Appendix G

Special-Status Species Tables

Special-Status Plant and Lichen Species in the Regional Vicinity of the Project Site

Scientific Name Common Name	Status Fed/State ESA CRPR	Habitat Requirements	Potential to Occur	Rationale
Allium peninsulare var. *franciscanum* Franciscan onion	None/None G5T2/S2 1B.2	Perennial bulbiferous herb. Cismontane woodland, valley and foothill grassland. Clay, Serpentinite (often), volcanic. Elevations: 170-1000ft. (52-305m.) Blooms (Apr)May-Jun.	Not Expected	The site is developed with actively maintained ornamental landscaping, and no Allium species were observed.
Alopecurus aequalis var. *sonomensis* Sonoma alopecurus	FE/None G5T1/S1 1B.1	Perennial herb. Marshes and swamps, riparian scrub. Wet areas, marshes, and riparian banks, with other wetland species. Elevations: 15-1200ft. (5-365m.) Blooms May-Jul.	Not Expected	The site is developed with actively maintained ornamental landscaping, and this species was not observed during the typical blooming period.
Amorpha californica var. *napensis* Napa false indigo	None/None G4T2/S2 1B.2	Perennial deciduous shrub. Broadleafed upland forest, chaparral, cismontane woodland. Openings in forest or woodland or in chaparral. 30-735 m. Elevations: 165-6560ft. (50-2000m.) Blooms Apr-Jul.	Not Expected	The site is developed with actively maintained ornamental landscaping, and this species was not observed during the typical blooming period.
Amsinckia lunaris bent-flowered fiddleneck	None/None G3/S3 1B.2	Annual herb. Cismontane woodland, coastal bluff scrub, valley and foothill grassland. Elevations: 10-1640ft. (3-500m.) Blooms Mar-Jun.	Not Expected	The site is developed with actively maintained ornamental landscaping, and this species was not observed during the typical blooming period.
Arctostaphylos montana ssp. *montana* Mt. Tamalpais manzanita	None/None G3T3/S3 1B.3	Perennial evergreen shrub. Chaparral, valley and foothill grassland. Rocky, serpentinite. Elevations: 525-2495ft. (160-760m.) Blooms Feb-Apr.	Not Expected	The site is developed with actively maintained ornamental landscaping, and no manzanita species were observed.
Arctostaphylos virgata Marin manzanita	None/None G2/S2 1B.2	Perennial evergreen shrub. Broadleafed upland forest, chaparral, closed-cone coniferous forest, north coast coniferous forest. Granitic (sometimes), sandstone (sometimes). Elevations: 195-2295ft. (60-700m.) Blooms Jan-Mar.	Not Expected	The site is developed with actively maintained ornamental landscaping, and no manzanita species were observed.
Astragalus pycnostachyus var. *pycnostachyus* coastal marsh milk-vetch	None/None G2T2/S2 1B.2	Perennial herb. Coastal dunes, coastal scrub, marshes and swamps. Mesic sites in dunes or along streams or coastal salt marshes. Elevations: 0-100ft. (0-30m.) Blooms (Apr)Jun-Oct.	Not Expected	The site is developed with actively maintained ornamental landscaping, and this species was not observed during the typical blooming period.

Scientific Name Common Name	Status Fed/State ESA CRPR	Habitat Requirements	Potential to Occur	Rationale
Astragalus tener var. *tener* alkali milk-vetch	None/None G2T1/S1 1B.2	Annual herb. Playas, valley and foothill grassland, vernal pools. Alkaline. Elevations: 5-195ft. (1-60m.) Blooms Mar-Jun.	Not Expected	The site is developed with actively maintained ornamental landscaping, and no Astragalus species were observed.
Blennosperma bakeri Sonoma sunshine	FE/SE G1/S1 1B.1	Annual herb. Valley and foothill grassland, vernal pools. Vernal pools and swales. Elevations: 35-360ft. (10-110m.) Blooms Mar-May.	Not Expected	The site is developed with actively maintained ornamental landscaping, and no vernal pools are present.
Calamagrostis crassiglumis Thurber's reed grass	None/None G3Q/S2 2B.1	Perennial rhizomatous herb. Coastal scrub, marshes and swamps. Usually in marshy swales surrounded by grassland or coastal scrub. Elevations: 35-195ft. (10-60m.) Blooms May-Aug.	Not Expected	The site is developed with actively maintained ornamental landscaping, and no coastal marshes are present.
Calochortus tiburonensis Tiburon mariposa-lily	FT/ST G1/S1 1B.1	Perennial bulbiferous herb. Valley and foothill grassland. On open, rocky, slopes in serpentine grassland. Elevations: 165-490ft. (50-150m.) Blooms Mar-Jun.	Not Expected	The site is developed with actively maintained ornamental landscaping, and no Calochortus species were observed.
Cardamine angulata seaside bittercress	None/None G4G5/S3 2B.1	Perennial herb. Lower montane coniferous forest, north coast coniferous forest. Streambanks. Elevations: 50-3000ft. (15-915m.) Blooms (Jan)Mar-Jul.	Not Expected	The site is developed with actively maintained ornamental landscaping, and this species was not observed during the typical blooming period.
Carex lyngbyei Lyngbye's sedge	None/None G5/S3 2B.2	Perennial rhizomatous herb. Marshes and swamps. Elevations: 0-35ft. (0-10m.) Blooms Apr-Aug.	Not Expected	The site is developed with actively maintained ornamental landscaping, and this species was not observed during the typical blooming period.
Castilleja affinis var. *neglecta* Tiburon paintbrush	FE/ST G4G5T1T2/S1S2 1B.2	Perennial herb (hemiparasitic). Valley and foothill grassland. Rocky serpentine sites. Elevations: 195-1310ft. (60-400m.) Blooms Apr-Jun.	Not Expected	The site is developed with actively maintained ornamental landscaping, and no Castilleja species were observed.
Ceanothus decornutus Nicasio ceanothus	None/None G1/S1 1B.2	Perennial shrub. Chaparral. Clay (sometimes), Rocky, serpentinite. Elevations: 770-950ft. (235-290m.) Blooms Mar-May.	Not Expected	The site is developed with actively maintained ornamental landscaping, and no Ceanothus species were observed.
Ceanothus masonii Mason's ceanothus	None/SR G1/S1 1B.2	Perennial evergreen shrub. Chaparral. Serpentine ridges or slopes in chaparral or transition zone. Elevations: 755-1640ft. (230-500m.) Blooms Mar-Apr.	Not Expected	The site is developed with actively maintained ornamental landscaping, and no Ceanothus species were observed.

Scientific Name Common Name	Status Fed/State ESA CRPR	Habitat Requirements	Potential to Occur	Rationale
Centromadia parryi ssp. *parryi* pappose tarplant	None/None G3T2/S2 1B.2	Annual herb. Chaparral, coastal prairie, marshes and swamps, meadows and seeps, valley and foothill grassland. Alkaline (often). Elevations: 0-1380ft. (0-420m.) Blooms May-Nov.	Not Expected	The site is developed with actively maintained ornamental landscaping, and this species was not observed during the typical blooming period.
Chloropyron maritimum ssp. *palustre* Point Reyes salty bird's-beak	None/None G4?T2/S2 1B.2	Annual herb (hemiparasitic). Marshes and swamps. Usually in coastal salt marsh with Salicornia, Distichlis, Jaumea, Spartina, etc. Elevations: 0-35ft. (0-10m.) Blooms Jun-Oct.	Not Expected	The site is developed with actively maintained ornamental landscaping, and this species was not observed during the typical blooming period.
Chloropyron molle ssp. *molle* soft salty bird's-beak	FE/SR G2T1/S1 1B.2	Annual herb (hemiparasitic). Marshes and swamps. In coastal salt marsh with Distichlis, Salicornia, Frankenia, etc. Elevations: 0-10ft. (0-3m.) Blooms Jun-Nov.	Not Expected	The site is developed with actively maintained ornamental landscaping, and this species was not observed during the typical blooming period.
Chorizanthe cuspidata var. *cuspidata* San Francisco Bay spineflower	None/None G2T1/S1 1B.2	Annual herb. Coastal bluff scrub, coastal dunes, coastal prairie, coastal scrub. Sandy. Elevations: 10-705ft. (3-215m.) Blooms Apr-Jul(Aug).	Not Expected	The site is developed with actively maintained ornamental landscaping, and this species was not observed during the typical blooming period.
Chorizanthe valida Sonoma spineflower	FE/SE G1/S1 1B.1	Annual herb. Coastal prairie. Sandy soil. Elevations: 35-1000ft. (10-305m.) Blooms Jun-Aug.	Not Expected	The site is developed with actively maintained ornamental landscaping, and this species was not observed during the typical blooming period.
Cirsium hydrophilum var. *vaseyi* Mt. Tamalpais thistle	None/None G2T1/S1 1B.2	Perennial herb. Broadleafed upland forest, chaparral, meadows, and seeps. Serpentinite. Elevations: 785-2035ft. (240-620m.) Blooms May-Aug.	Not Expected	The site is developed with actively maintained ornamental landscaping, and this species was not observed during the typical blooming period.
Collinsia corymbosa round-headed collinsia	None/None G1/S1 1B.2	Annual herb. Coastal dunes. Elevations: 0-65ft. (0-20m.) Blooms Apr-Jun.	Not Expected	The site is developed with actively maintained ornamental landscaping, and no Collinsia species were observed.
Delphinium bakeri Baker's larkspur	FE/SE G1/S1 1B.1	Perennial herb. Broadleafed upland forest, coastal scrub, valley and foothill grassland. Only occurs on NW-facing slope, on decomposed shale. Historically known from grassy areas along fencelines too. Elevations: 260-1000ft. (80-305m.) Blooms Mar-May.	Not Expected	The site is developed with actively maintained ornamental landscaping, and no Delphinium species were observed.

Scientific Name Common Name	Status Fed/State ESA CRPR	Habitat Requirements	Potential to Occur	Rationale
Delphinium luteum golden larkspur	FE/SR G1/S1 1B.1	Perennial herb. Chaparral, coastal prairie, coastal scrub. North-facing rocky slopes. Elevations: 0-330ft. (0-100m.) Blooms Mar-May.	Not Expected	The site is developed with actively maintained ornamental landscaping, and no Delphinium species were observed.
Dermatocarpon meiophyllizum silverskin lichen	None/None G3G5/S3 2B.3	Coastal prairie, lower montane coniferous forest, north coast coniferous forest, subalpine coniferous forest, upper montane coniferous forest. Usually aquatic to semi-aquatic, within splash zone of lakes or streams. Preferred habitat is undisturbed, exposed streams with large rocks or bedrock at high elevations, but it is also found in cold, deep canyons at lower elevations. 295-3495m. Blooms .	Not Expected	The site is developed with actively maintained ornamental landscaping, and no lichens were observed.
Dirca occidentalis western leatherwood	None/None G2/S2 1B.2	Perennial deciduous shrub. Broadleafed upland forest, chaparral, cismontane woodland, closed-cone coniferous forest, north coast coniferous forest, riparian forest, riparian woodland. On brushy slopes, mesic sites; mostly in mixed evergreen and foothill woodland communities. Elevations: 80-1395ft. (25-425m.) Blooms Jan-Mar(Apr).	Not Expected	The site is developed with actively maintained ornamental landscaping, and no Dirca species were observed.
Downingia pusilla dwarf downingia	None/None GU/S2 2B.2	Annual herb. Valley and foothill grassland, vernal pools. Vernal lake and pool margins with a variety of associates. In several types of vernal pools. Elevations: 5-1460ft. (1-445m.) Blooms Mar-May.	Not Expected	The site is developed with actively maintained ornamental landscaping, and no Delphinium species were observed.
Entosthodon kochii Koch's cord moss	None/None G1/S1 1B.3	Moss. Cismontane woodland. Moss growing on soil on river banks. Elevations: 590-3280ft. (180-1000m.)	Not Expected	The site is developed with actively maintained ornamental landscaping, and no mosses were observed.
Eriogonum luteolum var. *caninum* Tiburon buckwheat	None/None G5T2/S2 1B.2	Annual herb. Chaparral, cismontane woodland, coastal prairie, valley and foothill grassland. Serpentine soils; sandy to gravelly sites. Elevations: 0-2295ft. (0-700m.) Blooms May-Sep.	Not Expected	The site is developed with actively maintained ornamental landscaping, and this species was not observed during the typical blooming period.

Scientific Name Common Name	Status Fed/State ESA CRPR	Habitat Requirements	Potential to Occur	Rationale
Fissidens pauperculus minute pocket moss	None/None G3?/S2 1B.2	Moss. North coast coniferous forest. Moss growing on damp soil along the coast. In dry streambeds and on stream banks. Elevations: 35-3360ft. (10-1024m.)	Not Expected	The site is developed with actively maintained ornamental landscaping, and no mosses were observed.
Fritillaria lanceolata var. *tristulis* Marin checker lily	None/None G5T2/S2 1B.1	Perennial bulbiferous herb. Coastal bluff scrub, coastal prairie, coastal scrub. Occurrences reported from canyons and riparian areas as well as rock outcrops; often on serpentine. Elevations: 50-490ft. (15-150m.) Blooms Feb-May.	Not Expected	The site is developed with actively maintained ornamental landscaping, and no Fritillaria species were observed.
Fritillaria liliacea fragrant fritillary	None/None G2/S2 1B.2	Perennial bulbiferous herb. Cismontane woodland, coastal prairie, coastal scrub, valley and foothill grassland. Often on serpentine; various soils reported though usually on clay, in grassland. Elevations: 10-1345ft. (3-410m.) Blooms Feb-Apr.	Not Expected	The site is developed with actively maintained ornamental landscaping, and no Fritillaria species were observed.
Gilia capitata ssp. *chamissonis* blue coast gilia	None/None G5T2/S2 1B.1	Annual herb. Coastal dunes, coastal scrub. Elevations: 5-655ft. (2-200m.) Blooms Apr-Jul.	Not Expected	The site is developed with actively maintained ornamental landscaping, and this species was not observed during the typical blooming period.
Gilia capitata ssp. *tomentosa* woolly-headed gilia	None/None G5T2/S2 1B.1	Annual herb. Coastal bluff scrub, valley and foothill grassland. Rocky outcrops, sometimes serpentine. Elevations: 35-720ft. (10-220m.) Blooms May-Jul.	Not Expected	The site is developed with actively maintained ornamental landscaping, and this species was not observed during the typical blooming period.
Gilia millefoliata dark-eyed gilia	None/None G2/S2 1B.2	Annual herb. Coastal dunes. Elevations: 5-100ft. (2-30m.) Blooms Apr-Jul.	Not Expected	The site is developed with actively maintained ornamental landscaping, and this species was not observed during the typical blooming period.
Helianthella castanea Diablo helianthella	None/None G2/S2 1B.2	Perennial herb. Broadleafed upland forest, chaparral, cismontane woodland, coastal scrub, riparian woodland, valley and foothill grassland. Azonal soils, Partial shade (often), rocky (usually). Elevations: 195-4265ft. (60-1300m.) Blooms Mar-Jun.	Not Expected	The site is developed with actively maintained ornamental landscaping, and no Helianthella species were observed.

Scientific Name Common Name	Status Fed/State ESA CRPR	Habitat Requirements	Potential to Occur	Rationale
Hemizonia congesta ssp. *congesta* congested-headed hayfield tarplant	None/None G5T2/S2 1B.2	Annual herb. Valley and foothill grassland. Grassy valleys and hills, often in fallow fields; sometimes along roadsides. Elevations: 65-1835ft. (20-560m.) Blooms Apr-Nov.	Not Expected	The site is developed with actively maintained ornamental landscaping, and this species was not observed during the typical blooming period.
Hesperolinon congestum Marin western flax	FT/ST G1/S1 1B.1	Annual herb. Chaparral, valley and foothill grassland. In serpentine barrens and in serpentine grassland and chaparral. Elevations: 15-1215ft. (5-370m.) Blooms Apr-Jul.	Not Expected	The site is developed with actively maintained ornamental landscaping, and this species was not observed during the typical blooming period.
Holocarpha macradenia Santa Cruz tarplant	FT/SE G1/S1 1B.1	Annual herb. Coastal prairie, coastal scrub, valley and foothill grassland. Light, sandy soil or sandy clay; often with nonnatives. Elevations: 35-720ft. (10-220m.) Blooms Jun-Oct.	Not Expected	The site is developed with actively maintained ornamental landscaping, and no Holocarpha species were observed.
Horkelia tenuiloba thin-lobed horkelia	None/None G2/S2 1B.2	Perennial herb. Broadleafed upland forest, chaparral, valley and foothill grassland. Sandy soils; mesic openings. Elevations: 165-1640ft. (50-500m.) Blooms May-Jul(Aug).	Not Expected	The site is developed with actively maintained ornamental landscaping, and this species was not observed during the typical blooming period.
Kopsiopsis hookeri small groundcone	None/None G4?/S1S2 2B.3	Perennial rhizomatous herb (parasitic). North coast coniferous forest. Open woods, shrubby places, generally on Gaultheria shallon. Elevations: 295-2905ft. (90-885m.) Blooms Apr-Aug.	Not Expected	The site is developed with actively maintained ornamental landscaping, and this species was not observed during the typical blooming period.
Lasthenia conjugens Contra Costa goldfields	FE/None G1/S1 1B.1	Annual herb. Cismontane woodland, playas, valley and foothill grassland, vernal pools. Vernal pools, swales, low depressions, in open grassy areas. Elevations: 0-1540ft. (0-470m.) Blooms Mar-Jun.	Not Expected	The site is developed with actively maintained ornamental landscaping, and no Lasthenia species were observed.
Lessingia micradenia var. *micradenia* Tamalpais lessingia	None/None G2T2/S2 1B.2	Annual herb. Chaparral, valley and foothill grassland. Usually on serpentine, in serpentine grassland or serpentine chaparral. Often on roadsides. Elevations: 330-1640ft. (100-500m.) Blooms (Jun)Jul-Oct.	Not Expected	The site is developed with actively maintained ornamental landscaping, and this species was not observed during the typical blooming period.

Scientific Name Common Name	Status Fed/State ESA CRPR	Habitat Requirements	Potential to Occur	Rationale
Lilium pardalinum ssp. *pitkinense* Pitkin Marsh lily	FE/SE G5T1/S1 1B.1	Perennial bulbiferous herb. Cismontane woodland, marshes and swamps, meadows and seeps. Saturated, sandy soils with grasses and shrubs. Elevations: 115-215ft. (35-65m.) Blooms Jun-Jul.	Not Expected	The site is developed with actively maintained ornamental landscaping, and no Lilium species were observed.
Microseris paludosa marsh microseris	None/None G2/S2 1B.2	Perennial herb. Cismontane woodland, closed-cone coniferous forest, coastal scrub, valley and foothill grassland. Elevations: 15-1165ft. (5-355m.) Blooms Apr-Jun(Jul).	Not Expected	The site is developed with actively maintained ornamental landscaping, and this species was not observed during the typical blooming period.
Navarretia leucocephala ssp. *bakeri* Baker's navarretia	None/None G4T2/S2 1B.1	Annual herb. Cismontane woodland, lower montane coniferous forest, meadows and seeps, valley and foothill grassland, vernal pools. Vernal pools and swales; adobe or alkaline soils. Elevations: 15-5710ft. (5-1740m.) Blooms Apr-Jul.	Not Expected	The site is developed with actively maintained ornamental landscaping, and this species was not observed during the typical blooming period.
Navarretia rosulata Marin County navarretia	None/None G2/S2 1B.2	Annual herb. Chaparral, closed-cone coniferous forest. Dry, open rocky places; can occur on serpentine. Elevations: 655-2085ft. (200-635m.) Blooms May-Jul.	Not Expected	The site is developed with actively maintained ornamental landscaping, and this species was not observed during the typical blooming period.
Pentachaeta bellidiflora white-rayed pentachaeta	FE/SE G1/S1 1B.1	Annual herb. Cismontane woodland, valley and foothill grassland. Open dry rocky slopes and grassy areas, often on soils derived from serpentine bedrock. Elevations: 115-2035ft. (35-620m.) Blooms Mar-May.	Not Expected	The site is developed with actively maintained ornamental landscaping, and dry rocky slopes with serpentine soils are not present.
Plagiobothrys glaber hairless popcornflower	None/None GX/SX 1A	Annual herb. Marshes and swamps, meadows and seeps. Coastal salt marshes and alkaline meadows. Elevations: 50-590ft. (15-180m.) Blooms Mar-May.	Not Expected	The site is developed with actively maintained ornamental landscaping, and mesic sites with alkaline soils are not present.
Plagiobothrys mollis var. *vestitus* Petaluma popcornflower	None/None G4?TX/SX 1A	Perennial herb. Marshes and swamps, valley and foothill grassland. Wet sites in grassland, possibly coastal marsh margins. Elevations: 35-165ft. (10-50m.) Blooms Jun-Jul.	Not Expected	The site is developed with actively maintained ornamental landscaping, and this species was not observed during the typical blooming period.

Scientific Name Common Name	Status Fed/State ESA CRPR	Habitat Requirements	Potential to Occur	Rationale
Pleuropogon hooverianus North Coast semaphore grass	None/ST G2/S2 1B.1	Perennial rhizomatous herb. Broadleafed upland forest, meadows and seeps, north coast coniferous forest. Wet grassy, usually shady areas, sometimes freshwater marsh; associated with forest environments. Elevations: 35-2200ft. (10-671m.) Blooms Apr-Jun.	Not Expected	The site is developed with actively maintained ornamental landscaping, and no Pleuropogon species were observed.
Quercus parvula var. *tamalpaisensis* Tamalpais oak	None/None G4T2/S2 1B.3	Perennial evergreen shrub. Lower montane coniferous forest. Elevations: 330-2460ft. (100-750m.) Blooms Mar-Apr.	Not Expected	The site is developed with actively maintained ornamental landscaping, and this species was not observed.
Sidalcea calycosa ssp. *rhizomata* Point Reyes checkerbloom	None/None G5T2/S2 1B.2	Perennial rhizomatous herb. Marshes and swamps. Freshwater marshes near the coast. Elevations: 10-245ft. (3-75m.) Blooms Apr-Sep.	Not Expected	The site is developed with actively maintained ornamental landscaping, and this species was not observed during the typical blooming period.
Sidalcea hickmanii ssp. *viridis* Marin checkerbloom	None/None G3TH/SH 1B.1	Perennial herb. Chaparral. Serpentine or volcanic soils; sometimes appears after burns. Elevations: 165-1410ft. (50-430m.) Blooms May-Jun.	Not Expected	The site is developed with actively maintained ornamental landscaping, and no Sidalcea species were observed.
Spergularia macrotheca var. *longistyla* long-styled sand-spurrey	None/None G5T2/S2 1B.2	Perennial herb. Marshes and swamps, meadows and seeps. Alkaline. Elevations: 0-835ft. (0-255m.) Blooms Feb-May.	Not Expected	The site is developed with actively maintained ornamental landscaping, and marshes and swamps are not present.
Stebbinsoseris decipiens Santa Cruz microseris	None/None G2/S2 1B.2	Annual herb. Broadleafed upland forest, chaparral, closed-cone coniferous forest, coastal prairie, coastal scrub, valley and foothill grassland. Open areas in loose or disturbed soil, usually derived from sandstone, shale or serpentine, on seaward slopes. Elevations: 35-1640ft. (10-500m.) Blooms Apr-May.	Not Expected	The site is developed with actively maintained ornamental landscaping, and forest, scrub, and grassland habitats with sandstone, shale or serpentine soils are not present.
Streptanthus anomalus Mount Burdell jewelflower	None/None G1/S1 1B.1	Annual herb. Cismontane woodland. Openings, Serpentinite. Elevations: 165-490ft. (50-150m.) Blooms May-Jun.	Not Expected	The site is developed with actively maintained ornamental landscaping, and woodland habitats with serpentine soils are not present.
Streptanthus batrachopus Tamalpais jewelflower	None/None G2/S2 1B.3	Annual herb. Chaparral, closed-cone coniferous forest. Talus serpentine outcrops. Elevations: 1000-2135ft. (305-650m.) Blooms Apr-Jul.	Not Expected	The site is developed with actively maintained ornamental landscaping, and this species was not observed during the typical blooming period.

Scientific Name Common Name	Status Fed/State ESA CRPR	Habitat Requirements	Potential to Occur	Rationale
Streptanthus glandulosus ssp. *niger* Tiburon jewelflower	FE/SE G4T1/S1 1B.1	Annual herb. Valley and foothill grassland. Shallow, rocky serpentine slopes. Elevations: 100-490ft. (30-150m.) Blooms May-Jun.	Not Expected	The site is developed with actively maintained ornamental landscaping, and woodland habitats with serpentine soils are not present.
Streptanthus glandulosus ssp. *pulchellus* Mt. Tamalpais bristly jewelflower	None/None G4T2/S2 1B.2	Annual herb. Chaparral, valley and foothill grassland. Serpentine slopes. Elevations: 490-2625ft. (150-800m.) Blooms May-Jul(Aug).	Not Expected	The site is developed with actively maintained ornamental landscaping, and this species was not observed during the typical blooming period.
Symphyotrichum lentum Suisun Marsh aster	None/None G2/S2 1B.2	Perennial rhizomatous herb. Marshes and swamps. Most often seen along sloughs with Phragmites, Scirpus, blackberry, Typha, etc. Elevations: 0-10ft. (0-3m.) Blooms (Apr)May-Nov.	Not Expected	The site is developed with actively maintained ornamental landscaping, and this species was not observed during the typical blooming period.
Trifolium amoenum two-fork clover	FE/None G1/S1 1B.1	Annual herb. Coastal bluff scrub, valley and foothill grassland. Sometimes on serpentine soil, open sunny sites, swales. Most recently cited on roadside and eroding cliff face. Elevations: 15-1360ft. (5-415m.) Blooms Apr-Jun.	Not Expected	The site is developed with actively maintained ornamental landscaping, and grassland habitats with serpentine soils are not present.
Trifolium hydrophilum saline clover	None/None G2/S2 1B.2	Annual herb. Marshes and swamps, valley and foothill grassland, vernal pools. Mesic, alkaline sites. Elevations: 0-985ft. (0-300m.) Blooms Apr-Jun.	Not Expected	The site is developed with actively maintained ornamental landscaping, and marshes, swamps, and grassland habitats with alkaline soils are not present.
Trifolium polyodon Pacific Grove clover	None/SR G1/S1 1B.1	Annual herb. Closed-cone coniferous forest, coastal prairie, meadows and seeps, valley and foothill grassland. Along small springs and seeps in grassy openings. Elevations: 15-1395ft. (5-425m.) Blooms Apr-Jun(Jul).	Not Expected	The site is developed with actively maintained ornamental landscaping, and forest and grassland habitats with springs and seeps are not present.
Triquetrella californica coastal triquetrella	None/None G2/S2 1B.2	Moss. Coastal bluff scrub, coastal scrub. Grows within 30m from the coast in coastal scrub, grasslands and in open gravels on roadsides, hillsides, rocky slopes, and fields. On gravel or thin soil over outcrops. Elevations: 35-330ft. (10-100m.)	Not Expected	The site is developed with actively maintained ornamental landscaping, and no mosses were observed.

Scientific Name Common Name	Status Fed/State ESA CRPR	Habitat Requirements	Potential to Occur	Rationale
Viburnum ellipticum oval-leaved viburnum	None/None G4G5/S3? 2B.3	Perennial deciduous shrub. Chaparral, cismontane woodland, lower montane coniferous forest. Elevations: 705-4595ft. (215-1400m.) Blooms May-Jun.	Not Expected	The site is developed with actively maintained ornamental landscaping, and this species was not observed during the typical blooming period.

BSA = Biological Study Area; ft. = feet; m. = meter

Regional Vicinity refers to within a nine-quad search radius of site (in this case, a seven-quad search was conducted).

Status (Federal/State)

FE = Federal Endangered
FT = Federal Threatened
SE = State Endangered
ST = State Threatened
SR = State Rare

CRPR (California Native Plant Society California Rare Plant Rank)

1B = Rare, Threatened, or Endangered in California and elsewhere
2B= Rare, Threatened, or Endangered in California, but more common elsewhere

CRPR Threat Code Extension

.1 = Seriously endangered in California (>80% of occurrences threatened/high degree and immediacy of threat)
.2 = Moderately threatened in California (20-80% of occurrences threatened/moderate degree and immediacy of threat)
.3 = Not very endangered in California (<20% of occurrences threatened/low degree and immediacy of threat)

Other Statuses

G1 or S1 Critically Imperiled Globally or Subnationally (state)
G2 or S2 Imperiled Globally or Subnationally (state)
G3 or S3 Vulnerable to extirpation or extinction Globally or Subnationally (state)
G4/5 or S4/5 Apparently secure, common and abundant

Additional notations may be provided as follows

T – Intraspecific Taxon (subspecies, varieties, and other designations below the level of species)
Q – Questionable taxonomy that may reduce conservation priority
? – Inexact numeric rank

Special-Status Wildlife Species in the Regional Vicinity of the Project Site

Scientific Name Common Name	Status Fed/State ESA CDFW	Habitat Requirements	Potential to Occur	Rationale
Invertebrates				
Bombus occidentalis western bumble bee	None/SCE G3/S1	Once common and widespread, species has declined precipitously from central CA to southern B.C., perhaps from disease.	Low Potential	Flowering plants are present; however, a paved parking lot is not suitable habitat, and no beehives were observed.
Danaus plexippus plexippus pop. 1 monarch - California overwintering population	FC/None G4T1T2Q/S2	Winter roost sites extend along the coast from northern Mendocino to Baja California, Mexico. Roosts located in wind-protected tree groves (eucalyptus, Monterey pine, cypress), with nectar and water sources nearby.	Not Expected	Suitable wintering habitat with a wind-protecting grove of trees is not present.
Syncaris pacifica California freshwater shrimp	FE/SE G2/S2	Endemic to Marin, Napa, and Sonoma counties. Found in low elevation, low gradient streams where riparian cover is moderate to heavy. Shallow pools away from main streamflow. Winter: undercut banks with exposed roots. Summer: leafy branches touching water.	Not Expected	Aquatic freshwater habitats are not present.
Fish				
Acipenser medirostris pop. 1 green sturgeon - southern DPS	FT/None G2T1/S1	Spawning site fidelity. Spawns in the Sacramento, Feather and Yuba Rivers. Presence in upper Stanislaus and San Joaquin Rivers may indicate spawning. Non-spawning adults occupy marine/estuarine waters. Delta Estuary is important for rearing juveniles. Spawning occurs primarily in cool (11-15 C) sections of mainstem rivers in deep pools (8-9 meters) with substrate containing small to medium sized sand, gravel, cobble, or boulder.	Not Expected	Aquatic habitats are not present.
Eucyclogobius newberryi tidewater goby	FE/None G3/S3	Brackish water habitats along the California coast from Agua Hedionda Lagoon, San Diego County to the mouth of the Smith River. Found in shallow lagoons and lower stream reaches, they need fairly still but not stagnant water and high oxygen levels.	Not Expected	Brackish water habitats are not present.

Scientific Name Common Name	Status Fed/State ESA CDFW	Habitat Requirements	Potential to Occur	Rationale
Hesperoleucus venustus subditus southern coastal roach	None/None GNRT2/S2 SSC	Found in the drainages of Tomales Bay and northern San Francisco Bay in the north, and drainages of Monterey Bay in the south.	Not Expected	Aquatic habitats are not present.
Oncorhynchus kisutch pop. 4 coho salmon - central California coast ESU	FE/SE G5T2Q/S2	Federal listing = pops between Punta Gorda and San Lorenzo River. State listing = pops south of Punta Gorda. Require beds of loose, silt-free, coarse gravel for spawning. Also need cover, cool water and sufficient dissolved oxygen.	Not Expected	Aquatic habitats with sufficient flow and substrates are not present.
Oncorhynchus mykiss irideus pop. 8 steelhead - central California coast DPS	FT/None G5T2T3Q/S3	DPS includes all naturally spawned populations of steelhead (and their progeny) in streams from the Russian River to Aptos Creek, Santa Cruz County, California (inclusive). Also includes the drainages of San Francisco and San Pablo Bays.	Not Expected	Aquatic habitats with sufficient flow and substrates are not present.
Pogonichthys macrolepidotus Sacramento splittail	None/None G3/S3 SSC	Endemic to the lakes and rivers of the Central Valley, but now confined to the Delta, Suisun Bay and associated marshes. Slow moving river sections, dead end sloughs. Requires flooded vegetation for spawning and foraging for young.	Not Expected	Aquatic habitats with sufficient flow and substrates are not present.
Spirinchus thaleichthys longfin smelt	FC/ST G5/S1	Euryhaline, nektonic and anadromous. Found in open waters of estuaries, mostly in middle or bottom of water column. Prefer salinities of 15-30 ppt, but can be found in completely freshwater to almost pure seawater.	Not Expected	Estuarine habitats are not present.
Thaleichthys pacificus eulachon	FT/None G5/S1	Found in Klamath River, Mad River, Redwood Creek, and in small numbers in Smith River and Humboldt Bay tributaries. Spawn in lower reaches of coastal rivers with moderate water velocities and bottom of pea-sized gravel, sand, and woody debris.	Not Expected	Estuarine habitats are not present.
Amphibians				

Scientific Name Common Name	Status Fed/State ESA CDFW	Habitat Requirements	Potential to Occur	Rationale
Ambystoma californiense pop. 3 California tiger salamander - Sonoma County DPS	FE/ST G2G3T2/S2 WL	Lives in vacant or mammal-occupied burrows throughout most of the year; in grassland, savanna, or open woodland habitats. Need underground refuges, especially ground squirrel burrows, and vernal pools or other seasonal water sources for breeding.	Not Expected	Aquatic freshwater habitats are not present, and the site is isolated by development.
Dicamptodon ensatus California giant salamander	None/None G2G3/S2S3 SSC	Known from wet coastal forests near streams and seeps from Mendocino County south to Monterey County, and east to Napa County. Aquatic larvae found in cold, clear streams, occasionally in lakes and ponds. Adults known from wet forests under rocks and logs near streams and lakes.	Not Expected	Aquatic freshwater habitats are not present, and the site is isolated by development.
Rana boylii pop. 1 foothill yellow-legged frog - north coast DPS	None/None G3T4/S4 SSC	Northern Coast Ranges north of San Francisco Bay Estuary, Klamath Mountains, and Cascade Range including watershed subbasins (HU 8) Lower Pit, Battle Creek, Thomes Creek, and Big Chico Creek in Lassen, Shasta, Tehama, and Butte Counties. Partly shaded shallow streams and riffles with a rocky substrate in a variety of habitats. Needs at least some cobble-sized substrate for egg-laying and at least 15 weeks to attain metamorphosis.	Not Expected	Aquatic freshwater habitats are not present, and the site is isolated by development.
Rana draytonii California red-legged frog	FT/None G2G3/S2S3 SSC	Lowlands and foothills in or near permanent sources of deep water with dense, shrubby or emergent riparian vegetation. Requires 11-20 weeks of permanent water for larval development. Must have access to estivation habitat.	Not Expected	Aquatic freshwater habitats are not present, and the site is isolated by development.
Taricha rivularis red-bellied newt	None/None G2/S2 SSC	Coastal drainages from Humboldt County south to Sonoma County, inland to Lake County. Isolated population of uncertain origin in Santa Clara County. Lives in terrestrial habitats, juveniles generally underground, adults active at surface in moist environments. Will migrate over 1 km to breed, typically in streams with moderate flow and clean, rocky substrate.	Not Expected	Aquatic freshwater habitats are not present, and the site is isolated by development.

Scientific Name Common Name	Status Fed/State ESA CDFW	Habitat Requirements	Potential to Occur	Rationale
Reptiles				
Emys marmorata western pond turtle	None/None G3G4/S3 SSC	A thoroughly aquatic turtle of ponds, marshes, rivers, streams and irrigation ditches, usually with aquatic vegetation, below 6000 ft elevation. Needs basking sites and suitable (sandy banks or grassy open fields) upland habitat up to 0.5 km from water for egg-laying.	Not Expected	Aquatic habitats with aquatic vegetation are not present, and the site is isolated by development.
Birds				
Accipiter cooperii Cooper's hawk	None/None G5/S4 WL	Woodland, chiefly of open, interrupted or marginal type. Nest sites mainly in riparian growths of deciduous trees, as in canyon bottoms on river flood-plains; also, live oaks.	Not Expected	Woodland habitats with large trees suitable for nesting are not present.
Agelaius tricolor tricolored blackbird	None/ST G1G2/S2 SSC	Highly colonial species, most numerous in Central Valley and vicinity. Largely endemic to California. Requires open water, protected nesting substrate, and foraging area with insect prey within a few km of the colony.	Not Expected	Aquatic habitats with emergent vegetation are not present.
Asio flammeus short-eared owl	None/None G5/S3 SSC	Found in swamp lands, both fresh and salt; lowland meadows; irrigated alfalfa fields. Tule patches/tall grass needed for nesting/daytime seclusion. Nests on dry ground in depression concealed in vegetation.	Not Expected	Suitable swamp and grassland habitats are not present.
Athene cunicularia burrowing owl	None/None G4/S3 SSC	Open, dry annual or perennial grasslands, deserts, and scrublands characterized by low-growing vegetation. Subterranean nester, dependent upon burrowing mammals, most notably, the California ground squirrel.	Not Expected	Suitable grassland habitats are not present, and the site is isolated by development from open dry habitat.
Buteo swainsoni Swainson's hawk	None/ST G5/S4	Breeds in grasslands with scattered trees, juniper-sage flats, riparian areas, savannahs, and agricultural or ranch lands with groves or lines of trees. Requires adjacent suitable foraging areas such as grasslands, or alfalfa or grain fields supporting rodent populations.	Not Expected	Woodland and grassland habitats with large trees suitable for nesting are not present.

Scientific Name Common Name	Status Fed/State ESA CDFW	Habitat Requirements	Potential to Occur	Rationale
Charadrius nivosus nivosus western snowy plover	FT/None G3T3/S3 SSC	Sandy beaches, salt pond levees and shores of large alkali lakes. Needs sandy, gravelly or friable soils for nesting.	Not Expected	Suitable sandy beaches and shores are not present.
Circus hudsonius northern harrier	None/None G5/S3 SSC	Coastal salt and freshwater marsh. Nest and forage in grasslands, from salt grass in desert sink to mountain cienagas. Nests on ground in shrubby vegetation, usually at marsh edge; nest built of a large mound of sticks in wet areas.	Not Expected	Natural habitats suitable for foraging are not present.
Cypseloides niger black swift	None/None G4/S2 SSC	Coastal belt of Santa Cruz and Monterey counties; central and southern Sierra Nevada; San Bernardino and San Jacinto mountains. Breeds in small colonies on cliffs behind or adjacent to waterfalls in deep canyons and sea-bluffs above the surf; forages widely.	Not Expected	Coastal cliff and canyon habitats are not present.
Elanus leucurus white-tailed kite	None/None G5/S3S4 FP	Rolling foothills and valley margins with scattered oaks and river bottomlands or marshes next to deciduous woodland. Open grasslands, meadows, or marshes for foraging close to isolated, dense-topped trees for nesting and perching.	Low Potential	Open habitat with small mammal burrows is present, however the trees in the site are either not tall or dense enough for nesting, and no large stick nests were observed.
Geothlypis trichas sinuosa saltmarsh common yellowthroat	None/None G5T3/S3 SSC	Resident of the San Francisco Bay region, in fresh and salt water marshes. Requires thick, continuous cover down to water surface for foraging; tall grasses, tule patches, willows for nesting.	Not Expected	Aquatic habitats with emergent vegetation are not present.
Laterallus jamaicensis coturniculus California black rail	None/ST G3T1/S2 FP	Inhabits freshwater marshes, wet meadows and shallow margins of saltwater marshes bordering larger bays. Needs water depths of about 1 inch that do not fluctuate during the year and dense vegetation for nesting habitat.	Not Expected	Aquatic habitats with emergent vegetation are not present.
Melospiza melodia pusillula Alameda song sparrow	None/None G5T2T3/S2S3 SSC	Resident of salt marshes bordering south arm of San Francisco Bay. Inhabits Salicornia marshes; nests low in Grindelia bushes (high enough to escape high tides) and in Salicornia.	Not Expected	Aquatic habitats with emergent vegetation are not present.

Scientific Name Common Name	Status Fed/State ESA CDFW	Habitat Requirements	Potential to Occur	Rationale
Melospiza melodia samuelis San Pablo song sparrow	None/None G5T2/S2 SSC	Resident of salt marshes along the north side of San Francisco and San Pablo bays. Inhabits tidal sloughs in the Salicornia marshes; nests in Grindelia bordering slough channels.	Not Expected	Aquatic habitats with emergent vegetation are not present.
Nannopterum auritum double-crested cormorant	None/None G5/S4 WL	Colonial nester on coastal cliffs, offshore islands, and along lake margins in the interior of the state. Nests along coast on sequestered islets, usually on ground with sloping surface, or in tall trees along lake margins.	Not Expected	Coastal Cliff habitats with nesting colonies are not present.
Rallus obsoletus obsoletus California Ridgway's rail	FE/SE G3T1/S1 FP	Salt water and brackish marshes traversed by tidal sloughs in the vicinity of San Francisco Bay. Associated with abundant growths of pickleweed but feeds away from cover on invertebrates from mud-bottomed sloughs.	Not Expected	Aquatic habitats with emergent vegetation are not present.
Riparia riparia bank swallow	None/ST G5/S3	Colonial nester; nests primarily in riparian and other lowland habitats west of the desert. Requires vertical banks/cliffs with fine-textured/sandy soils near streams, rivers, lakes, ocean to dig nesting hole.	Not Expected	Riparian habitats with cliffs and banks are not present.
Mammals				
Antrozous pallidus pallid bat	None/None G4/S3 SSC	Found in a variety of habitats including deserts, grasslands, shrublands, woodlands, and forests. Most common in open, dry habitats with rocky areas for roosting. Roosts in crevices of rock outcrops, caves, mine tunnels, buildings, bridges, and hollows of live and dead trees which must protect bats from high temperatures. Very sensitive to disturbance of roosting sites.	Not Expected	Natural habitats with suitable for roosting structures and cavities are not present.
Aplodontia rufa phaea Point Reyes mountain beaver	None/None G5T2/S2 SSC	Coastal area of Point Reyes in areas of springs or seepages. North-facing slopes of hills and gullies in areas overgrown with sword ferns and thimbleberries.	Not Expected	Natural coastal habitats with suitable understory vegetation are not present.

Scientific Name Common Name	Status Fed/State ESA CDFW	Habitat Requirements	Potential to Occur	Rationale
Corynorhinus townsendii Townsend's big-eared bat	None/None G4/S2 SSC	Occurs throughout California in a wide variety of habitats. Most common in mesic sites, typically coniferous or deciduous forests. Roosts in the open, hanging from walls & ceilings in caves, lava tubes, bridges, and buildings. This species is extremely sensitive to human disturbance.	Not Expected	Natural habitats with suitable for roosting structures and cavities are not present.
Microtus californicus sanpabloensis San Pablo vole	None/None G5T1T2/S1S2 SSC	Saltmarshes of San Pablo Creek, on the south shore of San Pablo Bay. Constructs burrow in soft soil. Feeds on grasses, sedges and herbs. Forms a network of runways leading from the burrow.	Not Expected	Marsh habitats with emergent vegetation are not present.
Reithrodontomys raviventris salt-marsh harvest mouse	FE/SE G1G2/S1S2 FP	Only in the saline emergent wetlands of San Francisco Bay and its tributaries. Pickleweed is primary habitat, but may occur in other marsh vegetation types and in adjacent upland areas. Does not burrow; builds loosely organized nests. Requires higher areas for flood escape.	Not Expected	Marsh habitats with emergent vegetation are not present.
Sorex ornatus sinuosus Suisun shrew	None/None G5T1T2Q/S1S2 SSC	Tidal marshes of the northern shores of San Pablo and Suisun bays. Require dense low-lying cover and driftweed and other litter above the mean hightide line for nesting and foraging.	Not Expected	Marsh habitats with emergent vegetation are not present.
Sorex vagrans halicoetes salt-marsh wandering shrew	None/None G5T1/S1 SSC	Salt marshes of the south arm of San Francisco Bay. Medium high marsh 6-8 ft above sea level where abundant driftwood is scattered among Salicornia.	Not Expected	Marsh habitats with emergent vegetation are not present.

Scientific Name Common Name	Status Fed/State ESA CDFW	Habitat Requirements	Potential to Occur	Rationale
Taxidea taxus American badger	None/None G5/S3 SSC	Most abundant in drier open stages of most shrub, forest, and herbaceous habitats, with friable soils. Needs sufficient food, friable soils and open, uncultivated ground. Preys on burrowing rodents. Digs burrows.	Not Expected	Natural dry open grassland habitats are not present, and the site is isolated by development from open grasslands.

ft. = feet; km = kilometer

Regional Vicinity refers to within a nine-quad search radius of site (in this case, a seven-quad search was conducted).

Status (Federal/State)

FE = Federal Endangered
FT = Federal Threatened
FPT = Federal Proposed Threatened
FD = Federal Delisted
FC = Federal Candidate
SE = State Endangered
ST = State Threatened
SCE = State Candidate Endangered
SD = State Delisted
SSC = CDFW Species of Special Concern
FP = CDFW Fully Protected
WL = CDFW Watch List

Other Statuses

G1 or S1 Critically Imperiled Globally or Subnationally (state)
G2 or S2 Imperiled Globally or Subnationally (state)
G3 or S3 Vulnerable to extirpation or extinction Globally or Subnationally (state)
G4/5 or S4/5 Apparently secure, common and abundant

Additional notations may be provided as follows

T – Intraspecific Taxon (subspecies, varieties, and other designations below the level of species)
Q – Questionable taxonomy that may reduce conservation priority

Dear Ms. Katz:

Kleinfelder is pleased to present this report summarizing our geotechnical study for the proposed new fuel facility project at Costco Wholesale Warehouse No. 141 located at 300 Vintage Way in Novato, California. The purpose of our geotechnical study was to evaluate subsurface soil conditions at the project site to provide geotechnical recommendations for design and construction. The conclusions and recommendations presented in this report are subject to the limitations presented in Section 7.

We appreciate the opportunity to provide geotechnical engineering services to you on this project. If you have any questions regarding this report or if we can be of further service, please do not hesitate to contact Andrea Traum at (408) 595-3275, or Andy Franks, Kleinfelder's Client Account Manager for Costco, at (480) 650-4905.

Respectfully submitted,

KLEINFELDER, INC.

EXECUTIVE SUMMARY

This report presents the results of our geotechnical study for the proposed fuel facility project at Costco Wholesale Warehouse No. 141 located at 300 Vintage Way in Novato, California. The purpose of our study was to evaluate subsurface soil conditions to provide geotechnical recommendations for design and construction. We understand that Costco plans to construct a new fuel facility on the southwest corner of the existing warehouse parking lot. The new fueling facility will consist of four gasoline refueling islands, three gasoline underground storage tanks (USTs), a fuel additive UST, controller building, and a canopy structure. In addition, asphalt concrete and Portland cement concrete pavements, and curbs will also be constructed around the new facility. Our geotechnical study was based on the Costco Wholesale Development Requirements (CWDRs), Version 2018, dated October 26, 2018.

Subsurface conditions at the site were explored by drilling four borings to depths between approximately 7 and 40 feet below the existing ground surface (bgs). Within the canopy area toward the warehouse, subsurface materials encountered consisted of fill underlain by alluvial deposits, Bay Mud, and siltstone bedrock of the Franciscan Assemblage. As observed in Boring KB-2, the fill extended to depths of approximately 3 to 4 feet bgs and consists generally of medium stiff sandy lean clay with gravel. The alluvial soils consist of interbedded layers of medium stiff to very stiff sandy clays and medium dense clayey sands with gravel to an observed depth of 17½ feet bgs. Bay Mud was encountered beneath the alluvial soils at depths between approximately 17½ to 25 feet bgs and consisted of very soft, fat clay. Beneath the Bay Mud, a stiffer elastic silt layer was observed above siltstone bedrock, which was encountered a depth of approximately 30 feet bgs.

Subsurface materials encountered in the UST area consisted of fill over a thin layer of alluvium underlain by shallow siltstone bedrock. As observed in Borings KB-1, KB-3, and MW-1, fill within this area consisted generally of medium stiff sandy lean clay with gravel and extended to depths of approximately 4 to 5 feet bgs. A thin layer of alluvial soils was observed beneath the fill and consisted generally of medium stiff to very stiff sandy clays. Beneath the fill and alluvial soils, siltstone bedrock of the Franciscan Assemblage was encountered at depths between approximately 5 to 7½ feet bgs. The bedrock was weak and highly weathered.

During our subsurface exploration, perched groundwater was encountered at 3 to 5 feet bgs in Borings MW-1 and KB-3, respectively, in the area of the USTs where shallow bedrock was

© 2020 Kleinfelder

observed. Groundwater was not measured in Borings KB-1 and KB-2 due to drilling with mud rotary methods. However, based on prior field explorations for a proposed warehouse expansion, groundwater is anticipated to approximately 10 feet bgs where the deeper alluvium and Bay Mud was observed.

Based on the results of our field exploration, laboratory testing, and geotechnical analyses, it is our professional opinion that the proposed project is geotechnically feasible, provided the recommendations presented in this geotechnical report are incorporated into the project design and construction. The following key items were developed from our study.

- The primary geotechnical consideration for site development is the excavatability of bedrock and the presence of shallow groundwater. Bedrock was encountered at depths of approximately 5 to 7½ feet below grade in the area of the USTs. The bedrock material consisted generally of a weak and highly weathered siltstone. The bedrock is considered excavatable; however, cemented/stronger layers may be present, and a large hydraulic excavator equipped with either a rock ripping attachment or a pneumatic hammer may be needed to break up and excavate the bedrock.
- Due to the presence of shallow groundwater, we do not recommend open cutting the UST excavation. The UST excavation should be shored. Selection and design of temporary shoring systems should be the responsibility of the contractor. The shoring system selected should be compatible with excavation dewatering systems.
- Temporary dewatering will be required at the time of the installation of the UST and deep utilities. Dewatering of excavations may be achieved by using localized sumps and trenches for nuisance water if “watertight” shoring is used. If groundwater inflows are significant, a well-point or eductor pump dewatering system may be required. As an alternative to dewatering, the USTs may be “wet set.”
- The proposed fuel facility may be supported on a conventional shallow foundation system. As an alternative, the canopy may be supported on drilled piles. Piles should be founded within the bedrock underlying the Bay Mud.
- For areas with new pavements, we recommend that the exposed subgrade be proof-rolled with heavy construction equipment (e.g. loader or smooth-drum roller) to disclose areas of soft and yielding material after the area has been stripped of soft earth materials and debris. Where soft or yielding material are observed, the material should be overexcavated and replaced with structural fill.

© 2020 Kleinfelder

- Based on past experience, it is common to encounter wet, unstable soils upon removal of site pavements or flatwork as a result of subsurface moisture becoming trapped beneath relatively impervious asphalt concrete or Portland cement concrete surfaces. Wet, unstable subgrade conditions will likely be encountered during site grading activities. The contractor should anticipate that pumping subgrade conditions will be encountered, and the subgrade will need to be stabilized.
- Due to compaction difficulties, we do not recommend compacting the onsite clayey soils to 95 percent of the maximum dry unit weight (ASTM D1557), as required in the CWDRs. On-site clayey soils should be compacted to at least 90 percent of the soil's maximum dry unit weight (ASTM D1557). Compacting the on-site soils to at least 90 percent relative compaction will achieve the necessary strength assumed in our design recommendations. The upper 12 inches below pavement should be compacted to 95 percent of the maximum dry unit weight.
- Due to poor draining subgrade conditions, we recommend drainage inlets and catch basins include pavement underdrains as shown in Detail 16_16 of the CWDRs.
- The minimum resistivity of a soil sample taken at a depth of approximately 3 feet below grade indicates that the soils are extremely corrosive to metals. The concentrations of soluble sulfate in the soil samples analyzed are "low" with respect to sulfate attack. However, based on prior testing at the Costco site for other projects (Kleinfelder, 2018), we recommend that the soils be classified as Class S2 based on ACI 318-14 Table 19.3.1.1. Also, because the site is in a coastal (saltwater) environment, reinforcing steel in concrete structures and pipes in contact with soil and groundwater should be protected from chloride attack. The level of protection should be for reinforcement exposed to seawater, which is considered a "severe" environment (Class C2, ACI 318-14 Table 19.3.1.1).

The findings, conclusions, and recommendations presented in this executive summary should not be relied upon without consulting our geotechnical report for more detailed description of the geotechnical evaluation performed by Kleinfelder. The conclusions and recommendations presented in this report are subject to the limitations presented in Section 7.

1 INTRODUCTION

This report presents the results of our geotechnical study for the proposed fuel facility project at Costco Wholesale Warehouse No. 141 located at 300 Vintage Way in Novato, California. The location of the project site is presented on Figure 1, Site Vicinity Map. The purpose of our study was to evaluate subsurface soil conditions to provide geotechnical recommendations for design and construction. The scope of our services was presented in our proposal titled "Proposal for Geotechnical Study, Proposed New Fuel Facility, Costco Wholesale Warehouse No. 141, 300 Vintage Way, Novato, California 94945, CW#19-0843," dated February 4, 2020. Our geotechnical study was based on the Costco Wholesale Development Requirements (CWDRs), Version 2018, dated October 26, 2018.

This report includes a description of the work performed, a discussion of the subsurface and surficial conditions observed at the site, and recommendations developed from our engineering analyses of field and laboratory data.

1.1 PROJECT DESCRIPTION

Kleinfelder understands Costco plans to construct a new fuel facility on the southwest corner of the existing warehouse parking lot. The new fueling facility will consist of four gasoline refueling islands, three gasoline underground storage tanks (USTs), a fuel additive UST, controller building, and a canopy structure. In addition, asphalt concrete and Portland cement concrete pavements, and curbs will also be constructed around the new facility. The proposed location is shown on Figure 2, Site Exploration Map.

Based on our experience with fuel facilities, the canopy for the service islands is typically founded on spread footings and the design is typically governed by overturning moments from wind and seismic loading. Typical column dead loads are anticipated to be approximately 4 kips and typical live loads are approximately 25 kips, which result in bearing pressures of less than 1,000 pounds per square foot (psf).

The tank excavation is anticipated to be approximately 16 to 18 feet deep. The tanks are planned to be placed on gravel bedding and anchored with "deadmen" to resist potential buoyant forces. Grading plans were not provided; however, we anticipate the finished grades surrounding the new facility will generally match the existing grades with maximum grade changes of a foot, or less.

© 2020 Kleinfelder

1.2 SCOPE OF SERVICES

The scope of our limited geotechnical study consisted of a literature review, subsurface explorations, geotechnical laboratory testing, engineering evaluation and analysis, and preparation of this report. Studies to assess environmental hazards that may affect the soil and groundwater at the site were beyond our geotechnical scope of work. A description of our scope of services performed for the geotechnical portion of the project follows.

1.2.1 Task 1 – Background Data Review

We reviewed readily-available published and unpublished geologic literature in our files and the files of public agencies, including selected publications prepared by the California Geological Survey (formerly known as the California Division of Mines and Geology) and the U.S. Geological Survey (USGS). We also reviewed readily available seismic and faulting information, including data for designated earthquake fault zones as well as our in-house database of faulting in the general site vicinity.

In addition, we reviewed previous Kleinfelder geotechnical reports for a proposed off-site fuel facility (2018), which was to be located south of Vintage Way, and a warehouse building expansion (2004). Pertinent boring logs and laboratory data from the 2004 report are included in Appendix A and B.

1.2.2 Task 2 – Field Exploration

The site was explored by drilling 4 soil borings located within the proposed fuel facility area within an area of existing asphalt parking. One boring was located within the fuel canopy area, two borings were within the underground storage tank (UST) excavation area and the final boring was located within the queueing area. Borings were drilled to a maximum depth of approximately 40 feet bgs or to practical bedrock refusal. Borings within the UST area were drilled to a maximum depth of 20 feet bgs due to shallow bedrock conditions. The borings were drilled by Exploration Geo-services of San Jose, California using truck-mounted hollow-stem auger drill rig with rotary wash capabilities. The logs of the borings are included in Appendix A. The approximate locations of the explorations are presented on Figure 2, Site Exploration Plan.

© 2020 Kleinfelder

Prior to commencement of the fieldwork, various geophysical techniques were used at the exploration locations to identify potential conflicts with subsurface structures. Exploration locations were also cleared for buried utilities through Underground Service Alert (USA).

A Kleinfelder engineer supervised the field operations and logged the explorations. Selected bulk and drive samples were retrieved and transported to our laboratory for further evaluation. The number of blows necessary to drive a Standard Penetration Test (SPT) sampler or a California-type sampler was recorded. Appendix A presents a description of the field exploration program, exploration logs, and a legend of terms and symbols used on the logs. Soil descriptions used on the logs result from field observations and data, as well as from laboratory test data. Stratification lines on the logs represent the approximate boundary between soil and/or rock types, and the actual transition may vary and can be gradual.

1.2.3 Task 3 – Laboratory Testing

Laboratory testing was performed on selected samples to evaluate the physical and engineering characteristics of the subsurface soils. Laboratory testing consisted of in-situ moisture content and dry density, Atterberg limits, sieve analysis, R-value and preliminary corrosivity series (pH, minimum resistivity, and soluble sulfate and chloride). A summary of the testing and results are presented in Appendix B.

1.2.4 Task 4 – Geotechnical Analyses

Field and laboratory data was analyzed in conjunction with the existing site conditions, preliminary layout, and anticipated structural loads to provide geotechnical recommendations for design and construction of the proposed facility. We evaluated feasible foundation systems, including constructability and compatibility constraints, pavement support, and earthwork. Seismic design parameters based on the 2019 California Building Code (CBC) are also presented.

1.2.5 Task 5 – Report Preparation

This report summarizes the work performed, data acquired, and our findings, conclusions, and geotechnical recommendations for the design and construction. Our report includes the following items:

© 2020 Kleinfelder

- Site vicinity map and exploration location map showing the approximate boring locations from current and previous geotechnical studies;
- Logs of the current and previous borings;
- Results of current and previous laboratory tests;
- Discussion of general site conditions;
- Discussion of general subsurface conditions as encountered in our field exploration conducted for this study, including the depth to groundwater and bedrock;
- Recommendations for seismic design parameters in accordance with the 2019 CBC;
- Recommendations for site preparation, earthwork, temporary slope inclinations, fill placement, and compaction specifications;
- Recommendations for the excavation characteristics of subsurface soil deposits;
- Recommendations for the UST excavation side slopes, including temporary shoring recommendations and a discussion of groundwater impacts;
- Recommendations for foundation design (spread footings and drilled piles), allowable bearing capacities, embedment depths, and settlement estimates under various loading conditions;
- Recommendations for flexible and rigid pavement structural sections for light and heavy-duty pavement based on Equivalent Single Axle loading (ESALs), as stated in the CWDRs; and
- Preliminary evaluation of the corrosion potential of the on-site soils

© 2020 Kleinfelder

2 SITE CONDITIONS

2.1 SITE DESCRIPTION

The existing Costco Warehouse site is located roughly half a mile north of the junction of US Highway 101 and California Highway 37. The warehouse is bordered by a pond to the south and wetland areas to the east. The proposed new fuel facility site will be located on the southwestern corner of the existing parking lot. The area of the proposed fuel facility is bounded by Vintage Way to the south and west, the Costco Warehouse to the east, and existing asphalt parking to the north. The location of the fuel facility with respect to the warehouse is presented on Figure 2.

2.2 SURFACE DRAINAGE CONDITIONS

Site drainage is currently by sheet flow into on-site catch basins and storm drains, or onto the adjacent bordering streets and into the local storm-drain system.

© 2020 Kleinfelder

3 GEOLOGY AND SUBSURFACE CONDITIONS

3.1 SITE GEOLOGY

Based on our review of available literature and the results of our field exploration, the site is underlain primarily by alluvial soils underlain by Bay Mud and outcroppings of Franciscan Assemblage bedrock. Geologic mapping by Blake et al (2000) indicates that Cretaceous-age sandstone and shale underlie the hills to the SW of the project site. This bedrock surface appears to plunge to the E-NE beneath the site as shown on the attached Figure 3. The site is in an area covered originally by young Bay Mud deposits and some alluvium derived from Novato Creek to the north of Rowland Blvd. Development from the 1970s to the present, particularly for the Vintage Oaks shopping center, has necessitated the placement of various thicknesses of fill to provide building pads and roadways above the base level of the marsh deposits.

The mapping by Blake et al (2000) shows bedding attitudes in the outcrops on the west side of Highway 101 from the Costco site. Bedding within the bedrock strikes north to northeast and dips moderately to the east and southeast. Descriptions of bedrock lithology and seismic velocities (Vp) from Geology and Geologic Hazards of the Novato Area (Rice, 1973) indicate two subunits of the Franciscan Assemblage bedrock described by Blake et al (2000). The first is a thinly bedded unit made up predominantly of thin beds of gray or black shale that alternate rhythmically with thin beds of light colored, fine-grained sandstone. The second is a massive sandstone, which is characteristically light colored, usually pale buff at or near the surface. It, is composed principally of relatively coarse, angular to subangular sand grains of quartz and feldspar, commonly termed an “arkose”. Bedding planes are seldom visible with widely spaced fracture planes of joints and minor faults are commonly more evident than bedding. The unit observed in our borings and the outcrops to the west describe the shale unit the best.

3.2 SUBSURFACE CONDITIONS

Subsurface conditions at the site were explored by drilling four borings to depths between approximately 7 and 40 feet bgs. Conditions varied between the canopy area and the Underground Storage Tank (UST) excavation area for the new fuel facility. A generalized cross section of the subsurface conditions is presented on Figure 3, Cross Section A-A’. Detailed descriptions of the deposits are provided below and in our boring logs presented in Appendix A.

© 2020 Kleinfelder

3.2.1 Canopy Fueling Area

Subsurface materials encountered in the canopy fueling area consisted of fill underlain by alluvial deposits, Bay Mud, and siltstone bedrock of the Franciscan Assemblage. As observed in Boring KB-2, the fill extended to depths of approximately 3 to 4 feet bgs and consists generally of medium sandy lean clay with gravel. The alluvial soils consist of interbedded layers of medium stiff to very stiff sandy clays and medium dense clayey sands with gravel to an observed depth of 17½ feet bgs. Bay Mud was encountered beneath the alluvial soils at depths between approximately 17½ to 26 feet bgs and consisted of very soft, fat clay. Beneath the Bay Mud, a stiffer elastic silt layer was observed above siltstone bedrock, which was encountered a depth of approximately 30 feet bgs.

3.2.2 Underground Storage Tank (UST) Area

Subsurface materials encountered in the UST area consisted of fill over a thin layer of alluvium underlain by shallow siltstone bedrock. As observed in Borings KB-1, KB-3, and MW-1, fill within this area consisted generally of medium stiff sandy lean clay with gravel and extended to depths of approximately 4 to 5 feet bgs. A thin layer of alluvial soils was observed beneath the fill and consisted generally of medium stiff to very stiff sandy clays. Beneath the fill and alluvial soils, siltstone bedrock of the Franciscan Assemblage was encountered at depths between approximately 5 to 7½ feet bgs. The bedrock was weak and highly weathered.

3.3 GROUNDWATER

During our subsurface exploration, perched groundwater was encountered at 3 to 5 feet bgs in Borings MW-1 and KB-3, respectively, in the area of the USTs where shallow bedrock was observed. Groundwater was not measured in Borings KB-1 and KB-2 due to drilling with mud rotary methods. However, based on prior field explorations for a proposed warehouse expansion, groundwater is anticipated to approximately 10 feet bgs where the deeper alluvium and Bay Mud was observed.

Fluctuations of the groundwater level, localized zones of perched water, and increased soil moisture content should be anticipated during and following the rainy season. Irrigation of landscaped areas on or adjacent to the site can also cause a fluctuation of local groundwater levels.

© 2020 Kleinfelder

4 CONCLUSIONS AND RECOMMENDATIONS

4.1 GENERAL

Based on the results of our field exploration, laboratory testing and engineering analyses conducted during this study, it is our professional opinion that the proposed project is geotechnically feasible, provided the recommendations presented in this report are incorporated into the project design and construction.

- The primary geotechnical consideration for site development is the excavatability of bedrock and the presence of shallow groundwater. Bedrock was encountered at depths of approximately 5 to 7½ feet below grade in the area of the USTs. The bedrock material consisted generally of a weak and highly weathered siltstone. The bedrock is considered excavatable; however, cemented/stronger layers may be present, and a large hydraulic excavator equipped with either a rock ripping attachment or a pneumatic hammer may be needed to break up and excavate the bedrock.
- Due to the presence of shallow groundwater, we do not recommend open cutting the UST excavation. The UST excavation should be shored. Selection and design of temporary shoring systems should be the responsibility of the contractor. The shoring system selected should be compatible with excavation dewatering systems.
- Temporary dewatering will be required at the time of the installation of the UST and deep utilities. Dewatering of excavations may be achieved by using localized sumps and trenches for nuisance water if “watertight” shoring is used. If groundwater inflows are significant, a well-point or eductor pump dewatering system may be required. As an alternative to dewatering, the USTs may be “wet set.”
- The proposed fuel facility may be supported on a conventional shallow foundation system. As an alternative, the canopy may be supported on drilled piles. Piles should be founded within the bedrock underlying the Bay Mud.
- For areas with new pavements, we recommend that the exposed subgrade be proof-rolled with heavy construction equipment (e.g. loader or smooth-drum roller) to disclose areas of soft and yielding material after the area has been stripped of soft earth materials and debris. Where soft or yielding material are observed, the material should be overexcavated and replaced with structural fill.

© 2020 Kleinfelder

- Based on past experience, it is common to encounter wet, unstable soils upon removal of site pavements or flatwork as a result of subsurface moisture becoming trapped beneath relatively impervious asphalt concrete or Portland cement concrete surfaces. Wet, unstable subgrade conditions will likely be encountered during site grading activities. The contractor should anticipate that pumping subgrade conditions will be encountered, and the subgrade will need to be stabilized.
- Due to compaction difficulties, we do not recommend compacting the onsite clayey soils to 95 percent of the maximum dry unit weight (ASTM D1557), as required in the CWDRs. On-site clayey soils should be compacted to at least 90 percent of the soil's maximum dry unit weight (ASTM D1557). Compacting the on-site soils to at least 90 percent relative compaction will achieve the necessary strength assumed in our design recommendations. The upper 12 inches below pavement should be compacted to 95 percent of the maximum dry unit weight.
- Due to poor draining subgrade conditions, we recommend drainage inlets and catch basins include pavement underdrains as shown in Detail 16_16 of the CWDRs.
- The minimum resistivity of a soil sample taken at a depth of approximately 3 feet below grade indicates that the soils are extremely corrosive to metals. The concentrations of soluble sulfate in the soil samples analyzed are "low" with respect to sulfate attack. However, based on prior testing at the Costco site for other projects, we recommend that the soils be classified as Class S2 based on ACI 318-14 Table 19.3.1.1. Also, because the site is in a coastal (saltwater) environment, reinforcing steel in concrete structures and pipes in contact with soil and groundwater should be protected from chloride attack. The level of protection should be for reinforcement exposed to seawater, which is considered a "severe" environment (Class C2, ACI 318-14 Table 19.3.1.1).

The following opinions, conclusions, and recommendations are based on the properties of the materials encountered in the borings, the results of the laboratory-testing program, and our engineering analyses performed. Our recommendations regarding the geotechnical aspects of the design and construction of the project are presented in the following sections.

© 2020 Kleinfelder

4.2 SEISMIC DESIGN CONSIDERATIONS

4.2.1 2019 CBC Seismic Design Parameters

According to the 2019 California Building Code, every structure, and portion thereof, including non-structural components that are permanently attached to structures and their supports and attachments, shall be designed and constructed to resist the effects of earthquake motions in accordance with ASCE 7-16, excluding Chapter 14 and Appendix 11A. The Seismic Design Category for a structure may be determined in accordance with Section 1613.3.5 of the 2019 CBC.

Based on information obtained from the investigation, published geologic literature and maps, and on our interpretation of the 2019 CBC criteria, it is our opinion that the project site may be classified as Site Class C, Soft Rock for the area of the USTs and Site Class E, Soft Clay Soil for the area of the proposed canopy according to Section 1613.3.2 of 2019 CBC and Table 20.3-1 of ASCE/SEI 7-16. Approximate coordinates for the site are noted below.

Latitude: 38.08649 °N
Longitude: 122.55134 °W

The Risk-Targeted Maximum Considered Earthquake (MCER) mapped spectral accelerations for 0.2 seconds and 1 second periods (S_s and S_1) were estimated using Section 1613.3 of the 2019 CBC and the California Office of Statewide Planning and Development (OSHPD) seismic design maps web-based application (available at https://seismicmaps.org/). In accordance with Section 11.4.8 of ASCE 7-16, a site-specific ground motion analysis is required for Site Class E sites with an S_1 greater than 0.2 g or a S_s greater than 1.0. However, a site-specific ground motion analysis is not required if the exceptions noted in Section 11.4.8 are incorporated into the structural design. We have assumed that these exceptions will be used, which should be verified by the project structural engineer during final design. The 2019 CBC Seismic Design Parameters (non-site-specific) for the canopy and UST area are summarized in the following tables.

© 2020 Kleinfelder

Table 1
2019 CBC Seismic Design Parameters for Canopy

DESIGN PARAMETER	RECOMMENDED VALUE
Site Class	E
S_s (g)	1.500
S_1 (g)	0.600
F_a	1.200
F_v	N/A*
S_{MS} (g)	1.800
S_{M1} (g)	N/A
S_{DS} (g)	1.200
S_{D1} (g)	N/A
PGA_M (g)	0.651

* Section 11.4.8 of ASCE 7-16 requires a site-specific ground motion hazard analysis be performed for Site Class E sites unless the exceptions noted in Section 11.4.8 are taken. If these exceptions are taken, then a F_v value of 2.0 could be used only to calculate the T_s value.

Table 2
2019 CBC Seismic Design Parameters for UST Area

DESIGN PARAMETER	RECOMMENDED VALUE
Site Class	C
S_s (g)	1.500
S_1 (g)	0.600
F_a	1.200
F_v	1.400
S_{MS} (g)	1.800
S_{M1} (g)	0.840
S_{DS} (g)	1.200
S_{D1} (g)	0.560
PGA_M (g)	0.700

4.2.2 Liquefaction and Seismic Settlement

The term liquefaction describes a phenomenon in which saturated, cohesionless soils temporarily lose shear strength (liquefy) due to increased pore water pressures induced by strong, cyclic ground motions during an earthquake. Structures founded on or above potentially liquefiable soils may experience bearing capacity failures due to the temporary loss of foundation support, vertical settlements (both total and differential), and/or undergo lateral spreading. The factors known to influence liquefaction potential include soil type, relative density, grain size, confining pressure, depth to groundwater, and the intensity and duration of the seismic ground shaking. Liquefaction

© 2020 Kleinfelder

is most prevalent in loose to medium dense, silty, sandy, and gravelly soils below the groundwater table. Based on our field explorations did not encounter loss cohesionless soils within our soil borings. Therefore, the potential for liquefaction and its adverse effects (i.e., seismic settlement) is not considered a hazard at the site.

Seismic compression results from the accumulation of contractive volumetric strains in unsaturated soil during earthquake shaking. Loose to medium dense granular material with no fines or with low plasticity fines are most susceptible to seismic compression. Based on the density and composition of the underlying soils/bedrock, the potential for seismic compression is considered to be very low.

© 2020 Kleinfelder

4.3 FOUNDATIONS

4.3.1 General

The proposed fuel facility may be supported on a conventional shallow foundation system. As an alternative, the canopy may be supported on drilled piles. Piles should be founded within the bedrock underlying the Bay Mud. If deep foundations are desired, pile design recommendations can be provided. Light pole foundations may be founded on short drilled piles.

4.3.2 Conventional Shallow Foundations

Allowable Soil Bearing Pressure

We understand that new spread footing foundations will be embedded approximately 6 to 7 feet below the finished grade. Spread footings founded on existing soils may be designed for a net allowable soil bearing pressure of 1,500 psf for dead plus sustained live loads. The above bearing pressures can be increased to 3,000 psf used for short term load conditions for seismic loads. The footing dimension and reinforcement should be designed by the structural engineer; however, continuous footings should have minimum widths of 18 inches.

Estimated Settlement

We estimate total static settlement for foundations designed and constructed in accordance with the recommendations presented above to be approximately ¾ inch. Differential static settlement between similarly loaded footings is estimated to be less than ½ inch over 50 feet.

Lateral Resistance

Lateral load resistance may be derived from passive resistance along the vertical sides of the footings, friction acting at the base of the footing, or a combination of the two. An allowable passive resistance of 250 psf per foot of depth may be used for design. Allowable passive resistance values should not exceed 2,500 psf. An allowable coefficient of friction value of 0.30 between the base of the footings and the engineered fill soils can be used for sliding resistance using the dead load forces. Friction and passive resistance may be combined without reduction. We recommend that the first foot of soil cover be neglected in the passive resistance calculations if the ground surface is not protected from erosion or disturbance by a slab, pavement or in a similar manner.

© 2020 Kleinfelder

4.3.3 Short Drilled Pile Foundations (Light Poles)

Axial Capacity

The compressive axial capacity of drilled piles may be estimated based on an average allowable skin friction capacity of 300 pounds per square foot. The upper one foot of the skin friction capacity should be ignored. The uplift capacity may be estimated as 70 percent of the allowable compressive axial capacity. A one-third increase in the allowable capacities may be used for transient loading conditions such as wind or seismic loads.

Settlement

Static settlement of the proposed light poles supported on drilled piles, as recommended, is estimated to be less than ½ inch.

Lateral Resistance

The drilled pile foundations lateral resistance can be designed in general accordance with Section 1807.3 of the 2016 CBC. We recommend a lateral soil bearing pressure of 250 psf per foot of depth below grade. The total lateral soil bearing pressure should not exceed 2,500 psf per pile. Since drilled piles will act as isolated pole foundations, the allowable lateral soil bearing pressure may be increased by a factor of 2 for short-term lateral loads provided the structure will not be adversely affected by ½ inch of lateral movement at the ground surface.

4.4 EXTERIOR FLATWORK

Prior to casting exterior flatwork, the subgrade soils should be scarified, moisture conditioned, and recompacted to at least as recommended in Section 4.2.2. Additionally, all flatwork should be underlain at a minimum by 4 inches of aggregate base moisture conditioned to at least the optimum moisture content and compacted to not less than 95 percent relative compaction (ASTM D1557). Flatwork should be at least four inches thick. Flatwork subjected to wheel loads should be designed in accordance with Section 4.6.

Careful control of the water/cement ratio should be performed to avoid shrinkage cracking due to excess water or poor concrete finishing or curing. Unreinforced slabs should not be built in areas where further saturation may occur following construction.

© 2020 Kleinfelder

4.5 SITE DRAINAGE

Foundation and slab performance depends greatly on proper irrigation and how well runoff water drains from the site. This is especially true for this site where expansive soils subjected to cycles of wetting and drying potentially may cause significant distress to pavements, flatwork, and structures. As such, we recommend that good drainage be provided away from structures and other improvements as discussed below. Drainage should be maintained both during construction and over the entire life of the project. The ground surface around structures should be graded such that water drains rapidly away from structures without ponding. The surface gradient needed to do this depends on the surface type and should follow CWDRs (Costco, 2018).

Due to poor draining subgrade conditions, we recommend drainage inlets and catch basins include pavement underdrains as shown in Detail 16_16 of the CWDRs. Drains should be designed and constructed per Costco's standard details and laterals should extend at least 15 feet from the catch basins.

We recommend that landscape planters either not be located adjacent to buildings and pavement areas or be isolated and properly drained to area drains such that cycles of wetting and drying do not impact pavements, flatwork, and other structures. Drought resistant plants and minimum watering are recommended for planters, if used. No planters should be installed immediately adjacent to structures unless they are water-proofed and have a drainpipe connected to an area drain outlet. Planters should be built such that water exiting from them will not seep into the foundation areas or beneath slabs and pavement. Roof water should be directed to fall on hardscape areas sloping to an area drain, or roof gutters and downspouts should be installed and routed to area drains. Roof downspouts and their associated drains should be isolated from other subdrain systems, where used, to avoid flooding. In any event, maintenance personnel should be instructed to keep areas uniformly moist throughout the life of the project (e.g. limit or eliminate cycles of wetting and drying) as cycles of wetting and drying will cause distress in surrounding improvements. Should excessive irrigation, waterline breaks or unusually high rainfall occur, saturated zones and "perched" groundwater may develop. Consequently, the site should be graded so that water drains away readily without saturating the foundation or landscaped areas. Potential sources of water such as water pipes, drains, and the like should be frequently examined for signs of leakage or damage. Any such leakage or damage should be promptly repaired. Wet utilities should also be designed to be watertight and should be inspected and repaired as needed.

© 2020 Kleinfelder

4.6 STORMWATER MANAGEMENT

We have evaluated the potential for storm water infiltration/percolation into the subgrade soils at the subject project site. Based on the shallow groundwater levels (between 3 and 10 feet below grade) and presence of shallow bedrock encountered during our field exploration, infiltration is not considered feasible at this site. We recommend alternatives to infiltration Best Management Practices (BMPs), such as bio-filtration/bio-retention systems (bio-swales and planter boxes), be implemented at the project site.

If bio-filtration/bio-retention systems are employed, we recommend that the BMPs be built such that water exiting from them will not seep into the foundation areas or beneath slabs and pavement. Liners should be implemented to prevent water intrusion into the subsurface soils and all BMPs should be designed with a subdrain outlet to divert water away in the event of an overflow. If planters are located within 10 feet of structures or foundations, or adjacent to slabs and pavements, then some means of diverting water away from the structures, foundation soils, or soils that support slabs and pavements would be required, such as lining the planters.

4.7 PAVEMENTS

The required pavement structural sections will depend on the expected wheel loads, volume of traffic, and subgrade soils. We have provided asphalt concrete pavement sections for traffic indices provided in the CWDRs (Costco, 2018). Positive drainage of the paved areas should be provided since moisture infiltration into the subgrade may decrease the life of pavements. Curbing located adjacent to paved areas should be founded in the subgrade, not the aggregate base, in order to provide a cutoff, which reduces water infiltration into the base course.

The following pavement sections are based on the soil conditions encountered during our field investigation, our assumptions regarding final site grades, and limited laboratory testing.

4.7.1 Costco Design Parameters

We developed pavement design recommendations using traffic indices provided in the CWDRs (2018) based on the following assumptions:

© 2020 Kleinfelder

- A 20-year pavement design life;
- Light-duty pavements subject to 6,600 passenger vehicle trips per year (Traffic Index of 5.0);
- Heavy-duty pavements subject to 30 tractor-trailer truck trips per day (Traffic Index of 7.0);
- For asphalt concrete pavements: an R-value of 5 based on laboratory testing; and
- For Portland cement concrete (PCC) Pavements: a 28-day flexural strength (modulus of rupture determined by the third-point method) of at least 550 pounds per square inch (psi) (approximate compressive strength of 4,000 psi); a modulus of subgrade reaction (k value) of 75 pounds per square inch per inch (pci); and interlock at the control joints.

4.7.2 Asphalt Concrete Pavement

We have developed new asphalt concrete pavement, also referred to as Hot Mix Asphalt (HMA) pavements sections in accordance the Caltrans Highway Design Manual in lieu of the Asphalt Institute Manual Series (MS-1) so that the pavement structural sections are somewhat comparable to the existing sections. HMA should conform to requirements of the Costco Wholesale Specification Section 321216, Asphalt Paving. Table 3 presents recommended HMA pavement sections. The designer should select the appropriate pavement sections based on project requirements. Prior to placement of aggregate base, pavement subgrade should be prepared in accordance with Section 5.2.2.

Table 3
Asphalt Concrete Pavement Sections
(Design R-Value = 5)

Traffic Use	Traffic Index, TI	Asphalt Concrete* (inches)	Aggregate Base (inches)
Light-Duty Pavement	5.0	4.0	7.5
Heavy-Duty Pavement	7.0	5.0	13.5

*rounded to the nearest ½ inch.

4.7.3 Asphalt Performance Grade Binder

An asphalt performance grade (PG) binder of 64-10 should be used for the project. This recommendation was developed in accordance with Costco Wholesale Asphalt Paving

© 2020 Kleinfelder

Specification Section 321216. Air temperature data nearest the project site was used with the MERRA Climate Data option and the PG binder was selected using the FHWA program LTTPBind Online web-based tool based on the AASHTO M323-13 standard. The high-end and low-end temperature rating was selected to provide a reliability of at least 98 and 90 percent, respectively.

4.7.4 Portland Cement Concrete Pavement

We designed PCC pavement in accordance with the Portland Cement Association (PCA) Thickness Design for Concrete Pavements (PCA, 1984) using the design parameters stated above. For heavy-duty pavements, we recommend that PCC pavement should be comprised of 8.0 inches of PCC with 6.0 inches of aggregate base. Prior to placement of aggregate base, pavement subgrade should be prepared in accordance with Section 5.2.2.

Longitudinal and transverse joint spacing should not exceed 12 feet and 15 feet, respectively. Joint details should conform to PCA guidelines. Expansion joints in concrete slabs should be sealed with petroleum resistant sealant to prevent minor releases from impacting subsurface soil.

4.7.5 Aggregate Base

Aggregate base materials should meet current Caltrans specifications for Class 2 aggregate base. Please note that Caltrans Class 2 aggregate base may utilize recycled materials. The use of recycled material requires Costco's approval.

4.8 SOIL CORROSION

A preliminary evaluation of the corrosion potential of the on-site soils to steel and buried concrete was completed. Laboratory testing was performed on two soil samples to evaluate pH, minimum resistivity, chloride and soluble sulfate content. The test results are presented in Table 4.

Table 4
Corrosion Test Results

Boring	Depth (ft)	Minimum Resistivity (ohm-cm)	pH	Soluble Sulfate Content (ppm)	Soluble Chloride Content (ppm)
KB-2	3.0	956	8.7	138	26

© 2020 Kleinfelder

These tests are only an indicator of soil corrosivity for the samples tested. Other soils found on site may be more, less, or of a similar corrosive nature. Imported fill materials should be tested to confirm that their corrosion potential is not more severe than those noted.

The minimum resistivity of a soil sample taken at a depth of approximately 3 feet below grade indicates that the soils are extremely corrosive to metals. The concentrations of soluble sulfate in the soil samples analyzed are “low” with respect to sulfate attack. However, based on prior testing at the Costco site for other projects (Kleinfelder, 2018), we recommend that the soils be classified as Class S2 based on ACI 318-14 Table 19.3.1.1. Also, because the site is in a coastal (saltwater) environment, reinforcing steel in concrete structures and pipes in contact with soil and groundwater should be protected from chloride attack. The level of protection should be for reinforcement exposed to seawater, which is considered a “severe” environment (Class C2, ACI 318-14 Table 19.3.1.1).

Kleinfelder’s scope of services does not include corrosion engineering and, therefore, a detailed analysis of the corrosion test results is not included. We understand gasoline station equipment is constructed of corrosion resistant synthetic materials. We recommend the gasoline station designer review these results and consult a corrosion expert for further evaluation, if necessary.

© 2020 Kleinfelder

5 CONSTRUCTION RECOMMENDATIONS

5.1 GENERAL

The following recommendations should be used by the contractor for construction of the project.

5.2 EARTHWORK

5.2.1 General

Site preparation and earthwork operations should be performed in accordance with applicable codes, safety regulations and other local, state or federal specifications, and the recommendations included in this report. References to maximum dry unit weights are established in accordance with the latest version of ASTM Standard Test Method D1557 (modified Proctor). The earthwork operations should be observed and tested by a representative of Kleinfelder.

The moisture content of the fill is considered very important, and therefore, both relative compaction and moisture content should be used to evaluate compaction acceptance. If both criteria are not within the specified tolerances, the fill should not be accepted, and the contractor should rework the material until the fill is placed within the specified tolerances.

5.2.2 Site Preparation

Abandoned utilities (including any trench backfill), existing pavements, foundations, and other existing improvements within the proposed fuel facility areas should be removed and the excavation(s) backfilled with engineered fill. Debris produced by demolition operations, including wood, steel, piping, plastics, etc., should be separated and disposed of off-site. Existing utility pipelines or conduits that extend beyond the limits of the proposed construction and are to be abandoned in place, should be plugged with non-shrinking cement grout to prevent migration of soil and/or water. Demolition, disposal and grading operations should be observed and tested (as appropriate) by a representative of Kleinfelder. Areas to receive fill should be stripped of all dry, loose, or soft earth materials and unsuitable fill materials to the satisfaction of a representative of Kleinfelder.

© 2020 Kleinfelder

After the area has been stripped of soft earth materials and debris, we recommend that the exposed subgrade be scarified to a depth of 6 to 8 inches, moisture conditioned, and compacted in accordance to the compaction criteria provided in this report. Following compaction and prior to the placement of fill, areas to receive fill should be proof-rolled with heavy construction equipment (e.g. loader or smooth-drum roller) to disclose areas of soft and yielding material. Where soft or yielding material are observed, the material should be overexcavated and replaced as structural fill. The proof-rolling should extend beyond the proposed improvements a horizontal distance of at least 2 feet, if practicable.

Based on past experience, it is common to encounter wet, unstable soils upon removal of site pavements or flatwork as a result of subsurface moisture becoming trapped beneath relatively impervious asphalt concrete or Portland cement concrete surfaces. Perched groundwater or saturated near surface conditions are also common in clayey soils following winter or heavy rains. The contractor should anticipate that pumping or saturated subgrade conditions will be encountered during site grading activities, and the subgrade may need to be stabilized. Recommendations for stabilization are provided in section 5.3.

5.2.3 Foundation Excavations

Spread Footings

Following excavation to the foundation subgrade elevations, the exposed subgrade should be observed by a representative of the geotechnical engineer to evaluate the presence of satisfactory materials at design elevations. If unsatisfactory material, such as soft or disturbed soil, debris or otherwise unsuitable soil is present at the base of footing excavations, then unsuitable materials should be overexcavated and replaced (e.g. with structural concrete, 2-sack sand-cement slurry, structural fill) to the depth and extent determined by the geotechnical engineer. As a minimum, the contractor should be prepared to scarify, moisture condition, and recompact the upper 12 inches of footing subgrade.

Light Pole Foundations

The performance and capacities of piles can be influenced significantly by the selected construction methods and procedures used. Construction methods that create large zones of disturbance around the drilled shafts can lead to lower than expected skin friction due to excessive stress relief around the shaft length. Drilling of the pile shafts should be accomplished using

© 2020 Kleinfelder

heavy-duty excavation equipment maintained in good condition. Perched groundwater was encountered as shallow as approximately 3 feet bgs during our field exploration in the area of the proposed fuel facility. The piles will be constructed partly below groundwater and, therefore, caving of the pile shafts should be anticipated and will need to be prevented. Temporary casing may be required to stabilize the sides of the piles shaft.

Concrete should be placed immediately after drilling of the hole is complete. The concrete should be pumped to the bottom of the drilled shaft using a down hole tremie. If the tremie method is used to place concrete below the water level, we recommend it have a slump of at least 8 inches. If steel casing is used, the casing should be removed as the concrete is placed but the bottom of the casing should be kept at least 5 feet below the top of the concrete.

5.2.4 Fill Material and Compaction Criteria

The on-site soils, minus any debris, organic matter, or other deleterious materials, may be used in the site fills in the area of the existing and proposed fuel facility. Rock or other soil fragments greater than 3 inches in size should not be used in the fills.

Due to compaction difficulties, we do not recommend compacting the onsite clayey soils to 95 percent of the maximum dry unit weight (ASTM D1557), as required in the CWDRs. Onsite clayey soils should be compacted to at least 90 percent of the soil's maximum dry unit weight (ASTM D1557). Compacting the onsite soils to at least 90 percent relative compaction will achieve the necessary strength assumed in our design recommendations. The upper 12 inches below pavement should be compacted to 95 percent of the maximum dry unit weight.

Fill should be placed in loose horizontal lifts not more than 8 inches thick (loose measurement). The moisture content of the fill should be maintained at least 2 percent above optimum during compaction and until the aggregate base is placed and compacted. The moisture content of the clayey fill is considered very important, and therefore, both relative compaction and moisture content should be used to evaluate compaction acceptance. If both criteria are not within the specified tolerances, the fill should not be accepted, and the contractor should rework the material until the fill is placed within the specified tolerances.

Import materials, if required, should have a Plasticity Index of no less than 5 with no more than 30 percent of the particles passing the No. 200 sieve and no particles greater than 3 inches in maximum dimension. The maximum PI for imported soils may be modified by the project

© 2020 Kleinfelder

geotechnical engineer depending on its proposed use. Imported fill should be documented to be free of hazardous materials, including petroleum or petroleum byproducts, chemicals and harmful minerals. Kleinfelder should evaluate the proposed imported materials prior to their transportation and use on site.

5.2.5 Excavation Characteristics

Bedrock was encountered at depths of approximately 5 to 7½ feet below grade in the area of the USTs. The bedrock material consisted generally of a weak and highly weathered siltstone. The bedrock is considered excavatable; however, cemented/stronger layers may be present, and a large hydraulic excavator equipped with either a rock ripping attachment or a pneumatic hammer may be needed to break up and excavate the bedrock to depth.

5.2.6 Temporary Excavations

All excavations must comply with applicable local, state, and federal safety regulations, including OSHA requirements. The responsibility for excavation safety and stability of temporary construction slopes lies solely with the contractor. We are providing this information below solely as a service to our client. Under no circumstances should this information provided be interpreted to mean that Kleinfelder is assuming responsibility for final engineering of excavations or shoring, construction site safety, or the contractors' activities; such responsibility is not being implied and should not be inferred.

Minor sloughing and/or raveling of slopes should be anticipated as they dry out. Where space for sloped embankments is not available, shoring will be necessary. In addition, excavations within a 1:1 plane extending downward from a horizontal distance of 2 feet beyond the bottom outer edge of existing improvements should not be attempted without bracing and/or underpinning the footings, as discussed above. The geotechnical engineer or their field representative should observe the excavations so that modifications can be made to the excavations, as necessary, based on variations in the encountered soil conditions. All applicable excavation safety requirements and regulations, including OSHA requirements, should be met.

All trench excavations should be braced and shored in accordance with good construction practice and all applicable safety ordinances and codes. Stockpiled (excavated) materials should be placed no closer to the edge of an excavation than a distance equal to the depth of the excavation, but no closer than 4 feet.

© 2020 Kleinfelder

5.2.7 Trench Backfill

Pipe zone backfill (i.e. material beneath and in the immediate vicinity of the pipe) should consist of imported soil less than ¾-inch in maximum dimension. Trench zone backfill (i.e., material placed between the pipe zone backfill and finished subgrade) may consist of onsite soil or imported fill that meets the requirements for engineered fill provided above.

If imported material is used for trench zone backfill, we recommend it consist of silty sand. In general, gravel and cobble should not be used for trench zone backfill due to the potential for soil migration into the relatively large void spaces present in this type of material and water seepage along trenches backfilled with coarse-grained sand and/or gravel.

Recommendations provided above for pipe zone backfill are minimum requirements only. More stringent material specifications may be required to fulfill local building requirements and/or bedding requirements for specific types of pipes. We recommend the project civil engineer develop these material specifications based on planned pipe types, bedding conditions, and other factors beyond the scope of this study.

Trench backfill should be placed and compacted in accordance with recommendations provided for engineered fill in Section 5.2.3. Mechanical compaction is recommended; ponding or jetting should be avoided, especially in areas supporting structural loads or beneath concrete slabs supported on grade, pavements, or other improvements.

5.3 UNSTABLE SUBGRADE CONDITIONS

Based on past experience it is common to encounter wet, unstable soils upon removal of site pavements or flatwork as a result of subsurface moisture becoming trapped beneath relatively impervious asphalt concrete or Portland cement concrete surfaces. Additionally, depending on time of year and weather conditions we anticipate that near surface soils may become saturated. Pumping subgrade conditions may be encountered during site grading activities, and the subgrade may need to be stabilized with geotextiles and crushed rock. Additionally, should grading be performed during or following periods of rainfall, the moisture content of the near-surface soils will also be significantly above the optimum moisture content. These conditions could seriously impede grading by causing an unstable subgrade condition. Typical remedial measures include the following:

© 2020 Kleinfelder

- Drying: Drying unstable subgrade involves disking or ripping wet subgrade to a depth of approximately 18 to 24 inches and allowing the exposed soil to dry. Multiple passes of the equipment (likely on a daily basis) will be needed because as the surface of the soil dries, a crust forms that reduces further evaporation. Frequent disking will help prevent the formation of a crust and will promote drying. This process could take several days to several weeks depending on the depth of ripping, the number of passes, and the weather.
- Removal and Replacement with Crushed Rock and Geotextile Fabric: Unstable subgrade could be over-excavated 12 to 24 inches below existing grade and replaced with ¾- or 1-inch crushed rock underlain and/or wrapped by geotextile fabric. The geotextile fabric should consist of a woven geotextile, such as Mirafi HP series or equivalent. The final depth of removal will depend upon the conditions observed in the field once over-excavation begins. The geotextile fabric should be placed in accordance with the manufacturer's recommendations.

5.4 GROUNDWATER IMPACTS DURING CONSTRUCTION

Excavations of up to approximately 16 to 18 feet below existing grades are anticipated for construction of the USTs. Perched groundwater was measured in our soil borings, KB-2 and KB-3, at a depth of approximately 3 to 5 feet bgs.

Temporary dewatering will be required at the time of the installation of the UST and deep utilities. Dewatering of excavations may be achieved by using localized sumps and trenches for nuisance water if "watertight" shoring is used. If groundwater inflows are significant, a well-point or eductor pump dewatering system may be required. As an alternative to dewatering, the USTs may be "wet set." The following are considerations with respect to dewatering proposed excavations:

- The contractor should retain an experienced engineer for design of a dewatering system. The dewatering system should be installed by a contractor specializing in dewatering under similar soil conditions. It has been our experience that improperly designed or constructed dewatering systems can significantly impact project schedule, cost, and adjacent structures.
- Sump pumping during construction should be anticipated to remove groundwater that bypasses the dewatering system. Gravel filled trenches and sump pits should be lined with filter fabric (Mirafi 140N or equivalent) to reduce the potential of pumping out fines.

© 2020 Kleinfelder

Turbid (cloudy to muddy) discharge water should be anticipated and additional measures for settlement of solids may be required.

- A dewatering monitoring program should include routine monitoring for suspended solids and treatment facilities to ensure compliance with regulatory criteria. Permitting and monitoring of the discharged water will be required. Contaminated water will be required to be captured and treated to agency requirements prior to discharging into public system from the pumping system.
- The UST will be placed on gravel bedding and anchored with “deadmen” to resist potential buoyant forces from the groundwater.

5.5 TEMPORARY SHORING

Temporary shoring may be required in areas adjacent to existing structures or improvements where excavations cannot be adequately sloped. Temporary shoring may consist of a turn-key shoring system, soldier piles and lagging, or other system. Recommendations for design of temporary shoring are presented below.

The shoring design should be provided by a civil engineer registered in the State of California and experienced in the design and construction of shoring under similar conditions. Once the final excavation and shoring plans are complete, the plans and design should be reviewed by Kleinfelder for conformance with the design intent and geotechnical recommendations provided herein.

5.5.1 Lateral Pressures

For the design of cantilevered shoring, an equivalent fluid pressure of 40 pounds per cubic foot (pcf) may be used for level backfill conditions. Where the surface of the retained earth slopes up away from the shoring, a greater pressure should be used. Design data can be developed for additional cases when the design conditions are established.

In addition to the recommended earth pressure, any surcharge (live, including traffic, or dead load) located within a 1:1 plane drawn upward from the base of the shored excavation should be added to the lateral earth pressures. The lateral contribution of a uniform surcharge load located immediately behind the wall may be calculated by multiplying the surcharge by 0.33 for the level backfill condition. Lateral load contributions of surcharges located at a distance behind the shored

© 2020 Kleinfelder

wall may be provided once the load configurations and layouts are known. As a minimum, a 2-foot equivalent vertical soil surcharge (250 psf) is recommended to account for nominal construction loads. It should be noted that the above pressures do not include hydrostatic pressure and assume groundwater will not be encountered in the excavation, or dewatering will be used to lower the ground water table below the bottom of the excavation.

5.5.2 Design of Soldier Piles

All soldier piles should extend to a sufficient depth below the excavation bottom to provide the required lateral resistance. We recommend the required embedment depths be calculated based on the principles of force and moment equilibrium. For this method, the allowable passive pressure against soldier piles that extend below the level of excavation may be assumed to be equivalent to a fluid pressure of 400 pcf. The maximum lateral resistance value should not exceed 4,000 psf. To account for arching, the passive resistance may be assumed to act over a width 2.5 times the width of the embedded portion of the pile, provided adjacent piles are spaced at least 3.0 pile diameters, center-to-center.

Drilling of the soldier pile shafts could be accomplished using heavy-duty drilling equipment. Soldier pile shafts will extend below the groundwater into bedrock. Concrete for piles should be placed immediately after the drilling of the hole is complete. The concrete should be pumped to the bottom of the drilled shaft using a tremie. Once concrete pumping is initiated, a minimum head of 5 feet of concrete above the bottom of the tremie should be established and maintained throughout the concrete placement to prevent contamination of the concrete by soil inclusions. If steel casing is used, the casing should be removed as the concrete is placed.

To develop full lateral resistance, provisions should be taken to assure firm contact between the soldier piles and undisturbed materials. The concrete placed in the soldier pile excavations may be a lean-mix concrete. However, the concrete used in that portion of the soldier pile that is below the planned excavated level should provide sufficient strength to adequately transfer the imposed loads to the surrounding materials.

5.5.3 Lagging

Continuous treated timber lagging should be used between the soldier piles. The lagging should be installed as the excavation proceeds. If treated timber is used, the lagging may remain in place

© 2020 Kleinfelder

after backfilling. The lagging should be designed for the recommended earth pressure but limited to a maximum value of 400 psf.

5.5.4 Deflection

Shoring adjacent to existing structures or improvements should be designed and constructed to reduce potential movement. The shoring system designer should evaluate potential deflections in their design.

5.5.5 Monitoring

Some deflection of the shored excavation should be anticipated during the planned excavation. We recommend the project civil engineer perform a survey of all existing utilities and structures adjacent to the shored excavation. The purpose of this survey would be to evaluate the ability of existing utility lines or improvements to withstand horizontal movements associated with a shored excavation and to establish the baseline condition in case of unfounded claims of damage. If existing improvements are not capable of withstanding anticipated lateral movements, alternative shoring systems may be required.

Horizontal and vertical movements of the shoring system should be monitored by a licensed surveyor. The construction monitoring and performance of the shoring system are ultimately the contractor's responsibility. However, at a minimum, we recommend that the top of shoring be surveyed prior to excavation and that the top and bottom of the soldier beams be surveyed on a weekly basis until the shoring is not needed. Surveying should consist of measuring movements in vertical and two perpendicular horizontal directions.

5.6 EXTERIOR FLATWORK

Prior to casting exterior flatwork, the subgrade soils should be moisture conditioned and recompacted or over-excavated, as recommended in Section 5.2.2. The moisture content of the subgrade soils should be maintained at the required level until placement of any flatwork or engineered fill. Careful control of the water/cement ratio should be performed to avoid shrinkage cracking due to excess water or poor concrete finishing or curing. Unreinforced slabs should not be built in areas where further saturation may occur following construction.

© 2020 Kleinfelder

5.7 PAVEMENTS

5.7.1 HMA Design

Hot Mix Asphalt (HMA) should conform to requirements of the Costco Wholesale Specification Section 321216, Asphalt Paving. Section 1.3.C of the HMA specification requires that the HMA section be placed in at least two lifts. The HMA specification allows the use of ½- or ¾-inch Nominal Maximum Aggregate Size (NMAS) mixes for the base course and ⅜- or ½-inch NMAS mixes for surface course. Maximum and minimum HMA compacted lift thicknesses are provided in Table 3.1 in Section 3.3.B of the HMA specification.

5.7.2 Construction Considerations

The pavement sections provided in Section 4.6 are contingent on the following recommendations being implemented during construction.

- Pavement subgrade should be prepared as recommended in Section 5.2.2.
- Subgrade soils should be in a stable, non-pumping condition at the time the aggregate base materials are placed and compacted.
- Aggregate base materials should be moisture conditioned to at least the optimum moisture content and compacted to at least 95 percent relative compaction (ASTM D1557).
- Asphalt paving materials and placement methods should meet current Costco Wholesale Specifications Section 321216.
- Adequate drainage (both surface and subsurface) should be provided such that the subgrade soils and aggregate base materials are not allowed to become wet.

Note that pavement materials and construction must be completed in strict accordance with the Costco's specifications that contain very specific pavement material (asphalt, aggregate and concrete) criteria and construction practices to be used (compaction and material sampling). The general contractor and pavement construction subcontractor should be aware that asphalt and concrete mix designs must be submitted to the design architect and Kleinfelder at least 45 days prior to the scheduled production and laydown for review and approval.

6 ADDITIONAL SERVICES

6.1 PLANS AND SPECIFICATIONS REVIEW

We recommend that Kleinfelder perform a general review of the project plans and specifications before they are finalized to verify that our geotechnical recommendations have been properly interpreted and implemented during design. If we are not accorded the privilege of performing this review, we can assume no responsibility for misinterpretation of our recommendations.

6.2 CONSTRUCTION OBSERVATION AND TESTING

The construction process is an integral design component with respect to the geotechnical aspects of a project. Because geotechnical engineering is an inexact science due to the variability of natural processes, and because we sample only a limited portion of the soils affecting the performance of the proposed structure, unanticipated or changed conditions can be encountered during grading. Proper geotechnical observation and testing during construction are imperative to allow the geotechnical engineer the opportunity to verify assumptions made during the design process. Therefore, we recommend that Kleinfelder be retained during the construction of the proposed improvements to observe compliance with the design concepts and geotechnical recommendations, and to allow design changes in the event that subsurface conditions or methods of construction differ from those assumed while completing this study.

Our services are typically needed at the following stages of grading.

- After demolition;
- During grading;
- During the installation of temporary construction shoring;
- After the overexcavation, but prior to scarification;
- During utility trench backfill;
- During base placement and site paving; and
- After excavation for foundations.

7 LIMITATIONS

This geotechnical study has been prepared for the exclusive use of Costco Wholesale and their agents for specific application to the proposed fuel facility at Costco Wholesale Warehouse No. 141 located at 300 Vintage Way in Novato, California. The findings, conclusions and recommendations presented in this report were prepared in accordance with generally accepted geotechnical engineering practice. No other warranty, express or implied, is made.

The scope of services was limited to a background data review and the field exploration described in Section 1.2. It should be recognized that definition and evaluation of subsurface conditions are difficult. Judgments leading to conclusions and recommendations are generally made with incomplete knowledge of the subsurface conditions present due to the limitations of data from field studies. The conclusions of this assessment are based on our field exploration and laboratory testing programs, and engineering analyses.

Kleinfelder offers various levels of investigative and engineering services to suit the varying needs of different clients. Although risk can never be eliminated, more detailed and extensive studies yield more information, which may help understand and manage the level of risk. Since detailed study and analysis involves greater expense, our clients participate in determining levels of service, which provide information for their purposes at acceptable levels of risk. The client and key members of the design team should discuss the issues covered in this report with Kleinfelder, so that the issues are understood and applied in a manner consistent with the owner's budget, tolerance of risk and expectations for future performance and maintenance.

Recommendations contained in this report are based on our field observations and subsurface explorations, limited laboratory tests, and our present knowledge of the proposed construction. It is possible that soil or groundwater conditions could vary between or beyond the points explored. If soil or groundwater conditions are encountered during construction that differ from those described herein, the client is responsible for ensuring that Kleinfelder is notified immediately so that we may reevaluate the recommendations of this report. If the scope of the proposed construction, including the estimated Traffic Index or locations of the improvements, changes from that described in this report, the conclusions and recommendations contained in this report are not considered valid until the changes are reviewed, and the conclusions of this report are modified or approved in writing, by Kleinfelder.

© 2020 Kleinfelder

The scope of services for this subsurface exploration and geotechnical report did not include environmental assessments or evaluations regarding the presence or absence of wetlands or hazardous substances in the soil, surface water, or groundwater at this site.

Kleinfelder cannot be responsible for interpretation by others of this report or the conditions encountered in the field. Kleinfelder must be retained so that all geotechnical aspects of construction will be monitored on a full-time basis by a representative from Kleinfelder, including site preparation, preparation of foundations, and placement of engineered fill and trench backfill. These services provide Kleinfelder the opportunity to observe the actual soil and groundwater conditions encountered during construction and to evaluate the applicability of the recommendations presented in this report to the site conditions. If Kleinfelder is not retained to provide these services, we will cease to be the engineer of record for this project and will assume no responsibility for any potential claim during or after construction on this project. If changed site conditions affect the recommendations presented herein, Kleinfelder must also be retained to perform a supplemental evaluation and to issue a revision to our original report.

This report, and any future addenda or reports regarding this site, may be made available to bidders to supply them with only the data contained in the report regarding subsurface conditions and laboratory test results at the point and time noted. Bidders may not rely on interpretations, opinion, recommendations, or conclusions contained in the report. Because of the limited nature of any subsurface study, the contractor may encounter conditions during construction which differ from those presented in this report. In such event, the contractor should promptly notify the owner so that Kleinfelder's geotechnical engineer can be contacted to confirm those conditions. We recommend the contractor describe the nature and extent of the differing conditions in writing and that the construction contract include provisions for dealing with differing conditions. Contingency funds should be reserved for potential problems during earthwork and foundation construction.

This report may be used only by the client and only for the purposes stated, within a reasonable time from its issuance, but in no event later than one year from the date of the report. Land use, site conditions (both on site and off site) or other factors may change over time, and additional work may be required with the passage of time. Any party, other than the client who wishes to use this report shall notify Kleinfelder of such intended use. Based on the intended use of this report and the nature of the new project, Kleinfelder may require that additional work be performed and that an updated report be issued. Non-compliance with any of these requirements by the client or anyone else will release Kleinfelder from any liability resulting from the use of this report by any unauthorized party

© 2020 Kleinfelder

and the client agrees to defend, indemnify, and hold harmless Kleinfelder from any claims or liability associated with such unauthorized use or non-compliance.

Appendix A

APPENDIX A
CURRENT FIELD EXPLORATION

GENERAL

Our field exploration program consisted of drilling four geotechnical borings. The borings were drilled on February 26 and March 13, 2020. Prior to commencement of the fieldwork we obtained the necessary permits and permission for access to the site. The boring locations were also cleared for buried utilities through Underground Service Alert (USA) and by a private utility locating service.

The borings were located within the proposed fuel facility area within an area of existing asphalt parking. One boring was located within the fuel canopy area, two borings were within the underground storage tank (UST) excavation area and the final boring was located within the queueing area. Borings were drilled to a maximum depth of approximately 40½ feet bgs or to practical bedrock refusal. Borings within the UST area were drilled to a maximum depth of 20 feet bgs due to shallow bedrock conditions. The borings were drilled by Exploration Geo-services of San Jose, California using truck-mounted hollow-stem auger drill rig with mud rotary capabilities. The logs of the borings are included as an attachment to this appendix. The approximate locations of the explorations are presented on Figure 2.

An explanation of the boring logs are presented as Figure A-1 through A-3. The boring logs are presented on Figures A-3 through A-7. The boring log describes the earth materials encountered, samples obtained and show field and laboratory tests performed. The log also shows the location, boring number, drilling date and the name of the drilling subcontractor. The borings were logged by a Kleinfelder engineer using the Unified Soil Classification System (ASTM D2487/D2488). The boundaries between soil types shown on the log are approximate where indicated with a dashed line because the transition between different soil layers may be gradual or location of the transition may be unknown. In a few cases the transition was captured within samples obtained from the subsurface exploration or other information enable us to define an approximately exact location as depicted by a solid line on the logs.

Bulk and drive samples of selected earth materials were obtained from the borings. A California-type and a Standard Penetration (SPT) sampler were used to obtain drive samples of the soils encountered. The California-type sampler consists of a 3-inch O.D., 2.4-inch I.D. split barrel shaft and the SPT sampler consist of a 2-inch O.D., 1.5-inch split barrel shaft. Both sampling techniques involve the sampler being pushed or driven a total of 18 inches into the soil

© 2020 Kleinfelder

at the bottom of the boring. The soil was retained in tubes and zip-locked bags for laboratory testing. An additional 2 inches of soil from each drive remained in the cutting shoe and was usually discarded after visually classifying the soil per ASTM D2488. The sampler was driven using a 140-pound hammer falling 30 inches. The total number of blows required to drive the sampler the final 12 inches is termed blow count and is recorded on the boring log except where refusal was encountered. Bulk sample bags were also taken for analysis of near surface soils.

NOTES

- The report and graphics key are an integral part of these logs. All data and interpretations in this log are subject to the explanations and limitations stated in the report.
- Lines separating strata on the logs represent approximate boundaries only. Actual transitions may be gradual or differ from those shown.
- No warranty is provided as to the continuity of soil or rock conditions between individual sample locations.
- Logs represent general soil or rock conditions observed at the point of exploration on the date indicated.
- In general, Unified Soil Classification System designations presented on the logs were based on visual classification in the field and were modified where appropriate based on gradation and index property testing.
- Fine grained soils that plot within the hatched area on the Plasticity Chart, and coarse grained soils with between 5% and 12% passing the No. 200 sieve require dual USCS symbols, ie., GW-GM, GP-GM, GW-GC, GP-GC, GC-GM, SW-SM, SP-SM, SW-SC, SP-SC, SC-SM.
- If sampler is not able to be driven at least 6 inches then 50/X indicates number of blows required to drive the identified sampler X inches with a 140 pound hammer falling 30 inches.

GRAIN SIZE

DESCRIPTION		SIEVE SIZE	GRAIN SIZE	APPROXIMATE SIZE
Boulders		>12 in. (304.8 mm.)	>12 in. (304.8 mm.)	Larger than basketball-sized
Cobbles		3 - 12 in. (76.2 - 304.8 mm.)	3 - 12 in. (76.2 - 304.8 mm.)	Fist-sized to basketball-sized
Gravel	coarse	3/4 -3 in. (19 - 76.2 mm.)	3/4 -3 in. (19 - 76.2 mm.)	Thumb-sized to fist-sized
	fine	#4 - 3/4 in. (#4 - 19 mm.)	0.19 - 0.75 in. (4.8 - 19 mm.)	Pea-sized to thumb-sized
Sand	coarse	#10 - #4	0.079 - 0.19 in. (2 - 4.9 mm.)	Rock salt-sized to pea-sized
	medium	#40 - #10	0.017 - 0.079 in. (0.43 - 2 mm.)	Sugar-sized to rock salt-sized
	fine	#200 - #40	0.0029 - 0.017 in. (0.07 - 0.43 mm.)	Flour-sized to sugar-sized
Fines		Passing #200	<0.0029 in. (<0.07 mm.)	Flour-sized and smaller

SECONDARY CONSTITUENT

	AMOUNT	
Term of Use	Secondary Constituent is Fine Grained	Secondary Constituent is Coarse Grained
Trace	<5%	<15%
With	≥5 to <15%	≥15 to <30%
Modifier	≥15%	≥30%

MOISTURE CONTENT

DESCRIPTION	FIELD TEST
Dry	Absence of moisture, dusty, dry to the touch
Moist	Damp but no visible water
Wet	Visible free water, usually soil is below water table

CEMENTATION

DESCRIPTION	FIELD TEST
Weakly	Crumbles or breaks with handling or slight finger pressure
Moderately	Crumbles or breaks with considerable finger pressure
Strongly	Will not crumble or break with finger pressure

CONSISTENCY - FINE-GRAINED SOIL

CONSISTENCY	SPT - N_{60} (# blows / ft)	Pocket Pen (tsf)	UNCONFINED COMPRESSIVE STRENGTH (Q_u)(psf)	VISUAL / MANUAL CRITERIA
Very Soft	<2	PP < 0.25	<500	Thumb will penetrate more than 1 inch (25 mm). Extrudes between fingers when squeezed.
Soft	2 - 4	0.25 ≤ PP <0.5	500 - 1000	Thumb will penetrate soil about 1 inch (25 mm). Remolded by light finger pressure.
Medium Stiff	4 - 8	0.5 ≤ PP <1	1000 - 2000	Thumb will penetrate soil about 1/4 inch (6 mm). Remolded by strong finger pressure.
Stiff	8 - 15	1 ≤ PP <2	2000 - 4000	Can be imprinted with considerable pressure from thumb.
Very Stiff	15 - 30	2 ≤ PP <4	4000 - 8000	Thumb will not indent soil but readily indented with thumbnail.
Hard	>30	4 ≤ PP	>8000	Thumbnail will not indent soil.

FROM TERZAGHI AND PECK, 1948; LAMBE AND WHITMAN, 1969; FHWA, 2002; AND ASTM D2488

REACTION WITH HYDROCHLORIC ACID

DESCRIPTION	FIELD TEST
None	No visible reaction
Weak	Some reaction, with bubbles forming slowly
Strong	Violent reaction, with bubbles forming immediately

APPARENT / RELATIVE DENSITY - COARSE-GRAINED SOIL

APPARENT DENSITY	SPT-N_{60} (# blows/ft)	MODIFIED CA SAMPLER (# blows/ft)	CALIFORNIA SAMPLER (# blows/ft)	RELATIVE DENSITY (%)
Very Loose	<4	<4	<5	0 - 15
Loose	4 - 10	5 - 12	5 - 15	15 - 35
Medium Dense	10 - 30	12 - 35	15 - 40	35 - 65
Dense	30 - 50	35 - 60	40 - 70	65 - 85
Very Dense	>50	>60	>70	85 - 100

FROM TERZAGHI AND PECK, 1948

PLASTICITY

DESCRIPTION	LL	FIELD TEST
Non-plastic	NP	A 1/8-in. (3 mm.) thread cannot be rolled at any water content.
Low (L)	< 30	The thread can barely be rolled and the lump or thread cannot be formed when drier than the plastic limit.
Medium (M)	30 - 50	The thread is easy to roll and not much time is required to reach the plastic limit. The thread cannot be rerolled after reaching the plastic limit. The lump or thread crumbles when drier than the plastic limit.
High (H)	> 50	It takes considerable time rolling and kneading to reach the plastic limit. The thread can be rerolled several times after reaching the plastic limit. The lump or thread can be formed without crumbling when drier than the plastic limit.

STRUCTURE

DESCRIPTION	CRITERIA
Stratified	Alternating layers of varying material or color with layers at least 1/4-in. thick, note thickness.
Laminated	Alternating layers of varying material or color with the layer less than 1/4-in. thick, note thickness.
Fissured	Breaks along definite planes of fracture with little resistance to fracturing.
Slickensided	Fracture planes appear polished or glossy, sometimes striated.
Blocky	Cohesive soil that can be broken down into small angular lumps which resist further breakdown.
Lensed	Inclusion of small pockets of different soils, such as small lenses of sand scattered through a mass of clay; note thickness.

ANGULARITY

DESCRIPTION	CRITERIA
Angular	Particles have sharp edges and relatively plane sides with unpolished surfaces.
Subangular	Particles are similar to angular description but have rounded edges.
Subrounded	Particles have nearly plane sides but have well-rounded corners and edges.
Rounded	Particles have smoothly curved sides and no edges.

gINT TEMPLATE: E:\KLF_STANDARD_GINT_LIBRARY_2019.GLB [LEGEND 2 (SOIL DESC KEY)]

INFILLING TYPE

NAME	ABBR	NAME	ABBR
Albite	Al	Muscovite	Mus
Apatite	Ap	None	No
Biotite	Bi	Pyrite	Py
Clay	Cl	Quartz	Qz
Calcite	Ca	Sand	Sd
Chlorite	Ch	Sericite	Ser
Epidote	Ep	Silt	Si
Iron Oxide	Fe	Talc	Ta
Manganese	Mn	Unknown	Uk

DENSITY/SPACING OF DISCONTINUITIES

DESCRIPTION	SPACING CRITERIA
Unfractured	>6 ft. (>1.83 meters)
Slightly Fractured	2 - 6 ft. (0.061 - 1.83 meters)
Moderately Fractured	8 in - 2 ft. (203.20 - 609.60 mm)
Highly Fractured	2 - 8 in (50.80 - 203.30 mm)
Intensely Fractured	<2 in (<50.80 mm)

ADDITIONAL TEXTURAL ADJECTIVES

DESCRIPTION	RECOGNITION
Pit (Pitted)	Pinhole to 0.03 ft. (3/8 in.) (>1 to 10 mm.) openings
Vug (Vuggy)	Small openings (usually lined with crystals) ranging in diameter from 0.03 ft. (3/8 in.) to 0.33 ft. (4 in.) (10 to 100 mm.)
Cavity	An opening larger than 0.33 ft. (4 in.) (100 mm.), size descriptions are required, and adjectives such as small, large, etc., may be used
Honeycombed	If numerous enough that only thin walls separate individual pits or vugs, this term further describes the preceding nomenclature to indicate cell-like form.
Vesicle (Vesicular)	Small openings in volcanic rocks of variable shape and size formed by entrapped gas bubbles during solidification.

ADDITIONAL TEXTURAL ADJECTIVES

DESCRIPTION	CRITERIA
Unweathered	No evidence of chemical / mechanical alternation; rings with hammer blow.
Slightly Weathered	Slight discoloration on surface; slight alteration along discontinuities; <10% rock volume altered.
Moderately Weathered	Discoloring evident; surface pitted and alteration penetration well below surface; Weathering "halos" evident; 10-50% rock altered.
Highly Weathered	Entire mass discolored; Alteration pervading most rock, some slight weathering pockets; some minerals may be leached out.
Decomposed	Rock reduced to soil with relic rock texture/structure; Generally molded and crumbled by hand.

RELATIVE HARDNESS / STRENGTH DESCRIPTIONS

GRADE		UCS (Mpa)	FIELD TEST
R0	Extremely Weak	0.25 - 1.0	Indented by thumbnail
R1	Very Weak	1.0 - 5.0	Crumbles under firm blows of geological hammer, can be peeled by a pocket knife.
R2	Weak	5.0 - 25	Can be peeled by a pocket knife with difficulty, shallow indentations made by firm blow with point of geological hammer.
R3	Medium Strong	25 - 50	Cannot be scraped or peeled with a pocket knife, specimen can be fractured with a single firm blow of a geological hammer.
R4	Strong	50 - 100	Specimen requires more than one blow of geological hammer to fracture it.
R5	Very Strong	100 - 250	Specimen requires many blows of geological hammer to fracture it.
R6	Extremely Strong	> 250	Specimen can only be chipped with a geological hammer.

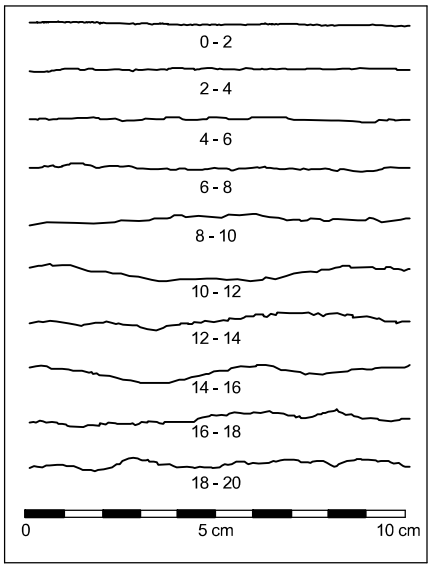
ROCK QUALITY DESIGNATION (RQD)

DESCRIPTION	RQD (%)
Very Poor	0 - 25
Poor	25 - 50
Fair	50 - 75
Good	75 - 90
Excellent	90 - 100

APERTURE

DESCRIPTION	CRITERIA [in (mm)]
Tight	<0.04 (<1)
Open	0.04 - 0.20 (1 - 5)
Wide	>0.20 (>5)

BEDDING CHARACTERISTICS



DESCRIPTION	Thickness [in (mm)]
Very Thick Bedded	>36 (>915)
Thick Bedded	12 - 36 (305 - 915)
Moderately Bedded	4 - 12 (102 - 305)
Thin Bedded	1 - 4 (25 - 102)
Very Thin Bedded	0.4 - 1 (10 - 25)
Laminated	0.1 - 0.4 (2.5 - 10)
Thinly Laminated	<0.1 (<2.5)

Bedding Planes — Planes dividing the individual layers, beds, or stratigraphy of rocks.

Joint — Fracture in rock, generally more or less vertical or traverse to bedding.

Seam — Applies to bedding plane with unspecified degree of weather.

JOINT ROUGHNESS COEFFICIENT (JRC)

From Barton and Choubey, 1977

RQD — Rock-quality designation (RQD) Rough measure of the degree of jointing or fracture in a rock mass, measured as a percentage of the drill core in lengths of 10 cm. or more.

10	0		approximately 6-inches of asphalt approximately 6-inches of aggregate base **Sandy Lean CLAY with Gravel (CL)**: fine to medium-grained sand, medium plasticity, olive yellowish to yellowish brown, moist, medium stiff, fine subangular gravel (FILL)												hand auger to 5 feet
	5		**Sandy Lean CLAY (CL)**: olive gray, wet, medium stiff, increasing sand content (ALLUVIUM) **SILTSTONE**: olive gray to olive												very difficult drilling, auger refusal

The boring was terminated at approximately 7 ft. below ground surface. The boring was backfilled with cement grout tremie method. Asphalt patch at surface. No well installed due to rig refusal on March 13, 2020. Rock was encountered at a depth of 5 ft. during this exploration.

GROUNDWATER LEVEL INFORMATION:
▽ Groundwater was observed at approximately 4 ft. below ground surface during drilling.
▼ Perched groundwater observed at approximately 3 ft.

GENERAL NOTES:
The exploration location and elevation are approximate and were estimated by Kleinfelder.

KLEINFELDER
Bright People. Right Solutions.

SOIL CLASSIFICATION CHART AND KEY TO TEST DATA

COSTCO WHOLESALE EXPANSION WAREHOUSE NUMBER 141
Novato, California

A-1

ROCK SYMBOLS

 SHALE OR CLAYSTONE

 CHERT

 SERPENTINITE

 SILTSTONE

 PYROCLASTIC

 METAMORPHIC ROCKS

 SANDSTONE

 VOLCANIC

 DIATOMITE

 CONGLOMERATE

 PLUTONIC

 SHEARED ROCKS

LAYERING

MASSIVE	Greater than 6 feet
THICKLY BEDDED	2 to 6 feet
MEDIUM BEDDED	8 to 24 inches
THINLY BEDDED	2-1/2 to 8 inches
VERY THINLY BEDDED	3/4 to 2-1/2 inches
CLOSELY LAMINATED	1/4 to 3/4 inches
VERY CLOSELY LAMINATED	Less than 1/4 inch

JOINT, FRACTURE, OR SHEAR SPACING

VERY WIDELY SPACED	Greater than 6 feet
WIDELY SPACED	2 to 6 feet
MODERATELY SPACED	8 to 24 inches
CLOSELY SPACED	2-1/2 to 8 inches
VERY CLOSELY SPACED	3/4 to 2-1/2 inches
EXTREMELY CLOSELY SPACED	Less than 3/4 inch

HARDNESS

SOFT - Pliable; can be dug by hand

FIRM - Can be gouged deeply or carved with a pocket knife

MODERATELY HARD - Can be readily scratched by a knife blade; scratch leaves heavy trace of dust and is readily visible after the powder has been blown away

HARD - Can be scratched with difficulty; scratch produces little powder and is often faintly visible

VERY HARD - Cannot be scratched with pocket knife; leaves a metallic streak

STRENGTH

PLASTIC - Capable of being molded by hand

FRIABLE - Crumbles by rubbing with fingers

WEAK - An unfractured specimen of such material will crumble under light hammer blows

MODERATELY STRONG - Specimen will withstand a few heavy hammer blows before breaking

STRONG - Specimen will withstand a few heavy ringing hammer blows and usually yields large fragments

VERY STRONG - Rock will resist heavy ringing hammer blows and will yield with difficulty only dust and small flying fragments

DEGREE OF WEATHERING

HIGHLY WEATHERED - Abundant fractures coated with oxides, carbonates, sulphates, mud, etc., thorough discoloration, rock disintegration, mineral decomposition

MODERATELY WEATHERED - Some fracture coating, moderate or localized discoloration, little to no effect on cementation, slight mineral decomposition

SLIGHTLY WEATHERED - A few stained fractures, slight discoloration, little or no effect on cementation, no mineral decomposition

FRESH - Unaffected by weathering agents, no appreciable change with depth

Appendix B

APPENDIX B
CURRENT LABORATORY TESTING

GENERAL

Laboratory tests were performed on selected samples as an aid in classifying the soils and to evaluate physical properties of the soils that may affect foundation design and construction procedures. The tests were performed in general conformance with the current ASTM standards. Laboratory testing was performed by Kleinfelder's in-house laboratory in Hayward, CA. Corrosion testing was conducted by AP Engineering and Testing, Inc. of Pomona, California. A description of the laboratory-testing program is presented below.

MOISTURE AND UNIT WEIGHT

Moisture content and dry unit weight testing was performed on a select samples recovered from our boring. Moisture contents were determined in general accordance with ASTM Test Method D2216; dry unit weight was calculated using the entire weight of the samples collected. The test results are presented on the boring log in Appendix A and as an attachment in this appendix.

PLASTICITY INDEX

Plasticity Index testing was performed on a sample to evaluate the plasticity of the onsite soils and to aid in classification of the soils. Plasticity Index testing (Atterberg limits) was performed in accordance with ASTM Standard Test Method D4318. The test result is presented on the boring log in Appendix A and as an attachment in this appendix.

R-VALUE

Resistance value (R-value) tests were performed on selected bulk soil samples obtained to evaluate pavement support characteristics of the near-surface onsite soils. R-value tests were performed in accordance with ASTM Standard Test Method D2844. The test results are attached to this appendix.

SEIVE ANALYSIS

Selected soil samples were tested for the percent passing the No. 4 and 200 sieve, which was performed by wash sieving in accordance with ASTM Standard Test Method C 136. The test results are presented on the boring logs.

© 2020 Kleinfelder

SOIL CORROSIVITY TESTS

A series of chemical tests were performed on selected samples of the near-surface soils to estimate pH, resistivity and sulfate and chloride contents. The samples were tested for pH and minimum resistivity, soluble chlorides, and soluble sulfates, respectively. Test results may be used by a qualified corrosion engineer to evaluate the general corrosion potential with respect to construction materials. The results of the tests are presented in the body of the report and attached to this appendix

Stormwater Control Plan Exhibit

This Stormwater Control Plan was prepared using the template dated October 2018.

I. Project Data

Table 1. Project Data Form

Project Name/Number	Costco Novato Fuel Center
Application Submittal Date	4/10/2020
Project Location	300 Vintage Way, Novato CA
Project Phase No.	NA
Project Type and Description	Costco fuel center with associated utilities and bio-retention areas
Total Project Site Area (acres)	Total site- 9.7 acres, Project area-1.6 acres
Total New and Replaced Impervious Surface Area	44,711 square feet
Total Pre-Project Impervious Surface Area	62,061 square feet
Total Post-Project Impervious Surface Area	60,265 square feet

II. Setting

II.A. Project Location and Description

The project site for the fueling facility includes the southern portion of the existing Costco parking area at 300 Vintage way. Costco is seeking a Design Review and Use Permit to allow for the development of a new fueling facility as part of the overall Costco development. The project includes a 9,761-square-foot fuel canopy, the installation of fourteen (14) new multi-product dispensers (MPDs), three (3) 40,000-gallon underground storage tanks (USTs), one (1) 1,500-gallon UST, a controller enclosure, vapor processer unit and associated site improvements. The intent of the fuel facility is to provide an efficient and convenient fuel purchasing experience for Costco members.

II.B. Existing Site Features and Conditions

The existing project area is part of the existing parking lot. The existing project area is nearly all impervious pavement with some landscaping planters dispersed throughout. The drainage from this area drains directly to the storm drain system and does not utilize any low impact development strategies.

II.C. Opportunities and Constraints for Stormwater Control

Opportunities for stormwater control elements include bioretention areas tha can be implemented utilizing the large landscape areas being provided along Vintage way. Site constraints is the existing site topography that slopes away from Vintage way such that we cannot surface drain into the proposed bioretention areas.

III. Low Impact Development Design Strategies

III.A. Optimization of Site Layout

The site has been designed so that the fuel center impacts the least amount of existing site area. A majority of the landscape areas are adjacent to Vintage Way.

III.B. Use of Permeable Pavements

The site will be primarily paved with asphalt with minor areas utilizing concrete. Permeable pavements are not being considered at this time.

III.C. Dispersal of Runoff to Pervious Areas

Runoff is being dispersed into landscape areas. Existing topography does not provide for all surface runoff to the landscape areas so we are utilizing drain pipes with bubblers and a pump that will convey stormwater quality flows to the landscape areas. Nearly all runoff from the site drains to the pervious bioretention areas.

III.D. Stormwater Control Measures

Runoff from new impervious areas on the site, including roofs and paved areas, will be routed to two bioretention facilities (see Exhibit). The facilities are designed to the criteria in the BASMAA Post-Construction Manual (January 2019), including the following features:

- Surrounded by a concrete curb. Where adjacent to pavement, curbs will be thickened and an impermeable vertical cutoff wall will be included
- Each layer built flat, level, and to the elevations specified in the plans:
  - Bottom of Gravel Layer (BGL)
  - Top of Gravel Layer (TGL)
  - Top of Soil Layer (TSL)
  - Overflow Grate
  - Facility Rim

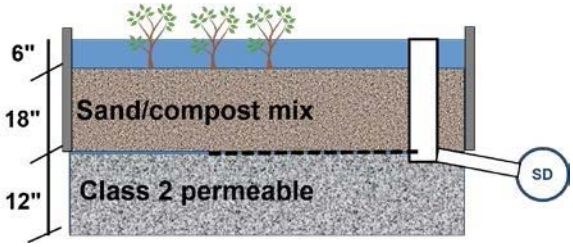

Figure 3. Bioretention Cross-Section (schematic)

- 12 inches of Class 2 permeable, Caltrans specification 68-2.02F(3)
- 18 inches sand/compost mix meeting BASMAA specifications
- 4 in. dia. PVC SDR 35 perforated pipe underdrain, installed with the invert at the top of the Class 2 permeable layer with holes facing down, and connected to the overflow structure at that same elevation
- 6-inch-deep reservoir between top of soil elevation and overflow grate elevation
- Concrete drop inlet with frame overflow structure, with grate set to specified elevation, connected to storm drain to be installed off-site as part of the Napa Pipe project.
- Vertical cutoff walls to protect adjacent pavement
- Plantings selected for water conservation
- Irrigation system on a separate zone, with drip emitters and "smart" irrigation controllers
- Sign identifying the facility as a stormwater treatment facility.

The only areas on the site which do not drain to a bioretention facility on-site are near the driveway entrance at the southwest corner of the site onto Vintage Way. The size of the uncaptured driveway area has been minimized as much as possible.

IV. Documentation of Drainage Design

IV.A. Descriptions of Each Drainage Management Area

IV.A.1. Table 2 - Drainage Management Areas

DMA Name	Surface Type	Area (square feet)
DMA 1	Roof	10,255
DMA 2	Landscape	1,478
DMA 3	Pavement	12,588
DMA 4	Roof and Pavement	459
DMA 5	Landscape	1,051
DMA 6	Landscape	4,010
DMA 7	Pavement	16,999
DMA 8	Landscape	342
DMA 9	Concrete Fuel Apron	12,936
DMA 10	Pavement	1,729

IV.A.2. Drainage Management Area Descriptions

DMA 1, totaling 10,255 square feet, is the fuel canopy that is piped to Bioretention Area #1.

DMA 2, totaling 1,478 square feet, is the landscape area that drains into Bioretention Area #1

DMA 3, totaling 12,588 square feet, is the paved areas that are collected into a drain system with pump that will be designed to convey stormwater quality flows into Bioretention Area #1.

DMA 4, totaling 459 square feet, is the control center areas that are collected into a drain system with pump that will be designed to convey stormwater quality flows into Bioretention Area #1

DMA 5, totaling 10,051 square feet, is the landscape area that are collected into a drain system with pump that will be designed to convey stormwater quality flows into Bioretention Area #1

DMA 6, totaling 4,010 square feet, is the landscape area that drains into Bioretention Area #2

DMA 7, totaling 16,999 square feet, is the paving area that drains into Bioretention Area #2

DMA 8, totaling 342 square feet, is the landscape area that drains into Bioretention Area #2

DMA 9, totaling 12,936 square feet, is the concrete fuel apron area that drains into the oil water separator and then into the sewer system. The fuel apron area is covered by a canopy (DMA 1).

DMA 10, totaling 1,729 square feet, is the pavement area that surface drains out of the project area untreated.

IV.B. Tabulation and Sizing Calculations

See attached spreadsheet. The project does not include any self-treating or self-retaining areas.

IV.B.1. Table 3 - Areas Draining to Bioretention Facilities

TREATMENT CONTROL SUMMARY TABLE

DMA#	DMA Area (SF)	Post-Project Surface Type	DMA Runoff Factor	DMA Area x runoff factor	Required Bioretention Surface Area (SF) *	Provided Bioretention Surface Area (SF)	Facility Name: Bioretention Area #1
01	10,255	Roof	1.0	10,255	410	-	
02	1,478	Landscape	0.1	148	6	-	
03	12,588	Paving	1.0	12,588	504	-	
04	459	Paving	1.0	459	18	-	
05	1,051	Landscape	0.1	105	4	-	
TOTAL	14,098			23,555	942	950	

* The required area for each bioretention facility is found by summing up the contributions of each tributary DMA - adjusted using the runoff factors in Table 4-1 of the BASMAA Post-Construction Manual - and multiplying by a sizing factor of 0.04. This sizing method is being utilized per the direction of the BASMAA Post-Construction Manual, which provides design guidance for Stormwater Treatment and Control for projects in Marin County.

TREATMENT CONTROL SUMMARY TABLE

DMA#	DMA Area (SF)	Post-Project Surface Type	DMA Runoff Factor	DMA Area x runoff factor	Required Bioretention Surface Area (SF) *	Provided Bioretention Surface Area (SF)	Facility Name: Bioretention Area #2
06	4,010	Landscape	0.1	401	16	-	
07	16,999	Paving	1.0	16,999	680	-	
08	342	Landscape	0.1	34	1	-	
TOTAL	21,351			17,434	697	700	

* The required area for each bioretention facility is found by summing up the contributions of each tributary DMA - adjusted using the runoff factors in Table 4-1 of the BASMAA Post-Construction Manual - and multiplying by a sizing factor of 0.04. This sizing method is being utilized per the direction of the BASMAA Post-Construction Manual, which provides design guidance for Stormwater Treatment and Control for projects in Marin County.

TREATMENT CONTROL SUMMARY TABLE

DMA#	DMA Area (SF)	Post-Project Surface Type	DMA Runoff Factor	DMA Area x runoff factor	Facility Name: Oil/Water Separator
09	12,936	Paving	1.0	12,936	DMA 09 drains to Sanitary Sewer and is treated by an oil/water separator. 10,255 SF of DMA 09 is covered by a canopy, which drains to the Storm Drain System.
TOTAL	12,936			12,936	

Per guidance from Section SC-20 of the CASQA Stormwater Best Management Practice Handbook, all runoff from the fueling area is collected and conveyed through an oil/water separator and connected to the existing sanitary sewer system existing on-site, which drains to the public sanitary sewer system off-site.

TREATMENT CONTROL SUMMARY TABLE

DMA#	DMA Area (SF)	Post-Project Surface Type	DMA Runoff Factor	DMA Area x runoff factor	Required Bioretention Surface Area (SF) *	Provided Bioretention Surface Area (SF)	Facility Name: Untreated
10	1,729	Paving	1.0	1,729	69	-	
TOTAL	1,729			1,729	69	-	

* The required area for each bioretention facility is found by summing up the contributions of each tributary DMA - adjusted using the runoff factors in Table 4-1 of the BASMAA Post-Construction Manual - and multiplying by a sizing factor of 0.04. This sizing method is being utilized per the direction of the BASMAA Post-Construction Manual, which provides design guidance for Stormwater Treatment and Control for projects in Marin County.

V. Source Control Measures

V.A. Site activities and potential sources of pollutants

On-site activities that could potentially produce stormwater pollutants include:

V.B. Table 4 – Source Control Table

Potential source of runoff pollutants	**Permanent source control BMPs**	**Operational source control BMPs**
On-site storm drain inlets	All inlets will be marked with "No Dumping! Flows to Local Waterways" or similar	Maintain and periodically repaint or replace inlet markings. Provide stormwater pollution prevention information to new site owners, lessees, or operators Lease agreements will include the following provision: "Tenant shall not allow anyone to discharge anything to storm drains or to store or deposit materials so as to create a potential discharge to storm drains."
Indoor and structural pest control		Inspect and maintain drains to prevent blockages and overflow.
Landscape maintenance	Landscaping will minimize irrigation and runoff and be selected for pest resistance, and will minimize the need for fertilizers and pesticides. Plants will be selected appropriate to site soils, slopes, climate, sun, wind rain, land use, air movement, ecological consistency, and plant interactions.	Landscaping will be maintained using minimum or no pesticides. IPM information will be provided to new owners, lessees, and operators.

Potential source of runoff pollutants	Permanent source control BMPs	Operational source control BMPs
Fuel Dispensing Areas	Fueling areas have impermeable floors that are graded at the minimum slope necessary to prevent ponding. This area is separated from the rest of the site by a grade break that prevents run-on of stormwater. The fueling area is covered by a canopy that extends the area within the grade break. The canopy does not drain into the fueling area.	The property owner shall dry sweep the fueling area routinely.
Plazas, sidewalks, and parking lots		Plazas, sidewalks and parking lots will be regularly swept to prevent accumulation of litter and debris. Debris from pressure washing will be collected to prevent entry to storm drain system. Washwater containing any cleaning agent or degreaser will be collected and discharged into the sanitary sewer and NOT storm drain.

VI. Stormwater Facility Maintenance

VI.A. Ownership and Responsibility for Maintenance in Perpetuity

Maintenance of stormwater facilities will be the responsibility of the property owner and will be performed by the owner's contractors or employees as part of routine maintenance of buildings, grounds, and landscaping. The applicant will review the standard agreement regarding the maintenance of stormwater facilities and commits to execute any necessary agreements prior to completion of construction. Applicant accepts responsibility for interim operation and maintenance of stormwater treatment and flow-control facilities until such time as this responsibility is formally transferred to a subsequent owner.

VI.B. Summary of Maintenance Requirements for Each Stormwater Facility

The two bioretention facilities will be maintained on the following schedule at a minimum. Details of maintenance responsibilities and procedures will be included in a Stormwater Facility Operation and Maintenance Plan to be submitted for approval prior to the completion of construction.

At no time will synthetic pesticides or fertilizers be applied, nor will any soil amendments, other than aged compost mulch or sand/compost mix, be introduced.

Daily: The facilities will be examined for visible trash during regular policing of the site, and trash will be removed.

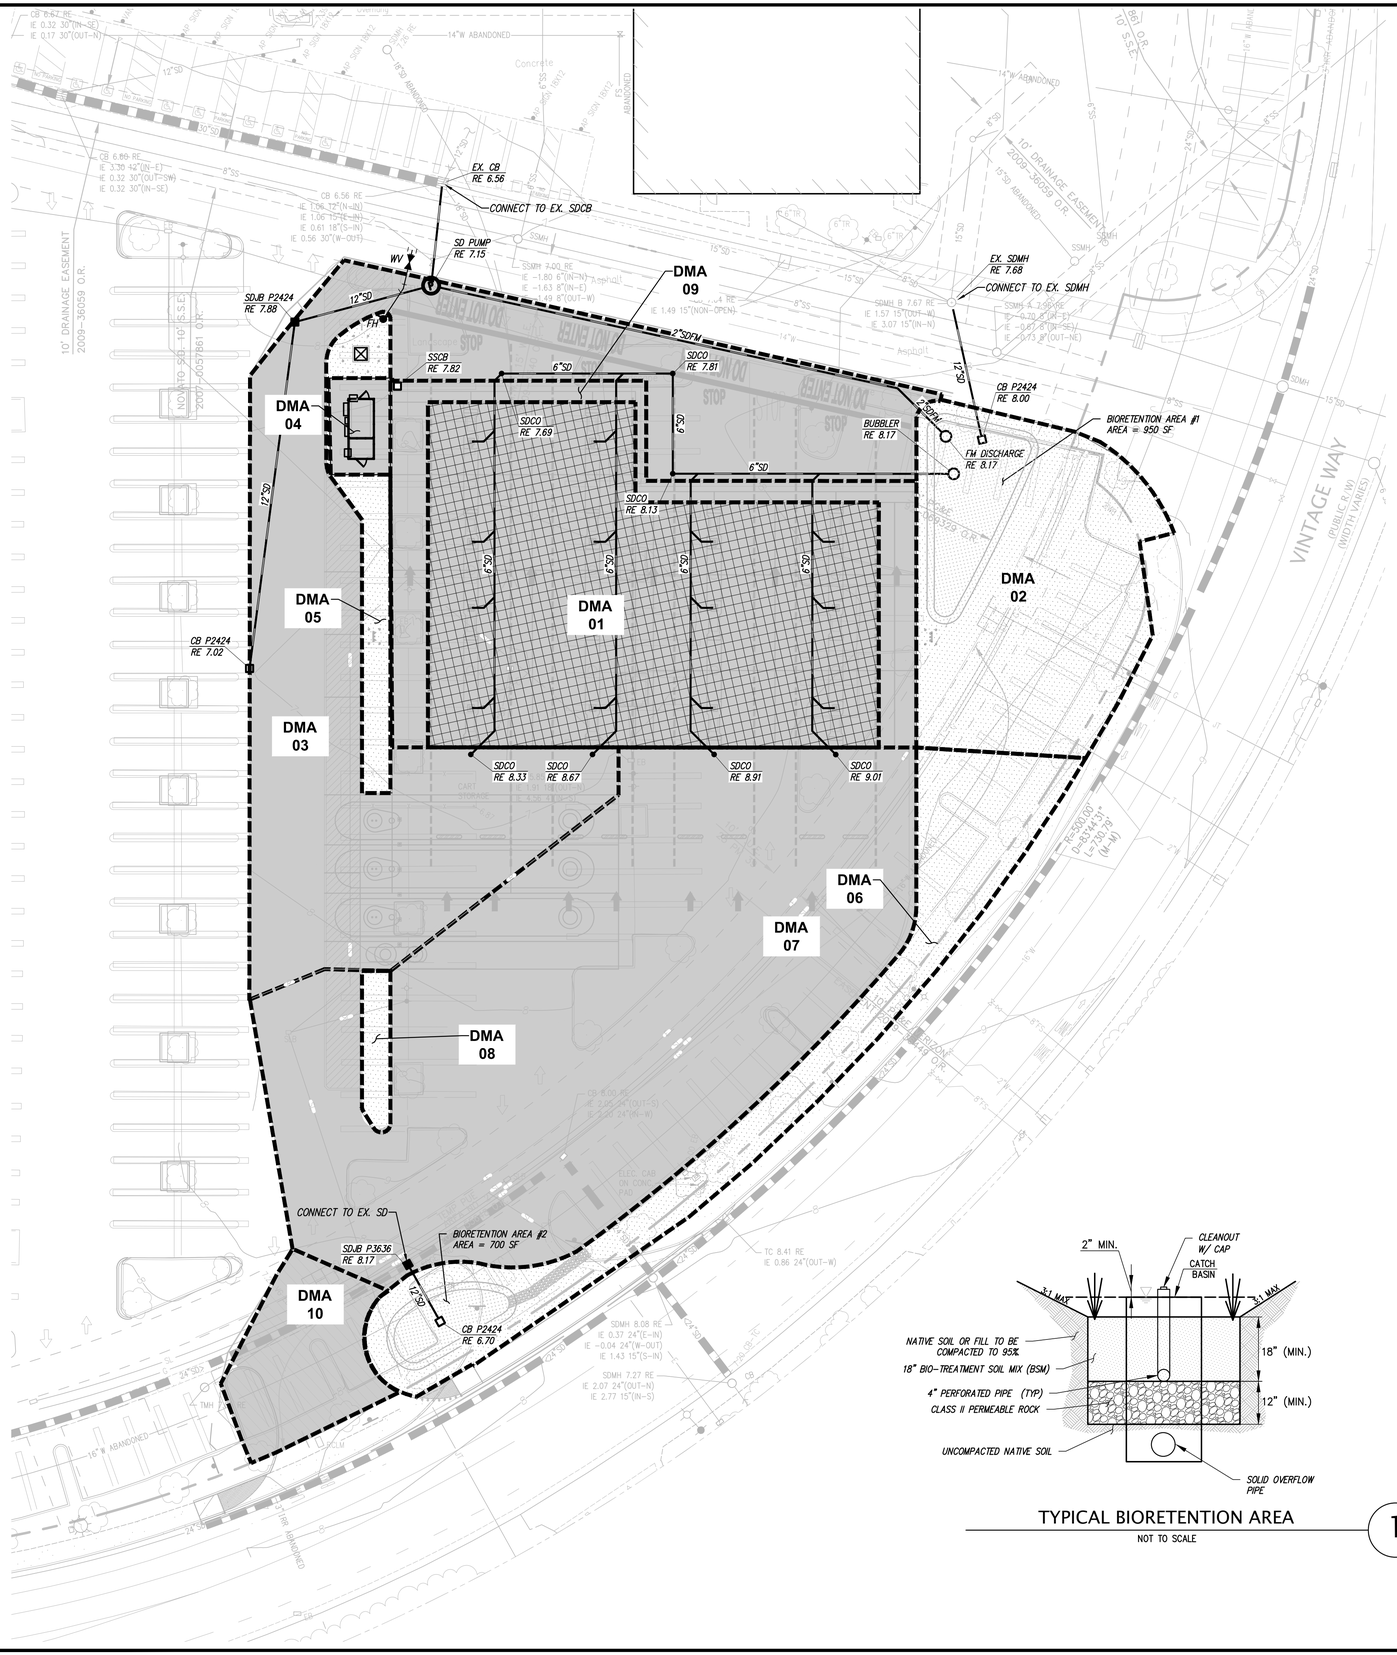
After Significant Rain Events: A significant rain event is one that produces approximately a half-inch or more rainfall in a 24-hour period. Within 24 hours after each such event, the following will be conducted:

The surface of the facility will be observed to confirm there is no ponding.

Inlets will be inspected, and any accumulations of trash or debris will be removed.

The surface of the mulch layer will be inspected for movement of material. Mulch will be replaced and raked smooth if needed.

Prior to the Start of the Rainy Season: In September or each year, the facility will be inspected to confirm there is no accumulation of debris that would block flow, and that growth and spread of plantings does not block inlets or the movement of runoff across the surface of the facility.



Annual Landscape Maintenance: In December – February of each year, vegetation will be cut back as needed, debris removed, and plants and mulch replaced as needed. The concrete work will be inspected for damage. The elevation of the top of soil and mulch layer will be confirmed to be consistent with the 6-inch reservoir depth.

VII. Construction Checklist

Stormwater Control Plan Page #	Source Control or Treatment Control Measure	See Plan Sheet #s
4-5	Bioretention Areas	C5
6	All catch basins are marked with "No Dumping" message	
6	Landscaping will minimize irrigation, runoff, fertilizers and pesticides.	
6	Fueling areas will be designed to not allow any run-on. Canopy will be designed as specified.	C3

VIII. Certifications

The preliminary design of stormwater treatment facilities and other stormwater pollution control measures in this plan are in accordance with the current edition of the BASMAA *Post-Construction Manual*.

	0.3578	48.7198	5.0830	25.4275	2.6479	default	
		0.595028044	0.06207957	0.310552717	0.032339669	% default gas	1.0000
Proposed		59.50280437	6.207957029	31.05527174	3.233966863	Project	100.0000
Alternative 2		59.50280437	6.207957029	31.05527174	3.233966863	Project	100.0000

	Proposed	Alternative 2			
Assumes	13.50	9.3	VMT per car trp	(Kettleson)	
	30.00	30	VMT per Truck Trip	Nearest refineries	
	-702.00	1,447.00	Change in Daily Regional VMT	From Kittleson	-52 trips per day
	360	360	Daily VMT from Trucks		

Notes: Reduction in VMT modeled in main analysis. For AQ/GHG Analysis. This accounts for the regional change in emissions.
Daily VMT from trucks modeled separately in CaleeMOD
TAC analysis includes the emissions for the 1405 new trips to the site. (Modeled Separately in CalEEMod)

90.8

Novato Costco - Alternative 2 Detailed Report

Table of Contents

1. Basic Project Information

1.1. Basic Project Information

1.2. Land Use Types

1.3. User-Selected Emission Reduction Measures by Emissions Sector

2. Emissions Summary

2.4. Operations Emissions Compared Against Thresholds

2.5. Operations Emissions by Sector, Unmitigated

4. Operations Emissions Details

4.1. Mobile Emissions by Land Use

4.1.1. Unmitigated

4.2. Energy

4.2.1. Electricity Emissions By Land Use - Unmitigated

4.2.3. Natural Gas Emissions By Land Use - Unmitigated

4.3. Area Emissions by Source

4.3.1. Unmitigated

4.4. Water Emissions by Land Use

4.4.1. Unmitigated

4.5. Waste Emissions by Land Use

4.5.1. Unmitigated

4.6. Refrigerant Emissions by Land Use

4.6.1. Unmitigated

4.7. Offroad Emissions By Equipment Type

4.7.1. Unmitigated

4.8. Stationary Emissions By Equipment Type

4.8.1. Unmitigated

4.9. User Defined Emissions By Equipment Type

4.9.1. Unmitigated

4.10. Soil Carbon Accumulation By Vegetation Type

4.10.1. Soil Carbon Accumulation By Vegetation Type - Unmitigated

4.10.2. Above and Belowground Carbon Accumulation by Land Use Type - Unmitigated

4.10.3. Avoided and Sequestered Emissions by Species - Unmitigated

5. Activity Data

5.9. Operational Mobile Sources

5.9.1. Unmitigated

5.10. Operational Area Sources

5.10.1. Hearths

5.10.1.1. Unmitigated

5.10.2. Architectural Coatings

5.10.3. Landscape Equipment

5.11. Operational Energy Consumption

5.11.1. Unmitigated

5.12. Operational Water and Wastewater Consumption

5.12.1. Unmitigated

5.13. Operational Waste Generation

5.13.1. Unmitigated

5.14. Operational Refrigeration and Air Conditioning Equipment

5.14.1. Unmitigated

5.15. Operational Off-Road Equipment

5.15.1. Unmitigated

5.16. Stationary Sources

5.16.1. Emergency Generators and Fire Pumps

5.16.2. Process Boilers

5.17. User Defined

5.18. Vegetation

5.18.1. Land Use Change

5.18.1.1. Unmitigated

5.18.1. Biomass Cover Type

5.18.1.1. Unmitigated

5.18.2. Sequestration

5.18.2.1. Unmitigated

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

6.2. Initial Climate Risk Scores

6.3. Adjusted Climate Risk Scores

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

7.2. Healthy Places Index Scores

7.3. Overall Health & Equity Scores

7.4. Health & Equity Measures

7.5. Evaluation Scorecard

7.6. Health & Equity Custom Measures

8. User Changes to Default Data

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	Novato Costco - Alternative 2
Operational Year	2025
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	3.60
Precipitation (days)	39.6
Location	38.08684474396162, -122.551860163085
County	Marin
City	Novato
Air District	Bay Area AQMD
Air Basin	San Francisco Bay Area
TAZ	909
EDFZ	2
Electric Utility	Pacific Gas & Electric Company
Gas Utility	Pacific Gas & Electric
App Version	2022.1.1.25

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
Gasoline/Service Station	20.0	Pump	0.06	125	6,086	0.00	—	—

Parking Lot	1.15	Acre	1.15	0.00	0.00	0.00	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

No measures selected

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	9.57	annual days of extreme heat
Extreme Precipitation	10.8	annual days with precipitation above 20 mm
Sea Level Rise	0.00	meters of inundation depth
Wildfire	7.46	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	3	0	0	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A

Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	3	1	1	3
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—

AQ-Ozone	11.6
AQ-PM	19.0
AQ-DPM	25.6
Drinking Water	5.55
Lead Risk Housing	56.0
Pesticides	0.00
Toxic Releases	27.8
Traffic	86.3
Effect Indicators	—
CleanUp Sites	29.1
Groundwater	17.2
Haz Waste Facilities/Generators	52.6
Impaired Water Bodies	12.5
Solid Waste	0.00
Sensitive Population	—
Asthma	46.1
Cardio-vascular	35.3
Low Birth Weights	6.79
Socioeconomic Factor Indicators	—
Education	43.4
Housing	43.9
Linguistic	29.5
Poverty	16.6
Unemployment	2.29

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	77.13332478
Employed	94.72603619
Median HI	76.59437957
Education	—
Bachelor's or higher	63.58270243
High school enrollment	100
Preschool enrollment	95.7141024
Transportation	—
Auto Access	55.28037983
Active commuting	62.46631592
Social	—

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	12.0
Healthy Places Index Score for Project Location (b)	90.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	Yes
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Land Use	Building represents controller enclosure.
Construction: Construction Phases	Based on removal of asphalt, excavation for tank storage, and building facilities.
Construction: Off-Road Equipment	Added excavator for tank closure
Construction: Dust From Material Movement	Import and Export for tank burial
Construction: Trips and VMT	Added trips for import and export of soil during demolition phase; added vendor trucks for concrete import for tank vault in demo phase; upped worker trips to 16 and vendor to 2 to account for equipment usage and potential material delivery rather than based on size of building.
Operations: Vehicle Data	Updated to match provided trip generation rates
Operations: Energy Use	Based on default consumption for 28 pumps. Removed natural gas as no natural gas used for project.
Operations: Vehicle EF	Updated to eliminate all but gasoline emission factors.
Operations: Fleet Mix	Based on project specific fleet mix

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	9.57	annual days of extreme heat
Extreme Precipitation	10.8	annual days with precipitation above 20 mm
Sea Level Rise	0.00	meters of inundation depth
Wildfire	7.46	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	3	0	0	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A

Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	3	1	1	3
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	12.0
Healthy Places Index Score for Project Location (b)	90.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	Yes
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Land Use	Building represents controller enclosure.
Construction: Construction Phases	Based on removal of asphalt, excavation for tank storage, and building facilities.
Construction: Off-Road Equipment	Added excavator for tank closure
Construction: Dust From Material Movement	Import and Export for tank burial
Construction: Trips and VMT	Added trips for import and export of soil during demolition phase; added vendor trucks for concrete import for tank vault in demo phase; upped worker trips to 16 and vendor to 2 to account for equipment usage and potential material delivery rather than based on size of building.
Operations: Vehicle Data	Updated to match provided trip generation rates
Operations: Energy Use	Based on default consumption for 28 pumps. Removed natural gas as no natural gas used for project.
Operations: Vehicle EF	Updated to eliminate all but gasoline emission factors.
Operations: Fleet Mix	Based on project specific fleet mix

TECHNICAL MEMORANDUM

June 3, 2024 Project# 24900

To: Brett Walker, AICP, Senior Planner
City of Novato
922 Machin Avenue
Novato, CA 94945

From: Amy Lopez; Andrew McIntyre

RE: Novato Costco Fuel Station – Project Alternative VMT Analysis

Introduction

Costco Wholesale (Costco) has proposed to construct a 28-fueling-position fuel station at the existing Costco warehouse in Novato, CA (Project). A transportation impact analysis (TIA) report has been prepared for the Project, dated February 2024. An environmental impact report (EIR) is being prepared for the Project, and through that effort a 20-fueling-position fuel station has been identified as the Project Alternative. This memo presents additional transportation analysis of vehicle miles traveled (VMT) for the Project Alternative to inform the EIR.

The Project Alternative would have eight fewer fueling positions than the Project and is not expected to meet the anticipated demand for Costco fuel purchases among members in the Novato area. Queueing and wait times associated with a 20-fueling-position facility are expected to be greater than those at a larger facility that Costco right-sized to meet anticipated demand in the Novato market. Opening a new Costco fuel facility will incentivize members who live closer to the new facility than another Costco facility to shift their existing trips. Because the Project Alternative is eight fueling positions, or 29%, smaller than the Project, some members are expected to wait longer in the queue to purchase fuel, and some members are expected not to shift their gas-purchase trips to Costco due to the inconvenience of longer queues and longer wait times.

Vehicle Miles Traveled (VMT)

Kittelson performed an analysis of VMT to understand the change in regional VMT attributed to the Project Alternative. The methodology includes the following components:

- Change in regional VMT associated with existing members shifting their trips from other Costco facilities to the new facility
- Change in regional VMT associated with existing members shifting their gas trips from other non-Costco facilities to the new facility
- Change in regional VMT associated with employees traveling to and from the new facility

PROPRIETARY DATA

The VMT analysis was conducted using proprietary transaction data provided by Costco Wholesale for the following two existing Costco warehouses with on-site fuel facilities:

- 5901 Redwood Drive, Rohnert Park (Rohnert Park)
- 198 Plaza Drive, Vallejo (Vallejo)

The Rohnert Park fuel facility has 24 fueling positions; the Vallejo location has 16 fueling positions. The data used in this analysis include the following:

- Approximate home locations of Costco members who completed a gas transaction at either of the existing Costco fuel facilities in the Project area in September 2023, grouped into 1-square-mile zones;
- Number of member visits to the existing Costco fuel facilities in September 2023 in each 1-square-mile zone;
- Market areas of the existing Costco warehouses and fuel facilities and projected market area for the new facility.

DAILY TRIP GENERATION

Daily trip generation estimates were developed for the Project Alternative as well as for the two existing Costco fuel facilities. The trip generation estimates were developed using trip data and travel characteristics for Costco fuel facilities in California. Table 1 presents the anticipated daily trip generation for the Project Alternative and the two existing facilities in the region.

Table 1. Daily Trip Generation for Regional Costco Fuel Facilities

Costco Gasoline Fuel Station	Novato Project Alternative	Rohnert Park	Vallejo
Total Daily Trips	**6,187**	**6,276**	**5,996**
Shared Warehouse + Gas Trips	**2,026**	**2,071**	**1,979**
Fuel Station-Only (Gas-Only) Trips	**4,161**	**4,205**	**4,017**
Primary Trips	1,265	1,262	1,205
Employee Trips	*8*	*8*	*8*
Truck Trips	*12*	*12*	*12*
Member Trips	*1,245*	*1,242*	*1,185*
Diverted Gas-Only Trips	1,405	1,430	1,366
Pass-by Gas-Only Trips	1,491	1,513	1,446

Source: Kittelson & Associates, Inc., 2024

All Costco member Project Alternative trips included in this analysis are assumed to be existing trips on the network. Due to the nature of gas purchases, members who would purchase fuel at the new Costco fuel facility are already purchasing gas somewhere today. Therefore, this analysis determines the change in regional VMT by calculating the difference between trip lengths associated with traveling to the new Costco fuel station versus traveling to an existing fuel station. Each trip type is described briefly below, including an explanation of how this analysis accounts for VMT associated with each type.

- **Shared Warehouse + Gas Trips** – A portion of the trips anticipated at the new fuel facility will be shared trips with the warehouse. These trips are assumed to already take place on the network – either as existing warehouse + gas trips at other Costco facilities or as two separate trips members take to shop at the Novato warehouse and to purchase gas elsewhere. The VMT for these trips is calculated by multiplying a portion of the shared warehouse + gas trips by an average trip distance associated with trips shifting from other Costco facilities, and multiplying a portion of the shared warehouse + gas trips by an average trip distance for trips shifting from other fuel stations.

- **Employee Trips** – Employee trips are evaluated separately from Costco member trips because average trip lengths for employees may differ from member trips. VMT is calculated by multiplying the expected number of daily employee shifts with an average VMT per employee, as provided by the Transportation Authority of Marin's (TAM) VMT webmap.[1]

- **Truck Trips** – Based on Section 15064.3 of the *Technical Advisory on Evaluating Transportation Impacts in CEQA* from the California Office of Planning and Research[2] (OPR), the VMT associated with trucks and the movement of goods is not required to be analyzed for potential transportation impacts. Therefore, truck trips are excluded from this analysis.

- **Primary Gas-Only Trips** – Primary gas-only trips (vehicles traveling to the site for the sole purpose of visiting the fuel facility) are assumed to be trips that already exist on the network today that will shift to the new Costco fuel facility. The difference in VMT associated with shifting these trips to the new facility is calculated based on the anticipated change in average trip lengths.

- **Diverted Gas-Only Trips** – Diverted gas-only trips (vehicles making an existing trip on the roadway that travel out-of-direction to visit the site) are assumed to be existing trips shifted from existing non-Costco gas stations near the Project site. The difference in VMT associated with shifting these trips to the new facility is calculated based on the anticipated change in average trip length.

- **Pass-by Gas-Only Trips** – Pass-by trips (vehicles making an existing trip on the adjacent roadway that stop at the site and then continue on their trip) are typically excluded from VMT calculations since pass-by trip lengths are assumed to be zero. Because the Project site is located at the far end a shopping center and thereby is offset from the arterial network, pass-by trip lengths for the Project

[1] https://www.tam.ca.gov/travel-demand-model-traffic-monitoring/#vmtwebmap

[2] https://opr.ca.gov/docs/20190122-743_Technical_Advisory.pdf

Alternative are assumed to be trips made by people already at the shopping center, are assumed to be slightly greater than zero, and are included in the VMT calculations.

The OPR *Technical Advisory on Evaluating Transportation Impacts in CEQA* states:

> "Generally, lead agencies should analyze the effects of a retail project by assessing the change in total VMT because retail projects typically re-route travel from other retail destinations. A retail project might lead to increases or decreases in VMT, depending on previously existing retail travel patterns. … Because new retail development typically redistributes shopping trips rather than creating new trips, estimating the total change in VMT (i.e., the difference in total VMT in the area affected with and without the project) is the best way to analyze a retail project's transportation impacts."

SHIFTING REGIONAL (COSTCO) TRIPS – SHARED WAREHOUSE + GAS TRIPS

The addition of a new Costco fuel facility provides another option for where Costco members would buy gas and therefore results in lower average trip lengths for some members within the Novato Costco market area. This section presents the change in VMT associated with existing regional trips that are expected to shift to the new Costco fuel facility given its closer proximity than other Costco fuel facilities in the region.

A portion of the trips at the new Costco fuel facility are expected to be made by members who currently visit other regional Costco facilities and who will find the new facility more convenient due to a shorter travel time. They are expected to replace their existing trip with a trip to the new facility. This analysis assumes that 100% of these regionally shifted trips will be shared warehouse + gas trips – members who currently make shared trips to shop at the warehouse and get gas at Costco locations in Vallejo or Rohnert Park but for whom travel to the Novato location would be a shorter travel time and therefore are expected to shift these shared trips to the new location. These trips are also assumed to be 100% primary trips since existing shared pass-by and diverted trips to the other Costco locations would not be influenced by the opening of a new fuel facility in another city.

Because the Project Alternative is eight fueling positions, or 29%, smaller than the Project, members are expected to wait longer in the queue to purchase fuel, and some members are expected not to shift their existing gas-purchase trips to Costco due to the inconvenience of longer queues and longer wait times. The VMT analysis of the Project Alternative takes these effects of a smaller facility into account both through the trip generation (fewer daily trips to the Project Alternative than to the Project) and through the portion of existing longer distance trips for which the travel time savings of shifting from Vallejo or Rohnert Park would be negated by longer wait times at the fuel station. To account for this expected phenomenon, the Project Alternative VMT analysis assumes that only members whose travel time to the new facility is 5 or more minutes shorter than their current travel time to Vallejo or Rohnert Park will shift their existing trip to the new facility. This assumption influences the average travel distance for shared warehouse + gas trips, resulting in an shorter average distance for the Project Alternative analysis than for the Project.

Existing gas-only trips made at the Vallejo and Rohnert Park Costco locations are not expected to shift to Novato since trips made strictly for the purpose of buying gas tend to be shorter than trips to shop at the warehouse and buy gas. It is assumed that gas-only trips made at Vallejo or Rohnert Park by members from Novato are trips made while those members are in those cities for other purposes. The new warehouse is located approximately 20 to 30 minutes from the two existing Costco facilities. Ten-minute "travel sheds" shown in Figure 1 are the areas from which a member could travel to/from each site within 10 minutes. As shown in the figure, the ten-minute travel sheds for the three Costco locations do not overlap, indicating that members who live within each travel shed would make home-based, or primary, gas-only trips to their local Costco and not to another Costco in the region.

The full proprietary transactions dataset includes transactions made by members who only bought gas during their visit to the Vallejo and Rohnert Park Costcos as well as gas transactions made by members who both shopped at the warehouse and bought gas during a visit to one of those Costcos. Since this analysis only considers primary shared warehouse + gas trips, a subset of the full dataset was isolated to estimate the existing primary trips made by members who go to the site to shop at a warehouse and also buy gas in a single trip. The spatial distribution of this dataset shows a greater portion of these trips are longer distance trips (compared to all gas transactions) since gas-only and pass-by and diverted trips, which are shorter trips, are not material to this analysis.

To measure the extent to which existing warehouse + gas trip lengths are reduced by Costco members replacing their existing Costco warehouse + gas trips with visits to the new facility, ArcGIS Online software was used to calculate average trip distances to the two existing Costco facilities and the new facility for two scenarios: without the Novato fuel facility and with it. The software routed member trips from each 1-square-mile zone to the existing Costco facility the member visited, according to the proprietary transaction data from September 2023. The same methodology was then applied assuming the presence of the new Novato facility and assuming members would visit the facility with the shortest travel time from their homes. The following provides more details regarding the methodology and assumptions of this analysis:

- The center of each 1-square-mile zone was used for the starting/ending point of member trips.
- Proprietary Costco data were used to estimate the number of existing primary shared warehouse + gas transactions at the two existing facilities between September 1, 2023 and September 30, 2023 by members who live within the combined market areas of the three existing warehouses.
- Each transaction is assumed to correspond to two one-way trips between the members' homes and the fuel facility (i.e., one roundtrip).
- To calculate the **average trip lengths to the two existing Costco fuel facilities**, trip distances between each 1-square-mile zone and the two existing facilities were computed using ArcGIS online software.
    - Trip routes were identified based on minimum travel time on the existing roadway network (as opposed to shortest distance since shorter distances along low-speed streets can result in longer travel times) and measured.
    - The trip distances were multiplied by the number of shared warehouse + gas trips made at each location by members within each 1-square-mile zone and summed to calculate the total of one-way distances traveled to each facility.

- The total of one-way distances traveled was divided by the average daily trips to the given facility to compute the weighted average one-way trip length for each facility. Table 2 presents these average existing trip lengths for each facility.

- To calculate the **average trip lengths to the three fuel facilities when the new facility opens**, origin-destination pairings were revised using the ArcGIS online software.
  - To determine which members would shift their trips from an existing Costco fuel facility to the new one, it was assumed that if the travel time from a 1-square mile zone to the new facility was five or more minutes shorter than the travel time to either of the existing facilities, all members within that zone would choose to buy gas at the new facility once it opens. In essence, members would shift from Vallejo and Rohnert Park to the Project Alternative in Novato if they would save five or more minutes in travel time. This assumption differs from the VMT anlaysis of the Project in that the Project VMT anlaysis assumed any travel time savings whatsoever would motivate members to shift their trip. The assumption that the travel time savings must be at least five minutes accounts for members waiting longer upon arrival at the Project Alternative due to longer queues and longer wait times.
  - For zones that are closer by travel time to Vallejo or Rohnert Park, no shift was made, and trips by members in those zones were assumed to continue to be made to the existing facilities after the Novato location opens.

Table 2. Average Shared Warehouse + Gas Trip Lengths (Existing and with Project Alternative)

	Existing			With Project Alternative		
Facility	Average Daily Transactions	Total Distance (One-Way)	Average Trip Length (One-Way)	Average Daily Transactions	Total Distance (One-Way)	Average Trip Length (One-Way)
Rohnert Park	658	7,346	11.2	600	5,780	9.6
Vallejo	603	4,010	6.6	592	3,682	6.2
Novato (New Facility)	0	0	0	69	644	9.3

Source: Kittelson & Associates, 2024

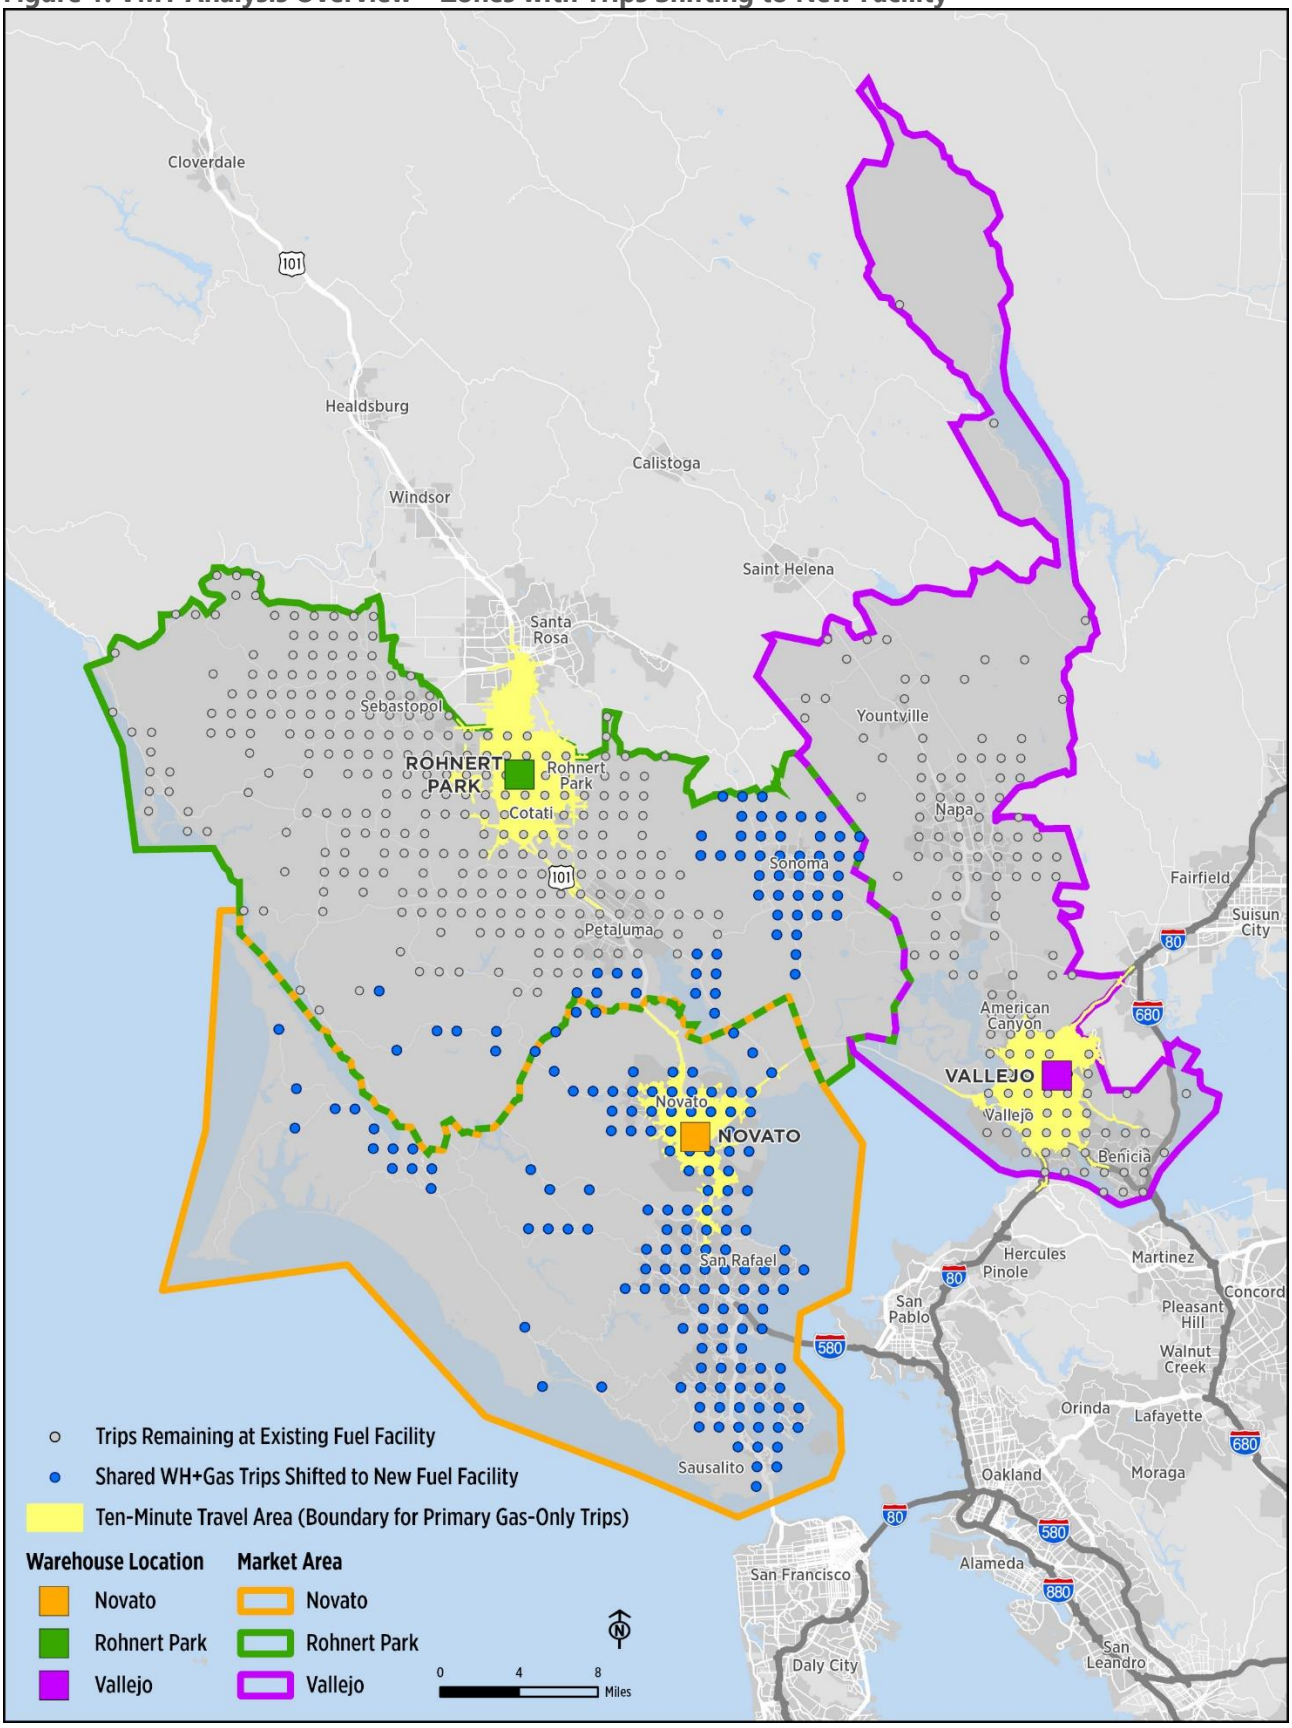

Figure 1 shows the 1-square-mile zones for Costco members in the region whose warehouse + gas trips are assumed to shift from an existing Costco fuel facility to the new one in Novato. Table 2 presents average trip lengths for shared warehouse + gas trips today and with the new fuel facility. The existing average daily transactions data in Table 2 are the number of shared warehouse + gas transactions at the existing facilities. Some of these transactions would shift to the new facility, and the data were used to establish proportions for transactions that would shift to Novato and those that would remain at Rohnert Park and Vallejo. These proportions were applied to the trip generation amounts in Table 14 to estimate the portion of warehouse + gas trips in the region that are expected to shift to Novato. Table 3 presents the expected change in regional VMT associated with shifting regional shared warehouse + gas trips from existing Costcos.

Table 3. Change in VMT Associated with Shifting Primary Warehouse + Gas Trips

	Existing			With Project Alternative		
	Average Trip Length	Daily Trips	Daily VMT	Average Trip Length	Daily Trips	Daily VMT
Rohnert Park	11.2	2,071	23,195	9.6	1,885	18,096
Vallejo	6.6	1,979	13,061	6.2	1,939	12,022

Figure 1. VMT Analysis Overview – Zones with Trips Shifting to New Facility

SHIFTING LOCAL (NON-COSTCO) TRIPS

The remainder of member trips not accounted for in the previous section are expected to be trips that exist on the roadway network today that would shift from other non-Costco gas stations in the Novato area to the new Costco fuel facility. These trips include the entirety of the Project Alternative gas-only trips and a portion of the Project Alternative warehouse + gas trips. This section provides details regarding changes to regional VMT associated with shifting different types of trips from non-Costco gas stations to the new Costco fuel facility.

Primary Gas-Only Member Trips

Of the 4,161 gas-only trips expected to be generated at the new fuel facility, 1,245 trips are expected to be primary gas-only trips that already exist on the transportation network today going to and from other non-Costco gas stations. To determine how regional VMT may change when these trips shift to the new Costco facility, average trip distances between member households and both the new Costco fuel facility as well as to non-Costco gas stations were estimated. The following provides more detail regarding the methodology and assumptions of this analysis:

- Only members whose home addresses are within about a 10-minute drive of the new Costco fuel facility in Novato were considered in this part of the analysis. While gas purchases are known in the transportation engineering industry to be purchases and trips of convenience, making 10 minutes seem like a long time to drive just to buy gas, this 10-minute assumption is derived from the observed willingness many Costco members have to spend more time to access the value Costco offers at its fuel stations than the willingness people generally show to drive to make a gas purchase of convenience. For example, data Kittelson has collected at dozens of Costco fuel facilities show Costco members will wait 10, 15, even 20 minutes to buy gas at Costco, demonstrating their willingness to spend time for the value of Costco gas. See Figure 1 for the area of the travel shed.
- Based on the 10-minute travel time shed and assuming a generally even distribution of member households within that shed, an average travel time of 5 minutes was used for Costco fuel facility trips. An average travel time of 2.5 minutes, correlating to a 5-minute travel shed, was used for non-Costco gas station trips since these trips are known in the industry to be more influenced by convenience than Costco gas trips are.
- Using Costco member household location data and the GIS analysis methods described in the previous section, an average speed of 30 miles per hour was estimated for trips between member households with the 10-minute travel shed and the new Costco fuel facility. An average speed of 20 miles per hour was used for non-Costco gas trips since a smaller portion of these trips take place on high-speed roadways; this assumption also ensures a conservative analysis. Average speed takes into consideration time spent while vehicles are moving at or around the speed limit as well as time spent slowing or stopped at intersections.

Based on this analysis, the computed average trip distance from members' homes to the nearest non-Costco gas station is approximately 0.83 miles and the average trip distance to the new Costco fuel facility is 2.5 miles. As shown in Table 4, the existing VMT associated with the 1,245 primary gas-only trips to non-Costco gas stations is estimated to be 1,038 miles. If all these trips were shifted to the new Costco facility, VMT for these trips would become 3,113 miles, which represents an increase in daily regional VMT of 2,075 miles.

Table 4. Change in VMT Associated with Shifting Non-Costco Primary Gas-Only Trips

	Existing	With Project Alternative	Difference
Number of Trips	1,245	1,245	-
Average Trip Length (miles)	0.83	2.5	1.67
Daily VMT	1,038	3,113	**2,075**

Diverted Gas-Only Member Trips

Diverted trips are trips associated with members who are traveling on the surrounding street network for some other primary purpose and stop by the fuel facility during that trip. Diverted trips for the Project Alternative are likely to originate from US-101. For the purpose of this analysis, half of the diverted trips were assumed to be traveling northbound on US-101 and half traveling southbound.

To calculate the change in regional VMT associated with diverted gas-only trips, diverted trip distances were first calculated for members diverting from their primary trip to visit existing non-Costco gas stations in the vicinity of the Costco site.[3] Then, diverted trip distances were calculated from the same point of diversion to the Novato fuel facility. The total number of diverted trips are then multiplied by the distance between non-Costco gas stations and by the distance to the new Costco facility to calculate existing and with-Project-Alternative VMT for each diversion route.

Table 5 presents the findings of this analysis. As shown in the table, there is a difference between the average diverted trip distance for the non-Costco gas stations and the new Costco fuel facility, resulting in an increase in daily regional VMT of 1,447 miles.

Table 5. Change in VMT Associated with Shifting Non-Costco Diverted Gas-Only Member Trips

	Diverted Trip Distance (mi.)			Number of Daily Diverted Trips	Daily VMT
	US-101 NB	US-101 SB	Average		
Non-Costco Gas Stations (Existing)	0.64	0.80	0.72	1,405	1,012
Novato Fuel Facility (With Project Alternative)	1.4	2.1	1.75	1,405	2,459
Change in Daily VMT					**1,447**

Pass-by Gas-Only Member Trips

Typically, VMT associated with pass-by trips is assumed to be zero since pass-by trips are existing trips on the network that require no out-of-direction travel. However, since the Project site is located more than half a mile south of Rowland Boulevard and is located within a shopping center, this analysis treats pass-by trips as trips originating somewhere within the shopping center, and it assumes an out-of-direction travel distance in the VMT calculations. These new Project Alternative pass-by trips are assumed to replace existing pass-by trips at other nearby non-Costco gas stations. The pass-by trip distance associated with the existing trips to non-Costco gas stations is assumed to be zero. Table 6 provides the increase in daily regional VMT expected due to pass-by trips to the Project Alternative.

Table 6. Change in VMT Associated with Shifting Non-Costco Pass-By Gas-Only Trips

	Existing	With Project Alternative	Difference
Number of Trips	1,491	1,491	-
Average Trip Length (miles)	0	0.3	0.3
Daily VMT	0	447	**447**

Shared (Internal) Warehouse + Gas Trips

As described previously in the Shifting Regional (Costco) Trips section, a portion of the trips anticipated at the new fuel facility would be shared trips with the warehouse, when members shop at the warehouse and also buy gas during a single visit to the Costco site. Although they account for a trip to both the warehouse and the fuel facility, these trips to the site are already on the street network today since members are already making trips to the warehouse. A portion of these warehouse + gas trips are assumed to be existing trips shifted from other Costco sites (as described in the previous section). The remainder of these internal trips are anticipated to replace existing trips to non-Costco gas station in the area, eliminating these separate trips from the street network and the VMT associated with them.

To calculate the change in VMT associated with this trip type, it was assumed that Costco members making a new internal trip to the fuel facility were previously making the same proportion of trip types as the data show for daily trips (i.e., the same percentage of gas-only diverted, pass-by, and primary trips relative to total gas-only trips). It was also assumed that these members were making these separate gas trips as a matter of convenience. Therefore, the average trip lengths calculated to these non-Costco facilities in the previous sections (see Table 4 and Table 5) were used here to estimate VMT.

As shown in Table 7, replacing these existing non-Costco gas trips with shared warehouse + gas trips will reduce daily regional VMT by approximately 814 miles.

Table 7. Change in VMT Associated with Shared Warehouse + Fuel Facility Member Trips

Trip Type	Number of Daily Trips	Existing (Separate Gas Trip)		With Project Alternative (Shared WH + Gas Trip)		Change in Daily VMT
		Average Trip Distance	Daily VMT	Average Trip Distance	Daily VMT	
Primary	382	0.83	318	0	0	-318
Diverted	689	0.72	496	0	0	-496
Pass-by	729	0	0	0	0	0
Total	1,800[1]	-	**814**	0	**0**	**-814**

Source: Kittelson & Associates, 2024

[1] 2,026 total internal trips – 226 expected to shift from other Costco facilities; 1,800 remaining trips expected to shift from non-Costco gas stations.

All Shifting Local (Non-Costco) Trips

The total change in VMT associated with shifting local (non-Costco) trips is calculated in Table 8.

Table 8. Change in VMT Associated with all Shifting Local (non-Costco) Trips

Member Trip Type	Existing Daily VMT	With Project Alternative Daily VMT	Change in Regional Daily VMT
Shifting Non-Costco Primary Gas-Only	1,038	3,113	2,075
Shifting Non-Costco Diverted Gas-Only	1,012	2,459	1,447
Shifting Non-Costco Pass-by Gas-Only	0	447	447
Shared Warehouse + Fuel Facility	814	0	-814
Total VMT	2,864	6,019	**3,155**

EMPLOYEE TRIPS

The Project Alternative is expected to require two employees on site to operate the facility. With two shifts occurring daily, these four employees are expected to make eight daily trips. The VMT associated with these eight trips was estimated to be about 83 miles using an average VMT per employee of 20.7, which is the Marin County average VMT per employee by the Transportation Authority of Marin Demand Model (TAMDM) VMT webmap.[4] The VMT per employee value used in this analysis reflects the Marin County

[4] https://www.tam.ca.gov/travel-demand-model-traffic-monitoring/#vmtwebmap

average in 2015 (20.7); this was used to ensure a conservative analysis, as the 2040 average provided is 19.6.

OVERALL CHANGE IN REGIONAL DAILY VMT

Table 9 presents the change in regional daily VMT associated with the opening of the proposed new Costco fuel facility at the existing Novato Costco warehouse. The change in total regional daily VMT is calculated by comparing the existing VMT by Costco members in the region and VMT by members and employees after the new facility is opened. As presented in the table, the change in total regional daily VMT associated with the Project Alternative is estimated to be a net decrease of 798 miles.

Table 9. Change in Regional Daily VMT Associated with Project Alternative

Trip Type	Existing VMT	With Project Alternative VMT	Change in Regional Daily VMT
Shifting Regional Trips (Existing Costco Trips)	36,256	32,220	-4,036
Shifting Local Trips (Existing Non-Costco Trips)	2,864	6,019	3,155
Employee Trips	0	83	83
Total VMT	**39,120**	**38,322**	**-798**

Peer Review of the Novato Costco Fuel Station Project Alternative VMT Analysis

Dear Mr. Walker;

As requested, W-Trans has completed a peer review of the *Novato Costco Fuel Station – Project Alternative VMT Analysis*, June 2024, prepared by Kittelson & Associates (Technical Memorandum). The memorandum contains a quantitative VMT analysis for an alternative to the project that will be assessed in the project's environmental impact report. The project alternative consists of a 20-fueling position station, in contrast to the 28-fueling position station that is proposed by the applicant.

The approach used by Kittelson & Associates to quantify the project alternative's VMT is consistent with the approach used in the assessment of the project, as contained in the *Transportation Impact Analysis: Costco Fuel Station Addition*, February 2024. Both VMT analyses quantify potential changes to regional VMT in three primary categories: changes related to Costco members shifting their trip from a different Costco fuel facility to the Novato facility, changes related to Costco members shifting their fuel purchases from a non-Costco gas station to the Novato facility, and changes associated with fuel station employees traveling to the Novato facility.

As indicated in the Technical Memorandum, the project alternative is smaller than the proposed project and would generate fewer daily trips; reducing daily trips in turn reduces VMT. The approach applied in the Technical Memorandum also accounts for longer wait times at the Novato facility with the project alternative versus the project given the availability of fewer fueling positions. Longer wait times at Novato make it less appealing for "warehouse plus gas" customers currently visiting the Rohnert Park or Vallejo facilities to divert to the new station. The analysis outlined in the Technical Memorandum assumes that Rohnert Park and Vallejo warehouse plus gas customers would only divert to Novato if their travel time would be five or more minutes shorter than it currently is. The premise that Novato wait times would be longer with a smaller station, with fewer existing warehouse plus gas customers of other facilities diverting to the new Novato station, appears to be a reasonable assumption. These effects, combined with the effects of fewer overall daily trips generated, ultimately result in the project alternative reducing regional VMT by slightly more than was estimated to occur with the proposed project.

Because the project alternative would be expected to cause a slight reduction in regional VMT, it would be considered to have a less-than-significant VMT impact. This is the same conclusion reached for the proposed project. W-Trans finds the quantitative VMT analysis performed for the project alternative to rely on reasonable methodologies that are consistent with those applied in the proposed project's VMT analysis and sufficient to support a less-than-significant VMT impact determination.

Thank you for giving W-Trans the opportunity to provide these services. Please call if you have any questions.

Sincerely,

Zachary Matley, AICP
Principal
