Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Description:	The airport was working on some improvements near the south field tank farm when a contractor cut an abandoned fuel line they were unaware had product in it. The product ran into soil. The contractor is digging out the impacted material, placing it onto plastic sheeting and will dispose of the material off site at an appropriate landfill.

Violation Description: Failure to keep a copy of each properly signed manifest for at least three years from the date the waste was accepted by the initial transporter. The manifest signed at the time the waste was accepted for transport shall be kept until receiving a signed copy from the designated facility which received the waste.
Violation Notes: Returned to compliance on 11/22/2017. OBSERVATION: Copy of hazardous waste disposal records for manifest number 015279596JJK and all of 2017 were not found on site. Hazardous waste generators shall retain copies of all manifests signed off by the disposal facility and all receipts used in a consolidated manifesting procedure on site for three years and have them readily available for review. CORRECTIVE ACTION: Immediately locate a copy of all manifests and receipts for the last three years, maintain them on site, and submit copies to the CUPA by 12/20/17

Violation Description: Failure to provide initial and annual training to all employees in safety procedures in the event of a release or threatened release of a hazardous material or failure to document and maintain training records for a minimum of three years.
Violation Notes: Returned to compliance on 04/22/2021. The business failed to provide initial and annual training to all employees in safety procedures in the event of a release or threatened release of a hazardous material including familiarity with the emergency response plan or failure to document and maintain training records for a minimum of three years. Hazardous materials business plan (HMBP) annual training has been provided, and documented, in 2018, and 2019. The annual 2020 training was not delivered due to COVID 19 pandemic. Establish and electronically submit an employee training program containing provisions to ensure initial and annual training for all employees in safety procedures in the event of a release or threatened release of a hazardous material and document and maintain training records for a minimum of three years. Provide HMBP training for 2021 to ARFF employees and send documentation to ACDEH CUPA Inspector.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Remarks:

THIS PACKAGE WAS FOUND TO BE LEAKING IN THE FEDEX WAREHOUSE. PROPER SPILL CLEANUP PROCEDURES WERE FOLLOWED AND THE PACKAGE WAS CONTAINED IN A SALVAGE DRUM. INSIDE THIS BOX WERE SEVERAL ITEMS INCLUDING THREE DIFFERENT TYPES OF AEROSOLS WHICH INCLUDED (A) CARBURATOR CLEANER WHICH SAYS "FLAMMABLE", (B) WD 40, AND (C) STAIN REMOVER. ALSO IN THE PACKAGE WAS A CASTROL CLEANER DEGREASER WHICH LEAKED, AND SOME PESTICIDES. SINCE THE OUTER PACKAGE HAD NO DG MARKINGS, DG LABELING, OR DG PAPERWORK SENT WITH THE SHIPMENT AND AEROSOLS ARE DANGEROUS GOODS, THEY ARE BELIEVED TO BE UNDECLARED DANGEROUS GOODS. THERE WERE EIGHT OTHER PACKAGES WITH THE SHIPMENT BUT ONLY ONE HAD LEAKED AND WAS ABLE TO BE STOPPED IN THE SORT. THIS PACKAGE WAS HELD PENDING FAA INVESTIGATION. FAA AGENT KATHLEEN ROSCHER WAS NOTIFIED.

Eval Type: Routine done by local agency
Eval Notes: ONSIte for hazardous waste generator inspection but facility only generates two filters every year and less than 5 gallons of oil when changing oil. Since hazardous waste is taken to 1029 Grumman facility should prepare a remote waste form when this happens. Remove the EPA ID number from the business activities page of CERS and CUPA will remove you from the hazardous waste generator program. ACDEH to closeout Haz waste generator program in EC.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and

Remarks:

THIS PACKAGE WAS FOUND TO BE LEAKING IN THE FEDEX WAREHOUSE. PROPER SPILL CLEANUP PROCEDURES WERE FOLLOWED AND THE PACKAGE WAS CONTAINED IN A SALVAGE DRUM. INSIDE THIS BOX WERE SEVERAL ITEMS INCLUDING THREE DIFFERENT TYPES OF AEROSOLS WHICH INCLUDED (A) CARBURATOR CLEANER WHICH SAYS "FLAMMABLE", (B) WD 40, AND (C) STAIN REMOVER. ALSO IN THE PACKAGE WAS A CASTROL CLEANER DEGREASER WHICH LEAKED, AND SOME PESTICIDES. SINCE THE OUTER PACKAGE HAD NO DG MARKINGS, DG LABELING, OR DG PAPERWORK SENT WITH THE SHIPMENT AND AEROSOLS ARE DANGEROUS GOODS, THEY ARE BELIEVED TO BE UNDECLARED DANGEROUS GOODS. THERE WERE EIGHT OTHER PACKAGES WITH THE SHIPMENT BUT ONLY ONE HAD LEAKED AND WAS ABLE TO BE STOPPED IN THE SORT. THIS PACKAGE WAS HELD PENDING FAA INVESTIGATION. FAA AGENT KATHLEEN ROSCHER WAS NOTIFIED.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System:
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
AIR MINOR
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Violation Description:	Failure to discuss in the SPCC Plan procedures to test or inspect each aboveground container for integrity in accordance with industry standards: 1. On a regular schedule. 2. After material repairs are made. 3. By qualified personnel. 4. The frequency and type of testing and inspections based on container size, configuration, and design.
Violation Notes:	Returned to compliance on 02/10/2022. SPCC Plan does not adequately discuss procedures to test or inspect each aboveground container for integrity in accordance with industry standards, and/or does not address one or more of the following: Inspections and testing completed on a regular schedule, after material repairs are made, by qualified personnel, the frequency and type of testing and inspections based on container size, configuration, and design. SPCC does not mention the STI SP001 inspection records, the provided maintenance logs do not contain all of the items required for inspection of STI tanks, nor does it mention the tank category and frequency, type and the qualifications for the inspectors. Violation Description:	Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes:	Returned to compliance on 06/24/2020. Owner/Operator is a small quantity generator and failed to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles), or has failed to comply with the conditions of CCR 66262.34(d) and has stored hazardous waste over 90 days. The used oil was last picked up in April 2018. Dispose of hazardous waste used oil that has been stored over the applicable time limit and provide documentation to ACDEH within 30 days that the violation was corrected.

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Violation Description: Failure to conduct and document inspections of hazardous waste tank systems each operating day and retain records of those inspections at the facility.
Violation Notes: Returned to compliance on 12/24/2020. Used oil tank AST-7 and 55 gallon used oil carboy have spilled oil on the maintenance shop floor. All hazardous waste is required to be placed into a hazardous waste container. Spills are required to e cleaned up as soon as practical. Submit documentation to the CUPA demonstrating that the used oil AST-7 tank system is being properly inspected and documented.

Violation Description: Leak detection equipment disabled or tampered with in a manner that would prevent the monitoring system from detecting and/or alerting the owner/operator of a leak.
Violation Notes: Returned to compliance on 05/03/2017. OBSERVATION: The Diesel fill sump sensor #3 was found on top of the tank manhole cover, which is not located at the bottom of the sump to detect a leak at the earliest opportunity. Observed an estimated 20 gallons of diesel (~ 3-4 inches of liquid) present in the Diesel fill sump. The spill bucket had a small leak and there was no leak present from the turbine sump when activated. The last time this sensor alarmed was on 4/12/2016. With the failure of the annunciator to work properly when an overfill occurs, the overfill would have come out of the probe riser and into the sump. The liquid sensor did not alarm due to being located on the man hole of the tank, which is about 5-6 inches off the bottom of the sump. Monitoring equipment shall be maintained to be able to detect a leak at the earliest possible opportunity. ACDEH was provided with a work order by Project Engineering Specialist, Joe Pieroni, that was dated4/27/16 for work completed by Pearson Equipment on 4/12/16 [Truncated]

Violation Description:	Failure of the leak detection equipment to be installed, calibrated, operated, and/or maintained properly.
Violation Notes:	Returned to compliance on 04/13/2020. Owner/Operator did not properly install, calibrate, operate and/or maintain leak detection equipment. DPLLD on emergency generator passed the 3.0 gph test with day tank valve closed manually. However, under normal operating conditions, the DPLLD triggers Gross Line Fail during VR panel scheduled line leak tests. Per the testing technician, the lack of an automatic valve or solenoid at the genset end of the pipe run causes the DPLLD/VR panel to detect a leak. The STP must develop enough pressure, and hold that pressure for the duration of the test, for a successful line leak test. Without a valve at the far end closest to the generators, the DPLLD can't run a successful automatic test. Properly install, calibrate, operate and/or maintain leak detection equipment. Owner/operator shall ensure the DPLLD/VR system can perform the scheduled line leak tests without triggering Gross Line Fail.

Violation Notes: Returned to compliance on 05/03/2017. OBSERVATION: Failure to make SPCC plan amendment(s) when the facility has had a change in: design, construction, operation, or maintenance which affects the facility s discharge potential. The facility failed to add changes in design, construction and operation when adding the new emergency generators with day tanks, 55 gallon drums from waste storage areas are not included from facility maintenance and A/C MX, and the plan still includes the used oil UST that was removed less than a year ago. CORRECTIVE ACTION: Amend SPCC as required. Provide ACDEH with changes made or a copy to review.

Violation Description: Failure to continuously monitor the interstitial space of a double-walled tank with an audible and visual alarm system.
Violation Notes: Returned to compliance on 03/20/2019. Owner/Operator did not continuously monitor the interstitial space of the USTs such that the leak detection activates an audible/visual alarm when a leak is detected. The dual float annular space sensor for the 87 unleaded tank alarms for high liquid, but not for low liquid. The annular space sensor is not continuously monitoring the interstitial space of the 87 unleaded tank properly. Continuously monitor the interstitial space of the USTs such that the leak detection equipment activates an audible/visual alarm when a leak is detected. Have the sensor repaired or replaced and retest the sensor. Submit verification to ACDEH within 30 days.

Violation Notes:	Returned to compliance on 05/03/2017. "OBSERVATION: The ATG and annunciator are used as the overfill prevention system and is not currently functional for the Diesel Tank. The annunciator was not activated when simulating an overfill (high level) and high product (high high level) alarms on the probe. Observed an estimated 30 gallons of diesel (~ 3-4 inches of liquid) present in the Diesel fill sump. The spill bucket had a small leak and there was no leak present from the turbine sump when activated. With the failure of the annunciator to work properly when an overfill occurs, the overfill would have come out of the probe riser and into the sump. The liquid sensor did not alarm due to being located on the man hole of the sump, which is about 5-6 inches off the bottom of the sump. "CORRECTIVE ACTION: The diesel liquid must be removed and disposed of properly. The probe for the Diesel Tank must also be programmed to activate the annunciator when an overfill occurs to prevent an unauthorized release/overfill. [Truncated]

Violation Description: Failure to submit a complete and accurate application for a permit to operate a UST, or for renewal of the permit.
Violation Notes: Returned to compliance on 03/22/2022. 1) The leak sensor model under Tank Monitoring in CERS for both Diesel and the 87 product tank was incorrectly labeled as VR-409. ACDEH observed a 794380-303 annular sensor. 2) The monitoring site plan does not accurately reflect location of all transition sumps (P1, P2, P3, and P4). 1) In CERS, update the leak sensor model to 794380-303 under Tank Monitoring for both Diesel and the 87 product tank. 2) Update the monitoring site plan and indicate clearly the location of all transition sumps (P1, P2, P3, and P4).

THE DIESEL TANK SERVES BOTH A DISPENSER FOR FUELING MOTOR VEHICLES AND FOR FUELING THREE EMERGENCY GENERATORS REMOTELY. THE PRESSURIZED LINE CONNECTED TO THE EMERGENCY GENERATORS IS ANNUALLY TESTED AT 0.1 GPH LEAK RATE IN LIEU OF AN AUTOMATIC LINE LEAK DETECTOR. THE PRESSURIZED LINE FOR THE DISPENSER HAS A MECHANICAL LINE LEAK DETECTOR INSTALLED. THE USED OIL TANK IS USED BY THE MAINTENANCE SHOP FOR STORING HAZARDOUS WASTE, THE PIPING IS DOUBLE WALL FLEXIBLE PIPING WITH A DIAPHRAGM PUMP ATTACHED TO PUMP THE USED OIL OUT OF CONTAINERS AND INTO THE UST. BECAUSE THE LINE IS PRESSURIZED WITHOUT A LINE LEAK DETECTOR AN ANNUAL PRECISION TEST IS REQUIRED AT A LEAK RATE OF 0.1 GPH. TESTING HAS NOT BEEN PERFORMED PREVIOUSLY BUT IS NOW A REQUIREMENT AS LONG AS THE DIAPHRAGM PUMP IS PART OF THE SYSTEM. IF THE USED OIL IS CONVEYED BY GRAVITY [Truncated]

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Site History:	Not all historic documents for the fuel leak case may be available on GeoTracker. A more complete historic case file for this site is located on the Alameda County Environmental Health website at https://ehgis.acgov.org/dehpublic/dehpublic.jsp. Site consists of a 39-acre property with the principal structure, building M110 -a 4-bay 310,00 sq-ft aircraft hanger- with surrounding paved areas of asphalt or concrete. Added to this 39-acre site is the Economy Parking area. Two USTs, a 3,000-gallon tank (MF-25) and a 1,000-gallon tank (MF-26) and associated piping, were removed from near the Building M-110. The tank site for MF-25 and MF-26 is described as located in the economy parking lot for the airport, at 1100 Airport Drive. The tanks have been reported to be used for the storage of waste oil and for solvents. Excavation sampling revealed the presence of up to 19,000 mg/kg total oil and grease (TOG), 11,000 mg/kg total petroleum hydrocarbons as gasoline (TPHg), 1,000 mg/kg total petroleum hydrocarbons as diesel (TPHd). Approximately 700 cu yds soil stockpiled on site from the tank excavation. Post over-excavation sampling revealed residual TPHd at 7 mg/kg TPHd, 0.3 mg/kg TPHg <50 mg/kg TOG and benzene to 0.02 mg/kg. Solvents, which had been identified in the excavated soil, were non-detect in the over-excavated pit. GW was not encountered. January 8, 1999 two 8,500-gallon USTs (tanks MF-37 and MF-38) containing Aer-O-Foam, a fire suppresion material consisting of animal protein and ethylene glycol, were closed in place. As ethylene glycol not detected, these tanks were considered NFA. On January 15, 1999 two USTs- one 10,000-gallon diesel (MF-35) and one 10,000-gallon gasoline (MF-36) and associated piping, were removed from near the Building M-110. Elevated concentrations of TPHd, TPHg, TPHj, benzene and MTBE detected in site soil and groundwater. TPHd was reported at up to 16,000 mg/kg, TPHg to 530, mg/kg, and benzene to 1.9 mg/kg. The tank pit was over excavated and approximately 12,000 gallons of water pumped from the excavation. GW reported having up to 16,000 ug/L TPHg, 7,300 ug/L TPHd 1,100 ug/L benzene, and 130 ug/L MTBE. Approximateltely 700 cu yds for total of ?843 tons remsoil removed. well MW-1 installed in 1992 with two additional wells in 1995. Groundwater is within 2.5 feet of the ground surface. Free product was reported in MW-2. Groundwater monitoring resumed in 1998 with the installation of an additional five wells. Concentrations of up to 4,000 ug/L TPHg, 2,600 ug/L TPHd and 3,400 TPHj wre reported. Additionally several VOCs, including benzene at 150 ug/L, 1,1-DCE to 180 ug/L, 1,2-DCA , and 6.0 ug/L VC were reported. This site (MF35 & MF36) was considered NFA status on 4/23/2001. One groundwater monitoring well was installed in May, 1992. TPHg, TPHd, asnd TPHj were reported at 70, 5,200, and 800 ug/L, respectively. Two wells were installed in May 1992. Well MW-1-2 was installed withinn 10 feet

MOIA, UNITED AIRLINES MF35/36 (Continued) **S117338859**

of UST pit for MF-23 & 24, MW-1-3 positioned within 10 feet of the former MF-25 & 26 UST location.Two wells, MW-2 and MW-3, were installed in April 1995 in the vicinity of the former MF-25/26 tank pit. TPHg, TPHj and TPHo were reported at 6,300, 11,000, and 1,600 mg/kg in soil. GW analysis indicated TPHg, TPHj, TPHd,and TPHo at 7,200, 38,000, 1,400 and 31,000 ug/L, respectively. NO VOCs other than BTEX were reported above lab RLs. Free product was subsequently reported for wells MW-2 and MW-3. A total of 30 wells were eventually installed across the greater site with 8 wells targting the Ecomomy Parking Area. ORC was applied to wells circa 1999. In addition to VOCs deteced at the site, elevated levels of metals, including arsenic, cadmium, chromium, copper, molydbenum, and nickel have been found at the site. A fill evaluation was performed in 2015 to evaluate the fill material as a potential source of metals detected at the site. The fill evaluation study was inconclusive. Additionally, a 2015 habitat study was conducted to evaluate if the drainage ditches along the northwestern portion of the property reflected an fresh water or estuarine environment. The eastern of the two ditches more resembled a brackish water (estuarine) environment and the western of the two ditches was more characteristic of the transitional zone between fresh and brackish water. The habitat study was conducted to determine if fresh or estuarine ESLs should be used for the Tier 1 evaluation. A data review was performed to determine if a correlation could be made between nickel concentrations in soil and groundwater. The data review concluded that there does not appear to be a correlation between the elevated nickel concentrations in soil versus groundwater.

Feature Description: The military use of Oakland Municipal Airport (OMA) in Oakland, CA located in Alameda County began nearly concurrently with its establishment in 1927, as a starting point for long distance Pacific flights. Both the Army and the Navy established reserve elements there during the 1930s concurrent with commercial and civilian use of the airfield. During WWII, the services took over the entire site, sharing the airfield runways and taxiways and making use of the airplane mechanics school there. In the beginning of the war, the 4th Air Force dispersed interceptor aircraft at OMA. By April 1944, the Army transferred jurisdiction of OMA to the Air Service Command (ASC), where it's main mission was processing aircraft for overseas shipment for the remainder of the war. The Army declared it excess in September 1946 and subsequently control returned to airport authority. The Army also stationed an anti-aircraft (AA) battery at OMA. In January 1942, the Navy operated full primary training there until more extensive facilities were completed at Livermore. Its presence continued as Naval Air Transport Service (NATS) terminal operating as both Naval Auxiliary Air Station (NAAS) and a Naval Air Station (NAS). Following the end of the war, the Navy reestablished a reserve air station at OMA, which continued operations there until 1961, when mission moved to NAS Alameda.

Description: The 1,167.71-acre site is at what is now called the North Airport at Oakland Municipal Airport. The Former Naval Auxiliary Air Station (NAAS) is a former Department of Defense (DoD) property that was purchased from the Port of Oakland between 1944 and 1945. The U.S. Navy formerly used the Facility as a supply center that was occupied by administration buildings, lubrication and storage buildings, fuel tanks, airplane hangars, jet engine test facilities, general maintenance hangars, warehouses, and various paint storage buildings. Based on the United States Geological Survey map (USGS 1993); the Site is located in Section 20, Township 2 South, Range 3 West (Mount Diablo Base and Meridian). Many original buildings are used by airport tenants. No evidence of gasoline storage was observed at the original gasoline storage area. After Department of Defense occupation, the property reverted back to the City of Oakland, the original lease holders, for use as an international airport.

Completed Document Type: Land Use Restriction
Completed Date: 06/10/2016
Comments: The Land Use Covenant (LUC)restricts the deed of the property due to residual contaminants that are present is soils at the site. The contaminants include metals, polychlorinated biphenyls (PCBs), and polynuclear aromatic hydrocarbons (PAHs). The LUC runs with the land in the event that the property is acquired by other entities.
Prohibited activites under the LUC includes usage as a residence, hospital, school or day care facility. Maintenance of the asphalt and concrete ground surfaces (Cap) which cover the property is required and any breaches of the Cap and soil handling activities require a Soil Management Plan (SMP) under DTSC oversight and prior approval.

Completed Document Type:	Removal Action Completion Report
Completed Date:	05/20/2015
Comments:	The project involved construction of a tunnel dug diagonally across the property for the BART airport connector line. The report described the soil cleanup at the site which was contaminated with metals, polycyclic aromatic hydrocarbons (PAHs), polychlorinated biphenyls (PCBs), hydrocarbons and volatile organic compounds (VOCs). The cleanup activities included construction of the tunnel, trenching for utilities, planter installations, excavations, groundwater dewatering with temporary wells, placement of approximately 3,200 cubic yards of contaminated soil in on-site consolidation areas, off-site disposal of approximately 80 tons of contaminated soil, and construction of an asphalt cap (approximately 52,000 square feet) across the site.

Comments:	The project involved construction of a tunnel dug diagonally across the property for the BART airport connector line. The report described the soil cleanup at the site which was contaminated with metals, polycyclic aromatic hydrocarbons (PAHs), polychlorinated biphenyls (PCBs), hydrocarbons and volatile organic compounds (VOCs). The cleanup activities included construction of the tunnel, trenching for utilities, planter installations, excavations, groundwater dewatering with temporary wells, placement of approximately 3,200 cubic yards of contaminated soil in on-site consolidation areas, off-site disposal of approximately 80 tons of contaminated soil, and construction of an asphalt cap (approximately 52,000 square feet) across the site.

Eval Notes: Alameda County Department of Environmental Health (ACDEH) was onsite to conduct a routine triennial hazardous materials business plan (HMBP) inspection. ACDEH was granted consent to inspect by Jesus DeHaro. The facility makes aluminum honeycomb panels. The hazardous material on site above reporting threshold includes resin, acetone, and liquified petroleum gasoline. Aluminum dust is generated during processing. A dust collector is used and Alco Iron & Metal Company recycles the dust and other metal scraps. Please correct violations noted above within 30 days and provide documentation that they have been corrected. Continue to annually update/recertify HMBP in CERS. A complete HMBP certification consists of Facility Information, Hazardous Materials Inventory, and Emergency Response and Training Plans. Alameda County HMBP permit is current and expires 6/30/2023.

Environmental Interest/Information System:
US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Comments: Certified Site. By May 1983, the drums containing hazardous waste and a small quantity of contaminated soil were removed. In May 1984, the phase II cleanup was conducted which removed 180 cubic yards of solder dross contaminated soil. Monitoring wells detected that previous contaminants were no longer present or were below the State Drinking Water standards. The Regional Water Quality Control Board conducted groundwater monitoring until September 1985.

reconditioning company and operated at the Site from 1957 to 1982. MCS purchased or obtained waste chemicals from food canneries, can manufacturers, and chemical companies. An estimated 2,000 to 6,000 drums were located onsite and many of the drums were deteriorated and leaking. Alameda County directed the removal of the drums from the site in January 1982. Soil samples indicated there was elevated levels of arsenic, cadmium, chromium, copper, nickel, lead, and zinc. Nearby wells were found to contain lead, other metals, acetone, and benzene.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Completed Date: 08/04/2021
Comments: The Department of Toxic Substances Control (DTSC) has reviewed the Vapor Intrusion Human Health Risk Assessment for Future Commercial Worker Receptors (HHRA) for the Former Kaiser Aerotech Facilities site (Site) located at 880 Doolittle Drive and 498 Hester Street, San Leandro, California, submitted by RMD Environmental Solutions, Inc. (RMD) and dated July 22, 2021. The Site is planned for commercial redevelopment, which is expected to include demolition of the existing buildings and construction of a new 97,240 square-foot commercial building in the north-central portion with associated parking, loading, and staging areas, and an above-grade parking area on a canopy structure. This HHRA evaluated potential human health risks from vapor intrusion of volatile organic compounds (VOCs) into indoor air for future commercial worker receptors. A vapor intrusion mitigation system (VIMS) has been incorporated into redevelopment plans, and a VIMS design has been submitted to the Department of Toxic Substances Control (DTSC) for review by the Engineering and Special Projects Office (ESPO).

Comments:	The revised Health and Safety Plan (HASP) was received by DTSC on February 13, 2020. Previous comments on the HASP by the DTSC was transmitted in an email to Cornerstone Earth dated January 22, 2020. Based upon its review, DTSC has on further comments or recommendations. The revised HASP contain valuable information to ensure community health and safety during planned site activities. The DTSC review of the HASP does not constitute a guarantee that all potential community hazards and exposure routes have been anticipated, recognized, and addressed, or that the HASP will be properly and safely implemented. Effective implementation and regulatory compliance are the employer's responsibilities. Continuous surveillance of the Site with a site-specific HASP by the employer should lead to reduced community exposures and subsequent liabilities. Not reported

Comments:	DTSC has reviewed and conditional approve below monitoring plan with one recommendation for next monitoring report. In the text the rise in concentration of cis-1 2-dichloroethene (cis-1,2-DCE) and vinyl chloride at well PZ-1 are noted. However, there is no discussion of potential causes of this increase or planned remediation. Recommendation: Please include a discussion of possible mechanisms for this observed increase, and if any additional injection activities are planned in the former oil/solvent storage area around PZ-1 to address these increasing concentrations in next groundwater monitoring report.

Leandro, California, submitted by RMD Environmental Solutions, Inc. (RMD) and dated July 22, 2021. The Site is planned for commercial redevelopment, which is expected to include demolition of the existing buildings and construction of a new 97,240 square-foot commercial building in the north-central portion with associated parking, loading, and staging areas, and an above-grade parking area on a canopy structure. This HHRA evaluated potential human health risks from vapor intrusion of volatile organic compounds (VOCs) into indoor air for future commercial worker receptors. A vapor intrusion mitigation system (VIMS) has been incorporated into redevelopment plans, and a VIMS design has been submitted to the Department of Toxic Substances Control (DTSC) for review by the Engineering and Special Projects Office (ESPO).

Comments: The revised Health and Safety Plan (HASP) was received by DTSC on February 13, 2020. Previous comments on the HASP by the DTSC was transmitted in an email to Cornerstone Earth dated January 22, 2020. Based upon its review, DTSC has on further comments or recommendations. The revised HASP contain valuable information to ensure community health and safety during planned site activities.
The DTSC review of the HASP does not constitute a guarantee that all potential community hazards and exposure routes have been anticipated, recognized, and addressed, or that the HASP will be properly and safely implemented. Effective implementation and regulatory compliance are the employer's responsibilities. Continuous surveillance of the Site with a site-specific HASP by the employer should lead to reduced community exposures and subsequent liabilities.

Background Info:	REDEMCO, LLC currently owns the Site and has owned the 880 Doolittle Drive and the 498 Hester Street properties since 2001. Kaiser Industries Corporation owned the 880 Doolittle Drive Property from 1957 through 1963. Kaiser Aerospace & Electronics Corporation (KAEC) owned the property from 1963 through 2001. During that time KAEC manufactured rocket nozzles and aircraft parts on the property. Kaiser Industries Corporation acquired the 498 Hester Street Property on September 6, 1963, and transferred it to KAEC on December 2, 1963. KAEC owned the property from 1963 through 2001. During that time KAEC used the property for employee parking, light manufacturing and storage. The Site is made up of two properties totaling 14 acres. The 880 Doolittle Drive property has several buildings and is otherwise almost entirely paved with asphalt. The 498 Hester Street property has one building and was recently paved. The Site is located approximately 3,000 feet east of San Francisco Bay. Both properties are fenced and are currently occupied by an airport park-and-fly business. Groundwater at the site has been divided into three zones. The A-zone is the groundwater which is encountered between 0 and 15 feet below ground surface (bgs). The B-zone is the groundwater which is encountered between 15 and 40 feet bgs. The C-zone is the groundwater encountered below 40 feet bgs. The following substances have been detected in the groundwater at the Site: 1,1-dichloroethane; 1,2-dichloroethane; 1,2-dichloroethylene; 1,1,2,2-tetrachloroethane; trichloroethylene; and vinyl chloride.

Site History:	The Grace facility is a manufacturer primarily of can sealants. Two releases of reagent-grade toluene from subsurface product transfer lines were reported in the southern portion of the site in April 1985 and January 1987, respectively. Source removal, product recovery, and groundwater monitoring were performed in the mid to late 1980's. Residual contamination remains. Grace sold the property to Alco Iron & Metal Co. in late 2008 but retained the responsibility of site cleanup.

Evaluation:

Eval General Type:	Compliance Evaluation Inspection
Eval Date:	02-13-2020
Violations Found:	No
Eval Type:	Industrial Storm Water Compliance Evaluation
Eval Notes:	This site was inspected with the scrap yard across Doolittle Drive WDID 1 01I019272. The Davis Street site houses company office, outdoor storage in open bins, a sales area and warehouse for finished metal product, and bio swales for storm water treatment. The driveway to the bin storage area is unpaved except near the street. I observed sediment and track out in the paved section of the driveway and the street. The bio swale along Davis street had sparse vegetation and needs maintenance. MB said he would follow up.

RWQCB Region:	SAN FRANCISCO BAY RWQCB (REGION 2)
Site History:	The Site is located at 2502 Williams Street in San Leandro, Calif. and the parcel is approximately 75,374 sq-feet in size and the buildings are approximately 46,698 sq-feet in size. Associated Aerospce Activities, Inc. has occupied the Site from 1972 to 2018 and manufactures jet engine components, including aircraft parts made from high temperature alloy sheet metal. From 1955 to 1972, the Site was occupied by Higgins Magee Printing Ink and Chemical Manufacturers and by UMC Industries, Inc., from 1962 to 1970 for manufacturing pigments using chemicals and metals. the building on the north side of the property is leased out as storage space, but was historically used by a hydraulic elevator parts manufacturer and stone cutting operation. The Site has chlorinated volatile organic compounds in soil, soil vapor and groundwater. A remediation work plan dated August 15, 2018, was approved by the RWQCB in an agency letter date January 2, 2019, that requires a remediation completion report for source removal, plume delineation, and vapor intrusion evaluation by April 16, 2019. The DTSC was the lead agency for tiered permitting and cleanup of a 1981 PCB spill incident. In February 2016, the RWQCB became lead agency, in accordance with the property owner's "request for agency oversight of a brownfield site" (Brownfield Memorandum of Agreement). Additional Information on this case, can be found at the DTSC website "Envirostor", the Alameda County Environmental Health's website "acgov.org" for the "Local Oversight Program records and the CUPA records". Additionally, contact the San Leandro Fire Department for inspection and permitting records. Source removal via excavation is planned for 2022. Additional investigation will be conducted to delineate the groundwater and soil vapor plumes beyond the Site and evaluate of vapor intrusion risk at the Site.

Completed Date: 09/01/1981
Comments: Certified Site. In November 1980, a polychlorinated biphenyls (PCBs) spill occurred and 30 gallons of PCBs leaked onto the ground. The spill was caused when a truck backed into a transformer and damaged one of the insulators. Initially, 445 cubic feet of soil was removed in March 1981 and confirmation soil sampling showed 4,930 parts per million (ppm) PCBs. In March 1981, a U.S. Environmental Protection Agency (EPA) contractor conducted an inspection of the Site to verify compliance with the federal PCB disposal and marking regulations and to investigate the spill. The EPA contractor observed, sampled, and took photographs of the excavation area during the inspection. The sampling results and photographs are included in the report for this inspection. Additional soil excavations were conducted, ending in September 1981. The last confirmation sample showed 0.85 ppm PCBs. The completion of the spill cleanup is documented in a November 18, 1981 letter to the Department of Health Services, Toxic Substances Control Division (DHS), predecessor to DTSC. This letter states that after the last confirmation soil sample, EPA gave verbal approval to fill in the excavated area.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PART 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

AQUEOUS FOAM NRC: Aqueous Foam Related Incidents Listing

The National Response Center (NRC) serves as an emergency call center that fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. The spreadsheets posted to the NRC website contain initial incident data that has not been validated or investigated by a federal/state response agency. Response center calls from 1990 to the most recent complete calendar year where there was indication of Aqueous Film Forming Foam (AFFF) usage are included in this dataset. NRC calls may reference AFFF usage in the ?Material Involved? or ?Incident Description? fields.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

USGS TOPOGRAPHIC MAP

Target Property Map:	12016487 SAN LEANDRO, CA
Version Date:	2018

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

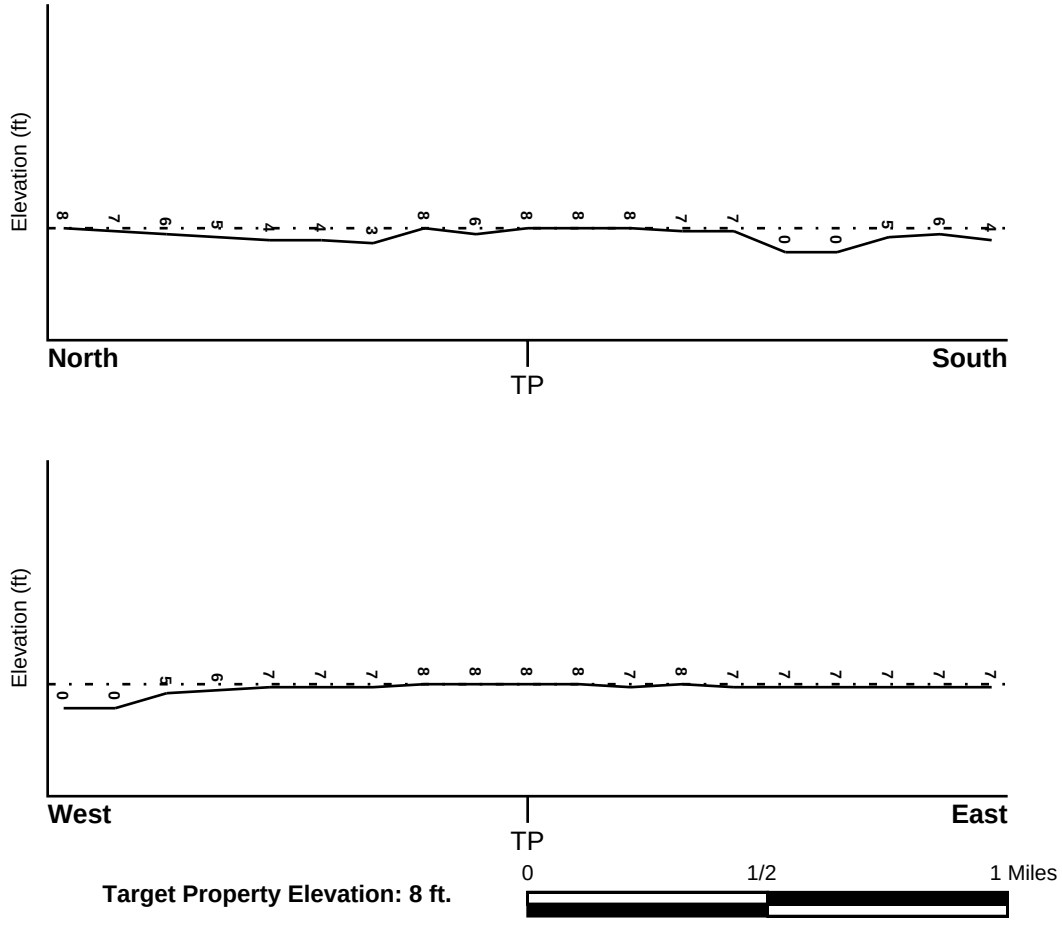
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Xeropsamments

Soil Surface Texture: sand

Hydrologic Group: Not reported

Soil Drainage Class:
Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 145 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	59 inches	sand	Granular materials (35 pct. or less passing No. 200), Fine Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 8.4 Min: 6.6

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program
State Water Resources Control Board
Telephone: 916-341-5577
The GAMA Program is Californias comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Heath Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at approximately five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through current. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

Summary information obtained is provided in the text of this report.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

Are there any environmental liens or activity and use limitations (AULs) for the property?

Not for the main development area. For the South Field Tank Farm, there is a recorded covenant/deed restriction that does not allow for development for sensitive receptors such as schools, hospitals, residential or daycare. These uses would not be compatible with aviation activity so we do not see this as a limitation.
