NOTICE OF PREPARATION OF A SUBSEQUENT ENVIRONMENTAL IMPACT REPORT AND SCOPING MEETING FOR THE TWO RIVERS TRAIL PHASE III MULTI-USE TRAIL PROJECT

PUBLIC COMMENT PERIOD
March 31, 2025, to May 1, 2025

Scoping Meeting: Wednesday, April 23, 2025, 5:30 – 6:30 PM
Zoom Link: www.cityofsacramento.gov/tworiverstrail

Responsible agencies and members of the public are invited to attend and provide input on the scope of the EIR. The scoping meeting will be conducted in a virtual format with presentation and time for questions and answers after. Written comments regarding relevant issues may be submitted during and after the meeting.

INTRODUCTION

The City of Sacramento (City) is the Lead Agency for preparation of a Subsequent Environmental Impact Report (SEIR) for the proposed Two Rivers Trail Phase III Multi-Use Trail Project (Project). The SEIR to be prepared by the City will evaluate potential significant environmental effects of the proposed Project and other actions associated with the proposed Project. Written comments regarding the issues that should be covered in the SEIR, including potential alternatives to the proposed Project and the scope of the analysis, are invited.

The SEIR for the proposed Project is being prepared in compliance with the California Environmental Quality Act (CEQA). Under CEQA, upon deciding to prepare an SEIR, the City as lead agency must issue a Notice of Preparation (NOP) to inform trustee agencies, the public, and responsible agencies of that decision. The purpose of the NOP is to provide information describing the project and its potential environmental effects to those who may wish to comment regarding the scope and content of the information to be included in the SEIR. Agencies should comment on such information as it relates to their statutory responsibilities in connection with the project.

The SEIR will provide an evaluation of potential environmental impacts associated with development of the proposed Project. The proposed project description, location, and environmental issue areas that may be affected by development of the proposed Project are described below. The SEIR will evaluate the potentially significant environmental impacts of the proposed Project, on both a direct and cumulative basis, identify mitigation measures that may be feasible to lessen or avoid such impacts, and identify alternatives to the proposed Project.

PROJECT BACKGROUND

In December 2022, the City approved the Final EIR (FEIR) for the Two Rivers Trail Phase II Project which will construct approximately 3.4 miles of Class I bicycle and pedestrian trail along the south bank of the American River extending from Tiscornia Park at Jibboom Street to the H Street Bridge in Sacramento, California (SCH #2018102058). Since then, the Project has been updated to include additional trail alignments and design features that were not previously analyzed. As the lead agency, the City will prepare a Subsequent Environmental Impact Report that will tier from the certified 2022 FEIR and will evaluate whether the proposed new alignment and design features for the trail would result in new or substantially more severe significant impacts, than the impacts disclosed in the 2022 FEIR.

PROJECT LOCATION/SETTING

Figures 1 and 2 shows the location of the Project area in the Sacramento region. The Project area is generally bounded by the American River to the north; 28th Street to the east; and ends on the levee approximately 0.10 mile west of SR-160. Figure 3 illustrates the proposed study area for the trail alignment.

PROJECT DESCRIPTION

The City proposes to construct approximately 1.8 miles of bicycle and pedestrian trail along the south bank of the American River that extends from the 28th/A Street intersection to the west, ending on the levee approximately 0.10 mile west of SR-160 (see Figure 3). The Two Rivers Trail Phase III Project would generally consist of a 12-foot-wide paved path with a 2-foot-wide compacted decomposed granite (DG) shoulders on each side. To accommodate project constraints and phasing, there will also be segments where the trail width will be slightly reduced and where the trail is composed of DG (unpaved). On-street bicycle lanes are also proposed in some locations as part of the Project.

This Project is essential for closing gaps in the existing and planned trail system, improving access to retail, employment, and recreational amenities for users of all ages and abilities. No permanent right-of-way acquisitions are required; however, temporary construction easements/maintenance agreements will be needed on UPRR parcels, and some utility relocations will be required.

This project is locally funded and therefore requires compliance with CEQA. The lead agency for CEQA compliance is the City.

Project Purpose

The purpose of the Project is to:

- Provide a vital recreation link between the Jedediah Smith Trail on the north side of the American River Parkway, the Sacramento River Parkway, the Sacramento Northern Bikeway Trail, the future Ueda Parkway trails, and the 20th Street bike connection to the Central City;

- Provide alternative transportation access for commuters and residents in the eastern part of the City, California State University, Sacramento (CSUS), Central City, North Sacramento, East Sacramento, and Richards Boulevard area;
- Provide trail users with a connection to the river and the American River Parkway; and
- Provide an American's with Disabilities Act (ADA)-compliant, active transportation connection to adjacent communities throughout the Sacramento area for pedestrians and bicyclists of all ages and abilities to access retail, jobs, and recreational amenities.

Project Need
The Project is needed to provide a gap closure in the existing and planned trail system, improving access to retail, employment, and recreational amenities for users of all ages and abilities.

ENVIRONMENTAL EFFECTS AND SCOPE OF THE EIR

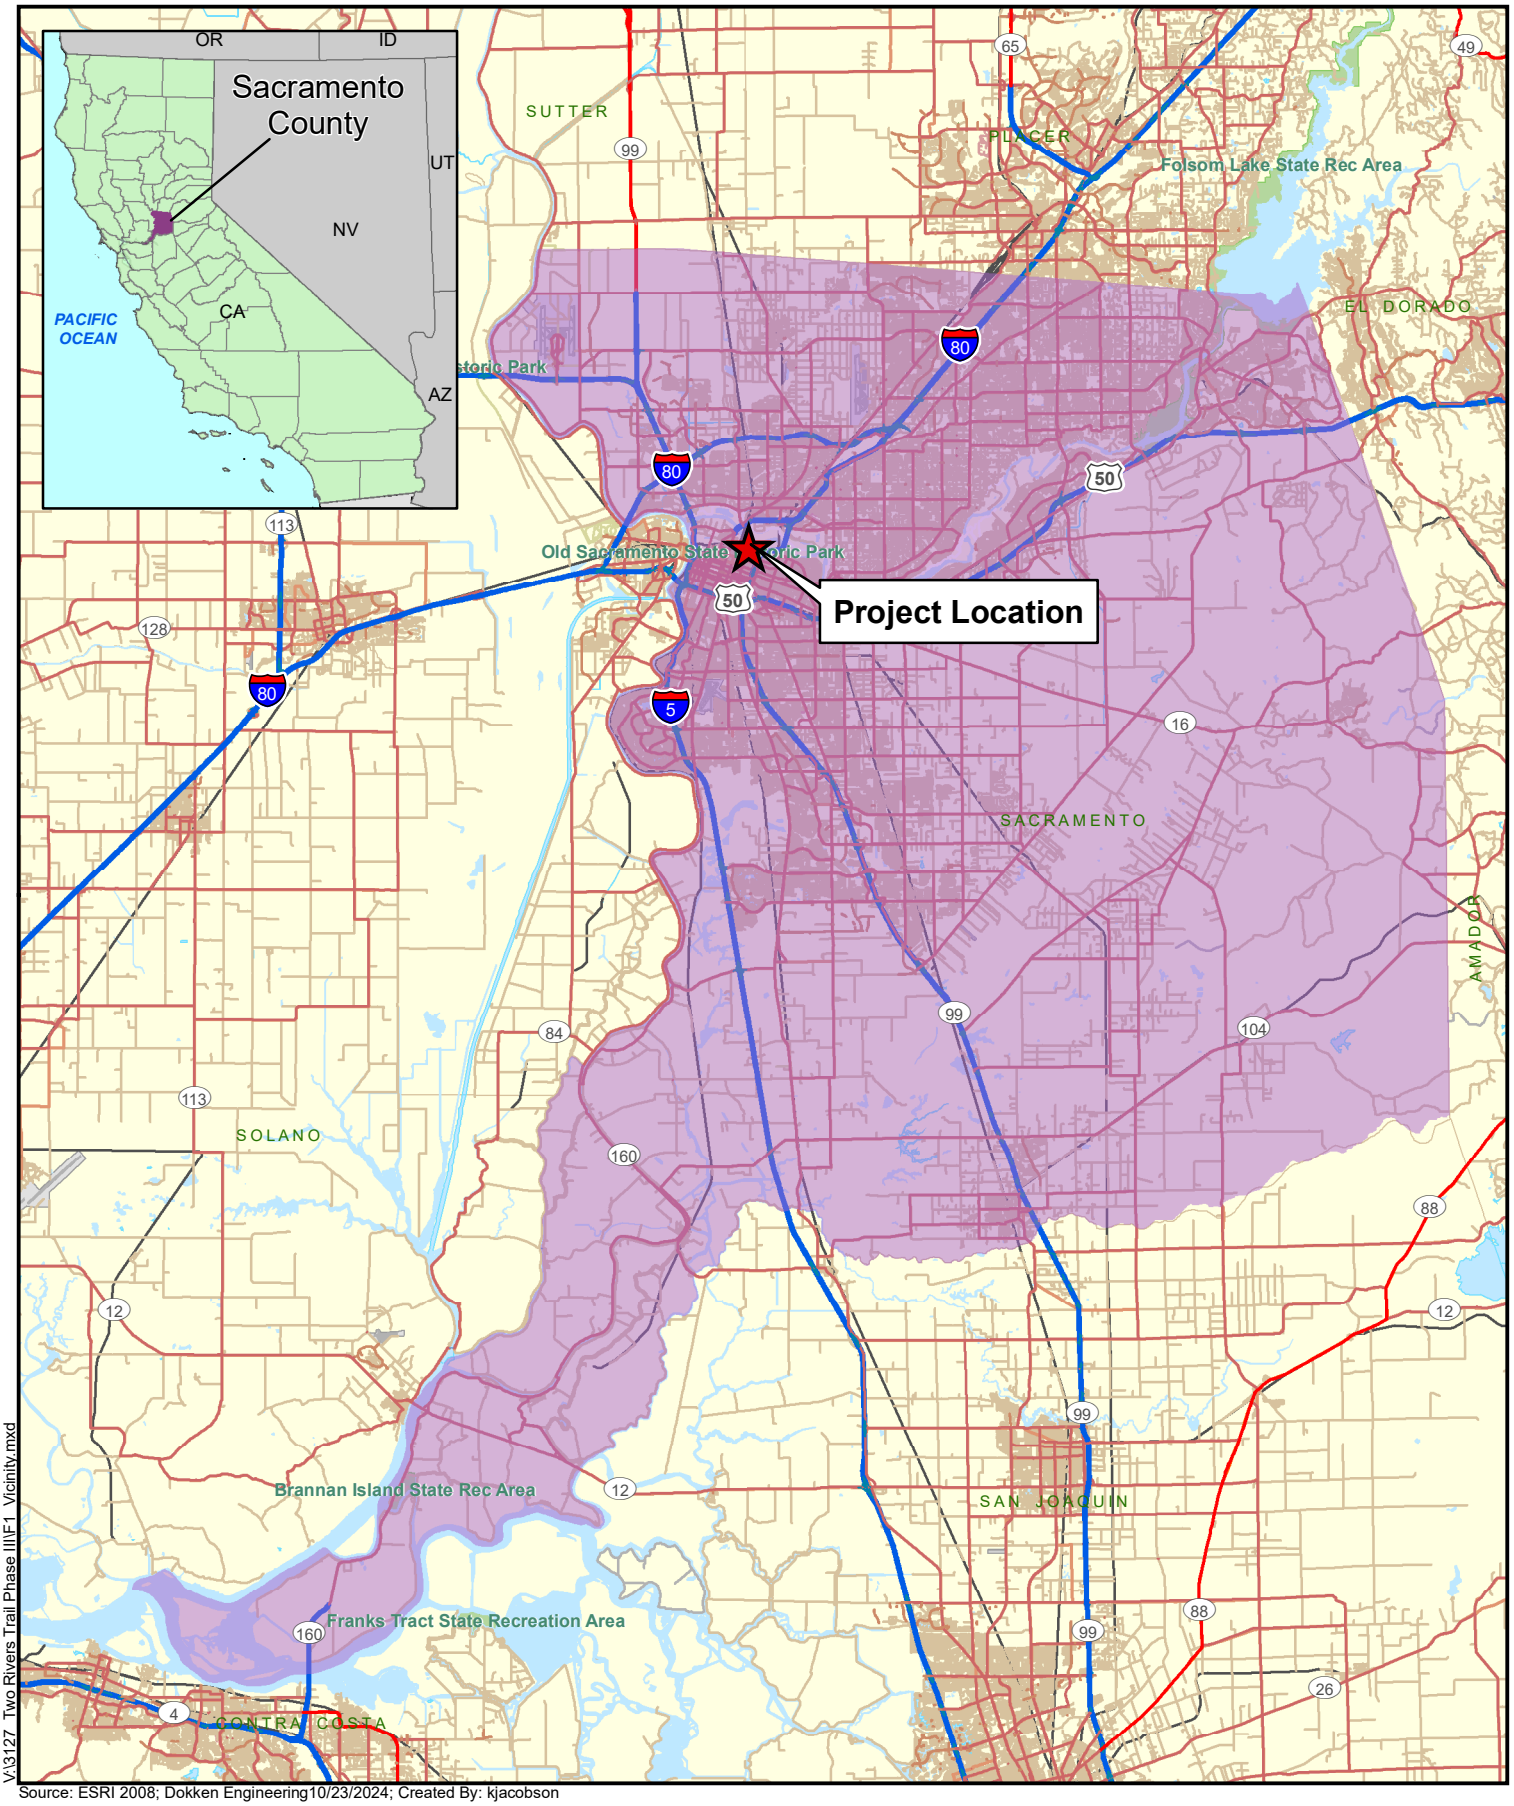
The SEIR will analyze potentially significant impacts that result from construction of the proposed Project.

Pursuant to section 15063 (a) of the CEQA Guidelines, an Initial Study has not been prepared for the proposed project. The SEIR will evaluate the full range of environmental issues contemplated for consideration under CEQA and the CEQA Guidelines, including:

- Aesthetics
- Agriculture and Forestry
- Air Quality
- Biological Resources
- Cultural Resources
- Energy
- Geology/Soils
- Greenhouse Gas Emissions
- Hazards and Hazardous Materials
- Hydrology/Water Quality
- Land Use/Planning
- Mineral Resources
- Noise
- Population/Housing
- Public Services
- Recreation
- Transportation
- Tribal Cultural Resources
- Utilities/Service Systems
- Wildfire
- Mandatory Findings of Significance

The SEIR will identify and evaluate a range of reasonable alternatives to the proposed Project.

SUBMITTING COMMENTS



Comments and suggestions as to the appropriate scope of analysis in the SEIR are invited from all interested parties. Written comments or questions concerning the SEIR for the proposed Project should be directed to the City's environmental planner at the following address by 5:00 p.m. on May 1, 2025. Please include the commenter's full name and address.

Proposed Trail Alignment

Two Rivers Trail Phase III Project
City of Sacramento, Sacramento County, California

From:	Amy Bakker
To:	Amy Bakker
Subject:	FW: Concerns about the new bike path loop route
Date:	Thursday, June 19, 2025 5:39:00 PM

From: Kevin Wehr <kevin_wehr@calfac.org>
Sent: Wednesday, April 23, 2025 6:03 PM
To: Ron Bess <rbess@cityofsacramento.org>
Subject: Concerns about the new bike path loop route

Ron,

I went toe-to-toe with SMUD over the new substation because their contractor started doing remediation and removal of toxic soils without approval and without notification. Toxic dust was blowing from the site over the neighborhood and especially of concern was the Courtyard Elementary School. Through that process I found out the old landfill immediately to the north of the new substation was also highly contaminated, see notes below from the SMUD substation EIR below. This is the area where the bike path is going to "loop" around.

I asked this on the webinar this evening and was not really satisfied with the answer. Can you confirm that this area has been cleaned up or will be cleaned up prior to construction of the bike trail?

Many thanks,

Kevin

Kevin Wehr

Bargaining Chair

California Faculty Association

From SMUD substation project EIR:

- The soil and waste were found to be contaminated with arsenic, lead, total petroleum hydrocarbons in the diesel and motor oil ranges (TPH-d/-mo), polychlorinated biphenyl (PCB)-1260, and benzo(a)pyrene. The soil gas also contained detectable levels of benzene. The groundwater contained arsenic, chromium, benzene, and TPH-d/-mo.
- The materials that required disposal in a hazardous waste management facility were contaminated with arsenic, lead, total petroleum hydrocarbons in the diesel and motor oil ranges (TPH-d/-mo), polychlorinated biphenyl (PCB)-1260, and benzo(a)pyrene. SMUD has conducted extensive confirmation sampling in areas previously excavated and recompacted in 2015, for soil, groundwater, and landfill gases to ensure those areas meet the cleanup goals of the Post Closure Land Use Plan.

Re: 2018102058 Two Rivers Trail Phase III Multi-Use Trail Project, Sacramento County

Dear Mr. Randolph:

The Native American Heritage Commission (NAHC) has received the Notice of Preparation (NOP), Draft Environmental Impact Report (DEIR) or Early Consultation for the project referenced above. The California Environmental Quality Act (CEQA) (Pub. Resources Code §21000 et seq.), specifically Public Resources Code §21084.1, states that a project that may cause a substantial adverse change in the significance of a historical resource, is a project that may have a significant effect on the environment. (Pub. Resources Code § 21084.1; Cal. Code Regs., tit.14, §15064.5 (b) (CEQA Guidelines §15064.5 (b)). If there is substantial evidence, in light of the whole record before a lead agency, that a project may have a significant effect on the environment, an Environmental Impact Report (EIR) shall be prepared. (Pub. Resources Code §21080 (d); Cal. Code Regs., tit. 14, § 5064 subd.(a)(1) (CEQA Guidelines §15064 (a)(1)). In order to determine whether a project will cause a substantial adverse change in the significance of a historical resource, a lead agency will need to determine whether there are historical resources within the area of potential effect (APE).

CEQA was amended significantly in 2014. Assembly Bill 52 (Gatto, Chapter 532, Statutes of 2014) (AB 52) amended CEQA to create a separate category of cultural resources, "tribal cultural resources" (Pub. Resources Code §21074) and provides that a project with an effect that may cause a substantial adverse change in the significance of a tribal cultural resource is a project that may have a significant effect on the environment. (Pub. Resources Code §21084.2). Public agencies shall, when feasible, avoid damaging effects to any tribal cultural resource. (Pub. Resources Code §21084.3 (a)). **AB 52 applies to any project for which a notice of preparation, a notice of negative declaration, or a mitigated negative declaration is filed on or after July 1, 2015.** If your project involves the adoption of or amendment to a general plan or a specific plan, or the designation or proposed designation of open space, on or after March 1, 2005, it may also be subject to Senate Bill 18 (Burton, Chapter 905, Statutes of 2004) (SB 18). **Both SB 18 and AB 52 have tribal consultation requirements.** If your project is also subject to the federal National Environmental Policy Act (42 U.S.C. § 4321 et seq.) (NEPA), the tribal consultation requirements of Section 106 of the National Historic Preservation Act of 1966 (154 U.S.C. 300101, 36 C.F.R. §800 et seq.) may also apply.

The NAHC recommends consultation with California Native American tribes that are traditionally and culturally affiliated with the geographic area of your proposed project as early as possible in order to avoid inadvertent discoveries of Native American human remains and best protect tribal cultural resources. Below is a brief summary of portions of AB 52 and SB 18 as well as the NAHC's recommendations for conducting cultural resources assessments.

Consult your legal counsel about compliance with AB 52 and SB 18 as well as compliance with any other applicable laws.

AB 52

AB 52 has added to CEQA the additional requirements listed below, along with many other requirements:

1. Fourteen Day Period to Provide Notice of Completion of an Application/Decision to Undertake a Project: Within fourteen (14) days of determining that an application for a project is complete or of a decision by a public agency to undertake a project, a lead agency shall provide formal notification to a designated contact of, or tribal representative of, traditionally and culturally affiliated California Native American tribes that have requested notice, to be accomplished by at least one written notice that includes:

a. A brief description of the project.

b. The lead agency contact information.

c. Notification that the California Native American tribe has 30 days to request consultation. (Pub. Resources Code §21080.3.1 (d)).

d. A "California Native American tribe" is defined as a Native American tribe located in California that is on the contact list maintained by the NAHC for the purposes of Chapter 905 of Statutes of 2004 (SB 18). (Pub. Resources Code §21073).

2. Begin Consultation Within 30 Days of Receiving a Tribe's Request for Consultation and Before Releasing a Negative Declaration, Mitigated Negative Declaration, or Environmental Impact Report: A lead agency shall begin the consultation process within 30 days of receiving a request for consultation from a California Native American tribe that is traditionally and culturally affiliated with the geographic area of the proposed project. (Pub. Resources Code §21080.3.1, subds. (d) and (e)) and prior to the release of a negative declaration, mitigated negative declaration or Environmental Impact Report. (Pub. Resources Code §21080.3.1(b)).

a. For purposes of AB 52, "consultation shall have the same meaning as provided in Gov. Code §65352.4 (SB 18). (Pub. Resources Code §21080.3.1 (b)).

3. Mandatory Topics of Consultation If Requested by a Tribe: The following topics of consultation, if a tribe requests to discuss them, are mandatory topics of consultation:

a. Alternatives to the project.

b. Recommended mitigation measures.

c. Significant effects. (Pub. Resources Code §21080.3.2 (a)).

4. Discretionary Topics of Consultation: The following topics are discretionary topics of consultation:

a. Type of environmental review necessary.

b. Significance of the tribal cultural resources.

c. Significance of the project's impacts on tribal cultural resources.

d. If necessary, project alternatives or appropriate measures for preservation or mitigation that the tribe may recommend to the lead agency. (Pub. Resources Code §21080.3.2 (a)).

5. Confidentiality of Information Submitted by a Tribe During the Environmental Review Process: With some exceptions, any information, including but not limited to, the location, description, and use of tribal cultural resources submitted by a California Native American tribe during the environmental review process shall not be included in the environmental document or otherwise disclosed by the lead agency or any other public agency to the public, consistent with Government Code §6254 (r) and §6254.10. Any information submitted by a California Native American tribe during the consultation or environmental review process shall be published in a confidential appendix to the environmental document unless the tribe that provided the information consents, in writing, to the disclosure of some or all of the information to the public. (Pub. Resources Code §21082.3 (c)(1)).

6. Discussion of Impacts to Tribal Cultural Resources in the Environmental Document: If a project may have a significant impact on a tribal cultural resource, the lead agency's environmental document shall discuss both of the following:

a. Whether the proposed project has a significant impact on an identified tribal cultural resource.

b. Whether feasible alternatives or mitigation measures, including those measures that may be agreed to pursuant to Public Resources Code §21082.3, subdivision (a), avoid or substantially lessen the impact on the identified tribal cultural resource. (Pub. Resources Code §21082.3 (b)).

7. Conclusion of Consultation: Consultation with a tribe shall be considered concluded when either of the following occurs:

a. The parties agree to measures to mitigate or avoid a significant effect, if a significant effect exists, on a tribal cultural resource; or

b. A party, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached. (Pub. Resources Code §21080.3.2 (b)).

8. Recommending Mitigation Measures Agreed Upon in Consultation in the Environmental Document: Any mitigation measures agreed upon in the consultation conducted pursuant to Public Resources Code §21080.3.2 shall be recommended for inclusion in the environmental document and in an adopted mitigation monitoring and reporting program, if determined to avoid or lessen the impact pursuant to Public Resources Code §21082.3, subdivision (b), paragraph 2, and shall be fully enforceable. (Pub. Resources Code §21082.3 (a)).

9. Required Consideration of Feasible Mitigation: If mitigation measures recommended by the staff of the lead agency as a result of the consultation process are not included in the environmental document or if there are no agreed upon mitigation measures at the conclusion of consultation, or if consultation does not occur, and if substantial evidence demonstrates that a project will cause a significant effect to a tribal cultural resource, the lead agency shall consider feasible mitigation pursuant to Public Resources Code §21084.3 (b). (Pub. Resources Code §21082.3 (e)).

10. Examples of Mitigation Measures That, If Feasible, May Be Considered to Avoid or Minimize Significant Adverse Impacts to Tribal Cultural Resources:

a. Avoidance and preservation of the resources in place, including, but not limited to:

i. Planning and construction to avoid the resources and protect the cultural and natural context.

ii. Planning greenspace, parks, or other open space, to incorporate the resources with culturally appropriate protection and management criteria.

b. Treating the resource with culturally appropriate dignity, taking into account the tribal cultural values and meaning of the resource, including, but not limited to, the following:

i. Protecting the cultural character and integrity of the resource.

ii. Protecting the traditional use of the resource.

iii. Protecting the confidentiality of the resource.

c. Permanent conservation easements or other interests in real property, with culturally appropriate management criteria for the purposes of preserving or utilizing the resources or places.

d. Protecting the resource. (Pub. Resource Code §21084.3 (b)).

e. Please note that a federally recognized California Native American tribe or a non-federally recognized California Native American tribe that is on the contact list maintained by the NAHC to protect a California prehistoric, archaeological, cultural, spiritual, or ceremonial place may acquire and hold conservation easements if the conservation easement is voluntarily conveyed. (Civ. Code §815.3 (c)).

f. Please note that it is the policy of the state that Native American remains and associated grave artifacts shall be repatriated. (Pub. Resources Code §5097.991).

11. Prerequisites for Certifying an Environmental Impact Report or Adopting a Mitigated Negative Declaration or Negative Declaration with a Significant Impact on an Identified Tribal Cultural Resource: An Environmental Impact Report may not be certified, nor may a mitigated negative declaration or a negative declaration be adopted unless one of the following occurs:

a. The consultation process between the tribes and the lead agency has occurred as provided in Public Resources Code §21080.3.1 and §21080.3.2 and concluded pursuant to Public Resources Code §21080.3.2.

b. The tribe that requested consultation failed to provide comments to the lead agency or otherwise failed to engage in the consultation process.

c. The lead agency provided notice of the project to the tribe in compliance with Public Resources Code §21080.3.1 (d) and the tribe failed to request consultation within 30 days. (Pub. Resources Code §21082.3 (d)).

The NAHC's PowerPoint presentation titled, "Tribal Consultation Under AB 52: Requirements and Best Practices" may be found online at: http://nahc.ca.gov/wp-content/uploads/2015/10/AB52TribalConsultation_CalEPAPDF.pdf

SB 18

SB 18 applies to local governments and requires local governments to contact, provide notice to, refer plans to, and consult with tribes prior to the adoption or amendment of a general plan or a specific plan, or the designation of open space. (Gov. Code §65352.3). Local governments should consult the Governor's Office of Planning and Research's "Tribal Consultation Guidelines," which can be found online at: https://www.opr.ca.gov/docs/09_14_05_Updated_Guidelines_922.pdf.

Some of SB 18's provisions include:

1. Tribal Consultation: If a local government considers a proposal to adopt or amend a general plan or a specific plan, or to designate open space it is required to contact the appropriate tribes identified by the NAHC by requesting a "Tribal Consultation List." If a tribe, once contacted, requests consultation the local government must consult with the tribe on the plan proposal. **A tribe has 90 days from the date of receipt of notification to request consultation unless a shorter timeframe has been agreed to by the tribe.** (Gov. Code §65352.3 (a)(2)).
2. No Statutory Time Limit on SB 18 Tribal Consultation. There is no statutory time limit on SB 18 tribal consultation.
3. Confidentiality: Consistent with the guidelines developed and adopted by the Office of Planning and Research pursuant to Gov. Code §65040.2, the city or county shall protect the confidentiality of the information concerning the specific identity, location, character, and use of places, features and objects described in Public Resources Code §5097.9 and §5097.993 that are within the city's or county's jurisdiction. (Gov. Code §65352.3 (b)).
4. Conclusion of SB 18 Tribal Consultation: Consultation should be concluded at the point in which:
    a. The parties to the consultation come to a mutual agreement concerning the appropriate measures for preservation or mitigation; or
    b. Either the local government or the tribe, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached concerning the appropriate measures of preservation or mitigation. (Tribal Consultation Guidelines, Governor's Office of Planning and Research (2005) at p. 18).

Agencies should be aware that neither AB 52 nor SB 18 precludes agencies from initiating tribal consultation with tribes that are traditionally and culturally affiliated with their jurisdictions before the timeframes provided in AB 52 and SB 18. For that reason, we urge you to continue to request Native American Tribal Contact Lists and "Sacred Lands File" searches from the NAHC. The request forms can be found online at: http://nahc.ca.gov/resources/forms/.

NAHC Recommendations for Cultural Resources Assessments

To adequately assess the existence and significance of tribal cultural resources and plan for avoidance, preservation in place, or barring both, mitigation of project-related impacts to tribal cultural resources, the NAHC recommends the following actions:

1. Contact the appropriate regional California Historical Research Information System (CHRIS) Center (https://ohp.parks.ca.gov/?page_id=30331) for an archaeological records search. The records search will determine:
    a. If part or all of the APE has been previously surveyed for cultural resources.
    b. If any known cultural resources have already been recorded on or adjacent to the APE.
    c. If the probability is low, moderate, or high that cultural resources are located in the APE.
    d. If a survey is required to determine whether previously unrecorded cultural resources are present.

2. If an archaeological inventory survey is required, the final stage is the preparation of a professional report detailing the findings and recommendations of the records search and field survey.
    a. The final report containing site forms, site significance, and mitigation measures should be submitted immediately to the planning department. All information regarding site locations, Native American human remains, and associated funerary objects should be in a separate confidential addendum and not be made available for public disclosure.

b. The final written report should be submitted within 3 months after work has been completed to the appropriate regional CHRIS center.

3. Contact the NAHC for:

a. A Sacred Lands File search. Remember that tribes do not always record their sacred sites in the Sacred Lands File, nor are they required to do so. A Sacred Lands File search is not a substitute for consultation with tribes that are traditionally and culturally affiliated with the geographic area of the project's APE.

b. A Native American Tribal Consultation List of appropriate tribes for consultation concerning the project site and to assist in planning for avoidance, preservation in place, or, failing both, mitigation measures.

4. Remember that the lack of surface evidence of archaeological resources (including tribal cultural resources) does not preclude their subsurface existence.

a. Lead agencies should include in their mitigation and monitoring reporting program plan provisions for the identification and evaluation of inadvertently discovered archaeological resources per Cal. Code Regs., tit. 14, §15064.5(f) (CEQA Guidelines §15064.5(f)). In areas of identified archaeological sensitivity, a certified archaeologist and a culturally affiliated Native American with knowledge of cultural resources should monitor all ground-disturbing activities.

b. Lead agencies should include in their mitigation and monitoring reporting program plans provisions for the disposition of recovered cultural items that are not burial associated in consultation with culturally affiliated Native Americans.

c. Lead agencies should include in their mitigation and monitoring reporting program plans provisions for the treatment and disposition of inadvertently discovered Native American human remains. Health and Safety Code §7050.5, Public Resources Code §5097.98, and Cal. Code Regs., tit. 14, §15064.5, subdivisions (d) and (e) (CEQA Guidelines §15064.5, subds. (d) and (e)) address the processes to be followed in the event of an inadvertent discovery of any Native American human remains and associated grave goods in a location other than a dedicated cemetery.

If you have any questions or need additional information, please contact me at my email address: Pricilla.Torres-Fuentes@NAHC.ca.gov.

Sincerely,

Pricilla Torres-Fuentes

Executive Summary

ES.1. Introduction

The City of Sacramento (City) proposes to construct approximately 3.4 miles of new Class 1 bicycle and pedestrian trail comprising 6 segments (proposed project) along the south bank of the American River that extends from Tiscornia Park at Jibboom Street to the H Street Bridge in Sacramento, California (see **Figure ES-1**).

The California Environmental Quality Act (CEQA) requires public agencies to identify, disclose, and consider the potential environmental impacts of proposed discretionary actions that an agency is considering for approval. A project that may have a significant impact on the environment cannot be approved unless the Lead Agency makes the approval contingent upon the implementation of mitigation measures that would reduce or avoid that impact to the extent feasible. When a project may have significant environmental impacts, the Lead Agency must prepare an environmental impact report (EIR) before it considers whether to approve the project.

ES.2. Proposed Project

The proposed multi-use trail design would meet California Department of Transportation (Caltrans) Class 1 bikeway design criteria and would also be based on the State Water Code Title 23 standards for recreation trails on levees and the ARFCD Recreational Trails Policy (ARFCD 2002). The trail would generally consist of an 8-foot-wide paved path with a 2-foot-wide compacted shoulder on the inner side and a similar 6-foot-wide shoulder on the waterside to provide space for walking and jogging adjacent to the paved portion of the trail, bringing the total trail cross section along most of its length to 16 feet wide. However, due to space limitations in some locations, the waterside shoulder of the trail would be narrowed to 4 feet wide. The trail would be paved and engineered to be load-bearing.

The proposed project is comprising of 6 segments which are briefly described below and shown in **Figures ES-2** and **ES-3**.

Segment 1 is approximately 0.4 miles long. It begins at the existing Sacramento Northern Bikeway Trail at North 18th Street and ends 0.3 miles west of Sutter's Landing Park (see **Figure ES-2**). At North 18th Street, the trail would run along the toe of the levee crossing under the Union Pacific Railroad (UPRR) and continue for another 0.3 miles.

Segment 2 is approximately 0.6 miles long. This segment begins at the eastern terminus of Segment 1 and continues to Sutter's Landing Regional Park (see **Figure ES-2**). Two trail alignments are under consideration for Segment 2. The preferred trail alignment, Alternative 1, which is approximately 0.7 miles in length, would diverge from the levee immediately at the end of the first segment and extend south for approximately 0.3 mile and then turn southeast and extend another approximately 0.4 mile to 28th Street at the entrance to Sutter's Landing Regional Park across the street from McKinley Village Way. The other alignment for Segment 2 (Alternative 2) is approximately 0.55 miles in length. It would extend east from the end of the first segment for another approximately 0.15 mile before diverging from the levee to the south. This leg of Segment 2 would then continue south approximately 0.25 mile, until it

intersected with the preferred alignment, or would turn southeast 0.1 mile sooner and follow the north side of an existing solar array for approximately 0.15 mile before terminating in the parking lot adjacent to the dog park and across the street from the existing trail within Sutter's Landing Regional Park.

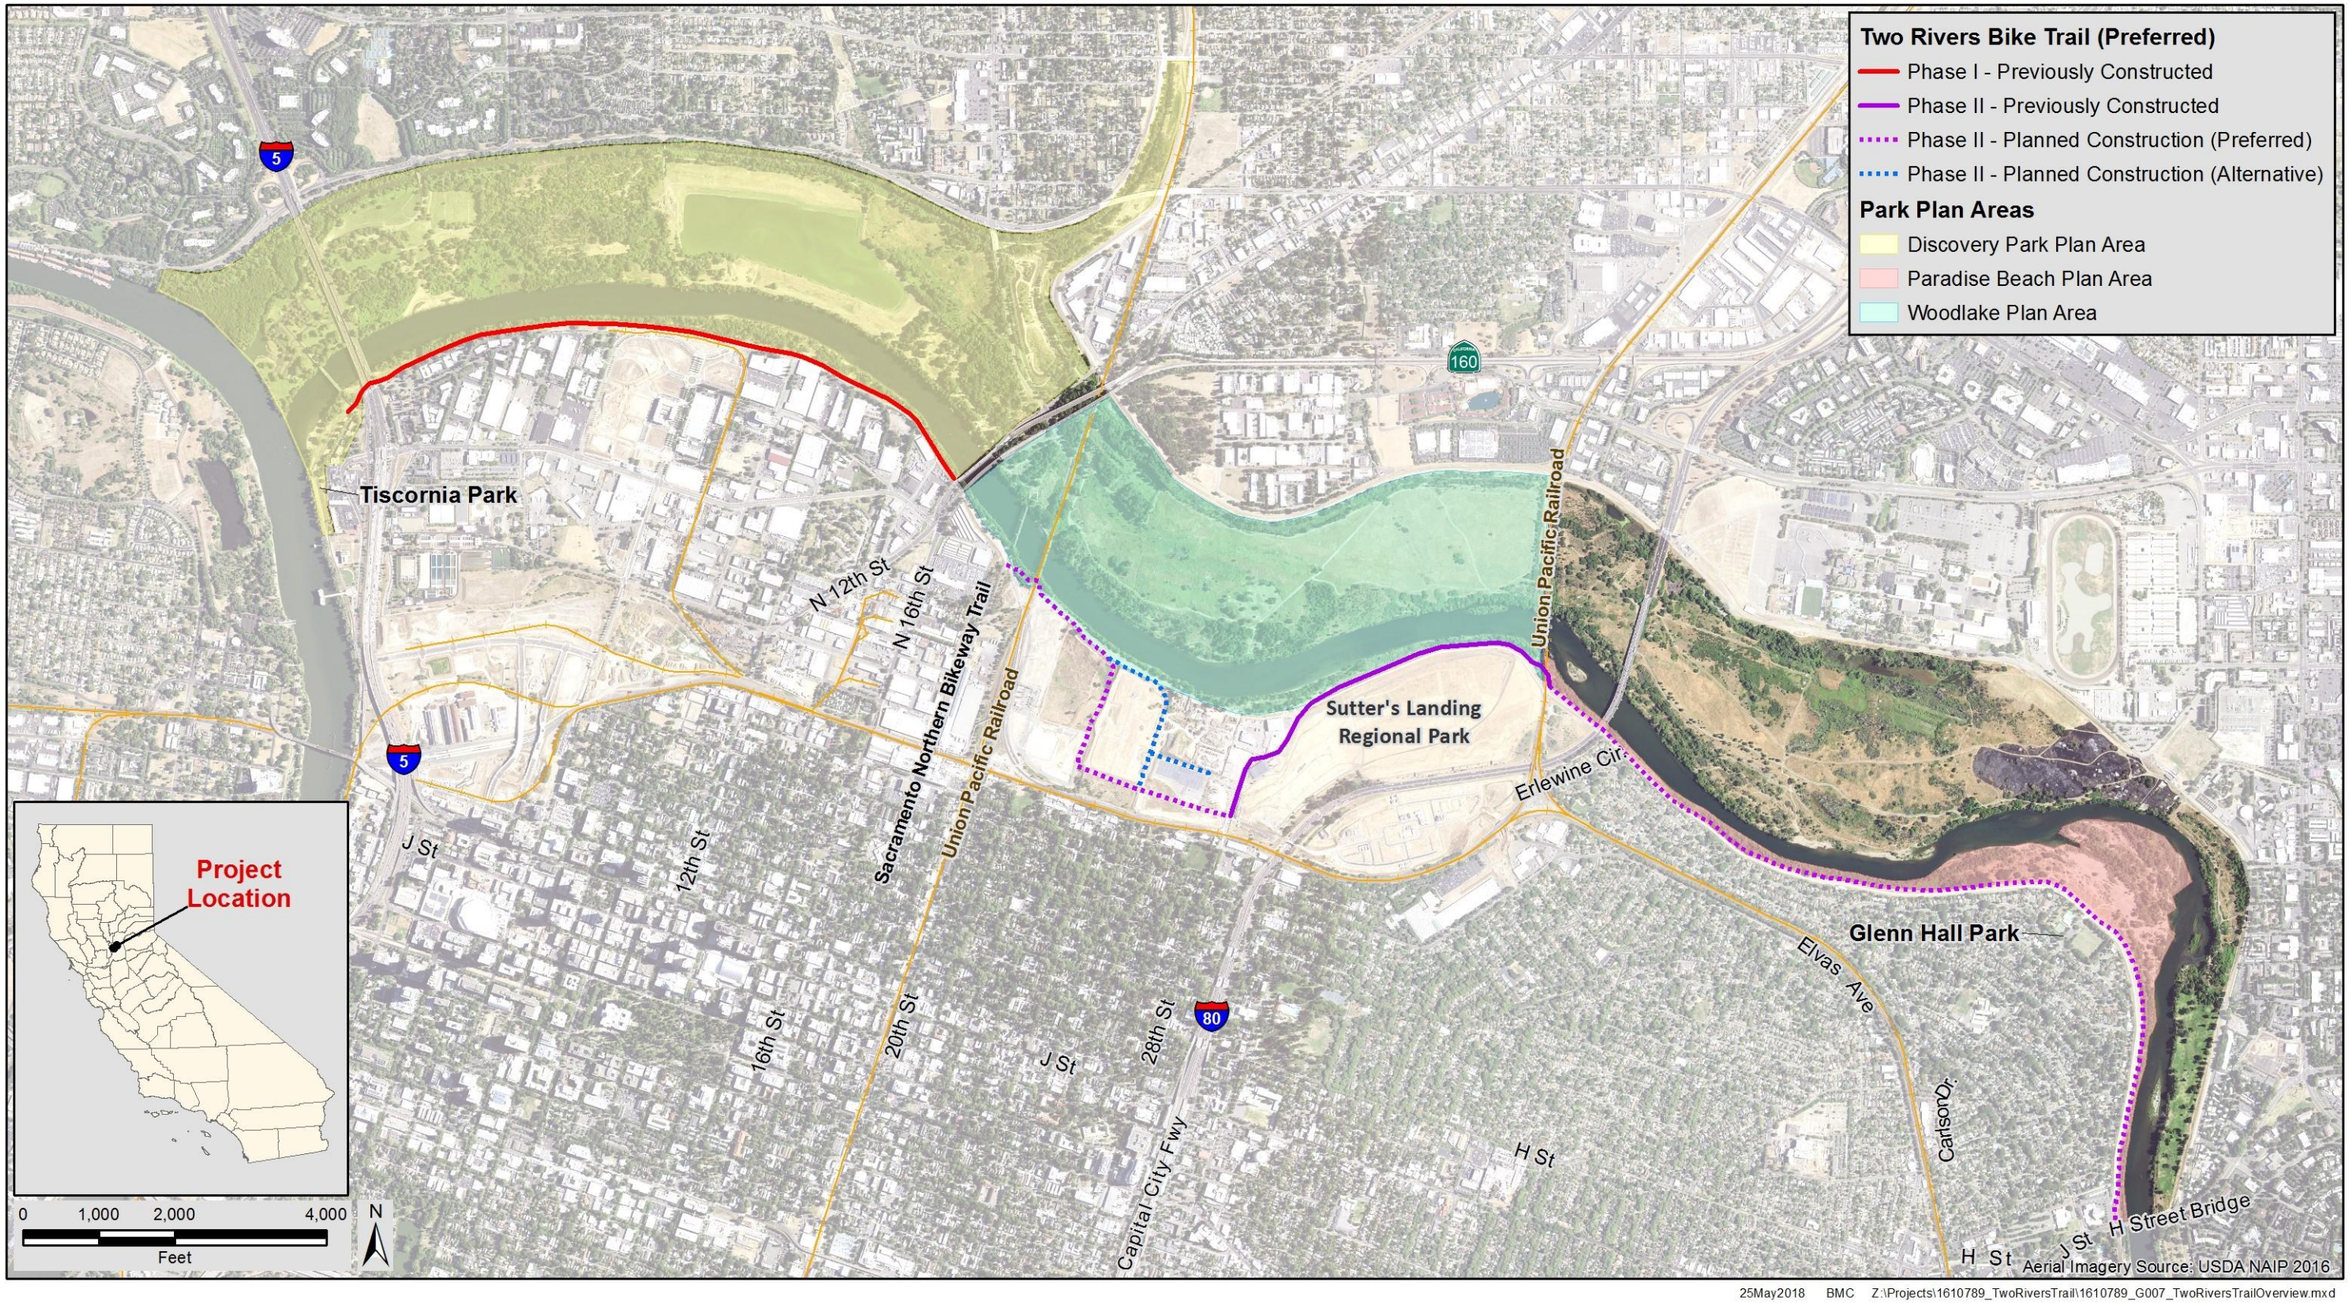
Segment 3 is approximately 0.3 miles long and begins on the east side of Sutter's Landing Park at the end of the recently completed trail segment. From here, the trail would run along an existing bench at the toe of the levee, first crossing under another portion of the UPRR and eventually under the Capital City Freeway (SR 80) where Segment 4 begins (see **Figure ES-3**).

Segment 4 is also approximately 0.25 miles long (see **Figure ES-3**) and would begin just east of the Capital City Freeway. This segment is proposed as a "levee-top" trail alignment, which may extend past the current boundary of Segment 5 should the ARFCD be able to grant additional trail variances to the waterside toe alignment proposed for the remaining portions of the trail.

Segment 5 is 1.4 miles long and passes Paradise Beach and Glenn Hall Park (see **Figure ES-3**).

Segment 6 begins at the east end of Segment 5 along the levee toe, is approximately 0.3 miles long, and includes a transition back to the levee crown where the trail would connect to the existing paved trail near the H Street Bridge (see **Figure ES-3**). While there is a bench along the toe in this segment, the bench is much narrower than in other locations requiring a reduced path width to limit impacts.

ES.3. Project Objectives



The objectives of the proposed project are to:

- Provide a vital recreation link between the Jedediah Smith Trail on the north side of the American River Parkway, the Sacramento River Parkway, the Sacramento Northern Bikeway Trail, the future Ueda Parkway trails, and the 20th Street bike connection to the Central City;
- Provide alternative transportation access for commuters and residents in the eastern part of the City, CSUS, Central City, North Sacramento, East Sacramento, and Richards Boulevard area;
- Provide opportunities for educating trail users through interpretive signage, establishing a connection to the river, and the Parkway;
- Provide an acceptable project to all authoritative agencies;
- Complete the project in a manner that minimizes environmental impacts to the Parkway, given the proposed project's location within the environmentally sensitive Parkway; and
- Where feasible, design trail access points to comply with the requirements of the Americans with Disabilities Act (ADA).

ES.4. Project Alternatives

CEQA requires that an EIR describe and evaluate a range of reasonable alternatives to a project or to the location of a project that would feasibly attain most of the basic project objectives and avoid or substantially lessen significant project impacts (CEQA Guidelines section 15126.6). The alternatives to the proposed project considered in this Draft EIR were developed based on information gathered during the development of the proposed project and during the EIR scoping process.

Figure ES-3. Proposed Trail Alignment - Eastern Segments

Source: GEI Consultants, 2019

This page intentionally left blank.

Alternative 1: October 2018 Initial Study Alternative

This alternative was analyzed in the October 2018 Initial Study and includes 3.4 miles of new Class 1 bicycle and pedestrian trail comprised of 6 segments. The trail would generally consist of an 8-foot-wide paved path with a 2-foot-wide compacted shoulder on the inner side and a similar 6-foot-wide shoulder on the waterside to provide space for walking and jogging adjacent to the paved portion of the trail, bringing the total trail cross section along most of its length to 16 feet wide. However, due to space limitations in some locations, the waterside shoulder of the trail would be narrowed to 4 feet wide. The trail would be paved and engineered to be load-bearing.

Alternative 2: Top of Levee Construction – Segments 4 through 6

This alternative includes 3.4 miles of new Class 1 bicycle and pedestrian trail comprised of 6 segments along the same alignment as described in Alternative 1, however, under this alternative, the entire length of Segments 4 – 6 would be constructed along the levee crown.

Alternative 3: Extended Top of Levee Segment Alternative

This alternative was suggested during the June 2019 EIR Public Scoping Meeting and is identical to the proposed project, except for a portion of Segment 4. Under this alternative, the trail would move from the levee toe to the top of levee near Jerome Way (approximately RM 5), rather than near Bevil Street, resulting in a top of levee segment approximately 3x longer than what is included in the proposed project.

Alternative 4: Align Trail Outside of the American River Parkway

This alternative was suggested during review of the IS/MND and during the June 2019 EIR Public Scoping Meeting. Under this alternative, no trail would be developed within the American River Parkway. Existing trail use along developed portions of the Two Rivers Trail (Phase I) would use existing City streets to travel between 16th Street or the current trail terminus at Sutter's Landing Park to reach the East Sacramento/River Park neighborhoods and CSUS. Public comments suggested using the Elvas Avenue Corridor and Carlson Driver as possible travel corridors for bicycles and pedestrians.

ES.5. Agency Roles and Responsibilities

This environmental document is prepared in conformance with the requirements of the California Environmental Quality Act (CEQA) Public Resources Code (PRC) 21000-21178. The City is the Lead Agency, as defined by CEQA, for this Draft EIR, and has the principal responsibility to ensure that the requirements of CEQA have been met. After the EIR public review process is complete, the City Council is the party responsible for certifying that the EIR adequately evaluates the environmental impacts of the proposed project. The City Council has the authority to approve, approve with modifications, or reject the proposed project.

Caltrans is preparing a separate environmental document for the proposed project consistent with the requirements of the National Environmental Policy Act (NEPA) 40 CFR 1500-1508. Compliance with NEPA is required because the proposed project intends to use Federal funding for implementation. Caltrans is the NEPA Lead Agency for the proposed project.

ES.6. Permits

The following agencies may have permitting or approval authority over the proposed project:

- **American River Flood Control District (ARFCD)** – Encroachment permit for portions of the trail located on or extending across ARFCD facilities; easements for trails over lands owned by ARFCD in fee title.
- **National Marine Fisheries Service (NMFS)** – Federal Endangered Species Act Section 7 Consultation for potential effects to federally listed and proposed (endangered and threatened) anadromous fish species.
- **Public Utilities Commission** – Permission for railroad crossings.
- **United States Army Corps of Engineers (USACE)** – Rivers and Harbors Act Section 14 (408) authorization for alterations to a Federal project levee; Clean Water Act (CWA) Section 404 permit for dredge or fill of waters of the U.S.
- **United States Fish and Wildlife Service (USFWS)** – Federal Endangered Species Act Section 7 Consultation for potential effects to federally listed and proposed (endangered and threatened) plant and wildlife species.
- **Union Pacific Railroad (UPRR)** – Encroachment permit for the portions of the trail passing under a Union Pacific Railroad Bridge.
- **California Department of Transportation (Caltrans)** – Encroachment permit for the portion of the trail passing under SR 80.
- **California Department of Fish & Wildlife (CDFW)** – California Fish and Game Code Section 1602 Streambed Alteration Agreement for construction and alterations within riparian areas.
- **Central Valley Flood Protection Board (CVFPB)** – Encroachment permit for work within the flood control easement.
- **Central Valley Regional Water Quality Control Board (RWQCB)** – CWA Section 401 Water Quality Certification for discharge to surface waters.
- **County of Sacramento, Department of Regional Parks** –approval of 100% construction drawings; Lease Agreement for staging and construction within the Parkway; Map Amendment to convert the trail from future to active status; and Joint Use Agreement.

ES.7. Areas of Controversy

The City issued a Notice of Preparation (NOP) for this Draft EIR on May 21, 2019 in compliance with CEQA and the State CEQA Guidelines (see **Appendix B** of this Draft EIR). The City provided the NOP to local, State, and Federal agencies, organizations, and individuals that requested receipt of the City's public notices. The NOP was circulated for comment for 30 days, ending on June 19, 2019.

During the NOP comment period, the public and various government agencies have identified areas of controversy that pertain to the proposed project. General topics raised included: biological resources,

water quality, recreation, visual resources, public safety, and land use consistency, as well as general permitting concerns. Specific topics raised included:

- Biological resource impacts to species (Valley Elderberry Longhorn Beetle) and habitats within the American River Parkway.
- Visual impacts of the proposed developed trail.
- Tree removal.
- Public safety and recreation impacts resulting from additional use generated by a developed trail.
- Consideration of alternatives.

ES.8. Issues to Be Resolved

The discussion of environmental impacts, mitigation measures, and project alternatives as evaluated in detail in this Draft EIR constitutes the identification of issues to be resolved as required for compliance with CEQA Guidelines Section 15123(b)(2). In addition, a summary of Environmental Impacts and Mitigation Measures is provided below in **Table ES-1**.

ES.9. Next Steps for the EIR

This Draft EIR will be circulated and made available to local, State, and Federal agencies and to organizations and individuals who may want to review and comment on the adequacy of the analysis included in this Draft EIR. The period for public review and comment is August 1, 2019 through September 16, 2019 [established in the Notice of Availability (NOA)], which is filed with the Sacramento County Clerk and posted on the Community Development Department website at: http://www.cityofsacramento.org/Community-Development/Planning/Environmental/Impact-Reports.

Written comments or questions concerning the Draft EIR must be directed to the name and address below via postal mail or email by no later than 4:00 p.m. on September 16, 2019:

Ron Bess, Assistant Planner
City of Sacramento Community Development Department
300 Richards Blvd., Third Floor
Sacramento, CA 95811
Telephone: (916) 808-8272
E-mail: Rbess@cityofsacramento.org

Copies of this Draft EIR are also available to review at the City of Sacramento Community Development Department on any business day between the hours of 9:00 a.m. and 4:00 p.m. at the address below or on the project website at: http://www.cityofsacramento.org/Community-Development/Planning/Environmental/Impact-Reports.

City of Sacramento Community Development Department
300 Richards Blvd., Third Floor
Sacramento, CA 95811

The Draft EIR is also available for review at the following location:

City of Sacramento Public Library
915 I Street
Sacramento, CA 95814

Please indicate "Two Rivers Trail Project EIR" in the subject line. For comments by agencies and organizations, please include the name of a contact person for your agency or organization. All comments received, including names and addresses, will become part of the official administrative record and may be available to the public.

ES.10. Final EIR

Upon completion of the public review period, the City will review the comments received and prepare written responses to all environmental issues raised and, if necessary, revise the Draft EIR. Comments received, the responses to comments, and any necessary text revisions to the Draft EIR will be included as part of the Final EIR record for consideration of the proposed project. Responses will be made available for review by the commenting agencies at least 10 days prior to any public hearing on the proposed project, at which time the certification of the complete EIR would be considered.

The Final EIR will be considered by the City Council when acting on the proposed project. If the proposed project is approved, CEQA requires the City to adopt findings describing how each of the significant impacts identified in the EIR is being mitigated. The findings will also describe the reasons why project alternatives that were analyzed in the EIR have not been adopted if the City Council chooses not to adopt a project alternative. Finally, the City will adopt a Mitigation Monitoring and Reporting Plan (MMRP) that describes how it will ensure the mitigation measures being required of the proposed Project will be carried out.

ES.11. Summary of Potential Impacts and Mitigation

CEQA requires that the environmental analysis contained in the Draft EIR also include a summary of the proposed project and its consequences, including an identification of each potentially significant effect of the proposed project, the level of effect the proposed project may have, as well as any proposed mitigation measures. A full description of each of the proposed impacts and mitigation measures is found in **Chapter 3.0**, with a summary provided below in **Table ES-1**.

Table ES-1. Summary of Impacts and Mitigation Measures

Impact	Significance Before Mitigation	Mitigation Measure	Significance After Mitigation
3.1 Aesthetics			
Impact AES-1: Adverse Effect on Scenic Vista or Scenic Quality	LTS	No mitigation required	LTS
Impact AES-2: New Sources of Light and Glare	LTS	No mitigation required	LTS
Air Quality and Greenhouse Gas Emissions (from IS/MND)			
Impact AIR-1: Potential for Construction-Related Emissions	LTS	Mitigation Measure AIR-1 Implement Construction-related Emission Control Practices: The City shall ensure that the construction contractor implement all basic construction emission control practices and requirements of SMAQMD Rule 403 during trail construction activities, including the following: Water all exposed surfaces two times daily. Exposed surfaces include, but are not limited to soil piles, graded areas, unpaved parking areas, staging areas, and access roads. Cover or maintain at least two feet of free board space on haul trucks transporting soil, sand, or other loose material on the site. Any haul trucks that would be traveling along freeways or major roadways should be covered. Use wet power vacuum street sweepers to remove any visible track-out mud or dirt onto adjacent public roads at least once a day. Use of dry power sweeping is prohibited. Limit vehicle speeds on unpaved roads to 15 miles per hour. Minimize idling time either by shutting equipment off when not in use or reducing the time of idling to 5 minutes [required by California Code of Regulations, Title 13, sections 2449(d)(3) and 2485]. Provide clear signage that posts this requirement for workers at the entrances to the site. Maintain all equipment in proper working condition according to manufacturer's specifications. The equipment must be checked by a certified mechanic and determine to be running in proper condition before it is operated.	LTS
3.2 Biological Resources			
Impact BIO-1: Potential to have a substantial adverse effect, either directly or through habitat modifications, on any species in local or regional plans, policies, or regulations, or regulated by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service	PS	Mitigation Measure BIO-1: Conduct Environmental Awareness Training Regarding Special-status Species and Sensitive Habitats prior to Construction Mitigation Measure BIO-2: Install Temporary Fencing around Environmentally Sensitive Habitat	LTS

NI = No Impact B = Beneficial LTS = Less than Significant S = Significant PS = Potentially Significant SU = Significant and Unavoidable

Table ES-1. Summary of Impacts and Mitigation Measures

Impact	Significance Before Mitigation	Mitigation Measure	Significance After Mitigation
		Mitigation Measure BIO-3: Prepare and Implement a Storm Water Pollution Prevention Plan, Spill Prevention and Control Plan, and Associated Best Management Practices	
		Mitigation Measure BIO-4: Return Temporarily Disturbed Areas to Pre-Project Conditions	
		Mitigation Measure BIO-5: Avoid the Spread of Invasive Plant Species	
		Mitigation Measure BIO-6: Compensate for Permanent Impacts to Riparian Habitat and Protected Trees	
		Mitigation Measure BIO-7: Monitor During Ground Disturbance and Vegetation Removal	
		Mitigation Measure BIO-8: Avoid Construction Activities within 165 feet of Elderberry Shrubs During Valley Elderberry Longhorn Beetle Flight Season	
		Mitigation Measure BIO-9: Implement Dust Control Measure	
		Mitigation Measure BIO-10: Prohibit Use of Herbicides and Mowing near Elderberry Shrubs	
		Mitigation Measure BIO-11: Compensate for the Permanent Removal and Temporary Disturbance of Valley Elderberry Longhorn Beetle Habitat	
		Mitigation Measure BIO-12: Transplant Elderberry Shrubs	
		Mitigation Measure BIO-13: Provide Escape Ramps or Cover Open Trenches	
		Mitigation Measure BIO-14: Conduct Preconstruction Surveys	
		Mitigation Measure BIO-15: Avoid Loss of Swainson's Hawk Nests	
		Mitigation Measure BIO-16: Obtain Preliminary Jurisdictional Determination and Compensate for Impacts to Waters of the U.S. and State	
Impact BIO-2: Potential to have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, and regulations or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service	PS	Mitigation Measure BIO-1: Conduct Environmental Awareness Training Regarding Special-status Species and Sensitive Habitats prior to Construction	LTS
		Mitigation Measure BIO-2: Install Temporary Fencing around Environmentally Sensitive Habitat	
		Mitigation Measure BIO-3: Prepare and Implement a Storm Water Pollution Prevention Plan, Spill Prevention and Control Plan, and Associated Best Management Practices	
		Mitigation Measure BIO-4: Return Temporarily Disturbed Areas to Pre-Project Conditions	

NI = No Impact B = Beneficial LTS = Less than Significant S = Significant PS = Potentially Significant SU = Significant and Unavoidable

Table ES-1. Summary of Impacts and Mitigation Measures

Impact	Significance Before Mitigation	Mitigation Measure	Significance After Mitigation
Impact BIO-3: Potential to have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means	PS	Mitigation Measure BIO-1: Conduct Environmental Awareness Training Regarding Special-status Species and Sensitive Habitats prior to Construction Mitigation Measure BIO-2: Install Temporary Fencing around Environmentally Sensitive Habitat Mitigation Measure BIO-3: Prepare and Implement a Storm Water Pollution Prevention Plan, Spill Prevention and Control Plan, and Associated Best Management Practices Mitigation Measure BIO-4: Return Temporarily Disturbed Areas to Pre-Project Conditions Mitigation Measure BIO-16: Obtain Preliminary Jurisdictional Determination and Compensate for Impacts to Waters of the U.S. and State	LTS
Impact BIO-4: Potential to impact protected trees	PS	Mitigation Measure BIO-1: Conduct Environmental Awareness Training Regarding Special-status Species and Sensitive Habitats prior to Construction Mitigation Measure BIO-2: Install Temporary Fencing around Environmentally Sensitive Habitat Mitigation Measure BIO-3: Prepare and Implement a Storm Water Pollution Prevention Plan, Spill Prevention and Control Plan, and Associated Best Management Practices Mitigation Measure BIO-4: Return Temporarily Disturbed Areas to Pre-Project Conditions Mitigation Measure BIO-5: Avoid the Spread of Invasive Plant Species Mitigation Measure BIO-6: Compensate for Permanent Impacts to Riparian Habitat and Protected Trees Mitigation Measure BIO-7: Monitor During Ground Disturbance and Vegetation Removal	LTS
3.3 Cultural and Tribal Resources			
Impact CTR-1: Damage to or Destruction of Built Environment Historic Properties	LTS	No mitigation required	LTS
Impact CTR-2: Potential Damage to or Destruction of Previously Undiscovered Archaeological Sites or Tribal Cultural Resources	PS	Mitigation Measure CTR-1: Conduct Cultural Resources and Tribal Cultural Resources Sensitivity and Awareness Training Program Prior to Ground-Disturbing Activities	LTS

NI = No Impact B = Beneficial LTS = Less than Significant S = Significant PS = Potentially Significant SU = Significant and Unavoidable

Table ES-1. Summary of Impacts and Mitigation Measures

Impact	Significance Before Mitigation	Mitigation Measure	Significance After Mitigation
		Mitigation Measure CTR-2: Implement Avoidance, Minimization, and Preservation Measures Should Cultural or Tribal Cultural Resources Be Discovered During Construction	
Impact CTR-3: Potential Damage to or Destruction of Human Remains During Construction	PS	Mitigation Measure CTR-3: Implement Post Discovery Procedures in the Event of the Inadvertent Discovery of Human Remains	LTS
3.4 Geology and Soils			
Impact GEO-1: Cause Adverse Effects Related to Earthquake Fault Rupture, Seismic Ground Shaking, Seismic-Related Ground Failure (including landslide, subsidence, or liquefaction, or Be Located On Expansive Soils	PS	Mitigation Measure GEO-1: Perform Final Geotechnical Investigation and Implement Report Recommendations	LTS
3.5 Hazards and Hazardous Materials			
Impact HAZ-1: Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials	PS	Mitigation Measure BIO-3: Prepare and Implement a Storm Water Pollution Prevention Plan, Spill Prevention and Control Plan, and Associated Best Management Practices	LTS
Impact HAZ-2: Potential to create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment	PS	Mitigation Measure HAZ-1: Prepare a Worker Health and Safety Plan and Implement Appropriate Measures to Minimize Potential Exposure of the Public to Hazardous Materials Mitigation Measure HAZ-2: Obtain Site Closure and Follow Post-Closure Requirements for Past Disposal Sites	LTS
3.6 Hydrology, Water Quality, and Drainage			
Impact HWQ-1: Violate Water Quality Standards or Waste Discharge Standards, Degrade Surface Water Quality, Conflict With Implementation of a Water Quality Control Plan, or Release Pollutants During Flooding	PS	Mitigation Measure BIO-3: Prepare and Implement a Storm Water Pollution Prevention Plan, Spill Prevention and Control Plan, and Associated Best Management Practices.	LTS
Impact HWQ-2: Result in Erosion or Flood Impacts	LTS	No mitigation required	LTS
3.7 Land Use and Planning			
Impact LUP-1: Conflict with Land Use Plans: American River Parkway Plan	NI	No mitigation required	NI
3.8 Noise			
Impact NOS-1: Cause A Temporary or Permanent Increase in Ambient Noise Levels In Excess Of Applicable Standards	LTS	No mitigation required	LTS

NI = No Impact B = Beneficial LTS = Less than Significant S = Significant PS = Potentially Significant SU = Significant and Unavoidable

Table ES-1. Summary of Impacts and Mitigation Measures

Impact	Significance Before Mitigation	Mitigation Measure	Significance After Mitigation
Impact NOS-2: Generate Excessive Groundborne Vibration or Groundborne Noise Levels	LTS	No mitigation required	LTS
3.9 Public Services, Recreation, and Utilities

Chapter 1. Introduction

Two Rivers Trail is a planned Class 1 bicycle and pedestrian trail along the south bank of the American River that extends from Tiscornia Park at Jibboom Street to the H Street Bridge in Sacramento, California (see **Figure 1-1**). Phase I of this trail has been completed and includes the segment from Tiscornia Park to the intersection of North 12th Street and State Route (SR) 160. Phase II (proposed project) includes the section from the Sacramento Northern Bikeway Trail at North 18th Street through Sutter's Landing Regional Park to the H Street bridge.

This environmental document is prepared in conformance with the requirements of the California Environmental Quality Act (CEQA) Public Resources Code (PRC) 21000-21178. The California Department of Transportation (Caltrans) is preparing a separate environmental document for the proposed project consistent with the requirements of the National Environmental Policy Act (NEPA) 40 CFR 1500-1508. Compliance with NEPA is required because the proposed project intends to use Federal funding for implementation. The City is the CEQA Lead Agency and Caltrans is the NEPA Lead Agency for the proposed project.

This Environmental Impact Report (EIR) has been prepared to provide decision makers, the public, and reviewing agencies a complete description of the proposed project and a description of how it has the potential to impact the natural and human environment. The EIR provides an overview of the proposed project (including identifying the project objectives and other anticipated regulatory approvals) in **Chapter 2**, evaluates each environmental resource for potential impacts and measures to reduce those impacts in **Chapter 3**, and analyzes proposed project alternatives in **Chapter 4**.

1.1 CEQA Purpose and Authority

This EIR has been prepared pursuant to the CEQA Guidelines (14 California Code of Regulations [CCR] 15000 et seq.). CEQA requires that State and local government agencies consider the environmental consequences of projects over which they have discretionary authority before taking action on those projects (PRC 21000 et seq.).

The purpose of this EIR is to analyze the environmental impacts of the proposed project and identify ways to reduce or avoid these potential impacts. Additionally, this EIR identifies alternatives to the proposed project that would meet most project objectives and reduce one or more potential environmental impacts.

CEQA requires that each public agency mitigate or avoid the significant environmental effects of projects it approves or implements, whenever feasible. An EIR is an informational document used in State, regional, and local planning and decision-making processes to disclose potential environmental effects. The purpose of this EIR is not to recommend approval or denial of a project. However, the public agency's decision whether to approve or to deny the proposed project must take into consideration the information provided by the EIR.

When considering the proposed project, the public agency may grant approval even if it would result in significant and unavoidable environmental impacts so long as the EIR discloses the project's environmental effects, including:

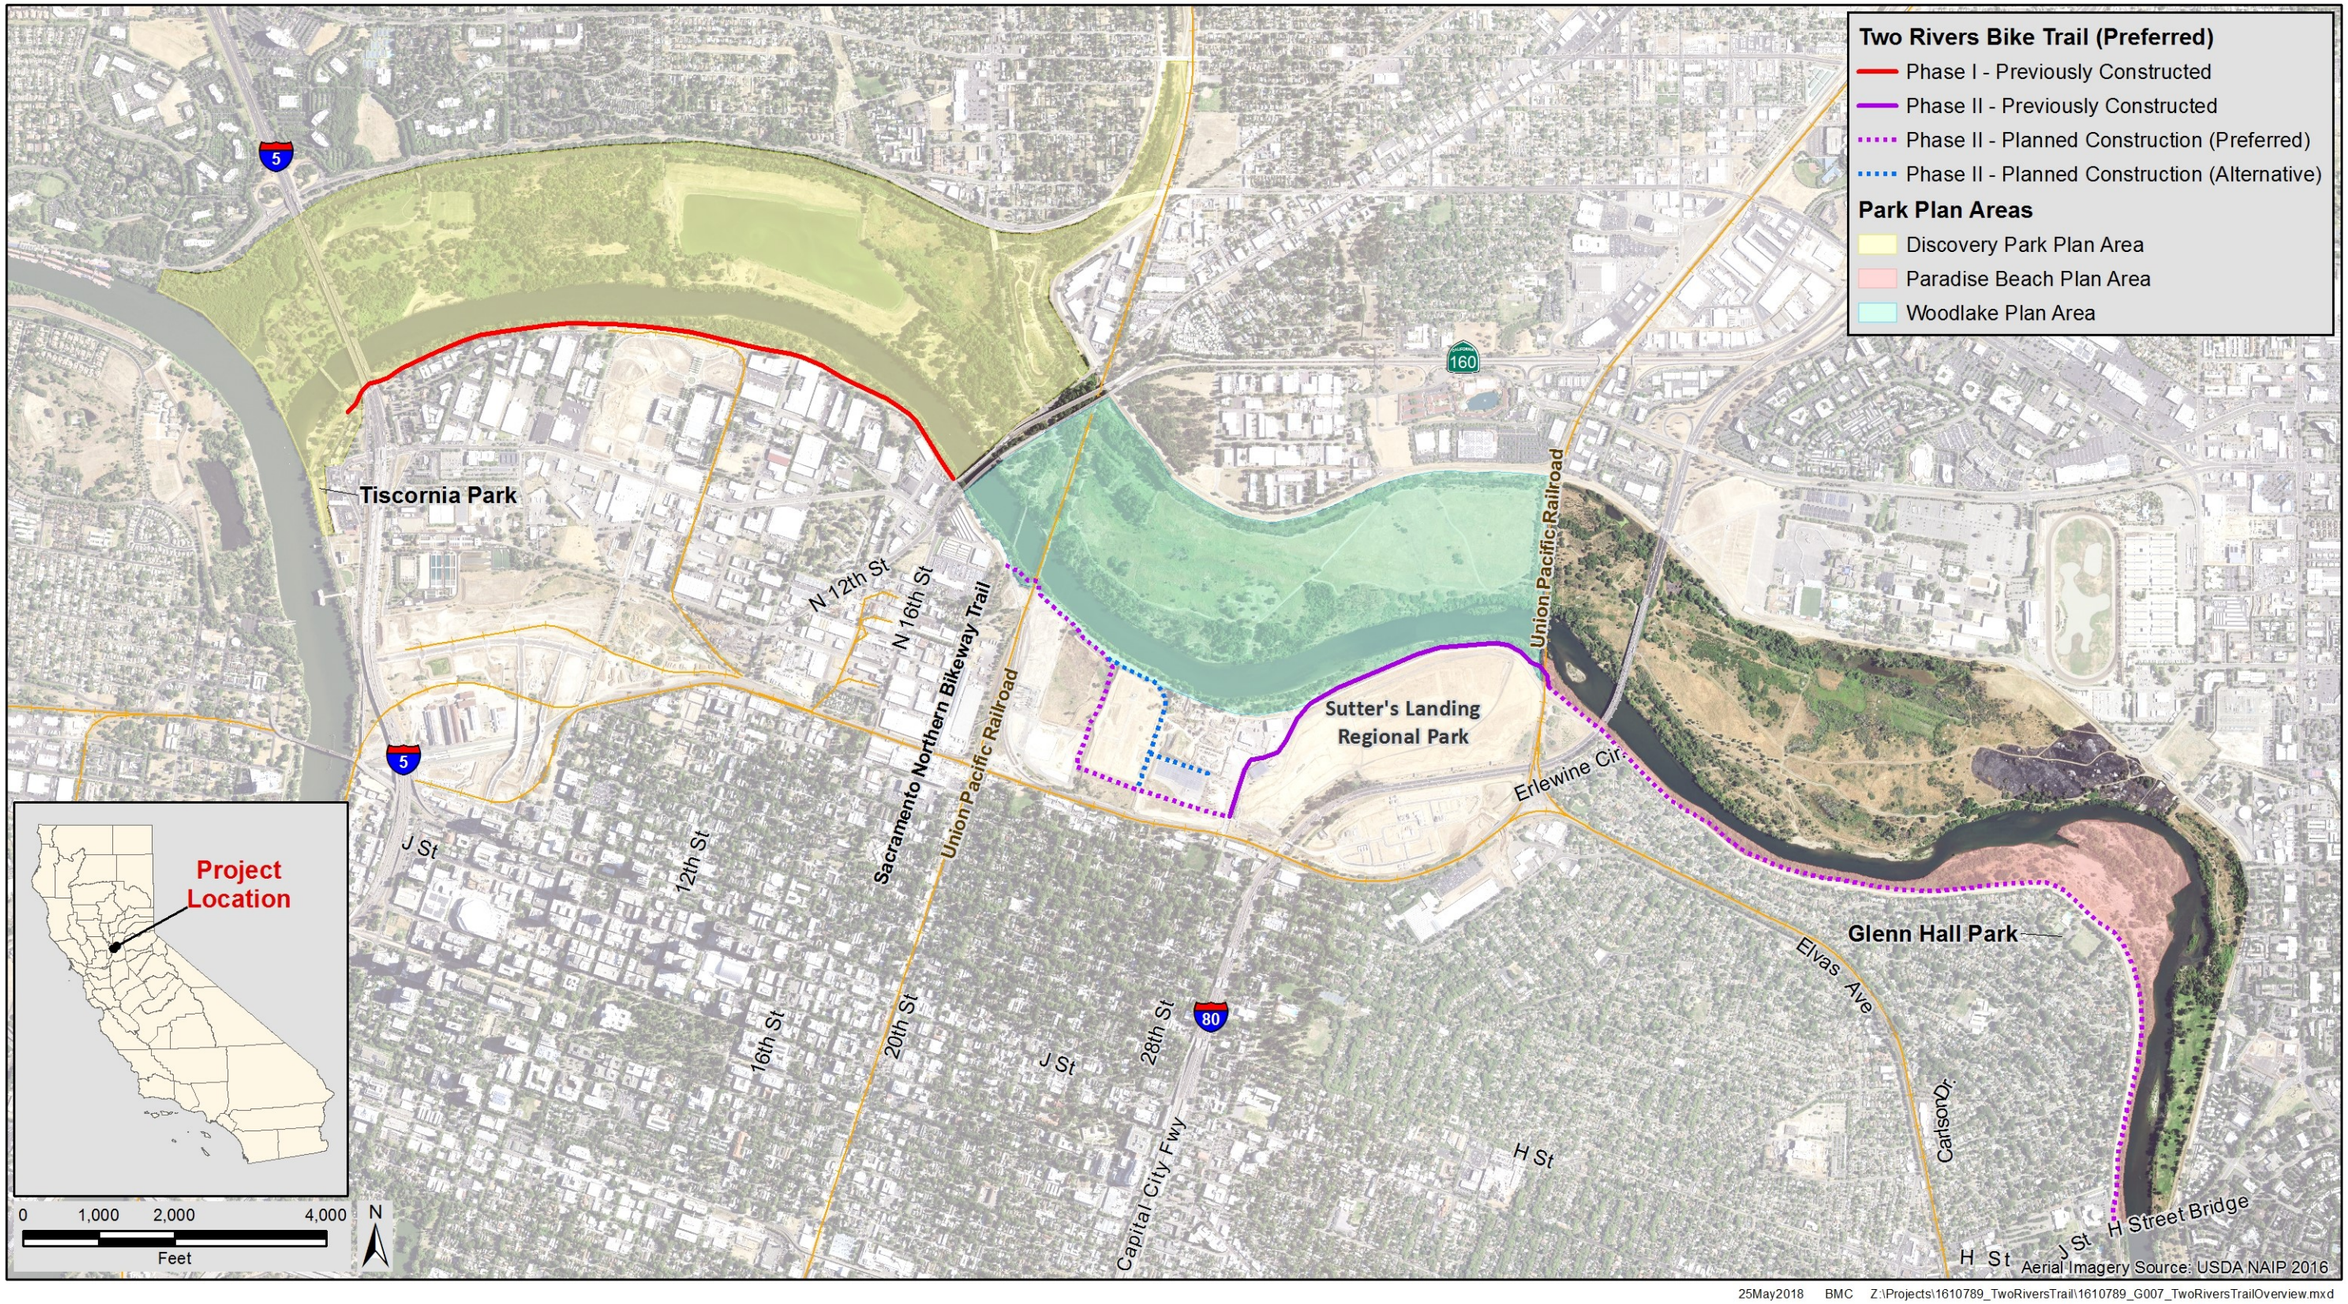
- Effects that cannot be avoided;
- Growth inducing effects;
- Effects found not to be significant; and
- Cumulative impacts.

CEQA provides that a Lead Agency that intends to approve a project with significant and unavoidable effects must identify the "[s]specific economic, legal, social, technological, or other considerations..." that make infeasible mitigation measures or alternatives identified in the EIR. In addition, the Lead Agency in such a case must identify the benefits of the project that outweigh the significant effects on the environment (Statement of Overriding Considerations).

Accordingly, this EIR describes and evaluates the potential impacts associated with the proposed project. Additional resource-specific studies, such as biological and cultural resources have been prepared for this EIR to provide detailed information about the proposed project's potential impacts on the environment. These technical studies are available for review at the City of Sacramento Community Development Center and at the project website at: http://www.cityofsacramento.org/Community-Development/Planning/Environmental/Impact-Reports.

The mitigation measures identified in this EIR are designed to include enough detail and specificity to ensure that they would be effectively carried out to reduce the proposed project's impacts.

1.2 Project Location and Background



Two Rivers Trail is a planned Class 1 bicycle and pedestrian trail along the south bank of the American River that extends from Tiscornia Park at Jibboom Street to the H Street Bridge in Sacramento, California (**Figure 1-1**). Phase I of this trail includes the segment from Tiscornia Park to the intersection of North 12th Street and State Route (SR) 160. Phase II includes the section from the Sacramento Northern Bikeway Trail at North 18th Street through Sutter's Landing Regional Park to the H Street bridge.

Phase I of the trail is complete and the City of Sacramento (City) recently completed a small section of the Phase II Trail within Sutter's Landing Regional Park, which was determined by the City in July 2018 to be exempt from review under CEQA (CEQA Guidelines §15304 and §15333).

The proposed project would construct the remainder of Phase II by extending the Class 1 trail west from Sutter's Landing Regional Park to the Sacramento Northern Bikeway Trail at North 18th Street, and east from the eastern terminus of Sutter's Landing Regional Park to the H Street Bridge (see **Figure 1-1**). This would result in a nearly continuous trail alignment along the south side of the American River that links the downtown area of Sacramento to the residential neighborhoods and California State University at Sacramento (CSUS) near the eastern boundary of the City.

The proposed project lies entirely within the City and the planning areas of the American River Parkway Plan (ARPP), which was adopted by the City Council on March 25, 1986 and updated by the County of Sacramento in 2008 (Sacramento County, 2008). In addition to the City, several other local agencies are responsible for management of the American River Parkway. Within the project study area, the

Figure 1-1. Project Location Map

Source: GEI Consultants, Inc. 2019

This page intentionally left blank.

American River Flood Control District (ARFCD) is responsible for maintenance of levee infrastructure and the Sacramento County Regional Parks Department is also responsible for parkway maintenance and security.

The ARPP is a policy and implementation guide developed to promote the preservation of the American River's natural environment while providing limited development for human enjoyment of the parkway. The American River Parkway (Parkway) is an open space greenbelt approximately 29 miles long extending west/southwest along the north and south sides of the Lower American River from Folsom Dam to its confluence with the Sacramento River. The ARPP divides the Parkway into smaller area plans that include specific guidelines and descriptions for individual segments of the Parkway. The proposed project is located within the Woodlake and Paradise Beach ARPP areas (see **Figure 1-1**). These areas are predominately designated as Protected Areas under the ARPP, with habitat preservation and recreation-related activities being the primary uses. The proposed trail is consistent with the ARPP.

In addition to the plans and policies of the ARPP, the Two Rivers Trail Concept Plan Report (Concept Plan Report) was prepared to provide specific guidance on development of the multiuse trail (Jones & Stokes 2001). This concept plan documented existing conditions, the purpose of the Two Rivers Trail project, and the steps and costs needed to implement the project, which, at that time, identified the development of a paved trail along the top of the American River south levee, including access to the landside street system and connections to other existing and proposed trails, that would minimize environmental impacts to the Parkway. However, in response to agency concerns regarding potential conflicts between trail users and levee maintenance equipment along with neighborhood concerns for homeowner privacy and visibility to the residences in the River Park neighborhood, a lower bench alignment mostly along the waterside toe of the easterly segment of the levee is now proposed. This alignment would separate the trail users from levee maintenance operations, limit visibility to neighboring residences on the landside of the levee and have little or no effect on levee stability.

A mid-height bench alignment along the waterside levee slope of the entire length of the proposed trail segments was more recently considered to minimize habitat impacts along the waterside toe of the levee and to address visibility and privacy concerns raised by residents of the River Park neighborhood. However, because the U.S. Army Corps of Engineers (USACE) considered placement of the trail on a mid-height bench on the waterside levee slope to be a risk to levee performance and potentially increase the cost of levee operations and maintenance costs, the mid-levee alignment was determined to be infeasible where adequate space along the levee toe to accommodate the trail was present (Erik James, USACE District Levee Safety Program Manager, Pers. Comm. 2018).

On March 29, 2019, the ARFCD Board granted the City a variance to construct a "levee-top" trail along a 0.25-mile section just east of the Capital City Freeway. With no defined bench on the water side of the existing levee in this area, the "levee-top" alignment (for a portion of the trail) would minimize the risk to levee performance by removing the need to construct the trail on an artificial bench offset from the top of the levee. The move to a levee top alignment in this location would also reduce the project's overall biological resource impacts.

1.3 The Environmental Review Process

CEQA requires public agencies to identify, disclose, and consider the potential environmental impacts of proposed discretionary actions that an agency is considering for approval. A project that may have a significant impact on the environment cannot be approved unless the Lead Agency makes the approval contingent upon the implementation of mitigation measures that would reduce or avoid that impact to

the extent feasible. When a project may have significant environmental impacts, the Lead Agency must prepare an EIR before it considers whether to approve the project.

The City, as the CEQA Lead Agency for the proposed project, has prepared this Draft EIR for public review and comment. In preparing this EIR and considering approval of the proposed project, the City conducted (or will complete) the following activities:

- Draft Initial Study/Mitigated Negative Declaration
- Notice of Preparation and Public Scoping
- Draft EIR
- Public Review of the Draft EIR
- Final EIR and EIR Certification
- Mitigation Monitoring and Reporting

Each of these activities is briefly described below.

1.3.1 Draft Initial Study/Mitigated Negative Declaration

As previously described above in **Section 1.3** "**Project Location and Background**" the proposed project was originally conceived as a paved trail along the top of the American River south levee. However, in response to agency and public concerns, the proposed project's alignment was modified as a lower bench alignment mostly along the waterside toe of the easterly segment of the levee. To comply with CEQA, the City prepared an initial study/mitigated negative declaration (IS/MND) in the Fall of 2018 and released the draft IS/MND for a 30-day review period beginning on October 23, 2018 and ending November 30, 2018.

In response to comments received on the IS/MND, the City has been working with the ARFCD to modify a portion of the trail alignment that would allow construction of a "levee-top" trail along a 0.25-mile section just east of the Capital City Freeway. This change to the trail alignment addresses several comments received on the IS/MND including minimizing the risk to levee performance and reducing the project's overall biological resource impacts to trees and vegetation. As a result of these and other comments (interest in project alternatives) received during review of the IS/MND, the City has determined that preparation of an EIR is appropriate to provide expanded discussion of these issues and to address the environmental impacts of this modified trail alignment (see **Chapter 2** for a complete description of the modified trail alignment or the proposed project, as referred to in this Draft EIR). A summary of the comments received on the IS/MND is provided below in **Section 1.5** "**Scope and Focus of this EIR**" and the comment letters are included in **Appendix A** of this Draft EIR.

1.3.2 Notice of Preparation and Public Scoping

The CEQA Guidelines do not require formal hearings at any stage of the environmental review process (CEQA Guidelines Section 15202[a]). However, they do encourage "wide public involvement, formal and informal, to receive and evaluate public reactions to environmental issues" (CEQA Guidelines Section 15201).

In accordance with the CEQA Guidelines, the City distributed a Notice of Preparation (NOP) of a Draft EIR for the proposed project on May 21, 2019 and gave responsible agencies and the public an opportunity to provide comment on the scope of the analysis that should be included in the Draft EIR. The NOP comment period closed on June 19, 2019. A public scoping meeting for the proposed project was held on June 8, 2019 at the Fremont Presbyterian Church in Sacramento, CA. The comments

received by the City on the NOP and at the public scoping meeting were considered in the preparation of the Draft EIR. The scope of the Draft EIR included the potential environmental impacts identified in the NOP, as well as any issues raised by agencies and the public in response to the NOP and public scoping meeting. The NOP and comments received during the NOP comment period and at the public scoping meeting are contained in **Appendix B** of this Draft EIR and a summary of the comments received on the NOP and at the public scoping meeting is provided below in **Section 1.5** "**Scope and Focus of this EIR**".

1.3.3 Draft EIR

This document constitutes the Draft EIR. The Draft EIR includes a description of the proposed project and provides a description of the environmental setting, project impacts, mitigation measures (or measures to be implemented to mitigate impacts found to be significant), as well as an analysis of several project alternatives.

As required by CEQA, this Draft EIR focuses on significant or potentially significant environmental effects (CEQA Guidelines, Section 15143). As described above, the NOP was prepared for the proposed project to identify issues to be evaluated in the Draft EIR and comments received on the NOP and at the public scoping meeting (see **Appendix B**) helped to further refine the list of environmental issues to be evaluated in this EIR.

1.3.4 Public Review of the Draft EIR

This document will be circulated to responsible agencies, trustee agencies, agencies with jurisdiction over the project and those who request the document for a 45-day review period. A public notice will be posted in a local newspaper and sent to all previous commenters that have requested information regarding the proposed project. Written comments or questions concerning the Draft EIR must be directed to the name and address below via email postal mail or email by no later than 4:00 p.m. on September 16, 2019:

Ron Bess, Assistant Planner
City of Sacramento Community Development Department
300 Richards Blvd., Third Floor
Sacramento, CA 95811
Telephone: (916) 808-8272
E-mail: Rbess@cityofsacramento.org

Copies of this Draft EIR are also available to review at the City of Sacramento Community Development Department on any business day between the hours of 9:00 a.m. and 4:00 p.m. at the address below or on the project website at: http://www.cityofsacramento.org/Community-Development/Planning/Environmental/Impact-Reports.

City of Sacramento Community Development Department
300 Richards Blvd., Third Floor
Sacramento, CA 95811

A public informational meeting will be held on **August 10, 2019**. Public comment is encouraged during the 45-day public review period and at all public hearings before the City Council.

1.3.5 Final EIR and EIR Certification

Comments regarding environmental issues received in response to the Draft EIR will be addressed in a response to comments document, which, together with the Draft EIR and any changes to the text made in response to comments, or initiated by staff, will constitute the Final EIR. After a public hearing on the proposed project, the City will review the Final EIR, staff recommendations, and public testimony prior to certifying the EIR and deciding whether to approve or deny the proposed project.

If the City approves the project, even though significant impacts identified by the EIR cannot be mitigated, the City must state in writing the reasons for its actions. A Statement of Overriding Considerations must be included in the record of the project approval and mentioned in the notice of determination (CEQA Guidelines, Section 15093(c)).

1.3.6 Mitigation Monitoring and Reporting

Throughout this Draft EIR, mitigation measures have been clearly identified and presented in language that will facilitate establishment of a mitigation monitoring and reporting program. A complete list of these mitigation measures is provided in **Table ES-1** in the **Executive Summary** of this EIR. CEQA (Section 21081.6(a)(1) of the Public Resources Code) requires public agencies, as part of the certification of an EIR, to prepare and approve a mitigation monitoring and reporting program (MMRP). The MMRP must be structured to ensure that changes to the project that the lead agency has adopted to mitigate or avoid significant environmental impacts are carried out during project implementation. A MMRP will be prepared at the time of the Final EIR for this project and will identify the specific timing, roles, and responsibilities for the implementation of mitigation measures.

1.4 Scope and Focus of this EIR

The analysis included in **Chapter 3.0** focuses on the specific environmental resource topics that require further evaluation to determine if they have a potential impact. The City has considered comments submitted in response to the Notice of Preparation for this EIR, comments received at the scoping meeting, as well as comments received regarding the previously-proposed Mitigated Negative Declaration. For ease of reference, **Tables 1-1** through **1-4** (shown below) identifying written comments include both those submitted for the MND, as well as the NOP for this EIR. All comment letters received are provided in **Appendix A** and **B** of this EIR.

1.4.1 Summary of IS/MND and NOP Comments

A summary and comparison of the comment letters received during the IS/MND and NOP scoping reviews is provided below.

1.4.2 Environmental Issues Determined Not to Be Significant

Pursuant to CEQA Guidelines, the discussion of the potential impacts on the physical environment can be focused on those impacts that may be significant or potentially significant. CEQA Guidelines allow a Lead Agency to limit the details of discussion of the environmental effects (impacts) that are not considered potentially significant (PRC Section 21100, CCR Sections 15126.2[a] and 15128). The CEQA Guidelines also require that the discussion of any significant effects on the environment be limited to substantial or potentially substantial adverse changes in physical conditions that exist within the affected area, as defined in PRC Section 21060.5 (Statutory definition of "environment").

Table 1-1. Summary of Agency Comment Letters

Commenting Entity	IS/MND (Date Received)	NOP (Date Received)
Regional SAN	September 25, 2018	May 22, 2019
	Key Issues: *Consider existing utility infrastructure during project planning and construction.*	**Key Issues:** *Same*
County of Sacramento Environmental Management Division	*None Received*	May 31, 2019
		Key Issues: *Coordination with Local Enforcement Agency for activities within a closed and ongoing landfill facility.*
California Native American Heritage Commission	*None Received*	June 7, 2019
		Key Issues: *Describes compliance with AB 52 and SB 18.*
County of Sacramento Regional Parks	November 5, 2018	June 11, 2019
	Key Issues: *Tree Removal and Trail Enforcement.*	**Key Issues:** *Same MND comment treated as NOP comment at request of agency.*
American River Flood Control District	November 9, 2018	*None Received*
	Key Issues: *Letter of Support*	
Central Valley Regional Water Quality Control Board	November 21, 2018	*None Received*
	Key Issues: *Defines project regulatory setting and identifies potential water quality permitting requirements.*	
California Department of Transportation	November 21, 2018	June 19, 2019
	Key Issues: *Identifies need for encroachment permit for work within State right-of-way.*	**Key Issues:** *Identifies cumulative transportation projects and encroachment permit for work within State right-of-way.*
California Department of Fish and Wildlife	*None Received*	June 20, 2019
		Key Issues: *Describes role of agency and provides guidance for setting, impacts and mitigation measure analysis. Identifies the Lake and Streambed Alteration Agreement Program.*
Sacramento Metropolitan Air Quality Management District	*None Received*	June 21, 2019
		Key Issues: *Compliance with Construction-Generated Criteria Air Pollutant and Precursor Emissions policies from the Guide to Air Quality Assessment in Sacramento County should construction-related emission thresholds be exceeded.*
State of California – Office of Planning and Research	December 3, 2018	*None Received*
	Key Issues: *List of State Agencies that reviewed and provided comments on the IS/MND.*	

Table 1-2. Summary of Organization Comment Letters

Commenting Entity	IS/MND (Date Received)	NOP (Date Received)
Pacific Gas and Electricity (PG&E)	October 23, 2018 **Key Issues:** *Outlines utility coordination procedures for work near utility infrastructure or PG&E easements.*	*None Received*
Sacramento Municipal Utility District (SMUD)	November 21, 2018 **Key Issues:** *Describes existing utility infrastructure near the trail alignment and describes the utility easement encroachment process.*	June 19, 2019 **Key Issues:** *Same*
Friends of Sutter's Landing Park (FOSL) and Friends of the River Banks (FORB)	November 29, 2018 **Key Issues:** *Oppose the current proposal which would place a new paved bike trail at the toe of the levee slope and or incised into the levee bank between Sutter's Landing Park and H street. Offsite biological resource mitigation not appropriate to maintain onsite wildlife corridor function. The current bike trail location needs to consider the pending work on the NRMP and BPWG. Trail impacts related to high water flow flooding. Construction staging areas need to be outside the American River Parkway to avoid impacts. White-tailed Kites and other raptor impacts. Riparian, tree and Valley Elderberry impacts. Post-construction impacts of increased recreation in an area of the Parkway.*	*None Received*
Save the American River Association	November 29, 2018 **Key Issues:** *Proposed project is inconsistent with the Concepts, Goals and Policies of the American River Parkway Plan. Project impacts to riparian habitat, trees, and Valley Elderberry are also inconsistent with the intent of the American River Parkway Plan. Address the use of excavated materials (vegetation) for use in habitat restoration activities in the Parkway. Offsite habitat mitigation also not consistent with Parkway Plan. Project to address the need for bicycle racks at Glen Hall Park. Adequate law enforcement and police patrols for new trail.*	June 19, 2019 **Key Issues:** *Same.* *The EIR must also include the impacts of the loss of specific riparian resources on Climate Change. The EIR should also account for future City and County projects impacting the American River Parkway's natural resources. Cumulative Impacts.*
Habitat 2020	November 30, 2018 **Key Issues:** *EIR should be prepared for project. Consider alternatives to the proposed toe of levee trail alignment. Consider a narrow trail to further minimize impacts. Impacts to habitats and wildlife from increased recreation activity. Impacts to nesting birds (distance to nests) resulting from trail construction and maintenance. MND misrepresents the applicable tree ordinance. 1 to 1 mitigation requirement for riparian impacts is considered*	*None Received*

Table 1-2. Summary of Organization Comment Letters

Commenting Entity	IS/MND (Date Received)	NOP (Date Received)
	inadequate. Offsite mitigation is considered inadequate.	
Save Don't Pave (Soluri Meserve)	November 30, 2018 **Key Issues:** P*roject description inadequate, fails to cover increased maintenance activities for the trail; Use of the trail by bikes, inadequate description of location vis a vis natural habitat and resources, including valley elderberry (VELB), and existing walking trails; Crime Prevention Through Environmental Design (CPTED) actions would remove vegetation with aesthetic impacts; Project is in conflict with land use policies and plans, including 2035 General Plan, American River Parkway Plan, the City Bikeway Master Plan and designation of the American River as a Wild and Scenic River; Parkway policy 10.4.2 calls for trail on top of levee where feasible; Failure to disclose baseline recreational use; Air quality impacts include emissions from vehicles searching for parking; Impacts to VELB and VELB habitat; Impacts to protected trees; Erosion; Hydrological; Increases in fecal coliform; Noise; Illegal camping; Public services; Transportation/traffic; Failure to address cumulative impacts.*	June 19, 2019 **Key Issues:** *Previous comment letter dated November 30, 2018 (Soluri Meserve) is reference and attached. Additional issue: The Draft EIR should analyze the needs of commuters and residents in the named areas identified in the project objectives.*
Save Don't Pave (Soluri Meserve) Errata	December 4, 2018 **Key Issues:** *Errata identifying corrections to November 30, 2018 letter.*	*None Received*

Table 1-3. Summary of Individual Comment Letters on the IS/MND

Commenter	Date Received	Summary Of Key Issues
Julie Lincoln (Comment Card)	October 27, 2018	**Key Issues:** *Of the Glen Hall Park access options, supports selection of Alternative #3, as presented at the October 27, 2018 public workshop.*
Jim Scrivner (Comment Card)	October 27, 2018	**Key Issues:** *Letter of support for the proposed project.*
Carol V. Michael (Comment Card)	October 31, 2018	**Key Issues:** *No specific environmental issue. Suggests replacing the proposed project with a bicycle bridge near I-80.*
Michael O'Brien	November 1, 2018	**Key Issues:** *Letter of support for the proposed project.*
Leland H. Ruth (Comment Card)	November 2, 2018	**Key Issues:** *Of the Glen Hall Park access options, supports selection of Alternative #3, as presented at the October 27, 2018 public workshop.*
Robert Montgomery (Comment Card)	November 5, 2018	**Key Issues:** *Letter of support for the proposed project.*
Jason Lynch (3 emails)	November 12, 2018	**Key Issues:** *Suggests raising the trail grade under the UPRR and I-80 structures to minimize trail closures during flood events. Suggestions for trail design to minimize*

Table 1-3. Summary of Individual Comment Letters on the IS/MND

Commenter	Date Received	Summary Of Key Issues
		shoulder erosion. Suggestions for Trail Segment #2 to minimize spot flooding.
Eric Schranz (Comment Card)	November 13, 2018	**Key Issues:** *Paved trail will increase pedestrian/cyclist conflicts in the area.*
Alison French-Tubo	November 20, 2018	**Key Issues:** *Letter of support for the proposed project.*
Thomas Cordano	November 21, 2018	**Key Issues:** *Aesthetics – IS/MND understates impacts. Geology & Soils – Geotechnical Report should be prepared for the project and not as mitigation. Recreation – trail will affect the existing open space nature of the area and result in user conflicts. Transportation – should address conflicts between current users and users introduced by the project. Adequate Environmental Review and Response to Comments – EIR should be prepared for the project.*
Mark Heilman	November 22, 2018	**Key Issues:** *Same as those provided by Thomas Cordano (see above). In addition: Biological Resources – riparian habitat, protected trees, and threatened & endangered species impact analysis not complete or rigorous enough. VELB impacts underestimated and offsite mitigation inadequate and uncertain.*
Susan Hausmann	November 26, 2018	**Key Issues:** *Opposition to trail for its impacts to the natural landscape and habitats of the area.*
Steve Anderson	November 28, 2018	**Key Issues:** *Same as those provided by Thomas Cordano and Mark Heilman (see above).*
Cheryl Franzi and Gregory Jamnetski	November 28, 2018	**Key Issues:** *Same as those provided by Thomas Cordano and Mark Heilman (see above).*
Emmy Mignano	November 28, 2018	**Key Issues:** *Same as those provided by Thomas Cordano and Mark Heilman (see above).*
Gregory Mignano	November 29, 2018	**Key Issues:** *Opposition to trail for its impacts to the natural landscape and habitats of the area.*
Tracy Keith	November 29, 2018	**Key Issues:** *Same as those provided by Thomas Cordano and Mark Heilman (see above).*
David Moffatt	November 29, 2018	**Key Issues:** *Same as those provided by Thomas Cordano and Mark Heilman (see above). In addition: Water Quality/Stormwater Runoff – no discussion regarding stormwater runoff from impervious surfaces and additional water quality impacts,*
Sean O'Brien	November 29, 2018	**Key Issues:** *Same as those provided by Thomas Cordano and Mark Heilman (see above).*
Pam Kennedy	November 29, 2018	**Key Issues:** *Same as those provided by Thomas Cordano and Mark Heilman (see above).*
Nancy MacKenzie	November 29, 2018	**Key Issues:** *No analysis of the Glen Hall Park access option, Aesthetic impacts. No invasive species prevention measures in Mitigation Measure 3-5. Offsite habitat mitigation should be replaced by onsite mitigation.*
Stuart Reeves	November 30, 2018	**Key Issues:** *Same as those provided by Thomas Cordano and Mark Heilman (see above).*
Horacio Porath	November 30, 2018	**Key Issues:** *Potential fire impacts resulting from cyclists smoking cigarettes on paved trails.*

Table 1-3. Summary of Individual Comment Letters on the IS/MND

Commenter	Date Received	Summary Of Key Issues
Horacio Porath	November 30, 2018	**Key Issues:** *Cyclist and pedestrian user conflicts from increased use of a paved trail.*
Kate Riley	November 30, 2018	**Key Issues:** *Supports "No Project", as existing options available including Guy West Bridge, Carlson Drive Improvements, etc. Flood danger from risk to levee performance. Compliance with the American River Parkway Plan. Consistency issue between the proposed project and the City of Sacramento Bicycle Master Plan. Loss of trees. Cultural resource impacts to the levee. Consistency with the Caltrans Capital City Corridor.*
Alex Burt	November 30, 2018	**Key Issues:** *Same as those provided by Thomas Cordano and Mark Heilman (see above).*
Sidney Scheideman	November 30, 2018	**Key Issues:** *Same as those provided by Thomas Cordano and Mark Heilman (see above).*

Eve Martinez	November 30, 2018	**Key Issues:** *Same as those provided by Thomas Cordano and Mark Heilman (see above).*
Sheri Opp	November 30, 2018	**Key Issues:** *Same as those provided by Thomas Cordano and Mark Heilman (see above).*
Jane Hunter	November 30, 2018	**Key Issues:** *Impacts to levee integrity resulting from cutting into the levee for the benched trail and retaining walls.*

Table 1-4. Summary of Individual Comment Letters during the NOP Scoping Period

Commenter	Date Received	Summary Of Key Issues
Trevor Neely	May 21, 2019	**Key Issues:** *Letter of support for the proposed project.*
Dan Ruiz	May 21, 2019	**Key Issues:** *Paved trail will increase homeless within the River Park levee area.*
Pam Kennedy	May 28, 2019	**Key Issues:** *General opposition to the project. Paved trail will escalate bike use and illegal camping which will increase demands on law enforcement services.*
Patrick Brown	June 8, 2019	**Key Issues:** *Supports extending the levee top trail further to the levee's location near Jerome Way (in the River Park neighborhood) to minimize biological resource impacts.*
Daniel Thomas	June 8, 2019	**Key Issues:** *Paved trail will increase homeless within the River Park levee area.*
Matt Mitchell	June 11, 2019	**Key Issues:** *Letter of support for the proposed project.*
Toni Pizetti (Comment Card)	June 11, 2019	**Key Issues:** *Assess flood-related damage impacts to trail. Paved trail will increase homeless within the River Park levee area. Consider the Elvas Corridor as an alternative to the proposed project.*
J. Scott Coatsworth	June 12, 2019	**Key Issues:** *Letter of support for the proposed project.*
Jason Grefrath	June 13, 2019	**Key Issues:** *Letter of support for the proposed project.*
Mark Guzman	June 13, 2019	**Key Issues:** *Letter of support for the proposed project.*

Table 1-4. Summary of Individual Comment Letters during the NOP Scoping Period

Commenter	Date Received	Summary Of Key Issues
Steven Andrews (Comment Card)	June 17, 2019	**Key Issues:** *Paved trail will increase homeless within the River Park levee area.*
Carla DuCray	June 17, 2019	**Key Issues:** *Opposed to proposed project. Cutting into levee would affect levee integrity. Project is expensive and other alternative routes are available. Trail will be flooded and require maintenance.*
Barbara Debert (Comment Card)	June 17, 2019	**Key Issues:** *Concerned about informal access and parking near Moddison Avenue.*
Patrick Brown (Comment Card)	June 17, 2019	**Key Issues:** *Supports extending the levee top trail further to the levee's location near Jerome Way (in the River Park neighborhood) to minimize biological resource impacts.*
Sheri Opp	June 18, 2019	**Key Issues:** *General opposition to the project. Supports a levee top trail.*
Stephanie Shelley	June 18, 2019	**Key Issues:** *Opposed to levee top alternative due to increased noise. Paved trail will require increased law enforcement and waste management services. Project should include call boxes and speed limit signs should be posted along trail.*
Brian Nowicki	June 19, 2019	**Key Issues:** *Changing the alignment of Segment 5A would avoid most impacts to the narrowest and most sensitive section of riparian area and habitat. Mitigation for the impacts to the riparian area and VELB should be sited along the project area. Leaving some areas unpaved could satisfy the needs of the project while avoiding the greatest negative environmental impacts. The aerial photos of the project fail to accurately present the current condition of the project area. Crime Prevention Through Environmental Design can result in substantial and ongoing environmental impacts.*
Stephanie Jentsch	June 19, 2019	**Key Issues:** *Same as those provided by Brian Nowicki (see above).*
Irene Gotta (Comment Card)	June 19, 2019	**Key Issues:** *General opposition to the project.*
Susan Hausmann	June 19, 2019	**Key Issues:** *Speed of bikes is a concern. Supports incorporating speed bumps or turnstiles to insure bikes adhere to the speed limit as this is a heavily used pedestrian trail.*
Stuart Reeves	June 19, 2019	**Key Issues:** *General opposition to the project.*
Jack Sales	June 22, 2019	**Key Issues:** *Concerns regarding artificial lighting impacts on Salmon predation in the study area.*

Impacts dismissed in an analysis as clearly insignificant and unlikely to occur need not be discussed further in the EIR unless the Lead Agency subsequently receives information inconsistent with the finding (CCR Section 15143). As part of the IS/MND it was determined that implementation of the project identified in the IS/MND (dated October 23, 2018) would result in **less than significant** or **no impact** (i.e., not significant) to the resources identified in **Table 1-5**. In reviewing the proposed project analyzed in this EIR compared to the project analyzed in the IS/MND, it was determined that the proposed project would result in similar impact conclusions to those issues identified in **Table 1-5**. These similar impact conclusions are primarily due to the project's location within the same study area or to the proposed project's reduced construction footprint (levee top versus benched levee, for a portion

of the trail) resulting in reduced construction activities affecting project-related energy use and air quality emissions. Consequently, the issues identified in **Table 1-5** are not discussed at further length in this EIR:

Table 1-5. Issues Not Analyzed in Detail in This EIR

Initial Study Issue Area (From IS/MND, October 23, 2018)	Checklist Status	Findings
Agricultural Resources	No Impact	The project site does not contain soils designated as Important Farmland (i.e., Prime Farmland, Unique Farmland or Farmland of Statewide Importance). (FMMP 2016) The site traverses an area zoned Agricultural-Open Space, but this area (a portion of Sutter's Landing Regional Park) is not currently in agricultural use, and there are no Williamson Act contracts that affect the project site. No existing agricultural or timber-harvest uses are located on or near the project site.
Mineral Resources	No Impact	Within the City, projects near mining activities are required to be compatible with such activities, and buffers and setbacks are required from areas classified as MRZ-2 (mineral resource zone with significant existing or likely mineral deposits). No existing mining activities are located within the project site or vicinity. There are no areas designated as MRZ-2 within the project site or vicinity.
Energy	No Impact	Project construction would be typical of trail construction practices. There are no unusual features of the trail construction that would result in inefficient or unnecessary consumption of energy or obstruct implementation of plans related to energy. Operation of the trail would have no significant energy impacts, and potential for the trail to increase usage of bicycle and pedestrian transportation in nearby neighborhoods and the City could potentially reduce energy use.
Water Supply	No Impact	The proposed project consists of constructing a bicycle and pedestrian trail. The project would not involve construction of any housing, commercial or public buildings, facilities or landscaping that would require connection to existing water conveyance pipelines or require additional connections to the regional water supply system.
Solid Waste	No Impact	The proposed project would be served by the Sacramento Solid Waste Authority (SWA). The 2035 General Plan Master EIR does not include analysis regarding waste generation for public park or trail facilities, however the proposed project does not include residential or business facilities, thus solid waste generation would be limited to trash generated by trail users. Because the project was accounted for in the City's General Plan and Master EIR, and the project is consistent with the General Plan land use designation, this increase in solid waste production would not exhaust the remaining landfill capacity.
Electricity and Natural Gas	No Impact	Electrical service is provided to the project area by SMUD's network of overhead lines. However, in compliance with ARPP Policy 5.27 "Prohibited Activities and Facilities" which prohibits permanent lighting facilities in the Parkway, the proposed trail would not be constructed with electrical lighting along the alignment and no connections to the regional electricity grid would be required. The proposed project would also not require connection to the PG&E natural gas distribution system.
Telecommunications	No Impact	Construction of the proposed project would not affect the use of the existing telecommunications system. Additionally, the

Table 1-5. Issues Not Analyzed in Detail in This EIR

Initial Study Issue Area (From IS/MND, October 23, 2018)	Checklist Status	Findings
		project would not result in the need for additional capacity within the existing system.
Wastewater and Stormwater	No Impact	The proposed project would not involve construction of any public restrooms or other wastewater-generating facilities along the project alignment. Therefore, additional wastewater treatment and conveyance capacity or connections to the regional wastewater management system would not be required to implement the proposed project. The bike trail footprint is not large enough to create a substantial increase in runoff from impervious surfaces and overall stormwater runoff patterns would not change along the project alignment. In Segments 1 and 2, stormwater is expected to infiltrate into the ground before entering the City's stormwater conveyance system. In Segments 3-6, all stormwater would continue to flow to the American River. The trail would be slightly sloped away from the levee crown (toward the river) to encourage sheet flow of stormwater over the ground surface. In areas where trail design may cause minor ponding of water, small drain inlets would be installed to carry water under the bike trail to outlets on the river side of the trail. Outlets would discharge out of a flared end section and onto a small area of rock which would reduce stormwater velocity and disperse the water in a way that reduces the possibility of erosion around the outlet. Therefore, project construction and operation would not contribute to a need for additional stormwater facilities or additional connections to existing facilities.
Wildfire	No Impact	The proposed project is not located within or near a State responsibility area or lands classified as very high fire hazard severity zones according to CalFire (Calfire 2007, 2008). Additionally, standard construction practices and trail usage would not increase the risk of wildfire or the possibility of uncontrolled spread of wildfire, reduce the effectiveness of emergency evacuation routes, interfere with an adopted emergency response or evacuation plan, or require the installation or maintenance of wildfire prevention or management infrastructure as part of normal trail maintenance.

1.4.3 Environmental Issues Determined to be Potentially Significant

The NOP and Project scoping process identified the environmental issues presented below as having potential environmental impacts that require further analysis in the EIR:

Aesthetics	Biological Resources	Cultural Resources
Geology/Soils	Hazards	Hydrology/Water Quality
Land Use/Planning	Noise	Public Services
Recreation	Transportation	Tribal Cultural Resources

In reviewing the proposed project analyzed in this EIR compared to the project analyzed in the IS/MND, it was determined that the proposed project would result in similar construction-related air quality emissions, primarily due to the project's similar construction footprint, use of equipment, and project duration, with the potential that the currently proposed project may result in fewer construction emissions due to the construction of the levee top segment (versus the benched waterside alignment, east

of the Capital City Freeway) which would requiring less imported/exported construction materials and less construction related truck/equipment trips. Consequently, the air quality and related greenhouse gas emissions analysis and impact conclusions (potentially significant with mitigation measures required) provided in the IS/MND were determined applicable to the proposed project and incorporated by reference into this EIR (see **Executive Summary**).

1.5 Documents Incorporated by Reference

This EIR incorporates, by reference, the environmental analysis and other information contained in the City of Sacramento 2035 General Plan (2015) and the Final City of Sacramento Bicycle Master Plan (2018). The full text of the City of Sacramento 2035 General Plan is available online at: https://www.cityofsacramento.org/Community-Development/Resources/Online-Library/2035--General-Plan.

The full text of the Final City of Sacramento Bicycle Master Plan is available online at: https://www.cityofsacramento.org/Public-Works/Transportation/Programs-and-Services/Bicycling-Program

1.6 Public Outreach and Participation

The City is dedicated to public and stakeholder outreach and ongoing public communications beyond that required by the CEQA Guidelines for the proposed project. Public outreach efforts have included the organization of a stakeholder committee, community survey, and regular updates to the community at the River Park Neighborhood Association Board meetings. Additionally, a publicly accessible page on the City's website was developed for the proposed project that provides a project timeline, updates, and links to related technical documents. The address is: http://www.cityofsacramento.org/Public-Works/Engineering-Services/Projects/Current-Projects/Two-Rivers-Trail-Phase-II

Community meetings included updates at River Park Neighborhood Association Board meetings and several topic specific public workshops. At the workshops, members of the public submitted questions and comments on comment cards, which were reviewed and considered as part of the project planning and environmental compliance phases of the project. A brief summary of these meetings is provided below.

April 7, 2018 – River Park Neighborhood Association General Meeting

Caleb Greenwood K-6 School
5457 Carlson Dr, Sacramento, CA, 95819
10:00 a.m.-12:00 a.m.

In April 2018, City staff (Adam Randolph) and Council Member Jeff Harris attended the River Park Neighborhood Association General Meeting to present on the current status of the project and answer questions from residents. Representatives from the City and the project team presented the current project design, answered questions, and collected contact information for inclusion in the project outreach database.

October 6, 2018 – River Park Neighborhood Association General Meeting

Caleb Greenwood K-6 School
5457 Carlson Dr, Sacramento, CA, 95819
10:00 a.m.-12:00 a.m.

In October 2018, City staff (Adam Randolph) and Council Member Jeff Harris attended the River Park Neighborhood Association General Meeting to present on the current status of the project and answer questions from residents. Representatives from the City and the project team presented the current project design, answered questions, and collected contact information for inclusion in the project outreach database.

October 27, 2018 – IS/MND Informational Workshop

Caleb Greenwood K-6 School
5457 Carlson Dr, Sacramento, CA, 95819
10:00 a.m.-12:00 a.m.

City staff hosted a public meeting on the morning of Saturday October 27, 2018 at Caleb Greenwood K-6 School. City staff and consultants answered questions on the recently released IS/MND and general project information. Public comments were received during the period between October 23 and November 30, 2018. Approximately 70 people attended the workshop and several information stations were provided including a habitat impacts map, typical trail cross sections, and options for the Glen Hall Park access route.

May 11, 2019 – River Park Neighborhood Association General Meeting

Caleb Greenwood K-6 School
5457 Carlson Dr, Sacramento, CA, 95819
10:00 a.m.-12:00 a.m.

City staff and Council Member Harris attended the River Park Neighborhood Association General Meeting to present on the status of the project. As part of the meeting, City staff informed residents that an Environmental Impact Report would be prepared for the project, and that there is a planned "scoping meeting" to be held in June 2019.

June 8, 2019 – NOP Public Scoping Meeting

Fremont Presbyterian Church, Ferguson Hall
5770 Carlson Dr, Sacramento, CA, 95819
10:00 a.m.-12:00 a.m.

City staff and project team members hosted a public scoping meeting on the morning of Saturday June 8, 2019 at Caleb Greenwood K-6 School. The session addressed general questions about the proposed project, as well as questions regarding trail use (including motorized bicycle use), trail alternatives, safety, and project funding. Public comments were received during the period between May 21, 2019 and June 19, 2019. Approximately 30 people attended the workshop and several information stations were provided including a habitat impacts map, typical trail cross sections, and options for the Glen Hall Park access route.

1.7 Organization of this EIR and Standard Terminology

In accordance with CEQA Guidelines Section 15126.2, this Draft EIR identifies and focuses on the significant direct and indirect environmental effects (impacts) of the proposed project, considering both its short-term and long-term effects. Short-term effects are generally those associated with project construction, while long-term effects are generally those associated with operation of the proposed project.

1.7.1 Organization of Environmental Issue Assessment

Each environmental issue analyzed in **Chapter 3.0** contains the following components:

Environmental Setting presents the existing environmental conditions within the proposed Project boundaries and within the surrounding Project area, as appropriate, to establish baseline conditions, in accordance with CEQA Guidelines Section 15125. The extent of the environmental setting area evaluated (the Project study area) differs among resources, depending on the locations where impacts would be expected. For example, water or air quality impacts are assessed for the basin (macro-scale), as well as the site vicinity (micro-scale), whereas aesthetic impacts are assessed for the project vicinity only.

Regulatory Framework presents the laws, regulations, plans, and policies that are relevant to each issue area. Regulations originating from the Federal, State, and/or local levels are each discussed, as appropriate.

Methodology of Analysis includes the methodology to determine what constitutes a significant impact, the Thresholds of Significance used to determine the level of significance of the environmental impacts for each resource topic, in accordance with CEQA Guidelines Sections 15126, 15126.2, and 15143, and the Project Impact Analysis and documentation of any required mitigation measures. The Thresholds of Significance used in this Draft EIR were developed using criteria from the CEQA Guidelines (see Appendix A); Federal, State, and local regulatory schemes; local/regional plans and ordinances; accepted practice; consultation with recognized experts; and other professional opinions.

Project Impacts identify the level of each environmental impact by comparing the effects of the proposed Project to the environmental setting. Project impacts are organized numerically in each subsection (e.g., Impact BIO-1, Impact BIO-2, Impact BIO-3). A bold-font environmental impact statement precedes the discussion of each impact while its level of significance follows the discussion of each impact. The discussion that follows the impact summary includes the substantial evidence supporting the impact significance conclusion.

Required Mitigation includes specific details of the mitigation identified in the Environmental Impacts with performance standards, timing, and responsible parties identified.

1.7.2 Format Used for Impact Analysis and Mitigation Measures

The format adopted in this Draft EIR to present the evaluation of environmental impacts is described and illustrated below.

Summary Heading of Impact (Example)

Impact BIO-1: ***An impact summary heading appears immediately preceding the impact description (Summary Heading of Impact in this example). The impact abbreviation identifies the section of the report (BIO for Biological Resources in this example) and the sequential order of the impact (1 in this example) within that section. To the right of the impact number is the impact statement, which identifies the potential impact.***

Narrative Analysis: A narrative analysis follows the impact statement assessing the baseline condition of the proposed project compared to the established Threshold of Significance. This analysis identifies any potential mitigation required and explains how the mitigation would mitigate the potential impact. The analysis concludes with what the Level of Significance is with all factors considered.

Level of Significance: Less than Significant with Mitigation (the evaluated Level of Significance concluded in the analysis is included here, such as Less than Significant with Mitigation in this example).

This section describes the determination of the severity of project impacts. This is fundamental to achieving the objectives of CEQA. The CEQA Guidelines Section 15091 requires that decision-makers mitigate, as completely as is feasible, the significant impacts identified in the Draft and Final EIRs. Levels of significance can fall into four categories: No Impact; Less Than Significant; Less Than Significant With Mitigation; or Significant Unmitigated Impact. If the EIR identifies any significant unmitigated impacts, the CEQA Guidelines Section 15093 requires decision-makers to adopt a statement of overriding considerations that explains why the benefits of the Project outweigh the adverse environmental consequences identified in the EIR.

The Level of Significance for each impact examined in this Draft EIR is determined by considering the predicted magnitude of the impact against the applicable threshold. This section also identifies the resulting level of significance of the impact, including the implementation of mitigation measures (if required).

Mitigation Required: Mitigation Required lists any feasible measures that could avoid, minimize, rectify, reduce, or compensate for significant adverse impacts, with measures having to be fully enforceable through incorporation into the Project (PRC Section 21081.6[b]) as discussed under the impact analysis.

Mitigation measures are not required for environmental impacts that are found to be less than significant. Mitigation for a significant environmental impact is described following the impact, where feasible and available. If sufficient feasible mitigation was not available to reduce environmental impacts to a less than significant level, or where the Lead Agency lacked the authority to ensure that the mitigation be implemented when needed, the impacts would be identified as significant and unavoidable. None of the impacts identified for the proposed project have been identified as significant and unavoidable.

Chapter 2. Project Description

2.1 Introduction

The identification of clear and concise project objectives establishes a foundation for the environmental impact analysis and assists in identifying the range of feasible project alternatives. This chapter provides the key objectives of the proposed project and identifies the primary components of the proposed Two Rivers Trail Phase II Project (proposed project), including project characteristics, construction activities, project maintenance, and discretionary actions and approvals that may be required.

2.2 Project Objectives

The objectives of the proposed project are to:

- Provide a vital recreation link between the Jedediah Smith Trail on the north side of the American River Parkway, the Sacramento River Parkway, the Sacramento Northern Bikeway Trail, the future Ueda Parkway trails, and the 20th Street bike connection to the Central City;
- Provide alternative transportation access for commuters and residents in the eastern part of the City, CSUS, Central City, North Sacramento, East Sacramento, and Richards Boulevard area;
- Provide opportunities for educating trail users through interpretive signage, establishing a connection to the river, and the Parkway;
- Provide an acceptable project to all authoritative agencies;
- Complete the project in a manner that minimizes environmental impacts to the Parkway, given the proposed project's location within the environmentally sensitive Parkway; and
- Where feasible, design trail access points to comply with the requirements of the Americans with Disabilities Act (ADA).

2.3 Project Description

2.3.1 Trail Alignment

The proposed project would create approximately 3.4 miles of new Class 1 bicycle and pedestrian trail comprising 6 segments (**Figures 2-1** and **2-2**).

Segment 1 is approximately 0.4 miles long. It begins at the existing Sacramento Northern Bikeway Trail at North 18th Street and ends 0.3 miles west of Sutter's Landing Park (see **Figure 2-1**). At North 18th Street, the trail would run along the toe of the levee crossing under the Union Pacific Railroad (UPRR) and continue for another 0.3 miles.

Segment 2 is approximately 0.6 miles long. This segment begins at the eastern terminus of Segment 1 and continues to Sutter's Landing Regional Park (see **Figure 2-1**). Two trail alignments are under consideration

for Segment 2. The preferred trail alignment, Alternative 1, which is approximately 0.7 miles in length, would diverge from the levee immediately at the end of the first segment and extend south for approximately 0.3 mile and then turn southeast and extend another approximately 0.4 mile to 28th Street at the entrance to Sutter's Landing Regional Park across the street from McKinley Village Way. The other alignment for Segment 2 (Alternative 2) is approximately 0.55 miles in length. It would extend east from the end of the first segment for another approximately 0.15 mile before diverging from the levee to the south. This leg of Segment 2 would then continue south approximately 0.25 mile, until it intersected with the preferred alignment, or would turn southeast 0.1 mile sooner and follow the north side of an existing solar array for approximately 0.15 mile before terminating in the parking lot adjacent to the dog park and across the street from the existing trail within Sutter's Landing Regional Park.

Segment 3 is approximately 0.3 miles long and begins on the east side of Sutter's Landing Park at the end of the recently completed trail segment. From here, the trail would run along an existing bench at the toe of the levee, first crossing under another portion of the UPRR and eventually under the Capital City Freeway (SR 80) where Segment 4 begins (see **Figure 2-2**).

Segment 4 is also approximately 0.25 miles long (see **Figure 2-2**) and would begin just east of the Capital City Freeway. This segment is proposed as a "levee-top" trail alignment, which may extend past the current boundary of Segment 5 should the ARFCD be able to grant additional trail variances to the waterside toe alignment proposed for the remaining portions of the trail. Extending a levee top trail past the Segment 4 boundary would further reduce biological resource impacts within the study area. **Figure 2-3** provides a comparison of the top of levee cross section and the toe of typical levee cross section proposed for segments 3, 5, and 6.

Segment 5 is 1.4 miles long and passes Paradise Beach and Glenn Hall Park (see **Figure 2-2**). This trail segment has a bench all along the waterside toe where the trail would be aligned, but bench width varies such that this segment has been subdivided into three subsegments (to accommodate topographic conditions). Subsegment 5A is approximately 2,900 feet in length, and the waterside bench, although well-defined, is narrower in this area than in Subsegment 5B. Subsegment 5B is approximately 4,300 feet in length and has a well-defined, much wider and flatter, bench to accommodate the trail.

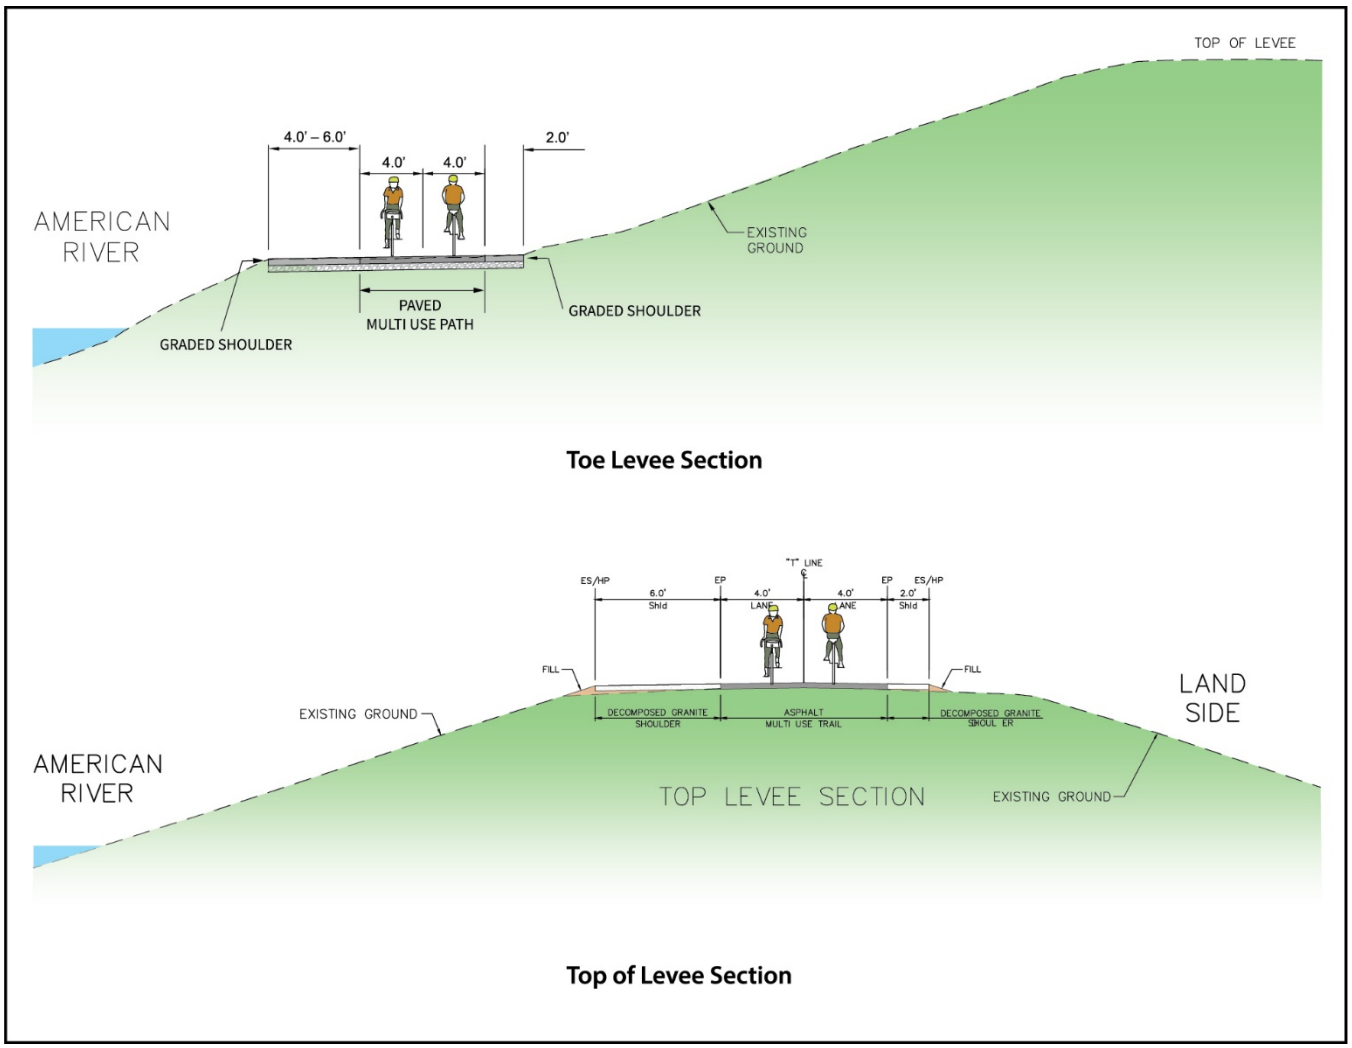
Subsegment 5C is approximately 500 feet in length and its waterside bench characteristics are similar to Subsegment 5A.

Segment 6 begins at the east end of Subsegment 5C along the levee toe, is approximately 0.3 miles long, and includes a transition back to the levee crown where the trail would connect to the existing paved trail near the H Street Bridge (see **Figure 2-2**). While there is a bench along the toe in this segment, the bench is much narrower than in other locations requiring a reduced path width to limit impacts.

2.3.2 Trail Design

The proposed multi-use trail design would meet California Department of Transportation (Caltrans) Class 1 bikeway design criteria and would also be based on the State Water Code Title 23 standards for recreation trails on levees and the ARFCD Recreational Trails Policy (ARFCD 2002). The trail would generally consist of an 8-foot-wide paved path with a 2-foot-wide compacted shoulder on the inner side and a similar 6-foot-wide shoulder on the waterside to provide space for walking and jogging adjacent to the paved portion of the trail, bringing the total trail cross section along most of its length to 16 feet wide. However, due to space limitations in some locations, the waterside shoulder of the trail would be narrowed to 4 feet wide. The trail would be paved and engineered to be load-bearing (**Figure 2-3**).

Figure 2-1. Proposed Trail Alignment - Western Segments



Source: GEI Consultants, Inc., 2019

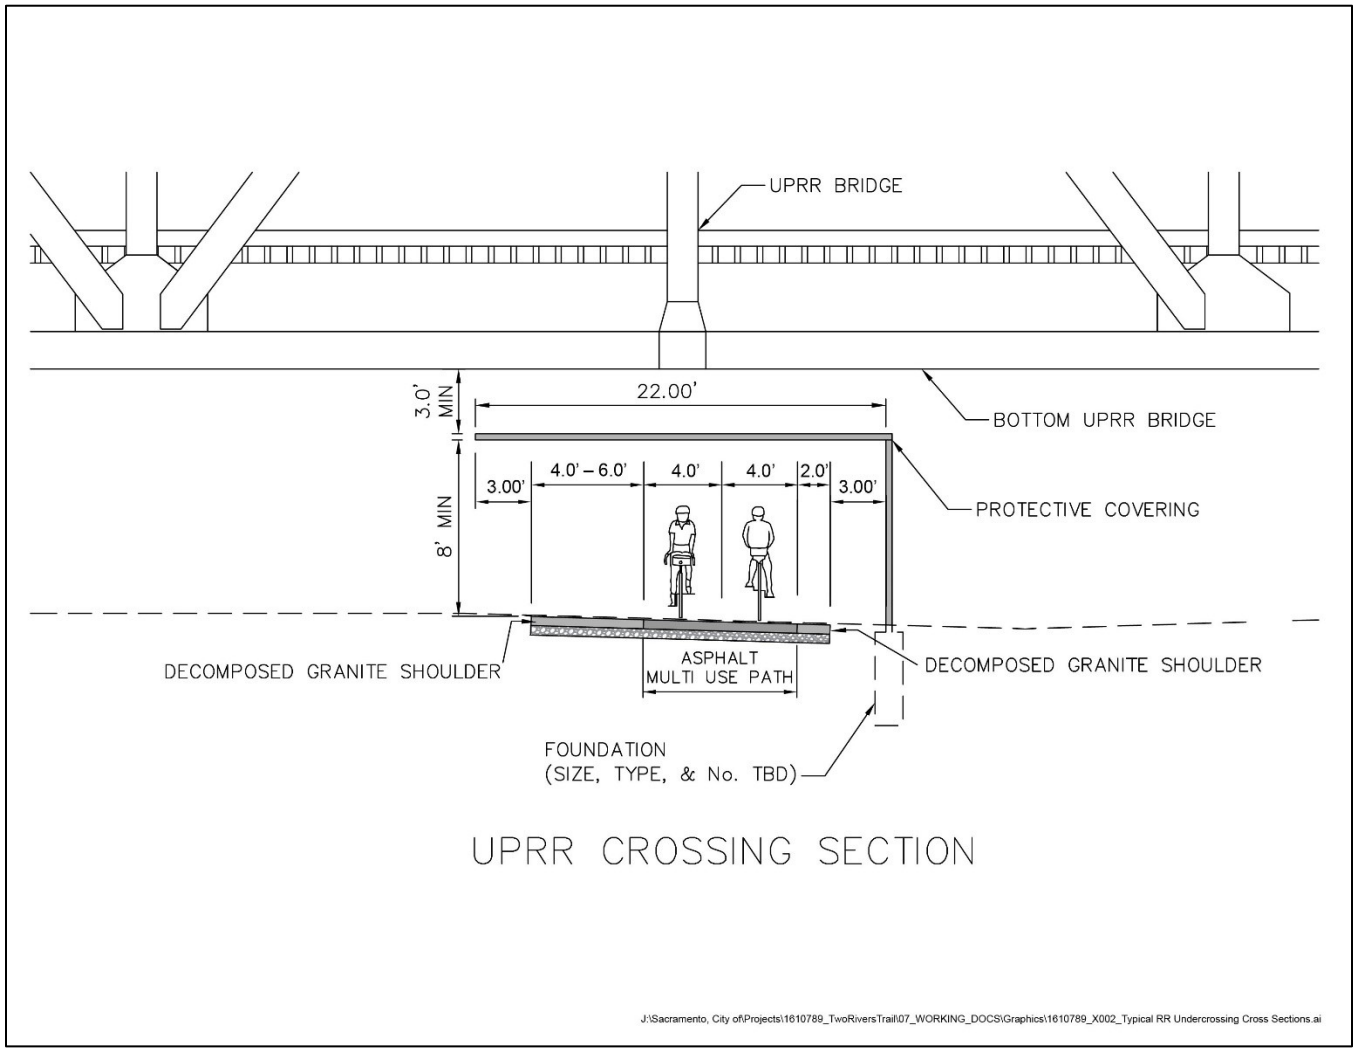
Figure 2-2. Proposed Trail Alignment - Eastern Segments

Source: GEI Consultants, Inc., 2019

Figure 2-3. Typical Cross Sections

Source: Quincy Engineering Inc., 2019

Note: Figure 2-3 is intended as a conceptual illustration, with actual trail location to be coordinated with CVFPB and USACE to ensure top of levee section is as close to waterside as possible.



In Segments 1 and 2, where the trail would be located landward of the levee, storm water is expected to infiltrate into the ground before entering the City's storm water conveyance system. In Segments 3-6 and where the trail would be along the levee crown or on the waterside of the levee in Segments 1 and 2, the trail would be slightly sloped toward the American River to maintain existing runoff patterns. In areas where trail design may cause minor ponding of water, small drain inlets would be installed to carry water under the bike trail to outlets on the river side of the trail. Outlets would discharge out of a flared end section and onto a small area of rock designed to reduce storm water velocity and disperse the water to prevent erosion at the outlet.

2.3.3 Union Pacific Rail Road Crossings

The trail in Segments 1 and 3 would cross under active railway lines. In these locations fencing would be constructed to prevent trail users from accessing the UPRR right-of-way. Fencing would be placed near the tops of the levee, directly adjacent (but not connecting) to the ends of the existing railroad bridges on one end and existing fences on the land side of the levees. The fences would be designed to meet UPRR requirements. Gates would be placed at the tops of the levee near the existing at-grade

crossings to allow levee maintenance and patrol vehicles to use the crossings. Protective covers similar to the one depicted in **Figure 2-4** may also be constructed to protect trail users crossing under the railroad bridges from potential falling debris from above. The protective cover is anticipated to be a free-standing canopy supported on a cantilever structure that would extend up to 30 feet out perpendicular to each side of the railroad structure but would not extend below the railroad structure.

Figure 2-4. Typical Railroad Undercrossing Cross Section

Source: GEI Consultants, Inc., 2019

2.3.4 Public Access, Trail Connections, and Lighting

The proposed project has been designed to ensure access and connectivity with City neighborhoods, regional and local park facilities (Sutter's Landing Regional Park, Glenn Hall Park), and other regional trails (Jedediah Smith Memorial Trail). Four potential points of access have been identified and are described below. Directional and interpretive signage is also proposed at these locations. Signage would conform to the Parkway Trail & Parks Sign Manual (Sacramento County 2018). No lighting is proposed as part of the proposed project.

Sacramento Northern Bikeway Trail (North 18th Street)

With the proposed project commencing just west of the Sacramento Northern Bikeway Trail, this access point in Segment 1 would facilitate connections to existing City neighborhoods (including New Era Park, Boulevard Park, and Alkali Flats) and newly developing areas of the City (including the Railyards) (see **Figure 2-2**). Trail users at this location could also access the larger regional trail system (Jedediah Smith Memorial Trail) via the Sacramento Northern Bikeway Bridge.

Sutter's Landing Regional Park (28th Street)

Access to the trail would also occur at Sutter's Landing Regional Park in Segment 2 (see **Figure 2-1**) near the terminus of 28th Street by the entrance to the park. This location would also provide access from the trail south to on-street bike lanes connecting the trail to central city commercial, employment, and residential areas including the New Era Park, Marshall School, East Sacramento, and McKinley Park neighborhoods.

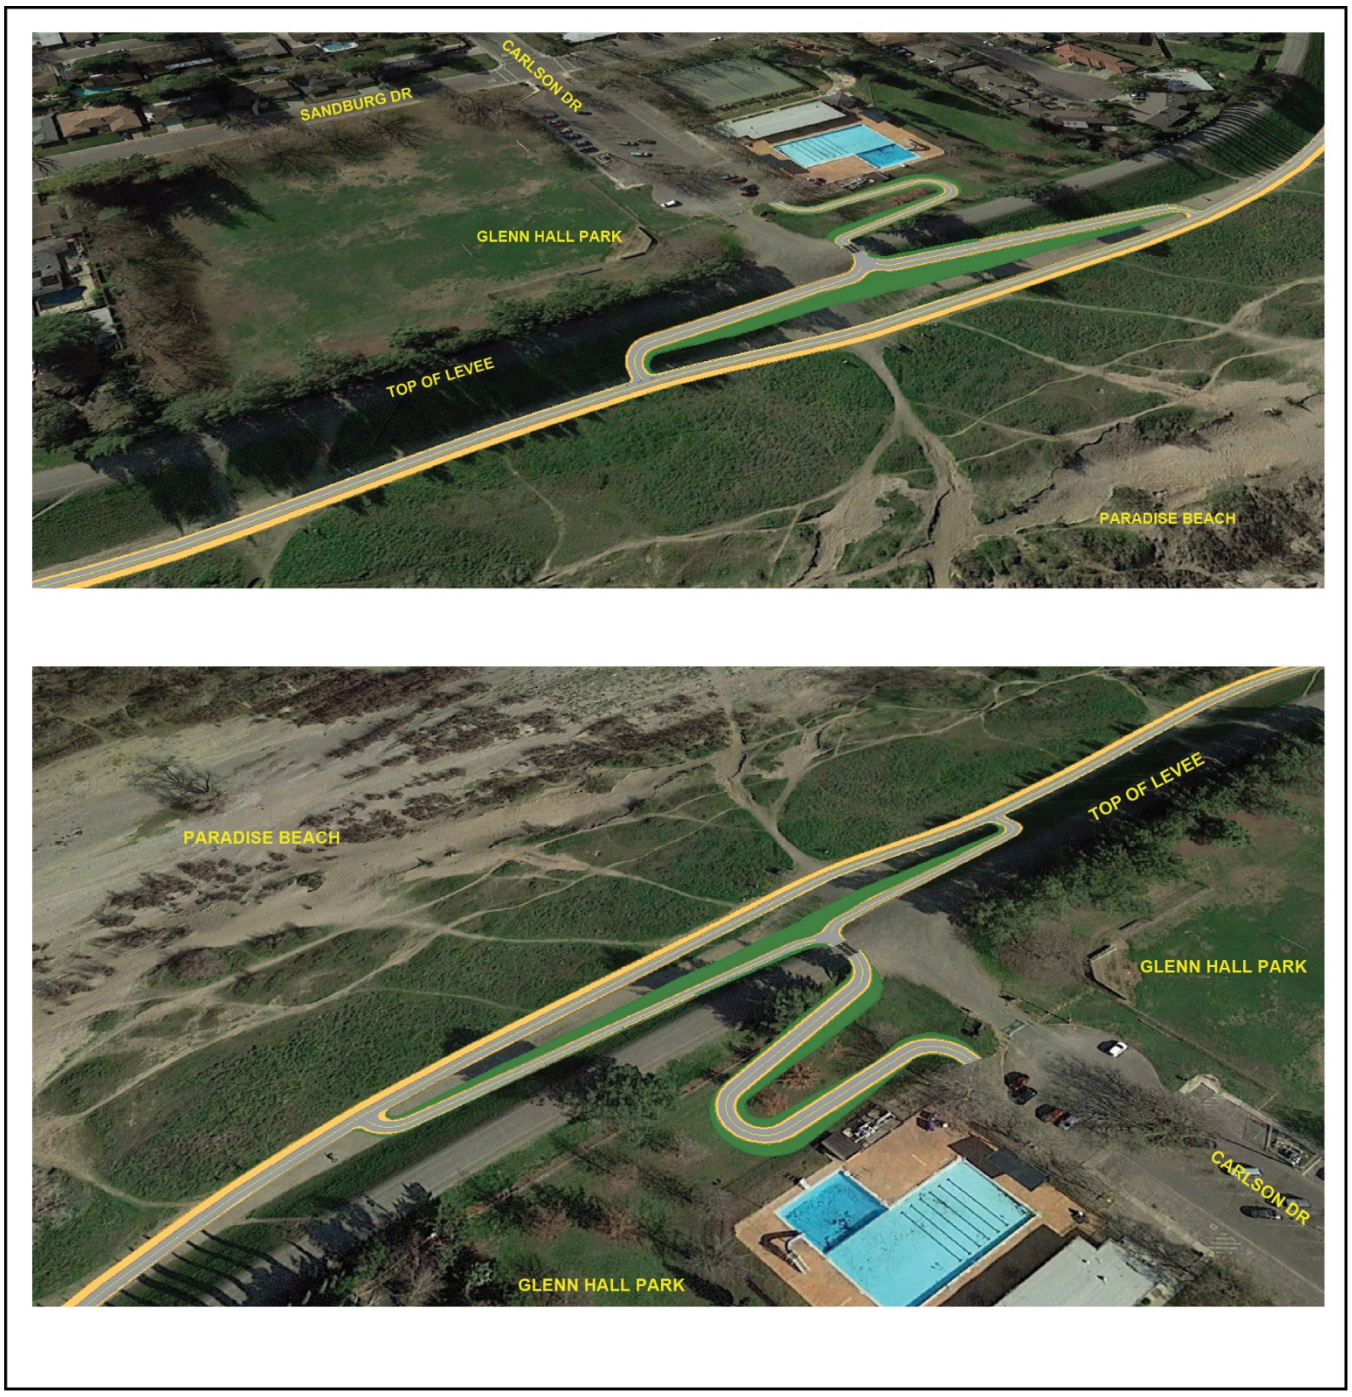
Glenn Hall Park

In Segment 5, access within the River Park neighborhood is proposed at Glenn Hall Park (see **Figure 2-2** and **Figure 2-5**). This point would provide ADA trail access to residents of the River Park neighborhood and would provide a connection to Carlson Avenue, Elvas Avenue, the CSUS campus, and surrounding commercial/residential areas.

H Street Bridge

The proposed project would connect to the existing paved trail along the south bank of the American River near the H Street Bridge at the terminus of Segment 6 (see **Figure 2-2**). This point provides an important connection linking the proposed project with the CSUS campus, the existing Jedediah Smith Trail on the north side of the Lower American River via the H Street Bridge, and the existing paved trail along the south side of the Lower American River west of the H Street Bridge. This point would also provide access to east/west on-street bike lanes connecting the central city, the CSU Sacramento and the Campus Commons neighborhoods.

2.3.5 Project Construction



Construction Schedule

Construction of Segments 1 and 2 would take approximately 2 to 3 months to complete while Segments 3 through 6 would require approximately 5 to 6 months to complete. The City currently has construction funding to complete Segments 3 through 6 and proposes to complete construction of these four segments in 2020 between April 15 and November 1, in accordance with Title 23 requirements. Construction of Segments 1 and 2 would be completed at a future date, contingent on the availability of funding and landfill remediation activities in the area.

Construction Methods

Trail construction would begin with clearing and grubbing any trees, shrubs and other organic material from within the construction limits. The alignment, including trail access points, would then be excavated, filled, and/or graded and compacted, as needed, to achieve a suitable base and ADA-compliant grades. All trail segments would only require minor excavation and fill to prepare for the Class I trail, with quantity estimates of these materials shown below in **Table 2-1**. The trail will

Figure 2-5. Glenn Hall Park Trail Access Alignment

Source: Quincy Engineering Inc., 2019

transition from the toe of the levee to the top in a couple of locations (including the transitions between Segments 3 to 4 and 4 to 5, access at Glen Hall Park, and the end of Segment 6), with some cut and fill involved to allow the trail to transition and have ADA compliant gradients. Imported materials would include aggregate base rock and pavement materials that would be placed on top of the aggregate base to create the smooth finished paved surface of the trail. The materials, dimensions, and methods used would accommodate sufficient load-bearing capacity for heavy equipment used for levee maintenance and emergency operations, while maintaining the integrity of the pavement for recreational use.

Table 2-1. Estimates of Excavation and Import Fill for the Project

Trail Segments	Material Type	Quantity Estimates (cy – cubic yards)
Segments 1 & 2	Excavation Amount	2,500 cy
	Import Fill Material	1,000 cy
	Import Aggregate Base Material	2,500 cy
	Import Pavement Material	650 cy
	Total Imported Materials	**4,150 cy**
Segments 3 through 6	Excavation Amount	3,710 cy
	Import Fill Material	3,375 cy
	Import Aggregate Base Material	4,940 cy
	Import Pavement Material	940 cy
	Total Imported Materials	**9,255 cy**

Following construction, the contractor would remove any construction materials and restore all disturbed surfaces to their pre-project condition, including replacing fences, repairing asphalt roadway surfaces, restoring existing slopes and grades, and revegetating affected surfaces through means such as hydroseeding. All hard surfaces would be cleaned of dirt, dust, or other construction materials.

Construction Equipment and Work Force

Equipment used for the project would include typical pieces of general construction equipment including backhoes, bulldozers, excavators, graders and compactors (**Table 2-2**). Some haul trucks may also be required including those with water (dust control) and seed sprayers (revegetation activities). All equipment types would be below legal limits for operating on local streets and would be staged as close to the project site as possible.

Table 2-2. Proposed Construction Equipment

Equipment	Construction Purpose
Backhoe	Soil manipulation
Bobcat	Fill distribution
Bulldozer/Loader	Earthwork construction, cleaning and grubbing
Excavator	Soil manipulation
Front-end Loader	Dirt or gravel manipulation
Grader	Ground leveling
Haul Truck	Earthwork construction; clearing and grubbing
Paver	Roadway paving
Roller	Earthwork and compacting
Scraper	Earthwork construction; clearing and grubbing
Truck with Seed Sprayer (hydroseeded)	Erosion control and landscaping
Water Truck	Earthwork construction; clearing and grubbing

An estimated 10 to 20 workers, which could vary based on specific trail development activity, would be onsite each day during construction activities. Construction activities would be limited to daylight hours, typically the hours from 7:00 a.m. to 6:00 p.m., Monday through Saturday, and possibly 9:00 a.m. to 6:00 p.m. Sunday. Construction-related noise during these hours is exempt from the City Noise Ordinance (City Code 8.68.080).

Construction Access and Staging Areas

Construction access would be via local roadways, including 28th Street (a local roadway), Carlson Drive (a minor collector), Camellia Drive (a local roadway) and H Street (an arterial east of Camellia Drive and major collector west of Camellia Drive) (City of Sacramento 2015).

Given the linear nature of the proposed project, several equipment staging areas would be required along the trail alignment (see **Figures 2-1** and **2-2**). The location of these staging areas has been planned to minimize construction activity/staging near residential/commercial areas to the extent feasible. Additionally, by distributing the staging areas at multiple locations along the project alignment/site, construction activity would also be distributed along the entire trail alignment resulting in shorter construction timeframes at individual locations and allowing for sections of the trail to remain open during construction.

Equipment staging areas may be located at the following locations:

- City-owned properties west and south of Sutter's Landing Park (001-0160-018, 003-0010-001) (see Figure 2-2).
- City-owned property between UPRR Bridge and SR 80 (001-0170-006) (see Figure 2-3).
- Area northeast of Glenn Hall Park on the waterside of the levee (005-0010-002) (see Figure 2-3).
- Scottish Rite Center parking lot (005-0232-003) (see Figure 2-3).

The City Code (City Code 12.20.030) establishes requirements for a construction traffic control plan for projects which include street closures. Although street closures during construction are not anticipated, a modified construction traffic control plan would be implemented to minimize impacts associated with construction traffic and trail closures. This plan would be prepared by the construction contractor and subject to review by the City Traffic Engineer and all affected agencies. All work performed during construction would be required to conform to the conditions and requirements of the approved plan. At a minimum, the plan would include the following:

- Safe and efficient access routes for emergency vehicles;
- Provisions for pedestrian safety;
- Provisions for pedestrian and bicycle detours, where necessary, including signage;
- Use of manual traffic control when necessary;
- Number of anticipated truck trips, and time of day of arrival and departure of trucks; and

- Provision of a truck circulation pattern and staging area with a limitation on the number of trucks that can be waiting and any limitations on the size and type of trucks appropriate for the surrounding transportation network.

The plan would be required to be available at the project site for inspection by the City representative during all work.

2.3.6 Trail Operations and Maintenance

Upon completion, the trail would be operated as a recreational Class 1 trail by the City of Sacramento. The trail operator would implement several operation and maintenance (O&M) measures, including but not limited to public safety, litter control, graffiti control, signage, access control, security, compliance enforcement, repair, rehabilitation, replacement, and removal of recreational trails facilities. Typical maintenance activities would include routine inspections, debris removal, and repair of cracks and slope failures.

In addition to the maintenance tasks listed above, typical vegetation management activities would routinely occur, including the following:

- **Mowing** – Mowing activities would occur up to 4 times annually, performed by ARFCD. Mowing would generally occur within a 4-foot area on each side of the trail. Mowing within the drip-line of elderberry shrubs would be limited to the season when adult valley elderberry longhorn beetles (VELB) are not active (August - February) and would avoid damaging the elderberry shrub.

- **Trimming** –Trimming of vegetation and hazard tree/limb removal along the trail would occur once annually. Woody vegetation would be trimmed back up to 4 feet from the sides of the trail, with a 12-foot vertical clearance. Vegetation less than 3 inches in diameter would be cleared by hand or small engine weed-eaters or chainsaws. Small material or grasses would be mowed close to the ground with low impact rubber-tired tractors. Vegetation over 3 inches in diameter may require larger equipment such as telescoping chainsaws, hoe-mounted flail mowers, bucket machines to hoist the crew and equipment, and climbing crew with chainsaws.

- **Removal of Vegetation from Trail Surfaces** – The removal of invasive vegetation would be eradicated through very limited and selective application of herbicides. Per U.S. Fish and Wildlife Service (USFWS) recommendations, the use of insecticides, herbicides, fertilizers, or other chemicals would not be used within 98 feet of elderberry shrubs.

As much as feasible, all O&M activities that could occur within 165 feet of an elderberry shrub, would be conducted outside of the flight season of the VELB (March - July) to minimize impacts to VELB. However, it is assumed that up to 5 elderberry shrubs may be affected as part of maintenance activities.

High river flow events, and some levee, railroad, and trail maintenance activities may also require temporary closure of sections of trail from time to time. During such closures, signs would be placed by the trail operator or ARFCD crew at access points to the trail alerting users of the closure and designating alternate routes.

2.4 Project Permits and Approvals

The following agencies may have permitting or approval authority over the proposed project:

- **American River Flood Control District (ARFCD)** – Encroachment permit for portions of the trail located on or extending across ARFCD facilities; easements for trails over lands owned by ARFCD in fee title.
- **National Marine Fisheries Service (NMFS)** – Federal Endangered Species Act Section 7 Consultation for potential effects to federally listed and proposed (endangered and threatened) anadromous fish species.
- **Public Utilities Commission** – Permission for railroad crossings.
- **United States Army Corps of Engineers (USACE)** – Rivers and Harbors Act Section 14 (408) authorization for alterations to a Federal project levee; Clean Water Act (CWA) Section 404 permit for dredge or fill of waters of the U.S.
- **United States Fish and Wildlife Service (USFWS)** – Federal Endangered Species Act Section 7 Consultation for potential effects to federally listed and proposed (endangered and threatened) plant and wildlife species.
- **Union Pacific Railroad (UPRR)** – Encroachment permit for the portions of the trail passing under a Union Pacific Railroad Bridge.
- **California Department of Transportation (Caltrans)** – Encroachment permit for the portion of the trail passing under SR 80.
- **California Department of Fish & Wildlife (CDFW)** – California Fish and Game Code Section 1602 Streambed Alteration Agreement for construction and alterations within riparian areas.
- **Central Valley Flood Protection Board (CVFPB)** – Encroachment permit for work within the flood control easement.
- **Central Valley Regional Water Quality Control Board (RWQCB)** – CWA Section 401 Water Quality Certification for discharge to surface waters.
- **County of Sacramento, Department of Regional Parks** –approval of 100% construction drawings; Lease Agreement for staging and construction within the Parkway; Map Amendment to convert the trail from future to active status; and Joint Use Agreement.

Chapter 3. Environmental Setting, Impacts, and Mitigation Measures

3.1 Aesthetics

3.1.1 Introduction

This section provides an overview of the existing aesthetic (or visual/scenic resources) within the proposed project study area, identifies the regulatory framework, and provides an analysis of the potential aesthetic impacts that would result from implementation of the proposed project. During preparation of the IS/MND and as a result of the proposed project's NOP scoping period, the following comments related to aesthetic resources were received and considered during preparation of the impact analysis:

- The project will substantially interfere with an important scenic resource and substantially degrade the view of this existing scenic resource.
- An EIR needs to be prepared to look at what the before and after aesthetics of the project will be, using existing, comparable trails and the recently constructed Phase I of the Two Rivers Trail as a base line of comparison.

As more fully described in **Chapter 2.0** "**Project Description**" design details (including trail width and composition) of the proposed project are provided to enable the following impact analysis. Trail design is consistent with other portions of the Two Rivers Trail and the larger network of multi-use trails located within the American River Parkway (see **Figures 3.1e** and **3.1f** under **Impact AES-1**, below).

Related impacts to the study area's vegetation and habitats from the effects of project construction and operation are provided in **Section 3.2**, "**Biological Resources**".

3.1.2 Environmental Setting

An overview of the project study area is shown in **Figure 1-1** "**Project Location Map**" provided in Chapter 1 of this Draft EIR. The project site extends along the south bank of the American River from the Sacramento Northern Bikeway to Sutter's Landing Regional Park, and along the waterside of the levee from the eastern terminus of Sutter's Landing Regional Park through the Paradise Beach area, to the H Street Bridge crossing the American River near California State University – Sacramento (CSUS).

In Segments 1 and 2, the visual character is formed by riparian vegetation along the riverbank, with upland areas characterized by ruderal vegetation, small structures, and chain link fencing. Nearby industrial facilities, the Union Pacific Railroad, and solar panels in Sutter's Landing Regional Park are also visible. **Figure 3.1-1a** contains a photo illustrating a typical view facing west across an upland area of Segment 2 near Sutter's Landing Regional Park

Segments 3 through 6 are generally characterized by riparian vegetation between the levee toe and the riverbank. A dirt or gravel track or road extends along most of the levee toe, and the levee slopes are kept clear of vegetation other than grass and ruderal vegetation. A gravel maintenance road extends along the crown of the levee. Single family residences are present on the land side of the levee in Segments 3 through 6, and visible from the levee crown, although not from the toe or levee shoulder where the proposed project would be constructed. **Figures 3.1-1a**, **3.1-1b**, **3.1-1c**, and **3.1-1d** provide photos illustrating existing visual conditions along the project site. Views of the river, typically framed by a mix of trees and smaller vegetation, are characteristic of Segment 1 and Segments 3 through 6.

3.1.3 Regulatory Setting

Federal Plans, Policies, Regulations and Laws

No Federal plans, policies, regulations, or laws related to aesthetics are relevant to the analysis of land use and planning impacts for the project.

State Plans, Policies, Regulations, Laws

No State plans, policies, regulations, or laws related to aesthetics are relevant to the analysis of land use and planning impacts for the project.

Regional and Local Plans, Policies, Regulations, and Ordinances

City of Sacramento 2035 General Plan

The following goals and policies from the Land Use and Urban Design (LU) Element and the Environmental Resources (ER) Element related to aesthetics, light, and glare are relevant to the proposed project (City of Sacramento 2015).

GOAL LU 2.3: **City of Trees and Open Spaces.** Maintain a multi-functional "green infrastructure" consisting of natural areas, open space, urban forest, and parkland, which serves as a defining physical feature of the City of Sacramento, provides visitors and residents with access to open space and recreation, and is designed for environmental sustainability.

- **Policy LU 2.3.1 Open Space System.** The City shall strive to create a comprehensive and integrated system of parks, open space, and urban forests that frames and complements the City's urbanized areas.

GOAL LU 2.4: **City of Distinctive and Memorable Places.** Promote community design that produces a distinctive, high-quality built environment whose forms and character reflect the City of Sacramento's unique historic, environmental, and architectural context, and create memorable places that enrich community life.

- **Policy LU 2.4.1 Unique Sense of Place.** The City shall promote quality site, architectural and landscape designs that incorporate those qualities and characteristics that make the City of Sacramento desirable and memorable, including walkable blocks, distinctive parks and open spaces, tree-lined streets, and varied architectural styles.

City of Sacramento		July 2019 Figure 3.1f

- **Policy LU 2.4.2 Responsiveness to Context.** The City shall promote building designs that respect and respond to the local context, including use of local materials, responsiveness to the City of Sacramento's climate, and in consideration of the cultural and historic context of the City's neighborhoods and centers.

GOAL ER 7.1: Visual Resource Preservation. Maintain and protect significant visual resources and aesthetics that define the City of Sacramento.

- **Policy ER 7.1.1 Protect Scenic Views.** The City shall seek to protect views from public places to the Sacramento and American rivers and adjacent greenways, landmarks, and urban views of the downtown skyline and the State Capitol along Capitol Mall.

American River Parkway Plan

The American River Parkway Plan (ARPP, Sacramento County 2008) is a policy and implementation guide developed to promote the preservation of the American River's natural environment while providing limited development for human enjoyment of the parkway. The American River Parkway (Parkway) is an open space greenbelt approximately 29 miles long extending west/southwest along the north and south sides of the Lower American River from Folsom Dam to its confluence with the Sacramento River. The ARPP establishes aesthetic values for the Parkway and identifies policies to reduce visual impacts within the Parkway (Sacramento County 2008, p. 3-77, p. 7-111—112).

The following policies from the ARPP are relevant to analysis of aesthetic impacts of the project:

7.22 Structures that are in the parkway shall be of a design, color, texture and scale that minimizes adverse visual impacts within the parkway.

7.22.1 Structures shall be located so that neither they, nor activities associated with them, cause damage to native plants or wildlife, without appropriate mitigation.

7.22.2 Structures shall be constructed of naturalistic materials which blend with the natural environment.

7.22.3 Colors shall be earth tones or shall blend with the colors of surrounding vegetation.

7.22.4 Structures may emulate authentic historic design but shall be unobtrusive.

7.22.5 To the extent possible, structures shall be screened from view by native landscaping or other naturally occurring features.

The ARPP also identifies aspects of the Parkway experience that should be considered as part of the aesthetic values of the Parkway:

- the clean, transparent waters of the American River,
- the American River as a designated Wild and Scenic River,
- the life that the river supports, such as mammals, fish, birds, beneficial insects, vegetation, and other wildlife,

- habitat diversity, riparian zone, woodland, upland, vegetation,
- presence of wildlife and their movement, visibility, grace,
- sounds of nature, including birds, wildlife, the flowing river,
- seasonal changes,
- feeling of peace and tranquility experienced by the people who visit and use the Parkway,
- feeling and experience of harmony that prevails between what is natural in the Parkway and the animals that live in it,
- the land form, exposed geological compositions,
- islands,
- views of the river—at various flow levels,
- views from within the Parkway at different vantage points,
- views from the Parkway outward, and
- minimal urban or ambient noise and light.

3.1.4 Environmental Impacts and Mitigation Measures

Thresholds of Significance

The significance criteria used to evaluate the project impacts to aesthetics are based on Appendix G of the CEQA Guidelines, thresholds of significance adopted by the City in applicable general plans and previous environmental documents, and professional judgment. A significant impact related to aesthetics would occur if the project would:

- Have a substantial adverse effect on a scenic vista.
- Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a State scenic highway.
- Conflict with applicable zoning and other regulations governing scenic quality.
- Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area.

Issues Not Discussed Further in this EIR

Damage Scenic Resources within a Scenic Highway

Only three roadways have views of the project site (Interstate Highway Business 80, 28th Street, and H Street), and none of these roadways is designated as a local or State scenic highway.

Impact Analysis

Impact AES-1: Adverse Effect on Scenic Vista or Scenic Quality

The project would be constructed consistent with American River Parkway Plan policies concerning aesthetics. [Less than Significant]

The proposed project includes construction of a paved trail. As part of the construction of the trail, some existing vegetation, including trees, would be removed to provide a sufficient clear width along the levee toe for construction of the trail. Two overhead structures would be constructed where the trail would pass beneath the Union Pacific Railroad bridges.

The existing visual character of the project site is generally formed by scrubby, riparian vegetation between the toe of the levee and the river, levee slopes covered by grassy vegetation, and upland uses including vacant lands, a former landfill, and (in Segments 3 through 6) single-family residences. There are numerous existing unpaved and gravel tracks and roadways along the levee crown and toes in the project vicinity.

This visual character of the proposed project area would not be significantly degraded by construction of the project. During construction activities, equipment would be staged at locations illustrated on Figures 2-2 and 2-3 in Chapter 2, "Project Description." These locations generally include vacant areas west of Interstate 80 Business, an area adjacent to Glenn Hall Park, and a parking lot located at H Street and Carlson Drive. Although construction activities and construction equipment staging would affect the visual character, this impact would be temporary, with impacts in any given area lasting less than a single construction season.

Several commenters have expressed concern regarding the difference in appearance between the existing views along the levee and those associated with a proposed paved bicycle path. After completion of the project construction activities, although an existing dirt toe road would be paved, and some small and local improvements would be constructed (i.e., the overhead structures), the overall visual character of the project site would remain. Implementation of the proposed project would be constructed consistent with ARPP policies concerning aesthetics, including Policy 7.22, which requires that the overhead structures be designed with color, texture, and scale that blends in with their surroundings. Outside of the UPRR overhead structures, construction of the trail would not include any other structures that would affect background views or the overall visual character of the study area. **Figures 3.1e** and **3.1f** provide a comparison of existing views along the proposed trail alignment with example views from similar developed trails (including Top of Levee and waterside Toe of Levee segments) within the American River Parkway. As shown in the figures, the proposed project would be developed in a manner similar to other multi-use trails in the Parkway and would not include structures or improvements that would affect the visual character of the study area outside of the immediate trail corridor.

This impact would be **less than significant** due to the temporary nature of construction disturbances, consistency with ARPP policies, and the minor changes in visual character following implementation of the project.

Mitigation Measure: No mitigation is required.

Impact AES-2: ***New Sources of Light and Glare***

The project would not include any new lighting, and all finishes would be matte. [Less than Significant]

The proposed project would not introduce any new sources of light or glare to the project site. For the majority of the trail alignment, the trail would be paved, with gravel or aggregate shoulders. Where the trail crosses under the two Union Pacific Railroad bridges, overhead structures may be required. However, the overhead structures would be designed in compliance with ARPP Policy 7.22, which require that structures be constructed of naturalistic materials and earth tones, and blend with surrounding vegetation. No lighting is proposed as part of the project. Therefore, this impact would be **less than significant**, with no mitigation required.

Mitigation Measure: No mitigation is required.

Residual Significant Impacts

There would be no residual significant impacts related to aesthetics.

3.2 Biological Resources

3.2.1 Introduction

This section provides an overview of the existing biological resource conditions within the project study area, identifies the regulatory framework, and provides and analysis of the potential biological impacts that would result from implementation of the proposed project. A Natural Environment Study (Area West Environmental, Inc. 2018) (NES) was prepared, for the City and Caltrans, that included a biological evaluation and field surveys of the study area to evaluate site conditions and potential impacts to biological resources from project activities. Other primary references consulted include species lists and information gathered using USFWS, Information, Planning, and Conservation System (IPAC), CDFW Natural Diversity Database (CNDDB), the California Native Plant Society's (CNPS) list of rare and endangered plants, and a literature review.

During preparation of the IS/MND and as a result of the proposed project's NOP scoping period, the following comments related to biological resources were received and considered during preparation of the impact analysis:

- Impacts to nesting birds (distance to nests), raptors riparian areas, trees and Valley Elderberry Longhorn Beetle (VELB) resulting from trail construction and maintenance are not considered complete or rigorous enough. VELB impacts underestimated and offsite mitigation inadequate and uncertain.
- 1 to 1 mitigation requirement for riparian impacts is considered inadequate.
- Offsite biological resource mitigation not appropriate to maintain onsite wildlife corridor function.
- Construction staging areas need to be outside the American River Parkway to avoid impacts.

Preparation of this EIR provides a detailed and complete analysis of the potential impacts to biological resources as identified in **Impacts BIO-1** through **BIO-4**. As more fully described below in **Section 3.2.4**, extensive and complete field surveys for both plant and wildlife resources were conducted at the appropriate times of year and within a study area that greatly exceeded the project footprint. For example, VELB surveys were conducted within 165 feet of the project footprint, consistent with the most current USFWS guidelines.

Mitigation requirements (including location, compensation ratios, etc.) will ultimately be determined following consultation with key regulatory agencies having responsibility over the management of affected resources (including the CDFW and USFWS) within the study area. While onsite mitigation may be the preferred option, implementation of this mitigation strategy is contingent on the availability of onsite locations and the feasibility of managing/monitoring the mitigation sites once they are in place.

As more fully described in **Chapter 2.0** "**Project Description**", a number of design features have been incorporated into the proposed project to minimize biological resource impacts. Design features include a levee top trail within Segment 4 of the trail alignment and the placement of most construction staging areas outside of the Parkway or proposed for disturbed areas within the study area.

3.2.2 Environmental Setting

The Biological Study Area (BSA) for the project site is approximately 238 acres (see **Table 3.2-1**), which is comprised of the project footprint (including Segments 1 through 6, access points, and staging areas) and a 165-foot buffer. Elevation ranges from approximately 20 to 60 feet above mean sea level (amsl), with topography consistent with the surrounding landscape of the lower American River area, consisting of low rolling foothills, floodplain areas, and a relatively flat valley floor. The flood control levee and slopes down to the river are the most significant topographic relief in the BSA. Natural features within the BSA include the American River and its riparian vegetation.

Table 3.2-1. Habitat Community Types

Habitat Community	Acres within the Project Study Area
Urban	93.39
Ruderal	16.60
Annual Grassland	59.66
Mixed Scrub	6.83
Valley Foothill Riparian	34.16
Riverine (American River)[1]	27.03
Total:	237.67

Notes:
[1] Acreages presented are subject to verification by the U.S. Army Corps of Engineers. Modifications of the riverine acreage would increase or decrease the acreage of other vegetation communities accordingly.
Source: Area West Environmental, Inc., 2019

Biological field surveys of the BSA (or project study area) were conducted on May 6 and 10, 2014; July 21, 2014; April 3, 4, 5, 11, and 12, 2017; June 21 and 22, 2017; February 27 and 28, 2018; March 14, 2018; and June 21, 2019. All vegetation and habitat types within the BSA were noted, mapped, and evaluated, and VELB habitat assessments were conducted in accordance with USFWS 1999 guidance and 2017 framework (USFWS 1999, 2017). Prior to field work, literature research was conducted through the USFWS Species List, the CDFW-maintained CNDDB, and the CNPS Electronic Inventory of Rare and Endangered Plants to identify habitats and special status species having the potential to occur within the BSA (CNDDB 2017; CNPS 2017; USFWS 2017b; and NMFS 2017).

Habitat and Land Cover Types

The BSA supports six generalized vegetation community types consisting of four upland communities (urban, ruderal, annual grassland, mixed scrub, and valley foothill riparian) and one aquatic community (Riverine [American River]). **Table 3.2-1** presents habitat information for the BSA. Habitat maps using collected field data for the BSA are included in **Appendix C** of this EIR and identify the location of the proposed project in relation to the mapped habitats.

Urban

The urban vegetation community consists of residential homes, industrial facilities, paved and graveled roadways, dirt trail, and train tracks. Vegetation within the urban community is regularly maintained with mowing, vegetation trimming and herbicide. Where residential homes with landscaped yards are present, horticultural species often included privet (*Ligustrum japonicum*), oleander (*Nerium oleander*), redwood (*Sequoia sempervirens*), interior live oak, and numerous cultivars of herbaceous garden plants.

The urban community may provide habitat for nesting migratory birds and raptors, one large stick nest was observed in the top of a redwood tree located in a backyard in the eastern segment of the project alignment. Residential homes may provide nest boxes for birds and bird feeders to attract foraging birds. Other species that may use urban habitats for foraging include raccoon (*Procyon lotor*) and coyote (*Canis latrans*). Other areas like the graveled levee road and dirt trail consist of bare ground and are devoid of vegetation, and typically do not provide habitat for any special-status plants or wildlife species. Although killdeer (*Charadrius vociferus*) was observed using this habitat for nesting, and other wildlife, such as small lizards like western fence lizard (*Sceloporus occidentalis*) will use the roadway for basking.

Ruderal

The ruderal vegetation community consists of non-native annual grasses and forbs that are regularly maintained (mowed, sprayed with herbicide, etc.) along the fringes of the levee road (mainly the southern side), rail road right-of-way, or vacant lots. In the ruderal areas, annual grasses included foxtail barley (*Hordeum murinum*), soft brome (*Bromus hordeaceus*), ripgut brome (*Bromus diandrus*), and wild oats (*Avena fatua*). Annual forbs included filaree (*Erodium spp.*), smooth cat's ears (*Hypochaeris glabra*), English plantain (*Plantago lanceolata*), wild geranium (*Geranium dissectum*), and burclover (*Medicago polymorpha*). Shrubs such as California blackberry (*Rubus ursinus*) and coyote brush (*Baccharis pilularis*) were also observed in scattered patches in this habitat.

Due to continual disturbance, this vegetation community does not provide suitable habitat for special-status plant or wildlife species. However, this ruderal habitat may support various species of wildlife including small rodent species that forage on seeds or herbaceous growth such as California vole (*Microtus californicus*) and Botta's pocket gopher (*Thomomys bottae*). These prey species, along with insects supported by this habitat attract a variety of wildlife that forage in annual grassland including species such as western meadowlark (*Sturnella neglecta*), American kestrel (*Falco sparverius*), red-tailed hawk (*Buteo jamaicensis*), white-tailed kite (*Elanus leucurus*), and gopher snake (*Pituophis catenifeer*).

Annual Grassland

Annual grassland is found throughout the BSA and consists of non-native annual grasses and forbs. Species present in the annual grassland community are identical to species found in the ruderal community; the only exception between the two communities is that the ruderal community is regularly managed. In addition to annual grasses, forbs, and shrubs, the annual grassland community also consists of scattered occurrences of shrubs and trees.

The same wildlife species described as having potential to use the ruderal habitat would be the same species to use the annual grassland habitat. Additionally, a white-tailed kite was observed foraging in annual grasslands within the BSA near the 16th Street Bridge on April 12, 2017, and then a pair was observed in the same area on February 27, 2018.

Mixed Scrub

The mixed scrub community occurs in scattered patches, intermixed with annual grassland in the western segment of the BSA. While similar to riparian vegetation growing on the south side of the American River (between the levee and river), the mixed scrub community is not influenced by the river. As the name suggests, this community is not dominated by any one species. The main shrubs and trees contributing to the canopy layer are blue elderberry (*Sambucus nigra*), tree of heaven (*Ailanthus*

altissima), domestic almond (*Prunus dulcis*), valley oak, and coyote brush. The understory of this community consists of species found in the ruderal and annual grassland communities.

The mixed scrub community is highly disturbed by human activity in the vicinity of Segments 1 and 2. Vegetation in this area has been altered to establish camps and trash piles are scattered throughout the area.

As previously mentioned, blue elderberry shrubs are the obligate host for VELB larvae. Focused surveys identified VELB habitat (elderberry shrubs) within the elderberry savanna community in the BSA. Additionally, larger shrubs and trees in these areas could provide habitat for nesting raptors or migratory songbirds.

Valley Foothill Riparian

Valley foothill riparian is present along the south side of the American River. Dominant species in the canopy layer are valley oak, Fremont cottonwood (*Populus fremontii*), arroyo willow (*Salix lasiolepis*), Northern California black walnut (*Juglans hindsii*), and black locust (*Robinia pseudoacacia*). Subcanopy trees present include boxelder (*Acer negundo*), white alder (*Alnus rhombifolia*), Oregon ash (*Fraxinus latifolia*), and blue elderberry. Typical understory shrub layer plants include wild grape (*Vitis californica*), wild rose (*Rosa californica*), willows (*Salix sp.*), and blackberry. The herbaceous layer consists mainly of bedstraw (*Galium sp.*), man-root (*Marah fabacea*), and non-native grasses. In a section of this habitat located in the Paradise Beach Park area, the vegetation opens up and is less dense. This area has sandier soils and is dominated by herbaceous species such as California tule pea (*Lathyrus jepsonii var. californica*), hairy vetch (*Vicia villosa*), and non-native grasses, along with scattered silver bush lupines (*Lupinus albifrons*), shrubs, and trees.

The valley foothill riparian community is also highly disturbed by human activity. There are many trails that have been established throughout this habitat type that provide access down to the river. During the 2017 and 2018 surveys there was evidence of trail maintenance activities along the current trail (trimmed back vegetation).

Focused surveys identified VELB habitat within the valley foothill riparian community in the BSA. During the 2014 VELB surveys, a single female VELB was documented within this community type in the BSA. Trees in riparian habitat with cavities or tree hollows could provide habitat for cavity nesting birds. Habitat is also present for other migratory nesting birds and raptors. Red-shouldered hawk (*Buteo lineatus*) and red-tailed hawk were observed nesting in riparian habitat and foraging in adjacent annual grasslands. Thick brambles within the understory of the riparian habitat provide habitat cover along the banks for species such as American beaver (*Castor canadensis*) and river otter (*Lontra canadensis*).

American River (Riverine)

The American River occurs in the BSA and conveys water from the surrounding foothills of the Sierra Nevada Mountains to the southwest. The river flows into the Sacramento River which drains to San Francisco Bay. The riverine community supports riparian wetland vegetation outside of the ordinary high water mark (OHWM). Rocky erosion controls (e.g. riprap) have been placed along sections of riverbank within the BSA to protect the levee from erosion. In most areas with riprap, riparian vegetation has reestablished and includes alders, willows, and blue elderberries.

The American River provides habitat for anadromous fish species, such as Central Valley steelhead (*Oncorhynchus mykiss irideus*) and chinook salmon (*Oncorhynchus tshawytscha*). The American River

also provides habitat for a multitude of bird species, such as Canada goose (*Branta canadensis*), mallard (*Anas platyrhynchos*) and several other species. The river provides habitat for reptiles such as western pond turtle (*Actinemys marmorata*), which could occur basking along the banks or on emergent logs or laying eggs along the bank. Amphibian species observed included Sierran tree frog (*Pseudacris sierra*).

Common Animal Species

The BSA provides habitat for an assemblage of wildlife species that are commonly found within stream/riparian corridors and valley grassland communities, as described above under each vegetation community description. During field surveys of the site, observations of wildlife were made, including raptors, great blue heron, egret, mallards and other waterfowl, beaver, and numerous species of birds. Cavity nesting birds, such as tree swallow (*Tachycineta bicolor*), were observed and could use tree hollows present throughout the BSA. Species such as cliff swallow (*Petrochelidon pyrrhonota*) and/or black phoebe (*Sayornis nigricans*) could nest under bridges.

Native and Non-Native Trees

Throughout the BSA there are numerous native and non-native tree species. Trees provide habitat for various wildlife including nesting birds and squirrels. Trees also provide shade over the American River which is essential for fish and aquatic species. Dominant tree species within the BSA included Fremont cottonwood, Oregon ash, Valley oak, arroyo willow, northern California black walnut, and black locust. Additional trees located within the BSA occur within residential neighborhoods adjacent to the levee; these are dominated by non-native horticultural trees, such as maples (*Acer sp.*), Eucalyptus (*Eucalyptus sp.*), privet, olive (*Olea europaea*), and various fruit and citrus trees (*Citrus sp.*).

Fish and Wildlife Migration Corridors

River/riparian corridors, such as that found along the lower American River, are commonly used by wildlife as migration and movement corridors. Striped skunk (*Mephitas mephitis*), Virginia opossum (*Didelphis virginiana*), black-tailed deer (*Odocoileus heminonus*) and song birds are commonly found traversing river/riparian corridors. Species of special concern that could use the American River as a migration corridor include ringtail (*Bassariscus astutus*) and western pond turtle. The Lower American River Watershed supports numerous species of native and nonnative fish species, including naturally spawning fish species of concern such as fall-run Chinook salmon and Central Valley steelhead.

Special-Status Species

Special status species are plants and animals in the following categories:

- Species that are listed under the federal Endangered Species Act (ESA) and/or California Endangered Species Act (CESA) as rare, threatened, or endangered;
- Species considered as candidates and proposed for state or Federal listing as threatened or endangered;
- Wildlife designated by CDFW as species of special concern; and
- Plants ranked by CDFW as "rare, threatened, or endangered" in California.

Tables (provided in **Appendix C**) list the special-status plant, wildlife, and fish species that are known to occur or have the potential to occur in the geographic region. These species were identified based on

the species lists provided by United States Fish and Wildlife Service (USFWS) (2018), National Marine Fisheries Service (NMFS) species list (2018), California Natural Diversity Database (CNDDB) records search (2018), California Native Plant Society (CNPS) Inventory of Rare and Endangered Plants (2018), and species distribution and habitat requirements data. **Appendix C** shows CNDDB results within 5 miles of the BSA. A 10-mile CNDDB search was not completed for the proposed project so as not to capture Delta species that would not have the potential to occur within the BSA.

Special-status Plants

During the pre-field investigation, 16 special-status plant species were identified during the pre-field review as potentially occurring in the vicinity of the BSA. Based on the lack of suitable habitat (i.e., vernal pools, alkaline, and brackish soils), only 6 of the 16 special-status plant species (bristly sedge *[Carex comosa]*, Peruvian dodder *[Cuscuta obtusiflora var. glandulosa]*, Mason's lilaeopsis *[Lilaeopsis masonii]*, Sanford's arrowhead *[Sagittaria sanfordii]*, woolly rose mallow *[Hibiscus lasiocarpos var. occidentalis]*, and Northern California black walnut have potential to occur in the BSA.

Scattered occurrences of Northern California black walnut trees were observed within the BSA. Black walnut trees occur within riparian forests and woodlands throughout Northern California. Historically, native varieties of black walnut trees were used as rootstock for English walnut (*Juglans regia*), resulting in hybridized trees. Over time, cultivated trees escaped and have become widely naturalized in parts of California. CNPS lists Northern California black walnut as 1B.1, and as such, is rare and endangered elsewhere, and seriously endangered in California. The CNPS designation only refers to the remaining native, un-hybridized stands of black walnuts. According to CNPS' Inventory of Rare and Endangered Plants, the current presumed extent of native trees only occurs within Contra Costa, Napa, and possibly Lake counties (CNPS 2018). Since the native species of black walnut is considered to be extirpated from Sacramento County (CNPS 2018), it is highly unlikely that the black walnut trees observed within the BSA belong to a remaining native stand.

Special-status Wildlife

Based on the results of the field surveys and review of existing information including a search of the CNDDB, USFWS and NMFS species lists, and species distribution and habitat requirements data, 34 special-status wildlife species were identified during the pre-field review as occurring or having the potential to occur within the vicinity of the proposed project.

Of the 34 special-status wildlife species, 16 species would not occur in the BSA or have the potential to be affected by the proposed project because: 1) the BSA lacks suitable habitat for the species, 2) the BSA is outside the species' known range, and/or 3) field surveys determined that the species is not present. The remaining 17 species identified below have potential to occur within the BSA:

- *Green Sturgeon Southern Distinct Population Segment (DPS)*, federally threatened species and state species of special concern;
- *Central Valley steelhead DPS*, federally threatened species;
- *Central Valley fall/late-fall-run Chinook salmon Evolutionarily Significant Unit (ESU)*, NMFS and state species of special concern;
- *Central Valley spring-run Chinook salmon ESU*, federally threatened species;

- *Sacramento splittail*, state species of special concern;
- *Valley elderberry longhorn beetle*, federally threatened species;
- *Western pond turtle*, state species of special concern;
- *Burrowing owl*, state species of special concern;
- *Swainson's hawk*, state threatened species;
- *White-tailed kite*, state fully protected species;
- *Bald eagle*, state endangered and state fully protected species;
- *Song sparrow* "Modesto population", state species of special concern;
- *Purple martin*, state species of special concern;
- *Bank swallow*, state threatened species;
- *Least Bell's vireo*, federally endangered species and state endangered species;
- *Ringtail*, state fully protected species; and
- *Western red bat*, state species of special concern.

Special-status Species Critical Habitat

Based on the results of the field surveys and review of existing information, the BSA falls within designated critical habitat for Central Valley steelhead and Central Valley spring-run Chinook salmon.

Other Protected Wildlife Species

In addition to the wildlife species listed above, the BSA was also evaluated for its potential to support migratory birds and raptors which are not special-status species. Trees and shrubs within and adjacent to the BSA could provide nesting habitat for migratory birds and raptors.

Additionally, Chinook salmon Essential Fish Habitat (EFH) and groundfish EFH are mapped and listed by NMFS within the BSA. These EFHs are managed under the Magnuson-Stevens Fishery Conservation and Management Act.

3.2.3 Regulatory Setting

Federal Plans, Policies, Regulations and Laws

Endangered Species Act

Under the Federal Endangered Species Act (FESA), the Secretary of the Interior and the Secretary of Commerce jointly have the authority to list a species as threatened or endangered (16 United States Code [USC] Section 1533[c]). Pursuant to the requirements of the FESA, an agency reviewing a proposed project within its jurisdiction must determine whether any federally listed threatened or endangered species may be present in the project area and determine whether the project would result in

"take" of any such species. In addition, the agency is required to determine whether the project is likely to jeopardize the continued existence of any species proposed to be listed under the FESA or result in the destruction or adverse modification of critical habitat proposed to be designated for such species (16 United States Code [USC] Section 1536[3], [4]). Section 7 of the FESA provides a means for authorizing incidental take of federally endangered or threatened species that result from federally conducted, permitted, or funded projects. Similarly, Section 10 authorizes incidental take of federally endangered or threatened species that result from non-federal projects.

Migratory Bird Treaty Act

The federal Migratory Bird Treaty Act (MBTA) (16 USC, Sec. 703, Supp. I, 1989) prohibits killing, possessing, or trading migratory birds except in accordance with regulations prescribed by the Secretary of the Interior. This act encompasses whole birds, parts of birds, bird nests, and eggs. The MBTA is administered by the USFWS and special permits from the agency are generally required for the take of any migratory birds. This act applies to all persons and agencies in the U.S., including federal agencies.

Clean Water Act: Section 401

The United States Environmental Protection Agency (USEPA) regulates surface water quality in Waters of the United States (WOTUS) under Section 401 of the State Clean Water Act (CWA). CWA Section 401 Water Quality Certification (WQC) provides states and authorized tribes with an effective tool to help protect the physical, chemical, and biological integrity of water quality, by providing them an opportunity to address the aquatic resource impacts of federally issued permits and licenses. CWA 401 compliance is required for any project that produces a federal action with construction that could have an impact to surface water quality (USEPA 2017).

Clean Water Act: Section 404

CWA Section 404 regulates the discharge of dredged and fill materials into waters of the United States. Waters of the United States refers to oceans, bays, rivers, streams, lakes, ponds, and wetlands, including any or all of the following: areas within ordinary high water mark of a stream, including non-perennial streams with a defined bed and bank and any stream channel that conveys natural runoff, even if it has been realigned; and seasonal and perennial wetlands, including coastal wetlands. If a project discharges any fill materials into WOTUS, including wetlands, before and after the project actions, then a CWA 404 compliance must be met with the USACE.

The USACE has primary federal responsibility for administering regulations that concern waters of the U.S., including wetlands and drainages. The USACE acts under two statutory authorities: the Rivers and Harbors Act (Sections 9 and 10), which governs specified activities in "navigable waters of the U.S.," and the CWA Section 404, which governs specified activities in waters of the U.S. The USACE requires that a permit be obtained if a project proposes placing structures within, over, or under navigable waters and/or discharging dredged or fill material into waters of the U.S., including wetlands. Additionally, Rivers and Harbors Act (Section 14 [33 U.S.C. 408]) allows for the temporary occupation or use of levees built by USACE. The USEPA, USFWS, NMFS, and several other agencies provide comment on USACE permit applications.

Invasive Species Regulation – Executive Order 13112

Executive Order 13112 directs all federal agencies to prevent and control introductions of invasive species in a cost-effective and environmentally sound manner. Executive Order 13112 established a national Invasive Species Council made up of federal agencies and departments and a supporting

Invasive Species Advisory Committee composed of state, local, and private entities. The Invasive Species Council and Advisory Committee oversee and facilitate implementation of the Executive Order, including preparation of a National Invasive Species Management Plan. The Management Plan recommends objectives and measures to implement the Executive Order and to prevent the introduction and spread of invasive species. The Executive Order and directives from the FHWA require consideration of invasive species in NEPA analyses, including the identification and distribution of species, their potential impacts, and measures to prevent or eradicate them.

Floodplain Policies – Executive Order 11988

Executive Order 11988 is a flood hazard policy for all federal agencies that manage federal lands, sponsor federal projects, or provide federal funds to state or local projects. It requires that all federal agencies take necessary action to reduce the risk of flood loss; restore and preserve the natural and beneficial values served by floodplains; and minimize the impact of floods on human safety, health, and welfare. Specifically, Executive Order 11988 dictates that all federal agencies avoid construction or management practice that would adversely affect floodplains unless that agency finds that there is no practical alternative and the proposed action has been designed or modified to minimize harm to or within the floodplain.

State Plans, Policies, Regulations and Laws

California Endangered Species Act

Under the CESA, the CDFW has the responsibility for maintaining a list of threatened and endangered species designated under state law (California Fish and Game Code [CFGC] Section 2070). Pursuant to the requirements of CESA, an agency reviewing a proposed project within its jurisdiction must determine whether any state-listed endangered or threatened species may be present in the project area and determine whether the proposed project would result in take of any such species. Under CESA, "take" is defined as the action of or attempt to "pursue, hunt, shoot, capture, collect, or kill." The CDFW may authorize the incidental take of a state-listed species under Section 2081 of the CFGC. For species that are listed as threatened or endangered under both the FESA and CESA, and for which an incidental take permit has been issued in accordance with Section 7 or Section 10 of the FESA, CDFW may authorize take after certifying that the federal incidental take permit is consistent with CESA, pursuant to Section 2080.1 of the CFGC.

California Fish and Game Code

The CFGC provides protection for migratory birds and raptors. Raptors and raptor nests or eggs are protected from take under CFGC Section 3503.5. Migratory birds are expressly prohibited from take under CFGC Section 3513 and species designated by CDFW as fully protected species are protected from take under CFGC Sections 3511 4700, 5050, and 5515.

California Environmental Quality Act Guidelines: Section 15380

Pursuant to CEQA Guidelines Section 15380, CEQA provides protection for Federal and/or State listed species, as well as species not listed Federally or by the State that may be considered rare, threatened, or endangered. Accordingly, "A species not included in any listing identified in subdivision (c) [FESA and CESA listed species] shall nevertheless be considered to be endangered, rare or threatened, if the species can be shown to meet the criteria in subdivision (b)" (CEQA Guidelines section 15380(d)). Subdivision (b) states, "A species of animal or plant is:

1. ‘Endangered’ when its survival and reproduction in the wild are in immediate jeopardy from one or more causes, including loss of habitat, change in habitat, overexploitation, predation, competition, disease, or other factors; or

2. ‘Rare’ when either:

    a) Although not presently threatened with extinction, the species is existing in such small numbers throughout all or a significant portion of its range that it may become endangered if its environment worsens; or

    b) The species is likely to become endangered within the foreseeable future throughout all or a significant portion of its range and may be considered ‘threatened’ as that term is used in the Federal Endangered Species Act” (CEQA Guidelines 15380(b)).

    c) Indicates that species of special concern should be included in an analysis of Project impacts if they can be shown to meet the criteria of sensitivity outlined therein.

The CDFW designates Species of Special Concern (SSC) as wildlife and plant species of limited distribution, declining populations, diminishing habitat, or unusual scientific, recreational, and/or educational values qualifying SSC as “special status species” meeting the criteria under subdivision (b) of section 15380 of the CEQA Guidelines. Plants appearing on the CNPS’s California Rare Plant Rank (CRPR) as well as species considered rare or protected under other applicable list are also considered to meet CEQA’s Section 15380 criteria.

For the purposes of this Draft EIR, the following parameters define “special-status species”:

- Plant and Wildlife species listed, or proposed for listing, as threatened, or endangered under the FESA (50 CFR 17.12 for listed plants, 50 CFR 17.11 for listed animals, and various notices in the Federal Register for proposed species);

- Plant and wildlife species that are listed or proposed for listing by the State as threatened or endangered under the CESA (14 CCR 670.5);

- Plant and wildlife species that meet the definitions of “rare” or “endangered” under CEQA Guidelines, Section 15380;

- Plant and wildlife species that are designated as “special animals” or “those of greatest conservation need”, by CDFW through the CNDDB;

- Wildlife Species of Special Concern to CDFW;

- Wildlife listed as “Fully Protected” in California under the CDFG Code;

- Plants listed as rare under the State Native Plant Protection Act (NPPA) of 1977 (CDFG Code 1900 et seq.);

- Plants considered by the CNPS to be Rank 1A- “plants presumed extirpated in California and either rare or extinct elsewhere”, or Rank 1B- “rare, threatened, or endangered in California and elsewhere”;

- Plants considered by CNPS to be a Rank 2A- Plants presumed extirpated in California, but common elsewhere", or Rank 2B- "rare, threatened, or endangered in California and common elsewhere";
- Plants considered by CNPS to be a Rank 3- "plants about which more information is needed" and cannot be yet be excluded from review"; and
- Plants considered by CNPS to be a Rank 4- "plants with limited distribution".

The CEQA provision enables an agency to protect a species from potential significant Project impacts until the respective government agencies have had an opportunity to list the species as protected, if warranted (CDFW 2017b). To asses "impact significance" to populations of non-listed species as well as listed species CDFW recommends population-level effects, proportion of the taxon's range affected by a Project, regional effects, and impacts to habitat features are all considered (CDFW 2017b).

Native Plant Protection Act: California Department of Fish and Game Code Section 1900 et seq.

The NPPA was enacted in 1977 and is administered by CDFW (CDFG Code, Section 1900 et seq.). The NPPA prohibits "take" of endangered, threatened, or rare plant species native to the State, with the exception of special criteria identified in the NPPA CDFG Code. A "native plant" means a plant growing in a wild uncultivated state which is normally found native to the plant life of the state. "Rare" species can be defined as species that are: broadly distributed but never abundant where found, narrowly distributed, or clumped yet abundant where found, and/or narrowly distributed or clumped and not abundant where found. If potential impacts are identified for a proposed Project activity, then consultation with CDFW, permitting, and/or other mitigation may be required (CNPS 2017a).

Nesting Migratory Birds and Raptors: California Department of Fish and Game Code Sections 3503, 3503.5, and 3800

Nesting migratory birds and raptors are protected under CDFG Code, Sections 3503, 3503.5, and 3800; which prohibit the "take", possession, or destruction of birds, their nests, or eggs. Implementation of "take" provisions require that any potential Project-related disturbance, within active nesting territories, be reduced or eliminated during critical phases of the nesting cycle (i.e., approximately February 15 through August 31). Disturbance that causes nest abandonment and/or loss of reproductive effort (e.g., killing or abandonment of eggs or young), or the loss of habitat upon which birds are dependent, is considered "taking", and is potentially punishable by fines and/or imprisonment (CLI 2017). Such taking would also violate federal law protecting migratory birds under the MBTA.

Porter-Cologne Water Quality Control Act: California Department of Fish and Game Code Section 1601-1602

The Porter-Cologne Water Quality Act, CDFG Code sections 1601-1607, is administered by the California State Water Resources Control Board (SWRCB). This act and associated codes pertain to Projects with potential impacts to water quality or waterways (SWRCB 2017).

Regional and Local Plans, Policies, Regulations, and Ordinances

City of Sacramento 2035 General Plan

The following goals and policies from the Environmental Resources (ER) and Land Use and Urban Design Element (LU) Elements are relevant to the proposed project (City of Sacramento 2015).

GOAL ER 1.1: Water Quality Protection: Protect local watersheds, water bodies and groundwater resources, including creeks, reservoirs, the Sacramento and American Rivers, and their shorelines.

- **Policy ER 1.1.1 Conservation of Open Space Areas.** The City shall conserve and where feasible create or restore areas that provide important water quality benefits such as riparian corridors, buffer zones, wetlands, undeveloped open space areas, levees, and drainage canals for the purpose of protecting water resources in the City's watershed, creeks, and the Sacramento and American Rivers.

- **Policy ER 1.1.3 Stormwater Quality.** The City shall control sources of pollutants and improve and maintain urban runoff water quality through storm water protection measures consistent with the City's National Pollution Discharge Elimination System (NPDES) Permit.

- **Policy ER 1.1.4 New Development.** The City shall require new development to protect the quality of water bodies and natural drainage systems through site design (e.g., cluster development), source controls, storm water treatment, runoff reduction measures, best management practices (BMPs) and Low Impact Development (LID), and hydromodification strategies consistent with the city's NPDES Permit.

- **Policy ER 1.1.5 Limit Stormwater Peak Flows.** The City shall require all new development to contribute no net increase in stormwater runoff peak flows over existing conditions associated with a 100-year storm event.

- **Policy ER 1.1.6 Post-Development Runoff.** The City shall impose requirements to control the volume, frequency, duration, and peak flow rates and velocities of runoff from development projects to prevent or reduce downstream erosion and protect stream habitat.

- **Policy ER 1.1.7 Construction Site Impacts.** The City shall minimize disturbances of natural water bodies and natural drainage systems caused by development, implement measures to protect areas from erosion and sediment loss, and continue to require construction contractors to comply with the City's erosion and sediment control ordinance and stormwater management and discharge control ordinance.

- **Policy ER 1.1.8 Clean Watershed.** The City shall continue ongoing Sacramento and American River source water protection efforts (e.g., Keep Our Waters Clean), based on watershed sanitary survey recommendations.

GOAL ER 2.1: Natural and Open Space Protection. Protect and enhance open space, natural areas, and significant wildlife and vegetation in the city as integral parts of a sustainable environment within a larger regional ecosystem.

- **Policy ER 2.1.1 Resource Preservation.** The City shall encourage new development to preserve on-site natural elements that contribute to the community's native plant and wildlife species value and to its aesthetic character.

- **Policy ER 2.1.2 Conservation of Open Space.** The City shall continue to preserve, protect, and provide appropriate access to designated open space areas along the American and Sacramento Rivers, floodways, and undevelopable floodplains, provided access would not disturb sensitive habitats or species.

- **Policy ER 2.1.3 Natural Lands Management.** The City shall promote the preservation and restoration of contiguous areas of natural habitat throughout the city and support their integration with existing and future regional preserves.

- **Policy ER 2.1.4 Retain Habitat Areas.** The City shall retain plant and wildlife habitat areas where there are known sensitive resources (e.g., sensitive habitats, special-status, threatened, endangered, candidate species, and species of concern). Particular attention shall be focused on retaining habitat areas that are contiguous with other existing natural areas and/or wildlife movement corridors.

- **Policy ER 2.1.5 Riparian Habitat Integrity.** The City shall preserve the ecological integrity of creek corridors, canals, and drainage ditches that support riparian resources by preserving native plants and, to the extent feasible, removing invasive nonnative plants. If not feasible, adverse impacts on riparian habitat shall be mitigated by the preservation and/or restoration of this habitat in compliance with State and Federal regulations or at a minimum 1:1 ratio, in perpetuity.

- **Policy ER 2.1.6 Wetland Protection.** The City shall preserve and protect wetland resources including creeks, rivers, ponds, marshes, vernal pools, and other seasonal wetlands, to the extent feasible. If not feasible, the mitigation of all adverse impacts on wetland resources shall be required in compliance with State and Federal regulations protecting wetland resources, and if applicable, threatened or endangered species. Additionally, the City shall require either on- or off-site permanent preservation of an equivalent amount of wetland habitat to ensure no net loss of value and/or function.

- **Policy ER 2.1.7 Annual Grasslands.** The City shall preserve and protect native grasslands and vernal pools that provide habitat for rare and endangered species. If not feasible, the mitigation of all adverse impacts on annual grasslands shall comply with State and Federal regulations protecting foraging habitat for those species known to utilize this habitat.

- **Policy ER 2.1.8 Oak Woodlands.** The City shall preserve and protect oak woodlands, heritage oaks, and/or significant stands of oak trees in the city that provide habitat for common native, and special-status wildlife species, and shall address all adverse impacts on oak woodlands in accordance with the City's Heritage Tree Ordinance.

- **Policy ER 2.1.9 Wildlife Corridors.** The City shall preserve, protect, and avoid impacts to natural, undisturbed habitats that provides movement corridors for sensitive wildlife species. If corridors are adversely affected, damaged habitat shall, be replaced with habitat of equivalent value or enhanced to enable the continued movement of species.

- **Policy ER 2.1.10 Habitat Assessments.** The City shall consider the potential impact on sensitive plants and wildlife for each project requiring discretionary approval. If site conditions are such that potential habitat for sensitive plant and/or wildlife species may be present, the City shall require habitat assessments, prepared by a qualified biologist, for sensitive plant and wildlife species. If the habitat assessment determines that suitable habitat for sensitive plant and/or wildlife species is present, then either (1) protocol-level surveys shall be conducted (where survey protocol has been established by a resource agency), or, in the absence of established survey protocol, a focused survey shall be conducted consistent with industry-recognized best practices; or (2) suitable habitat and presence of the species shall be assumed to occur within all potential habitat locations identified on the project site. Survey Reports shall be prepared and submitted to the City and CDFW or the

USFWS (depending on the species) for further consultation and development of avoidance and/ or mitigation measures consistent with state and federal law.

- **Policy ER 2.1.11 Agency Coordination.** The City shall coordinate with State and Federal resource agencies (e.g., CDFW, USACE, and USFWS to protect areas containing rare or endangered species of plants and animals).

GOAL ER 3.1: Urban Forest. Manage the City's urban forest as an environmental, economic and aesthetic resource to improve Sacramento residents' quality of life.

- **Policy ER 3.1.2 Manage and Enhance the City's Tree Canopy.** The City shall continue to plant new trees, ensure new developments have sufficient right-of-way width for tree plantings, manage and care for all publicly owned trees, and work to retain healthy trees. The City shall monitor, evaluate and report, by community plan area and city wide, on the entire tree canopy in order to maintain and enhance trees throughout the City and to identify opportunities for new plantings.

- **Policy ER 3.1.3 Trees of Significance.** The City shall require the retention of City trees and Heritage Trees by promoting stewardship of such trees and ensuring that the design of development projects provides for the retention of these trees wherever possible. Where tree removal cannot be avoided, the City shall require tree replacement or appropriate remediation.

County of Sacramento Tree Preservation Ordinance

The County of Sacramento Tree Preservation Ordinance protects trees and the driplines of trees. Trees are defined as any living native oak tree having at least one trunk of 6 inches or more DBH, or a multi-trunked native oak tree having an aggregate diameter of 10 inches or more DBH (County Code 19.2.040). County Code 19.12.060 states:

No person shall trench, grade or fill within the dripline of any tree or destroy, kill or remove any tree as defined, in the designated urban area of the unincorporated area of Sacramento County, on any property, public or private, without a tree permit, or unless authorized as a condition of a discretionary project approval by the Board of Supervisors, County Planning Commission, Zoning Board of Appeals, the Zoning Administrator or the Subdivision Review Committee. (SCC 1400 § 23, 2008; SCC 480 § 1, 1981.) The jurisdiction that subject to the code is as follows:

19.12.070 Jurisdiction.

a) Private Land Not in Conjunction with Other Discretionary Development. The preservation or removal of trees within privately owned land and not in conjunction with a previously approved discretionary development project shall be the responsibility of the Director of Public Works.

b) Discretionary Project. The preservation or removal of trees as a condition of approval of a discretionary project shall be the sole and continuing responsibility of the approving body which granted approval of the project.

c) Parks. The preservation or removal of trees within parks, parkways, and public recreation easements, shall be the responsibility of the Director of Parks and Recreation.

d) Other Public Land. Preservation or removal of trees within other County owned lands or public easements shall be the responsibility of the Director of Public Works. (SCC 480 § 1, 1981.)

Discretionary projects shall include but are not limited to: a special development permit, a parcel map, a parking reduction permit, a rezone, a site plan approval permit, a subdivision map, a variance, or a conditional use permit.

Specific control measures within the code describing measures that could be used if a tree permit is required and granted are included below:

19.12.130 Development Control Measures.

The approving body may mandate any or all of the following control measures to mitigate damage to oak trees caused by land development:

a) No grade cuts greater than one foot shall occur within the driplines of oak trees, and no grade cuts whatsoever shall occur within 5 feet of their trunks;

b) No fill greater than one foot shall be placed within the driplines of oak trees and no fill whatsoever shall be placed within 5 feet of their trunks;

c) No trenching whatsoever shall be allowed within the driplines of oak trees. If it is absolutely necessary to install underground utilities within the driplines of an oak tree, the trench shall be either bored or drilled;

d) No irrigation system shall be installed within the driplines of oak tree(s) which may be detrimental to the preservation of the oak tree(s) unless specifically authorized by the approving body or the Director of Public Works.

e) Landscaping beneath oak trees may include non-plant materials such as boulders, cobbles, wood chips, etc. The only plant species which shall be planted within the driplines of oak trees are those which are tolerant of the natural semi-arid environs of the trees. Limited drip irrigation approximately twice per summer is recommended for the understory plants. Permitted plants include:

    1. Iris douglasiana hydrids (native iris)
    2. Heuchera species (coral bells)
    3. Aloe species
    4. Dudleya species
    5. Sisyrinchium bellum (blue-eyed grass)
    6. Hemerocallis hybrids (day lily)
    7. Cyclamen neopolitanum
    8. Mimulus aurantiacus and hybrids (monkey flowers)
    9. Artemisia species
    10. Achillea tomentosa (woolly yarrow)
    11. Symphoricarpos mollis (prostrate snowberry)
    12. Mahonia repens (creeping Mahonia)

13. Mahonia nervosa (long leaf Mahonia)
14. Mahonia aquifolium compacta (compact Oregon grape)
15. Arctostaphylos edmundsii "Carmel Sur" (Sur manzanita)
16. Arctostaphylos hookeri "Monterey Carpet"
17. Sollya heterophylla (Australian bluebell creeper)
18. Ribes viburnifolium (Catalina currant)
19. Daphne odorata (winter daphne)
20. Arctostaphylos hookeri "Wayside"
21. Arctostaphylos densiflora "Howard McMinn"
22. Symphoricarpos rivularis (snowberry)
23. Rhamnus californica "Eve Case" (California coffeeberry)
24. Heteromeles arbutifolia (toyon)
25. Choisya ternata (Mexican orange or mock orange)

f) Paving within the driplines of oak trees should be stringently minimized. When it is absolutely necessary, porous material should be used. (SCC 480 § 1, 1981.)

American River Parkway Plan

The American River Parkway Plan (Sacramento County 2008) was developed by the County of Sacramento to guide the County's administration and management of the American River Parkway. Policies set forth in the ARPP include protecting and preserving the biological resources of the Parkway, with the following policies considered relevant to the analysis of biological resource impacts of the project:

Section 3.0 Terrestrial Resource Policies.

Terrestrial Resource Policies:

3.1 Any development of facilities within the Parkway, including but not limited to buildings, roads, turfed areas, trails, bridges, tunnels, pipelines, overhead electrical lines, levees and parking areas, shall be designed and located such that any impact upon native vegetation is minimized and appropriate mitigation measures are incorporated into the project.

3.1.1 Parkway facilities are those necessary for the operations, management, and permitted uses within the Parkway.

3.1.2 Development of non-Parkway facilities must have a compelling regional need, meet all applicable statutory requirements and provide mitigation and enhancements to the Parkway's natural, recreational, or interpretive resources.

3.2 Agencies managing the Parkway shall protect, enhance and expand the Parkway's native willow, cottonwood, and valley oak-dominated riparian and upland woodlands that provide important

shaded riverine aquatic habitat, seasonal floodplain, and riparian habitats; and the native live oak and blue oak woodlands and grasslands that provide important terrestrial and upland habitats.

3.2.1 Vegetation plantings shall be consistent with the approved list of trees, shrubs, and herbaceous plants native to the Parkway. This list shall be approved by the Recreation and Parks Commission, upon recommendation by the Director of the Department of Regional Parks, working in cooperation with resource and flood control managers, and organizations with native vegetation expertise. This list shall include species appropriate to the plant communities and habitats within the Parkway. Only plants on this approved list shall be planted within the Parkway, the exception being grass in permitted locations.

3.2.2 Native vegetation shall be reintroduced in areas of the Parkway where the substrate will support it, especially in areas that have been disturbed by construction, past gravel mining and agricultural activity, except in sites of human historical value.

3.2.3 Non-native trees and shrubs can be beneficial for native wildlife or be benign to the ecosystem. Non-native trees and shrubs may be removed over time if they:

a) constitute a hazard to the users of the Parkway,

b) the removal is a part of the on-going normal maintenance practices of the Parkway by its managers, or

c) the vegetation was approved to be removed as a part of a discretionary project in accordance with the policies of this Plan.

3.2.4 Agencies managing the Parkway shall remove invasive non-native vegetation species that conflict with habitat management goals, recreation uses, flood control or water supply conveyance.

3.2.5 New turf planting and associated irrigation within the dripline of existing mature native oaks shall be prohibited. Turf areas can be placed where there are immature native trees, provided the trees are not damaged by turf maintenance activities, such as summer watering, mowing, and string trimming.

3.3 The Parkway shall be managed to create habitat connectivity and wildlife travel corridors that provide for the habitat needs of the endangered valley elderberry longhorn beetle and other important native wildlife species, without compromising the integrity of flood control facilities, the flood conveyance capacity of the Parkway, or other Parkway management goals.

3.4 Management of the Parkway shall ensure the protection of the Parkway's resources, its environmental quality and natural values. A resource impact monitoring plan shall be developed that clearly defines criteria and standards to monitor, evaluate and protect the Parkway's resources from overuse, and provides steps to be taken to restore areas that have been overused.

3.5 Agencies managing the Parkway should develop and implement an Integrated Vegetation and Wildlife Management Plan to accommodate native wildlife species and minimize adverse effects of non-native species.

3.6 Excavation of aggregate/soil material should not be permitted except as a part of a flood control, environmental restoration or recreation improvement project approved in accordance with the provisions of this Plan. Objectives of the project will:

a) result in a net improvement to the health of the Parkway ecosystems,

b) not cause "harm" to the Parkway,

c) utilize material within the Parkway, where feasible, prior to being transferred out of the Parkway, and d prohibit commercial mining.

Aquatic Communities Policies:

3.7 The Parkway shall be managed to preserve, protect and/or restore riparian and in-channel habitat necessary for spawning and rearing of fish species, including native Chinook salmon (fall-run), steelhead, and Sacramento splittail, and recreational non-native striped bass and American shad. Priority shall be on providing diversity and complexity of habitat, consistent with recreational safety needs.

3.8 It is the intent of this Plan that available water provide adequate seasonal river flows and water temperatures to achieve and maintain viable populations and life stages of federal or state listed species, such as the Central Valley steelhead trout. In addition, species of primary concern include: naturally spawning Chinook salmon (fall-run) and Sacramento splittail; non-native American shad and striped bass; and their macroinvertebrate food sources in the lower American River.

3.9 Responsible local and state agencies shall, and federal agencies should, discourage introductions of invasive non-native aquatic plants and animals.

3.11 Agencies managing the Parkway shall identify, enhance and protect:

a) areas where maintaining riparian vegetation will benefit the aquatic and terrestrial resources;

b) current shaded riverine aquatic habitat; and

c) other areas that can support a shaded riverine aquatic habitat, as time and resources permit, especially as associated with flood control or federally/state mandated species protection projects.

Section 4.0 Water Flows, Water Quality and Flood Control Policies.

Water Quality Policies:

4.4 Water quality in the lower American River shall be maintained to provide for beneficial uses of the river, including: municipal and domestic water supply; industrial service water supply; irrigation; water contact and non-contact recreation; freshwater habitat; migration of aquatic organisms; spawning, reproduction, and/or early development of fish; and wildlife habitat.

4.5 Local, regional, state and federal agencies with jurisdiction over water quality of the American River should work together to maintain and protect a high level of water quality, manage and monitor discharges, and enforce existing water quality regulations.

4.6 Due to the unique urban setting of the lower American River, urban run-off containing a variety of contaminants has the potential to further degrade the river and Parkway resources. Therefore, agencies responsible for protecting water quality should take steps to minimize such contaminants.

Flood Control Policies:

4.10 Flood control projects, including levee protection projects and vegetation removal for flood control purposes, shall be designed to avoid or minimize adverse impacts on the Parkway, including impacts to wildlife and wildlife corridors. To the extent that adverse impacts are unavoidable, appropriate feasible compensatory mitigation shall be part of the project. Such mitigation should be close to the site of the adverse impact, unless such mitigation creates other undesirable impacts.

4.16 Bank scour and erosion shall be proactively managed to protect public levees and infrastructure, such as bridges, piers, power lines, habitat and recreational resources. These erosion control projects, which may include efforts to anchor berms and banks with rock revetment, shall be designed to minimize damage to riparian vegetation and wildlife habitat, and should include a revegetation program that screens the project from public view, provides for a naturalistic appearance to the site, and restores affected habitat values.

4.18 It is recognized that flood control agencies have the authority to take action(s) to prevent or respond to flood emergencies occurring in or adjacent to the Parkway. In the event that these action(s) have an adverse impact on biological resources in excess of the estimated impacts of the projected flood damage to such resources, the agency(ies) undertaking the emergency work will implement feasible compensatory mitigation measures pursuant to Policies 3.1 and 3.2. Nothing in this Policy shall be construed to interfere with the existing authority of flood control agencies to prevent or respond to an emergency situation occurring in or adjacent to the Parkway.

3.2.4 Environmental Impacts and Mitigation Measures

Thresholds of Significance

The significance criteria used to evaluate the project impacts to biological resources are based on Appendix G of the CEQA Guidelines, thresholds of significance adopted by the City in applicable general plans and previous environmental documents, and professional judgment. A significant impact related to biological resource issues would occur if the project would:

a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?

b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or US Fish and Wildlife Service?

c) Have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?

d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?

e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?

f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?

Analysis Methodology

Methods involved with documenting botanical, wildlife, and aquatic resources are described below.

Botanical Resources

During the field surveys, biologists conducted botanical surveys, assessed habitat for special-status plants, and identified noxious weeds. Except where constrained by limitations of private property and right to access, all areas within the BSA were walked and all plants observed were identified to species level when applicable. Species not readily identifiable in the field were collected and later identified using *The Jepson Manual: Vascular Plants of California, 2nd Edition* (Baldwin 2012). Vegetation communities in the BSA were also identified and mapped during the botanical survey.

Wildlife Resources

During the field surveys, wildlife biologists conducted general wildlife surveys within the BSA. The surveys focused on identifying and evaluating biological communities in and adjacent to the BSA and determining their suitability for common and special-status wildlife species. Visual surveys of undeveloped habitats adjacent to the BSA (where access was not obtained) were also conducted using binoculars to identify sensitive resources (i.e., raptor nests) that could be indirectly affected by the proposed project.

Valley Elderberry Longhorn Beetle Habitat Assessment

On May 6 and 10, 2014 and July 21, 2014, biologists conducted surveys to identify habitat for valley elderberry longhorn beetle (elderberry shrubs). Valley elderberry longhorn beetle is closely associated with the blue elderberry plant (Sambucus ssp.), an obligate host for beetle larvae (USFWS 2017). The 2014 surveys were conducted per the USFWS's Conservation Guidelines for the Valley Elderberry Longhorn Beetle (USFWS 1999). Survey results are only valid for a period of two years.

Since the 2014 surveys, changes to the trail alignment were made and USFWS developed updated guidelines for evaluating potential effects of projects on valley elderberry longhorn beetle, in the Framework for Assessing Impacts to the Valley Elderberry Longhorn Beetle (USFWS 2017). On April

3, 4, 5, 11, and 12, 2017 and February 28 and 29, 2018, biologists conducted focus surveys to identify habitat for Valley elderberry longhorn beetle (elderberry shrubs) for the new trail alignment.

Surveys were conducted at the time of year when elderberry shrubs were easily identifiable (shrubs had abundant live foliage). The 2014 elderberry shrub surveys were conducted according to the USFWS 1999 Guidance and the 2018 surveys were conducted in accordance with the 2017 Framework, which took place throughout the BSA where property access was granted (which excluded private property adjacent to the Project area). To look for elderberry shrubs, biologists walked the BSA in meandering transects. When an elderberry shrub was located, its position was collected using a sub-meter accurate Trimble GeoXT global positioning system (GPS) unit. Each individual elderberry shrub was given a unique identification number. Because elderberry shrubs spread through underground rhizomes, elderberry plants occurring within five feet of each other were considered a single shrub and were given a single identifying number.

Stem diameters were measured at ground level using a pocket tree caliper. All elderberry stems measuring 1-inch (or greater) diameter at ground level were recorded. Stems measuring less than 1-inch in diameter at ground level are unlikely to be habitat for Valley elderberry longhorn beetle (USFWS 1999) and were not recorded during this survey. Stems were thoroughly searched for beetle exit holes. The number of exit holes was recorded for each shrub. For elderberry shrubs that were partially inaccessible due to dense vegetation cover that prevented exit hole examination, only stem counts were recorded. When shrubs were completely inaccessible due to dense vegetation that completely obscured the bases of the shrubs, stem counts were estimated based on shrub size and height, but holes were not recorded.

Data on the number and size of live stems (dead stems were not counted), presence or absence of Valley elderberry longhorn beetle exit holes (evidence of beetle presence), and habitat associations for each shrub in the BSA was collected and recorded on standardized data forms.

Trees

Construction of the proposed project would likely result in trimming and/or the removal of trees along the trail. Concurrent with other surveys, trees with a DBH of 6 inches or greater located within the Project footprint were identified and mapped. Tree location information was recorded with a GPS and trees were identified to species. Trees were not tagged during surveys.

Aquatic Resources

On June 22, 2017, biologists conducted field mapping of potential waters of the U.S. and state, including wetlands, within the proposed Project footprint. Wetlands were delineated using the U.S. Army Corps of Engineers Wetland Delineation Manual (Environmental Laboratory 1987) and the Regional Supplement to the Corps of Engineers Wetland Delineation Manual: Arid West Region (Version 2.0) (Corps 2008a). The ordinary high water mark (OHWM) of potential other waters of the U.S. was delineated using A Field Guide to the Identification of the Ordinary High Water Mark in the Arid West Region of the Western United States (Corps 2008b) and using the guidance identified in the Corps Regulatory Guidance Letter No. 05-05 Subject: Ordinary High Water Mark Identification (Corps 2005). Features that did not meet the hydrophytic vegetation wetland criteria were reviewed to determine if they met the definition of other waters of the U.S. (i.e., had evidence of an OHWM).

Where accessible, the OHWM of the American River was recorded using a GPS unit with sub-meter accuracy. Data was collected in latitude/longitude in the WGS84 datum. The OHWM was evidenced by

a natural line impressed on the bank, shelving, a change in vegetation community and the changes in the character of the soil. Approximately 40 GPS points were collected along the OHWM. OHWM data was used to create maps showing habitat types present in the BSA, specifically the Riverine (American River) habitat type, and are shown on maps provided in **Appendix C**.

Impact Analysis

Impact BIO-1: ***Potential to have a substantial adverse effect, either directly or through habitat modifications, on any species in local or regional plans, policies, or regulations, or regulated by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service***

Construction-related activity from the proposed project may affect either directly or through habitat modifications species in local or regional plans, policies, or regulations, or regulated by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service. (Less than Significant With Mitigation)

Special-status Plants

No special-status plant species were observed during the botanical surveys, which were conducted during the appropriate bloom period. Therefore, the proposed project would have **no impact** on special-status plant species.

Special-status Fish

The proposed project would require no in-water work and would not result in direct impacts to riverine habitat (American River). Construction activities would result in impacts to riparian habitat, however no riparian trees or shrubs located at or near the banks of the river would be removed. Therefore, the project would not result in the loss of shaded riverine aquatic habitat. There would be no direct impact related to special-status fish or fish habitat, including green sturgeon, Central Valley steelhead, Sacramento splittail, or Central Valley spring-run or fall/late-fall-run Chinook salmon. There would be no direct habitat effects, including to EFH for Chinook salmon or critical habitat for Central Valley steelhead and Chinook salmon. Indirect construction effects to habitat, EFH, and critical habitat for these species, including the potential for sediment or contaminants to affect the American River, would be potentially significant. Implementation of wildlife avoidance and best management practices for water quality and erosion prevention provided under **Mitigation Measures BIO-1**, **BIO-2**, and **BIO-3** would ensure that indirect construction impacts to the aquatic environment in the American River through siltation or contamination would be **less than significant** by requiring training, fencing, BMPs to avoid sediment transport, and restoring disturbed areas to pre-project conditions. Therefore, this impact would be **less than significant** with the incorporation of **Mitigation Measures BIO-1** through **BIO-3**.

Special-status Wildlife

Valley Elderberry Longhorn Beetle

Elderberry shrubs are present and abundant within the BSA. There are various CNDDB records within a 5-mile radius of the BSA and several elderberry shrubs within the BSA have exit holes on the stems which indicate that VELB is present within the BSA. The USFWS 2017 Framework states that if elderberry shrubs occur on or within 165 feet of the project area, adverse effects to VELB may occur as a result of project implementation. Therefore, surveys for VELB habitat (elderberry shrubs) were

conducted within 165 feet of the project footprint. A total of 494 elderberry shrubs were identified within 165 feet of the project footprint.

Table 3.2-2 summarizes elderberry shrub impacts. The placement of the proposed project under Segments 1-2 Alternative 1 would result in the permanent removal of 22 elderberry shrubs (105 stems, 32 of which had exit holes). Segments 1-2 Alternative 2 would result in the permanent removal of 14 elderberry shrubs (88 stems, 16 of which had exit holes). Segments 3-6 would result in the permanent removal of 13 elderberry shrubs (45 stems, 3 of which had exit holes). Annual operations and maintenance along the trail would not result in the permanent loss (removal) of elderberry shrubs.

Table 3.2-2. Summary of Elderberry Shrub Impacts

Item		Number of Shrubs	Number of Stem(s) (by Diameter) (inches)			Total number of Stems	Number of Exit Holes in Stem(s) (by Diameter) (inches)			Total number of Stems with Exit Holes
			1" - 3"	3" - 5"	>5"		1" - 3"	3" - 5"	>5"	
Segments 1-2 Alternative 1	Shrubs with stems 1 inch or greater to be **trimmed**	**2**	5	1	5	**11**	5	0	1	**6**
	Shrubs with stems 1 inch or greater to be **removed**	**22**	43	33	29	**105**	2	11	19	**32**
Segments 1-2 Alternative 2	Shrubs with stems 1 inch or greater to be **trimmed**	**1**	5	1	4	**10**	5	0	0	**5**
	Shrubs with stems 1 inch or greater to be **removed**	**14**	43	24	21	**88**	2	3	11	**16**
Segments 3-6	Shrubs with stems 1 inch or greater to be **trimmed**	**48**	200	41	24	**265**	9	9	14	**32**
	Shrubs with stems 1 inch or greater to be **removed**	**13**	25	11	9	**45**	1	2	0	**3**
Maintenance[1]	Shrubs with stems 1 inch or greater to be trimmed	**5**	5	-	-	-	-	-	-	-

Note:
[1] Actual maintenance impacts are unknown. Impacts from maintenance are assumed to be 5 shrubs and 5 1-3" stems.

The placement of the proposed project under Segments 1-2 Alternative 1 would require trimming of an additional 2 elderberry shrubs (11 stems, 6 of which had exit holes), resulting in temporary impacts. Segments 1-2 Alternative 2 would require trimming of an additional 1 elderberry shrub (10 stems, 5 of which had exit holes). Segments 3-6 would result in the trimming of 48 elderberry shrubs (200 stems, 32

of which had exit holes). During trail maintenance in future years, temporary impacts would occur from trimming of up to 5 elderberry shrubs.

Although VELB were not observed during the 2018 surveys, one female VELB was observed during a previous survey of the project area on May 6, 2014 and the presence of exit holes in many of the shrubs indicates that VELB occupy the riparian habitat in the BSA. No critical habitat for VELB is located within the BSA. However critical habitat is located approximately 0.45-mile northeast of the VELB habitat (elderberry shrubs). Permanent impacts to VELB habitat (elderberry shrubs) would occur from removal of elderberry shrubs during construction of the proposed trail. Temporary impacts would occur as a result of vegetation clearing, grubbing, or trimming required to provide construction crews and equipment access to the project, and as part of maintenance from clearing debris, removing hazard vegetation, and mowing. **Table 3.2-3** summarizes impacts to VELB habitat.

Segments 1-2 Alternative 1 would result in the permanent removal of approximately 0.95 acre of VELB, riparian, and mixed scrub habitat. Segments 1-2 Alternative 2 would result in the permanent removal of approximately 0.97 acre. Segments 3-6 would result in the permanent removal of approximately 0.42 acre. No permanent impacts would occur as a result of maintenance activities.

Maintenance activities would trim vegetation that grows to overhang the trail and results in a hazard to cyclists. Additionally, maintenance would include work within 165 feet of riparian habitat, mixed scrub habitat, and the elderberry shrubs within that habitat. Maintenance activities may temporarily affect up to 0.205 acre (approximately 5 elderberry shrubs). This acreage is included in the temporary impact acreage presented for construction in **Table 3.2-3** but would occur later in time. These maintenance areas correspond with (are the same as) the temporary loss area described above for construction.

Table 3.2-3. Direct Impacts to Valley Elderberry Longhorn Beetle Habitat

	Direct Impacts to Potential Habitat					
	Permanent (acres)			Temporary (acres)		
Habitat Type	Segments 1-2 Alt. #1	Segments 1-2 Alt. #2	Segments 3-6	Segments 1-2 Alt. #1	Segments 1-2 Alt. #2	Segments 3-6
Mixed Scrub	0.35	0.37	0.12	0.24	0.21	0.02
Valley Foothill Riparian	0.60	0.60	0.30	0.05	0.05	1.45
Total	***0.95***	***0.97***	***0.42***	***0.29***	***0.26***	***1.47***

The project would result in **potentially significant** temporary and permanent impacts to VELB and VELB habitat. Implementing the wildlife avoidance measures provided in **Mitigation Measures BIO-1**, **BIO-2**, and **BIO-4** through **BIO-12** would reduce impacts to a **less than significant** level by requiring training, monitoring, fencing, restoring disturbed areas to pre-project conditions, compensating for the loss of habitat, constructing outside sensitive seasons, and controls on dust, herbicides, and mowing near shrubs. Therefore, this impact would be **less than significant** with the incorporation of **Mitigation Measures BIO-1**, **BIO-2**, and **BIO-4** through **BIO-12**.

Western Pond Turtle

Potential aquatic and upland habitat for western pond turtle is present within the BSA. If western pond turtles are present within the project footprint during construction, the movement of equipment within the project footprint could crush pond turtles or nests containing eggs or young. The project would result in a permanent impact of approximately 0.60 acre in Segments 1-2 (Alternative 1 or 2) and 0.30 acre in Segments 3-6, and a temporary impact of approximately 0.05 acre in Segments 1-2 and 1.45 acres in Segments 3-6 of potential upland western pond turtle habitat (Valley foothill riparian habitat). Impacts to western pond turtle would be **potentially significant**. Implementing wildlife species avoidance and erosion/water quality BMPs provided in **Mitigation Measures BIO-1** through **BIO-5**, **BIO-7**, **BIO-13**, and **BIO-14** would reduce these impacts to a **less than significant** level by requiring training, monitoring, fencing, restoring disturbed areas to pre-project conditions, water quality BMPs, providing escape ramps during trenching, and preconstruction surveys to avoid the species. Therefore, this impact would be **less than significant** with the incorporation of **Mitigation Measures BIO-1** through **BIO-5**, **BIO-7**, **BIO-13**, and **BIO-14.**

Burrowing Owl

Removal of vegetation within the project footprint could directly affect burrowing owl, if present. Additionally, noise associated with construction and maintenance activities and vegetation removal involving heavy equipment operation that occurs during the breeding season (generally from February to March) could disturb nesting burrowing owl if an active nest is located near these activities. Vegetation removal and soil disturbance could result in alteration of burrowing owl nesting or foraging habitat. Segments 1-2 Alternative 1 would result in a permanent impact of approximately 1.55 acres in Segments 1-2 and a temporary impact of approximately 1.16 acres to annual grasslands in the BSA. Segment 1-2 Alternative 2 would result in a permanent impact of approximately 1.68 acres and temporary impact of approximately 0.85 acre to annual grasslands in the BSA. Segments 3-6 would result in a permanent impact of approximately 2.66 acres and a temporary impact of approximately 7.18 acres to annual grasslands in the BSA. No additional acreage is anticipated to be affected by operations and maintenance activities. Impacts to burrowing owl would be **potentially significant**. Implementing wildlife species avoidance measures provided in **Mitigation Measures BIO-1**, **BIO-2**, **BIO-4**, **BIO-5**, **BIO-7**, **BIO-9**, and **BIO-14** would reduce these impacts to a **less than significant** level by requiring training, monitoring, fencing, dust control, restoring disturbed areas to pre-project conditions, and preconstruction surveys to avoid the species. Therefore, this impact would be **less than significant** with the incorporation of **Mitigation Measures BIO-1**, **BIO-2**, **BIO-4**, **BIO-5**, **BIO-7**, **BIO-9**, and **BIO-14**

Swainson's Hawk

Segments 1-2 Alternative 1 would result in a permanent impact to approximately 1.55 acres of annual grassland habitat and approximately 0.58 acre of ruderal habitat which could be used by Swainson's hawk as foraging habitat. Segments 1-2 Alternative 2 would result in a permanent impact to approximately 1.68 acres of annual grassland habitat and approximately 0.67 acre of ruderal habitat which could be used by Swainson's hawk as foraging habitat. Segments 3-6 would result in a permanent impact to approximately 2.66 acres of annual grassland habitat and approximately 0.51 acre of ruderal habitat which could be used by Swainson's hawk as foraging habitat. However, the habitat affected by the project is disturbed, fragmented, and set in an urban area, providing low-quality habitat for Swainson's hawk.

Suitable large trees within the Valley foothill riparian habitat along the American River within the BSA could provide nesting habitat for Swainson's hawk. Segments 1-2 (Alternative 1 or 2) would result in a

permanent impact to approximately 0.60 acre and a temporary impact of approximately 0.05 acre of Valley foothill riparian habitat which could provide nesting habitat for Swainson's hawk. Segments 3-6 would result in a permanent impact to approximately 0.30 acre and a temporary impact of approximately 1.45 acres of Valley foothill riparian habitat which could provide nesting habitat for Swainson's hawk. No additional acreage is anticipated to be affected by maintenance activities.

Noise associated with construction activities involving heavy equipment operation that occurs during the breeding season (generally between March 1 and August 31) could disturb nesting Swainson's hawk if an active nest is located near these activities. Within urban areas, CDFW considers 0.25 mile to be a sufficient buffer to avoid disturbance of nesting Swainson's hawks (CDFW 1994).

Impacts to Swainson's hawk would be **potentially significant**. Implementing the wildlife species avoidance measures provided in **Mitigation Measures BIO-1**, **BIO-2**, **BIO-4**, **BIO-5**, **BIO-7**, **BIO-9**, **BIO-14**, and **BIO-15** would reduce these impacts to a **less than significant** level by requiring training, monitoring, fencing, dust control, restoring disturbed areas to pre-project conditions, preconstruction surveys to avoid the species, and avoiding loss of nests. Therefore, this impact would be **less than significant** with the incorporation of **Mitigation Measures BIO-1**, **BIO-2**, **BIO-4**, **BIO-5**, **BIO-7**, **BIO-9**, **BIO-14**, and **BIO-15**.

White-tailed Kite

Segments 1-2 Alternative 1 would result in a permanent impact to approximately 1.55 acres of annual grassland habitat and approximately 0.58 acre of ruderal habitat which could be used by white-tailed kite as foraging habitat. Segments 1-2 Alternative 2 would result in a permanent impact to approximately 1.68 acres of annual grassland habitat and approximately 0.67 acre of ruderal habitat which could be used by white-tailed kite as foraging habitat. Segments 3-6 would result in a permanent impact to approximately 2.66 acres of annual grassland habitat and approximately 0.51 acre of ruderal habitat which could be used by white-tailed kite as foraging habitat. No additional acreage is anticipated to be affected by operations and maintenance activities. However, the habitat affected by the project is disturbed, fragmented, and set in an urban area, providing low-quality habitat for white-tailed kite.

Suitable large trees within the Valley foothill riparian habitat along the American River within the BSA could provide nesting habitat for white-tailed kite. Segments 1-2 (Alternative 1 or 2) would result in a permanent impact to approximately 0.60 acre and a temporary impact of approximately 0.05 acre of Valley foothill riparian habitat which could provide nesting habitat for white-tailed kite. Segments 3-6 would result in a permanent impact to approximately 0.30 acre and a temporary impact of approximately 1.45 acres of Valley foothill riparian habitat which could provide nesting habitat for white-tailed kit. No additional acreage is anticipated to be affected by operations and maintenance activities.

Noise associated with construction activities involving heavy equipment operation that occurs during the breeding season (generally between February 1 and August 31) could disturb nesting white-tailed kite if an active nest is located near these activities. Within urban areas, CDFW considers 0.25 mile to be a sufficient buffer to avoid disturbance of nesting white-tailed kites (CDFW 1994).

Impacts to white-tailed kite would be **potentially significant**. Implementing the wildlife species avoidance measures provided in **Mitigation Measures BIO-1**, **BIO-2**, **BIO-4**, **BIO-5**, **BIO-7**, **BIO-9**, and **BIO-14** would reduce these impacts to a **less than significant** level by requiring training, monitoring, fencing, dust control, restoring disturbed areas to pre-project conditions, and

preconstruction surveys to avoid the species. Therefore, this impact would be **less than significant** with the incorporation of **Mitigation Measures BIO-1**, **BIO-2**, **BIO-4**, **BIO-5**, **BIO-7**, **BIO-9**, and **BIO-14**.

Bald Eagle

No riverine habitat would be directly impacted by construction activities. Construction-related soil disturbance could indirectly result in temporary impacts to water quality in aquatic foraging habitat for bald eagle in the watershed.

Suitable large trees within the Valley foothill riparian habitat along the American River within the BSA could provide nesting habitat for bald eagle. Segments 1-2 (Alternative 1 or 2) would result in a permanent impact to approximately 0.60 acre and a temporary impact of approximately 0.05 acre of Valley foothill riparian habitat which could provide nesting habitat for Bald eagle. Segments 3-6 would result in a permanent impact to approximately 0.30 acre and a temporary impact of approximately 1.45 acres of Valley foothill riparian habitat which could provide nesting habitat for Bald eagle. No additional acreage is anticipated to be affected by operations and maintenance activities.

Noise associated with construction activities involving heavy equipment operation that occurs during the breeding season (generally between February 1 and August 31) could disturb nesting bald eagle if an active nest is located near these activities. Within urban areas, CDFW considers 0.25 mile to be a sufficient buffer to avoid disturbance of nesting bald eagle.

Impacts to bald eagle would be **potentially significant**. Implementing the wildlife species avoidance measures provided in **Mitigation Measures BIO-1** through **BIO-5**, **BIO-7**, **BIO-9**, and **BIO-14** would reduce these impacts to a **less than significant** level by requiring training, monitoring, water quality BMPs, fencing, dust control, restoring disturbed areas to pre-project conditions, and preconstruction surveys to avoid the species. Therefore, this impact would be **less than significant** with the incorporation of **Mitigation Measures BIO-1** through **BIO-5**, **BIO-7**, **BIO-9**, and **BIO-14**.

Other Protected Birds and Raptors

Removal of trees and shrubs within the project footprint could directly affect nesting birds. Additionally, noise associated with construction or maintenance activities involving heavy equipment operation that occurs during the breeding season (generally between March 1 and August 31) could disturb nesting birds and raptors if an active nest is located near these activities.

Impacts to other protected birds and raptors, including song sparrow, purple martin, least Bell's vireo, and other migratory birds, would be **potentially significant**. Implementing the wildlife species avoidance measures provided in **Mitigation Measures BIO-1**, **BIO-2**, **BIO-4**, **BIO-5**, **BIO-7**, **BIO-9**, and **BIO-14** would reduce these impacts to a **less than significant** level by requiring training, monitoring, fencing, dust control, restoring disturbed areas to pre-project conditions, and preconstruction surveys to avoid the species. Therefore, this impact would be **less than significant** with the incorporation of **Mitigation Measures BIO-1**, **BIO-2**, **BIO-4**, **BIO-5**, **BIO-7**, **BIO-9**, and **BIO-14**.

Ringtail

Potential foraging and den habitat for ringtail occurs within large trees in the riparian woodland habitat in the BSA. Forage that is present includes berries from Himalayan blackberry, insects, and small vertebrate prey such as mice or lizards. Other food sources available in the BSA include mistletoe (*Viscum album*) and other berry producing vegetation is present but is not abundant. Although this

species may avoid urban areas, the BSA is located along an expansive riparian corridor which could be used by ringtail to pass through the area to different locations along the American and Sacramento River.

Ringtail are nocturnal and would not likely be foraging in the project footprint during daylight hours. However, because the project area includes potential den and foraging habitat for ringtail, and the area could be used by ringtail as a movement corridor, project-related construction or maintenance activities and related noise could cause short-term, temporary disturbance to ringtail, or could have a direct permanent effect on ringtail through removal of mature trees and riparian vegetation that could represent potential foraging and/or den habitat for this species.

Impacts to ringtail would be **potentially significant**. Implementing the wildlife species avoidance measures provided in **Mitigation Measures BIO-1**, **BIO-2**, **BIO-4**, **BIO-7**, **BIO-9**, and **BIO-13** would reduce these impacts to a **less than significant** level by requiring training, monitoring, fencing, dust control, restoring disturbed areas to pre-project conditions, and escape ramps or covers for trenches. Therefore, this impact would be **less than significant** with the incorporation of **Mitigation Measures BIO-1**, **BIO-2**, **BIO-4**, **BIO-7**, **BIO-9**, and **BIO-13**.

Roosting Bats

The proposed project may have a direct permanent effect on bats through removal of mature trees that could support roosting bat colonies. Additionally, noise associated with construction or maintenance activities involving heavy equipment operation could disturb roosting bats if a roosting colony is located near these activities.

Impacts to bats, including western red bats, would be potentially significant. Implementing the wildlife species avoidance measures provide in **Mitigation Measures BIO-1**, **BIO-2**, **BIO-4**, **BIO-7**, and **BIO-14** would reduce these impacts to a **less than significant** level by requiring training, monitoring, fencing, dust control, restoring disturbed areas to pre-project conditions, and preconstruction surveys to avoid the species. Therefore, this impact would be **less than significant** with the incorporation of **Mitigation Measures BIO-1**, **BIO-2**, **BIO-4**, **BIO-7**, and **BIO-14**.

Mitigation Measures

> **Mitigation Measure BIO-1: Conduct Environmental Awareness Training Regarding Special-status Species and Sensitive Habitats prior to Construction**
>
> The City shall ensure the construction contractor will implement the following actions before and during construction activities:
>
> Before any work occurs in the proposed project footprint, including grading and equipment staging, all construction personnel shall participate in an environmental awareness training regarding special-status species and sensitive habitats present in the project limits. The training shall describe sensitive resources (i.e., waters of the U.S. and state, riparian habitat, special-status species and habitat, nesting birds/raptors) to be avoided during project construction and applicable permit conditions identified by state and federal agencies to protect these resources. If new construction personnel are added to the project, they must receive the mandatory training before starting work. After being trained, each construction person shall sign-in to document they received the training.

Responsibility: City of Sacramento / Construction Contractor

Timing: Before and During Construction Activities

Mitigation Measure BIO-2: Install Temporary Fencing around Environmentally Sensitive Habitat

The City shall ensure the construction contractor will implement the following actions before and during construction activities:

Before any ground-disturbing activity occurs within the project footprint, the City shall ensure that temporary construction barrier fencing, silt fencing, and/or flagging is installed between the work area and environmentally sensitive habitat areas (i.e., waters of the U.S. and state, riparian vegetation, special-status species habitat, active bird/raptor nests to be avoided), as appropriate. Construction/maintenance personnel and construction/maintenance activity shall avoid fenced environmentally sensitive areas. The exact location of the fencing and/or flagging shall be determined by the resident engineer coordinating with a qualified biologist, with the goal of protecting sensitive biological habitat and water quality. No ground disturbance or vegetation removal activity shall be allowed until this condition is satisfied. The fencing/flagging shall be checked regularly and maintained until all work is complete. For construction, any required barrier or sediment fencing and a note reflecting this condition shall be shown on the final construction documents.

Responsibility: City of Sacramento / Construction Contractor

Timing: Before and During Construction Activities

Mitigation Measure BIO-3: Prepare and Implement a Storm Water Pollution Prevention Plan, Spill Prevention and Control Plan, and Associated Best Management Practices

The City shall require that the construction contractor implement the following BMPs to protect water quality within the American River:

- Conduct ground-disturbing activities adjacent to the American River during the low-flow period (generally between June 1 and October 15).
- Install sediment fencing, fiber rolls, or other equivalent erosion and sediment control measures between the designated work area and the American River, as necessary, to ensure that construction debris and sediment does not inadvertently enter the drainage. The City shall also cover or otherwise stabilize all exposed soil 48 hours prior to potential precipitation events of greater than 0.5 inch.
- Immediately after trail construction is complete, all exposed soil shall be stabilized. Soil stabilization may include, but is not limited to, seeding with a native grass seed mix, planting native plants and placement of rock.
- No refueling, storage, servicing, or maintenance of equipment shall take place within 100 feet of waters of the U.S. and State.

- All machinery used during construction of the project shall be properly maintained and cleaned to prevent spills and leaks that could contaminate soil or water.

- Any spills or leaks from construction equipment (i.e., fuel, oil, hydraulic fluid, and grease) shall be cleaned up in accordance with applicable local, state, and/or federal regulations.

- Tightly woven fiber netting (no monofilament netting) or similar material shall be used for erosion control or other purposes within the project footprint to ensure that wildlife are not trapped. This limitation shall be communicated to the contractor through the special provisions included in the bid solicitation package. Coconut coir matting and burlap-containing fiber rolls are an example of acceptable erosion control materials.

- Before any construction-related ground-disturbing activities, the City shall prepare and implement a Storm Water Pollution Prevention Plan (SWPPP; as required under the SWRCB's General Construction Permit Order 2009-0009-DWQ [and as amended by most current order(s)]) or a Water Pollution Control Plan (WPCP), as applicable, that includes erosion control measures and construction waste containment measures to ensure that waters of the State are protected during and after project construction. The Plan (a SWPPP or WPCP) shall include site design to minimize offsite storm water runoff that might otherwise affect adjacent waters of the U.S. and State.

- The Plan (a SWPPP or WPCP) shall be prepared with the following objectives: (a) to identify pollutant sources, including sources of sediment, that may affect the quality of storm water discharges from the construction of the proposed project; (b) to identify BMPs to reduce or eliminate pollutants in storm water discharges and authorized non-storm water discharges from the project during construction; (c) to outline and provide guidance for BMP monitoring; (d) to identify proposed project discharge points and receiving waters; to address post-construction BMP implementation and monitoring; and (f) to address sedimentation, siltation, and turbidity.

- The SWPPP or WPCP shall also include a spill prevention, control, and countermeasure plan, and applicable hazardous materials business plans, and shall identify the types of materials used for equipment operation (including fuel and hydraulic fluids), and measures to prevent, and materials available to clean up, hazardous material and waste spills. The SWPPP or WPCP shall also identify emergency procedures for responding to spills.

Responsibility: City of Sacramento / Construction Contractor

Timing: Before and During Construction Activities

Mitigation Measure BIO-4: Return Temporarily Disturbed Areas to Pre-Project Conditions

The City shall ensure the construction contractor will implement the following actions before and during construction activities:

All temporarily disturbed areas shall be returned to pre-project conditions within one year following completion of construction/maintenance. These areas shall be properly protected from

washout and erosion using appropriate erosion control devices including coir netting, hydroseeding, and revegetation.

Responsibility: City of Sacramento / Construction Contractor

Timing: Before and During Construction Activities

Mitigation Measure BIO-5: Avoid the Spread of Invasive Plant Species

The City shall ensure the following mitigation measures shall be implemented, as appropriate, to avoid the spreading of invasive plant species throughout the project site during construction and maintenance activities, particularly in riparian areas:

- All hay, straw, hay bales, straw bales, seed, mulch, or other material used for erosion control or landscaping on the project site, and all material brought to the site, including rock, gravel, road base, sand, and top soil, shall be free of noxious weed seeds and propagules. Noxious weeds are defined in Title 3, Division 4, Chapter 6, Section 4500 of the California Code of Regulations and the California Quarantine Policy – Weeds. (Food and Agriculture Code, Sections 6305, 6341 and 6461)

- All equipment brought to the project site for construction shall be thoroughly cleaned of all dirt and vegetation prior to entering the site to prevent importing noxious weeds. (Food and Agriculture Code, Section 5401)

Responsibility: City of Sacramento / Construction Contractor

Timing: Before and During Construction and Maintenance Activities

Mitigation Measure BIO-6: Compensate for Permanent Impacts to Riparian Habitat and Protected Trees

The City shall implement the following actions at the completion of construction activities:

In accordance with policies stated in the City's General Plan, to compensate for the permanent removal of riparian vegetation associated with the trail construction, the City shall purchase off-site credits at a mitigation bank or replant riparian trees and shrubs at a 1:1 ratio (e.g., 1 acre planted for every 1 acre removed). The replacement plantings shall consist of a variety of native tree species that occur within the riparian vegetative community along the American River corridor such as live oak, Fremont cottonwood, Oregon ash, boxelder, white alder, arroyo willow, and native shrub species such as narrowleaf willow, California rose, and California blackberry. No long-term management of landscaping or watering beyond that needed to initially establish the plants is anticipated to occur.

If an onsite or offsite City-responsible mitigation site is used, the City shall accomplish riparian habitat compensation by implementing the following: after completion of the trail design, the City shall total the number, type, and size of all trees and shrubs to be removed and prepare a planting plan that identifies the location of the riparian mitigation plantings and the number, type, and size of plants. The planting plan shall also describe the irrigation and maintenance required to establish and monitor the planting area. Mitigation plantings will be completed between October 15 and December 31 of the year immediately following when impacts occur.

All mitigation plantings will be monitored for 3 years. The survival goals established by CDFW will be adhered to, and if the goals are not met, then the City will be responsible for installing replacement plantings. Replacement plants shall be monitored with the same survival and growth requirements for 3 years following planting. The City will be responsible for planting, replanting, watering, weeding, invasive exotic eradication, and any other practice needed to ensure this goal. An annual status report on the mitigation will be provided to CDFW by December 31 of each year. The report will include the survival, percent cover, and height of both tree and shrub species. The number by species of plants and trees replaced, and overview of the re-vegetation effort, and the method used to assess these parameters will also be included. Photographs of the mitigation area will also be included. To ensure success of the mitigation plantings, the City shall prepare and implement an adaptive management plan that identifies specific monitoring tasks, success criteria, and reporting requirements.

If mitigation bank credits are purchased, the credits must be purchased at a CDFW-approved site.

Responsibility: City of Sacramento / Construction Contractor

Timing: At the completion of Construction Activities

Mitigation Measure BIO-7: Monitor During Ground Disturbance and Vegetation Removal

The City shall ensure the construction contractor implement the following actions during construction activities:

A qualified biological monitor shall be present during all project activities requiring ground disturbance or vegetation removal within the construction area and shall make weekly monitoring visits to construction/active maintenance areas occurring in or adjacent to environmentally sensitive habitat areas, (i.e., waters of the U.S. and State, riparian vegetation, special-status species habitat, active bird/raptor nests). The biologist shall be responsible for ensuring that the contractor maintains the fencing/flagging protecting sensitive biological resources. Additionally, the biologist shall assist the City and the construction crew in complying with all proposed project implementation restrictions and guidelines as needed.

Vegetation less than 3 inches in diameter shall be cleared by hand or small engine weed-eaters or chainsaws. Small material or grasses shall be mowed close to ground with low impact rubber-tired tractors. Vegetation over 3 inches in diameter may require larger equipment such as telescoping chainsaws, hoe-mounted flail mowers, bucket machines to hoist crews and equipment, and crews climbing with chainsaws.

To qualify for approval from the USFWS, the biological monitor must be a biologist with demonstrated knowledge of VELB natural history, ecology, and identifying characteristics, as well as demonstrated field experience identifying other listed species. The monitor will be approved by the Sacramento USFWS Office in writing prior to the start of any ground-disturbing activities.

Responsibility: City of Sacramento / Construction Contractor

Timing: During Construction Activities

Mitigation Measure BIO-8: Avoid Construction Activities within 165 feet of Elderberry Shrubs During Valley Elderberry Longhorn Beetle Flight Season

The City shall ensure the construction contractor implement the following actions during construction activities:

As much as feasible, all construction activities that could occur within 165 feet (50 meters) of an elderberry shrub, will be conducted outside of the flight season of the VELB (March - July).

Responsibility: City of Sacramento / Construction Contractor

Timing: During Construction Activities

Mitigation Measure BIO-9: Implement Dust Control Measures

The City shall ensure the construction contractor implement the following actions during construction activities:

The City shall require that the construction contractor implement dust-control measures during all construction activities. These measures may include application of water to graded and disturbed areas that are un-vegetated. To avoid attracting Argentine ants, at no time shall water be sprayed within the driplines of elderberry shrubs).

Responsibility: City of Sacramento / Construction Contractor

Timing: During Construction Activities

Mitigation Measure BIO-10: Prohibit Use of Herbicides and Mowing near Elderberry Shrubs

The City shall ensure the construction contractor implement the following actions during construction and maintenance activities:

The City shall prohibit the contractor from using insecticides, herbicides, fertilizers, or other chemicals within 95 feet of elderberry shrubs. The City shall prohibit the contractor from conducting mechanical weed removal within the drip-line of the elderberry shrub during the season when adults are active (February - August) and will avoid damaging the elderberry.

Responsibility: City of Sacramento / Construction Contractor

Timing: During Construction and Maintenance Activities

Mitigation Measure BIO-11: Compensate for the Permanent Removal and Temporary Disturbance of Valley Elderberry Longhorn Beetle Habitat

The City will purchase mitigation credits for impacts to potential valley longhorn elderberry beetle riparian and mixed scrub habitat in accordance with the USFWS 2017 Framework for Assessing Impacts to the Valley Elderberry Longhorn Beetle (USFWS 2017). The City will coordinate with USFWS to determine the appropriate type and amount of compensatory mitigation for all unavoidable adverse impacts to VELB or its habitat.

Compensation for Permanent Loss of Habitat: Per the 2017 Framework, the USFWS recommends that the permanent loss of VELB habitat be replaced with habitat that is commensurate with the type (riparian or non-riparian) and amount of habitat lost. Suitable riparian habitat may be replaced, at a minimum of 3:1 for all acres that will be permanently impacted by the project (**Table 3.2-4**). The USFWS typically recommends that any shrub that will be adversely impacted by the project be transplanted to a USFWS-approved location.

Table 3.2-4. Potential Valley Elderberry Longhorn Beetle Habitat-level Compensation Ratios

		Approximate Direct Impacts to Potential Habitat					
		Approximate Permanent (acres) of Disturbance			Acres of Credits / Total Credit Purchase[2]		
Habitat Type	Compensation Ratio[1]	Segments 1-2 Alt. 1	Segments 1-2 Alt. 2	Segments 3-6	Segments 1-2 Alt. 1	Segments 1-2 Alt. 2	Segments 3-6
Mixed Scrub	3:1	0.35	0.37	0.12	1.05 / 25.61	1.11 / 27.07	0.36 / 8.78
Valley Foothill Riparian		0.60	0.60	0.30	1.8 / 43.90	1.80 / 43.90	0.90 / 21.95
Total		**0.95**	**0.97**	**0.42**	**2.85 / 69.51**	**2.91 / 70.97**	**1.26 / 30.73**

Notes:
[1] acre(s) of credit: acre(s) of disturbance
[2] one credit (unit) = 1,800 square feet (0.041 acre)

For the purpose of this analysis, both the Valley foothill riparian and mixed scrub community types were considered to be potential riparian habitat for this species. Therefore, the acres of disturbance to these two community types will be mitigated at the 3:1 ratio stated in the USFWS 2017 Framework (as shown in **Table 3.2-4**).

Temporary Loss of Valley Elderberry Longhorn Beetle Habitat: To appropriately compensate for all individual shrubs that will be impacted by the project, the City shall first consider the location of the plant (riparian or non-riparian) and the potential for the plant to be occupied by VELB (exit holes present, likely occupied). For direct effects to individual shrubs, the City may consider replacing habitat based on the amount of effects that occur, the location of the shrub (riparian or non-riparian), and the presence of exit holes (non-riparian only). Impacts to individual shrubs in riparian areas may be replaced by the purchase of 2 credits at an USFWS-approved bank for each shrub that will be trimmed regardless of the presence of exit holes.

For purposes of this analysis, impacts to individual elderberry shrub that result from temporary trimming activities were considered as riparian, and therefore would be mitigated at the 2:1 ratio stated in the USFWS 2017 guidelines. The number of elderberry shrubs requiring transplantation as shown in **Table 3.2-5** are included in the amounts described in **Mitigation Measure BIO-13: Transplant Elderberry Shrubs**.

Responsibility: City of Sacramento

Timing: Before Construction Activities

Table 3.2-5. Valley Elderberry Longhorn Beetle Shrub-level Impact Ratios

	Habitat	Compensation Ratio	# of Shrubs to be Trimmed	Compensation	Total Credit Purchase[2]
Segments 1-2 Alternative 1	Riparian	2:1	2	Transplant the shrub + 2:1 compensation	**2 shrubs transplanted + 4 credits**
Segments 1-2 Alternative 2	Riparian	2:1	1	Transplant the shrub + 2:1 compensation	**1 shrub transplanted + 2 credits**
Segments 3-6	Riparian	2:1	48	Transplant the shrub + 2:1 compensation	**49 shrubs transplanted + 98 credits**
Maintenance	Riparian	2:1	5	Transplant the shrub + 2:1 compensation	**5 shrubs transplanted + 10 credits**

Notes:
[1] number of credits: number of shrubs trimmed
[2] one credit (unit) = 1,800 square feet (0.041 acre)

Mitigation Measure BIO-12: Transplant Elderberry Shrubs

The City shall ensure the construction contractor implement the following actions during construction activities:

USFWS recommends that all loss of elderberry longhorn beetle habitat be replaced with habitat that is commensurate with the type and amount lost under the following conditions:

- If the elderberry shrub cannot be avoided.
- If indirect effects will result in the death of stems or the entire shrub.

If the shrub can be avoided, and indirect effects will not result in the death of the entire shrub, individual shrub-level impact compensation is recommended. Placement of the proposed project under Segments 1-2 Alternative 1 would result in temporary impacts (trimming) to 2 elderberry shrubs requiring both to be transplanted according to the 2017 Framework. Segments 1-2 Alternative 2 would result in temporary impacts (trimming) to 1 elderberry shrub (**Table 3.2-2**), requiring one to be transplanted according to the 2017 Framework. Segments 3-6 would result in temporary impacts (trimming) to 48 shrubs (**Table 3.2-2**), requiring 48 shrubs to be transplanted according to the 2017 Framework. Operations and maintenance would potentially impact up to 5 shrubs throughout all segments (**Table 3.2-2**), requiring 5 additional shrubs be transplanted.

Removal of entire elderberry plants without disturbance to the surrounding habitat is uncommon but may occur. The removal may either include the roots or just the removal of the aboveground portion of the plant. When possible, the City shall attempt to remove the entire root ball and transplant the shrub. To minimize the fragmentation of VELB habitat, the City will relocate elderberry shrubs as close as possible to their original location. Elderberry shrubs may be relocated adjacent to the project footprint if: 1) the planting location is suitable for elderberry growth and reproduction; and 2) the City is able to protect the shrub and ensure that the shrub

becomes reestablished. If these criteria cannot be met, the shrub may be transplanted to an appropriate USFWS-approved mitigation site.

Any elderberry shrub that is unlikely to survive transplanting because of poor condition or location, or a shrub that would be extremely difficult to move because of access limitations, may not be appropriate for transplanting. The following transplanting guidelines may be used by the City:

- **Monitor** - A qualified biologist will be on-site for the duration of transplanting activities to assure compliance with avoidance and minimization measures and other conservation measures.

- **Exit Holes** - Exit-hole surveys will be completed immediately before transplanting. The number of exit holes found, global positioning system (GPS) location of the plant to be relocated, and the GPS location of where the plant is transplanted will be reported to the USFWS and to the CNDDB.

- **Timing** - Elderberry shrubs will be transplanted when the shrubs are dormant (November through the first two weeks in February) and after they have lost their leaves. Transplanting during the non-growing season will reduce shock to the shrub and increase transplantation success.

- **Transplanting Procedure** - Transplanting will follow the most current version of the ANSI A300 (Part 6) guidelines for transplanting (http://www.tcia.org/).

- **Trimming Procedure** - Trimming will occur between November and February and should minimize the removal of branches or stems that exceed 1 inch in diameter. (USFWS 2017)

Responsibility: City of Sacramento / Construction Contractor

Timing: Before and During Construction Activities

Mitigation Measure BIO-13: Provide Escape Ramps or Cover Open Trenches

The City shall ensure the construction contractor implement the following actions during construction activities:

To avoid entrapment of wildlife, all excavated steep-walled holes or trenches more than two feet deep will be provided with one or more escape ramps constructed of earth fill or wooden planks at the end of each workday. If escape ramps cannot be provided, then holes or trenches will be covered with plywood or similar materials. Providing escape ramps or covering open trenches will prevent injury or mortality of wildlife resulting from falling into trenches and becoming trapped. The trenches will be thoroughly inspected for the presence of federally listed species at the beginning of each workday. Any species observed shall be allowed to voluntarily move outside of the work area on its own.

Responsibility: City of Sacramento / Construction Contractor

Timing: Before and During Construction Activities

Mitigation Measure BIO-14: Conduct Preconstruction Surveys

The City shall ensure the construction contractor implement the following actions prior to construction activities:

Western Pond Turtle: A qualified biologist shall conduct a preconstruction clearance survey for western pond turtles within 48 hours prior to any ground disturbance within the project footprint. Any western pond turtles found within the construction work area shall be allowed to voluntarily move out of this area or shall be captured and held by a qualified biologist for the minimum amount of time necessary to release them into suitable aquatic habitat outside the construction work area. If a western pond turtle nest containing eggs or young is identified within the construction work area, the biologist shall consult with CDFW to determine an appropriate no-disturbance buffer to ensure avoidance of the nest.

Burrowing Owl: A qualified biologist shall conduct a preconstruction survey to locate any active burrowing owl burrows within the BSA or within a 500-foot-wide buffer around the BSA, if feasible. The preconstruction survey shall be conducted in accordance with recommendations provided in CDFW's Staff Report on Burrowing Owl Mitigation (CDFW 2012) and no more than 14 days before the start of construction activities. If no burrowing owls or burrows exhibiting burrowing owl use (i.e., whitewash, owl pellets, feathers, or egg fragments) are detected, then construction may proceed. Preconstruction surveys must be reinitiated if more than 30 days lapse between the survey dates and construction or maintenance activities.

If active burrowing owls or occupied burrows are detected in the survey area, occupied burrows shall not be disturbed during the nesting season (generally February 1–August 31) or the wintering season (September 1–January 31). A no-disturbance buffer shall be established around the burrow to avoid disturbance of nesting burrowing owls until a qualified biologist, coordinating with CDFW, determines that the young have fledged and are foraging on their own. The extent of these buffers shall be determined by the biologist (coordinating with the CDFW) and shall depend on the level of noise or construction disturbance, line-of-sight between the nest and the disturbance, ambient levels of noise and other disturbances, and other topographical or artificial barriers.

Raptors/Nesting Birds: If construction/maintenance or vegetation removal occur during the breeding season for migratory birds and raptors (generally February through August), the City shall retain a qualified biologist to conduct a preconstruction nesting bird and raptor survey prior to the start of construction activities (including equipment staging). The preconstruction nesting bird and raptor surveys shall be conducted between February 1 and August 31 within suitable habitat within the designated project footprint. Surveys for raptors' nests shall also extend 250 feet from the project footprint to ensure that nesting raptors are not affected by construction disturbances. For raptor surveys outside the project footprint where property access has not been granted, the surveying biologist shall use binoculars to scan any suitable nesting substrate for potential raptor nests. The preconstruction survey shall be conducted no more than 14 days before the initiation of construction activities.

If an active bird or raptor nest is identified within the construction or maintenance work area or an active raptor nest is identified within 250 feet from the construction work area, a no-disturbance buffer shall be established around the nest to avoid disturbance of the nesting birds or raptors until a qualified biologist determines that the young have fledged and are foraging on

their own. The extent of these buffers shall be determined by the biologist (coordinating with the CDFW) and shall depend on the species identified, level of noise or construction disturbance, line-of-sight between the nest and the disturbance, ambient levels of noise and other disturbances, and other topographical or artificial barriers. In addition to the establishment of buffers, other avoidance measures (determined during CDFW coordination) may include monitoring of the nest during construction and restricting the type of work that can be conducted near the nest site. If no active nests are found during the preconstruction surveys, then no additional mitigation is required

Bats: During April–September before construction begins, a qualified biologist will survey trees and structures within the project footprint and identify any snags, hollow trees, voids or other trees with cavities that may provide suitable roosting habitat for bats. If evidence of bat usage is observed, a focused species acoustic survey shall be performed to determine the presence and type of bat roost. If no suitable roosting trees are found or the acoustic survey findings are negative, construction may proceed. If bats are found or evidence of use by bats is present, the qualified biologist will work with the City and CDFW to implement measures to avoid or minimize disturbance. Avoidance measures may include excluding bats from the tree before their hibernation period (mid-October to mid-March) and before construction or maintenance begins.

Mitigation Measure BIO-15: Avoid Loss of Swainson's Hawk Nests

The City shall ensure the construction contractor implement the following actions prior to construction activities:

- For construction or maintenance activities (including vegetation removal and/or other ground disturbance) that need to be conducted during the breeding season (March 1 – July 31), Swainson's hawk surveys shall include all suitable nesting habitat within line of sight of construction activities within a 0.5-mile radius of the project site. One survey following the guidelines provided in Recommended Timing and Methodology for Swainson's Hawk Nesting Surveys in the Central Valley (Swainson's Hawk Technical Advisory Committee 2000) shall be followed for surveys for Swainson's hawk.

- If active Swainson's hawk nests are identified within the project area, preconstruction activity shall cease and CDFW will be contacted. If a Swainson's hawk nest is identified a no-disturbance buffer shall be established around the nest to avoid disturbance of the nesting Swainson's hawk until a qualified biologist determines that the young have fledged and are foraging on their own. The extent of these buffers shall be determined by the biologist (coordinating with the CDFW), level of noise or construction disturbance, line-of-sight between the nest and the disturbance, ambient levels of noise and other disturbances, and other topographical or artificial barriers. In addition to the establishment of buffers, other avoidance measures (determined during CDFW coordination) may include monitoring of the nest during construction and restricting the type of work that can be conducted near the nest site. If no active nests are found during the preconstruction surveys, then no additional mitigation is required.

  Responsibility: City of Sacramento / Construction Contractor

  Timing: Before Construction Activities

Mitigation Measure BIO-16: Obtain Preliminary Jurisdictional Determination and Compensate for Impacts to Waters of the U.S. and State

The City shall obtain a Jurisdictional Determination or Preliminary Jurisdictional Determination from the USACE. Based on the determination, the City shall finalize the acreage of impacts to Waters of the U.S. and State based on project footprint and USACE-verified OHWM. If no impacts would occur, no compensation is required. If impacts would occur, the City shall compensate for impacts to Waters of the U.S. and State by purchasing credits from a State Water Resources Control Board (SWRCB)- and/or USACE-approved mitigation bank at a minimum ratio of 1:1, or in-lieu fees shall be paid to a SWRCB- and/or USACE-approved fund at a 1:1 replacement ratio to ensure the project would not result in a net loss of Waters of the U.S. and State.

Responsibility: City of Sacramento

Timing: Before Construction Activities

Impact BIO-2: ***Potential to have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, and regulations or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service***

Construction-related activity from the proposed project may affect riparian habitat or other sensitive natural community identified in local or regional plans, policies, and regulations or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service. (Less than Significant With Mitigation)

American River Habitat

The proposed project could result in indirect impacts to the American River related to increased sediment loads from earth moving activities during construction or the accidental introduction of wash water, solvents, oil, cement, or other pollutants during construction or maintenance. This impact would be **potentially significant**. Implementing the water quality and erosion BMPs provided in **Mitigation Measures BIO-1** through **BIO-5** would reduce this impact to a **less than significant** level by requiring training, fencing, BMPs to avoid sediment transport, and restoring disturbed areas to pre-project conditions. Therefore, this impact would be **less than significant** with the incorporation of **Mitigation Measures BIO-1** through **BIO-5**.

Valley Foothill Riparian Habitat

Construction of the proposed trail would affect the Valley foothill riparian habitat. Although the proposed project has been designed to minimize impacts on mixed riparian woodland habitat by using developed areas and annual grassland where possible, construction of the proposed trail would result in approximately 0.05 acre of temporary impacts in Segments 1-2 and 1.45 acres in Segments 3-6, and approximately 0.60 acre of permanent impacts in Segments 1-2 and 0.30 acre in Segments 3-6 to Valley foothill riparian habitat. Temporary impacts would occur as a result of vegetation clearing, grubbing, or trimming of tree canopy required in order to provide construction crews and equipment access to the project alignment and as part of maintenance activities. Permanent impacts on riparian habitat would occur as a result of construction of the proposed trail. No permanent impacts to Valley foothill riparian habitat would occur from operation and maintenance activities. Impacts to Valley foothill riparian

habitat would be **potentially significant**. Implementing species avoidance and water quality/erosion BMPs provided in **Mitigation Measures BIO-1** through **BIO-7** would reduce impacts to a **less than significant** level by requiring training, monitoring, fencing, restoring disturbed areas to pre-project conditions, avoiding the spread of invasive species, and compensating for the loss of habitat and protected trees. Therefore, this impact would be **less than significant** with the incorporation of **Mitigation Measures BIO-1** through **BIO-7**.

Impact BIO-3: ***Potential to have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means***

Construction-related activity from the proposed project may affect federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means. (Less than Significant With Mitigation)

USACE has not determined the OHWM of the American River in the project vicinity. If the USACE determines that the OHWM of the American River extends into the project footprint, the project would have a **potentially significant** impact related to waters of the U.S. and State. Implementing the avoidance and water quality/erosion BMPs provided in **Mitigation Measures BIO-1** through **BIO-4** and **BIO-16** would reduce this impact to a **less than significant** level by requiring training, fencing, BMPs to avoid sediment transport, restoring disturbed areas to pre-project conditions, obtaining a jurisdictional determination or preliminary jurisdictional determination from USACE, and purchasing credits to ensure that the project would not result in a net loss of Waters of the U.S. and State. Therefore, this impact would be **less than significant** with the incorporation of **Mitigation Measures BIO-1** through **BIO-4** and **BIO-16**.

Impact BIO-4: ***Potential to impact protected trees***

Construction or operation-related activity from the proposed project may affect protected trees. (Less than Significant With Mitigation)

Construction of the proposed trail would result in the removal of trees. The project would also adversely affect trees by requiring tree trimming for equipment access and conducting ground-disturbing activities within the dripline of protected trees.

The number of trees removed and trimmed within Segments 1-2 has not been determined. These Segments would be constructed in the future; therefore, the size of trees and portions of trees overhanging the project footprint may differ from current conditions. The trees within Segments 1-2 are within riparian habitat and co-occur with elderberry shrubs.

Segments 3-6 of the proposed project would permanently affect (remove) 25 trees and temporarily affect (trim) approximately 72 additional trees located within the project footprint. All trees identified for removal are located within the valley foothill riparian vegetation community. During operations and maintenance, dead, dying, and hazard trees may be trimmed or removed.

Impacts related to protected trees would be **potentially significant**. Implementing the avoidance and restoration measures provide in **Mitigation Measures BIO-1** through **BIO-7** would reduce impacts to a **less than significant** level by requiring training, monitoring, fencing, restoring disturbed areas to pre-project conditions, and compensating for the loss of habitat and protected trees. Additionally, the City will obtain a Streambed Alteration Agreement from the CDFW, which will include riparian/tree compensation requirements. Therefore, this impact would be **less than significant** with the incorporation of **Mitigation Measures BIO-1** through **BIO-7**.

Residual Significant Impacts

Mitigation that would reduce potential biological and water quality impacts to a less-than-significant level have been identified and therefore there would be no residual significant impacts to Biological Resource conditions.

This page intentionally left blank.

3.3 Cultural and Tribal Resources

3.3.1 Introduction

This section describes the environmental and regulatory setting for cultural resources and Tribal Cultural Resources (TCRs). It also describes potential impacts on cultural resources and TCRs that could result from implementation of the proposed project. Mitigation measures for potentially significant impacts are also described below.

As a result of circulation of the IS/MND and during the proposed project's NOP scoping period, the following comment related to cultural resources was received and considered during preparation of the impact analysis:

- Analysis should address how the "character-defining features" of the Levee Unit 118 Part 1 (American River South Levee) would be affected by the proposed project, as the levee is considered significant under National Register of Historic Places.

Impacts to the character defining features of the American River South Levee are described below in **Impact CTR-1** "Damage to or Destruction of Built Environment Historic Properties".

3.3.2 Environmental Setting

Prehistoric and Ethnographic Context

Archaeological research in the Central Valley has revealed almost 14,000 years of occupation, which has been organized into a chronology called the Archaic-Emergent System (Bennyhoff and Fredrickson 1969), built on the work of Lillard et al. (1939) and Beardsley (1948).

The earliest well-documented entry and spread of humans into California occurred at the beginning of the Paleo-Indian Period (13,500-8,000 B.P.). Little evidence from this period has been found in the Sacramento area, but sites typically include hunting implements such as fluted projectile points and chipped stone crescent forms. Social units are thought to have been small and highly mobile.

Human populations grew and occupied more diverse settings during the Middle Archaic Period (5,000-2,500 B.P). Permanent villages were established, primarily along major waterways. Sedentary settlements led to more intensive subsistence strategies, including the introduction of acorn processing technology. By the Upper Archaic Period (2,500-1000 B.P.), increased population density led to status differentiations and sociopolitical complexity. Exchange systems become more complex and formalized. Evidence of regular, sustained trade between groups was seen for the first time.

During the Emergent Period (1,000 B.P. to Historic), socioeconomic complexity continued to develop, with extensive exchange networks, social status associated with acquired wealth, and increasing territorial circumscription. The bow and arrow were introduced, replacing the atlatl. In the latter portion of this period (450-150 B.P.), the clamshell disk bead became a monetary unit for exchange and increasing quantities of goods moved greater distances. Specialists arose to govern various aspects of production and exchange.

The City of Sacramento and the surrounding area are known to have been occupied by Native American groups for thousands of years prior to settlement by non-Native peoples. Archaeological materials, including human burials, have been found throughout the City. Human burials outside of formal

cemeteries often occur in prehistoric contexts. Areas of high sensitivity for tribal cultural resources are located within close proximity to the Sacramento and American rivers and other watercourses.

The proposed project area is situated within the lands traditionally occupied by the Valley Nisenan, or Southern Maidu. Valley Nisenan territory was divided into politically autonomous "tribelet" areas, each including several large villages (Kroeber 1925, Moratto 1984). Two important villages were located near the project area, on the south bank of the American River, Momol, to the west of the project area, and Yalisumni, to the east (Wilson and Towne 1978:388). Valley Nisenan people lived in small, domed houses (10–15 feet in diameter) covered with earth and tule or grass and followed a seasonal round of food gathering (Wilson and Towne 1978).

Euro-American contact with the Nisenan began with infrequent excursions by Spanish explorers and Hudson's Bay Company trappers traveling through the Sacramento-San Joaquin Valley in the early 1800s (Wilson and Towne 1978). With the coming of Russian trappers, Spanish missionaries, and Euro-American settlers, traditional lifeways were threatened by competition for land and resources, and by the introduction of new diseases. The malaria epidemic of 1833 decimated the Valley Nisenan population, killing an estimated 75 percent of the population. The influx of Euro-Americans during the Gold Rush-era further reduced the population due to forced relocations and violent retribution from the miners for real or imagined affronts (Madley 2016).

Despite these setbacks, today many Native Americans in the proposed project area are maintaining traditional cultural practices. Sometimes supported by thriving business enterprises, Tribal groups maintain governments, historic preservation programs, education programs, cultural events, and numerous other programs that sustain a vibrant culture (Johnson 2018).

Historic Context

City of Sacramento

The City of Sacramento—named after the river that runs beside it—was built on 4 square miles of John Sutter's New Helvetia land grant in 1849 and officially incorporated in 1850 (McGowan and Willis 1983:21, 28). Sacramento served as an important gateway to California's gold fields during the Gold Rush years. By 1854, Sacramento had grown and matured as a city and secured the title of state capitol (McGowan and Willis 1983:49, 51–52). In 1861, the Central Pacific Railroad (CPRR) formed and groundbreaking for the transcontinental railroad commenced in 1863 in downtown Sacramento. The CPRR had a tremendous impact on Sacramento's economy as people were enticed to come to the region by the cheap rail fare and promise of rich agricultural land. The railroad also enabled easier transport of materials and goods from nearby communities to markets throughout the U.S. (McGowan and Willis 1983:56, 59).

Residential development continued into the early 20th century, slowing down only briefly during the Great Depression and World War II. Following World War II, the local economy boomed as the region adjusted to a post-war economy. Development spilled into the surrounding areas as the suburban lifestyle became more appealing to homeowners. In December 1964, the city merged with North Sacramento. Throughout the 1970s and 1980s, improvements were made to the area's infrastructure and roads (Page & Turnbull 2013: 6.3-16). Sacramento continues to grow in the present day as its suburbs expand to keep pace with an ever-increasing population.

Flood Management

The California Legislature tried to coordinate a levee system and control levee construction by creating the Swamp Land Commission in 1861. The Commission gave California drainage districts the power to construct levees. It would become the responsibility of state engineers to design the levees for each district. By the end of 1861, there were 28 drainage districts in the Sacramento and San Joaquin Valleys and the San Francisco Bay-Delta. The California Legislature enhanced the levee district powers in 1864, which spurred additional levee construction (O'Neill 2006:81).

Captain Thomas Jackson of the USACE came to California in 1905 and began studying Sacramento's rivers. He understood that there was a linkage between the mining debris, making the river navigable, and flood control. Jackson undertook a comprehensive flood management plan for the Sacramento Valley. In 1910, Jackson's plan, known as the Jackson Report became the foundation for the Sacramento River Flood Control Project (SRFCP) (Russo 2010:20; Kelley 1989:278, 280).

During the first half of the 20th century, Congress passed a handful of flood control acts, including the Flood Control Acts of 1917, 1928, 1936, and 1941. The Flood Control Committee was tasked with regulating and controlling the flood waters of the United States through levees, land reclamation, swampland reclamation, and storage for water power. In 1933, USACE planned to raise and strengthen approximately 2.5 miles of the American River south bank levee, from the Sacramento River to approximately the foot of C Street in Sacramento. Before the improvements, the levee was very uneven in both the cross-section and height, but USACE did not expect to introduce a lot of new material to make the necessary improvements, which ARFCD partially funded (Drinkwater 1933:1).

The American River levees were upgraded to USACEs' standards in three stages. The levee protecting the City of Sacramento (Levee Unit 118, Part 1) was finished in 1948 as part of the SRFCP. The north bank levee, which was designed to protect the City of North Sacramento, also was constructed as part of the SRFCP and was completed in 1955. This levee extended from the high ground near present-day Cal Expo, downstream to the east bank of Natomas Canal. A non-project levee was constructed on the north bank of the American River from the eastern end of Arden Way, downstream to the H Street Bridge. At the time it was constructed, if the river overtopped the levee, it would have flooded a hop field. In 1956, USACE brought this levee up to its standards as part of the American River project levee; the improvements extended upstream to the Carmichael Bluffs (McClurg and Haupt 1991:1–2).

3.3.3 Regulatory Setting

Federal Plans, Policies, Regulations and Laws

National Historic Preservation Act – Section 106 of the NHPA and its implementing regulations (36 Code of Federal Regulations [CFR] 800, as amended in 1999) require Federal agencies to consider the potential effects of their proposed undertakings, or those they fund or permit, on properties that may be eligible for listing, or that are listed in, the NRHP, and to allow the Advisory Council on Historic Preservation (ACHP) the opportunity to comment on the proposed undertaking. The proposed project will be partially funded using Caltrans Active Transportation Program Cycle 2 funds; therefore, Caltrans is the lead agency for compliance with Section 106 of the NHPA.

Pursuant to the X.B.1 of the January 2014 First Amended Programmatic Agreement among the Federal Highway Administration, the Advisory Council on Historic Preservation, the California State Historic Preservation Officer, and the California Department of Transportation Regarding Compliance with Section 106 of the National Historic Preservation Act (Section 106 PA), as well as under Public

Resources Code 5024 and pursuant to the January 2015 Memorandum of Understanding Between the California Department of Transportation and the California State Historic Preservation Office Regarding Compliance with Public Resources Code Section 5024 and Governor's Executive Order W-26-92 (5024 MOU), the Caltrans District may make a finding of "No Adverse Effect with Standard Conditions" when standard conditions that will avoid adverse effects to historic properties are imposed in accordance with Attachment 5 of the Section 106 PA. The Caltrans District shall submit its finding and supporting documentation to the Caltrans Cultural Services Office (CSO) for review. Should CSO approve the finding, the undertaking shall not be subject to further review under the Section 106 PA.

National Register of Historic Places

A property may be listed in the NRHP if it meets criteria for evaluation as defined in 36 CFR 60.4 and as described below.

The quality of significance in American history, architecture, archaeology, engineering, and culture is present in districts, sites, buildings, structures, and objects that possess integrity of location, design, setting, materials, workmanship, feeling, and association and meets one or more of the following criteria:

A. That are associated with events that have made a significant contribution to the broad patterns of our history; or

B. That are associated with the lives of persons significant in our past; or

C. That embody the distinctive characteristics of a type, period or method of construction, or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction; or

D. That have yielded, or may be likely to yield, information important in prehistory or history.

State Plans, Policies, Regulations and Laws

California Environmental Quality Act (CEQA)

CEQA includes provisions that specifically address the consideration of cultural resources. CEQA states that if a project would have significant impacts on important cultural resources, then alternative plans or mitigation measures must be considered. However, only significant cultural resources (termed "historical resources") need to be addressed. CEQA defines an historical resource as "a resource listed in, or determined to be eligible for listing in, the California Register of Historical Resources [CRHR]" (California PRC Section 21084.1). Applies to the consideration of cultural resources in the project APE.

California Register of Historical Resources (CRHR)

The CRHR includes resources listed in or formally determined eligible for listing in the NRHP, as well as some California Historical Landmarks and Points of Historical Interest. Properties of local significance that have been designated under a local preservation ordinance (local landmarks or landmark districts) or that have been identified in a local historical resources inventory may be eligible for listing in the CRHR and are presumed to be significant resources for purposes of CEQA unless a preponderance of evidence indicates otherwise (California PRC Section 5024.1, 14 California Code of Regulations [CCR] Section 4850). The eligibility criteria for listing in the CRHR are similar to those for

NRHP listing but focus on importance of the resources to California history and heritage. A cultural resource may be eligible for listing on the CRHR if it:

1. Is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage;

2. is associated with the lives of persons important in our past;

3. embodies the distinctive characteristics of a type, period, region, or method of construction or represents the work of an important creative individual or possesses high artistic values; or

4. has yielded, or may be likely to yield, information important in prehistory or history.

The State CEQA Guidelines also require consideration of unique archaeological resources (CCR Section 15064.5). As used in California PRC Section 21083.2, the term "unique archaeological resource" refers to an archaeological artifact, object, or site about which it can be clearly demonstrated that, without merely adding to the current body of knowledge, there is a high probability that it meets any of the following criteria:

- contains information needed to answer important scientific research questions and that there is a demonstrable public interest in that information,

- has a special and particular quality such as being the oldest of its type or the best available example of its type, or

- is directly associated with a scientifically recognized important prehistoric or historic event or person.

In addition to meeting one or more of the above criteria, resources eligible for listing in the CRHR must retain enough of their historic character or appearance to be recognizable as historical resources and to convey the reasons for their significance. Integrity is evaluated with regard to the retention of location, design, setting, materials, workmanship, feeling, and association (Office of Historic Preservation [OHP] 1999). These regulations apply to the eligibility determination of cultural resources in the project Area of Potential Effect (APE).

Assembly Bill 52 (AB 52)

AB 52, effective on July 1, 2015, amends CEQA and adds new sections relating to Native American consultation and certain types of cultural resources, TCRs. TCRs are either (1) sites, features, places, cultural landscapes, sacred places, and objects with cultural value to a California Native American Tribe that is either on or eligible for inclusion in the CRHR or a local historic register; or (2) the lead agency (in this case, DWR), at its discretion and supported by substantial evidence, chooses to treat the resource as a TCR. Additionally, a cultural landscape may also qualify as a TCR if it meets the criteria to be eligible for inclusion in the CRHR and is geographically defined in terms of the size and scope of the landscape. Other historical resources (as described in California PRC 21084.1), a unique archaeological resource (as defined in California PRC 21083.2[g]), or non-unique archaeological resources (as described in California PRC 21083.2[h]) may also be TCRs if they conform to the criteria to be eligible for inclusion in the CRHR.

AB 52 provides that a project with an effect that may cause a substantial adverse change in the significance of a TCR may have a significant effect on the environment. AB 52 requires the lead agency (in this case, the City) to begin consultation with California Native American Tribes that are traditionally and culturally affiliated with the geographic area of the project if the tribe requests the lead agency, in writing, to be informed by the lead agency through formal notification of projects that are proposed in that geographic area and the tribe subsequently requests consultation. California PRC Section 21084.3 states that "public agencies shall, when feasible, avoid damaging effects to any tribal cultural resource."

AB 52 explicitly recognizes "that California Native American tribes may have expertise with regard to their tribal history and practices, which concern the tribal cultural resources with which they are traditionally and culturally affiliated. Because the California Environmental Quality Act calls for a sufficient degree of analysis, tribal knowledge about the land and tribal cultural resources at issue should be included in environmental assessments for projects that may have a significant impact on those resources." AB 52 therefore includes a requirement for meaningful consultation with culturally and geographically affiliated Tribes to identify TCRs and to develop avoidance or mitigation as appropriate.

Discovery of Human Remains

Section 7050.5 of the California Health and Safety Code (CHSC) states the following regarding the discovery of human remains:

a. Every person who knowingly mutilates or disinters, wantonly disturbs, or willfully removes any human remains in or from any location other than a dedicated cemetery without authority of law is guilty of a misdemeanor, except as provided in Section 5097.99 of the [PRC]. The provisions of this subdivision shall not apply to any person carrying out an agreement developed pursuant to subdivision (l) of Section 5097.94 of the [PRC] or to any person authorized to implement Section 5097.98 of the [PRC].

b. In the event of discovery or recognition of any human remains in any location other than a dedicated cemetery, there shall be no further excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent remains until the coroner of the county in which the human remains are discovered has determined, in accordance with Chapter 10 (commencing with Section 27460) of Part 3 of Division 2 of Title 3 of the California Government Code [CGC], that the remains are not subject to the provisions of Section 27491 of the CGC or any other related provisions of law concerning investigation of the circumstances, manner and cause of any death, and the recommendations concerning the treatment and disposition of the human remains have been made to the person responsible for the excavation, or to his or her authorized representative, in the manner provided in Section 5097.98 of the PRC. The coroner shall make his or her determination within two working days from the time the person responsible for the excavation, or his or her authorized representative, notifies the coroner of the discovery or recognition of the human remains.

c. If the coroner determines that the remains are not subject to his or her authority and if the coroner recognizes the human remains to be those of a Native American or has reason to believe that they are those of a Native American, he or she shall contact, by telephone within 24 hours, the Native American Heritage Commission (NAHC) (CHSC Section 7050.5).

d. Of particular note to cultural resources is subsection (c), which requires the coroner to contact the NAHC within 24 hours if discovered human remains are determined to be Native American in origin. After notification, NAHC will follow the procedures outlined in PRC Section 5097.98, which include notification of most likely descendants (MLDs), if possible, and recommendations for treatment of the remains. The MLD will have 24 hours after notification by the NAHC to make their recommendation (PRC Section 5097.98). In addition, knowing or willful possession of Native American human remains or artifacts taken from a grave or cairn is a felony under State law (PRC Section 5097.99).

Local Plans, Policies, Regulations and Ordinances

City of Sacramento 2035 General Plan (2015)

The following goal and policies from the Historic and Cultural Resources (HCR) Element, related to cultural resources are relevant to the proposed project.

GOAL HCR 2.1: Identification and Preservation of Historic and Cultural Resources. Identify and preserve the City's historic and cultural resources to enrich our sense of place and our understanding of the city's prehistory and history.

- **Policy HCR 2.1.1 Identification.** The City shall identify historic and cultural resources including individual properties, districts, and sites (e.g., archaeological sites) to provide adequate protection of these resources.

- **Policy HCR 2.1.2 Applicable Laws and Regulations.** The City shall ensure compliance with City, State, and Federal historic preservation laws, regulations, and codes to protect and assist in the preservation of historic and archaeological resources, including the use of the California Historical Building Code as applicable. Unless listed in the Sacramento, California, or National registers, the City shall require discretionary Projects involving resources 50 years and older to evaluate their eligibility for inclusion on the California or Sacramento registers for compliance with the California Environmental Quality Act.

- **Policy HCR 2.1.3 Consultation.** The City shall consult with appropriate organizations and individuals (e.g., California Historical Resources Information System (CHRIS) Information Centers, the NAHC, the CA Office of Planning and Research (OPR) "Tribal Consultation Guidelines", etc.,) and shall establish a public outreach policy to minimize potential impacts to historic and cultural resources.

- **Policy HCR 2.1.10 Early Consultation.** The City shall minimize potential impacts to historic and cultural resources by consulting with property owners, land developers, and the building industry early in the development review process.

- **Policy HCR 2.1.11 Compatibility with Historic Context.** The City shall review proposed new development, alterations, and rehabilitation/remodels for compatibility with the surrounding historic context. The City shall pay special attention to the scale, massing, and relationship of proposed new development to surrounding historic resources.

- **Policy HCR 2.1.13 Historic Surveys and Context Statements.** Where historic resource surveys may no longer be valid, or for areas that have not been surveyed, the City shall seek funding to

prepare new historic context surveys. In these surveys, the potential eligibility of all properties 45 years and older for listing in National, California, or Sacramento registers shall be evaluated.

- **Policy HCR 2.1.16 Archaeological and Cultural Resources.** The City shall develop or ensure compliance with protocols that protect or mitigate impacts to archaeological and cultural resources including prehistoric resources.

Historic Preservation Zoning Ordinance

The City of Sacramento's historic preservation program began in 1975 with the enactment of the City's first Historic Preservation Ordinance. The current Historic Preservation Ordinance (No. 2006-063) was enacted in October 2006. The purpose of the Historic Preservation Ordinance is to do the following: identify, protect, and encourage the preservation of significant resources; maintain an inventory and ensure the preservation of these resources; encourage maintenance and rehabilitation of the resources; encourage retention, preservation, and re-use of the resources; safeguard city resources; provide consistency with state and federal regulations; protect and enhance the city's attraction to tourists; foster civic pride in the city's resources; and encourage new development to be aesthetically compatible.

3.3.4 Environmental Impacts and Mitigation Measures

Methods

The studies for this proposed project were carried out in a manner consistent with Caltrans' regulatory responsibilities under Section 106 of the National Historic Preservation Act (36 CFR Part 800) and pursuant to the January 2014 *First Amended Programmatic Agreement among the Federal Highway Administration, the Advisory Council on Historic Preservation, the California State Historic Preservation Officer, and the California Department of Transportation Regarding Compliance with Section 106 of the National Historic Preservation Act* (Section 106 PA), as well as under Public Resources Code 5024 and pursuant to the January 2015 *Memorandum of Understanding Between the California Department of Transportation and the California State Historic Preservation Office Regarding Compliance with Public Resources Code Section 5024 and Governor's Executive Order W-26-92* (5024 MOU) as applicable.

Records Search

GEI Consultants, Inc. (GEI) conducted a records search on July 27, 2017, at the North Central Information Center in Sacramento, California. The records search area included the proposed project area and a 1-mile buffer zone. The records search revealed five previously identified cultural resources within the project area. These include four railway crossings and Levee Unit 118, Part 1 (also known as the American River South Levee). No archaeological sites were identified in the APE as a result of the records search.

Referenced documents for the records search included base maps, reports from previous projects, Department of Parks and Recreation (DPR) site records, and California Historic Landmarks documentation. The records searched included the following sources:

- NRHP-listed properties (National Park Service [NPS] 1996) and updates;

- California Inventory of Historic Resources (California Department of Parks and Recreation 1976 and updates);

- California Points of Historical Interest (California Department of Parks and Recreation 1992 and updates);
- Caltrans Bridge Inventory (Caltrans 1989, 2000, and 2004);
- Historic Maps;
- California Historical Landmarks (Office of Historic Preservation 1996 and updates);
- Directory of Properties in the Historic Resources Inventory (Office of Historic Preservation 2006);

GEI conducted additional archival research at the California Railroad Museum's Library and Archives located at the California Statewide Museum Collection Center, California History Room of the California State Library, California Digital Newspaper Collection, the online Current and Historical Collection of *The Sacramento Bee* available at the Sacramento Public Library's website and GEI's cultural resources library.

Field Survey

An intensive archaeological pedestrian survey of the APE was conducted on December 7 and 14, 2017, and January 19, 2018, by two GEI archaeologists, led in the field by an archaeologist who meets the Secretary of the Interior's Professional Qualification Standards in Archaeology. The survey was conducted to intensive standards (pedestrian transects spaced no more than 15 meters apart). A Trimble 7 Series GPS unit capable of sub-meter accuracy was carried to record the location of any identified resources. Aerial maps were used in the field to ensure adequate inspection of all portions of the proposed project area.

Two areas within the APE were not surveyed. When surveying the southwest corner of the preferred route in Segment 2 on December 07, 2017, a solid fence was encountered at the southwest corner. When approached from the north on December 14, 2017, a locked gate was encountered. Also, on December 14, 2017, the gate for the staging area in Segment 1 was locked, and the area was inaccessible. As the surface soil in both areas is capped fill, it was determined in consultation with Caltrans that survey would not be necessary.

Testing

A Limited Subsurface Testing Plan was implemented to test for buried resources in areas of significant ground disturbance. Because ground-disturbing activities in project segments 2, 5, and 6 will involve only a ~12-inch degrade of the existing bench, and in segment 4, only a ~12-inch degrade of the levee crown, no subsurface testing was recommended. Trail construction in segments 1 and 3, will also only require a ~12 inch degrade; however, a protective structure will be constructed in each of these segments, adjacent to the Union Pacific Railroad Bridges. The protective structures will be stabilized with posts set in footings up to 8 feet deep. Construction of segment 1 will be in a later phase of the project. Limited subsurface testing was recommended and completed in segment 3. Subsurface testing in segment 3 was completed on August 31, 2018 and included digging six 4-inch diameter hand-augered holes, ranging between 73 and 190 cm deep. Depth was limited by the presence of river rocks. Results for all augers were negative for buried archaeological resources.

Native American Consultation

Data Sources/Methodology

Under PRC section 21080.3.1 and 21082.3, the City must consult with tribes traditionally and culturally affiliated with the project area that have requested formal notification and responded with a request for consultation. The parties must consult in good faith. Consultation is deemed concluded when the parties agree to measures to mitigate or avoid a significant effect on a tribal cultural resource when one is present or when a party concludes that mutual agreement cannot be reached. Mitigation measures agreed on during the consultation process must be recommended for inclusion in the environmental document.

On January 23, 2018, a search of the Sacred Lands Database was requested from the Native American Heritage Commission (NAHC). A response was received on January 31, 2018, indicating that Sacred Sites have been identified in the general vicinity (within the USGS quad, township, ranges, and sections of the project) but specific locations were not provided. Two tribes were listed as points of contact regarding these sites: the Ione Band of Miwok Indians (Ione), and United Auburn Indian Community (UAIC). Three additional federally listed tribes were indicated for consultation: Buena Vista Rancheria of Me-Wuk Indians (Buena Vista), Shingle Springs Band of Miwok Indians (Shingle Springs), and Wilton Rancheria (Wilton).

Native American Consultation Under CEQA

Two tribes have previously requested to be notified regarding projects within their traditional geographic area of cultural affiliation, in accordance with Public Resources Code Section 21080.3.1: UAIC and Wilton Rancheria. Consultation under Public Resources Code Section 21080.3.1 with UAIC is on-going. **Table 3.3-1**, below, provides a description of Native American consultation activities completed to date.

Table 3.3-1. Native American Contact Efforts

Date(s) Contacted	Method of Contact	Response
February 2, 2018	Letter	The City sent letters to UAIC and Wilton Rancheria notifying these Tribes about the proposed project and requesting a response within 30 days if consultation concerning the proposed project is requested. No response was received by the City from Wilton Rancheria.
February 15, 2018	Letter/Email	UAIC sent a letter to the City responding to the City's February 2, 2018 letter, indicating that UAIC would like to consult with the City under Assembly Bill 52. On the same date UAIC sent an email to the City requesting consultation, requesting a meeting and information about the proposed project, and providing recommended mitigation measures for potential impacts to tribal cultural resources.
March 22, 2018	In Person Meeting	The City and its cultural resources consultant, GEI met with a UAIC representative to discuss the proposed project. UAIC requested archaeological testing between site CA-Sac-40 and the proposed project area (the previously recorded site is outside the project area but in the vicinity); requested a copy of the cultural resource records search; and requested to have paid Native American monitors during any archaeological testing.
March 26, 2018	Email	UAIC sent an email to the City saying that upon review of their files, that 60% of the project area is what UAIC considers to be significantly sensitive.

Table 3.3-1. Native American Contact Efforts

Date(s) Contacted	Method of Contact	Response
March 30, 2018	Letter/Mailing	GEI sent UAIC a copy of the cultural resource records search, as requested by UAIC on March 22, 2018.
April through August 2018	Telephone/Email	GEI had intermittent contact with UAIC to coordinate UAIC monitoring of future archaeological augering near site CA-Sac-40
August 31, 2018	Field Visit	UAIC conducted Native American monitoring of archaeological augering between site CA-Sac-40 and the proposed project. Results for all augers were negative for buried archaeological resources.

Native American Consultation Under the NHPA, Section 106

Using the list of Native American contacts provided by the NAHC On January 31, 2018, GEI, on behalf of Caltrans, sent letters to the following Native American Tribes, groups and individuals on February 8, 2018.

- Crystal Martinez-Alire, Chairperson, Ione Band of Miwok Indians
- Randy Yonemura, Cultural Committee Chair, Ione Band of Miwok Indians
- Gene Whitehouse, Chairperson, United Auburn Indian Community of the Auburn Rancheria (UAIC)
- Rhonda Morningstar Pope, Chairperson, Buena Vista Rancheria of Me-Wuk Indians
- Nicholas Fonseca, Chairperson, Shingle Springs Band of Miwok Indians
- Raymond Hitchcock, Chairperson, Wilton Rancheria

On February 14, 2014, Antonio Ruiz, Cultural Resources Officer for the Department of Environmental Resources of the Wilton Rancheria, responded via email to GEI's letter. Ruiz determined that the project is within the Wilton Rancheria Tribe's ancestral territory. They requested copies of any cultural resources assessments or other assessments that have been completed on all or part of the project's APE. This includes the records search results, archaeological inventory survey, results of the Sacred Lands File search, ethnographic studies, and geotechnical reports. The response also included the Tribe's fees for reviewing these materials and comparing it with their own information and databases. Cherilyn Neider, Administrative Assistant for the Department of Tribal Historic Preservation of UAIC, responded on March 13, 2018, also by email. She requested copies of any existing cultural resource assessments and records search results, GIS SHP files for the project APE, and a meeting to be set up between the City of Sacramento, GEI, and Caltrans.

My Randy Yonemura of Ione Band of Miwok Indians responded to the GEI letter by telephone and requested a meeting. A Section 106 consultation meeting was conducted with Mr. Yonemura on May 18, 2018 and Mr. Yonemura also participated in a field review of the project area with GEI archaeologists. In late July 2018 GEI was informed that there was a new chairwoman of the Ione Band of Miwok Indians, who should be contacted for consultation. A letter was sent to Sara Dutschke Setshwaelo on August 3, 2018, with follow-up by email on August 15, 2018. She responded on August 15, 2018 and requested a phone meeting. This phone meeting occurred on August 17, 2018, between Sara, and Karen and Barry from GEI. During the call, Sara Dutschke Setshwaelo explained that Randy Yonemura no longer represented Ione and did not pass along any information about this project to the Tribe. She requested information about the project and notes from previous meetings and surveys; these were sent to her on August 17 and 20, 2018, along with the subsurface testing plan. No additional meeting with the City was requested, nor were there any comments about the meeting minutes or survey notes, or any request for additional site visits or surveys.

Section 106 consultation meetings were also held with UAIC representatives on March 22, 2018 and on May 21, 2018. UAIC identified areas considered to be sensitive by UAIC and requested archaeological testing in the APE near site CA-Sac-40 and Native American monitoring during that testing. UAIC conducted Native American monitoring of the archaeological monitoring on August 31, 2018.

On July 1, 2019 GEI, on behalf of Caltrans, sent letters to the following Native American Tribes, groups and individuals, providing updated project design information including a change in the APE and requesting information on cultural resources important to Native Americans.

- Ione Band of Miwok Indians
- United Auburn Indian Community of the Auburn Rancheria (UAIC)
- Buena Vista Rancheria of Me-Wuk Indians
- Shingle Springs Band of Miwok Indians
- Wilton Rancheria
- Colfax-Todds Valley Consolidated Tribe
- Nashville-Eldorado Miwok
- Tsi Akim Maidu

To date, no responses to the July 1, 2019 letter have been received.

Historical Society Consultation

On January 16, 2018, GEI sent letters to Preservation Sacramento and Sacramento County Historical Society asking for information on known cultural resources in the project area. GEI sent follow-up emails to each organization on May 31, 2018. As of the date of this document, GEI has not received a response from either organization.

Archaeological Results

As a result of background investigations, including a records search, pedestrian survey, and limited subsurface testing, no archaeological resources were found within the proposed project APE.

Built Environment Results

One historic-era (more than 45 years old) resource, Levee Unit 118 Part 1, is in the project area. The levee unit is assumed eligible for listing in the National Register of Historic Places for the purposes of this project and is therefore also considered a historical resource for the purposes of CEQA.

Levee Unit 118 Part 1 (American River South Levee) is considered significant under National Register of Historic Places Criterion A within the context of flood management and for its association with the SRFCP. The period of significance begins in 1917, when U.S. Congress approved the Flood Control Act, marking the first comprehensive plan for flood management in California, and ends in 1968.

Tribal Cultural Resources Results

Based on consultation with the Native American Heritage Commission, consultation with Native American Tribes in accordance with Public Resources Code Section 21080.3.1, consultation with Native American Tribes in accordance with Section 106 of the NHPA, and archaeological testing conducted; portions of the proposed project area may be sensitive for the presence of tribal cultural resources, but no tribal cultural resources as defined in Public Resources Code 21074 have been identified in or adjacent to the proposed project area.

Thresholds of Significance

The significance criteria used to evaluate the project impacts are based on Appendix G of the State CEQA Guidelines, thresholds of significance adopted by the City in applicable general plans and previous environmental documents, and professional judgement. A significant impact related to cultural resources would occur if the proposed project would:

- cause a substantial adverse change in the significance of a historical resource as defined in Section 15064.5;
- cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5;
- disturb any human remains, including those interred outside of formal cemeteries; or
- result in a substantially adverse change in the significance of a TCR (as defined in California PRC Section 21074 and above) when compared against existing conditions.

Impact Analysis

Impact CTR-1: Damage to or Destruction of Built Environment Historic Properties

The proposed project would be constructed to ensure the levee retains its important aspects of integrity (location, materials, design, setting, feeling and association) that allow it to convey its historical significance as an important component of the SRFCP and flood management efforts in Sacramento. [Less than Significant]

Levee Unit 118 Part 1 (American River South Levee) is considered significant under National Register of Historic Places Criterion A within the context of flood management and for its association with the SRFCP. Levee Unit 118 Part 1 is also considered to be a historical resource for the purposes of CEQA.

As designed, the proposed project would be located primarily along the toe of the levee, with Segment 4 and portions of Segments 1 and 2 along the levee crown. The proposed trail design does not include any visual features or uses that would alter the character-defining features of the levee (i.e. its compacted earth, slope, crown). The levee would retain its important aspects of integrity (location, materials, design, setting, feeling and association) that allow it to convey its historical significance as an important component of the SRFCP and flood management efforts in Sacramento. Therefore, the impacts to Levee Unit 118 Part 1 (American River South Levee) are considered **less than significant**, with no mitigation required.

Mitigation Measure: No mitigation is required.

Impact CTR-2: Potential Damage to or Destruction of Previously Undiscovered Archaeological Sites or Tribal Cultural Resources

Construction-related activities resulting from the proposed project may affect previously unknown buried cultural resources or Tribal Cultural Resources. Implementation of avoidance and preservation measures included in Mitigation

Measures CTR-1 and CTR-2 would reduce this impact to less than significant. [Less than Significant With Mitigation]

Efforts to identify archaeological resources and Tribal Cultural Resources included a records search and research, extensive Native American consultation, a pedestrian field survey with Native American participation, and archaeological testing. Based on these investigations, no archaeological resources or Tribal Cultural Resources have been identified within the project area. However, both ethnohistoric accounts and previously recorded sites nearby suggest that the project area is potentially sensitive for buried archaeological resources and Tribal Cultural Resources and there remains the possibility that previously unknown archaeological resources or Tribal Cultural Resources could be discovered during project construction and inadvertently damaged, resulting in a **potentially significant** impact. Implementation of **Mitigation Measures CTR-1** and **CTR-2** (described below) would reduce the potentially significant impact on any previously undiscovered archaeological resources and Tribal Cultural Resources to a less-than-significant level because the resources would be avoided and preserved in place or assessed and treated in accordance with appropriate professional standards. Therefore, this impact would be **less than significant** with the incorporation of **Mitigation Measures CTR-1** and **CTR-2**.

Mitigation Measures

Mitigation Measure CTR-1: Conduct Cultural Resources and Tribal Cultural Resources Sensitivity and Awareness Training Program Prior to Ground-Disturbing Activities

The City shall require the contractor to provide a cultural resources and tribal cultural resources sensitivity and awareness training program (WEAP) for all personnel involved in project construction, including field consultants and construction workers. The WEAP will be developed in coordination with an archaeologist meeting the Secretary of the Interior's Professional Qualifications Standards for Archaeology, as well as culturally affiliated Native American tribes. The City may invite Native American representatives from interested culturally affiliated Native American tribes to participate. The WEAP shall be conducted before any project-related construction activities begin at the project site. The WEAP will include relevant information regarding sensitive cultural resources and tribal cultural resources, including applicable regulations, protocols for avoidance, and consequences of violating State laws and regulations.

The WEAP will also describe appropriate avoidance and impact minimization measures for cultural resources and tribal cultural resources that could be located at the project site and will outline what to do and who to contact if any potential cultural resources or tribal cultural resources are encountered. The WEAP will emphasize the requirement for confidentiality and culturally appropriate treatment of any discovery of significance to Native Americans and will discuss appropriate behaviors and responsive actions, consistent with Native American tribal values.

Responsibility: City of Sacramento / Construction Contractor

Timing: Before and During Construction Activities

Mitigation Measure CTR-2: Implement Avoidance, Minimization, and Preservation Measures Should Cultural or Tribal Cultural Resources Be Discovered During Construction

If cultural resources or tribal cultural resources (such as Native American archaeological materials, sacred objects, unusual amounts of bone or shell, artifacts, or human remains and associated objects and materials) are encountered at the project site during construction, work shall be suspended within 100 feet of the find (based on the apparent distribution of cultural materials), and the construction contractor shall immediately notify the project's City representative. Avoidance and preservation in place is the preferred manner of mitigating impacts to cultural resources or tribal cultural resources. This will be accomplished, if feasible, by several alternative means, including:

- Planning construction to avoid cultural resources or tribal cultural resources, archaeological sites and/or other cultural resources; incorporating cultural resources within parks, green-space or other open space; covering archaeological resources; deeding a cultural resource to a permanent conservation easement; or other preservation and protection methods agreeable to consulting parties and regulatory authorities with jurisdiction over the activity.

- Recommendations for avoidance of cultural resources or tribal cultural resources will be reviewed by the City representative, interested culturally affiliated Native American tribes and other appropriate agencies, considering factors such as costs, logistics, feasibility, design, technology and social, cultural and environmental considerations, and the extent to which avoidance is consistent with project objectives. Avoidance and design alternatives may include realignment within the project site to avoid cultural resources or tribal cultural resources, modification of the design to eliminate or reduce impacts to tribal cultural resources or modification or realignment to avoid highly significant features within a cultural resource or tribal cultural resource.

- Native American representatives from interested culturally affiliated Native American tribes will be invited to review and comment on these analyses and shall have the opportunity to meet with the City representative and its representatives who have technical expertise to identify and recommend feasible avoidance and design alternatives, so that appropriate and feasible avoidance and design alternatives can be identified.

- If the discovered cultural resource or tribal cultural resource can be avoided, the construction contractor(s), will install protective fencing outside the site boundary, including a 100-foot buffer area, before construction restarts. The boundary of a tribal cultural resource will be determined in consultation with interested culturally affiliated Native American tribes and tribes will be invited to monitor the installation of fencing. Use of temporary and permanent forms of protective fencing will be determined in consultation with Native American representatives from interested culturally affiliated Native American tribes.

- The construction contractor(s) will maintain the protective fencing throughout construction to avoid the site during all remaining phases of construction. The area will be demarcated as an "Environmentally Sensitive Area".

If a cultural resource or tribal cultural resource cannot be avoided, the following performance standard shall be met prior to continuance of construction and associated activities that may result in damage to or destruction of tribal cultural resources:

- Each resource will be evaluated for California Register of Historical Resources- (CRHR) eligibility through application of established eligibility criteria (California Code of Regulations 15064.636), in consultation with consulting Native American Tribes, as applicable.

If a cultural resource or tribal cultural resource is determined to be eligible for listing in the CRHR, the City will avoid damaging effects to the resource in accordance with California PRC Section 21084.3, if feasible. The City shall coordinate the investigation of the find with a qualified archaeologist (meeting the Secretary of the Interior's Professional Qualifications Standards for Archeology) approved by the City and with interested culturally affiliated Native American tribes that respond to the City's invitation. As part of the site investigation and resource assessment, the City and the archaeologist shall consult with interested culturally affiliated Native American tribes to assess the significance of the find, make recommendations for further evaluation and treatment as necessary and provide proper management recommendations should potential impacts to the resources be determined by the City to be significant. A written report detailing the site assessment, coordination activities, and management recommendations shall be provided to the City representative by the qualified archaeologist. These recommendations will be documented in the project record. For any recommendations made by interested culturally affiliated Native American tribes that are not implemented, a justification for why the recommendation was not followed will be provided in the project record.

Native American representatives from interested culturally affiliated Native American Tribes and the City representative will also consult to develop measures for long-term management of any discovered Native American cultural resources or tribal cultural resources. Consultation will be limited to actions consistent with the jurisdiction of the City and considering ownership of the subject property. To the extent that the City has jurisdiction, routine operation and maintenance within tribal cultural resources retaining tribal cultural integrity shall be consistent with the avoidance and minimization standards identified in this mitigation measure.

If the City determines that the project may cause a significant impact to a cultural resource or tribal cultural resource, and measures are not otherwise identified in the consultation process, the following are examples of mitigation capable of avoiding or substantially lessening potential significant impacts to a tribal cultural resource or alternatives that would avoid significant impacts to the resource. These measures may be considered to avoid or minimize significant adverse impacts and constitute the standard by which an impact conclusion of less-than significant may be reached:

Avoid and preserve resources in place, including, but not limited to, planning construction to avoid the resources and protect the cultural and natural context, or planning greenspace, parks, or other open space, to incorporate the resources with culturally appropriate protection and management criteria.

- Treat the resource with culturally appropriate dignity considering Tribal cultural values and meaning of the resource, including, but not limited to, the following:
    - Protect the cultural character and integrity of the resource.
    - Protect the traditional use of the resource.
    - Protect the confidentiality of the resource.
    - Establish permanent conservation easements or other interests in real property, with culturally appropriate management criteria for the purposes of preserving or using the resources or places.
    - Protect the resource.

Responsibility: City of Sacramento / Construction Contractor

Timing: During Construction Activities

Impact CTR-3: Potential Damage to or Destruction of Human Remains During Construction

While not anticipated, human remains may be inadvertently discovered during construction-related activities. Implementation of performance standards in accordance with the California Health and Safety Code included in Mitigation Measure 3.3-3 would reduce this impact to less than significant. [Less than Significant With Mitigation]

No human remains have been discovered in the project area and it is not anticipated that human remains, including those interred outside of dedicated cemeteries, would be discovered during ground disturbance activities with the proposed project. However, should human remains, including those interred outside of formal cemeteries, be discovered during construction activities, the human remains could be inadvertently damaged. Therefore, this impact would be potentially significant. Implementation of **Mitigation Measure CTR-3** would reduce the potentially significant impact on any previously undiscovered human remains to a **less than significant** level because the California Health and Safety Code (HSC) would be adhered to in the event human remains are discovered; non-Native American human remains would be treated in accordance with HSC Section 7000 (et seq.); and Native American human remains would be avoided and preserved in place or assessed and treated in accordance with appropriate professional standards in consultation with the Most Likely Descendant (MLD). Therefore, this impact would be **less than significant** with the incorporation of **Mitigation Measure CTR-3**.

Mitigation Measures

Mitigation Measure CTR-3: Implement Post Discovery Procedures in the Event of the Inadvertent Discovery of Human Remains

If an inadvertent discovery of human remains is made at any time during project-related construction activities or project planning, the following performance standards shall be met prior to implementing or continuing actions such as construction, which may result in damage to or destruction of human remains. In accordance with the California Health and Safety Code

(HSC), if human remains are encountered during ground-disturbing activities, the City shall immediately halt potentially damaging excavation in the area of the remains and notify the Sacramento County Coroner and a professional archaeologist to determine the nature of the remains. The Coroner is required to examine all discoveries of human remains within 48 hours of receiving notice of a discovery on private or State lands (HSC Section 7050.5[b]).

If the human remains are of historic age and are determined to be not of Native American origin, the City will follow the provisions of the HSC Section 7000 (et seq.) regarding the disinterment and removal of non-Native American human remains.

If the Coroner determines that the remains are those of a Native American, he or she must contact the Native American Heritage Commission (NAHC) by phone within 24 hours of making that determination (HSC Section 7050[c]). After the Coroner's findings have been made, the archaeologist and the NAHC-designated Most Likely Descendant (MLD), in consultation with the landowner, shall determine the ultimate treatment and disposition of the remains. The responsibilities of the City for acting upon notification of a discovery of Native American human remains are identified in California PRC Section 5097.9 et seq.

Responsibility: City of Sacramento / Construction Contractor

Timing: During Construction Activities

Residual Significant Impacts

Mitigation measures that would reduce potential impacts to cultural resources and Tribal Cultural Resources to a less-than-significant level have been identified and therefore there would be no residual significant impacts to cultural resources or Tribal Cultural Resources.

3.4 Geology and Soils

3.4.1 Introduction

This section provides an overview of the existing geologic and soils conditions within the project study area, identifies the regulatory framework, and provides analysis of the potential geology and soils impacts that would result from implementation of the proposed project.

As a result of circulation of the IS/MND and during the proposed project's NOP scoping period, the following comments were received regarding:

- geotechnical issues identified during construction of Phase I of the Two River Trail, specifically regarding the suitability of material used during historic levee construction,
- the deferral of preparation of a final geotechnical investigation until after Project approval,
- potential erosion at the project site.

Geotechnical impacts are described below in **Impact GEO-1** "Cause Adverse Effects Related to Earthquake Fault Rupture, Seismic Ground Shaking, Seismic-Related Ground Failure (including landslide, subsidence, or liquefaction, or Be Located On Expansive Soils". The effects of project construction and operation on surface erosion and siltation potential to affect water quality is addressed in **Section 3.6**, "**Hydrology, Water Quality, and Drainage**".

3.4.2 Environmental Setting

Regional Geologic Context

The project area lies within the Sacramento Valley, which is part of the Great Valley Geomorphic Province. In the project area, Holocene (i.e., 11,700 years B.P. [Present Day]) stream channel deposits lie atop the thick sequence of sedimentary rock units that form the deeply buried bedrock units in the mid-basin areas of the valley (CGS 1965). The youngest geomorphic features in the project area are low floodplains along the American River. These major drainage ways were originally confined within broad natural levees sloping away from the rivers or streams. The natural levees formed through the deposition of coarser materials that settled out of suspension nearest the rivers and streams, forming the natural levees and sand bars in the vicinity of the river channel. The finer material was carried in suspension farther from the rivers or streams and settled out in quiet water areas such as swales, abandoned meander channels, and lakes. However, because the streams have meandered and reworked the previously deposited sediments, extreme variations in material types may be found over a limited distance or depth. Additionally, portions of the project area have been substantially altered due to levee construction (Segments 3 and 4) while other portions of the project area are subject to some natural geomorphic processes (portions of Segment 5 and 6).

The area is characterized by Holocene-age stream channel deposits and is thus not considered to be paleontologically sensitive (Ayres 1997).

Seismicity and Other Hazards

Within the City of Sacramento and the Sacramento region, there are no known active faults. The Sacramento Valley has historically experienced low levels of seismic activity and does not contain any Alquist-Priolo Earthquake Fault Zones (CGS 2018). Numerous earthquakes of magnitude (M) 5.0 or

greater have occurred on regional faults in the Coast Ranges, approximately 38–55 miles west of downtown Sacramento. The nearest known active (Holocene or Historic) fault trace to the project study area is the Dunnigan Hills fault, approximately 25 miles northwest of downtown Sacramento (Jennings and Bryant 2010).

According to the California Geological Survey, the project area is not mapped in an area where strong seismic ground shaking, liquefaction, landslides, or seiche are likely to occur (CGS 2019).

Soils

According to the Natural Resources Conservation Service (NRCS) Web Soil Survey five soil map units are present within the project area (**Table 3.4-1**) (NRCS 1993, 2018). These soils exhibit a low shrink-swell potential, except for the deepest layers of the Columbia-Urban land complex, which occurs along a small portion of the westernmost end of Segment 4.

Table 3.4-1. Soils within the Project Area

Soil Series Name and ID	Parent Material	Shrink-Swell Potential
117, Columbia sandy loam, drained, 0 to 2 percent slopes	Alluvium	Low
124, Columbia-Urban land complex, drained, 0 to 2 percent slopes	Alluvium	Low-High, depending on depth.
136, Dumps	N/A	N/A
203, Riverwash	Gravelly alluvium	N/A
205, Rossmoor-Urban land complex, 0 to 2 percent slopes	Alluvium	Low

Source: NRCS 1993, 2018

3.4.3 Regulatory Setting

Federal Plans, Policies, Regulations and Laws

Uniform Building Code Chapter 18, Division 1 Section 1803.2 and 1804.5

Uniform Building Code Chapter 18, Division 1 Section 1803.2 and 1804.5 The Uniform Building Code (UBC) 1994, Chapter 18. Division 1 Section 1803.2 mandates that special foundation design consideration be employed if the soil Expansion Index is 20, or greater in accordance with information shown in **Figure3.4-1** below. The methodology and scope for a geotechnical investigation are described in UBC Section 1803, and requires an assessment of a variety of factors, such as slope stability, soil strength, adequacy of load-bearing soils, the presence of compressible or expansive soils, and the potential for liquefaction. The required content of the geotechnical report includes recommendations for foundation type and design criteria. These recommendations can include foundation design provisions that are intended to mitigate the effects of expansive soils, liquefaction, and differential settlement. In general, mitigation can be accomplished through a combination of ground modification techniques (i.e., stone columns, reinforcing nail and anchors, deep soil mixing, etc.), selection of an appropriate foundation type and configuration, and use of appropriate building/foundation structural systems. Section 1804.5 Excavation, Grading, and Fill require the preparation of a geotechnical report where a building will be constructed on compacted fill.

Figure 3.4-1. Uniform Building Code Expansive Soils Classification

TABLE 18-I-B—CLASSIFICATION OF EXPANSIVE SOIL

EXPANSION INDEX	POTENTIAL EXPANSION
0-20	Very low
21-50	Low
51-90	Medium
91-130	High
Above 130	Very high

The International Building Code (IBC) replaced earlier regional building codes (including the Uniform Building Code) in 2000 and established consistent construction guidelines for the nation. In 2006, the IBC was incorporated into the 2007 California Building Code (CBC) (see State regulations below in Section 3.5.1.2), and currently applies to all structures being constructed in California. The national model codes are therefore incorporated by reference into the building codes of local municipalities. The CBC includes building design and construction criteria that take into consideration the State's seismic conditions.

Clean Water Act

The Clean Water Act (CWA, 33 USC 1344) focuses primarily on waters of the United States and is more thoroughly described in Section 3.3 (Biological Resources). However, the CWA focuses on sediment control in two aspects. First, the United States Army Corp of Engineers (USACE) administers Section 404, which regulates the discharge of fill into waters of the United States. Secondly, the State Water Resources Control Board (SWRCB) administers Section 401 which applies to stormwater discharges, where erosion control is an integral part of achieving permit compliance.

Earthquake Hazards Reduction Act of 1977

The Earthquake Hazards Reduction Act of 1977 established the National Earthquake Hazards Reduction Program (NEHRP) "to reduce the risks of life and property from future earthquakes in the United States through the establishment and maintenance of an effective earthquake hazards reduction program." The four principal goals of the NEHRP are:

- Develop effective practices and policies for earthquake loss reduction and accelerate their implementation;
- Improve techniques for reducing earthquake vulnerabilities of facilities and systems;
- Improve earthquake hazards identification and risk assessment methods, and their use; and
- Improve the understanding of earthquakes and their effects.

Many of the tools used to assess, as well as mitigate, earthquake hazards and impacts were developed under the NEHRP.

State Plans, Policies, Regulations, and Laws

Alquist-Priolo Fault Zoning Act

The Alquist-Priolo Fault Zoning Act (AP Act), administered by the California Geological Survey (CGS), provides a mechanism for reducing losses from surface fault ruptures on a statewide basis. The

AP Act requires the mapping of zones around active faults in California, in an effort to prohibit the construction of structures for human occupancy on active faults and minimize damage due to rupture of a fault. Active faults are those that have ruptured within the past 11,000 years. Where the AP Act identifies an Earthquake Fault Zone, a geologic investigation and report is necessary to prevent siting of buildings on active fault traces.

Seismic Hazard Mapping Act

The Seismic Hazard Mapping Act governs the responsibilities of city, county, and state agencies in identifying and mapping seismic hazard zones and mitigation seismic hazards to protect public health and safety in accordance with the provision of the California Public Resources Code, Division 2. Geology, Mines and Mining, Seismic Hazards Mapping – Chapter 7.8. The publication delineates zones where earthquakes could cause hazardous ground shaking and ground failure, including liquefaction and landslides. Currently, zones near the San Andreas Fault in the urban centers of the Greater San Francisco Bay Area and Los Angeles have been delineated. Local cities and counties within these zones regulate construction in order to minimize loss associated with these seismic hazards.

California Standard Building Code

Title 24, Part 2 of the California Building Standards Code of the California Code of Regulations contains specific requirements for construction with respect to earthquakes and seismic hazards intended to be protective of public health. Chapter 16 Section 1613 Earthquake Loads of the 2016 California Building Code (effective January 1, 2017) deals with Structural Design and requires that every structure, and portion thereof, including nonstructural components that are permanently attached to structures and their supports and attachments, shall be designed and constructed to resist the effects of earthquake motions.

Regional and Local Plans, Policies, Regulations, and Ordinances

The following goal and policies from the Environmental Constraints (EC) Element and the Environmental Resources (ER) Element related to geologic safety and soils are relevant to the proposed project (City of Sacramento 2015).

City of Sacramento 2035 General Plan

GOAL EC 1.1: **Hazards Risk Reduction.** Protect lives and property from seismic and geologic hazards and adverse soil conditions.

- **Policy EC 1.1.1 Review Standards.** The City shall regularly review and enforce all seismic and geologic safety standards and require the use of best Management Practices (BMPs) in site design and building construction methods.

- **Policy EC 1.1.2 Geotechnical Investigations.** The City shall require geotechnical investigations to determine the potential for ground rupture, earth shaking, and liquefaction due to seismic events, as well as expansive soils and subsidence problems on sites where these hazards are potentially present.

- **Policy ER 1.1.7 Construction Site Impacts.** The City shall minimize disturbances of natural water bodies and natural drainage systems caused by development, implement measures to protect areas from erosion and sediment loss, and continue to require construction contractors to comply with the City's erosion and sediment control ordinance and stormwater management and discharge control ordinances.

City of Sacramento Emergency Operations Plan

The purpose of the City of Sacramento Emergency Operations Plan (EOP) is to provide safeguards to minimize loss of life and property damage during natural disasters and emergencies of national defense. The City of Sacramento EOP establishes an Emergency Management Organization and assigns functions and tasks in accordance with California's Standardized Emergency Management System (SEMS). The EOP provides guidance as to disaster response from the initial onset through the cost recovery process. It includes policies, responsibilities, and procedures necessary to protect human health and safety, public and private property, and the environment from the effects of natural and anthropogenic disasters and emergencies. The EOP outlines the specific emergency-related responsibilities of City agencies. For example, the City of Sacramento Police Department is responsible for implementing emergency evacuations, including traffic control plans, while the City of Sacramento Fire Department is the first responder for hazardous materials incidents (City of Sacramento 2018).

2016 Sacramento Countywide Local Hazard Mitigation Plan Update

The 2016 Sacramento Countywide Local Hazard Mitigation Plan Update (2016) is designed to guide hazard mitigation planning to better protect the people and property of the County and participating jurisdictions from the effects of natural disasters and hazard events. The plan identifies goals, objectives, and measures for hazard mitigation and risk reduction for disasters such as earthquakes, flooding, dam or levee failure, hazardous material spills, epidemics, fires, extreme weather, major transportation accidents, and terrorism.

Sacramento City Code

Applicable city codes pertaining to Geology, Soils, and Seismicity are presented below.

Chapter 15.88 Grading and Erosion and Sediment Control

The City's grading ordinance is enacted for the purpose of regulating grading on property within the City to safeguard life, limb, health, property and the public welfare; to avoid pollution of watercourses with nutrients, sediments, or other materials generated or caused by surface water runoff from construction sites; to comply with the City's National Pollutant Discharge Elimination System (NPDES) Permit issued by the Regional Water Quality Control Board (RWQCB); and to ensure that the graded site within the City limits complies with all applicable City ordinances and regulations. The grading ordinance is intended to control all aspects of grading operations within the City.

Chapter 17.720 Surface Mining and Reclamation

This chapter provides effective and comprehensive surface mining and reclamation policies and regulations to properly carry out the requirements of Surface Mining and Reclamation Act (SMARA), and other applicable regulations to ensure that: adverse environmental and other effects of surface mining operations will be prevented or minimized and that the reclamation of mined lands will provide for the beneficial, sustainable, long-term productive use of the mined and reclaimed lands; and the production and conservation of minerals will be encouraged, while eliminating hazards to public health and safety and avoiding or minimizing adverse effects on the environment.

Building Permit - Site-Specific Geotechnical Investigation

A site-specific geotechnical investigation is required by the City prior to construction. The geotechnical evaluation must provide grading and design recommendations to address slope, channel-wall, and foundation instability; groundwater level and need for dewatering; erosion control; expansive soils; and

differential settlement. The investigation must evaluate the soil types, test for shrink-swell potential, and determine preliminary load-bearing and strength characteristics. The geotechnical evaluation must be provided to the City as part of the City's building permit process. The City must review the geotechnical report along with Project design to confirm that the recommendations in the geotechnical report are reflected in Project design.

3.4.4 Environmental Impacts and Mitigation Measures

Thresholds of Significance

The significance criteria used to evaluate the project impacts to geology and soils are based on Appendix G of the CEQA Guidelines, thresholds of significance adopted by the City in applicable general plans and previous environmental documents, and professional judgment. An impact is considered significant if it allows a project to be built that will either introduce geologic or seismic hazards by allowing the construction of the project on such a site without protection against those hazards. Consequently, a significant impact related to geology and soils would occur if the project would:

a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:
   i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? (Refer to California Geological Survey Special Publication 42.)
   ii) Strong seismic ground shaking?
   iii) Seismic-related ground failure, including liquefaction?
   iv) Landslides?

b) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?

c) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994, as updated), creating substantial direct or indirect risks to life or property?

Or would the project:

d) Result in substantial soil erosion or the loss of topsoil?

e) Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?

f) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?

Issues Not Discussed Further in this EIR

Suitability of Soils for Septic or Alternative Wastewater Disposal Systems

The proposed project is a multi-use trail and would not involve the use of wastewater disposal systems of any kind, thus the ability of project area soils to support the use of septic or alternative wastewater disposal systems is not discussed further in this EIR.

Impacts to Paleontological or Unique Geologic Features

The area is characterized by Holocene-age stream channel deposits and is thus not considered to be paleontologically sensitive. Additionally, since the project involves minor earthmoving and paving activities, there is no potential to encounter paleontological resources. This issue is not discussed further in the EIR.

Impact Analysis

Impact GEO-1: ***Cause Adverse Effects Related to Earthquake Fault Rupture, Seismic Ground Shaking, Seismic-Related Ground Failure (including landslide, subsidence, or liquefaction, or Be Located On Expansive Soils***

Construction-and operation related activity from the proposed project may be affected by unknown geotechnical site conditions (Less than Significant With Mitigation)

Seismicity

The project area is not located within an Alquist-Priolo Earthquake Fault Zone or in the immediate vicinity of an active fault. Surface fault rupture is most likely to occur on active faults (i.e., faults showing evidence of displacement within the last 11,700 years). Damage from surface fault rupture is generally limited to a linear zone a few yards wide. **Table 3.4-2** describes the proximity of the project site to local active and potentially active faults. The intensity of ground shaking caused by an earthquake at the Dunnigan Hills Fault is not expected to cause substantial damage to the project site, according to the *Probabilistic Seismic Hazard Assessment for the State of California*. However, the 2035 General Plan indicates that groundshaking would occur periodically in Sacramento due to distant earthquakes on any of the major regional faults.

Table 3.4-2. Regional Active and Potentially Active Faults

Activity	Fault Name	Distance and Direction in Relation to Project Site
Historic	Green Valley Fault	45 mi W-SW
Historic	Rodgers Creek Fault	61 mi W-SW
Active	Dunnigan Hills	30 mi W-NW
Active	West Napa Fault	51 mi W-SW
Active	Concord Fault	55 mi SW
Potentially Active	Midland Fault	24 mi SW
Potentially Active	Bear Mountains Fault Zone – West	23 mi E
Potentially Active	Bear Mountains Fault Zone – East	28 mi E
Potentially Active	Maidu Fault	26 mi E
Potentially Active	Melones – West	33 mi E
Potentially Active	Melones – East	36 mi E

Source: CGS 2018

Earthquake Induced Liquefaction, Surface Rupture Potential, and Settlement

Portions of Sacramento, especially along streams and floodplains, are underlain by historic alluvial deposits that, in their present states, could become unstable during seismic ground motion. To reduce the primary and secondary risks associated with seismically induced groundshaking, it is necessary to take the location and type of subsurface materials into consideration when designing foundations and structures, including recreational and flood management facilities.

Preliminary geotechnical investigations for the project alignment were completed by GEI Consultants (GEI 2017). Sampling of subsurface conditions focused on Segments 4 and 6, where the proposed waterside bike trail could potentially impact levee performance under the alternative previously analyzed in the October 2018 IS/MND (which included a "benched" levee trail in Segment 4). However, in order to address concerns from ARCFD, the trail alignment in the proposed project now avoids any construction that would require "benching" of the levee, and trail construction is confined to the levee toe along Segment 3, 5 and 6, and a portion of Segment 4, and is confined to the levee crown for the western portion of Segment 4.

Although the proposed project only involves paving the existing gravel trail and a portion of the existing gravel levee crown road (in Segment 4) and will not require penetration of the levee or remediation of levee material to facilitate trail construction or maintenance, subsurface conditions in Segments 4 and 6 were previously evaluated using draft subsurface profiles developed as part of the Department of Water Resources (DWR) Urban Levee Evaluation (ULE) for the American River study area. The subsurface data on the profiles consisted of geotechnical borings performed predominantly by USACE. Explorations were typically performed through the levee crown; however, several explorations were also performed at the landside levee toe or on waterside benches. The explorations range in depth, with the deepest explorations extending to about 85 feet. Review of the subsurface profiles indicated relatively consistent conditions throughout Segments 4 and 6. The subsurface was generally composed of a sandy levee overlying a medium to stiff fine-grained blanket, an upper silty sand aquifer, a lower gravelly/cobbley aquifer, and a deep, very stiff to hard fine-grained layer.

Past performance issues documented in the DWR ULE Supplemental Geotechnical Data Report (SGDR) for the American River study area were reviewed to evaluate past performance of Segments 4 and 6 and to determine whether any prior levee instabilities had occurred within Segments 4 and 6. Available past performance records indicated a single past performance issue consisting of waterside erosion of the riverbank below the levee toe in Segment 4 (approximately Sta. 114+80 to Sta. 130+80 of the present project or DWR Sta. 1206+30 to Sta. 1222+30). No waterside slope instabilities or sloughs were documented. Existing improvements to the levees include a 75-foot-deep cutoff wall for the entire lengths of Segments 4 and 6 and placement of revetment in several locations (GEI 2017). The previously documented waterside erosion along Segment 4 was taken into account during design of the proposed project, and a portion of the trail was moved to the levee crown to avoid exacerbating erosion in this area where there is little to no levee toe available for siting of the trail.

All trail improvements, including the grade changes where the trail will transition from levee toe to top (near the BUS-80 bridge, along Segment 4, and near the H Street Bridge) would be designed based on the results of ongoing, detailed geotechnical engineering studies (GEI 2017) and would be required to comply with standard engineering practices for trail and levee design. Preliminary geotechnical design criteria for the project were based on DWR Urban Levee Design Criteria (ULDC) (DWR 2012). The Central Valley Flood Protection Board's (CVFPB's) standards are the primary state standards applicable to levees in the project area; these are stated in Title 23, Division 1, Article 8, Sections 111–137 of the

California Code of Regulations. The Board's standards direct that any modifications to existing levees (made to accommodate trail placement) be in accordance with EM 1110-2-1913 *Engineering Design and Construction of Levees* (USACE 2000), the primary Federal standards applicable to levee improvements. Because the design, construction, and maintenance of levee improvements must comply with the regulatory standards of USACE and CVFPB, it is assumed that the design and construction of all levee modifications to accommodate placement of the trail would meet or exceed applicable design standards for static and dynamic stability, seismic ground shaking, liquefaction, subsidence, and seepage.

Additionally, final designs would comply with California Uniform Building Code (UBC), which is based on the federal UBC but is more detailed and stringent. Chapter 18 of the California UBC, which regulates the excavation and construction of embedded posts and poles, and also with UBC Appendix Chapter A33 which regulates grading activities, including drainage and erosion control, and construction on unstable soils, such as expansive soils (BSC 2016).

Based on an existing regulatory framework that addresses earthquake safety issues and requires adherence to requirements of the CBC and various design standards, seismically induced groundshaking and secondary effects would not be a substantial hazard in the project area. Additionally, this area is not mapped by CGS as lying within a known liquefaction or landslide hazard area (CGS 2019).

Because the proposed project would be required to comply with federal, state, and local construction standards, it would not expose people or structures to the risk of loss, injury, or death. However, per City requirements (2035 General Plan - Policy EC 1.1.2), a geotechnical investigation of the site is required. Since the geotechnical investigation for the project area is still under development to verify onsite geologic conditions, the impact is **potentially significant**. Implementation of **Mitigation Measure GEO-1** described below would reduce the impacts to **less than significant** by identifying site-specific soil conditions and limitations and implementing recommendations to meet engineering requirements**.** Therefore, this impact would be **less than significant** with the incorporation of **Mitigation Measure GEO-1**.

Mitigation Measures

Mitigation Measure GEO-1: Perform Final Geotechnical Investigation and Implement Report Recommendations

Prior to issuance of a construction contract, in accordance with City requirements (2035 General Plan - Policy EC 1.1.2), the project applicant shall prepare a final geotechnical investigation of the project alignment to determine the potential for ground rupture, earth shaking, and liquefaction due to seismic events, as well as expansive soils problems. As required by the City, recommendations identified in the geotechnical report for the proposed project shall be implemented to ensure that the project's design meets Caltrans Class 1 bikeway design criteria and State Water Code Title 23 standards for recreation trails on levees.

Responsibility: City of Sacramento

Timing: Before and During Construction Activities

Residual Significant Impacts

Mitigation that would reduce potential geotechnical impacts to a less-than-significant level have been identified and therefore there would be no residual significant impacts to Geology, Soils, or Seismicity conditions.

3.5 Hazards and Hazardous Materials

3.5.1 Introduction

This section provides an overview of the existing hazards and hazardous materials conditions within the proposed project study area, identifies the regulatory framework, and provides analysis of the potential hazards and hazardous materials impacts that would result from implementation of the proposed project.

As a result of circulation of the IS/MND and during the proposed project's NOP scoping period, the following comment was received regarding:

- The presence of past landfill disposal sites along Segments 1 and 2 and the need for all project construction to comply with 27 CCR, Section 21190 post-closure, security, and public safety protection requirements for these sites.

Impacts related to the past landfill uses and potential hazardous conditions are described below in **Impact HAZ-2** "Potential to create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment".

3.5.2 Environmental Setting

Segments 1 and 2 of the proposed project traverse parcels that were historically used for waste disposal and dumping, and there are regulatory listings which indicate that contaminated materials are still present. Please refer to the Phase I Environmental Site Assessment (GEI Consultants, Inc., 2018, included as Appendix D) for additional details. Groundwater monitoring wells associated with historic landfill uses are present near Segment 2, although sample results from these wells have not indicated the presence of contaminants above regulatory standards. No evidence of soil or groundwater contamination has been identified in Segments 3 through 6 (GEI Consultants, Inc., 2018). The project does not include demolition of any structures, and there are no known asbestos-containing materials that would be affected by construction of the project.

Schools

There is one school within 0.25 mile of the trail alignment; Courtyard Private School is located 0.1 mile from Segment 2 and one of the potential construction staging areas.

Known Hazardous Materials Sites

Table 3.5-1 presents database search results for the project vicinity. The database search included all of the data sources included in the Cortese List (enumerated in PRC Section 65962.5). These sources include the GeoTracker database, a groundwater information management system that is maintained by the State Water Resources Control Board (SWRCB); the Hazardous Waste and Substances Site List (i.e., the EnviroStor database), maintained by the California Department of Toxic Substances Control (DTSC); and EPA's Superfund Site database. Three sites with active SWRCB cases were identified within 0.25 mile of the project alignment:

Table 3.5-1. Cortese-listed Sites

Site Name, Address, Description, Number	Potential Contaminants	Media Affected	Status/Cleanup Actions
SMUD Station E Substation Northern End of 20th Street Sacramento, CA 95816 SWRCB: 60002499	Benzo(a)pyrene, metals, petroleum, polychlorinated biphenyls	Soil	Parts if site used as a landfill to dump burn waste in the past. Site currently managed under voluntary cleanup program with Sacramento County Environmental Management Department providing oversight.
Dellar Landfill 2401 A Street Sacramento, CA 95816 SWRCB: T10000007791	n/s	n/a	Past municipal solid waste landfill. Site assessment ongoing.
Cannon/Scollan Landfills 2401 A Street Sacramento, CA 95816 SWRCB: T10000011373	n/s	n/a	Past municipal solid waste landfill. No longer accepting waste.

Notes:
SWRCB = State Water Resources Control Board
[1] Includes listings within 0.25 mile of project activity areas.
Sources: DTSC 2019 and SWRCB 2019

3.5.3 Regulatory Setting

Federal Plans, Policies, Regulations and Laws

Resources Conservation and Recovery Act

The Resources Conservation and Recovery Act (RCRA) set up the federal regulatory program for hazardous substances and gives the United States Environmental Protection Agency (USEPA) the authority to regulate the generation, transport, treatment, and disposal of hazardous substances in a "cradle to grave" system. Under the RCRA, USEPA regulates the generation, transportation, treatment, storage, and disposal of hazardous substances. This regulatory system includes tracking all generators of hazardous waste.

1984 Hazardous and Solid Waste Amendment Act

RCRA was amended by the 1984 Hazardous and Solid Waste Amendment Act, which prohibited the use of certain techniques for the disposal of certain hazardous wastes (USEPA 2016a). The Emergency Planning and Community Right-to-Know Act of 1986 imposes safety requirements to protect local communities in the event of accidental release of hazardous substances. The requirements provide measures so that the risks from interaction with hazardous materials, such as handling, storage, and disposal, are mitigated or prevented. This law protects human health and the environment if the unintended release of hazardous materials was to occur (USEPA 2016b). USEPA has delegated fulfillment of many of the RCRA's requirements to the California Department of Toxic Substances Control (DTSC).

Clean Air Act

Regulations under the Clean Air Act (CAA) (42 USC 7401 et seq. as amended) are designed to prevent accidental releases of hazardous materials. The regulations require facilities that store a threshold

quantity or greater of listed regulated substances to develop a risk management plan, including hazard assessments and response programs to prevent accidental releases of listed chemicals.

Hazardous Materials Transportation Act

The transport of hazardous materials is regulated by the United States Department of Transportation (Caltrans) under Hazardous Materials Transportation Act (HMTA). To accomplish this, the Federal Aviation Administration, Federal Motor Carrier Safety Administration, Federal Railway Administration, Pipeline and Hazardous Materials Safety Administration, and the U.S. Coast Guard have been given authority to enforce hazardous material transport regulations.

Occupational Safety and Health Administration

The Occupational Safety and Health Act of 1970 created the Occupational Safety and Health Administration (OSHA), which is responsible for protecting the health of workers, such as during the handling of hazardous materials. OSHA has created regulation to set federal standards of workplace safety including exposure limits, mandatory workplace training, accident and injury reporting, and safety procedures. These regulations are recorded in the CFR Title 29 (GPO 2016).

State Plans, Policies, Regulations and Laws

Hazards Waste Control Act

The Hazardous Waste Control Act created the State hazardous waste management program. The act is implemented by regulations contained in Title 26 of the CCR, which describes the following required aspects for the proper management of hazardous waste: identification and classification; generation and transportation; design and permitting of recycling treatment, storage and disposal facilities; operation of facilities and staff training; and closure of facilities and liability requirements.

These regulations list more than 800 materials that may be hazardous and establish criteria for identifying, packaging, and disposing of such waste. Under the Hazardous Waste Control Act and Title 26, the generator of hazardous waste must complete a manifest that accompanies the waste from generator to transporter to the ultimate disposal location. Copies of the manifest must be filed with the DTSC.

California Environmental Protection Agency

The California EPA (CAL EPA) is responsible for creating and enforcing environmental regulations within California. Within CAL EPA is the DTSC, which was formed under the Hazardous Waste Control Act. The DTSC is responsible for regulating hazardous waste, remediating existing contamination, and identifying ways to reduce production of hazardous wastes. DTSC can delegate enforcement responsibilities to local jurisdictions.

Unified Program

The unified hazardous waste and hazardous materials management regulatory program (Unified Program) is a unified hazardous materials management program that was established by California's Secretary for Environmental Protection following Senate Bill 1082 (1993). The Unified Program consolidates, coordinates, and makes consistent the administrative requirements, permits, inspections, and enforcement activities of the following programs:

- Hazardous Materials Release Response Plans and Inventories
- California Accidental Release Prevention Program
- Underground Storage Tank Program
- Above Ground Petroleum Storage Act Program
- Hazardous Waste Generator and Onsite Hazardous Waste Treatment Programs
- California Uniform Fire Code: Hazardous Material Management Plans and Hazardous Material Inventory Statements

These six environmental programs are implemented at the local government level by Certified Unified Program Agencies (CUPAs). CUPAs provide a central permitting and regulatory agency for permits, reporting, and compliance enforcement. California Public Resources Code Section 21151.4 sets special requirements for environmental impact reports and negative declarations for Projects that involve the construction or alteration of a facility within one-fourth of a mile of school that creates the following conditions:

- Might reasonably be anticipated to emit hazardous air emissions;

- Would handle an extremely hazardous substance or a mixture containing extremely hazardous substances in a quantity equal to or greater than the state threshold quantity specified in Section 25532(j) of the Health and Safety Code; or

- May pose a health or safety hazard to persons who would attend or would be employed at the school.

As part of the CEQA process, the lead agency preparing the EIR must consult with the appropriate school district regarding the potential impact of the project on the school and the school district must be notified about the project in writing at least 30 days before the proposed certification of the EIR or adoption of the mitigated negative declaration (Public Resources Code section 21151.4; 14 California Code of Regulations Section 15186(b)).

Cortese List Government Code Section 65962

Government Code Section 65962 was enacted in 1985 and was amended in 1992. It is used as a planning document to comply with the CEQA and requires information about locations of hazardous

materials release sites. It states that the through the combined efforts of the DTSC, the Department of Health Service, the State Water Resources Control Board (SWRCB) and local enforcement agencies a list of potential hazardous areas and sites will be compiled and remain up to date (at a minimum annually updated). The list is consolidated by the Secretary for Environmental Protection and is distributed to each city and county which sites on the list are located. The list can be found on the DTSC's data management system known as EnviroStor, which includes information from the SWRCB GeoTracker database.

Division of Occupational Safety and Health

The Division of Occupational Safety and Health (DOSH), also known as CalOSHA, is responsible for enforcing workplace safety regulations and requirements in California, including hazardous materials requirements recorded under CCR Title 8 (DIR 2016). These regulations include requirements for safety training, availability of safety equipment, accident and illness prevention programs, warnings about hazardous substance exposure (such as asbestos), and preparation of emergency action and fire prevention plans.

The DOSH also enforces hazard-communication program regulations that contain training and information requirements. Such requirements include procedures for identifying and labeling hazardous substances, communicating information about hazardous substances and their handling, and preparing health and safety plans to protect workers and employees at hazardous waste sites. Under the hazard-communication program, employers must make Material Safety Data Sheets available to employees and document employee information and training programs.

California Emergency Services Act

The California Emergency Services Act provides the basic authority for conducting emergency operations following a proclamation of emergency by the governor and/or appropriate local authorities. Local government and district emergency plans are considered to be extensions of the California Emergency Plan, established in accordance with the Emergency Services Act.

The California Emergency Management Agency (CAL EMA) is the state agency responsible for establishing emergency response and spill notification plans related to hazardous materials accidents. CAL EMA regulates businesses by requiring specific businesses to prepare an inventory of hazardous materials (CCR Title 19). CAL EMA is also the lead state agency for emergency management and is responsible for coordinating the state-level response to emergencies and disasters.

Fire Protection

California state fire safety regulations apply to State Responsibility Areas (SRAs) during the time of year designated as having hazardous fire conditions. California Department of Forestry and Fire Protection (CALFIRE) has developed a fire hazard severity scale that considers vegetation, climate, and slope to evaluate the level of wildfire hazard in all SRAs. A SRA is defined as the part of the state where CALFIRE is primarily responsible for providing basic wildland fire protection assistance. Areas under the jurisdiction of other fire protection services are considered to be Local Responsibility Areas or on Federal lands are considered Federal Responsibility Areas.

During the fire hazard season, these regulations include: (a) restrict the use of equipment that may produce a spark, flame, or fire; (b) require the use of spark arrestors on any equipment that has an internal combustion engine; (c) specify requirements for the safe use of gasoline-powered tools in fire hazard areas; and (d) specify fire suppression equipment that must be provided onsite for various types of work in fire-prone areas. CAL FIRE has primary responsibility for fire protection within SRAs.

Regional and Local Plans, Policies, Regulations, and Ordinances

Sacramento County Environmental Management Department

The Sacramento County Environmental Management Department (SCEMD) is the CUPA for local implementation of the California Accidental Release Prevention (CAL ARP) and several other hazardous materials and hazardous waste programs. SCEMD is responsible for regulating hazardous materials business plans and chemical inventory, hazardous materials storage, hazardous materials management plans, and risk management plans. The hazardous materials business plan program requires businesses in Sacramento County to prepare business emergency response plans if hazardous materials storage equals or exceeds 55 gallons of liquid, 500 pounds of solid, or 200 cubic feet of gas. The goal of SCEMD is to protect human health and the environment by ensuring that hazardous materials and hazardous waste are properly managed.

The SCEMD distributes the information in the hazardous materials business plans and business emergency response plans to emergency response agencies, such as the Fire Department/Hazardous Materials Response Teams. In accordance with Health and Safety Code Chapter 6.95, Section 25500, the SCEMD prepared the Area Plan for Emergency Response to Hazardous Materials Incidents in Sacramento County (2012). The plan describes the responsibilities of local, state, and federal agencies during hazardous materials incidents.

The SCEMD is certified by California's Department of Resource Recycling and Recovery (CalRecycle) for Sacramento County. SCEMD permits and inspects solid waste facilities and enforces state laws pertaining to the storage, processing, and disposal of solid waste. The SCEMD also issues permits for the development and abandonment of groundwater wells, and with respect to the former 28th Street Landfill, the removal and relocation of the soil gas probes and groundwater monitoring wells.

2016 Sacramento Countywide Local Hazard Mitigation Plan Update

The 2016 Sacramento Countywide Local Hazard Mitigation Plan Update (2016) is designed to guide hazard mitigation planning to better protect the people and property of the County and participating jurisdictions from the effects of natural disasters and hazard events. The plan identifies goals, objectives, and measures for hazard mitigation and risk reduction for disasters such as earthquakes, flooding, dam or levee failure, hazardous material spills, epidemics, fires, extreme weather, major transportation accidents, and terrorism.

City of Sacramento 2035 General Plan

The following goals and policies from the Public Health and Safety (PHS) Element related to Hazards, Public Health and Safety are relevant to the proposed project (City of Sacramento 2015).

GOAL PHS 2.1: Fire Protection and Emergency Medical Services. Provide coordinated fire protection and emergency medical services that support the needs of Sacramento residents and businesses and maintains a safe and healthy community.

GOAL PHS 2.2: Fire Prevention Programs and Suppression. The City shall deliver fire prevention programs that protect the public through education, adequate inspection of existing development, and incorporation of fire safety features in new development.

GOAL PHS 3.1: Reduce Exposure to Hazardous Materials and Waste. Protect and maintain the safety of residents, businesses, and visitors by reducing, and where possible, eliminating exposure to hazardous materials and waste.

- **Policy PHS 3.1.1 Investigate Sites for Contamination.** The City shall ensure buildings and sites are investigated for the presence of hazardous materials and/or waste contamination before development for which City discretionary approval is required. The City shall ensure appropriate measures are taken to protect the health and safety of all possible users and adjacent properties.

- **Policy PHS 3.1.2 Hazardous Material Contamination Management Plan.** The City shall require that property owners of known contaminated sites work with Sacramento County, the State, and/or Federal agencies to develop and implement a plan to investigate and manage sites that contain or have the potential to contain hazardous materials contamination that may present an adverse human health or environmental risk.

- **Policy PHS 3.1.4 Transportation Routes.** The City shall restrict transportation of hazardous materials within Sacramento to designated routes.

- **Policy PHS 3.1.6 Compatibility with Hazardous Materials Facilities.** The City shall ensure that future development of treatment, storage, or disposal facilities is consistent with the County's Hazardous Waste Management Plan, and that land users near these facilities, or proposed sites for the storage or use of hazardous materials, are compatible with their operation.

GOAL PHS 4.1: Natural and Human-made Disasters. Promote public safety through planning, preparedness, and emergency response to natural and human-made disasters.

City of Sacramento Emergency Operations Plan

The purpose of the City of Sacramento Emergency Operations Plan (EOP) is to provide safeguards to minimize loss of life and property damage during natural disasters and emergencies of national defense. The City of Sacramento EOP establishes an Emergency Management Organization and assigns functions and tasks in accordance with California's Standardized Emergency Management System (SEMS). The EOP provides guidance as to disaster response from the initial onset through the cost recovery process. It includes policies, responsibilities, and procedures necessary to protect human health and safety, public and private property, and the environment from the effects of natural and anthropogenic disasters and emergencies. The EOP outlines the specific emergency-related responsibilities of City agencies. For example, the City of Sacramento Police Department is responsible for implementing emergency evacuations, including traffic control plans, while the City of Sacramento Fire Department is the first responder for hazardous materials incidents (City of Sacramento 2018).

City of Sacramento Evacuation Plan

The purpose of the City of Sacramento Evacuation Plan (2008) is to provide evacuation-specific strategy and information to support and guide the City's Emergency Managers, Emergency Operations Center staff, and other governmental and non-governmental agencies that would be involved with an evacuation event in the City of Sacramento. Therefore, the Evacuation Plan serves as an amendment to the EOP. Flooding is considered the primary threat that would invoke an evacuation in Sacramento. Therefore, much of the Evacuation Plan is dedicated to procedures to be followed in event of a flood emergency. However, the associated strategy and plan details apply to other hazards as well. The City of Sacramento Police Department has divided the City into six districts with each district further divided into three or four police patrol beat areas. The Evacuation Plan provides evacuation routes and locations of sirens and shelters within each police patrol beat area. The City of Sacramento Fire Department maintains updated records of the emergency response and evacuation routes for the City.

Hazardous Materials Response

The City's Hazardous Materials Program (HazMat) provides capability for response to hazardous material emergencies. HazMat contains firefighters trained to the Hazardous Materials Response level and includes three Hazardous Materials Response Teams (HMRTs) and one Decontamination Team. Under contractual agreement, HazMat provides 24-hour first response to hazardous materials incidents within the City of Sacramento.

Sacramento Area Council of Governments

In December of 2013, Sacramento Area Council of Governments (SACOG) adopted the Airport Land Use Compatibility Plan (ALUCP) for the Sacramento International Airport. This plan ensures that land

uses in and around the Sacramento International Airport are compatible with airport use. The boundaries for this plan, or the Airport Influence Area (AIA), range from the cities of Woodland and Davies to the west, West Sacramento to the south, the Sutter-Placer County line in the east, and the town of Nicolaus to the north (SACOG 2013). Central and Eastern Sacramento is not included in the AIA.

Sacramento Metropolitan Air Quality Management District

The Sacramento Metropolitan Air Quality Management District (SMAQMD) is responsible for the management and enforcement of a variety of air quality rules including asbestos within the City of Sacramento. Rule 902 of the SMAQMD outlines specific procedures to follow if asbestos is likely to occur within a Project area. These procedures include, but are not limited to, requirements for surveys to be conducted prior to construction, proper worker safety when handling asbestos containing materials, and proper disposal of any of these materials (SMAQMD 2015).

3.5.4 Environmental Impacts and Mitigation Measures

Thresholds of Significance

The significance criteria used to evaluate the project impacts to hazards are based on Appendix G of the CEQA Guidelines, thresholds of significance adopted by the City in applicable general plans and previous environmental documents, and professional judgment. A significant impact related to hazards or hazardous materials would occur if the project would:

For the purposes of this EIR, an impact is considered significant if the proposed project would:

a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?

b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment, including hazards associated with existing contaminated soils, asbestos, or existing contaminated groundwater during dewatering activities?

c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?

d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?

e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?

f) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?

Issues Not Discussed Further in this EIR

Accidental release of Hazardous Materials Associated with Asbestos or Contaminated Groundwater Encountered During Dewatering

No structures would be demolished as a part of the project and the project alignment is not located in an area of known naturally-occurring asbestos (USGS 2011), thus there would be no potential for exposure to asbestos-containing materials as a result of project construction. Additionally, construction of the proposed trail would include only minor excavation and fill and excavation depths are unlikely to encounter the water table. No dewatering would be required during construction of the project. Thus, these issues are not discussed further in this EIR.

Conflict With An Airport Land Use Plan or Location Within Two miles of An Airport Resulting In Excessive Noise

The project alignment is not located within an airport land use plan area and is not located within wo miles of an airport (SACOG 2013). Thus, hazards associated with these issues are not discussed further in this EIR.

Interfere With An Emergency Response Or Evacuation Plan

Construction of the proposed project would result in short-term construction activities and will not require closure or reduced access on any adjacent roads that would interfere with an adopted emergency response plan or evacuation plan. Construction would occur in segments, thus only one portion of the trail will be inaccessible at any time, and construction will occur outside of the flood season. Additionally, the closest roads to the project alignment that are designated as evacuation routes are H Street, SR 160, and the Business I-80 Freeway by the Sacramento County Office of Emergency Services and access to these routes will not be affected by project construction or operation (Sacramento County 2015). Thus, hazards associated with emergency egress are not discussed further in this EIR.

Impact Analysis

Impact HAZ-1: ***Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?***

Construction activity from the proposed project may involve the accidental spill of common materials used in the operation and maintenance of construction vehicles and equipment. (Less than Significant With Mitigation)

Project construction would involve the incidental transport and use of common materials used for the operation and maintenance of construction vehicles and equipment such as oils, lubricants, and fuel. However, operation (use of the multi-use recreation trail) of the project would not involve routine or long-term transport or disposal of such materials. None of the proposed project activities would involve the use of acutely hazardous materials. Regulations governing hazardous materials transport are included in CCR Title 22, the California Vehicle Code (CCR Title 13), and the State Fire Marshal Regulations (CCR Title 19). Transport of hazardous materials can only be conducted under a registration issued by the California Department of Toxic Substances Control. Construction contractors would be required to use, store, and transport hazardous materials in compliance with Federal, State, and local regulations during project construction. However, accidental spills could still occur and therefore the project would have a **potentially significant** impact. Implementation of **Mitigation Measure BIO-3** (more fully described in **Section 3.2** "**Biological Resources**") would reduce the impacts to **less than**

significant by requiring preparation of a hazardous materials business plan that identifies project specific measures to prevent and clean up hazardous material and waste spills (if necessary). Therefore, this impact would be **less than significant** with the incorporation of **Mitigation Measure BIO-3**.

Mitigation Measures

> **Mitigation Measure BIO-3: Prepare and Implement a Storm Water Pollution Prevention Plan, Spill Prevention and Control Plan, and Associated Best Management Practices.** See **Section 3.2 "Biological Resources"** for a complete description of the mitigation measure.

Impact HAZ-2: ***Potential to create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment***

Construction activity from the proposed project may expose construction workers to contaminated soil during cut and fill activities associated with the proposed project. (Less than Significant With Mitigation)

Portions of the project site (Segments 1 and 2) include lands that were historically used for waste disposal, and the Phase I Environmental Site Assessment prepared for the project indicated the potential presence of contaminated soil. During cut and fill activities associated with constructing the proposed project, construction workers could encounter contaminated soil. This impact would be **potentially significant**. Implementation of **Mitigation Measures HAZ-1** and **HAZ-2** described below would reduce the impacts to **less than significant** by ensuring appropriate closure of potentially contaminated sites prior to construction and implementing safety measures for workers that may encounter onsite hazardous materials during construction-related activities. Therefore, this impact would be **less than significant** with the incorporation of **Mitigation Measures HAZ-1** and **HAZ-2**.

Mitigation Measures

> **Mitigation Measure HAZ-1: Prepare a Worker Health and Safety Plan and Implement Appropriate Measures to Minimize Potential Exposure of the Public to Hazardous Materials**
>
> The City of Sacramento shall ensure the construction contractor implement the following measures before and during construction to reduce potentially significant impacts associated with exposure to hazardous materials.
>
> - Prepare and implement a worker health and safety plan before the start of construction activities that identifies, at a minimum, the potential types of contaminants that could be encountered during construction activity; all appropriate worker, public health, and environmental protection equipment and procedures to be used during project activities; emergency response procedures; the most direct route to the nearest hospitals; and a Site Safety Officer. The plan shall describe actions to be taken should hazardous materials be encountered on-site, including the telephone numbers of local and state emergency hazmat response agencies.
>
> - If, during site preparation and construction activities, evidence of hazardous materials contamination is observed or suspected (e.g., stained or odorous soil or groundwater) cease

immediately construction activities in the areas of the find. If contamination is observed or suspected, the City shall retain a qualified hazardous materials specialist to assess the site and collect and analyze soil and/or water samples, as necessary. If contaminants are identified in the samples, the City shall notify and consult with the appropriate Federal, State, and/or local agencies. Measures to remediate contamination and protect worker health and the environment shall be implemented in accordance with Federal, State, and local regulations before construction activities may resume at the site where contamination is encountered. Such measures could include, but are not limited to, preparation of a Phase I and/or Phase II Environmental Site Assessment, removal of contaminated soil, and pumping of groundwater into containment tanks.

Responsibility: City of Sacramento / Construction Contractor

Timing: Before and During Construction

Mitigation Measure HAZ-2: Obtain Site Closure and Follow Post-Closure Requirements for Past Disposal Sites

The City shall implement the following measures for all Segment 2 construction:

- Construction of the trail segment should not commence until this area is properly closed as per the requirements of the City of Sacramento.
- Segment 2 construction should be completed under the requirements described in Title 27 of the California Code of Regulations (CCR), Division 2, Subdivision 1, Chapter 3, Subchapter 5, Section 21190 titled "CIWMB-Post-Closure Land Use."
- Where cut and fill activities occur in Segment 2, proper measures should be taken to mitigate any landfill material or other hazardous material that is encountered.
- If fill material/soils will be brought in, these soils must be certified as clean fill.
- The trail will be designed to conform with drainage patterns in the project area and to prevent water collection that could cause seepage of the buried landfill material.

Responsibility: City of Sacramento

Timing: Before and During Construction

Residual Significant Impacts

Mitigation that would reduce potential hazardous materials impacts to a less-than-significant level have been identified and therefore there would be no residual significant impacts to Hazards and Hazardous Materials conditions.

This page intentionally left blank.

3.6 Hydrology, Water Quality, and Drainage

3.6.1 Introduction

This section provides an overview of the existing hydrology and water quality conditions within the project study area, identifies the regulatory framework for these resource areas, and provides analysis of the potential hydrologic and water quality impacts that would result from implementation of the proposed project.

As a result of circulation of the IS/MND and during the proposed project's NOP scoping period, the following comments were received regarding:

- Maintenance costs to the City due to flooding of unpaved portions of the trail and deposition of mud and debris during high flow events.
- Location of trail segments along the levee toe in areas where high flows may submerge sections for extended periods of time.
- Flood threat to adjacent residences due to placement of the trail along a mid-levee bench.
- Location of trail segments in areas identified as having existing or potential erosion by the Lower American River Task Force, Bank Protection Working Group.
- Potential for water quality impacts (particularly increases in fecal coliform bacteria) due to assumed increase in dog-owning visitors and a lack of an accompanying increase in restroom facilities and trash receptacles.
- Potential for impacts if project construction and maintenance are not coordinated with other upstream flood management agencies and operations.

Impacts associated with potential threats to nearby residences or levee integrity due to trail placement along a "mid-levee" bench are not addressed further in this EIR since the benched segment has been removed from the proposed project.

Setting and methodology information regarding the potential for cumulative impacts from other projects affecting the proposed project study area are described in **Chapter 5.0** "**Cumulative and Growth Inducing**".

3.6.2 Environmental Setting

Surface Water

The project site is immediately adjacent to the American River along most of the project alignment, except for a small portion of Segment 2. Within Sacramento County, the American River is impounded at Folsom Dam and Nimbus Dam. The dams regulate the water level of the American River throughout the project site (excepting stormwater flows from the adjacent levee slopes and floodplain) and downstream to its confluence with the Sacramento River.

Water Quality

The project site is in the Sacramento Hydrologic Basin Planning Area and the Lower American Hydrologic Subarea, as designated by the Central Valley Regional Water Quality Control Board (CVRWQCB). In accordance with Section 303 of the federal CWA, water quality standards for this basin are contained in the Water Quality Control Plan for the Sacramento River Basin and the San Joaquin River Basin (Basin Plan). Stormwater runoff from the project site is received by the American River which is listed on the 303(d) list as an impaired water for several constituents of concern, including fecal indicator bacteria, bifenthrin, pyrethroids, toxicity, mercury, and polychlorinated biphenyls (PCBs) (CVRWQCB 2016).

Groundwater

The project site is in the Sacramento Valley Groundwater Basin, within the larger South American Subbasin (5-021.65), as designated in the California Department of Water Resources' (DWR's) Bulletin 118 (DWR 2016). This basin is designated as a "High Priority" Basin under the Sustainable Groundwater Management Act (DWR 2018). According to the Groundwater Information Center Interactive Map Application, groundwater levels in the project area are approximately 25-40 feet from ground surface (DWR 2017).

Flood Management

The proposed project is mapped as Zone X (Segments 1 and 2) and Zone AE (Segment 3-6) on the Federal Emergency Management Agency (FEMA) Flood Insurance Rate Map (map panels 06067C0180J and 06067C0183H) (FEMA 2018). Zone X areas are designated as having a reduced flood risk due to the presence of levees and are considered by FEMA to be areas of minimal hazard (500-year flood zone) which are outside the 0.2% chance floodplain. The project areas mapped as Zone AE are designated as a Regulatory Floodway and are within the 100-year floodplain for the American River.

Stormwater/Drainage

The lands around Segments 1 and 2 are served by the City's Combined Sewer System (since they are located on the landside of the existing levee) and local runoff along Segments 3-6 flows by gravity overland during storm events, and also through culverts and vegetated or lined intermittent drainages, ultimately to the American River (since they are on the crest or waterside of the existing levee).

3.6.3 Regulatory Setting

Federal Plans, Policies, Regulations and Laws

Federal Clean Water Act

The Clean Water Act (CWA) (33 U.S.C. Section 1251 et seq.), formerly the Federal Water Pollution Control Act of 1972, was enacted with the intent of restoring and maintaining the chemical, physical, and biological integrity of the waters of the United States. The CWA requires states to set standards to protect, maintain, and restore water quality through the regulation of point source and certain non-point source discharges to surface water. Those discharges are regulated by the National Pollutant Discharge Elimination System (NPDES) permit process (CWA Section 402). Section 401 of the CWA regulates surface water quality and a Water Quality Certification is required for federal actions (including construction activities) that may entail impacts to surface water. In California, NPDES permitting

authority is delegated to, and administered by, the nine Regional Water Quality Control Boards (RWQCB).

NPDES Construction Permit

The federal CWA prohibits certain discharges of stormwater containing pollutants except in compliance with a NPDES permit. The federal statutes and regulations require discharges to surface waters comprised of storm water associated with construction activity, including demolition, clearing, grading, and excavation, and other land disturbance activities (except operations that result in disturbance of less than one acre of total land area and/or discharges to municipalities with combined stormwater and sewer systems) to obtain coverage under an NPDES permit. The NPDES permit must require implementation of Best Available Technology Economically Achievable (BAT) and Best Conventional Pollutant Control Technology (BCT) to reduce or eliminate pollutants in storm water runoff.

National Flood Insurance Act

The Federal Emergency Management Agency (FEMA) is responsible for managing the National Flood Insurance Program (NFIP), which makes federally-backed flood insurance available for communities that agree to adopt and enforce floodplain management ordinances to reduce future flood damage. The NFIP, established in 1968 under the National Flood Insurance Act, requires that participating communities adopt certain minimum floodplain management standards, including restrictions on new development in designated floodways, a requirement that new structures in the 100-year flood zone be elevated to or above the 100-year flood level known as base flood elevation. To facilitate identifying areas with flood potential, FEMA has developed Flood Insurance Rate Maps (FIRMs) that can be used for planning purposes, including floodplain management, flood insurance, and enforcement of mandatory flood insurance purchase requirements.

U.S. Army Corps of Engineers – Section 408 Permission

The American River is a designated navigable waterway. As such, the U.S. Army Corps of Engineers has jurisdiction and is a permitting authority for any development or activity which may affect the river's floodway capacity. The Corps sets operation and maintenance standards and performs levee inspections within the floodway. The Corps frequently implements flood damage reduction construction projects in the floodway and thus has a need to implement environmental mitigation for these projects in the Parkway.

Section 14 of the Rivers and Harbors Appropriation Act of 1899, as amended, and codified in 33 USC 408 (Section 408) provides that the Secretary of the Army may, upon the recommendation of the Chief of Engineers, grant permission to other entities for the permanent or temporary alteration or use of any U.S. Army Corps of Engineers (USACE) Civil Works project. An alteration refers to any action by any entity other than the Corp that builds upon, alters, improves, moves, occupies, or otherwise affects the usefulness, or the structural or ecological integrity of a USACE project. Section 408 permission requires a determination that the requested alteration is not injurious to the public interest and will not impair the usefulness of the project. This means USACE has the authority to review, evaluate, and approve all alterations to federally authorized civil works projects to make sure they are not harmful to the public and still meet the project's intended purposes mandated by congressional authorization. Routine operations and maintenance does not require 408 permissions.

State Plans, Policies, Regulations and Laws

Porter Cologne Water Quality Control Act

The State of California established the State Water Resources Control Board (SWRCB), which oversees the nine RWQCBs, through the Porter-Cologne Water Quality Control Act (Porter-Cologne). Through the enforcement of the Porter Cologne Act, the SWRCB determines the beneficial uses of the waters (surface and groundwater) of the State, establishes narrative and/or numerical water quality standards, and initiates policies relating to water quality. The SWRCB and, more specifically, the RWQCB, is authorized to prescribe Waste Discharge Requirements (WDRs) for the discharge of waste, which may impact the waters of the State. Furthermore, the development of water quality control plans, or Basin Plans, are required by Porter-Cologne to protect water quality. The SWRCB issues both General Construction Permits and individual permits under the auspices of the federal NPDES program. Per the SWRCB General Construction Permit, construction activity that discharges to Combined Sewer Systems is an activity not covered under the general permit and therefore the permit does not apply.

Sustainable Groundwater Management Act

SGMA requires governments and water agencies of high and medium priority basins to halt overdraft and bring groundwater basins into balanced levels of pumping and recharge. Under SGMA, these basins should reach sustainability within 20 years of implementing their sustainability plans. For critically over-drafted basins, that will be 2040. For the remaining high and medium priority basins, 2042 is the deadline.

Regional and Local Plans, Policies, Regulations and Ordinances

Sacramento Area Flood Control Agency

The Sacramento Area Flood Control Agency (SAFCA) was formed in 1989 by local agencies to address the deficiencies in Sacramento's flood control system identified by the United States Army Corp of Engineers (USACE) following the flood of 1986. Through a joint exercise of powers agreement, the City of Sacramento, County of Sacramento, the Sacramento County Water Agency, Sutter County, the Sutter County Water Agency, the American River Flood Control District, and Reclamation District 1000 (RD 1000) pooled their common flood-control authorities, established a management structure, and identified a program for improving Sacramento's flood control system. This program has three elements:

1. Ensure the structural integrity of the existing levee system;

2. Provide at least a 100-year level of flood protection as quickly as possible to the areas within the FEMA 100-year floodplain by, among other actions, increasing the space available for flood control at Folsom Dam and Reservoir (Folsom); and

3. Work toward achieving at least a 200-year level of flood protection for the Sacramento area.

SAFCA finances the local share of the cost to improve Sacramento's flood control system by creating assessment districts and levying annual assessments on properties which benefit from the improvements. These assessments are billed on Sacramento County's and Sutter County's annual real property tax bill.

SAFCA has carried out its flood risk management program on a step-by-step basis. It has succeeded in moving flood zone properties in Natomas and North Sacramento from a high- risk status (less than 100-year protection) to a moderate-risk status (greater than 100-year but less than 200-year protection) by

raising and strengthening levees around the Natomas basin and along lower Dry and Arcade creeks. When this work is completed, these properties will have greater than a 200-year level of protection and a relatively low risk of flooding. Outside the North Area, steps have been taken to ensure the integrity of the levee system along the Sacramento and American rivers and to secure additional flood storage space at Folsom Reservoir on an interim basis.

American River Flood Control District

The American River Flood Control District (ARFCD) is the part of SAFCA that provides flood protection for the Project site and surrounding neighborhoods. Formed by an act of the State Legislature in 1927, its mission is to protect the citizenry by maintaining the 40 miles of levees along the American River and portions of Steelhead, Arcade, Dry, and Magpie creeks. The ARFCD's year-round maintenance activities are designed to prevent degradation of the levees' structural stability and to keep the surface of the levees accessible and clearly visible so problems can be detected, and flood emergency equipment can be moved in when needed. In addition to routine operation and maintenance activities, the ARFCD implements Projects along the levee to improve accessibility. For example, in 2008, the ARFCD began working with numerous landowners to remove abandoned encroachments in River Park (such as deteriorating retaining walls, debris, and mounds of dirt), which resulted in a clean levee slope free of obstructions that will no longer compromise levee safety.

City of Sacramento 2035 General Plan

The following goals and policies from the Environmental Constraints (EC) Element and Environmental Resources (ER) Element related to Flooding Hazards and Water Resources are relevant to the proposed project (City of Sacramento 2015).

GOAL EC 2.1: Flood Protection. Protect life and property from flooding.

- **Policy EC 2.1.2 Regional Flood Management Planning Efforts.** The City shall participate in the California Department of Water Resources (DWR) Regional Flood Management Planning effort for the Lower Sacramento/Delta North region.

- **Policy EC 2.1.4 200-year Flood Protection.** The City shall work with local, regional, State, and Federal agencies to achieve by 2025 at least 200-year flood protection for all areas of the City.

- **Policy EC 2.1.12 New Development Design.** The City shall require new development located within a special (100-year) flood hazard area to be designed to minimize the risk of damage in the event of a flood.

GOAL ER 1.1: Water Quality Protection. Protect local watersheds, water bodies and groundwater resources, including creeks, reservoirs, the Sacramento and American rivers, and their shorelines.

- **Policy ER 1.1.3 Stormwater Quality.** The City shall control sources of pollutants and improve and maintain urban runoff water quality through stormwater protection measures consistent with the City's NPDES Permit.

- **Policy ER 1.1.4 New Development.** The City shall require new development to protect the quality of water bodies and natural drainage systems through site design, source controls, stormwater

treatment, runoff reduction measures, BMPs and Low Impact Development (LID), and hydromodification strategies consistent with the City's NPDES Permit.

- **Policy ER 1.1.5 Limit Stormwater Peak Flows.** The City shall require all new development to contribute no net increase in stormwater runoff peak flows over existing conditions associated with a 100-year storm event.

- **Policy ER 1.1.7 Construction Site Impacts.** The City shall minimize disturbances of natural water bodies and natural drainage systems caused by development, implement measures to protect areas from erosion and sediment loss, and continue to require construction contractors to comply with the City's erosion and sediment control ordinance and stormwater management and discharge control ordinance.

City of Sacramento Stormwater Management and Control Code

The City Stormwater Management and Control Code (Chapter 13.16 of the City Code) is intended to control non-stormwater discharges to the stormwater conveyance system; eliminate discharges to the stormwater conveyance system from spills, dumping, or disposal of materials other than stormwater; and reduce pollutants in urban stormwater discharges to the maximum extent practicable. Non-stormwater discharges are prohibited except where the discharge is regulated under a NPDES permit (see the descriptions of the NPDES in the discussions of federal and state water quality regulations above). Discharges to the stormwater conveyance system of pumped groundwater not subject to a NPDES permit may be permitted upon written approval from the City and in compliance with the City's conditions of approval.

City of Sacramento Grading. Erosion, and Sediment Control Ordinance

The City Grading, Erosion, and Sediment Control Ordinance (Title 15, Chapter 15.88 of the City Code) sets forth rules and regulations to control land disturbances, landfill, soil storage, pollution, and erosion and sedimentation resulting from construction activities. With limited exceptions, grading approval must be received from the City's Department of Utilities (DOU) before construction. All Project applicants, regardless of Project location, are required to prepare and submit separate erosion and sediment control plans applicable to the construction and post-construction periods. The ordinance also specifies other requirements, such as written approval from the City for grading work within the right of way (ROW) of a public road or street, or within a public easement.

City of Sacramento SQIP

The City of Sacramento Stormwater Quality Improvement Program (SQIP) provides a comprehensive plan to direct the Sacramento City Stormwater Management Program and its priorities and activities. Included in the City of Sacramento SQIP is information on the Sacramento City Stormwater Management Program's history and accomplishments as well as a description of specific activities. The City of Sacramento Stormwater Management Program is designed to reduce stormwater pollution to the maximum extent practicable and eliminate prohibited non-stormwater discharges in accordance with federal and state laws and regulations.

The Construction Element in the SQIP was designed to reduce the discharge of stormwater pollutants to the maximum extent practicable by requiring construction sites to reduce sediment in site runoff and reduce other pollutants such as litter and concrete wastes through good housekeeping procedures and proper waste management. The New Development Element in the SQIP was designed to protect local

creeks and rivers by reducing the discharge of stormwater pollutants that could result from new developments to the maximum extent practicable and by mitigating increased flows that could cause erosion and degrade habitat.

City of Sacramento Floodplain Management Ordinance

This Floodplain Management Ordinance is designed to promote the public health, safety, and general welfare, and to minimize public and private losses due to flood conditions in specific areas. The Ordinance regulates development which is or might be dangerous to health, safety, and property by requiring at the time of initial development, or substantial improvement, methods of protection against flood damage in areas vulnerable to flooding in order to minimize flood damage. The Ordinance regulates the following developmental impacts: filling, grading, or erosion, alteration of natural flood plains, stream channels or water courses, the imposition of barriers which increase flood hazards, or any other impacts that aggravate or cause flood hazards.

Resolution 93-164

Resolution 93-164, with regard to storm drainage, is intended to prevent street flooding during 10-year return storms and to prevent flooding of structures during 100-year return storms at complete buildout in each drainage basin.

City of Sacramento NPDES Permit

The City of Sacramento NPDES permit (Order No. R5-2016-0040, NPDES No. CAS0085324) requires implementation of programs that establish priorities based on addressing urban pollutants of concern, to reduce the level of pollutants in stormwater discharges from municipal separate storm sewer systems and requires that any change in water quality will not unreasonably affect the present and anticipated beneficial use of receiving waters and will not result in water quality less than that prescribed in SWRCB policies. The SQIP, described earlier, provides a comprehensive plan to direct the City's Stormwater Management Program priorities and activities, including program management, target pollutant reduction strategy, monitoring program, program element implementation (i.e., industrial, municipal, construction, and public education and outreach elements), and program evaluation.

Central Valley Regional Water Quality Control Board Order No. R5-2015-0045

On April 17, 2015, the Central Valley Regional Water Quality Control Board (CVRWQCB) adopted the Waste Discharge Requirements for the City of Sacramento Combined Wastewater Collection and Treatment System (Order No. R5-2015-0045, NPDES No. CA0079111) which describe discharge prohibitions to the Sacramento River unless certain specified conditions have been met or authorizations granted; effluent limitations and discharge specifications for total suspended solids, settleable solids, and chlorine; receiving water limitations to the Sacramento River, monitoring and reporting requirements; and other standard and special provisions.

General Order for Dewatering and Other Low-Threat Discharges to Surface Waters

The CVRWQCB has adopted a general NPDES permit for short-term discharges of small volumes of clean or relatively pollutant- free wastewater from certain construction-related activities that pose little or no threat to water quality. Permit conditions for the discharge of these types of wastewaters to surface water are specified in "General Order for Dewatering and Other Low-Threat Discharges to Surface Waters" (Order No. R5-2013- 0074, NPDES Permit No. CAG995001). Discharges may be covered by

the permit provided they are either (1) four months or less in duration or (2) the average dry weather discharge does not exceed 0.25 mgd. Construction dewatering, well development water, pump/well testing, and miscellaneous dewatering/low-threat discharges are among the types of discharges that may be covered by the permit. The general permit also specifies standards for testing, monitoring, and reporting, receiving water limitations, and discharge prohibitions.

3.6.4 Environmental Impacts and Mitigation Measures

Thresholds of Significance

The significance criteria used to evaluate the project impacts to hydrology and water quality are based on Appendix G of the CEQA Guidelines, thresholds of significance adopted by the City in applicable general plans and previous environmental documents, and professional judgment. A significant impact related to hydrology and water quality issues would occur if the project would:

a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?

b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?

c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:
   i) result in substantial erosion or siltation on- or off-site;
   ii) substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite;
   iii) create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or
   iv) impede or redirect flood flows?

d) In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?

e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?

Issues Not Discussed Further in this EIR

Affect Groundwater Supplies, Quality, Sustainable Management or Recharge

The project would not involve the use of groundwater during project construction or operation and would not affect any adjacent groundwater users or the recharge of groundwater in the project vicinity. Given that the maximum depth of excavation expected is 5 feet, this excavation would occur just below the levee crown, and the depth to groundwater in the project area is 25-40 feet, the need to dewater any trail segments during construction is not expected. No dewatering would be required during construction of the project. Therefore, this issue is not discussed further in the EIR.

Alteration of Existing Drainage Patterns and Stormwater Runoff

The footprint of the proposed project is not considered large enough to create a substantial increase in runoff from impervious surfaces and overall stormwater runoff patterns would not change along the

project alignment. In Segments 1 and 2, stormwater is expected to infiltrate into the ground before entering the City's stormwater conveyance system. In Segments 3-6, all stormwater would continue to flow to the American River. The trail would be slightly sloped away from the levee crown (toward the river) to encourage sheet flow of stormwater over the ground surface. In areas where trail design may cause minor ponding of water, small drain inlets would be installed to carry water under the bike trail to outlets on the river side of the trail. Outlets would discharge out of a flared end section and onto a small area of rock which would reduce stormwater velocity and disperse the water in a way that reduces the possibility of erosion around the outlet. Therefore, as also presented in **Table 1-5** of **Chapter 1.0** "**Introduction**", these issues are not discussed further in the EIR.

Hazards Associated with Tsunami or Seiche

According to the California Geological Survey, the project area is not mapped in an area where a tsunami or seiche are likely to occur (CGS 2019). Therefore, this issue is not discussed further in the EIR.

Impact Analysis

Impact HWQ-1: ***Violate Water Quality Standards or Waste Discharge Standards, Degrade Surface Water Quality, Conflict With Implementation of a Water Quality Control Plan, or Release Pollutants During Flooding***

Trail uses following project implementation would be similar to existing uses in the proposed project area (hiking, dog walking, bicycling). Although the number of users along the trail alignment, particularly bicycle commuters, may at times be greater relative to existing conditions, the exact mix of new users who may use the trail, and the assumption that certain types of trail users will degrade water quality conditions in the adjacent American River (particularly regarding the presence of fecal coliform [e.coli]) is speculative. (Less than Significant With Mitigation)

Since the SWRCB uses a "segmented" approach for assigning water bodies to the 303(d) list, any listing of the lower American River automatically includes the entire reach from Nimbus Dam to the Sacramento River confluence. The segment of the American River adjacent to the trail alignment is 303(d) listed as impaired for fecal coliform bacteria. However, the Water Board has recently begun working with Sacramento County and the Sacramento Area Sewer District to conduct weekly e. coli sampling to ascertain primary source areas for e.coli and disseminates this information on the County's website (the most recent samples were collected July 2, 2019). Two of the sampling locations are adjacent to the project trail alignment (Sutter's Landing Park and Paradise Beach) and show only a handful of exceedances of the Bacterial Objective Statistical Threshold Value (320 MPN/100mL) and very few exceedances of Bacterial Objective Geometric Mean Criteria (100 MPN/100mL) over the last several years, as compared to area with numerous exceedances (Steelhead Creek, Discovery Park, Tiscornia Beach) (Sacramento County 2018). Additionally, most *E. coli* strains are harmless and do not cause human illness (they are the necessary bacteria found in the intestines of mammals). Increased levels of *E. coli* do not necessarily equate to an increased exposure risk or possibility of illness for swimmers or other users coming into contact with these waters. *E. coli* are generally found in all recreational waters at various concentrations. Since documented e. coli levels adjacent to the project alignment are generally below acceptable levels and are much lower than other portions of the American River with heavy recreational usage, this impact would be **less than significant**.

As described in **Chapter 2.0** "**Project Description**", the proposed project is limited to short-term construction activities that would cease upon project completion. During work on all trail segments and the cantilever railroad undercrossing, the proposed activities would disturb and expose soils to erosion from wind and stormwater, which could temporarily impair water quality should disturbed material, petroleum products from equipment, or construction-related wastes accidently be discharged into local drainage ditches or onto the ground where they could be carried into receiving waters. Accidental spills of construction-related substances such as oils and fuels could also contaminate both surface water and groundwater. The extent of potential impacts on water quality would depend on several factors: the tendency of erosion of soil types encountered, soil chemistry, types of construction practices, extent of the disturbed area, durations of construction activities, proximity to receiving water bodies, and sensitivity of those water bodies to construction-related contaminants. Construction of the multi-use trail would create a very small amount of new impervious surfaces along the trail alignment. This would result in an incremental reduction in the amount of natural soil surfaces available for infiltration of rainfall and runoff.

During project construction, clearing and grubbing of vegetation along the trail alignment, excavation, fill, grading, and compacting of soils may be needed to achieve a suitable trail base and ADA-compliant gradient which could result in short-term increased turbidity or sedimentation in the adjacent American River. Restoration of the site would involve grading and hydroseeding/revegetation after construction. These design features would protect surface water quality in the project vicinity after construction. The proposed project would not increase drainage flows along the alignment after construction. Additionally, the trail would be used by bicyclists and pedestrians, and motorized vehicles would be prohibited on the trail (except for maintenance vehicles). The prohibition on motorized vehicles, and their associated oil, grease and other fluids would also serve to protect water quality along the project alignment, after construction.

The City has adopted standard measures to control erosion and sediment during construction and all projects in the City are required to comply with the City's Standard Construction Specifications for Erosion and Sediment Control. The proposed project would comply with the City's standards set forth in the "Administrative and Technical Procedures Manual for Grading and Erosion and Sediment Control." The project would comply with the City's grading ordinance, which specifies construction standards to minimize erosion and runoff (City of Sacramento 2018).

Construction activities would take place primarily during the typical construction season, April 1 to November 15, which corresponds to the dry season during which rain, and resulting stormwater runoff and ponding are not expected in this region. However, during earthmoving activities close to a waterway, impacts to water quality could occur due to accidental release of sediment or other contaminants. Thus, this impact would be **potentially significant.** Implementation of **Mitigation Measure BIO-3** (more fully described in **Section 3.2** "**Biological Resources**") would reduce the impacts to **less than significant** by requiring the implementation of water quality and erosion control best management practices in accordance with the appropriate SWPPP that would ensure no water quality standards or waste discharge requirements would be violated. In addition, the proposed project is subject to the water quality and erosion prevention provisions outlined under the CDFW Streambed Alteration Agreement. Therefore, this impact would be **less than significant** with the incorporation of **Mitigation Measure BIO-3**.

Mitigation Measures

Mitigation Measure BIO-3: Prepare and Implement a Storm Water Pollution Prevention Plan, Spill Prevention and Control Plan, and Associated Best Management Practices. See **Section 3.2 "Biological Resources"** for a complete description of the mitigation measure.

Impact HWQ-2: Result in Erosion or Flood Impacts?

As discussed in the setting description, the project alignment (Segments 3-6) is located on the waterside of the levee, and therefore, is within a designated floodway and the 100-year floodplain. To understand the effect that the trail and railroad undercrossing structures may have on flood flows within the project area, a Hydraulic Assessment of Existing and Project Conditions has been prepared for the project alignment (cbec 2018). (Less than Significant With Mitigation)

Under the HEC-RAS two-dimensional hydraulic analysis, the cross-sectional area of the river was compared in the pre- and post-project conditions to determine if 1% or more of the river conveyance would be blocked by the proposed project during four different flow scenarios (ranging from 115,000 cfs to 192,000 cfs). The 1% threshold was established based on USACE guidance (Kukas 2014). Analysis determined that the trail footprint itself would not impact the modeled water surface elevation due to the limited topographic changes resulting from trail placement. In the model, railroad undercrossing structures were conservatively represented as complete obstructions across the width of the structural support columns to simplify calculations. Under this condition, the maximum reduction in conveyance for both undercrossings, was 0.28%, which is well below the 1% threshold. Thus, the project features are not expected to impede flood flows during or after construction and would not substantially increase exposure of people or property to injury or damage due to flooding. Therefore, this impact would be **less than significant**, with no mitigation required.

Flooding and periodic inundation are a concern along portions of the project alignment since the waterside of the levee is within the floodway and portions of the alignment may be subject to high flows and sedimentation. Although surrounded by levees, the American River Parkway is a dynamic riverine environment, and continual sediment transport and deposition, and recruitment and disposition of riparian and floodplain trees and other vegetation is a part of the natural cycle as the river meanders throughout the Parkway and experiences seasonal high flows. Inundation during high flows, and subsequent clean-up, repairs, and maintenance are common occurrences for recreational facilities along the Parkway, including trails. The majority of the trail will be paved, which will reduce maintenance costs. Additionally, maintenance of the trail will be the responsibility of the City Public Works Department, and will be coordinated with ARCFD, and County Parks. Therefore, this impact would be **less than significant**, with no mitigation required.

Operations and maintenance of the flood system adjacent to the proposed trail may be of concern to some trail users and nearby residents. Levee operation and maintenance activities along the south bank of the American River are conducted by ARFCD in accordance with the Supplement to Standard Operation and Maintenance Manual for the Sacramento River Flood Control Project Unit No. 118- Part No. 1 (USACE 1955). Levees in this area are were constructed to pass 115,000 cfs with 5 feet of freeboard or 152,000 cfs with 3 feet of freeboard, whichever is higher. Subsequent levee improvements allow the levees to convey a peak release of 160,000 cfs (the Folsom Dam emergency objective release).

The inundation regime along the Segments 3-6 of the project alignment is dependent on releases from Folsom Dam. The effects of the 1986 and 1997 floods raised concerns over the adequacy of the existing flood management system, including areas along the American River. The results of these investigations led to authorization of several flood risk management projects, including the Folsom Dam Safety/Flood Damage Reduction Project, also known as the Joint Federal Project (JFP), the Folsom Dam Raise, the American River Common Features flood damage reduction project and general reevaluation (GRR).

Construction of the ongoing JFP was completed in 2017. Per Section 101(e) of the Water Resources Development Act (WRDA) of 1999, the Corps was directed by Congress to update the Water Control Manual (WCM) for Folsom Dam to fully realize the flood risk management and dam safety benefits of the completed Folsom Dam Modifications (now JFP). Sections 101(b) and 101(e) of the Act also directed the Corps to reduce variable space allocation to a range between 400,000 af and 600,000 af, and to evaluate the feasibility of incorporating improved weather forecasts into an updated WCM for Folsom Dam and Lake (Manual Update) (USACE 2017). The purpose of the Manual Update is to establish new operational changes to fully realize the flood risk management and dam safety benefits of the new auxiliary spillway in coordination with Reclamation, CVFPB, the California Department of Water Resources (DWR), and SAFCA. The crest of the auxiliary spillway is 50 feet lower than the main spillway. This improved the ability of Folsom Dam to manage large flood events by allowing more water to be safely released earlier in a storm event, resulting in more storage capacity remaining in the reservoir to hold back the peak inflow. The update of the water control manual is ongoing, with a draft Water Control Manual Update released in June 2017, along with a Draft Supplemental Environmental Assessment (EA)/Environmental Impact Report evaluating impacts of the manual update and any subsequent changes in operations on Folsom Dam, including hydraulic and flood impacts to the downstream lower American River.

Changes at Folsom Dam to allow additional releases necessitated improvements to downstream levees to ensure adequate channel capacity and levee stability, including in areas along the project alignment. Levee improvements along the American River have been ongoing for several years; some levees were raised and slurry walls were added to miles of levee along the north and south banks, in order to address seepage and stability concerns. These improvements (the American River Common Features Project) were funded by the 1996 and 1999 Federal WRDAs (USACE 2015, Figure 2-11). The American River Common Features Project was designed to operate in conjunction with Folsom Dam and provide the ability to convey emergency objective releases while providing flood protection along the lower American River.

Additionally, erosion protection projects identified in the American River GRR are ongoing and will further reduce the chance of levee erosion during flood releases. The only sites along the project alignment that have been identified as high-risk erosion sites by the Lower American River Task Force - Bank Protection Working Group, to be repaired with WRDA 2016 funding, are along a portion of Segment 5. As of March 2019, 10% designs for erosion repairs along this reach have been submitted to the Corps, and project construction is planned for 2020 (LARTF 2019). Completion of armoring and erosion repair projects is expected by 2025 (USACE 2017) and will enable optimal operation of the Folsom JFP.

A Final SEA/EIR for the Water Control Manual Update was released in January 2019 and concluded that downstream hydraulic impacts due to releases governed by the Manual Update, in concert with implementation of the erosion protection recommended by the American River Common Features GRR (USACE 2015) and implemented by Lower American River Task Force, Bank Protection Working

Group, would reduce the risk of potential bank and channel erosion impacts to **less than significant**, with no mitigation required.

Mitigation Measure: No mitigation is required.

Residual Significant Impacts

Mitigation that would reduce potential water quality impacts to a less-than-significant level have been identified and therefore there would be no residual significant impacts to hydrology or water quality conditions.

This page intentionally left blank.

3.7 Land Use and Planning

3.7.1 Introduction

This section provides an overview of the land use and planning framework within the project study area and provides analysis of the potential impacts related to land use and planning that would result from implementation of the proposed project.

As a result of circulation of the IS/MND and during the proposed project's NOP scoping period, the following comment was received regarding:

- Consistency with the American River Parkway Plan (ARPP), including resource conservation policies, trail design policies, and policies related to the Discovery Park and Paradise Beach Area Plans within the ARPP.

Consistency with the ARPP policies is addressed in detail in **Impact LUP-1**, below.

3.7.2 Environmental Setting

The majority of the proposed trail alignment (from Sutter's Landing Regional Park to H Street) is designated as "Parks and Recreation" on the City's General Plan Land Use Diagram. The westernmost portion of the trail (between the Sacramento Northern Bikeway Trail and Sutter's Landing Regional Park) is designated "Employment Center Low Rise" and identified as a "Proposed Park/Parkway" in the 2035 General Plan. The project site is zoned A-OS (Agricultural–Open Space), M-2 (Heavy Industrial), and ARP-F (American River Parkway–Floodplain).

3.7.3 Regulatory Setting

Federal Plans, Policies, Regulations and Laws

No Federal plans, policies, regulations, or laws related to land use and planning are relevant to the analysis of land use and planning impacts for the project.

State Plans, Policies, Regulations and Laws

No State plans, policies, regulations, or laws related to land use and planning are relevant to the analysis of land use and planning impacts for the project.

Regional and Local Plans, Policies, Regulations, and Ordinances

City of Sacramento 2035 General Plan

The following goals and policies from the Land Use and Urban Design Element (LU) Element are relevant to the proposed project (City of Sacramento 2015).

- **Policy LU 1.1.5 Infill Development.** The City shall promote and provide incentives (e.g., focused infill planning, zoning/rezoning, revised regulations, provision of infrastructure) for infill development, redevelopment, mining reuse, and growth in existing urbanized areas to enhance community character, optimize City investments in infrastructure and community facilities, support increased transit use, promote pedestrian- and bicycle-friendly neighborhoods, increase housing diversity, ensure integrity of historic districts, and enhance retail viability.

GOAL LU 2.3: **City of Trees and Open Spaces.** Maintain multi-functional "green infrastructure" consisting of natural areas, open space, urban forest, and parkland, which serves as a defining physical feature of Sacramento, provides visitors and residents with access to open space and recreation, and is designed for environmental sustainability.

- **Policy LU 2.6.1 Sustainable Development Patterns.** The City shall promote compact development patterns, mixed use, and higher-development intensities that use land efficiently; reduce pollution and automobile dependence and the expenditure of energy and other resources; and facilitate walking, bicycling, and transit use. (RDR)

GOAL LU 4.2: **Suburban Neighborhoods.** Encourage the creation of more complete and well-designed suburban neighborhoods that provide a variety of housing choices and mix of uses that encourage walking and biking.

- **Policy LU 4.2.1 Enhanced Walking and Biking.** The City shall pursue opportunities to promote walking and biking in existing suburban neighborhoods through improvements such as:

    - Introducing new pedestrian and bicycle connections.
    - Adding bike lanes and designating and signing bike routes.
    - Narrowing streets where they are overly wide.
    - Introducing planting strips and street trees between the curb and sidewalk.
    - Introducing traffic circles, speed humps, traffic tables, and other appropriate traffic-calming improvements.

- **Policy LU 5.4.3 Connectivity to Regional Centers.** The City shall require greater pedestrian and bicycle connections between mixed-use regional commercial centers and surrounding neighborhoods.

GOAL LU 9.1: **Open Space, Parks, and Recreation.** Protect open space for its recreational, agricultural, safety, and environmental value and provide adequate parks and open space areas throughout the city.

- **Policy LU 9.1.1 Open Space Preservation.** The City shall place a high priority on acquiring and preserving open space lands for recreation, habitat protection and enhancement, flood hazard management, public safety, water and agricultural resources protection, and overall community benefit.

City of Sacramento Bicycle Master Plan

The purpose of the Sacramento City Bicycle Master Plan (City of Sacramento 2018) is to establish bicycle-related investments, policies, programs and strategies to establish a complete bicycle system. This will encourage more bicycling by the citizens of Sacramento for both transportation and recreation, thereby allowing the City of Sacramento to meet General Plan emission targets. The Bicycle Master Plan was updated in 2018 to further engage under-represented neighborhoods, evaluate the equity related to bicycle infrastructure, and identify best practice bikeway designs to better connect the City's Low-stress bikeway network. The proposed project is included within the 2018 Master Plan (see Figure 22).

American River Parkway Plan

The American River Parkway Plan (ARPP, Sacramento County 2008) is a policy and implementation guide developed to promote the preservation of the American River's natural environment while providing limited development for human enjoyment of the parkway. The American River Parkway (Parkway) is an open space greenbelt approximately 29 miles long extending west/southwest along the north and south sides of the Lower American River from Folsom Dam to its confluence with the Sacramento River. The ARPP divides the Parkway into smaller area plans that include specific guidelines and descriptions for individual segments of the Parkway. The proposed project is located within the Woodlake and Paradise Beach ARPP areas. These areas are predominately designated as Protected Areas under the ARPP, with habitat preservation and recreation-related activities being the primary uses. Trail recreation activities are permitted in the Protected Area land use category, and include walking, running, horseback riding, hiking, bicycling and in-line skating. These activities are permitted on designated trails only.

The following policies from the ARPP are relevant to analysis of land use impacts of the project:

3.1 Any development of facilities within the parkway, including but not limited to buildings, roads, turfed areas, trails, bridges, tunnels, pipelines, overhead electrical lines, levees and parking areas, shall be designed and located such that any impact upon native vegetation is minimized and appropriate mitigation measures are incorporated into the project.

3.2 Agencies managing the parkway shall protect, enhance and expand the parkway's native willow, cottonwood, and valley oak-dominated riparian and upland woodlands that provide important shaded riverine aquatic habitat (SRA), seasonal floodplain, and riparian habitats; and the native live oak and blue oak woodlands and grasslands that provide important terrestrial and upland habitats.

5.13 A separate designated pedestrian trail shall be provided along the entire length of the parkway. The pedestrian trail will be adjacent to the existing paved Jedediah Smith Memorial (bicycle) trail where practical given the width of the area and location of trees and other natural resources. New trail sections shall avoid heavily vegetated areas and low floodplain locations subject to frequent inundation. This trail shall not be paved; instead, it shall have a naturalistic design and surface that is stable, firm, and slip-resistant in order to support assistive devices for persons with disabilities.

7.9 Activities in the Protected Areas shall include all Nature Appreciation, all Trails Recreation and Aquatic Recreation. Recreational Enjoyment activities are restricted to limited family unit picnicking along trails.

7.18 Adverse impacts on adjacent land, such as dust, traffic congestion or noise, caused by parkway uses shall be eliminated or mitigated.

8.2 Access points and parking lots shall be located where there is the least potential environmental damage and adverse impact on the parkway's environment and surrounding neighborhoods.

8.3 It is the preference of this plan that jurisdictions adjacent to the parkway plan for safe and convenient routes on local streets for bicyclists and pedestrians traveling to designated parkway access points.

8.4 Parkway Managers shall encourage walking, bicycling, horseback riding, public transit and boating as forms of transportation to the parkway. This is particularly important during peak use holidays and weekends to reduce traffic congestion and air pollution. In addition to its importance for recreational activities, the Jedediah Smith Memorial Trail is recognized and shall be maintained as an important bicycle transportation route in the Sacramento region.

8.17 All new facilities and renovations or alterations of existing facilities, where applicable for the intended use and access of the facility, shall be accessible to persons with disabilities. designated entryways for accessible trails shall be installed at several locations throughout the parkway. All trails designated for persons with disabilities shall be appropriately signed to serve persons with disabilities.

10.4 Strengthen the Discovery Park Area's connections with the Sacramento Riverfront and with the surrounding urban neighborhoods in the Richards Boulevard and Natomas areas in ways that promote increased access and connectivity into the parkway.

10.4.2 Support construction of a Two Rivers Trail extension to H Street that will provide direct connectivity from California State University Sacramento to downtown Sacramento. The trail should be constructed on top of the levee where feasible.

10.18.3 Connect the north levee trail to the Two Rivers Trail on the south side of the American River through construction of a bike/pedestrian bridge attached to, or in the vicinity of, the Capital City Freeway crossing.

10.26 Permanent structures and any other physical changes that would attract groups of users should not be introduced to the [Paradise Beach] area.

American River Flood Control District Recreational Trails Policy

The ARFCD recreational trails policy (ARFCD, 2002) calls for ARFCD to support creation of recreational trails. The policy identifies the priority of ARFCD operations over recreational uses and requires trails to be located off the levee crown where feasible; the ARFCD board may permit a trail to be constructed on the levee crown on a case-by-case basis, with conditions.

3.7.4 Environmental Impacts and Mitigation Measures

Thresholds of Significance

The significance criteria used to evaluate the project impacts to land use are based on Appendix G of the CEQA Guidelines, thresholds of significance adopted by the City in applicable general plans and previous environmental documents, and professional judgment. A significant impact related to land use issues would occur if the project would:

a) Physically divide an established community.

b) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect.

Issues Not Discussed Further in this EIR

Divide Established Community

The project site is located along City-owned lands and the Parkway, and generally follows the American River. The presence of the project would not divide any established community.

Impact Analysis

Impact LUP-1: ***Conflict with Land Use Plans: American River Parkway Plan***

The proposed project is identified as a future project in the American River Parkway Plan, and construction and operation of the project would be consistent with the Plan (No Impact).

The proposed project would be constructed and operated within the Parkway. Segments 1 and 2 would provide a linkage between existing trail segments in the Woodlake Area, although most of the Segment 1 and 2 alignments would be located outside of the Parkway itself. Segments 3 through 6 would be located within the Paradise Beach Area. Most of the trail would be constructed in areas designated as "Protected Areas" by the ARPP. Trails recreation activities, including walking, running, horseback riding, hiking, bicycling, and in-line skating are permitted on designated trails only within Protected Areas.

The Resource chapter of the ARPP includes policies calling on agencies to protect and enhance riparian and upland woodlands, including minimizing impacts on native vegetation and incorporating mitigation measures into the project. The project has been designed to minimize impacts on native vegetation, including reducing the width of the trail, and further reducing the width of the shoulder where necessary to reduce impacts on trees and riparian vegetation. Please refer to **Section 3.2**, "**Biological Resources**", for a detailed description of the project's impacts on riparian vegetation, and associated mitigation measures.

Language in the Discovery Park Area Plan supports the construction of an extension of the Two Rivers Trail on the south bank of the American River to connect California State University-Sacramento and Downtown Sacramento. The policy language states that the trail should be constructed on the levee top where feasible. The American River Flood Control District has implemented a recreational trails policy prohibiting trails on the levee top in most instances, and the proposed project has been designed in compliance with this policy.

The Paradise Beach Area Plan includes only one policy, prohibiting structures or changes that would attract groups of users. This policy addresses historical concerns related to parties at the beach, and vehicular access limitations due to the small parking area at Glenn Hall Park.

The proposed project was identified as a future improvement in the ARPP, and the project has been designed in compliance with this plan, and with related requirements of the ARFCD. Consequently, **no impact** would occur and no mitigation is required.

Mitigation Measure: No mitigation is required.

Residual Significant Impacts

As more fully described above in **Impact LUP-1**, the proposed project would not conflict with applicable policies identified in the American River Parkway Plan and therefore there would be no residual significant impacts related to land use and planning.

3.8 Noise

3.8.1 Introduction

This section provides an overview of the existing noise conditions within the project study area, identifies the regulatory framework for this resource, and provides and analysis of the potential noise impacts that would result from implementation of the proposed project.

As a result of circulation of the IS/MND and during the proposed project's NOP scoping period, the following comment was received regarding:

- Existing noise and potential for increased noise from trail users along the levee top.

- Potential new sources of noise from trial users, including: new trail users playing music with portable speakers; the potential for 24-hour use of the trail leading to unacceptable levels of nighttime noise; and that more pedestrians may use the top of the levee to avoid conflicts with bicyclists on the paved trail, creating new sources of noise closer to adjacent residents.

Noise impacts from all aspects of the proposed project (i.e., construction, maintenance, and trail use) is addressed in detail in **Impact NOS-1**, below.

3.8.2 Environmental Setting

Sound is the mechanical energy of a vibrating object transmitted by pressure waves through a liquid or gaseous medium, such as air. Noise is defined as sound that is unwanted (loud, unexpected, or annoying). Excessive exposure to noise can result in adverse physical and psychological responses (e.g., hearing loss and other health effects, anger, and frustration); interfere with sleep, speech, and concentration; or diminish the quality of life.

The perceived loudness of sounds depends on many factors, including sound pressure level and frequency content. However, within the usual range of environmental sound levels, perception of loudness is relatively predictable, and can be approximated through frequency filtering using the standardized A-weighting network. There is a strong correlation between A-weighted sound levels (decibels expressed as dBA) and community response to noise. For this reason, the A-weighted sound level has become the standard descriptor for environmental noise assessment. All noise levels reported in this section are in terms of A-weighting.

Groundborne vibration is energy transmitted in waves through the ground. Vibration attenuates at a rate of approximately 50% for each doubling of distance from the source.

Noise-Sensitive Receptors

The project site is in central Sacramento. Construction access would be via local roadways, including 28th Street, Carlson Drive, Camellia Drive and H Street. Land uses defined by Federal, State, and local regulations as noise-sensitive vary slightly but typically include schools, hospitals, rest homes, places of worship, long-term care facilities, mental care facilities, residences, convalescent (nursing) homes, hotels, certain parks, and other similar land uses. The Technical Noise Supplement (Caltrans 2013) defines a noise receiver or receptor as "any natural or artificial sensor that can perceive, register or be affected by sound, such as a human ear, or a microphone." The closest noise-sensitive receptors are residences located within 85 feet of construction areas. Residences, and two schools and two churches

(Caleb Greenwood Elementary, Fremont Presbyterian Church and School, Sacramento Central Seventh-Day Adventist Church) along local haul routes are also noise-sensitive uses potentially affected by the project. The primary existing noise sources near the project site include vehicular traffic, the UPRR line, and low amounts of noise from adjacent residential and recreational activities.

Noise is defined as unwanted sound. Sound levels usually are measured and expressed in decibels (dB), with 0 dB being the lowest threshold of hearing. Decibel levels range from 0 to 140: 50 dB for light traffic is considered a low decibel level, whereas 120 dB for a jet takeoff at 200 feet is considered a high decibel level. The vicinity of the project area is most similar to that of "Normal suburban residential urban". Normal suburban residential urban areas have a typical noise level of 50-55 dBA. **Table 3.8-1** summarizes typical ambient noise levels based on population density.

Table 3.8-1. Population Density and Associated Ambient Noise Levels

Population Density	dBA, Ldn
Rural Suburban	40–50
Quiet suburban residential or small town	45–50
Normal suburban residential urban	50–55
Normal urban residential	60
Noisy urban residential	65
Very noisy urban residential	70
Downtown, major metropolis	75–80
Under flight path at major airport, 0.5 to 1 mile from runway	78–85
Adjoining freeway or near a major airport	80–90

Source: Hoover and Keith 1996

The majority of the proposed trail alignment (from Sutter's Landing Regional Park to H Street) is designated as "Parks and Recreation" on the City's General Plan Land Use Diagram. The westernmost portion of the trail (between the Sacramento Northern Bikeway Trail and Sutter's Landing Regional Park) is designated "Employment Center Low Rise" and identified as a "Proposed Park/Parkway" in the 2035 General Plan. The project site is zoned A-OS (Agricultural–Open Space), M-2 (Heavy Industrial), and ARP-F (American River Parkway–Floodplain).

3.8.3 Regulatory Setting

Federal Plans, Policies, Regulations and Laws

No Federal plans, policies, regulations, or laws related to noise are relevant to the analysis of impacts for the project.

State Plans, Policies, Regulations and Laws

No State plans, policies, regulations, or laws related to noise are relevant to the analysis of impacts for the project.

Regional and Local Plans, Policies, Regulations and Ordinances

Sacramento County Parks Ordinances

6.68.150 General Noise Regulations: Notwithstanding any other provisions of this chapter and in addition thereto, it is unlawful for any person to willfully make or continue or cause to be made or continued any loud, unnecessary or unusual noise which disturbs the peace and quiet of any neighborhood or which causes discomfort or annoyance to any reasonable person of normal sensitiveness residing in the area. The standards which shall be considered in determining whether a violation of the provisions of this section exists shall include, but not be limited to, the following:

a. The sound level of the objectionable noise;

b. The sound level of the ambient noise;

c. The proximity of the noise to residential sleeping facilities;

d. The nature and zoning of the area within which the noise emanates;

e. The density of the inhabitation of the area within which the noise emanates;

f. The time of day or night the noise occurs;

g. The duration of the noise and its tonal informational or musical content;

h. Whether the noise is continuous, recurrent or intermittent;

i. Whether the noise is produced by a commercial or noncommercial activity. (SCC 254 § 1 (part), 1976.)

9.36.072 Sound Amplification Equipment: Within any park facility, no person shall use sound amplification equipment in excess of the noise levels provided by Chapter 6.68 of this code without a permit from the director. (SCC 0713 § 5, 1988; SCC 36 § 2 (part), 1971.)

6.68.145 Radios, Tape Players on Publicly Owned Property: Notwithstanding any other provision of this Code and in addition thereto, it is unlawful for any person to permit or cause any noise, sound, music or program to be emitted from any radio, tape player, tape recorder, record player or television outdoors on or in any publicly owned property, park or place when such noise, sound, music or program is audible to a person of normal hearing sensitivity one hundred feet from said radio, tape player, tape recorder, record player or television.

a. As used herein, "a person or normal hearing sensitivity" means a person who has a hearing threshold level of between zero (0) decibels and twenty-five (25) decibels HL averaged over the frequencies 500, 1,000 and 2,000 Hertz.

b. Notwithstanding any other provision of this Code, any person violating this section shall be guilty of an infraction and upon conviction thereof, is punishable by a fine not exceeding fifty dollars for a first violation; a fine not exceeding one hundred dollars for a second violation of this section within one year; a fine not exceeding two hundred fifty dollars for each additional violation of this section within one year. A person who violates the provisions of this section

shall be deemed to be guilty of a separate offense for each day, or portion thereof, during which the violation continues or is repeated.

c. Notwithstanding Sections 6.60.010 and 6.68.230 or any other provision of this Code, no citation or notice to appear shall be issued or criminal complaint shall be filed for a violation of this section unless the offending party is first given a verbal or written notification of violation by any peace officer, public officer, park ranger or other person charged with enforcing this section and the offending party given an opportunity to correct said violation.

d. This section shall not apply to broadcasting from any aircraft, vehicle or stationary sound amplifying equipment as defined and regulated in Chapter 5.56 or to the use of radios, tape players, tape recorders, record players or televisions in the course of an assembly or festival for which a license has been issued pursuant to Section 9.36.072 or a parade for which a permit has been issued pursuant to Section 10.32.020 or any other activity, assembly or function for which a permit or license has been duly issued pursuant to any provision of the Code. (SCC 490 § 1, 1981.)

City of Sacramento 2035 General Plan

The following goals and policies from the Environmental Constraints (EC) element are relevant to the proposed project (City of Sacramento 2015).

Construction noise is regulated by the City of Sacramento. Chapter 8.68 of the City of Sacramento Municipal Code contains application noise regulations within City limits:

Section 8.68.060 – Exterior Noise Standards

a. The noise standards that apply to all agricultural and residential properties are:
   1. From seven a.m. to ten p.m. the exterior noise standard shall be fifty-five (55) dBA.
   2. From ten p.m. to seven a.m. the exterior noise standard shall be fifty (50) dBA.

Construction noise for the proposed project is exempt under City Code Section 8.68.080 as long as all work is compliant with noise code requirements that restrict construction activity to the following hours: 7am to 6pm, Monday through Saturday, and 9am to 6pm on Sundays. Work that occurs outside of these hours could result in noise that exceeds the 55-dBA daytime standard or 50-dBA nighttime standard. The contractor would be required to comply with the noise ordinance during construction activities. However, if construction activities generate noise in violation of the timeframes described above, the contractor will be required to obtain the proper variances as outlined in Sections 8.68.250 and 8.68.260.

GOAL EC 3.1: **Noise Reduction.** Minimize noise impacts on human activity to ensure the health and safety of the community.

- **Policy EC 3.1.1 Exterior Noise Standards.** The City shall require noise mitigation for all development where the Projected exterior noise levels exceed those shown in **Table 3.8-2** below, to the extent feasible.

Table 3.8-2. Exterior Noise Compatibility Standards for Various Land Uses

Land Use Type	Highest Level of Noise Exposure That is Regarded as "Normally Acceptable"
Residential- Low Density Single Family, Duplex, Mobile Homes	60 dBA
Residential- Multi-family	65 dBA
Transient Lodging- Motels, Hotels	65 dBA
Schools, Libraries, Churches, Hospitals, Nursing Homes	70 dBA
Auditoriums, Concert Halls, Amphitheaters	Mitigation Based on site-specific study
Sports Arena, Outdoor Spectator Sports	Mitigation based on site-specific study
Playgrounds, Neighborhood Parks	70 dBA
Golf Courses, Riding stables, Water Recreation, Cemeteries	75 dBA
Office Buildings- Businesses, Commercial and Professional	70 dBA
Industrial, Manufacturing, Utilities, Agriculture	75 dBA

Source: City of Sacramento 2009

- **Policy EC 3.1.2 Exterior Incremental Noise Standards.** The City shall require noise mitigation for all development that increases existing noise levels by more than the allowable increment shown in **Table 3.8-3**, to the extent feasible.

Table 3.8-3. Exterior Incremental Noise Impact Standards for Noise-Sensitive Uses (dBA)

Residences and Buildings where people normally sleep		Institutional land uses with primarily daytime and evening uses	
Existing (Ldn)	Allowable Noise Increment	Existing Peak hour (Leq)	Allowable Noise Increment
45	8	45	12
50	5	50	9
55	3	55	6
60	2	60	5
65	1	65	3
70	1	70	3
75	0	75	1
80	0	80	0

Source: City of Sacramento 2009

- **Policy EC 3.1.3 Interior Noise Standards.** The City shall require new development to include noise mitigation to assure acceptable interior noise levels appropriate to the land use type: 45 dBA Ldn (Ldn = Day/Night Average Sound Level) for residential, transient lodgings, hospitals, nursing homes, and other uses where people normally sleep; and 45 dBA Leq (peak hour) for office buildings and similar uses.

- **Policy EC 3.1.4 Interior Noise Review for Multiple, Loud Short-Term Events.** In cases where new development is proposed in areas subject to frequent, high-noise events, (such as aircraft overflights, or train and truck pass-bys), the City shall evaluate noise impacts on any sensitive receptors from such events when considering whether to approve the development proposal, taking into account potential for sleep disturbance, undue annoyance, and interruption in conversation, to ensure that the proposed development is compatible within the context of its surroundings.

- **Policy EC 3.1.5 Interior Vibration Standards.** The City shall require construction Projects anticipated to generate a significant amount of vibration to ensure acceptable interior vibration levels at nearby residential and commercial uses based on the current City or Federal Transit Administration (FTA) criteria.

- **Policy EC 3.1.7 Vibration.** The City shall require an assessment of the damage potential of vibration-induced construction activities, highways, and rail lines in close proximity to historic buildings and archaeological sites and require all feasible mitigation measures be implemented to ensure no damage would occur.

- **Policy EC 3.1.9 Compatibility with Park and Recreation Uses.** The City shall limit the hours of operation of parks and active recreation areas in residential areas to minimize disturbance to residences.

- **Policy EC 3.1.10 Construction Noise.** The City shall require development Projects subject to discretionary approval to assess potential construction noise impacts on nearby sensitive uses and to minimize impacts on these uses, to the extent feasible.

3.8.4 Environmental Impacts and Mitigation Measures

Thresholds of Significance

The significance criteria used to evaluate the project impacts to noise and vibration are based on Appendix G of the CEQA Guidelines, thresholds of significance adopted by the City in applicable general plans and previous environmental documents, and professional judgment. A significant impact related to noise and vibration issues would occur if the project would:

a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or in other applicable standards of other agencies, including:

   i. result in exterior noise levels in the project area that are above the upper value of the normally acceptable category for various land uses due to the project's noise level increases;

   ii. result in residential interior noise levels of 45 dBA Ldn or greater caused by noise level increases due to the project?

b) Generation of excessive groundborne vibration or groundborne noise levels?

c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within 2 miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

Issues Not Discussed Further in this EIR

Conflict With An Airport Land Use Plan or Location Within Two miles of An Airport Resulting In Excessive Noise

The project alignment is not located within an airport land use plan area and is not located within wo miles of an airport (SACOG 2013). Thus, noise associated with these issues are not discussed further in this EIR.

Impact Analysis

Impact NOS-1: ***Cause A Temporary or Permanent Increase in Ambient Noise Levels In Excess Of Applicable Standards***

The proposed project would not violate any of the City's construction noise standards or result in operational uses that would directly increase ambient noise levels in the vicinity of the project beyond existing conditions. (Less than Significant).

Implementation of the proposed project would generate construction noise from equipment operating at the project site, and from the transport of construction workers, construction materials, and equipment to and from each work location. The list of construction equipment that would be used for project construction activities is shown in **Table 3.8-4** with typical noise levels generated at 50 feet from the equipment (reference levels).

Table 3.8-4. Construction Equipment and Typical Equipment Noise Levels

	Noise Levels (dBA)	
Type of Equipment	L_{max} at 50 Feet	L_{eq} at 50 Feet
Equipment/Supply Transport Trucks	84	80
Front-end Loader	80	76
Bulldozer	85	81
Highway Dump Truck	84	80
Grader	85	81
Water Truck	84	80
Self-propelled Sheepsfoot or Tamping Roller	85	78
Vibratory Smooth-wheel Compactor	80	73
Forklift	85	78
Concrete Transit Truck	84	80
Lubricating Truck	84	80
Pick-up Truck	55	51
Hydro-seed Truck	84	80

Notes:
L_{max} = maximum instantaneous sound level; L_{eq} = 1-hour equivalent sound level (the sound energy averaged over a continuous 1-hour period)
Source: Construction equipment list based on Federal Highway Administration 2006, adapted by GEI Consultants, Inc. in 2016 and 2017

The 2035 General Plan establishes acceptable exterior noise levels in Policy EC 3.1.1. Acceptable exterior noise levels for land uses in the vicinity of the project site range from a weighted 24-hour

average of 60 dBA for low-density residential to 70 dBA for schools, parks, office buildings, and urban residential projects, to 75 dBA for industrial uses. Depending on the existing exterior noise environment, incremental noise increases can also be significant, even if the noise compatibility standards are not exceeded. Chapter 8.68.060 (Exterior Noise Standards) establishes acceptable noise levels of 55 dBA from 7 a.m. to 10 p.m. for residential properties.

Chapter 8.68.080 (Exemptions) of the Sacramento City Code exempts construction noise from its noise standards, provided that construction noise occurs between the hours of 7:00 am and 6:00 pm Monday through Saturday and between the hours of 9:00 am and 6:00 pm on Sunday. Since all project-related construction activities would only occur within the hours specified in the City's code, the proposed project would not result in a violation of the City's construction noise standards. Therefore, this impact would be **less than significant**, with no mitigation required.

Activities associated with trail maintenance would also be similar to existing levee maintenance activities. Typical maintenance activities during project operation would include routine inspections, debris removal, and repair of cracks and slope failures. Mowing would occur four times per year, and tree and vegetation trimming would occur on an annual basis. Because operation of the trail would not introduce significant new noise sources or expose new sensitive receptors to noise, this impact would be **less than significant**, with no mitigation required.

Trail uses following project implementation would be similar to existing uses in the proposed project area (hiking, dog walking, bicycling). Although the number of users along the trail alignment, particularly bicycle commuters, may at times be greater relative to existing conditions, there would be no change to current regulations prohibiting motorized vehicles on the trail. Additionally, in the absence of an established paved trail, existing trail users have been documented to use existing gravel paths along both the levee toe and levee crown. Establishment of a (majority) levee toe paved bike trail with adjacent areas designated for pedestrians will likely reduce the use of the exposed levee crown path by many users and reduce the effect of noise from trail users on nearby residences, except in the small portion of Segment 4 where flood management infrastructure integrity requires construction along the levee crown due to the absence of a toe wide enough for trail placement. Prohibition of access to any portion of the flood management system (i.e. the levee toe or crown) is under the jurisdiction of the applicable local maintaining agency (ARCFD) and the decision to restrict access to any portion of the American River Parkway is under the jurisdiction of County Parks. ARCFD and County Parks do not currently place any restrictions on access to public lands in the project vicinity, including any portion of the levee or Parkway, except for areas where locked gates or fencing may be present (i.e. pumping facilities); the areas are open to recreation and associated ambient noise levels associated with allowed recreational activities.

Additionally, compliance with all applicable noise ordinances and laws that govern City and County lands along the trail alignment is the personal responsibility of trail users. Any trail user in violation of noise standards as described in Sacramento County Park ordinances, City code, or the City General Plan is subject to citation and/or removal at the discretion of law enforcement agencies with jurisdiction along the trail alignment. Trail uses following project implementation would be similar to existing allowable uses and no other mobile sources of noise will be introduced. Thus, operation of the trail will not directly increase ambient noise levels in the vicinity of the project beyond existing conditions, and therefore this impact would be **less than significant**, with no mitigation required.

Mitigation Measure: No mitigation is required.

Impact NOS-2: ***Generate Excessive Groundborne Vibration or Groundborne Noise Levels***

Construction equipment and traffic associated with the proposed project would not generate excessive groundborne vibration or groundborne noise levels. (Less than Significant).

Operation of some construction and maintenance equipment, and construction traffic would produce groundborne vibration. Project-related vibration levels were estimated using FTA's guidelines for environmental impact assessment to calculate a screening distance for vibration effects. The calculated screening distance is based on FTA's reference vibration levels for construction equipment (shown in **Table 3.8-5**). The highest reference vibration level for equipment used in constructing or maintaining the project is associated with use of a vibratory roller, approximately 94 VdB (0.210 inch per second PPV) at a distance of 25 feet (Caltrans 2013; FTA 2006). This vibration level at 25 feet is below the City of Sacramento's 0.5 inch per second PPV threshold. Although the use of a vibratory roller within 25 feet of the UPRR overcrossing (a historic structure) would exceed the City's 0.2 inch per second PPV standard, the UPRR overcrossing is built to withstand the vibration produced by freight and passenger rail traffic, well in excess of that produced by a vibratory roller. Therefore, impacts related to groundborne vibration from the operation of construction and maintenance equipment would be **less than significant**, with no mitigation required.

Table 3.8-5. Vibration Source Levels for Construction Equipment

Equipment	PPV at 25 feet (in/sec)	Approximate VdB at 25 feet
Hoe Ram	0.089	87
Vibratory Roller	0.210	94
Large Bulldozer	0.089	87
Loaded Trucks	0.076	86
Jackhammer	0.035	79
Small Bulldozer	0.003	58

Notes: PPV = peak particle velocity; in/sec = inches per second; VdB = vibration decibels
Source: Federal Transit Administration 2006

Unless there are substantial discontinuities in local roads, groundborne vibration generated by traffic traveling on roadways does not exceed FTA standards (FTA 2006). The project-generated construction traffic would use established roadways and thus potential project impacts related to groundborne vibration from construction traffic would be **less than significant**, with no mitigation required.

Mitigation Measure: No mitigation is required.

Residual Significant Impacts

As more fully described above, construction, maintenance, and use of the recreation trail would not exceed local noise standards or result in groundborne vibration or noise levels. Therefore, there would be no residual significant impacts related to noise or vibration.

This page intentionally left blank.

3.9 Public Services, Recreation, and Utilities

3.9.1 Introduction

This section provides an overview of the existing public services, utilities, and recreation facilities within the project study area, identifies the regulatory framework, and provides and analysis of the potential impacts on public services, recreation, and utilities that would result from implementation of the proposed project.

As a result of circulation of the IS/MND and during the proposed project's NOP scoping period, the following comments were received regarding:

- potential increased risk of fire and increased demand for police and emergency medical services with increased usage of trails;
- baseline existing recreational uses on the project site, and potential adverse effects on existing recreational use, including conflicts between bicycles and other trail users, and impacts on restrooms at Glenn Hall Park.

Increased demand for emergency medical services is addressed below in Impact **PSR-1** below, with demand for police services addressed in Impact **PSR-2**. Potential adverse effects on existing recreational use is addressed in Impact **PSR-3**. The related issue of increased wildfire risk is addressed in **Chapter 1.0** "**Introduction**" (see **Table 1-5**).

3.9.2 Environmental Setting

Public Services

Public Safety

The project site is located within the City of Sacramento and within the Woodlake and Paradise Beach areas of the American River Parkway (Parkway). The Sacramento County Park Ranger Unit is generally responsible for day-to-day patrol and law enforcement within the Parkway. The City of Sacramento Police (SPD) and Sacramento County Sheriff 's Department have concurrent law enforcement responsibilities within their respective jurisdictions where those jurisdictions overlap within the Parkway. Portions of the project alignment that are within Sutter's Landing Regional Park are also under the jurisdiction of City of Sacramento Park Rangers. The project lies within SPD Police District 3A, 3B, and 6E (SPD 2017). Other public safety agencies that provide law enforcement within the Parkway on a less frequent basis include CDFW, the California Highway Patrol, Cal Expo Police and the CSUS Police Department (Sacramento County 2008).

Police resources are allocated and assigned on an annual basis based upon several factors, including, but not limited to incidents of crime within a geographic area (police beat), population, and police staffing capabilities. Any significant expansion in terms of buildings, population, etc. would be factored into the annual patrol planning analysis when determining the amount of resources (patrol officers) to place in that particular geographic beat for the coming calendar year. (Young, Pers. Comm. 2018) The proposed trail project would not include the expansion of buildings or directly generate additional population growth in the surrounding area.

Fire and Emergency Medical Response

Emergency medical and fire protection is provided by the Sacramento City Fire Department. The project site is located within the Engine Company First-In District or Response Zone for Stations 2 and 4 (trail segments 1-3), and Station 6 (trail segments 4-6) (SFD 2012).

Schools

The City of Sacramento Unified School District provides school services to 42,000 students in the project vicinity.

Recreation

The project site extends from the Sacramento Northern Bikeway to Sutter's Landing Regional Park (Segments 1 and 2), and from Sutter's Landing Regional Park to H Street (Segments 3 through 6).

Segments 1 and 2 are not readily accessible or routinely used for recreation at the time of this Draft EIR's preparation. Segments 3 through 6 are on readily accessible public land and are routinely used for recreation. In Segments 3 through 6, the existing gravel road along the levee crown, the existing road along the levee toe (which includes both gravel and unpaved areas), and informal trails through wooded areas closer to the river are all used for recreation, including walking, jogging, biking, and dog walking.

The American River Parkway Plan (ARPP [Sacramento County 2008]) designates Segments 1 and 2, and Segments 3 through 6 as "Protected Area." Facilities permitted in this designation include surfaced and unsurfaced trails, water fountains, occasional family unit picnic tables, and restrooms located at trail rest stops. Trail recreational activities envisioned in Protected Areas include walking, hiking, running, horseback riding, and bicycling. The Two Rivers Trail is identified as a "proposed bike trail" in the ARPP. The ARPP also identifies activities and facilities for the Paradise Beach area. Due to the limited availability of parking at Glenn Hall Park, and the lack of legal on-street parking in the immediate vicinity of the park, the ARPP recommends that structures or physical changes that would attract groups of users to Paradise Beach should not be introduced.

During public outreach activities conducted by the City of Sacramento during the project planning and design, residents expressed satisfaction with the existing informal use of the levee crown, levee toe, and trails, and expressed concerns about compatibility of trails for bicycles, pedestrians, and dog walkers.

Existing park facilities in proximity to the proposed project include Sutter's Landing Regional Park and Glenn Hall Park. Sutter's Landing Regional Park offers a dog park, skate park, basketball and bocce courts, an existing portion of the Two Rivers Trail, and several parking lots. (City of Sacramento 2018a) Facilities at Glenn Hall Park include a public swimming pool, playground, picnic areas, tennis and volleyball courts, athletic fields, restrooms, and a parking lot. (City of Sacramento 2018b) Other nearby access points to the American River Trail's system of bicycle and pedestrian trails include Discovery Park, Ethan Way, Paradise Beach (at Glenn Hall Park), and Howe Avenue. (ARPF 2018)

The Lower American River has been designated a "Recreational River" under both the California Wild and Scenic Rivers Act and the National Wild and Scenic Rivers Act (NWSR 2018).

Utilities and Services

Water Supply

Water service to the project area is provided by the City of Sacramento. The City provides domestic water service from a combination of surface water and groundwater sources including the American River, Sacramento River, and groundwater wells. Water from the American River and Sacramento River is diverted by two water treatment plants (WTP): the Sacramento River WTP located south of Richards Boulevard between Bercut Drive and Sequoia Pacific Drive and the Fairbairn WTP located at the northeast corner of State University Drive South and College Town Drive. Water diverted from the Sacramento and American Rivers is treated, stored in storage reservoirs, and pumped to customers via an existing conveyance network.

The City of Sacramento complies with the California Water Code, which requires urban water suppliers to prepare and adopt an Urban Water Management Plan (UWMP) every five years. The most recent UWMP was adopted in 2016 (the 2015 UWMP) and includes an analysis of water demand sufficiency under normal, single dry year, and multiple dry year scenarios. Water supply and demand projections include future planned development until 2040.

Due to past severe drought conditions in California, the Governor has issued multiple Executive Orders mandating water use reductions and to support making water conservation a way of life in California. These include urban water use reporting requirements and prohibitions on wasteful practices such as watering during or after rainfall, hosing off sidewalks, and irrigating ornamental turf on public street medians.

Wastewater and Stormwater

The Sacramento Regional County Sanitation District (SRCSD) and the Sacramento Area Sewer District (SASD) and City of Sacramento provide both collection and treatment services within their service area. Wastewater generated in the service area is collected by trunk facilities in the Sacramento Area Sewer District and then conveyed via interceptors to the Sacramento Regional Wastewater Treatment Plant (SRWTP) (SRCSD 2018, SASD 2018). Wastewater within the vicinity of Segments 1 and 2 is collected by the City of Sacramento's Combined Sewer System and wastewater within the vicinity of Segment 3 through 6 is collected by SASD facilities. During non-storm conditions, all wastewater collected is conveyed to the SRCSD system, and ultimately treated at the SRWTP, which is located in Elk Grove.

There are no public restrooms or other wastewater-generating facilities along the project alignment. Local runoff along the project alignment flows by gravity overland during storm events, and also through culverts and vegetated or lined intermittent drainages, ultimately to the American River.

Solid Waste Disposal

Solid waste disposal services in the project area are provided by the Sacramento Regional Solid Waste Authority (SWA). The Sacramento County Kiefer Landfill in Sloughhouse, CA is the primary location for the disposal of waste from the City of Sacramento. The landfill accepts municipal waste and industrial waste and is permitted to accept up to 10,815 tons per day (CalRecycle 2018). It is the only landfill facility in Sacramento County permitted to accept household waste from the public. Current peak and average daily disposal is much lower than the current permitted amounts. As a result, the Kiefer Landfill is expected to be able to provide service to the City, without need for new expansion beyond that already planned, until the year 2065 (City of Sacramento 2014).

Electricity and Natural Gas

Sacramento Municipal Utility District (SMUD) is responsible for the generation, transmission, and distribution of electrical power to its 900 square mile service area, which includes most of Sacramento County and a small portion of Placer County. The Pacific Gas & Electric Company (PG&E) provides natural gas service to residents and businesses within the City of Sacramento.

Telecommunications

AT&T provides telecommunications service in the City of Sacramento and within the project area.

3.9.3 Regulatory Setting

Federal Plans, Policies, Regulations and Laws

No Federal plans, policies, regulations, or laws related to land use and planning are relevant to the analysis of public services, recreation, or utilities impacts for the project.

State Plans, Policies, Regulations and Laws

No State plans, policies, regulations, or laws related to land use and planning are relevant to the analysis of public services, recreation, or utilities impacts for the project.

Regional and Local Plans, Policies, Regulations and Ordinances

City of Sacramento 2035 General Plan

The following goals and policies from the Public Health and Safety (PHS) and Education, Recreation, and Culture (ERC) Elements are relevant to the proposed project (City of Sacramento 2015).

GOAL PHS 1.1: Crime and Law Enforcement. Work cooperatively with the community, regional law enforcement agencies, local government and other entities to provide quality police service that protects the long-term health, safety and well-being of our city, reduce current and future criminal activity, and incorporate design strategies into new development.

- **Policy PHS 1.1.2: Response Time Standards.** The City shall strive to achieve and maintain optimal response times for all call priority levels to provide adequate police services for the safety of all city residents and visitors.

- **Policy PHS 2.1.2 Response Time Standards.** The City shall strive to maintain appropriate emergency response times to provide optimum fire protection and emergency medical services to the community.

- **Policy PHS 2.2.4 Water Supplied for Fire Suppression.** The City shall ensure that adequate water supplies are available for fire suppression throughout the city and shall require development to construct all necessary fire suppression infrastructure and equipment.

GOAL ERC 2.1: Integrated Parks and Recreation System. Provide an integrated system of parks, open space areas, and recreational facilities that are safe and connect the diverse communities of Sacramento.

- **Policy ERC 2.1.1 Complete System.** The City shall develop and maintain a complete system of parks and open space areas throughout Sacramento that provide opportunities for both passive and active recreation.

- **Policy ERC 2.1.2 Connected Network.** The City shall connect all parts of Sacramento through integration of recreation and community facilities with other public spaces and rights-of-way (e.g., buffers, medians, bikeways, sidewalks, trails, bridges, and transit routes) that are easily accessible by alternative modes of transportation.

GOAL ERC 2.2: Parks, Community and Recreation Facilities and Services. Plan and develop parks, community and recreation facilities, and services that enhance community livability; improve public health and safety; are equitably distributed throughout the city; and are responsive to the needs and interests of residents, employees, and visitors.

- **Policy ERC 2.2.2 Timing of Services.** The City shall ensure that the development of parks and community and recreation facilities and services keeps pace with development and growth within the city.

3.9.4 Environmental Impacts and Mitigation Measures

Thresholds of Significance

The significance criteria used to evaluate the project impacts to public services, recreation, and utility use or infrastructure are based on Appendix G of the CEQA Guidelines, thresholds of significance adopted by the City in applicable general plans and previous environmental documents, and professional judgment. A significant impact related to public services, recreation, and utility issues would occur if the project would:

a) Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, or the need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the public services:

   Fire protection?
   Police protection?
   Schools?
   Parks?
   Other public facilities?

b) Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?

c) Include recreational facilities or require the construction or expansion of recreational facilities that might have an adverse physical effect on the environment?

d) Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?

e) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry, and multiple dry years?

f) Result in a determination by the wastewater treatment provider that serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?

g) Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?

h) Comply with Federal, State, and local management and reduction statutes and regulations related to solid waste?

Issues Not Discussed Further in this EIR

Schools, Parks, and Other Public Facilities or Utilities

The project site is located along City-owned lands and the Parkway. The proposed project would not require school, parks, library services, water, wastewater treatment, storm water drainage, electric power, natural gas, or telecommunications facilities because the project does not propose any residential or commercial uses that would generate demand for such services. In compliance with ARPP Policy 5.27 "Prohibited Activities and Facilities" which prohibits permanent lighting facilities in the Parkway, the proposed trail would not be constructed with electrical lighting along the alignment and no connections to the regional electricity grid would be required. The proposed project would also not require connection to the PG&E natural gas distribution system.

Sufficient Water, Wastewater, and Solid Waste Disposal Capacity

The proposed project would not include any residential or commercial uses that would require connection to existing water conveyance pipelines or require additional connections to the regional water supply system. The proposed project would not involve construction of any public restrooms or other wastewater-generating facilities along the project alignment. The project would not generate new demand for water, wastewater, or solid waste disposal capacity. Therefore, as also presented in **Table 1-5** of **Chapter 1.0** "**Introduction**", these issues are not discussed further in the EIR.

Stormwater Runoff

The footprint of the proposed project is not considered large enough to create a substantial increase in runoff from impervious surfaces and overall stormwater runoff patterns would not change along the project alignment. In Segments 1 and 2, stormwater is expected to infiltrate into the ground before entering the City's stormwater conveyance system. In Segments 3-6, all stormwater would continue to flow to the American River. The trail would be slightly sloped away from the levee crown (toward the river) to encourage sheet flow of stormwater over the ground surface. In areas where trail design may cause minor ponding of water, small drain inlets would be installed to carry water under the bike trail to outlets on the river side of the trail. Outlets would discharge out of a flared end section and onto a small area of rock which would reduce stormwater velocity and disperse the water in a way that reduces the possibility of erosion around the outlet. Consequently, project construction and operation would not contribute to a need for additional stormwater facilities or additional connections to existing facilities. As also presented in **Table 1-5** of **Chapter 1.0** "**Introduction**", these issues are not discussed further in the EIR.

Require New Recreational Facilities

The project would not introduce any new residents or commercial uses which would increase the demand for recreational facilities beyond what was envisioned in the 2035 General Plan, and the project would include construction of recreational facilities as envisioned in the General Plan.

Impact Analysis

Impact PSR-1: Public Services: Fire Protection and Emergency Medical Services

The project would not require new fire protection or emergency medical services facilities. [Less than Significant]

Segments 1 and 2 are not readily accessible to or routinely used by the public at the time of the preparation of the IS. Segments 3 through 6 are on public land and are routinely used for recreation. The existing gravel road along the levee crown, the existing road along the levee toe (which includes both gravel and unpaved areas) and informal trails through wooded areas closer to the river are all used for recreation, including walking, jogging, biking, and dog walking.

Segments 3 through 6 are readily accessible and routinely used by existing local and regional residents for recreation. The proposed project would not involve construction of residences or commercial buildings that would increase the population in the SFD service area. Construction workers, some likely from outside the immediate adjacent neighborhoods, would be in the area temporarily during construction, and following project completion, the developed access would likely result in increased bicycle and pedestrian use in the project area, potentially resulting in more service calls related to fire or emergency medical response. Nevertheless, several fire stations are in close proximity to the proposed project alignment and these areas already receive fire protection and emergency medical services from SFD, as discussed in Section 3.9.2, "Environmental Setting." Construction and operation of the project would not cause an increase in population such that additional fire stations would be needed under General Plan guidelines. The proposed project is consistent with the land use designation for these areas in the 2035 General Plan. Existing Sacramento County Parks Fire Fuel Reduction Action Plan activities along the Parkway would continue as would fuels and vegetation management in compliance with City Code (Sacramento County 2018). Therefore, impacts to fire service from the proposed project have already been accounted for, and the project would comply with the requirements of the City Code, County Parks, and General Plan policies regarding adequate fire protection services. As a result, the impact on fire and emergency medical response would be **less than significant**, with no mitigation required.

Mitigation Measure: No mitigation is required.

Impact PSR-2: Public Services: Police Protection

The project would not require new police facilities. [Less than Significant]

The majority of the project alignment is already used for undeveloped recreation and areas along the trail alignment are already under the jurisdiction of and served by SPD and City and County Park Rangers. The proposed project would not require construction of a new station or expansion of an existing facility in order to provide law enforcement services in the project area. Additionally, trail improvements associated with the proposed project were anticipated under the 2035 General Plan and would be consistent with General Plan policies.

Nearby residents have expressed concerns that the project would increase the number of unsheltered people along the Parkway in the project site, resulting in indirect impacts such as increased crime, fires, litter or noise. Although the project would introduce a paved path into areas currently characterized by informal recreation (Segments 3 through 6), this portion of the project site is currently accessible to the public and in widespread use for undeveloped recreation. There is no substantial evidence to indicate that a paved path would lead to increased crime, fires, or noise relative to the current condition. This impact would be **less than significant**, with no mitigation required.

Mitigation Measure: No mitigation is required.

Impact PSR-3: Recreation: Cause Deterioration of Existing Facilities

Implementing the project would not cause deterioration of existing parks or recreational facilities. Informal recreational use of the project site would be temporarily affected by construction of the project. [Less than Significant]

The project would expand recreational opportunities at the project site by offering a paved multi-use trail. The trail would generally consist of an 8-foot-wide paved path with a 2-foot-wide compacted aggregate base shoulder on the inner side and a similar 6-foot-wide shoulder on the waterside to provide space for walking and jogging adjacent to the paved portion of the trail, bringing the total trail cross section along most of its length to 16 feet wide. However, due to space limitations in some locations, the waterside shoulder of the trail would be narrowed to 4 feet wide.

There are no formal recreational facilities along most of the proposed trail alignment; the trail would connect several existing recreational facilities, including the Sacramento Northern Bikeway Trail, Sutter's Landing Regional Park, Glenn Hall Park, and an existing developed trail in the American River Parkway, extending eastward from H Street. Visitors seeking access to the proposed project might increase the use of Sutter's Landing Regional Park facilities, including use of parking and other facilities. However, as described in **Section 3.9.2**, "**Environmental Setting**," the limited parking available at Glenn Hall Park reduces the potential for an increase in visitors using Glenn Hall Park to access the proposed trail facilities. The project would likely result in increased bicycle and pedestrian use in the project area. Although the increase in the number of uses may increase the use of Glenn Hall Park facilities, including restroom facilities, the presence of the levee between the proposed trail location and the developed facilities at Glenn Hall Park is likely to reduce the use of park facilities by through-traveling users of the trail.

Existing informal recreational use along the proposed trail alignment would be temporarily disrupted during construction, but the disruption would be short-term and there are other trails and parks in the region. Following the completion of construction activities, the levee crown and existing informal foot trails between the levee and the American River would be unchanged from the existing condition.

The proposed trail is a modification of the City's standard trail cross section; the paved width would be less than the standard trail section, and the project would include a wider gravel shoulder on the waterside of the trail. These modifications to the standard trail section are intended to better accommodate the existing pedestrian uses of the corridor, while providing an accessible facility for bicycles. Although some commenters on the IS/MND and NOP identified concerns for increased conflict between pedestrians and high-speed bicycle trail users, the presence of multiple options (paved trail, shoulders, levee crown, and informal foot trails) and the relatively narrow paved trail cross section

compared to other segments of the Parkway trail would reduce the potential for conflict among trail users. Consequently, this impact would be **less than significant**, with no mitigation required.

Mitigation Measure: No mitigation is required.

Residual Significant Impacts

As more fully described above in **Impacts PSR-1** through **PSR-3**, there would be no residual significant impacts related to public services, recreation, or utilities.

This page intentionally left blank.

3.10 Transportation and Circulation

3.10.1 Introduction

This section provides an overview of the existing transportation facilities and conditions within the proposed project study area, identifies the regulatory framework, and provides and analysis of the potential transportation impacts that would result from implementation of the proposed project.

As a result of circulation of the IS/MND and during the proposed project's NOP scoping period, the following comments were received regarding:

- the existing use of trails in the project area, and the need to address potential conflict between users of the new multiuse trail facility and the existing informal trail users, and
- the lack of a bike lane on Carlson Drive.

The effect of project construction and operation on existing informal trail use is addressed in **Impact PSR-2**, and in **Section 3.9**, "**Public Services, Recreation, and Utilities**."

Carlson Drive enters the River Park neighborhood approximately 1,000 feet from the access point to the proposed multiuse trail at the H Street Bridge. Users from outside the neighborhood are therefore unlikely to travel more than 1.5 miles along Carlson Drive to access the trail by bicycle. Within the River Park neighborhood, bicycle traffic approaching Glenn Hall Park would likely be collected from other streets onto Carlson Drive and Sandberg Drive. The potential for substantial new bicycle traffic within the River Park neighborhood leading to new conflicts is low, and this issue is not addressed further in the EIR.

3.10.2 Environmental Setting

The project site is in central Sacramento. Construction access would be via local roadways, including 28th Street (a local roadway), Carlson Drive (a minor collector), Camellia Drive (a local roadway) and H Street (an arterial east of Camellia Drive and major collector west of Camellia Drive) (City of Sacramento 2015).

Transit serving the project vicinity includes the Sacramento Regional Transit (SacRT) Bus #30, which travels on H Street between downtown Sacramento and Sacramento State University; Bus #34, which circulates through the River Park neighborhood on Carlson Drive, Moddison Avenue, Sandberg Drive, and Messina Drive and in the Midtown neighborhood on F Street; and Buses #82 and #87, which pass the project site on H Street/Fair Oaks Boulevard (SacRT 2018).

The Midtown and River Park neighborhoods are served by sidewalks on both sides of most roadways. The project would connect to existing portions of the Two Rivers Trail, the Sacramento Northern Bikeway Trail, and the existing developed trail that extends eastward from H Street in the American River Parkway.

3.10.3 Regulatory Setting

Federal Plans, Policies, Regulations and Laws

No federal plans, policies, regulations, or laws related to transportation/traffic apply to the project.

State Plans, Policies, Regulations and Laws

No state plans, policies, regulations, or laws related to transportation/traffic apply to the project.

Regional and Local Plans, Policies, Regulations and Ordinances

City of Sacramento General Plan 2035

The City of Sacramento strives to operate most roadways at a LOS D or better during typical weekday conditions. The City has identified several roadways as exceptions to this policy in the 2035 General Plan, including the Central City Community Plan Area (which includes 28th Street access to Sutter's Landing Park), Carlson Drive, and H Street west of Carlson Drive. On these roadways, LOS F is acceptable. (City of Sacramento 2015)

Sacramento City Code

Section 12.20.020 of the Sacramento City Code has the following provisions related to construction traffic within the City limits:

A. Except when performing emergency repairs, no person shall perform any work that will obstruct vehicular traffic on a city street unless a traffic control plan has been approved by the director.

B. All work requiring a traffic control plan shall conform to the conditions and requirements of the approved plan.

C. Where a traffic control plan is required, the approved plan must be available at the site for inspection by the director during all work.

D. If the director determines that actual traffic conditions under the approved plan are hazardous to public safety, the director may require the plan to be immediately modified. If the hazardous conditions cannot be eliminated by plan modification the director may require work under the plan to be stopped, and the plan suspended, until the safety hazard is remedied.

The specific requirements for a traffic control plan are described in Section 12.20.030 of the Sacramento City Code and should include the appropriate diagrams, proposed time periods that traffic control would be in effect, and any proposed phases of the project that would affect the traffic control plan.

City of Sacramento Bicycle Master Plan

The purpose of the Sacramento City Bicycle Master Plan is to establish bicycle-related investments, policies, programs and strategies to establish a complete bicycle system. This will encourage more bicycling by the citizens of Sacramento for both transportation and recreation, thereby allowing the City of Sacramento to meet General Plan emission targets. The Bicycle Master Plan was updated in 2015 to further engage under-represented neighborhoods, evaluate the equity related to bicycle infrastructure, and identify best practice bikeway designs to better connect the City's Low-stress bikeway network. The proposed project is included within the 2015 Master Plan (City of Sacramento, 2018).

City of Sacramento Pedestrian Master Plan

The purpose of the Pedestrian Master Plan is to make Sacramento a model pedestrian-friendly city, also known as the "Walking Capital" (Pedestrian Master Plan 2006). The current overarching objectives of the Plan are to institutionalize pedestrian considerations and to improve the current pedestrian

deficiencies. The goals of the Plan include improving awareness through education, creating a walkable pedestrian environment, and increasing pedestrian safety.

3.10.4 Environmental Impacts and Mitigation Measures

Thresholds of Significance

The significance criteria used to evaluate the project impacts to transportation and circulation are based on Appendix G of the CEQA Guidelines, thresholds of significance adopted by the City in applicable general plans and previous environmental documents, and professional judgment. A significant impact related to transportation and circulation issues would occur if the project would:

a) Conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?

b) Conflict or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b)?

c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)? Or

d) Result in inadequate emergency access?

For item (a), impacts resulting from conflict with a program, plan, ordinance, or policy may be considered significant if construction and/or implementation of the proposed project would result in:

- level of service impacts that remain significant after implementation of General Plan policies or mitigation from the General Plan MEIR:
- adverse effects on public transit operations;
- failure to adequately provide for access to public transit;
- adverse effects on bicycle travel, bicycle paths;
- failure to adequately provide for access by bicycle;
- adverse effects on pedestrian travel, pedestrian paths; or
- failure to adequately provide for access by pedestrians.

Institute of Transportation Engineers – Screening Criteria for Construction Traffic

The Institute of Transportation Engineers (ITE) has recommended a screening criterion for assessing the effects of construction projects that create temporary traffic increases (ITE 1988). To account for the large percentage of heavy trucks associated with typical construction projects, ITE recommends a threshold level of 50 or more new peak-direction truck trips during the peak-hour. Therefore, a project would cause an increase in traffic that is substantial in relation to the existing traffic load and capacity of the street system, and result in a significant effect related to traffic, if they would result in 50 or more new truck trips (100 passenger car equivalent [PCE] trips) during the a.m. or p.m. peak hours. This is considered an "industry standard" and is the most current guidance commonly used for impact analysis.

Issues Not Discussed Further in this EIR

Conflict with CEQA Guidelines Section 15064.3(b)

The project would include temporary vehicle travel and VMT associated with construction activities, including worker commutes and transport of materials used to construct the facility. After construction of the project has been completed, the project would provide a connection between existing trails that are part of the American River Parkway, and the use of the new trail segment is not likely to increase VMT; the most conveniently accessible access points to users from outside the River Park neighborhood will continue to be Sutter's Landing Regional Park and access points at Sacramento State University and Howe Avenue.

Substantially increase hazards due to a geometric design feature or incompatible uses.

The project does not include any modifications to roadways. There would be no increase in hazards due to design features or incompatible uses.

Inadequate emergency access.

The project does not include any modifications to roadways, and thus there would be no change to emergency access as a result of the project.

Impact Analysis

Impact TRC-1: ***Conflict with Plans or Standards: Congestion and Transit Operations***

Construction-related activity from the proposed project may affect the existing transportation network. No lane, street, sidewalk, or bikeway closures are planned, and transit service would not be affected. (Less than Significant)

Construction-related activity from the proposed project may potentially disrupt the existing transportation network in the surrounding project area. No lane, street, sidewalk, or bikeway closures are planned, but heavy construction vehicles, materials, and workers would travel to and from the site and staging areas. As a result of these activities, existing roadway operation conditions may be degraded. Based on the construction details provided in the Project Description, up to 20,400 cubic yards (cy) of material would be transported as part of project construction. This includes excavation and transport offsite of 8,500 cy of material, and import of approximately 2,000 cy of fill material, approximately 7,900 cy of aggregate base, and 2,000 cy of pavement material. Based on a 5- to 6-month construction period, and assuming 10 cy per trip, this would generate approximately 21 heavy truck trips per day. Up to 20 construction workers would be present at any given time. Construction-related activity would therefore include less than 50 heavy truck trips (or 100 PCE trips) during the peak a.m. or p.m. hour and would not exceed the ITE screening criterion, described above. Implementation of the construction traffic control plan (consistent with City Code 12.20.030) as described in **Chapter 2.0** "**Project Description**" (see "Access and Staging Areas") would involve measures that would further reduce the potential for impacts associated with construction traffic by designating circulation routes and waiting areas for trucks. Consequently, this impact would be **less than significant**, with no mitigation required.

The project would not adversely affect existing or planned transit operations. As previously discussed, SacRT routes 30, 34, 82, and 87 operate nearby and would be accessible to the project site. While the project would not be anticipated to add noticeable transit demand, any additional demand is anticipated

to be adequately accommodated by the existing/planned transit system. The impacts of the proposed project on transit therefore would be **less than significant**, with no mitigation required.

Mitigation Measure: No mitigation is required.

Impact TRC-2: ***Conflict with Plans or Standards: Pedestrian and Bicycle Circulation***

Construction of the project could result in temporary closures of existing unimproved trails and areas used for informal recreation. (Less than Significant) Operation of the project would increase the range of pedestrian and bicycle transportation choices in the project area (Beneficial).

Construction

Construction of the project could result in temporary closures to the public of portions of the existing levee crown road and unimproved trail along the toe of the levee for construction access. As described in the Project Description under "Access and Staging Areas," the construction traffic control plan would include identification and signage of detours for bicycles and pedestrian traffic. In Segments 1 and 2 currently, there is no public access to the proposed trail alignment. Therefore, closures during construction would not disrupt pedestrian or bicycle transportation in this area. At Sutter's Landing, closures also would not significantly disrupt pedestrian or bicycle transportation because the existing trail currently dead-ends in the park, limiting through pedestrian- and bicycle traffic. At H Street, the existing bike trail along the south side of J Street, and existing bike lanes and sidewalks along Carlson Drive between H and J Streets offer an alternative route for bicycles and pedestrians. However, while portions of the trail would remain open to the public during construction between Sutter's Landing Park and north of the H Street bridge, closures would be necessary and could disrupt existing informal recreational activities, including walking, bicycle riding, and dog walking. These disruptions would be temporary; alternative routes are available, and as described in the Project Description under "Access and Staging Areas," the construction traffic control plan would include identification and signage of detours for bicycles and pedestrian traffic; therefore, this impact would be **less than significant**, with no mitigation required.

Operations

The project would add bicycle traffic to the corridor between Sutter's Landing Regional Park and H Street (Segments 3 through 6) and eventually between Sutter's Landing Regional Park and the Sacramento Northern Bikeway (Segments 1 and 2). Although bicycle travel is currently prohibited on the levee maintenance roads, there is some bicycle travel along the existing paths primarily along Segments 3 through 6. The number of bicycles would be expected to increase on all trail segments as a result of the project. The design of the project (with wider shoulders for pedestrian access and a narrower paved surface to reduce bicycle speeds) is intended to minimize the conflict between bicycles and pedestrians. This impact would therefore be **less than significant**, with no mitigation required.

The project includes construction of a multiuse trail along a corridor that is currently used informally by pedestrians, joggers, and dog walkers. The project has been designed to accommodate these uses alongside bicycle users. Operational impacts related to bicycle facilities and pedestrian transportation would thus be **beneficial**.

Mitigation Measure: No mitigation is required.

Residual Significant Impacts

The project would have no residual significant transportation impacts.

Chapter 4. Description of Project Alternatives

4.1 Introduction

This chapter describes alternatives to the proposed project that were considered but rejected based on environmental impacts or inability to meet project objectives. During preparation of the IS/MND and as a result of the proposed project's NOP scoping period, the following comments related to alternatives were received and considered during preparation of the impact analysis:

- Preparation of an EIR that fully analyzes the alternatives and their impacts.
- Consideration of a levee top alternative for additional trail segments and alignment of a trail outside the American River Parkway.

Consideration of these alternatives is more fully described below in **Section 4.4**.

4.2 CEQA Requirements for Evaluation of Alternatives

The principles used to guide selection of the alternatives analyzed in this EIR are provided by section 15126.6 of the CEQA Guidelines, which specifies that an EIR must do all of the following:

- Describe a reasonable range of potentially feasible alternatives to the Project that could attain most of the basic objectives of the Project,
- Consider alternatives that could reduce or eliminate any significant environmental impacts of the proposed Project, including alternatives that may be costlier or could otherwise impede the Project's objectives, and
- Evaluate the comparative merits of the alternatives.

The focus and definition of the alternatives are governed by the "rule of reason," in accordance with section 15126.6(f) of the CEQA Guidelines. That is, the range of alternatives presented in this Draft EIR must permit a reasoned choice by the City. CEQA Guidelines require that an EIR evaluate at least one "No-Project Alternative," evaluate a reasonable range of alternatives to the Project, identify alternatives that were considered during the scoping process but were eliminated from detailed consideration, and identify the "environmentally superior alternative." Consistent with section 15126.6(d) of the CEQA Guidelines, the information provided in this Draft EIR about each alternative is sufficient to allow for a meaningful evaluation, analysis, and comparison of the alternatives with the proposed Project.

4.3 Alternatives Considered and Screening Criteria

This section describes the development of a reasonable range of alternatives to the proposed project and the methods used to screen the alternatives.

4.3.1 Development of Reasonable Range of Alternatives

CEQA requires that an EIR describe and evaluate a range of reasonable alternatives to a project or to the location of a project that would feasibly attain most of the basic project objectives and avoid or substantially lessen significant project impacts (CEQA Guidelines section 15126.6). The alternatives to the proposed project considered in this Draft EIR were developed based on information gathered during the development of the proposed project and during the EIR scoping process.

In developing the proposed project, the City has considered a range of potential actions that could meet the Project objectives. Comments received during initial public outreach and scoping included the following:

- Preparation of an EIR that fully analyzes the alternatives and their impacts.
- Complete levee-top alternative (see Alternative 2, below).
- Extend levee-top segment to a point near River Mile #5 (near the intersection of Jerome Way and Sandburg Drive) (see Alternative 3, below).
- Align trail outside the American River Parkway on City streets (see Alternative 4, below).

4.3.2 Methods Used to Screen Alternatives

Potential alternatives were screened for their ability to attain most of the basic project objectives, their feasibility to be implemented, and reduce or eliminate any significant environmental impacts of the proposed project.

- **Meeting Project Objectives** – The project objectives are listed in **Chapter 2.0** "**Project Description**". The CEQA Guidelines state that alternatives must feasibly attain most of the basic objectives of the Project (CEQA Guidelines section 15126.6). Alternatives that did not meet the majority of the objectives were screened out and not carried forward for further evaluation in the EIR.
- **Feasibility** – Alternatives that are not "capable of being accomplished in a successful manner within a reasonable period of time, taking into account economic, environmental, social, and technological factors," (per Public Resource Code Section 21061.1), were not carried forward for further evaluation in the EIR.
- **Avoiding or lessening any potentially adverse environmental effect of the Proposed Project** – Consistent with the CEQA Guidelines (section 15126.6), alternatives should avoid or substantially lessen one or more of the significant environmental effects of the proposed project. Alternatives that would not lessen or avoid a potentially significant environmental impact, were not carried forward for detailed evaluation in the EIR.

4.4 Alternatives Considered but Not Carried Forward for Further Evaluation

The alternatives described below were rejected for further consideration and analysis because they failed to meet most of the basic project objectives or were determined to be infeasible, and/or would not avoid

or substantially lessen significant environmental impacts. While the No Project Alternative or a trail alignment outside of the American River Parkway (use of existing City streets) would avoid or substantially lessen the environmental impacts of the proposed project, these alternatives failed to meet most of the basic project objectives.

4.4.1 Alternative 1: October 2018 Initial Study Alternative

This alternative was analyzed in the October 2018 Initial Study and includes 3.4 miles of new Class 1 bicycle and pedestrian trail comprised of 6 segments. The trail would generally consist of an 8-foot-wide paved path with a 2-foot-wide compacted shoulder on the inner side and a similar 6-foot-wide shoulder on the waterside to provide space for walking and jogging adjacent to the paved portion of the trail, bringing the total trail cross section along most of its length to 16 feet wide. However, due to space limitations in some locations, the waterside shoulder of the trail would be narrowed to 4 feet wide. The trail would be paved and engineered to be load-bearing.

- Segment 1 begins at the existing Sacramento Northern Bikeway Trail at North 18th Street and ends 0.3 miles west of Sutter's Landing Park. At North 18th Street, the trail would run along the toe of the levee crossing under the Union Pacific Railroad (UPRR) and continue for another 0.3 miles.

- Segment 2 begins at the eastern terminus of Segment 1 and continues to Sutter's Landing Regional Park and would diverge from the levee immediately at the end of the first segment and extend south for approximately 0.3 mile and then turn southeast and extend another approximately 0.4 mile to 28th Street at the entrance to Sutter's Landing Regional Park across the street from McKinley Village Way.

- Segment 3 begins on the east side of Sutter's Landing Park at the end of the recently completed trail segment. The trail would run along an existing bench at the toe of the levee, first crossing under another portion of the UPRR and eventually under the Capital City Freeway (BUS 80) where Segment 4 begins.

- Segment 4 is also approximately 0.25 miles long. There is no defined bench on the water side of the levee in this segment. Consequently, to both avoid the potential for trail users to interfere with vehicles using the patrol road on the levee crown to perform levee maintenance and inspection activities, and limit the ability of trail users to see into the yards of residences located directly adjacent to the land side of the levee, this trail segment would be constructed on the water side slope on an artificial bench offset from the top of the levee with a reduced path width to limit impacts. The trail segment would also include a small retaining wall along the inner edge of the trail to maintain the width of the levee crown for levee maintenance and patrol vehicle use.

- Segment 5 is 1.4 miles long and passes Paradise Beach and Glenn Hall Park. This trail segment has a bench all along the waterside toe where the trail would be aligned, but bench width varies such that this segment has been subdivided into three subsegments (to accommodate topographic conditions). Subsegment 5A is approximately 2,900 feet in length, and the waterside bench, although well-defined, is narrower in this area than in Subsegment 5B. Subsegment 5B is approximately 4,300 feet in length and has a well-defined, much wider and flatter, bench to accommodate the trail. Subsegment 5C is approximately 500 feet in length and its waterside bench characteristics are similar to Subsegment 5A.

- Segment 6 begins at the east end of Subsegment 5C along the levee toe, is approximately 0.3 miles long, and includes a transition back to the levee crown where the trail would connect to the existing paved trail near the H Street Bridge. While there is a bench along the toe in this segment, the bench is much narrower than in other locations requiring a reduced path width to limit impacts.

Screening Evaluation – This alternative meets several project objectives and is considered feasible for implementation. However, this alternative was not carried forward for further analysis for the following reasons:

- Public concerns regarding impacts to biological resources, including the removal of trees on the levee toe along portions of Segment 4 during construction and impacts to VELB during construction and vegetation maintenance activities.

- ARFCD expressed concern regarding risk to levee integrity near River Mile 4, due to the presence of the trail on an artificial bench along portions of Segment 4, in an area that has experienced erosion during past high flows.

Impacts Identified as Being the Same or Similar to the Project

Under Alternative 1, aesthetics; air quality; cultural resources; tribal cultural resources; geology and soils; greenhouse gas; land use and planning; public services; recreation; hazards and hazardous materials; hydrology and water quality; noise; traffic; and utilities would result in similar impacts to the proposed project due to the scale (similar trail width and length) and location (toe of levee) of this alternative.

Impacts Identified as More Severe than the Project

Biological Resources. Alternative 1 would result in additional or greater special status species habitat (VELB) and tree loss impacts through development of the benched waterside trail section along Segment #4.

4.4.2 Alternative 2: Top of Levee Construction – Segments 4 through 6

This alternative includes 3.4 miles of new Class 1 bicycle and pedestrian trail comprised of 6 segments along the same alignment as described in Alternative 1, however, under this alternative, the entire length of Segments 4 – 6 would be constructed along the levee crown.

Screening Evaluation – This alternative meets several project objectives and is considered feasible for implementation. However, this alternative was not carried forward for further analysis for the following reasons:

- ARFCD expressed concerns regarding the ability to perform levee maintenance and inspection activities from the levee crown patrol road if the entire crown was occupied by the bike trail.

- Public comments received from River Park residents regarding a reduction in privacy and degradation of aesthetics for residences immediately adjacent to the landside of the levee due to increased recreational users along the levee top trail.

Impacts Identified as Being Similar or Less Severe than the Project

Under Alternative 2, air quality; biological resources, cultural resources; tribal cultural resources; geology and soils; greenhouse gas; land use and planning; public services; recreation; hazards and hazardous materials; hydrology and water quality; noise; traffic; and utilities would result in similar construction-related impacts (i.e., traffic, noise, land use, air quality, etc.) or less severe (less habitat/tree disturbance) impacts to the proposed project due to the location (disturbed/levee top) of this alternative.

Impacts Identified as More Severe than the Project

Aesthetics Resources. Alternative 2 would result in greater aesthetic impacts resulting from additional trail use along the top of the levee that may be visible to residents adjacent to the landside of the levee.

Alternative 3: Extended Top of Levee Segment Alternative

This alternative was suggested during the June 2019 EIR Public Scoping Meeting and is identical to the proposed project, except for a portion of Segment 4. Under this alternative, the trail would move from the levee toe to the top of levee near Jerome Way (approximately RM 5), rather than near Bevil Street, resulting in a top of levee segment approximately 3x longer than what is included in the proposed project.

Screening Evaluation – This alternative meets several project objectives and is considered feasible for implementation. However, this alternative was not carried forward for further analysis for the following reasons:

- This alternative is very similar to the proposed project due to the fact that both alternatives share a combination levee top and levee toe alignment, although the lengths of the top/toe segments vary.
- ARFCD expressed concerns regarding the ability to perform levee maintenance and inspection activities from the levee crown patrol road and has precluded construction along the levee crown unless absolutely necessary due to the complete absence of a toe bench.
- Public comments received from River Park residents regarding a reduction in privacy and degradation of aesthetics for residences immediately adjacent to the landside of the levee. This alternative would move even more of the alignment to the levee top than what is planned under the proposed project and would expose more homes directly adjacent to the landside of the levee to privacy and aesthetic concerns due to increased recreational users along the levee top trail.

Impacts Identified as Being Similar or Less Severe than the Project

Under Alternative 3, air quality; biological resources, cultural resources; tribal cultural resources; geology and soils; greenhouse gas; land use and planning; public services; recreation; hazards and hazardous materials; hydrology and water quality; noise; traffic; and utilities would result in similar construction-related impacts or less severe (less habitat/tree disturbance) impacts to the proposed project due to the location (disturbed/levee top) of this alternative. However, development of the trail segments along the waterside of the levee (past River Mile #5) would still result in similar types of habitat and tree loss impacts as the proposed project.

Impacts Identified as More Severe than the Project

Aesthetics Resources. Alternative 3 would result in greater aesthetic impacts resulting from additional trail use along the top of the levee that may be visible to residents adjacent to the landside of the levee.

Alternative 4: Align Trail Outside of the American River Parkway

This alternative was suggested during review of the IS/MND and during the June 2019 EIR Public Scoping Meeting. Under this alternative, no trail would be developed within the American River Parkway. Existing trail use along developed portions of the Two Rivers Trail (Phase I) would use existing City streets to travel between 16th Street or the current trail terminus at Sutter's Landing Park to reach the East Sacramento/River Park neighborhoods and CSUS. Public comments suggested using the Elvas Avenue Corridor and Carlson Driver as possible travel corridors for bicycles and pedestrians.

Screening Evaluation – Similar to the "No Project" alternative (described below), this alternative would not construct the remainder of Phase II of the Two Rivers Bike Trail to Class 1 bicycle and pedestrian standards. Implementation of this alternative would not meet any of the project objectives and was not carried forward for further analysis.

Impacts Identified as Being Similar or Less Severe than the Project

Implementation of Alternative 4 would not develop a trail within the American River Parkway and would result in no environmental impacts.

Impacts Identified as More Severe than the Project

Implementation of Alternative 4 would not develop a trail within the American River Parkway and would result in no environmental impacts.

No Project Alternative

Under the No Project Alternative, the City would not construct the remainder of Phase II of the Two Rivers Bike Trail to Class 1 bicycle and pedestrian standards. This alternative would leave the existing trail and access points unpaved and inaccessible to some users, which is currently not required to comply with the requirements of the Americans with Disabilities Act (ADA). Transportation access for commuters would not be improved in the eastern part of the City, CSUS, Central City, North Sacramento, East Sacramento, or Richards Boulevard areas. Educational opportunities fostering a connection to the Parkway and American River for trial users would not be provided. An important recreational link, identified as a subsequent project in the City of Sacramento 2035 General Plan, would remain unfinished. Construction would not result in the removal of any trees nor would the City be required to provide any additional maintenance activities along the trail alignment.

Implementation of the No Project Alternative would not develop a trail within the American River Parkway and would result in no environmental impacts.

4.5 Environmentally Superior Alternative

CEQA requires identification of the environmental superior alternative; that is, the alternative that has the least significant impacts on the environment. As presented in Chapter 3, implementation of the proposed project would result in less than significant environmental impacts with mitigation incorporated. As described above, Alternative 4 or the No Project Alternative would have the least

significant impacts on the environment because nothing would be constructed; however, this alternative does not meet the project objectives. Of the build alternatives, Alternative 2 (Top of Levee Construction – Segments 4 through 6) would substantially reduce biological and water quality impacts along Segments 4 through 6. However, implementation of trail Segments 1 and 2 would still result in similar biological and water quality impacts. **Table 4-1** presents a comparison of all alternatives with respect to the impacts and the ability to meet project objectives.

Table 4-1. Overview Comparison of Project Objective Attainment and Environmental Impacts of the Alternatives

	Alternative 1: October 2018 Initial Study Alternative	Alternative 2: Top of Levee Construction – Segments 4 through 6	Alternative 3: Extended Top of Levee Segment Alternative	Alternative 4: Align Trail Outside of the American River Parkway	Proposed Project	No Project Alternative
Environmental Impacts	**Less Than Significant (LTS) With Mitigation**			**No Impact**	**LTS with Mitigation**	**No Impact**
Meets Project Objective:						
Provide alternative transportation access for commuters and residents in the eastern part of the City, CSUS, Central City, North Sacramento, East Sacramento, and Richards Boulevard area;	Yes	Yes	Yes	No	Yes	No
Provide opportunities for educating trail users through interpretive signage, establishing a connection to the river, and the Parkway;	Yes	Yes	Yes	No	Yes	No
Provide an acceptable project to all authoritative agencies;	No	No	No	No	Yes	No
Complete the project in a manner that minimizes environmental impacts to the Parkway, given the proposed project's location within the environmentally sensitive Parkway	No	Yes	Yes	No	Yes	No
Where feasible, design trail access points to comply with the requirements of the Americans with Disabilities Act (ADA).	Yes	Yes	Yes	No	Yes	No

Notes:
* Detail regarding specific environmental impacts of each alternative is provided in the "Screening Evaluation" provided in the previous section.

This page intentionally left blank.

Chapter 5. Other CEQA Considerations

5.1 Introduction

Chapter 5.0 of this EIR describes other required topics including growth inducing impacts, significant and unavoidable impacts, and significant irreversible environmental changes relative to the proposed project. Additionally, this section addresses and assesses the potential for cumulative impacts from the proposed project in conjunction with recent past, current and reasonably foreseeable future projects.

5.2 Growth Inducing Impacts

CEQA (Guidelines (section 15126.2(e)) requires that an EIR evaluate the growth inducing impact of a proposed project. The CEQA Guidelines describe the required growth inducement analysis as follows:

Discuss the ways in which the proposed project could foster economic or population growth, or the construction of additional housing, either directly or indirectly, in the surrounding environment.

Included in this definition are public works projects, which would remove obstacles to population growth, would tax community service facilities, or encourage or facilitate other activities that could significantly affect the environment, either individually or cumulatively. It must not be assumed that growth in any area is necessarily beneficial, detrimental, or of little significance to the environment.

A project can have the potential for direct and/or indirect growth inducement. Direct growth inducement would result if a project involved construction of new housing which would facilitate new population in an area. Indirect growth inducement or secondary growth-inducement potential would be present if it would establish substantial new permanent employment opportunities (e.g., commercial, industrial, or governmental enterprises), or if it would involve a substantial construction effort with substantial long-term employment opportunities which could indirectly stimulate the need for additional housing and services to support the new employment demand.

Similarly, a project could indirectly induce growth if it would remove a physical obstacle to additional growth and development, such as removing a constraint or adding a required public service. Examples of removing a physical obstacle would include construction of a new roadway into an undeveloped area or construction of a wastewater treatment plant with sufficient capacity to serve additional new development. Construction of these types of infrastructure projects cannot be considered isolated from the immediate development that they facilitate and serve. Projects that physically remove obstacles to growth, or projects that indirectly induce growth, are those that may provide a catalyst for future unrelated development in the area. The growth inducing potential of a project could also be considered significant if it fosters growth in excess of what is assumed in the local master plans and land use plans, or in projections made by regional planning agencies.

5.2.1 Direct Growth Inducement

The proposed project does not include the construction of new housing, businesses, or roadways, require acquisition of private property, or create new connections to undeveloped land. The proposed project aims to improve pedestrian and bicycle access throughout East Sacramento and provide multi-modal

connectivity to CSUS and adjacent communities throughout the Sacramento area. No impacts would occur to the surrounding communities. However, the proposed project would result in improved accessibility for surrounding communities. The proposed project would also not create permanent employment. The proposed Project is consistent with the City of Sacramento General Plan as the proposed project will be zoned for Parks and Recreation and the Project would not change the zoning designation of adjacent areas. Development of the site as proposed would alter the existing landscape, but the project site has been designated for Recreation in the 2035 General Plan and the proposed development is consistent with these planning designations and those of the American River Parkway Plan (Sacramento County, 2008). The proposed project is included within the 2018 Master Plan (see Figure 22) (City of Sacramento 2018).

5.2.2 Indirect Growth Inducement

The proposed project would not establish new permanent employment opportunities or involve a substantial construction effort with substantial long-term employment opportunities that could indirectly stimulate the need for additional housing and services to support the new employment demand. Construction of the proposed project would last less than one year and would not require additional housing and/or services for workers. The proposed project would not directly or indirectly induce growth or remove an obstacle to growth, would not require or result in the need for new or expanded water or wastewater treatment facilities, and would not increase population. Consequently, no growth inducing effects would occur.

5.3 Significant and Unavoidable

CEQA Guidelines section 15126(b) requires an EIR to "describe any significant impacts, including those which can be mitigated but not reduced to a level of insignificance. Where there are impacts that cannot be alleviated without imposing an alternative design, their implications and the reasons why the proposed project is being proposed, notwithstanding their effect, should be described."

Chapter 3.0 of this EIR provides a description of the potential environmental impacts of the proposed project and recommends mitigation measures to reduce impacts to a less than significant level, where possible. After implementation of the recommended mitigation measures, all of the potentially significant impacts associated with the proposed project would be reduced to a less than significant level. Therefore, the proposed project will not have significant and unavoidable impacts.

5.4 Significant Irreversible Environmental Changes

CEQA Guidelines section 15126.2(d) describes irreversible environmental changes as follows:

Uses of nonrenewable resources during the initial and continued phases of the project may be irreversible since a large commitment of such resources makes removal or nonuse thereafter unlikely. Primary impacts and, particularly secondary impacts (such as highway improvement which provides access to a previously inaccessible area) generally commit future generations to similar uses. Also, irreversible damage can result from environmental accidents associated with the project. Irretrievable commitments of resources should be evaluated to assure that such current consumption is justified.

The CEQA Guidelines refer to the need to evaluate and justify the consumption of nonrenewable resources and the extent to which the proposed project commits future generations to similar uses of

nonrenewable resources. In addition, CEQA requires that irreversible damage that could result from an environmental accident associated with the project be evaluated.

Construction of the proposed project would result in the commitment of nonrenewable natural resources used in the construction process and during operation, including gravel, petroleum products, and other materials. As described in **Chapter 2.0** "**Project Description**", the proposed project would not require large areas to be excavated or include the demolition or removal of existing buildings or infrastructure that would generate large amounts of construction waste.

Construction and operation of the proposed project would also result in commitment of energy resources such as fossil fuels and electricity. Direct energy used during construction and operation would involve using petroleum products and electricity to operate equipment, and indirect energy use would involve consuming energy to extract raw materials, manufacture items, and transport the goods and people necessary for construction activities. Construction-related energy consumption would be temporary and would be confined to the construction period. Nevertheless, construction and operation activities would, as with any construction project, cause irreversible and irretrievable commitments of finite nonrenewable energy resources, such as gasoline and diesel fuel.

The proposed project would include all feasible control measures to improve equipment efficiency and reduce energy use as required by the Sacramento Metropolitan Air Quality Management District (SMAQMD). These measures include an Emission and Dust Control Plan that would reduce unnecessary equipment idling and other policies that would help reduce energy use and are consistent with state and local legislation and policies to conserve energy. In addition, the proposed project would comply with applicable Federal, State and local policies and regulations pertaining to energy standards and would ensure that natural resources are conserved to the maximum extent possible. Therefore, due to the rate and amount of energy consumed, the proposed project would not result in the unnecessary, inefficient, or wasteful use of resources and energy use would be accomplished in a manner consistent with applicable laws and regulations.

Finally, construction of the proposed project has the potential to result in accidental release of hazardous materials which may lead to irreversible damage. However, as stated in **Section 3.5**, "**Hazards and Hazardous Materials**" used during construction would be typical of common construction activities. They would be handled by the contractor in accordance with applicable federal, State, and local regulation for hazardous substances.

5.5 Cumulative Impacts

CEQA requires an environmental impact report to include a discussion of cumulative effects of a project when the project's incremental effect is "cumulatively considerable." An effect is cumulatively considerable when it is significant in connection with the effects of past projects, the effects of other current projects and the effects of future projects (CEQA Guidelines section 15065(a)(3)).

A "cumulative impact" is an impact that is created as a result of the combination of a project together with other projects causing related impacts. The first step in the cumulative analysis, therefore, is to identify each impact of the project and, in each case, consider whether there are other projects (past, current, future) that could have related impacts, and then to determine whether the project's contribution to the overall impact is "cumulatively considerable."

For example, a project that constructs a new residential or commercial retail center would generate a substantial number of vehicle trips once the project is completed and opened for operation, which in turn would affect road operations and conditions in the vicinity of the project site. A lead agency would be required not only to consider the effects of trips generated by the project, but also those trips in combination with other projects that might contribute vehicle trips to the same roadway system. Thus, CEQA seeks to avoid situations in which a series of small projects with relatively minor effects eventually result in far larger effects as their effects are combined.

Although the proposed Two Rivers Trail is part of a larger planned connection between the existing Sacramento River Parkway and the larger Jedediah Smith Memorial Trail located along the northern bank of the American River, no cumulative effects are anticipated because environmental resources that are adversely affected by the proposed project would be localized and of limited extent. While the elimination of trees and vegetation adjacent to the existing non developed path would temporarily impact the existing visual quality of the corridor, new trees and vegetation would be planted and allowed to grow; therefore, this impact would be temporary and not considered a cumulative effect.

Additionally, the proposed project was analyzed in terms of consistency with project's identified in the City of Sacramento Bicycle Master Plan, City of Sacramento General Plan, and the City of Sacramento General Plan Master Environmental Impact Report. The following sections include an overview of the relevant cumulative impacts and the proposed project's potential to contribute to the construction related cumulative impacts.

Geographic Scope

The geographic area that is analyzed for cumulative impacts depends on the resource being analyzed. The geographic area associated with a proposed project's different environmental impacts defines the boundaries of the area used for compiling the list of past, present, and probable future projects considered in the cumulative impact analysis. The geographic area varies depending on the type of environmental resource being considered (see **Table 5-1**, below). Also listed is the method of evaluation used to analyze cumulative impacts for each environmental resource.

For those environmental resources that were evaluated based on the projections approach, the projections take into consideration future projects that are not included in the below list of related plans and projects.

List of Related Plans and Projects

A list of past, current, and reasonably foreseeable future projects was compiled using information from the City. The past, present and reasonably foreseeable future projects proposed by the City within or directly adjacent to the proposed project area, the surrounding community, or the City as a whole were identified and categorized in **Table 5-2** below. For the purposes of this discussion, these projects that may have a cumulative effect on the resources of the Project area are often referred to as the "collective projects." These projects are described in **Table 5-2**.

Table 5-1. Geographic Scope of Cumulative Impact and Method of Evaluation

Resource Topic	Geographic Area	Method of Evaluation (*)
Aesthetics	Immediate Project Vicinity	Projects
Air Quality, Greenhouse Gas Emissions (GHG), and Energy	Local (Toxic Air Contaminants); Air Basin (Construction Related and Mobile Sources); GHG (Statewide).	Projects and Projections
Biological Resources	Immediate Project Vicinity and Region	Projects
Cultural and Tribal Resources	Immediate Project Vicinity	Projects
Geology and Soils	Immediate Project Vicinity	Projects
Hazards and Hazardous Materials	Immediate Project Vicinity	Projects
Hydrology, Water Quality, and Drainage	Immediate Project Vicinity Watershed/Basin	Projects and Projections
Land Use and Planning	Immediate Project Vicinity	Projects and Projections
Noise	Immediate Project Vicinity	Projects
Public Services, Utilities, and Recreation	Immediate Project Vicinity	Projects and Projections
Transportation and Circulation	Immediate Project Vicinity Regional Circulation Network	Projects and Projections

Notes:
* Projects: the use of a list of past, present, and reasonably foreseeable "Projects". Projections = the use of Projections contained in relevant planning documents.

Table 5-2. List of Collective Past, Present, and Reasonably Anticipated Future Projects Within the City

Project	Status	Location	Description
American River Common Features Erosion Control Project (including Bank Protection Conceptual Design Process)	In Progress	American River Levees	The Sacramento Area Flood Control Agency (SAFCA) is proposing to implement improvements to the flood management system protecting portions of the City and County of Sacramento along the Lower American. Projects would include the placement of rock erosion protection to over 6,000 feet of levee and bank within the project area. The design will also reduce erosion potential by removing susceptibility to geotechnical failure and increasing native riparian vegetation regeneration.
North Sacramento Streams, Sacramento River East Levee, Lower American River and Related Flood Improvements Project	In Progress	Sacramento River Levees	SAFCA is also proposing to implement improvements to the flood management system protecting portions of the City and County of Sacramento along the Lower American and Sacramento Rivers and their tributaries outside the Natomas Basin. The proposed improvements would reduce flood risk and bring the flood management system in the project area into compliance with applicable engineering

Table 5-2. List of Collective Past, Present, and Reasonably Anticipated Future Projects Within the City

Project	Status	Location	Description
			standards established under the National Flood Insurance Program.
Sacramento to Roseville Third Main Track Project	Future Project	City of Sacramento	The Capitol Corridor Joint Powers Authority (CCJPA) is proposing to improve existing intercity passenger rail (IPR) service along the Capitol Corridor by increasing the frequency of service between the cities of Sacramento and Roseville and implementing infrastructure improvements to support the increased service. Potentially affects the UPRR structure located within the western portion of the proposed project. Final EIR completed in November 2015.
Cap City Corridor Project	Future Project	City of Sacramento	Caltrans (in cooperation with the City of Sacramento and the Sacramento Area Council of Governments) is proposing the Cap City Corridor Project that would widen the existing roadway, extend the existing bus/carpool lanes, construct auxiliary lanes, improve intelligent transportation system elements, construct a new Class I bike path on the American River Bridge, and widen or replace existing structures within the project limits.
Railyards Specific Plan	In Progress	City of Sacramento	Sacramento Railyards Specific Plan area is approximately 244-acres and includes the subject property, the City's Sacramento Valley Station, and the Union Pacific Railroad rail corridor. The Project proposes to subdivide lots for a variety of uses, including residential, retail, and office. The propjet also includes a medical center campus and a major sports complex.
McKinley Village Project	In Progress	City of Sacramento	The McKinley Village Project consists of the construction and operation of a residential development, a neighborhood recreation center, parks, and associated infrastructure on an approximately 48-acre site within the East Sacramento Community Plan Area. Revised CEQA completed in 2017.
Leisure Lane Storm Drain Improvements Project	In Progress	Royal Oaks Drive/ Hwy 160 and Leisure Lane/ Exposition Blvd/ Hwy 160	Project consists of constructing a new outlet weir box north of CA-Highway 160 between the existing sewer line. CEQA review completed in 2015.
Accelerated Water Meter Project	In Progress	City of Sacramento	The Accelerated Water Meter Project proposes to install approximately 25,700 water meters on existing residential and commercial water service connections. The proposed

Table 5-2. List of Collective Past, Present, and Reasonably Anticipated Future Projects Within the City

Project	Status	Location	Description
			Project also involves replacement of approximately 62 miles of existing distribution and transmission mains primarily in existing City street rights-of-way. CEQA review was completed in 2017.
Sacramento Convention Center Renovation and Expansion and the 15th/K Street Hotel Projects	Future Project	13th Street W.,15th Street E., J Street N., K Street S.; Hotel: SW corner of K and 15th Streets	The proposed Sacramento Convention Center Renovation and Expansion Project will add exhibit space, meeting rooms, new lobbies, an outdoor amphitheater, and back-of-house uses to expand and renovate the existing Convention Center. The 15th/K Street Hotel Project will construct a hotel adjacent to the Convention Center. CEQA review was completed in 2018.
Twin Rivers Transit-oriented Development and Light Rail Station Project	Future Project	Richards Blvd./North 12th Street	The City, in partnership with the Sacramento Housing and Redevelopment Agency and the Sacramento Regional Transit District, proposes implementation of the Twin Rivers Transit-Oriented Development and Light Rail Station Project. The proposed Project would develop a mixed-income and mixed-use community comprising replacement public housing units, new market rare rental and low-income housing tax credit units, a realigned internal street network, green open space, and other community amenities on two noncontiguous but proximate properties that currently include public housing and undeveloped land. CEQA review was completed in 2017.

Notes:
* Detail regarding specific environmental impacts of each alternative is provided in the "Screening Evaluation" provided in the previous section.

Methods

The analysis below examines the cumulative impacts of the proposed project for each of the topics that are analyzed in **Chapter 3.0** of this EIR. The impacts are assessed by short term (construction) and long term (operational) impacts of the proposed project combined with the impacts of the past and planned projects listed in **Table 5-2** (referred to as the collective projects).

The following objectives were set forth to analyze the short-term construction and long-term operational cumulative impacts. First, there is an assessment of whether the baseline condition, when considered with the proposed project, entails a significant impact to any specific resource. Then, there is an assessment of whether the combined impacts of the proposed project and the projects in **Table 5-2** are cumulatively significant. Finally, there is a determination of whether the incremental effects of the proposed project would 'contribute considerably' and therefore cause a cumulatively considerable effect. If so, there is also a determination of whether mitigation is feasible.

Specifically, the following objectives were set forth to analyze the short-term construction and long-term operational cumulative impacts described below:

- Identify if the combined impacts of the proposed project and the projects described in **Table 5-2** are significant. If so,
- Determine whether the proposed project's incremental contribution to that significant impact are cumulatively considerable. If so,
- Determine if mitigation is feasible.

Note: it is possible that even when the cumulative impact of multiple projects is significant, the incremental contribution of the impact for the proposed project may itself not be cumulatively considerable (California Code of Regulations [CCR] section 15064.H4, Communities for Better Environment Case Law). In this case, the project's impact would not be cumulatively considerable.

Furthermore, a project's contribution is less than cumulatively considerable if the project implements mitigation measures designed to alleviate the cumulative impact. (CEQA Guidelines section 15130 (a)(3)).

Resource-Specific Cumulative Analysis

Aesthetics

What is the Geographic Scope for this resource area?

The geographic scope of the potential cumulative impacts with respect to aesthetic and visual resources is limited to areas within the physical footprint of a project area and areas adjacent to the project with views that could be changed by the proposed project.

What is the level of significance of the Combined Impact of the Proposed Project with the projects listed in Table 5-2?

The area surrounding the proposed project site is within the American River Parkway and consists of the American River levee and open space uses (see Sections **3.1** "**Aesthetics**" and **3.7** "**Land Use and Planning**"). Development of past and current projects, as well as future proposed projects, continue to alter the visual environment in and around the City. In general, the visual resource impacts of the proposed project and the majority of projects listed in **Table 5-2** are site-specific and would not necessarily combine with other projects that are not in the same viewshed to create a cumulative impact. In addition, all proposed and reasonably foreseeable projects would be subject to City design and landscaping requirements to ensure that they do not degrade visual character. The appearance of the project vicinity would not substantially change, and construction of the proposed project would not create significant visual impacts that would contribute to visual resource degradation in the viewshed when assessed in conjunction with other local projects. Therefore, the proposed project, in conjunction with other planned projects, would have a **less than significant** cumulative impact on aesthetic resources.

Finding: Less than Cumulatively Significant

Is the Proposed Project's Incremental Contribution to the Combined Impact Cumulatively Considerable?

The multiple development, transportation and infrastructure projects in the region around the City would have a combined aesthetic impact; however, the proposed project would not cause a considerable increase to that impact, given the proposed project involves construction of a multi-use recreation trail and no structures or roadways would be constructed. While the removal of large existing trees and vegetation would temporarily impact the existing visual quality of the corridor, new trees and vegetation would be planted and allowed to grow (see **Mitigation Measures BIO-2**, **BIO-5** through **BIO-10**, **BIO-12**, and **BIO-13**, summarized below and more fully described in **Section 3.2 "Biological Resources**"); therefore, this impact would be temporary and ultimately result in a similar aesthetic or visual quality. The combined impacts of tree removal with other projects does not constitute a significant impact and the proposed project does not entail a considerable contribution to the existing baseline (**Table 5-2**); therefore, no additional mitigation is necessary.

- **Mitigation Measure BIO-2**: Install Temporary Fencing around Environmentally Sensitive Habitat
- **Mitigation Measure BIO-5**: Return Temporarily Disturbed Areas to Pre-Project Conditions
- **Mitigation Measure BIO-6**: Avoid the Spread of Invasive Plant Species
- **Mitigation Measure BIO-7**: Compensate for Permanent Impacts to Riparian Habitat and Protected Trees
- **Mitigation Measure BIO-8**: Monitor During Ground Disturbance and Vegetation Removal
- **Mitigation Measure BIO-9**: Avoid Construction Activities within 165 feet of Elderberry Shrubs During Valley Elderberry Longhorn Beetle Flight Season
- **Mitigation Measure BIO-10**: Implement Dust Control Measures
- **Mitigation Measure BIO-12**: Compensate for the Permanent Removal and Temporary Disturbance of Valley Elderberry Longhorn Beetle Habitat
- **Mitigation Measure BIO-13**: Transplant Elderberry Shrubs

Finding: Less than Cumulatively Considerable with no additional mitigation required.

Air Quality and Greenhouse Gas Emissions

What is the Geographic Scope for this resource area?

The geographic scope of the potential cumulative impacts with respect to both air quality and greenhouse gas emissions is on a regional level because air quality impacts are regional in nature.

What is the level of significance of the Combined Impact of the Proposed Project with the Projects listed in Table 5-2?

The City is at nonattainment for State and Federal Ozone, State PM10 and Federal PM2.5. The collective projects listed in **Table 5-2** would result in new air emissions and the combined project impacts relative to these constituents are considered **significant**.

Finding: Cumulatively Significant

Is the Proposed Project's Incremental Contribution to the Combined Impact Cumulatively Considerable?

The SMAQMD has established operational cumulative significance thresholds for ROG and NOx, which are ozone precursors, of 85 pounds per day. Any project emitting over 85 pounds per day of ROG or NOx would be considered a cumulatively significant impact and would require mitigation. Based on the results of the air quality modelling assessment, construction-related emissions from the proposed project would be below the SMAQMD significance thresholds for cumulative impacts. Furthermore, implementation of all basic construction emission control practices and requirements provided in SMAQMD Rule 403 (see **Mitigation Measure AIR-1**, summarized below and more fully described in "**Executive Summary**", **Table ES-1**). Consequently, the incremental addition to the problem from the proposed project is considered mitigated to minimal levels and thus does not contribute considerably to this existing impact; therefore, no further mitigation is required.

- **Mitigation Measure AIR-1**: Implement Construction-related Emission Control Practices:

Finding: Less than Cumulatively Considerable for both air quality and greenhouse gas emissions with no additional mitigation required.

Biological Resources

What is the Geographic Scope for this resource area?

The geographic scope of the cumulative biological resources analysis is the project site and adjacent surrounding areas (including the BSA).

What is the level of significance of the Combined Impact of the Proposed Project with the Projects listed in Table 5-2?

Simultaneous construction of other projects in the project area (see **Table 5-2**) could potentially result in significant impacts on biological resources, should they be present within the project site or the vicinity of the Project site. Implementation of the Sacramento to Roseville Third Main Track Project, the Cap City Corridor Project, and portions of the American River Common Features Project would have a direct physical overlap with the proposed project. The American River Common Features Project may require construction activities within the project study area in 2021 and will require coordination with the City and SAFCA and ensure biological resource impacts are minimized. The cumulative projects listed in **Table 5-2** were/are required to complete CEQA environmental assessments, by law, which include a biological resource study and compliance with the FESA/CESA (as appropriate). While the proposed project would not directly affect any state or federally designated waters or wetlands, implementation of the proposed project would affect the habitat of VELB, a special status species. However, implementing the VELB avoidance, restoration, maintenance, and compensation measures (see **Mitigation Measures**

BIO-7 through **BIO-13**, summarized below and more fully described in **Section 3.2 "Biological Resources**") would reduce project impacts to a **less than significant** level. Therefore, in general, the proposed collective projects in **Table 5-2** are not considered to have a cumulatively significant impact to biological resources.

Finding: Less than Cumulatively Significant

Is the Proposed Project's Incremental Contribution to the Combined Impact Cumulatively Considerable?

When the proposed project is analyzed in conjunction with other recent, current, and reasonably foreseeable projects, the potential contribution to the cumulative biological resource impact to special status species, wetlands, migratory corridors, and trees, is not considered cumulatively considerable, because the proposed project was designed and adjusted to avoid and minimize impacts to biological resources as much as feasible. While the elimination of riparian and existing trees would temporarily impact the project corridor, new trees and vegetation would be planted and allowed to grow; therefore, this impact would be temporary and ultimately result in a similar visual quality.

The proposed Project would not have a cumulatively considerable impact to migratory wildlife corridors, specifically migratory nesting birds, when reviewed in conjunction with other local projects. While the elimination of large existing trees would impact nesting bird habitat, new trees and vegetation would be planted and allowed to grow (see **Mitigation Measures BIO-2**, **BIO-4** through **BIO-12**, summarized below and more fully described in **Section 3.2 "Biological Resources**"); therefore, this impact would be temporary. The proposed project is designed to protect wildlife species such as migratory birds through implementation of pre-construction biological surveys and monitoring, as needed, to protect and avoid these biological resources (see **Mitigation Measure BIO-14**, summarized below and more fully described in **Section 3.2 "Biological Resources**"). Therefore, it does not contribute to a cumulatively considerable impact to biological resources when analyzed in conjunction with other proposed projects in the region (**Table 5-2**).

- **Mitigation Measure BIO-2**: Install Temporary Fencing around Environmentally Sensitive Habitat
- **Mitigation Measure BIO-4**: Return Temporarily Disturbed Areas to Pre-Project Conditions
- **Mitigation Measure BIO-5**: Avoid the Spread of Invasive Plant Species
- **Mitigation Measure BIO-6**: Compensate for Permanent Impacts to Riparian Habitat and Protected Trees
- **Mitigation Measure BIO-7**: Monitor During Ground Disturbance and Vegetation Removal
- **Mitigation Measure BIO-8**: Avoid Construction Activities within 165 feet of Elderberry Shrubs During Valley Elderberry Longhorn Beetle Flight Season
- **Mitigation Measure BIO-9**: Implement Dust Control Measures
- **Mitigation Measure BIO-10**: Prohibit Use of Herbicides and Mowing near Elderberry Shrubs
- **Mitigation Measure BIO-11**: Compensate for the Permanent Removal and Temporary Disturbance of Valley Elderberry Longhorn Beetle Habitat

- **Mitigation Measure BIO-12**: Transplant Elderberry Shrubs
- **Mitigation Measure BIO-14**: Conduct Preconstruction Surveys

Finding: Less than Cumulatively Considerable with no additional mitigation required.

Cultural and Tribal Resources

What is the Geographic Scope for this resource area?

The geographic scope of the cumulative cultural and tribal analysis is the project site and the adjacent surrounding areas.

What is the level of significance of the Combined Impact of the Proposed Project with the Projects listed in Table 5-2?

The records search of the State and local registers of archaeological resources did not identify any archaeological resources (prehistoric or historic period) within the project area. In addition, based on consultation with tribal representatives summarized in **Section 3.3**, "**Cultural and Tribal Resources**", no tribal cultural resources were identified within the project area. The records search of the State and local registers of historic resources identified one resource, the American River South Levee (Levee Unit 118 Part 1) is considered significant under National Register of Historic Places Criterion A within the context of flood management and for its association with the SRFCP.

As designed, the proposed project would be located primarily along the toe of the levee, with Segment 4 and portions of Segments 1 and 2 along the levee crown. The proposed trail design does not include any visual features or uses that would alter the character-defining features of the levee (i.e. its compacted earth, slope, crown). The levee would retain its important aspects of integrity (location, materials, design, setting, feeling and association) that allow it to convey its historical significance as an important component of the SRFCP and flood management efforts in Sacramento. Therefore, the impacts to Levee Unit 118 Part 1 (American River South Levee) are considered less than significant, with no mitigation required.

There is a potential for the inadvertent discovery of buried tribal cultural resources, significant paleontological resources, or human remains during the construction of the proposed Project, but with implementation of resource avoidance measures (see **Mitigation Measures CTR-1** through **CTR-3**, summarized below and more fully described in **Section 3.3 "Cultural Resources**"), it would reduce the proposed Project's impacts to tribal cultural resources, significant paleontological resources, and human remains to **less than significant**.

Simultaneous construction of other projects in the project area could potentially result in significant impacts on historic resources, archaeological resources, human remains, or tribal resources, should they be present within the project site or the vicinity of the Project site. Implementation of the Sacramento to Roseville Third Main Track Project, the Cap City Corridor Project, and portions of the American River Common Features Project would have a direct physical overlap with the proposed project. However, all the projects listed in **Table 5-2** were/are required to complete CEQA environmental assessments, by law, which include a cultural resource study within the area including any areas overlapping the proposed project area as well as consultation with any tribes located in the area. These cultural resource studies and tribal consultations ensure proper documentation, protection, and/or mitigation of important cultural and tribal resources. Because of the CEQA requirements to assess impacts to cultural and tribal

resources, there is no combined significant impact to cultural or tribal resources from these projects, and the combined impacts to cultural and tribal resources are considered less than cumulatively significant.

Finding: Less than Cumulatively Significant

Is the Proposed Project's Incremental Contribution to the Combined Impact Cumulatively Considerable?

Since combined impacts of the projects do not constitute a significant impact and the proposed project does not entail a significant impact to cultural resources (as determined by CSO) or tribal cultural resources, there would not be a contribution to a cumulatively considerable impact.

- **Mitigation Measure CTR-1**: Conduct Cultural Resources and Tribal Cultural Resources Sensitivity and Awareness Training Program Prior to Ground-Disturbing Activities
- **Mitigation Measure CTR-2**: Implement Avoidance, Minimization, and Preservation Measures Should Cultural or Tribal Cultural Resources Be Discovered During Construction
- **Mitigation Measure CTR-3**: Implement Post Discovery Procedures in the Event of the Inadvertent Discovery of Human Remains.

Finding: Less than Cumulatively Considerable with no additional mitigation required.

Geology and Soils

What is the Geographic Scope for this resource area?

The geographic scope of the cumulative geologic resources is the project site and adjacent surrounding areas.

What is the level of significance of the Combined Impact of the Proposed Project with the Projects listed in Table 5-2?

The projects in **Table 5-2** must be constructed in compliance with seismic regulations and include soils and erosion control BMPs. Therefore, the potential impact to soil erosion is localized and mitigated, and not considered cumulatively significant.

Finding: Less than Cumulatively Considerable

Is the Proposed Project's Incremental Contribution to the Combined Impact Cumulatively Considerable?

Construction in a seismically-active region puts people and structures at risk from a range of earthquake-related effects, such as surface fault rupture, strong ground shaking, and landsliding. However, as more fully described in **Section 3.4** "**Geology and Soils**", the proposed project is not located within an area that is seismically active. Furthermore, the proposed project would be built to applicable California State Building Codes to further reduce risks associated with seismic activity. The proposed project would also entail erosion control BMPs and site restoration. Therefore, the proposed project's contribution to seismic hazards, erosion, and sedimentation in the region is not considered cumulatively considerable.

Finding: Less than Cumulatively Considerable with no additional mitigation required.

Hazards and Hazardous Materials

What is the Geographic Scope for this resource area?

The geographic scope of the potential cumulative impacts with respect to hazards and hazardous material is limited to the American Society for Testing and Materials (ASTM) standard of one-mile area surrounding the proposed project.

What is the level of significance of the Combined Impact of the Proposed Project with the Projects listed in Table 5-2?

Hazardous materials to be used during construction are of low toxicity and would consist of fuels, oils, paints, and lubricants. Because these materials are required for operation of construction vehicles and equipment, BMPs would be implemented to reduce the potential for or exposure to accidental spills or fires involving the use of hazardous materials. Impacts from minor spills or drips would be avoided by thoroughly cleaning up minor spills as soon as they occur. While foreseeable projects have the potential to cause similar impacts, is it assumed these projects would also implement BMPs. Therefore, there would not be a significant cumulative impact.

Finding: Less than Cumulatively Significant

Is the Proposed Project's Incremental Contribution to the Combined Impact Cumulatively Considerable?

Hazardous materials utilized during operation include fuels, oils, and lubricants. The materials would be stored in accordance with regulatory requirements as disclosed in **Section 3.5** "**Hazards and Hazardous Materials**". Simultaneous construction of projects in **Table 5-2** could also require the use of hazardous materials during construction. If these projects occurred in the immediate vicinity of the proposed Project, they could result in a cumulatively considerable potential risk of upset. However, the projects listed in **Table 5-2** would not occur simultaneously as the proposed project. Additionally, the proposed project and the projects listed in **Table 5-2** do not have high risk of wildfires due to the highly-urbanized nature of the City. Therefore, the proposed project would not result in a cumulatively considerable increase in hazards.

Finding: Less than Cumulatively Considerable with no additional mitigation required.

Hydrology and Water Quality

What is the Geographic Scope for this resource area?

The geographic scope of the potential cumulative impacts with respect to hydrology and water is on a regional level because hydrology and water quality impacts are regional in nature.

What is the level of significance of the Combined Impact of the Proposed Project with the Projects listed in Table 5-2?

The cumulative projects listed in **Table 5-2** may result in a cumulatively significant impact to regional hydrologic resources if, for example, flow alterations combined to either significantly reduce or increase flows in the region's stream, rivers and canals. The proposed project does not entail significant proposed

flow decreases or increases and the proposed trail design would not affect local or regional drainage patterns within the study area. Furthermore, the proposed project and the projects listed in **Table 5-2** would be subject to Federal, State and local regulations designed to minimize cumulative impacts to water quality. Erosion and water quality BMPs (see **Mitigation Measure BIO-4**, summarized below and more fully described in **Section 3.2 "Biological Resources**"), implemented in the short-term (during construction of the proposed project), in combination with compliance with Federal, state and local regulations, are expected to reduce potential short-term combined impacts to hydrology and water quality to a less than significant level.

The American River Common Features Erosion Control Project (including Bank Protection Conceptual Design Process) currently planned along Segment 5 would be constructed in 2021, after analysis and design has concluded. Trail construction for the proposed project would take place before the erosion repair project is implemented. However, any construction along the levee or within the floodway would involve close coordination between the City, County, LARTF, Corps, ARFCD, SAFCA, and CVFPB to ensure the two project designs do not affect levee integrity or contribute to a cumulatively considerable risk of erosion, flooding, or degradation of water quality in the vicinity of the project site.

The short-term impacts of the projects listed in **Table 5-2** on hydrology and water quality are estimated to be less than significant or less than significant with mitigation incorporated. None of the construction projects are expected to occur simultaneously as the proposed project. Therefore, the proposed project would have a **less than significant** cumulative impact on hydrology and water quality.

Finding: Less than Cumulatively Significant

Is the Proposed Project's Incremental Contribution to the Combined Impact Cumulatively Considerable?

The proposed project would mitigate impacts to a less than significant level by avoiding impacts to hydrology and water quality and would not be cumulatively considerable given the small and localized nature of the proposed project and the potential impacts. Therefore, the proposed project would not be cumulatively considerable and would not require additional mitigation.

Finding: Less than Cumulatively Considerable with no additional mitigation required.

Land Use and Planning

What is the Geographic Scope for this resource area?

The geographic scope of the cumulative land use analysis is the region (City). Land use decisions are made at the City level for the project region; therefore, the City is an appropriate geographic scope.

What is the level of significance of the Combined Impact of the Proposed Project with the Projects listed in Table 5-2?

The projects identified in **Table 5-2** could both create and alleviate growth-related impacts in the City. Residential and other development-related projects will impact regional infrastructure, including impacts to finite resources such as wastewater treatment capacity and water supply. Transportation-related projects such as the Twin Rivers Transit-oriented Development and Light Rail Station Project will alleviate impacts associated with cumulative development. Water and wastewater infrastructure construction projects such as the 3rd and 9th Street Sewer Relief Projects, and the Water Treatment

Plants Rehabilitation Project serve to alleviate impacts to existing infrastructure associated with increased development. The proposed multi-use trail would not contribute to the combined impacts associated with the past, present, and future development projects listed in **Table 5-2**.

Short-term and long-term cumulative impacts to land use as a result of the projects listed in **Table 5-2** would be less than significant. The cumulative infrastructure development of the proposed project and the projects identified in **Table 5-2**, would not individually or cumulatively physically divide a community or communities. All projects must be developed in accordance with applicable land use plans and policies. Applicable zoning ordinances and land-use regulations would not be affected as a result of the projects listed in **Table 5-2**. As a result, the proposed project and the projects listed in **Table 5-2** would have a **less than significant** cumulative impact.

Finding: Less than Cumulatively Significant

Is the Proposed Project's Incremental Contribution to the Combined Impact Cumulatively Considerable?

The combined impacts of the projects listed in **Table 5-2** do not constitute a significant land use impact. The proposed project area for the multi-use trail is classified as Parks and Recreation in the City of Sacramento 2035 General Plan and zoning code and would continue to be zoned as such. The trail project would not change the zoning designation of adjacent areas. Because the project does not create new connections to undeveloped land, no impacts to growth, economics, affordable housing, or crime would occur. Development of the site as proposed would alter the existing landscape, but the project site will continue to be consistent with these planning designations. The City Bikeway Master Plan also identifies the proposed trail project (Figure 22, City of Sacramento, 2018). Since the proposed project does not have the potential to conflict with land use plans as described above and would not incrementally contribute to the combined impact of the past, present, and future projects listed in **Table 5-2**, there would be no cumulative impact to land use.

Finding: Less than Cumulatively Considerable with no additional mitigation required.

Noise and Vibration

What is the Geographic Scope for this resource area?

The geographic scope of the potential cumulative impacts with respect to noise is limited to areas within the physical footprint of a project area.

What is the level of significance of the Combined Impact of the Proposed Project with the Projects listed in Table 5-2?

If the construction of projects identified in **Table 5-2** were to occur simultaneously when assessed in combination with the proposed project, they could have a cumulative impact to sensitive receptors adjacent to the project area. However, there are no overlapping construction schedules, thus their noise impacts would not compound to exceed a threshold, excessively vibrate the ground, or cause substantial permanent increase in ambient noise. Additionally, the timing of these projects located nearest to the proposed project are not anticipated to be constructed at the same time as the proposed project. Therefore, the potential cumulative impact from the projects in the region and the proposed project would be less than cumulatively significant.

Finding: Less than Cumulatively Significant

Is the Proposed Project's Incremental Contribution to the Combined Impact Cumulatively Considerable?

As discussed above, the baseline recent past, current, and reasonably foreseeable future cumulative conditions, with the addition of the proposed project, would not create a significant noise impact in the area, such as an increase in noise levels above local and regional thresholds. Therefore, the proposed project would not result in a cumulatively considerable impact.

Finding: Less than Cumulatively Considerable with no additional mitigation required.

Public Services, Recreation, and Utilities

What is the Geographic Scope for this resource area?

The geographic scope of the cumulative public services, recreation, and utilities analysis is the service area of each of the providers serving the proposed project area. These are discussed under **Section 3.9** "**Public Services**, **Recreation**, and **Utilities**" of this Draft EIR and include local fire districts, police departments, school districts, municipalities and utility service providers (both public and private),

What is the level of significance of the Combined Impact of the Proposed Project with the Projects listed in Table 5-2?

The potential for the projects in the region (**Table 5-2**) combined with the proposed project to cumulatively trigger new or larger demand on public services or utilities is considered less than cumulatively significant. This is because the proposed projects listed in **Table 5-2**, along with the proposed project, would not be constructed simultaneously and do not entail added demand for school or parks, or require the addition of large numbers of workers to move to the area. In addition, the potential heightened risk for fire (and demand on fire departments) during construction is temporary and significantly reduced through the application of standard fire prevention and control mitigation. As such, combined demand on local police, fire, schools, parks, and other public facilities or utilities is considered less than significant. In addition, the operation of the combined projects, most notably the housing development projects, could create additional demand on local facilities such as the police and fire department; however, such facility expansions (i.e. new parks, police, and fire stations) are typically part of the proposed development project environmental documents and the impacts were contemplated and disclosed. The combined projects therefore would not trigger the need for new governmental facilities for which impacts have not been contemplated.

Finding: Less than Cumulatively Considerable

Is the Proposed Project's Incremental Contribution to the Combined Impact Cumulatively Considerable?

As discussed above, the past, current and reasonably foreseeable future cumulative conditions with the addition of the proposed project would not create a significant impact to public services or utilities. The proposed project's contribution to the cumulative less than significant impact to public services/utilities is also not cumulatively considerable, as it would not cause a significant incremental increase to the demand on these services or utility service providers.

Finding: Less than Cumulatively Considerable with no additional mitigation required.

Transportation and Circulation

What is the Geographic Scope for this resource area?

The geographic scope of the potential cumulative impacts with respect to transportation and traffic is limited to a quarter mile area surrounding the proposed project.

What is the level of significance of the Combined Impact of the Proposed Project with the Projects listed in Table 5-2?

The proposed project would not result in long-term effects on the existing transportation system. In addition, the projects in the region, given their locations, do not appear to have significant overlapping access footprints that would result in a cumulatively significant impact to key highways and roads. Therefore, the potential cumulative impact to transportation and circulation from past, current and reasonably foreseeable future projects is considered **less than significant**.

Finding: Less than Cumulatively Significant

Is the Proposed Project's Incremental Contribution to the Combined Impact Cumulatively Considerable?

The proposed project consists of constructing a multi-use trail and would not include the construction of trip generating development roadways or other transportation infrastructure that would impact traffic. Based on the analysis in **Section 3.10** "**Transportation and Circulation**", the limited project footprint within existing roadways, and minimal amounts of long-term vehicle generation, the contribution of the proposed project to the cumulative impact to transportation and traffic resources would not cause a significant increase to the demand on these resources beyond the thresholds listed. Therefore, the impact of the proposed project would not be cumulatively considerable.

Finding: Less than Cumulatively Considerable with no additional mitigation required.

Summary

The City of Sacramento (City) proposes to construct approximately 1.8 miles of bicycle and pedestrian trail through Sutters Landing Park that extends from 28th Street to the west, ending on the levee approximately 0.10 mile west of SR-160 (see enclosed exhibit). The Two Rivers Trail Phase III Project (Project) will generally consist of a 12-foot-wide paved trail with a 2-foot-wide compacted aggregate base (AB) shoulders on each side. To accommodate project phasing, there will also be segments where the trail is composed only of aggregate base (unpaved). On-street bicycle lanes are also proposed in some locations as a part of the Project.

Literature research, habitat assessments, and biological surveys were completed to determine the potential for special status species to occur within the Project area. Special status species include any plant or animal species listed by a state or federal agency or by one or more special interest groups, such as the California Native Plant Society (CNPS). Based on literature review, biological surveys, and habitat assessments, ten special status species have potential to occur, or are presumed present, within the Project area. Avoidance, minimization and mitigation measures have been incorporated for the general protection of wildlife species.

The Project area encompasses an existing gravel path along A Street, around the westerly landfill, and along the south bank of the American River, a jurisdictional water pursuant to the Clean Water Act (CWA) and the California Department of Fish and Wildlife (CDFW). The following permits will be obtained prior to construction of the Phase IV project (Phase III does not require permits): Section 404 Nationwide Permit from the United States Army Corps of Engineers (USACE), Section 408 Permit from the USACE, Section 401 Water Quality Certification from Regional Water Quality Control Board (RWQCB), Central Valley Flood Protection Board (CVFPB) Permit, and a Section 1600 Permit from CDFW.

1. Introduction

The City is proposing to connect the Phase I and Phase II sections of the Two Rivers bicycle trail along the south bank of the American River. The Project is located between Business 80 and SR 160 (California Department of Transportation Bridge No. 24 0007) over the American River in Sacramento County (Figure 1. Project Vicinity and Figure 2. Project Location). The Project is located within the Sacramento East 7.5-Minute United States Geological Survey quadrangle (3812154).

This segment of the American River is also designated as a California State Wild and Scenic River, from the Nimbus Dam to its confluence with the Sacramento River. The designation protects the river's water quality, free-flowing condition, fishery, recreation, and scenic values under the California Wild and Scenic Rivers Act.

Project Background

In December 2022, the City approved the Final EIR (FEIR) for the Two Rivers Trail Phase II Project which will construct approximately 3.4 miles of Class I bicycle and pedestrian trail along the south bank of the American River extending from Tiscornia Park at Jibboom Street to the H Street Bridge in Sacramento, California (SCH #2018102058). Since then, the Project has been updated to include additional trail alignments and design features that were not previously analyzed, which are included as Phase III and Phase IV of the overall Project (see Figure 3). This Biological Resources Technical Report is intended to analyze all impacts that will occur to sensitive biological resources under the California Environmental Quality Act (CEQA) as a result

of differences between the previously approved Phase II Project and the proposed Phase III and Phase IV segments , as well as regulatory permits that will be obtained for Phase IV in the future.

1.1 Project Description

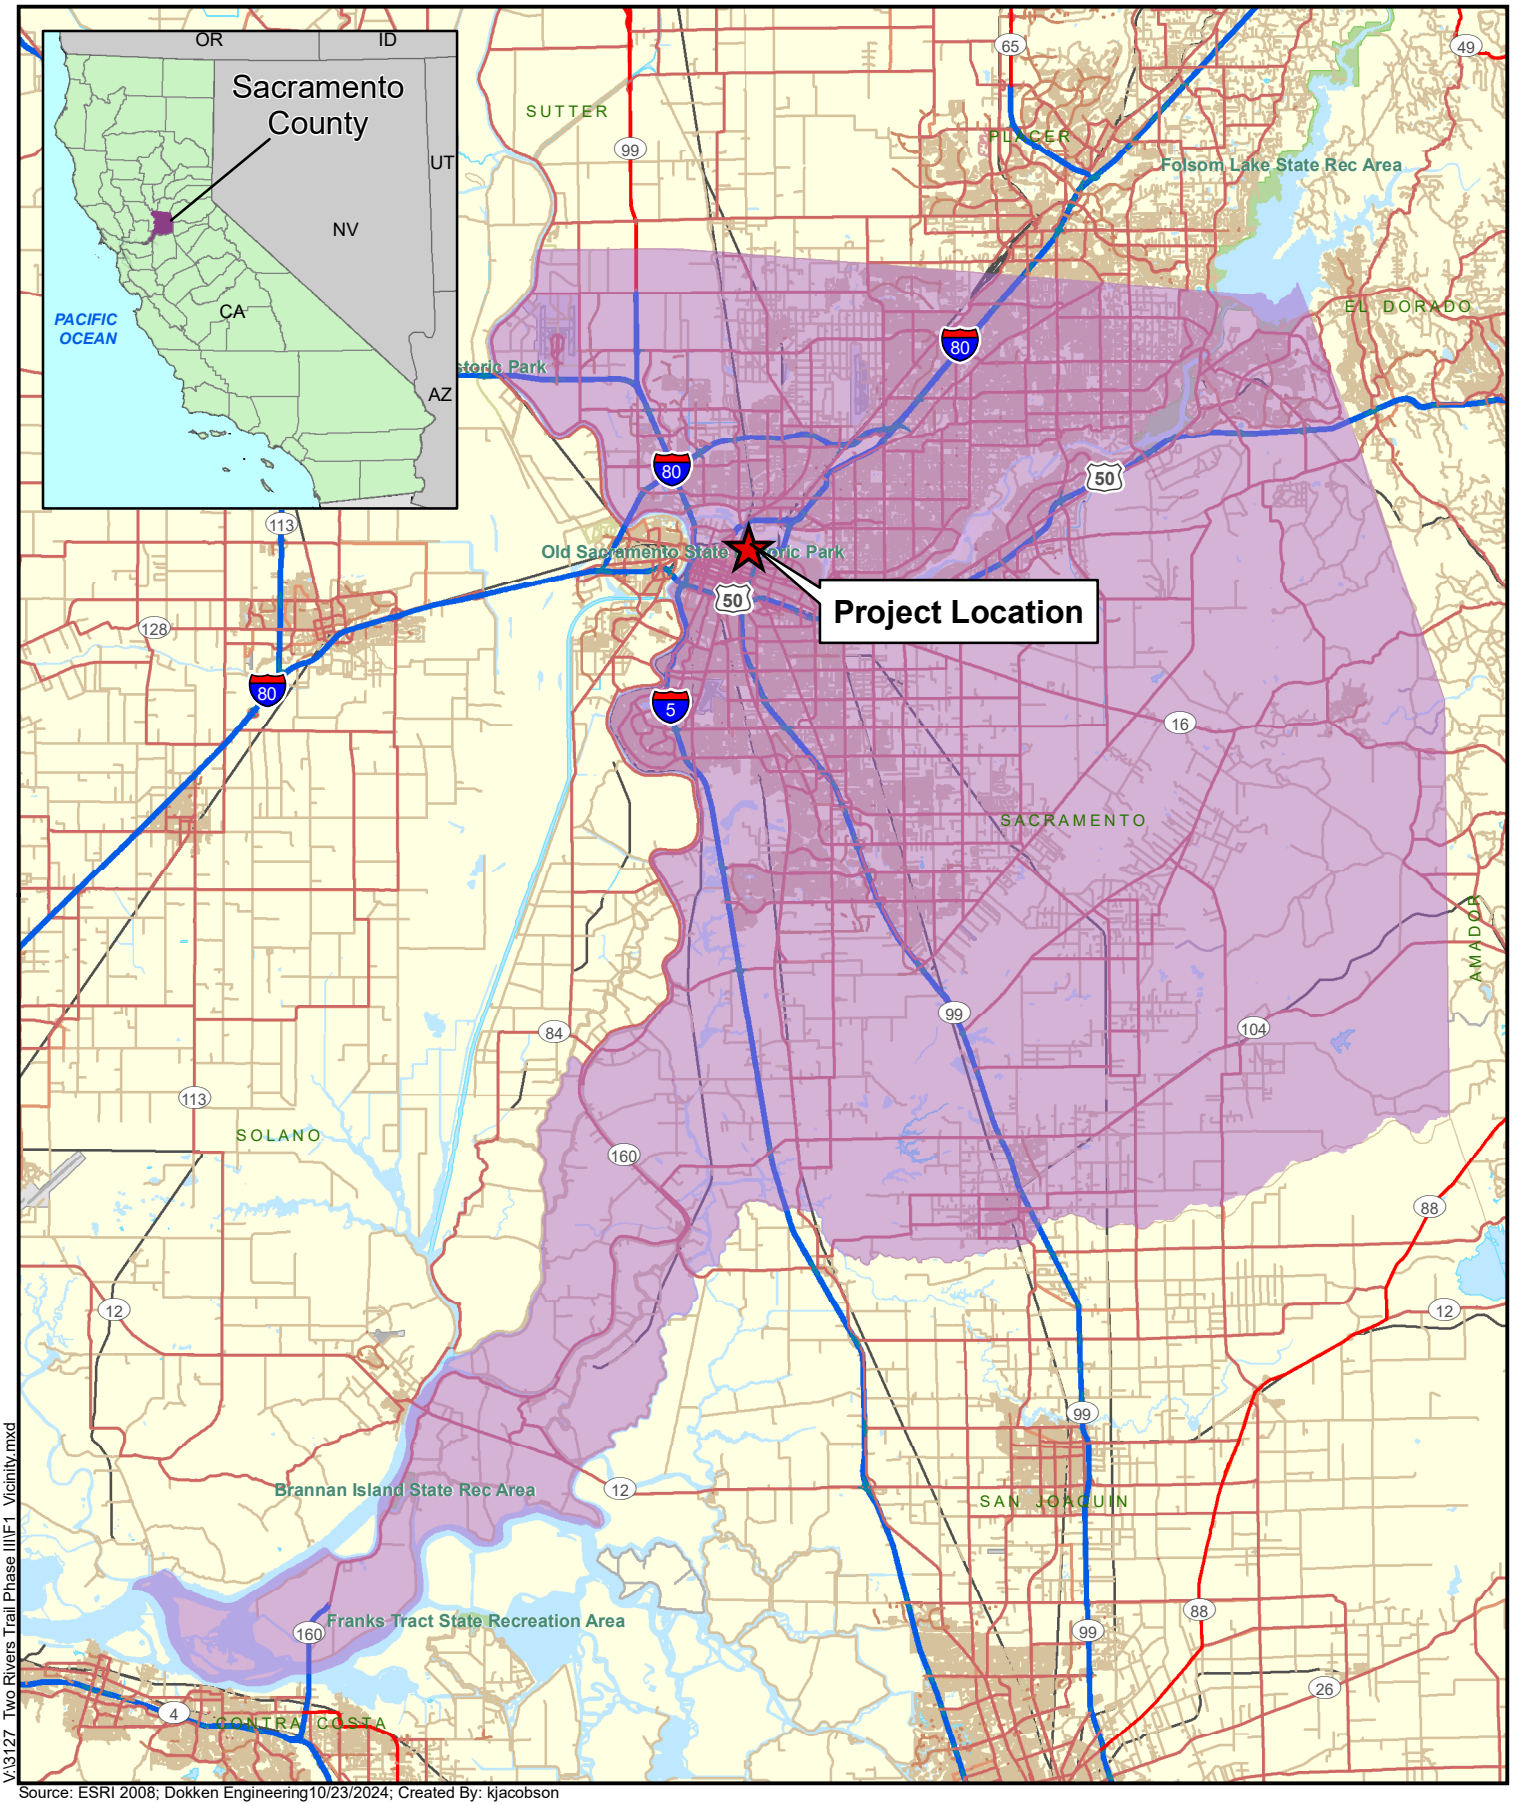
The City of Sacramento (City) proposes to construct approximately 1.8 miles of bicycle and pedestrian trail through Sutters Landing Park that extends from 28th Street to the west, ending on the levee approximately 0.10 mile west of SR-160 (see enclosed exhibit). The Two Rivers Trail Phase III Project (Project) will generally consist of a 12-foot-wide paved trail with a 2-foot-wide compacted aggregate base (AB) shoulders on each side. To accommodate project phasing, there will also be segments where the trail is composed only of aggregate base (unpaved). On-street bicycle lanes are also proposed in some locations as a part of the Project.

Beginning along the west side of 28th Street just south of the 28th & B Skate Park, the Project will replace the paver walkway adjacent to the dog park with the paved trail, regrade a small area of the dog park, realign the A Street driveway to align with McKinley Village Way and relocate the Sutters Landing Park monument. The trail turn west following the existing A Street alignment and create a separate, parallel gravel road to the north to accommodate maintenance and truck traffic serving the landfill and local businesses. Just east of the SMUD substation, the trail will turn north and follow the eastern perimeter of the landfill until reaching the landward toe of the American River levee. Turning west again, the paved trail will continue for approximately 1,000 feet where it will conform to the existing landfill maintenance road, which consists of gravel. In the near-term, users of the Phase III trail will be able to continue west along the gravel maintenance road, following the west, east, and south edge of the landfill in succession until closing the loop at the paved trail near the northeast corner of the SMUD substation. West of the UPRR tracks, the trail will connect to the Sacramento Northern Bikeway, ramping down to the intersection of North 18th Street and Basler Street. The trail will continue west along Basler Street as a Class III bikeway and along Sproule Avenue as a Class II bikeway. West of Sproule Avenue, users will be able to use a combination of existing facilities to connect to the Two Rivers Phase I trail.

In the future, the Phase IV project will connect to the end of the Phase III paved trail north of the landfill and south of the American River levee, ramping up to a bridge that spans the UPRR tracks. West of the tracks, the trail will follow the top of the American River levee, connecting to the Sacramento Northern Bikeway and ramping down the water side of the levee to pass under the North 16th Street and North 12th Street (collectively State Route 160 [SR 160]) bridges. The underpass will consist of a 12-foot paved path with no shoulders and will be supported on the water side by a retaining wall. The trail will ramp back up to the top of the levee and connect to the existing Two Rivers Phase I trail segment west of SR 160. For the Phase IV trail, lighting will be provided on the UPRR overcrossing and the SR 160 underpass. Erosion control will be provided to protect graded elements within the American River channel.

This Project is essential for closing gaps in the existing and planned trail system, improving access for users of all ages and abilities to retail, employment, and recreational amenities. No permanent right-of-way acquisitions are required; however, permanent and temporary easements will be needed on UPRR parcels, and some utility relocations will be required.

This project is locally funded and therefore requires compliance with the California Environmental Quality Act (CEQA). The lead agency for CEQA compliance is the City.



1.2 Project Purpose

The purpose of the Project is to:

- Provide a vital recreation link between the Jedediah Smith Trail on the north side of the American River Parkway, the Sacramento River Parkway, the Sacramento Northern Bikeway Trail, the future Ueda Parkway trails, and the 20th Street bike connection to the Central City;
- Provide alternative transportation access for commuters and residents in the eastern part of the City, California State University, Sacramento (CSUS), Central City, North Sacramento, East Sacramento, and Richards Boulevard area;
- Provide trail users with a connection to the river and the American River Parkway; and
- Provide an American's with Disabilities Act (ADA)-compliant, active transportation connection to adjacent communities throughout the Sacramento area for pedestrians and bicyclists of all ages and abilities to access retail, jobs, and recreational amenities.

1.3 Project Need

The project is needed to provide a gap closure in the existing and planned trail system, improving access for users of all ages and abilities to retail, employment, and recreational amenities.

2. Study Methods

2.1 Regulatory Requirements

This section describes the general federal, state, and local plans, policies, and laws that are relevant to biological resources within the Project area. Applicable approvals that could be required before construction of the Project are provided in Chapter 5.

2.1.1 Federal Regulations

Federal Endangered Species Act

The Federal Endangered Species Act (FESA) of 1973 [16 United States Code (U.S.C.) section 1531 et seq.] provides for the conservation of endangered and threatened species listed pursuant to Section 4 of the Act (16 U.S.C. section 1533) and the ecosystems upon which they depend. These species and resources have been identified by the United States (U.S.) Fish and Wildlife Service (USFWS).

Clean Water Act

The CWA was enacted as an amendment to the Federal Water Pollutant Control Act of 1972, which outlined the basic structure for regulating discharges of pollutants to Waters of the U.S. The CWA serves as the primary federal law protecting the quality of the nation's surface waters, including lakes, rivers, and coastal wetlands. The CWA empowers the U.S. Environmental Protection Agency (EPA) to set national water quality standards and effluent limitations and includes programs addressing both point-source and non-point-source pollution for all Waters of the United States.

On May 25, 2023, the U.S. Supreme Court issued its ruling on the Sackett v. EPA case redefining Waters of the United States (WoUS). The ruling limits the scope of WoUS to only those "wetlands with a continuous surface connection to bodies that are WoUS in their own right." In addition, the Court's decision also holds that "only those relatively permanent, standing or continuously flowing bodies of water forming geographic features that are described in ordinary parlance as streams, oceans, river, and lakes" are considered WoUS.

The CWA was enacted as an amendment to the Federal Water Pollutant Control Act of 1972, which outlined the basic structure for regulating discharges of pollutants to WoUS. The CWA serves as the primary federal law protecting the quality of the nation's surface waters, including lakes, rivers, and coastal wetlands. The CWA empowers the EPA to set national water quality standards and effluent limitations and includes programs addressing both point-source and non-point-source pollution. Point-source pollution originates or enters surface waters at a single, discrete location, such as an outfall structure or an excavation or routine maintenance site. Non-point-source pollution originates over a broader area and includes urban contaminants in storm water runoff and sediment loading from upstream areas. The CWA operates on the principle that all discharges into the nation's waters are unlawful unless they are specifically authorized by a permit; permit review is CWA's primary regulatory tool.

Section 401

The RWQCB has jurisdiction under §401 of CWA and regulates any activity that may result in a discharge to surface waters. Typically, the areas subject to jurisdiction of the RWQCB coincide with those of the USACE (i.e., waters of the U.S. including any wetlands). The RWQCB also asserts authority over "waters of the State" under waste discharge requirements pursuant to the Porter-Cologne Water Quality Control Act.

Section 402

The State Water Resources Control Board regulates construction projects that involve ground disturbance of 1 acre or greater. These projects must obtain coverage under the State Water Resources Control Board General Permit for Storm Water Discharges Associated with Construction Activity (General Construction Permit). Operators of regulated construction sites are required to develop a Stormwater Pollution Prevention Plan; to implement sediment, erosion, and pollution prevention control measures; and to obtain coverage under the General Construction Permit.

City of Sacramento's Municipal Separate Storm Sewer System (MS4) Permit (Order R5-2016-0040, NPDES No. CAS0085324)

Under the City of Sacramento's MS4 Permit (Order R5-2016-0040, NPDES No. CAS0085324), the City is required to implement a comprehensive stormwater management program to minimize pollutant discharges from public and private development projects to the maximum extent practicable. Compliance includes incorporation of site design measures, source control best management practices (BMPs), and low impact development (LID) features that reduce runoff and promote infiltration. Projects that create or replace a threshold amount of impervious surface must also address post-construction stormwater management, including hydromodification controls, and ensure long-term maintenance of installed BMPs. The City's compliance is guided by its Stormwater Quality Design Manual and enforced through plan review, permitting, and ongoing monitoring and reporting to the Central Valley Regional Water Quality Control Board.

Section 404

The USACE regulates discharges of dredged or fill material into waters of the U. S. These waters include wetlands and non-wetland bodies of water that meet specific criteria, including a direct or indirect connection to interstate commerce. USACE regulatory jurisdiction pursuant to Section 404 of the CWA is founded on a connection, or nexus, between the water body in question and interstate commerce. This connection may be direct (through a tributary system linking a stream channel with traditional navigable waters used in interstate or foreign commerce) or may be indirect (through a nexus identified in USACE regulations).

Executive Order 13112: Prevention and Control of Invasive Species

Executive Order (EO) 13112 (signed February 3, 1999) directs all federal agencies to prevent and control introductions of invasive species in a cost-effective and environmentally sound manner.

Executive Order 13186: Migratory Bird Treaty Act

EO 13186 (signed January 10, 2001) directs each federal agency taking actions that could adversely affect migratory bird populations, to work with USFWS to develop a Memorandum of Understanding that will promote the conservation of migratory bird populations. Protocols developed under the Memorandum of Understanding will include the following agency responsibilities:

- Avoid and minimize, to the maximum extent practicable, adverse impacts on migratory bird resources when conducting agency actions;
- Restore and enhance habitat of migratory birds, as practicable; and

- Prevent or abate the pollution or detrimental alteration of the environment for the benefit of migratory birds, as practicable.

The EO is designed to assist federal agencies in their efforts to comply with the Migratory Bird Treaty Act (MBTA) [50 Code of Federal Regulations (CFR) 10 and 21] and does not constitute any legal authorization to take migratory birds. Take is defined under the MBTA as "the action of or attempt to pursue, hunt, shoot, capture, collect, or kill" (50 CFR 10.12) and includes intentional take (i.e., take that is the purpose of the activity in question) and unintentional take (i.e., take that results from, but is not the purpose of, the activity in question).

Bald and Golden Eagle Protection Act

The Bald and Golden Eagle Protection Act, established in 1940, prevents the "take" of bald or golden eagles, including their parts (feathers, nests, eggs, etc.), (USFWS 16 U.S.C. 668-668d). Bald and golden eagles are known to occur in the Project vicinity, however bald/golden eagles or evidence of these species nesting was not observed within the Project area. To prevent take of these species, a pre-construction nesting bird survey will be completed prior to the start of Project activities (see Section 4). If an active bald or golden eagle nest is identified within the survey area the appropriate measures will be implemented to avoid take of the species.

2.1.2 State Regulations

California Environmental Quality Act

The CEQA is a state law created to inform governmental decision-makers and the public about the potential, significant environmental effects of proposed activities and to work to reduce these negative environmental impacts. The City is the CEQA lead agency for the Project.

California Endangered Species Act

The California Endangered Species Act (CESA) [California Fish and Game (CFG) Code Section 2050 et seq.] requires the CDFW to establish a list of endangered and threatened species (Section 2070) and to prohibit the incidental taking of any such listed species except as allowed by the Act (Sections 2080-2089). In addition, CESA prohibits take of candidate species (under consideration for listing).

CESA also requires CDFW to comply with CEQA (Pub. Resources Code Section 21000 et seq.) when evaluating Incidental Take Permit applications [CFG Code Section 2081(b) and California Code Regulations, Title 14, section 783.0 et seq.], and the potential impacts the project or activity, for which the application was submitted, may have on the environment. CDFW's CEQA obligations include consultation with other public agencies that have jurisdiction over the project or activity [California Code Regulations, Title 14, Section 783.5(d)(3)]. CDFW cannot issue an Incidental Take Permit if issuance will jeopardize the continued existence of the species [CFG Code Section 2081(c); California Code Regulations, Title 14, Section 783.4(b)].

Section 3503 and 3503.5: Bird and Raptors

CFG Code Section 3503 prohibits the destruction of bird nests and Section 3503.5 prohibits the killing of raptor species and destruction of raptor nests.

Section 3513: Migratory Birds

CFG Code Section 3513 prohibits the take or possession of any migratory non-game bird as designated in the MBTA or any part of such migratory non-game bird except as provided by rules and regulations adopted by the Secretary of the Interior under provisions of the MBTA.

Porter-Cologne Water Quality Control Act

California's Porter-Cologne Act, enacted in 1969, provides the legal basis for water quality regulation within California. The act requires a "Report of Waste Discharge" for any discharge of waste (liquid, solid, or gaseous) to land or surface waters that may impair beneficial uses for surface and/or groundwater of the state. It predates the CWA and regulates discharges to waters of the State. Waters of the State include more than just WoUS, such as groundwater and surface waters that were recently precluded from the definition of WoUS by the Sackett ruling. Additionally, it prohibits discharges of "waste" as defined and this definition is broader than the CWA definition of "pollutant". Discharges under the Porter-Cologne Act are permitted by Waste Discharge Requirements and may be required even when the discharge is already permitted or exempt under the CWA.

The RWQCBs are responsible for establishing the water quality standards (objectives and beneficial uses) required by the CWA and regulating discharges to ensure compliance with the water quality standards. Details regarding water quality standards in a project area are contained in the applicable RWQCB Basin Plan. In California, Regional Boards designate beneficial uses for all water body segments in their jurisdictions and then set criteria necessary to protect these uses. Consequently, the water quality standards developed for particular water segments are based on the designated use and vary depending on such use. In addition, the State Water Resources Control Board identifies waters failing to meet standards for specific pollutants, which are then state-listed in accordance with CWA Section 303(d). If a state determines that waters are impaired, and the standards cannot be met through point source or non-source point controls (National Pollutant Discharge Elimination System) permits or Waste Discharge Requirements), the CWA requires the establishment of Total Maximum Daily Loads which specify allowable pollutant loads from all sources (point, non-point, and natural) for a given watershed.

2.1.3 Local Regulations

Sacramento City General Plan

The City's General Plan serves as the long-term blueprint for guiding land use, development, and resource management within Sacramento City, California. It reflects the City's vision for growth and development over the coming decades while balancing economic, environmental, and social needs. The plan addresses key areas like housing, transportation, public services, and conservation, ensuring that future growth occurs in a sustainable and organized manner. The Project must remain consistent with the applicable policies and procedures outlined in the General Plan (Sacramento City 2024).

Section 6 of the City's General Plan outlines policies related to the preservation of environmental resources such as water and biological resources including:

Policy 6.ERC-1. –

> Responsible management of water resources that preserves and enhances water quality and availability. The City is committed to water resource protection goals and policies, including:
>
> 1.1 Clean Water Programs
>
> 1.2 Clean Watershed
>
> 1.3 Runoff Contamination
>
> 1.4 Construction Site Impacts

1.5 Drinking Water Data

1.6 Groundwater Management

Policy 6.ERC-2. –

Thriving rivers, wildlife, and natural open spaces that contribute to public health, livability, and protection of the environment for future generations. The City is committed to biological resource protection goals and policies, including:

2.1 Conservation of Water Resources in Open Areas

2.2 Biological Resources

2.3 Onsite Preservation

2.4 Native and Climate-Adapted Plants

2.5 Environmental Awareness

2.6 Wetland Protection

2.7 Annual Grasslands

2.8 Wildlife Corridors

2.9 Habitat Assessments

2.10 Agency Coordination

2.11 Natomas Basin Habitat Conservation Plan

2.12 Support Habitat Conservation Plan Efforts

2.13 Climate Change-related Habitat Shifts

2.14 Climate Change-related Habitat Restoration and Enhancement

2.2 Studies Required

2.2.1 Literature Search

In addition to field work, literature research was conducted through the USFWS Information for Planning and Consultation (IPaC) official species list generator (Appendix A. USFWS Species List), the CDFW California Natural Diversity Database (CNDDB) (Appendix B. CNDDB Species List), the CNPS Electronic Inventory of Rare and Endangered Plants (Appendix C. CNPS Species List), and the National Marine Fisheries Service (NMFS) West Coast Region Species List (Appendix D. NMFS Species List) to identify habitats and special-status species having the potential to occur within the Project area. Section 3.2 of this report provides a comprehensive list of the species generated from the online database searches and presents specific characteristics, habitat requirements, and potential of occurrence for each species.

2.2.2 Survey Methods

Prior to field surveys, the Project area was defined as the Project area with an approximate 50-100-foot buffer to facilitate construction access, accommodate alternatives, and capture potential biological resources adjacent to Project limits. Habitat assessment and analysis of historic occurrences were conducted to determine the potential for each of these species to occur within the Project area.

Biological surveys and habitat assessment methods included walking meandering transects through the entire Project area, observing vegetation communities, compiling notes on observed flora and fauna, and assessing the potential for existing habitat to support sensitive plants and wildlife. All plant and wildlife observations were recorded and are discussed in Chapter 3.

2.2.3 Personnel and Survey Dates

A biological field survey was conducted on February 10 and 12, 2025, by Dokken Engineering biologists Hanna Sheldon and Lea Braen. Habitat assessments were conducted within the Project area to assess the vegetative communities present, identify biological resources t may be impacted by the Project, and evaluate the potential for special status species to occur on-site.

2.3 Agency Coordination and Professional Contacts

2.3.1 United States Fish and Wildlife Service

On February 27, 2025, an official species list was obtained from USFWS of federally listed species that could occur in the vicinity of the Project (Appendix A).

2.3.2 California Department of Fish and Wildlife

On February 19, 2025, a nine-quadrangle list of species with potential to occur in the Project vicinity was obtained from CDFW's CNDDB (Appendix B).

2.3.3 California Native Plant Society

On February 19, 2025, a nine-quadrangle list of plant species with potential to occur in the Project vicinity was obtained from the CNPS Inventory of Rare and Endangered Plants of California (Appendix C).

2.3.4 National Marine Fisheries Service

On February 19, 2025, a list of federally listed fish species with the potential to occur in the Project vicinity was obtained from the NMFS West Coast Region Species List (Appendix D).

2.4 Limitations That May Influence Results

Sensitive wildlife species with the potential to occur in the Project area may be cryptic (difficult to detect) or transient, migratory species. The population size and locations of sensitive species may fluctuate through time. Because of this, the data collected for this biological resource technical report represents a "snapshot" in time and may not reflect actual future conditions.

The collection of biological field data is normally subject to environmental factors that cannot be controlled or reliably predicted. Consequently, the interpretation of field data must be conservative and consider the uncertainties and limitations imposed by the environment. Biological surveys were conducted in February, which is within the typical plant blooming period. No limitations were

present that could substantially influence the results of this document. All surveys were conducted during appropriate weather and temperature conditions.

3. Results: Environmental Setting

3.1 Description of the Existing Biological and Physical Conditions Study Area

3.1.1 Study Area

Prior to field surveys, the Project impact area was defined with an approximate 50-100-foot buffer to capture potential biological resources adjacent to Project limits and accommodate for any potential changes in Project design. The Project area encompasses portions of SR 160 and is located west of the Capital City Freeway (Business Loop I-80, as well as directly adjacent to the American River. The total acreage of the Project area is approximately 92.89 acres (Figure 6. Project Features).

3.1.2 Physical Conditions

Regionally, the Project is located within the Central Valley in Sacramento County, California. This Project is located within the Central Valley Floristic Province (Jepson 2025). Sacramento County experiences Mediterranean conditions including warm, dry summers and cool, wet winters. The nearby City of Sacramento experiences an average annual high temperature of approximately 74 degrees Fahrenheit (°F), an average annual low temperature of approximately 48°F, and an average of 18.52 inches of precipitation annually (U.S. Climate Data 2025). The elevation of the Project area is approximately 23 to 72 feet above mean sea level. Theres are four soil types within the Project area. The eastern portion of the Project area, includes Columbia-Urban land complex, drained, 0 to 2 percent slopes (13.4%) and Dumps (19.4%), and the remaining portion of the Project area, includes Urban land (13.0%) and Columbia sandy loam, drained, 0 to 2 percent slopes (54.3%) (Natural Resource Conservation Service [NRCS] 2025; Appendix E. NRCS Soil Report).

3.1.3 Biological Conditions in the Study Area

Plant and wildlife species identified during the February 2025 biological survey were used to classify land cover types within the Project area, based on their composition, abundance, and density (Table 1. Species Observed). Four primary land cover types were documented: developed, valley oak riparian woodland, disturbed valley oak woodland, and disturbed/ruderal/barren. Additionally, the American River, a jurisdictional WoUS and state, is directly adjacent to and partially within the Project area (Figure 7. Vegetation Communities; Appendix F. Representative Photographs). A detailed description of each land cover type is provided below.

Developed

The Project area includes portions of various paved highways, dirt shoulders, residential areas, gravel roads, and industrial facilities that are devoid of vegetation/contain roadside or ornamental vegetation and are regularly disturbed by both vehicular and foot traffic. This area experiences heavy use as the Project area is located in a popular recreational destination and busy residential/industrial area. Developed areas within the Project area include SR 160 and Richards Boulevard, railroad tracks, and associated road shoulders, and comprises approximately 35.47 acres of the Project area.

Disturbed/Ruderal/Barren

The Project area includes areas that have been disturbed by foot, vehicle traffic, and previous construction. These areas are either devoid of vegetation or disturbed with minimal vegetation. This area supports a large, unhoused community that is also present within all other habitats. This community is the most common throughout the Project area and is dominated by Russian thistle

(*Salsola tragus*), dallisgrass (*Paspalum dillatatum*), and ripgut brome (*Bromus diandrus*). Also present in this habitat are multiple patches of elderberry shrubs (*Sambucus spp.*). There are also several stands of tree of heaven (*Ailanthus altissima*) located adjacent to the landfill within the trail study area. This vegetation community comprises approximately 51.72 acres of the Project area.

Disturbed Valley Oak Woodland

The Project area includes disturbed areas dominated by a canopy of valley oak (*Quercus lobata*) and black locust (*Robina pseudoacacia*), and an understory dominant in ripgut brome (*Bromus diandrus*) and common vetch (*Vicia sativa ssp. nigra*), with the same species as the Disturbed/Ruderal/Barren community. This area also supports a large, unhoused community and is disturbed largely by foot traffic. The disturbed valley oak woodland comprises approximately 2.26 acres of the Project area.

Valley Oak Riparian Woodland

The Project area includes a riparian habitat that encompasses the south bank of the American River. This community is dominated by valley oak, Fremont cottonwood (*Populus fremontii*), northern California black walnut (*Juglans hindsii*), California sycamore (*Plantanus racemosa*), willow (*Salix spp.*), dallisgrass, ripgut brome, and common vetch. Elderberry shrub patches are common throughout the community. This area also supports an unhoused community and is disturbed by regular foot traffic in some areas. The valley oak riparian woodland comprises approximately 2.71 acres of the Project area.

American River

The Project area is located directly on the southern bank of the American River, a perennial river that flows southwest underneath the SR 160 Bridge. The river originates in eastern Placer County in the Tahoe National Forest. Given the Project area is approximately 18 miles downstream of the Nimbus Dam, flows within this portion of the American River are influenced by water releases generated by the Dam, regulated by the U.S. Bureau of Reclamation. This aquatic feature is classified as a WoUS and state. The American River comprises approximately 0.73 acres of the Project area.

Project Area (92.89 acres)

Vegetation Communities and Land Cover

- American River (0.73 acres)
- Developed (35.47 acres)
- Disturbed Valley Oak Woodland (2.26 acres)
- Disturbed/Ruderal/Barren (51.72 acres)
- Valley Oak Riparian Woodland (2.71 acres)

Red-shouldered hawk	*Buteo linaetus*	N
Ruby-crowned kinglet	*Corthylio calendula*	N
Western bluebird	*Sialia Mexicana*	N
White-breasted nuthatch	*Sitta carolinensis*	N
White-crowned sparrow	Zonotrichia leucophrys	N
Yellow-billed magpie	*Pica nuttalli*	N
Yellow-rumped warbler	*Setophaga coronata*	N

[1]California Invasive Plant Council (Cal-IPC) Rating

Wildlife

Wildlife observations within the Project area consisted of local bird species such as American crow (*Corvus brachyrhynchos*), bushtit (*Psaltriparus minimus*), California scrub jay (*Aphelocoma californica*), and black phoebe (*Sayornis nigricans*). No special status wildlife species were observed during the biological survey conducted on February 10 and 12, 2025.

Habitat Connectivity

The CDFW Biogeographic Information & Observation System (CDFW 2024a) was reviewed to determine if the Project area is located within an Essential Habitat Connectivity Area. The Project area is within an area of Terrestrial Connectivity Rank 3 – Connections with implementation Flexibility and Rank 4 – Conservation Planning Linkages. These rankings represent areas that have connectivity importance and linkages that have more flexibility than irreplaceable and essential corridors. These corridors allow species to migrate, disperse, and access different habitats for foraging, breeding, and seasonal migration. These areas typically contain small natural areas within a larger developed landscape.

Although the Project is within an essential connectivity area, proposed activities are limited to the construction of a trail that already exists as a gravel path, which will not create new barriers or fragment essential wildlife corridors. The gravel path along the American River is already a part of the existing environment. As such, the Project will not permanently disrupt wildlife corridors or habitat connectivity.

3.2 Regional Species and Habitats and Natural Communities of Concern

Plant and animal species have special status if they have been listed as such by federal or state agencies or by one or more special interest groups, such as CNPS.

In addition to the field survey, literature searches were conducted using USFWS IPaC, CDFW CNDDB, CNPS, and NMFS databases to identify regionally sensitive species with potential to occur within the Project area. Table 2. Special Status Species Potential Table provides an updated list of regional special status species returned by the database searches, describes the habitat requirements for each species, and states if the species has potential to occur within the Project area. Seventeen special status plant species and twenty-seven special status wildlife species were returned by the database searches. No special status plant species were determined to have the potential to occur within the Project area.

Two special status wildlife species have been determined to have a high potential to occur within the Project area: Swainson's hawk (*Buteo swainsoni*) and white-tailed kite (*Elanus leucurus*). Four special status wildlife species have been determined to have a moderate potential to occur within the Project area: burrowing owl (*Athene cunicularia*), purple martin (*Progne subis*), song sparrow ("Modesto" population) (*Melospiza melodia pop. 1*), and northwestern pond turtle (*Actinemys marmorata*). Lastly, four species are presumed present within the portion of the American River: chinook salmon Central Valley spring-run ESU (*Oncorhynchus tshawytscha pop. 11*), chinook salmon Sacramento River winter-run ESU (*Oncorhynchus tshawytscha pop. 7*), steelhead – Central Valley Distinct Population Segment (DPS) (*Oncorhynchus mykiss irideus pop. 11*), and valley elderberry longhorn beetle (*Desmocerus californicus dimorphus*).

Table 2. Special Status Species with Potential to Occur in the Project Vicinity

Common Name	Species Name	Status		General Habitat Description	Habitat Present	Potential for Occurrence and Rationale
Amphibian Species						
Western spadefoot	*Spea hammondii*	Fed: State: CDFW:	PT -- SSC	Inhabits open areas with sandy or gravelly soils within mixed woodlands, grasslands, coastal sage scrub, chaparral, sandy washes, lowlands, river floodplains, alluvial fans, playas, alkali flats, foothills, and mountains. Burrows underground for most of the year and is active above ground during rainfall. Requires vernal, shallow, temporary pools formed by heavy winter rains for reproduction. These pools must be free of bullfrogs, fish, and crayfish. Breeds from late winter to March.	A	**Presumed Absent:** The Project area occurs along the American River which is too deep and fast-moving to support breeding for the species. The Project area lacks dense, shrubby riparian vegetation, and is instead bordered by valley oak riparian woodlands and disturbed/developed areas which provides limited cover and/or estivation opportunities for the species. There is only one documented CNDDB occurrence within 10 miles of the Project area, located approximately 7 miles southeast within the Carmichael USGS Quadrangle (2009). Due to lack of suitable habitat features as well as the lack of local occurrences, this species is presumed absent.
Bird Species						
Bank swallow	*Riparia riparia*	Fed: State: CDFW:	-- T --	A migratory colonial nester inhabiting lowland and riparian habitats west of the deserts during spring through fall. Majority of current breeding populations occur along the Sacramento and Feather Rivers in the north Central Valley. Forages in grassland, brushland, wetlands, and cropland during migration. Requires vertical banks or cliffs with fine textured/sandy soils for nesting (tunnel and burrow excavations). Nests exclusively near streams, rivers, lakes, or the ocean. Breeds from May through July.	A	**Presumed Absent:** The Project area occurs along the American River in the City of Sacramento. The Project area does not contain the vertical banks or cliffs that are required for nesting. There is a historical occurrence from 1986 only 0.89 miles east of the Project area, however, this occurrence noted the destruction of habitat due to installation of riprap along the bank and there has not been any other recorded occurrences in that area. Due to the lack of suitable habitat features, this species is presumed absent.

Common Name	Species Name	Status		General Habitat Description	Habitat Present	Potential for Occurrence and Rationale
Burrowing owl	*Athene cunicularia*	Fed: State: CDFW:	-- CE SSC	The species inhabits arid, open areas with sparse vegetation cover such as deserts, abandoned agricultural areas, grasslands, and disturbed open habitats. Can be associated with open shrub stages of pinyon-juniper and ponderosa pine habitats. Nests in old small mammal burrows but may dig own burrow in soft soil. Nests are lined with excrement, pellets, debris, grass, and feathers. The species may use pipes, culverts, and nest boxes, and even buildings where burrows are scarce. Breeding occurs March through August (below 5,300 feet).	HP	**Moderate Potential:** The Project area contains disturbed, open habitat just west of Sutter's Landing Corporation Yard/Bell Marine Industrial Aggregate and Concrete Recycling and north of the SMUD substation. This area contains come grassland vegetation and patches of exposed soil. However, these areas are clay capped landfills which are designed to be impenetrable by water, plants and animal burrows. However a few burrows were observed on the western portion of the Project area. None of the burrows exhibited signs of burrowing owls. The nearest CNDDB occurrence was approximately 1.49 miles east of the Project area (1974). The most recent recorded occurrence from CNDDB is approximately 8.84 miles southeast of the Project area (2016). Due to the presence of suitable habitat and recorded CNDDB occurrences within 10 miles of the Project area, this species has a moderate potential to occur within the Project area.
California black rail	*Laterallus jamaicensis coturniculus*	Fed: State: CDFW:	-- T FP	A rare, yearlong California resident of brackish and freshwater emergent wetlands in delta and coastal locations including the San Francisco Bay area, Sacramento-San Joaquin Delta, Morro Bay, the Salton Sea, and lower Colorado River. More than 90% of the species are found in the tidal salt marshes of the northern San Francisco Bay region, predominantly in San Pablo and Suisun Bays. Smaller populations occur in the San	A	**Presumed Absent:** The Project area does not contain suitable brackish or freshwater emergent wetland habitat for this species. There is only one CNDDB occurrence within 10 miles of the Project area, approximately 6.28 miles southwest (2017) within wetlands adjacent to the Sacramento River Deep Water Ship Chanel. Due to the lack of suitable habitat as well as the lack of local occurrences, this species is presumed absent.

Common Name	Species Name	Status		General Habitat Description	Habitat Present	Potential for Occurrence and Rationale
				Francisco Bay, the Outer Coast of Marin County, and freshwater marshes in the foothills of the Sierra Nevada. The species is extirpated from San Diego County and the majority of coastal southern California. Occurs in tidal emergent wetlands dominated by pickleweed, in brackish marshes dominated by bulrushes with pickleweed, and in freshwater wetlands dominated by bulrushes, cattails, and salt grass. Species prefers high wetland areas, away from areas experiencing fluctuating water levels. Requires vegetation providing adequate overhead cover for nesting. Eggs are laid from March through June.		
Least Bell's vireo	*Vireo bellii pusillus*	Fed: State: CDFW:	E E --	Summer resident of southern California inhabiting low elevation riparian habitats in the vicinity of water and dry river bottoms. Prefers willows, baccharis, mesquite and other low, dense vegetation as nesting site. Forages in dense brush and occasionally treetops. The species is known to occur in all four southern California national forests, with the largest population in the Los Padres National Forest (below 2,000 feet).	A	**Presumed Absent:** While the Project area contains low elevation riparian habitat, the vegetation is not dense and is not in the vicinity of dry river bottoms. There is one CNDDB historic occurrence approximately 1.33 miles west of the Project area (1877) and one occurrence approximately 9.12 miles southwest of the Project area in Yolo County. There are no other recorded occurrences of this species within 10 miles of the Project area. Due to the lack of local occurrences, this species is presumed absent.
Purple martin	*Progne subis*	Fed: State: CDFW:	-- -- SSC	Present in California as a summer migrant, arriving in March and departing by late September. Inhabits valley foothill and montane hardwood/hardwood-conifer, coniferous habitats, and riparian	HP	**Moderate Potential:** The Project area contains some open woodland habitat as well as a presence of former woodpecker cavities, bridges, and culverts. The nearest CNDDB occurrence is approximately 1.23 miles west of the

Common Name	Species Name	Status		General Habitat Description	Habitat Present	Potential for Occurrence and Rationale
				habitats. Associated with closed-cone pine-cypress, pondorosa pine, Douglas-fir, and redwood. Nests in tall, old, isolated trees or snags in open forest or woodland and in proximity to a body of water. Frequently nests within former woodpecker cavities; may nest in human-made structures such as nesting boxes, under bridges and in culverts. Needs abundant aerial insect prey. Breeds April through August.		Project area (2003). There are more recent iNaturalist occurrences in Sutter's Landing Regional Park, directly adjacent to the Project area (2015 and 2017). The species was not observed during biological surveys. Due to the presence of suitable habitat and local occurrences, this species has a moderate potential for occurrence within the Project area.
Song sparrow ("Modesto" population)	*Melospiza melodia pop. 1*	Fed: State: CDFW:	-- -- SSC	An endemic bird found exclusively in the north-central portion of the Central Valley, with highest densities in the Butte Sink and Sacramento-San Joaquin River Delta. The species is usually found in open brushy habitats, along the borders of ponds or streams, abandoned pastures, desert washes, thickets, or woodland edges. In addition, there is a strong affinity for emergent freshwater marshes dominated by tules and cattails, riparian willow thickets, and valley oak forests with a blackberry understory. Nests found in base of shrubs or clumps of grass, requiring low, dense vegetation for cover, usually near water. Breeds from March through August.	HP	**Moderate Potential:** The Project area contains suitable riparian willow and valley oak habitat as well as some areas with prominent blackberry understories or larger clumps of grass. A CNDDB historic occurrence is present within the Project area (1900). The nearest, most recent CNDDB occurrence is located approximately 8.92 miles southwest of the Project area (2011). iNaturalist also features more recent occurrences within the 10-mile buffer, though none are present within or directly adjacent to the Project area with the most presence in the Yolo Bypass area. Due to the presence of habitat and local occurrences, this species has a moderate potential to occur.
Swainson's hawk	*Buteo swainsoni*	Fed: State: CDFW:	-- T --	Inhabits grasslands with scattered trees, juniper-sage flats, riparian areas, savannahs, and agricultural or ranch lands with groves or lines of trees. Requires adjacent suitable foraging areas such as grasslands,	HP	**High Potential:** The Project area contains a riparian valley oak woodland and areas with sparser, tall trees with an open grassland understory suitable for foraging. The nearest, most recent CNDDB occurrence is approximately

Common Name	Species Name	Status		General Habitat Description	Habitat Present	Potential for Occurrence and Rationale
				alfalfa or grain fields that support a stable rodent prey base. Breeds March to late August.		0.35 miles south of the Project area (2017) and there are multiple recent iNaturalist occurrences within Sutter's Landing Regional Park. Due to the presence of habitat and recent occurrences, this species has a high potential to occur.
Tricolored blackbird	*Agelaius tricolor*	Fed: State: CDFW:	-- T SSC	Inhabits freshwater marsh, swamp and wetland communities, but may utilize agricultural or upland habitats that can support large colonies, often in the Central Valley area. Requires dense nesting habitat that is protected from predators, is within 3-5 miles from a suitable foraging area containing insect prey and is within 0.3 miles of open water. Suitable foraging includes wetland, pastureland, rangeland, at dairy farms, and some irrigated croplands (silage, alfalfa, etc.). Nests in dense cattails, tules, willow, blackberry, wild rose, or tall herbs. Nests mid-March to early August, but may extend until October or November in the Sacramento Valley region.	A	**Presumed Absent:** The Project area does not contain suitable marsh, swamp, and wetland communities or suitable, dense nesting habitat. The nearest, most recent CNDDB occurrence is approximately 4.14 miles southwest of the Project area. Due to the lack of suitable habitat and lack of recent, nearby occurrences, this species is presumed absent.
Western yellow-billed cuckoo	*Coccyzus americanus occidentalis*	Fed: State: CDFW:	T E --	Species inhabits riparian forests, along broad, lower flood bottoms of larger river systems. Nests in large blocks of riparian jungles often mixed with cottonwoods. Nesting appears to be preferred in riparian forest habitats with a dense understory; requires water near nesting site. Breeds June to August.	HP	**Presumed Absent:** Although the Project area does contain some suitable riparian habitat, most of the Project area does not contain a dense understory. There is one occurrence in the 10-mile buffer that overlaps the Project area, however this is historic (1877) and noted as Extirpated. There are also no iNaturalist occurrences in the Sacramento area. Due to the lack of local occurrence records, and

Common Name	Species Name	Status		General Habitat Description	Habitat Present	Potential for Occurrence and Rationale
						"Extirpated" determination, this species is presumed absent.
White-tailed kite	*Elanus leucurus*	Fed: State: CDFW:	-- -- FP	Inhabits rolling foothills and valley margins with scattered oaks and river bottomlands or marshes next to deciduous woodland. Prefers open grasslands, meadows or marshes for foraging close to isolated, dense-topped trees for nesting and perching. In southern California, will roost in saltgrass and Bermuda grass. Often found near agricultural lands. Nests are placed near the tops of dense oak, willow, or other tree stands. Breeds February through October.	HP	**High Potential:** The Project area contains potentially suitable nesting and foraging habitat, as well as abundant habitat adjacent to the Project area. The nearest, most recent CNDDB occurrence is approximately 3.34 miles southwest of the Project area, however there is a historic occurrence directly across the American River from the Project area (1974) and multiple recent iNaturalist occurrences within Sutter's Landing Regional Park and surrounding area. Due to the presence of potentially suitable habitat and local occurrences, this species has a high potential to occur.
Yellow-headed blackbird	*Xanthocephalus xanthocephalus*	Fed: State: CDFW:	-- -- SSC	The species occurs primarily as a migrant and summer resident from April to early October. The species almost exclusively nests in marshes with tall emergent vegetation such as tules (*Scirpus* sp.) or cattails (*Typha* sp.), in open areas and edges over water at depths typically ranging from 1-4 feet deep. Frequently breeds within marshes edges of lakes, reservoirs, or larger ponds. Nesting colonies occur where large insects, such as Odonata, are present and emerging. Breeds from April-July.	A	**Presumed Absent:** The Project area does not contain suitable marsh habitat. The only CNDDB occurrence within the 10-mile buffer is approximately 9.15 miles south of the Project area. Due to the lack of suitable habitat and lack of recorded occurrences, this species is presumed absent.
Fish Species						
Chinook Salmon – Central Valley Spring-Run ESU	*Oncorhynchus tshawytscha pop. 11*	Fed: State: CDFW:	T T --	Spring-run Chinook enter the Sacramento-San Joaquin River system to spawn, requiring larger gravel particle size and more water flow through their redds than other salmonids. Remaining runs occur in	CH	**Presumed Present:** The lower American River is known to support this species and is Critical Habitat for the species. The Nimbus Fish Hatchery located in Folsom, CA also raises chinook salmon for release into the

Common Name	Species Name	Status		General Habitat Description	Habitat Present	Potential for Occurrence and Rationale
				Butte, Mill, Deer, Antelope, and Beegum Creeks, tributaries to the Sacramento River. Known to occur in Siskiyou and Trinity counties.		American River and being connected to the Sacramento River, the American River is supportive to this species. The only CNDDB occurrence in the 10-mile buffer is located approximately 3.33 miles southwest within the Sacramento River Deep Water Ship Channel, however there are other records from CDFW of this species within the American River. Due to the presence of habitat and known occurrence, this species is presumed present.
Chinook salmon – Sacramento River winter-run ESU	*Oncorhynchus tshawytscha pop. 7*	Fed: State: CDFW:	E E --	Winter-run Chinook are currently restricted within the Sacramento River below Keswick dam; species does not spawn in tributaries. Species requires cold water over gravel beds to spawn.	HP	**Presumed Present:** The lower American River is known to support this species. The Nimbus Fish Hatchery located in Folsom, CA also raises chinook salmon for release into the American River and being connected to the Sacramento River, the American River is supportive to this species. The only CNDDB occurrence in the 10-mile buffer is located approximately 3.33 miles southwest within the Sacramento River Deep Water Ship Channel, however there are other records from CDFW of this species within the American River. Due to the presence of habitat and known occurrence, this species is presumed present.
Delta smelt	*Hypomesus transpacificus*	Fed: State: CDFW:	T E --	This species is endemic to California and can tolerate a wide range of salinity and temperatures but is most commonly found in brackish waters. Juveniles require shallow waters with food rich sources. Adults require adequate flow and suitable water quality for spawning in winter and spring. Occurs within the	A	**Presumed Absent:** Thie species is not known to occur in the American River and prefers brackish, in which the American River is a freshwater channel. Due to the lack of suitable habitat, this species is presumed absent.

Common Name	Species Name	Status		General Habitat Description	Habitat Present	Potential for Occurrence and Rationale
				Sacramento-San Joaquin Delta and seasonally within the Suisun Bay, Carquinez Strait and San Pablo Bay. Most often occurs in partially saline waters.		
Green sturgeon – southern DPS	*Acipenser medirostris pop. 1*	Fed: State: CDFW:	T -- SSC	Most marine of the sturgeon species. Predominately spawns in the upper Sacramento River, with some recorded in the Rogue River, Klamath and Trinity Rivers (Klamath River basin). In the Sacramento River, green sturgeon spawn above Hamilton City up to Keswick Dam. Known to occupy other river bodies including the lower Feather River; spawning not recorded; no green sturgeon has ever been documented in the San Joaquin River or its tributaries. Large cobbles preferred for spawning, but may utilize a range of substrates from bedrock to sand. Spawning occurs March-July.	A	**Presumed Absent:** This species is not known to occur within the American River. Though the species spawns within pockets of the Sacramento River, it is not known to utilize the American River. There are no CNDDB records for this species within the 10-mile buffer. Due to lack of occurrence and preferred habitat, this species is presumed absent.
Longfin smelt – San Francisco Bay Delta DPS	*Spirinchus thaleichthys pop.2*	Fed: State: CDFW:	E T --	Within California, occurs slightly upstream from Rio Vista (on the Sacramento River in the Delta) including the Cache Slough region and Medford Island (on the San Joaquin River in the Delta) through Suisun Bay and Suisun Marsh, the San Pablo Bay, the main San Francisco Bay, South San Francisco Bay,the Gulf of the Farallones, Humboldt Bay, and the Eel river estuary & local coastal areas. Resides in California and are primarily an anadromous estuarine species that can tolerate salinities ranging from freshwater to nearly	A	**Presumed Absent:** This species is not known to occur in the American River and does not travel far north of Rio Vista, CA. This species prefers more turbid, slow-moving waters, the American River is a fast-moving freshwater channel. Due to lack of occurrences and habitat, this species is presumed absent.

Common Name	Species Name	Status		General Habitat Description	Habitat Present	Potential for Occurrence and Rationale
				pure seawater. Prefers temperatures in the range of 16-18°C and salinities ranging from 15-30 ppt. Their spatial distribution within a bay or estuary is seasonally variable. Longfin smelt may also make daily migrations; remaining deep during the day and rising to the surface at night.		
Sacramento perch	*Archoplites interruptus*	Fed: State: CDFW:	-- -- SSC	Inhabits sloughs, lakes, and slow moving rivers of the Central Valley. Prefers turbid lakes, reservoirs and ponds warmed by summer heat and absent of plants; may occasionally occur in clear water among beds of aquatic vegetation. Species tolerates high temperatures, high salinities, high turbidity, and low water clarity. Young require aquatic and overhanging vegetation for cover. Spawns March-August in water temperatures between 64-84°F.	A	**Presumed Absent:** The Project area does not contain suitable habitat for this species. This species inhabits slow-moving waters, the American River is a fast-moving freshwater channel. The only CNDDB occurrence within 10 miles is approximately 6.04 miles southwest in Lake Greenhaven (1973). Due to lack of suitable habitat and local occurrences, this species is presumed absent.
Sacramento splittail	*Pogonichthys marcolepidotus*	Fed: State: CDFW:	-- -- SSC	Historically inhabited low moving rivers, sloughs, and alkaline lakes of the Central Valley; now restricted to the Delta, Suisun Bay and associated marshes. Species is adapted to fluctuating environments with tolerance to water salinities from 10-18 ppt., low oxygen levels (< 1.0 mg/L) and temperatures of 41-75°F. Spawns late February- early July, with a peak in March-April; requires flooded vegetation for spawning activity and protective cover for young.	A	**Presumed Absent:** The Project area does not contain suitable habitat for this species. The American River is a fast-moving freshwater channel. Due to lack of suitable habitat, this species is presumed absent.
Steelhead – California Central Valley DPS	*Oncorhynchus mykiss irideus pop. 11*	Fed: State: CDFW:	T -- SSC	This species is known to occur along most of the California coastline and inhabits freshwater streams and	CH	**Presumed Present:** The lower American River is known to support this species and is Critical Habitat for the

Common Name	Species Name	Status		General Habitat Description	Habitat Present	Potential for Occurrence and Rationale
				tributaries in northern and central California. The preferred habitat consists of estuaries, freshwater streams and near shore habitat with productive costal oceans. Spawning occurs in small freshwater streams and tributaries occurs from January through March and could extend into spring. Spawning occurs where cool, well oxygenated water is available year-round. Approximately 550-1,300 eggs are deposited in an area with good intergravel flow. The fry emerge from the gravel about 4-6 six weeks after hatching and remain in shallow protected areas associated with stream margin. Juveniles may remain in freshwater for the rest of their life cycle or return to the ocean. The principal remaining wild populations spawn annually in Deer and Mill Creeks in Tehama County, in the lower Yuba River, and a small population in the lower Stanislaus River.		species. The Nimbus Fish Hatchery, located in Folsom, CA, also raises Steelhead for release into the American River. Due to the presence of habitat and known occurrence, this species is presumed present.
Invertebrate Species						
Monarch butterfly	*Danaus plexippus*	Fed: State: CDFW:	C -- --	Winter roosts along the coast from northern Mendocino to Baja California. Utilizes wind protected tree groves in proximity to nectar and water sources. Host plants include milkweed species such as *Asclepias syriaca, A. incarnara,* and *A. speciosa.* Suitable habitat includes fields, meadows, weedy areas, marshes, and roadsides. Mass adult migrations occur from August to October.	A	**Presumed Absent:** During biological survey efforts the species host plant, milkweed, was not observed onsite. Furthermore, there are no documented CNDDB occurrences of the species within 10 miles. Due to lack of suitable habitat features and lack of local occurrences, this species is presumed absent.

Common Name	Species Name	Status		General Habitat Description	Habitat Present	Potential for Occurrence and Rationale
Valley elderberry longhorn beetle	*Desmocerus californicus dimorphus*	Fed: State: CDFW:	T -- --	Species requires red or blue elderberry (*Sambucus sp.*) as host plants. Typically occurs in moist valley oak woodlands associated with riparian corridors in the lower Sacramento River and upper San Joaquin River drainages. Adults are active, feeding, and breeding from March until June (sea level-3,000 feet).	P	**Presumed Present:** The Project area contains woodland habitat inland and on the banks of the American River that could provide suitable habitat for the species. 150+ elderberry shrubs were observed during the February 2025 biological survey. Exit holes, indicating the presence of VELB, were also observed. Due to presence of suitable habitat and observance of exit holes, this species is presumed present.
Vernal pool fairy shrimp	*Brachinecta lynchi*	Fed: State: CDFW:	T -- --	In California, species inhabits portions of Tehama County, south through the Central Valley, and scattered locations in Riverside County and the Coast Ranges. Species is associated with smaller and shallower cool-water vernal pools approximately 6 inches deep and short periods of inundation. In the southernmost extremes of the range, the species occurs in large, deep cool-water pools. Inhabited pools have low to moderate levels of alkalinity and total dissolved solids. The shrimp are temperature sensitive, requiring pools below 50 F to hatch and dying within pools reaching 75 F. Young emerge during cold-weather winter storms.	A	**Presumed Absent:** The Project area does not contain the vernal pool habitat required for this species. The nearest CNDDB occurrence is approximately 2.31 miles north of the Project area (1995). Due to lack of suitable habitat, this species is presumed absent.
Vernal pool tadpole shrimp	*Lepidurus packardi*	Fed: State: CDFW:	E -- --	Inhabits vernal pools and swales containing clear to highly turbid waters such as pools located in grass bottomed swales of unplowed grasslands, old alluvial soils underlain by hardpan, and mud-bottomed pools with highly turbid water.	A	**Presumed Absent:** The Project area does not contain the vernal pool habitat required for this species. The nearest CNDDB occurrence is approximately 4.98 miles southeast of the Project area (1992). Due to lack of suitable habitat, this species is presumed absent.
Mammal Species						

Common Name	Species Name	Status		General Habitat Description	Habitat Present	Potential for Occurrence and Rationale
American badger	*Taxidea taxus*	Fed: State: CDFW:	-- -- SSC	An uncommon, nocturnal and diurnal, permanent resident throughout most of California, aside from the northern coastline. Most abundant in drier and open stages of most shrub, forest, and herbaceous habitats with friable soils. Habitat requirements include access to fossorial rodents and sometimes reptiles, insects, birds, and eggs. Friable soil is required for digging burrows, often a new one dug each night, and frequently reuse old burrows. Young are born in burrows that have relatively dry, often sandy, soil, usually in areas with sparse overstory cover.	HP	**Presumed Absent:** While the Project area contains suitable soils and along with sparse overstories, this species is not known to be common in the area. The only CNDDB occurrence within the 10-mile buffer is approximately 3.65 miles southeast of the Project area (1991). Due to some potentially suitable habitat, but lack of documented occurrences, this species is presumed absent.
Reptile Species						
Giant gartersnake	*Thamnophis gigas*	Fed: State: CDFW:	T T --	A highly aquatic species that inhabits marsh, swamp, wetland (including agricultural wetlands), sloughs, ponds, rice fields, low gradient streams and irrigation/drainage canals adjacent to uplands. Ideal habitat contains both shallow and deep water with variations in topography. Species requires adequate water during the active season (April-November), emergent, herbaceous wetland vegetation, such as cattails and bulrushes, for escape cover and foraging habitat and mammal burrows estivation. Requires grassy banks and openings in waterside vegetation for basking and higher elevation uplands for cover and refuge from flood waters during winter dormant season. Mating	A	**Presumed Absent:** The Project area does not contain suitable habitat for this species. This species prefers slow-moving water and is not known to occur in the American River. The American River is a fast-moving channel. The nearest CNDDB occurrence is approximately 2.8 miles northwest of the Project area and noted as possibly extirpated (1986). Due to lack of suitable habitat and nearby occurrences, this species is presumed absent.

Common Name	Species Name	Status		General Habitat Description	Habitat Present	Potential for Occurrence and Rationale
				occurs in the spring and females bear live young.		
Northwestern pond turtle	*Actinemys marmorata*	Fed: State: CDFW:	PT -- SSC	A fully aquatic turtle of ponds, lakes, rivers, streams, creeks, marshes, and irrigation ditches with aquatic vegetation. Suitable habitat includes woodland, forests, and grasslands. Requires logs, rocks, cattail mats, and exposed banks for basking. Suitable upland habitat (sandy banks or grassy open field) is required for reproduction, which begins in April and ends with egg laying as late as August (sea level to 4,700 feet).	HP	**Moderate Potential:** Although northwestern pond turtle is known to occur within the American River, the river channel present within the Project area is not preferred habitat by the species due to fast moving flows and steep banks, as well as a lack of basking habitat and emergent vegetation. The nearest documented CNDDB occurrence of the species is approximately 5.52 miles northeast of the Project area, recorded in 1995. There are also recent iNaturalist occurrences of the species nearby. However, habitat along the American River, upstream of the Project area, is different than habitat available within the Project area, with sloped banks that aren't too steep, and tree stems available for basking. Due to the nearby presence of suitable habitat, this species has a moderate potential to occur.
Plant Species						
Ahart's dwarf rush	*Juncus leiospermus var. ahartii*	Fed: State: CDFW:	-- -- 1B.2	An annual grasslike herb inhabiting grassland swales, gopher mounds, freshwater wetlands, wetland-riparian habitats and foothill grassland communities. Flowers March-May (100-750 feet).	A	**Presumed Absent:** The Project area contains grassland communities, however, the grasslands within the Project area are disturbed and lacks clay soils per the NRCS soil report. There are no CNDDB occurrences within the 10-mile buffer, and no INaturalist occurrences within the Sacramento area. Due to the lack of suitable habitat features and lack of recent species occurrences, this species is presumed absent.

Common Name	Species Name	Status		General Habitat Description	Habitat Present	Potential for Occurrence and Rationale
Alkali-sink goldfields	*Lasthenia chrysantha*	Fed: State: CDFW:	-- -- 1B.1	An annual herb native to California. Generally found in alkali sinks, valley grassland, vernal pools, saline flats, and wetland-riparian areas. Blooms February to June (<300 ft).	A	**Presumed Absent:** The Project area contains grassland communities, however, the grasslands within the Project area are disturbed and lacks suitable soils per the NRCS soil report. There are no CNDDB occurrences within the 10-mile buffer, and no INaturalist occurrences within the Sacramento area. Due to the lack of suitable habitat features and lack of recent species occurrences, this species is presumed absent.
Bogg lake hedge-hyssop	*Gratiola heterosepala*	Fed: State: CDFW:	-- E 1B.2	An annual herb inhabiting clay soils and shallow waters of marshes, swamps, lake margins, and vernal pools. Flowers April-August (30-7,800 feet).	A	**Presumed Absent:** The Project area does not contain marshes, swamps, lake margins, or vernal pools, and lacks clay soils per the NRCS soil report. The nearest CNDDB occurrence is approximately 7.49 miles north of the Project area (1997). Due to the lack of suitable habitat features and lack of recent species occurrences, this species is presumed absent.
Bristly sedge	*Carex comosa*	Fed: State: CDFW:	-- -- 2B.1	A perennial grasslike herb native to California, inhabiting lake-margins and edges in freshwater wetlands, coastal prairie, valley grassland, foothill grassland, and wetland-riparian communities. Blooms May-September (0-2,050 feet).	A	**Presumed Absent:** The Project area contains riparian and disturbed grassland habitat communities, however, this species prefers habitat that is more commonly wet. there are no CNDDB or iNaturalist occurrences within the 10-mile buffer. Due to lack of occurrences and preferred habitat, this species is presumed absent.
Dwarf downingia	*Downingia pusilla*	Fed: State: CDFW:	-- -- 2B.2	An annual herb inhabiting vernal pools and mesic soils in valley and foothill grassland communities. Flowers March-May (0-1,500 feet).	A	**Presumed Absent:** The Project area contains disturbed grassland habitat, however there are no recent records of this species nearby. The nearest CNDDB occurrence is approximately 7.04 miles north of the Project area (1997). Due to lack of suitable habitat

Common Name	Species Name	Status		General Habitat Description	Habitat Present	Potential for Occurrence and Rationale
						and occurrences, this species is presumed absent.
Ferris' milk-vetch	*Astragalus tener var. ferrisiae*	Fed: State: CDFW:	-- -- 1B.1	An annual herb inhabiting vernally mesic meadows and seeps and subalkaline flats within valley and foothill grassland communities. Known only from six extant occurrences. Flowers April-May (0-250 feet).	A	**Presumed Absent:** The Project area contains disturbed grasslands and lacks suitable habitat for this species. There is only one historic CNDDB occurrence within the 10-mile buffer, approximately 5.61 miles west of the Project area (1954). Due to lack of suitable habitat and occurrences, this species is presumed absent.
Heckard's pepper-grass	*Lepidium latipes var. heckardii*	Fed: State: CDFW:	-- -- 1B.2	An annual herb found in alkaline flats within valley or foothill grasslands. Flowers March-May (0-660 feet).	A	**Presumed Absent:** The Project area contains disturbed grasslands and lacks suitable habitat for this species. There are no CNDDB occurrences within the 10-mile buffer. Due to lack of suitable habitat and occurrences, this species is presumed absent.
Legenere	Legenere limosa	Fed: State: CDFW:	-- -- 1B.1	Legenere is not a state or federal listed species, but is a CNPS rare plant rank 1B.1 species. Legenere grows in a variety of wetland habitats including vernal pools, vernal marshes, artificial ponds and floodplains of intermittent streams. Occupied vernal pool types include Northern Basalt Flow, northern claypan, northern hardpan, northern volcanic ash-flow and Northern Volcanic Mudflow. The blooming period for this plant species is between May-June. Once approved, legenere will be a covered species under the SSHCP.	A	**Presumed Absent:** The Project area does not contain the essential wetland habitats for this species. The nearest CNDDB occurrence is approximately 4.94 miles north of the Project area (1997). Due to lack of suitable habitat and nearby occurrences, this species is presumed absent.

Common Name	Species Name	Status		General Habitat Description	Habitat Present	Potential for Occurrence and Rationale
Mason's lilaeopsis	*Lilaeopsis masonii*	Fed: State: CDFW:	-- -- 1B.1	A perennial rhizomatous herb found exclusively in the Sacramento-San Joaquin River Delta and San Francisco Bay. Found in low elevation freshwater and brackish mashes adjacent to surface water. Flowers June-August (0-100 feet).	A	**Presumed Absent:** The Project area does not contain suitable marsh habitat required for this species. There is only one CNDDB occurrence within the 10-mile buffer, located approximately 9.04 miles southwest of the Project area (2009). Due to a lack of suitable habitat and nearby occurrences, this species is presumed absent.
Pappose tarplant	*Centromadia parryi ssp. Parryi*	Fed: State: CDFW:	-- -- 1B.2	An annual herb inhabiting chaparral, coastal scrub, meadows, seeps, marshes, swamps (coastal salt), and valley foothill grasslands often with alkaline soils. Flowers May-November (0-1,375 feet).	A	**Presumed Absent:** The Project area contains disturbed grassland habitat and does not contain suitable swamp or marsh habitat required for this species. There is only one CNDDB occurrence within the 10-mile buffer, located approximately 8.54 miles west of the Project area (2011). Due to a lack of suitable habitat and nearby occurrences, this species is presumed absent.
Peruvian dodder	*Cuscuta obtusiflora var. glandulosa*	Fed: State: CDFW:	-- -- 2B.2	An annual parasitic vine inhabiting freshwater marsh communities on herbs such as *Alternanthera sp*., *Dalea sp*., *Lythrum sp*., *Polygonum sp*., and *Xanthium sp*. Flowers July-October (50-1,640 feet).	A	**Presumed Absent:** The Project area does not contain the essential freshwater marsh habitat required for this species. There are no CNDDB occurrences within the 10-mile buffer. Due to lack of suitable habitat and occurrences, this species is presumed absent.
Sacramento Orcutt grass	*Orcuttia viscida*	Fed: State: CDFW:	E E 1B.1	An annual herb inhabiting vernal pools. Flowers April-July (100-330 feet).	A	**Presumed Absent:** The Project area does not contain the essential vernal pool habitat for this species. There are no CNDDB occurrences within the 10-mile buffer. Due to a lack of suitable habitat and occurrences, this species is presumed absent.
Slender Orcutt grass	*Orcuttia tenuis*	Fed: State: CDFW:	T E 1B.1	An annual herb inhabiting vernal pools, often within gravelly soils. Flowers May-October (115-5,775 feet).	A	**Presumed Absent:** The Project area does not contain the essential vernal pool habitat for this species. There are no CNDDB occurrences within the 10-

Common Name	Species Name	Status		General Habitat Description	Habitat Present	Potential for Occurrence and Rationale
						mile buffer. Due to a lack of suitable habitat and occurrences, this species is presumed absent.
Saline clover	*Trifolium hydrophilum*	Fed: State: CDFW:	-- -- 1B.2	An annual herb inhabiting mesic, alkaline soils of salt marsh, marshes and swamps, vernal pools, and valley and foothill grasslands. Flowers April-June (0 - 1,000 feet).	A	**Presumed Absent:** The Project area contains disturbed grassland habitat and does not contain salt marsh, swamp, or vernal pool habitat for this species. There are no CNDDB occurrences within the 10-mile buffer. Due to a lack of suitable habitat and occurrences, this species is presumed absent.
Sanford's arrowhead	*Sagittaria sanfordii*	Fed: State: CDFW:	-- -- 1B.2	A perennial rhizomatous herb inhabiting freshwater marshes, swamps, ponds, and ditches. Flowers May-October (0-2,130 feet).	A	**Presumed Absent:** The Project area does not contain the essential marsh, swamp, vernal pool, pond, or ditch habitat for this species. The nearest CNDDB occurrence is approximately 0.46 miles north of the Project area (1993) across the American River in a flooded ditch. Due to a lack of suitable habitat, this species is presumed absent.
Suisun marsh aster	*Symphyotrichum lentum*	Fed: State: CDFW:	-- -- 1B.2	A perennial rhizomatous herb inhabiting wetlands, freshwater marsh, and brackish-marsh communities. Flowers May-November (0-10 feet).	A	**Presumed Absent:** The Project area does not contain the essential wetland or marsh habitat for this species. There is only one CNDDB occurrence within the 10-mile buffer, located approximately 7.06 miles southwest of the Project area. Due to a lack of suitable habitat and nearby occurrences, this species is presumed absent.
Woolly rose-mallow	*Hibiscus lasiocarpos var. occidentalis*	Fed: State: CDFW:	-- -- 1B.2	A perennial rhizomatous herb inhabiting freshwater wetlands, wet banks, and marsh communities. Often found in-between riprap on levees. Flowers June-September (0-400 feet).	A	**Presumed Absent:** The Project area lacks suitable wetland habitat for this species. Although the American River has significant banks within the Project area, these banks are not always saturated. The nearest CNDDB occurrence is historic and approximately 3.21 miles northwest of the Project area

Common Name	Species Name	Status		General Habitat Description	Habitat Present	Potential for Occurrence and Rationale
						(1988). Due to lack of suitable habitat and nearby occurrences, this species is presumed absent.

4. Results: Biological Resources, Discussion of Impacts, and Mitigation

4.1 Habitats and Natural Communities of Special Concern

Habitats are considered to be of special concern based on federal, state, or local laws regulating their development; limited distributions; and/or the habitat requirements of special-status plants or animals occurring on site. Wetlands and WoUS are also considered sensitive by both federal and state agencies. Within the Project area, the American River has been identified as a natural community of special concern and is discussed in this section. Approximately 0.41 acres of temporary impacts are anticipated to the American River due to a 15-foot buffer for access for the construction of the trail, including temporary fill, and retaining wall under SR 160 are anticipated during Phase IV of the Project. Additionally, approximately 0.005 acres of permanent fill, including rock slope protection and pile supports, will be placed within the American River. Construction of the trail under SR 160 will require both temporary and permanent fill within the American River. Avoidance and minimization measures have been proposed to reduce potential direct and indirect impacts.

4.1.1 Discussion of American River

The American River originates in eastern Placer County in the Tahoe National Forest. It flows initially to the west and then southwest, passing through Folsom Lake and into the City of Sacramento. The Project area is just upstream of the American River's confluence with the Sacramento River. Flows within this portion of the American River are influenced by water releases generated by the Nimbus Dam regulated by USACE. The American River supports a diverse range of wildlife and serves as a popular destination for recreational activities.

Project Impacts to the American River

As a part of Phase IV of the Project, construction of the SR 160 bridge undercrossing will require temporary and permanent fill within the ordinary high-water mark of the American River. The undercrossing will include a wall built into the soil under the existing RSP on the north edge of the trail to help support the undercrossing and provide safety to trail users.

Construction of the Class I path beneath Highway 160 (at the 12th and 16th Street bridges), including the ramped approaches to the undercrossing, will require temporary shoring to facilitate excavation for the retaining wall footings and to protect the work area from river flows by enabling dewatering. To achieve dewatering for construction of the retaining walls at the undercrossing and the placement of rock slope protection (RSP) along the approaches, temporary shoring or cofferdams—anticipated to consist of steel sheet piling installed roughly parallel to the project alignment and approximately 30 feet beyond the river side of the RSP excavation—will be used. This sheet piling will isolate the construction site from the river and allow for safe excavation and foundation work. The additional 30-foot setback provides sufficient space for grading, installation of the sheet piling, placement of driven or drilled piles for the retaining wall foundations, and maneuvering of equipment needed to install the RSP along the retaining walls and approach ramps.

As a result of these processes, approximately 0.41 acres of temporary impacts to the American River are anticipated to account for construction access, which includes temporary fill for an access path (Figure 8. Project Impacts). Additionally, approximately 0.005 acres of permanent fill within the American River will be required for the trail, including RSP, pile supports and a wall. Upon Project completion, all temporary materials, supports and/or construction equipment will be removed.

4.1.2 Discussion of Valley Oak Riparian Woodland

The Project area includes a riparian habitat that encompasses the south bank of the American River. This community is dominated by valley oak, Fremont cottonwood (*Populus fremontii*), northern California black walnut (*Juglans hindsii*), California sycamore (*Plantanus racemosa*), willow (*Salix spp.*), dallisgrass, ripgut brome, and common vetch. Elderberry shrub patches are common throughout the community. This area occasionally supports an unhoused community and is disturbed by regular foot traffic in some areas.

Figure 8. Project Impacts

Project Impacts to the Valley Oak Riparian Woodland

During Phase IV of the Project, the proposed trail will be constructed partially within Valley Oak Riparian Woodland. Approximately 0.66 acres of Valley Oak Riparian Woodland will be permanently impacted by construction of the trail and associated cut and fill. Approximately 0.75 acres of Valley Oak Riparian Woodland will be temporarily impacted due to construction access.

Avoidance and Minimization Efforts for American River and Valley Oak Riparian Woodland

The following avoidance and minimization measures will be incorporated into the Project to reduce potential impacts to natural communities of special concern:

BIO-1: Every individual working on the Project must attend a biological awareness training session delivered by a biologist. This training program will include information regarding the sensitive habitats and an overview of special-status wildlife species that may be encountered within the work area.

BIO-2: Prior to the start of construction activities, the Project limits adjacent to the American River and riparian corridor will be marked with flagging, staking, or high visibility fencing to ensure construction will not further encroach into adjacent sensitive resources.

BIO-3: Best Management Practices will be incorporated into Project design and Project management to minimize impacts on the environment including erosion and the release of pollutants (e.g., oils, fuels):

- Equipment used in and around jurisdictional waters must be in good working order and free of dripping or leaking contaminants;
- All erosion control measures, and storm water control measures will be properly incorporated and maintained;
- All construction materials will be hauled off-site after completion of construction.
- A chemical spill kit must be kept onsite and available for use in the event of a spill.

BIO-4: Secondary containment consisting of plastic sheeting or other impermeable material will be used during refueling to prevent petroleum products or other potentially harmful chemicals from contaminating the soil or directly or indirectly entering the American River and associated riparian corridor. Secondary containment must have a raised edge (e.g. sheeting wrapped around wattles).

4.2 Special-Status Plant Species

Plants are considered to be of special concern based on (1) federal, state, or local laws regulating their development; (2) limited distributions; and/or (3) the presence of habitat required by the special-status plants occurring on site. In addition to field surveys, a list of regional special status plant species with potential to occur within the Project vicinity was compiled from database searches. The potential for each species to occur within the Project area was determined by analyzing the habitat requirements of each species and comparing the habitat requirements to available habitat within the Project area. After a careful comparison between habitat requirements and the habitat available within the Project area, no special status plant species have potential to occur within the Project area.

4.3 Special-Status Wildlife Species

Animals are considered to be of special concern based on (1) federal, state, or local laws regulating their development; (2) limited distributions; and/or (3) the habitat requirements of special-status animals occurring on site. In addition to field surveys, a list of regional special-status wildlife species with potential to occur within the Project vicinity was compiled from database searches. The potential for each species to occur within the Project area was determined by analyzing the habitat requirements of each species and comparing the habitat requirements to available habitat within the Project area. After a careful comparison between habitat requirements and the habitat available within the Project area, ten special status wildlife species have potential to occur within the Project area.

The Project area also contains >150 elderberry shrubs. This is the host plant for the Valley Elderberry Longhorn Beetle (VELB). Exit holes, indicating the presence of VELB were observed on elderberry shrubs during biological surveys.

4.3.1 Discussion of Burrowing Owl

The burrowing owl (*Athene cunicularia*) is not Federally listed species but is a CDFW Species of Special Concern (SSC) and is currently a candidate species for listing under CESA, as well as a USFWS Migratory Nongame Bird of Management Concern. Burrowing owls were historically common throughout much of California; however, due to habitat degradation and urbanization, populations have been drastically reduced. The owl is a migrant or yearlong resident occupying disturbed open, arid habitats, particularly grasslands, deserts, and abandoned agricultural areas. The species requires friable soils for burrow construction and an adequate prey base (Zeiner et al. 1988-1990). Burrowing owls rely on California ground squirrels and other fossorial mammals for burrow construction. Although active throughout the day, burrowing owls mainly forage nocturnally for small vertebrate and invertebrate prey including mammals, lizards, birds, and beetles (Shuford 2008). Burrowing owl nests can be identified by the presence of owl excrement, pellets, debris, grass, and feathers in the vicinity of a burrow. Human development threatens burrowing owl populations by reducing available nesting habitat and decreasing rodent populations, which serve as the owl's main food source.

Potential for Occurrence

Although the burrowing owl was not observed during biological surveys, it does have a moderate potential to occur within the Project area. The Project area contains disturbed, open habitat just west of Sutter's Landing Corporation Yard/Bell Marine Industrial Aggregate and Concrete Recycling and north of the SMUD substation. However, these areas are clay capped landfills which are designed to be impenetrable by water, plants and animal burrows. However a few burrows were observed on the western portion of the Project area. None of the burrows exhibited signs of burrowing owls. The nearest CNDDB occurrence was approximately 1.49 miles east of the Project area (1974). The most recent recorded occurrence from CNDDB is approximately 8.84 miles southeast of the Project area (2016). Due to the presence of potentially suitable habitat and recorded CNDDB occurrences within 10 miles of the Project area, this species has a moderate potential to occur within the Project area.

Potential Impacts to Burrowing Owl

The Project has the potential to temporarily impact habitat suitable for burrowing owl. Construction activities such as grading, staging, and equipment operation may disturb open areas or levee slopes that support ground squirrel burrows, which are often used by burrowing owls for nesting and shelter. If present during the breeding season (February 1 to August 31), owls could be subject to nest abandonment or displacement due to increased noise, vibration, and human

activity. Although no permanent habitat loss is anticipated, temporary disturbance could affect both nesting and foraging behavior in the immediate vicinity of the trail alignment if burrowing owl are present.

Avoidance and Minimization Measures for Burrowing Owl

To avoid direct and indirect effects of the Project on the burrowing owl, the following measures will be implemented.

BIO-5: Prior to construction, during the breeding season or non-breeding season, surveys for burrowing owl must be conducted by a biologist in accordance with the 2012 CDFW Staff Report on Burrowing Owl Mitigation (or more recent guidance). Surveys must follow CDFW guidance based on timing of survey efforts (breeding season vs. non-breeding season). If burrowing owl is not detected, no further measures will be required.

BIO-6: If burrowing owls are detected within 500 feet of the Project area, a 250-foot construction buffer zone will be established and maintained around any occupied burrowing owl burrow. A biologist will monitor the site periodically to ensure that buffers are enforced, and owls are not disturbed. The Project biologist will also train/inform construction personnel on avoidance procedures, buffer zones, and protocols in the event that a burrowing owl flies into an active construction zone. Occupied burrows must not be disturbed until a Project biologist verifies through non-invasive means that either: 1) the birds have not begun egg laying, or 2) juveniles from the occupied burrows are foraging independently and are capable of independent survival. The Project biologist and City will coordinate with CDFW regarding the potential need for burrowing owl mitigation prior to the collapse of presumed unoccupied burrows.

4.3.2 Discussion of Chinook Salmon Central Valley Spring-Run ESU

Central Valley Spring Run (CVSR) Chinook salmon is listed as threatened under the FESA (70 FR 37160, June 28, 2005) and is under the jurisdiction of NMFS. CVSR Chinook salmon are anadromous fish that spend part of their life cycle in freshwater and part in salt water. Adults typically leave the ocean between January and May, entering freshwater from March to July. After migrating up rivers, they hold in deep pools with cool, well-oxygenated water during the summer months before spawning in the fall, usually between September and October. Eggs hatch in late fall or early winter, and the fry emerge from the gravel nests (redds) about 4 to 6 weeks later. Juvenile salmon typically spend 3 to 12 months in freshwater before migrating downstream through the Sacramento River system and into the Delta, eventually reaching the ocean. Once in the ocean, they mature over a period of 2 to 4 years before returning to their natal streams to spawn and complete their life cycle (NOAA 2025).

Historically, CVSR Chinook salmon were abundant in the rivers and tributaries of the Sacramento and San Joaquin River systems. Population numbers have drastically declined due to habitat loss, water diversions, and barriers such as dams. In particular, many populations were thought to be extirpated from the San Joaquin River, but restoration efforts have led to the reintroduction of small populations in some tributaries. Upon entering freshwater, the salmon hold in deep pools until flows increase enough to access upstream spawning areas.

Unlike CCV steelhead, CVSR Chinook salmon are semelparous, meaning they die after spawning once. The species can tolerate a range of water temperatures, but optimal holding temperatures range between 52°F to 60°F, while ideal temperatures for egg incubation and juvenile rearing range from 50°F to 55°F (NOAA 2025).

Potential for Occurrence

The lower American River is known to support this species, and is designated as Critical Habitat for the species. The Nimbus Fish Hatchery, located in Folsom, California, also raises Chinook Salmon for release into the American River. The only CNDDB occurrence in the 10-mile buffer is located approximately 3.33 miles southwest within the Sacramento River Deep Water Ship Channel, however there are other records from CDFW of this species within the American River. This species is presumed present within the American River.

Potential Impacts to Chinook Slamon Central Valley Spring-Run ESU

As part of Phase IV of the Project, construction of the SR 160 bridge undercrossing will require both temporary and permanent fill within the ordinary high-water mark of the American River. The undercrossing will include a retaining wall constructed into the soil beneath the existing rock slope protection (RSP) along the north edge of the trail to provide structural support and enhance safety for trail users.

Construction of the Class I path beneath Highway 160 (at the 12th and 16th Street bridges), including the ramped approaches, will require temporary shoring to support excavation for the retaining wall footings and to isolate the construction area from river flows through dewatering. To enable this, temporary shoring or cofferdams—anticipated to consist of steel sheet piling installed roughly parallel to the trail alignment and located approximately 30 feet beyond the riverward edge of the RSP excavation—will be installed. This sheet piling will create a dry work area for safe excavation and foundation construction. The additional 30-foot buffer will allow for necessary grading, pile installation for the retaining wall foundation, and equipment access to place the RSP along the retaining walls and approaches.

As a result of these activities, approximately 0.089 acre of temporary impact within the American River is anticipated to accommodate construction access, including temporary fill for an access path (Figure 8. Project Impacts). In addition, approximately **0.005** acres of permanent fill within the American River will be required for the trail, including the RSP, pile supports, and retaining wall. Upon completion of construction, all temporary shoring, cofferdams, supports, and construction equipment will be removed from the river channel.

Moreover, the adjacent valley oak riparian woodland is considered essential fish habitat (EFH) for Chinook salmon. Construction will result in approximately 0.502 acre of permanent impacts and approximately 0.361 acre of temporary impacts to the riparian corridor, including the removal of mature trees that provide bank stability and shading for instream habitat.

Construction activities associated with the SR 160 bridge undercrossing have the potential to result in both direct and indirect impacts to Chinook salmon. Direct impacts may include physical injury or mortality from in-water activities such as pile driving, wall installation, and placement of fill material, with an increased risk of “take” of individuals protected under the Federal Endangered Species Act (FESA), especially during sensitive life stages such as migration or spawning.

Work within the ordinary high-water mark may increase sedimentation and turbidity, which can impair gill function and reduce feeding efficiency by diminishing aquatic invertebrate prey. Construction noise and vibration, particularly from pile driving and heavy equipment operation, may disrupt migration corridors or spawning behavior, potentially causing delayed migration,

habitat abandonment, or unsuccessful reproduction. Accidental fuel or contaminant spills could degrade water quality, and temporary removal of riparian vegetation could decrease shading, raise water temperatures, and destabilize the riverbank, collectively reducing habitat quality for Chinook salmon.

A Section 7 consultation under the FESA will be required for this species. Implementation of species-specific avoidance and minimization measures, as well as compliance with all measures prescribed by the National Marine Fisheries Service (NMFS) in the final Biological Opinion, will reduce potential impacts to Chinook salmon and their habitat to the extent feasible.

Avoidance and Minimization Measures for Chinook Salmon Central Valley Spring-Run ESU
To avoid direct and indirect effects of the Project on Chinook Salmon Central Valley Spring-Run ESU, the following measure will be implemented.

BIO-7: Work within or near the American River will be scheduled during periods of low water levels or within designated in-water work windows as determined through consultation with the National Marine Fisheries Service. Alternatively, if water is present within the work area, a dewatering system, or containment system will be implemented prior to commencing work to prevent silt, dust, equipment and other deleterious materials from entering the water.

4.3.3 Discussion of Chinook Salmon Sacramento River Winter-Run ESU

The Sacramento River Winter-Run (SRWR) Chinook salmon is listed as endangered under the Federal Endangered Species Act (59 FR 440, June 28, 1994) and is under the jurisdiction of the NMFS. SRWR Chinook salmon are anadromous fish, meaning they migrate between freshwater and saltwater during their life cycle. Adults typically leave the ocean between November and May, entering freshwater from December through early July. After migrating upriver, they hold in deep, cold-water pools with high oxygen levels during the summer months before spawning in the late summer, usually between May and August. Their eggs incubate in the gravel beds and hatch in late summer or early fall, with fry emerging from the redds about 4 to 6 weeks later. Juvenile salmon typically spend 5 to 10 months in freshwater before migrating downstream through the Sacramento River system and into the Delta, eventually reaching the ocean. Once in the ocean, they mature over a period of 2 to 4 years before returning to their natal streams to spawn and complete their life cycle (NOAA 2014).

Historically, SRWR Chinook salmon were abundant in the upper Sacramento River and its cold-water tributaries, particularly areas that are now blocked by Shasta and Keswick Dams. Their populations have drastically declined due to habitat loss, water diversions, and migration barriers. Unlike other Chinook salmon runs, SRWR Chinook rely on the cold-water releases from Shasta Reservoir to sustain their summer holding and spawning periods, as they require cooler water temperatures for successful reproduction. Restoration efforts, such as the use of the Livingston Stone National Fish Hatchery and habitat enhancement projects, have aimed to stabilize and support the remaining populations. Upon entering freshwater, SRWR Chinook salmon hold in deep pools until suitable spawning conditions become available in the upper Sacramento River.

Unlike Central Valley steelhead, SRWR Chinook salmon are semelparous, meaning they die after spawning once. The species can tolerate a range of water temperatures, but optimal holding temperatures range between 50°F to 58°F, while ideal temperatures for egg incubation and juvenile rearing range from 50°F to 55°F (NOAA 2014).

Potential for Occurrence

The lower American River is known to support this species. The Nimbus Fish Hatchery, located in Folsom, California, also raises Chinook Salmon for release into the American River. The only CNDDB occurrence in the 10-mile buffer is located approximately 3.33 miles southwest within the Sacramento River Deep Water Ship Channel, however there are other records from CDFW of this species within the American River. This species is presumed present within the American River.

Potential Impacts to Chinook Salmon SRWR ESU

As part of Phase IV of the Project, construction of the SR 160 bridge undercrossing will require both temporary and permanent fill within the ordinary high-water mark of the American River. The undercrossing will include a retaining wall constructed into the soil beneath the existing rock slope protection (RSP) on the north edge of the trail to help support the undercrossing structure and provide safety for trail users.

Construction of the Class I path beneath SR 160 (at the 12th and 16th Street bridges), including the ramped approaches to the undercrossing, will require temporary shoring to facilitate excavation for retaining wall footings and to protect the construction area from river flows through dewatering. To accomplish this, temporary shoring or cofferdams—anticipated to consist of steel sheet piling installed roughly parallel to the alignment and located approximately 30 feet beyond the riverward limit of the RSP excavation—will be used. The sheet piling will allow for dewatering and create a stable work zone for safe excavation and foundation installation. The 30-foot setback will provide adequate space for grading, installation of the sheet piling, construction of driven or drilled piles for the retaining wall foundation, and access for an excavator to place RSP along the retaining walls and approaches.

As a result of these activities, approximately 0.089 acre of temporary impacts to the American River are anticipated to accommodate construction access, including temporary fill for an access path (see Figure 8, Project Impacts). Additionally, approximately 0.005 acres of permanent fill within the American River will be required for the completed trail infrastructure, including the RSP, pile supports, and retaining wall. Upon Project completion, all temporary materials, shoring, cofferdams, and construction equipment will be fully removed from the river channel.

The adjacent valley oak riparian woodland is considered essential fish habitat (EFH) for the Sacramento River winter-run Chinook salmon ESU. Construction of the undercrossing will result in approximately 0.502 acre of permanent impacts and approximately 0.361 acre of temporary impacts to the riparian corridor, including removal of large mature trees that provide shading, bank stability, and habitat complexity beneficial to salmonids.

Construction activities within and adjacent to the American River have the potential to result in both direct and indirect impacts to winter-run Chinook salmon. Direct impacts may include physical injury or mortality due to in-water activities such as pile driving, retaining wall installation, and placement of fill material. These actions could result in the “take” of individuals protected under the Federal Endangered Species Act (FESA), especially during sensitive life stages such as upstream migration, spawning, or rearing.

Construction activities at and within the ordinary high-water mark may increase sedimentation and turbidity, which can impair gill function in fish and reduce feeding efficiency by diminishing aquatic invertebrate prey availability for juvenile salmon. Construction-related noise and vibration,

particularly from pile driving and heavy equipment operation, could disturb migratory pathways or spawning behavior, potentially causing delayed migration, avoidance of the area, or unsuccessful reproduction. Accidental spills of fuel, lubricants, or other hazardous materials also pose a risk to water quality, while temporary removal of riparian vegetation could reduce stream shading, increase water temperatures, and destabilize the riverbank, further degrading suitable habitat for this ESU.

A Section 7 consultation under the FESA will be required for the Sacramento River winter-run Chinook salmon ESU. Implementation of species-specific avoidance and minimization measures, in compliance with all requirements identified in the final Biological Opinion issued by the National Marine Fisheries Service (NMFS), will be necessary to avoid or reduce potential impacts to the species and its critical habitat to the maximum extent practicable.

Avoidance and Minimization Measures for Chinook Salmon SRWR

Avoidance and minimization measures **BIO-7** will serve to protect water quality and reduce potential impacts to the Chinook Salmon SRWR.

4.3.4 Discussion of Northwestern Pond Turtle

Northwestern pond turtle (*Actinemys marmorata*) is a federally proposed threatened species. The species is fully aquatic, inhabiting ponds, lakes, rivers, streams, creeks, marshes, and irrigation ditches with aquatic vegetation. Suitable habitat includes woodland, forests, and grasslands. The species requires logs, rocks, cattail mats, and exposed banks for basking. Suitable upland habitat (sandy banks or grassy open field) is required for reproduction, which begins in April and ends with egg laying as late as August.

Potential for Occurrence

Although the northwestern pond turtle was not observed during surveys, it does have a moderate potential to occur within the Project area. The northwestern pond turtle is known to occur in the American River, however the portion of the American River near the Project area is fast moving, has steep banks with RSP, and lacks basking areas. The nearest documented CNDDB occurrence of the species is approximately 5.52 miles northeast of the Project area, recorded in 1995. There are also recent iNaturalist occurrences of the species nearby. However, habitat along the American River, upstream of the Project area, is different than habitat available within the Project area, with sloped banks that aren't too steep, and logs/emergent vegetation available for basking. Due to the nearby presence of suitable habitat, this species has a moderate potential to occur.

Potential Impacts to Northwestern Pond Turtle

Construction activities associated with the Project, particularly near the SR-160 undercrossing and within the riparian corridor, such as grading, vegetation clearing, equipment staging, and temporary access could disturb or degrade potential nesting sites, or temporarily disturb areas used by turtles for movement or foraging. While the immediate Project area is not ideal turtle habitat due to steep, riprap-lined banks and lack of basking features, individuals could still pass through from higher-quality habitat upstream. With proper avoidance measures such as pre-construction clearance surveys and biological monitoring these potential impacts can be effectively minimized. Construction activities may temporarily impact potentially suitable upland habitat for the northwestern pond turtle.

Avoidance and Minimization Measures for Northwestern Pond Turtle

To avoid direct and indirect effects of the Project on the northwestern pond turtle, the following measure will be implemented.

BIO-8: The Project biologist will complete a clearance survey for northwestern pond turtle immediately prior to initiating work near the American River for the SR-160 undercrossing, as well as initiating clearing/grubbing in the riparian corridor.

If a northwestern pond turtle is encountered during construction activities, construction activities will be suspended in a 100-foot radius of the animal until the animal leaves the Project site on its own volition. If necessary, the Project biologist will notify the Wildlife Agencies to determine the appropriate procedures related to relocation. Any worker who inadvertently injures or kills a northwestern pond turtle or who finds one dead, injured, or entrapped must immediately report the incident to the Project biologist.

4.3.5 Discussion of Purple Martin

The purple martin (*Progne subis*) is not a State or Federally listed species but is a CDFW SSC. Purple martin migrates and is present in California during the summer. This species can inhabit valley foothills and montane hardwood/hardwood-conifer, coniferous, or riparian habitats. Purple martin prefers nesting in tall, old, isolated tress or snags, or former woodpecker cavities in open forest or woodland in proximity to a body of water and is associated with closed-cone pine - cypress, ponderosa pine, Douglas-fir, and redwood.

Potential for Occurrence

Although the purple martin was not observed during biological surveys, it does have a moderate potential to occur within the Project area. This is due to the presence of snags and structures as well as valley oak woodland and riparian communities that may provide potentially suitable nesting habitat near the American River. The nearest CNDDB occurrence is approximately 1.23 miles west of the Project area (2003). There are more recent iNaturalist occurrences in Sutter's Landing Regional Park, directly adjacent to the Project area (2015 and 2017). Due to the presence of suitable habitat and local occurrences, this species has a moderate potential for occurrence within the Project area.

Potential Impacts to Purple Martin

The purple martin has the potential to occur within bridges, snags, or mature trees within the Project area. In Sacramento, purple martins often nest in crevices under elevated freeway structures or in large cavities in standing trees. Vegetation removal required for trail construction includes trimming or removal of 20+ trees within Disturbed Valley Oak Woodland and Valley Oak Riparian Woodland, which could result in the loss of potential nesting or roosting sites, as well as reduce foraging habitat by altering insect-rich open space adjacent to the river. To minimize potential impacts**,** pre-construction nesting bird surveys should be performed to identify and protect any active nests in compliance with the MBTA.

Avoidance and Minimization Measures to Purple Martin

To avoid direct and indirect effects of the Project on the purple martin, the following measure will be implemented.

BIO-9: If vegetation removal or ground disturbance is planned to occur during the nesting season (February 1st – August 31st), the Project biologist will conduct a pre-construction nesting bird survey within 5 days prior to vegetation removal or ground disturbance. Within 2 weeks of the nesting bird survey, all vegetation cleared by the Project biologist will be removed from the Project site.

If an active nest is discovered, the Project biologist will determine the appropriate no-work buffer. The buffer will remain in place until after the young have fledge, as determined by the Project biologist. Alternatively, the buffer may be removed if the Project biologist determines the nest is no longer active (e.g., predated, failed, abandon, etc.).

4.3.6 Discussion of Song Sparrow ("Modesto" Population)

The song sparrow ("Modesto" population) (*Melospiza melodia pop. 1*) is not a State or Federally listed species but is a CDFW SSC. The song sparrow ("Modesto" population) is endemic to the north-central portion of the Central Valley of California and its highest densities are within the Butte Sink and Sacramento-San Joaquin River Delta. This species prefers open and brushy habitats along ponds or steams, abandoned pastures, thickets, and woodland edges. This species is strongly associated with emergent freshwater marshes dominated by tules and cattails, riparian willow thickets, and valley oak forests with blackberry-dominated understory. The song sparrow ("Modesto" population) nests un the base of shrubs or clumps of grasses near water.

Potential for Occurrence

Although the song sparrow ("Modesto" population) was not observed during biological surveys, it does have a moderate potential to occur within the Project area. This is due to potentially suitable riparian willow and valley oak habitat as well as some areas with prominent blackberry understories or larger clumps of grass. A CNDDB historic occurrence is present within the Project area (1900). The nearest, most recent CNDDB occurrence is located approximately 8.92 miles southwest of the Project area (2011). iNaturalist also features more recent occurrences within the 10-mile buffer, though none are present within or directly adjacent to the Project area with the most presence in the Yolo Bypass area. Due to the presence of habitat and local occurrences, this species has a moderate potential to occur.

Potential Impacts to the Song Sparrow ("Modesto" Population)

The song sparrow ("Modesto" Population) has the potential to occur within trees, shrubs and willow thickets within the Project area. Vegetation removal required for trail construction, including trimming or removal of 20+ trees within Disturbed Valley Oak Woodland and Valley Oak Riparian Woodland, could result in the loss of potential nesting sites, as well as reduce foraging habitat by altering insect-rich open space adjacent to the river. To minimize potential impacts**,** pre-construction nesting bird surveys should be performed to identify and protect any active nests in compliance with the MBTA.

Avoidance and Minimization Measures to the Song Sparrow ("Modesto" Population)

To avoid direct and indirect effects of the Project on the song sparrow ("Modesto" population), measure **BIO-9** will be implemented.

4.3.7 Discussion of Steelhead – Central Valley DPS

California Central Valley steelhead is listed as threatened under FESA (63 FR 13347, March 19, 1998) and is under the jurisdiction of NOAA Fisheries. This distinct population segment consists of steelhead in the Sacramento and San Joaquin River basins in the Central Valley. Steelhead are anadromous fish that spend part of their life cycle in freshwater and part in salt water. The species was once abundant in California coastal and Central Valley drainages. Population numbers have declined significantly, especially in the tributaries of the Sacramento River (NOAA Fisheries 2014). The species spawns in small, freshwater streams where the young remain from one to several years before migrating to the ocean to feed and grow. Adults return to their natal streams to spawn and complete their life cycle. Juvenile steelhead typically migrate to marine waters after spending two years in cool, clear, fast-flowing permanent streams and rivers where

they reside for two or three years prior to returning to their natal stream to spawn at four- or five-years old (Williams 2006). All California Central Valley steelhead today are winter-run fish, beginning their upstream migrations to freshwater during peak flows between December and February. Upon entering freshwater, they remain until flows are high enough in tributaries to enter for spawning. Spawning typically occurs from February to April (California Trout 2022). Steelhead may survive a wide temperature gradient, but optimal immigration and holding temperatures are 46°F to 52°F and optimal growing temperatures for juveniles are 59°F to 64.4°F (NOAA Fisheries 2014).

Potential for Occurrence

The lower American River is known to support this species, and is designated as Critical Habitat for the species. The Nimbus Fish Hatchery, located in Folsom, CA, also raises Steelhead for release into the American River. Due to the presence of habitat and known occurrence, this species is presumed present.

Project Impacts to Steelhead – Central Valley DPS

As part of Phase IV of the Project, construction of the SR 160 bridge undercrossing will require both temporary and permanent fill within the ordinary high-water mark of the American River. The undercrossing will include a retaining wall constructed into the soil beneath the existing rock slope protection (RSP) on the north edge of the trail to help support the undercrossing structure and ensure trail user safety.

Construction of the Class I path beneath SR 160 (at the 12th and 16th Street bridges), including the ramped approaches to the undercrossing, will require temporary shoring to facilitate excavation for retaining wall footings and to protect the work area from river flows through dewatering. To enable this, temporary shoring or cofferdams—anticipated to consist of steel sheet piling installed roughly parallel to the alignment and positioned approximately 30 feet beyond the riverward limit of the RSP excavation—will be installed. This sheet piling will create a stable, dry construction zone for safe excavation and installation of the wall foundation. The additional 30-foot setback will provide adequate space for grading, installation of the sheet piling, pile installation for the retaining wall foundations, and access for heavy equipment to place the RSP along the retaining walls and approaches.

As a result of these activities, approximately 0.089 acre of temporary impacts to the American River are anticipated to accommodate construction access, including temporary fill for an access path (see Figure 8, Project Impacts). Additionally, approximately 0.005 acres of permanent fill within the American River will be required for the completed trail improvements, including the RSP, pile supports, and retaining wall. Upon completion of construction, all temporary shoring, cofferdams, supports, and construction equipment will be removed from the river channel.

Construction activities associated with the SR 160 bridge undercrossing have the potential to result in both direct and indirect impacts to Central Valley steelhead. Direct impacts may include physical injury or mortality due to in-water activities such as pile driving, wall installation, and placement of fill material. These actions have the potential to result in the “take” of individuals protected under the Federal Endangered Species Act (FESA), particularly during sensitive life stages such as upstream migration or spawning.

Work at and within the ordinary high-water mark may increase sedimentation and turbidity, which can impair gill function and reduce feeding efficiency by decreasing the availability of aquatic invertebrates on which juvenile steelhead depend. Construction noise and vibration, especially from pile driving and heavy equipment operation, may disturb migratory pathways or spawning behavior, potentially causing delayed migration, habitat avoidance, or unsuccessful reproduction. Accidental spills of fuel or other contaminants pose a risk to water quality, while temporary disturbance to riparian vegetation could reduce shading, increase water temperatures, and destabilize the riverbank, cumulatively degrading steelhead habitat.

A Section 7 consultation under the FESA will be required for this species. Implementation of species-specific avoidance and minimization measures, and adherence to all conditions specified by the National Marine Fisheries Service (NMFS) in the final Biological Opinion, will be necessary to avoid or minimize potential impacts to steelhead and their habitat to the extent feasible.

Avoidance and Minimization Measures for Steelhead – Central Valley DPS

Avoidance and minimization measures **BIO-7** will serve to protect water quality and reduce potential impacts to the Steelhead – Central Valley DPS.

4.3.8 Discussion of Swainson's Hawk

Swainson's hawk (*Buteo swainsoni*) is a raptor species listed as threatened under CESA. This species migrates annually from wintering areas in South America to breeding locations in northwestern Canada, the western U.S., and Mexico. In California, Swainson's hawk nest throughout the Sacramento and San Joaquin Valley in large trees in riparian habitats and in isolated trees in or adjacent to agricultural fields. The breeding season extends from late March through late August, with peak activity from late May through July (England et al. 1997). Swainson's hawks forage in large, open agricultural habitats, including alfalfa and hay fields. The breeding population in California has declined by an estimated 91% since 1900; this decline is attributed to the loss of riparian nesting habitats and the conversion of native grassland and woodland habitats to agriculture and urban development (CDFG 1994).

Potential for Occurrence

Although the Swainson's hawk was not observed during biological surveys, it has a high potential to occur within the Project area. This is due to the presence of disturbed, open grasslands with adjacent or sparser/scattered mature riparian/oak woodland trees providing potentially suitable nesting and foraging habitats. The nearest, most recent CNDDB occurrence is approximately 0.35 miles south of the Project area (2017) and there are multiple recent iNaturalist occurrences within Sutter's Landing Regional Park. Due to the presence of habitat and recent occurrences, this species has a high potential to occur.

Potential Impacts to Swainson's Hawk

Vegetation removal required for trail construction includes trimming or removal of 20+ trees within Disturbed Valley Oak Woodland and Valley Oak Riparian Woodland, which could result in the loss of potential nesting sites for the species. In addition, if Swainson's hawk are nesting near the Project area, this may result in temporary increase in noise, vibration and human presence, including construction equipment. To minimize potential impacts and avoid take of the species**,** pre-construction protocol level Swainson's hawk surveys will be performed to identify and protect any active nests.

Avoidance and Minimization Measures for Swainson's Hawk

To avoid direct and indirect effects of the Project on the Swainson's hawk, the following measures will be implemented.

BIO-10: During the spring/summer season prior to construction the Project biologist must conduct Swainson's hawk protocol level surveys within the Project area plus a ½ mile buffer in accordance with CDFW's guide for Swainson's Hawk Technical Advisory Committee. Pre-construction surveys will determine if active nests are present within the Project area or within 0.25 mile of Project activities. If an active nest is discovered within the survey area the Project biologist will determine the appropriate avoidance strategies (e.g., monitoring, no-work buffers, work windows, temporary sound/noise barriers, etc.) to avoid take of the nest and will coordinate with CDFW as needed.

4.3.9 Discussion of Valley Elderberry Longhorn Beetle

The valley elderberry longhorn beetle (*Desmocerus californicus dimorphus*) or VELB has been federally listed as threatened since 1980. Elderberry shrubs, which grow in riparian areas and foothill woodlands in California's Central Valley, are VELB's obligate host plant which they depend on for survival and reproduction. The beetle goes through four life stages: egg, larvae, pupa, and adult. Females lay their eggs on the bark of the elderberry shrub and the larvae hatch and burrow into the stems. Larvae are active within the stems year-round and take one to two years to emerge as adults. The adults are active from March to June. The beetle feeds exclusively on the elderberry shrub throughout all stages of its life (USFWS 2017). VELB's usage of elderberry shrubs can be detected by the presence of exit holes created by the beetle's larval stage in the stem of the shrubs. The VELB is threatened by habitat loss of California's Central Valley riparian areas mainly due to agriculture and urban development.

Potential for Occurrence and Survey Results

In accordance with the *Framework for Assessing Impacts to the Valley Elderberry Longhorn Beetle* (USFWS 2017), the valley oak woodland habitat inland and on the banks of the American River within the Project area provides suitable habitat for VELB. During the biological survey >150 elderberry shrubs were identified within the Project area (Figure 9. VELB Impacts). Exit holes were observed in most shrubs, indicating the current or historic presence of VELB. Due to the presence of suitable habitat and observance of exit holes, this species is presumed to be present within the Project area.

Potential Impacts to Valley Elderberry Longhorn Beetle

The Project will result in direct impacts to elderberry shrubs including removal of five shrubs and two elderberry clusters of <1-inch diameter as a result of the proposed path and associated cut and fill. The Project will have indirect impacts on 60 elderberry shrubs in non-riparian areas due to the shrubs being located within 165 feet of Project activities. These indirect impacts may include increased dust, vibration, soil compaction, accidental encroachment from equipment, and root zone disturbance. Furthermore, construction noise and increased human presence may alter microhabitat conditions near these shrubs, potentially affecting the beetle's lifecycle or dispersal. Section 7 consultation under the FESA will be required for this species.

Table 3. Impacts to VELB Habitat

Impact Type	Habitat Type	No. of Shrubs	Mitigation Ratio
Direct	Riparian	2	3:1
Direct	Non-Riparian	3	2:1

Impact Type	Habitat Type	No. of Shrubs	Mitigation Ratio
Indirect	Riparian	11	2:1
Indirect	Non-Riparian	60	1:1

Avoidance and Minimization Measures for Valley Elderberry Longhorn Beetle

To avoid direct and indirect effects of the Project on VELB, the following measures will be implemented and consultation with USFWS will be initiated.

BIO-11: In order to avoid and minimize adverse effects to VELB, removal of elderberry shrubs will occur between November and February.

BIO-12: Herbicides will not be used within the drip-line of the shrub. Insecticides will not be used within 30 meters (98 feet) of an elderberry shrub. If chemicals will be applied, they must be applied using a backpack sprayer or similar direct application method.

4.3.10 Discussion of White-Tailed Kite

The white-tailed kite (*Elanus leucurus*) is not a State or Federally listed species but is a fully protected species under CDFW. The white-tailed kite is a year-round species of California and occurs in coastal and valley lowlands, most often in association with agricultural areas. The white-tailed kite forages in undisturbed, open grasslands, meadows, farmlands and emergent wetlands and seldom hunts more than 0.5 miles from nest while breeding. Breeding occurs from February to October, preferably in isolated, dense-topped trees close to open grasslands, meadows or marsh foraging sites (Zeiner 1990, CNDDB 2012).

Potential for Occurrence

Although white-tailed kite was not observed during biological surveys, the species has a high potential to occur within the Project area. This is due to the presence of potentially suitable open grasslands nearby riparian woodland habitat potentially capable of supporting this species. The nearest, most recent CNDDB occurrence is approximately 3.34 miles southwest of the Project area, however there is a historic occurrence directly across the American River from the Project area (1974) and multiple recent iNaturalist occurrences within Sutter's Landing Regional Park and surrounding area. Due to the presence of suitable habitat and local occurrences, this species has a high potential to occur.

Two Rivers Trail Phase III and IV Project
City of Sacramento, Sacramento County, California

Potential Impacts to White-tailed Kite

Vegetation removal required for trail construction includes trimming or removal of 20+ trees within Disturbed Valley Oak Woodland and Valley Oak Riparian Woodland, which could result in the loss of potential nesting sites for the species. In addition, if white-tailed kites are nesting near the Project area, this may result in temporary increase in noise, vibration and human presence, including construction equipment. To minimize potential impacts and avoid take of the species**,** pre-construction nesting bird surveys, including a ½ mile buffer for raptors, will be performed to identify and protect any active nests.

Avoidance and Minimization Measures for White-tailed Kite

The avoidance and minimization measures for the white-tailed kite will be the same measures implemented for migratory nesting birds and Swainson's hawk (**BIO-9** and **BIO-10**).

5. Conclusions and Regulatory Determinations

5.1 Federal Endangered Species Act Consultation Summary

In addition to field survey, a list of seventeen federally threatened or endangered species were returned via database searches. The potential for each species to occur within the Project area was determined by analyzing the habitat requirements of each species, comparing the habitat requirements to available habitat within the Project area. Overall, twelve species are presumed absent from the Project area, and five species have habitat present. Further consideration under FESA is warranted.

Table 4. Federally Listed Species Determinations

Species Name	Federal Status	Potential	Determination
Delta smelt (*Hypomesus transpacificus*)	Threatened	Absent	No Effect
Giant gartersnake (*Thamnophis gigas*)	Threatened	Absent	No Effect
Green sturgeon – southern DPS (*Acipenser medirostris pop. 1*)	Threatened	Absent	No Effect
Least Bell's vireo (*Vireo bellii pusillus*)	Endangered	Absent	No Effect
Northwestern pond turtle (*Actinemys marmorata*)	Proposed Threatened	Moderate	No determination at this time
Chinook salmon – Central Valley spring-run ESU (*Oncorhynchus tshawytscha pop. 11*)	Threatened	Presumed Present/Critical Habitat	May Affect, Likely to Adversely Affect
Chinook salmon – Sacramento River winter-run ESU (*Oncorhynchus tshawytscha pop. 7*)	Endangered	Presumed Present	May Affect, Likely to Adversely Affect
Western spadefoot (Spea hammondii)	Proposed Threatened	Absent	No Effect
Longfin smelt – San Francisco Bay Delta DPS (*Spirinchus thaleichthys pop.2*)	Endangered	Absent	No Effect
Monarch butterfly (*Danaus plexippus*)	Candidate	Absent	No Effect
Sacramento Orcutt grass (*Orcuttia viscida*)	Endangered	Absent	No Effect
Slender Orcutt grass (*Orcuttia tenuis*)	Threatened	Absent	No Effect
Steelhead – Central Valley DPS	Threatened	Presumed Present/Critical Habitat	May Affect, Likely to Adversely Affect
Valley elderberry longhorn beetle (*Desmocerus californicus dimorphus*)	Threatened	Habitat Present	May Affect, Likely to Adversely Affect
Vernal pool fairy shrimp (*Brachinecta lynchi*)	Threatened	Absent	No Effect
Vernal pool tadpole shrimp (*Lepidurus packardi*)	Endangered	Absent	No Effect
Western yellow-billed cuckoo (*Coccyzus americanus occidentalis*)	Threatened	Absent	No Effect

5.2 Essential Fish Habitat Consultation Summary

Essential fish habitat is defined as waters and substrate necessary for fish spawning, breeding, feeding, and growth to maturity (Magnuson-Stevens Fishery Conservation and Management Act §3). According to the National Oceanic and Atmospheric Administration habitat conservation Essential Fish Habitat View Tool, the Project area falls within an area that is considered essential fish habitat for Chinook salmon and Groundfish (NOAA 2025). As part of trail construction, the Project may require removal of large riparian trees and vegetation along the American River, which currently provide important shade and bank stability functions. The loss of this vegetation could result in increased solar exposure, leading to localized increases in water temperature, which may adversely affect the thermal suitability of habitat for juvenile Chinook salmon. Additionally, removal of vegetation may contribute to reduced input of large woody debris, decreased cover for predator avoidance, and potential changes to near-bank aquatic invertebrate communities, thereby impacting food resources and shelter critical for fish development.

The Project may also include permanent fill within areas designated as essential fish habitat (EFH), which could result in direct loss or degradation of aquatic substrate used by Chinook salmon for foraging and cover. Permanent fill may alter natural hydrologic and sediment transport processes and reduce channel complexity, thereby diminishing habitat availability and quality for salmonids.

Construction of the Class I path beneath Highway 160 (at the 12th and 16th Street bridges), including the ramped approaches to the undercrossing, will require temporary shoring to facilitate excavation for the retaining wall footings and to protect the work area from river flows by enabling dewatering. To achieve dewatering for construction of the retaining walls at the undercrossing and the placement of rock slope protection (RSP) along the approaches, temporary shoring or cofferdams—anticipated to consist of steel sheet piling installed roughly parallel to the project alignment and approximately 30 feet beyond the riverward edge of the RSP excavation—will be used. This sheet piling will isolate the construction site from the river and allow for safe excavation and foundation work. The additional 30-foot setback provides sufficient space for grading, installation of the sheet piling, placement of driven or drilled piles for the retaining wall foundations, and maneuvering of equipment needed to install the RSP along the retaining walls and approach ramps.

Therefore, these potential effects to EFH will be addressed in detail during Section 7 consultation with the National Marine Fisheries Service (NMFS), and all conservation recommendations included in the final Biological Opinion will be implemented to minimize adverse impacts to salmonid habitat to the maximum extent practicable.

5.3 Wetlands and Other Waters Coordination Summary

Under Section 401 and Section 404 of the CWA, certain surface waters are regulated by USACE and the RWQCB. CDFW also claims jurisdiction over the bed, bank and channel of waters and associated riparian vegetation. The Project area encompasses the American River, a stream channel that is a jurisdictional water feature pursuant to the CWA and CDFW. Temporary and permanent impacts to the American River are anticipated due to access for construction and permanent fill associated with the trail at the SR 160 undercrossing. With the implementation of avoidance and minimization measures **BIO-1** through **BIO-4**, impacts to the American River will be minimized.

Prior to work near the river, the City will obtain a Section 1602 permit from CDFW, a 401 Water Quality Certification from RWQCB, and a 404 NWP from USACE.

5.4 Invasive Species

In February 1999, EO 13112 was signed, requiring federal agencies to work on preventing and controlling the introduction and spread of invasive species. Measure **BIO-13** will be incorporated into the Project to ensure that invasive species are not introduced or spread.

BIO-13: Prior to arrival at the Project site and prior to leaving the Project site, construction equipment that may excessive vegetation, debris, or mud that may contain invasive plants and/or seeds will be cleaned to reduce the spreading of noxious weeds.

5.5 Other

5.5.1 General Wildlife

To minimize and avoid potential effects to local wildlife, the following measures **BIO-14** through **BIO-17** will be incorporated into the Project.

BIO-14: All food-related trash must be disposed into closed containers and disposed offsite. Construction personnel must not feed or otherwise attract wildlife to the Project area.

BIO-15: The contractor will not apply rodenticide or herbicide within the Project area during construction.

BIO-16: If any wildlife is encountered during the course of construction, said wildlife will be allowed to leave the construction area unharmed.

BIO-17: The use of plastic or synthetic monofilament netting is prohibited. All erosion control materials will be comprised of natural fibers.

Subject: List of threatened and endangered species that may occur in your proposed project location or may be affected by your proposed project

To Whom It May Concern:

The enclosed species list identifies threatened, endangered, proposed and candidate species, as well as proposed and final designated critical habitat, that may occur within the boundary of your proposed project and/or may be affected by your proposed project. The species list fulfills the requirements of the U.S. Fish and Wildlife Service (Service) under section 7(c) of the Endangered Species Act (Act) of 1973, as amended (16 U.S.C. 1531 *et seq.*).

New information based on updated surveys, changes in the abundance and distribution of species, changed habitat conditions, or other factors could change this list. Please feel free to contact us if you need more current information or assistance regarding the potential impacts to federally proposed, listed, and candidate species and federally designated and proposed critical habitat. Please note that under 50 CFR 402.12(e) of the regulations implementing section 7 of the Act, the accuracy of this species list should be verified after 90 days. This verification can be completed formally or informally as desired. The Service recommends that verification be completed by visiting the IPaC website at regular intervals during project planning and implementation for updates to species lists and information. An updated list may be requested through the IPaC system by completing the same process used to receive the enclosed list.

The purpose of the Act is to provide a means whereby threatened and endangered species and the ecosystems upon which they depend may be conserved. Under sections 7(a)(1) and 7(a)(2) of the Act and its implementing regulations (50 CFR 402 *et seq.*), Federal agencies are required to utilize their authorities to carry out programs for the conservation of threatened and endangered species and to determine whether projects may affect threatened and endangered species and/or designated critical habitat.

A Biological Assessment is required for construction projects (or other undertakings having similar physical impacts) that are major Federal actions significantly affecting the quality of the human environment as defined in the National Environmental Policy Act (42 U.S.C. 4332(2)

(c)). For projects other than major construction activities, the Service suggests that a biological evaluation similar to a Biological Assessment be prepared to determine whether the project may affect listed or proposed species and/or designated or proposed critical habitat. Recommended contents of a Biological Assessment are described at 50 CFR 402.12.

If a Federal agency determines, based on the Biological Assessment or biological evaluation, that listed species and/or designated critical habitat may be affected by the proposed project, the agency is required to consult with the Service pursuant to 50 CFR 402. In addition, the Service recommends that candidate species, proposed species and proposed critical habitat be addressed within the consultation. More information on the regulations and procedures for section 7 consultation, including the role of permit or license applicants, can be found in the "Endangered Species Consultation Handbook" at:

https://www.fws.gov/sites/default/files/documents/endangered-species-consultation-handbook.pdf

Migratory Birds: In addition to responsibilities to protect threatened and endangered species under the Endangered Species Act (ESA), there are additional responsibilities under the Migratory Bird Treaty Act (MBTA) and the Bald and Golden Eagle Protection Act (BGEPA) to protect native birds from project-related impacts. Any activity, intentional or unintentional, resulting in take of migratory birds, including eagles, is prohibited unless otherwise permitted by the U.S. Fish and Wildlife Service (50 C.F.R. Sec. 10.12 and 16 U.S.C. Sec. 668(a)). For more information regarding these Acts, see https://www.fws.gov/program/migratory-bird-permit/what-we-do.

The MBTA has no provision for allowing take of migratory birds that may be unintentionally killed or injured by otherwise lawful activities. It is the responsibility of the project proponent to comply with these Acts by identifying potential impacts to migratory birds and eagles within applicable NEPA documents (when there is a federal nexus) or a Bird/Eagle Conservation Plan (when there is no federal nexus). Proponents should implement conservation measures to avoid or minimize the production of project-related stressors or minimize the exposure of birds and their resources to the project-related stressors. For more information on avian stressors and recommended conservation measures, see https://www.fws.gov/library/collections/threats-birds.

In addition to MBTA and BGEPA, Executive Order 13186: *Responsibilities of Federal Agencies to Protect Migratory Birds*, obligates all Federal agencies that engage in or authorize activities that might affect migratory birds, to minimize those effects and encourage conservation measures that will improve bird populations. Executive Order 13186 provides for the protection of both migratory birds and migratory bird habitat. For information regarding the implementation of Executive Order 13186, please visit https://www.fws.gov/partner/council-conservation-migratory-birds.

We appreciate your concern for threatened and endangered species. The Service encourages Federal agencies to include conservation of threatened and endangered species into their project planning to further the purposes of the Act. Please include the Consultation Code in the header of this letter with any request for consultation or correspondence about your project that you submit to our office.

- Official Species List

OFFICIAL SPECIES LIST

This list is provided pursuant to Section 7 of the Endangered Species Act, and fulfills the requirement for Federal agencies to "request of the Secretary of the Interior information whether any species which is listed or proposed to be listed may be present in the area of a proposed action".

This species list is provided by:

PROJECT SUMMARY

Project Code: 2025-0062258
Project Name: Two Rivers Phase III
Project Type: Recreation - New Construction
Project Description: Construction of Phase III of the Two Rivers Bicycle/Pedestrian Trail in the City of Sacramento

Project Location:

The approximate location of the project can be viewed in Google Maps: https://www.google.com/maps/@38.593113349999996,-121.47798812233614,14z

Counties: Sacramento County, California

ENDANGERED SPECIES ACT SPECIES

There is a total of 6 threatened, endangered, or candidate species on this species list.

Species on this list should be considered in an effects analysis for your project and could include species that exist in another geographic area. For example, certain fish may appear on the species list because a project could affect downstream species.

IPaC does not display listed species or critical habitats under the sole jurisdiction of NOAA Fisheries[1], as USFWS does not have the authority to speak on behalf of NOAA and the Department of Commerce.

See the "Critical habitats" section below for those critical habitats that lie wholly or partially within your project area under this office's jurisdiction. Please contact the designated FWS office if you have questions.

---

1. NOAA Fisheries, also known as the National Marine Fisheries Service (NMFS), is an office of the National Oceanic and Atmospheric Administration within the Department of Commerce.

REPTILES

NAME	STATUS
Northwestern Pond Turtle *Actinemys marmorata* No critical habitat has been designated for this species. Species profile: https://ecos.fws.gov/ecp/species/1111	Proposed Threatened

AMPHIBIANS

NAME	STATUS
Western Spadefoot *Spea hammondii* No critical habitat has been designated for this species. Species profile: https://ecos.fws.gov/ecp/species/5425	Proposed Threatened

INSECTS

NAME	STATUS
Monarch Butterfly *Danaus plexippus* There is **proposed** critical habitat for this species. Your location does not overlap the critical habitat. Species profile: https://ecos.fws.gov/ecp/species/9743	Proposed Threatened
Valley Elderberry Longhorn Beetle *Desmocerus californicus dimorphus* There is **final** critical habitat for this species. Your location does not overlap the critical habitat. Species profile: https://ecos.fws.gov/ecp/species/7850	Threatened

CRUSTACEANS

NAME	STATUS
Vernal Pool Fairy Shrimp *Branchinecta lynchi* There is **final** critical habitat for this species. Your location does not overlap the critical habitat. Species profile: https://ecos.fws.gov/ecp/species/498	Threatened
Vernal Pool Tadpole Shrimp *Lepidurus packardi* There is **final** critical habitat for this species. Your location does not overlap the critical habitat. Species profile: https://ecos.fws.gov/ecp/species/2246	Endangered

CRITICAL HABITATS

THERE ARE NO CRITICAL HABITATS WITHIN YOUR PROJECT AREA UNDER THIS OFFICE'S JURISDICTION.

YOU ARE STILL REQUIRED TO DETERMINE IF YOUR PROJECT(S) MAY HAVE EFFECTS ON ALL ABOVE LISTED SPECIES.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:24,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Sacramento County, California
Survey Area Data: Version 25, Sep 8, 2024

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Apr 23, 2022—Apr 24, 2022

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

SACRAMENTO, CALIFORNIA

Referenced Geocon Report: *Draft Initial Site Assessment Report, Two Rivers Trail Phase III Project, Sacramento, California,* May 2025.

Ms. Dalcin-Walling:

In accordance with the request of Dokken Engineering on behalf of the City of Sacramento (City), Geocon Consultants, Inc. has performed environmental engineering services for the Two Rivers Trail Phase 3 Project in Sacramento, California. The accompanying report summarizes the services performed including the advancement of four hand-auger borings for the collection of surface soil samples for Title 22 (CAM 17) metals (including lead), diesel- and oil-range petroleum hydrocarbons, organochlorine pesticides, polychlorinated biphenyls, and semivolatile organic compound analyses.

The contents of this report reflect the views of the author, who is responsible for the facts and accuracy of the data presented herein. The contents do not necessarily reflect the official views or policies of the State of California or the Federal Highway Administration. This report does not constitute a standard, specification, or regulation.

We appreciate the opportunity to provide our services on this project. Please contact us if you have any questions concerning this report or if we may be of further service.

Sincerely,

GEOCON CONSULTANTS, INC.

LIMITED SURFACE SOIL ASSESSMENT REPORT

1.0 INTRODUCTION

We performed a Limited Surface Soil Assessment and prepared this report for the Two Rivers Trail Phase 3 Project in Sacramento, California, for Dokken Engineering (Dokken) on behalf of the City of Sacramento (City).

1.1 Project Description and Proposed Improvements

The project consists of unpaved areas within proposed bicycle and pedestrian trail alignments south of the American River between 0.1 mile west of State Route 160 (SR-160) and the 28th/A Street intersection (the Project Site) in Sacramento, California (Figure 1). The project will require disturbance of shallow soil at the Project Site. Geocon completed a *Draft Initial Site Assessment (ISA)* report for the project in May 2025. The ISA identified that the proposed trail alignments within the eastern portion of the Project Site are located over inactive City landfills that were capped with imported soil material (Geocon, 2025). The local community near the Project Site is concerned about potentially toxic dust that could be generated during the proposed improvements.

1.2 General Objectives

The proposed construction project will require the disturbance of shallow soil at the Project Site. The purpose of the scope of services was to provide an initial evaluation of surface soil at the eastern portion of the Project Site for the presence of chemicals of concern (COC) including Title 22 (CAM 17) metals (including lead), diesel-range organics (DRO), oil-range organics (ORO), organochlorine pesticides (OCPs), polychlorinated biphenyls (PCBs), and semivolatile organic compounds (SVOCs). The investigative results will be incorporated into the project environmental document.

2.0 BACKGROUND

2.1 Hazardous Waste Determination Criteria

Regulatory criteria to classify a waste as “California hazardous” for handling and disposal purposes are contained in the California Code of Regulations (CCR), Title 22, Division 4.5, Chapter 11, Article 3, § 66261.24. Criteria to classify a waste as “Resource, Conservation, and Recovery Act (RCRA) hazardous” are contained in Chapter 40 of the Code of Federal Regulations (40 CFR), § 261.

DRAFT

For waste containing metals, the waste is classified as California hazardous when: 1) the representative total metal content equals or exceeds the respective Total Threshold Limit Concentration (TTLC); or 2) the representative soluble metal content equals or exceeds the respective Soluble Threshold Limit Concentration (STLC) based on the standard Waste Extraction Test (WET). A waste may have the potential of exceeding the STLC when the waste's total metal content is greater than or equal to ten times the respective STLC value, since the WET uses a 1:10 dilution ratio. Hence, when a total metal is detected at a concentration greater than or equal to ten times the respective STLC, and assuming that 100 percent of the total metals are soluble, soluble metal analysis is required. A material is classified as RCRA hazardous, or Federal hazardous, when the representative soluble metal content equals or exceeds the Federal regulatory level based on the Toxicity Characteristic Leaching Procedure (TCLP). The TTLCs and STLCs are on Table 2.

The above regulatory criteria are based on chemical concentrations. Wastes may also be classified as hazardous based on other criteria such as ignitability and corrosivity; however, for the purposes of this investigation, toxicity (i.e., representative lead concentrations) is the primary factor considered for waste classification since waste generated during the construction activities would not likely warrant testing for ignitability or corrosivity. Waste that is classified as either California-hazardous or RCRA-hazardous requires management as a hazardous waste.

2.2 DTSC Screening Levels (DTSC-SLs)

The California Department of Toxic Substances Control (DTSC) developed screening levels for commonly found contaminants in soil, groundwater, and soil gas to provide guidance regarding the need for additional investigation, cleanup, or no-further-action at sites where a release of a potentially hazardous chemical has occurred. The screening levels are based on exposure assumptions and established toxicity values. Screening levels for soil with respect to residential and commercial/industrial land use include the DTSC Human Health Risk Assessment Note 3 Screening Levels (DTSC-SLs) (June 2020, revised April 2025). Generally, these DTSC-SLs were developed as conservative screening tools applicable to potentially impacted sites and are not enforceable regulatory standards. Concentrations of chemicals detected in soil that are less than their respective DTSC-SLs are generally assumed not to pose a significant threat to human health or the environment, whereas concentrations of chemicals detected in soil that equal or exceed their respective DTSC-SLs may indicate that additional characterization, investigation or cleanup actions are appropriate. The DTSC-SLs are listed at the end of Tables 2 and 3.

DRAFT

2.3 SFRWQCB Screening Levels (ESLs)

The San Francisco Bay Regional Water Quality Control Board (SFRWQCB) has prepared a technical report entitled *User's Guide: Derivation and Application of Environmental Screening Levels, Interim Final 2019* (updated 2019, Rev. 2), which presents Environmental Screening Levels (ESLs) for over 100 commonly found contaminants in soil, groundwater, soil gas, and surface water, to assist in evaluating sites impacted by releases of hazardous chemicals. "If used correctly, ESLs are considered to be protective for typical bay area sites. Under most circumstances, the presence of a chemical in soil, soil gas, or groundwater at concentrations below the corresponding ESL can be assumed to not pose a significant threat to human health, water resources, or the environment" (SFRWQCB, 2019, Rev. 2). ESLs are commonly used by contractors, soil trucking companies, and private and commercial land owners as default acceptance criteria to evaluate suitability of import soil material. ESL Table S-1, Summary of Soil ESLs, Direct Exposure to Human Health, was used for this characterization. The ESLs are listed at the end of Tables 2 and 3.

3.0 SCOPE OF SERVICES

The scope of services requested by Dokken included the collection of surface soil samples from the eastern portion of the Project Site for laboratory analysis to evaluate the COCs and the preparation of this report.

3.1 Pre-field Activities

We retained the services of California Laboratory Services (CLS) of Rancho Cordova, California, a California-certified analytical laboratory, to analyze the surface soil samples for the contaminants of concern.

3.2 Field Activities

On May 30, 2025, we advanced four hand-auger borings (B1 to B4) to a maximum depth of 0.5 foot and collected surface soil samples at a depth interval of 0 to 0.5 foot. The approximate boring locations are depicted on the Site Plan, Figure 2. Representative sampling locations are depicted on Photo Nos. 1 and 2.

Following sample collection, we backfilled the borings with the excess soil cuttings. Details of the field activities are presented in the following sections.

DRAFT

4.0 INVESTIGATIVE METHODS

4.1 Soil Sampling Procedures

We collected the soil samples using a hand-auger and transferred them to stainless steel tubes, sealed the sample tubes with Teflon sheets and plastic end caps, and subsequently labeled the tubes. We placed the sample tubes in a chilled ice chest and transported them to CLS for laboratory analysis under chain-of-custody documentation. General soil types were noted on the daily field log.

We utilized Google Earth™ to determine the horizontal position of the boring locations. The latitude and longitude of the boring locations are summarized in Table 1.

4.2 Quality Assurance/Quality Control (QA/QC) Procedures

We performed QA/QC procedures during the field sampling activities including decontaminating the sampling equipment prior to each boring and providing chain-of-custody documentation for each sample submitted to the laboratory. The soil sampling equipment was decontaminated between borings by washing the equipment with a non-phosphate detergent (e.g. Alconox®) solution followed by a double-rinse with purified water. The decontamination water was discharged to the ground surface onsite, away from roadways and storm drain inlets.

4.3 Laboratory Analyses

CLS analyzed the four surface soil samples collected at the eastern portion of the Project Site for the following analyses under standard turnaround-time.

- Title 22 (CAM 17) metals by United States Environmental Protection Agency (USEPA) Test Methods 6010B and 7471A.
- DRO and ORO by USEPA Test Method 8015M.
- OCPs by USEPA Test Method 8081A.
- PCBs by USEPA Test Method 8082.
- SVOCs by USEPA Test Method 8270C.

CLS performed QA/QC procedures as applicable for the method of analysis with specificity for each analyte listed in the test method's QA/QC. QA/QC measures for the lead analysis included the following:

DRAFT

- One method blank for every ten samples, batch of samples or type of matrix, whichever was more frequent.
- One sample analyzed in duplicate for every ten samples, batch of samples or type of matrix, whichever was more frequent.
- One spiked sample for every ten samples, batch of samples or type of matrix, whichever was more frequent, with the spike made at ten times the detection limit or at the analyte level.

Prior to submitting the samples to the laboratory, we reviewed the chain-of-custody documentation for accuracy and completeness.

5.0 FIELD OBSERVATIONS AND INVESTIGATIVE RESULTS

5.1 Soil Description

Soil encountered in borings B1 to B4 generally consisted of fine sand with gravel to the maximum sampling depth of 0.5 foot. No field indicators of apparent contamination (i.e., odors, staining, debris, etc.) were observed in the surface soil samples collected from borings B1 to B4.

5.2 Laboratory Analysis Results

The laboratory analysis results are discussed in the following sections. A copy of the CLS laboratory report and chain-of-custody documentation is in Appendix A.

5.2.1 Title 22 Metals

The Title 22 metals laboratory analysis results are listed below and summarized in Table 2:

Antimony	6.9 to 8.9 milligrams per kilogram (mg/kg);
Arsenic	<1.0 mg/kg;
Barium	120 to 150 mg/kg;
Beryllium	<1.0 mg/kg;
Cadmium	<1.0 mg/kg;
Chromium	31 to 49 mg/kg;
Cobalt	12 to 16 mg/kg;
Copper	24 to 38 mg/kg;

DRAFT

Lead	<2.5, 15, and 160 mg/kg;
Mercury	<0.10 and 0.26 mg/kg;
Molybdenum	<1.0 and 1.0 mg/kg;
Nickel	58 to 78 mg/kg;
Selenium	<2.5 mg/kg;
Silver	<1.0 mg/kg;
Thallium	<4.0 mg/kg;
Vanadium	52 to 73 mg/kg; and
Zinc	50 to 200 mg/kg.

The reported metals concentrations are less than their respective commercial/industrial and construction worker exposure ESLs and generally are within the range of naturally occurring background levels with the exception of an elevated lead concentration reported for sample B2-0.

5.2.2 DRO, ORO, OCPs, PCBs, and SVOCs

The analytical laboratory results for these compounds are summarized in Table 3.

DRO was not detected at concentrations exceeding the laboratory reporting limit (RL) in the soil samples analyzed.

ORO was only detected in sample B1-0 at 32 mg/kg, less than the residential, commercial/industrial, and construction worker exposure ESLs.

OCPs and SVOCs were not detected at concentrations exceeding the laboratory RL in the soil samples analyzed.

PCBs were only detected in soil sample B2-0 (aroclor 1260) at 65 micrograms per kilogram (µg/kg), less than the residential and commercial/industrial DTSC-SLs and ESLs, and the construction worker exposure ESL.

DRAFT

5.3 Review of Laboratory QA/QC

We reviewed the analytical laboratory QA/QC data provided with the laboratory report. The laboratory noted that the surrogate recovery for some samples were outside of established control limits due to a sample matrix effect. The extract of a sample was dark and/or oily. Therefore, the sample was analyzed with a dilution and the reporting limit was raised for all target compounds.

The relative percent difference (RPD) result exceeded the QC control limits; however, both percent recoveries were acceptable. Sample results for the QC batch were accepted based on percent recoveries and completeness of QC data.

The RPD value for the sample duplicate or matrix spike (MS)/matrix spike duplicate (MSD) was outside of the QC acceptance limits due to matrix interference. QC batch was accepted based on laboratory control sample (LCS) and/or LCS Duplicate (LCSD) recovery.

The spike recovery was outside acceptance limits for the MS and/or MSD due to matrix interference. The LCS and/or LCSD were within acceptance limits showing that the laboratory was in control and the data is acceptable.

The spike recovery was outside acceptance limits for the LCS or LCSD. The batch was accepted based on acceptable MS/MSD recoveries and RPDs.

The recovery of one CCV was greater than the acceptance limit. However, all analytes in the associated samples were ND; therefore a reanalysis was not performed. The analyte was detected in the method blank or calibration verification blank. A re-analysis was not performed since all sample results for the

The data show acceptable non-detect results for the remaining method blanks and acceptable recoveries and RPDs for the rest of the MS and MSDs. Based on the laboratory QA/QC data, no additional qualification of the data presented herein is necessary, and the data are of sufficient quality for the purposes of this report.

DRAFT

6.0 CONCLUSIONS AND RECOMMENDATIONS

Total lead was reported for soil sample B2-0 at a concentration greater than the residential DTSC-SL and ESL but less than the commercial/industrial DTSC-SL and ESL.

With the exception of an elevated lead concentration reported for sample B2-0, metals were not detected in the soil samples at concentrations greater than the regulatory screening levels.

No significant concentrations of DRO, ORO, OCPs, PCBs, and SVOCs were detected in the soil samples.

If obvious impacted soil conditions (i.e., staining, odors, debris, etc.) are encountered during construction excavations, these materials should be isolated, stockpiled and characterized to determine appropriate soil disposal options. Any subsurface structures (e.g., undocumented underground storage tanks, wells, septic systems, sumps, asbestos containing pipe, etc.) encountered during planned improvements at the Project Site should be properly removed or abandoned per applicable Sacramento County permitting requirements.

DRAFT

7.0 REPORT LIMITATIONS

This report has been prepared exclusively for Dokken on behalf of the City of Sacramento. The information contained herein is only valid as of the date of the report and will require an update to reflect additional information obtained.

This report is not a comprehensive site characterization and should not be construed as such. The findings as presented in this report are predicated on the results of the limited sampling and laboratory testing performed. In addition, the information obtained is not intended to address potential impacts related to sources other than those specified herein. Therefore, the report should be deemed conclusive with respect to only the information obtained. We make no warranty, express or implied, with respect to the content of this report or any subsequent reports, correspondence or consultation. We strived to perform the services summarized herein in accordance with the local standard of care in the geographic region at the time the services were rendered.

Notes:

B1-0
- B1-0: boring identification
- 0: Top of 1-foot sample depth interval in feet below ground surface

DRO = diesel-range organics
ORO = oil-range organics
OCPs = organochlorine pesticides
PCBs = polychlorinated biphenyls
SVOCs = semivolatile organic compounds
mg/kg = milligrams per kilogram
µg/kg = micrograms per kilogram
[a] = aroclor 1260
[b] = PCBs
< = less than the laboratory reporting limit
ND = not detected at concentrations exceeding the laboratory reporting limit
NA = not applicable/not available
DTSC-SLs = California Department of Toxic Substances Control, Table 1, Human Health Risk Assessment Note 3 Screening Levels for Soil, June 2020 (Revised April 2025)
ESL = Environmental Screening Levels, Table S-1, Direct Exposure Human Health Risk Levels, San Francisco Bay Regional Water Quality Control Board, 2019 (Rev. 2)

APPENDIX A

CALIFORNIA LABORATORY SERVICES
Committed. Responsive. Flexible.

June 06, 2025

CLS Work Order #: 25E1562
COC #:

Rebecca Silva
Geocon Consultants
3160 Gold Valley Dr. Suite #800
Rancho Cordova, CA 95742

Project Name: Two Rivers Trail

Enclosed are the results of analyses for samples received by the laboratory on 05/30/25 15:11. Samples were analyzed pursuant to client request utilizing EPA or other ELAP approved methodologies. I certify that the results are in compliance both technically and for completeness.

Analytical results are attached to this letter. Please call if we can provide additional assistance.

Sincerely,

Daniel Johnson
Technical Director

CA SWRCB ELAP Accreditation/Registration number 1233

Notes and Definitions

QS-4	The surrogate recovery for this sample is outside of established control limits due to a sample matrix effect.
QRL-8	The extract of this sample was dark and/or oily. Therefore, the sample was analyzed with a dilution and the reporting limit was raised for all target compounds.
QR-2	The RPD result exceeded the QC control limits; however, both percent recoveries were acceptable. Sample results for the QC batch were accepted based on percent recoveries and completeness of QC data.
QR-1	The RPD value for the sample duplicate or MS/MSD was outside of the QC acceptance limits due to matrix interference. QC batch accepted based on LCS and/or LCSD recovery.
QM-5	The spike recovery was outside acceptance limits for the MS and/or MSD due to matrix interference. The LCS and/or LCSD were within acceptance limits showing that the laboratory is in control and the data is acceptable.
QM-1	The spike recovery was outside acceptance limits for the LCS or LCSD. The batch was accepted based on acceptable MS/MSD recoveries & RPD's.
QC-2H	The recovery of one CCV was greater than the acceptance limit. However, all analytes in the associated samples were ND; therefore a reanalysis was not performed.
QB-2	The analyte was detected in the method blank or calibration verfication blank. A re-analysis was not performed since all sample results for the analyte are ND.
DET	Analyte DETECTED
ND	Analyte NOT DETECTED at or above the reporting limit (or method detection limit when specified)
NR	Not Reported
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference

Enclosed are the results of analyses for samples received by the laboratory on 05/30/25 15:11. Samples were analyzed pursuant to client request utilizing EPA or other ELAP approved methodologies. I certify that the results are in compliance both technically and for completeness.

Analytical results are attached to this letter. Please call if we can provide additional assistance.

Sincerely,

Daniel Johnson
Technical Director

CA SWRCB ELAP Accreditation/Registration number 1233

TABLE 2
SUMMARY OF SOIL LABORATORY ANALYSIS RESULTS - DRO, ORO, OCPs, PCBs, AND SVOCs
TWO RIVER TRAILS PHASE II PROJECT
SACRAMENTO, CALIFORNIA

SAMPLE ID	DRO (mg/kg)	ORO (mg/kg)	OCPs (µg/kg)	PCBs (µg/kg)	SVOCs (µg/kg)
B1-0	<1.0	32	ND	ND	ND
B2-0	<1.0	<1.0	ND	65[a]	ND
B3-0	<1.0	<1.0	ND	ND	ND
B4-0	<1.0	<1.0	ND	ND	ND
DTSC-SLs					
Residential	NA	NA	NA	240[a]	NA
Commercial/Industrial	NA	NA	NA	790[a]	NA
ESLs					
Residential	260	12,000	NA	230[b]	NA
Commercial/Industrial	1,200	180,000	NA	940[b]	NA
Worker Exposure	1,100	54,000	NA	5,500[b]	NA

Notes:

B1-0
- Top of 1-foot sample depth interval in feet below ground surface
- boring identification

DRO = diesel-range organics
ORO = oil-range organics
OCPs = organochlorine pesticides
PCBs = polychlorinated biphenyls
SVOCs = semivolatile organic compounds
mg/kg = milligrams per kilogram
µg/kg = micrograms per kilogram
[a] = aroclor 1260
[b] = PCBs
< = less than the laboratory reporting limit
ND = not detected at concentrations exceeding the laboratory reporting limit
NA = not applicable/not available
DTSC-SLs = California Department of Toxic Substances Control, Table 1, Human Health Risk Assessment Note 3 Screening Levels for Soil, June 2020 (Revised April 2025)
ESL = Environmental Screening Levels, Table S-1, Direct Exposure Human Health Risk Levels, San Francisco Bay Regional Water Quality Control Board, 2019 (Rev. 2)

Notes and Definitions

QS-4	The surrogate recovery for this sample is outside of established control limits due to a sample matrix effect.
QRL-8	The extract of this sample was dark and/or oily. Therefore, the sample was analyzed with a dilution and the reporting limit was raised for all target compounds.
QR-2	The RPD result exceeded the QC control limits; however, both percent recoveries were acceptable. Sample results for the QC batch were accepted based on percent recoveries and completeness of QC data.
QR-1	The RPD value for the sample duplicate or MS/MSD was outside of the QC acceptance limits due to matrix interference. QC batch accepted based on LCS and/or LCSD recovery.
QM-5	The spike recovery was outside acceptance limits for the MS and/or MSD due to matrix interference. The LCS and/or LCSD were within acceptance limits showing that the laboratory is in control and the data is acceptable.
QM-1	The spike recovery was outside acceptance limits for the LCS or LCSD. The batch was accepted based on acceptable MS/MSD recoveries & RPD's.
QC-2H	The recovery of one CCV was greater than the acceptance limit. However, all analytes in the associated samples were ND; therefore a reanalysis was not performed.
QB-2	The analyte was detected in the method blank or calibration verfication blank. A re-analysis was not performed since all sample results for the analyte are ND.
DET	Analyte DETECTED
ND	Analyte NOT DETECTED at or above the reporting limit (or method detection limit when specified)
NR	Not Reported
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference

Subject: INITIAL SITE ASSESSMENT
TWO RIVERS TRAIL PHASE III PROJECT
SACRAMENTO, CALIFORNIA

Ms. Bakker:

In accordance with the request of Dokken Engineering on behalf of the City of Sacramento (City), we have performed an Initial Site Assessment (ISA) of the Two Rivers Trail Phase III Project in Sacramento, California. The project consists of proposed bicycle and pedestrian trail alignments south of the American River between 0.1 mile west of State Route 160 and the 28th/A Street intersection. The proposed project will close gaps in the existing trail system and improve access to nearby businesses and recreational areas.

The accompanying report presents the details of the ISA. The report summarizes our findings relative to potential recognized environmental conditions and environmental concerns identified within the Project Study Area that may impact design and construction of the proposed trail improvements within existing public right-of-way and private property easements.

Please contact us should you have any questions concerning the contents of this ISA Report or if we may be of further service.

Sincerely,

GEOCON CONSULTANTS, INC.

John E. Juhrend, PE, CEG
Senior Engineer

EXECUTIVE SUMMARY

Geocon Consultants, Inc. performed an Initial Site Assessment (ISA) of the Two Rivers Trail Phase III Project for Dokken Engineering (Dokken) on behalf of the City of Sacramento (City). The ISA Project Study Area consists of proposed pedestrian trail alignments between 0.1 mile west of State Route 160 (SR-160) and the 28th/A Street intersection (including Sproule Avenue and Basler Street) and adjacent properties in Sacramento, California.

The purpose of the project is to close gaps in the existing and planned trail system, and improve access to retail, employment, and recreational amenities for users of all ages and abilities. Construction of the trail will require crossings at SR-160 and the active Union Pacific Railroad (UPRR) corridor in addition to regulatory compliance for construction of improvements over regulated closed landfill facilities. The planned trail improvements will be constructed within existing public ROW and private property easements including the existing UPRR corridor.

Dokken and the City requested the ISA to determine the presence of recognized environmental conditions and potential environmental concerns within the Project Study Area that may impact design and construction of the proposed pedestrian trail improvements. The ISA included a site reconnaissance and review of historical topographic maps, aerial photographs, city directories, regulatory databases, and regulatory record documents. The following significant environmental concerns were identified within the Project Study Area.

Shallow soil in the immediate vicinity of the western portion of Sproule Avenue contains elevated arsenic and lead concentrations (likely associated with imported fill materials) that may exceed California hazardous waste thresholds. Though not currently planned or anticipated, any trail-related construction excavations within the western portion of Sproule Avenue should be performed in accordance with recommended soil management protocols.

The alignment of SR-160, Sacramento Regional Transit District light rail tracks, and the former Sacramento Northern (existing bike trail) and existing UPRR corridors cross north-south across the western and central portions of the Project Study Area. Deeper excavations will be required in these areas to facilitate construction of trail crossings. Soil sampling and analytical testing should be performed in areas of planned construction excavations in the vicinity of these existing roadway and rail improvements to evaluate the potential presence of aerially deposited lead (ADL) at regulated concentrations along unpaved areas adjacent to SR-160, and potential railroad-related contaminants of concern. If deep foundation excavation methods are planned, groundwater sampling and analytical testing should be performed to provide a preliminary indication of pre-treatment requirements (if any) prior to permitted discharge of any extracted and contained groundwater.

DRAFT

The eastern portion of the Project Study Area consists of former and existing Sacramento Municipal Utility District substations, and closed regulated landfill facilities. Construction excavations deeper than one to two feet in these areas may encounter contaminated soil and/or buried landfill waste that would require special handling. Exploratory excavations, soil sampling and analytical testing should be performed for any planned deeper construction excavations within and adjacent to the landfill and substation areas to determine the thickness of the existing soil cap and potential to encounter waste materials that may require management and disposal as a California hazardous waste.

The regulatory agencies overseeing the landfills (Sacramento County, Central Valley Regional Water Quality Board, and CalRecycle) may require the preparation of a soil management plan and health and safety plan for proper management and handling of excavated landfill capping and buried waste materials and monitoring protocols during trail construction activities.

Any potential conflicts with landfill monitoring wells and methane gas collection systems (wells and piping) should be addressed during preparation of the trail design plans to protect these features in place. In addition, a petroleum pipeline (no documented accidental releases) is located along the west side of 28th Street within the Project Study Area. Any planned construction excavations in this area should include precautions to protect the petroleum pipeline.

Any excess excavated soil generated within the Project Study Area during construction of the trail project will require sampling and analytical testing to determine if these materials are suitable for reuse at offsite properties and/or for acceptance at permitted landfill facilities.

Any undocumented subsurface structures (i.e. underground storage tanks, septic systems, wells, asbestos-containing pipe, etc.) encountered during construction excavation activities should be properly removed or abandoned in accordance with any applicable Sacramento County Environmental Management Department (SCEMD) permitting requirements. Areas where apparent soil contamination (i.e. odor, staining, debris, etc.) are encountered (if any) during construction excavation activities should be isolated, stockpiled separately, and disposed of where appropriate to an accepting landfill facility. Notification to the SCEMD for regulatory oversight may be required if any significant areas of contamination are encountered.

DRAFT

INITIAL SITE ASSESSMENT

1.0 INTRODUCTION

This report presents the results of an Initial Site Assessment (ISA) of the Two Rivers Trail Phase III Project located in Sacramento, California. The project consists of proposed bicycle and pedestrian trail alignments south of the American River between 0.1 mile west of State Route 160 (SR-160) and the 28th/A Street intersection.

This ISA was performed by Geocon Consultants, Inc. for Dokken Engineering on behalf of the City of Sacramento (City). The Project Study Area is depicted on the Project Location Map, Figure 1 and Site Plan, Figure 2, and shown in the site photographs.

1.1 Purpose and Scope of Services

Dokken Engineering and the City requested this ISA to determine the potential presence of environmental concerns within the Project Study Area that may impact design and construction of the planned trail improvements within existing public right-of-way (ROW) and private property easements. Potential environmental concerns that are determined to potentially pose a significant impact to the project will be evaluated during a subsequent environmental site investigation. This ISA was performed in general accordance with the *Caltrans Initial Site Assessment Guidance Document* (Geomatrix, 2006).

The primary purpose of the ISA was to identify evidence or indications of 'recognized environmental conditions' (RECs) as defined by the ASTM International (ASTM) *Designation E 1527-21 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process.* Section 1.1.1 of ASTM *Designation E 1527-21* defines an REC as: (1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment. A de minimis condition is not a recognized environmental condition." De minimis conditions are those that generally do not present a threat to human health or the environment and that generally would not be the subject of the enforcement action if brought to the attention of appropriate governmental agencies.

We define a "potential environmental concern" as a past use of a site or adjoining or adjacent property that may have involved the use, storage, and/or release of hazardous substances or petroleum products that could have impacted the site, but for which there are no records or other information to confirm

DRAFT

that use, storage, or release. An example would be the possible application of pesticides to an agricultural field (i.e., irrigated row crop or orchard), but for which there are no records of such application or information from a knowledgeable person (i.e., site owner/occupant/operator) to confirm that application.

ASTM *Designation E1527-21* also defines 'Historical' and 'Controlled' RECs (HREC and CREC, respectively). An 'Historical REC' is defined as "a previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls (for example, activity and use limitations or other property use limitations)." A 'Controlled REC' is defined as "recognized environmental condition affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls (for example, activity and use limitations or other property use limitations)." An HREC is not an REC if a property meets current standards for unrestricted residential use. A CREC remains an REC by definition when a property does not meet the unrestricted residential use requirement unconditionally.

The following principles are an integral part of ASTM *Designation E1527-21*:

- "**Uncertainty Not Eliminated** - No environmental site assessment can wholly eliminate uncertainty regarding the potential for recognized environmental conditions in connection with a subject property. Performance of this practice is intended to reduce, but not eliminate, uncertainty regarding the potential for recognized environmental conditions in connection with a subject property, and this practice recognizes reasonable limits of time and cost."

- "**Not Exhaustive** - All Appropriate Inquiries does not mean an exhaustive assessment of a property. There is a point at which the cost of information obtained, or the time required to gather it outweighs the usefulness of the information and, in fact, may be a material detriment to the orderly completion of transactions. One of the purposes of this practice is to identify a balance between the competing goals of limiting the costs and time demands inherent in performing an environmental site assessment and the reduction of uncertainty about unknown conditions resulting from additional information."

- "**Level of Inquiry is Variable** - Not every property will warrant the same level of assessment. Consistent with good commercial and customary standards and practices as defined at 42 U.S.C. § 9601(35)(B), the appropriate level of environmental site assessment will be guided by the type of property subject to assessment, the expertise and risk tolerance of the user, future intended uses of the subject property disclosed to the environmental professional, and the information developed in the course of the inquiry."

DRAFT

- **"Comparison with Subsequent Inquiry** - It should not be concluded or assumed that an inquiry was not all appropriate inquiries merely because the inquiry did not identify recognized environmental conditions in connection with a subject property. Environmental site assessments must be evaluated based on the reasonableness of judgments made at the time and under the circumstances in which they were made. Subsequent environmental site assessments should not be considered valid standards to judge the appropriateness of any prior assessment based on hindsight, new information, use of developing technology or analytical techniques, or other factors."

- **"Point in Time** - The environmental site assessment is based upon conditions at the time of completion of the individual environmental site assessment elements."

The main components of this report, as specified by the Caltrans ISA Guidance and ASTM Standard include the following:

- **Physical Setting:** Physical setting references were reviewed and observations made to obtain information concerning the topographic, geologic, and hydrogeologic characteristics of the Project Study Area. Such information may be indicative of the direction and/or extent that a contaminant could migrate in the event of a spill or release.

- **Site Reconnaissance:** The objective of the site reconnaissance was to observe conditions and activities for indications of evidence of recognized environmental conditions within the Project Study Area. The site reconnaissance was performed by making observations from public thoroughfares.

- **Site History:** The purpose of consulting historical references was to develop a history of the previous uses of the Project Study Area in order to identify if past uses have led to recognized environmental conditions in connection with the improvement project. Historical sources reviewed included topographic maps, aerial photographs and city directories provided by Environmental Data Resources (EDR). EDR certified that Sanborn fire insurance map coverage is not available for the Project Study Area.

- **Records Review:** The objective of the records review was to obtain and review records that will help identify recognized environmental conditions at or potentially affecting the improvement project. We reviewed publicly available Federal, State, and local regulatory agency records for facilities located within the Project Study Area.

1.2 Report Limitations

This ISA report has been prepared exclusively for Dokken Engineering on behalf of the City. The information obtained is only relevant for the dates of the records reviewed or as of the date of the site reconnaissance. Therefore, the information contained herein is only valid as of the date of the report and will require an update to reflect recent records and site observations.

This report is not a comprehensive site characterization and should not be construed as such. The findings and conclusions presented in this report are predicated on the site reconnaissance, a review of the historical usage of land in the Project Study Area, and a review of the specified regulatory records

DRAFT

as presented in this report. We did not assess the Project Study Area for wetlands, or perform testing (sample collection and testing) for asbestos-containing building materials, lead-containing paint, lead in drinking water, mercury related to mining activities, methane, mold, or potential naturally occurring hazards such as radon and arsenic as part of this ISA.

Therefore, the report should only be deemed conclusive with respect to the information obtained. No guarantee or warranty of the results of the ISA is implied within the intent of this report or any subsequent reports, correspondence or consultation, either express or implied. We strived to conduct the services summarized herein in accordance with the local standard of care in the geographic region at the time the services were rendered.

1.3 Existing Conditions and Improvements

The Project Study Area includes the proposed trail alignment, adjacent properties, and Sproule Avenue, Basler Street, unpaved A Street, and 28th Street.

Existing two River Trail improvements exist along the top of the southern American River levee between the western end of the Project Study Area and SR-160. Sacramento Regional Transit District (SRTD) light rail tracks extend parallel to SR-160. The Sacramento Northern Bike Trail extends north-south across the Project Study Area between SR-160 and the active Union Pacific Railroad (UPRR) corridor. It is noted that slurry cutoff walls were installed in the early 2000s along the top of the southern American River levee by the United States Army Corp of Engineers.

East of the UPRR corridor the Project Study Area consists of primarily vacant City- and privately-owned landfill properties and associated methane gas collection systems and monitoring wells, unpaved access roads, a Sacramento Municipal Utility District (SMUD) substation, and Sutter's Landing Park. Improvements within Sutter's Landing Park within the eastern end of the Project Study Area include a solar farm, dog park, and landfill methane plants.

1.4 Proposed Trail Improvements

The information presented in this section was obtained from Dokken. Existing conditions and proposed trail improvements within the Project Study Area are depicted on the Site Plan, Figure 2.

The City proposes to construct approximately 1.8 miles of bicycle and pedestrian trail along the south bank of the American River that extends from the 28th/A Street intersection to the west, ending on the levee approximately 0.10 mile west of SR-160.

DRAFT

This Project is essential for closing gaps in the existing and planned trail system, improving access to retail, employment, and recreational amenities for users of all ages and abilities. No permanent ROW acquisitions are required; however, temporary construction easements/maintenance agreements will be needed on UPRR parcels, and some utility relocations will be required. This project is locally funded and therefore requires compliance with the California Environmental Quality Act (CEQA). The lead agency for CEQA compliance is the City.

The purpose of the Project is to:

- Provide a vital recreation link between the Jedediah Smith Trail on the north side of the American River Parkway, the Sacramento River Parkway, the Sacramento Northern Bikeway Trail, the future Ueda Parkway trails, and the 20th Street bike connection to the Central City;
- Provide alternative transportation access for commuters and residents in the eastern part of the City, California State University, Sacramento, Central City, North Sacramento, East Sacramento, and Richards Boulevard area;
- Provide trail users with a connection to the river and the American River Parkway; and
- Provide an American's with Disabilities Act compliant, active transportation connection to adjacent communities throughout the Sacramento area for pedestrians and bicyclists of all ages and abilities to access retail, jobs, and recreational amenities.

The Project is needed to provide a gap closure in the existing and planned trail system, improving access to retail, employment, and recreational amenities for users of all ages and abilities.

The majority of the trail will require construction excavations to a maximum depth of approximately two feet. Trail construction excavations within the inactive closed landfill areas between the UPRR corridor and eastern project limit will be a maximum of 1 foot deep to minimize the potential to encounter buried waste materials. No construction excavations or paving is anticipated for the proposed trail alignment along Sproule Avenue, Basler Street, and west and south of the former SMUD substation located east of the UPRR corridor. Deeper construction excavations are anticipated at the following locations:

- Up to 10 feet for retaining wall and cast in drilled hole (CIDH) piers for the SR-160 crossing.
- Up to 80 feet for CIDH bridge piers or driven piles for the UPRR crossing.

DRAFT

1.5 Project Related Report

Geocon prepared a *Draft Quality Assurance Plan for Geotechnical Investigation at 28th Street Landfill, Two Rivers Trail Phase III Project*, Sacramento, California for the project dated April 25, 2025 (Appendix A). The Quality Assurance (QA) Plan was prepared to provide protocols for geotechnical investigation field exploration within the closed landfill areas in the eastern portion of the Project Study Area.

The purpose of the QA Plan was to set forth procedures that are intended to preserve the final landfill cover during invasive activities associated with the proposed geotechnical investigation, and to verify that the procedures and materials used in maintenance of the final cover will be constructed, tested, and monitored according to the design specifications indicated in the approved landfill closure plan. The QA Plan includes exploratory boring abandonment procedures that are to be followed during the geotechnical investigation to provide the City with sufficient data to evaluate whether the landfill final cover has been preserved during the invasive investigation activities. Identified potential hazards associated with geotechnical field exploration within the closed landfills include chemical hazards in landfill waste and methane gas accumulation.

DRAFT

2.0 PHYSICAL SETTING

This section provides a brief description of the physical setting of the Two Rivers Trail Phase III Project Study Area including topography, geologic and hydrogeologic conditions. Observations of onsite conditions are described in Section 3.0.

2.1 Topography and Drainage Patterns

Review of an online topographic map available from the United States Geological Survey (USGS) indicates that the Project Study Area is at elevations ranging from approximately 30 to 40 feet above mean sea level.

On the eastern portion of the Project Study Area that is occupied by inactive landfills, localized drainage is directed to stormwater drainage inlets and/or detention basins. Drainage on the western portion of the Project Study Area is primarily influenced by the American River levee system.

2.2 Soil and Geologic Conditions

The Project Study Area is located within the Great Valley Geomorphic Province of California, more commonly referred to as the Sacramento-San Joaquin Valley. The Sacramento-San Joaquin Valley is a broad depression bounded by the Sierra Nevada range to the east and the Coast Ranges to the west. The Sacramento-San Joaquin Valley has been filled with a thick sequence of sediments derived from weathering of adjacent mountain ranges resulting in a stratigraphic section of Cretaceous, Tertiary, and Quaternary deposits.

Published geologic mapping by the USGS depicts the site vicinity underlain by Quaternary-age alluvial deposits (map symbol Qa), consisting of poorly sorted natural levee and stream channel deposits comprised of interbedded mixtures of sand, silt, clay, and gravel (USGS, 1981).

2.3 Groundwater Occurrence

Groundwater has generally been encountered at depths between 20 and 40 feet within the Project Study Area. The American River borders the Project Study Area to the north and influences the prevailing groundwater flow from southeast to southwest. Fluctuations of groundwater levels occur due to variations in precipitation, localized pumping, irrigation practices, and seasonal flows of the American River.

DRAFT

3.0 SITE RECONNAISSANCE

Mr. John Juhrend with Geocon performed a reconnaissance of the Project Study Area on April 11, 2025, to attempt to identify visual indicators of potential contamination sources. The reconnaissance was limited to viewing the Project Study Area from the public ROW. We did not have access to the active UPRR rail corridor. Information presented hereinafter is based on observations noted during the site reconnaissance. Land use and features identified within the Project Study Area are depicted on Figure 2. Photographs of the Project Study Area are attached.

The Project Study Area consists of proposed pedestrian trail alignments on the south side of the American River along existing public ROW and private property easements between 0.1 mile west of SR-160 to just beyond the 28th/A Street intersection. Easements will be required to construct crossings to extend the trail over/under SR-160 and the active UPRR tracks.

Existing Two River Trail improvements (asphalt-paved bicycle and pedestrian trail) exist within the Project Study Area along the top of the southern American River levee between the western Project Study Area boundary and SR-160 (Photos 1 and 2). A crossing would be constructed to extend the existing trail over/under SR-160 including the adjacent SRTD light rail tracks with new trail continuing along the top of the southern American River levee (Photos 3 and 4). The proposed trail alignment crosses the existing north-south Sacramento Northern Bike Trail on the west side of the active UPRR railroad corridor (Photos 5 and 6).

A crossing would be constructed over/under the active UPRR tracks to City-owned property east of the tracks (Photo 7). The proposed trail alignment east of the UPRR tracks extends along existing unpaved roadways (City ROW) adjacent to and within City-owned and privately-owned inactive landfill properties and former and existing SMUD substation facilities. These properties were observed to contain methane gas wells and associated piping, and groundwater monitoring wells.

The trail east of the UPRR tracks loops around City-owned former landfill properties (Photos 8 through 10). The southern portion of the loop is adjacent to former and existing SMUD substations (Photo 11). The trail alignment then extends easterly between City-owned landfill properties to the south (Cannon and Scollan) and a privately-owned landfill property to the north (Dellar Landfill, Photo 12).

The trail then extends across the central portion of the City-owned West Side Landfill (Photo 13). The northwestern portion of the West Side Landfill property is asphalt-paved and contains a methane plant and solar panel farm (Photo 14). The northeastern portion of the West Site Landfill property contains Sutter's Landing Dog Park (Photo 15). Methane gas wells and associated piping were observed on the

DRAFT

southern portion of the West Site Landfill (Photo 16). The end of this portion of the trail extends north on 28th Street through the Sutter's Landing Park entrance (Photo 17). A petroleum pipeline marker was observed near the trail alignment between the dog park and 28th Street (Photo 18). On the east side of 28th Street along this segment is a methane gas plant (Photo 19).

An additional segment of proposed trail extends along Sproule Avenue and Basler Steet extending between the Sacramento Northern Bike Trail to 12th Street (Photos 20 through 22).

DRAFT

4.0 PROJECT STUDY AREA HISTORY

This section summarizes information regarding the historical development and use of the Project Study Area. The historical information sources included historical topographic maps, aerial photographs, and city directories provided by EDR, an environmental and historical records search firm. Historical source documents were reviewed to obtain information regarding the history and the potential for impacts to the Project Study Area due to the former/existing generation, use, storage, and/or disposal of hazardous substances and/or petroleum products.

4.1 Review of Historical Topographic Maps

Historical topographic maps provided by EDR for selected years between 1891 and 2021 were reviewed. A copy of the *EDR Historical Topo Map Report* dated April 7, 2025 is in Appendix B. The following summarizes information about the Project Study Area depicted on the maps (map scale in parenthesis):

- **1891, 1892, and 1893, (1:125,000):** The 1891, 1892, and 1893 maps do not depict any features or development within the Project Study Area other than the alignment of SR-160 and the main channel of the American River that extended further south into the eastern portion of the Project Study Area. The maps depict urban development within Downtown Sacramento to the southwest.

- **1902 and 1911 Maps (1:62,500 and 1:31,680):** The 1902 map depicts the American River closer to the existing main channel alignment. The 1911 map depicts two railroad corridors (Sacramento Northern and Western Pacific) extending north-south across the central portion of the Project Study Area.

- **1949, 1954, and 1967 (1:24,000):** The 1949 map depicts city streets and commercial/residential development west of SR-160 and along Sproule Avenue and Basler Street. Levees are depicted along the southern edge of the American River channel and along the 28th Street alignment within the Project Study Area. The 1954 map depicts a "City Dump" within the Project Study Area to either side of 28th Street. The 1967 map depicts additional development west of SR-160 and a radio tower on the current Dellar Landfill property within the Project Study Area.

- **1975 and 1980 Maps (1:24,000):** The 1975 and 1980 maps depict additional landfill areas west of 28th Street within the Project Study Area.

- **1992, 2012, 2015, 2018, and 2021 Maps (1:24,000):** These maps do not depict specific development features other than existing roadways.

In summary, information on the historical USGS maps indicates that railroad alignments and landfill operations have existed within the Project Study Area since the early 1900s.

DRAFT

4.2 Review of Historical Aerial Photographs

We reviewed historical aerial photographs (1" = 750') provided by EDR for the selected years between 1937 and 2020. A copy of *The EDR Aerial Photo Decade Package* dated April 7, 2025 is in Appendix C. The following summarizes information regarding the Project Study Area based on our review of the photographs:

- **1937 and 1947 Photographs:** The Project Study Area consisted of relatively undeveloped land with the exception of commercial/residential development along local city streets including Sproule Avenue and Basler Street. SR-160 and two railroad alignments existed within the Project Study Area. Agricultural fields and orchards existed within the eastern portion of the Project Study Area. By 1947 landfill operations existed adjacent and east of the current UPRR corridor.

- **1957, 1964, 1966 and 1972 Photographs:** Industrial development existed immediately west and east of SR-160 adjacent to the American River. Additional landfill operations existed within the majority of the eastern portion of the Project Study Area with some remaining agricultural fields. By 1964 the former SMUD Northern Substation existed adjacent and east of the current UPRR corridor with the remaining properties to the east occupied by landfill operations. By 1972 additional railroad spur tracks extended toward the American River between the former Sacramento Northern and current UPRR mainline tracks.

- **1984, 1993 and 1998 Photographs:** Industrial development was present where the current SMUD substation exists with a drainage channel extending northeasterly to a detention pond. Development west of the current UPRR corridor appears to be similar to current conditions.

- **2006, 2009 and 2012 Photographs:** By 2006 the spur tracks were removed within the current UPRR corridor and the drainage canal and associated pond east of the current UPRR corridor were no longer present. By 2009 the northwestern portion of the West Site Landfill appears to be capped with asphalt with the current dog park on the northeastern portion. The existing methane plant at the northeast corner of 28th and A Streets existed by 2009.

- **2016 and 2020 Photographs:** By 2016 the industrial development at the current SMUD substation location had been removed and the Dellar Landfill appears to have been capped with soil and a methane collection system installed. The solar farm and methane plant on the northwestern portion of the West Site Landfill was present by 2016. By 2020 the existing SMUD substation had been constructed and the City landfill immediately to the north had been capped.

In summary, former and existing development and facility operations identified within the Project Study Area on the historical aerial photographs associated with potential RECs and environmental concerns include railroad corridors, landfill operations, and electrical substations.

DRAFT

4.3 Review of City Directories

We reviewed historical city directories dated between 1920 and 2020 for addresses listed along 28th Street, Sproule Avenue, and Basler Street in the vicinity of the Project Study Area. No address listings were identified for the requested streets. A copy of *The EDR-City Directory Abstract* dated April 23, 2025 is in Appendix D.

DRAFT

5.0 REGULATORY AGENCY RECORDS

This section describes the review of regulatory agency database and records for listed facilities located within the Project Study Area and vicinity.

5.1 Database Review

EDR searched federal, state, and local environmental databases for the Project Study Area and surrounding areas. The following table lists the databases that were searched and the number of properties/facilities listed. Other databases searched that do not list any properties/facilities are not included in the table. A copy of the report titled *The EDR Radius Map™ Report with GeoCheck®* dated April 7, 2025, is in Appendix E.

DRAFT

Summaries of the searched databases are presented in the referenced EDR Report.

Numerous properties/facilities within the Project Study Area are listed on non-release databases[1] for permitted air emissions, hazardous material use and storage, operation of underground storage tanks (UST) and/or aboveground storage tanks (AST), etc. The following table summarizes provided information for parcels located within the Project Study Area that are listed on regulatory release databases, and existing/historical gasoline station, dry-cleaning, landfills and other hazardous material/waste use/storage/disposal databases. Additional information for some of these properties/facilities is presented in the Regulatory File Review Section 5.2 of this report.

Facility Name/Type (Current Land Use)	Address (Location)	Regulatory Databases	Pertinent Information
Western Truck Parts	1441 Richards Blvd.	CPS-SLIC, HWTS, HAZNET, RCRA NonGen NLR, E Manifest, AST, CERS HAZ WASTE, Sacramento County ML, CERS, RCRA SQG, FINDS, ECHO	This vacant auto part/repair facility is listed for a diesel release to soil that as of 2021 was eligible for regulatory case closure by the Sacramento County Environmental Management Department (SCEMD).
Douglas Service Station	500 N. 12th St.	EDR Hist Auto, Sacramento County ML and CS, HIST UST	This property was listed as a gasoline station between 1966 and 2004 with three fuel USTs installed in 1976. The former gasoline station is listed as having impacted groundwater as of 1990 and receiving regulatory case closure status from the SCEMD in 1997.
Twin Rivers Triangle Site	Sproule Ave. and 12th St.	EnviroStor, VCP	This SRTD light rail property is listed for a Department of Toxic Substances Control (DTSC) voluntary cleanup for contaminants of concern in soil including heavy metals, solvents and polychlorinated biphenyls (PCBs). The project status is listed as active in 2019.
1-Day Paint & Body	1400 Sproule Ave.	CPS-SLIC, HWTS, HAZNET	This facility is listed for lead-impacted soil with regulatory case closure granted in 2017 by the SCEMD.

[1] "Release" refers to an unauthorized release of a petroleum product or hazardous substance to the environment - i.e. the ground surface, soil, soil vapor, groundwater, or surface water on a property. "Non-release database" refers to those that may report use, storage, or disposal of hazardous substances and/or petroleum products or other environmental conditions, but do not report releases of such. "Release database" refers to those which provide information regarding an unauthorized release.

DRAFT

Facility Name/Type (Current Land Use)	Address (Location)	Regulatory Databases	Pertinent Information
E.D. Properties (Nor Cal Towing)	1506 Sproule Ave.	RGA LUST, UST FINDER RELEASE, FINDS, LUST, Cortese, HIST CORTESE, Sac County ML	This facility is listed for a gasoline UST release that impacted groundwater. The regulatory case was closed by the SCEMD in 1997.
Crest Distributors	470 N 16th St. (SW Corner 16th and Sproule)	RGA LUST, UST, Sac County ML and CS	This facility is listed as a LUST regulatory case that was closed by the State Water Resources Control Board (SWRCB) in 2017.
Craig G B (parking lot)	451 N 16th St. (SE Corner 16th and Basler)	EDR Hist Auto	This property is listed as a former gasoline station facility in 1942.
SMUD North City Substation	20th and B St.	EnviroStor	This facility is listed as a PCB cleanup facility with status of "Inactive – Needs Evaluation" as of 1990.
SMUD North City Landfill (City Landfill)	East of UPRR Corridor	HWTS, SWF/LF, CERS	This inactive landfill property is listed as a solid waste disposal site.
City Disposal Site (City Landfill)	N B St. (East of UPRR Corridor)	SWF/LF, CERS	This inactive landfill property is listed as a solid waste disposal site.
Cannon/Scollan (City Landfill)	28th and A St.	SWF/LF, CERS	This inactive landfill property is listed as a solid waste disposal site.
Dellar Landfill	2401 A St.	PFAS Project, PFAS HO, PFAS, RCRA-LQG	This inactive landfill property is listed as a solid waste disposal site with per- and polyfluoroalkyl substances (PFAS) detected in groundwater.
West Sutters Landing (City Landfill)	N B St.	SWF/LF	This inactive landfill property is listed as a solid waste disposal site.
28th Street Landfill (City Landfill)	28th and A St.	SEMS-ARCHIVE, WMUDS, SWAT, Notify 65, WDS, Sac County ML, PFAS, PFAS ECHO, PFAS Project, HWTS, HIST UST, Cortese, ENF, CIWQS, CERS	This inactive landfill property is listed as a Class III solid waste disposal site. The facility is further listed for a gas recovery system, USTs and AST, and listed in the Environmental Protection Agency (EPA) Enforcement and Compliance History Online (ECHO) database as no violations identified.

DRAFT

5.2 Regulatory Online Database Review

Additional information obtained from a review of regulatory case file documentation available on the SWRCB GeoTracker website (http://geotracker.waterboards.ca.gov), DTSC's EnviroStor website (http://www.envirostor.dtsc.ca.gov/public), and CalRecycle Solid Waste Information System website (https://www2.calrecycle.ca.gov/SolidWaste/Site/Serach), for properties/facilities within the Project Study Area is presented hereinafter.

FB Hart Equipment Repair, 1441 Richards Boulevard. This inactive vehicle repair facility is located adjacent to and south of the existing trail alignment at the western end of the Project Study Area. The facility received regulatory case closure from the SCEMD in 1993 for the removal of fuel USTs. The results of a 2021 environmental site assessment did not identify significant onsite soil and groundwater impacts. In 2024 additional soil vapor sampling was collected at the facility. Elevated tetrachloroethene (PCE) concentrations in soil vapor were delineated beneath the onsite building requiring a land use covenant to restrict land use to commercial/industrial. The regulatory case status is listed as "Open – Site Assessment as of 8/1/2023."

Cars-R-Us (Former Gasoline Station), 500 N. 12th Street. This former gasoline station is located on the west side of 12th Street across from the proposed trail terminus on Sproule Avenue. The facility received regulatory case closure from the SCEMD in 1997 for petroleum hydrocarbon soil and groundwater impacts associated with leaking USTs removed in 1986. Groundwater was encountered in the early 1990s at depths between 16 and 25 feet with primarily southwesterly to southeasterly flow. The extent of the subsurface impacts were limited to the immediate vicinity of the former USTs.

Twin Rivers Triangle Site, Sproule Avenue and N. 12th Street. This vacant property located north of the west end of Sproule Avenue was previously occupied by commercial/industrial developments. The results of environmental assessments identified elevated concentrations of metals (lead and arsenic) and PCBs in soil. The Sacramento Housing and Redevelopment Agency entered into a voluntary cleanup agreement with DTSC in 2019. In 2022 and 2023 remedial excavations were performed for a SRTD light rail station along N. 12th Street. Elevated lead and arsenic concentrations (some exceeding hazardous waste thresholds) in soil appear to extend off the property beneath adjacent City streets. DTSC determined that this contamination is likely associated with historical imported fill materials and notified the City and SRTD of these findings in writing dated April 18, 2024. The DTSC instructed the City and SRTD to take precautions during any planned excavation activities adjacent to the Triangle Site including preparation of an air monitoring plan and soil management plan. A copy of the April 18, 2024 DTSC letter including a site plan depicting elevated lead concentrations identified in soil along the north side of Sproule Avenue is in Appendix F.

E. D. Properties, 1506 Sproule Avenue. This facility is located along the south side of Sproule Avenue. The facility is listed as a gasoline LUST case that impacted groundwater and received regulatory case closure from the SCEMD and the Central Valley Regional Water Quality Control Board (CVRWQCB) in 1997. No further details provided.

DRAFT

Crest Distributors, 470 16th Street. This facility is located at the southwestern corner of Sproule Avenue and N. 16th Street. The facility is listed as a fuel LUST case that impacted groundwater and received regulatory case closure from the SWRCB in 2017. Three gasoline USTs were removed from the facility in 1987 and 1989 and a diesel UST in 1997. Depth to groundwater was 20 feet with flow to the southwest in 1997. The petroleum hydrocarbon subsurface impacts were limited to the facility boundaries.

SMUD Station E Substation, Northern End of 20th Street. This existing electrical substation facility is located adjacent and south of the proposed trail alignment and east of the UPRR railroad corridor. A portion of the property had been used as a burn dump. SMUD investigated the property between 2009 and 2016 and started substation construction in 2014. The majority of the burn waste encountered during construction was stockpiled, tested, and transported as non-hazardous waste to a landfill facility. A minimal portion of the excavated burn waste was determined to be hazardous waste. The deepest burn waste in the western portion of the property was left in place and capped.

North City Substation, City Landfill. This inactive, pre-regulation landfill is located adjacent and east of the UPRR corridor. The landfill operated between 1940 and 1949 with buried waste ranging to depths between 22 to 31 feet. Results of environmental site investigations confirmed that soluble lead levels in the buried waste likely exceed the California hazardous waste threshold. Elevated petroleum hydrocarbons were further detected in the buried waste. Other potential contaminants of concern including PCBs, semivolatile organic compounds, and dioxins/furans were not detected at levels of concern. A SMUD substation was constructed on the southern portion of the landfill in the early 1950s. The substation was removed in 2022 following completion of the existing adjacent substation to the south. The landfill was subsequently capped with a vegetated 4-foot-thick soil layer. Electrical transmission towers are located on the property. The City submitted a 2025 Grading and Drainage Correction Work Plan dated February 5, 2025 to the SCEMD. The plan addresses how drainage will be improved for areas that were observed to pond water.

Dellar Landfill, 2410 A Street. This inactive, pre-regulation landfill is located adjacent and north of the proposed eastern portion of the trail alignment. The property is privately owned and was utilized by the City between 1959 and 1963 for waste disposal. The landfill consists of a landfill unit, detention basins and storm water controls, containment berms, river levee, and monitoring well network. The property is regulated by the CVRWQCB for groundwater and surface water monitoring including inorganic compounds and volatile organic compounds. The City received a Notice of Violation dated February 12, 2025 from the CVRWQCB for maintaining the landfill methane gas extraction system and overdue corrective action progress reporting. The depth to groundwater at the landfill in 2024 was approximately 30 feet with flow to the south away from the American River.

Cannon/Scollan Landfills, 2401 A Street. This inactive landfill is located adjacent and south of the proposed eastern portion of the trail alignment. The property is owned by the City and was historically utilized (pre-1961) for waste disposal. Exploratory excavations completed in 2017 indicated that buried waste extends to a depth of 24 feet beneath and beyond the property boundaries. In writing dated March 10, 2025, the CVRWQCB approved a final landfill closure plan prepared by the City. Proposed landfill closure includes placement of a 2-foot-thick foundation layer, geotextile and membrane, drainage layer, and a 1-foot-thick vegetated layer. A site plan prepared by Stantec depicting a historical summary of landfill operations at this property and adjacent landfills is in Appendix F.

DRAFT

28th Street Landfill, 28th and A Street. This closed landfill is located adjacent to the easternmost trail alignment. The property is owned by the City and was utilized for waste disposal from the 1960s until 1994. Final closure of the landfill was completed in 1997. Portions of the closed landfill have been redeveloped as Sutter's Landing Park including trails, a dog park, and solar farm. The Waste Management Unit (WMU)-A portion of the 28th Street Landfill is located adjacent and east of the eastern end of the proposed trail alignment. Final cover for this landfill consists of a 4-foot-thick vegetated soil cap. The eastern end of the proposed trail alignment extends across the West Site Landfill portion of the 28th Street Landfill. The northwestern portion of the West Site Landfill is capped with asphalt concrete pavement. The closed landfills include a landfill gas collection and control system and groundwater monitoring wells. The depth to groundwater in 2024 at the West Site Landfill was approximately 30 to 35 feet with flow to the south away from the American River.

5.3 City of Sacramento

We contacted Mr. Chris Thoma with the City of Sacramento Recycling & Solid Waste Division to obtain additional information for the closed landfills located in the eastern portion of the Project Study Area. Mr. Thoma provided the following documents (Appendix F):

Historical Summary, Ninyo & Moore, 2016. This site plan depicts a historical summary of landfill operations within the eastern portion of the Project Study Area (UPRR corridor to 28th Street).

Preliminary Fill Sequence, City of Sacramento Department of Public Works, 1989. This series of site plans and historical photos depict landfill operations/conditions between 1937 and 2015. The 1937, 1947, and 1957 aerial photos depict Blue Diamond Almond Growers orchards between the Dellar Landfill and UPRR corridor. The former SMUD Northern Substation is visible on the 1957 through 2015 aerial photos. By 2002 the northern portion of the West Site Landfill appears to have been paved. The dog park appears by 2009 and the solar farm and adjacent methane plant by 2015. The methane gas plant at the northeastern corner of 28th and A Streets is visible on the 1998 through 2015 aerial photos.

28th Street Landfill, SCS Engineers, 2016. This site plan depicts the groundwater monitoring well network for the landfill properties located within eastern portion of the Project Study Area (UPRR corridor to 28th Street).

West Site Gas Collection and Control System, 28th Street Landfill, SCS Engineers, 2020. This site plan depicts the methane gas collection system including wells, piping and monitoring probes installed within the Dellar, West Site and WMU-A landfills.

2024 Landfill Gas Improvements, Cannon-Scallon Landfill, SCS Engineers, 2024. This site plan depicts the proposed methane gas collection system at the Cannon-Scallon Landfill property including wells, piping and monitoring probes. Mr. Thoma indicated that the engineered cover for this landfill is scheduled to be installed suing the summer of 2025.

DRAFT

Mr. Thoma further provided details regarding the process for obtaining approvals for the proposed trail project from the following regulatory agencies:

- Sacramento County as the Local Enforcement Agency (LEA)
- CVRWQCB
- City of Sacramento Planning Department
- Sacramento Metropolitan Air Quality Management District

He indicated that the design package submitted to the stakeholder agencies should include 95% or 100% design plans, a health and safety plan (HSP), and a soil management plan (SMP). The documents should include specifics on the scope of work, project worker and community safety, and management and proper disposal of any landfill waste materials and/or contaminated soil generated from construction excavations. Design details and protocols should also be provided with respect to maintaining the integrity of the landfill caps and proper drainage.

5.4 California Geologic Energy Management Division

We reviewed the California Department of Conservation - Geologic (CalGEM) website for oil or gas wells within the vicinity of the Project Study Area. Based on a review of CalGEM well finder map, active oil or gas wells/fields are not depicted within the Project Study Area or general vicinity.

5.5 National Pipeline Mapping System

The National Pipeline Mapping System online mapping system depicts a hazardous liquid (petroleum) pipeline extending along the UPRR corridor adjacent and south of the SMUD substation and City landfills then extends north along 28th Street and along the northeastern boundary of the 28th Street Landfill WMU-A. No accidents (pipeline release) were noted along the pipeline within and adjacent to the Project Study Area.

DRAFT

6.0 CONCLUSIONS AND RECOMMENDATIONS

Geocon Consultants, Inc. performed an ISA of the Two Rivers Trail Phase III Project for Dokken on behalf of the City of Sacramento. The ISA Project Study Area consists of proposed pedestrian trail alignments between 0.1 mile west of SR-160 and the 28th/A Street intersection (including Sproule Avenue and Basler Street) and adjacent properties.

The purpose of the project is to close gaps in the existing and planned trail system, and improve access to retail, employment, and recreational amenities for users of all ages and abilities. Construction of the trail will require crossings at SR-160 and the active UPRR corridor in addition to regulatory compliance for construction of improvements over regulated closed landfill facilities. The planned trail improvements will be constructed within existing public ROW and private property easements including the existing UPRR corridor.

The following significant environmental concerns were identified within the Project Study Area. Shallow soil in the immediate vicinity of the western portion of Sproule Avenue contains elevated arsenic and lead concentrations (likely associated with imported fill materials) that may exceed California hazardous waste thresholds. DTSC submitted written notification to the City in 2024 (Appendix F) that any planned construction excavations within the North 12th Street City ROW between Sproule Avenue and Richards Boulevards may encounter contaminated soil and recommended preparing an air monitoring plan and soil management plan for DTSC review, approval and oversight. Though not currently planned or anticipated, any trail-related construction excavations within the western portion of Sproule Avenue should be performed in accordance with DTSC-recommended soil management protocols.

The alignment of SR-160, SRTD light rail tracks, and the former Sacramento Northern (existing bike trail) and existing UPRR corridors cross north-south across the western and central portions of the Project Study Area. Deeper excavations will be required in these areas to facilitate construction of trail crossings. Soil sampling and analytical testing should be performed in areas of planned construction excavations in the vicinity of these existing roadway and rail improvements to evaluate the potential presence of aerially deposited lead (ADL) at regulated concentrations along unpaved areas adjacent to SR-160, and potential railroad-related contaminants of concern (i.e. slag ballast, petroleum hydrocarbons, heavy metals, etc.). If deep foundation excavation methods are planned, groundwater sampling and analytical testing should be performed to provide a preliminary indication of pre-treatment requirements (if any) prior to permitted discharge of any extracted and contained groundwater.

DRAFT

The eastern portion of the Project Study Area consists of former and existing SMUD substations and closed regulated landfill facilities. Construction excavations deeper than one to two feet in these areas may encounter contaminated soil and/or buried landfill waste that would require special handling. Previous excavations within the closed landfill facilities have encountered waste materials that required disposal as a California hazardous waste. Exploratory excavations (could be combined with geotechnical explorations), soil sampling and analytical testing should be performed for any planned deeper construction excavations within and adjacent to the landfill and substation areas to determine the thickness of the existing soil cap and potential to encounter waste materials that may require management and disposal as a California hazardous waste. Any sampling performed near the former and existing electrical substations should include analysis for PCBs.

The regulatory agencies overseeing the landfills (Sacramento County, CVRWQCB and CalRecycle) may require the preparation of a SMP for the proper management and handling of excavated landfill capping and buried waste materials during trail construction activities. The SMP should include protocols for the proper management and disposal of any contaminated soil and landfill waste materials, contingencies for encountering any uncharacteristic waste, and include a HSP to address worker and community safety from potential contaminated media including monitoring for methane gas.

Any potential conflicts with landfill monitoring wells and methane gas collection systems (wells and piping) should be addressed during preparation of the trail design plans to protect these features in place. In addition, a petroleum pipeline (no documented accidental releases) is located along the west side of 28th Street within the Project Study Area. Any planned construction excavations in this area should include precautions to protect the petroleum pipeline.

Any excess excavated soil generated within the Project Study Area during construction of the trail project will require sampling and analytical testing to determine if these materials are suitable for reuse at offsite properties and/or for acceptance at permitted landfill facilities.

Any undocumented subsurface structures (i.e. USTs, septic systems, wells, asbestos-containing pipe, etc.) encountered during construction excavation activities should be properly removed or abandoned in accordance with any applicable SCEMD permitting requirements. Areas where apparent soil contamination (i.e. odor, staining, debris, etc.) are encountered (if any) during construction excavation activities should be isolated, stockpiled separately, and disposed of where appropriate to an accepting landfill facility. Notification to the SCEMD for regulatory oversight may be required if any significant areas of contamination are encountered.

Subject: QUALITY ASSURANCE PLAN
FOR GEOTECHNICAL INVESTIGATION AT 28TH STREET LANDFILL
TWO RIVERS TRAIL PHASE III PROJECT
SACRAMENTO, CALIFORNIA

EMD Staff:

Geocon Consultants, Inc. prepared the enclosed Quality Assurance (QA) Plan for a proposed geotechnical investigation at the 28th Street Landfill related to the Two Rivers Trail Phase III Project. The geotechnical investigation will require up to two days of field exploration and will be performed along the proposed trail alignment within and west of the "West Site" portion of the landfill. The field exploration includes collection of near-surface bulk soil samples along the proposed trail alignment to a maximum depth of one foot.

No exploration deeper than one foot below the ground surface is currently proposed. This QA Plan includes provisions for exploratory borings if required in the future. For borings deeper than two feet, boring coordinates, depth intervals, and description of fill materials, liner materials, and waste materials will be recorded, and borings will be abandoned by backfilling with granular bentonite pellets. Compliance with this QA Plan and the landfill post-closure requirements will be recorded in field logs and will be documented in a QA Report stamped by a California-licensed civil engineer experienced with landfill line construction, testing, and repair.

Please contact the undersigned with any questions regarding this QA Plan or the proposed geotechnical investigation.

Sincerely,

GEOCON CONSULTANTS, INC.

Jason Muir, PE, GE
Senior Engineer

Ronald E. Loutzenhiser, PE, GE

DRAFT

1.0 INTRODUCTION

Geocon Consultants, Inc. prepared the enclosed Quality Assurance Plan (QA Plan) for a proposed geotechnical investigation at the 28th Street Landfill related to the Two Rivers Trail Phase III Project. A segment of the trail (the site) crosses the 28th Street Landfill, a closed and permitted landfill owned by the City of Sacramento (the City). Figure 1 depicts the site location.

1.1 Purpose

The purpose of this QA Plan is to set forth procedures that are intended to preserve the final landfill cover during invasive activities associated with the proposed geotechnical investigation, and to verify that the procedures and materials used in maintenance of the final cover will be constructed, tested, and monitored according to the design specifications indicated in the approved landfill closure plan.

Although exploration deeper than two feet is not currently proposed, this QA Plan includes exploratory boring abandonment procedures that are to be followed if borings deeper than two feet are proposed in the future to provide the landfill owner (the City) and regulatory agencies with sufficient data to evaluate whether the landfill final cover has been preserved during the invasive investigation activities.

1.2 Plan Organization

This QA Plan is organized in the following sections:

- Section 1.0, *Introduction*, describes the plan purpose and organization, roles and responsibilities, the proposed invasive activities, and the landfill cover and subsurface conditions.
- Section 2.0, *QA Procedures*, describes procedures for coordination with the landfill owner and regulatory agencies, final cover preservation and repair, soil management, health and safety, and documentation.

1.3 Roles and Responsibilities

General roles and responsibilities for QA tasks are outlined below.

1.3.1 QA Manager

The QA Manager is a Geocon representative responsible for reviewing the geotechnical investigation scope, scheduling and overseeing the boring abandonment and observation, directing the QA Monitor, coordination with the Owner and Local Enforcement Agency (LEA), identifying compliance, and preparing a final report. The QA Manager will be a Civil Engineer, Geotechnical Engineer or Engineering Geologist registered in the State of California and will have related experience in landfill final cover construction, landfill design and construction, and soil testing.

DRAFT

1.3.2 QA Monitor

The QA Monitor is a Geocon representative responsible for compliance inspections and testing under the direction of the QA Manager. The QA Monitor may be a field engineer or geologist or engineering technician.

1.3.3 Owner

The City of Sacramento is the landfill owner.

1.3.4 Local Enforcement Agency

The landfill is subject to post-closure requirements set forth in Title 27 of the California Code of Regulations and overseen by the California Regional Water Quality Control Board (RWQCB) and the California Department of Resources Recycling and Recovery (CalRecycle). The Sacramento County Environmental Management Department (EMD) serves as the Local Enforcement Agency (LEA).

1.4 Proposed Invasive Activities

The geotechnical investigation is to be performed in one or two days. Figure 2 depicts the proposed trail alignment and geotechnical exploration locations. Invasive activities associated with the proposed geotechnical investigation include collection of bulk soil samples along the proposed trail alignment to a maximum depth of one foot.

1.5 Landfill Description

The landfill cover types depicted on Figure 2 are based on *Figure 3, Existing Topography and Final Grading Plan, 28th Street Landfill* (SCS Engineers, February 13, 2013), as modified based on cover types presented by Callendar Associates (2008) and our review of aerial photography. The existing Two Rivers Trail on the east side of the landfill is near the boundary of Waste Management Unit (WMU) A, which is covered by a low-permeability soil cap. The proposed Phase III trail crosses the West Site portion of the landfill, which is an inactive waste unit that pre-dates certain Title 27 regulations and is covered by asphalt and soil rather than a prescriptive landfill cover. Both WMU A and the West Site received non-hazardous residential, commercial and industrial waste, although a small percentage of the waste inadvertently contained materials that would currently be defined as household hazardous waste.

DRAFT

1.5.1 Landfill Cover

WMU A (east of 28th Street) is a reclassified Class III WMU under Section 20080(d) of California Code of Regulations (CCR) Title 27. Refuse filling was performed from 1971 to 1986, and WMU A was closed with a low-permeability clay cover in 1997. No work is proposed at WMU A. The prescriptive final cover of MWU A includes, from top to bottom:

- 1 foot of soil cover,
- 1 foot of low-permeability clay,
- 2 feet of concrete and asphalt rubble, and
- 1 foot of intermediate soil cover overlying the waste.

The West Site of the landfill (west of 28th Street) is an older, unclassified fill area that received waste from approximately 1963 to 1971. Waste Discharge Requirements (WDR) Finding 26 describes the final cover of a paved, approximately 10-acre portion of the West Site as, from top to bottom:

- 3 inches of asphalt concrete,
- 6 inches of asphalt street grindings,
- 2 feet of concrete and asphalt rubble, and
- 1 foot of soil paved with asphalt concrete.

Cover on the remaining, unpaved portion of the West Site, from top to bottom, is described as:

- 2 feet of soil cover,
- 6 inches of asphalt street grindings,
- 2 feet of concrete and asphalt rubble, and
- 6 inches of soil cover.

1.5.2 Subsurface Conditions

In February 2016, SCS Engineers advanced a hollow-stem auger (HSA) boring to a depth of 55 feet to install piezometer PZ-4 near the proposed trail alignment within the West Site, a short distance south of A Street approximately 650 feet west-northwest of the intersection of A Street and 28th Street. Subsurface conditions were described as 3 feet of silty clay underlain by waste of unspecified content with sand and fine gravel to a depth of 35 feet. The waste was underlain by sand and gravelly sand.

DRAFT

In 2014, Langan Treadwell Rollo, Inc. (Langan) performed geotechnical investigation for improvements to Sutter's Landing Park and presented their findings in a report dated December 29, 2014. Langan's boring TR-4 was advanced in the West Site approximately 500 feet north of the proposed trail alignment, on the west side of 28th Street approximately 500 feet north of the intersection of 28th Street and McKinley Village Way. The boring log indicates that Langan encountered a pavement section at the ground surface, which was underlain by gravel fill to a depth of approximately 3.5 feet. A clay layer (with an estimated hydraulic conductivity of 5E-07 centimeters per second [cm/s]) was encountered from approximately 3.5 to 5.0 feet below the ground surface, and was underlain by fill (gravel and sandy silt) to a depth of approximately 9.5 feet. Beneath the fill, Langan encountered landfill debris to a depth of 36 feet. The landfill debris is described as generally consisting of concrete, brick, asphalt, wood, plastic, glass, paper, and metal fragments. Landfill gas probes 127 and 128 are located in this vicinity.

Callender Associates (2008) identified that differential settlement is occurring at the West Site, as evidenced by depressions in the existing asphalt pavement. Further discussion of landfill cover and West Site predicted settlement is provided in the *Feasibility Study for Sutter's Landing Park* (Callander Associates, et al., 2005). SCS Engineers prepared topographic surveys and iso-settlement maps for the landfill as described in their *Settlement Analysis – Iso-settlement Map 2018-2022* (May 27, 2022).

1.5.3 Post Closure Land Use Plan

On behalf of the City, Callander Associates and Treadwell & Rollo, Inc. prepared an *Amendment to Post Closure Land Use Plan for Sutters Landing Park* (July 21, 2008) to identify design and construction methods for park improvements, including a trail, that address Title 27 requirements for post-closure land use, including preservation of the landfill cover. Post-closure land use requirements are set forth in Title 27 of the California Code of Regulations (CCR), Division 2, Subdivision 1, Chapter 3, Subchapter 5, Section 21190. The applicable provisions are summarized in this QA Plan.

1.5.4 Landfill Closure Documents

Calendar Associates (2008) lists the following closure documents for the landfill.

- 1986 Closure Plan – Final Report
- 1988 Closure Plan Update to Final 1986 Report
- 1989 Landfill Closure Plan
- 1991 Final Closure & Post Closure Plan Revised
- 1993 Final Closure Plan Amendment & Post Closure Maintenance Plan Amendment

DRAFT

- 1995 Final Closure Plan Amendment #2
- 1995 Final Post Closure Maintenance Plan Amendment #2
- 2003 Closure Plan Amendment Update

DRAFT

2.0 QA PROCEDURES

The geotechnical investigation invasive activities will employ the following QA procedures.

2.1 QA Coordination

2.1.1 Underground Utilities

If exploration deeper than two feet is proposed in the future, Geocon will mark the proposed boring locations in the field and will contact Underground Service Alert a minimum of 48 hours prior to the investigation, as required by law. Underground Service Alert will notify utility companies of the proposed borings so that they can mark their underground utilities prior to Geocon's exploration.

2.1.2 Pre-investigation Meeting

Geocon will hold a pre-investigation meeting prior to the proposed investigation. The meeting and investigation will be scheduled at a time mutually acceptable to the LEA, Owner, and QA Manager. The meeting will be documented by the QA Manager/Monitor. The LEA, CalRecycle, and CRWQCB will be invited although their participation is not mandatory. The purpose of the pre-investigation meeting will be to:

- address questions regarding the scope of work;
- discuss underground utility locations in the vicinity of the proposed borings;
- discuss lines of communication and authority;
- review boring abandonment and final cover preservation procedures;
- establish a procedures for notification of deficiencies, nonconformances, and correction of nonconformances;
- inspect the work area, and
- address any concerns of the state or local agencies.

2.1.3 Lines of Communication

The QA Monitor will be the onsite representative and will be responsible for communication with the QA Manager. The QA Manager will be the liaison between the Owner, LEA, and QA Monitor.

DRAFT

2.1.4 Problem Resolution Procedures

The QA Monitor is to notify the QA Manager, Owner, and LEA immediately if damage to the landfill cover is suspected. The Owner or LEA may require additional corrective actions for final cover repair.

2.2 Specific QA Tasks

No exploration deeper than two feet is currently proposed. If exploration to depths exceeding two feet is proposed in the future, the following QA tasks will be performed.

2.2.1 Logging of Exploratory Borings

Borings, if proposed in the future, shall be logged by the field engineer or geologist following the Unified Soil Classification System (USCS), including, if encountered, the depth interval and description of fill materials, liner materials, and waste materials.

2.2.2 Boring Abandonment

All exploratory borings deeper than two feet are to be abandoned by backfill with granular bentonite pellets. The pellets are to be placed dry in lifts (layers) not exceeding two feet, and the surface of each lift is to be tamped with a probe. The bentonite pellets are to be hydrated with clean water upon completion of the backfill.

2.2.3 Final Cover Repair

If the final landfill cover is damaged during the invasive activities in excess of a three-inch-diameter hand auger boring, the final cover is to be repaired in kind, in accordance with Section 5.1, *Landfill Cap*, of the *Sutter's Landing Park Feasibility Study* (Callander Associates, et al., 2005). The QA Monitor is to locate and describe all repairs in the daily summary report. Repair procedures depend on the extents/depth of the damage to the existing cap, which is to include, from bottom to top:

- Foundation soil (minimum 2 feet thick) over the waste and below the low permeability layer;
- Low-permeability (maximum 1E-06 cm/s) clay (minimum one foot thick) over the foundation layer;
- Clean cover soil (minimum one foot thick) over the low-permeability layer (capable of sustaining vegetation in landscape areas).

All repairs are to be observed by the QA Monitor and accepted by the QA Manager prior to the post-construction inspection.

DRAFT

2.3 Soil Management Procedures

Callander Associates (2008) prepared a soil management plan for construction activities at Sutter's Landing Park, including the following components that are pertinent to the proposed geotechnical investigation. Soil sample collection and laboratory analysis performed by others identified soil at the landfill with detectable concentrations of volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), polynuclear aromatic hydrocarbons, and slightly elevated concentrations of arsenic, chromium, cadmium, and zinc. Potential hazards include:

- potential chemical hazards imported to the site in landfill refuse;
- landfill gas (LFG) that may accumulate at the site; and
- miscellaneous drummed contaminants, household chemicals, and industrial chemicals in the landfill refuse.

Investigation activities could potentially expose workers and future park users to hazardous conditions associated with soil or waste materials containing elevated concentrations of soil contaminants. The following procedures are intended to manage worker and public exposure to common soil contaminants such as petroleum hydrocarbons, VOCs, SVOCs, organochlorine pesticides (OCPs), and heavy metals, and landfill gas constituents, including methane and VOCs.

The procedures described below should be used to minimize exposure to existing site soil or waste through prevention of fugitive dust emissions and soil management.

DRAFT

2.3.1 Fugitive Dust Mitigation

Dust will be controlled by application of a water spray. The amount of water applied will be the minimum amount required to control dust without creating run-off. Visual dust monitoring will be conducted during all activities impacting existing site soil or waste. Dust control measures include wetting of soil to be disturbed and restricting speeds of vehicles in unpaved areas to five to ten miles per hour. If visible airborne dust is observed, the QA Monitor will recommend additional dust control measures such as additional wetting of soil.

2.3.2 Air Monitoring

Soil and waste at the site may contain LFG (methane and VOCs), petroleum hydrocarbons, and heavy metals, which may require procedures to prevent risk to the safety and health of workers. Considering that the geotechnical investigation will generally not expose landfill refuse, the primary concerns are:

- contaminants in near-surface soil, and
- LFG that may present an explosive hazard or an oxygen deficient atmosphere in confined spaces or areas.

Air monitoring may be necessary if exploration deeper than two feet is proposed in the future. If exploration depths are to exceed two feet, a combustible gas/oxygen indicator will be used during investigation activities where the presence of flammable vapors/gases or oxygen deficient/enriched atmospheres is suspected. The combustible gas/oxygen indicator (MSA 261, 360, 361, or equivalent) shall be capable of detecting and indicating flammable vapor or gas concentrations of zero percent to 100 percent of the lower explosive limit (LEL). Oxygen shall be measured within a range of zero percent to 25 percent by volume. The meter shall be calibrated to a known concentration of combustible gas, per the instrument manufacturer's instructions prior to use at the site. Calibration shall be repeated at the frequency recommended by the manufacturer.

2.3.3 Waste Handling and Disposal Requirements

Cuttings are to be contained and disposed of appropriately. If landfill waste is encountered in cuttings, the waste is to be handled as follows:

1. Place landfill waste in a sealed, labeled drum or container that is secure and not accessible to the public.
2. Characterize the waste by laboratory analysis including but not limited to:
    a. total petroleum hydrocarbons (TPH) in the gasoline, diesel, and motor oil ranges by USEPA Methods 8260B/8015M;
    b. volatile organic compounds (VOC) by USEPA Method 8260B;
    c. semi-volatile organic compounds (SVOC) by USEPA Method 8270C; and
    d. organochlorine pesticides by USEPA Method 8081;
    e. polychlorinated biphenyls (PCB) by USEPA Method 8082; and
    f. Title 22 (CAM 17) metals by United States Environmental Protection Agency (USEPA) Methods 6000/7000).
3. Dispose of the waste off-site at a State of California-licensed disposal facility approved by the Owner and QA Manager in compliance with local, state, and federal regulations.

DRAFT

2.4 Landfill Hazards and Health and Safety Planning

A site-specific health and safety plan (HSP) is required to address Cal-OSHA regulations in Title 8 of the California Code of Regulations (8 CCR), including but not limited to:

- Injury and illness prevention program (8CCR 1509 and 8 CCR 3203)
- Hazardous waste operations and emergency response (8 CCR 5192)
- Hazard communication (8 CCR 5194)
- Personal protective equipment (8 CCR Article 3 and 8 CCR Article 1)
- Respiratory protective equipment (8 CCR 5192)
- Control of noise exposure (8 CCR Article 105)
- Excavations (8 CCR 1504 and 8 CCR Article 6)
- Fire prevention and suppression procedures (8 CCR 4848)
- Portable fire extinguishers (8 CCR 6151)

2.4.1 Personal Protective Equipment

Geocon personnel and visitors to the geotechnical investigation area shall be provided with hard hats and safety glasses with rigid side shields. This equipment shall be worn at all times when in work areas. Leather, steel-toed boots shall be worn by all employees on the work site. Appropriate hand protection shall be provided to employees as necessary based on work activity. All other personal protective equipment (PPE) identified in the HSP shall be provided.

2.4.2 Hazard Communication

Requirements of the Cal-OSHA Hazard Communication standard (8 CCR 5194) are applicable to the proposed geotechnical investigation. No hazardous materials are to be brought onto the jobsite.

2.4.3 Work on Landfill Sites

As applicable, work on the site will be conducted under Cal-OSHA regulations due to the presence of landfill contaminants as identified above in Section 2.3. Soil-disturbing activities or excavation of waste where there is potential for contact with contaminants shall be performed in accordance with Cal-OSHA, 8 CCR 5192, Hazardous Waste Operations and Emergency Response (HazWOPER) regulations and Cal-OSHA, 8 CCR 1529, asbestos regulations, if applicable.

DRAFT

2.4.4 Certified Industrial Hygienist

A Certified Industrial Hygienist (CIH), certified by the American Board of Industrial Hygiene, shall provide professional health and safety services to the project. The CIH shall have at least two years of experience in the development and implementation of a HSP for site operations similar to those anticipated for this project. The CIH shall prepare a HSP covering site activities outlined in this QA Plan. The HSP shall evaluate chemical, physical, and other hazards anticipated on the site and provide details for specific control measures to be used to maintain worker and community health and safety. The HSP shall present safety procedures to be followed by employees and subcontractors during potentially hazardous site activities. Site workers involved in activities covered by the HSP shall sign a statement that they have read and understand the HSP requirements. A copy of the HSP shall be accessible at the jobsite during the investigation.

2.4.5 Daily Report

The QA Monitor is to document daily invasive activities, boring abandonment, and cover repairs (if needed) in a daily field log. The QA Manager is to summarize the activities and document compliance with this QA Plan in a QA Report. A daily log is attached.

The daily log will be used to summarize the work performed during that day. Information logged will include an estimate of temperature, weather conditions and rainfall within the last 24 hours. Temperature, rainfall and wind must be estimated in appropriate units (i.e., inches, degrees, and mph). The log must also contain the following information as applicable to the work being performed:

- global positioning system (GPS) coordinates and photographs of exploratory boring locations;
- equipment and personnel working;
- summary of the work performed and boring abandonment materials and methods;
- documentation of deficiencies noted or corrected, clarification provided, questions asked, and information provided;
- meeting minutes; and
- subcontractors and visitors present.

2.4.6 QA Report

The QA Report is to document compliance with this QA Plan and is to be signed and stamped by the QA Manager, a California-licensed engineer experienced with landfill construction, testing, and repair.

JOB HAZARD ANALYSIS

Project #:	Task #:	Project Name:	Date:
S2715-05-02		Two Rivers Trail	
Project Manager:	**Representative:**	**Project Location:**	
		28th St Landfill, Sacramento, California	

Activity:
Geotechnical investigation including subsurface investigation and soil sample collection

MINIMUM REQUIRED PERSONAL PROTECTIVE EQUIPMENT AND TRAINING (SEE ACTIONS FOR TASK-SPECIFIC REQUIREMENTS)

☒ WORK BOOTS ☒ HARD HAT ☒ SAFETY GLASSES ☒ LEVEL "D" PPE ☒ HEARING PROTECTION (as needed)	☒ GLOVES, leather (as needed) ☒ GLOVES. nitrile (sampling) ☒ FIELD SAFETY TRAINED ☒ FIRST AID/CPR TRAINED	☒ FIRST AID KIT, EYEWASH, FIRE EXTINGUISHER ON VEHICLE ☒ DEFFENSIVE DRIVING TECHNIQUES ☒ INFORM SUPERVISOR OF ANY WORK LIMITATIONS	CODE OF SAFE PRACTICES ☐ ENGINEERING TECHNICIANS ☐ LABORATORY TECHNICIANS ☒ ENGINEERS/GEOLOGISTS

List the hazards:
Heavy equipment, excavations, slip trip falls, vehicle traffic, metals in soil/dust, snakes, insects, electrical, sun and heat exposure.

TASK	HAZARDS	ACTIONS
Drive to and from Site	• Vehicle Traffic • Road Obstructions • Off paved road driving – combustible dry grass, muddy road, poor visibility	• Use Smith Driving techniques • Drive on paved road and avoid going off road • If necessary to drive off road, stay out of tall dry grass • Avoid slopes in excess of 30 degrees
Park vehicle	• Obstructions in road • Vehicle traffic • Vehicle fire • Possible Snow – do not visit if snow/ice on road	• Park using "Pull through" Smith Driving technique • Note the location of gates, steps, bollards, and uneven ground • Establish safety zone around vehicle using cones. • Park vehicle in manner to protect work zone from oncoming traffic • Park vehicle away from dry grass
Geotechnical Investigation	• Chemical hazards associated with exposure to lead in soil / soil dust (inhalation, dermal contact, incidental ingestion) • Slip, trips, falls • Biological Hazards • Heavy equipment, haul roads and industrial equipment • Excavations • Sun and heat exposure	• Wear Work boots • Do not contact soil or soil dust • Do not eat or smoke in the work zone, and use proper personal decontamination when exiting work zone • Keep eyes focused on walking surfaces • Be aware of heavy equipment and stay away • Avoid walking on steep terrain when possible • Watch for insects and poison oak • Use TecNu or equivalent if poison oak contacted • Wear long sleeves or coverall to limit exposure to poison oak, sun and soil dust • Watch for snakes • Wear light colored clothing and check for ticks often

DRAFT

GEOCON

JOB HAZARD ANALYSIS

List the hazards:
Heavy equipment, excavations, slip trip falls, vehicle traffic, metals in soil/dust, snakes, insects, electrical, sun and heat exposure.

TASK	HAZARDS	ACTIONS
Soil Sampling	• Heavy metals in soil • Heavy equipment • Slip, trip, fall • Pinching, cutting with hand tools • Heat and sun	• Wear work boots • Do not contact soil or soil dust • Do not eat or smoke in the work zone, and use proper personal decontamination when exiting work zone • Keep eyes focused on walking surfaces • Be aware of heavy equipment and stay away • Avoid walking on steep terrain when possible • Wear leather gloves, and when sampling, nitrile gloves • Replace gloves between sampling events and whenever glove integrity is compromised • Stay hydrated and wear sun protection • Watch your step on uneven surfaces and near excavations • If hazardous or physically taxing, contact project manager, who will initiate additional engineering controls or otherwise modify the sampling event to reduce hazards • Proper training on XRF usage
Communication	• Lack of communication • Equipment / vehicle hazards	• Contact foreman of remediation contractor when arriving at Site and discuss heavy equipment activities and routes • Avoid working around heavy equipment • If sampling involves heavy equipment, stay out of reach of equipment, maintain eye contact with operator and wear bright clothing • Call project manager upon arrival at Site and when leaving Site

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Geocon Consultants, Inc. were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at approximately five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through current. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 1320 feet of the target property.

Summary information obtained is provided in the text of this report.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

EXECUTIVE SUMMARY

TARGET PROPERTY SEARCH RESULTS

The target property was not listed in any of the databases searched by EDR.

DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable ") government records either on the target property or within the search radius around the target property for the following databases:

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL ---------- National Priority List
Proposed NPL ---------- Proposed National Priority List Sites
NPL LIENS ---------- Federal Superfund Liens

Lists of Federal Delisted NPL sites

Delisted NPL ---------- National Priority List Deletions

Lists of Federal sites subject to CERCLA removals and CERCLA orders

FEDERAL FACILITY ---------- Federal Facility Site Information listing
SEMS ---------- Superfund Enterprise Management System

Lists of Federal RCRA facilities undergoing Corrective Action

CORRACTS ---------- Corrective Action Report

Lists of Federal RCRA TSD facilities

RCRA-TSDF ---------- RCRA - Treatment, Storage and Disposal

Lists of Federal RCRA generators

RCRA-VSQG ---------- RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

Federal institutional controls / engineering controls registries

LUCIS ---------- Land Use Control Information System
US ENG CONTROLS ---------- Engineering Controls Sites List
US INST CONTROLS ---------- Institutional Controls Sites List

Federal ERNS list

ERNS ---------- Emergency Response Notification System

Lists of state and tribal leaking storage tanks

INDIAN LUST - Leaking Underground Storage Tanks on Indian Land

Lists of state and tribal registered storage tanks

FEMA UST - Underground Storage Tank Listing
INDIAN UST - Underground Storage Tanks on Indian Land

Lists of state and tribal voluntary cleanup sites

INDIAN VCP - Voluntary Cleanup Priority Listing

Lists of state and tribal brownfield sites

BROWNFIELDS - Considered Brownfieds Sites Listing

ADDITIONAL ENVIRONMENTAL RECORDS

Local Lists of Landfill / Solid Waste Disposal Sites

SWRCY - Recycler Database
INDIAN ODI - Report on the Status of Open Dumps on Indian Lands
DEBRIS REGION 9 - Torres Martinez Reservation Illegal Dump Site Locations
ODI - Open Dump Inventory
IHS OPEN DUMPS - Open Dumps on Indian Land

Local Lists of Hazardous waste / Contaminated Sites

US HIST CDL - Delisted National Clandestine Laboratory Register
SCH - School Property Evaluation Program
CDL - Clandestine Drug Labs
Toxic Pits - Toxic Pits Cleanup Act Sites
US CDL - National Clandestine Laboratory Register

Local Land Records

LIENS - Environmental Liens Listing
LIENS 2 - CERCLA Lien Information

Records of Emergency Release Reports

HMIRS - Hazardous Materials Information Reporting System
CHMIRS - California Hazardous Material Incident Report System
LDS - Land Disposal Sites Listing
MCS - Military Cleanup Sites Listing
SPILLS 90 - SPILLS 90 data from FirstSearch

Other Ascertainable Records

DOD - Department of Defense Sites
SCRD DRYCLEANERS - State Coalition for Remediation of Drycleaners Listing
US FIN ASSUR - Financial Assurance Information

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 12/19/2024 has revealed that there

are 3 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

Lists of Federal RCRA generators

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 02/17/2025 has revealed that there are 6 RCRA-LQG sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 02/17/2025 has revealed that there are 13 RCRA-SQG sites within approximately 0.25 miles of the target property.

Lists of state- and tribal (Superfund) equivalent sites

RESPONSE: Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

A review of the RESPONSE list, as provided by EDR, has revealed that there are 3 RESPONSE sites within approximately 1 mile of the target property.

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 01/21/2025 has revealed that there are 30 ENVIROSTOR sites within approximately 1 mile of the target property.

Lists of state and tribal landfills and solid waste disposal facilities

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database.

A review of the SWF/LF list, as provided by EDR, has revealed that there are 10 SWF/LF sites within approximately 0.5 miles of the target property.

Lists of state and tribal registered storage tanks

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, has revealed that there are 5 UST sites within approximately 0.25 miles of the target property.

Local Lists of Registered Storage Tanks

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 13 SWEEPS UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 02/17/2025 has revealed that there are 75 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

FUDS: The Listing includes locations of Formerly Used Defense Sites Properties where the US Army Corps Of Engineers is actively working or will take necessary cleanup actions.

A review of the FUDS list, as provided by EDR, and dated 10/01/2024 has revealed that there is 1 FUDS site within approximately 1 mile of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
SACRAMENTO SIGNAL DE		NW 1/2 - 1 (0.638 mi.)	BU485	1846

US MINES: Mines Master Index File. The source of this database is the Dept. of Labor, Mine Safety and Health Administration.

A review of the US MINES list, as provided by EDR, has revealed that there is 1 US MINES site within approximately 0.25 miles of the target property.

FINDS: The Facility Index System contains both facility information and "pointers" to other sources of information that contain more detail. These include: RCRIS; Permit Compliance System (PCS); Aerometric Information Retrieval System (AIRS); FATES (FIFRA [Federal Insecticide Fungicide Rodenticide Act] and TSCA Enforcement System, FTTS [FIFRA/TSCA Tracking System]; CERCLIS; DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes); Federal Underground Injection Control (FURS); Federal Reporting Data System (FRDS); Surface Impoundments (SIA); TSCA Chemicals in Commerce Information System (CICS); PADS; RCRA-J (medical waste transporters/disposers); TRIS; and TSCA. The source of this database is the U.S. EPA/NTIS.

A review of the FINDS list, as provided by EDR, and dated 11/11/2024 has revealed that there are 6 FINDS sites within approximately 0.001 miles of the target property.

EXECUTIVE SUMMARY

PFAS ECHO: Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

A review of the PFAS ECHO list, as provided by EDR, and dated 12/30/2024 has revealed that there are 6 PFAS ECHO sites within approximately 0.25 miles of the target property.

UST FINDER: EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

A review of the UST FINDER list, as provided by EDR, and dated 06/08/2023 has revealed that there are 2 UST FINDER sites within approximately 0.25 miles of the target property.

UST FINDER RELEASE: US EPA's UST Finder data is a national composite of leaking underground storage tanks. This data contains information about, and locations of, leaking underground storage tanks. Data was collected from state sources and standardized into a national profile by EPA's Office of Underground Storage Tanks, Office of Research and Development, and the Association of State and Territorial Solid Waste Management Officials.

A review of the UST FINDER RELEASE list, as provided by EDR, and dated 06/08/2023 has revealed that there are 24 UST FINDER RELEASE sites within approximately 0.5 miles of the target property.

E MANIFEST: EPA established a national system for tracking hazardous waste shipments electronically. This system, known as ?e-Manifest,? will modernize the nation?s cradle-to-grave hazardous waste tracking process while saving valuable time, resources, and dollars for industry and states.

A review of the E MANIFEST list, as provided by EDR, and dated 02/17/2025 has revealed that there are 61 E MANIFEST sites within approximately 0.25 miles of the target property.

HWTS: DTSC maintains the Hazardous Waste Tracking System that stores ID number information since the early 1980s and manifest data since 1993. The system collects both manifest copies from the generator and destination facility.

A review of the HWTS list, as provided by EDR, and dated 07/19/2024 has revealed that there are 16 HWTS sites within approximately 0.001 miles of the target property.

HAZNET: The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets are not included at the present time. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method. The source is the Department of Toxic Substance Control is the agency. This database begins with calendar year 1993.

A review of the HAZNET list, as provided by EDR, and dated 12/31/2024 has revealed that there are 8 HAZNET sites within approximately 0.001 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 26 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 2 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

EDR RECOVERED GOVERNMENT ARCHIVES

Exclusive Recovered Govt. Archives

RGA LUST: The EDR Recovered Government Archive Leaking Underground Storage Tank database provides a list of LUST incidents derived from historical databases and includes many records that no longer appear in current government lists. Compiled from Records formerly available from the State Water Resources Control Board in California.

A review of the RGA LUST list, as provided by EDR, has revealed that there are 2 RGA LUST sites

within approximately 0.001 miles of the target property.

Environmental Interest/Information System:
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release

Environmental Interest/Information System:
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

BELL MARINE (Continued) **1025818025**

Environmental Interest/Information System:
The National Pollutant Discharge Elimination System (NPDES) module of the Integrated Compliance Information System (ICIS). Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Completed Document Type:	Pre-HARP Form
Completed Date:	09/13/2021
Comments:	Pre-HARP for Twin Rivers field activities. 09/13/2021-09/12/2022
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Voluntary Cleanup Consultation
Completed Date:	09/09/2021
Comments:	Communicate with DTSC OLC regarding path forward to expedite remediation of NW portion of slated for transfer to Regional Transit.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Project Management
Completed Date:	08/10/2021
Comments:	DTSC determined that DTSC does not need to provide SHRA with insurance information under its agreement with SHRA and that DTSC is not a vendor of SHRA and no additional contract is required. SHRA concurred in an email dated August 10, 2021.
Completed Area Name:	PROJECT WIDE

TWIN RIVERS TRIANGLE SITE (Continued) **S125431920**

Completed Sub Area Name: Not reported
Completed Document Type: Annual Oversight Cost Estimate
Completed Date: 09/22/2021
Comments: Cost Estimate Letter for FY 21/22 sent to SHRA.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Annual Oversight Cost Estimate
Completed Date: 06/02/2021
Comments: Amended cost estimate sent to Project Proponent on June 2, 2021.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Annual Oversight Cost Estimate
Completed Date: 05/19/2023
Comments: Letter amending cost estimate for oversight of site remediation.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Correspondence
Completed Date: 12/28/2022
Comments: DTSC has reviewed RTCs for comments provided on Response Action Letter. DTSC's letter provided HERO comments on soil intake for construction workers and guidance for next steps for remediation of Light Rail Property that includes Proponent proposal to change cleanup goal for lead from 80 mg/kg to 500 mg/kg.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Correspondence
Completed Date: 03/25/2023
Comments: SHRA provided a map of stockpiles

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Pre-HARP Form
Completed Date: 09/21/2022
Comments: Pre-HARP for Twin Rivers. Signed by Lora Jameson on September 21, 2022.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Annual Oversight Cost Estimate
Completed Date: 09/29/2022
Comments: Annual cost estimate letter for fiscal year 22/23.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Correspondence
Completed Date: 09/23/2021
Comments: Five of the six parcels of which the Twin Rivers Triangle site consisted were consolidated into two parcels. One of the parcels is the Light Rail Property (LRP). SHRA determined that the LRP should be separated from the remainder of the Site in order to expedite remediation to help expedite construction of the light rail station.

Completed Area Name: PROJECT WIDE

TWIN RIVERS TRIANGLE SITE (Continued) **S125431920**

Completed Sub Area Name: Not reported
Completed Document Type: CEQA - Initial Study/ Mitigated Neg. Dec. (MND)
Completed Date: 04/27/2023
Comments: The Revised Addendum again concluded there is no new information of substantial importance showing that changes to the residential development project and implementation of the ESD would have one or more significant effects not previously discussed or that any previously examined significant effects would be substantially more severe than significant effects shown in the previous environmental documents.

Completed Date: 08/24/2022
Comments: DTSC's GSU and DTSC staff provided oversight for soil gas sampling activities on August 24, 2022.

Completed Area Name: Light Rail Property
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 03/14/2023
Comments: GSU conducted a site visit on 3/14/2023. See report with photos and narrative.

Completed Area Name: Light Rail Property
Completed Sub Area Name: Not reported
Completed Document Type: Technical Workplan
Completed Date: 07/27/2022
Comments: DTSC review of SWPPP not necessary.

Completed Area Name: Light Rail Property
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 04/23/2024
Comments: Revised final RACR accepted as final on 04.23.2024. The comment as part of the conditional approval related to storm water infiltration will be addressed in a separate deliverable.

Completed Area Name: Light Rail Property
Completed Sub Area Name: Not reported
Completed Document Type: Health & Safety Plan

TWIN RIVERS TRIANGLE SITE (Continued) **S125431920**

Completed Date: 09/09/2022
Comments: DTSC accepted SSHP.

Completed Area Name: Light Rail Property
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Workplan w/ESD
Completed Date: 04/20/2023
Comments: Final ESD meets DTSC criteria for approval. ESD Approval Letter includes comments for project moving forward.

Completed Area Name: Light Rail Property
Completed Sub Area Name: Not reported
Completed Document Type: Other Report
Completed Date: 10/10/2022
Comments: Potentially two septic tanks discovered in Light Rail Property during remedial activities.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Workplan
Completed Date: 08/22/2022
Comments: All of DTSC's comments for the SG Work Plan have been addressed and the final document meets DTSC's criteria.

Completed Area Name: Light Rail Property
Completed Sub Area Name: Not reported
Completed Document Type: Other Report
Completed Date: 11/14/2022
Comments: DTSC review of soil stockpile not necessary.

Completed Area Name: Light Rail Property
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 03/28/2023
Comments: Email notification to Project Proponent and Consultant that details stockpile cover issue.

Completed Area Name: Light Rail Property
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Workplan
Completed Date: 01/18/2023
Comments: DTSC Approved the Septic Tank Sampling WP.

Completed Area Name: Light Rail Property
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 11/04/2022
Comments: DTSC commented on discovery of the presence of two assumed septic tanks discovered while performing removal activities within Light Rail Property.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 03/29/2022
Comments: DTSC has determined that site characterization is adequate to move project forward to Response Plan Phase for Light Rail Property.

TWIN RIVERS TRIANGLE SITE (Continued) **S125431920**

Additional characterization is required for soil gas VOCs for the entirety of the Site and for organochlorine pesticides for the remaining portion of the Site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Workplan
Completed Date: 07/30/2020
Comments: Document met DTSC criteria. Project proponent has committed to address remaining comments in subsequent document.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Public Notice
Completed Date: 05/02/2023
Comments: Public Notice for ESD was published in Sacramento Bee newspaper on May 2, 2023.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Workplan
Completed Date: 09/01/2021
Comments: DTSC conditionally approved

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 05/11/2023
Comments: DTSC approved the Soil Gas Report. The Report concluded that characterization of soil gas is complete enough to move forward to the remedy, but additional characterization is necessary to complete characterization of offsite soil gas. DTSC agrees with this conclusion and reiterated in the approval letter.

Completed Area Name: Light Rail Property
Completed Sub Area Name: Not reported
Completed Document Type: Other Report
Completed Date: 03/30/2023
Comments: DTSC submitted letter that accepted Letter Report with directions and requested that air monitoring information is summarized in Completion Report.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 10/07/2021
Comments: GSU Site Visit Report completed and submitted.

Completed Area Name: Light Rail Property
Completed Sub Area Name: Not reported
Completed Document Type: Work Notice
Completed Date: 09/16/2022
Comments: Start Work Notice for remediation of Light Rail Property.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Workplan

TWIN RIVERS TRIANGLE SITE (Continued) **S125431920**

Completed Date: 02/02/2023
Comments: OCP Step Out Sampling WP meets DTSC criteria and has been approved.

Completed Area Name: Light Rail Property
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 04/03/2023
Comments: DTSC approves the Site Characterization Report. The approval letter requested a search for dry wells and/or leach fields during removal of tanks and removal of soil in forthcoming remedial activities.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Correspondence
Completed Date: 08/15/2023

Completed Sub Area Name:	Not reported
Completed Document Type:	Fact Sheets
Completed Date:	07/12/2022
Comments:	Community Update finalized for remediation of Light Rail Property.

TWIN RIVERS TRIANGLE SITE (Continued) **S125431920**

Completed Area Name: Light Rail Property
Completed Sub Area Name: Not reported
Completed Document Type: Community Profile
Completed Date: 03/24/2022
Comments: Community Profile finalized and signed by Kerry Klosterman.

Completed Area Name: Light Rail Property
Completed Sub Area Name: Not reported
Completed Document Type: Technical Workplan
Completed Date: 07/27/2023
Comments: PCB Sampling WP meets DTSC criteria for approval as final.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Pre-HARP Form
Completed Date: 09/13/2021
Comments: Pre-HARP for Twin Rivers field activities. 09/13/2021-09/12/2022

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Voluntary Cleanup Consultation
Completed Date: 09/09/2021
Comments: Communicate with DTSC OLC regarding path forward to expedite remediation of NW portion of slated for transfer to Regional Transit.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Project Management
Completed Date: 08/10/2021
Comments: DTSC determined that DTSC does not need to provide SHRA with insurance information under its agreement with SHRA and that DTSC is not a vendor of SHRA and no additional contract is required. SHRA concurred in an email dated August 10, 2021.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Annual Oversight Cost Estimate
Completed Date: 09/22/2021
Comments: Cost Estimate Letter for FY 21/22 sent to SHRA.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Annual Oversight Cost Estimate
Completed Date: 06/02/2021
Comments: Amended cost estimate sent to Project Proponent on June 2, 2021.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Annual Oversight Cost Estimate
Completed Date: 05/19/2023
Comments: Letter amending cost estimate for oversight of site remediation.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Correspondence
Completed Date: 12/28/2022
Comments: DTSC has reviewed RTCs for comments provided on Response Action

TWIN RIVERS TRIANGLE SITE (Continued) **S125431920**

Letter. DTSC's letter provided HERO comments on soil intake for construction workers and guidance for next steps for remediation of Light Rail Property that includes Proponent proposal to change cleanup goal for lead from 80 mg/kg to 500 mg/kg.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Correspondence
Completed Date: 03/25/2023
Comments: SHRA provided a map of stockpiles

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Pre-HARP Form
Completed Date: 09/21/2022
Comments: Pre-HARP for Twin Rivers. Signed by Lora Jameson on September 21, 2022.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Annual Oversight Cost Estimate
Completed Date: 09/29/2022
Comments: Annual cost estimate letter for fiscal year 22/23.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Correspondence
Completed Date: 09/23/2021
Comments: Five of the six parcels of which the Twin Rivers Triangle site consisted were consolidated into two parcels. One of the parcels is the Light Rail Property (LRP). SHRA determined that the LRP should be separated from the remainder of the Site in order to expedite remediation to help expedite construction of the light rail station.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: CEQA - Initial Study/ Mitigated Neg. Dec. (MND)
Completed Date: 04/27/2023
Comments: The Revised Addendum again concluded there is no new information of substantial importance showing that changes to the residential development project and implementation of the ESD would have one or more significant effects not previously discussed or that any previously examined significant effects would be substantially more severe than significant effects shown in the previous environmental documents.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported

Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 03/14/2023
Comments: GSU conducted a site visit on 3/14/2023. See report with photos and narrative.

Completed Area Name: Light Rail Property
Completed Sub Area Name: Not reported
Completed Document Type: Technical Workplan
Completed Date: 07/27/2022
Comments: DTSC review of SWPPP not necessary.

Completed Area Name: Light Rail Property
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 04/23/2024
Comments: Revised final RACR accepted as final on 04.23.2024. The comment as part of the conditional approval related to storm water infiltration will be addressed in a separate deliverable.

Completed Area Name: Light Rail Property
Completed Sub Area Name: Not reported
Completed Document Type: Health & Safety Plan
Completed Date: 09/09/2022
Comments: DTSC accepted SSHP.

Completed Area Name: Light Rail Property
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Workplan w/ESD
Completed Date: 04/20/2023
Comments: Final ESD meets DTSC criteria for approval. ESD Approval Letter includes comments for project moving forward.

Completed Area Name: Light Rail Property
Completed Sub Area Name: Not reported
Completed Document Type: Other Report
Completed Date: 10/10/2022
Comments: Potentially two septic tanks discovered in Light Rail Property during remedial activities.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Workplan
Completed Date: 08/22/2022
Comments: All of DTSC's comments for the SG Work Plan have been addressed and

TWIN RIVERS TRIANGLE SITE (Continued) **S125431920**

the final document meets DTSC's criteria.

Completed Area Name: Light Rail Property
Completed Sub Area Name: Not reported
Completed Document Type: Other Report
Completed Date: 11/14/2022
Comments: DTSC review of soil stockpile not necessary.

Completed Area Name: Light Rail Property
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 03/28/2023
Comments: Email notification to Project Proponent and Consultant that details stockpile cover issue.

Completed Area Name: Light Rail Property
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Workplan
Completed Date: 01/18/2023
Comments: DTSC Approved the Septic Tank Sampling WP.

Completed Area Name: Light Rail Property
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 11/04/2022
Comments: DTSC commented on discovery of the presence of two assumed septic tanks discovered while performing removal activities within Light Rail Property.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 03/29/2022
Comments: DTSC has determined that site characterization is adequate to move project forward to Response Plan Phase for Light Rail Property. Additional characterization is required for soil gas VOCs for the entirety of the Site and for organochlorine pesticides for the remaining portion of the Site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Workplan
Completed Date: 07/30/2020
Comments: Document met DTSC criteria. Project proponent has committed to address remaining comments in subsequent document.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Public Notice
Completed Date: 05/02/2023
Comments: Public Notice for ESD was published in Sacramento Bee newspaper on May 2, 2023.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Workplan
Completed Date: 09/01/2021

TWIN RIVERS TRIANGLE SITE (Continued) **S125431920**

Comments: DTSC conditionally approved

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 05/11/2023
Comments: DTSC approved the Soil Gas Report. The Report concluded that characterization of soil gas is complete enough to move forward to the remedy, but additional characterization is necessary to complete characterization of offsite soil gas. DTSC agrees with this conclusion and reiterated in the approval letter.

Completed Area Name: Light Rail Property
Completed Sub Area Name: Not reported
Completed Document Type: Other Report
Completed Date: 03/30/2023
Comments: DTSC submitted letter that accepted Letter Report with directions and requested that air monitoring information is summarized in Completion Report.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 10/07/2021
Comments: GSU Site Visit Report completed and submitted.

Completed Area Name: Light Rail Property
Completed Sub Area Name: Not reported
Completed Document Type: Work Notice
Completed Date: 09/16/2022
Comments: Start Work Notice for remediation of Light Rail Property.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Workplan
Completed Date: 02/02/2023
Comments: OCP Step Out Sampling WP meets DTSC criteria and has been approved.

Completed Area Name: Light Rail Property
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 04/03/2023
Comments: DTSC approves the Site Characterization Report. The approval letter requested a search for dry wells and/or leach fields during removal of tanks and removal of soil in forthcoming remedial activities.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Correspondence
Completed Date: 08/15/2023
Comments: Sent proponent notice of change in PM.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Annual Oversight Cost Estimate
Completed Date: 11/21/2024
Comments: Annual cost estimate letter for FY 24/25 completed.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

City,State,Zip:	SACRAMENTO, CA 95811
Site ID:	138801
CERS ID:	10228477
CERS Description:	Chemical Storage Facilities

Violations:

Site ID:	138801
Site Name:	NORTH VALLEY BODY & PAINT SHOP
Violation Date:	03-08-2021
Citation:	HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)
Violation Description:	Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2)

NORTH VALLEY BODY & PAINT SHOP (Continued) **S111711801**

	The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes:	Returned to compliance on 03/30/2021. Observation: Per KPA consultant documentation reviewed during the site inspection, the facility appears to be a small quantity hazardous waste generator (SQG) and has accumulated hazardous waste on site greater than 180 days. Correction: Dispose of all hazardous wastes that have accumulated on-site for greater than 180 days through a licensed hazardous waste hauler and submit copies of the hazardous waste disposal documentation to Specialist Ryan Artz.
Violation Division:	Sacramento County Env Management Department
Violation Program:	HW
Violation Source:	CERS,
Site ID:	138801
Site Name:	NORTH VALLEY BODY & PAINT SHOP
Violation Date:	03-08-2021
Citation:	22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description:	Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes:	Returned to compliance on 03/23/2021. Observation: A 55 gallon metal drum containing hazardous waste spent paint booth filters observed outside in the yard storage area was missing required hazardous waste labeling. Hazardous waste drums of used oil and waste coolant were observed to be missing required hazardous waste labeling. Several other drums of waste paint booth filters and spent sandpaper had hazardous waste labels that were barely legible. Correction: All hazardous waste accumulation containers (drums) are required to be labeled with a properly completed hazardous waste label. Properly label each of the above noted hazardous waste accumulation containers and submit photo documentation to Specialist Ryan Artz showing violation correction.

NORTH VALLEY BODY & PAINT SHOP (Continued) **S111711801**

	if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes:	OBSERVATION: Two 55gal drums of used paint booth filters, one 55gal drum of waste solvent, and one 55gal drum of waste paint all located in the shop, and one 55gal drum of used oil filters in the yard, and one 55gal drum of paint waste solids were observed either without a label, an accumulation start date or an accumulation start date from 2014, and a manifest/receipt demonstrating disposal within the past 180 days was not available. CORRECTIVE ACTION: Dispose of above listed waste and submit a copy of the manifest/receipt to this department.
Violation Division:	Sacramento County Env Management Department
Violation Program:	HW
Violation Source:	CERS,
Site ID:	138801
Site Name:	NORTH VALLEY BODY & PAINT SHOP
Violation Date:	07-17-2023
Citation:	HSC 6.95 25508.1(a)-(f) - California Health and Safety Code, Chapter 6.95, Section(s) 25508.1(a)-(f)
Violation Description:	Failure to electronically update business plan within 30 days of any one of the following events: A 100 percent or more increase in the quantity of a previously disclosed material. Any handling of a previously undisclosed hazardous materials at or above reportable quantities. A change of business address, business ownership, or business name. A substantial change in the handler's operations that requires modification to any portion of the business plan.
Violation Notes:	Returned to compliance on 09/12/2023. Observation: The primary emergency contact information on the facility HMBP owner/operator sheet and contingency plan were not updated within 30 days of change. Correction: Update the above noted emergency contact information on the facility HMBP and notify EMD Specialist Ryan Artz when this has been corrected.
Violation Division:	Sacramento County Env Management Department
Violation Program:	HMRRP
Violation Source:	CERS,
Site ID:	138801
Site Name:	NORTH VALLEY BODY & PAINT SHOP
Violation Date:	03-08-2021
Citation:	HSC 6.5 25123.3(h)(2) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(2)
Violation Description:	Failure to determine the status of any hazardous waste if a signed copy of the manifest isn t received within 35 days of the date the waste was accepted by the initial transporter and/or to submit an Exception Report to DTSC if a signed copy of the manifest isn t received within 60 days of the date the waste was accepted by the initial transporter.
Violation Notes:	Returned to compliance on 03/09/2021. Observation: The hazardous waste generator (North Valley Body & Paint shop) had not obtained the destination facility signed hazardous waste manifest for the following manifests within 60 days of waste shipment and had not filed an Exception Report with the CA Dept. of Toxic Substances Control (DTSC): #013183248 (4/24/2019) #013183245 (4/19/2019) #012887282 (10/30/2018)

Site Name:	KEN IMLER DIESEL PERFORMANCE
Violation Date:	09-04-2024
Citation:	HSC 6.5 25160(b)(3) - California Health and Safety Code, Chapter 6.5, Section(s) 25160(b)(3)
Violation Description:	Failure to determine the status of any hazardous waste if a signed copy of the manifest isn t received within 35 days of the date the waste was accepted by the initial transporter and/or to submit an Exception Report to DTSC if a signed copy of the manifest isn t received within 45 days of the date the waste was accepted by the initial transporter.
Violation Notes:	Returned to compliance on 09/24/2024. Observation: Waste Generator (Ken Imler Diesel Performance) has not obtained the destination facility signed uniform hazardous waste manifest copy #016056074 (3/4/2024) within 30 days of waste shipment and did not file and manifest exception report with the CA Dept. of Toxic Substances Control (DTSC) when the signed manifest was not received within 45 days of waste shipment. Correction: Obtain the noted manifest destination facility signed copy and submit record to EMD Specialist Ryan Artz, or file Manifest Exception Report with DTSC and 'cc EMD Specialist Ryan Artz.

POWER BRAKE SALES (Continued) **S108753184**

	6.95, Section(s) 25505(a)(4)
Violation Description:	Failure to provide initial and annual training to all employees in safety procedures in the event of a release or threatened release of a hazardous material or failure to document and maintain training records for a minimum of three years.
Violation Notes:	Returned to compliance on 08/11/2021. Observation: Per discussion with business President Sandra Standley, the business has not provided any current hazard communication training to facility staff. An annually documented hazard communication employee training is required to be maintained. Correction: Implement annual hazard communication training for applicable business employees and submit a copy of the training outline to Specialist Ryan Artz.
Violation Division:	Sacramento County Env Management Department
Violation Program:	HMRRP
Violation Source:	CERS,
Site ID:	58329
Site Name:	POWER BRAKE SALES
Violation Date:	03-19-2018
Citation:	HSC 6.95 25505(a)(4) - California Health and Safety Code, Chapter 6.95, Section(s) 25505(a)(4)
Violation Description:	Failure to provide initial and annual training to all employees in safety procedures in the event of a release or threatened release of a hazardous material or failure to document and maintain training records for a minimum of three years.
Violation Notes:	Returned to compliance on 03/26/2018. OBSERVATION:[INITIAL / ANNUAL training documentation for all applicable employees was not available. CORRECTIVE ACTION: Submit documentation to this department demonstrating that employees have received training on safe handling of hazardous materials and the Emergency Response Plan.
Violation Division:	Sacramento County Env Management Department
Violation Program:	HMRRP
Violation Source:	CERS,
Site ID:	58329

Violation Date:	08-03-2021
Citation:	22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description:	Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes:	Returned to compliance on 08/11/2021. Observation: Two container of waste flammable thinner were observed in the shop. One container was not labeled and one container had an illegible hazardous waste label. All hazardous waste accumulation containers are required to be labeled with a properly completed hazardous waste accumulation label. Correction: Properly label each of the above noted hazardous waste accumulation container and submit photo showing violation correction to Specialist Ryan Artz.

Site Name:	POWER BRAKE SALES
Violation Date:	02-23-2015
Citation:	HSC 6.95 25505(a)(4) - California Health and Safety Code, Chapter 6.95, Section(s) 25505(a)(4)
Violation Description:	Failure to provide initial and annual training to all employees in safety procedures in the event of a release or threatened release of a hazardous material or failure to document and maintain training records for a minimum of three years.
Violation Notes:	Returned to compliance on 03/31/2015. OBSERVATION: ANNUAL training documentation for all applicable employees was not available. CORRECTIVE ACTION: Submit documentation to this department demonstrating that employees have received training on safe handling of hazardous materials and the Emergency Response Plan.
Violation Division:	Sacramento County Env Management Department
Violation Program:	HMRRP
Violation Source:	CERS,
Site ID:	58329
Site Name:	POWER BRAKE SALES
Violation Date:	03-19-2018
Citation:	HSC 6.5 Multiple - California Health and Safety Code, Chapter 6.5, Section(s) Multiple
Violation Description:	Hazardous Waste Generator Program - Operations/Maintenance - General
Violation Notes:	Returned to compliance on 04/06/2018. OBSERVATION: One 5gal bucket of waste sand blast material located next to the sand blasting machine was observed with an accumulation start date of 2009 and a manifest/receipt demonstrating disposal within the 180 days was not available. CORRECTIVE ACTION: Dispose of metal sanding waste and submit a copy of the manifest/receipt to this department.
Violation Division:	Sacramento County Env Management Department
Violation Program:	HW
Violation Source:	CERS,

Site Name:	POWER BRAKE SALES
Violation Date:	08-03-2021
Citation:	HSC 6.5 Multiple - California Health and Safety Code, Chapter 6.5, Section(s) Multiple
Violation Description:	Hazardous Waste Generator Program - Operations/Maintenance - General
Violation Notes:	Returned to compliance on 08/30/2021. Observation: The hazardous waste generator (Power Brake Sales) has accumulated spent blast media and waste metal fines (hazardous wastes) greater than 180 days from the

POWER BRAKE SALES (Continued) **S108753184**

point where the facility had generated greater than 100 kilograms of total hazardous waste on-site. A hazardous waste generator that generates less than 100 kilograms of total hazardous waste per month, is required to dispose of all hazardous wastes accumulated on-site within 180 days from the date which the facility has accumulated 100 kilograms. Correction: Dispose of all hazardous waste spent bead blast media/waste metal fines at an authorized hazardous waste disposal point and submit a copy of the disposal documentation to Specialist Ryan Artz.
