s temporary impact on southern tarplant during construction but does not address the Project’s potentially permanent impact.

Evidence impact would be significant: Southern tarplant has a CRPR of 1B.1. A CRPR of 1B.1 means that southern tarplant is a species that is rare, threatened, or endangered in the State. Plants with a CRPR of 1B are rare throughout their range with the majority of them endemic to California (CNPS 2023). Ranks also include a threat rank (0.1). A rank of 0.1 means that southern tarplant is seriously threatened in the State. Plants with a CRPR of 1B meets the definition of endangered, rare, or threated species under CEQA (CEQA Guidelines, § 15380).

424-6

Currently, there are only two populations of southern tarplant remaining within the City of Torrance (Calflora 2023, CDFW 2023). These populations are located at the Preserve and Madrona Marsh Preserve. Southern tarplant has continued to decline locally within the City of Torrance. For example, 350 to 400 plants were impacted as a result of the Torrance Regional Transit Center project (see Footnote 1). The Project’s temporary and permanent impacts on southern tarplant could contribute to decline of southern tarplant within the Preserve and City of Torrance. The Project’s impact on a rare species that only occurs in two isolated, remnant habitat fragments is significant. Loss of southern tarplant and habitat resulting from the Project has yet to be mitigated. Therefore, the Project continues to have a substantial adverse effect, either directly or through habitat modifications, on a species identified as rare by CDFW.

DocuSign Envelope ID: 10A880E5-CDF6-46FB-A7B7-AAB4394A8DDB

Recommended Potentially Feasible Mitigation Measure(s):

Recommendation #1: CDFW recommends Metro disclose the Project's permanent impact on southern tarplant in the Project's environmental document. The environmental document should disclose where and by how much the Project would encroach onto and/or develop the Southern Tarplant Open Space Preserve. Complete and good-faith disclosure should be provided before finalizing an environmental document for the Project. 424-7

Mitigation Measure #1: Metro should provide compensatory mitigation for the Project's impact on southern tarplant. Metro should offset the Project's impact to individual plants and habitat acres at no less than 3:1 for impacts to a CRPR 1B.1 species with only two extant populations within the City of Torrance. Metro should provide additional and higher compensatory mitigation to offset impacts to a CRPR 1B.1 species protected within a preserve that was established as mitigation for a separate project. Metro should acquire and preserve land in perpetuity for southern tarplant. Land should support southern tarplant or can be demonstrated to successfully support a self-sustaining population of southern tarplant. If feasible, Metro should identify land within the City of Torrance.

Mitigation Measure #2: Metro should coordinate with CDFW to review potential mitigation land and to ensure that mitigation land is suitable for southern tarplant prior to acquisition of mitigation land.

Mitigation Measure #3: Metro should protect replacement habitat in perpetuity under a conservation easement dedicated to a local land conservancy or other appropriate entity that has been approved to hold and manage mitigation lands pursuant to Assembly Bill 1094 (2012)[2]. Metro should record the conservation easement before commencement of any ground disturbing activities within 100 feet of the Southern Tarplant Open Space Preserve. 424-8

Mitigation Measure #4: Metro should provide an appropriate endowment for the long-term management of replacement habitat. Funding should be provided for long-term management activities that include but are not limited to the following: botanical surveys; vegetation assessments; non-native plant inspections; non-native plant removal; and reporting. A mitigation plan should be prepared and include measures to protect the targeted habitat values in perpetuity from direct and indirect negative impacts. Issues that should be addressed include but are not limited to the following: protection from any future development and zone changes; restrictions on access; proposed land dedications; control of illegal dumping; water pollution; and increased human intrusion.

Mitigation Measure #5: Metro should retain a qualified biologist to prepare a Southern Tarplant Translocation Plan that should include information including but not limited to the following: seed and plant material collection methods and best management practices; planting methods; non-native, invasive plant control; monitoring plan; and schedule of activities. Metro should collect southern tarplant seeds and/or plants from the impacted population for a minimum of two years 424-9

[2] Assembly Bill 1094 amended Government Code sections 65965-65968. Under Government Code section 65967(c), the lead agency must exercise due diligence in reviewing the qualifications of a governmental entity, special district, or nonprofit organization to effectively manage and steward land, water, or natural resources on mitigation lands it approves.

DocuSign Envelope ID: 10A880E5-CDF6-46FB-A7B7-AAB4394A8DDB

in order to maximize the amount of plant material collected from the impacted area. A Southern Tarplant Translocation Plan should be prepared and seed and/or plants should be collected for at least two years before commencement of any ground disturbing activities within 100 feet of the Southern Tarplant Open Space Preserve. 424-9

Additional Recommendations

Recommendation #2: CEQA requires that information developed in environmental impact reports and negative declarations be incorporated into a database (e.g., CNDDB) which may be used to make subsequent or supplemental environmental determinations [Pub. Resources Code, § 21003, subd. (e)]. Information on special status species should be submitted to the CNDDB by completing and submitting CNDDB Field Survey Forms (CDFW 2023b). Information on special status native plant populations and sensitive natural communities, the Combined Rapid Assessment and Relevé Form should be completed and submitted to CDFW's Vegetation Classification and Mapping Program (CDFW 2023c). 424-10

Recommendation #3: CDFW recommends Metro update the Project's proposed Biological Resources Mitigation Measures to include mitigation measures recommended in this letter. CDFW provides comments to assist Metro in developing mitigation measures that are specific, detailed (i.e., responsible party, timing, specific actions, location), and enforceable through permit conditions, agreements, or other legally-binding instruments [CEQA Guidelines, § 15126.4(a)(2)] in order for mitigation measures to be implemented successfully via a mitigation monitoring and/or reporting program (CEQA Guidelines, § 15097; Pub. Resources Code, § 21081.6). Metro is welcome to coordinate with CDFW to further review and refine the Project's mitigation measures. Per Public Resources Code section 21081.6(a)(1), CDFW has provided Metro with a summary of our suggested mitigation measures and recommendations in the form of an attached Draft Mitigation and Monitoring Reporting Plan (MMRP; Attachment A). 424-11

Filing Fees

The Project, as proposed, would have an impact on fish and/or wildlife, and assessment of filing fees is necessary. Fees are payable upon filing of the Notice of Determination and serve to help defray the cost of environmental review by CDFW. Payment of the fee is required for the underlying Project approval to be operative, vested, and final (Cal. Code Regs., tit. 14, § 753.5; Fish & G. Code, § 711.4; Pub. Resources Code, § 21089). 424-12

Conclusion

We appreciate the opportunity to comment on the Project to assist Metro in adequately analyzing and minimizing/mitigating impacts to biological resources. CDFW requests an opportunity to review and comment on any response that Metro has to our comments and to receive notification of any forthcoming hearing date(s) for the Project [CEQA Guidelines, § 15073(e)]. If you have any questions or comments regarding this letter, please contact Ruby Kwan-Davis, Senior Environmental Scientist, at (562) 619-2230 or by email at Ruby.Kwan-Davis@wildlife.ca.gov.

Attachment A: Draft Mitigation and Monitoring Reporting Plan

CDFW recommends the following language to be incorporated into the Project's environmental document.

Biological Resources (BIO)			
Mitigation Measure (MM) or Recommendation (REC)		**Timing**	**Responsible Party**
REC-1-Revise CEQA Document	Metro should disclose the Project's permanent impact on southern tarplant in the Project's environmental document. The environmental document should disclose where and by how much the Project would encroach onto and/or develop the Southern Tarplant Open Space Preserve. Complete and good-faith disclosure should be provided before finalizing an environmental document for the Project.	Prior to finalizing CEQA document	Los Angeles County Metropolitan Transportation Authority (Metro)
REC-2-Submitting Data for Sensitive and Special Status Species and Natural Communities	Information on special status species should be submitted to the CNDDB by completing and submitting CNDDB Field Survey Forms. Information on special status native plant populations and sensitive natural communities, the Combined Rapid Assessment and Relevé Form should be completed and submitted to CDFW's Vegetation Classification and Mapping Program.	Prior to finalizing CEQA document	Metro
REC-3-Mitigation and Monitoring Reporting Plan	Metro should condition the environmental document to include mitigation measures recommended in CDFW's comment letter.	Prior to finalizing CEQA document	Metro
MM-BIO-1-Impacts on Southern Tarplant	Metro shall provide compensatory mitigation for the Project's impact on southern tarplant. Metro shall offset the Project's impact to individual plants and habitat acres at no less than 3:1 for impacts to a CRPR 1B.1 species with only two extant populations within the City of Torrance. Metro shall provide additional and higher compensatory mitigation to offset impacts to a CRPR 1B.1	Before any ground disturbing activities within 100 feet of the Southern	Metro

Subject: Choose Hawthorne Blvd for the Metro C Line / Green Line Extension

Dear Metro Board Members,

I am writing to express my strong disapproval for routing the proposed C (Green) Line extension down the current Metro right of way through residential neighborhoods in Lawndale and Redondo Beach. I am urging you and the board to choose the Hawthorne Boulevard elevated option instead for the following reasons: 425-1

- NEIGHBORHOOD QUALITY OF LIFE: The ROW option would send 200-300 trains per day through quiet residential neighborhoods from 4 AM until Midnight. This will permanently affect the quality of life for more than 1,000 families in Lawndale and North Redondo Beach. Metro's own environmental impact report states increases in NOISE and VIBRATION will be "Significant" and "Unavoidable." This is in addition to 3-5 years of significant construction-related impacts to the neighborhood. 425-2

- SAFETY: In some spots, the ROW option will move an existing freight track to within 8-10 feet of fence lines. This track currently sees trains carrying highly flammable and dangerous petroleum products between two oil refineries. Even a minor derailment -- even at slow speeds -- would put petroleum tanker cars into homes and backyards. This freight line already has a history of previous derailments. 425-3

In addition, the ROW has multiple high-pressure petroleum pipelines buried in unstable soil. Construction of the C Line down the ROW presents a danger to those pipelines even if all safety protocols are followed. Even one slip-up could be catastrophic to the neighborhood. 425-4

- LOSS OF GREEN SPACE: The ROW -- for better or worse -- is utilized as much-needed green space in the City of Lawndale. Not only that, it offers a respite from urban sprawl with tall, mature trees and views of the San Gabriel Mountains in the distance. What is now a park-like community along the ROW will be replaced with giant walls that will bounce train noise and destroy views of the horizon. 425-5

- RIDERSHIP: Routing the Metro C Line down Hawthorne Boulevard would see more ridership than the ROW option as it passes by businesses and landmarks people want to visit. This includes a station in front of a planned mixed-use residential development at the South Bay Galleria. 425-6

I implore you to listen to the voices of the community when selecting which option to build. This is a 100-year project that will have PERMANENT impacts on a community already disadvantaged compared to neighboring South Bay cities. When considering costs, look at not only the financial costs, but the societal and environmental costs as well. Do the right thing, get it right for future generations and choose HAWTHORNE BOULEVARD for the Metro C Line Extension. 425-7

Thank you,

Subject: Green line extension

I'm very concerned about using the pow for the green line extension. The noise and disruption to the neighborhood would be completely intolerable. Please use Hawthorne Boulevard as has been approved as a possibility. Less disruptive to the neighborhood and better for business. Thank you for your kind consideration. 426-1

Subject: Green line extension

I am led to believe that if the green line extension uses p o w, they will need to use part of private property of individual homes in order to make two sets of tracks through the area. This is intolerable please vote for and use Hawthorne Boulevard with an elevated track. This has to be the best way. Thank you for your consideration. 427-1

Subject: Draft EIR Comment

Hello Metro.

As a commercial property owner in Redondo Beach, I am submitting my public comment on the DEIR for the C Line extension in **SUPPORT of the Metro ROW alignment elevated/street-level option.** 428-1

I believe this path costs Metro, and the taxpayers, less money and can be built faster than the other choices. Putting this line in service as early as possible means more people will be access to network of Metro options, lowers our GHG emissions that much sooner, and gets people in the community out our vehicles. 428-2

Thank you.

Wally Marks

Subject:	C Line (Green) Extension to Torrance
Date:	Sunday, March 5, 2023 12:41:19 PM

Dear Committee Members,
While consideration and review is still in process for this extension, please know that the residents and occupants of the neighborhood in the where the green line is proposed and particularly where it would go through the neighborhood of Franklin Park are of the utmost concern about 192 trains coming practically throught their backyards, creating loud, industrial noises and vibrations, and large trains banging above the residents' and childrens' heads. These photos show in the green space behind these homes on Firmona where the tracks run right up above families' yards. Please kindly consider the Hawthorne option. This would still provide a viable means of efficient travel to Torrance for those who need it.
Thank you.

429-1

429-2

Sincerely,
Lillian Katzenmeyer

Subject:
Comments on the Draft Environmental Impact Review (DEIR) for the C-Line Extension to Torrance Project

Ms. Sheridan,

As a citizen of Redondo Beach and LA County, I have reviewed portions of the DEIR document. I offer the following comments for inclusion in the public record and for consideration by Metro:

The vibration maps appendix (CLGET DEIR 3.06-C Vibration Detail Maps.pdf), Tables 3.6-C7 to C21, indicate Light Rail (LRT) operations may have adverse vibration impacts on over 250 private homes adjacent to the right of way in Lawndale and Redondo Beach. This is an unacceptable outcome for my neighbors. 430-1

The Hawthorne Blvd option will avoid the operations vibration impacts for most homeowners. However, the elevated roadbed structure down the middle of Hawthorne Blvd will negatively impact businesses along Hawthorne and change the ambience of that neighborhood. 430-2

Projected costs for the C-Line LRT Extension will undoubtedly go up as Metro strives to mitigate the impacts. Metro's own projections indicate the expected cost is now over one billion dollars. 430-3

I read with interest Table ES-3 and paragraph ES.5-2. That table shows that the High Frequency Bus (HFB) alternative is the environmentally superior alternative. However, the draft report dismisses the HFB alternative because it does not meet all project objectives. 430-4

I offer another alternative: Do not extended the C-Line LRT. Instead, build a dedicated two-lane busway along the right of way next to the existing railroad tracks. A dedicated busway will enable fast efficient connections avoiding traffic delays incurred by on-street busses. Run battery-electric busses along the busway. Battery electric busses will have no noise or vibration impact to the surrounding homes. Metro's busway planning documents show that a 2-lane busway only needs 26 feet. This is less than the 31 feet needed by the 2 track LRT as shown in Figure ES-5. In addition, a busway will not require the additional "maintenance access" right of way needed for LRT maintenance. The busway will not require the electrical substations needed by the LRT. The busway will also integrate well with the Redondo Beach and Torrance transit centers. Even assuming an expensive implementation of the busway of $100M per mile, with dedicated viaducts (or trenches) across the major intersecting streets, a busway would be much less expensive than the LRT. Finally, a busway will be much easier to extend into downtown Torrance and beyond. 430-5

In summary, I encourage Metro to consider a busway alternative for the C-Line extension. It is the best alternative. 430-6

Thank-you for Metro's efforts on behalf of the citizens of LA County.

Mike Jamgochian
Redondo Beach

Submission 431

From: Daniel Kozhemyako
To: GreenlineExtension
Subject: Metro Line concerns
Date: Monday, March 6, 2023 9:00:45 PM

Dear Metro Team,

I am writing to express my concerns regarding the proposed construction of a new subway line next to my house. While I appreciate the benefits that such a project can bring to the community, I am worried about the potential negative impacts on my quality of life, as well as on the safety of the children who attend the nearby school. 431-1

Firstly, I am concerned about the noise and pollution that the construction and operation of the subway line will generate. I live in a quiet neighborhood and the sound and air pollution from the construction and operation of the subway line could have a significant impact on my daily life. 431-2

Secondly, I am concerned about the vibrations that may be generated during the construction and operation of the subway line. These vibrations could damage my property and disrupt my daily routine. 431-3

Additionally, I am concerned about the safety implications of the construction. The back street that connects to my house is currently the only way to access my property without making a U-turn on a busy street. If this street is closed during construction, it could pose a safety risk for me and my family. 431-4

Furthermore, I am deeply concerned about the safety of the children who attend the nearby school. The construction and operation of the subway line will require the installation of tracks and other infrastructure that could be a hazard for the children as they cross the railway tracks to get to school every day. 431-5

I appreciate the efforts that the Metro team is making to ensure that this project is carried out with minimal disruption to the community. However, I urge you to take my concerns into consideration and to take steps to mitigate the negative impacts that the construction and operation of the subway line may have on my quality of life and on the safety of the nearby school children. 431-6

Thank you for your attention to this matter.

Sincerely,

Daniil Kozhemyako

Subject: DEIR Comments on Noise, Section 3.6-4.1 (OSB Q. No 3A)
Date: Monday, March 6, 2023 1:05:02 AM

Dear Metro:

On Saturday morning, Feb 25, during the second round of comments in the hearing in Lawndale, I made comments about problems with your discussion of noise effects in the DEIR. In re-examining the issue, I subsequently discovered **over 200 errors** in the noise data in your Table 3.6-16. in the DEIR regarding your ""Proposed Project." This email is solely about correcting the errors. It is not an endorsement of your methodology. (Fixing the errors could also necessitate changing your discussion of the table.) 432-1

(I intend to send a second email regarding the analysis. That will be labeled OSB Q. No. 3B)

Problem: Noise table for the ROW Proposed Project Options: Table 3.6-16; pages 494-501 of the DEIR.

a) **All the entries in the "Mitigated Freight and LRT" column are incorrect;** see extract from table below. (Since this table has more than 200 rows, this means more than 200 errors.) 432-2

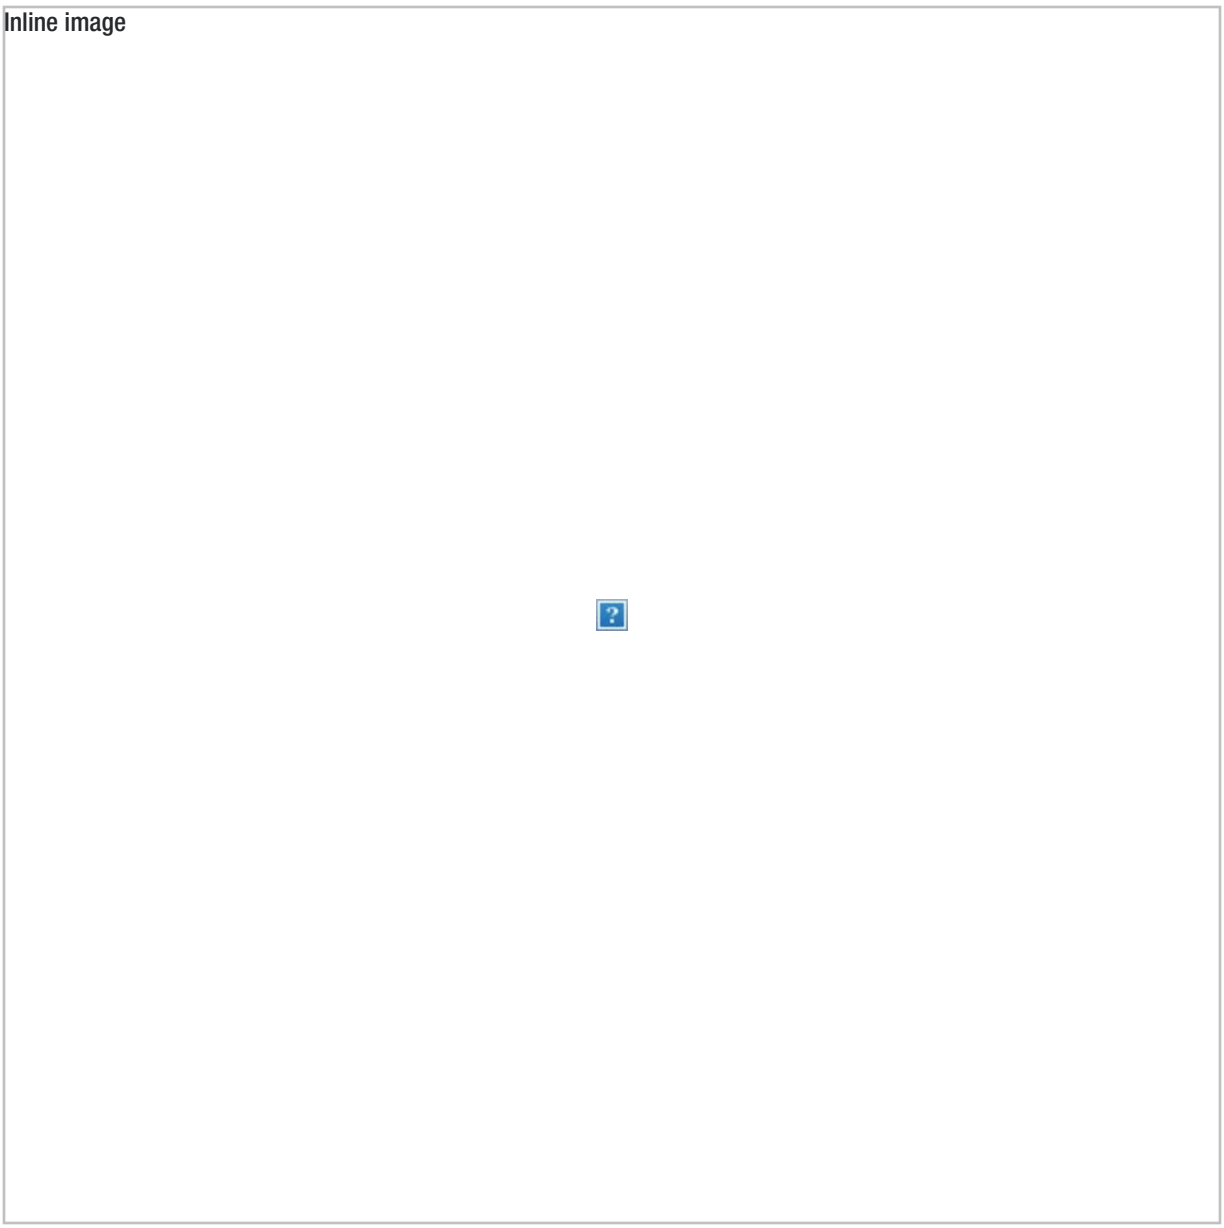
b) The precision in the "existing" column has accuracy to the first decimal point in the Appendix 3.06-B. Rounding to ".0" in this table is misleading. 432-3

From: Table 3.6-16. Proposed Project – Combined Light Rail and Freight Relocation Mitigated Noise Impacts

Submission 432

Inline image

Inline image



1.The impact threshold is compared to (unmitigated freight and LRT combined) and (mitigated freight and LRT combined) noise level to determine impact after mitigation.

Discussion.

You discuss the Noise Effects in Section 3.6-4.1 of the DEIR. You state in the last column of the above table that the impact at the designated cluster (clusters are defined in Figures 3.6-21 through 3.6-24) is "less than significant with mitigation" if the mitigated noise is LESS than the impact threshold, and the unmitigated noise is GREATER than the impact threshold."

For cluster D28, the unmitigated noise is 60 dB, and the mitigated noise is 47 dB. Since the **threshold is 56** dB, this meets the criteria of "less than significant with mitigation."

For Cluster D29, the unmitigated noise is a 69 dB, and the mitigated noise is 55 dB. Since the **threshold is 59** dB, this also **apparently** meets the criteria of "less than significant with mitigation." Yet, your table says "Significant and unavoidable."

For Cluster D32 the unmitigated noise is also 69 dB, and the mitigated noise is 55 dB. Since the **threshold is 59** dB, this also **apparently** meets the criteria of "less than significant with mitigation." Yet, your table says "Significant and unavoidable." 432-5

Curiously, Cluster D35 has exactly the same measurements as cluster D32, and this time, you do say "less than significant with mitigation" 432-6

So, what is going on here? Clearly, there are problems with the table. 432-7

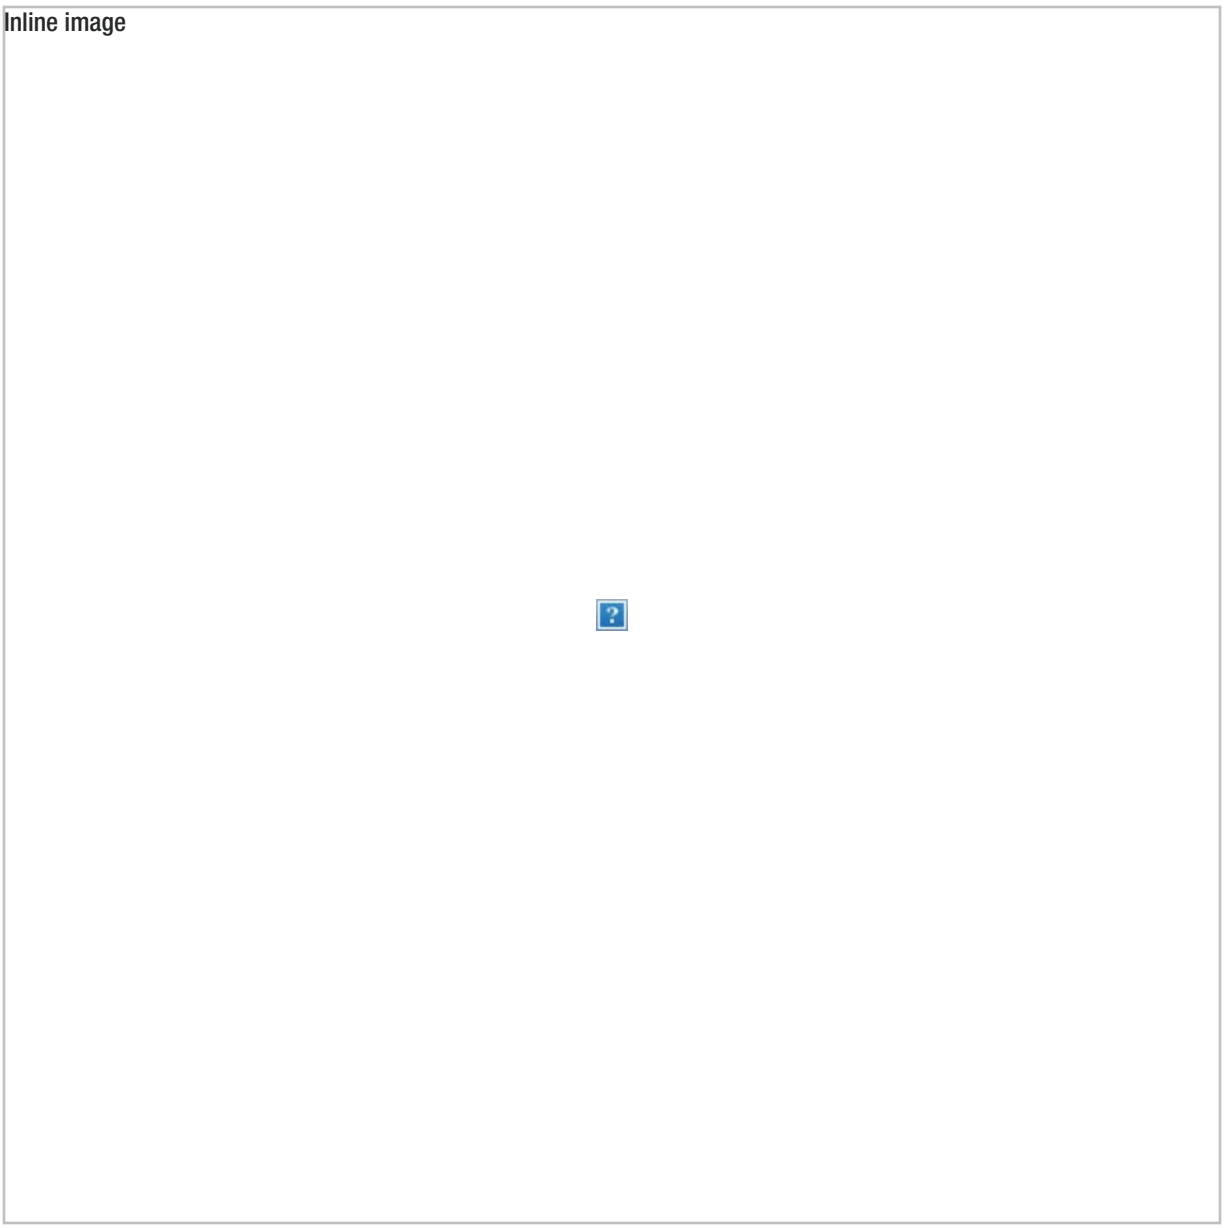
To examine this confusing issue, I went to the Appendix 3.06-B.
I examined the back-up table to these measures in Appendix 3.06-B: *Table 5. Proposed Project Mitigated Combined Freight Track Relocation and Light Rail Noise with Quiet Zone, Bell Shroud, and Gate-DownBell-Stop*

Table 5. Proposed Project Mitigated Combined Freight Track Relocation and Light Rail Noise with Quiet Zone, Bell Shroud, and Gate-DownBell-Stop (This is from the Appendix 3.06-B, page 36 out of 107)

Submission 432

Inline image

Inline image



At least here, the conclusions appear to make sense, with the impact being consistent with the mitigated noise being compared to the threshold, and being greater than the threshold to be "significant:" (See D29, for example: 60 is greater than the threshold 59; therefore there is a "significant and unavoidable" impact.)

I examined each data column in the Appendix, and compared with Section 3.6, in the main body of the DEIR.

a) The **impact thresholds match** EXACTLY with the DEIR Table (3.6-16).
b) The **mitigated numbers do not match up AT ALL** with the previous table. (Example: .In the Appendix Table 5, you have **48** in the mitigated column for D 28; in the previous table from Section 3.6 you have 47. For D29, you have **60** for the mitigated in the Appendix Table 5 (exceeding threshold) and you have **55** in the previous table above.
c) The **unmitigated columns** DO match up between the Appendix Table 5, and that in Table 3.6-16,
d) The existing measurements DO NOT MATCH AT ALL. (Perhaps they were rounded in the Table 3.6-16 However, it is not good engineering practice to round to an integer, and then keep the decimal point, and add a 0. That implies an accuracy

432-8
432-9
432-10
432-11

that you do not have.)
(Addendum question: Are all your other data entries rounded to ".0" as well? Which should be rounded, and which **should not be rounded?**

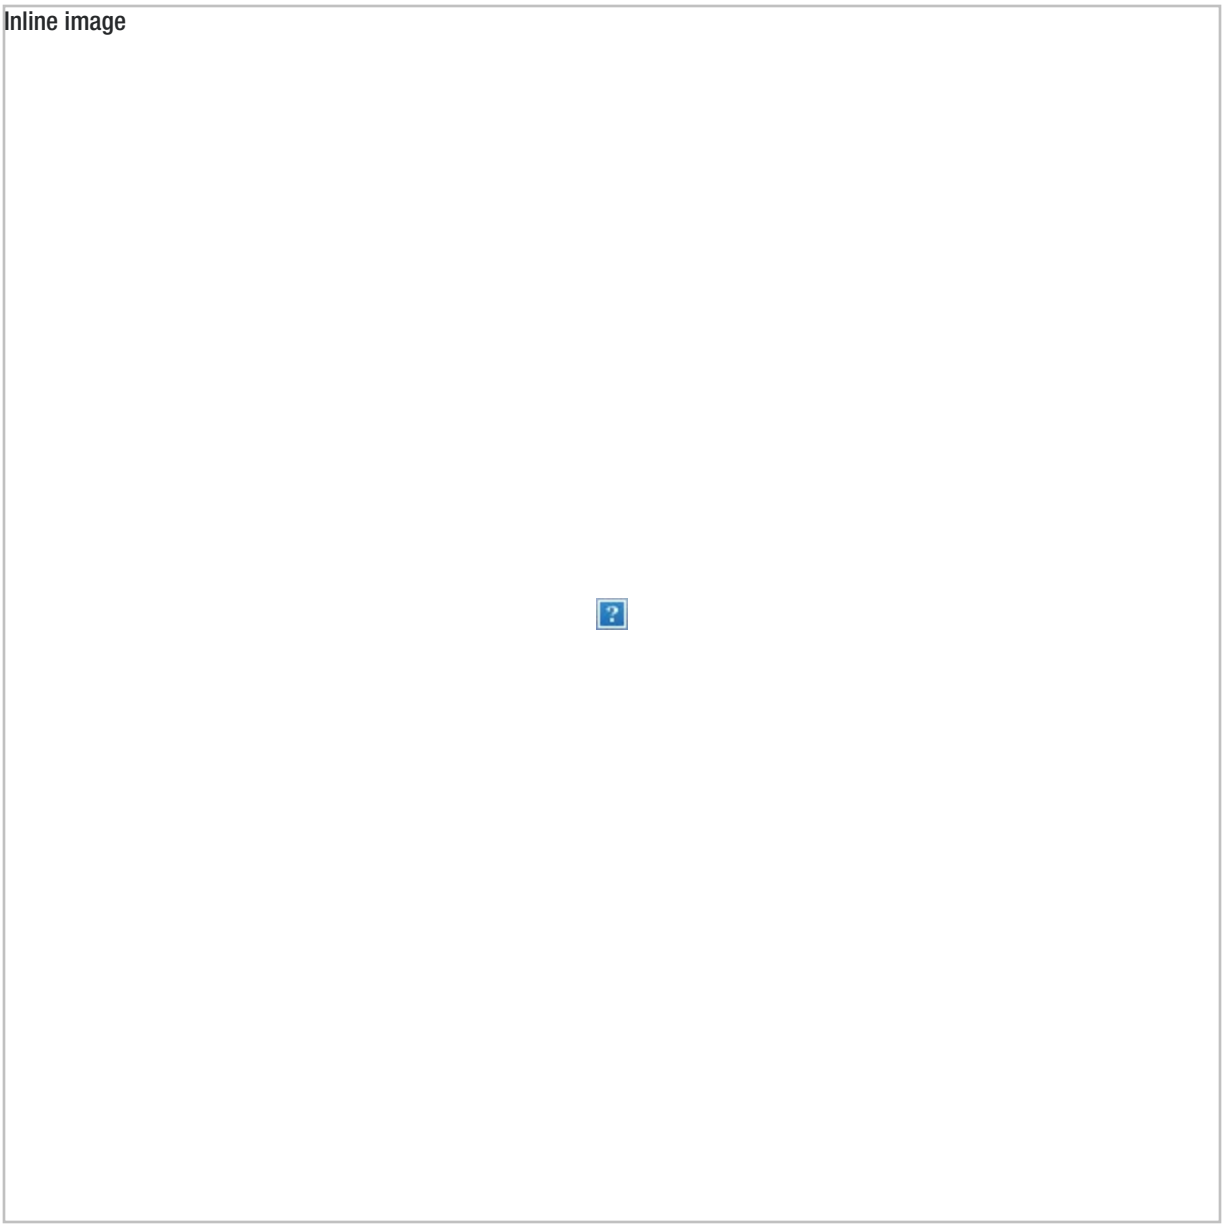
432-11

To see whether these errors also occurred in the "Trench option "data, I discovered that the existing measurements had been rounded in the main DEIR, as they were in the "Proposed Project" (They should not have been), but the other errors did not occur. **(In other words, the "Trench option" tables basically matched,)**

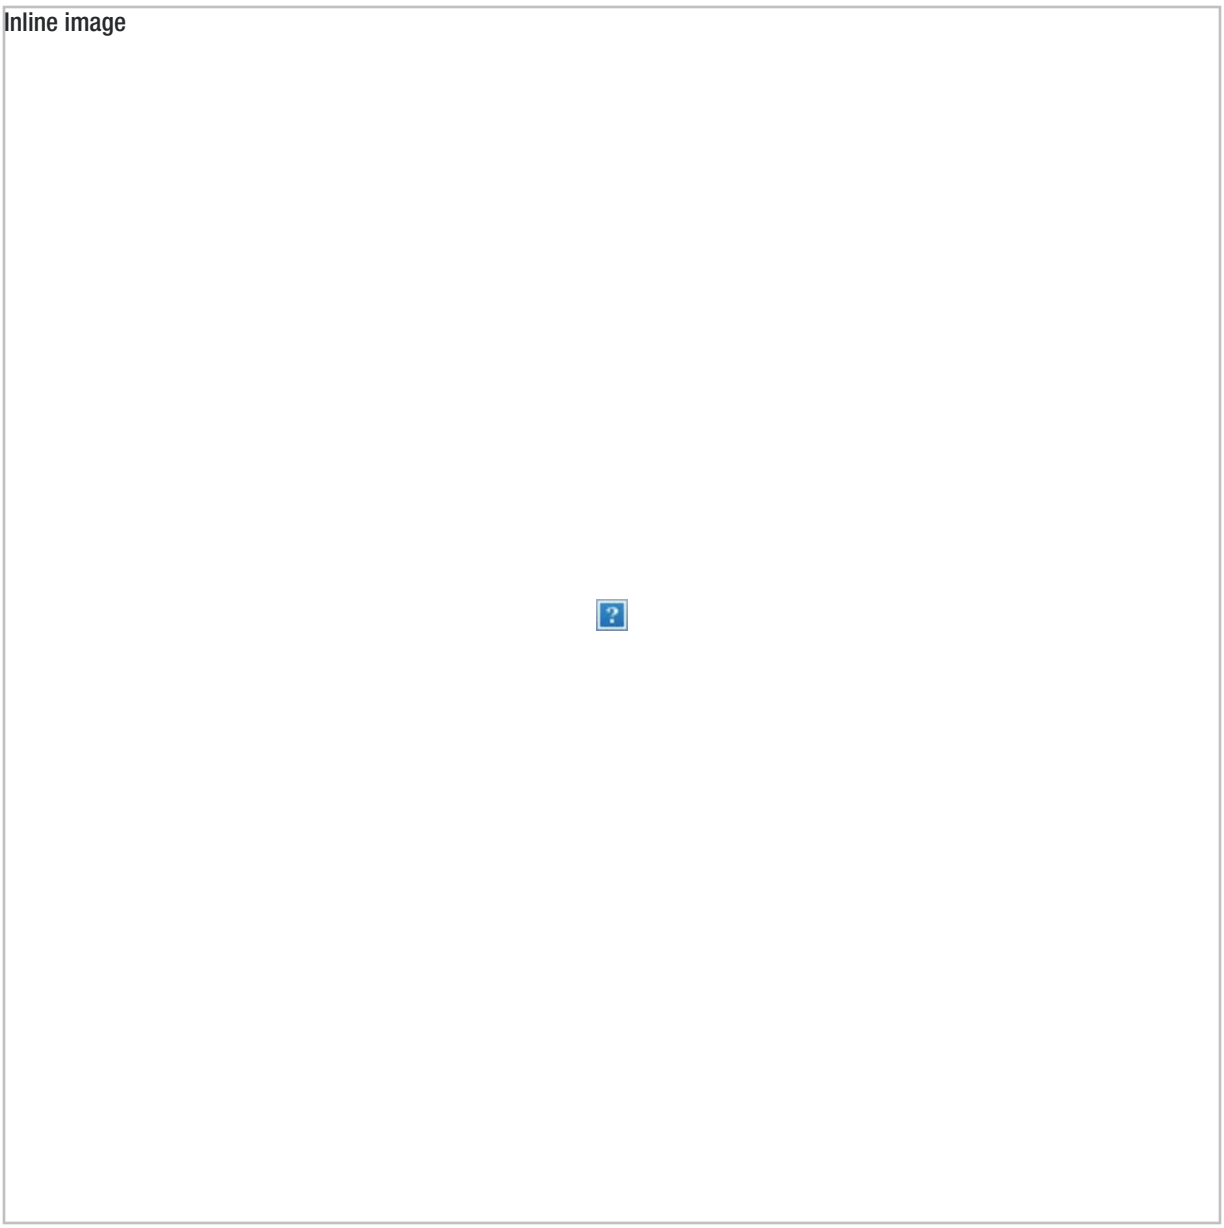
432-12

Table 3.6-17 is from the main DEIR, Table 10 is from the Appendix 3.06-B)

Inline image



Inline image

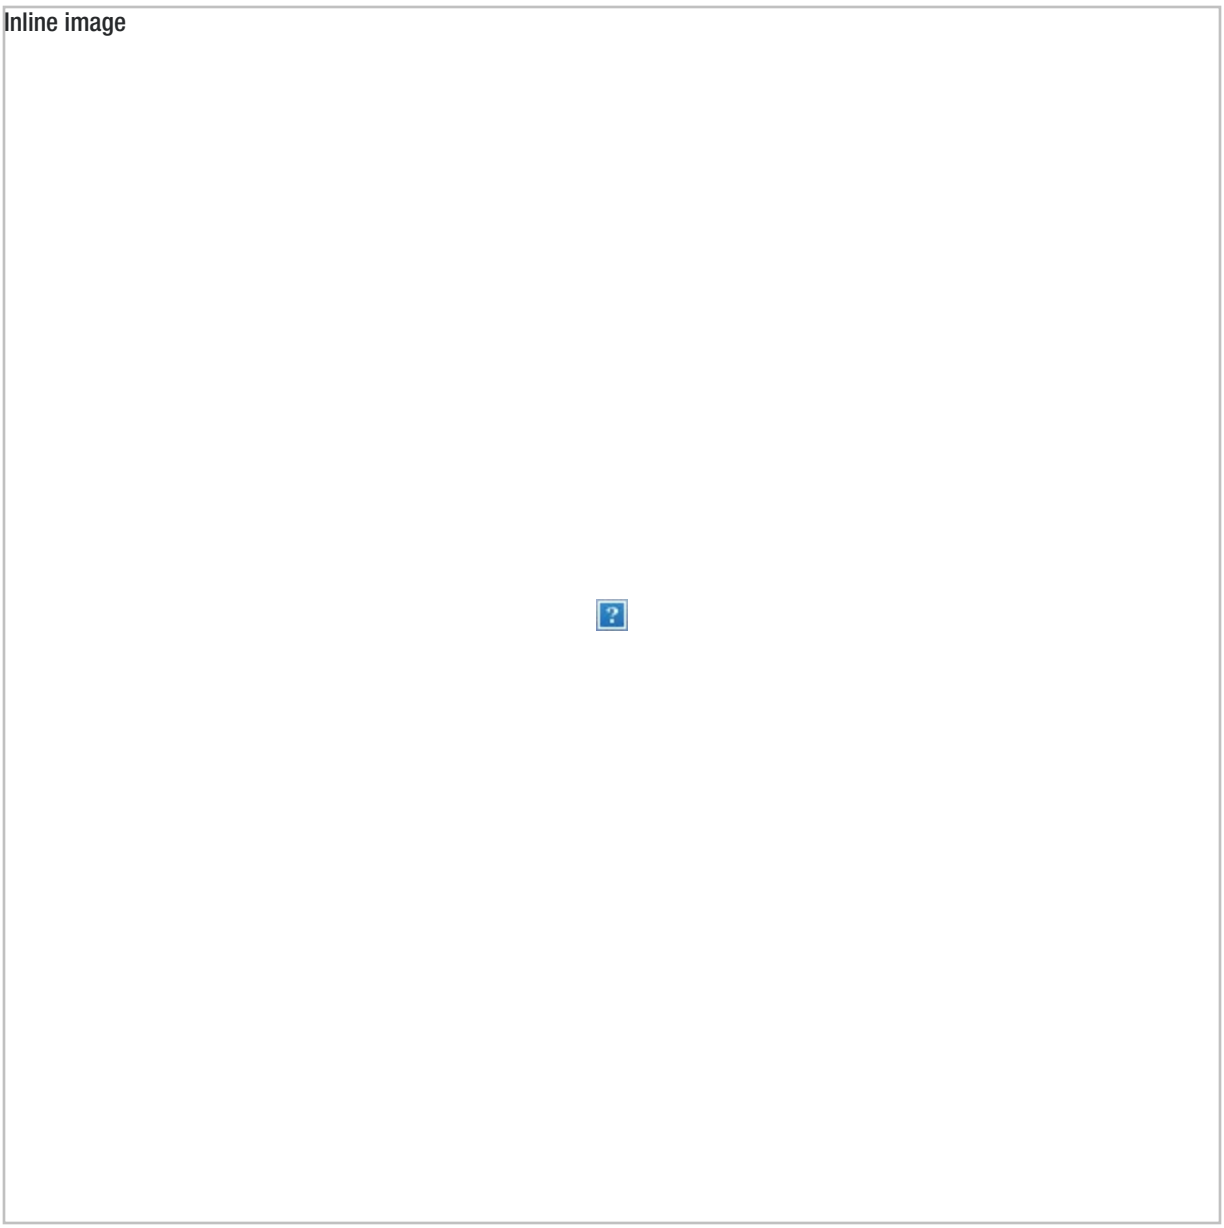


1.The impact threshold is compared to (unmitigated freight and LRT combined) and (mitigated freight and LRT combined) noise level to determine impact after mitigation.

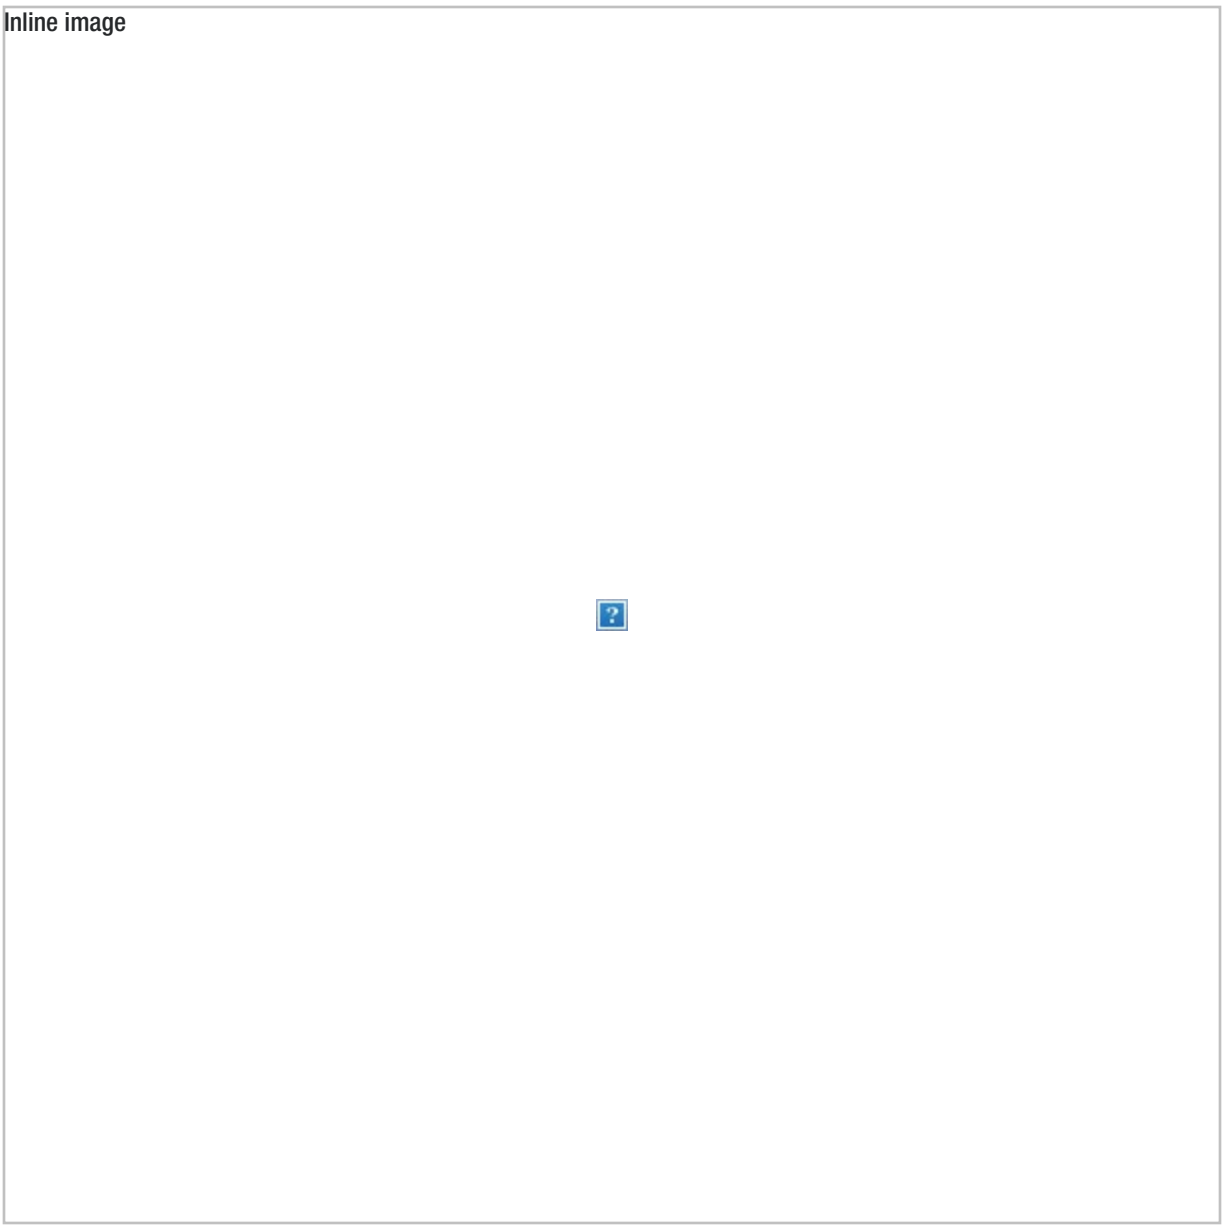
From Appendix 3.06-B

Submission 432

Inline image



Inline image



Action. I have given you the courtesy of this review, noting over 200 data entry "copy/paste" (and rounding) errors in the "Proposed Project" Table in the main DEIR. I would like the courtesy of a response, telling me whether the data in the Appendix is correct.

Impact: If you do not correct your report, you will have tables and tables of meaningless numbers and comments on noise for the "Proposed Project Option.".

432-13

Respectfully submitted,

Holly Osborne, PE.

Submission 433

From: Karen Reed
To: GreenlineExtension
Subject: Draft EIR Comments
Date: Monday, March 6, 2023 1:52:15 PM

Hello,
I would like to have the following comments recorded for the Green Line Extension Draft EIR.

While the Metro ROW seems like the easy solution, the majority of the path runs directly through residential neighborhoods with very little setback (in some cases as little as 5') from existing homes. The Hawthorne alignment borders mostly commercial and industrial properties and where there are residential properties, the setback to the new light rail is closer to 50'. The noise, air and light pollution during both construction and on-going operation of the new green line within the Metro ROW is going to have an irreparable impact on those living in this area. It will greatly reduce property values and quality of life. This same impact would not be seen in the long term for the Hawthorne alignment. 433-1

The Metro ROW alignment intends to put the main station located between Grant and 182nd Street. This is approximately 1000 feet (less than 0.25 mile) from the Washington Elementary CDC and Adams Middle School campuses. The noise, vibration, traffic and safety both during construction and in the long term should be taken into consideration. There are 11 schools shown within the RSA for the project. The Hawthorne alignment would have the least impact on the 11 schools listed. It also doesn't put a major station near any of the schools. 433-2

The current Metro ROW is an active freight track but there is no mention of the current frequency of freight traffic. Adding the light rail at this location will greatly increase the constant traffic - thereby increasing greenhouse gas emissions, noise, air and light pollution. Whereas Hawthorne is already a major thoroughfare with 4 through lanes in either direction seeing continuous car traffic. 433-3

The Metro ROW represents the border of Redondo Beach and Torrance. This location is already a site dealing with crime and homelessness. Putting a major light rail station at this location is concerning for the on-going safety and security of the community. Which police agency is responsible for responding to crimes that happen along the Metro ROW alignment? Redondo Beach is a small City with only 44 sworn police officers per the report. How can they be expected to deal with the uptick of crime expected from a new major transit location? There is no mention of how on-going security will actually be addressed. 433-4

Please let me know if I need to clarify any of my statements/questions.

thanks,
Karen Reed

Submission 434

From: Nancy
To: GreenlineExtension
Subject: Draft EIR Comment
Date: Tuesday, March 7, 2023 12:38:50 PM

I urge LA metro to adopt the light rail on the right of way with the elevated and at grade lines. I understand there are two crossings that would be noisy for the homeowners. It seems to me that LA Metro could either pay to have windows changed to double pane for those houses or perhaps even buy a few of the homes that are the most impacted. Options that include running on Hawthorne Boulevard would cost $1 billion more. We could sure pay for a lot of double pane windows for $1 billion. The option of having a trench would make this be much more expensive as well. 434-1

While there are houses located near the right of way that right of way has been there and has trains traveling on it every day. This is not a new area that has been created.

I see numerous problems with the Hawthorne Boulevard option. It worries me to see people crossing Hawthorne Boulevard. That is a very busy street. Cars certainly do not pay attention to pedestrians like they should. It also does not make sense with where the Redondo Beach transit center is. This may also cause problems for the freeway. The extra cost just does not make any sense. 434-2

I encourage you to continue with the light rail on the metro right of way elevated/at grade. 434-3

Thank you,
Barb Bush

Submission 435

From: Walker (US), Daniel
To: GreenlineExtension
Subject: Draft EIR Comments on Green Line Redondo, Lawndale, Torrance rail extension (Friends of Green Line)
Date: Tuesday, March 7, 2023 2:51:25 PM

Overall, we support a high quality Green Line (C) extension through Redondo Beach, Lawndale, and Torrance, and hope this latest extension can be built quickly and efficiently. 435-1
It is not part of this EIR study, but we also support extending the Green Line further southeast through the heart of Torrance and onward eastward eventually to San Pedro / Wilmington / Banning / Long Beach. 435-2
And Friends of Green Line also supports extending the other end of this Green Line further east 2.7 miles from current Norwalk / Santa Fe Springs terminus station (mostly underground) to the Norwalk Metrolink station.

We support completing the required environmental studies ASAP and urge Metro and local leaders to advocate for the additional funding needed to complete this Green Line extension ASAP. 435-3
We still have some concerns on how the Redondo/Lawndale/Torrance extension is built. We recommend staying on the existing BNSF railroad right-of-way to minimize overall cost, schedule, and disruption of traffic on Hawthorne Blvd. 435-4
We estimate ridership and end-to-end travel times will be about the same with any of the options proposed during this EIR phase.
We don't see any real benefit for the extended trench option for the Lawndale community. Overall sound impact improvement would be negligible for the trench, and the much louder freight trains would remain on the same surface tracks anyway. 435-5
Overall, adding the electric passenger Green Line extension to the already existing noisy polluting freight line through Lawndale should be a net benefit for the near by residents along Condon Ave. The Green Line trains should be much quieter than the diesel train which already run many time per week along this same railroad right of way. As part of this project, the existing freight railroad tracks would improved and welded to run heavy freight trains more quietly and smoothly. 435-6
However, we would like Metro to carefully study how this part of the project can be expedited so that the duration of on-going construction environmental impacts can be reduced substantially. Can Metro offer construction contractor financial incentives for completing the project faster than scheduled and with less overall environmental disruption? What can Metro leaders & inspectors do to expedite inspections and reviews to move the project along more efficiently? With all our technological advancements, in 2023, delivering these type of great transportation projects should not take nearly a decade to complete! Faster completion should also reduce overall project cost. 435-7
If the Hawthorne Blvd. elevated track option is selected, it is unlikely that the Lawndale freight tracks along Lawndale Condon Ave. on the right of way would be upgraded (thereby reducing noise). Extended streets closures and disrupted traffic along crowded Hawthorne Blvd. makes this option much less attractive. The additional estimated almost ~$1Billion dollar cost for the Hawthorne Blvd. elevated track or Lawndale trench options are not really feasible given the limited funding allocated so far for this Green Line extension. Selecting much higher cost extension alternatives would most likely significantly delay final approval and construction of this project (while Metro leaders search for significant additional funding). 435-8

This project should NOT be excessively expensive because Metro already owns the existing railroad

right of way and has already nearly completed transit centers at both proposed light rail stations in Torrance and Redondo Beach. 435-8

With this new extension, commuters from Torrance, Lawndale, or Redondo Beach should be able to reach new LAX Metro station on one-seat ride or ride directly to east end of the Green Line in Norwalk (and the rest of the growing rail network in Southern California). 435-9

We support improved safety enhancement at each intersection along this proposed route so that the California PUC will designate quiet zones to reduce train horn noise near each crossing, especially at-grade crossings at 170th and 182nd streets in Lawndale. 435-10

Both new rail stations should be easily accessible to bikers, bus users, and Uber/Lyft taxi commuters as well. 435-11

Although no longer part of this study, we still support adding another Green Line station in the city of Lawndale between busy Inglewood Ave and Manhattan Beach Blvd over the Metro ROW. Metro should not just skip over Lawndale to provide transportation improvements just for Redondo Beach and Torrance. In fact, blue collar workers, seniors, and students living / working around Lawndale are probably more likely to use Metro Green Line than commuters from other more affluent regions in the South Bay. 435-12

Personally, a large part of my diverse family lives in Lawndale, Inglewood, and Torrance, Gardena, and LA. Many of us work in El Segundo or Redondo Beach (several Aerospace companies: Boeing, Raytheon, and Northrop Grumman). This Green Line extension will open up exciting new transportation options for us. This extension will also reduce air pollution and improve congestion along several busy South Bay local streets and 405 freeway. 435-13

This Green Line project will draw significant new ridership because the new stations will serve busy destinations, such as South Bay Galleria and downtown Torrance. Like many families living near to this proposed Green Line extension, my kids attend school in the Wiseburn School District. Wiseburn DaVinci High School is located one block from a Green Line station in El Segundo. 435-14

Thanks,
Daniel Walker,
Founder, Friends of Green Line

Date: Tuesday, March 7, 2023 5:08:40 PM

Good evening,

I am a lawndale resident who is very concerned about the extension of the metro c line extension that will run directly through my community.

I currently live close to the train tracks, where all 3 of the proposed sites will cut through. Unfortunately, since the wind blows east, it carries the sound of anything west of us. This will include the extension and the very noisy sounds of the train passing by our house every 4 minutes for 20 hours of the day. Have you, or anyone else considered the impact that the noise pollution would have on the thousands of residents that live nearby? Have you taken into consideration the cost of soundproofing many of the surrounding homes, like the airport did after litigation with the city under the flight path? 437-1

Are you also aware of the Los Angeles times and daily breeze articles about the safety and security of the existing line? Do you think 300 more unarmed individuals will minimize crime? There are so many unanswered questions, but it seems TheMetro has made up its mind before even problem solving some of the existing crime issue. This one more problem, just like New York City subways and San Francisco's Bart system has experienced over the past 30 years. 437-2

Metro needs to listen to the tax payers who are funding this, as you are using our money to pay for a train to nowhere. 437-3

Sincerely,
Kimiko shiozaki

Subject:	Public Comment - Metro DEIR Comment - Green Line Extension and BCHD Blue Zones
Date:	Tuesday, March 7, 2023 4:36:31 PM

Beach Cities Health District in Redondo Beach has spent millions of dollars supporting and promoting Blue Zones. Blue Zones has made numerous findings that chronic stress is the silent killer and causes intergenerational health damage. There are many studies linking excessive intermittent noise, such as the proposed Metro line through Redondo Beach to chronic stress and its many health damages, including early death. 438-1

The DEIR is defective and fails to consider the negative health impacts found by BCHD's Blue Zones program. The DEIR must be halted and amended to include that specific health damages found by BCHD's Blue Zones program. As a proposed new health damaging project, any route causing additional 24/7/365 damaging intermittent noise and vibration cannot be pursued without intergeneration health damages. 438-2

The following references are directly on point linking rail and intermittent noise to BCHD's Blue Zones finding on chronic stress and they must be fully incorporated as they are a platform of BCHD and continuing health priority of BCHD. To the extent that time and resources allow, further, directly on point data and peer reviewed research will be provided to Metro along with further comments.

Sample References on Chronic Stress and Blue Zones for FULL INCORPORATION into the Draft EIR on the Green Line Extension

LESSONS FROM THE BLUE ZONES : "… widen its main street and raise the speed limit, which, Buettner [Blue Zones CEO] said, creates stress, danger, noise pollution, and air pollution"
https://www.ncbi.nlm.nih.gov/books/NBK298903/

HOW STRESS MAKES US SICK: "…this stress can be chronic, due to a specific situation … exposure to stress in early life can alter the normal development … resulting in increased sensitivity to stress and lifelong health risks in offspring"
https://www.bluezones.com/2019/05/how-stress-makes-us-sick-and-affects-immunity-inflammation-digestion/ 438-3

STRESS IS OFTEN REFERRED TO AS THE SILENT KILLER: "… causes many harmful, often overlooked effects … pain and strain … sleep habits … physical suffering … headache, upset stomach, or back pain … stress can reduce the ability of your immune system"
https://www.bluezones.com/2012/03/maximize-health-and-longevity-using-these-stress-management-strategies/

EVEN THE METRO THREAT SHORTENS LIVES OF RESIDENTS "Although people often underestimate the influence of the mind on the body, a growing catalog of research shows that high levels of stress over an extended time can drastically alter physical function and affect nearly every organ system."
https://www.bluezones.com/2020/10/fighting-chronic-stress-from-current-events-you-are-not-alone/

METRO WILL DESTROY ONE BLUE ZONES SOLUTION FOR GENERATIONS
https://www.bluezones.com/2012/05/create-a-sanctuary-in-your-home/

Sample References on the Impacts and Damages to Residents of Rail and Intermittent Noise/Vibration

NATIONAL GEOGRAPHIC: How living near a railroad can harm your health: From chronic stress to an increased risk of cancer, scientists say that constant exposure to trains takes a toll on the human body.
https://www.nationalgeographic.com/science/article/health-risks-living-near-railroads-east-palestine-trains

Effects of Exposure to Road, Railway, Airport and Recreational Noise on Blood Pressure and Hypertension: transportation noise can induce annoyance, sleep disturbance with awakening, cognitive impairment, physiological stress reactions, endocrine imbalance and cardiovascular disorders
https://www.ncbi.nlm.nih.gov/pmc/articles/PMC8431620/

The Effect of Aircraft, Road, and Railway Traffic Noise on Stroke – Results of a Case–Control Study Based on Secondary Data: For railway noise, there was a positive linear exposure–risk relation: Per 10 dB the stroke risk increased by 1.8% for railway traffic noise. The maximum risk increase of 18% for railway traffic noise was found in the exposure category ≥65 to <70 dB. NOTE 65-70 dB is modest for rail, along with accompanying vibration.
https://www.ncbi.nlm.nih.gov/pmc/articles/PMC6122263/

420-3

Transportation Noise and Risk: Transportation noise exposure is believed to be detrimental to human health through stress reactions with activation of the hypothalamic–pituitary–adrenal axis, followed by increased levels of stress hormones. In addition, nighttime noise exposure can impact sleep quality and duration, which are crucial for physiological and mental restoration.
https://ehp.niehs.nih.gov/doi/10.1289/EHP11248

A study of self-reported health problems of the people living near railway: Noise ... can cause both auditory and nonauditory health effects. Nonauditory effects of noise can cause tinnitus, headache, auricular plenitude, dizziness, and gastric, visual, sleep, and mood disorders, endocrine imbalance, and cardiovascular disorders.
https://www.ncbi.nlm.nih.gov/pmc/articles/PMC7114011/

The references above are demonstrative and not fully inclusive of the Metro-ignored Blue Zones impacts to health caused by the proposed Metro Green Line extension through Redondo Beach Neighborhoods.

BCHD CEO Tom Bakaly's support of Blue Zones and its work and findings includes: "serving as a Blue Zones Project ambassador to the U.S. Surgeon General"; "Blue Zones designation as City Hall earned Blue Zones certification as an employee work site [in Hermosa Beach]"; "Bakaly has become the district's archetype for health. ... a key advocate for the Blue Zones Project"; "Blue Zones Project® is a nationally acclaimed well-being improvement initiative that Beach Cities Health District (BCHD) has been implementing" and on and on.

Clearly BCHD is fully committed to the peer-reviewed results and recommendations of Blue Zones and must support its incorporation into the findings of the DEIR. BCHD must also oppose the route through the existing right-of-way, consistent with Blue Zones principles and peer-reviewed findings. It would be the pinnacle of hypocrisy for BCHD not to fully oppose the stressors of adding 24/7/365 rail through residential Redondo Beach neighborhoods.

438-4

Surely Metro, a county agency, will share the principles of Blue Zones and take the benefits of the millions of dollars of BCHD investment in Blue Zones, fully incorporate the health damages to residents in surrounding neighborhoods and deny the use of any route in the existing, less traveled right-of-way and either cancel the project, or move it to a commercial area.

438-5

Hello!

I live on Condon Ave in Lawndale directly facing the right of way.

I'm deeply concerned about the toxic noise & air pollution that will happen with the new train pushing the current one closer to our homes. 439-1

Just last week a neighbors dog was killed by this train. 439-2

Also the light rail doesn't serve us in Lawndale at all so how is that conducive to public transport options. We get left out! I'm all for public transport but it just seems downright insulting to ruin a quiet neighborhood that doesn't even benefit us people who live here! 439-3

Please bring the train down Hawthorn Ave which will serve everyone more realistically and respectfully. 439-4

Thank you,
Maureen Smith

Subject:	DEIR Stakeholder Response - Seismic Vibration
Date:	Tuesday, March 7, 2023 12:36:54 AM
Attachments:	DEIR Vibration VdB table.png DEIR VibMeter ElNido.png

I am a homeowner along the ROW in Redondo Beach at 1302 Firmona Ave. The following is one of the concerns I have as a residential neighbor to this corridor and a small business owner, metalsmith artist. My metal workshop in located separate from the house, at the back side of our property. The corner of this workspace where I sit and where my workbench is 15 feet from the back cinder block wall we built as a separation from the ROW. I use typical equipment for silver work and stone setting. I have chemicals on my shelves which have to be in glass bottles and a diluted chemical bath for cleaning torched metals.

When the freight train passes by on its once per day round trip, the several liquid petroleum tankers are a total of 42 feet away from the corner of my workshop, where I sit and my workbench is. Some of my bottles of chemicals are at that back wall 42 feet away from the passing fuel tankers.

440-1

The DEIR states the "proposed project", both ROW alignments would have the freight shifted to the west bringing it 7 feet closer, 35 feet away from my workshop, where I spend my time creating inventory using the necessary metalsmithing equipment, including a jewelry torch, grinding wheels, hand held rotary tools for polishing, engraving and drilling. This requires steady precision, also safety protocols.

workshop5.jpg

fullsizeoutput_110f.jpeg

There is very significant seismic vibration as the train passes daily. Glass chemical bottles shake and move toward the edge of the shelves. I have to move them back. My heated chemical bath in a crock pot rattles vigorously. See video which clearly demonstrates this happening, link here, https://youtu.be/OtvWR7xzcYM

440-2

The DEIR states:

3.6-4.1.1 Construction Impacts

Significant and Unavoidable Impact. The Proposed Project would be located in a fully built-out urban environment and construction activities would occur in close proximity to sensitive land uses, including residences, parks, religious uses, and schools throughout the corridor, and may occur during daytime or nighttime hours.

Construction of the Proposed Project would take place over the course of approximately five years. It is anticipated that several construction phases would occur simultaneously along the Proposed Project alignment, accommodating activities requiring lengthy construction times such as utility relocation.

440-3

Construction of the Proposed Project would take place over the course of approximately five or probably more years at my back wall.

What does VdB mean in vibration?

Level: Vibration is expressed in **vibration decibels** (VdB). The level of vibration represents how much the ground is moving. The threshold of human perception to LRT and freight rail vibration is approximately 65 VdB and annoyance begins to occur for frequent events at vibration levels over 70 VdB.

https://metrocouncil.org/getattachment/458e5e99-f1fb-4ab1-8fd7-d2261cbd637a/Southwest-LRT-Vibration-Fact-Sheet.aspx

On The Vibration Fact Sheet for MetroCouncil.org it defines human annoyance as being over 70 VdB, the measurement taken behind my house as shown in below chart is 91.5 VdB for several full tankers passing by at 30 feet distance. The DEIR proposes to move that activity closer to my home. It cannot be proven with any certainty that this proposal would be safe to execute without the option to undo. Promises that it would be safe given all of the factors are lofty at best.

440-4

Submission 440

DEIR Vibration VdB table.png

440-4

I have had conversations in March 2022 about vibration with David Meiger where I conveyed the significant vibration levels I feel both in my workshop and in my home. Again about vibration with Isaiah Ford and Georgia Sheridan in my own backyard in April 2022. My workshop is well within the 50 feet distance as indicated in the table above. I was certain then and this measurement table shows that I was correct that the vibration level is so significant there is no way to mask it. We have a geology issue that raises concerns this construction is highly risky. My personal concern is more significant seismic vibration activity coupled with longevity of construction, then subsequent frequency of operations activity 20 hours per day will most certainly be unbearable both to my family and quite possibly to my private home infrastructure..

440-5

Coincidentally, as you can see in this below photo from the DEIR, the vibration meter is set where our back wall is visible. The arrow is pointing there. The DEIR is confused as to the "inconsistent readings" at El Nido Park. It is because the noon hour trip headed north is FULL of JET FUEL. Later on its trip headed back south the tankers have been emptied so

440-6

the weight difference would cause different levels of vibration.

Trying to mitigate on the ROW very well could be futile and a colossal risk for us as well and everyone else nearby. The combination of the soils conditions along with other added factors including the weight being transported over unstable ground and vibration of the fuel tankers adds a cumulative compounded risk that I cannot be convinced of it being safe at all and proposing mitigations to attempt at squeezing this all into this narrow passage 23 feet from my home is unthinkable.

It is not worth it. Too much is at stake. Please take this to heart and decide accordingly. The only solution is to build the elevated profile on Hawthorne Blvd.

Hawthorne Blvd elevated would add to the community along that commercial corridor. Please do the sensible thing for the sake of human compassion.

Thank you for your consideration on this matter,

Monique Negrete-Mitchell

Hello Georgia et al,

I have been reading about the proposed extension with interest. I wanted to share a few comments.

1. If the use of current right of way can be effected safely, use that route - it is a no-brainer. 441-1
2. The Hawthorne route is not attractive. Disruption to traffic during construction and long-term aesthetic impact should not be underestimated. We should stick to optimizing existing corridors. 441-2

The issue of ridership must be addressed. I would be interested in seeing studies, as there are few reasons to drive down-town. Many in South Bay have money and cars. And the reasons for public transportation that are attractive: getting to the airport, the dodgers, the galaxy, LAFC, are not really addressed, as the network design assumes a need to go down-town. I would use Metro if it was convenient to get to LAX. But it does not connect there. 441-3

Thanks,

Philip

Hello,
I am a resident of Lawndale and live right next to the right of way (will include address below). I am in full support of the project and think the ideal route would be the Hawthorne Option. I don't mind the ROW option but I think all the neighbors are bringing up concerns and would make things difficult to get worked started. And to do the trenching option would cost nearly as much as just going through Hawthorne. 442-1
I attended the townhall in person at Lawndale high school and honestly it was disappointing to hear how short sighted the people in the neighborhood are. This project could be very beneficial to the area. Everyone brought up some terrible excuses on why they opposed it. I attended USC right when the expo line opened and got to see first hand the benefits of having public transportation that's easily accessible. I would love to have a line close to me that I can use to one day get around all of LA.

People complaining about the noise are ridiculous. I think showing a graphic of how much noise a light rail train would generate as compared to the noisy cars that drive up and down Inglewood avenue might be a good graphic to show. 442-2

People also brought up how the "greenery" would be removed that's next to the ROW. I find that ridiculous. I live next to it and that area is very poorly lit at night and I don't see anyone walking there In the evening cause it looks like you'd get mugged. With the project, that area would be redone and people would actually be able to use it to go on walks as the renderings show. 442-3

Overall, I think this project would be a great benefit to the area and I hope it gets done. People always complain about public transit in LA and then block projects like this, it's ridiculous! Good luck and I'll be rooting for this project to break ground as soon as possible! 442-4

Hello Metro,

I'm sure these meetings are meaningless because Metro by force want to go thru the residental area of Lawndale. You even have it at the top of your list of options for the project. You have these meetings knowing very well that most Lawndale residents are working class and don't have the time to go to your pointless meetings. You want to bring constant noise pollution, traffic and worst of all possible danger to residents. 443-1

The only one of these options that makes any sense to me is the route going thru Hawthorne blvd, out of all the options doesn't effect the residents of Lawndale, gives more visibility to our city's small businesses and has any historical value being that what you are proposing had been running down Hawthorne blvd in the beginning of the 1900s. But politicians of the time decided against using a rail system which in my opinion was the wrong choice but they had enough sense not to run it down residental neighborhoods. 443-2

Metro is going to do what they want, but if you really want input and care about the residents of a lower income community, you would avoid using the Condon pass through Lawndale residential communities that will negatively generations of residents to come. 443-3

Thank you,

Roberto Escobar
Lawndale home owner

From: Sarah Straton
To: GreenlineExtension
Subject: Draft EIR Comment
Date: Tuesday, March 7, 2023 8:15:45 PM

I live in the Franklin Park neighborhood. Please reconsider having this train go through our neighborhood. At the moment the train is a novelty, passing about once a day, but the idea of having them running every 10 minutes from early morning until late at night is horrifying. There is no need to pass through the neighborhood, especially as there won't even be a stop nearby. It doesn't go to any appealing destination to the south- not even to the mall, so I don't understand why it needs to go south of the Galleria area. It will be loud and disruptive, even with noise mitigation strategies. Please don't destroy our neighborhood! I love public transport, but smart public transport. Not using a ROW because it happens to be there, but being more intentional about it and putting it somewhere that makes sense. 444-1

Also, my friend lives in Lawndale. Her dog was decapitated by the train last week. The train that runs once a day. That could have been a child! Imagine the added risk with over a hundred trains going by each day. 444-2

Thank you for considering my position.

Sarah Straton

Submission 445

Metro would like to thank you for attending the Public Hearings held for the Release of the Draft Environmental Impact Report (EIR) on the C Line (Green) Extension to Torrance Project

Metro hosted five public hearing to gather comments on the Draft EIR during the 61-day public comment period for the proposed light rail project. The project would extend the C Line (Green) from Redondo Beach (Marine) Station to the new Torrance Transit Center. Three alignments are evaluated in the Draft EIR. Thank you for your attendance and participation with the project this far! Public comments can be submitted until March 27, 2023, by mail, email, or phone.

If you missed these public hearings, a video of the virtual public hearing is available on our

website to view the presentation. The Draft Environmental Impact Report (DEIR) and other project documents can be found on the project website by visiting the documents section or go directly to metro.net/clineext/#documents. A 3D simulation video of the three possible alignments under evaluation is available at bit.ly/cletvideo. Please visit the project StoryMap for additional information at bit.ly/cletstory.

To access the Draft EIR and other project information, please reference the direct links below.

- Draft EIR (Full Document)
- Draft EIR (By Chapter)
- Draft EIR Appendices (By Appendix)
- Other Project Information Reports
- Public Hearing Presentation
- Public Hearing Meeting Boards
- Virtual Public Hearing Recording

A copy of the DEIR can also be accessed by visiting the locations below during normal business hours.

- Lawndale Library – 14615 Burin Av, Lawndale, CA 90260
- Redondo Beach North Library – 2000 Artesia Bl, Redondo Beach, CA 90278
- North Torrance Library – 3604 Artesia Bl, Torrance, CA 90504
- Katy Geissert Civic Center Library – 3301 Torrance Bl, Torrance, CA 90503
- Metro Headquarters Library by appointment only – One Gateway Plaza, Los Angeles, CA 90012 Please email library@metro.net to schedule an appointment

Make sure your voice is heard!

Metro will be accepting additional comments through March 27, 2023, when the DEIR will close for public review. Metro will share comments with the Metro Board of Directors later this spring as part of project findings to help inform their selection of preferred alignment (called the Locally Preferred Alternatives). All comments will be formally responded to in the Final EIR (anticipated 2024).

You can submit your written feedback by email at greenlineextension@metro.net, by mail at the address below, or by phone at (213)-922-4004.

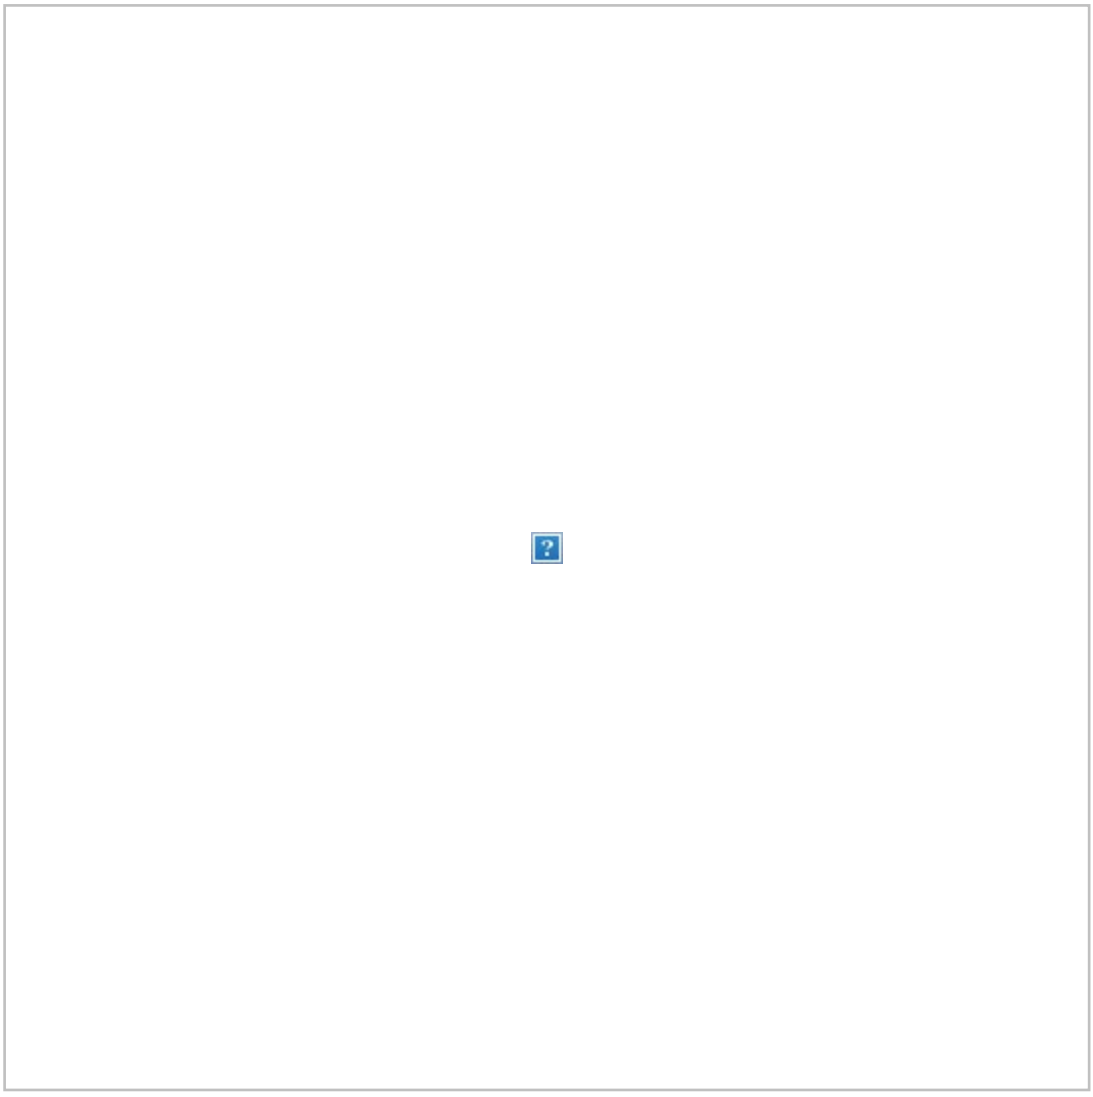
Metro invites you to stay involved and share your feedback.



Metro quiere agradecerle por asistir a las reuniones públicas que se llevaron a cabo con motivo de la presentación de plan preliminar del Informe de Impacto Ambiental del proyecto de extensión de la Línea C (verde) a Torrance

Metro llevó a cabo cinco reuniones públicas para recopilar comentarios sobre el plan preliminar del Informe de Impacto Ambiental durante un periodo de 61 días de comentarios públicos para el proyecto del tren ligero propuesto. El proyecto extendería la Línea C (verde) desde la estación de Redondo Beach (Marine) hasta el nuevo centro de transporte público de Torrance. En el plan preliminar del Informe de impacto Ambiental se evalúan tres alineaciones. ¡Gracias por sus asistencia y participación en el proyecto hasta la fecha! Los comentarios públicos pueden presentarse hasta el 27 de marzo de 2023 por correo postal, por correo electrónico o por teléfono.

Si no pudo asistir a las reuniones públicas, hay disponible un video de la reunión virtual en nuestro sitio web para que pueda ver la presentación. El plan preliminar del Informe de Impacto Ambiental y otros documentos del proyecto se encuentran en el sitio web del

proyecto visitando la sección de documentos o visitando directamente metro.net/clineext/#documents. Se encuentra disponible un video de simulación en 3D de las tres alineaciones bajo evaluación en bit.ly/cletvideo. Visite el esquema narrativo del proyecto para obtener más información en bit.ly/cletstory.

Submission 446

From: Sheila Fierro
To: GreenlineExtension
Subject: C Line Extension
Date: Tuesday, March 7, 2023 11:29:09 AM

Please consider sticking with the original and existing right of way used by freight trains at this time. The squeaky wheels who live near the existing tracks all moved into their locations with the knowledge that #1 a train passes regularly. #2 The former "green" line would be extended in that same right of way in the future. We lived within a block of those tracks for years, and it was no secret. Why must a small minority ruin Hawthorne Blvd which is already highly congested from the 405 to 190th, and create inconvenience for the majority of South Bay residents and visitors trying to utilize the new Redondo Transit Station (on Kingsdale) buses. Hawthorne Blvd is a ridiculous concept and must be put aside.
Do what you must to mitigate the noise along the current right of way tracks, but do NOT let a noisy few dictate the needs of the many.

446-1

446-2

Regards,

A. Fierro

Subject: Greenline

Hi Georgia Sheridan,

I'm Yumiko Omatsu.
[redacted]

I'm living in Breakwater Village.
And my unit is facing the railroad.
My bedroom and patio are next to the railroad.

But the train goes 2 times a day for only 2 min now.
Always quiet around here.

I open the window all day because I need fresh air and sunshine.
I stay on the patio during the day.
My neighbors too.

There are 45 units facing the railroad.
Most of them are old and can't send email or they are sick now.

If the Metro goes from early in the morning until midnight, I can't live in my condo. 447-1
This is my last condo to survive and I can't move anywhere else.

And also there are yellow poles of the pipeline near my unit . 447-2
It is a ridiculous plan to use this railroad.

Please make a plan to go to Hawthorn Bl. 447-3

Sincerely

Yumiko Omatsu

I support the Light Rail on the Metro Right-of-way elevated or at grade option. It is the least expensive and does not affect any more or less lives than if it were to go down Hawthorne Blvd. The latter option would also block traffic on Hawthorne Blvd. for nearly a decade while the Light Rail line is being constructed.

448-1

Subject: Public Comment - Metro Greenline Extension

LA Metro Comment – Greenline Extension

I support the Metro Right-of-Way option. It is the least in cost and will not affect the 405 freeway & Hawthorne Blvd. which is a major arterial highway with lots of traffic, city buses and pedestrians. 449-1

For residents who live near certain portions of the ROW, there should be a soundwall to protect them from the sound of the freight train. 449-2

Other Options: Please consider a high-frequency bus alternative (HFB) from the Marine station to the Redondo Station to the Torrance Station. 449-3

I do not support the Hawthorne option because part of this option would run the metro train along the 405 freeway in the city of Lawndale. There are residents who live across the street from the freeway on Grevillea Ave. & 159th in Lawndale. Currently, there is green space and tall trees which separate them from the 405 freeway. CalTrans has plans to widen the 405 freeway in the future. According to the DEIR, the current greenspace would be replaced by the elevated LA Metro train. These residents would have to live with a widened 405 freeway & an elevated train. It's too much for the neighborhood, as the freeway never shuts down, constant motion, 7 days/nights a week. 449-4

Safety: An elevated train on Hawthorne would remove parking spaces from businesses. The columns needed to support the train would obscure vision to safely make a left hand turn from the neighborhoods in Lawndale. Additional traffic signals would be installed, but left-hand turns are already difficult to maneuver because cars travel so fast and do not stop at red lights at the intersections. Future accidents expected on this highly traveled highway. Could a study be done to observe drivers who speed up & run through a solid red light at the intersections? Unfortunately, I can witness this everyday. 449-5

Please do a safety study.

Congestion & Consequences: Hawthorne Blvd. is an arterial highway. The metro train would cause drivers to use alternate routes to avoid Hawthorne. Surrounding neighborhoods would experience cut-through traffic as cars unsafely speed through their neighborhood. 449-6

Maintenance: If the train requires maintenance, where do the crews work? Does this include shutting off a lane on Hawthorne Blvd., to provide maintenance? How long and how often is maintenance performed? Please provide a study on this and include a maintenance schedule. 449-7

Cost: The cost is too high at $2.9 Billion. The cost also does not reflect the additional cost to raise the power lines located on the Southern California Edison tower which run across 177th & Hawthorne Blvd. The lines would need to be raised in order to avoid interference from the electrical lines above the metro cars. Please include a cost estimate for this adjustment. 449-8

Thank you,

Jackie Ecklund
Torrance Resident

Hello Lawndale board members,

I'm a long term property owner in the City of Lawndale. I live on 163rd - 1/2 a block from rail line. Every time the train comes by, my home shakes and I can hear the train whistle and noise from heavy cargo it carries. Fortunately it only come by 1-2 time a day. I would be very distressed if it came by every 10-20 minutes. This is a residential area mostly quite area with no thru traffic. If you put a commuter train on our back yard it will become a noisy part of Lawndale and living conditions will go down. Our quiet neighborhood will be destroyed. Please please don't let this happen. Hawthorne option would be the best place for a public train. Best for bussiness owners who will see more customers and best for Lawndale residents. A vote for a vote!

450-1

Thank you!

2023_esoro-Marathon ACE Plans.pdf

Good morning Ed and Hernando –
Thank you for your email regarding the Metro C (Green) Line Extension to Torrance. As part of the Draft EIR, Metro has prepared 15% engineering plans for the three alignments under study. The plans are included as an appendix to the Draft EIR – available here.

We have extracted two pages from the drawing set to acknowledge the Marathon pipelines. They are identified in the plan set (see attached). Once you have reviewed, please let us know if you have any further questions. We are happy to set up a call with our technical team.

We are accepting comments on the Draft EIR through March 27, 2023 as part of the 61-day public comment period. Following the comment period, Metro staff will review all project findings and comments and prepare a staff recommendation to share with the Metro Board of Directors. They will vote later this summer to select one alignment to move forward into final design and construction.

We have more background information on the project here. If you have questions, please reach out directly to me as I'm the project manager.

Best,
Georgia

Submission 453

Good Morning METRO – Please fine attached Marathon Pipe Line LLC (MPL), Right of Way Department (ROW), response to the subject Draft EIR Public Hearings on the C Line (Green) Extension to Torrance. This response is specific only to the route selection chosen for the extension of the C Line (Green) from Redondo Beach (Marine) Station to the new Torrance Transit Center. This response does not address any other aspects of the DEIR.

PLEASE BE ADVISED **–** MPL has researched its facilities and located **pipelines 217A and 088C** that traverse within, across, and near the area of your proposed project at two different locations. Please see the attached MPL Research Results. **MPL may have a conflict at these locations**. **Please do not dig within 50' feet of the pipelines without coordinating with MPL.** To determine exact horizontal and vertical alignment, the pipeline must be **pot holed after proper notice to Dig-Alert.** In response to Dig-Alert notification, MPL will then come out to locate and mark its facilities.

453-1

I have attached a system screenshot that depicts the approximate location of the **pipelines**. Please incorporate the information from the screenshot into your project drawings and forward a PDF copy to MPL for review and verification. While MPC understands it is Project proponent's responsibility to ensure there are no conflicts, MPL will need to review the plans. If there are still conflict(s) between MPL facilities and the proposed project, MPL will then work with your Engineering group to resolve any conflict.

This request has been assigned to Mr. Hernando Avilez, Right of Way Specialist. He will assist you throughout the duration of your project. Below is his contact information. Please forward all future correspondence regarding this project to:

View this email in your browser

You're Invited to a Public Hearing for the Release of the Draft Environmental Impact Report (EIR) on the C Line (Green) Extension to Torrance

Metro is planning to extend the C Line (Green) from Redondo Beach (Marine) Station to the new Torrance Transit Center. This extension will provide an alternative to the busy I-405 corridor and expand access to the region by connecting to the existing Metro Rail K (Crenshaw), J (Silver) and A (Blue) Lines.

Metro has prepared a Draft Environmental Impact Report (DEIR) to describe the three alignments under study and evaluate the potential environmental impacts per California

Environmental Quality Act (CEQA). The DEIR is available for public review from January 26 through March 27, 2023. During the review period, the public will have an opportunity to comment on the Draft EIR and attend virtual and in-person public hearings.

The DEIR and other project documents can be found on the project website by visiting the documents section or go directly to metro.net/clineext/#documents. A 3D simulation video of the three alignments under evaluation is available at bit.ly/cletvideo. Please visit the project StoryMap for additional information at bit.ly/cletstory. A copy of the DEIR can also be accessed by visiting the locations below during normal business hours.

- Lawndale Library – 14615 Burin Av, Lawndale, CA 90260

Metro invites you to stay involved and share your feedback.

Lo invitamos a una reunión pública para la publicación del plan preliminar del Informe de Impacto Ambiental de la extensión de C Line (Green) hacia Torrance

Metro planea extender la Línea C (Verde) desde la estación de Redondo Beach (Marine) hasta el nuevo Centro de transporte público de Torrance. Esta extensión brindará una alternativa para la congestionada autovía I-405 y ampliará el acceso a la región al conectarse con las líneas existentes de K Line (Crenshaw/LAX), J Line

(Silver), y A Line (Blue) de Metro.

Metro ha preparado un plan preliminar de Informe de Impacto Ambiental para describir las tres alineaciones bajo estudio y para evaluar los posibles impactos conforme a la Ley de Calidad Ambiental de California (CEQA, por sus siglas en inglés). El plan preliminar del Informe de Impacto Ambiental estará disponible para revisión pública del 26 de enero al 27 de marzo de 2023. Durante este periodo de revisión, el público tendrá la oportunidad de comentar el plan preliminar del Informe de Impacto Ambiental y asistir a las reuniones de manera virtual o personalmente.

El plan preliminar del Informe de Impacto Ambiental y otros documentos del proyecto se encuentran en el sitio web del proyecto visitando la sección de documentos o visitando directamente metro.net/clineext/#documents. Se encuentra disponible un video de simulación en 3D de las tres alineaciones bajo evaluación en bit.ly/cletvideo. Visite el esquema narrativo del proyecto para obtener más información en bit.ly/cletstory. Puede acceder a una copia del plan preliminar del Informe de Impacto Ambiental visitando los lugares que se describen debajo en horario laboral normal.

Submission 455

From: H Martinez
To: GreenlineExtension
Subject: Draft EIR Comment
Date: Wednesday, March 8, 2023 1:29:56 PM

Hello Green Line Team,

I am a lifelong Torrance resident and live on Post Avenue in the historic downtown district.
It would be wonderful if finally we could get a rail service connection to Torrance.
I support the original right-of-way design, via the existing rail corridor.
This kind of implementation has been delivered throughout many other communities nearby, and has not only been compatible but also has provided many benefits of improved access to its residents.

455-1

It is my hope that on this important project, perfection does not become the enemy of very good.
A lot of Engineering time has been spent, on the public's behalf, to ensure we build something we can all be happy with. Let's get it done within the original time goals, with the money that we approved from the special taxes we've paid. I am very concerned that the continual delays will result in the project being cancelled - to which we will have a situation with lots of money spent for no tangible good for the community.

With Kind Regards,

-Henry Martinez

As someone who has done BILLION$ in CEQA and NEPA projects, your response is confusing as hell. It should be more like - "your comment to the Draft EIR has been received" What you sent seems to imply that you received my comment as some general Metro comment and then you provided a bunch of extraneous DEIR "stuff". This is confusing and I would argue that it isn't good for due process of the public.

Subject: Public Comment - Metro DEIR Comment - Green Line Extension and BCHD Blue Zones

Beach Cities Health District in Redondo Beach has spent millions of dollars supporting and promoting Blue Zones. Blue Zones has made numerous findings that chronic stress is the silent killer and causes intergenerational health damage. There are many studies linking excessive intermittent noise, such as the proposed Metro line through Redondo Beach to chronic stress and its many health damages, including early death. 456-2

The DEIR is defective and fails to consider the negative health impacts found by BCHD's Blue Zones program. The DEIR must be halted and amended to include that specific health damages found by BCHD's Blue Zones program. As a proposed new health damaging project, any route causing additional 24/7/365 damaging intermittent noise and vibration cannot be pursued without intergeneration health damages. 456-3

The following references are directly on point linking rail and intermittent noise to BCHD's Blue Zones finding on chronic stress and they must be fully incorporated as they are a platform of BCHD and continuing health priority of BCHD. To the extent that time and resources allow, further, directly on point data and peer reviewed research will be provided to Metro along with further comments.

Sample References on Chronic Stress and Blue Zones for FULL INCORPORATION into the Draft EIR on the Green Line Extension
LESSONS FROM THE BLUE ZONES : "… widen its main street and raise the speed limit, which, Buettner [Blue Zones CEO] said, creates stress, danger, noise pollution, and air pollution"
https://www.ncbi.nlm.nih.gov/books/NBK298903/ 456-4

HOW STRESS MAKES US SICK: "…this stress can be chronic, due to a specific situation … exposure to stress in early life can alter the normal development … resulting in increased sensitivity to stress and lifelong health risks in offspring"
https://www.bluezones.com/2019/05/how-stress-makes-us-sick-and-affects-immunity-inflammation-digestion/

STRESS IS OFTEN REFERRED TO AS THE SILENT KILLER: "… causes many harmful, often overlooked effects … pain and strain … sleep habits … physical suffering … headache, upset stomach, or back pain … stress can reduce the ability of your immune

system”
https://www.bluezones.com/2012/03/maximize-health-and-longevity-using-these-stress-management-strategies/

EVEN THE METRO THREAT SHORTENS LIVES OF RESIDENTS "Although people often underestimate the influence of the mind on the body, a growing catalog of research shows that high levels of stress over an extended time can drastically alter physical function and affect nearly every organ system."
https://www.bluezones.com/2020/10/fighting-chronic-stress-from-current-events-you-are-not-alone/

METRO WILL DESTROY ONE BLUE ZONES SOLUTION FOR GENERATIONS
https://www.bluezones.com/2012/05/create-a-sanctuary-in-your-home/

Sample References on the Impacts and Damages to Residents of Rail and Intermittent Noise/Vibration
NATIONAL GEOGRAPHIC: How living near a railroad can harm your health: From chronic stress to an increased risk of cancer, scientists say that constant exposure to trains takes a toll on the human body.
https://www.nationalgeographic.com/science/article/health-risks-living-near-railroads-east-palestine-trains

Effects of Exposure to Road, Railway, Airport and Recreational Noise on Blood Pressure and Hypertension: transportation noise can induce annoyance, sleep disturbance with awakening, cognitive impairment, physiological stress reactions, endocrine imbalance and cardiovascular disorders
https://www.ncbi.nlm.nih.gov/pmc/articles/PMC8431620/

The Effect of Aircraft, Road, and Railway Traffic Noise on Stroke – Results of a Case–Control Study Based on Secondary Data: For railway noise, there was a positive linear exposure–risk relation: Per 10 dB the stroke risk increased by 1.8% for railway traffic noise. The maximum risk increase of 18% for railway traffic noise was found in the exposure category ≥65 to <70 dB. NOTE 65-70 dB is modest for rail, along with accompanying vibration.
https://www.ncbi.nlm.nih.gov/pmc/articles/PMC6122263/

Transportation Noise and Risk: Transportation noise exposure is believed to be detrimental to human health through stress reactions with activation of the hypothalamic–pituitary–adrenal axis, followed by increased levels of stress hormones. In addition, nighttime noise exposure can impact sleep quality and duration, which are crucial for physiological and mental restoration.
https://ehp.niehs.nih.gov/doi/10.1289/EHP11248

A study of self-reported health problems of the people living near railway: Noise ... can cause both auditory and nonauditory health effects. Nonauditory effects of noise can cause tinnitus, headache, auricular plenitude, dizziness, and gastric, visual, sleep, and mood disorders, endocrine imbalance, and cardiovascular disorders.
https://www.ncbi.nlm.nih.gov/pmc/articles/PMC7114011/

456-4

The references above are demonstrative and not fully inclusive of the Metro-ignored Blue Zones impacts to health caused by the proposed Metro Green Line extension through Redondo Beach Neighborhoods.

BCHD CEO Tom Bakaly's support of Blue Zones and its work and findings includes: "serving as a Blue Zones Project ambassador to the U.S. Surgeon General"; "Blue Zones designation as City Hall earned Blue Zones certification as an employee work site [in Hermosa Beach]"; "Bakaly has become the district's archetype for health. ... a key advocate for the Blue Zones Project"; "Blue Zones Project® is a nationally acclaimed well-being improvement initiative that Beach Cities Health District (BCHD) has been implementing" and on and on.

456-4

Clearly BCHD is fully committed to the peer-reviewed results and recommendations of Blue Zones and must support its incorporation into the findings of the DEIR. BCHD must also oppose the route through the existing right-of-way, consistent with Blue Zones principles and peer-reviewed findings. It would be the pinnacle of hypocrisy for BCHD not to fully oppose the stressors of adding 24/7/365 rail through residential Redondo Beach neighborhoods.

456-4

Surely Metro, a county agency, will share the principles of Blue Zones and take the benefits of the millions of dollars of BCHD investment in Blue Zones, fully incorporate the health damages to residents in surrounding neighborhoods and deny the use of any route in the existing, less traveled right-of-way and either cancel the project, or move it to a commercial area.

456-5

Subject: Re: Green Line Extension
Date: Wednesday, March 8, 2023 12:29:45 PM

We live in Lawndale where the traffic congestion is bad. Any Metro design that stops traffic every time a train crosses is terrible idea and we cannot support such an ill conceived plan. If such a project proceeds, trains would need to be elevated. The need for this extension is still questionable and an inefficient design that causes congestion defeats our transportation objectives. 459-1

Submission 460

From: Rene Arreygue
To: GreenlineExtension
Subject: Draft EIR Comment
Date: Wednesday, March 8, 2023 7:18:24 PM

Hello,

Route which contains the stop at the South Bay Galeria Station is the worse choice of the three. Removing the parking along Hawthorne Blvd will hurt the business along this corridor. It will also create additional visual pollution along Hawthorne Blvd. I would agree to this route if there wasn't an alternative which there are. Either one along the train rail ROW are a much better option. The Redondo Beach Transit Center is the best place for the station to be located. I believe the Crenshaw station will not be the ultimate terminus for this line and will be just a transit center with the line continuing south. The Torrance and Redondo stations will be an afterthought yet important one for those using the train. Most users will just be passing through these two stations. I reside within a mile of both South Bay Galeria and will be affected by this train on a daily basis.

460-1

Regards,
Rene Arreygue

Subject: DEIR Questions on Noise Methodology, Section 3.6-4.1 (OSB Q. No 3B)
Date: Thursday, March 9, 2023 5:26:47 PM

Dear Metro:

At the Lawndale Hearing on Feb. 25, I was unable finish my remarks on how an erroneous high setting of the noise threshold could lead to a conclusion that the increase in noise due to the LRT on the ROW was insignificant, **when it was in fact significant.** 461-1

(In a related matter, I discussed in **OSB Q. No 3A**. the numerous data errors in the data table for the "Proposed Project" in the main body of your DEIR (Table 3.6-16). 461-2

This DEIR feedback response is concerned with the **Noise and Vibration** question in the **Executive Summary on page ES-22**: **"Would the Project result in generation of a ..permanent increase in ambient noise levels in the vicinity of the project...** "

Here is a summary of my remarks:

1) **For the ROW options**, a condition that should have been analyzed is how much the ambient **noise would increase due to the presence of the LRT** compared to what **the ambient noise is now, WITHOUT the twice a day freight trains in the ambient noise.** (The normal conditions on the ROW are very quiet, and the impact to that quiet is what concerns the residents.) 461-3

2) You set the **impact threshold based on "existing noise" measurements.** Since **your** "existing noise" measurements INCLUDED the freight trains, **then the threshold was set too high**. This would mean that more noise due to the LRT could be allowed and still be considered "insignificant." 461-4

3) **Bottom Line**: **A noise analysis needs to be done, with impact thresholds determined from "normal" ambient noise only, i.e. when freight trains are not present.** 461-5

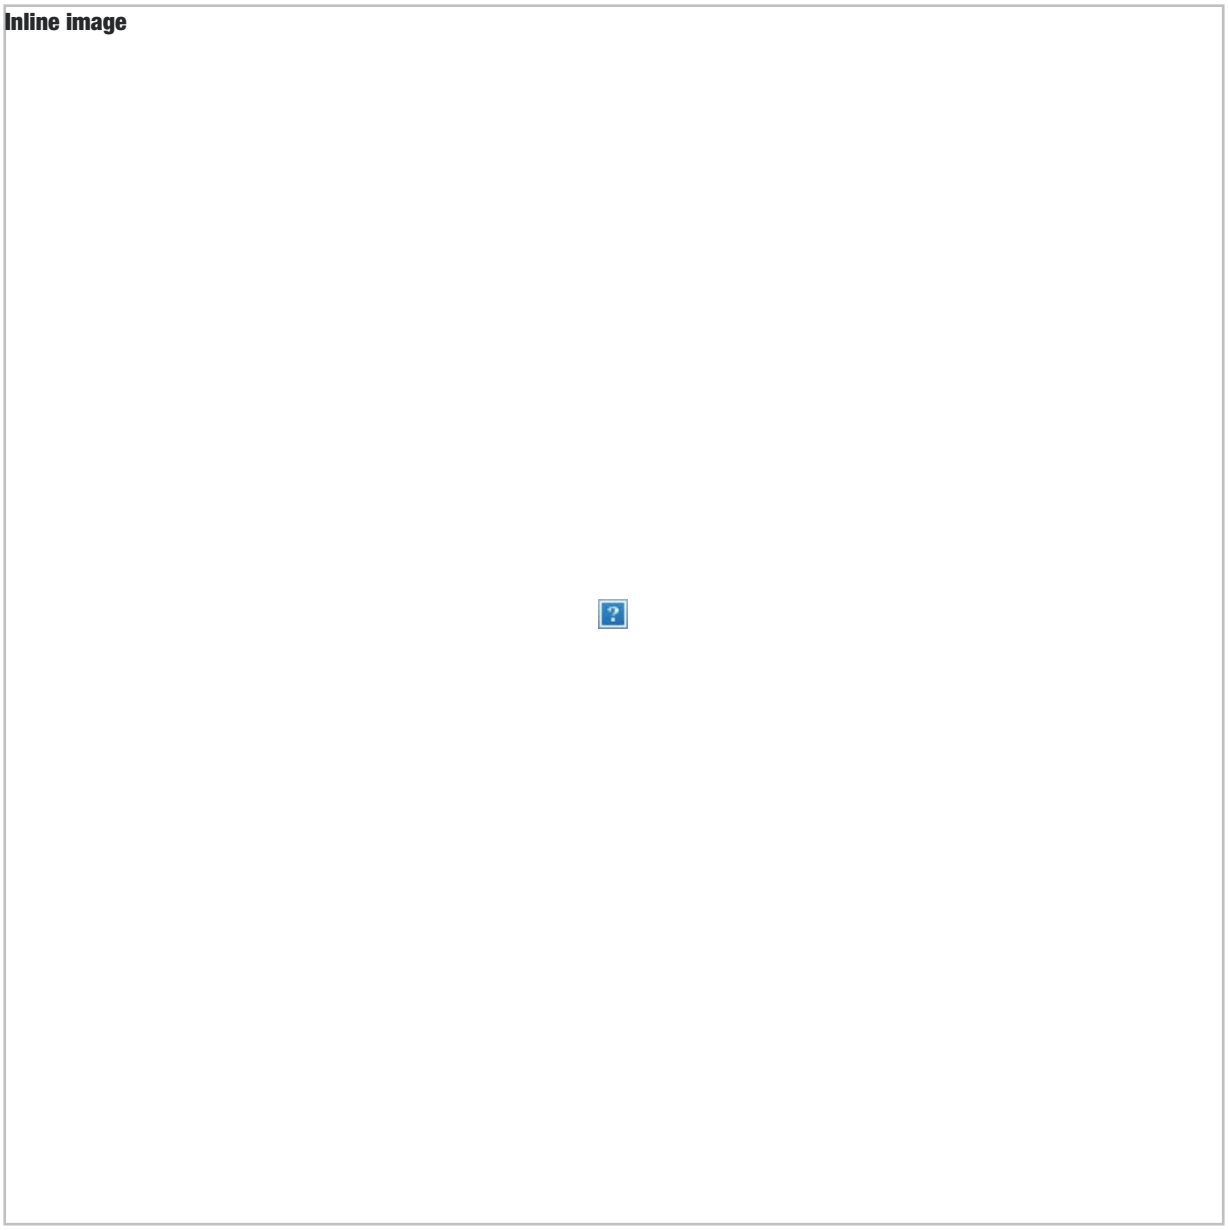
The following is a step-by-step detail of looking at your measurements, to prove my point. For this analysis, I am working solely from the corresponding tables in the Appendix 3-06B on the "Proposed Project" for the noise aspects. I cannot complete the analysis, because I do not have access to your raw data.

Analysis:

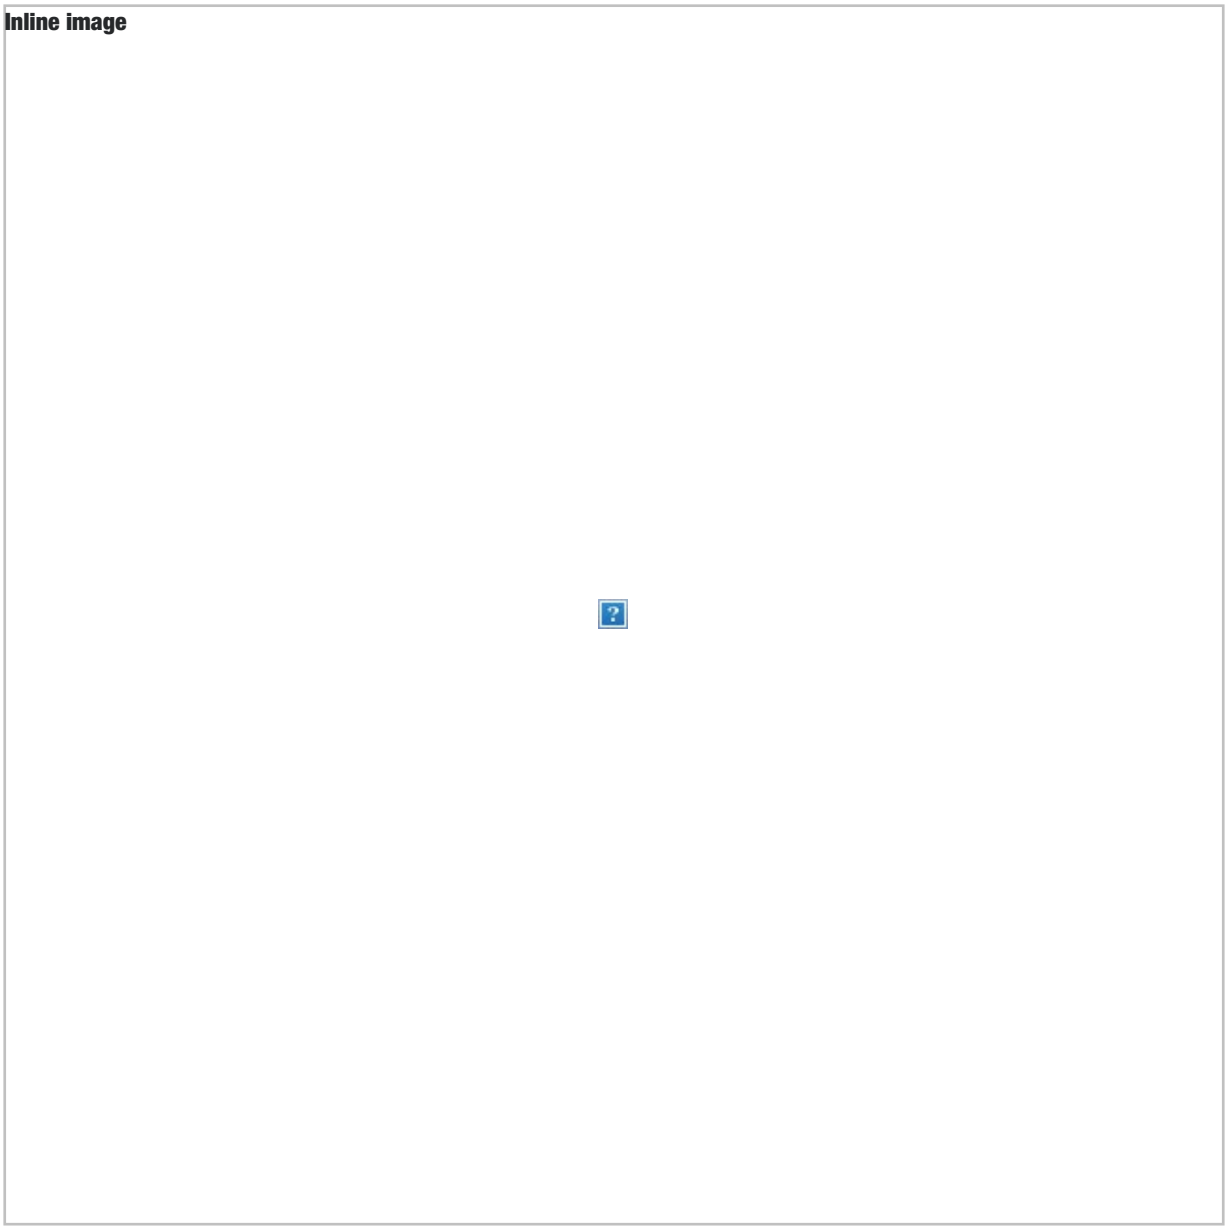
Table 1 below concerning the proposed project is from pages 2 and 3 of 107, of Appendix 3.06-B. I draw attention to the columns of your "existing noise", and the thresholds. (Note: Thresholds **are set solely based on the "existing noise"** as shown in Table 3.6-3, which is the last table in this email)

Portion of **Table 1. Proposed Project Light Rail Noise at Sensitive Receptors (from Appendix 3.06-B)**

Inline image



Inline image



Here are some specific questions:

1) You talk about placing noise receivers at every cluster. Is the "existing column" supposed to be the result of that measurement? How is it possible that there is so little variation: Clusters B23 through B34 all report the EXACT same measurement: "55.1" **This defies believability. (Reference, page 486 of DEIR.** "The sensitive uses were grouped into clusters, each having one representative receiver. Noise levels were modeled at each cluster and listed in detail in Appendix 3.6-B, Noise Analysis Detail, Table 1 for unmitigated noise"

461-6

2) Consider the measurements at B20 nd B23. Those "clusters" are EXACTLY across the street from each other (see second map below; also enlarged portion immediately below) Yet, you have a measurement of **70.0 dB at B20**, and **55.1 dB** at **B23. Are you telling me that there is a 15 dB difference in measured noise, just from crossing the street?** (This is 163rd street, on the West side of the ROW.)

461-7

Enlargement from Figure 3.6-22. How come measurements recorded for B 20 are 15 dB higher than those from B 23?

Inline image

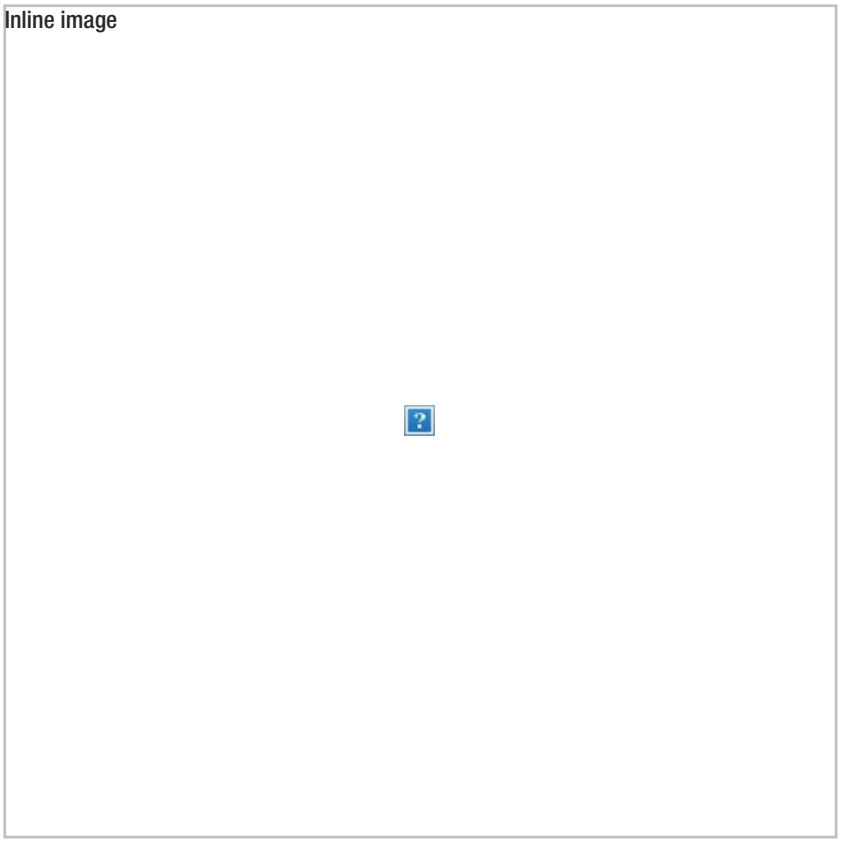


Figure 3.6-22. Proposed Project – Combined Light Rail and Freight Relocation Mitigated Noise Impacts (2 of 4)

Inline image

3) Later in the report, you state you have only **three** long term measurements along the sections of the ROW in question, in Lawndale: At the points numbered 3, 5 and 10 (orange circles) (with an additional 4th one off the page at the bottom)
Note: C7 is on 167th street, close to where measurement device 10 was. (See excerpt from Figure 3.6-6. below)

461-8

So, does this explain the lack of variability in the measurements! WOULD IT NOT HAVE BEEN POSSIBLE TO INDICATE THAT IN TABLE 1? **Table 1 gives no indication that these are NOT actual measurements at each cluster**.

Excerpt from **Figure 3.6-6. Noise Monitoring Locations and Sensitive Land Uses (2 of 4)**
(Point 3 is on 159th Street; Point 5 is South of 161st street on the ROW, Point 10 is on 167th St.

Continuing the discussion:
4) You have the statement on page 461 of the DEIR: :

"Existing 24-hour Ldn noise levels along the Metro ROW ranged from ..55.1 dBA , Ldn to 61.3 dBA, Ldn in the interior of neighborhoods along the Metro ROW. " (Ldn means Leq over a 24 hour period.)

You elsewhere express concern that you might not have captured the twice a day freight in your measurements. **I am concerned that you DID capture them.**

You can see from the measurements of Table 1, that all the supposed "less than significant impacts" **come from clusters where there is a very high existing noise level, and thus a higher impact threshold.** In other words, it might be said that you would be motivated to measure as much existing noise as possible. If the conditions that cause the "high reading" are not typical, this is skewing the analysis.

Measurements that include a dominant source (such as the freight train, where the horn can be 110 dB; and the pass by noise can be as much as 85 dB), could totally dominate the averaged measurement. An example of this is taken from the Canadian Transport Agency, shown below. which has a train pass-by, but no horn. The **ambient level would have been between 45 and 55** dB, except for the train (and a truck). The train so dominates the measurements, even for a brief pass by, that the Leq (60 seconds) is 75 dB.

My question to you is, what is the similar plot over a 30 minute or 1 hour period for Lawndale, **with and without a train. The plot without a train is the normal condition of the ROW, since the train only comes by twice a day, around roughly the noon hour. To determine the impact of the LRT noise (under project) , you need to compare to "normal" ambient conditions.**

Action: I would like to see the "existing numbers" generated by conditions where the freight train is not present; and the corresponding resulting reduced thresholds in this table. I believe that there will be even more "significant" impact cases.

You should adapt the FTA standard to the particular case to be analyzed, using the process I have suggested above.

(Example from Canadian Transport Agency, Noise Measurement and Reporting Analogy.)
(https://otc-cta.gc.ca/eng/railway_noise_measurement)

461-9

461-10

461-11

Inline image

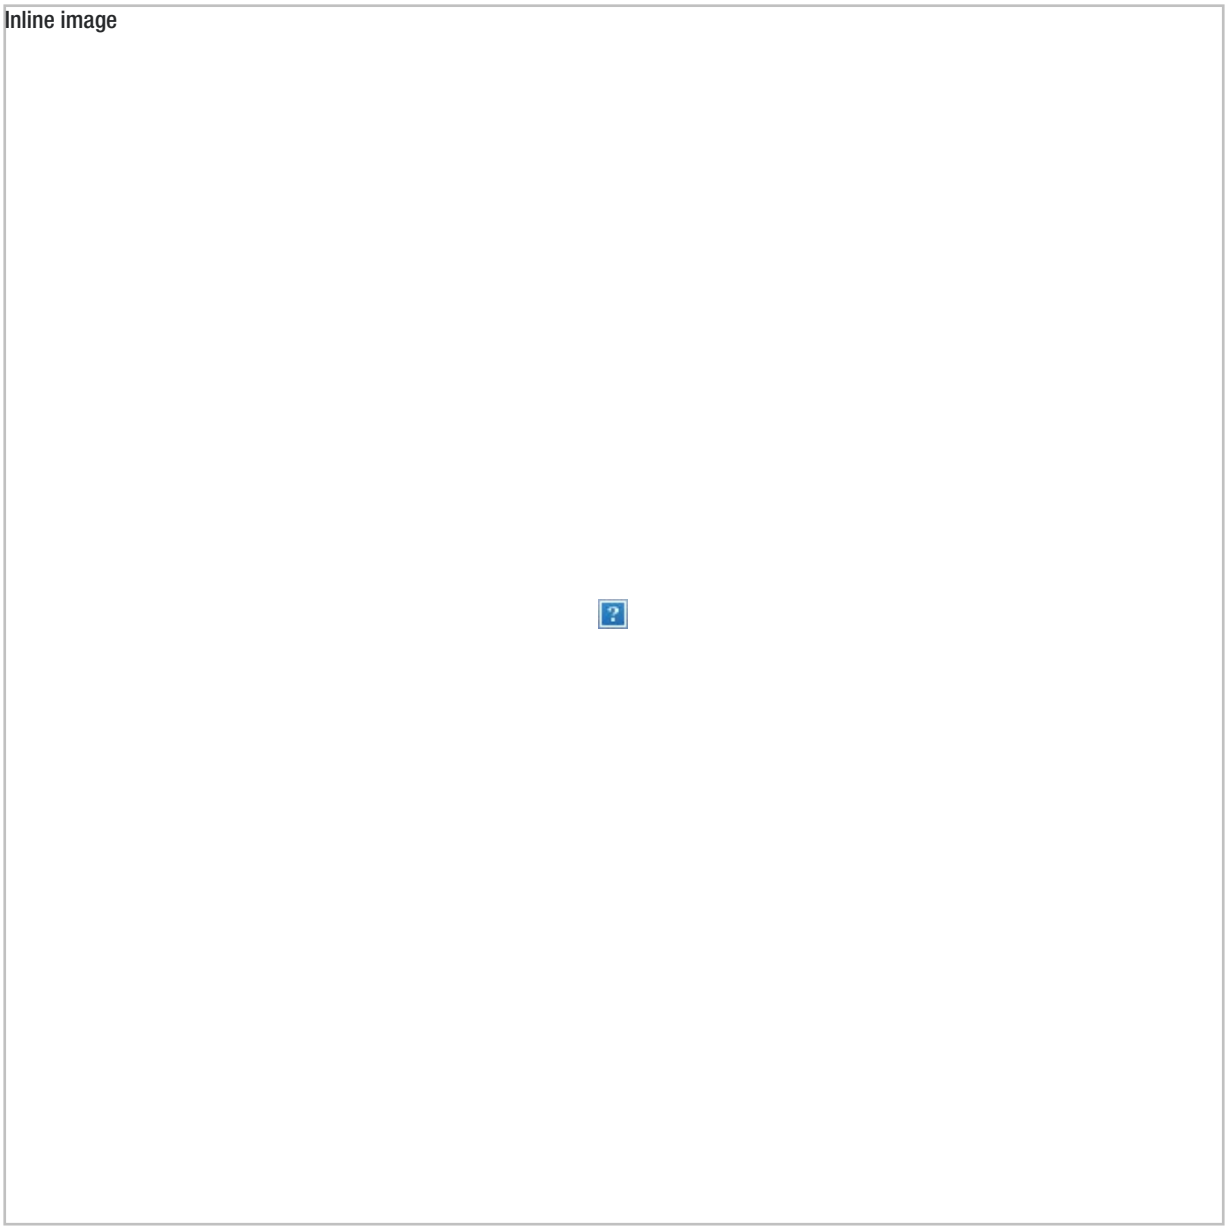

Figure from Canadian Transport Agency showing relation of long-term average Leq, to instantaneous sound level L (in dBA)

How Metro computes the threshold is in the document in Table 3.6-3 on page 447. The highlighted ones basically correspond to what was measured along the ROW in Lawndale.

Date:	Thursday, March 9, 2023 9:43:14 AM

Dear Metro,

Please add my comments below expressing my concerns with the DEIR. The Chapter on Hazards/Hazardous Materials does not adequately address the severe impacts of the multiple pressurized Liquid Petroleum that occupy the ROW currently. Daily the freight train transports Liquid Petroleum to the El Segundo refinery. What safeguards will be in place during all phases? According to the pipeline workers, the lines are old/brittle.

462-1

Thank you for your attention to this matter.

To: GreenlineExtension
Subject: Submitting Public Comment
Date: Thursday, March 9, 2023 7:07:34 PM

Good morning. Thank you for allowing us to attend your public hearings and also submit comments.

I have a specific question: Is this metro project something that has already been officially approved by some entity, or will South Bay residents have a chance to vote on this? If you could please respond back to confirm, it would be appreciated. 464-1

Given this, I do want to submit the following as an official comment to be included in your review:
"I and the neighbors on my block in Redondo Beach are vehemently opposed to this entire project. We do not want any of your metro options, we do not want a metro. The results of your EIR do not totally reflect reality. Any metro will cause noise and aesthetic disturbances, and will increase crime in our neighborhood by making it easier for people to get into and flee from the neighborhood after committing crime. Finally, but maybe more importantly, these millions of dollars can be much better spent by improving existing issues, repairs and the homeless problem in our neighborhood. Let's focus on making improvements that are actual improvements to our community, and not focus on a bureaucratic, political project that very few residents actually want." 464-2

Thank you. I look forward to your response to my question above. Have a nice weekend.
Tara

Subject:	Please oppose ROW
Date:	Friday, March 10, 2023 2:10:25 PM

Putting the green line on Row would disrupt SO many lives. The sound pollution alone living so close to the metro would drive people crazy. Let alone it is not safe to move it over 10feet closer to houses. Many safety and legal issues do not pan out. 465-1

Please say no to metro on Row! 465-2

Dana Icaza
(Redondo Beach resident)

Submission 466

Share Your Thoughts on Extending Light Rail to Torrance!

As LA Metro evaluates the future of transit in the South Bay, share your thoughts on a future light rail route. Please complete the below survey.

As a City of Torrance resident, I would like to share my opinion on what light rail route I would like in the South Bay.

- [x] Proposed Project: Metro Right-of-Way Elevated/At-Grade
- [ ] Trench Option
- [ ] Hawthorne Option

466-1

Additional comments on the Draft Environmental Impact Report

What is the plan to address the inevitable influx of unhoused individuals to torrance? I think all 3 options are unnecessary and a waste of torrance tax payer money. No one here is excited or even wants this.

- [ ] Hawthorne Option

468-1

Additional comments on the Draft Environmental Impact Report

This project should be expedited so that the South Bay is truly included the LA County transit system. Currently the South Bay is very isolated from the rest of Los Angeles. The project should be completed by 2028 (the ear of the Olympics). The proposed project is the most rapid way to reach this goal.

Additional comments on the Draft Environmental Impact Report

Just wanted to drop you a line and say that your mailer regarding light rail transit is an incredible piece of propaganda and insulting to thinking people. The language you use in your description of options is so manipulative, it's embarrassing. Yes, we get it. You want everyone on board with the City Council approved route. Maybe just maybe, ask us for genuine public input when you are actually willing to receive it.

- [x] Proposed Project: Metro Right-of-Way Elevated/At-Grade
- [ ] Trench Option
- [ ] Hawthorne Option

478-1

Additional comments on the Draft Environmental Impact Report

This is clearly the best option since it's the lowest cost, easiest to complete and has the least impact on the surrounding area. Some home owners will be impact per by additional rail noise and vibration but when you buy a house right next to RR tracks you lose the right to complain about the tracks.

- [x] Proposed Project: Metro Right-of-Way Elevated/At-Grade
- [x] Trench Option
- [ ] Hawthorne Option

481-1

Additional comments on the Draft Environmental Impact Report

I would rank the Trench Option as 1st choice and the “Proposed Project Elevated/At-Grade” Option as 2nd choice. The trench option, while more expensive and time consuming to build, might help keep property values a bit higher in our neighboring communities by mitigating noise in the residential areas. Plus, noise pollution and it’s health effects is, I believe, a documented reality supported by scientific studies. It’s just the right thing to do for those who live near the tracks. Spending now to trench the tracks could help reduce healthcare costs in the long run, as well as reduce the risk of potential lawsuits filed against LA Metro or other public entities by residents who believe they were negatively impacted.

- [ ] Trench Option
- [ ] Hawthorne Option

483-1

Additional comments on the Draft Environmental Impact Report

I am a big fan of Metro rail and think the CLine extension is important for the future.
Existing tracks are already above grade, putting Metro rail below grade next to that or everything below grade makes no sense.
I feel sorry for the nearby residents but have to believe the rail lines were there first

- [x] Proposed Project: Metro Right-of-Way Elevated/At-Grade
- [ ] Trench Option
- [ ] Hawthorne Option

485-1

Additional comments on the Draft Environmental Impact Report

Trench Option: not viable because it will collect water, dust, trash and provide safety concerns that other people and/objects may fall in.
Hawthorne Option: not viable due to extreme cost of building elevated structures with associated elevators, escalators, etc.
At Grade Option: the only fiscally viable choice with only moderate risk due to rail crossing streets and crosswalks.

- [x] Proposed Project: Metro Right-of-Way Elevated/At-Grade
- [ ] Trench Option
- [ ] Hawthorne Option

486-1

Additional comments on the Draft Environmental Impact Report

As a public transit user, none of the options seem useful, unless you can build the last mile infrastructure around the Torrance and Redondo stations. It appears to me that it would be inconvenient with multiple transfers to board the rail system and return home from the Torrance station. (For me) For example, to go to LAX I just hop on the Torrance 8 and about 45 minutes I'm at the bus way waiting for the shuttle. When the C line is completed I have to find a way to get to the Torrance or Redondo station with my carry-on luggage and maybe transfer one or two times to board the rail. Same for the return trip home. Plus I don't like standing in the rain or sun waiting for the bus to show up.

- [x] Proposed Project: Metro Right-of-Way Elevated/At-Grade
- [ ] Trench Option
- [ ] Hawthorne Option

491-1

Additional comments on the Draft Environmental Impact Report

The Hawthorne option appears to improve safety by separating light rail from car traffic and pedestrians, but in reality it forces pedestrians to cross busy streets to reach the proposed light rail stations. For this reason it is likely to decrease pedestrian safety and pedestrian usage of the stations, resulting in wasted money. I implore those in charge to not consider the Hawthorne option.

- [ ] Proposed Project: Metro Right-of-Way Elevated/At-Grade
- [ ] Trench Option
- [x] Hawthorne Option

493-1

Additional comments on the Draft Environmental Impact Report

Lawndale and its residents would never accept light rail near their schools or residences. Although an elevated rail system along Hawthorne is economically and environmentally expensive, the cost can be mitigated by having one-track sections with two-track single platform stations. (Japan Rail Nara line and LIRR Port Jefferson line have one-track sections). One car line in each direction along most of Hawthorne will be affected during construction.

498-1

Additional Comments on the Draft Environmental Impact Report:

Keep the train where they planned it to go. Stop changing plans at the end of the project just to accomodate Redondo. They should have known the plan !!

As a City of Torrance resident, I would like to share my opinion on what light rail route I would like in the South Bay.

- [x] Proposed Project: Metro Right-of-Way Elevated/At-Grade
- [ ] Trench Option
- [ ] Hawthorne Option

500-1

Additional comments on the Draft Environmental Impact Report

The trench option is concerning due to underground gas pipes. The proposed plan is clearly the least invasive. It is high time that Torrance got better public transit.

503-1

Additional comments on the Draft Environmental Impact Report

I like rail travel, but it is an oddity to get somewhere (the museums near USC if there's a game or a concert). To travel through the city just to look at what it holds. MOST tax payers see it the same way, I'm afraid. Asking for higher and higher taxes, more and more inconvenience delays during extend schedule overruns will only alienate most of the folks who will rarely if EVER ride light rail. Do it at the lowest cost and the fastest to get the project to pass on voting day.

- [ ] Hawthorne Option

Additional comments on the Draft Environmental Impact Report

I don't want to have the rail system come through our city at all, why isn't that an option offered to the voter!? I don't want homeless or drug users able to crisscross though our city with ease. No one uses the trains, they're dangerous and neglected. No one of professional worth uses these things.

- [ ] Hawthorne Option

506-1

Additional comments on the Draft Environmental Impact Report

I agree with the proposed project. Consider what racist redlining has done to the whole LA County, pushing freeways into lower-income neighborhoods where the majority are people of color. Let's spread projects out a little more to neighboring beach cities so we can stop pushing people out of their homes. It's about being fair all around.

- [ ] Proposed Project: Metro Right-of-Way Elevated/At-Grade
- [ ] Trench Option
- [x] Hawthorne Option

520-1

Additional comments on the Draft Environmental Impact Report

To be clear, I love this project and I can't wait to see it happen! My vote is for the Hawthorne Option, however, I understand it might be cost-prohibitive. If one of the other two options is selected, I would like to see improved bicycle lanes and pedestrian walkways to and from the station, in all directions, but especially along Artesia to the East! I'm guessing that easy access to the station increases ridership, property values, rents, and tax revenues.

As a City of Torrance resident, I would like to share my opinion on what light rail route I would like in the South Bay.

- [x] Proposed Project: Metro Right-of-Way Elevated/At-Grade
- [ ] Trench Option
- [ ] Hawthorne Option

521-1

Additional comments on the Draft Environmental Impact Report

My second choice would be the Trench Option if the impact is really high on the Redondo Beach and Lawndale resides for the original ROW. The Draft EIR did not address the possible traffic issues and pollution created by the Hawthorne Option and the additional cost of an elevated station. In addition, since my home is so close to Hawthorne Blvd., there would be more traffic using 177th Street as a shortcut to get away from the Metro and any congestion caused by the Metro.

- [x] Proposed Project: Metro Right-of-Way Elevated/At-Grade
- [ ] Trench Option
- [ ] Hawthorne Option

522-1

Additional comments on the Draft Environmental Impact Report

Using Hawthorne Blvd is not practical or any way good for the public. The route is not one that would be used very much to begin with since the destinations are not the usual ones people desire. Hawthorne Blvd is already one of the most used highways in this area and additional traffic will make congestion and pollution worse.

- [x] Proposed Project: Metro Right-of-Way Elevated/At-Grade
- [ ] Trench Option
- [ ] Hawthorne Option

524-1

Additional comments on the Draft Environmental Impact Report

Extending the Metro to Torrance is a great idea. The Proposed Project seems to be the most cost effective option with the least amount of disruption due to construction. The Trench Option, while a better option for residents along the Right-of-Way, would cause excessive expense and delays. The Hawthorne option is a joke and not sure why this was even proposed. I am glad to hear that the Torrance City Council supports avoiding the Hawthorne option.

As a City of Torrance resident, I would like to share my opinion on what light rail route I would like in the South Bay.

- [x] Proposed Project: Metro Right-of-Way Elevated/At-Grade
- [ ] Trench Option
- [x] Hawthorne Option

529-1

Additional comments on the Draft Environmental Impact Report

I am concerned that the Proposed Project would reduce 4 lanes each side to 2 lane each side, causing permanent traffic congestion.
The Trench Option not a good idea, I think it would be hard to remove trash from it or keep it clean.
I like the futuristic Hawthorne Option best, because it doesn't impact the car lanes, but I only support it if there is an easy and quick way to get to the Regional Transit Center. Otherwise, it's pointless. Due to the aging population and likelihood of the 60+ to use this mode of transit, accessibility is a big concern.
Maybe less stations, but more accessibility (e.g. escalator, ramps, elevator), or special stations where there is no elevation gain would help.

Additional comments on the Draft Environmental Impact Report

The impact to the environment is substantial as the noise is a problem forever long for the residents along the line. Has the government thought of a shuttle line between the green line and the C line terminals? That would be the least noise and would cost much less than this proposal. Residents have voiced concern about losing a park that a father plays ball with his kids which would be eliminated with this proposal. A bus line would keep the park intact.

Share Your Thoughts on Extending Light Rail to Torrance!

As LA Metro evaluates the future of transit in the South Bay, share your thoughts on a future light rail route. Please complete the below survey.

As a City of Torrance resident, I would like to share my opinion on what light rail route I would like in the South Bay.

- [x] Proposed Project: Metro Right-of-Way Elevated/At-Grade
- [ ] Trench Option
- [ ] Hawthorne Option

533-1

Additional comments on the Draft Environmental Impact Report

Metro should have a duty to choose the most cost efficient and least disruptive option. Clearly the proposed plan provides the extension of light rail within those guidelines.

As a City of Torrance resident, I would like to share my opinion on what light rail route I would like in the South Bay.

- [ ] Proposed Project: Metro Right-of-Way Elevated/At-Grade
- [ ] Trench Option
- [ ] Hawthorne Option

Additional comments on the Draft Environmental Impact Report

Not a useful way to spend tax payers money. Spend extra tax dollars on local development, homeless shelters, free lunches for every child in public schools (no matter income and pay off any debts owed).

- [ ] Proposed Project: Metro Right-of-Way Elevated/At-Grade
- [ ] Trench Option
- [ ] Hawthorne Option

Additional comments on the Draft Environmental Impact Report

None of the above, what we have is a rail system going to nowhere. Galleria is a ghost town soon to be re-developed and Torrance Station is in no mans land.

Share Your Thoughts on Extending Light Rail to Torrance!

As LA Metro evaluates the future of transit in the South Bay, share your thoughts on a future light rail route. Please complete the below survey.

As a City of Torrance resident, I would like to share my opinion on what light rail route I would like in the South Bay.

- [ ] Proposed Project: Metro Right-of-Way Elevated/At-Grade
- [x] Trench Option
- [ ] Hawthorne Option

536-1

Additional comments on the Draft Environmental Impact Report

Although the at-grade option would be least expensive, I think the trench option would be the safer choice with fewer at-grade crossings, and have less noise for residents living close to the tracks. Both options following the existing right-of-way would also be closer to the Redondo Beach Transit Center, unlike the more expensive Hawthorne boulevard option.

- [x] Proposed Project: Metro Right-of-Way Elevated/At-Grade
- [ ] Trench Option
- [ ] Hawthorne Option

540-1

Additional comments on the Draft Environmental Impact Report

I prefer the baseline plan due to cost, less impact to the environment. By following the existing right of way, it minimizes the footprint of the rails and infrastructure to the city.

As a City of Torrance resident, I would like to share my opinion on what light rail route I would like in the South Bay.

- [ ] Proposed Project: Metro Right-of-Way Elevated/At-Grade
- [ ] Trench Option
- [x] Hawthorne Option

546-1

Additional comments on the Draft Environmental Impact Report

I would use the Metro so much more if it went down Hawthorne Blvd. The ROW option is too far away. I want a stop in front of the South Bay galleria and walkable from our apartment complex. Hawthorne option is better

Subject: Choose Hawthorne Blvd for the Metro C Line / Green Line Extension

Dear Metro Board Members,

I am writing to express my strong disapproval for routing the proposed C (Green) Line extension down the current Metro right of way through residential neighborhoods in Lawndale and Redondo Beach. I am urging you and the board to choose the Hawthorne Boulevard elevated option instead for the following reasons: 666-1

- NEIGHBORHOOD QUALITY OF LIFE: The ROW option would send 200-300 trains per day through quiet residential neighborhoods from 4 AM until Midnight. This will permanently affect the quality of life for more than 1,000 families in Lawndale and North Redondo Beach. Metro's own environmental impact report states increases in NOISE and VIBRATION will be "Significant" and "Unavoidable." This is in addition to 3-5 years of significant construction-related impacts to the neighborhood. 666-2

- SAFETY: In some spots, the ROW option will move an existing freight track to within 8-10 feet of fence lines. This track currently sees trains carrying highly flammable and dangerous petroleum products between two oil refineries. Even a minor derailment -- even at slow speeds -- would put petroleum tanker cars into homes and backyards. This freight line already has a history of previous derailments. 666-3

In addition, the ROW has multiple high-pressure petroleum pipelines buried in unstable soil. Construction of the C Line down the ROW presents a danger to those pipelines even if all safety protocols are followed. Even one slip-up could be catastrophic to the neighborhood. 666-4

- LOSS OF GREEN SPACE: The ROW -- for better or worse -- is utilized as much-needed green space in the City of Lawndale. Not only that, it offers a respite from urban sprawl with tall, mature trees and views of the San Gabriel Mountains in the distance. What is now a park-like community along the ROW will be replaced with giant walls that will bounce train noise and destroy views of the horizon. 666-5

- RIDERSHIP: Routing the Metro C Line down Hawthorne Boulevard would see more ridership than the ROW option as it passes by businesses and landmarks people want to visit. This includes a station in front of a planned mixed-use residential development at the South Bay Galleria. 666-6

I implore you to listen to the voices of the community when selecting which option to build. This is a 100-year project that will h
ave PERMANENT impacts on a community already disadvantaged compared to neighboring South Bay cities. When considering costs, look at not only the financial costs, but the societal and environmental costs as well. Do the right thing, get it right for future generations and choose HAWTHORNE BOULEVARD for the Metro C Line Extension. 666-7

Thank you,

Susana Quintanar

Dear Metro Board Members,

I am writing to express my strong disapproval for routing the proposed C (Green) Line extension down the current Metro right of way through residential neighborhoods in Lawndale and Redondo Beach. I am urging you and the board to choose the Hawthorne Boulevard elevated option instead for the following reasons: 667-1

- NEIGHBORHOOD QUALITY OF LIFE: The ROW option would send 200-300 trains per day through quiet residential neighborhoods from 4 AM until Midnight. This will permanently affect the quality of life for more than 1,000 families in Lawndale and North Redondo Beach. Metro's own environmental impact report states increases in NOISE and VIBRATION will be "Significant" and "Unavoidable." This is in addition to 3-5 years of significant construction-related impacts to the neighborhood. 667-2

- SAFETY: In some spots, the ROW option will move an existing freight track to within 8-10 feet of fence lines. This track currently sees trains carrying highly flammable and dangerous petroleum products between two oil refineries. Even a minor derailment -- even at slow speeds -- would put petroleum tanker cars into homes and backyards. This freight line already has a history of previous derailments. 667-3

In addition, the ROW has multiple high-pressure petroleum pipelines buried in unstable soil. Construction of the C Line down the ROW presents a danger to those pipelines even if all safety protocols are followed. Even one slip-up could be catastrophic to the neighborhood. 667-4

- LOSS OF GREEN SPACE: The ROW -- for better or worse -- is utilized as much-needed green space in the City of Lawndale. Not only that, it offers a respite from urban sprawl with tall, mature trees and views of the San Gabriel Mountains in the distance. What is now a park-like community along the ROW will be replaced with giant walls that will bounce train noise and destroy views of the horizon. 667-5

- RIDERSHIP: Routing the Metro C Line down Hawthorne Boulevard would see more ridership than the ROW option as it passes by businesses and landmarks people want to visit. This includes a station in front of a planned mixed-use residential development at the South Bay Galleria. 667-6

I implore you to listen to the voices of the community when selecting which option to build. This is a 100-year project that will have PERMANENT impacts on a community already disadvantaged compared to neighboring South Bay cities. When considering costs, look at not only the financial costs, but the societal and environmental costs as well. Do the right thing, get it right for future generations and choose HAWTHORNE BOULEVARD for the Metro C Line Extension. 667-7

Subject: Choose Hawthorne Blvd for the Metro C Line / Green Line Extension

Dear Metro Board Members,

I am writing to express my strong disapproval for routing the proposed C (Green) Line extension down the current Metro right of way through residential neighborhoods in Lawndale and Redondo Beach. I am urging you and the board to choose the Hawthorne Boulevard elevated option instead for the following reasons: 668-1

- NEIGHBORHOOD QUALITY OF LIFE: The ROW option would send 200-300 trains per day through quiet residential neighborhoods from 4 AM until Midnight. This will permanently affect the quality of life for more than 1,000 families in Lawndale and North Redondo Beach. Metro's own environmental impact report states increases in NOISE and VIBRATION will be "Significant" and "Unavoidable." This is in addition to 3-5 years of significant construction-related impacts to the neighborhood. 668-2

- SAFETY: In some spots, the ROW option will move an existing freight track to within 8-10 feet of fence lines. This track currently sees trains carrying highly flammable and dangerous petroleum products between two oil refineries. Even a minor derailment -- even at slow speeds -- would put petroleum tanker cars into homes and backyards. This freight line already has a history of previous derailments. 668-3

In addition, the ROW has multiple high-pressure petroleum pipelines buried in unstable soil. Construction of the C Line down the ROW presents a danger to those pipelines even if all safety protocols are followed. Even one slip-up could be catastrophic to the neighborhood. 668-4

- LOSS OF GREEN SPACE: The ROW -- for better or worse -- is utilized as much-needed green space in the City of Lawndale. Not only that, it offers a respite from urban sprawl with tall, mature trees and views of the San Gabriel Mountains in the distance. What is now a park-like community along the ROW will be replaced with giant walls that will bounce train noise and destroy views of the horizon. 668-5

- RIDERSHIP: Routing the Metro C Line down Hawthorne Boulevard would see more ridership than the ROW option as it passes by businesses and landmarks people want to visit. This includes a station in front of a planned mixed-use residential development at the South Bay Galleria. 668-6

I implore you to listen to the voices of the community when selecting which option to build. This is a 100-year project that will have PERMANENT impacts on a community already disadvantaged compared to neighboring South Bay cities. When considering costs, look at not only the financial costs, but the societal and environmental costs as well. Do the right thing, get it right for future generations and choose HAWTHORNE BOULEVARD for the Metro C Line Extension. 668-7

***Keep the commuters with the commuters! Don’t ruin my neighborhood and my right to peace and quiet at home just because there may be a legal way for you to do so. It isn’t right.

***Additionally, taking the train to work would take me over twice as long as driving, so I'm not sure why you're rushing this extension without first figuring out how to make the routes faster or reduce stops. Most people will take the fastest route. And that will still be driving.

***I pay $2,300 in rent each month. This is no longer a low-income neighborhood. I make six figures. You need to be respectful of ALL people. You cannot take advantage of us.

Thank you,

Melissa Hoppe

Submission 669

From: Danny Hom <[redacted]>
Sent: Tuesday, March 28, 2023 11:22 PM
To: GreenlineExtension
Subject: Draft EIR Comment: Green Line towards Torrance

While extending the line down the existing right-of-way has pros and cons, so does extending the line along the busy Hawthorne Boulevard corridor. It is unfortunate that subgroups of South Bay homeowners seem to have objections to both possible pathways forward for the train. Nevertheless, its extension is important, not least as a faster way into the heart of the South Bay for workers in the Gateway Cities.

When Metro makes its routing decision, please prioritize having easy transfers from rail to bus, with priority placed on the Metro Bus network, regardless of how you build. For example, if a station ends up being sited in the center of Hawthorne, which makes the trains an inconvenient walk from the Redondo Beach Transit Center, please evaluate routing for the local lines that will allow bus passengers to disembark near the Hawthorne Station at least one stop prior to their trips' arrival at the RBTC. 669-1

If the C Line (Green) follows the ROW, I will be disappointed to not have a convenient rail transfer point to my primary bus line in this area, the 344. Unless Metro can find some sort of workaround for the inconvenience, that is.

Also, please ensure that stations are designed from the perspective of accessibility, given the significant use of the system by disabled passengers. In particular, an elevated platform (say, at the potential stop on Hawthorne) should be designed to account for wheelchair users and the quality of their experience. The breakdown of elevators experienced at contemporary Metro Rail sites today is a frustrating phenomenon for disabled riders. 669-2

Thank you for your consideration!

Subject: Green Line EIR Comment- Haaland

Thank you for the opportunity to comment on the Project/EIR.

My experience as a neighbor to the existing Greenline (Marine to Douglas segment) has been that noise is audible at my Manhattan Beach/Oak Avenue location approximately 1 mile away. Most noticeably at night.

My thought for the project, as I have received bits of information over the years, is to use an app-based self-driving NEV track on the existing railroad right-of-way as an alternative to conventional light rail. Substantial discussion has appeared to indicate technology for self-driving NEVs (or similar small electric vehicles) on isolated tracks is currently viable. I assume this can be done while maintaining some freight train functionality, and light/raisable bridging over primary streets to provide safe, continuous, confined paths for NEV trips. Advantages to this approach appear to include:

- Minimal noise compared to light rail.
- Minimal disturbance to the existing railroad right-of-way.
- Customized stops for rider flexibility.
- Flexibility to provide spurs to malls, beaches, and other significant destinations.
- Elimination of light rail power supply issues previously expressed for the project.
- Compatibility in converting existing Marine-to-Aviation/Airport light rail segment connecting to main Norwalk-to-Crenshaw light rail route.

670-1

Thanks again,
Eric Haaland

Subject: Metro expansion through Lawndale

Dear Metro Board Members,

We are writing to express our deep concern regarding the proposal to build the Metro Train Green Line down the ROW (Right of Way) and urge you to reconsider the route and consider an alternative path down Hawthorne Boulevard. 671-1

Our friends, who live alongside the ROW, are very dear to us, and we are extremely worried about their safety and wellbeing if the train were to be built down the ROW. They have shared their concerns about the train running through their backyard and the disruption it would cause to their daily lives. Their house is a peaceful haven that provides them with much-needed respite from the hustle and bustle of life. We fear that the noise and vibration from the train would cause them and their children immense stress and anxiety. 671-2

The ROW is also home to many trees and green spaces that provide a much-needed escape for the residents. The train's construction would result in the loss of these natural resources, which are essential for the mental and physical wellbeing of the community. 671-3

In contrast, Hawthorne Boulevard is a much more appropriate location for the Metro Train. It is a major thoroughfare that would cause fewer disruptions to the community. Building the train down Hawthorne Boulevard would not only be safer for our friends but would also provide a more convenient route for commuters. 671-4

We urge you to consider our concerns and the impact that the train's construction would have on our friends and the community living alongside the ROW. We strongly recommend building the Metro Train down Hawthorne Boulevard and ensuring the safety and wellbeing of our friends and community. As residents of the neighboring city of North Redondo, we consider Lawndale and the neighborhood surrounding ROW as a part of our larger community, and we want to look out for the quality of life and safety of our neighbors. 671-5

Thank you for your time and attention to this matter.

Sincerely,

Anna Mavromati Duncan

The DEIR Comment Period for the C Line (Green) Extension to Torrance Project Will Close Today, March 27, 2023

Reminder that the public comment period for the Draft Environmental Impact Report (DEIR) for the C Line (Green) Extension to Torrance project closes today, Monday, March 27, 2023. Public comments on the DEIR can be submitted through the end of today, March 27, by mail, email, or phone.

If you missed the public hearings, a video of the virtual public hearing is available on our website to view the presentation. The DEIR and other project documents can be found on the project website by visiting the documents section or go directly to metro.net/clineext/#documents. A 3D simulation video of the three possible alignments under evaluation is available at bit.ly/cletvideo. Please visit the project StoryMap for additional information at bit.ly/cletstory.

To access the DEIR and other project information, please reference the direct links below.

- Draft EIR (Full Document)

- Draft EIR (By Chapter)
- Draft EIR Appendices (By Appendix)
- Other Project Information Reports
- Public Hearing Presentation
- Public Hearing Meeting Boards
- Virtual Public Hearing Recording

Next Steps

Metro will be accepting comments on the DEIR through the end of today, March 27, 2023, when the DEIR will close for public review. Metro will share comments with the Metro Board of Directors later this spring/summer as part of project findings to help inform their selection of preferred alignment (called the Locally Preferred Alternative). All comments received during the DEIR public comment period will be formally responded to in the Final EIR (anticipated 2024). Metro will continue to collect general input after the DEIR public comment period closes and any comments received will continue to help inform the project.

You can submit your written feedback by email at greenlineextension@metro.net, by mail at the address below, or by phone at (213) 922-4004.

Contact Us

Metro invites you to stay involved and share your feedback.

El período de comentarios de DEIR para el proyecto de extensión de la línea C (verde) a Torrance se cerrará hoy, 27 de marzo de 2023

Recordatorio de que el período de comentarios públicos para el Borrador del Informe de Impacto Ambiental (DEIR) para el proyecto de Extensión de la Línea C (Verde) a Torrance finaliza hoy, lunes 27 de marzo de 2023. Los comentarios públicos sobre el DEIR se pueden enviar hasta el final de hoy, 27 de marzo, por

correo, correo electrónico o teléfono.

Si no pudo asistir a las reuniones públicas, hay disponible un video de la reunión virtual en nuestro sitio web para que pueda ver la presentación. El plan preliminar del Informe de Impacto Ambiental y otros documentos del proyecto se encuentran en el sitio web del proyecto visitando la sección de documentos o visitando directamente metro.net/clineext/#documents. Se encuentra disponible un video de simulación en 3D de las tres alineaciones bajo evaluación en bit.ly/cletvideo. Visite el esquema narrativo del proyecto para obtener más información en bit.ly/cletstory.

Para acceder al plan preliminar del Informe de Impacto Ambiental, consulte los siguientes enlaces directos.

- Plan preliminar del Informe de Impacto Ambiental (documento completo)
- Plan preliminar del Informe de Impacto Ambiental (por capítulos)
- Plan preliminar del Informe de Impacto Ambiental, Apéndices (por apéndices)
- Otros informes sobre el proyecto
- Presentación de las reuniones públicas
- Paneles de las reuniones públicas
- Grabación de la reunión pública virtual

Próximos pasos

Metro aceptará comentarios sobre el DEIR hasta el final de hoy, 27 de marzo de 2023, cuando el DEIR se cerrará para revisión pública. Metro compartirá los comentarios con la Junta Directiva de Metro más tarde esta primavera/verano como parte de los resultados del proyecto para aportar información para la selección de la alternativa preferida (llamada Alternativa preferida a nivel local). Todos los comentarios recibidos se responderán formalmente en el Informe de Impacto Ambiental final (previsto para 2024). Metro continuará recolectando la opinión del público luego que el Plan preliminar del Informe de Impacto Ambiental cierre y todo comentario recibido posteriormente ayudará a aportar información para el proyecto.

También puede hacer sus comentarios por escrito por correo electrónico a greenlineextension@metro.net, por correo postal a la dirección que se encuentra debajo o por teléfono al (213)-922-4004.

Submission 673

From: Sofia Merino [redacted]
Sent: Tuesday, March 28, 2023 2:56 PM
To: GreenlineExtension
Subject: Resident Comment

Hello,
I am a current resident in Lawndale, California and live a few houses down from the current railroad tracks and from your potential metro proposal is (Metro ROW Elevated/At-Grade Alignment (Proposed Project), Trench Option). I and many neighbors have many concerns about the proposal you are suggesting. One of the most pressing is regarding the residential disturbance that this will cause due to the noise and overall construction. As well as from Condom Street from 162nd street to 170th street it is a one way that is necessary for residents to reach their houses that would cause an issue for many. 673-1

This project would completely change the neighborhood for the worse. The train/freight cars that pass by the tracks cause little disturbance to the neighborhood and the metro would cause a drastic change. If you must go through with this project you should vote for the Hawthorne option. It would cause the least amount of residential change for all cities involved. The Hawthorne option also allows for a better overall option for your project. It would allow for a more public view of your metro line and its very location would promote the usage of it. When everyone is stuck in traffic on the freeway or on Hawthorne boulevard they will see the metro and influence them to take the metro instead of driving. Having this metro line go through the residential areas will affect thousands of families and would be a devastating mistake. Please take these concerns seriously. 673-2 673-3

Thank you,
Rosalia Merino

SUBJECT: SCH# 2021010269; C Line (Green) Extension to Torrance Project - Draft Environmental Impact Report

Dear Ms. Sheridan,

The California Public Utilities Commission (Commission) has jurisdiction over the safety of highway-rail crossings (crossings) and rail transit projects in California. All rail fixed guideway systems are subject to the Commission's Safety Oversight Program requirements. Safety Certification Plan (SCP) approval and Safety Certification Verification Report (SCVR) approval is required for rail transit projects to be placed in revenue service. In addition, the California Public Utilities Code requires Commission approval for construction or alteration of crossings and grants the Commission exclusive power on design, alteration, and/or closure of crossings in California. The Commission's Rail Transit Safety Branch (RTSB) will review rail transit project matters and the Rail Crossings and Engineering Branch (RCEB) will review crossing matters. The Commission has received a copy of the *Draft Environmental Impact Report (DEIR)* from the Los Angeles County Metropolitan Transportation Authority (Metro), who is the lead agency for the proposed C Line (Green) Extension to Torrance Project (CLGET Project).

According to the DEIR, the CLGET Project is a light rail transit (LRT) project that would extend for approximately 4.5-miles from the existing Redondo Beach (Marine) Metro C Line (Green) Station southeast to the Torrance Transit Center (TC), along the Metro-owned Harbor Subdivision railroad right-of-way (Metro ROW), with a combination of elevated and at-grade segments. The Project Area includes portions of the Cities of Hawthorne, Lawndale, Redondo Beach, and Torrance.

Alternatives studied include a No Project Alternative and three Project Alternatives, as follows:

- **Alternative 1: Proposed Project (Metro ROW)**
  Consists of a 4.5-mile segment along the Metro ROW, that will remain shared with freight service. The freight track will be shifted to one side of the right of way to accommodate two light rail tracks. This alignment is comprised of a combination of elevated and at-grade segments. This alignment includes six grade-separated crossings in the north (between Inglewood Ave and 162nd Street) and two at-grade crossings at 170th Street and 182nd Street. The freight track will remain at grade at existing locations.

Alternative 1 has two Options:

- **Option 1: Trench Option along Metro ROW alignment**
  The Trench Option follows the same alignment as the Proposed Project, with a combination of below grade (trench) and at-grade segments. In the northern part of the alignment, the light rail would travel in an open-air trench for approximately two miles, crossing under eight streets between Inglewood Avenue and 182nd Street. At-grade segments are proposed between 173rd Street and Grant Avenue and south of 182nd Street, where the light rail would cross over existing grade-separated crossings (bridges) at Artesia Boulevard, Grant Avenue, Hawthorne Boulevard, and 190th Street. This option would be entirely grade-separated with no rail crossings at street level. South of 190th Street, the alignment and Torrance TC Station would be identical to the Proposed Project.

- **Option 2: Hawthorne Boulevard Option (entirely elevated)**
  The Hawthorne Option would start within the existing Metro ROW at the Redondo Beach (Marine) Metro C (Green) Line Station, leave the Metro ROW to parallel I-405 between Inglewood Avenue and Hawthorne Boulevard, and follow Hawthorne Boulevard south between 162nd Street and 190th Street. The entire alignment within the Hawthorne Option segment would be elevated, for approximately 2.7 miles. South of 190th Street, the alignment and Torrance TC Station would be identical to the Proposed Project.

- **Alternative 2: 170th/182nd Grade-Separated Light Rail Transit**
  The 170th/182nd Grade-Separated Light Rail Transit Alternative would be identical to the Proposed Project (Alternative 1) in the north with an elevated segment of light rail between Inglewood Ave and 162nd Street. In the south, the light rail would be grade separated from the roadways at 170th Street and 182nd Street, with the light rail tracks located below street level in a trench. Between 170th Street and 182nd Street, the Alternative would be identical to the Trench Option (Option 1). All other aspects of the project would be the same as the Proposed Project. This Alternative would be entirely grade-separated with six over-crossings in the north (between Inglewood Ave and 162nd Street) and two below-grade crossings at 170th and 182nd Streets.

- **Alternative 3: High Frequency Bus (HFB)**
  The HFB Alternative would implement a rapid bus service instead of a light rail extension. The bus line would be a local express service with some bus rapid transit characteristics. The service may be as frequent as that proposed for light rail, though its ability to attract ridership would be less due to less travel time savings and fewer amenities. The buses would operate in mixed-flow traffic with transit signal priority systems, which give priority to transit vehicles at signalized intersections by giving an early green signal or holding a green signal. There would be a total of four bus stops between the existing Redondo Beach (Marine) Station and Torrance TC, compared to two light rail stations in the Proposed Project. Travel times from end to end would be about 25 minutes, which is faster than local bus service (approximately one hour, with a transfer), but slower than the travel times expected from the Proposed Project (approximately seven minutes).

The CLGET Project described in the DEIR is subject to several rules and regulations involving the Commission. These may include, but are not limited to:

- California Public Utilities Code, Sections 1201 et al, which requires Commission authority to construct rail crossings,
- California Public Utilities Code, Section 99152; rail transit safety,
- Commission's Rules of Practice and Procedure, which detail the Formal Application process for construction or modification of public crossings. These are available on the CPUC web site. www.cpuc.ca.gov

675-1

The design criteria of the proposed CLGET Project must comply with Commission General Orders (GOs), such as:

- GO 26 series, Clearances on Railroads and Street Railroads With Reference to Side and Overhead Structures, Parallel Tracks, Crossings of Public Roads, Highways and Streets,
- GO 72 series, The Construction and Maintenance of Crossings At-Grade of Railroads with Public Streets, Roads and Highways in the State of California (if any),
- GO 75 series, Standards for Warning Devices for At-Grade Highway-Rail Crossings in the State of California (if any),
- GO 88 series, Rules for Altering Public Highway-Rail Crossings (if any),
- GO 95 series, Overhead Electric Line Construction (if catenary is used),
- GO 128 series, Construction of Underground Electric Supply and Communication Systems,
- GO 143 series, Safety Rules and Regulations Governing Light-Rail Transit, and
- GO 164 series, Rules and Regulations Governing State Safety Oversight of Rail Fixed Guideway Systems

675-2

The project must ensure compliance with federal regulations including:

- 49 CFR Part 674, State Safety Oversight

675-3

The following link provides resources on the Commission's rules and regulations regarding rail safety: https://www.cpuc.ca.gov/about-cpuc/divisions/rail-safety-division

While the DEIR identified less than significant impacts to Transportation and Safety for the Light Rail Alternatives studied, it is important to note that two of the crossings in the Proposed Project are planned at-grade. The at-grade crossings at 170th Steet and at 182nd Street are existing freight track crossings. The Proposed Project would modify each 1-freight track crossing into a wider 3-track crossing (2-light rail & 1-freight) and increase the frequency of train activity. Both crossings are in residential communities and the 182nd Street crossing is located approximately ¼ mile from Adams Middle School and Washington Elementary School. The impact to safety of pedestrians at these locations must be evaluated and mitigated. If the Proposed Project is selected, Commission staff recommend Metro also select either Option 1 (Trench Option) or Option 2 (Hawthorne Option) as both options consist of entirely grade separated light rail crossings and will eliminate the potential for future light rail related crossing incidents.

675-4

The DEIR also identified significant impacts due to noise as a result of the combination of relocated freight tracks and light rail noise, as well as overall train service operations for Alternatives proposed along the Metro ROW. The DEIR also indicates that Metro proposes to mitigate these noise impacts by designing and modifying all at-grade crossings to include all required equipment needed to allow local jurisdictions to designate a quiet zone. Additional proposed mitigation measures include requesting authorization from the Commission to: (1) install bell shrouds (PF-NV-2) on crossing warning device bells, and (2) implement a gate-down-bell-stop variance (PF-NV-3). The Commission's RCEB staff will not support a gate-down-bell-stop variance, as the audible warning provided by bells will remain the only source of audible warning afforded to pedestrians if a quiet zone is established along this rail corridor. Thus, Metro should not assume that a gate-down-bell-stop variance will be authorized as a noise mitigation measure. Metro should reevaluate noise impacts without the availability of a gate-down-bell-stop variance as a mitigation. 675-5

We understand that this is a complex and challenging project with funding, design, and environmental approval considerations for Metro. Assuming the project advances in some form, the Commission will need to provide applicable regulatory oversight for the CLGET Project. Oversight activities include approval of the CLGET Project SCP and SCVR, selected document reviews, sampling inspections, participation in fire-life safety and safety-certification related meetings, and pre-revenue testing observations. Commission staff will provide the CLGET Project team a project-specific Safety and Security Certification Oversight Plan (SSCOP) after Commission approval of CLGET Project's SCP. The SSCOP will detail Commission staff's oversight process and activities prior to the Project's proposed revenue service date. 675-6

The proposed project must also conform to the goals of the CPUC's Environmental and Social Justice Action Plan. This includes improving safety and access to transportation, improving local air quality and public health, and expanding outreach and public participation opportunities in disadvantaged communities. For more information, please visit https://www.cpuc.ca.gov/esjactionplan . 675-7

We encourage early coordination between Commission staff and Metro personnel in order to provide consultation on proposed design and engineering of the CLGET Project prior to Metro filing applications seeking Commission authorization to construct.

Thank you for the opportunity to comment on the Metro's DEIR for the CLGET Project. We look forward to working with Metro. Please feel free to contact me at (916) 803-0736 or daren.gilbert@cpuc.ca.gov or contact our lead staff on this project: Madeline Ocampo at (213) 503-5243 or madeline.ocampo@cpuc.ca.gov for transit safety matters, and Jose Pereyra at (213) 479-0181 or jose.pereyra@cpuc.ca.gov for crossing matters.

Subject: Choose Hawthorne Blvd for the Metro C Line / Green Line Extension

Dear Metro Board Members,
Please have some understanding.
I am writing to express my strong disapproval for routing the proposed C (Green) Line extension down the current Metro right of way through residential neighborhoods in Lawndale and Redondo Beach. I am urging you and the board to choose the Hawthorne Boulevard elevated option instead for the following reasons: 688-1

- NEIGHBORHOOD QUALITY OF LIFE: The ROW option would send 200-300 trains per day through quiet residential neighborhoods from 4 AM until Midnight. This will permanently affect the quality of life for more than 1,000 families in Lawndale and North Redondo Beach. Metro's own environmental impact report states increases in NOISE and VIBRATION will be "Significant" and "Unavoidable." This is in addition to 3-5 years of significant construction-related impacts to the neighborhood. 688-2

- SAFETY: In some spots, the ROW option will move an existing freight track to within 8-10 feet of fence lines. This track currently sees trains carrying highly flammable and dangerous petroleum products between two oil refineries. Even a minor derailment -- even at slow speeds -- would put petroleum tanker cars into homes and backyards. This freight line already has a history of previous derailments. 688-3

In addition, the ROW has multiple high-pressure petroleum pipelines buried in unstable soil. Construction of the C Line down the ROW presents a danger to those pipelines even if all safety protocols are followed. Even one slip-up could be catastrophic to the neighborhood. 688-4

- LOSS OF GREEN SPACE: The ROW -- for better or worse -- is utilized as much-needed green space in the City of Lawndale. Not only that, it offers a respite from urban sprawl with tall, mature trees and views of the San Gabriel Mountains in the distance. What is now a park-like community along the ROW will be replaced with giant walls that will bounce train noise and destroy views of the horizon. 688-5

- RIDERSHIP: Routing the Metro C Line down Hawthorne Boulevard would see more ridership than the ROW option as it passes by businesses and landmarks people want to visit. This includes a station in front of a planned mixed-use residential development at the South Bay Galleria. 688-6

I implore you to listen to the voices of the community when selecting which option to build. This is a 100-year project that will have PERMANENT impacts on a community already disadvantaged compared to neighboring South Bay cities. When considering costs, look at not only the financial costs, but the societal and environmental costs as well. Do the right thing, get it right for future generations and choose HAWTHORNE BOULEVARD for the Metro C Line Extension. 688-7

Thank you,

—— Michael Valdez

Submission 695

From: MIKE KIM [redacted]
Sent: Wednesday, April 12, 2023 12:52 PM
To: ServiceCouncils ServiceCouncils@metro.net
Subject: no to Row

Hello,

Even with all of the recent freight train derailments, there was yet another freight train derailment reported in San Bernadino yesterday (Mar 27th). There is clearly a difference in the safety protocol for passenger trains vs. freight trains. If the Los Angeles Metro board votes to have the C Line extension along the ROW, as a resident living along the ROW, I have concerns as follows:

- I question if Metro will rebuild the freight line with the same safety standards as the passenger lines.
- I am concerned that Metro does not have the civil and structural engineers available to design and plan out the freight line to the same safety standards as the passenger lines
- I am concerned that Metro will try to certify the rebuilt freight line to handle more freight cars and freight trains to higher speeds. Recent catastrophic freight derailments are evidence that freight cars / containers are not all maintained adequately; and increased freight traffic would increase the risk to all who reside along the ROW. It only takes one faulty rail car to cause a derailment!

695-1

The freight line in its current condition and current usage has been derailment free for many decades and is proven to be safe based on its history. Moving the freight line several feet to the west so that 2 commuter lines can squeeze in the ROW will not drive towards a safe rail design as the design layout engineering team will compromise safety concerns for the concern to squeeze everything into the limited space along the ROW.

695-2

Please demand that your Metro team takes another look at the Hawthorne Blvd option. Let's keep the commuter train line away from the freight line where ever we can and let's leave the freight line alone.

695-3

respectfully,

Michael Kim

Subject: no to Row

Hello,

the Metro EIR for the commuter C line extension to the Torrance bus station has projections for the number of commuter trains that will travel using those lines and their impact is considered in the report.

However, the EIR does not have any projections as to how the freight traffic along the Metro ROW will change after it is built. Metro has presented how the freight rail lines will be improved and will be quieter after it is built, however it is silent regarding projected increased freight traffic after it is built, which is concerning.

I know if Metro rebuilds the freight line along the ROW, it will want to certify it to be able to pass more freight through those lines, which will have additional noise and vibration impacts not mentioned in the EIR. 695-4

Please direct the Metro team to update the EIR report with impact studies due to increased projected freight with the ROW options.

Respectfully,
Michael Kim

Subject: no to Row

Hello,

I read in last week's Metro train ridership report that ridership on the Los Angeles Metro rail system is half of where it was precovid. I can't see why Metro continues to build and expand commuter train lines when the riders are not there. Case in point is the C line extension to the Torrance bus depot next door to the Torrance refinery for $2-3 billion. 695-5

Don't see waiting for a bus or train next to a refinery belching toxic fumes as a good way to start or end a day! The Torrance bust depot is desolate and empty at night and please consider the higher possiblity for crime/ physical safety issues for any riders getting off a later train and need to walk or ride a bicycle to get to their destination. Seems like the funding could be better used for Metro rail projects that actually go to a destination such as a rail extension to SoFi stadium. 695-6

please recommend the 'no rail' option for the upcoming vote on the C Line extension to Torrance. This proposal to add rail to the C Line to Torrance will not improve Metro's ridership metrics nor will it serve the South Bay communities. 695-7

Hello,

Due to recent freight railway catastrophes, there is an emerging bipartisan movement in Congress demanding lasting changes to improve railroad safety demanding a deeper study into the options that ensure rail safety. Please pre-emptively consider the legislation that will emerge from these investigations and look deeper into the C line extension with regards to safety. 695-8

Metro has a third option of an elevated commuter train that would travel up Hawthorne Blvd or an approval for 'no train' with high frequency transit buses in dedicated bus lanes- these would be the best options to safely serve the community. 695-9

respectfully,

Michael Kim

Subject: no to Row

Hello,

With the recent catastrophic freight train derailments, I am very concerned with the possibility of a derailment with both of the 2 ROW options. The safest route for the existing freight line along the ROW is where it is now, based on the fact that there has not been a derailment in decades. Moving the freight line closer to the residents on the west side of the tracks and squeezing in 2 Metro commuter rail lines along the ROW will not make it safer for the Lawndale and Redondo Beach communities. BNSF had 2 recent train derailments, the most recent one was last Thursday 3/16/2023 in Washington State where 5000 gallons of diesel fuel spilled. 695-10

Please reconsider and do not recommend to the Metro board either of the 2 ROW options for the C Line extension to the Torrance Station. 695-11

respectfully,

Michael Kim

Hello,

Los Angeles Metro, I am highly concerned with Metro's plan to build the C line extension along the Metro owned ROW due to the numerous gas pipelines going along it and the risk of explosions during construction. 695-12

In light of recent freight railway catastrophes please look deeper into the Hawthorne Blvd route option. 695-12

respectfully,

Michael Kim

April 10, 2023

Dear Metro Board Members,

I have sent several letters to Metro and have copied you on them. I am opposed to the Metro Green Line Extension running down the Right of Way (ROW) through the peaceful Lawndale and Redondo Beach neighborhoods, and believe it belongs in the business corridor along Hawthorne Boulevard. My neighbors and I would like to extend an invitation to all of you to come and see first hand what we are talking about. We would be happy to give you a tour of the neighborhood at your convenience. I look forward to hearing back from you. 698-1

Sincerely,

Colleen M. Villegas

From: Suzan Hubert [redacted]
Sent: Thursday, April 6, 2023 9:16 AM
To: GreenlineExtension
Subject: Native Plants

Greetings,
I am writing to you because I would like to encourage the Metro to plant native plants along the new train route in Torrance. Plants such as lupine, milkweed, poppies, buckwheat and sycamore trees require almost no maintenance once established. They are adapted to live on natural rainfall thus saving water and maintenance of a watering system. Native plants are interesting as they bloom and produce seeds attracting butterflies and birds. Metro could install interpretive panels by stations to educate passengers about native plants while they wait for a train. 699-1

There are several local groups such as the California Native Plant Society, that could assist Metro staff in selecting plants.

Sincerely,
Suzan Hubert,
Torrance resident

I've lived here for the past two years as an undergraduate and now law student. I moved here precisely because of how peaceful and quiet it is here. I also work from home as a tutor for other fellow students. By enacting the propose line extension in Lawndale, it will devalue that decision and make working from home extremely difficult. Please reconsider this proposal that will dramatically decrease the quality of life for everyone in the surrounding homes, many of which have lived here in quiet peace for decades. 704-2

Dear Metro Board Members,

I am writing to express my strong disapproval for routing the proposed C (Green) Line extension down the current Metro right of way through residential neighborhoods in Lawndale and Redondo Beach. I am urging you and the board to choose the Hawthorne Boulevard elevated option instead. 708-1

As a resident of 10+ years in this community, it has not been easy living next to the train tracks. It has required my family and I to take serious precautions when walking or even driving across the train tracks. Especially after having a toddler. We've limited our travel through the train tracks to get to Inglewood Ave seeing as we've personally witnessed how the train never stops for wild life or pets that get loose. The addition of the C-line is not only a life and death issue but also a disruption to our way of life. We have enough with the noise and vibration the train causes multiple times a day. 200-300 passes of the metro line a day is excessive and unnecessary when there is a clear solution which is to build on Hawthorne Blvd where people can have a more direct path to commercial areas and businesses. Please take our livelihoods into consideration and opt to not disturb our community's residents and the little wildlife area we still have left. Thanks. 708-2

Subject: Public Comment - Metro Greenline Extension

The failed politicians in the letter below do not speak for the stakeholders and residents of Lawndale and Redondo Beach. Quite the opposite. They have opinions that are their own and not ours. We have commented substantially on the defective CEQA document circulated by Metro and on the many public health damages from using the right-of-way. I am disappointed that former, failed politicians are still polluting our cities. 711-1

Certainly,

Dear Metro and Metro Board Members,

I cannot stress enough, the environmental impact the ROW path will have on it's residents, wildlife, families and friends. 712-1

We are not Los Angeles proper here
We are neigbors visiting neighbors here
We are generations raising generations here
We are a dog walkers, nature enjoying, RESIDENTIAL neighborhood here

Please, Do not run your trains in our backyard. 712-2
Please, consider the lives that will be emotionally, even physically impacted HERE.

Can you imagine a derailment??!? 712-3
Can you imaine YOUR families living here?!!!!

Hawthorne Blvd is the clear choice 712-4

Please

For the sake of our lives
Not rider lives
Nor profit
For the serenity our greenway provides our people

For your conveniences
For our children

Thank you for considering.... the folks that actually live here

Submission 768

Would you like to leave any comments regarding this project?

I have numerous negative comments on this project's placement. First of all, there is already an area for a railroad system at the ROW. It makes no sense to tear up Hawthorne Blvd. when there is already a ROW system nearby. The residents at the ROW were aware of the tracks when they moved to that location. The train tracks at the ROW have been at that location for over fifty years.

I have lived at my residence (177th St.) for forty years with no awareness of a train to be put in on Hawthorne Blvd. The Metro train system would devastate the neighborhood on the east side of Hawthorne Blvd. south of Artesia. As a result, the property values in this neighborhood would drop. The noise from night and day construction would be a nightmare for those who live adjacent to the construction. Additionally, once the train has been built, the noise from the train would also impact the area. 768-2

At the ROW there will be noise mitigation in the form of a wall, a trench system for the tracks, and a walking path for the residents. For us on the Hawthorne Blvd. option there is none of that for these residents. So, we will have to live with constant noise and vibration from the project, both during construction and after construction. 768-3

Redondo Beach is already building its transit center at the ROW, so why would the train not stop there. It makes no economic sense to use Hawthorne Blvd. when there already is a ROW with a transit center being built at that location. 768-4

If the train is to go down Hawthorne Blvd, the City of Torrance would lose numerous businesses as a result of the train. And this would be a negative impact to the City of Torrance. Additionally, the construction of this project would heavily impact an already congested road system at Hawthorne and Artesia. 768-5

Finally, another impact of the train going down Hawthorne Blvd. is that the train system would be under the enforcement of the Sheriff's Dept. The Torrance PD would have very little enforcement in this area. As a result, crime in this area would go up. 768-6

The Metro system has admitted that the program has not been fully funded, so this in itself is a poorly organized project. There is nothing good about this project coming down Hawthorne Blvd. and into Torrance. 768-7

Thank you.

Please give the Right of Way to the train rather than cars when it is at-grade. We want to encourage more people to ride the train. If the train is stuck in traffic, the argument to get people out of their cars is less strong.

Would you like to leave any comments regarding this project?

We live on Hawthorne across from the galleria mall and would lose all landscaping, trees, and buffer area between Hawthorne Blvd and our home if Hawthorne is widened to accommodate the overhead line if it runs along Hawthorne. There would be an additional stop light for pedestrian crossing and a station adjacent to our home. This would slow down Hawthorne traffic even more and have cars idling even more in front of our home between 177th street and Artesia. That would cause more noise and pollution blowing downwind to our home just east of Hawthorne. The Right of Way extension is less expensive, would run along an existing train line ROW, and allow for landscaping and other enhancements along the ROW. There would be no additional landscaping or benefits for our home and our neighbors as shown on the latest Metro designs for the Hawthorne option. Please keep the train line extension on the existing train Right of Way. Thank you.

Would you like to leave any comments regarding this project?

I have been a resident in Torrance for over 40 years. My family moved to North Torrance in the 70s and I now am married and raising my children here as well. Though we have seen and welcome changes in our city, we believe in maintaining the integrity of our neighborhood on 176th Street to 179th between Hawthorne Blvd and Prairie Ave. As a resident on the corner of 176th Street and Hawthorne Blvd, we believe adding the Metro C-line on Hawthorne would be detrimental to this neighborhood. Extending the Metro on the ROW offers many benefits like potential subterranean rail, landscaping, bike paths. In contrast, extending the Metro on Hawthorne would only offer a large structure, more traffic with additional pedestrian crosswalks, creating the potential for more congestion and accidents. Please keep the Metro on the ROW, where it would be safer and benefit the South Bay in many more ways and be less disruptive to an already congested Hawthorne Blvd. Thank you.

It does not make any sense to put the rail anywhere other than the Right of Way! Putting in down Hawthorne Blvd will take away precious land in an already congested area that is used for vehicles and other public transportation. It would be much more costly to put down Hawthorne Blvd than putting it along the already existing Right of Way!

[redacted]

Would you like to leave any comments regarding this project?

I support using the existing ROW to get the project built faster and cheaper for a comparable level of service. Also, @Torrance Transit please get the city to invest more in transit and bike infra improvements before the extension opens, the location of the new transit center in an industrial area with no easy access to old town is unfortunate; and Torrance Transit has some of the worst headways in the region. 874-2

Would you like to leave any comments regarding this project?

This railway would've been hugely beneficial to my sister, who had to drive out to the Redondo beach station every day to get to her internship in LA. It will make it much easier to reach LA from the heart of the South Bay and vice versa.

Torrance resident, Exec Dir of Walk Long Beach

If you would like to be updated about this project in the future, please add your phone number or email address.

[redacted]

Would you like to leave any comments regarding this project?

The Hawthorne alternative will be more expensive and disruptive to build. It won't provide better service to the business corridor and is a really bad idea. Having seen how the A Line divides Long Beach Boulevard, but doesn't improve transit access, I'm strongly opposed. 889-2

Lifelong South Bay resident and employee

If you would like to be updated about this project in the future, please add your phone number or email address.

Would you like to leave any comments regarding this project?

The original plan was to utilize the existing railway. It made the most sense and had the least amount of area disruption. I lived very close to that railway for two decades. ALL of the are residents understood the cons of living by an active railway. We also knew there were future plans to extend the "Green Line" using that right of way. Mitigate noise and use walls and undergrounding when plausible. There is a reason ALL of the area residents homes cost less than those further away from the rail. It is ridiculous that people would buy/rent homes near an existing feature, then whine and complain that they want the feature gone.

I think it's fantastic the South Bay is serious about improving public transit and making it more accessible will help tremendously. We moved down from the Bay Area which was abysmal (mid-Peninsula area). Before that we lived in New York City, so we appreciate (and used) good transit when it exists! 900-2

As LA Metro evaluates the future of transit in the South Bay, share your thoughts on a future light rail route. Please complete the attached survey and mail it back, or take it online at tinyurl.com/CLineExt or by scanning the QR code.

As a City of Torrance resident, I would like to share my opinion on what light rail route I would like in the South Bay. *[Check one or more boxes]*

☒ Proposed Project: Metro Right-of-Way Elevated/At-Grade ☐ Trench Option ☐ Hawthorne Option

958-1

SAFETY & SECURITY FOR TORRANCE!

3/23/23

Additional Comments on the Draft Environmental Impact Report:

Long support this Metro extension so long coming. Now have serious safety concerns with Metro bringing Zombies, crime, drugs to our fair city of Torrance Lets not do this if Metro makes Torrance unsafe. Trench & overhead options cost too much in money and delays. I will be dead before they finish 1st 5 miles.

As LA Metro evaluates the future of transit in the South Bay, share your thoughts on a future light rail route. Please complete the attached survey and mail it back, or take it online at tinyurl.com/CLineExt or by scanning the QR code.

We bank in Torrance, Eat in Terrace for our Business. Church

As a City of Torrance resident, I would like to share my opinion on what light rail route I would like in the South Bay. *(Check one or more boxes)*

☒ Proposed Project: Metro Right-of-Way Elevated/At-Grade ☐ Trench Option ☐ Hawthorne Option

But extended to South (Carson St) Sepulveda Lomita – San Pedro Please –

1000-1

Additional Comments on the Draft Environmental Impact Report:

BLue Line does not come near us. (Just off Carson between Vermont + Normandie) This new center/end of line won't either. Could it extend to Carson ~~BLVD~~ Street & Sepulveda? Lomita? or San Pedro would make sense

As a City of Torrance resident, I would like to share my opinion on what light rail route I would like in the South Bay. *[Check one or more boxes]*

☒ Proposed Project: Metro Right-of-Way Elevated/At-Grade ☑ Trench Option ☐ Hawthorne Option

1001-1

Additional Comments on the Draft Environmental Impact Report:

Continue along the Metro ROW to Western + Sepulveda! Better yet, link up with Silver or Blue lines to truly connect the South Bay. Hawthorne route is a waste of time + money.

1004-1

☑ Proposed Project: Metro Right-of-Way Elevated/At-Grade ☐ Trench Option ☐ Hawthorne Option

Additional Comments on the Draft Environmental Impact Report:

1) Need to ensure no traffic gridlock (like P.)
2) Plan for hookups to rail (e.g. Del Amo) via bus
3) Good if ready in time for Olympics
4) Trench is worst option due to [illegible]

Share Your Thoughts on Extending Light Rail to Torrance!

As LA Metro evaluates the future of transit in the South Bay, share your thoughts on a future light rail route. Please complete the below survey.

As a City of Torrance resident, I would like to share my opinion on what light rail route I would like in the South Bay.

- [ ] Proposed Project: Metro Right-of-Way Elevated/At-Grade
- [x] Trench Option
- [ ] Hawthorne Option

1053-1

Additional comments on the Draft Environmental Impact Report

Trench option is safer from a car/pedestrian point of view. Also the little sound that is generated from the trains are not projecting towards residential neighborhoods.

1064-1

Additional comments on the Draft Environmental Impact Report

Any mass transit NEEDS to be Clean, Safe and Family / Kid friendly or it will fail. Mass transit isn't for drug users or a "Homeless Hotel." If you want it to succeed it MUST be Clean, Safe and Family / Kid friendly.

As a City of Torrance resident, I would like to share my opinion on what light rail route I would like in the South Bay. *(Check one or more boxes)*

☒ Proposed Project: Metro Right-of-Way Elevated/At-Grade ☐ Trench Option ☐ Hawthorne Option

1083-1

Additional Comments on the Draft Environmental Impact Report:

I selected this option because it can be done without political drama. The others although perhaps better solutions, are not approved & will require decades of litigation to get approved.

Submission 1094

Share Your Thoughts on Extending Light Rail to Torrance!

As LA Metro evaluates the future of transit in the South Bay, share your thoughts on a future light rail route. Please complete the below survey.

As a City of Torrance resident, I would like to share my opinion on what light rail route I would like in the South Bay.

- [x] Proposed Project: Metro Right-of-Way Elevated/At-Grade
- [ ] Trench Option
- [ ] Hawthorne Option

1094-1

Additional comments on the Draft Environmental Impact Report

I feel this option is best for the city. It would cause the least amount of disruption to our city. I would really not like an elevated train going down Hawthorne Blvd.

1199-1

Additional comments on the Draft Environmental Impact Report

I am grateful for the care and insight that has gone into developing the proposed light rail project to serve all of our community members. We should all appreciate the forward thinking efforts to effectively meet the needs of our children and grandchildren AND BEYOND. Some inconvenience now will provide crucial transportation links in the future. This is bigger than us. I live just off an active rail track, and I could see this become another link in the future, and I'm ok with that. Because it is bigger than me, it is about the greater good and the environment in the future.

1204-1

Additional comments on the Draft Environmental Impact Report

As someone that takes the A line, there are too many delays and unreliable arrival times when having the train mixed in with traffic. Elevating it would make for more reliable times and better usability.

- [ ] Hawthorne Option

Additional comments on the Draft Environmental Impact Report

I have several concerns about having a rail go through the city. Im concerned about its ability to bring more crime and homelessness to our city. 1206-1
I am also concerned about the cities ability to find a project like this. Use these funds for safety programs and to get rid of the homeless and street vendors. This is not down town LA this is a suburb and I would like to see it kept that way. 1206-2

Additionally, related to the funding problem. I would recommend the city take a look at the failed rail project in Oahu. The project has been “in progress” for at least the past 10 years or so. Hawaii has been struggling to complete this project due to lack of funding now it’s just a huge expensive eyesore causing traffic congestion due to the unfinished construction.
Don’t do it Torrance. As a native to the Southbay I’m concerned about the future of our city.

- [ ] Hawthorne Option

1207-1

Submission 1207

Additional comments on the Draft Environmental Impact Report

Quiet-zone ready is a great initiative but requiring the local city to implement is essentially a non-starter. Trenching seems like a bad idea with potential for more debris, fall accidents, and places to tag. The trenching option also has elevated portions of track. The at-grade seems to be the best option, especially if cities actually complete the quiet-zone requirements. 1207-2

The trouble with ridership in LA is that there is plenty of parking everywhere outside of downtown, so it is too convenient to drive even with the terrible traffic. I suspect most users of the line would be those transiting to and from Downtown LA and South Bay. This Line would not increase foot traffic in the South Bay, especially with only 2 stops around nothing. No one is taking a hour train ride to transfer to another 20 minute bus ride in the South Bay. 1207-3

The Hawthorne Option would be the best for the potential of supporting South Bay businesses. But, would require a stop every 2 blocks or so to allow for walking. It would also need to reach the Del Amo Mall as a more attractive destination for those in other parts of LA. But the Del Amo Mall has thousands of parking spaces and mostly apparel shops - no one is taking an hour train ride to lug home bags of clothes. I don't see it being a feasible option for the extension in terms of ridership. 1207-4

As someone who has had to take Metro out of necessity in the past as a broke college student with no car, I don't see how this line would help those in a similar situation. Maybe it will decrease rush hour traffic on the 405 or 110 for workers who choose to use the new Line. My vote is to make it as simply as possible, but with dense multi-level parking structures at the Transit Centers to support those potential workers who would be the main riders for this line extension. Give companies an incentive to get their workers using the line. Incentivize the cities to complete the Quiet-zone crossings so that nearby residents don't need to hear the freight horns blaring anymore. I'd vote for additional tracks and trains if it resulted in the neighborhood becoming a Quiet Zone. 1207-5

- [ ] Hawthorne Option

1220-1

Additional comments on the Draft Environmental Impact Report

Southbay has a lot of great sightseeing spots, huge shopping malls, and tremendous number of big and small local restaurants people love. People always think it is inconvenient to drive over because of 405 and 110 traffic any day in the week. We are very behind on public transportation system. We can't wait longer and it keeps on delaying our connectivity to other metro LA cities. The best choice is to reuse the existing available old rail way which is the most time and cost efficient plan. Then, Torrance bus system should be restructured and improved a lot to meet our future needs while currently it is very outdated and does not meet the standard of a metropolitan city.

- [ ] Trench Option
- [ ] Hawthorne Option

1224-1

Additional comments on the Draft Environmental Impact Report

Concerned for impact of homeless traveling to the end of the line here in Torrance and adding to trash, crime, and behavioral emergencies leading to added workload of public safety and less availabilty for them to assist paying taxpayers of the City. I saw this first hand in West LA and Santa Monica. This will also occur here in Torrance if light rail is built and especially if it terminates here..

- [ ] Hawthorne Option

Submission 1233

Additional comments on the Draft Environmental Impact Report

Before spending over $2 billion dollars to build a 4 mile metro rail, I respectfully ask the city of Torrance to reconsider your stance on building this.

1233-1

I support the no build option for the following reasons listed below. I think investing in micro services is a better Alternative. As a current Torrance homeowner I'm Very concerned since I live close to both proposed locations:

Crime & Drug Usage concerns
In the recent 2022 survey of metro riders they found that they shared growing concerns over safety (crime) , homeless, and harassment.
36% increase in violent crime (according to Metro data).
In the 2.23.23 Metro board meeting the following alarming issues where shared:
21 deaths took place as of February on Metros and 21 was the total from last year-This is a sharp increase
98% of complaints from your current riders- In 2022, Metro received 1,385 Incidents reports on users having/doing drugs on Metros
The South Bay Galleria just had a shooting last weekend. Can we allocate some of these $2 billion + dollar funds to keeping our City safe?

Homeless concerns:
"Metro took a point in time count in August, and they found that there were 4,100 individuals who appeared to be homeless on their buses and about 1,500 on their rail,". With recent rain and cold temps, Im sure this number has increased.
I live at the end of a bus stop near the South Bay Galleria. I have seen many homeless people at the end of the bus line already. At the corner of the end of the bus line there is a Rapls. I spoke to workers at the Ralphs and they have shared that homeless people have been stealing from them and recently attacked a security guard. They attribute the homeless attacks to the end of the bus running on Hawthorne blvd.
There is a homeless person on ever block on my way home from work today and the number
Keeps increasing..

1233-2

Cities with Metro Rails Already Have Issues and Are Getting No Answers From The Metro:
Long Beach has been in the news for the explosion of homeless in their community due to Metro rail.
As of 1.27.23 a recent article states: Long Beach residents are once again up in arms about the lack of change when it comes to the rampant increase in the homeless population in the area and the crime that has come with it. Nancy Downs, a local business owner, said that in recent years her business has been subjected to an array of vandalism, which she believes is a result of the fact that transient riders of the Metro train system are essentially dropped off on her doorstep, thanks to the train line's policy to kick riders off at their final stop in Downtown Long Beach. Full article is here:
https://www.cbsnews.com/losangeles/news/metro-opts-not-to-change-end-of-line-rules-looking-into-creation-of-hub-at-willow-street-station/
Please see city council meeting from Long Beach and hear residents and business owners voice their concerns. https://abc7.com/long-beach-homeless-la-metro-a-line/12298132/

Drop In Rail Riders:

Submission 1233

Based on a Metro survey of riders that use rail services at least 3 times a week there has been 14% decline since 2019 and based on 2022 especially women. Please read the comments in your survey from 2022. Top concerns from your rail riders based on your survey include: Homeless, crime, cleanliness and harassment. Source:https://thesource.metro.net/2022/10/27/results-of-our-2022-customer-experience-survey/

1233-3

Work From Home Trends Increase:
Increase in work from home in LA. Working from home has tripled since 2019 which is already reducing emissions (listed as one of the Metro's Mission) and is most likely to consider growing : https://www.census.gov/newsroom/press-releases/2022/people-working-from-home.html. Please review the recent Census on work from home trends.

1233-4

Demographics of Redondo Beach, Torrance, and Lawndale currently don't align with users of Metro:
Current demograhics include based on 2022 survey, approximately 83% of riders reported a household income of under $50,000 a year
All South Bay cities come in higher:
Redondo Beach residents median HHLD income $116k, Torrance resident median HHLD income $94K, Lawndale resident media HHLD income level is $65k

1233-5

Accidents Caused From Metro Rails:
Please note that there are two schools in close proximity to the proposed metro rail location with young students walking home. I see students crossing over the proposed Locations
Here are recent articles from 2022 accidents Metro has been involved with:
https://abc7.com/south-los-angeles-metro-blue-line-train-crash-car-crashes/12603759/
https://www.latimes.com/california/story/2022-12-31/bicyclist-hit-critically-injured-by-l-a-metro-train-in-long-beach
https://ktla.com/news/local-news/1-dead-after-apparently-being-struck-by-metro-train-in-south-l-a/

1233-6

Rather than build an expensive a rail system which might not even be used why not look into Micro services like these:
https://micro.metro.net/
Utilize EV vehicles hence not impacting

These services offer safe alternatives to the above and also keeps Metro workers safe since it is smaller groups

Additional Comments on the Draft Environmental Impact Report:

Food for thought. I lived in Minneapolis when the light rail was built from downtown to Mall of America at grade. It was very popular but the complaints from homes along the track about the noise level was so great, the MTC had to apply very expensive teflon grease to the rails to help keep the noise down.

Additional comments on the Draft Environmental Impact Report

Hawthorne makes the most sense, it has the most room. The Greenbelt has so many people that walk their dogs. Kids play there. Those houses are so close to the tracks, what if the refinery train derailed? Unwise and dangerous route.

- [ ] Trench Option
- [ ] Hawthorne Option

1279-1

Additional comments on the Draft Environmental Impact Report

To avoid noise pollution the project should be at ground level. Never elevate the tracks as the sound will project and make noise pollution like it did in LA

- [ ] Trench Option
- [ ] Hawthorne Option

1283-1

Additional comments on the Draft Environmental Impact Report

There is no environmental impact. Use the current/un-used railroad tracks. Making a trench is the dumbest thing to do and making an overpass above Hawthorne blvd, is quite possibly even worse. No one cares what the people living near the railroad tracks have to say. I bet more than 90% of them have not even ridden on the metro line before.

Submission 1392

Share Your Thoughts on Extending Light Rail to Torrance!

As LA Metro evaluates the future of transit in the South Bay, share your thoughts on a future light rail route. Please complete the attached survey and mail it back, or take it online at tinyurl.com/CLineExt or by scanning the QR code.

STOP LIGHT RAIL IT DESTROYS NEIGHBORHOOD

As a City of Torrance resident, I would like to share my opinion on what light rail route I would like in the South Bay. *[Check one or more boxes]* NO LIGHT RAIL IN OUR BEACH CITIES

1392-1

☐ Proposed Project: Metro Right-of-Way Elevated/At-Grade ☐ Trench Option ☐ Hawthorne Option

THESE ARE NOT OPTIONS. IT IS NOT SAFE!!!

Additional Comments on the Draft Environmental Impact Report:

Honest workers DO NOT USE LIGHT RAIL. IT IS TOO DANGEROUS!!! They are sleeping Aerosol drug users and transients. They bring crime into safe neighborhoods. Pre-paid ride A→B transit Vans are smart, timely and inexpensive. The same people sign up to Ride evaluate, Bring a real service to us. Make it safe and reliable. Ask big business what they need.

- [ ] Hawthorne Option

1419-1

Additional comments on the Draft Environmental Impact Report

I think the Metro right of way approach is the best option and least costly. It does the least amount of damage and disruption to the community and will be completed in the least amount of time along with the least amount of "unknown-unknowns" affecting its completion. The other two options are simply not practical in the densely populated area that must be trans versed; the incidental costs to the economic health of the community would be horrendous and long lasting.

- [ ] Hawthorne Option

1429-1

Additional comments on the Draft Environmental Impact Report

The mailer is extremely biased in promoting the "Proposed Project". It lists mixed comments for the "Trench Option" and mostly negative comments for the "Hawthorne Option". I would like to see "Pros" and "Cons" for each option. Why is the trench option or elevated option (Hawthorne option) proposed if they cost extremely more? List the benefits as well. Don't just say they cost more, cause traffic delays, will impact businesses without listing the benefits of these options.

As a City of Torrance resident, I would like to share my opinion on what light rail route I would like in the South Bay.

- [ ] Proposed Project: Metro Right-of-Way Elevated/At-Grade
- [ ] Trench Option
- [x] Hawthorne Option

1443-1

Additional comments on the Draft Environmental Impact Report

I strongly urge the use of the Hawthorne option due to the significant impact the proposed Metro right-of-way option will have to homeowners and families immediately adjacent to the existing railroad tracks. Home values between 182nd and 190th, East of Inglewood Ave, will surely suffer as a result of the increased rail traffic, not to mention the negative impact to families living there.

- [ ] Proposed Project: Metro Right-of-Way Elevated/At-Grade
- [x] Trench Option
- [ ] Hawthorne Option

1445-1

Additional comments on the Draft Environmental Impact Report

Anything but the Hawthorne option. It doesn't make sense to have to walk that far from the stop to the transit station... This is something that is supposed to be a convenience, not the opposite.

- [ ] Trench Option
- [ ] Hawthorne Option

1446-1

Additional comments on the Draft Environmental Impact Report

I believe proposed route is quite convincing. And seems less expensive. This route will not effect the environment. Straight route is not hamper or danger the privacy of residents . I stay at Emerald street so proposed route is more convenient for me .

- [ ] Proposed Project: Metro Right-of-Way Elevated/At-Grade
- [ ] Trench Option
- [x] Hawthorne Option

1463-1

Additional comments on the Draft Environmental Impact Report

The metro should run though a commercial corridor, Hawthorne was built to have street cars. It will boost the businesses on Hawthorne and impact fewer homes. The people who bought homes near Inglewood did not sign up to have a passenger metro run through their yards.

Share Your Thoughts on Extending Light Rail to Torrance!

As LA Metro evaluates the future of transit in the South Bay, share your thoughts on a future light rail route. Please complete the below survey.

As a City of Torrance resident, I would like to share my opinion on what light rail route I would like in the South Bay.

- [x] Proposed Project: Metro Right-of-Way Elevated/At-Grade
- [ ] Trench Option
- [ ] Hawthorne Option

1470-1

Additional comments on the Draft Environmental Impact Report

The proposed project seems the logical way to go ,less expensive, completed sooner and less inconvenience for the public and store owners. The Trench option would become a magnet for trash and undesirables and would need constant patrolling and maintenance. Why not use the metro right of way since it's available and requires less construction !!!!!!

As LA Metro evaluates the future of transit in the South Bay, share your thoughts on a future light rail route. Please complete the below survey.

As a City of Torrance resident, I would like to share my opinion on what light rail route I would like in the South Bay.

- [ ] Proposed Project: Metro Right-of-Way Elevated/At-Grade
- [ ] Trench Option
- [x] Hawthorne Option

1476-1

Additional comments on the Draft Environmental Impact Report

The proposed project is too large of an impact on the residents in Redondo Beach along the existing right of way. 1476-2

If the trench option were cheaper than the Hawthorne option, then I would choose the trench option because it would be the least impact to all communities AND connect to the RB transit center. 1476-3

In my opinion, the Hawthorne option will actually benefit businesses along Hawthorne, increase visibility of public transport, and avoid impacts to residents since Hawthorne is already a heavy traffic route. Personally I would like to see the Hawthorne option extended down Hawthorne to the Del Amo Mall. 1476-4

- [ ] Hawthorne Option

Additional comments on the Draft Environmental Impact Report

No light rail in Torrance. Will increase crime and street traffic in the area. Very few people use Metro except criminals and homeless. I know it is long term plan to make everyone use public transport so working class will own nothing. I reject this push to enrich the elites and disempower the working class in California. I will go to another state before I will bend the knee

1481-1

Additional comments on the Draft Environmental Impact Report

Something like this should have been done yesterday. California needs to rid itself of the religion of environmental extremism so that important projects like this can be completed in a cost-effective and timely manner. I find it utterly ridiculous that the current project of linking the airport with the Metro lines took so long to start and is taking this long to complete. Things should never be done willy-nilly. But, we for decades have allowed Red Tape Environmental extremists to put strangleholds on vital projects that would benefit human beings in a myriad of ways!! Enough is enough. Stop with the nonsense and GET IT DONE!!

Submission 1499

Additional comments on the Draft Environmental Impact Report

Hello

I am a resident here in Torrance.

I am writing you to see if anything can be done to end/oppose the Metro Light Rail being proposed thru Torrance, 1499-1
This rail line will bring more crime into the area. 1499-2
This rail line will pose a large safety hazard to the area. 1499-3

Studies have found that there are massive problems with the same type of proposed rail line thru Torrance that is currently in Long Beach.

I am imploring you to look into this and to spearhead an opposition against this rail line coming into the city of Torrance. 1499-4
Buying more Buses and creating a Bus lane would be cheaper, more effective, safer and would create less crime if mass transportation is really the goal of this effort. 1499-5

Sincerely,
Michael Hikido

- [ ] Proposed Project: Metro Right-of-Way Elevated/At-Grade
- [ ] Trench Option
- [ ] Hawthorne Option

Additional comments on the Draft Environmental Impact Report

I'm not a huge fan of the light rail coming into the south bay because it invites more foot congestion and easier access into the area by transients and criminals. But given that this project will happen, the better option is the at-grade option

Additional comments on the Draft Environmental Impact Report

The time to have done this was 30 years ago. In fact I don't support any of your idiot plans, but since you asked, if the three idiotic suggestions, the one is less stupid than the others.
Makes little difference to me, most of us will be dead before this crap is finished, if ever.

- [ ] Hawthorne Option

1533-1

Additional comments on the Draft Environmental Impact Report

I don't really see how any of these routes benefit the residents of Torrance. I don't think we need light rail. The funds could be better spent on other needs. As far as commuting, we could use protected bike lanes. Probably much more useful for residents.

1534-1

Additional comments on the Draft Environmental Impact Report

Surround the rail projects with high density, mixed use, mixed income housing developments to make it more effective for use. We're pressed against the ocean, only direction to go is up.

Share Your Thoughts on Extending Light Rail to Torrance!

As LA Metro evaluates the future of transit in the South Bay, share your thoughts on a future light rail route. Please complete the below survey.

As a City of Torrance resident, I would like to share my opinion on what light rail route I would like in the South Bay.

- [ ] Proposed Project: Metro Right-of-Way Elevated/At-Grade
- [x] Trench Option
- [ ] Hawthorne Option

1591-1

Additional comments on the Draft Environmental Impact Report

I think the safety of our residents at road/rail crossings is most important which is why I prefer the trench option.

- [ ] Hawthorne Option

1611-1

Submission 1611

Additional comments on the Draft Environmental Impact Report

I am writing as a lifelong resident of the South Bay and rider of public transit to express my support for the Metro ROW Elevated/Street-Level Option. After reviewing the Simulation Video, Draft EIR, and StoryMap, and considering the needs of the surrounding community, I feel that this option will provide the most amenities for the community (improved intersections, quiet zone, multi-use paths) and accessibility to the light rail for ridership. The trench option would be prone to debris buildup. The Hawthorne Option would be a possible 2nd alternative but I feel that the station in the center of the intersection would be too hazardous and loud with fast-moving cars on a high-speed arterial, leading to low ridership. 1611-2

Transit is best utilized when it runs frequently and on-time, with good wayfinding. In the South Bay area there has been a decline in investment in transit funding, leading to far reduced frequency of service and bus operator shortages. However, there is still strong ridership and demand, particularly of the Beach Cities Transit among high school students, and the various bus lines that serve the Harbor Gateway Transit Center. Redondo Beach invested millions into the new RB Transit Center, including secure bike storage. Putting the Green Line along the ROW with a stop at this Transit Center will provide the best connectivity to the bus lines there and those who combine bike + transit for travel. 1611-3

I also have a few comments to make with regard to the design and eventual buildout:
Can the ROW Elevated/Street-Level Option include a street-level station at the RBTC? Current plans show an elevated station for this option, but a street-level station for the Trench Option. I think a street-level station would be best for accessibility. 1611-4
Consider adding sound barriers for protection from 405 freeway noises and freight rail noises. These are much louder than light rail. 1611-5
Any accompanying pedestrian trails would be best served with dedicated bike trails as well. Please make these straight-going rather than curved or meandering. 1611-6
Raised pedestrian crossings at intersections would also be ideal for traffic calming. 1611-7
Wherever possible, include landscaping that will maximize stormwater retention with infiltration and bioswale design. 1611-8
Ensure that the land and soil surface of the entire ROW is stabilized (including gas pipelines) to prevent shifting and sinkholes. 1611-9

Additional comments on the Draft Environmental Impact Report

There should be an option to choose NO BUILD. This is not a necessary route and will not be needed for most people what is the current ridership for the metro line that ends in Redondo? Crime will increase along with no help in reliving traffic for cars. 1619-1

1627-1

Additional comments on the Draft Environmental Impact Report

if we must have this metro, the proposed project would be best. DEFINATELY not Hawthorne Blvd. The noise factor for the residents between 190-Del Amo-Haw. Blvd & Anza would be awful. The old train route was bad enough. And Haw. Blvd is sooo conjested as it is. It seems we are trying to make things easier for people who don't live in Torrance. I have lived here since 1961. For one thing, we need our streets repaired for the residences of Torrance.

- [ ] Hawthorne Option

Additional comments on the Draft Environmental Impact Report

I do not support the plan to extend light rail to Torrance at all. I experienced the extension to Culver City and it has brought nothing but severe traffic congestion and pollution, thanks to all the idling cars jammed at intersections. The cost to benefit doesn't make sense.

1647-1

Additional comments on the Draft Environmental Impact Report

This project is so needed and way over due. It's crazy that we are not using light rail to commute to work, get to LAX and entertainment and sports venues.
The metro right of way would have the least amount of impact to my neighborhood and to our commute. Let's stay on schedule and on budget and go with the original plan.

Additional comments on the Draft Environmental Impact Report

I've heard complaints from residents who live next to the train tracks. However, they chose to live next to the train tracks but somehow didn't realize that trains make noise? Interesting.

1652-1

Additional comments on the Draft Environmental Impact Report

Before retirement, I rode the Green line, to the Blue line, to the Red line, to the Gold Line and finally an ARTS bus to arrive at Caltech 2 hrs later. It was 20 min drive to the Marine Green line station. If the Torrance station had been here, it would have been 5 min. Please bring it to Torrance, and continue to the Harbor!

1655-1

Additional comments on the Draft Environmental Impact Report

Is this truly necessary, as there is no money in the City of Torrance. I don't see the advantage as outweighing the expense. For instance The City does not have enough money to repair the basketball court at Guenser Park. We have been without one for about a year now. Surely this is a minimal expense compared to the proposed project.

- [ ] Proposed Project: Metro Right-of-Way Elevated/At-Grade
- [ ] Trench Option
- [ ] Hawthorne Option

Additional comments on the Draft Environmental Impact Report

Metro should rethink this proposal. Torrance would be better served with enhanced regional bus service. Metro is not providing clean, safe alternatives and should not be invited into our community until they do. 1684-1

- [x] Hawthorne Option

1687-1

Additional comments on the Draft Environmental Impact Report

We need to make sure our tax dollars are put to work. The extension will only make sense if it goes through a high transit area. It's an opportunity for high density development near Hawthorne. If it goes through the right of way, we would only be extending line from nowhere to nowhere. This line will never reach its full potential if it just follows the easiest way. Let's be bold and have it make sense. Everything new comes with growing pains.

- [ ] Proposed Project: Metro Right-of-Way Elevated/At-Grade
- [ ] Trench Option
- [x] Hawthorne Option

1689-1

Additional comments on the Draft Environmental Impact Report

Over Hawthorne is the best location. First, it's close to the mall and someday the mall could be re-vamped into a commercial/residential complex which feeds ridership on the line. Second, it's already noisy in that location and the median isn't doing anything useful. Third, I don't see it affecting traffic much on Hawthorne Blvd compared to on the other side, which is more narrow and residential. Finally, if it's tucked away from Hawethorne, who would even think to use the thing at that stop? Build for the future, not just band-aids on the present.

As a final preference, definitely *do not* do the trench option, unless you're willing to fully cover it (e.g., make it a subway in that region). I struggle to imagine why this option was even proposed in that form. The Trench is the worst of both worlds: pay huge money to dig a hole, then have to stare at the hole.

1689-2

Good luck and have a great one!

1694-1

Additional comments on the Draft Environmental Impact Report

Can't wait for this project to come to life. I've been a Torrance resident for well over 50 years (born and raised). Torrance seems to be coming full circle in regard to transportation. The city was originally founded with light rail by Jared Sydney Torrance and now we're getting back to this sensible form of public transportation (which should have never gone away). Can't wait to get off the street and take the train to work.

Additional comments on the Draft Environmental Impact Report

Why do we need this ?What a mess during construction !! I doubt if even 1% of Torrance Residents would use it. We have UBER, and people do still " CARPOOL " A lot of crime , and crazy people out there these days. People are not going to give up on the SAFTY , and convenience of their car to wait at a Glorified Bus stop to get NEAR, at best , to their destination !! This is right up there with the Bullet Train to Nowhere Fiasco !! Yet another complete waste of of Tax Dollars. My wife and I have City of Torrance Municipal Bonds , and they're not doing well as it is !! All of our neighbors are angered that this is even being proposed . " IF It Ain't Broke, Why Fix It ?

Submission 1705

Share Your Thoughts on Extending Light Rail to Torrance!

As LA Metro evaluates the future of transit in the South Bay, share your thoughts on a future light rail route. Please complete the below survey.

As a City of Torrance resident, I would like to share my opinion on what light rail route I would like in the South Bay.

- [x] Proposed Project: Metro Right-of-Way Elevated/At-Grade
- [ ] Trench Option
- [ ] Hawthorne Option

1705-1

Additional comments on the Draft Environmental Impact Report

Increasing rail traffic using the at-grade rail will have significant impact on traffic. What evidence do you have to make the marketing statements in your materials? The availability of this rail is so limited and still too distant from most residential areas that it does not make rail an option for most people or still requires driving to some centralized location where thieves can target your property.

- [ ] Proposed Project: Metro Right-of-Way Elevated/At-Grade
- [x] Trench Option
- [ ] Hawthorne Option

1707-1

Additional comments on the Draft Environmental Impact Report

I wouldn't like the light rail if it caused more traffic because it has to cross streets. I think the trench option would be the best.

- [ ] Trench Option
- [ ] Hawthorne Option

1731-1

Additional comments on the Draft Environmental Impact Report

Metro should use the ROW option so the cost is lower and impact is less. Redondo Residents don't like this because of the impact on Seniors, however if you look at the senior complex it is only few feet that impact this complex. Additionally, this complex was built after the ROW was in place. This ultimately will cost the taxpayers and Metro should go with the lowest cost and impact to businesses and residents.

Submission 1790

Share Your Thoughts on Extending Light Rail to Torrance!

As LA Metro evaluates the future of transit in the South Bay, share your thoughts on a future light rail route. Please complete the below survey.

As a City of Torrance resident, I would like to share my opinion on what light rail route I would like in the South Bay.

- [ ] Proposed Project: Metro Right-of-Way Elevated/At-Grade
- [ ] Trench Option
- [ ] Hawthorne Option

Additional comments on the Draft Environmental Impact Report

I am against any Light Rail into Torrance/South Bay. It will bring more crime and homeless problems. It will also affect eligibility of SB9/10 increasing density. Most people who live in South Bay own a car or use Uber. THIS IDEA IS BAD FOR TORRANCE.

- [x] Proposed Project: Metro Right-of-Way Elevated/At-Grade
- [ ] Trench Option
- [ ] Hawthorne Option

1791-1

Additional comments on the Draft Environmental Impact Report

The light rail route coming to Torrance is an altogether bad idea. However, if it must happen the existing right of way is the only way to go.

- [x] Proposed Project: Metro Right-of-Way Elevated/At-Grade
- [ ] Trench Option
- [ ] Hawthorne Option

1794-1

Additional comments on the Draft Environmental Impact Report

The Proposed Project is less expensive to taxpayers! I reside in Old Torrance,(two blocks away from the railroad tracks) and I am used to the railroad train noise. The residents of Redondo Beach, that live near the railroad track, have to be used to the railroad train noise too! The Light Rail noise is not as loud at the railroad trains. The residents of Redondo Beach need to get over it! The Hawthorne Option will cause major traffic and safety issues which will be very costly to us taxpayers!

1795-1

Additional comments on the Draft Environmental Impact Report

We've live in Lomita (neighbors to Torrance) for many, many years and are very happy to SUPPORT the Proposed Project: Metro Right-of-Way Elevated/At Grade as a viable option.
We've followed/watched the Transit Center being built on Crenshaw Blvd. and hoped to one day use the proposed "Light Rail" route it would provide.

- [ ] Trench Option
- [ ] Hawthorne Option

1812-1

Additional comments on the Draft Environmental Impact Report

I believe the route that has the least impact on the residents and business in the city is the best option. I am not a fan of eminent domain with regards to using it for transit. I also think the least impact to businesses and residents will help the businesses and residents be more open to using the new transit system and supporting the new route.

- [ ] Hawthorne Option

1813-1

Additional comments on the Draft Environmental Impact Report

I am particularly interested in how local residents, like myself who live within walking distance of the station being built will be provided with resources or ways to limit the impact of pollution. We live near the refinery too. We also think traffic and rail noise will be a problem.

- [ ] Hawthorne Option

Additional comments on the Draft Environmental Impact Report

NO to rail system!

Buses and or Bus Lanes are a far better
alternative for mass transportation due to cost, can be easily reversed or modified, smaller crime impact and much lower death rate created by Buses over Trains.
There are so many unintended negative
consequences of this proposed Torrance Metro Rail line project
1) Enormous cost to build.
2) Disruption due to construction
3) potential increase of crime on train and train station areas.
4) Potential for deadly car crash accidents caused by this Metro Rail line, as it has happened in other metro rail lines in LA.

- [x] Proposed Project: Metro Right-of-Way Elevated/At-Grade
- [ ] Trench Option
- [ ] Hawthorne Option

1817-1

Additional comments on the Draft Environmental Impact Report

I support only the right of way option because it is the least expensive. While I support public transit in LA county, I think it needs to be safe and secure. My female friends will not take public transportation in LA because they are afraid of being harassed.

Submission 1825

Share Your Thoughts on Extending Light Rail to Torrance!

As LA Metro evaluates the future of transit in the South Bay, share your thoughts on a future light rail route. Please complete the below survey.

As a City of Torrance resident, I would like to share my opinion on what light rail route I would like in the South Bay.

- [x] Proposed Project: Metro Right-of-Way Elevated/At-Grade
- [x] Trench Option
- [x] Hawthorne Option

1825-1

Additional comments on the Draft Environmental Impact Report

We need more public transit, "at grade" not ideal as the train has to stop for traffic and can be a hazard. Less people will use it if it has to wait for traffic. Either way though. Get it done ASAP.

- [ ] Trench Option
- [ ] Hawthorne Option

1899-1

Additional comments on the Draft Environmental Impact Report

What action/s will be made to reduce air pollution during this construction? Also was research completed on if this metro will be better or worse for our air quality? Is Torrance doing this because they will receive money? If so how will that money be spent? I'd rather we spend money on cleaning up our city that has gone down hill in the last several years. I'm concerned this line will further destroy our once beautiful spacious clean quiet suburb city.

Additional comments on the Draft Environmental Impact Report

Why add any rail or other transportation for people on this route ???? Look how bad the traffic is now in the train crossings for existing tracks !!!! and now you would triple or more of the problems for a PEOPLE train !!!??? Look at the big buses now doing the same routes in that area. You might see a maximum of 10 people riding the buses NOW !! Some have only 3 or 4 people on them going down Hawthorne Blvd and other streets !!!!!!!!!!!!!!!! 1907-1

Now you want to destroy those neighborhoods and cause a terrible traffic scene from Manhattan Beach Blvd and all other east & west bound streets to the south, that are already backed up 3 or 4 blocks because of the freight trains crossing!!!!!!!!!!!!!!!!!!!

Have you done any studies of these trafic problems going on now for years ???????

How the hell are you going make $$$ with this project ???

What kind of idiots are we dealing with here ???? What kind politions would even think of this idea ??? Are they the ones that are going to be making $$$ fromthe contractures involved ??? 1907-2

PLEASE STOP THIS STUPID PLAN AND GET THE INSTIGATORS A MENTAL HEALTH EXAM 1907-3

!!!!!!!!!!!!!!!!!!!

Share Your Thoughts on Extending Light Rail to Torrance!

As LA Metro evaluates the future of transit in the South Bay, share your thoughts on a future light rail route. Please complete the below survey.

As a City of Torrance resident, I would like to share my opinion on what light rail route I would like in the South Bay.

- [x] Proposed Project: Metro Right-of-Way Elevated/At-Grade
- [ ] Trench Option
- [ ] Hawthorne Option

1908-1

Additional comments on the Draft Environmental Impact Report

Would prefer no rail station coming into Torrance.

As a City of Torrance resident, I would like to share my opinion on what light rail route I would like in the South Bay.

- [ ] Proposed Project: Metro Right-of-Way Elevated/At-Grade
- [ ] Trench Option
- [ ] Hawthorne Option

Additional comments on the Draft Environmental Impact Report

I grew up in Torrance and I am presently a Redondo Beach resident. Based on family members who tried Public Transit from the South Bay to nearby cities. I am against Light Rail in the South Bay. 1909-1

Submission 1910

Share Your Thoughts on Extending Light Rail to Torrance!

As LA Metro evaluates the future of transit in the South Bay, share your thoughts on a future light rail route. Please complete the below survey.

As a City of Torrance resident, I would like to share my opinion on what light rail route I would like in the South Bay.

- [ ] Proposed Project: Metro Right-of-Way Elevated/At-Grade
- [ ] Trench Option
- [x] Hawthorne Option

1910-1

Additional comments on the Draft Environmental Impact Report

Current alignment on existing rail may be easier from an infrastructure perspective, but from a catchment and commuter base, makes little sense. While the Hawthorne option does not fix this, it does present additional opportunities to add additional stops along Hawthorne outside of the Galleria, and add value to the community and development along the Green Line as it doesn't exist only in current rail lines that run behind residential communities.

- [x] Proposed Project: Metro Right-of-Way Elevated/At-Grade
- [ ] Trench Option
- [ ] Hawthorne Option

1920-1

Additional comments on the Draft Environmental Impact Report

The proposed project connects with the bus line at Redondo Beach to make it easier for those with less resources and for the disabled to transfer. There would be less congestion on Hawthorne. Also the bus station has a police substation and parking. The Hawthorne station has none of those options. We should stick to the original plan.

1928-1

Additional comments on the Draft Environmental Impact Report

Most of my sympathies go to Redondo Beach / Torrance residents who will feel the huge impact. No, NO, riders should disembark in residential areas! They deserve a secure and sturdy sound barrier as those who are too close to freeway are given during new construction.

Subject: Quashed Opinion

Dear Los Angeles County Metropolitan Transit Authority,

From the very beginning I have felt that my voice was not being heard, so I have been reluctant to participate in this discussion. From the very beginning I have been concerned about an obviously biased (prejudiced) electorate violating the rights of landowners and developers. Metro has been down this road before, trying to appease the Pitchforks and Torches Mob, with some very inferior, unsatisfactory, and substandard results. Just look at what happened in Pasadena. I know resident landowners don't like being told what can or can be done with their land, so I find it slightly disingenuous of them to be telling the landowners of the Right-of-Way what they can or cannot do with their property. In Redondo Beach, resident vitriol has been inflamed by special interest group(s), political action committee(s), and social welfare organization(s) strictly for political opportunism. 1945-1

In my opinion and in my opinion only, I feel that if it isn't broken then why fix it? "Plan A" should be utilizing the Right-Of-Way connecting with Redondo Beach's new transit center. Going down Hawthorne Blvd. should only be considered if "Plan A" develops some unsustainable problems. I have personally, stood on the C-Line (Green Line) Platform and I couldn't even see Hawthorne Blvd. from that vantage point. I was faced with the sheer impossibilities of the Hawthorne Blvd. plan. One dealbreaker for me was having to build an additional transit station on the Hawthorne Blvd. side of the South Bay Social District which is not even in Redondo Beach. Personally, I believe that there is a certain amount of xenophobia considering the Olympics and racism considering that the light rail system more than likely will result in making Redondo Beach more accessible to more ethnic groups. 1945-2

While I was standing on the Green C-Line Platform I did notice the high voltage power lines though, and where the high voltage power lines went, all the way to the coast. I immediately thought of an opportunity for the Los Angeles County Metropolitan Transit Authority. If Metro could convert to gondolas instead of Light Rail in the coastal regions, it might help to mitigate the environmental impacts making it easier to expand the Metro transit system in the coastal regions. If Metro would consider adopting gondolas, the gondolas could follow the path of the Power Lines all the was to the coast, helping to mitigate traffic concerns for not only commuters in Redondo Beach, but also their neighboring Hermosa Beach, which share the street adjacent to the power line corridor, Herondo. In my opinion, it's a once in a lifetime opportunity to extend the Metro transit system all the way to the coast. Redondo Beach used to have a Red Car making it possible for residents living in Redondo Beach to work and play in downtown Los Angeles, utilizing gondolas in the coastal regions would bring back more opportunities for Redondo Beach and

Hermosa Beach commuters. Believe you me, it is extremely difficult to get to the 405 and the Harbor Freeways in the morning, it takes forever.

One advantage to switching to gondolas in the coastal regions is that whatever activities of land use that are currently being utilized in the Power Lines Corridor could for the most part continue because the gondolas are in the air, only the gondolas' support towers would take up space on the ground. One more thing that I like about using gondolas as an alternative mode of transportation, even if it is only as a method of getting to the Light Rail Line, is that they're constant, quiet, and less damaging to the environment than the Light Rail Trains. Also, it is easier to clean gondolas in case of another pandemic breakout and easier to take one gondola compartment off-line in case of exposure or police incident without shutting down the whole operation or a train, until the proper authorities can investigate the single compartment. It would be less troublesome for commuters.

In Redondo Beach, there is trepidation of homeowners and business owners along the Right-Of-Way because they are adjacent to the Rail Line. Actually, this was music to my ears, because Metro could ease their concerns by offering those homeowners a buyout if the Right-Of Way "Plan A" Plan is intolerable for them. Metro could offer Redondo Beach Homeowners above market value for their homes, tear the homes down and replace them with more affordable housing units; possibly getting some assistance from the State for Metro's efforts.

1945-3

Now I know, nobody is talking about using gondolas to help mitigate environmental impacts of the C-Line (Greenline) Extension Plan, so my letter will probably fall on deaf ears, but thank you Metro for the opportunity for at least getting my opinion heard.

Subject: Public Comment Green Line Damages to Resident Health and Property Values

CC: Redondo Beach City Council

Peer-reviewed research clearly demonstrates that intermittent noise from rail causes various serious cardiovascular and other impacts including chronic stress. Blue Zones, a program that BCHD has spent millions of dollars supporting, clearly states that chronic stress is the "silent killer" and leads to health damages. 1946-1

In addition, peer-reviewed research demonstrates that train noise can also damage property values. This should come as no surprise and can also be seen from property value analysis. RBMC 10-2.2502 Planning Commission Design Review states as a purpose of the statute that it will "serve to protect property values." Projects that decay property value are in violation, such as the Green Line proposed project using the existing freight right-of-way. 1946-2

As such, the DEIR of Metro is defective and must be reanalyzed to include non-compliance with the RBMC and the many health impacts. 1946-3

Vehicular Noise Pollution: Its Environmental Implications and Strategic Control
DOI: 10.5772/intechopen.85707
"All types of noise altogether affect the same irrespective of the sources and cause headache to the high blood pressure and other heart diseases. Some noise types like aircraft and train noise also has the negative effects on property prices."

Subject: Questions on DEIR Presentation Package compared to DEIR document

Dear Metro:

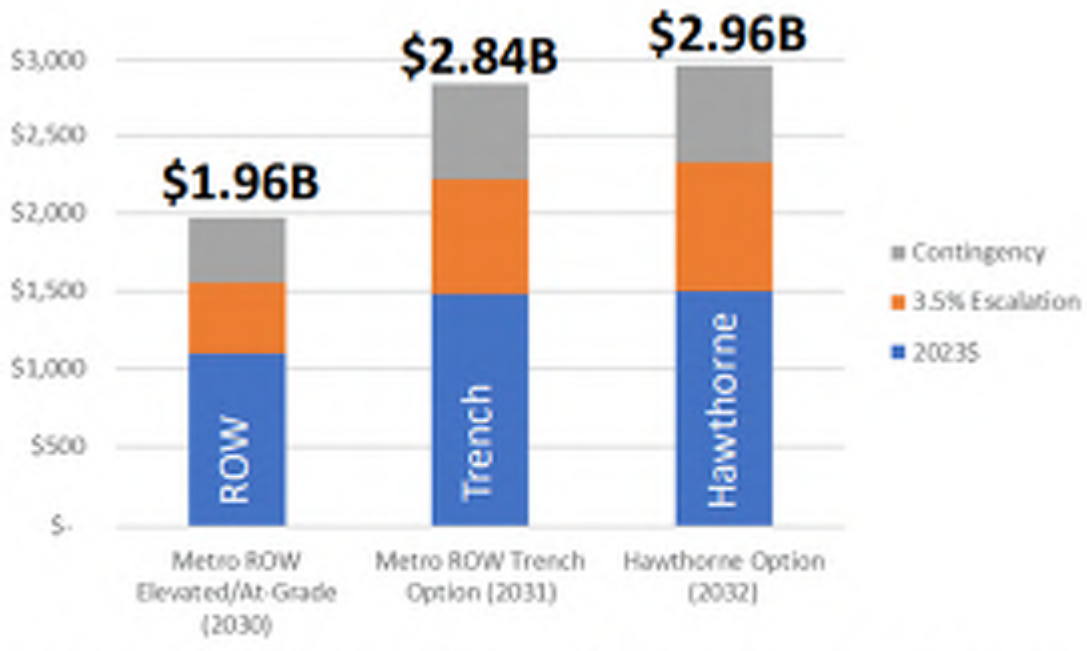
Your presentation package on the DEIR presents some material **which is not in the DEIR, but which should have been.** I am specifically referring to the **Cost Charts** and **Ridership Summary.**

You have supplemental materials, which you incorporate into your presentation package on these two topics**.**

However, your presentation is incomplete (as is the DEIR).

1. Cost Charts. (Reference: CLGET Cost Estimates Summary.pdf)

Metro has presented the following cost chart at every DEIR hearing:

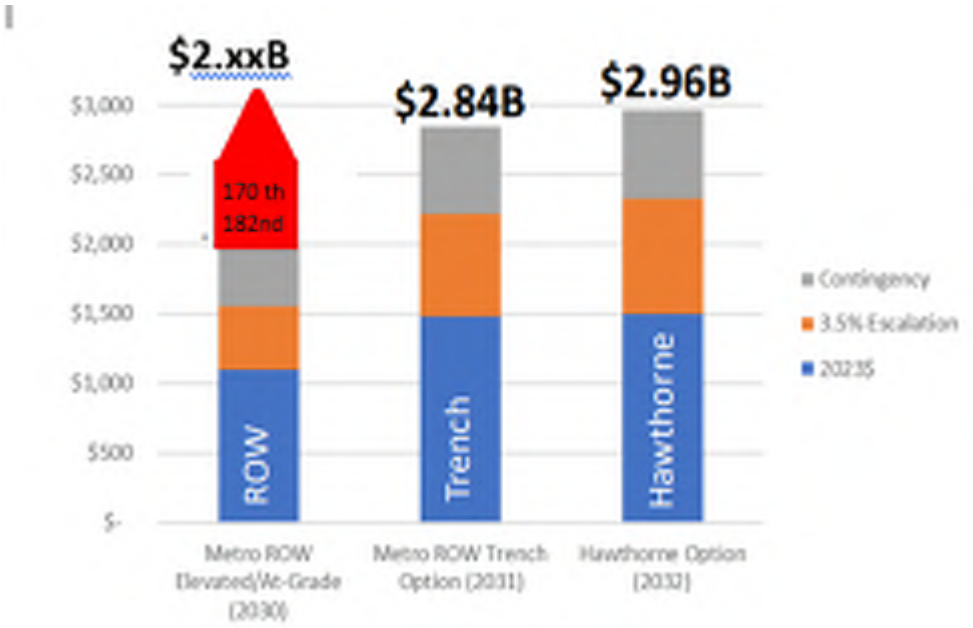


- Estimates are based on **midpoint for construction**, which varies:
  - 2030 – Metro ROW Elevated/At-Grade (Proposed Project)
  - 2031 – Trench Option
  - 2032 – Hawthorne Option
- Midpoint for construction includes BNSF & Utility Relocation.
- Accuracy range is the same of all alignments.

This draws immediate attention to the "Proposed Project" Option on the Metro ROW because of its supposed cheaper cost.

But what Metro has not presented are the **two additions** to the "Proposed Project" discussed in the DEIR. These are the **170th and 182nd grade separated alignments.** See Figure ES-15 in the Executive Summary, as well as section **4.4-3 "170th/182nd Grade-Separated Light Rail Transit Alternative "** on page 4-27.

If the costs associated with these two changes were added to the Program Project option, then the "Proposed Project" costs (with those two options) would rise up closer to the level of the Trenched ROW and the Hawthorne Blvd Option. **Thus, the cost differential between the projects would not even be a factor.**



1947-1

It was repeatedly mentioned in the walking tours conducted by your engineers that the Hawthorne Option compared to the ROW option with mitigations **would result in roughly equivalent costs, with the Hawthorne option taking less time to build.**

Please modify the presentation charts to more accurately reflect this information.

2. Ridership. (Reference: CLGET Ridership Summary Report.pdf; DEIR page 3.1-6)

1947-2

The word "ridership" is mentioned 40 times in the DEIR, but nowhere are any ridership numbers given. Ridership is specifically mentioned in the Draft EIR which says the first of Metro's top 5 goals is to "**Increase transit ridership** and choice." *(see list on page 3.1-6)*

To get actual figures, one must resort to the "Ridership Summary Report."

The summary report mentions "trips on project," and "new riders"

Extracted from Table 3-1. Year 2042 Average Weekday Project Boardings, User Benefits and Congestion Relief Summary for C Line Extension Project Build Alternatives

Submission 1947

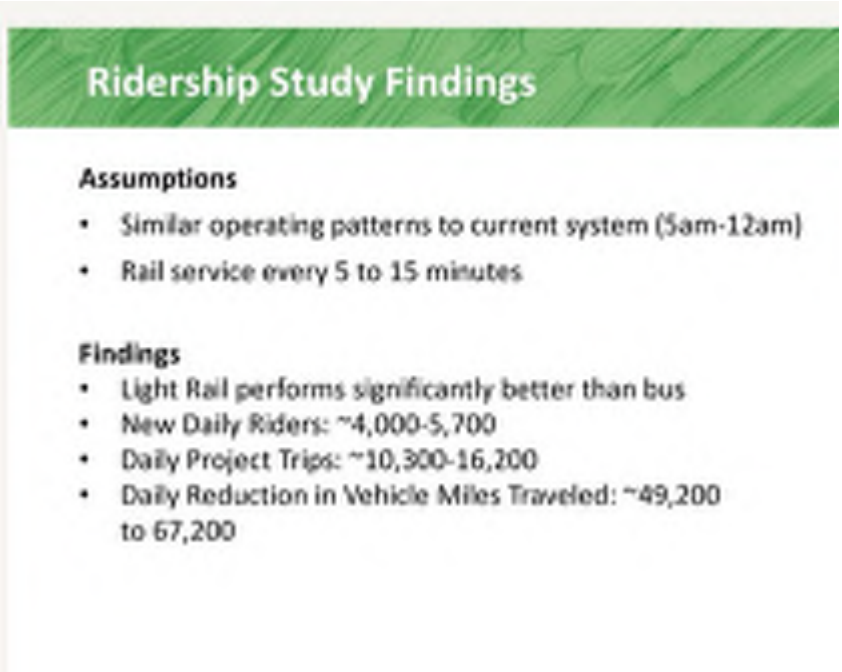
Build Alternatives	Metro ROW			Hawthorne Option		
Operating Scenario	C-1	C-2	C-3	C-1	C-2	C-3
Trips on Project	10,348	11,579	12,812	14,203	15,648	16,251
New Riders	4,077	4,694	5,086	5,101	5,497	5,710

(The Configurations C-1, C-2 and C-3 refer to possible connections to the K line)

It is clear that the Hawthorne option has more riders. (This is true for all configurations. For example, Compare Hawthorne C-1 (**5101**) to Metro ROW C-1 (**4077)**

During the walking tours, the increase in Ridership for Hawthorne was repeatedly mentioned, and the amount of increase was stated as roughly 20%.

Yet, here is how you reported it in your briefings: No distinction between Hawthorne and the ROW:



1947-3

Your **presentation charts do not reflect the increased ridership on Hawthorne at all**.
Please update your presentation charts to show this difference.

Also, include this information in the DEIR.

Respectfully submitted,

Holly Osborne, P.E.

Subject: Comment on Draft DEIR - Metro Green Line

Please add this comment to the DEIR.

I own a townhouse unit located at [redacted] Redondo Beach, CA. It is part of an 18-unit townhome complex right next to the ROW. I have lived here for over 20 years since these units were built in 2000. The long freight train would come by regularly/daily when I first moved here, but I bought my unit with the understanding that the Alameda Corridor was being built and the bulk of the freight train traffic would be diverted there. That happened in 2003. There are now just one or two short freight trains that run along the ROW each day.

I understand that if Metro chooses the ROW, it will locate its two tracks in addition to the freight track, with three tracks total, and the freight track will be moved just 25 FEET from our complex. **This is truly unacceptable and completely unsafe.** The right-of-way is simply not sufficiently wide to accommodate three tracks and keep residents on either side of the ROW safe. The soil is unstable; there are pipelines running underneath the tracks; and the noise would be a **significant and unavoidable** and permanent impact to those who live here. 1948-1 1948-2

Moreover, my unit has already sustained damage from the vibration of the freight train over the past 20 years that will only worsen with three tracks on the narrow right of way. I have attached a photo here: 1948-3

I implore you to locate the Green Line extension down the middle of Hawthorne Blvd. where the Red Car used to run. This is a commercial corridor that makes the most sense for the businesses located there; in fact, the owner of the South Bay Galleria property (to become the Social District) has voiced its support for the Green Line down Hawthorne. Please make the right decision here that will impact the least number of residents in the area and locate the Green Line down the middle of Hawthorne in the elevated position. 1948-4

Subject: Re: DEIR Questions: Median Parking Utilization, Mitigation ... Re: Third Try ... Re: Second Try ... Fwd: Hawthorne Blvd Option Parking Impact Assessment Questions

Metro,
Thank you for your fast reply.
I hope can you understand that, from my point of view, by failing to put the 20 parking space loss forecast for the Hawthorne Blvd median into perspective, you have shown a feature of the Hawthorne Blvd option in the worst possible light, much worse than it really is. And you did not bury it somewhere in the 1008 pages of the DEIR, but put it in the Executive Summary, page ES-13.
You could have said "we forecast 20 of 83 parking spaces available in the Hawthorne Blvd median would be lost."
Or, including Hawthorne Blvd on-street and side street available parking as defined in the Transportation Summary, you could have said, "we forecast 20 parking spaces available in the Hawthorne Blvd median would be lost compared to a total of 310 parking spaces available on Hawthorne Blvd."
And you could have said, current utilization of median parking is less than 50% during weekday business hours. I have counted utilization of every category, individually, of Hawthorne Blvd parking in Lawndale during weekday business hours to be less than 50%, including parking on business property premises, whose capacity you did not report. And even with all of that, there are numerous opportunities to replace or otherwise compensate for those lost parking spaces.

So by failing to put those 20 parking spaces into perspective, you gave reason for the City of Torrance, the SBCCOG, and anybody who opposes the Hawthorne Blvd option, a high profile talking point.

1950-1

Those are my comments.

Here are my DEIR questions.

Why did you put the forecast loss of 20 Hawthorne Blvd median parking spaces into the Executive Summary when you knew that was a small percentage of total Hawthorne Blvd parking available, about 6.5%, not including commercial property parking?
What threshold criteria did you use to decide that was worthy of inserting into the DEIR, then into the Executive Summary section?
Having included that loss there ...
Why did you not include the total number of parking spaces in the median?
Why did you not include the total number of parking spaces on Hawthorne Blvd?
Why did you not include the number of parking spaces on commercial property along Hawthorne Blvd?
Why did you not include any utilization data of Hawthorne Blvd parking in the median, on the street, on the side streets, or on the commercial properties?

Subject: RE: DEIR Questions: Median Parking Utilization, Mitigation ... Re: Third Try ... Re: Second Try ... Fwd: Hawthorne Blvd Option Parking Impact Assessment Questions

Parking is not considered an environmental impact under CEQA. As such, it is described as part of the project design in the Draft EIR, but not analyzed as an impact area to be mitigated. Metro understands that parking is an important topic for communities, and discusses it as part of a separate report on our project website, called "Transportation Detail Report" available here - https://www.dropbox.com/sh/nn9qo1wix6ror76/AADbOr4ALT84gESOXN7RRLHsa/Non-CEQA%20Reports%20and%20Information?dl=0&preview=CLGET+Transportation+Detail+Report.pdf&subfolder_nav_tracking=1.

Metro will continue to look for ways to minimize parking loss as part of the project design once the Metro Board selects a Locally Preferred Alternative.

Subject: DEIR Questions: Median Parking Utilization, Mitigation ... Re: Third Try ... Re: Second Try ... Fwd: Hawthorne Blvd Option Parking Impact Assessment Questions

I appreciate that your designers tried to minimize impact to Hawthorne Blvd median parking. That said,
How did loss of parking spaces get elevated into the Executive Summary, item ES.6, as one of the "Areas of Controversy?"
If it is such a concern, why did you not propose any mitigation measures (of which there are many)?
Why did you not report the number of median parking spaces available (83) in the DEIR? I think this helps put the loss of 20 spaces in perspective.

1950-2

Upon further review of your response below, how can you claim that median parking "does tend to be highly utilized" if you did not perform utilization counts?
I have performed utilization counts, during weekday business hours, and utilization tends to be about 35 spaces, less than half the 83 spaces available. I would not consider that "highly utilized."
The pandemic was over, practically, last year, well before the DEiR was published. Why didn't you perform counts to resolve this "area of controversy?"

Mr. Hollar:

Thank you for your email. The Draft EIR and other project materials, including summaries of public outreach events and comments, ridership information, cost estimates, frequently asked questions, real estate needs, urban design, traffic and parking are available on the project website at metro.net/clineext.

To help support the Draft EIR, a project StoryMap has been developed to provide more information on the project. To view the EIR, alignment maps and project information, please visit https://storymaps.arcgis.com/stories/d7e05c37de87474e8f523738af8dc556

As for your specific question on the Hawthorne Blvd Alternvietive, we also counted 83 spaces in the median of Hawthorne Blvd in that area, and per the Draft EIR's transportation chapter (3.1) we show needing to remove approximately 20 spaces permanently for the Hawthorne Option (all will likely be closed at times during the construction process). We did not do parking utilization counts due to the pandemic, but in general, the median parking does tend to be highly utilized, often by employees, since you can park there longer than 2 hours with a permit.

Here are links to the above reference sections of the DEIR

It's in the transportation chapter --

Subject: Hawthorne Blvd Option Parking Impact Assessment Questions

Metro Representative,

I have been a homeowner in Southwest Lawndale for 36 years.
I have attended many Metro C (Green) Line extension meetings going back to a meeting at William Green School in South Lawndale ,c.2011.
Recently, in a Metro C Line Extension presentation, I saw a presentation chart entitled "*Hawthorne Blvd Option*."

Elevated/At-grade: Looking south between 170th St and 171st St
> Metro is studying ways to limit the reduction of median parking
(*A conceptual drawing of the elevated train is shown)*

Some Hawthorne Blvd median parking is available starting about 163rd Street running south until just north of 171th Street. I count 83 spaces.

Have you counted utilization of these median parking spaces?
How many of those median parking spaces do you think you can preserve as part of the elevated Hawthorne Blvd C Line extension option?

Thank You
Ray Hollar

Submission 1951

From: Marg Alexander <[redacted]
Sent: Wednesday, March 15, 2023 8:05 PM
To: GreenlineExtension
Subject: Opposition to Metro's Plan to Align the C Line/ Green Line Along the ROW in Redondo Beach

Margie Alexander
[redacted]

To Whom It May Concern:

I am an eighty-year-old resident at Breakwater Village, a senior complex in Redondo Beach. I am writing to let you know of my concerns regarding Metro's plan to align the C Line/Green Line along the ROW which places the light rail adjacent to our complex.

According to the DEIR, the light rail will have a significant impact on our complex. The vibration and pollution from the continual passage of trains will greatly impact our health, the structural integrity of our building and the value of our property once Metro allows trains on the ROW that will traverse the rails every six to twelve minutes for twenty hours out of the day. 1951-1

Of even greater concern is the existing irreparable sinkhole on Ruxton and effect of construction and the vibration from the continuous running of high-speed trains in an area with significant soil instability. Even more alarming is the fact that this construction will be located right next to multiple pressurized liquid petroleum lines that occupy the ROW. What will be the impact of moving and adding two tracks between the Breakwater Village complex and the digging of a trench behind the complex? 1951-2

What is Metro's reasoning with this situation? This all smacks of a callous disregard for the lives of others, particularly the senior citizens of Redondo Beach. What quality of life can we expect here at Breakwater where the majority of us, have our life savings invested in our properties? What about the health of the over three hundred senior citizens residing at Breakwater Village? What about the dangers inherent in moving the utilities from the Right of Way? 1951-3

Additionally, drug use is rampant on Metro trains. Since January, 2023, twenty two people have died on Metro buses and trains, mostly from suspected overdoses — more people than all of 2022. Serious crimes — such as robbery, rape and aggravated assault — soared 24% last year compared with the previous year. Even before the pandemic, ridership in the region was never as high as in other big-city rail systems. Metro needs to focus on the safety of their current ridership before spending taxpayer dollars to extend the C Line/Green Line. Seniors cannot safely ride the Metro. What will Metro do to ensure safety of ridership on the C Line/Green that has not been done on the current Metro trains? 1951-4

So many questions, and as I see it few viable answers from Metro. I implore you to take action to prevent this disaster to the senior citizens at Breakwater Village in Redondo Beach, and oppose the routing of the C Line (Green) on the existing Metro ROW. 1951-5

Sincerely yours,

Margie Alexander

Subject: C-line (Green) DEIR Public Comments

Dear Metro,

Please add my comments below expressing my concerns with the DEIR.

Chapter: LAND USE AND PLANNING does not adequately address the impact with regard to the ROW and the Redondo Transit Center. How will riders be funneled when departing the train? Will it be into the local neighborhood? How will moving and adding 2 tracks be handled between Breakwater Village/Condon Ave. with steep embankments? Moreover, how will the impact of the trench under 182nd with southern transition points behind the homes be resolved? 1952-1

I have observed that there is no room to accommodate another rail between Breakwater Village/Condon. A trench under 182nd is impossible.

Thank you for your attention to this matter.

Subject: Stakeholder DEIR Response - HazMat

Dear Metro and Metro Board of Directors,

I am a homeowner sharing property line on the west side of the ROW corridor, Firmona Ave just south of 182nd St. This is of UTMOST IMPORTANCE for my husband and myself -

SAFETY:

Is squeezing 3 rails into narrow corridor with passengers riding in close proximity to liquid petroleum fuel tankers 12-25' away from densely occupied housing, above 7 highly pressurized petroleum pipelines rounding a curve ever "safe"? 1953-1

Does this federal regualtion apply to impacted residents as well as commuters? 1953-2

HazMat chapter pg 2:

3.9-1.1 Federal Regulations

Hazardous Materials Transportation Act (49 United States Code Section 5101 et seq. and 49 Code of Federal Regulations Parts 101, 106, 107, and 171-180)

The Hazardous Materials Transportation Act regulates the transportation of hazardous materials. The objective is to provide adequate protection against the risks to life and property inherent in the transportation of hazardous materials in commerce, by improving the regulatory and enforcement authority of the Secretary of Transportation.

Especially after we learned rail regulations had been relaxed federally as we hear there've been 34+ derailments and/or crash incidents in the past 2 months.

Thank you for your attention to this matter,

Monique Negrete-Mitchell

My name is Gianna Mitchell, and I have been a resident in Redondo Beach my entire life, and have lived on the ROW for more than a decade and still continue to do so. In my many years of living here, I have noticed a few things left out of Metro's Environmental Impact Report draft.

I am referring to the families of great horned owls and red tailed hawks that live along the ROW, in the park behind my house (El Nido Park). Both of these species of birds have been living here for years and are crucial in our local ecosystem for keeping the population of gophers, mice, and rats in check, and construction on the ROW would drive them away completely.

1954-1

Without these birds, the population of these and other prey animals would skyrocket, leaving the door open for other predators such as coyotes, which pose a danger to pets and small children.

Attached is a picture of one of these owls in my backyard, as well as an article detailing a similar situation in Hermosa Beach, albeit with a different species of owl.

YOUR EMPLOYEE'S EVERYDAY EXPERIENCE AND OBSERVATION

Earlier that day, as he drove the Red Line subway, **he saw a man *masturbating* in his seat and several people whom he refers to as "sleepers," people who get high and nod off on the train.**

"We don't even see any business people anymore. We don't see anybody going to Universal. **It's just people who have no other choice [than] to ride the system, homeless people and drug users."** 1955-3

Commuters have abandoned large swaths of the Metro train system. Even before the pandemic, ridership in the region was never as high as other big-city rail systems. ***For January, ridership on the Gold Line was 30% of the pre-pandemic levels, and the Red Line was 56% of them. The new $2.1-billion Crenshaw Line that officials tout as a bright spot with little crime had fewer than 2,100 average weekday boardings that month.*** 1955-3

The video @metrolosangeles doesn't want you to see. A montage of crimes mostly from 2021. Both @LASDHQ and @lapdhq say this is not a daily occurrence but illustrates just how crime has escalated over the years. @KFIAM640 @GaryandShannon @johnandkenshow

https://vimeo.com/701346094 <Copy and paste and see these attacks for yourself the numerous attacks and shootings

LA riders bail on Metro Trains amid 'horror' of deadly drug overdoses, Matthew Morales smokes fentanyl on the Red Line in the Metro subway leaving MacArthur Park on Feb, 28.

The transit agency's head of security has said she will be asking the 13-member board — that includes Mayor Karen Bass and the county supervisors — to expand the agency's force of nearly 200 in-house transit officers, some of whom are armed and enforce fare evasion and code of conduct violations. And the board will soon decide whether to continue contracts with the Los Angeles Police Department, the Los Angeles County Sheriff's Department and the Long Beach Police Department, or come up with another way to secure the system. 1955-4

Some board members and social justice advocates have argued for less policing on the system, saying that racial profiling targets many passengers. ARE YOU KIDDING. IF THEY ARE DOING THE CRIME, THEY NEED TO BE CAUGHT, ARRESTED AND PROSECUTED. THAT IS HOW YOU REDUCE CRIME. THAT IS HOW YOU PROTECT THE PASSENGERS.

Violent crimes have jumped on the Metro system 36% this year, the Los Angeles Times reported, with *aggravated assaults, rapes and homicides* rising for the second consecutive year. Some of the crimes have generated publicity because of the brazenness of the alleged attackers amid a rise in homelessness and loitering on transit lines.

In January, a homeless man attacked Sandra Shells, a 70-year-old emergency room nurse who was near a bus stop at Union Station when she was pushed to the ground and hit her head, authorities said. 1955-4

The uptick in violence has led to a standoff between the MTA and Los Angeles County Sheriff Alex Villanueva, who announced last week that he would withdraw his deputies from transit patrol suites by July 1 unless his department is given sole authority to provide such services on buses, trains and stations.

UNTIL METRO PUTS SECURITY ENFORCEMENT ON BOARD THESE DEATH TRAPS, NO ONE IS GOING TO WANT TO TRAVEL ON THESE DEATH TRAINS. AND NONE OF THE 1,200 HOMEOWNERS OF LAWNDALE AND NORTH REDONDO BEACH WANT THESE DEATH TRAINS RUNNING THROUGH OUR BACKYARDS along the ROW.

IF YOU HAVE TO BUILD THE EXTENSION, PUT IT *ELEVATED DOWN HAWTHORNE BLVD 2e ALIGNMENT* 1955-5 **REGARDLESS OF COST. DO THE RIGHT THING. NONE OF YOU WOULD WANT THIS FEET FROM YOU PROPERTY WITH 30 PLUS OIL TANKERS DERAILING DOWN ON YOUR HOUSES.** 1955-6

Subject: Comment

I moved here from DC, which had a robust Metro. While I am excited, that Los Angeles is trying to do the same thing, yesterday's Los Angeles Times article gave me pause.

I live in Redondo Beach. I think before expanding everything should be done to make sure that the metro is safe. The article pointed out how the metro has become a haven for drug users.

I was born in New York City, and did not have a car in DC. I am not afraid to use public transportation but Los Angeles is so different. My comment is before expanding please make sure the current metro is safe. Los Angeles is such a unique city. While people do you want to use mass transportation it will not be a success, unless they feel safe doing so. If the Los Angeles Times article was accurate, it seems a better use of money would be to clean up the current system as it is, and get more riders prior to expanding. Unless that is done, it seems like expansion without riders is only going to be more disruptive. 1956-1

Once people feel safe, riding the metro, I do suggest the lease disruptive option for residents. In other cities, the metro is close to living areas, but there are definite protections in place to ensure that those who live close or not unduly disturbed.

Thanks,

Marie Puterbaugh

Subject: Yes to Metro by Hawthorne Location

Hello everyone,

I live in 182nd Pl and Firmona, I was reading the DEIR Draft, an when it comes to environmental impact Hawthorne is the better option, also it would take less time (2029-2035 vs 2027-2035 by our street) it has less air quality sensitive receptors and less daily haul loads, I would think this will help you save money. Yes we love the idea of public transportation but not in our backyard especially when we're dealing with the freight train already, and that train will drive by 1-2 times a day, the metro would be passing by ALL DAY. In my street we have old retired couples and young families with babies so please don't make us deal with noise and vibrations when there are other better options. 1957-1

Thank you,
Maria Savage

Subject: DEIR Community Response Series from Right of Say/Redondo Beach Quality of Life Installment #5

After having a chance to review the Draft Environmental Impact Report, please consider the following as our fifth DEIR group response for the record. We are responding in joint installments submitted by group members. This installment is regarding Vibration.

When the freight train passes by on its once per day round trip, the several liquid petroleum tankers are full of jet fuel on the trip north, get emptied at their destination and returns headed south after dropping the fuel off. The jet fuel is highly flammable, and so would be the emptied tankers. 1958-1

The DEIR states the "proposed project", both ROW alignments, would require shifting the freight to the west bringing it 7 - 25 feet closer to residential properties on the west side of the ROW. What are the safety protocols to guarantee no more structural damage will occur to our homes with the added wear and tear of 200 - 300 new commuter trains over 20 hours per day? 1958-2

There is very significant seismic vibration as the train passes daily. Glasses, dishes, bottles, shake and move toward the edge of the shelves. They have to be moved back. Walls shake both indoor and outdoor showing cracks from wear and tear, artwork moves and either falls or needs adjusting. A heated chemical bath in a crock pot rattles vigorously. See video which clearly demonstrates this happening, link here: https://youtu.be/OtvWR7xzcYM

The DEIR states:
3.6-4.1.1 Construction Impacts
Significant and Unavoidable Impact. The Proposed Project would be located in a fully built-out urban environment and construction activities would occur in close proximity to sensitive land uses, including residences, parks, religious uses, and schools throughout the corridor, and may occur during daytime or nighttime hours. Construction of the Proposed Project would take place over the course of approximately five years.It is anticipated that several construction phases would occur simultaneously along the Proposed Project alignment, accommodating activities requiring lengthy construction times such as utility relocation. 1958-3

Construction of the Proposed Project would take place over the course of approximately five years.

VdB in vibration definition as taken from MetroCouncil.org:

Level: Vibration is expressed in ***vibration decibels*** *(VdB). The level of vibration represents how much the ground is moving. The threshold of human perception to LRT and freight rail vibration is approximately 65 VdB and annoyance begins to occur for frequent events at vibration levels over 70 VdB.* 1958-4
According to well documented studies, we have known geology issues of loose dirt, sand, silt and sandy clay which raises concerns that vibration from the proposed construction is highly risky to surrounding buildings. More significant seismic vibration activity coupled with longevity of construction, then subsequent frequency of operations activity 20 hours per day will most certainly be unbearable to residents and puts the infrastructure of our homes at risk.
Table 3.6-12 demonstrating the higher than predicted vibration levels that are well above the defined level of over 70. This plus 20 hours per day light rail every 5 - 12 minutes cannot be allowed. 1958-5

Table 3.6-12 Measured Train Pass-by Vibration Levels at 50 feet

Date	Time	Location	Train Consist	Ground Type	Train Speed (mph)	Measured Level (VdB)	Predicted Level (VdB)	Level Difference	Comment
11/18/20	11:37 AM	Condon Ave	2+40	Flat	20	75.9	76.7	0.8	Good Agreement
11/18/20	3:04 PM	El Nido Park	2+12	Berm	20	89.0	76.7	-12.3	Higher than predicted
11/19/20	12:45 PM	El Nido Park	2+17	Berm	20	91.5	76.7	-14.8	Higher than predicted
11/1/20	2:55 PM	Condon Ave	2+8	Flat	21	76.5	77.1	0.6	Good Agreement

Source: AECOM, 2020

1958-5

There is confusion in the DEIR about "inconsistent (vibration) readings" at El Nido Park. That happened because the earlier northbound tankers are full of liquid petroleum (flammable), then later on the trip back south the tankers have been emptied so the weight difference would cause different levels of vibration.
It's stunning to us that there isn't even a question about this risk. The threat it poses can't be proven. Metro would be rolling the dice at our communities' peril. The only real mitigation is to build the elevated profile on Hawthorne Blvd.

1958-6

Too much humanity is at stake. Please take this to heart and decide accordingly. Thank you for your attention to this matter.

Respectfully,

Redondo Beach and Lawndale members of Right of Say/RBQOL

Submission 1959

Submission 1960

From: Ray Hollar <[redacted]>
Sent: Saturday, March 18, 2023 8:49 PM
To: GreenlineExtension
Subject: DEIR Section 3.3-2.3 Aesthetics Impact

Metro Green Line Extension DEIR: Proposed Project [ROW trains] would Degrade Lawndale "Visual and Aesthetics"

Per DEIR Section 3.3-2.3, “The Project [ROW trains] and Options may have a significant effect on visual and aesthetics if they would:

a. Have a substantial adverse effect on a scenic vista;
b. Substantially damage scenic resources, including but not limited to, trees …”

The DEIR concludes, “There are no scenic vistas or other public vistas within the RSAs [resource study areas],” (Section 3.3-3.1.) and “No Impact” to Visual and Aesthetics, A and B (Table ES-2). These conclusions are false.

The impact by "The Project" ROW trains should have been scored as being “significant.” From the ROW in Lawndale, especially this time of year with clear skies and sun low in the south, one can see the beautiful snowcapped San Bernardino Mountains, the San Gabriel Mountains, the Santa Monica Mountains, and my two favorite landmarks in all of LA, the Hollywood Sign and Griffith Park Observatory: what’s more scenic than that? Walls along the ROW and especially the elevated ROW train section from 159th street to 165th street would obscure those scenic vistas of those who live by and walk along the ROW. The scenic vista provided by our beautiful pine trees, many as tall as 65 feet, cannot be replaced by numerous 10 foot trees. But the impact would be more than that. The ROW trains would consume our sense of openness along the ROW, closing us in like prisoners of progress, degrading our quality of life. Forever. Come visit us in Lawndale and see.
Say No to the Metro ROW trains.

1960-1

Subject: A message from lawndale

Hi there. My name is Kylee and I have lived in lawndale my whole life, that's 30 years this summer, and I'm asking you to vote no on extending the railway through lawndale. I grew up on these streets and have great memories exploring lawndale and am now raising a little one in a small house on 160th only two houses down from the tracks. I even went to high school in this area, at Environmental Charter, so I am knowledgeable of the detriments this project could have on our local environment while also respecting the need for public transportation. 1961-1

We take daily walks down the lovely green space and I get to watch my toddler explore nature so close to home. The train comes by twice a day and my son runs to me so we can drop everything we are doing to go out and watch it pass. This rail way is our backyard and I do not support the green line being extended through it. Lawndale deserves better! 1961-2

Alternative 2e is a forward thinking option to advance lawndale businesses and put our name on the map. Please vote to pass the railway through hawthorne blvd; do not destroy the only green space we have! NO ON ROW! 1961-3

Subject: C-Line (Green) DEIR Public Comments

Dear Metro,

Please add my comments below expressing my concerns with the DEIR.

The Chapter on Biological Resources does not adequately address the severe impact on the only open space close by namely El Nido Park. Its an oasis in this densely populated area. The train will pass next to the park and put stress on the park's birds and small mammals. It will also disturb family and group gatherings to celebrate significant occasions. 1962-1

March 15, 2023

Dear Metro and Metro Board Members,

This is my final letter for the public record. I urge you to put the Metro on Hawthorne Boulevard rather than the (ROW) Right Of Way where it will destroy the lives of so many. I say this for the following reasons.

Vibration and Noise: The DEIR says the noise and vibration will be significant and unavoidable. Our homes were not built to withstand the vibration of up to 300 trains per day. This could damage their foundations. Also, the noise during construction, which will take several years, and after has the potential to harm the health and wellbeing of the residents. Studies link several health concerns to living near high levels of noise pollution. Some of these include, (NIHL)noise induced hearing loss, high blood pressure. Heart attack, asthma, chronic stress, anxiety. Children risk impairment in memory, attention and reading skill.
https://education.nationalgeographic.org/resource/noise-pollution/ 1963-1

Soil conditions: The geology along the ROW is not suitable for a Metro. There are numerous old gas lines running through it. These would have to be moved to make room for the Metro. Also, routine maintenance caused a large sink hole over a year ago that damaged homes and has yet to be fixed. The combination of the soil conditions and the serious hazard of moving old gas lines in a heavily populated area makes Hawthorne Boulevard a much better option**.** 1963-2

Quality of Life: There are numerous problems with the ROW option. They include the potential for structural issues from vibration, gas line dangers, soil problems, the disruption of wildlife living along this green space, but the most important reason to put the Metro on Hawthorne Boulevard is the impact on human life. The risk of potential harm to the hundreds of families living in the area, some only feet from the Metro is too great. Many of the health risks are irreversible. You can not put a price on human life. 1963-3

For the health and wellbeing of the people of Lawndale and Redondo Beach, please consider putting the Metro along Hawthorne Boulevard. Thank you for your consideration in this matter.

Subject: Metro Green C Line Extension

Hello,
I am writing to let you know what I think about this Metro plan. My whole family is definitely against this plan of going through the ROW. We own property on Condon Avenue in Lawndale between 170th and Artesia. 1964-1
This Metro plan of cutting through our peaceful and quiet community, separating the western and eastern parts of the community, is out of line. We would have commuter trains speeding by, on average, every 6 minutes daily. The excess noise and vibrations for those adjacent to the rail lines, especially for my family home, would destroy our peace and tranquility both during construction and after. 1964-2
I think that logically, a better way to serve the community transportation needs and get a greater percentage of the South Bay population to use public transportation is by the use of shuttle buses. Environment friendly, variety of sizes of shuttle buses, the flexibility of changing of routes to meet the varieties of needs. 1964-3
I personally used to park and ride the Silver Line from Harbor Gateway station to work. I had to drive to the bus station because the Artesia Boulevard bus schedules did not coincide.
In conclusion, increase bus circulation and NO to the ROW. 1964-4
Thank you.

Subject: No to Metro Green Line to go down the ROW

CAUTION: External Email. Proceed Responsibly.

Dear Supervisor Holly Mitchell:

My name is Ana Maria Houck and I am a resident of Lawndale. I live on Condon Ave with my family and the freight tracks are right behind our house. The freight tracks are bordered by houses on both sides. Metro wants to add a second set of tracks but THERE IS NOT ENOUGH ROOM. In addition, there are high pressure petroleum pipelines. Metro has not said anything about relocating these hazardous oil pipelines and has said nothing about which residents' property will be taken. Metro only says that the ROW boundaries are "preliminary". The ROW boundaries have been there since the 1965-1

1980s. Metro should know that there is not enough room. In repeated public briefings, Metro says they do not "anticipate" taking private properties. If that were so, then the figure should be able to be drawn accurately. 1965-1

Please help me protect my family and our home. We've done so much to make it a beautiful place, planting trees, growing fruit, and encouraging the bird wildlife to thrive (mainly mourning doves). We love where we live and do not want our way of life to be upended. I hope to get pregnant by summer and I'd like to raise my unborn child in this home, which until now has been a quiet and safe haven.

Thank You,

Ana Maria Houck

Subject: DEIR Community Response Series from Right of Say/Redondo Beach Quality of Life Installment #6

Dear Metro and Metro Board of Directors,

After having a chance to review the Draft Environmental Impact Report, please consider the following as our fifth DEIR group response for the record. We are responding in joint installments submitted by group members. This installment is regarding Overall SAFETY.

As a lot of us are homeowners who share property lines on the west side of the ROW corridor, we have grave concerns for our safety, to our health, our property and our persons.

SAFETY:
Is it even possible to guarantee that crowding THREE rails into a narrow corridor in between 1,100 homes and with passengers in such close proximity to liquid petroleum fuel tankers 12-25' away from densely occupied housing above 7 highly pressurized petroleum pipelines at some points rounding a curve and others 30 feet above occupied trenched light rails "safe"?

Please refer to federal guidelines which pertain to impacted residents as well as light rail passenger commuters.
HazMat chapter pg 2:
3.9-1.1 Federal Regulations
Hazardous Materials Transportation Act (49 United States Code Section 5101 et seq. and 49 Code of Federal Regulations Parts 101, 106, 107, and 171-180)
The Hazardous Materials Transportation Act regulates the transportation of hazardous materials. The objective is to provide adequate protection against the risks to life and property inherent in the transportation of hazardous materials in commerce, by improving the regulatory and enforcement authority of the Secretary of Transportation.

1967-1

There have been numerous derailments and/or crash incidents daily in the past 3 months. We have since learned rail regulations had been relaxed federally on an incremental basis due to the rail industry lobby.

We are strongly urging Metro and the Metro Board of Directors to deeply consider the safety of the highly impacted 1,100 households between Lawndale and Redondo Beach.

1967-2

Thank you for your attention to this matter.

Right of Say/Redondo Beach Quality of Life Coalition
"Still Growing In Numbers"

Submission 1968

From: Nancy Skiba [redacted]
Sent: Sunday, March 19, 2023 1:19 PM
To: GreenlineExtension
Subject: Green Line Extension Project

Please construct the Green Line on Hawthorne Boulevard, for residents' sake and to make the trains more conveniently located for shoppers on Hawthorne Boulevard and nearby stores. 1968-1

The proposed alternative in residential areas would be very unfair to home owners and residents, who would suffer the noise/soot/vibration of frequent passenger trains
running behind their homes. It is a known fact that lots of vibration can damage homes. The constant flow of passenger trains close to homes would negatively affect quality of life for families
living so many feet from the trains. I can tell you that a lot of soot and dirt gets kicked up by passing trains, 1968-2
because I used to rent a storage unit which was adjacent to train tracks in the area of Inglewood Avenue and Manhattan Beach Boulevard. The storage facility was quite dirty from black soot and dust thrown up by the passing trains, even inside the locked storage rooms. No one's nice homes should be at risk, and no one should have the noise and dirt and rumbling of trains 24/7 outside their back yard.

In addition, if there is a train derailment there would be very serious harm to residents, and this has been shown recently in the derailments which have been in the news. Please please locate the Green Line on Hawthorne Boulevard. Imagine if a derailment occurred how many families would be affected. 1968-3

Due to proximity of shopping locations on Hawthorne and nearby roads, it will increase your ridership and spare the poor residents and their homes. Underground placement would be helpful
but most of all, it would serve everyone best if the Green Line is not built close to homes. In addition, there 1968-4
are crimes which occur at the light rail stations and inside the light rail cars. Families need to be protected from harm and crime as well. Please help to make this a safer and more effective Green Line Extension.

Sincerely,

Nancy Skiba

Subject: Metro DEIR Comments

CEQA COMMENTS ON METRO'S DEFECTIVE DRAFT EIR FOR GREEN LINE EXTENSION

The following comments demonstrate that there is **substantial evidence** (CEQA guidelines section 15384a) of damages and regulatory noncompliance by Metro in the Green Line extension using the freight right-of-way. This conclusion is based on Redondo Beach Municipal Code (RBMC), evidence from Beach Cities Health District's multimillion dollar investment in Blue Zones and other peer-reviewed studies as cited by the National Institutes of Health (NIH) research findings. 1970-1

1. Project alternatives that use the existing freight right-of-way violate RBMC 10-2.2502 (Planning Design) 1970-2
2. Project alternatives that use the existing freight right-of-way violate RBMC 4-24.301 (Noise) 1970-3
3. Project alternatives that use the existing freight right-of-way create health damages 1970-4
4. Project alternatives that use the existing freight right-of-way damage child development 1970-5

These comments and damages that are demonstrated with substantial evidence must be included in the Final EIR, adjustments must be made to project, and no use of the freight right-of-way can be selected by Metro without non-compliance with RBMC and damages to both adults and generations of children. 1970-6

[1] GREEN LINE ALTERNATIVE ALONG THE RIGHT-OF-WAY VIOLATES RBMC 10-2.2502

There is **substantial evidence** that the proposed Green Line preferred option in the existing freight right-of-way, coupled with planned 24/7/365 intermittent operation violates Redondo Beach Municipal Code (RBMC) 10-2.2502 Planning Commission Design Review (PCDR). The RBMC PCDR states that it's purposes include: "protect property values" and "ensure compatibility" with the existing neighborhoods. Clearly, 24/7/365 rail operations are not consistent with the existing residential neighborhoods. Peer-reviewed research has found that rail damages surrounding property values, thereby failing compliance with RBMC. 1970-7

Peer-reviewed research demonstrates that train noise can also damage property values. This should come as no surprise and can also be seen from property value analysis. 1970-8

Vehicular Noise Pollution: Its Environmental Implications and Strategic Control
DOI: 10.5772/intechopen.85707
"All types of noise altogether affect the same irrespective of the sources and cause headache to the high blood pressure and other heart diseases. **Some noise types like** aircraft and **train noise also have negative effects on property prices**."

[2] GREEN LINE ALTERNATIVE ALONG THE FREIGHT RIGHT-OF-WAY VIOLATES RBMC 4-24.301

There is **substantial evidence** that the proposed Green Line preferred option in the existing freight right-of-way, coupled with planned 24/7/365 operation violates Redondo Beach Municipal Code for noise generation. The noise receiving zoning from the proposed alternative in Redondo Beach would be predominantly residential, with a maximum, not to exceed nighttime noise limit of 65dBA and daytime limit of 70dBA (presumed ambient level plus 20 dBA. 1970-9

4-24.301 Maximum permissible sound levels by land use categories

"No person shall operate, or cause to be operated, any source of sound at any location within the City or allow the creation of any noise on property owned, leased, occupied, or otherwise controlled by such person which causes the noise level when measured on any other property to exceed: …the noise standard of the receiving land use district plus twenty (20) dB for any period of time

[3] GREEN LINE ALTERNATIVE ALONG THE FREIGHT RIGHT-OF-WAY VIOLATES DAMAGES HEALTH

There is **substantial evidence** that the proposed Green Line preferred option in the existing freight right-of-way, coupled with planned 24/7/365 intermittent operation will increase the risk of death and illness of nearby residents from chronic stress according to the Beach Cities Health District's multimillion dollar Blue Zones project research, findings, and other peer-reviewed studies and publications. 1970-10

Lessons from the Blue Zones

https://www.ncbi.nlm.nih.gov/books/NBK298903/

"… widen its main street and raise the speed limit, which, Buettner [Blue Zones CEO] said, creates stress, danger, noise pollution, and air pollution." Obviously 24/7/365 train activity exceeds a widened main street's negative health impacts as stated by Blue Zones.

How Stress Makes Us Sick

https://www.bluezones.com/2019/05/how-stress-makes-us-sick-and-affects-immunity-inflammation-digestion/

"…this stress can be chronic, due to a specific situation … exposure to stress in early life can alter the normal development … resulting in increased sensitivity to stress and lifelong health risks in offspring."

Stress is Often Referred to as the "Silent Killer"

https://www.bluezones.com/2012/03/maximize-health-and-longevity-using-these-stress-management-strategies/

"… causes many harmful, often overlooked effects … pain and strain … sleep habits … physical suffering … headache, upset stomach, or back pain … stress can reduce the ability of your immune system"

Even the Metro Threat to Build in the Freight R-O-W Shortens Lives of Residents

https://www.bluezones.com/2020/10/fighting-chronic-stress-from-current-events-you-are-not-alone/

"Although people often underestimate the influence of the mind on the body, a growing catalog of research shows that high levels of stress over an extended time can drastically alter physical function and affect nearly every organ system."

Metro Will Destroy the Blue Zones Solution of Home Sanctuary for Generations

https://www.bluezones.com/2012/05/create-a-sanctuary-in-your-home/

Blue Zones recommends creating a quiet calm home sanctuary which cannot be accomplished with 24/7/365 noise that creates stress and violates RBMC. 1970-11

How living near a railroad can harm your health: From chronic stress to an increased risk of cancer, scientists say that constant exposure to trains takes a toll on the human body

https://www.nationalgeographic.com/science/article/health-risks-living-near-railroads-east-palestine-trains

National Geographic discusses how rail creates noise and increased risks that create chronic stress and health damages. 1970-12

Effects of Exposure to Road, Railway, Airport and Recreational Noise on Blood Pressure and Hypertension

https://www.ncbi.nlm.nih.gov/pmc/articles/PMC8431620/

Transportation noise can induce annoyance, sleep disturbance with awakening, cognitive impairment, physiological stress reactions, endocrine imbalance and cardiovascular disorders 1970-13

The Effect of Aircraft, Road, and Railway Traffic Noise on Stroke – Results of a Case–Control Study Based on Secondary Data

https://www.ncbi.nlm.nih.gov/pmc/articles/PMC6122263/

For railway noise, there was a positive linear exposure–risk relation: Per 10 dB the stroke risk increased by 1.8% for railway traffic noise. The maximum risk increase of 18% for railway traffic noise was found in the exposure category ≥65 to <70 dB. NOTE 65-70 dB is modest for rail, along with accompanying vibration. 1970-14

Transportation Noise and Risk

https://ehp.niehs.nih.gov/doi/10.1289/EHP11248

Transportation noise exposure is believed to be detrimental to human health through stress reactions with activation of the hypothalamic–pituitary–adrenal axis, followed by increased levels of stress hormones. In addition, nighttime noise exposure can impact sleep quality and duration, which are crucial for physiological and mental restoration. 1970-15

A study of self-reported health problems of the people living near railway:

https://www.ncbi.nlm.nih.gov/pmc/articles/PMC7114011/

Noise ... can cause both auditory and nonauditory health effects. Nonauditory effects of noise can cause tinnitus, headache, auricular plenitude, dizziness, and gastric, visual, sleep, and mood disorders, endocrine imbalance, and cardiovascular disorders. 1970-16

[4] GREEN LINE ALTERNATIVE ALONG THE FREIGHT RIGHT-OF-WAY DAMAGES CHILD DEVELOPMENT

There is **substantial evidence** that the proposed Green Line preferred option in the existing freight right-of-way, coupled with planned 24/7/365 intermittent operation will damage the development of residents' children from chronic stress according to the Beach Cities Health District's multimillion dollar Blue Zones projects research and findings. 1970-17

How Stress Makes Us Sick

https://www.bluezones.com/2019/05/how-stress-makes-us-sick-and-affects-immunity-inflammation-digestion/

"…this stress can be chronic, due to a specific situation … exposure to stress in early life can alter the normal development … resulting in increased sensitivity to stress and lifelong health risks…"

Subject: Extension Metro line thru Lawndale

Hello,
We are against Metro extension thru Lawndale. Lawndale community is very old and most houses are older without air-condition. For years people here were enjoying in hot weather ocean breeze . Most time during day and night open windows , with 200 trains coming thru close to houses that will be impossible with the noise. 1971-1

Subject: Unstable ground for the project

Hello,
As a resident of Lawndale ,I am strongly against the project to extend Metro line thru Lawndale. Lawndale houses are on sand/clay ground and 200 trains per day will make a vibration, specially danger to the houses near the track. A lot houses were builded in 1940-1950 and vibration will damage the structures. 1972-1

Subject: NO BUILD OR ELEVATE GREEN LINE EXTENSION DOWN HAWTHORNE BLVD ALIGNMENT 2e HAVE SOME HUMANITY

***********NO ON THE ROW EXTENSION OF METRO GREEN LINE *********** 1973-1

After having a chance to review the Draft Environmental Impact Report, please consider the following as our fifth DEIR group response for the record. We are responding in joint installments submitted by group members. This installment is regarding Vibration.

When the freight train passes by on its once per day round trip, ***the up to 32 (THIRTY TWO) liquid petroleum tankers*** *are full of jet fuel* on the trip north, get emptied at their destination and return headed south after dropping the fuel off. [redacted] ***The jet fuel is highly flammable*** [redacted], and so would be the emptied tankers. 1973-2

The DEIR states the "proposed project", both ROW alignments, would require shifting the freight to the west bringing it ***7 - 25 feet closer to residential properties on the west side of the ROW***. ***The tracks are currently elevated 25 feet above my property on FISK COURT.***

[redacted] **DERAILMENT** [redacted] **IS POSSIBLE WITHOUT ANY SUPPORTING WALL.** What are the safety protocols to guarantee no more structural damage will occur to our homes with the added wear and tear of 200 - 300 new commuter trains over 20 hours per day? 1973-3

There is very significant seismic vibration as the train passes daily. Glasses, dishes, bottles, shake and move toward the edge of the shelves. They have to be moved back. Walls shake both indoor and outdoor showing cracks from wear and tear, artwork moves and either falls or needs adjusting. A heated chemical bath in a crock pot rattles vigorously. See video which clearly demonstrates this happening, link here: https://youtu.be/OtvWR7xzcYM

The DEIR states:

3.6-4.1.1 Construction Impacts

Significant and Unavoidable Impact. The Proposed Project would be located in a fully built-out urban environment and **construction activities would occur in close proximity to sensitive land uses, including residences, parks, religious uses, and schools throughout the corridor, and may occur during daytime or nighttime hours. Construction of the Proposed Project would take place over the course of approximately five years.** It is anticipated that several construction phases would occur simultaneously along the Proposed Project alignment, accommodating activities **requiring lengthy construction times such as utility relocation.** 1973-4

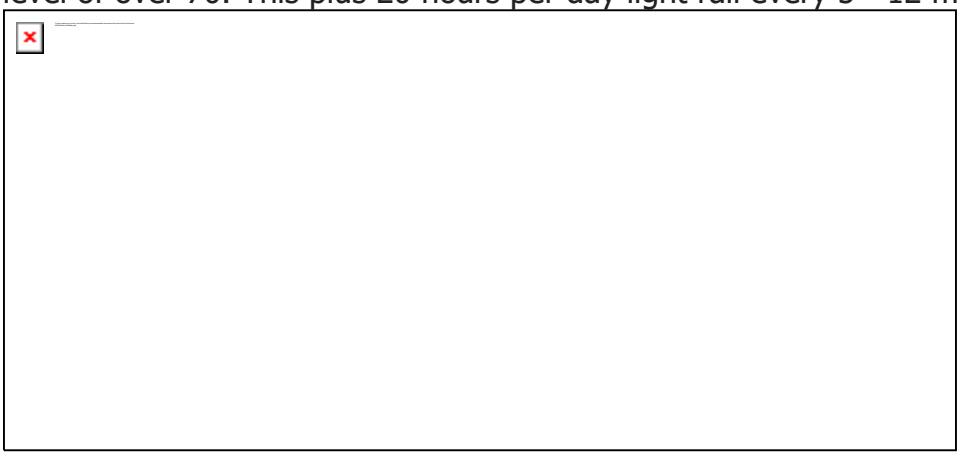
Construction of the Proposed Project would take place over the course of approximately five years.

VdB in vibration definition as taken from MetroCouncil.org:

*Level: Vibration is expressed in **vibration decibels** (VdB). The level of vibration represents how much the ground is moving. The threshold of human perception to LRT and freight rail vibration is approximately 65 VdB and annoyance begins to occur for frequent events at vibration levels over 70 VdB.*

According to well documented studies, we have known geology issues of loose dirt, sand, silt and sandy clay which raises concerns that vibration from the proposed construction is highly risky to surrounding buildings. More significant seismic vibration activity coupled with longevity of construction, then subsequent frequency of operations activity 20 hours per day will most certainly be unbearable to residents and puts the infrastructure of our homes at risk. 1973-5

Table 3.6-12 demonstrating the higher than predicted vibration levels that are well above the defined level of over 70. This plus 20 hours per day light rail every 5 - 12 minutes cannot be allowed. 1973-6



There is confusion in the DEIR about "inconsistent (vibration) readings" at El Nido Park. That happened because the earlier northbound tankers are full of liquid petroleum (flammable), then later on the trip back south the tankers have been emptied so the weight difference would cause different levels of vibration. 1973-7

It's stunning to us that there isn't even a question about this risk. The threat it poses can't be proven. Metro would be rolling the dice at our communities' peril. The only real mitigation is to build the elevated profile on Hawthorne Blvd.

Too much humanity is at stake. Please take this to heart and decide accordingly. Thank you for your attention to this matter.

Respectfully, Jan Kurth
AND
Redondo Beach and Lawndale members of Right of Say/RBQOL

Submission 1975

From: Jake Divine [redacted]
Sent: Sunday, March 19, 2023 8:19 PM
To: GreenlineExtension
Subject: C-LINE / Green Line Extension

Dear Metro,

I have been a Lawndale homeowner for over 45 year, I have grave concerns for my community's safety, health, and security.

SAFETY:
Is it even possible to guarantee that crowding THREE rails into a narrow corridor in between 1,100 homes and with passengers in such close proximity to liquid petroleum fuel tankers 12-25' away from densely occupied housing above 7 highly pressurized petroleum pipelines at some points rounding a curve and others 30 feet above occupied trenched light rails "safe"? 1975-1

Please refer to federal guidelines which pertain to impacted residents as well as light rail passenger commuters.
HazMat chapter pg 2:
3.9-1.1 Federal Regulations
Hazardous Materials Transportation Act (49 United States Code Section 5101 et seq. and 49 Code of Federal Regulations Parts 101, 106, 107, and 171-180)
The Hazardous Materials Transportation Act regulates the transportation of hazardous materials. The objective is to provide adequate protection against the risks to life and property inherent in the transportation of hazardous materials in commerce, by improving the regulatory and enforcement authority of the Secretary of Transportation.

There have been numerous derailments and/or crash incidents daily in the past 3 months. We have since learned rail regulations had been relaxed federally on an incremental basis due to the rail industry lobby. 1975-2

We are strongly urging Metro and the Metro Board of Directors to deeply consider the safety of the highly impacted 1,100 households between Lawndale and Redondo Beach. 1975-3

Thank you for your attention to this matter.

James Divine

Kelly F

02/10/2023

Hello, my name is Kelly F. I own property in Torrance not too far from the green line where you are extending. But one of the things that—I got your brochure "Next Stop More Rail in the South Bay, C Line Green Metro." Okay, I appreciate that. But you failed to send a map of where this is going to go. This is for us seniors that need to have visuals. Not what you are going to do, but what you are going to do with the map. Failed on that score. Are you going to eliminate the railroad tracks or what? Are you going to use them? What are you going to do? Give us the map. Get smart. Thank you. 1975-1

Jay Gould

02/12/2023

Yeah, I'm calling about that Metro line. I went to my first meeting in 2002, when you guys proposed, started this thing and you guys got the land from behind my property. I had a lease out here. You guys took the land from us. Being around the railroad tracks. Which you stole. It should have been given to us that's it. The railroad let's start right there. Well ever since you guys started there and then in May, we had a meeting in 2010, and you guys said you were, we voted—170 people voted no build. No build. No build. I know you don't, you've been tormenting me causing me major stress in my life. And my name is Jay Gould. You know who I am. And you guys have been causing major stress in my life. I'll talk to my lawyer about suing you guys and now you're still saying you're going through with this thing. This is a ridiculous proposal, put it behind a bunch of houses. I want to be compensated, or buy my property off so I can go somewhere else. So I can go somewhere else. You are dirty. You guys are nasty, you're wrong people and your board members never show up to the meetings. Why can't they just show up for the meetings? No, he keeps going to Mark and all those quacks out there. There's something wrong with you guys. You know, can somebody call me back? Yeah, because I need to talk to you guys. Now, you're going to have more meetings and more meetings, and we don't want it. What part of we don't want it don't you understand? If anything, it should go down Crenshaw or Crenshaw will work, and Torrance wants it, and you gave them money.

02/12/2023

Did you put me through that again? I wasn't finished talking. Listen, listen. You guys are crazy. Bringing a train close to people's houses like that. Just the train that is here now already vibrates the house to death, and it's only twice a day. What's wrong with you guys? You know? As soon as Mark—Mark is going to retire pretty soon, and he's going to leave the state anyway. He didn't give a[redacted] about anybody. What's wrong with you guys? You guys are idiots. You know what? Payback's coming.

1977-1

Mark Car

02/14/2023

Yes, I would like to talk to the board members on this. It seems like common sense would say, you wouldn't take it down to the back of residential area. You take it right down Hawthorne Boulevard. And I don't know why you're going down the railroad track there. Evidently you must be paying somebody off. I don't understand what's going on, but the commonsense thing would be down Hawthorne Boulevard or if they don't want it down there, we go down Crenshaw because it's all refinery and everything down there. To your other play. Please let me know why your—the people there are stupid, because I need to know why stupid people are running this place. Please give me a call back. It's Mark Car. And I don't understand it. What's wrong with you guys that you would do something like that? Is it because you don't like people or you're stupid? I haven't figured out exactly what it is but there's something seriously wrong, but I'd like to talk to a board member and ask them how they would like to come down to the back of their house. And I would like to know, you know, are there—are the people along that line that are right on the line all the way the houses getting a kickback? Or what are they getting? Are they getting money? Then I would understand it if they're getting money and maybe you guys don't know how. If they're not, it's the wrong move. Please inform me and call me back or get me in touch with a board member. My name is Mark Car. Thank you.

Los Angeles, CA 90012

RE: Metro C Line (Green) Extension to Torrance (DEIR) Public Comments

Dear Ms. Sheridan,

In an effort to educate, inform, and engage our residents, businesses and important stakeholders about the C-Line Extension to Torrance and the three (3) options that were studied in the DEIR, the City of Torrance sent out mailers and conducted online surveys to gather comments. Below is a summary of the 1,203 total comments and responses that we received:

- 79.47% of the comments support the Proposed Project: Right-of-Way Elevated/At-Grade;
- 6.57% of the comments support the Trench Option;
- 5.65% of the comments support the Elevated Hawthorne Blvd Option; and
- 8.31% of the comments do not support project at all and/or provided miscellaneous comments.

1990-1

There are some common themes found in the comments we received:

- Concerns about crime and the unhoused on or at L.A. Metro properties; 1990-2
- Concerns about increase in costs of the project with the Trench Options and Elevated Hawthorne Blvd. Option; 1990-3
- Impact to businesses and homes on Hawthorne Blvd. for the Elevated Hawthorne Blvd. Option; 1990-4
- The need for completing the project as soon as possible; 1990-5
- Improving First-Last-Mile Connections; and
- Improving connectivity between buses and rail. 1990-6

We look forward to the incorporation of these comments into the Draft EIR when completed. We have enclosed a copy of all the comments received.

Should L.A. Metro need to contact the City of Torrance please do not hesitate to contact David Mach at 310.781.6974.

Sincerely,

Kim Turner

Kim Turner, Director
Torrance Transit System

Dear Metro:

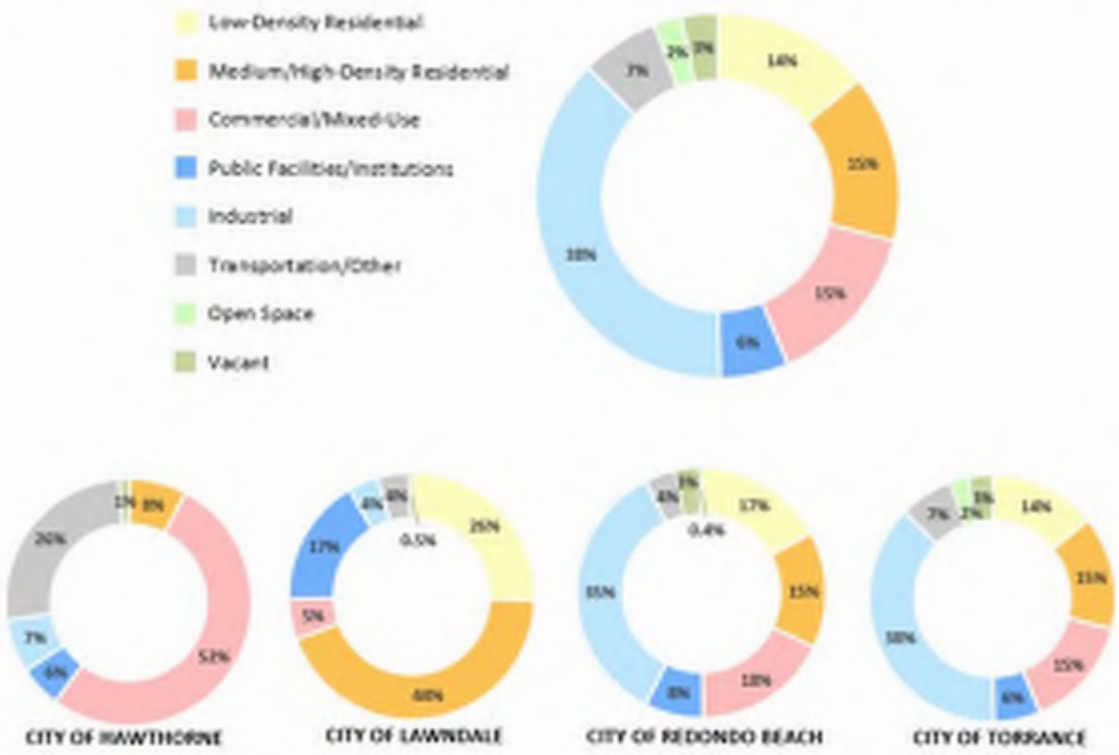
Problem: Figures 3.2-5 and 3.2-10 in the DEIR appear to be in error. (See below)
Action: Fix the figures, **and provide total acreage information on each city. (**Correct discussions on figures as necessary)
Impact: Inaccurate figures can lead to inaccurate conclusions. These figures should be corrected before you make decisions; and corrected figures might lead to follow-up questions. (Time should be provided to the originator of the question for that.)

Discussion:

I have the following questions on Figures 3.2-5 and 3.2-10..

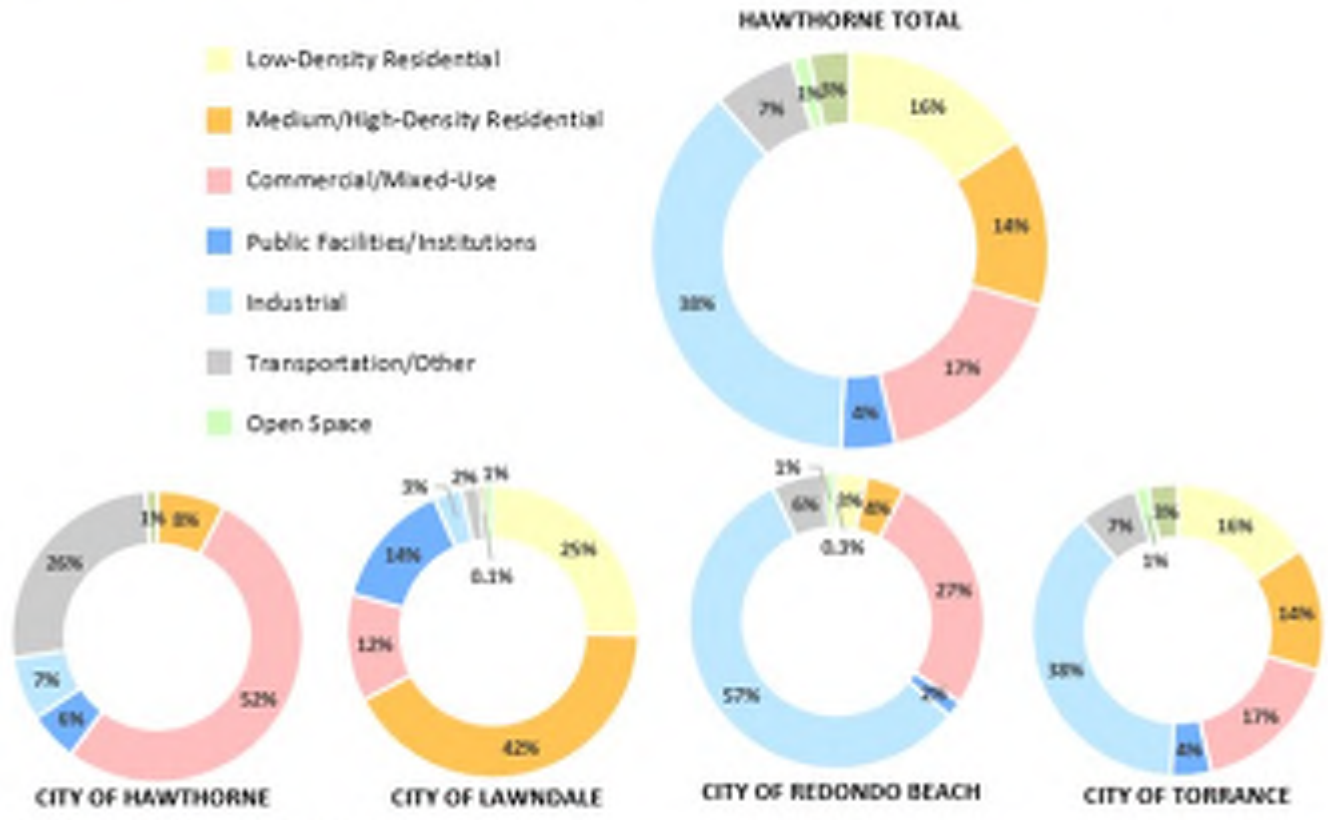
1) **What are the exact total acreages for each city of Hawthorne, Lawndale, Redondo and Torrance?** It seems peculiar to me t**hat the figure for the city of Torrance (4th figure on right) is exactly the same as the figure which professes to be the percentages for the combined region (larger figure on to**p). 1991-1
(This occurs in Both Figures 3.2-5 and 3.2-10.)

Figure 3.2-5. Proposed Project and Trench Option – Percentage of Existing Land Uses in Resource Study Area



Source: SCAG, 2020; STV,2022
Note: Percentages may not add up to 100 due to rounding.

Figure 3.2-10. Hawthorne Option – Percentage of Existing Land Uses in Resource Study Area



Source: Source: SCAG, 2020; STV,2022
Note: Percentages may not add up to 100 due to rounding Redondo Beach (Marine) Station

2) So, is the figure for Torrance really the one on the extreme right, or the one on top, or neither?

1991-2

Respectfully submitted,

Holly Osborne, PE.

Submission PH 1

PH 1: ARMANDO VICENTE

My name is Armando Vicente, and I'm here to say that I am all in favor of the Hawthorne alignment. And mainly because that is the one that makes most sense. It is more appealing, more modern looking. It costs almost the same as the trench and the proposed stations. According to your map, the station on the Hawthorne alignment is going to be in the South Bay Galleria, in front of it, I suppose. That makes the most sense to me because there is bus lines already existing there. And I believe they just finished building a Metro bus line station behind the Galleria, so they all interconnect. The other one on the ROW, whether it is trench or whatever it is, is going to be way at 182nd Street. It will be next to a park where there is birds and there's children and people walking their dogs. It doesn't make no sense to put a station there.

PH 1-1

PH 2: JOSH STANDIFER

Josh Standifer. My address is …….That is one of the areas where it's going to be a grade 20 feet from my property line. One of the things that I don't believe you have addressed with trying to take the only green piece of land we have left in our city and turn it into this where everyone is walking their dogs. PH 2-1

And you know what we also do -- it's a natural organism in relationship with the homeless community that can only tent maybe five to six at a time across the span of a mile. The minute that you isolate it from people accessing it, we will have an influx of tent cities in that area that you block off.

The first day I bought my house and it was on the market, two days later when we were renovating, I had ten homeless people that broke into that house. I can't imagine how many people would have been banded together to go squat if your station was built through our neighborhood. And not to mention that we have a ton of people who own outside cats that have grown used to a 15-mile-per-hour freight train that happens four times a day, not a 30- to 65-mile-per-hour train that happens every 6 to 15 minutes. PH 2-2

Don't build it. Go to Hawthorne. We don't want you in our city. And we remember Vanderbilt. We remember the names like Rockefeller. And this is not the age of railroad barons anymore. It's 2023. PH 2-3

PH 3: CRAIG ST JOHN

Hey, Mark. You know me. Craig St John, President of Westwood Building Materials on Inglewood Avenue and Manhattan Beach Boulevard. I would like, first of all, to give you a compliment. I do appreciate Metro working with us trying to go around this. Though, I get your Draft EIR, and we 11 find a little kicker there talking about taking 10 feet 12 off our property on Manhattan Beach Boulevard and Inglewood Avenue. We addressed that. Hopefully we take care of that.

PH 3-1

Personally, as my first -- and people out here in Lawndale. I'm surprised there's not more people out here. I bet you neighbors would get out here.

Personally, I do not think we should do something that is a waste of money. I am waiting to get an answer from any of you guys about your ridership, whether it's gone up, down, sideways. I read the newspaper, and Metro says your ridership has dropped. I don't know where you get your ridership numbers from.

PH 3-2

I have been to your meetings. Originally, you showed us a station there. A station that showed little black dots telling me each one was 5,000 people rode the bus at the two stops. And I said, "Really?" That one stop that you have right there hasn't even been there for fifteen years. Oops. So I don't know where you get your numbers, but anyway, that is my personal opinion.

As far as Westwood, I hope you guys go overhead if you do the ROW, which I think you are going to do. Because I think Hawthorne is just a dog and pony show for everybody. You are going to go with the ROW.

PH 3-3

I hope for the traffic sake those that travel Inglewood Avenue and Manhattan Beach Boulevard in the last month and a half knows how the traffic has been that being trenched. You will have that road congestion for six years. So please take it overhead. Do the work at night and not during the day.

PH 3-4

PH 4: KEVIN MITCHELL

Kevin Mitchell. Hello. I'm a homeowner on the ROW. I purchased my house in 2007 understanding the train line would -- it typically would have a roundtrip of one a day back and forth. So that has been our experience for 15 years now. The push by Metro to bring the C Line behind our homes changes this dramatically. What we have learned now is the trains are running from 4:00 a.m. to midnight every 6 to 15 minutes every day of the year. The road neighborhoods are primarily worker class, homeowners who would be assaulted by years of heavy construction and an infinite amount of train cars filled with noise and vibration that would essentially destroy any peace time we have outside the current freight schedule. PH 4-1

The mitigations like trench and elevated train positions have been proposed. It does not address the fact that this is a huge industrial encroachment into what are now peaceful, residential neighborhoods. Thank you. PH 4-2

PH 5: JOHN SCHREIBER

So as I go to these meetings over the year, I ask every Metro official can you name one benefit to the City of Lawndale and everyone just gives me a blank stare Because you can't name one positive impact on our city. We don't get a station. We don't get increased ridership to us. We don't get increased access to any train stations. We get all the negative impacts and none of the positive. And not one of you can ever tell me this is a good project for Lawndale.

PH 5-1

Going down the ROW you are destroying our way of life. You are destroying our homes. And I'll get more specific to the Draft EIR because that's what you asked. But you were asked would the project substantially damage or increase sources included but not limited to trees. For the ROW you stated there is no impact. I don't know how you can possibly say that. The ROW is the most scenic, peaceful place in Lawndale. We use this green space by the community. In a community that is very park poor. In fact, it is one of the most park poor cities in all of the South Bay. So I don't know how the Draft EIR can say that taking away the ROW would have zero impact on natural resources.

PH 5-2

I also didn't see you address hazards and hazardous materials. You are moving a freight train full of petroleum within 15 feet of some people's backyards. What happens if that train derails further down the line in El Segundo? What would happen if that train derails, tipped over and dumps petroleum in people's backyards? You saw what happened in Ohio, hazardous materials from trains? People has to evacuate for miles. You do not address that anywhere in the EIR.

PH 5-3

Finally, one minute is totally inadequate for us to address you guys. We are all here tonight. One minute is a BS amount of time. I think you need to change the amount of time.

PH 5-4

Submission PH 6

PH 6: CHELSEA SCHREIBER

I have a lot of questions. This will take a little more than a minute. My first question is about the trees. How will the project replace the trees that have been on the road for many years and been established there way longer than we have been alive? Will it be cut down? How will that be impacted? How will home values next to the ROW be impacted? I heard multiple times that home values will go up, but I cannot see how that is possible. I don't know. PH 6-1

I would also like to have you specifically identify projects similar to this in LA County. I'd like to know how other communities have fought and won against you. And I would like to know the contact information for those people so we can kick you out of our area. PH 6-2

How many homes will be impacted by the Hawthorne option versus the ROW option? And my most important question is: What are the health related environmental impacts that will impact families that live next to the railway? You have addressed sound but no long-term health concerns, cancer, asthma, et cetera. PH 6-3

I have a 4-month-old and a 4-year-old, and they spend most of their time in our yard, which butts up against the rail. Will they have health concerns later in life because they play in our yard while the Metro is being built? What's going to happen to them? To the people who are working on this project, would you allow your family to live next to this? PH 6-4 PH 6-5

PH 7: LENA PULLEN

Hello, my name is Lena Pullen, and I live in the City of Lawndale, and I am a parent. I have three daughters, and I asked my three daughters: If they built a Metro rail through the City of Lawndale, through Torrance, would you ride it? They said, "No." I said, "Why not?" "I don't feel safe."

PH 7-1

None of the women feel safe on this Metro rail. They feel like they will get killed, raped or stabbed by the homeless people who are going to turn it into their homes.

And the City of Lawndale has nine schools in their school district on both sides of the city on Hawthorne Boulevard. How are parents supposed to get their kids back and forth to school every morning if there is a Metro rail running from 4:00 a.m. to midnight, five to six minutes every day, 365 days and seven days a week? And what if there is a fire? Firefighters, EMTs, police how are they supposed to help people? And the Lawndale High School, how are we supposed to get our kids to the high school if they are doing construction on the Metro rail?

PH 7-2

No build. You can go down Prairie. You can go down Western. You can go down Crenshaw. You do not have to go through Hawthorne Boulevard. You can go down through Manhattan Beach, Hermosa Beach, Palos Verdes. Stay out of the City of Lawndale.

PH 7-3

PH 8: ERIC HERMELIN

Hi. My name is Eric Hermelin. I'm a 25-year homeowner in Redondo Beach adjacent to the right-of-way. And I note that there is predicted to be, assuming it goes to the trench or right-of-way or even on Hawthorne, significant construction, noise and vibration for at least five years and possibly longer. I guess for the trench is longer. And even after it's built, there would be significant noise on the right-of-way. PH 8-1

And for those reasons, I am in favor of the Hawthorne route as there is already currently heavy traffic most of the day and at night, and I think it would be less impact to residences in both Redondo and other cities. Thank you. PH 8-2

PH 9: BARRY OGLE

My name is Barry Ogle. We have lived in our house since 1963 right-of-way in Redondo Beach. I'm a retired BNSF conductor remote control engineer. We do the same thing as regular engineers. We just don't leave them and kick them to the curb. And someone brought up about the chemicals. And, yes, that can happen. And I know the chemicals we run up and down the Harbor Line. I ran it for many years. PH 9-1

I also approve of the Hawthorne Boulevard where you do not have to do a lot of soil compacting and such as where it's up on the right-of-way at Grant Avenue. You just had to go in there and rebuild the ground around the retirement home that is built up there on the other side of the right-of-way to the west of it. And you had to come in and put up some type of clay asphalt up there as well to keep the right-of-way from sliding into our neighbor's backyard already. PH 9-2

And you did not address to me in 2018 when I went to one of these local community get-togethers why you didn't look at the right-of-way on Normandie Avenue that comes right into Torrance up Del Amo Boulevard, which would bypass a lot of residential and come right into your train station -- rebuilt station on Crenshaw at Del Amo mall. It would be very little difference. PH 9-3

PH 10: ANGELICA VICENTE

Hello. So I have two major concerns. Mainly because I am a property homeowner on the strip where the ROW is going through 170th and Artesia. The main concern that I just confirmed today looking at the plan is that those that own property there might actually have to give up part of their small, tiny backyard to this project. So that's a major impact on residence living on that street. Property value is going to go down.

PH 10-1

I mean, I just bought a house there 10 years ago, and to think I would have to think about do I have to sell before construction starts or before a decision is made by Metro? So just things to think about when you are thinking between the ROW and Hawthorne. Another major concern for us is the wall. I mean, if it is going to be even closer to us, is it going to go higher? Is it going to block natural light? Is it going to be earthquake proof if it is going higher?

PH 10-2

And then the train tracks, they have always been very respectful, the BNSF, but I heard that you will move them even closer to us. So vibration, noise -- I mean, we can already feel a little bit of a rattle on our second floors, but now with the train even closer and the chemicals they carry even closer to us. There is also gas lines and petroleum lines running through the back of our homes.

PH 10-3

PH 10-4

So this affects all this community in the surrounding area. There is schools. There is families that need to cross that intersection on 170th to get to the school. Those living on the Westside are going to be kind of cut off from getting to Hawthorne quickly. So it's a huge disruption to the Lawndale community if going down the ROW. I don't see why disrupting otherwise a quiet neighborhood rather than go down a commercial street that is pretty wide, but there are other concerns with Hawthorne as well.

PH 10-5

PH 11: RHONDA HOFMANN GORMAN

Since I know the other two are going to address what my feelings are. I am going to share with all of you just tonight when I walked into this room -- I am from Lawndale, and I sit on a committee with the mayor of the City of Lawndale. Speaking on behalf of the City of Lawndale with Metro and tonight is the first time I heard that we were only going to get one minute to speak. And I am appalled. And I just went up and said at least 3 to 5 minutes was needed by each one of you, and you all should have that kind of time. So, again, that's the kind of respect that Lawndale gets from Metro. PH 11-1

The other piece I will say is Lawndale for 30 years has maintained the same stance that we always will. We are against this thing. Not down the ROW, not down Hawthorne Boulevard. We don't want it, period. And what they are not telling us is there is an option to do nothing. That is the option we want. PH 11-2

I ask every single one of you get on the phone, e-mail. The voting members of the Metro Board, share your comments of not bringing it through Lawndale. We do not want it. We do not need it. We do not need the homeless and the Disney park that you are going to plan around it if it goes down the ROW for our homeless to encamp in. Thank you. PH 11-3

PH 12: TED HOFMANN

Thank you. I'm not a speaker, and I certainly need more than a minute just to get my thoughts together. But the chart that's up there and the chart out in the vestibule, it shows three options. It doesn't show five options or six options that I see in the environmental impact report. There is no project alternative. It is right here in the environmental impact report. No project alternative would avoid many of the constructions and operational impacts identified for the proposed project. PH 12-1

Now I'm watching the clock.

Also, there is the high frequency bus alternative that is environmentally superior. Let me read that. "Therefore, the HFB, the bus alternative, is the environmentally superior alternative as it would avoid or reduce all impacts to a less than significant level." PH 12-2

That is not even up there. Out there there is a sign that says in spring the Board will be voting on the options and it shows three options. These people are being told there is only three options.

We personally have property. I'm against all of it, but I'm certainly against the Hawthorne Boulevard off ramp as it actually goes over our property. The train rails are over our property. Thank you. PH 12-3

PH 13: DORIS HOFMANN

My name is Doris Hofmann. My family has lived in the City of Lawndale since 1927 on the same piece of property. Right now we are right next to the San Diego freeway. The train is going to go right over one of my houses there next to the San Diego Freeway. I'm concerned about property values. Can anybody hear me? Thank you. I just want to make sure I am speaking loud enough.

PH 13-1

I'm especially concerned about the property values, not only for my property but for every other piece of property in the City of Lawndale, even on the east side of Hawthorne Boulevard. We do not need to have our property values dropped anymore.

The bus is running up and down Hawthorne Boulevard empty. There might be six or seven people on those great big, long, double buses. We do not need a train. We can't even fill a bus. The people that ride the train are the ones that are -- do not have homes. They are looking for a home. They use the train for a home.

PH 13-2

If you do use the train and you get off, you have to walk back to a bus stop to go where you want to go. So why not take the bus in the first place? I see graffiti. I see trash. I see all kinds of problems that we do not need in our City of Lawndale. Thank you.

PH 13-3

We have been fighting this problem, by the way, you guys, since 2008 when my husband was the mayor. He died in 2013. We have fought this problem before.

PH 14: ROBERT PULLEN MILES

Ladies and gentlemen, tonight I rise in opposition to this project in general. We don't need it. We don't want it.

PH 14-1

Can we say that together? We don't need it. We don't want it. We don't need it. We don't want it. I rise in opposition to this project along the ROW because it would adversely affect all the families, 400 units, along the ROW. In particular, the environmental concerns along the ROW is the only green belt in our city, so I rise in opposition against that.

PH 14-2

I also rise in opposition against this project because it will negatively affect our economic engine in the City of Lawndale. You are talking about one of our greatest economic engines of Westwood Builders. One of our top producing tax revenues. It will adversely affect them as well, so I rise in opposition against that.

PH 14-3

Redondo Beach will benefit from this project. Torrance will benefit from this project but not Lawndale. Take it through Redondo Beach. Take it through Torrance. Take it down Crenshaw Boulevard. Whatever you need to do to get there, where you are going, but don't bring it to Lawndale.

PH 14-4

No alternative should be adopted. More buses should be used. I use to be on one of the Metro Boards, so I know you can do more buses to get your objective met. Thank you for your time.

PH 15: PAT NICHOLS

Good evening. I am Pat Nichols, and I am representing Breakwater Village. We are a senior community of 191 units, approximately 300 people. And I am concerned about the quality of life. The only thing that was significant on all the different areas was the noise of the operation on the ROW. I question how it could be not significant in the trench because all along Redondo Beach it's the same as the ROW. So if it is going to be significant for the ROW, then it should be significant for the trench.

PH 15-1

Also, we are senior citizens who have worked our whole lives to purchase something that would give us a tranquil and pleasant place to live. I question if that would continue after the Metro. Many of us -- most of us are on fixed incomes. We will no longer be able to open our windows because our bedroom windows are approximately 50 feet from the current railroad. I can wave to the conductor from my bedroom window. It is right there. I don't need the noise. If I have to close my windows all the time, then our air conditioning and everything will increase.

Also, we are having problems with the foundation of our building at this time with the railroad going right directly by. What do you think will happen when the Metro comes?

PH 15-2

PH 16: DENISE

Hi. I'm Denise, everybody. And so I am trying to fight for everybody in here, and this is what I have: Will the project result in an inadequate emergency access? And the DEIR says for the ROW the effect is less than significant, so I need to know the answer for that? Why can't you have it now so everybody knows? So we know where we are standing. Give me the answer. Every six minutes.

So what are we supposed to do if it's backed up? What is going to happen to everybody? We have an older community there. Some of them cannot even speak English. What do we do? I will give it to somebody else.

PH 16-1

PH 17: ANDREW WANG

Hi. I just came to this meeting because I wanted to learn more about this project and it sounds pretty interesting to me. And I just figured that probably for this project I think the right-of-way trench option is probably the most feasible option to me. And that is just because at least that would -- because I figure how it works and that it does go along with the Redondo Beach station and it doesn't cross the street at Grant, and that's about it.

PH 17-1

RICK GOULD: I'm speaking for all my family. My daughter was raped on the train. I'm speaking for her. That's a crime what you guys are doing. You know it is a crime. This is a crime. And the last estimates for how to build the train, they are a lie. You know you made the first one, got it through so it could go back down behind all those people. Those other two lines are overestimated, overdone and elaborated so that you guys can do what you want. PH 18-1

Build it in our city. Do it. But build it the way we want it, not the way you want it. You do not get to do that. You are destroying my family. My family is in Lawndale. You are destroying our lives. You destroyed my daughter's with your train. You destroy everything you have. Do not do it here.

You paid $360 million on building that tower in LA that is a Metro tower, but you won't spend the money here. I don't care. Spend it. Charge us. That land was ours. We leased that land in 1946. I have the paperwork here. You stole that land from us. You stole it. You went and bought it from Metro and you took it, and now you just want to destroy our lives.

And you know, Mark, I like you, but you know what, the problem is they are destroying my life. They are destroying my daughter's life. They are destroying my wife's life, and you have destroyed us.

And if you come down through there, we have nothing to say. You guys are just going to do what you want. You are going to kill every one of these citizens here. And they could be doing something better tonight. They can be with their families. And you keep bringing these meetings up. I have 25 years of meetings with you guys.

Submission PH 19

PH 19: JOSH STANDIFER

My main point is that we have been tricked and these reports -- it's not a matter of whether or not there is damage. It's the threshold of damage that's allowable by an administration that allows the project to go forward. And I happen to be at one of the residences where the train will be above and at grade. And it will be 20 feet from where I am raising my children -- going 65 miles an hour -- every four to six minutes. The hardest part about this also is that if they block it off -- the first day I bought my home, I had ten homeless people break into it. The minute that these go up there will be a wall sitting back there breaking. The homeless will be sitting right there. I believe Hawthorne Boulevard is the more sensible choice, stops with me and where it will be observed by municipal powers.

PH 19-1

PH 19-2

PH 19-3

MARIA FRANCIS: I live in Lawndale, and I just -- I don't want the train going through my -- close to my house. It'll be a block away. And I think it's -- I don't want all that construction. I don't want all the noise. I think it's a public transit, it should be more in a public area. I think it should go down Hawthorne. I would prefer it. Deeply, deeply prefer to go down Hawthorne Boulevard. I think more people see it and will be able to jump on and off the Metro. That's it. That's my comment.

PH 20-1

PH 21: MARVIN FRANCIS

Hi. My name is Marvin Francis, and I just wanted to say that I would prefer that the Metro to go down Hawthorne Boulevard. Because I feel like there would be too much of a disruption through the neighborhood near Condon, which is a neighborhood. I understand they are saying that it would be less money to go through the residential area, but I feel like the construction would be tremendous on the neighborhood. The noise of the train running almost 24/7 would be an issue as well. PH 21-1 PH 21-2 PH 21-3

And I just think it would disrupt the neighborhood too much. I don't think the residents realize we have construction going right now at one of the intersections near Manhattan and Inglewood Avenue. It's horrible traffic, and it's a lot of delays. And I think it should go down Hawthorne Boulevard. Thank you. PH 21-4

PH 22: TOM WOOGE

My main concern is the neighborhood, the residential neighborhood that's bounded by Hawthorne and Inglewood or Artesia and Manhattan Beach Boulevard. Our public park, the William Green Park. And the elementary school, it's in the center of the block. Common in almost every super block that you put a school in the middle because you could cross the street without getting killed.

But this -- two of those options, the trench and at grade, cut off one third of the neighborhood from the park and so you have to go all way north to looks like 162nd to cross and come all the way back down to get to the park, which is pretty far. Or you have to go all the way south to the crossing and come back up to the park, which is very far. You have to drive your kid to elementary school or have them take a kind of concentrated route to get back to where they should have been able to walk through easily.

PH 22-1

PH 23: FRED SADEGH

So my name is Fred. I am currently the business owner at the corner of Inglewood and Manhattan Beach where the street-level Blue Line plan is going through. This will definitely impact our business and the land. Our suggestion is instead of having at -- there are two businesses there, instead of having the two businesses and having to relocate, our suggestion is to go with the green elevated plan that goes through South Bay Galleria because there is already train track there that runs all day so the noise and, I guess. It would be easier to build there, and the noise is already there so it wouldn't really affect what's going on at this point.

PH 23-1

PH 24: ABBY SAHJARI

I am the landlord of the property on the corner of Inglewood and Manhattan Beach Boulevard. I have been talking to a couple people at this meeting at this point right now. And they told me they have three options and do not affect my property and they said are going to relocate me. It's going to be very hard because the businesses have been established since 1990. I don't think if we moved out from that area, it's going to help us. There is a car wash, a body shop, and a mechanic shop and it's been there since 1990. I really want to go to the third option with the Green Line, if that's possible.

PH 24-1

PH 25: KHELA GUIRUIS

It's really going to be living on Condon Avenue by the crossing and by Condon. Three houses away from there. There is a gate. We hear the noise from the train all day long. And when the train passes by, there is always -- we hear the horn on it. It's not pleasant for us, really for us. It's taking any of -- it's the people more increase, and taking our privacy away because it will be too close to our houses and we have children. I am scared for people going back and forth and we would not like to have anything additional in our area. It's way too much.

PH 25-1

PH 26: SAFAA GUIRUIS

We just live close when the train, like, passes by, we can see the driver. And they can hear the train litter, towering sliders. So we hear the noise like the horn. If anything else is added to this, we might sell the house. If there's an option to go the other way, Hawthorne Boulevard, that would be great. That would be really great. PH 26-1

PH 27: LENA PULLEN

I don't understand why the Metro Rail has to come through the city of Lawndale. There are other boulevards the Metro Rail can go down. There is Perry Boulevard, Crenshaw Boulevard, Western Boulevard. They can go through other cities like Hermosa Beach, Manhattan Beach, Palos Verdes. On the Metro Rail, women will not ride it. They don't feel safe riding the Metro Rail. The homeless will ride the Metro Rail and kill, rape, and stab the women on the Metro.

PH 27-1

PH 27-2

And the city of Lawndale has nine schools in the school districts on both sides of Hawthorne Boulevard. How are the parents supposed to take their kids to school every day? How will firefighters, EMTs, and police help the people who need help if the Metro Rail is running seven days a week, 365 days a year, every five to six minutes from 4:00 p.m. to midnight? Property values will go down. Our quality of life will go down. Bells and whistles every day. And it's just terrible. I will vote for no project. No build.

PH 27-3

PH 27-4

PH 28: ANGELICA VICENTE

I am Angelica Vicente and I have a real concern with the line going through the street of Artesia and 170 because I am a homeowner and that whole block will be severely affected. Talking to the engineer and the real estate property experts, they are saying they might have to actually tear down into our property. And it's just a concern because of loss of property value and earthquake concerns. Like, are the walls earthquake proof and safe? The train tracks are closer to our house, so that's a concern because of vibration. We already have existing vibrations and the train goes slow. Now with the Metro train going about 60 miles per hour daily, that's another concern. And just railing and stuff falling. I mean, again, the earthquake. We have petroleum lines, gas lines going through there. Warning signs everywhere, sign 170.

PH 28-1

PH 28-2

PH 28-4

PH 29: ARMANDO VICENTE

My name is Armando Vicente. I am here to speak against the idea of having the option of going through the right-of-way where the existing rail line is right now. According to paperwork that I have seen, that train is going to be passing by every five to six minutes from 4:00 a.m. all the way up to probably midnight. Seven days a week. 365 days a year. The noise factor is what I'm objecting to. Having the railway going through there that often with that amount of noise will affect our quality of life. That's my main concern. Thank you.

PH 29-1

PH 30: BRANDON VICKERS

So, I guess, the thing that I like, I like this project. I want it to happen. I have been a member of the community. I have been living in Lawndale for 20-plus years at this point. I really like the proposal of taking a street-level path option through the neighborhood in the existing track. I think it's going to offer the most amount of gain for the community without disrupting anymore changes, right. I heard a lot of people talking about traffic conditions on Hawthorne, right, cry me a river. But along the street-level paths with the existing tracks, I think because I see working into the plan the ability to, like, keep it as quiet as possible. While adding walkable and bike paths gives the community the most amount of gain to have. To have, like, to have bike and walkable paths those stations between South Bay, the Redondo Beach station.

PH 30-1

I think knowing the proposed station or the Hawthorne build is near the front of Hawthorne, right there near Artesia in front of the Galleria and the other one can be right here behind the mall, the Redondo Beach train station. That walk from Manhattan right to Redondo -- to the mall is about ten to fifteen minutes no matter what. It's a difference in time. Whether it is downtown Hawthorne or takes those existing paths and the existing train tracks, so I think it would be much better to take this street-level path option, whatever you guys call it.

PH 31: SHAUN MOORE

Good morning, Metro, and everybody on the -- Shaun Moore, City Manager with the City of Lawndale. I just have a few comments. They are general in nature. First and foremost, as the council, we had a meeting last night and concerns for the residents. We prefer that there be no project, just want to specify that. We have great concerns with this project and its environmental impact on the city. PH 31-1

We looked over the document in general and all the alternatives. We feel the document is insufficient. It does not address -- it has inadequate CEQA analysis. There is a CEQA scale issue going on here because this is part of the greater regional planning for Metro. We looked at your master planning, so we have concerns with that.

But we feel that the document missed the mark, and this is not to attack staff, but just the document itself. It didn't -- the potential, significant environmental impacts on the environment for aesthetics, traffic, noise, vibration, land use, planning, air quality, greenhouse gases, utility, energy, public services. There are also deferred mitigation measures and a faulty ridership study. Those are just some of our general comments. PH 31-2

I want to thank Metro and everyone for attending and their comments last night as well.

PH 32: JONATHAN SHULTZ

I'm sure I will send an e-mail as well because I just started briefly looking over the Draft Environmental Impact Report. But the thing that stands out to me the most is this is the ES.4, the significant and unavoidable impacts. The thing that stands out to me the most here under the proposed project, one, I think is kind of misleading in some categories. And under the first thing, under the proposed project, it says, "Noise (construction and operation.)"

This is the only place where I see "operation" as like a significant impact, and you have to realize operation is going to be forever. This is running through the middle of a neighborhood, and we should keep any of this noise to a commercial area where it is already noisy and the vibration.

I think it is misleading just because the trench option leaves out the fact that it does come out of the ground south of 170th at some point. And there are three blocks of residential area on that side at least and probably another three blocks on the other side of Artesia. And in this report it is just kind of saying that the construction is the impact, and I don't think that is the case.

PH 32-1

PH 33: GEORGE GALE

Hi. This is George Gale, and I'm Kim's husband. I am a resident here in Redondo Beach on Fisk Lane.

Now, as it exists now, the track is going right through a bunch of backyards in the Redondo Beach area of right-of-way. Now, as it exists now, you know, you have freight trains already operating right above gas lines, underground gas pipelines, which is already risky to me. Especially in the vicinity where you have this track going right down people's backyards. PH 33-1

I want to know how Metro is going to construct our existing gas pipelines and also deal with the existing sinkhole issue as well. But there are gas pipelines already existing on a high track, a track that is above backyards that already carry corrosive materials just with the BNSF lines as it exists now. PH 33-2

So you will add two more tracks over existing gas pipelines going through people's backyards. Not only do you have the devaluation with the noise and the 192 times proposed for this Metro link to travel a day, so it will destroy property values, but there is also a physical threat to the residence with the gas lines and the derailment issues. I'm just wondering how this environmental report -- you know, what they say about this issue. I'm very interested to hear the answer. Thank you. PH 33-3 PH 33-4

PH 34: RAUL MORATTO

Hi. Good morning, Metro. Thank you for holding this meeting. My name is actually Raul Moratto. I'm a resident on 165th between Inglewood Avenue and Condon.

So this will actually -- and I'm speaking from just a residential person. I'm not really familiar with everything that is going on, you know, such as environmentally, but I am a resident. And I do believe this will impact a lot of people along this plan that you guys are considering to make.

The walkway that we have now is the only one that we have here that we use on a daily. You know, I take my kid out there to play baseball, walk my dogs, stuff like that. And everything will be stripped away if this plan goes through to go around Condon. PH 34-1

I believe, if possible, it would be better to go down Hawthorne Boulevard. Not only would it bring more awareness to the ride-and-share and just people who travel Hawthorne Boulevard, but it would also bring more awareness to the small businesses, which will help impact the economy in Lawndale as it is. PH 34-2

So I hope you guys go a different route and do not strip away our, you know, our walking path because we do use it. We love it, we enjoy it, and we want to preserve it for future generations who want to come and live here. Thank you very much. PH 34-3

PH 35: ED HOFMANN

Hi. My name is Ed Hofmann. So I'm a resident in Lawndale, and my option, according to what you showed, was no project at all. Right now we have infrastructure already for option -- what they told me last night in the fourth chapter of your EIR that, yes, they have considered buses from the Redondo Beach Station to the Redondo Beach Station.

If we have to take and have a system like this, that is my preference. We've already got the ROW. We've already got the bus station. We've already got the light system. We've already got everything in place. In fact, if you use this plan, I think you can have it implemented in six weeks instead of doing all this building and all these things where ridership is not real important.

PH 35-1

Because I can sit at Spires on Manhattan Beach Boulevard and see the MTA buses on Friday night, 5:00 o'clock to 7:00 o'clock running, with only five and six people on it. So why are we building this multibillion dollar ridership system when it is not needed?

PH 35-2

PH 36: AMY LACOE

Okay. The thing about going down Hawthorne Boulevard is -- well, let's face it, that is going to affect everything from Sepulveda Boulevard on the south far up into, you know, Marine and everything else with all the construction that would go down Hawthorne Boulevard. PH 36-1

The other thing about this is that you still have people within -- it might not be going through a backyard, but in terms of somebody's windows, there are places, apartment buildings and there are homes that are nearly on the corner of Hawthorne Boulevard. So to me what it's doing is you are going down and using a more expensive option because Lawndale is a poorer community and probably would not fight it as successfully. And that is the way I feel. That Hawthorne Boulevard is an option just because Redondo Beach does not want it and Torrance and what have you. That's it. PH 36-2 PH 36-3

PH 37: KIM

Yes. I just had a question about the -- I don't know if you are familiar, but there are state and federal laws that protect the owls that live in the trees. I'm sure you have heard of the recent story in Hermosa Beach of the homeowner that won the fight against the City. A lot of people, as you, do not realize that there are federal and state laws that protect the owls and other endangered animals as well as plants.

PH 37-1

Those are all currently on the tracks. We have pictures of owls right here across the street behind our homes. Putting in those tracks would be illegal because that would be endangering -- putting those owls in great danger.

So, yeah. Do your homework there. There is no discussion in going any further through putting it into the residential neighborhoods. There is also nowhere else where you have a train going through just residences. There is one down -- I believe down in San Bernardino or that area that we were discussing. There is one around a couple of homes. But we are talking hundreds of homes, families, children.

PH 37-2

We are earthquake country. We have derailments. It makes no sense to put people, homes, property, and babies and children at risk to put a light rail in that nobody is going to ride. Thank you.

PH 37-3

PH 38: MARIANNA CARLTON

Thank you so much for the opportunity. I grew up and went to Hawthorne High, and I am a resident of Redondo Beach. I am also a youth public transportation advocate. I am very optimistic about the idea of a project like this. I just noticed that there seems to be a missed opportunity to provide additional access to businesses along the route. There are very few stops proposed, and there just seems to be a lot of missed opportunity for many businesses along Hawthorne Boulevard that struggle. The idea of bringing more folks through and providing more access to those businesses, stimulating the local economy, I'm not sure that this report really took that into account.

PH 38-1

PH 38-2

PH 39: MIKE GALLIN

Thank you. My name is Mike Gallin (phonetic). I am a long-time resident, born and raised in South Bay. Looking at these options, to me, clearly, the Hawthorne Boulevard option is the one that should really be pursued. One thing I do not think the EIR does is to weigh the impact on the number of residents that the alternate route is impacting directly, being directly behind all of those residents. PH 39-1 PH 39-2

Running down Hawthorne Boulevard where the historical lines had run before, which is why the median is so wide, is clearly an indicator of where the new lines should go.

And I think a couple of other people talked about dumping all of those people onto Hawthorne Boulevard will greatly enhance those businesses. To me, it just seems like a much less environmentally impacting construction and impacts on much fewer residents. PH 39-3

PH 40: RAY HOLLAR

This is Ray Hollar, homeowner in southwest Lawndale near the freight train right-of-way, also known as ROW, for 36 years.

For an untouched topic, the DEIR says the impact by the ROW train on scenic vistas or state scenic highways is less than significant. I think the DEIR has overlooked this. I walk the ROW almost every day. And this time of year especially, I can see the beautiful snowcapped San Bernardino Mountains, the Santa Monica Mountains, and my two favorite landmarks in all of LA, the Hollywood sign and Griffith Park Observatory. What is more scenic than that?

PH 40-1

Walls along the road, especially the elevated ROW train section from 159th Street to 165th Street, would obscure those scenic vistas. I think the impact by the ROW should have been scored as being significant regarding aesthetics.

But it's more than that. The ROW train will consume our sense of openness along the ROW, holding us in like prisoners of progress, degrading our quality of life forever. Please say no to the Metro ROW train. Come visit us in Lawndale. This is Ray Hollar.

PH 40-2

Submission PH 41

PH 41: ED HOFMANN

I'm back. Wow. Again, I'm still for no project. I used to be a person who rode the Green Line when it first opened. And some of the problems they had on the Green Line is that the trains did not run on time, and then when there was a problem, they would shut the trains down and put us on a bus to take us to some place else to either put us on the train or whatever our destination was. PH 41-1

I don't know if you have heard about some of the problems at the Galleria. So you are running trains right through the Galleria. So what are you going to take and do? PH 41-2

My opinion, again, is not covered. You are pushing your three agendas, not the agenda that should be pushed, which is no project. But on the other hand, running buses -- and I'm talking a 12-person bus, a 13-person bus, more of a shuttle than a van, or a van, and not a big hundred-foot-long bus that you guys have between the two stations. Because they will end up on buses anyway if something happens to the light rail. Thank you. PH 41-3

PH 42: LAMA BARIKHAN

Hi. So thank you for this presentation today. I'm much more informed at this point of what's going on, and I would like to also express my -- that I do not vote for Metro City. Because basically -- I mean, I am a resident of Lawndale, basically on Marine Avenue. And I would like to say no, again, because of the unwanted noise and the construction that is going to be around Lawndale city.

PH 42-1

Basically, the vibration, like you mentioned before, and the noise and all of these unwanted issues. And on top of that -- I guess, that is basically it.

I just like the idea. I mean, I would have to dig more into that, but I mean, the bus is like another one mentioned. Mr. Hofmann mentioned that would solve the dilemma, and there is no actual need for Metro to be here. I would have to dig more into that myself, but I kind of liked his input on that too.

PH 42-2

PH 43: SAMSUNG

Hi. Again, I just want to thank everyone for speaking, for you guys, again, you know, just giving this presentation. And, again, I just want to emphasize the disruption that it is going to cause all along 162nd through 170th and furthermore.

You know, you guys are the gentlemen and the ladies that are going to take this presentation to get the final draft. And please keep in mind that the path that we have here is useful. We use it. You know, kids grow up using it. You know, neighbors have planted swings on trees. So just keep that in mind.

PH 43-1

We do not have much in the City of Lawndale. It is a very small city compared to Redondo Beach and Torrance, and I know those cities don't want anything disrupting them. You know, we are a lower income zip code compared to them. So it would kind of suck if we get, you know, the wrong side of the stick on this.

But, again, just think of all the future families, all the future generations, and you know, that would be it. Thank you again.

PH 44: LAMA BARIKHAN

It's more of a -- did you mention the house like the real estate market or housing? You mentioned something regarding a proposal that will come in 2024; is that correct what I understood? Like how is it going to affect the market? That will be it. Thank you.

PH 44-1

Submission PH 45

PH 45: KIM

I just wanted to bring up the fact that if the train is coming by 192nd almost 200 times a day past these homes, these homes were not built to withstand all of that going by all day, not just the vibration. But just foundations of homes, as you know, are not built to withstand something like that. That is not what we agreed on when we purchased these homes. PH 45-1

So having it go down Hawthorne is obviously the common sense way of doing it. And these days common sense is not such a common sense thing anymore, or common thing; right? So I just want to state that for the record for my whole block here for people who cannot call you. Thank you. PH 45-2

PH 46: MIKE GALLIN

Just one more thing I did want to add. You know, I talked about mitigating noise, and saw where it said grease the wheels of the train. I work in El Segundo, and those trains go by all the time, and they don't grease them every day. So, you know, I think it's a little bit inaccurate to say that, you know, because they are going to grease the wheel that's going to mitigate the noise of the squeaky wheels. The reality is it won't completely mitigate it. So in my eyes that is probably more of a significant impact than it is a mitigable one.

PH 46-1

But I think that is something that should be considered especially where it is more approximate to the residents as opposed to down on Hawthorne Boulevard.

PH 47: BECKY SITTON

Hi. Thank you. I will be quick. I just have been mostly listening. I do not live in the area, but have -- I'm representing a business. You all invited me to this.

But, you know, just looking at -- so I guess I'm a stakeholder.

But anyway, looking at the routes and kind of following along on this, I am trying to understand the differences. But long story short, I understand the residents' concerns. And looking at the Hawthorne route, that one to me makes the most sense also because it is already in a commercial area. It would probably benefit the businesses. And it does not seem to be your preferred, but I can see why because of the cost. PH 47-1

So I can see why you all do not want that one, but everyone probably does. Or nothing. I understand a lot of people do not want anything. But that one seems to make a lot of sense, but it's, obviously, the most costly for you. So that was my only comment.

PH 48: NANCY CLINE

Hi. Thank you for allowing me to speak.

I'm a homeowner in Torrance 10 houses down off of Hawthorne and 177th in that little residential area, which is a very nice little area. And my thought on this is -- and I've been in this area for about 25 years now. And my thought on this is with all this money that is going into this project, ruining down Hawthorne is just something I am totally against.

PH 48-1

You already have the train track on the west side of Hawthorne, and I just think that they should allocate the money they are going to spend on this project into improvements in Torrance, Lawndale and Redondo. The homeless, the streets, all the signs up in the sky, the wires. I mean, I just think there is other forms of improvement that they can allocate this money to. I'm against it riding down Hawthorne, and that is my opinion.

PH 48-2

PH 49: KIM

Yes. I went down yesterday right in front of the light rail, which is in El Segundo, and you can hear it right here. This is how it sounds. Here you go. (Video playing)

So you can hear it squeaking. So hopefully you can hear that. The wheels are absolutely rusted out, so as it goes around the bend, you can hear it squeaking. And I'm sure if you guys lived right here and you are on a Zoom call with your business like we are right now, you do not want to hear that in the background; right?

The future and the wave of the future is telecommuting, people working out of their home, which is what we do, a lot of people do. You are taking Zoom calls. You got this thing going on from 4:00 in the morning to midnight. There is no way that people can run their own businesses from their homes, have babies sleeping, people that are sick living in their homes.

PH 49-1

You know, it's insane. So it is very squeaky and very loud, and it is not going to be an option to put behind these homes here through Lawndale, Redondo Beach, Torrance.

So there you go. That's how it sounds. And that is hearing it from my cell phone on a video. Thank you for your time.

PH 50: RUPESH

So I'm about -- let's call it four or five houses over from the freight train that currently exists. How would you compare the sound of the light rail to the freight train? I guess I am just mainly concerned about noise and then frequency of the, you know, back and forth transport. Because right now we have the freight train, which is twice a day, and it is fairly loud, but I feel like this will be a lot more frequent. And I'm a little concerned about it.

PH 50-1

PH 51: ED HOFMANN

Hi, there, again. I'm glad you are addressing the noise issue or at least talking about it. I live in Lawndale. I'm about four blocks from the train crossing at Manhattan Beach Boulevard.

Now, the train crossings start at about 162nd and the trains start blowing their horns at 162nd, 161st, 160th, all the way until the time they get to Manhattan Beach Boulevard. I understand it is a safety consideration. But when that train starts blowing its horn, even though I am four blocks away from it, it sounds like that train is coming straight through my living room. And sometimes it gets so bad you think you have to duck and start looking for where the train is coming -- you know, trying to be silly -- that it is off the track.

PH 51-1

So when they are talking about 192 trips across Manhattan Boulevard per day, and the building and everything happening, noise is a great consideration. Thank you for giving me this time.

PH 52: KIM

Yes. Thank you. I would just like to close in saying that I myself and most of my neighbors are not against light rail at all. We are against light rail going through our -- behind our houses in the right-of-way. And I just want to make a note of that. It is just a really bad idea for many, many reasons. PH 52-1

And I was just informed by my neighbor about five minutes ago that there was a meeting in Hawthorne with you guys and there was a man -- obviously, people are passionate about this. It's stressing people out. It's taking a toll on their health. And evidently, a man collapsed in the middle of the meeting yesterday.

You know, you can't take your money with you when we all die. This is just an example of it. Everything is not about money. It is about people and us being a community and helping each other out.

So take that into consideration. You have someone that is collapsing because he is so passionate about keeping his community with families and keeping it safe and protected. Thank you.

PH 53: RUPESH

Hey, there, again, yeah, I guess just -- the more I look into this, the more concerned I get as a resident. And I see the cons far outweighing any sort of pros. So I don't know how to prevent this sort of thing or propose an alternative route, but, you know, as a Lawndale resident, this concerns me. I'm not really excited about having to deal with construction and all the things that are going to come with this project.

PH 53-1

PH 54: TED HOFMANN

Okay. Sorry. I was unable to get unmuted. I'm -- regarding the closing comments, I would just like to remind this board -- or I'm sorry -- Metro, you guys, that you are going to be making a recommendation to the Metro Board about which option is the best. I have not heard -- I'm just not hearing people from Lawndale saying they are looking for a Metro rail to come through Lawndale. Almost every single person is saying they do not want Metro rail coming through Lawndale. At this point, I would hope that your organization would recommend to the Metro Board that is going to be voting in the spring that the best option is no option.

Also, regarding Jay last night, 15 minutes after the ambulance left the Centinela Performance Art Center, 15 minutes later they had not made it to Manhattan Beach Boulevard yet because of a simple lane closure on Inglewood Avenue on Redondo Beach side. They were stuck in traffic. I sat there for about six lights. The ambulance was just ahead of me and they were stuck there. So with just a simple lane closure they could not get him to the hospital. I cannot imagine what it would be like to put up with construction for five years. Thank you.

PH 54-1

PH 55: KEVIN MCKENZIE

Yes. I just wanted to say thank you. I know that this is a super difficult process. There are a lot of options that will anger a lot of people. I live in northwest Torrance, and I greatly appreciate the work that you are all doing. There are people who are very much looking forward to public transit, I being one of them.

I really look forward to the day that we can go to the airport without having to drive and clog up traffic. I work just north of the airport, and I cannot wait to commute via light rail. So there are a lot of people out there that are very supportive of this, and I hope that you don't all take it as everyone is negative. So thank you.

PH 55-1

PH 56: RAY HOLLAR

This is Ray Hollar. Thank you very much, again, for your presentation and the opportunity here. Part of the reason why I am completely uninterested, besides all the negatives there, the construction and all the noise that would happen and during operation of 192 trains per day. But also because I would not use it. The reason I would not use it is because I take the Torrance bus from the corner of Inglewood Avenue and Artesia. It costs a dollar. That is how I get to the airport, and I get there and back. So I will not walk down for either train. PH 56-1

And, secondly, I visit -- I have medical specialists down in Torrance, and I can take the same Torrance No. 8 bus, and it's a quarter for seniors. There is no upside whatsoever for me. I know it is not just about me, but I don't think anyone is going to use it. Thank you for hearing my comment. PH 56-2

PH 57: AMY LACOE

I guess the only thing that I had to add on this is, again, it does seem like the only reason that this thing is going down Hawthorne is because people that live along the existing track and already know how noisy it is don't want it. Therefore, I just want to make a point here that I -- I don't even know how many houses there are along Hawthorne Boulevard that are just as close as they are along the ROW. But it's just a matter of who you are bothering, not that you are bothering people, but it's a matter of who you are bothering. So I will just put it there.

PH 57-1

And, again, I think I will -- I'm not interested in either one. I am interested in no rail because I don't think there is anybody that wants it. And I will just leave it that way.

PH 58: TRABER SCHROEDER

Hi. I've got something prepared, a statement here real quick, so I will go very quickly. I just want to say thank you very much for bringing this meeting and your efforts getting this built and getting community comments on this.

I'm here today to express my support for this entire project and for the Metro plans in the South Bay. I am a commuter and officer worker here in Torrance, and I want as many alternatives as possible to not being exposed to dangerous car traffic. Easy access to transit is vital to traffic reduction, economic opportunity, economic activity and improved safety and quality of life. PH 58-1

The current transit is not long enough. It needs to be connected in every way possible to the surrounding community, making the last mile of the transit stations more accessible to as many people as possible. It is vital to making the system convenient to use and the project a success. So I believe this project should include much more extensive sidewalks, projected bike lanes and bike parking along its entire length.

As a commuter and pedestrian I find it endlessly frustrating that it takes so long to build transit in human-centered communities but we continue to build and expand inhuman freeways and roads seemingly every year. As a taxpayer, I don't really care how much it costs. Build all of it. Nobody complains about dirty cars or traffic congestion, and nobody complains about how much it costs to build roads or freeways. So I support this project in its entirety. PH 58-2

PH 59: PAM COMBAR

Hello. Forty-six-year resident of Torrance. I am really hoping that you decide on the Hawthorne option. Do you really want any of the many, many risks if it goes on ROW for the 1000-plus homes? Already there is a two-and-a-half-year-old unfixed sinkhole inside Weston Place Townhomes. There are extensive soils, alluvial deposits, unstable ground, which, in essence, are clay deposits, soot, loose dirt and sand. There is fundamental damage to the housing developments already and the inaccessible properties. Thank you.

PH 59-1

PH 59-2

Submission PH 60

PH 60: NATHAN KOLLER

Really do not have much to say, just overwhelming support. I've lived in Torrance all my life and am really just looking for the freedom to choose how I want to get to work. It takes me 15 minutes by car, an hour by bus, so I'm really just looking for any alternative. PH 60-1

PH 61: BILL LINGAR

Hi. I'm Bill Lingar. I'm a teacher in Redondo Beach, but I live in Torrance. As a resident that would like to use the Metro more because we will have more access because of the new lines that are going to be built, I am really concerned about the need for some changes to security on the trains right now in order to increase ridership. And I know personally myself and others that I know are concerned about the security on the trains primarily through the Blue Line and some other areas that we would like to go.

PH 61-1

Smoking of marijuana, selling of items, riders that go on the train without paying and never seeing security on the trains. So if we want to grow the trains in general, and this line is growing the trains, I think security needs to be addressed. I do not see that in your impact reports at all. That is my comment.

PH 62: KIMBERLY GILLEN

Hello, everybody. I just want to speak regarding the EIR sound, lubrication, and vibration. I was just in El Segundo. They have a new light rail that they put in there. It is brand-new. The wheels are all rusted, and it's very loud. (Video playing) PH 62-1

I went on there and I counted about six people on there. The ridership is very low, especially among women and children because of security, as someone else mentioned. And where is -- a lot of people want to know where are you going to take this? PH 62-2

A lot of issues with the sinkholes and pipelines. As you can see on the news, there are derailments happening everywhere. And if you have freight train and light rail right next to each other, they will derail. It is just an accident waiting to happen. Thank you. PH 62-3

PH 63: ARAM CHAPARYAN

I am Aram Chaparyan, Torrance city manager. I'm here to state for the record that the City of Torrance fully supports the Metro right-of-way alternative for several factors. This is a once-in-a-lifetime opportunity for the South Bay and Torrance region to connect to better LA through Metro. As well as with the new transit center coming up, we will be able to service major amenities such as SoFi, Intuit, and Dignity Health and other attractions. PH 63-1

We are aware of the concerns by neighboring communities, and we encourage Metro to mitigate those concerns. We realize the cost estimates vary greatly, and if we were to focus on making this a reality, the Metro right-of-way alternative seems to be the most reasonable option in the city. We encourage Metro to make this happen. Thank you. PH 63-2

PH 64: RON WILLINIS

Hello. Good evening to everyone.

My name is Ron Willinis. I have been a resident of Redondo and Torrance for all of my 78 years. I have been in law enforcement for 30 years, and I feel my brain is still good.

And the lady that came just before me spoke about users. Who is going to use it? It's obvious that you plan on building it. That is understandable, but just because you build the Metro line doesn't mean we, the community, will climb on board. I mean that greatly; we are just not going -- we are aging. Our society is aging.

Just in the paper today there was an article that nationally there are 100,000 new 60-year-olds each day, which indicates that our community is slowly aging. The graying of society is what it used to be called. It's not going to work. You can build it. Disney could build it and it could be beautiful, but they are not going to ride. Thank you very much.

PH 64-1

PH 65: MICHAEL KIM

Hi. Good evening. I am a resident of Lawndale since the end of 2017. I have three young children who will be pre-teenagers and teenagers once the rail gets established. And yes, absolutely, I am concerned about the safety of our community, the children in our community, teenagers in our community, and also drivers and everybody else that live in the city of Lawndale. PH 65-1

Once the rail is established, I'm looking at railroad crossings that I can hear right now on 170th. There is a railroad crossing and there is a school and a park there, and that's a concern. PH 65-2

But not only that, now with the addition of freight train derailments, we are an earthquake land. And, you know, the rail line may make it through an earthquake, but there may be some bending and things going on with the land underneath it.

And the rail line and straightness and trueness of it, and as the years go by, I am highly concerned about a derailment of some kind, especially with moving of a rail line. If you move a rail line that hasn't had an issue, there may be an issue once you move it. If it's not broke, don't fix it. Let's not try to move something two feet -- sometimes it's harder to move next door than across town. I would like to keep things the way they are. PH 65-3

PH 66: TED HOFMANN

Good evening, Mark. My name is Ted Hofmann. I came tonight to see what the people of Torrance think about Metro rail. Last week at the Lawndale meeting, I did not hear one person state they were for the Metro rail coming through Lawndale, either through the right-of-way or through Hawthorne Boulevard. They only stated they did not want it or they stated to use the other option away from my house.

The mayor and the city council of Lawndale opposed Metro rail, and you saw that. They opposed Metro rail coming through Lawndale. If I remember correctly, they have been opposing it for at least 15 years or more. PH 66-1

In the Zoom meeting Thursday, I heard many people state they did not want the Metro rail line built through Lawndale, and it was no use to them. They would not ride it. I only heard one man from Torrance who said he looked forward to it.

Personally, if the Metro rail goes the Hawthorne Boulevard route, the track actually sits approximately 15 feet over two of our properties running right by three houses. Metro rail will say that the rails are elevated. Yeah, they are elevated going by 192 times a day. PH 66-2

This Metro rail board -- group -- I'm sorry -- has to make a recommendation to the Metro Board which is the best alternative based on input from the residents. What you are not telling people is there is an option -- Tyler did mention it tonight that there is an option called no project alternative. There is also the high-frequency busing alternative. PH 66-3

In your own environmental impact report, there is a statement buried that says, "As shown in Table ES3, the no project alternative would avoid many of the construction and operational impacts identified for the proposed project."

Your own EIR goes on to say, "Therefore, a high-frequency busing alternative is the environmentally superior alternative as it would avoid or reduce all impact to a less than significant level." PH 66-4

PH 67: JAMES ECKLAND

Good evening. I am a Torrance resident. As a facility manager, I am kind of experienced with the excavation and cost of doing that, so I do agree with the estimates there. I see that the Hawthorne option did not talk about maintenance access, how you would maintain the tracks. I saw that in the other two, so maybe you want to consider adding that. PH 67-1

I also did not see a rescue plan. How would you get passengers off a train that is disabled? I did not see an action plan for that. Maybe you want to add that. For reasons of cost, safety, and project schedule, I would support the proposed option using the right-of-way. PH 67-2 PH 67-3

PH 68: GEORGE GILLEN

Hello. My name is George Gillen. I am a Redondo Beach resident. I would like to address that I am opposed to the right-of-way option due to the fact that the existing hazards to the residents and the devaluation of the properties. You have backyards on either side of the railroad tracks. I don't know if there is available space to add two more tracks. PH 68-1

In addition, going above gas lines already exist, and to me that does not seem like a very good option. Here we are, you know, being brushed aside for progress' sake and then having to endure devaluation of property, hazards, derailment. When I think the best option is, if Torrance wants connection to the station and all that, I think a bus system would be much more effective due to the ridership and the hazards to the public and the hazards to EMS responses, too, when you have all these gates crossing and construction going on as well. PH 68-2

PH 69: PATTI GIGLIO

Good evening. My name is Patti Giglio. My family owns and personally operates more than 104,000 square feet of retail property that is front-facing on Hawthorne Boulevard. Eleven retail stores in total that my father built in the late 1960s and 1980s. Ours is a long-standing pub, small business in the traditional sense of things and also as is defined by Metro, so are all of our tenants.

While the Draft EIR shows comparable environmental impacts among the options under consideration, it's clear to us that the economic and financial impacts from the Hawthorne Boulevard route would be enormous to our family and all of the small businesses that lease stores from us. We urge Metro to conduct an economic impact report to carefully consider the negative small business impacts of the Hawthorne Boulevard route and to support instead the proposed project that utilizes the Metro right-of-way.

PH 69-1

PH 70: BETTINA OSTEN

Hello. I'm Bettina Osten. I live on 190th and Hawthorne, and we live right next to the freight train. I would like to ask Metro to look a little bit more into that freight train. Every night, we hear a big bang and our house shakes when they change that train around. It comes from a factory, carries dangerous materials, and I am not sure I have heard anything about the real dangers of changing this freight train.

PH 70-1

Additionally, having the light rail and freight train right next to each other concerns me. I talked to people and did not get a clear answer about the situation on Hawthorne Boulevard. In my opinion, the current setup is dangerous. Thank you.

PH 71: MILAN MATSUMOTO

Hello. I am Milan Matsumoto. I am 13 years old and look forward to using public transit. So I have been keeping up with this project for awhile and I'm really looking forward to it. I see that there may be a benefit to the Hawthorne option. It may attract tourists more. Tourists may think that an aerial option over a street is enjoyable and might attract dollars to the city.

However, it takes more time and is more costly. So if it's not viable, I think Metro should consider the other two options for this. However, overall I've great hope for this. PH 71-1

I have traveled to Tokyo several times and seen their rail system, and it will be great if we could bring it back home. Los Angeles is a very progressive city, and I feel that we could really bring change to the South Bay. Thank you.

PH 72: ROBERT ACHERMAN

Good evening. My name is Robert Acherman. I'm a resident of Torrance. I want to see the Green Line extended to LAX without having to change trains to maximize ridership. I would use that. PH 72-1

I am very concerned about the cost. The average cost of the three alternatives is about $500,000,000. That is half a billion dollars of our transportation money. I think we need to find better ways to do the project at a lower cost. PH 72-2

I am also very concerned about our friends and neighbors of Lawndale and Redondo Beach, especially those properties who back up to the rail line. There cannot be a one-time mitigation for noise, vibration and safety. So if this project is approved, Metro needs to have a mechanism in place where additional mitigations can be put in place when neighbors request it. Thank you. PH 72-3

PH 73: THOMAS DORSEY:

I am Thomas Dorsey. I'm a 13-year resident of West Torrance. I am for the trench right-of-way option. I have a background as a travel publisher and in transportation planning. I have also ridden approximately 25 different metro systems around the country and some in other continents. I realize there is always a challenge. There is no perfect solution in terms of transportation. Someone will always feel bad about this, that or the other.

PH 73-1

I do encourage one thing, that we all listen to each other. And even though I want the trench option, I highly respect what I heard one of the ladies say about the situation. So I would love to see Metro address that.

I would also say to doubters, typically, well-designed systems like this do not depress home values; quite the opposite happens.

PH 74: KYLE BRUBAKER

Hi. I live down the street just over by Torrance. I'm very excited about the transportation opening up near our property and excited to skip the chaos that is LA. I want to take the Green Line decision directly to the people movers, and there is going to be reaction.

And I also want to note that as someone who used to live in Downtown LA and took the transit system from downtown LA to Torrance, having the option for transit is amazing, not having to deal with the traffic on the 110. I think anybody would love to have an option to avoid that, and I think transit sort of provides that.

And I also wanted to kind of bring up what the guy before me said, that transit systems have been shown to increase values of property, not decrease them. So if that is a concern, just be aware that that is not going to be a problem.

PH 74-1

PH 75: MASSIMA DAROM

Hi, everybody. My name is Massima Darom. I live in Lawndale. I have been there with my family for a few years. We live by the ROW, so this project -- the proposed project would be a big impact in our lives. One thing is not really anybody in Lawndale really wants this project to go through like that. And I wonder why since it is connecting Torrance and Redondo Beach, why not have it connect through Inglewood Boulevard, for example, so it goes through Torrance and Redondo Beach and doesn't go through Lawndale. PH 75-1

Another thing is I would like to note for Metro, are you trying to create a demand, or do you have a demand for the train to go from Torrance to Redondo Beach? It feels like there is -- there is no demand really. You are trying to create it. There are not that many people riding the Metro right now in Redondo Beach. We see the passengers, and there are not that many passengers. And how many people are actually going all the way to LAX? I don't know. PH 75-2

Anyhow, if it is for -- I am okay for the Metro to move through but on Hawthorne Boulevard. And like the gentlemen said earlier, it would attract tourists. I'm from Paris, and yes, the transit system is actually way better. Sorry. And it goes places where people want to go and it is quieter. I heard the lady earlier showing the noise, so yeah. Please not on ROW, Hawthorne or no transit system. PH 75-3

PH 76: PAUL MILLER

Good evening. My name is Paul Miller. I am a resident of Northwest Torrance. I live right on Hawthorne and 176th, which would be the station location if Hawthorne Boulevard is chosen. We have lived there -- my wife actually could not make it tonight. She has lived there since the '70s. And Hawthorne continues to increase in traffic and pollution. If we do the station at the line, Hawthorne, it would reduce the buffer that is right in front of our house, so we really would encourage the right-of-way.

PH 76-1

I do hope for increased Metro everywhere in the city. I used to live in New York, and I used to drive from Torrance to Santa Monica every day, and it drove me crazy. So we do need Metro. We need a solution, and I do support the right-of-way. So thank you for your time.

PH 77: MICHELLE BONNEE

My name is Michelle Bonnee, and I just want to say thank you for the presentation, first of all. I wanted to address the fact that on the presentation I was not sure if you -- everyone was going to be able to go online and see some of the things that you put up. Is it going to be that way?

I would suggest that the maps that you put up start having continuity in the colors of the lines. Because every single map that you put up -- the pink was not a problem. I understand the reasoning for that, but you had each and every line a different color. The Hawthorne line was blue sometimes and orange sometimes and green sometimes in every single map. So that is really confusing for people when they come and you are trying to talk about the Green Line. So I would like to suggest that you fix that.

But other than that, I don't see any reason for a Hawthorne line to be a billion dollars more. It does not make any sense to build it along Hawthorne. Both of those communities, whether it is Redondo Beach or Hawthorne, they are residential areas. I'm sorry. They will both be impacted, but it doesn't make any sense to spend a billion dollars more so that someone isn't impacted but you are impacting someone else. That is all I have to say.

PH 77-1

PH 78: MONICA SWEET

Hi, my name is Monica Sweet, and I am a resident of Torrance. Thank you for doing this. I have been somewhat paying attention to this, but this has been good information to show me the different options. Just based on what I am hearing today and seeing today, I think the trench option sounds the best as far as less dangerous, not affecting pedestrians or cyclists, derailment issues. I mean, I have no experience in any of this, but that one sounds good to me, and I am all for public transit, rail system.

PH 78-1

I have been to Europe. They do have a better system there. I am embarrassed when I say I am from LA because we don't have one. What are we waiting for? I mean, we need to get cars off the street for traffic reasons, pollution reasons.

Luckily, I have not had to commute much in life, but the little bit I did was horrendous. I am all for this. Again, I think the middle one, the trench one, sounds good. And somebody mentioned, which I have not thought of, is security. It is an important issue, so hopefully that is factored into whatever decision is made. Thank you.

PH 78-2

PH 79: KIM TURNER

Good evening, everyone. My name is Kim Turner. I'm the transit director here at Torrance Transit. First off, I want to start by thanking Metro for coming today to provide the information regarding this wonderful project. As my city manager has mentioned, the City of Torrance is supporting the right-of-way alternative. No. 1, is it doable. It is already paid for and can be done quickly.

Second thing, we have the terminals. A beautiful transit center that will support the project.

PH 79-1

I heard what a lot of folks have said. I've been in the transit industry for 37 years, 13 with Metro and 24 here. I've seen a Blue Line open, the Green Line open, and the Gold Line open with the same comments. You can take this meeting and put it back to 1990; I'm hearing the same things, but guess what? Those projects are finished, they're operating, and folks use them.

As that gentleman said, housing prices don't go down; they go up. It's a benefit to you. If you'd like to ride a bus to see for yourself, call me. I did not believe it either. I got on the Gold Line and they said it goes between houses. I got on there and sure enough, there's a condominium where the train goes through it. And you stand there, and you do not hear anything. I live next to Crenshaw.

PH 79-2

I live near the K Line. I thought it was going to be noisy there. It's not. So if you want to come see me, we'll plan a trip and take you there so you can hear it for yourself.

So with that, if not now, when? South Bay does not have any rail. If you look at the regional map, you're not getting those taxpayer dollars like all the other communities, so let your money come your way. Thank you.

PH 79-3

PH 80: HOLLY OSBORNE

Hi. My name is Holly Osborne. I live in Redondo Beach, though not near the ROW. I've heard the presentation three times, and one thing struck me right away. I review specs and EIRs for a living for 40 years, and I noticed that while you say the cost analysis is not part of the DEIR, the initial cost estimate seems to bias people toward that option.

You have the "cheap" option listed, but the cost for the trench options is not provided in the report. I asked about this and was told it would be in the final DEIR. If people are expected to make a decision based on cost, and if all three options are going to cost the same, then the costs should be fully disclosed.

PH 80-1

I don't support the ROW anyway, but I think the cost analysis should be transparent and complete. It’s important that the decision-making process isn’t influenced by artificially low estimates or incomplete information. Thank you.

PH 81: RAY HOLLAR

Thank you for the opportunity to speak, and thank you for coming to visit us. This project is not fully funded; it is far short, and the DEIR does not demonstrate that it is fully financed. This is not part of the process outlined.

Additionally, many rental properties are along the right-of-way in Northwest Torrance, Northeast Redondo, and Southwest Lawndale. Many of these landlords are business people, and their concerns should be acknowledged.

PH 81-1

Finally, I calculated the cost per rider, based on earlier documents and updated information, to be about $22 per rider per day. This represents a significant ongoing subsidy. Thank you.

PH 82: MR. HOFMANN

Thank you, I appreciate it. Good evening Mark, my name is Ted Hofmann and we've met. You started this presentation asking for the audience to be respectful to you and your staff, and that you would stop the meeting if you didn't like something. Then after the presentation, you tell people that they'll have one minute to speak. One minute to speak on something that's going to impact their lives through 2036.

I ask that at the next meeting on Saturday, that you are respectful enough of the community to allow the residence of Lawndale and Redondo to speak more than one minute, but at least three minutes. With the one minute time limit, you can't get your thoughts out and you, Mark, last night kept looking at that timer. It's hard to do that when you're looking at the timer.

The mayor of Lawndale, the City Council, the City opposed this green line extension. Again, I ask that you, Mark, and your staff recommend the no project alternative or the high frequency bussing alternative. With your own environmental impact report states as the environmentally superior alternative. Thank you.

PH 82-1

PH 83: MR. SCHREIBER

Good evening. I think the draft DIR did a whole inadequate analysis of the aesthetics down the road through both Lawndale and North Redondo. Page 3.3-69 claims a proposed project but not substantially degrade the visual character of the area, and is changed the visual quality to be neutral. The existing visual quality in the area is considered to be a low, because we are accustomed to the use of the existing Metro road by freight trains.

I don't know how you can justify this as a fair analysis of our views and aesthetics. It makes it seem that like we have never ending views of freight trains when, in fact, we only get two per day. Metro would bring 200 to 300 trains per day down the ROW. The rest of the day I have views of green grass, trees, nesting birds, and wildlife. I can see the snowcapped mountains of the San Gabriel's, I can see Mount Baldy, I can see the Hollywood sign, and I can see the Griffith Observatory.

If the proposed project goes ahead down the ROW, you're replacing that view with a giant concrete wall, where the train transitions down the grade. I think the CIR did a terrible job in analyzing our aesthetics, and I think it needs to be redone.

PH 83-1

PH 84: MR. SZERLIP

Good evening. Metro proposes to have an integrated public transit system. Easy for people to use, convenient for them to use, and something that they want to use. I don't see how that can possibly happen if the rail is divided away from the ride of way, and away from the Redondo Beach Transit Center. Redondo Beach spent over 20 million dollars to put in a new transit center right where they expected it to be a multinodal transit center. And the train should go there.

I can't imagine anyone wanting to be let out of that train in the middle of eight lanes of traffic, and then have to go to the bus a quarter mile away, toting their bags if they've come from the airport. That's not what I consider a user friendly system.

PH 84-1

PH 85: MS. DODGE

Good evening. I have a town home on Ruxton Lane, which directly is adjacent to the ROW. I bought my home in 2000. When the freight train was running continuously down the ROW, I bought it with the expectation that the Alameda corridor would be constructed in 2003, which it was. Which diverted the majority of the freight train traffic with the understanding now and the expectation, it would only be a couple of trains a day which it currently is.

There was never a discussion about Metro running trains there 2 to 300 times a day. I believe that the DEIR is inadequate in looking at the actual size of the right-of-way. It does not correctly measure it. I also believe this proposed -- putting the LRT with the freight train is something that's completely different than putting it into any other area. All of the other LRT's that have been put in, like the Gold line, do not include a freight train as well.

PH 85-1

And I don't believe that those impacts have been adequately studied, and I believe there will be significant and unavoidable impact as a result. Thank you.

PH 86: MR. GILLEN

Hello everybody, I'm George Gillen, okay. It was mentioned yesterday at the Torrance meeting that right-of-way property owns value would increase due to Metrolink's right-of-way proposal because it's happened in other places. And that this was the best of all possible worlds. Well, I can agree that proximity to public transport could increase home values, but those other places aren't facing the same circumstances that right-of-way home owners are.

We're supposed to believe that houses on either side of a narrow corridor of existing freight tracks, elevated above peoples backyards, that have gas lines buried underneath, where toxic and corrosive materials are being hauled above by BNSF due to the refineries. Now, let's add two more tracks and run Metro cars 20 hours a day, 200 times a day, with the noise and vibration.

PH 86-1

And tell me how my property value will increase. Show me anywhere in the Metrolink network where these circumstances increased home values. Couple that with the existing derailment threat of toxic and corrosive materials in close proximity to right-of-way homes, due to simultaneous running of BNSF freight and Metro link cars. This ERR has -- has this EIR addressed such a scenario? And how complete, and how impartial is this EIR? Thank you.

PH 86-2

PH 87: MR. ORE

Hi, Erik Ore. I moved here in 1972. We are all in, what many consider in the South Bay, the result of the worst decision in the South Bay. This was the newest of the three high schools, Mira Costa, Redondo, and Aviation where I graduated right up on that stage. And then in 1980, because of the decreased students, the South Bay Unified High School District had a vote to close one school. It was tied. Two to close this, two to keep it open. The superintendent made the shortsighted decision to close the newest school.

If this goes down the ROW, that will be the at least the second, or maybe the biggest, worst decision in the South Bay. Tonight, I learned it's going to be two train tracks. I thought it was only one. It would be a disservice to the businesses on Hawthorne, to the employees there, run it down the middle of Hawthorne so the people can get the best use of it. It's a lower price to put on the ROW, but you get what you pay for.

PH 87-1

It's always better to do the right thing. Here, they made the worst decision closing this.

PH 88: MS. GILLEN

I just wanted to start off by saying the stats show a lot. I'm going back five years to some news articles. I believe in the Daily Breeze, some others as well showing that the Green Line is the least used light rail out of them all. Compared to the Gold, and the rest of them. And it's getting lower as the years go by. Right now, the ridership is very low. PH 88-1

Also, people that voted for measure M, we didn't vote on it thinking it was going to be built right next to the freight train. Right behind homes, where there's swimming pools, people have barbecues with their families in the backyard, and don't want a light rail next to a freight train. Derailments can happen. There are owls that are protected federally, and by the state. I know none of you can really see these pictures well, but I printed out pictures of owls that come out of the tree onto the power lines, right where they want to put the train. Right behind the homes. PH 88-2 PH 88-3

They are protected federally, and by the state. That's something I don't see in the EIR. Also, I wanted to talk about The Friendship Foundation that's being built. It's a brand-new 54 million dollar plus building called The Friendship Foundation. It's right in Franklin park, right in the corner of Fisk and Inglewood. So it steps from the tracks, and this is for autistic and disabled children, and adults. It's owned by the unified school district in Redondo Beach. Sketchers, is also a part of it. Connected Credit Union is a part of it and more. PH 88-4

Yes, sorry. So I just want to let you know that the friendship campus is being built right now, will be done next year and it's going to be for kids and adults with disabilities. We don't want more children being exposed to derailments, and issues with this train.

PH 89: MR. ZAPPACOSTA

Good evening, everyone. Road proposals located within extreme proximity of our 191 unit senior community, Breakwater Village Condominiums. The proposed location of the heavy freight train relocated closer to our property, in addition to the two light rails, will cause serious damage to our building. This can grossly be affecting property values. And our property's foundation originally was not designed or engineered for any such further pressures. PH 89-1

DEIR mitigation imminent tables 2.4-3ES4 and 3.62244 duration times of construction FTA levels ES 7, indicate high level of moderate impact annoyance. Figures 3616, 31615, noise and vibration nuance for over three years. The 76 and 94 decibels is punitive to all living along the ROW.

Furthermore, the operational frequency of the trains will cause continual nuance detriment to everyone living contingent to the ROW. In conclusion, the Metro Board not only has their fiduciary duties and due diligence cut out for them. Moreover, it becomes a moral issue, not to forever destroy the quiet and enjoyment of over 1100 residential owners. PH 89-2

No on ROW. Thank you. PH 89-3

PH 90: MR. MITCHELL

Good evening, everybody. I'm a homeowner whose home backs -- back wall is 30 feet from the ROW freight tracks. Between the wall and the tracks sit multiple high-pressure gas lines, which have been described by maintenance workers as old and brittle. Metro is proposing to move the freight rail seven to 12 feet closer to residences along the ROW, thereby encroaching more on our neighborhoods. The current freight line hauls a highly volatile liquid petroleum to El Segundo for refining.

PH 90-1

The Metro DEIR is claiming that the construction and operations will pose a quote, "less than significant impact," with regards to hazardous materials. Historically, the ROW has suffered from sinkholes and derailments. As a resident, any superficial judgment regarding the risk and the impact are on their face disingenuous. The truth is that there's significant risk of catastrophic outcomes for both homes and neighborhoods. The ROW should not be recommended.

Hawthorne Boulevard alternative former home with the red card line is tailor-made for public transit trains. Not only does its wide meridian provide a suitable footprint for our commuter train, the proposed elevated position creates pleasing passages to the South Bay and can showcase businesses that line the boulevard on both sides. It's a win-win.

PH 90-2

PH 91: MS. NEGRETE-MITCHELL

Hi, good evening. Back in July 2020, Shell Pipeline Company attempted to perform routine gas pipeline maintenance in the Redondo Beach right-of-way. This opened a sinkhole that crossed property lines from inside the right-of-way into the private townhome complex there. Homeowners have been unable to access their outdoor space due to a dangerous, unstable retaining wall above the open sinkhole complete with barricades. Two and a half years later, this still has not been fixed.

If routine pipeline maintenance caused this, then what would five-plus years of heavy construction do here, with all of the digging and pounding? What would it do to our housing developments? When we bought our home 15 years ago, our in-ground pool plaster was a shattered surface of intricate cracks. An older resident in his 90s told me about a sinkhole that opened up south on the right-of-way as they built newer homes near Spreckels Court. These facts cannot be dismissed. The draft EIR does not address this.

PH 91-1

It addresses the geology inside the right-of-way, but it does not address the surrounding buildings. I did see something in the draft EIR -- the executive summary -- that they did not want to pose any risks to existing buildings in the surrounding areas. This project could ruin the lives of 1,100 families. It should be Hawthorne, or nothing.

PH 91-2

PH 92: MS. NAFISSI

Good evening, Candice Nafissi. Lifelong resident of the South Bay and resident of Redondo Beach. I join many residents and the City Council in supporting the elevated Hawthorne option. In every option you propose, you impact 1,900 students at two different schools here in Redondo Beach, 480 homes in Redondo Beach, and 600 in Lawndale.

All the stakeholders will experience noise that exacerbates Redondo Beach's noise ordinance, as well as air quality issues as identified in your EIR for years from start to finish. You cannot mitigate the devaluing of a family home, and you cannot mitigate the deteriorating health of our children, seniors, or people around us, or even our quality of life. I strongly encourage you to focus on the Hawthorne option or consider a No-Build. Thank you.

PH 92-1

PH 93: MS. LOPEZ

Hello, good evening. I'm here today to share that I'm not in favor of this proposed project. You analyzed noise, vibration, and environmental factors, but there doesn't seem to be an impact report on safety, accidents, and home values.

Let's first talk about safety. In your 2022 Metro rider survey, your own riders listed safety, homelessness, and harassment concerns. Your own data shows that there was a 36 percent increase in violent crimes on metros.

PH 93-1

Taking a look at cities like Long Beach and Santa Monica, many recent articles attribute crime and homelessness to the Metro. In regard to accidents, just yesterday, two people died from an accident with the Metro rail in South LA. There are many schools and parks in the proposed areas, and we don't want to see kids involved in accidents just because they were walking to school.

In regard to home values, over 1,000 homes are in close proximity to this. As a homeowner, I don't want to live with a Metro rail running behind my house until 1:00 a.m. So has there been an economic and financial impact report on home values and resale values?

PH 93-2

Before spending over 2 billion dollars, it seems like Metro has many issues to fix on their current railway before they start building a four-mile stretch in the South Bay. Thank you.

PH 94: MS. LEDERMANN

Good evening. Three points I'd like to make. As first, if you really want to get -- in order to move forward, it would be nice if all the residences knew about this. I would suggest that you do broader outreach, because I can see by the attendance, and from my finding out very last minute about this that maybe the outreach isn't as broad as it should be to get public opinion with so many people impacted.

PH 94-1

I also am concerned with some of the information shared that not all the facts are included. For example, it has come to my understanding, and perhaps I'm wrong. That with the right-of-way, between the length of the tracks, as well as the digging for the trench, that actually the cost would shift and actually the right-of-way would total closer to 3 billion. So I do feel like all the facts should be all in. And I also think that there's significant and unavoidable impact to residences including a lot of families, and children. And I think that, no, on ROW, and Hawthorne should really be the solution.

PH 94-2

PH 95: MR. LOVE

Good evening, everyone. I own a town-home on Ruxton Lane. Very near this track. It's adjacent to this track. And just listening tonight, I want to recap some of the things that we've been hearing and maybe this will make it easier to make -- to make this decision. If we take the train as proposed through the residential neighborhood of Lawndale and Redondo Beach, we're dealing with dangerous materials, increased threats of derailments of the trains, severely impacted homeowners, increased noise levels, and angry residents. If we go down Hawthorne, we remove these liabilities, and remove these threats. We have increased home values, and it's positively impacts the businesses on Hawthorne. And you have happy residents. Seems like a very simple decision and solution to me. So I encourage all of you to consider taking this train down Hawthorne Boulevard.

PH 95-1

PH 96: MR. GARLAN

Hi, Mike Garland, resident of Redondo Beach. I first learned of the plan to extend the green line in our district three committee meeting in -- I think, it was late 2017. I was initially open to the project, and I signed up for a Metro sponsored tour that took us by bus to Union Station where we boarded a train that we rode to South Pasadena.

The train was relatively clean, and the ride very smooth and quiet. Then we got off. The area near the station looked nice then a train approached and my attitude quickly changed. First, I heard excruciatingly loud bells that gave warning to the crossing gates being lowered. Then, I heard the sound of the quacker, that loudly announced the approach of the train. The train then roared by, and I quickly realized that we didn't really even need to do a study to show that we didn't want that thing running through our neighborhood.

PH 96-1

Over the years I made dozens of comments, both in writing and in person speaking about the horrible impacts the train will have in our quiet residential neighborhood. Mostly focusing on the noise and vibration. Reading the DEIR I was appalled to read the section out of all things, aesthetics. It basically described our neighborhood as a run down, urbanized area full of strip malls, auto body shops, and old homes built in the 50's and 60's –

PH 96-2

(MR DURKIN: Can you wrap up Mr. Garlan?)

-- yes. Concluding that the train would not significantly impact aesthetics of the area. I'm concerned that this impression will cause the Metro Board to unfairly consider running the train down the ROW. I, personally, favor the No-Build option as those funds can be used in neighborhoods that are more transit dependent. And secondarily, I prefer Hawthorne. Thank you very much.

PH 96-3

PH 97: MS. VILLEGAS

Hi, I'm Colleen Villegas. Lifetime resident of the South Bay. I strongly believe that the Metro should go down Hawthorne Boulevard, the business corridor instead of the neighborhood where it's -- will affect -- negatively affect hundreds of residents. Some of the reasons are the vibrations of 2 to 300 trains per day. Our homes weren't built to withstand that type of vibration. Another consideration is the health of the residents living along that corridor from noise pollution. PH 97-1 PH 97-2

A lot of recent studies have been done linking noise pollution, specifically from the Metro, to increased risk of things like heart attacks, high blood pressure, hearing loss, and stress. To name a few. Just it -- it is just a negative impact for all the residents living along -- the hundreds of residents that live along that ROW. So Hawthorne Boulevard is a much better option. PH 97-3

PH 98: MR. KIM

Hi, good evening. To many readers the three options and the colorful impact study table would all seem about the same. Except for the hefty price tag and the schedule. So it would almost be a no-brainer for the untrained reader, or somebody that does not go into it, to pick the ROW option. As a resident getting impacted by this train, I would request more granularity to the impact analysis.

PH 98-1

Where they are ranked, instead of showing rows of green and rows of yellow, if they would rank them one, two, and three. Best, worst, or least worst. So that the reader -- and more importantly, the decision makers would be able to differentiate the three options. Speaking specifically to the ROW options, please add more details as to the impact from the freight line construction and the freight line operation.

After investing and constructing a new freight line along the ROW, I would imagine that the freight carriers would want to send more than just two trains a day. They may go to eight, nine, or ten a day. Because as soon as you spend money on something, you want to use it. There was a study on a projected ridership, based on the Metro study. I'd like for Metro to do a study, or a survey to figure out how many trains the freight lines would want to send through.

PH 98-2

Okay. And also in light of the recent rail accidents, during COVID, we had a safety -- safety distance of six foot that we were all supposed to maintain from one another. I'd like for the Metro to wait for this analysis to take place on why that derailment took place. And maybe take into consideration what kind of safety mandates the government would put forth.

PH 98-3

Maybe they might say, you shall not have passenger lines adjacent to a freight line.

PH 99: MS. KALUDEROVIC

Hi, my name is Paige Kaluderovic, and I live in the neighborhood next to the ROW between 182nd and 190th. I'm advocating for the Hawthorne option, and not in my neighbors' backyards. There's another option that does not disrupt the quality of life for our residents, and that's the Hawthorne option. That being said, with the news of the Ohio train derailment, I'd like Metro to address the emergency measures it plans for scenarios like that, should the ROW option be selected. And based on what's currently proposed for either of the two ROW options, there are no sound barriers around the freight train. Only the light rail.

PH 99-1

PH 99-2

PH 99-3

Metro needs to prioritize the mitigation measures for the freight rail as well, because it will move even closer to homes. This needs to be addressed in the final EIR for this to even be considered for one of the ROW options. Thank you.

PH 99-4

Submission PH 100

PH 100: MS. LOVE

Hi, my name is Jill and I'm a resident right along the right-of-way, and I have six major concerns with regard to the ROW option. The first one is safety issues of the freight and passenger trains in such proximity to each other, particularly behind neighborhoods.

And I just wanted to share that in 2008 the father of one of my college friends, Walt Fuller (phonetic), was killed in the Metrolink train crash between a freight train and a passenger train in Chatsworth. There's no dollar value on life. And so if you are comparing pure numbers, sure the ROW might make sense, but if you are actually thinking of possible loss of life, a risk that you are taking on a daily basis, there's no comparison.

PH 100-1

I also have concerns about disruption of unstable soil, and movement of place -- and placement of the natural gas pipelines running underneath. Along with the resulting sinkholes, and cracks along properties. Also construction of retaining walls that will result in significant impact visually, but also possibly with rain drainage like the big storms we just had last month.

PH 100-2

Noise pollution, again, significant impact with the greatest significant impact along the right-of-way among thousands of residents. Traffic affects that would affect the Friendship Foundation new build. Also, homes, and schools, and emergency vehicles along 182nd.

PH 100-3

PH 100-4

And then finally, a permanent change to the community. The reason why we chose where we wanted to live was that's where we wanted to raise our children, and we love to live outside. With 300 trains going by daily, we would avoid being outside at all cost. Thank you.

PH 100-5

PH 101: MR. CHANG

Hi, good evening. My name is Jerome Chang, and I want to express some concerns for the Redondo Beach School District during the extensive construction process for the Metro. With it only being .3 miles away from construction, Washington Elementary just happens to be the largest elementary school in Redondo. It's also right next door to Adams Middle School, which is also a large middle school. PH 101-1

So in combination between the air quality, as you said, it's very significant. And the noise level, it's going to be quite disruptive to an already pretty crowded school environment in addition to the construction happening at Friendship Foundation. So we have two major construction projects. PH 101-2

I've taken the Metro from Redondo through the rapid transit bus. Taking the Green Line to the Silver Line, and honestly, I'd rather just see a rapid transit line like the Silver Line, come down Hawthorne to prove ridership, to get something going, to provide the convenience of mass transit which is the very goal of this in the first place. Thank you. PH 101-3

PH 102: MR. HOFMANN

Mark. Mark. Good to see you, again. But we have 45 minute -- 43 minutes left; so I figured might as well get another minute in. And I would be glad if any more people -- last night they stopped at 7:00 o'clock. Georgia earlier said, spring of 2023 the Metro Board would select the LPA, but the EIR, with comments and questions, does not come out until 2024. How is the Metro Board going to know what the answers to those questions are. Also, she said that the freight train goes by, she said one time. The sign up there said one to two times.

PH 102-1

Three blocks away, I heard that thing go by more than two times a day. I would like to see a report of how many times that freight train goes by. She also said, no residential property would need to be purchased. We happen to have two pieces of property, you're aware of them Mark, where the train tracks will actually extend over our property ten to 15 feet over our property. I'd like to know how that's going to work. Thank you.

PH 102-2

PH 103: MR. PINZLON

Hi, my name is Bob Pinzlon, I was a City councilman here from 1993 to 2001. I go back with this project to a meeting with a supervisor Dean Dana (phonetic), who told me the original plan for this line was to terminate in downtown Torrance. They fought it because they didn't want to become the parking lot for the hill. Torrance has clout. It didn't go there.

PH 103-1

Now you want to destroy the lives of thousand households. They don't have Torrance's clout, but you can protect them by putting the line down Hawthorne. Too bad that they'll still end up in the middle of nowhere in Torrance.

PH 104: MS. IFFLAND

Sorry. Good evening, I didn't think I was really going to be able to come up here and speak, but I just wanted to take the one minute I'm given. I'm with all the same residents, we bought our homes in early 2000 in anticipation that there would be no more train. I feel like the Metro has completely bulldozed us into a no-win option. We've been given no chance. We can't fight something as big as this.

PH 104-1

We have hundreds of residents at risk. I want to know how you're going to keep our children safe that are walking to the schools nearby. I'm also curious how we compared to the other cities. Torrance was just mentioned. But this didn't happen in Manhattan Beach, either. You guys easily elevated it for that City. There's no way you can put it down to our ground, right through our houses, the same way. It's not fair, it's unethical, and it won't be met. It won't be without a lot of resistance. So please keep that in mind.

PH 104-2

PH 104-3

PH 105: MR. HOUGH

Yes, good evening. I bought my house on Condon Avenue, in 2007. My neighbors across the street, their backyard border up against the right-of-way, just across the street from Ruxton. And upon the purchase of my home, I quickly realized, or was told, that the MTA purchased the right-of-way after the Alameda corridor got built. It was a very busy rail line. Between the -- well, you know, the harbors bringing goods up Alameda corridor from downtown LA, to the harbors got built, it reduced the traffic. MTA came in and purchased the right-of-way, and took the Redondo Beach residents to fight even a secondary consideration, to go down Hawthorne Boulevard. That's how much it took.

PH 105-1

Second of all, former Mayor of Los Angeles, Eric Garcetti told residents of Lawndale, in return for their support of Measure R in 2010, he would underground through Lawndale. And MTA, and Garcetti won't even acknowledge that that statement ever occurred. Thank you.

PH 106: MR. SUDDETH

Okay. I'd like to address a couple of things that I feel were inadequately, or incorrectly addressed in the presentations outside. For one thing, property values. The assertion that property values are increased by the proximity to light rail, I have something similar to that in my experience. And that is my house is near an intersection of Manhattan Beach Boulevard and Vail, which is a little less busy than Manhattan Beach and Inglewood, but similar.

PH 106-1

And what happened there is that when we bought the property, the real estate agent informed us that because we were near that noisy intersection, that the value of our property that we were buying, which was two houses removed from it -- that intersection, was reduced by 2 percent. So noise makes a big difference in terms of quality of life and the value.

The other thing that I want to address is the noise that is occurring. A lot of times I go up Aviation and at the crossing of Rosecrans, and right at that crossing, you'll find that the light rail goes over. And every time I'm sitting there in my car waiting for the light and the light rail goes over, it's a lot of sound. It's a lot of sound. It goes -- (sounds) -- or if it's turning -- if you go another place where there's a little bit of a curve, there's a squealing, and maybe they can ameliorate that, but I'm not sure how successful those attempts might be. Thanks.

PH 106-2

PH 107: MS. NEGRETE-MITCHELL

Hi, again. Niki Negrete-Mitchell. Redondo Beach right-of-way homeowner, and I'm a proud Hispanic Native-American. And I just want to address the frightening prospect of five plus years, at least, of heavy construction at my back wall. My metal smith workshop, where I make turquoise jewelry, is 15 feet from my back wall. My swimming pool in ground, is about three feet from my back wall.

PH 107-1

And the right-of-way behind my house is -- I think about 80 feet wide. How are you going to have cranes, dump trucks, back and forth constantly. Early hours of the morning, and you know, I have a lot of health issues and sensitivities, and my daughter has sensory integration dysfunction. And we're extremely anxiety ridden about this prospect.

And not to mention, Kimberly brought up the owls that rest on my backyard wall -- the wires above our house, and you know, it would just completely upend our lives. And this is a more emotional talk about this but it's very personal, and I just wanted to bring that up. Thank you.

PH 107-2

PH 108: MS. OSBORNE

Good evening, my name is Doctor Osborne. I live in Redondo Beach, I do not live on the ROW, but I reviewed documents for 40 years as part of my engineering career. So I'm going to just mention something that should have been done, that wasn't, okay. And I'm talking about the noise analysis.

The people that live on the ROW, are used to the two freight trains, okay. But when you have increase in noise, the ambient should have been done without the freight trains present, okay. Because it is the increased noise, you have -- normally it's quiet, and then how much noise is the light rail going to add. And I don't want your number artificially increased by the fact that you had a freight train a day.

You have -- everything is insignificant, in terms of the noise. All your things are colored green. I would like the noise analysis redone, without the freight train considered in the baseline and see how many significant green things go to orange or red. Thank you.

PH 108-1

PH 109: MS. DUKE

Hello, just wanted to mention a couple of things. As far as the options, I think it's a no-brainer. The Hawthorne option would be the way to go. You've heard so many people here who, in the ROW option, it would just be devastating for so many people and I'm nowhere near it. But we can all relate to one another, and realize about property values, owls, and everything else that was mentioned here. PH 109-1

I was on that tour of the Metro -- the Metro offered to Pasadena. There was a gentleman talking about the noise. And I remember on that trip thinking this is great. I mean, it's wonderful, but as far as the noise, he was right. If you're right next to it, forget about it. A couple other things that I mention are the safety on all light rail and all Metro. I want you guys to really, strongly, think about that. And the first mile/last mile. PH 109-2

So there's other things to be considered. I know that the draft DIR is the big thing, but the overriding thing is like the first mile/last mile, and also the safety. That's going to get everybody, whether it's Hawthorne or anywhere else, even on the rail to begin with is really important. Thank you. PH 109-3

PH 110: MS. KURTH

Hi, I live on Fisk Court. Where I live, I've been there for 43 years. The existing freight line is about 35 feet above. You're planning to keep the access road and from there up it just elevates up at a very high -- um -- I guess, a steep grade. You're planning to move the existing freight line closer to our property lines. I was told by the engineers today that it's probably going to be a minimum of eight feet.

PH 110-1

So I don't know how you're going to support that elevation. They said there was going to be no retaining wall, and we're concerned about derailment, of those -- anything from 15 to 30 of those huge tankers plummeting down on our homes. Our safety doesn't appear to be an issue to you. And it's just going to be a huge crater. There are derailments all the time. And this -- it needs to go down Hawthorne Boulevard.

Either you don't build it, no project at all, run the high-speed buses, or the high-frequency buses. But bare minimum, if you have to have it, it needs to go down Hawthorne Boulevard. Not through 1,100 residents. That's going to destroy our quality of life, no sleep, degrade our health. We -- elderly, my husband is 76, I'm almost 70 --

PH 110-2

(MR. DURKIN: So can you wrap up?)

-- yeah. Our safety is paramount. That's what you should think about.

PH 111: MS. MICHAEL

I'm Shelby Michael. I'm a resident of Redondo Beach, born and raised here. I went to Washington Elementary and Adams Middle School. I also grew up to be a transportation planner, and I support this project. I came in here thinking that using the right-of-way, the existing right-of-way, was the right option. But after hearing everyone's concerns tonight, I do think using Hawthorne Boulevard might be the better option. My concern is connectivity issues. First and last mile has been a long-standing issue with Metro and I encourage you to explore those options further with the Hawthorne Boulevard connection. Thank you. PH 111-1

PH 112: MS. KIMBERLY

Thanks for your time. I just want to start off with Santa Monica has got multi, multimillion dollar homes, and it's now the highest crime rate in the city around. They call it the crime train, which is the light rail that goes through there. And evidently, it's easiest to just jump on there and get away with lots of crimes. Aside from the homeless urinating on it, and people feeling unsafe, such as women and children. I just feel that, you know, don't make a short term decision to save money when we can do something better. Spend more money, and make it safer. Guess I'm losing sound on the mic. Is this still working? Okay. PH 112-1

(MR. DURKIN: Yeah, we can hear you. Go ahead.)

And I just heard recently, the construction going on Wilshire in Westwood for the light rail, there are nails all over the ground. That people are getting flat tires from. That's another thing about construction, that I wanted to note on from this other person that was talking about that. PH 112-2

So basically, it's kind of the same thing, if you are going to buy a house and you got a new construction, you're offered one which is cheaper, but with illegal, unsafe issues, or problems. Or you're offered another home, where it's a little bit more money but it's safe and it's illegal. What is right. What is the smart choice that makes sense to anyone who has a brain and sense. The safer choice, that cost more money now, than later with tragic consequences, accidents, and lawsuits; right? Thank you. PH 112-3

PH 113: MS. OSBORNE

Okay. This time I'm just Holly Osborne. And I have another job, which I'm prouder of than any other one I've ever done. And that's volunteer with the schools in reading to second graders, okay. I read with them outside. We can't read when the trash trucks even come by. Somebody was speaking about, you know, the schools in Redondo.

PH 113-1

And that reminded me that there's a school in Lawndale right close -- just within a few hundred feet, and I cannot imagine how those kids are going to learn if they have that noise of that light rail tracks coming down all the time. And I'm also going to say because I do numbers, and I do statistics, and all that kind of stuff. I looked up the statistics of that school, and 45 percent of them are English learners.

Which probably means that those parents do not speak English, even though the kids speak it pretty well. They probably don't know about all of this. So I'm just saying about your outreach, probably could be better. Thank you.

PH 113-2

PH 114: MS. SCHREIBER

Hi. I'm Chelsea, and this is Juno. And we live in Lawndale, right across -- well, right next to where this is going to happen. And I don't get politically involved. In fact, I'm a reporter and I reported on Redondo Beach and Hermosa Beach for many years. I don't contribute to the noise, in a citizen way, but now I am. I'm here.

I'm going to keep talking about this, I'm going to come to all the meetings. And I have a lot of questions. Mainly, I want a one number, and I want the number of homes affected by this along the ROW. I keep asking the question, we hear 700 we hear 1,000. I want the actual number. And I also would request more outreach on this.

PH 114-1

I've been talking to people along the ROW for the past week. And nobody knows what's going on. There's even a council -- a man who ran for council, whose house buts up against this, and he had no idea this was going on. I know you send the information, but we need to figure out a way to get the information actually out there to people. And we need it in Spanish. We absolutely need it in a way that everybody can understand it. So I'm here. Nice to meet everybody. Let's take them down.

PH 114-2

PH 115: MR. OBAGI

All right. Mr. Durkin, thank you. Mark, we know that the Metro Board that is going to make the decision here is probably only going to read the executive summary. And the executive summary here is defective, informing the decision maker as the environmental impacts. For example, it says, the existing freight tracks would be rebuilt, and shifted -- and shifted in some areas within the Metro ROW. And would remain at grade throughout the length of the corridor. PH 115-1

You are not saying the full truth. The full truth, it'll be shifted 15 feet closer to 480 Redondo Beach residents. You talk about the quiet zones in here. That a quiet zone would be established for the freight train and for the Metro. But there's no such thing as a quiet zone. When you're talking about the heavy freight train running by elderly residents' homes ten feet away from their home. PH 115-2

There's no such thing as a quiet zone. You talk about the high frequency bus alternative. You show a map of it. Somebody chose that route for it. And it passes right in front of the South Bay Galleria. Why is that? Why doesn't it go to the transit center? Because you know, we all know, that higher ridership will result if it goes in front of the South Bay Galleria to become the South Bay social district. PH 115-3

So let's be honest about that. Let's say why we chose that route for the high frequency bus. And you'll hear more from the City Council of Redondo Beach, shortly. Thank you.

PH 116: MS. BINEGAR

Thank you. I'm a resident of Redondo Beach, and I've done a lot of alternative analysis in my job. And I'd like to understand, and have transparency around what factors you're including in the analysis. How you're weighing those factors. And then also, how you're collecting the local input meaning those impacted, and where they prefer it to be. How many weight does that have in the Board's analysis. I'd like transparency on that. Thank you.

PH 116-1

PH 117: MR. COLE

Hey, good evening. Whoa, sorry. I've only been here for about 25 minutes. Unfortunately, I wish I could have been here earlier and heard everyone's comments. Don't think I heard anybody in favor of the right-of-way alignment. I thought that was interesting. I don't really care which alignment. I'm just super thankful that there's going to be more transit options in the South Bay. PH 117-1

I look forward to driving less, look forward to making a positive impact on the traffic situation. I do think it's a legitimate concern, the first mile/last mile thing, that one of the previous speakers brought up. The right-of-way alignment. I'm born and raised and life-long resident in Redondo Beach, if that makes any difference. It would be about ten minutes closer for me to walk to the train. If it's on the close side, but if it's on the far side, maybe I'll take a bike. I don't know. Thank you guys. PH 117-2

PH118: MS. KIMBERLY

Sorry, that one minute goes fast. One thing I wanted to end on is I -- and I think a lot of people on here are for light rail. Just not having it go behind houses. And all the things we are discussing today with the sinkholes, and all that stuff, and the Friendship Center that's being built, 56 million dollars with a lot of disabled kids, autistic kids. But I want to also note, is this is unrealistic to have this for the Olympics.

PH 118-1

I know that's your plan, but it's unrealistic. The ridership is low. And to have it just for the Olympics, and then it's going to be of no use is a complete waste of money. So I'm for it not at all, but of course going down Hawthorne makes more sense to bring businesses more business. Thank you.

PH 118-2

PH 119: MS. TURNER

Good evening, everyone. My name is Kim Turner, and I'm the transit director for the city of Torrance. And I just wanted to let you know that the city of Torrance is in support of the proposed alignment along the right-of-way. I guess this is a Kimberly thing, but I too, support the light rail. I've been in the transit industry for other 37 years. 13 years with Metro, and 23 years with Torrance. And I can assure you that all the projects that Metro has done from the blue line, kicking off in 1990 when I was there, to the K Line that was recently kicked off. There have been the same concerns for all of those projects. You are not telling them anything they don't already know. But I assure you that items have been addressed.

PH 119-1

Those projects are there, and those communities that those projects are operating in have worked with Metro to come to agreement to address some of those issues. I ride the rail, and I don't hear complaints from other people. I live -- my friends live right next to the Expo Line. We have parties in the backyard. We don't even hear it. So again, you have to go out and check it out. Ride it. How many of you have actually ridden it?

(UNIDENTIFIED SPEAKER: You're not supposed to talk to us.)

(MR. DURKIN: Wait, hold on. Hold on. She's speaking.)

It's my comment.

(MR. DURKIN: Yeah, go ahead.)

Okay. Well, my comment is go out and try it. If you want to take a ride with us, I know some people here have ridden it before then just come out. Thank you.

(MR. DURKIN: Thank you for your comment.)

Right-of-way.

PH 119-2

PH 120: MS. DAROUI

So I just wanted to say the -- Lawndale, I'm a resident of Lawndale, as you may know. And the project is going to be serving Torrance and Redondo Beach, and I fear -- feel for you too, Redondo Beach. But those are white well-affluent community and they will be going -- if it goes to ROW, it would be going through a community that has minorities.

There's probably -- not a lot of them in the meetings because they probably don't know that those meetings are happening. And it feels like by having the train going through ROW, it will be -- in Lawndale, it will be going through the poor peoples backyards. Just because it's going to benefit the two other cities.

PH 120-1

Also, property values, I do not care. I care about my health and my sanity. We bought our house on ROW because we wanted to raise our kids there. Not to be in the business of real estate. My sanity, my mental health, my family, my neighbors, it's what's most important. So please, no on ROW. Hawthorne, buses, or not at all. Thank you.

PH 120-2

PH 121: MR. BOSWELL

Darn. Last again. So I'm really disappointed that Torrance doesn't have our back on this when, you know, they are our next door neighbors, and they are not giving us the respect that we give them in a lot of situations. Any way, I hadn't planned on speaking because only a minute, I just didn't have time to organize it. But after seeing what I've seen today, I just got to say a couple of things.

Considering the cost of this project region wise, worldwide. To pick an option based on one being more expensive than the other, is atrocious. We are talking about the quality of life of over 1,000 households. We are talking about noise, safety, and the understanding that every train that is built has the potential of derailing. And we had one back in I think, 1988. In El Nido Park. PH 121-1

So you have a number of things in the DIR in the presentation today like, I noticed the phrasing. No residential acquisitions anticipated. Notice how it doesn't say no residential acquisitions required. That's pretty soft. When you consider that in Lawndale, there's actually a section of the ROW that is too narrow for this to go through. It's only 75 feet. And in your DIR, and in another things that you present, you need 81 feet.

So what are you going to do? You are going to take somebody's house. Or you are going -- you're just going to have to route it somewhere else. But frankly, the fact that the soil is sandy, and underneath that it's clay. Which expands, and contracts with moisture. You do not have a place that's solid enough for three sets of train tracks. This is 100 year project. The cost difference is insignificant over that time period. But once you build it, we are stuck with it for the next 100 years or more, or who knows what. PH 121-2

It has to go down the -- it has to take the Hawthorne elevated route, because down the row is just asking for trouble at some point. PH 121-3

(MR. DURKIN: Okay.)

It's engineering malpractice to put it on the ROW on unstable ground. It's -- it's an upfront to the families who live along that ROW, and I'm not talking about boarding it. I'm talking about blocks in each direction that will be impacted. PH 121-4

(MR. DURKIN: Okay -- okay.)

I'm the last speaker, give me a break. So you are going to build a sound wall, but what everybody doesn't know, the sound wall will be on El Nido side of the tracks. Creating a great way to bounce the sound even further into Redondo to the west. This, again, shows no concern for the people of Redondo Beach. And frankly, considering how it's even narrower, and more dense in Lawndale, you're showing them no respect either. PH 121-5

(MR. DURKIN: Okay.)

So what I want is the option that will be less disruptive and in your best interest, as you always say, ridership. There's going to be 300 apartments that the Galleria is building right on the corner of Hawthorne and Artesia -- PH 121-6

(MR. DURKIN: Okay. You need to wrap up. We have another speaker behind you. You need to wrap up. Wrap up.)

-- And those are your riders --

(UNIDENTIFIED FEMALE SPEAKER: You can have my time.)

(MR. DURKIN: No, wrap up.)

-- okay. I'll come back.

PH 122: MR. HOLLAR

But I like Niki. I'm Ray Hollar, I live in -- thank you. I'm Ray Hollar --

(MR. DURKIN: Yeah, go for it Ray.)

-- 36 years in southwest Lawndale along the ROW. But I've come to talk about the Redondo Beach issue, and that is the Pacific Crest Cemetery. It's located between 182nd Street and Grand Avenue. 1,500 feet of frontage along the right-of-way. And it's right -- it's right where the right-of-way the project train would run -- run over the wall from the cemetery.

PH 122-1

Now, trains going by there would cause noise along the street crossing and at the station. And the funerals are conducted there. So I think it would degrade the cemetery. And my grandfather, a World War II Combat Veteran, is a permanent resident of Pacific Crest. So I ask you to oppose the ROW train to honor those many veterans who are in Pacific Crest, and the funerals held there, and the people who visit there to visit their ancestors. Which I know was the father of one of the earlier speaker is also a resident and possible others. Thank you.

PH 122-2

PH 123: NEGRETE-MITCHELL

Thank you. I -- you know I have a lot of respect for Tyler Bonsted, and I really appreciate everybody with Metro being so cordial with me. But there's just a lot of things like the sound wall, Doug mentioned. He kind of stole my thunder, but the problem is -- there is not enough room between the track and my back wall for a sound wall or a retaining wall. That's how close it is. There's just not enough room for a wall to be built. PH 123-1

And so it is not any better, in fact, it's even worse to put the sound wall on the opposite side of the track. Which is going to bounce all the sound back at us. There are other issues, you know, with all the vibration and that sort of thing. And my metal smith workshop, where I had chemicals that, you know, they vibrate and they work their way up to the edge of the shelves. And I push them back and that sort of thing. So the mitigations that are mentioned really don't give me any comfortability about any of it. So again. Thank you. PH 123-2

PH 124: MS. DODGE

I just had one more brief comment, when looking at the project boards out in the lobby. Earlier they talked about the three alternatives, the elevated Hawthorne, the trench along the ROW, and the ROW. The ROW was presented as a proposed project. And then there's options for the trenching, and options for Hawthorne.

PH 124-1

So it looks like ROW is the preferred option. And it's misleading, at best, when all three options should be -- being considered before the final environmental impact report is submitted. Thank you.

PH 125: MR. OBAGI

Thanks. So another thing missing from the draft DIR executive summaries, are any mention of sinkholes. And the potential for sinkholes when this construction is undertaken. And I don't mean sinkholes on the right-of-way. I mean sinkholes on the private properties adjacent to the right-of-way.

PH 125-1

Because residents at the Ruxton, which is adjacent to Breakwater Village, or adjacent to Ruxton Place, had a sinkhole on their private property when shell was drilling a shore wall, and hammering down a shore wall into the right-of-way. So the whole area is a sand bed. It's -- it's -- the land -- the geology of the area is not adequately represented in the draft EIR executive summary.

PH 125-2

And the Metro Board is not going to be apprised sufficiently of the potential detrimental impacts, both to -- during construction, and afterwards from operation to the adjacent dense residences adjacent to the ROW. So it's defective in that regard. Thank you.

PH 126: MR. BOSWELL

Hello. Doug Boswell, again. A little more organized this time. So I just wanted to say a couple of things. Metro has stated many times that the goal on these is ridership. And when you consider that the Galleria is going to be putting 300 apartments on the corner of Hawthorne and Artesia, right where the proposed Metro station would be, this is going to hopefully take a lot of cars off the road. Because where do we go? We don't go to work in Redondo Beach because it's all houses. We've given up all our commercial and industrial land for random numbers.

PH 126-1

So where are they going to go to work? Probably points north. A lot of people work in El Segundo. Jumping on that train and getting off at a stop in El Segundo is far easier than driving your car and then coming back in the heavy traffic. So ridership, just for that one complex, or actually two buildings that they are going to put in, makes this a better shot for ridership than putting the station over at the new Redondo Beach bus depot, which had to move from the Galleria because the Galleria needed the space.

So the other thing that I wanted to mention was, if you do go with the ROW option, your plan is to move the freight train tracks a lot closer to the homes, making the noise, vibration, and pollution issues even worse. But as someone else mentioned earlier, with nice shiny new tracks, who knows what other trains are going to say, "Hey, we can take that route too." Then instead of having one train going up and back, we might have two trains, or three trains, or 400 trains. Who knows what we'll have.

PH 126-2

But, in closing, I see the term "the locally preferred option." And at the end of this process, apparently the Metro Board is going to select the locally preferred option. I think after what we've seen tonight, it's very clear what the locally preferred option is. And it's not going down the ROW, no matter how many options you try to entice us with. It's the Hawthorne option. That is the locally preferred option.

PH 126-3

It's been pretty much unanimous here, except for a couple of people that probably don't have all the facts. Let's just say that. Anyway, thank you for your time.

PH 127: MARY SMILEY

Good morning.

Thank you for the presentation. I live on 171st and Firmona, just a short way from the right-of-way that you have. If this were a vote, I would vote for the construction on the right-of-way that you already own. The cost estimates you provided indicated that it was the cheapest. I think it would be the least disruptive and would not only benefit the residents but also the taxpayers, who are already burdened quite a bit.

There will be cost overruns in any construction. You have a contingency plan, but who knows? You have an estimate, and to be on the safe side, use one where you are about 50 percent above that, because you never know if you are going to find a dead body in a wall or something. PH 127-1

So I would ask that you use the asset that you have, which is the right-of-way, and use that as the lane to put down the Metro train. Thank you.

PH 128: RAY HOLLAR

I'm Ray Hollar, homeowner in southwest Lawndale for 36 years. You said Metro staff will make a recommendation to your board of directors for which project to build, if any. One of the five project goals is cost effectiveness. You keep showing a cost estimate chart for construction cost of the project along the right-of-way, the ROW and the Hawthorne Boulevard path. This is the wrong chart to show.

Total construction cost is not cost effectiveness. The correct metric is cost per rider as your SAA document indicated. Your ridership forecast shows 37 percent more riders for the Hawthorne Boulevard path versus the ROW path. When you calculate the cost per rider from the starting costs and operations and maintenance, the Hawthorne Boulevard path costs less per rider. So that is more cost effective.

And because your chart there shows more riders along Hawthorne Boulevard, it meets another project goal of reducing air pollution and greenhouse gases better than with the ROW. If you must build, Hawthorne Boulevard is the better choice than the ROW because it meets project goals better, with less noise impact also. Thank you.

PH 128-1

PH 129: COREY CARDINAL

Hello. My name is Corey Cardinal. I just purchased a home on 162nd, and as a new homeowner I am definitely concerned about this. As far as listening to this meeting, not only did I hear about noise pollution, I didn't hear anything about air pollution and what that will contribute as far as the construction, the digging at the concrete, all of that. I also did not hear anything about how it would affect our beaches with the runoff as we are like three miles away from Redondo Beach.

PH 129-1

PH 129-2

I also did not hear anything about safety as far as the environmental concerns, and I am just wondering if that is like an aspect, too. Because I have noticed that there are, you know, substantial issues with the homelessness and, you know, drug use around here.

PH 129-3

What else? Oh, yeah. In the ballast mats, I would be interested to know what that is made out of. Because if you are inserting that into, you know, our environment, how would that impact or affect any of that?

PH 129-4

And then also my last thing is like not only the soil but the air quality around here. We are also close to the airport and such, so I don't know how that will impact that. Thank you.

PH 129-5

PH 130: LISA FRANCIS

Good morning. I'm a new resident to Lawndale. I bought my home on Condon Avenue, and my concern is having that right-of-way pass in front of my door disrupt the peace and quiet of our neighborhood. The BNSF already passes, but it is not 200 cars and it doesn't pass every day. So I can live with that. PH 130-1

But I'd like to say, if you do have to do this project, as he mentioned, Hawthorne Boulevard makes more sense. You already have buses, businesses. And around this city a lot of Metro links have been put down the main streets like the one on Crenshaw Boulevard instead of through people's neighborhoods. I'm very concerned what will happen to my property value and my way of life. So my vote would be if you have to do it, use Hawthorne Boulevard. Thank you. PH 130-2

PH 131: TED HOFMANN

Good afternoon, Mark. Good to see you, too. First off, this is only my fifth minute, not as many minutes as you have accused me of.

I do wish you would give the residents of Lawndale more than one minute to speak because they are the city that is most impacted by this project. More than Redondo Beach, which prefers the Hawthorne Boulevard option because they do not want the light rail near Redondo Beach residents. And Lawndale is impacted more than Torrance, which prefers the right-of-way. I've been at the meetings. I've heard them.

The City of Lawndale is opposed to any of the three options. Why are the three alternatives that Tyler did mention again today not included in the presentation more?

Out there on the boards, they are not even mentioned, the other three options. I know this isn't a question-and-answer session, but I would like an answer.

Why can't Metro make recommendations to do the no-project alternative that is in the Draft EIR, or why can't Metro make a recommendation to do the high-frequency busing, which according to your own Draft Environmental Impact Report is the environmentally superior alternative?

PH 131-1

PH 132: DORIS HOFMANN

Hello, Mark. My name is Doris Hofmann. My family has been in the City of Lawndale since 1927. That is a long time. And we do not need a Metro in our city. We are a small community. We know each other and we cooperate with each other, but a Metro will not help us at all. If you make a study and look down Hawthorne Boulevard at the big double buses that go up and down Hawthorne Boulevard, they might at the most have 8 to 10 passengers at one time.

We do not need a Metro. It will not benefit Lawndale in any way except for a lot of noise and racket and congestion. Stick with the high-frequency buses, which you are not talking about. You are not pushing. You are just pushing the ROW and Hawthorne Boulevard. You need to take and study the bus routes. We do not need Metro in any way, shape, or form in our little City of Lawndale. Thank you.

PH 132-1

PH 133: MICHAEL KIM

As a resident of Lawndale living along the ROW, I am not a fan of the passenger freight trains. I'm not a fan of having a train go by every 5 to 15 minutes through the daylight hours up until midnight. I am more concerned, however, about the freight train upgrade that you guys have been talking about.

Once you spend all that money to make the freight train line up to code and put in the silent measures and fix the ground underneath the freight line, will there be a certification to make the trains longer, make the freight trains go by faster, or have more freight trains go all along the freight line all day long every day?

PH 133-1

We are okay with two a day, but if it's 10 to 20 a day, I have problems with that even more than having a passenger line go by every 5 to 15 minutes. The environmental impact study does not include the proposed projected freight train impact of having more freight trains, so I'd like to see that in the study as well.

PH 134: GLEN BRACKENRIDGE

My name is Glen Brackenridge. I live on 172nd near the ROW, and also run a community organization dedicated to getting the rail down Hawthorne.

Now, one thing I would say is when you think about the benefit to Metro, as they said, we need ridership. If ridership is going to be increased going down Hawthorne, you have to think about the current businesses, and who's working the businesses. You can go to the Galleria. Clearly, Hawthorne is the better choice for ridership. PH 134-1

In terms of the City of Lawndale, what you will be looking at is, if it goes on the ROW, the property values that drop, which is tax revenue that Lawndale is losing. If we keep the property values high and keep the sales tax high in terms of the numbers on the ROW as well as the businesses on Hawthorne, and we increase the ridership that goes through that business, taxes go up, and Lawndale gets more money to spend on the things they need. PH 134-2

Another thing I would say about the noise is to make sure to please study the sound on Hawthorne, and when you compare that to the sound on the ROW, do not just study the sound when the freight train goes by but the quiet times compared to rush hour and the normal amount of noise on Hawthorne. I think you would find that there is quite a bit of disparity. PH 134-3

PH 135: SIRLEY CUEVAS

Good morning. Metro knows where the City of Lawndale stands. So at this time, I am asking to please make sure to listen to our citizens, especially those who will be affected by Metro going through their backyards and their kids, the air pollution, and all that. We want to make sure they are taken care of.

PH 135-1

These citizens are the ones that are going to be affected the most, so please listen to the citizens, not to your pocket.

PH 136: LAURA THOMAS

Hello. I am Laura Thomas, and I have lived in Lawndale for 76 years. I want to address the fact that here we are in a high school, and there is a SWAT team of about seven officers. And if I could take them on to the Metro, I would feel much safer. I think there is a big safety issue that we have not addressed in Lawndale. I don't know who feels safe getting on them. PH 136-1

Also, I want to say that when I get my Tesla charged up, I am in view of one of the stations, and there is nobody riding on that rail. I am there at many different times, sometimes early in the morning, sometimes late at night. I have a direct view. It is just unbelievable how few people ride that Metro.

And all along Hawthorne Boulevard, there is nothing but car dealerships, parts stores, everything automotive. PH 136-2

So where are we going? This is a bridge to nowhere. And, you know, you gave a slick presentation, but I see right through you. Thank you.

PH 137: JOHN RICHARDS

Resident of southwest Lawndale. So far we have had two project managers. What's your interest? I know what your interest is. What city do you live in? The million-dollar neighborhood of El Segundo. What do you care about Lawndale? No care but your job.

That train, I sit down there and watch it where it ends at Costco. It comes in at the peak time Monday to Friday, 10 percent occupancy, and you want to push that down our throat. That is baloney. Buses are so much better.

Let's talk about the money. First of all, project managers make a quarter million dollars a year and do nothing, and we cannot have a guy that wants job security for the next 15 years to retire on our back.

Okay. Let's talk about money. I've seen a lot of projects with Metro. Let's use one for example. The one going down Wilshire, all underground, same makeup as Lawndale. It has residential half a block from one side, residential half a block from the other side on Wilshire Boulevard.

PH 137-1

Okay. All the way close to downtown. It went underground. You guys spent so much money because it is not your money. If you are going to spend that kind of money on that city, spend it on ours.

Why did you not go through Redondo? Did they have more pull and more money? Are you going for the people that are poor? Shove it down our throat. This is baloney. 37 years I have lived here. For the last 15, you project managers probably had a job to figure out how to go through a neighborhood that will give you the least resistance. That train is unneeded. You know it, we know it, and there will be more comments from me.

PH 138: HOLLY OSBORNE

Good morning. My name is Holly Osborne. I'm from Redondo Beach, but I'm a retired engineer. And I'm looking at this report objectively, and I'm looking at deficiencies.

This first one has to do with the vibration during construction. It says, "Construction of the proposed project would have a significant impact on 133 residential structures on the ROW." It turns out there are 88 in Lawndale, as counted, and 40 in Redondo Beach, and 5 in Torrance.

I wanted to know where they were, and it turns out you have an appendix with a little red dot by each one. When I looked at that, I said, this is a horrible undercount. Just to give you an example, between Artesia and Grant, you have seven. But you only had two at Breakwater Village.

I think you need to redo those tables because they are inaccurate and undercounted, and your report is deficient. Thank you.

PH 138-1

PH 139: TED HOFMANN

Hi, Mark. Is this No. 6? By the way, I think this meeting goes till 1:00. Am I correct? Yep. You guys can all speak till 1:00 o'clock.

Georgia stated—see, my time has already started. Georgia stated in more than one meeting that no residential properties will need to be acquired. Yet, according to your maps, if the Hawthorne Boulevard option is chosen, the tract and structures are about—they actually extend over some of our property by about 15 feet according to your maps that you put out there in the vestibule. Can you tell me how that will be handled if they are not purchasing any property? PH 139-1

Again, I would like an answer or response of some kind. I have not gotten any answers yet.

Metro will tell us there was a vote in 2008 and 2016 to spend money on light rail, but that was just a statement on a ballot. Did people really know how it would affect them? Was it specifically stated on the ballot where the light rail would be built so people could make an educated decision? PH 139-2

I'm out of time. I will be back in a minute.

PH 140: G.P. SUDDETH

Hello. One thing I think—probably not such a popular idea within this room and the attendance in this room—but the thing that shocked me when I realized this project was going on was that there was beginning to be an upwelling of concern about having to go down the ROW and the disruption to people's lives every day going on if that happened.

And therefore, suddenly a strong support for going on Hawthorne Boulevard, and once they realized that grade was impossible, elevated. And when I saw that beginning to happen, I went, Wow, there are a lot of businesses there. Those people deserve to be served in those businesses, and the population that lives near those businesses and that would like to go and attend and use those businesses need to be served.

And I said, Okay. Well, then there should be—if there is a choice to be elevated on Hawthorne, there should be a stop at 164, 166th, somewhere like that, so that Lawndale is not just disrupted by this thing but is also served by this thing. It's just not right. PH 140-1

PH 141: JOHN SCHREIBER

Good morning. One of the things I think that the DEIR does not address adequately is the separation of the community, at least the western part of Lawndale from the eastern part if you go down the ROW. And one part of that is when it's elevated and then comes down to grade, you have these giant concrete walls that the train will travel down. PH 141-1

And it is not just only physically dividing the community; from where I live, I would not even be able to see the other side. I would be staring at a giant blocked wall. And I don't think you addressed that in the DEIR, just even the feeling of being disconnected from the other side of the community just because you cannot see it. PH 141-2

The other thing about the quiet zones, you guys are saying that will make our lives so much better because you are basically quieting two freight trains a day. I mean, I think it's minimal at best. But you are not addressing 200 to 300 trains a day coming at grade, downgrade, up and down the slopes and making the noise from the wind, the squeaking of the tracks. And I don't think putting some lubrication on the wheels is really going to mitigate that well. So I think that needs to be looked at further. PH 141-3

PH 142: CATHERINE BOLL

Hi. I'm all for better transit in LA, but I can only support the Hawthorne Boulevard elevated train due to the amount of disturbance using the rail line will cause to thousands of homes and people living along the existing rail. I'm a homeowner, just the second house east of the existing rail line in Lawndale, and although the train only runs a couple of times a day right now, it shakes the house and blows the horn at crossing. The Metro would only run minutes apart at extended hours disturbing all residents. PH 142-1

How will noise and debris through construction be mitigated? PH 142-2

The elevated Hawthorne route is the most expensive, but the other options using existing rail are a great cost to thousands of homeowners along the way. Please go with the Hawthorne route. PH 142-3

PH 143: JOHN RICHARDS

John, Southwest Lawndale. Okay. Hopefully we get some answers from this and hopefully we get a truthful answer. I see a reporter here taking down every word.

This is a question for you: Do you ever ride the train to your office? Tell the truth. I want the truth. I want to know if you take a bus from your little million-dollar house to your office? Does any of your staff do it?

PH 143-1

And like I said, I gave you the figures for peak 5:00 o'clock, Monday to Friday traffic. On the end of the trail there, it's roughly 10 percent. If you wait till 8:00 o'clock at night, you are down to 3 or 4 percent. To have a train go through Lawndale 3, 4, 5, 6, 7 times an hour is ridiculous.

Why don't we have buses and study this more and actually a need for a train to ruin our neighborhood and go through our neighborhood? We have to stop this. And by the way, how is that project working for the train going to LA to Frisco? It's been cut in half about 10 times.

PH 143-2

PH 144: JOANNE DORAM

Thank you. I'm a Lawndale resident. I've owned my home for 13 years. I really like where I live. I love my neighbors. I love the whole area. It's convenient. It has everything. As they say, it's the heart of the South Bay. That is what it is, and it's a very mixed, great group of people.

But I'm a retired administrator from Los Angeles Unified School District. And guess what, this is the first time I heard anything about this. I came on a rainy day to find out what is going on, and why do I feel like there was no vote? I did not have a say so. You guys have this study made. It looks like it's really moving.

PH 144-1

And I think that the people who are here, if you had a vote that was put out for the people, you would hear a lot more than just the folks that are here today on a rainy day. I feel like it needs to be tabled and brought to the attention of the public, and we need to have much more transparency before this goes any further. Thank you.

PH 145: COREY CARDINAL

Hello. So I just wanted to piggyback off of my first comment. I also agree with the last person who spoke, that I just received this in the mail even though I have lived in this town for 10 months.

And as far as -- I know this is not a question-and-answer thing, but I do want to ask: As far as the almost $2.0 billion budget that was proposed, what will be contributed to the City of Lawndale for the beautifying of the town

Because I did just get nominated for updating my house as part of the beautification award, and I felt that that was a strong part of the community. And I totally loved that about this town. I grew up in the South Bay. I have lived in north Redondo my entire life, and obviously, because of being priced out of that town, I have had to not necessarily downsize to be able to even buy a home in Lawndale. It's just crazy how expensive it is. And to just take away all of that and our like -- again, you did not put in the proposal how it would affect our property value. And I think that definitely needs to be addressed. Thank you.

PH 145-1

PH 146: MASSIMA DAROUI

Hi, everybody. First, I just have a question. How do you study how many passengers are actually riding your train after construction?

From what I've seen, a lot of the riders in LA are not really paying their fare. There are a lot of homeless, so I am not sure how you are actually finding out how many people are riding. You have estimates of how many would be riding, but what are they based on?

PH 146-1

Also, Proposition M was for the creation of a commuter train, and if this train goes on the ROW, I feel like it would be good for you because you will be able to budget it to actually fix the freight train tracks, which should have been fixed a long time ago already. And you will be using our tax money to fix them instead of being a separate project.

PH 146-2

So for me, no, on ROW again and again. Hawthorne or buses, actually. Thank you.

PH 146-3

PH 147: TERRI THOMAS

Thank you. I wanted to address a comment that was made in the presentation. They were talking about putting potential bike paths and trees, if possible. That is one of the most important things that residents need these days: open space, clean air, beautiful trees to refresh and get us away from the stress of the world that we live in.

PH 147-1

And I'm for eliminating a train that goes nowhere with no ridership and using an effective bus station on Hawthorne Boulevard. Thank you very much.

PH 148: CRAIG ST. JOHN

Hello, Mark. Craig St. John, president of Westwood Building Materials on Inglewood Avenue and Manhattan Beach Boulevard.

We have had a lot of discussions, and you know my philosophy about this thing. I don't think the city needs it at all. I think you need to be honest with the people here. Doing my research, I found a little bit. Caltrans is adamantly opposed to Hawthorne Boulevard because they want to widen the 405. I'm sure these people are not aware of that. PH 148-1

I would like a reaction from Metro. It is yes-or-no. Because these people need to make up their minds if they want Hawthorne or they want it at all. That is one thing.

Two, your study about noise and impact during construction is minimal or less than significant. The people who live around here know the traffic that we have going down Inglewood Avenue the last three months with the construction right now. Imagine that for six years. PH 148-2

Also, I have not seen any economic impact on the businesses on Inglewood Avenue or Manhattan Beach Boulevard or Artesia during construction being tied up. I can tell you what it's cost us this three months of construction, this project right now. I would want to know your answer for that. Is there a study for the economic impact of the City of Lawndale for that? Yes-or-no? PH 148-3

PH 149: HOLLY OSBORNE

It's almost impossible to say something intelligent about engineering in one minute, but I will try again. And this is a continuation from my remark of another night about your noise level being totally faulty. And that is because you have down the ROW as your ambient, you have included the freight train. Ambient should be the times without the freight train because the train only comes twice a day.

When you include the freight train with the ambient, that raises your baseline, and that means the extra noise by the LRT, it does not seem as significant. You have not done your noise analysis correctly. PH 149-1

When I got home after the last one, I Googled noise disturbance, whatever. I came up with the Canadian way to do it. It just happened to be the first one. And they specifically divide into two, like daytime and nighttime, because nighttime they expect to be quieter. They have two different levels. You don't.

I hate that your transcriber is never going to get this.

PH 150: ROSE RODRIGUEZ

I am against ROW C option, which turns our very, very diverse city into Torrance's doormat. They escape by design all adverse consequences. Lawndale will encounter every negative impact including putting our lives in peril forever. PH 150-1

This is very unfair. There isn't any social justice here for Lawndale. We have always been against this. No to the enormous increased risk of possible gas pipelines, explosions and derailments. No to 192-plus Metro trains zooming by 20 hours a day. No to changing the rules of the game in the middle. PH 150-2

We bought our houses or rented our houses without 200-plus Metro trains coming by. No to stealing our 1.1 acre of desperately needed green space. No to sealing off an entire section of Lawndale from our neighbors. No to CEQA waivers that change the rules. No to this environmental report, which Metro paid for. They are not neutral arbitrators. No to this anti-equity platform. PH 150-3 PH 150-4

PH 151: RAY HOLLAR

Ray Hollar. Homeowner in southwest Lawndale for 36 years. We should take issue with one of the charts that was shown earlier today with regard to project funding. Yes, it talked about funding from Measure R, Measure M, and TARCP, which is state funding, but it didn't say what the total is. And the number is from an FAQ attachment to—or appendix to the voluminous amount of documents attached to the DEIR on the website.

FAQ, bottom of the first page, the number is 1.12 billion. You know I'm not a fan of the cost summary charts that were shown because I think it's misleading and I think it's the wrong method. Because cost-effectiveness is the right metric. But those numbers were 2 to 3 billion. So it's nowhere near funded.

PH 151-1

This is a tremendous amount of money. And my estimate for the cost per rider is about $22 per rider, per day, every day, every rider, $22. That is a lot of money. And I am perfectly fine with a no-build option in the City of Lawndale. Thank you.

PH 152: G.P. SUDDETH

Hi. A lot of points to get to. It mentions as proposed better property values if you have the trains come through. And I live at the corner of Manhattan Beach Boulevard and Vail. And when I bought the house, the real estate agent told me that my house was discounted 2 percent because of my proximity to that intersection, which was a lot of noise. And of course, these things come through every six minutes or whatever. There is noise.

PH 152-1

And that noise, by the way, is not—I don't think accurately estimated. Because if I sit in a car at the corner of Rosecrans and Aviation where they go over, when they go over, it's a pretty big noise right there. You hear it. It's not something that you can ignore.

PH 152-2

The expressed bus stop that Metro has proposed for the area at the corner of Artesia and Hawthorne, not at the transit center, and that shows that Metro thinks there is going to be a better ridership there.

PH 152-3

PH 153: MICHAEL KIM

So Metro being the owner or part owner of the ROW and having that freight line going along the ROW. I'm going to have to believe that once that freight line gets upgraded, Metro will now be in the freight business. And if Metro can get many, many, many trains going through that ROW, Metro will be turning a profit even without any passengers. Because 5,000 passengers a day, 10,000 projected a day, that's not going to turn a profit. But if you can increase that freight—getting a lot of freight cars going through, you guys don't need passengers at that point. So that is one point I wanted to add. PH 153-1

And also Inglewood Avenue over the last nine months has been a nightmare with that construction just going along that corner. All of us here as Inglewood residents—sorry—residents along Inglewood, that includes Redondo Beach and Lawndale, we will have to go through this construction zone. And how long it will take only God knows. And chances are with the gridlock and if you add more freight trains going through and across Inglewood even after the construction is done, somebody here in this room is going to get into an accident while that freight train goes by. PH 153-2 PH 153-3

PH 154: DORIS HOFMANN

Doris Hofmann. I'm up here to let you know I have worked all my life very, very hard to pay my taxes. And I don't want my tax money being spent for something that is totally unnecessary. We do not need a train either down the ROW or down Hawthorne Boulevard in the City of Lawndale. The train does not benefit the City of Lawndale. PH 154-1

It probably benefits the City of Redondo Beach because of the Galleria, so, therefore, put the train on the other side of Inglewood in Redondo Beach so Redondo Beach can benefit from the Galleria. It does not help the City of Lawndale.

I heard a lady a while ago get up and say she did not get any information. I have talked to some business people on Hawthorne Boulevard. Oh, they got information okay. All it said was a meeting here at this date and time, a meeting there at this date and time, but it didn't say what the meeting was for. It was very, very poor information. PH 154-2

Can you hear me out there? Thank you.

PH 155: ROSE RODRIGUEZ

I would like to get back to the Torrance issue. Torrance is the main promoter of this whole thing because they want a train for the Olympics, but what do they do? They bypass every residential area. They bypass Del Amo Mall. They bypass Old Town Mall. They bypass their old town city area. And they go to a dead man's land where there is nothing there. So, so much for mass transit.

There is no place for pedestrians to get off. When they leave there, you either have to go back into your car or you have to take a bus. So what is the whole purpose when Lawndale gets zero?

We need buses. I take the 8 Bus. I'm out waiting for it for an hour and a half if I have to go to the airport. What happened to our bus service? Spend your money on buses. Do not destroy our lives.

PH 155-1

Who would want to listen to trains zooming by their windows, by their houses up to 200 times a day? It's horrible. It is anti-equity. This is not a social justice issue. And to make things worse, many of the other people who aren't here today just kind of threw up their hands because they have already suffered your injustice. They have this placed in Lawndale, and now they are getting — yeah, you need to let people talk.

PH 155-2

PH 155-3

PH 156: MARY SMILEY

I would just say that I join and stipulate what the observations made by the other speakers or commentators. The problem is you don't have any jurisdiction to make a decision on this. You will make a recommendation. As you say, the board will make the decision, and even the board doesn't have the ultimate decision. We are barking up the wrong tree here.

This is a county. This is a county board of supervisors, and although I believe in subsidiarity, the fact is that at this stage—I jokingly refer to it as the sanctuary state of [Indiscernible]—we really do not have any power over these issues as people have pointed out. PH 156-1

Another factor which was mentioned by one speaker was the crime rate. There is an article in the Daily Breeze today on the front page by a reporter named Steve Castillo that addresses that and addresses the various A, B, and C lines.

PH 157: LISA FRANCIS

I'd like to piggyback on the gentleman that talked about Caltrans and their plans to expand the 405 Freeway and the fact that they do not want the Hawthorne option. So I feel like this is a little disingenuous. There is nothing in your presentation about Caltrans. So I want to know, is it true? It feels like it probably is true because they are constantly expanding the 405 Freeway.

So that makes me feel like maybe a fleet of green buses would be better to go from one station to another if Caltrans has made this, I guess, apparently, their wishes with the Metro board. But I feel like how come that has not come up, the Caltrans issue?

And as far as BNSF, do they own that rail line, and are they putting any money into some of the mitigation factors that you were saying about making that quieter? Or who is going to own that rail line? Thank you.

PH 157-1

PH 158: BERNADETTE SUAREZ

Hello. Hi, my name is Bernadette Suarez. I am a current Lawndale city council member, and I know we've -- as my colleague mentioned, we've made it pretty clear where we stand as a city. Hearing all the comments here today, it's -- you know, it's a pretty emotional day for everybody because this is something that is very personal. As someone mentioned, our community is considered low income, a disadvantaged community. And if you look at in general at transportation, you always seem to see that it always runs through similar disadvantaged communities.

So why is that? I don't know. Maybe it just doesn't matter if you are not an affluent community. We have asked that an environmental justice component be added to the EIR, but we are told, you know, since federal funds are not being used, that does not need to be a consideration. But I definitely think it is important to take into consideration our community.

PH 158-1

And, you know, we do not have resources that others have. You know, and why are we expected to use the trains when you hear articles about celebrities flying their jets and whatnot? So I don't understand why we are expected to take the blunt of this train when it just adds no benefit to our community.

PH 159: SEAN MOORE

First of all, I want to thank all the residents and community members that have come out today to express their concerns.

I mentioned over the years that this project, we do not want this project in the city. We mentioned about all the impacts it has. We are looking at your EIR. It has significant impacts on the city—transportation, aesthetics, land use, open space, you name it. It goes on and on.

We are combing through your document, Metro. We are looking closely, and let me assure you that we are prepared to take this all the way to where we have to. We do not want this project in the city. I wish Metro would understand that. And please take notice that the residents here do not want this impactful project to go through the city, any alternative.

PH 159-1

We prefer you go with no project or go with the bus service—high frequency bus service. But please consider our comments. Consider everybody's comments in the city. And please look at the alternatives other than going down the ROW that impacts the city. Thank you.

PH 159-2

PH 160: PAT KEARNEY

Couple comments. I'd looked at the EIR, and you said about public safety in there, how great it is. Well, as of yesterday, there has been 21 deaths on the light rail. That is more than the same time last year. PH 160-1

And you showed a big slide about ridership, it's increasing, which is a lie. It's declining. I saw it. And I got Metro board to confirm it. Your ridership is down. So I think scrap the ROW, scrap Hawthorne and make the residents from Costco—the riders from Costco to the Galleria—ride the buses. They are underused and so are the light rails. PH 160-2

PH 161: JOHN RICHARDS

Lawndale resident. I demand one thing: we need a current environmental report. We need a traffic study for both construction and completion, current. We need a study on the soil to see how much vibration will go through the neighborhood, current. We need all these studies current. I don't care if it's redundant for you and you have to do it over and over again. We need this stuff. PH 161-1

And current ridership projected by the hour, we need that. Because we do not want a train going through our neighborhood with 10 percent occupancy and 3 percent occupancy on the end. We need all this stuff. And you need to be fair to us and go through a different city that benefits this. We do not benefit from this at all. PH 161-2

And the safety, we need a safety projection study as well. The whole nation is getting off trains because it is so unsafe. The crime is riddled. It's unbelievable. PH 161-3

PH 162: ROSE RODRIGUEZ

I would just like to comment on the environmental impact report. I noticed under utilities, which includes gas pipes, it was glossed over. I don't know how they could do that. Because for us, it is a reality. They ignored the fact that we already had an explosion when Lawndale didn't have the high density that we have now. Now we have 33,000 people.

PH 162-1

In 1951 there was an explosion. Twenty-seven people got injured, three people, including children, were killed, and the impact was found around a one-mile radius of Lawndale. Where I have my house now, my next-door neighbor told me their windows were blown out, and this was almost a mile from the area where it hit. This is a real reality to us.

Especially if you think about what happened recently with the derailment, which is another problem. Back in Ohio, they have a population of like close to 5,000. We have almost seven times that amount in Lawndale. Could you imagine if we have a derail? It would be 192 more chances for a derailment.

PH 162-2

PH 163: TED HOFMANN

Respect, Mark, like we talked the other night. You need to give these people more than one minute. This is my eighth minute over five different meetings. And that is because this is going to affect me until 2036, if I live that long. That is a big deal.

We are not supposed to have a personal opinion, but my opinion is if the City of Redondo Beach wants the rail, build it in Redondo Beach. If the City of Torrance wants a light rail, run it through Torrance. PH 163-1

I don't know why the people of Lawndale should have to suffer through this construction for all these years. If the Hawthorne Boulevard option is chosen, the station will be in the middle of Hawthorne Boulevard. If someone is to use that station, where do they park, at the Redondo Beach transit station three-tenths of a mile away, or are they supposed to park in the Galleria parking? PH 163-2

Will there be long-term parking available for all those people that I hear want to go to the airport?

Anyway, again, I hope you give these people their respect. I will give my four seconds for the next person.
