EXECUTIVE SUMMARY

The Port of Oakland (Port) is proposing modifications to the Oakland International Airport (OAK or Airport) with the Terminal Modernization and Development Project (Proposed Project) in Oakland, Alameda County, California. The Proposed Project includes modernizing Terminals 1 and 2, consolidating passenger processing functions (e.g., ticketing, baggage check-in, baggage claim, security screening), constructing expanded international arrival facilities, constructing a new terminal, relocating existing cargo and support facilities, and improving the terminal area roadway, parking areas, and support facilities.. OAK is located in the city of Oakland, about 6.5 miles southeast of downtown Oakland in Alameda County along San Francisco Bay. Cities in the immediate vicinity of OAK include Alameda (to the northwest), Oakland (to the north), and San Leandro (to the southeast). Access to OAK is primarily by Interstate Highway 880 (I-880), Hegenberger Road, and 98th Avenue to Bessie Coleman Drive and Airport Drive/Bessie Coleman Drive.

The purpose of the Phase I Environmental Site Assessment (Phase I ESA) was to evaluate and identify, to the extent feasible, whether recognized environmental conditions (REC) exist with respect to areas at OAK where work would be performed as part of the Proposed Project (detailed study areas). The detailed study areas include the following: (1) main central area consisting of Terminals 1 and 2, proposed new and modernized terminal facilities, associated support facilities, several existing and proposed parking lots, Oakland Maintenance Center (OMC) Hangar area, and fuel farm area,; (2) proposed new Maitland Parking Lot in the western area of OAK; (3) proposed new North Field Parking Lot in the northern corner of OAK; and (4) proposed new Golf Course Parking Lot in the eastern corner of OAK. The main central detailed study area including Terminals 1 and 2, associated support facilities and parking lots, OMC Hangar area, and Fuel Farm area is approximately 380 acres in size. The four detailed study areas collectively total approximately 415 acres. Parcels on which the detailed study areas are located are defined as the Subject Property. The Subject Property includes portions of Alameda County Assessor Parcel Numbers (APNs) 42-4540-2-1, 42-4545-1, 42-4404-2, 74-1040-4-2, 42-4404-8, and 42-4525-1-2. The historical use of the Subject Property consists of a reclaimed estuary-marsh and construction of an airport beginning in 1927, with various stages of development at the Airport to the present-day configuration.

The Phase I ESA consisted of a site reconnaissance and a review of environmental regulatory database information, historical aerial photographs, topographic maps, regulatory file review, and a questionnaire completed by a representative of the Port. Northgate completed the Phase I ESA, which was started by HDR|WRECO.

The Alameda County Department of Environmental Health (ACDEH) was contacted to conduct public records file reviews for the Subject Property. Information regarding hazardous materials relative to the Subject Property and adjoining properties were researched on the State Water Resources Control Board GeoTracker database and the California Department of Toxic Substances and Control EnviroStor database. Files for the

Subject Property were identified on the environmental websites reviewed with previous ownership and uses.

This report presents the results of the Phase I ESA, including regulatory records searches, file reviews, historical database reviews, and a site reconnaissance along with our recommendations. Based on the findings of the Phase I ESA, the following table summarizes the RECs that were identified at the Subject Property or adjoining properties and the associated recommended actions:

Summary of RECs and Recommendations

Area	RECs and Potential Sources	Recommended Actions
Hazardous Building Materials		
Main Central Detailed Study Area	Previous studies identified asbestos-containing materials (ACM) and lead based paint (LBP) within the Terminal buildings and OMC Hangar. The OMC Hangar and Terminal 1 planned for demolition at OAK were tested and ACM and LBP were documented.	Structures scheduled for demolition or renovation should be inspected for ACM and LBP. Inspection conducted under the direction and quality control of a California Certified Asbestos Consultant and Certified Lead Inspector/Assessor. The identification, handling, removal, and/or disposal of any potential ACMs and LBP must be completed in compliance with regulatory requirements.
	Polychlorinated biphenyls (PCBs) from transformers within the OMC Hangar and substation, and from industrial sites adjacent to the Subject Property.	Monitor for PCBs during construction.
	Mercury from fluorescent light tubes.	Fluorescent light tubes should be handled with care during demolition and renovation. Any tubes removed as part of these activities should be disposed of appropriately as a hazardous waste.
Contaminated Soil and Groundwater		
Main Central Detailed Study Area	Petroleum hydrocarbons (jet fuel, motor oil, and hydraulic oil) from	

Area	RECs and Potential Sources	Recommended Actions
	accidental leaks and spills from and LUSTs.	Perform a Phase II ESA[1] including sampling for the following compounds: • Petroleum Hydrocarbons (gasoline, diesel, jet fuel, oil, and grease) • Volatile Organic Compounds (VOCs), including Benzene, toluene, ethylbenzene, and xylenes • PFAS • California Title 22 (CAM) 17 metals • PCBs The Phase II ESA should include soil and groundwater sampling. Soil Vapor sampling should be included in areas where new habitable structures are planned.
	Solvents (e.g., degreasers, lubricants) from accidental leaks and spills from aircraft maintenance.	
	Per– and Polyfluoroalkyl Substances (PFAS) from the deployment or accidental release of firefighting foam.	
	Metals associated with aircraft maintenance (e.g., in waste oil and or deposited as dust).	
	PCBs from accidental releases in areas identified as having PCB-containing equipment.	
Proposed North Field Lot	Petroleum hydrocarbons (aviation fuel and diesel) at adjacent properties from leaks and spills from and LUSTs	Perform a Phase II ESA including sampling for the following compounds: • Petroleum Hydrocarbons (gasoline, diesel, jet fuel, oil and grease) • CAM 17 metals The Phase II ESA should include both soil and groundwater due to the shallow groundwater table.
	Metals detected in the detailed study area and in a nearby property.	
Proposed Maitland Lot	Petroleum hydrocarbons (total petroleum hydrocarbons [TPH], oil – waste, motor, hydraulic, lubricating) were identified	Perform a Phase II ESA including sampling for the following compounds:

[1] A Phase II ESA is part of environmental due diligence and occurs when there are recognizable environmental conditions (RECs). The Phase II ESA includes sampling of soil, groundwater, and soil-vapor, as appropriate, to verify the presence or absence of contamination.

Area	RECs and Potential Sources	Recommended Actions
	as constituents of potential concern in the Northfield Runway Safety Area	• Petroleum Hydrocarbons (gasoline, diesel, jet fuel, oil and grease) The Phase II ESA should include soil and groundwater (due to the shallow depth of groundwater in the area).
Proposed Golf Course Lot	Petroleum hydrocarbons have been detected in the soil and groundwater at nearby/adjacent sites.	Perform a Phase II ESA including sampling for the following compounds: • Petroleum Hydrocarbons (gasoline, diesel, jet fuel, oil and grease) • CAM 17 metals Due to the nature of the site (capped), the distance from the potential PCB source, and the nature of construction, sampling for PCBs and VOCs is not recommended. The Phase II ESA should include shallow soil sampling only to limit potential damage and/or penetration of the cap.

1.0 INTRODUCTION

The Port of Oakland (Port) is proposing modifications to Oakland International Airport (OAK or Airport) with the Terminal Modernization and Development Project (Proposed Project), in Oakland, Alameda County, California. Northgate Environmental Management (Northgate) has prepared this Phase I Environmental Site Assessment (Phase I ESA) for the Proposed Project at OAK. The Proposed Project includes modernizing Terminals 1 and 2, consolidating passenger processing functions (e.g., ticketing, baggage check-in, baggage claim, security screening), constructing expanded international arrival facilities, constructing a new terminal, relocating existing cargo and support facilities, and improving the terminal area roadway, parking areas, and support facilities. OAK is located in the city of Oakland, about 6.5 miles southeast of downtown Oakland in Alameda County along San Francisco Bay. Cities in the immediate vicinity of OAK include Alameda (to the northwest), Oakland (to the north), and San Leandro (to the southeast). Access to OAK is primarily by Interstate Highway 880 (I-880), Hegenberger Road, and 98th Avenue to Airport Drive/Bessie Coleman Drive. The entire land area of OAK property is approximately 2,600 acres in size. The location of OAK is shown in **Figure 1**.

The purpose of the Phase I ESA was to evaluate and identify, to the extent feasible, whether recognized environmental conditions (REC) exist with respect to areas at OAK where work would be performed as part of the Proposed Project (detailed study areas). The detailed study areas include the following: (1) main central area consisting of Terminals 1 and 2, proposed new and modernized terminal facilities, associated support facilities, several existing and proposed parking lots, Oakland Maintenance Center (OMC) Hangar area, and Fuel Farm area; (2) proposed new Maitland Parking Lot in the western area of OAK; (3) proposed new North Field Parking Lot in the northern corner of OAK; and (4) proposed new Golf Course Parking Lot in the eastern corner of OAK. The main central detailed study area including Terminals 1 and 2, associated support facilities and parking lots, OMC Hangar area, and Fuel Farm area is approximately 380 acres in size. The four detailed study areas collectively total approximately 415 acres. Parcels on which the detailed study areas are located are defined as the Subject Property. The Subject Property includes portions of Alameda County Assessor Parcel Numbers (APNs) 42-4540-2-1, 42-4545-1, 42-4404-2, 74-1040-4-2, 42-4403-8, and 42-4525-1-2. The historical use of the Subject Property consists of a reclaimed estuary-marsh and construction of an airport beginning in 1927, with various stages of development at the Airport continued to the present-day configuration. The detailed study areas and the APNs comprising the Subject Property are shown in **Figure 2**.

1.1 Project Description

1.1.1 Existing Airport

OAK property consists of approximately 2,600 acres and includes South Field, which primarily accommodates the commercial passenger and cargo activity, and North Field,

which primarily serves corporate and general aviation purposes and other supporting facilities.

1.1.1.1 Terminals and Runways

OAK has four runways: one primary air carrier runway at South Field (Runway 12-30) and three runways at North Field (Runway 10R-28L, Runway 10L-28R, and Runway 15-33). The runways are served by multiple taxiways and taxilanes that provide access to and from the runways and aircraft parking positions. The existing runways and taxiways are shown on **Figure 3.**

The Airport has 29 passenger gates in two terminals located in South Field: Terminal 1 and Terminal 2. Each of the terminals includes a check-in hall, a concourse with holdrooms and concessions, outbound baggage makeup areas, domestic baggage claim, baggage service offices, passenger airline operations space, a passenger security checkpoint area, Transportation Security Administration (TSA) checkpoint support, TSA baggage screening areas, commercial support space, public restrooms, offices, loading docks, public and non-public circulation, maintenance and storage areas, and mechanical, electrical, and plumbing facilities. The International Arrivals Building is connected to Terminal 1 and includes U.S. Customs and Border Protection (CBP) inspection and support facilities and international baggage claim. **Figure 4** shows the layout of Terminals 1 and 2.

1.1.1.2 Landside and Support Facilities

Access to OAK is provided primarily by Interstate Highway 880, Hegenberger Road, and 98th Avenue to Airport Drive/Bessie Coleman Drive. Other major roadways serving OAK include Doolittle Drive/State Route 61, Harbor Bay Parkway, Ron Cowan Parkway, and Davis Street/State Route 61. Terminals 1 and 2 are accessed via Airport Drive, which is a single-level loop roadway. The curbside and parallel islands in front of Terminals 1 and 2 provide for private vehicles and commercial operators (shuttle buses, transit, taxicab, and transportation network companies) to drop off and pick up departing and arriving passengers. The main parking lot is in the center of the loop roadway. Additional public parking facilities are located off John Glenn Drive. Employee parking lots for South Field are located off Air Cargo Way, Edward White Way, Neil Armstrong Way, and John Glenn Drive. Employee parking for North Field is located off Earhart Road. The Bay Area Rapid Transit (BART) system is connected to the Airport via a station that is directly across Airport Drive from the terminals, and a track system that provides access to the BART Coliseum Station.

The Airport includes cargo facilities which are located on both sides of Taxiway B to the north of the existing terminals (see **Figure 3**). Cargo airlines (FedEx and UPS) and passenger airlines carrying belly cargo[2] operate out of these facilities.

Other support facilities at the Airport include the fuel farm, an airline provisioning building, a catering building, storage facilities, offices, hangars, a rental car facility, general aviation

[2] Belly cargo is the freight that passenger airlines transport on scheduled passenger flights.

facilities, and other support functions such as aircraft and ground service equipment maintenance.

1.2 Proposed Project

The Proposed Project includes modernizing Terminals 1 and 2, consolidating passenger processing functions (e.g., ticketing, baggage check-in, baggage claim, security screening), constructing expanded international arrival facilities, constructing a new terminal, relocating existing cargo and support facilities, and improving the terminal area roadway, parking areas, and support facilities. The specific components of the Proposed Project are listed below.

1.2.1 Demolition of Existing Facilities

To accommodate the construction of new facilities at OAK, some existing facilities would be demolished and most of those facilities would be relocated at the Airport. The existing OMC Hangar would be demolished and would not be replaced. Facilities that would be demolished and relocated include freighter and belly cargo, ground service equipment maintenance and support functions, passenger airline provisioning, catering, offices, storage, public parking, and employee parking. The Terminal 1 ticketing and baggage claim building would be demolished after its functions are relocated to other buildings. Specific demolition project components are listed below and shown in **Figure 5**.

- D-1: Demolition of Catering Building and Removal of Associated Parking
- D-2: Removal of Employee Parking in Neil Armstrong Lot (Portion)
- D-3: Demolition of Terminal 1 Ticketing and Baggage Claim
- D-4: Demolition of Offices and Storage Buildings
- D-5: Removal of Fuel Rack and Below-Grade Fuel Systems
- D-6: Removal of Remote and Cargo Aircraft Parking Positions and Existing Taxilanes
- D-7: Removal of Employee Parking
- D-8: Demolition of Multi-Tenant Cargo / Support Building and Removal of Associated Parking
- D-9: Removal of Economy Parking
- D-10: Demolition of Provisioning Building and Associated Parking
- D-11: Demolition of OMC Hangar, Related Structures, and Associated Parking
- D-12: Demolition of Storage Building
- D-13: Removal of Park and Call Lot
- D-14: Removal of Main Parking Lot (Portion)

1.2.2 Passenger Terminal Improvements

The Proposed Project includes construction of a new passenger terminal as well as improvements to the existing passenger terminals, including the demolition of the Terminal 1 ticketing and baggage claim building. Passenger terminal improvement components are described below and shown on **Figure 6**.

- B-1: Construction of New Terminal. Includes the construction of an approximately 830,000-square-foot new terminal north of the existing Terminal 1 with a connector building between the existing terminals and the new terminal.
- B-2: Modernization of Existing Terminals 1 and 2. Includes renovation of Terminals 1 and 2 to maximize efficiencies within the terminals, to provide functional areas that provide acceptable levels of service, and to expand the existing international arrivals facilities in Terminal 1. The modernization would result in a total of approximately 722,000 square feet, an increase of approximately 81,600 square feet in Terminals 1 and 2.

  Terminal 2 facilities would be modernized to accommodate the multiple domestic and international passenger airline functions currently being served in the Terminal 1 ticketing and baggage claim building and would support the existing Terminal 1 and Terminal 2 concourses.

1.2.3 Airfield Improvements

These project components would be implemented to provide areas required for safe movement and parking of aircraft and related service equipment associated with the Proposed Project. Airfield improvement components are described below and shown on **Figure 6**.

- A-1: Construction of New Terminal Apron: Includes development of an aircraft apron to provide areas for parking, loading, unloading, and servicing aircraft and equipment at the new terminal.
- A-2: Improvements to Existing Airfield (Adjacent to New Terminal): Includes the development of new and reconfigured taxilanes and/or taxiways on all sides of the new terminal apron.
- A-3: Improvements to Existing Airfield (Adjacent to Replacement Remote and Cargo Aircraft Parking Positions). Includes the development of new taxilanes adjacent to the replacement remote and cargo aircraft parking positions.

1.2.4 Landside Improvements

A variety of improvements are required to support the construction of the new terminal and to provide access to the new terminal. To offset the removal of employee parking spaces to enable the construction of the New Terminal and to accommodate the increase in employees that is commensurate to the forecast increase in passengers, replacement employee parking

spaces would be developed. Landside improvement components are listed below and shown on **Figure 6**.

- L-1: Replacement of Employee Parking – North Field Lot
- L-2: Replacement of Employee Parking – Golf Course Lot
- L-3: Expansion of Employee Parking – Neil Armstrong Lot
- L-4: Replacement of Employee Parking – Terminal Approach Lot
- L-5: Expansion of Employee Parking – Terminal Infill Lot
- L-6: Replacement of Public Parking – Ron Cowan Lot
- L-7: Replacement of Public Parking – Maitland Lot
- L-8: Extension of Terminal Curbside
- L-9: Construction of BART Access Covered Walkway
- L-10: Construction of Return to Terminal Connection

1.2.5 Airport Support Facilities

A variety of improvements are required to provide space for functions that support the entire Airport. Airfield support facilities components are described below and shown on **Figure 6**.

- S-1: Construction of Replacement Cargo Building and Associated Parking. Includes the construction of an approximately 100,000-square-foot replacement cargo building, would replace the approximately 75,625-square-foot multi-tenant cargo/support building, trailers, and usable outdoor space that would be removed as part of Project Component D-8.
- S-2: Construction of Replacement Remote and Cargo Aircraft Parking Positions. Includes the replacement of some of the remote and cargo aircraft parking positions near the northwest corner of Airport Drive and Ron Cowan Parkway and off John Glenn Drive.
- S-3: Construction of Replacement Airline and Airport Support Building and Associated Parking. Includes the construction of an approximately 43,000-square-foot replacement airline and airport support building in the location of the existing catering building, which is removed as part of Project Component D-1.
- S-4: Construction of Replacement Belly Cargo Building and Associated Parking. Includes the construction of an approximately 30,800-square-foot belly cargo building, would provide replacement space to offset the space removed as part of Project Component D-8. The belly cargo building also would include space for maintenance of ground service equipment and other support functions.

1.2.6 Utility Improvements

A variety of improvements would be made to the existing utility systems at the Airport to accommodate the increase in square footage, the increase in the number of aircraft gates, and the relocation and reconfiguration of existing aircraft positions. Utility improvement components are described below and shown on **Figure 6**.

- U-1: Expansion of Central Utility Plant. Includes expansion of and upgrades to the existing central utility plant.
- U-2: Replacement of Fuel Rack and Below-Grade Fuel Systems. Includes replacement of the fuel rack and below-grade fuel systems near the proposed replacement belly cargo building and associated parking.
- U-3: Upgrade of Fuel System. Includes expansion, relocation, and upgrades to the existing fuel system at OAK and the construction of a roadway to provide access to the expanded fuel farm.
- U-4: Relocation and Upgrade of Utility Systems. Includes relocation, expansion, and upgrades of existing utility systems at OAK, which include, but are not limited to, electrical, sewer, stormwater, telephone, and data.

1.3 Detailed Scope-of-Services

Northgate has completed this Phase I ESA, which was started by HDR|WRECO, in general conformance with the scope and limitations of the American Society for Testing and Materials (ASTM) E-1527-13 and E-1527-21, Standard Practices for Environmental Site Assessments: Phase I Environmental Site Assessment Process, and 40 Code of Federal Regulations (CFR) Part 312 (EPA, 2015), Standards and Practices for All Appropriate Inquiry – Final Rule, the latter of which was published on November 1, 2021, and is currently under review by the EPA to be formally adopted as the new standard. Due to time constraints, Northgate was not able to meet the Phase I ESA shelf-life requirements for some components (refer to **Section 1.5**). This investigation was conducted by Kevin Torres, with review from Ana Demorest PE, GE, Principal. The scope of work for the investigation included the following services:

- Review of readily available information regarding the history of the Subject Property, including historic aerial photographs, maps, previous reports, and other information;
- Discussions with and/or completed questionnaires from individuals familiar with the Subject Property (by HDR|WRECO);
- Review of environmental lien documents obtained for the Subject Property;
- A reconnaissance of the Subject Property and near vicinity (by HDR|WRECO);
- Review of regulatory agency files for the Subject Property and surrounding area, as applicable;
- Evaluation of potential RECs, development of conclusions and recommendations as appropriate; and
- Preparation of this report.

1.4 Limitations and Exceptions

1.4.1 Limitations

The purpose of an environmental site assessment is to reasonably evaluate the potential for RECs arising from past practices on a given site area. In performing an environmental site assessment, it is understood that a balance must be struck between a reasonable inquiry into the environmental issues and an exhaustive analysis of each conceivable issue of potential concern. No investigation is thorough enough to absolutely rule out the presence of hazardous materials at a given site. If hazardous conditions have not been identified during the assessment, such a finding should not be construed as a guarantee of the absence of such materials on the Subject Property, but rather as the result of the services performed within the scope, limitations, and cost of the work performed.

Environmental conditions may exist at the Subject Property that cannot be identified by visual observation. Where subsurface work was performed, our professional opinions are based in part on interpretation of data from discrete sampling locations that may not represent actual conditions at un-sampled locations.

Except where there is express concern of Northgate's client, or where specific environmental contaminants have been previously reported by others, naturally occurring toxic substances, potential environmental contaminants inside buildings, or contaminant concentrations that are not of current environmental concern may not be reflected in this document.

Where the scope of services is limited to interview and/or review of readily available reports and literature, any conclusions and/or recommendations are necessarily based largely on information supplied by others, the accuracy or sufficiency of which may not be independently reviewed by Northgate.

Any opinions and/or recommendations presented apply to Subject Property conditions existing at the time of performance of services. Northgate is unable to report on, or accurately predict, generally unforeseeable events that may impact the Subject Property following performance of services, whether occurring naturally or caused by external forces. Therefore, Northgate cannot assume responsibility for such events or their impact. Northgate also cannot assume responsibility for changes in environmental standards, practices, or regulations.

1.4.2 Exceptions

Northgate was not able to meet the shelf-life requirements for some components as presented in **Section 1.5**. In addition, the site reconnaissance performed by HDR|WRECO did not include the proposed Maitland, North Field, and Maitland parking lots. However, in Northgate's opinion, this data gap does not significantly affect our ability to evaluate historic land use conditions at the Subject Property given the nature of the Airport operations and the availability of other sources of information. Northgate will issue an addendum to this

report if any information received from these agencies within 90 days of the date of this report significantly changes the conclusions or recommendations of this report.

There were no other limiting conditions.

1.5 Phase I ESA Report Shelf Life

As defined in the ASTM Standard, a Phase I ESA report remains viable if it was completed no more than 180 days prior to the date of acquisition of a Subject Property or up to one year if the Phase I ESA Report has been updated including the following five components: 1) Interviews; 2) Searches for recorded environmental cleanup liens; 3) Review of government records; 4) Reconnaissance of the Subject Property and adjoining properties; and 5) Environmental Professional Declaration. Activities related to the site reconnaissance were performed by HDR|WRECO in 2021 and have not been updated

2.0 USER-PROVIDED INFORMATION

2.1 Title Records and Easements

The Port provided the airport layout plan (ALP), dated May 27, 2015, which includes a figure of the airport easements and title records showing previous and current ownership of land in the Subject Property. The ALP shows deed grantors and grantees as well as other information about property transfer of the land surrounding the Airport. This indicates the Subject Property includes parcels that are owned by the City of Oakland; however, the Port of Oakland is a department of the City of Oakland. The parcels within the Subject Property were granted to the City of Oakland between 1927 and 1955. A copy of the title figure is provided in **Attachment 1**.

Additionally, the EDR Area Corridor Report ([EDR, 2023] as **Attachment 2**) lists one property, located at 1 Edward Way within the Tank Farm, that is subject to a land use/deed restriction.

2.2 Specialized Knowledge

The Port has provided known reports and documentation for previous hazardous waste investigations and testing for various portions of OAK. Other than the information provided, no specialized knowledge of RECs, historical RECs (HRECs), controlled RECs (CRECs), or other potential environmental concerns were reported by the Port.

2.3 Purpose of Phase I Environmental Site Assessment

The purpose of a Phase I ESA is to evaluate the Subject Property for the presence of RECs, which is defined as the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property. The term includes hazardous substances or petroleum products even under conditions in compliance with laws.

The term "REC" is not intended to include de minimis conditions that generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

Two additional types of RECs are included in the revised ASTM publication, specifically HREC and CREC. An HREC is defined by ASTM as a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or met unrestricted use criteria established by the regulatory authority without subjecting the property to any required controls.

A CREC is defined by ASTM as a REC resulting from a past release of any hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by a No Further Action [NFA] letter or equivalent or met risk-based criteria established by the regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

3.0 SUBJECT PROPERTY RECONNAISSANCE

3.1 Methodology and Limiting Conditions

HDR|WRECO conducted site reconnaissance on two occasions: the terminals and cargo areas were observed on July 9, 2021, and the OMC Hangar and fuel farm (also called Tank Farm in previous documents and this report) areas were observed on December 30, 2021. During both visits, the HDR|WRECO reconnaissance team was accompanied by a representative from the Port. HDR|WRECO staff did not note any reconnaissance or observations at the proposed new Maitland, North Field, and Golf Course parking lots. Areas observed during both site reconnaissance were traversed primarily by foot. During each site reconnaissance, areas included in the Proposed Project were photographed and documented. Photos from the site reconnaissance are provided in **Attachment 3**.

Areas with limited access included the Tank Farm and the upper floors of the former United Airlines office cores located within the OMC Hangar. The limited access to the Tank Farm was a result of the surrounding wetlands; access to the upper floors of the former United Airlines office cores was not available during the reconnaissance.

3.2 Subject Property Conditions

3.2.1 Terminals and Cargo Area (July 9, 2021, Reconnaissance)

3.2.1.1 Terminals

The areas inspected during the July site reconnaissance included the interior and exterior of Terminal 1 and Terminal 2; the exterior of existing airline and airport support facilities adjacent to Terminal 1 (to the north) and along Alan Shepard Way; and exterior area of the OMC Hangar from the Air Cargo Road west of the OMC structure. Adjoining properties were also visually inspected for RECs.

In Terminal 1, the flooring was a terrazzo concrete (composite material of marble chippings set into cement) with carpeted areas at the gates. The ceiling had metal slats with new LED lighting, and the walls and ceiling beams were painted. Some walls contained porcelain tiles and others had textured paint. The Terminal 1 gate area had recent upgrades and newer features installed.

Terminal 2 had a mix of carpet and terrazzo concrete flooring. The walls were painted, and ceilings were a mix of metal slats with new LED lighting, and painted sheetrock. Terminal 2 also had recent upgrades and newer features installed.

The outer portion of the terminals, where baggage check-in is located, contained metal beams and roofing with concrete curbs/sidewalk. The Terminal 1 awning appears to be made of arched concrete along the terminal entrance. Inside these areas of the terminal buildings the ceilings contain popcorn surfacing (some of which has been removed) and fluorescent lighting. Glass windows are framed as the entry wall to the terminal buildings.

Some water marks were identified in the popcorn ceiling indicative of leaks. The baggage claim area has painted walls and ceiling, with modern lighting, and terrazzo flooring.

3.2.1.2 Other Structure and Exterior Features

On the southeastern side of Terminal 2, the reconnaissance team observed a seawall that has been fortified and raised by 2 feet along the 4.5-mile dike that separates its main runway and terminals from the bay.

Located east of the terminals toward the OMC Hangar and behind the cargo buildings, the reconnaissance team observed several permanent trailer buildings. Several large storage containers were also present along the cargo buildings. Security fencing provided secure parking areas for airport vehicles used for runway operations. Several transformers and utility boxes were observed along the open area to the west of the OMC Hangar.

The OMC Hangar was fenced off which provided a limited outside view along the northern and western sides. The hangar was constructed of corrugated steel siding and roofing, with large open steel areas for cranes to work on aircraft. Security fencing lined the concrete tarmac and limited vehicles were present inside the OMC Hangar parking area.

3.2.2 OMC Hangar with Former Offices, and Tank Farm (December 30, 2021, Reconnaissance)

Areas inspected during the December site reconnaissance included the OMC Hangar, former United Airlines offices located within the OMC Hangar, and Tank Farm. Access to the OMC Hangar was provided by a Port Maintenance/Utilities representative. Adjoining properties were also visually inspected for RECs.

The principal structure is Building M110, which is a four-bay approximately 304,000 square foot aircraft hangar that includes office and shop spaces. The facility is currently not leased or occupied. The economy parking area was added later to this 39-acre site. Two underground storage tanks (USTs), a 3,000-gallon tank (MF-25) and a 1,000-gallon tank (MF-26) and associated piping, were removed from near Building M-110. The tank site for MF-25 and MF-26 is described as located in the economy parking lot for the Airport, at 1100 Airport Drive.

A marked area in front of the gate entrance into the OMC Hangar shows where two underground tanks were abandoned in place in December 1998 and covered with concrete. A backup diesel generator with attached fuel tank and some other transformers, capacitor banks, and possible generators were also observed. Currently the power is used primarily to light the billboards on the side of the OMC facing incoming traffic from Bessie Coleman Drive.

The OMC Hangar is constructed of corrugated steel walls and roofing (painted) as noted during the July reconnaissance. Security fence, supported by k-rail, encircles the facility. Specific observations related to the OMC Hangar exterior include:

- A truck docking area with equipment and a metal shed are located on the west side of the OMC Hangar. The asphalt paved parking area (for employees) changes to concrete to the west of the OMC.
- The southern entrance to the OMC is secured with fencing and gates and leads into an asphalt paved lot (poor condition) with several storm drains. In the lot are two large Poly Tanks that are used to hold the Aerolite aqueous film forming foam (AFFF) which is used to extinguish fires in hydrocarbon fuels (crude oil, gasoline, and fuel oils).
- A small Substation (SS-15) is located to the south of the OMC in the parking area.
- The eastern side of the OMC has sliding corrugated steel doors where aircraft used to enter for repair and maintenance. Some of the painted metal on the lower portion of the building is rusted and peeled off.

Inside the OMC Hangar, there are corrugated steel sliding doors and siding, corrugated steel roof, supported by metal beams and scaffolding. Specific observations related to the interior of the OMC Hangar include:

- Pipes and light ballasts hang from the ceiling and several transformers were identified inside the structure.
- The painted corrugated steel walls are weathered, and paint is peeling off. Some of the walls are made up of concrete cinder blocks and have circuit breakers mounted.
- The flooring is solid concrete throughout, with a reservoir beneath the concrete floor (two manhole covers were observed).
- Large metal support beams inside the structure have fire proofing material sprayed directly on and inside of them.
- Several rollup doors and freight elevators are operative inside the OMC.
- An elaborate scaffolding system is still operational inside the building and was used to access portions of the aircraft.
- The structure includes three vertical building cores that have up to four floors with offices and repair shops, and operative elevators.

3.2.2.1 Tank Farm

The Tank Farm was visually inspected from the roadway; access is privileged and was not provided during the site reconnaissance. The Oakland Fuel Facilities Corporation (OFFC) operates and manages the Tank Farm. The original Tank Farm was constructed in the 1960s and was a concern for its structural integrity in the event of an earthquake (the Tank Farm is located about 6 miles from the Hayward Fault). From 2009 to 2010, changes to the existing Tank Farm included installation of a soft cement shoring wall around the entire site with a bioswale to protect neighboring wetlands; creation of a dike wall support system to catch spilled oil if a tank fails or leaks and to work with the retaining wall to prevent lateral spreading during an earthquake; construction of tank foundations supported by 7--foot--diameter soil cement columns; and additional pump pads, pipe supports and filter

pads were placed around the tanks. Three 35,000-gallon fuel tanks are in operation and a new operating facilities building has also been constructed.

3.3 Current Uses of Subject Properties

OAK currently has two passenger terminals (Terminal 1 and Terminal 2) ; multiple aviation-related buildings including cargo facilities, rental car facilities, support facilities and storage areas; passenger gates and remote aircraft parking positions; runways and taxiways; a tank farm and below grade distribution system for aviation fuel; employee and public parking facilities; and infrastructure for various utilities. A more detailed description of current Airport facilities is presented in **Section 1.1.1.**

As described in **Section 1**, the Subject Property includes portions of the Alameda County Office of the Assessor APNs 42-4540-2-1, 42-4545-1, 42-4404-2, 74-1040-4-2, 42-4404-8, and 42-4525-1-2. These APNs contain the detailed study areas for the Proposed Project as noted below:

- Main Study Area - APNs 42-4540-2-1 and 42-4545-1. The detailed study area located on these parcels currently includes Terminals 1 and 2, the OMC Hangar, the Tank Farm, and supporting facilities including an existing fuel canopy, taxiways, roadways, and parking.
- Proposed North Field Lot - APN 42-4404-2. The detailed study area located on this parcel is currently an unpaved lot.
- Proposed Maitland Lot - APNs 74-1040-4-2 and 42-4404-8. The detailed study area located on this parcel is currently an unpaved area.
- Proposed Golf Course Lot - APN 42-4525-1-2. The detailed study area located on this parcel is currently an unpaved lot.

3.4 Current Use of Adjoining Properties

The Airport is located in an area with light industrial and commercial properties. The properties adjacent to detailed study areas and their Alameda County APNs are shown in **Figure 7**.

Parcels that are not part of the Subject Property as listed in **Section 3.3** but are adjacent to one or more detailed study areas include:

- APN 74-1361-7: This property does not have an associated address. It is listed in Alameda County records as vacant commercial land. This parcel is located along the western side of the proposed Maitland Lot. APN 74-1361-8: This parcel, located at 1150 Harbor Bay Parkway, Alameda houses a former Oakland Raiders training facility. This parcel is located along the western side of the proposed Maitland Lot.
- APN 74-1361-9: This parcel, located at 1020 Harbor Way Parkway, Alameda is owned by an unidentified exempt public agency. It contains the intersection of Harbor Bay and Ron Cowen Parkway. This parcel is located along the northwest corner of the proposed Maitland Lot.

- APN 74-1365-3-1: This parcel is located along Harbor Bay Parkway but does not have an assigned address. The parcel, which is on Airport property, is an unpaved area near the western end of Runway 10R-28L and is located along the northwest corner of the proposed Maitland Lot.
- APN 74-1365-2: This parcel, located at 1004 Harbor Bay Parkway, Alameda, is on Airport property. The parcel is an unpaved area near the western end of Runway 10R-28L and is located along the northwest corner of the proposed Maitland Lot.
- APN 42-4404-11-2: This parcel, located at 7501 Earhart Road, Oakland, contains the North Field of the Airport and support buildings. This parcel, which is on Airport property, is located north of the proposed Maitland Lot and west of the proposed North Field Lot.
- APN 42-4404-1: This parcel, located at 7250 Doolittle Drive, Oakland, contains the MLK JR. Shoreline which is part of the East Bay Regional Parks District. The parcel, which includes a boating center and boat launch, is located to the east of the proposed North Field Lot.
- APN 42-4404-9: This parcel, which appears to be a corridor, is located along the west side of the proposed North Field Lot.
- APN 77A-740-17: This parcel, located at 750 Doolittle Drive, San Leandro currently contains a fast-food restaurant (Giant Burger). The parcel is located to the east of the proposed Golf Course Lot.
- APN 77A-649-22: This parcel, located at 840 Doolittle Drive, currently contains a vacant warehouse. The parcel is located to the east of the proposed Golf Course Lot.
- APN 77A-649-21-1: This parcel, located at 844 Doolittle Drive, currently contains a plastics fabrication business (Mr. Plastics). The parcel is located to the east of the proposed Golf Course Lot.
- APN 77A-649-19-2: This parcel, located at 870 Doolittle Drive, currently contains a metals fabrication business (BayFab Metals). The parcel is located to the east of the proposed Golf Course Lot.
- APN 77A-649-29-1: This parcel, located at 888 Doolittle Drive, currently contains a plumbing, electrical, and building materials supply company (American Emperor). The parcel is located to the east of the proposed Golf Course Lot.
- APN 77A-649-18-2: This parcel, located at 900 Doolittle Drive, currently contains mixed commercial businesses. The parcel is located to the east of the proposed Golf Course Lot.
- APN 77A-649-31: This parcel, located at 900 Doolittle Drive, currently contains mixed commercial businesses. The parcel is located to the east of the proposed Golf Course Lot.
- APN 77A-649-6-5: This parcel, located at 2233 Eden Drive, San Leandro, is currently occupied by Alco Iron and Metal. The parcel is located to the south of the proposed Golf Course Lot.

- APN 42-4530-1-1 & APN 42-4530-1-2: These parcels, located at 2620 Eden Drive, San Leandro, is currently occupied by Phelps Auto Wreckers. The parcel is located to the south of the proposed Golf Course Lot.
- APN 42-4530-2: This parcel, located at 2622 Eden Drive, San Leandro, is currently occupied by Phelps Auto Wreckers. The parcel is located to the south of the proposed Golf Course Lot.

Current use information for adjoining properties was obtained from the Alameda County Assessor's Office Parcel Viewer (http://gis.acgov.org/Html5Viewer/index.html?viewer=parcel_viewer) and publicly available information associated with the parcel's address.

3.5 Potential Hazardous Material Sources

3.5.1 Hazardous Building Materials

Implementation of certain Project components will include modifying, removing, or replacing buildings and other structures, including structures constructed prior to 1978. There is potential for buildings constructed prior to 1978 to contain building materials that consist of hazardous components such as LBP, ACM, mercury, and PCBs. When these buildings or structures are demolished, or when refurbishment disturbs these hazardous building materials, they can become exposed and create a health hazard for workers.

- LBP: Prior to the EPA ban in 1978, LBP was commonly used on interior and exterior surfaces of buildings and other structures. Old peeling paint has also been found to contaminate near-surface soil.
- ACM: Asbestos is a naturally occurring fibrous material that was extensively used as a fireproofing and insulating agent in building construction before such uses were banned by the U.S. Environmental Protection Agency (USEPA) in the 1970s. ACM is a known constituent in linoleum tiles, carpet, popcorn ceiling material, mastic, and acoustic drop-tile ceilings.
- Mercury: Spent fluorescent light tubes commonly contain mercury vapors. In February 2004, regulations took effect in California that classified all fluorescent lamps and tubes as hazardous waste. When these lamps or tubes are broken, mercury is released to the environment.
- PCBs: PCBs are organic oils that were formerly used primarily as insulators in many types of electrical equipment including transformers, electrical switches, and light ballasts, and caulking. In the mid to late 1970's, the USEPA banned PCB use in most new equipment and began a program to phase out certain existing PCB-containing equipment.

The presence of LBP and/or ACM can be expected at older Airport buildings including Terminal 1, the OMC Hangar, and the Air Cargo building due to the age of the buildings. In addition, numerous investigations documenting the presence of LBP and/or ACM and related abatement efforts have been conducted at these facilities. A summary of the investigation

findings and abatement activities are summarized in **Attachment 4.** LBP and ACM may also be present in older (pre-1980) buildings that have not yet been investigated.

Fluorescent light fixtures were observed in some portions of the terminals, as well as the former United Airlines offices which can release mercury to the environment if not properly managed.

Electrical switches, light ballasts, transformers, and caulking Terminals 1 the OMC Hangar could potentially contain PCBs.

3.5.2 Petroleum Products

The Proposed Project will include transporting, using, and storing petroleum products during both construction and operations. Sources of potential contamination include:

- Accidental leaks or spills during operations and maintenance activities (e.g., aircraft fueling and maintenance)
- Leaks from storage tanks and associated piping

Fuel and other petroleum products are used, stored, and transported across the Airport property. Although there may be multiple potential sources of petroleum contamination within the Subject Property, the primary fuel storage area is the Tank Farm, while the OMC Hangar has historically been the primary aircraft maintenance area. These two areas are described in more detail below.

3.5.2.1 Tank Farm

Currently, the OFFC operates the Tank Farm facilities that receive, store, and supply fuel for the airplanes at OAK. The facilities include administrative and maintenance functions on the site, formerly identified as Tank Farm S), and the operational tank farm with aboveground storage tanks, formerly identified as Tank Farm C.

Historically, the Tank Farm consisted of three separate jet fuel storage and distribution facilities. The three tanks in the Tank Farm were known as Tank Farm C, Tank Farm S, and Humble/PST Tank Farm. The Humble/PST Tank Farm has been demolished and the location is currently an unpaved lot. The above ground storage tanks (ASTs) are at the location of Tank Farm C and the administrative and maintenance functions of the current Tank Farm are at the location of Tank Farm S.

Prior to construction of the current ASTs, soil at the site was mixed with concrete in the subsurface for structural underlayment of the site. Due to the presence of the relatively impermeable concrete/soil mixture beneath the current Tank Farm, the presence of native soil and groundwater is minimal to a depth of 12-30 feet.

The Tank Farm currently contains aircraft fuel stored in ASTs and below grade pipelines, which are used to transfer fuels to specific fueling locations for aircraft at the terminal gates and some remote parking positions. Gasoline (including benzene), diesel, and jet fuel are identified as constituents of concern at this facility (see **Table 2A**).

3.5.2.2 OMC Hangar

The OMC Hangar site formerly contained two USTs that included a 3,000-gallon tank (MF-25) and a 1,000-gallon tank (MF-26) and associated piping. The tanks have been reported to be used for the storage of waste oil and for solvents. Current uses at the site include seven diesel fuel tanks, one emergency backup generator with an integral 400--gallon diesel fuel tank, two 125-gallon elevator hydraulic fluid reservoirs, an approximate 1,100-cubic-foot sewage sump with extractor pump installation, and a 45--cubic-foot concrete subsurface hydraulic fluid vault.

Petroleum hydrocarbons detected in soil at the OMC Hangar include total petroleum hydrocarbons as gasoline (TPHg), TPH as diesel (TPHd), and total oil and grease (TOG); petroleum hydrocarbons detected in groundwater include TPHg, TPHd, and TPH as jet fuel (TPHj).

3.5.3 Solvents and Metals

Solvents and metals are often detected in areas where maintenance activities have been performed. Solvents (including volatile organic compounds [VOCs]) have many useful applications including metal cleaning, parts cleaning, surface preparation, degreasing, paint thinners and lubricants. Because of their widespread prevalence in many industrial products, solvents are among the most commonly used chemicals in the workplace. Metals are also common contaminants found in maintenance facilities. Metal dust can be generated by friction in vehicle and equipment operation and metals are often found in cleaning/lubricating solvents as well as waste oil. As noted previously, the two former USTs at the OMC Hangar area were used to store solvents and waste oil. Although there may be multiple potential sources of VOC and/or metal contamination within the Subject Property, the OMC Hangar has historically been the primary aircraft maintenance area.

Both VOCs and metals have been detected at the OMC Hangar. Metals have also been detected across the former NAS property and at the former Galbraith Golf Course.

3.5.4 Per– and Polyfluoroalkyl Substances

The firefighting foams used for both training exercises and actual fire containment commonly contain PFAS. The uncontained suppressant foam could discharge to pavement surfaces and onsite stormwater drains. In recent years, USEPA has identified PFAS as emerging contaminants of concern, because of the persistence in the environment, ready migration to and in water, and bioaccumulation in organisms. In 2019, the USEPA announced its "PFAS Action Plan" that will list perfluorooctanoic acid (PFOA) and PFAS as hazardous substances under Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) with the maximum contaminant level process outlined in the Safe Drinking Water Act. In April 2021, an "EPA Council on PFAS" was created and will be responsible for better understanding and reducing the potential risks caused by these chemicals. In addition, the State Water Resources Control Board is initiating a statewide investigation of PFAS at airports, landfills, manufacturing facilities, bulk terminals, and

wastewater treatment facilities. Potential sources of PFAS at the Subject Property include firefighting foam storage USTs at the OMC Hangar and several fire related incidents. PFAS have been identified in soil and groundwater at the Tank Farm (Swissport Fueling site), South Field, and Hangar 10 in the North Field.

3.5.5 Pits, Sumps, Catch Basins, and Lagoons

No pits, ponds, or lagoons were observed at the Subject Property. A wetlands area is located near the Tank Farm.

3.5.6 Reclaimed Marsh

Construction of the Oakland Municipal Airport (OMA), which is located on a historically reclaimed marsh, began in 1927. The Airport was partially developed from the 1920s to the 1960s on portions of San Francisco Bay, which was filled using imported fill materials. South Field was generally filled with sand dredged from San Francisco Bay, and North Field was filled with a mixture of materials (Sorensen, 1989). These fill materials may have included contaminated soil; however, the Port's Environmental Division has no evidence that the fill used for filling of the Airport property contained contaminants. However, some subsequent fill materials used locally around the Airport property have been determined to contain lead (e.g., levee improvements at the proposed North Field Lot parcel). It is possible that impacted fill is present within the Airport property.

3.5.7 Radon

Radon is an odorless, invisible gas that occurs naturally in soils. Natural radon levels vary and are closely related to geologic formations. It cannot be detected without specialized equipment. Radon may enter buildings through basement sumps or other openings.

The USEPA has established the recommended safe radon level at 4 picocuries per liter (pCi/L). According to the EDR GeoCheck® Physical Setting Source Map Findings of Radon for the Subject Property, the USEPA Radon Zone database indicates that Alameda County is in Zone 2 where the predicted Radon levels are between 2.0 to 4.0 pCi/L.

4.0 PHYSICAL SETTING

4.1 Topography

Based on the EDR GeoCheck® Physical Setting Source Summary (**Attachment 5**), the average elevation of the Subject Property is 8 ft above mean sea level (AMSL) and is sloped moderately to the southwest. The United States Geological Survey (USGS), 2006, California 7.5-Minute Topographic Quadrangle map was reviewed. A copy of the EDR Historical Topo Map Report is provided in **Attachment 6**.

4.2 Geology

The Subject Property is located within the northern portion of the physiographic unit referred to as the California Coast Range Geomorphic Province (Norris and Webb, 1990). This province encompasses an elongated length of the California's Coast which surrounds an area from the Oregon border to Santa Ynez. The Coast Range province is composed of marine sedimentary and volcanic rocks that form the Franciscan Complex Formation. This bedrock can be found at elevations from 200 to 2,000 feet below mean sea level across the Greater Bay Area (Tetra Tech, 2021).

The Subject Property is in the Santa Clara Valley Groundwater Basin (2-009), East Bay Plain subbasin (2-9.04). The basin in the coastal mountains of California contains structural troughs or depressions that parallel the coastline and formed as a result of folding and faulting. The rocks that underlie the basins and form the surrounding mountains are primarily marine sediments and metamorphic and igneous rocks, all of which are of Mesozoic age but locally include Cenozoic age (ACE, 2002).

The basins are partly filled with semi-consolidated marine sedimentary rocks. These rocks were deposited during periodic encroachment of the sea and with unconsolidated continental deposits. These deposits consist of weathered igneous and sedimentary rock material, which was transported into the basins primarily by mountain streams and weathering. Almost all the material in San Francisco Bay consists of unconsolidated continental deposits, primarily sand and gravel. The Airport is built on a large area of land that was once sand and part of San Francisco Bay. These deposits were relocated to form the land surface underlying the site (ACE, 2002). Subsurface soils throughout the greater port typically consists of artificial fill overlying soft to medium stiff bay clays to dense sands (CH2M Hill, 2020).

The EDR GeoCheck® - Physical Setting Source Summary provided geologic information in the general area of the Subject Property, which was identified as Stratified Sequence of the Cenozoic Era and Quaternary System and Series (Q).

4.3 Soil

Most of the soil at OAK consists of sandy material that was dredged from old beach areas. These soils are moderately alkaline sands that extend to a depth of over 60 inches and

slopes less than two percent with an elevation ranging from 2 to 10 feet above MSL. The soil is rapidly permeable, and the runoff is slow (ACE, 2002). The soils are moderately course-grained soils as sands, sands with fines, and silty sand (EDR, 2023).

4.4 Hydrogeology

The East Bay Plain subbasin is a northwest trending alluvial plain bounded on the north by the neighboring San Pablo Bay (DWR, 2004). Groundwater in the vicinity of the Subject Property ranges from approximately 1 to 10 feet below ground surface (ft bgs), but confined aquifers can be seen from 20 to 60 feet below surface with surface flow direction is typically south-southwest. The fill ranges from 1 to 50 feet with the thickest deposits found nearer San Francisco Bay (CRWQCB, 1999).

The EDR GeoCheck® Physical Setting Source Summary searched Local/Regional Water Agency records within 1 mile of the Subject Property. The records identified four water wells within 0.125 to 0.25-mile to the north and north northeast (CA monitoring), four water wells from a 0.25 to 0.5-mile to the west-southwest and east-southeast (CA monitoring), and 15 water wells from 0.5 to 1-mile from the east-southeast and north (CA monitoring).

5.0 RECORDS REVIEW

5.1 Regulatory Records

In accordance with the ASTM Standard E 1527-21 and part of the Phase I ESA, a computerized Corridor/Area search of pertinent federal, state, and tribal environmental record databases was performed by EDR of Shelton, Connecticut. The database search was conducted to identify environmental regulatory records associated with the Subject Property and nearby properties that would indicate environmental conditions (i.e., reported releases of hazardous substances and/or petroleum products) which may have the potential to adversely impact the Subject Property and surrounding vicinity.

Database listings were reviewed for properties located within a 1-mile radius of the Subject Property. Because the Subject Property consists of several noncontiguous detailed study areas, three of which are spaced around the perimeter of the OAK property, the Subject Property database search was conservatively conducted for the entire OAK property. Database search results produced by the EDR Area/Corridor Report were reviewed in conjunction with governmental records reviewed during this Phase I ESA. The results of the database search are included in **Table 1**; the EDR Area/Corridor Report is included in **Attachment 2**.

5.1.1 Subject Property

Multiple federal and state agency database listings were identified within the Airport Property and the Subject Property (detailed study areas). Due to the extensive nature of the listings, as well as the ambiguous nature of the location (e.g., Airport address at 1 Airport Way provided, actual location not described) for many listings, it is difficult to determine whether specific listings are located within the Subject Property. Based on our review of listings, the Subject Property was listed in the following databases related to potential contamination, spills, leaks, or other conditions that might pose a risk during implementation of the Proposed Project. Hazardous Waste Tracking System (HWTS), Aqueous Foam (firefighting foam used for fuel source fire suppression), LUST, Recovered Government Archive LUST (RGA LUST), California Hazardous Material Incident Reporting System (CHMIRS), Hazardous Materials Information Reporting System (HMIRS), HAZNET (Facility and Manifest Data), CalEPA Regulated Site Portal Data (CERS), CERS HAZ WASTE, California Integrated Water Quality System (CIWQS), Non-Case Information Sites (NON-CASE INFO) GeoTracker, PFAS Contamination Site Location Listing (PFAS), Cortese, Historic Cortese, Cleanup Program Sites (CPS), and Emergency Response Notification System (ERNS). Additional listings that document the permitted facilities or entities that generate, store, or transport hazardous materials without evidence of violation are not included.

A summary of the database listings is included in **Table 1**. The following summarizes the types of RECs (including HRECS and CRECS) identified at the Subject Property.

- Fuel Spills Associated with Aircraft Fueling: Several listings were included for fuel spills associated with aircraft fueling activities. Identified spill volumes range from 3 gallons to 500 gallons. Identified causes of the fuel spills include equipment failure/malfunction, leaky valves, operator error, hose damage due to vehicle strike, and overfilling/fuel expansion.
- ACM: The presence, abatement, and removal of asbestos was noted in several listings. Additional information related to ACM is provided in **Section 3.5.1.**
- Emissions Related to Improper Hazardous Material Transport, Storage and Handling: Incidents included fumes emitted from a hazardous materials storage area, improper declaration (and as a result handling) of hazardous materials being shipped to/through OAK, and the puncture of corrosive material packaging by a forklift.
- LUST and RGA LUST Sites: Six LUST sites were identified on the Subject Property. In addition, 8 RGA LUST sites are located, and 11 more may be located, on the Subject Property. The RGA LUSTs, which are located at or near the main central detailed study area, have the associated addresses: 1 Airport Drive (8) and 1100 Airport Drive (5); these addresses are consistent with current LUST cases and there is likely some overlap. All LUST sites on the Subject Property are closed. Additional information on the LUST sites is included in **Section 5.3.1.**
- Spills of Hazardous Materials: Spills of hazardous materials (not related to aircraft fueling) included petroleum hydrocarbons, battery acid, corrosive materials, and effluent water.
- Inspection Violations: Numerous inspection violations were included in the database listings. These violations typically related to insufficient declaration or documentation of hazardous materials, Hazardous Materials Business Plan (HMBP) deficiencies, insufficient training regarding hazardous materials handling, insufficient tank inspection frequency, exceedances of maximum allowable hazardous materials volumes, failure to remove hazardous waste in a timely fashion, deficient emergency response procedures, improper storage of hazardous materials (e.g. drums not closed), and improper drum labeling.
- Use and Accidental Release of Fire Suppressant Foam/PFAS: Three PFAS-related incidents were listed. Incidents included a broken water main that caused fire suppressant to be released, fire suppressant deployment on a runway, and a spill of fire suppressant from an overturned fire truck.
- EnviroStor Sites: One certified EnviroStor Site was identified on the proposed North Field Lot during file review. Additional information regarding this Site is included in **Section 5.3.2.**
- Cleanup Program Sites: Six CPS sites are listed for the Subject property in the EDR Area/Corridor Study Report. Two sites are PFAS-related, one is a former landfill, and the remaining two are related to petroleum hydrocarbon contamination. Additional information on CPS sites is included in **Section 5.3.1.**

5.1.2 Surrounding Properties

The Subject property could be impacted as a result of contamination impacting nearby properties. Regulatory records concerning nearby properties are reviewed to identify a release of hazardous materials which would be expected to impact conditions at the Subject Property. Sites of greatest concern are those from which contamination may have migrated onto the Subject Property. Therefore, the discussion of surrounding properties has generally been limited to those adjacent to the Subject Property. Database search results produced by the EDR Area/Corridor Report (**Attachment 2**) provide additional information on the listings summarized in **Table 1**. The following summarizes LUST, CPS, military, or State Response sites that have been identified in surrounding properties. Additional sites have been identified on Airport property or on adjacent parcels at further distances from the subject property; however, these sites are deemed to pose substantially lower risk due to the nature of the work proposed in the proximate detailed study areas (proposed parking lots) and the increased distance from those areas.

- LUST Sites: Six LUST sites have been identified on properties that are in close proximity to the Subject Property. Two of the LUST sites are located near the proposed North Field Lot and four are located near the proposed Golf Course Lot. Additional information on the LUST sites is included in **Section 5.3.1.**
- Cleanup Program Sites: Six CPS sites were identified on properties that are in close proximity to the Subject Property. Two of the sites are located near the proposed North Field Lot, two are located near the proposed Maitland Lot, and two are located near the proposed Golf Course Lot. Additional information on the CPS sites is included in **Section 5.3.1.**
- Military Sites: Two former military sites were identified on the Airport property in close proximity to the proposed North Field Lot. Both sites are related to petroleum hydrocarbon contamination.
- State Response (EnviroStor) Sites: One State Response Site, Kaiser Aerotech was listed at a property near the proposed Golf Course Lot Property. Additional information regarding this site is included in **Section 5.3.2.**

5.2 Historical Use Information

Information regarding prior uses of the Subject Property was collected using available historical reference sources. Information related to the historical use of this property and surrounding area was obtained from a review of aerial photographs, historical topographic maps, fire insurance maps, and city directory information provided as part of the initial EDR Radius Report requested by HDR|WRECO.

In the mid-1800s, Oakland Harbor was mostly a waterfront shoreline with marshes and adjoined by tidelands, of which overtime became mudflats due to the expansion of the railroad. The railroad held a monopoly of the land in the area, so expanding ports along was shoreline was not feasible. Oakland began lobbying for the estuary expansion of the Port. Congress passed the River and Harbor Act of 1873 and issued the Army Corps of

Engineers to begin the process. The shoreline was reconfigured by dredging, installing jetties for the channel, and a tidal canal. By 1900, the channel was 300 feet wide with a low tide depth of 20 feet. The tidal canal was opened in 1902, and with the canal three additional bridges were constructed (Minor, 2000).

The City of Oakland grew after the 1906 earthquake that resulted in many local San Franciscans relocating to Oakland. The first World War also provided an increase in people relocating to the city for factory jobs, and better opportunities. After the Panama Canal was established, more port opportunities and transfer of goods were established.

Construction for the OMA began in 1927, with crews using mule-drawn graders to complete the first runway. The job was completed in three weeks, and on June 28, 1927, the first military plane left the Airport. As a starting point for long distance Pacific flights, the military use of OMA began nearly concurrently with its establishment in 1927. Both the United States Army and the Navy established reserve elements there during the 1930s concurrent with commercial and civilian use of the airfield. During World War II (WWII), the military services took over the entire site, sharing the airfield runways and taxiways and making use of the airplane mechanics school there. In the beginning of the war, the 4th Air Force dispersed interceptor aircraft at OMA. The Army also stationed an anti-aircraft (AA) battery at OMA.

In January 1942, the Navy operated full primary training there until more extensive facilities were completed at Livermore. Its presence continued as Naval Air Transport Service (NATS) terminal operating as both Naval Auxiliary Air Station (NAAS) and a Naval Air Station (NAS). By April 1944, the Army transferred jurisdiction of OMA to the Air Service Command (ASC), where its main mission was processing aircraft for overseas shipment for the remainder of the war. The Army declared it excess in September 1946 and subsequently control was relinquished to the Airport Authority.

Following the end of the war, the Navy reestablished a reserve air station at OMA, which continued operations there until 1961, when the mission moved to NAS Alameda. The 1,167.71-acre site is at what is now called the North Field at OAK. The U.S. Navy formerly used the facility as a supply center that was occupied by administration buildings, lubrication and storage buildings, fuel tanks, airplane hangars, jet engine test facilities, general maintenance hangars, warehouses, and various paint storage buildings. Many original buildings are currently used by Airport tenants. No evidence of gasoline storage was observed at the original gasoline storage area. After DoD occupation, the property reverted to the City of Oakland, the original lease holders, for use as an international airport.

5.2.1 Historical Topographic Maps

A historical map report was prepared by EDR and included a search of a collection of public and private topographic maps. Maps dated 1899, 1915, 1947, 1948, 1959, 1968, 1973, 1980, 1996, 2012, 2015, and 2018 were provided for review by EDR. The EDR Historical

Topographic Map Report is included as **Attachment 6**. The Subject Property historical use based on the topographic map review is summarized in **Table 3**.

5.2.2 Historical Aerial Photographs

Historical site uses can frequently be ascertained from a review of aerial photographs. Aerial photographs of the Subject Property and surrounding area were provided from the United States Department of Agriculture (USDA), National Agriculture Imagery Program (NAIP), United States Geologic Society (USGS), Digital Orthophoto Quarter Quads (DOQQ), through EDR for the following years: 1939, 1946, 1958, 1963, 1968, 1974, 1982, 1993, 1998, 2005, 2009, 2012, 2016, and 2020. The EDR Aerial Photo Decade Package is included in **Attachment 7**. The Subject Property historical use based on the aerial photograph review is summarized in **Table 4**.

5.2.3 Sanborn Fire Insurance Maps

Fire insurance maps (Sanborn Maps) are used to determine fire hazards and were produced for most urban areas beginning in the late 1800s. EDR searched for Fire Insurance Maps for the main central detailed study area, and none were found.

5.2.4 City Directory Review

Historical use near the Subject Property can be inferred from previous companies that may have operated at and in nearby facilities within proximity of the Subject Property. The Airport address at 1 Airport Way had listings in the research source (Cole Information Services, Haines Company Inc, R.L. Polk & Co., and Pacific Bell) for the years 1920 to 2017. The EDR City Directory Image Report is provided in **Attachment 8**. A summary of the historical city directory records researched at 1 Airport Way is summarized in **Table 5**.

5.3 Online Database Review

5.3.1 State Water Quality Control Board GeoTracker Database

GeoTracker is the State Water Quality Control Board (SWRCB) data management system for sites that impact groundwater or have the potential to impact groundwater. The GeoTracker online database contains sites that require groundwater cleanup as well as permitted facilities that could impact groundwater.

A review of the online GeoTracker database listed 13 properties, including LUST and CPS sites, located within the Subject Property (SWRCB, 2021). In addition, 14 properties located near or adjacent to the Subject Property were identified as having potential environmental concerns.

5.3.1.1 Subject Property

GeoTracker listings for the Subject Property, including site type, site information, constituents of concern and media, and site status, are listed in **Table 2A** and shown on

Figure 8. All listings were related to the Main Central detailed study area and the proposed Golf Course Lot; there were no onsite listings for the proposed Northfield Lot or the proposed Maitland Lot. The GeoTracker sites include:

Main Central Area

- Six LUST sites were identified in this area with gasoline or diesel as the constituent of potential concern. Impacted media includes soil and groundwater. All sites have been closed.
- Two CPS sites were identified with PFAS as the constituent of potential concern. Both sites are in the Site Assessment phase.
- Two CPS sites were listed with petroleum hydrocarbons (diesel and gasoline) in groundwater as the constituents of potential concern. These sites are both open.
- One CPS site (the Tank Farm) was listed with petroleum hydrocarbons and associated compounds (aviation fuel, gasoline, diesel, benzene) in the soil, groundwater, and surface water. This site is listed as open and in the remediation phase as of January 2009. The site has land use restrictions.

Proposed Golf Course Lot - The CPS listing for the proposed Golf Course Lot included lead, nickel, arsenic, and copper in the groundwater. The site is the location of a former landfill. The site is listed as inactive.

5.3.1.2 Sites Near/Adjacent to the Subject Property

GeoTracker listings for sites near and adjacent to the Subject Property, including site type, site information, constituents of concern and media, and site status, are listed in **Table 2B** and shown on **Figure 9**. Listings were identified for the sites near the proposed North Field, Maitland, and Golf Course Lots. The GeoTracker sites include:

Proposed North Field Lot

- Two LUST sites were identified in this area with aviation fuel or diesel as the constituent of potential concern. Impacted media includes soil and groundwater. Both sites have been closed.
- Two CPS sites were listed in this area.
    - National Airmotive Corporation, which has aviation fuel listed as the constituent of potential concern in soil and groundwater, is open but eligible for closure.
    - Port of Oakland Raiders Training Facility is a former landfill. Lead was listed as the constituent of potential concern in soil.
- Two former military sites were listed.
    - The NAS Oakland -FAA Tracon site is listed as having petroleum hydrocarbons in the groundwater. This site is open but eligible for closure as of January 2018.

- The NAS Oakland – AOC 21 site lists TPH in groundwater as the constituent of potential concern and is in the site assessment phase.

Proposed Maitland Lot This area has two CPS sites listed.

- The Oakland Airport Northfield Runway Area has TPH, and oil (waste, motor, hydraulic, and lubricating) listed as constituents of potential concern. The impacted media is under investigation. The site is open but has been in the verification monitoring phase since June 2015.
- The Island Gun Club does not have any constituents of concern listed but has soil as the affected media. The site is closed.

Proposed Golf Course Lot

- Four LUST sites were identified in this area with gasoline or diesel as the constituent of potential concern. Impacted media includes soil and groundwater. All sites have been closed.
- Two CPS sites were listed in this area.
    - Kaiser Aerotech, which has gasoline in groundwater listed as the constituent of potential concern, is open and in remediation as of July 2008.
    - Doolittle Associates has no constituents of potential concern or media listed in the case record, but a report included elevated levels of TPH, PCBs, and metals.

5.3.2 Department of Toxic Substances Control EnviroStor Database

The DTSC's EnviroStor database (DTSC, 2023) is an online search and Geographic Information System (GIS) tool for identifying sites that have known contamination or sites that may require further investigation. It also identifies facilities that are authorized to treat, store, dispose, or transfer (TSDF) hazardous waste. Only sites identified as "cleanup" sites on EnviroStor are included in this evaluation.

A review of the online EnviroStor database listed 1 site within the Subject Property and one site of potential concern near the Subject Property. An additional "Tiered Permit" site (Likit Window) was listed near the proposed Golf Course Lot; however, no work was performed beyond a Phase I ESA. This site is listed as a closed LUST site in GeoTracker. EnviroStor listings for the Subject Property and sites near and adjacent to the Subject Property, including site type, site information, constituents of concern and media, and site status, are listed in **Table 2A** and **2B**, respectively; the corresponding sites are shown on **Figure 8** and **Figure 9**, respectively.

- **Subject Property (Proposed North Field Lot):** The Port of Oakland EZBH site had elevated lead concentrations in soil. The site had been remediated and certified.
- **Adjacent/Nearby Property (Proposed Golf Course Lot):** The Kaiser Aerotech which has volatile organics listed as the constituent of potential concern in groundwater listed, is certified and in the operations and maintenance phase.

5.4 File Review

5.4.1 Alameda County Department of Environmental Health

Certified Unified Program Agency (CUPA)-related inspection reports and violations include the types of violations listed below. A detailed list of violations is included in the EDR Area/Corridor Report in **Attachment 2** (EDR, 2023):

- Drums not being handled properly, not labelled, or labels not filled out properly
- Improper declaration of hazardous materials
- Insufficient declaration or documentation of hazardous materials
- HMBP deficiencies
- Insufficient training regarding hazardous materials handling
- Insufficient tank inspection frequency
- Exceedances of maximum allowable hazardous materials volumes
- Failure to remove hazardous waste in a timely fashion
- Deficient emergency response procedures
- Improper storage of hazardous materials (e.g., drums not closed)
- Improper or inadequate labeling of waste accumulation containers and portable tanks
- Improper documentation of hazardous waste disposal records
- General housekeeping issues (e.g., used absorbent not cleaned up in a timely fashion)
- Insufficient fire extinguisher inspection frequency

Noted violations were addressed and mitigation was submitted to Alameda County Environmental Health for approval.

5.4.2 Alameda County Assessor's Office

As described in **Section 1**, the Subject Property includes portions of the Alameda County Office of the Assessor APNs 42-4540-2-1, 42-4545-1, 42-4404-2, 74-1040-4-2, 42-4404-8, and 42-4525-1-2. The Alameda County Assessor's Office database was accessed online to obtain records of ownership for the Subject Property. The Port also provided a figure last updated in 2015 designating the current grantees for the different parcels. Files from the Assessor's office and documentation from the Port are summarized in **Table 6**.

Information regarding prior uses of the Subject Property was collected using available historical reference sources. Information related to the historical use of the Subject Property and surrounding area were obtained from a review of aerial photographs, historical topographic maps, fire insurance maps and city directory information provided as part of the EDR report.

6.0 INTERVIEWS AND QUESTIONNAIRES

The interview form to obtain information regarding past uses of the Subject Property was emailed to Colleen Liang, Port Environmental Supervisor, and returned to HDR|WRECO staff on December 21, 2021. The same individual that responded to the 2021 owner questionnaire reviewed the questionnaire in June 2023 and confirmed the responses have not changed. The completed questionnaire is provided as **Attachment 9**.

7.0 FINDINGS

Based on the findings of the Phase I ESA, the following potential RECs were identified:

Main Central Detailed Study Area:

- ACM and LBP: Previous studies have identified ACM and lead-based paint (LBP) within the Terminal buildings and OMC Hangar. The OMC Hangar and Terminal 1 planned for demolition at OAK were tested and ACM and LBP were documented. (REC).
- PCBs from transformers within the OMC Hangar and substation. (REC)
- Mercury from fluorescent light tubes. (REC)
- Petroleum Hydrocarbons: Petroleum hydrocarbons (and associated compounds including benzene) have been detected in the soil, groundwater, and surface water. Impacts would be potentially significant. Sources include:
    - Leaks and spills associated with aircraft maintenance or other operational activities. Previous investigations at the OMC Hangar indicate that the contaminants of concern include gasoline, diesel, jet fuel, petroleum hydrocarbons in both waste oil and lubricating oil in the soil and/or groundwater. (REC)
    - Spills associated with aircraft fueling. Several incidents of spillage were documented in the EDR Area/Corridor Study. (REC)
    - LUST cleanup sites along the Subject Property. A LUST site at the Tank Farm has associated land use restrictions. (CREC and HREC)
- Solvents: Solvent (e.g., degreasers, lubricants) from leaks and spills associated with aircraft maintenance. Previous investigations at the OMC Hangar indicate that VOCs likely associated with solvent use are present in the soil and groundwater. Impacts would be potentially significant. (REC)
- PFAS: The use and release of firefighting foam resulting in detections of PFAS in groundwater and soil has been documented in the EDR Area/Corridor Study. PFAS sites are documented on Table 2. Impacts would be potentially significant. (REC)
- Metals: Metals associated with aircraft maintenance. Previous investigations at the OMC Hangar indicate that metals are present in the soil and groundwater. Metals are common in waste oils and can be released as dust during machining or other activities. Impacts would be potentially significant. (REC)

Proposed North Field Lot:

- Metals: Elevated levels of lead have been detected in both the detailed study area and in a nearby property. Both sites have been closed with no land use restrictions. Due to remediation as the property, impacts would be low. (HREC)
- Petroleum Hydrocarbons: Petroleum hydrocarbons (aviation fuel and diesel) have been detected in the soil and/or groundwater at properties near the near the

proposed North Field Lot. Potential sources include LUST sites as well as other spills and leaks associated with historical operations at those Sites. As shown on Table 2B two nearby/adjacent LUST sites (one open one closed), one CPS Site (eligible for closure) and two former military sites (one eligible for closure and one listed in the site assessment phase) have petroleum hydrocarbons listed as constituents of potential concern. No land use restrictions were noted. Impacts would be low to moderate. (REC and HREC)

Proposed Maitland Lot

- Petroleum Hydrocarbons: Petroleum hydrocarbons (TPH, oil – waste, motor, hydraulic, lubricating) were identified as constituents of potential concern in the Northfield Runway Safety Area near the proposed Maitland Lot. Impacts would be low to moderate. (REC)
- An additional site was listed in the EDR Area/Corridor study but no constituents of potential concern were listed and the site was closed without documentation of any regulatory activity (e.g., site assessment).

Proposed Golf Course Lot

- Petroleum Hydrocarbons: Petroleum hydrocarbons have been detected in the soil and groundwater at four nearby/adjacent LUST sites and two CPS sites. All LUST sites have been closed, while one CPS site remains open. Due to site conditions (capped landfill) and the nature of the construction, impacts would be low. (REC and HREC)
- Metals: Elevated levels of metals have been detected in both the detailed study area (groundwater), and a nearby property (soil). The Subject Property site is open, the adjacent site is closed with no land use restrictions noted. Due to site conditions (capped landfill) and the nature of the construction, impacts would be low. (REC and HREC)
- PCBs: PCBs were noted in a report for a property near the detailed study area. The site is closed with no land use restrictions noted. Due to site conditions (capped landfill) and the nature of the construction, impacts would be low. (HREC)
- VOCs: VOCs were identified in the soil, groundwater, and soil vapor at the Kaiser Aerotech site at 880 Doolittle Drive. Although the address indicates that the site should be adjacent to the Subject property, it is actually located off of Doolittle Drive behind other properties. The site is Certified; however, it is subject to Land Use restrictions. Due to site conditions (capped landfill) and the nature of the construction, impacts would be low. (CREC)

8.0 RECOMMENDATIONS

Based on the findings of the Phase I ESA, Northgate has the following recommendations:

Hazardous Building Materials: Hazardous building materials that may be encountered during demolition and renovation include LBP, ACM, PCBs, and mercury.

- Structures scheduled for demolition or renovation should be inspected for ACM and LBP. Inspection conducted under the direction and quality control of a California Certified Asbestos Consultant and Certified Lead Inspector/Assessor. The identification, handling, removal, and/or disposal of any potential ACMs and LBP must be completed in compliance with regulatory requirements. The offices in the building will require the linoleum tiles, carpet, and acoustic drop-tile ceilings to be tested and evaluated for ACM. Impacts would be potentially significant.
- Potential PCBs from transformers and other equipment and materials will need to be monitored during construction. Potential sources of PCBs have been noted within the OMC Hangar and substation; however, they may also be located in other areas. Suspected sources of PCBs should be investigated prior to demolition. Impacts would be potentially significant.
- Mercury: Fluorescent light tubes should be handled with care during demolition and renovation. Any tubes removed as part of these activities should be disposed of appropriately as a hazardous waste. Impacts would be moderate.

Contaminated Soil and Groundwater: A Phase II ESA[3] is recommended to be performed at the Subject Property to help verify the presence/absence of RECs identified in the Phase I ESA, identify specific impacted areas, and provide guidance for waste management and worker safety during project construction. Constituents of potential concern to be evaluated based on the data review are listed below by detailed study area. Additional constituents may be included as appropriate to evaluate available options for soil disposal and/or reuse, or remediation.

Main Central Detailed Study Area

- Petroleum Hydrocarbons (gasoline, diesel, jet fuel, oil and grease)
- Volatile Organic Compounds (VOCs), including Benzene, toluene, ethylbenzene, and xylenes)
- PFAS
- CAM 17 metals
- PCBs

[3] A Phase II ESA is part of environmental due diligence and occurs when there are recognizable environmental conditions (RECs). The Phase II ESA includes sampling of soil, groundwater, and soil-vapor, as appropriate, to verify the presence or absence of contamination.

The Phase II ESA should include soil and groundwater sampling. Soil Vapor sampling should be included in areas where new habitable structures are planned.

Proposed North Lot

- Petroleum Hydrocarbons (gasoline, diesel, jet fuel, oil, and grease)
- CAM 17 metals

The Phase II ESA should include both soil and groundwater due to the shallow groundwater table.

Proposed Maitland Lot:

- Petroleum Hydrocarbons (gasoline, diesel, jet fuel, oil, and grease)

The Phase II ESA should include soil and groundwater (due to the shallow depth of groundwater in the area).

Proposed Golf Course Lot:

- CAM 17 metals.

Due to the nature of the site (capped), the distance from the potential PCB source, and the nature of construction, sampling for PCBs and VOCs is not recommended.

The Phase II ESA should include shallow soil sampling only to limit potential damage and/or penetration of the cap.

Previous studies have indicated that groundwater occurs within 1-foot (ft) of the ground surface. Potential construction impacts associated with the Subject Property may include the possibility of encountering soil and/or groundwater contamination in select areas. To reduce the potential impacts of contaminated soil and groundwater during construction, the Port should require that the contractor submits a soil and groundwater management plan for the handling, storage, treatment, and/or testing of contaminated soil and/or groundwater, including dewatering, and implements BMPs.

10.0 ENVIRONMENTAL PROFESSIONAL STATEMENT

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312, and I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312 except as noted in **Section 1.4.2**. As described, information related to site reconnaissance and questionnaires was gathered by HDR|WRECO prior to Northgate's involvement. Due to time limitations, I was not able to reconduct these activities.

TABLE 3
HISTORICAL TOPOGRAPHIC MAP SUMMARY

Year	Subject Property Use Description/Significant Changes
1899	The map shows the Subject Property not yet constructed. The San Francisco Bay and what is known as the Oakland Bay are major landmarks in the Topo Map. The Birmingham Southern Railroad Company running northeast through the Tributary of the Subject Property. Buildings are present northeast of the map, with a few structures.
1915	The map presents a clearer understanding of the Subject Property. There is a tributary feeding into San Francisco Bay, with the Subject Property in the middle of the flow path. The Birmingham Southern Railroad Company is still located in the northeast of the Subject Property, but as the previous map displayed the railroad does not cut through the Tributary.
1947	The Subject Property is located south of the Oakland Bay, and south of the Oakland Municipal Airport. The town of Brookfield is located northeast of the Subject Property, next to the tributary flowing into the Bay. Major roadways are located on the map with Interstate 880 in the northeast corner. There is a Naval Chapel north of the Subject Property, with a Naval base near-by.
1948	The Subject Property and vicinity appear like the previous map.
1959	The Subject Property is now the Metropolitan Oakland International Airport, as the San Francisco Bay was filled in. The land is not an active airport, but under construction. The properties north of the Subject Property are similar as the previous maps.
1968	The maps show the constructed Metropolitan Oakland International Airport with Terminal 1 and Airport Drive constructed. More surface area is surrounding the Subject Property with more fill material. Bay Farm Island is also visible from the map with the former Oakland Airport still intact.
1973	More development is located around the Metropolitan Oakland International Airport aside from Terminal 1, the OMC Hangar and other buildings are located north of Airport Drive. More development is growing around the major roadways and Interstate 880.
1980	Additional development of structures is located north-northeast of the Subject Property. As well as additional properties within the immediate Subject Property, with these structures toward the east. The Lew Galbraith Golf Course is located east of the Subject Property.
1996	This map shows the buildings associated with the Airport including Terminal 2. Roadways and residential streets are visible, but the properties are not visible on this map. The Tidal Channel is visible north of the Subject Property.
2012, 2015, 2018	The maps do not display buildings, but the roadways around the Subject Property. The land and development surrounding the Subject Property looks like the previous map.

TABLE 4
HISTORICAL AERIAL PHOTOGRAPH SUMMARY

Year	Source	Subject Property Use Description/Significant Changes
1939	USDA 1″ = 875′	The Subject Property is situated in San Francisco Bay in the water. The Oakland Municipal Airport can be seen to the north of the image with the runway.
1946	USGS 1″ = 875′	The aerial photograph appears like the previous photograph, but the image has two runways instead of one. The image is more defined with two runways and roads crossing between them.
1958	USGS 1″ = 875′	The Subject Property is being more defined with active construction mobilizing fill for the proposed airport. Southwest of the Subject Property runways are more defined, but only has the fill material.
1963	EDR Proprietary Aerial Viewpoint 1″ = 875′	The aerial photo shows the Subject Property more defined with Terminal 1 and a circular parking lot close to the terminal. The Subject Property is also completed with fill surrounding the area for future construction.
1968	USGS 1″ = 875′	More completed construction around the perimeter of the Subject Property is visible with runways and airport access roads. Vegetation can be seen growing in the compacted fill material around the Subject Property.
1974, 1982	USGS 1″ = 875′ USDA 1″ = 875′	More structures are in place around the Subject Property prior to previous images. The OMC Hangar, smaller plane storage structures to the west, a tank farm to the east, and other buildings to the roadway entrance of Airport Drive can be seen. A runway and other plane taxiing roads are in place. There is construction northwest of the Subject Property for potential use.
1993	USGS/ DOQQ 1″ = 875′	The image is like the previous, with additional structures around the Subject Property. Terminal 2, more parking lots, more plane hangars to the northwest, and additional plane hangars to the west of the Subject Property. There are now a total of nine oil tanks to the east of the Subject Property.
1998	USDA 1″ = 875′	The aerial photograph appears like the previous photograph with more parking areas available and more office buildings designated for Airport purposes.
2005, 2009, 2012, 2016, 2020	USDA/ NAIP 1″ = 875′	Increase in development throughout the Subject Property, specifically to the north where additional roadways and parking lots have been built.

″ = inches
′ = feet

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527-21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

Case Worker:	DT
Local Agency:	Not reported
RB Case Number:	Not reported
Loc Case Number:	Not reported
File Location:	Not reported
Potential Contaminants of Concern:	Total Petroleum Hydrocarbons (TPH)
Potential Media Affected:	Other Groundwater (uses other than drinking water)
Site History:	The investigation at AOC-3 has been combined with AOC-13 because AOC-13 is located within the boundary of AOC-3 and is part of the

NAS OAKLAND - FAA TRACON (Continued) **S121476119**

same fuel delivery system. AOC-3 and AOC-13 are located at the northeastern corner of the Facility and are currently within the secured confines of the FAA TRACON facility. AOC-3 consists of four USTs that were formerly used to store aviation fuel. These tanks, identified as USTs 16-1, 16-2, 16-3, and 16-4, were constructed prior to 1952. USTs 16-1, 16-2, and 16-3 have capacities of 100,000 gallons each and measure 42 feet in diameter by 10 feet deep. UST 16-4 has a capacity of 210,000 gallons and measures 53 feet in diameter by 13 feet deep. USTs 16-1 and 16-4 contained JP-3 jet fuel; UST 16-2 contained 91/96 aviation fuel; and UST 16-3 contained 115/145 aviation fuel. USTs 16-1, 16-2, 16-3, and 16-4 were also identified as UST-8, UST-7, UST-6, and UST-5, respectively, in previous reports. Each of the USTs was destroyed in place and backfilled with gravel and/or soil. AOC-13 consists of the former location of Building 16, which housed the pump and meter for aviation fuel storage activities (FA/BC 2003). The pump and meter house, constructed in 1944, serviced the four USTs that are located in AOC-3. This building was equipped with a rack for loading aviation fuel trucks. A release of petroleum hydrocarbons could have occurred during routine operations at this facility.

RWQCB Region: SAN FRANCISCO BAY RWQCB (REGION 2)
Site History: Water Board staff has reviewed the soil and groundwater data contained in the Workplan for Soil and Groundwater Investigation, dated 6 May 2008 (Work Plan) for the subject Site, prepared by BASELINE Environmental Consulting on behalf of the Port of Oakland. A 4,000-gallon gasoline UST and storm drain system were removed from the site in 1999. Based upon the results of investigations summarized in the Work Plan, it appears that soil and groundwater contamination at the Site consists of metals, petroleum hydrocarbons, and volatile organic compounds. The Work Plan proposes conducting additional investigations to better define the extent of soil and groundwater contamination at the Site.

Environmental Interest/Information System:
US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
OSHA ESTABLISHMENT
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United

ROLLS ROYCE ENGINE SERVICES-OAKLAND (Continued) **1000260560**

States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
HAZARDOUS AIR POLLUTANT MAJOR
STATE MASTER
HAZARDOUS WASTE BIENNIAL REPORTER
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

RWQCB Region:	SAN FRANCISCO BAY RWQCB (REGION 2)
Site History:	AOC 21 consists of the footprints of two former ASTs (Tanks 11-1 and 11-2) that were constructed prior to 1957. The tanks were used for the storage of aviation lube oil and were located just west of Sixth Avenue and north of B Street near the northwestern property line of

NAS OAKLAND - AOC 21 - AVIATION LUBE OIL STORAGE (TANKS 11-1 (Continued) **S118502967**

the former NAAS Oakland. During the refilling and use of these tanks, petroleum hydrocarbons may have been released to the surrounding soil. Therefore, soils within AOC 21 may contain elevated concentrations of petroleum hydrocarbons.This site has insufficient information to support no further action.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Military DOD Site:	No
Facility Project Subtype:	Not reported
RWQCB Region:	SAN FRANCISCO BAY RWQCB (REGION 2)
Site History:	Site is the location of a former aircraft engine test facility most recently operated by the Rolls Royce Corporation. Facility decommissioning/removal which included the removal of the three remaining USTs was performed in the last half of 2019 and early 2020. The site has entered the verification monitoring phase following completion of the remedial actions. No above ground structures remain on-site and the site has been covered with pavement and residual foundation slabs remain for a hardscape cover. As part of the remedial activities following facility demolition, a total of approximately 3228 tons of soil were disposed off site from five excavated areas of concern. Confirmation sampling was conducted at the excavated areas, with one location, represented by sample EX-8, having a residual TPH concentration above the clean up level. In September 1992, the test engine facility experienced a release of

ROLLS ROYCE TEST CELL FACILITY (Continued) **S108246028**

1,143 gallons of Jet-A fuel. In October 1998, petroleum hydrocarbons, identified as a mixture of degraded motor oil, diesel, and/or kerosene, was observed floating on groundwater infiltrating a trench. Prior to 1978, gray water- water potentially containing oil from test cell engine wash down- was discharged directly to an unlined drainage ditch. Between 1978 and 1992 gray water was passed through an oil-water separator prior to discharge. From 1992 onward gray water was transported off-site for disposal. In Spring 1994 the facility experienced a release of gray water into the surrounding environment. SWIs conducted for the facility identified construction debris and other refuse in site soil. Source of the debris is believed to be from the North Port of Oakland Refuse Disposal site located to the north and to the west of the test engine facility. Three groundwater monitoring wells were installed in 1996 after an inital investigation identified petroleum contaminants at the site. Groundwater was measured at approximately 3 feet bgs and determined to contain up to 1,300 ug/L TPHj and 2,200 ug/L TPHd. SWIs conducted between 1996 and 2002 revealed the presence of up to 42,000 mg/kg TPHj, 29,000 mg/kg TPHd, and 13,000 TPHg in soil. In 1998 trenching operations revealed oil floating on infiltrating groundwater in one of the trenches. Fourteen additional wells were installed in 2007. Groundwater concentrations for the well network were report up to 34,000 ug/L TPHo, 12,000 ug/L TPHd and 9,100 ug/L TPHj for the inial monitoring event. Separate phase hydrocarbon concentrations continue to be observed in one well (MW-18) and in a few soil bores advanced for GGW collection and analysis.

Violations:
Site ID: 29332
Site Name: FAA OAK SSC/OAK RCLT Facility 108
Violation Date: 06-22-2017
Citation: 22 CCR 12 66262.40(a) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(a)
Violation Description: Failure to keep a copy of each properly signed manifest for at least three years from the date the waste was accepted by the initial transporter. The manifest signed at the time the waste was accepted for transport shall be kept until receiving a signed copy from the designated facility which received the waste.
Violation Notes: Returned to compliance on 11/30/2017. OBSERVATION: Copies of hazardous waste disposal records for 2016 and 2015 were not found on site. Hazardous waste generators shall retain copies of all manifests signed off by the disposal facility and all receipts used in a consolidated manifesting procedure on site for three years and have them readily available for review. CORRECTIVE ACTION: Immediately locate a copy of all manifests and receipts for the last three years, maintain them on site, and submit copies to the CUPA within 30 days.
Violation Division: Alameda County Environmental Health
Violation Program: HW
Violation Source: CERS,

Site ID: 29332
Site Name: FAA OAK SSC/OAK RCLT Facility 108
Violation Date: 06-22-2017
Citation: HSC 6.95 25507 - California Health and Safety Code, Chapter 6.95, Section(s) 25507
Violation Description: Failure to adequately establish and implement a business plan when storing/handling a hazardous material at or above reportable quantities.
Violation Notes: Returned to compliance on 01/16/2018. OBSERVATION: Observed that the annular space monitoring panel for the West 1000 gallon Diesel tank is not powered on. No visual inspections are being conducted on the annular space. CORRECTIVE ACTION: Have the monitoring panel powered on so it is operating properly. Provide documentation showing that it is working properly.

Violation Division:	Alameda County Environmental Health
Violation Program:	HMRRP
Violation Source:	CERS,
Site ID:	29332
Site Name:	FAA OAK SSC/OAK RCLT Facility 108
Violation Date:	06-22-2017
Citation:	HSC 6.95 25508.1(a)-(f) - California Health and Safety Code, Chapter 6.95, Section(s) 25508.1(a)-(f)
Violation Description:	Failure to electronically update business plan within 30 days of any one of the following events: A 100 percent or more increase in the quantity of a previously disclosed material. Any handling of a previously undisclosed hazardous materials at or above reportable quantities. A change of business address, business ownership, or business name. A substantial change in the handler's operations that requires modification to any portion of the business plan.
Violation Notes:	Returned to compliance on 01/16/2018. OBSERVATION: The facility has not submitted the Hazardous Materials Inventory Chemical Description page for two 55 gallons and fourteen 5 gallon buckets of used oil, three 287 cubic feet propane cylinders, one dichlorol fluoromathane cylinder and over 70 gallons of roof & tile primer to the CUPA. CORRECTIVE ACTION: Complete and submit the Hazardous Materials Inventory Chemical Description page for all materials listed above electronically in the California Environmental Reporting System (CERS).
Violation Division:	Alameda County Environmental Health
Violation Program:	HMRRP
Violation Source:	CERS,
Site ID:	29332
Site Name:	FAA OAK SSC/OAK RCLT Facility 108
Violation Date:	06-22-2017
Citation:	HSC 6.5 25250.22 - California Health and Safety Code, Chapter 6.5, Section(s) 25250.22
Violation Description:	Failure to properly manage used oil and/or fuel filters in accordance with the requirements.
Violation Notes:	Returned to compliance on 11/30/2017. OBSERVATION: Observed one 5 gallon bucket of used oil filters that is not closed nor labeled with contents and accumulation start date. Used oil filters can only be stored onsite no longer than 1 year. CORRECTIVE ACTION: Have the container of used oil filters labled, closed, and provide photo documentation to ACDEH within 30 days.
Violation Division:	Alameda County Environmental Health
Violation Program:	HW
Violation Source:	CERS,
Site ID:	29332
Site Name:	FAA OAK SSC/OAK RCLT Facility 108
Violation Date:	06-22-2017
Citation:	HSC 6.95 25505(a)(4) - California Health and Safety Code, Chapter 6.95, Section(s) 25505(a)(4)
Violation Description:	Failure to provide initial and annual training to all employees in safety procedures in the event of a release or threatened release of a hazardous material or failure to document and maintain training records for a minimum of three years.
Violation Notes:	Returned to compliance on 11/17/2017. OBSERVATION: INITIAL / ANNUAL training documentation for all applicable employees was not available.

FAA OAK SSC/OAK RCLT FACILITY 108 (Continued) **S121759875**

CORRECTIVE ACTION: Submit documentation to the CUPA demonstrating that employees have received training on safe handling of hazardous materials and the Emergency Response Plan.

Violation Division: Alameda County Environmental Health
Violation Program: HMRRP
Violation Source: CERS,

Site ID: 29332
Site Name: FAA OAK SSC/OAK RCLT Facility 108
Violation Date: 06-22-2017
Citation: HSC 6.5 25123.3(h)(1)(c) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)(c)
Violation Description: Failure to send hazardous waste offsite for treatment, storage, or disposal of acute/extremely hazardous waste after the first 1-kilogram threshold amount was accumulated within a 90 day period.
Violation Notes: Returned to compliance on 11/30/2017. OBSERVATION: The generatopr failed to dispose of hazardous waste after the first 100-kilogram threshold amount was accumulated within a 90 day period. Observed two 55 gallon drums and fourteen 5 gallon buckets of used oil with no hazardous waste labels to determine the amount of time stored onsite. CORRECTIVE ACTION: Immediately contact a licensed hazardous waste hauler to dispose of this waste under manifest and submit a copy of the manifest to the CUPA within 30 days.
Violation Division: Alameda County Environmental Health
Violation Program: HW
Violation Source: CERS,

Site ID: 29332
Site Name: FAA OAK SSC/OAK RCLT Facility 108
Violation Date: 06-22-2017
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description: Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes: Returned to compliance on 11/30/2017. OBSERVATION: There are two 55 gallon drums and fourteen 5 gallon buckets of used oil that have no hazardous waste labels. All hazardous waste containers shall be marked with the following information: 1) the words Hazardous Waste ; 2) name and address of generator; 3) hazardous properties; 4) physical state; 5) composition (contents); 6) accumulation start date. CORRECTIVE ACTION: Immediately label these containers and ensure that all containers are marked with all the required information. Since it cannot be determined how long the used oil drums have been on site, immediately contact a licensed hazardous waste hauler to dispose of this waste under manifest and submit a copy of the manifest to the CUPA within 30 days.

Violation Source: CERS,

Site ID: 29332
Site Name: FAA OAK SSC/OAK RCLT Facility 108
Violation Date: 06-22-2017
Citation: 40 CFR 1 265.173 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.173
Violation Description: Failure to meet the following container management requirements: (a) A container holding hazardous waste must always be closed during storage, except when it is necessary to add or remove waste. (b) A container holding hazardous waste must not be opened, handled, or stored in a manner which may rupture the container or cause it to leak.
Violation Notes: Returned to compliance on 06/22/2017. OBSERVATION: Observed two 55 gallon used oil drums that had missing bung caps. All hazardous waste containers shall be closed at all times except when adding or removing waste. CORRECTED ONSITE: Generator placed bung caps back on during inspection.
Violation Division: Alameda County Environmental Health
Violation Program: HW
Violation Source: CERS,

Site ID: 29332
Site Name: FAA OAK SSC/OAK RCLT Facility 108
Violation Date: 06-22-2017
Citation: 40 CFR 1 265.31 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.31
Violation Description: Failure to maintain and operate the facility to minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water which could threaten human health or the environment.
Violation Notes: Returned to compliance on 11/30/2017. OBSERVATION: Observed that the used oil secondary containment area contains used oil inside it. All spills are to be cleaned up immediately to minimize the possibility of a release. CORRECTION ACTION: Clean out the used oil from the secondary containment area and provide photo documentation to ACDEH within 30 days.
Violation Division: Alameda County Environmental Health
Violation Program: HW
Violation Source: CERS,

FAA OAK SSC/OAK RCLT FACILITY 108 (Continued) **S121759875**

Evaluation:

Eval General Type:	Compliance Evaluation Inspection
Eval Date:	06-22-2017
Violations Found:	Yes
Eval Type:	Routine done by local agency
Eval Notes:	Onsite to conduct the Hazardous Waste Generator inspection at FAA Bay SSC/OAK RCL/TRACON Facility 108 - 1029 Grumman St., Oakland, CA Met with Airway Transportations Specialist, Ryan Risser. Facility consolidates waste from other locations, but is not submitted as a consolidated hazardous waste site from remote facilities. Generator shall determine designated facilities from remote site consolidation.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource

SENTINEL POWER SERVICES (Continued) **1023291056**

Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

CERS HAZ WASTE:
Name: FAA EAST BAY SSC
Address: 1029 GRUMMAN STREET, SUITE B
City,State,Zip: OAKLAND, CA 94621
Site ID: 29337
CERS ID: 10159837
CERS Description: Hazardous Waste Generator

Focus Map: **5**

Violations:
Site ID: 29337
Site Name: FAA East Bay SSC
Violation Date: 06-22-2017
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description: Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes: Returned to compliance on 11/30/2017. OBSERVATION: The hazardous waste storage area had no hazardous waste label. All hazardous waste containers shall be marked with the following information: 1) the words Hazardous Waste ; 2) name and address of generator; 3) hazardous properties; 4) physical state; 5) composition (contents); 6) accumulation start date. CORRECTIVE ACTION: Immediately label these containers and ensure that all containers are marked with all the required information. Provide photo documentation of proper hazardous waste labeling to ACDEH within 30 days.
Violation Division: Alameda County Environmental Health
Violation Program: HW
Violation Source: CERS,

Site ID: 29337
Site Name: FAA East Bay SSC
Violation Date: 06-22-2017
Citation: 22 CCR 12 66262.40(a) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(a)
Violation Description: Failure to keep a copy of each properly signed manifest for at least three years from the date the waste was accepted by the initial

FAA EAST BAY SSC (Continued) **S121759876**

transporter. The manifest signed at the time the waste was accepted for transport shall be kept until receiving a signed copy from the designated facility which received the waste.

Violation Notes: Returned to compliance on 11/30/2017. OBSERVATION: Able to review one manifest dates 5/23/17. Provide 2015 and 2016 waste manifests. CORRECTIVE ACTION: Provide 2015 and 2016 manifests within 30 days.
Violation Division: Alameda County Environmental Health
Violation Program: HW
Violation Source: CERS,

Site ID: 29337
Site Name: FAA East Bay SSC
Violation Date: 06-22-2017
Citation: 40 CFR 1 265.173 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.173
Violation Description: Failure to meet the following container management requirements: (a) A container holding hazardous waste must always be closed during storage, except when it is necessary to add or remove waste. (b) A container holding hazardous waste must not be opened, handled, or stored in a manner which may rupture the container or cause it to leak.
Violation Notes: Returned to compliance on 11/30/2017. OBSERVATION: Observed one 5 gallon drum of what appears to be waste oil that is not closed All hazardous waste containers shall be closed at all times except when adding or removing waste. CORRECTIVE ACTION: Immediately close these containers and ensure all hazardous waste containers are closed when not adding or removing waste.
Violation Division: Alameda County Environmental Health
Violation Program: HW
Violation Source: CERS,

Site ID: 29337
Site Name: FAA East Bay SSC
Violation Date: 06-22-2017
Citation: 40 CFR 1 265.31 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.31
Violation Description: Failure to maintain and operate the facility to minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water which could threaten human health or the environment.
Violation Notes: Returned to compliance on 11/30/2017. OBSERVATION: Observed unknown spilled thick material on the black top near the Flammable storage container in the parking lot. It is not dry, but also does not appear to be a liquid state. All spilled need to be cleaned up immediately. CORRECTIVE ACTION: Clean up the spilled material and provide photo documentation and how it was disposed of to ACDEH within 30 days.
Violation Division: Alameda County Environmental Health
Violation Program: HW
Violation Source: CERS,

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 06-22-2017
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Onsite to conduct the Hazardous Waste Generator inspection at FAA East

FAA EAST BAY SSC (Continued) **S121759876**

Bay SSC - 1029 Grumman St.,Oakland. Met with Airway Transportations Specialist, Ryan Risser. Facility consolidates waste from other locations, but is not submitted as a consolidated hazardous waste site from remote facilities. Generator shall determine designated facilities from remote site consolidation. CERTIFICATION OF RETURN TO COMPLIANCE I certify that the violation(s) noted in the Inspection Forms have been corrected. I have personally examined any documentation attached to the certification to establish that the violations have been corrected.

CERS Description:	Chemical Storage Facilities

Evaluation:

Eval General Type:	Compliance Evaluation Inspection
Eval Date:	06-12-2018
Violations Found:	No
Eval Type:	Routine done by local agency
Eval Notes:	Onsite to conduct the Hazardous Materials Business Plan inspection at Oakland SSC Facility 104 OAK AFSS - 1027 Grumman St., Oakland, CA. Met with Safety and Environmental Compliance Manager, Beth Rodigari . The most recent HMBP submittal was on 1/15/2018. Facility has a 500 gallon diesel tank that is monitored by a Veeder-Root. The Veeder-Root panel monitors the interstitial space and the fuel level. A 0.2 gph leak test is conducted periodically as well. ACDEH recommends adding the facility name, tank ID, and address on the header, so it is printed out on the Veeder-Root. Per California Health and Safety Code regulations, testing on monitoring equipment shall follow the manufacturer guidelines. The Veeder-Root shall be tested and programed by a Veeder-Root certified technician.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RWQCB Region:	SAN FRANCISCO BAY RWQCB (REGION 2)
Site History:	AOC 14 includes the site of former Building 38T, which was located on Fourth Avenue between B and D Streets (Figure 9). Currently, AOC 14 is covered with asphalt and is located with AOC 10 (Jet Engine Test Facility). Building 38T was formerly used as a firearm range. Therefore, the soils within AOC 14 may potentially contain elevated concentrations of lead. As stated in the February 12, 2016 NDAI Request letter, this AOC was determined to contain sufficient information to require no further action.

RWQCB Region:	SAN FRANCISCO BAY RWQCB (REGION 2)
Site History:	AOC 19 consists of former Building 60T, which was located near the corner of Doolittle Drive and Third Avenue. AOC 19 is currently covered with asphalt and is occupied by a rental car business. Building 60T was formerly used for the storage of construction equipment. Due to the potential use of fuels, oils and grease at this facility, the soils and groundwater in and around AOC 19 may potentially contain elevated concentrations of petroleum hydrocarbons and related compounds. As stated in the February 12, 2016 NDAI Request letter, this AOC was determined to contain sufficient information to require no further action.

Dwr Groundwater Subbasin Name:	Santa Clara Valley - East Bay Plain (2-009.04)
Disadvantaged Community:	Not reported
CA Enviroscreen 3 Score:	86-90%
CA Enviroscreen 4 Score:	95-100% (highest scores)
Military DOD Site:	Yes
Facility Project Subtype:	Not reported
RWQCB Region:	SAN FRANCISCO BAY RWQCB (REGION 2)
Site History:	AOC-16 includes the location of former Building 10, which was located just south of A Street. Building 10 was formerly used for the servicing of vehicles and served as the NAAS Oakland firehouse. USTs

NAS OAKLAND - AOC 16 - AUTO REPAIR AND FIREHOUSE (BLDG 10) (Continued) **S118502970**

were formerly located in the northern corner of the AOC. Due to the potential use of fuels, oils, and grease at this facility, the soils and groundwater within AOC-16 may potentially contain elevated concentrations of VOCs and/or petroleum hydrocarbons.

Violations:

Site ID: 28465
Site Name: Enterprise/Alamo/National Oakland Airport QTA
Violation Date: 01-10-2020
Citation: 22 CCR 15 66265.192(k) - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.192(k)
Violation Description: Failure to include all required information in the tank system assessment.
Violation Notes: Returned to compliance on 01/11/2022. The written hazardous waste tank system assessment for the hazardous waste tank system did not include the following: the material of construction, material thickness, description of the tank system and piping, a sketch of the tank, design standard, age of the tank, evaluation of equipment, a determination that the tank is good for service for five years, an the certification statement. Revise the written hazardous waste tank system assessment for the HAZARDOUS WASTE tank tank system in accordance with 22 CCR 15 66265.192(k) and submit a copy to the CUPA.

Violation Date:	01-10-2020
Citation:	22 CCR 15 66265.16 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.16
Violation Description:	Failure to provide employees with hazardous waste training program of class room instructions or on-the-job training within the first six months after the date of their employment or assignment to a facility, or to a new position at a facility and annually thereafter. Training records on current personnel shall be kept until closure of the facility and for former employees the record shall be kept for at least three years from the date the employee last worked at the facility. The records shall include the following: the job title for each position at the facility related to hazardous waste management, and the name of the employee filling each job; a written job description for each position, duties of facility personnel assigned to each position, and a written description of the type and amount of both introductory and continuing training that will be given to each person filling a position.
Violation Notes:	Returned to compliance on 08/12/2021. Training has been performed by the facility. However, the facility was a large quantity generator from over 1,000 kg of used oi, oil filters, etc., and did not have the training record for each individual staff who handles hazardous waste. Prepare a job training record that includes the job title, description of hazardous waste duties and training topics needed and send to the CUPA.

Eval General Type: Compliance Evaluation Inspection
Eval Date: 12-15-2016
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Complete an unannounced inspections for a vehicle fleet rental company and meet with facility representative Hattie Garrett who granted permission to compete the inspection. Facility operates 2-6000 gallon above ground fuel storage tanks (ASTs) used for vehicle fueling, and the AST system is serviced annually by RL Stevens. Employee training is completed annually and documented. The facility CERS submittal has been completed for 2016, with annual CERS review due in March 2017. However, the actual chemical inventory observed on site does not reflect the chemical inventory noted in CERS, as 4-55 gallon drums of synthetic oil are not listed on the CERS chemical inventory. Update the CERS chemical inventory to reflect all chemical stored at the facility. CERTIFICATION OF RETURN TO COMPLIANCE I certify that the violation(s) noted on the Notice to Comply and/or /Summary of Violations page(s) have been corrected. I have personally examined any documentation attached to the [Truncated]

Feature Description:	Between 1944 and 1945, the United States acquired 65.03 fee acres by purchase from the City of Oakland. Total acreage acquired for the site was 65.03. The Navy used the site as a supply center. Improvements to the site consisted of administration buildings, lubrication and storage buildings, a gasoline station, and various paint storage buildings. On 9 November 1962, 65.03 fee acres were quitclaimed back to the City of Oakland. The site is currently used as a portion of the Municipal Oakland International Airport and is known as the North Field Operations.

Description:	The 65.03-acre site is located in Alameda County, approximately five miles southeast of Oakland, California. The property consists

NAVAL AIR STATION OAKLAND (Continued) **1007211926**

primarily of private and public businesses and facilities; approximately half of the original DoD structures are occupied. About two acres of the property, at the corner of Fairchild and Northrop Streets, are used as a staging area for an off-site bioremediation project. There are no indications of aboveground gasoline and lubrication oil storage tanks or a gasoline pump house. The former gasoline station has been replaced with a parking lot.

History: Between 1944 and 1945, the United States acquired 65.03 fee acres by purchase from the City of Oakland. Total acreage acquired for the site was 65.03. The Navy used the site as a supply center. Improvements to the site consisted of administration buildings, lubrication and storage buildings, a gasoline station, and various paint storage buildings. On 9 November 1962, 65.03 fee acres were quitclaimed back to the City of Oakland. Military DOD Site:	Yes
Facility Project Subtype:	Not reported
RWQCB Region:	SAN FRANCISCO BAY RWQCB (REGION 2)
Site History:	AOC 22 includes the site of former Building 13, which was located on the corner of A Street and Fourth Avenue. Building 13 was used for the servicing of refrigerator equipment. Due to the potential use of fuels, oils, grease, and refrigerants (Freon) at this facility, the soils and groundwater in and around AOC 22 may potentially contain elevated concentrations of these compounds. As stated in the February 12, 2016 NDAI Request letter, this AOC was determined to contain sufficient information to require no further action.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

RWQCB Region:	SAN FRANCISCO BAY RWQCB (REGION 2)
Site History:	AOC-23 includes the site of former Building 20, which is located at the northeastern end of Sikorsky Street. This building was used as a waste incinerator. Due to the likelihood that waste was temporarily stored and eventually incinerated at this facility, the soils and groundwater within and around AOC-23 may potentially contain petroleum hydrocarbons, VOCs, SVOCs, or metals. As stated in the February 12, 2016 NDAI Request letter, this AOC was determined to contain sufficient information to require no further action.

Citation: 22 CCR 15 66265.192(k) - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.192(k)
Violation Description: Failure to include all required information in the tank system assessment.
Violation Notes: OBSERVATION: Owner/Operator does not have a tank assessment for the 250 gallon used oil tank located inside the shop. The owner or operator of a hazardous waste tank shall obtain a written assessment reviewed and certified by an independent, qualified, professional engineer, registered in California attesting that the system has sufficient structural integrity, is acceptable for the transferring, storing, and treating of hazardous waste, and that the tanks and containment system are suitably designed. CORRECTIVE ACTION: Immediately have an assessment prepared for the 250 gallon used oil tank. Submit a schedule showing when this will be accomplished to the CUPA within 30 days.

Citation:	HSC 6.95 25507 - California Health and Safety Code, Chapter 6.95, Section(s) 25507
Violation Description:	Failure to adequately establish and implement a business plan when storing/handling a hazardous material at or above reportable quantities.
Violation Notes:	Returned to compliance on 04/04/2019. The Hazardous Materials Business Plan (HMBP) has not been adequately implemented as demonstrated by a copy of the plan not being on site and available to employees to implement in an emergency. Also, the facility has not conducted annual employee training in safe handling of a hazardous material and emergency response. Submit verification documentation to the CUPA demonstrating that the HMBP is maintained on site and provide training to all employees and submit a training roster to ACDEH within 30 days.

Violation Date:	06-11-2018
Citation:	22 CCR 15 66265.16 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.16
Violation Description:	Failure to provide employees with hazardous waste training program of class room instructions or on-the-job training within the first six months after the date of their employment or assignment to a facility, or to a new position at a facility and annually thereafter. Training records on current personnel shall be kept until closure of the facility and for former employees the record shall be kept for at least three years from the date the employee last worked at the facility. The records shall include the following: the job title for each position at the facility related to hazardous waste management, and the name of the employee filling each job; a written job description for each position, duties of facility personnel assigned to each position, and a written description of the type and amount of both introductory and continuing training that will be given to each person filling a position.
Violation Notes:	OBSERVATION: The Owner/Operator failed to document training of personnel who handle hazardous waste. All employees shall be trained within six months of assignment and take part in an annual review of the initial training received. At a minimum, the training program shall be designed to ensure that facility personnel are able to respond effectively to emergencies by familiarizing them with emergency procedures, emergency equipment, and emergency systems, including where applicable: 1) procedures for using, inspecting, repairing, and replacing facility emergency and monitoring equipment; 2) key parameters for automatic waste feed cut-off systems; 3) communications or alarm systems; 4) response to fires or explosions; 5) response to ground-water contamination incidents; and 6) shutdown of operations. The owner or operator shall maintain the following documents and records at the facility: 1) the job title for each position at the facility related to hazardous waste [Truncated]

RWQCB Region:	SAN FRANCISCO BAY RWQCB (REGION 2)
Site History:	AOC 15 includes the location of former Building 4, which was located on the corner of Third Avenue and A Street. Building 4 was formerly used for the servicing and repair of propellers and possibly other metal working activities. Due to the metals that were potentially used at this facility, the soils in and around AOC 15 may potentially contain elevated concentrations of metals, particularly cadmium, chromium, lead, nickel, and zinc. Elevated concentrations of VOCs may also be present due to the possible use of solvents at the building. As stated in the February 12, 2016 NDAI Request letter, this AOC was determined to contain sufficient information to require no further action.

NAS OAKLAND - AOC 17 - AMBULANCE AND MARRIED OFFICER QUARTER (Continued) **S118502961**

RWQCB Region: SAN FRANCISCO BAY RWQCB (REGION 2)
Site History: AOC-17 includes the locations of former Buildings 33 and 61T, which were both used for the storage of vehicles. Building 33 was located approximately 40 feet east of Building 21. Building 61T, the Married Officer Quarters Garage, was located at the termination of Fifth Avenue, just north of D Street. Due to the potential use of fuels, oils, and grease at these facilities, the soils and groundwater in and around AOC-17 may potentially contain elevated concentrations of petroleum hydrocarbons. As stated in the February 12, 2016 NDAI Request letter, this AOC was determined to contain sufficient information to require no further action.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

container holding hazardous waste must always be closed during storage, except when it is necessary to add or remove waste. (b) A container holding hazardous waste must not be opened, handled, or stored in a manner which may rupture the container or cause it to leak.

Violation Notes: Returned to compliance on 02/14/2017. OBSERVATION: 3 containers of hazardous waste in the main shop were open during time of inspection. A drum of aerosol cans were open during the inspection. Black 55 gallon drum of used oil filters and a 55 gallon drum of used absorbent inside of the shed on the east side of the PM (Preventative Maintenance) open during inspection. A 35 gallon drum of used absorbent in the PM (Preventative Maintenance) shop was open during inspection. All hazardous waste containers shall be closed at all times except when adding or removing waste. CORRECTIVE ACTION: Immediately close these containers and ensure all hazardous waste containers are closed when not adding or removing waste. This was corrected on site during return visit on February 22, 2017.

Violation Description:	Failure to discuss in the SPCC Plan procedures to test or inspect each aboveground container for integrity in accordance with industry standards: 1. On a regular schedule. 2. After material repairs are

DOLLAR RENT A CAR (Continued) **S121739165**

made. 3. By qualified personnel. 4. The frequency and type of testing and inspections based on container size, configuration, and design.

Violation Notes: Returned to compliance on 04/09/2021. SPCC Plan does not adequately discuss procedures to test or inspect each aboveground container for integrity in accordance with industry standards, and/or does not address one or more of the following: Inspections and testing completed on a regular schedule, after material repairs are made, by qualified personnel, the frequency and type of testing and inspections based on container size, configuration, and design. SPCC plan does not discuss the STI required external inspection every 20 years from the date of the tank installation. The tank is dated a 2000, which would mean the external inspection for these Category 1 double-wall with overfill prevention 6,000-gallon tanks, are required to have an external inspection this year by an STI certified inspector. Provide the results of the STI external inspections to the CUPA. Add this requirement to the SPCC plan at the next update.

RWQCB Region:	SAN FRANCISCO BAY RWQCB (REGION 2)
Site History:	AOC-18 consists of four separate areas defined by rectangular outlines. These rectangular outlines are not contiguous, but rather are separated by several hundred feet. AOC-18 includes the sites of former Buildings 34T, 35T, 42T, 43T, 45T, and 8. These buildings were used for the storage of paint and/or oil. Building 34T, the Paint Shop, was located north of A Street and east of Sixth Avenue. Building 35T, the Spray Paint and Sign Shop, was located north of A Street and east of Sixth Avenue. Building 45T, Paint Storage, was located south of B Street and west of Fourth Avenue. Building 8, the Paint Shop, was located west of Building 6 and south of A Street. Due to the potential use of paints and oils at these facilities, soils and groundwater in and around AOC-18 may contain elevated concentrations of VOCs and/or petroleum hydrocarbons.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Violation Date: 07-07-2020
Citation: HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)
Violation Description: Failure to properly close tanks when making a claim of "permanently closed."
Violation Notes: Returned to compliance on 11/10/2020. Owner/Operator failed to comply with one or more of the following permanent closure requirements: 1. All liquid and sludge has been removed from each container and connecting line. 2 All connecting lines and piping have been disconnected from the container blanked off. 3 All valves have been closed and locked. 4 Conspicuous signs have been posted on the container stating that it is a permanently closed container and denoting the date of closure. The used oil and new oil tanks have not been in use for years but are currently included in the inspection protocol. You may place a permanently closed with the date of closure on each tank and stop performing inspections on the tanks. Since the requirements for the hazardous waste tank assessment are not being met, it is advised to permanently close this tank.

Citation: HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)
Violation Description: Failure to ensure that tanks are inspected and tested by an appropriately qualified person in accordance with industry standards.
Violation Notes: Returned to compliance on 02/14/2022. Failure to ensure that tanks are inspected and tested by an appropriately qualified person in accordance with industry standards. The last monthly testing was performed in April due to the COVID pandemic. However, tank maintenance has been determined to be essential and therefore, testing must be continued. The sensor used to monitor the annular space (secondary containment) of the 12,000 gallon AST has not been tested on an annual basis. The emergency vents are not exercised annually. One of the plastic caps on what appears to be the secondary containment appears to be broken and has not been inspected or replaced. ACDEH did not observe emergency venting on the secondary containment. Submit the July test record for the 12,000 gallon AST to ACDEH and begin testing the sensors used to determine if water is present in the annular space of the tank. Add annual testing of the sensor to the required testing. Ensure that emergency venting is ... [TRUNCATED: Refer to full Inspection Report]

Name:	HERTZ QUICK TURNAROUND FACILITY
Address:	8000 EARHART ROAD
City,State,Zip:	OAKLAND, CA 94607
Region:	STATE
Facility Status:	**Completed - Case Closed**
Status Date:	11/09/2017
Global Id:	T10000003889
Lead Agency:	SAN FRANCISCO BAY RWQCB (REGION 2)
Lead Agency Case Number:	2020443
Latitude:	37.7341719038972
Longitude:	-122.21400210017
Case Type:	Cleanup Program Site
Case Worker:	MS
Local Agency:	Not reported
RB Case Number:	01S3593
File Location:	Regional Board
Potential Media Affected:	Other Groundwater (uses other than drinking water), Soil, Surface water
Potential Contaminants of Concern:	Benzene, Gasoline
EPA Region:	9
Coordinate Source:	Google Map Move
Cuf Case:	NO
Quantity Released Gallons:	2500
Begin Date:	05/22/2012
Leak Reported Date:	Not reported
How Discovered:	Other Means
How Discovered Description:	gasoline odor in sanitary sewer
Discharge Source:	Dispenser, Piping
Discharge Cause:	Install Problem, Spill
Stop Method:	Repair Tank, Replace product piping

HERTZ QUICK TURNAROUND FACILITY (Continued) **S107149418**

Stop Description:	fixed leaky dispenser
No Further Action Date:	11/09/2017
CA Water Watershed Name:	South Bay - East Bay Cities (204.20)
Dwr Groundwater Subbasin Name:	Santa Clara Valley - East Bay Plain (2-009.04)
Disadvantaged Community:	Severely Disadvantaged Community
CA Enviroscreen 3 Score:	96-100% (highest scores)
CA Enviroscreen 4 Score:	95-100% (highest scores)
Military DOD Site:	No
Facility Project Subtype:	Not reported
RWQCB Region:	SAN FRANCISCO BAY RWQCB (REGION 2)
Site History:	Gasoline leaked from the dispenser in the pump island. Hertz is conducted site investigations to determine the extent of impact to soil and GW. Impacted soil was excavated and removed. Groundwater monitoring is conducted on a regular basis. Concentrations are below ESLs.

HERTZ QTA FACILITY (Continued) **1016139901**

AIR EMISSIONS CLASSIFICATION UNKNOWN
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Property **OAKLAND, CA 94621**

Site 8 of 10 in cluster V

Actual: **8 ft.**

Focus Map: **5**

HAZNET:

Name:	HERTZ RENT-A-CAR (1242-12)
Address:	8000 EARHART RD
Address 2:	Not reported
City,State,Zip:	OAKLAND, CA 946210000
Contact:	ROBERT DE LOS SANTOS
Telephone:	6506161277
Mailing Name:	Not reported
Mailing Address:	8501 WILLIAMS RD.
Year:	2020
Gepaid:	CAL000275018
TSD EPA ID:	CAT080013352
CA Waste Code:	221 - Waste oil and mixed oil
Disposal Method:	H039 - Other Recovery Of Reclamation For Reuse Including Acid Regeneration, Organics Recovery Ect
Tons:	0.304
Year:	2015
Gepaid:	CAL000275018
TSD EPA ID:	CAT080013352
CA Waste Code:	134 - Aqueous solution with total organic residues less than 10 percent
Disposal Method:	H039 - Other Recovery Of Reclamation For Reuse Including Acid Regeneration, Organics Recovery Ect
Tons:	1.47
Year:	2015
Gepaid:	CAL000275018
TSD EPA ID:	UTD981552177
CA Waste Code:	352 - Other organic solids

HERTZ RENT-A-CAR (1242-12) (Continued) **S113128505**

Disposal Method: H040 - Incineration--Thermal Destruction Other Than Use As A Fuel
Tons: 0.0525

Year: 2014
Gepaid: CAL000275018
TSD EPA ID: UTD981552177
CA Waste Code: 352 - Other organic solids
Disposal Method: H040 - Incineration--Thermal Destruction Other Than Use As A Fuel
Tons: 0.0275

Year: 2013
Gepaid: CAL000275018
TSD EPA ID: CAD980887418
CA Waste Code: 223 - Unspecified oil-containing waste
Disposal Method: H141 - Storage, Bulking, And/Or Transfer Off Site--No Treatment/Reovery (H010-H129) Or (H131-H135)
Tons: 0.0375

Year: 2013
Gepaid: CAL000275018
TSD EPA ID: TXD077603371
CA Waste Code: 352 - Other organic solids
Disposal Method: H141 - Storage, Bulking, And/Or Transfer Off Site--No Treatment/Reovery (H010-H129) Or (H131-H135)
Tons: 0.15

Year: 2013
Gepaid: CAL000275018
TSD EPA ID: CA0000084517
CA Waste Code: 213 - Hydrocarbon solvents (benzene, hexane, Stoddard, Etc.)
Disposal Method: H141 - Storage, Bulking, And/Or Transfer Off Site--No Treatment/Reovery (H010-H129) Or (H131-H135)
Tons: 0.65

Year: 2013
Gepaid: CAL000275018
TSD EPA ID: CA0000084517
CA Waste Code: 352 - Other organic solids
Disposal Method: H141 - Storage, Bulking, And/Or Transfer Off Site--No Treatment/Reovery (H010-H129) Or (H131-H135)
Tons: 0.675

Year: 2013
Gepaid: CAL000275018
TSD EPA ID: UTD981552177
CA Waste Code: 352 - Other organic solids
Disposal Method: H040 - Incineration--Thermal Destruction Other Than Use As A Fuel
Tons: 0.0875

Year: 2012
Gepaid: CAL000275018
TSD EPA ID: TXD077603371
CA Waste Code: 352 - Other organic solids
Disposal Method: H141 - Storage, Bulking, And/Or Transfer Off Site--No Treatment/Reovery (H010-H129) Or (H131-H135)
Tons: 0.2

Dwr Groundwater Subbasin Name:	Santa Clara Valley - East Bay Plain (2-009.04)
Disadvantaged Community:	Severely Disadvantaged Community
CA Enviroscreen 3 Score:	96-100% (highest scores)
CA Enviroscreen 4 Score:	95-100% (highest scores)
Military DOD Site:	Yes
Facility Project Subtype:	Not reported
RWQCB Region:	SAN FRANCISCO BAY RWQCB (REGION 2)
Site History:	AOC-12 consists of former Building 44, in which welding activities were conducted. Building 44 measured approximately 50 feet by 10 feet and was located west of Building 44 and south of B Street. It was recently discovered that the location of AOC-12 is outside the DoD property boundary. This site is FUDs - ineligible due to impacts from non-DOD activities; however, insufficient information is provided to support no further action.

Description:	per NRC fax: "Caller is reporting that a shipment of four 1 gallon containers leaked less than 1 cup of water (UN2910) on the Tarmac, the cause of the leak was that the top on one of the containers loose. The water was from a containment pond and iit contained uranium (10 parts per million). The conductivity was 7000 to 16000 and the gravity was 1.005 to 1.008. Remedial Actions: Cleanup completed, repackage the package in a 30 gallon steel container.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

CERS:
Name: CHEVRON AVIATION SERVICES
Address: 7799 EARHART RD
City,State,Zip: OAKLAND, CA 94621
Site ID: 104835
CERS ID: 10424056
CERS Description: Chemical Storage Facilities

Violations:
Site ID: 104835
Site Name: Chevron Aviation Services
Violation Date: 12-06-2022
Citation: HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)
Violation Description: Failure to address in the SPCC Plan the type of oil and storage capacity for each fixed container. For mobile or portable containers, either provide the type of oil and storage capacity, or an estimate of the potential number of mobile or portable containers, the types of oil, and anticipated storage capacities.
Violation Notes: The facility failed to include the 60 gallon double-wall diesel generator belly tank and possibly the transformer (if oil contained in it is above 55 gallons and if owned by Chevron and not PG&E). Add 60 gallon double-wall tank to the SPCC plan and include inspections for this tank in both the plan and the monthly inspections. Determine if the transformer is owned by Chevron and has a capacity above 55-gallons. Add to SPCC plan if it is required.

Citation:	HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description:	Failure to annually review and electronically certify that the business plan is complete and accurate on or before the annual due date.
Violation Notes:	Returned to compliance on 12/20/2017.
Violation Division:	Alameda County Environmental Health
Violation Program:	HMRRP
Violation Source:	CERS,

Site ID:	104835
Site Name:	Chevron Aviation Services
Violation Date:	12-06-2022
Citation:	HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)
Violation Description:	Failure to adequately discuss in the SPCC Plan all applicable bulk storage containers, including compatibility with material stored and conditions of storage, and description of sized secondary containment capable of containing the largest single container and sufficient freeboard to contain precipitation.
Violation Notes:	The facility failed to include the 60 gallon double-wall diesel generator belly tank and possibly the transformer (if oil contained in it is above 55 gallons and if owned by Chevron and not PG&E). Add the 60-gallon double-wall diesel generator belly tank to the SPCC plan and the transformer if it is determined Chevron owns it and the fluid it contains is 55 gallons or more.
Violation Division:	Alameda County Environmental Health

Violation Date:	12-05-2019
Citation:	HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description:	Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.
Violation Notes:	Returned to compliance on 12/05/2019. The business failed to complete and electronically submit chemical inventory information for all reportable hazardous materials on site at or above reportable quantities. Three propane tanks were located at the facility for the forklift and boomlift. They were not listed on the HMBP. Complete and electronically submit the chemical inventory information for all reportable hazardous materials on site at or above reportable quantities. The propane was added to the HMBP. Corrected onsite.

CHEVRON AVIATION SERVICES (Continued) **S113173445**

	6.67, Section(s) 25270.4.5(a)
Violation Description:	Failure to include in the SPCC Plan an adequate facility diagram, or no facility diagram included. The facility diagram is not required on a Tier I qualified facility SPCC Plan.
Violation Notes:	Returned to compliance on 10/24/2016. OBSERVATION: Failure to have an adequate facility diagram, or no facility diagram included within the SPCC plan. The SPCC Plan is missing the A-2 to A-5 inspection. CORRECTIVE ACTION: Include an adequate facility diagram in the SPCC

Citation:	22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description:	Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes:	Returned to compliance on 10/12/2016. OBSERVATION: Observed a 55 gallon drum of waste flammable solids that was missing the accumulation start date. All hazardous waste containers shall be marked with the following information: 1) the words Hazardous Waste ; 2) name and address of generator; 3) hazardous properties; 4) physical state; 5) composition (contents); 6) accumulation start date. CORRECTED ONSITE: Corrected onsite during inspection.

Violation Source: CERS,

Site ID: 104835
Site Name: Chevron Aviation Services
Violation Date: 01-04-2019
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description: Failure to annually review and electronically certify that the business plan is complete and accurate on or before the annual due date.
Violation Notes: Returned to compliance on 01/15/2019.
Violation Division: Alameda County Environmental Health
Violation Program: HMRRP
Violation Source: CERS,

Site ID: 104835
Site Name: Chevron Aviation Services
Violation Date: 12-05-2019
Citation: HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)
Violation Description: Failure to discuss in the SPCC Plan procedures to test or inspect each aboveground container for integrity in accordance with industry standards: 1. On a regular schedule. 2. After material repairs are made. 3. By qualified personnel. 4. The frequency and type of testing and inspections based on container size, configuration, and design.
Violation Notes: Returned to compliance on 12/10/2019. SPCC Plan does not adequately discuss procedures to test or inspect each aboveground container for integrity in accordance with industry standards, and/or does not address one or more of the following: Inspections and testing completed on a regular schedule, after material repairs are made, by qualified personnel, the frequency and type of testing and inspections based on container size, configuration, and design. The SPCC plan does not include the 20 year testing for a double-wall, 20,000 gallon steel tank with overfill prevention. The tank is a Category 1 tank and should have an external inspection every 20 year. A preliminary tank external test should have been performed at installation in 2010 to use as a baseline. Add the 20 year external inspection to the amendments in the SPCC plan.

Eval Program: HMRRP
Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 12-05-2019
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: ROUTINE INSPECTION WITH MESSRS COLLINS AND LEAL. FACILITY HAS TWO 20,000 GALLON ASTS THAT ARE SECONDARILY CONTAINED, HAVE OVERFILL PREVENTION AND ALL WATER IS COLLECTED IN SUMPS THAT ARE SENT TO AN OIL WATER SEPARATOR (OWS). IF OIL IS DETECTED IN THE OWS, A VAKVE AUTOMATICALLY STOPS DISCHARGE TO THE STORM OUTLET. THERE IS A SECONDARY DRAIN WITH SENSOR IN THAT SUMP THAT ALSO CLOSES THE VALVE IF OIL IS DETECTED. THE FACILITY CONDUCTS DAILY AND MONTHLY INSPECTIONS AND MAINTAINS THESE ONSITE. A QUARTERLY AND ANNUAL INSPECTION IS PERFORMED BY AN OUTSIDE COMPANY. ALL SENSORS ARE TESTED TO ENSURE WORKING OPERATION DURING THE TESTING BY THE OUTSIDE VENDOR. THE SPCC PLAN STATES THAT NO OTHER TANK INSPECTIONS ARE REQUIRED BUT THE STEEL TANK INSTITUTE SP001 TANK INSPECTION SCHEDULE STATES THAT A TWENTY YEAR EXTERNAL INSPECTION SHOULD BE PERFORMED ON 20,000 GALLON CATEGORY 1 TANKS. PLEASE ADD THIS IN TO THE SPCC PLAN IN THE NEXT AMENDMENT.
Eval Division: Alameda County Environmental Health
Eval Program: APSA
Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 12-05-2019
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: FACILITY GENERATES WASTE JET FUEL AND ABSORBENT RAGS FROM MAINTAINING JETS. THE FACILITY IS A SMALL QUANITTY GENERATOR YET REMOVES WASTE EVERY 90 DAYS.
Eval Division: Alameda County Environmental Health
Eval Program: HW
Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 12-06-2022
Violations Found: Yes
Eval Type: Routine done by local agency

CHEVRON AVIATION SERVICES (Continued) **S113173445**

Eval Notes: Facility operates two jet fuel tanks to fuel corporate fleet. Both tanks and the piping are double walled. The tanks and tanker truck fueling area are bermed and runoff goes to an oil water separator (OWS). The OWS alarms if oil is detected. Therefore, there is no need for inspections on accumulated water in the diked area. A 60-gallon diesel generator was observed during this inspection and should be added to the SPCC plan and the monthly inspections if the company who maintains the generator does not already perform the recommended inspection items.
Eval Division: Alameda County Environmental Health
Eval Program: APSA
Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 12-06-2022
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Routine inspection for the HMBP, hazardous waste generator, and aboveground petroleum storage act programs. ACDEH escorted through facility by Sherman Collins, Rodrigo Leal, Chad Brown, and Jay King III.

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

CERS:

Name:	CLEAN ENERGY - 13010
Address:	7855 EARHART RD
City,State,Zip:	OAKLAND, CA 94621
Site ID:	106743
CERS ID:	10600423
CERS Description:	Chemical Storage Facilities

Violations:

Site ID:	106743
Site Name:	Clean Energy - 13010
Violation Date:	11-18-2016
Citation:	HSC 6.95 25507 - California Health and Safety Code, Chapter 6.95, Section(s) 25507
Violation Description:	Failure to adequately establish and implement a business plan when storing/handling a hazardous material at or above reportable quantities.
Violation Notes:	Returned to compliance on 12/08/2016. OBSERVATION: Fire extinguishers

CLEAN ENERGY - 13010 (Continued) **S126138201**

were last serviced in 2013. CORRECTIVE ACTION: Annually certify that fire extinguishers are functional. Transmit evidence of annual fire extinguisher certification to the CUPA inspector within 30 days.

Violation Division: Alameda County Environmental Health
Violation Program: HMRRP
Violation Source: CERS,

Site ID: 106743
Site Name: Clean Energy - 13010
Violation Date: 11-18-2016
Citation: HSC 6.95 25505.1 - California Health and Safety Code, Chapter 6.95, Section(s) 25505.1
Violation Description: Failure to provide a copy of the business plan to the owner or the owner's agent within five working days after receiving a request for a copy from the owner or the owner's agent.
Violation Notes: Returned to compliance on 12/08/2016. OBSERVATION: The facility leases/rents the property and has not notified the property owner (City of Oakland) in writing that a HMBP is required for the business and complied with all of its provisions. CORRECTIVE ACTION: Submit documentation to the CUPA demonstrating that you have complied with the requirement. CUPA to email example property owner letter to facility contacts.
Violation Division: Alameda County Environmental Health
Violation Program: HMRRP
Violation Source: CERS,

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 01-22-2020
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Routine triennial hazardous materials business plan (HMBP) inspection. Facility representative is David Castro. Clean Energy provides compressed natural gas for vehicle re-fueling. CNG source is natural gas from PG&E.
Eval Division: Alameda County Environmental Health
Eval Program: HMRRP
Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 11-18-2016
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Routine hazardous materials business plan (HMBP) inspection of Clean Energy at 7855 Earhart Rd, Oakland. Facility walk through conducted with Tom Bressler, director, western regional operations. Send inspection report to: Tom Bressler (tbressler@cleanenergyfuels.com), and James Wright (james.wright@cleanenergyfuels.com). Clean Energy provides compressed natural gas (CNG) for vehicular transportation. CNG is supplied by PG&E via pipeline directly to the facility. Clean Energy receives the PG&E natural gas, sends the gas through a dryer, then to a compressor, then to high-pressure storage bottles of approximately 20,000 cubic feet capacity. These stations are unstaffed with service technicians visiting each site at least every two weeks. Each facility has emergency features that include gas detectors within the gas compressor enclosure, gas flow shut off valves at the compressor stage (manual shut off only at the meter set assembly (MSA)

Name: SOUTHWEST AIRLINES CO
Address: 8302 EARHART RD
City,State,Zip: OAKLAND, CA 94621
Site ID: 69774
CERS ID: 10145975
CERS Description: Chemical Storage Facilities

Violations:
Site ID: 69774
Site Name: Southwest Airlines Co
Violation Date: 01-11-2017
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description: Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.
Violation Notes: Returned to compliance on 02/03/2017. OBSERVATION: The facility has not submitted the Hazardous Materials Inventory Chemical Description page for: Argon, helium/argon/CO2 mixture, nitrogen. Add: 3 x 30 gallons of brake cleaner. Add: 55 gallons new 50/50 antifreeze. Update: 2 x 55 gallons of drained, used oil filters. Add: 55 gallons of hydraulic fluid. Add: 55 gallons of ATF. CORRECTIVE ACTION: Chemical inventory requires additions of unreported and under-reported chemicals above threshold quantities of 55 gallons for liquids, 200 cubic feet for gas, and 500 pounds for solids. Complete and resubmit the Hazardous Materials Inventory Chemical Description page for all materials listed above electronically in the California Environmental Reporting System (CERS) within 30 days.
Violation Division: Alameda County Environmental Health
Violation Program: HMRRP
Violation Source: CERS,

Site ID: 69774
Site Name: Southwest Airlines Co
Violation Date: 01-11-2017
Citation: 40 CFR 1 265.173 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.173
Violation Description: Failure to meet the following container management requirements: (a) A container holding hazardous waste must always be closed during storage, except when it is necessary to add or remove waste. (b) A container holding hazardous waste must not be opened, handled, or stored in a manner which may rupture the container or cause it to leak.
Violation Notes: Returned to compliance on 01/11/2017. OBSERVATION: All hazardous waste containers shall be closed at all times except when adding or removing waste. 1) ABSORBENTS DISCARDED IN OPEN BIN PRIOR TO BEING PLACED IN 30 GALLON STEEL DRUM. 2) WASTE ANTIFREEZE BUNG OPEN - CORRECTED ON SITE. CORRECTIVE ACTION: 1) Place all used absorbent in the proper used oil absorbent drum that is labeled and sealed.

Violation Date:	01-11-2017
Citation:	40 CFR 1 262.34(d)(5)(iii) - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 262.34(d)(5)(iii)
Violation Description:	Failure to ensure that all employees are thoroughly familiar with proper waste handling and emergency procedures, relevant to their responsibilities during normal facility operations and emergencies.
Violation Notes:	Returned to compliance on 02/03/2017. OBSERVATION: Employees have access to spill kits and are trained annually on Spill Response and Waste Handling. Per emergency response plan: Employee records are kept on file at Southwest Airlines Headquarters Office in Dallas, TX. Training records were not observed stored on site at time of inspection. CORRECTIVE ACTION: Provide training records for the past three years to ACDEH inspector within 30 days. Maintain annual

Eval General Type: Compliance Evaluation Inspection
Eval Date: 01-11-2017
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Routine hazardous materials business plan (HMBP) inspection of Southwest Airlines Co. Ground Support Equipment (GSE) facility at 8302 Earhart Rd, Oakland, CA, 94621. Facility walk through conducted with, and permission granted by Donald Bribes, Manager OAK Ground Support. Email inspection reports to: Donald Bribes (donald.bribes@wnco.com); Adam Walters (adam.walters@wnco.com). The facility provides mechanical support and repairs for ground support equipment: airplane tugs, ramp carts, etc... Numerous ground support equipment are battery powered by Nextsys (Enersys) non-spillable gel batteries. Each battery is 60 pounds and number of batteries varies by equipment and equipment counts vary by service required. It is unlikely that more than 55 gallons of electrolyte is stored at the facility at any one time. All violations noted in this Hazardous Materials Business Plan (HMBP) inspection report are to be corrected within THIRTY (30) days and

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
