768-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

768-2 As described in Section 3.6, Noise and Vibration, of the Draft EIR, the project would result in significant and unavoidable noise impacts during construction for all alignment options. Mitigation Measure MM-NOI-1: Noise Control Plan would require contractors to prepare and implement a Noise Control Plan, which includes the use of quieter equipment, temporary noise barriers, and restrictions on construction hours to reduce noise exposure to below the Federal Transit Administration's (FTA) construction noise criteria to the maximum extent feasible. Construction activities would also be phased and would not occur continuously in any one location for the full construction period.

With respect to long-term operational noise, the Draft EIR finds that only the Elevated/At-Grade Alignment would result in a significant and unavoidable operational noise impact. Operational noise impacts of the Trench Option, Hawthorne Option, and the LPA would be less than significant with mitigation.

Metro understands concerns regarding property values. However, under CEQA, economic impacts such as changes in property values are not considered environmental impacts. The Draft EIR focuses on physical environmental impacts and measures to mitigate them, as required by CEQA. To address questions and concerns on property values, Metro has prepared more information. MR-14: Property Values and Impacts to Businesses. Also see MR-10: Changes to Community Character.

768-3 See response to Comment 768-2. Although construction related noise and vibration impacts of each alignment option studied in the Draft EIR would be significant and unavoidable, the operational noise and vibration impacts of the Hawthorne Option would be less than significant with mitigation. Soundwalls would be installed in areas where noise levels are predicted to exceed FTA noise impact criteria for residences, as required by Mitigation Measure MM-NOI-2: Soundwalls. These soundwalls would block the line-of-sight between the light rail train and sensitive receptors, reducing noise impacts. See MR-3: Operational Noise Project Features and Mitigation Measures. See Section 3.6-6, Project Impacts Remaining After Mitigation, of the Draft EIR, for further detail about these impact conclusions.

768-4 The commenter's support for the Metro ROW alignment and opposition to the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. The City of Redondo Beach's transit center opened in January 2023.

768-5 As described in Section 3.1, Transportation, of the Draft EIR, Project Feature PF-T-1 requires contractors to develop a Construction Traffic Management Plan (CTMP), which would include coordination with local businesses and residents as well as relevant jurisdictions to manage access and the effects of temporary closures and identify reasonable accommodations or alternatives, which could include limiting construction hours, providing alternate routes or temporary easements, or other strategies. As discussed, beginning on

Page 3.1-50, construction of the Hawthorne Option would be staged to minimize traffic disruption. See MR-11: Traffic Delay and Level of Service and the 2023 Transportation Detail Report, published concurrently with the Draft EIR.

The Hawthorne Option would require permanent property acquisitions, as shown in the 2023 Real Estate Acquisitions Report, published concurrently with the Draft EIR. These permanent property acquisitions are primarily located where the alignment transitions in a few areas: from the Metro ROW to alongside the I-405, from the I-405 to Hawthorne Boulevard and back to the Metro ROW near 190th Street.

768-6 CEQA does not require an analysis of safety in terms of crime, as it is not an environmental issue, and therefore the Draft EIR does not make any conclusions regarding this topic. Metro takes the safety and well-being of nearby communities very seriously. See MR-9: Light Rail Security.

768-7 This commenter's opposition to the Hawthorne Option is noted. The project has secured funding from Measure R (2008), Measure M (2016), TIRCP Grant from the California State Transportation Agency (CALSTA) Transit and Intercity Rail Capital Program, and 3% match contributions from local jurisdictions. Metro is committed to the responsible use of public funds and to managing project costs efficiently, while continuing to pursue additional funding sources to support project delivery.

Submission 769 Jason Nishiyama

769-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 770 David Cobb

770-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

770-2 This comment is noted. All comments have been shared with the Metro Board for their consideration. See response to comment 770-1.

Submission 771 Devin Valdez

771-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

771-2 See response to comment 771-1. The Elevated/At-Grade Alignment is the only option in the Metro ROW that would include at-grade light rail crossings. The LPA and the Trench Option would fully grade separate light rail from traffic.

Submission 772 Jordyn Kieft

772-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. The LPA, Trench Option, and Hawthorne Option light rail guideways are all fully grade-separated from the roadway network, and trains would not conflict with intersections. See MR-1: Selection of Alternatives.

Submission 773 Jacqueline Ecklund

773-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 774 Tiffany Lopez

774-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 775 Lita Garcia

775-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 776 Melanie Drieke

776-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 777 Christopher Drieke

777-1 The commenter's support for the Elevated/At-Grade Alignment is noted. See MR-1: Selection of Alternatives. Per the commenter's note about their preference to save taxpayer dollars, the project has secured funding from Measure R (2008), Measure M (2016), a Transit and Intercity Rail Capital Program (TIRCP) Grant from the California State Transportation Agency (CALSTA) Transit and Intercity Rail Capital Program, and 3% match contributions from local jurisdictions. Metro is committed to the responsible use of public funds and to managing project costs efficiently, while continuing to pursue additional funding sources to support project delivery.

Submission 778 Rosa Fontana

778-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 779 Victoria Parrish

779-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 780 Abdulvahob Nabiev

780-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 781 MD Smith

781-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

781-2 The commenter's opinion regarding cost efficiency is noted. Cost efficiency is one of the objectives on which the Metro Board made its LPA selection. Metro strives to complete projects on time and within estimated budgets.

Submission 782 Hunter White

782-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 783 Mary Napoleone

783-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 784 Kristina Scruggs

784-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 785 James Ecklund

785-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 786 John Flanagan

786-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 787 Stefan Ecklund

787-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 788 Stephanie Ishioka

788-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

788-2 See response to Comment 788-1. Under CEQA, economic effects, such as financial effects on businesses, are not considered environmental effects. Metro has created a Business Interruption Fund for major rail projects under construction in Los Angeles County to support the business community.

Submission 789 Carl Paquette

789-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 790 Sandra Jo Williamson

790-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

790-2 The commenter's opposition to the project and secondary support for the Metro ROW alignment are noted. All comments have been shared with the Metro Board for their consideration.

Submission 791 Dennis Piotrowski

791-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

791-2 The commenter's support for the Metro ROW alignment and opposition to the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration.

Submission 792 Elisabeth Bailly

792-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

792-2 The commenter's support for the Metro ROW alignment and opposition to the Hawthorne Option is noted. Under CEQA, financial effects on businesses are not considered environmental effects. Metro has created a Business Interruption Fund for major rail projects under construction in Los Angeles County to support the business community. As explained on page 3.1-3 of the Draft EIR, traffic delay (often measured by level of service) is no longer permissible as a CEQA impact criterion and therefore this analysis and related topics are not addressed in the Draft EIR. See MR-11: Traffic Delay and Level-of-Service and the 2023 Transportation Detail Report, published concurrently with the Draft EIR, for a discussion of traffic conditions. The LPA, Trench Option, and Hawthorne Option fully grade separates light rail from all roadways and would not increase vehicle delay compared to existing conditions. Under CEQA, economic impacts, such as financial effects on businesses, are not considered environmental effects. Metro has created a Business Interruption Fund for major rail projects under construction in Los Angeles County to support the business community.

Submission 793 William Champlin

793-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 794 Tiffany Jones

794-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 795 Stephanie Cati

795-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

795-2 The commenters' support for transit is noted. As indicated in Section 3.1-4.2.2 of the Draft EIR, each of the alignments under consideration would have a neutral or beneficial effect on vehicle miles traveled. See also MR-11: Traffic Delay and Level of Service. Under the LPA, Trench Option, and Hawthorne Option, the light rail would be grade-separated from all roadways. For the LPA and Trench Option, this means that vehicle delay would not increase compared to existing conditions. Under the Hawthorne Option, however, changes in traffic signals and roadway modifications could affect circulation pattern, as detailed in MR-11 and the 2023 Transportation Detail Report, published concurrently with the Draft EIR.

Submission 796 Kevin Hernandez

796-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 797 Joan Hardy

797-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 798 Erika Hatzenbuhler

798-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

798-2 The commenter's opposition to the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See response to Comment 798-1.

Submission 799 Glenn Hatzenbuhler

799-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 800 Jeff Earnest

800-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

800-2 See response to Comment 800-1. Before making a final determination on the project, the Metro Board will review the comments and responses included in the Final EIR and will consider multiple factors, including environmental impacts, benefits, and costs.

Submission 801 Susan Earnest

801-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 802 Daniel Lim

802-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 803 Daniel Gonzalez

803-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 804 Alison Brown

804-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 805 Aqsha Munshi

805-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 806 Aamir Kuriswala

806-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 807 Cornelius Fong

807-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 808 Richard Krason

808-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 809 Leonarda Krason

809-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 810 Felisha Black

810-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 811 Aguilar

811-1 The commenter's support for the Elevated/At-Grade Alignment is noted, as well as support for more buses. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 812 Daniel Schwartz

812-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 813 Thomas Shigemitsu

813-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 814 Sapan Shah

814-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 815 Tam Nguyen

815-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 816 Paul Miller

816-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

816-2 See response to Comment 816-1. As explained on page 3.1-3 of the Draft EIR, traffic delay (often measured by level of service) is no longer permissible as a CEQA impact criterion and therefore this analysis and related topics are not addressed in the Draft EIR. See MR-11: Traffic Delay and Level-of-Service and the 2023 Transportation Detail Report, published concurrently with the Draft EIR, for a discussion of traffic conditions. The LPA, Trench Option, and Hawthorne Option would fully grade separate light rail from all roadways. Noise is addressed in Section 3.6, Noise and Vibration, of the Draft EIR. Air Quality is addressed in Section 3.4, Air Quality, of the Draft EIR, which finds that operational impacts of the Elevated/At-Grade Alignment, Trench Option and Hawthorne Option would improve air quality relative to 2042 without project conditions. This conclusion likewise applies to the LPA, as described in Section 4.5-3.4.2 of the Draft EIR, and Final EIR.

Submission 817 Mary Miller

817-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

817-2 The commenter's opposition to the Hawthorne Option is noted. As explained on page 3.1-3 of the Draft EIR, traffic delay (often measured by level of service) is no longer permissible as a CEQA impact criterion and therefore this analysis and related topics are not addressed in the Draft EIR. See MR-11: Traffic Delay and Level-of-Service and the 2023 Transportation Detail Report, published concurrently with the Draft EIR, for a discussion of traffic conditions, including a discussion of the proposed pedestrian crosswalk on Hawthorne Boulevard under the Hawthorne Option.

Submission 818 Matthew Bilodeau

818-1 The commenter's support for the Elevated/At-Grade Alignment is noted. See MR-1: Selection of Alternatives. The project would provide a direct connection to the LAX/Metro Transit Center, which would link to the LAX Automated People Mover. Both the Metro C and K Lines provide a connection to LAX.

Submission 819 Al Tatro

819-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

819-2 The commenter's opposition to the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See response to Comment 819-1.

Submission 820 Angela Brizuela

820-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

820-2 This comment is noted. See response to comment 820-1. As explained on page 3.1-3 of the Draft EIR, traffic delay (often measured by level of service) is no longer permissible as a CEQA impact criterion and therefore this analysis and related topics are not addressed in the Draft EIR. See MR-11: Traffic Delay and Level-of-Service and the 2023 Transportation Detail Report, published concurrently with the Draft EIR, for a discussion of traffic conditions. The LPA and Trench Option would fully grade separate light rail from all roadways and would not increase vehicle delay compared to existing conditions. The Hawthorne Option would similarly grade separate the light rail; however, due to proposed changes to traffic signals and roadway modifications, the Hawthorne Option could affect circulation patterns, as described in MR-11. The 2023 Ridership Summary Report, published concurrently with the Draft EIR, describes the estimated ridership for each of the options. See MR-15: Metro Ridership Forecasting Methodology.

Submission 821 Michale Kirby

821-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

821-2 This comment is noted. All comments have been shared with the Metro Board for their consideration. See response to Comment 821-1.

Submission 822 Rebecca Eastman

822-1 The commenter's support for the Elevated/At-Grade Alignment and opposition to the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 823 Tammy Clark

823-1 The commenter's support for the Elevated/At-Grade Alignment and opposition to the Hawthorne Option is noted. See MR-1: Selection of Alternatives. As explained on page 3.1-3 of the Draft EIR, traffic delay (often measured by level of service) is no longer permissible as a CEQA impact criterion and therefore this analysis and related topics are not addressed in the Draft EIR. See MR-11: Traffic Delay and Level-of-Service and the 2023 Transportation Detail Report, published concurrently with the Draft EIR, for a discussion of traffic conditions. The LPA fully grade separates light rail from all roadways and would not increase vehicle delay compared to existing conditions.

Submission 824 Scott Clark

824-1 The commenter's support for the Elevated/At-Grade Alignment and opposition to the Hawthorne Option is noted. See MR-1: Selection of Alternatives. As explained on page 3.1-3 of the Draft EIR, traffic delay (often measured by level of service) is no longer permissible as a CEQA impact criterion and therefore this analysis and related topics are not addressed in the Draft EIR. See MR-11: Traffic Delay and Level-of-Service and the 2023 Transportation Detail Report, published concurrently with the Draft EIR, for a discussion of traffic conditions. The LPA fully grade separates light rail from all roadways and would not increase vehicle delay compared to existing conditions.

Submission 825 Jason Blain

825-1 The commenter's support for the Elevated/At-Grade Alignment and opposition to the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 826 Ins Luters

826-1 The commenter's support for the Trench Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 859 Raihan Fazalbhoy

859-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 860 Adrienne Greenfield

860-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 861 Camille Randolph

861-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 862 Timothy Gould

862-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives and MR-21: Cost Estimates and Schedule.

Submission 863 Lyle Sanders

863-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 864 Kitty Shiao

864-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives and MR-21: Cost Estimates and Schedule.

Submission 865 G Patricia Stewart

865-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 866 Russell Stewart

866-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 867 Peter Spartalis

867-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 868 Julio Ceballos

868-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 869 William Laronal

869-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 870 Toni Wright

870-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

870-2 Visual impacts are addressed in Section 3.3, Aesthetics, of the Draft EIR. Regarding traffic, as explained on page 3.1-3 of the Draft EIR, traffic delay (often measured by level of service) is no longer permissible as a CEQA impact criterion and therefore this analysis and related topics are not addressed in the Draft EIR. See MR-11: Traffic Delay and Level-of-Service and the 2023 Transportation Detail Report, published concurrently with the Draft EIR, for a discussion of traffic conditions. The LPA fully grade separates light rail from all roadways and would not increase vehicle delay compared to existing conditions. Under CEQA economic effects, such as financial effects on businesses, are not considered environmental effects. Metro has created a Business Interruption Fund for major rail projects under construction in Los Angeles County to support the business community.

Submission 871 Ryan Uyehara

871-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 872 Melfern Claro

872-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 873 Winston Zhou

873-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 874 Brennan Long

874-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

874-2 See response to comment 874-1. Metro does not have oversight of Torrance Transit.

Submission 875 Jose Dennis Alabaso

875-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

875-2 The commenter's request is noted. All comments have been shared with the Metro Board for their consideration. The Metro Aviation/Century C/K Line Station opened in Fall 2024.

Submission 876 Thomas Elder

876-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 877 Yundan Liu

877-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

877-2 See response to Comment 877-1.

Submission 878 Raymond Peterson

878-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

878-2 The commenter's opposition to the Hawthorne Option and support for the Metro ROW Alignment is noted. All comments have been shared with the Metro Board for their consideration. See response to Comment 878-1.

Submission 879 Kay Peterson

879-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

879-2 The commenter's opposition to the Hawthorne Option and support for the Metro ROW Alignment is noted. All comments have been shared with the Metro Board for their consideration. See response to Comment 879-1.

Submission 880 Sunny Zhou

880-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 881 Frank Huang

881-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 882 Sarah Chiang

882-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 883 Caroline Kong

883-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 884 Karl Kohl

884-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 885 Alexander

885-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 886 Mike Palmer

886-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

886-2 Metro has worked diligently to develop feasible and effective mitigation measures to address the potentially significant impacts of the project.

Submission 887 Jose Roldan

887-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 888 Maria Pescheryakova

888-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 889 Steven Gerhardt

889-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

889-2 The commenter's opposition to the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration.

Submission 890 Al Tatro

890-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

890-2 See MR-21: Cost Estimates and Schedule.

Submission 891 Miguel Dvid

891-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 892 Sheila Fierro

892-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

892-2 As noted by the comment, the Metro ROW has long been planned for potential transit expansion, although Metro acknowledges that some residents who live near the ROW may have been unaware of the potential for future transit use. Noise is discussed in Section 3.6, Noise and Vibration, of the Draft EIR. See MR-3: Operational Noise Project Features and Mitigation Measures.

Submission 893 Kim Turner

893-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

893-2 See response to Comment 893-1.

Submission 894 Dennis Bosch

894-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 895 Calin Chiorean

895-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 896 Darren Uyematsu

896-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 897 Michael Fetaru

897-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 898 Nikola Renard

898-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

898-2 The commenter's support for the project is noted. All comments have been shared with the Metro Board for their consideration.

Submission 899 Michael Brenk

899-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

899-2 See response to comment 899-1. The project schedule will continue to be updated as refinements to the design, project cost estimates, and funding plans are advanced. See MR-21: Cost Estimates and Schedule.

Submission 900 Alex Emly

900-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

900-2 The commenter's support for the project is noted. All comments have been shared with the Metro Board for their consideration. See response to comment 900-2.

Submission 901 Kyle Freitas

901-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

901-2 The commenter's support for the Trench Option is noted. All comments have been shared with the Metro Board for their consideration. See response to Comment 901-1.

Submission 902 Alexandra Flores

902-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 903 Jamelia Davenport

903-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 904 Michael Kosidlak

904-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 905 Andrea Retana

905-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 906 Kathy Wood

906-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 907 Dawn Ng

907-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 908 Kevin Griswold

908-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

908-2 The commenter's support for the project is noted. All comments have been shared with the Metro Board for their consideration.

Submission 909 Andre Flores

909-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 910 Judith Gerber

910-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 911 Patti O'Reilly

911-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 912 Barbara Kelly

912-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 913 Mauricio De La Torre

913-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 914 Alonso Muñoz

914-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 915 Skyler Reynoso

915-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 916 William Chuh

916-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 917 Lyle Sanders

917-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 918 Nedeen Nasser

918-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 919 Ryan Bada

919-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 920 Raymond Fisher

920-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 921 Michelle Hughes

921-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 922 Frank Kraus

922-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 923 Sawyer

923-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 924 Rudy Onate

924-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

924-2 Metro is designing the terminus station at the Torrance Transit Center to allow the line to continue further south, should funding become available in the future. Potential extensions from the Torrance Transit Center to San Pedro, Long Beach, and the Los Angeles/Orange County line are included in the unfunded portion of the 2009 Metro Long Range Transportation Plan. Metro may consider these projects in the future, if additional funding becomes available.

Submission 925 Micah Alex

925-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 926 Shin Furukawa

926-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 927 Chau Yang

927-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 928 Jeanne Bala

928-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

928-2 Under CEQA, economic effects, such as financial effects on businesses, are not considered environmental effects. Metro has created a Business Interruption Fund for major rail projects under construction in Los Angeles County to support the business community.

Submission 929 Patrice Watanabe

929-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 930 Wayne Watanabe

930-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 931 Zen Rosenthal

931-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 932 Stephen Kawalko

932-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 933 Traveion Bell

933-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives. You can find more about Metro's training programs and career opportunities at www.metro.net/about/careers/students/.

Submission 934 Juan Delgado

934-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 935 Victor Alvarado

935-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 936 Richard Krason

936-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 937 Kevin Chan

937-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 938 Andrea Seo Bauer

938-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 939 Brian Rodriguez

939-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 940 Linda Amato

940-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 941 LeRoy Jackson

941-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

941-2 As described in Section 3.1, Transportation, of the Draft EIR, Project Feature PF-T-1 requires contractors to develop a Construction Traffic Management Plan (CTMP), which would include coordination with local businesses and residents as well as relevant jurisdictions to manage access and the effects of temporary closures and identify reasonable accommodations or alternatives, which could include limiting construction hours, providing alternate routes or temporary easements, or other strategies. PF-T-1 would apply to all of the alignment options studied in the Draft EIR.

Submission 942 Rebecca Poirier

942-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 943 L.R. Rowe

943-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives. Guidance on how to ride Metro Rail can be found at https://www.metro.net/riding/guide/how-ride-rail/.

Submission 944 Janet Dirks

944-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 945 Scott Wood

945-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives. See MR-9: Light Rail Security.

Submission 946 Marian Kravitz

946-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 947 Shawn Denny

947-1 The commenter's opposition to the project is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives. See MR-9: Light Rail Security and MR-21: Cost Estimates and Schedule.

Submission 948 Joanne Verespej

948-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

948-2 Chapter 2, Description of the Locally Preferred Alternative, of the Final EIR, includes an updated schedule for the LPA. The project schedule and cost estimates will continue to be updated as the design advances. See MR-21: Cost Estimates and Schedule.

Submission 949 W. Hamada

949-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 950 Steve Oshiro

950-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 951 Robin Fields

951-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 952 Paul Matsumoto

952-1 The commenter's support for the Elevated/At-Grade Alignment and Trench Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 953 Nicki Noble

953-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 954 Craig Kazin

954-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 955 Mark Chavez

955-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 956 Jahja

956-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 957 Reagan Woo

957-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

957-2 The commenter's opposition to the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. All options and Alternatives would connect to the Torrance Transit Center, including the Hawthorne Option.

Submission 958 Cliff Weinan

958-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives. See MR-9: Light Rail Security.

Submission 959 Stan Ponegalek

959-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 960 David Sakai

960-1 The commenter's support for the Trench Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 961 Pamela Dieter

961-1 The commenter's support for the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

961-2 See MR-8: Light Rail and Freight Train Safety.

Submission 962 Freida Wang

962-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 963 Allen Treibull

963-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 964 Charles Dorsey

964-1 The commenter's support for the Elevated/At-Grade Alignment and Trench Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 965 Robert G. Dye

965-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 966 Catherine Clarke

966-1 The commenter's preference for the Trench Option but overall opposition to the project is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives and MR-15: Metro Ridership Forecasting Methodology.

Submission 967 Nancy Bridi

967-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 968 Beverly Ricketts

968-1 The commenter's support for the Trench Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 969 Juan Cabeza

969-1 The commenter's support for the Hawthorne Option is noted. See MR-1: Selection of Alternatives. As explained on page 3.1-3 of the Draft EIR, traffic delay (often measured by level of service) is no longer permissible as a CEQA impact criterion and therefore this analysis and related topics are not addressed in the Draft EIR. See MR-11: Traffic Delay and Level-of-Service and the 2023 Transportation Detail Report, published concurrently with the Draft EIR, for a discussion of traffic conditions. The LPA fully grade separates light rail from

all roadways and would not increase vehicle delay compared to existing conditions. As indicated in Section 3.1-4.2.2 of the Draft EIR, each of the alignment options under consideration would have a neutral or beneficial effect on vehicle miles traveled (VMT). Chapter 4, Corrections and Additions, of the Final EIR has been updated to clarify that the VMT reduction for the LPA is the same as for the Elevated/At-Grade Alignment and Trench Option.

Submission 970 Joyce Henderson

970-1 The commenter's opposition to the project is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives and MR-9: Light Rail Security.

Submission 971 Anonymous

971-1 The commenter's opposition to the project is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

971-2 See MR-9: Light Rail Security.

Submission 972 M. Suarez

972-1 The commenter's opposition to the project in general is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

972-2 See MR-9: Light Rail Security.

Submission 973 Lynn

973-1 The commenter's opposition to the project is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives; MR-9: Light Rail Security; and MR-10: Changes to Community Character.

Submission 974 David H. Lee

974-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 975 Judith Crosby

975-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 976 Depland

976-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 977 Christopher Caunt

977-1 The commenter's support for the Elevated/At-Grade Alignment is noted. See MR-1: Selection of Alternatives. The project design does not prohibit a future extension that would continue south on the Metro ROW. Potential extensions from the Torrance Transit Center to San Pedro, Long Beach, and the Los Angeles/Orange County line are included in the unfunded portion of the 2009 Metro Long Range Transportation Plan. Metro may consider these projects in the future, if additional funding becomes available. Any future extension would be subject to its own environmental review under CEQA and other applicable requirements before it could be implemented.

Submission 978 Bruce Hamilton

978-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 979 Michele Kidman

979-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 980 J. Gardinale

980-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 981 Robert Allen

981-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 982 Steve Marchki

982-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 983 Thomas Fukman

983-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 984 Duane Sung

984-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 985 John Whang

985-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 986 Ray Portka

986-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 987 Judith Carter

987-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 988 Vijenera Joseph

988-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

988-2 The Federal Transit Administration Transit Noise and Assessment Manual (2018) defines the area of potential noise impact as within 350 feet of the proposed light rail transit line. Predicted noise levels have been analyzed and reported for all sensitive receptors located within this distance. See MR-2: Operational Noise Analysis Methodology and Impact Standards.

988-3 The light rail would operate at speeds of between 45 and 65 miles per hour.

988-4 The project is expected to follow the operating patterns of Metro's current rail lines. The anticipated hours of operation are 4:00 a.m. one day to 1:00 a.m. the following day. System headways would be reduced during early morning (4:00 a.m. to 6:00 a.m.) and late-night hours (7:00 p.m. to 1:00 a.m.) to approximately 15 minutes. This would result in a reduced frequency of trains during these hours and reduced overall noise compared to peak-hour

system headways of five minutes. Weekend system headways would be reduced compared to weekdays. For purposes of impact analysis, the Draft EIR assumes that trains would run approximately every five to 10 minutes during peak periods (typical commuting hours) and would run approximately every 10 to 20 minutes during non-peak periods, depending on the time of day. The final operating schedule will be determined closer to project operation.

Submission 989 Offutt

989-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 990 Leroy Kerahen

990-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives and MR-21: Cost Estimates and Schedule.

Submission 991 Pablo Delgado

991-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 992 Janet Wade

992-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 993 Bernadette Kociemba

993-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 994 Carl Willison

994-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 995 John Choy

995-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives and MR-21: Cost Estimates and Schedule.

Submission 996 David Seager

996-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 997 Richard Kim

997-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 998 Randall Leak

998-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 999 Janet Colmerauer

999-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1000 Mr. and Mrs. John Hardin

1000-1 The commenter's support for the Elevated/At-Grade Alignment is noted. Metro is designing the terminus station at the Torrance Transit Center to allow the line to continue further south along the Metro ROW, should funding become available in the future. Potential extensions from the Torrance Transit Center to San Pedro, Long Beach, and the Los Angeles/Orange County line are included in the unfunded portion of the 2009 Metro Long Range Transportation Plan. Metro may consider these projects in the future, if additional funding becomes available.

Submission 1001 Elizabeth Evans

1001-1 The commenter's support for the Elevated/At-Grade Alignment and opposition to the Hawthorne Option is noted. Metro is designing the terminus station at the Torrance Transit Center to allow the line to continue further south, should funding become available in the future. Potential extensions from the Torrance Transit Center to San Pedro, Long Beach, and the Los Angeles/Orange County line are included in the unfunded portion of the 2009 Metro Long Range Transportation Plan. Metro may consider these projects in the future, if additional funding becomes available.

Submission 1002 Mary Strenn

1002-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1003 Fred Missman

1003-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1004 Karen Wheeler

1004-1 The commenter's support for the Elevated/At-Grade Alignment and opposition to the Trench Option is noted. See MR-1: Selection of Alternatives. See MR-8: Light Rail and Freight Train Safety. Metro is committed to ensuring that bus access is optimized, regardless of the final station locations. Metro would continue to engage with local transit providers to optimize bus access. Chapter 2, Description of the Locally Preferred Alternative, of the Final EIR, includes an updated schedule for the LPA. The project schedule will continue to be updated as refinements to the design, project cost estimates, and funding plans are advanced.

Submission 1005 Jan and Dan Moorehouse

1005-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1006 Rogy

1006-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration.

1006-2 Regarding job creation, as discussed in Section 3.15, Public Services and Recreation, of the Draft EIR, although construction of the project would create additional jobs in the project area, construction workers would temporarily work in the area and would not likely relocate to the project area on a permanent basis. Additionally, a minimum of 40% of all project work hours would be local hire workers as per Metro's Local Hire Initiative.

Regarding police services, under CEQA, an increase in the need for police services is not considered an environmental impact requiring analysis. However, Section 3.15, Public Services and Recreation, of the Draft EIR, does evaluate whether the project would create a demand for public services, such as police, which would necessitate the construction of new or expanded facilities, the construction of which could result in environmental impacts. The analysis concludes that the project would not result in unplanned population growth or other conditions that would generate a demand for new or expanded public service facilities. Therefore, no such impacts were identified.

Regarding project funding, the project has secured funding from Measure R (2008), Measure M (2016), Transit and Intercity Rail Capital Program (TIRCP) Grant from the California State Transportation Agency Transit and Intercity Rail Capital Program, and 3% match contributions from local jurisdictions. Metro would continue to explore funding opportunities for the project, if approved by the Metro Board.

See MR-18: Homelessness.

Submission 1007 Sandra and Bill Goetz

1007-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1007-2 The commenter's opposition to trains is noted. All comments have been shared with the Metro Board for their consideration.

Submission 1008 Robert and Paula Castro

1008-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1009 Linda and Thomas Hart

1009-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1010 Russ and Trish Stewart

1010-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1011 Charles Ford Jr.

1011-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1012 James McGee

1012-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1013 Barbara Safah

1013-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1014 Pauline Acherman

1014-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1015 Edith Reid

1015-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1016 John De Rago

1016-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1017 Judy Douglas

1017-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1018 Daniel McKay

1018-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1019 Anonymous

1019-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1020 Lillian Isobe

1020-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1021 David and Diane Brown

1021-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives. See MR-21: Cost Estimates and Schedule.

Submission 1022 Ron and Karen Ury

1022-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1023 Mr. and Mrs. Mark Hansen

1023-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1024 Anonymous

1024-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1025 C. Rauser

1025-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1025-2 See MR-15: Metro Ridership Forecasting Methodology. The project has secured funding from Measure R (2008), Measure M (2016), Transit and Intercity Rail Capital Program (TIRCP) Grant from the California State Transportation Agency Transit and Intercity Rail Capital Program, and 3% match contributions from local jurisdictions. Metro would continue to explore funding opportunities for the project, if approved.

Submission 1026 Donn Plewes

1026-1 The commenter's support for the Elevated/At-Grade Alignment and opposition to the Metro ROW alignment is noted. See MR-1: Selection of Alternatives. Chapter 2, Description of the Locally Preferred Alternative, of the Final EIR, includes an updated schedule for the LPA. The project schedule will continue to be updated with refinements to the design, project cost estimates, and funding plans. See MR-21: Cost Estimates and Schedule.

Submission 1027 Jane Kamiya

1027-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1028 Frank Mekrut

1028-1 The commenter's support for the Elevated/At-Grade Alignment is noted. See MR-1: Selection of Alternatives; MR-9: Light Rail Security; and MR-18: Homelessness. Previous

studies examined routes to Del Amo Mall, but those options were screened out as they did not provide comparable ridership benefits.

Submission 1029 Elizabeth Higgins

1029-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1029-2 A map illustrating the LPA and project options can be located on the Metro project website, as well as in different sections of the EIR. The online maps are interactive and can be zoomed in for detailed viewing. https://www.metro.net/projects/green-line-extension/

Submission 1030 Michael Maiuri

1030-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1031 Camille Henderson Cardenas

1031-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1032 Loren Heard

1032-1 The comment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives. The project is being developed and implemented by Metro, not the State of California. Metro's Board of Directors, which is composed of locally elected officials and appointees, provides oversight, and makes decisions about the project's planning, funding, and implementation.

Submission 1033 Anonymous

1033-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1033-2 A map illustrating the LPA and project options can be located on the Metro project website, as well as in different sections of the EIR. The online maps are interactive and can be zoomed in for detailed viewing. https://www.metro.net/projects/green-line-extension/.

Submission 1034 Robert and Linda Culpeper

1034-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1035 William and Claudia Fischer

1035-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1036 Martin and Ann Gallagher

1036-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1037 Sheldon Katzer

1037-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1038 AJ and Richard Ziman

1038-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1039 David Frazee

1039-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1039-2 Section 3.6, Noise and Vibration, of the Draft EIR, identifies mitigation measures to minimize noise levels of construction and operation of the project. See MR-3: Operational Noise Project Features and Mitigation Measures for information regarding noise project features and mitigation measures. Although operation of the Elevated/At-Grade Alignment would result in a significant and unavoidable noise impact, the operational noise impacts of the Trench Option, Hawthorne Option, and LPA would be less than significant with mitigation.

Submission 1040 Joyce Nagel

1040-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1041 Linda Howard

1041-1 The commenter's support for the Elevated/At-Grade Alignment and Trench Option is noted. All comments have been shared with the Metro Board for their consideration.

Submission 1042 Henry Yee

1042-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1043 Nelson Duenas

1043-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1043-2 See response to comment 1043-1.

Submission 1044 Theo Misaresh

1044-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1044-2 See response to comment 1044-1.

Submission 1045 Resident

1045-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1046 William Haffey

1046-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1047 Janice Collins

1047-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1047-2 See response to comment 1047-1. As explained on page 3.1-3 of the Draft EIR, traffic delay (often measured by level of service) is no longer permissible as a CEQA impact criterion and therefore this analysis and related topics are not addressed in the Draft EIR. See MR-11: Traffic Delay and Level-of-Service and the 2023 Transportation Detail Report, published concurrently with the Draft EIR, for a discussion of traffic conditions. As indicated in Section 3.1-4-2.2 of the Draft EIR, each alignment option under consideration would result in a neutral or positive effect on vehicle miles traveled.

Submission 1048 Sherwin Rubin

1048-1 The commenter's support for the Elevated/At-Grade Alignment is noted. See MR-1: Selection of Alternatives. The project would provide a direct connection to the LAX/Metro Transit Center, which would link to the LAX Automated People Mover. Both the Metro C and K Lines provide a connection to LAX.

Submission 1049 Noema Lorenzo

1049-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1049-2 The commenter's support for the Metro ROW alignment is noted. As explained on page 3.1-3 of the Draft EIR, traffic delay (often measured by level of service) is no longer permissible as a CEQA impact criterion and therefore this analysis and related topics are not addressed in the Draft EIR. See MR-11: Traffic Delay and Level-of-Service and the 2023 Transportation Detail Report, published concurrently with the Draft EIR, for a discussion of traffic conditions. The LPA, Trench Option, and Hawthorne Option fully grade separates light rail from all roadways and would not increase vehicle delay compared to existing conditions.

Submission 1050 Daniel Dalton

1050-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1051 Anthony Garcia

1051-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1052 Jay Hoffman and Alicia Jacobson

1052-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1053 Kyle Freitas

1053-1 The commenter's support for the Trench Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1053-2 The commenter's preference for the Trench Option related to safety and noise concerns is noted. See MR-9: Light Rail Security and Section 3.6, Noise and Vibration, of the Draft EIR. The LPA, similar to the Trench Option, would fully grade separate light rail from roadways and avoid operational noise impacts with mitigation.

Submission 1054 Terry Masaoka

1054-1 The commenter's support for the Trench Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1055 Eduardo Paiva

1055-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1055-2 The proposed stations were selected based on ridership potential, ability to provide through service, physical fit, and community impacts. Previous studies examined routes to Del Amo Mall, but those options were screened out as they did not provide comparable ridership benefits.

Submission 1056 Joe Molloy

1056-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1057 Fred Won

1057-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1057-2 Chapter 2, Description of the Locally Preferred Alternative, of the Final EIR, includes an updated schedule for the LPA. The project schedule will continue to be updated as refinements to the design, project cost estimates, and funding plans are advanced. See MR-21: Cost Estimates and Schedule.

Submission 1058 James Won

1058-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives. Metro strives to complete projects on time and within estimated budgets.

Submission 1059 Jeff O'Brien

1059-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1060 Dolores Merendo

1060-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1061 Naeim Soliman

1061-1 The commenter's support for the Trench Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1062 Pozos

1062-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1063 Ronald Murakami

1063-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1064 Mike Marin

1064-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1064-2 See MR-9: Light Rail Security and MR-18: Homelessness.

Submission 1065 Lisa Chun

1065-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1066 Roberta Siegel-Okumura

1066-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1067 Sara

1067-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1067-2 See MR-18: Homelessness.

Submission 1068 Noreen Tsumaki

1068-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1068-2 The commenter's opposition to the Trench Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1069 Gabriel Catalogne

1069-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1070 Bryan Thompson

1070-1 The commenter's support for the Trench Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1071 Shiv Murti

1071-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1071-2 The commenter's opinion regarding cost efficiency is noted. Cost efficiency is one of the objectives on which the Metro Board made its LPA selection. Metro strives to complete projects on time and within estimated budgets.

Submission 1072 Roxanne Morrow

1072-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1073 Tim Knerr

1073-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1073-2 The commenter's opposition to the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration.

Submission 1074 Deborah Comstock

1074-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1075 Theresa Barke

1075-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1075-2 Chapter 2, Description of the Locally Preferred Alternative, of the Final EIR, includes an updated schedule for the LPA. The project schedule and cost estimates will continue to be updated as the design advances. Under CEQA, economic impacts, such as effects on businesses, are not considered environmental impacts. Metro has created a Business Interruption Fund for major rail projects under construction in Los Angeles County to support the business community.

Submission 1076 Dorothy Derricks

1076-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1076-2 The commenter's support for the Metro ROW alignment is noted. All comments have been shared with the Metro Board for their consideration.

Submission 1077 Arthur Oshiro

1077-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1078 Scott Bauer

1078-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1078-2 The commenter's support for the Metro ROW alignment and Trench Option is noted. All comments have been shared with the Metro Board for their consideration. The LPA, Trench Option, and Hawthorne Option would fully grade separate light rail from all roadways.

Submission 1079 Frank R.

1079-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1080 Judy Tizon

1080-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1080-2 The commenter's support for the Metro ROW alignment is noted. The opposition to the Hawthorne Option due to cost concerns is also noted. See MR-21: Cost Estimates and Schedule. Chapter 2, Description of the Locally Preferred Alternative, of the Final EIR, includes an updated schedule for the LPA. The project schedule and cost estimates will continue to be updated as the design advances. Section 3.6, Noise and Vibration, of the Draft EIR, includes comprehensive mitigation measures to minimize and/or avoid impacts. Although operation of the Elevated/At-Grade Alignment would result in a significant and unavoidable noise impact, the operational noise impact of the Trench Option, Hawthorne Option, and LPA would be less than significant with mitigation. Accordingly, no additional mitigation is required for those alignment options. See MR-3: Operational Noise Project Features and Mitigation Measures.

Submission 1081 Romanelli

1081-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1082 Sylvia S.

1082-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1083 Claudia Brubaker

1083-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1084 Amjadi's

1084-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1084-2 Metro acknowledged that comment letter represents one person in support of the project and one person opposed to the project. The commenter's preference for an at-grade option is noted. All comments have been shared with the Metro Board for their consideration.

Submission 1085 Nancy Taneka

1085-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1086 Mary and Alan Shadbourne

1086-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1087 John McGee

1087-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1087-2 The commenter's opinion on the benefits of the Elevated/At-Grade Alignment and cost are noted. All comments have been shared with the Metro Board for their consideration.

Submission 1088 Fred Wolfe

1088-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1088-2 The commenter's opinion on the benefits of the Hawthorne Option and cost and schedule concerns are noted. All comments have been shared with the Metro Board for their consideration.

Submission 1089 James Bailey

1089-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1090 Kelly Hartman

1090-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1090-2 Metro published a summary of preliminary cost estimates and schedule in 2023, concurrent with the Draft EIR. The project construction costs range from $1.96 billion to $2.96 billion (as estimated in 2022) depending on the route and design configuration. See MR-21: Cost Estimates and Schedule.

1090-3 Chapter 2, Description of the Locally Preferred Alternative, of the Final EIR includes an updated schedule for the LPA. The project schedule and cost estimates will continue to be updated as the design advances.

Submission 1091 Georgia Williams

1091-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1092 Robert Hernandez

1092-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1093 Ray Karimoto

1093-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1094 Melody Knerr

1094-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1094-2 The commenter's support for the Metro ROW alignment and opposition to the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration.

Submission 1095 Karen Currey

1095-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1096 Lori Yamasaka

1096-1 The commenter's support for the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration.

Submission 1097 Niparpon Johansen

1097-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1097-2 The commenter's opinion regarding the perceived safety and environmental quality of the Elevated/At-Grade Alignment, Trench Option, and Hawthorne Option is noted. However, at-grade crossings are generally considered to present a higher risk of collisions with vehicles and pedestrians compared to grade-separated options. The LPA, Trench Option, and Hawthorne Options would eliminate these conflicts by fully separating light rail from roadways. The Draft EIR evaluates the potential impacts associated with each option in multiple resource areas, including air quality (Section 3.4), pedestrian safety (Section 3.1), and aesthetics (Section 3.3). Dust and air pollution are not expected to accumulate under the elevated guideway in a meaningful or harmful way because the guideway would be open to air on all sides, allowing for natural ventilation. As set forth in Section 3.4-2.5 of the Draft EIR, each alignment option would comply with PF-AQ-2 (SCAQMD Rule 403 Compliance) to control dust and emissions during construction. As set forth in Section 3.4-4 of the Draft EIR, no adverse air quality impacts are expected during operation of the alignment options.

Submission 1098 Marciano Saldana

1098-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1099 Hamin

1099-1 The commenter's support for the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1100 Moien Bigdeli

1100-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1101 Allegra DeMott

1101-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1101-2 See MR-14: Property Values and Impacts to Businesses

Submission 1102 Deb White

1102-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1103 Kevin White

1103-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1104 Sherry Roberts

1104-1 The commenter's opposition to the project is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1104-2 The Draft EIR evaluates several physical environmental topics related to the concerns implicated in this comment, including pedestrian safety (Section 3.1, Transportation), land use compatibility (Section 3.2, Land Use), visual quality (Section 3.3, Aesthetics), noise and vibration (Section 3.6, Noise and Vibration), and wildlife (Section 3.7, Biological Resources). These sections assess how the project may affect surrounding neighborhoods. Although the Elevated/At-Grade Alignment would result in a significant and unavoidable operational noise impact, none of the other alignments studied – including the LPA – would result in significant and unavoidable operational impacts. Temporary construction-related impacts would be reduced to the maximum extent feasible through implementation of mitigation measures. See MR-10: Changes to Community Character.

Submission 1105 Tyler

1105-1 The commenter's support for the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1105-2 Metro is not considering a trolley system on Hawthorne Boulevard south to the Pacific Coast Highway as part of the project.

Submission 1106 Charles Osborne

1106-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1107 Moss Misiaszek

1107-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1107-2 Metro notes the commenter's desire for more transit with less interference at crossings and lights. The LPA, Trench Option, and Hawthorne Option fully grade separate light rail from streets to avoid conflicts with pedestrians, cyclists, and vehicles.

Submission 1108 Leo Tsai

1108-1 The commenter's opposition to a new transit system located in Torrance is noted. See MR-1: Selection of Alternatives. Traffic signals within Torrance are operated by the City of Torrance and are within the City's jurisdiction to modify or improve.

Submission 1109 John VanderVennet

1109-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1110 Tobeylynn Birch

1110-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1110-2 Cost efficiency is one of the objectives on which the Metro Board made its LPA selection. Metro strives to complete projects on time and within estimated budgets. Chapter 2, Description of the Locally Preferred Alternative, of the Final EIR, includes an updated schedule for the LPA. The project schedule and cost estimates will continue to be updated as the design advances. See MR-21: Cost Estimates and Schedule.

Submission 1111 Ed De La Cruz

1111-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1111-2 This project would provide alternatives to the busy I-405 corridor and also more transit options in this region by connecting to the existing Metro rail lines, as well as two regional bus centers in Redondo Beach and Torrance. The 2023 Ridership Summary Report, published alongside the Draft EIR, shows that the project is expected to generate between 11,500 to 15,600 daily transit trips (boardings). See MR-15: Metro Ridership Forecasting Methodology. Metro published a summary of preliminary cost estimates and schedule in 2023, concurrent with the Draft EIR. The project construction costs range from $1.96 billion to $2.96 billion (as estimated in 2022) depending on the route and design configuration. See MR-21: Cost Estimates and Schedule.

Submission 1112 Hector

1112-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1112-2 This commenter's support for public transit and use of existing infrastructure is noted. All comments have been shared with the Metro Board for their consideration.

Submission 1113 Johnson

1113-1 The commenter's support for the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1114 Victoria Nagano

1114-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1115 Travis Wilmer

1115-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1116 Bob Kelchner

1116-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1116-2 Noise impacts and mitigation measures are described in detail in Section 3.6, Noise and Vibration, of the Draft EIR. Soundwalls would be installed in areas where noise levels are predicted to exceed Federal Transit Administration (FTA) noise impact criteria for residences, as required by Mitigation Measure MM-NOI-2: Soundwalls. These soundwalls would block the line-of-sight between the light rail train and sensitive receptors, reducing noise impacts. See MR-3: Operational Noise Project Features and Mitigation Measures.

Submission 1117 James Knerr

1117-1 The commenter's support for the Trench Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1117-2 The commenter's opposition to the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration.

Submission 1118 Steph Knerr

1118-1 The commenter's support for the Trench Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1119 Jules River

1119-1 The commenter's support for the Trench Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives and MR-18: Homelessness.

Submission 1120 Bill and Elaine McMullen

1120-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1120-2 The commenter's support is noted. All comments have been shared with the Metro Board for their consideration.

Submission 1121 Steven Dewberry

1121-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1121-2 The commenter's opposition to the project in Torrance and alternative support for "the lowest cost option" is noted. Metro published a summary of preliminary cost estimates and schedule in 2023, concurrent with the Draft EIR. The project construction costs range from $1.96 billion to $2.96 billion (as estimated in 2022) depending on the route and design configuration. See MR-21: Cost Estimates and Schedule.

Submission 1122 S. Zirkes

1122-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1122-2 The project has been designed to provide convenient access to the Redondo Beach Transit Center and Torrance Transit Center, which were selected based on extensive analysis of connectivity and accessibility and community outreach. The stations would serve as key transit hubs, with existing local bus routes providing access to nearby destinations. While Metro assists in identifying improvements during the planning and design phases, the implementation of local access to regional transit facilities falls under the jurisdiction of the local cities. If the project is approved, Metro would coordinate with the local jurisdictions to assist in this planning.

Submission 1123 John Schlosser

1123-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1124 David Smith and Guadalupe Vicon

1124-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1124-2 The commenter's support for the project is noted. All comments have been shared with the Metro Board for their consideration.

Submission 1125 Jiteshkumar Patel

1125-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1126 David Placenti

1126-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1126-2 The commenter's support for the lowest cost and least intrusive option is noted. Metro published a summary of cost and schedule in 2023. Metro published a summary of preliminary cost estimates and schedule in 2023, concurrent with the Draft EIR. The project construction costs range from $1.96 billion to $2.96 billion (as estimated in 2022) depending on the route and design configuration. See MR-21: Cost Estimates and Schedule. See Chapter 4, Evaluation of Alternatives, of the Draft EIR for a comparative analysis of the LPA, project options, and alternatives.

Submission 1127 Anonymous

1127-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1128 Abir Chakaborty

1128-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1129 T.B.

1129-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1130 Roxanne Griffin

1130-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1131 Linda Brown

1131-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1131-2 Noise impacts and mitigation measures are described in detail in Section 3.6, Noise and Vibration, of the Draft EIR. Soundwalls would be installed in areas where noise levels are predicted to exceed Federal Transit Administration (FTA) noise impact criteria for residences, as required by Mitigation Measure MM-NOI-2: Soundwalls. These soundwalls would block the line-of-sight between the light rail train and sensitive receptors, reducing noise impacts. See MR-3: Operational Noise Project Features and Mitigation Measures.

Submission 1132 Mitchell Morgan

1132-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1133 Joseph Gualtiere

1133-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1134 JoAnn Cope

1134-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1134-2 See response to Comment 1134-1.

Submission 1135 Elena Castillo

1135-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1135-2 The commenter's support for the Metro ROW alignment is noted. Metro published a summary of preliminary cost estimates and schedule in 2023, concurrent with the Draft EIR. The project construction costs range from $1.96 billion to $2.96 billion (as estimated in 2022) depending on the route and design configuration. See MR-21: Cost Estimates and Schedule.

Submission 1136 John Heins and Yvonne Vanherk

1136-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1137 W. Calzadella

1137-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1138 Barbara Varou

1138-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1139 Marcia and Wilma Noboa

1139-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1140 Michael J. Gibson

1140-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1141 Patty Nishi

1141-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives and MR-9: Light Rail Security.

1141-2 See MR-9: Light Rail Security.

Submission 1142 Young Cheng

1142-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1174 Suwannee Adomien

1174-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives and MR-9: Light Rail Security.

1174-2 See MR-9: Light Rail Security.

Submission 1175 Jon M. Ziegler

1175-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1176 Michael Dillenback

1176-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1177 Patricia Miyoshi

1177-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1178 Rajeswari Gounder

1178-1 The commenter's support for the Trench Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1179 Julie Snakenborg

1179-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1180 C. Bedrossian

1180-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1181 Dario M. Chavez

1181-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1181-2 This commenter's support for the Metro ROW alignment is noted. All comments have been shared with the Metro Board for their consideration. See response to comment 1181-1.

Submission 1182 Gloria Londono

1182-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1183 Alvaro Lopez

1183-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1184 Vincent Deneux

1184-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1185 Tony Yang

1185-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1186 Charles Delio

1186-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1187 Tim

1187-1 The commenter's opposition to transit is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1188 Sarah Winfrey

1188-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1189 Young-Joon Mok

1189-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1190 Isabel Douvan

1190-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1190-2 See response to comment 1190-1.

Submission 1191 Melanie White

1191-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1192 Timothy Ma

1192-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1193 Irene Ma

1193-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1194 Matteo Interlandi

1194-1 The commenter's support for the Elevated/At-Grade Alignment and the Trench Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1195 Mohamed Fassy Jayah

1195-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1196 Abdulvahob Nabiev

1196-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1197 Alan Kita

1197-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1197-2 See response to Comment 1197-1. Metro strives to complete projects on time and within estimated budgets.

Submission 1198 Charles Wilson

1198-1 The commenter's support for the Trench Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1199 Dawn Kita

1199-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1200 Xianming Liu

1200-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1201 Donna

1201-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1202 Kevin Hetrick

1202-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1202-2 The project schedule and cost estimates will continue to be updated as the design advances. While offering financial incentives to construction contractors for early completion is worth considering, accelerating the project would present significant challenges. These include securing additional funds, expediting the procurement process, coordinating condensed review and permit approvals from public and private entities, and managing an intensive, compressed construction period. Each of these elements requires careful planning to ensure that safety, environmental regulations, and community impacts are appropriately addressed. Metro remains committed to delivering the project as efficiently as possible while balancing the need to control costs and ensure compliance with all necessary approvals.

Submission 1203 Avelina Daum

1203-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1204 Mark Nakano

1204-1 The commenter's support for the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1204-2 The commenter's support for an elevated project is noted. All comments have been shared with the Metro Board for their consideration. The LPA, Trench Option, and Hawthorne Option would fully grade separate light rail from all roadways, which would help avoid service delays.

Submission 1205 Nelson Wong

1205-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1206 Catrice Nakamura

1206-1 See MR-9: Light Rail Security and MR-18: Homelessness.

1206-2 The project has secured funding from Measure R (2008), Measure M (2016), Transit Intercity Rail Capital Program (TIRCP) Grant from the California State Transportation Agency (CALSTA) Transit and Intercity Rail Capital Program, and 3% match contributions from local jurisdictions. These funds are specifically allocated for transportation infrastructure and cannot be redirected for unrelated purposes such as homelessness programs or other local services. The commenter's concerns about community character and public priorities are noted. See MR-10: Changes to Community Character.

Submission 1207 Jack L.

1207-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1207-2 This commenter's preference for an at-grade alignment over the Trench Option and support for a quiet zone is noted. See MR-1: Selection of Alternatives. The project would provide all the upgrades to the crossings needed to establish the quiet zone. See MR-3: Operational Noise Project Features and Mitigation Measures.

1207-3 The commenter's concern regarding parking deterring ridership is noted. The 2023 Ridership Summary Report, published alongside the Draft EIR, shows that the project is expected to generate between 11,500 to 15,600 daily transit trips (boardings). Ridership projections show that riders from the greater South Bay and Palos Verdes Peninsula would use the system to connect to the regional rail network.

1207-4 The commenter's opinion that the Hawthorne Option would be best for South Bay businesses is noted. An additional station along the Hawthorne Option was studied in the 2018 Supplemental Alternatives Analysis, and removed from further study at the request of

the City of Lawndale. Previous studies also examined routes to Del Amo Mall, but those options were screened out as they did not provide comparable ridership benefits.

1207-5 All alignments proposed on the Metro ROW include infrastructure improvements that would make all freight at-grade crossings alongside the light rail tracks eligible for quiet zone applications.

Submission 1208 Alkistis Tsitouri

1208-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1209 Kelly Lowe

1209-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1210 Laura Harder

1210-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1211 Kandi Hsin

1211-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1212 Jeff Patton

1212-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1213 Lin Van Gelder

1213-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1214 James Van Gelder

1214-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1215 Jan-Michael Sanchez

1215-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1215-2 The commenter's support for the Metro ROW alignment is noted. Chapter 2, Description of the Locally Preferred Alternative, of the Final EIR, includes an updated schedule for the LPA. The project schedule and cost estimates will continue to be updated as the design advances. See MR-21: Cost Estimates and Schedule

Submission 1216 Emilie Hunter

1216-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1217 Pat Leighton

1217-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1218 Abraham Que

1218-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1219 Paul Yamada

1219-1 This project would provide alternatives to the busy I-405 corridor and also more transit options in this region by connecting to existing Metro rail lines, as well as two regional bus transit centers in Redondo Beach and Torrance. The 2023 Ridership Summary Report, published alongside the Draft EIR, shows that the project is expected to generate between 11,500 to 15,600 daily transit trips (boardings). See MR-15: Metro Ridership Forecasting Methodology. Metro published a summary of preliminary cost estimates and schedule in 2023, concurrent with the Draft EIR. The project construction costs range from $1.96 billion to $2.96 billion (as estimated in 2022) depending on the route and design configuration. See MR-21: Cost Estimates and Schedule.

Submission 1220 Celia Lee

1220-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1220-2 This comment is noted. All comments have been shared with the Metro Board for their consideration. See response to comment 1220-1.

Submission 1221 Kaiulani Lie

1221-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1221-2 Chapter 3.0, Environmental Impacts, of the Draft EIR, analyzes the project's environmental impacts. Section 4.20, Corrections and Additions, of the Final EIR, includes revisions to the Draft EIR analysis. The revisions do not result in significant new information or changes to the impact conclusions.

Submission 1222 Ernie Roberts

1222-1 The commenter's support for the Trench Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1222-2 The potential for noise impacts is addressed in Section 3.6, Noise and Vibration, of the Draft EIR. Similar to the Trench Option, the LPA, and Hawthorne Option would fully grade separate light rail and, with mitigation, would result in less than significant noise impacts during operations. Regarding potential disruptions to businesses, under CEQA, economic impacts, such as financial effects on businesses, are not considered environmental impacts. Metro has created a Business Interruption Fund for major rail projects under construction in Los Angeles County to support the business community.

Submission 1223 Daniel Will

1223-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1224 Brian Quinn

1224-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1224-2 CEQA does not require an analysis of safety in terms of crime, as it is not an environmental issue, and therefore the Draft EIR does not make any conclusions regarding this topic. Metro takes the safety and well-being of nearby communities very seriously. See MR-9: Light Rail Security and MR-18: Homelessness.

Submission 1225 Gregg DeNeui

1225-1 The commenter's support for the Trench Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1225-2 The potential for noise impacts is addressed in Section 3.6, Noise and Vibration, of the Draft EIR. See MR-9: Light Rail Security and MR-18: Homelessness.

Submission 1226 Jimmy Gow

1226-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1226-2 As described in Section 3.1, Transportation, of the Draft EIR, Project Feature PF-T-1: Construction Traffic Management Plan requires contractors to develop a construction traffic management plan. Metro and its contractors would coordinate with local businesses and residents as well as relevant jurisdictions to manage access and the effects of temporary closures and identify reasonable accommodations or alternatives, which could include limiting construction hours, providing alternate routes or temporary easements, or other strategies. These are identified as part of the preliminary engineering work and addressed in the development of the Construction Traffic Management Plan.

Submission 1227 Rhonda McNeil

1227-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1227-2 CEQA does not require an analysis of safety in terms of crime, as it is not an environmental issue, and therefore the Draft EIR does not make any conclusions regarding this topic. Metro takes the safety and well-being of nearby communities very seriously. See MR-9: Light Rail Security. Regarding job creation, as discussed in Section 3.15, Public Services and Recreation, of the Draft EIR, although construction of the project would create additional jobs in the project area, construction workers would temporarily work in the area and would not likely relocate to the project area on a permanent basis. Additionally, a minimum of 40% of all project work hours would be local hire workers as per Metro's Local Hire Initiative.

Submission 1228 Kimberlee Ann James

1228-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1229 Jackson N. Henry

1229-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1229-2 This commenter's support for the Metro ROW alignment and opposition to the Trench Option and Hawthorne Options is noted. Metro published a summary of preliminary cost estimates and schedule in 2023, concurrent with the Draft EIR. The project construction costs range from $1.96 billion to $2.96 billion (as estimated in 2022) depending on the route and design configuration. See MR-21: Cost Estimates and Schedule.

Submission 1230 Brian Getchius

1230-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1230-2 As described on Page 3.15-17 of the Draft EIR, the Los Angeles County Sheriff Department's Transit Policing Division provides contract transit policing services to the Metro public transit system. Deputies provide transit police services for both the light rail and bus transportation systems throughout 1,433 square miles, where Metro provides transit service. Los Angeles County Sheriff Department deputies conduct routine patrols of Metro facilities and transit vehicles and respond to emergency calls placed on Metro's public transit system. Police departments not contracted with Metro are also available for 9-1-1 emergency responses. See MR-9: Light Rail Security and MR-11: Traffic Delay and Level-of-Service. See also the 2023 Transportation Detail Report, published concurrently with the Draft EIR, for discussion on traffic conditions. It includes intersections along Crenshaw Boulevard.

Submission 1231 Eric Chen

1231-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1231-2 Chapter 2, Description of the Locally Preferred Alternative, of the Final EIR, includes an updated schedule for the LPA. The project schedule and cost estimates will continue to be updated as the design advances. See MR-21: Cost Estimates and Schedule.

Submission 1232 Mike Selfridge

1232-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1232-2 The commenter's opposition to the project is noted. The project has secured funding from Measure R (2008), Measure M (2016), Transit Intercity Rail Capital Program (TIRCP) Grant from the California State Transportation Agency (CALSTA) Transit and Intercity Rail Capital Program, and 3% match contributions from local jurisdictions. Metro would continue to identify additional funding to support the project and close the funding gap, pending project approval.

Submission 1233 HL

1233-1 The commenter's support for the No Build Alternative is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1233-2 CEQA does not require an analysis of safety in terms of crime, as it is not an environmental issue, and therefore the Draft EIR does not make any conclusions regarding this topic. Metro

takes the safety and well-being of nearby communities very seriously. See MR-9: Light Rail Security and MR-18: Homelessness.

1233-3 See response to Comment 1233-2.

1233-4 The 2023 Ridership Summary Report, published concurrently with the Draft EIR, shows that the project is expected to generate between 11,500 to 15,600 daily transit trips (boardings). See MR-15: Metro Ridership Forecasting Methodology. The commenter asserts the household incomes of residents in Redondo Beach, Torrance, and Lawndale are not similar to those of users on the Metro system, based on results of a survey. As described in the 2023 Project Need and Purpose Report, published concurrently with the Draft EIR, the project area contains communities that meet Metro's Equity Focus Communities (EFC) criteria, which include income, vehicle ownership, and ethnicity. For all three of these criteria, the greatest percentages of equity-related criteria within the project area are located in Lawndale, east of the Redondo Beach (Marine) Station; centrally, surrounding the South Bay Galleria; and in Torrance, to the west of the Torrance Transit Center. In addition to serving these communities, the project would also provide a regional benefit for all riders, by improving an alternative mode of access to the South Bay.

1233-5 Metro is committed to integrating safety into all Metro rail operations. The project would comply with relevant safety standards, including the California Manual on Uniform Traffic Control Devices, the California Department of Transportation Highway Design Manual, the Americans with Disabilities Act, and Metro's Grade Crossing Safety Policy. The LPA, Trench Option, and Hawthorne Option would fully grade separate light rail from all roadways, thereby avoiding potential conflicts with school-age pedestrians and cyclists. The presence of a station could also improve access to schools for residents and parents.

1233-6 See response to Comment 133-4.

Submission 1234 Michael Dillenback

1234-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1235 Patricia Miyoshi

1235-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1236 Christopher Rutte

1236-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1236-2 The C Line Extension to Torrance Ridership Summary Report (2023a), available on the project's website, includes ridership forecasts. The project is estimated to serve between

11,500 and 15,600 daily project trips by 2045. The project has secured funding from Measure R (2008), Measure M (2016), Transit Intercity Rail Capital Program (TIRCP) Grant from the California State Transportation Agency Transit and Intercity Rail Capital Program, and 3% match contributions from local jurisdictions. Metro would continue to explore funding opportunities for the project.

Submission 1237 Richard Long

1237-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives. Both the Metro C and K Lines now connect to LAX.

Submission 1238 Enrique Garcia

1238-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1239 Louis Quaglietta

1239-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1240 Catherine Emmerson

1240-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1241 Jerri Holmgren

1241-1 The commenter's support for the Elevated/At-Grade Alignment is noted. See MR-1: Selection of Alternatives. The potential for noise impacts is addressed in Section 3.6, Noise and Vibration, of the Draft EIR.

Submission 1242 Charles A. Pineros

1242-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1242-2 The Mary K. Giordano Regional Transit Center is located at 465 Crenshaw Boulevard, Torrance, CA.

Submission 1243 Ruth Ann Gray

1243-1 The commenter's support for the Elevated/At-Grade Alignment and the Trench Option and is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1244 Harder Munro

1244-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1245 Terry Engle

1245-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1246 D.J. Ponder

1246-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1247 Marilyn Deborah Maxwell

1247-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1248 Russell Tsuji

1248-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1249 Earl Nolan

1249-1 The commenter's support for the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1250 Alfred Jung

1250-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1251 Mariana Amezcua

1251-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1252 Se Hyun Sung

1252-1 The commenter's support for the Trench Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1268-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1269 Steven Lindsey

1269-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1270 Albert Castro

1270-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1271 Josh Standifer

1271-1 The commenter's support for the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1271-2 The commenter's support for the Hawthorne Option is noted. The project is designed to fit within the Metro ROW. See Appendix 2-A, Select Advanced Conceptual Engineering Drawings, of the Draft EIR and Final EIR Appendix B, Select Advanced Conceptual Engineering Drawings - Locally Preferred Alternative. Impacts related to wildlife were analyzed in Section 3.7, Biological Resources, of the Draft EIR. See MR-8: Light Rail and Freight Train Safety; and MR-10: Changes in Community Character.

Submission 1272 Owen

1272-1 The commenter's support for the Elevated/At-Grade Alignment and rail in general is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1273 Josh Stanton

1273-1 The commenter's support for the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1273-2 The commenter's support for the Hawthorne Option is noted. The project is designed to fit within the Metro ROW. See Appendix 2-A, Select Advanced Conceptual Engineering

Drawings, of the Draft EIR and Final EIR Appendix B, Select Advanced Conceptual Engineering Drawings - Locally Preferred Alternative. As part of this project, multi-use recreational paths would be added in several parts of the corridor, which would provide safe paths for recreational users. See MR-8: Light Rail and Freight Train Safety and MR-10: Changes to Community Character.

Submission 1274 Brendon Reyell

1274-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1275 Dale Case

1275-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1276 Kathy

1276-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1277 E. Atkins

1277-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1278 Jason T. Tam

1278-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1279 Marc Lawrence

1279-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1279-2 The noise impacts of the Elevated/At-Grade Alignment, Trench Option, and Hawthorne Option are evaluated in detail in Section 3.6, Noise and Vibration, of the Draft EIR. The LPA is addressed in Chapter 4, Evaluation of Alternatives, of the Draft EIR. The noise impacts of a light rail system depend on many factors, including track technology, mitigation measures, and whether the alignment crosses streets at-grade. For this project, the Elevated/At-Grade Alignment includes at-grade light rail crossings that require warning bells and light rail train horns, which increase noise exposure in the surrounding neighborhoods. By contrast, the

LPA, Trench Option, and Hawthorne Option would fully separate the light rail from the street grid, eliminating the need for these audible warnings and significantly reducing operational noise impacts. With implementation of mitigation measures, including MM-NOI-2: Soundwalls, noise impacts would be reduced to less than significant with mitigation for LPA, Trench Option and Hawthorne Option.

Submission 1280 Michael Wermers

1280-1 The commenter's support for the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1281 Alexandros S. Martinez

1281-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1281-2 The commenter's support for the Metro ROW alignment is noted. The LPA, along with all alignments along the Metro ROW, directly connects to the Redondo Beach Transit Center.

Submission 1282 Diana Davis

1282-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1283 Bryan

1283-1 The commenter's support for the Elevated/At-Grade Alignment is noted. See MR-1: Selection of Alternatives. See the Executive Summary in the Draft EIR for a summary of the potential impacts on pages ES-1 through ES-50.

Submission 1284 Perry Shields

1284-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1285 Daniel

1285-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1286 Virgina Darnell

1286-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1287 Tejas Parmar

1287-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1288 L. Nakashima

1288-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1289 Dave and Rena Hayami

1289-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1290 Swee Woo

1290-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1291 Robert Boiles

1291-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1291-2 This commenter's preference for the least expensive option is noted. Cost efficiency is one of the objectives on which the Metro Board made its LPA selection. See MR-21: Cost Estimates and Schedule.

Submission 1292 Jeff Wong

1292-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1293 Larry Turgeon

1293-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1293-2 The project is designed to provide convenient access to the Redondo Beach Transit Center and Torrance Transit Center, which were selected based on extensive analysis of

connectivity and accessibility and community outreach. The stations would serve as key transit hubs, with existing local bus routes providing access to nearby destinations.

Submission 1294 Jose Dennis Alabaso

1294-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1294-2 The commenter's support for the project and desire for an accelerated schedule is noted.

Submission 1295 Anonymous

1295-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1296 Sean Murphy

1296-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1297 Ton-Ming Chieh

1297-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1298 Benito Miranda

1298-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1298-2 The project would provide a direct connection to the LAX Automated People Mover via the K Line.

Submission 1299 Anonymous

1299-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1300 Steve Chamberlain

1300-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1301 Bonnie Van Alphen

1301-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1301-2 This commenter's preference for the least expensive option is noted. Cost efficiency is one of the objectives on which the Metro Board made its LPA selection. See MR-21: Cost Estimates and Schedule.

Submission 1302 Anonymous

1302-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1303 Noriko Fujita

1303-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1304 Harry & JoAnn Ross

1304-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1305 Susan LaMotte

1305-1 The commenter's support for the Elevated/At-Grade Alignment is noted. See MR-1: Selection of Alternatives. The 2023 Ridership Summary Report, published alongside the Draft EIR, shows that the project is expected to generate between 11,500 to 15,600 daily transit trips (boardings). Ridership projections show that riders from the greater South Bay and Palos Verdes will use the system to connect to the regional rail network. See MR-15: Metro Ridership Forecasting Methodology.

Submission 1306 Joseph A Spilka

1306-1 The commenter's support for the Elevated/At-Grade Alignment is noted. See MR-1: Selection of Alternatives. See also the 2023 Transportation Detail Report, published concurrently with the Draft EIR, for discussion on traffic conditions.

Submission 1307 Michael Stull

1307-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1308 Ron Botelho

1308-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1308-2 The 2023 Ridership Summary Report, published alongside the Draft EIR, shows that the project is expected to generate between 11,500 to 15,600 daily transit trips (boardings). Ridership projections show that riders from the greater South Bay and Palos Verdes Peninsula would use the system to connect to the regional rail network. The project has secured funding from Measure R (2008), Measure M (2016), Transit Intercity Rail Capital Program (TIRCP) Grant from the California State Transportation Agency (CALSTA) Transit and Intercity Rail Capital Program, and 3% match contributions from local jurisdictions. Metro would continue to identify additional funding to support the project and close the funding gap, pending approval.

Submission 1309 Mr. & Mrs. Aguiar

1309-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1309-2 See response to Comment 1309-1. Cost efficiency is one of the objectives on which the Metro Board made its LPA selection. See MR-21: Cost Estimates and Schedule.

Submission 1310 D. Fisher

1310-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1311 Chih Chang

1311-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1312 Anonymous

1312-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1312-2 As described in Section 3.1, Transportation, of the Draft EIR, Project Feature PF-T-1: Construction Traffic Management Plan requires contractors to develop a Construction Traffic Management Plan (CTMP). Metro and its contractors would coordinate with local businesses and residents as well as relevant jurisdictions to manage access and the effects of temporary closures and identify reasonable accommodations or alternatives, which could

include limiting construction hours, providing alternate routes or temporary easements, or other strategies. These are identified as part of the preliminary engineering work and addressed in the development of the CTMP.

Submission 1313 Everett Kirsch

1313-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1314 Kikuchi Family

1314-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1315 Donald Nakamoto

1315-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1316 Beverly Findley

1316-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1316-2 The Metro Board considered cost efficiency in selecting the LPA and will continue to consider that factor, among others, prior to reaching a final decision on the project. See MR-21: Cost Estimates and Schedule.

Submission 1317 Edmund & Kerry Cababa

1317-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1318 Mrs. Deborah DeLoud

1318-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1319 Craig Scdoris

1319-1 The commenter's support for the Elevated/At-Grade Alignment and desire for an accelerated schedule is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1320 Lynn Shirvandehi

1320-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1320-2 This commenter's support for the Metro ROW alignment is noted. All comments have been shared with the Metro Board for their consideration. See response to Comment 1320-1.

Submission 1321 Bernas

1321-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1321-2 This commenter's preference to reduce disruptions is noted. The Draft EIR analyzes the environmental impacts of all project options and alternatives. See the Draft EIR Executive Summary for a summary of all impacts, and the Final EIR Executive Summary for a summary of the LPA impacts.

Submission 1322 Dianne & Jerry Baltz

1322-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1323 Jenny Sakamoto

1323-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1324 Timothy McAkee

1324-1 The commenter's support for the Elevated/At-Grade Alignment is noted. See MR-1: Selection of Alternatives. Should the project be approved and advanced into construction, a minimum of 40% of all project work hours would be local hire workers as per Metro's Local Hire Initiative.

Submission 1325 Anonymous

1325-1 The commenter's opposition to the project is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1326 Janet Sieffert

1326-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

5.5 Responses to Individual Comments (Submission #1327-#1989)

Submission 1327 Frederick A. Mohit

1327-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1328 Tim Calkins

1328-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1328-2 The commenter's opposition to the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1329 Oliver King

1329-1 The commenter's support for either the Elevated/At-Grade Alignment or the Hawthorne Option is noted. The opposition to the Trench Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1330 T. Elder

1330-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1331 Helen Itabashi

1331-1 The commenter's support for the Trench Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1331-2 The commenter states that the Trench Option is the best choice, although the comment also notes that the Trench Option and Elevated/At-Grade Alignment would bring more traffic and crime to Torrance. As explained on page 3.1-3 of the Draft EIR, traffic delay (often measured by level of service) is no longer permissible as a CEQA impact criterion and therefore this analysis and related topics are not addressed in the Draft EIR. See MR-11: Traffic Delay and Level-of-Service and the 2023 Transportation Detail Report, published concurrently with the Draft EIR, for a discussion of traffic conditions. The LPA and Trench Option are fully grade-separated from all roadways and would not increase vehicle delay compared to existing conditions. The Hawthorne Option is likewise grade-separated; however, its proposed changes in traffic signals and roadway modifications could affect circulation patterns, as described in MR-11: Traffic Delay and Level-of-Service. CEQA does not require an analysis of safety in terms of crime, as it is not an environmental issue, and therefore the Draft EIR does not make any conclusions regarding this topic. See MR-9: Light Rail Security.

Submission 1332 Susan Hale

1332-1 The commenter's opposition to the project is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1333 Francesco Aiello

1333-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1334 JoAnne Naka

1334-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1335 Sharon I.

1335-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1335-2 The commenter's preferences and concerns have been noted. Regardless of alignment, Metro would comply with all applicable safety regulations, including those established by the California Public Utilities Commission and the Federal Railroad Administration, to ensure safe operations. The Metro Board will consider multiple factors in their final determination on the project, including environmental impacts, benefits, and costs. See MR-8: Light Rail and Freight Train Safety and MR-10: Changes to Community Character.

Submission 1336 L. Hawkes

1336-1 The commenter's opposition to the project is noted. See MR-1: Selection of Alternatives. The project has secured funding from Measure R (2008), Measure M (2016), TIRCP Grant from the California State Transportation Agency Transit and Intercity Rail Capital Program, and 3% match contributions from local jurisdictions. Metro is committed to the responsible use of public funds and to managing project costs efficiently, while continuing to pursue additional funding sources to support project delivery. See MR-21: Cost Estimates and Schedule.

Submission 1337 Julie Tuttle

1337-1 The commenter's opposition to the project is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives and MR-10: Changes to Community Character.

Submission 1338 Ros Barry

1338-1 The commenter's opposition to the project is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1339 Cheryl Petrucelli

1339-1 The commenter's opposition to the project is noted. See MR-1: Selection of Alternatives. The project has secured funding from Measure R (2008), Measure M (2016), TIRCP Grant from the California State Transportation Agency Transit and Intercity Rail Capital Program, and 3% match contributions from local jurisdictions. See MR-21: Cost Estimates and Schedule. Metro is committed to the responsible use of public funds and to managing project costs efficiently, while continuing to pursue additional funding sources to support project delivery. The 2023 Ridership Summary Report, published concurrently with the Draft EIR, shows that the project is expected to generate between 11,500 to 15,600 daily transit trips (boardings). See MR-15: Metro Ridership Forecasting Methodology.

Submission 1340 Kevin Brown

1340-1 The commenter selected all three boxes indicating support for the Elevated/At-Grade Alignment, the Trench Option, and the Hawthorne Option. See MR-1: Selection of Alternatives.

1340-2 The project's consistency with existing land use plans and zoning designations is assessed in Section 3.2, Land Use and Planning, of the Draft EIR. The project would not require zoning changes. Furthermore, land use and zoning decisions, including any potential zone changes, are under the jurisdiction of local agencies such as cities or counties. Metro does not have the authority to impose or prevent zoning changes. Local jurisdictions retain full control over their zoning decisions and any future changes would be subject to their respective public review and approval processes.

1340-3 Police services would be provided by the Los Angeles County Sheriff's Department (LASD) under Metro's existing contract service agreement with this agency. See MR-9: Light Rail Security. The project has secured funding from Measure R (2008), Measure M (2016), TIRCP Grant from the California State Transportation Agency Transit and Intercity Rail Capital Program, and 3% match contributions from local jurisdictions. Metro is committed to the responsible use of public funds and to managing project costs efficiently, while continuing to pursue additional funding sources to support project delivery. See MR-21: Cost Estimates and Schedule.

Submission 1341 Richard Rudshagen

1341-1 The commenter's opposition to the project is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1342 Gerri Yarborough

1342-1 Metro takes public safety very seriously. See MR-9: Light Rail Security and MR-18: Homelessness.

Submission 1343 J. Myatt

1343-1 The commenter's statement to take the light rail to Carson instead of Torrance is noted. Metro has considered multiple alignment options, starting with the 2009 Alternatives Analysis, which identified the C Line Extension to Torrance within the Metro ROW as a priority project. An extension further south past Torrance was considered, but currently does not have funding to be evaluated further.

Submission 1344 Dawson J.

1344-1 The commenter's opposition to the project is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives. Metro takes public safety very seriously. See MR-9: Light Rail Security.

1344-2 The 2023 Ridership Summary Report, published concurrently with the Draft EIR, shows that the project is expected to generate between 11,500 to 15,600 daily transit trips (boardings). See MR-15: Metro Ridership Forecasting Methodology. Comments related to Torrance Transit should be directed to the City of Torrance.

Submission 1345 Michael Lituin

1345-1 The commenter's opposition to money going to public transportation is noted. The project has secured funding from Measure R (2008), Measure M (2016), a Transit and Intercity Rail Capital Program (TIRCP) Grant from the California State Transportation Agency Transit, and 3% match contributions from local jurisdictions. Metro is committed to the responsible use of public funds and to managing project costs efficiently, while continuing to pursue additional funding sources to support project delivery. See MR-21: Cost Estimates and Schedule.

Submission 1346 Judith Shoemaker

1346-1 The commenter's opposition to the project is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1346-2 The commenter's preference for an improved bus system is noted. A High-Frequency Bus Alternative on local arterials is evaluated in Chapter 4, Evaluation of Alternatives, of the Draft EIR.

Submission 1347 Don White

1347-1 The commenter's opposition to the project is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1348 Wilmes LLC

1348-1 The commenter checked the box supporting the Elevated/At-Grade Alignment but also expressed opposition to all choices. See MR-1: Selection of Alternatives.

1348-2 The commenter's opposition to the project is noted. All comments have been shared with the Metro Board for their consideration.

Submission 1349 Priscilla Sena

1349-1 The commenter's opposition to the project is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1350 Scott Tan

1350-1 The commenter's opposition to the project is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1351 Laurie Lehmer

1351-1 Metro takes public safety very seriously. See MR-9: Light Rail Security.

Submission 1352 John & Emeli Anagnost

1352-1 The commenter's opposition to the project is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives. Metro takes public safety very seriously. See MR-9: Light Rail Security.

Submission 1353 Susan Gibson

1353-1 The commenter checked the box supporting the Trench Option but also expressed opposition to all choices. See MR-1: Selection of Alternatives.

1353-2 The commenter's opposition to the project is noted. The 2023 Ridership Summary Report, published alongside the Draft EIR, shows that the project is expected to generate between 11,500 to 15,600 daily transit trips (boardings). See MR-15: Metro Ridership Forecasting Methodology.

Submission 1354 Anonymous

1354-1 The commenter's opposition to the project is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1354-2 Metro takes public safety very seriously. See MR-9: Light Rail Security. The project has secured funding from Measure R (2008), Measure M (2016), a Transit and Intercity Rail Capital Program (TIRCP) Grant from the California State Transportation Agency Transit, and 3% match contributions from local jurisdictions. Metro is committed to the responsible use of public funds and to managing project costs efficiently, while continuing to pursue additional funding sources to support project delivery. See MR-21: Cost Estimates and

Schedule. The 2023 Ridership Summary Report, published concurrently with the Draft EIR, shows that the project is expected to generate between 11,500 to 15,600 daily transit trips (boardings). See MR-15: Metro Ridership Forecasting Methodology.

Submission 1355 Terrian Ferren

1355-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1355-2 The commenter's opposition to rail in Torrance is noted. All comments have been shared with the Metro Board for their consideration.

1355-3 Metro takes public safety very seriously. See MR-9: Light Rail Security.

Submission 1356 D. Weirick

1356-1 The commenter's support for the No Project Alternative is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1356-2 The 2023 Ridership Summary Report, published alongside the Draft EIR, shows that the project is expected to generate between 11,500 to 15,600 daily transit trips (boardings). See MR-15: Metro Ridership Forecasting Methodology and MR-18: Homelessness.

Submission 1357 Concerned Citizen

1357-1 The commenter's opposition to the project is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1358 Ray K

1358-1 A High-Frequency Bus Alternative on local arterials, which is not "fixed" light rail infrastructure, is evaluated in Chapter 4, Evaluation of Alternatives, of the Draft EIR. See MR-1: Selection of Alternatives.

Submission 1359 Michael Mitani

1359-1 The commenter's stated support for public transit and selection of the Elevated/At-Grade Alignment, the Trench Option, and the Hawthorne Option without preference, are noted. All comments have been shared with the Metro Board for their consideration.

Submission 1360 Richard Beaver

1360-1 The commenter's recommendation for a subway in Redondo Beach is noted. See Table 4.2-1, Summary of Alternatives Considered and Rejected, on page 4-2 of the Draft EIR, which explains that a deep bore tunnel alignment was considered but rejected because it was expected to have significantly higher costs, higher-real estate needs, and increased construction-related impacts without corresponding benefits compared to a trench configuration. See also MR-1: Selection of Alternatives.

Submission 1361 Anonymous

1361-1 You can reference a map illustrating the Elevated/At-Grade Alignment, Trench Option, and Hawthorne Option on the Metro project website, as well as in different sections of the Final EIR. The web maps are interactive and can be zoomed in for detailed viewing. If accessing the online maps is difficult, printed maps with larger formats can be made available at the project's outreach events or by contacting Metro directly at greenlineextension@metro.net. Additionally, Metro staff members are available to assist with reviewing maps in person at public meetings or by phone at 213-922-4004 to help ensure the maps are accessible for all.

The Torrance Transit Center is not included in the map since it is not a Metro station, but the proposed light rail station would be adjacent to the Torrance Transit Center and is included in the project maps in Chapter 2, Project Description, of the Draft EIR and Chapter 2, Description of the Locally Preferred Alternative, of the Final EIR.

Submission 1362 Sudduth

1362-1 The commenter's opposition to the project is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1362-2 The project has secured funding from Measure R (2008), Measure M (2016), a Transit and Intercity Rail Capital Program (TIRCP) Grant from the California State Transportation Agency Transit, and 3% match contributions from local jurisdictions. Metro is committed to the responsible use of public funds and to managing project costs efficiently, while continuing to pursue additional funding sources to support project delivery. See MR-21: Cost Estimates and Schedule and MR-18: Homelessness.

Submission 1363 F. Ron

1363-1 The commenter's support for the Elevated/At-Grade Alignment and Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1363-2 None of the alignments evaluated in the Draft EIR would require roadway reconfigurations that would eliminate general-purpose traffic lanes. However, the Hawthorne Option would involve modifications to Hawthorne Boulevard to accommodate the support columns for the elevated guideway. This includes reducing the number of northbound left-hand turn lanes at 177th Street from two to one. For additional information, see MR-11: Traffic Delay and Level-of-Service. The LPA, Trench Option, and Hawthorne Option would fully grade separate the light rail from all roadways.

1363-3 See response to Comment 1363-1. An option to connect to the Del Amo Mall was considered during the 2021 scoping period for the project, but was not studied as other transit lines connect to the mall and the route would not connect to the City's transit center.

Submission 1364 Anonymous

1364-1 The commenter's opposition to the project is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1365 Richard Foryell

1365-1 The commenter's opposition to the project is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1366 Charles Bauman

1366-1 The commenter's opposition to the project is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1367 F. Blaek

1367-1 The commenter marked boxes for the Elevated/At-Grade Alignment, the Trench Option, and the Hawthorne Option. See MR-1: Selection of Alternatives.

1367-2 The commenter's concerns regarding project costs and values are noted. The 2023 Ridership Summary Report, published concurrently with the Draft EIR, shows that the project is expected to generate between 11,500 to 15,600 daily transit trips (boardings). See MR-15: Metro Ridership Forecasting Methodology; see MR-19: Project Benefits, and MR-21: Cost Estimates and Schedule.

Submission 1368 Barry Buth

1368-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1368-2 For clarification, commuter rail would not run on this track. Metro light rail trains would operate within the Metro ROW. As explained on page 3.1-3 of the Draft EIR, traffic delay (often measured by level of service) is no longer permissible as a CEQA impact criterion, and therefore this analysis and related topics are not addressed in the Draft EIR. See MR-11: Traffic Delay and Level-of-Service and the 2023 Transportation Detail Report, published concurrently with the Draft EIR, for a discussion of traffic conditions. The LPA and Trench Option light rail guideway is fully grade-separated from all roadways and would not increase vehicle delay compared to existing conditions. CEQA does not require an analysis of safety in terms of crime, as it is not an environmental issue, and therefore the Draft EIR does not make any conclusions regarding this topic. See MR-9: Light Rail Security.

Submission 1369 Shirley Mitchell

1369-1 The commenter's opposition to the project is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1369-2 The 2023 Ridership Summary Report, published concurrently with the Draft EIR, shows that the project is expected to generate between 11,500 to 15,600 daily transit trips (boardings). See MR-15: Metro Ridership Forecasting Methodology and MR-18: Homelessness.

Submission 1370 Vicki Smith

1370-1 The commenter's opposition to light rail in Torrance is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1371 Mrs. David C. Dupuls

1371-1 Comments related to sidewalk construction should be directed to the city with jurisdiction.

Submission 1372 Karen Robinson

1372-1 The commenter's support for the Elevated/At-Grade Alignment and Hawthorne Option is noted. See MR-1: Selection of Alternatives. The cities of Lawndale, Redondo Beach, and Torrance plan, construct, and maintain sidewalks within their respective jurisdiction.

1372-2 The 2023 Ridership Summary Report, published concurrently with the Draft EIR, shows that the project is expected to generate between 11,500 to 15,600 daily transit trips (boardings). See MR-15: Metro Ridership Forecasting Methodology.

1372-3 The commenter's concern about project costs and value are noted. See MR-19: Project Benefits and MR-21: Cost Estimates and Schedule.

Submission 1373 Rick & Lori Kamrath

1373-1 The commenter's opposition to the project is noted. See MR-1: Selection of Alternatives. This is not a vote but a request to the public to participate in the environmental review process required by CEQA. The Metro Board will consider the findings of the Final EIR, along with all public comments and community input received throughout the process, before making any final decision on the project. Potential impacts associated with all the project alternatives and options are summarized in Chapter 4, Evaluation of Alternatives, of the Draft EIR.

Submission 1374 Member of Madrone Homeowner Assoc.

1374-1 The commenter's opposition to light rail in Torrance is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1375 Vicke Wallace

1375-1 The commenter's support for the Elevated/At-Grade Alignment is noted. See MR-1: Selection of Alternatives. All comments have been shared with the Metro Board for their consideration.

Submission 1376 Kathleen Kenny

1376-1 The commenter marked boxes indicating support for the Elevated/At-Grade Alignment and Hawthorne Option, although also states unhappiness with the project. Metro takes public safety very seriously. See MR-9: Light Rail Security.

Submission 1377 J. Armandores

1377-1 The commenter's opposition to light rail in Torrance is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1378 Anonymous

1378-1 The commenter's opposition to light rail in Torrance is noted. See MR-1: Selection of Alternatives. Metro takes public safety very seriously. See MR-9: Light Rail Security and MR-18: Homelessness.

Submission 1379 Anonymous

1379-1 The commenter marked a box indicating support for the Elevated/At-Grade Alignment, although also states opposition to the project. See MR-1: Selection of Alternatives.

1379-2 See response to Comment 1379-1.

Submission 1380 Anonymous

1380-1 The commenter's opposition to the project is noted. Metro takes public safety very seriously. See MR-9: Light Rail Security.

Submission 1381 James Lews

1381-1 The commenter's opposition to light rail and preference for a bus terminal is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1381-2 The project would provide benefits to Torrance. The project would connect to the new regional bus transit center in Torrance. See MR-17: Response to Torrance Community Letter and MR-19: Project Benefits. A High-Frequency Bus Alternative is discussed in Chapter 4, Evaluation of Alternatives, of the Draft EIR.

Submission 1382 Anonymous

1382-1 This commenter's opposition to the project has been noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1383 Ernest Yuska

1383-1 The commenter's support for the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1383-2 See Section 3.6, Noise and Vibration, of the Draft EIR, for a thorough analysis of the noise and vibration impacts of the three light rail alignment options, as well as mitigation measures to reduce the noise and vibration impacts. The Metro Board selected an LPA for purposes of the Final EIR. The LPA, Trench Option, and Hawthorne Option significantly reduce noise impacts compared to the Elevated/At-Grade Alignment because they avoid the

at-grade crossings at 170th and 182nd Streets. By grade-separating the light rail from all roadways, the LPA, Trench Option, and Hawthorne Option remove the need for audible warning at light rail crossings, such as routine train horns and crossing bells. As detailed in Chapter 4, Evaluation of Alternatives, of the Draft EIR, and Chapter 4, Corrections and Additions, of the Final EIR, the noise and vibration impacts of the LPA would be comparable to those of the Trench Option.

Submission 1384 Jon R.

1384-1 The commenter's support for the project is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1385 Carol Vega

1385-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1385-2 The commenter states opposition to the project and also confirms preference for the Elevated/At-Grade Alignment. The project is partially funded by Measure R, as well as Measure M, another ballot measure passed by over 71% of voters in Los Angeles County to fund mobility projects.

Submission 1386 Leanna Smith

1386-1 The commenter's opposition to the project is noted. All comments have been shared with the Metro Board for their consideration. Metro takes public safety very seriously. See MR-9: Light Rail Security.

Submission 1387 Sharon L. Guzman

1387-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives. Metro takes public safety very seriously. See MR-9: Light Rail Security.

Submission 1388 Debre Cowrin

1388-1 The commenter's opposition to the project is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives. Metro takes public safety very seriously. See MR-9: Light Rail Security.

Submission 1389 David Ortiz

1389-1 The commenter's opposition to the project is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives and MR-18: Homelessness.

Submission 1390 Monica Steele

1390-1 The commenter's opposition to the project is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1390-2 Metro takes public safety very seriously. See MR-9: Light Rail Security.

Submission 1391 M. Page, LCSW, BCD

1391-1 The commenter's support for the project is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives and MR-18: Homelessness.

Submission 1392 Judith Lanfried

1392-1 The commenter's opposition to the project is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives. Metro takes public safety very seriously. See MR-9: Light Rail Security and MR-18: Homelessness.

Submission 1393 Miriam Lengle

1393-1 The commenter marked boxes expressing support for all light rail alignments. See MR-1: Selection of Alternatives.

Submission 1394 Carolyn Lewis (Trustee for Althea Boehm)

1394-1 The commenter's opposition to light rail in Torrance is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives and MR-10: Changes to Community Character.

Submission 1395 Craig Stanton

1395-1 South Bay Estates is included in the Draft EIR's noise and vibration analysis as Clusters G27 through G30. As shown on Figure 3.6-23 of the Draft EIR, a soundwall is proposed along the eastern boundary of the Metro ROW near South Bay Estates and would be required by Mitigation Measure MM-NOI-2: Soundwalls. The soundwall locations are also shown in Table 3.6-26 of the Draft EIR. Operational noise impacts at Clusters G27 through G30 would be less than significant with mitigation.

Submission 1396 Sherry Roberts

1396-1 The commenter's opposition to the project is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1396-2 See response to Comment 1396-1. As explained on page 3.1-3 of the Draft EIR, traffic delay (often measured by level of service) is no longer permissible as a CEQA impact criterion and therefore this analysis and related topics are not addressed in the Draft EIR. See MR-11: Traffic Delay and Level-of-Service and the 2023 Transportation Detail Report, published concurrently with the Draft EIR, for a discussion of traffic conditions. Neither the LPA nor the

Trench Option would increase vehicle delay compared to existing conditions, as both alignments fully grade separate the light rail from all roadways and do not require modifications to existing intersections or traffic lanes.

Submission 1397 T. Fox

1397-1 Metro takes public safety very seriously. See MR-9: Light Rail Security and MR-18: Homelessness.

Submission 1398 Sofia

1398-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1398-2 The commenter's preference for the No Build Alternative is noted. All comments have been shared with the Metro Board for their consideration.

Submission 1399 Glass

1399-1 Metro takes public safety very seriously. See MR-9: Light Rail Security.

1399-2 The commenter's opposition to the project in Torrance is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1400 Mark and Diana

1400-1 This commenter's support for the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1400-2 This commenter's support for elevated rail is noted. All comments have been shared with the Metro Board for their consideration.

Submission 1401 Linda Mandel

1401-1 This commenter's support for the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1402 Paul Halpern

1402-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1402-2 Metro values public participation and input. All comments received on the Draft EIR during the public comment period are reviewed and considered as part of the preparation of the Final EIR. The Metro Board will make a decision on the project with consideration of the Final EIR and all public comments and feedback received during the engagement.

Submission 1403 Katherine McKinney

1403-1 This commenter's support for the Trench Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1404 Keith Lee

1404-1 The commenter's support for the ROW alignment and secondary support for the Trench Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1404-2 See response to Comment 1404-1.

Submission 1405 Ismat Madhani

1405-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1406 Kevin Morrow

1406-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1406-2 All light rail options and alternatives analyzed in the Draft EIR provide a direct connection to the LAX/Metro Transit Center. When the project opens, it would operate as part of the K Line, traveling north-south between the Expo/Crenshaw Station and the proposed station at Torrance. It would connect to the LAX/Metro Transit Station, providing service to LAX. The C (Green) Line currently travels east/west between the LAX/Metro Transit Station and the Norwalk Station.

Submission 1407 Fred M. Gravett

1407-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1408 Robert Tashiro

1408-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1409 Ryan Moon

1409-1 The commenter's support for the Trench Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1409-2 See response to Comment 1409-1. The environmental impacts of each option and alternative were analyzed in Chapter 3 of the Draft EIR. See the Executive Summary in the Draft EIR for a summary of the impacts of each project option.

Submission 1410 Cynthia Angel

1410-1 The commenter's support for the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1411 Bob Habel

1411-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1412 Charlene Rhodus

1412-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1413 Michael Mahkorn

1413-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1414 Kirk Jensen

1414-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1415 Lonnie Nakasone

1415-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1415-2 As described in Section 3.9, Hazards and Hazardous Materials, of the Draft EIR, a Phase I Site Investigation was conducted for the length of the project to determine the presence of contaminated soils that may be disturbed by the project. As noted in Section 3.9-4.4 of the Draft EIR, Project Feature PF-HHM-3: Property Acquisition Phase II Site Investigation would require a Phase II Site Investigation to be conducted prior to construction during the preliminary engineering phase for sites that would be used for the project. If the Phase II Site Investigation concludes that a site to be acquired/utilized by the project is contaminated, Project Feature PF-HHM-3: Property Acquisition Phase II Site Investigation requires that remediation or corrective action (e.g., removal of contamination, in-situ treatment, capping) be conducted prior to or during construction in accordance with

applicable regulations. Additionally, Project Feature PF-HHM-5: Disposal of Groundwater would ensure that contaminated groundwater would be managed appropriately according to federal and state regulations.

Submission 1416 Christian Chlup

1416-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1417 Robin Eisenberg

1417-1 The commenter's support for the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. The project is proposed by Metro and not the City of Torrance. See MR-1: Selection of Alternatives.

Submission 1418 Daniel Evans

1418-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1419 Robert Feldman

1419-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1419-2 The commenter's support for the Metro ROW alignments is noted. All comments have been shared with the Metro Board for their consideration.

Submission 1420 Yogesh Patel

1420-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1421 Brandon Beers

1421-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1422 Lesli Curry

1422-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1423 Shatiana Bedgood

1423-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1424 Dave Sato

1424-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1425 Gary Hawkins

1425-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1425-2 The commenter expresses support for the Elevated/At-Grade Alignment over the Trench Option and Hawthorne Option, based on costs, noise, and convenience considerations. See response to Comment 1425-1.

Submission 1426 Simon Hsu

1426-1 The commenter's support for the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1427 Michael McGee

1427-1 The commenter's support for the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1427-2 A station option along Hawthorne Boulevard in Lawndale had been evaluated in the 2018 Supplemental Alternatives Analysis, but was eliminated from further consideration at the request of the City of Lawndale. The South Bay Galleria Station would provide access to the South Bay Galleria and shopping area adjacent to the station area.

Submission 1428 Wayne Chen

1428-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1429 K. Sinn

1429-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1429-2 The Trench and Hawthorne Options were studied in direct response to requests from local jurisdictions and the public to evaluate alternatives to the Metro ROW. The Draft EIR evaluates the environmental impacts of each alignment studied in accordance with CEQA. The Draft EIR does not evaluate costs or broader economic and social considerations, which are not required under CEQA.

However, those additional factors were considered by Metro outside of the EIR, as documented in public Metro Board reports published in September 2023 and April 2024. These reports, which are available on the project website, summarize the opportunities and challenges associated with each alignment. The Metro Board considered these factors, along with the environmental analysis in the Draft EIR and public feedback, in selecting the LPA in May 2024.

The Metro Board will consider the findings of the Final EIR, along with all public comments and community input received throughout the process, before making any final decision on the project.

Submission 1430 Adair Johnson

1430-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1431 Walt Lapovich

1431-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1432 Rajakumar Ganesan

1432-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1432-2 The commenter's support for an at-grade alignment within the Metro ROW due to cost and traffic concerns is noted. All comments have been shared with the Metro Board for their consideration.

Submission 1433 Angeline Diana Velu

1433-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1433-2 The commenter's support for the Elevated/At-Grade Alignment due to cost and traffic concerns is noted. All comments have been shared with the Metro Board for their consideration.

Submission 1434 Tim Mochizuki

1434-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1435 Roxanne Morrison

1435-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1436 Nick Morrison

1436-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1437 Sandy Kast

1437-1 The commenter's support for the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1438 Sam Lee

1438-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1438-2 The commenter's recommendation for Metro to select the most cost-efficient project is noted. All comments have been shared with the Metro Board for their consideration. Metro takes public safety very seriously. See MR-9: Light Rail Security.

Submission 1439 Erika Magana

1439-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1440 Ronald Cline

1440-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1441 Christopher J. Spitzer

1441-1 The commenter's support for the Trench Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1442 Janet Closs

1442-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1443 Dr. Eric Homier

1443-1 The commenter's support for the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1443-2 See response to Comment 1443-1. Metro understands concerns regarding property values. However, under CEQA, economic impacts such as changes in property values are not considered environmental impacts. The Draft EIR focuses on physical environmental impacts and measures to mitigate them, as required by CEQA. To address questions and concerns on property values, Metro has prepared more information. See MR-14: Property Values and Impacts to Businesses. Also see MR-10: Changes to Community Character and MR-16: Response to Lawndale and Redondo Beach Community Letter.

Submission 1444 Scott Robertson

1444-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1445 Franco Macchia

1445-1 The commenter's support for the Trench Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1445-2 The commenter's opposition to the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration.

Submission 1446 Anjali Bhardwaj

1446-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1446-2 Potential impacts associated with the Elevated/At-Grade Alignment are summarized in Chapter 4, Evaluation of Alternatives, of the Draft EIR. Before making a final determination on the project, the Metro Board will review the comments and responses included in the Final EIR and will consider multiple factors, including environmental impacts, benefits and costs. See MR-21: Cost Estimates and Schedule.

Submission 1447 Carol Gilles

1447-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1447-2 Metro does not collect data on Torrance Transit usage as Torrance Transit falls under the jurisdiction of the City of Torrance rather than Metro. For the light rail extension, the 2023 Ridership Summary Report, published alongside the Draft EIR, shows that the project is expected to generate between 11,500 to 15,600 daily transit trips (boardings). See MR-15: Metro Ridership Forecasting Methodology.

Submission 1448 Marcus

1448-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1449 Allison Madrid

1449-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1450 Benjamin Madrid

1450-1 The commenter's support for the Trench Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1450-2 The commenter's preference for both the light rail and freight rail tracks trenched is noted. All comments have been shared with the Metro Board for their consideration.

Submission 1451 Emilio Moyers

1451-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1452 Jim Steenhoek

1452-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1453 Huali Tian and Phillip Harris

1453-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1454 James Kinnings

1454-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1455 Bill Tymczyszyn

1455-1 The commenter's opposition to the project is noted. See MR-1: Selection of Alternatives. The 2023 Ridership Summary Report, published concurrently with the Draft EIR, shows that the project is expected to generate between 11,500 to 15,600 daily transit trips (boardings). See MR-15: Metro Ridership Forecasting Methodology.

Submission 1456 Stanley Paez

1456-1 The commenter's support for the Trench Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1457 Stanley Paez

1457-1 The commenter's support for the Trench Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1458 Marilyn Rafkin

1458-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1459 Bryon Sargent

1459-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1460 Louis Lansang

1460-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1461 Michele Smith

1461-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1461-2 The 2023 Ridership Summary Report, published concurrently with the Draft EIR, shows that the project is expected to generate between 11,500 to 15,600 daily transit trips (boardings). See MR-15: Metro Ridership Forecasting Methodology.

Submission 1462 Eileen Dann

1462-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1463 Cynthia Baran

1463-1 The commenter's support for the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1463-2 The commenter's opposition to the Metro ROW alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-10: Changes to Community Character.

Submission 1464 Darren Bracken

1464-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives. Metro is designing the terminus station at the Torrance Transit Center to allow the line to continue further south, should funding become available in the future. Potential extensions from the Torrance Transit Center to San Pedro, Long Beach, and the Los Angeles/Orange County line are included in the unfunded portion of the 2009 Metro Long Range Transportation Plan. Metro may consider these projects in the future, if additional funding becomes available.

Submission 1465 Cheryl Neese

1465-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1466 Ken Yang

1466-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1467 Johnny Rodriguez

1467-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1468 Grace Eze

1468-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1469 Debby Zagorin

1469-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1470 Marshall Holladay

1470-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1470-2 The commenter's support for a Metro ROW alignment is noted. All comments have been shared with the Metro Board for their consideration. Metro takes public safety very seriously. See MR-9: Light Rail Security and MR-10: Changes to Community Character.

Submission 1471 Kathryn Wathen

1471-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1471-2 Metro strives to complete projects on time and within estimated budgets. See MR-21: Cost Estimates and Schedule.

Submission 1472 U.A. Garred Sexton

1472-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1472-2 Metro strives to complete projects on time and within estimated budgets. See MR-21: Cost Estimates and Schedule.

Submission 1473 Erik Gara

1473-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1474 Norris Blake

1474-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1475 N.

1475-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1476 Victor Kiuhan

1476-1 The commenter's support for the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1476-2 Metro has worked diligently to develop feasible and effective mitigation measures to address the potentially significant impacts of the project. See MR-10: Changes to Community Character.

1476-3 The commenter's support for the Hawthorne Option and secondary support for the Trench Option is noted. All comments have been shared with the Metro Board for their consideration. See responses to Comments 1476-1 and 1476-2.

1476-4 See response to Comment 1476-3. Previous studies also examined routes to Del Amo Mall, but those options were screened out as they did not provide ridership benefits.

Submission 1477 Gary Sisson

1477-1 The commenter's support for the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1477-2 As discussed in Section 3.2, Land Use and Planning, of the Draft EIR, the Metro ROW alignments would not physically divide a community because residents would still be able to cross the Metro ROW at all existing designated rail crossings located at Inglewood Avenue, Manhattan Beach Boulevard, 159th, 160th, 161st, 162nd, 170th, and 182nd Streets. Land uses would not be altered so as to isolate anyone part of the community from the other.

Submission 1478 Cynthia Benon

1478-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1479 Dan

1479-1 The commenter's opposition to light rail in Torrance is noted. See MR-1: Selection of Alternatives. As explained on page 3.1-3 of the Draft EIR, traffic delay (often measured by

level of service) is no longer permissible as a CEQA impact criterion and therefore this analysis and related topics are not addressed in the Draft EIR. See MR-11: Traffic Delay and Level-of-Service and the 2023 Transportation Detail Report, published concurrently with the Draft EIR, for a discussion of traffic conditions. The LPA and Trench Option light rail guideway is fully grade-separated from all roadways, and would not increase vehicle delay compared to existing conditions. Metro takes public safety very seriously. See MR-9: Light Rail Security and MR-18: Homelessness.

Submission 1480 Chris Jenne

1480-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1481 Steve

1481-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1482 Huong Do

1482-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1483 Kazuhiro Tominaga

1483-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1484 Don Hanson

1484-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1485 Mohammad Sarfaraz Siddiqui

1485-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1485-2 The commenter's support for the Metro ROW alignment is noted. All comments have been shared with the Metro Board for their consideration.

Submission 1486 Dawn Ng

1486-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1487 William M. Weed

1487-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1488 Denise Weed

1488-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1489 Thomas N. Bailey

1489-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1490 Zubiar

1490-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1491 Evelyn Kelly

1491-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1492 Wayne Nakatsu

1492-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1493 Ron Kawasaki

1493-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1494 Isabel Balboa

1494-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives. Metro has worked diligently to develop feasible and effective mitigation measures to address the potentially significant impacts of the project.

Submission 1495 Lee Huniu

1495-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1496 Derrick Yamauchi

1496-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1497 Diana Yamauchi

1497-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1498 Gary Motowaki

1498-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1499 Michael Hikido

1499-1 The commenter's opposition to the light rail in Torrance is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1499-2 Metro takes public safety very seriously. See MR-9: Light Rail Security.

1499-3 Metro is committed to integrating safety into all Metro rail operations. The project would comply with relevant safety standards, including the California Manual on Uniform Traffic Control Devices, the California Department of Transportation Highway Design Manual, the Americans with Disabilities Act, and Metro's Grade Crossing Safety Policy. The LPA, Trench Option, and Hawthorne Option light rail guideway would be fully grade-separated from all roadways, thereby avoiding potential conflicts with school-age pedestrians and cyclists. See MR-8: Light Rail and Freight Train Safety.

1499-4 See response to Comment 1499-1.

1499-5 The commenter's preference for a bus lane is noted. All comments have been shared with the Metro Board for their consideration. A High-Frequency Bus Alternative is evaluated in Chapter 4, Evaluation of Alternatives, of the Draft EIR.

Submission 1500 Jaycob

1500-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1501 John V. Shaw

1501-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1502 Cecelia Ruiz

1502-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1503 Lauren Lopez

1503-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1504 Barbara Asada

1504-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1504-2 The project has secured funding from Measure R (2008), Measure M (2016), TIRCP Grant from the California State Transportation Agency Transit and Intercity Rail Capital Program, and 3% match contributions from local jurisdictions. Metro is committed to the responsible use of public funds and to managing project costs efficiently, while continuing to pursue additional funding sources to support project delivery. See MR-21: Cost Estimates and Schedule.

Submission 1505 Todd Zylman

1505-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1506 Dweejal Torado

1506-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1506-2 The proposed stations are located at the Redondo Beach Transit Center or South Bay Galleria and Torrance Transit Center. The proposed stations were selected based on proximity to activity centers, ridership potential, ability to provide seamless and efficient service, and physical fit. Metro does not have plans to add another station at this time.

Submission 1507 Dorota Wiercinska

1507-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1508 Sean O'Connell

1508-1 The commenter's support for the Trench Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1509 Linh Tu

1509-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1509-2 Metro strives to complete projects on time and within estimated budgets. See MR-21: Cost Estimates and Schedule.

Submission 1510 Judy Chai

1510-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1511 Pei Shao

1511-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1512 Traci Barr

1512-1 The commenter's opposition to the project is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1513 Michael Van Dyke

1513-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1514 Amber

1514-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1515 Benjamin

1515-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1516 Anna Silhavy

1516-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1517 Mika Yukimura

1517-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1517-2 As described in Section 3.10, Hydrology and Water Quality, of the Draft EIR, subsections 3.10-4.4 and 3.10-4.6, none of the alignment options evaluated would alter drainage patterns in manner that could result in flooding or redirect flood flows. Each alignment option would include integrated stormwater management systems designed to address changes in impervious surfaces and ensure compliance with applicable stormwater management regulations. These systems must be designed to accommodate stormwater runoff volumes associated with current and projected conditions, including the potential for more severe weather patterns. Therefore, impacts related to flooding or redirected flood flows would be less than significant for each alignment option. As discussed in Chapter 4, Evaluation of Alternatives, of the Draft EIR, Subsection 4.5-3.10, the hydrology and water quality impacts of the LPA would be similar to those of the Trench Option and would be less than significant.

Submission 1518 Mauricio Padilla

1518-1 This commenter's opposition to light rail in the South Bay but a preference for the Elevated/At-Grade Alignment is noted. See MR-1: Selection of Alternatives. Metro takes public safety very seriously. See MR-9: Light Rail Security and MR-18: Homelessness.

Submission 1519 Sandhya Pathak

1519-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1520 Monique Sharf

1520-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1521 Nicolas Cerveaux

1521-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1522 Ray Licon

1522-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1523 John Alter

1523-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1524 Chris Alter

1524-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1525 Myra Masuyama

1525-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1526 Sylvia Wagner

1526-1 The commenter's support for the Trench Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1527 Tina Wu

1527-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1528 Nancy Carr

1528-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1529 Natalie Brecher

1529-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1530 Sandeep Pangala

1530-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1531 Gina Gualtiere

1531-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1532 Russel Lear

1532-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1533 Michael Hering

1533-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1533-2 The commenter's opposition to the project and support for protected bike lanes is noted. The project would provide benefits to Torrance. The project would connect to the new regional bus transit center in Torrance. See MR-17: Response to Torrance Community Letter and MR-19: Project Benefits. The 2023 Ridership Summary Report, published concurrently with the Draft EIR, shows that the project is expected to generate between 11,500 to 15,600 daily transit trips (boardings). See MR-15: Metro Ridership Forecasting Methodology. See response to Comment 1533-1.

Submission 1534 Nicolas M. Garcia

1534-1 The commenter's support for the Elevated/At-Grade Alignment is noted. See MR-1: Selection of Alternatives. Comments related to increasing development density along the project should be directed to the city with jurisdiction over the land use zoning.

Submission 1535 Clifford Yamamoto

1535-1 The commenter's support for the Trench Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1536 Kathy Yandell

1536-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1537 Vicki Momary

1537-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1538 Michael Bawolski

1538-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1539 Bob D. Turnbull

1539-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1539-2 See response to Comment 1539-1.

Submission 1540 Fred Deninger

1540-1 The commenter's support for the Trench Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1541 David W. Tressel

1541-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1542 Marsha Kraus

1542-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1543 Cyndi and Michael Runyan

1543-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1544 Jeffery Ly

1544-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1545 Karyn Campbell

1545-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1546 Michael Navarrete

1546-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1546-2 The environmental impacts of each project option and alternative are analyzed in Chapter 3, Affected Environment and Environmental Impact Analyses, of the Draft EIR. Metro has worked diligently to develop feasible and effective mitigation measures to address the potentially significant impacts of the project.

Submission 1547 Onofre Ramirez

1547-1 The commenter's support for the Trench Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1548 John

1548-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1549 Kristina Nakao

1549-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1550 Jean Garcia-Gomez

1550-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1551 Ingrid Aquino-Gomez

1551-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1552 Christopher Olsen

1552-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1553 Eric Loew

1553-1 The commenter's support for the Trench Option. See MR-1: Selection of Alternatives.

Submission 1554 Glenn Murakami

1554-1 The commenter's support for the Trench Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1555 Dory Ann Volpe

1555-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1556 Diana

1556-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1557 Jeff Pierce

1557-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1558 Sharon Obatake

1558-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1559 Steve Harmon

1559-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1560 Lilian Harmon

1560-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1561 Jonathan Harmon

1561-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1562 Wendy Ito

1562-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1563 Eric McLeod

1563-1 The commenter's support for the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1564 Yuji Kato

1564-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1565 Eric Hambly

1565-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1565-2 The commenter's opposition to the project is noted, along with a preference for the Elevated/At-Grade Alignment.

Submission 1566 Alexis Hambly

1566-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1566-2 The commenter's opposition to the project is noted. All comments have been shared with the Metro Board for their consideration.

Submission 1567 Giselle L. Henry

1567-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1568 Alison & Michael Kasterko

1568-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1568-2 See response to Comment 1568-1.

Submission 1569 Gary Nakamura

1569-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1570 Robert Munoz

1570-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1571 Hakjoon Song

1571-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1572 Jongmi Kim

1572-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1573 Peter Farb

1573-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1573-2 The project has been designed to improve overall connectivity, including safe and convenient access to the Torrance Transit Center for pedestrians and cyclists. The project's design has taken accessibility into account, and Metro will continue to assess opportunities for further enhancing connections as the design progresses.

Submission 1574 Rod Royales

1574-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1575 Dena Bialick

1575-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1575-2 As explained on page 3.1-3 of the Draft EIR, traffic delay (often measured by level of service) is no longer permissible as a CEQA impact criterion and therefore this analysis and related topics are not addressed in the Draft EIR. See MR-11: Traffic Delay and Level-of-Service and the 2023 Transportation Detail Report, published concurrently with the Draft EIR, for a discussion of traffic conditions. Neither the LPA nor the Trench Option would increase vehicle delay compared to existing conditions, as both alignments fully grade separate the light rail from all roadways and do not require modifications to existing intersections or traffic lanes. Regarding access to the Torrance Transit Center, as described in Chapter 2, Project Description, of the Draft EIR, the project would provide a direct connection. Cities with a light rail station are required to make a local contribution to funding through the Measure M 3% Local Match as part of the Los Angeles County Traffic Improvement Plan Ordinance (#16-01).

Submission 1576 C.B.

1576-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1576-2 The 2023 Ridership Summary Report, published concurrently with the Draft EIR, shows that the project is expected to generate between 11,500 to 15,600 daily transit trips (boardings). See MR-15: Metro Ridership Forecasting Methodology.

Submission 1577 Krishna Kallury

1577-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1578 Rebecca Ward

1578-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1578-2 Metro recognizes the importance of minimizing impacts from light rail and relocated freight operations. Section 3.6, Noise and Vibration, of the Draft EIR, provides a detailed noise analysis and identifies mitigation measures to reduce significant noise impacts. See MR-3: Operational Noise Project Features and Mitigation Measures.

Submission 1579 Martin Gutierrez

1579-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1580 Brian Gillman

1580-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1581 Jeff Etheringtin

1581-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1581-2 Metro takes public safety very seriously. See MR-9: Light Rail Security and MR-18: Homelessness.

Submission 1582 Angela Stark

1582-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1583 Steven Birenbaum

1583-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1584 Eileen

1584-1 The commenter's opposition to the project is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1585 Ryan

1585-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1585-2 See the Executive Summary of the Draft EIR for an overview of the analysis and a description of each option. See MR-19: Project Benefits.

Submission 1586 Mark Kohagura

1586-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1587 Andrea Korntheuer

1587-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1588 Dori

1588-1 The commenter's opposition to the project is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1589 Michael Powe & Barbara Dyer

1589-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1589-2 Section 3.1, Transportation, of the Draft EIR analyzes the project's transportation impacts. See MR-11: Traffic Delay and Level-of-Service for information addressing traffic concerns. Neither the LPA nor the Trench Option would increase vehicle delay compared to existing conditions, as both alignments fully grade separate the light rail from all roadways and do not require modifications to existing intersections or traffic lanes.

Submission 1590 Kelly L. Dewing Wedel

1590-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1590-2 The comment reiterates support for the Elevated/At-Grade Alignment due to cost considerations. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1591 Fernando

1591-1 The commenter's support for the Trench Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1591-2 Metro is committed to integrating safety into all Metro rail operations. The project would comply with relevant safety standards, including the California Manual on Uniform Traffic Control Devices, the California Department of Transportation Highway Design Manual, the Americans with Disabilities Act, and Metro's Grade Crossing Safety Policy. The LPA, Trench Option, and Hawthorne Option would be fully grade-separated from all roadways. See MR-8: Light Rail and Freight Train Safety.

Submission 1592 Jafet Rosado De Van

1592-1 The commenter's support for the Trench Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1593 Carolina Olaya

1593-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1594 Maria Brown

1594-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1595 Steven Rosales

1595-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1596 Kevin Knapp

1596-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1597 Michele Starkey

1597-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1598 Jackie

1598-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1598-2 Metro does not have authority to plan for green space within the local jurisdictions. However, as part of the project, Metro would include multi-use paths along the Metro ROW where there is space (between 159th Street and Condon Avenue and between Grant Avenue and 182nd Street, to create recreational space for walking and cycling in the neighborhoods. As explained on page 3.1-3 of the Draft EIR, traffic delay (often measured by level of service) is no longer permissible as a CEQA impact criterion and therefore this analysis and related topics are not addressed in the Draft EIR. See MR-11: Traffic Delay and Level-of-Service and the 2023 Transportation Detail Report, published concurrently with the Draft EIR, for a discussion of traffic conditions. The LPA and Trench Option light rail guideway is fully grade-separated from all roadways, and would not increase vehicle delay compared to existing conditions, nor require modifications to existing traffic lanes.

Submission 1599 Paul

1599-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1599-2 Metro takes public safety very seriously. See MR-9: Light Rail Security.

Submission 1600 Kathleen Franczak

1600-1 The commenter's support for the Trench Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1601 Jenny Lee

1601-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1602 Nitin Dua

1602-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1603 Nolan Miya

1603-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1603-2 The comment reiterates support for the Elevated/At-Grade Alignment as the economical choice.

Submission 1604 Thomas W. Broyles

1604-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1605 Nes Banta

1605-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1606 Michael Flynn

1606-1 The commenter's support for the Trench Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1606-2 Metro is committed to integrating safety into all Metro rail operations. The project would comply with relevant safety standards, including the California Manual on Uniform Traffic Control Devices, the California Department of Transportation Highway Design Manual, the Americans with Disabilities Act, and Metro's Grade Crossing Safety Policy. The only light rail alignment option studied in the Draft EIR is the Elevated/At-Grade Alignment. The LPA, Trench Option, and Hawthorne Option would fully grade separate the light rail from all roadways. See MR-8: Light Rail and Freight Train Safety.

Submission 1607 Adam Reed

1607-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1608 Brandon Foster

1608-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1608-2 All light rail alternatives and options, except the Elevated/At-Grade Alignment, would be fully grade-separated, meaning that the light rail would be separated from vehicular and pedestrian crossings. For the at-grade crossings proposed under the Elevated/At-Grade Alignment, the light rail would have signal priority.

Submission 1609 Matthew Lin

1609-1 The commenter's support for the Trench Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1610 Steven Deuel

1610-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1611 Kyle Richardson

1611-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1611-2 See response to comment 1611-1.

1611-3 The comment reiterates support for locating the alignment in the Metro ROW and connecting to the new Redondo Beach Transit. The comment also emphasizes the importance of service frequency and clear wayfinding to support a successful transit system.

1611-4 The Redondo Beach Transit Center Station would be fully Americans with Disabilities Act (ADA) compliant, regardless of alignment. The station would include features such as pedestrian pathways, ramps, and stairs to ensure safe and convenient access for all users.

1611-5 While this project would include measures to address noise impacts specifically associated with the light rail transit line and relocated freight operations, addressing noise from the Interstate 405 Freeway is outside the scope of this project because it is not part of the proposed project. For freight rail noise, the project includes Project Feature PF-NV-1: Quiet Zone Equipment Installation and Mitigation Measure MM-NOI-4: Quiet Zone Establishment to reduce freight noise impacts by eliminating the need for the routine sounding of freight train horns. See MR-3: Operational Noise Project Features and Mitigation Measures.

1611-6 Metro has proposed two multi-use recreational paths, one between 159th Street and 170th Street and another between Grant Avenue and 182nd Street. The multi-use paths follow the route of the Metro ROW, which is straight rather than curved.

1611-7 The LPA, Trench Option, and Hawthorne Option would fully grade separate the light rail from all roadways, meaning, under those alignment options, there would be no conflict between light rail and vehicular traffic at intersections. As a result, raised pedestrian crossings would not be necessary in areas where the light rail crosses for those alignment options. However, pedestrian enhancements would be included at freight crossings for the Metro ROW alignments, and along Hawthorne Boulevard for the Hawthorne Option to improve safety and accessibility. The Elevated/At-Grade Alignment would also include pedestrian enhancements at the two at-grade crossings at 170th and 182nd Streets. Refer to Chapter 2, Description of the Locally Preferred Alternative, of the Final EIR, for more information.

1611-8 As described in Section 3.10, Hydrology and Water Quality, of the Draft EIR, landscaping within the project footprint would meet all relevant regulations, including stormwater retention and infiltration.

1611-9 See MR-13: Soil Stability and Sinkholes and MR-7: Utility Relocation and Hazardous Materials Safety. Pursuant to Project Feature PF-GEO-1: Metro Geotechnical Design Standards, engineering designs, including retaining walls and track support structures, would comply with Metro's safety and engineering standards, and final design would address stability and safety considerations.

Submission 1612 Donald Isozaki

1612-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1613 Jon Robertson

1613-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1614 Garrick McLaughlin

1614-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1615 Ron Carroll

1615-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1616 Al Stahl

1616-1 The commenter's support for the Trench Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1616-2 As explained on page 3.1-3 of the Draft EIR, traffic delay (often measured by level of service) is no longer permissible as a CEQA impact criterion and therefore this analysis and related topics are not addressed in the Draft EIR. See MR-11: Traffic Delay and Level-of-Service and the 2023 Transportation Detail Report, published concurrently with the Draft EIR, for a discussion of traffic conditions. None of the alignment options would increase vehicle miles traveled.

Submission 1617 Mark Kimura

1617-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1618 Lia

1618-1 The commenter's support for the Trench Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1618-2 Metro is committed to integrating safety into all Metro rail operations. The project would comply with relevant safety standards, including the California Manual on Uniform Traffic Control Devices, the California Department of Transportation Highway Design Manual, the Americans with Disabilities Act, and Metro's Grade Crossing Safety Policy. The LPA, Trench Option, and Hawthorne Option would fully grade separate the light rail from all roadways.

Submission 1619 Richard Reinhardt

1619-1 The No Project Alternative was analyzed in the Draft EIR as required by CEQA. As concluded in the Draft EIR, the No Project Alternative would have significant and unavoidable impacts related to transportation, land use and planning, air quality and greenhouse gas emissions, while it would avoid the significant and unavoidable noise and vibration impacts of the project and options. The Metro Board does not have to approve the project and retains the authority to approve the No Project Alternative. This decision will be made after a thorough review of the environmental analysis contained in the Draft and Final EIR and community input.

Current Metro line ridership information can be found at the website: https://opa.metro.net/MetroRidership/. The 2023 Ridership Summary Report, published concurrently with the Draft EIR, shows that the project is expected to generate between 11,500 to 15,600 daily transit trips (boardings). See MR-15: Metro Ridership Forecasting Methodology.

As explained on page 3.1-3 of the Draft EIR, traffic delay (often measured by level of service) is no longer permissible as a CEQA impact criterion and therefore this analysis and related topics are not addressed in the Draft EIR. See MR-11: Traffic Delay and Level-of-Service and the 2023 Transportation Detail Report, published concurrently with the Draft EIR, for a discussion of traffic conditions. Neither the LPA nor the Trench Option would increase vehicle delay compared to existing conditions, as both alignments fully grade separate the

light rail from all roadways and do not require modifications to existing intersections or traffic lanes.

Metro takes public safety very seriously. See MR-9: Light Rail Security.

Submission 1620 George Pimentel

1620-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1620-2 The Metro Board has selected an LPA for purposes of the Final EIR, although it has not yet approved the project, including any of the options and alternatives evaluated in the Draft EIR. The final decision will be made after the Metro Board reviews the Final EIR, which will include responses to all public comments, including those of the commenter.

Submission 1621 James Hallman

1621-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1622 Annette Porter

1622-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1623 Patrick Porter

1623-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1624 Robert Suyehara

1624-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1624-2 Metro strives to complete projects on time and within estimated budgets. See MR-21: Cost Estimates and Schedule. Metro has worked diligently to develop feasible and effective mitigation measures to address the potentially significant impacts of the project.

Submission 1625 Norig B. Karakashian

1625-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1626 James Thistle

1626-1 The commenter's support for the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1626-2 The 2023 Ridership Summary Report, published concurrently with the Draft EIR, shows that the project is expected to generate between 11,500 to 15,600 daily transit trips (boardings). See MR-15: Metro Ridership Forecasting Methodology.

Submission 1627 Sandra Radford

1627-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1627-2 The commenter's support for the Metro ROW alignment and opposition to the Hawthorne Option is noted. Section 3.6, Noise and Vibration, of the Draft EIR, provides a detailed noise analysis and identifies mitigation measures to reduce significant noise impacts. See MR-3: Operational Noise Project Features and Mitigation Measures. Relative to the Elevated/At-Grade Alignment, the LPA and Trench Option significantly reduce noise impact to residence near the Metro ROW because they eliminate the at-grade crossings at 170th and 182nd Streets. The Hawthorne Option is also fully grade-separated. By grade-separating the light rail from all roadways, the LPA, Trench Option, and Hawthorne Option remove the need for audible warning at light rail crossings, such as routine train horns and crossing bells.

Submission 1628 Madu Chanani

1628-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1629 Katerina Yu

1629-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1630 Adeline Chappell

1630-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1631 Ben Gunter

1631-1 The commenter's support for the Trench Option is noted. See MR-1: Selection of Alternatives. Comments related to Torrance Transit should be directed to the City of Torrance.

Submission 1632 Yacgley Valdes

1632-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1633 Current Resident

1633-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1634 Seema S. Turner

1634-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1635 Amy

1635-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1636 Kimberly Wimmer

1636-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1636-2 The commenter's secondary support for the Trench Option is noted. All comments have been shared with the Metro Board for their consideration.

Submission 1637 Joel Carlson

1637-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1638 Drew Hettinger

1638-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1639 Marlena Allen

1639-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1640 Lisa DiFranco

1640-1 The commenter's opposition to the project has been noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

As explained on page 3.1-3 of the Draft EIR, traffic delay (often measured by level of service) is no longer permissible as a CEQA impact criterion and therefore this analysis and related topics are not addressed in the Draft EIR. See MR-11: Traffic Delay and Level-of-Service and the 2023 Transportation Detail Report, published concurrently with the Draft EIR, for a discussion of traffic conditions. The potential for traffic disruption from at-grade light rail crossings would not occur under the LPA, Trench Option or Hawthorne Option, as all of these alignment options fully grade separate the light rail from all roadways.

Chapter 3, Section 3.4, Air Quality, of the Draft EIR, analyzes air quality impacts and found no significant impacts during operations. Regarding vehicle idling, the primary pollutant of concern related to idling is carbon monoxide (CO). However, CO concentrations in the South Coast Air Basin have been well below federal and state standards for over two decades and the region has been designated as attainment/maintenance of the CO standards since 2007. Even with potential for localized vehicles idling near stations or drop-off areas, or at grade-crossings under the Elevated/At-Grade Alignment, the project would reduce vehicle miles traveled (VMT), which, in turn reduces total emissions. As a result, any localized idling effects are not anticipated to outweigh the project's broader air quality and mobility benefits.

Submission 1641 J. Imai

1641-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1642 Max Huang

1642-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1643 Andrew Zakim

1643-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1644 David Gutierrez

1644-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1645 Geri Harmon

1645-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1645-2 Construction traffic would be managed through a Construction Traffic Management Plan (CTMP), required by Project Feature PF-T-1: Construction Traffic Management Plan, described in Section 3.1, Transportation. That said, as explained on page 3.1-3 of the Draft EIR, traffic delay (often measured by level of service) is no longer permissible as a CEQA impact criterion and therefore this analysis and related topics are not addressed in the Draft EIR. See MR-11: Traffic Delay and Level-of-Service and the 2023 Transportation Detail Report, published concurrently with the Draft EIR, for a discussion of traffic conditions. Neither the LPA nor the Trench Option would increase vehicle delay compared to existing conditions, as both alignments fully grade separate the light rail from all roadways and do not require modifications to existing intersections or traffic lanes.

Although, as described in Section 3.6, Noise and Vibration, of the Draft EIR, the project would result in significant and unavoidable noise impacts during construction for all alignment options, construction noise would be managed pursuant to Mitigation Measure MM-NOI-1: Noise Control Plan, which establishes performance standards based on the Federal Transportation Administration's (FTA) 1-hour Leq criteria and requires preparation of a site-specific plan, continuous noise monitoring, and responsive actions to reduce noise to the maximum extent feasible. However, because construction conditions can vary and some activities may temporarily exceed those thresholds, the impact is conservatively considered significant and unavoidable even with mitigation. With respect to long-term operational noise, the Draft EIR finds that only the Elevated/At-Grade Alignment would result in a significant and unavoidable operational noise impact. Operational noise impacts of the Trench Option, Hawthorne Option, and the LPA would be less than significant with mitigation.

Submission 1646 Tanya Sue Cyre

1646-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1647 Sarah Huante-Bimat

1647-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1647-2 Metro strives to complete projects on time and within estimated budgets. See MR-21: Cost Estimates and Schedule. Metro has worked diligently to develop feasible and effective mitigation measures to address the potentially significant impacts of the project.

Submission 1648 Ed Tobias

1648-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1649 Jan Tobias

1649-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1650 Isabel Torres

1650-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1651 Paul Hutchins

1651-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1652 John Phillip Van Deusen

1652-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1652-2 Metro is designing the terminus station at the Torrance Transit Center to allow the line to continue further south, should funding become available in the future. Potential extensions from the Torrance Transit Center to San Pedro, Long Beach, and the Los Angeles/Orange County line are included in the unfunded portion of the 2009 Metro Long Range Transportation Plan. Metro may consider these projects in the future, if additional funding becomes available.

Submission 1653 Karne Holley

1653-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1654 Lisa Li

1654-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1655 Lois & Ron Jones

1655-1 The commenter's support for the Elevated/At-Grade Alignment is noted. See MR-1: Selection of Alternatives. The project would provide benefits to Torrance. The project would connect to the new regional bus transit center in Torrance. See MR-17: Response to Torrance Community Letter and MR-19: Project Benefits. The project has secured funding from Measure R (2008), Measure M (2016), TIRCP Grant from the California State Transportation Agency Transit and Intercity Rail Capital Program, and 3% match contributions from local jurisdictions. Metro is committed to the responsible use of public funds and to managing project costs efficiently, while continuing to pursue additional funding sources to support project delivery. See MR-21: Cost Estimates and Schedule.

Submission 1656 Phil Hong

1656-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1657 Randy Garrett

1657-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1658 Maya Yanez

1658-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1659 Judith Gerber

1659-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1660 Michael and Nancy Bergan

1660-1 The commenter's support for the Trench Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1661 Richard Leroy Lujan

1661-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1662 Stephanie Seki

1662-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1663 Andrew Maxwell

1663-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1663-2 The comment reiterates support for the Elevated/At-Grade Alignment despite noise impacts due to schedule and cost. Metro has worked diligently to develop feasible and effective mitigation measures to address the potentially significant impacts of the project, including noise.

Submission 1664 Leah Glavan

1664-1 The commenter's support for the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives. Similar to the Hawthorne Option, the LPA and Trench Option would fully grade separate the light rail from all roadways, thereby avoiding potential conflicts with pedestrians.

Submission 1665 Jawad Jilani

1665-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1666 Nancy Gutierrez

1666-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1667 Pirza Castro

1667-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1668 Chirstos Sbarounis

1668-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1668-2 The proposed stations are located at the Redondo Beach Transit Center or South Bay Galleria and Torrance Transit Center. The proposed stations were selected based on ridership potential, ability to provide seamless and efficient service, physical fit, and community impacts. Metro does not have plans to add another station at this time.

Submission 1669 Jonathan Turcios

1669-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1670 Sumit Kalra

1670-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1671 Deborah Wearn

1671-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1671-2 The comment reiterates support for the Elevated/At-Grade Alignment due to avoiding delays and incremental funding.

Submission 1672 Mitch Koch

1672-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1673 Steven Dillow

1673-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives. The commenter also notes that the Elevated/At-Grade Alignment is the most cost-effective method. See MR-21: Cost Estimates and Schedule.

Submission 1674 DarLynn Nemitz

1674-1 The commenter's support for the Trench Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1674-2 Regarding earthquake safety, as described in Section 3.8, Geology, Soils and Paleontological Resources, of the Draft EIR, in accordance with Project Feature PF-GEO-1: Metro Geotechnical Design Standards, all elements of the project would be designed and constructed in compliance with Metro's geotechnical and seismic design criteria to ensure seismic resistance and stability. In addition, the Metro Rail Design Criteria and associated Metro seismic stability and safety guidelines provide specific requirements to prevent structural failure and protect public safety during seismic events.

Submission 1675 Jay Kim

1675-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1675-2 The comment reiterates support for the Elevated/At-Grade Alignment.

Submission 1676 Erik Aguillon

1676-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1677 Scott Fukuda

1677-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1678 Connie Noehren

1678-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1679 Libra Washington

1679-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1680 Lily Lau

1680-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1681 Ana Sorto

1681-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1681-2 Metro is committed to engaging communities as part of the project development process to inform design and decision-making. Metro collected public comments as part of the Draft EIR public comment process and shared summaries of public input with the Metro Board. Before making a final determination on the project, the Metro Board will review the comments and responses included in the Final EIR and will consider multiple factors, including environmental impacts, benefits, and costs.

Submission 1682 Badrinath Ramamoorthy

1682-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1683 Yi Chen Pao

1683-1 The commenter's support for the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1683-2 The commenter correctly notes that the Elevated/At-Grade Alignment includes grade crossings. The LPA and Trench Option light rail guideway is fully grade-separated from all roadways, and would not increase vehicle delay compared to existing conditions.

Submission 1684 Estela Lopez

1684-1 The commenter's preference for enhanced regional bus service is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives. A High-Frequency Bus Alternative on local arterials is discussed in Chapter 4, Evaluation of Alternatives, of the Draft EIR. Metro takes public safety very seriously. See MR-9: Light Rail Security.

Submission 1685 Alissa Pappadake

1685-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1685-2 See response to Comment 1685-1.

Submission 1686 Jeff Hovsepian

1686-1 The commenter's support for the Elevated/At-Grade Alignment, Hawthorne Option, and Trench Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1687 Emanuel Rodriguez

1687-1 The commenter's support for the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1687-2 All light rail options and alternatives evaluated in the Draft EIR have two proposed stations: one in Redondo Beach and one in Torrance adjacent to the Torrance Transit Center. Alignments that use the Metro ROW stop at the Redondo Beach Transit Center, adjacent to and west of the South Bay Galleria. The alignment that uses the Hawthorne Option stops on Hawthorne in front of and east of the South Bay Galleria.

Submission 1688 Kathy Miya

1688-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1689 Ben Nye

1689-1 The commenter's support for the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1689-2 The commenter's opposition to the Trench Option is noted. All comments have been shared with the Metro Board for their consideration.

Submission 1690 Layne Sakamoto

1690-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1691 Jose Dennis Alabaso

1691-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives and MR-21: Cost Estimates and Schedule.

Submission 1692 Molly

1692-1 The commenter's opposition to the light rail in Torrance is noted. All comments have been shared with the Metro Board for their consideration. Metro takes public safety very seriously. See MR-9: Light Rail Security and MR-18: Homelessness.

Submission 1693 Matthew J. Davis

1693-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1693-2 Metro takes public safety very seriously. See MR-9: Light Rail Security.

Submission 1694 Jon Robertson

1694-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1694-2 The commenter's support for public transit in Torrance is noted. All comments have been shared with the Metro Board for their consideration.

Submission 1695 Michelle

1695-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1695-2 The commenter's opposition to the project is noted. All comments have been shared with the Metro Board for their consideration. Metro takes public safety very seriously. See MR-9: Light Rail Security.

Submission 1696 Esther

1696-1 The commenter's support for the Trench Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1697 Patrick Llorens

1697-1 The commenter's support for the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1698 James Kotekci

1698-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1699 Mary Kotekci

1699-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1700 Karen Blanchard

1700-1 The commenter's support for the Metro ROW alignment, Hawthorne Option, and Trench Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1701 Miguel A. Perez

1701-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1701-2 See response to Comment 1701-1.

Submission 1702 Michael Guzman

1702-1 The commenter's support for the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1703 Fred Mosley

1703-1 The commenter's opposition to the project is noted. The 2023 Ridership Summary Report, published concurrently with the Draft EIR, shows that the project is expected to generate between 11,500 to 15,600 daily transit trips (boardings). See MR-15: Metro Ridership Forecasting Methodology and MR-19: Project Benefits. Metro takes public safety very seriously. See MR-9: Light Rail Security.

Submission 1704 Richard Rodriguez

1704-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1704-2 Metro strives to complete projects on time and within estimated budgets. See MR-21: Cost Estimates and Schedule. The intent of the project is to provide an alternative to driving which would reduce the likelihood of future increases in traffic. See MR-11: Traffic Delay and Level-of-Service and the 2023 Transportation Detail Report, published concurrently with the Draft EIR, for a discussion of traffic conditions. The Draft EIR focuses on physical environmental impacts and measures to mitigate them, as required by CEQA. However, Metro's goal is to help businesses continue to operate throughout construction and post-construction.

Submission 1705 Maria Gordon

1705-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1705-2 The project would provide an alternative to driving which would reduce the likelihood of future increases in traffic. See MR-11: Traffic Delay and Level-of-Service and the 2023 Transportation Detail Report, published concurrently with the Draft EIR, for discussion on traffic conditions. The 2023 Ridership Summary Report, published concurrently with the Draft EIR, shows that the project is expected to generate between 11,500 to 15,600 daily transit trips (boardings). See MR-15: Metro Ridership Forecasting Methodology and MR-19: Project Benefits. Metro takes public safety very seriously. See MR-9: Light Rail Security.

Submission 1706 Constance Reynolds

1706-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1707 Joseph Yamashiro

1707-1 The commenter's support for the Trench Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1707-2 Like the Trench Option, the LPA fully grade separates the light rail from all roadways, as does the Hawthorne Option. See response to Comment 1707-1 and MR-11: Traffic Delay and Level-of-Service.

Submission 1708 Lisa Scherer

1708-1 The commenter's support for the Trench Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1709 Carlos Delgado

1709-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1709-2 Metro takes public safety very seriously. See MR-9: Light Rail Security.

Submission 1710 Ryan Shiroma

1710-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1711 Tony & Karen Herrada

1711-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1711-2 The 2023 Ridership Summary Report, published concurrently with the Draft EIR, shows that the project is expected to generate between 11,500 to 15,600 daily transit trips (boardings). See MR-15: Metro Ridership Forecasting Methodology and MR-19: Project Benefits. A High-Frequency Bus Alternative on local arterials is evaluated in Chapter 4, Evaluation of Alternatives, of the Draft EIR. Metro takes public safety very seriously. See MR-9: Light Rail Security. See MR-15: Metro Ridership Forecasting Methodology for more information regarding ridership trends.

Submission 1712 Katie Pandolfo

1712-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1713 Graham DesErmia

1713-1 The commenter's support for the Trench Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1714 Trang Le

1714-1 The commenter's support for the Trench Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1715 Gianna Valenzuela

1715-1 The commenter's support for the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1715-2 The commenter's opinion that the additional cost of the Hawthorne Option is worth the ability to keep streets available for cars is noted. All comments have been shared with the Metro Board for their consideration.

Submission 1716 Carol Erickson

1716-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1716-2 The commenter's primary support for the Elevated/At-Grade Alignment and secondary support for the Hawthorne Option is noted. Metro strives to complete projects on time and within estimated budgets. See MR-21: Cost Estimates and Schedule.

Submission 1717 Brad Aniya

1717-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1717-2 The commenter's support for light rail is noted. All light rail options and alternatives analyzed in the Draft EIR provide a direct connection to the LAX/Metro Transit Center. When the project opens, it would operate as part of the K Line, traveling north-south between the Expo/Crenshaw Station and the proposed station at Torrance. It would connect to the LAX/Metro Transit Station, providing service to LAX. The C (Green) Line currently travels east/west between the LAX/Metro Transit Station and the Norwalk Station. Metro takes public safety very seriously. See MR-9: Light Rail Security.

Submission 1718 Yukihisa Aokusa

1718-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1719 Lisa Barry

1719-1 The commenter's support for the Trench Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1720 Eileen Jaynes

1720-1 The commenter's support for the Elevated/At-Grade Alignment and the Trench Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1721 Deborah Pasienski

1721-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1722 Harry Yee

1722-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1723 Mamatha Amrutham

1723-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1724 Jennifer Bullivant

1724-1 The commenter's opposition to the project is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1725 Edwin Rosas

1725-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1726 Maria Alarcon

1726-1 The commenter's support for the Elevated/At-Grade Alignment is noted. See MR-1: Selection of Alternatives. Metro strives to complete projects on time and within estimated budgets. See MR-21: Cost Estimates and Schedule. Metro has worked diligently to develop feasible and effective mitigation measures to address the potentially significant impacts of the project.

Submission 1727 GN

1727-1 The commenter's support for the Trench Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1728 James Baker

1728-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1729 Heng Baker

1729-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1730 Brad Shimbukuro

1730-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1731 Melanie Drieke

1731-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1731-2 The commenter's support for the Metro ROW alignment is noted. See MR-1: Selection of Alternatives for more information regarding how the LPA would avoid impacts to the Breakwater Village senior living community. Metro strives to complete projects on time and within estimated budgets. See MR-21: Cost Estimates and Schedule. The commenter's support for the lowest cost and impact to businesses and residents is noted. Metro strives to complete projects on time and within estimated budgets. See MR-21: Cost Estimates and Schedule. Metro has worked diligently to develop feasible and effective mitigation measures to address the potentially significant impacts of the project.

Submission 1732 Jackie Eckland

1732-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1732-2 Metro worked diligently to develop feasible and effective mitigation measures to address the potentially significant impacts of the project. See MR-10: Changes to Community Character.

Submission 1733 West Torrance Homeowners Association

1733-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1733-2 This comment is noted. All comments have been shared with the Metro Board for their consideration. See response to Comment 1733-1.

Submission 1734 Fink Family

1734-1 The commenter's support for Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1734-2 See response to Comment 1734-1.

Submission 1735 Cori Talbot

1735-1 The commenter's support for the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1735-2 The commenter's concern for residents along the Metro ROW is noted. Metro has worked diligently to develop feasible and effective mitigation measures to address the potentially significant impacts of the project. See MR-10: Changes to Community Character.

Submission 1736 C. Henderson

1736-1 The commenter's support for the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1736-2 No additional bike path improvements are proposed for the Hawthorne Option. The Metro ROW alignment includes two multi-use paths along where there is space (between 159th Street and Condon Avenue, between Grant Avenue and 182nd Street, and adjacent to the Torrance Transit Center), to create recreational space for walking and cycling in the neighborhoods.

Submission 1737 Gari Tani

1737-1 The commenter's support for the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1738 Margaret Heflinger

1738-1 The commenter's support for the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1738-2 Elevated structures are used where grade separations are required. There are elevated tracks for both the Hawthorne Option as well as parts of the Metro ROW alignments.

Submission 1739 Michael A. Serufine

1739-1 The commenter's support for the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1739-2 See response to Comment 1739-1.

Submission 1740 Donald Heflinger

1740-1 The commenter's support for the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1740-2 Elevated structures are used where grade separations are required. There are elevated tracks for both the Hawthorne Option as well as parts of the Metro ROW alignments.

Submission 1741 Dennis LoPiccolo

1741-1 The commenter's support for the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1741-2 Metro takes public safety very seriously. See MR-9: Light Rail Security and MR-18: Homelessness.

Submission 1742 Florence Tebbets

1742-1 The commenter's support for the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1743 Eric Homier

1743-1 The commenter's support for the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1743-2 Metro understands concerns regarding property values. However, under CEQA, economic impacts such as changes in property values are not considered environmental impacts. The Draft EIR focuses on physical environmental impacts and measures to mitigate them, as

required by CEQA. To address questions and concerns on property values, Metro has prepared more information. See MR-14: Property Values and Impacts to Businesses. Also see MR-10: Changes in Community Character.

Submission 1744 Bruce Lagarte

1744-1 The commenter's support for the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1745 Irene Griffith

1745-1 The commenter's support for the Hawthorn Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1745-2 Metro strives to complete projects on time and within estimated budgets. See MR-21: Cost Estimates and Schedule. Metro has worked diligently to develop feasible and effective mitigation measures to address the potentially significant impacts of the project.

Submission 1746 Emily Durbin

1746-1 The commenter's support for the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1746-2 Metro is committed to integrating safety into all Metro rail operations. The project would comply with relevant safety standards, including the California Manual on Uniform Traffic Control Devices, the California Department of Transportation Highway Design Manual, the Americans with Disabilities Act, and Metro's Grade Crossing Safety Policy. The LPA, Trench Option, and Hawthorne Option would fully grade separate the light rail from all roadways, thereby avoiding potential conflicts between the light rail and pedestrians and cyclists. See MR-8: Light Rail and Freight Train Safety.

Submission 1747 Carol Booser

1747-1 The commenter's support for the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1748 Gary Maclean

1748-1 The commenter's support for the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1748-2 The commenter's support for the project is noted. All comments have been shared with the Metro Board for their consideration.

Submission 1749 Pam Combar

1749-1 The commenter's support for the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1749-2 Section 3.8, Geology and Soils, of the Draft EIR acknowledges alluvial soils in the project resource study area. As detailed in Section 3.8-4.6 of the Draft EIR, which evaluates the potential for the project to be located on a geologic unit or soil that is unstable or that would become unstable as a result of the project, the project would result in a less than significant impact. The project includes Project Feature PF-GEO-1: Metro Geotechnical Design Standards, which requires preparation of a site-specific geotechnical investigation. See MR-13: Soil Stability and Sinkholes.

1749-3 The potential for noise impacts for the Elevated/At-Grade Alignment, the Trench option, and the Hawthorne Option are addressed in Section 3.6, Noise and Vibration, of the Draft EIR. The potential for LPA impacts is addressed Chapter 4, Evaluation of Alternatives, of the Draft EIR. See MR-2: Operational Noise Analysis Methodology and Impact Thresholds; MR-3: Operational Noise Project Features and Mitigation Measures; and MR-4: Potential Negative Health Effects Related to Noise, Vibration, and Air Quality.

Submission 1750 Harumi Nishikan

1750-1 The commenter's support for the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1751 Douglass Coreas

1751-1 The commenter's support for the Trench Option and Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1752 Tom O'Neill

1752-1 The commenter's support for the Trench Option and Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1752-2 The 2023 Ridership Summary Report, published concurrently with the Draft EIR, shows that the project is expected to generate between 11,500 to 15,600 daily transit trips (boardings). See MR-15: Metro Ridership Forecasting Methodology. Metro understands concerns regarding property values. However, under CEQA, economic impacts such as changes in property values are not considered environmental impacts. The Draft EIR focuses on physical environmental impacts and measures to mitigate them, as required by CEQA. To address questions and concerns on property values, Metro has prepared more information. See MR-14: Property Values and Impacts to Businesses. Also see MR-10: Changes in Community Character.

Submission 1753 Janet Sue

1753-1 The commenter's support for the Trench Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1754 Patricia Carlini

1754-1 The commenter's support for the Trench Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1755 The Browns

1755-1 The commenter's support for the Trench Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1756 Franco and Kim Reitz

1756-1 The commenter's support for the Trench Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1757 Geoffrey M. Hefler

1757-1 The commenter's support for the Trench Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1757-2 Chapter 4, Evaluation of Alternatives, of the Draft EIR, and Chapter 2, Description of the Locally Preferred Alternative, of the Final EIR further describe the impacts of the LPA, which, for operational noise and aesthetic impacts, would be similar to the Trench Option. The LPA and Trench Option significantly reduce operational noise impacts to residential land uses along the Metro ROW compared to the Elevated/At-Grade Alignment because they eliminate the at-grade crossings at 170th and 182nd Streets. The Hawthorne Option also fully grade separates the light rail. By grade-separating the light rail from all roadways, the LPA, Trench Option, and Hawthorne Option remove the need for audible warning at light rail crossings, such as routine light rail train horns and crossing bells.

Submission 1758 Ophelia Biomort

1758-1 The commenter's support for the Trench Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1759 Frank Kraus

1759-1 The commenter's preference for the Trench Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1759-2 The commenter's opposition to the project is noted. All comments have been shared with the Metro Board for their consideration.

Submission 1760 Jerry Morrison

1760-1 The commenter's support for the Trench Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1761 Seok Jeong Lim

1761-1 The commenter's support for the Trench Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1762 Juno & Ethel Uyematsu

1762-1 The commenter's support for the Trench Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1762-2 The commenter's opinion that the Trench Option is aesthetically better is noted. All comments have been shared with the Metro Board for their consideration.

1762-3 The commenter's opinion that the Trench Option would generate less noise is noted. All comments have been shared with the Metro Board for their consideration.

Submission 1763 Louis V. Martel

1763-1 The commenter's support for the Elevated/At-Grade Alignment and the Trench Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1764 Alan Sarkisian

1764-1 The commenter's preference for the Trench Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1764-2 The commenter's opposition to the project is noted. No alignment has been approved at this time. The Metro Board selected the LPA for purposes of the Final EIR. Before making a final determination on the project, the Metro Board will review the comments and responses included in the Final EIR and will consider multiple factors, including environmental impacts, benefits and costs. A bus would cost less than rail but would offer significantly reduced benefits. As described in the 2023 Ridership Summary Report, published concurrently with the Draft EIR, the light rail extension would serve 11,500 and 15,600 daily project trips in 2042 compared to the High-Frequency Bus Alternative, which attracts 3,700 to 4,000 daily project trips. Buses would need to travel within already congested streets, and would not have the same capacity to support anticipated growth in the South Bay. See MR-19: Project Benefits.

Submission 1765 Dana LaRoche

1765-1 The commenter's support for the Trench Option and Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1766 William Nichols

1766-1 The commenter's support for the Trench Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1766-2 The commenter's support for the trench option due to noise reduction is noted. Similar to the Trench Option, the LPA significantly reduces noise impacts compared to the Elevated/At-Grade Alignment because it eliminates the at-grade crossings at 170th and 182nd Streets. Unlike the Elevated/At-Grade Alignment, the under the LPA, Trench Option and Hawthorne Option would grade separate the light rail from all roadways, thereby eliminating the need for audible warning at light rail crossings, such as routine light rail train horns and crossing bells. Metro strives to complete projects on time and within estimated budgets. See MR-21: Cost Estimates and Schedule.

Submission 1767 Steven Sack

1767-1 The commenter's support for the Trench Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1768 Eric Orchard

1768-1 The commenter's support for the Trench Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1768-2 See Section 3.3, Aesthetics, and Section 3.6, Noise and Vibration, of the Draft EIR, along with MR-3: Operational Noise Project Features and Mitigation Measures and MR-10: Changes to Community Character.

Submission 1769 Lisa Loewner

1769-1 The commenter's support for the Trench Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1770 Merry Passage

1770-1 The commenter's support for the Trench Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1770-2 The commenter's opposition for the Trench Option is noted despite the prior comment indicating support. As described in Chapter 2, Project Description, of the Draft EIR, the entire light rail guideway would be enclosed with some kind of barrier, such as fencing or a soundwall in areas where noise mitigation is proposed. Metro takes public safety very seriously. See MR-8: Light Rail and Freight Train Safety.

Submission 1771 Chuck Salisbury

1771-1 The commenter's support for the Elevated/At-Grade Alignment and the Trench Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1771-2 As described in Chapter 2, Project Description, of the Draft EIR, the entire light rail guideway would be enclosed in a physical barrier, such as fencing, soundwalls, or a combination of both, thereby preventing unauthorized intrusion. Metro takes public safety very seriously. See MR-8: Light Rail and Freight Train Safety.

Submission 1772 David Burrows

1772-1 The commenter's support for the Elevated/At-Grade Alignment and Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1772-2 The commenter's opposition to the Trench Option is noted. It is unclear what the commenter means about the Hawthorne Option connecting to the Redondo Green line; the Hawthorne Option would start at the Redondo Beach (Marine) Station, and would have a stop at Artesia Boulevard, where riders could walk to the Redondo Beach Transit Center or connect there via transit.

Submission 1773 K. Nelson

1773-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1774 Joe & Mary

1774-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1775 Camillia Lee

1775-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1776 B. O'Brien

1776-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1776-2 The commenter's support for the Torrance City Council's approved route is noted. All comments have been shared with the Metro Board for their consideration.

Submission 1777 Lisa Pedion

1777-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1777-2 The Hawthorne Boulevard Median Project beautified medians located on Hawthorne Boulevard between Del Amo Boulevard and Torrance Boulevard. The Hawthorne Option would avoid this area and south of 190th Street would run adjacent to the existing freight tracks.

Submission 1778 Kathy

1778-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1779 James Cook

1779-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1780 Nancy Fengler

1780-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1781 H. & J. Taga

1781-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1781-2 The project has secured funding from Measure R (2008), Measure M (2016), TIRCP Grant from the California State Transportation Agency Transit and Intercity Rail Capital Program, and 3% match contributions from local jurisdictions. Metro is committed to the responsible use of public funds and to managing project costs efficiently, while continuing to pursue additional funding sources to support project delivery. See MR-21: Cost Estimates and Schedule. The environmental impacts of each project option and alternative are analyzed in Chapter 3, Affected Environment and Environmental Impact Analyses, of the Draft EIR. Metro has worked diligently to develop feasible and effective mitigation measures to address the potentially significant impacts of the project.

Submission 1782 Susan Ludwig

1782-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1782-2 The commenter's support for the Metro ROW alignment as the most cost effective and least impactful to traffic and parking is noted.

Submission 1783 Anonymous

1783-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1784 Geoff Guerrero

1784-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1785 Christine Brenk

1785-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1786 Michael Brenk

1786-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1787 Madison Brenk

1787-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1788 Diana L. Seyb

1788-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1789 Michael Brenk

1789-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1790 Jane Readeur

1790-1 The commenter's opposition to the project is noted. All comments have been shared with the Metro Board for their consideration. Metro takes public safety very seriously. See MR-9: Light Rail Security and MR-18: Homelessness.

The project's potential relationship to increased density is discussed in Section 3.16, Other CEQA Considerations, of the Draft EIR. The project would improve and facilitate opportunities for growth around transit while helping to reduce reliance on personal automobiles in the region. Senate Bill (SB) 9 and SB 10 are state housing laws that facilitate the development of additional housing units on certain parcels, but their applicability is not determined or driven by the presence of light rail transit. Instead, these laws are part of broader efforts to address California's housing shortage. While the project would support

growth management goals of the affected jurisdictions, and help to reduce potential environmental impacts associated with such foreseeable growth, the project would not cause unplanned or excessive growth. Rather, the project would be consistent with local and regional planning efforts, such as those of the Southern California Association of Governments, to manage growth. These efforts prioritize transit-oriented development to create walkable communities near transit hubs, consistent with local growth management goals. Therefore, no adverse effects associated with growth-inducement are anticipated. See MR-19: Project Benefits.

Submission 1791 Thomas Penland

1791-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1791-1 The commenter's opposition to light rail in Torrance and secondary support for the Metro ROW alignment is noted. All comments have been shared with the Metro Board for their consideration.

Submission 1792 Timothy Cunningham

1792-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1793 Ted Potcovaru

1793-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1794 Eric Caro

1794-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1794-2 This commenter's opposition to the Hawthorne Option is noted. The comment also notes support for the Elevated/At-Grade Alignment due to cost and noise considerations. Metro is committed to the responsible use of public funds and to managing project costs efficiently, while continuing to pursue additional funding sources to support project delivery. See MR-21: Cost Estimates and Schedule. See Section 3.6, Noise and Vibration, of the Draft EIR, for a thorough analysis of potential noise impacts, as well as mitigation measures to reduce the noise impacts. As explained on page 3.1-3 of the Draft EIR, traffic delay (often measured by level of service) is no longer permissible as a CEQA impact criterion and therefore this analysis and related topics are not addressed in the Draft EIR. See MR-11: Traffic Delay and Level-of-Service and the 2023 Transportation Detail Report, published concurrently with the Draft EIR, for a discussion of traffic conditions. Neither the LPA nor the Trench Option would

increase vehicle delay compared to existing conditions, as both alignments fully grade separate the light rail from all roadways and do not require modifications to existing intersections or traffic lanes. Metro takes public safety very seriously. See MR-9: Light Rail Security.

Submission 1795 Allen Perlstein and James Goodrich

1795-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1795-2 See response to Comment 1795-1.

Submission 1796 William Champlin

1796-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1797 Victoria Fox

1797-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1798 James Vaughan

1798-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1799 Henry Martinez

1799-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1799-2 The commenter's concerns regarding delays and cost increases are noted. Metro strives to complete projects on time and within estimated budgets. See MR-21: Cost Estimates and Schedule.

Submission 1800 Mike Madrigal

1800-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1800-2 Presently, the Metro C Line links with the Metro J Line at the Harbor Freeway Station, two stations north of Harbor Gateway Transit Center. Operating as part of the Metro K Line,

riders could connect to the Metro C Line at Aviation/Century, to then connect to the Metro J Line and access the Harbor Gateway Transit Center. Torrance Transit, which provides bus service within this project's study area, also connects to the Harbor Gateway Transit Center.

Submission 1801 David Sanders

1801-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1801-2 The Redondo Beach and Torrance Transit Centers both provide existing parking spaces that could be used for transit customers. Metro will coordinate with the cities on transit parking based on demand. The project would include infrastructure and design features that facilitate access for varying modes of transportation. Metro will continue to engage with the community to identify opportunities for improving station access and connectivity. It does not provide term parking for LAX.

Submission 1802 Margaret Kline

1802-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1803 Sue Walters

1803-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1804 Kelly Wu

1804-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1805 Eva Wuertz

1805-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1806 Kurt Michel

1806-1 The commenter's support for the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1807 Jose Dennis Alabaso

1807-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1807-2 The Metro K Line Aviation/Century Station opened in Fall 2024.

Submission 1808 Lisa Whitfield

1808-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1808-2 As explained on page 3.1-3 of the Draft EIR, traffic delay (often measured by level of service) is no longer permissible as a CEQA impact criterion and therefore this analysis and related topics are not addressed in the Draft EIR. See MR-11: Traffic Delay and Level-of-Service and the 2023 Transportation Detail Report, published concurrently with the Draft EIR, for a discussion of traffic conditions. The LPA and Trench Option are fully grade-separated from all roadways, and would not increase vehicle delay compared to existing conditions, nor would they require modifications to existing traffic lanes.

Submission 1809 Sandra Schreyer

1809-1 The commenter's support for the Trench Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1810 Han Wen Tsao

1810-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1811 Dan Criotoru

1811-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1812 Tana Rice

1812-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1812-2 The environmental impacts of each project option and alternative are analyzed in Chapter 3, Affected Environment and Environmental Impact Analyses, of the Draft EIR. Metro has worked diligently to develop feasible and effective mitigation measures to address the potentially significant impacts of the project. As part of the project development process in

preparing the alignment routes, Metro emphasized minimizing acquisitions and effects to residents and businesses. The alignment options would have minimal real estate impacts to businesses, as described in the 2025 Real Estate Acquisitions Report.

Submission 1813 Grace Weltman

1813-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1813-2 Potential air quality impacts are addressed in Section 3.4, Air Quality, of the Draft EIR, including dust control during construction. Compliance with Project Features PF-AQ-1: Tier 4 Engine Standards and PF-AQ-2: Dust Control Best Practices would ensure that construction activities comply with South Coast Air Quality Management District and Metro standards controlling emissions and dust. Operationally, the light rail vehicles would be powered by electricity and would not produce localized emissions. Regional air quality would improve with implementation of the project due to a shift from passenger vehicles to light rail in the corridor. As explained on page 3.1-3 of the Draft EIR, traffic delay (often measured by level of service) is no longer permissible as a CEQA impact criterion and therefore this analysis and related topics are not addressed in the Draft EIR. See MR-11: Traffic Delay and Level-of-Service and the 2023 Transportation Detail Report, published concurrently with the Draft EIR, for a discussion of traffic conditions. See Section 3.6, Noise and Vibration, of the Draft EIR, for a thorough analysis of potential noise impacts, as well as mitigation measures to reduce the noise impacts. For the Metro ROW alignments, the project would enable local cities to establish Quiet Zones with Federal Railroad Administration (FRA), as part of Project Feature PF-NV-1: Quiet Zone Equipment Installation and Mitigation Measure MM-NOI-4: Quiet Zone Establishment. See MR-3: Operational Noise Project Features and Mitigation Measures.

Submission 1814 Nancy Wilcox

1814-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1814-2 See response to Comment 1814-1. Metro takes public safety very seriously. See MR-9: Light Rail Security. Regarding earthquake safety, as described in Section 3.8, Geology, Soils and Paleontological Resources, of the Draft EIR, in accordance with Project Feature PF-GEO-1: Metro Geotechnical Design Standards, all elements of the project would be designed and constructed in compliance with Metro's geotechnical and seismic design criteria to ensure seismic resistance and stability. In addition, the Metro Rail Design Criteria and associated Metro seismic stability and safety guidelines provide specific requirements to prevent structural failure and protect public safety during seismic events. Routine maintenance has been factored into the cost assumptions for the project. See MR-21: Cost Estimates and Schedule.

Submission 1815 Milton Aineruhanga

1815-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1816 Marco

1816-1 The commenter's opposition to a rail system and support for buses or bus lanes is noted. See MR-1: Selection of Alternatives. A High-Frequency Bus Alternative on local arterials is evaluated in Chapter 4, Evaluation of Alternatives, of the Draft EIR. Metro takes public safety very seriously. Metro is committed to the responsible use of public funds and to managing project costs efficiently, while continuing to pursue additional funding sources to support project delivery. See MR-21: Cost Estimates and Schedule. Metro has worked diligently to develop feasible and effective mitigation measures to address the potentially significant impacts of the project, including those related to construction. Metro is committed to integrating safety into all Metro rail operations. The project would comply with relevant safety standards, including the California Manual on Uniform Traffic Control Devices, the California Department of Transportation Highway Design Manual, the Americans with Disabilities Act, and Metro's Grade Crossing Safety Policy. See MR-8: Light Rail and Freight Train Safety.

Submission 1817 Stefan Eckland

1817-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1817-2 The commenter's support for the Metro ROW alignment due to cost considerations is noted. Metro takes public safety very seriously. See MR-9: Light Rail Security.

Submission 1818 David Dewitt

1818-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1819 Masaru Iwanaga

1819-1 The commenter's support for the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1819-2 The project would provide benefits to Torrance. The project would connect to the new regional bus transit center in Torrance. See MR-17: Response to Torrance Community Letter and MR-19: Project Benefits.

Submission 1820 Susan Eriksen

1820-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1821 Leslie Chavez

1821-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1822 Sandra Yoshioka

1822-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1823 Patty Zaremski

1823-1 The commenter's support for the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1824 Cristian Guerrero

1824-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1825 Kent Oliver

1825-1 The commenter's support for the Metro ROW alignment, Trench Option, and Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1825-2 The commenter's preference for grade-separated transit is noted. All comments have been shared with the Metro Board for their consideration. The LPA, Trench Option, and Hawthorne Option would fully grade separate the light rail from all roadways.

Submission 1826 Brad M.

1826-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1827 Wolfgang Fengler

1827-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1828 Bexsi Fujiwara

1828-1 The commenter's support for the Trench Option and Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1829 Linda & David Ortega

1829-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1830 Karl D. Albert

1830-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1830-2 See response to Comment 1830-1.

Submission 1831 Adrianne Luther

1831-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1831-2 The commenter's support for the project is noted. TAP machines are a requirement for all Metro Rail stations.

Submission 1832 Brenden Baltimore

1832-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1833 Mr. James T. Wright

1833-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1833-2 The commenter's support for the Elevated/At-Grade Alignment but preference for no light rail is noted. All comments have been shared with the Metro Board for their consideration.

Submission 1834 Christopher J. Pon

1834-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1835 Anonymous

1835-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1836 Robin Solomon

1836-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1836-2 This commenter's support for the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. Metro strives to complete projects on time and within estimated budgets. See MR-21: Cost Estimates and Schedule.

Submission 1837 Mr. Richard Smisek

1837-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1838 N. Maloney

1838-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1838-2 The Metro ROW alignments would directly connect to the new Redondo Beach Transit Center.

Submission 1839 Luis Garcia

1839-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1840 Irene Brucks

1840-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1840-2 This commenter's preference for cost savings is noted. The project has secured funding from Measure R (2008), Measure M (2016), TIRCP Grant from the California State Transportation Agency Transit and Intercity Rail Capital Program, and 3% match contributions from local jurisdictions. Metro is committed to the responsible use of public funds and to managing project costs efficiently, while continuing to pursue additional funding sources to support project delivery. See MR-21: Cost Estimates and Schedule.

Submission 1841 Marianne Moscynski

1841-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1842 Jane K. Hashimoto

1842-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1842-2 The commenter's support for the project is noted.

Submission 1843 George Williams

1843-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1844 Bill Sorosky

1844-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1845 Joseph Palsulich

1845-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1846 Sung J. Hong

1846-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1847 Linda Zelk

1847-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1848 Kathy H. Ujiye

1848-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1849 Anonymous

1849-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1850 Anonymous

1850-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1851 Keith

1851-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1852 Mr. & Mrs. William B. Campbell

1852-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1853 Jaclynn Miller Madoni

1853-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1853-2 The commenter's support for the Torrance City Council's approved route is noted. All comments have been shared with the Metro Board for their consideration.

Submission 1854 Jennifer Silver

1854-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1855 Judy & Bob June

1855-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1856 Carol Campbell

1856-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1856-2 Routine maintenance has been factored into the cost assumptions for the project. See MR-21: Cost Estimates and Schedule.

Submission 1857 Mary Hileman

1857-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1857-2 The commenter's support for the Elevated/At-Grade Alignment due to cost and disruption concerns is noted.

Submission 1858 Patrick Westfahl

1858-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1859 Zalatan Sehovic

1859-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1860 Nancy Brock

1860-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1860-2 This commenter's support for the project is noted.

Submission 1861 Maureen Wilson

1861-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1861-2 Metro takes public safety very seriously. See MR-9: Light Rail Security and MR-18: Homelessness.

Submission 1862 Mrs. Dana Chambers

1862-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1863 Keiko Kono

1863-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1864 Genie Valdez

1864-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1864-2 As described in Section 3.8, Geology and Soils, of the Draft EIR, the project would be designed to accommodate high seismic ground motion and associated consequences in accordance with Metro's geotechnical design standards and thresholds, Project Feature PF-GEO-1: Metro Geotechnical Design Standards. Site-specific geotechnical investigations would be performed in accordance with the Metro Rail Design Criteria (MRDC) Section 5.6 to incorporate seismic demands and provide engineering solutions. The project would comply with the latest versions of local and state building codes and regulations.

Submission 1865 Randy Degasperin

1865-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1866 Kristen Papac

1866-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1867 Celia Caampued

1867-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1868 Gary E. Kaloostian

1868-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1869 Harry Bellows III

1869-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1869-2 The commenter's support for the Elevated/At-Grade Alignment due to cost and constructability concerns is noted.

Submission 1870 Michael Goguen

1870-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1871 Maurine Swilley

1871-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1872 Harold Jason

1872-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1873 Samuel Gnerre

1873-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1878-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1878-2 The commenter's support for the Torrance City Council's approved route is noted.

Submission 1879 Linda Jung

1879-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1880 Beverly A. Borton

1880-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1881 Danelle Berch

1881-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1882 Fazlo Edber

1882-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1882-2 This commenter's preference for cost savings is noted. The project has secured funding from Measure R (2008), Measure M (2016), TIRCP Grant from the California State Transportation Agency Transit and Intercity Rail Capital Program, and 3% match contributions from local jurisdictions. Metro is committed to the responsible use of public funds and to managing project costs efficiently, while continuing to pursue additional funding sources to support project delivery. See MR-21: Cost Estimates and Schedule.

Submission 1883 Randy & JoanAnn Hart

1883-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1884 Kerry Croucer

1884-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1885 Sam Marteland

1885-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1886 Joann and Mike Tripp

1886-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1886-2 See MR-18: Homelessness, for details on how Metro is addressing concerns related to homeless populations.

Submission 1887 Gail Serrano Vasquez

1887-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1888 Mr. Gary McKenzie

1888-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1889 Chris Tam

1889-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1890 Arelen Dubas

1890-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1891 Kit Chan

1891-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1892 Tomi Kawaski

1892-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1892-2 Metro is committed to integrating safety into all Metro rail operations. The project would comply with relevant safety standards, including the Americans with Disabilities Act and Metro's Grade Crossing Safety Policy. The LPA, Trench Option, and Hawthorne Option would fully grade separate the light rail from all roadways, thereby avoiding potential conflicts between light rail and pedestrians. In addition, for the Metro ROW alignments, the freight crossing at 182nd Street would include new safety equipment. The Hawthorne Option would also include pedestrian enhancements, as discussed in Chapter 2, Project Description, of the Draft EIR.

Submission 1893 Leonard Zak

1893-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1894 Denny Hallmark

1894-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1894-2 The commenter's support for the Elevated/At-Grade Alignment due to cost, constructability, and traffic concerns is noted.

Submission 1895 Peter Gregoris

1895-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1896 Michele Urbina

1896-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1897 Shoreh Zareh

1897-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1898 Ann Clark

1898-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1899 Heather Albright

1899-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1899-2 The Draft EIR includes quantitative analyses by subject matter experts on the effects of the project on air quality. With respect to actions that would be taken to reduce air pollution during construction, the project's contractor would comply with all applicable air quality control measures adopted by the South Coast Air Quality Management District (SCAQMD) and Metro. These measures include requiring all construction equipment to meet or exceed Tier 4 emission standards, which represent the cleanest available technology for off-road equipment, as outlined in Project Features PF-AQ-1: Metro Green Construction Policy Compliance and PF-AQ-2: SCAQMD Rule 403 Compliance in the Draft EIR. Additionally, best management practices for controlling fugitive dust emissions, such as regular watering of exposed surfaces, covering of stockpiles, and limiting vehicle speeds on unpaved surfaces,

would be enforced. Relative to non-compliance, these practices are expected to reduce dust emissions by up to 91%, as detailed in Section 3.4, Air Quality, of the Draft EIR. The Draft EIR determined that although construction activities would result in temporary emissions, these emissions would not exceed regional or localized thresholds established by SCAQMD for each light rail alignment option considered, other than the Trench Option. As discussed in Chapter 3 of the Final EIR, the LPA would have less than significant construction air quality impacts.

For operations, the project is expected to improve regional air quality by reducing vehicle miles traveled and encouraging a shift from car travel to clean, electric-powered light rail transit. This would result in a net decrease in air pollutants and greenhouse gas (GHG) emissions over the long term. See Section 3.4, Air Quality, of the Draft EIR, for a detailed analysis of both construction and operational air quality impacts.

1899-3 Metro has worked diligently to develop feasible and effective mitigation measures to address the potentially significant impacts of the project. See MR-10: Changes to Community Character. The project has secured funding from Measure R (2008), Measure M (2016), a Transit and Intercity Rail Capital Project (TIRCP) Grant from the California State Transportation Agency Transit and 3% match contributions from local jurisdictions. Metro is committed to the responsible use of public funds and to managing project costs efficiently, while continuing to pursue additional funding sources to support project delivery. See MR-21: Cost Estimates and Schedule.

Submission 1900 X

1900-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1901 Hanif Haji

1901-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1901-2 This comment is noted. See response to Comment 1901-1.

Submission 1902 Oluynika Sorunke

1902-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1903 John Usui

1903-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1904 Robert Jung

1904-1 The commenter's support for the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1905 Brandon Folkman

1905-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1906 Samantha Folkman

1906-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1907 Ralph

1907-1 The 2023 Ridership Summary Report, published concurrently with the Draft EIR, shows that the project is expected to generate between 11,500 to 15,600 daily transit trips (boardings). See MR-15: Metro Ridership Forecasting Methodology. As explained on page 3.1-3 of the Draft EIR, traffic delay (often measured by level of service) is no longer permissible as a CEQA impact criterion and therefore this analysis and related topics are not addressed in the Draft EIR. See MR-11: Traffic Delay and Level-of-Service and the 2023 Transportation Detail Report, published concurrently with the Draft EIR, for a discussion of traffic conditions. The LPA and Trench Option are fully grade-separated from all roadways, and would not increase vehicle delay compared to existing conditions, nor require modifications to traffic lanes.

1907-2 The project has secured funding from Measure R (2008), Measure M (2016), TIRCP Grant from the California State Transportation Agency Transit and Intercity Rail Capital Program, and 3% match contributions from local jurisdictions. Metro is committed to the responsible use of public funds and to managing project costs efficiently, while continuing to pursue additional funding sources to support project delivery. See MR-21: Cost Estimates and Schedule.

1907-3 The commenter's opposition to the project is noted. See MR-1: Selection of Alternatives. It is important to note that while the Elevated/At-Grade Alignment has been selected as the LPA, the Metro Board has not yet approved the project, including any of the options and alternatives evaluated in the Draft EIR. The final decision will be made after the Metro Board reviews the Final EIR, which will include responses to all public comments.

Submission 1908 Christine Tokunaga

1908-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1908-2 The commenter's opposition to providing a station in Torrance is noted. All comments have been shared with the Metro Board for their consideration.

Submission 1909 Cynthia Kringen

1909-1 The commenter's opposition to light rail in the South Bay is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1910 Isaac Ng

1910-1 The commenter's support for the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1910-2 The commenter's support for the Hawthrone Option and opposition to the Elevated/At-Grade Alignment and Trench Option is noted. The project includes two stations for all three options studied in the Draft EIR: one in Redondo Beach and one at the Torrance Transit Center.

Submission 1911 Mahesh Tyagi

1911-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1912 Rajani Patel

1912-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1913 Vinh Cam

1913-1 The commenter's support for the Metro ROW alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1913-2 Metro strives to complete projects on time and within estimated budgets. See MR-21: Cost Estimates and Schedule. Metro has worked diligently to develop feasible and effective mitigation measures to address the potentially significant impacts of the project.

Submission 1914 Lori Bowker

1914-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1915 Daniel Bowker

1915-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1916 Ellen Tran

1916-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1917 Cynthia A. Lim

1917-1 The commenter's support for the Trench Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1918 Sam

1918-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1919 Rachel LaCoe

1919-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1920 Melissa Brymer

1920-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1920-2 See response to Comment 1920-1.

Submission 1921 Potato Jim

1921-1 The commenter's support for the Elevated/At-Grade Alignment and Trench Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1921-2 The project would provide an alternative to driving which would reduce the likelihood of future increases in traffic. See MR-11: Traffic Delay and Level-of-Service and the 2023 Transportation Detail Report, published concurrently with the Draft EIR, for discussion on traffic conditions.

Submission 1922 Frank Putz

1922-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1923 B. Stacy

1923-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1923-2 This comment's support for the Elevated/At-Grade Alignment due to cost considerations is noted.

Submission 1924 Rebecca Poirier

1924-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1925 Marian Eskander

1925-1 The commenter's support for the Trench Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1925-2 The commenter's opposition to light rail in Torrance is noted. The Draft EIR considers and analyzes a No Project Alternative, which was presented to the Metro Board along with all other options prior to the Board's selection of the LPA. It is important to note that while the Metro Board has selected an LPA for purposes of the Final EIR, it has not yet approved the project, including any of the options and alternatives evaluated in the Draft EIR. The final decision will be made after the Metro Board reviews the Final EIR, which will include responses to all public comments, including those of the commenter.

Submission 1926 Linda Holliday

1926-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1926-2 Metro takes public safety very seriously. See MR-9: Light Rail Security and MR-18: Homelessness.

Submission 1927 Cheng-Wen Huang

1927-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1928 Jenifer Roberts

1928-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1928-2 No light rail stations are proposed within predominantly residential areas. Soundwalls would be implemented to reduce noise associated with the light rail transit line as required by Mitigation Measure MM-NOI-2: Soundwalls. See MR-3: Operational Noise Project Features and Mitigation Measures for information regarding noise project features and mitigation measures.

Submission 1929 Lauren Faith Niro

1929-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1930 Linda Hurnbeck

1930-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1931 John Carter

1931-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1932 Frank Yanai

1932-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1933 James C. Reidy

1933-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1934 Lilia Lucero

1934-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1934-2 The commenter's preference for using the existing tracks on the Redondo side is noted.

Submission 1935 Sally Matsumoto

1935-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1936 Gus Mesch

1936-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1936-2 The commenter's support for the project is noted.

Submission 1937 Thomas & Cheryl Lenahan

1937-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1938 Douglas Lowder

1938-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1939 Dorcas Huang

1939-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1940 Richard Astin

1940-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. Metro takes public safety very seriously. See MR-9: Light Rail Security and MR-1: Selection of Alternatives.

Submission 1941 R. Parke

1941-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1942 Mr. Kenneth F. Darr

1942-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1943 Bryan Griebenow

1943-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1944 Bruce Pettingale

1944-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1945 Patrick Healy

1945-1 Metro has designed the project to avoid displacement of residents. See the 2025 Real Estate Acquisition Report for more detailed information on proposed property acquisitions. In some areas along the Metro ROW, property owners have built out past their property lines and encroached into Metro ROW.

1945-2 This commenter's support for the Metro ROW alignment and secondary support for the Hawthorne Option is noted. See MR-1: Selection of Alternatives. A gondola has not been studied as the transit mode for the project as it would not meet the objectives of the project, in particular related to providing a direct connection to the existing regional transit network. See Section 4.2, Alternatives Considered and Rejected, of the Draft EIR, for a discussion of alternative studied by Metro starting in 2009.

1945-3 Metro has prioritized designing the project to fit within the existing Metro ROW to reduce disruption to nearby homes and businesses and reduce property acquisition needs. Redevelopment is not proposed by the project.

Submission 1946 Mark Nelson

1946-1 The project under consideration is a light rail transit line to be operated by Metro, not a heavy rail line operated by Metrolink or freight rail. Light rail vehicles are quieter, electrically powered trains that generate less noise compared to larger, diesel operated Metrolink trains and freight operators. See MR-4: Potential Negative Health Effects Related to Noise, Vibration, and Air Quality.

1946-2 Metro understands concerns regarding property values. However, under CEQA, economic impacts such as changes in property values are not considered environmental impacts. The Draft EIR focuses on physical environmental impacts and measures to mitigate them, as required by CEQA. To address questions and concerns on property values, Metro has prepared more information. See MR-14: Property Values and Impacts to Businesses. Metro, as the CEQA Lead Agency, has the responsibility to determine the appropriate criteria for the project. The Metro ROW is owned by Metro and is not regulated by the City of Redondo Beach. The Redondo Beach Municipal Code does not apply to the Metro ROW and state law preempts Metro from local zoning requirements.

1946-3 See response to Comments 1946-1 and 1946-2.

Submission 1947 Holly Osborne

1947-1 Metro prepared cost estimates in 2022 for all rail alignments and shared them with the Metro Board prior to the May 23, 2024, Board meeting. The cost estimate for the LPA at the time was $2.23B. Metro is continuing to refine the cost estimate as design progresses, and will provide an update to the Metro Board when the Final EIR is completed; see MR-21: Cost Estimates and Schedule. While the LPA is more costly than the Elevated/At-Grade Alignment, it remains over half a billion dollars less expensive than the Trench or Hawthorne Options.

1947-2 The 2023 Ridership Summary Report, published concurrently with the Draft EIR, shows that the project is expected to generate between 11,500 to 15,600 daily transit trips (boardings). See MR-15: Metro Ridership Forecasting Methodology.

1947-3 See response to Comment 1947-2.

The commenter refers to presentation materials that were shared at the Draft EIR public hearings. The materials summarized the range of ridership projections for all alignment options. The May 2024 Board Report, available to the public prior to the Metro Board meeting and reviewed by the Metro Board prior to selecting an LPA, included detailed ridership information for all alignment options and alternatives.

Submission 1948 Jennifer L. Dodge

1948-1 All light rail and freight tracks are designed according to Metro's design criteria with appropriate clearances, and would fit within the existing Metro ROW. See Appendix 2-A, Select ACE Drawings, of the Draft EIR and Appendix B, Select Advanced Conceptual Engineering Drawings - Locally Preferred Alternative, of the Final EIR for more details on the relocated freight and light rail tracks. See also MR-8: Light Rail and Freight Train Safety.

1948-2 Potential impacts related to soil conditions are evaluated in Section 3.8, Geology and Soils, of the Draft EIR. See MR-7: Utility Relocation and Hazardous Materials Safety for utility relocation details in the Metro ROW, as well as information concerning construction and operational vibration effects on underground utilities. See MR-13: Soil Stability and Sinkholes for a detailed discussion of how construction and operation within the corridor would be managed in consideration of local soil conditions. Potential noise impacts, along with noise mitigation measures, are described in Section 3.6, Noise and Vibration, of the Draft EIR. See also MR-4: Potential Negative Health Effects Related to Noise, Vibration, and Air Quality.

1948-3 The project under consideration is a light rail transit line to be operated by Metro, not a heavy rail line operated by Metrolink or freight rail. Light rail vehicles are quieter, electrically powered trains that generate less noise compared to larger, diesel operated Metrolink trains and freight operators. As described in Section 2, Project Description, of the Draft EIR, existing freight tracks would need to be shifted to accommodate light rail tracks; the distances vary depending on the location. Mitigation Measure MM-VIB-3: Pre- and Post-Construction Surveys requires contractors to document damage resulting from vibration

impacts during construction, and repair them. In addition, as discussed in Section 3.8, Geology and Soils, of the Draft EIR, the project design process would include thorough site geotechnical investigations to ensure the stability of nearby structures. Per Project Feature PF-GEO-1: Metro Geotechnical Design Standards, site-specific geotechnical investigations would be conducted to address foundation and structural safety. The investigation would include engineering and constructions recommendations to ensure surrounding structures are not damaged.

1948-4 The commenter's support for the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1949 Ray Hollar

1949-1 Submission 346 includes the same comment from the same commentor. See response to Comment 346-1.

Submission 1950 Ray Hollar

1950-1 The potential loss of on-street parking is part of the Hawthorne Option, thus was included in the description of this option. The 2023 Transportation Detail Report, published concurrently with the Draft EIR, includes an inventory of on-street parking spaces and the number of parking spaces along this segment of the Hawthorne Option. However, this loss of parking spaces in the context of a public transit project in an urban environment is not considered an environmental impact under CEQA that needs to be mitigated.

With regards to inclusion of Areas of Controversy, see the response to Comment 364-1.

1950-2 In the context of a public transit project in an urban environment, parking impacts are not considered an environmental impact that requires mitigation under CEQA. The potential loss of on-street parking is mentioned as an element of the Hawthorne Option's description, not an impact. It is also described in the 2023 Transportation Detail Report, published concurrently with the Draft EIR.

With regards to inclusion of Areas of Controversy, see the response to Comment 364-1.

Submission 1951 Margie Alexander

1951-1 Regarding changes in community character, health impacts, and property values, see MR-10: Changes to Community Character, MR-4: Potential Negative Health Effects Related to Noise, Vibration, and Air Quality and MR-14: Property Values and Impacts to Businesses, respectively. It should also be noted that the LPA would avoid shifting the freight tracks closer to the Breakwater Village Senior Complex. For additional information, see MR-1: Selection of Alternatives.

1951-2 The project under consideration is a light rail transit line to be operated by Metro, not a heavy rail line operated by Metrolink or freight rail. Light rail vehicles are quieter, electrically powered trains that generate less noise compared to larger, diesel operated Metrolink trains and freight operators. As described in Section 2, Project Description, of the Draft EIR, existing freight tracks would need to be shifted to accommodate light rail tracks; the

distances vary depending on the location. Mitigation Measure MM-VIB-3: Pre- and Post-Construction Surveys requires contractors to document damage resulting from vibration impacts during construction and repair them. In addition, as discussed in Section 3.8, Geology and Soils, of the Draft EIR, the project design process would include thorough site geotechnical investigations to ensure the stability of nearby structures. Per Project Feature PF-GEO-1: Metro Geotechnical Design Standards, site-specific geotechnical investigations would be conducted to address foundation and structural safety. The investigation would include engineering and constructions recommendations to ensure surrounding structures are not damaged.

The presence of natural gas lines and petroleum pipelines, their potential impacts, and applicable regulatory requirements are addressed in Sections 3.9, Hazards and Hazardous Materials, and 3.11 Utilities and Service System, of the Draft EIR. Potential impacts of the LPA in this context are evaluated in Chapter 4, Evaluation of Alternatives, of the Draft EIR. In addition, Section 4.13, Corrections and Additions, of the Final EIR expands on the analysis in Section 3.9-4.2.1 of the Draft EIR by clarifying the protocols, construction techniques, regulations, and standards with which the project would comply. As detailed therein, the revisions do not change the Draft EIR's conclusion that the impact related to oil and gas pipelines would be less than significant.

See MR-7: Utility Relocation and Hazardous Materials Safety, MR-8: Light Rail and Freight Train Safety; and MR-13: Soil Stability and Sinkholes.

1951-3 Metro has worked diligently to develop feasible and effective mitigation measures to address the potentially significant environmental impacts of the project. See MR-10: Changes to Community Character; MR-4: Potential Negative Health Effects Related to Noise, Vibration, and Air Quality; MR-7: Utility Relocation and Hazardous Materials Safety; and MR-14: Property Values and Impacts to Businesses.

It should also be noted that the LPA would avoid shifting the freight tracks closer to the Breakwater Village Senior Complex.

1951-4 Metro takes public safety very seriously. See MR-9: Light Rail Security and MR-18: Homelessness.

1951-5 The commenter's opposition to the Metro ROW alignment is noted. All comments have been shared with the Metro Board for their consideration.

Submission 1952 Janice Tanabe

1952-1 Passengers at the Redondo Beach TC Station would exit the station toward the city's transit center, where they could connect with other modes of transit. A multi-use recreational path would be located between Grant Avenue and 182nd Street along the east side of the Metro ROW, which would provide access to the station.

There is sufficient room to construct and operate a trench under 182nd Street to allow the light rail to travel below the street. With respect to the embankment near Breakwater Village, a new retaining wall would be constructed to accommodate the grade changes and ensure safe operation of the light rail and freight. See MR-13: Soil Stability and Sinkholes.

All light rail and freight tracks are designed according to Metro's design criteria with appropriate clearances, and would fit within the existing Metro ROW. See Appendix 2-A, Select ACE Drawings, of the Draft EIR and Appendix B, Select Advanced Conceptual Engineering Drawings -Locally Preferred Alternative, of the Final EIR for more details on the relocated freight and light rail tracks. See MR-8: Light Rail and Freight Train Safety.

Submission 1953 Monique Negrete-Mitchell

1953-1 The commenter's opposition to the Metro ROW alignment is noted. The presence of natural gas lines and petroleum pipelines, their potential impacts, and applicable regulatory requirements are addressed in Sections 3.9, Hazards and Hazardous Materials, and 3.11, Utilities and Service System, of the Draft EIR. Potential impacts of the LPA in this context are evaluated in Chapter 4, Evaluation of Alternatives, of the Draft EIR. In addition, Section 4.13, Corrections and Additions, of the Final EIR expands on the analysis in Section 3.9-4.2.1 of the Draft EIR by clarifying the protocols, construction techniques, regulations, and standards with which the project would comply. As detailed therein, the revisions do not change the Draft EIR's conclusion that the impact related to oil and gas pipelines would be less than significant. See MR-7: Utility Relocation and Hazardous Materials Safety and MR-13: Soil Stability and Sinkholes.

1953-2 This regulation applies to the project and is referenced in Section 3.9, Hazards and Hazardous Materials, of the Draft EIR. As outlined in Project Feature PF-HHM-1: Handling, Storage, and Transport of Hazardous Materials and Wastes, handling, storage, and transport of any identified hazardous materials and waste would comply with applicable federal and state regulations.

In Section 4.13, Corrections and Additions, of this Final EIR, the following text pertaining to the Hazardous Materials Transportation Act's regulations has been added to Project Feature PF-HHM-1: Handling, Storage, and Transport of Hazardous Materials and Wastes for clarity: "The transportation of hazardous materials and waste shall be conducted in accordance with the applicable regulations codified in 49 Code of Federal Regulations (CFR) Parts 101, 106, 107, and 171 to 180, including, but not limited to, those related to packagings, pre-transportation functions, transportation functions, and functions not subject to the requirements of the federal Hazardous Materials Regulations." This addition does not change the meaning or conclusions of the Draft EIR. The impact is still less than significant.

Submission 1954 Giana Mitchell

1954-1 Urbanized avian species, including resident birds of prey such as red-tailed hawks, great-horned owls, and barn owls (as noted in the article provided), are protected under the Migratory Birds Treaty Act and the California Fish and Game Code (CFGC). As discussed in Section 3.7, Biological Resources, of the Draft EIR, species protected under the Migratory Bird Treaty Act (MBTA) and California Fish and Game Code (CFGC) have potential to occur within the SA. This includes resident birds of prey, such as red-tailed hawks and great-horned owls. As stated on page 3.7-22 of the Draft EIR, portions of the Resource Study Area (RSA) provide urbanized avian species with both suitable breeding and foraging habitat in the form of trees, vegetation, and man-made structures. The Draft EIR acknowledges that construction activities could temporarily disturb these habitats. To address this, Mitigation

Measure MM-BIO-2: Nesting Bird Season Restrictions and Pre-Construction Surveys establishes protections for nesting birds, including seasonal restrictions and pre-construction surveys to identify active nests. Given the existing anthropogenic disturbance (e.g., vehicular traffic, train traffic, human presence) throughout the RSA, these measures are anticipated to mitigate potential impacts on local avian species to less than significant. The project does not propose any permanent changes that would preclude birds from returning to the area after construction is completed.

Submission 1955 Jan Kurth

1955-1 The commenter's opposition to the project in Torrance is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1955-2 Metro takes public safety very seriously. See MR-9: Light Rail Security and MR-18: Homelessness.

1955-3 The 2023 Ridership Summary Report, published concurrently with the Draft EIR, shows that the project is expected to generate between 11,500 to 15,600 daily transit trips (boardings). See MR-15: Metro Ridership Forecasting Methodology

1955-4 See response to Comment 1955-2.

1955-5 The commenter's support for the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration.

1955-6 See MR-8: Light Rail and Freight Train Safety.

Submission 1956 Marie Puterbaugh

1956-1 Metro takes public safety very seriously. See MR-9: Light Rail Security.

Submission 1957 Maria Savage

1957-1 The commenter's support for the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration.

Metro recognizes the concerns of residents near the Metro ROW, including those on 182nd Place and Firmona Avenue. The Draft EIR evaluates all alignment options, including the Hawthorne Option, which is referenced in the comment. For additional information related to the issues raised in this comment, see Section 3.1, Transportation, Section 3.3, Aesthetics, Section 3.4, Air Quality, Section 3.6, Noise and Vibration, and Chapter 4, Evaluation of Alternatives, of the Draft EIR.

Compared to the Elevated/At-Grade Alignment, the LPA significantly reduces operational noise impacts because, like the Trench Option, it eliminates the at-grade crossings at 170th and 182nd Streets. By grade-separating the light rail from all roadways, the LPA, as well as the Trench and Hawthorne Options, removes the need for audible warning at light rail crossings, such as routine light rail train horns and crossing bells. As described in Chapter 4,

Evaluation of Alternatives, of the Draft EIR and Chapter 2, Description of the Locally Preferred Alternative, of the Final EIR, operational noise impacts of the LPA would be reduced to less than significant levels with mitigation at all sensitive receptors. As further described in Chapter 4, Evaluation of Alternatives, of the Draft EIR, and Chapter 2, Description of the Locally Preferred Alternative, of the Final EIR, the impacts of the LPA would be comparable to those of the Trench Option.

Metro has worked diligently to develop feasible and effective mitigation measures to address the potentially significant impacts of the project, including noise and vibration. See MR-3: Operational Noise Project Features and Mitigation Measures; MR-6: Vibration Analysis During Final Design; and MR-10: Changes to Community Character.

See MR-21: Cost Estimates and Schedule for details on the construction schedule for the project.

Submission 1959 Mike

1959-1 The commenter does not provide specific information on which properties are of concern, but there are two gas stations along Inglewood Avenue that would be affected by the project. One property on the north side of Inglewood Avenue would be affected by the Hawthorne Option, and would be fully acquired for construction and operations. The other gas station on the south side of Inglewood Avenue would be affected by the Metro ROW alignments, including the LPA, with a small portion of the property identified as being needed for grade crossing infrastructure, as well as for a temporary construction easement. See the 2025 Real Estate Acquisitions Report for more information.

The project email included in the comment is correct, and Metro checks it frequently and on a regular basis for comments, including for comments on the Draft EIR.

Should property acquisition be required, Metro would comply with all applicable laws and regulations, including the California Relocation Act (Gov. Code subsection 7260 et seq.) and Metro's internal policies. Metro would provide relocation assistance and compensation to eligible displaced property and business owners, in accordance with these regulations. Just compensation would be based on the fair market value established by an approved appraisal, and all affected property owners would be notified in advance and informed of their rights and eligibility for assistance and benefits

Submission 1960 Ray Hollar

1960-1 As stated on page 3.3-54 of the Draft EIR, there are no designated scenic vistas in the resource study area (RSA). Views of the mountains and other landmarks the commenter mentioned are located relatively long distances from the Metro ROW in Lawndale, which makes any possible views of them quite distant. For example, the Hollywood Sign is located approximately 17 miles north/northeast of the Metro ROW in Lawndale. Nonetheless, those distant views would remain available from public streets and sidewalks, even with the addition of project elements such as soundwalls and elevated structure.

Project Feature PF-AES-2: Metro Design Standards further commits the project to implementing Metro's design policies, which ensure high-quality landscaping and visual appeal. Section 3.3-4.3.2 of the Draft EIR provides details concerning landscaping, as relevant, in the text and corresponding visual simulations. The project's unified design elements and landscaping would contribute positive visual enhancements, such as uniform landscaped public spaces. In addition, as relevant to the City of Lawndale, the 2023 Urban Design Report, published concurrently with the Draft EIR, provides that the project design would focus on preserving the open space character along Condon Avenue by retaining mature trees, where feasible, and introducing additional shade trees to enhance the corridor's visual character. CEQA does not mandate a detailed landscape and maintenance plan at the EIR stage. Such details would be determined during final design.

1960-2 The commenter's opposition to the Metro ROW alignment is noted. See MR-1: Selection of Alternatives. Metro has worked diligently to develop feasible and effective mitigation measures to address the potentially significant impacts of the project. See MR-10: Changes to Community Character.

Submission 1961 Kylee Kirby-Smith

1961-1 The commenter's opposition to the project is noted. See MR-1: Selection of Alternatives Metro has worked diligently to develop feasible and effective mitigation measures to address the potentially significant impacts of the project. See MR-10: Changes to Community Character.

1961-2 Although some residents use the Metro ROW for recreational activities, this use is not authorized or compliant with freight safety standards. See response to Comment 1961-1.

1961-3 The commenter's support for the Hawthorne Option and opposition to the Metro ROW alignment is noted. All comments have been shared with the Metro Board for their consideration.

Submission 1962 Janice Tanabe

1962-1 Urbanized avian species, including resident birds of prey such as red-tailed hawks and great-horned owls, are protected under the Migratory Birds Treaty Act and the California Fish and Game Code (CFGC). As discussed in Section 3.7, Biological Resources, of the Draft EIR, species protected under the Migratory Bird Treaty Act (MBTA) and California Fish and Game Code (CFGC) have potential to occur within the Resource Study Area (RSA). This includes resident birds of prey, such as red-tailed hawks and great-horned owls. As stated on page 3.7-22 of the Draft EIR, portions of the RSA, such as El Nido Park, provide urbanized avian species with both suitable breeding and foraging habitat in the form of trees, vegetation, and man-made structures. The Draft EIR acknowledges that construction activities could temporarily disturb these habitats. To address this, Mitigation Measure MM-BIO-2: Nesting Bird Season Restrictions and Pre-Construction Surveys establishes protections for nesting birds, including seasonal restrictions and pre-construction surveys to identify active nests. Given the existing anthropogenic disturbance (e.g., vehicular traffic, train traffic, human presence) throughout the RSA, these measures are anticipated to mitigate potential impacts on local avian species to less than significant. The project does not propose any permanent

changes that would preclude birds from returning to the area after construction is completed. Further, El Nido Park is a landscaped area consisting of ornamental vegetation and located adjacent to the existing Metro ROW where disturbance from ongoing freight activity and anthropogenic use occurs daily; terrestrial wildlife species utilizing the park are adapted to living in an urban environment; therefore operational impacts would be less than significant. See MR-10: Changes in Community Character.

Submission 1963 Colleen Villegas

1963-1 The potential for noise and vibration impacts for the Elevated/At-Grade Alignment, the Trench option, and the Hawthorne Option are addressed in Section 3.6, Noise and Vibration, of the Draft EIR. The potential for LPA impacts is addressed Chapter 4, Evaluation of Alternatives, of the Draft EIR. The analysis concludes that, with mitigation, vibration levels from light rail and relocated freight operations would be well below thresholds that could cause structural damage to buildings. Mitigation Measure MM-VIB-3: Pre- and Post-Construction Surveys requires contractors to document damage resulting from vibration impacts during construction and repair them. In addition, as discussed in Section 3.8, Geology and Soils, of the Draft EIR, the project design process would include thorough site geotechnical investigations to ensure the stability of nearby structures. Per Project Feature PF-GEO-1: Metro Geotechnical Design Standards, site-specific geotechnical investigations would be conducted to address foundation and structural safety. The investigation would include engineering and constructions recommendations to ensure surrounding structures are not damaged.

The Draft EIR identifies potential construction noise and construction vibration impacts as significant and unavoidable. However, Metro's contractor would implement Mitigation Measures MM-NOI-1: Noise Control Plan and MM-VIB-1: Vibration Control Plan to reduce these impacts to the extent feasible. The vibration control plan would include monitoring vibration levels to ensure compliance with the damage and annoyance thresholds to the maximum extent feasible. Additionally, construction-related activities would proceed in phases, limiting the duration of any impacts at a given location.

The commenter provides a link to a National Geographic Encyclopedia Entry, which discusses the global issue of noise pollution, particularly its high-intensity effects on human health, wildlife, and marine life. In contrast, the noise generated by the project would be intermittent, localized, and mitigated through soundwalls, quiet zones, and low-impact technologies. See MR-4: Potential Negative Health Effects Related to Noise, Vibration, and Air Quality.

1963-2 Metro has extensive experience overseeing the design and construction of light rail projects and has successfully managed utility relocations for similar transit projects throughout the region. Potential soil stability impacts are addressed in Section 3.8, Geology and Soils, of the Draft EIR. See MR-13: Soil Stability and Sinkholes. As described in Section 3.8, Geology, Soils, and Paleontological Resources, of the Draft EIR, pursuant to Project Feature PF-GEO-1: Metro Geotechnical Design Standards, engineering designs, including retaining walls and track support structures, would comply with Metro's safety and engineering standards, and final design would address stability and safety considerations.

1963-3 Metro has worked diligently to develop feasible and effective mitigation measures to address the potentially significant impacts of the project. See MR-4: Potential Negative Health Effects Related to Noise, Vibration, and Air Quality and MR-10: Changes to Community Character. Section 3.7, Biological Resources, of the Draft EIR, discusses implementation of mitigation measures that include general protection measures to avoid and minimize impacts on sensitive biological resources and nesting bird season restrictions, and pre-construction surveys. See response to Comments 1963-1 and 1963-2.

1963-4 The commenter's support for the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1964 Armando Vicente

1964-1 The commenter's opposition to the project using the Metro ROW is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1964-2 Noise and vibration are addressed in Section 3.6, Noise and Vibration of the Draft EIR. Chapter 4, Evaluation of Alternatives, of the Draft EIR evaluates these impacts with respect to the LPA. Metro has worked diligently to develop feasible and effective mitigation measures to address the potentially significant impacts of the project, including noise and vibration. See MR-2: Operational Noise Analysis Methodology and Impact Thresholds; MR-3: Operational Noise Project Features and Mitigation Measures; and MR-4: Potential Negative Health Effects Related to Noise, Vibration, and Air Quality; MR-5: Vibration Impact Types and Impact Thresholds; and MR-6: Vibration Analysis During Final Design.

As discussed in Section 3.2, Land Use, of the Final EIR, the Elevated/At-Grade Alignment would not physically divide the community because residents would still be able to cross the Metro ROW at all existing designated rail crossings located at Inglewood Avenue, Manhattan Beach Boulevard, 159th, 160th, 161st, 162nd, 170th, and 182nd Streets. Land uses would not be altered to isolate any one part of the community from the other. See also MR-10: Changes to Community Character.

For clarification, commuter rail would not run on this track. Metro light rail trains would operate within the Metro ROW, and would operate every five minutes during peak periods. System headways would be reduced during early morning (4:00 a.m. to 6:00 a.m.) and late-night hours (7:00 p.m. to 1:00 a.m.) to approximately 15 minutes.

1964-3 The commenter's support for shuttle buses is noted. A High-Frequency Bus Alternative is discussed in Chapter 4, Evaluation of Alternatives, of the Draft EIR. See MR-1: Selection of Alternatives.

1964-4 The commenter's opposition to the Metro ROW alignment and support for increased bus circulation is noted. All comments have been shared with the Metro Board for their consideration.

Submission 1965 Ana Maria Houck

1965-1 Metro has worked diligently to develop feasible and effective mitigation measures to address the potentially significant impacts of the project.

All light rail and freight tracks are designed according to Metro's design criteria with appropriate clearances, and would fit within the existing Metro ROW. See Appendix 2-A, Select ACE Drawings, of the Draft EIR and Appendix B, Select Advanced Conceptual Engineering Drawings-Locally Preferred Alternative, of the Final EIR for more details on the relocated freight and light rail tracks. See MR-8: Light Rail and Freight Train Safety.

Metro has extensive experience overseeing the design and construction of light rail projects and has successfully managed utility relocations for similar transit projects throughout the region. See MR-7: Utility Relocation and Hazardous Materials.

Metro has designed the project to avoid displacement of residents. See the 2023 Real Estate Acquisition Report, published concurrently with the Draft EIR, and the 2025 Real Estate Acquisition Report, published concurrently with the Final EIR, for more detailed information on proposed property acquisitions. In some areas along the Metro ROW, property owners have built out past their property lines and encroached into Metro ROW.

Submission 1966 Sirley Cuevas

1966-1 The commenter's opposition to the Metro ROW alignment and support for the Hawthorne Option is noted. See MR-7: Utility Relocation and Hazardous Materials.

Submission 1968 Nancy Skiba

1968-1 The commenter's support for the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1968-2 The commenter's concerns are noted. The issues raised in the response are addressed in the following master responses: MR-20: Proximity Impacts of Relocated Freight Tracks, MR-2: Operational Noise Analysis Methodology and Impact Thresholds; MR-3: Operational Noise Project Features and Mitigation Measures; MR-4: Potential Negative Health Effects Related to Noise, Vibration, and Air Quality; and MR-10: Changes to Community Character.

1968-3 See MR-8: Light Rail and Freight Train Safety.

1968-4 A fully underground alignment option was not considered as it would have significantly more impacts on surrounding communities during construction, as well as significantly higher costs. Metro takes public safety very seriously. See MR-9: Light Rail Security.

Submission 1969 Mike Kim

1969-1 Metro has extensive experience overseeing the design and construction of light rail projects and has successfully managed utility relocations for similar transit projects throughout the region. See MR-7: Utility Relocation and Hazardous Materials.

1969-2 The commenter's support for the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives and MR-8: Light Rail and Freight Train Safety.

Submission 1970 Mark Nelson

1970-1 The comment states that, "the Metro Draft EIR is defective and based on, "Redondo Beach Municipal Code (RBMC), evidence from Beach Cities Health District's multimillion dollar investment in Blue Zones and other peer-reviewed studies as cited by the National Institutes of Health (NIH) research findings." See responses to Comments 1970-2 through 1970-17 for responses to specific comments.

1970-2 The project does not violate Redondo Beach Municipal Code 10-2.2502 related to Planning Design Review. Metro, as the CEQA Lead Agency, has the responsibility to determine the appropriate criteria for the project. The Metro ROW is owned by Metro, and not regulated by the City of Redondo Beach. The Redondo Beach Municipal Code does not apply to the Metro ROW.

1970-3 The project does not violate Redondo Beach Municipal Code 4-24.301 related to noise. Metro, as the CEQA Lead Agency, has the responsibility to determine the appropriate criteria for the project, and has utilized the Federal Transportation Administration's (FTA) noise impact criteria, which was specifically developed to address transit noise based on well-documented criteria and research on human response to community noise. See MR-2: Operational Noise Analysis Methodology and Impact Thresholds. As discussed therein, application of the FTA criteria contrasts with the "brightline" operational noise thresholds used by many local jurisdictions, which set fixed operational limits without considering existing noise levels, and in many cases, these city thresholds have already been exceeded by existing conditions.

1970-4 The comment states that, "Project alternatives that use the existing freight right-of-way create a variety of health damages." See MR-4: Potential Negative Health Effects Related to Noise, Vibration, and Air Quality. It is not technically feasible to correlate project-specific effects to specific health outcomes, given the complexity of factors contributing to these conditions. However, health effects related to air quality, noise, and other CEQA resources would be reduced with implementation of the proposed mitigation measures.

1970-5 The comment states that, "Project alternatives that use the existing freight right-of-way damage child development." It is not technically feasible to correlate project-specific effects to specific health outcomes, given the complexity of factors contributing to these conditions. However, health effects related to air quality, noise, and other CEQA resources would be reduced with implementation of the proposed mitigation measures. See MR-4: Potential Negative Health Effects Related to Noise, Vibration, and Air Quality.

1970-6 The commenter has not provided substantial evidence that, "adjustments must be made to project, and no use of the freight right-of-way could be selected by Metro without non-compliance with RBMC and damages to both adults and generations of children." See response to Comments 1970-2 through 1970-5.

1970-7 The project does not violate Redondo Beach Municipal Code 10-2.2502 related to Planning Design Review. Metro, as the CEQA Lead Agency, has the responsibility to determine the appropriate criteria for the project. The Metro ROW is owned by Metro, and not regulated by the City of Redondo Beach. The Redondo Beach Municipal Code does not apply to the Metro ROW.

1970-8 Metro understands concerns regarding property values. However, under CEQA, economic impacts such as changes in property values are not considered environmental impacts. The Draft EIR focuses on physical environmental impacts and measures to mitigate them, as required by CEQA. To address questions and concerns on property values, Metro has prepared more information. See MR-14: Property Values and Impacts to Businesses.

1970-9 The project does not violate Redondo Beach Municipal Code 4-24.301 related to noise. Metro, as the CEQA Lead Agency, has the responsibility to determine the appropriate criteria for the project, and has utilized the FTA's noise impact criteria, which was specifically developed to address transit noise based on well-documented criteria and research on human response to community noise. See MR-2: Operational Noise Analysis Methodology and Impact Thresholds. As discussed therein, application of the FTA criteria contrasts with the "brightline" operational noise thresholds used by many local jurisdictions, which set fixed operational limits without considering existing noise levels, and in many cases, these city thresholds have already been exceeded by existing conditions.

1970-10 The comment does not provide substantial evidence that the project would increase the risk of death and illness from chronic stress. It is not technically feasible to correlate project-specific effects to specific health outcomes, given the complexity of factors contributing to these conditions. However, health effects related to air quality, noise, and other CEQA resources would be reduced with implementation of the proposed mitigation measures. See MR-4: Potential Negative Health Effects Related to Noise, Vibration, and Air Quality. See response to Comment 1970-11 related to the cited Blue Zone Articles.

1970-11 The commenter provides the following quote from a book titled, "Business Engagement in Building Healthy Communities: Workshop Summary": "… widen its main street and raise the speed limit, which, Buettner [Blue Zones CEO] said, creates stress, danger, noise pollution, and air pollution." Metro does not dispute that excessive noise levels could cause adverse health effects. However, refer to Section 3.4, Air Quality, and Section 3.6, Noise and Vibration, of the Draft EIR, for project-specific analysis using health impact criteria established by the FTA and the South Coast Air Quality Management District. Also see MR-4: Potential Negative Health Effects Related to Noise, Vibration, and Air Quality.

The commenter provides the following quote from an article titled, "Stress Makes us Sick": [T]his stress can be chronic, due to a specific situation … exposure to stress in early life can alter the normal development … resulting in increased sensitivity to stress and lifelong health risks in offspring." Metro does not dispute that stress could make people ill. This comment does not dispute the contents of the Draft EIR.

The commenter provides the following quote from an article titled, "Maximize Health and Longevity Using These Stress Management Strategies": "… causes many harmful, often overlooked effects … pain and strain … sleep habits … physical suffering … headache, upset

stomach, or back pain … stress can reduce the ability of your immune system". Metro does not dispute that stress could cause the cited health effects. This comment does not dispute the contents of the Draft EIR.

The commenter provides the following quote from an article titled, "Fighting Chronic Stress from Current Events? You Are Not Alone": "Although people often underestimate the influence of the mind on the body, a growing catalog of research shows that high levels of stress over an extended time can drastically alter physical function and affect nearly every organ system." Metro does not dispute that stress could cause health effects. This comment does not dispute the contents of the Draft EIR.

1970-12 The link provided for the National Geographic article on rail noise and stress in East Palestine is broken. Regardless, articles such as those cited by National Geographic, often address general or cumulative effects of noise from various types of rail or transportation systems, including heavy freight, passenger rail, and light rail. The project is a proposed light rail system, which operates differently than heavy rail of freight systems, with shorter and lighter trains and electric propulsion (reducing noise compared to diesel-powered freight trains). These distinctions mean that impacts identified in general studies may not directly apply to the project. This comment does not dispute the contents of the Draft EIR.

1970-13 The commenter submits an article titled, "Effects of Exposure to Road, Railway, Airport and Recreational Noise on Blood Pressure and Hypertension" as evidence of project impacts. The project is a proposed light rail system, which operates differently than heavy rail of freight systems, with shorter and lighter trains and electric propulsion (reducing noise compared to diesel-powered freight trains). These distinctions mean that impacts identified in general studies may not directly apply to the project. This comment does not dispute the contents of the Draft EIR.

1970-14 The commenter submits an article titled, "The Effect of Aircraft, Road, and Railway Traffic Noise on Stroke – Results of a Case–Control Study Based on Secondary Data" as evidence of project impacts. The project is a proposed light rail system, which operates differently than heavy rail of freight systems, with shorter and lighter trains and electric propulsion (reducing noise compared to diesel-powered freight trains). These distinctions mean that impacts identified in general studies may not directly apply to the project. This comment does not dispute the contents of the Draft EIR.

1970-15 The commenter submits an article titled, "Transportation Noise and Risk of Tinnitus: A Nationwide Cohort Study from Denmark as evidence of project impacts. The project is a proposed light rail system, which operates differently than heavy rail of freight systems, with shorter and lighter trains and electric propulsion (reducing noise compared to diesel-powered freight trains). These distinctions mean that impacts identified in general studies may not directly apply to the project. This comment does not dispute the contents of the Draft EIR.

1970-16 The commenter submits an article titled, "A study of self-reported health problems of the people living near railway tracks in Raipur city" as evidence of project impacts. The project is a proposed light rail system, which operates differently than heavy rail of freight systems, with shorter and lighter trains and electric propulsion (reducing noise compared to diesel-

powered freight trains). These distinctions mean that impacts identified in general studies may not directly apply to the project. This comment does not dispute the contents of the Draft EIR.

1970-17 See MR-4: Potential Negative Health Effects Related to Noise, Vibration, and Air Quality. It is not technically feasible to correlate project-specific effects to specific health outcomes, given the complexity of factors contributing to these conditions. However, health effects related to air quality, noise, and other CEQA resources would be reduced with implementation of the proposed mitigation measures. Furthermore, the project would not operate 24 hours per day for seven days per week. The proposed hours of operation are 4:00 a.m. one day to 1:00 a.m. the following day. System headways would be reduced during early morning (4:00 a.m. to 6:00 a.m.) and late-night hours (7:00 p.m. to 1:00 a.m.) to approximately 15 minutes.

Submission 1971 Jiri Samuel

1971-1 The commenter's opposition to the Metro ROW alignment is noted. See MR-1: Selection of Alternatives. Metro recognizes the importance of minimizing impacts from light rail and relocated freight operations. Section 3.6, Noise and Vibration, of the Draft EIR, provides a detailed noise analysis and identifies mitigation measures to reduce significant noise impacts. The analysis follows the Federal Transit Administration Transit Noise and Vibration Impact Assessment Manual and evaluates the potential changes from existing conditions. The analysis accounts for the proposed frequency of train operation and proximity to sensitive receptors, such as residences. The noise standards used in the noise analysis are based on exterior noise levels, meaning that impacts were evaluated without assumed closed windows or air conditioning. See MR-2: Operational Noise Analysis Methodology and Impact Thresholds and MR-3: Operational Noise Project Features and Mitigation Measures.

Submission 1972 Jiri Samuel

1972-1 The commenter's opposition to the Metro ROW alignment is noted. See MR-1: Selection of Alternatives. The project under consideration is a light rail transit line to be operated by Metro, not a heavy rail line operated by Metrolink or freight rail. Light rail vehicles are quieter, electrically powered trains that generate less noise compared to larger, diesel operated Metrolink trains and freight operators. Mitigation Measure MM-VIB-3: Pre- and Post-Construction Surveys requires contractors to document damage resulting from vibration impacts during construction and repair them. In addition, as discussed in Section 3.8, Geology and Soils, of the Draft EIR, the project design process would include thorough site geotechnical investigations to ensure the stability of nearby structures. Per Project Feature PF-GEO-1: Metro Geotechnical Design Standards, site-specific geotechnical investigations would be conducted to address foundation and structural safety. The investigation would include engineering and constructions recommendations to ensure surrounding structures are not damaged.

Submission 1973 Jan Kurth

1973-1 The commenter's opposition to the Metro ROW alignment is noted. See MR-1: Selection of Alternatives. See responses to Comments 1973-3, 1973-5, 1973-6, and 1973-7 for specific

responses related to vibration. The project under consideration is a light rail transit line, not a commuter rail line, which typically consists of heavy rail. Light rail vehicles are quieter, electrically powered trains that generate less noise compared to larger, diesel operated Metrolink trains.

Section 3.6, Noise and Vibration, of the Draft EIR identifies locations where potential operational vibration impacts related to structural damage and annoyance would occur and sets forth Mitigation Measures MM-VIB-4: Low Impact Frogs through MM-VIB-6: Ballast Mats. The foregoing mitigation measures would reduce vibration operational annoyance impacts to less than significant. See MR-5: Vibration Impact Types and Impact Thresholds and MR-6: Vibration Analysis During Final Design for more information regarding the vibration analysis in the Draft EIR and during final design.

1973-2 Metro is committed to integrating safety into all Metro rail operations. The project would comply with relevant safety standards, including the California Manual on Uniform Traffic Control Devices, the California Department of Transportation Highway Design Manual, and Metro's Grade Crossing Safety Policy. See MR-8: Light Rail and Freight Train Safety.

1973-3 The project under consideration is a light rail transit line to be operated by Metro, not a heavy rail line operated by Metrolink or freight rail. Light rail vehicles are quieter, electrically powered trains that generate less noise compared to larger, diesel operated Metrolink trains and freight operators. Mitigation Measure MM-VIB-3: Pre- and Post-Construction Surveys requires contractors to document damage resulting from vibration impacts during construction, and repair them. In addition, as discussed in Section 3.8, Geology and Soils, of the Draft EIR, the project design process would include thorough site geotechnical investigations to ensure the stability of nearby structures. Per Project Feature PF-GEO-1: Metro Geotechnical Design Standards, site-specific geotechnical investigations would be conducted to address foundation and structural safety. The investigation would include engineering and constructions recommendations to ensure surrounding structures are not damaged.

1973-4 Metro has worked diligently to develop feasible and effective mitigation measures to address the potentially significant impacts of the project. The construction duration for the LPA is included in the Final EIR. Construction-related activities would proceed in phases, limiting the duration of any impacts at a given location. See MR-21: Cost Estimates and Schedule.

1973-5 See response to Comment 1973-3. As described in Section 3.6, Noise and Vibration, of the Draft EIR, the Federal Transit Administration (FTA) has defined vibration thresholds for human annoyance and structural damage. As shown in Table 3.6-6 of the Draft EIR, the threshold for vibration annoyance is 65 vibration decibels, for "frequent events." The threshold for construction vibration damage is shown in Table 3.6-5, which expresses vibration in terms of peak particle velocity inches per second. The analysis in the Draft EIR evaluates construction vibration impacts based on these established thresholds. For operational vibration impacts, vibration impacts are assessed in terms of human annoyance, as building damage thresholds are much greater than annoyance thresholds and are typically limited to construction activities which generate higher peak vibration levels than freight or light rail trains.

1973-6 See responses to Comments 1973-3 and 1973-5.

1973-7 The commenter's interpretation of the vibration data is inaccurate. Vibration levels were elevated at the El Nido Park measurement location for both northbound and southbound trains, indicating that the observed levels were not solely attributable to variations in train weight. For both loaded and unloaded trains, the highest vibration levels typically occurred with the passage of the locomotive, which is generally the heaviest part of the train.

As described on page 3.6-28 of the Draft EIR, the FTA general assessment methodology does not require vibration measurements. Vibration measurements were primarily conducted to collect samples of vibration generated by the existing freight train pass-bys and not as a requirement to prepare the analysis. As described on Page 3.6-31 of the Draft EIR, where higher vibration propagation was predicted compared to the predicted vibration levels, adjustments were made to calibrate the model such that it reflected higher vibration levels in the vicinity of El Nido Park.

See response to Comment 133-3 regarding vibration mitigation and vibration effects related to annoyance and damage during operations.

The commenter's support for the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration.

Submission 1974 Michael Cowan

1974-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1975 Kelly F.

1975-1 A map of the project and options is provided in Figure 1.2-1 of the Draft EIR, located on page 1-3 of the document and page 2-7 of the Final EIR. A map is also available online at Metro's website located here: Metro C Line Extension to Torrance - LA Metro. If accessing Draft EIR or the online map is difficult, printed copies of the map can be requested by contacting Metro at: greenlineextension@metro.net

Additionally, Metro staff are available to assist seniors and other community members in reviewing the map and project details, either by phone at 213-922-4004 or in person at public outreach events and meetings.

The proposed light rail tracks would be built adjacent to the freight tracks within the Metro ROW. While freight tracks would remain, in some locations the freight tracks would be shifted within the Metro ROW to accommodate the light rail tracks. For more information regarding the proposed modifications to the freight tracks, see Section 2.3-1 of the Draft EIR and Chapter 2, Description of the Locally Preferred Alternative, of the Final EIR. Also refer to Appendix 2-A, Select Advanced Conceptual Engineering Drawings, of the Draft EIR and Final EIR Appendix B, Select Advanced Conceptual Engineering Drawings - Locally Preferred Alternative.

Submission 1976 Jay Gould

1976-1 The comment does not address the adequacy of the Draft EIR and is noted for the record. All comments have been shared with the Metro Board for their consideration.

1976-2 The commenter's opposition to the project is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1976-3 The commenter's objection to the project alignment in proximity to residences is noted. The project is designed to avoid displacement of residents. However, for properties where acquisition is necessary, Metro would comply with all applicable laws and regulations, including the California Relocation Act. See the 2025 Real Estate Acquisitions Report for additional information about property needs associated with the project. See also MR-14: Property Values and Impacts to Businesses.

1976-4 The comment does not address the adequacy of the Draft EIR and is noted for the record. All comments have been shared with the Metro Board for their consideration.

1976-5 The commenter's opposition to the project is noted. As described in the 2023 Alternatives Considered and Eliminated Report, published alongside the Draft EIR, Metro evaluated multiple alternatives and design options for a light rail extension in the South Bay from 2010 to the present day. Prior to the publication of the 2023 Draft EIR, reports analyzing the extension were published in 2009 and 2018. Crenshaw Boulevard would not be a feasible route, as it does not connect to the existing Redondo Beach (Marine) Station.

Submission 1977 Jay Gould

1977-1 The commenter's opposition to the project is noted. See MR-1: Selection of Alternatives. Vibration is addressed in Section 3.6, Noise and Vibration of the Draft EIR. Chapter 4, Evaluation of Alternatives, of the Draft EIR evaluates these impacts with respect to the LPA. Metro has worked diligently to develop feasible and effective mitigation measures to address the potentially significant impacts of the project, including vibration. See MR-5: Vibration Impact Types and Impact Thresholds and MR-6: Vibration Analysis During Final Design.

Submission 1978 Mark Car

1978-1 The commenter's support for the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

1978-2 The comment does not address the adequacy of the Draft EIR and is noted for the record. All comments have been shared with the Metro Board for their consideration.

Submission 1979 Stable

1979-1 Noise is addressed in Section 3.6, Noise and Vibration of the Draft EIR. Chapter 4, Evaluation of Alternatives, of the Draft EIR evaluates these impacts with respect to the LPA. Metro has worked diligently to develop feasible and effective mitigation measures to address the potentially significant impacts of the project, including noise. See MR-2: Operational Noise

Analysis Methodology and Impact Thresholds and MR-3: Operational Noise Project Features and Mitigation Measures.

Metro has undertaken extensive community outreach for potential transit service along the Metro ROW for well over a decade. Metro's outreach program also takes into consideration limited English proficiency within the communities. Most recently, in notifying the community regarding the Locally Preferred Alternative decision at a Metro Board of Directors meeting in May 2024 connection with the Draft EIR open houses, Metro distributed 32,000 flyers to residents, property owners, and businesses within a one-mile radius of all the alignments under study to notify the community of the LPA selection. Additionally, at the request of the City of Lawndale, Metro sent flyers to every resident within Lawndale. All outreach notifications are provided in both English and Spanish. Documentation on the outreach conducted during the environmental review process is available on the Metro project Dropbox, by visiting metro.net/clineext/#documents.

Submission 1980 Teresita Gonzales

1980-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1981 Lyuamila Gurevich

1981-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1982 Anne and Steve Granick

1982-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1983 Ralph Giordano

1983-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1984 Ricardo Gonzalez

1984-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1985 R. Yanase

1985-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1986 Ana Sofia Chappeton

1986-1 The commenter's support for the Elevated/At-Grade Alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1987 Grant Glazebrook

1987-1 The commenter's support for the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1988 Jason Macdonald

1988-1 The commenter's support for the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1989 Anonymous

1989-1 The commenter's support for the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission 1990 can be found in Section 5.3 Responses to Public Agencies

Submission 1991 Holly Osborne

1991-1 Figure 3.2-5 and Figure 3.2-10 incorrectly duplicated the City of Torrance percentage of existing land uses in the resource study area for the Proposed Project and Trench Option (Figure 3.2-5) and Hawthorne Option (Figure 3.2-10) totals.

This error has been corrected in Section 4.6, Corrections and Additions, of the Final EIR. The correction does not change the overall conclusion of the DEIR.

1991-2 See response to Comment 1991-1.

5.6 RESPONSES TO PUBLIC HEARING COMMENTS

Submission PH-1 Armando Vicente

PH-1-1 The commenter's support for the Hawthorne Option and opposition to the Elevated/At-Grade Alignment and Trench Option is noted. All comments have been shared with the Metro Board for its consideration. See MR-1: Selection of Alternatives and MR-10: Changes to Community Character.

Submission PH-2 Josh Standifer

PH-2-1 The use of the Metro ROW as recreational space is acknowledged on page 3.15-38 of the Draft EIR. While Metro recognizes that some residents currently use the Metro ROW as informal recreational space, it is important to note that the Metro ROW is not a designated park or public recreational area. Its primary purpose is rail transportation. The project includes two multi-use paths, expanding access to residential neighborhoods and offering additional recreational options. See MR-10: Changes to Community Character and MR-16: Response to Lawndale and Redondo Beach Community Letter.

PH-2-2 Metro Homeless Outreach Teams are deployed on Metro buses, trains, and stations to engage with unhoused riders and connect them to resources. See MR-18: Homelessness.

PH-2-3 The commenter's support for the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission PH-3 Craig St. John

PH-3-1 Property along Manhattan Beach Boulevard and Inglewood Avenue has been identified as potential location for a traction power substation (TPSS), as well as for a sump pump for the Trench Option. The LPA would not require a sump pump or the use of the parcel. The Draft EIR evaluated multiple TPSS locations, which are updated in the Final EIR Appendix B, Select Advanced Conceptual Engineering Drawings – Locally Preferred Alternative, and would be further refined in the next phase of design, pending certification of the Final EIR and approval of the project by the Metro Board.

PH-3-2 The 2023 Ridership Summary Report, published alongside the Draft EIR, shows that the project is expected to generate between 11,500 to 15,600 daily transit trips (boardings). See MR-15: Metro Ridership Forecasting Methodology.

PH-3-3 The commenter's preference for an elevated alignment in the Metro ROW alignment is noted. The Metro Board has selected an LPA for purposes of the Final EIR, although it has not yet approved the project, including any of the options and alternatives evaluated in the Draft EIR. A final decision will not be made until after the Metro Board reviews the Final EIR, which will include responses to all public comments, including those of the commenter. See MR-1: Selection of Alternatives.

PH-3-4 As described in Section 3.1, Transportation, of the Draft EIR, on page 3.1-15, PF-T-1: Construction Traffic Management Plan (CTMP), a CTMP would be prepared and implemented to manage disruptions during construction. The plan would include strategies

to manage traffic flow, including phased construction to avoid long-term closures, clearly marked detours, and coordination with local agencies to ensure efficient traffic management. As part of Metro's standard practice, the CTMP would explore scheduling certain construction activities, including deliveries and pick-ups of materials, during non-peak travel periods, and the possibility of conducting some construction work at night. The CTMP would be updated as construction progresses to reflect changes and updates at the work areas.

Submission PH-4 Kevin Mitchell

PH-4-1 Metro has worked diligently to develop feasible and effective mitigation measures to address the potentially significant impacts of the project, including those related to noise and vibration. Light rail transit operations differ significantly from freight operations in terms of noise and vibration characteristics. Light rail transit systems use lighter, electrically powered vehicles, resulting in lower noise and vibration levels compared to the diesel-powered freight trains currently operating along the Metro ROW. While the project would introduce light rail noise and would require adjustments to the locations of the existing freight tracks, the project would not increase freight operations.

Section 3.6, Noise and Vibration, of the Draft EIR, provides a comprehensive analysis of potential noise and vibration impacts associated with construction and operation of the Elevated/At-Grade Alignment, the Trench Option, and the Hawthorne Option. In addition, Chapter 4, Evaluation of Alternatives, of the Draft EIR, also evaluates the No Project Alternative, and the LPA. Operational noise and vibration impacts of the Trench Option, the Hawthorne Option and the LPA would be reduced to less than significant levels with mitigation. See MR-3: Operational Noise Project Features and Mitigation Measures and MR-10: Changes to Community Character

Regarding construction impacts, Section 3.6, Noise and Vibration, of the Draft EIR, discloses that construction activities would cause potentially significant noise and vibration impacts. To address these impacts, Mitigation Measures MM-NOI-1: Noise Control Plan and MM-VIB-1: Vibration Control Plan would be implemented to reduce these temporary construction impacts to the maximum extent feasible. Additionally, construction-related activities would proceed in phases, meaning that work would not occur in one location for the entire construction period.

PH-4-2 The mitigation measures included in the Draft EIR are designed to eliminate or lessen potentially significant impacts of the project to environmental resources listed in the CEQA Guidelines. The Draft EIR established existing conditions for each resource addressed in the Draft EIR to appropriately study potential impacts to affected neighborhoods.

Submission PH-5 John Schreiber

PH-5-1 The project provides multiple benefits to the City of Lawndale, including improving mobility in the South Bay and providing equitable access to regional destinations through improved connections to the Metro regional rail system. Stations in the City of Lawndale were proposed as part of the 2018 Supplemental Alternatives Analysis, but were removed from consideration at the request of the City of Lawndale. See MR-19: Project Benefits.

PH-5-2 Metro has worked diligently to develop feasible and effective mitigation measures to address the potentially significant impacts of the project. The use of the Metro ROW as recreational space is acknowledged on page 3.15-38 of the Draft EIR. While Metro recognizes that some residents currently use the Metro ROW as informal recreational space, it is important to note that the Metro ROW is not a designated park or public recreational area. Its primary purpose is rail transportation. The project includes two new multi-use paths, expanding access to residential neighborhoods and offering additional recreational options. See MR-10: Changes to Community Character and MR-16: Response to Lawndale and Redondo Beach Community Letter.

Section 3.2, Land Use and Planning, Section 3.3, Aesthetics, and 3.7, Biological Resources, of the Draft EIR, evaluate potential impacts to natural resources, including trees and green space, along the Metro ROW. Section 3.15-4.5, Public Services and Recreation, of the Draft EIR, concludes that the project would not lead to a significant impact or the need for new or physically altered government facilities to meet demand for parks or recreational areas. Existing parks and recreational facilities in the area would continue to serve residents after project implementation.

PH-5-3 See MR-8: Light Rail and Freight Train Safety. The presence of natural gas lines and petroleum pipelines, their potential impacts, and applicable regulatory requirements are addressed in Sections 3.9, Hazards and Hazardous Materials, and 3.11 Utilities and Service System, of the Draft EIR. Potential impacts of the LPA in this context are evaluated in Chapter 4, Evaluation of Alternatives, of the Draft EIR. In addition, Section 4.13, Corrections and Additions, of the Final EIR expands on the analysis in Section 3.9-4.2.1 of the Draft EIR by clarifying the protocols, construction techniques, regulations, and standards with which the project would comply. As detailed therein, the revisions do not change the Draft EIR's conclusion that the impact related to oil and gas pipelines would be less than significant. See MR-7: Utilities Relocation and Hazardous Materials Safety, MR-8: Light Rail and Freight Train Safety, and MR-20: Proximity Impacts of Relocated Freight Tracks. In addition, the potential for the project to interfere with evacuation plans is addressed on page 3.9-47 of the Draft EIR. The project would not interfere with an emergency response plan or emergency evacuation plan. See MR-12: Emergency Access. The Metro Board has selected an LPA for purposes of the Final EIR, which would fully grade separate the light rail within the Metro ROW.

PH-5-4 In order to provide every commenter with an opportunity to express their opinions during the public hearing, a one-minute time limit was allocated. The public has several other avenues to express their comments, including through the project email, letters, and the project phone number.

Submission PH-6 Chelsea Schreiber

PH-6-1 As discussed on page 3.3-71 and several other locations within Section 3.3, Aesthetics, of the Draft EIR, Metro's Tree Policy requires a minimum tree replacement ratio of 2:1 (or 4:1 if the tree is considered a heritage tree), and the planting of California-native or other drought-tolerant trees. Trees would also be replanted along the corridor to preserve and enhance the aesthetic character of the community.

PH-6-2 Under CEQA, economic impacts such as changes in property values are not considered environmental impacts. The Draft EIR focuses on physical environmental impacts and measures to mitigate them, as required by CEQA. To address questions and concerns on property values, Metro has prepared more information. See MR-14: Property Values and Impacts to Businesses.

PH-6-3 Metro has constructed nearly 120 miles of light rail throughout Los Angeles County. More information on light rail projects can be found https://www.metro.net/projects/. Comments from stakeholders can be found in the Final EIR of each respective Metro project.

PH-6-4 Approximately 178 residential properties are located immediately adjacent to the Metro ROW, and 22 residential properties are located immediately adjacent to the Hawthorne Option. Metro has designed the project to avoid displacement of residents under either the Metro ROW alignments or the Hawthorne Option. See MR-4: Potential Negative Health Effects Related to Noise, Vibration, and Air Quality. Project operations would not introduce a new substantial permanent source of air pollutant emissions along the alignment. The light rail system would be powered by electricity, meaning there would be no direct emissions associated with rail propulsion. Consequently, operation of the light rail would not contribute to air pollution that could affect long-term health concerns such as asthma or cancer. Regarding potential air quality impacts associated with the relocation of the freight tracks, the distance to which the freight track would be shifted would vary all throughout the alignment, with a maximum shift of approximately 25 feet in the industrial areas north of the Torrance TC Station. This relocation is designed to accommodate the light rail tracks while minimizing potential impacts on adjacent properties. See MR-20: Proximity Impacts of Relocated Freight Tracks. Regarding construction impacts, as shown in Table 3.4-21 of the Draft EIR, localized emissions during construction, including those from freight track relocation, would remain below the applicable South Coast Air Quality Management District (SCAQMD) localized screening thresholds, even with sensitive receptors located near the edge of the Metro ROW. For a comparative evaluation of the alignment options and alternatives, see Chapter 4, Evaluation of Alternatives, of the Draft EIR and Section 4.21, Corrections and Additions, of this Final EIR.

PH-6-5 Metro takes the safety and well-being of nearby communities very seriously. Metro has worked diligently to design the project in a manner that avoids impacts to adjacent residential areas and to develop feasible and effective mitigation measures to address potentially significant environmental impacts. See response to Comment PH-6-4.

Submission PH-7 Lena Pullen

PH-7-1 Metro takes the safety and well-being of nearby communities very seriously. See MR-9: Light Rail Security. Metro Homeless Outreach Teams are deployed on Metro buses, trains, and stations to engage with unhoused riders and connect them to resources. See MR-18: Homelessness.

PH-7-2 The Hawthorne Boulevard Option, the Trench Option, and the LPA would fully grade separate light rail from all roadways, thereby avoiding potential conflicts with school-age pedestrians and cyclists. As described in Chapter 2, Project Description, of the Draft EIR, the Elevated/At-Grade Alignment would have two at-grade light rail crossings at 170th and

182nd Streets. During operations, the potential for delays is dependent on dispatch routing of emergency responders to these particular crossings. Emergency responders are dispatched either from the station or from their current location, which means they may not utilize this crossing to arrive at their response destination. Alternative routes include Grant Avenue, Artesia Boulevard, and 190th Street. Metro would coordinate with involved police departments in addressing security and station areas within their respective jurisdictions. Gate operations for at-grade crossings would be configured per California Public Utility Commission standards. The LPA and Trench Option would grade separate light rail at 170th Street and 182nd Street.

During construction, Project Feature PF-T-1: Construction Traffic Management Plan, as described on page 3.1-15 of the Draft EIR, would require Metro to coordinate with the local jurisdictions to minimize disruptions to public services (e.g., schools). This plan would include details on street closure, detour routes, haul routes and staging areas and would be reviewed by the Cities of Lawndale, Redondo Beach, and Torrance. Consistent with standard Metro practice, the construction traffic management plan would account for peak hours to minimize any disruption to student transportation, including access to Lawndale High School and other schools in the district. Project Feature PF-T-1 also requires Metro to coordinate with emergency service providers, including fire, police and EMTs, to ensure emergency access is provided to the construction zones and neighboring land uses. Emergency access points would be clearly marked in consultation with local fire departments to ensure that emergency vehicles could quickly respond to incidents in the community during construction. See MR-12: Emergency Access.

PH-7-3 The commenter's support for the No Build Alternative and opposition to the Hawthorne Boulevard Option and an alignment through the City of Lawndale are noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission PH-8 Eric Hermelin

PH-8-1 Section 3.6. Noise and Vibration, of the Draft EIR, discloses that each alignment option would result in potentially significant construction-related noise and vibration impacts. To address these impacts, the project would implement Mitigation Measures MM NOI-1: Noise Control Plan, MM-VIB-1: Vibration Control Plan, MM-VIB-2: Construction Equipment Location, and MM-VIB-3: Pre- and Post- Construction Surveys. While implementation of these measures would reduce the construction noise and vibration impacts to the maximum extent feasible, some noise and vibration impacts during construction would remain significant and unavoidable. These impacts would be temporary and would cease upon the completion of construction activities.

The potential operational noise impacts for the Elevated/At-Grade Alignment, the Trench Option, and the Hawthorne Option are addressed in Section 3.6, Noise and Vibration, of the Draft EIR. The potential for LPA impacts is addressed in Chapter 4, Evaluation of Alternatives, of the Draft EIR. See MR-2: Operational Noise Analysis Methodology and Impact Thresholds and MR-3: Operational Noise Project Features and Mitigation Measures.

PH-8-2 The commenter's support for the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission PH-9 Barry Ogle

PH-9-1 The commenter's experience as a retired BNSF conductor remote control engineer is noted. See MR-8: Light Rail and Freight Train Safety.

PH-9-2 The commenter's support for the Hawthorne Option is noted. See MR-1: Selection of Alternatives. Soil conditions and potential impacts along the Metro ROW are identified in Section 3.8, Geology, Soils, and Paleontological Resources, of the Draft EIR. Any design using the Metro ROW would account for these conditions in order to construct and operate the project safely. See MR-13: Soil Stability and Sinkholes.

PH-9-3 Several routes were examined as part of previous phases and studies of the project, but were eliminated from further consideration, as described in the 2023 Alternatives Considered and Eliminated Report, published alongside the Draft EIR. See Chapter 4, Evaluation of Alternatives, of the Draft EIR.

Submission PH-10 Angelica Vicente

PH-10-1 The commenter's concerns regarding the Metro ROW alignments are noted. Metro has designed the project to fit within the Metro ROW and avoid displacement of people from their homes. Metro has designed the project to avoid displacement of residents. See the 2025 Real Estate Acquisition Report, published concurrently with this Final EIR, for more detailed information on proposed property acquisitions. Metro understands the concern related to property values. See MR-14: Property Values and Impacts to Businesses.

PH-10-2 Appendix 2-A, Select Advanced Conceptual Engineering Drawings, of the Draft EIR and Appendix B, Select Advanced Conceptual Engineering Drawings - Locally Preferred Alternative, of the Final EIR show the locations and approximate heights of the retaining walls. The commenter refers to their property near the Metro ROW in the area between 170th Street and Artesia Boulevard. The retaining walls proposed in this area would be approximately the same height as the existing freight track, and would not substantially alter views or affect natural light relative to existing conditions. Figure 3.3-64 in the Draft EIR provides a simulation of a similar scenario, where the retaining wall near Grant Avenue would replace the existing earthen berm. Overall, the impacts related to the retaining walls would be similar to the rest of the project as a whole, as discussed in Section 3.3-4.3.2 of the Draft EIR. They would represent a visual change compared to existing conditions but through application of Metro design policies to ensure a high level of quality in design, they would be consistent with local policies regarding visual character and quality. Soundwalls are designed to withstand all but the most severe earthquakes per the California Building Code.

With respect to potential shading, the creation of shade on private property, such as reduced sunlight in private yards, is generally not considered a significant environmental impact unless it affects public spaces or public resources such as parks, open space, or solar access. In addition, because the position of the sun changes throughout the day and year,

any shading from the project features would be temporary and vary in duration, rather than causing continuous loss of light. Furthermore, the scale of retaining walls and soundwalls would generally be similar to the surrounding environment, and would therefore not introduce substantial new shade. Accordingly, shading of individual residences would not constitute a significant impact.

PH-10-3 Noise and vibration are discussed in Section 3.6, Noise and Vibration, of the Draft EIR. The analysis considers both the light rail train and relocated freight tracks. See MR-2: Operational Noise Analysis Methodology, MR-3: Operational Noise Project Features and Mitigation Measures, MR-5: Vibration Impact Types and Impact Thresholds, MR-6: Vibration Analysis During Final Design, and MR-20: Proximity Impacts of Relocated Freight Tracks.

PH-10-4 Metro has extensive experience overseeing the design and construction of light rail projects and has successfully managed utility relocations for similar transit projects throughout the region. See MR-7: Utility Relocation and Hazardous Materials Safety.

PH-10-5 As discussed in Section 3.2, Land Use and Planning, of the Draft EIR, the project would not physically divide a community because residents would still be able to cross the Metro ROW at all existing designated rail crossings located at Inglewood Avenue, Manhattan Beach Boulevard, 159th, 160th, 161st, 162nd, 170th, and 182nd Streets. Land uses would not be altered to isolate any one part of the community from the other. All at-grade crossings for light rail and/or freight would include upgraded safety crossing infrastructure. The LPA, Trench Option, and Hawthorne Option would fully grade separate light rail from all roadways. See MR-10: Changes to Community Character.

Submission PH-11 Rhonda Hofmann Gorman

PH-11-1 In order to provide every commenter with an opportunity to express their opinions, a one-minute time limit was allocated. The public has several other avenues to express their comments, including through the project email, letters, and the project phone number.

PH-11-2 The commenter's opposition to the project is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

PH-11-3 Metro Homeless Outreach Teams are deployed on Metro buses, trains, and stations to engage with unhoused riders and connect them to resources. See MR-18: Homelessness.

Submission PH-12 Ted Hofmann

PH-12-1 The commenter's opposition to the project is noted. The chart that the commenter refers to was displayed at the public hearings showing the Elevated/At-Grade Alignment and Trench and Hawthorne Options analyzed in the Draft EIR, and did not include the alternatives to the project discussed in Chapter 4, Evaluation of Alternatives, of the Draft EIR. See MR-1: Selection of Alternatives.

PH-12-2 See response to Comment PH12-1. The High-Frequency Bus Alternative is considered and analyzed in Chapter 4, Evaluation of Alternatives, of the Draft EIR. CEQA requires that an EIR identify the Environmentally Superior Alternative and discuss the facts that support that

selection. However, the Lead Agency is not obligated to select the Environmentally Superior Alternative for implementation if it would not accomplish the basic project objectives.

PH-12-3 The commenter's opposition to the Hawthorne Option, which may require an overhead easement for the light rail to cross over their property is noted. All comments have been shared with the Metro Board for their consideration.

Submission PH-13 Doris Hofmann

PH-13-1 Metro understands concerns regarding property values. However, under CEQA, economic impacts such as changes in property values are not considered environmental impacts. The Draft EIR focuses on physical environmental impacts and measures to mitigate them, as required by CEQA. To address questions and concerns on property values, Metro has prepared more information. See MR-14: Property Values and Impacts to Businesses.

PH-13-2 The 2023 Ridership Summary Report, published alongside the Draft EIR, shows that the project is expected to generate between 11,500 to 15,600 daily transit trips (boardings). Metro Homeless Outreach Teams are deployed on Metro buses, trains, and stations to engage with unhoused riders and connect them to resources. See MR-18: Homelessness.

PH-13-3 The commenter's opposition to the project is noted. The Draft EIR analyzed a High-Frequency Bus Alternative. Light rail offers travel time savings over bus, as demonstrated in the 2023 Ridership Summary Report, which makes light rail transfer to bus rather than a single ride on a bus preferable to many riders. See MR-1: Selection of Alternatives. Metro has a graffiti program that requires removal of graffiti within 24 hours of being reported. In addition, the Metro Rail Design Criteria requires that a graffiti-resistant coating be applied to furnishings and surfaces to prevent graffiti.

Submission PH-14 Robert Pullen Miles

PH-14-1 The commenter's opposition to the project is noted. All comments have been shared with the Metro Board for their consideration. Metro has worked diligently to develop feasible and effective mitigation measures to address the potentially significant impacts of the project. See MR-1: Selection of Alternatives.

PH-14-2 The use of the Metro ROW as recreational space is acknowledged on page 3.15-38 of the Draft EIR. However, access to the Metro ROW is not authorized, as the Metro ROW is part of an active transportation corridor, nor compliant with freight safety standards. The Metro ROW is not a designated park or public recreational area. Its primary purpose is rail transportation. The project would include new multi-use paths, expanding access to residential neighborhoods and offering safe recreational options. See MR-10: Changes to Community Character and MR-16: Response to Lawndale and Redondo Beach Community Letter.

PH-14-3 Metro has been coordinating with Westwood Building Supplies since early phases of the project and has refined the design to minimize potential disruptions to the property's operations, as well as their storage area, which they lease from Metro. Although construction activities could result in partial and full road closures along Inglewood Avenue

and Manhattan Beach Boulevard, Metro is committed to minimizing disruption to local businesses. As part of Project Feature PF-T-1: Construction Traffic Management Plan, described in Section 3.1, Transportation, of the Draft EIR, the project would include a Construction Traffic Management Plan (CTMP), which would manage closures, maintain access, and coordinate with businesses. The CTMP requires Metro to coordinate with impacted businesses to limit disruptions.

PH-14-4 The commenter's opposition to the project in Lawndale, support for the No Project Alternative, and preference for more buses is noted. The No Project Alternative and a High-Frequency Bus Alternative were analyzed in Section 4, Evaluation of Alternatives, of the Draft EIR. See MR-1: Selection of Alternatives.

Submission PH-15 Pat Nichols

PH-15-1 Metro has worked diligently to develop feasible and effective mitigation measures to address the potentially significant impacts of the project. The Trench Option would reduce noise impacts compared to the Elevated/At-Grade Alignment by blocking the line-of-site between noise sources and nearby receptors and by eliminating the need for audible light rail warning devices at the 170th Street and 182nd Street crossings.

The Metro Board selected the LPA for the purposes of the Final EIR. Similar to the Trench Option, the LPA significantly reduces noise impacts compared to the Elevated/At-Grade Alignment because it eliminates the at-grade crossings at 170th and 182nd Streets. By grade separating the light rail from all roadways, the LPA, Trench Option, and Hawthorne Option avoid the need for audible warning at light rail crossings, such as routine light rail train horns and crossing bells. Operational noise impacts of the LPA, Trench Option, and Hawthorne Option would be less than significant with mitigation. See MR-3: Operational Noise Project Features and Mitigation Measures.

Metro acknowledges that the project would result in light rail noise along the Metro ROW. Per guidance established by the Federal Transit Administration (FTA) in the Transit Noise and Vibration Impact Assessment Manual (2018), the potential for impacts is based on exterior noise levels. The analysis in Section 3.6, Noise and Vibration, of the Draft EIR, demonstrates that with mitigation, exterior noise levels impacts would be below the FTA noise thresholds, regardless of whether windows are open or closed.

PH-15-2 The vibration levels from light rail operations would be significantly lower than those generated by freight trains due to the lighter weight. The vibration analysis considered both light rail trains and relocated freight. Operational vibration annoyance impacts would be mitigated to less than significant with mitigation for the Metro ROW alignments and the Hawthorne Option. Mitigation measures include MM-VIB-4: Low Impact Frogs, MM-VIB-5: Resilient Fasteners, and MM-VIB-6: Ballast Mats. Vibration mitigation measures and locations where they would apply are included on pages 3.6-106 through 3.6-108 of the Draft EIR. Because, with mitigation, the operational vibration levels would be below the FTA's thresholds for annoyance, they would also be well below the levels associated with structural damage to adjacent buildings. In addition, as discussed in Section 3.8, Geology and Soils, of the Draft EIR, the project design process would include thorough site-specific

geotechnical investigations to ensure the stability of nearby structures. Per Project Feature PF-GEO-1: Metro Geotechnical Design Standards, site-specific geotechnical investigations would be conducted to address foundation and structural safety. The investigation would include engineering and construction recommendations to ensure surrounding structures are not damaged. See MR-13: Soil Stability and Sinkholes.

Submission PH-16 Denise

PH-16-1 The LPA and the Trench Option would fully grade separate light rail from all roadways, and would not increase traffic congestion, nor affect emergency access along the Metro ROW. For the Elevated/At-Grade Alignment, the frequency of the railroad crossing gate down time would increase travel times for vehicles relative to existing conditions, but it would not result in the permanent closure of emergency access. All homes and businesses on either side of the Metro ROW are accessible by alternate routes within a half-mile and, therefore, would not be substantially affected by train frequency. See MR-12: Emergency Access for additional information.

Submission PH-17 Andrew Wang

PH-17-1 The commenter's support for the Trench Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission PH-18 Jay Gould

PH-18-1 Metro extends its sympathy to the commenter and their family for the experience described. While Metro is not able to comment on individual criminal investigations, safety and security are a top priority for Metro. The commenter's opposition to the project is noted. All comments have been shared with the Metro Board for their consideration. Metro is committed to integrating safety into all Metro rail operations, as well as construction. See MR-9: Light Rail Security.

Submission PH-19 Josh Standifer

PH-19-1 The Draft evaluates potential environmental impacts using established regulatory thresholds and methodologies developed by expert agencies such as the Federal Transit Administration (FTA) and the South Coast Air Quality Management District (SCAQMD). These thresholds are not arbitrary; they are designed to protect public health, safety, and quality of life, based on peer-reviewed research and real-world data. Metro understands concerns regarding the introduction of additional rail infrastructure near residential areas, and has worked diligently to develop feasible and effective mitigation measures to address the potentially significant environmental impacts of the project. See MR-2: Operational Noise Analysis Methodology and Impact Thresholds; MR-3: Operational Noise Project Features and Mitigation Measures; MR-4: Potential Negative Health Effects Related to Noise, Vibration, and Air Quality; MR-5: Vibration Impact types and Impact Thresholds; and MR-8: Light Rail and Freight Train Safety.

PH-19-2 Metro Homeless Outreach Teams are deployed on Metro buses, trains, and stations to engage with unhoused riders and connect them to resources. See MR-18: Homelessness.

PH-19-3 The commenter's support for the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission PH-20 Maria Francis

PH-20-1 The commenter's opposition to the project in Lawndale and support for the Hawthorne Option is noted. See MR-1: Selection of Alternatives. Operation and construction noise impacts and associated mitigation measures are evaluated in Section 3.6, Noise and Vibration, of the Draft EIR. Construction impacts are addressed for each relevant environmental topic in Chapter 4, Evaluation of Alternatives, of the Draft EIR. Chapter 4, Corrections and Additions, of the Final EIR, with mitigation measures proposed as necessary to reduce potentially significant impacts. See MR-3: Operational Noise Project Features and Mitigation Measures. It should also be noted that, with mitigation, the LPA would not result in significant operational noise impacts.

Submission PH-21 Marvin Francis

PH-21-1 The commenter's support for the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

PH-21-2 Metro understands concerns regarding the introduction of additional train infrastructure near residential areas and has worked diligently to develop feasible and effective mitigation measures to address the potentially significant environmental impacts of the project. The commenter's concern about construction impacts is noted. Chapter 3, Affected Environment and Environmental Impact Analyses, of the Draft EIR, analyzes the impacts that would occur during construction and identifies mitigation measures that would be required to reduce impacts.

PH-21-3 Noise impacts associated with operation of the project are analyzed in detail in Section 3.6, Noise and Vibration, of the Draft EIR. Relative to the Elevated/At-Grade Alignment, the LPA and Trench Option within the Metro ROW would significantly reduce noise impacts because they eliminate the at-grade crossings at 170th and 182nd Streets. By grade separating the light rail from all roadways, the LPA, Trench Option, and Hawthorne Option avoid the need for audible warning at light rail crossings, such as routine light rail train horns and crossing bells. Operational noise impacts of the LPA, Trench Option, and the Hawthorne Option would be less than significant with mitigation. See MR-3: Operational Noise Project Features and Mitigation Measures. The anticipated hours of operation would be 4:00 a.m. one day to 1:00 a.m. the following day. System headways would be reduced during early morning (4:00 a.m. to 6:00 a.m.) and late-night hours (7:00 p.m. to 1:00 a.m.) to approximately 15 minutes. This would result in a reduced frequency of trains during these hours and reduced overall noise compared to peak-hour system headways of 5 minutes.

PH-21-4 The commenter's support for the Hawthorne Option is noted. The street improvements on Manhattan Beach Boulevard from Aviation Boulevard to Inglewood Avenue were implemented by the City of Redondo Beach and are unrelated to this project. Those street improvements were completed in early 2025.

Submission PH-22 Tom Wooge

PH-22-1 As discussed in Section 3.2, Land Use and Planning, of the Draft EIR, the project would not physically divide a community because residents would still be able to cross the Metro ROW at all existing designated rail crossings: at Inglewood Avenue, Manhattan Beach Boulevard, 159th, 160th, 161st, 162nd, 170th, and 182nd Streets. There are no legal crossings between 162nd Street and 170th Street. Although some individuals trespass across the Metro ROW, such use is unauthorized. Metro is committed to integrating safety into all Metro rail operations. The project would comply with relevant safety standards, including the California Manual on Uniform Traffic Control Devices, the California Department of Transportation Highway Design Manual, the Americans with Disabilities Act (ADA), and Metro's Grade Crossing Safety Policy. The LPA, the Trench Option, and the Hawthorne Option would fully grade separate light rail from all roadways, thereby avoiding potential conflicts with school-age pedestrians and cyclists. The freight track would remain at-grade, but the project would include new pedestrian safety infrastructure, such as gates, which would improve safety compared to existing conditions, where no pedestrian safety infrastructure exists. The presence of a station could also benefit access to schools for residents, parents, and caretakers. See MR-8: Light Rail and Freight Train Safety and MR-10: Changes to Community Character.

Submission PH-23 Fred Sadegh

PH-23-1 The commenter's concerns for businesses impacts near the corner of Inglewood Avenue and Manhattan Beach Boulevard are noted. It is unclear which alignment the commenter is supporting. The commenter's preference for the alignment located where there is already a train track may be referring to the Metro ROW alignment. The LPA would require permanent acquisition of three industrial parcels near Inglewood Avenue and Condon Avenue (APN # 4080-025-057- 4080-025-059) to locate operational equipment including traction power substation (TPSS), pump station, and grade-crossing infrastructure. There are a few commercial and industrial properties along Inglewood Avenue near Manhattan Beach Boulevard where Metro has identified the need for a temporary construction easement (TCE) or partial acquisition to locate grade-crossing equipment. See the 2025 Real Estate Acquisitions Report for more information. See MR-1: Selection of Alternatives.

Noise and vibration impacts are addressed in Section 3.6, Noise and Vibration, of the Draft EIR. See MR-3: Operational Noise Project Features and Mitigation Measures. It should also be noted that, with mitigation, the LPA, Trench Option, and Hawthorne Option would not result in significant operational noise impacts.

Submission PH-24 Abby Sahjari

PH-24-1 The commenter's concerns for business impacts near the corner of Inglewood Ave and Manhattan Beach Blvd are noted. It is not clear what parcel the commenter is referring to. Metro published the 2023 Real Estate Acquisition Report concurrent with the Draft EIR to identify potentially affected properties and has updated it for the LPA, which identifies potential temporary construction easements (TCEs), partial acquisitions for grade-crossing

infrastructure, and permanent acquisitions for light rail operational equipment for commercial and industrial properties that may be needed for construction and operations. See the 2025 Real Estate Acquisitions Report for updated information.

Submission PH-25 Kehla Guirguis

PH-25-1 Noise impacts associated with the operation of the project are analyzed in detail in Section 3.6, Noise and Vibration, of the Draft EIR. The Elevated/At-Grade Alignment, the Trench Option, and the LPA would include upgrades to existing freight crossings, allowing for the establishment of a Federal Railroad Administration quiet zone. This would eliminate routine freight train horn noise along the Metro ROW in the area. See MR-3: Operational Noise Project Features and Mitigation Measures; MR-7: Utility Relocation and Hazardous Materials Safety; and MR-10: Changes to Community Character.

The commenter's concerns about the potential impacts to privacy, safety, and the character of the neighborhood are noted. The Metro ROW alignments have been designed to stay within the existing Metro ROW, which has been an active freight corridor for decades. Metro has designed the project to avoid encroachment into the surrounding residential areas and reduce impacts wherever feasible. To address concerns related to proximity, safety and privacy, Metro would install new or upgraded fencing and soundwalls along the light rail guideway. These barriers would enhance safety by preventing unauthorized access, reduce operational noise impacts, and help to preserve privacy for adjacent residents. Soundwall design would also include aesthetic treatments to ensure compatibility with surrounding neighborhoods. Landscaping would also be provided along the Metro ROW. Any remaining views from the light rail into adjacent areas would be brief and transitory. Moreover, Metro's light rail trains are not designed for sightseeing; passengers are typically seated facing inward or are engaged in other activities, further limiting the potential for visual intrusion. As project design advances, Metro would continue to work with local communities to ensure a high level of design. As described in Section 3.3, Aesthetics, of the Draft EIR, the project would include Project Feature PF-AES-1: Local Zoning Ordinances and PF-AES-2: Metro Design Standards to ensure compliance with local ordinances and enhance the visual identity and character of the project within surrounding communities.

Submission PH-26 Safah Guirguis

PH-26-1 Noise is addressed in Section 3.6, Noise and Vibration, of the Draft EIR. Metro has established procedures to maintain the cleanliness and appearance of its transit corridors. Metro's standard operations and maintenance plans address routine landscaping, vegetation management, and litter removal activities. See MR-3: Operational Noise Project Features and Mitigation Measures; MR-8: Light Rail and Freight Train Safety; and MR-10: Changes to Community Character.

PH-26-2 The commenter's support for the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission PH-27 Lena Pullen

PH-27-1 Several routes were examined as part of previous phases and studies of the project, but were eliminated from further consideration, as described in the 2023 Alternatives Considered and Eliminated Report, published alongside the Draft EIR. See Chapter 4, Evaluation of Alternatives, of the Draft EIR. See MR-1: Selection of Alternatives.

PH-27-2 Metro Homeless Outreach Teams are deployed on Metro buses, trains, and stations to engage with unhoused riders and connect them to resources. See MR-9: Light Rail Security and MR-18: Homelessness.

PH-27-3 Metro is committed to integrating safety into all Metro rail operations. The project would comply with relevant safety standards, including the California Manual on Uniform Traffic Control Devices, the California Department of Transportation Highway Design Manual, the Americans with Disabilities Act (ADA), and Metro's Grade Crossing Safety Policy. The LPA, Trench Option, and Hawthorne Option would fully grade separate light rail from all roadways, thereby avoiding potential conflicts between light rail and with school-age pedestrians and cyclists, and avoid increasing traffic congestion or inhibiting emergency access. The freight track would remain at-grade, but the project would include new pedestrian safety infrastructure, such as gates, which would improve safety compared to existing conditions, where no pedestrian safety infrastructure exists. The presence of a station could also benefit access to schools for residents and parents. See MR-8: Light Rail and Freight Train Safety and MR-10: Changes to Community Character.

For the Elevated/At-Grade Alignment, the frequency of the railroad crossing gate down time would increase relative to existing conditions, but it would not result in the permanent closure of emergency access. All homes and businesses on either side of the Metro ROW are accessible by alternate routes within a half-mile and therefore not affected by train frequency. See MR-12: Emergency Access.

PH-27-4 The commenter's opposition to the project and support for the No Build Alternative is noted.

Noise and vibration are addressed in Section 3.6, Noise and Vibration, of the Draft EIR. The LPA significantly reduces noise impacts compared to the Elevated/At-Grade Alignment because it eliminates the at-grade crossings at 170th and 182nd Streets. By grade separating the light rail from all roadways, the LPA removes the need for audible warning at light rail crossings, such as routine train horns and crossing bells. Operational noise impacts of the LPA would be less than significant, with mitigation.

Metro understands concerns regarding property values. However, under CEQA, economic impacts such as changes in property values are not considered environmental impacts. The Draft EIR focuses on physical environmental impacts and measures to mitigate them, as required by CEQA. To address questions and concerns on property values, Metro has prepared more information. See MR-14: Property Values and Impacts to Businesses.

Submission PH-28 Angelica Vicente

PH-28-1 Metro has designed the project to fit within the Metro ROW and avoid displacement of residents. Metro understands concerns regarding property values. However, under CEQA, economic impacts such as changes in property values are not considered environmental impacts. The Draft EIR focuses on physical environmental impacts and measures to mitigate them, as required by CEQA. To address questions and concerns on property values, Metro has prepared more information. See MR-14: Property Values and Impacts to Businesses.

PH-28-2 As described in Section 3.8, Geology, Soils, and Paleontological Resources, of the Draft EIR, the project would be designed to accommodate high seismic ground motion and associated consequences in accordance with Metro's geotechnical design standards and thresholds, per Project Feature PF-GEO-1: Metro Geotechnical Design Standards. Site-specific geotechnical investigations would be performed in accordance with the Metro Rail Design Criteria Section 5.6 to incorporate seismic demands and provide engineering solutions. The project would comply with the latest versions of local and state building codes and regulations. See MR-8: Light Rail and Freight Train Safety. See MR-13: Soil Stability and Sinkholes.

PH-28-3 The potential for vibration impacts is addressed in Section 3.6, Noise and Vibration, of the Draft EIR. The vibration levels from light rail operations would be significantly lower than those generated by freight trains, due to the lighter weight. The vibration analysis considered both light rail trains and relocated freight. Operational vibration annoyance impacts would be mitigated to less than significant with mitigation for the Metro ROW alignment and the Hawthorne Option. Mitigation measures include MM-VIB-4: Low Impact Frogs, MM-VIB-5: Resilient Fasteners, and MM-VIB-6: Ballast Mats. Vibration mitigation measures and locations where they would apply are included on pages 3.6-106 through 3.6-108 of the Draft EIR. See MR-5: Vibration Impact Types and Impact Thresholds.

PH-28-4 Metro has extensive experience overseeing the design and construction of light rail projects and has successfully managed utility relocations for similar transit projects throughout the region. The presence of natural gas lines and petroleum pipelines, their potential impacts, and applicable regulatory requirements are addressed in Sections 3.9, Hazards and Hazardous Materials, and 3.11 Utilities and Service System, of the Draft EIR. Potential impacts of the LPA in this context are evaluated in Chapter 4, Evaluation of Alternatives, of the Draft EIR. In addition, Section 4.13, Corrections and Additions, of the Final EIR expands on the analysis in Section 3.9-4.2.1 of the Draft EIR by clarifying the protocols, construction techniques, regulations, and standards with which the project would comply. As detailed therein, the revisions do not change the Draft EIR's conclusion that the impact related to oil and gas pipelines would be less than significant. See MR-7: Utility Relocation and Hazardous Materials Safety and MR-20: Proximity Impacts of Relocated Freight Tracks.

Submission PH-29 Armando Vicente

PH-29-1 The commenter's opposition to a project along the Metro ROW is noted. The project is expected to follow the operating patterns of Metro's current rail lines. The anticipated hours of operation are 4:00 a.m. one day to 1:00 a.m. the following day. System headways would be reduced during early morning (4:00 a.m. to 6:00 a.m.) and late-night hours (7:00

p.m. to 1:00 a.m.) to approximately 15 minutes. This would result in a reduced frequency of trains during these hours and reduced overall noise compared to peak-hour system headways of 5 minutes. Weekend system headways would be reduced compared to weekdays. For purposes of the impact analysis, the Draft EIR assumes that trains would run approximately every 5 to 10 minutes during peak periods (typical commuting hours) and would run approximately every 10 to 20 minutes during non-peak periods, depending on the time of day. The final operating schedule will be determined closer to project operation. More sensitive time periods of the day, such as nighttime hours would have a reduced frequency of trains and therefore reduced overall noise compared to peak-hour system headways of 5 minutes.

The potential operational noise impacts for the Elevated/At-Grade Alignment, the Trench Option, and the Hawthorne Option are addressed in Section 3.6, Noise and Vibration, of the Draft EIR. The potential for LPA impacts is addressed Chapter 4, Evaluation of Alternatives, of the Draft EIR. Like the Trench and Hawthorne Options, the LPA would not result in significant operational noise impact. See MR-2: Operational Noise Analysis Methodology and Impact Thresholds and MR-3: Operational Noise Project Features and Mitigation Measures, and MR-10: Changes to Community Character.

Submission PH-30 Brandon Vickers

PH-30-1 The commenter's support for the project and an at-grade alignment along the Metro ROW is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission PH-31 Sean Moore

PH-31-1 The commenter's opposition to the project is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

PH-31-2 The project is evaluated as a standalone project under CEQA because it has a logical terminus and independent utility, serving a specific transit need between Redondo Beach and Torrance without requiring additional phases to function effectively (*Del Mar Terrace Conservancy, Inc. v. City Council* (1992) 10 Cal. App. 4th 712). The cumulative impact analysis in the Draft EIR incorporates regional projections from the Southern California Association of Governments (SCAG) 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS), which accounts for other projects, including Metro rail, and their combined regional effects. In doing so, the Draft EIR evaluates the potential growth effects from past, present, and probable future projects. Each Metro project has specific local objectives, routes, and impacts that must be assessed individually to ensure an accurate and meaningful analysis under CEQA. Evaluating each project independently allows for the consideration of project-specific conditions, resources, and community concerns, while cumulative impacts are addressed within the framework of regional planning documents. Furthermore, consistent with how CEQA Guidelines Section 15378(c) defines a "project," permit approvals facilitated, in part, by the environmental analysis in the Draft EIR, would be limited to only those associated with the Metro ROW alignments and the Hawthorne Option. Future projects proposed by Metro along other alignments not evaluated by the Draft EIR would be required to undergo their own environmental analysis in accordance

with the requirements established by CEQA. Thus, the Draft EIR adequately evaluates the whole of the action and does not piecemeal.

The commenter also expresses general concerns about the adequacy of mitigation measures, but does not specify which mitigation measures they believe to be deferred or inadequately addressed. All mitigation measures proposed in the Draft EIR are based on established standards, methods and guidelines, commonly accepted under CEQA for large-scale transportation projects. In cases where mitigation measures require further refinements and identify feasible compliance options to achieve those standards.

The commenter further states that the Draft EIR does not adequately address multiple CEQA topics. No reason for this belief is provided in the comment. The Draft EIR complies with CEQA and Metro worked diligently to develop feasible and effective mitigation measures to address the potentially significant impacts of the project.

Finally, the commenter asserts the ridership study is flawed. The operational parameters in the Draft EIR are based on the travel demand modeling performed for the project. This modeling is included in the 2023 Ridership Report, published concurrently with the Draft EIR. See MR-15: Metro Ridership Forecasting Methodology.

Submission PH-32 Jonathan Shultz

PH-32-1 Each environmental topic analyzed in the Draft EIR, including noise and vibration, is evaluated for both construction and operational phases. The operational noise impact analysis is presented in Section 3.6-4.1.2, Noise and Vibration, of the Draft EIR, beginning on page 3.6-46. As concluded therein, the operational noise impact would only be for the Elevated/At-Grade Alignment and at one specific location, which is near 170th Street.

Regarding the Trench Option, the Draft EIR recognizes that the alignment transitions out of the trench south of 170th Street, including the areas noted in the comment. The Trench Option is described in Section 2.3-2, Project Description, of the Draft EIR beginning on page 2-21.

The Metro Board selected the LPA for purposes of the Final EIR, which significantly reduces noise impacts compared to the Elevated/At-Grade Alignment because it eliminates the at-grade crossings at 170th and 182nd Streets. By grade separating the light rail from all roadways, the LPA removes the need for audible warning at light rail crossings, such as routine train horns and crossing bells. See MR-1: Selection of Alternatives.

Submission PH-33 George Gale

PH-33-1 The existing freight rail line is located within the Metro ROW, which runs behind residential properties in Lawndale and Redondo Beach. The proposed light rail alignments that follow the Metro ROW would place the new light rail tracks within that same Metro ROW. Metro has extensive experience overseeing the design and construction of light rail projects and has successfully managed utility relocations for similar transit projects throughout the region. The presence of natural gas lines and petroleum pipelines, their potential impacts, and applicable regulatory requirements are addressed in Sections 3.9, Hazards and Hazardous Materials, and 3.11 Utilities and Service System, of the Draft EIR. Potential

impacts of the LPA in this context are evaluated in Chapter 4, Evaluation of Alternatives, of the Draft EIR. In addition, Section 4.13, Corrections and Additions, of the Final EIR expands on the analysis in Section 3.9-4.2.1 of the Draft EIR by clarifying the protocols, construction techniques, regulations, and standards with which the project would comply. As detailed therein, the revisions do not change the Draft EIR's conclusion that the impact related to oil and gas pipelines would be less than significant. See MR-7: Utility Relocation and Hazardous Materials Safety.

PH-33-2 See response to Comment PH-33-1. Impacts related to soil stability are addressed in Section 3.8, Geology, Soils, and Paleontological Resources, of the Draft EIR. See MR-13: Soil Stability and Sinkholes.

PH-33-3 Metro understands concerns regarding property values. However, under CEQA, economic impacts such as changes in property values are not considered environmental impacts. The Draft EIR focuses on physical environmental impacts and measures to mitigate them, as required by CEQA. To address questions and concerns on property values, Metro has prepared more information. See MR-14: Property Values and Impacts to Businesses.

The potential operational noise impacts for the Elevated/At-Grade Alignment, the Trench Option, and the Hawthorne Option are addressed in Section 3.6, Noise and Vibration, of the Draft EIR. The potential for LPA impacts is addressed Chapter 4, Evaluation of Alternatives, of the Draft EIR. See MR-2: Operational Noise Analysis Methodology and Impact Thresholds and MR-3: Operational Noise Project Features and Mitigation Measures. The project under consideration is a light rail transit line to be operated by Metro, not a heavy rail line operated by Metrolink. Light rail vehicles are quieter, electrically powered trains that generate less noise compared to larger, diesel operated Metrolink trains. Section 3.6, Noise and Vibration, of the Draft EIR, evaluates the potential for noise impacts and mitigation measures in detail.

PH-33-4 See MR-7: Utility Relocation and Hazardous Materials Safety and MR-8: Light Rail and Freight Train Safety.

Submission PH-34 Raul Moratto

PH-34-1 The use of the Metro ROW as recreational space is acknowledged on page 3.15-38 of the Draft EIR. While Metro recognizes that some residents currently use the Metro ROW as informal recreational space, it is important to note that the Metro ROW is part of an active transportation corridor and recreational use of the Metro ROW is unauthorized and not compliant with freight safety standards. The Metro ROW alignments, including the LPA, would provide new multi-use paths, expanding access to residential neighborhoods and offering additional recreational options. See MR-10: Changes to Community Character and MR-16: Response to Lawndale and Redondo Beach Community Letter.

PH-34-2 The commenter's support for the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

PH-34-3 See response to Comment 34-1.

Submission PH-35 Ted Hofmann

PH-35-1 The commenter's opposition to the project is noted. All comments have been shared with the Metro Board for their consideration. The commenter also notes a preference for a bus system should a project be developed within the Metro ROW. A High-Frequency Bus Alternative is analyzed in Chapter 4, Evaluation of Alternatives, of the Draft EIR. See MR-1: Selection of Alternatives.

PH-35-2 The fundamental purpose of the project is to provide high-capacity transit service in the South Bay. All project objectives could be viewed on page ES-4 of the Draft EIR. The 2023 Ridership Summary Report, published alongside the Draft EIR, shows that the project is expected to generate between 11,500 to 15,600 daily transit trips (boardings). See MR-15: Metro Ridership Forecasting Methodology.

Submission PH-36 Amy Lacoe

PH-36-1 The commenter's concern about construction impacts on Hawthorne Boulevard is noted. Chapter 3, Affected Environment and Environmental Impact Analyses, of the Draft EIR, analyzes the impacts that would occur during construction, and identifies mitigation measures that would be required to reduce impacts. As detailed in Section 3.1, Transportation, Project Feature PF-T-1: Construction Traffic Management Plan would ensure that access would be maintained, and disruptions reduced during construction.

PH-36-2 The impacts of the Hawthorne Option to nearby residents are described in Section 3.1, Transportation, Section 3.2, Land Use and Planning, Section 3.3, Aesthetics, Section 3.4, Air Quality, and Section 3.6, Noise and Vibration of the Draft EIR. Mitigation measures are proposed to address these impacts, including MM-NOI-2: Soundwalls, MM-NOI-3: Low Impact Frogs and MM-NOI-5: Wheel Squeal Noise Monitoring, as well as design considerations to maintain aesthetic compatibility and minimize disruptions. See MR-3: Operational Noise Project Features and Mitigation Measures and MR-10: Changes to Community Character.

PH-36-3 In 2009, Metro prepared an alternatives analysis that studied the potential for transit service along all or portions of the Metro ROW and identified the segment between the Redondo Beach (Marine) Station and the Torrance Transit Center as the highest priority project. Since then, several alignments and alternatives have been studied. The 2018 Supplemental Alternatives Analysis report recommended two alignments to be carried forward into environmental analysis: the Metro ROW and the Hawthorne Boulevard alignment (both primarily at-grade alignments).

Submission PH-37 Kim

PH-37-1 Urbanized avian species, including resident birds of prey such as red-tailed hawks and great-horned owls, are protected under the Migratory Birds Treaty Act and the California Fish and Game Code. As discussed in Section 3.7, Biological Resources, of the Draft EIR, these species have potential to occur within the Resource Study Area (RSA), which provides suitable breeding and foraging habitat in the form of trees, vegetation, and man-made structures (see page 3.7-22). The Draft EIR acknowledges that construction activities could temporarily

disturb these habitats. To address this, Mitigation Measure MM-BIO-2: Nesting Bird Season Restrictions and Pre-Construction Surveys, establishes seasonal restrictions and pre-construction surveys to identify and protect active nests. Given the existing anthropogenic disturbance (e.g., vehicular traffic, train traffic, human presence) throughout the RSA, these mitigation measures are anticipated to reduce potential impacts on nesting and foraging birds to less than significant. The project does not propose any permanent changes that would preclude birds from returning to the area after construction. Moreover, birds and terrestrial species in the RSA are adapted to living in an urban environment, and operational impacts would be less than significant.

PH-37-2 The commenter's opposition to a project located in residential neighborhoods is noted. Metro has successfully implemented light rail in residential communities across Los Angeles County, including along the Metro E Line in West Los Angeles and the Metro A Line in South Pasadena, where light rail operates adjacent to homes. Metro has worked diligently to design the project in a way that minimizes disruption and to develop feasible and effective mitigation measures to address potentially significant impacts.

PH-37-3 As described in Section 3.8, Geology, Soils, and Paleontological Resources, of the Draft EIR, the project would be designed to accommodate high seismic ground motion and associated consequences in accordance with Metro's geotechnical design standards and thresholds, per Project Feature PF-GEO-1: Metro Geotechnical Design Standards. Site-specific geotechnical investigations would be performed in accordance with the Metro Rail Design Criteria Section 5.6 to incorporate seismic demands and provide engineering solutions. See MR-8: Light Rail and Freight Train Safety.

Submission PH-38 Marianna Carlton

PH-38-1 The commenter's support for the project is noted. All comments have been shared with the Metro Board for their consideration.

PH-38-2 An additional station along the Hawthorne Option within the City of Lawndale was studied as part of the 2018 Supplemental Alternatives Analysis, but was removed from further consideration at the request of the City of Lawndale. Over the course of several planning studies, the project has been designed to provide convenient access to the Redondo Beach Transit Center and Torrance Transit Center, which were selected based on extensive analysis of connectivity and accessibility and community outreach. The stations would serve as key transit hubs, with existing local bus routes providing access to nearby destinations. While Metro assists in identifying improvements during the planning and design phases, the implementation of local access to regional transit facilities falls under the jurisdiction of the local cities. If the project is approved, Metro would coordinate with the local jurisdictions to assist in this planning.

Submission PH-39 Mike Gallin

PH-39-1 The commenter's support for the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

PH-39-2 Approximately 178 residential properties are located immediately adjacent to the Metro ROW, and 22 residential properties are located immediately adjacent to the Hawthorne Option. Metro has worked diligently to develop feasible and effective mitigation measures to address the potentially significant impacts of the project, including air quality and noise effects to residences.

PH-39-3 The commenter's reiteration of support for the Hawthorne Option is noted.

Submission PH-40 Ray Hollar

PH-40-1 Section 3.3, Aesthetics, of the Draft EIR, evaluates baseline conditions of the existing Metro ROW as an active railroad corridor. This includes not only the current freight train operations, but also the visual characteristics inherent to a railroad corridor, such as railroad tracks and associated infrastructure. In addition, as stated on page 3.3-54 of the Draft EIR, views of the mountains and other landmarks the commenter mentioned are located relatively long distances from the Metro ROW in Lawndale, which makes any possible views of them quite distant. For example, the Hollywood Sign is located approximately 17 miles north/northeast of the Metro ROW in Lawndale. Nonetheless, those distant views would remain available from public streets and sidewalks, even with the addition of project elements such as soundwalls and elevated structure. The implementation of the project would not fundamentally change the use of the Metro ROW as a transportation corridor. The potential for LPA impacts is addressed in Chapter 4, Evaluation of Alternatives, of the Draft EIR.

PH-40-2 The commenter's opposition to the Metro ROW alignment is noted. All comments have been shared with the Metro Board for their consideration. Metro has worked diligently to develop feasible and effective mitigation measures to address the potentially significant impacts of the project. See MR-10: Changes to Community Character.

Submission PH-41 Ted Hoffmann

PH-41-1 The commenter's opposition to the project is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

PH-41-2 It is unclear what problems the commenter is referring to at the Galleria. The Hawthorne Option would be located within Hawthorne Boulevard and would not require any acquisitions of private property as part of the South Bay Galleria.

PH-41-3 The commenter's support for the No Project Alternative or buses is noted. Chapter 4, Evaluation of Alternatives, of the Draft EIR, assesses a No Project Alternative and a High-Frequency Bus Alternative.

Submission PH-42 Lama Barikhan

PH-42-1 The commenter's opposition to the project in Lawndale is noted. Noise and vibration impacts and associated mitigation measures are addressed in Section 3.6, Noise and Vibration, of the Draft EIR. See MR-3: Operational Noise Project Features and Mitigation Measures. Moreover, the LPA significantly reduces noise impacts compared to the

Elevated/At-Grade Alignment because it eliminates the at-grade crossings at 170th and 182nd Streets. By grade separating the light rail from all roadways, the LPA removes the need for audible warning at light rail crossings, such as routine train horns and crossing bells. See MR-1: Selection of Alternatives and MR-10: Changes to Community Character.

PH-42-2 The commenter's support for the No Project Alternative or buses is noted. Chapter 4, Evaluation of Alternatives, of the Draft EIR, assessed a No Project Alternative and a High-Frequency Bus Alternative. The Metro Board reviewed and considered these alternatives when they selected the Hybrid Alternative as the LPA in May 2024.

Submission PH-43 Samsung

PH-43-1 The use of the Metro ROW as recreational space is acknowledged on page 3.15-38 of the Draft EIR. While Metro recognizes that some residents currently use the Metro ROW as informal recreational space, it is important to note that the Metro ROW is not a designated park or public recreational area. Its primary purpose is rail transportation. The project would include two new multi-use paths, expanding access to residential neighborhoods and offering additional recreational options. See MR-10: Changes to Community Character and MR-16: Response to Lawndale and Redondo Beach Community Letter.

Submission PH-44 Lama Barikhan

PH-44-1 The commenter's question appears to refer to a future proposal in 2024 and its potential effect on the housing market. It is unclear what specific proposal the commenter is referencing. If the comment is referring to the proposed C Line Extension Project and its potential impacts on the real estate market, note that economic effects such as changes in property values are not considered physical environmental impacts. The Draft EIR focuses on physical environmental impacts and measures to mitigate them, as required by CEQA. Metro acknowledges community concerns related to property values. See MR-14: Property Values and Impacts to Businesses.

Submission PH-45 Kim

PH-45-1 The project would not pass by 192nd Street. If the commenter intended to say 182nd Street, the project would pass through that area. The project under consideration is a light rail transit line to be operated by Metro, not a heavy rail line operated by Metrolink or freight rail. Light rail vehicles are quieter, electrically powered trains that generate less noise compared to larger, diesel operated Metrolink trains and freight operators. Mitigation Measure MM-VIB-3: Pre- and Post-Construction Surveys requires contractors to document damage resulting from vibration impacts during construction, and repair them. In addition, as discussed in Section 3.8, Geology and Soils, of the Draft EIR, the project design process would include thorough site geotechnical investigations to ensure the stability of nearby structures. Per Project Feature PF-GEO-1: Metro Geotechnical Design Standards, site-specific geotechnical investigations would be conducted to address foundation and structural safety. The investigation would include engineering and construction recommendations to ensure surrounding structures are not damaged. Regarding operational vibration damage, see MR-5: Vibration Impact Types and Impact Thresholds.

PH-45-2 The commenter's support for the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission PH-46 Mike Gallin

PH-46-1 Section 3.6, Noise and Vibration, of the Draft EIR, evaluates potential noise impacts, including those from wheel squeal. According to the Federal Transit Administration's Transit Noise and Vibration Impact Assessment Manual (2018), curves with a radius greater than 1,000 feet do not generate wheel squeal. As a result, the Federal Transit Administration (FTA) recommends designing transit projects to avoid tight curves with radii of less than 1,000 feet to mitigate potential noise impacts. The Elevated/At-Grade Alignment, Trench Option, and the LPA do not include curves with radii less than 1,000 feet, which are the primary cause of wheel squeal. Consequently, wheel squeal is not anticipated under these design conditions.

The Hawthorne Option includes two curves which could potentially produce wheel squeal. Mitigation Measure MM-NOI-5: Wheel Squeal Noise Monitoring would require noise monitoring to identify wheel squeal at two curves with a radius less than 1,000 feet for the Hawthorne Option:

> Curve between Santa Fe Avenue and Inglewood Avenue

> Curve between 161st Street and 163rd Street

If wheel squeal is identified, Metro shall install wayside rail lubrication to ensure wheel squeal does not occur. See MR-3: Operational Noise Project Features and Mitigation Measures.

Submission PH-47 Becky Sitton

PH-47-1 The commenter's support for the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission PH-48 Nancy Cline

PH-48-1 The commenter's opposition to the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

PH-48-2 The commenter reiterates opposition to the Hawthorne Option. The comment does not address the adequacy of the Draft EIR and is noted for the record. All comments have been shared with the Metro Board for their consideration.

Submission PH-49 Kim

PH-49-1 Section 3.6, Noise and Vibration, of the Draft EIR, evaluates potential noise impacts, including those from wheel squeal. According to the Federal Transit Administration's (FTA) Transit Noise and Vibration Impact Assessment Manual (2018), curves with a radius greater than 1,000 feet do not generate wheel squeal. As a result, the FTA recommends designing transit projects to avoid tight curves with radii of less than 1,000 feet to mitigate potential noise impacts. The Elevated/At-Grade Alignment, Trench Option, and the LPA do not include

curves with radii less than 1,000 feet, which are the primary cause of wheel squeal. Consequently, wheel squeal is not anticipated under these design conditions.

The Hawthorne Option includes two curves which could potentially produce wheel squeal. Mitigation Measure MM-NOI-5: Wheel Squeal Noise Monitoring would require noise monitoring to identify wheel squeal at two curves with a radius less than 1,000 feet for the Hawthorne Option:

> Curve between Santa Fe Avenue and Inglewood Avenue

> Curve between 161st Street and 163rd Street

If wheel squeal is identified, Metro shall install wayside rail lubrication to ensure wheel squeal does not occur. See MR-3: Operational Noise Project Features and Mitigation Measures.

The 2023 Ridership Summary Report, published alongside the Draft EIR, shows that the project is expected to generate between 11,500 to 15,600 daily transit trips (boardings). See MR-15: Metro Ridership Forecasting Methodology.

Submission PH-50 Rupesh

PH-50-1 Light rail transit vehicles are much quieter than freight trains because they are electrically powered and propelled by propulsion motors in the wheels of the transit vehicles. Freight locomotives are significantly louder as a result of the large diesel engines needed to propel the train and the freight horn which is sounded on approach to at-grade crossings. For example, a freight locomotive has a reference sound exposure level of 97 A-weighted decibels (dBA) and the freight horn has a reference sound exposure level of 110 dBA. In comparison, a light rail transit vehicle has a reference sound exposure level of 78 dBA, approximately 19 dBA quieter than a freight locomotive. The light rail transit vehicles use a "quacker" horn which produces a relatively low-volume sound (78 dBA at 50 feet in front of the lead vehicle) and has a marginal effect on community noise exposure at train speeds greater than 35 miles per hour. The "quacker" horn is approximately 32 dBA quieter than the freight horn. See MR-3: Operational Noise Project Features and Mitigation Measures.

Submission PH-51 Ted Hofmann

PH-51-1 Regarding existing horn noise from freight trains, for the Metro ROW alignments, the project would enable local cities to establish a Quiet Zone in coordination with the Federal Railroad Administration (FRA). More specifically, as part of Project Feature PF-NV-1: Quiet Zone Equipment Installation, Metro would install all necessary safety equipment to meet FRA standards for the establishment of a freight quiet zone. Additionally, Mitigation Measure MM-NOI-4: Quiet Zone Establishment would require Metro to provide support and guidance to the City of Lawndale, City of Redondo Beach, and City of Torrance to establish a quiet zone(s) from north of Inglewood Avenue to south of 182nd Street. The establishment of a quiet zone would reduce freight noise overall along the Metro ROW by eliminating one of the primary sources of noise from freight trains, the horn, which produces a noise level of 110 decibels. In most cases, with implementation of the quiet zone, freight noise would be

quieter than existing conditions even though the tracks would be in closer proximity to some sensitive receptors.

Light rail transit vehicles are much quieter than freight trains because they are electrically powered and propelled by propulsion motors in the wheels of the transit vehicles. Freight locomotives are significantly louder as a result of the large diesel engines needed to propel the train and the freight horn which is sounded on approach to at-grade crossings. For example, a freight locomotive has a reference sound exposure level of 97 A-weighted decibels (dBA) and the freight horn has a reference sound exposure level of 110 dBA. In comparison, a light rail transit vehicle has a reference sound exposure level of 78 dBA, approximately 19 dBA quieter than a freight locomotive. The light rail transit vehicles use a "quacker" horn which produces a relatively low-volume sound (78 dBA at 50 feet in front of the lead vehicle) and has a marginal effect on community noise exposure at train speeds greater than 35 miles per hour. The "quacker" horn is approximately 32 dBA quieter than the freight horn. See MR-3: Operational Noise Project Features and Mitigation Measures.

Submission PH-52 Kim

PH-52-1 The commenter's opposition to a light rail project in the Metro ROW is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission PH-53 Rupesh

PH-53-1 Metro worked diligently to develop feasible and effective mitigation measures to address the potentially significant impacts of the project, including those related to construction. The Metro Board has selected an LPA for the purposes of the Final EIR, although it has not yet made a final decision on the project, including whether to approve of the options and alternatives evaluated in the Draft EIR or reject the project for approval. A final decision will not be made until after the Metro Board reviews the Final EIR, which includes responses to all public comments, including those of the commenter.

Submission PH-54 Ted Hofmann

PH-54-1 The commenter's opposition to a light rail project in the City of Lawndale is noted. See MR-1: Selection of Alternatives. During construction, Project Feature PF-T-1: Construction Traffic Management Plan, as described on page 3.1-15 of the Draft EIR, requires Metro to coordinate with emergency service providers, including fire, police, and EMTs, to ensure emergency access is provided to the construction zones and neighboring land uses. Emergency access points would be clearly marked in consultation with local fire departments to ensure that emergency vehicles could quickly respond to incidents in the community during construction. See MR-12: Emergency Access.

Submission PH-55 Kevin McKenzie

PH-55-1 The commenter's support for the project is noted. See MR-1: Selection of Alternatives. The C Line Extension would operate as the K Line and connect to the LAX/Metro Transit Station, which serves LAX. The K Lines operate as a north-south line between the South Bay and the

Metro E Line and the C Line now operates east-west between LAX and Norwalk. Both lines would provide a direct connection to LAX.

Submission PH-56 Ray Hollar

PH-56-1 Metro has worked diligently to develop feasible and effective mitigation measures to address the potentially significant impacts of the project, including those related to construction. The potential operational noise impacts for the Elevated/At-Grade Alignment, the Trench option, and the Hawthorne Option are addressed in Section 3.6, Noise and Vibration, of the Draft EIR. The potential for LPA impacts is addressed Chapter 4, Evaluation of Alternatives, of the Draft EIR. Along the Metro ROW, the LPA and Trench Option would significantly reduce noise impacts compared to the Elevated/At-Grade Alignment because they eliminate the at-grade crossings at 170th and 182nd Streets. By grade separating the light rail from all roadways, the LPA, Trench Option and Hawthorne Option avoid the need for audible warning at light rail crossings, such as routine train horns and crossing bells. Operational noise impacts of the LPA would be less than significant with mitigation. See MR-2: Operational Noise Analysis Methodology and Impact Thresholds and MR-3: Operational Noise Project Features and Mitigation Measures. Section 3.6, Noise and Vibration, of the Draft EIR, evaluates potential noise impacts in detail for both construction and operation. The analysis identifies mitigation measures to reduce these impacts to the extent feasible.

PH-56-2 The 2023 Ridership Summary Report, published alongside the Draft EIR, shows that the project is expected to generate between 11,500 to 15,600 daily transit trips (boardings). See MR-15: Metro Ridership Forecasting Methodology. A Metro ride is 75 cents for seniors during peak periods and 35 cents during non-peak periods, with fare capping of $2.50 per day. See Metro website for fare information at www.metro.net/riding/fares/seniors/#how-much-does-it-cost.

Submission PH-57 Amy Lacoe

PH-57-1 The commenter's opposition to the project is noted. See MR-1: Selection of Alternatives. Approximately 178 residential properties are located immediately adjacent to the Metro ROW, and 22 residential properties are located immediately adjacent to the Hawthorne Option. Metro has worked diligently to develop feasible and effective mitigation measures to address the potentially significant impacts of the project, including air quality and noise effects to residences. The Draft EIR considers and analyzes noise and vibration impacts in Section 3.6. See MR-3: Operational Noise Project Features and Mitigation Measures. Moreover, the LPA significantly reduces noise impacts compared to the Elevated/At-Grade Alignment because it eliminates the at-grade crossings at 170th and 182nd Streets. By grade separating the light rail from all roadways, the LPA removes the need for audible warning at light rail crossings, such as routine train horns and crossing bells.

Submission PH-58 Traber Schroeder

PH-58-1 The commenter's support for the project is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

PH-58-2 The commenter's support for more extensive transit lines, sidewalks, bike lanes and bike parking, is noted. As described in Chapter 2, Description of the Locally Preferred Alternative, of the Final EIR, the project would feature multi-use paths along the Metro ROW, where space permits along Condon Avenue in Lawndale and between Grant Avenue and 182nd Street in Redondo Beach. The new paths would improve neighborhood walking/cycling spaces within neighborhoods where sidewalks do not exist and access to proposed stations. The project has been designed to provide convenient access to the Redondo Beach Transit Center and Torrance Transit Center, which were selected based on extensive analysis of connectivity and accessibility and community outreach. The stations would serve as key transit hubs, with existing local bus routes providing access to nearby destinations. While Metro assists in identifying improvements during the planning and design phases, the implementation of local access to regional transit facilities falls under the jurisdiction of the local cities. If the project is approved, Metro would coordinate with the local jurisdictions to assist in this planning.

Submission PH-59 Pam Combar

PH-59-1 The commenter's support for the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

PH-59-2 The project's potential impacts related to soil and ground conditions are evaluated in Section 3.8, Geology, Soils, and Paleontological Resources, of the Draft EIR, with additional information regarding soil stability provided in Section 4.12, Corrections and Additions, of the Final EIR. Regarding the sinkhole cited by the commenter and potential for collapsible soil more generally, see MR-13: Soil Stability and Sinkholes.

Submission PH-60 Nathan Koller

PH-60-1 The commenter's support for the project is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission PH-61 Bill Lingar

PH-61-1 CEQA does not require an analysis of safety in terms of crime, as it is not an environmental issue, and therefore the Draft EIR does not make any conclusions regarding this topic. Metro takes the safety and well-being of nearby communities very seriously. See MR-9: Light Rail Security.

Submission PH-62 Kimberly Gillen

PH-62-1 Section 3.6, Noise and Vibration, of the Draft EIR, evaluates potential noise and vibration impacts, including noise impacts from wheel squeal. According to the Federal Transit Administration's (FTA) Transit Noise and Vibration Impact Assessment Manual (2018), curves with a radius greater than 1,000 feet do not generate wheel squeal. As a result, the FTA recommends designing transit projects to avoid curves with radii of less than 1,000 feet to mitigate potential noise impacts. The Elevated/At-Grade Alignment, Trench Option, and the LPA do not include tight curves with radii less than 1,000 feet, which are the primary

cause of wheel squeal. Consequently, wheel squeal is not anticipated under these design conditions.

The Hawthorne Option includes two curves which could potentially produce wheel squeal. Mitigation Measure MM-NOI-5: Wheel Squeal Noise Monitoring would require noise monitoring to identify wheel squeal at two curves with a radius less than 1,000 feet for the Hawthorne Option:

> Curve between Santa Fe Avenue and Inglewood Avenue

> Curve between 161st Street and 163rd Street

If wheel squeal is identified, Metro shall install wayside rail lubrication to ensure wheel squeal does not occur.

PH-62-2 The 2023 Ridership Summary Report, published alongside the Draft EIR, shows that the project is expected to generate between 11,500 to 15,600 daily transit trips (boardings). See MR-15: Metro Ridership Forecasting Methodology.

PH-62-3 The presence of natural gas lines and petroleum pipelines, their potential impacts, and applicable regulatory requirements are addressed in Sections 3.9, Hazards and Hazardous Materials, and 3.11 Utilities and Service System, of the Draft EIR. Potential impacts of the LPA in this context are evaluated in Chapter 4, Evaluation of Alternatives, of the Draft EIR. In addition, Section 4.13, Corrections and Additions, of the Final EIR expands on the analysis in Section 3.9-4.2.1 of the Draft EIR by clarifying the protocols, construction techniques, regulations, and standards with which the project would comply. As detailed therein, the revisions do not change the Draft EIR's conclusion that the impact related to oil and gas pipelines would be less than significant. See MR-7: Utility Relocation and Hazardous Materials Safety. See MR-8: Light Rail and Freight Train Safety.

In addition, as discussed in Section 3.8, Geology and Soils, of the Draft EIR, the project design process would include thorough site geotechnical investigations to ensure the stability of nearby structures. Per Project Feature PF-GEO-1: Metro Geotechnical Design Standards, site-specific geotechnical investigations would be conducted to address foundation and structural safety. The investigation would include engineering and construction recommendations to ensure surrounding structures are not damaged. See MR-13: Soil Stability and Sinkholes.

Submission PH-63 Aram Chaparyam

PH-63-1 The commenter's support for the Metro ROW alignments is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

PH-63-2 Metro has worked diligently to develop feasible and effective mitigation measures to address the potentially significant impacts of the project.

Submission PH-64 Robin Willinis

PH-64-1 The Metro Board has not committed to approving the project. The Metro Board has selected an LPA for purposes of the Final EIR, although it has not yet approved the project,

including any of the options and alternatives evaluated in the Draft EIR. A final decision will not be made until after the Metro Board reviews the Final EIR, which includes responses to all public comments, including those of the commenter. The Metro Board may select the No Build Alternative. The 2023 Ridership Summary Report, published alongside the Draft EIR, shows that the project is expected to generate between 11,500 to 15,600 daily transit trips (boardings). See MR-15: Metro Ridership Forecasting Methodology.

Submission PH-65 Michael Kim

PH-65-1 Metro takes the safety and well-being of nearby communities very seriously. See MR-9: Light Rail Security.

PH-65-2 The project would comply with relevant safety standards, including the California Manual on Uniform Traffic Control Devices, the California Department of Transportation Highway Design Manual, the Americans with Disabilities Act (ADA), and Metro's Grade Crossing Safety Policy. The LPA, Trench Option and Hawthorne Option would fully grade separate the light rail from all roadways, thereby avoiding potential light rail conflicts with school-age pedestrians and cyclists. The freight track would remain at-grade, but the project would include new pedestrian safety infrastructure, such as gates, which would improve safety compared to existing conditions, where no pedestrian safety infrastructure exists. The presence of a station could also benefit access to schools for residents, parents, and caretakers. Both the LPA and Trench Option would grade separate light rail at 170th Street, which could eliminate conflicts between light rail trains, vehicles, pedestrians, and cyclists and eliminate the need for audible warning sounds to reduce noise to less than significant with mitigation.

PH-65-3 As described in Section 3.8, Geology, Soils, and Paleontological Resources, of the Draft EIR, the project would be designed to accommodate high seismic ground motion and associated consequences in accordance with Metro's geotechnical design standards and thresholds, per Project Feature PF-GEO-1: Metro Geotechnical Design Standards. Site-specific geotechnical investigations would be performed in accordance with the Metro Rail Design Criteria Section 5.6 to incorporate seismic demands and provide engineering solutions. The project would comply with the latest versions of local and state building codes and regulations. See MR-8: Light Rail and Freight Train Safety.

Submission PH-66 Ted Hofmann

PH-66-1 The comment does not raise significant environmental issues or otherwise address the adequacy of the Draft EIR and is noted for the record. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

PH-66-2 The properties mentioned by the commenter relate to the Hawthorne Option, where an overhead (aerial) easement would be needed for the elevated light rail structure to cross over the owner's property. Metro has designed the project to avoid displacement of residents. The maps referenced are from the 2023 Real Estate Acquisitions Report, published concurrently with the Draft EIR.

PH-66-3 As indicated by the commenter, Chapter 4, Evaluation of Alternatives, of the Draft EIR assesses a No Project Alternative and a High-Frequency Bus Alternative.

PH-66-4 CEQA requires that an EIR identify the Environmentally Superior Alternative and discuss the facts that support that selection. However, the Lead Agency is not obligated to select the Environmentally Superior Alternative for implementation if it would not accomplish the basic project objectives.

Submission PH-67 James Eckland

PH-67-1 As shown in Appendix 2-A, Select Advanced Conceptual Engineering Drawings, of the Draft EIR, there would be walkways along the elevated guideway for maintenance of the Hawthorne Option.

PH-67-2 Metro's projects are all designed to National Fire Protection Association (NFPA) and California Public Utilities Commission (CPUC) requirements that cover fire/life safety. Metro has emergency response plans and safety policies and procedures to address incidents that may occur during operation. In the event of an emergency, passengers would be able to exit the train and leave the light rail guideway via walkways. Additionally, communication systems would be integrated into the project equipment to communicate with emergency providers during incidents.

PH-67-3 The commenter's support for the Metro ROW alignments is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission PH-68 George Gillen

PH-68-1 The commenter's opposition to the Metro ROW alignments is noted. See MR-1: Selection of Alternatives. All light rail and freight tracks are designed according to Metro's design criteria with appropriate clearances, which includes space for maintenance. See Appendix 2-A, Select Advanced Conceptual Engineering Drawings of the Draft EIR and Final EIR Appendix B, Select Advanced Conceptual Engineering Drawings - Locally Preferred Alternative, for more details on the relocated freight and light rail tracks. Potential hazard impacts were analyzed in Section 3.9-4, Hazards and Hazardous Materials, of the Draft EIR, and Section 4.13 of this Final EIR and determined to be less than significant. Metro understands concerns regarding property values. However, under CEQA, economic impacts such as changes in property values are not considered environmental impacts. The Draft EIR focuses on physical environmental impacts and measures to mitigate them, as required by CEQA. To address questions and concerns on property values, Metro has prepared more information. See MR-14: Property Values and Impacts to Businesses.

PH-68-2 The commenter's support for a bus system is noted. Chapter 4, Evaluation of Alternatives, of the Draft EIR includes an analysis of a High-Frequency Bus Alternative. For more information regarding the concerns raised in the comment, see MR-1: Selection of Alternatives, MR-3: Operational Noise Project Features and Mitigation Measures, MR-8: Light Rail and Freight Train Safety, MR-12: Emergency Access, and MR-14: Property Values and Impacts to Businesses.

Submission PH-69 Patti Giglio

PH-69-1 The commenter's support for the Metro ROW alignments is noted. See MR-1: Selection of Alternatives. Metro has not conducted an economic impact study for the project. Under CEQA, potential economic effects such as reductions in property values or loss of property tax revenues would not constitute an effect to the physical environment. The Draft EIR focuses on physical environmental impacts and measures to mitigate them, as required by CEQA. To address questions and concerns on property values, Metro has prepared more information. See MR-14: Property Values and Impacts to Businesses. Additionally, Metro's goal is to help businesses continue to thrive throughout and following construction. Metro has developed programs to provide financial assistance to small businesses along transit corridor construction project through the Business Interruption Fund and marketing support through the Eat Shop Play program. More information about these programs is available on the Metro website at https://www.metro.net/about/business-interruption-fund/ and https://eat-shop-play-lametro.hub.arcgis.com/.

Submission PH-70 Bettina Osten

PH-70-1 Metro takes the safety and well-being of nearby communities very seriously. See MR-8: Light Rail and Freight Train Safety. Vibration is discussed in Section 3.6, Noise and Vibration, of the Draft EIR. The analysis considers both the light rail train and relocated freight tracks. See MR-5: Vibration Impact Types and Impact Thresholds.

Submission PH-71 Milan Matsumoto

PH-71-1 The commenter's support for the project and preference for the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission PH-72 Robert Acherman

PH-72-1 The C Line Extension would operate as the K Line and connect to the LAX/Metro Transit Station, which serves LAX. The K Line operates as a north-south line between the South Bay and the Metro E Line and the C Line operates east-west between LAX and Norwalk. Both lines provide a direct connection to LAX.

PH-72-2 The commenter's concerns are noted. Cost effectiveness is one of the project objectives and has been and will continue to be taken into consideration by the Metro Board with respect to this project. See MR-21: Cost Estimates and Schedule.

PH-72-3 Section 3.6, Noise and Vibration, of the Draft EIR evaluates the potential noise and vibration impacts of the project and identifies mitigation measures to reduce these impacts to the extent feasible. The Metro Board selected the LPA for the purposes of the Final EIR. The LPA and Trench Option significantly reduce noise impacts along the Metro ROW compared to the Elevated/At-Grade Alignment because they eliminate the at-grade crossings at 170th and 182nd Streets. By grade separating the light rail from all roadways, the LPA, Trench Option and Hawthorne Option avoid the need for audible warning at light rail crossings, such as routine light rail train horns and crossing bells. Operational noise impacts of the LPA,

Trench Option, and Hawthorne Option would be less than significant with mitigation. See MR-3: Operational Noise Project Features and Mitigation Measures and MR-10: Changes to Community Character. Metro's general contact information is included at this website: https://www.metro.net/about/contacts/. Metro Customer relations handles complaints and feedback.

Submission PH-73 Thomas Dorsey

PH-73-1 The commenter's support for the Trench Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission PH-74 Kyle Brubaker

PH-74-1 The commenter's support for the project is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives and MR-14: Property Values and Impacts to Businesses.

Submission PH-75 Massima Darom

PH-75-1 Metro has considered multiple alignment options, starting with the 2009 Alternatives Analysis, which identified the C Line extension to Torrance within the Metro ROW as a priority project. Alignments to other destinations were considered and eliminated in past studies because they did not provide ridership benefits or achieve the project objectives. The project would connect the two new city transit centers in Redondo Beach and Torrance to the Metro rail network. See MR-1: Selection of Alternatives.

PH-75-2 The 2023 Ridership Summary Report, published alongside the Draft EIR, shows that the project is expected to generate between 11,500 to 15,600 daily transit trips (boardings). See MR-15: Metro Ridership Forecasting Methodology.

PH-75-3 The commenter's support for the Hawthorne Option and opposition to the Metro ROW alignment is noted. See MR-1: Selection of Alternatives. Noise is addressed in Section 3.6, Noise and Vibration, of the Draft EIR. See MR-3: Operational Noise Project Features and Mitigation Measures. It should also be noted that, with mitigation, the LPA, Trench Option, and Hawthorne Option would not result in significant operational noise impacts.

Submission PH-76 Paul Miller

PH-76-1 The commenter's support for the Metro ROW alignments and opposition to the Hawthorne Option is noted. See MR-1: Selection of Alternatives. Air quality is addressed in Section 3.4, Air Quality, of the Draft EIR. Traffic congestion and delays (often measured by Level of Service) are not considered significant environmental impacts under CEQA, but Metro prepared a 2023 Transportation Detail Report, published alongside the Draft EIR, providing additional information on potential changes in traffic patterns and impacts not required by CEQA, but for the public's information. See also MR-11: Traffic Delay and Level-of-Service.

Submission PH-77 Michelle Bonnee

PH-77-1 The commenter's opposition to the Hawthorne Option and concerns for cost are noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives and MR-21: Cost Estimates and Schedule.

Submission PH-78 Monica Sweet

PH-78-1 The commenter's support for the Trench Option is noted. See MR-1: Selection of Alternatives and MR-8: Light Rail and Freight Train Safety.

PH-78-2 The Metro Board has selected an LPA for purposes of the Final EIR, although it has not yet approved the project, including any of the options and alternatives evaluated in the Draft EIR. A final decision will not be made until after the Metro Board reviews the Final EIR, which will include responses to all public comments, including those of the commenter.

Submission PH-79 Kim Turner

PH-79-1 The commenter's support for the Metro ROW alignments is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

PH-79-2 The comment does not address the adequacy of the Draft EIR, or otherwise raise significant environmental issues, and is noted for the record. All comments have been shared with the Metro Board for their consideration.

PH-79-3 See response to PH-79-1.

Submission PH-80 Holly Osborne

PH-80-1 Cost estimates are not part of the Draft EIR but were prepared in 2022 and published in 2023 alongside the Draft EIR for public information and Metro Board consideration. The costs estimates for all light rail alternatives considered in the Draft EIR as estimated in 2022 are as follows: Elevated/At-Grade Alignment ($1.96B), Trench Option ($2.84B), Hawthorne Option ($2.96B), and the LPA ($2.23B). These costs were considered by the Metro Board in the May 2024 Board meeting prior to selecting the LPA, and would continue to be a major consideration. See MR-21: Cost Estimates and Schedule. Metro has published refined cost estimates concurrent with the release of the Final EIR.

The commenter's opposition to the Metro ROW alignments is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission PH-81 Ray Hollar

PH-81-1 CEQA does not require funding to be demonstrated in a Draft EIR. However, the May 2024 Board Report, available to the public prior to the Metro Board meeting and reviewed by the Metro Board prior to selecting an LPA, included estimates of how much funding could be expected from identified funding sources, shortfalls, and potential additional sources. The

project has secured funding from Measure R (2008), Measure M (2016), a Transit and Intercity Rail Capital Program (TIRCP) Grant from the California State Transportation Agency, and 3% match contributions from local jurisdictions. Metro is committed to the responsible use of public funds and to managing project costs efficiently, while continuing to pursue additional funding sources to support project delivery.

PH-81-2 The commenter's statement about rental businesses is noted. All comments have been shared with the Metro Board for their consideration.

PH-81-3 It is unclear how the commenter derived their cost per rider figure. The May 2024 Board Report, available to the public prior to the Metro Board meeting and reviewed by the Metro Board prior to selecting an LPA, included cost/benefit information on cost per annual new rider, cost per all annual trips, and cost per reduction in vehicle miles traveled (VMT). In all instances the Elevated/At-Grade Alignment performed the best on this metric of the light rail alignments. The LPA performed second best on cost per annual new rider and cost per reduction in VMT. The Hawthorne Option performed second best in cost per annual trips and worse than the Trench Option in cost per reduction in VMT.

After the close of the Draft EIR comment period, Metro continued to coordinate with the commenter on questions related to cost, including an email sent on April 22, 2024. In the additional correspondence, Metro provided more information regarding cost estimate assumptions.

Submission PH-82 Ted Hofmann

PH-82-1 The commenter's support for the No Project Alternative or the High Frequency Bus Alternative is noted. CEQA requires that an EIR identify the Environmentally Superior Alternative. However, the Lead Agency is not obligated to select the Environmentally Superior Alternative for implementation if it is infeasible. See MR-1: Selection of Alternatives. The Metro Board has selected an LPA for the purposes of the Final EIR. A final decision will not be made until after the Metro Board reviews the Final EIR, which will include responses to all public comments, including those of the commenter.

Submission PH-83 John Schreiber

PH-83-1 Section 3.3, Aesthetics, of the Draft EIR, evaluates baseline conditions of the existing Metro ROW as an active railroad corridor. This includes not only the current freight train operations, but also the visual characteristics inherent to a railroad corridor, such as railroad tracks and associated infrastructure. In addition, as stated on page 3.3-54 of the Draft EIR, views of the mountains and other landmarks the commenter mentioned are located relatively long distances from the Metro ROW in Lawndale, which makes any possible views of them quite distant. For example, the Hollywood Sign is located approximately 17 miles north/northeast of the Metro ROW in Lawndale. Nonetheless, those distant views would remain available from public streets and sidewalks, even with the addition of project elements such as soundwalls and elevated structure. The implementation of the project would not fundamentally change the use of the Metro ROW as a transportation corridor. The potential for LPA impacts is addressed in Chapter 4, Evaluation of Alternatives, of the Draft EIR. See MR-10: Changes to Community Character.

Submission PH-84 Don Szerlip

PH-84-1 The commenter's support for the Metro ROW alignment to directly connect to the Redondo Beach Transit Center is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission PH-85 Jennifer Dodge

PH-85-1 Metro has been exploring options for transit service along the Metro ROW for several decades. Metro purchased the Harbor Subdivision from the precursor to the BNSF in the early 1990s with plans to provide passenger rail service to the South Bay. In 2009, Metro prepared an alternatives analysis that studied the potential for transit service along all, or portions of the Metro ROW and identified the segment between the Redondo Beach (Marine) Station and the Torrance Transit Center as the highest priority project. Since then, several alignments and alternatives have been studied. The project is designed to fit within the Metro ROW. Metro completed a property boundary survey in 2025, the results of which are reflected in the Final EIR Appendix B, Select Advanced Conceptual Engineering Drawings - Locally Preferred Alternative. Chapter 3, Environmental Impact Analyses, of the Draft EIR, analyzes not only the potential impacts of light rail, but impacts associated with modifications to freight tracks as well as their simultaneous operation. See MR-8: Light Rail and Freight Train Safety.

Submission PH-86 Kimberly Gillen

PH-86-1 The project is designed to fit within the Metro ROW. See Appendix 2-A, Select Advanced Conceptual Engineering Drawings, of the Draft EIR, Select Advance Conceptual Engineering Drawings, and Final EIR Appendix B, Select Advanced Conceptual Engineering Drawings - Locally Preferred Alternative. See MR-8: Light Rail and Freight Train Safety.

The Draft EIR, Section 3.9, Hazards and Hazardous Materials and Section 3.11, Utilities and Service Systems, account for the presence of underground utilities. As described in Project Feature PF-US-1: Utility Identification and Coordination, Metro and its contractors would coordinate with utility providers to implement required safety measures during design and construction. See MR-7: Utility Relocation and Hazardous Materials Safety. Section 3.6, Noise and Vibration of the Draft EIR analyze impacts related to noise and vibration.

Metro understands concerns regarding property value. However, under CEQA, economic impacts such as changes in property values are not considered environmental impacts. The Draft EIR focuses on physical environmental impacts and measures to mitigate them, as required by CEQA. To address questions and concerns on property values, Metro has prepared more information. See MR-14: Property Values and Impacts to Businesses.

PH-86-2 See response to Comment 86-1. See also MR-8: Light Rail and Freight Train Safety and MR-20: Proximity Impacts of Relocated Freight Tracks.

Submission PH-87 Erik Ore

PH-87-1 The commenter's support for the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission PH-88 Kimberly Gillen

PH-88-1 The 2023 Ridership Summary Report, published alongside the Draft EIR, shows that the project is expected to generate between 11,500 to 15,600 daily transit trips (boardings). See MR-15: Metro Ridership Forecasting Methodology.

PH-88-2 The commenter's opposition to the Metro ROW alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-8: Light Rail and Freight Train Safety.

PH-88-3 Urbanized avian species, including resident birds of prey such as red-tailed hawks, great-horned owls, and barn owls, are protected under the Migratory Birds Treaty Act and the California Fish and Game Code. As discussed in Section 3.7, Biological Resources, of the Draft EIR, these species have potential to occur within the RSA, which provides suitable breeding and foraging habitat in the form of trees, vegetation, and man-made structures (see page 3.7-22 of the Draft EIR). The Draft EIR acknowledges that construction activities could temporarily disturb these habitats. To address this, Mitigation Measure MM-BIO-2: Nesting Bird Season Restrictions and Pre-Construction Surveys establishes protections for nesting birds, including seasonal restrictions and pre-construction surveys to identify active nests. Given the existing anthropogenic disturbance (e.g., vehicular traffic, train traffic, human presence) throughout the RSA, these measures are anticipated to mitigate potential impacts on local avian species to less than significant. The project does not propose any permanent changes that would preclude birds from returning to the area after construction is completed. Moreover, birds and terrestrial species in the RSA are adapted to living in an urban environment, and operational impacts would be less than significant with mitigation.

PH-88-4 Regarding potential for derailments, see MR-8: Light Rail and Freight Train Safety. Metro is aware of the Friendship Campus, which is currently under construction. The property fronts Inglewood Avenue and is approximately 550 feet from the Metro ROW at the nearest boundary. The presence of the under-construction Friendship Campus within a quarter-mile of the Metro ROW is acknowledged in Section 4.13, Corrections and Additions, of the Final EIR. As discussed in Section 3.9-4.3 of the Draft EIR, although proposed construction activities would occur within a quarter-mile of several existing schools, the project includes Project Feature PF-HHM-2: Demolition Plans, which requires demolition plans detailing the procedures for handling ACMs, LBP, PCB, TWW, and universal waste in accordance with federal and state regulations. The project feature also includes provisions for the handling and transport of contaminated soil in compliance with SCAQMD Rule 116. Additionally, the project includes Project Feature PF-AQ-1: Metro Green Construction Policy Compliance, which would require construction activities to comply with the provisions of the Metro Green Construction Policy related to emissions and fugitive dust control. Furthermore, the project includes Project Feature PF-HHM-1: Handling, Storage, and Transport of Hazardous Materials and Wastes, which requires preparation of plans detailing BMPs for hazardous

materials transport, storage, and use, as well as BMPs for cleanup should releases occur. The Friendship Campus does not alter this conclusion.

Submission PH-89 David Zappacosta

PH-89-1 Section 3.6, Noise and Vibration, of the Draft EIR evaluates vibration impacts to sensitive uses along the proposed alignments, including both vibration annoyance and potential for structural damage during construction. The Draft EIR concludes that construction of the Elevated/At-Grade Alignment would result in one significant and unavoidable vibration damage impact near Grant Avenue, where reconstruction of the freight bridge would require equipment such as an impact pile driver. For all other areas of the corridor, construction methods would generate lower vibration levels, and with implementation of Mitigation Measures MM-VIB-1: Vibration Control Plan and MM-VIB-2: Construction Equipment Location, damage-related vibration impacts would be reduced to less than significant.

The Trench Option, Hawthorne Option, and LPA would not require reconstruction of the Grant Avenue freight bridge and therefore would not result in significant construction vibration damage impacts with mitigation. For more information on vibration damage and annoyance, see MR-5: Vibration Impact Types and Thresholds.

The LPA would also avoid relocating the freight track closer to the Breakwater Village Condominiums; this is one of the reasons it was selected as the LPA.

For additional information on structural concerns, see MR-13: Soil Stability and Sinkholes.

Finally, Metro understands concerns regarding property values. However, under CEQA, economic impacts such as changes in property values are not considered environmental impacts. The Draft EIR focuses on physical environmental impacts and measures to mitigate them, as required by CEQA. To address questions and concerns on property values, Metro has prepared more information. See MR-14: Property Values and Impacts to Businesses.

The Metro Board selected an LPA for the purposes of the Final EIR, but has not approved the project. The Board will make that decision after reviewing the Final EIR, which includes analysis of potential impacts and public input.

PH-89-2 Noise and vibration are addressed in Section 3.6, Noise and Vibration, of Draft EIR. The analysis follows the Federal Transit Administration Transit Noise and Vibration Assessment Manual to evaluate both construction and operational noise impacts, including potential impacts on nearby residences.

The Draft EIR discloses that construction activities may cause temporary noise impacts in exceedance of the Federal Transit Administration (FTA) noise criteria. To address these impacts, Mitigation Measures such as MM-NOI-1: Noise Control Plan and MM-VIB-1: Vibration Control Plan would be implemented to minimize construction noise and vibration to the extent feasible. These plans include measures such as the use of quieter equipment, noise barriers, and monitoring to ensure compliance with the FTA construction noise and vibration criteria to the maximum extent feasible.

The comment references noise levels of 76 and 94 decibels as "punitive" to those living along the Metro ROW. However, it is unclear to which specific noise levels the commenter is referring. Construction noise levels would not be continuous. Regarding operational noise impacts, the Draft EIR assesses those impacts by calculating the total noise exposure at sensitive receptors, which combines the existing noise exposure with the incremental noise caused by the project. The FTA criteria, as shown in Table 3.6-3 and Figure 3.6-2 of the Draft EIR, determine the thresholds for moderate and severe impacts based on existing conditions at each cluster of properties. For example, if the existing noise level at a residence is 50 a-weighted decibels (dBA (L_{dn})), the severe impact threshold would be noise levels above 59 dBA (L_{dn}). These thresholds ensure that noise impacts remain within acceptable levels relative to the existing conditions of the area.

It should also be noted that the frequency of trains has been factored into the analysis, consistent with the FTA guidance. The operational noise impacts for the Metro ROW alignments would be less than significant with mitigation.

See MR-1: Selection of Alternatives, MR-3: Operational Noise Project Features and Mitigation Measures, MR-5: Vibration Impact Types and Impact Thresholds, and MR-10: Changes to Community Character.

PH-89-3 The commenter's opposition to the Metro ROW alignments is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission PH-90 Kevin Mitchell

PH-90-1 See MR-7: Utility Relocation and Hazardous Materials Safety; MR-8: Light Rail and Freight Train Safety; and MR-13: Soil Stability and Sinkholes.

PH-90-2 The commenter's support for the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission PH-91 Niki Negrete-Mitchell

PH-91-1 As discussed in Section 3.8-2.3 of the Draft EIR, the Resource Study Areas (RSAs) for geology, soils, and paleontological resources are the footprints of the Elevated/At-Grade Alignment, Trench Option, and Hawthorne Option. The footprints are defined as the areas necessary to construct, operate, and maintain the Elevated/At-Grade Alignment and Options. The footprints evaluated by the Draft EIR are consistent in soil composition and geologic characteristics with those found throughout Los Angeles County.

According to the utility owner, the sinkhole referenced by the commenter was the result of a broken irrigation line in a residential flower bed and was a localized issue that has since been repaired. Although Metro cannot independently confirm the exact cause, available information suggests it was unrelated to underlying geologic conditions, which differ significantly from the construction methods planned for the project. Drilling operations, especially those involving extraction, could alter subsurface pressure and create voids, increasing the risk of subsidence and sinkholes. In contrast, Metro's construction, including the proposed trenching, would involve controlled excavation with no substantial extraction

of subsurface materials that could destabilize soil layers. In Section 4.3 of Chapter 4, Corrections and Additions, of the Final EIR, the following language has been added to the Project Description regarding construction: "Any existing sinkholes shall be examined by the geotechnical engineer of record prior to construction to inform specific steps needed for unique site conditions." The addition provides further clarity that sinkholes, as well as immediately adjacent features such as existing retaining walls, would be examined as part of site-specific soil investigations, but does not change the conclusions of the Draft EIR. See also MR-13: Soil Stability and Sinkholes.

With respect to underground utilities, including the high-pressure gas lines, see MR-7: Utility Relocation and Hazardous Materials Safety.

With respect to the risk of freight derailment, see MR-8: Light Rail and Freight Train Safety.

With respect to the relocation of the existing freight, see MR-20: Proximity Impacts of Relocated Freight Tracks.

PH-91-2 The commenter's support for the Hawthorne Option and opposition to using the Metro ROW alignments is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission PH-92 Candice Nafissi

PH-92-1 The commenter's support for the Hawthorne Option and opposition to using the Metro ROW is noted. All comments have been shared with the Metro Board for their consideration. The Metro Board selected the Hybrid Alternative as the LPA. See MR-1: Selection of Alternatives.

The Draft EIR analyzes noise impacts and air quality impacts in Sections 3.6, Noise and Vibration, and 3.4, Air Quality, of the Draft EIR, respectively. See MR-3: Operational Noise Project Features and Mitigation Measures and MR-4: Potential Negative Health Effects Related to Noise, Vibration, and Air Quality. It should also be noted that, with mitigation, the LPA, Trench Option, and Hawthorne Option would not result in significant operational noise impacts. With respect to the commenter's assertion that the project would generate noise that "exacerbates Redondo Beach's noise ordinance," see responses to Comments 130-5 and 130-15.

Metro understands concerns regarding property values. However, under CEQA, economic impacts such as changes in property values are not considered environmental impacts. The Draft EIR focuses on physical environmental impacts and measures to mitigate them, as required by CEQA. To address questions and concerns on property values, Metro has prepared more information. See MR-14: Property Values and Impacts to Businesses.

Submission PH-93 Michelle Lopez

PH-93-1 The commenter's opposition to the project is noted. Metro understands the commenter's concerns regarding property values and crime. However, social and economic impacts are not considered environmental impacts under CEQA. The Draft EIR focuses on physical

environmental impacts and measures to mitigate them, as required by CEQA. See MR-14: Property Values and Impacts to Businesses. Metro takes the safety and well-being of nearby communities very seriously. See MR-9: Light Rail Security. Metro Homeless Outreach Teams are deployed on Metro buses, trains, and stations to engage with unhoused riders and connect them to resources. See MR-18: Homelessness.

PH-93-2 See response to Comment 93-1. Metro has not conducted an economic impact study for the project at this time.

Submission PH-94 Cindy Lederman

PH-94-1 Metro has undertaken extensive community outreach for potential transit service along all or portions of the Metro ROW for well over a decade. Metro's outreach program also accommodates the needs of residents with limited English proficiency. Most recently, in advance of the Metro Board of Director's selection of the LPA in May 2024, Metro distributed 32,000 postcards to residents, property owners, and businesses within a one-mile radius of all alignments under study. Additionally, at the request of the City of Lawndale, Metro sent flyers to every resident within Lawndale. All outreach notifications are provided in both English and Spanish. Documentation on the outreach conducted during the environmental review process is available on the Metro project Dropbox, by visiting metro.net/clineext/#documents.

Metro prepared cost estimates for the alignments in 2022, which included the cost of the length of the tracks as well as excavation. See MR-21: Cost Estimates and Schedule. While CEQA does not require an EIR to include project cost information, Metro provided this information to support public understanding of the project alternatives and to inform the Metro Board's selection of the LPA. The costs as estimated in 2022 are as follows: Elevated/At-Grade Alignment ($1.96B), Trench Option ($2.84B), Hawthorne Option ($2.96B), and the LPA ($2.23B). Metro has released refined cost estimates in 2025 dollars, concurrent with the Final EIR.

PH-94-2 The Draft EIR identifies all significant and unavoidable impacts in Chapter 3, Affected Environment and Environmental Impact Analyses, of the Draft EIR. The commenter's support for the Hawthorne Option and opposition to the Metro ROW alignment is noted. See MR-1: Selection of Alternatives and MR-10: Changes to Community Character.

Submission PH-95 Lucas Love

PH-95-1 The commenter's support for the Hawthorne Option and opposition to the Metro ROW alignments is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

The Draft EIR analyzed the project's noise impacts in Section 3.6, Noise and Vibration, of the Draft EIR. See MR-3: Operational Noise Project Features and Mitigation Measures. It should also be noted that, with mitigation, the LPA would not result in significant operational noise impacts.

Potential impacts related to hazardous materials were analyzed in Section 3.9, Hazards and Hazardous Materials, of the Draft EIR, and determined to be less than significant. MR-7:

Utilities Relocation and Hazardous Materials. See MR-8: Light Rail and Freight Train Safety and MR-14: Property Values and Impacts to Businesses, for additional information.

Submission PH-96 Mike Garlan

PH-96-1 Section 3.6, Noise and Vibration, of the Draft EIR, provides a thorough analysis of the project's potential noise and vibration impacts and identifies mitigation measures to reduce significant impacts to the maximum extent feasible. See MR-1: Selection of Alternatives, MR-3: Operational Noise Project Features and Mitigation Measures, and MR-10: Changes to Community Character.

PH-96-2 The potential for aesthetics impacts for the Elevated/At-Grade Alignment and the Trench Option are addressed in Section 3.3, Aesthetics, of the Draft EIR. The potential for aesthetics impacts for the LPA is addressed Chapter 4, Evaluation of Alternatives, of the Draft EIR. None of the Metro ROW alignments would result in temporary or permanent significant aesthetic impacts. The analysis in Section 3.3, Aesthetics, of the Draft EIR, does not assign value judgments to neighborhoods or communities. Instead, every effort was made to be objective in the descriptions of the existing visual conditions. The analysis considers the characteristics of the area, including existing infrastructure, land use, and visual features, to determine whether the project would result in a significant aesthetic impact. The descriptions in the Draft EIR are intended to provide factual context for the analysis and do not reflect Metro's value or perception of the community. Metro values the input of residents and works to ensure that projects enhance neighborhoods and meet the needs of local communities.

See MR-10: Changes to Community Character.

PH-96-3 The commenter's support for the No Project Alternative and secondary preference for the Hawthorne Option is noted. See MR-1: Selection of Alternatives.

Submission PH-97 Colleen Villegas

PH-97-1 The commenter's support for the Hawthorne Option and opposition to the Metro ROW alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

PH-97-2 Vibration is addressed in Section 3.6, Noise and Vibration, of the Draft EIR. With mitigation, the project would not result in significant operational vibration impacts. See MR-5: Vibration Impact Types and Impact Thresholds.

PH-97-3 Metro is not aware of any study linking noise from Metro transit to increased health effects. See response to Comment PH-97-1 and MR-4: Potential Negative Health Effects Related to Noise, Vibration, and Air Quality.

Submission PH-98 Michael Kim

PH-98-1 The Draft EIR analyzes the potential impacts of each project option in Chapter 3, Affected Environment and Environmental Impact Analyses, of the Draft EIR. The impacts of each option are summarized in the Executive Summary of the Draft EIR.

This comment does not identify any specific impacts that lack detail. The conclusions of the Draft EIR are based on technical studies, modeling, and data prepared by qualified experts. Its assumptions and analyses are documented in the report and its technical appendices for public review. If there are specific aspects of the analysis that the commenter believes require clarification or revision, the commenter is encouraged to provide further details so that Metro may address them.

PH-98-2 The frequency of freight operations on the Metro ROW is determined by BNSF, subject to existing agreements and applicable regulatory constraints. Metro does not control the freight train schedule or operations but coordinates with BNSF to ensure continued safe and efficient use of the Metro ROW. The Draft EIR's analysis of freight train operations is based on existing operating patterns, developed in consultation with BNSF and based on observed conditions. While BNSF has the right to operate within the Metro ROW, any substantial increase in freight traffic would require major infrastructure modifications, scheduling adjustments, and regulatory approvals (e.g., from the Federal Railroad Administration and the California Public Utilities Code) that are not reasonably foreseeable at this time. The project would replace freight tracks as needed, in kind, with newer tracks, but it would not increase track capacity. The demand for freight movement along this corridor has remained stable for years, and no changes to freight operation are anticipated.

PH-98-3 See MR-8: Light Rail and Freight Train Safety.

Submission PH-99 Paige Kaluderovic

PH-99-1 The commenter's support for the Hawthorne Option and opposition to the Metro ROW alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives and MR-10: Changes to Community Character.

PH-99-2 See MR-8: Light Rail and Freight Train Safety.

PH-99-3 As described in Section 3.6, Noise and Vibration, of the Draft EIR, soundwalls would be implemented to mitigate noise generated by the light rail and to some extent, noise generated by the freight trains as required by Mitigation Measure MM-NOI-2: Soundwalls. However, two of the primary sources of freight noise are the diesel engines and the horn; soundwalls are less effective at mitigating these due to the height of the engines and horn as well as the decibel level of the horn. Other measures would be implemented to reduce freight noise.

Project Feature PF-NV-1: Quiet Zone Equipment Installation ensures that the project would be quiet zone ready and freight noise is anticipated to be reduced with implementation of Mitigation Measure MM-NOI-4: Quiet Zone Establishment. Per Project Feature PF-NV-1: Quiet Zone Equipment Installation, the eight at-grade freight crossings between Inglewood Ave and 182nd Street have been designed and would be constructed to include all Federal Railroad Administration (FRA) required Supplemental Safety Measures and associated improvements and equipment that are needed to qualify for Automatic FRA Approval to establish a quiet zone. Crossing signal bells would also be set to the minimum noise level of

75 a-weighted decibel (dBA) at 10 feet per American Railway and Engineering and Maintenance of Way requirements.

Mitigation Measure MM-NOI-4: Quiet Zone Establishment would require Metro to cooperate with the City of Lawndale, City of Redondo Beach, and City of Torrance to establish a quiet zone(s) from north of Inglewood Avenue to south of 182nd Street. The quiet zone is anticipated to reduce freight noise overall along the Metro ROW by eliminating one of the primary sources of noise from freight trains, the horn, which produces a noise level of 110 dBA. See MR-3: Operational Noise Project Features and Mitigation Measures.

PH-99-4 While Metro is not responsible for freight operations, the EIR includes mitigation measures to address potential impacts from the freight relocation that occur as part of this project. See response to Comment PH-99-3.

Submission PH-100 Jill Love

PH-100-1 Metro is committed to integrating safety into all Metro rail operations. The project would comply with relevant safety standards, including the California Manual on Uniform Traffic Control Devices, the California Department of Transportation Highway Design Manual, the Americans with Disabilities Act (ADA), and Metro's Grade Crossing Safety Policy. The LPA, Trench Option, and Hawthorne Option would fully grade separate light rail from all roadways, thereby avoiding potential conflicts with pedestrians and cyclists. See MR-8: Light Rail and Freight Train Safety.

PH-100-2 See MR-7: Utility Relocation and Hazardous Materials Safety and MR-13: Soil Stability and Sinkholes for detailed discussions of how construction and operation in the corridor would be managed in the consideration of local soils conditions, including preventing potential impacts to underground utilities, including with respect to groundborne-vibration during construction and operations of the project.

With respect to potential impacts associated with views of the retaining walls, the Draft EIR includes a detailed evaluation of potential visual changes. This assessment uses the Federal Highway Administration's (FHWA) methodology for evaluating visual quality, based on three criteria: vividness (the memorability of the landscape), intactness (the extent to which the landscape is free from visual intrusions), and unity (the coherence and harmony of the landscape). As described in Section 3.3, Aesthetics, of the Draft EIR, the project area is already highly urbanized, with a mix of residential, industrial, and commercial land uses, as well as the existing freight rail corridor. There are no designated scenic vistas or notable natural landscapes within the project's vicinity. As required by Project Feature PF-AES-1: Local Zoning Ordinances, the proposed retaining walls would be developed consistently with Metro's Design Criteria. The addition of these retaining walls would not substantially degrade the visual character of the environment, which, as noted is generally low under all three of FHWA criteria. In many cases, the retaining walls would be screened by fencing, landscaping, or adjacent structures. The addition of retaining walls and other project elements would be considered neutral and would not result in significant aesthetic impacts.

Regarding potential impacts related to flooding as a result of the retaining walls, the project would include a Low-Impact Development (LID) drainage system designed to retain most

stormwater runoff within the project footprint. This system would meet the stormwater quality design volume requirements under the Municipal Separate Storm Sewer System (MS4) Permit established by the Los Angeles Regional Water Quality Control Board (LARWQCB), thereby minimizing flooding on-site and off-site, including in sumps, per Project Feature PF-HWQ-6: Low Impact Development (LID) BMPs per Regional Requirements. Additional runoff from the project would continue to be collected by storm drain facilities. Discharge locations of underdrains installed along the alignment would be the same as existing discharge locations. The retainment of the majority of stormwater runoff within the project footprint and preservation of existing discharge locations reduces the potential for erosion and sedimentation to occur on or off site. Thus, the addition of impervious surfaces would not result in substantial erosion or siltation, and this impact would be less than significant. For the Trench Option, storm water management would be addressed through Project Feature PF-HWQ-7: Trench Operation Runoff Collection and Treatment, which provides for proper collection, treatment, and rerouting of excess runoff, which would prevent flooding, reduce strain on sump pumps and help maintain natural water absorption.

None of the alignment options have potential to cause vibration-related structural damage during operations (see Draft EIR page 3.6-92). During construction, with mitigation, only the Elevated/At-Grade Alignment would result in a potentially significant and unavoidable vibration-related damage impact (see Draft EIR, Sections 3.6-4.3, 4.5-3.6.3, and 4.5-3.6.4). See MR-5: Vibration Impact Types and Impact Thresholds, and MR-6: Vibration Analysis During Final Design for additional information.

PH-100-3 The potential for noise impacts is addressed in Section 3.6, Noise and Vibration, of the Draft EIR. The potential for LPA impacts is addressed in Chapter 4, Evaluation of Alternatives, of the Draft EIR. See MR-2: Operational Noise Analysis Methodology and Impact Thresholds, MR-3: Operational Noise Project Features and Mitigation Measures, and MR-4: Potential Negative Health Effects Related to Noise, Vibration, and Air Quality.

PH-100-4 As explained on page 3.1-3 of the Draft EIR, traffic delay (often measured by level of service) is no longer permissible as a CEQA impact criterion and therefore this analysis and related topics are not addressed in the Draft EIR. See MR-11: Traffic Delay and Level-of-Service and the 2023 Transportation Detail Report, published concurrently with the Draft EIR, for a discussion of traffic conditions. As described in Section 3.1, Transportation, of the Draft EIR, Project Feature PF-T-1: Construction Traffic Management Plan requires contractors to develop a construction management traffic plan. Metro and its contractors would coordinate with emergency providers, schools, local businesses, residents and relevant jurisdictions to manage access and the effects of temporary closures and identify reasonable accommodations or alternatives, which could include limiting construction hours, providing alternate routes or temporary easements, or other strategies. See MR-12: Emergency Access. The Metro Board has selected an LPA for the purpose of the Final EIR, which, like the Trench Option, would fully grade separate the light rail at 182nd Street and therefore have no effect on emergency vehicles along 182nd Street.

PH-100-5 While change in community character does not constitute a significant impact under CEQA, Section 3.2, Land Use and Planning, of the Draft EIR, analyzes the project's consistency or support with the many goals and policies of the jurisdictions along the corridor and finds less than significant impacts. See MR-10: Changes to Community Character.

Submission PH-101 Jerome Chang

PH 101-1 Washington Elementary School and Adams Middle school are both located approximately 1,200 feet from the Metro ROW. Section 3.4, Air Quality, of the Draft EIR, analyzes air quality impacts to sensitive receptors, including schools within the study area. As described in the Draft EIR and Final EIR, the Metro ROW alignments and the LPA would not generate localized emissions that exceed regional air quality standards; therefore, localized air quality impacts to schools would be less than significant.

Section 3.6, Noise and Vibration, of the Draft EIR, analyzes construction-related noise impacts to sensitive uses using a screening distance of 500 feet. Because the schools are located approximately 1,200 feet from the ROW, they are outside of this screening distance. At this distance, typical construction noise would be less than 65 a-weighted decibels (dBA), not accounting for additional noise reduction provided by intervening structures. For the Elevated/At-Grade Alignment, pile driving activity at the Grant Avenue freight bridge would result in an hourly equivalent sound level (Leq) of approximately 67 dBA at the schools. The LPA, Trench Option and Hawthorne Option would not involve constructing a new freight bridge at Grant Avenue.

These estimated noise levels would not exceed the Federal Transit Administration (FTA) daytime construction noise impact criteria of 90 dBA 1-hour Leq. Noise contours for typical construction activities and for pile driving near Washington Elementary School and Adams Middle School are shown in Figure 3.6-13 (page 3.6-27) and Figure 3.6-19 (page 3.6-45) of the Draft EIR, respectively. As shown, neither school is located within the construction noise contours. Mitigation Measure NOI-1 (Noise Control Plan) would be implemented to control noise during construction. The Noise Control Plan would include noise reducing measures to reduce construction noise and noise monitoring to ensure compliance with the FTA noise criteria to the maximum extent feasible.

PH-101-2 See response to Comment PH-101-1. Regarding the potential for concurrent construction activities with other nearby construction projects, Metro is committed to integrating safety into all Metro rail construction activities. As described in Section 3.1, Transportation, of the Draft EIR, Project Feature PF-T-1: Construction Traffic Management Plan, Metro would require contractors to develop a detailed construction traffic management plan (CTMP) prior to the start of localized construction activities. The CTMP would require Metro and its contractors to coordinate with emergency providers, schools, and relevant jurisdictions. Among other things, the plan would address how to maintain access to schools, ensure pedestrian and cyclist safety, and coordinate with emergency service providers to preserve emergency access. The CTMP may also include measures such as limiting construction hours, scheduling material deliveries during off-peak hours, providing off-site truck staging. The plan would also be updated as needed to reflect changing conditions, such as the presence of other active construction in the area, to minimize disruptions and ensure effectiveness. Metro would work closely with the local jurisdictions to reduce impacts and maintain safe, navigable conditions for pedestrians, vehicles, and school operations throughout the construction period.

PH-101-3 The commenter's support for a rapid bus line on Hawthorne Boulevard is noted. A High-Frequency Bus Alternative is analyzed in Chapter 4, Evaluation of Alternatives, of the Draft EIR. See MR-1: Selection of Alternatives.

Submission PH-102 Ted Hoffmann

PH-102-1 The freight train estimates included in the Draft EIR are based on actual operations data collected through field monitoring and coordination with the BNSF.

PH-102-2 As currently designed, the Hawthorne Option would include an elevated structure that would span over a portion of the property identified by the commenter. However, based on the current engineering plans, the project would not require permanent acquisition of the home, but rather an overhead (aerial) easement to cross over a portion of the property. If the Metro Board selects the Hawthorne Option for implementation, Metro would coordinate with potentially affected property owners as needed.

Submission PH-103 Bob Pinzlon

PH-103-1 Several routes were examined as part of previous phases and studies of the project, but were eliminated from further consideration, as described in the 2023 Alternatives Considered and Eliminated Report, published alongside the Draft EIR See Chapter 4, Evaluation of Alternatives, of the Draft EIR.

The commenter's support for Hawthorne Option is noted. See MR-1: Selection of Alternatives. While change in community character does not constitute a significant impact under CEQA, Section 3.2, Land Use and Planning, of the Draft EIR, analyzes the project's consistency or support with the many goals and policies of the jurisdictions along the corridor and finds less than significant impacts. See MR-10: Changes to Community Character.

Submission PH-104 Julie Iffland

PH-104-1 Metro has been exploring options for transit service along the Metro ROW for several decades. Metro purchased the Harbor Subdivision from the precursor to the BNSF in the early 1990s. In 2009, Metro prepared an alternatives analysis that studied the potential for transit service along all or portions of the Metro ROW and identified the segment between the Redondo Beach (Marine) Station and the Torrance Transit Center as the highest priority project. Since then, several alignments and alternatives have been studied. The 2018 Supplemental Alternatives Analysis report recommended two alignments to be carried forward into environmental analysis: the Metro ROW and the Hawthorne Boulevard alignment (both primarily at-grade alignments).

PH-104-2 Metro is committed to integrating safety into all Metro rail operations. The project would comply with relevant safety standards, including the California Manual on Uniform Traffic Control Devices, the California Department of Transportation Highway Design Manual, the Americans with Disabilities Act (ADA), and Metro's Grade Crossing Safety Policy. The LPA, Trench Option and Hawthorne Option would fully grade separate light rail from all roadways, thereby avoiding potential conflicts with school-age pedestrians and cyclists. The

freight track would remain at-grade, but the project would include new pedestrian safety infrastructure, such as gates, which would improve safety compared to existing conditions, where no pedestrian safety infrastructure exists. The presence of a station could also benefit access to schools for residents and parents. See MR-8: Light Rail and Freight Train Safety.

PH-104-3 The commenter's opposition to the Metro ROW alignment, and at-grade options in particular, is noted. The only alignment option with at-grade light rail under consideration is the Elevated/At-Grade Alignment. See MR-1: Selection of Alternatives. As a point of clarification, light rail transit has not been studied by Metro within the City of Manhattan Beach.

Submission PH-105 John Hough

PH-105-1 This comment is noted. The Los Angeles County Transportation Commission, Metro's predecessor, purchased the Harbor Subdivision in the early 1990s from the predecessor of the BNSF Railway, prior to the opening of the Alameda Corridor. The 2009 Harbor Subdivision Alternatives Analysis Study analyzed existing and future transportation conditions and studied many transit alternatives along the 26-mile Metro ROW between Downtown Los Angeles, and the Ports of Los Angeles and Long Beach. The Alternatives Analysis Study recommended a Phased Implementation Strategy that identified a Metro Light Rail extension from Redondo Beach to Torrance as the highest priority for implementation. This 2009 study considered Hawthorne Boulevard as a potential route for this extension. Based on community input, the Trench Option was studied through Lawndale in the Draft EIR.

Submission PH-106 G.P. Sudduth

PH-106-1 Metro understands concerns regarding property values. However, under CEQA, economic impacts such as changes in property values are not considered environmental impacts. The Draft EIR focuses on physical environmental impacts and measures to mitigate them, as required by CEQA. To address questions and concerns on property values, Metro has prepared more information. See MR-14: Property Values and Impacts to Businesses. Also see MR-1: Selection of Alternatives.

PH-106-2 Section 3.6, Noise and Vibration, of the Draft EIR, evaluates potential noise impacts, including those from wheel squeal. According to the Federal Transit Administration's Transit Noise and Vibration Impact Assessment Manual (2018), curves with a radius greater than 1,000 feet do not generate wheel squeal. As a result, the Federal Transit Administration (FTA) recommends designing transit projects to avoid tight curves with radii of less than 1,000 feet to mitigate potential noise impacts. The Elevated/At-Grade Alignment, Trench Option, and the LPA do not include curves with radii less than 1,000 feet, which are the primary cause of wheel squeal. Consequently, wheel squeal is not anticipated under these design conditions.

The Hawthorne Option includes two curves which could potentially produce wheel squeal. Mitigation Measure MM-NOI-5: Wheel Squeal Noise Monitoring would require noise

monitoring to identify wheel squeal at two curves with a radius less than 1,000 feet for the Hawthorne Option:

> Curve between Santa Fe Avenue and Inglewood Avenue

> Curve between 161st Street and 163rd Street

If wheel squeal is identified, Metro shall install wayside rail lubrication to ensure wheel squeal does not occur. See MR-3: Operational Noise Project Features and Mitigation Measures.

Submission PH-107 Niki Negrete-Mitchell

PH-107-1 The commenter's concern about construction impacts is noted. As described in Section 3.6, Noise and Vibration of the Draft EIR, a Noise Control Plan (Mitigation Measure MM-NOI-1: Noise Control Plan) would be implemented to minimize noise levels to below the Federal Transit Administration (FTA) construction noise criteria to the maximum extent feasible. Construction-related activities would proceed in phases, limiting the duration of any impacts at a given location. With respect to construction vibration impacts, Mitigation Measures MM-VIB-1: Vibration Control Plan; MM-VIB-2: Construction Equipment Location; and MM-VIB-3: Pre- and Post-Construction Surveys would be implemented to minimize vibration near sensitive receptors. Metro closely engages with neighborhoods during construction, there would be a designated construction manager that could be contacted to report any construction related concerns. See MR-3: Operational Noise Project Features and Mitigation Measures and MR-4: Potential Negative Health Effects Related to Noise, Vibration, and Air Quality.

PH-107-2 Urbanized avian species, including resident birds of prey such as red-tailed hawks and great-horned owls, are protected under the Migratory Birds Treaty Act and the California Fish and Game Code (CFGC). As discussed in Section 3.7, Biological Resources, of the Draft EIR, species protected under the Migratory Bird Treaty Act (MBTA) and California Fish and Game Code (CFGC) have potential to occur within the Resource Study Area (RSA). This includes resident birds of prey, such as red-tailed hawks and great-horned owls. As stated on page 3.7-22 of the Draft EIR, portions of the RSA, such as El Nido Park, provide urbanized avian species with both suitable breeding and foraging habitat in the form of trees, vegetation, and man-made structures. The Draft EIR acknowledges that construction activities could temporarily disturb these habitats. To address this, Mitigation Measure MM-BIO-2: Nesting Bird Season Restrictions and Pre-Construction Surveys establishes protections for nesting birds, including seasonal restrictions and pre-construction surveys to identify active nests. Given the existing anthropogenic disturbance (e.g., vehicular traffic, train traffic, human presence) throughout the RSA, these measures are anticipated to mitigate potential impacts on local avian species to less than significant. The project does not propose any permanent changes that would preclude birds from returning to the area after construction is completed.

See MR-10: Changes to Community Character.

Submission PH-108 Holly Osborne

PH-108-1 The noise analysis in the Draft EIR follows the Federal Transit Administration (FTA) Transit Noise and Vibration Impact Assessment Manual (2018), which specifies the use of 24-hour time-averaged noise levels to assess the ambient noise environment. These levels capture all sound sources, including the occasional freight train pass-by, as part of the existing baseline. The analysis also incorporates a 10-dBA (a-weighted decibel) penalty for all sound occurring during the nighttime hours (10:00 p.m. to 7:00 a.m.) to account for increased sensitivity to noise during these hours. The effect of the penalty is that in the calculation of 24-hour noise, any event that occurs during the nighttime hours, is equivalent to 10 of the same events during the daytime hours. This ensures the assessment reflects the potential for greater disturbance from nighttime noise events. See MR-2: Operational Noise Analysis Methodology and Impact Thresholds.

Although noise from freight trains is loud and increases the 24-hour average noise levels, its infrequent occurrence during the day means that it does not dominate or skew the overall noise profile. Excluding the freight noise from the existing ambient noise conditions would not comply with FTA methodology and would misrepresent the true ambient noise environment. The 24-hour noise measurements include both periods when the freight is not operating and periods when freight is operating.

Submission PH-109 Lara Duke

PH-109-1 The commenter's support for the Hawthorne Option is noted. See MR-1: Selection of Alternatives. The Draft EIR analyzed biological impacts in Section 3.7, Biological Resources, and concluded that impacts would be less than significant or less than significant with mitigation. See MR-14: Property Values and Impacts to Businesses.

PH-109-2 Section 3.6, Noise and Vibration, of the Draft EIR, includes a comprehensive analysis of the potential noise and vibration impacts of the proposed light rail and freight train operations. Mitigation measures, including MM-NOI-2: Soundwalls, MM-NOI-3: Low Impact Frogs, and MM-NOI-4: Quiet Zone Establishment are designed to reduce noise levels to less than significant for most sensitive receptors. Additionally, the Metro Board selected the LPA for purposes of the Final EIR. The LPA and Trench Option significantly reduce noise impacts compared to the Elevated/At-Grade Alignment because they eliminate the at-grade crossings at 170th and 182nd Streets. By grade separating the light rail from all roadways, the LPA, Trench Option, and Hawthorne Option remove the need for audible warning at light rail crossings, such as routine light rail train horns and crossing bells.

PH-109-3 Metro takes the safety and well-being of nearby communities very seriously. See MR-8: Light Rail and Freight Train Safety and See MR-9: Light Rail Security.

The project has been designed to provide convenient access to the Redondo Beach Transit Center and Torrance Transit Center, which were selected based on extensive analysis of connectivity and accessibility and community outreach. The stations would serve as key transit hubs, with existing local bus routes providing access to nearby destinations. While Metro assists in identifying improvements during the planning and design phases, the implementation of local access to regional transit facilities falls under the jurisdiction of the

local cities. If the project is approved, Metro would coordinate with the local jurisdictions to assist in this planning.

Submission PH-110 Jan Kurth

PH-110-1 The commenter's support for the Hawthorne Option is noted. Metro takes the safety and well-being of nearby communities very seriously. See Section 2.4-1 of the Draft EIR for more information on methods anticipated for retaining wall construction. Also see MR-8: Light Rail and Freight Train Safety.

PH-110-2 The commenter's support for the No Project Alternative, the High-Frequency Bus Alternative, or high-speed buses is noted. The commenter also reiterates support for the Hawthorne Option and opposition to Metro ROW alignment. See MR-1: Selection of Alternatives; MR-4: Potential Negative Health Effects Related to Noise, Vibration, and Air Quality; and MR-10: Changes to Community Character.

Submission PH-111 Shelby Michael

PH-111-1 The commenter's support for the project with a preference for the Hawthorne Option is noted. See MR-1: Selection of Alternatives. The project has been designed to provide convenient access to the Redondo Beach Transit Center and Torrance Transit Center, which were selected based on extensive analysis of connectivity and accessibility and community outreach. The stations would serve as key transit hubs, with existing local bus routes providing access to nearby destinations. While Metro assists in identifying improvements during the planning and design phases, the implementation of local access to regional transit facilities falls under the jurisdiction of the local cities. If the project is approved, Metro would coordinate with the local jurisdictions to assist in this planning.

Submission PH-112 Kimberly

PH-112-1 CEQA does not require an analysis of safety in terms of crime, as it is not an environmental issue, and therefore the Draft EIR does not make any conclusions regarding this topic. Metro takes the safety and well-being of nearby communities very seriously. See MR-9: Light Rail Security and MR-18: Homelessness.

PH-112-2 The commenter's concern about construction impacts is noted. As part of Metro's standard construction management practices, contractors are required to maintain clean and safe work zones, including regular site inspections and debris removal to minimize impacts to the surrounding community. Metro closely engages with neighborhoods during construction, there would be a designated construction manager that could be contacted to report any construction related concerns.

PH-112-3 See MR-8: Light Rail and Freight Train Safety and MR-21: Cost Estimates and Schedule.

Submission PH-113 Holly Osborne

PH-113-1 Project-related noise was estimated using methodologies provided in the Federal Transit Administration (FTA) Transit Noise and Vibration Impact Assessment Manual (2018). The FTA Manual includes screening guidance for distances at which rail transit noise would not

significantly impact land uses. The screening distance for sensitive land uses is 175 feet for obstructed uses and 350 feet for unobstructed uses. The park facilities of William Green Park in Lawndale are approximately 350 feet from the Metro ROW and classrooms are located approximately 0.13 mile (686 feet) from the Metro ROW. William Green Elementary School would not be exposed to excessive noise.

PH-113-2 Metro has undertaken extensive community outreach for potential transit service along all or portions of the Metro ROW for well over a decade. Metro's outreach program also accommodates the needs of residents with limited English proficiency. Most recently, in advance of the Metro Board of Director's selection of the LPA in May 2024, Metro distributed 32,000 postcards to residents, property owners, and businesses within a one-mile radius of all alignments under study. Additionally, at the request of the City of Lawndale, Metro sent flyers to every resident within Lawndale. All outreach notifications are provided in both English and Spanish. Documentation on the outreach conducted during the environmental review process is available on the Metro project Dropbox, by visiting metro.net/clineext/#documents.

Submission PH-114 Chelsea Schreiber

PH-114-1 There are approximately 178 residential properties located immediately adjacent to the Metro ROW, from the Redondo Beach (Marine) Station to the Torrance Transit Center.

PH-114-2 Metro has undertaken extensive community outreach for potential transit service along all or portions of the Metro ROW for well over a decade. Metro's outreach program also accommodates the needs of residents with limited English proficiency. Most recently, in advance of the Metro Board of Director's selection of the LPA in May 2024, Metro distributed 32,000 postcards to residents, property owners, and businesses within a one-mile radius of all alignments under study. Additionally, at the request of the City of Lawndale, Metro sent flyers to every resident within Lawndale. All outreach notifications are provided in both English and Spanish. Documentation on the outreach conducted during the environmental review process is available on the Metro project Dropbox, by visiting metro.net/clineext/#documents.

Submission PH-115 Zein Obagi

PH-115-1 The Executive Summary is intended to provide a high-level overview of the project and its impacts, consistent with CEQA Guidelines section 15123. More detailed information is provided in the body of the Draft EIR, including in Chapter 2, Project Description, of the Draft EIR, which explains that freight track relocation would vary along the Metro ROW. The Draft EIR accurately describes the freight track relocation, which would vary along the Metro ROW, and remain at-grade. The Final EIR will be presented to the Metro Board who, prior to approving the project must certify that it has reviewed and considered the information contained in the Final EIR. Throughout the entire corridor, the width of the Metro ROW is more than sufficient to meet design requirements to safely incorporate the project elements, including for tracks, retaining walls, soundwalls or other barriers, and maintenance access areas. See MR-8: Light Rail and Freight Train Safety. The Draft EIR evaluates the potential impacts of the freight relocation on adjacent residences. See MR-20: Proximity Impacts of Relocated Freight Tracks.

PH-115-2 Project Feature PF-NV-1: Quiet Zone Equipment Installation ensures that equipment would be installed at the eight at-grade freight crossings to ensure seamless implementation of a quiet zone by the cities of Lawndale, Redondo Beach, and Torrance. It does not require discretionary action from the California Public Utilities Commission (CPUC) or other agencies. Project Features PF-NV-2: Crossing Signal Bell Shrouds and PF-NV-3: Gate-Down-Bell-Stop Variance would require CPUC coordination and approval, but based on Metro's past experience with CPUC on similar light rail transit projects, it is fully anticipated that these project features would receive CPUC approval. See MR-3: Operational Noise Project Features and Mitigation Measures.

PH-115-3 The route for the High-Frequency Bus was chosen to maximize the use of existing bus infrastructure on existing arterials and minimize travel time by not deviating off the main roadways. Light rail with dedicated tracks and stations does not face that same constraint as bus. Ridership is discussed in the 2023 Ridership Summary Report, published alongside the Draft EIR. See MR-15: Metro Ridership Forecasting Methodology.

Submission PH-116 Kim Binegar

PH-116-1 Metro has published two alternatives analyses related to a light rail extension to Torrance and the South Bay: the 2009 Harbor Subdivision Alternatives Analysis Report and the 2018 Green Line Extension to Torrance Supplemental Alternatives Analysis Report. These reports can be found on the project website project filing cabinet and include an explanation of their methodology. The Metro Board has selected an LPA for the purposes of the Final EIR, although it has not yet approved the project, including any of the options and alternatives evaluated in the Draft EIR. A final decision will not be made until after the Metro Board reviews the Final EIR, which will include responses to all public comments, including those of the commenter. See MR-1: Selection of Alternatives. The EIR does not weigh factors such as cost and community preferences, as those are outside the scope of CEQA. However, those broader considerations are part of the Metro Board's policy decision-making process. These factors were summarized in Board reports available on the project website and presented in September 2023 and April 2024, prior to the selection of the LPA in May 2024. The Metro Board will consider the findings of the Final EIR, along with all public comments and community input received throughout the process, and take into account other policy considerations, before making any final decision on the project.

Submission PH-117 Mark Cole

PH-117-1 The commenter's support for the project is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

PH-117-2 The project has been designed to provide convenient access to the Redondo Beach Transit Center and Torrance Transit Center, which were selected based on extensive analysis of connectivity and accessibility and community outreach. The stations would serve as key transit hubs, with existing local bus routes providing access to nearby destinations. While Metro assists in identifying improvements during the planning and design phases, the implementation of local access to regional transit facilities falls under the jurisdiction of the local cities. If the project is approved, Metro would coordinate with the local jurisdictions to assist in this planning.

Submission PH-118 Kimberly

PH-118-1 The commenter's opposition to the Metro ROW alignment is noted. See MR-1: Selection of Alternatives and MR-13: Soil Stability and Sinkholes. Metro is aware of the Friendship Campus, which is currently under construction and located approximately 550 feet from the Metro ROW at its closest point. The Draft EIR includes analysis of potential noise, vibration, air quality, and other impacts to receptors located within the vicinity of the Metro ROW, including at this distance. Based on that analysis, the project would not result in significant noise, vibration, pollutant or other impacts to this property. Metro acknowledges that project construction is not anticipated to be complete before the 2028 Olympics.

PH-118-2 The commenter's support for the Hawthorne Option is noted. The project has been studied by Metro well before Los Angeles was awarded as the host city for the 2028 Olympic Games in 2017. Metro has been exploring options for transit service along the Metro ROW for several decades. Metro purchased the Harbor Subdivision from the precursor to the BNSF in the early 1990s. In 2009, Metro prepared an alternatives analysis that studied the potential for transit service along all or portions of the Metro ROW and identified the segment between the Redondo Beach (Marine) Station and the Torrance Transit Center as the highest priority project. Since then, several alignments and alternatives have been studied. The 2018 Supplemental Alternatives Analysis report recommended two alignments to be carried forward into environmental analysis: the Metro ROW and the Hawthorne Boulevard alignment (both primarily at-grade alignments). The project is estimated to serve between 11,500 and 15,600 daily project trips in 2042. Ridership projections are discussed in the 2023 Ridership Summary Report, published alongside the Draft EIR. See MR-15: Metro Ridership Forecasting Methodology.

Submission PH-119 Kim Turner

PH-119-1 The commenter's support for the Metro ROW alignment is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

PH-119-2 See response to Comment PH-119-1.

Submission PH-120 Massimi Darou

PH-120-1 The commenter's opposition to the Metro ROW alignment is noted. See MR-1: Selection of Alternatives. Metro has undertaken extensive community outreach for potential transit service along all or portions of the Metro ROW for well over a decade. Metro's outreach program also takes into consideration limited English proficiency within the communities. Most recently, in connection with the Draft EIR open houses, Metro mailed nearly 32,000 postcards to residents, property owners, and businesses within a one-mile radius of all the alignments under study. Additionally, at the request of the City of Lawndale, Metro sent flyers to every resident within Lawndale. All outreach notifications are provided in both English and Spanish. Documentation on the outreach conducted during the environmental review process is available on the Metro project Dropbox, by visiting metro.net/clineext/#documents.

PH-120-2 The commenter's opposition to the Metro ROW alignments, and support for the Hawthorne Option, High-Frequency Bus Alternative, or No Project Alternative, are noted. Metro has worked diligently to develop feasible and effective mitigation measures to address the potentially significant impacts of the project. See MR-1: Selection of Alternatives; See MR-4: Potential Negative Health Effects Related to Noise, Vibration, and Air Quality; and MR-10: Changes to Community Character.

Submission PH-121 Doug Boswell

PH-121-1 Metro has worked diligently to design the project in a manner that minimizes property acquisitions, and disruptions to adjacent residential areas and to develop feasible, and effective mitigation measures to address the potentially significant impacts of the project, including noise and safety effects. See MR-3: Operational Noise Project Features and Mitigation Measures and MR-9: Light Rail Security. See MR-8: Light Rail and Freight Train Safety.

The Metro Board will not select the project based only on cost. Instead, the Board considers a range of factors, including technical analysis, environmental impacts, and community input. The Metro Board has selected an LPA for the purposes of the Final EIR, although it has not yet approved the project, including any of the options and alternatives evaluated in the Draft EIR. A final decision will not be made until after the Metro Board reviews the Final EIR, which will include responses to all public comments, including those of the commenter.

The width of the Metro ROW varies across the project area. Most segments measure 100 feet, but some are narrower (75 feet) or wider (over 150 feet). Metro conducted a property survey in Spring 2025 to verify Metro's property boundaries, the results of which are reflected in the Final EIR Appendix B, Select Advanced Conceptual Engineering Drawings - Locally Preferred Alternative. Throughout the entire corridor, the width of the Metro ROW is more than sufficient to meet design requirements for the project elements, including for tracks, retaining walls, soundwalls or other barriers, maintenance access areas, and sufficient clearance from freight. Metro has designed the project to avoid displacement of residents.

PH-121-2 Section 3.8-4.6 of the Draft EIR evaluates the potential for the project to be located on a geologic unit or soil that is unstable or that would become unstable as a result of the project. As described in 3.8-2.5 of the Draft EIR, the project includes Project Feature PF-GEO-1: Metro Geotechnical Design Standards, which requires preparation of site-specific geotechnical investigations, consistent with Metro's established design criteria. Based on the project as defined, including PF-GEO-1: Metro Geotechnical Standards, the Draft EIR concludes that this impact would be less than significant. Similarly, Section 3.8-4.7 of the Draft EIR evaluates whether the project to be located on expansive soil, as defined in California Building Code Section 1803.5.3, and whether it would create a substantial risk to life or property. The Draft EIR concludes that this impact would also be less than significant based on the full project description, which incorporates Project Feature PF-GEO-1: Metro Geotechnical Design Standards. Compliance with established engineering and safety criteria, as required by Project Feature PF-GEO-1: Metro Geotechnical Design Standards, would

ensure long-term structural stability and safety. See MR-13: Soil Stability and Sinkholes for additional information.

As discussed in Section 3.8-4.2 of the Draft EIR, using construction techniques like sloping or benching of excavation and shoring of trench walls with support would prevent any construction impacts like caving or soil instability. The following text has been added to Section 4.12, Corrections and Additions, of the Final EIR: "Shoring would be monitored for lateral and vertical movement during construction."

PH-121-3 The commenter's opposition to the Metro ROW alignment and support for the Hawthorne Option is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

PH-121-4 See response to Comment 121-2.

PH-121-5 As shown on page 3.6-53 of the Draft EIR, soundwalls are proposed along both the west and east sides of the Metro ROW. The soundwalls would begin immediately south of 182nd Street and continue to Hawthorne Boulevard for the Elevated/At-Grade Alignment and from 186th Street to Hawthorne Boulevard for the LPA and Trench Option. The noise analysis follows the Detailed Noise Analysis Procedure per the 2018 Federal Transit Administration (FTA) Transit Noise and Vibration Impact Assessment Manual. Consistent with this methodology, the assessment of soundwall effectiveness takes into consideration the height of the receptors, height of the soundwalls, and the distance of the receptor from the source and soundwall. Regarding reflective noise, the FTA methodology includes assumptions about sound reflections from barriers, such as soundwaves bouncing off non-absorptive (reflective) surfaces. Where the assessment determined that additional noise reduction was necessary to reduce noise levels to below the FTA noise impact criteria, absorptive noise barriers have been recommended.

PH-121-6 The commenter's support for the Hawthorne Option is noted. See MR-1: Selection of Alternatives. Ridership is discussed in the 2023 Ridership Summary Report, published alongside the Draft EIR. See MR-15: Metro Ridership Forecasting Methodology. Riders at the Redondo Beach Transit Center would also be able to access the South Bay Galleria and planned future development via a short walk or transit connection, and Metro would continue to assess opportunities for further enhancing connections as the design progresses.

Submission PH-122 Ray Hollar

PH-122-1 Section 3.6, Noise and Vibration, of the Draft EIR, carefully considered potential noise and vibration impacts on sensitive receptors, including Pacific Crest Cemetery, which is included as Cluster F1. As discussed in Section 3.6, the light rail transit vehicles would be slower at this location due to the approach and departure from the Redondo Beach Transit Center Station. The existing ambient noise level at Cluster F1 is approximately 60 a-weighted decibels (dBA), L_{eq}. The predicted noise level at Cluster F1 after implementation of mitigation would be approximately 55 dBA, L_{eq} during a typical hour, as shown on page 3.6-60 of the Draft EIR. While the maximum instantaneous noise level as the train passes at a speed of 35 miles per hour would be approximately 70 to 75 dBA, this temporary noise is

similar to existing conditions of the cemetery, which fronts Grant Avenue and Inglewood Avenue. To provide context, normal human speech at 3 feet is approximately 65 dBA, as shown in Figure 3.6-1 on page 3.6-2 of the Draft EIR. With mitigation measures implemented, noise levels would not exceed the Federal Transit Administration noise impact criteria, and the Draft EIR concluded that noise impacts to Cluster F1 would be less than significant with mitigation. See MR-3: Operational Noise Project Features and Mitigation Measures.

It should also be noted that the LPA would reduce all operational noise impacts to less than significant with mitigation. See MR-1: Selection of Alternatives.

Submission PH-123 Niki Negrete-Mitchell

PH-123-1 There is sufficient space for the proposed light rail, freight track, and soundwalls within the Metro ROW. See Appendix 2-A, Select Advanced Conceptual Engineering Drawings, of the Draft EIR and Appendix B, Select Advanced Conceptual Engineering Drawings - Locally Preferred Alternative, of the Final EIR for more details on the relocated freight and light rail tracks. See also MR-8: Light Rail and Freight Train Safety. Regarding reflective noise, the Federal Transit Administration (FTA) methodology includes assumptions about sound reflections from barriers, such as soundwaves bouncing off non-absorptive (reflective) surfaces. Where the assessment determined that additional noise reduction was necessary to reduce noise levels to below the FTA noise impact criteria, absorptive noise barriers have been recommended.

PH-123-2 Vibration is addressed in Section 3.6, Noise and Vibration, of the Draft EIR. The vibration levels from light rail operations would be significantly lower than those generated by freight trains, due to the lighter weight. The vibration analysis considered both light rail trains and relocated freight. Operational vibration annoyance impacts would be mitigated to less than significant with mitigation for the Metro ROW alignments and the Hawthorne Option. Mitigation measures include MM-VIB-4: Low Impact Frogs, MM-VIB-5: Resilient Fasteners, and MM-VIB-6: Ballast Mats. Vibration mitigation measures and locations where they would apply are included on pages 3.6-106 through 3.6-108 of the Draft EIR.

Submission PH-124 Jennifer Dodge

PH-124-1 As discussed on page ES-1 of the Draft EIR, the Elevated/At-Grade Alignment is referred to as the “Proposed Project” in the Draft EIR, because it is the alignment that has been historically studied and advanced for the extension of the C Line (Green) to the South Bay Region. In addition, for the purposes of CEQA, Metro must define one of the three evaluated alignments as the “proposed project;” however, this term does not convey any preference or recommendation. The Elevated/At-Grade Alignment, Trench Option, and Hawthorne Option were evaluated in the Draft EIR at equal levels of detail. Pursuant to Section 15126.6 of the CEQA Guidelines, the Draft EIR also considered a reasonable range of CEQA alternatives: the No Project Alternative, the High-Frequency Bus Alternative, and the 170th/182nd Grade-Separated Light Rail Transit Alternative (also referred to as the “Hybrid Alternative”). In May 2024, based on a range of factors, the Metro Board selected the Hybrid Alternative as LPA for the purposes of the Final EIR. The Metro Board has not yet approved the project and may approve any of the options or alternatives evaluated in the

Draft EIR, including the No Project Alternative. A final decision will not be made until after the Metro Board reviews the Final EIR, which includes responses to all public comments, including those of the commenter. See MR-1: Selection of Alternatives.

Submission PH-125 Zein Obagi

PH-125-1 The Executive Summary is intended to provide a high-level summary of the CEQA impact determinations and does not include detailed information about specific design elements or specific aspects of the existing setting with respect to individual environmental issue areas (e.g., geology and soils).

Section 3.8-2.3 of the Draft EIR defines the Resource Study Areas (RSAs) for geology, soils, and paleontological resources as the footprints of the Elevated/At-Grade Alignment, Trench Option, and Hawthorne Option. These footprints encompass the areas necessary to construct, operate, and maintain each alignment. Additional information about existing soil conditions is provided in Draft EIR section 3.8-3.

See MR-13: Soil Stability and Sinkholes for additional information.

PH-125-2 Metro staff recommended that the Metro Board select the LPA based on multiple factors, including the contents of the Draft EIR and public engagement. In May 2024, the Metro Board selected the Hybrid Alternative as the LPA. It has not yet approved the project, including any of the options and alternatives evaluated in the Draft EIR. A final decision will not be made until after the Metro Board reviews the Final EIR which includes responses to all public comments, including those of the commenter. See MR-1: Selection of Alternatives.

Submission PH-126 Doug Boswell

PH-126-1 The 2023 Ridership Summary Report, published alongside the Draft EIR, shows that the project is expected to generate between 11,500 to 15,600 daily transit trips (boardings). See MR-15: Metro Ridership Forecasting Methodology.

PH-126-2 Noise and vibration are addressed in Section 3.6, Noise and Vibration, and air quality is addressed in Section 3.4, Air Quality, of the Draft EIR. The Draft EIR considers the effects of both light-rail and the relocated freight tracks. The frequency of freight operations on the Metro ROW is determined by BNSF, subject to existing agreements and applicable regulatory constraints. Metro does not control the freight train schedule or operations but coordinates with BNSF to ensure continued safe and efficient use of the Metro ROW. The Draft EIR's analysis of freight train operations is based on existing operating patterns, developed in consultation with BNSF and based on observed conditions. While BNSF has the right to operate within the Metro ROW, any substantial increase in freight traffic would require major infrastructure modifications, scheduling adjustments, and regulatory approvals (e.g., from the Federal Railroad Administration (FRA) and the California Public Utilities Code (CPUC)) that are not reasonably foreseeable at this time. The project would replace freight tracks as needed, in kind, with newer tracks, but it would not increase track capacity. The demand for freight movement along this corridor has remained stable for years, and no changes to freight operation are anticipated.

PH-126-3 The commenter's support for the Hawthorne Option is noted. The Metro Board has selected an LPA for the purposes of the Final EIR. It has not yet approved the project, including any of the options and alternatives evaluated in the Draft EIR. A final decision will not be made until after the Metro Board reviews the Final EIR, which includes responses to all public comments, including those of the commenter. See MR-1: Selection of Alternatives.

Submission PH-127 Mary Smiley

PH-127-1 The commenter's support for the Metro ROW alignment is noted. See MR-1: Selection of Alternatives. Metro strives to complete projects on time and within estimated budgets. Contingency is considered in the development of cost and schedule. See MR-21: Cost Estimates and Schedule.

Submission PH-128 Ray Hollar

PH-128-1 The May 2024 Board Report, available to the public prior to the Metro Board meeting and reviewed by the Metro Board prior to selecting an LPA, included information on cost effectiveness and included cost/benefit information, including cost per annual new rider, cost per annual project trip, and cost per reduction in vehicle miles traveled (VMT). In all instances the Elevated/At-Grade Alignment performed the best of the light rail alignments on all metrics. The LPA performed second best on cost per annual new rider and cost per reduction in VMT and third best on cost per annual project trip. The Trench Option performed third best in cost per VMT reduction and the worst in cost per annual new rider and cost per annual project trip. The Hawthorne Option performed second best in cost per annual project trip, third best in cost per annual new rider, and the worst in cost per reduction in VMT.

The commenter refers to metrics in the 2018 Supplemental Alternatives Report, which included two methods to calculate cost per rider. One method was to calculate the total capital cost over projected new riders. The other was to use the Federal Transit Administration's (FTA's) formula for annualized cost per rider, which divides annualized capital costs and annual operating and maintenance costs by the total anticipated annual riders and consists of only the total ridership on the project alignment (including riders who may already use Metro Rail and other public transit). The results of the first method are included in the May 2024 Metro Board Report. Although the Hawthorne Option is anticipated to have the highest annual new ridership (based on the FTA's formula), it would have significantly higher capital costs, which results in a lower cost effectiveness ratio.

All alignment options would provide greenhouse gas emissions reductions as shown in Table 3.5-16 Proposed Project and Options GHG Emissions (2042) in Section 3.5, Greenhouse Gas Emissions, of the Draft EIR. Although the Hawthorne Option would provide a marginal benefit in greenhouse gas emissions reductions compared to the Elevated/At-Grade Alignment and Trench Option, this is not the only consideration in selection of the LPA, as noted above.

Regarding noise, with implementation of the mitigation measures identified in the EIR, operational noise and vibration impacts of the Trench Option, the Hawthorne Option and

the LPA would be reduced to less than significant levels with mitigation. See MR-3: Operational Noise Project Features and Mitigation Measures.

Submission PH-129 Corey Cardinal

PH-129-1 Potential air quality impacts are addressed in Section 3.4, Air Quality, of the Draft EIR, including dust control during construction. Compliance with Project Features PF-AQ-1: Tier 4 Engine Standards and PF-AQ-2: Dust Control Best Practices would ensure that construction activities comply with South Coast Air Quality Management District (SCAQMD) and Metro standards controlling emissions and dust. Operationally, the light rail vehicles would be powered by electricity and would not produce localized emissions. The air quality analysis disclosed in the Draft EIR includes an assessment of localized emissions that would be generated from construction sites, which accounted for dust that would be generated. The localized air quality impacts were found to be less than significant when compared to the applicable SCAQMD thresholds, which were set at levels to prevent the occurrence of substantial dust concentrations reaching sensitive receptors that could cause adverse health effects. The localized impacts analysis used the most conservative receptor distance to be as protective as possible of the health of nearby residents. Thus, the analysis of dust emissions in the Draft EIR is adequate. Regional air quality would improve with implementation of the project due to a shift from passenger vehicles to light rail in the corridor. The potential for LPA impacts is addressed in Chapter 4, Evaluation of Alternatives, of the Draft EIR. See MR-4: Potential Negative Health Effects Related to Noise, Vibration, and Air Quality.

PH-129-2 Impacts related to drainage patterns alterations are addressed in Section 3.10, Hydrology and Water Quality, of the Draft EIR. As discussed in Section 3.10-4.3 of the Draft EIR, each of the alignment options studied in the Draft EIR, would increase impervious surfaces compared to existing conditions. However, most of the stormwater runoff would be retained within the project footprint, through an integrated low-impact development (LID) drainage system. This system would be designed to accommodate the stormwater quality design in volume, consistent with the Municipal Separate Storm Sewer System (MS4) Permit requirements established by the Los Angeles Regional Water Quality Control Board (LARWQCB). This system would minimize the potential for flooding both on-site and off-site, including in sumps. Maintenance of drainage infrastructure would also comply with applicable regulatory requirements to ensure long-term functionality.

As discussed in Chapter 4, Evaluation of Alternatives, in the Draft EIR, Section 4.5-3.10, the hydrology and water quality impacts of the LPA would be less than those analyzed in the Draft EIR for the Trench Option based on requiring less excavation. The potential impacts would be less than significant because the LPA would also include stormwater retention systems consistent with regional LID requirements.

PH-129-3 CEQA does not require an analysis of safety in terms of crime, as it is not an environmental issue, and therefore the Draft EIR does not make any conclusions regarding this topic. However, safety is a top priority for Metro. Metro Homeless Outreach Teams are deployed on Metro buses, trains, and stations to engage with unhoused riders and connect them to resources. See MR-9: Light Rail Security and MR-18: Homelessness.

PH-129-4 Ballast mats are proposed to reduce noise and vibration and consist of a rubber or other type of elastomer pad that is placed under the ballast. In general, the mat must be placed on a concrete pad to be effective. Installation of the ballast mats would not have any secondary detrimental effects to the environment. The materials are engineered for durability and have been extensively used in transit systems, including throughout the Metro system, without adverse environmental effects. Based on their track record of use and compliance with regulatory requirements, no significant impact to the environment is anticipated from the installation or use of ballast mats.

PH-129-5 As discussed in Section 3.8, Geology and Soils, of the Draft EIR, per Project Feature PF-GEO-1: Metro Geotechnical Design Standards, the project design process would include thorough site-specific geotechnical investigations to address foundation and ensure the stability of nearby structures. The investigation would identify soil conditions and include engineering and construction recommendations to ensure surrounding structures are not damaged and remain safe and structurally sound. See MR-13: Soil Stability and Sinkholes.

The comment is not clear regarding the concern related to airports. As stated on page 3.9-47 of the Draft EIR, the project is not within an airport land use plan or within two miles of any airport. Therefore, the project would have no impact related to safety hazards associated with a public airport or public use airport during construction or operation. See response to Comment PH-129-1 related to air quality concerns.

Submission PH-130 Lisa Francis

PH-130-1 The commenter's support for the Hawthorne Option is noted. See MR-1: Selection of Alternatives. Section 3.6, Noise and Vibration, of the Draft EIR, provides a comprehensive analysis of potential noise impacts associated with construction and operation of the Elevated/At-Grade Alignment, the Trench Option, and the Hawthorne Option. In addition, Chapter 4, Evaluation of Alternatives, of the Draft EIR, also evaluates the No Project Alternative, and the LPA. Operational noise and vibration impacts of the Trench Option, the Hawthorne Option and the LPA would be reduced to less than significant levels with mitigation. See MR-3: Operational Noise Project Features and Mitigation Measures.

PH-130-2 Metro understands concerns regarding property values. However, under CEQA, economic impacts such as changes in property values are not considered environmental impacts. The Draft EIR focuses on physical environmental impacts and measures to mitigate them, as required by CEQA. To address questions and concerns on property values, Metro has prepared more information. See MR-14: Property Values and Impacts to Businesses. Also see MR-10: Changes to Community Character.

Submission PH-131 Ted Hofmann

PH-131-1 In order to provide every commenter with an opportunity to express their opinions, a one-minute time limit was allocated at public hearings. The public has several other avenues to express their comments, including through the project email, letters, and the project phone number.

CEQA requires analysis of a reasonable range of alternatives to the project that would have the potential to meet most project objectives while avoiding or substantially reducing any of the significant impacts of the project. Public outreach events and materials focused on the Elevated/At-Grade Alignment and Options under study, although, details on all the CEQA alternatives can be found in the Draft EIR and were presented to the Metro Board for consideration.

CEQA requires that an EIR identify the Environmentally Superior Alternative, which is the alternative that would be expected to generate the fewest adverse impacts. However, the Lead Agency is not obligated to select the Environmentally Superior Alternative. See MR-1: Selection of Alternatives. The Metro Board has selected an LPA for the purposes of the Final EIR, although it has not approved the project, including any of the options and alternatives evaluated in the Draft EIR. A final decision will not be made until after the Metro Board reviews the Final EIR, which includes responses to all public comments, including those of the commenter.

Submission PH-132 Doris Hofmann

PH-132-1 The commenter's opposition to a Metro rail project, and support for the High-Frequency Bus Alternative, is noted. The High-Frequency Bus Alternative is analyzed in Chapter 4, Evaluation of Alternatives, of the Draft EIR. See MR-1: Selection of Alternatives and See MR-16: Response to Lawndale and Redondo Beach Community Letter.

Ridership projections are discussed in the 2023 Ridership Summary Report, published alongside the Draft EIR. See MR-15: Metro Ridership Forecasting Methodology.

Section 3.6, Noise and Vibration, of the Draft EIR, provides a comprehensive analysis of potential noise impacts associated with construction and operation of the Elevated/At-Grade Alignment, the Trench Option, and the Hawthorne Option. In addition, Chapter 4, Evaluation of Alternatives, of the Draft EIR, evaluates the No Project Alternative, High Frequency Bus Alternative, and the LPA. Operational noise and vibration impacts of the Trench Option, the Hawthorne Option and the LPA would be reduced to less than significant levels with mitigation. See MR-3: Operational Noise Project Features and Mitigation Measures.

As explained on page 3.1-3 of the Draft EIR, traffic delay (often measured by level of service) is no longer permissible as a CEQA impact criterion and therefore this analysis and related topics are not addressed in the Draft EIR. See MR-11: Traffic Delay and Level-of-Service and the 2023 Transportation Detail Report, published concurrently with the Draft EIR, for a discussion of traffic conditions. The LPA and Trench Option would fully grade separate light rail from all roadways, and would not increase vehicle delay compared to existing conditions. The Hawthorne Option would also be fully grade-separated.

Submission PH-133 Michael Kim

PH-133-1 The commenter's opposition to the Metro ROW alignments is noted. The frequency of freight operations on the Metro ROW is determined by BNSF, subject to existing agreements and applicable regulatory constraints. Metro does not control the freight train schedule or

operations but coordinates with BNSF to ensure continued safe and efficient use of the Metro ROW. The Draft EIR's analysis of freight train operations is based on existing operating patterns, developed in consultation with BNSF and based on observed conditions. While BNSF has the right to operate within the Metro ROW, any substantial increase in freight traffic would require major infrastructure modifications, scheduling adjustments, and regulatory approvals (e.g., from the Federal Railroad Administration (FRA) and the California Public Utilities Code (CPUC)) that are not reasonably foreseeable at this time. The project would replace freight tracks as needed, in kind, with newer tracks, but it would not increase track capacity. The demand for freight movement along this corridor has remained stable for years, and no changes to freight operation are anticipated.

Submission PH-134 Glen Brackenridge

PH-134-1 The commenter's support for the Hawthorne Option is noted. See MR-1: Selection of Alternatives. Ridership is discussed in the 2023 Ridership Summary Report, published alongside the Draft EIR. See MR-15: Metro Ridership Forecasting Methodology. The project would connect the two new city transit centers in Redondo Beach and Torrance to the Metro rail network.

PH-134-2 Metro understands concerns regarding property values. However, under CEQA, economic impacts such as changes in property values are not considered environmental impacts. The Draft EIR focuses on physical environmental impacts and measures. To address questions and concerns on property values, Metro has prepared more information. See MR-14: Property Values and Impacts to Businesses.

PH-134-3 Existing noise levels both along the Metro ROW and Hawthorne Boulevard are shown beginning on page 3.6-22 of the Draft EIR. These monitored noise levels reflect full 24-hour monitoring and accurately portray the existing conditions for the alignments, including rush hour, non-rush hour, and freight rail activities. The analysis follows Federal Transit Administration (FTA) methodology, which uses day-night average noise levels to capture overall ambient conditions, including quiet periods when the freight trains are not present. Monitored noise levels along Hawthorne Boulevard typically had a higher ambient noise level due to roadway traffic. However, residential neighborhoods set back from Hawthorne Boulevard had similar noise levels as to those recorded in neighborhoods along the Metro ROW, which accounted for freight rail noise. See page 3.6-23 for noise measured ambient noise levels at each noise monitoring location.

Submission PH-135 Sirley Cuevas

PH-135-1 Metro shared all comments made on the Draft EIR, as well as records of previous engagement, with the Metro Board to help inform their decision-making process. In May 2024, the Metro Board selected an LPA for the purposes of the Final EIR. However, it has not yet approved the project, including any of the options and alternatives evaluated in the Draft EIR. A final decision will not be made until after the Metro Board reviews the Final EIR, which includes responses to all public comments, including those of the commenter. The decision will also consider comments from the community and environmental impacts, including those to air quality. As disclosed in the Draft EIR, only the Trench Option would result in a significant and unavoidable air quality impact, which would occur during

construction; none of the other alignment options or alternatives would result in significant impacts to air quality.

Submission PH-136 Laura Thomas

PH-136-1 CEQA does not require an analysis of safety in terms of crime, as it is not an environmental issue, and therefore the Draft EIR does not make any conclusions regarding this topic. Metro takes the safety and well-being of nearby communities very seriously. See MR-9: Light Rail Security.

PH-136-2 The 2023 Ridership Summary Report, published alongside the Draft EIR, shows that the project is expected to generate between 11,500 to 15,600 daily transit trips (boardings). The project would connect the City of Lawndale to two new city transit centers in Redondo Beach and Torrance, providing expanded access to Los Angeles County through the Metro rail network. See MR-15: Metro Ridership Forecasting Methodology.

Submission PH-137 John Richards

PH-137-1 The commenter's opposition to a rail project and preference for buses is noted. See MR-1: Selection of Alternatives. Chapter 4, Evaluation of Alternatives, in Draft EIR analyzes a High-Frequency Bus Alternative. Ridership projections are discussed in the 2023 Ridership Summary Report, published alongside the Draft EIR. See MR-15: Metro Ridership Forecasting Methodology.

The project has secured funding from Measure R (2008), Measure M (2016), Transit and Intercity Rail Capital Program (TIRCP) Grant from the California State Transportation Agency, and 3% match contributions from local jurisdictions. Metro would continue to explore funding opportunities for the project.

The project would travel through three cities: Lawndale, Redondo Beach and Torrance. Metro has been exploring options for transit service along the Metro ROW for several decades. Metro purchased the Harbor Subdivision from the precursor to the BNSF in the early 1990s. In 2009, Metro prepared an alternatives analysis that studied the potential for transit service along all or portions of the Metro ROW that identified the segment between the Redondo Beach (Marine) Station and the Torrance Transit Center as a high-priority corridor. Since then, several alignments and alternatives have been studied. The 2018 Supplemental Alternatives Analysis report recommended two alignments to be carried forward into environmental analysis: the Metro ROW and the Hawthorne Boulevard alignment (both primarily at-grade alignments). Since then, Metro has considered grade-separated light rail, including the Trench Option, Hawthorne Option, and LPA. See MR-15: Metro Ridership Forecasting Methodology.

The underground subway being constructed on Wilshire Boulevard, referenced by the commenter, is the Metro D Line Subway Extension. The Wilshire corridor is among the busiest in the country, with extremely high transit and traffic demand and limited surface right-of-way. By contrast, the Metro ROW is an existing rail corridor and does not meet the same thresholds that would necessitate a fully underground subway.

Submission PH-138 Holly Osborne

PH-138-1 The Draft EIR, using aerial imagery, identified seven structures along the west side of the Metro ROW between Grant Avenue and Artesia Boulevard that could be subject to groundborne vibration damage during construction of the Elevated/At Grade Alignment. Breakwater Village, a senior living community adjacent to the Metro ROW, appears to have one structure that is immediately adjacent to the rail corridor. The other buildings in the development front Ruxton Lane and are set back farther from the Metro ROW. It is important to note that only the structure physically adjacent to the Metro ROW was identified as potentially affected in the analysis. For that structure, there is approximately 400-feet of frontage along the corridor. Two points along the building frontage were analyzed to ensure that vibration levels were adequately evaluated along its length. Regardless of the number of dwelling units with a structure, the vibration analysis in the Draft EIR focused on the potential for structural damage to the building, consistent with the Federal Transit Administration (FTA) Transit Noise and Vibration Impact Assessment Manual (FTA, 2018). The analysis evaluates vibration levels at representative building facades and applies thresholds based on structural criteria, not on individual unit count. Therefore, the conclusions of the Draft EIR remain valid. This approach was applied consistently throughout the corridor.

Submission PH-139 Ted Hofmann

PH-139-1 The property mentioned by the commenter is located along the Hawthorne Option, which would require an aerial (overhead) easement for the elevated light rail structure to cross a portion of the property. Metro has designed the project to avoid displacement of residents. The maps referenced are from the 2023 Real Estate Acquisitions Report, published concurrently with the Draft EIR.

In May 2024, the Metro Board selected the Hybrid Alternative as the LPA, which travels along the Metro ROW and would not affect the property mentioned. However, if the Metro Board approved the Hawthorne Option as the final project as part of the certification of the Final EIR, Metro would follow the standard property appraisal and compensation procedures to determine fair market value and just compensation for the overhead easement area. The easement process would comply with the California Relocation Act, as applicable. Affected property owners would be contacted in advance and provided with information regarding the easement and their rights.

PH-139-2 The Measure M Expenditure Plan, passed in 2016 by over 70% of Los Angeles County voters, includes a variety of transportation projects, one of which was this light rail project extending the C Line (Green) to Torrance.

Submission PH-140 G.P. Sudduth

PH-140-1 The commenter's support for the Hawthorne Option is noted. See MR-1: Selection of Alternatives. As part of the 2018 Supplemental Alternatives Analysis, Metro studied stations in the City of Lawndale between Inglewood Avenue and Manhattan Beach Boulevard along

the Metro ROW and at Hawthorne Boulevard/166th Street. At the request of the City of Lawndale, Metro removed these proposed stations from further study.

Submission PH-141 John Schreiber

PH-141-1 While change in community character does not constitute a significant impact under CEQA, Section 3.2, Land Use, of the Draft EIR, analyzes the project's potential to physically divide communities and concludes that impacts would result in less than significant. Pedestrians would still be able cross the Metro ROW at all existing designated rail crossings: Inglewood Avenue, Manhattan Beach Boulevard, 159th, 160th, 161st, 162nd, 170th, and 182nd Streets. Land uses would not be altered so as to isolate any one part of the community from the other. Retaining walls would be required to transition the light rail guideway from elevated to at-grade, but they would not block any crossings. The LPA and Trench Option would fully grade separate light rail from all roadways along the Metro ROW. The Hawthorne Option would likewise be fully grade-separated. MR-10: Changes to Community Character.

PH-141-2 As discussed in Section 3.2, Land Use and Planning, and Section 3.3, Aesthetics, of the Draft EIR, while the Metro ROW alignments would cause visual changes in the community, the same access across the Metro ROW as designated today would be maintained, and structures would not completely block views to the other side of the community (see Figures 3.3-62 and 3.3-63 of the Draft EIR, where the opposite side of the Metro ROW is both visible and accessible).

PH-141-3 Light rail noise was assessed based on the anticipated frequency of trips during the different hours of operation. See MR-2: Operational Noise Analysis Methodology and Impact Thresholds.

Section 3.6, Noise and Vibration, of the Draft EIR, evaluates potential noise impacts, including those from wheel squeal. According to the Federal Transit Administration (FTA) Transit Noise and Vibration Impact Assessment Manual (2018), curves with a radius greater than 1,000 feet do not generate wheel squeal. As a result, the FTA recommends designing transit projects to avoid tight curves with radii of less than 1,000 feet to mitigate potential noise impacts. The Elevated/At-Grade Alignment, Trench Option, and the LPA do not include curves with radii less than 1,000 feet, which are the primary cause of wheel squeal. Consequently, wheel squeal is not anticipated under these design conditions.

The Hawthorne Option includes two curves which could potentially produce wheel squeal. Mitigation Measure MM-NOI-5: Wheel Squeal Noise Monitoring would require noise monitoring to identify wheel squeal at two curves with a radius less than 1,000 feet for the Hawthorne Option:

> Curve between Santa Fe Avenue and Inglewood Avenue

> Curve between 161st Street and 163rd Street

If wheel squeal is identified, Metro shall install wayside rail lubrication to ensure wheel squeal does not occur. Rail lubrication is discussed in the FTA Transit Noise and Vibration Impact Assessment Manual (2018) as a valid method for mitigating noise.

Submission PH-142 Catherine Boll

PH-142-1 The commenter's support for the Hawthorne Option is noted. See MR-1: Selection of Alternatives. Metro has worked diligently to develop feasible and effective mitigation measures to address the potentially significant impacts of the project.

Light rail vehicles are quieter, electrically powered trains that generate less noise compared to larger, diesel operated Metrolink trains. Noise and vibration impacts are addressed in Section 3.6, Noise and Vibration, of the Draft EIR. See MR-3: Operational Noise Project Features and Mitigation Measures. The Metro ROW alignment, the Trench Option, and the LPA would include upgrades to existing freight crossings, allowing for the establishment of a Federal Railroad Administration quiet zone. This would eliminate routine freight train horn noise along the Metro ROW in the area.

PH-142-2 As described in Section 3.6, Noise and Vibration, of the Draft EIR, a Mitigation Measure MM-NOI-1: Noise Control Plan would be implemented as mitigation for construction noise impacts, which would require Metro's contractor to prepare and implement a detailed, site-specific Noise Control Plan that demonstrates compliance with the Federal Transit Administration's (FTA's) construction noise thresholds. To ensure impacts are reduced to the maximum extent feasible, MM-NOI-1: Noise Control Plan would require the contractor to conduct continuous noise monitoring and to implement corrective actions if thresholds are exceeded. As described in Section 3.9, Hazards and Hazardous Materials, of the Draft EIR, debris and waste generated during construction would be properly transported away and disposed of in accordance with federal and State regulations.

PH-142-3 See response to Comment 142-1.

Submission PH-143 John Richards

PH-143-1 The 2023 Ridership Summary Report, published alongside the Draft EIR, shows that the project is expected to generate between 11,500 to 15,600 daily transit trips (boardings). See MR-15: Metro Ridership Forecasting Methodology.

PH-143-2 The commenter's opposition to a train in Lawndale and support for buses is noted. A High-Frequency Bus Alternative is analyzed in Chapter 4, Evaluation of Alternatives, of the Draft EIR. See MR-1: Selection of Alternatives.

Submission PH-144 Joanne Doram

PH-144-1 Metro has undertaken extensive community outreach for potential transit service along all or portions of the Metro ROW for well over a decade. Metro's outreach program also accommodates the needs of residents with limited English proficiency. Most recently, in advance of the Metro Board of Director's selection of the LPA in May 2024, Metro distributed 32,000 postcards to residents, property owners, and businesses within a one-mile radius of all alignments under study. Additionally, at the request of the City of Lawndale, Metro sent flyers to every resident within Lawndale. All outreach notifications are provided in both English and Spanish. Documentation on the outreach conducted during the

environmental review process is available on the Metro project Dropbox, by visiting metro.net/clineext/#documents.

The Metro Board of Directors, not the public, votes on the approval of regional transit projects. The Measure M Expenditure Plan, passed in 2016 by over 70% of Los Angeles County voters, includes a variety of transportation projects, one of which was this light rail project extending the C Line (Green) to Torrance. The Metro Board has selected an LPA for purposes of the Final EIR, although it has not yet approved the project, including any of the options and alternatives evaluated in the Draft EIR. A final decision will not be made until after the Metro Board reviews the Final EIR, which includes responses to all public comments, including those of the commenter. See MR-1: Selection of Alternatives.

Submission PH-145 Corey Cardinal

PH-145-1 The commenter's concerns are noted. Metro has undertaken extensive community outreach for the project, see response PH-144-1. The estimated capital cost would be to construct the project. See MR-14: Property Values and Impacts to Businesses.

Submission PH-146 Massima Daroui

PH-146-1 The 2023 Ridership Summary Report, published alongside the Draft EIR, shows that the project is expected to generate between 11,500 to 15,600 daily transit trips (boardings). See MR-15: Metro Ridership Forecasting Methodology.

PH-146-2 The Measure M Expenditure Plan, passed in 2016 by over 70% of Los Angeles County voters includes funding for a variety of transportation projects, one of which was this light rail project extending the C Line (Green) to Torrance. Although Metro owns the Metro ROW, BNSF operates and maintains the freight tracks in the City of Lawndale. As part of this project, Metro would relocate and rebuild the freight tracks as needed, to accommodate the light rail extension.

PH-146-3 The commenter's opposition to the Metro ROW alignments, and support for the Hawthorne Option and High-Frequency Bus Alternative, is noted. All comments have been shared with the Metro Board for their consideration. See MR-1: Selection of Alternatives.

Submission PH-147 Terri Thomas

PH-147-1 The commenter's opposition to a rail project and support for an effective bus station on Hawthorne Boulevard is noted. A High-Frequency Bus Alternative is evaluated in Chapter 4, Evaluation of Alternatives, of the Draft EIR. See MR-1: Selection of Alternatives. The 2023 Ridership Report, published concurrently with the Draft EIR, shows that the project would generate between 11,500 to 15,600 daily transit trips (boardings). See MR-15: Metro Ridership Forecasting Methodology. In 2022, Metro adopted a Metro Tree Policy which outlines Metro's commitment to protecting trees, when possible, and replacing those that must be removed as a result of Metro construction and maintenance. For non-heritage trees, the policy specifies a replacement ratio of two trees for every tree removed. For the alignments along the Metro ROW, the project would include two new multi-use paths

along the Metro ROW (between 159th Street and Condon and 170th 182nd Streets). See MR-10: Changes to Community Character.

Submission PH-148 Craig St. John

PH-148-1 The commenter's opposition to the project is noted. All project options and alternatives were planned to minimize conflicts with the California Department of Transportation (Caltrans). However, Metro does not have authority over Caltrans or its potential future projects. Metro would continue to coordinate with Caltrans as this project progresses. The Metro Board selected as the LPA for the purposes of the Final EIR, is located within the Metro ROW and would avoid potential conflict on Hawthorne Boulevard. See MR-1: Selection of Alternatives.

PH-148-2 Section 3.6. Noise and Vibration, of the Draft EIR, discloses that each alignment option would result in a potentially significant construction-related noise impact. To address this impact, the project would implement Mitigation Measure MM NOI-1: Noise Control Plan. While implementation of this measure requires compliance with the FTA's 1-hour equivalent noise level (Leq) noise thresholds and includes continuous noise monitoring and corrective actions, the Draft EIR acknowledges that temporary exceedances may still occur. For this reason, construction noise impacts are identified as significant and unavoidable. Such impacts would be temporary and would cease upon the completion of construction activities.

Regarding construction traffic impacts, as described in Section 3.1, Transportation, of the Draft EIR, the project includes Project Feature PF-T-1: Construction Traffic Management Plan, which would be submitted to the local cities and include measures manage construction-related traffic, such as establishing detour routes, providing advance notice and signage, maintaining access for residents, businesses, and emergency services, and scheduling deliveries and pick-ups during non-peak hours.

PH-148-3 Metro has not conducted an economic impact study for the project. Potential economic effects, such as reductions in property values and loss of property tax revenues, do not in and of themselves constitute effects on the physical environment, and therefore the Draft EIR does not reach conclusions on those issues. Rather, the Draft EIR focuses on physical environmental impacts and measures to mitigate them, as required by CEQA. However, Metro's goal is to help businesses continue to thrive throughout construction and post construction. See MR-14: Property Values and Impacts to Businesses for more information on the resources for businesses impacted by Metro's project due to construction and post construction.

Submission PH-149 Holly Osborne

PH-149-1 The noise analysis in the Draft EIR follows the Federal Transit Administration (FTA) Transit Noise and Vibration Impact Assessment Manual (2018), which specifies the use of 24-hour time-averaged noise levels to assess the ambient noise environment. These levels capture all sound sources, including the occasional freight train pass-by, as part of the existing baseline. The analysis also incorporates a 10-dBA (a-weighted decibel) penalty for all sound occurring during the nighttime hours (10:00 p.m. to 7:00 a.m.) to account for increased

sensitivity to noise during these hours. The effect of the penalty is that in the calculation of 24-hour noise, any event that occurs during the nighttime hours, is equivalent to 10 of the same events during the daytime hours. This ensures the assessment reflects the potential for greater disturbance from nighttime noise events. See MR-2: Operational Noise Analysis Methodology and Impact Thresholds.

Although noise from freight trains is loud and increases the 24-hour average noise levels, its infrequent occurrence during the day means that it does not dominate or skew the overall noise profile. Excluding the freight noise from the existing ambient noise conditions would not comply with FTA methodology and would misrepresent the true ambient noise environment. The 24-hour noise measurements include both periods when the freight is not operating and periods when freight is operating.

Metro follows Federal Transit Administration guidance which is a United States agency. It is unclear what the referenced Canadian methodology is, which may not be appropriate for a project being implemented in the United States.

Submission PH-150 Rose Rodriguez

PH-150-1 The commenter's opposition to the Metro ROW alignments is noted. See MR-1: Selection of Alternatives; and MR-10: Changes to Community Character; and MR-16: Response to Lawndale and Redondo Beach Community Letter.

PH-150-2 The presence of natural gas lines and petroleum pipelines, their potential impacts, and applicable regulatory requirements are addressed in Sections 3.9, Hazards and Hazardous Materials, and 3.11 Utilities and Service System, of the Draft EIR. Potential impacts of the LPA in this context are evaluated in Chapter 4, Evaluation of Alternatives, of the Draft EIR. In addition, Section 4.13, Corrections and Additions, of the Final EIR expands on the analysis in Section 3.9-4.2.1 of the Draft EIR by clarifying the protocols, construction techniques, regulations, and standards with which the project would comply. As detailed therein, the revisions do not change the Draft EIR's conclusion that the impact related to oil and gas pipelines would be less than significant. See MR-7: Utility Relocation and Hazardous Materials Safety. See MR-8: Light Rail and Freight Train Safety. The commenter's opposition to light rail train pass-bys is noted.

PH-150-3 As discussed in Section 3.2, Land Use and Planning, of the Draft EIR, the project would not physically divide a community because residents would still be able cross the Metro ROW at all existing designated rail crossings: Inglewood Avenue, Manhattan Beach Boulevard, 159th, 160th, 161st, 162nd, 170th, and 182nd Streets. Land uses would not be altered so as to isolate any one part of the community from the other. The use of the Metro ROW as recreational space is acknowledged on page 3.15-38 of the Draft EIR. While Metro recognizes that some residents currently use the Metro ROW as informal recreational space, it is important to note that the Metro ROW is not a designated park or public recreational area. Its primary purpose is rail transportation, and access is not authorized. The LPA includes two new multiuse paths, expanding access to residential neighborhoods and offering additional recreational options. See MR-10: Changes to Community Character and MR-16: Response to Lawndale and Redondo Beach Community Letter.

Per CEQA and the CEQA Guidelines, Metro is conducting environmental analysis to disclose the potential impacts of the project and identify feasible mitigation measures or alternatives to reduce significant impacts. The EIR and associated approval process is not a waiver. An EIR is the most detailed level of environmental approval under CEQA. The Metro Board has selected an LPA for the purposes of the Final EIR. It has not yet approved the project, including any of the options and alternatives evaluated in the Draft EIR. A final decision will not be made until after the Metro Board reviews the Final EIR, which includes responses to all public comments, including those of the commenter.

PH-150-4 Metro is the CEQA lead agency for this project. This requires Metro to take responsibility for preparing the appropriate CEQA document for the project.

Submission PH-151 Ray Hollar

PH-151-1 The commenter's opposition to the Metro ROW alignment and support for the No Build Alternative is noted. See MR-1: Selection of Alternatives. CEQA does not require funding to be demonstrated in a Draft EIR. However, the May 2024 Board Report, which was made available to the public prior to the Metro Board meeting and reviewed by the Board prior to selecting an LPA, included estimates of anticipated funding from identified sources, projected shortfalls, and potential additional sources. It also included cost-benefit analysis information, including cost per annual new rider, cost per all annual trips, and cost per reduction in vehicle miles traveled (VMT). The 2018 Supplemental Alternatives Report described similar methods for calculating cost per rider. It is unclear how the commenter derived their cost per rider figure.

Submission PH-152 G.P. Sudduth

PH-152-1 Metro understands concerns regarding property values. However, under CEQA, economic impacts such as changes in property values are not considered environmental impacts. The Draft EIR focuses on physical environmental impacts and measures to mitigate them, as required by CEQA. To address questions and concerns on property values, Metro has prepared more information. See MR-14: Property Values and Impacts to Businesses.

PH-152-2 Section 3.6, Noise and Vibration, of the Draft EIR, provides a detailed analysis of noise and vibration impacts based on the Federal Transit Administration Transit Noise and Vibration Assessment Manual. See MR-2: Operational Noise Analysis Methodology and Impact Thresholds.

PH-152-3 A High-Frequency Bus Alternative is analyzed in Chapter 4, Evaluation of Alternatives, of the Draft EIR. Proposed bus stops for the High-Frequency Bus Alternative are located at existing on-road stops, such as the one at Artesia Boulevard and Hawthorne Boulevard to maximize travel time savings by avoiding deviations from arterials. This strategy is intended to improve efficiency for bus riders by maintaining a direct route. Light rail does not have the same constraints as bus. The proposed light rail stations are strategically placed to optimize connectivity and serve key transit hubs, including the Torrance Transit Center, to provide greater access for riders.

Submission PH-153 Michael Kim

PH-153-1 Metro plans, operates, and coordinates funding for most of the public transportation system in Los Angeles County. It does not operate or profit from freight rail operations. The project would not add new freight rail capacity to the Metro ROW. The frequency of freight operations on the Metro ROW is determined by BNSF, subject to existing agreements and applicable regulatory constraints. Metro does not control the freight train schedule or operations but coordinates with BNSF to ensure continued safe and efficient use of the Metro ROW. The Draft EIR analysis of freight train operations is based on existing operating patterns, developed in consultation with BNSF and based on observed conditions. While BNSF has the right to operate within the Metro ROW, any substantial increase in freight traffic would require major infrastructure modifications, scheduling adjustments, and regulatory approvals (e.g., from the Federal Railroad Administration (FRA) and the California Public Utilities Code (CPUC)) that are not reasonably foreseeable at this time. The project would replace freight tracks as needed, in kind, with newer tracks, but it would not increase track capacity. The demand for freight movement along this corridor has remained stable for years, and no changes to freight operation are anticipated.

PH-153-2 As described in Section 3.1, Transportation, of the Draft EIR, on page 3.1-15, Project Feature PF-T-1: Construction Traffic Management Plan (CTMP), a CTMP would be prepared and implemented to manage disruptions during construction. The plan would include strategies to manage traffic flow, including phased construction to avoid long-term closures, clearly marked detours, and coordination with local agencies to ensure efficient traffic management. As part of Metro's standard practice, the CTMP would explore scheduling certain construction activities, including deliveries and pick-ups of materials, during non-peak travel periods, and the possibility of conducting some construction work at night. The CTMP would be updated as construction progresses to reflect changes and updates at the work areas.

PH-153-3 The project would not add new freight rail capacity to the Metro ROW, as discussed in response to Comment PH-153-1. All at-grade crossings for light rail and/or freight would include upgraded safety crossing infrastructure. The LPA, Trench Option and Hawthorne Option would fully grade separate light rail from roadways. Metro takes the safety and well-being of nearby communities very seriously. See MR-8: Light Rail and Freight Train Safety.

Submission PH-154 Doris Hofmann

PH-154-1 The commenter's opposition to the project is noted. This project is partially funded by Measure R, as well as Measure M, another ballot measure passed by over 70% of voters in Los Angeles County to fund mobility projects. Additional funding includes a Transit and Intercity Rail Capital Program (TIRCP) Grant from the California State Transportation Agency (CALSTA) and 3% match contributions from local jurisdictions. Metro would continue to explore funding opportunities for the project. The project would provide multiple benefits to the City of Lawndale, including improving mobility in the South Bay and providing equitable access to regional destinations through improved connections to the Metro regional rail system. Stations in the City of Lawndale were proposed as part of the 2018 Supplemental Alternatives Analysis, but were removed from consideration at the request of the City of Lawndale.

PH-154-2 The project would provide multiple benefits to the City of Lawndale, including improving mobility in the South Bay and providing equitable access to regional destinations through improved connections to the Metro regional rail system. Metro has undertaken extensive community outreach for potential transit service along all or portions of the Metro ROW for well over a decade. Metro's outreach program also accommodates the needs of residents with limited English proficiency. In advance of the Metro Board of Director's selection of the LPA in May 2024, Metro distributed 32,000 postcards to residents, property owners, and businesses within a one-mile radius of all alignments under study. Additionally, at the request of the City of Lawndale, Metro sent flyers to every resident within Lawndale. All public meeting materials and outreach notification have been provided in English and Spanish. Documentation on the outreach conducted during the environmental review process is available on the Metro project Dropbox, by visiting metro.net/clineext/#documents.

Submission PH-155 Rose Rodriguez

PH-155-1 The commenter's support for buses instead of rail is noted. A High-Frequency Bus Alternative is analyzed in Chapter 4, Evaluation of Alternatives, of the Draft EIR. Proposed bus stops for the High-Frequency Bus Alternative are located at existing bus stops, such as the one at Artesia Boulevard and Hawthorne Boulevard to maximize travel time savings by avoiding deviations from arterials. This strategy is intended to improve efficiency for bus riders by maintaining a direct route. Light rail does not have the same constraint as bus. The proposed light rail stations are strategically placed to optimize connectivity and serve key transit hubs, including the Torrance Transit Center, to provide greater access for riders. The proposed stations would serve as key transit hubs, with existing local bus routes providing access to nearby destinations. While Metro assists in identifying improvements during the planning and design phases, the implementation of local access to regional transit facilities falls under the jurisdiction of the local cities. If the project is approved, Metro would coordinate with the local jurisdictions to assist in this planning.

The 2023 Ridership Summary Report, published alongside the Draft EIR, shows that the project is expected to generate between 11,500 to 15,600 daily transit trips (boardings). See MR-15: Metro Ridership Forecasting Methodology.

Metro has worked diligently to develop feasible and effective mitigation measures to address the potentially significant impacts of the project.

PH-155-2 The potential operational noise impacts for the Elevated/At-Grade Alignment, the Trench Option, and the Hawthorne Option are addressed in Section 3.6, Noise and Vibration, of the Draft EIR. The potential for LPA impacts is addressed Chapter 4, Evaluation of Alternatives, of the Draft EIR. See MR-2: Operational Noise Analysis Methodology and Impact Thresholds and MR-3: Operational Noise Project Features and Mitigation Measures. Also see MR-19: Project Benefits, which details how the project is consistent with Metro's Equity Platform.

PH-155-3 The comment does not address the adequacy of the Draft EIR and is noted for the record. All comments have been shared with the Metro Board for their consideration.

Submission PH-156 Mary Smiley

PH-156-1 Metro plans, operates, and coordinates funding for most of the public transportation system in Los Angeles County. The Los Angeles County Board of Supervisors, as a governing body, does not vote to approve or reject regional transit projects. However, all five County Supervisors sit on the Metro Board of Directors as individual members representing their supervisorial district. In May 2024, the Metro Board selected an LPA for the purposes of the Final EIR, although it has not taken final action on the project, including approval of any of the options and alternatives evaluated in the Draft EIR. A final decision on whether to certify the EIR and approve the project will not be made until after the Metro Board reviews the Final EIR, which includes responses to all public comments, including those of the commenter. See MR-1: Selection of Alternatives.

CEQA does not require an analysis of safety in terms of crime, as it is not an environmental issue, and therefore the Draft EIR does not make any conclusions regarding this topic. See MR-9: Light Rail Security.

Submission PH-157 Lisa Francis

PH-157-1 The commenter's preference for buses is noted. A High-Frequency Bus Alternative is analyzed in Chapter 4, Evaluation of Alternatives, of the Draft EIR. Caltrans has a planned Express Lanes project, which expands the I-405 through this area; Metro has considered this future expansion in the design of the Hawthorne Option, as described in Chapter 2, Project Description, of the Draft EIR.

In the City of Lawndale, Metro owns the railroad corridor, while BNSF has operating rights through it. BNSF is not obligated to address freight noise mitigation, but Metro is committed to enhancing the community's well-being. The project includes many features to reduce noise and vibration from freight trains. As described in Chapter 2, Project Description, of the Draft EIR, the project would include new pedestrian safety infrastructure at all at-grade freight crossings, which would allow for future conversion of the corridor into a quiet zone. See MR-3: Operational Noise Project Features and Mitigation Measures. Special trackwork is also proposed for the new relocated freight tracks to reduce noise and vibration. Mitigation measures include MM-VIB-5: Resilient Fasteners and MM-VIB-6: Ballast Mats.

Submission PH-158 Bernadette Suarez

PH-158-1 The project would provide multiple benefits to the City of Lawndale, including improving mobility in the South Bay and providing equitable access to regional destinations through improved connections to the Metro regional rail system. Stations in the City of Lawndale were proposed as part of the 2018 Supplemental Alternatives Analysis, but were removed from consideration at the request of the City of Lawndale. Metro adopted an Equity Platform to help ensure system changes prioritize those most in need of improved access to opportunity. Metro identifies Equity Focuses Communities as communities where there are higher concentrations of resident and household demographics associated with mobility barriers (low-income households; Black, Indigenous, or People of Color populations; and households that do not have access to a car). The southern neighborhoods of Lawndale

would be within walking distance to proposed stations in Redondo Beach. Metro is committed to equity to improve access to jobs, housing, and economic opportunities through mobility projects and would continue to prepare inclusive outreach and engagement strategies as Metro advances the project. See MR-19: Project Benefits.

Submission PH-159 Sean Moore

PH-159-1 The commenter's opposition to the project within the City of Lawndale is noted. The Draft EIR analyzes transportation impacts in Section 3.1, Transportation, of the Draft EIR. Aesthetics is addressed in Section 3.3, Aesthetics, of the Draft EIR. Land use impacts, including those related to open space, are addressed Section 3.2, Land Use, of the Draft EIR. The Draft EIR concluded that the project would not result in significant and unavoidable impacts to transportation, aesthetics, land use, or open space.

PH-159-2 The commenter's support for the No Project Alternative, High-Frequency Bus Alternative, or any alternative that is not located within the Metro ROW is noted. The Metro Board has selected the Hybrid Alternative as the LPA for the purposes of the Final EIR, although it has not approved the project, including any of the options and alternatives evaluated in the Draft EIR. A final decision on whether to certify the EIR and approve the project will not be made until after the Metro Board reviews the Final EIR, which includes responses to all public comments, including those of the commenter. See MR-1: Selection of Alternatives.

Submission PH-160 Pat Kearney

PH-160-1 Metro takes the safety and well-being of nearby communities very seriously. See MR-8: Light Rail and Freight Train Safety and MR-9: Light Rail Security.

PH-160-2 The 2023 Ridership Summary Report, published alongside the Draft EIR, shows that the project is expected to generate between 11,500 to 15,600 daily transit trips (boardings). See MR-15: Metro Ridership Forecasting Methodology.

Submission PH-161 John Richards

PH-161-1 The Draft EIR was published in 2023 using the most currently available information to conduct the environmental impact analysis, including for transportation and vibration.

The Draft EIR analyzed transportation impacts in Section 3.1, Transportation, of the Draft EIR. As described in Section 3.1, Transportation, of the Draft EIR, on page 3.1-15, Project Feature PF-T-1: Construction Traffic Management Plan (CTMP), a CTMP would be prepared to manage disruptions during construction. The plan would include strategies to manage traffic flow, including phased construction to avoid long-term closures, clearly marked detours, and coordination with local agencies to ensure efficient traffic management. As part of Metro's standard practice, the CTMP would explore scheduling certain construction activities, including deliveries and pick-ups of materials, during non-peak travel periods, and the possibility of conducting some construction work at night. The CTMP would be updated as construction progresses to reflect changes and updates at the work areas. Traffic congestion and delays (often measured by Level of Service) are not considered significant environmental impacts under CEQA. Metro prepared a 2023 Transportation Detail Report,

published alongside the Draft EIR, providing additional information on potential changes in traffic patterns and impacts not required by CEQA, but for the public's information. See also MR-11: Traffic Delay and Level-of-Service.

The potential for vibration impacts is addressed in Section 3.6, Noise and Vibration, of the Draft EIR. The vibration levels from light rail operations, would be significantly lower than those generated by freight trains, due to the lighter weight. The vibration analysis considered both light rail trains and relocated freight. Operational vibration annoyance impacts would be mitigated to less than significant with mitigation for all alignments. Mitigation measures include MM-VIB-4: Low Impact Frogs, MM-VIB-5: Resilient Fasteners, and MM-VIB-6: Ballast Mats. Vibration mitigation measures and locations where they would apply are included on pages 3.6-106 through 3.6-108 of the Draft EIR. See MR-5: Vibration Impact Types and Impact Thresholds.

PH-161-2 The 2023 Ridership Summary Report, published alongside the Draft EIR, shows that the project is expected to generate between 11,500 to 15,600 daily transit trips (boardings). See MR-15: Metro Ridership Forecasting Methodology. The project provides multiple benefits to the City of Lawndale, including improving mobility in the South Bay and providing equitable access to regional destinations through improved connections to the Metro regional rail system. Stations in the City of Lawndale were proposed as part of the 2018 Supplemental Alternatives Analysis, but were removed from consideration at the request of the City of Lawndale.

PH-161-3 Metro takes the safety and well-being of nearby communities very seriously. See MR-8: Light Rail and Freight Train Safety and MR-9: Light Rail Security. CEQA does not require an analysis of safety in terms of crime, as it is not an environmental issue, and therefore the Draft EIR does not make any conclusions regarding this topic.

Submission PH-162 Rose Rodriguez

PH-162-1 The presence of natural gas lines and petroleum pipelines, their potential impacts, and applicable regulatory requirements are addressed in Sections 3.9, Hazards and Hazardous Materials, and 3.11 Utilities and Service System, of the Draft EIR. Potential impacts of the LPA in this context are evaluated in Chapter 4, Evaluation of Alternatives, of the Draft EIR. In addition, Section 4.13, Corrections and Additions, of the Final EIR expands on the analysis in Section 3.9-4.2.1 of the Draft EIR by clarifying the protocols, construction techniques, regulations, and standards with which the project would comply. As detailed therein, the revisions do not change the Draft EIR's conclusion that the impact related to oil and gas pipelines would be less than significant.

The 1951 explosion mentioned in the comment occurred decades before Metro's establishment and was unrelated to Metro, its operations, or light rail transit, in general. Since that time, safety protocols, construction methods, and regulatory standards for managing pipelines and hazardous materials have significantly advanced. Additionally, light rail and relocated freight operations would not increase the likelihood of pipeline-related incidents, such as explosions. See MR-7: Utility Relocation and Hazardous Materials Safety andMR-8: Light Rail and Freight Train Safety for more details on how light rail would be safely constructed and operated in the Metro ROW.

PH-162-2 See MR-8: Light Rail and Freight Train Safety.

Submission PH-163 Ted Hofmann

PH-163-1 The commenter's opposition to the Metro ROW alignment is noted. See MR-1: Selection of Alternatives. Metro has worked diligently to develop feasible and effective mitigation measures to address the potentially significant impacts of the project.

PH-163-2 The Hawthorne Option would include a station in the center median of Hawthorne Boulevard south of Artesia Boulevard. Transit parking is included in the Redondo Beach Transit Center, which is operated by the City of Redondo Beach. Metro would provide transit parking at the terminus station in Torrance. Metro does not provide long-term parking for airports. The C Line Extension would operate as the southern part of the K Line and connect to the LAX/Metro Transit Station, which would serve LAX. The K Line now operates as a north-south line between the South Bay and the Metro E Line and the C Line operates east-west between LAX and Norwalk. Both lines provide a direct connection to LAX.

The project has been designed to provide convenient access to the Redondo Beach Transit Center and Torrance Transit Center, which were selected based on extensive analysis of connectivity and accessibility and community outreach. The stations would serve as key transit hubs, with existing local bus routes providing access to nearby destinations. While Metro assists in identifying improvements during the planning and design phases, the implementation of local access to regional transit facilities falls under the jurisdiction of the local cities. If the project is approved, Metro would coordinate with the local jurisdictions to assist in this planning.

1. INTRODUCTION

This document provides a brief overview of community engagement to support the environmental review process for the C Line Extension to Torrance Project and summarizes:

> Public noticing and comment periods required per the California Environmental Quality Act (CEQA) to prepare the Draft Environmental Impact Report (EIR).
> Additional community notifications, events, and phases of engagement to share Project information and gather feedback to inform Project development.

The document is organized in chronological order with links to more detailed summaries of engagement.

1.1 CEQA Required Noticing and Comment Periods

> Notice of Preparation: January 29, 2021
> Public Scoping Period: January 29 - March 29, 2021
> Notice of Availability for Draft EIR: January 26, 2023
> Draft EIR Public Comment Period: January 26 – March 27, 2023

1.2 Other Stages of Community Engagement

> Fall 2021 Virtual Neighborhood Walks & Survey
> Spring 2022 Neighborhood Walks
> Summer 2022 Community Open Houses
> Summer 2022 Transit Rider Intercepts & Door-to-Door Business Outreach
> January 2023 Release of Draft EIR & Public Hearings
> Spring 2023 Transit Rider Intercepts & Door-to-Door Business Outreach
> Fall 2023 Project Update to Metro Board of Directors (Metro Board)
> Winter 2023 Community Walk with Metro Board Director Holly J. Mitchell, Los Angeles County Supervisor of the Second District
> Early 2024 Community Meeting
> Spring 2024 Metro Board Selection of the Locally Preferred Alternative (LPA)
> Early 2025 Notice to Community of Project Next Steps

2. EARLY 2021 OUTREACH

2.1 SCOPING MEETINGS (VIRTUAL)

Metro held three public scoping meetings to receive feedback on the scope of the Draft EIR, including the goals and objectives, the project area, project description, and the environmental impacts to be evaluated in the EIR.

2.1-1. Notifications for Public Scoping

- Posted legal ads in four newspapers on 1/29/2021 (LA Times, La Opinion, Daily Breeze, Herald Publications)
- Mailed over 15,400 bilingual[1] (English/Spanish) notices to property and business owners within 750 feet of proposed routes (alignments) on 1/29/2021
- Distributed electronic noticing and reminders to the Project database of over 1,300 contacts on 1/29/2021, 2/10/2021, 2/17/2021, 2/23/2021, and 2/26/2021
- Distributed 6,500 flyers door-to-door within the communities of Lawndale, Redondo Beach, and Torrance on 2/18/2021
- Purchased three geo-targeted social media advertisements and two event posts on Facebook, generating a total reach of 47,573 people and 129,540 impressions from 2/16/2021 through 2/26/2021
- Displayed advertisements in local Division 18 Metro bus lines operating in the South Bay communities 1/29/2021 through 3/29/2021
- Posted advertisements on Metro's Project website 1/29/2021 through 3/29/2021
- Presented to various community groups, business groups, councils of governments, elected officials, and neighborhood councils throughout the Project area from 1/5/2021 through 2/25/2021
- Obtained paid media advertisements and earned media through organic publicly gained media, including stories from local blogs, print, and online newspapers advertising the meetings on 2/18/2021 (including the Daily Breeze, Beach Reporter, Easy Reader, The Source, Daily News, and South Bay Watch)

Table 1. Scoping Meetings Details

Meeting Date (Virtual)	Event Description
Tuesday, 2/23/2021	Scoping Meeting for Public Agencies
Wednesday, 2/24/2021, 4 PM	Public Scoping Meeting #1
Saturday, 2/27/2021, 11 AM	Public Scoping Meeting #2

Source: The Robert Group, 2021

[1]Refers to English/Spanish, selected based on Metro's criteria for determining language outreach based on Metro's demographic profile.

2.1-2. Summary of Input Received

> 387 stakeholders attended virtual Public Scoping Meetings, 288 comments received at the meetings

> 825 stakeholders visited the online StoryMap presentation

> 669 comments received during the Scoping Review Period. Public Scoping Summary Report can be found here: ***Summary Report***

3. FALL 2021 OUTREACH

3.1 NEIGHBORHOOD WALKS (VIRTUAL)

Due to COVID-19 public health protocols, Metro held virtual community engagement during the Fall of 2021 to gather feedback. Four virtual neighborhood walks were offered to the public to explore both the key routes (Metro ROW and Hawthorne Boulevard alignments) to be evaluated in the Draft EIR with narrated videos at key stops along each walking route map. The maps allowed community members to complete the walks within their neighborhood, or online. Following each walk, attendees could provide feedback through an online questionnaire on key design elements as well as any additional comments.

3.1-1. Notifications

> Sent five bilingual e-blasts on 10/5/2021, 10/14/2021, 10/21/2021, 11/15/2021, and 11/19/2021
> Distributed 32,000 bilingual[1] flyers to properties within a one-mile radius of the ROW and Hawthorne Boulevard alignments on 10/1/2021
> City of Lawndale announced the availability of the virtual walks on 10/5/2021
> Distributed 4,000 additional flyers along the immediate Project area on 10/18/2021

3.1-2. Virtual Online Survey Availability

> Virtual online survey was available from October 1 – November 19, 2021

3.1-3. Summary of Input Received

As part of the questionnaire, community members were able to provide feedback on the Project, as well as identify certain areas that Metro's design team should consider.

> 1,600 site visits to virtual walks
> 232 questionnaires completed
    - Condon Ave/Metro ROW Walk (67 completed questionnaires)
    - Hawthorne Bl Walk (52 completed questionnaires)
    - South Bay Galleria Walk (54 completed questionnaires)
    - Hawthorne Boulevard/ROW Walk (59 completed questionnaires)
> Summary Report can be found here: ***2021 Virtual Neighborhood Walk Summary Report***

4. SPRING 2022 OUTREACH

4.1 NEIGHBORHOOD WALKS (IN-PERSON)

In the Spring of 2022 when COVID-19 public health protocols allowed for in-person meetings, Metro hosted 12 neighborhood walks in the Project area along key routes and areas of interest to the public. The in-person neighborhood walks provided an opportunity for the Project team to meet community members and listen to local ideas and concerns while walking along segments of the Metro ROW and Hawthorne Boulevard alignments. Attendees could provide written comment cards to Metro.

4.1-1. Notifications

> Sent three bilingual e-blasts to over 2,100 unique email addresses notifying the public about the neighborhood walk registration on 2/9/2022, 2/16/2022, and 2/28/2022. An additional 18 e-blasts were sent as reminders for those registered.

> Distributed 32,000 bilingual flyers to properties within a one-mile radius of the Metro ROW and Hawthorne Boulevard alignments on 2/22/2022

> The City of Lawndale announced the registration of the neighborhood walks on 2/9/2022

> Issued 18 e-blasts notifying and reminding those registered for each walk with an average open rate of approximately 69% from 2/29/2022 to 3/11/2022

Table 2. Neighborhood Walk Details

Location	City	Date	# of Attendees
Condon Ave/Metro ROW	Lawndale	Wednesday, 3/2/2022, 8 AM	25
	Lawndale	Saturday, 3/5/2022, 10 AM	35

172nd St/Metro ROW	Lawndale	Wednesday, 5/11/2022, 4 PM	12
		Total	**394**

Source: The Robert Group, 2022

4.1-2. Summary of Input Received

394 Total Attendees: During the in-person neighborhood walks, participants inquired about details on the design elements, including station locations, freight track adjustments, and potential impacts from noise and vibration, as well as projected ridership and the cost of the Project. Metro staff took notes during the walks based on the community discussion and questions and received 24 written comment cards.

> Summary Report can be found here: ***2022 In-Person Neighborhood Walks Summary Report***

5. SUMMER 2022 OUTREACH

5.1 COMMUNITY OPEN HOUSES

The Metro team hosted four community open-house meetings in August 2022 to provide community members with an update on the Project, the opportunity to ask questions, and see a preview of the three proposed alignments for the Project area to be evaluated in the Draft EIR. The meetings were held in the three cities in the study area and were designed to provide an update to the community on the feedback that Metro had heard to date and how it had been incorporated into the planning and design process.

5.1-1. Notifications

> Sent four bilingual e-blasts to over 2,100 email addresses notifying the public about the meetings on 7/28/2022, 8/1/2022, 8/9/2022, 8/15/2022, and 8/17/2022. Distributed 32,000 bilingual[1] flyers door-to-door to homes and businesses within a one-mile radius of the Metro ROW, Trench, and Hawthorne Boulevard alignments on 8/12/2022

> City of Lawndale announced the registration and availability of neighborhood walks

> Developed and provided flyers to the City of Lawndale to be mailed to residents within the city boundaries

> Mailed 35,881 postcards to residents, property owners, and businesses within a one-mile radius of the Metro ROW, Trench, and Hawthorne Boulevard alignments, excluding the City of Lawndale on 8/5/2022.At the request of the City of Lawndale, Metro developed and provided flyers to the City of Lawndale to be mailed to residents within the city boundaries.

Table 3. Community Open House Details

City/Location	Date	# of Attendees	Comments Received
City of Redondo Beach, Adams Middle School Gym	Thursday, 8/11/2022, 6 – 8 PM	125	36 comment cards 26 verbal comments
Virtual Meeting via Zoom	Monday, 8/15/2022, 11 AM – 1 PM	213	180 comments/questions
City of Torrance, Torrance Cultural Arts Center, Toyota Meeting Hall	Tuesday, 8/16/2022, 6 – 8 PM	119	22 comment cards 13 verbal comments
City of Lawndale, Leuzinger High School Gym	Wednesday, 8/17/2022, 6:30 – 8:30 PM	86	24 comment cards 23 verbal comments
TOTAL		**543***	**324**

Source: The Robert Group, 2022

**Not all attendees signed-in to register at meetings.*

5.1-2. Summary of Input Received

> Community members provided feedback on the Project, including input on alignment, design, and potential mitigation measures.

> Summary Report can be found here: ***2022 Open House Summary Report***

5.2 TRANSIT RIDER INTERCEPTS 2022

In Summer 2022, the Project team met with transit riders as major transit stops in the Project area to help raise awareness of the Project and the upcoming meetings by distributing flyers.

Table 4. Transit Rider Intercept Details

City/Location	Date	# of Transit Riders
Artesia/Kingsdale Stops	Friday, 8/5/2022, 7 – 9 AM	11

	Total	**317**

Source: The Robert Group, 2022

> Summary Report can be found here: ***2022 Open House Summary Report***

6. EARLY 2023 OUTREACH

Metro released the Draft EIR for public comment over a 61-day public comment period from January 26, 2023, to March 27, 2023. During this timeframe, Metro held five public hearings (four in-person and one virtual) to provide information on the Draft EIR and receive public comments.

6.1 NOA AND DRAFT EIR REVIEW PERIOD

6.1-1. Notifications

> Posted legal ads in four newspapers on 1/26/2023 (LA Times, La Opinion, Daily Breeze, Herald Publications)

> Notified federal, state, county, and city agencies, including responsible agencies, public agencies that have legal jurisdiction with respect to the Project, and other organizations or individuals that requested notice on 1/26/2023

> Mailed bilingual notices to over 47,200 addresses on 1/24/2023

> Distributed 32,000 flyers door-to-door within the communities of Lawndale, Redondo Beach, and Torrance

> Distributed electronic noticing to the Project database of over 2,300 contacts on 1/26/2023, 2/2/2023, 2/9/2023, 2/14/2023, 2/23/2023, 3/7/2023, 3/23/2023, 3/27/2023, and 4/13/2023

> Displayed advertisements in Metro bus lines operating in the South Bay from 1/16/2023 through 2/19/2023

> Posted advertisements on Metro's Project Website on 1/26/2023

> Presented to various community groups, business groups, and elected officials throughout the Project area

> Obtained paid media advertisements (Beach Reporter, El Segundo Herald, Redondo Beach Heralds, South Bay Cities Herald, Daily Breeze) and earned media through organic publicly gained media, including stories from local blogs, print, and online newspapers advertising the meetings

> Notified Metro Board of Directors through Board Box

- Board Box can be found here: ***1/26/2023 Board Box***

> Sent letters to property owners for potentially affected properties during construction or operations

Table 6. Public Hearing Details

	Total	**421**

Source: The Robert Group, 2023

6.1-2. Summary of Input Received

> 181 verbal comments received

> 67 written comments cards at meetings received248 total comments received

6.2 TRANSIT RIDER INTERCEPTS 2023

In Spring 2023, prior to the close of the public comment period on the Draft EIR, Metro continued outreach efforts to existing transit riders to build greater awareness about the Project for those taking transit within the Project area and encourage community members to provide feedback on the Draft EIR and participate in the Project by signing up for the Project newsletter.

Table 7. Transit Rider Intercept Details

Location	Date	# of Transit Riders
Artesia/Kingsdale Stops	Monday, 3/13/2023, 8 – 10 AM	10

Source: The Robert Group, 2023

> Summary Report can be found here***: 2023 Summary Report (Draft EIR comment period)***

7. FALL 2023 OUTREACH

7.1 PROJECT UPDATE TO METRO BOARD

After the close of the public comment period on the Draft EIR, staff provided the Metro Board with an update on the findings from the Draft EIR and technical studies, including a comparison of the alignments and alternatives studied and their relative benefits and impacts, and community feedback on the Draft EIR. Staff prepared a written summary of this information in a Board Box, as well as a Board Report for the September Metro Board Committee meetings and notified the public of the meetings, which provided an opportunity for public comment.

7.1-1. Notifications

> Four E-Blasts to approximately 3,200 emails on 9/13/2023, 9/18/2023, 9/29/2023, and 10/25/2023

Table 9. Metro Board Meeting Details

Meeting Date	Event Description	# of Comments Received
Wednesday, 9/20/2023, 1 PM	Planning & Programming Committee Meeting	31
Thursday, 9/21/2023, 11 AM	Metro Board Meeting	37
	Total	**68**

Source: The Robert Group, 2023

7.1-2. Summary of Input Received

Sixty-eight community members provided public comment at the Metro Board committee meetings on a variety of topics including preferences for alignments and design configurations, as well as concerns including the frequency of trains in residential areas, proximity of freight tracks to residences, construction impacts, noise, and vibration, among others that could result from the Project.

> Board Box can be found here: ***8/14/2023 Board Box***

> Board Report can be found here: ***9/2023 C Line Extension to Torrance Update Report***

7.2 REQUEST FOR ADDITIONAL ENGAGEMENT FROM DIRECTOR MITCHELL

On September 27, 2023, Director Mitchell sent a letter addressed to Metro CEO Stephanie Wiggins regarding the Project and requested that Metro conduct additional community outreach prior to the Metro Board consideration of the LPA selection. During the September 28, 2023 Metro Board Meeting, CEO Wiggins acknowledged Director Mitchell's request and agreed to work with Mitchell's office to further engage the community prior to the Metro Board considering selection of the LPA.

8. WINTER 2023-2024 OUTREACH

8.1 DECEMBER 2023 & JANUARY 2024 COMMUNITY MEETINGS

Director Mitchell requested that Metro provide additional opportunities for community engagement prior to the Metro Board considering selection of the LPA. In response to this request, Metro worked with Director Mitchell's office to host two engagement events to hear directly from those within the Second District served by the Project, which includes Lawndale and Redondo Beach. The events provided an opportunity for community members to ask questions, share concerns, and discuss their visions for the future of the South Bay directly with Director Mitchell and Metro. At both events, community members were able to submit written comments, ask questions, and share video testimonials.

8.1-1. Notifications

> 1,200 door-to-door flyers distributed to neighbors surrounding the walk locations on 12/12/2023
> E-Blast to approximately 3,200 emails on 1/17/2024
> 2,000 door-to-door flyers to residents along the Metro ROW on 1/12/2024
> Additional e-blasts and notifications sent through Director Mitchell's office

8.1-2. Summary of Input Received

> Approximately 250 community members attended the Community Walk in December 2023. 68 comment cards were received, and 16 videos were submitted. Approximately 50 community members attended the January 2024 community meeting, and 21 comment cards were received.
> Summary Report can be found here: ***Winter 2023/2024 Summary Report***

9. SPRING 2024 SELECTION OF LOCALLY PREFERRED ALTERNATIVE

9.1 METRO BOARD MEETINGS

In Spring 2024, Metro staff presented before the Metro Board Committees and the full Metro Board to present a recommendation for the selection of an LPA. The Metro Committee and Board meetings included time for public comment. Metro notified the community through a variety of methods.

9.1-1. Notifications of Metro Committee and Board Meetings in April and May

> Sent e-blasts to approximately 4,000 emails on 4/15/2024, 4/22/2024
> Posted online advertisements in Daily Breeze, Herald Tribune, and Easy Reader News on 5/20/2024
> Distributed 32,000 door-to-door bilingual flyers door-to-door to homes and businesses within a one-mile radius of the Metro ROW and Hawthorne Boulevard alignments on 4/17/2024
> Distributed packets of flyers to 25 local businesses and public facilities along the Project alignments on 5/20/2024
> Posted online Facebook advertisements geo-targeted to users within a one-mile radius of the Metro ROW from 5/15 - 5/22/2024

Table 11. Metro Meeting Details

Meeting Date	Event Description
Wednesday, 4/17/2024, 1 PM	Metro Planning & Programming Committee Meeting
Thursday, 5/23/2024, 10 AM	Metro Board Meeting

Source: The Robert Group, 2024

9.1-2. Summary of Input Received

A total of 143 community members provided comments at the Metro Board Committee and Metro Board meetings.

9.1-3. Metro Board Direction

At the May 23, 2024 Regular Metro Board meeting, the Metro Board voted unanimously to select the Hybrid Alignment[2] as the LPA. Along with the approval of the LPA, the Metro Board approved a Motion put forth by Metro Director Butts (Mayor of Inglewood), which recommended that the Metro Board:

> Approve the staff recommendation on LPA and continue the EIR process in compliance with CEQA;
> Complete studies to respond fully to public comments received on the ROW and Hawthorne Boulevard alignments in the Final EIR; and
> Continue to develop refined cost estimates for the LPA on the ROW alignment and develop a refined funding plan that includes the identification of all federal, state, and local funding sources to implement the Project.

[2] The Hybrid Alignment is referred to as the 170th/182nd Grade-Separated Light Rail Transit Alternative in the Draft EIR.

> Meeting Minutes can be found here: ***5/23/2024 Board Meeting Minutes***

10. WINTER 2025 COMMUNITY LETTER

10.1 COMMUNICATIONS ON PROJECT NEXT STEPS

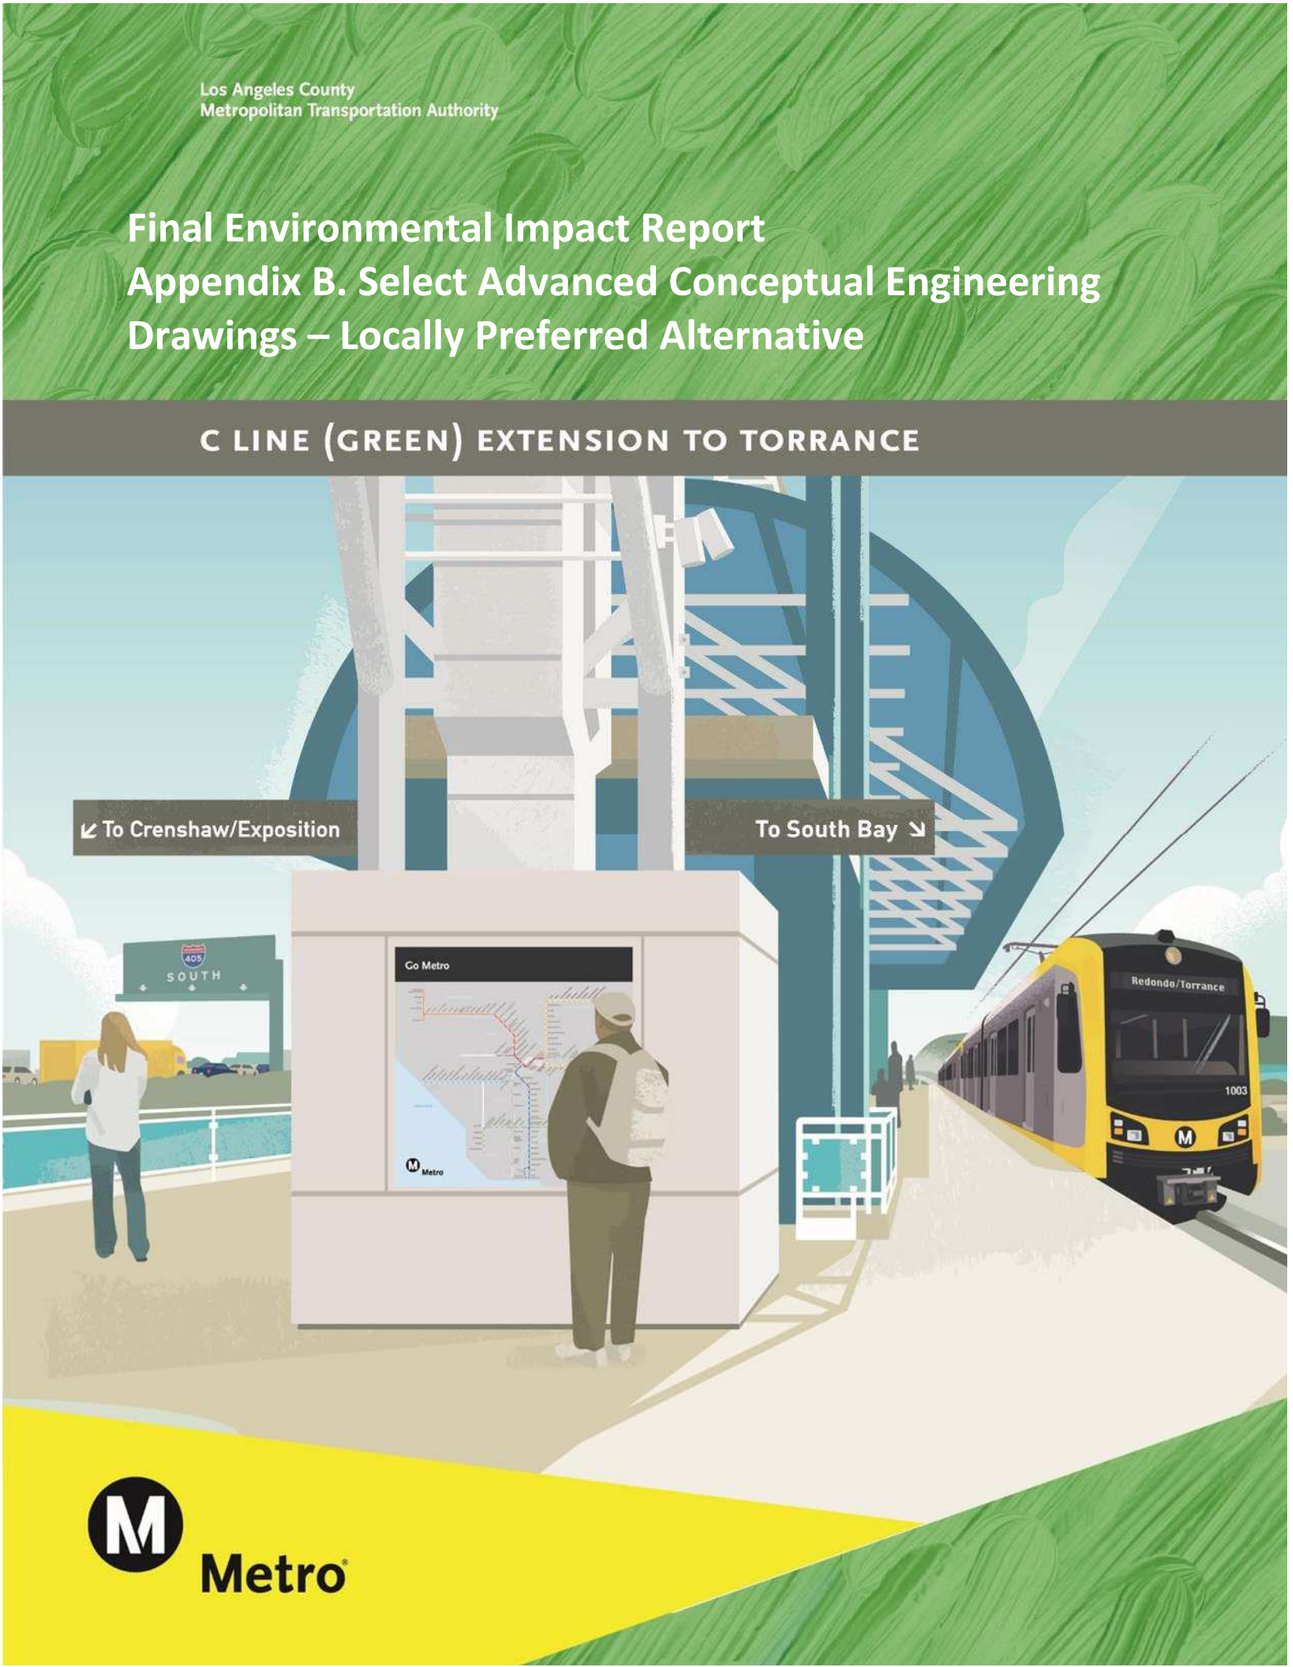
In January 2025, Metro sent a letter to community members within the Project area to summarize the Metro Board's direction at its May 2024 Metro Board meeting, including the selection of the LPA, and to share next steps for the environmental review process. The next steps included conducting field work to support Metro's preparation of responses to comments on the Draft EIR. As part of this effort, Metro briefed staff of the Cities of Lawndale, Redondo Beach, and Torrance, as well as the Metro Board offices. Additionally, Metro provided updates to the public through e-blasts and door-to-door flyer distribution.

10.2 NOTIFICATIONS

> Sent letter to community members within one-mile radius of Metro ROW (approximately 47,000 addresses): 1/6/25
> Sent E-blasts on Project next steps including field work: 12/13/2024, 1/14/2025, 1/17/2025, 1/31/2025, 2/7/2025, 2/14/2025, 2/28/2025, 3/7/2025, 3/21/2025, 4/4/2025, 5/2/2025
> Distributed flyers to approximately 4,500 properties along ROW with updates on field work: 1/14/2025, 1/20/2025, 2/20/2025, 3/5/2025, 4/4/2025
> Published two Daily Breeze Online Ads: 2/3/2025 - 2/10/2025
> Published two Geo-targeted Facebook Ads: 2/3/2025 - 2/17/2025

11. NEXT STEPS

In accordance with CEQA, responses to comments on the Draft EIR will be provided to commenting public agencies prior to Metro Board consideration of the Final EIR. The Metro Board will consider certification of the Final EIR and potential approval of the Project approval at a public meeting.



Final Environmental Impact Report

GENERAL NOTES:

1. PARCEL LINES AND DATA SHOWN ON THESE PLANS ARE COMPILED FROM PUBLIC SOURCES AND ARE SUBJECT TO VERIFICATION.

2. AUTHORITY (RAIL) RIGHT OF WAY WAS ACQUIRED BY LOS ANGELES METRO FROM BNSF VIA THE FOLLOWING DEEDS:
   -GRAND DEED: DOCUMENT NUMBER 93-1256121 RECORDED JUNE 30, 1993
   -QUITCLAIM DEED: DOCUMENT NUMBER 93-1256122 RECORDED JUNE 30, 1993
THE LEGAL DESCRIPTIONS IN THE ABOVE DEEDS ARE SUBORDINATE TO THE DESCRIPTIONS IN THE ORIGINAL RAILROAD ACQUISITION AND DISPOSAL DOCUMENTS, WHICH WERE NOT EXAMINED.

3. PUBLIC RIGHT OF WAY AND PARCEL LINES ARE SHOWN FOR ILLUSTRATIVE PURPOSES BASED ON ASSESSORS MAPS.

PARCEL #	TITLE CODE	GRANTOR	AREAS (sq feet or as noted)			REMARKS	RECORDATION		
			TOTAL	REQUIRED	REMAINDER		TYPE	DATE	DOC.#
4149007800		SOCAL EDISON	133318	22018	111300	PARTIAL ACQUISITION FOR ACCESS ROAD, UTILITY RELOCATION AND TEMPORARY CONSTRUCTION STAGING			
4149007801		SOCAL EDISON	108112	10193	97919	PERMANENT EASEMENT FOR UTILITY RELOCATION & ACCESS			

DEFINITIONS:

1. ACQUISITION: TYPICALLY KNOWN AS "FULL FEE ACQUISITION" WHERE FEE INTEREST IS BEING ACQUIRED FOR LAND AND RIGHTS FOR AN ENTIRE PARCEL. INCLUDES CASES WHERE ACQUISITION OF AN ENTIRE PARCEL IS NOT ESSENTIAL BUT IS A PRACTICAL REQUIREMENT SINCE ANY PARCEL REMAINDER IS DETERMINED AS NOT VIABLE FOR USE ON ITS OWN.

2. PARTIAL ACQUISITION: TYPICALLY KNOWN AS "PARTIAL FEE ACQUISITION" AS ACQUISITION EXCEPT IT APPLIES TO ONLY A PORTION OF THE PROPERTY AND LEAVES THE REMAINDER OF A PARCEL WITH THE EXISTING OWNER.

3. PERMANENT EASEMENT: TYPICALLY KNOWN AS "PERMANENT EASEMENT ACQUISITION' AND APPLIES TO PROPERTY WHERE LIMITED RIGHTS ARE REQUIRED FOR PERPETUITY (FOR EXAMPLE, THE RIGHT TO CROSS OVER, UNDER OR UPON, THE RIGHT TO INSTALL FACILITIES SUCH AS UTILITIES, THE RIGHT TO ENTER THE PROPERTY FOR CONSTRUCTION OR MAINTENANCE PURPOSES) AND THAT PERMITS CONCURRENT USE BY OTHERS WITH LEGAL INTEREST IN THE PARCEL. THE RIGHTS CONVEYED CAN BE DESCRIBED IN DETAIL IN THE EASEMENT DEED.

4. TEMPORARY EASEMENT: AS PERMANENT EASEMENT EXCEPT IT APPLIES TO PROPERTY WHERE LIMITED RIGHTS ARE REQUIRED FOR A TEMPORARY PERIOD.

- PROPOSED PERMANENT EASEMENT
- PROPOSED TEMPORARY CONSTRUCTION EASEMENT
- PROPOSED METRO ROW CONVEYED TO BNSF

PLAN

HORIZONTAL
40 0 40 80
1"=40'

GENERAL NOTES:

1. PARCEL LINES AND DATA SHOWN ON THESE PLANS ARE COMPILED FROM PUBLIC SOURCES AND ARE SUBJECT TO VERIFICATION.

2. AUTHORITY (RAIL) RIGHT OF WAY WAS ACQUIRED BY LOS ANGELES METRO FROM BNSF VIA THE FOLLOWING DEEDS:
   -GRAND DEED: DOCUMENT NUMBER 93-1256121 RECORDED JUNE 30, 1993
   -QUITCLAIM DEED: DOCUMENT NUMBER 93-1256122 RECORDED JUNE 30, 1993
THE LEGAL DESCRIPTIONS IN THE ABOVE DEEDS ARE SUBORDINATE TO THE DESCRIPTIONS IN THE ORIGINAL RAILROAD ACQUISITION AND DISPOSAL DOCUMENTS, WHICH WERE NOT EXAMINED.

3. PUBLIC RIGHT OF WAY AND PARCEL LINES ARE SHOWN FOR ILLUSTRATIVE PURPOSES BASED ON ASSESSORS MAPS.

4. AREA NEEDED FOR TEMPORARY CONSTRUCTION EASEMENTS MAY BE REFINED DURING FUTURE PHASES OF DESIGN. METRO WOULD WORK WITH OWNERS TO AVOID RESIDENTIAL STRUCTURES DURING CONSTRUCTION.

Final Environmental Impact Report
Appendix C. Public Comments on the Draft EIR
Part 1: Submissions 1-337

Metro

Submission 1

From: Erin Hoops
To: GreenlineExtension
Subject: +1 for the Trench option
Date: Wednesday, February 1, 2023 1:15:08 PM

Hi,

I'm Erin Hoops, a South Bay resident. I'd like to support the trench configuration for the C line extension. This option will do the most to provide transit without increasing noise. The mental health issues caused by noise pollution is a big reason I would like to see more public transit and fewer cars. Quieter metro lines will help the mental health of the surrounding communities.

1-1

Thanks,
Erin

Submission 2

From: Johnny Menhennet
To: GreenlineExtension
Subject: Alignment Comment
Date: Friday, February 3, 2023 8:28:51 AM

Good morning,

I'm writing with my support of the Hawthorne Alignment for the Green Line Extension. I think it's most suitable as it locates the mid-point station in a closer walkshed to large attractions and destinations. I would also support another infill station in between South Bay Galleria and Redondo Beach stations, either further up Hawthorne before the 405 or at Manhattan Beach Boulevard in the ROW to better serve residents of Lawndale. Though that's not in the scope, I further support the Hawthorne alignment for its potential to serve those customers later on with an infill option. Thank you for taking the time to review my comment! 2-1

Best,
Johnny Menhennet

Submission 3

From: Kyle Freitas
To: GreenlineExtension
Subject: Below grade Alternative 1 Support
Date: Tuesday, January 31, 2023 8:20:04 PM

Hello,

My wife and I are very much affected by this rail and wanted to show our support for the below grade alternative 1 as we live in North Torrance, near Hawthorne and 182nd and we have a property on 167th street and Firmona in Lawndale. 3-1

We used to walk our dog near the freight tracks when we lived at the lawndale property and it would be nice to have a proper walkway there with some sound barriers to mitigate some of the train noise. Love that there are plans to put in more train safety and the issue of the train operators having to blow their horns. 3-2

I wish this project was completed 10 years ago! I would have never needed to drive to my old job between the marine station and douglas.

Best regards,

Kyle Freitas

Submission 4

From: Robert Kessmar
To: greenlineextension@metro.net
Subject: C Line Extension
Date: Friday, January 27, 2023 8:24:47 PM

Hi,

I live in Lawndale near 162nd and Grevillea Ave. Looking at the 3 options I think the one which goes down the center of Hawthorne Blvd would be the best. When people ride any of the lines the thing they look forward to is looking out the windows and seeing the scenery. Whenever I walk to the Marine station and take the stairs up to the platform it's really neat to look around and see the landscape from that elevation. 4-1

Having the new extension run in a trench would be a poor visual experience for everyone riding in the cars. Also, it seems like the trenches would be more expensive. 4-2

If possible, have the C Line tracks be elevated above ground as much as you can. 4-3

Robert Kessmar

Sent from my iPad

Submission 5

From: Leslie Andrew Ridings
To: greenlineextension@metro.net
Subject: Comment regarding C-Line Extension to Torrance
Date: Saturday, January 28, 2023 5:43:51 PM

Metro,

I would like to submit my 2¢ regarding the C-Line Extension to Torrance.

I do not live in the area but I am a daily Metro Rail rider, I think the guiding principle for choosing an alignment should be: *How do we get the most people around the city fastest*? Using the E line frequently, the portion at-grade on-street is frustrating. No train should have to wait at a stop light!

5-1

Of the options presented, **I would like to voice my support for the Metro ROW alignment that is trenched because of the presumed speed of the trains permitted by being off-grade.**

Further, a stop at the Redondo Beach Transit center makes a lot more sense as a long-term commitment to car-free urban mobility than it does to connect the train to a mall. In 50 years, when Angelenos not yet born are riding the C line to the K to get to a party in WeHo, will the Mall still be there, or the Transit Center? My money is on the Transit Center.

5-2

The mall may help ridership, but Metro's mandate is to grow a county-wide network.

Thank you for all you do, and I look forward to riding the extending C line!

Leslie

Submission 6

From: Joseph Guay
To: greenlineextension@metro.net
Subject: Draft EIR Comment
Date: Thursday, January 26, 2023 10:05:01 AM

I strongly oppose the extension. 6-1

I live on 164th and Inglewood right near the train tracks and all the neighborhoods in the area impacted are against the extension.

Please listen to the constituents in the area rather than build an extended line no one uses. The Marine station is overwhelmingly unused. I was using it before the crime and homelessness deterred me. 6-2

Submission 7

From: joanna g
To: greenlineextension@metro.net
Subject: Draft EIR Comment
Date: Thursday, January 26, 2023 6:01:26 PM

We are long time residents of Torrance n we do have to say we are very sad to see this change happening to our beautiful city- we once called a “sweet hometown” that everyone knew eachother by first their first name n with that said it maybe a good change but as far as we see it - it will not benefit us to use the metro/bus line in any way sharpe or form “only for those who do not live here”… Our city needs more family style restaurants n things for our kids to do -like we did when we were young n also “we need more police” to this over crowded city its becoming ….

7-1

Joanna

Re: **Torrance Logistic Company LLC's Comments on Draft Environmental Impact Report for Los Angeles County Metropolitan Transportation Authority's Proposed C Line (Green) Extension Project**

Ms. Sheridan:

Torrance Logistics Company LLC ("TLC") appreciates the opportunity to provide these comments on the Los Angeles County Metropolitan Transportation Authority's ("Metro") Draft Environmental Impact Report ("DEIR") prepared for the proposed C Line (Green) Extension to Torrance Project ("Proposed Project"). TLC owns and operates several petroleum pipelines that are within rights-of-way ("ROWs") located withing the scope of the Proposed Project. These pipelines are critical to conveying petroleum products between the Torrance Refinery ("Refinery") and downstream pipelines, facilities, and customers.[1]

TLC has operated the Torrance Logistics assets ("Assets") since acquiring the Assets in 2016 from the former owner and operator, ExxonMobil Oil Corporation. TLC transports various petroleum products that support the surrounding communities and is critical in the jet fuel supply for the Los Angeles International Airport ("LAX"). TLC has been a vital and integral part of Los Angeles County's and State's economy and community fabric for many years. TLC employs approximately 100 Southern California residents and numerous contractors on a daily basis during normal operations, most of whom work in close proximity to the Proposed Project. As an operator of critical pipeline facilities in areas that would be directly affected by the Project, TLC shares the serious concerns TORC and others have that the Proposed Project would cause significant adverse safety, security, access, and other impacts to

8-1

[1] TLC joins in the comments submitted by the operator of the Refinery, Torrance Refining Company ("TORC"), and incorporates them herein by reference.

our employees, operations, contractors, and surrounding community and environment that have not been adequately reviewed and addressed in the DEIR. 8-1

We join in the comments from TORC noting that the California Environmental Quality Act ("CEQA") and its regulatory CEQA Guidelines require the DEIR to fully advise the public of all potential significant environmental impacts of the Proposed Project and assess potentially feasible Project alternatives that can help avoid or substantially mitigate these impacts. *See* 14 C.C.R. ("CEQA Guidelines") § 15126.4(a)(1). The DEIR does not identify many of the safety, security, access, and other impacts associated with the Proposed Project's proximity to the Refinery, let alone discuss proposed feasible Project alternatives that could mitigate or avoid those impacts. 8-2

We also share TORC's concern that many of these issues have resulted from Metro's inadequate consultation with TORC and TLC prior to the release of the DEIR. Particularly concerning is Metro's proposal to make final decisions on alignment and other project options by Spring 2023, even as the DEIR remains substantially incomplete. We urge Metro to have this proper consultation and avoid rushing the project through without properly assessing and disclosing to the public the full range of environmental consequences and impacts flowing from the Proposed Project. TLC reserves the right to supplement these comments as needed to capture any additional concerns it may identify in its ongoing review of the DEIR. 8-3

I. The Proposed Project Would Require an Easement Through or Acquisition of Refinery Property That Would Cause Significant Adverse Impacts to TLC

As TORC has mentioned in its comment letter, Metro only approached TLC and TORC in the past month – well after the DEIR's release – that Metro would need to either obtain an easement through or acquire a significant section of the TORC Refinery Property for an access road to be used by the Project. TLC's ROWs, containing the Assets, are located in this area, which runs along the south perimeter of the Refinery immediately adjacent to the existing rail line property owned in parts by both BNSF and Metro. 8-4

The access road at issue is used by TLC's vehicles, employees, and contractors, and includes a number of substructure facilities including two critical Assets operated by TLC. Ready access to these critical pipelines is required for regular routine inspection and maintenance pursuant to various Federal and State regulations (*see, e.g.*, 49 CFR Part 195, Subpart F. Project development impacting access to, or the path of the Assets could require the Assets to be altered or moved. Alteration or relocation of these pipelines and related infrastructure would necessitate an extensive period of

construction in and around the impacted area, causing additional noise, air quality, traffic, and other impacts associated with such construction activities. Additionally, any alteration or relocation would require the pipelines to be shut down for some extended period of time, which would adversely impact TORC and TLC operations and California consumers.

The Proposed Project's annexation of a large section of the existing TORC's Refinery's southwestern perimeter for an access road will present a host of logistical and operational challenges for the Proposed Project, TORC, and TLC that have not been addressed at all in the DEIR. Questions of whether and how the Proposed Project, TORC's Refinery, and TLC's Assets could accommodate the other's operations are numerous and complex. TORC and TLC believe that Metro should engage an independent third-party expert consultant to study the impacts of the proposed access road annexation and any other encroachment on existing TORC Refinery property and TLC's Assets, identifying all of the work that would be required to ensure TORC's Refinery's and TLC's ROWs' ongoing compliance with environmental, emergency response, safety, and related requirements, if the Proposed Project were to require an easement or acquisition for an access road or any other encroachment through the affected area. The results of this study should be shared with TORC, TLC, and the public and fully incorporated into any future revised DEIR, along with an analysis of the potential impacts of the work required and the potential alternatives to the Proposed Project that could mitigate or avoid these issues and impacts.

8-4

II. The Project Would Require the Relocation of TLC's Active Jet Fuel Line Along the Route of Proposed Option 1

In addition to the concerns raised in Item I, within the past month TLC was notified of the potential relocation of its active Jet Fuel Pipeline at approximately five locations north of the Refinery, along the proposed route identified as Option I. Again, the pipeline that operates within the railroad property in TLC's ROWs is critical to the operation of LAX. The coordination of downtime of this Asset to accommodate the proposed alterations or relocations of the pipeline would have a significate impact on the operations of TORC, TLC, LAX, and California consumers. In addition, as noted above, alteration or relocation of this pipeline would necessitate an extensive period of construction in and around the affected area, causing additional noise, air quality, traffic and other impacts associated with construction activities.

8-5

Again, as discussed above, TLC urges Metro to engage a third-party expert to assess the potential impacts associated with the alteration or relocation of pipelines, particularly critical ones like TLC's pipeline to LAX, along with potential alternatives to mitigate or avoid those impacts. The results of this study should be incorporated into

a revised and recirculated DEIR for further review and comment by the public before Metro proceeds with the Proposed Project. 8-5

III. The Proposed Timeline for Selection of a Project Alternative is Unrealistic and Disregards the Time Needed to Address the Important Potential Impacts Discussed Above

The DEIR notes that Metro staff intend to present a final recommendation on their Proposed Project route(s) alignment by Spring 2023, ostensibly as part of or a prelude to issuance of a Final EIR. TLC believes that the issues identified above are both challenging and complex. But these impacts must be addressed now. They are reasonably foreseeable and significant, and their analysis (and analysis of potential mitigation measures) cannot be "piecemealed" or deferred to a later date. *See* Cal. Pub. Res. Code § 21065; CEQA Guidelines §§ 15126.4(a)(1)(B), 15378(a). While TLC stands ready to work cooperatively and collaboratively with Metro staff in assessing the impacts related to the Proposed Project's proximity to TLC's Assets, the full picture of potential impacts from the Proposed Project simply will not be known by this spring. TLC urges Metro staff to undertake a full and fair analysis of all the Proposed Project's potential impacts, and not to cut this process short to meet artificial or unrealistic deadlines. 8-6

* * *

Again, TLC appreciates the opportunity to provide these comments on the Proposed Project. Despite the concerns outlined above, we remain ready and willing to engage with Metro staff to address these concerns and assess the full range of the Proposed Project's potential impacts, alternatives, and mitigation measures to alleviate or avoid these impacts.

Very truly yours,

Mr. Neal Sahni
Vice President Logistics Operations

Hello Metro,

I am a frequent rider on the C line and I applaud this project going into Torrance, a sorely underserved city by transit.
-Preference: I prefer the main, original option down the Harbor subdivision. Go with the simple one at grade. If it is needed to trench, avoid it as much as possible to deliver this project. Community backlash is fierce but the cheapest option is the best.
Suggestions:
-Connect the Galleria and Transit center by foot/path to maximise usability regardless of alignment.
-Also, if possible squeeze in a station for Lawndale. They will eventually need it even if their short sighted politicos do not. The line appears to be elevated at that area anyway and a station should be easier to add now than later.

9-1

9-2

Thanks for reading and lets get this done.

Sincerely,
MJ Anderson

This is the second time I have forwarded this message. Isn't it funny I never get a reply! I don't know why you are having meetings in February and waiting everyone's time. For what? You obviously are not going to put the Green Line down Hawthorne Blvd. The transit station is completed and isn't it wired it's right next to the railway tracks that you will put the Green Line down. You have no idea what this will do to my neighbor hood. I live miles away from the existing Green Line and I can hear it. If you put it down the railroad tracks it will be less than a block from my house. That means constant noise! The poor people right next to it. There are only 2 entrances to the Lawndale neighborhood to the west (Inglewood Avenue).

10-1

By the way, many years ago the Red Car (Pacific Electric) went down the middle of Hawthorne Blvd. It was the most efficient transportation ever. It went every where. Redondo Beach (right to the water). Look it up! It was replaced with , that take you forever to get any where. Now you're trying to recreate what we already had. Only you don't call it the RED CAR. Give Lawndale a break, they already put the freeway thru us. What's next!

PLEASE READ MY ORIGINAL MESSAGE.

Just got your C Line (Green) Extension to Torrance on my fence. I am located between the railroad and Hawthorne Blvd. I went to all your meetings. I can tell you that you don't want our opinion, because you already made up your minds before the meetings. Why you spent money to print this little paper is a mystery to me.

There is no alternative to Hawthorne Blvd (which would be quieter for that residential area) because you have already, almost completed the Redondo Beach Transit Station next to Target.

So do you think we are fools? Your just not thinking of the people in my neighborhood and never did !! They make noise!

Submission 11

From: Dierking, Mark
To: Isaiah Ford
Subject: FW: Metro"s plan to align the C Line/Green Line along the ROW
Date: Tuesday, February 14, 2023 2:13:24 PM

Mark Dierking
Community Relations Manager – Gateway/South Bay
Local Government & External Affairs
[redacted]

Our mission is to provide world-class transportation for all.

From: MARG ALEXANDER [redacted]
Sent: Tuesday, February 14, 2023 2:06 PM
To: Dierking, Mark [redacted]
Cc: Mieger, David [redacted]
Subject: Metro's plan to align the C Line/Green Line along the ROW

Dear Mr. Dierking and Mr. Mieger:
I am an eighty-year-old resident at Breakwater Village, a senior complex in Redondo Beach. I am writing to let you know of my concerns regarding Metro's plan to align the C Line/Green Line along the ROW which places the light rail adjacent to our complex.

If the project goes on the ROW, according to the DEIR, the light rail will have a significant impact on our complex. The railroad currently passes by our complex twice daily, and we are already witnessing structural damage to our complex as a result of the vibration and pollution from this twice daily occurrence. I am greatly concerned about the impact on our wellbeing as senior citizens, the structural integrity of our building and the value of our property once Metro allows trains on the ROW that will traverse the rails every six to twelve minutes for twenty hours out of the day. 11-1

Of even greater concern is the existing irreparable sinkhole on Ruxton and effect of construction and the vibration from the continuous running of high-speed trains in an area with significant soil instability. Even more alarming is the fact that this construction will be located right next to multiple pressurized liquid petroleum lines that occupy the ROW. What will be the impact of moving and adding two tracks between the Breakwater Village complex and the digging of a trench behind the complex? What safeguards will be in place during all these phases? What is Metro's reasoning with this situation? So, we blow up the lives of a few people, possibly literally and without a doubt figuratively. That's somehow okay because many of them are senior citizens? This all smacks of a callous disregard for the 11-2

lives of others, particularly senior citizens. 11-2

What quality of life can we expect here at Breakwater where the majority of us, have our life savings invested in our properties? What about the health of an average of three hundred senior citizens residing at Breakwater Village? What about the pollution of the area during the construction and then afterwards from the trains flying by our complex? What about the dangers inherent in moving the utilities from the Right of Way? So many questions, Metro and as I see it few answers. 11-3

I spent forty years in education as an LAUSD employee. I struggled and saved to buy a home at Breakwater, only to have my life unended by an ill thought out and potentially dangerous plan about to be implemented by Metro without any concern or care for its impact on human beings. 11-4
I implore you to take action to prevent this disaster to senior citizens at Breakwater Village in Redondo Beach.

Sincerely Yours,
Margie Alexander

From: Janet Lindquist
To: greenlineextension@metro.net
Subject: Green Line Extension
Date: Saturday, January 28, 2023 12:13:28 PM

To Whom it May Concern:

Thank you for the mailer regarding the green line extension, and for requesting feedback from the community. I watched the 3D simulation video and really feel the safest and best option is the one that elevates the trains over Hawthorne Blvd. It puts the stations closer to businesses that can benefit from the people using the Metro. It also limits the dangers to pedestrian traffic. 12-1

Hope this helps in making such an important decision.

Sincerely,

Janet Lindquist

Submission 20

From: Grace Peng [redacted]
Sent: Thursday, February 2, 2023 2:01 PM
To: GreenlineExtension
Subject: Prefer alternative Metro ROW Alignment, Elevated/Street Level

I live in the Artesia Corridor, about 1 mi west of the ROW.
I want transit that is fast and cost-effective.

After attending your open house, I realized that the cost difference and construction delays for trenching or building along Hawthorne is just not feasible. Moving petroleum pipelines to build a trench would be a nightmare. Install sound walls and quiet zone street crossings. 20-1 20-2

For the same cost as trenching or tracks on Hawthorne, we can build elevated/street grade light-rail along the Metro ROW (which is closer to my home, yippee) AND have a bus lane and complete streets on Hawthorne. 20-3

My reservations about the existing ROW is that it doesn't hit the businesses along Hawthorne that I frequent. But, with a bus priority lane and complete streets, I would be zipping along on my ebike or on a bus on Hawthorne. I absolutely hate driving on Hawthorne and would take transit or bike on it if it was safe and convenient. 20-4

In fact, I urge you to do the bus priority lane and complete streets on Hawthorne ASAP. 20-5

If we use the existing ROW, we owe it to the neighborhoods affected to build sound walls and quiet zone street controls. 20-6

thank-you for letting me comment,
Grace Peng, PhD

Georgia Sheridan, Project Manager
Los Angeles County Metropolitan Authority
One Gateway Plaza, Mail Stop: 99-22-3
Los Angeles, CA 90012

Dear Ms. Sheridan:

RE: Metro C-Line (Green) Extension to Torrance (DEIR)

Thank you for including the City of Torrance in the notification list for the proposed C-Line Extension to Torrance Draft Environmental Impact Report (DEIR). The City of Torrance has reviewed the DEIR and has the following comments:

- **Page 2-20: Figure 2.3-13:** The North arrow is incorrectly oriented with respect to true north and the centerline of Crenshaw Blvd. Also, please verify orientations in Figure 2.3-14 on Page 2-21 if a change is made on Page 2-20. 21-1

- **Page 2-36: New South Bay Galleria Station Mid-Block Crossing:** Torrance STRONGLY opposes any new pedestrian crossing on Hawthorne Blvd related to the South Bay Galleria Station due to multiple concerns and the absence of a Traffic Study. The proposed mid-block crossing is located only 360 feet south of the existing traffic signal at the Hawthorne Blvd/Artesia Blvd intersection and an undisclosed close distance not provided in the DEIR north of the signalized Hawthorne Blvd/177th St intersection. This proposal should be analyzed further in a Traffic Study to identify potential negative impacts to traffic circulation; traffic delay; LOS impacts at the Hawthorne Blvd/Artesia Blvd intersection and the Hawthorne Blvd/177th St intersection; and safety and other impacts. The Hawthorne Blvd/Artesia Blvd intersection served an average daily traffic (ADT) of 61,000 vehicles in 2017. The ADT has likely increased to 64,000. An additional signal for a Mid-block crossing in close proximity to other signalized intersections will likely have overall negative impacts, even with the implementation of programmed signal coordination. 21-2

  Furthermore, the Traffic Study should also analyze the potential impacts to Torrance's adjacent residential streets (i.e. 175th Place, W. 176th Street, 177th Street) and privately-owned parking lots on the east side of Hawthorne Blvd, south of Artesia Blvd. It is very likely that a proposed signalized Mid-block crossing will introduce new vehicle traffic and also increase on-street parking demand on these residential streets and in the private parking lots for those wishing to enter the South Bay Galleria Station platform

from the east side of Hawthorne Blvd. This is because there is no proposed designated parking area in Torrance for the South Bay Galleria Station. Also, these residential streets and private parking lots are geographically convenient for non-Torrance residents that will use the South Bay Galleria Station versus the parking areas designated for the Redondo Beach Transit Center and/or other available parking areas on the west side of Hawthorne Blvd. The daily intrusion of non-residents, related to the C-Line usage, parking in a residential area would reduce on-street parking availability for Torrance residents; negatively impact quality of life for Torrance residents; and require the City of Torrance to mitigate the impacts imposed on its residents. The daily intrusion of non-residents into a private parking lot would reduce parking for business patrons and could have negative economic impacts to Torrance businesses.

An option to consider is to construct a pedestrian bridge over southbound Hawthorne Blvd with access only from the west side of Hawthorne Blvd to/from the South Bay Galleria Station platform. Access from the east side would be provided at the Hawthorne Blvd/Artesia Blvd intersection, a close walking distance of only 360 feet further for Torrance residents residing on residential streets on the east side of Hawthorne This option would: eliminate the need for a new traffic signal; reduce/eliminate parking impacts to adjacent residential streets and private parking lots in Torrance; and allow for a functional, designated parking area on the west side of Hawthorne Blvd.

21-2

- **Page 2-36: 177th Street:** The proposed elimination of one of the two northbound left-turn lanes should be analyzed further in a Traffic Study to determine potential negative impacts. No data is provided to indicate a decrease in the northbound left-turn movement volume and, therefore, this lane reduction would require an increase to the GREEN time for this protected left-turn movement in order to accommodate the same northbound left-turn volume in one left-turn lane versus two. Without the increase in GREEN time, left-turning vehicles will queue into the #1 northbound through lane, thereby blocking one through lane. This would result in vehicle delay; vehicle idling; driver frustration; and cause the potential for increased rear end and side swipe collisions. Conversely, the increase in left-turn GREEN time will increase delays for other intersection approaches. The Traffic Study should obtain the existing left-turn movement volume; calculate the projected left-turn movement volume; calculate the actual length needed for the longer single left-turn lane; analyze and design new traffic signal timing; calculate a post-project intersection LOS and the LOS at other affected intersections north and south of 177th St.

21-3

- **Page 2-36: 179th Street:** The proposed new traffic signal should be analyzed further in a Traffic Study to identify potential negative impacts to traffic circulation; traffic delay; LOS determination; and safety and other impacts, including diversion of traffic onto 179th Street due to the proposed new traffic signal. A signal warrant analysis should be included. Additionally, it is not specified if you are proposing to extend the northbound or southbound left-turn lane.

21-4

- **Page 2-36: 180th Street:** The proposed median gap closure should be analyzed further in a Traffic Study to identify potential negative impacts to traffic circulation, including diversion of traffic onto 179th Street due to the proposed median closure. 21-5

- **Page 2-39: South Bay Galleria Station:** Torrance STRONGLY opposes any new pedestrian crossing in Hawthorne Blvd related to the South Bay Galleria Station. Instead, consideration should be given to constructing a pedestrian bridge overcrossing. See previous comment for Page 2-36: New South Bay Galleria Station Mid-Block Crossing. 21-6

- **Page 2-40:** Figure 2.3-29 should be revised to indicate the proposed new crosswalks are signalized and also include distances to Artesia Blvd (signalized) and 177th St (signalized). 21-7

- **Pages 2-54 and 2-55:** Consider including a row at the bottom of each Table to list the total duration in months and total daily truck loads for the Proposed Project and each Option. 21-8

- **Page 2-55: Table 2.4-3 Hawthorne Option Construction Schedule:** For the "LRT Guideway Bridges" phase it lists a duration of 35 months for 278,700 CY of soil import/export. Please verify if the duration is accurate. This is only 10 months (40%) longer than the duration of the similar phase shown on Page 2-54 in Table 2.4-1 Proposed Project-Construction Schedule of 25 months for 66,500 CY of soil import/export. Yet, the volume of soil import/export is more than 4 times (400%) greater. 21-9

- **Page 2-58:** Consider adding a projected schedule for permitting with State agencies. It is expected that the permit process will be longer for the Hawthorne Blvd option, when compared to the Projected Project and/or Trench option. 21-10

- **Page 3-4 Table 3.0-1:** The Map #1 project in Torrance is significantly complete and status should be changed to "Construction". 21-11

- **Page 3.1-1: Federal Regulations: American with Disabilities Act:** Bicycling and Walking: Hawthorne option would create over half a mile walk through dense parking lots of the South Bay Galleria in order for people to connect between buses and train from new train station on Hawthorne to the new Redondo Beach Transit Center. This could potentially create more issues for those who have mobility challenge to be able to connect between buses and train. 21-12

- **Page 3.1-3: Senate Bill 743, Transportation Impacts:** Although SB 743 requires the use of Vehicle Miles Traveled to evaluate traffic impacts, local agencies can require that traffic circulation enhancements be constructed to improve traffic conditions that would otherwise be worsened by a proposed project. 21-13

- **Page 3.1-47: Bicycling and Walking:** Hawthorne option would create over half a mile walk through dense parking lots of the South Bay Galleria in order for people to connect between buses and train from new train station on Hawthorne to the new Redondo Beach Transit Center. This could potentially create more issues for those who have mobility challenges to be able to connect between buses and train. 21-14

- **Page 3.1-15: PF-T-1 CTMP:** It appears the CTMP will be developed and prepared by contractors during the construction phase. The CTMP review, revision and approval process by each local agency should be considered in either the permitting schedule, if added, or as part of early activity during construction. See previous comments for Pages 2-54, 2-55 and 2-58. 21-15

- **Page 3.1-21: Torrance TC Station (Proposed Project)** – This section should say (All Options) as they all will end at the Torrance TC Station. 21-16

- **Page 3.1-38: South Bay Galleria Station (Hawthorne Option):** The prior history of various collisions from 2014 through 2018 is a concern that further supports strong consideration be given to constructing a pedestrian bridge overcrossing instead of a new pedestrian crossing in Hawthorne Blvd. See previous comment for Page 2-39. 21-17

- **Pages 3.1-54 and 3.1-55: South Bay Galleria Station Mid-Block Crossing:** Torrance STRONGLY opposes any new pedestrian crossing in Hawthorne Blvd related to the South Bay Galleria Station. Instead, consideration should be given to constructing a pedestrian bridge overcrossing. See previous comment for Page 2-36: New South Bay Galleria Station Mid-Block Crossing. 21-18

- **Page 3.1-55: 179th Street:** The proposed new traffic signal should be analyzed further in a Traffic Study. See previous comment for Page 2-36 179th Street. 21-19

- **Page 3.1-56: South Bay Galleria Driveway:** See previous comment for Page 2-36: New South Bay Galleria Station Mid-Block Crossing. 21-20

- **Page 3.1-57: 177th Street:** See previous comment for Page 2-36: 177th Street. 21-21

- **Page 3.1-57: 179th Street:** See previous comment for Page 2-36: 179th Street. 21-22

- **Page 3.1-57: 180th Street:** See previous comment for Page 2-36: 180th Street. 21-23

- **Page 3.1-57: 186th Street:** The realignment of the northbound left turn lane should be designed to provide the maximum possible clearance/separation between the northbound left-turn lane and southbound #1 travel lane. Subsequently, it is recommended that double-double yellow pavement markings be used for lane separation instead of flexible vertical delineators due to the anticipated problematic maintenance needs of frequently having to replace missing or damaged delineators. 21-24

- **P3.2-5:** Zoning code was last updated on January 1, 2023 (ADU Code Updates). 21-25

- **P3.2-6:** Description of Hawthorne Boulevard Corridor Specific Plan (HBCSP) should also describe intent and purpose of HBCSP is to guide actions within the area so that businesses can continue to prosper and the City of Torrance can continue to enjoy a healthy retail tax base. Furthermore, the design concept envisioned for the North Torrance District is that of a northern gateway to the City and the City's most prominent commercial boulevard, providing an active, community oriented, commercial environment. The "Hawthorne" option requires additional analysis on potential significant impacts to Land Use and the adopted plan based on design guidelines and intent for the North Torrance Sub District. 21-26

- **3.2-13: Torrance TC Station:** The Mary K. Giordano Regional Transit Center (operated under Torrance Transit System) will have 250 surface parking spaces along with 1,000-space parking structure that is currently under the design phase. The parking structure project will have 4 levels, up to 1,000 stalls, and electric vehicle charging stations. 21-27

- **P3.2-21:** Zoning along Hawthorne Boulevard along City of Torrance is predominantly single-family residential along the east side of Hawthorne Boulevard between Redondo Beach Boulevard on the north and 180th Street to the south; Commercial uses, including vehicle dealerships, restaurants, auto related businesses, between 180th and 190th Streets, with a mobile home residential community along the west side of Hawthorne Boulevard between 186th Street and along the Proposed Project rail line; uses industrial uses near the terminus of the TC. Description of land uses should reflect path of extension to the south. 21-28

- **P3.2-23:** Assumptions of Hawthorne option construction should take into consideration years and not months due to oversight and review from additional agencies. 21-29

- **P3.2-26:** Include HBCSP in table 3.2-5 in addition to General Plan (GP) as it is a local land use policy. 21-30

- **P3.3-117:** Analyze shadows casting on adjacent properties on Hawthorne Boulevard Option and include proposed soundwalls. 21-31

- **P3.3-120:** 3.3-7.3 Hawthorne Option – Aesthetics of additional infrastructure should be considered as degradation of views and cumulative impacts should be taken into account. 21-32

- **P3.4-30:** Sensitive receptors section did not take into account Excelsior Preschool located at 19801 Mariner Avenue (Figure 3.4-4). 21-33

- **P3.7-28: Section 3.7-4.1.2 Operational Impacts:** Operational Impacts were determined to be "Less than Significant Impact with Mitigation" with respect to the Centromadia parryi ssp. Australis (Common name Southern Tarplant), a 1B.1 Status Plant, at the Torrance Tarplant Preserve parcel (LA County Assessor Parcel # 7352-002-914). 21-34

- Unfortunately, the proposed mitigation measures do not assess the impact of the reduced watershed following the 12'-5" to 12'-7" (Appendix-2A: RW-120 & RW-121) expansion of the right-of-way via easements into the subject 2-acre parcel that is cited in the DEIR. The viability of the stated 3 to 1 replacement ratio goal set by the City's planned implementation of the Torrance Tarplant Preserve (Mitigation Measure BIO-1; Adopted Mitigated Negative Declaration (EAS13-00002, SCH#2014121003) may be impacted by the reduced watershed. 21-35

- **Page 4-25: High-Frequency Bus Alternative:** This section should also mention that the proposed High-Frequency Bus (HFB) Alternative would create duplication of service for Torrance Line 8. The HFB Alternative would also require a transfer at the Redondo Beach (Marine) Station in order for riders to continue further. This increases travel time and delays and becomes less attractive options compared to light rail. 21-36

- **MM VIB -1:** Require noticing of surrounding businesses near Del Amo Bridge regarding pile driving activities at least 72hrs in advance, in coordination with the City of Torrance Public Works Department, due to Significant and Unavoidable Impact. 21-37

- **MM-NOI2:** Information on proposed soundwalls is vague. Additional detail is required on heights and potential impacts to surrounding uses due to shade. 21-38

- **MM-BIO2:** Please Include El Nido Park for nesting bird surveys. 21-39

- **P3.10-21: Fig3.10-2:** Amie Sump identified instead of Pioneer Sump. 21-40

- **P3.15-22: Figure 3.15-4**: Educational Facilities map is missing Excelsior Preschool located at 19801 Mariner Avenue. 21-41

- **P3.15:** Public Services - Ensure coordination with TPD/TFD on construction detours. 21-42

- **Pages 4-49 Table 4.5-1 Comparison of Alternatives:** Torrance supports the Proposed Project in the Metro R.O.W. and opposes the Trench Option and the Hawthorne Option. Table 4.5-1 clearly reveals that impacts resulting from the Trench Option and the Hawthorne Option DO NOT avoid and DO NOT substantially lessen the significant majority of the significant effects of the project, when compared to the Proposed Project impacts. 21-43

- **Appendix 2-A, Drawing RW-763:** depicts the Hawthorne Option right of way expansions for both additional right-of-way acquisition and permanent easement requirements. The Hawthorne option would result in full and partial takings for at least two parcels, parcels 4084-024-086 and 4084-024-4026 respectively. In addition, significant economic disruptions would result in two commercial operations immediately north that include two regional car dealer operations, parcels 4084-024-023 and 4084-024-063. The four parcels represent an annual sales, property and business license tax revenues for the City that exceed $1.04 million. In an ever increasing environment, where additional pressure is being placed on local agencies, the economic impact of the Hawthorne Option would lessen the City of Torrance's ability to provide and maintain existing levels of service.

21-44

As previously indicated in a letter dated March 3, 2021 to Dolores Roybal Saltarelli for the preparation of the DEIR, the City of Torrance continues to support the Proposed Project and strongly opposes the Trench and Hawthorne Alternatives due to additional time required, additional costs, and negative economic impacts to commercial businesses along Hawthorne Boulevard during construction and operation of the LRT. The Proposed Project would commence in spring 2027 and be completed in approximately 5 years, while the Trench Option would commence in spring 2027 and require 8 years to build and the Hawthorne Option would not commence until 2029 and take 6 years to build. Furthermore, the Trench Option is projected to cost approximately $900M more than the Proposed Project and the Hawthorne Option is projected to cost approximately $1 Billion more than the Proposed Project. While CEQA does not require consideration of cost differences between alternatives, it is important to note that neither Option is an alternative that avoids or substantially lessens the significant majority of project impacts. The $900M to $1 Billion should be re-directed to fund other eligible critical projects in the South Bay area, and/or be used to address potential environmental impacts related to other eligible projects in the South Bay area.

21-45

The City of Torrance appreciates the opportunity to comment and looks forward to the incorporation of these comments into the analysis when completed. We have enclosed a copy of letters from Torrance related to this matter. Should Metro need to contact the City of Torrance please do not hesitate to contact the Community Development Department at 310.618.5990.

Sincerely,

ARAM CHAPARYAN
CITY MANAGER

Attn: Mr. Phillip A. Washington, CEO/General Manager

RE: Proposed Green Line Extension to Torrance

Dear Mr. Washington,

On behalf of the City of Torrance, I am writing to convey our official position on the four proposed alternatives for extending the Green Line to Torrance. After careful review and analysis of the four alternatives, the City of Torrance recommends the Metro Board proceed with a full project Environmental Impact Report (EIR) to study **Alternative 1.** This alternative is fully funded and provides the best opportunity for project acceleration and completion by 2028. Implementation of Alternative 1 will create opportunity for greater regional connectivity, economic growth and traffic mitigation for the South Bay and all of Los Angeles County.

21-46

If Alternative 1 is not selected, Torrance recommends **Alternative 3** as a secondary/compromise option. We are aware that Alternative 3 is not presently fully funded and will require additional capital investment in order to complete. However, this option maintains certain components of the infrastructure needed for potential growth and service enhancement in the region.

21-47

The future of public transportation and regional connectivity will be heavily impacted by the decisions made in the selection of one of these four alternatives. As you know, there is presently limited light rail service into the South Bay region of Los Angeles County. Hence, this crucial enhancement of the transportation system is essentially our one great opportunity to build the infrastructure needed for the next several decades and generations of residents living and working in the South Bay. Therefore, in our assessment, **Alternative 1** is the best alternative to address all needs, present and future, for the South Bay.

21-48

If you have any questions, or if there is anything that we can do to continue our collaboration and advocacy to strengthen and enhance public transportation in the region, please do not hesitate to contact Kim Turner, the Director of Torrance Transit at (310) 618-6245.

Sincerely,

Patrick J. Furey, Mayor
City of Torrance

Dolores Roybal Saltarelli, Project Manager
Los Angeles County Metropolitan Transportation Authority
One Gateway Plaza, Mail Stop 99-22-4
Los Angeles, CA 90012

RE: Metro C Line (Green) Extension to Torrance Project

Dear Ms. Roybal Saltarelli,

On behalf of the City of Torrance, I am writing to convey our official position on the two proposed alternatives for extending the Metro C Line to Torrance (Project), and to provide comments related to preparation of the Draft Environmental Impact Report (Draft EIR) for the Project.

The City of Torrance supports the intent of the Project to provide high frequency transit service through the South Bay that will serve the City of Torrance and other communities. The City of Torrance appreciates being notified of the Revised and Recirculated Notice of Preparation (NOP) and Comments and Scoping Meeting for the Project, and that an Environmental Impact Report will be prepared in compliance with the California Environmental Quality Act.

After careful review of the two alternatives, the City of Torrance continues to affirm its support of Alternative 1. This alternative utilizes an existing railroad right-of-way as the most cost-effective and efficient route to the future Torrance Regional Transit Center, which reduces the environmental footprint and is least impactful. It is also fully funded and provides the best opportunity for project acceleration and completion by 2028. 21-49

The City of Torrance strongly opposes the Alternative 2 alignment. Alternative 2 would cause significant negative impacts in Torrance, specifically to: aesthetics; air quality and greenhouse gas emissions; noise and vibration; public services; traffic and transportation; hazards and safety; and the local economy. 21-50

The City of Torrance recommends the Draft EIR consider for each Project alternative the following topics of environmental analysis:

3031 Torrance Boulevard • Torrance, California 90503 • 310/618-2801 • FAX 310/618-5841

Air Quality and Greenhouse Gas Emissions: Assess the potential air quality and greenhouse emissions impacts to residential zones and park recreation located east of the Metro right-of-way. Include the potential impacts to sensitive receptors including Torrance residential communities, public and private schools, childcare facilities, and City facilities within a half-mile radius. 21-51

Hazards and Safety: Assess the potential construction hazard and operating hazard impacts to sensitive receptors including Torrance residential communities, public and private schools, childcare facilities, and City facilities within a half-mile radius. 21-52

Hydrology and Water Quality: Assess the potential hydrology and water quality impacts to Pioneer Sump located adjacent to the Metro right-of-way. 21-53

Noise and Vibration: Assess the potential noise and vibration impacts to residential and commercial zones and park recreation located along the Metro right-of-way. Horn soundings, crossing gate bells, rail noise, and construction noise and vibration may create impacts for adjacent residents and businesses. Include the potential impacts to sensitive receptors including Torrance residential communities, public and private schools, childcare facilities, and City facilities within a half-mile radius. The residential communities near the Alternative 1 alignment are largely composed of duplexes, multifamily structures, planned developments, and manufactured homes. Include detailed maps showing the locations of any proposed sound walls along with elevation views for City review and comment. Develop a mitigation plan to reduce these impacts for City review and comment. 21-54

Public Services and Recreation: Assess the potential recreation impacts to park facilities at El Nido Park located adjacent to the Metro right-of-way. Include detailed maps showing the proposed alignment and any proposed removal of trees or impact to park facilities. Develop a mitigation plan to reduce these impacts for City review and comment. 21-55

<u>Alternative 2: Hawthorne Boulevard</u>

Aesthetics: Assess the potential aesthetic impacts to residential and commercial zones located along Hawthorne Boulevard. The equipment and power traction system to operate the light rail train has the potential of creating negative aesthetic impacts along Hawthorne Boulevard, especially to the residential zones located east and west of Hawthorne Boulevard. In addition, the poles and the overhead wiring system, along Hawthorne Boulevard will have an adverse impact to the aesthetic value of the commercial corridor. Several commercial properties and nearby residential properties could be significantly impacted where the alignment rejoins the Metro right-of-way near 190th Street. The elevated portion of Alternative 2 from 182nd Street to 190th Street would pose fewer physical conflicts with vehicles, bicycles and pedestrians but would require a very large supporting structure with abutments and support columns that would occupy much if not all of the planted center median width, which may cause a significant impacts to nearby residential properties from light casting downward and excess glare. The elevated portion may also cause shadow impacts at sunrise and sunset to nearby residential properties. In addition, assess the potential impacts from loss of (removal or trimming) significant trees and vegetation along Hawthorne Boulevard. 21-56

Air Quality and Greenhouse Gas Emissions: Assess the potential air quality and greenhouse gas emissions impacts resulting from construction along Hawthorne Boulevard. This alternative would be highly visible and would take a significant amount of time to complete, and a thorough analysis and plan should be included to reduce construction air quality and excess greenhouse gas emissions impacts along the commercial corridor. Include the potential impacts to sensitive receptors including Torrance residential communities, public and private schools, childcare facilities, and City facilities within a half-mile radius. 21-57

Hazards and Safety: Assess the potential construction hazard and operating hazard impacts to sensitive receptors including Torrance residential communities, public and private schools, childcare facilities, and City facilities within a half-mile radius. At-grade crossings are undesirable as a rule and new crossings are highly discouraged due to the safety risks they pose to the public regardless of the safety measures employed. Additionally, the frequent and recurrent blockage of traffic on Hawthorne Boulevard caused by the proposed train may increase vehicle congestion at the proposed crossings and could negatively impact response times for emergency vehicles. 21-58

Hydrology and Water Quality: Assess the potential hydrology and water quality impacts to Pioneer Sump located adjacent to the Metro right-of-way. 21-59

Noise and Vibration: Assess the potential noise and vibration impacts to residential and commercial zones located along Hawthorne Boulevard. Horn soundings, crossing gate bells, rail noise, and construction noise and vibration may create impacts for adjacent residents and businesses. Include the potential impacts to sensitive receptors including Torrance residential communities, public and private schools, childcare facilities, and City facilities within a half-mile radius. The residential communities near the Alternative 2 alignment are largely composed of single-family homes, duplexes, multifamily structures, planned developments, and manufactured homes. Include detailed maps showing the locations of any proposed sound walls along with elevation views for City review and comment. Develop a mitigation plan to reduce these impacts for City review and comment. 21-60

Land Use and Planning: Assess the potential impacts to existing residential and commercial land uses along Hawthorne Boulevard. An at-grade rail line in the median as proposed from 166th Street to 182nd Street may cause a significant physical disconnection of the residential neighborhoods located east and west of Hawthorne Boulevard. Physical disconnection may also be further contributed by the existing high power transmission lines located between 177th Street and 178th Street. The elevated portion of Alternative 2 from 182nd Street to 190th Street would pose fewer physical conflicts with vehicles, bicycles and pedestrians but would require a very large supporting structure with abutments and support columns that would occupy much if not all of the planted center median width, which may cause a significant physical disconnection of the El Nido neighborhood west of Hawthorne Boulevard from the rest of the City. 21-61

Transportation and Traffic: Assess the potential traffic impacts to Hawthorne Boulevard and to residential and commercial uses along the corridor. Hawthorne Boulevard is the busiest roadway in Torrance carrying in excess of 69,000 vehicles per day. Construction of the C Line at-grade would impact five signalized intersections and three unsignalized intersections along Hawthorne Boulevard from Redondo Beach Boulevard to 190th Street. An at-grade rail line in the median as proposed from 166th Street to 182nd Street would likely require either the elimination of left-turn lanes at several of these intersections or street widening that would push Hawthorne Boulevard traffic closer to adjacent residential and commercial uses. Restriction of turning movements onto or off of Hawthorne Boulevard may be required and would cause the diversion of traffic to other routes and cut-through traffic in residential neighborhoods. At-grade rail systems would require the installation of traffic signal pre-emption systems that would stop vehicular traffic with signals, bells, and gates as trains pass through. At-grade crossings are undesirable as a rule and new crossings are highly discouraged due to the safety risks they pose to the public regardless of the safety measures employed. The frequent and recurrent blockage of traffic by the proposed train would cause increased vehicle congestion at the proposed crossings and would negatively impact response times for emergency vehicles. Additionally, the distance between the Alternative 2 alignment and the Redondo Beach Transit Center should be evaluated for connectivity and efficiency between transit systems. The approximate three-quarter mile distance between the two would reduce effectiveness to an efficient multi-modal outcome and not convenient for future users that have physical mobility limitations. 21-62

the installation of traffic signal pre-emption systems that would stop vehicular traffic with signals, bells, and gates as trains pass through. At-grade crossings are undesirable as a rule and new crossings are highly discouraged due to the safety risks they pose to the public regardless of the safety measures employed. The frequent and recurrent blockage of traffic by the proposed train would cause increased vehicle congestion at the proposed crossings and would negatively impact response times for emergency vehicles. Additionally, the distance between the Alternative 2 alignment and the Redondo Beach Transit Center should be evaluated for connectivity and efficiency between transit systems. The approximate three-quarter mile distance between the two would reduce effectiveness to an efficient multi-modal outcome and not convenient for future users that have physical mobility limitations.

Economic Impact: Assess the potential economic impacts to businesses located along the Hawthorne Boulevard commercial corridor that may occur with Alternative 2 both during construction due to reduced access or traffic detours, and after construction. Include an assessment of tax base for the City of Torrance during and after construction resulting from Alternative 2. Include the potential loss of existing commercial operations located on commercial and industrial properties and the impact to nearby residential properties where the alignment would rejoin the Metro right-of-way near 190th Street. 21-63

Finally, the environmental analysis for each Project alternative should assess the potential demand increase to the Torrance Regional Transit Center and need for additional parking resulting from introduction of the new mode of transit. The Draft EIR should include analysis for constructing a multilevel parking structure up to 1,500 vehicles at the Torrance Regional Transit Center to accommodate increased ridership along the C Line and connecting transit systems. The extension of the Line C to Torrance requires a 3% local match contribution, which is provided by the construction of the Torrance Regional Transit Center via South Bay Measure R Highway Program funds in the amount of $25.7 Million. 21-64

The City of Torrance has many mechanisms at its disposal to reach individual homeowners, business owners, homeowner associations, and business associations. It is strongly recommended that all stakeholders in the City be reached and engaged, particularly those that live near to where the Project alternatives are proposed. 21-65

The future of public transportation and regional connectivity will be heavily impacted by the decisions made in the selection of one of these two alternatives. There is presently limited light rail service into the South Bay region of Los Angeles County, and this crucial enhancement of the transportation system is a great opportunity to building the infrastructure needed for the next generation of residents living and working in the South Bay. Therefore, the City of Torrance continues to affirm its support of **Alternative 1** as the best alternative to address all needs, present and future, for the South Bay. 21-66

If there are any questions, of if there is anything the City of Torrance can do to continue our collaboration and advocacy to the strengthen and enhance public transportation in the region, please do not hesitate to contact Kim Turner, the Director of Torrance Transit, at (310) 618-6245.

Sincerely,

Patrick J, Furey, Mayor
City of Torrance

Los Angeles, CA 90012-2952

Re: Metro South Bay C-Line Extension to Torrance Regional Transit Center

Honorable Ara J. Najarian and the Esteemed Members of the Board:

On behalf of the City of Torrance, I am writing to convey our official position and continued support for the C-Line Extension to Torrance using the existing L.A. Metro Railroad Right-of-Way (ROW) Alternative. This alignment provides the best opportunity for project acceleration and completion by the 2028 Olympics hosted in Los Angeles. Implementation of the ROW alignment will create opportunity for greater regional connectivity, economic growth, and traffic mitigation for the South Bay and all of Los Angeles County. Project completion and operation to support the 2028 Olympics should be of utmost priority with respect to the project schedule. 21-67

As Metro conducts its Public Scoping Meetings and engages the public throughout the process for the Draft Environment Impact Report (EIR) for the C-Line Extension, city staff reviewed the proposed alternatives and attended the neighborhood walks and community meetings to better understand the impacts of the two alignments. The Right-of-Way Alignment, which allows the new rail line to continue safely along the existing right of way to the Mary K. Giordano Regional Transit Center, should be the locally preferred alternative. This alternative also creates the least impacts to residents and businesses within the City of Torrance. 21-68

Initially, our governing board considered proposing a 4th option in which the train would be fully underground (e.g. – a subway). However, after speaking with L.A. Metro staff at our Council Meeting on October 25, 2022, we confirmed this option was not cost effective and had not been selected by the Metro Board for moving forward into the Draft Environmental Impact Report back in 2018. Furthermore, Metro staff stated that the fully underground option would most likely not allow this project to be expedited for the completion before the 2028 Olympics. 21-69

Additionally, the City of Torrance is requesting that the Metro Board and LA Metro staff consider our concerns and the following suggestions as the project proceeds with its environmental impact assessment.

ROW Alignment is City of Torrance's preferred alternative as it has better chance of completion by the 2028 Summer Olympics in Los Angeles

The ROW alignment was initially fully funded under the Measure R and Measure M, which were a half-cent sales tax approved by the voters in 2008 and 2016. In addition, the ROW Alignment would create the least amount of impacts in terms of traffic congestion for residents of Torrance and displacement of our businesses as compared to the elevated Hawthorne Blvd. Alignment. With the 2028 Summer Olympics scheduled to take place in Los Angeles, having the project completed on time using the ROW means that Torrance and South Bay residents can take the new rail line to all of the sporting events. It will also alleviate major traffic congestion for cities along the 405 Freeway. According to Metro Staff, the projected ridership to and from Torrance for the C-Line Extension is higher than the projected ridership for other cities.

The ROW Alignment can potentially create more benefits to the surrounding communities than the Elevated Hawthorne Alignment

ROW Alignment would potentially provide improved mobility and minimize environmental impacts compared to the Hawthorne Blvd. alignment. Based on Metro staff's assessment of performance and project goals as part of the Supplemental Alternative Analysis submitted to the Metro Board on September 19, 2018, ROW alternative will perform better in the areas of Improved Mobility, Cost Effectiveness and Financial Feasibility, and Travel Time compared to the other alternatives. 21-71

Currently, the existing freight tracks do not have safety barriers surrounding them. Metro staff mentioned that the ROW alignment will include looking at adding barriers to prevent pedestrian/rail interactions/accidents. 21-72

Pasadena, Santa Monica, and some of the surrounding communities to the Metro L and E Lines have experienced increase in property values. In a 2013 study conducted by Center for Neighborhood Technology, commissioned by American Public Transportation Association, and in partnership with National Association of Realtors, researchers found that areas within frequent transit service outperformed others as a whole by 41.6 percent. Additionally, neighborhoods near transit had an effect on the resilience of property values, which benefited more from transit that was well connected and had a higher frequency of service. Households living in these areas had better access to jobs and lower average transportation costs than the region as a whole. 21-73

The Elevated Hawthorne Blvd. Alignment will cause major impacts to Torrance residents and businesses along this Corridor

The second alignment is to build an elevated railway along Hawthorne Boulevard. This will affect many businesses in the City of Torrance, including the Volvo Cars South Bay Dealership located on Hawthorne Blvd. and 190th Street. Other businesses and residents along Hawthorne Blvd. in Torrance will have to live with seeing an elevated train and columns adjacent to their homes. The Hawthorne alignment will have negative impacts to their current way of life as there is no existing rail line going through the area. Other concerns from the Torrance community include noise and 21-74

vibration, visual aesthetics and an increase in traffic on Hawthorne Boulevard. Moreover, Metro staff should also include costs and delays potentially caused by encroachment along the 405 Freeway and on Hawthorne Boulevard in their analysis. The Elevated Hawthorne Boulevard Alignment may also require travel lane and/or turn pocket modifications in the City of Torrance. Last but not least, Metro staff should consider the effects of the elevated train structure casting a shadow on business and homes within the affected corridors.

In contrast, the ROW alignment will utilize most of the existing right-of-way currently owned by L.A. Metro. Additionally, Metro is planning to study and provide sound barriers to alleviate not only the low noise from the new light rail, but also to help alleviate the noise from the existing freight rail for the surrounding communities. Furthermore, Metro staff mentioned at the April 2022 Neighborhood Walks that they will work with BNSF Railway to upgrade and replace some of the older existing freight tracks as part of the construction process. This will further reduce the noise level coming from the existing freight rail.

Again, we strongly support the Right-of-Way Alignment and oppose the Elevated Hawthorne Boulevard Alignment. If you have any questions or concerns, please contact our Transit Director, Kim Turner at (310) 618-6245 or KTurner@TorranceCA.Gov. Thank you for your consideration.

Sincerely,

George K. Chen
Mayor
City of Torrance

Mark Dierking, Metro

CITY OF
TORRANCE

GEORGE K. CHEN
MAYOR

March 15, 2023

Honorable Chair Ara J. Najarian
Los Angeles County Metropolitan Transportation Authority
Board of Directors
1 Gateway Plaza, Mail Stop 99-3-1
Los Angeles, CA 90012

Dear Chair Najarian,

As L.A. Metro prepares to bring light rail to the South Bay via an extension of the existing C-Line (formerly "Green Line") and studies the three options, we write to encourage you to support the Proposed Project: Right-of-Way with Elevated/At-Grade Option. 21-75

The Right-of-Way with Elevated/At-Grade Option utilizes existing L.A. Metro Right-of-Way with a combination of elevated and at-grade segments and is the most cost-effective route, leveraging existing transit investments in the Mary K. Giordano Regional Transit Center and the Redondo Beach Transit Center. Additionally, it does not encroach on I-405, avoids businesses, traffic and parking impacts on Hawthorne Blvd. 21-76

Los Angeles drivers are estimated to spend an average of approximately 95 hours in traffic, costing $1,600 per driver annually. The light rail extension to the South Bay will bring numerous benefits to our region, including an alternate mode of transportation for those traveling along the I-405 corridor, save passenger commute times and alleviate traffic on roadways. The extension will also provide vastly improved access to regional destinations, connections to the greater L.A. Metro regional rail system and reductions in air pollution and greenhouse gas emissions by about 2,369 metric tons of C02 annually. 21-77

Additionally, the C-Line extension is estimated to serve 65,000 jobs in the project area by 2042, with most riders traveling to and from Torrance in addition to surrounding cities, such as Redondo Beach, Gardena, Carson, and Long Beach. It is also projected to generate between 10,300 – 16,200 new daily transit trips and improves equity by serving 18% of the low-income and 47% of the minority populations in the project area. 21-78

3031 Torrance Boulevard • Torrance, California 90503 • 310/618-2801 • FAX 310/618-5841

The other route options for Light Rail on Metro's Rail Right-of-Way/Trench and Elevated Light Rail along Hawthorne Blvd. would require major construction in the area and result in further delays for the project. The Elevated Hawthorne Blvd. option is inconsistent with voter-approved funding initiatives. It will cause significant impacts to local businesses and the economy, including loss of parking, impacting businesses along Hawthorne Blvd., and creating accessibility and connectivity issues to the Redondo Beach Transit Center.

21-79

For too long the South Bay region has waited for this light rail investment. Please advance the only option that builds on a completed right-of-way capital investment, minimizes commuter disruption and realizes both environmental and ridership access the soonest: **The Right-of-Way with Elevated/At-Grade Option**. The Torrance City Council supports bringing light rail to the South Bay via the route planned years ago along with investments made to integrate the extension of the existing C-Line via the Metro Right-of-Way Elevated/At-Grade Option. This is the only option with the opportunity to complete by LA28 if given the focus, funding, and support of not only the county, but the entire nation. Thank you for your time and consideration.

21-80

Sincerely,

George K. Chen
Mayor
City of Torrance

RE: DRAFT ENVIRONMENTAL IMPACT REPORT (DEIR) FOR THE C-LINE (GREEN) METRO EXTENSION TO TORRANCE PROJECT 61-DAY PUBLIC COMMENT REVIEW PERIOD (SCH# 2021010269)/CITY OF LAWNDALE COMMENTS

Dear Board Members:

On behalf of the City Council of the City of Lawndale ("City" or "Lawndale"), Lawndale takes this opportunity to provide its comments and express its concerns on the Draft Environmental Impact Report, State Clearinghouse No. 2021010269 (the "DEIR"), for the C-line (Green) Metro extension to Torrance (the "Project"). While the City understands that there are a number of potential benefits associated with the Project, the City remains concerned that substantial impacts to the citizens of Lawndale are not being adequately addressed in the DEIR and fall short of applicable legal standards under the California Environmental Quality Act (Public Resources Code § 21000 *et seq.*, "CEQA").

We respectfully submit these comments to the Los Angeles County Metropolitan Transportation Authority ("Metro") to help ensure that local decisionmakers fully comply with CEQA and the CEQA Guidelines (14 Cal. Code of Regulations §§ 15000 – 15387) as applicable to the Project. The City contends the Project should be rejected as proposed for a variety of reasons, including failing to conform with Metro's 2020 Long Range Transportation Plan ("LRTP"), CEQA, and the National Environmental Policy Act (42 U.S.C. §§ 4321 *et seq.*, "NEPA"). The following list outlines the City's comments and concerns: 22-1

PART I: GENERAL COMMENTS

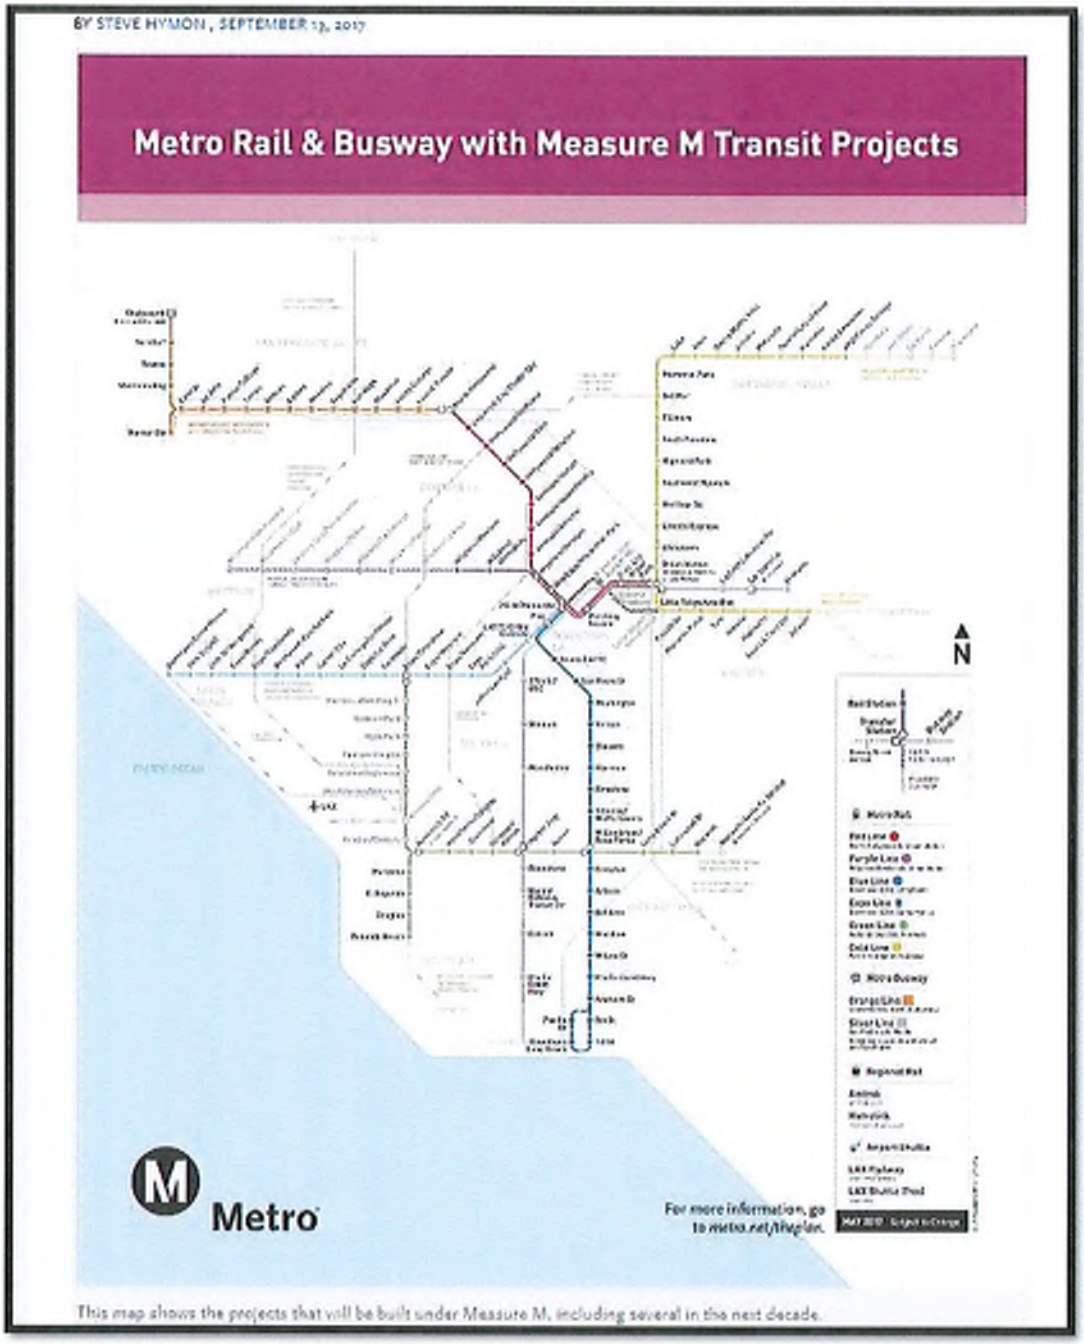
1. **Baseline Conditions:** The DEIR does not adequately address or establish baseline conditions as to environmental subjects throughout the entire DEIR. The identified areas lacking adequate baseline conditions include, without limitation: Air Quality, Greenhouse Gases, Land Use and Traffic/Transportation sections. Pursuant to CEQA, the Lead Agency is required to address and establish the baseline conditions in the DEIR. The DEIR grossly understates baseline 22-2

conditions, particularly with respect to the train crossing frequency attendant to the existing (freight) track usage versus the massive increase in rail crossing frequency attendant to the proposed Project (under any of its "options"). Currently, freight trains traverse the City of Lawndale only approximately two times daily. The proposed Project entails upwards of 12 to 18 rail crossings per hour during peak passenger periods. Thus, even though the Project's rail alignment may not significantly deviate from existing freight alignments (at least under two options), the sheer increase in the number/frequency of rail interruptions is massive. However, the DEIR's analyses fail to adequately address the impacts attributable to this change. For example, in the Land Use section, the DEIR states that the Project would "not physically divide the community" because rail crossings are "only occasional." (DEIR § 3.2-4.1.2.) This conclusory and dismissive assay overlooks the fact that a community is further divided not just by the *physical* location of the proposed rail lines, but also by the immense increase in rail *frequency* funning that will be running through the City— an escalation in train crossing frequency that increases several hundred (if not thousands) of times over the current "two trains per day" baseline. The DEIR fails to acknowledge that the Lawndale portion of the railroad right-of-way narrows. In turn, properties in this area will have significant impacts due to the increase from 2 to 200 daily trips. 22-3 22-4

As another example, the Transportation discussion baldly asserts that impacts to traffic/pedestrian safety and emergency response times will be less than significant with the (i) unfounded *expectation* that safety and traffic impacts will not vary significantly from those attendant to the current freight lines, and (ii) that traffic and emergency services can simply "detour around" rail crossings. These conclusory findings are unsupported by any analysis of much the Project will increase the frequency of rail crossings, and hence intersection closures. The delta in impacts as between the "two trains per day" baseline versus the Project's estimated "several trains per hour" is conspicuously absent from all aspects of the DEIR. 22-5

The difference between two trains per day, versus several trains per hour, presents massive interruptive impacts to the community from a land use perspective, as well as transportation circulation, noise and vibration, aesthetics, public services and other CEQA considerations. Yet, throughout the DEIR, Metro is overly-dismissive of impacts attributable to the sheer increase in rail frequency. Without further comparative analysis of actual "before and after" Project impacts, the public has not been provided an accurate representation of Project impacts upon which it can meaningfully comment. (*County of Inyo v. City of Los Angeles* (1977) 71 Cal.App.3d 185, 192–193.) 22-6

2. **Piecemealing:** The impacts of an entire project, not just individual segments, must be analyzed. CEQA forbids "piecemealing" projects. The proposed Project is part of a larger project to extend the Metro rail and transit systems, which include all the existing Metro lines and transit centers connecting with each other to form the entirety of a Metro rail system. This Project is a continuation of such existing, larger project. 22-7



Pursuant to CEQA, the whole of an entire project must be analyzed, and those environmental considerations related to project(s) broken down into little projects, thus reducing or minimizing the potential impacts to the environment through "piecemeal" is prohibited. Potential growth impacts, such as new development projects, cannot be deferred to be analyzed in a piecemeal fashion at a later time. Rather, "the need for regional environmental consideration [must be made] at the earliest stage of a planned development before it gains irreversible momentum." (*Bozung v. Local Agency Formation Commission of Ventura County* (1975) 13 Cal.3d 263, 284, fn. 28.) An agency cannot treat one

22-7

integrated, large project as a succession of smaller projects to avoid analyzing the environmental impacts of the whole project. (*See, CASDBA v. County of Inyo* (1985) 172 Cal. App. 3d 151, 165-166 [two separate "packages" of entitlements for one Project, each analyzed in a separate Negative Declaration, improper].) Piecemealing impermissibly results in a curtailed project description, which allows the EIR to misstate the cumulative impacts "by separately focusing on isolated parts of the whole." (*San Joaquin Raptor/Wildlife Rescue Center v. Cnty. of Stanislaus* (1994) 27 Cal. App. 4th 713, 729-30.)

It is "only through an accurate view of the project" that the "public and interested parties [can] balance the proposed project's benefits against its environmental costs, consider appropriate mitigation measures, assess the advantages of terminating the proposal and properly weigh other alternatives." (*San Joaquin Raptor Center v. County of Merced* (2007) 149 Cal. App. 4th 645, 655.) In this case, it is clear that the Project will have overlapping environmental impacts in conjunction with other Metro transit projects to be directly connected, since (i) they are located, or will be located, adjacent or directly connected to one another, (ii) they will be providing similar or the same services to the community (i.e., public rail transit), (iii) they will both be used and visited by residents and visitors to the Los Angeles County Region as one integrated project, and (iv) they are both owned and operated by the same entity. 22-7

Thus, this Project must be evaluated on a programmatic level well beyond the mere terminus of its tracks. Indeed, this issue also represents a principal deficiency in the DEIR's analyses of cumulative impacts, which analyses fail to address related and upcoming rail projects throughout the DEIR. Simply put, the DEIR addresses the project in an "environmental vacuum."

3. **NEPA:** The City is informed and believes the Project is substantially financed with Federally-based funding sources. This is evidenced, without limitation, by Metro's Planning & Programming Committee meeting staff report dated November 18, 2009, in which the Committee deliberated the Harbor Subdivision Transit corridor now owned by Metro and identified as the ROW proposed Project area. In the fiscal impact portion of that report it is clearly stated: "Funding of $800,000 from a combination of federal funds provided by the Southern California Association of Governments (SCAG) and Proposition C 25% of funds for this project is included in the FY10 budget in cost cebte4r 4330 South Bay Area Team, in Project 400229 (Harbor Subdivision Task 01.02, 50316 (Services Professional/ Technical) for the completion of AA Study." 22-8
The DEIR makes several references to the 2009 Alternative Analysis Report. That 2009 AA report, in turn, says that Federal funding sources are going towards the Project.

The tables below were obtained from a Construction/Executive Committee Board Report that further breakdown Green Line Extension to Torrance funding.

Estimated Accelerated Capital Cost and Available Funding
"Pillar Projects"
($ in millions)

Pillar Projects	Total Capital Cost	Metro Local Funding	State and Federal Funding	Funding Surplus/ (Shortfall)
Gold Line Eastside Extension Phase 2	$ 3,037.7	$ 2,179.8	$ 385.7	$ (1,072.2)
Green Line Extension to Torrance	1,088.0	854.7	231.3	-
SepulAveda Transit Corridor	8,572.6	3,448.6	3,748.1	(1,376.0)
West Santa Ana Branch to Downtown LA	5,565.6	2,513.4	2,155.5	(896.7)
Total	$18,862.0	$ 8,996.5	$ 6,520.7	$ (3,344.8)

Green Line Extension to Torrance

10-YEAR CASH FLOW ($ in millions)	Years Prior'28	Prior Years	2018 2019	2019 2020	2020 2021	2021 2022	2022 2023	2023 2024	2024 2025	2025 2026	2026 2027	2027 2028

Total Project Cost:	Life of Project budget will to be established. Measure M estimate is $803 million (2015$).
Description:	This extension will provide congestion relief along the I-405 corridor. It will also improve mobility in southwestern LA County by accessing the regional rail network through connections to the Metro Blue, Expo, and Crenshaw Lines.
Funding Status:	Per Measure M, the Project has a $619 million (2015$) allocation, plus inflation adjustments, beginning in FY2026 for construction, and Measure R allocation of $232 million beginning FY2028. Received award of $211.3 million TIRCP grant and $19.3 million of $81 LPP in Feb. 2018.
Subregion:	South Bay
Metro Project Number:	#460314

Moreover, related transit projects directly connected to this Project's rail extension have done Joint EIR/EIS reports to comply with both CEQA and NEPA, respectively. As noted in Lawndale's comments on unlawful "piecemealing," Metro cannot segment this Project from directly connected and related projects as a means of understating, and avoiding analyses of, the larger project as a whole. Likewise, Metro cannot segment a larger project "as a whole" into discreet "smaller projects" to avoid NEPA compliance in some areas, even though NEPA would otherwise apply to the larger project. Yet, apparently, that is what has occurred here.

22-9

Furthermore, the likely reliance on federal funding is shown through Metro's own financial documents. First, the October,7, 2010 EIR/EIS Scoping Report identified extensive federal involvement with the Project, and there is nothing the City found in the administrative record thus far that explains why the EIS component was dropped. We do note that Appendix D-5 of the DEIR/EIS Scoping Summary lists The Federal Aviation Administration, US Army Corps of Engineers, US Department of Housing and Urban Development and US

22-10

Environmental Protection Agency as Cooperating and Participating Agencies. Nor are any federal agencies listed as "responsible agencies" under CEQA, and federal agencies which have discretionary approval for portions of the Project are not listed in Table 2.6-1 of the DEIR as required. 22-10

Second, Metro's January, 2023 Cost Summary Report estimates Preferred Project costs at $1.96 billion with secured funding sources coming from Measure R, Measure M, California State Transportation Agency TIRCP, a 3% match by local agencies, and unspecified "unsecured funding sources." Metro's Expenditure Plan for Measure R (as amended July 22, 2021) identifies Total Cost Estimate for the Project to be $280 million, with $272 million coming from Measure R funds, $8 million from local funding, and a "to be determined" amount from Federal and State Funding, with project completion in FY 2033-2035. As to Measure M funds, Metro's 2015 Expenditure Plan identifies a total cost estimate of $891 million, with $619 million coming from Measure M funds and $272 million coming from all other funding sources. The 2020 TIRCP Allocation Plan Update allocates $231.3 million to the Project through 2024-25. The City recognizes that these costs and funding amounts are estimates and moving targets, and thus mixing "apples and oranges"; however, the theme that arises is that the secured funding for the Project comes nowhere near the projected $1.96 billion total estimated cost. 22-11

This is a significant point because (1) reliance on unsecured and "to be determined" funding sources is contrary to the DEIR's Section 2.2's Project Objective to "provide a cost-effective project," and (2) violates NEPA for lack of an EIS to support federal agency funding and/or approvals. 22-12

The DEIR states in conclusion that a "funding plan and schedule will be prepared after Metro selects a preferred alignment." Isn't that backwards? Shouldn't Metro have the money to buy something before it commits to buying it? The City understands that the Green Line Extension to Torrance project is still under development, but how can Metro have a "cost-effective" project when it doesn't know how much money it will have to spend, and the sources of secured funding to date is woefully short? 22-13

The proposed Project and options must be analyzed in an EIR/EIS joint document or otherwise processed in compliance with both CEQA and NEPA. 22-14

4. **Analyses Based on Unknown Future Standards or Approvals:** The DEIR improperly defers its analyses to reports and standards that either do not exist and/or are unknown. For example, without limitation, in the Transportation section Project impacts are found to be less than significant because, in part, Project construction will be subject to a construction traffic management plan ("CTMP"). (*See, e.g.,* DEIR § 3.2-4.1.1.) As the DEIR openly admits, no such plan has been developed or circulated, much less adopted. Similar to issues of "deferred mitigation," the public cannot meaningfully comment on plans, regulations or approvals relating to environmental impacts *to the extent they are non-existent* 22-15

and/or unknown. Other instances of the DEIR deferring environmental analysis to unknown, unsettled or non-existent policies and standards are presented in Part II below, without limitation; Lawndale otherwise objects generally to all instances in which the DEIR relies upon unknown, unsettled or non-existent policies, plans, changeable design standards and/or approvals. 22-15

5. **Insufficient Mitigation Measures:** The DEIR prepared for the Project identified several areas of significant environmental impacts including: Aesthesis; Greenhouse Gases; Land Use Planning; Transportation/Traffic; Hazards & Hazardous Materials; Air Quality; and Noise & Vibration sections. However, despite these acknowledgements of significant environmental impacts, the DEIR lacked, deferred, and obfuscated proposing adequate mitigation measures to address the issues outlined in the Initial Study. To the extent the DEIR does present mitigation measures, Lawndale objects to all measures to the extent they are reliant upon deferred studies, analyses or policies that are not grounded in currently-known, objective standards.[1] 22-16

PART II: SECTION-SPECIFIC COMMENTS

1. **Section 2, Project Description:** The Project Description is deficient because the public was not provided with "an accurate, stable and finite" project description on which to comment. (*County of Inyo v. City of Los Angeles* (1977) 71 Cal.App.3d 185, 192–193.) Here, the DEIR "proposed Project" is framed as not just one, but three "options" that vary significantly. Indeed, the Hawthorne "option" presents an entirely different alignment when compared to the other two "options" (and even those other two "options" present widely varying environmental impacts). "[A] project description that gives conflicting signals to decision makers and the public about the nature and scope of the project is fundamentally inadequate and misleading.) (*Washoe Meadows Community v. Department of Parks & Recreation* (2017) 17 Cal.App.5th 277, 287 (*Washoe*").) The DEIR's presentation of three very different "options" all presented as one "Project Description" fails to designate a stable project and thus presents an obstacle to informed public participation. 22-17

   Lawndale further offers the following comments relating to the Project Description:

   a. Section 2.1-1, Project Location and Surrounding Uses: The DEIR Project Description is also not clear and fails to identify a specific Project because it mentions a high-capacity transit center, but does not define what that is and what constitutes "high capacity." 22-18

[1] The DEIR also presents mitigation measures that are either confusing in their application, or are missing entirely where there otherwise should be mitigation proposed. For example, Mitigation Measure LU-1 – Temporary Crossings is proposed in the Land Use analysis. However, the Land Use section finds all environmental impacts to be "less than significant". Why is a mitigation measure being proposed if Metro earnestly believes that Land Use impacts are less than significant? Lawndale posits that the imposition of a mitigation measure here belies how understated Metro's findings of less-than significance are.

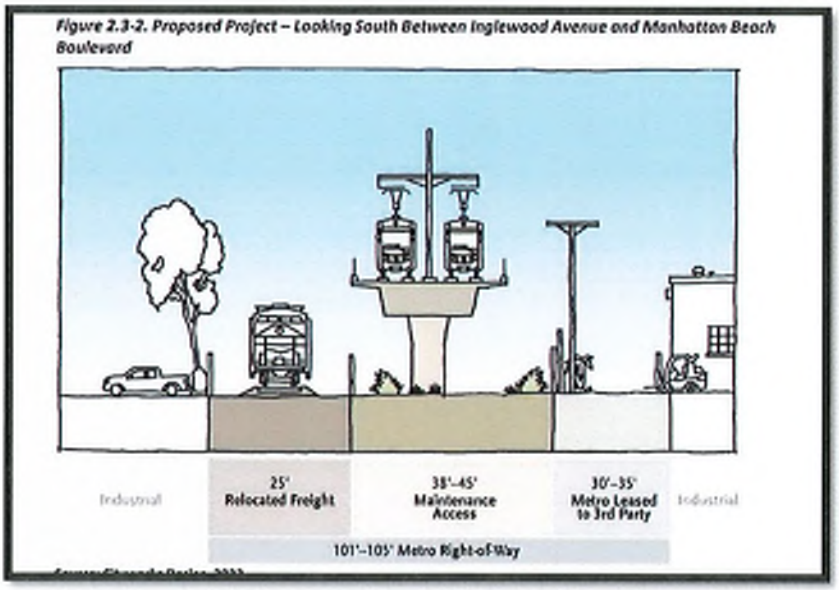
b. Figure 2.1-2, Project History: The Project site map is incomplete and does not identify the Project area clearly. 22-19

c. Section 2.2, Project Objectives: The following Project objectives in the DEIR are misleading and cannot be achieved because descriptions relating to the objectives are too vague and a genuine plan to achieve such objectives would require mitigation measures: (1) "Reduce air pollution and greenhouse gas emissions by making transit a more viable transportation choice;" (2) "Avoid and minimize environmental impacts on environmental resources to the maximum extent feasible;" and (3) "Provide a cost effective Project." 22-20

d. Section 2.3-1, Proposed Project: The DEIR is not clear on property acquisition. Metro stated that they would not acquire any property on the right-of-way, or "ROW". However the DEIR states that Metro "would acquire or lease additional ROW from BNSF to accommodate the two new rail tracks. This is in case of the ROW not being big enough to accommodate the tracks." The DEIR does not specify what the right-of-way will be. 22-21

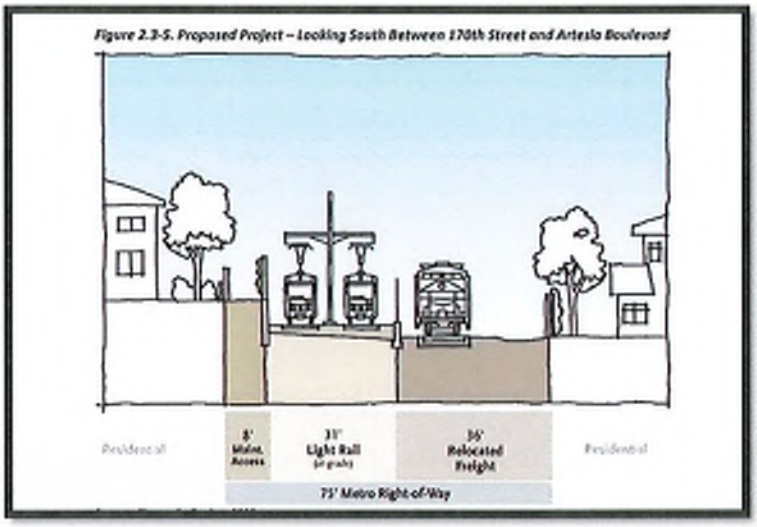
e. Figure 2.3-2, Proposed Project: This figure is showing a proposed right-of-way of 101'-105', which is more than the existing right-of-way owned by Metro (currently 100 ft.). Metro stated that no properties would be taken, but based on this elevation that cannot be correct. A side elevation should also be provided to include the surrounding residential areas to compare the scale of the Project versus the existing site. The footnote in this discussion alludes to a retained fill ("The retained fill would be an elevated platform made of reinforced walls which are filled with soil material"). But, an indication of what that is on the elevation is lacking. 22-22

Figure 2.3-2. Proposed Project – Looking South Between Inglewood Avenue and Manhattan Beach Boulevard



f. Figure 2.3-2; Looking South of 162nd: There is no clear explanation of the type of construction the overhead railway would be, some areas say columns and the diagram states "elevated/at-grade." This is too ambiguous. 22-23

g. Figure 2.3-5, Proposed Project elevation looking south between 170th and Artesia Blvd.: The elevations depicted are vague and lack clarity. The diagram indicates a small proximity from the light rail to the freight rail. However, it is required that there is a minimum of 20 ft. between the light rail and the freight train. Such distance is not indicated in the elevation, and the distances indicated do not appear to comport with minimum space between rails. 22-24



h. Lacking Bridge Expansion Description: The description in the DEIR states that the rail tracks would cross over Artesia Boulevard, however the existing bridge cannot accommodate three rail tracks. The proposed Project would need to include the expansion of the bridge. This is not analyzed under the DEIR or shown in the exhibits. 22-25

i. Multi-Use Recreational Paths: The DEIR does not address the relocation of the railways, which will have significant impacts to surrounding thoroughfares. The size of the proposed walking path must already be determined—giving an approximate number is not sufficient. The figure attendant to this discussion does not identify a fence or wall. Thus, what is proposed is not clear. 22-26

j. Other Insufficient Elements of the Project Description. In all, the Project is overbroad, vague, and reliant upon unspecified assumptions. Further areas of ambiguity include, without limitation: 22-27

   i. *2.3-4.2, Light Rail Vehicles*: The DEIR states that "[I]t is assumed that existing Metro light rail cars would be used" and provides a 22-28

sweeping generalization of how such cars are "typically" configured. The height and surface materials (as relevant to aesthetics), and attendant air and exhaust systems (as relevant to air quality) are not described. Further, Metro's reliance upon an "assumed" use of "typical" light rail cars is too indefinite for purposes of eliciting meaningful public comment. 22-28

ii. *2.3-4.4; Ancillary and Support Facilities*: The Project Description loosely states, "Multiple additional elements are required to support light rail vehicle operations, including an overhead catenary system (OCS), traction power substations (TPSS), and communications and signaling buildings." The size, locations, number—and indeed what other "additional elements" may be intended here—is left entirely to the public's imagination. 22-29

iii. *2.3-4.1, OCS*: This is likewise too vague. For example, the description states that these overhead wires will entail poles "[i]n some locations" to "be located on both sides of the tracks." The number and locations of single versus dual OCS infrastructure is unspecified. 22-30

iv. *2.3-4.2, Traction Power Stations*: These stations are described as being subject to "principles of urban design" with "several options available for some locations." The lack of specificity here fails to comply with CEQA standards. 22-31

2. **Aesthetics:**

a. Failure to Address Visual Character/Quality Impacts in Conflict with General Plan Scenic Quality: In general, the Aesthetics section of the DEIR does not adequately identify, study, or mitigate potential aesthetic impacts on the surrounding area with regards to the proposed Metro Project. This is not surprising given the lack of detail that was provided in the description of the individual Project elements. The DEIR inadequately describes, insufficiently analyzes, and certainly fails to propose any mitigation measures to minimize disruption to, visual resources even where Lawndale's General Plan Open Space Element applies for purposes of preserving aesthetic quality and character. For example: 22-32

- *Section 3.3-1.3, Local Regulations*: The DEIR failed to demonstrate how the Project meets Lawndale's policies and regulations. The "Resource Study Areas," as depicted in the DEIR, do not identify and evaluate existing conditions of open space used by residents. The DEIR has failed to provide sufficient key points of interest along the existing ROW used for recreational purposes. For example, the proposed walking path will disturb, disrupt and interfere with day-to-day recreational features currently utilized by Lawndale residents. 22-33

Lawndale's General Plan and policies strive to protect the limited recreational spaces within the City of Lawndale as vital elements of residents' quality of life. 22-33

- *Page 3.3-22, Inglewood Avenue to Artesia Boulevard (Proposed Project and Trench Option)*: With respect to an identified greenway, the DEIR states: "because the greenway is not specifically protected by any applicable local general plans, planning and zoning codes, or other regulations, this greenway is not considered to be a visual resource." This statement and any analysis stemming therefrom is inaccurate because it does not acknowledge the application of Lawndale's General Plan Open Space Element. 22-34

- *Unaddressed Open Space Areas*: The proposed elevated rail structure and the freight track will have potential significant impacts along the existing railway as it is currently identified in the Open Space Element of Lawndale's General Plan as open recreational space. There is currently only one railway, no overhead wires and ample vegetation that residents use for recreation. Adding the light rail system, along with its ancillary structures and the overhead wires, will significantly impact the aesthetics of 11.04 acres of recreational land within Lawndale. 22-35

Therefore, to the extent Metro holds that "visual impacts in urbanized areas are assessed based on the potential of a project to conflict with applicable zoning and other regulations governing scenic quality" (DEIR p. 3.3-59), the DEIR fails its own stated standard. As demonstrated in the above examples, visual impacts to Lawndale recreational areas are in conflict with the City's General Plan Open Space Element, leaving the DEIR's analysis thereof legally insufficient. 22-36

The Aesthetics section states that there will be no significant impacts. However, based on the actual current conditions of the Project area and the proposed Project's new above-ground wires and pillars to be added, there will be substantial impacts to aesthetics with respect to all Project options.[2] 22-37

b. <u>The DEIR Fails to Address Other Fundamental Aesthetic Elements, Wants for Baseline Descriptions of Aesthetic Conditions, and Presents Inadequate Methodologies</u>. 22-38

i. *Unstated and Understated Visual Impacts*:

[2] The DEIR similarly misjudges aesthetic character and scenic quality policies elsewhere. For example, without limitation, Figure 3.3-17 (View 12) and Figure 3.3-38 (View 48) respectively depict an open area with ample mature trees and a tree-lined residential street with homes dating more than 75 years old. Nonetheless, the DEIR misconstrues these areas, amongst others, as "urbanized areas" having no "unique visual features" and thus improperly understates (or discounts) visual impacts. The same can be said of the DEIR's aesthetic lacking analysis of El Nido Park in the City of Redondo Beach.

The picture below shows the existing Metro ROW of way. Looking northeast from Condon Avenue in Lawndale.

The picture below is an example of an existing Metro railway going through a residential area and how it will potentially look going through the ROW. Clearly, the potential aesthetic impact is significant compared to the above.

22-39

The picture below shows existing Hawthorne Boulevard looking North towards the 405 freeway. According to the DEIR this would be the location of one of the Project "options" where the Project may be located.

The DEIR fails to evaluate the negative impacts on aesthetics within Hawthorne Boulevard. Below is a picture of the existing C-line Redondo Metro station. It is evident that the construction of an overhead railway like this would significantly change the aesthetic of Hawthorne Boulevard as pictured above.

22-40

The DEIR fails to provide a maintaince schedule to prevent blight. The two pictures below existing Metro Light railway areas in Compton, located near residential areas. The railway has not been maintained, there is rubbish, dead vegetation, graffiti, and homelessness.

22-41

The photograph below shows the "art" that was provided by Metro when the light rail train passed through Compton. Lawndale posits that such installations detract from, rather than enhance, aesthetic appeal. Such installations are also a draw for

22-42

graffiti, vandalization and other nuisance conditions. Yet, these issues are not addressed in the DEIR Aesthetics discussion.

22-42

Below is an example of a current Metro light rail area showing a typical itinerant encampment. As descrbed further below, railway setbacks, bridge undercrossings and ROWs are a draw to those experiencing homelessness, resulting in unsightly and unsafe conditions. Yet, these aesthetic issues are not addressed.

22-43

The DEIR fails to provide mitigation measures for aesthetics on all three Project options. The DEIR must provide a detailed design for the proposed Project, fuller description of potential aesthetic impacts and meaningful mitigation measures to minimize aesthetic impacts. 22-44

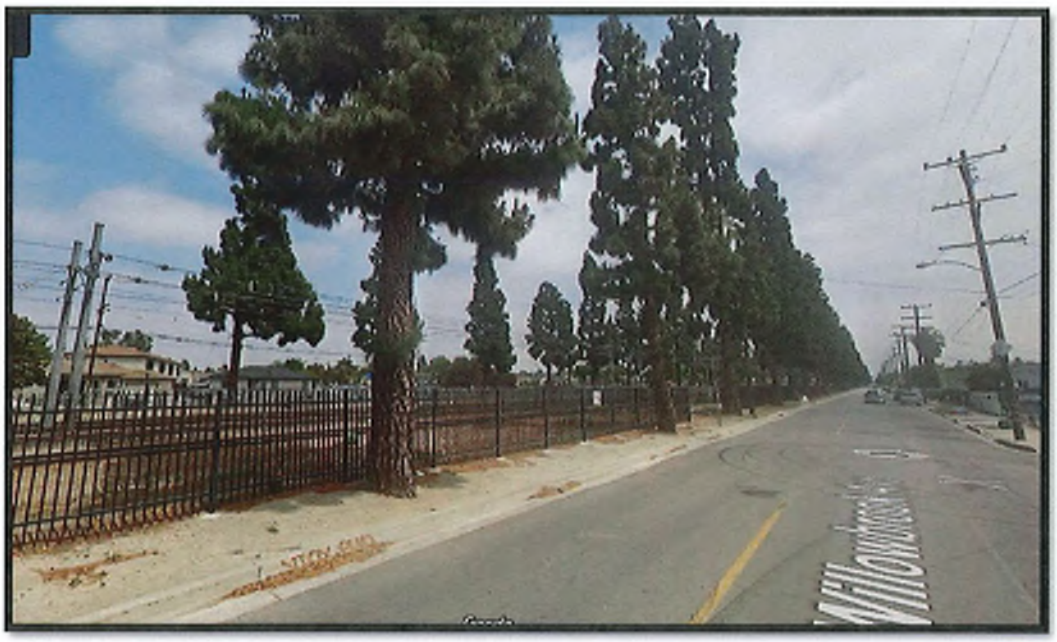
ii. *Soundwall Missing Design/Aesthetic Analyses*: The DEIR fails to address the aesthetic impacts of specific Project elements. For example, the DEIR mentions a soundwall in both the Aesthetics section and as a Noise mitigation measure (MM-NOI-2); however, no design/aesthetic description is proposed or provided in attendance with respect to the proposed soundwall, which should be part of the Aesthetics section. The description of the soundwall is extremely vague and does not give enough information to review and comment on whether it will mitigate impacts. Further detail and schematics must be provided. 22-45

iii. *Metro Design Standards*: The DEIR fails to provide information on Metro's adopted design standards. The proposed Project fails to show any information related to such. 22-46

iv. *Metro Tree Policy*: The DEIR fails to provide a copy of Metro's Tree Policy. The DEIR should provide the proposed landscaping and monitoring plan for the future Project and analyze appropriate natural buffers to all adjacent residential areas. 22-47

The two pictures below show the existing Metro light rail roadway network in the City of Compton. The areas are barren and without landscaping, which is a 22-48

significant change from the existing ROW in the City of Lawndale. The dominance of rock, metal and hardscape features present potential significant impacts to light and glare, which were not analyzed in the DEIR. 22-48



v. *Section 3.3-2, Methodology*: The DEIR indicates that "typical views and key observation points ("KOPs") for the visual assessment are identified, based on the responses of representative viewers." The 22-49

DEIR fails to identify the "representative viewers" and the role they play in the Project.

- It is unclear if the views represent the greatest impact to the greatest number of representative viewers.
- It is unclear if the views represent the cross section of viewers exposed to the site.
- It is unclear if there are any views that should be simulated to show there would be minimal impacts.

22-49

Based on the KOPs identified in the DEIR only two KOPs were identified within the Open Space area in Lawndale, which insufficiently describes residential neighborhoods located along the ROW. The responses from the "representative viewers" fail to provide the existing recreational space used by residents. In addition, the representative viewers failed to include additional KOPs along nearby residential areas.

22-50

vi. *Section 3.3-2.1, Resource Study Area*: The DEIR presents resource study areas ("RSAs") that omit areas "blocked by tall vegetation, buildings, and other intervening development." This metric for drawing RSAs is entirely subjective and could be applied to exclude a vast majority of areas that may include local residents in Lawndale. Metro needs to provide a methodology that is objective, fair and does not exclude residents based on subjective interpretations of "tall vegetation, buildings and other intervening development."

22-51

vii. *Section 3.3-2.2.2, Visual Quality*: The DEIR contains subjective interpretations and decisions that are not appropriate and will significantly impact the community of Lawndale. The DEIR indicates that "visual quality refers to the aesthetics of the landscape, which is based on the viewers values and notions about what constitutes a quality setting."

22-52

viii. *Section 3.3-3.3, Visual Character*: This section of the DEIR fails to adequately identify the existing character of the residential neighborhood(s). There is a total of 15 residential streets along the proposed Project. Five out of those 15 residential streets have vital cross points used for day-to-day activities. Those five streets are used to travel to two separate schools located one block east from the proposed Project site. The DEIR neglects to set the proper baseline in describing the character of the residential area. For example, the DEIR states that the existing "residences were constructed between the 1930s and the 1970s" and the DEIR fails to mention that newer single-family dwellings were developed in the

22-53

1990's. The DEIR improperly understates the residential view character of these suburban areas adjacent to the proposed Project will be negatively impacted. 22-53

ix. *Figure 3.3-3, Detailed Location of Representative Views*: The DEIR fails to identify locations that will be affected by the proposed light-rail Project. All railroad crossings located within the residential areas should be identified as KOPs. 22-54

x. *Page 3.3-22, Inglewood Avenue to Artesia Boulevard (Proposed Project and Trench Option)*: The DEIR fails to identify residential properties located between 170th Street and Artesia Boulevard. 22-55

xi. *Page 3.3-31, 182nd Street to Intersection of Hawthorne Boulevard and 190th Street (Proposed Project and Trench Option)*: The DEIR provides inconsistent descriptions of ROW green / open space located in the City of Lawndale versus that located in the City of Torrance without any stated justification or reasoning. 22-56

c. Inadequate Light/Glare Analysis: The DEIR fails to passably analyze aesthetic issues of light and glare, particularly from an operational impact perspective. (*See*, Sections 3.3-4.4.2 – 3.3.-6.3.) At Section 3.3-4.4.2, the DEIR states: 22-57

The Proposed Project includes several elements, such as glass, metal surfaces, and additional lighting that could create new sources of glare. However, the existing sources of light at the existing Redondo Beach (Marine) Station do not generate substantial glare. Thus, it is not anticipated that the Proposed Project would generate substantial glare.

This conclusory and over-generalized comparison between the glare impacts attributable to a stationary building and a fast-moving, metallic vehicle is entirely misplaced. The fast transitory nature of rail cars produces substantially different attributes of "flashing" light and glare, particularly if paired with unmitigated surrounding hardscape (an unknown given the lack of landscape screening information provided). Yet, no further analysis other than the above-quote is provided with respect to the Project's potential reflective attributes. 22-58

Similarly, the DEIR fails to address the introduction of lighting from rail vehicle headlights, which will impact certain residences, as well as street vehicles and surrounding businesses. As to maintenance lighting, the DEIR provides no meaningful analysis based on the conclusory expectation that non-transient lighting will "be compliant" with Metro and other agency lighting regulations and design standards; these standards are not described or analyzed. (*See,* Section 3.3-7.1.) 22-59

While the DEIR observes that shade and shadow patterns from Project-related structures "would change throughout the day and seasonally," and notes that such changes could create "adverse shadow impact" to recreational facilities, there is no mention of impacts to surrounding street, pedestrian, residential or other viewsheds. (Section 3.3-7.1.) Nor does the DEIR identify or analyze structures that may pose undeviating areas of shadow over adjacent streets, thoroughfares, or buildings (including residences). 22-60

Because the DEIR fails to properly study these significant impacts on aesthetics, the DEIR fails to live up to its role as an informational document. Metro's failure here "precludes informed decision making and informed public participation, thereby thwarting the statutory goals of the EIR process." (*Ass'n of Irritated Residents v. County of Madera* (2003) 107 Cal.App.4th 1383, 1391.) 22-61

d. Section 3.3-1.2, State and Regional Regulations: State and Regional Regulations CEQA. DEIR statements here delete a very critical component of the California Public Resources Code Section 21002(b), which states: "Take all action necessary to provide the people of this state with clean air and water, enjoyment of aesthetic, natural, scenic, and historic environmental qualities, and freedom from excessive noise." The DEIR neglects the element of freedom from excessive noise. The proposed trips that will be generated for the light rail will dramatically increase the amount of daily noise (20 hours a day) for the residents. 22-62

3. **Air Quality:** The Air Quality section of the DEIR is incomplete and, therefore, inadequate. This proposed Project will create a significant amount of air quality issues locally and regionally. The Air Quality sections of the DEIR did not adequately address or identify vehicle traffic trips generated by the Project. Additionally, vehicle emissions that will be generated have not been adequately addressed by the DEIR. For example, the DEIR does not adequately account for air quality impacts associated with rail riders driving automobiles either to a rail station (e.g., "park and ride"), or from a rail station to their endpoint destination. 22-63

a. Section 3.4-1.1, Federal Regulations: This section mentions Toxic Air Contaminants ("TAC") as air pollutants that may increase a person's risk of developing cancer and/or other serious health effects. The Project includes the relocation of the existing freight locomotive, and the DEIR here mentions that at least 10% of the soil will be contaminated. All three Project options are located within or closer than 500 feet of sensitive receptors that may be affected by the TACs resulting from the Project. There is no mention of a Phase II or Phase III study to check for contamination on the property along the ROW option. The DEIR mentions that Metro will be removing the 22-64

contaminated soil; however, there are no details or information about how this would impact the sensitive receptors. 22-64

b. Section 3.4-2.2.1, Proposed Project construction: The DEIR fails to give detailed information on the amount of soils and materials to be disturbed. The Project would involve a total of approximately 556,100 cubic yards of imported and exported materials. What are the individual quantities of dirt that will be moved or imported? How will dust built-up be mitigated? Such information is conspicuously lacking. 22-65

    i. The trench option fails to provide details on the amount, type, and timing of material to be exported and imported to the Project site. 22-66

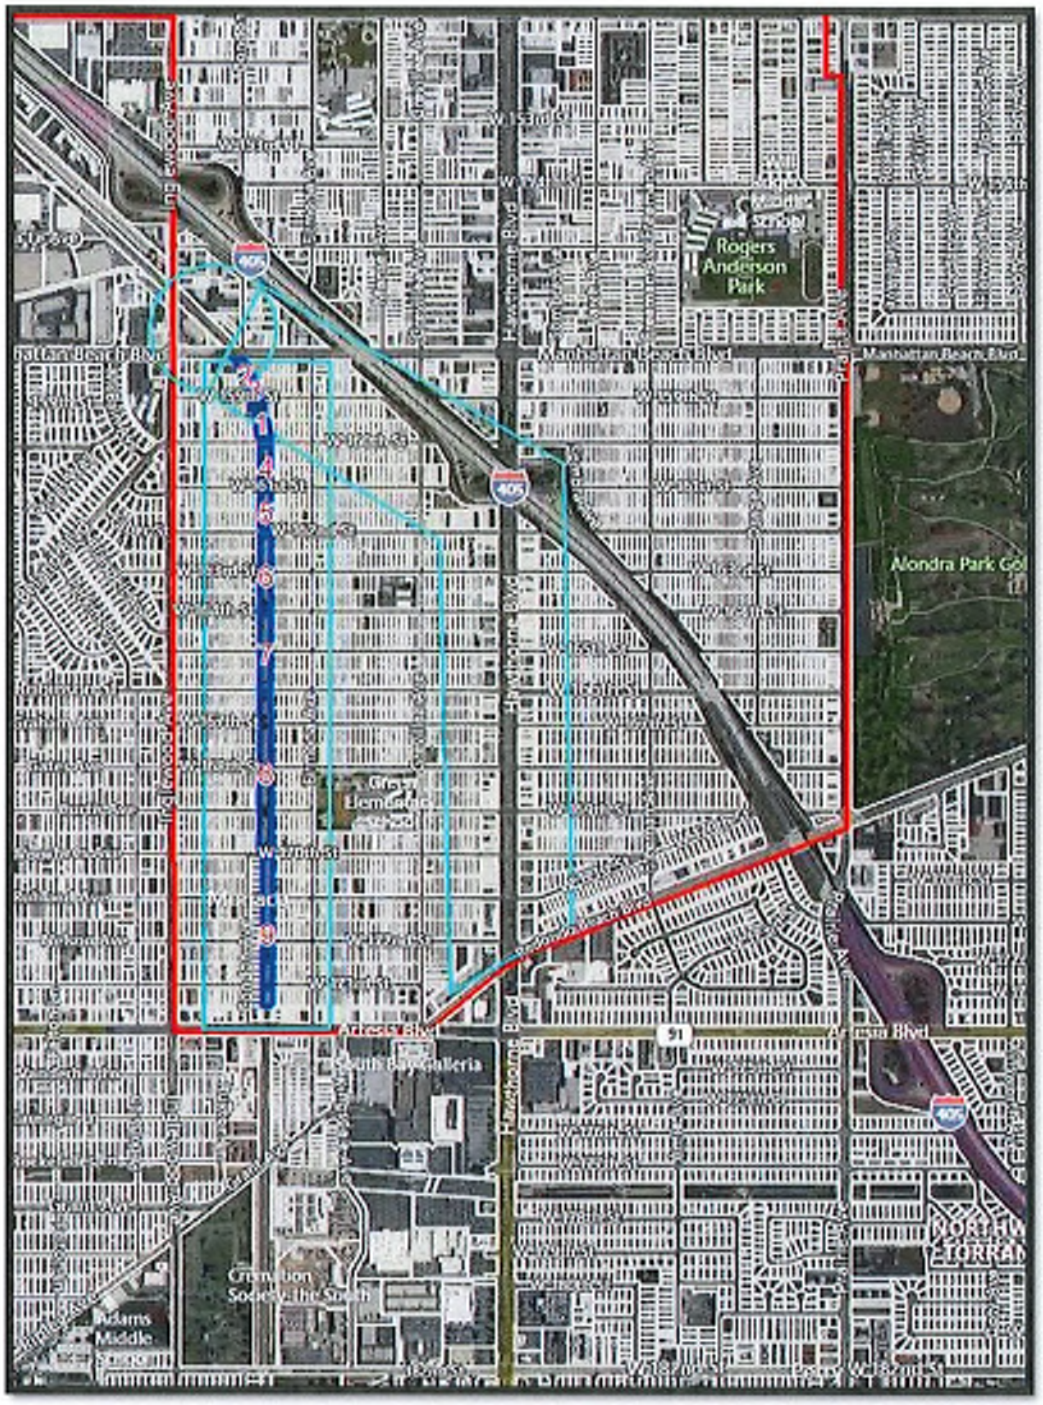
    ii. The Hawthorne option fails to provide details on the amount, type, and timing of material to be exported and imported to the Project site. 22-67

c. Section 3.4-2.3.1, CEQA Review of Sustainable Transportation Projects: The DEIR states, "To estimate daily emissions for the Proposed Project, Trench Option, and Hawthorne Option, the daily vehicle miles travelled ("VMT") reduction corresponding to each operational scenario was multiplied by the corresponding emission factor for each pollutant" This statement does not present the results of calculations or numbers supporting it.[3] 22-68

d. Section 3.4-2.4.1, State CEQA Guidelines: This section of the DEIR provides false information. The proposed Project and its options would conflict with the applicable SCAQMD plan due to the direct impact on population and housing as per SB 2097. The Project would expose all sensitive receptors within a 500-foot radius of the Project. There is a high number of residential homes and several schools near the proposed Project location and the options. The proposed Project of the ROW includes the relocation of an existing freight train, and according to the Air Quality portion of the DEIR, the moving of dirt anticipates at least 10% of contaminated soils which need to be disposed of, however this is located within 100 feet of sensitive receptors. The DEIR states "Compliance with the Metro Green Construction Policy will preclude the possibility of unhealthy exposures of sensitive receptors to TAC concentrations during the proposed Project construction." This statement is incomplete, there is a lack of explanation of how this will be achieved. 22-69

The diagram below shows sensitive receptors within 500 ft. of the proposed Project and proposed options.

[3] Throughout the DEIR it is also stated that the proposed Project and options would reduce Vehicle Miles Traveled ("VMT"); however it does not present an analysis of, or number by which, this will be reduced. This conclusory statement is inadequate.



The DEIR fails to provide accurate and complete mitigation. This section also contains deferred mitigation: "If maximum daily emissions would exceed applicable thresholds values during construction or operations, opportunities to mitigate and reduce those emissions are required to be explored and implemented as feasible."

22-70

e. Section 3.4-2.5, Project Features: The DEIR fails to provide complete information and details about the use of generators. More information must be provided on locations, types of generators and whether they will be back-up or will they be on all the time. The DEIR states inspections will be conducted by Metro for compliance with air quality regulations. The study fails to specify how often or whether this information will be submitted to AQMD. If Metro fails to comply with the inspections or with air quality rules, how will this be mitigated? Merely deferring air quality analysis to future inspections is unacceptable. 22-71

The DEIR provides incomplete and inaccurate information. The document states that the information provided for 2020 data is not reliable due to the COVID19 Pandemic; however, the 2020 monitoring period for air quality is used for concentrations of pollutants. During the pandemic there was nearly no traffic and low transit ridership. The information is inconsistent; all data presented must be consistent. 22-72

The DEIR did not address new Senate Bill 2097, which eliminates parking requirements for any property located near public transit. Contrary to Metro's claims, this Project will result in population / housing growth because State Legislation has approved numerous housing bills that incentivize more housing near transit centers. The numerous new State housing bills promote incentives for developers to construct more housing and therefore increase population. 22-73

f. Section 3.4-4.1.1, Construction impacts: The DEIR fails to provide an accurate constriction timeline. The "temporary" construction is expected to last 5-6 years. The sensitive receptors will be impacted. The DEIR fails to provide ways to mitigate the construction impacts on air quality. 22-74

g. Table 3.4-14, Project Construction Regulatory Control Measures: The DEIR fails to provide information on the proposed mitigation plan to water and reduce fugitive dust, Rule 403 fugitive dust. 22-75

All three Project "options" will require mitigation for air quality. The proposed Project and its options will be moving material to and from the Project area. The ROW option will require relocation of existing railroad tracks, which will require demolition of existing tracks. The trench option will require digging and moving of dirt, and the Hawthorne Boulevard option will required demolition or relocation of existing high power electricity lines. 22-76

SCAQMD RULE 403 (FUGITIVE DUST)	
Backfilling, Clearing and Grubbing, Cut and fill, Demolition, Disturbed soil, Earth-moving activities	Apply water to materials/stockpiles to prevent visible dust plumes and stabilize wind erodible surfaces.
Importing/exporting of bulk materials	Maintain at least six inches of freeboard on haul vehicles; use tarps or other suitable enclosures.
Road shoulder maintenance	Apply chemical dust suppressants and/or washed gravel to maintain a stabilized surface after maintenance.
Staging areas	Limit size of staging areas and limit vehicle speeds to 15 miles per hour.

4. **Biology:** The Biological Resources section of the DEIR is in complete and inadequate. The Biological Resources section of the DEIR did not identify, study, or properly mitigate the potential biological impacts with regards to bird surveys or special status species. (*See e.g.*, DEIR p. 3.2.3.) The Project site has acres of existing trees throughout the ROW and the Hawthorne Boulevard corridor areas; yet, no surveys were completed to determine the limits and potential impacts the proposed Project could have on biological resources. In addition, the DEIR failed to provide an inventory of existing trees within the proposed area. It is crucial to know the types of trees that are being removed since different species, such as the Monarch Butterfly, utilize available trees as migration resting points. 22-77

Furthermore, deferred mitigation is inconsistent with CEQA Guidelines. DEIR Section 3.7-1.1, Federal Regulations Migratory Bird Treaty Act, proposes deferring mitigation measures by completing a Pre-Construction Nesting Bird Survey; this deferral of potential mitigation does not address the potential biological impacts that the Project could have on the environment. 22-78

   a. Section 3.7-3.4, Sensitive Biological Resources Within the RSA: This section of the DEIR mentions plant and animal species that have potential to occur and are protected under the Migratory Bird Treaty Act (MBTA) and California Fish & Wildlife. The species named under the DEIR show low potential to occur and one plant species with high potential to occur. The DEIR did not complete an assessment or study on the current conditions of habitat, thus there is no determination on potential impacts during construction. The DEIR is stating that the proposed Project would be Less Than Significant Impact with Mitigation for all three options by conducting a pre-construction survey. How was this assessment made without first completing a special species survey of the area to justify less than significant impacts on Biological Resources? It would be impossible to arrive at this conclusion without first basing the assessment on completed special surveys conducted by a licensed and certified biology expert. 22-79

   b. Section 3.7-4.1.2, Operational Impacts: The DEIR states there will be Less Than Significant Impacts with mitigation. However that conclusion is self-contradictory given the statement that "Potential direct impacts may

subsequently cause nest abandonment (and this loss of young), nest failure, or direct mortality of individuals." Metro is proposing to mitigate with routine maintenance, however no routine maintenance plan was provided The Trench option was also identified as Less Than Significant Impacts with mitigation, and the Hawthorne Option Less Than Significant Impacts without any mitigation. A survey should be conducted and a plan should be prepared by an expert providing ways to mitigate potential loss of wildlife. 22-80

c. Section 3.7-4.2, Riparian or Fish and Wildlife: This section states No Impact under Construction and Operation of all three Project options. However, in the list provided of potential endangered species some vegetation is identified as potentially to occur. No study has been conducted and a No Impact determination cannot be made without sufficient information. 22-81

d. Section 3.7-4.4, Native or Migratory Species Corridors or Nurseries: Project interference with any native resident or migratory species. This section states No Impact under Construction and Operation of all three Project options. However, in the list provided of potential endangered species some wildlife is identified as potentially to occur. No study has been conducted and a No Impact determination cannot be made without sufficient information. 22-82

5. **Energy:** The DEIR does not mention that a purchasing power agreement with Edison is needed to run the light rail train. There was no analysis on how the project will be energized and where the power will be coming from. The power purchasing agreement must also be approved by the California Public Utilities Commission ("CPUC"). 22-83

a. Page 3.12-11 Metro Energy conservation and Management Plan (ECMP), the DEIR states that solar panels will be installed in the year 2022. Has or will this be part of the construction of the rail system? Is the stated timeframe still accurate given that 2022 has passed? Where will the panels be located? The information is unclear and deficient. 22-84

6. **Geology & Soils:** There is a lack of mitigation for the proposed Project in case of an earthquake within the vicinity. 22-85

a. Section 3.8-3.7, Landslides and Slope Failures: This section lacks data on the potential impacts for the areas identified in the map as landslide prone area. 22-86

7. **Green House Gases:** The proposed Green House Gases ("GHG") mitigation measures are not adequate. Deferral of mitigation measures is inconsistent with the CEQA Guidelines. On DEIR page 3.5-5, it states that building public transportation would reduce vehicle miles travelled, however there is no supporting data to show that this is the case. A GHG study must be prepared 22-87

and analyzed to ensure appropriate mitigation measures are incorporated into the Project. 22-87

a. Table 3.5-3, City of Lawndale – Relevant GHG Emissions, Goals, Policies and Programs: The DEIR states that goals from the Lawndale Air Quality Management Plan were incorporated as they would be relevant to the GHG emissions from the transportation and transit sector. City of Lawndale's Climate Action Plan Goal "LUT:C" encourages public transit by implementing a Bus Rapid Transit System. The City's CAP or AQMP does not recommend or provide goals or policies that support a light transit system. 22-88

    i. The DEIR is not consistent with the GHG Emissions, Goals, Policies, and Programs for the City of Lawndale. Goal 1- The City shall promote air quality and mobility in an environment of continued population growth, while providing for a healthy economic base. The City will work towards reducing VMT through an improved job/ housing balance and more efficient urban land use plan. Goal No. "LUT:C" Encourage transit through the implementation of a Bus Rapid Transit System and expand the sub-regional public transit network and enhance transit frequency through collaboration with SBCCOG and neighboring cities, as well as the prioritization of funding around transit stations to promote active transportation. 22-89

b. Section 3.5-2 Methodology: The DEIR explains that there will be environmental effects on GHGs temporarily during the Project construction and during future operation following the completion of the Project. This section mentions what was used to calculate the data, however there is lack of information on what or how this was conducted. 22-90

c. Section 3.5-2.1 Resource Study Area: This section states that the regional GHG emissions are evaluated primarily at the Metropolitan Planning Organization (MOP) level but does not specify if it was at Regional or Local levels. 22-91

d. Figure 3.5-1, Resource Study Area Map: The map should be analyzed locally, not just regionally. The study area is deficient. 22-92

e. Section 3.5-2.2, Construction GHG Emission: This section talks about temporary GHG emissions during construction from the use of heavy-duty haul trucks. Also, it states that the GHG emissions will be amortized over a 30-year operational lifetime. There are no mitigation measures or data backing up this claim. 22-93

    And, in the last sentence of this section, it is stated that construction "would take approximately five." Approximately five what? Months, Years? Does this account for potential unforeseen delays? 22-94

f. Section 3.5-10, Operational GHGs: The DEIR mentions that the proposed Project would reduce the sources of regional GHG because of increased ridership. What is the nexus between the two arguments? What warrants that ridership will increase to reduce GHGs? Are there any case studies associated with this claim? The DEIR does not adequately account for GHG (and other impacts) associated with rail riders driving automobiles either to a rail station (e.g., "park and ride"), or from a rail station to their endpoint destination. 22-95

g. Table 3.5-10, Operational Parameters: This table data does not have any information backing up the numbers. Provide a justification and basis for the numbers tabulated here. 22-96

    i. *Indirect Power Supply Emissions*: The last paragraph of this section sets forth deferred mitigation based on renewable energy requirements by the State, which is inadequate for the current conditions. What mitigations are proposed for the current electricity usage before the State becomes 100 percent renewable? The impact is significant and must be mitigated. 22-97

h. Section 3.5-2.4, Significance Thresholds: The proposed Project and Project options will be generating GHG emissions directly and indirectly. It also conflicts with the SCAQMD by stating that there are no thresholds for new light rail Projects; however, as part of this Project there is a locomotive freight rail system that is proposed to be moved and this is not mentioned within the GHG analysis. 22-98

i. Section 3.5-2.5, CEQA Streamlining: This section claims that air quality will improve. There is no data or metrics supporting this. 22-98

j. Section 3.5-3.1, California GHG Emissions: There is no study showing the wall built for the proposed Project. Provide information on how this will affect GHGs. 22-99

k. Sections 3.5-1.1 and 3.5-3.2: These discussions are not tailored to be Project related as they relate and rely on regional data. These should be be looked at a local level. 22-100

l. Section 3.5-3.3, Effects of COVID 19-Pandemic: This discussion suggests that there are no determinations on how the pandemic affected ridership. The DEIR takes the approach of a proffering a deferred study in or around 2042. There should be enough data from 2019, years prior, and 2022 to make a determination on ridership rather than deferring analysis. 22-101

m. Table 3.5-1.13, Proposed Project Table: This table is deficient and incomplete. There are no baselines to determine a less than significant impact. 22-102

n. Table 3.5-14 Trench Option Table: This table is deficient and incomplete, there are no baselines to determine the outcome. 22-103

o. Section 3.5-4.1.2, Operational Impact: The DEIR states that "Metro network GHG emissions displacement through mode shift by 3,721.4 MTCO2e, which represents an additional two percent reduction relative to 2019 Metro operations summarized in Table 3.5-12." This statement has no supporting data or studies. This section states that there are less than significant impacts, however there are no mitigation measures or supporting data attendant to this conclusory determination. Lawndale objects that the statements here are not accurate as to all Project options. 22-104

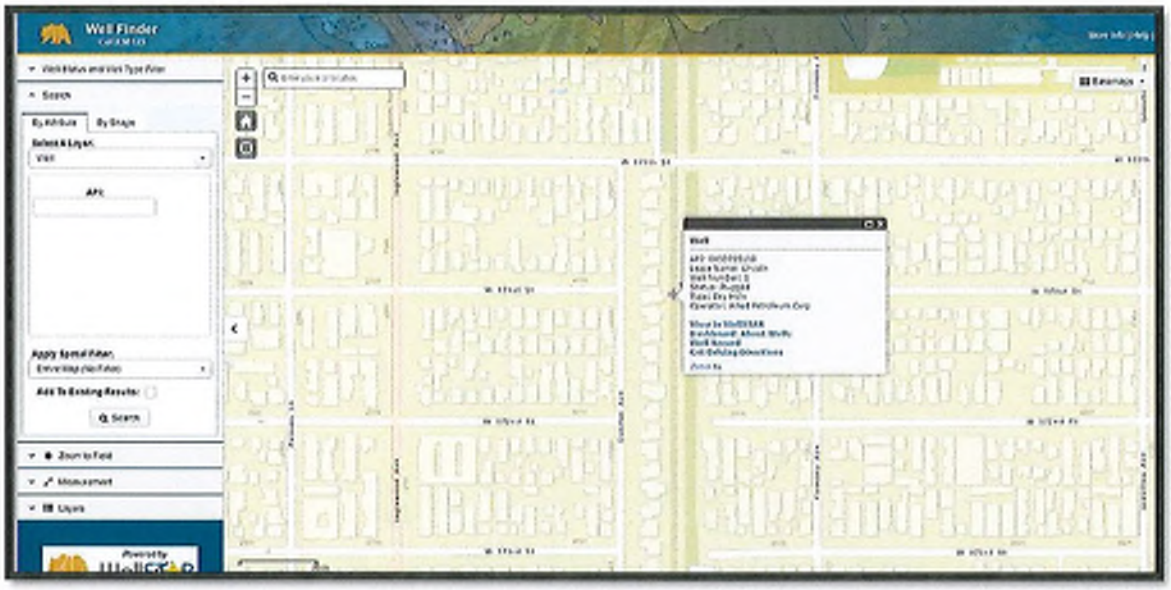
p. Section 3.5-4.2.1, Construction Impacts: The DEIR states that the Project would not conflict with any applicable policy or regulation adopted for the purpose of reducing emissions of GHGs. However, this statement is false. All the determinations were made without studies and without mitigation measures for construction and operational phases. The wait time at the crossings will create significant impacts on GHG emissions by idling traffic not analyzed in the DEIR. 22-105

q. Section 3.5-7, Cumulative Impacts: The information provided in this section of the DEIR is deficient and lacks information. There are portions of the proposed Project that are not evaluated, such as the construction of a sound wall, the construction of the widening of the bridge over Artesia Boulevard, as well as the construction of future development within the region. 22-106

See, Senate Bill 743: "...reduction of vehicle miles traveled that contribute to GHG emission as required by AB 32. SB 743 requires the State Office of Planning and Research (OPR) to develop revisions to the CEQA Guidelines, establishing criteria for determining the significance of transportation impacts of Projects within transit priority areas that promote the reduction of GHG emissions, the development of multimodal transportation networks , and a diversity of land uses." 22-107

8. **Hazardous Materials:** There is an Allied Petroleum Corporate Well within the existing right-of-way. The DEIR also states under the Air Quality section that there will be approximately 10% of contaminated soil. A Phase I study was conducted; however, a Phase II and Phase III remediation plan should have been prepared as part of the study. Thus, there are potential significant impacts that have not been addressed. 22-108

The diagram below provides the location of an existing well within the ROW in the City of Lawndale.



The DEIR does not provide sufficient information on the existing freight train. A study should be conducted to demonstrate how relocating the railway may expose sensitive receptors to hazardous materials and such impacts should be mitigated. 22-109

9. **Land Use:** Relevant regulations for the proposed Project do not support the light rail system. *See,* Lawndale General Plan Land Use Element, Table 3.2-2. Goal 1 of the Lawndale General plan requires the following: "Preserve and enhance the environment, values, aesthetic character, and image of Lawndale as a vital, attractive, desirable, and safe urban community." The proposed Project and its options are not consistent with this Goal 1 as it would decrease the aesthetic character, attractiveness, desirability and would not promote public safety. 22-110

   a. Section PR-AES-1, Local Zoning Ordinances: The Project components will NOT adhere to Lawndale's zoning ordinances. The City identifies the existing rail road right-of-way as Public Facilities/Open Space in the City of Lawndale's General Plan. These types of uses are identified as prioritized limited resources.

   See Lawndale Land Use Element Policy 1a: "Maintain the existing Residential development pattern, except in locations along major transportation corridors and public centers where Commercial or higher density." The proposed Project is to go through the ROW, which is a low density residential area with local and collector streets. The Project does not conform to the City of Lawndale's General Plan Land Use Element. 22-111

The proposed Project and its options are not consistent with the City of Lawndale's Zoning Ordinance Policies mentioned in the DEIR. 22-111

Table 3.2-5 The statements made in the chart below are false and lack data to support the information provided. 22-112

City of Lawndale, General Plan	
Land Use Element Policy/Goals: • Goal 1: Preserve and enhance the environment, values, aesthetic character, and image of Lawndale as a vital, attractive, desirable, and safe urban community; • Policy 1a: Maintain the existing Residential development pattern, except in locations along major transportation corridors and public centers where Commercial or higher-density Residential uses are more appropriate; *Circulation Element Policy/Goals:* • Goal 1: Provide an integrated transportation system for the safe and efficient movement of people and goods with minimal disruption to the environment within and through the City; • Goal 2: Consider all modes of transportation; and • Goal 5: Participate in and assist with coordinating regional efforts which integrate the City's transportation system with the regional transportation system.	**Consistent.** These policies support maintaining: • land use patterns except for major transit corridors • a viable and desirable community • integrating public transportation facilities and encouraging all modes of transportation In addition to the consistency of these policies, there would be no change to existing land use patterns.

The table below indicates "City of Lawndale Necessary Regulations." What does Metro mean by "Necessary"? 22-113

	City of Lawndale Necessary Regulations	
	Zoning Regulation	To encourage the most appropriate use of land
	Zoning Regulation	To conserve and stabilize the value of property
	Zoning Regulation	To provide adequate open spaces for light and air and to prevent and fight fires
	Zoning Regulation	To prevent undue concentration of population
	Zoning Regulation	To lessen congestion on streets
	Zoning Regulation	To facilitate adequate provisions for community utilities and facilities, such as transportation, water, sewerage, schools, parks, and other public requirements
	Zoning Regulation	To protect and promote the health, safety, and general welfare, all in accordance with the comprehensive general plan

The chart below is a continuation of the abovementioned chart. It shows Goals and Objectives for the Hawthorne Boulevard Specific Plan. The DEIR fails to meet and provide the information listed below. 22-114

Hawthorne Boulevard Specific Plan	
Plan's Purpose	Develop appropriate land use categories and development standards
Plan's Purpose	Ensure General Plan consistency
Plan's Purpose	Prepare design guidelines for signs, streetscape, and landscaping
Plan's Purpose	Make recommendations for circulation and other improvements
Plan's Purpose	Establish a conceptual framework for physical improvements to Hawthorne Boulevard
Plan's Purpose	Provide program and policy assistance for rehabilitating and revitalizing existing structures and businesses

Source: City of Lawndale General Plan, 1992a;1992c; 1999

The proposed Project would physically divide the established community of the City of Lawndale. Currently a freight train passes twice per day, which allows both the east and west side of the City to be connected. Adding the light rail train would divide the City as it would have light rail passing by every 15 minutes creating many environmental impacts interrupting the community. 22-115

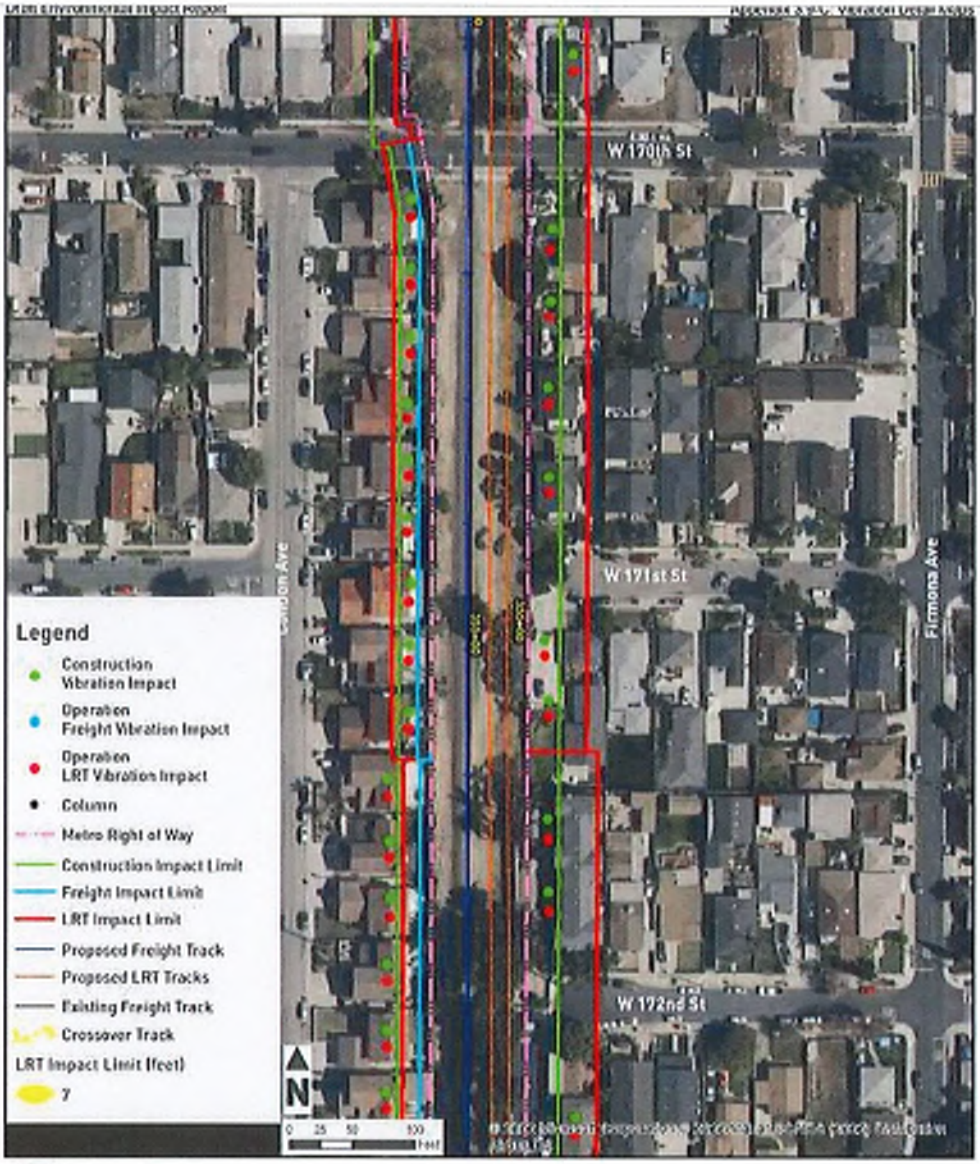
10. **Noise and Vibration:** The proposed mitigation measures and noise study are inadequate. The noise study did not analyze potential noise impacts on sensitive noise receptors for the proposed residential component of the Project with regards to the existing and proposed commercial expansion. In addition, no mitigation measures were proposed that would protect sensitive noise receptors for the proposed residential component of the Project from excessive noise and vibrations from the proposed and existing commercial component of the Project. 22-116

The DEIR states that noise and vibration will only cause annoyance to the residents, which is false, particularly given the massive increase in train frequency pursuant to the Project. The DEIR fails to address the public health issue caused by noise pollution and the public safety issue caused by constant vibration to the homes located near the ROW. According to a the National Geographic Encyclopedia "Sounds that reach 85 decibels or higher can harm a person's ear. Sounds that exceed this threshold include familiar things, such as power lawn mowers (90 decibels), subway trains (90-115 decibels, and loud rock concerts (110-120 decibels)." Noise pollution can cause induced hearing loss (NIHL). "Exposure to loud noise can also cause high blood pressure, heart disease, sleep disturbances, and stress." The DEIR fails to address the long-term impacts of noise and does not propose any mitigation. 22-117

The DEIR does not evaluate the noise from the wheels of the trains. A mitigation for rail and wheel lubrication is required to reduce noise levels. 22-118

Sound walls were discussed however not analyzed under the DEIR. Additionally, the sound walls are not shown in any of the elevations for the proposed Project and the options. 22-119

Studies have shown and proven that constant vibration to older residential structures will compromise the structural integrity of a residence. Metro has not acknowledged how the constant vibration of the light-rail system will be mitigated. The proposed light rail system will be adjacent to hundreds of residential structures that were built from the 40's, 50's and so on. All the existing residential structures will be susceptible to the constant vibrations emanated by the proposed light rail Project. Metro has failed to demonstrate any mitigations. 22-120



Metro

Figure 3.6-C11
Construction & Operational Vibration Impacts
Proposed Project

Page 11 of 76

The above figure from the DEIR show how the residential areas will be impacted by both construction phase and the operational phase of the proposed Project and trench options. This affects all the residential areas along the ROW, with Lawndale having the largest area of potential residential impacts. 22-121

a. Section 3.6-1.2 Federal Regulations mention a potential mitigation by establishing a "quiet zone" with "no horn" restriction for the proposed 22-122

crossinngs. The DEIR states supplemental safety measures for the "quiet zone" areas. The proposed mitigation has not been studied or analyzed with the existing railroad crossing within the City of Lawndale. The DEIR is deficient in identifying the potential impacts of implementing quiet zones within the crossing areas. 22-122

b. Section 3.6-5, Mitigation Measures MM-NOI-1 Noise Control Plan: This mitigation does is deficient there is not specific plan to control noise. This mitigation is deferred. 22-123

c. Mitigation Measure MM-VIB-3: Pre- and Post Construction Surveys: This section states that the construction noise would be less than significant impact. This determination is not accurate as noise mitigation was not implemented correctly. 22-124

d. Page 3.6-49: The impacts of the combined noise of the light rail with the freight impacts are significant. No forms of mitigation or mitigation analysis are presented to reduce such impacts. 22-125

11. **Population and Housing:** The DEIR does not provide adequate analysis of the proposed Project as it pertains to the population and housing impacts that this Project will generate, which is required to be reviewed under CEQA. The analysis states the Project will have no impacts to population or housing in the DEIR. The DEIR fails to address or take into account that the proposed Project would induce substantial population growth either directly or indirectly and failed to identify the new housing laws around public transport. 22-126

a. Property Inventory, Residential Impacts: Studies have shown that residential real estate properties that are adjacent and near rail lines are negatively impacted. The DEIR fails to provide information on the impacts to nearby residential. In addition, Metro must provide a detailed inventory of all properties that are located within a quarter (1/4) of a mile of the proposed light rail Project and demonstrate property that will be impacted. 22-127

b. Homelessness Impacts: Railway setbacks, bridge undercrossing and ROWs are a draw to those experiencing homelessness. While social justice and social impacts issues are not always required in a CEQA analysis, such issues must be analyzed where the social impact issue will result in physical construction or changes to the environment. A draw to homeless populations in the Project area will not only result in direct changes to the environment in the form of transitory encampments but would also necessitate the construction of homeless shelters and/or other physical accommodations to the homeless population. 22-128

12. **Public Safety/Public Services:** Under 49 C.F.R. § 38.85, where light rail vehicles operate in a high-platform, level boarding mode, devices or systems must be provided to prevent, deter, or warn individuals from inadvertently 22-129

stepping off the platform in between cars. The intent of this provision, which has been a part of the DOT ADA regulations since September 6, 1991, is to require light rail systems to obtain suitable devices to assist with and prevent passengers from mistaking the gap between cars for a doorway and potentially falling onto the track bed. The regulation provides that appropriate devices include, but are not limited to, pantograph gates, chains, motion detectors, or other suitable devices. This document fails to identify how this issue will be addressed. Some examples of the existing barriers are shown in the following images: 22-129

"9.02 Standards For The Installation Of Barriers. When the separate right-of-way of an LRT system occupies the median of a divided arterial highway with fully controlled grade-separated access or is contiguous to such a highway, Caltrans' 22-130

standard barriers of the following types shall be installed under the conditions indicated":

22-130

Distance from Center Line of Track to Edge of Nearest Travel Lane on Roadway	Type of Barrier
36 feet or less	Rigid concrete barrier at least 32 inches in height above the roadway.
Greater than 36 feet up to 45 feet	Rigid concrete barrier as specified above or semi-flexible metal barrier (thrie, W, box or other comparable beam) at least 33 inches in height above the roadway.

Fire protection requirements: "11.01 Fire Protection Requirements. All LRT systems shall establish fire protection requirements to control potential fire hazards. The minimum requirements for underground segments of the LRT system shall be as specified in the Standards for Fixed Guideway Transit Systems published by the National Fire Protection Association (NFPA 130). The minimum requirements for all other segments shall be established by the LRT system based upon a documented engineering analysis of the factors affecting fire hazards and fire risks using NFPA 130 as a guide." The DEIR does not address this aspect of the CPUC requirements.

22-131

The proposed Project would have significant impacts on public safety services, during construction and during operation. Ambulances, fire trucks and police would be heavily delayed by the construction of the Project and its options which would last approximately 5-6 years. "...Closure of major arterial crossings due to trains can cause delays up to five to six minutes on streets such as Inglewood and Manhattan Beach Boulevard.. Delays on these major arterials cause delays at nearby intersections as well when queue length grows. The LOS (levels of service) declines at the intersections feeding adjacent to the major arterials where the queue length have grown due to crossing closures. In addition, the angle at which the railroad line traverses the mostly north-south orthogonal grid roadway system further exacerbates traffic congestion in that area." (Downey, Cheryl, Southbay Cities Railroad Study.)

22-132

- Several discussions in the DEIR present the theory that public safety services (e.g., response times) will not be significantly impacted because train crossings will only be "occasional" and because emergency services can simply "detour" around rail crossings. Both observations are without merit. As addressed further above, the frequency of train interruptions at intersections is much more than "occasional"—especially considering the current baseline condition

22-133

of only two trains per day. Further, while public safety/services vehicles *can* detour around train crossings, so will all other vehicles on the road. Hence, public safety response times will inevitably slow, along with all other traffic. Thus, the mere availability of detours cannot serve as a legitimate basis to disregard the negative impacts on public safety response times. 22-133

The DEIR proposed Project and its options will cause health issues. According to the Beach Cities Health District Multimillion Dollar Blue Zones Project research findings. " …Widening its main street and raise speed limit, which, Buettner (Blue zones CEO) said, 'creates stress, danger, noise pollution and air pollution'." 22-134

The DEIR does not evaluate public benefits to be provided by Metro for each City. 22-135

The DEIR has failed to include the disruption of resident's daily routines. William Green Elementary School and Environmental Charter High School are both one block east from the proposed light rail Project. The excessive number of daily trips from the light rail are not recognized, acknowledged, or mitigated. The number of daily trips proposed by Metro will create a significant impact on the children of residents attending the nearby schools. It is an utmost importance that children have a healthy and quiet environment to facilitate their education and safety. The DEIR has failed to demonstrate infrastructure mitigation measures consistent with the safe routes to school program that aims to increase public safety. 22-135

The picture below shows the proximity of William Green School to the ROW.

13. **Traffic/Transportation Impacts:** The proposed Project will have tremendous traffic environmental impacts on the regional and locally-based on the scale and scope of the Project. The DEIR is incomplete, deficient, inadequate and does not analyze traffic impacts to local roadways or to Caltrans freeways, including the 22-136

State Route 405. The DEIR failed to address traffic impacts or provide measurable mitigation measures. There is insufficient information or data to make any determination on potential impacts. 22-136

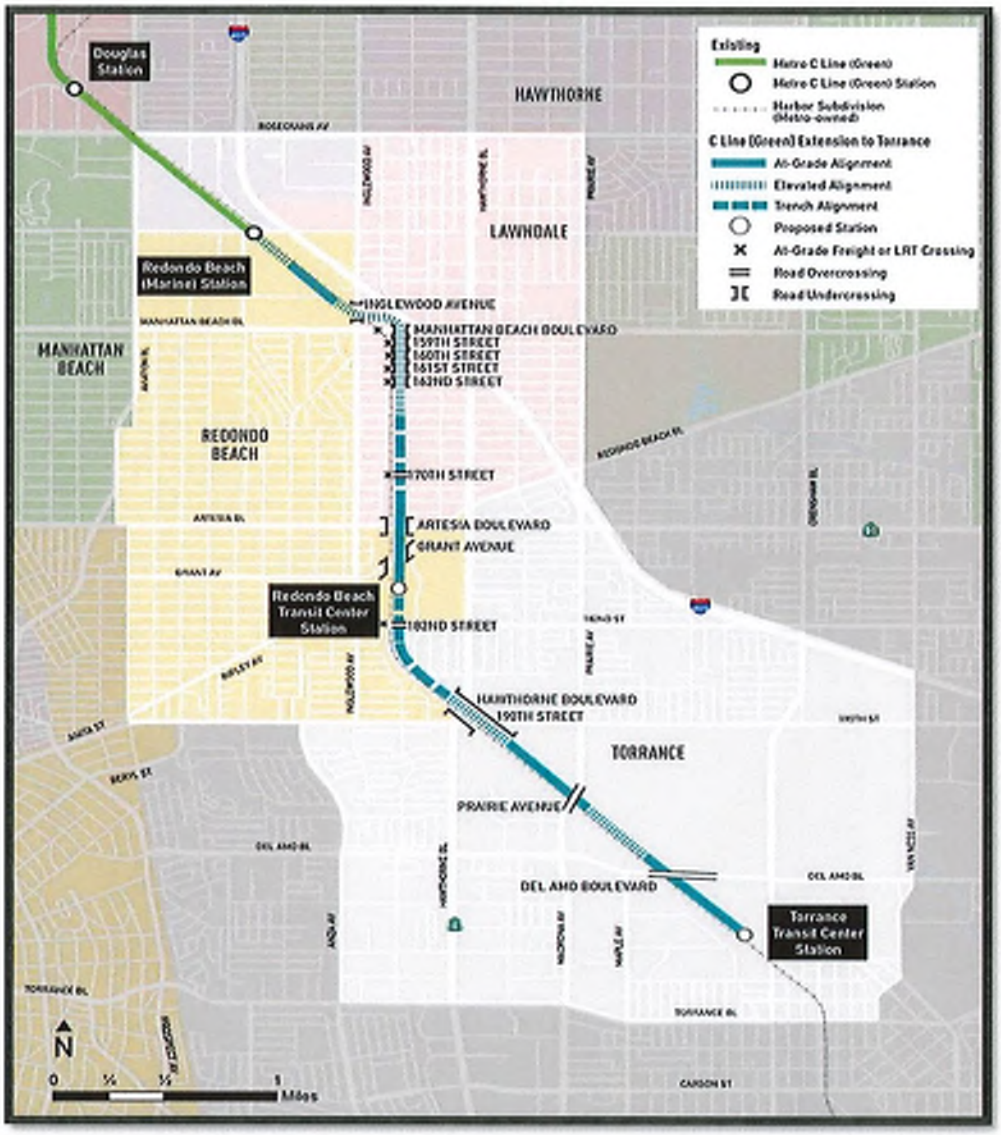
The DEIR states that Metro staff will prepare its recommendation on the preferred alignment in Spring 2023. It is not clear if the "preferred alignment" will be based on the 170th/182nd Grade-Separated Light Rail Transit Alternative, or if there will be potential for a hybrid alternative subject to the stakeholders' comments / public input they will be receiving. 22-137

Based on the review of the proposed Project and the presented options, the 170th/182nd Grade-Separated Light Rail Transit Alternative seems to be most relevant within reasonable Project alternatives to the proposed Project that could meet most of the basic Project objectives and substantially reduce or eliminate significant impacts associated with the Project.

- The Alternative states that "This Alternative would be entirely grade-separated with six over-crossings in the north (between Inglewood Ave and 162nd Street) and two below-grade crossings at 170th and 182nd Streets". However, the Figure ES-15 below shows that within the City of Lawndale just north of Artesia Blvd, there's a segment that is at grade. This needs to be clarified and effects (such as pedestrian bicycle and vehicular safety) on at-grade intersections need to be evaluated. 22-137

- Could impact freeway traffic, and street traffic near offramps, and increase further congesting of traffic. 22-138

Figure ES-15. Overview of 170th/182nd Grade-Separated Light Rail Transit Alternative



Indeed, the DEIR identifies the proposed Project's traffic impacts as significant and unavoidable. However, the Project's traffic analysis and the Project alternative analyses do not provide sufficient information to support the conclusion that traffic impacts cannot be feasibly mitigated under a less-intense Project alternative. Any one significant unavoidable impact requires disapproval of the proposed Project unless feasible mitigation measures or alternatives do not exist and specific benefits outweigh the significant impact. (Pub. Resources Code § 21081.) CEQA requires public agencies to deny approval of a Project with significant adverse effects when feasible alternatives or feasible mitigation measures can substantially lessen such effects. (Pub. Resources Code § 21002;

22-139

Sierra Club v. Gilroy City Council (6th Dist. 1990) 222 Cal.App.3d 30, 41.) The Legislature has stated:

> "[I]t is the policy of the state that public agencies should not approve Projects as proposed if there are feasible alternatives or feasible mitigation measures available which would substantially lessen the significant environmental effects of such Projects. . . ."

22-140

(Pub. Resources Code § 21002.) The CEQA Guidelines require an agency to "Disclose to the public the reasons why a governmental agency approved the Project in the manner the agency chose if significant environmental effects are involved." In order to implement this policy, the CEQA Guidelines specify that:

> "A public agency may approve a Project even though the Project would cause a significant effect on the environment if the agency makes a fully informed and publicly disclosed decision that: (a) There is no feasible way to lessen or avoid the significant effect..."

22-141

(CEQA Guidelines § 15043.) Feasible means "capable of being accomplished in a successful manner within a reasonable period of time, taking into account economic, environmental, social, and technological factors." (Public Resources Code § 21061.1.) Project alternatives remain feasible "even if these alternatives would impede to some degree the attainment of the Project objectives or would be more costly." (CEQA Guidelines § 15126.6(b).)

22-142

CEQA's purpose of avoiding, or substantially reducing, environmental impacts of a Project through the adoption of feasible alternatives is defeated where an EIR fails to ensure that information about potentially feasible alternatives is subject to public and decision maker review. It also fails when an EIR fails to include alternatives that actually reduce a Project's impacts below thresholds of significance. Smaller scale versions of the proposed Project that avoid or reduce significant impacts would meet most of the objectives and should be adequately analyzed in the EIR.

22-143

The objectives stated in the DEIR do not provide a Project of any specific size or scale, and, more importantly, all of the City's objectives could not be met with a scaled-down Project that requires little, if any, diversion from existing land use regulations. Furthermore, because this intense development will have unavoidable significant impacts on this site, off-site locations should be considered. Off-site alternatives should be considered when "significant effects of the Project would be avoided or lessened by putting the Project in another location." (Guidelines § 15126.6(f)(2)(A).)

22-144

The DEIR lacks information on how it will impact the City's General Plan Circulation and Safety Elements. 22-145

The DEIR fails to include a Traffic Operation Study ("TOS") document for any of the alternatives or options. 22-146

The DEIR refers to the City of Lawndale's 1991 General Plan/ Circulation Element and to the adopted 2015 General Plan/ Safety Element. Although Section 3.1 apparently attempts to address Policies 1 and 4, it totally ignores Policies 2 & 3. Specifically, Policy 2. C pertaining Master Transportation Plan, and Policy 3. A. pertaining to Street System, Levels of Service (LOS). (Reference Table 3.1-2) 22-147

Table 3.1-2. City of Lawndale – Relevant Regulations

Code/Goal/Policy	Description
City of Lawndale General Plan Circulation Element	
Policy 1B	Provide necessary facilities to balance all travel modes, users, and for a variety of trip purposes. Transportation modes are prioritized in the following order: vehicles, public transit, pedestrians, bicycles where sufficient ROW exists, and freight
Policy 3A	Require or provide adequate traffic safety measures on all roadways
Policy 4A	Reduce daily and peak hour vehicle trips
Policy 5A	Work with regional transportation agencies to establish criteria to implement transit improvements and develop short- and long-term transit service plans, corridor improvements, transit centers, park and ride lots, and the preservation of rights-of-way for commuter rail stations
Policy 5D	Work with regional transportation agencies to plan and implement a commuter rail system, including routes, location of stops, service schedules, feeder bus routes, parking needs, a transit terminal/park and ride lot, and funding
City of Lawndale General Plan Safety Element	
Policy SAf-4.4	Provision of adequate access for emergency vehicles and evacuation in all new developments

Source: City of Lawndale, 1991a; 2015

The DEIR refers to the VMT method very briefly, and ignores the LOS method which is referred to as a standard in the City's 1991 General Plan, hence lacks sufficient information on how each alternative would impact the City's Circulation Element. 22-148

Most of the DEIR lacks specific information pertaining each alternative, it is thus deemed to be incomplete and impossible to further comment on the Project's traffic/transportation impacts to the City. 22-149

14. **Tribal Cultural Resources:** The DEIR states that one Tribe proposed to be a part of the consultation process. It is the Lead Agency's responsibility to begin consultation with the Tribe within 30 days of receiving notice from the Tribe. The DEIR states emails were sent and no response was received. Best management practices would reach out to the Tribe by phone and formal mailed notice, not just an email contact. 22-150

15. **Utility Service Systems:** The DEIR fails to address how the proposed Project or its options will meet the requirements of the California Public Utilities Commission. The CPUC has safety rules and regulations for light-rail systems 22-151

including breaks, construction. Lighting on light-rail vehicles, speed, fire protection, traction etc. The DEIR is deficient in providing this information. There are sections in the DEIR where it is mentioned that CPUC approval is required for the Project, but descriptions of such approvals or standards therefore are lacking. 22-151

DEIR page 2-48, under the Project Description, ambiguously states that some existing utilities would need to be relocated. There are some major power lines located near the Hawthorne option by the 405. The approach as to how that will be handled is not described in the document; the description for this option and potential utility work is deficient. 22-152

The comments described above certainly do not represent a complete list, but are demonstrative of the fact that there are many issues related to the proposed Project that were not adequately addressed in the DEIR. Lawndale incorporates by reference other public comments submitted upon the DEIR.

CEQA was enacted to promote environmental protection and encourage governmental transparency. (*Citizens of Goleta Valley v. Bd. of Supervisors (1990) 52 Cal. 3d 553, 564.*) CEQA requires full disclosure of a Project's significant environmental effects so that decision makers and the public are informed of these consequences before the Project is approved, to ensure that government officials are held accountable for the consequences. (*Laurel Heights Improvement Ass'n of San Francisco v. Regents of the University of California* (1988) 47 Cal.3rd 376, 392.) In order to satisfy CEQA and protect the quality of life in the surrounding region, Lawndale requests that if the Project is not rejected outright, that the DEIR be revised to address the deficiencies identified in these comments and be recirculated to the public prior to preparation of a final EIR. 22-153

The members of the Lawndale City Council would like to make it clear that the City has significant concerns about the proposed Project, as is presented in the DEIR. Furthermore, we encourage Metro to work with Lawndale, as well as the communities adjacent to the Project site, to arrive at a solution that is a benefit, rather than a burden, to the surrounding area as a whole.

Sincerely,

Robert Pullen-Miles
Mayor

Submission 36

From: Eric Homier [redacted]
Sent: Friday, February 3, 2023 4:21 PM
To: GreenlineExtension
Subject: Greenline Extension

To whom it may concern

As a homeowner in Torrance, I am writing to urge you to strongly consider building the Greenline (C Line) extension through the commerce sector of Redondo Beach, not through the residential neighborhoods. Building on Hawthorne Blvd makes sense to the businesses along that route and prevents negatively impacting the families along the existing rail line. These families include my wife's family who live immediately adjacent to the rail line on 182nd St. in Redondo Beach. Bringing the Greenline (C Line) extension through the residential area immediately next to their house would cause a huge noise problem, create increased traffic immediately next to their house along 182nd St., decrease their quality of life, and likely drastically decrease home values.

36-1

36-2

Many Thanks!
-Eric

Subject: Alignment Comment

Good morning,

I'm writing with my support of the Hawthorne Alignment for the Green Line Extension. I think it's most suitable as it locates the mid-point station in a closer walkshed to large attractions and destinations. I would also support another infill station in between South Bay Galleria and Redondo Beach stations, either further up Hawthorne before the 405 or at Manhattan Beach Boulevard in the ROW to better serve residents of Lawndale. Though that's not in the scope, I further support the Hawthorne alignment for its potential to serve those customers later on with an infill option. Thank you for taking the time to review my comment! 37-1

Best,
Johnny Menhennet

Subject: Stop the ROW Train

Please strongly consider running the light rail train down Hawthorne Bl. Being a resident adjacent to the current freight track in Lawndale, it is already disturbing enough as it is. Having a light rail train run by the house frequently will be a disaster. Whether it is at grade or below grade, it will still be a major inconvenience and will make it extremely difficult to sell my home in the future. 38-1

Thank You for your consideration.

Cc:
Subject: Green Line Extension - NO to the ROW in Redondo Beach and YES to Hawthorne option

Dear Supervisor Mitchell and support staff,

My name is Lori Smalling. My husband Matt and I are homeowners in the Ruxton Ridge 3-story townhome complex that borders/overlooks the train tracks on the possible Right of Way (ROW) option in Redondo Beach. **I firmly ask that you please advocate for the Hawthorne Blvd. option for the Green Line Extension through the South Bay** and please take the time to read this email. 39-1

We purchased our home in 2001, with my husband's inheritance money he received from the passing of his mother. We were concerned about the couple of freight trains that pass by per day but loved the location and neighbors, and more importantly, it was what we could afford. Now with the proposed Green Line Extension, those few freight trains go from a couple of times per day to adding high-speed passenger trains every few minutes from 5am until midnight daily. This would be a considerable safety and quality of life change to our family, home, and community.

As you know it is very difficult to own property in the South Bay and we have worked very hard to live in this amazing community and city. I cannot imagine how disruptive the Green Line Extension will be for people who have put their hard-earned savings into living along the ROW option in Redondo Beach. It would be unfair to us if the better option is Hawthorn Blvd. because of the businesses and few residences if any.
It just makes sense! 39-2

Here are a few important and reasonable concerns:

1. **Safety issues of freight and passenger trains in such proximity to each other**. 39-3
2. **Disruption of unstable soil and movement/placement of natural gas pipelines.** Our neighbors in the Ruxton Place townhome complex have been dealing with sinkhole issues for years due to the pipelines running near our homes. I can't imagine the level of disruption to the soil in this neighborhood if Metro were to need to move those pipelines, dig trenches, and build retaining walls to accommodate the additional trains. And where, exactly, would those natural gas pipelines go? Closer to our homes? The trenching option would likely exacerbate any soil and pipeline issues, making the project more expensive and complicated - and would put our property in danger. 39-4
3. **Construction of retaining walls.** Again, I worry about the detrimental effects of soil instability, loss of natural light, and the overall eyesores that huge retaining walls would have on our neighborhood. What about very rainy days like what we just had in January? Our complex's sump pumps were working extra hard, and with retaining walls preventing natural water drainage and absorption, I worry about stability for all the homes near and below the walls. 39-5
4. **Noise pollution.** Even though Metro claims they will mitigate noise to the thousands of residents along the Right of Way with at-grade noise mitigation, our 3-story townhome looks down onto the tracks (including my bedroom window), and Metro admitted there was nothing they could do to mitigate noise above the tracks. They suggested "possibly" exploring double-paned windows for the "quiet" 39-6

hours from midnight to 5 am in the middle of the night, but that would only make a difference, if at all INSIDE my home – but what does that do to mitigate noise during the day when we would like to be outside? Trains whizzing by every few minutes would be a huge nuisance. And of course, what will that do to impact my family's sleep if we are above the retaining wall? That noise would be far from the peaceful environment we currently enjoy. 39-6

5. **Traffic.** Our neighborhood will be negatively impacted by the train traffic at lights, particularly 182nd and near the Galleria Mall where a new bus terminal has been built. I can't imagine the additional traffic issues during both morning and evening rush hour in our quiet residential neighborhoods, nor access to emergency vehicles. 39-7
6. **Change to the community.** Ruxton Ridge is a close community of townhome families that spend time with each other mainly outdoors. I worry about what the constant noise and traffic of the Green Line would mean to our little community, our older neighbors at Breakwater Village (a 55+ community), our neighbors at Ruxton Place (with ongoing sinkhole issues), and other neighborhoods all along the ROW in Redondo Beach and Lawndale. This possible ROW extension goes against so much of why we bought our home where we did. We wanted to walk to school, spend time with our kids and neighbors outside, and live a peaceful life. If we wanted an urban lifestyle, we would have chosen that – but this might be forced upon us, and we'd be devastated. 39-8

Thank you for your consideration to advocate for the Green Line Extension on Hawthorn Blvd. and give hard-working homeowners who cannot afford to live anywhere else in the South Bay the quality of life we deserve.

Sincerely,
Matt and Lori Smalling

In your proposed option to have the train travel elevated along Hawthorne Blvd you also propose a controlled crosswalk intersection on the west side of the median, South of Artesia Blvd below the train station. The result would be 4 signalized intersections within, I believe, less than only a few hundred feet. Stop lights would be at Redondo Beach Blvd, Artesia Blvd, below the train platform and at 177th street.

What mitigations do you propose to assure that traffic within this area does not become unjustifiably congested?

With the station on Hawthorne Blvd, how can you mitigate automobile traffic that's picking up or dropping off Metro travellers? Have you discussed with The Galleria their liability for the cars and the foot traffic of people passing through their parking lot between the station and the newly opened bus terminal? Can this problem be mitigated?

40-1

Subject: C Line Extension Comments

Regarding **Would the Project physically divide an established community.**" The DEIR says for the ROW, the effect is "less than significant."

On the contrary, the effect of metro coming down the row is a PERMANENT division of our community. Homes west of the tracks have decreased access to the east. How can you possibly say that the effect is "less than significant" when you are putting fences down the ROW which we can no longer cross? How will this affect our kids access to the schools on the other side of the tracks and the only park space within miles? 41-1

If at grade option is chosen you are also building a giant sloped embankment outside bedroom windows. We won't even be able to SEE the other side of the community. Right now we have views of the San Gabriel mountains, downtown LA and points beyond. A transition from elevated to at grade would block any view we have and block the sun from our house. How will Metro mitigate our loss of view and access to the other side of the community? 41-2

Subject: C Line Extension Comment

Regarding **hazards and hazardous materials**— there is no mention of the potential impacts of moving petroleum trains within a dozen feet of people's backyards if the C Line comes down the ROW. What would happen if a train derailed? Even at slow speeds? Where would those tankers end up? Freight Trains HAVE derailed on this track before in El Segundo and also at 159th street in Lawndale. We have seen what happened with recent derailments in Ohio and elsewhere… where hazardous materials are released from the trains and people have to leave their homes. 42-1

I also see no mention of High pressure petroleum pipelines that are buried beneath the row. How will constriction threaten these pipelines or cause potential disaster? How will hundreds of trains per day and the vibrations affect these pipelines? 42-2

NOTICE TO AGENT IS NOTICE TO PRINCIPAL --- NOTICE TO PRINCIPAL IS NOTICE TO AGENT

re: DEIR (Draft Environmental Impact Report),C Line Extension to Torrance Transportation Center: **ROW moving BNSF line closer to residences**

Dear Metro,

Regarding the "Proposed Project" outlined in the DEIR that identifies the BNSF Harbor Line Right-Of-Way(ROW)for expansion:

1) As a property owner living adjacent to this proposed project, myself, my family, and other residents sharing propery lines with this project will bear an unduly and unnecessary burden. Both during construction and post-construction, our safety, our property values, and our way-of-life, will all be compromised. 43-1

a) DEIR proposes to add 2 additional "light-rail" lines to the existing 80+ year freight line currently being used to transport Liquid Petroleum from the harbor to El Segundo for refinement. This train passes two times per day, to and fro. (see attached video)

b) To accommodate space for the added rails, the project would move the existing freight 12-7 feet closer to the rear wall of my property. All properties adjacent to the ROW will suffer this encroachment. 43-2

As our property already is subject to Noise and Vibration, the DEIR has no real way to mitigate the effects of this expansion and have stated as much in the DEIR:

During Construction ((Page3.6-34): "While MM-NOI-1 would include measures that reduce construction noise levels, in some instances the FTA construction impact criteria may still be exceeded. There are no additional feasible mitigation measures that could be implemented to further reduce construction noise levels. Therefore,construction of the Proposed Project would result in noise levels that would exceed FTA's criteria, and the impact would be **significant and unavoidable.**" 43-3

Operational Impacts (Page 3.6-46): Overall, the Proposed Project would have a **significant and unavoidable impact** for light rail and for combined freight and light rail noise…"

Moving the train closer to our properties to add two additional rail lines, violates our space to live, and also work, and presents foreseeable hardships and damage to infrastructure. 43-4

Please do not use the ROW for the C Line Expansion. 43-5

Sincerely,

Kevin Mitchell

Subject: C-line (Green) DEIR Public Comments

Dear Metro,

Please add my comments below expressing my concerns with the DEIR.

ES.2-3.1 The proposed project on the ROW is especially concerning because of the bridge that crosses Artesia. It will be highly impossible to build another to accommodate the Metro. There is no space to include both bridges. 44-1

Thank you for your attention to this matter.

Re: Public Comment on Draft Environmental Impact Report – Greenline Extension Project
South Bay Estates Mobile Home Community (55+)
18801 Hawthorne Blvd., Torrance (NWC Hawthorne & 190th St.)

To whom it may concern:

The undersigned represents the ownership interests of South Bay Estates, a mobile home park for senior residents located on Hawthorne Blvd., just north of 190th Street. We are writing to provide our comments on the January 2023 draft environmental impact report (the "DEIR") for the proposed C Line (Green) Extension. We also write to convey our OPPOSITION to the Metro ROW Option and Trench Option described in the DEIR. These potential alignments will have significant and material negative impacts on the residents of our South Bay Estates community. 45-1

South Bay Estates is a 55+ community consisting of 99 homes. It was developed in 1960, and many of our residents have lived there for decades. We care deeply about our residents, and feel it is our duty to maintain their safety and quality of life. Our community directly backs the existing freight rail alignment, and is very exposed to impacts on the new C Line Extension. Based on our review of the DEIR, our concerns are as follows: 45-2

Noise & Vibration

Both the Metro ROW and the Trench Options have significant unmitigated noise and vibration impacts on the residents of our community. These options are both at grade at the point where they are adjacent to South Bay Estates. According to the DEIR, the at grade noise and vibration impacts are Significant and Unavoidable. For this reason, should the C Line Extension move forward, we would strongly prefer the Hawthorne Option. This option is more compatible with the commercial and high traffic nature of Hawthorne Blvd., than is running behind the numerous existing residential communities along the Metro ROW and Trench Options, including South Bay Estates. 45-3

Further, the specific physical construction and infrastructure of our community make the construction and operational impacts worse for our residents. South Bay Estates consists of modular homes that do not have the same level of insulation or foundation types as standard single-family residences or even apartments. The impacts of noise and vibration within the residences and potential physical damage to the unit structures will be significant. House leveling will be a long-term issue with vibration. Ground vibration can cause damage to primary and secondary electrical lines below ground, causing power outages to our elderly resident base and costly repairs. Also, the potential for damage to the community walls, asphalt areas and underground utilities including gas, electric, water and sewer lines poses a very high risk to our residents.

45-3

Due to the higher density of our community, these impacts will affect more residents than in a standard residential community. The DEIR does not adequately consider the unique nature and adverse impacts that the Metro ROW Option and/or the Trench Option will have on a mobilehome / modular home community like South Bay Estates.

Safety

We do not believe the DEIR adequately addressed the safety risks of the Metro ROW and Trench Options. These alignments run through many residential neighborhoods, not commercial or industrial areas. Of course, with residential neighborhoods come people, including children and the elderly, who are likely to be at increased risk from such close proximity to a metro line. The presence of a metro line directly adjacent to residences represents an "attractive nuisance" for children and others. Although South Bay Estates is a 55+ community, our residents regularly have family visitors. We feel it is an inordinate risk for our residents and their families to be so close a metro line that runs throughout the day and night. The DEIR concludes, without sufficient reference to and analysis of evidence, that the project will have no significant impact on public safety.

45-4

In addition to the inherent safety risks, the project also risks bringing blight to the area. It is observable that in other areas with metro line stations there is an element of blight that exists, including homelessness and potential crime. With a proposed station just to the north of South Bay Estates, our residents will be exposed to more potential crime. Given the 55+ nature of our community, our residents are very sensitive to safety and crime issues. The DEIR does not adequately consider these issues and their aesthetic effect on the environment.

Again, the Hawthorne Option alignment is more compatible in this regard due to the greater overall traffic and illumination along Hawthorne Blvd., which would discourage this type of activity more than the dark areas along the Metro ROW and Trench Options that run directly behind South Bay Estates.

Commercial Business Benefits

The Hawthorne Option is a much preferrable alignment to the Metro ROW and Trench Options for the simple reason that it brings travelers and businesses together. With stops along Hawthorne Blvd., travelers will be able to take advantage of the many businesses on Hawthorne Blvd., which will create a more vigorous and vital commercial environment on that corridor. In addition, the increased level of existing development along the alignment of the Hawthorne Option would pose fewer risks of adverse environmental impacts, including but not

45-5

limited to noise, light pollution, and carbon emissions from increased traffic congestion. The DEIR is deficient in concluding that all 3 of the proposed alignment options would be equivalent in their impacts on these areas, without providing substantive consideration of the anticipated specific impacts of each option. 45-5

As long-time property owners in the area, we support efforts to mitigate the impacts of growing vehicle traffic. However, in this instance the negative impacts of the Metro ROW and Trench Options are very acute as to their effects on the quality of life and safety of our residents at South Bay Estates, so we oppose those options. If any alignment is to be considered for this project the Hawthorne Option alignment is highly preferred. 45-6

Thank you,

Tony Dolim

Subject: C line DEIR Public Comments

Dear Metro

I'm Yumiko Omatsu. [redacted]

My unit is facing the railroad.
If the Metro goes next to Breakwater village, I can't staying in the patio or opening the window all day.
And also I'm going to loose my privacy. 48-1

It is too close to our building and also pipe line too.
It is impossible to use ROW .
There are so many residences facing the railroad.
We can't live with the noise, vibration, pollution, dust and unsafe ground condition. 48-2
We are all old senior residents.
My blood pressure is going too high because of stress.

Thank you for your attention to this matter.

Submission 49

From: Jake Divine [redacted]
Sent: Sunday, March 19, 2023 8:19 PM
To: GreenlineExtension
Subject: C-LINE / Green Line Extension

Dear Metro,

I have been a Lawndale homeowner for over 45 year, I have grave concerns for my community's safety, health, and security.

SAFETY:
Is it even possible to guarantee that crowding THREE rails into a narrow corridor in between 1,100 homes and with passengers in such close proximity to liquid petroleum fuel tankers 12-25' away from densely occupied housing above 7 highly pressurized petroleum pipelines at some points rounding a curve and others 30 feet above occupied trenched light rails "safe"?

Please refer to federal guidelines which pertain to impacted residents as well as light rail passenger commuters.
HazMat chapter pg 2:
3.9-1.1 Federal Regulations
Hazardous Materials Transportation Act (49 United States Code Section 5101 et seq. and 49 Code of Federal Regulations Parts 101, 106, 107, and 171-180)
The Hazardous Materials Transportation Act regulates the transportation of hazardous materials. The objective is to provide adequate protection against the risks to life and property inherent in the transportation of hazardous materials in commerce, by improving the regulatory and enforcement authority of the Secretary of Transportation.

49-1

There have been numerous derailments and/or crash incidents daily in the past 3 months. We have since learned rail regulations had been relaxed federally on an incremental basis due to the rail industry lobby.

We are strongly urging Metro and the Metro Board of Directors to deeply consider the safety of the highly impacted 1,100 households between Lawndale and Redondo Beach.

49-2

Thank you for your attention to this matter.

Submission 50

From: Halland McKenna [redacted]
Sent: Tuesday, February 21, 2023 2:57 PM
To: greenlineextension@metro.net
Subject: South Bay Volvo/BMW - C Line (Green) Extension to Torrance

To whom this may concern:

My name is Halland McKenna, I am the Real Estate Director for the McKenna Auto Group, and my family owns Volvo Cars of South Bay (18900 Hawthorne Blvd., Torrance, CA 90504), South Bay BMW (18800 Hawthorne Blvd., Torrance, CA 90504), and the adjacent parking structure that houses our inventory (19 W 190th Street, Torrance, CA 90504).

Two of our properties, 18900 Hawthorne Blvd and 19 W 190th Street, are identified (ID #14) in the "Figure 2-21. Hawthorne Option Potentially Affected Properties – Sheet 9" in the Real Estate Acquisitions Report February 2023.

I want to start out by saying that we, the McKenna Auto Group, are extremely supportive of growth in our City – growth that includes better transportation, less pollution, economic development, the good of community and its citizens, safety, etc.

As we learn more about the C Line (Green) Extension to Torrance project, however, a couple questions have surfaced.

Firstly, there has to be another solution/alignment/approach to achieving all the above benefits to our community without impacting or terminating all of the parcels and businesses that are spelled out in the Real Estate Acquisitions Report. 50-1

Secondly, we are concerned that there is no separate measure of opinion for parcel/business owners, apart from the public hearings, that may be heavily impacted by the extension project. I understand there would be a separate "negotiation" time if the project progresses to acquisitions, but why do parcel/business owners not have a platform to express support or hesitation? 50-2

Thirdly, the Introduction section of the Real Estate Acquisitions Report Feb 2023 says "Metro Staff will prepare a recommendation on its preferred alignment in Spring 2023 based on findings from the Draft EIR, public comments made during the comment period, technical analysis, stakeholder input, and other factors such as cost, ridership and project objectives." We would like to know what is involved with the 'technical analysis' – where will the potential acquisition of affected parcels be analyzed in terms of the termination or relocation of these businesses – especially outside the City of Torrance? 50-3

Lastly, will there be economic studies performed and analyzed in the project alternative selection process, and if so will those economic reports be made publicly available? 50-4

Thank you,
Halland McKenna

Hello,

Thank you for your comment, we are confirming receipt of this email.

To ensure your comment is collected with Metro's public record of public comments, please do continue to engage with Metro.

Metro has prepared a Draft Environmental Impact Report (DEIR) to describe the three alignments under study and evaluate the potential environmental impacts per California Environmental Quality Act (CEQA). The DEIR is available for public review from January 26 through March 27, 2023. During the review period, the public will have an opportunity to comment on the Draft EIR and attend virtual and in-person public hearings.

The DEIR and other project documents can be found on the project website by visiting the documents section or go directly to metro.net/clineext/#documents. A 3D simulation video of the three alignments under evaluation is available at bit.ly/cletvideo. Please visit the project StoryMap for additional information at bit.ly/cletstory.

To access the Draft EIR and other project information, please reference the direct links below.

CAUTION: External Email. Proceed Responsibly.

Dear Supervisor Mitchell,

As part of the ongoing conversation about the selection of route for the Green Line extension, I would like to voice my opinion and ask for your support. Please do what you can to select the option for the Green Line to go down the commercial route on Hawthorne Blvd. This option is both the most beneficial and least disruptive option for the local residents of this area. I am looking forward to using the Green Line extension to connect with the Metro system so I can go places in LA without fighting the traffic. At the same time I want to avoid the disruption and lower quality of life of the other two options. 52-1

Thank you so very much,

Eddie Jira

From: Paige Kaluderovi [redacted]
Sent: Tuesday, February 21, 2023 12:51 PM
To: greenlineextension@metro.net
Subject: Green Line Extension Draft EIR Comment

My name is Paige Kaluderovic and I live in the neighborhood next to the ROW between 182nd St. and 190th. I'm advocating for the Hawthorne option and not in my neighbors backyards. The construction and disruption to the quality of life is of high importance. 55-1

That being said, with the news of the Ohio train derailment, I'd like METRO to address emergency measures it plans for scenarios like that, should the ROW option be selected. Based on what is currently proposed for either of the 2 ROW options there are sound barrier walls around ONLY the light rail. There are no measures proposed to ensure the residents next to the ROW maintain their quality of life. The freight train tracks are planned to move even closer to the homes without any crash barriers or other measures to ensure safety to the homes and residents there. This needs to be addressed in the Final EIR for this to be even a consideration for the ROW options. 55-2

Respectfully,

Paige Kaluderovic

Submission 56

From: Valerie Lee [redacted]
Sent: Tuesday, February 21, 2023 3:54 PM
To: greenlineextension@metro.net
Subject: Concern

The C line extension should not be near homes. If this extension is something absolutely necessary, building the overpass over Hawthorne Blvd. makes much more sense as that is an area zoned for commercial use. I've lived in North Redondo Beach all my life, and I do recall the train that would cut through Redondo Beach and Lawndale. It was a nuisance to all of us living in the area. But as more homes and businesses were built, and an increase in traffic to and from the freeway, the train schedule was dramatically reduced, which has minimized its negative impact to our surrounding homes. Adding a new train railway, with more frequent trips, will have a terrible impact on the homes in our neighborhoods. These areas are not commercial/industrial places... These are neighborhoods, with families enjoying their peaceful homes: Homes that people are retiring in, and homes that young families are spending their life savings to buy. Our neighborhoods' densities are maxed out: Our homes and narrow streets cannot absorb the added negative effects of an added train railway without sacrificing quality of life. Please keep our neighborhoods train free!

56-1

Thank you for your consideration.
Regards, Valerie

Comments on Draft EIR for C Line (Green) Extension to Torrance

Dear Ms. Sheridan

I write regarding my strong policy and environmental concerns regarding the Hawthorne Option #3, and its potential adverse impact upon Proposed Project's regional transit goals.

The Draft EIR identifies the following Project objectives, among others: (1) "creating direct connections between the regional transit network and local transit hubs for convenient transfers," and (2) "provide more equitable access to regional destinations by improving connections to the Metro regional rail system.

The Hawthorne Option falls short of these aims. My specific environmental concerns all relate to the lack of an immediate connection between the proposed elevated South Bay Galleria station, which is located hundreds of feet south of Artesia Blvd. on the Hawthorne Blvd. median and the multi-modal Redondo Beach Transit Center, located south of the intersection of Grant and Kingsdale Avenues. 57-1

The two transit centers are not in close proximity. The Draft EIR notes there is no direct east-west pedestrian route to Hawthorne Blvd. Instead, connecting transit passengers will have to walk for some 15-20 minutes through surface parking lots and on a grade-level signalized crosswalk on Hawthorne Blvd., a heavily trafficked arterial. This deficiency has the following significant environmental impacts.

1. **ADVERSE TRANSPORTATION IMPACTS**

As noted in the Draft EIR, the Redondo Beach Transit Center is a "regional hub for local and regional bus lines", with 11 bus bays, public bathrooms, a 320-space parking lot, bicycle storage lockers, and a pickup and drop off area. Yet none of these amenities, critical to accessibility, mobility, connectivity and safety, will be immediately accessible to transit users who enter and exit the Hawthorne Option's South Bay Galleria station. 57-2

Adoption of this route will frustrate transit goals by increasing the time, distance and accessibility of transferring from bus lines served by the Redondo Beach Transit Center and the C line. This is contrary to Metro's Vision 2028 plan which promotes swift and easy mobility by removing passenger wait and transfer times. Such barriers will be substantial for senior and disabled transit users. 57-3

Further, a primary objective of the C line extension is its LAX access through the Airport Metro Connector Transit Station and the LAX Automated People Mover. This is projected to substantially reduce VMT by allowing airport passengers and employees to transfer quickly and easily between LAX and Metro. 57-4

However, Metro's utility as a regional airport connector requires convenient and accessible parking and pick-up and drop-off areas. The Hawthorne Option's South Bay Galleria station has no such parking, pick-up and drop-off areas. By contrast, the Redondo Beach TC Station for the ROW Options does offer such parking, pick-up and drop-off areas. These are key considerations for evaluating the Project's effect on transportation and VMT. 57-5

The Hawthorne Option further has a deleterious impact on roadway efficiency and safety through its creation of an additional midblock grade-level pedestrian crossing south of the proposed South Bay Galleria Station. This crosswalk will create irremediable and unsafe conflicts between motorists on multi-lane Hawthorne Blvd. and transit passengers who hurry across the street while trying to catch an approaching train. 57-6

2. **HAZARDS / SAFETY / PUBLIC SERVICES**

There is no identified pedestrian path between the Redondo Beach Transit Center and the Hawthorne Option's South Bay Galleria Station. Instead, passengers, frequently with luggage, will be required to make their own way among a maze of surface parking lots and at a crosswalk across busy Hawthorne Blvd. 57-7

The EIR has not identified a safe means for pedestrian travel between these two waypoints, which may impose unknown expense, inherent risks and mobility barriers.

Thank you for your consideration of these matters.

Very truly yours,

Bob Wolfe

Subject: RE: ENV: Metro C Line (Green) Extension to Torrance Project (NOC and Availability (NOA) of a Draft EIR)

Lt. Garcia,

After further study of the EIR, I like to point out that the project area is within the boundaries of four cities which are Hawthorne, Lawndale, Redondo Beach, and Torrance. The City of Lawndale is under LASD jurisdiction and the City of Torrance and Redondo Beach transit centers plan to include LASD substations. The existing Redondo Beach (Marine) Station, the proposed Redondo Beach Transit Center and South Bay Galleria Station are within the Redondo Beach PD jurisdiction. The Torrance Transit Center Station is within the Torrance PD jurisdiction.
Also, at the northern segment of the Project area between Redondo Beach (Marine) Station and 190th Street, two alternatives are being considered: Trench Option and Hawthorne Option.

We are currently working on the draft letter. We would like to see if you have any concerns that need to be addressed in the study to be included in the draft letter. Please review the Notice. I am requesting that we get your response by **Monday February 13, 2023**.

Please give me a call if you have any question.

Thank you.

Subject: ENV: Metro C Line (Green) Extension to Torrance Project (NOC and Availability (NOA) of a Draft EIR)

Good afternoon, Lt. Garcia

FPB received the attached Notice dated 01/26/2023, see attachment. It is a Notice of Completion and Availability of a Draft Environmental Impact Report from the Los Angeles County Metropolitan Transportation Authority (METRO), for the Metro C Line (Green) Extension to Torrance Project (Project). Metro is planning to develop a combined elevated and at-grade light rail transit lines that extend the C Line (Green) by approximately 4.5 miles between Redondo Beach (Marine) Station to the Torrance Transit Center (TC). The proposed project will also develop two new stations, Redondo Beach TC Station, and Torrance TC Station, which are located adjacent to the existing cities' bus transit centers.

The existing Redondo Beach (Marine) Station and proposed Redondo Beach Transit Center is within the Redondo Beach PD jurisdiction and the Torrance Transit Center Station is within the Torrance PD jurisdiction. I like to verify with you whether this project will be under Transit Service Bureau (TSB) service area or not. Please let me know.

If it is under TSB service area, please review the Project information and provide comments on any potential environmental issues or impacts to the law enforcement operations. Attached is the executive summary for the project and here is the link to download all the documents.

Submission 61

From: Janice Tanabe [redacted]
Sent: Wednesday, February 22, 2023 6:27 PM
To: greenlineextension@metro.net
Cc: [redacted]
Subject: C-line (Green) DEIR Public Comments

Dear Metro,

Please add my comments below expressing my concerns with the DEIR.

Chapter 3.6 Noise and Vibration does not adequately address severe impacts to the residents at the South Bay Estates, a community of Modular homes adjacent to the R.O.W.

The noise and vibration that the residents will experience from the trains going by will change their peaceful way of living. Many of the residents are of low income and will not be able to relocate.

61-1

Thank you for your attention to this matter.

Jan Tanabe

Subject: Draft EIR C Line Ext. – Questions – 2.3-1.1 Alignment – 2. Project Description – Pages 2-9 - 11
Attachments: Picture-13-1 tie-changer.jpg; Picture-13-2 ballast-reg.jpg

To: Metro and Metro Board Members

If sufficient space is not allocated for Freight Line maintenance, then the Freight Line or Light Rail or both would end up being moved even closer to residential structures than what is currently being shown for the Proposed Project in the Draft EIR. More detail is needed than what is currently being shown in the Project Description figures such as the distance between the Freight Line and the Light Rail.

Reference: *Figure 2.3-3. Proposed Project – Looking South of 162nd Street – 2.3-1.1 Alignment* – 2. Project Description – Page 2-9

Reference: *Figure 2.3-4. Proposed Project – Looking South Between 165th Street and 170th Street* – 2. Project Description – Page 2-19

Reference: *Figure 2.3-5. Proposed Project – Looking South Between 170th Street and Artesia Boulevard – 2.3-1.1 Alignment* – 2. Project Description – Page 2-10

Reference: *Figure 2.3-7. Proposed Project – Looking South Between 186th Street and Hawthorne Boulevard – 2.3-1.1 Alignment* – 2. Project Description – Page 2-11

For the Proposed Project, each of the 3 referenced figures (Figure 2.3-3, Figure 2.3-4, and Figure 2.3-7) depicts the width of the ROW as 100 feet and shows that the portion of the ROW that would be allocated to the “relocated freight” would have a width of 25 feet. Figure 2.3-5 (referenced above) depicts the width of the ROW as 75 feet and shows that the portion of the ROW that would be allocated to the “relocated freight” would have a width of 36 feet. However, it also shows the Freight Line as being located very close to the Light Rail.

62-1

A few years ago, possibly sometime in 2014 or 2015, Freight Line track maintenance was observed in which several big machines replaced the railroad ties and repacked the stones. It was fascinating to watch this process, especially extraction of the old ties and the insertion of the new ties. Photographs of 2 machines similar to those that were observed, have been obtained from the internet (https://fossbytes.com/railway-maintenance-machines) and are attached as “Picture-13-1 tie-changer” and “Picture-13-2 ballast-reg”. Ballast refers to the small stones. Note how far tie-changer arm which swings far out. One would expect that a similar space is required on both sides of the tracks. Otherwise, a different, possibly more labor-intensive process would have to be performed. 62-2

Questions: What would be the distances between the Light Rail and the Freight Line, as they would lie parallel to each other throughout the length of the ROW? What would be the distances between the Freight Line and the edge of it’s allocated space? Has

The concern is that if insufficient space is being allocated to allow for maintenance on the freight line, then adjustments would be made, after the Proposed Project is started, which would place the Freight Line, the Light Rail, or both closer to residential structures, than what is currently being show in the Draft EIR. 62-3

So, in summary, if sufficient space is not allocated for Freight Line maintenance, then the Freight Line or Light Rail or both would end up being moved even closer to residential structures than what is currently being shown for the Proposed Project in the Draft EIR. More detail is needed beyond what is currently being shown in the Project Description figures such as the distance between the Freight Line and the Light Rail.

To the Metro Line Board - Please read this article from our local newspaper. It expresses the concern that I have and that everyone feels about the possible rail extension next to Breakwater Village. At age 82, I object to the noise, dust, and construction of the line. Please choose an alternative path. Thanks. 63-1

Metro C Line extension could rattle seniors in Redondo Beach apartment complex

Although the project isn't set in stone, Breakwater Village residents worry some options will constantly disturb their quality of life

By **TYLER SHAUN EVAINS** | tevains@scng.com |
PUBLISHED: February 22, 2023 at 6:00 a.m. | UPDATED: February 22, 2023 at 8:35 a.m.
Residents of a Redondo Beach senior apartment complex say they are concerned about the consequences to their quality of life if a planned extension of LA Metro's C Line ends up traveling behind their homes.

Two of the three options for extending the C Line, formerly the Green Line, 4.5 miles south — from the Redondo Beach Marine Avenue Station to the Torrance Transit Center, just south of Del Amo Boulevard — would send the route along an LA Metro-owned public right-of-way that runs behind the Breakwater Village apartment complex for those 55 and up.

Metro currently leases the right-of-way to a freight rail company that transports petroleum to nearby refineries.

About 300 people live in the 191 unit complex, with around 20 units reserved for residents with low-to-moderate incomes. Two of the three options for the upcoming commercial light rail extension would cause even more noise and vibrations for those residents than they already experience from the freight train passing by twice daily, according to those who live there and their City Council representative.

“The 300 of us, our quality of life will be diminished,” said Breakwater resident Pat Nichols, who has led the charge in advocating against the new rail being built along the right-of-way.

Metro officials, for their part, have stressed that there are still three possible options — and no decision has yet been made on which one will happen.

It’ll still be a while before any new rail goes in, though.

The project, for which planning began in 2010, is currently in the draft environmental impact review process and the final EIR will be released in 2024. Construction may begin in 2026 and the rails are estimated to open for service between 2030 and 2033.

Metro staff will recommend one of the options to its board of directors, which the panel will consider approving in the spring, according to the agency’s website. The final recommendation will be based on the findings from the draft environmental impact report, public comments, technical analysis, stakeholder input and more.

Breakwater residents have been meeting regularly for about a year to discuss their concerned over the project, said Marg Alexander, who has lived there since 2009. Among their fears, Alexander said, is that Metro will choose the cheapest right-of-way option; one of the two routes that would travel behind Breakwater is projected to cost $1 billion less than the other options.

Residents have sent emails to Metro’s board of directors and, more recently spoken, at public hearings during the draft EIR review period, which began Jan. 26 and ends March 27.

In the right-of-way elevated/street level option, which would go behind Breakwater, the rail would follow the right-of-way above ground and then travel at street level south of 162nd Street. The light rail would cross 170th and 182nd streets at the street level. This would cost an estimated $1.96 billion.

The trench option, which would also travel along the right-of-way and behind Breakwater, would transition from the Redondo Beach station down into an open-air underground trench, crossing under seven streets between Inglewood Avenue and 170th Street; then it’d move up to street level to cross over Artesia Boulevard and Grant Avenue, cross under 182nd Street in another short trench, and finally return to grade level to go across Hawthorne Boulevard and continue south. It’s estimated to cost $2.84 billion.

Metro would build stations adjacent to the Redondo Beach and Torrance transit centers for both right-of-way options.

The Hawthorne Boulevard option, meanwhile, would travel in an elevated structure parallel to the 405 freeway until turning south onto Hawthorne Boulevard near 162nd Street and rejoining the

right-of-way south of 190th Street. Metro would build a station adjacent to the South Bay Galleria and another near the Torrance Transit Center. This option, which won't run behind the Breakwater, would cost an estimated $2.96 billion.

To put the new rail along the right-of-way, the freight rail would be rebuilt and moved west, putting it closer to the apartment complex per Metro's website.

But Nichols, who has lived in Breakwater Village since 2007, said that it's already close enough.

"We can wave to the conductor on the train," Nichols said. "What they're planning on doing for the right-of-way will move the existing train line and bring it closer to our complex, almost in our backyard."

Nobody really complains about the freight's passage twice per day, Nichols said, but to have the nuisance from commercial trains every few minutes is a whole other thing.

Metro, in the draft EIR, mentions potentially building sound walls to mitigate the noise, but Nichols said she doesn't think there's room for them.

"Most of our windows face the train tracks on that side of the complex," she said. If it moves closer, "we wont be able to have our windows open because of the noise."

Councilmember Zein Obagi Jr., who represents District 4, where the apartment building is, said that he is "100% behind the residents of Breakwater."

"Moving the heavy train closer could be devastating to their quality of life," Obagi said. "These are retired people –some in affordable units. They're hoping to enjoy their later life in a quiet, beautiful place, but now they'll have construction for years if it gets built there."

The building already shakes when the train goes by, he added, and a resident recently told him that she has to adjust the photos hanging on her walls every day because of the train's vibrations.

The building also has foundational cracks, Nichols said, which could get worse during c Another main concern, Obagi said, is that the ground beneath the site is compacted sand.

There's already a sinkhole that's affecting three units, Nichols added. It could get worse or more could come with new construction and train activity.

But no decisions have been made yet, Metro officials said.

"There's three different alignments in the draft EIR," said Metro spokesperson Patrick Chandler. "No final decision has been made on what the line is going to be; in this process we really want to hear from (the public,) get that feedback and have that conversation."

Public hearings are scheduled for this week, including:

- From 5 to 8 p.m. Wednesday, Feb. 22, at the Redondo Beach Performing Arts Center, 1935 Manhattan Beach Blvd.
- From 10 a.m. to 1 p.m. Saturday, Feb. 25, at Lawndale High School, 14901 S. Inglewood Ave.

Those interested in commenting on the draft EIR can do so by calling 213-922-4004 or emailing greenlineextension@metro.net.

Subject: Draft EIR C Line Ext. – Questions – 2.3-1.1 Alignment – 2. Project Description – Pages 2-9 - 11
Attachments: Picture-13-1 tie-changer.jpg; Picture-13-2 ballast-reg.jpg

To: Metro and Metro Board Members

If sufficient space is not allocated for Freight Line maintenance, then the Freight Line or Light Rail or both would end up being moved even closer to residential structures than what is currently being shown for the Proposed Project in the Draft EIR. More detail is needed than what is currently being shown in the Project Description figures such as the distance between the Freight Line and the Light Rail.

Reference: *Figure 2.3-3. Proposed Project – Looking South of 162nd Street – 2.3-1.1 Alignment* – 2. Project Description – Page 2-9

Reference: *Figure 2.3-4. Proposed Project – Looking South Between 165th Street and 170th Street* – 2. Project Description – Page 2-19

Reference: *Figure 2.3-5. Proposed Project – Looking South Between 170th Street and Artesia Boulevard – 2.3-1.1 Alignment* – 2. Project Description – Page 2-10

Reference: *Figure 2.3-7. Proposed Project – Looking South Between 186th Street and Hawthorne Boulevard – 2.3-1.1 Alignment* – 2. Project Description – Page 2-11

For the Proposed Project, each of the 3 referenced figures (Figure 2.3-3, Figure 2.3-4, and Figure 2.3-7) depicts the width of the ROW as 100 feet and shows that the portion of the ROW that would be allocated to the "relocated freight" would have a width of 25 feet. Figure 2.3-5 (referenced above) depicts the width of the ROW as 75 feet and shows that the portion of the ROW that would be allocated to the "relocated freight" would have a width of 36 feet. However, it also shows the Freight Line as being located very close to the Light Rail.

66-1

A few years ago, possibly sometime in 2014 or 2015, Freight Line track maintenance was observed in which several big machines replaced the railroad ties and repacked the stones. It was fascinating to watch this process, especially extraction of the old ties and the insertion of the new ties. Subject: RE: "C Line Extension to Torrance Public Meeting."

Hello, Metro Staff!

Submission 67

First of all, my main concern is about the completion of the **Metro K Line**. You noticed that the **Aviation/Century K Line Station** is slated to open before the Fall of 2023, and that would easily connect into the **Aviation/I-105 C & K Line Station**, so I could connect even better if I have gone on the upcoming **K Line** between **Rosa Parks/Imperial/Wilmington Station** and the **Expo/Crenshaw Metro K Line Station**. Why? Because every Sunday Morning, I go to **Saint Monica's Catholic Church** as soon as I get off at **Downtown Santa Monica E Line Station** and then connect with **Santa Monica Big Blue Bus Line 18** to over there and vice versa.

Second, my other main concern is also about the completion of the **Metro Regional Transit Connector** which is slated to open later this year. I would like to know what's going on over there regarding the 90% completion right now.

And finally, my other main concern is about the future opening of the **South Bay Metro C Line Extension**. Last Sunday, January 29th, I visited the brand-new **Redondo Beach Transit Center**, shortly after I got off from **Torrance Transit Bus Line 8**, at the intersection of **Artesia Blvd. & Kingsdale Avenue** as I walked all the way to that location which is very close to the nearest **Target** Store. And because of that, there are supposed to be a couple of proposed light-rail tracks to help connect to the buses at the **Redondo Beach Transit Center** even better along with the upcoming location: **The Mary K. Giordano Regional Transit Center** in the city of Torrance, and the proposed **Metro C Line Extension** won't be completed until **2028-2032**, with the help of the **Los Angeles 2028 Summer Olympic Games**.

67-1

Do you have any answers that I gave you above? Please do so, and thank you very much for your generosity, and for your cooperation.

Yours Sincerely,

JOSE DENNIS ALABASO

Subject: Draft EIR C Line Ext. – Questions – 3.9-3.1.6 Petroleum Hydrocarbons – 3.9 Hazardous Materials – Page 3.9-16
Attachments: Picture-7-4 SEof182X.JPG; Picture-7-2 SWof182X.JPG; Picture-7-3 SWof182X.JPG; Picture-7-1 SWof182X.JPG; Picture-7-5 NWof182X.JPG; Picture-7-6 NWof182X.JPG

To: Metro and Metro Board Members

The Proposed Project involves relocating the existing Freight Line tracks and adding two Light Rail tracks to the ROW which in many places is only 100 feet wide and through which several existing petroleum lines run. How many petroleum pipelines are there and where are they located, vertically as well as horizontally? Impacts related to petroleum pipelines are of less magnitude for the Hawthorne Option which is a reason to choose the Hawthorne Option. 68-1

Reference: *3.9-3.1.6 Petroleum Hydrocarbons* – 3.9 Hazardous Materials – Page 3.9-16

Reference: *3.9-4.2.1 Construction Impacts* – 3.9 Hazardous Materials – Page 3.9-35

Reference: *3.11-3.6 Natural Gas and Oil Facilities* – 3.11 Utilities & Service Systems – Page 3.11-18

Reference: *3.9-2.1 Resource Study Area* – 3.9 Hazardous Materials – Page 3.9-8

Reference: *Figure 3.9-1. Proposed Project – Hazardous Materials Resource Study Area* – 3.9 Hazardous Materials – Page 3.9-9.

Reference: *3.11-2.2 Resource Study Area* – 3.11 Utilities & Service Systems – Page 3.11-9 – 10

Submission 68

Many questions about the petroleum pipelines were raised during the 8:00 AM March 10, 2022 "Metro neighborhood walk" along 182nd Street to the Freight Line crossing, then back along 182nd Street to Kingsdale, and then down to 186th Street.

It is obvious that some information about the petroleum pipelines has been learned and has been included in the Draft EIR. However, upon careful examination one gets the impression that the information is still partial and incomplete, and that more work remains to be done. 68-2

The following list of petroleum pipelines is given in sections *3.9-3.1.6 Petroleum Hydrocarbons* and *3.9-4.2.1 Construction Impacts.*

"Several oil and gas pipelines run within the Metro ROW including a 10-inch Shell crude oil, 8-inch ExxonMobil jet fuel, and 20-inch Chevron gas lines." (3.9 Hazardous Materials - Page 3.9-16)

"Oil and gas pipelines including a 10-inch Shell crude oil, 8-inch ExxonMobil jet fuel, and 20-inch Chevron gas lines run within the Metro ROW." (3.9 Hazardous Materials - Page 3.9-35)

But a somewhat different list of petroleum pipelines is given in section *3.11-3.6 Natural Gas and Oil Facilities.* 68-3

"There are numerous privately-owned oil pipelines located within the RSA. Owners of the oil pipelines are Crimson Pipeline, Chevron, Shell, and Plains All American." (3.11 Utilities & Service Systems - Page 3.11-18)

Question: Why isn't the "8-inch ExxonMobil jet fuel" pipeline, which is said to "run within the Metro ROW" included on the list of "pipelines located within the RSA"? 68-4

One would expect that the ROW is contained within the RSA. Regardless that the term RSA is defined differently in different sections of the Draft EIR, as shown below. 68-5

Section *3.9-2.1 Resource Study Area* (page 3.9-8 in 3.9 Hazardous Materials) defines RSA as follows and provides a map, which is *Figure 3.9-1*. "The RSA is the geographic extent in which this assessment was conducted. The RSA for the hazardous materials is the project footprint. The project 68-5

footprint is defined as the area necessary to construct, operate, and maintain the Proposed Project. Figure 3.9-1 shows the RSAs for the Proposed Project, Trench Option, and Hawthorne Option."

Section *3.11-2.2 Resource Study Area* – (Pages 3.11-9 – 10 in 3.11 Utilities & Service Systems) gives 6 different definitions for RSA as follows. "The RSA for utilities is the service area of the utilities and service systems servicing the jurisdictions through which the Proposed Project traverses in the Cities of Lawndale, Redondo Beach, and Torrance. For water facilities, … For wastewater and stormwater, … The RSA for electrical power generation is … Regarding natural gas, the RSA includes the service area for SoCal Gas … Regarding solid waste, the RSA encompasses … The telecommunication services RSA includes …" 68-5

There are a lot of petroleum pipeline warning signs and markers throughout the ROW. The following 6 pictures, attached to this email message, were taken Saturday, March 18, 2023, at where the Freight Line crosses 182nd Street. 68-6

Picture-7-1 SWof182X --- looks south on west side of tracks behind backyards of homes along Firmona

Picture-7-2 SWof182X --- mid-zoom looks south on west side of tracks behind backyards of … Firmona

Picture-7-3 SWof182X --- max-zoom looks south to where track begins to curve

Picture-7-4 SEof182X --- looks south on east side of tracks between El Nido Park and track

Picture-7-5 NWof182X --- looks north on west side of tracks between cemetery and track

Picture-7-6 NWof182X --- mid-zoom looks north on west side of tracks between cemetery and track

Words such as "several" and "numerous" and "including" used on pages 3.9-16, 3.9-35 and 3.11-18, seem to imply that there may be more and as yet unidentified or undocumented, petroleum pipelines. These words do no inspire confidence that a full and complete understanding of the ROW petroleum pipelines has been achieved. By the way, homeowners receive frequent notices to check before you dig. 68-7

Finally, as stated on page 38 of 3.9 Hazardous Materials: "The Hawthorne Option alignment would be located within the Metro ROW from the Redondo Beach (Marine) Station to approximately 2,000 feet south, before it leaves the Metro ROW. The impacts related to oil and gas lines that are located within the ROW are similar to those discussed for the Proposed Project but are of lesser magnitude because of the shorter length of the alignment within the freight corridor."

The Proposed Project involves relocating the existing Freight Line tracks and adding two Light Rail tracks to the ROW which in many places is only 100 feet wide and through which 68-8

several existing petroleum lines run. How many petroleum pipelines are there? Where are they located, both vertically as well as horizontally? Impacts related to petroleum pipelines are of less magnitude for the Hawthorne Option which is a reason to choose the Hawthorne Option. 68-8

> Hi Chelsea –

The operating schedule is not yet determined and will be prepared closer to operations. However, our ridership modeling assumes a similar pattern to today's Metro light rail lines, operating between approximately 4am and 12am with headways between trains of 5 to 15 minutes. The existing C (Green) Line has approximately 96 trains each direction daily or 192 trains total based on 10 minute frequencies. If the future C Line Extension, the team analyzed for frequent service (based on 5 minute peak headways), which would result in approximately 200-300 trains passing in a 24-hour period.

The ridership report is available here --

Subject: Train frequency

Hi Dolores - do you know how many trains are expected to go by per day on the ROW project? I've heard every 5-7 minutes, or 192 trains a day - but that can't be right. Can you please give me realistic numbers?

Thank you

Chelsea Schreiber

Please find attached.

NOTICE TO AGENT IS NOTICE TO PRINCIPAL --- NOTICE TO PRINCIPAL IS NOTICE TO AGENT

re: DEIR (Draft Environmental Impact Report),C Line Extension to Torrance Transportation Center: **"Proposed" ROW moving BNSF freight line closer to residences already exposed to "High Pressure" Petroleum Pipelines.**

Dear Metro,

Regarding the "Proposed Project" outlined in the DEIR that identifies the BNSF Harbor Line Right-Of-Way(ROW)for expansion:

1) As a property owner living adjacent to this proposed project, myself, my family, and other residents sharing property lines with this project will bear an unduly and unnecessary burden. 70-1

a) For the ROW, DEIR proposes to add 2 additional "light-rail" lines to the existing 80+ year freight line currently being used to transport Liquid Petroleum from the harbor to El Segundo for refinement. This train passes two times per day, to and fro. (see attached video link) 70-2

b) To accommodate space for the added rails, the project would move the existing freight 12-7 feet closer to the rear wall of my property. All properties adjacent to the ROW will suffer this encroachment. 70-3

c) Our property on the ROW is 30' from the track. Between the track and our back wall is a "High Pressure" Petroleum Pipeline marked at 7' from our wall. Our property has a 3' easement at the back wall. 70-4

d) There are numerous pipelines identified in the DEIR: "Several oil and gas pipelines run within the Metro ROW including a 10-inch Shell crude oil, 8-inch ExxonMobil jet fuel, and 20-inch Chevron gas lines. Due to various reasons, the subsurface utility lines could potentially leak and contaminate the subsurface." (DEIR, 3.9-3.1.6 Petroleum Hydrocarbons)

> **3.9-4.2 Would the Project create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?**
>
> **3.9-4.2.1 Construction Impacts**
>
> **Less than Significant Impact.** The RSA contains multiple sources of potentially hazardous materials that could be encountered during construction of the Proposed Project. Overall, the Proposed Project would have a **less than significant** impact during construction involving the release of hazardous materials into the environment.

Oil and Gas Pipelines

Less than Significant Impact. Oil and gas pipelines are located adjacent to the Proposed Project corridor,and oil refineries are located near the southern end. Oil and gas pipelines including a 10-inch Shell crude oil, 8-inch ExxonMobil jet fuel, and 20-inch Chevron gas lines run within the Metro ROW. Oil and gas pipelines may pose a hazard to human health and safety or to the environment if oil or gas are released.

Release could occur through spills during construction or rupture of a pipeline during construction. At this phase of design, Metro has obtained as-built drawings from these utility owners and developed preliminary plans for relocation or protect-in-place. Per the Metro Rail Design Criteria, Metro would continue to coordinate with the utility owners in future phases of design, and present preliminary relocation concepts to each utility owner with affected facilities. Metro would conduct additional surveys and potholing as needed to verify the relocation plans, which would avoid any conflicts with pipelines during construction. As noted in PF-US-1 in Section 3.11, Utilities and Service Systems, prior to ground-disturbing activities, all oil and gas pipelines within the ROW would be identified and marked on-site in coordination with the well owners to avoid damaging the pipelines. Utility agreements would be finalized to ensure the designs are prepared by third party utility owners. Therefore, the impact related to oil and gas pipelines would be **less than significant**.

70-5

Metro's blatant disregard for residents safety and well being is on full display here. Metro engineers have communicated that the BNSF train line will be operational during construction. As their plans indicate, massive amounts of dirt will be hauled in and out to accommodate the relocated freight line. The ROW already has a history of sink holes, exemplified by the one open now at Artesia and Ruxton Place condos. Squeezing a new rail line closer to high-pressure pipelines and residences cannot be a "less than significant" risk. Please reassess this conclusion.

70-6

I pray that the ROW is not chosen for this project. A more suitable alternative exists in the Hawthorne option. Do not put homes and neighborhoods in harm's way to save a buck.

70-7

Sincerely,

Kevin Mitchell

To the Metro Line Board - Please read this article from our local newspaper. It expresses the concern that I have and that everyone feels about the possible rail extension next to Breakwater Village. At age 82, I object to the noise, dust, and construction of the line. Please choose an alternative path. Thanks. 71-1

Metro C Line extension could rattle seniors in Redondo Beach apartment complex

Although the project isn't set in stone, Breakwater Village residents worry some options will constantly disturb their quality of life

By **TYLER SHAUN EVAINS** | tevains@scng.com |
PUBLISHED: February 22, 2023 at 6:00 a.m. | UPDATED: February 22, 2023 at 8:35 a.m.
Residents of a Redondo Beach senior apartment complex say they are concerned about the consequences to their quality of life if a planned extension of LA Metro's C Line ends up traveling behind their homes.

Two of the three options for extending the C Line, formerly the Green Line, 4.5 miles south — from the Redondo Beach Marine Avenue Station to the Torrance Transit Center, just south of Del Amo Boulevard — would send the route along an LA Metro-owned public right-of-way that runs behind the Breakwater Village apartment complex for those 55 and up.

Metro currently leases the right-of-way to a freight rail company that transports petroleum to nearby refineries.

About 300 people live in the 191 unit complex, with around 20 units reserved for residents with low-to-moderate incomes. Two of the three options for the upcoming commercial light rail extension would cause even more noise and vibrations for those residents than they already experience from the freight train passing by twice daily, according to those who live there and their City Council representative.

“The 300 of us, our quality of life will be diminished,” said Breakwater resident Pat Nichols, who has led the charge in advocating against the new rail being built along the right-of-way.

Metro officials, for their part, have stressed that there are still three possible options — and no decision has yet been made on which one will happen.

It’ll still be a while before any new rail goes in, though.

The project, for which planning began in 2010, is currently in the draft environmental impact review process and the final EIR will be released in 2024. Construction may begin in 2026 and the rails are estimated to open for service between 2030 and 2033.

Metro staff will recommend one of the options to its board of directors, which the panel will consider approving in the spring, according to the agency’s website. The final recommendation will be based on the findings from the draft environmental impact report, public comments, technical analysis, stakeholder input and more.

Breakwater residents have been meeting regularly for about a year to discuss their concerned over the project, said Marg Alexander, who has lived there since 2009. Among their fears, Alexander said, is that Metro will choose the cheapest right-of-way option; one of the two routes that would travel behind Breakwater is projected to cost $1 billion less than the other options.

Residents have sent emails to Metro’s board of directors and, more recently spoken, at public hearings during the draft EIR review period, which began Jan. 26 and ends March 27.

In the right-of-way elevated/street level option, which would go behind Breakwater, the rail would follow the right-of-way above ground and then travel at street level south of 162nd Street. The light rail would cross 170th and 182nd streets at the street level. This would cost an estimated $1.96 billion.

The trench option, which would also travel along the right-of-way and behind Breakwater, would transition from the Redondo Beach station down into an open-air underground trench, crossing under seven streets between Inglewood Avenue and 170th Street; then it’d move up to street level to cross over Artesia Boulevard and Grant Avenue, cross under 182nd Street in another short trench, and finally return to grade level to go across Hawthorne Boulevard and continue south. It’s estimated to cost $2.84 billion.

Metro would build stations adjacent to the Redondo Beach and Torrance transit centers for both right-of-way options.

The Hawthorne Boulevard option, meanwhile, would travel in an elevated structure parallel to the 405 freeway until turning south onto Hawthorne Boulevard near 162nd Street and rejoining the

right-of-way south of 190th Street. Metro would build a station adjacent to the South Bay Galleria and another near the Torrance Transit Center. This option, which won't run behind the Breakwater, would cost an estimated $2.96 billion.

To put the new rail along the right-of-way, the freight rail would be rebuilt and moved west, putting it closer to the apartment complex per Metro's website.

But Nichols, who has lived in Breakwater Village since 2007, said that it's already close enough.

"We can wave to the conductor on the train," Nichols said. "What they're planning on doing for the right-of-way will move the existing train line and bring it closer to our complex, almost in our backyard."

Nobody really complains about the freight's passage twice per day, Nichols said, but to have the nuisance from commercial trains every few minutes is a whole other thing.

Metro, in the draft EIR, mentions potentially building sound walls to mitigate the noise, but Nichols said she doesn't think there's room for them.

"Most of our windows face the train tracks on that side of the complex," she said. If it moves closer, "we wont be able to have our windows open because of the noise."

Councilmember Zein Obagi Jr., who represents District 4, where the apartment building is, said that he is "100% behind the residents of Breakwater."

"Moving the heavy train closer could be devastating to their quality of life," Obagi said. "These are retired people –some in affordable units. They're hoping to enjoy their later life in a quiet, beautiful place, but now they'll have construction for years if it gets built there."

The building already shakes when the train goes by, he added, and a resident recently told him that she has to adjust the photos hanging on her walls every day because of the train's vibrations.

The building also has foundational cracks, Nichols said, which could get worse during c Another main concern, Obagi said, is that the ground beneath the site is compacted sand.

There's already a sinkhole that's affecting three units, Nichols added. It could get worse or more could come with new construction and train activity.

But no decisions have been made yet, Metro officials said.

"There's three different alignments in the draft EIR," said Metro spokesperson Patrick Chandler. "No final decision has been made on what the line is going to be; in this process we really want to hear from (the public,) get that feedback and have that conversation."

Public hearings are scheduled for this week, including:

- From 5 to 8 p.m. Wednesday, Feb. 22, at the Redondo Beach Performing Arts Center, 1935 Manhattan Beach Blvd.
- From 10 a.m. to 1 p.m. Saturday, Feb. 25, at Lawndale High School, 14901 S. Inglewood Ave.

Those interested in commenting on the draft EIR can do so by calling 213-922-4004 or emailing greenlineextension@metro.net.

Subject: Greenline extension

As a resident of a neighborhood that will be severely impacted by the ROW option for the Greenline extension, I am writing to you to ask you to please choose the Hawthorne Bl option instead. If you look at the tiny number of people that get on and off the train at the Redondo Beach station now, it doesn't make any sense to extend that line through a neighborhood. If you want more people to use it and businesses to benefit from it, the Hawthorne Bl alternative would be a much better choice. My neighbors and I, as well as our city council representatives have organized to do whatever we can to stop the ROW extension . Please consider our quality of life on this matter. Thank you. To: greenlineextension@metro.net
Subject: No extension down green space!

Hello,
I am a resident of Lawndale and live off of 163rd. I have lived here for 6 years and am raising my family of four here. We utilize the green space on a daily basis for exercise and play, along with countless other Lawndale citizens. It is a lively green space that is a valuable part of our neighborhood. Taking this rare open space away from the citizens of Lawndale will further relegate us into a lower standard of living compared to our more affluent communities and remove one of the only ways many people have to exercise and enjoy nature. Please do not build the metro here! Instead, build it down Hawthorne, which is in desperate need of revitalization and new business opportunities anyways.
Thank you,
Courtney Allen

Submission 78

From: David Clasby [redacted]
Sent: Thursday, February 23, 2023 12:17 PM
To: greenlineextension@metro.net
Subject: my view

In response to the current Metro project, I would like to add my view point to the conversation.
Living close to the existing Metro line, I do not favor the idea of increased train traffic and the noise it will produce. 78-1
I also feel for my friends living against the easement who face the prospect not only of increased noise but the loss of property due to an increase of the size of the Metro right of way. There is also the matter of decreased property values of homes with numerous Metro trains all day in the back yard. 78-2

At the recent Lawndale High public meeting, it was mentioned that the proposal of the use of the existing right of way is not EPA approved. The need for a 20-ft wall was also disclosed. There is also the matter of retro fitting 200 affected homes with sound-proofing windows. It would appear to be more cost-effective to put the new line below grade or, better yet, route the line down the Hawthorne Blvd, commercial corridor.
In regard to the purchase of the land on either side of the RR right of way (10 ft west and 20ft east - purchased in 1978); this land could be leased back to the residents along the right of way, to off-set the cost of constructing the line down the Hawthorne corridor. 78-3
I hope you will give the proper consideration to these comments.

David Clasby

Submission 79

From: Diane Smith [redacted]

To: greenlineextension@metro.net
Subject: C-Line (Green) ext Torrance

Hello, my name is Diane Smith and I live at [redacted]. I was born, raised and currently live in Torrance. My parents in their 80's still live in the same house we grew up in at [redacted] - 4 houses in from Hawthorne Blvd.

This new extension is not wanted. It will bring much noise to the neighborhood along Hawthorne Blvd. Is the City or Metro going to be installing a noise barrier or wall to separate houses and this elevated line? Who is going to be paying each home owner for the loss of value in their home, due to proximity to this ? 79-1

We are Californians and we love our cars, this line will not be used by Torrance residents enough to validate its existence. Traffic is bad enough we can't lose any existing lanes on Hawthorne Blvd. 79-2

We have buses and they are empty most of the time.

Don't go ahead with this project. It's not good for our City.

Best Regards,
Diane

To: greenlineextension@metro.net
Subject: Green Line / C Line Extension inquiry

Good evening, Metro!

I love the Green Line / C Line Extension concept, but why do $ Billions need to be wasted on trenches and other grade-separation projects?

80-1

This line has hosted massive freight trains for many decades in Santa Fe Railway / BNSF use without any issue, so there is really no good reason to spend money on expensive excavation, relocation, or other major route alignment changes.

In other words, why not simply operate Metro passenger service over the existing tracks, with only a minimum of upgrades (such as signalling improvements for safety purposes)?

80-2

** Additionally, could Metro please look into the possibility of rebuilding the other ex-Santa Fe Railway track that ran along the coast, serving Manhattan Beach, Hermosa Beach and the downtown Redondo Beach pier area?

Although this old Right-Of-Way is currently used as a pedestrian trail, it is more than wide enough to accommodate Metro trains and continue as a walking path.

This would be a very popular short extension which can also be serviced by Green Line / C Line trains that make an occasional diversion to the coast -- especially great for tourists and others on daytrips to the seaside.

Thank you very much,
Isobel Dozier

Subject: Draft EIR Comment

I am writing in opposition to the Metro C Line extension Right of Way (ROW) along the existing Union Pacific railroad tracks in North Redondo Beach. There are numerous reasons that the ROW along this tract should be opposed. The METRO has more suitable alternatives that do not put the health and wellbeing of the residents at risk. As alternatives, the METRO C can run along Hawthorne Blvd. and will not be disruptive to the residents. The noise, dust, increased traffic, and potential rise in crime should all be considered. The only possible agreeable solution is the Hawthorne Blvd. route. 81-1

Dear Ms. Sheridan:

The California Department of Transportation (Caltrans) appreciates the opportunity to comment on the Draft Environmental Impact Report (EIR) for the C Line (Green) Extension to Torrance Project prepared by the Los Angeles County Metropolitan Transportation Authority (Metro). The project would extend the Metro C Line (Green) to the south by providing a light rail line through the cities of Lawndale, Redondo Beach, and Torrance.

The project would require encroachment permits as the alignments of the Proposed Project (Metro right-of-way [ROW] Elevated/Street-Level alignment) and two Options: Trench Option (Metro ROW Trench/Below-Grade) and Hawthorne Option (entirely elevated) would intersect State ROW at Artesia Blvd (SR-91), Interstate 405 (I-405), and Hawthorne Blvd (SR-107). Caltrans has reviewed the Draft EIR at these locations and presents the following comments to Metro for consideration in the project's development and Final EIR: 82-1

Project Description

- Table 2.6-1 Permits and Approvals. For Local, considering there seems to be a potential for property acquisitions, do approvals for zoning, land use, and/or general plan amendments need to be considered? If so, specify this within the table. 82-2

Transportation

- Section 3.1-3.10 Bicycle Facilities. 82-3
    - Relabel this section from Bicycle Facilities to Bikeways. It's confusing to use the term bicycle facilities and bikeways. To a reader the term facilities could entail ancillary uses such as bike racks, storage, showers, or parking which are not discussed in this section.
    - Are bicyclists allowed along the major roadways such as Hawthorne Blvd and is sidewalk riding allowed? 82-4
    - For proposed station discussion. Each bullet starts with "… a bike lane". Is this referring to a Class II (bike lane)? Please include relevant nomenclature and classification when discussing specific bikeways. 82-5
- Section 3.1-4.1. Mention Appendix 3.1-A, Transportation Policy Analysis. There is no mention of how this Project is consistent with Caltrans Complete Streets Directive within this section or in the appendix. 82-6

- Section 3.1-4.1. (Hawthorne – Roadways). Replace "…hours, and access would remain to neighborhoods, although some detours may be required and would be signed." With "…hours and access to and from neighborhoods would remain although some detours with signage may be required." 82-7
- Section 3.1-4.1. (Hawthorne – Bicycle and Walking).
    - First sentence mentions "bicycle routes". If referring generally to bikeways please label as such, but if referring to Class III (Bike Routes) then revise to the relevant nomenclature and classification. Please apply consistent terminology throughout the document. 82-8
    - "No existing or planned bicycle facilities…" Per earlier comment on revising Bike Facilities to Bikeways, please clarify if this is in reference to bikeways or bikeways and related support facilities.
    - Please rephrase 2nd to last sentence per this suggestion (*if meaning maintains the same conclusion*): No existing or planned bicycle facilities would be directly affected by construction of the Hawthorne Boulevard Option. However, indirect temporary impacts may occur along small segments of [*existing/planned*] intersecting bikeways. For example, 190th Street may be temporarily shifted, reduced, or closed during construction east of Hawthorne Blvd. 82-9
    - "Typically, signage warning road user to share the lane with bicyclists…" This should be revised to state that signage warning road users would be provided as needed, instead of saying typically. 82-10
- Section 3.1-4.1.2 Policies Addressing Transit. "Discussed in Section 2.2.16…" Is this the correct reference? There is no subsection 2.2.16 in Chapter 2. Section 2.2 goes directly to 2.3. Should this be the same as Appendix 3.1-A, Transportation Policy Analysis, as referenced above? 82-11
- Section 3.1-4.3.1 Construction Impacts (Hawthorne Option - Transit). Is there an estimate for how many bus stops would be temporarily relocated? 82-12
- Section 3.1-4.3.1 Construction Impacts (Hawthorne Option - Roadways). Are full closures anticipated during construction along Hawthorne? If no full closures are anticipated, please state that here. If only partial closures, how many lanes would be maintained at all times during construction? 82-13

Land Use

- Section 3.2-4.1.1 Construction Impacts (Hawthorne Option). "…would require additional parcel acquisitions..." Does that mean the other Options would require parcel acquisition as well? Or should this state "…would require parcel acquisitions". 82-14

  Given that the Real Estate Acquisition Summary is available to the public, can reference to that document be made in this DEIR? The DEIR should specify what types of acquisitions are anticipated, if they are full and/or partial acquisitions, if they are temporary or permanent acquisitions, and what the zoning/land use designations are for the parcels being affected. 82-15
- Section 3.2-4.1.1 Construction Impacts (Hawthorne Option). Are the "temporary lane" closures full or partial? 82-16

- Section 3.2-4.1.1 Construction Impacts (Hawthorne Option). "Vehicular and pedestrian access across Hawthorne Boulevard would generally be maintained by phasing construction in such a way that does not close multiple parallel roads or sidewalk at the same time." Would any of these temporary closures of lanes impact access (e.g., close or impede driveway access) to businesses along the Hawthorne corridor? If so, is there a secondary access or will access to all businesses be maintained throughout construction for continued operation? 82-17
- Section 3.2-4.1.2 Operational Impacts (Hawthorne Option). Even though the structure is elevated and allows for continued access below once in operation, an elevated railway within a commercial district with low-scale uses might be seen as a physical boundary that is creating a division or barrier. Additionally, the uses between the existing RR ROW and Hawthorne Blvd, may see this as a physical and visual barrier. Explain how the elevated structure would not contribute to the division of a community. 82-18
- Table 3.2-5. Table 3.2-5 seems more like a consistency table as it relates to Project operation and not construction, although it is referenced in the construction impact section. Include discussion on how construction would not affect the implementation of the plan, policy, or goal and what PF or MM may reduce any impacts that may cause the Project or Option to be inconsistent. 82-19
- Table 3.2-5. Column label "Consistency with the Proposed Project". Rename to "Consistency of the Proposed Project and Options".
- This table should look more like what is seen in Appendix 3.1-A, Transportation Policy Analysis. If possible, consider creating a separate appendix dedicated to a more detailed table similar to Appendix 3.1, for all applicable regulations/policies/goals and then reference it in these discussions. 82-20
- Table 3.2-5. City of Redondo Beach, General Plan.
    - "In addition to the consistency of these policies, there would be no change to existing land use patterns." State how the acquisitions, if any, would not conflict with the existing land use pattern or general plan and whether it would or would not require an amendment to a land use planning document. 82-21

Aesthetics

- PF-AES-2. Metro Design Standard. Include statement that Metro will coordinate with Caltrans' Office of Stormwater and Landscape Architecture as applicable for any tree removals along Hawthorne under Caltrans jurisdiction. 82-22
- Section 3.3-3.3 Visual Character. "… that also incorporates parking spaces and traffic circulation left-turn lanes." Please note that this also serves as a pedestrian refuge. 82-23
- Section 3.3-4.3.1. Construction Impacts. The visual impacts of one Option may be prolonged compared to another. Therefore, consider including discussion comparing the differences of the construction time frame between the Project and Options. 82-24
- Section 3.3-4.3.1 Construction Impacts (Hawthorne Option). "The Hawthorne Option would involve construction activities that result in similar changes in the visual character as the Proposed Project." Because this Option would construct an entirely elevated structure along a commercial corridor where there may be more foot traffic and vehicular viewers compared to the other options, explain further how this would be similar? 82-25

- Section 3.3-4.3.1 Construction Impacts (Hawthorne Option). Based on the concept drawing for this Option, where the structure's footprint would remain within the median, the overhead structure might give a feeling of a ceiling plan to motorists. If the structure clearance is about 14'-11", there may be a noticeable perception of semi-enclosure space, similar to driving in a tunnel. Please include this potential impact in this discussion and mitigation measures as needed. Additionally, if this Option is chosen, preparation of a VIA may be recommended to analyze this effect and provide additional recommendations for mitigation/minimization/avoidance measures. 82-26
- KOP 17.
    - "… the new elevated structure along the Center of Hawthorne Blvd…" Provide estimated heights and widths when discussing these structures, or reference the appropriate appendix/drawing?
    - "… includes straddle bent columns." Discuss how the structure or bent would not block signage whether they be street signs or in plazas. In the figure, the column of the bent is blocking that plaza's signage. If there any signs that would be blocked by components of this elevated structure, would they be relocated?
    - 1st and 2nd Sentence of paragraph starting with "Trees and other vegetation that exist…and the planting of California native or other drought-tolerant trees." Please note that for Hawthorne Blvd under Caltrans jurisdiction, if trees are to be removed during construction, coordination with Caltrans' Office of Stormwater and Landscape Architecture is required for approval. 82-27
    - Section 3.3-4.4.2 Operational Impacts (Hawthorne Option). The mass of the elevated structure may be a dominant feature of Hawthorne Blvd. The catenary and overhead wires and support masts may add to the structure's height, and the structure will cast shadows onto the road and be part of the new street environment as well. Please include this potential impact in this discussion. If this Option is selected, preparation of a VIA may be recommended to include a discussion of the visual effect of the elevated structure and a shadow analysis as well as provide additional recommendation for proposed mitigation/minimization/avoidance measures.

Air Quality

- Section 2.3 indicates that several stations are proposed as part of the Alternatives: Redondo Beach TC, Torrance TC, or South Bay Galleria Stations. While Section 2.3 is not clearly describing whether or not Redondo Beach TC Station proposes parking spaces, it does clearly indicate that a surface parking lot with 180 parking spaces is included as part of the proposed Torrance TC Station. The Torrance TC is proposed just across Crenshaw Bl and in close proximity to residential receptors. However, operational analyses for the project alternatives did not consider impacts from mobile sources that have potential to congregate at the new TC/parking lot. It is suggested that guidance such as Caltrans CO Protocol be utilized to evaluate/disclose potential impacts from anticipated increase in new mobile sources at the proposed stations. 82-28
- Section 2.3 also describes that the proposed roadway modifications would result in new traffic signalization at some intersections. AQ impacts are typically evaluated at intersections with new signalization due to the potential to increase traffic delays and 82-29

resulting impacts from mobile sources. It is suggested that these impacts are considered as part of operational analyses in Section 3.4. 82-29

Biology

- Section 3.7-4.5.1 Construction Impacts (Proposed Project). In last part of 1st paragraph, shouldn't the Metro Tree Policy (as referenced in the Aesthetics section) be listed here as well? 82-30
- Section 3.7-4.5.1 Construction Impacts (Hawthorne Option). Per comment in Aesthetic section, please note that Metro should also be coordinating with Caltrans' Office of Stormwater and Landscape Architecture, as applicable, for any removal and replacement of trees along Hawthorne Blvd (that is not relinquished to City of Lawndale). 82-31
- Section 3.7-4.5.1 Construction Impacts (Hawthorne Option). Within Caltrans ROW there are mature eucalyptus trees at Inglewood Ave and I-405, and from Inglewood Ave to Hawthorne Blvd. If construction should occur within bird nesting season, then pre-construction bird surveys 72 hours prior must be conducted within construction limits. 82-32
- MM-BIO-2. Revise to: "If construction should occur within bird nesting season (February 1st - September 1st) then preconstruction bird surveys 72 hours prior must be conducted within construction limits."

Hazardous Waste

- Section 3.9-2.3 "Project Features": It is stated that "…a Phase II site investigation would be conducted during the preliminary engineering phase on sites that would be acquired/utilized for the project to determine whether the suspected contamination had resulted in soil, groundwater, or soil vapor contamination exceeding regulatory action levels".

  Please note, in addition to a Phase II site investigation for sites to be acquired/utilized for the project, additional site investigations are required to evaluate soil and groundwater contamination in areas where soil/groundwater will be disturbed, such as soil excavation, earthwork and dewatering, during the Project construction activities. As listed in Section 3.9-3.1 "Hazardous Materials" of the provided DEIR, all hazardous materials expected to be encountered within the Project RSA such as heavy metals (including ADL), herbicides, hazardous gases, petroleum hydrocarbons, and contaminants related to the identified RECs, are to be included in the Site Investigations. These Site investigations are to be conducted during the preliminary engineering phase. The collected soil and/or groundwater data are to be utilized in development of hazardous waste/hazardous materials/soil/groundwater management plans as described in PF-HHM-1 and PF-HHM-4. The collected data also are to be utilized in development of measures for worker and public safety protection from exposure to contaminated soil/groundwater during construction. 82-33

  Please, revise all relevant DEIR sections to include the above required Phase II site investigations to be completed within the Project RSA during the preliminary engineering phase and prior to development of any plans described in PF-HHM-1 and PF-HMM-4.

- Include removal of existing traffic stripping and/or pavement markings if such activities will be conducted. Please note, yellow lead-based paint and thermoplastic paint traffic stripe or/and pavement marking applied prior to 2006 should be treated as hazardous waste due to its high lead and chromium content. Removal of such material should be properly collected, stored, transported, and disposed of in accordance with the state and federal regulations. 82-34

Utilities and Service Systems

- Section 3.11-4.1.1 Construction Impacts (Hawthorne Option). It is stated that "… some excavation would be needed for the column piles." What is the maximum depth of excavation for these piles? Provide estimated range, as applicable. 82-35

Public Services

- Section 3.15-4.1.1 Construction Impacts (Hawthorne). Regarding "Roadways that intersect the Hawthorne Option would need to be temporarily closed…", do we know if these are full or partial closures or both depending on the situation? 82-36

Complete Streets

- The Inglewood and Hawthorne Blvd interchanges are Tier 1 locations for improvements according to the Caltrans Active Transportation Plan. The Hawthorne Blvd Option may present an opportunity to recommend pedestrian and bikeway enhancements. If this Option is chosen, Metro should consider how they may be compliant with Caltrans Complete Streets Policy & ATP by improving the intersections at the on/off ramps on both I-405 interchanges which need crosswalk, ramp, and signal upgrades. 82-37

Thank you for the opportunity to comment on this important transportation project. We look forward to the ongoing coordination between our agencies to establish a more effective permit application process. If there are any questions about this letter, please contact Elaine Lee, Environmental Planner at elaine.lee@dot.ca.gov.

Sincerely,

Dawn Kukla

To: greenlineextension@metro.net
Subject: 6 residents in house vote for the Hawthorne blvd option

I am all for better public transit in LA but I can only support the Hawthorne blvd elevated train due to the amount of disturbance using the rail line will cause to thousands of homes and people living along the existing rail. I am a homeowner just the 2nd house east of the existing rail line in lawndale and although the train only runs a couple times a day it shakes the house and blows the horn at crossings. The metro would run only minutes apart at extended hours disturbing all residents. 83-1

Im worried about my property value, my structure and foundation and noise and debris from 8yrs of construction as well. The cost to me could be100's of thousands in property value and I would need earthquake retrofit, engineer review of structure, earthquake insurance, new windows for some peace of mind. 83-2
Question: are you proposing any of these concessions to homeowners in the area?
How will noise and debris from construction be mitigated?

The elevated Hawthorne Blvd route is most expensive but the other options using existing rail are at a great cost to thousands of homeowners along the way. Please go with the Hawthorne route. 83-3

Thank You
Steven Boll

RE: DRAFT ENVIRONMENTAL IMPACT REPORT (DEIR) FOR THE C-LINE (GREEN) METRO EXTENSION TO TORRANCE PROJECT 61-DAY PUBLIC COMMENT REVIEW PERIOD (SCH# 2021010269)/CITY OF LAWNDALE COMMENTS

Dear Board Members:

On behalf of the City Council of the City of Lawndale ("City" or "Lawndale"), Lawndale takes this opportunity to provide its comments and express its concerns on the Draft Environmental Impact Report, State Clearinghouse No. 2021010269 (the "DEIR"), for the C-line (Green) Metro extension to Torrance (the "Project"). While the City understands that there are a number of potential benefits associated with the Project, the City remains concerned that substantial impacts to the citizens of Lawndale are not being adequately addressed in the DEIR and fall short of applicable legal standards under the California Environmental Quality Act (Public Resources Code § 21000 *et seq.*, "CEQA").

We respectfully submit these comments to the Los Angeles County Metropolitan Transportation Authority ("Metro") to help ensure that local decisionmakers fully comply with CEQA and the CEQA Guidelines (14 Cal. Code of Regulations §§ 15000 – 15387) as applicable to the Project. The City contends the Project should be rejected as proposed for a variety of reasons, including failing to conform with Metro's 2020 Long Range Transportation Plan ("LRTP"), CEQA, and the National Environmental Policy Act (42 U.S.C. §§ 4321 *et seq.*, "NEPA"). The following list outlines the City's comments and concerns: 84-1

PART I: GENERAL COMMENTS

1. **Baseline Conditions:** The DEIR does not adequately address or establish baseline conditions as to environmental subjects throughout the entire DEIR. The identified areas lacking adequate baseline conditions include, without limitation: Air Quality, Greenhouse Gases, Land Use and Traffic/Transportation sections. Pursuant to CEQA, the Lead Agency is required to address and establish the baseline conditions in the DEIR. The DEIR grossly understates baseline 84-2

conditions, particularly with respect to the train crossing frequency attendant to the existing (freight) track usage versus the massive increase in rail crossing frequency attendant to the proposed Project (under any of its "options"). Currently, freight trains traverse the City of Lawndale only approximately two times daily. The proposed Project entails upwards of 12 to 18 rail crossings per hour during peak passenger periods. Thus, even though the Project's rail alignment may not significantly deviate from existing freight alignments (at least under two options), the sheer increase in the number/frequency of rail interruptions is massive. However, the DEIR's analyses fail to adequately address the impacts attributable to this change. For example, in the Land Use section, the DEIR states that the Project would "not physically divide the community" because rail crossings are "only occasional." (DEIR § 3.2-4.1.2.) This conclusory and dismissive assay overlooks the fact that a community is further divided not just by the *physical* location of the proposed rail lines, but also by the immense increase in rail *frequency* funning that will be running through the City— an escalation in train crossing frequency that increases several hundred (if not thousands) of times over the current "two trains per day" baseline. The DEIR fails to acknowledge that the Lawndale portion of the railroad right-of-way narrows. In turn, properties in this area will have significant impacts due to the increase from 2 to 200 daily trips.

82-3

84-4

As another example, the Transportation discussion baldly asserts that impacts to traffic/pedestrian safety and emergency response times will be less than significant with the (i) unfounded *expectation* that safety and traffic impacts will not vary significantly from those attendant to the current freight lines, and (ii) that traffic and emergency services can simply "detour around" rail crossings. These conclusory findings are unsupported by any analysis of much the Project will increase the frequency of rail crossings, and hence intersection closures. The delta in impacts as between the "two trains per day" baseline versus the Project's estimated "several trains per hour" is conspicuously absent from all aspects of the DEIR.

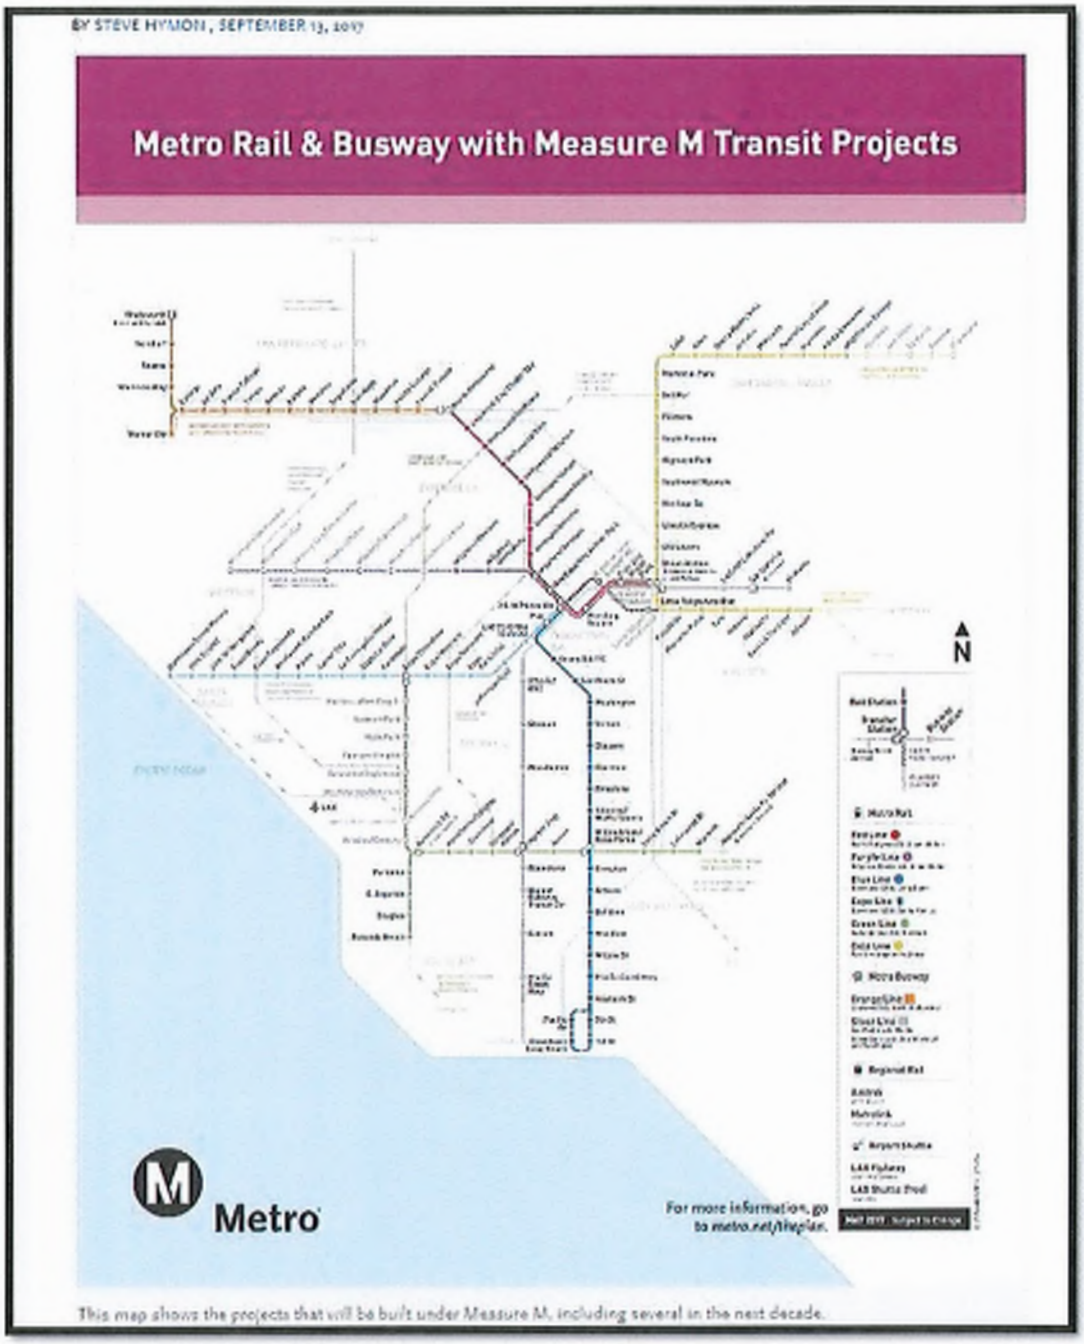
84-5

The difference between two trains per day, versus several trains per hour, presents massive interruptive impacts to the community from a land use perspective, as well as transportation circulation, noise and vibration, aesthetics, public services and other CEQA considerations. Yet, throughout the DEIR, Metro is overly-dismissive of impacts attributable to the sheer increase in rail frequency. Without further comparative analysis of actual "before and after" Project impacts, the public has not been provided an accurate representation of Project impacts upon which it can meaningfully comment. (*County of Inyo v. City of Los Angeles* (1977) 71 Cal.App.3d 185, 192–193.)

84-6

2. **Piecemealing:** The impacts of an entire project, not just individual segments, must be analyzed. CEQA forbids "piecemealing" projects. The proposed Project is part of a larger project to extend the Metro rail and transit systems, which include all the existing Metro lines and transit centers connecting with each other to form the entirety of a Metro rail system. This Project is a continuation of such existing, larger project.

84-7



Pursuant to CEQA, the whole of an entire project must be analyzed, and those environmental considerations related to project(s) broken down into little projects, thus reducing or minimizing the potential impacts to the environment through "piecemeal" is prohibited. Potential growth impacts, such as new development projects, cannot be deferred to be analyzed in a piecemeal fashion at a later time. Rather, "the need for regional environmental consideration [must be made] at the earliest stage of a planned development before it gains irreversible momentum." (*Bozung v. Local Agency Formation Commission of Ventura County* (1975) 13 Cal.3d 263, 284, fn. 28.) An agency cannot treat one

84-7

integrated, large project as a succession of smaller projects to avoid analyzing the environmental impacts of the whole project. (*See, CASDBA v. County of Inyo* (1985) 172 Cal. App. 3d 151, 165-166 [two separate "packages" of entitlements for one Project, each analyzed in a separate Negative Declaration, improper].) Piecemealing impermissibly results in a curtailed project description, which allows the EIR to misstate the cumulative impacts "by separately focusing on isolated parts of the whole." (*San Joaquin Raptor/Wildlife Rescue Center v. Cnty. of Stanislaus* (1994) 27 Cal. App. 4th 713, 729-30.)

It is "only through an accurate view of the project" that the "public and interested parties [can] balance the proposed project's benefits against its environmental costs, consider appropriate mitigation measures, assess the advantages of terminating the proposal and properly weigh other alternatives." (*San Joaquin Raptor Center v. County of Merced* (2007) 149 Cal. App. 4th 645, 655.) In this case, it is clear that the Project will have overlapping environmental impacts in conjunction with other Metro transit projects to be directly connected, since (i) they are located, or will be located, adjacent or directly connected to one another, (ii) they will be providing similar or the same services to the community (i.e., public rail transit), (iii) they will both be used and visited by residents and visitors to the Los Angeles County Region as one integrated project, and (iv) they are both owned and operated by the same entity.

Thus, this Project must be evaluated on a programmatic level well beyond the mere terminus of its tracks. Indeed, this issue also represents a principal deficiency in the DEIR's analyses of cumulative impacts, which analyses fail to address related and upcoming rail projects throughout the DEIR. Simply put, the DEIR addresses the project in an "environmental vacuum."

3. **NEPA:** The City is informed and believes the Project is substantially financed with Federally-based funding sources. This is evidenced, without limitation, by Metro's Planning & Programming Committee meeting staff report dated November 18, 2009, in which the Committee deliberated the Harbor Subdivision Transit corridor now owned by Metro and identified as the ROW proposed Project area. In the fiscal impact portion of that report it is clearly stated: "Funding of $800,000 from a combination of federal funds provided by the Southern California Association of Governments (SCAG) and Proposition C 25% of funds for this project is included in the FY10 budget in cost cebte4r 4330 South Bay Area Team, in Project 400229 (Harbor Subdivision Task 01.02, 50316 (Services Professional/ Technical) for the completion of AA Study."
The DEIR makes several references to the 2009 Alternative Analysis Report. That 2009 AA report, in turn, says that Federal funding sources are going towards the Project. 84-8

The tables below were obtained from a Construction/Executive Committee Board Report that further breakdown Green Line Extension to Torrance funding.

Estimated Accelerated Capital Cost and Available Funding
"Pillar Projects"
($ in millions)

Pillar Projects	Total Capital Cost	Metro Local Funding	State and Federal Funding	Funding Surplus/ (Shortfall)
Gold Line Eastside Extension Phase 2	$ 3,037.7	$ 2,179.8	$ 385.7	$ (1,072.2)
Green Line Extension to Torrance	1,086.0	854.7	231.3	-
Sepulveda Transit Corridor	8,572.6	3,448.6	3,748.1	(1,376.0)
West Santa Ana Branch to Downtown LA	5,565.0	2,513.4	2,155.5	(896.7)
Total	$18,662.0	$ 8,996.5	$ 6,520.7	$ (3,344.8)

Green Line Extension to Torrance

10-YEAR CASH FLOW ($ in millions)	Years Prior'18	Prior Years	2018 2019	2019 2020	2020 2021	2021 2022	2022 2023	2023 2024	2024 2025	2025 2026	2026 2027	2027 2028
USES OF FUNDS												
Construction costs	$ 959.9							48.5	143.6	246.8	426.3	136.9
Project/system costs	$ 86.1	13.7	0.7	1.2	0.9	2.0	2.1	20.0	32.9	12.7		
TOTAL USES	$ 1,046.0	$ 13.7	$ 0.7	$ 1.2	$ 0.9	$ 2.0	$ 2.1	$ 68.4	$ 176.5	$ 259.5	$ 426.3	$ 136.9
SOURCES OF FUNDS

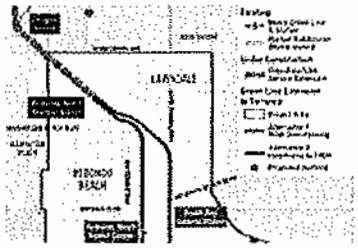
Transit and Intercity Rail Capital Program (TIRCP)	$ 231.3	-	-	-	-	-	-	48.4	$ 105.1	$ 75.8	-	-
State Revenue Subtotal	$ 231.3	$ -	$ -	$ -	$ -	$ -	$ -	$ 48.4	$ 105.1	$ 75.8	$ -	$ -
TOTAL SOURCES	$ 1,046.0	$ 13.7	$ 0.7	$ 1.2	$ 0.9	$ 2.0	$ 2.1	$ 68.4	$ 176.5	$ 259.5	$ 426.3	$ 136.9

Total Project Cost:	Life of Project budget not to be established. Measure M estimate at $931 million (2015$).
Description:	This extension will provide congestion relief along the I-405 corridor. It will also improve mobility in southeastern LA County by accessing the regional rail network through connections to the Metro Blue, Expo, and Crenshaw lines.
Funding Status:	Per Measure M, the Project has a $619 million (2015$) allocation, plus inflation adjustments, beginning in FY2026 for construction and Measure R allocation of $212 million beginning FY2018. Received award of $231.3 million in TIRCP grant and $39.7 million of $81 LPP in Feb. 2018.
Subregion:	South Bay
Metro Project Number:	#460204



Moreover, related transit projects directly connected to this Project's rail extension have done Joint EIR/EIS reports to comply with both CEQA and NEPA, respectively. As noted in Lawndale's comments on unlawful "piecemealing," Metro cannot segment this Project from directly connected and related projects as a means of understating, and avoiding analyses of, the larger project as a whole. Likewise, Metro cannot segment a larger project "as a whole" into discreet "smaller projects" to avoid NEPA compliance in some areas, even though NEPA would otherwise apply to the larger project. Yet, apparently, that is what has occurred here. 84-9

Furthermore, the likely reliance on federal funding is shown through Metro's own financial documents. First, the October,7, 2010 EIR/EIS Scoping Report identified extensive federal involvement with the Project, and there is nothing the City found in the administrative record thus far that explains why the EIS component was dropped. We do note that Appendix D-5 of the DEIR/EIS Scoping Summary lists The Federal Aviation Administration, US Army Corps of Engineers, US Department of Housing and Urban Development and US 84-10

Environmental Protection Agency as Cooperating and Participating Agencies. Nor are any federal agencies listed as "responsible agencies" under CEQA, and federal agencies which have discretionary approval for portions of the Project are not listed in Table 2.6-1 of the DEIR as required. 84-10

Second, Metro's January, 2023 Cost Summary Report estimates Preferred Project costs at $1.96 billion with secured funding sources coming from Measure R, Measure M, California State Transportation Agency TIRCP, a 3% match by local agencies, and unspecified "unsecured funding sources." Metro's Expenditure Plan for Measure R (as amended July 22, 2021) identifies Total Cost Estimate for the Project to be $280 million, with $272 million coming from Measure R funds, $8 million from local funding, and a "to be determined" amount from Federal and State Funding, with project completion in FY 2033-2035. As to Measure M funds, Metro's 2015 Expenditure Plan identifies a total cost estimate of $891 million, with $619 million coming from Measure M funds and $272 million coming from all other funding sources. The 2020 TIRCP Allocation Plan Update allocates $231.3 million to the Project through 2024-25. The City recognizes that these costs and funding amounts are estimates and moving targets, and thus mixing "apples and oranges"; however, the theme that arises is that the secured funding for the Project comes nowhere near the projected $1.96 billion total estimated cost. 84-11

This is a significant point because (1) reliance on unsecured and "to be determined" funding sources is contrary to the DEIR's Section 2.2's Project Objective to "provide a cost-effective project," and (2) violates NEPA for lack of an EIS to support federal agency funding and/or approvals. 84-12

The DEIR states in conclusion that a "funding plan and schedule will be prepared after Metro selects a preferred alignment." Isn't that backwards? Shouldn't Metro have the money to buy something before it commits to buying it? The City understands that the Green Line Extension to Torrance project is still under development, but how can Metro have a "cost-effective" project when it doesn't know how much money it will have to spend, and the sources of secured funding to date is woefully short? 84-13

The proposed Project and options must be analyzed in an EIR/EIS joint document or otherwise processed in compliance with both CEQA and NEPA. 84-14

4. **Analyses Based on Unknown Future Standards or Approvals:** The DEIR improperly defers its analyses to reports and standards that either do not exist and/or are unknown. For example, without limitation, in the Transportation section Project impacts are found to be less than significant because, in part, Project construction will be subject to a construction traffic management plan ("CTMP"). (*See, e.g.,* DEIR § 3.2-4.1.1.) As the DEIR openly admits, no such plan has been developed or circulated, much less adopted. Similar to issues of "deferred mitigation," the public cannot meaningfully comment on plans, regulations or approvals relating to environmental impacts *to the extent they are non-existent* 84-15

and/or unknown. Other instances of the DEIR deferring environmental analysis to unknown, unsettled or non-existent policies and standards are presented in Part II below, without limitation; Lawndale otherwise objects generally to all instances in which the DEIR relies upon unknown, unsettled or non-existent policies, plans, changeable design standards and/or approvals. 84-15

5. **Insufficient Mitigation Measures:** The DEIR prepared for the Project identified several areas of significant environmental impacts including: Aesthesis; Greenhouse Gases; Land Use Planning; Transportation/Traffic; Hazards & Hazardous Materials; Air Quality; and Noise & Vibration sections. However, despite these acknowledgements of significant environmental impacts, the DEIR lacked, deferred, and obfuscated proposing adequate mitigation measures to address the issues outlined in the Initial Study. To the extent the DEIR does present mitigation measures, Lawndale objects to all measures to the extent they are reliant upon deferred studies, analyses or policies that are not grounded in currently-known, objective standards.[1] 84-16

PART II: SECTION-SPECIFIC COMMENTS

1. **Section 2, Project Description:** The Project Description is deficient because the public was not provided with "an accurate, stable and finite" project description on which to comment. (*County of Inyo v. City of Los Angeles* (1977) 71 Cal.App.3d 185, 192–193.) Here, the DEIR "proposed Project" is framed as not just one, but three "options" that vary significantly. Indeed, the Hawthorne "option" presents an entirely different alignment when compared to the other two "options" (and even those other two "options" present widely varying environmental impacts). "[A] project description that gives conflicting signals to decision makers and the public about the nature and scope of the project is fundamentally inadequate and misleading.) (*Washoe Meadows Community v. Department of Parks & Recreation* (2017) 17 Cal.App.5th 277, 287 (*Washoe*").) The DEIR's presentation of three very different "options" all presented as one "Project Description" fails to designate a stable project and thus presents an obstacle to informed public participation. 84-17

   Lawndale further offers the following comments relating to the Project Description:

   a. Section 2.1-1, Project Location and Surrounding Uses: The DEIR Project Description is also not clear and fails to identify a specific Project because it mentions a high-capacity transit center, but does not define what that is and what constitutes "high capacity." 84-18

[1] The DEIR also presents mitigation measures that are either confusing in their application, or are missing entirely where there otherwise should be mitigation proposed. For example, Mitigation Measure LU-1 – Temporary Crossings is proposed in the Land Use analysis. However, the Land Use section finds all environmental impacts to be "less than significant". Why is a mitigation measure being proposed if Metro earnestly believes that Land Use impacts are less than significant? Lawndale posits that the imposition of a mitigation measure here belies how understated Metro's findings of less-than significance are.

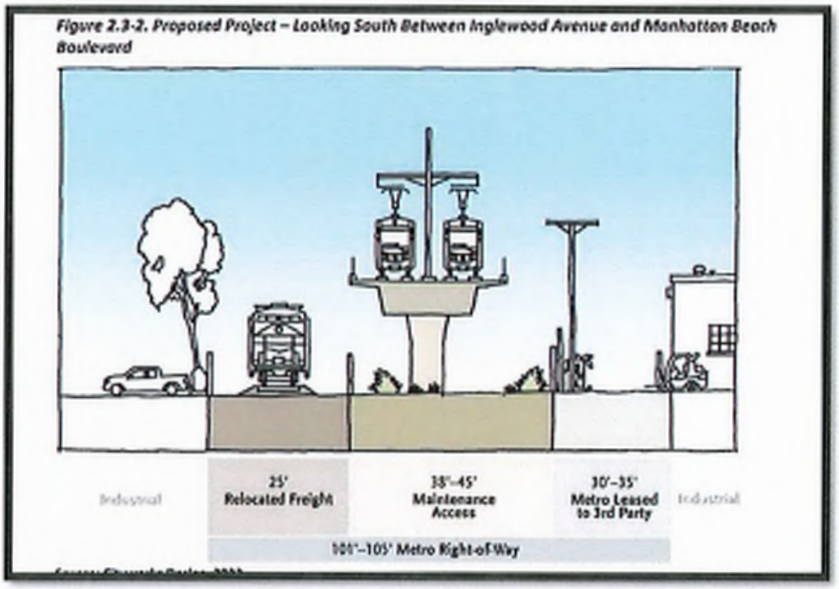
b. Figure 2.1-2, Project History: The Project site map is incomplete and does not identify the Project area clearly. 84-19

c. Section 2.2, Project Objectives: The following Project objectives in the DEIR are misleading and cannot be achieved because descriptions relating to the objectives are too vague and a genuine plan to achieve such objectives would require mitigation measures: (1) "Reduce air pollution and greenhouse gas emissions by making transit a more viable transportation choice;" (2) "Avoid and minimize environmental impacts on environmental resources to the maximum extent feasible;" and (3) "Provide a cost effective Project." 84-20

d. Section 2.3-1, Proposed Project: The DEIR is not clear on property acquisition. Metro stated that they would not acquire any property on the right-of-way, or "ROW". However the DEIR states that Metro "would acquire or lease additional ROW from BNSF to accommodate the two new rail tracks. This is in case of the ROW not being big enough to accommodate the tracks." The DEIR does not specify what the right-of-way will be. 84-21

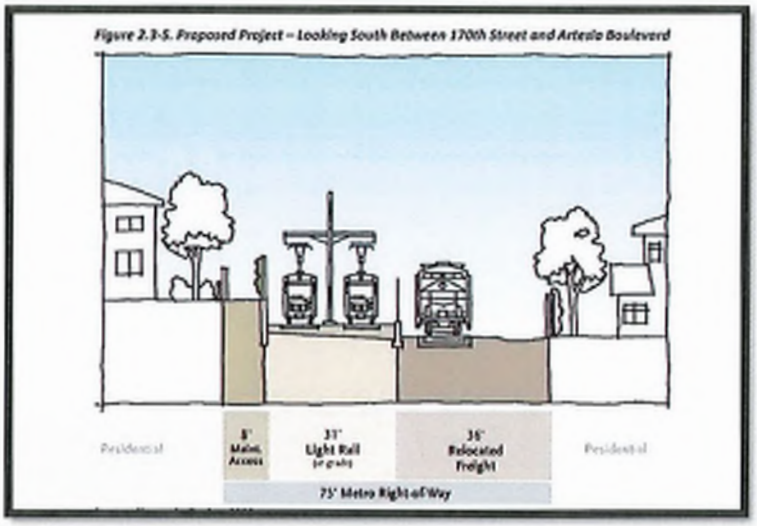
e. Figure 2.3-2, Proposed Project: This figure is showing a proposed right-of-way of 101'-105', which is more than the existing right-of-way owned by Metro (currently 100 ft.). Metro stated that no properties would be taken, but based on this elevation that cannot be correct. A side elevation should also be provided to include the surrounding residential areas to compare the scale of the Project versus the existing site. The footnote in this discussion alludes to a retained fill ("The retained fill would be an elevated platform made of reinforced walls which are filled with soil material"). But, an indication of what that is on the elevation is lacking. 84-22

Figure 2.3-2. Proposed Project – Looking South Between Inglewood Avenue and Manhattan Beach Boulevard



f. Figure 2.3-2; Looking South of 162nd: There is no clear explanation of the type of construction the overhead railway would be, some areas say columns and the diagram states "elevated/at-grade." This is too ambiguous. 84-23

g. Figure 2.3-5, Proposed Project elevation looking south between 170th and Artesia Blvd.: The elevations depicted are vague and lack clarity. The diagram indicates a small proximity from the light rail to the freight rail. However, it is required that there is a minimum of 20 ft. between the light rail and the freight train. Such distance is not indicated in the elevation, and the distances indicated do not appear to comport with minimum space between rails. 84-24



h. Lacking Bridge Expansion Description: The description in the DEIR states that the rail tracks would cross over Artesia Boulevard, however the existing bridge cannot accommodate three rail tracks. The proposed Project would need to include the expansion of the bridge. This is not analyzed under the DEIR or shown in the exhibits. 84-25

i. Multi-Use Recreational Paths: The DEIR does not address the relocation of the railways, which will have significant impacts to surrounding thoroughfares. The size of the proposed walking path must already be determined—giving an approximate number is not sufficient. The figure attendant to this discussion does not identify a fence or wall. Thus, what is proposed is not clear. 84-26

j. Other Insufficient Elements of the Project Description. In all, the Project is overbroad, vague, and reliant upon unspecified assumptions. Further areas of ambiguity include, without limitation: 84-27

i. *2.3-4.2, Light Rail Vehicles*: The DEIR states that "[I]t is assumed that existing Metro light rail cars would be used" and provides a 84-28

sweeping generalization of how such cars are "typically" configured. The height and surface materials (as relevant to aesthetics), and attendant air and exhaust systems (as relevant to air quality) are not described. Further, Metro's reliance upon an "assumed" use of "typical" light rail cars is too indefinite for purposes of eliciting meaningful public comment. 84-28

ii. *2.3-4.4; Ancillary and Support Facilities*: The Project Description loosely states, "Multiple additional elements are required to support light rail vehicle operations, including an overhead catenary system (OCS), traction power substations (TPSS), and communications and signaling buildings." The size, locations, number—and indeed what other "additional elements" may be intended here—is left entirely to the public's imagination. 84-29

iii. *2.3-4.1, OCS*: This is likewise too vague. For example, the description states that these overhead wires will entail poles "[i]n some locations" to "be located on both sides of the tracks." The number and locations of single versus dual OCS infrastructure is unspecified. 84-30

iv. *2.3-4.2, Traction Power Stations*: These stations are described as being subject to "principles of urban design" with "several options available for some locations." The lack of specificity here fails to comply with CEQA standards. 84-31

2. <u>Aesthetics:</u>

a. <u>Failure to Address Visual Character/Quality Impacts in Conflict with General Plan Scenic Quality</u>: In general, the Aesthetics section of the DEIR does not adequately identify, study, or mitigate potential aesthetic impacts on the surrounding area with regards to the proposed Metro Project. This is not surprising given the lack of detail that was provided in the description of the individual Project elements. The DEIR inadequately describes, insufficiently analyzes, and certainly fails to propose any mitigation measures to minimize disruption to, visual resources even where Lawndale's General Plan Open Space Element applies for purposes of preserving aesthetic quality and character. For example: 84-32

- *Section 3.3-1.3, Local Regulations*: The DEIR failed to demonstrate how the Project meets Lawndale's policies and regulations. The "Resource Study Areas," as depicted in the DEIR, do not identify and evaluate existing conditions of open space used by residents. The DEIR has failed to provide sufficient key points of interest along the existing ROW used for recreational purposes. For example, the proposed walking path will disturb, disrupt and interfere with day-to-day recreational features currently utilized by Lawndale residents. 84-33

Lawndale's General Plan and policies strive to protect the limited recreational spaces within the City of Lawndale as vital elements of residents' quality of life. 84-33

- *Page 3.3-22, Inglewood Avenue to Artesia Boulevard (Proposed Project and Trench Option)*: With respect to an identified greenway, the DEIR states: "because the greenway is not specifically protected by any applicable local general plans, planning and zoning codes, or other regulations, this greenway is not considered to be a visual resource." This statement and any analysis stemming therefrom is inaccurate because it does not acknowledge the application of Lawndale's General Plan Open Space Element. 84-34

- *Unaddressed Open Space Areas*: The proposed elevated rail structure and the freight track will have potential significant impacts along the existing railway as it is currently identified in the Open Space Element of Lawndale's General Plan as open recreational space. There is currently only one railway, no overhead wires and ample vegetation that residents use for recreation. Adding the light rail system, along with its ancillary structures and the overhead wires, will significantly impact the aesthetics of 11.04 acres of recreational land within Lawndale. 84-35

Therefore, to the extent Metro holds that "visual impacts in urbanized areas are assessed based on the potential of a project to conflict with applicable zoning and other regulations governing scenic quality" (DEIR p. 3.3-59), the DEIR fails its own stated standard. As demonstrated in the above examples, visual impacts to Lawndale recreational areas are in conflict with the City's General Plan Open Space Element, leaving the DEIR's analysis thereof legally insufficient. 84-36

The Aesthetics section states that there will be no significant impacts. However, based on the actual current conditions of the Project area and the proposed Project's new above-ground wires and pillars to be added, there will be substantial impacts to aesthetics with respect to all Project options.[2] 84-37

b. <u>The DEIR Fails to Address Other Fundamental Aesthetic Elements, Wants for Baseline Descriptions of Aesthetic Conditions, and Presents Inadequate Methodologies</u>. 84-38

i. *Unstated and Understated Visual Impacts:*

[2] The DEIR similarly misjudges aesthetic character and scenic quality policies elsewhere. For example, without limitation, Figure 3.3-17 (View 12) and Figure 3.3-38 (View 48) respectively depict an open area with ample mature trees and a tree-lined residential street with homes dating more than 75 years old. Nonetheless, the DEIR misconstrues these areas, amongst others, as "urbanized areas" having no "unique visual features" and thus improperly understates (or discounts) visual impacts. The same can be said of the DEIR's aesthetic lacking analysis of El Nido Park in the City of Redondo Beach.

The picture below shows the existing Metro ROW of way. Looking northeast from Condon Avenue in Lawndale.

The picture below is an example of an existing Metro railway going through a residential area and how it will potentially look going through the ROW. Clearly, the potential aesthetic impact is significant compared to the above.

84-39

The picture below shows existing Hawthorne Boulevard looking North towards the 405 freeway. According to the DEIR this would be the location of one of the Project "options" where the Project may be located.

The DEIR fails to evaluate the negative impacts on aesthetics within Hawthorne Boulevard. Below is a picture of the existing C-line Redondo Metro station. It is evident that the construction of an overhead railway like this would significantly change the aesthetic of Hawthorne Boulevard as pictured above.

84-40

The DEIR fails to provide a maintaince schedule to prevent blight. The two pictures below existing Metro Light railway areas in Compton, located near residential areas. The railway has not been maintained, there is rubbish, dead vegetation, graffiti, and homelessness.

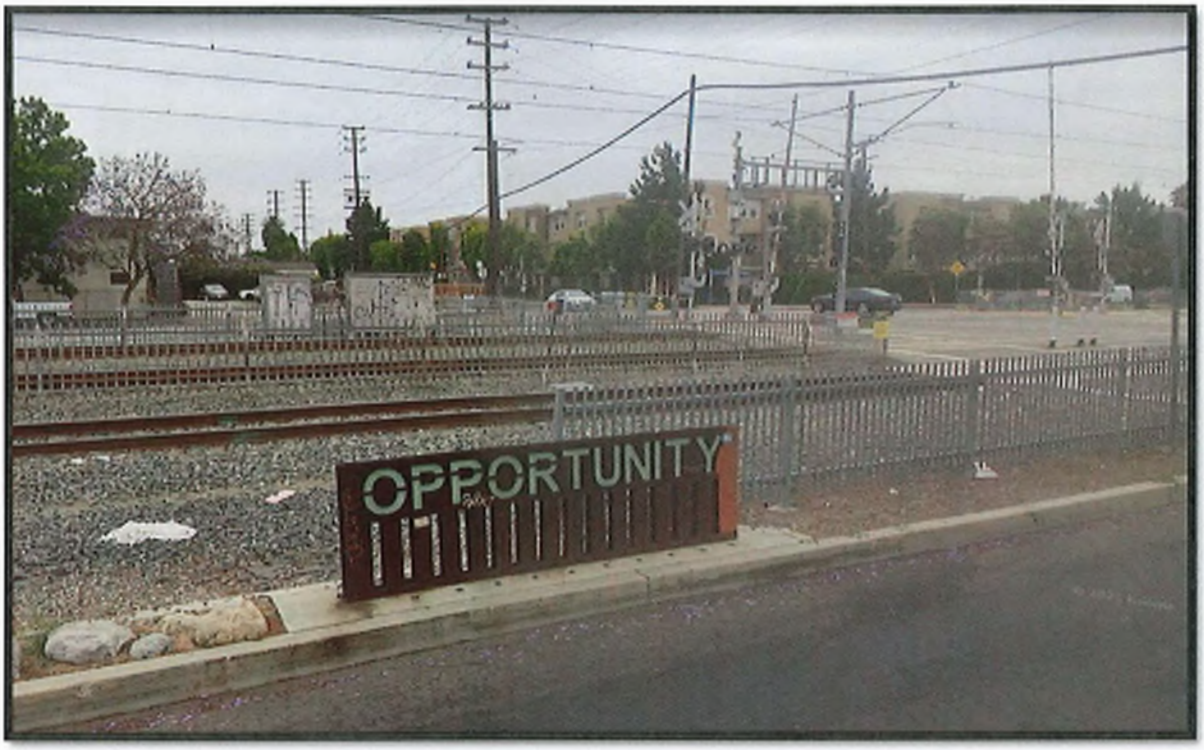
84-41

The photograph below shows the "art" that was provided by Metro when the light rail train passed through Compton. Lawndale posits that such installations detract from, rather than enhance, aesthetic appeal. Such installations are also a draw for

84-42

graffiti, vandalization and other nuisance conditions. Yet, these issues are not addressed in the DEIR Aesthetics discussion.

84-42



Below is an example of a current Metro light rail area showing a typical itinerant encampment. As descrbed further below, railway setbacks, bridge undercrossings and ROWs are a draw to those experiencing homelessness, resulting in unsightly and unsafe conditions. Yet, these aesthetic issues are not addressed.

84-43

The DEIR fails to provide mitigation measures for aesthetics on all three Project options. The DEIR must provide a detailed design for the proposed Project, fuller description of potential aesthetic impacts and meaningful mitigation measures to minimize aesthetic impacts. 84-44

ii. *Soundwall Missing Design/Aesthetic Analyses*: The DEIR fails to address the aesthetic impacts of specific Project elements. For example, the DEIR mentions a soundwall in both the Aesthetics section and as a Noise mitigation measure (MM-NOI-2); however, no design/aesthetic description is proposed or provided in attendance with respect to the proposed soundwall, which should be part of the Aesthetics section. The description of the soundwall is extremely vague and does not give enough information to review and comment on whether it will mitigate impacts. Further detail and schematics must be provided. 84-45

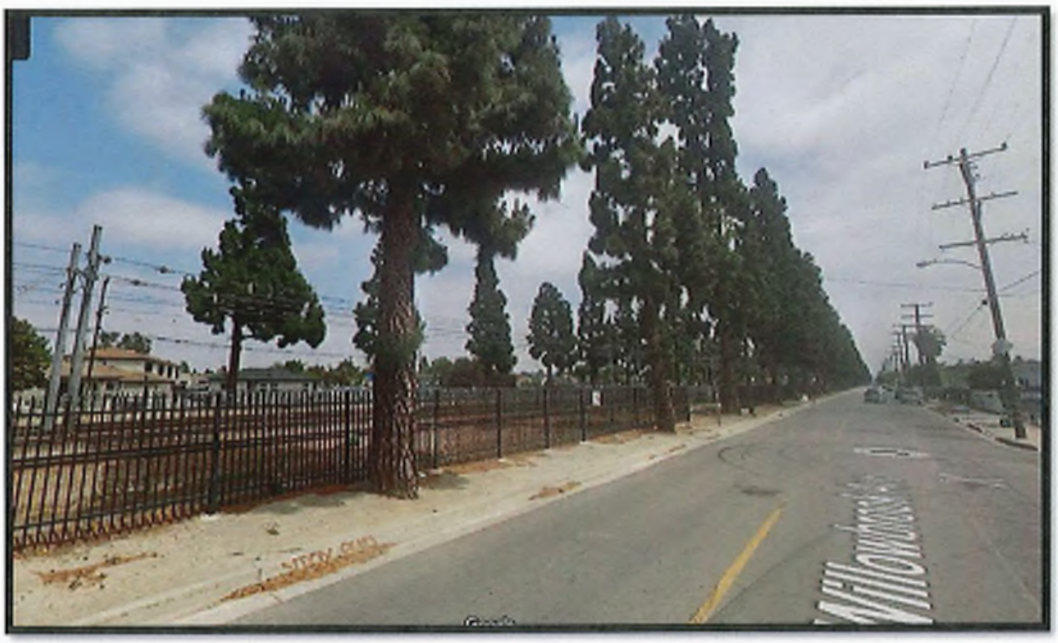
iii. *Metro Design Standards*: The DEIR fails to provide information on Metro's adopted design standards. The proposed Project fails to show any information related to such. 84-46

iv. *Metro Tree Policy*: The DEIR fails to provide a copy of Metro's Tree Policy. The DEIR should provide the proposed landscaping and monitoring plan for the future Project and analyze appropriate natural buffers to all adjacent residential areas. 84-47

The two pictures below show the existing Metro light rail roadway network in the City of Compton. The areas are barren and without landscaping, which is a 84-48

significant change from the existing ROW in the City of Lawndale. The dominance of rock, metal and hardscape features present potential significant impacts to light and glare, which were not analyzed in the DEIR.

84-48



v. *Section 3.3-2, Methodology*: The DEIR indicates that "typical views and key observation points ("KOPs") for the visual assessment are identified, based on the responses of representative viewers." The

84-49

DEIR fails to identify the "representative viewers" and the role they play in the Project.

- It is unclear if the views represent the greatest impact to the greatest number of representative viewers.
- It is unclear if the views represent the cross section of viewers exposed to the site.
- It is unclear if there are any views that should be simulated to show there would be minimal impacts.

Based on the KOPs identified in the DEIR only two KOPs were identified within the Open Space area in Lawndale, which insufficiently describes residential neighborhoods located along the ROW. The responses from the "representative viewers" fail to provide the existing recreational space used by residents. In addition, the representative viewers failed to include additional KOPs along nearby residential areas. 84-50

vi. *Section 3.3-2.1, Resource Study Area*: The DEIR presents resource study areas ("RSAs") that omit areas "blocked by tall vegetation, buildings, and other intervening development." This metric for drawing RSAs is entirely subjective and could be applied to exclude a vast majority of areas that may include local residents in Lawndale. Metro needs to provide a methodology that is objective, fair and does not exclude residents based on subjective interpretations of "tall vegetation, buildings and other intervening development." 84-51

vii. *Section 3.3-2.2.2, Visual Quality:* The DEIR contains subjective interpretations and decisions that are not appropriate and will significantly impact the community of Lawndale. The DEIR indicates that "visual quality refers to the aesthetics of the landscape, which is based on the viewers values and notions about what constitutes a quality setting." 84-52

viii. *Section 3.3-3.3, Visual Character*: This section of the DEIR fails to adequately identify the existing character of the residential neighborhood(s). There is a total of 15 residential streets along the proposed Project. Five out of those 15 residential streets have vital cross points used for day-to-day activities. Those five streets are used to travel to two separate schools located one block east from the proposed Project site. The DEIR neglects to set the proper baseline in describing the character of the residential area. For example, the DEIR states that the existing "residences were constructed between the 1930s and the 1970s" and the DEIR fails to mention that newer single-family dwellings were developed in the 84-53

1990's. The DEIR improperly understates the residential view character of these suburban areas adjacent to the proposed Project will be negatively impacted. 84-53

ix. *Figure 3.3-3, Detailed Location of Representative Views*: The DEIR fails to identify locations that will be affected by the proposed light-rail Project. All railroad crossings located within the residential areas should be identified as KOPs. 84-54

x. *Page 3.3-22, Inglewood Avenue to Artesia Boulevard (Proposed Project and Trench Option)*: The DEIR fails to identify residential properties located between 170th Street and Artesia Boulevard. 84-55

xi. *Page 3.3-31, 182nd Street to Intersection of Hawthorne Boulevard and 190th Street (Proposed Project and Trench Option)*: The DEIR provides inconsistent descriptions of ROW green / open space located in the City of Lawndale versus that located in the City of Torrance without any stated justification or reasoning. 84-56

c. Inadequate Light/Glare Analysis: The DEIR fails to passably analyze aesthetic issues of light and glare, particularly from an operational impact perspective. (*See*, Sections 3.3-4.4.2 – 3.3.-6.3.) At Section 3.3-4.4.2, the DEIR states: 84-57

The Proposed Project includes several elements, such as glass, metal surfaces, and additional lighting that could create new sources of glare. However, the existing sources of light at the existing Redondo Beach (Marine) Station do not generate substantial glare. Thus, it is not anticipated that the Proposed Project would generate substantial glare.

This conclusory and over-generalized comparison between the glare impacts attributable to a stationary building and a fast-moving, metallic vehicle is entirely misplaced. The fast transitory nature of rail cars produces substantially different attributes of "flashing" light and glare, particularly if paired with unmitigated surrounding hardscape (an unknown given the lack of landscape screening information provided). Yet, no further analysis other than the above-quote is provided with respect to the Project's potential reflective attributes. 84-58

Similarly, the DEIR fails to address the introduction of lighting from rail vehicle headlights, which will impact certain residences, as well as street vehicles and surrounding businesses. As to maintenance lighting, the DEIR provides no meaningful analysis based on the conclusory expectation that non-transient lighting will "be compliant" with Metro and other agency lighting regulations and design standards; these standards are not described or analyzed. (*See*, Section 3.3-7.1.) 84-59

While the DEIR observes that shade and shadow patterns from Project-related structures "would change throughout the day and seasonally," and notes that such changes could create "adverse shadow impact" to recreational facilities, there is no mention of impacts to surrounding street, pedestrian, residential or other viewsheds. (Section 3.3-7.1.) Nor does the DEIR identify or analyze structures that may pose undeviating areas of shadow over adjacent streets, thoroughfares, or buildings (including residences). 84-60

Because the DEIR fails to properly study these significant impacts on aesthetics, the DEIR fails to live up to its role as an informational document. Metro's failure here "precludes informed decision making and informed public participation, thereby thwarting the statutory goals of the EIR process." (*Ass'n of Irritated Residents v. County of Madera* (2003) 107 Cal.App.4th 1383, 1391.) 84-61

d. Section 3.3-1.2, State and Regional Regulations: State and Regional Regulations CEQA. DEIR statements here delete a very critical component of the California Public Resources Code Section 21002(b), which states: "Take all action necessary to provide the people of this state with clean air and water, enjoyment of aesthetic, natural, scenic, and historic environmental qualities, and freedom from excessive noise." The DEIR neglects the element of freedom from excessive noise. The proposed trips that will be generated for the light rail will dramatically increase the amount of daily noise (20 hours a day) for the residents. 84-62

3. **Air Quality:** The Air Quality section of the DEIR is incomplete and, therefore, inadequate. This proposed Project will create a significant amount of air quality issues locally and regionally. The Air Quality sections of the DEIR did not adequately address or identify vehicle traffic trips generated by the Project. Additionally, vehicle emissions that will be generated have not been adequately addressed by the DEIR. For example, the DEIR does not adequately account for air quality impacts associated with rail riders driving automobiles either to a rail station (e.g., "park and ride"), or from a rail station to their endpoint destination. 84-63

a. Section 3.4-1.1, Federal Regulations: This section mentions Toxic Air Contaminants ("TAC") as air pollutants that may increase a person's risk of developing cancer and/or other serious health effects. The Project includes the relocation of the existing freight locomotive, and the DEIR here mentions that at least 10% of the soil will be contaminated. All three Project options are located within or closer than 500 feet of sensitive receptors that may be affected by the TACs resulting from the Project. There is no mention of a Phase II or Phase III study to check for contamination on the property along the ROW option. The DEIR mentions that Metro will be removing the 84-64

contaminated soil; however, there are no details or information about how this would impact the sensitive receptors. 84-64

b. Section 3.4-2.2.1, Proposed Project construction: The DEIR fails to give detailed information on the amount of soils and materials to be disturbed. The Project would involve a total of approximately 556,100 cubic yards of imported and exported materials. What are the individual quantities of dirt that will be moved or imported? How will dust built-up be mitigated? Such information is conspicuously lacking. 84-65

    i. The trench option fails to provide details on the amount, type, and timing of material to be exported and imported to the Project site. 84-66

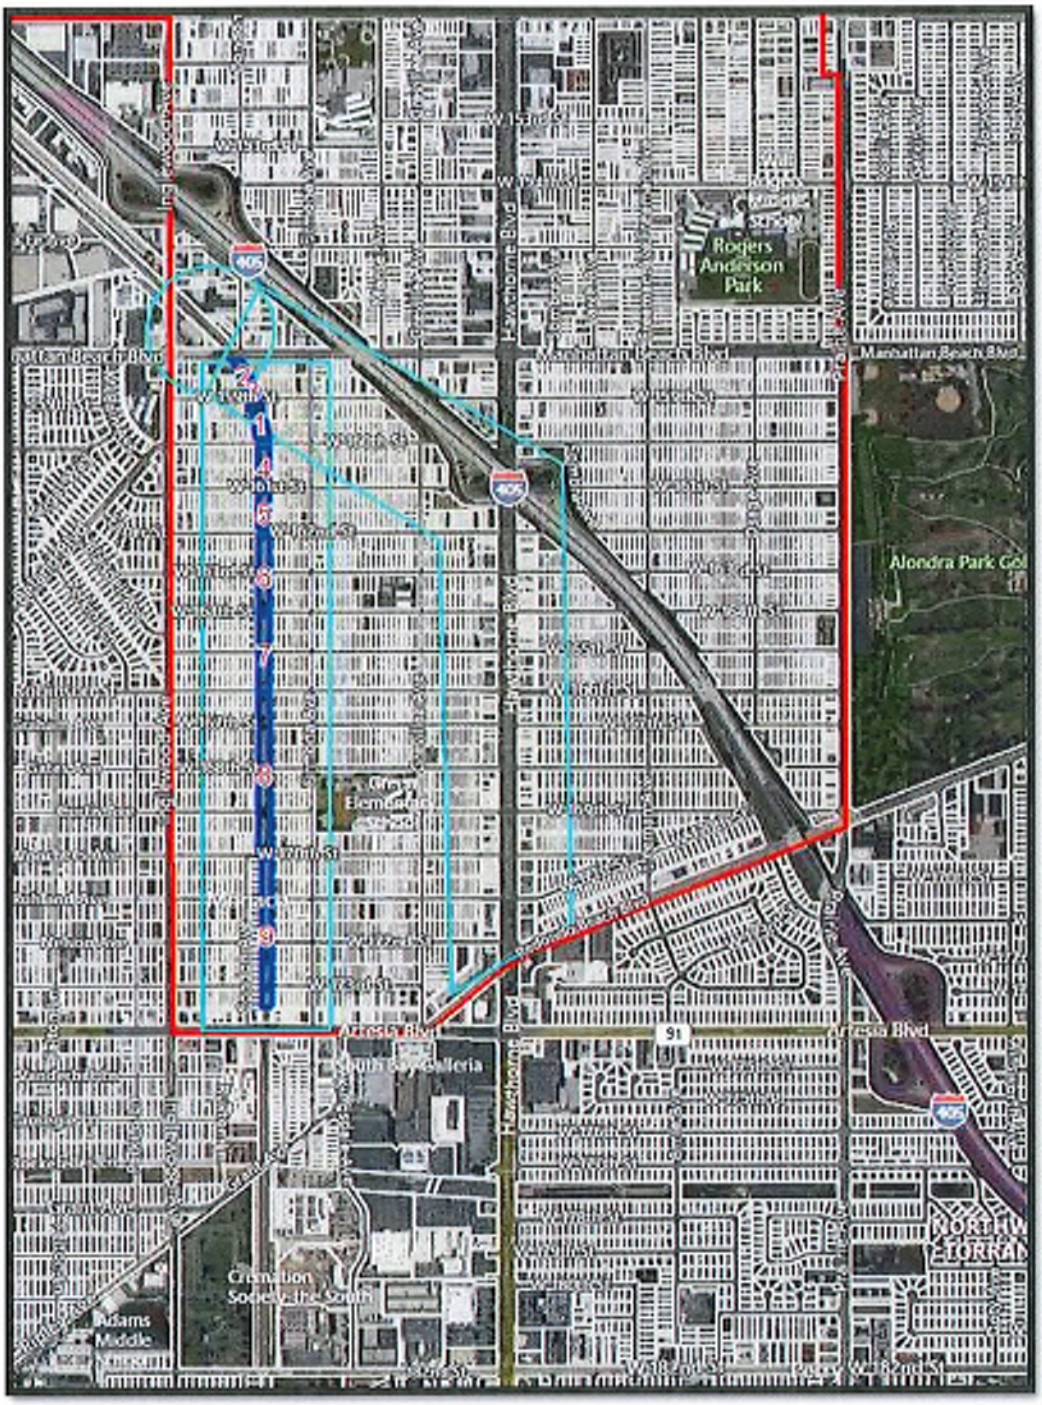
    ii. The Hawthorne option fails to provide details on the amount, type, and timing of material to be exported and imported to the Project site. 84-67

c. Section 3.4-2.3.1, CEQA Review of Sustainable Transportation Projects: The DEIR states, "To estimate daily emissions for the Proposed Project, Trench Option, and Hawthorne Option, the daily vehicle miles travelled ("VMT") reduction corresponding to each operational scenario was multiplied by the corresponding emission factor for each pollutant" This statement does not present the results of calculations or numbers supporting it.[3] 84-68

d. Section 3.4-2.4.1, State CEQA Guidelines: This section of the DEIR provides false information. The proposed Project and its options would conflict with the applicable SCAQMD plan due to the direct impact on population and housing as per SB 2097. The Project would expose all sensitive receptors within a 500-foot radius of the Project. There is a high number of residential homes and several schools near the proposed Project location and the options. The proposed Project of the ROW includes the relocation of an existing freight train, and according to the Air Quality portion of the DEIR, the moving of dirt anticipates at least 10% of contaminated soils which need to be disposed of, however this is located within 100 feet of sensitive receptors. The DEIR states "Compliance with the Metro Green Construction Policy will preclude the possibility of unhealthy exposures of sensitive receptors to TAC concentrations during the proposed Project construction." This statement is incomplete, there is a lack of explanation of how this will be achieved. 84-69

The diagram below shows sensitive receptors within 500 ft. of the proposed Project and proposed options.

[3] Throughout the DEIR it is also stated that the proposed Project and options would reduce Vehicle Miles Traveled ("VMT"); however it does not present an analysis of, or number by which, this will be reduced. This conclusory statement is inadequate.



The DEIR fails to provide accurate and complete mitigation. This section also contains deferred mitigation: "If maximum daily emissions would exceed applicable thresholds values during construction or operations, opportunities to mitigate and reduce those emissions are required to be explored and implemented as feasible."

84-70

e. Section 3.4-2.5, Project Features: The DEIR fails to provide complete information and details about the use of generators. More information must be provided on locations, types of generators and whether they will be back-up or will they be on all the time. The DEIR states inspections will be conducted by Metro for compliance with air quality regulations. The study fails to specify how often or whether this information will be submitted to AQMD. If Metro fails to comply with the inspections or with air quality rules, how will this be mitigated? Merely deferring air quality analysis to future inspections is unacceptable. 84-71

The DEIR provides incomplete and inaccurate information. The document states that the information provided for 2020 data is not reliable due to the COVID19 Pandemic; however, the 2020 monitoring period for air quality is used for concentrations of pollutants. During the pandemic there was nearly no traffic and low transit ridership. The information is inconsistent; all data presented must be consistent. 84-72

The DEIR did not address new Senate Bill 2097, which eliminates parking requirements for any property located near public transit. Contrary to Metro's claims, this Project will result in population / housing growth because State Legislation has approved numerous housing bills that incentivize more housing near transit centers. The numerous new State housing bills promote incentives for developers to construct more housing and therefore increase population. 84-73

f. Section 3.4-4.1.1, Construction impacts: The DEIR fails to provide an accurate constriction timeline. The "temporary" construction is expected to last 5-6 years. The sensitive receptors will be impacted. The DEIR fails to provide ways to mitigate the construction impacts on air quality. 84-74

g. Table 3.4-14, Project Construction Regulatory Control Measures: The DEIR fails to provide information on the proposed mitigation plan to water and reduce fugitive dust, Rule 403 fugitive dust. 84-75

All three Project "options" will require mitigation for air quality. The proposed Project and its options will be moving material to and from the Project area. The ROW option will require relocation of existing railroad tracks, which will require demolition of existing tracks. The trench option will require digging and moving of dirt, and the Hawthorne Boulevard option will required demolition or relocation of existing high power electricity lines. 84-76

SCAQMD RULE 403 (FUGITIVE DUST)	
Backfilling, Clearing and Grubbing, Cut and fill, Demolition, Disturbed soil, Earth-moving activities	Apply water to materials/stockpiles to prevent visible dust plumes and stabilize wind erodible surfaces.
Importing/exporting of bulk materials	Maintain at least six inches of freeboard on haul vehicles; use tarps or other suitable enclosures.
Road shoulder maintenance	Apply chemical dust suppressants and/or washed gravel to maintain a stabilized surface after maintenance.
Staging areas	Limit size of staging areas and limit vehicle speeds to 15 miles per hour.

4. **Biology:** The Biological Resources section of the DEIR is in complete and inadequate. The Biological Resources section of the DEIR did not identify, study, or properly mitigate the potential biological impacts with regards to bird surveys or special status species. (*See e.g.,* DEIR p. 3.2.3.) The Project site has acres of existing trees throughout the ROW and the Hawthorne Boulevard corridor areas; yet, no surveys were completed to determine the limits and potential impacts the proposed Project could have on biological resources. In addition, the DEIR failed to provide an inventory of existing trees within the proposed area. It is crucial to know the types of trees that are being removed since different species, such as the Monarch Butterfly, utilize available trees as migration resting points. 84-77

Furthermore, deferred mitigation is inconsistent with CEQA Guidelines. DEIR Section 3.7-1.1, Federal Regulations Migratory Bird Treaty Act, proposes deferring mitigation measures by completing a Pre-Construction Nesting Bird Survey; this deferral of potential mitigation does not address the potential biological impacts that the Project could have on the environment. 84-78

   a. Section 3.7-3.4, Sensitive Biological Resources Within the RSA: This section of the DEIR mentions plant and animal species that have potential to occur and are protected under the Migratory Bird Treaty Act (MBTA) and California Fish & Wildlife. The species named under the DEIR show low potential to occur and one plant species with high potential to occur. The DEIR did not complete an assessment or study on the current conditions of habitat, thus there is no determination on potential impacts during construction. The DEIR is stating that the proposed Project would be Less Than Significant Impact with Mitigation for all three options by conducting a pre-construction survey. How was this assessment made without first completing a special species survey of the area to justify less than significant impacts on Biological Resources? It would be impossible to arrive at this conclusion without first basing the assessment on completed special surveys conducted by a licensed and certified biology expert. 84-79

   b. Section 3.7-4.1.2, Operational Impacts: The DEIR states there will be Less Than Significant Impacts with mitigation. However that conclusion is self-contradictory given the statement that "Potential direct impacts may

subsequently cause nest abandonment (and this loss of young), nest failure, or direct mortality of individuals." Metro is proposing to mitigate with routine maintenance, however no routine maintenance plan was provided The Trench option was also identified as Less Than Significant Impacts with mitigation, and the Hawthorne Option Less Than Significant Impacts without any mitigation. A survey should be conducted and a plan should be prepared by an expert providing ways to mitigate potential loss of wildlife. 84-80

c. Section 3.7-4.2, Riparian or Fish and Wildlife: This section states No Impact under Construction and Operation of all three Project options. However, in the list provided of potential endangered species some vegetation is identified as potentially to occur. No study has been conducted and a No Impact determination cannot be made without sufficient information. 84-81

d. Section 3.7-4.4, Native or Migratory Species Corridors or Nurseries: Project interference with any native resident or migratory species. This section states No Impact under Construction and Operation of all three Project options. However, in the list provided of potential endangered species some wildlife is identified as potentially to occur. No study has been conducted and a No Impact determination cannot be made without sufficient information. 84-82

5. **Energy:** The DEIR does not mention that a purchasing power agreement with Edison is needed to run the light rail train. There was no analysis on how the project will be energized and where the power will be coming from. The power purchasing agreement must also be approved by the California Public Utilities Commission ("CPUC"). 84-83

a. Page 3.12-11 Metro Energy conservation and Management Plan (ECMP), the DEIR states that solar panels will be installed in the year 2022. Has or will this be part of the construction of the rail system? Is the stated timeframe still accurate given that 2022 has passed? Where will the panels be located? The information is unclear and deficient. 84-84

6. **Geology & Soils:** There is a lack of mitigation for the proposed Project in case of an earthquake within the vicinity. 84-85

a. Section 3.8-3.7, Landslides and Slope Failures: This section lacks data on the potential impacts for the areas identified in the map as landslide prone area. 84-86

7. **Green House Gases:** The proposed Green House Gases ("GHG") mitigation measures are not adequate. Deferral of mitigation measures is inconsistent with the CEQA Guidelines. On DEIR page 3.5-5, it states that building public transportation would reduce vehicle miles travelled, however there is no supporting data to show that this is the case. A GHG study must be prepared 84-87

and analyzed to ensure appropriate mitigation measures are incorporated into the Project. 84-87

a. Table 3.5-3, City of Lawndale – Relevant GHG Emissions, Goals, Policies and Programs: The DEIR states that goals from the Lawndale Air Quality Management Plan were incorporated as they would be relevant to the GHG emissions from the transportation and transit sector. City of Lawndale's Climate Action Plan Goal "LUT:C" encourages public transit by implementing a Bus Rapid Transit System. The City's CAP or AQMP does not recommend or provide goals or policies that support a light transit system. 84-88

    i. The DEIR is not consistent with the GHG Emissions, Goals, Policies, and Programs for the City of Lawndale. Goal 1- The City shall promote air quality and mobility in an environment of continued population growth, while providing for a healthy economic base. The City will work towards reducing VMT through an improved job/ housing balance and more efficient urban land use plan. Goal No. "LUT:C" Encourage transit through the implementation of a Bus Rapid Transit System and expand the sub-regional public transit network and enhance transit frequency through collaboration with SBCCOG and neighboring cities, as well as the prioritization of funding around transit stations to promote active transportation. 84-89

b. Section 3.5-2 Methodology: The DEIR explains that there will be environmental effects on GHGs temporarily during the Project construction and during future operation following the completion of the Project. This section mentions what was used to calculate the data, however there is lack of information on what or how this was conducted. 84-90

c. Section 3.5-2.1 Resource Study Area: This section states that the regional GHG emissions are evaluated primarily at the Metropolitan Planning Organization (MOP) level but does not specify if it was at Regional or Local levels. 84-91

d. Figure 3.5-1, Resource Study Area Map: The map should be analyzed locally, not just regionally. The study area is deficient. 84-92

e. Section 3.5-2.2, Construction GHG Emission: This section talks about temporary GHG emissions during construction from the use of heavy-duty haul trucks. Also, it states that the GHG emissions will be amortized over a 30-year operational lifetime. There are no mitigation measures or data backing up this claim. 84-93

    And, in the last sentence of this section, it is stated that construction "would take approximately five." Approximately five what? Months, Years? Does this account for potential unforeseen delays? 84-94

f. Section 3.5-10, Operational GHGs: The DEIR mentions that the proposed Project would reduce the sources of regional GHG because of increased ridership. What is the nexus between the two arguments? What warrants that ridership will increase to reduce GHGs? Are there any case studies associated with this claim? The DEIR does not adequately account for GHG (and other impacts) associated with rail riders driving automobiles either to a rail station (e.g., "park and ride"), or from a rail station to their endpoint destination. 84-95

g. Table 3.5-10, Operational Parameters: This table data does not have any information backing up the numbers. Provide a justification and basis for the numbers tabulated here. 84-96

    i. *Indirect Power Supply Emissions*: The last paragraph of this section sets forth deferred mitigation based on renewable energy requirements by the State, which is inadequate for the current conditions. What mitigations are proposed for the current electricity usage before the State becomes 100 percent renewable? The impact is significant and must be mitigated. 84-97

h. Section 3.5-2.4, Significance Thresholds: The proposed Project and Project options will be generating GHG emissions directly and indirectly. It also conflicts with the SCAQMD by stating that there are no thresholds for new light rail Projects; however, as part of this Project there is a locomotive freight rail system that is proposed to be moved and this is not mentioned within the GHG analysis. 84-98

i. Section 3.5-2.5, CEQA Streamlining: This section claims that air quality will improve. There is no data or metrics supporting this. 84-98

j. Section 3.5-3.1, California GHG Emissions: There is no study showing the wall built for the proposed Project. Provide information on how this will affect GHGs. 84-99

k. Sections 3.5-1.1 and 3.5-3.2: These discussions are not tailored to be Project related as they relate and rely on regional data. These should be be looked at a local level. 84-100

l. Section 3.5-3.3, Effects of COVID 19-Pandemic: This discussion suggests that there are no determinations on how the pandemic affected ridership. The DEIR takes the approach of a proffering a deferred study in or around 2042. There should be enough data from 2019, years prior, and 2022 to make a determination on ridership rather than deferring analysis. 84-101

m. Table 3.5-1.13, Proposed Project Table: This table is deficient and incomplete. There are no baselines to determine a less than significant impact. 84-102

n. Table 3.5-14 Trench Option Table: This table is deficient and incomplete, there are no baselines to determine the outcome. 84-103

o. Section 3.5-4.1.2, Operational Impact: The DEIR states that "Metro network GHG emissions displacement through mode shift by 3,721.4 MTCO2e, which represents an additional two percent reduction relative to 2019 Metro operations summarized in Table 3.5-12." This statement has no supporting data or studies. This section states that there are less than significant impacts, however there are no mitigation measures or supporting data attendant to this conclusory determination. Lawndale objects that the statements here are not accurate as to all Project options. 84-104

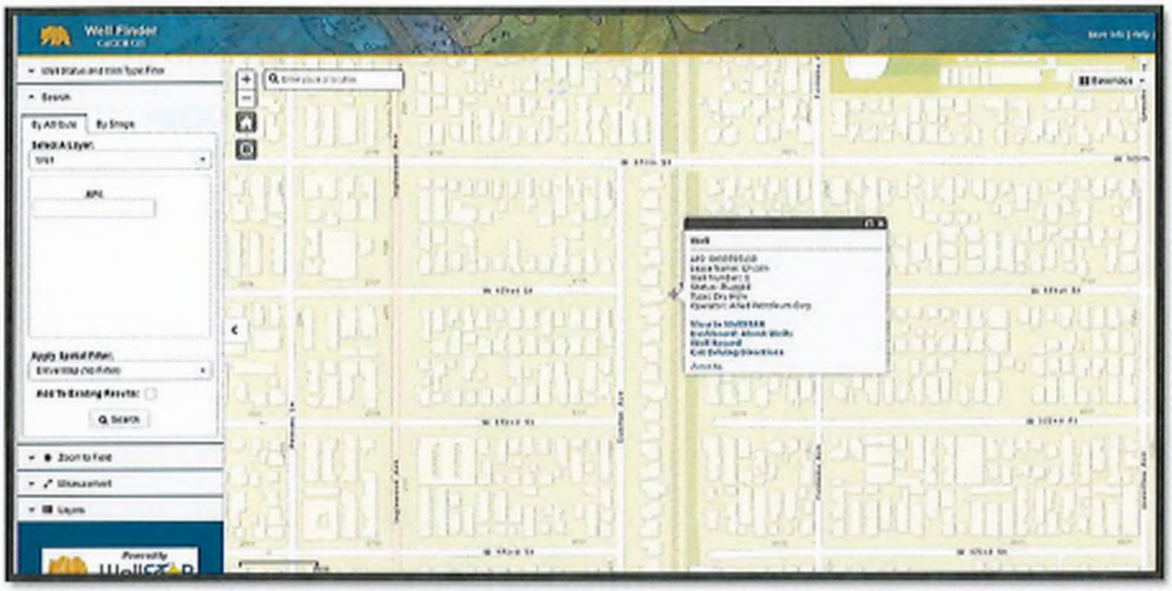
p. Section 3.5-4.2.1, Construction Impacts: The DEIR states that the Project would not conflict with any applicable policy or regulation adopted for the purpose of reducing emissions of GHGs. However, this statement is false. All the determinations were made without studies and without mitigation measures for construction and operational phases. The wait time at the crossings will create significant impacts on GHG emissions by idling traffic not analyzed in the DEIR. 84-105

q. Section 3.5-7, Cumulative Impacts: The information provided in this section of the DEIR is deficient and lacks information. There are portions of the proposed Project that are not evaluated, such as the construction of a sound wall, the construction of the widening of the bridge over Artesia Boulevard, as well as the construction of future development within the region. 84-106

See, Senate Bill 743: "...reduction of vehicle miles traveled that contribute to GHG emission as required by AB 32. SB 743 requires the State Office of Planning and Research (OPR) to develop revisions to the CEQA Guidelines, establishing criteria for determining the significance of transportation impacts of Projects within transit priority areas that promote the reduction of GHG emissions, the development of multimodal transportation networks , and a diversity of land uses." 84-107

8. **Hazardous Materials:** There is an Allied Petroleum Corporate Well within the existing right-of-way. The DEIR also states under the Air Quality section that there will be approximately 10% of contaminated soil. A Phase I study was conducted; however, a Phase II and Phase III remediation plan should have been prepared as part of the study. Thus, there are potential significant impacts that have not been addressed. 84-108

The diagram below provides the location of an existing well within the ROW in the City of Lawndale.



The DEIR does not provide sufficient information on the existing freight train. A study should be conducted to demonstrate how relocating the railway may expose sensitive receptors to hazardous materials and such impacts should be mitigated. 84-109

9. **Land Use:** Relevant regulations for the proposed Project do not support the light rail system. *See,* Lawndale General Plan Land Use Element, Table 3.2-2. Goal 1 of the Lawndale General plan requires the following: "Preserve and enhance the environment, values, aesthetic character, and image of Lawndale as a vital, attractive, desirable, and safe urban community." The proposed Project and its options are not consistent with this Goal 1 as it would decrease the aesthetic character, attractiveness, desirability and would not promote public safety. 84-110

   a. Section PR-AES-1, Local Zoning Ordinances: The Project components will NOT adhere to Lawndale's zoning ordinances. The City identifies the existing rail road right-of-way as Public Facilities/Open Space in the City of Lawndale's General Plan. These types of uses are identified as prioritized limited resources.

   See Lawndale Land Use Element Policy 1a: "Maintain the existing Residential development pattern, except in locations along major transportation corridors and public centers where Commercial or higher density." The proposed Project is to go through the ROW, which is a low density residential area with local and collector streets. The Project does not conform to the City of Lawndale's General Plan Land Use Element. 84-111

The proposed Project and its options are not consistent with the City of Lawndale's Zoning Ordinance Policies mentioned in the DEIR. 84-111

Table 3.2-5 The statements made in the chart below are false and lack data to support the information provided. 84-112

City of Lawndale, General Plan	
Land Use Element Policy/Goals: • Goal 1: Preserve and enhance the environment, values, aesthetic character, and image of Lawndale as a vital, attractive, desirable, and safe urban community; • Policy 1a: Maintain the existing Residential development pattern, except in locations along major transportation corridors and public centers where Commercial or higher-density Residential uses are more appropriate; *Circulation Element Policy/Goals:* • Goal 1: Provide an integrated transportation system for the safe and efficient movement of people and goods with minimal disruption to the environment within and through the City; • Goal 2: Consider all modes of transportation; and • Goal 5: Participate in and assist with coordinating regional efforts which integrate the City's transportation system with the regional transportation system.	**Consistent.** These policies support maintaining: • land use patterns except for major transit corridors • a viable and desirable community • integrating public transportation facilities and encouraging all modes of transportation In addition to the consistency of these policies, there would be no change to existing land use patterns.

The table below indicates "City of Lawndale Necessary Regulations." What does Metro mean by "Necessary"? 84-113

	City of Lawndale Necessary Regulations	
	Zoning Regulation	To encourage the most appropriate use of land
	Zoning Regulation	To conserve and stabilize the value of property
	Zoning Regulation	To provide adequate open spaces for light and air and to prevent and fight fires
	Zoning Regulation	To prevent undue concentration of population
	Zoning Regulation	To lessen congestion on streets
	Zoning Regulation	To facilitate adequate provisions for community utilities and facilities, such as transportation, water, sewerage, schools, parks, and other public requirements
	Zoning Regulation	To protect and promote the health, safety, and general welfare, all in accordance with the comprehensive general plan

The chart below is a continuation of the abovementioned chart. It shows Goals and Objectives for the Hawthorne Boulevard Specific Plan. The DEIR fails to meet and provide the information listed below.

84-114

Hawthorne Boulevard Specific Plan	
Plan's Purpose	Develop appropriate land use categories and development standards
Plan's Purpose	Ensure General Plan consistency
Plan's Purpose	Prepare design guidelines for signs, streetscape, and landscaping
Plan's Purpose	Make recommendations for circulation and other improvements
Plan's Purpose	Establish a conceptual framework for physical improvements to Hawthorne Boulevard
Plan's Purpose	Provide program and policy assistance for rehabilitating and revitalizing existing structures and businesses

Source: City of Lawndale General Plan, 1992a;1992c; 1999

The proposed Project would physically divide the established community of the City of Lawndale. Currently a freight train passes twice per day, which allows both the east and west side of the City to be connected. Adding the light rail train would divide the City as it would have light rail passing by every 15 minutes creating many environmental impacts interrupting the community.

84-115

10. **Noise and Vibration:** The proposed mitigation measures and noise study are inadequate. The noise study did not analyze potential noise impacts on sensitive noise receptors for the proposed residential component of the Project with regards to the existing and proposed commercial expansion. In addition, no mitigation measures were proposed that would protect sensitive noise receptors for the proposed residential component of the Project from excessive noise and vibrations from the proposed and existing commercial component of the Project.

84-116

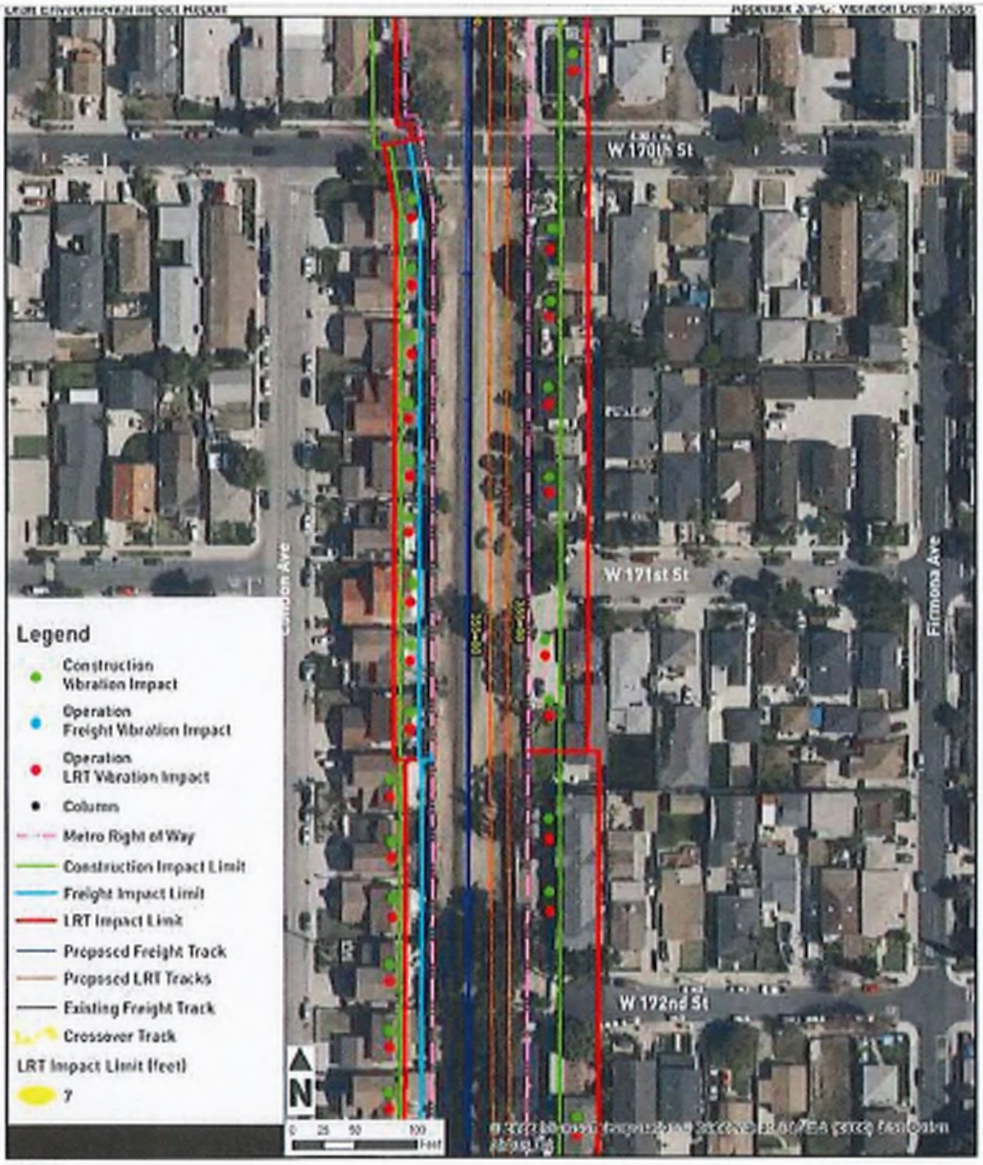
The DEIR states that noise and vibration will only cause annoyance to the residents, which is false, particularly given the massive increase in train frequency pursuant to the Project. The DEIR fails to address the public health issue caused by noise pollution and the public safety issue caused by constant vibration to the homes located near the ROW. According to a the National Geographic Encyclopedia "Sounds that reach 85 decibels or higher can harm a person's ear. Sounds that exceed this threshold include familiar things, such as power lawn mowers (90 decibels), subway trains (90-115 decibels, and loud rock concerts (110-120 decibels)." Noise pollution can cause induced hearing loss (NIHL). "Exposure to loud noise can also cause high blood pressure, heart disease, sleep disturbances, and stress." The DEIR fails to address the long-term impacts of noise and does not propose any mitigation.

84-117

The DEIR does not evaluate the noise from the wheels of the trains. A mitigation for rail and wheel lubrication is required to reduce noise levels. 84-118

Sound walls were discussed however not analyzed under the DEIR. Additionally, the sound walls are not shown in any of the elevations for the proposed Project and the options. 84-119

Studies have shown and proven that constant vibration to older residential structures will compromise the structural integrity of a residence. Metro has not acknowledged how the constant vibration of the light-rail system will be mitigated. The proposed light rail system will be adjacent to hundreds of residential structures that were built from the 40's, 50's and so on. All the existing residential structures will be susceptible to the constant vibrations emanated by the proposed light rail Project. Metro has failed to demonstrate any mitigations. 84-120



Metro

Figure 3.6-C11
Construction & Operational Vibration Impacts
Proposed Project

Page 11 of 75

The above figure from the DEIR show how the residential areas will be impacted by both construction phase and the operational phase of the proposed Project and trench options. This affects all the residential areas along the ROW, with Lawndale having the largest area of potential residential impacts.

84-121

a. Section 3.6-1.2 Federal Regulations mention a potential mitigation by establishing a "quiet zone" with "no horn" restriction for the proposed

84-122

crossinngs. The DEIR states supplemental safety measures for the "quiet zone" areas. The proposed mitigation has not been studied or analyzed with the existing railroad crossing within the City of Lawndale. The DEIR is deficient in identifying the potential impacts of implementing quiet zones within the crossing areas. 84-123

b. Section 3.6-5, Mitigation Measures MM-NOI-1 Noise Control Plan: This mitigation does is deficient there is not specific plan to control noise. This mitigation is deferred. 84-123

c. Mitigation Measure MM-VIB-3: Pre- and Post Construction Surveys: This section states that the construction noise would be less than significant impact. This determination is not accurate as noise mitigation was not implemented correctly. 84-124

d. Page 3.6-49: The impacts of the combined noise of the light rail with the freight impacts are significant. No forms of mitigation or mitigation analysis are presented to reduce such impacts. 84-125

11. **Population and Housing:** The DEIR does not provide adequate analysis of the proposed Project as it pertains to the population and housing impacts that this Project will generate, which is required to be reviewed under CEQA. The analysis states the Project will have no impacts to population or housing in the DEIR. The DEIR fails to address or take into account that the proposed Project would induce substantial population growth either directly or indirectly and failed to identify the new housing laws around public transport. 84-126

a. Property Inventory, Residential Impacts: Studies have shown that residential real estate properties that are adjacent and near rail lines are negatively impacted. The DEIR fails to provide information on the impacts to nearby residential. In addition, Metro must provide a detailed inventory of all properties that are located within a quarter (1/4) of a mile of the proposed light rail Project and demonstrate property that will be impacted. 84-127

b. Homelessness Impacts: Railway setbacks, bridge undercrossing and ROWs are a draw to those experiencing homelessness. While social justice and social impacts issues are not always required in a CEQA analysis, such issues must be analyzed where the social impact issue will result in physical construction or changes to the environment. A draw to homeless populations in the Project area will not only result in direct changes to the environment in the form of transitory encampments but would also necessitate the construction of homeless shelters and/or other physical accommodations to the homeless population. 84-128

12. **Public Safety/Public Services:** Under 49 C.F.R. § 38.85, where light rail vehicles operate in a high-platform, level boarding mode, devices or systems must be provided to prevent, deter, or warn individuals from inadvertently 84-129

stepping off the platform in between cars. The intent of this provision, which has been a part of the DOT ADA regulations since September 6, 1991, is to require light rail systems to obtain suitable devices to assist with and prevent passengers from mistaking the gap between cars for a doorway and potentially falling onto the track bed. The regulation provides that appropriate devices include, but are not limited to, pantograph gates, chains, motion detectors, or other suitable devices. This document fails to identify how this issue will be addressed. Some examples of the existing barriers are shown in the following images:

"9.02 Standards For The Installation Of Barriers. When the separate right-of-way of an LRT system occupies the median of a divided arterial highway with fully controlled grade-separated access or is contiguous to such a highway, Caltrans'

standard barriers of the following types shall be installed under the conditions indicated":

84-130

Distance from Center Line of Track to Edge of Nearest Travel Lane on Roadway	Type of Barrier
36 feet or less	Rigid concrete barrier at least 32 inches in height above the roadway.
Greater than 36 feet up to 45 feet	Rigid concrete barrier as specified above or semi-flexible metal barrier (thrie, W, box or other comparable beam) at least 33 inches in height above the roadway.

Fire protection requirements: "11.01 Fire Protection Requirements. All LRT systems shall establish fire protection requirements to control potential fire hazards. The minimum requirements for underground segments of the LRT system shall be as specified in the Standards for Fixed Guideway Transit Systems published by the National Fire Protection Association (NFPA 130). The minimum requirements for all other segments shall be established by the LRT system based upon a documented engineering analysis of the factors affecting fire hazards and fire risks using NFPA 130 as a guide." The DEIR does not address this aspect of the CPUC requirements.

84-131

The proposed Project would have significant impacts on public safety services, during construction and during operation. Ambulances, fire trucks and police would be heavily delayed by the construction of the Project and its options which would last approximately 5-6 years. "...Closure of major arterial crossings due to trains can cause delays up to five to six minutes on streets such as Inglewood and Manhattan Beach Boulevard.. Delays on these major arterials cause delays at nearby intersections as well when queue length grows. The LOS (levels of service) declines at the intersections feeding adjacent to the major arterials where the queue length have grown due to crossing closures. In addition, the angle at which the railroad line traverses the mostly north-south orthogonal grid roadway system further exacerbates traffic congestion in that area." (Downey, Cheryl, Southbay Cities Railroad Study.)

84-132

- Several discussions in the DEIR present the theory that public safety services (e.g., response times) will not be significantly impacted because train crossings will only be "occasional" and because emergency services can simply "detour" around rail crossings. Both observations are without merit. As addressed further above, the frequency of train interruptions at intersections is much more than "occasional"—especially considering the current baseline condition

84-133

of only two trains per day. Further, while public safety/services vehicles *can* detour around train crossings, so will all other vehicles on the road. Hence, public safety response times will inevitably slow, along with all other traffic. Thus, the mere availability of detours cannot serve as a legitimate basis to disregard the negative impacts on public safety response times.

84-133

The DEIR proposed Project and its options will cause health issues. According to the Beach Cities Health District Multimillion Dollar Blue Zones Project research findings. " …Widening its main street and raise speed limit, which, Buettner (Blue zones CEO) said, 'creates stress, danger, noise pollution and air pollution'."

84-134

The DEIR does not evaluate public benefits to be provided by Metro for each City.

84-135

The DEIR has failed to include the disruption of resident's daily routines. William Green Elementary School and Environmental Charter High School are both one block east from the proposed light rail Project. The excessive number of daily trips from the light rail are not recognized, acknowledged, or mitigated. The number of daily trips proposed by Metro will create a significant impact on the children of residents attending the nearby schools. It is an utmost importance that children have a healthy and quiet environment to facilitate their education and safety. The DEIR has failed to demonstrate infrastructure mitigation measures consistent with the safe routes to school program that aims to increase public safety.

84-135

The picture below shows the proximity of William Green School to the ROW.

13. **Traffic/Transportation Impacts:** The proposed Project will have tremendous traffic environmental impacts on the regional and locally-based on the scale and scope of the Project. The DEIR is incomplete, deficient, inadequate and does not analyze traffic impacts to local roadways or to Caltrans freeways, including the

State Route 405. The DEIR failed to address traffic impacts or provide measurable mitigation measures. There is insufficient information or data to make any determination on potential impacts. 84-136

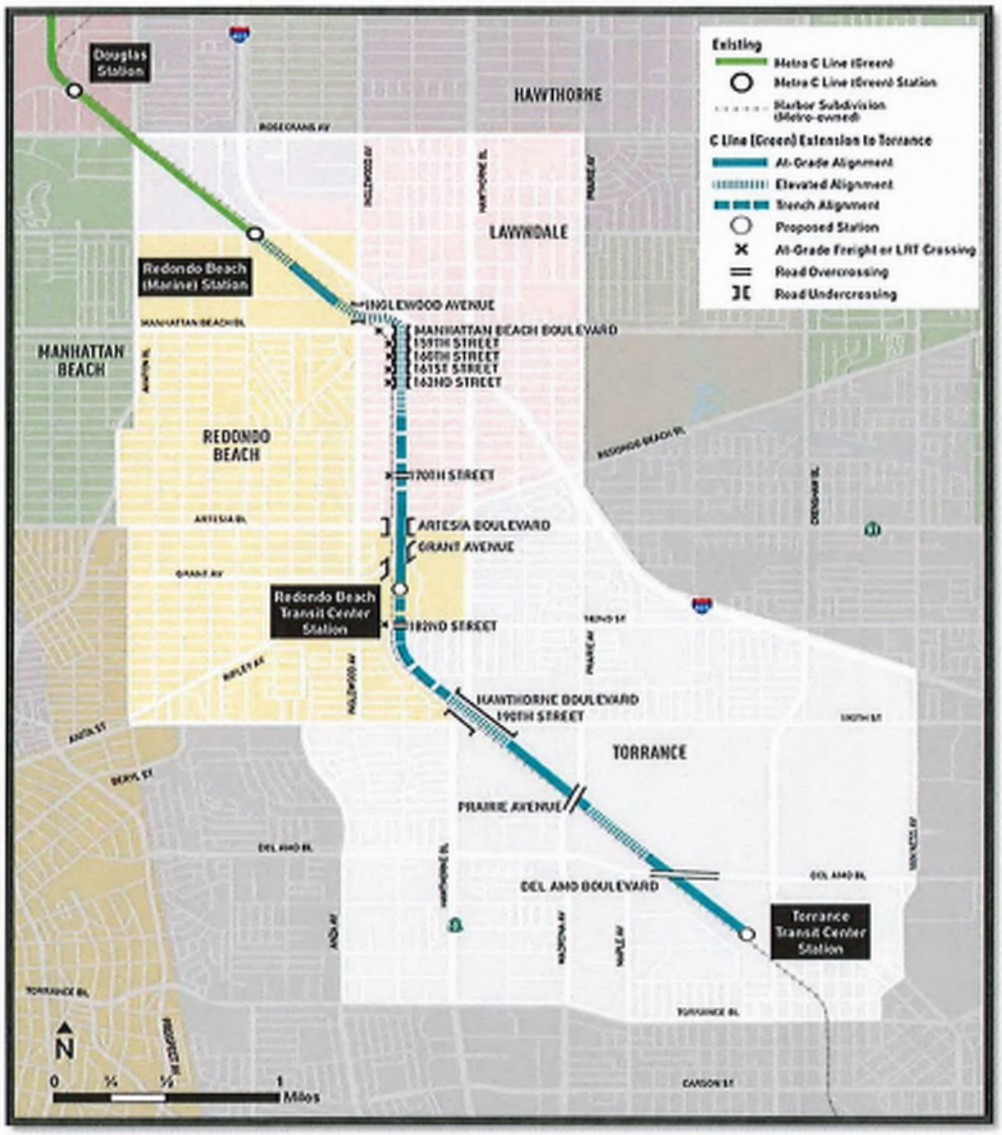
The DEIR states that Metro staff will prepare its recommendation on the preferred alignment in Spring 2023. It is not clear if the "preferred alignment" will be based on the 170th/182nd Grade-Separated Light Rail Transit Alternative, or if there will be potential for a hybrid alternative subject to the stakeholders' comments / public input they will be receiving. 84-137

Based on the review of the proposed Project and the presented options, the 170th/182nd Grade-Separated Light Rail Transit Alternative seems to be most relevant within reasonable Project alternatives to the proposed Project that could meet most of the basic Project objectives and substantially reduce or eliminate significant impacts associated with the Project.

- The Alternative states that "This Alternative would be entirely grade-separated with six over-crossings in the north (between Inglewood Ave and 162nd Street) and two below-grade crossings at 170th and 182nd Streets". However, the Figure ES-15 below shows that within the City of Lawndale just north of Artesia Blvd, there's a segment that is at grade. This needs to be clarified and effects (such as pedestrian bicycle and vehicular safety) on at-grade intersections need to be evaluated. 84-137

- Could impact freeway traffic, and street traffic near offramps, and increase further congesting of traffic. 84-138

Figure ES-15. Overview of 170th/182nd Grade-Separated Light Rail Transit Alternative



Indeed, the DEIR identifies the proposed Project's traffic impacts as significant and unavoidable. However, the Project's traffic analysis and the Project alternative analyses do not provide sufficient information to support the conclusion that traffic impacts cannot be feasibly mitigated under a less-intense Project alternative. Any one significant unavoidable impact requires disapproval of the proposed Project unless feasible mitigation measures or alternatives do not exist and specific benefits outweigh the significant impact. (Pub. Resources Code § 21081.) CEQA requires public agencies to deny approval of a Project with significant adverse effects when feasible alternatives or feasible mitigation measures can substantially lessen such effects. (Pub. Resources Code § 21002;

84-139

Sierra Club v. Gilroy City Council (6th Dist. 1990) 222 Cal.App.3d 30, 41.) The Legislature has stated:

> "[I]t is the policy of the state that public agencies should not approve Projects as proposed if there are feasible alternatives or feasible mitigation measures available which would substantially lessen the significant environmental effects of such Projects. . . ."

84-140

(Pub. Resources Code § 21002.) The CEQA Guidelines require an agency to "Disclose to the public the reasons why a governmental agency approved the Project in the manner the agency chose if significant environmental effects are involved." In order to implement this policy, the CEQA Guidelines specify that:

> "A public agency may approve a Project even though the Project would cause a significant effect on the environment if the agency makes a fully informed and publicly disclosed decision that: (a) There is no feasible way to lessen or avoid the significant effect..."

84-141

(CEQA Guidelines § 15043.) Feasible means "capable of being accomplished in a successful manner within a reasonable period of time, taking into account economic, environmental, social, and technological factors." (Public Resources Code § 21061.1.) Project alternatives remain feasible "even if these alternatives would impede to some degree the attainment of the Project objectives or would be more costly." (CEQA Guidelines § 15126.6(b).)

84-142

CEQA's purpose of avoiding, or substantially reducing, environmental impacts of a Project through the adoption of feasible alternatives is defeated where an EIR fails to ensure that information about potentially feasible alternatives is subject to public and decision maker review. It also fails when an EIR fails to include alternatives that actually reduce a Project's impacts below thresholds of significance. Smaller scale versions of the proposed Project that avoid or reduce significant impacts would meet most of the objectives and should be adequately analyzed in the EIR.

84-143

The objectives stated in the DEIR do not provide a Project of any specific size or scale, and, more importantly, all of the City's objectives could not be met with a scaled-down Project that requires little, if any, diversion from existing land use regulations. Furthermore, because this intense development will have unavoidable significant impacts on this site, off-site locations should be considered. Off-site alternatives should be considered when "significant effects of the Project would be avoided or lessened by putting the Project in another location." (Guidelines § 15126.6(f)(2)(A).)

84-144

The DEIR lacks information on how it will impact the City's General Plan Circulation and Safety Elements. 84-145

The DEIR fails to include a Traffic Operation Study ("TOS") document for any of the alternatives or options. 84-146

The DEIR refers to the City of Lawndale's 1991 General Plan/ Circulation Element and to the adopted 2015 General Plan/ Safety Element. Although Section 3.1 apparently attempts to address Policies 1 and 4, it totally ignores Policies 2 & 3. Specifically, Policy 2. C pertaining Master Transportation Plan, and Policy 3. A. pertaining to Street System, Levels of Service (LOS). (Reference Table 3.1-2) 84-147

Table 3.1-2. City of Lawndale – Relevant Regulations

Code/Goal/Policy	Description
City of Lawndale General Plan Circulation Element	
Policy 1B	Provide necessary facilities to balance all travel modes, users, and for a variety of trip purposes. Transportation modes are prioritized in the following order: vehicles, public transit, pedestrians, bicycles where sufficient ROW exists, and freight
Policy 3A	Require or provide adequate traffic safety measures on all roadways
Policy 4A	Reduce daily and peak hour vehicle trips
Policy 5A	Work with regional transportation agencies to establish criteria to implement transit improvements and develop short- and long-term transit service plans, corridor improvements, transit centers, park and ride lots, and the preservation of rights-of-way for commuter rail stations
Policy 5D	Work with regional transportation agencies to plan and implement a commuter rail system, including routes, location of stops, service schedules, feeder bus routes, parking needs, a transit terminal/park and ride lot, and funding
City of Lawndale General Plan Safety Element	
Policy SAF-4.4	Provision of adequate access for emergency vehicles and evacuation in all new developments

Source: City of Lawndale, 1991a; 2015

The DEIR refers to the VMT method very briefly, and ignores the LOS method which is referred to as a standard in the City's 1991 General Plan, hence lacks sufficient information on how each alternative would impact the City's Circulation Element. 84-148

Most of the DEIR lacks specific information pertaining each alternative, it is thus deemed to be incomplete and impossible to further comment on the Project's traffic/transportation impacts to the City. 84-149

14. **Tribal Cultural Resources:** The DEIR states that one Tribe proposed to be a part of the consultation process. It is the Lead Agency's responsibility to begin consultation with the Tribe within 30 days of receiving notice from the Tribe. The DEIR states emails were sent and no response was received. Best management practices would reach out to the Tribe by phone and formal mailed notice, not just an email contact. 84-150

15. **Utility Service Systems:** The DEIR fails to address how the proposed Project or its options will meet the requirements of the California Public Utilities Commission. The CPUC has safety rules and regulations for light-rail systems 84-151

including breaks, construction. Lighting on light-rail vehicles, speed, fire protection, traction etc. The DEIR is deficient in providing this information. There are sections in the DEIR where it is mentioned that CPUC approval is required for the Project, but descriptions of such approvals or standards therefore are lacking. 84-151

DEIR page 2-48, under the Project Description, ambiguously states that some existing utilities would need to be relocated. There are some major power lines located near the Hawthorne option by the 405. The approach as to how that will be handled is not described in the document; the description for this option and potential utility work is deficient. 84-152

The comments described above certainly do not represent a complete list, but are demonstrative of the fact that there are many issues related to the proposed Project that were not adequately addressed in the DEIR. Lawndale incorporates by reference other public comments submitted upon the DEIR.

CEQA was enacted to promote environmental protection and encourage governmental transparency. (*Citizens of Goleta Valley v. Bd. of Supervisors (1990) 52 Cal. 3d 553, 564.*) CEQA requires full disclosure of a Project's significant environmental effects so that decision makers and the public are informed of these consequences before the Project is approved, to ensure that government officials are held accountable for the consequences. (*Laurel Heights Improvement Ass'n of San Francisco v. Regents of the University of California* (1988) 47 Cal.3rd 376, 392.) In order to satisfy CEQA and protect the quality of life in the surrounding region, Lawndale requests that if the Project is not rejected outright, that the DEIR be revised to address the deficiencies identified in these comments and be recirculated to the public prior to preparation of a final EIR. 84-153

The members of the Lawndale City Council would like to make it clear that the City has significant concerns about the proposed Project, as is presented in the DEIR. Furthermore, we encourage Metro to work with Lawndale, as well as the communities adjacent to the Project site, to arrive at a solution that is a benefit, rather than a burden, to the surrounding area as a whole.

Sincerely,

Robert Pullen-Miles
Mayor

Subject: C LINE (GREEN) EXTENSION THROUGH Parts of TORRANCE. REDONDO BEACH AND LAWNDALE

Dear Metro Board of Director Members:

Last night, February 22, 2023, I attended Metro's prepared Draft Environmental Impact Report (DEIR) at the Redondo Beach Performing Arts Center, headed by Mark Dierking, about the three proposed construction alignments to the Metro C Line Green Extension through parts of Torrance, Redondo Beach and Lawndale. We are original homeowner in Redondo Beach.

First, I will not address the proposal to not build this C LINE GREEN EXTENSION because we know that is really not an option to us. I will address below the other two proposals.

Last night we were told that the PASSENGER TRAIN track proposed on the current Right of Way ("ROW") will be next to the current FREIGHT TRAIN track. This will require the ROW to be widened to the west by 8 to 11 feet in many areas to accommodate two sets of tracks. The ROW would come 15 feet into one homeowner's property when the ROW is area is widened. Clearly his home would need to be torn down to accommodate this project on the current ROW FREIGHT TRAIN track. I suspect one of many homes to be forced to sell to METRO to widened the ROW, although very vague language about imminent domain. 85-1

This is a 4 mile extension to connect to the Green Line. Metro proposes approximately 180 PASSENGER TRAINS per day, only with a 4 to 5 hour reprieve, from midnight to 4 or 5am.

With the exception of ONE PERSON, every person who spoke at last night's METRO meeting, were against the PASSENGER TRAIN addition to the ROW..

It was clear that a majority of the residents in attendance last night, including me, supported the C LINE GREEN EXTENSION run down the center of HAWTHORNE BLVD, ELEVATED. We were told last night that the Hawthorne Blvd traffic lanes would not be affected, sounds like a common sense approach. 85-2

Torrance: there are no homes close by the current FREIGHT TRAIN track, the current track runs behind Gandahl Lumber and the Torrance Refinery. Residential homes are not impacted.

Redondo Beach: the current FREIGHT TRAIN track ROW abutts to the back fence of homes owned by elderly and many original owners, and new residents with children. These residents will be severely impacted with the construction noise, pounding of heavy equipment and pollution for years of construction and then noise and pollution of 200 trains daily. 85-3

Lawndale: these homeowners will be critically impacted negatively, like Redondo residents.

Total of a thousand people impacted if PASSENGER TRAIN Track is built on the ROW.. two sets of trains running daily.

We were told that the METRO BOARD OF DIRECTORS has the ultimate vote where the LINE C EXTENSION will be built. 85-4

My concerns are as follows:

1. There are underground FUEL pipes from the Torrance Refinery on 190th Street, Torrance, that I was told are UNDER THE ROW. These pipes go to LAX Airport for jet fuel.

Question:

Will you confirm exactly where the fuel pipes are buried, how deep? 85-5
What year were these fuel pipes installed?
Who is responsible for inspection of these fuel pipes? Who regulates the refinery?
How often are they inspected and repaired?
What date was the last inspection AND repair?
How will the fuel lines be repaired with two sets of train tracks above them?

Tonight's NBC news stated there were 1,000 train accidents last year in the U.S., a derailment of two trains would be a catastrophe because homes are within feet of the ROW in Redondo Beach and Lawndale. 85-6

Please vote for C LINE EXTENSION GREEN LINE TORRANCE be built on the center of Hawthorne Blvd as it makes sense for passengers to stop in Lawndale to shop along Hawthorne Blvd. 85-7

I understand my letter will be placed in the DEIR. I want to ensure that the Metro Board of Directors is fully aware of the danger to residents, not only from the years of construction, but the environmental concerns to the health of our families. 85-8

If you are not aware, please note that there is currently under construction the new Friendship Campus, located on Inglewood Avenue and Fisk Lanes in Redondo Beach. This Friendship Campus is co-sponsored by Sketcher Shoes. This Campus will educate and train mentally and physically challenged adults, including those with autism, for jobs. I understand they will have culinary education as well. They are 1 block away from the FREIGHT TRAIN ROW. 85-9

VOTE NO TO BUILD C LINE EXTENSION on the current FREIGHT TRAIN ROW. 85-10

VOTE YES to build C LINE EXTENSION on Hawthorne Blvd. 85-11

Thank you.

Vickie Vega

Submission 86

From: Craig St. John [redacted]
Sent: Friday, February 24, 2023 10:41 AM
To: greenlineextension@metro.net
Subject: No on ROW - No on Trench

Being a business owner on the corner of Inglewood Ave and Manhattan Beach Blvd, I'm adamantly opposed to the trench option of the ROW from north of Inglewood Ave to the south of Manhattan Beach Blvd.

In the last two months we have been subjected to road work on the corner of Inglewood and Manhattan Beach. This construction has eliminated lanes in all directions and caused massive traffic delays.
This construction has caused a loss of over $35,000 per day in lost revenue. Our customer base has simply decided to go to other competitors in neighboring cities to pick up their supplies rather than fight the traffic to get in and out of our yard. 86-1

Our own delivery fleet has been delayed in getting out of the yard to scheduled deliveries. On their return back to the yard it as taken up to as much as 30 minutes to drive from Hawthorne Blvd to our
gate just east of Inglewood Ave. (A drive that should only take 2-3 minutes). These delays have cost each of our trucks a loss of one additional delivery per day. With a fleet of 12 trucks, that adds up to a substantial loss of revenue.

The proposed Metro trench project would cause us far more in damages than the current 3 month project that going on now. To trench both, Inglewood and Manhattan Beach Blvd, Metro is going have to close both and/or limit lanes during the entire construction time frame. Metro's is known its snails pace in construction time. I have asked Metro a few times on the estimates construction time in our area but have still not received an answer. My guess is construction time for trenching in just this area is two plus years if not longer. 86-2

When run 45ft tractor trailers in our operation. If we are unable to get in or out of our yard during construction and our customer base decides to shop at other competitors during construction delays we are DOOMED to die a slow death. And being one of Lawndale's largest tax payers, our lost revenue will affect all residence in the city.

Has Metro studied the impacts to traffic during construction in this area? Manhattan Beach Blvd is a main artery for access to and from Lawndale, Redondo Beach, Hermosa and Manhattan Beach to the 405 freeway. 86-3

Has a study been done on the amount of excess carbon footprint from all the cars idling while stuck from the traffic delays and road closures? 86-4

Has Metro done an economic impact study on the local businesses along Inglewood Ave, Manhattan Beach and Hawthorne Blvd? 86-5

Submission 87

From: Janet Lindquist
To: greenlineextension@metro.net
Subject: Green Line Extension
Date: Saturday, January 28, 2023 12:13:28 PM

To Whom it May Concern:

Thank you for the mailer regarding the green line extension, and for requesting feedback from the community. I watched the 3D simulation video and really feel the safest and best option is the one that elevates the trains over Hawthorne Blvd. It puts the stations closer to businesses that can benefit from the people using the Metro. It also limits the dangers to pedestrian traffic. 87-1

Hope this helps in making such an important decision.

Sincerely,

Janet Lindquist

Submission 88

From: Eric Homier
To: GreenlineExtension
Subject: Greenline Extension
Date: Friday, February 3, 2023 4:21:37 PM

To whom it may concern

As a homeowner in Torrance, I am writing to urge you to strongly consider building the Greenline (C Line) extension through the commerce sector of Redondo Beach, not through the residential neighborhoods. Building on Hawthorne Blvd makes sense to the businesses along that route and prevents negatively impacting the families along the existing rail line. These families include my wife's family who live immediately adjacent to the rail line on 182nd St. in Redondo Beach. Bringing the Greenline (C Line) extension through the residential area immediately next to their house would cause a huge noise problem, create increased traffic immediately next to their house along 182nd St., decrease their quality of life, and likely drastically decrease home values.

88-1

88-2

Many Thanks!
-Eric

Dr. Eric Homier

Submission 89

From: Eugene Balfour
To: GreenlineExtension
Subject: Metro C Line Extension: Hawthorne Blvd Option
Date: Monday, January 30, 2023 10:06:50 PM

To whom this may concern, I believe the Hawthorne Blvd option will provide more benefit to the LA region than the other two options. Hawthorne Blvd used to carry Pacific Electric streetcar lines in it's huge median, and as such, it is the center of commerical activity in the neighborhoods it passes through. The South Bay Galleria, as well as commerical establishments that people visit while running errands, will be huge trip generators. 89-1

Having a majority elevated alignment allows for speeds of 55 mph+, and less service disruptions causes by intersection mishaps. So I agree that the Hawthorne alignement is the best possible choice. 89-2

Thank you,
Eugene Balfour

Submission 90

From: Thelma Mericle
To: GreenlineExtension
Subject: METRO EXTENSION
Date: Tuesday, January 31, 2023 10:11:10 AM

I have seen the video regarding the transit plans. The buildings are shown in white, I would like to see the actual buildings, not in white. They should NOT be close to residential housing. Trees should NOT be removed. New plantings cannot take the place of established trees. Also, how many people would use the metro?? How many people currently use the metro?? No one I know uses the metro. They use their cars to get around. What is the TOTAL estimated cost of these projects??

90-1

Submission 91

From: G G
To: GreenlineExtension
Subject: Metro train line through South Bay
Date: Thursday, February 2, 2023 8:51:26 AM

Greetings,

I am writing to share plea to build train on Hawthorne Blvd & not through residential El Nido & adjacent neighborhoods. I have lived in Redondo Beach & Torrance near the South Bay Galleria for most of my 48 years of age. Traffic congestion & noise has been a long term challenge for residents & businesses in this area. Keeping transportation growth in business areas is proven beneficial for communities across our country. Please consider avoiding development through residential area. I want my friends & family to stay in their homes & not be displaced by what will be major negative socioeconomic impact.

91-1

Thank you,

Gretchen Gerull

[redacted]

Submission 92

From: Grace Peng
To: GreenlineExtension
Subject: Prefer alternative Metro ROW Alignment, Elevated/Street Level
Date: Thursday, February 2, 2023 2:01:36 PM

I live in the Artesia Corridor, about 1 mi west of the ROW.
I want transit that is fast and cost-effective.

After attending your open house, I realized that the cost difference and construction delays for trenching or building along Hawthorne is just not feasible. Moving petroleum pipelines to build a trench would be a nightmare. Install sound walls and quiet zone street crossings. 92-1

For the same cost as trenching or tracks on Hawthorne, we can build elevated/street grade light-rail along the Metro ROW (which is closer to my home, yippee) AND have a bus lane and complete streets on Hawthorne. 92-2

My reservations about the existing ROW is that it doesn't hit the businesses along Hawthorne that I frequent. But, with a bus priority lane and complete streets, I would be zipping along on my ebike or on a bus on Hawthorne. I absolutely hate driving on Hawthorne and would take transit or bike on it if it was safe and convenient. 92-3

In fact, I urge you to do the bus priority lane and complete streets on Hawthorne ASAP. 92-4

If we use the existing ROW, we owe it to the neighborhoods affected to build sound walls and quiet zone street controls. 92-5

thank-you for letting me comment,
Grace Peng, PhD
[redacted]

Submission 93

From: Mark Johnston
To: greenlineextension@metro.net
Subject: Question and Comments
Date: Thursday, January 26, 2023 8:14:03 PM

Question :
How far north are freight trains running along this ROW? I thought when Metro acquired the ROW, freight train service ended north of the oil refinery areas of Torrance. 93-1

Comments:
We have already wasted the Harbor ROW along Slauson converting it to a very expensive bike path. That ROW should have been a connection to Union Station.
PLEASE do not waste the TAX PAYER OWNED ROW on the Torrance extension by moving it to an ugly elevated route on Hawthorne Blvd. 93-2
BUDGETS ARE TIGHT, use the PAID FOR ROW. Selected trench and bridges are fine, reuse existing bridges. Sound proof where necessary. Quiet zones as well. 93-3

Also, this should be a "K" Line extension, not a "C" Line extension as the South Bay needs direct access to the LAX People Move Transfer station.
The "C" after Aviation, should simply curve north up to the LAX People Mover Station. This means the airport would be served by 3 rail lines from North, South and East. Proper Airport Service. 93-4
The "K" line will one day run from Hollywood to Torrance and hopefully on to Wilmington and Long Beach.

So in conclusion, build the shortest, most economical selection on THE METRO OWNED ROW and simply get moving on this. All Metro projects take way to long to build. 93-5

Thank you
Mark R. Johnston

Submission 94

OFFICE OF THE SHERIFF

COUNTY OF LOS ANGELES

HALL OF JUSTICE

ROBERT G. LUNA, SHERIFF

March 23, 2023

Ms. Georgia Sheridan
Project Manager
Los Angeles County Metropolitan Transportation Authority
One Gateway Plaza, MS 99-113-1
Los Angeles, California 90012

Dear Ms. Sheridan:

METRO C LINE (GREEN) EXTENSION TO TORRANCE PROJECT
NOTICES OF COMPLETION AND AVAILABILITY
OF A DRAFT ENVIRONMENTAL IMPACT REPORT
REVIEW COMMENTS

Thank you for inviting the Los Angeles County Sheriff's Department (Department) to review and comment on the January 2023 Notice of Completion (NOC) and Availability (NOA) of a Draft Environmental Impact Report (EIR) for Metro C Line (Green) Extension to Torrance Project (Project). The Los Angeles County Metropolitan Transportation Authority (Metro) proposes to develop a combined elevated and at-grade light rail transit lines (LRT) that extend the C Line (Green) by approximately 4.5 miles between Redondo Beach (Marine) Station to the Torrance Transit Center (TC). The Proposed project will also develop two new stations, Redondo Beach TC Station, and Torrance TC Station, which are located adjacent to the existing Cities' bus transit centers and follows the existing Metro Right of Way (ROW). The Proposed Project will include the development of six traction power substations to support the LRT operations.

The Project area is within the boundaries of four cities which are Hawthorne, Lawndale, Redondo Beach, and Torrance. The City of Lawndale is under the Department's South Los Angeles Station (Station) and policing services of the Metro public transit system are under the Department's Transit Services Bureau (TSB). Currently, the Redondo Beach Police Department (RBPD) provides police protection for the proposed Redondo Beach TC and

South Bay Galleria Station and the surrounding neighborhoods whereas the Torrance Police Department (TPD) provides police protection for the proposed Torrance TC, the end of Green Line extension, and the surrounding communities. In addition, Section 3.15, page 3.15-17, incorrectly indicated the City of Torrance, and City of Redondo Beach TCs plan to include LASD substations. The City of Torrance TC is currently under construction to include a police substation slated for TPD, whereas the Redondo Beach TC was recently completed without a dedicated police substation but rather an office space used RBPD on as-needed basis. Also, as noted in the Ridership Summary Report, pages 11 to 12, the proposed Project potentially will attract 4,000 to 5,700 new daily riders and between 10,300 to 16,200 new daily project trips, which would increase the daytime population in those communities along the project area that is under our Department's policing services. Therefore, to meet the anticipated increase in policing services, additional law enforcement personnel will be required. Assigning additional law enforcement personnel to meet acceptable service ratios will be required and will be negotiated through an amendment and/or contract extension of an existing service agreement between Metro and the Department. 94-1 94-2

In Section 3.15, page 3.15-17, the second line of paragraph one indicates, the Department provides professional public safety services to the Cities of Lawndale and Inglewood. However, does not provide public safety services to the City of Inglewood only the City of Lawndale. Additionally, on the last paragraph, it indicates that Department did not respond to public outreach requests for information regarding average emergency response times for the Station. However, our Department did not receive the request for information on this matter during the January 2021 Notice of Preparation. Per Fiscal Year 2023-2024, the Station's average or anticipated response times for emergent, priority, and routine calls for service received from the proposed Project are 4.5, 10, and 55 minutes, respectively. Please note these are approximate time ranges only and could be affected by traffic conditions and these response times are variable because the responding unit may be elsewhere within the Station's service area and not necessarily dispatched from the Station itself. 94-3 94-4

The Department recommends Metro to prepare a construction traffic management plan to communicate with cities and emergency response providers to identify alternative routes during temporary road closures. The alternative routes shall be coordinated with our Department for safe passage of emergency services to minimize the potential delay in response times, which may occur. 94-5

The Department reserves the right to amend or supplement our assessment upon subsequent reviews of the proposed Project once additional information becomes available.

For future reference, the Department provides the following updated address and contact information for all requests for reviews comments, law documents, and other related correspondence:

Tracey Jue, Director
Facilities Planning Bureau
Los Angeles County Sheriff's Department
211 West Temple Street
Los Angeles, California 90012

Attention: Planning Section

Should you have any questions regarding this matter, please contact me, at (323) 526-5657, or your staff may contact Mr. Immanuel Chiang, of my staff, at (323) 526-5637.

Sincerely,

ALEX VILLANUEVA, SHERIFF

If any problem arises and these comments are not entered into the record, contact [redacted]

METRO GREEN LINE DRAFT EIR COMMENTS

1. The Metro Draft EIR is defective and fails to consider reasonably expected health and property value damages based on substantial evidence discussed below. 95-1

2. Project alternatives that use the existing freight right-of-way violate RBMC 10-2.2502 (Planning Design Review). 95-2

3. Project alternatives that use the existing freight right-of-way violate RBMC 4-24.301 (Noise). 95-3

4. Project alternatives that use the existing freight right-of-way create a variety of health damages. 95-4

5. Project alternatives that use the existing freight right-of-way damage child development. 95-5

1. The Metro Draft EIR is defective and fails to consider reasonably expected health and property value damages based on substantial evidence discussed below 95-6

The following NIH articles provide ***substantial evidence*** that Metro's planned Green Line extension through residential property by adding additional rail lines to the existing freight right of way will have ***significant and non-mitigable negative impacts on health and property values***. 95-7

Further, the rail noise was shown to have larger impacts than road traffic, thereby demonstrating that alternatives, even if they lead to increased road traffic, as less damaging than Metro CEQA Alternatives that require use of the right-of-way Based on the supplied ***substantial evidence***, it is a ***fair argument*** that these findings demonstrate Metro's actions will lead to resident stress, which based on Beach Cities Health District's millions of dollars in Blue Zones expenditures will lead to disease, early death, and lifetimes of developmental damages to children. This is a damage that Metro has refused to include in the DEIR and is also a ***significant and non-mitigable negative health impact.*** 95-8

If Metro moves forward, reasonable inference from the supplied evidence demonstrates that Redondo Beach and Lawndale residents will be irreparably damaged.

It is unknown why BCHD, a public agency co-owned by Redondo Beach has refused to leverage its million$ of dollars of Blue Zones expenditures to develop DEIR comments to protect the health of District residents. The likely causes are BCHD's receipt of $2M in grants from Metro or the likely damages of BCHD's plan to build an 800,000 sqft, up to 133-feet concrete compound amid residential homes. 95-9

Notwithstanding BCHD's lack of resident protections, Blue Zones (bluezones.com) citations have been provided and are ***substantial evidence*** of significant health damages from the impacts extracted from peer-review medical studies as published by the US NIH, also providing ***substantial evidence***. 95-10

Reasonable inferences are drawn from ***the substantial evidence*** to build fair arguments ***of the significant and non-mitigable negative impacts of the Preferred Alternative and any Alternatives using the existing freight right-of-way***. 95-11

2. GREEN LINE ALTERNATIVE ALONG THE RIGHT-OF-WAY VIOLATES RBMC 10-2.2502

There is ***substantial evidence*** that the proposed Green Line preferred option in the existing freight right of-way, coupled with planned 24/7/365 intermittent operation violates Redondo Beach Municipal Code (RBMC) 10-2.2502 Planning Commission Design Review (PCDR). The RBMC PCDR states that its purposes include: "protect property values" and "ensure compatibility" with the existing neighborhoods. Clearly, 24/7/365 rail operations are not consistent with the existing residential neighborhoods. Peer-reviewed research has found that rail damages surrounding property values, thereby failing compliance with RBMC. 95-12

Peer-reviewed research demonstrates that train noise can also damage property values. This should come as no surprise and can also be seen from property value analysis. 95-13

Vehicular Noise Pollution: Its Environmental Implications and Strategic Control
DOI: 10.5772/intechopen.85707
"All types of noise altogether affect the same irrespective of the sources and cause headache to the high blood pressure and other heart diseases. Some noise types like aircraft and train noise also have negative effects on property prices."

3. GREEN LINE ALTERNATIVE ALONG THE FREIGHT RIGHT-OF-WAY VIOLATES RBMC 4-24.301

There is **substantial evidence** that the proposed Green Line preferred option in the existing freight right of-way, coupled with planned 24/7/365 operation violates Redondo Beach Municipal Code for noise generation. The noise receiving zoning from the proposed alternative in Redondo Beach would be predominantly residential, with a maximum, not to exceed nighttime noise limit of 65dBA and daytime limit of 70dBA (presumed ambient level plus 20 dBA. 95-14

RBMC 4-24.301 Maximum permissible sound levels by land use categories
"No person shall operate, or cause to be operated, any source of sound at any location within the City or allow the creation of any noise on property owned, leased, occupied, or otherwise 95-15

controlled by such person which causes the noise level when measured on any other property to exceed: …the noise standard of the receiving land use district plus twenty (20) dB for any period of time. 95-15

4. GREEN LINE ALTERNATIVE ALONG THE FREIGHT RIGHT-OF-WAY DAMAGES HEALTH

There is ***substantial evidence*** that the proposed Green Line preferred option in the existing freight right of-way, coupled with planned 24/7/365 intermittent operation will increase the risk of death and illness of nearby residents from chronic stress according to the Beach Cities Health District's multimillion dollar Blue Zones project research, findings, and other peer-reviewed studies and publications. 95-16

Lessons from the Blue Zones

https://www.ncbi.nlm.nih.gov/books/NBK298903/

"… widen its main street and raise the speed limit, which, Buettner [Blue Zones CEO] said, creates stress, danger, noise pollution, and air pollution." Obviously 24/7/365 train activity exceeds a widened main street's negative health impacts as stated by Blue Zones.

How Stress Makes Us Sick

https://www.bluezones.com/2019/05/how-stress-makes-us-sick-and-affects-immunity-inflammation digestion/

"…this stress can be chronic, due to a specific situation … exposure to stress in early life can alter the normal development … resulting in increased sensitivity to stress and lifelong health risks in offspring."

Stress is Often Referred to as the "Silent Killer"

https://www.bluezones.com/2012/03/maximize-health-and-longevity-using-these-stress-management strategies/ 95-17

"… causes many harmful, often overlooked effects … pain and strain … sleep habits … physical suffering … headache, upset stomach, or back pain … stress can reduce the ability of your immune system"

Even the Metro Threat to Build in the Freight R-O-W Shortens Lives of Residents

https://www.bluezones.com/2020/10/fighting-chronic-stress-from-current-events-you-are-not-alone/ "Although people often underestimate the influence of the mind on the body, a growing catalog of research shows that high levels of stress over an extended time can drastically alter physical function and affect nearly every organ system."

Metro Will Destroy the Blue Zones Solution of Home Sanctuary for Generations

https://www.bluezones.com/2012/05/create-a-sanctuary-in-your-home/.

Blue Zones recommends creating a quiet calm home sanctuary which cannot be accomplished with 24/7/365 noise every 7-12 minutes that creates stress and violates RBMC. 95-18

How living near a railroad can harm your health: From chronic stress to an increased risk of cancer, scientists say that constant exposure to trains takes a toll on the human body
https://www.nationalgeographic.com/science/article/health-risks-living-near-railroads-east-palestine trains
National Geographic discusses how rail creates noise and increased risks that create chronic stress and health damages. 95-19

Effects of Exposure to Road, Railway, Airport and Recreational Noise on Blood Pressure and Hypertension
https://www.ncbi.nlm.nih.gov/pmc/articles/PMC8431620/
Transportation noise can induce annoyance, sleep disturbance with awakening, cognitive impairment, physiological stress reactions, endocrine imbalance and cardiovascular disorders 95-20

The Effect of Aircraft, Road, and Railway Traffic Noise on Stroke – Results of a Case–Control Study Based on Secondary Data
https://www.ncbi.nlm.nih.gov/pmc/articles/PMC6122263/
For railway noise, there was a positive linear exposure–risk relation: Per 10 dB the stroke risk increased by 1.8% for railway traffic noise. The maximum risk increase of 18% for railway traffic noise was found in the exposure category ≥65 to <70 dB. NOTE 65-70 dB is modest for rail, along with accompanying vibration. 95-21

Transportation Noise and Risk
https://ehp.niehs.nih.gov/doi/10.1289/EHP11248
Transportation noise exposure is believed to be detrimental to human health through stress reactions with activation of the hypothalamic–pituitary–adrenal axis, followed by increased levels of stress hormones. In addition, nighttime noise exposure can impact sleep quality and duration, which are crucial for physiological and mental restoration. 95-22

A study of self-reported health problems of the people living near railway:
https://www.ncbi.nlm.nih.gov/pmc/articles/PMC7114011/
Noise ... can cause both auditory and nonauditory health effects. Nonauditory effects of noise can cause tinnitus, headache, auricular plenitude, dizziness, and gastric, visual, sleep, and mood disorders, endocrine imbalance, and cardiovascular disorders. 95-23

5.GREEN LINE ALTERNATIVE ALONG THE FREIGHT RIGHT-OF-WAY DAMAGES CHILD DEVELOPMENT

There is ***substantial evidence*** that the proposed Green Line preferred option in the existing freight right of-way, coupled with planned 24/7/365 intermittent operation will damage the development of residents' children from chronic stress according to the Beach Cities Health District's multimillion dollar Blue Zones projects research and findings. 95-24

How Stress Makes Us Sick

https://www.bluezones.com/2019/05/how-stress-makes-us-sick-and-affects-immunity-inflammation digestion/

"…this stress can be chronic, due to a specific situation … exposure to stress in early life can alter the normal development … resulting in increased sensitivity to stress and lifelong health risks…"

CONCLUSION

These comments provide ***substantial evidence*** that can be used to draw ***reasonable assumptions*** and inferences that produce ***fair arguments*** that the Metro DEIR is defective. To comply with CEQA, the EIR must be reanalyzed using this substantial evidence and the significant and un-mitigable negative impacts and non-compliance to RBMC must be considered. 95-25

Since Metro cannot mitigate the impact of several multigeneration damages nor can it comply with RBMC, the routes that involve expansion of the current right-of-way are permanently flawed and must be abandoned. 95-26

From: Ashlyn Neff
To: GreenlineExtension
Subject: Re: Green Line Extension to Torrance Concerns
Date: Wednesday, February 1, 2023 3:54:22 PM

Hi,

I have reviewed the proposed routes and design options for the Metro Green Line extension from the Marine station in Redondo Beach to Torrance. As a Redondo Beach resident I have serious concerns about both the Metro Row Trench & Metro Elevated/ Street Level route that would run just East of Inglewood Blvd and would say that the Elevated Hawthorne Blvd route is the only option that's feasible since it does not go right through housing and near kids' schools. 97-1

My concerns for the route just east of Inglewood are: 97-2
- The routes' proximity to both Washington Elementary School and Adams Middle School. There will be noise, pollution and safety impacts to those kids.
- The more northern part of that route goes right through high density residential housing. Again, there will be noise, pollution and safety impacts to those neighborhoods.

While it may be more costly to build the Elevated Hawthorne Blvd route it's definitely less impactful to traffic and families in the area. Additionally, the South Bay Galleria could really use that traffic boost by having a stop there. 97-3

Thanks for your consideration,
Ashlyn Neff

Subject: Metro DEIR Comments - Aesthetics
Attachments: DEIR Stakeholder Response - Aesthetics copy.pdf

I adopt the attached comments as my own put them into the record of the DEIR.

Metro's planned construction will in fact forever create an industrial setting along the existing right of way. The change of view, the expanded multi-track, the deep trench, and 24/7/365 trains all lead to an industrial look and feel, inconsistent with the existing neighborhood, the design standards, and the overall aesthetics. As such, the attached issues must be incorporated into the defective DEIR. 98-1

Subject: DEIR Stakeholder Response - Aesthetics
Date: Mon, Mar 27, 2023 5:20 pm

Dear Metro and Metro Board of Directors,

I am a Redondo Beach homeowner sharing my back property line with the ROW adjacent to El Nido Park on Firmona Ave. just south of 182nd St. This is my final response the the C-Line (Green) Draft Environmental Impact Report.

I have been saying all along that building a project of this caliber, an ill-designed commuter railway in a bad location, where we have a little bit of organic landscape to enjoy and the reason we bought our homes here would forever change the landscape of my home and my community. This organic, natural environment plays an important role in defining the visual setting, even for an urban community. In cases like ours, regionally recognized natural features contribute to an urban community's aesthetic character and visual quality. In SBCCOG-2002 South Bay Rail Studies, BNSF and South Bay Cities Council of Governments concluded a linear parkway could easily be introduced in the ROW. This was after rerouting the more frequent freight to the Alameda corridor and the ROW was falling under the category of "lightly used or abandoned corridors", therefore the public was anticipating this change and that was the basis for buying our home here rather than further west. 98-2

The DEIR only acknowledges aesthetics above the ground, but not the ground itself. On the ROW in the vicinity of 182nd St. it is necessary to trench to allow ambulance and emergency response free uninhibited access which could be a matter of life or death. I have been told numerous times that behind my house the new light rails would be hidden behind the freight berm or trenched, therefor out of my view. I do leave my house frequently and 182nd St is my daily path to food and other necessities. It is the route I take to visit family. It is where aviary wildlife live their lives and we enjoy watching them.

Currently I enjoy the aesthetics of the natural ground along this daily path on 182nd St. I enjoy the view of the park unhindered by the blight of the mechanical chasm a trench would bring. No matter how hard I could try to keep my focus up high above the ground, the chasm would always be in my view as I go about my daily life. The oversimplified concession of "you won't see it, it'll be hidden behind the berm" or "down in the trench so you won't see it" is dismissive and disingenuous. Metro can do better. Of course I will see it. 98-3

The only improvement to this narrow swath of land would be to add native grass. It would be aesthetically more pleasing and keep the area much cleaner. Currently the ROW is unkempt and adding more rail will not improve it all, it would just make matters much worse.

The DEIR is totally dismissive of the impacts of construction aesthetics, either writing it off as temporary, when 5 - 7 years of that kind of industrial intrusion would be something intolerable for a long enough time to have concerning mental health impacts. I also see claims of a low profile footprints deemed as insignificant or low impact. This is not possible, there would be big brown clouds of dirt, a constant barrage of industrial equipment and vehicles, plus the workers who on top of the berm would have full view into my home. 98-4

Submission 98

Please understand there is no way to "mitigate" any of this. We should not have to work so hard at begging to be left alone. I am at an age when I need to be living in comfort for the rest of my life. This process has not been that and it has been going on for years. What an intrusion this has been. 98-5

Please recommend Hawthorne Blvd. elevated or any other option besides the ROW to preserve the quality of life of the many actual people like myself. 98-6

Thank you to the Board of Directors for your consideration.

Niki Negrete-Mitchell

To Metro and Metro Board Members,

We live in the corner of 182nd st and Firmona Ave where is located next to train truck.

We're multi cultural (diverse) family and we do ceremonies throughout year such as Dewali, Tihar, dog Tihar, etc. We often do these ceremonies in our backyard with lots of kids and relatives. We love our peaceful backyard and we have one of the Hindu god there next to flowerbeds. We have different types of birds like blue jays & parakeets come to our houses. Trains now just come twice a day and it doesn't bother much even though it vibrates and shakes our house a lot when it comes as goes. However, I don't think we can bear the noises and vibration every 5-10 mins from trains and you plan to move this freight train truck closer to our house if Metro has decided to take Greenline through ROW. Kids cannot play outside and we can't even have a cup of tea or coffee in peace. How can my kids sleep through night without the noises and vibration? What if the pipeline explode? We really hope you respect our cultural belief, religion, & to many families impacted by your decisions. Therefore, please choose to put greenline to Hawthorne elevated option where all the businesses. 99-1

Thank you,

Akemi Pradhan

Subject: Stop the ROW Train
Date: Saturday, February 4, 2023 8:32:03 AM

Please strongly consider running the light rail train down Hawthorne Bl. Being a resident adjacent to the current freight track in Lawndale, it is already disturbing enough as it is. Having a light rail train run by the house frequently will be a disaster. Whether it is at grade or below grade, it will still be a major inconvenience and will make it extremely difficult to sell my home in the future.

Good afternoon Metro/Board of Directors,

I'm writing to you today to request that the extension project continue on Hawthorne Blvd. The neighborhood surrounding the ROW would be negatively affected if Metro decides to go that route because it would divide the community. The community from the side of Inglewood Blvd/Condon Ave includes members living in Lawndale as well as Redondo Beach. Members from that side would be deterred from using the path due to continuous Metro line crossings, noise, and loss of the scenic vista. There is also higher risk of injury due to the continuous Metro crossings that would cause families to avoid the area.
I've included a couple of pictures of the current vista where the community walks, sits, and plays along the pasture. If you have the chance to enjoy the view you'll see hawks, mourning doves, bushtits, sparrows, and squirrels to name a few of the animals that call the ROW their home. Please consider this when making your decision.

Submission 105

From: Eugene Balfour
To: GreenlineExtension
Subject: Metro C Line Extension: Hawthorne Blvd Option
Date: Monday, January 30, 2023 10:06:50 PM

To whom this may concern, I believe the Hawthorne Blvd option will provide more benefit to the LA region than the other two options. Hawthorne Blvd used to carry Pacific Electric streetcar lines in it's huge median, and as such, it is the center of commerical activity in the neighborhoods it passes through. The South Bay Galleria, as well as commerical establishments that people visit while running errands, will be huge trip generators. 105-1

Having a majority elevated alignment allows for speeds of 55 mph+, and less service disruptions causes by intersection mishaps. So I agree that the Hawthorne alignement is the best possible choice. 105-2

Thank you,
Eugene Balfour

Good morning. Thank you for allowing us to attend your public hearings and also submit comments.

I have a specific question: Is this metro project something that has already been officially approved by some entity, or will South Bay residents have a chance to vote on this? If you could please respond back to confirm, it would be appreciated. 106-2

Given this, I do want to submit the following as an official comment to be included in your review:

"I and the neighbors on my block in Redondo Beach are vehemently opposed to this entire project. We do not want any of your metro options, we do not want a metro. The results of your EIR do not totally reflect reality. Any metro will cause noise and aesthetic disturbances, and will increase crime in our neighborhood by making it easier for people to get into and flee from the neighborhood after committing crime. Finally, but maybe more importantly, these millions of dollars can be much better spent by improving existing issues, repairs and the homeless problem in our neighborhood. Let's focus on making improvements that are actual improvements to our community, and not focus on a bureaucratic, political project that very few residents actually want." 106-3

Thank you. I look forward to your response to my question above. Have a nice weekend.

To: GreenlineExtension
Subject: C line Alternative Comments

Hello,

Below are my thoughts on the alternatives put forth for the C line extension to Torrance.

I believe both options for using the Metro right-of-way are the best options. They connect to the Redondo Beach Transit center, which will allow easy access to the surrounding areas via connecting bus. The existing right-of-way is also away from the busiest streets in the area, keeping transit riders safer and providing a better transit experience. The South Bay Galleria is easily within walking distance from the station in these alternatives, so it would serve riders well. As for whether the elevated or trench option is best, I see both as viable alternatives since they allow existing roads to remain open. The trench may be better to keep noise down for the houses nearby. 108-1

The Hawthorne Blvd option puts the station very close to an extremely busy car intersection. This makes for a louder and less pleasant rider experience, not to mention more dangerous. This alternative also contains much more elevated track, which would increase cost for no real rider benefit. For these reasons I would choose one of the Metro ROW options. 108-2

I believe the possibility of adding a walking/biking path to the Metro ROW is a significant beneficial addition to this project. Green community spaces are very important for residents to have for recreation, pedestrian safety, and active transportation. Since many people already use this space to walk, that pedestrian space should be protected and enhanced for the community. 108-3

Thank you for your consideration of my comments.

Please extend the Green Line from Norwalk to Expo/Crenshaw.

Also, when is the Regional Connector going to be open? In 2052? (It was 29 years that the previous MTA gutted the last Red Car, only to reopen it as the Blue Line in 1990.)

I would like to see the Blue Line run from Downtown Long Beach to Citrus College, and the Expo Line run from Atlantic Pomona to Downtown Santa Monica. Please let it happen. I wanna take the Blue Line from Long Beach to Montclair someday.

Hi,

I have two inquiries about my voice on the C and K Line.

1. I actually like the third option that was shown in which one track goes straight to Norwalk from Redondo Beach, while the other goes towards LAX. 110-1

2. In terms of extending the C Line to Torrance, I prefer the ROW option. In that way, it is near the Redondo Beach Transit Center and passengers can exit the potential stop and catch any bus at the RBTC. Having it built along Hawthorne builds it away from the transit center. 110-2

Subject: GUESS WHAT - All of Redondo Beach on the WEST side of the ROW were OVERLOOKED!

The DEIR has a table to show their ambient noise measurements. Listed Below GUESS WHAT - All of Redondo Beach on the WEST side of the ROW were OVERLOOKED! Metro did not take sound measurements for ANY of our streets from Ruxton, to Firmona Avenue, to Fisk Lane and Fisk Court and along Fisk Lane to Spreckles Court.
WE ARE THE CLOSEST IN PROXIMITY to the tracks of anywhere!
METRO DID NOT INCLUDE US IN THE STUDY! We are STILL "the most overlooked and highly impacted" along the ROW

Metro is unbelievable. YOU SHOULD BE ASHAMED OF YOURSELVES. YOU ARE SO TRANSPARENT. ***The homes that are the closest are being exempted from the report because they are off the scale. The noise of an approaching train can be heard from blocks away, Not to mention the HORN BLASTS as they cross 182nd.*** The vibration causes cracks in our ceilings and foundations. And that is from two trains passing daily.

Metro hasn't even studied or engineered the ROW from 182nd to 190th street. The elevated area of the existing track near Fisk Court is to be moved ***8 to 10 feet closer to our property line*** and will have *no supporting wall to stabilize the rebuilt track 25 feet above us.* That has now been confirmed by your **Technical Team Leader: *Tyler Bonstead*** months ago ***and again***, most recently by your Design Engineers in the lobby at a meeting held on Wednesday evening at the Redondo Performing Arts Center on **Feb 22, 2023**.

Up to 32 of those Black Tankers carrying 31,000 gallons of toxic, volatile fuel passing only feet from our property line could derail and plummet down on top of our homes. OUR SAFETY SHOULD BE A MAJOR CONCERN.

Subject: Public Comment Green Line Damages to Residents: Reinforcing Health Damages and Blue Zones Chronic Stress "Silent Killer"

Metro DEIR Comment on Greenline Surface Right-of-Way Preferred Project
Metro Inspector General Comment on BCHD's Bike Path Reimbursement

BCHD has failed to weigh in to support the District residents who will be harmed by Metro noise and vibration, despite the fact that BCHD is now fully aware of damages from peer reviewed studies and the Blue Zones that BCHD has spent millions of dollars supporting has significant research on the damages of noise and chronic stress. BCHD is ignoring its fundamental responsibility by failing to weigh in Metro.

112-1

It is possible that through its negligence, BCHD has spent significant Metro Measure M funds with worthless planning for a bike path in Torrance along Flagler St and in Flagler Alley. As such, BCHD may well have no professional status at Metro from BCHD's error of failing to get Torrance approval prior to significant expenditures.

The following is yet another demonstration of the damages caused by Metro's proposed project:

https://doi.org/10.1007/s00395-019-0753-y
Acute exposure to nocturnal train noise induces endothelial dysfunction and pro-thromboinflammatory changes of the plasma proteome in healthy subjects
This study demonstrates the damages of night time noise on surrounding residents from trains. The 24/7/365 Metro will cause such damages if it runs on the surface of the existing right of way, and perhaps in a trench as well. Furthermore, Blue Zones findings on noise and sleep both indicate this is a health hazard. From the study conclusions "In the present study, we showed for the first time in a field study that nighttime railway noise is associated with a significant degree of endothelial dysfunction in healthy subjects. ... nights with exposure to railway noise, compatible with a noise-induced increase in oxidative stress within the vasculature. The observed proteomic changes in response to nighttime railway noise point toward a prooxidative, proinflammatory and pro-thrombotic phenotype, providing a molecular basis to explain the **increased cardiovascular risk observed in epidemiological noise studies**."

Subject: C-Line (GREEN) DEIR Public Comments

Importance: High

Dear Metro,

Please add my comments below expressing my concerns with the DEIR

I am 86 and on a fixed income and have enjoyed my fourteen years at Breakwater Village. Putting the train on the ROW will put a great
Deal of stress on the Senior residents here. The noise will keep us indoors and we will have less contact with our neighbors. 113-1
Most important to me and my neighbors we worry that the value of our condominiums will diminish if you put the train on the ROW. 113-2

Thank you for your attention in this matter,

Angeline Souza

It's Jane Alfonso and my phone number is [redacted]. And I definitely favor the Hawthorne. 114-1

William Daniel Mack

02/26/2023

Hello, my name is William Daniel Mack. [redacted] I just want to comment on the green line. I utilize—I go to Hollywood once a week I utilize public transportation. I used to use the green line to the blue line to the red line to get into Hollywood, but I stopped taking that because of the danger of being on those lines. I've seen a guy pull out a 45 once, I've seen a guy do Kung Fu dancing and you know, getting off at the blue line station. At Rosa Parks, you know, I see gun—gun shops in the television sets. So there's an issue on safety and you know I was just on the green line yesterday and the smell of urine was on the train. So that's an issue with the green line and all the all the metro chains that I wanted to bring up. But the point was the green line extension. I think it's a really good idea. Primarily because in 2033, 2030, I think the price of gas is going to be astronomical. And I think we're going to be transitioning away from gas powered cars. So I think options for public transportation is going to be much more important in 10 years than it is now. So, and I take the 232 now with the Culver City Bus and I just wish the 232.

Comment on Draft Environmental Impact Report for Metro C Line (Green) Extension to Torrance Project

Dear Georgia:

Ganahl Lumber Company ("Ganahl") appreciates the opportunity to comment upon the Draft Environmental Impact Report ("DEIR") for the Metro C Line (Green) Extension to Torrance ("the Project"). CEQA requires that a DEIR identify a project's significant environmental effects, identify feasible mitigations measures and project alternatives that may reduce or avoid those impacts, and then determine whether those effects are unavoidable or can be reduced or avoided by adopting mitigation measures of project alternatives.

Ganahl sincerely appreciates the effort LACMTA has shown to meet with us and discuss our business and operational needs so far in this process. We are hopeful the dialog and efforts to reduce and avoid potential impacts will continue. Additionally, Ganahl recognizes the importance and benefits of the outcomes of the project while at the same time needs to ensure that we conduct business safely and productively during construction and beyond project completion. Ganahl selected, purchased, and developed the Torrance facility specifically because of the rail spur access and high volume of service which is central to our business performance.

Both during construction, as well as after project completion, a reduction or elimination of our ability to receive rail cars when and where required will have a significant impact on our operation. These impacts include, but are not limited to, loss of productivity, loss of sales, increased costs of inventory and increased cost and effort of inventory handling. These impacts also include greatly increased truck and vehicle traffic on and around the Ganahl facility. 118-1

Ganahl believes it is possible to design and build the Metro light rail project to maintain freight rail service to Ganahl throughout construction without compromising the project construction process. Furthermore, Ganahl believes it is possible to design and engineer the project to maintain the current Ganahl Lumber spur as is without compromising theprojec t outcomes and we look forward to working with LACMTA on the next stages of engineering and design to accomplish this goal. 118-2

March 21, 2023

Mark Dierking, Community Relations Manager
Los Angeles County Metropolitan Transportation Authority
One Gateway Plaza
Los Angeles, CA 90012 – 2952

Dear Mr. Dierking,

On behalf of the Torrance Area Chamber of Commerce, an organization made up of 752 businesses, we voice our support for the Light Rail on Metro Right-of-Way Elevated/At-Grade option. This option utilizes an existing rail right-a-way as the most cost-effective and efficient route to the future Torrance Regional Transit Center, which reduces the environmental footprint and is lest impactful. 120-1

Representatives from Metro have attended three different Torrance Area Chamber of Commerce Government Affairs Policy meetings. Each of these meetings were well attended and each meeting had robust discussions. Torrance Chamber members, with businesses along Hawthorne Blvd., have expressed much concern with the Trench and the Hawthorne options.

The future of public transportation and regional connectivity will be heavily impacted by the decisions made in the selection of options selected now. The Torrance Area Chamber of Commerce supports the Light Rail on Metro Right-of-Way Elevated/ At-Grade option. This is the best alternative for Torrance businesses and residents. 120-2

Sincerely,

Donna Duperron
President & CEO

Ms. Georgia Sheridan, Project Manager
Los Angeles County Metropolitan Transportation Authority
One Gateway Plaza
Los Angeles, CA 90012

Dear Ms. Sheridan:

DEIR Response to the C Line (Green) Extension to Torrance Project

The Los Angeles County Sanitation Districts (Districts) received a Draft Environmental Impact Report (DEIR) for the subject project on January 26, 2023. The proposed project is located within the jurisdictional boundaries of District No. 5. Previous comment submitted by the Districts to your agency in correspondence dated March 15, 2021, (copy enclosed) still apply to the subject project with the following updated information:

1. **Section 3.9-2.3 Project Features**, PF-HHM-5. Disposal of Groundwater, *page 3.9-12*: this project feature mentioned that "The County of Los Angeles Department of Public Works would be contacted prior to discharging groundwater into their sewer or stormwater systems." Local collector and/ or lateral sewer lines, such as those managed by the Los Angeles County Department of Public Works or the City Department of Public Works, are typically tributary to and discharge into the Districts' sewerage system. The Districts own, operate, and maintain the large trunk sewers that form the backbone of the regional wastewater conveyance system. Please note that the Districts policy restricts groundwater discharges into the Districts' sewerage systems. The Districts may accept groundwater discharges on a case-by-case basis, after all other alternatives have been determined to be unfeasible, and will require an Industrial Wastewater Discharge Permit. Project developers should contact the Districts' Industrial Waste Section at (562) 908-4288, extension 2900, to reach a determination on this matter. If this permit is necessary, project developers will be required to forward copies of final plans and supporting information for the proposed project to the Districts for review and approval before beginning project construction. For additional Industrial Wastewater Discharge Permit information, please visit https://www.lacsd.org/services/wastewater-programs-permits/industrial-waste-pretreatment-program/industrial-wastewater-discharge-permits. For additional groundwater and stormwater discharges information, please visit https://www.lacsd.org/services/wastewater-programs-permits/industrial-waste-pretreatment-program/industrial-waste-policies/rainwater-stormwater-groundwater-and-other-water-discharges. 121-1

2. **Section 3.11-3.2 Wastewater**, *page 3.11-13*: the end of the page stated that "both stormwater runoff and sewage are collected and transported through underground municipal sewage systems and are then processed and treated through municipal wastewater treatment facilities." Please note that the Districts' policy also restricts stormwater discharge into the Districts' sewerage system. Stormwater should be directed to the storm drains. The Districts may accept stormwater discharges on a case-by-case basis, after all other alternatives have been determined to be unfeasible, and will require an Industrial Wastewater Discharge Permit. Please refer to the links provided in Comment #1, above, for information regarding Industrial Wastewater Discharge Permit and stormwater discharges. 121-2

3. **Section 3.9-4.2.1 Construction Impacts**, Buried Utilities subsections for the Proposed Project, Trench Option, and Hawthorne Option, *pages 3.9-36 to -39*: the subsections stated that "At this phase of design, Metro has obtained as-built drawings from these [dry and/ or wet] utility owners and developed preliminary plans for relocation or protect-in-place." As indicated in the correspondence dated March 15, 2021, the Districts' facilities (e.g., trunk sewers) are located directly under and/or cross directly beneath the proposed project alignments. To date, the Districts have not received as-built drawing request for the proposed project. To obtain copies of as-built drawings of the Districts' facilities within the project area, please contact the Districts' Engineering Counter at engineeringcounter@lacsd.org or (562) 908-4288, extension 1205. When project plans that incorporate our facilities have been prepared, please submit copies to the Engineering Counter for our review and comment. 121-3

4. **Section 3.11-4.1.1 Construction Impacts**, Hawthorne Option, Wastewater Treatment Subsection, *page 3.11-23* and **Section 4.3-3.11.1 Construction**, *page 4-22*: these sections mentioned that the construction of the Hawthorne Option would likely relocate a sewer line. Please clarify the location and ownership of the impacted sewer lines. If any of the Districts' sewers within the project area may be relocated, please contact Ms. Rosann Paracuelles at (562) 908-4288, extension 1614, or rparacuelles@lacsd.org. 121-4

5. **Section 3.11-3.2 Wastewater**, Wastewater Treatment subsection, *page 3.11-16*; **Section 3.11-4.3.1 Construction Impacts**, *page 3.11-28*; and **Section 3.11-7.1 Proposed Project**, Wastewater subsection, *page 3.11-33*: these sections incorrectly stated the Joint Water Pollution Control Plant's (JWPCP) service (tributary) area. The JWPCP provides regional wastewater treatment for Los Angeles County, covering an extensive area that includes 73 cities and unincorporated county territory. For its tributary area, please visit https://www.app.lacsd.org/facilities/ and, under Wastewater Treatment, select Joint Water Pollution Control Plant. 121-5

6. **Section 3.11-4.3.1 Construction Impacts**, *page 3.11-28*: the first paragraph of this section incorrectly stated the Los Angeles County Sanitation Districts as the Los Angeles County Sewer Districts. 121-6

If you have any questions, please contact the undersigned at (562) 908-4288, extension 2743, or mandyhuffman@lacsd.org.

Very truly yours,

Dear Ms. Royball Saltarelli:

NOP Response to Metro C Line (Green) Extension to Torrance Project

The Los Angeles County Sanitation Districts (Districts) received a Notice of Preparation of a Draft Environmental Impact Report (NOP) for the subject project on January 25, 2021. The proposed project is located within the jurisdictional boundary of District No. 5. We offer the following comments regarding sewerage service:

- The proposed project may impact existing and/or proposed Districts' facilities (e.g. trunk sewers, recycled waterlines, etc.) over which it will be constructed. Districts' facilities are located directly under and/or cross directly beneath the proposed project alignment. The Districts cannot issue a detailed response to or permit construction of, the proposed project until project plans and specification that incorporate Districts' facilities are submitted for our review. To obtain copies of as-built drawings of the Districts' facilities within the project limits, please contact the Districts' Engineering Counter at engineeringcounter@lacsd.org or (562) 908-4288, extension 1205. When project plans that incorporate our facilities have been prepared, please submit copies of the same to the Engineering Counter for our review and comment.

122-7

If you have any questions, please contact the undersigned at (562) 908-4288, extension 2717 or at araza@lacsd.org.

Subject: DEIR Hawthorne route mods
Attachments: C_Line_routing_032123.pdf

NOTICE TO AGENT IS NOTICE TO PRINCIPAL --- NOTICE TO PRINCIPAL IS NOTICE TO AGENT

re: DEIR (Draft Environmental Impact Report),C Line Extension to Torrance Transportation Center: **The Hawthorne Option route as detailed in the Real Estate Acquisition Report creates unnecessary hardships for business which accrue extra costs. This is fixable.**

The Hawthorne Option route initiates from the Marine Station and travels briefly down the ROW to then veer to the left crossing over a self-storage center, then a Chevron station to then cross Inglewood Ave. to take out an auto repair shop and a sign company to finally merge with the 405 to then squeeze down a narrow corridor abutting the 405 and many businesses.

This route can (and should) be avoided.

Simply follow the ROW route to Manhattan Beach Blvd. and then use the wide MBB for an eighth of mile to then merge with the 405 at that point. This keeps both costs and hardships on par with the ROW option.

122-1

At the south end of the Hawthorne Option before 190th, the route crosses over the North bound lanes and cuts through the newly opened Volvo dealership between their parking structure and showroom to then merge with the ROW. This creates an unnecessary hardship for the dealership. The route should simply continue on Hawthorne to then merge with the train overpasses at Hawthorne and 190th. If the ROW option was used, both these overpasses would need construction to accommodate the light rail lines, so a modification to these existing overpasses should not be avoided at the expense of the dealership.

Please find attached pdf for images and further details.

Sincerely,

Kevin Mitchell

[redacted]

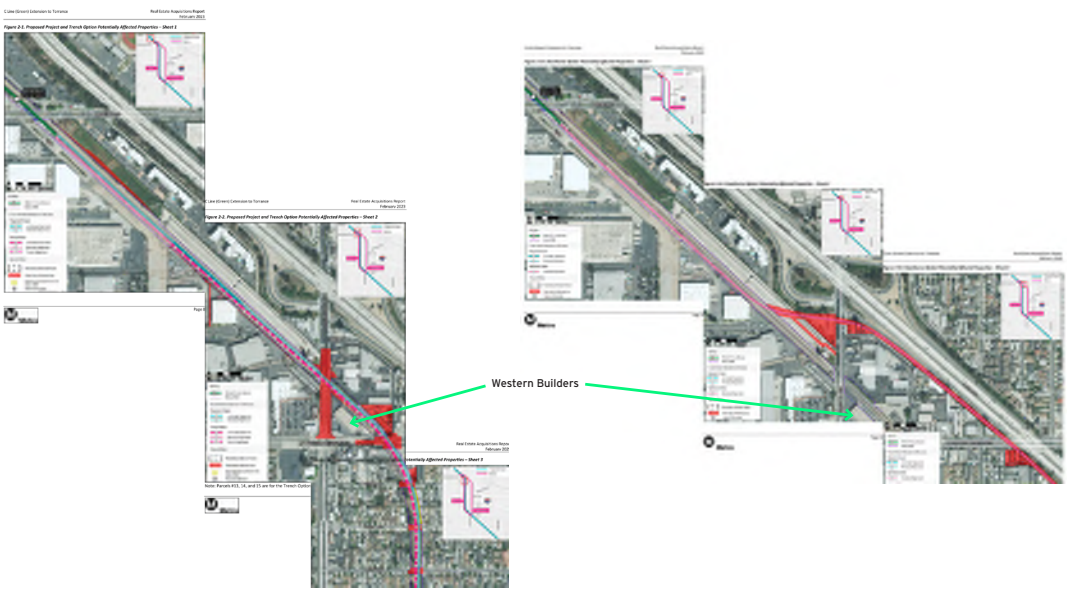
EXAMINING THE C LINE HAWTHORNE ROUTE

A closer examination of the C Line Hawthorne route shows major flaws both in the North and the South.

1) **North:** the currently proposed route from Marine Station to Manhattan Beach Blvd. destroys multiple businesses and disregards an easy path that does no damage to businesses in the area. 122-2

METRO ROW ROUTE (from Marine Station)

HAWTHORNE ROUTE (from Marine Station)



2) **Compare:** north routes of the ROW option vs. the Hawthorne option. Both options indicate elevated trains leaving from the Marine Station. The ROW route stays on the ROW as it crosses Inglewood Ave. to run behind Westwood Builders on the existing ROW path to then cross Manhattan Beach Blvd. and continue on the ROW. The Hawthorne route takes a hard turn to cross over the existing self-storage business, then runs over a Chevron station, crosses Inglewood Ave. to then run over two more businesses (Ron Roger's Auto Services Center and EMI Signs) to get to the edge of the 405. The question is why. 122-3

Looking North from the ROW north of Inglewood.

Looking West from Inglewood Blvd. at Chevron.

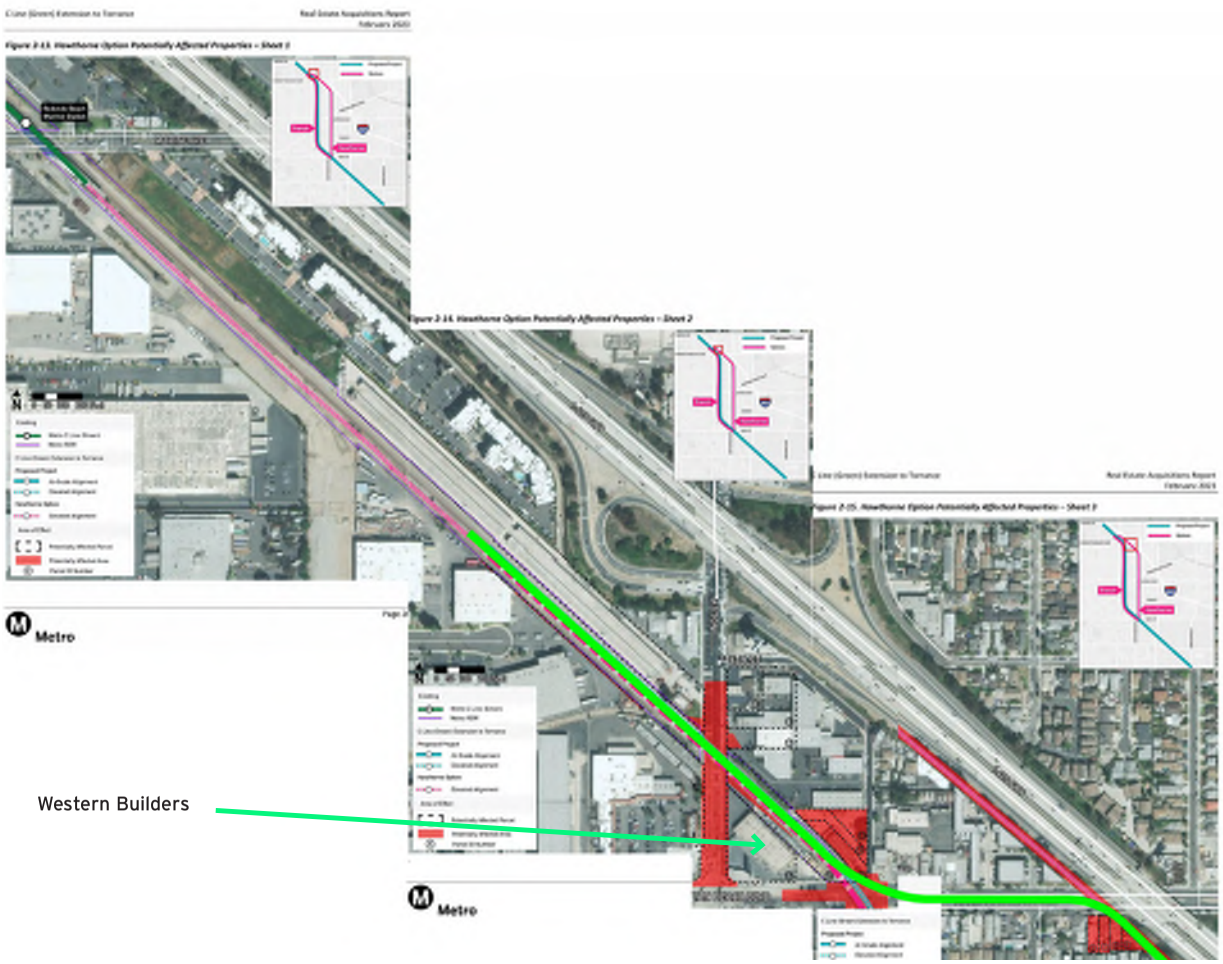
Looking East from Inglewood Blvd., Ron Rogers Auto.

Looking East from Condon Ave. at EMI Signs.

3) A simple solution: by running the same route as the ROW to Manhattan Beach Blvd., Metro could avoid damage to businesses and enjoy the same cost as the ROW route. From there, a simple turn down Manhattan Beach Blvd. to then get to the 405 corridor. 122-4

AN ALTERNATE HAWTHORNE ROUTE (from Marine Station)

The green path indicates a suggested revision to Metro's planned route



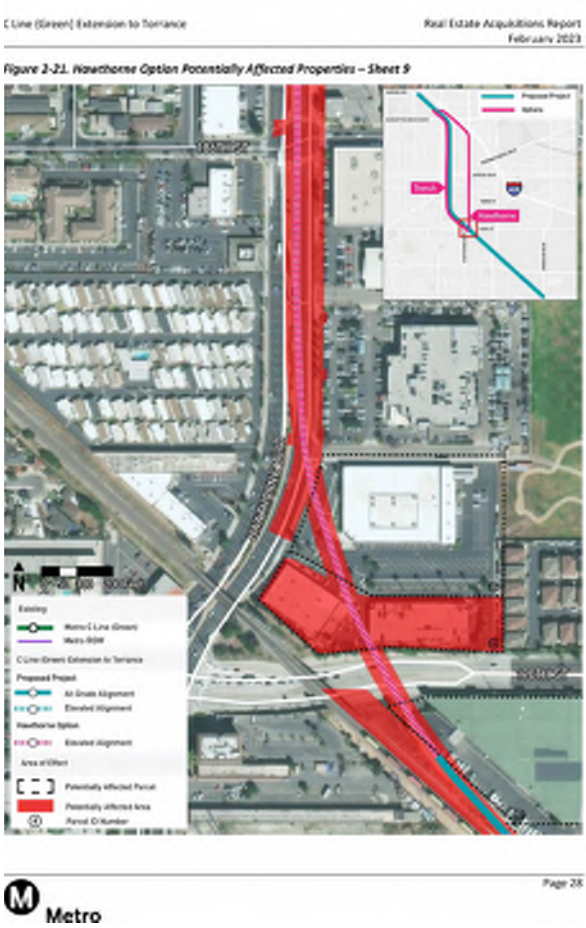
4) Manhattan Beach Blvd.: offers a wide corridor and large median to receive the Metro train to travel unimpeded to the 405. One business, Manhattan Auto Body Shop, which has been slated for disruption for the Hawthorne Option, will be effected as this is unavoidable to connect to Hawthorne Ave. 122-5

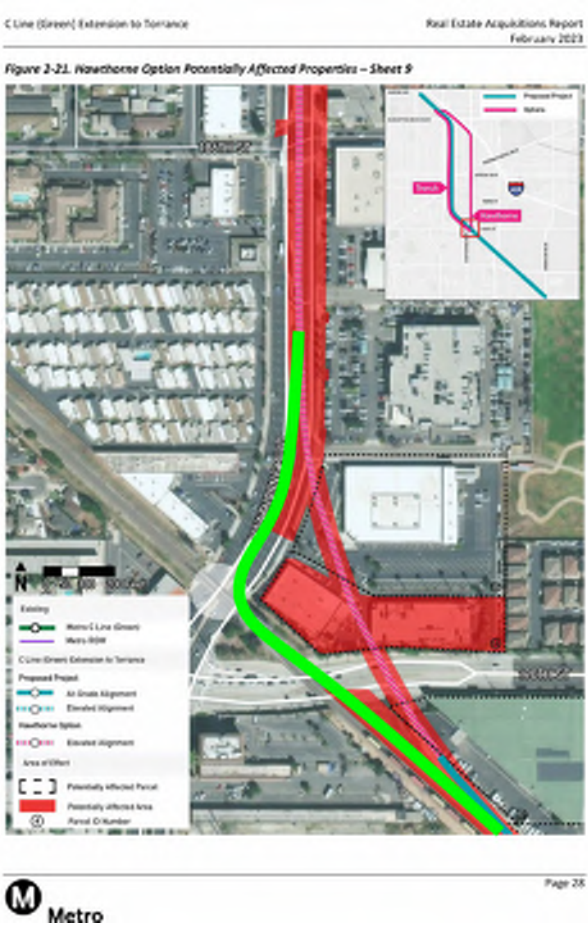
Looking West on Manhattan Beach Blvd.

Looking East on Manhattan Beach Blvd.

Looking South from Manhattan Beach Blvd. at Manhattan Auto Body Shop. Indicated for disruption on REAR.

5) South End of Hawthorne Option collides with the newly built Volvo Dealership which is avoidable.: To connect with the southern ROW crossing at 190th, the route crosses over into the Volvo Dealership splitting their parking structure and showroom. The dealership is openly upset with this route and have thrown their weight behind Torrance's position to use the ROW. The route should be modified. 122-6





6) By changing the route to avoid the Volvo dealership: A more equitable solution is possible. Some re-engineering will be necessary to allow for the trains to merge at the ROW overpass on Hawthorne and 190th, but can avoid severe business interruptions and allow the dealership to remain unmolested. 122-6

Looking South at Hawthorne Blvd. and ROW crossing before 190th.

Subject: Metro C Line (Green) Extension to Torrance Project, Draft Environmental Impact Report, SCH #2021010269, Los Angeles County Metropolitan Transportation Authority, Los Angeles County

Dear Ms. Sheridan,

The California Department of Fish and Wildlife (CDFW) has reviewed the Draft Environmental Impact Report (DEIR) from the Los Angeles County Metropolitan Transportation Authority (Metro) for the Metro C Line (Green) Extension to Torrance Project (Project). CDFW appreciates the opportunity to provide comments regarding aspects of the Project that could affect fish and wildlife resources and be subject to CDFW's regulatory authority under the Fish and Game Code.

CDFW's Role

CDFW is California's Trustee Agency for fish and wildlife resources and holds those resources in trust by statute for all the people of the State [Fish & G. Code, §§ 711.7, subdivision (a) & 1802; Pub. Resources Code, § 21070; California Environmental Quality Act (CEQA) Guidelines, § 15386, subdivision (a)]. CDFW, in its trustee capacity, has jurisdiction over the conservation, protection, and management of fish, wildlife, native plants, and habitat necessary for biologically sustainable populations of those species (Id., § 1802). Similarly, for purposes of CEQA, CDFW is charged by law to provide, as available, biological expertise during public agency environmental review efforts, focusing specifically on projects and related activities that have the potential to adversely affect State fish and wildlife resources.

123-1

CDFW is also submitting comments as a Responsible Agency under CEQA (Pub. Resources Code, § 21069; CEQA Guidelines, § 15381). CDFW expects that it may need to exercise regulatory authority as provided by the Fish and Game Code, including lake and streambed alteration regulatory authority (Fish & G. Code, § 1600 *et seq*.). Likewise, to the extent implementation of the Project as proposed may result in "take", as defined by State law, of any species protected under the California Endangered Species Act (CESA) (Fish & G. Code, § 2050 *et seq.*), or CESA-listed rare plant pursuant to the Native Plant Protection Act (NPPA; Fish & G. Code, §1900 *et seq.*), CDFW recommends the Project Applicant obtain appropriate authorization under the Fish and Game Code.

DocuSign Envelope ID: 10A880E5-CDF6-46FB-A7B7-AAB4394A8DDB

Submission 123

Project Description and Summary

Objective: The Project proposes to extend Metro C (Green) Line approximately 4.5 miles from the City of Redondo Beach to the City of Torrance. The extension would start from the existing Redondo Beach (Marine) Metro C Line Station and travel southeast to the City of Torrance. Two new stations would be constructed: Redondo Beach Transit Center Station and Torrance Transit Center Station. Both stations would be adjacent to recently built bus transit centers in both cities. The extended 4.5-mile two track line would consist of a combination of elevated and at-grade segments. Light rail tracks would start on an elevated structure and run above street level for approximately 1.1 miles. Then, light rail tracks would come down to street level for approximately 3.5 miles with two at-grade crossings at 170th and 182nd streets in the City of Redondo Beach. To support light rail vehicle operations, six traction power substations would be constructed. Access to each substation would be provided via maintenance access roads. Access roads would be shielded with landscaping where possible. The Project would not include new or modified maintenance facilities. Light rail vehicles would be maintained and stored at existing Metro facilities.

Burlington Northern Santa Fe, LLC (Burlington) operates an existing freight track between Redondo Beach (Marine) Station and 190th Street within the Metro right-of-way (ROW). The Project would relocate the freight track in some areas. The freight track would remain at-grade throughout the length of the corridor. South of 190th Street, Burlington and Metro share ownership of the freight corridor. Metro owns approximately 15 feet in width and would acquire or lease additional ROW from Burlington to accommodate the Project between 190th Street and the Torrance Transit Center Station.

123-2

The Project would include multi-use paths along Metro ROW where there is space to create recreational space for walking and cycling. Multi-use paths would be located between 159th Street and Condon Avenue, and between Grant Avenue and 182nd Street.

Location: The Project would follow the existing Metro ROW. The Project area forms roughly a one-mile buffer around the Metro ROW. The Project area would include portions of the cities of Hawthorne, Lawndale, Redondo Beach, and Torrance. The Project area includes single family and multi-family residential areas, industrial and institutional uses, as well as commercial and recreational areas. The Project area also includes major activity centers such as the South Bay Galleria, and high-capacity bus transit centers, such as the Redondo Beach Transit Center and Torrance Transit Center.

Comments and Recommendations

On March 20, 2023, CDFW met with the City of Torrance to discuss an existing Southern Tarplant Open Space Preserve (Preserve) located adjacent to the Metro ROW. Based on our meeting with the City of Torrance and review of the Project's CEQA document, CDFW offers the comments and recommendations below to assist Metro in adequately identifying, avoiding, and/or mitigating the Project's significant, or potentially significant, direct, and indirect impacts on fish and wildlife (biological) resources. CDFW recommends the measures or revisions below be included in a science-based monitoring program that contains adaptive management strategies as part of the Project's CEQA mitigation, monitoring, and reporting program (Pub. Resources Code, § 21081.6; CEQA Guidelines, § 15097).

123-3

DocuSign Envelope ID: 10A880E5-CDF6-46FB-A7B7-AAB4394A8DDB

Specific Comments

Comment #1: Impacts on Southern Tarplant

Issue: The Project may have a significant impact on southern tarplant (*Centromadia parryi* ssp. *australis*) protected within an established two-acre Preserve. Southern tarplant is a rare plant with a California Rare Plant Rank (CRPR) of 1B.1.

Specific impacts: The Project could result in population decline of southern tarplant and/or local extirpation of a remnant population of southern tarplant within the City of Torrance. In addition, the Project could impact a Preserve created a mitigation for a separate project.

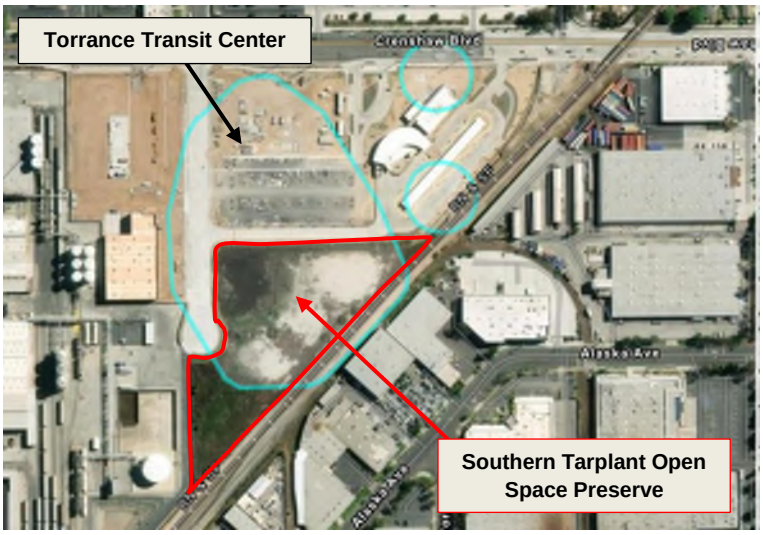
Why impacts would occur: The DEIR states that the existing two-acre Preserve near the Torrance Transit Center was established to offset impacts resulting from the 2014 Torrance Transit Center Project[1] (Figure 1). The DEIR states, "Construction of the Proposed Project would not disturb the [Southern Tarplant] Open Space Preserve that has been established adjacent to the Torrance TC [Transit Center], as this area has been designated as a protected space by the City of Torrance." However, CDFW is concerned that the Project would temporarily and permanently disturb the Preserve and impact a rare plant species and habitat.

123-4

Figure 1. Southern Tarplant Open Space Preserve (illustrative purposes only). The Torrance Transit Center Project (SCH No. 2014121003) impacted southern tarplant populations (blue). Imagery and data from the California Natural Diversity Database (CDFW 2023a).

[1] Torrance Transit Park and Ride Regional Terminal (or Torrance Regional Transit Center project), SCH No. 2014121003, Mitigated Negative Declaration certified by the City of Torrance (Lead Agency) in 2014. Environmental documents available from: https://www.torranceca.gov/our-city/community-development/planning/transit-project-2014. According to the Mitigated Negative Declaration (MND), the Torrance Regional Transit Center project developed 6.95 acres of a 15-acre project site. Construction of the Torrance Regional Transit Center was expected to result in direct impacts to "the majority of the estimated 350 to 400 southern tarplant individuals on site." To offset these impacts, two acres was preserved for southern tarplant (Southern Tarplant Open Space Preserve). According to the MND, the two acre Southern Tarplant Open Space Preserve was supposed to be enhanced by establishing appropriate grades to promote seasonal ponding and seeding the area with southern tarplant collected prior to construction of the Torrance Regional Transit Center; designated as open space and placed within a protective easement for conservation purposes such as a restrictive covenant or conservation easement; and managed in perpetuity with long-term management funding provided by the City or successors.

DocuSign Envelope ID: 10A880E5-CDF6-46FB-A7B7-AAB4394A8DDB

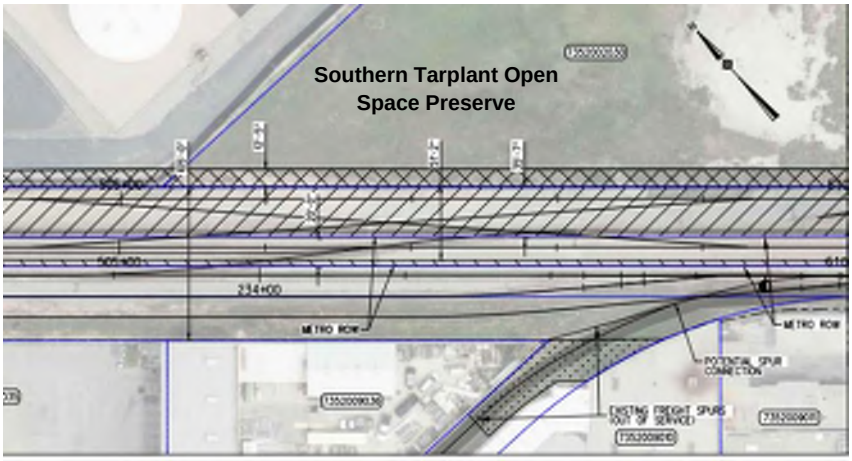


Per CDFW's meeting with the City of Torrance, the Project would need to encroach onto the Preserve by 12 to 20 feet. That could result in development and loss of between 15,000 to 20,000 square feet of the Preserve and loss of an unknown number of individual southern tarplant. In addition, drawing numbers RW-120 and T-120 in the Advanced Conceptual Engineering Drawings for the Project (Appendix 2-A) shows the Project and Metro ROW, but it is not entirely clear from the drawings if, where, and by how much the Project would encroach on to the Preserve (Figure 2). Finally, according to a Metro-produced video simulating the Project, the Metro C Line rendering at 10 minutes and seven seconds appears to show that the Preserve would be developed as part of "City of Torrance Future Development" (Metro Los Angeles 2023). Encroaching onto and/or developing the Preserve would impact southern tarplant and habitat.

123-4

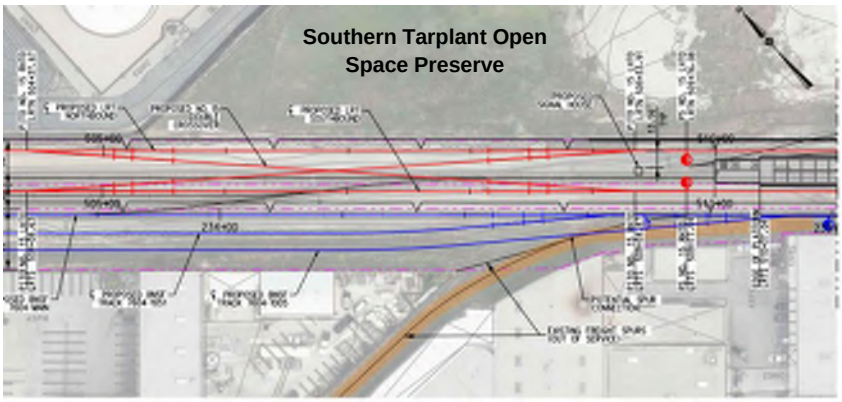
123-5

Figure 2. Advanced Conceptual Engineering Drawings for the Project (Appendix 2-A), drawings RW-120 (top) and T-120 (bottom). "Southern Tarplant Open Space Preserve" label added by CDFW to identify location of the preserve. CDFW is concerned that the Project would encroach onto the two-acre preserve and impact southern plants through loss of individuals and habitat loss and degradation.



123-6

DocuSign Envelope ID: 10A880E5-CDF6-46FB-A7B7-AAB4394A8DDB



123-6

The Project could encroach onto the Preserve during construction. Page 3.7-26 in the DEIR states, “Potential direct impacts to the southern tarplant may include the loss of individual plants as a result of removal or crushing due to construction related activities (i.e., equipment or employees inadvertently working in an unauthorized area). Potential indirect impacts may include soil and contaminant runoff in the wet season, dust in the dry season during excavation, and the introduction of non-native/invasive species that have potential to degrade habitat and outcompete southern tarplant for critical resources.” Adding to this, CDFW is concerned that loss of individual plants may also result from burial from stockpiles and spoils. The Project could have permanent impacts on southern tarplant and habitat. Permanent loss of individual tarplant and habitat supporting tarplant could occur if the Project develops any portion of the Preserve.

123-7

The DEIR discloses that the Project would have a significant impact on southern tarplant only during construction, and states that impacts would be less than significant through implementation of Mitigation Measure BIO-1. Mitigation Measure BIO-1would require delineating construction work limits and installation of temporary fencing or markers in order to avoid and minimize impacts. Mitigation Measure BIO-1 addresses the Project’s temporary impact on southern tarplant during construction but does not address the Project’s potentially permanent impact.

123-8

Evidence impact would be significant: Southern tarplant has a CRPR of 1B.1. A CRPR of 1B.1 means that southern tarplant is a species that is rare, threatened, or endangered in the State. Plants with a CRPR of 1B are rare throughout their range with the majority of them endemic to California (CNPS 2023). Ranks also include a threat rank (0.1). A rank of 0.1 means that southern tarplant is seriously threatened in the State. Plants with a CRPR of 1B meets the definition of endangered, rare, or threated species under CEQA (CEQA Guidelines, § 15380).

123-9

Currently, there are only two populations of southern tarplant remaining within the City of Torrance (Calflora 2023, CDFW 2023). These populations are located at the Preserve and Madrona Marsh Preserve. Southern tarplant has continued to decline locally within the City of Torrance. For example, 350 to 400 plants were impacted as a result of the Torrance Regional Transit Center project (see Footnote 1). The Project’s temporary and permanent impacts on southern tarplant could contribute to decline of southern tarplant within the Preserve and City of Torrance. The Project’s impact on a rare species that only occurs in two isolated, remnant habitat fragments is significant. Loss of southern tarplant and habitat resulting from the Project has yet to be mitigated. Therefore, the Project continues to have a substantial adverse effect, either directly or through habitat modifications, on a species identified as rare by CDFW.

123-10

DocuSign Envelope ID: 10A880E5-CDF6-46FB-A7B7-AAB4394A8DDB

Recommended Potentially Feasible Mitigation Measure(s):

Recommendation #1: CDFW recommends Metro disclose the Project's permanent impact on southern tarplant in the Project's environmental document. The environmental document should disclose where and by how much the Project would encroach onto and/or develop the Southern Tarplant Open Space Preserve. Complete and good-faith disclosure should be provided before finalizing an environmental document for the Project. 123-11

Mitigation Measure #1: Metro should provide compensatory mitigation for the Project's impact on southern tarplant. Metro should offset the Project's impact to individual plants and habitat acres at no less than 3:1 for impacts to a CRPR 1B.1 species with only two extant populations within the City of Torrance. Metro should provide additional and higher compensatory mitigation to offset impacts to a CRPR 1B.1 species protected within a preserve that was established as mitigation for a separate project. Metro should acquire and preserve land in perpetuity for southern tarplant. Land should support southern tarplant or can be demonstrated to successfully support a self-sustaining population of southern tarplant. If feasible, Metro should identify land within the City of Torrance. 123-12

Mitigation Measure #2: Metro should coordinate with CDFW to review potential mitigation land and to ensure that mitigation land is suitable for southern tarplant prior to acquisition of mitigation land. 123-13

Mitigation Measure #3: Metro should protect replacement habitat in perpetuity under a conservation easement dedicated to a local land conservancy or other appropriate entity that has been approved to hold and manage mitigation lands pursuant to Assembly Bill 1094 (2012)[2]. Metro should record the conservation easement before commencement of any ground disturbing activities within 100 feet of the Southern Tarplant Open Space Preserve. 123-14

Mitigation Measure #4: Metro should provide an appropriate endowment for the long-term management of replacement habitat. Funding should be provided for long-term management activities that include but are not limited to the following: botanical surveys; vegetation assessments; non-native plant inspections; non-native plant removal; and reporting. A mitigation plan should be prepared and include measures to protect the targeted habitat values in perpetuity from direct and indirect negative impacts. Issues that should be addressed include but are not limited to the following: protection from any future development and zone changes; restrictions on access; proposed land dedications; control of illegal dumping; water pollution; and increased human intrusion. 123-15

Mitigation Measure #5: Metro should retain a qualified biologist to prepare a Southern Tarplant Translocation Plan that should include information including but not limited to the following: seed and plant material collection methods and best management practices; planting methods; non-native, invasive plant control; monitoring plan; and schedule of activities. Metro should collect southern tarplant seeds and/or plants from the impacted population for a minimum of two years 123-16

[2] Assembly Bill 1094 amended Government Code sections 65965-65968. Under Government Code section 65967(c), the lead agency must exercise due diligence in reviewing the qualifications of a governmental entity, special district, or nonprofit organization to effectively manage and steward land, water, or natural resources on mitigation lands it approves.

DocuSign Envelope ID: 10A880E5-CDF6-46FB-A7B7-AAB4394A8DDB

in order to maximize the amount of plant material collected from the impacted area. A Southern Tarplant Translocation Plan should be prepared and seed and/or plants should be collected for at least two years before commencement of any ground disturbing activities within 100 feet of the Southern Tarplant Open Space Preserve. 123-16

Additional Recommendations

Recommendation #2: CEQA requires that information developed in environmental impact reports and negative declarations be incorporated into a database (e.g., CNDDB) which may be used to make subsequent or supplemental environmental determinations [Pub. Resources Code, § 21003, subd. (e)]. Information on special status species should be submitted to the CNDDB by completing and submitting CNDDB Field Survey Forms (CDFW 2023b). Information on special status native plant populations and sensitive natural communities, the Combined Rapid Assessment and Relevé Form should be completed and submitted to CDFW's Vegetation Classification and Mapping Program (CDFW 2023c). 123-17

Recommendation #3: CDFW recommends Metro update the Project's proposed Biological Resources Mitigation Measures to include mitigation measures recommended in this letter. CDFW provides comments to assist Metro in developing mitigation measures that are specific, detailed (i.e., responsible party, timing, specific actions, location), and enforceable through permit conditions, agreements, or other legally-binding instruments [CEQA Guidelines, § 15126.4(a)(2)] in order for mitigation measures to be implemented successfully via a mitigation monitoring and/or reporting program (CEQA Guidelines, § 15097; Pub. Resources Code, § 21081.6). Metro is welcome to coordinate with CDFW to further review and refine the Project's mitigation measures. Per Public Resources Code section 21081.6(a)(1), CDFW has provided Metro with a summary of our suggested mitigation measures and recommendations in the form of an attached Draft Mitigation and Monitoring Reporting Plan (MMRP; Attachment A). 123-18

Filing Fees

The Project, as proposed, would have an impact on fish and/or wildlife, and assessment of filing fees is necessary. Fees are payable upon filing of the Notice of Determination and serve to help defray the cost of environmental review by CDFW. Payment of the fee is required for the underlying Project approval to be operative, vested, and final (Cal. Code Regs., tit. 14, § 753.5; Fish & G. Code, § 711.4; Pub. Resources Code, § 21089). 123-19

Conclusion

We appreciate the opportunity to comment on the Project to assist Metro in adequately analyzing and minimizing/mitigating impacts to biological resources. CDFW requests an opportunity to review and comment on any response that Metro has to our comments and to receive notification of any forthcoming hearing date(s) for the Project [CEQA Guidelines, § 15073(e)]. If you have any questions or comments regarding this letter, please contact Ruby Kwan-Davis, Senior Environmental Scientist, at (562) 619-2230 or by email at Ruby.Kwan-Davis@wildlife.ca.gov.

Attachment A: Draft Mitigation and Monitoring Reporting Plan

CDFW recommends the following language to be incorporated into the Project's environmental document.

Biological Resources (BIO)			
Mitigation Measure (MM) or Recommendation (REC)		**Timing**	**Responsible Party**
REC-1-Revise CEQA Document	Metro should disclose the Project's permanent impact on southern tarplant in the Project's environmental document. The environmental document should disclose where and by how much the Project would encroach onto and/or develop the Southern Tarplant Open Space Preserve. Complete and good-faith disclosure should be provided before finalizing an environmental document for the Project.	Prior to finalizing CEQA document	Los Angeles County Metropolitan Transportation Authority (Metro)
REC-2-Submitting Data for Sensitive and Special Status Species and Natural Communities	Information on special status species should be submitted to the CNDDB by completing and submitting CNDDB Field Survey Forms. Information on special status native plant populations and sensitive natural communities, the Combined Rapid Assessment and Relevé Form should be completed and submitted to CDFW's Vegetation Classification and Mapping Program.	Prior to finalizing CEQA document	Metro
REC-3-Mitigation and Monitoring Reporting Plan	Metro should condition the environmental document to include mitigation measures recommended in CDFW's comment letter.	Prior to finalizing CEQA document	Metro
MM-BIO-1-Impacts on Southern Tarplant	Metro shall provide compensatory mitigation for the Project's impact on southern tarplant. Metro shall offset the Project's impact to individual plants and habitat acres at no less than 3:1 for impacts to a CRPR 1B.1 species with only two extant populations within the City of Torrance. Metro shall provide additional and higher compensatory mitigation to offset impacts to a CRPR 1B.1	Before any ground disturbing activities within 100 feet of the Southern	Metro

Submission 126

From: David Leger <davidl@southbaycities.org>
Sent: Friday, March 24, 2023 2:58 PM
To: greenlineextension@metro.net
Subject: SBCCOG Comments on C Line Extension DEIR
Attachments: 03.2023 SBCCOG Comment Letter to Metro re Green Line DEIR-2.pdf

Good afternoon:

Please find the attached comment letter on the C Line Draft EIR from the South Bay Cities Council of Governments. Should you have any questions, please feel free to contact Executive Director, Jacki Bacharach, at Jacki@southbaycities.org.

Sincerely,

David Leger
Pronouns: he/him/his
Senior Project Manager
(424) 271-4682
SOUTH BAY CITIES
COUNCIL OF GOVERNMENTS

Submission 126

SOUTH BAY CITIES
COUNCIL OF GOVERNMENTS

sbccog@southbaycities.org

March 24, 2023

To Be Submitted electronically to: greenlineextension@metro.net

To Whom It May Concern:

The South Bay Cities Council of Governments has reviewed the C Line (Green) Extension to Torrance (GLET) Draft Environmental Impact Report. We request that L. A. Metro reviews and responds to the comments and questions in the attachment to this letter prior to adopting the Final Environmental Impact Report or selecting a locally preferred alternative (LPA) for the GLET project.

Beyond the environmental considerations, we understand that Metro Staff has additional memos with information on ridership, cost, implementation timeframes, project phasing, and funding availability in development of the LPA which is tentatively scheduled for consideration by the Metro Board in June 2023. These additional factors are essential elements that must be considered before the final design, required right of way acquisitions and construction can proceed.

126-1

The SBCCOG will be reviewing the additional information and participating in the LPA decision-making process. After our review of the non-EIR analyses, we may make further comments on the LPA.

Sincerely,

John Cruikshank, SBCCOG Chair
Mayor Pro Tem, City of Rancho Palos Verdes

Metro Board of Directors

Attachment: SBCCOG Green Line to Torrance DEIR Comments and Questions

Submission 126

South Bay Cities Council of Governments Comments and Questions Related to the L. A. Metro Green Line Extension to Torrance Draft Environmental Impact Report

Title Page – Change Los Angeles County Transportation Authority to Los Angeles County Metropolitan Transportation Authority

EXECUTIVE SUMMARY (ES)

The Executive Summary should include a statement to the effect that all the other evaluated potential environmental impacts not addressed in comments below were determined to have no impact, less than significant impact, or less than significant impact with mitigation. 126-2

Section-specific comments:

ES 2-1 – When will the other factors beyond environmental considerations (e.g.: cost, ridership, funding sources, and project objectives) be released to the public? When will the Metro Board consider the Final EIR and a staff recommendation on the Locally Preferred Alternative? 126-3

ES 2-3.1, ES 2-3.2 – Would the number of existing parking spaces be reduced or increased at the Redondo Beach or Torrance Transit Centers to accommodate the new Proposed Project design elements? For the Hawthorne Blvd. option would the 20 lost parking spaces due to station and columns placement be replaced within the street median or relocated in the vicinity of the South Bay Galleria (perhaps on the Proposed Project Station site)? 126-4

Table ES-1 – Add parking loss to the chart. 126-5

ES.5 – High Frequency Bus Alternative: Should the line be described as a limited stop service rather than an Express Service? Express services imply a bus-only lane, but the proposed service is in mixed flow. The EIR should make the distinction between Express and limited stop service and how each would operate and then address the feasibility of each as mitigations. If parking is eliminated, the number of removed spaces should be noted as an impact and mitigated consistent with treatment of mitigations in the Proposed Project and Options. 126-6

ES.5-1 – "The … Grade-Separated LRT Alternative would have a less than significant impact with mitigation for vibration damage during construction, compared to significant and unavoidable impact for the Proposed Project (however, the significant and unavoidable vibration annoyance impact would be the same during construction)." Is this sentence contradictory, or, if not, what is the intended distinction? Is it due to avoiding relocating the freight bridge at Grant or some other differentiating mitigations? 126-7

ES.5-2 – Agree that the High Frequency Bus (HFB) alternative is the environmentally superior alternative. However, also agree that the HFB "would not realize the same level of benefits from vehicle miles traveled reduction, air quality improvements, greenhouse gas emissions reduction and energy savings as the Proposed Project and Options" due to increased travel time caused by operating in mixed flow traffic and four bus stops rather two rail stations. The Locally Preferred Alternative decision must also consider cost, ridership, implementation timeframes, and funding sources and availability. These distinctions make it important for the Locally Preferred Alternative decision to consider differences in cost, ridership, implementation timeframes, and funding sources and availability. 126-8

ES.2-3.2 – What intersection crossings would be "quiet zone ready"? What design changes would be needed to rebuild freight crossings to be "quiet zone ready"? Would the light rail crossings also be designed to be quiet zone ready? 126-9

ES.2-3.3 – Note in the Executive Summary the need to relocate overhead transmission lines on the Hawthorne Option to accommodate the aerial configuration. 126-10

ES. ? – Additional detail on the relocation of the freight tracks should be provided in the Executive Summary including the range of changes in relocated distance from sensitive noise and vibration receptors and mitigations related to the relocation. 126-11

ES. ? – Note in the Executive Summary the 4.5-mile (Marine Ave. to Torrance Transit Center) travel time differential between the Proposed Project / ROW Options (7 minutes), Hawthorne Blvd Option (? Minutes), the High Frequency Bus Option (25 minutes), and the No Project Alternative (1 hour with a transfer). 126-12

ES.? – Include the total construction duration table in the Executive Summary that is added to section 2.4-3. comparing the construction schedule, phasing, and duration for the Proposed Project, Trench Option, and Hawthorne Blvd. Alternative. Tables 2.3-1, 2.3-2, and 2.3-3 currently include the duration of each major task, but not the total 5 to 7-year construction duration for each alternative / option that reflects overlapping task durations and dependencies that are usually found in a Gantt Chart. 126-13

MAIN DOCUMENT

2.3-1 – Since Metro only owns 15-feet of the ROW between 190th Street and the Torrance Transit Center, the estimated costs of acquiring or leasing sufficient ROW from BNSF should be included in the cost calculations for the LPA. What happens to the Proposed Project and Options should BNSF not be willing to share its ROW in this segment in a timely manner? Are the proposed designs feasible to build and operate the extension only to the Galleria station initially? 126-14

Figure 2.3.4 shows a multi-use recreational path but it is not shown in any of the subsequent slides. Ex. In figure 2.3.7, it shows a maintenance access on both sides but no recreational path and the ROW looks sufficient. The figures should be revised to be consistent. How long is the multi-use recreational path where it exists? And is it discontinuous? 126-15

Figure 2.3.10 shows Quad Gates which are a key element of a Quiet Zone crossing. However, the text says the crossings will be designed to be "Quiet Zone Ready". Will the quad gates be installed or merely designed? If only designed, revise the drawing to show two gates, not four. 126-16

Trench option – Figure 2.3.16 – what does "Metro Leased to 3rd Party" mean? 126-17

2.3-1.4 "… consistent with the Metro Boards…" add an apostrophe between d and s. Would the 180 parking spaces at the Torrance Transit Center be a reduction, one-for-one replacement, or increase from current vehicle parking the station? Same question for Proposed Project and Options parking at the Redondo Transit Center. Would elevators, ramps, and stairs be included between the Redondo Beach platform and plaza (they are shown on the drawing, but not mentioned in the text)? There are escalators at the Galleria Hawthorne station but ramps at the ROW station. Why the difference? 126-18

2.3-4.2 Are 5 additional articulated LRT vehicles sufficient to operate service at current Green Line frequencies from Norwalk on the current Green Line through the 4.5-mile extension? 126-19

2.4.1 – Property acquisition described at the end of this section should be included in the Executive Summary. 126-20

2.4.2 – Construction staging areas described in this section should be included in the Executive Summary. 126-21

2.4.-3 – Construction duration tables 2.4-1, 2.4-2, and 2.4-3 show the duration of each major task, but do not reflect the overlap of task durations. The section should include a table comparing the total construction duration for the Proposed Project, Trench Option and Hawthorne Blvd. Option. 126-22

3.1 Transportation - This section presents data associated with the Base Year, which for ridership forecasts, is 2017, consistent with the Metro Transportation Analysis Model. For other data outside of ridership forecasts, the Base Year represents 2021 conditions. The project Horizon Year is 2042, consistent with the Horizon Year used in the Metro Transportation Analysis Model used to develop the ridership forecast. What does the horizon year mean? Why are different years used for different forecast items? 126-23

3.1-3.2 The 2020 LRTP identifies, as Action 1.2i, "implementation of future BRT corridors identified in BRT Vision and Principles Study." Metro's BRT Vision and Principles Study provides the foundation for assignment of Measure M funds for the Countywide BRT Expansion program. The study also identifies Hawthorne Boulevard from the City of Inglewood to the City of Torrance as a Top 30 corridor. The Measure R and Measure M expenditure plans include allocation of funds for general BRT projects throughout the County, though there is no defined allocation to the Hawthorne Boulevard project. The differences between the BRT option and the aerial light rail option impacts and mitigations should be more clearly described in the DEIR. 126-24

3.2-4.1.1 – Construction Impacts – "The Hawthorne Option would require additional parcel acquisitions to construct the elevated guideways and stations when compared to the Trench Option and Proposed Project between the existing Marine Station and 190th Street." In addition, construction of the Trench Option is estimated to take two years longer than the construction of the Proposed Project. These statements should be included in the Executive Summary. 126-25

3.2-7.3 – Boldface the last phrase of the section, "would not result in a cumulatively significant impact to land use and planning during construction or operation." 126-26

3.3-4.3.2 – Define or spell out the abbreviation "KOPs" in first sentence. 126-27

3.4-4.1.1 – Note in the Executive Summary that only the construction of the Trench Option would result in a significant and unavoidable Air Quality impact related to air quality violations and AQMP consistency, even after incorporating mitigation measures. All other options would have less than a significant impact at nearby sensitive receptor locations. 126-28

3.6-4.1.1 - Note in the Executive Summary that the Proposed Project, Trench Option, and Hawthorne Option would have significant and unavoidable Construction Noise impact. 126-29

3.6-4.1.2 – Note in the Executive Summary that the Proposed Project would have a significant and unavoidable impact for light rail and for combined freight and light rail noise, a less than significant impact for ancillary facilities, and no impact for the parking facility. The Trench and Hawthorne Blvd. options would have a less than significant noise impact with mitigation. 126-30

3.6-4.3.1 – Note in the Executive Summary that the Proposed Project would have a significant and unavoidable impact related to vibration damage and vibration annoyance during construction. The Trench and Hawthorne Blvd. Options would have less than significant impact with mitigation related to damage and a significant and unavoidable impact related to annoyance. 126-31

4.4-2 High-Frequency Bus Alternative - Two important distinctions between the HFB and all rail alternatives are projected ridership and cost, neither of which is considered an environmental impact under CEQA. The Locally Preferred Alternative decision must also consider cost, ridership, implementation timeframes, and funding sources and availability. 126-32

Table 4.5-1 – What do the initials LTSM, LTS, SUI mean? They should be spelled out in a note on the table. 126-33

4.5-1.1.2 – The Executive Summary should note that, “The No Project Alternative includes minor roadway changes proposed in the 2020-2045 SCAG RTP/SCS, but there would not be a notable change in operating conditions on roadways.” 126-34

The DEIR also states that the No Project Alternative could create a conflict with programs and plans addressing the circulation system since the Proposed Project is included within Metro’s LRTP, programmed through Measure M, as well as within the City of Redondo Beach General Plan Circulation Element and the 2020-2045 SCAG RTP/SCS. The No Project Alternative, during operation, would be inconsistent with the transportation and applicable air quality plans, reduction in GHG emissions, VMT reduction, and energy consumption by private automobile trips. 126-35

The DEIR Executive Summary should note that Responsible Agencies would need to mitigate the No Project Alternative inconsistency with their plans and programs. For the No Project Alternative to have operational impacts that are less than significant with mitigation, the agencies would need to eliminate the project and adopt offsetting measures in their plans and programs.

RE: Metro C Line (Green) Extension to Torrance Project - Draft Environmental Impact Report (DEIR)
SCH# 2021010269
GTS# 07-LA-2021-04159
Vic. LA-405 PM 18.20 to 17.60
LA-107 PM 04.80 to 03.79
LA-107 PM 3.715

Dear Georgian Sheridan:

Thank you for including the California Department of Transportation (Caltrans) in the environmental review process for the above referenced project. Metro proposes to implement a light rail transit Project that would extend the C Line (Green) from the existing Redondo Beach (Marine) Station to the Torrance Transit Center. The Draft EIR evaluates:

a) The Proposed Project, which would be an elevated/at-grade alignment within the existing Metro-owned right-of-way (ROW) for the entire 4.5-mile length,

b) A Trench Option, which travels along the Metro ROW with the light rail located within a below grade trench, and

c) The Hawthorne Option, with the light rail in an elevated configuration traveling parallel to the I-405 Freeway and within the median of Hawthorne Boulevard.

127-1

The nearest State facilities to the proposed project are SR 107 and I-405. After reviewing the DEIR, Caltrans has the following comments:

127-2

Caltrans supports the Project as it provides a valuable extension to regional transit network, creating invaluable opportunities and choices for people to reach their destinations in the mode that best meets their needs. Projects of this nature, that create high quality transportation alternatives for local and inter-regional trips, can help California meet its State-level policy goals

127-3

Submission 127

to reduce the number of trips made by driving, improve air quality, and encourage alternative modes of travel. Caltrans' Strategic Management Plan has set targets to improve trips made by bicycle, walking, and public transit, as well as achieving a reduction in statewide, per capita, vehicle miles traveled (VMT). Similar goals are embedded in the California Transportation Plan 2050 and Southern California Association of Governments' (SCAG) Connect SoCal 2024 Regional Transportation Plan/Sustainable Communities Strategy. Statewide legislation such as AB 32 and SB 375, as well as Executive Order S-3-05 and N-19-19, echo the need to pursue more sustainable development. Projects, like the one proposed, can help California meet these goals. 127-3

As stated in Table 2.6-1 on Page 2-58 of the DEIR, encroachment permit approvals will be required for any work on Caltrans ROW. This could include segments of I-405, SR 107, or bridges that cross State facilities depending on the final chosen alignment.

- The **Proposed Project** and the **Trench Option** will both require coordination, approvals, and permits for any segments that cross Caltrans ROW.

- The **Hawthorne Option** runs directly within or along State right-of-way. Due to the extensive length and scope of work within State ROW for this option, the project will require extensive collaboration with Caltrans staff for various permits and design approvals. These reviews, approvals, and encroachment permits will be conducted at the time of permit application so that all concerns can be adequately addressed. 127-4

Regardless of which option will be defined as the Proposed Project, all current design standards and access management concerns must be addressed and Metro would be fully responsible for all mitigation. Caltrans is not responsible for any fair-share contribution to the improvements.

Finally, Caltrans concurs that the Proposed Project alignment would meet the Project's stated objectives by reducing VMT and Greenhouse Gas (GHG) emissions, while providing a critical link in the high-capacity regional transit system. If all appropriate permits and approvals are obtained through the Office of Permits, Caltrans does not anticipate any transportation safety impacts to State facilities as a result of the Proposed Project alignment. 127-5

If you have any questions, please contact project coordinator Anthony Higgins, at anthony.higgins@dot.ca.gov and refer to GTS# 07-LA-2021-04159.

Sincerely,

Miya Edmonson

To: GreenlineExtension
Subject: I Support the Metro Board's Proposed Project Option for the C-Line Extension
Attachments: I Support the Metro Board's Proposed Project Option for the C-Line Extension_Downtown Torrance resident (2).pdf

Dear Metro Board,

Thank you for the opportunity to comment on the Metro's C-Line Extension. I'm a resident of Downtown Torrance, and I'm writing to **express support for the C-Line Extension that utilizes the existing railroad right of way (ROW) between the Marine Station in Redondo Beach to the Mary Giordano Regional Transit Center in Torrance, also known as the Proposed Project.** 128-1

As evidenced by the Board's Draft Environmental Impact Review (EIR), the Proposed Project that utilizes the ROW is the least impactful to Torrance residents, businesses, and current and future surface street traffic. It is also the least costly option that also provides the fastest pathway to starting construction. The Proposed Project has the best chance of being completed in time for the 2028 Olympics, which, with a robust and well connected Metro system, can be an economic and cultural boon for Torrance's economy. Lastly, the Proposed Project will connect the two transit centers that have already been built in the Cities of Redondo and Torrance–transit centers that were built for the purpose of connecting to the Metro line expansion. 128-2

I am opposed to the option of extending the C-Line along Hawthorne Boulevard. This option requires elevation, causing significant disturbance and devastation to neighborhoods and businesses along that popular corridor. Furthermore, the option requires the Metro Board using eminent domain, which is unnecessary considering the Board has the rights of way for the Proposed Project. Locating light rail on Hawthorne Boulevard, whether elevated or at grade, would negatively impact Torrance residents and would be devastating to Torrance commercial properties that line Hawthorne Boulevard. 128-3

The Torrance Transit team estimates that the majority of riders on the new C-Line Expansion will travel in and out of Torrance, with projected daily trips of up to 16,000! I hope that the City's significant ridership contribution will contribute heavily in your decision to support the Proposed Project–the same position unanimously approved by the Torrance City Council. 128-4

Thank you for the opportunity to share my position. I appreciate all the hard work the Metro employees do every day.

Best regards,
Isabel (Douvan) Schwartz

Planting a Church Without Losing Your Soul: Nine Questions for the Spiritually Formed Pastor

Submission 129

March 22, 2023

Georgia Sheridan
Project Manager, Metro
One Gateway Plaza, MS 99-22-3
Los Angeles, CA 90012

Re: Comments C Line Green Line Extension Draft Environmental Impact Report

Dear Ms. Sheridan,

I am writing to comment on the Green Line Extension Draft Environmental Impact Report (DEIR). For nearly 20 years, I have served as the lead pastor for Life Covenant Church located at 308 Maple Avenue. It has come to my attention that the project described in the DEIR is proposed to pass directly adjacent to the church property. I would like to express some concerns about the analysis in the DEIR and potential significant impacts the project could create for the sensitive receptors at my church. Included in my concerns are suggestions for mitigations that might lessen some of these significant impacts to a less than significant level. 129-1

Concerns about Insufficient Analysis/ Recommendations for Mitigations to Significant Impacts:

- **Insufficient Analysis and Need for Mitigations of Hazardous Materials** – a Phase I identified land adjacent to our church as a site of concern. However, a Phase II needs to be conducted to complete the identification of contaminated soil, groundwater and what would be released during any soil vapor extraction and other construction activities and ongoing operations. Additionally, our church is not listed in your inventory of sites with sensitive receptors. Other churches have been included in that list but ours is not one of them. The extent of the contamination that exists near and adjacent to our church needs to be known and mitigation cleaning up that contamination needs to be precise and articulated to ensure that the sensitive receptors at our location are not exposed to significant amounts of contamination both during construction and operations of the proposed project. All alternatives being considered include excavation of soil near and adjacent to our church site. So this is especially important and must be adequately analyzed and mitigated. 129-2
- **Insufficient Analysis and Need for Mitigations of Geology and Soils** – Any planned geotechnical site-investigation for the proposed project must include the stipulation that our church site be considered specifically and must be protected against any potential flooding, erosion, instability or subsidence created by the construction and/or operations of the project. This becomes especially important given that the proposed project design includes expansion of the existing bridge located along Del Amo Boulevard near the intersection of Maple Avenue and Del Amo Boulevard. This intersection is the precise location of our church and we need mitigations that ensure a 129-3

design that protects our property during both general construction and operation of the proposed project but more specifically during changes made to the existing bridge. We do not want to experience significant negative impacts from flooding and/or other geological and/or soils problems as a result of the project. Please include adequate analysis of these potential project impacts as well as mitigations that specify the design be done in a fashion to avoid such impacts.

129-3

- **Insufficient Analysis and Need for Mitigations of Public Services** – Because we are directly adjacent to the tracks, your DEIR needs to analyze the emergency response that would be conducted in the event of catastrophic events such as, but not limited to, derailment, fires, and earthquakes. Table 3.15-1 lists the relevant regulations that would currently dictate emergency responses for construction and operations of the proposed project. The lack of specific actions or potential dangers that would require public services shows the inadequacy of analysis in the DEIR. This list in the table is largely policies and goals that are so general that there would be no accountability to the inaction of public services in the event of a catastrophic event. We need to know specifically what would be done as an emergency response in a myriad of potential catastrophic event scenarios. Without analysis of what potential events could cause significant negative impacts to our church property and congregants, there is no way to adequately list the detailed mitigations necessary for such potential events. Relying on existing public services when you are adding greater potential for negative significant impacts in this area is not sufficient mitigation. More public services must be identified and included in the operational budget of the project in order to properly mitigate potentially significant negatives impacts in this area in the event of an emergency.

129-4

- **Insufficient Analysis and Need for Mitigations of Safety and/or Security –** A specific plan needs to be put in place that articulates how the at grade rail will be secured both for the protection of those who might inadvertently traverse the rail itself and so that it is not used as a means of nontraditional pedestrian travel. In other words, it is our hope that the line would be secure so that pedestrians would not be able to walk up and down off and on the tracks with special attention given to possible access from the bridge area.

129-5

- **Insufficient Analysis and Mitigations of Noise –** The threshold for ambient noise needs to be when no trains are running since this is the noise condition for the majority of the day and night. Freight trains typically only travel once or twice a day. So, you should not be using the noise created at the time of the freight passing as the noise threshold. This creates a false conclusion of no significant increases in negative noise impacts. Further, designs for the proposed project need to include a landscape buffer, rails and connectors that reduce sound, quieter signals especially at crossings within a half mile or less and sound proofing materials used in the area around the bridge to prevent sound from bouncing off. Finally, our church has regularly scheduled services and events on Sunday mornings and Wednesday evenings. So, we request a mitigation that no

129-6

construction be conducted during the hours of 7am to 1pm on Sundays and 5:30pm to 9pm on Wednesdays.

- **Insufficient Analysis and Mitigations of Air Quality –** All construction plans within a ½ mile or less of our church location must include no idling of construction vehicles us during construction (and operational vehicles during operations). Any exclusion of such a mandate will create a significant negative air quality impact for the sensitive receptors at the church which will not be sufficiently mitigated.
- **Insufficient Analysis and Mitigations of Vibrations –** As mentioned with the noise impact concerns, rails and connectors that reduce sound should also be used to reduce vibrations both during construction and operations of the proposed project.

129-6

129-7

129-8

129-9

Life Covenant Church supports the proposed project only if it is properly analyzed and developed with appropriate mitigations during construction and operations to protect our people and our property. Please contact me if you have any questions, at tim@life-covenant.com.

Sincerely,

Tim Morey
Lead Pastor, Life Covenant Church

RE: Metro C Line Extension to Torrance Project Draft Environmental Impact Report Comments

Dear Ms. Sheridan:

On behalf of the City of Redondo Beach, California, please accept this letter as the City's official comment letter regarding the Metro C Line (Green) Extension to Torrance Project Draft Environmental Impact Report (DEIR). The City respectfully submits these comments to you, as the Metro representative accepting the DEIR comments for the project, for consideration as Metro prepares the Final EIR for this project and considers alternative alignments.

As noted in the City's May 17, 2022 letter to LA County Supervisors Mitchell and Hahn, a copy of which was sent to the LA County Metro Board, the City Council expresses unified support of an elevated Hawthorne Boulevard alignment (Hawthorne Elevated Option) for the Metro C Line (Green) Extension to Torrance Project, which would run along the historic Red Car route. The City of Redondo Beach continues to urge the LA County Metro Board not to gravitate to the Metro ROW alignment options. As we detail below, the Hawthorne Elevated Option is the most equitable, environmentally sound and the only option that promises to connect residents of Central Los Angeles County with the economic powerhouse coming to Redondo Beach along Hawthorne Blvd. 130-1

I. Hawthorne Elevated Option is superior to the ROW Options (At-Grade and Trenched) in all regards except cost, which should not drive monumental generational investments.

As part of its decision-making process, Metro studied through the DEIR three potential alignments–the Metro railroad right-of-way (ROW) At-Grade Option, the Metro ROW Trenched, and the Hawthorne Elevated Option.

As a preliminary matter, we want you to know that L Catterton (the real-estate arm of LVMH) is in the process of investing nearly half a billion dollars in a mixed retail, 300- 130-2

unit inclusionary apartment units, office space, and a 150-room hotel at the same intersection that would serve as the Redondo Beach stop for the Hawthorne Elevated Option. Between the mall and other uses, L Catterton projects about 750 new, permanent jobs to come to the site. Only the Hawthorne Elevated Option would deliver residents from the Willowbrook/Rosa Park station to all of the economic, family and medical centers along Hawthorne Blvd. by delivering them to its intersection with Artesia Blvd. The two ROW Options would deliver these residents to a residential neighborhood. If Metro does not seize this monumental, once-in-a-generation opportunity to send the C Line down the most utile path, the C Line could be destined to demise for nonuse.

130-2

If located along the Hawthorne Elevated Option, the C Line would also deliver residents from Redondo Beach, Lawndale, Torrance and Hawthorne conveniently to the Crenshaw/LAX Transit Project. If, however, the C Line is extended into our residential neighborhood along the ROW, the C Line would not serve as a central hub to move the masses efficiently to LAX. It would be a pity for government to have spent hundreds of millions of dollars improving LAX and installing a people mover, only to build a C Line extension that does not maximize ridership.

130-3

The City of Redondo Beach is united behind Hawthorne Elevated Option since it addresses many of our residents' concerns regarding noise, vibration, resident/child safety, and other factors, as well as having an expeditious, speedy route to the Torrance Transit center which would likely bolster its usership at a time of Metro ridership decline. The Hawthorne Elevated Option along Hawthorne Boulevard would also revitalize local businesses through higher visibility and the creation of a vibrant destination for riders.

II. <u>The City is united behind the Hawthorne Elevated Option and against the ROW Options.</u>

We are very concerned for our mixed-income senior residents at the Breakwater Village. Breakwater Village was built along the Metro ROW in the early 2000's. It boasts 191 units covenanted for seniors. It includes 20 affordable units, including Section 8 housing. The same is true for the mixed-income residents of the Ruxton Place and Ruxton Ridge, that are home to 27 and 28 units, respectively.

130-4

Shell's drilling on the Metro ROW created a sinkhole in close proximity to these sites, and even caused a sinkhole on the Ruxton property. For over a year that sinkhole was fenced off; where residents of the affordable units there did not have regular access to their front doors because the conditions. The land subsidence that occurred at the Ruxton Place is merely symptomatic of the potential, serious hazards that could arise from heavy machinery and construction on the ROW so close to pre-existing, heavy residential developments. To date, Metro has not articulated confidence that the geology on the ROW would permit the C Line to be extended with no damaging effect on the dense residential developments adjacent to the ROW.

The DEIR has concluded that the ROW options will have significant unavoidable noise impacts for the ongoing operations at those alignments. As well, construction of either ROW Options will have significant unavoidable impacts on residents related to both noise and vibration. Based on the multi-year timeline needed to build the light rail within feet of where many of these neighboring residents sleep nightly, the negative impact that this will have on so many lives, including our seniors', simply cannot be understated. 130-5

Below are the comments specific to the DEIR studies. With the concerns to the impacts to the quality of life and safety/security of more than 1000 residential households along the ROW Options, the City implores that Metro **not** move forward with either of the ROW Options.

III. Additional DEIR Comments.

Attached are comments from the Redondo Beach Planning Commission, the Redondo Beach Public Works & Sustainability Commission, and the public received by City Council in discussing the DEIR. The Redondo Beach City Council requests that Metro accept these as official comments to be addressed in the DEIR process. Below are additional official comments of the City of Redondo Beach.

Emergency Response Services:

- Metro should not consider the ROW At-Grade option. Life threatening delays could occur at the at-grade crossing at 182nd Street due to frequency of the light rail service stopping traffic and emergency response capabilities. In addition to police and fire, McCormick private ambulance service is located on and travels along 182nd Street regularly—this is a major corridor. The ROW At-Grade Option traffic stoppage will cause delays. The ability to get across tracks in a timely manner is critical for these life safety services. 130-6

- Regarding public services and emergency responders, the DEIR does not go deep enough to address deployment practices and the impacts of these delays.

Geology/Soils:

- The Draft EIR identifies less than significant issues with subsidence and settlement that may be in conflict with other known reports. As noted above, Shell's drilling on the Metro ROW created a sinkhole in close proximity to these sites, and even caused a sinkhole on the Ruxton property. As well, there was a prior undocumented ROW sinkhole near 190th Street.

  The DEIR Section 3.8-2.1 notes that the DEIR reviewed published maps, professional publications, and technical reports pertaining to the geology, soils, and seismicity of the RSA. Significant impact would include exposing people or structures to adverse effects, including the risk of loss, injury or death, as well as when a geological unit or soil would become unstable as a result of the project and potentially result in on or off-site subsidence or collapse. The DEIR needs to 130-7

review the studies of soils in the immediate area, including the sinkhole in the vicinity of the Ruxton housing development, to ensure that the conditions and potential mitigation is adequate. This includes the study conducted by Ninyo & Moore on behalf of the Shell Pipeline Co. and the Galleria DEIR.

- There is a concern with safety with 3 sets of tracks over pipelines where there are unstable soils (including clay soils) along the ROW alignments. There are seemingly unrepairable unstable soils evidenced by a sinkhole in the area, including adjacent to the alignment and spread onto property of Ruxton Place. Evaluation needs to be done to determine where the pipelines are located throughout the corridor. 130-7

- The Hawthorne Elevated Option has the opportunity for engineering over more stable soils where Red Car had been routed for several decades. This is the preferred option to address geology and soils impacts. 130-8

At-Grade Crossing:

- Page 3.1-23 of the DEIR did not include the impacts to 182nd Street traffic. 182nd Street should be considered a major arterial since there are approvals for improvements to Galleria site and the new Transit Center has just been completed in the vicinity. The DEIR should include evaluating impacts of the additional possible high-density residential development per the Redondo Beach Housing Element sites inventory and the cumulative impacts of the ROW alignments with the increased traffic from these developments. 130-9

- Page 3.1-45 of the DEIR regarding roadways relies on the municipalities to implement measures to deter cut through traffic when 182nd Street is experiencing traffic stoppage due to the ROW at Grade option. The DEIR is undercounting cut through traffic impacts on arterials. This needs to be addressed. 130-10

- The DEIR claims no impact on bicycle safety, yet riding bicycles across rail tracks is a hazard due to tire size and uneven surfaces. At this point there is only one set of tracks to cross at 182nd Street, but the proposed ROW at-grade option would have two additional sets of tracks, compounding the safety hazard. This safety hazard needs to be addressed. 130-11

- Was there sufficient analysis of transportation impacts on Inglewood and 182nd Street as a result of the frequency of trains and resulting restriction of traffic in ROW At-Grade Option? 130-12

Noise and Vibration

- On Table 3.6-11 no ambient noise measurement was taken south of Artesia Boulevard on Ruxton Avenue and other adjacent residential roadways or south of 182nd Street on Firmona Avenue, Fisk Lane, Fisk Court, or Spreckles Court. 130-13

There are numerous residential properties in these areas. Ambient noise measurements need to be taken to accurately reflect the impacts. 130-13

- The significant unavoidable impacts of the ROW Options regarding noise will be in perpetuity for operations. Metro should not move forward with those Options. And even the Trench Option would only be LTSM if other agencies take action for Quiet Zone, relying on other agencies to do the mitigation. This doesn't guarantee that there will not be continued noise just because the Quiet Zone designation is made. The City does not believe the benefits of these ROW Options outweigh the significant unavoidable impacts. 130-14

- Noise and vibration metrics make no reference to the noise standards in residential districts per the Redondo Beach Municipal Code. The DEIR needs to respect the local municipalities' regulations.

    - For the Proposed Project (ROW At-Grade) and the Trench Option, the projected noise levels are in excess of City's noise ordinance during construction and during operation (RBMC 4-24.301)
    - For the Proposed Project (ROW At-Grade) and the Trench Option, the projected noise levels during operation occur prior to 7 AM and after 10 PM and so are in violation of City's noise ordinance (RBMC 4-24.301, 4-24.503) 130-15
    - For the Proposed Project (ROW At-Grade) and the Trench Option, the projected vibration levels listed to have significant impact violates City ordinance (RBMC 4-24.504)

- Considering there are already vibration impacts as a result of the existing freight operations, are the proposed mitigation measures for ROW options proven sufficient for the lifetime of the project? 130-16

- The DEIR utilized the FTA General Assessment method to evaluate the Vibration impacts, deferring a Detailed Assessment once final alternative and option is selected. However, if that Detailed Assessment detects Vibration impacts that are significant and cannot be mitigated to a less than significant level, it is unclear if the DEIR would need to be recirculated with this updated information and if another option would be considered after that Detailed Assessment. 130-17

Air Quality

- For the Trench Option, air quality risk is listed as significant and unavoidable. 130-18
- Particulate matter along the ROW will most certainly bring the air quality to an unlivable standard. In the case of this project, the reference to "temporary" means 5 years beginning with 101 dump trucks for 18 months and then subsequently, up to 40 pieces of heavy equipment continually disturbing the dirt and creating particulate matter, which will cause health problems at such a close proximity to human lives. 130-19

Safety

- For the Proposed Project (ROW At-Grade) and the Trench Option, the City did not observe adequate discussion of safety issues related to brittle buried pipelines in the right of way. 130-20

- The City did not observe adequate discussion of safety issues related to derailment. Information needs to be provided to address the hazardous materials carried on the freight rail, if there are any issues with moving that closer to residences than it currently is, and impacts if a derailment were to occur. 130-21

- Pipeline locations are not shown on the cross section drawings or in the materials. Impacts should be considered for both construction and operation if there are issues with the pipelines (i.e., leaks, repairs, etc.). 130-22

Biological

- The DEIR notes no wildlife impact, yet there have been observed nesting owls and hawks in the El Nido Park and cemetery vicinity. 130-23

- For the ROW At-Grade Option and the Trench Option, significant substantial adverse effects are projected either directly or through habitat modifications on local wildlife. Metro should provide better mitigation requirements to protect local wildlife. 130-24

Transportation

- Metro should provide First / Last Mile improvements to the scope of the project. 130-25

- Metro should elaborate on bus connectivity from the proposed Hawthorne Light Rail Station to the new Redondo Beach Transit Center. Explore partnership with South Bay Social District (SBSD - formerly South Bay Galleria) to make connection. 130-26

- Provide some discussion of dedicated connectivity from the proposed C Line extension to the Del Amo Mall. 130-27

- Discuss parking options for Hawthorne Light Rail Station and explore partnership with SBSD. 130-28

Other Issues

- Concerns have been raised by residents regarding incorrect figures and diagrams. Any information needing correction needs to be reviewed to see if those corrections show additional impacts. 130-29

- The “No Project Alternative” shows significant unavoidable impacts in many categories. Where is the significant data to support this? 130-30

- The Hawthorne Elevated Option is most environmentally sound option and should be the option pursued if Metro is going to build the project. The Hawthorne Elevated Option is the option that does not directly impact adjacent residential uses. 130-31

- There may be concerns of the north section and south section of the Hawthorne Elevated Option impacting businesses. Modifications to those sections of the proposed route could be made and evaluated to address those concerns and minimize disruption to commercial uses. Those should be studied if the impacts to businesses would otherwise deter Metro from considering the Hawthorne Elevated Option. 130-32

- There is no level of service data or analysis. The DEIR mentions in the Land Use section that this is consistent with the local General Plans. However, the Redondo Beach Circulation Element requires this level of service analysis. 130-33

- The ridership study should be included as a part of the DEIR since “improving mobility within the South Bay and encourage mode shift” is objective of project. 130-34

- In the absence of selection of a light rail option, or if the no build option is selected, discuss how funds will remain invested into South Bay transit needs. 130-35

- If the ROW Options are not selected, has there been any analysis of how this area could be utilized for alternative forms of transportation, such as bike lanes and for pedestrians. 130-36

- How much money is BNSF investing annually to maintaining the train tracks on the ROW? (Norfolk Southern) 130-37

- What will be done to protect residents in the South Bay from second hand smoke from Fentanyl, meth, etc consumption on the Metro, irrespective of the path it goes? 130-38

- What is metro doing to prevent and reduce the crimes, including violent and sexual crimes, that it exports to communities on its mass transit? https://www.dailynews.com/2023/02/24/crime-skyrockets-on-la-metro-system-including-a-jump-in-drug-deaths/ 130-39

- Why doesn't moving the freight rail closer to Redondo Beach residents, without slowing down the speed of the train to 5mph or below, violate section 10.10 of our General Plan? 130-40

- How does the operation of a metro light rail for 20 hours (verify # of hours) in a day comply with Redondo Beach General Plan Policy 10.10.1, regarding the 130-41

City's operational restrictions during the early morning and late evening hours to reduce adverse noise impacts in residential areas and other noise sensitive areas? 130-41

- What will Metro be doing to protect people's indoor / outdoor cats from being struck by the Metro light rails on the ROW? 130-42

- How does the movement of the heavy freight rail closer to the high-density residential, without reducing its speed to 5 mph in Redondo Beach, comply with RBMC Section 4-24.504, which precludes the operation of any device which creates vibration which is above the vibration perception threshold of an individual at or beyond the property boundary of the source if on private property, or at 150 feet (forty-six (46) meters) from the source if on a public space or public right-of-way? 130-43

- Lighting impacts studied were primarily focused on construction lighting impacts. However, the study doesn't address the lighting on the trains themselves, along the tracks, at intersections/crossings, etc. related to the operations of the light rail. This needs to be evaluated to ensure that proper mitigation is in place. 130-44

IV. Consideration of Other Alternatives Studied in the DEIR – High Frequency Bus Alternative.

If Metro is considering pursuing one of the other Alternatives (other than the three Options), the City of Redondo Beach recommends consideration of the High Frequency Bus (HFB) Alternative. The DEIR acknowledges the HFB Alternative as the environmentally superior alternative, as it would avoid or reduce all impacts to a less than significant level. Although this alternative would not necessarily realize the same level of benefits or fully meet the objectives of the options, it would provide a mass transit service similar to light rail at what is expected to be a fraction of the cost.

The review of the HFB Alternative should be comparable in service to the options. The DEIR noted that the HFB Alternative would take 25 minutes to traverse the same 4.5-mile corridor, compared to 7 minutes for the light rail options; however, the HFB Alternative added several additional stops. To accurately compare the alternatives, the HFB Alternative should have the same bus stop frequency—only adding two stops total in Redondo Beach at the Galleria and in Torrance at the Torrance Transit Center Station. 130-45

If Metro decides to pursue one of the less costly Alternatives rather than the light rail Options, the funding that had been set aside that would no longer be used for this particular project needs to be redirected to improve transit in the South Bay area.

These comments have been reviewed and approved by the Redondo Beach City Council at their March 21, 2023 public meeting. If Metro has any questions regarding this comment letter, please contact Brandy Forbes, Community Development Director for the City of Redondo Beach at 310-318-0637 x2200 or brandy.forbes@redondo.org. Thank you for your consideration of our comments.

Sincerely,

Mayor William Brand

Recommendations to City Council for Comments
Metro C Line Extension Draft Environmental Impact Report
February 16, 2023

EMERGENCY RESPONSE SERVICES

1. Metro should not consider the ROW at-grade option. Life threatening delays could occur at the at-grade crossing at 182nd Street due to frequency of the light rail service stopping traffic and emergency response capabilities. In addition to police and fire, McCormick private ambulance service is located on and travels along 182nd Street regularly—this is a major corridor. ROW at-grade traffic stoppage will cause delays. The ability to get across tracks in a timely manner is critical for these life safety services. 130-46

2. Regarding public services and emergency responders, the DEIR does not go deep enough to address deployment practices and the impacts of these delays. 130-47

3. The Planning Commission recommends that the City Council has for review fire and police data and ambulance frequency to see how much these services use the crossing intersections (182nd Street) by their March 21, 2023 meeting.

SOILS

4. There is a concern with safety with 3 sets of tracks over pipelines where there are unstable soils (including clay soils) along the ROW alignments. There are seemingly unrepairable unstable soils evidenced by a sinkhole in the area, including adjacent to the alignment and spread onto property of Ruxton Place. 130-48

5. The raised elevation route down Hawthorne has the opportunity for engineering over more stable soils where Red Car had been routed for several decades. 130-49

AT GRADE CROSSING

6. Page 3.1-23 of the DEIR did not include in the materials the impacts to 182nd Street traffic. 182nd Street should be considered a major arterial since there are approvals for improvements to Galleria site and the new Transit Center has just been completed in the vicinity. The DEIR should include evaluating impacts of the additional possible high-density residential development per the Redondo Beach Housing Element sites inventory and the cumulative impacts of the ROW alignments with the increased traffic from these developments. 130-50

7. Page 3.1-45 of the DEIR regarding roadways relies on the municipalities to implement measures to deter cut through traffic when 182nd Street is experiencing traffic stoppage due to the ROW at Grade option. The DEIR is undercounting cut through traffic impacts on arterials. 130-51

8. The DEIR claims no impact on bicycle safety, yet riding bicycles across rail tracks is a hazard due to tire size and uneven surfaces. At this point there is only one set of tracks to cross at 182nd Street, but the proposed ROW at-grade option would have two additional sets of tracks, compounding the safety hazard. 130-52

9. Was there sufficient analysis of transportation impacts on Inglewood and 182nd Street as a result of the frequency of trains and resulting restriction of traffic in ROW at-grade option? 130-53

NOISE AND VIBRATION

10. The significant unavoidable impacts of ROW options regarding noise will be in perpetuity for operations. Metro should not move forward with those options. And even the Trench Option would only be LTSM if other agencies take action for Quiet Zone, relying on other agencies to do the mitigation. The Planning Commission does not believe the benefits of these ROW project options outweigh the significant unavoidable impacts. 130-54

11. Noise and vibration metrics make no reference to the noise standards in residential districts per the Redondo Beach 130-55

Municipal Code. The DEIR needs to respect the local municipalities' regulations. 130-55

12. Considering there are already vibration impacts as a result of the existing freight operations, are the proposed mitigation measures for ROW options proven sufficient for the lifetime of the project? 130-56

OTHER COMMENTS

13. There is a concern about impacts to quality of life and safety/security of more than 1000 residential households along the ROW alignment options (see all categories above). 130-57

14. The "No Project Alternative" shows significant unavoidable impacts in many categories. Where is the significant data to support this? 130-58

15. The Hawthorne Option is most environmentally sound option and should be the option pursued if Metro is going to build the project. The Hawthorne Option is the option that does not directly impact adjacent residential uses. 130-59

16. There is no level of service data or analysis. The DEIR mentions in the Land Use section that this is consistent with the local General Plans. However, the Redondo Beach Circulation Element requires this level of service analysis. 130-60

17. The Planning Commission recommends that City Council look at what the mitigation measures are that are necessary to bring to LTSM to see if those measures are sufficient.

18. The ridership study should be included as a part of the DEIR since "improving mobility within the South Bay and encourage mode shift" is objective of project. 130-61

19. The DEIR notes no wildlife impact, yet there have been observed owls and hawks in the El Nido Park and cemetery vicinity. 130-62

TO: Brandy Forbes, Community Development Director

SUBJECT: RECOMMENDATIONS FOR COMMENTS ON METRO C LINE EXTENSION DRAFT ENVIRONMENTAL IMPACT REPORT

Per the request of City Council, the Public Works & Sustainability Commission reviewed the Metro C Line Extension Draft Environmental Impact Report (DEIR) and provided input on the DEIR during the February 27, 2023 Public Works & Sustainability Commission Meeting. Attached are the recommendations as approved by the Public Works & Sustainability Commission.

- Recommendations to City Council for Comments Metro C Line Extension Draft Environmental Impact Report February 27, 2023

City of Redondo Beach
Public Works & Sustainability Commission
Recommendations to City Council for Comments
Metro C Line Extension Draft Environmental Impact Report
February 27, 2023

1. The PWC prefers the Hawthorne option for the following reasons:
   A. Noise and Vibrations
      - For the Proposed Project (right of way at grade) and the Trench Option, the projected noise levels are in excess of City's noise ordinance during construction and during operation (RBMC 4-24.301)
      - For the Proposed Project (right of way at grade) and the Trench Option, the projected noise levels during operation occur prior to 7 AM and after 10 PM and so are in violation of City's noise ordinance (RBMC 4-24.301, 4-24.503)
      - For the Proposed Project (right of way at grade) and the Trench Option, the projected vibration levels listed to have significant impact violates City ordinance (RBMC 4-24.504)

130-63

   B. Geology
      - DEIR 3.8-3.12 Subsidence and settlement - The Draft EIR identifies less than significant issues with subsidence that may be in conflict with other known reports.

130-64

   C. Air quality
      - For the Trench Option, air quality risk is listed as significant and unavoidable.
   D. Safety
      - For the Proposed Project (right of way at grade) and the Trench Option, Commission did not observe adequate discussion of safety issues related to brittle buried pipelines in the right of way.

130-65

      - Commission did not observe adequate discussion of safety issues related to derailment.

130-66

   E. Biological
      - For the Hawthorne Option and the Trench Option, significant substantial adverse effects are projected either directly or through habitat modifications on local wildlife. Metro should provide better mitigation requirements to protect local wildlife.

130-67

   F. Transportation

- Metro should provide First / Last Mile improvements to the scope of the project.
- Metro should elaborate on bus connectivity from the proposed Hawthorne Light Rail Station to the to the new Redondo Beach Transit Center. Explore partnership with SBSD to make connection.
- Provide some discussion of dedicated connectivity from the proposed C Line extension to the Del Amo Mall.
- Discuss parking options for Hawthorne Light Rail Station and explore partnership with SBSD.

2. In the absence of selection of a light rail option, or if the no build option is selected, discuss how funds will remain invested into South Bay transit needs.

130-68

130-69

130-70

130-71

130-72

Submission 130

Comments from Holly Osborne

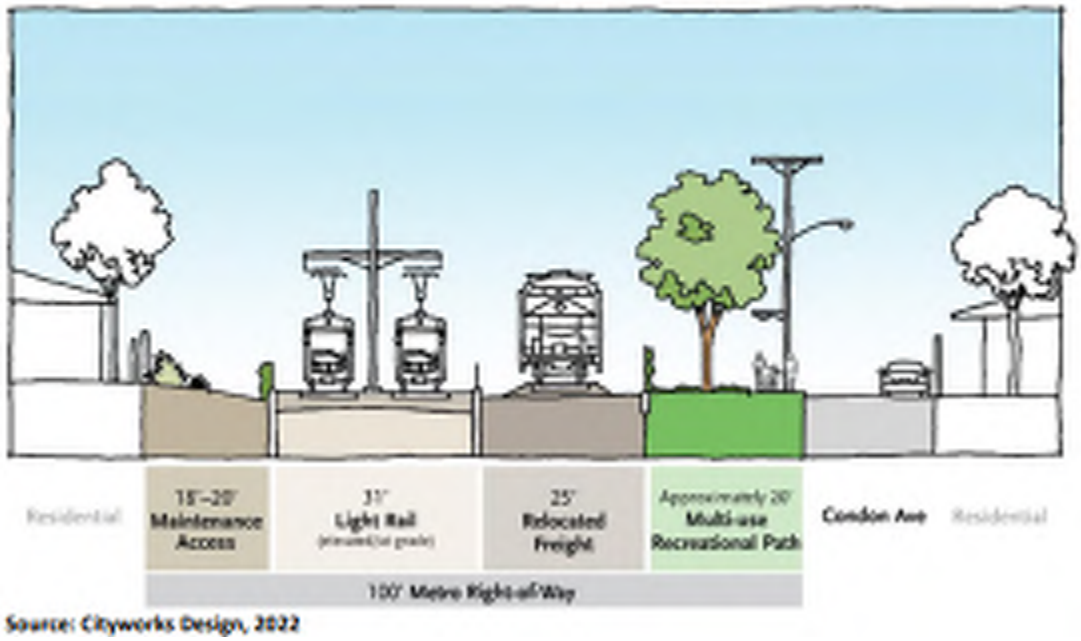
DEIR Areas of Concern: Width of ROW is inadequate for proposed project

Problem: The ROW is nominally 100 ft, but it narrows to 75 ft at 170th St. in Lawndale, and does not widen again until after crossing Artesia Blvd. The narrow width of the ROW of 75 ft is not compatible with **3 sets of train tracks** and **multiple pipelines**. Metro's diagrams sketching the transition of the ROW from 100 ft to 75 ft are incomplete, and imply that Metro will take properties, when Metro said repeatedly on the walks that they would not impact residential properties. 130-73

DEIR References: Fig. 2.3-4 page2-9; Fig. 2.3-5, page 2-10; Fig. 2.3-6, page 2-11.

Figure 2.3-4 shows the layout of the proposed project at 165th St. in Lawndale, where the ROW is nominally 100 ft wide.

Figure 2.3-4. Proposed Project – Looking South Between 165th Street and 170th Street



Source: Cityworks Design, 2022

130-74

1)The maintenance access is to get at the petroleum pipelines underneath.

2) The furthest pipeline is about 12 feet; for clearance one needs about a foot more than that, so about 13 ft of maintenance access is needed; so, an access region of 18-20 ft is good.

3) The ROW is supposed to be 100 ft; here they have 20+31+25+20 = 96 ft. (So, they are missing 4 ft. It is not indicated where the extra 4 ft is expected to be allocated.)

3a) Scenario 1: The freight train was at the center (which would have been at 50 ft from the **west** edge); according to the diagram it is now at 20+12.5=32.5 feet from west edge. **This would imply a 17.5 ft shift to the west**

3b) Scenario 2: The freight train was at the center (which would have been at 50 ft from the **east** edge); it is now at 20+31+12.5=63.5 feet from east edge. **This would imply a 13.5 ft shift to the west**

The DEIR says on page 2-12,

"Between Manhattan Beach Boulevard and 172nd Street, the existing freight track would be relocated to the west up to **14 feet** within the Metro ROW. In this segment, the freight trains would continue to cross streets at-grade as they do today."

130-74

(This is within the shift calculated above; so the text and figures are consistent, although more-so with Scenario 2)

4) The 20 ft. "path" is an illusion. (The bicycle path in North Redondo is 16 ft wide. Could it support a big tree like that, and cyclists, and some pedestrians?)

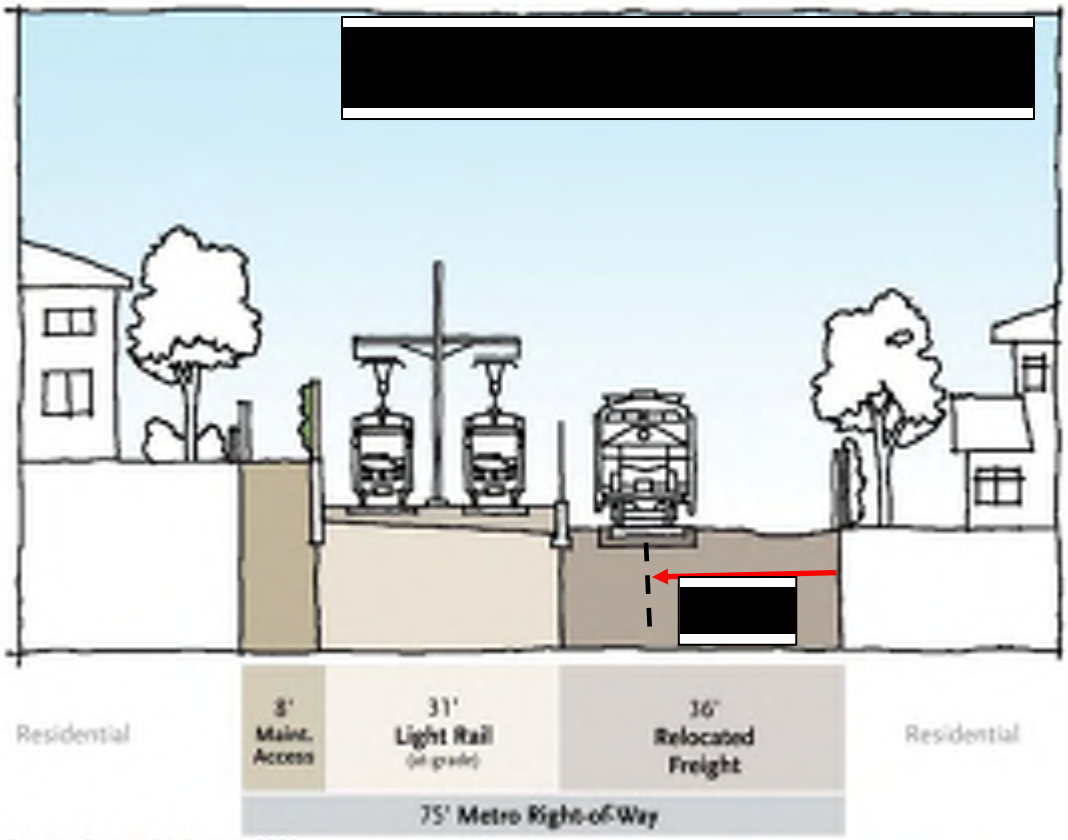
130-75

- - - ----

Next, consider the layout at 170th street, in Figure 2.3-5. We were told at the walks that the shift of the freight train track is now only 3 ft from center, to the west. That would make the distance **22** ft from the edge; so the 22 ft has been indicated on the diagram.

130-76

Figure 2.3-5. Proposed Project – Looking South Between 170th Street and Artesia Boulevard



Source: Cityworks Design, 2022
Dimensions and ROW boundaries are preliminary and subject to confirmation in future phases of design.

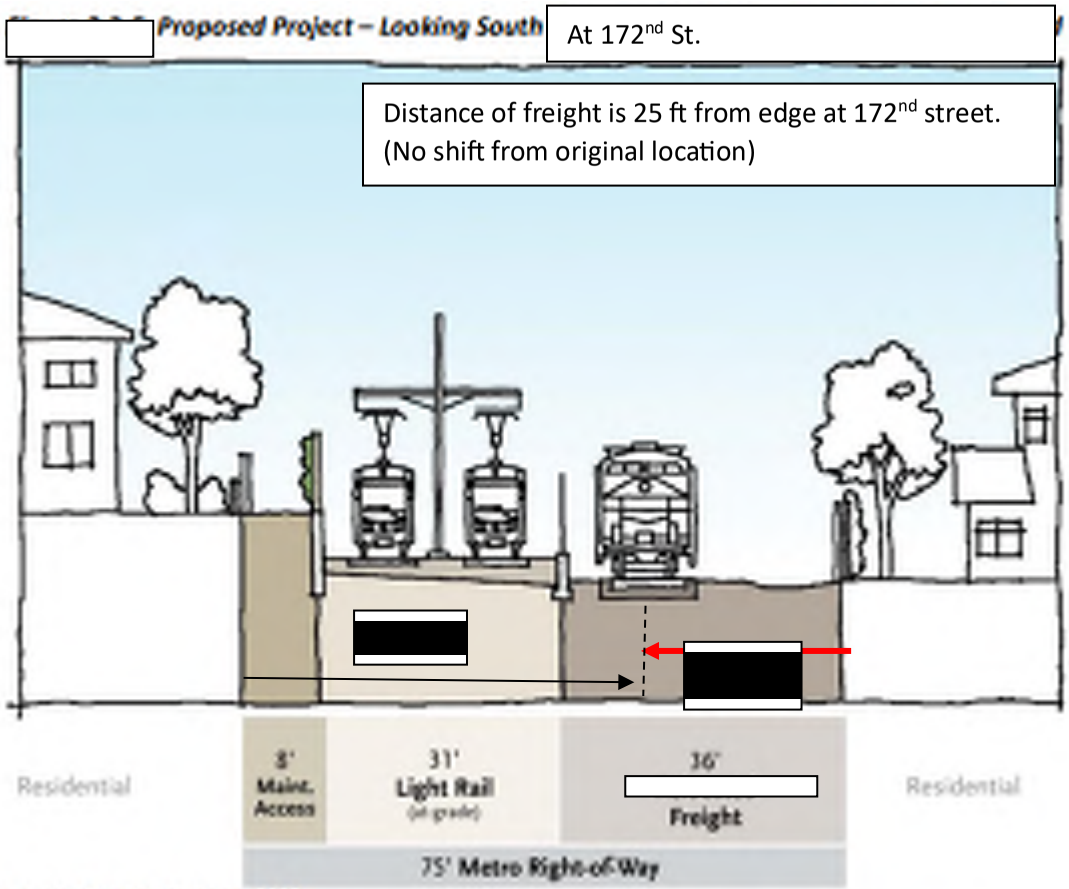
The Maintenance Access is now only 8 ft. I have measured the distance. The furthest pipes are 12 ft from the eastern wall. So, is Metro going to stack the pipes on top of each other, or what**? (See pipeline discussion following)**. Or are they going to take someone's property? (An earlier version of the diagram showed an 81 ft wide total ROW, with a 14 ft Maint. access in the August 2022 diagrams. They later realized they did NOT have 81 ft.)

Next, consider **the layout at 172nd street**, in an altered version of Figure 2.3-5.

According to the DEIR page 2-12: "Between 172nd Street and Artesia Boulevard, the freight track would remain in its current location."

I am repeating the diagram, but this time the freight train **has no shift**. It has to line up **with the bridge**. (*I am relabeling, but not rescaling the drawing. I do not have the software to do that.)*

That means the freight train is 25 ft from Western wall. If the freight train is back to where it was originally, does that means it is now closer to the light rail? Or does the light rail shift too, and result in even less maintenance access? See **separation requirements discussion**.



"

130-77

***Pipeline Discussion and Questions**: Reference: UTILITY ACCOMMODATION POLICY, BNSF Railway

Question for metro: Please address how the moved pipeline fits with the criteria in the reference, realizing that there are multiple pipelines:

https://www.bnsf.com/bnsf-resources/pdf/about-bnsf/utility.pdf

130-78

See page 2-3 of above reference. Pipelines:
i. Any pipeline installation paralleling BNSF property shall be within ten (10) feet of property line and a minimum of forty (40) feet from track.

ii.. If the pipeline is proposed to be located forty (40) feet or less from centerline of nearest track, the pipeline shall be encased in a steel pipe subject to approval from BNSF. No pipe may be placed closer than twenty-five (25) feet from centerline of any track. Pipe must be buried with a minimum cover of six (6) feet. If less than minimum depth is necessary because of existing utilities, water table, ordinance or similar reasons, the line shall be rerouted.
iii. Locations where it will be difficult to attain minimum depth due to wet or rocky terrain shall be avoided. Any location change from plan must be approved by BNSF.

130-78

***Separation Requirements Discussion:** **Reference:** "Shared-Use Corridors Survey of Current Practice and Recommendations for the Future"

Question for metro: Please address how the separation between the freight tracks fits with these guidelines.

https://onlinepubs.trb.org/onlinepubs/circulars/ec058/08_04_sela.pdf

Note that according to the above reference, page 309

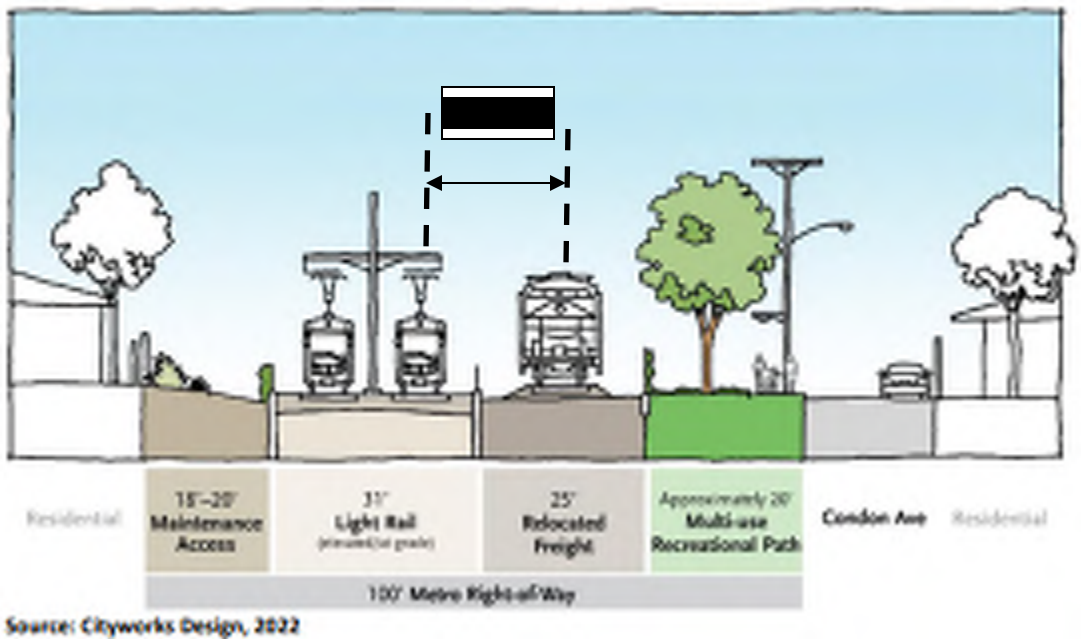
'Distance separation such as more than 25 ft between freight track and LRT track centerlines is normally desired by the FRA'

In the diagrams from Green Line presentations **in 2018, Metro was careful to always observe this 25 ft separation**. Now, it appears to be about 18 ft. Yes, the referenced document discusses that case, but is Metro relaxing safety requirements by operating the freight tracks and LRT tracks closer than the recommended 25 ft? **(Metro needs to address that**. **Is BNSF in agreement?**)

I have indicated what I think the separation is on the diagram in Figure 2.3-4 below: 18 ft. (It is definitely less than 25 ft, if this diagram is at all to scale; plus I was told the distance is 18 ft by one of the Metro engineer contractors.)

130-79

Figure 2.3-4. Proposed Project – Looking South Between 165th Street and 170th Street



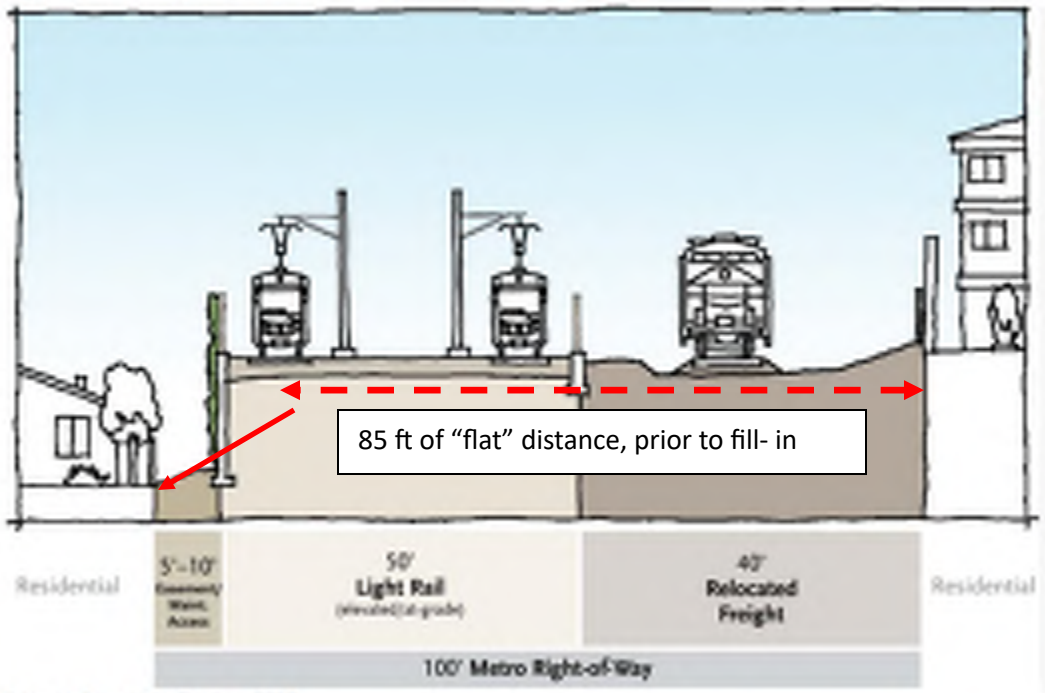
Source: Cityworks Design, 2022

Continuing on, South of Artesia.

Immediately south of Artesia, the ROW is still 75 ft, with the Great Room café on the West, and a Strip mall on the right. But I do not have a decent sketch to work with. (**Metro needs to provide a sketch** indicating the set-up of the proposed project **immediately** after crossing the Artesia bridge.)

Metro has provided a diagram for **further down** the ROW, near Breakwater Village. More questions are introduced. See Figure 2.3-6, below.

Figure 2.3-6. Proposed Project – Looking South of Artesia Boulevard



Source: Cityworks Design, 2022
Dimensions and ROW boundaries are preliminary and subject to confirmation in future phases of design.

Here are the questions:

1) Why does the light-rail set up look so different after crossing the bridge, than it did before the bridge. (See Figures 2.3-4, 2.3-5 and 2.3-6) What physically happened?
2) The actual "flat width" of the ROW here is currently about 85 ft as indicated by the red dashed arrow. Then there is a steep embankment down to the houses on the west, as indicated by the downward solid red arrow. (Those homeowners can currently access the ROW by climbing up the embankment.)

130-80

130-81

3) The left most LRT track would be "resting on air" without the fill dirt. Is the fill dirt described in the DEIR? (Where is it addressed?)
4) Notice how Meto has labeled the area in the home-owners backyard as "Easement/Maintenance access" So, **who is providing the "easement**?" Is Metro providing the homeowner with an easement, or is Metro "appropriating" the homeowner's backyard?
5) Metro needs to describe the height of the retaining wall.

130-82

130-83

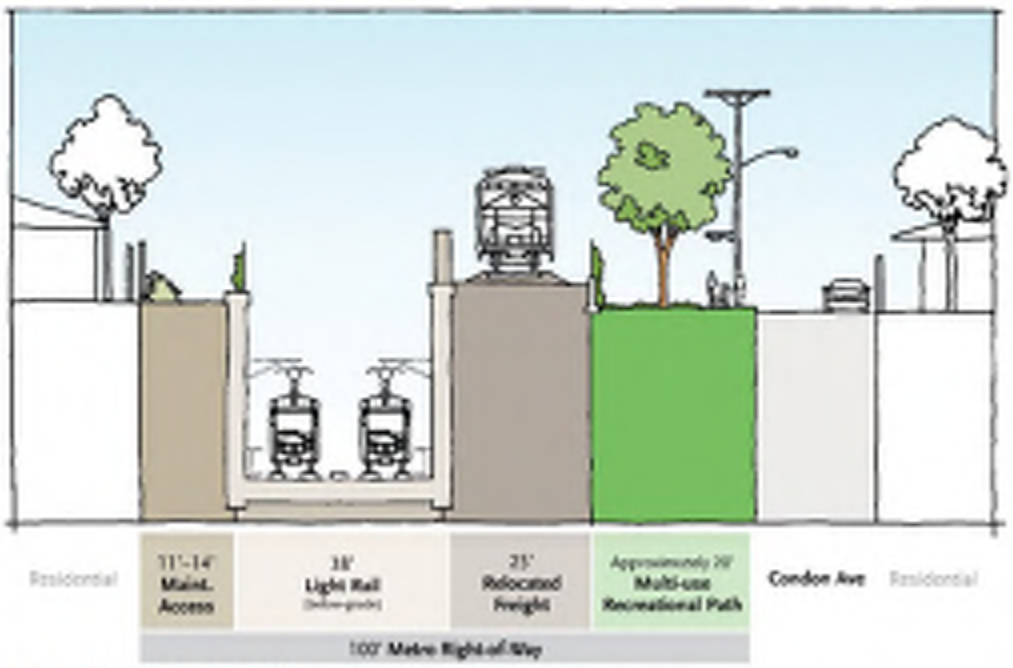
130-84

More comments:

The whole analysis needs to be repeated with the Trench Option.

130-85

Figure ES-8. Trench Option - Looking South Between 162nd Street and 168th Street



Source: Cityworks Design, 2022
Note: Dimensions and ROW boundaries are preliminary and subject to confirmation in future phases of design.

Metro needs to provide:

1) Accurate Diagrams at 170th
2) Accurate Diagrams at 172nd (where the freight train is back to its original position)
3) Accurate Diagrams after crossing Artesia.

130-86

---

*CAUTION: Email is from an external source; **Stop, Look, and Think** before opening attachments or links.*

Dear City Clerk,

Attached please find my comments on the latest version of the city's DEIR response letter in PDF format.

Also please ensure all 5 CM's plus the mayor have the following link to the EPA's webpage about Particulate Matter Pollution, as I refer to relevant facts discussed on this page in my comments:

https://www.epa.gov/pm-pollution/health-and-environmental-effects-particulate-matter-pm

I appreciate all of your help!

Thank you kindly,
Niki Negrete-Mitchell, D3
[redacted]

Niki Negrete-Mitchell, D3 - City Council 3/21/23 Submission 130

Thank you for adding the additional comments, the letter reads well and covers a lot of ground. I want to commend all of you for placing your concerns on the residents so highly as a priority. It makes a huge difference and is much appreciated.

Air Quality: This week I'm focusing on air quality. The letter now only states signficant and unavoidable impacts for ROW trenched with no other comment.
The DEIR acknowledges "cumulative impacts" and that they strive to protect human health. I cannot overstate how much overly extreme, uncontrollable amounts of loose, fine powdery dirt, technically referred to as PARTICULATE MATTER, gets kicked up by just one maintenance or recreational vehicle that passes though the ROW behind my house. It's a literal brown cloud, like a mini haboob dust cloud that they get in the desert. My backyard is impossible to keep clean just due to one passing RT train so when the occassional vehicle kicks up that much dirt it is unbearable. Imagine 5 - 7 years of HEAVY construction utilizing up to 40 vehicles at a time up and down the ROW and what that will do..

Please add to the letter under **Air Quality**: Particulate matter along the ROW will most certainly bring the air quality to an unlivable standard. In the case of this project, the reference to "temporary" means 5 years beginning with 101 dump trucks for 18 months and then subsequently, up to 40 pieces of heavy equipment kicking up an insurmountable amount of dirt which will cause health problems at such a close proximity to human lives. 130-87

From EPA.gov: Exposure to such particles can affect both your lungs and your heart. Numerous scientific studies have linked particle pollution exposure to a variety of problems, including, irregular heartbeat, heart attacks, aggravated asthma, decreased lung function, increased respiratory symptoms like difficulty breathing.
I'm asking you to please take this to heart. Personally, I already have an irregular heartbeat and get short of breath, and I'm not the only neighbor who sees this.

Biology: Referring to the owls and hawks as "nesting" is important, the DEIR distinguishes this. Naming the species is helpful. (Great Horned Owls, Red Tail Hawks)

We have witnessed parent birds of prey training their babies to hunt above our backyard. At night I can hear two parent owls calling out to up to two babies at a time in the tree canopy and every year there are new hoots to hear. They're distinguishable by their differences in tone. They perch separately in different trees for hunting vantage points. They call one another and answer each other repeatedly. They are nocturnal. The hawks hunt in daylight. 130-88
Their hunting keeps the ecosystem balance in check. If they go away other predators will move in, most likely more coyotes.

In closing: I'd like to convey to all of you - I fully comprehend the materials I am commenting on and that all of my comments are made as a REALIST. As realists, Is it even possible for anybody no matter what credentials they may have, to guarantee that crowding THREE rails into a narrow corridor in between 1,100 homes and with passengers in such close
proximity to liquid petroleum fuel tankers 12-25' away from densely occupied housing above 7 highly pressurized petroleum pipelines at some points rounding a curve and others 30 feet above occupied trenched light rails "safe"? 130-89

Please reach out to me with any questions or comments. I am HAPPY to work with ANYBODY.

Subject: Metro DEIR Comments
Date: Sunday, March 19, 2023 7:46:02 PM

*CAUTION: Email is from an external source; **Stop, Look, and Think** before opening attachments or links.*

CEQA COMMENTS ON METRO'S DEFECTIVE DRAFT EIR FOR GREEN LINE EXTENSION
The following comments demonstrate that there is **substantial evidence** (CEQA guidelines section 15384a) of damages and regulatory noncompliance by Metro in the Green Line extension using the freight right-of-way. This conclusion is based on Redondo Beach Municipal Code (RBMC), evidence from Beach Cities Health District's multimillion dollar investment in Blue Zones and other peer-reviewed studies as cited by the National Institutes of Health (NIH) research findings. 130-90

1. Project alternatives that use the existing freight right-of-way violate RBMC 10-2.2502 (Planning Design) 130-91
2. Project alternatives that use the existing freight right-of-way violate RBMC 4-24.301 (Noise) 130-92
3. Project alternatives that use the existing freight right-of-way create health damages 130-93
4. Project alternatives that use the existing freight right-of-way damage child development 130-94

These comments and damages that are demonstrated with substantial evidence must be included in the Final EIR, adjustments must be made to project, and no use of the freight right-of-way can be selected by Metro without non-compliance with RBMC and damages to both adults and generations of children. 130-95

[1] GREEN LINE ALTERNATIVE ALONG THE RIGHT-OF-WAY VIOLATES RBMC 10-2.2502
There is **substantial evidence** that the proposed Green Line preferred option in the existing freight right-of-way, coupled with planned 24/7/365 intermittent operation violates Redondo Beach Municipal Code (RBMC) 10-2.2502 Planning Commission Design Review (PCDR). The RBMC PCDR states that it's purposes include: "protect property values" and "ensure compatibility" with the existing neighborhoods. Clearly, 24/7/365 rail operations are not consistent with the existing residential neighborhoods. Peer-reviewed research has found that rail damages surrounding property values, thereby failing compliance with RBMC. 130-96

Peer-reviewed research demonstrates that train noise can also damage property values. This should come as no surprise and can also be seen from property value analysis. 130-97

Vehicular Noise Pollution: Its Environmental Implications and Strategic Control
DOI: 10.5772/intechopen.85707
"All types of noise altogether affect the same irrespective of the sources and cause headache to the high blood pressure and other heart diseases. **Some noise types like** aircraft and **train noise also have negative effects on property prices**."

[2] GREEN LINE ALTERNATIVE ALONG THE FREIGHT RIGHT-OF-WAY VIOLATES RBMC 4-24.301 130-98
There is **substantial evidence** that the proposed Green Line preferred option in the existing freight right-of-way, coupled with planned 24/7/365 operation violates Redondo Beach Municipal Code for noise generation. The noise receiving zoning from the proposed alternative in Redondo Beach would be predominantly residential, with a maximum, not to exceed nighttime noise limit of 65dBA and daytime limit of 70dBA (presumed ambient level plus 20 dBA.

4-24.301 Maximum permissible sound levels by land use categories
"No person shall operate, or cause to be operated, any source of sound at any location within the City or allow the creation of any noise on property owned, leased, occupied, or otherwise controlled by such person which causes the noise level when measured on any other property to exceed: …the noise standard of the receiving land use district plus twenty (20) dB for any period of time

130-98

[3] GREEN LINE ALTERNATIVE ALONG THE FREIGHT RIGHT-OF-WAY VIOLATES DAMAGES HEALTH
There is **substantial evidence** that the proposed Green Line preferred option in the existing freight right-of-way, coupled with planned 24/7/365 intermittent operation will increase the risk of death and illness of nearby residents from chronic stress according to the Beach Cities Health District's multimillion dollar Blue Zones project research, findings, and other peer-reviewed studies and publications.

130-99

Lessons from the Blue Zones
https://www.ncbi.nlm.nih.gov/books/NBK298903/

"… widen its main street and raise the speed limit, which, Buettner [Blue Zones CEO] said, creates stress, danger, noise pollution, and air pollution." Obviously 24/7/365 train activity exceeds a widened main street's negative health impacts as stated by Blue Zones.

How Stress Makes Us Sick
https://www.bluezones.com/2019/05/how-stress-makes-us-sick-and-affects-immunity-inflammation-digestion/
"…this stress can be chronic, due to a specific situation … exposure to stress in early life can alter the normal development … resulting in increased sensitivity to stress and lifelong health risks in offspring."

Stress is Often Referred to as the "Silent Killer"
https://www.bluezones.com/2012/03/maximize-health-and-longevity-using-these-stress-management-strategies/
"… causes many harmful, often overlooked effects … pain and strain … sleep habits … physical suffering … headache, upset stomach, or back pain … stress can reduce the ability of your immune system"

130-100

Even the Metro Threat to Build in the Freight R-O-W Shortens Lives of Residents
https://www.bluezones.com/2020/10/fighting-chronic-stress-from-current-events-you-are-not-alone/
"Although people often underestimate the influence of the mind on the body, a growing catalog of research shows that high levels of stress over an extended time can drastically alter physical function and affect nearly every organ system."

Metro Will Destroy the Blue Zones Solution of Home Sanctuary for Generations
https://www.bluezones.com/2012/05/create-a-sanctuary-in-your-home/
Blue Zones recommends creating a quiet calm home sanctuary which cannot be accomplished with 24/7/365 noise that creates stress and violates RBMC.

130-101

How living near a railroad can harm your health: From chronic stress to an increased risk of cancer, scientists say that constant exposure to trains takes a toll on the human body
https://www.nationalgeographic.com/science/article/health-risks-living-near-railroads-east-palestine-trains
National Geographic discusses how rail creates noise and increased risks that create chronic stress and health damages.

130-102

Effects of Exposure to Road, Railway, Airport and Recreational Noise on Blood Pressure and Hypertension

130-103

https://www.ncbi.nlm.nih.gov/pmc/articles/PMC8431620/
Transportation noise can induce annoyance, sleep disturbance with awakening, cognitive impairment, physiological stress reactions, endocrine imbalance and cardiovascular disorders

130-103

The Effect of Aircraft, Road, and Railway Traffic Noise on Stroke – Results of a Case–Control Study Based on Secondary Data
https://www.ncbi.nlm.nih.gov/pmc/articles/PMC6122263/
For railway noise, there was a positive linear exposure–risk relation: Per 10 dB the stroke risk increased by 1.8% for railway traffic noise. The maximum risk increase of 18% for railway traffic noise was found in the exposure category ≥65 to <70 dB. NOTE 65-70 dB is modest for rail, along with accompanying vibration.

130-104

Transportation Noise and Risk
https://ehp.niehs.nih.gov/doi/10.1289/EHP11248
Transportation noise exposure is believed to be detrimental to human health through stress reactions with activation of the hypothalamic–pituitary–adrenal axis, followed by increased levels of stress hormones. In addition, nighttime noise exposure can impact sleep quality and duration, which are crucial for physiological and mental restoration.

130-105

A study of self-reported health problems of the people living near railway:
https://www.ncbi.nlm.nih.gov/pmc/articles/PMC7114011/
Noise ... can cause both auditory and nonauditory health effects. Nonauditory effects of noise can cause tinnitus, headache, auricular plenitude, dizziness, and gastric, visual, sleep, and mood disorders, endocrine imbalance, and cardiovascular disorders.

130-106

[4] GREEN LINE ALTERNATIVE ALONG THE FREIGHT RIGHT-OF-WAY DAMAGES CHILD DEVELOPMENT
There is **substantial evidence** that the proposed Green Line preferred option in the existing freight right-of-way, coupled with planned 24/7/365 intermittent operation will damage the development of residents' children from chronic stress according to the Beach Cities Health District's multimillion dollar Blue Zones projects research and findings.

130-107

How Stress Makes Us Sick
https://www.bluezones.com/2019/05/how-stress-makes-us-sick-and-affects-immunity-inflammation-digestion/
"…this stress can be chronic, due to a specific situation … exposure to stress in early life can alter the normal development … resulting in increased sensitivity to stress and lifelong health risks…"

CAUTION: Email is from an external source; Stop, Look, and Think before opening attachments or links.

Please find attached PDF for presentation at this evening City Council meeting. This will be regarding the Metro DEIR as it relates to the Hawthorne Option.

Metro has presented a route that creates numerous unnecessary hardships for business at the north and south ends of the Hawthorne route. This document presents what I believe to be better alternatives and brings in to question Metro's due diligence regarding this option.

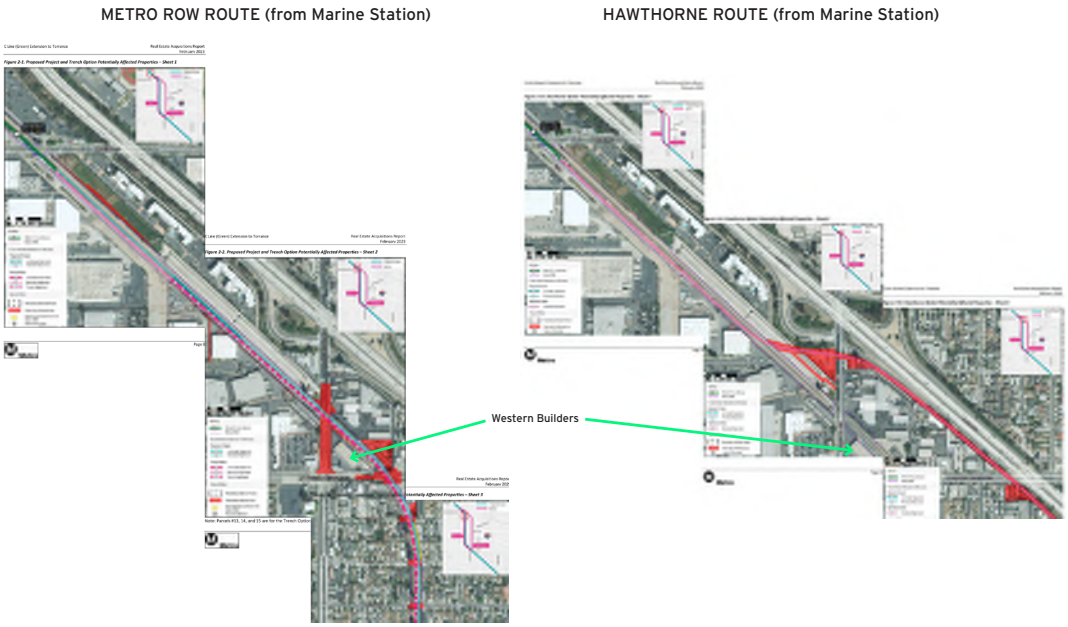
I request that PDF is displayed publicly at my time at the podium.

Thank you,
Kevin Mitchell

EXAMINING THE C LINE HAWTHORNE ROUTE

A closer examination of the C Line Hawthorne route shows major flaws both in the North and the South.

1) **North:** the currently proposed route from Marine Station to Manhattan Beach Blvd. destroys multiple businesses and disregards an easy path that does no damage to businesses in the area.



130-108

2) **Compare:** north routes of the ROW option vs. the Hawthorne option. Both options indicate elevated trains leaving from the Marine Station. The ROW route stays on the ROW as it crosses Inglewood Ave. to run behind Westwood Builders on the existing ROW path to then cross Manhattan Beach Blvd. and continue on the ROW. The Hawthorne route takes a hard turn to cross over the existing self-storage business, then runs over a Chevron station, crosses Inglewood Ave. to then run over two more businesses (Ron Roger's Auto Services Center and EMI Signs) to get to the edge of the 405. The question is why.

Looking North from the ROW north of Inglewood.

Looking West from Inglewood Blvd. at Chevron.

130-109

Looking East from Inglewood Blvd., Ron Rogers Auto.

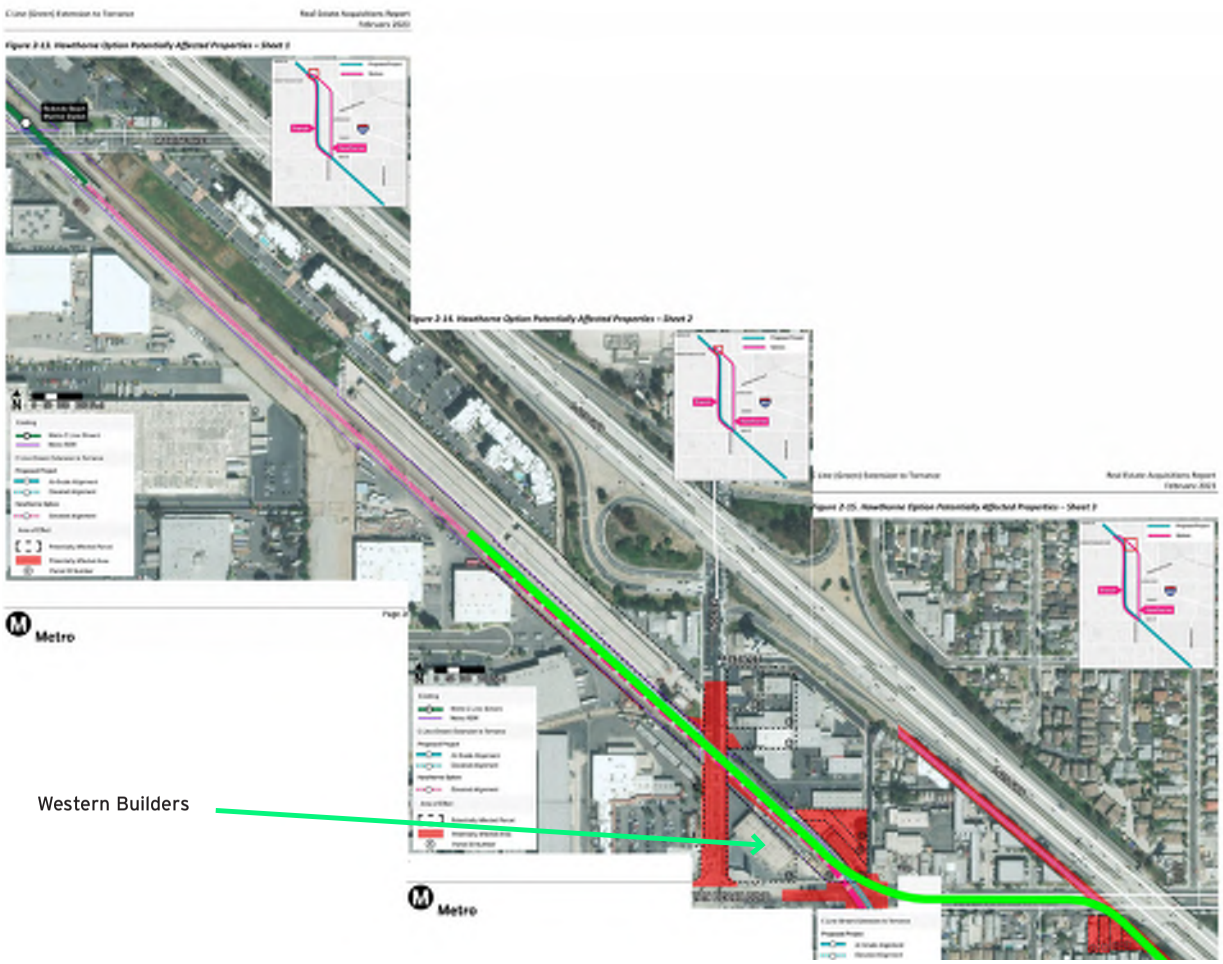
Looking East from Condon Ave. at EMI Signs.

130-109

3) A simple solution: by running the same route as the ROW to Manhattan Beach Blvd., Metro could avoid damage to businesses and enjoy the same cost as the ROW route. From there, a simple turn down Manhattan Beach Blvd. to then get to the 405 corridor.

AN ALTERNATE HAWTHORNE ROUTE (from Marine Station)

The green path indicates a suggested revision to Metro's planned route



130-110

4) Manhattan Beach Blvd.: offers a wide corridor and large median to receive the Metro train to travel unimpeded to the 405. One business, Manhattan Auto Body Shop, which has been slated for disruption for the Hawthorne Option, will be effected as this is unavoidable to connect to Hawthorne Ave.

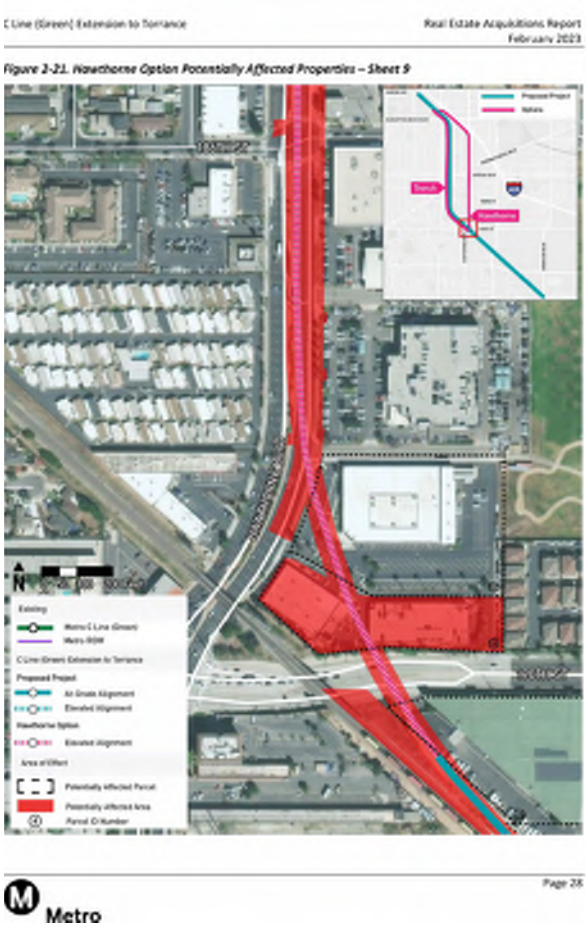
Looking West on Manhattan Beach Blvd.

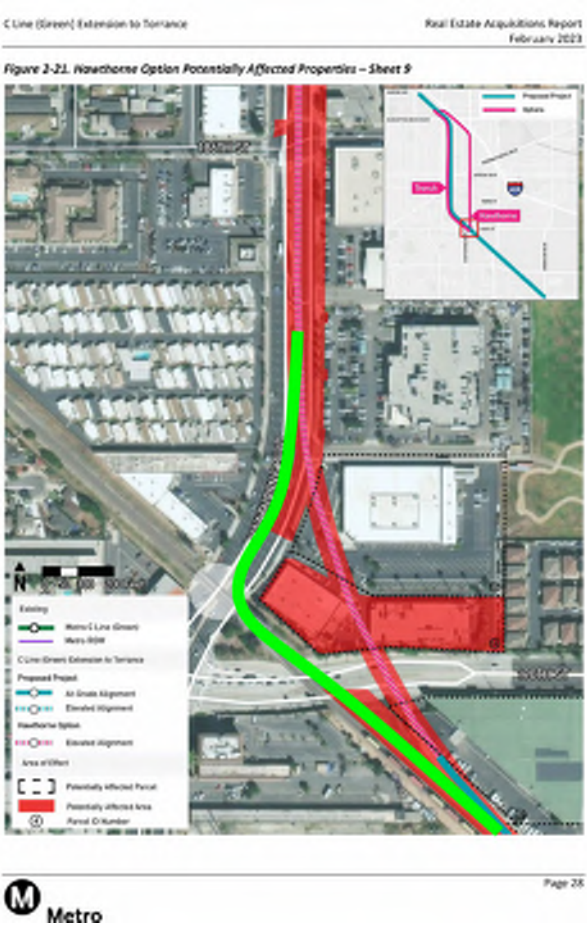
Looking East on Manhattan Beach Blvd.

130-111

Looking South from Manhattan Beach Blvd. at Manhattan Auto Body Shop. Indicated for disruption on REAR.

5) South End of Hawthorne Option collides with the newly built Volvo Dealership which is avoidable.: To connect with the southern ROW crossing at 190th, the route crosses over into the Volvo Dealership splitting their parking structure and showroom. The dealership is openly upset with this route and have thrown their weight behind Torrance's position to use the ROW. The route should be modified.





130-112

6) By changing the route to avoid the Volvo dealership: A more equitable solution is possible. Some re-engineering will be necessary to allow for the trains to merge at the ROW overpass on Hawthorne and 190th, but can avoid severe business interruptions and allow the dealership to remain unmolested.

Looking South at Hawthorne Blvd. and ROW crossing before 190th.

130-113

Destination is Most Important Factor for the C Line Expansion project

Metro has been touting how the new C Line will connect the South Bay with greater Los Angeles. They are openly stating in their presentations that their goal is to connect the South Bay with North Hollywood while avoiding Downtown Los Angeles. So from the Torrance Transit Center, you're going to take the C Line to the K Line to the E Line to the D Line to the B Line.

During yesterday's SBCCOG transportation meetings, Mayor Butts of Inglewood was soliciting funds for a project to connect SoFi, The Forum, and Hollywood Park area with the K Line at their Inglewood station. The traffic jams out of SoFi are becoming legendary. Not sure of all the details, but this serves as an illustration of the need to consider destinations as the primary driver for ridership. No one cares about going to North Hollywood if you can't access Dodger Stadium. No one wants to go to El Segundo if you can't access LAX.

Unfortunately, Metro keeps promoting this idea of connectedness without the due diligence of asking what it is that is being connected. They know full well, people do not want to ride a train to then have to board a bus. Buses are a city's least desirable form of transportation and riders do not give up their cars for buses.

Redondo Beach has a very important community development project in the works with the South Bay Social District, formally The Galleria. New retail, new live/work spaces, new hotel, and a new fascia on Hawthorne Blvd. and Artesia Blvd.

Stuart Miller, as a spokesperson for The Galleria communicated to Metro in a letter dated December 22, 2022 that, "The proposed Green Line extension route along the ROW offers no significant destinations, while the new South Bay Social District will be built just a matter of feet away from the proposed station location on Hawthorne Boulevard."

The E Line provides a relevant comparison. Beginning is at the Santa Monica Pier, it travels through the West side to Culver City and USC/Exposition Park then into LA past Staples/Crypto Arena and LA LIVE to then connect with the B Line to N. Hollywood or Union Station.

The E Line uses the wide meridians of Colorado and Exposition to bring riders to relevant locations like Bergamont Station, the Amazon Studios Media Hub in Santa Monica and on to the Culver City Ivy Station and then USC and Downtown. Primarily the train is buttressed by wide streets and not residential backyards.

The South Bay needs revitalization to be relevant as an urban destination. The South Bay Social District is central to this need. A Hawthorne Blvd. station can help bring this much needed revitalization by attracting ridership to the front door. Currently, Hawthorne Blvd. suffers from neglect and a lack of vision from the surrounding municipalities. Lawndale's C Line 'no build' stance creates a 'no win' scenario where ROW residents, by default, will be burdened with a high-frequency train line in their backyards. Torrance has also proven itself to be beligerent about this project demonstrating a clear lack of vision and a willingness to victimize adjacent communities to demonstrate their disdain.

130-114

It has become clear, Metro will be putting in a train.

Hawthorne Blvd. should become the 'preferred option' that all three cities should get behind.

To: CityClerk <CityClerk@redondo.org>
Subject: Comments re: Metro Green Line Extension in Redondo Beach

You don't often get email from [redacted] Learn why this is important

*CAUTION: Email is from an external source; **Stop, Look, and Think** before opening attachments or links.*

Beach Cities Health District in Redondo Beach has spent millions of dollars supporting and promoting Blue Zones. Blue Zones has made numerous findings that chronic stress is the silent killer and causes intergenerational health damage. There are many studies linking excessive intermittent noise, such as the proposed Metro line through Redondo Beach to chronic stress and its many health damages, including early death.

The DEIR is defective and fails to consider the negative health impacts found by BCHD's Blue Zones program. The DEIR must be halted and amended to include that specific health damages found by BCHD's Blue Zones program. As a proposed new health damaging project, any route causing additional 24/7/365 damaging intermittent noise and vibration cannot be pursued without intergeneration health damages.

130-115

This stress can be chronic, due to a specific situation … exposure to stress in early life can alter the normal development … resulting in increased sensitivity to stress and lifelong health risks in offspring. Although people often underestimate the influence of the mind on the body, a growing catalog of research shows that high levels of stress over an extended time can drastically alter physical function and affect nearly every organ system. How living near a railroad can harm your health: From chronic stress to an increased risk of cancer, scientists say that constant exposure to trains takes a toll on the human body. Effects of Exposure to Road, Railway, Airport and Recreational Noise on Blood Pressure and Hypertension: transportation noise can induce annoyance, sleep disturbance with awakening, cognitive impairment, physiological stress reactions, endocrine imbalance and cardiovascular disorders. Transportation noise exposure is believed to be detrimental to human health through stress reactions with activation of the hypothalamic–pituitary–adrenal axis, followed by increased levels of stress hormones. In addition, nighttime noise exposure

can impact sleep quality and duration, which are crucial for physiological and mental restoration. The references above are demonstrative and not fully inclusive of the Metro-ignored Blue Zones impacts to health caused by the proposed Metro Green Line extension through Redondo Beach Neighborhoods. 130-115

Therefore, please do not build a Metro Green Line Extension near homes in Redondo Beach ! Please build the Green Line Extension on Hawthorne Boulevard to protect families and their homes/neighborhood. 130-116

Sincerely,

Nancy Skiba

Hi,
Please use this email instead, I forgot to attach another image for my Biology Resource comments

Subject: Item N.1 Blue Folder Items

Hello City Clerk,

For Item N.1 Blue Folder I'm attaching a PDF document titled Ruxton Geo draftEval, and the following link to the 2017 Galleria Draft EIR goes with it. Please ensure all members have this, and I've included screenshots below: https://www.redondo.org/civicax/filebank/blobdload.aspx?BlobID=34511

Also attached are my oral comments in written form with proposed edits to the DEIR letter being discussed. Please distribute to all members plus the mayor accordingly.

Please let me know if it's better to print hard copies for them and if so, how many would I need to bring? I know cm Obagi will be remote and Mayor Brand may or may not be present.

Thank you!

Submission 130

130-118

Niki Negrete-Mitchell, D3

Geology/soils

I've sent the PDF file of the Ruxton sinkhole performed by Ninyo & Moore, on behalf of Shell Pipeline Co. plus a link to the Galleria DEIR for comparison to Metro DEIR to the Blue Folder. 130-119

Also there was an undocumented old ROW sinkhole near 190th, and 20 years ago a condemned house near Man Bch Bl due to clay soils foundational damage 20 yrs ago. Old owner says he doesn't have the documentation. 130-120

After 2.5 years private home spaces finally repaired, but we don't know if it's done thoroughly, letter needs to be udated to reflect that. 130-121

Noise and Vibration

"Quiet zone" only establishes no bells at grade crossing, does not quiet down moving trains passing every 6 - 12 minutes 20 hrs day 4am-past midnight - that needs to be clear in the DEIR. Vague reference to "safety measures" in presentation. 130-122

On table 3.6-11 no ambient noise measurement was taken South of Artesia Bl on Ruxton Ave, or south of 182nd St on Firmona Ave, Fisk Ln and Ct or Spreckles Ct. Torrance addresses on 186th St are labeled as Redondo Beach. Inaccurate study not sufficient 130-123

Biological: (There is a lot of concern from residents on this, I'm adding clarified language) The DEIR notes no wildlife impact, yet there have been observed **Nesting Great Horned Owl and Red Tail Hawk families** in the El Nido Park and cemetery vicinity. 130-124

For **both the Proposed Project and Trench ROW Options** (Hawthorne is far enough from the tree canopy in El Nido), significant substantial adverse effects are projected either directly or through habitat modifications on local wildlife. Metro should provide better mitigation requirements to protect local wildlife. **Nesting owls and hawks which feed on invasive rodents (gophers, rats and mice) would be forced to leave their homes and food source on both ROW options** 130-125

Transportation:

- (This is to clear all of the confusion on connectivity from Hawthorne Bl without appearing confused ourselves) **DEIR should clarify for the Hawthorne Bl station there is an ample opportunity for riders to connect to any further destination via the sheer abundance of buses that stop and pick up at Artesia.** 130-126
- **In the rare case that riders need to go to the RB Transit Center, the DEIR should clarify every bus stops at Artesia before looping over to there and riders can easily shuttle over.** 130-127
- **The DEIR should clarify Hawthorne Bl station will be designed once decision is made boasting enhancements for accessible and safe pedestrian usage with city's input.** 130-128

Re: Del Amo - Torrance already has a shuttle to Del Amo from the Torrance TC. Statement above that connection to Del Amo can easily be made by boarding one of the many southbound buses. 130-129

5 GEOLOGIC AND SUBSURFACE CONDITIONS

Submission 130

The site is located in the west portion of the Los Angeles Basin in an area mapped as being underlain by dune and drift sand deposits (Dibblee, et. al., 1999). The exploratory borings in the sidewalk area encountered fill that generally consisted of brown, moist, loose to medium dense, silty sand to the total depth explored. Borings B-5 and B-6 encountered fill underlain by dune sand deposits. The fill encountered in borings B-5 and B-6 generally consisted of reddish yellow, moist, loose silty sand and was encountered to depths of approximately 9.5 and 15.5 feet in B-5 and B-6, respectively. The fill encountered in borings B-5 and B-6 were underlain by dune sand deposits, which were generally comprised of light brown and reddish brown, moist, loose to medium dense, poorly graded sand and silty sand. The removal of additional sidewalk panels did not expose additional voids at the surface. Voids were not encountered in our exploratory borings. More detailed descriptions of the subsurface materials are presented in the boring and test pit logs in Appendix A. The locations of our excavations are presented on the aerial view of the site on Figure 2.

Groundwater was not encountered in our exploratory excavations at the site. Fluctuations in the level of groundwater may occur due to variations in ground surface topography, subsurface stratification, rainfall, irrigation practices, groundwater pumping, and other factors which may not have been evident at the time of our field evaluation.

6 RECOMMENDATIONS

130-130

Based on discussions with Hamilton and Shell, it is understood that the removal and replacement of the retaining wall backfill in the affected area has been requested. Prior to excavation of retaining wall backfill, we recommend that the retaining wall in the subject area be underpinned/stabilized by installing push piers and/or helical piers placed below the retaining wall footings, or other applicable methods. The push piers and/or helical piers should be extended through the fill soils to sufficient depth to derive support in the underlying dune sand deposits. Voids in the area of the retaining wall footing may be filled with a combination of aggregate and expanding low-density polymer. We recommend that specialty contractors experienced with polymer injection and foundation underpinning evaluate this method of repair. The repairs should be performed by a qualified specialty contractor utilizing appropriate methods and materials.

Although the details of installation may vary depending upon the selected method of underpinning, push piers and/or helical piers generally consist of small-diameter steel piers that are driven or rotated down, usually hydraulically, into competent subsurface materials. Our analysis indicated that a design capacity of 25 kips per pier maybe utilized for underpinning design. We anticipate that the bearing material (dune sand deposits) will be encountered at depths of approximately 10

RE: Metro C Line (Green) Extension to Torrance Project Comments and Request

Dear Supervisor Mitchell:

On behalf of the City of Redondo Beach, please accept this letter as unified support of an elevated Hawthorne Boulevard alignment for the Metro C Line (fka Green Line) Extension to Torrance Project which would run along the historic Red Car route. We urge your honors not to gravitate to the Metro ROW alignment merely because it is the lowest cost alternative. As we detail below, the elevated Hawthorne Blvd. alignment is the most equitable, environmentally sound and the only alternative that promises to connect residents of Central Los Angeles County with the economic powerhouse coming to Redondo Beach along Hawthorne Blvd.

130-131

I. Hawthorne Blvd alignment is the superior to the ROW alignment in all regards except as to cost, which should not drive monumental generational investments.

As part of its decision-making process, Metro is considering and studying through the DEIR, two potential alignments–the Metro railroad right-of-way (ROW) alignment, currently used by heavy rail, and the elevated Hawthorne Boulevard roadway alignment.[1] We hope that as Metro Board Members, you will take our feedback to heart as you render your decision on the C Line extension.

As a preliminary matter, we want you to know that L Catterton (the real-estate arm of LVMH) is about to invest nearly half a billion dollars in a mixed retail, 300-unit inclusionary apartment units, office space and a 150-room hotel at the same intersection that would serve as the Redondo Beach stop for the Hawthorne Blvd. alignment. Between the mall

130-132

[1] Metro officials have told us that they are no longer considering an at-grade pathway down Hawthorne Blvd.

and other uses, L Catterton projects about 750 new, permanent jobs to come to the site. Only the elevated Hawthorne Blvd. alignment would deliver residents from the Willowbrook/Rosa Park station to all of the economic, family and medical centers along Hawthorne Blvd. by delivering them to its intersection with Artesia Blvd. The ROW alignment would deliver these residents to a residential neighborhood. If the County does not seize this monumental, once-in-a-generation opportunity to send the C Line down the most utile path, the C Line could be destined to demise for nonuse. 130-132

If located along Hawthorne Blvd., the C Line would also deliver residents from Redondo Beach, Lawndale, Torrance and Hawthorne conveniently to the Crenshaw/LAX Transit Project. If, however, the C Line is extended into our residential neighborhood along the ROW, the C Line would not serve as a central hub to move the masses efficiently to LAX. It would be a pity for government to have spent hundreds of millions of dollars improving LAX and installing a people mover, only to build a C Line extension that does not maximize ridership. 130-133

The City of Redondo Beach is united behind elevated Hawthorne Boulevard alignment since it addresses many of our residents' concerns regarding noise, vibration, resident/child safety, and other factors, as well as having an expeditious, speedy route to the Torrance Transit center which would likely bolster its usership at a time of Metro ridership decline. The Hawthorne Blvd. alignment would also revitalize local businesses through higher visibility and the creation of a vibrant destination for riders.

II. <u>The City is united behind the Hawthorne Blvd. alignment and against the ROW.</u>

The City Council unanimously voted to reaffirm our recommendation of the elevated route along Hawthorne Blvd. We are very concerned for our mixed-income senior residents at the Breakwater Village. Breakwater Village was built along the Metro ROW in the early 2000's. It boasts 191 units covenanted for seniors. It includes 20 affordable units, including Section 8 housing. On May 11, 2022, we heard from elderly members of the Redondo beach community who talked about re-leveling the pictures on their wall every week due to the vibrations from the BNSF freight train that passes by Breakwater Village twice daily. 130-134

If you adopt the ROW alternative, Metro will relocate the BNSF freight train 15 feet closer to Breakwater Village. The residents are terrified about more cracks appearing on their property, the devaluation of their "nest eggs," and not being able to live out their golden years in peace and quiet. Imagine years – not months or weeks – of Metro construction within feet of your home. Peace and quiet is precisely what our seniors at Breakwater Village bargained for when they invested in their retirement homes there.

The same is true for the mixed-income residents of the Ruxton Place and Ruxton Ridge, that are home to 27 and 28 units, respectively. Metro staff declined to enter Ruxton Place. Had they done so, they would have seen firsthand the sink hole created by Shell's drilling on the Metro ROW. For over a year now that sinkhole has been fenced off; residents of the affordable units there do not have regular access to their front doors because the 130-135

sinkhole persists.[2] The land subsidence that occurred at the Ruxton Place is merely symptomatic of the potential, serious hazards that could arise from heavy machinery and construction on the ROW so close to pre-existing, heavy residential developments. To date, Metro has not articulated confidence that the geology on the ROW would permit the C Line to be extended with no damaging effect on the dense residential developments adjacent to the ROW. 130-135

On the other side of the Metro ROW from Breakwater Village are several single-family residential homes that front Condon Avenue. Due to an extreme grade change between those properties and the proposed elevation of the light rail for the Metro C Line ROW alignment, a major retaining wall of 15 to 20 feet in height would be required just 5 feet from the rear property lines of those residential lots. In many cases those homes are set just 20 feet from the rear property line, and in some instances just 5 to 10 feet. This major retaining wall would tower over the rear yards of these properties. As well, the height of that proposed retaining wall would be the height of most of these homes that are just a single story. In addition to the noise and vibration concerns that the proximity of the light rail would have on these the homes, the retaining wall would significantly reduce the light and air in the rear yards of these residential properties. 130-136

It's for these reasons and those stated below that we implore you to say "No" to the ROW. As noted previously in the Redondo Beach comments on the Notice of Preparation (NOP) of the Draft EIR in the March 16, 2021 letter (attached), the Metro railroad right-of-way (ROW) option is expected to have numerous devastating impacts on the 480+ Redondo Beach private homeowners who live directly adjacent to the ROW (some sharing property lines). Those adverse effects would persist whether the rail is at grade or made subterranean at certain roadways like 182nd Street (near Firmona Ave). 130-137

Based on the multi-year timeline needed to build the light rail within feet of where many of them sleep nightly, the negative impact that this will have on so many lives, including our seniors', simply cannot be understated. The City of Redondo Beach has expressed significant concerns about using the ROW for the C Line extension based on our understanding of the proposed project to date, including: 130-138

- Failure to equitably use tax dollars for the benefit of the maximum number of Angelenos from all over the County by directing the C Line extension down the alignment that would reach the greatest number of residents and garner higher ridership than implementing the ROW alternative;

- Failure to provide communities from the Willowbrook/Rosa Parks Metro stop areas to the South Bay job centers, medical offices and the economic powerhouses located along Hawthorne Blvd., including the soon to be 130-139

[2] We are thankful that staff from each of your offices have gotten to know about this issue. Jennifer LaMarque helped us get Shell's attention to the sinkhole in 2021, and Karishma Shamdasani visited the site and listened to considerately residents on May

totally revitalized South Bay Galleria, which will host about 750 new jobs, 300 new apartment units, 150 hotel rooms, office space and a modern, family-oriented mall; 130-139

- Concerns about drilling and excavating land used for numerous oil pipelines, for the construction of the partially subterranean light rail tracks; 130-140
- That there would be no time-savings associated by building the below-grade options on the ROW versus the elevated option on Hawthorne Blvd.; 130-141
- The below grade ROW alternative would be constructed at about a 30-foot grade differential from the adjacent train track that runs heavy loads of hazardous oil down the ROW twice a day;
- Metro has not analyzed the suitability of the land on the ROW to have a heavy, hazardous-material carrying train running next to below-grade light rail. In fact, in 2020, Shell conducted drilling along the ROW near the Ruxton, that cause land subsidence in that residential development for our affordable housing residents; 130-142
- Noise and vibration from construction and operation. 130-143

On April 11, 2022, two Redondo Beach Council Members and I, Mayor Brand, met with more than 60 concerned community members as part of the *Walk with Metro* event. At that meeting, Metro presented new facts that escalated existing concerns regarding the ROW alternative, including the need to re-align the freight line (that hauls oil, cars, jet fuel, and other industrial materials) further west, closer to existing homes.[3] 130-144

On May 11, 2022, Council Members Obagi and Loewenstein, and Community Development Director Brandy Forbes met with two groups of over 100 residents total at Breakwater Village and the Ruxton developments, respectively. At those meetings, Metro staff attempted to assuage residents' concerns about devaluation of their homes by pointing to increased value in Culver City and other areas around the Metro stops. But, Culver City and other areas are distinguishable in that there were opportunities there and in Pasadena to build new development around the Metro stops that were designed to block out the noise and other disruptions posed by trains passing every 6 minutes.

[3] Asked why they could not push the train tracks further east, one official answered that, around 182nd, that would put it too close to El Nido Park. But, putting it closer to homes should not be more ok than putting it closer to a park. On May 11, an engineer stated that pushing the freight train east would require Metro to take private property to the east of the ROW. Clearly, there are no good cost-effective options down the ROW 130-144

In Redondo Beach however, the developments at Breakwater Village and Ruxton were built less than twenty years ago with no contemplation of Metro trains passing by every six minutes. Their relative young age shows that these buildings will not be replaced anytime soon. In addition, they already have sustained cracks and damages due to their proximity to the freight train that passes by only twice a day. Yet, in the ROW alignment, Metro proposes to move the fuel carrying trains closer to our residents' homes. That is not ok. 130-145

III. The City still has many questions that Metro has not answered.

The City requests that the following questions are addressed, at a minimum in the DEIR

1. What are the standardized noise levels being used (federal or state guidelines)? 130-146
    a. If the noise levels exceed certain levels, will Metro provide noise-proofing to surrounding homes like LAX does in El Segundo? This should be considered for both during construction and post-construction impacts. 130-147
    b. Are the "ambient noise levels" greater for the freight train for the current position or the new position proposed after the freight rail realignment? 130-148
2. Since the freight line will be re-aligned, closer to the existing homes, what are the potential impacts of a derailment? If there is a derailment, what would the costs and impacts be to the City? 130-149
3. Are Police/Fire/EMT response times taken into account for the crossing on 182nd and the rail line, both during construction and after? 130-150
4. If the ROW alignment goes below grade at the crossing on 182nd and other intersections, how would the rail line retaining wall be structured to support the weight of the heavy freight on grade immediately next to the deep below-grade alignment (the representative on the tour mentioned needing to go as far as 30 feet or more below grade) for the Metro line to prevent soil subsidence issues we have seen elsewhere in the City? 130-151
5. Since the berms for the freight lines will be brought closer to private property, in some places, as close as five feet, what is the plan for providing extra retaining walls, addressing sound, vibration, and accommodating proper drainage? 130-152
6. Will personal transportation improvements, including a bike path and pedestrian walkway still be implemented? And, if so, where in Redondo Beach? 130-153
7. Has the soil and or geology on the ROW been studied to determine that the ROW land could tolerate a heavy freight train carrying oil directly adjacent to a pair of 30' below-grade light trail tracks? And to tolerate the differential vibrations of both 130-154

These comments have been reviewed and approved by the Redondo Beach City Council at their May 17, 2022 public meeting. If you or Metro have any questions regarding this comment letter, please contact Brandy Forbes, Community Development Director for the City of Redondo Beach at 310-318-0637 x2200 or brandy.forbes@redondo.org. Thank you for your consideration of our comments.

Sincerely,

Mayor William Brand

Subject: Metro C Line Extension DEIR Comments
Attachments: IMG_4368.jpg; IMG_4277.jpg

Dear Metro and Metro Board Members,

I am submitting one of multiple comments on the proposed C Line (Green Line) Extension and want to first state -- I strongly urge you as a board to choose the Hawthorne Boulevard elevated option over the ROW options. 131-1

I want to specifically address multiple issues with the findings of the Draft Environmental Impact Report and in this email I want to address **AESTHETICS.**

I think the Draft EIR did a wholly inadequate analysis of "aesthetics" down the ROW in both Lawndale and North Redondo. Page 3.3-69 of the Draft EIR claims:

"The proposed project would not substantially degrade the visual character of the area… and its change to visual quality would be neutral…. The existing visual quality in this area is considered to be low… " because we are "accustomed to the use of the existing Metro ROW by freight trains."

How can you justify this as a fair analysis of our views and aesthetics? This analysis assumes we have never-ending views of a freight train when in fact, we only get TWO trains per day coming down the existing tracks. Metro would add 200-300 light rail trains per day. I do not see how you can rate this as "NEUTRAL" in the Draft EIR. 131-2

For the other 99 percent of the day I have views of green grass, trees, nesting birds and wildlife. From my yard, I can see the snow-capped mountains of the San Gabriels. If the proposed ROW option is chosen, that view will be replaced with a giant, sloped concrete wall as the train transitions down hill.

Please see the attached photos for the views and aesthetics of my back yard at 163rd and Condon Ave. You can clearly see the mountains and on clear days even the Hollywood sign out in the distance. The ROW option would completely block this view.

The ROW option would also eliminate mature trees and other greenery that gives this part of the neighborhood a sense of calm and disconnect from the urban environment. Even if Metro plans to add a walking path and new landscaping, it will take decades for new trees to reach the height of the current trees we enjoy. 131-3

I encourage your planners to revisit this neighborhood on a clear day and try to tell us our existing visual quality is "low." Redo this analysis and in the meantime, I encourage everyone to choose the Hawthorne Blvd. option. 131-4

Thanks,

John Schreiber

Submission 132

THE METROPOLITAN WATER DISTRICT
OF SOUTHERN CALIFORNIA

Office of the General Manager

March 23, 2023 EMAIL

Georgia Sheridan, Project Manager
Los Angeles County Metropolitan Transportation Authority
One Gateway Plaza, Mail Stop: 99-22-3
Los Angeles, California 90012

Dear Ms. Sheridan:

Notice of Availability
of a Draft Environmental Impact Report for the Green Line Extension to Torrance

The Metropolitan Water District of Southern California (Metropolitan) has reviewed the Notice of Availability of a Draft Environmental Impact Report for the Green Line Extension to Torrance. Metro proposes to implement a light rail transit Project that would extend the C Line (Green) from the existing Redondo Beach (Marine) Station to the Torrance Transit Center. The Draft EIR evaluated the Proposed Project, which would be an elevated or at-grade alignment within the existing Metro-owned right-of-way (ROW) for the entire 4.5-mile length. Two options are considered for the northern segment of the Project area between the Redondo Beach (Marine) Station and 190th Street: 1) Trench Option, which travels along the Metro ROW with the light rail located within a below grade trench, and 2) Hawthorne Option, with the light rail in an elevated configuration traveling parallel to the I-405 Freeway and within the median of Hawthorne Boulevard.

Metropolitan owns and operates facilities within and adjacent to the proposed Project Limits. Metropolitan's West Basin Feeder between Sta. 288+00 to 290+00 and Sta. 296+00 to 299+00 are located along Manhattan Blvd. and adjacent to I-405 within the Metropolitan easement along and or within the Project boundary. Metropolitan is concerned with potential impacts to these facilities and rights-of-way that may result from implementation of the proposed Project. 132-1

Metropolitan must be allowed to maintain its rights-of-way and access to its facilities and properties at all times, in order to repair and maintain the current condition of those facilities. In order to avoid potential conflicts with Metropolitan's rights-of-way, we require that any design plans for any activity in the area of Metropolitan's pipelines or facilities be submitted for our review and written approval. Metropolitan will not permit procedures that could subject the pipes to excessive vehicle, impact, or vibratory loads. Any future design plans associated with this Project should be submitted to the attention of Metropolitan's Substructures Team. Approval 132-2

DocuSign Envelope ID: A6245D3B-F730-4CC3-905F-C9C36C714715
Submission 132

of the Project should be contingent on Metropolitan's approval of design plans for portions of the proposed Project that could impact its facilities. 132-2

Detailed prints of drawings of Metropolitan's pipelines and rights-of-way may be obtained by contacting Metropolitan's Substructures Team at EngineeringSubstructures@mwdh2o.com. To assist Metro in preparing plans that are compatible with Metropolitan's facilities and rights-of-way, enclosed is a copy of Substructure's review of the available plans in the DEIR. Please note that Metropolitan's facilities and rights-of-way must be fully shown and identified as Metropolitan's on all designs or plans submitted. 132-3

Additionally, appropriate property rights must be obtained from Metropolitan for any project activities within Metropolitan's property, such as the granting of a road easement or license. The granting of property rights may be subject to Metropolitan's Board of Director's approval. No work must be done including potholing or any studies within Metropolitan's property prior to the execution of an appropriate agreement. Please contact Metropolitan's Real Property Group regarding the process for obtaining access or property rights at RealEstateServices@mwdh2o.com. Metropolitan recommends that the EIR include reference to Metropolitan's property and granting of an agreement, and also acknowledge Metropolitan as a potential responsible agency "expected to use the EIR in their decision-making" per CEQA Guidelines Section 15124(d)(A). 132-4

Metropolitan encourages projects within its service area to include water conservation measures. While Metropolitan continues to build new supplies and develop means for more efficient use of current resources, projected population and economic growth will increase demands on the current system. Water conservation, reclaimed water use, and groundwater recharge programs are integral components to regional water supply planning. Metropolitan supports mitigation measures such as using water efficient fixtures, drought tolerant landscaping, and reclaimed water to offset any increase in water use associated with the proposed Project. 132-5

We appreciate the opportunity to provide input to your planning process and look forward to receiving future plans and documentation for this Project. If we can be of further assistance, please contact Liz Florence at (213) 217-7193 or at eflorence@mwdh2o.com.

Very truly yours,

From: Francisco Flores, Manager
Substructures Team

Subject: West Basin Feeder
Sta. 288+00 to 290+00 and
Sta. 296+00 to 299+00
Substructures Job No. 2020-20-001

Refence is made to your email dated February 9, 2023, forwarding a link for MTA's proposed Green Line extension (Line C) project connection from existing Redondo Beach (Marine) station to the Torrance Transit station in the South Bay area of Los Angeles County. Included in the link to the DEIR documents were prints of the conceptual plans (Pages 1 through 213).

We have reviewed the submitted conceptual plans, and our comments and requirements are as follows:

1. The location of our 45-inch-inside-diameter precast concrete West Basin Feeder pipeline, as shown on Pages 46 (Drawing TC-102), 76 (Drawing TC-202), 130 (Drawing T-704), 143 (Drawing GX-120), and 152 (Drawing GX-220), is generally in agreement with our records. However, we request that our pipeline and accompanying 10-foot-wide permanent easement right-of-way also be shown and identified as Metropolitan's on all pertinent sheets of your plans. Enclosed is a copy of our Right-of-Way Map 1418-5 for your information and use.

   We request that the final alternative detail plans and sections showing the exact locations of the proposed trench/new piles/at-grade proposal in relation to our pipeline be submitted for our review and written approval. In addition, all the pipeline appurtenances such as manholes within the footprint of the proposed project must shown and identified as "protect in place".

   Metropolitan's Drawings A-2755 and B-8289 are enclosed, to convert elevation from NGVD29 to NAVD88 datum, use the following formula:

132-6

132-7

DocuSign Envelope ID: A6245D3B-F730-4CC3-905F-C9C36C71473C
Submission 132

$$Elevation_{NAVD88} = Elevation_{NGVD29} + 1.45 \text{ feet}$$

Trench Option

2. The proposed "grade-separation" design, as shown on Pages 76 (Drawing TC-202), 81 (Drawing T-204), and 152 (Drawing GX-220), will require relocation of Metropolitan's existing pipeline at Manhattan Beach Boulevard. However, we will need to further evaluate design criteria for the alignment for the final length, depth, and size due to utility conflict constraints. Please note that our air release and vacuum valve structure may need to be redesigned and introducing a new air release and pumpwell manhole structures if the proposed alignment results in a new high or low point. 132-8

   This proposal to relocate portion of our pipeline could run up to millions of dollars. All costs associated with the modification design, protection, and inspection of our facilities to accommodate this project must be borne by the project proponent. Please note that general cost estimate includes Metropolitan's design, inspection, administration and any required shutdown and dewatering. The cost may vary, depending on the actual site conditions. The relocation must be designed and constructed in accordance with Metropolitan's standard specifications and design criteria. 132-9

   In order for Metropolitan to determine a detailed scope, we require a deposit in the amount of $100,000 to apply toward the cost of our review of your project plans, establish a utility agreement, and to prepare a detailed cost estimate for the proposed protection and modification design of our facility. Please note that general cost estimate includes Metropolitan's design, inspection, administration and any required shutdown and dewatering. The cost may vary, depending on the actual site conditions.

   Regarding the schedule of work, the relocation of our pipeline would typically take 12 to 18 months from preliminary to final design and construction, and shutdowns and dewatering of our pipeline would only take place between the months of November and March. 132-10

Elevated and/or At-Grade Options

3. To evaluate the feasibility of the proposed options, we will need a comprehensive and substantial technical analysis be submitted for our review and written approval to demonstrate and ensure that there will be no adverse impacts that would compromise the operation, continuity, and long-term reliability of our water conveyance system. As such, we are requesting the following information for our review: 132-11

DocuSign Envelope ID: A6245D3B-F730-4CC3-905F-C9C36C7147EC
Submission 132

- Based on Page 130 (Drawing T-704), please provide a site-specific geotechnical report with borings where the 8-foot-diameter CIDH pile at your Station 438+50 is the closest one to our pipeline, which runs along the Manhattan Beach Boulevard. 132-12

- Please include a vertical section normal to the pipeline alignment while crossing the 8-foot-diameter CIDH pile at your Station 438+50. Please also show the foundation stratigraphy using the closest borings, section of the pipeline, and horizontal clearance between the CIDH pipe and the pipeline. 132-13

- If groundwater drawdown is required to construct the 8-foot-diameter CIDH pile at your Station 438+50, the cone of depression expands and deepens during pumping until the flow in the aquifer is equal to the pumping rate. When the cone stops expanding, equilibrium exists and its configuration in terms of its radius and depth should be determined. If our pipeline alignment crosses the cone of depression, then settlement/lateral deflection profiles along the affected reach of the pipeline are required, as referenced in Metropolitan's Geotechnical Guidelines, copy attached. 132-14

- A contingency plan must be in place in the event of encountering perch water/running soil/unstable soil during the CIDH excavation at your Station 438+50 since the proposed pile at this location is closet to our pipeline. Please note that encountering running soil during the CIDH excavation would potentially undermine the pipeline, thereby adversely affecting its structural integrity and compromising the reliability and continuity of Metropolitan's conveyance and distribution system. 132-15

4. Our pipeline is a precast concrete pipe installed within a jacked casing from Station 297+13 to Station 297+53 with a 10-foot-wide concrete encasement at each end of the jacked casing, as shown on our Drawing A-2755, copy enclosed.

   The plans show that the proposed future at-grade rail tracks may cross over and outside the existing concrete encasement designed to carry the railroad loads. Outside the existing concrete encasement, our pipeline is not designed to carry the proposed railroad loads; therefore, a permanent concrete protective slab or a bridge structure must be placed over our pipeline to protect from excess loads. 132-16

   Please submit the live load per American Railway Engineering Association (equivalent Cooper E-xx loading) for the railway at-grade proposal.

DocuSign Envelope ID: A6245D3B-F730-4CC3-905F-C9C36C714716
Submission 132

5. Cast-in-driven hole piles and piles support structures may impose vertical and/or lateral load on our pipeline. The structural calculations of the piles adjacent to our pipeline must be submitted for our review and written approval.

132-17

Furthermore, a settlement and/or lateral deformation study may be required for pile installations within 50 feet of our pipeline. The use of driven piles within 20 feet of the centerline of our pipeline is not permitted. Before construction commences, our pipeline must be located by potholing, under Metropolitan's supervision.

6. If the proposed grading exceeds 2 feet of cut or fill over our pipeline, a soil report showing the predicted settlement of our pipeline at 10-foot intervals must be submitted. This data must be carried past the point of zero change in each direction and the actual size and varying depth of the fill must be considered when determining the settlement/rebound.

132-18

Any grading that could result in a significant settlement of the pipeline will not be acceptable. If the pipeline settles or rebounds, deflection at the pipe joints will occur. This could result in cracking or chipping of the cement mortar and cement grout joint filler. It could also result in cracking or chipping of the mortar coating. This will allow corrosion to begin at the bells and spigot joints. Excessive settlement/rebound will cause the wall of the pipe to fail catastrophically.

7. Excavation for the proposed project could affect Metropolitan's facilities. Therefore, we request that the contractor submit an engineered shoring design to Metropolitan for review and acceptance a minimum of 30 days before the scheduled start of excavation. Excavation must not begin until the shoring design is accepted by Metropolitan. The submittal must include all required trenches, pits, and related calculations. The use of driven piles within 20 feet of the centerline of our pipeline will not be permitted. Before beginning construction, our pipeline and appurtenances should be located by potholing

132-19

under Metropolitan's supervision. There must be a minimum of 2- and 5-feet of clearance between our pipeline and the edge of the drilled hole for temporary and permanent piles, if applicable. There must be a minimum of 1-foot of clearance between any part of the shoring and Metropolitan's pipeline.

8. Procedures and specifications of construction equipment to be used for the removal and placement of soil in proximity to Metropolitan's pipeline must be submitted to Metropolitan for review and approval a minimum of 30 days prior to starting work in the vicinity of Metropolitan's pipeline. The submittal must include the equipment and procedures to be used for the placement and compaction of soil over and adjacent to Metropolitan's pipeline and meter vault. Metropolitan will not permit procedures, which could subject the pipe and meter vault to excessive

132-20

DocuSign Envelope ID: A6245D3B-F730-4CC3-905F-C9C36C71471C Submission 132

vehicle, impact, or vibratory loads. Procedures for the removal and placement of soil over our pipeline must be such that excessive unbalanced loads are not imposed on the pipeline. 132-20

Storing of equipment or spoils over the footprint of our pipeline is not allowed. 132-21

Vehicles that impose a load no greater than that imposed by an AASHTO H20 vehicle may be used when the cover is between 4 feet and 11 feet. When the cover over Metropolitan's pipeline is less than 4-feet Metropolitan's pipeline loading restrictions must apply. 132-22

No vibratory compaction equipment in vibratory mode must be used within 25 feet of the centerline of our pipeline. 132-23

9. We request that a stipulation be added to your plans and/or specifications to notify Daniel Diaz of our Water System Operations Team at (323) 276-7623 or cell (760) 792-2573, at least two working days prior to starting any work (including potholing) in the vicinity of our facilities. 132-24

We are returning prints of the Pages 46 (Drawing TC-102), 76 (Drawing TC-202), 130 (Drawing T-704), 143 (Drawing GX-120), and 152 (Drawing GX-220), stamped "REVIEWED — CORRECTIONS NOTED — RESUBMITTAL REQUIRED." 132-25

If you have any questions regarding this matter, please contact Ken Chung at 77670.

Subject: Re: 3.6-4.1.1 Construction Impacts Significant and Unavoidable Impact.

Please consider the negative impact of this extension's proposed ROW location's vibrations to our community. See attached photos of Firmosa Ave. homes for visual of the negative impact due to very close proximity to homes and children's outdoor activities at home. The large trains will ramble along practically in families' backyards creating noise and vibrations all day long at these homes and many more. This will negatively impact quality of life for this area's residents for years to come. 133-1
Sincerely,
Lillian Katzenmeyer

Subject: Fwd: DEIR Community Response Series from Right of Say/Redondo Beach Quality of Life Installment #5

---------- Forwarded message ---------
From: **RightOfSay/RBQoL** <[redacted]
Date: Fri, Mar 17, 2023 at 2:29 PM
Subject: DEIR Community Response Series from Right of Say/Redondo Beach Quality of Life Installment #5
To: <greenlineextension@metro.net>
CC: <anajarian@glendaleca.gov>, <fdutra@cityofwhittier.org>, <firstdistrict@bos.lacounty.gov>,

Submission 133

<HollyJMitchell@bos.lacounty.gov>, [redacted] <mayor.helpdesk@lacity.org>, <FourthDistrict@bos.lacounty.gov>, <[redacted], <councilmember.yaroslavsky@lacity.org>

After having a chance to review the Draft Environmental Impact Report, please consider the following as our fifth DEIR group response for the record. We are responding in joint installments submitted by group members. This installment is regarding Vibration.

When the freight train passes by on its once per day round trip, the several liquid petroleum tankers are full of jet fuel on the trip north, get emptied at their destination and returns headed south after dropping the fuel off. The jet fuel is highly flammable, and so would be the emptied tankers. 133-2

The DEIR states the "proposed project", both ROW alignments, would require shifting the freight to the west bringing it 7 - 25 feet closer to residential properties on the west side of the ROW. What are the safety protocols to guarantee no more structural damage will occur to our homes with the added wear and tear of 200 - 300 new commuter trains over 20 hours per day? 133-3

There is very significant seismic vibration as the train passes daily. Glasses, dishes, bottles, shake and move toward the edge of the shelves. They have to be moved back. Walls shake both indoor and outdoor showing cracks from wear and tear, artwork moves and either falls or needs adjusting. A heated chemical bath in a crock pot rattles vigorously. See video which clearly demonstrates this happening, link here: https://youtu.be/OtvWR7xzcYM 133-4

The DEIR states:

3.6-4.1.1 Construction Impacts

Significant and Unavoidable Impact. The Proposed Project would be located in a fully built-out urban environment and construction activities would occur in close proximity to sensitive land uses, including residences, parks, religious uses, and schools throughout the corridor, and may occur during daytime or nighttime hours.

Construction of the Proposed Project would take place over the course of approximately five years.It is anticipated that several construction phases would occur simultaneously along the Proposed Project alignment, accommodating activities requiring lengthy construction times such as utility relocation. 133-5

Construction of the Proposed Project would take place over the course of approximately five years.

VdB in vibration definition as taken from MetroCouncil.org:

Level: Vibration is expressed in ***vibration decibels*** *(VdB). The level of vibration represents how much the ground is moving. The threshold of human perception to LRT and freight rail vibration is approximately 65 VdB and annoyance begins to occur for frequent events at vibration levels over 70 VdB.*

According to well documented studies, we have known geology issues of loose dirt, sand, silt and sandy clay which raises concerns that vibration from the proposed construction is highly risky to surrounding buildings. More significant seismic vibration activity coupled with longevity of construction, then subsequent frequency of operations activity 20 hours per day will most certainly be unbearable to residents and puts the infrastructure of our homes at risk. 133-6

Table 3.6-12 demonstrating the higher than predicted vibration levels that are well above the defined level of over 70. This plus 20 hours per day light rail every 5 - 12 minutes cannot be allowed.

Table 3.6-12 Measured Train Pass-by Vibration Levels at 50 feet

Date	Time	Location	Train Consist	Ground Type	Train Speed (mph)	Measured Level (VdB)	Predicted Level (VdB)	Level Difference	Comment
11/18/20	11:37 AM	Condon Ave	2+40	Flat	20	75.9	76.7	0.8	Good Agreement
11/18/20	3:04 PM	El Nido Park	2+12	Berm	20	89.0	76.7	-12.3	Higher than predicted
11/19/20	12:45 PM	El Nido Park	2+17	Berm	20	91.5	76.7	-14.8	Higher than predicted
11/1/20	2:55 PM	Condon Ave	2+8	Flat	21	76.5	77.1	0.6	Good Agreement

Source: AECOM, 2020

There is confusion in the DEIR about "inconsistent (vibration) readings" at El Nido Park. That happened because the earlier northbound tankers are full of liquid petroleum (flammable), then later on the trip back south the tankers have been emptied so the weight difference would cause different levels of vibration.
It's stunning to us that there isn't even a question about this risk. The threat it poses can't be proven. Metro would be rolling the dice at our communities' peril. The only real mitigation is to build the elevated profile on Hawthorne Blvd.

133-7

Too much humanity is at stake. Please take this to heart and decide accordingly. Thank you for your attention to this matter.

Respectfully,

Redondo Beach and Lawndale members of Right of Say/RBQOL

Subject: Response to DEIR – No to Metro Row (C Line Extension)
Attachments: PXL_20230323_160448870.jpg

To: Metro and Metro Board of Directors

During the Metro meeting at Lawndale High School on Wednesday, February 15, 2023. It was stated that Metro did not anticipate taking any private homes. However, after carefully reviewing the blueprint plans for the Metro Row during the open house, I noticed that the area between Manhattan Beach Blvd and Artesia Blvd. showed Metro planning to take property from residents on the West side of the tracks in order to accommodate the additional two Metro trains. This was confirmed by the engineer at the open house who was kind enough to answer my questions. After careful review of the Draft Environmental Impact Report (DEIR), I also noted that on page 2-12 (page 83), Section Freight Track Modifications, it states that, "Between Manhattan Beach Boulevard and 172nd Street, the existing freight track would be relocated to the west up to 14 feet within the Metro Row."

Please confirm where exactly Metro is planning to take private property in order to make room for the Metro trains and how many square feet for both the Proposed Project and Trench option. Just on the West side of the tracks or also on the East side? Will whole homes be taken or just backyards?

Attached Figure 2.3-5 of the Proposed Project Looking South Between 170th Street and Artesia Boulevard is not at all accurate if you compare with the photos I've also attached. There isn't sufficient room on either side so as a homeowner next to the Metro Row, I would like to know how my family's financial future will look in a few years. The rising cost of homes and interest rates will not make it easy for the homeowners that will be impacted by this project. For a lot of us, these homes were purchased many years ago and with a lot of hard work and effort. So please take into consideration that this Proposed Project will literally be tearing up a community and causing undue financial hardship to blue collar hardworking home owners, especially for those of us who are minorities who have already been struggling with generations of systematic red lining, for those that are retired, for those who thought they only had to purchase a home only once and now face a struggling economy and higher interest rates, for those who are barely making ends meet with their current mortgage and for countless other reasons.

134-1

Please see attached photo of space between the tracks and residences in Lawndale.

Please select the Hawthorne option which has a significantly less impact on surrounding residents and homeowners.

134-2

Subject: Response to DEIR – No to the Metro Row (C Line Extension)
Attachments: PXL_20230323_160434951.jpg

To: Metro and Metro Board of Directors

After careful review of the Draft Environmental Impact Report (DEIR), my family, my neighbors, and I are against the Metro Row construction and operation in our backyards for the following concerns and questions:

On page 3.6 - 86 (page 525), Section 3.6 - 4.3.1 Construction Impacts, states that the, "Overall, the Proposed Project would have a **significant and unavoidable impact for both damage and annoyance impacts**. Furthermore, under Building Damage paragraph in same section, "**Even with implementation of mitigation measures, the Proposed Project would have a significant and unavoidable impact related to vibration damage during construction**."

If the impact is significant and unavoidable, who will be responsible for damage to residential homes? Would Metro cover any damage caused by vibration caused by the construction of the Proposed project or trench option? 135-1

If Metro is going to cover the costs of construction damage to residential properties, how would residents/homeowners apply or submit a claim to Metro?

Is Metro also covering the cost of vibration damage once trains are in operation?

Is there anything that can be done to decrease vibration frequency once the trains are in operation next to the freight train?

What safeguards will be placed or taken to ensure once the Metro light rail trains are in full operation and constantly passing through (200-300 times a day) that the constant vibration of these trains will not disturb or compromise the integrity of the petroleum and gas pipelines under the Metro Row? 135-2

In one of the attached photo, you can observe how close the tracks are to residences.

Also, on page 3.6-94 (page 533), Table 3.6-24 Summary of Proposed Project Operational Ground-borne Vibration Annoyance Impacts states that only 23 residences are impacted West of the Row between 160th and Artesia. This is not an accurate number, there are 28 houses between just 170th and Artesia. Unless Metro is planning to take some of those homes for the Row, 23 seems to be an inaccurate count of residences. Please confirm the number of the residences impacted in this whole 135-3

table. Or if they are accurate, please specify what residences will be taken and become part of the Row. 135-3

Thank you for your time and hope that you take into consideration our community's well-being and quality of life.

To: Metro and Metro Board of Directors

After careful review of the Draft Environmental Impact Report (DEIR), my family, fellow residents, and I are against the Metro Row construction and operation in our backyards and just a few yards away to an elementary school in Lawndale for the following major safety concerns: 136-1

On page 3.9 - 35 (page 662), Section 3.9 - 4.2.1 Construction Impacts, Oil and Gas Pipelines, states that the "Proposed Project would have a **less than significant** impact during construction involving the release of hazardous materials into the environment." Yet the DEIR also states in this same section that, "Oil and gas pipelines including a 10-inch Shell crude oil, 8-inch Exxon Mobil jet fuel, and 20-inch Chevron gas lines run within the Metro Row. **Oil and gas pipelines may pose a hazard to human health and safety or to the environment if oil or gas are released**. Release could occur through spills during construction or rupture of a pipeline during construction."

Based on this DEIR section, if there is a risk and a potential for leaks during construction and it may pose a threat, why is the construction over these oil and gas pipelines in a residential area considered "**less than significant**"? Wouldn't this also be a potential risk to the construction workers? 136-2

What safeguards will be placed or taken to ensure that once in full operation, and with the constant vibration of these Metro light rail trains constantly passing through (200-300 times a day), do not disturb or compromise the integrity of these pipelines?

How often will the pipelines be inspected for vibration damage? Residents on the Row can feel homes and things shake with just the BNSF freight train. 136-3

How about safeguards for unforeseen events such as derailments, earthquakes, etc.?

For these potential unforeseen events, what would be the potential consequences to the surrounding homes and residents be, given the close proximity to the trains and the underground and exposed pipelines along the Metro Row? 136-4

Also, once in operation, will the speed of these Metro trains be moderated when passing next to the BNSF freight trains also carrying hazardous materials? 136-5

Please see attached photos of the petroleum pipeline warning signs along the Metro row on 170th in Lawndale. The first picture is facing South of 170th. The homes can also be seen along the wall and/or their yards on the left. The second picture is facing West at 170th intersection. 136-6

Thank you for your time and hope that you take into consideration our community's safety and well-being.

The Metro Board
One Gateway Plaza
Los Angeles, CA 90012-2952
Sent via email to: greenlineextension@metro.net

Dear Metro Board,

Thank you for the opportunity to comment on the Metro's C-Line Extension. I'm a resident of Torrance, and I'm writing to **express support for the C-Line Extension that utilizes the existing railroad right of way (ROW) between the Marine Station in Redondo Beach to the Mary Giordano Regional Transit Center in Torrance, also known as the Proposed Project.** 137-1

As evidenced by the Board's Draft Environmental Impact Review (EIR), the Proposed Project that utilizes the ROW is the least impactful to Torrance residents, businesses, and current and future surface street traffic. It is also the least costly option that also provides the fastest pathway to starting construction. The Proposed Project has the best chance of being completed in time for the 2028 Olympics, which, with a robust and well connected Metro system, can be an economic and cultural boon for Torrance's economy. Lastly, the Proposed Project will connect the two transit centers that have already been built in the Cities of Redondo and Torrance– transit centers that were built for the purpose of connecting to the Metro line expansion. 137-2

I am opposed to the option of extending the C-Line along Hawthorne Boulevard. This option requires elevation, causing significant disturbance and devastation to neighborhoods and businesses along that popular corridor. Furthermore, the option requires the Metro Board using eminent domain, which is unnecessary considering the Board has the rights of way for the Proposed Project. Locating light rail on Hawthorne Boulevard, whether elevated or at grade, would negatively impact Torrance residents and would be devastating to Torrance commercial properties that line Hawthorne Boulevard. 137-3

The Torrance Transit team estimates that the majority of riders on the new C-Line Expansion will travel in and out of Torrance, with projected daily trips of up to 16,000! I hope that the City's significant ridership contribution will contribute heavily in your decision to support the Proposed Project–the same position unanimously approved by the Torrance City Council. 137-4

Thank you for the opportunity to share my position. I appreciate all the hard work the Metro employees do every day.

Sincerely,

Joan A. Marks

SUBJECT: Letter of Support for C-Line Extension to Torrance

Dear Ms. Sheridan,

As L.A. Metro prepares to bring light rail to the South Bay via an extension of the existing C-Line (formerly "Green Line") and studies the two potential alignments, we write to encourage you to support the Proposed Project: Right-of-Way with Elevated/At-Grade Option.

The Right-of-Way with Elevated/At-Grade Option utilizes existing L.A. Metro Right-of-Way with a combination of elevated and at-grade segments. Additionally, it does not encroach on I-405 Freeway, avoids business, traffic and parking impacts on Hawthorne Blvd. and is the most cost-effective option. 138-1

Los Angeles drivers are estimated to spend an average of approximately 95 hours in traffic, costing $1,601 per driver annually. This Project will provide an alternate mode of transportation for those traveling along the I-405 corridor, which will help save passenger commute times and alleviate traffic on roadways. The extension will also provide more equitable access to regional destinations by improving connections to the greater L.A. Metro regional rail system and reduce air pollution and greenhouse gas emissions by about 2,369 metric tons of C02 annually, making transit a more viable transportation choice. Additionally, the C-Line Extension is estimated to serve 65,000 jobs by 2042, generate between 10,300 – 16,200 new daily transit trips and improve equity by serving 18% of the low-income and 47% of the minority populations in the project area.

The other route options would require major construction in the area and will result further delays for the project. The Elevated Hawthorne Blvd. option is inconsistent with voter-approved funding initiatives. It will cause significant impacts to local businesses and the economy, most notably major traffic burden at multiple intersections within the City of Torrance. LA Metro has identified six intersections within Torrance which would experience worse traffic conditions than current flow, which will undoubtedly force cars onto less trafficked, more residential streets. 138-2

For too long the South Bay region has waited for light rail investment. Please advance the only option that builds on completed right-of-way investment, minimizes commuter disruption 138-3

and realizes both environmental and ridership access the soonest: The Right-of-Way with Elevated/At-Grade Option. 138-3

Thank you for your time and consideration.

Best Regards,

AROHI SHARMA
City of Torrance Traffic Commission, Commissioner

Re: **Torrance Refining Company LLC's Comments on Draft Environmental Impact Report for Los Angeles County Metropolitan Transportation Authority's Proposed C Line (Green) Extension Project**

Ms. Sheridan:

Torrance Refining Company LLC ("TORC") appreciates the opportunity to provide these comments on the Los Angeles County Metropolitan Transportation Authority's ("Metro") Draft Environmental Impact Report ("DEIR") prepared for the proposed C Line (Green) Extension Project ("Proposed Project"). TORC operates a petroleum refinery ("Refinery") located at 3700 W. 190th Street in Torrance, California, immediately adjacent an existing commercial freight rail right-of-way that is currently included as part of the Proposed Project.

TORC has operated the Torrance Refinery ("Refinery") since acquiring the Refinery in 2016 from the former owner and operator, ExxonMobil Oil Corporation. The Torrance Refinery has been operating in the City of Torrance ("City") for almost 100 years.[1]

TORC refines and supplies approximately 20 percent of Southern California's California-compliant fuels, 32 percent of the jet fuel for Los Angeles International Airport, and 40 percent of the North American Emission Control Area marine diesel to the Port of Los Angeles, in addition to other necessary petroleum products to California and surrounding states. These fuels provide part of the critical backbone of the energy infrastructure used every day by over 50 million people across the Western United States. TORC has been a

139-1

[1] TORC joins in and incorporates by reference the comments submitted by Torrance Logistics Company LLC ("TLC"), the operator and owner of multiple pipelines and related infrastructure that are used to convey petroleum products between the Refinery and downstream pipelines, facilities, and customers.

vital and integral part of the City's, Los Angeles County's, and California's economy and community fabric for many years. TORC currently employs approximately 588 Southern California residents and 495 contractors on a daily basis during normal operations, most of whom work in close proximity to the Proposed Project.

139-1

As an operator of a major industrial facility in the South Bay that would be directly impacted by the Proposed Project, TORC has serious concerns that the Proposed Project would cause significant adverse safety, security, access, and other impacts to our employees, operations, contractors, and surrounding community and environment that have not been adequately reviewed and addressed in the DEIR. We are also concerned that the DEIR does not discuss the potential adverse impacts of adding prospective passengers to a rail line previously used only for commercial freight, including passengers' proximity to potential heat, noise, and air quality impacts that would be associated with any unexpected Refinery emergency incident or necessary equipment maintenance activities.

Under the California Environmental Quality Act ("CEQA") and its regulatory CEQA Guidelines, the DEIR is required to advise the public of these significant environmental impacts related to the Proposed Project and assess potentially feasible Project alternatives that can help avoid or substantially mitigate these impacts. *See* 14 C.C.R. ("CEQA Guidelines") § 15126.4(a)(1). Unfortunately, the DEIR does not identify many of the safety, security, access, and other impacts associated with the Proposed Project's proximity to the Refinery, let alone discuss proposed feasible Project alternatives that could mitigate or avoid those impacts. TORC urges Metro to address these deficiencies in order to comply with the requirements of CEQA and the CEQA Guidelines. Until this happens, the DEIR is premature and must be revised to address these issues and impacts and then recirculate for further review and comment by the public.

139-2

We also note that many of the issues and impacts associated with the Proposed Project discussed in detail below have been exacerbated by insufficient discussions between Metro and TORC prior to the release of the DEIR. In our view, this has resulted in a rushed and incomplete DEIR that has not yet assessed and disclosed to the public the full range of environmental consequences and impacts flowing from the Proposed Project. Indeed, as discussed below, the scope and breadth of the remaining outstanding issues and impacts associated with the Proposed Project related to its close proximity to the Refinery makes it difficult to envision that they will all be fully resolved in time to allow Metro staff to make an informed recommendation on preferred Proposed Project options by Spring 2023. In any event, while we believe CEQA certainly requires Metro to address the impacts discussed below before the Proposed Project can proceed, TORC reserves the right to supplement these comments as needed to capture any additional concerns and impacts it may identify in its ongoing review of the DEIR.

I. The Proposed Project Would Require an Easement Through or Acquisition of Refinery Property That Would Cause Significant Adverse Impacts to TORC

While TORC has monitored the public progress of the Proposed Project, it was only in the past month – well after the release of the DEIR – that Metro notified TORC and TLC that Metro would need to either obtain an easement through or acquire a significant section of the Refinery for an access road related to the Proposed Project. The section of TORC property at issue is in the southwest corner of the Refinery, in an area adjacent to a tank farm and containing a critical access road for Refinery vehicles. This area is located approximately within 420 feet of two tanks containing petroleum products and within approximately 1,000 feet of the Refinery's two main flares. When these flares are required to operate (e.g., in an emergency or for necessary equipment maintenance purposes), they emit substantial amounts of radiant heat in the immediate vicinity of this area.

The access road at issue is used every day by Refinery vehicles, employees, and contractors. Refinery vehicles are required to have a turning radius of at least 44 feet to safely navigate this road in either direction. Also, there are active pipelines adjacent to the tank farm in this area, which further restrict vehicles' turning radius. Additionally, the access road must provide a safe path of egress for vehicles, employees, and first responders in the event of an emergency. Accordingly, it is crucial that Refinery and first responder vehicles continue to have unrestricted access to this area for regular Refinery activities and for necessary emergency operations.

139-3

As discussed above, TORC is deeply concerned that the Project's proposal to annex Refinery property that would limit access to this the section of Refinery could adversely impact the Refinery's ability to comply with applicable regulatory requirements regarding emergency response and employee and contractor safety, and could require TORC to spend significant time and resources relocating operating infrastructure away from this area (also creating additional impacts from those corresponding construction efforts). All of these impacts would cause significant hardship to TORC's operations.

In addition to the logistical, emergency response, and safety issues for TORC's Refinery raised above, the proposed easement or acquisition for an access road in this area of the Refinery could also impact TLC's rights-of-way ("ROWs"), which contain multiple pipelines and related infrastructure that are used to convey petroleum products between the Refinery and downstream pipelines, facilities, and customers. Ready TLC employee and contractor access to these pipelines in the ROWs is necessary for legally mandated inspections, maintenance, and to address any leaks that may occur over time. Accordingly, the Project's proposal would limit TLC access to (or the path of) the TLC's pipelines and related infrastructure in the ROWs, and could require the pipelines to be altered or moved. Alteration or relocation of these pipelines and related infrastructure would necessitate an extensive period of construction in and around the impacted area, causing additional noise,

air quality, traffic, and other impacts associated with such construction activities. Additionally, any alteration or relocation would require the pipelines to be shut down for some extended period of time, which would adversely impact TORC and TLC operations and California consumers.

The Proposed Project's annexation of a large section of the existing Refinery's southwestern perimeter for an access road will present a host of logistical and operational challenges for the Proposed Project, TORC, and TLC that have not been addressed at all in the DEIR. Questions of whether and how the Proposed Project, TORC's Refinery, and TLC's pipelines and related infrastructure could accommodate the other's operations are numerous and complex. TORC and TLC believe that Metro should engage an independent third-party expert consultant to study the impacts of the proposed access road annexation and any other encroachment on existing TORC Refinery property and TLC's ROWs. At a minimum, such a study should identify all of the work that would be required to ensure TORC's Refinery's and TLC's ROWs' ongoing compliance with environmental, emergency response, safety, and related requirements, if the Proposed Project were to require an easement or acquisition for an access road or any other encroachment through the affected area. The results of this study should be shared with TORC, TLC, and the public and fully incorporated into any future revised DEIR, along with an analysis of the potential impacts of the work required and the potential alternatives to the Proposed Project that could mitigate or avoid these issues and impacts.

139-3

II. The Project Has Not Addressed Potential Impacts to Passengers from Proximity to Emergency Flares and Other Industrial Equipment on a Rail Line Previously Used Only for Freight

The DEIR also lacks any analysis of potential impacts on prospective rail passengers from proximity to the TORC Refinery's tank farm, emergency flares, and other area industrial operations. As Metro knows, rail line running through this area is currently used only for commercial freight. As noted above, the portion of the rail line immediately adjacent to the Refinery is located within approximately 420 feet of the Refinery's tank farm and within approximately 1,000 feet of the Refinery's two main emergency flares. The nearest tanks contain large volumes of petroleum products. Any future incident that might occur involving the flares and/or these tanks would create safety concerns for persons and equipment in the area, potentially requiring evacuation of the area. Given its proximity, those safety considerations also would have an impact on the Project's proposed adjacent rail line.

139-4

The Refinery flares, which rise 200 feet above the Refinery, are designed to safely combust excess flammable Refinery gas in the event of an emergency or necessary equipment maintenance. When operating, these flares can emit radiant heat of approximately two (2) kilowatts per square meter (kW/m2), requiring Refinery employees and contractors to follow safety precautions to vacate the area during their operation.

Again, the proximity of the proposed adjacent rail line requires that Metro revise the DEIR to address these safety considerations. We are concerned that the DEIR has not even attempted to analyze whether and how passengers on the Project's proposed route nearest to the Refinery may be adversely impacted by an incident at the tank farm and/or potential operation of the flares. Metro must amend the DEIR to assess these potential impacts.[2]

Notably, the City in its EIR for the Del Amo Boulevard extension project did analyze the potential radiant heat impacts of the Refinery's flares. The City included as an important project mitigation a physical barrier at Crenshaw and Del Amo Boulevards that could be lowered to prevent vehicular and pedestrian traffic along the north side of Del Amo Boulevard from getting near the flares if activated. As further mitigation, the project did not include a sidewalk or bike lane on the north side of Del Amo Boulevard, which is closest to the Refinery, to further prevent pedestrian and bike traffic from being exposed if the flares were activated. None of these types of potential mitigation have been considered as part of the Proposed Project.

139-4

Again, as discussed above, TORC urges Metro to engage a third-party expert to assess the potential impacts to rail passengers associated with the Proposed Project's close proximity to the Refinery's tank farm, flares, and other industrial equipment, along with potential alternatives to mitigate or avoid those impacts. The results of this study should be incorporated into a revised and recirculated DEIR for further review and comment by the public before Metro proceeds with the Proposed Project.

III. The Project Has Not Addressed Other Potential Impacts Related to Security, Safety, Land Use, Etc.

In addition to failing to address the issues and impacts addressed above, the DEIR also fails to analyze other potential impacts related to security, safety, land use, etc., due to the Proposed Project's close proximity to the Refinery.

Regarding security, the Refinery is subject to the Chemical Facility Anti-Terrorism Standards and Protecting and Securing Chemical Facilities from Terrorist Attacks Act. Under these regulations administered by Homeland Security, TORC has undertaken certain security precautions to keep the Refinery secure and safe for employees, contractors, and the community. Currently, the DEIR does not analyze the potential security impacts and risks of the Proposed Project's rail line to the Refinery and its ability to comply with these regulations.

139-5

Regarding safety, the Refinery is subject to state and federal Risk Management Practices regulations. Under these regulations, administered by the California Office of Emergency

[2] In the context of this additional impact analysis, Metro also should consider potential safety and other impacts in the event of a train derailment in close proximity to this section of the Refinery.

Services on the state level and the U.S. Environmental Protection Agency on the federal level, TORC has undertaken required impact analyses for certain materials used in its operations. These analyses are used by various local, state, and federal agencies for planning purposes to determine the appropriate level of response needed in the event of an incident. The DEIR does not analyze how these agencies' planning or response may be impacted by the Proposed Project.

Regarding land use, the Refinery is zoned M2-Heavy Industrial under the City's Zoning Ordinance and General Plan. Under the City's zoning, certain setback requirements may be applicable to the Refinery's boundary, which could apply in the area of the Proposed Project's access road. The DEIR does not analyze how the City's zoning requirements could impact applicable setback requirements associated with the proposed access road.

139-5

Again, as discussed above, TORC urges Metro to engage a third-party expert to assess the potential security, safety, land use, and other impacts, along with potential alternatives to mitigate or avoid those impacts. The results of this study should be incorporated into a revised and recirculated DEIR for further review and comment by the public before Metro proceeds with the Proposed Project.

IV. The Proposed Timeline for Selection of a Project Alternative is Unrealistic and Disregards the Time Needed to Address the Important Potential Impacts Discussed Above

Finally, the DEIR notes that Metro staff intend to present a final recommendation on their Proposed Project route(s) alignment by Spring 2023, ostensibly as part of or a prelude to issuance of a Final EIR. TORC believes that the issues identified above are both challenging and complex. But these impacts must be addressed now. They are reasonably foreseeable and significant, and their analysis (and analysis of potential mitigation measures) cannot be "piecemealed" or deferred to a later date. *See* Cal. Pub. Res. Code § 21065; CEQA Guidelines §§ 15126.4(a)(1)(B), 15378(a). While TORC stands ready to work cooperatively and collaboratively with Metro staff in assessing the impacts related to the Proposed Project's proximity to TORC's Refinery property and operations and TLC's ROWs, the full picture of potential impacts from the Proposed Project simply will not be known by this spring. TORC urges Metro staff to undertake a full and fair analysis of all the Proposed Project's potential impacts, and not cut this process short to meet artificial or unrealistic deadlines.

139-6

* * *

Again, TORC appreciates the opportunity to provide these comments on the Proposed Project. Despite the concerns outlined above, we remain ready and willing to engage with Metro staff to address these concerns and assess the full range of the Proposed Project's potential impacts, alternatives, and mitigation measures to alleviate or avoid these impacts.

Very truly yours,

Sara C. Wilson

https://www.cbsnews.com/losangeles/news/train-derailment-in-el-segundo-forces-road-closure/

EL SEGUNDO (CBSLA.com) — A tanker train derailed in El Segundo Thursday, but there were no immediate reports of injuries or spill. At least four cars jumped the track, and their undercarriages were torn out around 2:30 p.m. near Douglas Street and Chapman Way, according to El Segundo police.

140-4

THE RAIL WAS AT GRADE where it derailed. According to El Segundo police, *the train was coming from the nearby Chevron oil refinery, and the cars were carrying liquefied natural gas.* The derailment prompted the suspension of rail service on Metro's Green Line between El Segundo and Redondo Beach and buses were requested to shuttle passengers between the stations.

Firefighters were there to check for possible leaks.

Some areas around the tracks appeared to be flooded. But it was unclear if the derailment was rain-related. Nearby businesses and residents were evacuated as a precaution.

LEAVE THE ROW **AS IS.** USE THE ***ELEVATED HAWTHORN BLVD 2e OPTION*** FOR THE GREENLINE EXTENSION IF IT IS TO BE BUILT. ***NO BUILD*** WOULD BE THE PREFERRED OPTION.

140-5

Subject: Proposed Metrolink in Lawndale and Redondo Beach

I am writing to express my strong opposition for routing the proposed C (Green) Line extension down the current Metro right of way in front of my new home. I purchased last december for an outrageous price, due to the housing market, and do not want my investment obliterated! It's a modest but quiet working class community, a representation of the American dream. A home that to me is my "slice " of American pie which you now want to squish under a train! Why in the name of sanity, would you destroy this and other residential neighborhoods in Lawndale and Redondo Beach. I am urging you and the board to choose the Hawthorne Boulevard elevated option instead for the following reasons: 141-1

- NEIGHBORHOOD QUALITY OF LIFE: The ROW option would send 200-300 trains per day through quiet residential neighborhoods from 4 AM until Midnight. This will permanently affect the quality of life for more than 1,000 families in Lawndale and North Redondo Beach. Metro's own environmental impact report states increases in NOISE and VIBRATION will be "Significant" and "Unavoidable." This is in addition to 3-5 years of significant construction-related impacts to the neighborhood. Working people need their rest; this will not be possible with the years of construction and then the train repeatedly passing until midnight! 141-2

- SAFETY: In some spots, the ROW option will move an existing freight track to within 8-10 feet of fence lines. This track currently sees trains carrying highly flammable and dangerous petroleum products between two oil refineries. Even a minor derailment -- even at slow speeds -- would put petroleum tanker cars into homes and backyards. This freight line already has a history of previous derailments. We don't want to become Palestine, Ohio! 141-3

In addition, the ROW has multiple high-pressure petroleum pipelines buried in unstable soil. Construction of the C Line down the ROW presents a danger to those pipelines even if all safety protocols are followed. Even one slip-up could be catastrophic to the neighborhood. There have been other neighborhoods destroyed in the past due to pipeline explosions. 141-4

- LOSS OF GREEN SPACE: The ROW -- for better or worse -- is utilized as much-needed green space in the City of Lawndale. Not only that, it offers a respite from urban sprawl with tall, mature trees and views of the San Gabriel Mountains in the distance. What is now a park-like community along the ROW will be replaced with giant walls that will bounce train noise and destroy views of the horizon. Access to green space is not only aesthetically pleasing but good for the overall health and wellness of residents. 141-5

- RIDERSHIP: Routing the Metro C Line down Hawthorne Boulevard would see more ridership than the ROW option as it passes by businesses and landmarks people want to visit. This includes a station in front of a planned mixed-use residential development at the South Bay Galleria. I thought the point of commuter trains was to make life easier for people living in busy areas. The future residents of the planned residential development will need the train to be on Hawthorne Blvd and not my neighborhood. 141-6

I implore you to listen to the voices of the community when selecting which option to build. This is a 100-year project that will have PERMANENT impacts on a community already disadvantaged compared to neighboring South Bay cities. When considering costs, look at not only the financial costs, but the societal and environmental costs as well. Do the right thing, get it right for future generations and choose HAWTHORNE BOULEVARD for the Metro C Line Extension. Remember, you wouldn't want your property values and peace ruined, neither do we! 141-7

Thank you
Lisa Francois
Row homeowner

Subject: Choose Hawthorne Blvd for the Metro C Line / Green Line Extension

Dear Metro Board Members,

I am writing to express my strong disapproval for routing the proposed C (Green) Line extension down the current Metro right of way through residential neighborhoods in Lawndale and Redondo Beach. I am urging you and the board to choose the Hawthorne Boulevard elevated option instead for the following reasons: 142-1

- NEIGHBORHOOD QUALITY OF LIFE: The ROW option would send 200-300 trains per day through quiet residential neighborhoods from 4 AM until Midnight. This will permanently affect the quality of life for more than 1,000 families in Lawndale and North Redondo Beach. Metro's own environmental impact report states increases in NOISE and VIBRATION will be "Significant" and "Unavoidable." This is in addition to 3-5 years of significant construction-related impacts to the neighborhood. 142-2

- SAFETY: In some spots, the ROW option will move an existing freight track to within 8-10 feet of fence lines. This track currently sees trains carrying highly flammable and dangerous petroleum products between two oil refineries. Even a minor derailment -- even at slow speeds -- would put petroleum tanker cars into homes and backyards. This freight line already has a history of previous derailments. 142-3

In addition, the ROW has multiple high-pressure petroleum pipelines buried in unstable soil. Construction of the C Line down the ROW presents a danger to those pipelines even if all safety protocols are followed. Even one slip-up could be catastrophic to the neighborhood. 142-4

- LOSS OF GREEN SPACE: The ROW -- for better or worse -- is utilized as much-needed green space in the City of Lawndale. Not only that, it offers a respite from urban sprawl with tall, mature trees and views of the San Gabriel Mountains in the distance. What is now a park-like community along the ROW will be replaced with giant walls that will bounce train noise and destroy views of the horizon. 142-5

- RIDERSHIP: Routing the Metro C Line down Hawthorne Boulevard would see more ridership than the ROW option as it passes by businesses and landmarks people want to visit. This includes a station in front of a planned mixed-use residential development at the South Bay Galleria. 142-6

I implore you to listen to the voices of the community when selecting which option to build. This is a 100-year project that will have PERMANENT impacts on a community already disadvantaged compared to neighboring South Bay cities. When considering costs, look at not only the financial costs, but the societal and environmental costs as well. Do the right thing, get it right for future generations and choose HAWTHORNE BOULEVARD for the Metro C Line Extension. 142-7

Thank you,

To: GreenlineExtension
Subject: no to ROW

Hello,

Due to recent freight railway catastrophies, there is an emerging bipartisan movement in Congress demanding lasting changes to improve railroad safety demanding a deeper study into the options that ensure rail safety. Please premptively consider the legislation that will emerge from these investigations and look deeper into the C line extension with regards to safety. 143-1

Metro has a third option of an elevated commuter train that would travel up Hawthorne Blvd or an approval for 'no train' with high frequency transit buses in dedicated bus lanes- these would be the best options to safely serve the community. 143-2

respectfully,
Michael Kim

Subject: DEIR Stakeholder Response - Air Quality

Dear Metro and Metro Board of Directors,

I am a homeowner in Redondo Beach sharing a property line with the ROW. I have grave concerns about Air Quality during 5+ years of heavy construction right behind and up against my property's back wall.

The DEIR acknowledges “cumulative impacts” during construction and that Metro strives to protect human health, yet non of the actual data from readings refers to healthy human tolerance levels..

I cannot overstate how much overly extreme, uncontrollable amounts of loose, fine powdery dirt, technically referred to as PARTICULATE MATTER (Pm10), gets kicked up by just one maintenance or recreational vehicle that passes though the ROW behind my house. It’s a literal brown cloud, like a mini haboob dust cloud that they get in the desert. My backyard is impossible to keep clean just due to just the one passing RT train so when the occasional vehicle kicks up that much dirt it is unbearable.

Imagine 5 - 7 years of HEAVY construction utilizing up to 40 vehicles at a time up and down the ROW after 18 months of 101 dump trucks per day and what that will do..

Particulate matter along the ROW will most certainly bring the air quality way beyond an unlivable standard. In the case of this project, the reference to “temporary” means 5 years beginning with 101 dump trucks for 18 months and then subsequently, up to 40 pieces of heavy equipment kicking up an insurmountable amount of dirt which will cause health problems at such a close proximity to human lives. 144-1

From EPA.gov:
Exposure to such particles can affect both your lungs and your heart. Numerous scientific studies have linked particle pollution exposure to a variety of problems, including:

- *premature death in people with heart or lung disease*
- *nonfatal heart attacks*
- *irregular heartbeat*
- *aggravated asthma*
- *decreased lung function*
- *increased respiratory symptoms, such as irritation of the airways, coughing or difficulty breathing.*

https://www.epa.gov/pm-pollution/health-and-environmental-effects-particulate-matter-pm

I’m asking you to please take this to heart. Personally, I already have an irregular heartbeat and get short of breath, and I’m not the only neighbor who sees this.

Please recommend and vote for the options with fewer health impacts, which is Hawthorne Blvd Elevated. If funding is a problem then we would have to got to the High Frequency Buses alternative. 144-2

Thank you for your consideration.

Mr. Dierking and staff,
That is very unfair.
Below, you said you would "work on that and get back to you." I held back hoping you would: you did not.
Secondly, Metro staff showed the [construction] cost estimates chart at every presentation and on a big chart for display before every public meeting for months.
Please supply backup for your construction costs. Failure to supply is its own message.

Cost is not part of the environmental review process per CEQA. Metro is preparing more detailed cost and funding information to share with the Metro Board later this summer to inform their selection of a Locally Preferred Alternative. We will have this information for you then.

Subject: Feedback on C line (Green) Extension to Torrance

We attended the Redondo Beach Performing Arts Center meeting.
It appears to be a high cost to extend the line only 4.5 miles with only two stops being added.
The Metro Row Alignment (Elevated/Street-Level) & Metro Row Alignment (Trench/Below-Grade)
would greatly disrupt the lives of people living in Redondo Beach & Lawndale. The Hawthorne Option
while a better option will affect all of us including Torrance as Hawthorne is a major road.
At the meeting a brief statement was made regarding rapid bus route along Hawthorne.
That seems to be a better option for all of us. 148-1

The funds would be better used to extend the line to the airport benefiting everyone. 148-2

We do not support any of the three extensions plans to Torrance. 148-3

Subject: No on Railroad in the ROW

Hello,
I am sending this email to you all to please reconsider the plan of placing the Metro train that would run down the ROW. I am a homeowner and resident of the City of Lawndale for the past 20 years and find this plan very upsetting to our community. When purchasing our home here we were aware of the train that goes through 2x a day but never expected to have a METRO train going through our neighborhood 200 to 300 times a day. The noise that this train will bring will be such a disturbance to my family and neighbors. Please reconsider moving this project!! 149-1

Thank you ,

Subject: Response to DEIR - Quality of Life

To: Metro and Metro Board of Directors

After careful review of the Draft Environmental Impact Report (DEIR), my family, fellow residents and neighbors, and I are against the Metro Row construction and operation in our backyards for the following concerns:

Regarding pages ES-22 – ES-23, Table ES-2 Summary of Impacts Evaluation Under Noise and Vibration, Letter A: The Proposed Project and Trench option would run through our backyards, and according to this table, there is a "**significant**" impact both during construction and operations. According to this table, **"The Project would result in generation of a substantial increase in ambient noise levels** in the vicinity of the project in excess of standards established by the FTA, in the local general plan or noise ordinance." 150-1

Will any precautions be taken to warn families when construction is planned in close proximity to residential homes? 150-2

During operation, this same table ES-2, states that there will be soundwalls, how high will these soundwalls be? Will they be earthquake safe since they will be next to our homes? Have these soundwalls been used elsewhere in LA County and has the noise level been tested to see if they truly reduce noise from the Metro trains? 150-3

Thank you for your time and hope that you take into consideration that our community will lose our quiet and peaceful neighborhood since these trains will run every five minutes 200-300 times a day behind our homes. Therefore, we urge you to please select the Hawthorne option since it's an already a busy commercial street. 150-4

- Angelica Vicente, Concerned Lawndale Resident

Subject: Choose Hawthorne Blvd for the Metro C Line / Green Line Extension

Dear Metro Board Members,

I am writing to express my strong disapproval for routing the proposed C (Green) Line extension down the current Metro right of way through residential neighborhoods in Lawndale and Redondo Beach. I am urging you and the board to choose the Hawthorne Boulevard elevated option instead for the following reasons: 151-1

- NEIGHBORHOOD QUALITY OF LIFE: The ROW option would send 200-300 trains per day through quiet residential neighborhoods from 4 AM until Midnight. This will permanently affect the quality of life for more than 1,000 families in Lawndale and North Redondo Beach. Metro's own environmental impact report states increases in NOISE and VIBRATION will be "Significant" and "Unavoidable." This is in addition to 3-5 years of significant construction-related impacts to the neighborhood. 151-2

- SAFETY: In some spots, the ROW option will move an existing freight track to within 8-10 feet of fence lines. This track currently sees trains carrying highly flammable and dangerous petroleum products between two oil refineries. Even a minor derailment -- even at slow speeds -- would put petroleum tanker cars into homes and backyards. This freight line already has a history of previous derailments. 151-3

In addition, the ROW has multiple high-pressure petroleum pipelines buried in unstable soil. Construction of the C Line down the ROW presents a danger to those pipelines even if all safety protocols are followed. Even one slip-up could be catastrophic to the neighborhood. 151-4

- LOSS OF GREEN SPACE: The ROW -- for better or worse -- is utilized as much-needed green space in the City of Lawndale. Not only that, it offers a respite from urban sprawl with tall, mature trees and views of the San Gabriel Mountains in the distance. What is now a park-like community along the ROW will be replaced with giant walls that will bounce train noise and destroy views of the horizon. 151-5

- RIDERSHIP: Routing the Metro C Line down Hawthorne Boulevard would see more ridership than the ROW option as it passes by businesses and landmarks people want to visit. This includes a station in front of a planned mixed-use residential development at the South Bay Galleria. 151-6

I implore you to listen to the voices of the community when selecting which option to build. This is a 100-year project that will have PERMANENT impacts on a community already disadvantaged compared to neighboring South Bay cities. When considering costs, look at not only the financial costs, but the societal and environmental costs as well. Do the right thing, get it right for future generations and choose HAWTHORNE BOULEVARD for the Metro C Line Extension. 151-7

Thank you,

Subject: I Support the Metro Board's Proposed Project Option for the C-Line Extension

Dear Metro Board,

Thank you for the opportunity to comment on the Metro's C-Line Extension. **I'm a resident of Torrance, and I'm writing to express support for the C-Line Extension that utilizes the existing railroad right of way (ROW) between the Marine Station in Redondo Beach to the Mary Giordano Regional Transit Center in Torrance, also known as the Proposed Project.** 152-1

As evidenced by the Board's Draft Environmental Impact Review (EIR), the Proposed Project that utilizes the ROW is the least impactful to Torrance residents, businesses, and current and future surface street traffic. It is also the least costly option that also provides the fastest pathway to starting construction. The Proposed Project has the best chance of being completed in time for the 2028 Olympics, which, with a robust and well connected Metro system, can be an economic and cultural boon for Torrance's economy. Lastly, the Proposed Project will connect the two transit centers that have already been built in the Cities of Redondo and Torrance–transit centers that were built for the purpose of connecting to the Metro line expansion. 152-2

I am opposed to the option of extending the C-Line along Hawthorne Boulevard. This option requires elevation, causing significant disturbance and devastation to neighborhoods and businesses along that popular corridor. Furthermore, the option requires the Metro Board using eminent domain, which is unnecessary considering the Board has the rights of way for the Proposed Project. Locating light rail on Hawthorne Boulevard, whether elevated or at grade, would negatively impact Torrance residents and would be devastating to Torrance commercial properties that line Hawthorne Boulevard. 152-3

The Torrance Transit team estimates that the majority of riders on the new C-Line Expansion will travel in and out of Torrance, with projected daily trips of up to 16,000! I hope that the City's significant ridership contribution will contribute heavily in your decision to support the Proposed Project–the same position unanimously approved by the Torrance City Council. 152-4

Thank you for the opportunity to share my position. I appreciate all the hard work the Metro employees do every day.

Sincerely,
Arohi Sharma

Submission 153

February 18, 2023

Dear Metro and Metro Board Members:

I am a homeowner living on 163rd Street in Lawndale, a couple of houses from the ROW. I am adamantly opposed to the Metro Green Line running through the ROW section of Lawndale/Redondo Beach.This is the only greenbelt in the City of Lawndale. It is a peaceful area lined with hundreds of trees and wildlife. It is a space widely used by the neighborhood residents for getting out with family and walking dogs. In addition, the constant vibration of the Metro train has the potential to harm our homes and their foundation. They weren't built to withstand this type of consistent movement (200-300 times per day). Also, noise pollution is a huge consideration. Two recent studies show an increased risk of heart attack and numerous other health risks when living near the Metro due to the noise.The DEIR says that the noise would be substantial and unavoidable. Please consider the health and wellbeing of the residents. The Metro belongs in a commercial corridor not in a residential neighborhood where it has the potential to disrupt the lives of hundreds of families.

Subject: Metro c line safety concerns

Hi Metro and Metro Board Members,

I live along side the fright tracks on Condon Avenue in Lawndale, and I am vehemently opposed to the new line being built down the ROW. My main concern is safety - not just at the crossings but across the whole tracks. 155-1

I'd like to know about the kill stats the current train has with hitting cars, animals and people. My dog was killed on the tracks three weeks ago and the railroad company we contacted acted as if it was an everyday occurrence. 155-2

If that is true, I'm terrified for our community if a Metro train goes through the neighborhood 200-300 times a day. No matter the safety precautions, somebody is going to die. If we can prevent that we MUST! 155-3

Send the train down Hawthorne Blvd, where it is raised and much less of a risk to animal and human life. 155-4

Subject: ROW Resident DEIR Response - Noise

To whom it may concern:

My name is Gianna Mitchell and I have been a Redondo Beach resident living on the ROW for over a decade. Having lived here for that long, I can say with confidence that building the Greenline on the ROW will create many different problems, and in this email I shall focus on the noise issue it creates.

At a young age, I was diagnosed with a sensory disorder, and it has impacted my entire life. My hearing is more sensitive and even now with the single train passing by it is difficult to tolerate the noise it creates. In addition to myself, there are also children, elderly people, and other disabled people living along the ROW who would be negatively impacted by the noise pollution construction and the passenger train itself would create.

Loss of hearing isn't the only consequence of noise pollution. According to an article published by Harvard University, noise pollution is linked to cardiovascular disease, type 2 diabetes, sleep disturbances, stress, mental health and cognition problems such as memory impairment and attention deficits, childhood learning delays, and low birth weight.

> Researchers and clinicians are trying to change this. They've shown that noise pollution not only drives hearing loss, tinnitus, and hypersensitivity to sound, but can cause or exacerbate cardiovascular disease; type 2 diabetes; sleep disturbances; stress; mental health and cognition problems, including memory impairment and attention deficits; childhood learning delays; and low birth weight. Scientists are investigating other possible links, including to dementia.

162-1

Please consider building the Greenline on the elevated platform on Hawthorne Blvd., if at all.

162-2

Thanks,
Gianna Mitchell

Subject: No to Metro Green Line to go down the ROW

CAUTION: External Email. Proceed Responsibly.

Dear Supervisor Holly Mitchell:

My name is Ana Maria Houck and I am a resident of Lawndale. I live on Condon Ave with my family and the freight tracks are right behind our house. The freight tracks are bordered by houses on both sides. Metro wants to add a second set of tracks but THERE IS NOT ENOUGH ROOM. In addition, there are high pressure petroleum pipelines. Metro has not said anything about relocating these hazardous oil pipelines and has said nothing about which residents' property will be taken. Metro only says that the ROW boundaries are "preliminary". The ROW boundaries have been there since the

164-1

1980s. Metro should know that there is not enough room. In repeated public briefings, Metro says they do not "anticipate" taking private properties. If that were so, then the figure should be able to be drawn accurately. 164-1

Please help me protect my family and our home. We've done so much to make it a beautiful place, planting trees, growing fruit, and encouraging the bird wildlife to thrive (mainly mourning doves). We love where we live and do not want our way of life to be upended. I hope to get pregnant by summer and I'd like to raise my unborn child in this home, which until now has been a quiet and safe haven.

Thank You,

Ana Maria Houck

Subject: SUPPORT: Proposed Project, existing railroad right-of-way, C-Line Extension

The Metro Board
One Gateway Plaza
Los Angeles, CA 90012-2952
Sent via email to: greenlineextension@metro.net

Dear Metro Board,

Thank you for the opportunity to comment on the Metro's C-Line Extension. I'm a resident of Torrance, and I'm writing to **express support for the C-Line Extension that utilizes the existing railroad right of way (ROW) between the Marine Station in Redondo Beach to the Mary Giordano Regional Transit Center in Torrance, also known as the Proposed Project.** 165-1

As evidenced by the Board's Draft Environmental Impact Review (EIR), the Proposed Project that utilizes the ROW is the least impactful to Torrance residents, businesses, and current and future surface street traffic. It is also the least costly option that also provides the fastest pathway to starting construction. The Proposed Project has the best chance of being completed in time for the 2028 Olympics, which, with a robust and well connected Metro system, can be an economic and cultural boon for Torrance's economy. Lastly, the Proposed Project will connect the two transit centers that have already been built in the Cities of Redondo and Torrance–transit centers that were built for the purpose of connecting to the Metro line expansion. 165-2

I am opposed to the option of extending the C-Line along Hawthorne Boulevard. This option requires elevation, causing significant disturbance and devastation to neighborhoods and businesses along that popular corridor. Furthermore, the option requires the Metro Board using eminent domain, which is unnecessary considering the Board has the rights of way for the Proposed Project. Locating light rail on Hawthorne Boulevard, whether elevated or at grade, would negatively impact Torrance residents and would be devastating to Torrance commercial properties that line Hawthorne Boulevard. 165-3

The Torrance Transit team estimates that the majority of riders on the new C-Line Expansion will travel in and out of Torrance, with projected daily trips of up to 16,000! I hope that the City's significant ridership contribution will contribute heavily in your decision to support the Proposed Project–the same position unanimously approved by the Torrance City Council. 165-4

Thank you for the opportunity to share my position. I appreciate all the hard work the Metro employees do every day.

Furthermore, the option requires the Metro Board using eminent domain, which is unnecessary considering the Board has the rights of way for the Proposed Project. Locating light rail on Hawthorne Boulevard, whether elevated or at grade, would negatively impact Torrance residents and would be devastating to Torrance commercial properties that line Hawthorne Boulevard. 166-3

The Torrance Transit team estimates that the majority of riders on the new C-Line Expansion will travel in and out of Torrance, with projected daily trips of up to 16,000! I hope that the City's significant ridership contribution will contribute heavily in your decision to support the Proposed Project–the same position unanimously approved by the Torrance City Council. 166-4

Thank you for the opportunity to share my position. I appreciate all the hard work the Metro employees do every day.

Sincerely,

John Clifford

Subject: Choose Hawthorne Blvd for the Metro C Line / Green Line Extension

Dear Metro Board Members,

I am writing to express my strong disapproval for routing the proposed C (Green) Line extension down the current Metro right of way through residential neighborhoods in Lawndale and Redondo Beach. I am urging you and the board to choose the Hawthorne Boulevard elevated option instead for the following reasons: 167-1

- NEIGHBORHOOD QUALITY OF LIFE: The ROW option would send 200-300 trains per day through quiet residential neighborhoods from 4 AM until Midnight. This will permanently affect the quality of life for more than 1,000 families in Lawndale and North Redondo Beach. Metro's own environmental impact report states increases in NOISE and VIBRATION will be "Significant" and "Unavoidable." This is in addition to 3-5 years of significant construction-related impacts to the neighborhood. 167-2

- SAFETY: In some spots, the ROW option will move an existing freight track to within 8-10 feet of fence lines. This track currently sees trains carrying highly flammable and dangerous petroleum products between two oil refineries. Even a minor derailment -- even at slow speeds -- would put petroleum tanker cars into homes and backyards. This freight line already has a history of previous derailments. 167-3

In addition, the ROW has multiple high-pressure petroleum pipelines buried in unstable soil. Construction of the C Line down the ROW presents a danger to those pipelines even if all safety protocols are followed. Even one slip-up could be catastrophic to the neighborhood. 167-4

- LOSS OF GREEN SPACE: The ROW -- for better or worse -- is utilized as much-needed green space in the City of Lawndale. Not only that, it offers a respite from urban sprawl with tall, mature trees and views of the San Gabriel Mountains in the distance. What is now a park-like community along the ROW will be replaced with giant walls that will bounce train noise and destroy views of the horizon. 167-5

- RIDERSHIP: Routing the Metro C Line down Hawthorne Boulevard would see more ridership than the ROW option as it passes by businesses and landmarks people want to visit. This includes a station in front of a planned mixed-use residential development at the South Bay Galleria. 167-6

I implore you to listen to the voices of the community when selecting which option to build. This is a 100-year project that will have PERMANENT impacts on a community already disadvantaged compared to neighboring South Bay cities. When considering costs, look at not only the financial costs, but the societal and environmental costs as well. Do the right thing, get it right for future generations and choose HAWTHORNE BOULEVARD for the Metro C Line Extension. 167-7

Thank you,

Subject: Metro C Line

NOTICE TO AGENT IS NOTICE TO PRINCIPAL --- NOTICE TO PRINCIPAL IS NOTICE TO AGENT

re: DEIR (Draft Environmental Impact Report),C Line Extension to Torrance Transportation Center:

3.1-2.6 Significance Thresholds
Based upon the thresholds of significance contained in Appendix G of the CEQA Guidelines,implementation of the Proposed Project would result in a **significant impact if the Proposed Project would:**
a. Conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities.
b. Conflict or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b) [increase in VMT].
c. Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment).
d. Result in inadequate emergency access.

168-1

The DEIR fails to recognize the level of "Significance Thresholds" at play in the Proposed Project on the ROW. The project seeks to combine a heavy freight line carrying toxic, flammable Liquid Petroleum with a high-speed, high-voltage electric commuter trains to run through densely populated residential neighborhoods at grade which already have exposure to "high-pressure Petroleum" lines underground.

Proposed Project has shared street crossings at 170th and 182nd for both the freight line and the Metro train at multiple streets. This will **"Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)."** The DEIR dismisses this confluence of factors as "Less than Significant."

The concerns here extends far beyond a design flaw or miscalculation. This type of planning puts in jeapordy entire communities. Train derailments happen. (NYT OpEd, "**Over 1,000 Trains Derail Every Year in America. Let's Bring That Number Down**") The only current solace for residents regarding the BNSF line is a low frequency footprint and a long record of service. Adding the stresses of construction and disruption to the site, followed by the stresses of two additional high-speed train lines creates an unnecessary risk to residents and an ongoing nuisance to what is currently a quiet neighborhood. Add in multiple high-pressure petroleum lines and the project takes on the a "reckless endangerment" quality.

168-2

Currently, an ambulance center is run out of an industrial park at 182nd that has frequent dispatches that cross the ROW. An at-grade crossing will delay emergency services to needed victims. As the South Bay Social District and surrounding higher density developments will surely have an effect on traffic on 182nd.

The ROW option should not be considered. It is too dangerous, too invasive to established neighborhoods, and is fraught with foreseeable pitfalls. Please consider the appropriate mitigations to make the Hawthorne Option the preferred option. 168-4

Sincerely,
Kevin Mitchell

Subject: Choose Hawthorne Blvd for the Metro C Line / Green Line Extension

Dear Metro Board Members,

I am writing to express my strong disapproval for routing the proposed C (Green) Line extension down the current Metro right of way through residential neighborhoods in Lawndale and Redondo Beach. I am urging you and the board to choose the Hawthorne Boulevard elevated option instead for the following reasons: 170-1

- NEIGHBORHOOD QUALITY OF LIFE: The ROW option would send 200-300 trains per day through quiet residential neighborhoods from 4 AM until Midnight. This will permanently affect the quality of life for more than 1,000 families in Lawndale and North Redondo Beach. Metro's own environmental impact report states increases in NOISE and VIBRATION will be "Significant" and "Unavoidable." This is in addition to 3-5 years of significant construction-related impacts to the neighborhood. 170-2

- SAFETY: In some spots, the ROW option will move an existing freight track to within 8-10 feet of fence lines. This track currently sees trains carrying highly flammable and dangerous petroleum products between two oil refineries. Even a minor derailment -- even at slow speeds -- would put petroleum tanker cars into homes and backyards. This freight line already has a history of previous derailments. We don't want to end up like Palestine, Ohio! 170-3

In addition, the ROW has multiple high-pressure petroleum pipelines buried in unstable soil. Construction of the C Line down the ROW presents a danger to those pipelines even if all safety protocols are followed. Even one slip-up could be catastrophic to the neighborhood. 170-4

- LOSS OF GREEN SPACE: The ROW -- for better or worse -- is utilized as much-needed green space in the City of Lawndale. Not only that, it offers a respite from urban sprawl with tall, mature trees and views of the San Gabriel Mountains in the distance. What is now a park-like community along the ROW will be replaced with giant walls that will bounce train noise and destroy views of the horizon. 170-5

- RIDERSHIP: Routing the Metro C Line down Hawthorne Boulevard would see more ridership than the ROW option as it passes by businesses and landmarks people want to visit. This includes a station in front of a planned mixed-use residential development at the South Bay Galleria. 170-6

I implore you to listen to the voices of the community when selecting which option to build. This is a 100-year project that will have PERMANENT impacts on a community already disadvantaged compared to neighboring South Bay cities. When considering costs, look at not only the financial costs, but the societal and environmental costs as well. Do the right thing, get it right for future generations and choose HAWTHORNE BOULEVARD for the Metro C Line Extension. 170-7

Subject: No on Row - for the C line extension

Hello,

With the recent catastrophic freight train derailments, I am very concerned with the possibility of a derailment with both of the 2 ROW options. The safest route for the existing freight line along the ROW is where it is now, based on the fact that there has not been a derailment in decades. Moving the freight line closer to the residents on the west side of the tracks and squeezing in 2 Metro commuter rail lines along the ROW will not make it safer for the Lawndale and Redondo Beach communities. BNSF had 2 recent train derailments, the most recent one was last Thursday 3/16/2023 in Washington State where 5000 gallons of diesel fuel spilled. 172-1

Please reconsider and do not recommend to the Metro board either of the 2 ROW options for the C Line extension to the Torrance Station. 172-2

respectfully,
Michael Kim

Betty Fisk

03/23/2023

Hello, my name is Betty Fisk. F-I-S-K. I live at Breakwater Village in Redondo Beach. I do not want the train to go on the right-of-way past our Breakwater Village complex. It would destroy our way of life. It would shake our building. It would lower our property taxes. And, so, please do not put the green line on the right of way. Hawthorne Boulevard would be a good alternative. Betty Fisk. [redacted] or [redacted]. Thank you. Goodbye. 173-1

03/26/2023

Yes, I want to know how you wake up in the morning and look at yourself in the mirror and think that you are absolutely doing the right thing. For 20 years, you guys have been bringing that metro down to the back of residents—threatening to. And your first meetings were No Build, Build, down Hawthorne Boulevard—a couple different options. And I, well, especially my brother since now I'm involved because you've almost killed my brother with this because he had a heart attack at one of your meetings. Uh, and I don't know how he's going to do now, but you guys have destroyed. You have lied, you can typically know how to lie. So, you know, it should go down Hawthorne Boulevard. It's the most common sense place, it's down to the red commercial area, not residential, you're not 20 feet from people's backdoors you're not bringing crap down there. You have destroyed and have tried to destroy life of everybody that lives there. What is wrong with you? Uh, now my brother, I'm taking care of him at my house. You have destroyed his life, you've destroyed everything. You guys should be sued continuously personally and mentally and physically because you guys are just absolutely out of control. What is wrong with you that you guys cannot sustain a substantial relationship with the citizens of America? You are so wrong. You are so wrong in so many different ways. You know, you're going to just do what you're going to do and I know that. I understand that. You know, I hope one day your husband and wife comes home and says bye and just leaves you and see how that feels If you're actually in love with them because this is what it is, some people are in love with this city.

Subject: Comment Metro DEIR - Recent Blue Zones Communication and Damages from Reduced Sleep

Metro has clearly stated that use of the freight right of way will lead to noise and vibration that would be significant. As such, it can be reasonably expected, and the peer reviewed literature supports this reasonable conclusion, that sleep will be impacted in the nearby residential property. Metro will also be in violation of RBMC night time noise limits. As such, surrounding residents will suffer increased health damages based on this substantial evidence and Metro's proposed action of running 24/7/365 rail through residential neighborhoods. 175-1

It is quite disappointing that BCHD has spent millions of taxpayer funds on Blue Zones, yet fails to protect District residents by commenting on this defective EIR.

Today, I received a fresh Blue Zones communication directly from Blue Zones which I offer as substantial evidence that must be included and considered in the CEQA process. 175-2

BLUE ZONES COMMUNICATION
https://www.bluezones.com/2023/03/sleeping-less-than-5-hours-per-night-could-increase-risk-of-chronic-disease/?utm_source=BLUE+ZONES+Newsletter&utm_campaign=945972d64b-EMAIL_CAMPAIGN_2023_03_20_10_00&utm_medium=email&utm_term=0_9642311849-945972d64b-198578113&mc_cid=945972d64b&mc_eid=d700bcc469

NIH PUBLICATIONS

https://journals.plos.org/plosmedicine/article?id=10.1371/journal.pmed.1004109

It clearly demonstrates that damage from Metro's use of the existing freight right of way will be the following based on robust, long term research of the impacts of reduced sleep from any cause: 175-3

"After 25 years of accumulating data on sleep's effects on human health, a recently published study delves deeper into sleep's impacts on morbidity and mortality. Aging puts you at a greater risk of chronic diseases, explaining why older adults are the most vulnerable. According to the study led by researchers at University College London and Université Paris Cité, mid-to-older-aged adults are less likely to develop a chronic disease when getting seven to eight hours of sleep—compared to those who sleep for five hours or less."

"short sleep duration was consistently associated with increased risk of multimorbidity, irrespective of sleep being measured in mid or late life. The analysis of transitions in health states showed short sleep to be associated with the onset of a first disease and subsequent multimorbidity"

"

BCHD COMMUNICATION
- none, derelict of support to District residents

Lena Poland

03/27/2023

Hi, my name is Lena Poland, and my phone number is [redacted]. I'm a citizen of the City of Lawndale and I'm calling to say we do not want to build the Metro Green Line to Torrance. So that's a no build on Hawthorne Boulevard and a no build on the ROW. You can use the Normandy track that already exists to Torrance and if you build a metro line, no one will ride it. The only people who will ride it are the homeless and the drug users who will sleep on the metro line until they overdose. We do not want it. No builds. We want our quality of life. Thank you. Bye.

176-1

Mike Cook

03/27/2023

Yeah. How is it going? My name is Mike Cook I'm using my friend's phone. I live right here in Lawndale. So, you guys, I'm looking at your ETA estimate. Evidently your estimate on the one railway going down the railway. You didn't put in sump pumps for all the properties along there. When you dead-end it, it is supposed to be something ten thousand dollars across, and you have to maintain them for years. And you didn't even also put in the triple pane windows that they did at the airport because the noise levels were over a thousand units. You have to put that in. You didn't put that in. So, what actually did you guys put into the estimates on that? Did you just put whatever you wanted so that you make sure that it goes through because it's cheaper? You know, you guys are pretty crooked, pretty underhanded and pretty illegit. You know what? You are a very corrupt organization. Uh, why don't you build another metro building and put gold at the front of it? Say, we are the temple. So you know what? And I know this won't be, I'm going to look into it, see if my message got through. I know it's in writing and you guys delete most of the stuff that there is. But you need to put in triple-pane windows along every house and the average would be forty windows per house. So let's figure that out and sump pumps which would be over 150 sump pumps to drain off because you will need the natural drainage to the railroad track. So thank you very much. Have a great day.

Subject: Choose Hawthorne Blvd for the Metro C Line / Green Line Extension

Dear Metro Board Members,

I am writing to express my strong disapproval for routing the proposed C (Green) Line extension down the current Metro right of way through residential neighborhoods in Lawndale and Redondo Beach. I am urging you and the board to choose the Hawthorne Boulevard elevated option instead for the following reasons: 183-1

- NEIGHBORHOOD QUALITY OF LIFE: The ROW option would send 200-300 trains per day through quiet residential neighborhoods from 4 AM until Midnight. This will permanently affect the quality of life for more than 1,000 families in Lawndale and North Redondo Beach. Metro's own environmental impact report states increases in NOISE and VIBRATION will be "Significant" and "Unavoidable." This is in addition to 3-5 years of significant construction-related impacts to the neighborhood. 183-2

- SAFETY: In some spots, the ROW option will move an existing freight track to within 8-10 feet of fence lines. This track currently sees trains carrying highly flammable and dangerous petroleum products between two oil refineries. Even a minor derailment -- even at slow speeds -- would put petroleum tanker cars into homes and backyards. This freight line already has a history of previous derailments. 183-3

In addition, the ROW has multiple high-pressure petroleum pipelines buried in unstable soil. Construction of the C Line down the ROW presents a danger to those pipelines even if all safety protocols are followed. Even one slip-up could be catastrophic to the neighborhood. 183-4

- LOSS OF GREEN SPACE: The ROW -- for better or worse -- is utilized as much-needed green space in the City of Lawndale. Not only that, it offers a respite from urban sprawl with tall, mature trees and views of the San Gabriel Mountains in the distance. What is now a park-like community along the ROW will be replaced with giant walls that will bounce train noise and destroy views of the horizon. 183-5

- RIDERSHIP: Routing the Metro C Line down Hawthorne Boulevard would see more ridership than the ROW option as it passes by businesses and landmarks people want to visit. This includes a station in front of a planned mixed-use residential development at the South Bay Galleria. 183-6

I implore you to listen to the voices of the community when selecting which option to build. This is a 100-year project that will have PERMANENT impacts on a community already disadvantaged compared to neighboring South Bay cities. RE: Metro C-Line Extension

Dear Metro Board,

The **Torrance Democratic Club** (TDC) supports the C-Line Extension known as the **Proposed Project**, that utilizes the **existing railroad right-of-way** (ROW) between the Marine Station in Redondo Beach to the Mary K. Giordano Regional Transit Center in Torrance. 186-1

As evidenced by the Board's Draft Environmental Impact Review (EIR), the Proposed Project that utilizes the ROW, **elevated and/or at-grade**, is the least impactful to Torrance residents, businesses, and current or future surface street traffic. It is also the least costly option that also provides the fastest pathway to starting construction. The Proposed Project has the best chance of being completed in time for the 2028 Olympics, which, with a robust and well-connected Metro system, can be an economic and cultural boon for Torrance's economy. Lastly, the Proposed Project will connect the two transit centers that have already been built in the Cities of Redondo and Torrance, transit centers that were built for the purpose of connecting to the Metro line expansion. 186-2

Likewise, the TDC is **OPPOSED** to the **Hawthorne Option**, extending the C-Line along the Boulevard. This option requires elevation, causing significant disturbance to neighborhoods and businesses along that popular corridor. Furthermore, the option requires the Metro Board to use eminent domain, which is unnecessary considering the Board already has the right-of-way for the Proposed Project. Locating light rail on Hawthorne Boulevard, whether elevated or at grade, would negatively impact Torrance residents and would be devastating to Torrance commercial properties that line Hawthorne Boulevard. 186-3

The **Torrance Transit** team estimates that the majority of riders on the new C-Line Expansion will travel in and out of Torrance, with projected daily trips of up to **16,000**! The city's significant ridership contribution should weigh heavily in your decision to support the Proposed Project–the same position unanimously approved by the **Torrance City Council**. 186-4

Sincerely,

Torrance Democratic Club

Subject: Choose Hawthorne Blvd for the Metro C Line / Green Line Extension

Dear Metro Board Members,

I am writing to express my strong disapproval for routing the proposed C (Green) Line extension down the current Metro right of way through residential neighborhoods in Lawndale and Redondo Beach. I am urging you and the board to choose the Hawthorne Boulevard elevated option instead for the following reasons: 187-1

- NEIGHBORHOOD QUALITY OF LIFE: The ROW option would send 200-300 trains per day through quiet residential neighborhoods from 4 AM until Midnight. This will permanently affect the quality of life for more than 1,000 families in Lawndale and North Redondo Beach. Metro's own environmental impact report states increases in NOISE and VIBRATION will be "Significant" and "Unavoidable." This is in addition to 3-5 years of significant construction-related impacts to the neighborhood. 187-2

- SAFETY: In some spots, the ROW option will move an existing freight track to within 8-10 feet of fence lines. This track currently sees trains carrying highly flammable and dangerous petroleum products between two oil refineries. Even a minor derailment -- even at slow speeds -- would put petroleum tanker cars into homes and backyards. This freight line already has a history of previous derailments. 187-3

In addition, the ROW has multiple high-pressure petroleum pipelines buried in unstable soil. Construction of the C Line down the ROW presents a danger to those pipelines even if all safety protocols are followed. Even one slip-up could be catastrophic to the neighborhood. 187-4

- LOSS OF GREEN SPACE: The ROW -- for better or worse -- is utilized as much-needed green space in the City of Lawndale. Not only that, it offers a respite from urban sprawl with tall, mature trees and views of the San Gabriel Mountains in the distance. What is now a park-like community along the ROW will be replaced with giant walls that will bounce train noise and destroy views of the horizon. 187-5

- RIDERSHIP: Routing the Metro C Line down Hawthorne Boulevard would see more ridership than the ROW option as it passes by businesses and landmarks people want to visit. This includes a station in front of a planned mixed-use residential development at the South Bay Galleria. 187-6

I implore you to listen to the voices of the community when selecting which option to build. This is a 100-year project that will have PERMANENT impacts on a community already disadvantaged compared to neighboring South Bay cities. When considering costs, look at not only the financial costs, but the societal and environmental costs as well. Do the right thing, get it right for future generations and choose HAWTHORNE BOULEVARD for the Metro C Line Extension. 187-7

Thank you,

Submission 188

Subject: Choose Hawthorne Blvd for the Metro C Line / Green Line Extensión

Dear Metro and Board Members,

I am writing to express my strong disapproval for routing the proposed C (Green) Line extension down the current Metro right of way through residential neighborhoods in Lawndale and Redondo Beach. I am urging you and the board to choose the Hawthorne Boulevard elevated option instead for the following reasons: 188-1

- SAFETY:
The ROW has multiple high-pressure petroleum pipelines buried in the soil. Construction of the C Line down the ROW presents a danger to those pipelines even if all safety protocols are followed. Even one slip-up could be catastrophic to the neighborhood. We would have a likely televised incident in close proximity to a residential neighborhood potentially involving soil contamination from exposure, environmental air quality compromised due to the release of toxins into the air, explosions, fire, ruptured pipelines, etc. Worst case scenarios involve loss of property, human injury or loss of life. The consequences can have permanent and lasting effects on many and cost Metro significantly. Best case scenario, Metro incurs unplanned costs not considered in the initial project estimate. 188-2

Please choose HAWTHORNE BOULEVARD for the Metro C Line Extension. 188-3

Thank You,

Ana

Wow on 170th Street students walk to School so will be an impact for them 189-1

Why are you disturbing a residential area when you can build it in a Commercial area?
All the neighbors around here will be impacted by the Green Line Extension
I believe there is not enough room for the two trains here in the back of my house.
I live on Condon Ave and 170th st. 189-2

I do not sleep at night just thinking about this new Green Line train.
Of course will impact the value of the properties in this area. 189-3

Are you going to pay to the owners for all the damages this train is going to bring? 189-4

How many owners will sue this Green Line Extension for the disturbance of noise, congestion of traffic
and value of properties? 189-5

I think it is very bad idea to extend it in residential neighborhood. 189-6

Betty

Hello,

Thank you for your email and interest in Metro's C Line (Green) Extension to Torrance project. We have recorded your comment and added your contact information to our project email list.

Metro has prepared a Draft Environmental Impact Report (DEIR) to describe the three alignments under study and evaluate the potential environmental impacts per California Environmental Quality Act (CEQA). The DEIR is available for public review from January 26 through March 27, 2023. During the review period, the public will have an opportunity to comment on the Draft EIR and attend virtual and in-person public hearings.

The DEIR and other project documents can be found on the project website by visiting the documents section or go directly to metro.net/clineext/#documents. A 3D simulation video of the three alignments under evaluation is available at bit.ly/cletvideo. Please visit the project StoryMap for additional information at bit.ly/cletstory.

To access the Draft EIR and other project information, please reference the direct links below.

- Draft EIR (Full Document)
- Draft EIR (By Chapter)
- Draft EIR Appendices (By Appendix)
- Other Project Information Reports

We will add you to our project database to receive updates on the project and additional information on ways to stay involved.

Thank you again for your interest in the project.

Subject: Use Hawthorne Blvd for the Metro Green Line Extension

Dear Metro,

PLEASE DO NOT route the proposed C (Green) Line extension down the current Metro right of way through residential neighborhood. I am urging you and the board to choose the Hawthorne Boulevard elevated option instead for the following reasons: 213-1

THIS WILL LOWER OUR PROPERTY VALUE AND NEIGHBORHOOD IN GENERAL!
When have ever been to a neighborhood that has a metro train running through it that was nice? NEVER! You don't see these in Beverly Hills, Palos Verdes, or Manhattan Beach? And for a good reason!! 213-2

- NEIGHBORHOOD QUALITY OF LIFE: The ROW option would send 200-300 trains per day through quiet residential neighborhoods from 4 AM until Midnight. This will permanently affect the quality of life for more than 1,000 families in Lawndale and North Redondo Beach. Metro's own environmental impact report states increases in NOISE and VIBRATION will be "Significant" and "Unavoidable." This is in addition to 3-5 years of significant construction-related impacts to the neighborhood. 213-3

- SAFETY: In some spots, the ROW option will move an existing freight track to within 8-10 feet of fence lines. This track currently sees trains carrying highly flammable and dangerous petroleum products between two oil refineries. Even a minor derailment -- even at slow speeds -- would put petroleum tanker cars into homes and backyards. This freight line already has a history of previous derailments. 213-4

In addition, the ROW has multiple high-pressure petroleum pipelines buried in unstable soil. Construction of the C Line down the ROW presents a danger to those pipelines even if all safety protocols are followed. Even one slip-up could be catastrophic to the neighborhood. 213-5

- LOSS OF GREEN SPACE: The ROW -- for better or worse -- is utilized as much-needed green space in the City of Lawndale. Not only that, it offers a respite from urban sprawl with tall, mature trees and views of the San Gabriel Mountains in the distance. What is now a park-like community along the ROW will be replaced with giant walls that will bounce train noise and destroy views of the horizon. 213-6

Subject: Select the Hawthorne Blvd elevated route for the C-Line extension

To Metro:

As a resident of North Redondo I ask that you select the Hawthorne Blvd elevated route for the C-Line extension. This is the best route for attracting riders, causes the least disruption of residential neighborhoods, and avoids the unstable ground on and around the ROW, which has proven to have a tendency for sink-holes to form. Noise, pollution, and safety issues are much more mitigatable with the rail lines going down Hawthorne. 214-1

Thanks you for your attention to this matter.

Sincerely,

Doug Boswell
Redondo Beach resident since 1989

Subject: Public Comment - Metro Greenline Extension

LA Metro Comment – Greenline Extension

I support the Metro Right-of-Way option. It is the least in cost and will not affect the 405 freeway & Hawthorne Blvd. which is a major arterial highway with lots of traffic, city buses and pedestrians. 215-1

For residents who live near certain portions of the ROW, there should be a soundwall to protect them from the sound of the freight train. 215-2

Other Options: Please consider a high-frequency bus alternative (HFB) from the Marine station to the Redondo Station to the Torrance Station. 215-3

I do not support the Hawthorne option because part of this option would run the metro train along the 405 freeway in the city of Lawndale. There are residents who live across the street from the freeway on Grevillea Ave. & 159th in Lawndale. Currently, there is green space and tall trees which separate them from the 405 freeway. CalTrans has plans to widen the 405 freeway in the future. According to the DEIR, the current greenspace would be replaced by the elevated LA Metro train. These residents would have to live with a widened 405 freeway & an elevated train. It's too much for the neighborhood, as the freeway never shuts down, constant motion, 7 days/nights a week. 215-4

Safety: An elevated train on Hawthorne would remove parking spaces from businesses. The columns needed to support the train would obscure vision to safely make a left hand turn from the neighborhoods in Lawndale. Additional traffic signals would be installed, but left-hand turns are already difficult to maneuver because cars travel so fast and do not stop at red lights at the intersections. Future accidents expected on this highly traveled highway. Could a study be done to observe drivers who speed up & run through a solid red light at the intersections? Unfortunately, I can witness this everyday. 215-5

Please do a safety study.

Congestion & Consequences: Hawthorne Blvd. is an arterial highway. The metro train would cause drivers to use alternate routes to avoid Hawthorne. Surrounding neighborhoods would experience cut-through traffic as cars unsafely speed through their neighborhood. 215-6

Maintenance: If the train requires maintenance, where do the crews work? Does this include shutting off a lane on Hawthorne Blvd., to provide maintenance? How long and how often is maintenance performed? Please provide a study on this and include a maintenance schedule. 215-7

Cost: The cost is too high at $2.9 Billion. The cost also does not reflect the additional cost to raise the power lines located on the Southern California Edison tower which run across 177th & Hawthorne Blvd. The lines would need to be raised in order to avoid interference from the electrical lines above the metro cars. Please include a cost estimate for this adjustment. 215-8

Thank you,

Subject: SUPPORT: Proposed Project, existing railroad right-of-way, C-Line Extension

The Metro Board
One Gateway Plaza
Los Angeles, CA 90012-2952
Sent via email to: greenlineextension@metro.net

Dear Metro Board,

Thank you for the opportunity to comment on the Metro's C-Line Extension. I'm a resident of Torrance, and I'm writing to **express support for the C-Line Extension that utilizes the existing railroad right of way (ROW) between the Marine Station in Redondo Beach to the Mary Giordano Regional Transit Center in Torrance, also known as the Proposed Project.** 216-1

As evidenced by the Board's Draft Environmental Impact Review (EIR), the Proposed Project that utilizes the ROW is the least impactful to Torrance residents, businesses, and current and future surface street traffic. It is also the least costly option that also provides the fastest pathway to starting construction. The Proposed Project has the best chance of being completed in time for the 2028 Olympics, which, with a robust and well connected Metro system, can be an economic and cultural boon for Torrance's economy. Lastly, the Proposed Project will connect the two transit centers that have already been built in the Cities of Redondo and Torrance–transit centers that were built for the purpose of connecting to the Metro line expansion. 216-2

I am opposed to the option of extending the C-Line along Hawthorne Boulevard. This option requires elevation, causing significant disturbance and devastation to neighborhoods and businesses along that popular corridor. Furthermore, the option requires the Metro Board using eminent domain, which is unnecessary considering the Board has the rights of way for the Proposed Project. Locating light rail on Hawthorne Boulevard, whether elevated or at grade, would negatively impact Torrance residents and would be devastating to Torrance commercial properties that line Hawthorne Boulevard. 216-3

The Torrance Transit team estimates that the majority of riders on the new C-Line Expansion will travel in and out of Torrance, with projected daily trips of up to 16,000! I hope that the City's significant ridership contribution will contribute heavily in your decision to support the Proposed Project–the same position unanimously approved by the Torrance City Council. 216-4

Thank you for the opportunity to share my position. I appreciate all the hard work the Metro employees do every day.

Sincerely,
Jimmy Gow

Subject: Support for Hawthorne Alignment

Hello.

I am a resident of North Redondo Beach, and I am writing in support of the Hawthorne Boulevard alignment. While most of my neighbors favor the same option due to their concerns of having more rail too close to their property, I favor the Hawthorne alignment primarily because of the destinations along the corridor. 217-1

I recognize that both the Metro ROW and the Hawthorne options would only add two additional stops; however, I believe running the line on Hawthorne Boulevard as well as the planned station at the South Bay Galleria would provide better economic opportunity and return on investment.

The Galleria has been in a sorry state for years now. It does not have the premier stores at which people want to shop, and it is overshadowed by its neighbor, the Del Amo Fashion Center. However, Redondo Beach is currently working to redevelop it into a shopping, recreation, office, and residential destination. Connecting it to Metro Rail would turbocharge the project, help to revitalize the area, and increase Metro ridership. The junction of Hawthorne, Artesia, and Manhattan Beach Boulevard is an important hub of activity, and the Galleria project will only elevate its status. 217-2

Yes, a station at the Redondo Beach Transit Center with the ROW alignment would technically be “accessible” from the South Bay Galleria, but there are no other destinations around it, and passengers would need to walk through very large, sparse parking lots with speeding cars to get from one to the other, even after the redevelopment. 217-3

The two advantages of the Metro ROW are the lower cost and the connection to the Redondo Beach Transit Center. In my opinion, the new location of the Transit Center was ill conceived; it is more difficult to get to, for both vehicles and pedestrians, which is antithetical to the entire notion of a transit center. It should have been closer to the Galleria, instead utilizing some of the parking lots that remain unused slabs of asphalt most of the time. Nevertheless, I would prefer Metro to spend the money for a better investment and a location that would have greater usage. And it is much easier to move a bus station than to move a rail alignment. 217-4

Regardless of the option, however, the extension should be built. I understand safety is always a concern around public transit, but they are not mutually exclusive. Rather, they are two different issues we must tackle holistically. The other concern is obviously cost. There may be a sentiment that the South Bay is far removed from the traffic woes of the urban core of Los Angeles and that congestion is not bad enough to warrant spending on transit. However, the same could have been said about the City of Los Angeles merely a decade or two ago. And we continue to spend money on road and highway infrastructure projects. Yet traffic on the 405 and major thoroughfares is still getting worse, and electric personal vehicles can only do so much. We must invest in options that can be sustainable far into the future. And this project is one piece of a system of which the economic powerhouse of Southern California can be proud. 217-5

Thank you,
Jonathan Chue

To: GreenlineExtension
Subject: Thoughts on Green Line Extension

Dear Metro,

As someone who recently moved to the South Bay, I am a huge advocate for the Green Line Extension. Compared to many other parts of LA, the South Bay is quite disconnected to the rest of the Metro and this extension is a crucial step in the right direction. From personal experience from talking with friends living in the South Bay, I can imagine that the line would get much use from people seeking to get to LAX and El Segundo (I know many people who would use these lines multiple times a week). Once the K Line Extension is complete, I know many people who would be interested in using the line to get to Santa Monica the surrounding Beach Cities. 296-1

As for which proposal, I am a big fan of the third plan (the elevated Hawthorne one). I think it would add a lot of character to an otherwise extraordinarily bland street. I am ok with the first plan, but the second plan (with the trenches) should be avoided in my opinion, for the same reason that I am a big fan of the first plan — I think elevated lines and even at grade lines add a lot to an area and makes it unique, whereas the trench option would just seem a little out of place and frankly a bit ugly. I'm not too concerned for the environmental issues; I just wanted to weigh in on the aesthetic. 296-2

As for the last mile dilemma, it is quite unfortunate that the end of the line is slotted to be the Torrance Transit Center. It makes sense, of course, since it gives passengers the option to connect to other parts of Torrance via buses, but there is nothing remotely walkable in that area. Ideally, there would be some thing to do as people are waiting for their buses, but I imagine that is beyond the scope of what you handle. However, I would like for there to be a consistent means of transportation to get to the Del Amo Mall, because that is the main attraction in that area and it would be a travesty if the eminent mall of the South Bay is not properly connected. 296-3

Best,
Viet

To: GreenlineExtension
Subject: please take another look at the Hawthorne option for the C Line extension to Torrance

Hello,

Even with all of the recent freight train derailments, there was yet another freight train derailment reported in San Bernadino yesterday (Mar 27th). There is clearly a difference in the safety protocol for passenger trains vs. freight trains. If the Los Angeles Metro board votes to have the C Line extension along the ROW, as a resident living along the ROW, I have concerns as follows:

- I question if Metro will rebuild the freight line with the same safety standards as the passenger lines.
- I am concerned that Metro does not have the civil and structural engineers available to design and plan out the freight line to the same safety standards as the passenger lines
- I am concerned that Metro will try to certify the rebuilt freight line to handle more freight cars and freight trains to higher speeds. Recent catastrophic freight derailments are evidence that freight cars / containers are not all maintained adequately; and increased freight traffic would increase the risk to all who reside along the ROW. It only takes one faulty rail car to cause a derailment!

297-1

The freight line in its current condition and current usage has been derailment free for many decades and is proven to be safe based on its history. Moving the freight line several feet to the west so that 2 commuter lines can squeeze in the ROW will not drive towards a safe rail design as the design layout engineering team will compromise safety concerns for the concern to squeeze everything into the limited space along the ROW.

297-2

Please demand that your Metro team takes another look at the Hawthorne Blvd option. Let's keep the commuter train line away from the freight line where ever we can and let's leave the freight line alone.

297-3

respectfully,
Michael Kim

CAUTION: External Email. Proceed Responsibly.

Dear Supervisor Mitchell and support staff,

My name is Adam Karp, and I am a homeowner in the Ruxton Ridge townhome complex that borders the train tracks on the possible Right of Way (ROW) option Redondo Beach. I emphatically request that you advocate for the Hawthorne Blvd. option for the Green Line Extension through the South Bay. 298-1

My wife and I purchased our home in 2020 right before the pandemic and had no knowledge of this proposed extension that would greatly impact our livelihood, our kids, and potential value of our property. This would also be a huge safety issue and quality of life change to our family, home, and neighborhood. 298-2

Just a few of my concerns:

1. **Safety issues of freight and passenger trains in such proximity to each other**. As we have seen in recent news there have been a number of Train and freight crashes that have caused severe environmental damage. How can Metro possibly guarantee safety to the many thousands of residents living just a few feet away from these train tracks along the ROW? If there were to be a crash or derailment, how would Metro prevent damage to the homes that are practically arm's length away? 298-3
2. **Disruption of unstable soil and movement/placement of natural gas pipelines.** Our neighbors in the Ruxton Place townhome complex have been dealing with sinkhole issues for years due to the pipelines running near our homes. I can't imagine the level of disruption to the soil in this neighborhood if Metro were to need to move those pipelines, dig trenches, and build retaining walls to accommodate the additional trains. And where, exactly, would those natural gas pipelines go? Closer to our homes? The trenching option would likely exacerbate any soil and pipeline issues, making the project more expensive and complicated - and would put our property in danger. 298-4
3. **Construction of retaining walls.** I again worry about the detrimental effects of soil instability, loss of natural light, and the overall eyesores that huge retaining walls would have to our neighborhood. What about very rainy days like what we just had in January? Our complex's sump pumps were working extra hard, and with retaining walls preventing natural water drainage and absorption, I worry about stability for all the homes near and below the walls. 298-5
4. **Noise pollution.** My neighbor spoke with a sound engineer at the open house last year at Adams Middle School. When She asked about ways Metro would mitigate noise to the thousands of residents along the Right of Way, he talked about at-grade noise mitigation. She explained to him that our 3-story townhome looks down onto the tracks (including my bedroom window), and he admitted there was nothing they could do to mitigate noise above the tracks. He talked about the "quiet" hours from midnight to 5 am in the middle of the night and that they would also "possibly" explore double-paned windows. That would only make a difference, if at all, INSIDE my home – but what does that do to mitigate noise in our yards? I have a toddler and many other young neighbors who utilize the common space between our buildings for outdoor play. Trains whizzing by every few minutes would be a huge nuisance. And of course, what will that do to impact my childs sleep – and mine? That noise would be far from the peaceful environment we currently enjoy. 298-6
5. **Traffic.** Our little neighborhood will be negatively impacted by the train traffic at lights, particularly 182nd. Our childs school and Child Development Center are a block away at the end of 182nd; I can't imagine the additional traffic issues during both morning and evening rush hour in our quiet residential neighborhoods, nor access for emergency vehicles. 298-7
6. **Change to the community.** My wife and I chose to start our family in Redondo Beach partly because we wanted to live life outdoors, really get to know our neighbors, and build community here. During the pandemic, I'm proud to say that we grew closer than ever to our neighbors and have developed deep friendships. We did that by spending afternoons and evenings outdoors. I worry what the constant noise and traffic of the Green Line would mean to our little community, our older neighbors at Breakwater Village (a 55+ community), our neighbors at Ruxton Place (with ongoing sinkhole issues), and other neighborhoods all along the ROW in Redondo Beach and Lawndale. This possible ROW extension goes against so much of why we bought our home where we did. We wanted to walk to school, spend time with our kids and neighbors outside, and live a peaceful life. If we wanted an urban lifestyle, we would have chosen that – but this might be forced upon us, and we'd be devastated. 298-8
7. BUDGET- lastly the million dollar difference in budget to put on ROW versus down Hawthorne in the grand scheme of things is nothing compared to the funds, grants, and spend metro in the city experiences year after year. To impact so many residential buildings and peoples livelihood and the environmental impact to save a few dollars is not right and unethical. 298-9

Extending the Green line along Hawthorne Blvd. would make so much sense for safety, traffic, and commercial revitalization purposes. Sticking high-speed trains in the backyards of thousands of homes does not. I urge you to use your influence to select the Hawthorne Blvd. option and NOT the residential ROW option. I would be happy to answer any questions you might have regarding my concerns. 298-10

Thank you so much, and kindest regards,

Adam Karp

Subject: DEIR Comment for the C Line (Green) Extension to Torrance Project

CAUTION: External Email. Proceed Responsibly.

Dear Supervisor Mitchell and support staff,

My name is Jennifer Dowd and I am a homeowner in the Ruxton Ridge townhome complex that borders the train tracks on the possible Right of Way (ROW) option Redondo Beach. I emphatically request that you advocate for the Hawthorne Blvd. option for the Green Line Extension through the South Bay. 299-1

My family of two children under four years of age with an infant live in the closest proximity to the tracks of the complex. My biggest concern is the safety of my family as the ROW option will impact our lives extremely due to being even closer in proximity to possibility three tracks within 299-2

arms reach of my young family's lives. This would be a huge safety and quality of life change not only for my family and neighbors, however also our beloved South Bay community. 299-2

As I mentioned safety issues are my biggest concern as the tracks border my children's rooms and have seen and heard of such unfortunate accidents as the Chatsworth Metrolink train in 2008. To think my children's windows border closest to the tracks is chilling when we realistically know of horrific events like this accident years ago. How can we unsure our safety for our community as many of our children play in our complex? 299-3

Another big concern is the building of retaining walls and noise pollution. I have an infant at home and in today's society, mental health is a huge concern not only for our children but for ourselves especially as a mother having to go through postpartum even depression. Us neighbors near the ROW tracks have our own health issues we try to tackle each day and adding additional noise pollution to our sanities is not ideal especially when we purchased our home for peace and quiet even with the existing train passing only twice a day briefly. I cannot imagine metolink trains passing every five minutes especially at night. My eldest is going to begin elementary school in the amazing school district of Redondo Beach soon and what a toll it will provide on my child functioning well in school due to lack of sleep. How is ROW option going to protect our children and family quality of live for the better? We love the southbay and have stayed in the southbay for the quality of life of raising children near the beach and the school districts. I will find heartbreak of the ROW option becoming a reality as I want to provide the best life possible for my children and this option will not provide us this opportunity. 299-4

I believe extending the Green line along Hawthorne Blvd. would make so much sense for safety, traffic, and provide us neighbors with mental health more ease as we navigate our daily tasks in our beloved neighborhood. Sticking high-speed trains in the backyards of thousands of homes does not. I urge you to use your influence to select the Hawthorne Blvd. option and NOT the residential ROW option. Thank you for your time. 299-5

Sincerely,

Jennifer Dowd
Ruxton Ridge community

Subject: Choose Hawthorne Blvd for the Metro C Line / Green Line Extension

Dear Metro Board Members,

I am writing to express my strong disapproval for routing the proposed C (Green) Line extension down the current Metro right of way through residential neighborhoods in Lawndale and Redondo Beach. I am urging you and the board to choose the Hawthorne Boulevard elevated option instead for the following reasons: 300-1

- NEIGHBORHOOD QUALITY OF LIFE: The ROW option would send 200-300 trains per day through quiet residential neighborhoods from 4 AM until Midnight. This will permanently affect the quality of life for more than 1,000 families in Lawndale and North Redondo Beach. Metro's own environmental impact report states increases in NOISE and VIBRATION will be "Significant" and "Unavoidable." This is in addition to 3-5 years of significant construction-related impacts to the neighborhood. 300-2

- SAFETY: In some spots, the ROW option will move an existing freight track to within 8-10 feet of fence lines. This track currently sees trains carrying highly flammable and dangerous petroleum products between two oil refineries. Even a minor derailment -- even at slow speeds -- would put petroleum tanker cars into homes and backyards. This freight line already has a history of previous derailments. 300-3

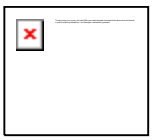
In addition, the ROW has multiple high-pressure petroleum pipelines buried in unstable soil. Construction of the C Line down the ROW presents a danger to those pipelines even if all safety protocols are followed. Even one slip-up could be catastrophic to the neighborhood. 300-4

- LOSS OF GREEN SPACE: The ROW -- for better or worse -- is utilized as much-needed green space in the City of Lawndale. Not only that, it offers a respite from urban sprawl with tall, mature trees and views of the San Gabriel Mountains in the distance. What is now a park-like community along the ROW will be replaced with giant walls that will bounce train noise and destroy views of the horizon. 300-5

- RIDERSHIP: Routing the Metro C Line down Hawthorne Boulevard would see more ridership than the ROW option as it passes by businesses and landmarks people want to visit. This includes a station in front of a planned mixed-use residential development at the South Bay Galleria. 300-6

I implore you to listen to the voices of the community when selecting which option to build. This is a 100-year project that will have PERMANENT impacts on a community already disadvantaged compared to neighboring South Bay cities. When considering costs, look at not only the financial costs, but the societal and environmental costs as well. Do the right thing, get it right for future generations and choose HAWTHORNE BOULEVARD for the Metro C Line Extension. 300-7

Thank you,



Bryan Lee
Chief Executive Officer

Subject: C-Line Extension DEIR Question?

Hello,

Among the comments and questions I have submitted as part of the Redondo Beach City Council, I add the following.

From time to time, when South Bay air quality is good, residents choose to open their bedroom windows at night to avoid the cost of powering an air conditioning unit, or fan. If the C-Line is extended down the ROW, what will Metro do, if anything, to permit the residents who live adjacent to the ROW to sleep with their windows ajar? 303-1

Currently, to my knowledge, the freight train does not operate between 9pm and 8 am each night, so the subject residents have the liberty to open their windows at night, if they so choose. 303-2

In other words, the DEIR has inadequately analyzed the project's impact on the sleep of residents along the ROW. 303-3

Submission 304

From: Yumiko Omatsu [redacted]
Sent: Monday, March 27, 2023 5:12 PM
To: GreenlineExtension

Hi I'm Yumiko Omatsu.

I'm living in Breakwater Village in Redondo Beach.
My unit is facing the railroad but only 2times a day the freight train goes by.
So it is always very quiet here.
We are senior residents so the noise is a very important issue. 304-1
And also safety is the most important matter.
There is not enough space for making a new Metro train next to us.
It's too narrow and there are pipeline yellow poles next to our wall. 304-2
ROW is an impossible plan and destroying our life and community.

Please think about it.
Sincerely,

Yumiko Omatsu

Subject: DEIR Response to Proposed Green Line Extension in Redondo Beach and Lawndale

Dear Metro and Metro Board of Directors,

After reviewing the Draft Environmental Impact Report, please consider the following comments.

Comparison of Right of Way (ROW) vs Hawthorne Blvd Elevated Route

The prosed Metro route along the Right of Way (ROW) will create significant continuous negative impacts on the nearly 400 homes adjacent to the rail tracks. To me it is astounding Metro could even propose such a horrific location that will have hundreds of trains running directly behind homes each day and then claim it will have mitigated impacts on residents. The ongoing issues include risks from derailment, air pollution, ground settling, hazardous chemical release from underground pipelines, and constant loud sounds every 10 minutes that will be detrimental to the health and safety of hundreds of residents currently living along that route. 305-1

The best option and one that would be preferred by all cities in the area would be underground along Hawthorne Blvd. While this is probably the most expensive alternative it would alleviate any concerns from residents and would not have any detrimental impacts on areas above ground. 305-2

If this is not feasible the next best one would be an elevated above ground route on Hawthorne boulevard as stated in the executive summary pages ES-13 to ES-16. 305-3

An elevated Hawthorne Blvd Route makes the most sense for the following reasons:

- It was the original public rail route and will better connect the community. 305-4
- Most of the surrounding area is commercial not residential and will have less of an impact on residents. 305-5
- Increased ridership as it is adjacent to the new Galleria Construction Project 305-6

Metro already has a significant problem with low ridership. Placing the new route as has been suggested by some behind homes on the Right of Way will not take advantage a regional amenity that can increase ridership. 305-7

The new developer for the Galleria project has publicly supported and submitted a letter stating they would prefer the elevated route along Hawthorne Blvd with a stop at Artesia Blvd and Hawthorne Blvd. They believe it will benefit their large development as more people would use the Green Line to come and shop, eat, and work. As the development is later expanded to include housing this will most likely be used by residents and will further increase ridership. 305-8

I urge you to please consider the elevated route along Hawthorne Blvd. 305-9

Sincerely,

Wayne Craig
Redondo Beach Resident

Subject: Draft EIR Comment

To Whom it May Concern,

My name is Tony Galvan and I am writing this email to comment on the proposal for the Green Line extension. As a resident of Lawndale for close to 30 years I have become familar with Metro Transportation in my neighborhood my whole life. I have taken the train from the Rosecrans station to Downtown Los Angeles station occassionally for work and Jury Duty. When I was in High School I would take the bus from Lawndale High School to Home from time to time as well. One thing I've always felt is that my basic needs of transportation was already meet between both the train and bus stations that Metro already has in place in Lawndale and Redondo Beach.

My current residence is perpendicular to 162nd Street and Condon Ave in Lawndale California. I beleive extending the Green Line through the train tracks to the Redondo Beach would devalue the property value of Lawndale and in turn hinder the growth of our city. The noise, the shaking from the train, the trash left behind from displaced individuals and the quality of life would go down as a train being placed right next to a residential neighborhood would cause. This would definitely cause a shift in property value to go down as many long time residents would move out instead of dealing with a train that passes through their backyard every 10-15 minutes. It would also be hard to sell a home to a person in the market as they would have to think about their quality of life as to hear a train pass through 10+ times a day. 307-1

I feel that Lawndale has grown in the time that i've been here. I believe if you absolutely have to put the Green Line extension through Lawndale that the best idea would be to have it run through Hawthorne Blvd. Individuals who ride the Green Line would be able to see firsthand the businesses that our city has to offer before departing the train for the Galleria Mall. I believe the idea of running more buses through Lawndale and Hawthrone Blvd to Redondo Beach and Torrance would be a viable option as there has already been a bus stop built around Kingsdale Ave in Redondo. I please ask that you consider these factors in your decison making for the Green Line extension. 307-2

Thank you.
Tony Galvan
City of Lawndale Resident

Subject: No to ROW from the Lawndale Gnome King

Dear Metro and the Metro Board,

I am writing to you as a concerned gnome who lives in the neighborhood affected by the proposed ROW project. As a resident of this community, I want to express my opposition to the project and explain why it would be bad for our neighborhood.

Firstly, the ROW project would require the removal of many trees and green spaces in our community. As a gnome, I value nature and its importance in maintaining the health and well-being of our environment. Trees and green spaces provide a vital habitat for animals and help to purify the air we breathe. Removing them would not only be detrimental to the natural beauty of our neighborhood but would also have serious consequences for our local ecosystem. 308-1

Secondly, the construction of the ROW project would create a lot of noise and pollution. As a gnome, I am very sensitive to noise and pollution, and I know that many of my human neighbors are as well. The constant sound of construction machinery and heavy traffic would make it difficult for us to enjoy our homes and gardens, and the increased pollution would have negative health effects on us all. 308-2

Lastly, the ROW project would disrupt the peaceful and close-knit community we have built here. As a gnome, I value community and the relationships we have with our neighbors. The construction and increased traffic would create a divide between us, making it more difficult for us to come together and support one another. 308-3

I urge you to consider building the project down Hawthorne Blvd instead. This area already has a high volume of traffic and would benefit from improved public transportation options. It would also avoid the disruption and negative impact on our neighborhood. 308-4

In conclusion, I strongly urge you to reconsider the proposed ROW project and its impact on our neighborhood. As a gnome and resident of this community, I am committed to protecting our environment, preserving our quality of life, and maintaining our sense of community. Please consider our concerns and work with us to find a better solution that benefits us all. 308-5

Sincerely,
The Lawndale Gnome King

Good evening,
With a multi-year project under construction at the ROW, traffic on Inglewood Avenue and Hawthorne Blvd will be affected, as well as the local side streets.
How will Emergency Vehicles access the area? 309-1

If the Hawthorne Blvd. Option is chosen, will traffic lanes be blocked or closed?
How will traffic be affected? How will Emergency Vehicles access the city of Lawndale? 309-2

The City of Torrance has a construction moratorium from November through January on the major streets.
Will construction on the Metro Rail project adhere to that moratorium?
Will the City of Lawndale be allowed to have the same timeline for a construction moratorium? 309-3

Thank you,
Ted Hofmann

Submission 310

To: GreenlineExtension
Subject: Draft EIR Comment

Good evening,
With the proposed project in the ROW, at grade and elevated, there will be tracks, cars, and above the cars, electrical wires.

In a time where all local cities are trying to get rid of the eyesores of overhead wiring, and requiring residential builders to underground utilities at great expense, has Metro considered the eyesore of the electrical wires extended above the light rail cars? 310-1

Has Metro looked at alternatives to the overhead wires powering the trains?

With the Hawthorne Blvd Option, the rail is elevated 30' above street level along the 405, and elevated tracks approx 30' wide. Has that eyesore, at that height, been considered? 310-2

Currently, while traveling North on Hawthorne Blvd, there is the view of sky above, with the 405 freeway being the first obstacle blocking the view. If a Metro Rail track is built on Hawthorne Blvd., the view will be blocked, or greatly affected. How can that be "less than significant"? 310-3

Ted Hofmann

Good evening,
If the Hawthorne Blvd. Option is chosen, the train will run along the freeway soundwall at 159th St.
The drawing shows the tracks on the west side of the soundwall, partially overhanging Grevillea Ave.
Currently, there are High Voltage Power Lines, I have heard 92KVolts, on poles right where the train is drawn.

311-1

What would be done with the existing power poles and power lines?

311-2

To: GreenlineExtension
Subject: Draft EIR Comment

Good evening,
The DEIR comment period is coming to a close on 3/27/23.

The Metro Board is to select a Local Preferred Alternative out of the 3 Alternatives presented.
The DEIR actually has 6 Alternatives, including the HFB, the best option according to the DEIR.

312-1

Is the HFB Alternative even being considered?

After the Metro Board selects an Alternative, the Final EIR will be done, addressing all of the comments from the DEIR.

So, the Metro Board is not aware of the questions or answers, or concerns brought up by the DEIR when they select an Alternative?

312-2

So the Metro Board is voting on options they know nothing about? Or to put it another way, they are voting without the local communities input?

How can they vote without knowing the facts?

Ted Hofmann

Subject: FW: Property Value and Aesthetics Negatively Impacted By ROW

Dear Metro and Metro Board Members,

I'm writing in regard to the aesthetics section of the DIER. As a homeowner in the ROW impact zone I don't believe the DIER objectively accounts for negative impacts on property value and the character of the existing neighborhood. I was told by a Metro real estate representative that my property can only increase in value with the implementation of ROW. 314-1
This is absurd – I understand in other circumstances certain proximity to public transit stations can be beneficial but homeowners in the ROW impact zone aren't even in a remotely beneficial situation. To begin with Metro proposes to build two more sets of tracks along a narrow passageway with homeowners property on either side. In some cases trains will have to pass within 10 ft. of somebody's Livingroom window. These trains will pass 192 times a day form 4am to 12am. In addition these new tracks will be built alongside existing freight tracks that haul toxic and corrosive materials between two oil refineries. If these cars were to derail as we've seen in the news recently, toxic and corrosive materials 314-2
tumble into someone's backyard. So now we have loud and incessant Metro cars built on an existing freight car hazard to our neighborhood. Would you like to try and sell the house you worked and sweat for under these circumstances? That Metro real estate representative must have taken me for an imbecile. I challenge anyone to tell me how homeowners in the ROW impact zone aren't going to have a significant devaluation to their property given our unique circumstances of Metro Rail cars going through a narrow passageway with residential property in such close proximity 314-3
on either side of the tracks. I ask the Metro Board members to ask yourselves "What if it was my house". Please take these comments into consideration before an existing liability is exponentially exacerbated.

Thank You,
George Gillen
L.A. County Firefighter (Retired)

City of Redondo Beach

Section10-2.19 Landscaping regulations. This section establishes standards for installation of landscaping order to enhance the aesthetic appearance of properties within the City, ensure the quality, quantity, and appropriateness of landscape materials, effect a functional and attractive design, improve compatibility between land uses, conserve water, control soil erosion, and preserve the character of existing neighborhoods.

Submission 315

From: Glen Brackenridge <[redacted]>
Sent: Monday, March 27, 2023 11:31 PM
To: GreenlineExtension
Subject: Public Comment #7

Metro Staff:

The ROW for the C Line (Green) Extension to Torrance Transit Project is currently home to many pipelines that carry hazardous materials, including petroleum products, natural gas, and other chemicals. The construction of a light rail train down the ROW would pose a significant risk to public safety and the environment due to the potential for pipeline accidents or incidents.

In the event of a pipeline leak or rupture, hazardous materials could spill onto nearby streets and neighborhoods, causing serious health impacts and environmental damage. The presence of pipelines along the ROW also increases the risk of explosions or fires, which could have catastrophic consequences for the surrounding community.

Moreover, construction activities associated with the light rail train down the ROW could potentially damage the pipelines, leading to additional safety risks and environmental hazards. Even minor damage to a pipeline could result in a major leak or rupture, threatening the health and safety of nearby residents and the environment.

315-1

Given these risks, it is imperative that Metro and other relevant authorities conduct a thorough analysis of the potential impacts of constructing a light rail train down the ROW, taking into account the presence of pipelines and other hazards. Alternatives that avoid the ROW and reduce the risks to public safety and the environment should be considered and evaluated in the Draft Environmental Impact Report for the C Line (Green) Extension to Torrance Transit Project.

Thank You,

Glen Brackenridge

Submission 316

From: Glen Brackenridge <[redacted]>
Sent: Monday, March 27, 2023 11:30 PM

Subject: Public Comment #6

Metro Staff:

The proposed option that goes down the ROW would violate the National Environmental Policy Act (NEPA) by causing significant environmental harm to the local ecosystem. Specifically, the destruction of trees and vegetation would impact air quality, reduce carbon sequestration, and alter local wildlife habitats. 316-1

The proposed option that goes down the ROW would also violate the California Environmental Quality Act (CEQA) by causing significant impacts to the environment and the community. Noise pollution, traffic congestion, and the loss of trees and vegetation would adversely affect the quality of life for residents and could lead to long-term health impacts. 316-2

The option that goes down Hawthorne Boulevard would be more consistent with the **City of Torrance's General Plan**, which emphasizes the preservation of natural resources and the promotion of sustainable development. The destruction of trees and vegetation associated with the ROW option conflicts with the General Plan's goals. 316-3

The ROW option would also have negative impacts on the **federally-protected California gnatcatcher bird**, which has been observed in the project area. The loss of natural habitat would **violate the Endangered Species Act** (ESA) and require significant mitigation efforts. 316-4

In contrast, the option that goes down Hawthorne Boulevard would avoid significant impacts on the environment and wildlife, and would comply with all applicable environmental regulations. This option would minimize noise pollution and preserve trees and vegetation, promoting a healthier and more sustainable community. 316-5

Thank You,

Glen Brackenridge

Metro Staff:

As a resident of Lawndale I would like to comment about the lack of discussion of emminent domain. Egineering staff at Metro have commented that properties along the ROW south of 170th street may have portions of their yards taken in order to achieve the needed width of that section. If this is going to be necessary for the ROW option, than the Metro Board should be informed that is going to be a cosequence. For them to make an informed decision regarding their constituents, they should know how they will potentially be affected. 317-1

Thank You,

Glen Brackenridge

Submission 318

From: Glen Brackenridge <[redacted]>
Sent: Monday, March 27, 2023 11:02 PM

Subject: Public Comment #4

Metro Staff:

As a resident of Lawndale I would like to respond to the question in the DEIR regarding the ROW option: **"Would the project result in generation of a substantial or permanent increase in ambient noise levels in the vicinity of the project."** Metro's answer is for the ROW operation at grade, the noise level increase is significant and unavoidable. With 200-300 trains passing daily, and honking horns at the crossing at 170th street, this level of noise is unacceptable. Have noise levels been taken currently at the ROW when the BNSF train is NOT going by? If so, readings would show that the ROW is peacefully quiet. I'd request Metro compare that to the current level of noise on Hawthorne Boulevard at all hours. I think it's clear that as a busy thoroughfare, Hawthorne Boulevard already has much higher ambient noise levels due to traffic, and therefore would not noticeably be altered by the addition of a light rail train. 318-1

Thank You,

Glen Brackenridge

Submission 319

From: Glen Brackenridge [redacted]
Sent: Monday, March 27, 2023 10:57 PM
To: GreenlineExtension
Subject: Public Comment #3

Metro Staff:

As a resident of Lawndale I would like to respond to the question in the DEIR regarding the ROW option: **"Would the Project substantially damage scenic resources, including but not limited to trees..."** The DEIR says that there is NO IMPACT for Metro going down the ROW. How can you possibly say that? The ROW is one of the most scenic, peaceful places in Lawndale. Lawndale has a park ratio of 0.8 acres/1000 people, when the county average is over 3 acres/1000 people. The ROW currently serves the community as a park, and helps make up a vast portion of that 0.8 acres. Lawndale identified trying to build a park as one of their highest priorities in that 2016 report. This was their no.1 project: (screen shot taken from report) 319-1

1. Project Name: Multipurpose Park Along Railroad

   Project Location (address, assessor's parcel number, or nearest intersection):

   170th St and Manhattan Beach Blvd.

   Project Type (choose one):

   - ☐ Repairs to Existing Amenities
   - ☐ Add/Replace Amenities in Existing
   - ☑ Park Build New Park or Specialty Facility (include acreage in description)

   Brief Description of Project:

   Multipurpose park along available space next to railroads for all to use starting at 170th St and ending on Manhattan Beach Blvd. Property is not city owned. Land acquisition required.

According to DEIR page 3.3-13:
"Visual quality refers to the aesthetics of a view. Determining the quality of a view is based in part on the viewer's values and notions about what constitutes a quality setting. Existing visual quality is compared to the expected appearance of the site in order to determine whether the visual character of the area would be degraded. Factors such as changes in the appearance of the project site, structure height and massing, setbacks, landscape buffers, and other features are taken into account."

Based in this definition, the ROW option will destroy the visual aesthetics of Lawndale. Currently there are no fences or soundwalls on the ROW. Building a train down the ROW will destroy our much needed park land, will deforest our limited number of trees, and will be a visual and environmental blight on the community. 319-2

Thank You,

Glen Brackenridge

Metro Staff:

As a resident of Lawndale I would like to respond to the question in the DEIR regarding the ROW option: "**Will the project result in inadequate emergency access?**" The DEIR says for the ROW, the effect is "less than significant." I disagree. How was this determined? For those of us who live between Inglewood Ave and the ROW, we would no longer be able to exit our neighborhood easily, going east. If there is backup on Inglewood, as there frequently is, this could be a real problem. 321-1

In addition, McCormick Ambulance Station on 182nd would be directly impeded from reaching residents in North Redondo as it would have to wait at the railroad crossing at 182nd and the ROW. Wheras this would not be a problem if the Hawthorne Blvd option was chosen. 321-2

Metro Staff,

I would ask that before a cost option is shown for any proposed route down the ROW to the Metro Board, that any cost should also include the expense of moving all of the pipelines that are currently on the ROW. Have all of those pipelines been identified? What is the cost of their relocation? Has this cost been added to the general total of the ROW alternatives? 322-1

Thank You,

Glen Brackenridge

Submission 323

From: J T <[redacted]>
Sent: Monday, March 27, 2023 4:36 PM
To: GreenlineExtension
Subject: Comment on C-line extension.

Hi,

I live in the Nido park area. I think the only option that makes sense is the below grade following the rail ROW. The Hawthorne Blvd option will disrupt the traffic on the road and will put the station in the middle of the road. It will be hard to make any bike or walking connections to it. Also the elevated tracks will let the noise to travel for miles. 323-1 323-2

Following the ROW below grade minimizes the impact to the homes nearby. It also allows putting the station next to the Redondo beach transit center. This will turn the center to a multimodal transit center and greatly increase usage. The bike lane under the power lines could be extended to the station making it much easier for anyone in North Redondo to use the transit center. 323-3

The value in a network depends on the number of connections. Having one large multimodal transit center is much better than a separate train station and bus station. 323-4

James Tucker

Submission 324

From: Jamison Hughes [redacted]
Sent: Monday, March 27, 2023 9:59 PM
To: GreenlineExtension
Subject: Draft EIR Comment

To whom it may concern,

I am writing to express my opposition to the proposed light rail project that is set to be built through our neighborhood in Lawndale with the Metro Row or trench option. 324-1

While I understand the potential benefits of a light rail system, such as reduced traffic congestion and improved public transportation options, I believe that this particular project will have significant negative impacts on our community. 324-2

First and foremost, history is filled with transportation projects that detrimentally affect low-income or communities of color. The proposed project has no stops in the city of Lawndale yet we will disproportionately suffer most of the disruption through construction, vibrations to our house and the noise of up to 200 trains passing through each day. 324-3

It also seems as though the need for this extension is based on a made-up new ridership number. We know that ridership is down on the Metro system due to the perceived danger. 324-4

It benefits the city of Torrance, and understandably, they are in favor of it because it does not seem to affect many of their residents. The project, however, would cause major disruptions to our community in Lawdale. I urge you to reconsider the proposed light rail project and instead focus on alternative solutions to our transportation challenges. Our neighborhood is peaceful, and we should not sacrifice our quality of life for the sake of a poorly conceived public transportation system that has zero benefits to the city of Lawndale. 324-5

Thank you for your attention to this matter.

Sincerely,
Jamison Hughes

Subject: What is lacking are studies on the human mental health altering and neurological impacts of Noise Pollution exposure

To: Metro and Metro Board Members

After having a chance to review the Draft Environmental Impact Report, please consider the following as our ninth DEIR group response for the record. We are responding in joint installments submitted by group members to ensure each concern is highlighted and expressed so it represents the breadth of our combined communities.

This installment is commenting on concerns about lack of Human Health Impacts studies. The DEIR only mentions human health briefly with regard to Air Quality, Energy and Hazardous Materials.
The DEIR claims less than significant impact under Energy and HazMat due to chemicals and emissions for construction which we would dispute due to a cumulative impact factor.
However under Air Quality for trenching, the designation is Significant and Unavoidable. 325-1

There can be no fully At-Grade project build because of the McCormick Ambulance facility on 182nd St a half block away from the crossing, therefore it would be necessary to trench under 182nd St. which would impose excavation for trenching violating the EPA air quality regulations for the duration of construction, noted in the DEIR as 5 - 7 years. Note there are homes within 50 feet of where this would occur. 325-2
The scenario for 170th St. in Lawndale would be similar due to school crossing and limited access for emergencies. 325-3

What is lacking are studies on the human mental health altering and neurological impacts of Noise Pollution exposure which can according to numerous studies by well respectedminstitutions have a negative effect on the human brain. The DEIR indicates noise would be Significant and Unavoidable (3.6-2). 325-4

Please note there are many studies linking serious health risks to living near this type of noise. Some of these risks include stress related illnesses, high blood pressure, speech interference, hearing loss, sleep disruption, and lost productivity. Chronic stress, sleep disturbances, and anxiety are noted to impact children living with high levels of noise pollution. They can develop impairments in memory, attention, and reading skills. 325-5
Other more serious health effects include high blood pressure and increased risk of heart attack.
DEIR Community Response Series from Right of Say-Redondo ... https://mail.aol.com/webmail-std/en-us/PrintMessage
1 of 3 3/27/23, 2:23 PM

The willingness to even consider exposing 1,100 households along the ROW to these kinds of health risks is inconceivable.
Here are links to some articles that lay out some of the dangers of noise pollution:
EPA.gov - Clean Air Act Title IV - Noise Pollution - https://www.epa.gov/clean-air-act-overview /clean-air-act-title-iv-noise-pollution 325-6
Harvard - The Effects of Noise on Health, Noise pollution is more than a nuisance. It's a health risk - https://hms.harvard.edu/magazine/viral-world/effects-noise-health

NIH - Decibel Hell: The Effects of Living in a Noisy World - https://www.ncbi.nlm.nih.gov /pmc/articles/PMC1253729/ 325-6

Stress is another Human Health Impact we are concerned about. For the impacted community we are faced with the threat being thrust upon our homes, our community, our environment and our lives being permanently altered to an insurmountable extreme.

This is the stress we are forced to endure and feel harassed by. When we could and should have been enjoying our lives in peace, we are instead finding ourselves embroiled in not only this painstaking brutal process by no fault of our own, but we also have abusive rhetoric and name calling thrown at us by our neighboring city, more community harassment once again by no fault of our own. Some of us have recently suffered the shock of newly finding out about this project and what it means to our homes and peaceful enjoyment while others of us have been involved in this issue for years. 325-7
Those of us who are at a more advanced age will never be able to get those years back.

This amount of stress and anxiety will surely have lasting effects on our health and well being, some of us already suffer from PTSD. Other stress related health problems include digestive health which can lead to more serious issues. This health wear and tear impact has been Significant and Unavoidable and it is not being considered in the DEIR as an environmental impact. If harassment on the job creates a hostile environment, then so too should a process like this be thought of as creating a hostile environment in our communities. Not something we ever asked for, nor do we deserve.

Health risks due to stress include: Brain Function Complications, Memory disorders, Cognition and Learning disorders, compromised Immune System Functions, deteriorated Function of the Cardiovascular System, Gastrointestinal Complications and impairments to the Endocrine System.
The most difficult part to digest is this is all being done and perpetuated for over a decade knowing there are much better, more beneficial and less destructive alternatives to consider. 325-8
DEIR Community Response Series from Right of Say-Redondo ... https://mail.aol.com/webmail-std/en-us/PrintMessage
2 of 3 3/27/23, 2:23 PM

Once again the only suitable mitigation for all of this is to recommend the Hawthorne Blvd. Elevated option, for the sake of our combined communities between the two cities of Redondo Beach and Lawndale. 325-9
Thank you for your consideration in this matter.
Respectfully, Jan Kurth

Subject: Choose Hawthorne Blvd for the Metro C Line / Green Line Extension

Dear Metro Board Members,

I am writing to express my strong disapproval for routing the proposed C (Green) Line extension down the current Metro right of way through residential neighborhoods in Lawndale and Redondo Beach. I am urging you and the board to choose the Hawthorne Boulevard elevated option instead for the following reasons: 327-1

- NEIGHBORHOOD QUALITY OF LIFE: The ROW option would send 200-300 trains per day through quiet residential neighborhoods from 4 AM until Midnight. This will permanently affect the quality of life for more than 1,000 families in Lawndale and North Redondo Beach. Metro's own environmental impact report states increases in NOISE and VIBRATION will be "Significant" and "Unavoidable." This is in addition to 3-5 years of significant construction-related impacts to the neighborhood. 327-2

- SAFETY: In some spots, the ROW option will move an existing freight track to within 8-10 feet of fence lines. This track currently sees trains carrying highly flammable and dangerous petroleum products between two oil refineries. Even a minor derailment -- even at slow speeds -- would put petroleum tanker cars into homes and backyards. This freight line already has a history of previous derailments. 327-3

In addition, the ROW has multiple high-pressure petroleum pipelines buried in unstable soil. Construction of the C Line down the ROW presents a danger to those pipelines even if all safety protocols are followed. Even one slip-up could be catastrophic to the neighborhood. 327-4

- LOSS OF GREEN SPACE: The ROW -- for better or worse -- is utilized as much-needed green space in the City of Lawndale. Not only that, it offers a respite from urban sprawl with tall, mature trees and views of the San Gabriel Mountains in the distance. What is now a park-like community along the ROW will be replaced with giant walls that will bounce train noise and destroy views of the horizon. 327-5

- RIDERSHIP: Routing the Metro C Line down Hawthorne Boulevard would see more ridership than the ROW option as it passes by businesses and landmarks people want to visit. This includes a station in front of a planned mixed-use residential development at the South Bay Galleria. 327-6

I implore you to listen to the voices of the community when selecting which option to build. This is a 100-year project that will have PERMANENT impacts on a community already disadvantaged compared to neighboring South Bay cities. When considering costs, look at not only the financial costs, but the societal and environmental costs as well. Do the right thing, get it right for future generations and choose HAWTHORNE BOULEVARD for the Metro C Line Extension. 327-7

Thank you,

Jose A Jimenez

Subject: Draft EIR Comment

Dear Metro & Metro Board Members,

I am deeply concerned about the DEIR in regards to the possible Green Line extension along the Right of Way. I'm writing today as a resident of Redondo Beach and I own property adjacent to the Right of Way.

I fail to see anything in the DEIR that addresses the freight line being moved further west, and as a result closer to the underground gas pipelines — the pipelines that were being worked on in summer of 2020 that caused pretty significant property damage (a sink hole outside my front door) that literally took years to properly repair. Please note the pipelines are generally at a depth of 6-7 feet, where they go under Grant Avenue - they are at a depth of greater than 30 feet. 328-1

As a property owner adjacent to the right of way, I have been repeatedly told that light rail is "quiet, not disruptive, and would likely go unnoticed" as literally hundreds of trains go by on a daily basis, however page ES-22 clearly states that the operation of project as proposed would have “significant and unavoidable" "increased noise levels.” There are literally HUNDREDS of homes and residents that would be directly negatively impacted by daily increased noise for up to 20 hours daily if the project is done as proposed. While the Hawthorne boulevard option does have some residences within a stones throw of where the tracks would be - the number impacted would be much fewer. 328-2

It only makes sense to have mass transit stay near mass transit and not cut through local neighborhoods. The benefits to local businesses if the extension goes down the right of way would be immeasurably beneficial for them! Having metro ridership get a first hand view of local shopping options during their time on transit outweighs passing by private bedroom windows. 328-3

I understand the benefits of mass transit - I really do. However, the reality of my family taking the metro if the extension comes through by any option is slim to none, and I know I’m not alone. Ridership is drastically down across the board, and taking my family of 6 on the metro is not only expensive, but I rarely feel safe on the Metro anymore when I do take it. I wish I could feel safe. I wish I could take the Metro more, but the statistics of Metro's safety doesn’t lie, and I’m just not willing to risk it. 328-4

I would prefer a high frequency bus alternative to the extension as proposed. 328-5

Subject: C Line (Green) Extension to Torrance

Dear Metro Board,

I'm writing to express my concern about the proposed plan to run a commuter train through the densely populated neighborhoods. As a resident of Ruxton Ridge, I strongly believe that this plan should not be implemented for several reasons.

Running a commuter train thru a populated neighborhood would impact a significant safety risk to the residents. As you know, trains are heavy and fast-moving vehicles that can cause serious damage & accidents if something goes wrong. This risk is even higher in a densely populated area where there are more people and obstacles that could potentially cause accidents. It's not worth the risk to the safety and well-being of the residents. 329-1

The pollution & noise disruption caused by the train would be a major inconvenience to the residents. As you know, Commuter trains are known for their loud noises & vibration, this vibration can slowly damage the foundations & decrease the home values of the properties in the area. The loud noises can be heard and felt for miles around. This would disrupt the peace and quite of the neighborhoods and make it difficult for all residents to go about their daily lives without disturbance. 329-2

As of now residents of the community are able to enjoy the pleasant weather & climate by having their windows & doors open for fresh air, how fair would it be to the residents to now live with doors & windows closed to prevent from being disturbed and annoyed by the noisy train running so frequently day & night? Have you, each Member, considered the unfairness in imposing such disruption in quality of life on our daily basis for every day of the residents' lives? Have you personally contemplated how your lives would be if something loud went right past your houses every few minutes, every single day for the rest of your life? 329-3

I strongly believe that running a commuter train thru a densely populated neighborhood is not a wise decision. The safety risks, noise pollution, and disruption caused by the train (Green line) would have a negative impact on the resident's quality of life and well-being. I urge you to consider alternative options that would not pose such risks to the community. 329-4

Thank you so much for your attention to this important matter.

Sincerely,

Lily Kua

Importance: High

SAFETY:

I am addressing the subject of safety. I live at Breakwater Village along the ROW. We have 191 units plus the 1,000 other home in Redondo
Beach and Lawndale and El Nico Park

You want to move the current track 15 feet closer to our property and add two more sets of track. A total of 3 tracks in such a narrow space. 330-1
These trains carry liquid petroleum and with the homes,passengers and children in the park I worry about possible derailments. We have had several in the past and Just recently in East Palenstine Ohio, where the residents are still dealing with the after effects. I am concerned for our health and safety. 330-2

I hope the METRO and Metro Board will consider our HEALTH AND SAFETY 330-3

Sincerely,
Angeline Souza

Subject: Please select the Hawthorne Blvd elevated route for the C-Line extension

To Metro:

As a resident of North Redondo I ask that you select the Hawthorne Blvd elevated route for the C-Line extension. As detailed in your DEIR, the 2 ROW options, expanded to 3 sets of tracks will contribute to continued damage to nearby homes from the virtually continuous vibration during hours of operation. People's homes have already suffered such damage over the years. The best option to extend the C-Line to Torrance is to avoid the ROW entirely and select the Hawthorne Blvd route.

333-1

Thank you for your attention to this matter.

Sincerely,

Doug Boswell
Redondo Beach resident since 1989

Subject: Choose Hawthorne Blvd for the Metro C Line / Green Line Extension

Dear Metro Board Members,

I am with the neighbors who are egregiously offended by your insensitive decision to run this train through a neighborhood full of homes. After attending the broad meeting where a man had a heart attack, and learned of another neighbor's dog tragically being decapitated should send a clear message to your broad that this selfish choice is inhumane. The obvious solution is to run the train down Hathwrone. Not sure how you're going to save money while your insurance company is going to be paying out lump sums to injuries and mental distress caused by those living too close to a train. 334-1

Think with your heads, not your wallets, and think about the ways in which you could help this community instead of divide. 334-2

Subject: Metro C Line Extension -- HAZARDOUS MATERIALS & SAFETY

Dear Metro and Metro Board Members,

I am submitting one of multiple comments on the proposed C Line (Green Line) Extension and want to first state -- I strongly urge you as a board to choose the Hawthorne Boulevard elevated option over the ROW options. 337-1

I also want to specifically address multiple issues with the findings of the Draft Environmental Impact Report and in this email I want to address **HAZARDOUS MATERIALS.**

Choosing the ROW option for the C line extension would present significant safety issues regarding hazardous materials. I think these issues were inadequately addressed in the Draft EIR. 337-2

In some parts of the ROW in Lawndale, Metro plans to move the existing freight track to within 8-10 feet of property lines. This freight track carries highly flammable petroleum products in tanker cars and has had a history of derailment (see attached article). Just down the line from here, on January 12, 2017, the very train you want to move closer to homes derailed and overturned. If a derailment were to happen along the ROW, petroleum tanker cars would quite literally land in backyards and possibly into structures. With so many train derailments in the news, you can see why this is a terrible idea. Even if Metro mitigates the tracks and modernizes them, there is still the unacceptable risk a train can derail and injure or even kill. 337-3

https://www.cbsnews.com/losangeles/news/train-derailment-in-el-segundo-forces-road-closure/

In addition to the current freight track, the Metro ROW has buried high-pressure petroleum pipelines underground. The draft EIR barely addresses these pipelines and the possibility for disaster if something happens to them during construction. The draft EIR essentially states "we will deal with it when we get to it." How can Metro take such a lackadaisical approach to these pipelines? Especially when they sit in unstable soil that has a history of sinkholes and erosion? You are just asking for disaster. 337-4

Thanks,

John Schreiber

Subject: DEIR COMMENT

Figure 3.6-23 Proposed Project - Combined Light Rail and Freight Relocation Mitigated Noise Impacts shows Sensitive Clusters F2, F3 and F5 as being in the Degree of Impact category of “Less Than Significant With Mitigation”. These clusters should be classified as “Significant and Unavoidable” due to there proximity to the At Grade Crossing at 182nd St. The Bells at the crossing could be as loud as 103 dba SEL at the residence at the corner of 182nd St and Firmona. All the homes in these clusters would be subject to the crossing bells, the train quacker and the sound of the passing train due to the gap in the sound wall. 341-1

Additionally, nearly all the homes in these clusters do not have air conditioning, so occupants do not have the option of closing their windows to try to mitigate the train noise. 341-2

Thank you,
Michael Garlan
Redondo Beach

Subject: Opposition to the Metro on the ROW

To Whom It May Concern:

I am writing to express my strong opposition to the proposed metro train on the ROW that is slated to be built in our Lawndale neighborhood. As a resident of this community, I believe that this train will have a negative impact on our daily lives and the overall quality of our neighborhood with absolutely no benefit to our community as the train will not have any stops here. 342-1

Firstly, the construction of the train will cause significant disruption to our daily lives. The noise pollution from the construction work will make it difficult for residents to carry out their daily activities in peace. In addition, the increased traffic that will come with the construction of the train will lead to more congestion on our already busy streets, making it even harder for residents to get around. 342-2

Secondly, the train itself will also be a source of constant noise pollution. The sound of the train passing through our neighborhood at all hours of the day and night will disrupt our peace and quiet. This will be particularly problematic for families with young children, elderly residents, and those who work from home. 342-3

Finally, I believe that the train will have a negative impact on the value of our homes. With the constant noise pollution and increased traffic, our neighborhood will become less desirable to potential homebuyers. This will make it harder for residents to sell their homes and could lead to a decline in property values. 342-4

In light of these concerns, I strongly urge you to reconsider the construction of the train in our neighborhood on the ROW. I believe that this project will have a negative impact on our quality of life and the value of our homes. 342-5

Sincerely,

Michelle Hughes | [redacted]

Subject: DEIR Stakeholder Response - Aesthetics

Dear Metro and Metro Board of Directors,

I am a Redondo Beach homeowner sharing my back property line with the ROW adjacent to El Nido Park on Firmona Ave. just south of 182nd St. This is my final response the the C-Line (Green) Draft Environmental Impact Report.

I have been saying all along that building a project of this caliber, an ill-designed commuter railway in a bad location, where we have a little bit of organic landscape to enjoy and the reason we bought our homes here would forever change the landscape of my home and my community. This organic, natural environment plays an important role in defining the visual setting, even for an urban community. In cases like ours, regionally recognized natural features contribute to an urban community's aesthetic character and visual quality. In SBCCOG-2002 South Bay Rail Studies, BNSF and South Bay Cities Council of Governments concluded a linear parkway could easily be introduced in the ROW. This was after rerouting the more frequent freight to the Alameda corridor and the ROW was falling under the category of "lightly used or abandoned corridors", therefore the public was anticipating this change and that was the basis for buying our home here rather than further west. 343-1

The DEIR only acknowledges aesthetics above the ground, but not the ground itself. On the ROW in the vicinity of 182nd St. it is necessary to trench to allow ambulance and emergency response free uninhibited access which could be a matter of life or death. I have been told numerous times that behind my house the new light rails would be hidden behind the freight berm or trenched, therefor out of my view. I do leave my house frequently and 182nd St is my daily path to food and other necessities. It is the route I take to visit family. It is where aviary wildlife live their lives and we enjoy watching them. 343-2

Currently I enjoy the aesthetics of the natural ground along this daily path on 182nd St. I enjoy the view of the park unhindered by the blight of the mechanical chasm a trench would bring. No matter how hard I could try to keep my focus up high above the ground, the chasm would always be in my view as I go about my daily life. The oversimplified concession of "you won't see it, it'll be hidden behind the berm" or "down in the trench so you won't see it" is dismissive and disingenuous. Metro can do better. Of course I will see it. 343-3

The only improvement to this narrow swath of land would be to add native grass. It would be aesthetically more pleasing and keep the area much cleaner. Currently the ROW is unkempt and adding more rail will not improve it all, it would just make matters much worse. 343-4

The DEIR is totally dismissive of the impacts of construction aesthetics, either writing it off as temporary, when 5 - 7 years of that kind of industrial intrusion would be something intolerable for a long enough time to have concerning mental health impacts. I also see claims of a low profile footprints deemed as insignificant or low impact. This is not possible, there would be big brown clouds of dirt, a constant barrage of industrial equipment and vehicles, plus the workers who on top of the berm would have full view into my home. 343-5

Please understand there is no way to "mitigate" any of this. We should not have to work so hard at begging to be left alone. I am at an age when I need to be living in comfort for the rest of my life. This process has not been that and it has been going on for years. What an intrusion this has been. 343-6

Please recommend Hawthorne Blvd. elevated or any other option besides the ROW to preserve the quality of life of the many actual people like myself. 343-7

Thank you to the Board of Directors for your consideration.

To: GreenlineExtension
Subject: Homeowner 4561 W 162nd Street - Response to DEIR

Dear LA Metro,

My name is Morgan Schultz and I am a first-time homeowner and Lawndale resident located at [redacted] This is a direct response to the DEIR. I am writing to express my strong opposition to any of the proposed ROW options that will send 200 trains a day passed my house. The noise and vibration, the potential air and water quality impacts, and the safety concerns would have a significant negative impact on my family and my community - particularly the lower income residents who already face numerous challenges. **If LA Metro chooses the ROW option, you are yet again taking advantage of vulnerable, primarily BIPOC communities that don't have a voice. This is a social justice issue!** 344-1

My husband and I chose to buy a home in Lawndale after renting in this area for two years. We fell in love with this diverse neighborhood. It is a quiet, safe, community-oriented respite compared to other areas we have lived in Los Angeles. Our neighbors are kind, caring and supportive of one another. The proposed ROW plans would significantly disrupt the neighborhood we fell in love with. **The constant disruption of 200 trains would make it impossible for us to enjoy our home and outdoor space, as the noise and vibration from the trains would be constant and overwhelming.** We just renovated our backyard and look forward to welcoming a newborn baby in 2024. This would significantly impact the quality of life we imagined for ourselves when we moved here. 344-2

Additionally, I strongly believe that this option would disproportionately impact the lower income residents in the area, who may not have the means to relocate or mitigate the negative impacts of the increased train traffic/noise. These are working class families, who come home after working long, physically demanding hours, and want nothing more than peace and quiet to unwind. If LA Metro chooses the ROW option, they would be taking away their only peace and quiet! **Additionally, there is already evidence of sinkholes, and a high likelihood of additional property damage (foundation issues, exterior finishes, etc.)**, and lower income households would not have the means to remedy these problems. I urge you to consider the impacts on all members of our community before making a decision. 344-3

In addition, the increased traffic and activity could have a **negative impact on the air and water quality in the area, which could have long-term health consequences for residents.** 344-4

Lastly, the increased traffic and activity in the area would pose a danger to the many animals and children who live and play in the area. The freight train is already extremely close to the residences. The ROW option would bring them even closer. The noise and disruption could scare animals and cause them to run into traffic, while children could be at risk of being hit by passing trains or vehicles. **You would not only be impacting this community financially, but you will also be putting our safety at risk!** 344-5

The Torrance Blvd. option would immensely decrease these negative impacts. The budget differences are negligible when looking at the other projects you have spent on across LA County. In light of these concerns, I urge LA Metro to reconsider the ROW option and to explore other alternatives that would be less disruptive and damaging to our community. **Vote as an ally to low-income, BIPOC communities, and vote NO on ROW!** 344-6

Thank you for your attention to this important matter.

Sincerely,

Morgan Schultz

Cc: Mary Miller
Subject: C Line (Green) Extension to Torrance - Input

Dear Metro Board and Mark Dierking,

My family and I are long time Torrance residents who live directly along Hawthorne Blvd. & 176th Street (at the corner of 176th St. and Little Hawthorne), adjacent to/ east of where the potential South Bay Galleria Station would be located according to the Hawthorne Blvd. Elevated Line Option.

We are big proponents of public transportation in general in order to reduce traffic/ pollution, and to connect many more people to areas throughout the region. My wife and I both lived in New York City and love using subways and public transportation to commute.

However we feel the At Grade ROW option is the most financially responsible and beneficial option being studied. The train tracks and ROW were established prior to the housing that was built adjacent to the ROW. The ROW was purchased by Metro explicitly to run Metro lines along the ROW in the future, therefore it is only logical that the Metro train lines are built and run along the ROW. 345-1

The ROW option includes numerous improvements to the ROW including additional/ enhanced landscaping, sound barriers, pedestrian/ biking paths, and improved amenities.

The Hawthorne option however widens Hawthorne Blvd. with no pedestrian/ biking paths, no landscaping improvements, and no improved amenities; except the addition of the Metro train line. It is incredibly more expensive and takes the longest to build, therefore increasing the escalation costs significantly. The amount of reinforced concrete to build the elevated train line and station structure would significantly add to the carbon footprint of the project, therefore reducing the benefits to the environmental impact of the project. 345-2

The proposed elevated station in the middle of Hawthorne Blvd. would add to the already congested thoroughfare due to adding at-grade crosswalks along Hawthorne Blvd. at an area that already has traffic back-ups from Artesia to 177th St. and beyond. Our home is currently impacted from light and air pollution from thousands of idling and moving trucks/vehicles that already drive past our home every day and blow downwind to the east towards our house. Adding the at-grade pedestrian crosswalks to the center median station would add even more traffic and pollution from idling vehicles at new traffic signals at the new pedestrian crossings right in front of our home. The Hawthorne option also eliminates the landscape buffer that is currently along Little Hawthorne between 177th and Artesia in order to accommodate the concrete columns that support the proposed station, because the center median is not wide enough currently to accommodate the station structural footprint. Therefore the station would push the north-bound Hawthorne lanes even closer to our home and eliminate any landscape buffer to mitigate pollution. The center station would also eliminate or greatly reduce any of the center median larger trees that currently occupy the center median landscape area - again increasing the pollution mitigating landscaping. 345-3

The Hawthorne Blvd. option construction project would be incredibly disruptive to Hawthorne Blvd. that constantly has traffic jams already; without construction, because the contractors would need to close off multiple lanes to build the station and train line if the Hawthorne option is selected. 345-4

We hope this does not happen, however if for some reason the Hawthorne option is selected, we implore that the

design would maintain a landscape buffer zone with evergreen (not deciduous) bushes and trees to screen/ mitigate pollution to the Torrance houses to the east and instead reduce the width of Little Hawthorne drive lanes to result in a one way thoroughfare in lieu of eliminating the landscaping buffer along the sidewalk between Hawthorne and Little Hawthorne. 345-5

We have participated in multiple town hall sessions with Metro and attended multiple walking tours throughout this process, therefore we have seen and heard the pros and cons of each option.

With proper planning/ improvements and hopefully the implementation of a quiet zone train line along the ROW (without bells at the street crossings), the Metro improvements along the new train line at the ROW would bring much-needed train transit in this area in addition to providing supplemental improvements through new pedestrian/ bicycle paths and landscaping that would benefit the immediately adjacent residents as well as residents in the surrounding neighborhoods. 345-6

In summary, LA County needs additional train/subway metro lines to eventually connect the South Bay to the airport, Long Beach, and the Greater Los Angeles Metropolitan Area, but it should be done logically and more cost effectively along existing Right of Way Track areas. The at-grade option along the ROW is the most cost effective, quickest, and most logical solution for extending the C Line through the South Bay area. 345-7

Thank you for your time and consideration.

To: GreenlineExtension
Subject: DEIR: Residential Rental Real Estate is a business

Metro Staff,

Why is residential rental real estate not recognized as a business in the DEIR? I am very sensitive to this issue, as those of you who listened to my comments during the DEIR Public hearing in Torrance may recall. Residential rental real estate is a business, a very difficult business which takes many years to develop; I know because I have been a landlord for over 30 years. If you were paying attention during the pandemic, a lot of people were paid by the government not to work. But landlords were required to continue working, without government support, and if they did not get paid, too bad: the normal remedy for non-paying tenants, court action, was taken away by the government. 346-1

The term “commercial business” is used in the DEIR.
The words “rental” and “landlord” or “apartment” do not even appear in the DEIR.
The word “renter” appears only once in the DEIR, in the FEMA Flood Insurance program. 346-2

“Housing” appears

OK, so the word “family” is the term associated with residences.

Most of Lawndale is zoned R-2. Along the ROW in Lawndale, there are far more rental residences than owner-occupied.

Please update the DEIR to include the unique category of residential rental real estate as a business. If “commercial businesses” are compensates for impact, especially during construction, then residential rental real estate businesses should be also. 346-3

Subject: DEIR FAQs: Property Values

Metro Staff,
In C Line Extension to Torrance website, link to "All Documents for this Project," FAQ folder, the Frequently Asked Questions (FAQ) file, page … well the pages are not numbered, I think page 12, is the question, "Will the Project impact my property values?" The reply is "… studies show that residential properties within walking distance (half-mile) of a station typically experience an increase in property values …"

347-1

Please produce these studies.

Secondly, while this may be true, the answer does not address impact on values of property close to the trains, especially near noisy curves or street crossings, but not necessarily close to a station. Where are the studies which address the impact on those properties? Please produce them.

Subject: DEIR Community Response Series from Right of Say-Redondo Beach Quality of Life Installment #10 FINAL

Dear Metro and Metro Board of Directors,

After having a chance to review the Draft Environmental Impact Report, please consider the following as our ninth DEIR group response for the record. We are responding in joint installments submitted by group members to ensure each concern is highlighted and expressed so it represents the breadth of our combined communities. This installment is commenting on concerns about lack of Human Health Impacts studies. The DEIR only mentions human health briefly with regard to Air Quality, Energy and Hazardous Materials.

348-1

The DEIR claims less than significant impact under Energy and HazMat due to chemicals and emissions for construction which we would dispute due to a cumulative impact factor. However under Air Quality for trenching, the designation is Significant and Unavoidable.

348-2

There can be no fully At-Grade project build because of the McCormick Ambulance facility on 182nd St a half block away from the crossing, therefore it would be necessary to trench under 182nd St. which would impose excavation for trenching violating the EPA air quality regulations for the duration of construction, noted in the DEIR as 5 - 7 years. Note there are homes within 50 feet of where this would occur. The scenario for 170th St. in Lawndale would be similar due to school crossing and limited access for emergencies.

348-3

What is lacking are studies on the human mental health altering and neurological impacts of Noise Pollution exposure which can according to numerous studies by well respected institutions have a negative effect on the human brain. The DEIR indicates noise would be Significant and Unavoidable (3.6-2).

348-4

Please note there are many studies linking serious health risks to living near this type of noise. Some of these risks include stress related illnesses, high blood pressure, speech interference, hearing loss, sleep disruption, and lost productivity. Chronic stress, sleep disturbances, and anxiety are noted to impact children living with high levels of noise pollution. They can develop impairments in memory, attention, and reading skills. Other more serious health effects include high blood pressure and increased risk of heart attack. The willingness to even consider exposing 1,100 households along the ROW to these kinds of health risks is inconceivable. 348-5

Here are links to some articles that lay out some of the dangers of noise pollution:

EPA.gov - Clean Air Act Title IV - Noise Pollution - *https://www.epa.gov/clean-air-act-overview/clean-air-act-title-iv-noise-pollution* 348-6

Harvard - The Effects of Noise on Health, Noise pollution is more than a nuisance. It's a health risk - *https://hms.harvard.edu/magazine/viral-world/effects-noise-health*

NIH - Decibel Hell: The Effects of Living in a Noisy World - *https://www.ncbi.nlm.nih.gov/pmc/articles/PMC1253729/*

Stress is another Human Health Impact we are concerned about. For the impacted community we are faced with the threat being thrust upon our homes, our community, our environment and our lives being permanently altered to an insurmountable extreme. This is the stress we are forced to endure and feel harassed by. When we could and should have been enjoying our lives in peace, we are instead finding ourselves embroiled in not only this painstaking brutal process by no fault of our own, but we also have abusive rhetoric and name calling thrown at us by our neighboring city, more community harassment once again by no fault of our own. Some of us have recently suffered the shock of newly finding out about this project and what it means to our homes and peaceful enjoyment while others of us have been involved in this issue for years. 348-7

Those of us who are at a more advanced age will never be able to get those years back. This amount of stress and anxiety will surely have lasting effects on our health and well being, some of us already suffer from PTSD. Other stress related health problems include digestive health which can lead to more serious issues. This health wear and tear impact has been Significant and Unavoidable and it is not being considered in the DEIR as an environmental impact. If harassment on the job creates a hostile environment, then so too should a process like this be thought of as creating a hostile environment in our communities. Not something we ever asked for, nor do we deserve.

Health risks due to stress include: Brain Function Complications, Memory disorders, Cognition and Learning disorders, compromised Immune System Functions, deteriorated Function of the Cardiovascular System, Gastrointestinal Complications and impairments to the Endocrine System. 348-8

The most difficult part to digest is this is all being done and perpetuated for over a decade knowing there are much better, more beneficial and less destructive alternatives to consider.

Once again the only suitable mitigation for all of this is to recommend the Hawthorne Blvd. Elevated option, for the sake of our combined communities between the two cities of Redondo Beach and Lawndale. 348-9

Thank you for your consideration in this matter.

Respectfully,

Right of Say/Redondo Beach Quality of Life Coalition

Subject: Draft EIR Comment

Hello,

I am the owner of an apartment building approximately 80' from the railroad track. As it is now. When a train arrives, as it goes around the curve the lights go directly into 6 bedrooms..
I can't imagine how much light pollution could be tolerated by the residents with trains going by constantly. 349-1
With the lights the vibrations and the noise, I can't imagine how this could pass an environmental impact report.
My apartment building is also heavily cantalouvered. I am terrified that if it receives vibration day-and-night that it would be very harmful to the building. 349-2

My house in lawndale was condemned due to lawndale clay, or as it's also called expansive soil.
It was Demoed as mandated by the city. 349-3

Many of the old homes, probably almost all of them, still have the regular depth foundations and I would imagine there will be a lot more condemnations that will occur.

Craig Casner owns several homes in Lawndale that are just sitting vacant because of the settling from the expansive soil. The roofs leek the walls crack et cetera. I can't imagine trains going through day and night without causing a lot of destruction to other homes. 349-4
Please consider the Hawthorne Boulevard option, or buses. 349-5

Sincerely,

Roy Bolling

DRAFT

March 21, 2023

Georgia Sheridan
Project Manager
Los Angeles County Metropolitan Transportation Authority
One Gateway Plaza, Mail Stop: 99-22-3
Los Angeles, CA 90012
Email: greenlineextension@metro.net

RE: Metro C Line Extension to Torrance Project Draft Environmental Impact Report Comments

Dear Ms. Sheridan:

On behalf of the City of Redondo Beach, California, please accept this letter as the City's official comment letter regarding the Metro C Line (Green) Extension to Torrance Project Draft Environmental Impact Report (DEIR). The City respectfully submits these comments to you, as the Metro representative accepting the DEIR comments for the project, for consideration as Metro prepares the Final EIR for this project and considers alternative alignments.

As noted in the City's May 17, 2022 letter to LA County Supervisors Mitchell and Hahn, a copy of which was sent to the LA County Metro Board, the City Council expresses unified support of an elevated Hawthorne Boulevard alignment (Hawthorne Elevated Option) for the Metro C Line (Green) Extension to Torrance Project, which would run along the historic Red Car route. The City of Redondo Beach continues to urge the LA County Metro Board not to gravitate to the Metro ROW alignment options. As we detail below, the Hawthorne Elevated Option is the most equitable, environmentally sound and the only option that promises to connect residents of Central Los Angeles County with the economic powerhouse coming to Redondo Beach along Hawthorne Blvd.

356-1

I. Hawthorne Elevated Option is superior to the ROW Options (At-Grade and Trenched) in all regards except cost, which should not drive monumental generational investments.

As part of its decision-making process, Metro studied through the DEIR three potential alignments–the Metro railroad right-of-way (ROW) At-Grade Option, the Metro ROW Trenched, and the Hawthorne Elevated Option.

As a preliminary matter, we want you to know that L Catterton (the real-estate arm of LVMH) is in the process of investing nearly half a billion dollars in a mixed retail, 300-unit inclusionary apartment units, office space, and a 150-room hotel at the same intersection that would serve as the Redondo Beach stop for the Hawthorne Elevated Option. Between the mall and other uses, L Catterton projects about 750 new, permanent jobs to come to the site. Only the Hawthorne Elevated Option would deliver residents from the Willowbrook/Rosa Park station to all of the economic, family and medical centers along Hawthorne Blvd. by delivering them to its intersection with Artesia Blvd. The two ROW Options would deliver these residents to a residential neighborhood. If Metro does not seize this monumental, once-in-a-generation opportunity to send the C Line down the most utile path, the C Line could be destined to demise for nonuse. 356-2

If located along the Hawthorne Elevated Option, the C Line would also deliver residents from Redondo Beach, Lawndale, Torrance and Hawthorne conveniently to the Crenshaw/LAX Transit Project. If, however, the C Line is extended into our residential neighborhood along the ROW, the C Line would not serve as a central hub to move the masses efficiently to LAX. It would be a pity for government to have spent hundreds of millions of dollars improving LAX and installing a people mover, only to build a C Line extension that does not maximize ridership. 356-3

The City of Redondo Beach is united behind Hawthorne Elevated Option since it addresses many of our residents' concerns regarding noise, vibration, resident/child safety, and other factors, as well as having an expeditious, speedy route to the Torrance Transit center which would likely bolster its usership at a time of Metro ridership decline. The Hawthorne Elevated Option along Hawthorne Boulevard would also revitalize local businesses through higher visibility and the creation of a vibrant destination for riders.

II. <u>The City is united behind the Hawthorne Elevated Option and against the ROW Options.</u>

We are very concerned for our mixed-income senior residents at the Breakwater Village. Breakwater Village was built along the Metro ROW in the early 2000's. It boasts 191 units covenanted for seniors. It includes 20 affordable units, including Section 8 housing. The same is true for the mixed-income residents of the Ruxton Place and Ruxton Ridge, that are home to 27 and 28 units, respectively. 356-4

Shell's drilling on the Metro ROW created a sinkhole in close proximity to these sites, and even caused a sinkhole on the Ruxton property. For over a year that sinkhole was fenced off; where residents of the affordable units there did not have regular access to their front doors because the conditions. The land subsidence that occurred at the Ruxton Place is merely symptomatic of the potential, serious hazards that could arise from heavy machinery and construction on the ROW so close to pre-existing, heavy residential developments. To date, Metro has not articulated confidence that the

DRAFT

geology on the ROW would permit the C Line to be extended with no damaging effect on the dense residential developments adjacent to the ROW. 356-4

The DEIR has concluded that the ROW options will have significant unavoidable noise impacts for the ongoing operations at those alignments. As well, construction of either ROW Options will have significant unavoidable impacts on residents related to both noise and vibration. Based on the multi-year timeline needed to build the light rail within feet of where many of these neighboring residents sleep nightly, the negative impact that this will have on so many lives, including our seniors', simply cannot be understated. 356-5

Below are the comments specific to the DEIR studies. With the concerns to the impacts to the quality of life and safety/security of more than 1000 residential households along the ROW Options, the City implores that Metro **not** move forward with either of the ROW Options.

III. Additional DEIR Comments.

Attached are comments from the Redondo Beach Planning Commission, the Redondo Beach Public Works & Sustainability Commission, and the public received by City Council in discussing the DEIR. The Redondo Beach City Council requests that Metro accept these as official comments to be addressed in the DEIR process. Below are additional official comments of the City of Redondo Beach.

Emergency Response Services:

- Metro should not consider the ROW At-Grade option. Life threatening delays could occur at the at-grade crossing at 182nd Street due to frequency of the light rail service stopping traffic and emergency response capabilities. In addition to police and fire, McCormick private ambulance service is located on and travels along 182nd Street regularly—this is a major corridor. The ROW At-Grade Option traffic stoppage will cause delays. The ability to get across tracks in a timely manner is critical for these life safety services. 356-6

- Regarding public services and emergency responders, the DEIR does not go deep enough to address deployment practices and the impacts of these delays.

Geology/Soils:

- The Draft EIR identifies less than significant issues with subsidence and settlement that may be in conflict with other known reports. As noted above, Shell's drilling on the Metro ROW created a sinkhole in close proximity to these sites, and even caused a sinkhole on the Ruxton property. As well, there was a prior undocumented ROW sinkhole near 190th Street. 356-7

  The DEIR Section 3.8-2.1 notes that the DEIR reviewed published maps, professional publications, and technical reports pertaining to the geology, soils, and seismicity of the RSA. Significant impact would include exposing people or

structures to adverse effects, including the risk of loss, injury or death, as well as when a geological unit or soil would become unstable as a result of the project and potentially result in on or off-site subsidence or collapse. The DEIR needs to review the studies of soils in the immediate area, including the sinkhole in the vicinity of the Ruxton housing development, to ensure that the conditions and potential mitigation is adequate. This includes the study conducted by Ninyo & Moore on behalf of the Shell Pipeline Co. and the Galleria DEIR.

356-7

- There is a concern with safety with 3 sets of tracks over pipelines where there are unstable soils (including clay soils) along the ROW alignments. There are seemingly unrepairable unstable soils evidenced by a sinkhole in the area, including adjacent to the alignment and spread onto property of Ruxton Place. Evaluation needs to be done to determine where the pipelines are located throughout the corridor.

- The Hawthorne Elevated Option has the opportunity for engineering over more stable soils where Red Car had been routed for several decades. This is the preferred option to address geology and soils impacts.

356-8

At-Grade Crossing:

- Page 3.1-23 of the DEIR did not include the impacts to 182nd Street traffic. 182nd Street should be considered a major arterial since there are approvals for improvements to Galleria site and the new Transit Center has just been completed in the vicinity. The DEIR should include evaluating impacts of the additional possible high-density residential development per the Redondo Beach Housing Element sites inventory and the cumulative impacts of the ROW alignments with the increased traffic from these developments.

356-9

- Page 3.1-45 of the DEIR regarding roadways relies on the municipalities to implement measures to deter cut through traffic when 182nd Street is experiencing traffic stoppage due to the ROW at Grade option. The DEIR is undercounting cut through traffic impacts on arterials. This needs to be addressed.

356-10

- The DEIR claims no impact on bicycle safety, yet riding bicycles across rail tracks is a hazard due to tire size and uneven surfaces. At this point there is only one set of tracks to cross at 182nd Street, but the proposed ROW at-grade option would have two additional sets of tracks, compounding the safety hazard. This safety hazard needs to be addressed.

356-11

- Was there sufficient analysis of transportation impacts on Inglewood and 182nd Street as a result of the frequency of trains and resulting restriction of traffic in ROW At-Grade Option?

356-12

Noise and Vibration

DRAFT

- On Table 3.6-11 no ambient noise measurement was taken south of Artesia Boulevard on Ruxton Avenue and other adjacent residential roadways or south of 182nd Street on Firmona Avenue, Fisk Lane, Fisk Court, or Spreckles Court. There are numerous residential properties in these areas. Ambient noise measurements need to be taken to accurately reflect the impacts. 356-13

- The significant unavoidable impacts of the ROW Options regarding noise will be in perpetuity for operations. Metro should not move forward with those Options. And even the Trench Option would only be LTSM if other agencies take action for Quiet Zone, relying on other agencies to do the mitigation. This doesn't guarantee that there will not be continued noise just because the Quiet Zone designation is made. The City does not believe the benefits of these ROW Options outweigh the significant unavoidable impacts. 356-14

- Noise and vibration metrics make no reference to the noise standards in residential districts per the Redondo Beach Municipal Code. The DEIR needs to respect the local municipalities' regulations.

    - For the Proposed Project (ROW At-Grade) and the Trench Option, the projected noise levels are in excess of City's noise ordinance during construction and during operation (RBMC 4-24.301)
    - For the Proposed Project (ROW At-Grade) and the Trench Option, the projected noise levels during operation occur prior to 7 AM and after 10 PM and so are in violation of City's noise ordinance (RBMC 4-24.301, 4-24.503) 356-15
    - For the Proposed Project (ROW At-Grade) and the Trench Option, the projected vibration levels listed to have significant impact violates City ordinance (RBMC 4-24.504)

- Considering there are already vibration impacts as a result of the existing freight operations, are the proposed mitigation measures for ROW options proven sufficient for the lifetime of the project? 356-16

Air Quality

For the Trench Option, air quality risk is listed as significant and unavoidable. 356-17

Safety

- For the Proposed Project (ROW At-Grade) and the Trench Option, the City did not observe adequate discussion of safety issues related to brittle buried pipelines in the right of way. 356-18

- The City did not observe adequate discussion of safety issues related to derailment. Information needs to be provided to address the hazardous materials carried on the freight rail, if there are any issues with moving that closer to residences than it currently is, and impacts if a derailment were to occur. 356-19

DRAFT

- Pipeline locations are not shown on the cross section drawings or in the materials. Impacts should be considered for both construction and operation if there are issues with the pipelines (i.e., leaks, repairs, etc.). 356-20

Biological

- The DEIR notes no wildlife impact, yet there have been observed owls and hawks in the El Nido Park and cemetery vicinity. 356-21

- For the ROW At-Grade Option and the Trench Option, significant substantial adverse effects are projected either directly or through habitat modifications on local wildlife. Metro should provide better mitigation requirements to protect local wildlife. 356-22

Transportation

- Metro should provide First / Last Mile improvements to the scope of the project. 356-23

- Metro should elaborate on bus connectivity from the proposed Hawthorne Light Rail Station to the new Redondo Beach Transit Center. Explore partnership with South Bay Social District (SBSD - formerly South Bay Galleria) to make connection. 356-24

- Provide some discussion of dedicated connectivity from the proposed C Line extension to the Del Amo Mall. 356-25

- Discuss parking options for Hawthorne Light Rail Station and explore partnership with SBSD. 356-26

Other Issues

- Concerns have been raised by residents regarding incorrect figures and diagrams. Any information needing correction needs to be reviewed to see if those corrections show additional impacts. 356-27

- The “No Project Alternative” shows significant unavoidable impacts in many categories. Where is the significant data to support this? 356-28

- The Hawthorne Elevated Option is most environmentally sound option and should be the option pursued if Metro is going to build the project. The Hawthorne Elevated Option is the option that does not directly impact adjacent residential uses. 356-29

- There is no level of service data or analysis. The DEIR mentions in the Land Use section that this is consistent with the local General Plans. However, the Redondo Beach Circulation Element requires this level of service analysis. 356-30

DRAFT

- The ridership study should be included as a part of the DEIR since “improving mobility within the South Bay and encourage mode shift” is objective of project. 356-31
- In the absence of selection of a light rail option, or if the no build option is selected, discuss how funds will remain invested into South Bay transit needs. 356-32
- If the ROW Options are not selected, has there been any analysis of how this area could be utilized for alternative forms of transportation, such as bike lanes and for pedestrians. 356-33
- How much money is BNSF investing annually to maintaining the train tracks on the ROW? (Norfolk Southern) 356-34
- What will be done to protect residents in the South Bay from second hand smoke from Fentanyl, meth, etc consumption on the Metro, irrespective of the path it goes? 356-35
- What is metro doing to prevent and reduce the crimes, including violent and sexual crimes, that it exports to communities on its mass transit? https://www.dailynews.com/2023/02/24/crime-skyrockets-on-la-metro-system-including-a-jump-in-drug-deaths/ 356-36
- Why doesn't moving the freight rail closer to Redondo Beach residents, without slowing down the speed of the train to 5mph or below, violate section 10.10 of our General Plan? 356-37
- How does the operation of a metro light rail for 20 hours (verify # of hours) in a day comply with Redondo Beach General Plan Policy 10.10.1, regarding the City’s operational restrictions during the early morning and late evening hours to reduce adverse noise impacts in residential areas and other noise sensitive areas? 356-38
- What will Metro be doing to protect people's indoor / outdoor cats from being struck by the Metro light rails on the ROW? 356-39
- How does the movement of the heavy freight rail closer to the high-density residential, without reducing its speed to 5 mph in Redondo Beach, comply with RBMC Section 4-24.504, which precludes the operation of any device which creates vibration which is above the vibration perception threshold of an individual at or beyond the property boundary of the source if on private property, or at 150 feet (forty-six (46) meters) from the source if on a public space or public right-of-way? 356-40
- Lighting impacts studied were primarily focused on construction lighting impacts. However, the study doesn’t address the lighting on the trains themselves, along 356-41

DRAFT

the tracks, at intersections/crossings, etc. related to the operations of the light rail. This needs to be evaluated to ensure that proper mitigation is in place. 356-41

IV. Consideration of Other Alternatives Studied in the DEIR – High Frequency Bus Alternative.

If Metro is considering pursuing one of the other Alternatives (other than the three Options), the City of Redondo Beach recommends consideration of the High Frequency Bus (HFB) Alternative. The DEIR acknowledges the HFB Alternative as the environmentally superior alternative, as it would avoid or reduce all impacts to a less than significant level. Although this alternative would not necessarily realize the same level of benefits or fully meet the objectives of the options, it would provide a mass transit service similar to light rail at what is expected to be a fraction of the cost.

The review of the HFB Alternative should be comparable in service to the options. The DEIR noted that the HFB Alternative would take 25 minutes to traverse the same 4.5-mile corridor, compared to 7 minutes for the light rail options; however, the HFB Alternative added several additional stops. To accurately compare the alternatives, the HFB Alternative should have the same bus stop frequency—only adding two stops total in Redondo Beach at the Galleria and in Torrance at the Torrance Transit Center Station. 356-42

If Metro decides to pursue one of the less costly Alternatives rather than the light rail Options, the funding that had been set aside that would no longer be used for this particular project needs to be redirected to improve transit in the South Bay area.

These comments have been reviewed and approved by the Redondo Beach City Council at their March 21, 2023 public meeting. If Metro has any questions regarding this comment letter, please contact Brandy Forbes, Community Development Director for the City of Redondo Beach at 310-318-0637 x2200 or brandy.forbes@redondo.org. Thank you for your consideration of our comments.

Sincerely,

Mayor William Brand

DRAFT

City of Redondo Beach
Planning Commission
Recommendations to City Council for Comments
Metro C Line Extension Draft Environmental Impact Report
February 16, 2023

EMERGENCY RESPONSE SERVICES

1. Metro should not consider the ROW at-grade option. Life threatening delays could occur at the at-grade crossing at 182nd Street due to frequency of the light rail service stopping traffic and emergency response capabilities. In addition to police and fire, McCormick private ambulance service is located on and travels along 182nd Street regularly—this is a major corridor. ROW at-grade traffic stoppage will cause delays. The ability to get across tracks in a timely manner is critical for these life safety services. 356-43

2. Regarding public services and emergency responders, the DEIR does not go deep enough to address deployment practices and the impacts of these delays. 356-44

3. The Planning Commission recommends that the City Council has for review fire and police data and ambulance frequency to see how much these services use the crossing intersections (182nd Street) by their March 21, 2023 meeting.

SOILS

4. There is a concern with safety with 3 sets of tracks over pipelines where there are unstable soils (including clay soils) along the ROW alignments. There are seemingly unrepairable unstable soils evidenced by a sinkhole in the area, including adjacent to the alignment and spread onto property of Ruxton Place. 356-45

5. The raised elevation route down Hawthorne has the opportunity for engineering over more stable soils where Red Car had been routed for several decades. 356-46

AT GRADE CROSSING

6. Page 3.1-23 of the DEIR did not include in the materials the impacts to 182nd Street traffic. 182nd Street should be considered a major arterial since there are approvals for improvements to Galleria site and the new Transit Center has just been completed in the vicinity. The DEIR should include evaluating impacts of the additional possible high-density residential development per the Redondo Beach Housing Element sites inventory and the cumulative impacts of the ROW alignments with the increased traffic from these developments. 356-47

7. Page 3.1-45 of the DEIR regarding roadways relies on the municipalities to implement measures to deter cut through traffic when 182nd Street is experiencing traffic stoppage due to the ROW at Grade option. The DEIR is undercounting cut through traffic impacts on arterials. 356-48

8. The DEIR claims no impact on bicycle safety, yet riding bicycles across rail tracks is a hazard due to tire size and uneven surfaces. At this point there is only one set of tracks to cross at 182nd Street, but the proposed ROW at-grade option would have two additional sets of tracks, compounding the safety hazard. 356-49

9. Was there sufficient analysis of transportation impacts on Inglewood and 182nd Street as a result of the frequency of trains and resulting restriction of traffic in ROW at-grade option? 356-50

NOISE AND VIBRATION

10. The significant unavoidable impacts of ROW options regarding noise will be in perpetuity for operations. Metro should not move forward with those options. And even the Trench Option would only be LTSM if other agencies take action for Quiet Zone, relying on other agencies to do the mitigation. The Planning Commission does not believe the benefits of these ROW project options outweigh the significant unavoidable impacts. 356-51

11. Noise and vibration metrics make no reference to the noise standards in residential districts per the Redondo Beach 356-52

Municipal Code. The DEIR needs to respect the local municipalities' regulations. 356-52

12. Considering there are already vibration impacts as a result of the existing freight operations, are the proposed mitigation measures for ROW options proven sufficient for the lifetime of the project? 356-53

OTHER COMMENTS

13. There is a concern about impacts to quality of life and safety/security of more than 1000 residential households along the ROW alignment options (see all categories above). 356-54

14. The "No Project Alternative" shows significant unavoidable impacts in many categories. Where is the significant data to support this? 356-55

15. The Hawthorne Option is most environmentally sound option and should be the option pursued if Metro is going to build the project. The Hawthorne Option is the option that does not directly impact adjacent residential uses. 356-56

16. There is no level of service data or analysis. The DEIR mentions in the Land Use section that this is consistent with the local General Plans. However, the Redondo Beach Circulation Element requires this level of service analysis. 356-57

17. The Planning Commission recommends that City Council look at what the mitigation measures are that are necessary to bring to LTSM to see if those measures are sufficient.

18. The ridership study should be included as a part of the DEIR since "improving mobility within the South Bay and encourage mode shift" is objective of project. 356-58

19. The DEIR notes no wildlife impact, yet there have been observed owls and hawks in the El Nido Park and cemetery vicinity. 356-59

TRANSMITTAL MEMO

DATE: March 3, 2023

FROM: Lauren Sablan, Public Works & Sustainability Commission Liaison

TO: Brandy Forbes, Community Development Director

SUBJECT: RECOMMENDATIONS FOR COMMENTS ON METRO C LINE EXTENSION DRAFT ENVIRONMENTAL IMPACT REPORT

Per the request of City Council, the Public Works & Sustainability Commission reviewed the Metro C Line Extension Draft Environmental Impact Report (DEIR) and provided input on the DEIR during the February 27, 2023 Public Works & Sustainability Commission Meeting. Attached are the recommendations as approved by the Public Works & Sustainability Commission.

City of Redondo Beach
Public Works & Sustainability Commission
Recommendations to City Council for Comments
Metro C Line Extension Draft Environmental Impact Report
February 27, 2023

1. The PWC prefers the Hawthorne option for the following reasons:
   A. Noise and Vibrations
      - For the Proposed Project (right of way at grade) and the Trench Option, the projected noise levels are in excess of City's noise ordinance during construction and during operation (RBMC 4-24.301)
      - For the Proposed Project (right of way at grade) and the Trench Option, the projected noise levels during operation occur prior to 7 AM and after 10 PM and so are in violation of City's noise ordinance (RBMC 4-24.301, 4-24.503)
      - For the Proposed Project (right of way at grade) and the Trench Option, the projected vibration levels listed to have significant impact violates City ordinance (RBMC 4-24.504)

356-60

   B. Geology
      - DEIR 3.8-3.12 Subsidence and settlement - The Draft EIR identifies less than significant issues with subsidence that may be in conflict with other known reports.

356-61

   C. Air quality
      - For the Trench Option, air quality risk is listed as significant and unavoidable.
   D. Safety
      - For the Proposed Project (right of way at grade) and the Trench Option, Commission did not observe adequate discussion of safety issues related to brittle buried pipelines in the right of way.

356-62

      - Commission did not observe adequate discussion of safety issues related to derailment.

356-63

   E. Biological
      - For the Hawthorne Option and the Trench Option, significant substantial adverse effects are projected either directly or through habitat modifications on local wildlife. Metro should provide better mitigation requirements to protect local wildlife.

356-64

   F. Transportation

- Metro should provide First / Last Mile improvements to the scope of the project.
- Metro should elaborate on bus connectivity from the proposed Hawthorne Light Rail Station to the to the new Redondo Beach Transit Center. Explore partnership with SBSD to make connection.
- Provide some discussion of dedicated connectivity from the proposed C Line extension to the Del Amo Mall.
- Discuss parking options for Hawthorne Light Rail Station and explore partnership with SBSD.

2. In the absence of selection of a light rail option, or if the no build option is selected, discuss how funds will remain invested into South Bay transit needs.

Destination is Most Important Factor for the C Line Expansion project

Metro has been touting how the new C Line will connect the South Bay with greater Los Angeles. They are openly stating in their presentations that their goal is to connect the South Bay with North Hollywood while avoiding Downtown Los Angeles. So from the Torrance Transit Center, you're going to take the C Line to the K Line to the E Line to the D Line to the B Line.

During yesterday's SBCCOG transportation meetings, Mayor Butts of Inglewood was soliciting funds for a project to connect SoFi, The Forum, and Hollywood Park area with the K Line at their Inglewood station. The traffic jams out of SoFi are becoming legendary. Not sure of all the details, but this serves as an illustration of the need to consider destinations as the primary driver for ridership. No one cares about going to North Hollywood if you can't access Dodger Stadium. No one wants to go to El Segundo if you can't access LAX.

Unfortunately, Metro keeps promoting this idea of connectedness without the due diligence of asking what it is that is being connected. They know full well, people do not want to ride a train to then have to board a bus. Buses are a city's least desirable form of transportation and riders do not give up their cars for buses. 356-70

Redondo Beach has a very important community development project in the works with the South Bay Social District, formally The Galleria. New retail, new live/work spaces, new hotel, and a new fascia on Hawthorne Blvd. and Artesia Blvd.

Stuart Miller, as a spokesperson for The Galleria communicated to Metro in a letter dated December 22, 2022 that, "The proposed Green Line extension route along the ROW offers no significant destinations, while the new South Bay Social District will be built just a matter of feet away from the proposed station location on Hawthorne Boulevard." 356-71

The E Line provides a relevant comparison. Beginning is at the Santa Monica Pier, it travels through the West side to Culver City and USC/Exposition Park then into LA past Staples/Crypto Arena and LA LIVE to then connect with the B Line to N. Hollywood or Union Station.

The E Line uses the wide meridians of Colorado and Exposition to bring riders to relevant locations like Bergamont Station, the Amazon Studios Media Hub in Santa Monica and on to the Culver City Ivy Station and then USC and Downtown. Primarily the train is buttressed by wide streets and not residential backyards.

The South Bay needs revitalization to be relevant as an urban destination. The South Bay Social District is central to this need. A Hawthorne Blvd. station can help bring this much needed revitalization by attracting ridership to the front door. Currently, Hawthorne Blvd. suffers from neglect and a lack of vision from the surrounding municipalities. Lawndale's C Line 'no build' stance creates a 'no win' scenario where ROW residents, by default, will be burdened with a high-frequency train line in their backyards. Torrance has also proven itself to be beligerent about this project demonstrating a clear lack of vision and a willingness to victimize adjacent communities to demonstrate their disdain. 356-72

It has become clear, Metro will be putting in a train.

Hawthorne Blvd. should become the 'preferred option' that all three cities should get behind.

Submission 356

[COMMENTS PROVIDED BY HOLLY OSBORNE MARCH 14, 2023]

Series of Drawings for Proposed Project

Start here. This is Lawndale, this is the start of the proposed project.

1)The maintenance access is to get at the petroleum pipelines underneath.

2) The furthest pipe is about 12 feet; you need about a foot more than that, so you need about 13 ft; so 18-20 is good,

3) The ROW is supposed to be 100 ft; here they have 20+31+25+20 = 96 ft. So they are missing 4 ft. Not sure where it went. 356-73

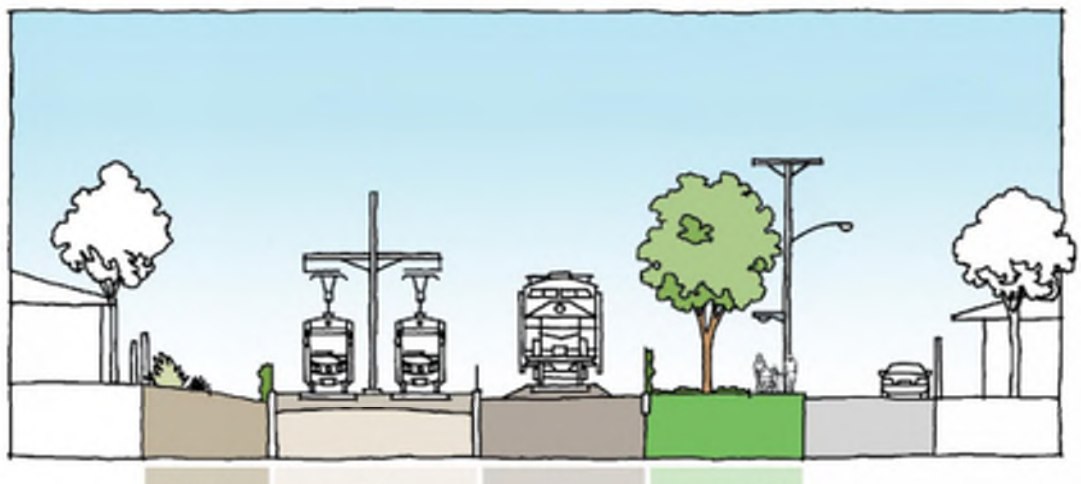
3) The freight train was at the center (which would have been at 50 ft; it is now at 20+12.5=32.5 feet from west edge.

And 51+12.5=63.5 ft from the east.

It has been shifted to the right 13.5.5 ft according to looking from the east edge; and 17.5 ft according to the west. (Hey, what is 4 ft between friends?) 356-74

4) the 20 ft path is a joke. (Our bicycle path in North Redondo is 16 ft wide. Could it support a big tree like that, and a bunch of cyclists, and some pedestrians? 356-75

Figure 2.3-4. Proposed Project – Looking South Between 165th Street and 170th Street



Source: Cityworks Design, 2022

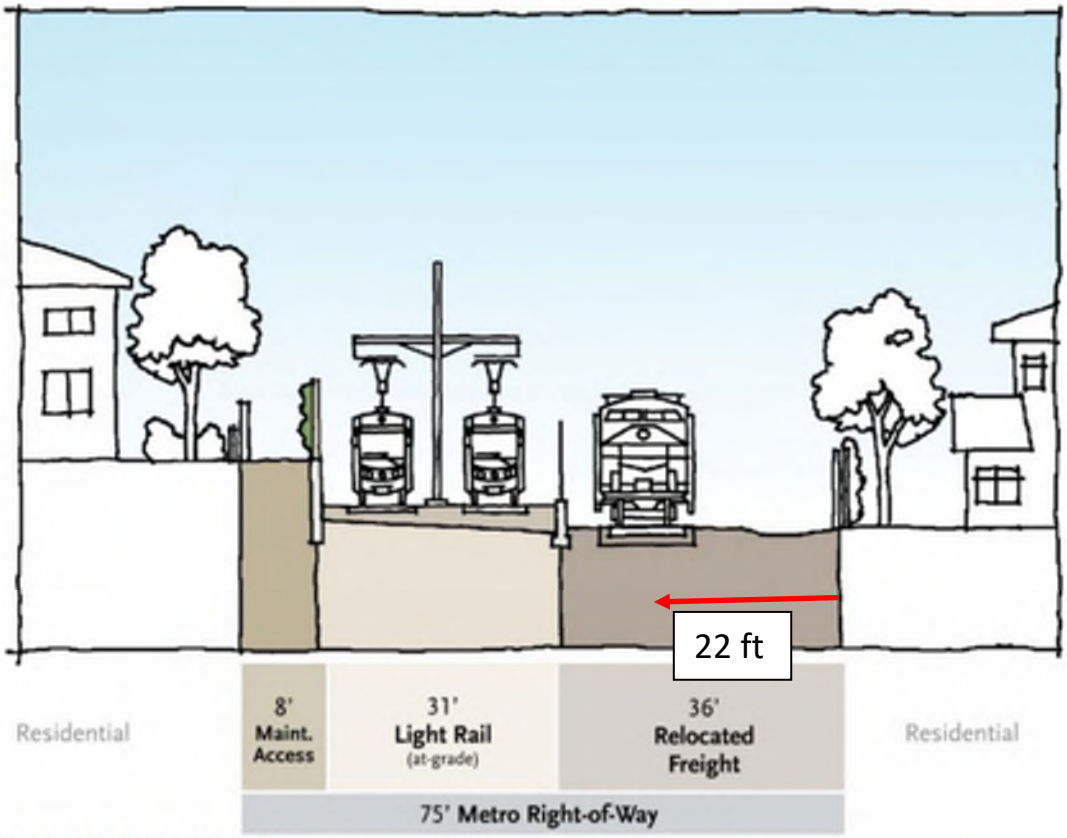
ON TO THE NEXT FIGURE. ASSUME IT IS RIGHT AT 170th. We have been told the shift it now only 3 ft to the west.

Some how, the Maintenance access is now only 8 ft. I have measured the distance. The furthest pipes are now 12 ft. SO, are they going to stack the pipes on top of each other, or what**? THAT IS A QUESTION**. Or are they going to take someone's property? (This is the diagram that appeared as 81 ft wide with a 14 ft access in the August Diagrams.)

356-76

Taking this diagram at face value, the center track of freight train is 25-3 = 22 ft from edge

Figure 2.3-5. Proposed Project – Looking South Between 170th Street and Artesia Boulevard



Source: Cityworks Design, 2022

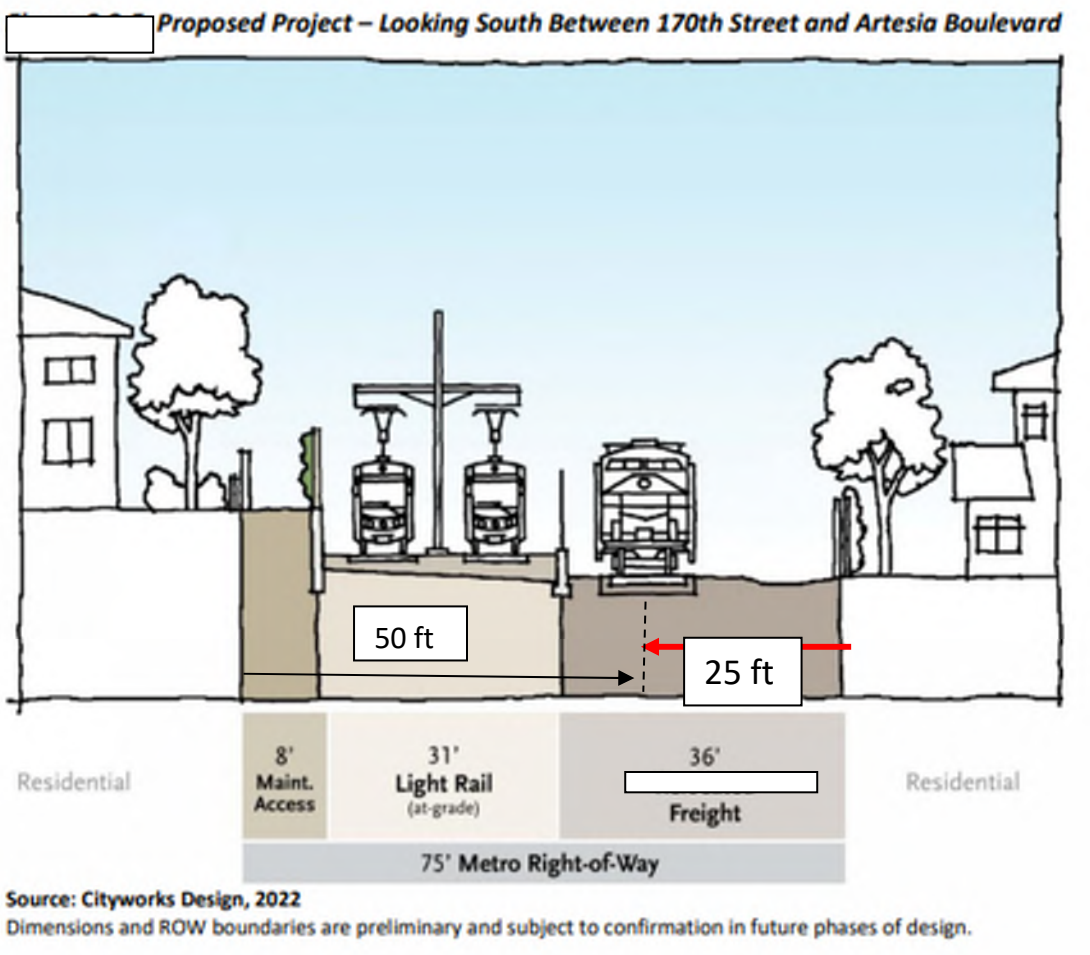
Dimensions and ROW boundaries are preliminary and subject to confirmation in future phases of design.

w

I am repeating the diagram, but this time the freight train HAS NO SHIFT IT HAS TO LINE UP WITH THE BRIDGE,

SO this diagram is now **JUST BEFORE ARTESIA BOULEVARD**. That means it is 25 ft from Western wall. IF THE FREIGHT TRAIN IS BACK TO WHERE IT WAS ORIGNALLY, that means it is now closer to the light rail. Don't know what the requirements are.

356-77



Source: Cityworks Design, 2022
Dimensions and ROW boundaries are preliminary and subject to confirmation in future phases of design.

THIS IS THE DIAGRAM JUST AFTER THE BRIDGE. THE ONLY THING THAT HAS CHANGED IS HOW LOW THE HOUSES ARE TO THE WEST.

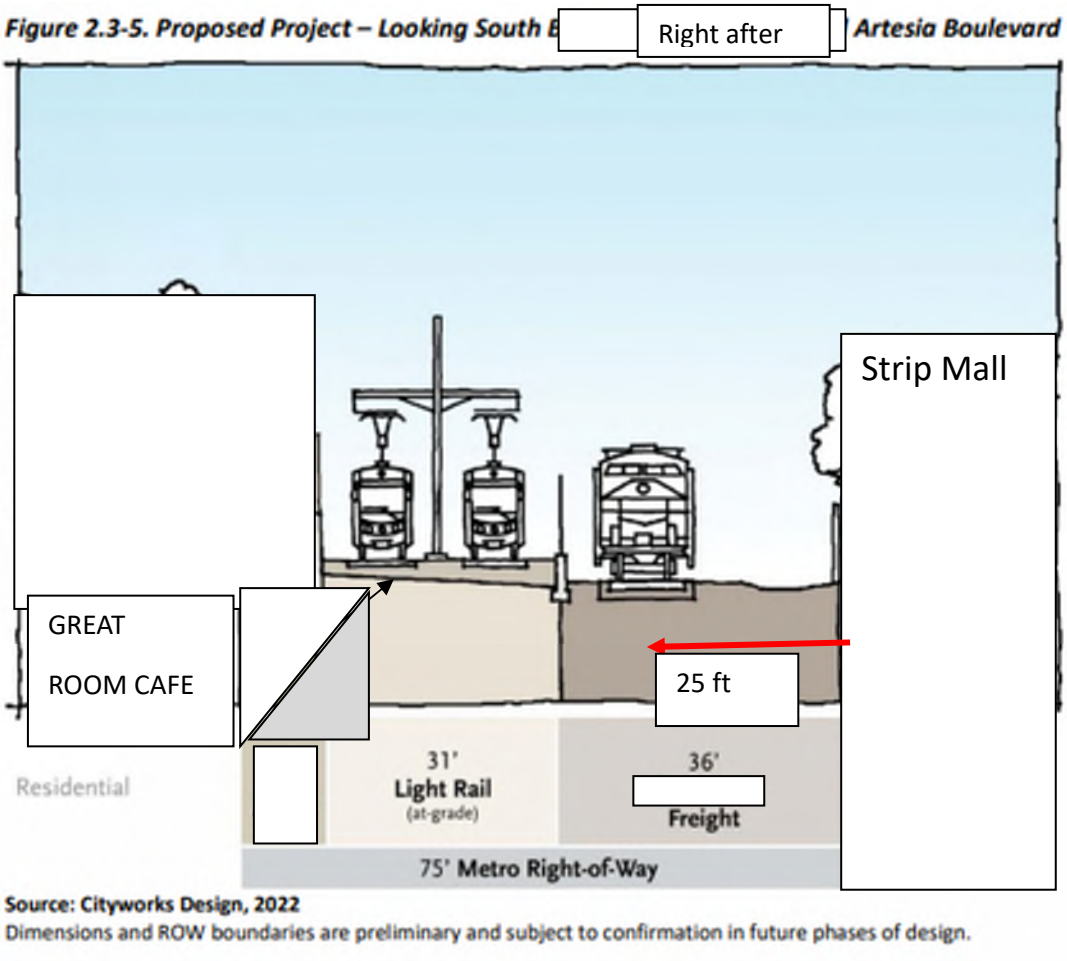
This is RIGHT AFTER THE BRIDGE. Before you get to Breakwater. The ROW is still only 75 ft wide. And it is flat to about only 34 ft from the center of the track to the west..

The train will be floating on air, unless you provide dirt to fill in the embankment.

Was that mentioned in DEIR?

356-78

Submission 356



Here is where I stopped. MAGICALLY, the configuration of the at grade rail changed.

Don't now how.

But here is what you should notice:

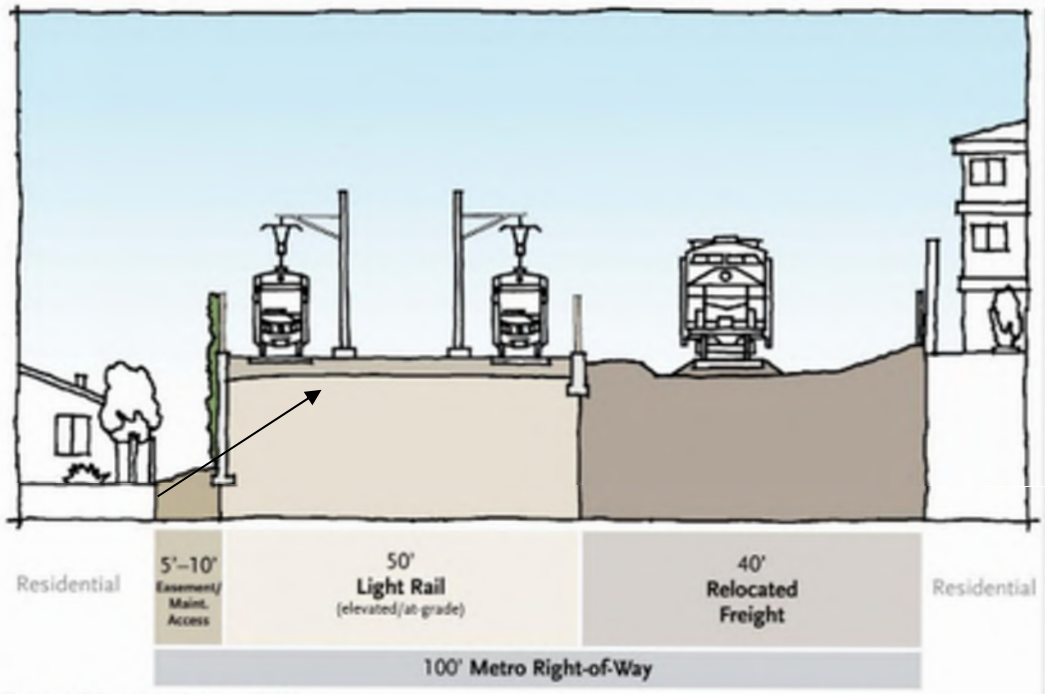
This is at Breakwater, somewhere.

356-79

But look at the backyard notice on the East side.. It says EASEMENT. Who owns that property? Metro, or the homeowners?

And one of the LRT's is sitting on fill dirt. (It would be air, otherwise.)

Figure 2.3-6. Proposed Project – Looking South of Artesia Boulevard



Source: Cityworks Design, 2022
Dimensions and ROW boundaries are preliminary and subject to confirmation in future phases of design.

Subject: Comments re: Metro Green Line Extension in Redondo Beach

You don't often get email from foresthaven@hotmail.com. Learn why this is important

*CAUTION: Email is from an external source; **Stop, Look, and Think** before opening attachments or links.*

Beach Cities Health District in Redondo Beach has spent millions of dollars supporting and promoting Blue Zones. Blue Zones has made numerous findings that chronic stress is the silent killer and causes intergenerational health damage. There are many studies linking excessive intermittent noise, such as the proposed Metro line through Redondo Beach to chronic stress and its many health damages, including early death.

The DEIR is defective and fails to consider the negative health impacts found by BCHD's Blue Zones program. The DEIR must be halted and amended to include that specific health damages found by BCHD's Blue Zones program. As a proposed new health damaging project, any route causing additional 24/7/365 damaging intermittent noise and vibration cannot be pursued without intergeneration health damages.

356-80

This stress can be chronic, due to a specific situation … exposure to stress in early life can alter the normal development … resulting in increased sensitivity to stress and lifelong health risks in offspring. Although people often underestimate the influence of the mind on the body, a growing catalog of research shows that high levels of stress over an extended time can drastically alter physical function and affect nearly every organ system. How living near a railroad can harm your health: From chronic stress to an increased risk of cancer, scientists say that constant exposure to trains takes a toll on the human body. Effects of Exposure to Road, Railway, Airport and Recreational Noise on Blood Pressure and Hypertension: transportation noise can induce annoyance, sleep disturbance with awakening, cognitive impairment, physiological stress reactions, endocrine imbalance and cardiovascular disorders. Transportation noise exposure is believed to be detrimental to human health through stress reactions with activation of the hypothalamic–pituitary–adrenal axis, followed by increased levels of stress hormones. In addition, nighttime noise exposure

can impact sleep quality and duration, which are crucial for physiological and mental restoration. The references above are demonstrative and not fully inclusive of the Metro-ignored Blue Zones impacts to health caused by the proposed Metro Green Line extension through Redondo Beach Neighborhoods. 356-81

Therefore, please do not build a Metro Green Line Extension near homes in Redondo Beach ! Please build the Green Line Extension on Hawthorne Boulevard to protect families and their homes/neighborhood. 356-82

Sincerely,

Nancy Skiba

*CAUTION: Email is from an external source; **Stop, Look, and Think** before opening attachments or links.*

Hi,
Please use this email instead, I forgot to attach another image for my Biology Resource comments

Subject: Item N.1 Blue Folder Items

Hello City Clerk,

For Item N.1 Blue Folder I'm attaching a PDF document titled Ruxton Geo draftEval, and the following link to the 2017 Galleria Draft EIR goes with it. Please ensure all members have this, and I've included screenshots below: https://www.redondo.org/civicax/filebank/blobdload.aspx?BlobID=34511

Also attached are my oral comments in written form with proposed edits to the DEIR letter being discussed. Please distribute to all members plus the mayor accordingly.

Please let me know if it's better to print hard copies for them and if so, how many would I need to bring? I know cm Obagi will be remote and Mayor Brand may or may not be present.

Thank you!

Niki Negrete-Mitchell, D3
[redacted]

Submission 356

356-84

Niki Negrete-Mitchell, D3

Geology/soils

I've sent the PDF file of the Ruxton sinkhole performed by Ninyo & Moore, on behalf of Shell Pipeline Co. plus a link to the Galleria DEIR for comparison to Metro DEIR to the Blue Folder. 356-85

Also there was an undocumented old ROW sinkhole near 190th, and 20 years ago a condemned house near Man Bch Bl due to clay soils foundational damage 20 yrs ago. Old owner says he doesn't have the documentation. 356-86

After 2.5 years private home spaces finally repaired, but we don't know if it's done thoroughly, letter needs to be udated to reflect that. 356-87

Noise and Vibration

"Quiet zone" only establishes no bells at grade crossing, does not quiet down moving trains passing every 6 - 12 minutes 20 hrs day 4am-past midnight - that needs to be clear in the DEIR. Vague reference to "safety measures" in presentation. 356-88

On table 3.6-11 no ambient noise measurement was taken South of Artesia Bl on Ruxton Ave, or south of 182nd St on Firmona Ave, Fisk Ln and Ct or Spreckles Ct. Torrance addresses on 186th St are labeled as Redondo Beach. Inaccurate study not sufficient 356-89

Biological: (There is a lot of concern from residents on this, I'm adding clarified language) The DEIR notes no wildlife impact, yet there have been observed **Nesting Great Horned Owl and Red Tail Hawk families** in the El Nido Park and cemetery vicinity. 356-90

For **both the Proposed Project and Trench ROW Options** (Hawthorne is far enough from the tree canopy in El Nido), significant substantial adverse effects are projected either directly or through habitat modifications on local wildlife. Metro should provide better mitigation requirements to protect local wildlife. **Nesting owls and hawks which feed on invasive rodents (gophers, rats and mice) would be forced to leave their homes and food source on both ROW options** 356-91

Transportation:

- (This is to clear all of the confusion on connectivity from Hawthorne Bl without appearing confused ourselves) **DEIR should clarify for the Hawthorne Bl station there is an ample opportunity for riders to connect to any further destination via the sheer abundance of buses that stop and pick up at Artesia.** 356-92
- **In the rare case that riders need to go to the RB Transit Center, the DEIR should clarify every bus stops at Artesia before looping over to there and riders can easily shuttle over.** 356-93
- **The DEIR should clarify Hawthorne Bl station will be designed once decision is made boasting enhancements for accessible and safe pedestrian usage with city's input.** 356-94

Re: Del Amo - Torrance already has a shuttle to Del Amo from the Torrance TC. Statement above that connection to Del Amo can easily be made by boarding one of the many southbound buses. 356-95

5 GEOLOGIC AND SUBSURFACE CONDITIONS

Submission 356

The site is located in the west portion of the Los Angeles Basin in an area mapped as being underlain by dune and drift sand deposits (Dibblee, et. al., 1999). The exploratory borings in the sidewalk area encountered fill that generally consisted of brown, moist, loose to medium dense, silty sand to the total depth explored. Borings B-5 and B-6 encountered fill underlain by dune sand deposits. The fill encountered in borings B-5 and B-6 generally consisted of reddish yellow, moist, loose silty sand and was encountered to depths of approximately 9.5 and 15.5 feet in B-5 and B-6, respectively. The fill encountered in borings B-5 and B-6 were underlain by dune sand deposits, which were generally comprised of light brown and reddish brown, moist, loose to medium dense, poorly graded sand and silty sand. The removal of additional sidewalk panels did not expose additional voids at the surface. Voids were not encountered in our exploratory borings. More detailed descriptions of the subsurface materials are presented in the boring and test pit logs in Appendix A. The locations of our excavations are presented on the aerial view of the site on Figure 2.

DRAFT

Groundwater was not encountered in our exploratory excavations at the site. Fluctuations in the level of groundwater may occur due to variations in ground surface topography, subsurface stratification, rainfall, irrigation practices, groundwater pumping, and other factors which may not have been evident at the time of our field evaluation.

356-96

6 RECOMMENDATIONS

Based on discussions with Hamilton and Shed, it is understood that the removal and replacement of the retaining wall backfill in the affected area has been requested. Prior to excavation of retaining wall backfill, we recommend that the retaining wall in the subject area be underpinned/stabilized by installing push piers and/or helical piers placed below the retaining wall footings, or other applicable methods. The push piers and/or helical piers should be extended through the fill soils to sufficient depth to derive support in the underlying dune sand deposits. Voids in the area of the retaining wall footing may be filled with a combination of aggregate and expanding low-density polymer. We recommend that specialty contractors experienced with polymer injection and foundation underpinning evaluate this method of repair. The repairs should be performed by a qualified specialty contractor utilizing appropriate methods and materials.

Although the details of installation may vary depending upon the selected method of underpinning, push piers and/or helical piers generally consist of small-diameter steel piers that are driven or rotated down, usually hydraulically, into competent subsurface materials. Our analysis indicated that a design capacity of 25 kips per pier maybe utilized for underpinning design. We anticipate that the bearing material (dune sand deposits) will be encountered at depths of approximately 10

RE: Metro C Line (Green) Extension to Torrance Project Comments and Request

Dear Supervisor Mitchell:

On behalf of the City of Redondo Beach, please accept this letter as unified support of an elevated Hawthorne Boulevard alignment for the Metro C Line (fka Green Line) Extension to Torrance Project which would run along the historic Red Car route. We urge your honors not to gravitate to the Metro ROW alignment merely because it is the lowest cost alternative. As we detail below, the elevated Hawthorne Blvd. alignment is the most equitable, environmentally sound and the only alternative that promises to connect residents of Central Los Angeles County with the economic powerhouse coming to Redondo Beach along Hawthorne Blvd. 356-97

I. Hawthorne Blvd alignment is the superior to the ROW alignment in all regards except as to cost, which should not drive monumental generational investments.

As part of its decision-making process, Metro is considering and studying through the DEIR, two potential alignments–the Metro railroad right-of-way (ROW) alignment, currently used by heavy rail, and the elevated Hawthorne Boulevard roadway alignment.[1] We hope that as Metro Board Members, you will take our feedback to heart as you render your decision on the C Line extension.

As a preliminary matter, we want you to know that L Catterton (the real-estate arm of LVMH) is about to invest nearly half a billion dollars in a mixed retail, 300-unit inclusionary apartment units, office space and a 150-room hotel at the same intersection that would serve as the Redondo Beach stop for the Hawthorne Blvd. alignment. Between the mall 356-98

[1] Metro officials have told us that they are no longer considering an at-grade pathway down Hawthorne Blvd.

and other uses, L Catterton projects about 750 new, permanent jobs to come to the site. Only the elevated Hawthorne Blvd. alignment would deliver residents from the Willowbrook/Rosa Park station to all of the economic, family and medical centers along Hawthorne Blvd. by delivering them to its intersection with Artesia Blvd. The ROW alignment would deliver these residents to a residential neighborhood. If the County does not seize this monumental, once-in-a-generation opportunity to send the C Line down the most utile path, the C Line could be destined to demise for nonuse. 356-99

If located along Hawthorne Blvd., the C Line would also deliver residents from Redondo Beach, Lawndale, Torrance and Hawthorne conveniently to the Crenshaw/LAX Transit Project. If, however, the C Line is extended into our residential neighborhood along the ROW, the C Line would not serve as a central hub to move the masses efficiently to LAX. It would be a pity for government to have spent hundreds of millions of dollars improving LAX and installing a people mover, only to build a C Line extension that does not maximize ridership. 356-100

The City of Redondo Beach is united behind elevated Hawthorne Boulevard alignment since it addresses many of our residents' concerns regarding noise, vibration, resident/child safety, and other factors, as well as having an expeditious, speedy route to the Torrance Transit center which would likely bolster its usership at a time of Metro ridership decline. The Hawthorne Blvd. alignment would also revitalize local businesses through higher visibility and the creation of a vibrant destination for riders.

II. <u>The City is united behind the Hawthorne Blvd. alignment and against the ROW.</u>

The City Council unanimously voted to reaffirm our recommendation of the elevated route along Hawthorne Blvd. We are very concerned for our mixed-income senior residents at the Breakwater Village. Breakwater Village was built along the Metro ROW in the early 2000's. It boasts 191 units covenanted for seniors. It includes 20 affordable units, including Section 8 housing. On May 11, 2022, we heard from elderly members of the Redondo beach community who talked about re-leveling the pictures on their wall every week due to the vibrations from the BNSF freight train that passes by Breakwater Village twice daily. 356-101

If you adopt the ROW alternative, Metro will relocate the BNSF freight train 15 feet closer to Breakwater Village. The residents are terrified about more cracks appearing on their property, the devaluation of their "nest eggs," and not being able to live out their golden years in peace and quiet. Imagine years – not months or weeks – of Metro construction within feet of your home. Peace and quiet is precisely what our seniors at Breakwater Village bargained for when they invested in their retirement homes there.

The same is true for the mixed-income residents of the Ruxton Place and Ruxton Ridge, that are home to 27 and 28 units, respectively. Metro staff declined to enter Ruxton Place. Had they done so, they would have seen firsthand the sink hole created by Shell's drilling on the Metro ROW. For over a year now that sinkhole has been fenced off; residents of the affordable units there do not have regular access to their front doors because the 356-102

sinkhole persists.[2] The land subsidence that occurred at the Ruxton Place is merely symptomatic of the potential, serious hazards that could arise from heavy machinery and construction on the ROW so close to pre-existing, heavy residential developments. To date, Metro has not articulated confidence that the geology on the ROW would permit the C Line to be extended with no damaging effect on the dense residential developments adjacent to the ROW. 356-102

On the other side of the Metro ROW from Breakwater Village are several single-family residential homes that front Condon Avenue. Due to an extreme grade change between those properties and the proposed elevation of the light rail for the Metro C Line ROW alignment, a major retaining wall of 15 to 20 feet in height would be required just 5 feet from the rear property lines of those residential lots. In many cases those homes are set just 20 feet from the rear property line, and in some instances just 5 to 10 feet. This major retaining wall would tower over the rear yards of these properties. As well, the height of that proposed retaining wall would be the height of most of these homes that are just a single story. In addition to the noise and vibration concerns that the proximity of the light rail would have on these the homes, the retaining wall would significantly reduce the light and air in the rear yards of these residential properties. 356-103

It's for these reasons and those stated below that we implore you to say "No" to the ROW. As noted previously in the Redondo Beach comments on the Notice of Preparation (NOP) of the Draft EIR in the March 16, 2021 letter (attached), the Metro railroad right-of-way (ROW) option is expected to have numerous devastating impacts on the 480+ Redondo Beach private homeowners who live directly adjacent to the ROW (some sharing property lines). Those adverse effects would persist whether the rail is at grade or made subterranean at certain roadways like 182nd Street (near Firmona Ave). 356-104

Based on the multi-year timeline needed to build the light rail within feet of where many of them sleep nightly, the negative impact that this will have on so many lives, including our seniors', simply cannot be understated. The City of Redondo Beach has expressed significant concerns about using the ROW for the C Line extension based on our understanding of the proposed project to date, including: 356-105

- Failure to equitably use tax dollars for the benefit of the maximum number of Angelenos from all over the County by directing the C Line extension down the alignment that would reach the greatest number of residents and garner higher ridership than implementing the ROW alternative;

- Failure to provide communities from the Willowbrook/Rosa Parks Metro stop areas to the South Bay job centers, medical offices and the economic powerhouses located along Hawthorne Blvd., including the soon to be 356-106

[2] We are thankful that staff from each of your offices have gotten to know about this issue. Jennifer LaMarque helped us get Shell's attention to the sinkhole in 2021, and Karishma Shamdasani visited the site and listened to considerately residents on May

totally revitalized South Bay Galleria, which will host about 750 new jobs, 300 new apartment units, 150 hotel rooms, office space and a modern, family-oriented mall; 356-106

- Concerns about drilling and excavating land used for numerous oil pipelines, for the construction of the partially subterranean light rail tracks; 356-107
- That there would be no time-savings associated by building the below-grade options on the ROW versus the elevated option on Hawthorne Blvd.; 356-108
- The below grade ROW alternative would be constructed at about a 30-foot grade differential from the adjacent train track that runs heavy loads of hazardous oil down the ROW twice a day;
- Metro has not analyzed the suitability of the land on the ROW to have a heavy, hazardous-material carrying train running next to below-grade light rail. In fact, in 2020, Shell conducted drilling along the ROW near the Ruxton, that cause land subsidence in that residential development for our affordable housing residents; 356-109
- Noise and vibration from construction and operation. 356-110

On April 11, 2022, two Redondo Beach Council Members and I, Mayor Brand, met with more than 60 concerned community members as part of the *Walk with Metro* event. At that meeting, Metro presented new facts that escalated existing concerns regarding the ROW alternative, including the need to re-align the freight line (that hauls oil, cars, jet fuel, and other industrial materials) further west, closer to existing homes.[3] 356-111

On May 11, 2022, Council Members Obagi and Loewenstein, and Community Development Director Brandy Forbes met with two groups of over 100 residents total at Breakwater Village and the Ruxton developments, respectively. At those meetings, Metro staff attempted to assuage residents' concerns about devaluation of their homes by pointing to increased value in Culver City and other areas around the Metro stops. But, Culver City and other areas are distinguishable in that there were opportunities there and in Pasadena to build new development around the Metro stops that were designed to block out the noise and other disruptions posed by trains passing every 6 minutes.

[3] Asked why they could not push the train tracks further east, one official answered that, around 182nd, that would put it too close to El Nido Park. But, putting it closer to homes should not be more ok than putting it closer to a park. On May 11, an engineer stated that pushing the freight train east would require Metro to take private property to the east of the ROW. Clearly, there are no good cost-effective options down the ROW 356-112

In Redondo Beach however, the developments at Breakwater Village and Ruxton were built less than twenty years ago with no contemplation of Metro trains passing by every six minutes. Their relative young age shows that these buildings will not be replaced anytime soon. In addition, they already have sustained cracks and damages due to their proximity to the freight train that passes by only twice a day. Yet, in the ROW alignment, Metro proposes to move the fuel carrying trains closer to our residents' homes. That is not ok. 356-113

III. The City still has many questions that Metro has not answered.

The City requests that the following questions are addressed, at a minimum in the DEIR

1. What are the standardized noise levels being used (federal or state guidelines)? 356-114
    a. If the noise levels exceed certain levels, will Metro provide noise-proofing to surrounding homes like LAX does in El Segundo? This should be considered for both during construction and post-construction impacts. 356-115
    b. Are the "ambient noise levels" greater for the freight train for the current position or the new position proposed after the freight rail realignment? 356-116
2. Since the freight line will be re-aligned, closer to the existing homes, what are the potential impacts of a derailment? If there is a derailment, what would the costs and impacts be to the City? 356-117
3. Are Police/Fire/EMT response times taken into account for the crossing on 182nd and the rail line, both during construction and after? 356-118
4. If the ROW alignment goes below grade at the crossing on 182nd and other intersections, how would the rail line retaining wall be structured to support the weight of the heavy freight on grade immediately next to the deep below-grade alignment (the representative on the tour mentioned needing to go as far as 30 feet or more below grade) for the Metro line to prevent soil subsidence issues we have seen elsewhere in the City? 356-119
5. Since the berms for the freight lines will be brought closer to private property, in some places, as close as five feet, what is the plan for providing extra retaining walls, addressing sound, vibration, and accommodating proper drainage? 356-120
6. Will personal transportation improvements, including a bike path and pedestrian walkway still be implemented? And, if so, where in Redondo Beach? 356-121
7. Has the soil and or geology on the ROW been studied to determine that the ROW land could tolerate a heavy freight train carrying oil directly adjacent to a pair of 30' below-grade light trail tracks? And to tolerate the differential vibrations of both 356-122

These comments have been reviewed and approved by the Redondo Beach City Council at their May 17, 2022 public meeting. If you or Metro have any questions regarding this comment letter, please contact Brandy Forbes, Community Development Director for the City of Redondo Beach at 310-318-0637 x2200 or brandy.forbes@redondo.org. Thank you for your consideration of our comments.

Sincerely,

Mayor William Brand

Subject: Re: No on ROW Torrance C Line Extension (Green)

To: The Metro Board
From: April Kubachka
Date: 03/22/23
Re: No on ROW Torrance C Line Extension (Green)

I vehemently oppose the Right of Way Torrance "Greenline". As a Redondo resident and business owner, I know the only ones who will be negatively affected by this project are the residents of Torrance and Redondo Beach. Reviewing the DEIR (Draft Environmental Impact Report), I can say that this is a disaster. ES.2-3.1 Proposed Project to extend the C line into Torrance and Redondo Beach will bring no benefit and only bring crime, graffiti, congestion and noise to the South Bay. ES.3 on impact analysis states no impact or less than significant impact on most items, this is a blatant lie. They attempt to down play actual impact with simply made up or skewed data, and by phrasing the questions to evaluate to purposely side-step the actual question they want to avoid answering. (i.e. "Will the Project substantially increase hazards due to a geometric design feature or incompatible uses? Findings: less than significant" – **Are you serious?**)

357-1

357-2

357-3

This stops now! I, and the people of the South Bay, do not want this project in our cities PERIOD. No to the C Line (Green) extension.
,

357-4

Thank you,
Apri Kubachka

Submission 358

THE METROPOLITAN WATER DISTRICT
OF SOUTHERN CALIFORNIA

Office of the General Manager

March 23, 2023 EMAIL

Georgia Sheridan, Project Manager
Los Angeles County Metropolitan Transportation Authority
One Gateway Plaza, Mail Stop: 99-22-3
Los Angeles, California 90012

Dear Ms. Sheridan:

Notice of Availability
of a Draft Environmental Impact Report for the Green Line Extension to Torrance

The Metropolitan Water District of Southern California (Metropolitan) has reviewed the Notice of Availability of a Draft Environmental Impact Report for the Green Line Extension to Torrance. Metro proposes to implement a light rail transit Project that would extend the C Line (Green) from the existing Redondo Beach (Marine) Station to the Torrance Transit Center. The Draft EIR evaluated the Proposed Project, which would be an elevated or at-grade alignment within the existing Metro-owned right-of-way (ROW) for the entire 4.5-mile length. Two options are considered for the northern segment of the Project area between the Redondo Beach (Marine) Station and 190th Street: 1) Trench Option, which travels along the Metro ROW with the light rail located within a below grade trench, and 2) Hawthorne Option, with the light rail in an elevated configuration traveling parallel to the I-405 Freeway and within the median of Hawthorne Boulevard.

Metropolitan owns and operates facilities within and adjacent to the proposed Project Limits. Metropolitan's West Basin Feeder between Sta. 288+00 to 290+00 and Sta. 296+00 to 299+00 are located along Manhattan Blvd. and adjacent to I-405 within the Metropolitan easement along and or within the Project boundary. Metropolitan is concerned with potential impacts to these facilities and rights-of-way that may result from implementation of the proposed Project. 358-1

Metropolitan must be allowed to maintain its rights-of-way and access to its facilities and properties at all times, in order to repair and maintain the current condition of those facilities. In order to avoid potential conflicts with Metropolitan's rights-of-way, we require that any design plans for any activity in the area of Metropolitan's pipelines or facilities be submitted for our review and written approval. Metropolitan will not permit procedures that could subject the pipes to excessive vehicle, impact, or vibratory loads. Any future design plans associated with this Project should be submitted to the attention of Metropolitan's Substructures Team. Approval 358-2

DocuSign Envelope ID: A6245D3B-F730-4CC3-905F-C9C36C714715
Submission 358

of the Project should be contingent on Metropolitan's approval of design plans for portions of the proposed Project that could impact its facilities. 358-2

Detailed prints of drawings of Metropolitan's pipelines and rights-of-way may be obtained by contacting Metropolitan's Substructures Team at EngineeringSubstructures@mwdh2o.com. To assist Metro in preparing plans that are compatible with Metropolitan's facilities and rights-of-way, enclosed is a copy of Substructure's review of the available plans in the DEIR. Please note that Metropolitan's facilities and rights-of-way must be fully shown and identified as Metropolitan's on all designs or plans submitted. 358-3

Additionally, appropriate property rights must be obtained from Metropolitan for any project activities within Metropolitan's property, such as the granting of a road easement or license. The granting of property rights may be subject to Metropolitan's Board of Director's approval. No work must be done including potholing or any studies within Metropolitan's property prior to the execution of an appropriate agreement. Please contact Metropolitan's Real Property Group regarding the process for obtaining access or property rights at RealEstateServices@mwdh2o.com. Metropolitan recommends that the EIR include reference to Metropolitan's property and granting of an agreement, and also acknowledge Metropolitan as a potential responsible agency "expected to use the EIR in their decision-making" per CEQA Guidelines Section 15124(d)(A). 358-4

Metropolitan encourages projects within its service area to include water conservation measures. While Metropolitan continues to build new supplies and develop means for more efficient use of current resources, projected population and economic growth will increase demands on the current system. Water conservation, reclaimed water use, and groundwater recharge programs are integral components to regional water supply planning. Metropolitan supports mitigation measures such as using water efficient fixtures, drought tolerant landscaping, and reclaimed water to offset any increase in water use associated with the proposed Project. 358-5

We appreciate the opportunity to provide input to your planning process and look forward to receiving future plans and documentation for this Project. If we can be of further assistance, please contact Liz Florence at (213) 217-7193 or at eflorence@mwdh2o.com.

Very truly yours,

DocuSigned by:

MWD
METROPOLITAN WATER DISTRICT OF SOUTHERN CALIFORNIA

Date: March 22, 2023

To: Liz Florence, Associate Environmental Specialist
Environmental Planning

From: Francisco Flores, Manager
Substructures Team

Subject: West Basin Feeder
Sta. 288+00 to 290+00 and
Sta. 296+00 to 299+00
Substructures Job No. 2020-20-001

Refence is made to your email dated February 9, 2023, forwarding a link for MTA's proposed Green Line extension (Line C) project connection from existing Redondo Beach (Marine) station to the Torrance Transit station in the South Bay area of Los Angeles County. Included in the link to the DEIR documents were prints of the conceptual plans (Pages 1 through 213).

We have reviewed the submitted conceptual plans, and our comments and requirements are as follows:

1. The location of our 45-inch-inside-diameter precast concrete West Basin Feeder pipeline, as shown on Pages 46 (Drawing TC-102), 76 (Drawing TC-202), 130 (Drawing T-704), 143 (Drawing GX-120), and 152 (Drawing GX-220), is generally in agreement with our records. However, we request that our pipeline and accompanying 10-foot-wide permanent easement right-of-way also be shown and identified as Metropolitan's on all pertinent sheets of your plans. Enclosed is a copy of our Right-of-Way Map 1418-5 for your information and use.

   We request that the final alternative detail plans and sections showing the exact locations of the proposed trench/new piles/at-grade proposal in relation to our pipeline be submitted for our review and written approval. In addition, all the pipeline appurtenances such as manholes within the footprint of the proposed project must shown and identified as "protect in place".

   Metropolitan's Drawings A-2755 and B-8289 are enclosed, to convert elevation from NGVD29 to NAVD88 datum, use the following formula:

358-6

358-7

DocuSign Envelope ID: A6245D3B-F730-4CC3-905F-C9C36C71473C
Submission 358

$$Elevation_{NAVD88} = Elevation_{NGVD29} + 1.45 \text{ feet}$$

Trench Option

2. The proposed "grade-separation" design, as shown on Pages 76 (Drawing TC-202), 81 (Drawing T-204), and 152 (Drawing GX-220), will require relocation of Metropolitan's existing pipeline at Manhattan Beach Boulevard. However, we will need to further evaluate design criteria for the alignment for the final length, depth, and size due to utility conflict constraints. Please note that our air release and vacuum valve structure may need to be redesigned and introducing a new air release and pumpwell manhole structures if the proposed alignment results in a new high or low point. 358-8

   This proposal to relocate portion of our pipeline could run up to millions of dollars. All costs associated with the modification design, protection, and inspection of our facilities to accommodate this project must be borne by the project proponent. Please note that general cost estimate includes Metropolitan's design, inspection, administration and any required shutdown and dewatering. The cost may vary, depending on the actual site conditions. The relocation must be designed and constructed in accordance with Metropolitan's standard specifications and design criteria. 358-9

   In order for Metropolitan to determine a detailed scope, we require a deposit in the amount of $100,000 to apply toward the cost of our review of your project plans, establish a utility agreement, and to prepare a detailed cost estimate for the proposed protection and modification design of our facility. Please note that general cost estimate includes Metropolitan's design, inspection, administration and any required shutdown and dewatering. The cost may vary, depending on the actual site conditions.

   Regarding the schedule of work, the relocation of our pipeline would typically take 12 to 18 months from preliminary to final design and construction, and shutdowns and dewatering of our pipeline would only take place between the months of November and March. 358-10

Elevated and/or At-Grade Options

3. To evaluate the feasibility of the proposed options, we will need a comprehensive and substantial technical analysis be submitted for our review and written approval to demonstrate and ensure that there will be no adverse impacts that would compromise the operation, continuity, and long-term reliability of our water conveyance system. As such, we are requesting the following information for our review: 358-11

DocuSign Envelope ID: A6245D3B-F730-4CC3-905F-C9C36C7147EC
Submission 358

- Based on Page 130 (Drawing T-704), please provide a site-specific geotechnical report with borings where the 8-foot-diameter CIDH pile at your Station 438+50 is the closest one to our pipeline, which runs along the Manhattan Beach Boulevard. 358-12

- Please include a vertical section normal to the pipeline alignment while crossing the 8-foot-diameter CIDH pile at your Station 438+50. Please also show the foundation stratigraphy using the closest borings, section of the pipeline, and horizontal clearance between the CIDH pipe and the pipeline. 358-13

- If groundwater drawdown is required to construct the 8-foot-diameter CIDH pile at your Station 438+50, the cone of depression expands and deepens during pumping until the flow in the aquifer is equal to the pumping rate. When the cone stops expanding, equilibrium exists and its configuration in terms of its radius and depth should be determined. If our pipeline alignment crosses the cone of depression, then settlement/lateral deflection profiles along the affected reach of the pipeline are required, as referenced in Metropolitan's Geotechnical Guidelines, copy attached. 358-14

- A contingency plan must be in place in the event of encountering perch water/running soil/unstable soil during the CIDH excavation at your Station 438+50 since the proposed pile at this location is closet to our pipeline. Please note that encountering running soil during the CIDH excavation would potentially undermine the pipeline, thereby adversely affecting its structural integrity and compromising the reliability and continuity of Metropolitan's conveyance and distribution system. 358-15

4. Our pipeline is a precast concrete pipe installed within a jacked casing from Station 297+13 to Station 297+53 with a 10-foot-wide concrete encasement at each end of the jacked casing, as shown on our Drawing A-2755, copy enclosed.

   The plans show that the proposed future at-grade rail tracks may cross over and outside the existing concrete encasement designed to carry the railroad loads. Outside the existing concrete encasement, our pipeline is not designed to carry the proposed railroad loads; therefore, a permanent concrete protective slab or a bridge structure must be placed over our pipeline to protect from excess loads. 358-16

   Please submit the live load per American Railway Engineering Association (equivalent Cooper E-xx loading) for the railway at-grade proposal.

DocuSign Envelope ID: A6245D3B-F730-4CC3-905F-C9C36C714716
Submission 358

5. Cast-in-driven hole piles and piles support structures may impose vertical and/or lateral load on our pipeline. The structural calculations of the piles adjacent to our pipeline must be submitted for our review and written approval.

Furthermore, a settlement and/or lateral deformation study may be required for pile installations within 50 feet of our pipeline. The use of driven piles within 20 feet of the centerline of our pipeline is not permitted. Before construction commences, our pipeline must be located by potholing, under Metropolitan's supervision.

358-17

6. If the proposed grading exceeds 2 feet of cut or fill over our pipeline, a soil report showing the predicted settlement of our pipeline at 10-foot intervals must be submitted. This data must be carried past the point of zero change in each direction and the actual size and varying depth of the fill must be considered when determining the settlement/rebound.

Any grading that could result in a significant settlement of the pipeline will not be acceptable. If the pipeline settles or rebounds, deflection at the pipe joints will occur. This could result in cracking or chipping of the cement mortar and cement grout joint filler. It could also result in cracking or chipping of the mortar coating. This will allow corrosion to begin at the bells and spigot joints. Excessive settlement/rebound will cause the wall of the pipe to fail catastrophically.

358-18

7. Excavation for the proposed project could affect Metropolitan's facilities. Therefore, we request that the contractor submit an engineered shoring design to Metropolitan for review and acceptance a minimum of 30 days before the scheduled start of excavation. Excavation must not begin until the shoring design is accepted by Metropolitan. The submittal must include all required trenches, pits, and related calculations. The use of driven piles within 20 feet of the centerline of our pipeline will not be permitted. Before beginning construction, our pipeline and appurtenances should be located by potholing

under Metropolitan's supervision. There must be a minimum of 2- and 5-feet of clearance between our pipeline and the edge of the drilled hole for temporary and permanent piles, if applicable. There must be a minimum of 1-foot of clearance between any part of the shoring and Metropolitan's pipeline.

358-19

8. Procedures and specifications of construction equipment to be used for the removal and placement of soil in proximity to Metropolitan's pipeline must be submitted to Metropolitan for review and approval a minimum of 30 days prior to starting work in the vicinity of Metropolitan's pipeline. The submittal must include the equipment and procedures to be used for the placement and compaction of soil over and adjacent to Metropolitan's pipeline and meter vault. Metropolitan will not permit procedures, which could subject the pipe and meter vault to excessive

358-20

DocuSign Envelope ID: A6245D3B-F730-4CC3-905F-C9C36C71471C Submission 358

vehicle, impact, or vibratory loads. Procedures for the removal and placement of soil over our pipeline must be such that excessive unbalanced loads are not imposed on the pipeline. 358-20

Storing of equipment or spoils over the footprint of our pipeline is not allowed. 358-21

Vehicles that impose a load no greater than that imposed by an AASHTO H20 vehicle may be used when the cover is between 4 feet and 11 feet. When the cover over Metropolitan's pipeline is less than 4-feet Metropolitan's pipeline loading restrictions must apply. 358-22

No vibratory compaction equipment in vibratory mode must be used within 25 feet of the centerline of our pipeline. 358-23

9. We request that a stipulation be added to your plans and/or specifications to notify Daniel Diaz of our Water System Operations Team at (323) 276-7623 or cell (760) 792-2573, at least two working days prior to starting any work (including potholing) in the vicinity of our facilities. 358-24

We are returning prints of the Pages 46 (Drawing TC-102), 76 (Drawing TC-202), 130 (Drawing T-704), 143 (Drawing GX-120), and 152 (Drawing GX-220), stamped "REVIEWED — CORRECTIONS NOTED — RESUBMITTAL REQUIRED." 358-25

If you have any questions regarding this matter, please contact Ken Chung at 77670.

Submission 359

From: [redacted]
Sent: Wednesday, March 22, 2023 11:29 AM
To: GreenlineExtension
Cc: info@rightofsay.com
Subject: ROW Torrance C Line Extension (Green) Rejection

Re: No on ROW Torrance C Line Extension (Green)

Stop the ROW Right of Way C Line Extension (Green). I am a Redondo resident and business owner. This project will negatively the residents of Redondo Beach & Torrance. 359-1

The DEIR (Draft Environmental Impact Report), is a farse of double speak and untruths. ES.2-3.1 Proposed Project to extend the C line into Redondo Beach/Torrance will bring unprecedented crime to the South Bay. If you want to revitalize, take this line to the old Hawthorne Mall that had to close and then you tell me if it has a "significant impact" on revitalization. Let's see your so-called impact data conclusions in practice first. 359-2

ES.3 on impact analysis states no impact or less than significant impact on most items, the truth is old people will be forced out of their life long homes but it does not mention that in its tap dance of deception. (They use words like slightly used) 359-3

Stop this C Line (Green) extension project! 359-4
,

Thank you,
Keith Kubachka

Please do not allow this to happen!! Our children and pets won't be safe. This is a residential area in Lawndale. We have sacrificed to be able to buy a home here. Please don't ruin our life here! 360-1

Subject: Metro Green Line Extension DEIR Public Comment - Metro's Proposed Use of Right-of-Way Will Lead to Significant Public Health Damages

"Sleep problems are direct, modifiable risk factors for the top ten causes of death and disability around the world, said Shane Creado, MD, at the 2023 Integrative Healthcare Symposium in New York City. “Sleep is a weapon,” said Creado. "It’s your variable fountain of youth. And it’s the difference between disability and great quality of life.”

"Research suggests that even a small loss of sleep can impair the immune system. In fact, one study by Matthew Walker, PhD, a cognitive neuroscientist, found that when participants restricted their sleep to four hours for just one night, their natural killer cell (NKC) activity dropped by 70 percent."

In his presentation, Creado, a sleep medicine doctor and psychiatrist trained in integrative and functional medicine, described sleep as a “cornerstone of integrative medicine” and detailed the crucial role that it plays in preventing disease.

The following provides additional **substantial evidence** that Metro's proposed expansion of use freight right-of-way through neighborhoods on the Green Line will cause significant damage to the health of impacted residents. Metro's DEIR finds that significant noise and vibration will occur, and as a 24/7/365 operation, peer-reviewed research demonstrates that the sleep and stress levels of surrounding residents will be negatively impacted. This impact on sleep will lead to chronic stress and lifetime health damages according to Blue Zones (**BCHD's multi-million dollar taxpayer expenditure program**), NIH peer-reviewed research, and the research of the MD practitioner below. 361-1

Subject: No to ROW - for the C Line extension to Torrance

Hello,

I've met the Metro C Line extension team during Metro's town hall community meetings in Lawndale, Redondo Beach and Torrance and have to say that the team appears short staffed and tired and not ready to begin a new project such as this. If the Metro board votes 'no rail' extension to Torrance, I would expect few of the Metro team would be relieved.

I see that Metro is actively searching for new recruits to shore up the many Metro projects and in this job market, engineers and construction talent are in short supply. This Metro team seems stretched thin and has not exhibited the energy to build any of the options safely and for that I would ask that you recommend to the Metro board 'no rail' extension to Torrance. More errors are made when personnel are fatigued and these errors at times can be costly to rectify. 362-1

If a rail option must be picked, in light of recent freight train disasters I would recommend that the elevated rail option along Hawthorne Blvd be selected. 362-2

Respectfully,
Michael Kim

Subject: Lawndale

One of the options is to run the Metro extension along the right of way alongside many Lawndale homes. How many other locations are there that Metro has trains that run parallel to existing freight tracks? What safety measures will be implemented in the event of a train derailment while a Metro train is running alongside? 363-1

I oppose the Metro extension cutting through the neighborhood along Condon Avenue. 363-2

Thank you,

Randall Abram
Longtime Lawndale resident

Subject: DEIR Questions: Median Parking Utilization, Mitigation ... Re: Third Try ... Re: Second Try ... Fwd: Hawthorne Blvd Option Parking Impact Assessment Questions
Date: Monday, March 13, 2023 4:20:29 AM

I appreciate that your designers tried to minimize impact to Hawthorne Blvd median parking. That said,
How did loss of parking spaces get elevated into the Executive Summary, item ES.6, as one of the "Areas of Controversy?"
If it is such a concern, why did you not propose any mitigation measures (of which there are many)?
Why did you not report the number of median parking spaces available (83) in the DEIR? I think this helps put the loss of 20 spaces in perspective.

Upon further review of your response below, how can you claim that median parking "does tend to be highly utilized" if you did not perform utilization counts?
I have performed utilization counts, during weekday business hours, and utilization tends to be about 35 spaces, less than half the 83 spaces available. I would not consider that "highly utilized."
The pandemic was over, practically, last year, well before the DEiR was published. Why didn't you perform counts to resolve this "area of controversy?"

Subject: DEIR Figure 2.3-9 Proposed Project, Vertical Diagram:

In Reference DEIR Figure 2.3-9

Dear Metro Friends,

On the stretch of the path starting from elevated Marine Ave station, heading southeast, why bother transitioning to at-grade then elevating a short distance later before reaching Inglewood Avenue? 365-1

Wouldn't this cause the train to slow and provide a roller-coaster feeling by the riders, if any?

Is there a cost savings performing a transition from elevated to at-grade back to elevated, even for a short distance as shown in the Figure? 365-2
If so, how much savings?

Subject: Two Questions...Re: Ridership Summary Report: User Benefits per Project Trip (minutes)

Mr. Dierking and technical team,

Thank you for your reply.
The FTA process document to which you referred is fascinating and helpful, in general, especially the Project Justification Criteria.

You wrote that your User Benefit includes drive time, access time, wait time, time in vehicle, egress, etc., systemwide. I understand now.

I'm trying to make the numbers in your table relevant to a rider.

My simple analysis includes some of that, and I showed my rationale and numbers. And if were to agree on my good faith budget of 50 minutes extra time for an actual train rider per Project trip versus using a car for those items (possibly longer, especially if transfers are required, but I try not to overreach), you have to come up with 72.6 minutes of time savings systemwide independent of the actual train rider to offset my 50 minutes and end up with 22.6 minutes of User Benefit. That's a big hill to climb I wish to understand. 366-3
