AIRPORT FACILITIES COMPLEX (Continued) **S121793924**

Eval Notes: Airport Facilities Complex generates waste from maintenance of fleet vehicles, paint, universal waste lamps, waste absorbents/debris, and occasional waste fuel. The facility is a large quantity generator in numerous months of the year based on volumes of waste. Approximately 20 workers handle hazardous waste at the facility. Waste tank assessment states that the tank needs to be seismically anchored.

The diesel fuel and the gasoline ASTs are connected to a Veeder Root monitoring panel and in the event of a release an audible/visual alarm is activated. The facility is a Tier II facility and an SPCC plan was prepared by a registered professional engineer and reviewed and updated in June 2012. Meet with Mr. Derek Lee, airport environment compliance representative, who granted permission to complete the HMBP inspection. Facility operates as Oakland Airport maintenance center for vehicle fleet service, airport facility services and other airport operations services. Information in CERS is not accurate as the chemical inventory does not list 12-55 gallon drums of latex paint or 5-55 gallon drums of hazardous waste located in the hazardous waste storage area lockers. The facility has an extensive chemical inventory stored in the warehouse, which is identified in CERS. Additionally, the facility operates several above ground storage tanks including; 1-4000 gallon gasoline above ground storage tank (AST), 1-2000 gallon diesel AST, 1-275 gallon used oil AST, 2-280 gallon lubrication oil ASTs, 2-120 gallon lubrication oil ASTs and up to 12-55 gallon drums of various [Truncated]

Environmental Interest/Information System:
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the

discharge does not adversely affect water quality.

Eval Notes: THE FACILITY GENERATES USED FUEL FILTERS, SLUDGE FROM THE OIL WATER SEPARATOR, AND USED OILY RAGS, AS THE MAIN WASTE STREAMS. THE WASTE STREAMS HAVE BEEN PROFILED AND LDRS ARE AVAILABLE. THE FACILITY MAINTAINS TRAINING RECORDS N THEIR ONLINE TRAINING DATABASE. IT IS A SMALL QUANTITY GENERATOR. AEROSOL CANS ARE COMPLETELY USED UP PRIOR TO DISPOSAL SO NO UNIVERSAL WASTE HAS BEEN SENT OFF THE SITE. RAGS CONTAMINATED WITH FUEL OR OIL ARE DISPOSED AS HAZARDOUS WASTE NOT LAUNDERED. THIS WAS THE ONLY WASTE STREAM ONSITE DURING THE INSPECTION AS THE FUEL FILTERS ARE PICKED UP WITHIN A DAY OF GENERATION BY THE HAULER.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

facilities.
HAZARDOUS AIR POLLUTANT MAJOR
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
HAZARDOUS WASTE BIENNIAL REPORTER
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Eval Notes: Onsite to conduct the Hazardous Waste Generator Inspection at CVS Pharmacy #1283 - 3236 Lakeshore Ave., Oakland, CA. Met with Store Manager, Kristie Yamasaki. Observed that facility does not currently generate enough P and U listed waste to be considered a Large Quantity Generator according to hazardous waste manifests reviewed, but did generate 3 lbs of Warfarin on 6/27/14, which puts them in the RCRA LQG category. Facility does still have the possibility to generate over 1 KG per month to make them a Large Quantity Generator going forward. CERTIFICATION OF RETURN TO COMPLIANCE I certify that the violation(s) noted in the Inspection Forms have been corrected. I have personally examined any documentation attached to the certification to establish that the violations have been corrected.

Inspection was conducted with John Schofield of US EPA. Facility was under the name Landmark in 2014. Changed ownership to Signature February 2016. Facility currently has 6 different company tenant mechanics. Each mechanic has or may have hazardous materials above the reporting quantity. Signature Aviation needs to come up with a system in order to have all sub-tenants' hazardous materials on Signature's property reported into CERS. Last accepted HMBP submittal was on 6/8/2015 without verification of materials found onsite. This inspection was a partial inspection of

Feature Description:	The military use of Oakland Municipal Airport (OMA) in Oakland, CA located in Alameda County began nearly concurrently with its establishment in 1927, as a starting point for long distance Pacific flights. Both the Army and the Navy established reserve elements there during the 1930s concurrent with commercial and civilian use of the airfield. During WWII, the services took over the entire site, sharing the airfield runways and taxiways and making use of the airplane mechanics school there. In the beginning of the war, the 4th Air Force dispersed interceptor aircraft at OMA. By April 1944, the Army transferred jurisdiction of OMA to the Air Service Command (ASC), where it's main mission was processing aircraft for overseas shipment for the remainder of the war. The Army declared it excess in September 1946 and subsequently control returned to airport authority. The Army also stationed an anti-aircraft (AA) battery at OMA. In January 1942, the Navy operated full primary training there until more extensive facilities were completed at Livermore. Its presence continued as Naval Air Transport Service (NATS) terminal operating as both Naval Auxiliary Air Station (NAAS) and a Naval Air Station (NAS). Following the end of the war, the Navy reestablished a reserve air station at OMA, which continued operations there until 1961, when mission moved to NAS Alameda.

Description:	The 1,167.71-acre site is at what is now called the North Airport at Oakland Municipal Airport. The Former Naval Auxiliary Air Station (NAAS) is a former Department of Defense (DoD) property that was purchased from the Port of Oakland between 1944 and 1945. The U.S.

OAKLAND MUNICIPAL AIRPORT (Continued) **1007211921**

Navy formerly used the Facility as a supply center that was occupied by administration buildings, lubrication and storage buildings, fuel tanks, airplane hangars, jet engine test facilities, general maintenance hangars, warehouses, and various paint storage buildings. Based on the United States Geological Survey map (USGS 1993); the Site is located in Section 20, Township 2 South, Range 3 West (Mount Diablo Base and Meridian). Many original buildings are used by airport tenants. No evidence of gasoline storage was observed at the original gasoline storage area. After Department of Defense occupation, the property reverted back to the City of Oakland, the original lease holders, for use as an international airport.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Violation Description:	Failure to maintain and operate the facility to minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water which could threaten human health or the environment.
Violation Notes:	Returned to compliance on 09/12/2017. "OBSERVATION: Observed an oil spill inside the shop floor from equipment stored above and the yellow container used as secondary containment for the hazardous waste storage area had an estimated 1 inch of used oil inside of it. Facilities shall be maintained and operated to minimize the possibility of a fire, explosion, or release of hazardous waste to air, soil, or surface water which could threaten human health or the environment. CORRECTIVE ACTION: Immediately clean up the spill and the secondary containment structure and manage according to Title 22 hazardous waste regulations. Submit a statement and supporting documentation explaining how this waste was managed by September 13, 2017.

Environmental Interest/Information System:
AIR EMISSIONS CLASSIFICATION UNKNOWN
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Violation Description: Failure to conduct and document inspections of hazardous waste tank systems each operating day and retain records of those inspections at the facility.
Violation Notes: Returned to compliance on 12/24/2020. Used oil tank AST-7 and 55 gallon used oil carboy have spilled oil on the maintenance shop floor. All hazardous waste is required to be placed into a hazardous waste container. Spills are required to e cleaned up as soon as practical. Submit documentation to the CUPA demonstrating that the used oil AST-7 tank system is being properly inspected and documented.

Violation Description: Leak detection equipment disabled or tampered with in a manner that would prevent the monitoring system from detecting and/or alerting the owner/operator of a leak.
Violation Notes: Returned to compliance on 05/03/2017. OBSERVATION: The Diesel fill sump sensor #3 was found on top of the tank manhole cover, which is not located at the bottom of the sump to detect a leak at the earliest opportunity. Observed an estimated 20 gallons of diesel (~ 3-4 inches of liquid) present in the Diesel fill sump. The spill bucket had a small leak and there was no leak present from the turbine sump when activated. The last time this sensor alarmed was on 4/12/2016. With the failure of the annunciator to work properly when an overfill occurs, the overfill would have come out of the probe riser and into the sump. The liquid sensor did not alarm due to being located on the man hole of the tank, which is about 5-6 inches off the bottom of the sump. Monitoring equipment shall be maintained to be able to detect a leak at the earliest possible opportunity. ACDEH was provided with a work order by Project Engineering Specialist, Joe Pieroni, that was dated4/27/16 for work completed by Pearson Equipment on 4/12/16 [Truncated]

Violation Description: Failure to maintain monitoring records for release detection and/or maintain records of appropriate follow-up actions.
Violation Notes: Returned to compliance on 04/13/2020. Owner/Operator failed to maintain monitoring records for release detection (e.g., alarm logs) and/or maintain records of appropriate follow-up actions. Facility owner/operator did not complete Section V (owner/operator description of follow-up actions) of the monthly DUSTO reports. Maintain monitoring records for release detection (e.g., alarm logs) and/or maintain records of appropriate follow-up actions. Facility owner/operator shall complete Section V, follow up actions, explaining all Compliance Issues noted in Section III. A complete action includes: monitoring system alarm log; Section III issues from DO; Section V follow up actions; and any work orders, as appropriate. Transmit to ACDEH CUPA Inspector the next monthly DUSTO report with follow up actions noted.

Violation Description: Failure to provide employees with hazardous waste training within the first six months after the date of their employment or assignment to a facility, or to a new position at a facility and annually thereafter. Training records on current personnel shall be kept until closure of the facility and for former employees the record shall be kept for at least three years from the date the employee last worked at the facility.
Violation Notes: Returned to compliance on 05/03/2017. OBSERVATION: The Owner/Operator failed to properly train personnel who handle hazardous waste. All employees shall be trained within six months of assignment and take part in an annual review of the initial training received. At a minimum, the training program shall be designed to ensure that facility personnel are able to respond effectively to emergencies by familiarizing them with emergency procedures, emergency equipment, and emergency systems, including where applicable: 1) procedures for using, inspecting, repairing, and replacing facility emergency and monitoring equipment; 2) key parameters for automatic waste feed cut-off systems; 3) communications or alarm systems; 4) response to fires or explosions; 5) response to ground-water contamination incidents; and 6) shutdown of operations. The owner or operator shall maintain the following documents and records at the facility: 1) the job title for each position at the facility related to hazardous waste management, and [Truncated]

Violation Description:	Failure of the leak detection equipment to be installed, calibrated, operated, and/or maintained properly.
Violation Notes:	Returned to compliance on 04/13/2020. Owner/Operator did not properly install, calibrate, operate and/or maintain leak detection equipment. DPLLD on emergency generator passed the 3.0 gph test with day tank valve closed manually. However, under normal operating conditions, the DPLLD triggers Gross Line Fail during VR panel scheduled line leak tests. Per the testing technician, the lack of an automatic valve or solenoid at the genset end of the pipe run causes the DPLLD/VR panel to detect a leak. The STP must develop enough pressure, and hold that pressure for the duration of the test, for a successful line leak test. Without a valve at the far end closest to the generators, the DPLLD can't run a successful automatic test. Properly install, calibrate, operate and/or maintain leak detection equipment. Owner/operator shall ensure the DPLLD/VR system can perform the scheduled line leak tests without triggering Gross Line Fail.

The annunciator was not activated when simulating an overfill (high level) and high product (high high level) alarms on the probe. Observed an estimated 30 gallons of diesel (~ 3-4 inches of liquid) present in the Diesel fill sump. The spill bucket had a small leak and there was no leak present from the turbine sump when activated. With the failure of the annunciator to work properly when an overfill occurs, the overfill would have come out of the probe riser and into the sump. The liquid sensor did not alarm due to being located on the man hole of the sump, which is about 5-6 inches off the bottom of the sump. "CORRECTIVE ACTION: The diesel liquid must be removed and disposed of properly. Violation Notes: Returned to compliance on 05/03/2017. OBSERVATION: The Diesel fill sump sensor #3 was found on top of the tank manhole cover, which is not located at the bottom of the sump to detect a leak at the earliest opportunity. The spill bucket had a small leak and there was no leak present from the turbine sump when activated. The last time this sensor alarmed was on 4/12/2016. With the failure of the annunciator to work properly when an overfill occurs, the overfill would have come out of the probe riser and into the sump. The liquid sensor did not alarm due to being located on the man hole of the tank, which is about 5-6 inches off the bottom of the sump. Monitoring equipment shall be maintained to be able to detect a leak at the earliest possible opportunity. Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Alameda County Department of Environmental Health (ACDEH) was on site for an Annual Monitoring Certification and met with Service Assurance Agent, Ron Van Overbeke, who granted permission for the inspection. The facility has a current UST permit to operate. Shaun Andrieu (ICC# 8373616) from Armour Petroleum conducted the testing and all of his certifications were valid. The facility operates on 87 product tank and one diesel tank. The diesel tank also supplies the emergency generators through a series of transition sumps (P1, P2, P3, and P4) that have leak detection sensors. The report was not signed at the time of the inspection due to current Covid-19 social distancing

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Site History:	Not all historic documents for the fuel leak case may be available on GeoTracker. A more complete historic case file for this site is located on the Alameda County Environmental Health website at https://ehgis.acgov.org/dehpublic/dehpublic.jsp. Site consists of a 39-acre property with the principal structure, building M110 -a 4-bay 310,00 sq-ft aircraft hanger- with surrounding paved areas of asphalt or concrete. Added to this 39-acre site is the Economy Parking area. Two USTs, a 3,000-gallon tank (MF-25) and a 1,000-gallon tank (MF-26) and associated piping, were removed from near the Building M-110. The tank site for MF-25 and MF-26 is described as located in the economy parking lot for the airport, at 1100 Airport Drive. The tanks have been reported to be used for the storage of waste oil and for solvents. Excavation sampling revealed the presence of up to 19,000

MOIA, UNITED AIRLINES MF35/36 (Continued) **S117338859**

mg/kg total oil and grease (TOG), 11,000 mg/kg total petroleum hydrocarbons as gasoline (TPHg), 1,000 mg/kg total petroleum hydrocarbons as diesel (TPHd). Approximately 700 cu yds soil stockpiled on site from the tank excavation. Post over-excavation sampling revealed residual TPHd at 7 mg/kg TPHd, 0.3 mg/kg TPHg <50 mg/kg TOG and benzene to 0.02 mg/kg. Solvents, which had been identified in the excavated soil, were non-detect in the over-excavated pit. GW was not encountered. January 8, 1999 two 8,500-gallon USTs (tanks MF-37 and MF-38) containing Aer-O-Foam, a fire suppresion material consisting of animal protein and ethylene glycol, were closed in place. As ethylene glycol not detected, these tanks were considered NFA. On January 15, 1999 two USTs- one 10,000-gallon diesel (MF-35) and one 10,000-gallon gasoline (MF-36) and associated piping, were removed from near the Building M-110. Elevated concentrations of TPHd, TPHg, TPHj, benzene and MTBE detected in site soil and groundwater. TPHd was reported at up to 16,000 mg/kg, TPHg to 530, mg/kg, and benzene to 1.9 mg/kg. The tank pit was over excavated and approximately 12,000 gallons of water pumped from the excavation. GW reported having up to 16,000 ug/L TPHg, 7,300 ug/L TPHd 1,100 ug/L benzene, and 130 ug/L MTBE. Approximateltely 700 cu yds for total of ?843 tons remsoil removed. well MW-1 installed in 1992 with two additional wells in 1995. Groundwater is within 2.5 feet of the ground surface. Free product was reported in MW-2. Groundwater monitoring resumed in 1998 with the installation of an additional five wells. Concentrations of up to 4,000 ug/L TPHg, 2,600 ug/L TPHd and 3,400 TPHj wre reported. Additionally several VOCs, including benzene at 150 ug/L, 1,1-DCE to 180 ug/L, 1,2-DCA , and 6.0 ug/L VC were reported. This site (MF35 & MF36) was considered NFA status on 4/23/2001. One groundwater monitoring well was installed in May, 1992. TPHg, TPHd, asnd TPHj were reported at 70, 5,200, and 800 ug/L, respectively. Two wells were installed in May 1992. Well MW-1-2 was installed withinn 10 feet of UST pit for MF-23 & 24, MW-1-3 positioned within 10 feet of the former MF-25 & 26 UST location.Two wells, MW-2 and MW-3, were installed in April 1995 in the vicinity of the former MF-25/26 tank pit. TPHg, TPHj and TPHo were reported at 6,300, 11,000, and 1,600 mg/kg in soil. GW analysis indicated TPHg, TPHj, TPHd,and TPHo at 7,200, 38,000, 1,400 and 31,000 ug/L, respectively. NO VOCs other than BTEX were reported above lab RLs. Free product was subsequently reported for wells MW-2 and MW-3. A total of 30 wells were eventually installed across the greater site with 8 wells targting the Ecomomy Parking Area. ORC was applied to wells circa 1999. In addition to VOCs deteced at the site, elevated levels of metals, including arsenic, cadmium, chromium, copper, molydbenum, and nickel have been found at the site. A fill evaluation was performed in 2015 to evaluate the fill material as a potential source of metals detected at the site. The fill evaluation study was inconclusive. Additionally, a 2015 habitat study was conducted to evaluate if the drainage ditches along the northwestern portion of the property reflected an fresh water or estuarine environment. The eastern of the two ditches more resembled a brackish water (estuarine) environment and the western of the two ditches was more characteristic of the transitional zone between fresh and brackish water. The habitat study was conducted to determine if fresh or estuarine ESLs should be used for the Tier 1 evaluation. A data review was performed to determine if a correlation could be made between nickel concentrations in soil and groundwater. The data review concluded that there does not appear

MOIA, UNITED AIRLINES MF35/36 (Continued) **S117338859**

to be a correlation between the elevated nickel concentrations in soil versus groundwater.
