EXECUTIVE SUMMARY

The purpose of this Traffic Impact Analysis is to provide an assessment of traffic operations resulting from development of the proposed DHS 109 Business Park project and to identify measures necessary to mitigate potentially significant traffic impacts. This report analyzes traffic impacts for the anticipated project opening year in Year 2021 traffic conditions.

Although this is a technical report, effort has been made to write the report clearly and concisely. A glossary is provided in Appendix A to assist the reader with terms related to transportation engineering.

PROJECT DESCRIPTION

The project site is located east of Little Morongo Road between 15th Avenue and 16th Avenue in the City of Desert Hot Springs. The project site is proposed to include various industrial uses. The project site has a zoning designation of light industrial (I-L) use in the City of Desert Hot Springs General Plan. The applicant will be obtaining a Master Conditional Use Permit for cannabis activities including cultivation, extraction, processing, manufacturing, distribution and potentially, sales. The project site is proposed to consist of 364,180 square feet of general light industrial use and 767,770 square feet of industrial park (cannabis activity) use.

The primary access for the project site is though 15th Avenue at Little Morongo Road. The secondary emergency-only access is through Atlantic Avenue to Dillon Road.

The proposed project (southern portion of the site) is anticipated to be constructed and fully operational by year 2021.

EXISTING CONDITIONS

The study intersections currently operate within acceptable Levels of Service during the peak hours for Existing traffic conditions, except for the following study intersections that are projected to operate at deficient Levels of Service (see Table 1):

- Indian Canyon Drive/Dillon Road – #3 (AM peak hour)
- Palm Drive/Two Bunch Palms Trail – #14 (AM peak hour)

A traffic signal appears to currently be warranted at the following study intersections based upon the California Manual on Uniform Traffic Control Devices (2014) for Existing conditions:

- Indian Canyon Drive/Pierson Boulevard – #2
- Indian Canyon Drive/Dillon Road – #3
- Little Morongo Road/Two Bunch Palms Trail – #8
- Little Morongo Road/Dillon Road – #10
- Little Morongo Road/Camino Aventura – #16

PROJECT TRIPS

The proposed project is forecast to generate a total of approximately 3,665 daily PCE trips, including 531 PCE trips during the morning peak hour and 490 PCE trips during the evening peak hour.

FORECAST OPERATIONS

Existing Plus Project Conditions: The study intersections are projected to operate within acceptable Levels of Service during the peak hours for Existing Plus Project traffic conditions, except for the following study intersections that are projected to operate at deficient Levels of Service (see Table 4):

- Indian Canyon Drive/Dillon Road – #3 (AM & PM peak hours)
- Little Morongo Road/15th Avenue – #9 (PM peak hour)
- Palm Drive/Two Bunch Palms Trail – #14 (AM peak hour)
- Palm Drive/Dillon Road – #17 (AM peak hour)

Existing Plus Ambient Project Conditions: The study intersections are projected to operate within acceptable Levels of Service (D or better) during the peak hours for Existing Plus Ambient Plus Project traffic conditions, except for the following study intersection that is projected to operate at deficient Levels of Service (see Table 5):

- Indian Canyon Drive/Dillon Road – #3 (AM & PM peak hours)
- Little Morongo Road/15th Avenue – #9 (PM peak hour)
- Palm Drive/Two Bunch Palms Trail – #14 (AM peak hour)
- Palm Drive/Dillon Road – #17 (AM peak hour)

Existing Plus Ambient Plus Project Plus Cumulative Conditions: The study intersections are projected to operate within acceptable Levels of Service during the peak hours for Existing Plus Ambient Plus Project Plus Cumulative traffic conditions, except for the following study intersection that is projected to operate at deficient Levels of Service (see Table 6):

- Indian Canyon Drive/Pierson Boulevard – #2 (AM & PM peak hours)
- Indian Canyon Drive/Dillon Road – #3 (AM & PM peak hours)
- Little Morongo Road/Pierson Boulevard – #7 (AM & PM peak hours)
- Little Morongo Road/Two Bunch Palms Trail – #8 (AM & PM peak hours)
- Little Morongo Road/15th Avenue – #9 (AM & PM peak hours)
- Little Morongo Road/Dillon Road – #10 (AM & PM peak hours)
- Atlantic Avenue/Dillon Road – #11 (AM & PM peak hours)
- Palm Drive/Two Bunch Palms Trail – #14 (AM & PM peak hours))
- Palm Drive/Camino Aventura – #16 (AM & PM peak hours)
- Palm Drive/Dillon Road – #17 (AM & PM peak hours)

MITIGATION MEASURES

The following off-site mitigation measures are recommended to address the Level of Service deficiency, for Existing Plus Project conditions and Existing Plus Ambient Plus Project conditions:

- Indian Canyon Drive/Dillon Road – #3
  - Install traffic signal (already satisfy signal warrant under Existing conditions)
  - Provide northbound left turn lane
  - Provide southbound left turn lane
  - Provide eastbound left turn lane
  - Provide westbound left turn lane

- Little Morongo Road/15th Avenue – #9
  - Install traffic signal (satisfy signal warrant under Existing Plus Project conditions)

- Provide southbound left turn lane
- Provide westbound left turn lane
- Provide westbound right turn lane

- Palm Drive/Two Bunch Palms Trail – #14
  - Provide eastbound right-turn overlap phasing

- Palm Drive/Dillon Road – #17
  - Provide eastbound right-turn overlap phasing

The project shall construct the following improvements to provide project access and mitigate the significantly impacted intersections for Existing Plus Ambient Plus Cumulative Plus Project conditions:

- Indian Canyon Drive/Pierson Boulevard – #2
  - Install traffic signal (already satisfy signal warrant under Existing conditions)
  - Provide northbound left turn lane
  - Provide southbound left turn lane
  - Provide eastbound left turn lane
  - Provide westbound left turn lane

- Indian Canyon Drive/Dillon Road – #3
  - Install traffic signal (signal warrant currently satisfied under Existing conditions)
  - Provide northbound left turn lane
  - Provide northbound right turn lane with overlap phasing
  - Provide southbound left turn lane
  - Provide southbound right turn lane
  - Provide eastbound left turn lane
  - Provide eastbound right turn lane
  - Provide two westbound left turn lanes

- Little Morongo Road/Pierson Boulevard – #7
  - Install traffic signal (satisfy signal warrant under Existing Plus Ambient Plus Project Plus Cumulative conditions)
  - Provide northbound left turn lane
  - Provide southbound left turn lane
  - Provide eastbound left turn lane
  - Provide westbound left turn lane

- Little Morongo Road/Two Bunch Palms Trail – #8
  - Install traffic signal (already satisfy signal warrant under Existing conditions)
  - Provide northbound left turn lane
  - Provide northbound right turn lane
  - Provide southbound left turn lane
  - Provide eastbound left turn lane
  - Provide two westbound left turn lanes

- Little Morongo Road/15th Avenue – #9
  - Install traffic signal (already satisfy signal warrant under Existing Plus Project conditions)
  - Provide southbound left turn lane
  - Provide westbound left turn lane
  - Provide westbound right turn lane
  - Provide second northbound through lane

- Little Morongo Road/Dillon Road – #10
  - Install traffic signal (already satisfy signal warrant under Existing conditions)
  - Provide northbound left turn lane
  - Provide southbound left turn lane
  - Provide second eastbound left turn lane
  - Provide westbound right turn lane

- Atlantic Avenue/Dillon Road – #11
  - Restrict southbound left turn

- Palm Drive/Two Bunch Palms Trail – #14
  - Provide second northbound left turn lane
  - Provide third southbound through lane
  - Provide eastbound right-turn overlap phasing

- Palm Drive/Camino Aventura – #16
  - Install traffic signal (already satisfy signal warrant under Existing conditions)

- Palm Drive/Dillon Road – #17
  - Provide third southbound through lane
  - Provide southbound right-turn overlap phasing
  - Provide eastbound right-turn overlap phasing

Since this is a degradation of traffic level of service for the already impacted intersections during the Existing conditions, the project applicant should pay its fair share of fees to an applicable program for the required mitigations. Some of the intersections currently satisfy the traffic signal warrant based on Existing conditions.

The project's fair share percentages of identified impacted intersections are approximately 6.5% to 46.9%. The fair share calculations are intended only for the discussion purposes of this traffic impact analysis, and do not imply any legal responsibility or formula for contributions or mitigation.

1. INTRODUCTION

This section describes the purpose of this traffic impact analysis, project location, proposed development, and study area. Figure 1 shows the project location map and Figure 2 illustrates the project site plan.

PURPOSE AND OBJECTIVES

The purpose of this traffic impact analysis is to provide an assessment of traffic operations resulting from development of the proposed DHS 109 Business Park project and to identify measures necessary to mitigate potentially significant traffic impacts. This report analyzes traffic impacts for the anticipated project opening year in 2021.

Although this is a technical report, effort has been made to write the report clearly and concisely. A glossary of terms is provided in Appendix A to assist the reader with terms related to transportation engineering.

PROJECT DESCRIPTION

The project site is located east of Little Morongo Road between 15th Avenue and 16th Avenue in the City of Desert Hot Springs. The project site is proposed to include various industrial uses. The project site has a zoning designation of light industrial (I-L) use in the City of Desert Hot Springs General Plan. The applicant will be obtaining a Master Conditional Use Permit for cannabis activities including cultivation, extraction, processing, manufacturing, distribution and potentially, sales. The project site is proposed to consist of 364,180 square feet of general light industrial use and 767,770 square feet of industrial park (cannabis activity) use.

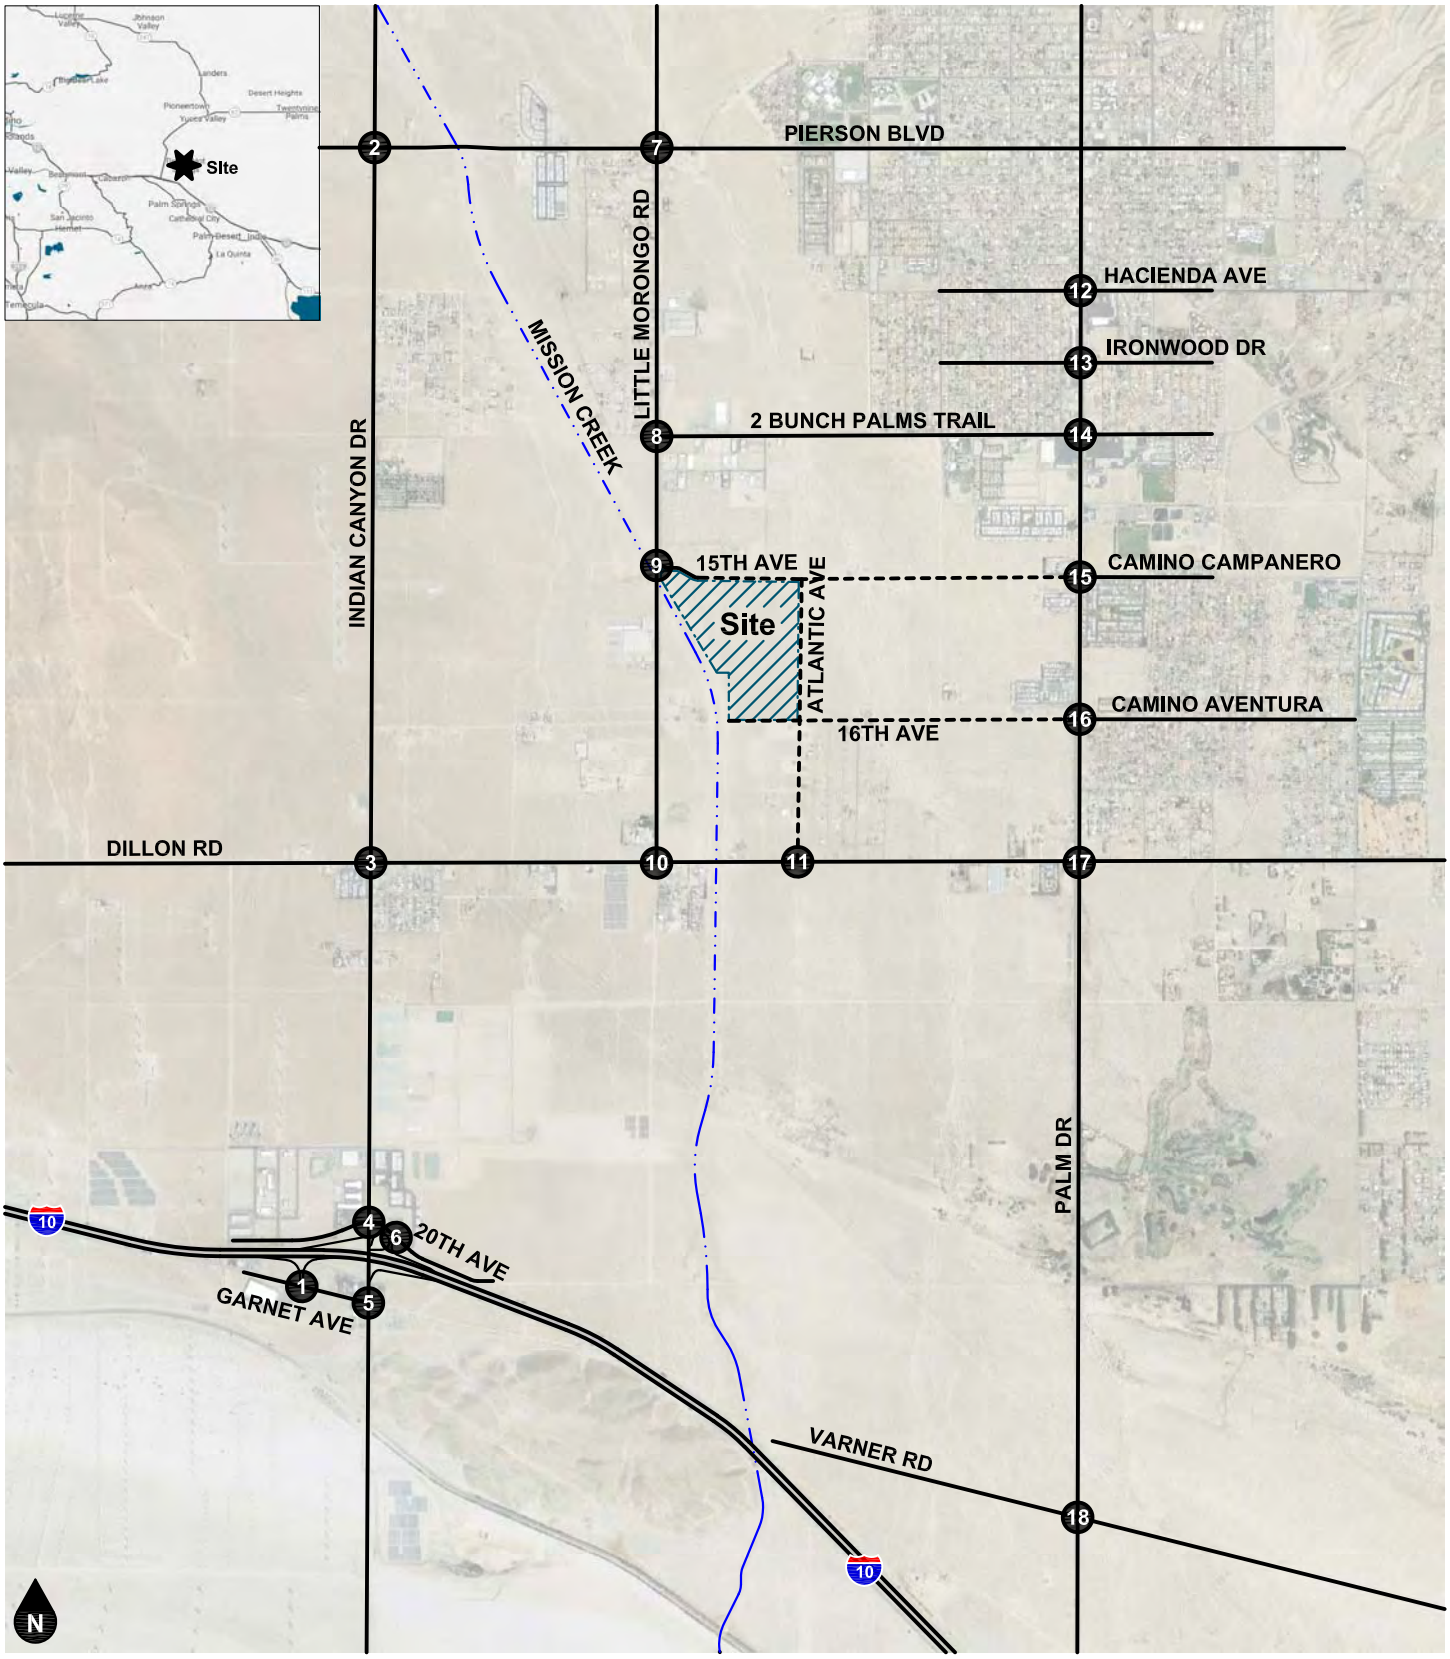
The primary access for the project site is though 15th Avenue at Little Morongo Road. The secondary emergency-only access is through Atlantic Avenue to Dillon Road.

The proposed project is anticipated to be constructed and fully operational by year 2021.

STUDY AREA

Based on the study intersections identified in the approved scoping agreement (Appendix B), the study area consists of the following study intersections within the City of Desert Hot Springs, City of Corona, and California Department of Transportation (Caltrans) jurisdictions:

Study Intersections[1]	Jurisdiction
1. I-10 Eastbound Ramps (NS) at Garnet Avenue (EW)	Caltrans/City of Palm Springs
2. Indian Canyon Drive (NS) at Pierson Boulevard (EW)	City of Desert Hot Springs
3. Indian Canyon Drive (NS) at Dillon Road (EW)	County of Riverside
4. Indian Canyon Drive (NS) at 20th Avenue (EW)	City of Palm Springs
5. Indian Canyon Drive (NS) at Garnet Avenue (EW)	City of Palm Springs
6. I-10 Westbound Ramps (NS) at 20th Avenue (EW)	Caltrans
7. Little Morongo Road (NS) at Pierson Boulevard (EW)	City of Desert Hot Springs
8. Little Morongo Road (NS) at Two Bunch Palms Trail (EW)	City of Desert Hot Springs
9. Little Morongo Road (NS) at 15th Avenue(EW)	City of Desert Hot Springs
10. Little Morongo Road (NS) at Dillon Road (EW)	County of Riverside
11. Atlantic Avenue (NS) at Dillon Road (EW)	County of Riverside



[1] (NS) = north-south roadway; (EW) = east-west roadway

Study Intersections[1]	Jurisdiction
12. Palm Drive (NS) at Hacienda Avenue (EW)	City of Desert Hot Springs
13. Palm Drive (NS) at Ironwood Drive (EW)	City of Desert Hot Springs
14. Palm Drive (NS) at Two Bunch Palm Trails (EW)	City of Desert Hot Springs
15. Palm Drive (NS) at Camino Campanero (EW)	City of Desert Hot Springs
16. Palm Drive (NS) at Camino Aventura (EW)	City of Desert Hot Springs
17. Palm Drive (NS) at Dillon Road (EW)	County of Riverside
18. Palm Drive (NS) at Varner Road (EW)	County of Riverside

ANALYSIS SCENARIOS

The following scenarios are analyzed during typical weekday morning and evening peak hour conditions:

- Existing Conditions
- Existing Plus Project Conditions
- Existing Plus Ambient Plus Project Conditions
- Existing Plus Ambient Plus Project Plus Cumulative Conditions

Figure 1
Project Location Map

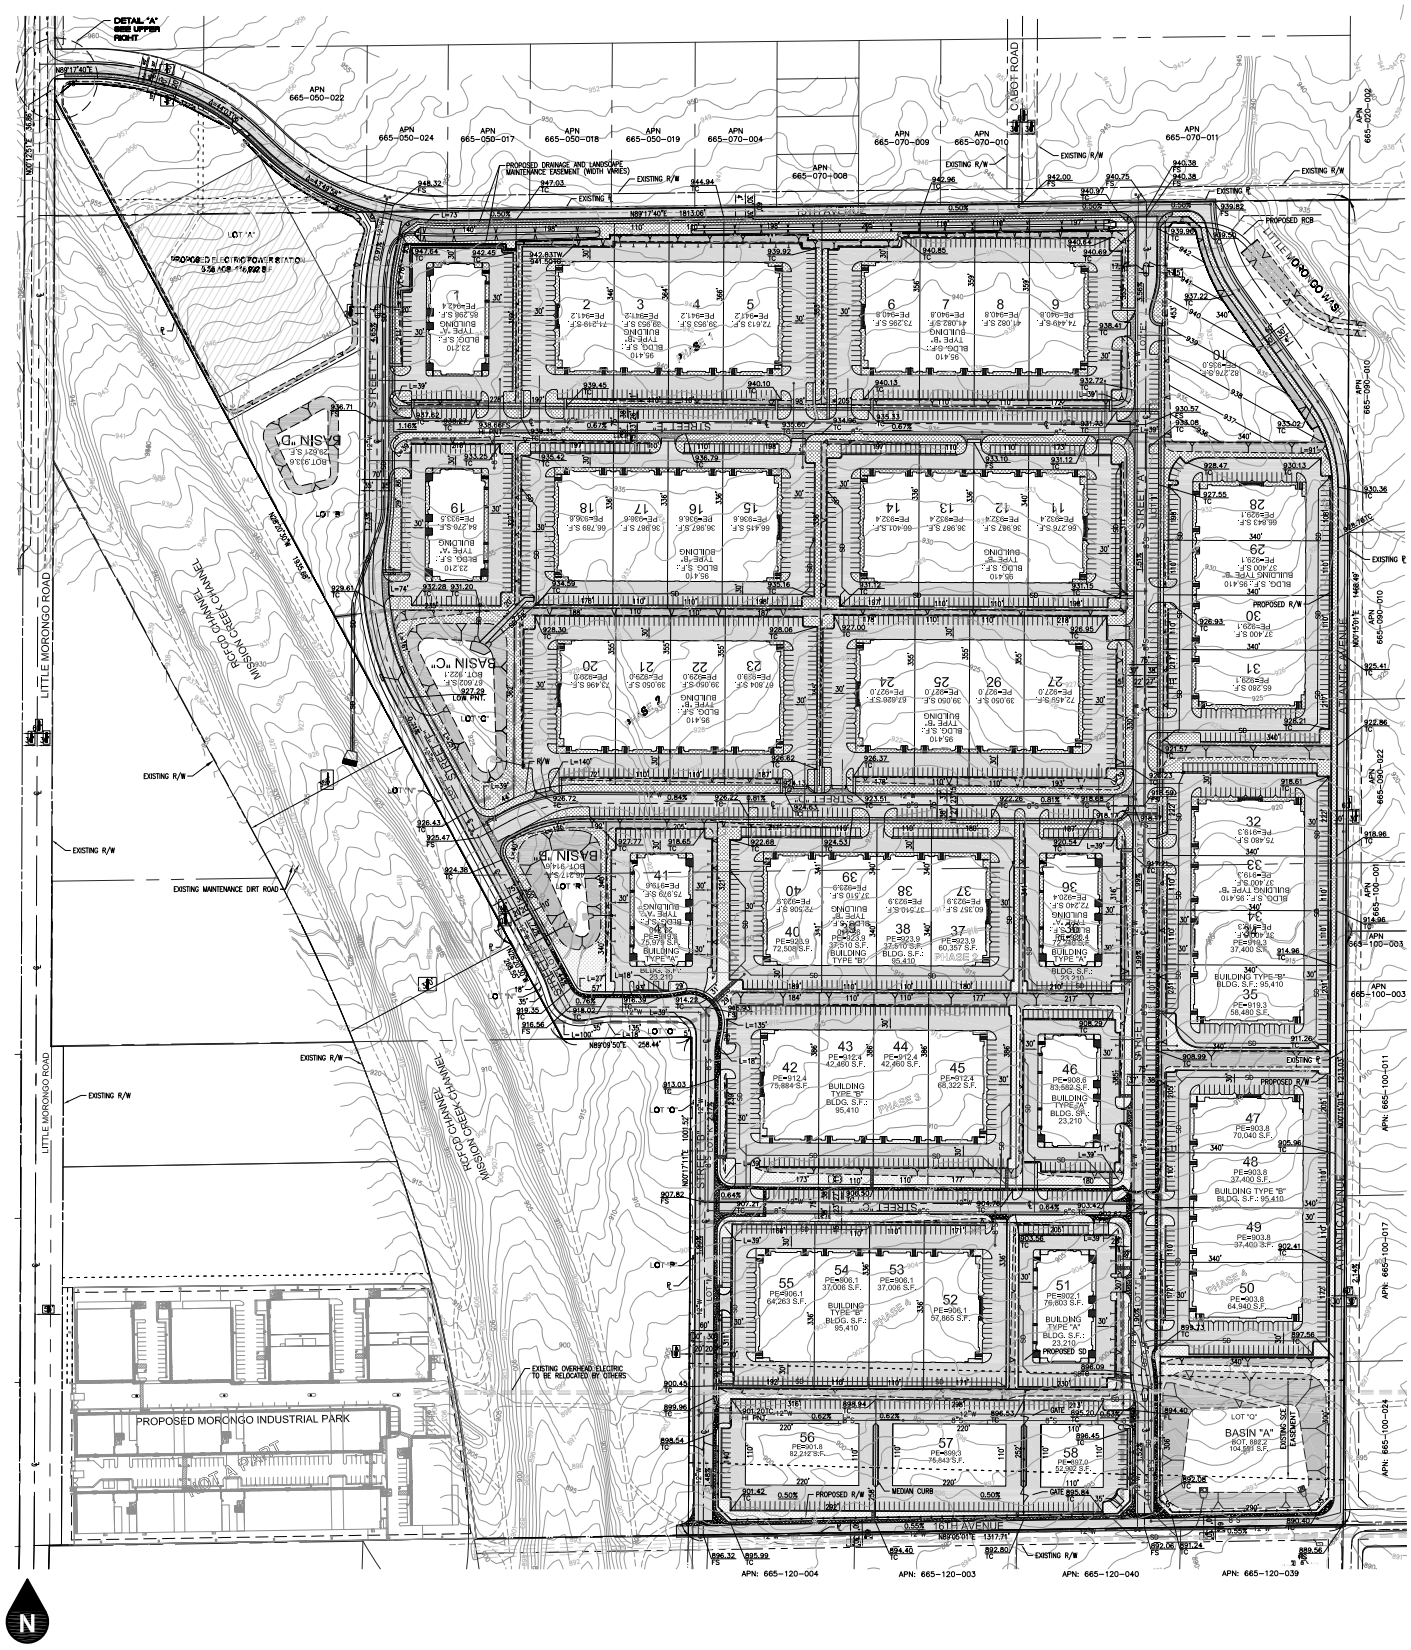

Figure 2
Site Plan

2. METHODOLOGY

This section discusses the analysis methodologies used to assess transportation facility performance as adopted by the respective jurisdictional agencies.

INTERSECTION DELAY METHODOLOGY

The technique used to assess the performance of intersections is known as the intersection delay methodology based on the procedures contained in the Highway Capacity Manual (Transportation Research Board, 6th Edition). The methodology considers the traffic volume and distribution of movements, traffic composition, geometric characteristics, and signalization details to calculate the average control delay per vehicle and corresponding Level of Service. Control delay is defined as the portion of delay attributed to the intersection traffic control (such as a traffic signal or stop sign) and includes initial deceleration, queue move-up time, stopped delay, and final acceleration delay. The intersection control delay is then correlated to Level of Service based on the following thresholds:

Level of Service	Intersection Control Delay (Seconds / Vehicle)	
	Signalized Intersection	Unsignalized Intersection
A	≤ 10.0	≤ 10.0
B	> 10.0 to ≤ 20.0	> 10.0 to ≤ 15.0
C	> 20.0 to ≤ 35.0	> 15.0 to ≤ 25.0
D	> 35.0 to ≤ 55.0	> 25.0 to ≤ 35.0
E	> 55.0 to ≤ 80.0	> 35.0 to ≤ 50.0
F	> 80.0	> 50.0

Source: Transportation Research Board, Highway Capacity Manual (6th Edition).

Level of Service is used to qualitatively describe the performance of a roadway facility, ranging from Level of Service A (free-flow conditions) to Level of Service F (extreme congestion and system failure). At intersections with traffic signal or all way stop control, Level of Service is determined by the average control delay for the overall intersection. At intersections with cross street stop control (i.e., one- or two-way stop control), Level of Service is determined by the average control delay for the worst individual movement (or movements sharing a single lane).

Intersection delay analysis was performed using the Vistro (Version 6.00-00) software. Saturation flow rates of 1,800 vehicles per hour of green for through and right turn lanes and 1,700 vehicles per lane for single left turn lanes, 1,600 vehicles per lane for dual left turn lanes, and 1,500 vehicles per lane for triple left turn lanes have been assumed for the capacity analysis. Measured peak hour factors have been applied for existing and near-term conditions.

PERFORMANCE STANDARDS

County of Riverside. The definition of an intersection deficiency has been obtained from the County of Riverside General Plan. The General Plan states that peak hour intersection operations of Level of Service C or better are generally acceptable along all County maintained roads and conventional state highways. As an exception, Level of Service D may be allowed in Community Development areas, only at intersections of any combination of Secondary Highways, Major Highways, Arterial Highways, Urban Arterial Highways, Expressways, conventional state highways or freeway ramp intersections.

California Department of Transportation. As stated in the Guide for the Preparation of Traffic Impact Studies (State of California, 2002), "California Department of Transportation endeavors to maintain a target LOS [Level of Service] at the transition between LOS "C" and LOS "D" on State highway facilities". The California Department of Transportation acknowledges this may not always be feasible and recommends consultation with the California Department of Transportation to determine the appropriate target Level of Service. For consistency with local requirements, this analysis defines Level of Service D as the minimum acceptable Level of Service for State Highway facilities.

City of Desert Hot Springs. The City of Desert Hot Springs has established Level of Service D as the minimum acceptable Level of Service.

THRESHOLDS OF SIGNIFICANCE

Based on the established performance standards, a potentially significant transportation impact is defined to occur if the project causes or worsens unacceptable Level of Service (E or F) at a study intersection.

3. EXISTING CONDITIONS

EXISTING ROADWAY SYSTEM

Figure 3 identifies the lane geometry and intersection traffic controls for Existing conditions based on a field survey of the study area. Regional access to the project site is provided by the I-10 Freeway located approximately 2.3 miles south of the project site and State Route 62 (SR-62) located approximately 4.1 miles west of the project site. Key roadways providing local circulation include Indian Canyon Road, Little Morongo Road, Palm Drive, Pierson Boulevard, Two Bunch Palms Trail, Dillon Road and Varner Road.

GENERAL PLAN CONTEXT

Figure 4 shows the City of Desert Hot Springs General Plan Circulation Element roadway classifications map. This figure shows the nature and extent of arterial and collector highways that are needed to adequately serve the ultimate development depicted by the Land Use Element of the General Plan. The City of Desert Hot Springs standard roadway cross-sections are illustrated on Figure 5.

TRANSIT SERVICE

Figure 6 shows Existing public transit facilities and routes in the project vicinity. There are currently no transit routes in the immediate project vicinity. SunLine Transit Agency bus route 14 runs along Palm Drive. Bus route 20 runs along Pierson Boulevard from Palm Drive to West Drive and along Palm Drive from Pierson Boulevard to Interstate 10. Bus route 15 runs along Pierson Boulevard from Palm Drive to West Drive and along Palm Drive from Pierson Boulevard to Two Bunch Palms Trails.

BICYCLE FACILITIES

The City of Desert Hot Springs bike paths are illustrated on Figure 7. A future Multi-Use Path is planned along Little Morongo Road, a Bike Lane is planned along 15th Avenue east of Little Morongo Road and a future Buffered Bike Lane is planned along Dillon Road east of Little Morongo Road. There are currently no existing bicycle facilities in the immediate project vicinity. Sidewalks are not provided on both sides of the street along Little Morongo Road and Dillon Road.

EXISTING ROADWAY VOLUMES

Figure 8 shows the Existing average daily traffic volumes. The Existing average daily traffic volumes have been factored from peak hour intersection turning movement volumes using the following formula for each intersection leg:

Evening Peak Hour (Approach Volume + Exit Volume) x 13.2[2] = Leg Volume.

The peak hour to daily volume factor was derived based on a comparison of the existing evening peak hour intersection turning movement volumes with sample 24-hour roadway segment volume data obtained from the Coachella Valley Association of Governments Traffic Census Report (2017). This is a conservative estimate and may over-estimate the average daily traffic volumes.

Existing peak hour traffic conditions are based upon morning peak period and evening peak period intersection turning movement counts obtained in June and September 2017, April 2018 and April 2019 during typical weekday conditions. The 2017 counts include a 4% growth to factor up to 2019 conditions. 2018 counts

[2] Source: Approximate average evening peak hour K factor based on a comparison of the existing peak hour intersection turning movement counts with the roadway segment daily traffic volume data.

include a 2% growth to factor up to 2019 conditions. The weekday morning peak period was counted between 7:00 AM and 9:00 AM, and the weekday evening peak period was counted between 4:00 PM and 6:00 PM. The actual peak hour within the peak period is the four consecutive 15 minute periods with the highest total volume when all movements are added together. Thus, the weekday evening peak hour at one intersection may be 4:45 PM to 5:45 PM if those four consecutive 15 minute periods have the highest combined volume. Intersection turning movement count worksheets are provided in Appendix C.

Figure 9 and Figure 10 show the Existing morning peak hour and evening peak hour intersection turning movement volumes.

EXISTING LEVEL OF SERVICE

The intersection Levels of Service for Existing conditions have been calculated and are shown in Table 1. Existing intersection Level of Service worksheets are provided in Appendix D.

As shown in Table 1, the study intersections currently operate within acceptable Levels of Service during the peak hours for Existing conditions, except for the following study intersections that are projected to operate at deficient Levels of Service (E or F):

- Indian Canyon Drive/Dillon Road – #3 (AM peak hour)
- Palm Drive/Two Bunch Palms Trail – #14 (AM peak hour)

EXISTING TRAFFIC SIGNAL WARRANT ANALYSIS

Traffic signal warrants are satisfied at the following study intersections based upon the California Manual on Uniform Traffic Control Devices (2014), peak hour volume warrant (Warrant 3), for Existing conditions:

- Indian Canyon Drive/Pierson Boulevard – #2
- Indian Canyon Drive/Dillon Road – #3
- Little Morongo Road/Two Bunch Palms Trail – #8
- Little Morongo Road/Dillon Road – #10
- Little Morongo Road/Camino Aventura – #16

Traffic signal warrant analysis worksheets are provided in Appendix E.

4. PROJECT TRIP FORECASTS

This section describes how project trip generation, trip distribution, and trip assignment forecasts were developed. The forecast project volumes are illustrated on figures contained in this section.

PROJECT TRIP GENERATION

The project site is located east of Little Morongo Road between 15th Avenue and 16th Avenue in the City of Desert Hot Springs. The project site is proposed to include various industrial uses. The project site has a zoning designation of light industrial (I-L) use in the City of Desert Hot Springs General Plan. The applicant will be obtaining a Master Conditional Use Permit for cannabis activities including cultivation, extraction, processing, manufacturing, distribution and potentially, sales. The project site is proposed to consist of 364,180 square feet of general light industrial use and 767,770 square feet of industrial park (cannabis activity) use.

Table 2 shows the project trip generation based upon trip generation rates obtained from the Institute of Transportation Engineers, Trip Generation Manual, 10th Edition, 2017. Trip generation rates were determined for daily trips, morning peak hour inbound and outbound trips, and evening peak hour inbound and outbound trips for the proposed land uses. The number of trips forecast to be generated by the proposed project are determined by multiplying the trip generation rates by the land use quantities. For General Light Industrial uses, the vehicle mix assumption is based on the City of Fontana, Truck Trip Generation Study, April 2003. For cannabis activity (Industrial Park) traffic, 5% of the vehicle mix is assumed to be 2-axle trucks used for delivery. The project-generated truck trips were converted to Passenger Car Equivalent (PCE) trips.

For the proposed cannabis activity (including cultivation, extraction, testing and other support services), the total number of employees is estimated based on one employee per 2,000 square feet of building area. This employee-to-square footage ratio is consistent with the operational assumptions of similar cannabis projects. Since cannabis activity will require significantly less employees per square feet of building area than typical industrial uses, it is more appropriate to forecast the project traffic based on number of employees rather than based on building square footage of an industrial park.

As shown in Table 2, the proposed project is forecast to generate a total of approximately 3,665 daily PCE trips, including 531 PCE trips during the morning peak hour and 490 PCE trips during the evening peak hour.

PROJECT TRIP DISTRIBUTION AND ASSIGNMENT

Figure 11 shows the forecast directional outbound and inbound distribution patterns for the project generated trips. The project trip distribution patterns are based on review of existing volume data, surrounding land uses, designated truck routes, and the local and regional roadway facilities in the project vicinity. The primary access for the project site is though 15th Avenue at Little Morongo Road. The secondary emergency-only access is through Atlantic Avenue to Dillon Road.

Based on the identified project trip generation and distributions, project average daily traffic volumes have been calculated and shown on Figure 12. Project morning and evening peak hour intersection turning movement volumes expected from the project are depicted on Figure 13 and Figure 14, respectively.

PROJECT DESIGN FEATURES

This analysis assumes the following improvements will be constructed by the project to provide project site access:

Little Morongo Road at 15th Street (Intersection #9)

- Install a traffic signal.
- Provide a southbound left turn lane.
- Provide a westbound left turn lane.
- Provide a westbound right turn lane.

The project should provide a secondary emergency-only access to the south of the project site to Atlantic Avenue.

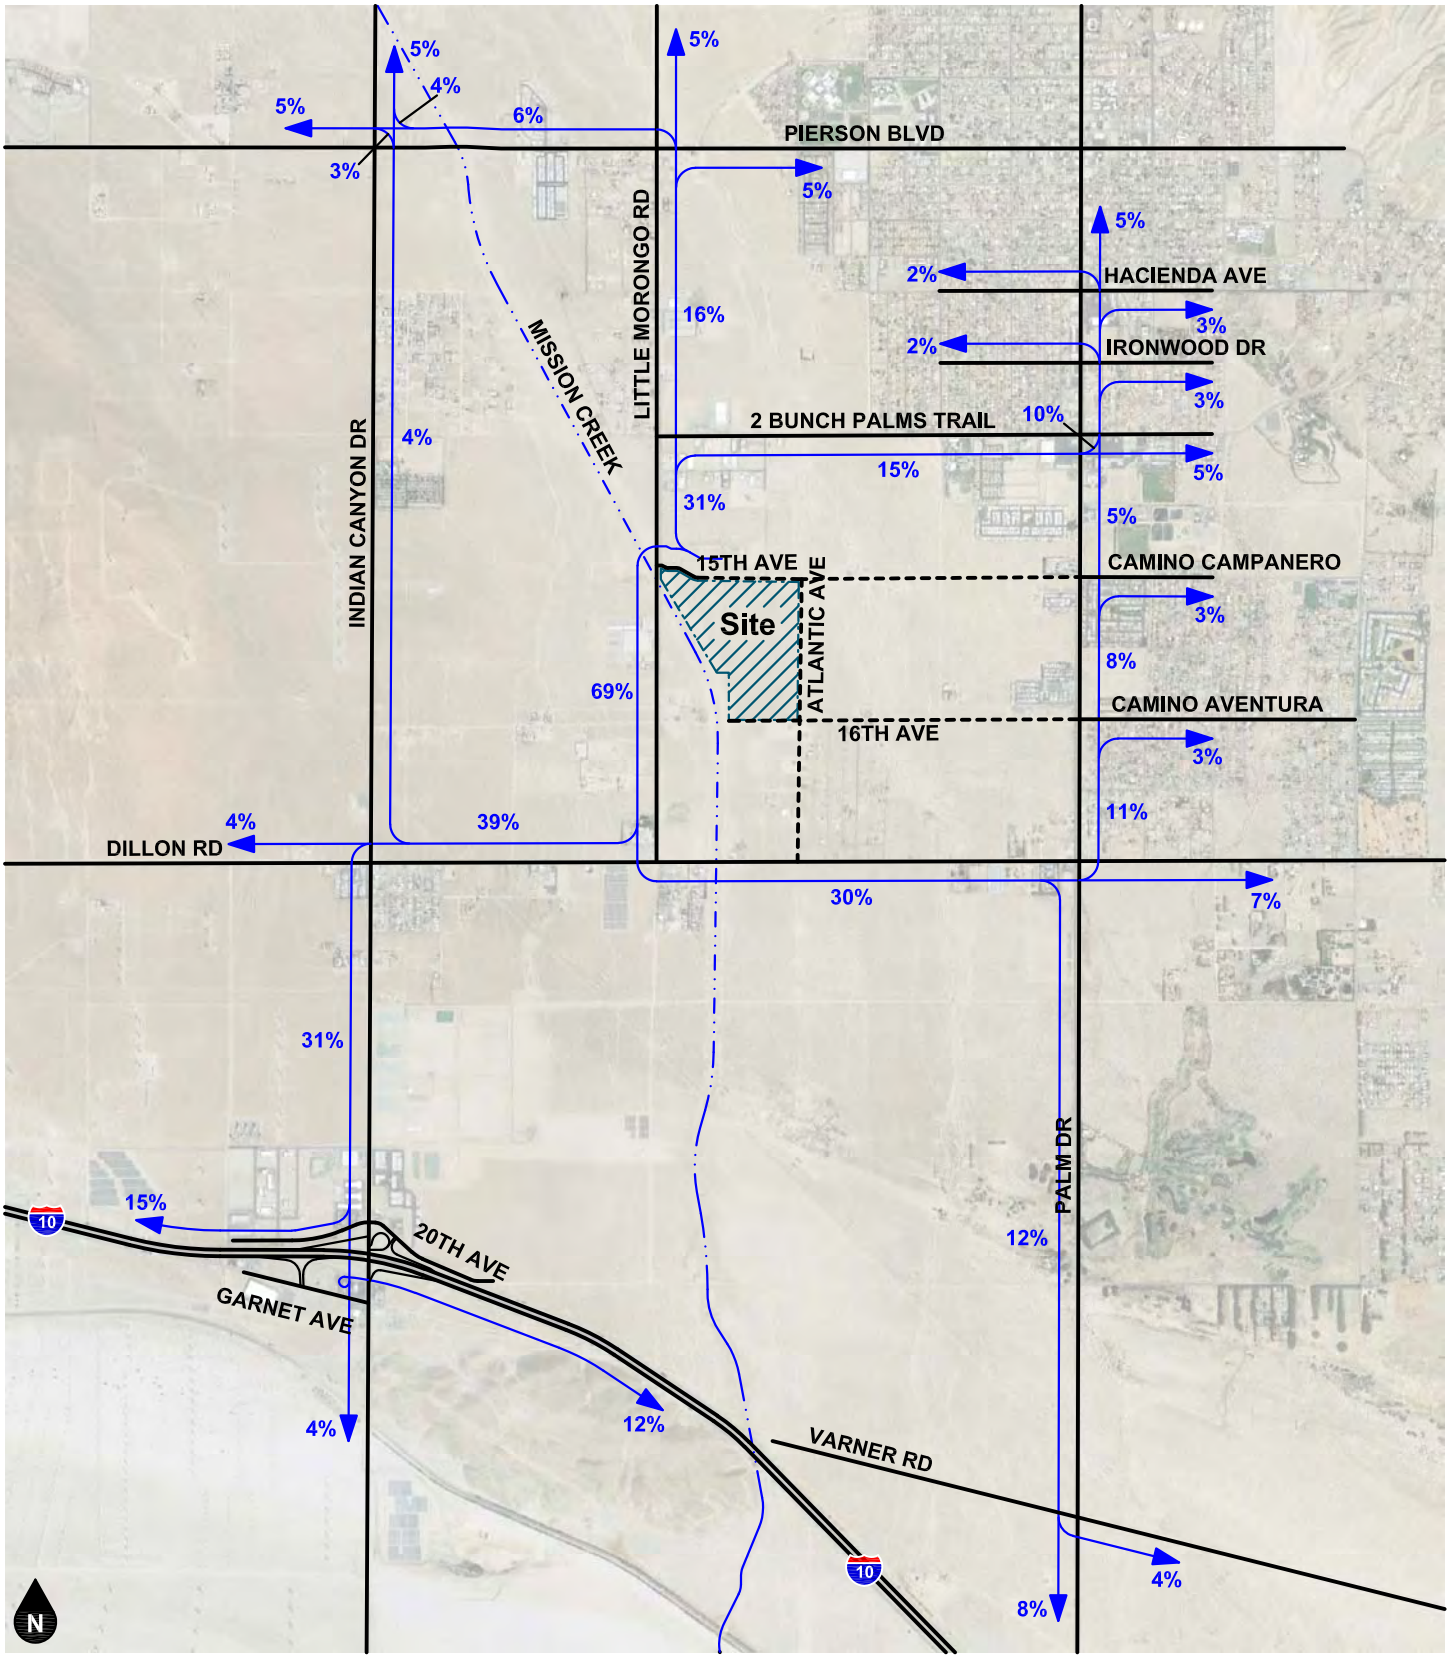
Total Project Truck PCE Trips			121	18	139	17	109	126	973
Overall Total Project PCE Trips			462	69	531	77	413	490	3,665

Notes:

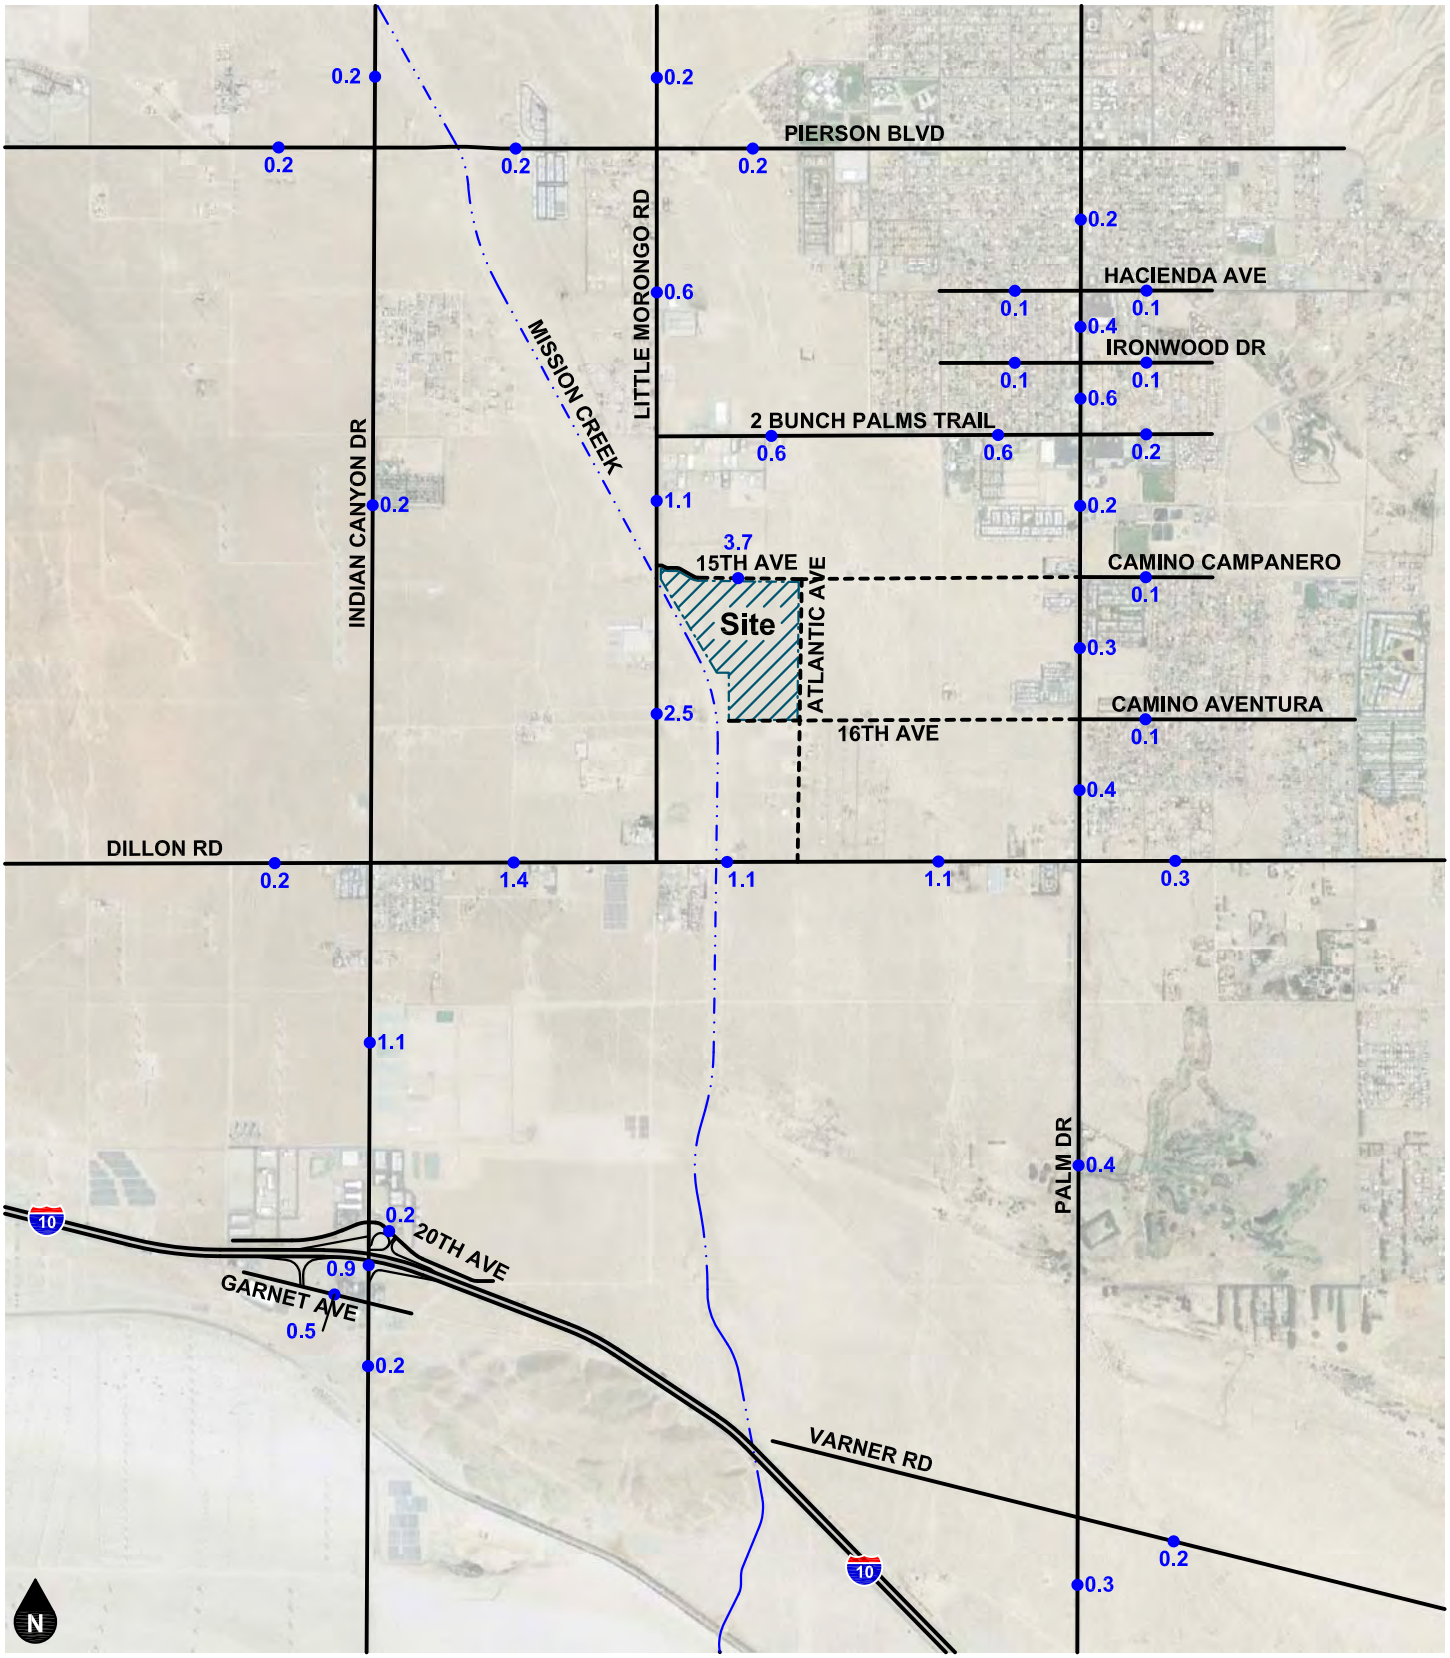


(1) Institute of Transportation Engineers, Trip Generation Manual, 10th Edition, 2017. General Light Industrial; Industrial Park.

For General Light Industrial traffic, the vehicle mix assumptions is based on the City of Fontana, Truck Trip Generation Study, April 2003. For cannabis activity (Industrial Park) traffic, 5% of the vehicle mix is assumed to be 2-axle trucks used for delivery.

(2) TSF = Thousand Square Feet; EMP = Employees

(3) Passenger Car Equivalence (PCE) rate per San Bernardino Association of Governments (SANBAG) guidelines.



(4) For the proposed cannabis activity (including cultivation, extraction, testing and other support services), the total number of employees is estimated based on one employee per 2,000 square feet of building area. This employee-to-square footage ratio is consistent to other operational assumptions of similar cannabis projects. Since cannabis activity will require significantly less employees per square feet of building area than typical industrial activities, it is more appropriate to forecast the project traffic based on number of employees rather than based on building square footage of an industrial park.

5. FUTURE VOLUME FORECASTS

This section describes how future volume forecasts for each analysis scenario were developed. Forecast study area volumes are illustrated on figures contained in this section.

CUMULATIVE TRIPS

Ambient Growth Rate

To account for ambient growth on roadways, existing roadway volumes were increased by a growth rate of two percent (2%) per year over two years for Opening Year (2021) conditions. This equates to a total growth factor of approximately 1.04. The ambient growth rate was conservatively applied to all movements at the study intersections.

Other Development

To account for trips generated by future development, trips generated by pending or approved other development projects in the City of Desert Hot Springs were added to the study area. Table 3 shows the trip generation summary for other development projects.

Figure 15 shows the forecast average daily traffic volumes for the other development. Figure 16 and Figure 17 show the forecast morning and evening peak hour intersection turning movement volumes for trips generated by other developments.

ANALYSIS SCENARIO VOLUME FORECASTS

Existing Plus Project

Existing Plus Project volume forecasts were derived by adding the project generated trips to Existing volumes. Existing Plus Project average daily traffic volumes are shown on Figure 18. Existing Plus Project morning and evening peak hour intersection turning movement volumes are shown on Figure 19 and Figure 20.

Existing Plus Ambient Plus Project

To develop Existing Plus Ambient Plus Project volume forecasts, Existing Plus Project volumes were combined with ambient growth. Existing Plus Ambient Plus Project average daily traffic volumes are shown on Figure 21. Existing Plus Ambient Plus Project morning and evening peak hour intersection turning movement volumes are shown Figure 22 and Figure 23.

Existing Plus Ambient Plus Project Plus Cumulative

Existing Plus Ambient Plus Project Plus Cumulative volume forecasts were developed by adding trips by the other developments to the Existing Plus Ambient Plus Project forecast. Existing Plus Ambient Plus Project Plus Cumulative average daily traffic volumes are shown on Figure 24. Existing Plus Ambient Plus Project Plus Cumulative morning and evening peak hour intersection turning movement volumes are shown on Figure 25 and Figure 26.

FUTURE TRAFFIC SIGNAL WARRANT ANALYSIS

The need for traffic control signals at the unsignalized study intersections have been evaluated using the California Department of Transportation Warrant 3 Peak Hour traffic signal warrant analysis, as specified in

the California Manual of Uniform Traffic Control Devices (2014 Update). Traffic signal warrant analysis worksheets are provided in Appendix E.

Existing Plus Project

Traffic signal warrants are satisfied at the following additional study intersection for Existing Plus Project conditions, in addition to those already satisfy the warrants for Existing conditions:

- Little Morongo Road/15th Avenue – #9

Existing Plus Ambient Plus Cumulative Plus Project

Traffic signal warrants are satisfied at the following additional study intersections for Existing Plus Ambient Plus Cumulative Plus Project conditions, in addition to those already satisfied for prior conditions:

- Little Morongo Road/Pierson Boulevard – #7

6. FUTURE OPERATIONAL ANALYSIS

Detailed intersection Level of Service calculation worksheets for each of the following analysis scenarios are provided in Appendix D.

EXISTING PLUS PROJECT

The intersection Levels of Service for Existing Plus Project conditions are shown in Table 4. As shown in Table 4, the study intersections are forecast to operate within acceptable Levels of Service (D or better) during the peak hours for Existing Plus Project conditions, except for the following study intersections that are projected to operate at deficient Levels of Service:

- Indian Canyon Drive/Dillon Road – #3 (AM & PM peak hours)
- Little Morongo Road/15th Avenue – #9 (PM peak hour)
- Palm Drive/Two Bunch Palms Trail – #14 (AM peak hour)
- Palm Drive/Dillon Road – #17 (AM peak hour)

The project shall construct the following improvements to mitigate the deficient intersections for Existing Plus Project conditions:

- Indian Canyon Drive/Dillon Road – #3
  - Install traffic signal (signal warrant currently satisfied under Existing conditions)
  - Provide northbound left turn lane
  - Provide southbound left turn lane
  - Provide eastbound left turn lane
  - Provide westbound left turn lane

- Little Morongo Road/15th Avenue – #9
  - Install traffic signal
  - Provide southbound left turn lane
  - Provide westbound left turn lane
  - Provide westbound right turn lane

- Palm Drive/Two Bunch Palms Trail – #14
  - Provide eastbound right-turn overlap phasing

- Palm Drive/Dillon Road – #17
  - Provide eastbound right-turn overlap phasing

EXISTING PLUS AMBIENT PLUS PROJECT

The intersection Levels of Service for Existing Plus Ambient Plus Project conditions are shown in Table 5. As shown in Table 5, the study intersections are forecast to operate within acceptable Levels of Service (D or better) during the peak hours for Existing Plus Ambient Plus Project conditions, except for the following study intersection that is forecast to operate at deficient Levels of Service (E or F):

- Indian Canyon Drive/Dillon Road – #3 (AM & PM peak hours)
- Little Morongo Road/15th Avenue – #9 (PM peak hour)
- Palm Drive/Two Bunch Palms Trail – #14 (AM peak hour)
- Palm Drive/Dillon Road – #17 (AM peak hour)

The project shall construct the following improvements to mitigate the deficient intersections for Existing Plus Ambient Plus Project conditions:

- Indian Canyon Drive/Dillon Road – #3
  - Install traffic signal (signal warrant currently satisfied under Existing conditions)
  - Provide northbound left turn lane
  - Provide southbound left turn lane
  - Provide eastbound left turn lane
  - Provide westbound left turn lane

- Little Morongo Road/15th Avenue – #9
  - Install traffic signal
  - Provide southbound left turn lane
  - Provide westbound left turn lane
  - Provide westbound right turn lane

- Palm Drive/Two Bunch Palms Trail – #14
  - Provide eastbound right-turn overlap phasing

- Palm Drive/Dillon Road – #17
  - Provide eastbound right-turn overlap phasing

EXISTING PLUS AMBIENT PLUS PROJECT PLUS CUMULATIVE

The intersection Levels of Service for Existing Plus Ambient Plus Project Plus Cumulative conditions are shown in Table 6. As shown in Table 6, the study intersections are projected to operate within acceptable Levels of Service (D or better) during the peak hours for Existing Plus Ambient Plus Project Plus Cumulative conditions, except for the following study intersections that are forecast to continue operating at deficient Levels of Service (E or F):

- Indian Canyon Drive/Pierson Boulevard – #2 (AM & PM peak hours)
- Indian Canyon Drive/Dillon Road – #3 (AM & PM peak hours)
- Little Morongo Road/Pierson Boulevard – #7 (AM & PM peak hours)
- Little Morongo Road/Two Bunch Palms Trail – #8 (AM & PM peak hours)
- Little Morongo Road/15th Avenue – #9 (AM & PM peak hours)
- Little Morongo Road/Dillon Road – #10 (AM & PM peak hours)
- Atlantic Avenue/Dillon Road – #11 (AM & PM peak hours)
- Palm Drive/Two Bunch Palms Trail – #14 (AM & PM peak hours))
- Palm Drive/Camino Aventura – #16 (AM & PM peak hours)
- Palm Drive/Dillon Road – #17 (AM & PM peak hours)

The following improvements are needed to mitigate the deficient intersections for Existing Plus Ambient Plus Project Plus Cumulative conditions:

- Indian Canyon Drive/Pierson Boulevard – #2
  - Install traffic signal (signal warrant currently satisfied under Existing conditions)
  - Provide northbound left turn lane
  - Provide southbound left turn lane
  - Provide eastbound left turn lane
  - Provide westbound left turn lane

- Indian Canyon Drive/Dillon Road – #3
  - Install traffic signal (signal warrant currently satisfied under Existing conditions)
  - Provide northbound left turn lane
  - Provide northbound right turn lane with overlap phasing
  - Provide southbound left turn lane
  - Provide southbound right turn lane
  - Provide eastbound left turn lane
  - Provide eastbound right turn lane
  - Provide two westbound left turn lanes

- Little Morongo Road/Pierson Boulevard – #7
  - Install traffic signal
  - Provide northbound left turn lane
  - Provide southbound left turn lane
  - Provide eastbound left turn lane
  - Provide westbound left turn lane

- Little Morongo Road/Two Bunch Palms Trail – #8
  - Install traffic signal (signal warrant currently satisfied under Existing conditions)
  - Provide northbound left turn lane
  - Provide northbound right turn lane
  - Provide southbound left turn lane
  - Provide eastbound left turn lane
  - Provide two westbound left turn lanes

- Little Morongo Road/15th Avenue – #9
  - Install traffic signal
  - Provide southbound left turn lane
  - Provide westbound left turn lane
  - Provide westbound right turn lane
  - Provide second northbound through lane

- Little Morongo Road/Dillon Road – #10
  - Install traffic signal (signal warrant currently satisfied under Existing conditions)
  - Provide northbound left turn lane
  - Provide southbound left turn lane
  - Provide second eastbound left turn lane
  - Provide westbound right turn lane

- Atlantic Avenue/Dillon Road – #11
  - Restrict southbound left turn

- Palm Drive/Two Bunch Palms Trail – #14
  - Provide second northbound left turn lane
  - Provide third southbound through lane
  - Provide eastbound right-turn overlap phasing

- Palm Drive/Camino Aventura – #16
  - Install traffic signal (signal warrant currently satisfied under Existing conditions)

- Palm Drive/Dillon Road – #17
  - Provide third southbound through lane
  - Provide southbound right-turn overlap phasing
  - Provide eastbound right-turn overlap phasing

The project applicant should pay its fair share of fees to an applicable program for the required mitigation measure improvements. Some of the intersections currently satisfy the traffic signal warrant based on Existing conditions.

Notes:

(1) TS = Traffic Signal; CSS = Cross Street Stop

(2) Delay is shown in seconds/vehicle. For intersections with traffic signal or all way stop control, overall average intersection delay and LOS are shown. For intersections with cross street stop control, Level of Service is based on average delay of the worst individual lane (or movements sharing

(3) LOS = Level of Service

Table 5

7. CONCLUSIONS

MITIGATION MEASURES

The project shall construct the following improvements to provide project access and mitigate the significantly impacted intersections for Existing Plus Project and Existing Plus Ambient Plus Project conditions:

- Indian Canyon Drive/Dillon Road – #3
  - Install traffic signal (signal warrant currently satisfied under Existing conditions)
  - Provide northbound left turn lane
  - Provide southbound left turn lane
  - Provide eastbound left turn lane
  - Provide westbound left turn lane

- Little Morongo Road/15th Avenue – #9
  - Install traffic signal (signal warrant satisfied under Existing Plus Project conditions)
  - Provide southbound left turn lane
  - Provide westbound left turn lane
  - Provide westbound right turn lane

- Palm Drive/Two Bunch Palms Trail – #14
  - Provide eastbound right-turn overlap phasing

- Palm Drive/Dillon Road – #17
  - Provide eastbound right-turn overlap phasing

The project shall construct the following improvements to provide project access and mitigate the significantly impacted intersections for Existing Plus Ambient Plus Cumulative Plus Project conditions:

- Indian Canyon Drive/Pierson Boulevard – #2
  - Install traffic signal (signal warrant currently satisfied under Existing conditions)
  - Provide northbound left turn lane
  - Provide southbound left turn lane
  - Provide eastbound left turn lane
  - Provide westbound left turn lane

- Indian Canyon Drive/Dillon Road – #3
  - Install traffic signal (signal warrant currently satisfied under Existing conditions)
  - Provide northbound left turn lane
  - Provide northbound right turn lane with overlap phasing
  - Provide southbound left turn lane
  - Provide southbound right turn lane
  - Provide eastbound left turn lane
  - Provide eastbound right turn lane
  - Provide two westbound left turn lanes

- Little Morongo Road/Pierson Boulevard – #7
  - Install traffic signal (signal warrant satisfied under Existing Plus Ambient Plus Project Plus Cumulative conditions)
  - Provide northbound left turn lane
  - Provide southbound left turn lane

- Provide eastbound left turn lane
- Provide westbound left turn lane

- Little Morongo Road/Two Bunch Palms Trail – #8
  - Install traffic signal (signal warrant currently satisfied under Existing conditions)
  - Provide northbound left turn lane
  - Provide northbound right turn lane
  - Provide southbound left turn lane
  - Provide eastbound left turn lane
  - Provide two westbound left turn lanes

- Little Morongo Road/15th Avenue – #9
  - Install traffic signal (signal warrant satisfied under Existing Plus Project conditions)
  - Provide southbound left turn lane
  - Provide westbound left turn lane
  - Provide westbound right turn lane
  - Provide second northbound through lane

- Little Morongo Road/Dillon Road – #10
  - Install traffic signal (signal warrant currently satisfied under Existing conditions)
  - Provide northbound left turn lane
  - Provide southbound left turn lane
  - Provide second eastbound left turn lane
  - Provide westbound right turn lane

- Atlantic Avenue/Dillon Road – #11
  - Restrict southbound left turn

- Palm Drive/Two Bunch Palms Trail – #14
  - Provide second northbound left turn lane
  - Provide third southbound through lane
  - Provide eastbound right-turn overlap phasing

- Palm Drive/Camino Aventura – #16
  - Install traffic signal (signal warrant currently satisfied under Existing conditions)

- Palm Drive/Dillon Road – #17
  - Provide third southbound through lane
  - Provide southbound right-turn overlap phasing
  - Provide eastbound right-turn overlap phasing

Since this is a degradation of Level of Service for the already deficient intersection operations under Existing conditions, the project applicant should pay its fair share of fees to an applicable program for the required mitigation measure improvements. Some of the intersections currently satisfy the traffic signal warrant based on Existing conditions.

PROJECT FAIR SHARE CONTRIBUTION

The project fair share contributions have also been calculated for Existing Plus Ambient Plus Project Plus Cumulative improvement locations. The project share of cost has been based on the proportion of project peak hour intersection turning movement volumes contributed to the improvement location relative to the

total new peak hour Existing Plus Ambient Plus Project Plus Cumulative intersection turning movement volumes.

Table 7 presents a summary of improvement cost and project cost shares at the Existing Plus Ambient Plus Project Plus Cumulative study intersection improvement locations. The intersection fair share cost calculations are typically based on the higher of the weekday morning and weekday evening peak hour traffic volumes. As shown in Table 7, the project's fair share percentages of identified impacted intersections are approximately 6.5% to 46.9%. The fair share calculations are intended only for the discussion purposes of this traffic impact analysis, and do not imply any legal responsibility or formula for contributions or mitigation.

SITE ACCESS

The following improvements will be constructed by the project to provide project site access:

Little Morongo Road at 15th Street (Intersection #9)

- Install a traffic signal.
- Provide a southbound left turn lane.
- Provide a westbound left turn lane.
- Provide a westbound right turn lane.

The project should provide a secondary emergency-only access to the south of the project site to Atlantic Avenue.

GENERAL RECOMMENDATIONS

Figure 27 summarizes the circulation recommendations for the proposed project.

15th Avenue, adjacent to the project boundary, should be constructed at its ultimate half-section width, including landscaping and parkway improvements in conjunction with development per City standards.

16th Avenue, adjacent to the project boundary, should be constructed at its ultimate half-section width, including landscaping and parkway improvements in conjunction with development per City standards.

Atlantic Avenue, adjacent to the project boundary, should be constructed at its ultimate half-section width, including landscaping and parkway improvements in conjunction with development per City standards.

The project should provide a secondary emergency-only access to the south of the project site to Atlantic Avenue.

Install a traffic signal at the intersection of Little Morongo Road and 15th Street.

All roadway design, traffic signing and striping, and traffic control improvements relating to the proposed project should be constructed in accordance with applicable engineering standards and to the satisfaction of the City of Desert Hot Springs.

Site-adjacent roadways should be constructed or repaired at their ultimate half-section width, including landscaping and parkway improvements in conjunction with development, or as otherwise required by the City of Desert Hot Springs.

On-site traffic signing and striping plans should be submitted for City of Desert Hot Springs approval in conjunction with detailed construction plans for the project.

The final grading, landscaping, and street improvement plans should demonstrate that sight distance standards are met in accordance with applicable City of Desert Hot Springs/California Department of Transportation sight distance standards.

As is the case for any roadway design, the City of Desert Hot Springs should periodically review traffic operations in the vicinity of the project once the project is constructed to assure that the traffic operations are satisfactory.

Table 7

APPENDIX A

GLOSSARY

GLOSSARY OF TERMS

ACRONYMS

AC	Acres
ADT	Average Daily Traffic
Caltrans	California Department of Transportation
DU	Dwelling Unit
ICU	Intersection Capacity Utilization
LOS	Level of Service
TSF	Thousand Square Feet
V/C	Volume/Capacity
VMT	Vehicle Miles Traveled

TERMS

AVERAGE DAILY TRAFFIC: The average 24-hour volume for a stated period divided by the number of days in that period. For example, Annual Average Daily Traffic is the total volume during a year divided by 365 days.

BANDWIDTH: The number of seconds of green time available for through traffic in a signal progression.

BOTTLENECK: A point of constriction along a roadway that limits the amount of traffic that can proceed downstream from its location.

CAPACITY: The maximum number of vehicles that can be reasonably expected to pass over a given section of a lane or a roadway in a given time period.

CHANNELIZATION: The separation or regulation of conflicting traffic movements into definite paths of travel by the use of pavement markings, raised islands, or other suitable means to facilitate the safe and orderly movements of both vehicles and pedestrians.

CLEARANCE INTERVAL: Nearly same as yellow time. If there is an all red interval after the end of a yellow, then that is also added into the clearance interval.

CONTROL DELAY: The component of delay, typically expressed in seconds per vehicle, resulting from the type of traffic control at an intersection. Control delay is measured by comparison with the uncontrolled condition; it includes delay incurred by slowing down, stopping/waiting, and speeding up.

CORDON: An imaginary line around an area across which vehicles, persons, or other items are counted (in and out).

CORNER SIGHT DISTANCE: The minimum sight distance required by the driver of a vehicle to cross or enter the lanes of the major roadway without requiring approaching traffic travelling at a given speed to radically alter their speed or trajectory. Corner sight distance is measured from the driver's eye at 42 inches above the pavement to an object height of 36 inches above the pavement in the center of the nearest approach lane.

CYCLE LENGTH: The time period in seconds required for a traffic signal to complete one full cycle of indications.

CUL-DE-SAC: A local street open at one end only and with special provisions for turning around.

DAILY CAPACITY: A theoretical value representing the daily traffic volume that will typically result in a peak hour volume equal to the capacity of the roadway.

DELAY: The time consumed while traffic is impeded in its movement by some element over which it has no control, usually expressed in seconds per vehicle.

DEMAND RESPONSIVE SIGNAL: Same as traffic-actuated signal.

DENSITY: The number of vehicles occupying in a unit length of the through traffic lanes of a roadway at any given instant. Usually expressed in vehicles per mile.

DETECTOR: A device that responds to a physical stimulus and transmits a resulting impulse to the signal controller.

DESIGN SPEED: A speed selected for purposes of design. Features of a highway, such as curvature, superelevation, and sight distance (upon which the safe operation of vehicles is dependent) are correlated to design speed.

DIRECTIONAL SPLIT: The percent of traffic in the peak direction at any point in time.

DIVERSION: The rerouting of peak hour traffic to avoid congestion.

FORCED FLOW: Opposite of free flow.

FREE FLOW: Volumes are well below capacity. Vehicles can maneuver freely and travel is unimpeded by other traffic.

GAP: Time or distance between successive vehicles in a traffic stream, rear bumper to front bumper.

HEADWAY: Time or distance spacing between successive vehicles in a traffic stream, front bumper to front bumper.

INTERCONNECTED SIGNAL SYSTEM: A number of intersections that are connected to achieve signal progression.

LEVEL OF SERVICE: A qualitative measure of a number of factors, which include speed and travel time, traffic interruptions, freedom to maneuver, safety, driving comfort and convenience, and operating costs.

LOOP DETECTOR: A vehicle detector consisting of a loop of wire embedded in the roadway, energized by alternating current and producing an output circuit closure when passed over by a vehicle.

MINIMUM ACCEPTABLE GAP: Smallest time headway between successive vehicles in a traffic stream into which another vehicle is willing and able to cross or merge.

MULTI-MODAL: More than one mode; such as automobile, bus transit, rail rapid transit, and bicycle transportation modes.

OFFSET: The time interval in seconds between the beginning of green at one intersection and the beginning of green at an adjacent intersection.

PLATOON: A closely grouped component of traffic that is composed of several vehicles moving, or standing ready to move, with clear spaces ahead and behind.

PASSENGER CAR EQUIVALENT (PCE): A metric used to assess the impact of larger vehicles, such as trucks, recreational vehicles, and buses, by converting the traffic volume of larger vehicles to an equivalent number of passenger cars.

PEAK HOUR: The 60 consecutive minutes with the highest number of vehicles.

PRETIMED SIGNAL: A type of traffic signal that directs traffic to stop and go on a predetermined time schedule without regard to traffic conditions. Also, fixed time signal.

PROGRESSION: A term used to describe the progressive movement of traffic through several signalized intersections.

QUEUE: The number of vehicles waiting at a service area such as a traffic signal, stop sign, or access gate.

QUEUE LENGTH: The length of vehicle queue, typically expressed in feet, waiting at a service area such as a traffic signal, stop sign, or access gate.

SCREEN-LINE: An imaginary line or physical feature across which all trips are counted, normally to verify the validity of mathematical traffic models.

SHARED/RECIPROCAL PARKING AGREEMENT: A written binding document executed between property owners to provide a designated number of off-street parking stalls within a designated area to be available for specified businesses or land uses.

SIGHT DISTANCE: The continuous length of roadway visible to a driver or roadway user.

SIGNAL CYCLE: The time period in seconds required for one complete sequence of signal indications.

SIGNAL PHASE: The part of the signal cycle allocated to one or more traffic movements.

STACKING DISTANCE: The length of area available behind a service area, such as a traffic signal or gate, for vehicle queueing to occur.

STARTING DELAY: The delay experienced in initiating the movement of queued traffic from a stop to an average running speed through an intersection.

STOPPING SIGHT DISTANCE: The minimum distance required by the driver of a vehicle on the major roadway travelling at a given speed to bring the vehicle to a stop after an object on the road becomes visible. Stopping sight distance is measured from the driver's eye at 42 inches above the pavement to an object height of 6 inches above the pavement.

TRAFFIC-ACTUATED SIGNAL: A type of traffic signal that directs traffic to stop and go in accordance with the demands of traffic, as registered by the actuation of detectors.

TRIP: The movement of a person or vehicle from one location (origin) to another (destination). For example, from home to store to home is two trips, not one.

TRIP-END: One end of a trip at either the origin or destination (i.e., each trip has two trip-ends). A trip-end occurs when a person, object, or message is transferred to or from a vehicle.

TRIP GENERATION RATE: The quantity of trips produced and/or attracted by a specific land use stated in terms of units such as per dwelling, per acre, and per 1,000 square feet of floor space.

TRUCK: A vehicle having dual tires on one or more axles, or having more than two axles.

TURNING RADIUS: The circular arc formed by the smallest turning path radius of the front outside tire of a vehicle, such as that performed by a U-turn maneuver. This is based on the length and width of the wheel base as well as the steering mechanism of the vehicle.

UNBALANCED FLOW: Heavier traffic flow in one direction than the other. On a daily basis, most facilities have balanced flow. During the peak hours, flow is seldom balanced in an urban area.

VEHICLE MILES OF TRAVEL: A measure of the amount of usage of a section of highway, obtained by multiplying the average daily traffic by length of facility in miles.

APPENDIX B

SCOPING AGREEMENT

SCOPE AND ASSUMPTIONS FOR TRAFFIC IMPACT ANALYSIS

This letter acknowledges the Riverside County Transportation Department requirements for traffic impact analysis of the following project. The analysis must follow the Riverside County Transportation Department Traffic Study Guidelines dated April 2008.

Project Name: DHS 109 Business Park (Tentative Parcel Map No. 37235)

Project Address: East of Little Morongo Road and north of 16th Avenue **(See attached Figure 1)**

Project Description: 364,180 square feet of general light industrial use, and 920,000 square feet of industrial park (cannabis activity) use for a total of 1,284,180 square feet of building area **(See attached site plan in Figure 2)**

Trip Generation Source: Institute of Transportation Engineers (ITE) Trip Generation Manual, 10th Edition, 2017. **(See attached Table 1)** For General Light Industrial traffic, the vehicle mix assumptions is based on the City of Fontana, Truck Trip Generation Study, April 2003. For cannabis activity (Industrial Park) traffic, 5% of the vehicle mix is assumed to be 2-axle trucks used for delivery.

For the proposed cannabis activity (including cultivation, extraction, testing and other support services), the total number of employees is estimated based on one employee per 2,000 square feet of building area. This employee-to-square footage ratio is consistent to other operational assumptions of similar cannabis projects. Since cannabis activity will require significantly less employees per square feet of building area than typical industrial activities, it is more appropriate to forecast the project traffic based on number of employees rather than based on building square footage of an industrial park.

Existing Land Use: Vacant

Proposed Land Use: Industrial

Current Zoning: IL – Light Industrial

Proposed Zoning: IL – Light Industrial

Total Daily Project Trips: 3,665 PCE **See attached Table 1**

	Current Trip Generation			Proposed Trip Generation (PCE)		
	In	Out	Total	In	Out	Total
AM Trips				462	69	531
PM Trips				77	413	490

Internal Trip Allowance Yes **No** (_____% Trip Discount)

Pass-By Trip Allowance Yes **No** (_____% Trip Discount)

Trip Geographic Distribution: See attached Figure 3

Main project access is through 15th Avenue at Little Morongo Road. Secondary emergency access is through Atlantic Avenue to Dillon Road.

Project Completion Year: 2021 Annual Background Growth Rate: 2.0%

Other area projects to be considered: Need City's approved project list.

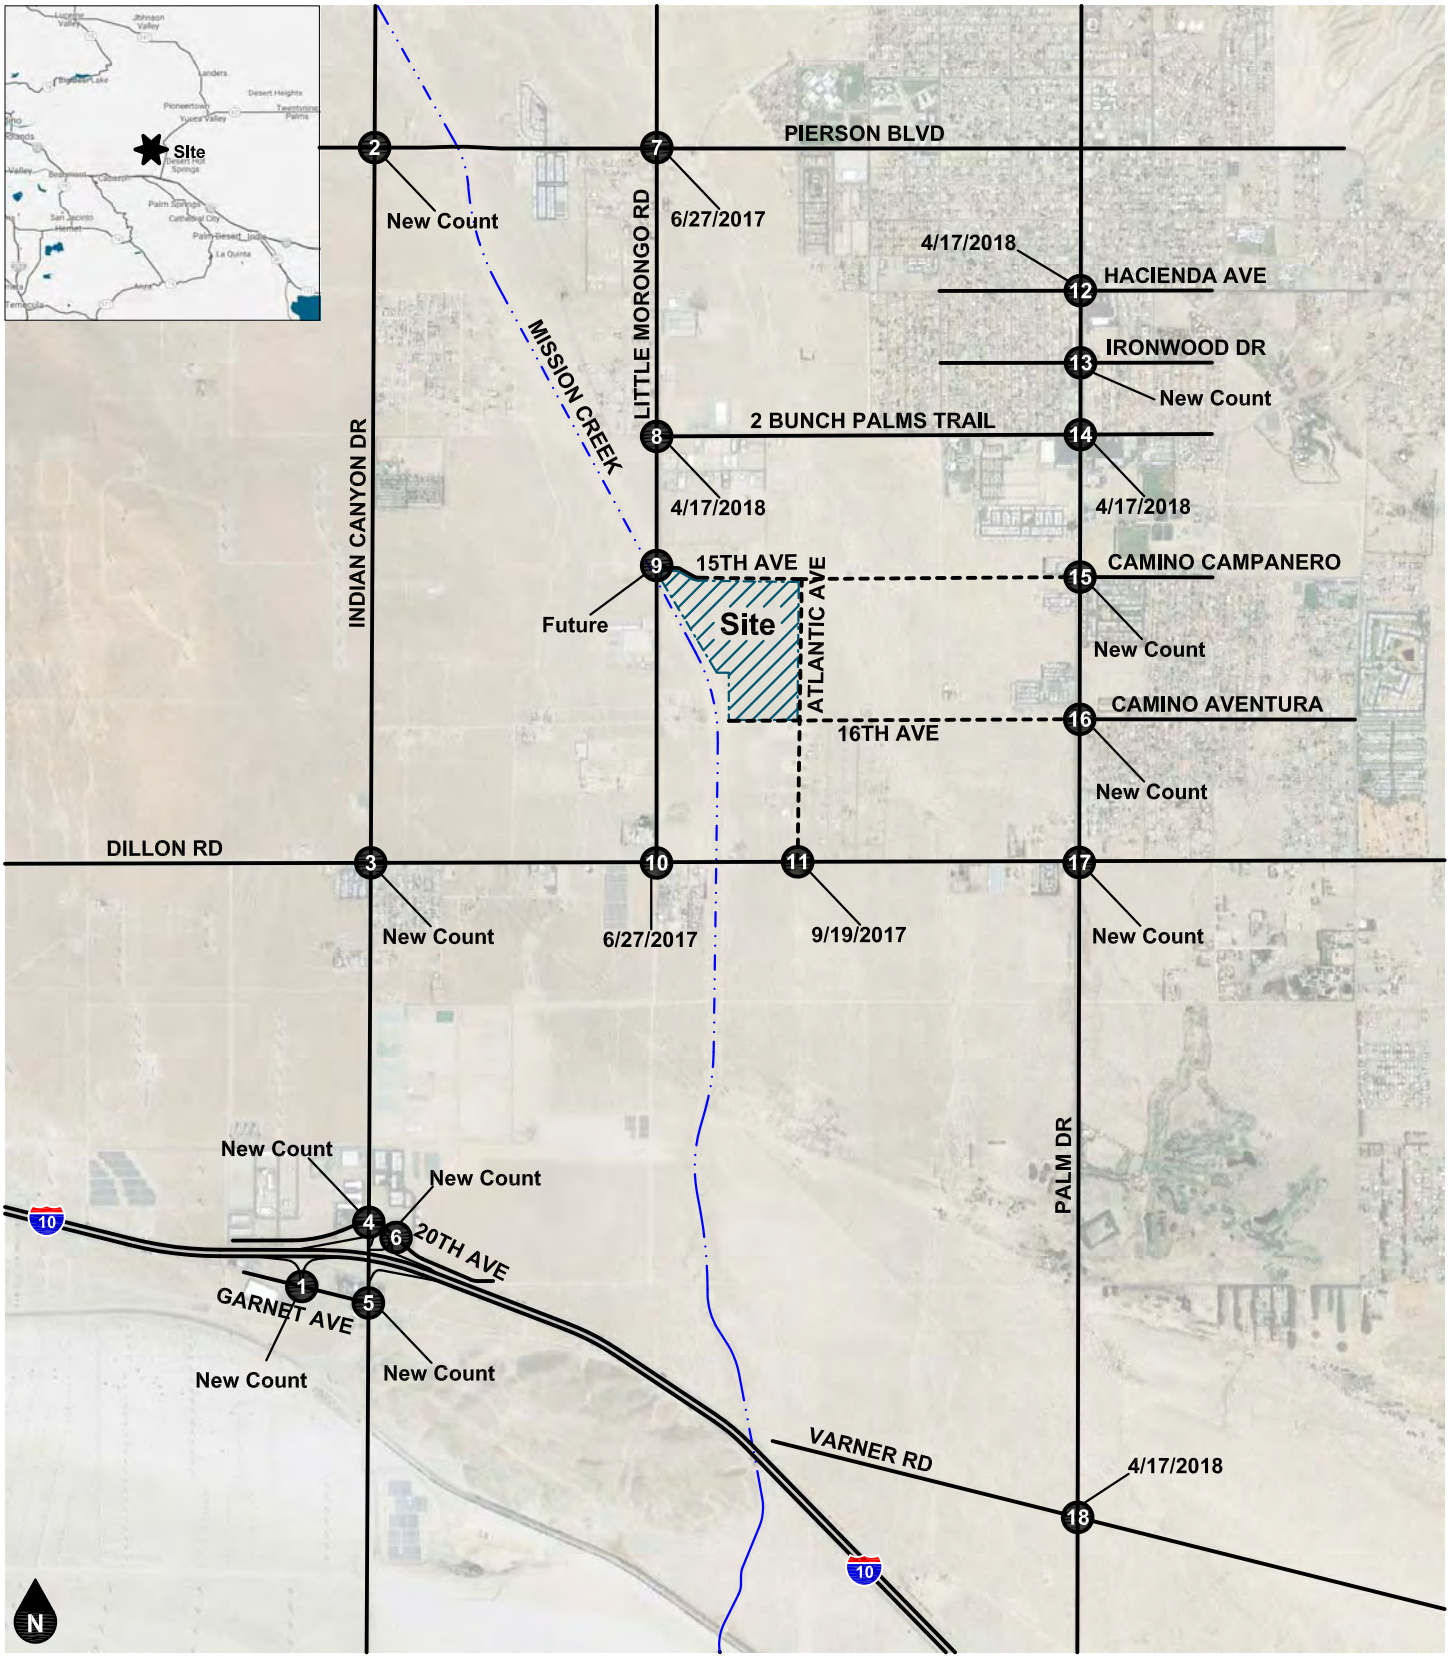
Notes:



(1) Institute of Transportation Engineers, Trip Generation Manual, 10th Edition, 2017. General Light Industrial; Industrial Park.

For General Light Industrial traffic, the vehicle mix assumptions is based on the City of Fontana, Truck Trip Generation Study, April 2003. For cannabis activity (Industrial Park) traffic, 5% of the vehicle mix is assumed to be 2-axle trucks used for delivery.

(2) TSF = Thousand Square Feet; EMP = Employees

(3) Passenger Car Equivalence (PCE) rate per San Bernardino Association of Governments (SANBAG) guidelines.

(4) For the proposed cannabis activity (including cultivation, extraction, testing and other support services), the total number of employees is estimated based on one employee per 2,000 square feet of building area. This employee-to-square footage ratio is consistent to other operational assumptions of similar cannabis projects. Since cannabis activity will require significantly less employees per square feet of building area than typical industrial activities, it is more appropriate to forecast the project traffic based on number of employees rather than based on building square footage of an industrial park.

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
1	I-10 EB Ramps (NS) at Garnet Ave (EW)	Signalized	HCM 6th Edition	EB Left	0.251	17.5	B
2	Indian Canyon Dr (NS) at Pierson Blvd (EW)	All-way stop	HCM 6th Edition	SB Thru	0.699	16.8	C
3	Indian Canyon Dr (NS) at Dillon Rd (EW)	All-way stop	HCM 6th Edition	WB Left	1.040	54.3	F
4	Indian Canyon Dr (NS) at 20th Ave (EW)	Signalized	HCM 6th Edition	SB Left	0.404	15.1	B
5	Indian Canyon Dr (NS) at Garnet Ave (EW)	Signalized	HCM 6th Edition	SB Left	0.547	17.3	B
6	I-10 WB Ramps (NS) at 20th Ave (EW)	Signalized	HCM 6th Edition	WB Left	0.153	24.7	C
7	Little Morongo Rd (NS) at Pierson Blvd (EW)	All-way stop	HCM 6th Edition	WB Thru	0.322	9.6	A
8	Little Morongo Rd (NS) at 14th Ave/2 Bunch Palms (EW)	All-way stop	HCM 6th Edition	WB Left	0.507	12.6	B
9	Little Morongo Rd (NS) at 15th Ave (EW)	Two-way stop	HCM 6th Edition	WB Left	0.000	13.3	B
10	Little Morongo Rd (NS) at Dillon Rd (EW)	All-way stop	HCM 6th Edition	WB Thru	0.430	11.2	B
11	Atlantic Ave (NS) at Dillon Rd (EW)	Two-way stop	HCM 6th Edition	SB Left	0.009	13.5	B
12	Palm Dr (NS) at Hacienda Ave (EW)	Signalized	HCM 6th Edition	WB Left	0.482	18.7	B
13	Palm Dr (NS) at Ironwood Dr (EW)	Signalized	HCM 6th Edition	NB Left	0.457	13.4	B
14	Palm Dr (NS) at Two Bunch Palms Trail (EW)	Signalized	HCM 6th Edition	EB Right	1.038	58.7	E
15	Palm Dr (NS) at Camino Campanero (EW)	Signalized	HCM 6th Edition	SB Left	0.739	13.1	B
16	Palm Dr (NS) at Camino Aventura (EW)	Two-way stop	HCM 6th Edition	WB Left	0.121	22.1	C
17	Palm Dr (NS) at Dillon Rd (EW)	Signalized	HCM 6th Edition	EB Right	0.993	49.7	D

18	Palm Dr (NS) at Varner Rd (EW)	Signalized	HCM 6th Edition	SB Left	0.793	8.2	A

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Level Of Service Report
Intersection 1: I-10 EB Ramps (NS) at Garnet Ave (EW)

Control Type:	Signalized	Delay (sec / veh):	17.5
Analysis Method:	HCM 6th Edition	Level Of Service:	B
Analysis Period:	15 minutes	Volume to Capacity (v/c):	0.251

18	Palm Dr (NS) at Varner Rd (EW)	Signalized	HCM 6th Edition	SB Left	0.811	9.6	A

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Level Of Service Report
Intersection 1: I-10 EB Ramps (NS) at Garnet Ave (EW)

Control Type:	Signalized	Delay (sec / veh):	18.0
Analysis Method:	HCM 6th Edition	Level Of Service:	B
Analysis Period:	15 minutes	Volume to Capacity (v/c):	0.287

16	Palm Dr (NS) at Camino Aventura (EW)	Two-way stop	HCM 6th Edition	WB Left	0.149	28.3	D
17	Palm Dr (NS) at Dillon Rd (EW)	Signalized	HCM 6th Edition	WB Left	0.798	25.8	C

18	Palm Dr (NS) at Varner Rd (EW)	Signalized	HCM 6th Edition	NB Left	0.642	6.8	A

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Level Of Service Report
Intersection 1: I-10 EB Ramps (NS) at Garnet Ave (EW)

Control Type:	Signalized	Delay (sec / veh):	15.4
Analysis Method:	HCM 6th Edition	Level Of Service:	B
Analysis Period:	15 minutes	Volume to Capacity (v/c):	0.231

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
3	Indian Canyon Dr (NS) at Dillon Rd (EW)	Signalized	HCM 6th Edition	WB Left	0.865	18.1	B
9	Little Morongo Rd (NS) at 15th Ave (EW)	Signalized	HCM 6th Edition	WB Left	0.534	5.0	A
14	Palm Dr (NS) at Two Bunch Palms Trail (EW)	Signalized	HCM 6th Edition	NB Left	1.003	33.5	C
17	Palm Dr (NS) at Dillon Rd (EW)	Signalized	HCM 6th Edition	NB Left	1.015	36.9	D

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Level Of Service Report

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
3	Indian Canyon Dr (NS) at Dillon Rd (EW)	Signalized	HCM 6th Edition	EB Left	0.829	31.2	C
9	Little Morongo Rd (NS) at 15th Ave (EW)	Signalized	HCM 6th Edition	WB Left	0.581	14.2	B
14	Palm Dr (NS) at Two Bunch Palms Trail (EW)	Signalized	HCM 6th Edition	WB Left	0.831	26.2	C
17	Palm Dr (NS) at Dillon Rd (EW)	Signalized	HCM 6th Edition	WB Left	0.798	25.1	C

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
3	Indian Canyon Dr (NS) at Dillon Rd (EW)	Signalized	HCM 6th Edition	EB Left	0.861	33.0	C
9	Little Morongo Rd (NS) at 15th Ave (EW)	Signalized	HCM 6th Edition	WB Left	0.545	5.0	A
14	Palm Dr (NS) at Two Bunch Palms Trail (EW)	Signalized	HCM 6th Edition	WB Left	1.016	36.6	D
17	Palm Dr (NS) at Dillon Rd (EW)	Signalized	HCM 6th Edition	NB Left	1.022	41.6	D

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Level Of Service Report
Intersection 3: Indian Canyon Dr (NS) at Dillon Rd (EW)

Control Type:	Signalized	Delay (sec / veh):	33.0
Analysis Method:	HCM 6th Edition	Level Of Service:	C
Analysis Period:	15 minutes	Volume to Capacity (v/c):	0.861

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
3	Indian Canyon Dr (NS) at Dillon Rd (EW)	Signalized	HCM 6th Edition	EB Left	0.858	33.4	C
9	Little Morongo Rd (NS) at 15th Ave (EW)	Signalized	HCM 6th Edition	WB Left	0.591	14.2	B
14	Palm Dr (NS) at Two Bunch Palms Trail (EW)	Signalized	HCM 6th Edition	WB Left	0.862	27.5	C
17	Palm Dr (NS) at Dillon Rd (EW)	Signalized	HCM 6th Edition	EB Left	0.798	26.3	C

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Vehicle Miles Traveled Memo

November 4, 2020

Mr. Rich Malacoff
THE ALTUM GROUP
73-710 Fred Waring Drive, Ste. 219
Palm Desert, California 92260

RE: DHS 109 Project Vehicle Miles Traveled Memorandum
Project No. 01-6627

Dear Mr. Malacoff:

INTRODUCTION

Ganddini Group, Inc. is pleased to submit this Vehicle Miles Traveled Memorandum for the proposed DHS 109 Project in the City of Desert Hot Springs. This analysis supplements the DHS 109 Project Traffic Impact Analysis (Ganddini Group, Inc., May 21, 2019) ["Project TIA"]. A copy of the trip generation forecast from the Project TIA (Table 2) is included in Attachment A.

PROJECT DESCRIPTION

The project location and site plan are shown on Figures 1 and 2.

The project site is located east of Little Morongo Road between 15th Avenue and 16th Avenue in the City of Desert Hot Springs. The project site is proposed to include a total of 1,284,180 square feet of various industrial uses. The project site has a zoning designation of light industrial (I-L) use in the City of Desert Hot Springs General Plan. The applicant will be obtaining a Master Conditional Use Permit for cannabis activities including cultivation, extraction, processing, manufacturing, distribution and potentially, sales. The project site is proposed to consist of 364,180 square feet of general light industrial use and 920,000 square feet of industrial park (cannabis activity) use for a total of 1,284,180 square feet.

PROJECT TRIPS

Based on the project trip generation forecast as documented in the Project TIA (see Attachment A), the proposed project is forecast to generate a total of approximately 3,665 daily PCE trips, including 531 PCE trips during the morning peak hour and 490 PCE trips during the evening peak hour.

VEHICLE MILES TRAVELED ANALYSIS

The City of Desert Hot Springs has not established vehicle miles traveled (VMT) analysis procedures or thresholds of significance at this time. Therefore, this VMT assessment has been prepared in accordance with the methodology established in County of Riverside Draft Transportation Analysis Guidelines, September 2020 ["Riverside County TA Guidelines"].

Mr. Rich Malacoff
THE ALTUM GROUP
November 4, 2020

BACKGROUND

California Senate Bill 743 (SB 743) directs the State Office of Planning and Research (OPR) to amend the California Environmental Quality Act (CEQA) Guidelines for evaluating transportation impacts to provide alternatives to Level of Service that "promote the reduction of greenhouse gas emissions, the development of multimodal transportation networks, and a diversity of land uses." In December 2018, the California Natural Resources Agency certified and adopted the updated CEQA Guidelines package. The amended CEQA Guidelines, specifically Section 15064.3, recommend the use of VMT as the primary metric for the evaluation of transportation impacts associated with land use and transportation projects. In general terms, VMT quantifies the amount and distance of automobile travel attributable to a project or region. All agencies and projects State-wide are required to utilize the updated CEQA guidelines recommending use of VMT for evaluating transportation impacts as of July 1, 2020.

The updated CEQA Guidelines allow for lead agency discretion in establishing methodologies and thresholds provided there is substantial evidence to demonstrate that the established procedures promote the intended goals of the legislation. Where quantitative models or methods are unavailable, Section 15064.3 allows agencies to assess VMT qualitatively using factors such as availability of transit and proximity to other destinations. The Office of Planning and Research (OPR) Technical Advisory on Evaluating Transportation Impacts in CEQA (State of California, December 2018) ["OPR Technical Advisory"] provides technical considerations regarding methodologies and thresholds with a focus on office, residential, and retail developments as these projects tend to have the greatest influence on VMT.

THRESHOLDS OF SIGNIFICANCE

In accordance with Riverside County TA Guidelines, a VMT impact for office and other employment land uses is considered significant if the project VMT exceeds the existing county-wide average work VMT per employee.

PROJECT SCREENING

The Riverside County TA Guidelines identify the following seven screening criteria to determine if a presumption of a non-significant transportation impact can be made based on the facts of the project:

- Small Projects
- Projects Near High Quality Transit
- Local-Serving Retail
- Affordable Housing
- Local Essential Service
- Map-Based Screening
- Redevelopment Projects

Map-Based Screening

The OPR Technical Advisory provides guidance indicating that residential and office projects located in areas with low VMT and that exhibit similar VMT-related features (e.g., density, mix of uses, transit accessibility), will typically exhibit similarly low VMT. Identifying low VMT areas requires maps to be created using VMT data from travel surveys or a travel demand model that illustrate areas that are below the established VMT threshold.

Since the County of Riverside has not developed low VMT screening maps at this time and the Western Riverside Council of Governments (WRCOG) VMT Screening Tool does not cover the Coachella Valley, existing VMT for the traffic analysis zone (TAZ) containing the project was compared to the thresholds established by the County of Riverside using the Riverside Transportation Analysis Model (RIVTAM) base year 2012 model.

VMT data from the RIVTAM base year 2012 model was extracted by AFSHA Consulting, Inc. in accordance with the VMT analysis methodology contained in Appendix E of the Riverside County TA guidelines, including adjustments for trips outside the County by using the average lengths provided by the County. In accordance with Riverside County TA Guidelines, work VMT is derived from commute trips represented by the attraction trips the model. Since the RIVTAM model runs produced a county-wide VMT per employee value slightly lower than the 14.2 VMT per employee as noted in the Riverside County TA Guidelines, the initial model outputs were factored by 1.034 to provide a consistent analysis. TAZ and model output summaries are provided Attachment B.

The project site is located in TAZ 4522, which generates approximately 10.14 work VMT per employee. Comparatively, the existing County of Riverside threshold is 14.2 work VMT per employee. Furthermore, the proposed project is consistent with the existing Industrial/Industrial Cannabis Overlay land use designations in the City of Desert Hot Springs General Plan. Therefore, the proposed project is located in a low VMT area for employment-based land uses and may be presumed to result in a less than significant VMT impact based on County-established thresholds.

CONCLUSION

The proposed project is located in a low VMT area for employment-based land uses and may be presumed to result in a less than significant VMT impact based on County-established thresholds; therefore, no VMT-related mitigation measures are required for the proposed project.

It has been a pleasure to assist you with this project. Should you have any questions or if we can be of further assistance, please do not hesitate to call at (714) 795-3100.

Sincerely,

GANDDINI GROUP, INC.

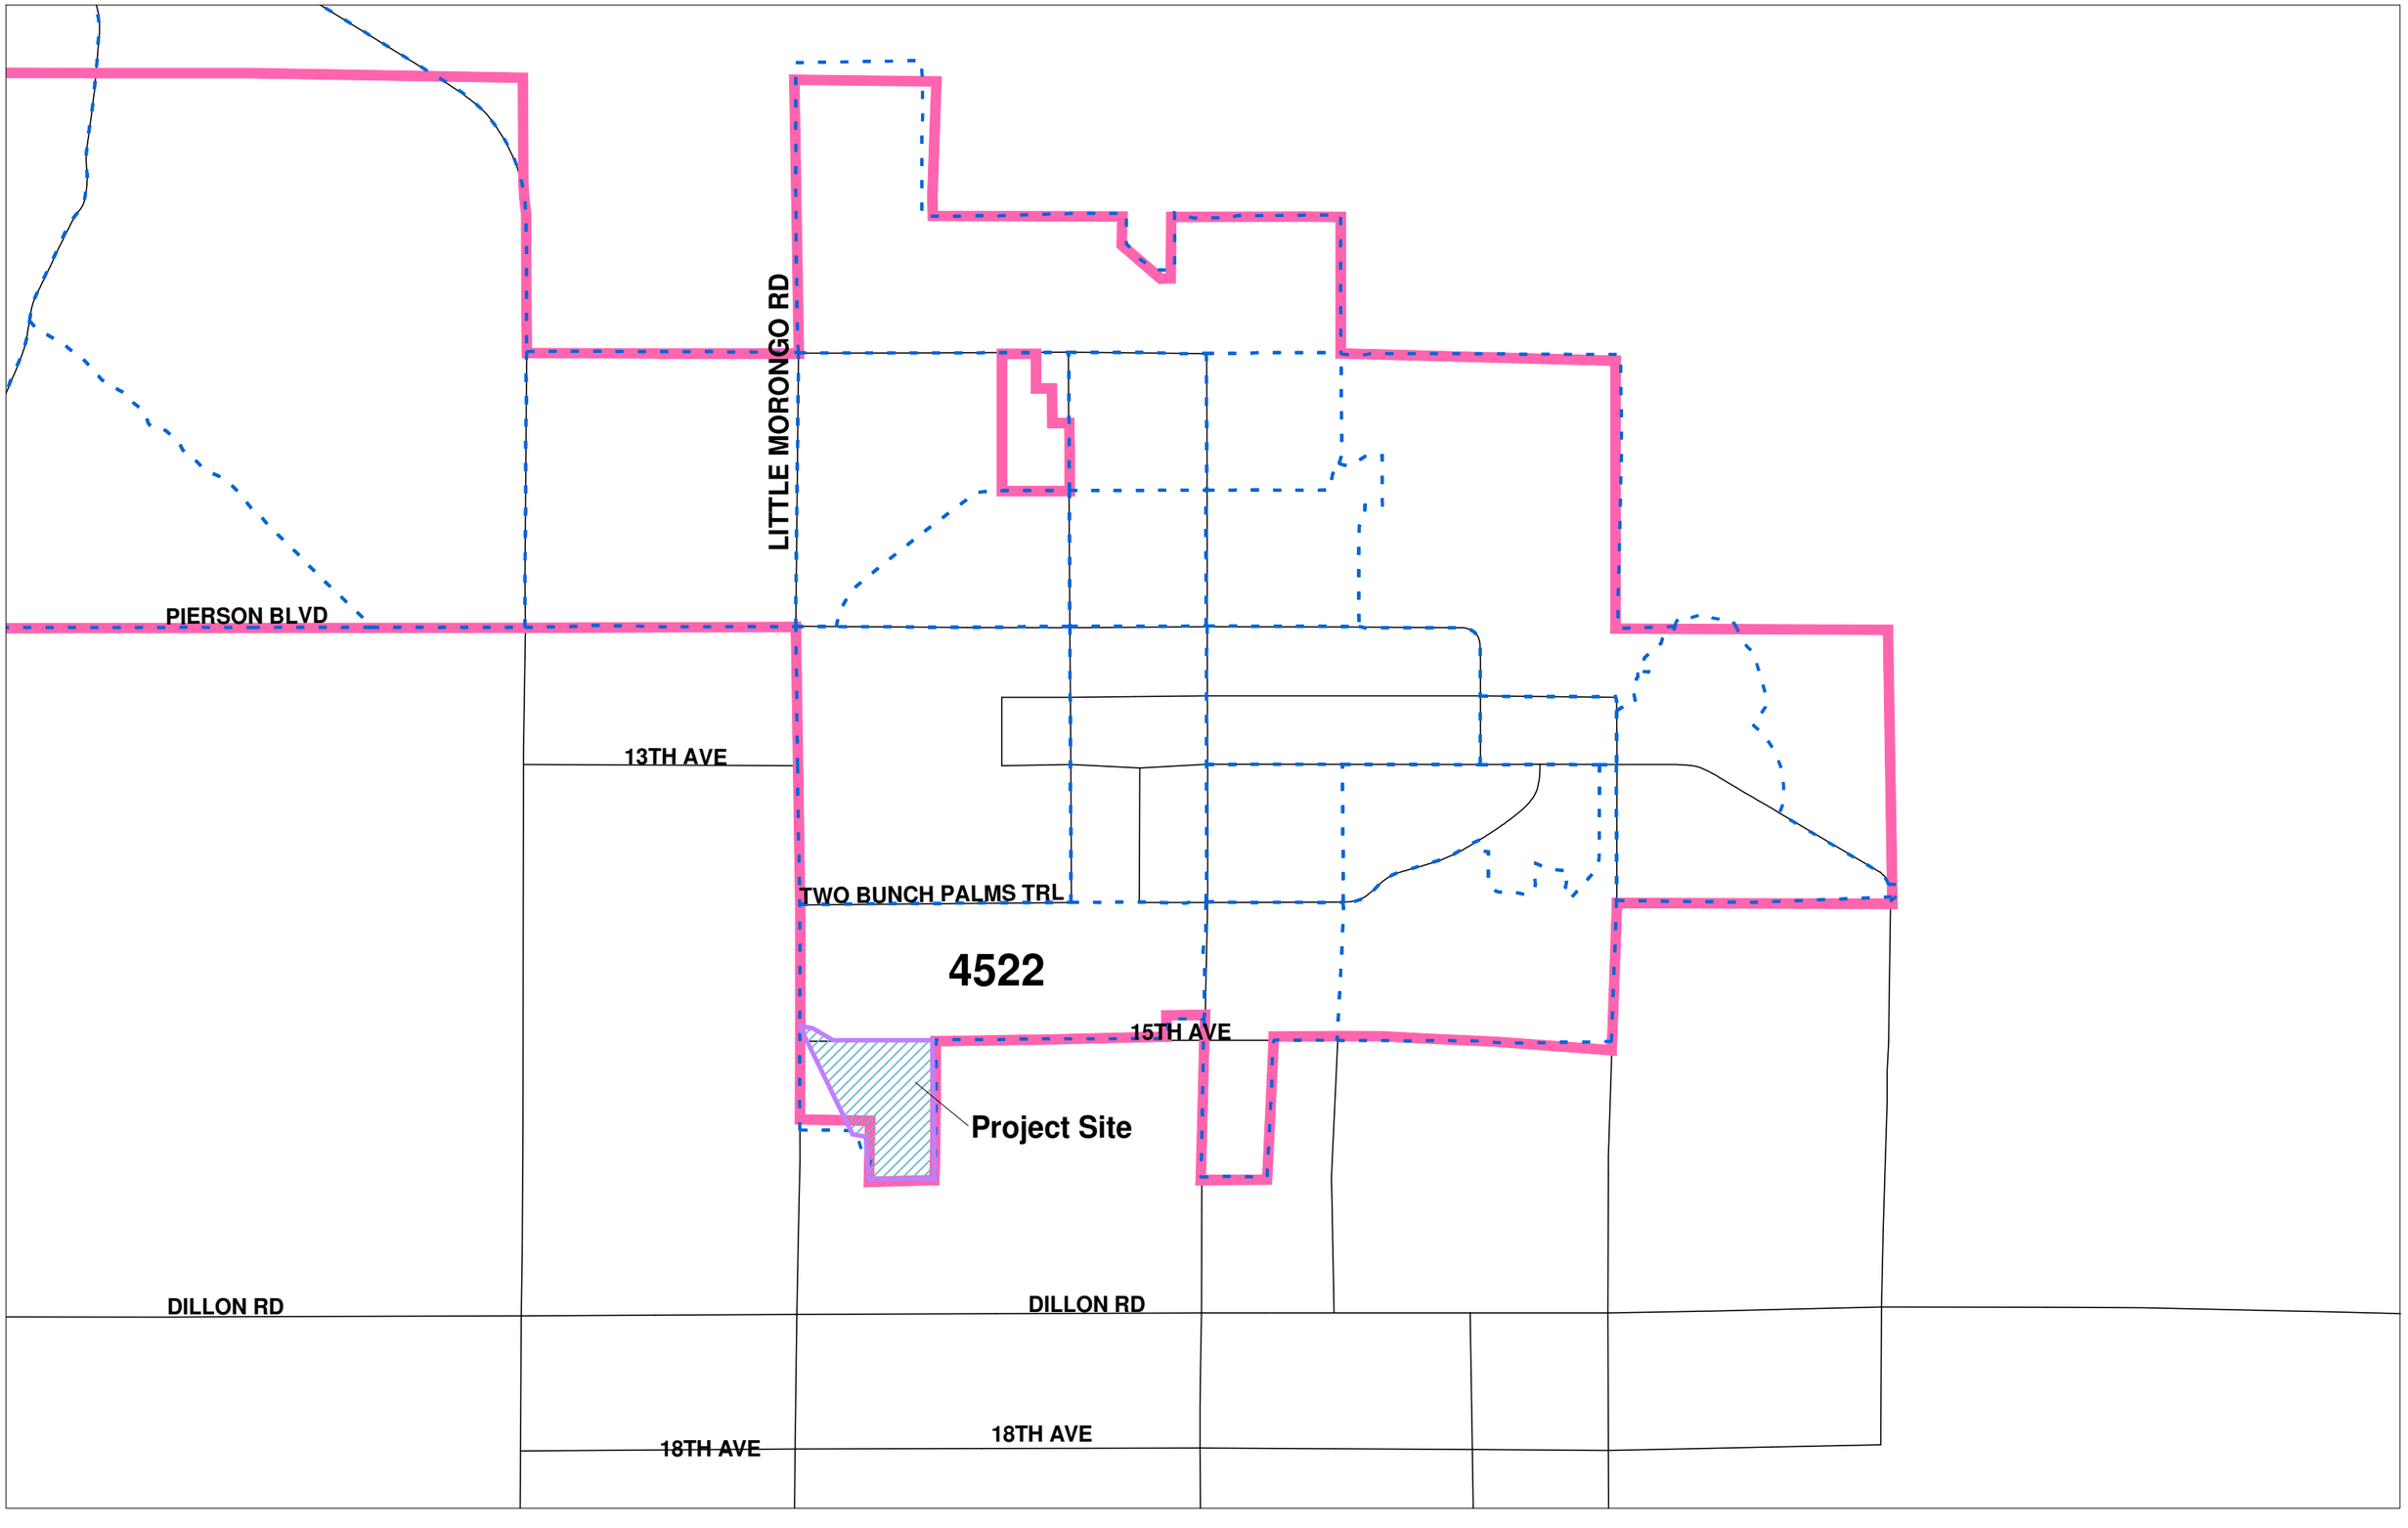
Notes:

(1) Institute of Transportation Engineers, Trip Generation Manual, 10th Edition, 2017. General Light Industrial; Industrial Park.

For General Light Industrial traffic, the vehicle mix assumptions is based on the City of Fontana, Truck Trip Generation Study, April 2003. For cannabis activity (Industrial Park) traffic, 5% of the vehicle mix is assumed to be 2-axle trucks used for delivery.



(2) TSF = Thousand Square Feet; EMP = Employees

(3) Passenger Car Equivalence (PCE) rate per San Bernardino Association of Governments (SANBAG) guidelines.

(4) For the proposed cannabis activity (including cultivation, extraction, testing and other support services), the total number of employees is estimated based on one employee per 2,000 square feet of building area. This employee-to-square footage ratio is consistent to other operational assumptions of similar cannabis projects. Since cannabis activity will require significantly less employees per square feet of building area than typical industrial activities, it is more appropriate to forecast the project traffic based on number of employees rather than based on building square footage of an industrial park.

SECTION 1
INTRODUCTION

1.1 Regulatory Requirements

In 2002, California Water Code (CWC) Sections 10910 through 10915 were amended by the enactment of Senate Bill 610 (SB 610) to improve the link between information on water supply availability and certain land use decisions made by cities and counties. SB 610 provides that when a city or county determines that a "project" as defined in CWC Section 10912 is subject to review under the California Environmental Quality Act (CEQA), the city or county must identify the water supply agency that will provide retail water service to the project and request that water supplier to prepare a Water Supply Assessment (WSA).[1] The proposed Desert Hot Springs 109 Industrial Park Development Project (referred to herein as the "Project" or "DHS 109") includes 236,180 square feet of general light industrial uses, 761,770 square feet of industrial park for cannabis activity, and a 286,230 square feet power plant for a total of 1,284,180 square feet of industrial floor space; and thus qualifies as a "project" under SB 610. Generally, a WSA must evaluate whether the total projected water supplies available to the water supplier during normal, single dry, and multiple dry water years during a 20-year projection will meet the projected water demand associated with the proposed project, in addition to the water supplier's existing and planned future uses, including agricultural and manufacturing uses.

This WSA has been prepared in accordance with the requirements of SB 610. Accordingly, the information, analyses and conclusions contained herein utilize and rely upon, in part, the information, analyses and conclusions set forth in other water supply planning documents that have been prepared and duly adopted by agencies such as the City of Desert Hot Springs (City), the Mission Springs Water District (MSWD or District), and the California Department of Water Resources (DWR). Those documents include, without limitation, MSWD's 2015 Urban Water Management Plan (MSWD 2015 UWMP), the 2013 Mission Creek-Garnet Hill Water Management Plan (2013 MC-GH WMP), the 2018 Coachella Valley Integrated Regional Water

[1] For purposes of CWC Section 10912(a), a "project" includes any of the following: (1) a proposed residential development of more than 500 dwelling units; (2) a proposed shopping center or business establishment employing more than 1,000 persons or having more than 500,000 square feet of floor space; (3) a proposed commercial office building employing more than 1,000 persons or having more than 250,000 square feet of floor space; (4) a proposed hotel or motel, or both, having more than 500 rooms; (5) a proposed industrial, manufacturing, or processing plan, or industrial park planned to house more than 1,000 persons, occupying more than 40 acres of land, or having more than 650,000 square feet of floor area (provided; however, that until January 1, 2017, a photovoltaic or wind energy generation facility is not a "project" that requires a WSA if the facility would demand no more than 75 acre-feet of water annually); (6) a mixed-use project that includes one or more of the above-specified projects; or (7) a project that would demand an amount of water equivalent to, or greater than, the amount of water required by a 500 dwelling unit project.

Management and Stormwater Resource Plan (2018 IRWMP / SWRP), and DWR's 2017 State Water Project Final Delivery Capability Report (DWR 2017 Report).

1.2 Water Supplier

Mission Springs Water District (MSWD or District) is the public water supplier for the area in which the DHS 109 Project is located. The District was established in 1953 and was formerly known as Desert Hot Springs County Water District. The District's water service area consists of 135 square miles including the City of Desert Hot Springs, 10 smaller communities in Riverside County, and communities in the City of Palm Springs. The District's water supply source is 100 percent groundwater produced from District-owned and operated wells which provide water service to approximately 37,600 people in their water service area. The District also provides sewer service to approximately 26,000 people in Desert Hot Springs and surrounding communities.

MSWD currently receives 100 percent of its water supply from groundwater produced from subbasins within the Coachella Valley Groundwater Basin, which underlies the District's water service area. MSWD primarily produces groundwater from the Mission Creek Subbasin via nine (9) active wells. To a lesser extent, the District also produces groundwater from the Indio Subbasin via two (2) active wells, the Garnet Hill Subbasin via one (1) active well, and the San Gorgonio Pass Subbasin via two (2) active wells.

1.3 Purpose of Document

As mentioned above, this WSA is required under SB 610 because, among other features, the Project includes a proposed industrial, manufacturing, or processing plan, or industrial park planned having more than 650,000 square feet of floor area. Moreover, in accordance with SB 610 and applicable provisions of CEQA, the WSA will be included as part of the CEQA documentation being prepared for the Project. In the following sections, this WSA will evaluate whether the total projected water supplies available to the District during normal, single dry, and multiple dry water years during a 20-year projection will meet the projected water demand associated with DHS 109, in addition to the District's existing and planned future uses, including agricultural and manufacturing uses. Notably, the water demands associated with the DHS 109 Project have not been accounted for or are a part of the projected growth analyzed by District in its recent 2015 UWMP.

1.3.1 Water Supply Verification

SB 221 was enacted in January 2002 and amends Section 11010 of the Business and Professional Code, and Sections 66455.3, 66473.7 and 65867.6 of the Government Code. SB 221 establishes the relationship between the WSA prepared for a residential project and its approval under the Subdivision Map Act. Pursuant to California Government Code Section 66473.7, the District, the public water supplier for the Project, a majority of which is proposed as residential, must provide a written verification of sufficient water supply prior to the approval of a new subdivision.

A WSV is required prior to the approval of a tentative subdivision map, or a parcel map for which a tentative map was not required, or a proposed industrial, manufacturing, or processing plant, or industrial park planned to house more than 1,000 persons, occupying more than 40 acres of land, or having more than 650,000 square feet of floor area. The purpose of the WSV is to provide the city or county or redevelopment agency with written verification from the public water purveyor that a sufficient water supply is available, or will be available, prior to completion of the project. The Project includes a proposal for more than 650,000 square feet of industrial floor area, thus requiring a WSV as defined by the Government Code once a tentative map, parcel map, or subdivision map is established.

1.3.2 Validity of the Document

This WSA/WSV must be reviewed every five years or, in the event that water planning assumptions have changed, until the Project begins construction. The Project applicant shall notify MSWD when construction begins. Subsequent review will ensure that the information included in the WSA/WSV remains accurate and no significant changes to either the Project or MSWD's water supply have occurred. If neither the Project applicant nor the lead agency (City of Desert Hot Springs) contacts MSWD within five years of approval of this WSA/WSV, it will be assumed that the Project no longer exists, and the WAS/WSV provided by this document will become invalid.

1.4 Existing Water Management Plans

In accordance with Water Code Section 19010(c)(1), the District has reviewed whether the projected water demand associated with the Project was included as part of the District's most recently adopted 2015 Urban Water Management Plan. MSWD's 2015 UWMP did not specifically reflect the demands associated with the DHS 109 development. However, the demands associated with the Project have been accounted for as part of MSWD's 2015 UWMP, which specifically include population projections (and associated growth) within MSWD's service areas through the year

2040 in accordance with the Southern California Association of Government (SCAG) Regional Transportation Plan (RTP) 2016 projects.[2] In addition, the demands associated with the Project have also been accounted for in MSWD's, DWA's, and CVWD's regional water supply planning efforts, which specifically include population projections within MSWD's and CVWD's service areas in the Mission Creek and Garnet Hill subbasins through the year 2045 in accordance with the Riverside County Center for Demographic Research RCP-10 growth forecast.[3] Therefore, and as set forth herein, the projected water demands of DHS 109 have already been considered in preparing and adopting both the MSWD 2015 UWMP and the 2013 MC-GH WMP. These documents are described in more detail in the following sections.

1.4.1 MSWD 2015 Urban Water Management Plan

As indicated above, the District has completed its 2015 UWMP. Water Code Section 10910(c)(2) provides that if demand associated with a proposed project is accounted for in the most recently adopted UWMP, the water supplier may incorporate information from the UWMP in preparing certain elements of a WSA for the project.

Water conservation efforts are allowing water agencies to plan for growth in new and improved ways, where State law now requires water agencies to do more with less. SBx7-7 (sometimes referred to as the new "20 percent by 2020" law) is one of four policy bills enacted as part of the November 2009 Comprehensive Water Package (see California Water Code section 10608 et seq.). Among other things, SBx7-7 established the goal of achieving a 20 percent reduction in statewide urban per capita water use by the year 2020, and the interim goal of achieving a 10 percent reduction by 2015. In an effort to achieve those goals, SBx7-7 requires each urban retail water supplier to determine technical information, such as existing baseline water consumption, to establish future water use reduction targets (in gallons per capita per day (gpcd)), and to report that and other information in their UWMPs. SBx7-7 also requires each urban wholesale water supplier to include in its UWMP an assessment of its present and proposed future measures, programs, and policies to help achieve the water use reductions required by SBx7-7.

The two primary calculations required by SBx7-7 are (1) the Base Daily Per Capita Water Use Calculation (average gpcd used in past years), and (2) Compliance Water Use Targets (targets for gpcd in 2015 and 2020). The Base Daily Per Capita Water Use Calculation is based on gross water use by an agency in each year and can be based on a ten-year average ending no earlier than 2004 and no later than 2010, or a 15 year average if ten percent of 2008 demand was met by recycled water. The

[2] See MSWD 2015 UWMP, pp. 3-7 to 3-9
[3] See 2013 Mission Creek-Garnet Hill Water Management Plan, pp. 2-10 to 2-13

District does not currently produce or receive recycled water supply, and therefore, a 10 year baseline period is used as opposed to a 15 year baseline period. As indicated above, an urban retail water supplier must then set a 2020 water use target and a 2015 interim water use target in terms of gpcd. SBx7-7 establishes four alternative methods for water agencies to use in calculating their Compliance Water Use Targets, as follows: (1) 80 percent of Base Daily Per Capita Use; (2) adherence to specified performance standards; (3) 95 percent of the applicable state hydrologic region target as set forth in the State's 20x2020 Water Conservation Plan; or (4) the provisional target method and procedures developed by DWR pursuant to SBx7-7.

In accordance with SBx7-7, the District will strictly manage its per capita water use throughout the year 2020 and beyond. As set forth in Section 3, the District's actual baseline daily per capita water use was calculated as 172.1 gpcd. The 2015 and 2020 targets were established as 262.3 gpcd and 234.9 gpcd respectively, which confirm that the District achieved its targeted reduction by the year 2015.

There are several water supply planning ideas, future projects and management activities detailed in the District's 2015 UWMP that will help meet the 20 percent reduction in per capita water consumption under SBx7-7. For example, the District has begun the planning process to construct the West Valley Water Reclamation Facility (WVWRF) that will include tertiary treatment facilities in the future. The plan is to have the plant in operation by 2022. It is estimated that the future first phase of tertiary treatment will accommodate a recycled water demand of 1.0 mgd (1,120 AFY). The District plans to expand the recycled water system demand to 6,400 AFY by 2040 by expanding the plant. In order to help put the recycled water system into practice, the District prepared a Recycled Water Program Development Feasibility Study in March 2018 in which treatment and distribution alternatives and recycled water demands were identified. The study determined that the recycled water infrastructure could feasibly be implemented to supply existing and future irrigation demands and offset a portion of potable water demands. Recycled water can also be used for groundwater aquifer replenishment. The District's 2015 UWMP also details desalination efforts considered by the Coachella Valley IRWMP. These efforts include the CVWD Agricultural Drain Water Desalination Project where the CVWD is evaluating the development of up to 85,000 AFY of desalinated drain water by 2045 in efforts to help increase water supply and reliability during drought periods.

The District universally acknowledges and embraces the importance of water issues, and as such is managing several cost-effective demand management measures (DMMs). These DMMs include technologies and methodologies that have been sufficiently documented in multiple demonstration projects and result in more efficient water use and conservation (e.g., water use surveys/audits, rebates or giveaways of plumbing fixtures, rebate programs that include turf conversion, smart

timer rebates and high efficiency toilet rebates, leak detection and monitoring program, rebates for landscape irrigation efficiency, and public information and school education programs).

The District has adopted a landscape irrigation policy as part of the District's "Landscape Guidelines". The guidelines establish effective water efficient landscape requirements for newly installed and rehabilitated landscapes, as well as promote water conservation through climate appropriate plant material and efficient irrigation practices. In addition, the guidelines also require an irrigation design plan, which includes the installation of separate landscape water meters for all projects except for single-family homes or any project with a landscaped area of less than 2,500 square feet. Automatic control systems are required for each system and mechanical irrigation controllers are prohibited.

Furthermore, the District understands the need to investigate future water projects to meet demands associated with projected growth. As indicated above and as further discussed in this analysis, the District is evaluating and will continue to evaluate various source substitution projects to reduce overall demands on native groundwater.

1.4.2 2013 Mission Creek/Garnet Hill Water Management Plan

Water supply is critical to civilization especially in a desert region. The Mission Creek and Garnet Hill subbasins are located in the northern portion of the Coachella Valley and are part of the larger Coachella Valley Groundwater Basin in Riverside County, California. These subbasins are located within the northwestern portion of the hot, arid Colorado Desert sub-region of the Sonoran Desert. The Mission Creek and Garnet Hill Subbasins have been important sources of potable water supply to the City of Desert Hot Springs and surrounding communities. Since the 1940s, the Desert Hot Springs region has been known as a tourist destination with its small spa hotels supplied by hot mineral water from the Desert Hot Springs Subbasin. The Mission Creek and Garnet Hill Subbasins have been the primary potable water source to the area since that time.[4]

Continued pumping of the groundwater from the Coachella Valley in excess of natural recharge resulted in steadily declining groundwater levels since the 1950s. To control this water level decline, the Coachella Valley Water District (CVWD) and Desert Water Agency (DWA) with the support of the Mission Springs Water District (MSWD) embarked on a groundwater replenishment program in 2002 using imported water. Additional water management activities have been implemented since that time. The

[4] 2013 MC-GH WMP, p. 1-1.

purpose of this Water Management Plan is to describe existing water management programs, evaluate potential alternative management strategies and recommend additional programs with the goal of ensuring that water resources of these subbasins are sustained and protected in the future.[5]

The Mission Statement for the plan states that "the purpose of the Mission Creek and Garnet Hill Water Management Plan is to manage the water resources to meet demands reliably and protect water quality in a sustainable and cost-effective manner". In order to meet the overall goals of the WMP, as described in the Mission Statement, the following management objectives for the Mission Creek and Garnet Hill subbasins were developed:[6]

- Meet current and future water demands with a 10 percent supply buffer – This objective will be fully implemented by 2020.
- Eliminate long-term groundwater overdraft – This objective will be implemented by maintaining 2009 groundwater levels to the extent practicable based on water supply availability by 2015.
- Manage and protect water quality
- Minimize adverse environmental impacts
- Comply with state and federal laws and regulations
- Manage future costs

The water management objectives work together to provide improved supply reliability throughout the 2013 MC-GH WMP Planning Area, including a majority of MSWD's service area and the proposed DHS 109 Project.

The 2013 MC-GH WMP also presented a Management Plan to meet the objectives set forth by above. Key components of the Management Plan include measures for reducing demand, managing water supply sources, eliminating overdraft by maintaining groundwater levels on a long-term basis, protecting water quality, managing wastewater through septic conversions, and developing a recycled water system for the Planning Area. In addition, the Management Plan includes recommendations for monitoring and reporting to facilitate data sharing and coordination between CVWD, DWA and MSWD, stakeholder involvement through an advisory committee comprised of staff from CVWD, DWA and MSWD, and financial and implementation guidelines needed to actualize the proposed projects for the Planning Area.[7]

[5] 2013 MC-GH WMP, p. 1-1.
[6] 2013 MC-GH WMP, p. 6-1.
[7] 2013 MC-GH WMP, p. 7-1.

CVWD, DWA and MSWD developed the MC-GH WMP with the goal of managing the water resources to meet demands reliably while protecting water quality in a sustainable and cost-effective manner. The plan recognizes that continued recharge, development or acquisition of additional water supplies, protection of water quality through wastewater management and other tools, monitoring and data management and continuous communication are vital for the cost-effective management of the water resources of the Planning Area.[8]

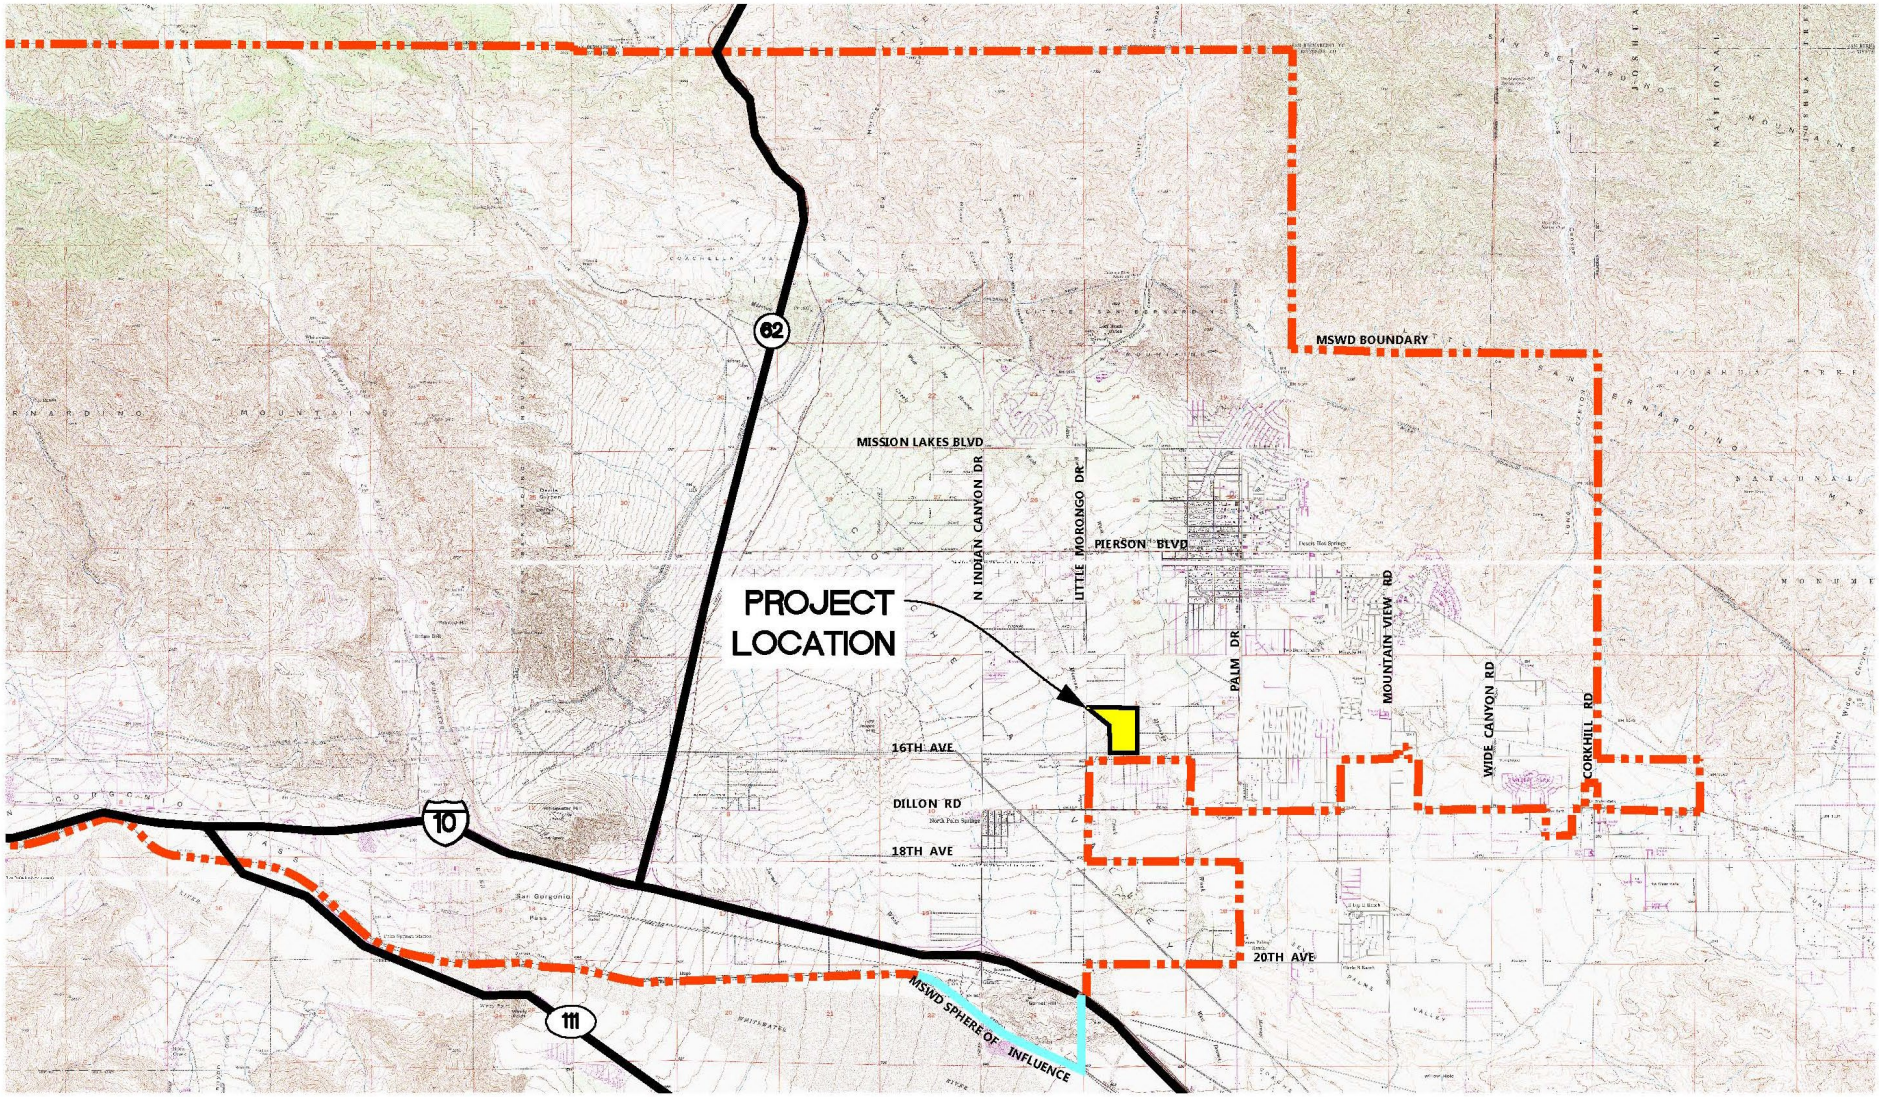
[8] 2013 MC-GH WMP, p. 7-28.

SECTION 2
DHS 109 DEVELOPMENT

2.1 Project Description

The proposed DHS 109 Industrial Park Development Project will accommodate a combination of general light industrial, cannabis activity (cultivation, manufacturing, distribution, etc.), and large-scale energy / utility facilities, basins, landscaping and roadways on approximately 110 acres. This includes 236,180 square feet of general light industrial uses, 761,770 square feet of industrial park for cannabis activity, a 286,230 square foot power plant, together with basins, landscaping and parking lots and onsite roadways for a total of 4,799,908 square feet or 110 acres. The District will serve as the public water system for this development. **Figure 2-1** shows the general project location within the City of Desert Hot Springs.

2.2 Project Land Use Summary



The DHS 109 Project is intended to be an industrial park that will accommodate a combination of general light industrial, cannabis cultivation, cannabis manufacturing, cannabis distribution, and large-scale energy / utility facilities within the City of Desert Hot Springs. The project land currently has a land use designation of Light Industrial (I-L) per the City of Desert Hot Springs General Plan Land Use and Zoning Designations. Based on the County of Riverside's 2019 General Plan Land Use Designations, **Table 2-1** details the proposed land use designations for the DHS 109 development.

Table 2-1
Proposed DHS 109 Land Use Designation

Facilities	Land Use Designation	Area (square feet)	Area (acres)
Industrial Park (Cannabis Activity)	Light Industrial (LI)	761,770	17.49
General Light Industrial	Light Industrial (LI)	236,180	5.42
Basins	-	247,856	5.69
Landscaping	-	1,117,750	25.66
Power Plant	Light Industrial (LI)	286,230	6.57

2.3 Project Water Demand

As described, the DHS 109 Project is a combination these water demand facilities: general light industrial, an industrial park for cannabis activity, landscaping and a power plant. The water demands were separated and calculated into two separate categories: light industrial areas and landscaping areas. The light industrial areas include the general light industrial, the industrial park for cannabis activity and the power plant. These areas included a subtotal water demand, an expected reclaimed water demand, and total water demand. The expected reclaimed water demands are attributed to reclaimed cultivation drain to waste for the cannabis cultivation activities and reclaimed condensate from power plant cooling. They are deducted from the subtotal water demand to produce the total water demand.

Additionally, landscape consumption factors were developed using MSWD's Water Efficient Landscaping Guidelines. The guidelines set forth the Maximum Annual Applied Water Allowance (MAAWA) for landscaping. Using a combination of the total landscaped area, reference evapotranspiration in the area, and an evapotranspiration adjustment factor, the landscape consumption was determined. The following **Table 2-2** summarizes the light industrial area water demands and **Table 2-3** summarizes the landscape water demands for the DHS 109 Project, using the methods described above.

Table 2-2
DHS 109 Light Industrial Water Demands

Facilities	Land Use Designation	Area		Demand Factor	Subtotal Water Demand	Return Flow Factor	Expected Return Flow	Total Water Demand
		Square Feet	Acres	AFY/ Acre	AFY	AFY/ Acre	AFY	AFY
Industrial Park (Cannabis Activity)	Light Industrial (LI)	761,770	17.49	27.90	487.90	22.41	391.92	95.98
General Light Industrial	Light Industrial (LI)	236,180	5.42	45.39	246.10	0.00	0.00	246.10
Power Plant	Light Industrial (LI)	286,230	6.57	174.33	1,145.53	137.53	677.77	467.76
Total		**1,284,180**	**29.48**	**-**	**1,879.53**	**-**	**1,069.69**	**809.85**

Table 2-3
DHS 109 Landscape Water Demands

Facility	Area (acres)	Eto (in/yr)	ET Adjustment Factor	Landscaped Area (sq ft)	Conversion Factor (to gallons per sq ft)	MAAWA (gal/yr)	MAAWA (AFY)
Landscape	25.66	93.9	0.5	1,117,750	0.62	32,536,573	**99.86**

The DHS 109 Project has an expected total water demand of approximately 910 AFY. In 2009 the Senate Bill x7-7 was enacted requiring all water suppliers to increase water use efficiency. MSWD has developed consumption factors based on their 2015 UWMP, after the enactment of SBx7-7. While the demands included herein were provided by the DHS 109 engineer, they are consistent with MSWD and other Coachella Valley consumption factors that reflect the statewide goal to achieve a 20 percent reduction of per capita water use by the year 2020.

2.4 Water Conservation Measures

New developments are required to follow and implement the water conservation measures and efficient water use goals outlined in several of MSWD and County of Riverside planning documents.

In 2007, the County of Riverside adopted Ordinance 859.2, The Water Efficient Landscape Requirements. This Ordinance is an effort to implement, manage and maintain water efficient landscapes without a decline in landscape quality or quantity to all new and rehabilitated landscapes associated with residential uses. Furthermore, this Ordinance was adopted to implement the requirements of the California Water Conservation in Landscaping Act 2006 and the California Code of Regulations Title 23, Division 2, Chapter 2.7. The following are some of the requirements applicable to the DHS 109 Project:

- All planting areas shall receive three inches (3”) of shredded bark mulch and one and a half inches (1-1/2”) on ground cover from flats.
- Turf areas shall be used in response to functional needs and in compliance with the water budget.
- Where available, recycled water shall be used as the source for irrigation and decorative water features.
- Stabilizing mulching products shall be used on slopes. Irrigation systems shall be designed, maintained and managed to meet or exceed an average irrigation efficiency of 0.71.
- All irrigation systems shall be designed to prevent runoff, overspray, low head drainage and other similar conditions where water flows off-site on to adjacent property, non-irrigated areas, walk, roadways, or structures.
- All irrigation systems shall be equipped with a small irrigation controller, a rain sensing device, anti-drain check valves, a manual shut off valve, a pressure regulator, backflow prevention device, and riser protection components
- Water systems for common open space areas shall use non-potable water, if approved facilities are made available by the water purveyor.

The project will follow both County and local water conservation and planting measures. In addition, the project will implement native desert landscaping throughout park and landscape areas.

SECTION 3
WATER DEMANDS

3.1 General Water System Information

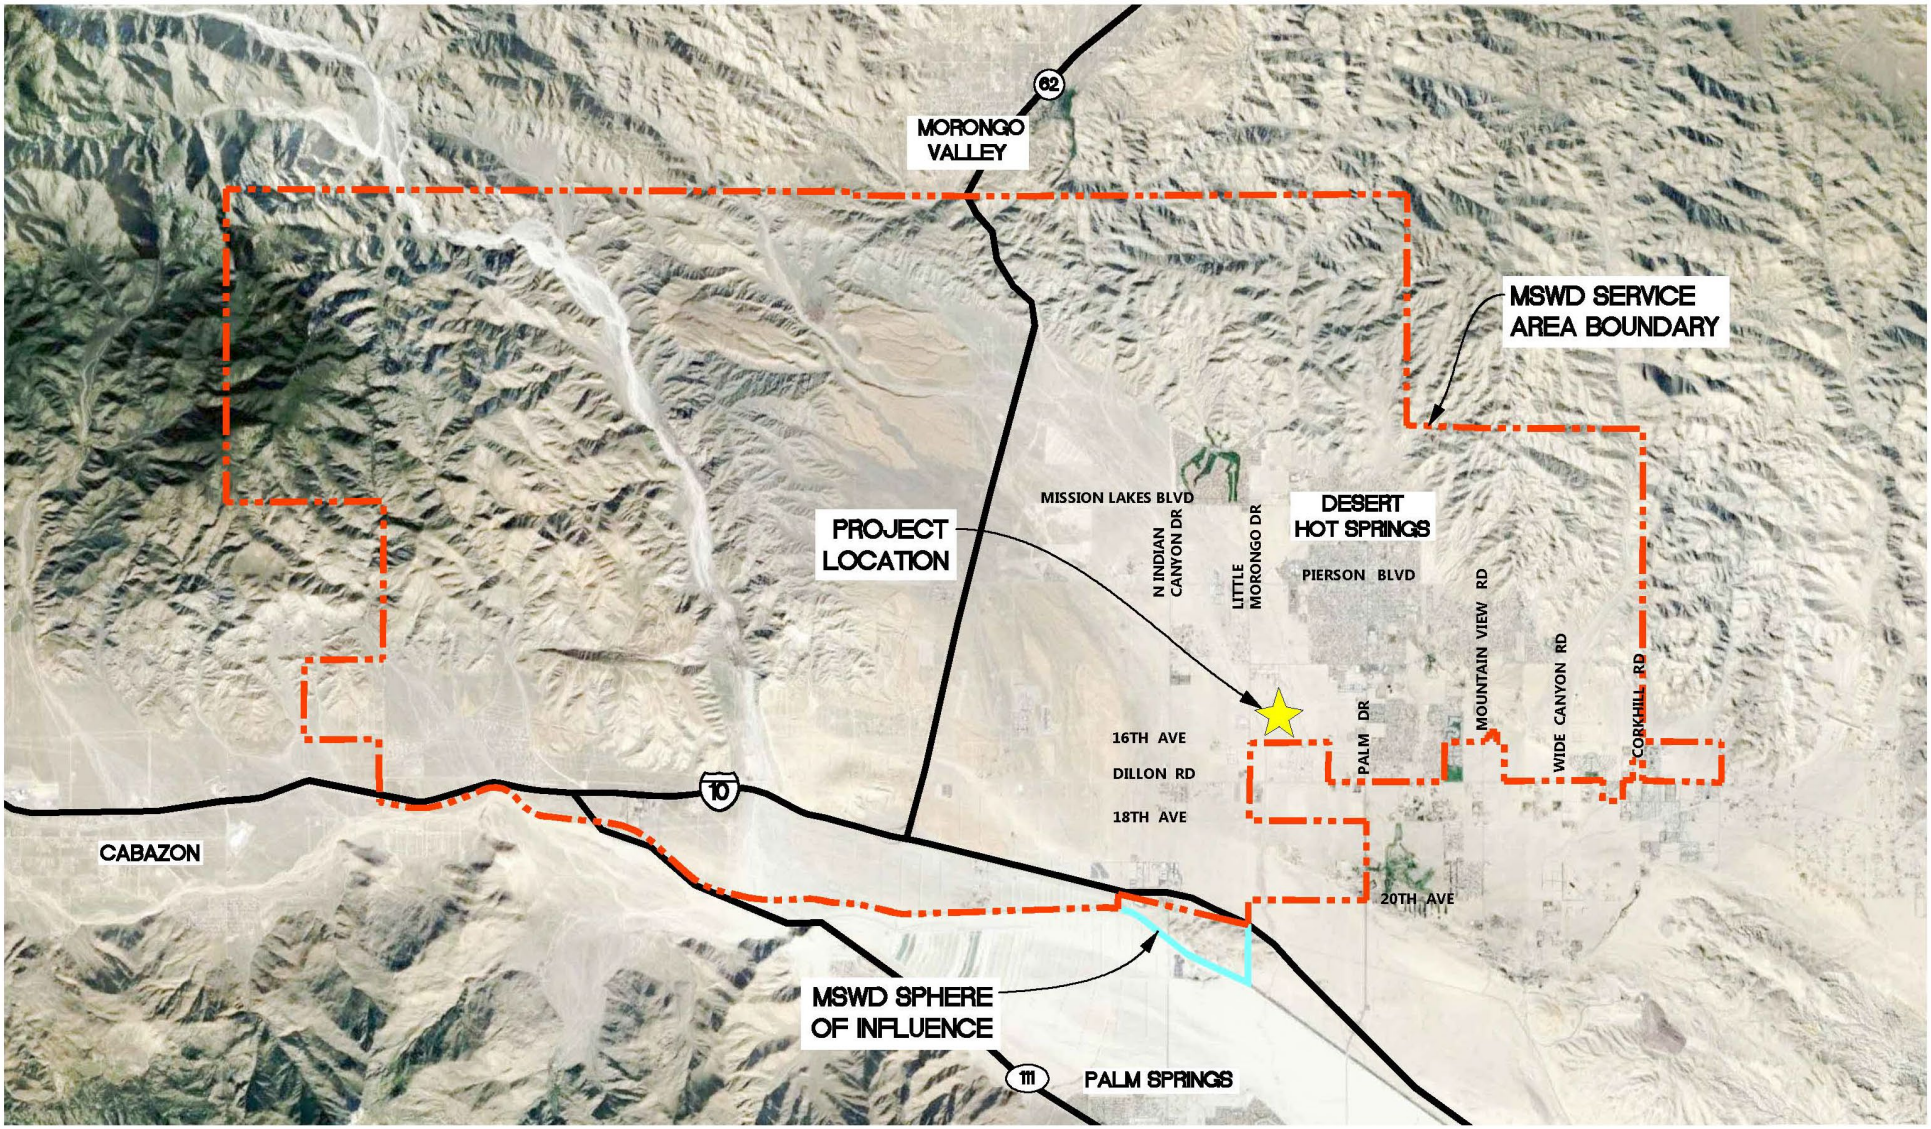
3.1.1 Service Area Description

The District, established in 1953, consists of approximately 135 square miles, including the City of Desert Hot Springs, 10 smaller communities in Riverside County and communities in the City of Palm Springs. The District provides water service to approximately 39,800 people and sewer service to approximately 27,500 people in their service area. MSWD offices are located in Desert Hot Springs, California.[9]

The District has three different water supply and distributions systems, the Desert Hot Springs System, the Palm Springs Crest System, and the West Palm Springs Village System. The Desert Hot Springs System is the largest of the three and is where the proposed DHS 109 Development is located. The Palm Springs Crest System and the West Palm Springs Village Systems are located 5 miles from the Desert Hot Springs system and abutting the Morongo Indian Hill Reservation. **Figure 3-1** shows MSWD's service area and sphere of influence.[10]

MSWD currently receives 100 percent of its water supply from groundwater wells supplied by the several subbasins within the Coachella Valley Groundwater Basin. The District mainly produces water from the Mission Creek Subbasin and the Garnet Hill Subbasin.

3.1.2 Facilities



The District, inclusive of all three distribution systems, has approximately 1.26 million linear feet of distribution pipeline ranging in sizes.

As previously mentioned, 100 percent of the water produced is supplied by the Coachella Valley Groundwater Basin. The Desert Hot Springs System has nine active wells, Well Nos. 22, 24, 27, 28, 29, 31, 32, 34 and 37 and one inactive well, Well No. 30. The nine active wells and the inactive well produce water from the Mission Creek Subbasin. Well No. 33 produces water from the Garnet Hill Subbasin. The nine active wells have a production capacity of 12,600 gpm. Well No. 28 and Well No. 34 have wellhead uranium treatment facilities.

[9] 2015 MSWD Urban Water Management Plan, Section 3.
[10] 2015 MSWD Urban Water Management Plan, Section 3.

This page is left intentionally blank

Figure 3-1
MSWD Service Area and Sphere of Influence

This page is left intentionally blank

3.1.3 Climate

The District's climate is a desert climate with a large range of high and low temperatures. The area has low rainfall and humidity and has an average of 5.5 inches of rainfall per year. The average high month temperature is 108.2 degrees Fahrenheit occurring in July and the average low month temperature of 42.2 degrees Fahrenheit occurring in December and January. **Table 3.1** shows the historic average monthly evapotranspiration, rainfall and temperatures for the District.

Table 3-1
Historical District Climate Characteristics

Month	Standard Average Eto (inches)	Average Rainfall (inches)	Daily Max Temperature (degrees F)	Daily Min Temperature (degrees F)
January	2.98	1.13	69.6	42.3
February	3.53	1.00	73.7	45.6
March	6.25	0.58	79.3	48.8
April	8.39	0.18	86.7	54.1
May	10.55	0.05	94.5	60.4
June	10.95	0.05	103.0	67.0
July	10.78	0.20	108.2	75.2
August	9.66	0.27	106.8	74.3
September	8.25	0.29	101.7	68.1
October	5.85	0.29	91.4	59.4
November	3.63	0.42	78.7	49.2
December	2.62	1.01	69.8	42.3
Annual (Total or Average):	**83.44**	**5.47**	**88.6**	**57.2**

3.1.4 Service Area Population

The majority of the District's service area population resides in the City of Desert Hot Springs. The City of Desert Hot Springs makes up approximately 17 percent of the District's water service area, 23 square miles. Population current and future estimates were gathered from MSWD's 2015 UWMP. MSWD's 2015 UWMP utilized the DWR Population Tool to estimate the 2015 population based on water service connections. A 2015 District water service area population of 37,614 was estimated. With an estimated City of Desert Hot Springs population of 28,134, the City makes up approximately 74.8 percent of MSWD's total water service area population. However, 2019 population estimate is 33,056.

Future population growth was estimated using the MSWD 2009 Comprehensive Water System Master Plan growth scenarios and applying it to the 2015 water service area population results every five years. **Table 3-2** shows the current and projected water service area population for the City of Desert Hot Springs and population outside the City.

Table 3-2
Current and Projected Population

Service Area Population	2015	2019	2020	2025	2030	2035	2040	Increase
City of Hot Desert Springs	28,134	30,056	34,287	40,440	46,593	52,746	58,900	109.4%
Outside City of Hot Desert Springs	9,480	9,758	9,827	10,174	10,521	10,686	11,214	18.3%
Total:	**37,614**	**42,814**	**44,114**	**50,614**	**57,114**	**63,432**	**70,114**	**86.4%**

3.2 Water Demands

3.2.1 District Past and Current Water Use

The District experienced steady service area population growth since 2005. As a result, the District as also had a steady growth in metered connections. As previously mentioned, the District's service area population will continue to increase over time and it is expected that the number of metered accounts will also increase. It should be noted that water deliveries and the number of metered accounts does not directly reflect the District's service area population. The main factor in the growth of water deliveries and in the number of metered accounts are the types of developments that were built and will be built. **Table 3-3** details the historical water service connections by customer sector.

Table 3-3
Historical Water Service Connections

Customer Sector	2005	2010	2015	2019
Single Family	10,053	11,463	11,625	11,790
Multi Family	670	705	709	719
Commercial	403	325	356	355
Other (Billed Institutional, Industrial, Irrigation)	168	254	277	304
Total:	**11,294**	**12,747**	**12,967**	**13,168**

3.2.2 District Water Demand Projections

MSWD currently does not have any recycled water use within its service area. However, according to the 2015 UWMP, there are plans to use recycled water for the irrigation of golf courses, parks, medians and greenbelts, and groundwater aquifer recharge in the future. In addition, the District is constructing the West Valley Water Reclamation Facility and plan to have the plant in running by 2022. The proposed treatment plant has been designed to accommodate tertiary treatment is a subsequent phase. It is estimated that the future initial recycled water demand will be 1.0 mgd (1,120 AFY).

The demand for potable water is expected to increase as service area population increase within time. **Table 3-4** and **Table 3-5** list the projected demands for potable, recycled and total water demands for the future years.

Table 3-4
Demands for Potable Water Projected

Use Type	2020	2025	2030	2035	2040
Single Family	4,688	5,266	5,844	6,422	7,000
Multi Family	1,479	1,661	1,843	2,025	2,208
Commercial	504	566	628	690	752
Other (Billed Institutional, Industrial, Irrigation)	1,189	1,335	1,482	1,628	1,775
Losses	570	641	711	781	851
Total:	**8,430**	**9,469**	**10,508**	**11,546**	**12,586**

Table 3-5
Total Water Demands

Type	2015	2020	2025	2030	2035	2040
Potable Water Demand	7,252	8,430	9,469	10,508	11,547	12,586
Recycled Water Demand	0	1,120	2,200	3,600	5,000	6,400
Total:	**7,252**	**9,550**	**11,669**	**14,108**	**16,547**	**18,986**

Both recycled and potable projected demands were obtained from MSWD's 2015 UWMP. However, a more precise future per-capita water use will occur within the District for new residential developments due to California's newly adopted Green Building Code. The Green Building Code cuts indoor water consumption by 20 percent by more efficient water fixtures. **Table 3-6** shows the future per-capita water use for projected water demands.

Table 3-6
Projected District Water Demands

	2015	2020	2025	2030	2035	2040
Existing Households						
Population	37,614	37,614	37,614	37,614	37,614	37,614
Total Per-Capita Water Use (gpcd)	172.1	173.5	171.3	169.0	166.8	164.5
Water Use (AFY)	7,252	7,312	7,217	7,211	7,028	6,933
New Households						
Population	0	6,500	13,000	19,500	26,000	32,500
Total Per-Capita Water Use (gpcd)	0	156.0	156.0	156.0	156.0	156.0
Water Use (AFY)	0	1,136	2,272	3,408	4,545	5,681
Total Water Use (AFY):	**7,252**	**8,430**	**9,469**	**10,508**	**11,547**	**12,586**
Total Per-Capita Water Use (gpcd):	**172.1**	**170.9**	**167.3**	**164.6**	**162.4**	**160.6**

Total per-capita water use is estimated to decrease from 172.1 gpcd in 2015 to 160.6 gpcd in 2040. From 2020 through 2040, projections are based on normal, non-drought years.

3.3 Water Use Reduction Plan

The District has made the State-mandated DMMs a key element in the overall water resource management strategy. The District is dedicated to implementing water conservation measures as demonstrated in adopting a Water Conservation Master Plan in 2004 (2004 WCMP). A series of sensible water conservation activities that complement the unique water resource characteristics of the District's service area are outlines in the 2004 WCMP. The Plan represents a qualitative effort at identifying and screening potential conservation initiatives appropriate for implementation in the District's service area. The data will assist the District in determining which initiatives should be continued to meet long-term conservation objectives.[11]

As part of the 2004 WCMP, the District identified factors affecting water conservation within the District. Significant factors are impacting water use within the District and include the following:

- Limited availability of water as a resource in Coachella Valley;
- the District's 100 percent dependency on groundwater as a water source;

[11] MSWD 2015 UWMP, p. 9-1.

- lack of other potable water sources and limited emergency interconnections;
- assessments to DWA for future imported water supply; lack of sufficient reservoir storage for water shortages and emergencies;
- continued new residential development in the City of Desert Hot Springs;
- risk of future degradation of groundwater supplies from septic systems, and commercial and industrial development;
- the need to implement costly new sources of water (reclamation/ conjunctive use, etc.).[12]

The water conservation principles identified in the District's Water Conservation Master Plan were outlined and include detailed tasks. Overall, the District aims to employ the following principles:

- Clarify and summarize the District's conservation programs, reflecting conservation commitments made through the UWMP and other programs.
- Ensure that the conservation measures adopted by the District treat all customers fairly and equitably.
- Do not create undue pressure on revenue stability resulting in water costs exceeding local socio-economic conditions.
- Identify and establish measurable conservation targets to be accomplished by the District within a reasonable period of time.
- Develop sensible approaches for practical, cost-effective and efficient conservation programs which anticipate and serve the long-term needs of District customers.
- Facilitate the District's ability to provide a dependable, reliable supply of water.[13]

The District also developed a conceptual framework for the proposed conservation planning process throughout the service area. Four phases are envisioned as part of the process, including the formulation of conservation principles, program refinement, program implementation and program evaluation. The Plan's Conservation Action Plan seeks to implement the conceptual framework in a "dual approach," whereby regulatory and management practices are jointly utilized. In the Conservation Action Plan, the process for establishing measurable conservation targets is discussed. Three distinct components for the process are identified as the following:

- establishment of measurable targets,
- identifying worthwhile conservation measures, and

[12] MSWD 2015 UWMP, p. 9-1.
[13] MSWD 2015 UWMP, pp. 9-1 to 9-2.

- evaluating the effects of conservation activities and attainment of goals[14]

For additional information on the District's implementation of the demand management and water conservation measures, see their 2015 UWMP Chapter 9.

[14] MSWD 2015 UWMP, p. 9-2.

SECTION 4
WATER SUPPLY ASSESSMENT

4.1 General

The Coachella Valley relies on a combination of local groundwater, Colorado River (CR) water, State Water Project (SWP) water, surface water, and recycled water to meet demand. MSWD produces all of its water supplies from the Upper Coachella Valley Groundwater Basin; more specifically, the Mission Creek, Indio, Garnet Hill, and San Gorgonio Pass Subbasins. According to MSWD's 2015 UWMP, CVWD and DWA are remediating the overdraft condition of the groundwater basin by artificial replenishment with imported Colorado River and State Water Project (SWP) Exchange Water in the Indio and Mission Creek subbasins.

The following section identifies and describes the water supply sources that will serve the DHS 109 Project. Additionally, in accordance with State Water Code Section 10910(d), this section will identify existing water supply amounts, water rights, or water service contracts relevant to the identified water supply for the proposed Project. As previously described, MSWD's 2015 UWMP and the 2013 MC-GH WMP apply to the DHS 109 Project. According to MSWD's 2015 UWMP, the aquifer and other sources of supply are adequate for a single dry year and also for multiple dry years for a 20-year period.[15]

4.2 Identification of Water Sources

4.2.1 Primary Water Sources

As described above, MSWD currently receives 100 percent of its municipal water supply from groundwater produced from subbasins within the Coachella Valley Groundwater Basin, which underlies the District's water service area. The Coachella Valley Groundwater Basin in not adjudicated. As such, there are no legal agreements that limit MSWD from producing groundwater from any of the subbasins. As indicated herein, substantial regional efforts are ongoing, led by CVWD and DWA, to manage and recharge the Mission Creek Subbasin and Indio Subbasin with imported water and other supplies to ensure adequate water supplies are sustained and protected in the future. Those efforts are made possible in large part because CVWD and DWA are Metropolitan State Water Project (SWP) contractors. Therefore, the DHS 109 Project will rely on groundwater as its primary water supply source, more specifically the Mission Creek Subbasin.

[15] MSWD 2015 UWMP, pp. 7-20 to 7-22

4.2.2 Additional Water Sources

While groundwater from the Mission Creek Subbasin will be the sole source of water for the project, additional water sources related to the project include surface water that naturally replenished the groundwater basin and imported water to recharge groundwater supplies.

4.3 Analysis of Water Supply

4.3.1 Groundwater

As described above, MSWD currently receives 100 percent of its water supply from groundwater produced from subbasins within the Coachella Valley Groundwater Basin, which underlies the District's water service area. MSWD primarily produces groundwater from the Mission Creek Subbasin through nine (9) active groundwater wells. In addition, MSWD also produces groundwater from the Indio Subbasin via two (2) active wells, the Garnet Hill Subbasin through one (1) active well, and the San Gorgonio Pass Subbasin through two (2) active wells.

The Coachella Valley Groundwater Basin is bounded on the north and east by non-water bearing crystalline rocks of the San Bernardino and Little San Bernardino Mountains and on the south and west by the crystalline rocks of the Santa Rosa and San Jacinto Mountains. At the west end of the San Gorgonio Pass, between Beaumont and Banning, the basin boundary is defined by a surface drainage divide separating the Coachella Valley Groundwater Basin from the Beaumont Groundwater Basin of the Upper Santa Ana drainage area.[16]

While groundwater flows throughout the groundwater basin, several features (i.e. fault lines, constrictions in the basin profile, and changed soil conditions) limit and control its movement. As such, several subareas and subbasins have been identified and defined by CDWR in 1964 and the United States Geological Survey (USGS) in 1971.[17]

The Coachella Valley subbasins are the: Mission Creek, Desert Hot Springs, Garnet Hill, San Gorgonio Pass, and Indio subbasins. The Indio subbasin is sometimes referred to as the Whitewater subbasin. The subbasins all have varying water quality and quantity, and serve as groundwater storage reservoirs. Municipal and Private wells are used to produce water from the natural reservoirs. MSWD's water service area and underlying subbasins are shown on **Figure 4-1**. MSWD produces

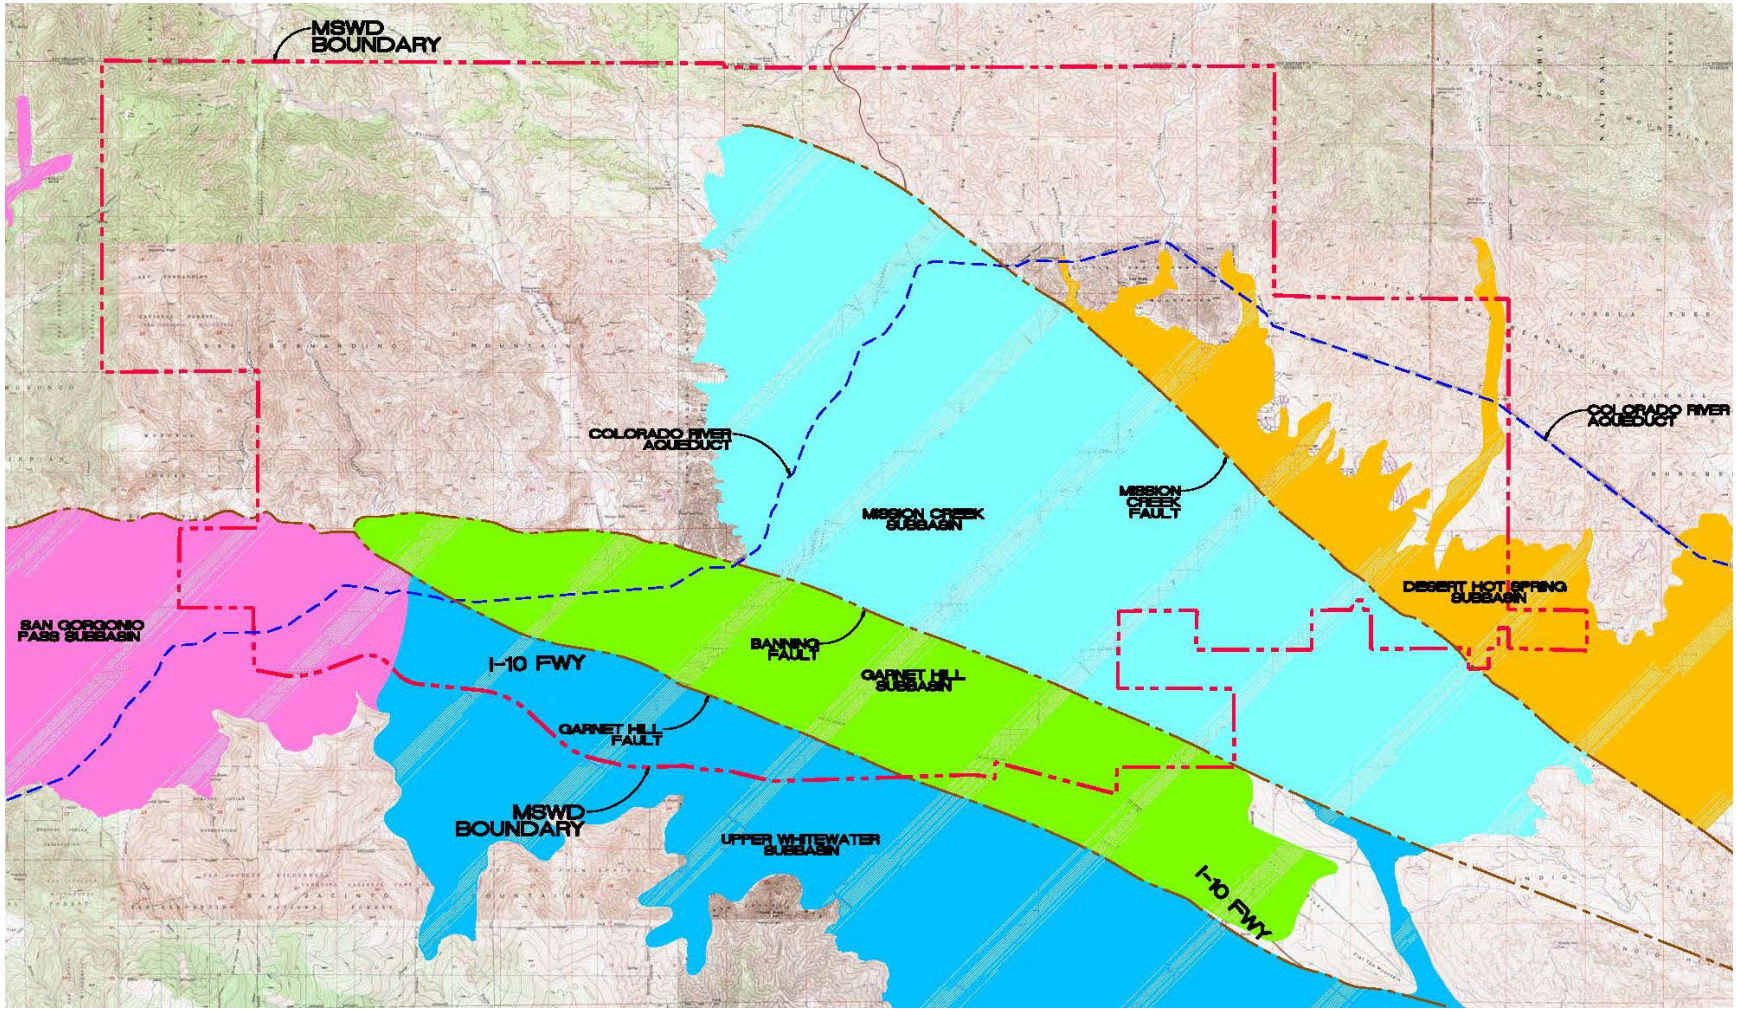
[16] MSWD 2015 UWMP, p. 6-5
[17] MSWD 2015 UWMP, p. 6-6

groundwater from the Mission Creek, Garnet Hill, Indio, and the San Gorgonio Pass Subbasins; described in greater detail in the following sections.

Of note, the Coachella Valley Groundwater Basin in not adjudicated and there are no legal agreements that limit MSWD from producing groundwater from any of the subbasins. CVWD and DWA continually recharge the Mission Creek Subbasin and Indio Subbasin with imported water and other supplies. Both agencies are SWP contractors.

Starting in 1973, the Indio Subbasin has been replenished using SWP Exchange Water for groundwater recharge. CVWD and DWA have an agreement with Metropolitan to exchange (on an acre-foot-for-acre-foot basis) a percentage of their SWP Table A water rights for an equal amount of Metropolitan's Colorado River water for the purpose of recharging the Coachella Valley Groundwater Basin. A replenishment program using SWP Exchange Water was also established for the Mission Creek Subbasin with recharge commencing in 2003.[18]

4.3.1.1 Mission Creek Subbasin



MSWD primarily produces groundwater from the Mission Creek Subbasin through nine (9) active groundwater wells. The Mission Creek Subbasin is located in the Upper Coachella Valley in the north central portion of Riverside County, California. The Mission Creek Fault and the Banning Fault bound the northeastern and southern edges of the subbasin, respectively, and are the major groundwater controls. Both act to limit groundwater movement as these faults have folded sedimentary deposits, displaced water-bearing deposits, and caused once permeable sediments to become impermeable (DWR, 1964).[19]

To the west, the subbasin is bounded by the San Bernardino Mountains and to the east by the Indio Hills and the Mission Creek Fault. Artesian conditions have historically been present near a narrow strip along the northwest portion of the Seven Palms Ridge (DWR, 1964), allowing for the development of a unique Willow-Mesquite biological community that includes phreatophytes. Depth to groundwater in other parts of the Subbasin averages 300 feet below ground surface. Major surface water features in the area are the Whitewater River, Mission Creek, San Gorgonio River, Little and Big Morongo Washes, and Long Canyon.[20]

[18] MSWD 2015 UWMP, p. 6-9
[19] MSWD 2015 UWMP, p. 6-9
[20] MSWD 2015 UWMP, p. 6-9

This page is left intentionally blank

Figure 4-1
MSWD Groundwater Basins

This page is left intentionally blank

The Mission Creek Subbasin is filled with Holocene and late Pleistocene unconsolidated sediments eroded from the San Bernardino and Little San Bernardino Mountains. There are three significant water-bearing sedimentary deposits recognized in the subbasin: Pleistocene Cabazon Fanglomerate and Pleistocene to Holocene Older alluvium and alluvial deposits. These deposits are generally coarse sand and gravel, poorly sorted alluvial fan and pediment deposits that coalesce with one another.[21]

The Mission Creek Subbasin is considered an unconfined aquifer with a saturated thickness of 1,200 feet or more and an estimated total storage capacity on the order of 2.6 million acre-feet (MAF). The subbasin is naturally recharged by surface and subsurface flow from the Mission Creek, Dry, and Big Morongo Washes, the Painted Hills, and surrounding mountain drainages. Irrigation return flow and discharges from municipal and individual subsurface wastewater disposal systems also contribute to recharge.[22]

Natural inflow has been supplemented with artificial recharge of imported water since 2003. In Water Year (WY) 2017-2018 total inflow to the Mission Creek Subbasin is estimated at 22,044 (afy) and includes 7,500 AFY from infiltration or natural runoff, 1,840 of subsurface inflows from adjacent basins and 7,895 AF of artificial recharge.[23] Additionally, non-consumptive return flow (2,010 AF of infiltration of applied irrigation water, 2,085 AFY of wastewater percolation, 714 AF of septic tank percolation) is estimated at 4,809 AF or approximately 22 percent of the total inflow budget.[24]

The primary outflow from the Mission Creek Subbasin is through groundwater production for domestic, agricultural and commercial use. Total groundwater production by MSWD, CVWD, and other privately-owned wells together averaged approximately 2,000 AFY in the 1970s; increased to over 17,000 AFY in 2006; and has since decreased to 14,573 in WY 2017-2018.[25] Additionally, natural outflow include underflow to the Garnet Hill Subbasin and to semi-water-bearing rocks in southeastern portion of basin of 5,100 AF, evapotranspiration of 900 AF, and evaporative losses of 220 AF for a total of 6,220 AF.

The WY 2017-2018 water balance in Mission Creek Subbasin is shown in **Table 4-1**. The annual water balance is the total inflow less the total outflow, which is estimated at a surplus of 1,251 AF of water storage (approximately 0.03 percent of storage capacity) in the subbasin in WY 2017-2018.

[21] MSWD 2015 UWMP, p. 6-10
[22] MSWD 2015 UWMP, p. 6-10
[23] Mission Creek Subbasin Annual Report for Water Year 2017-2018, p. 7-5, Table 7-3.
[24] Mission Creek Subbasin Annual Report for Water Year 2017-2018, p. 7-2.
[25] Mission Creek Subbasin Annual Report for Water Year 2017-2018, p. 7-5, Table 7-3.

Table 4-1
WY 2017-2018 Water Balance in Mission Creek Subbasin

Basin Inflow and Outflow Component	Flow (AFY)
Inflow	
Subsurface Inflows From Adjacent Basins	1,840
Non-Consumptive Return	4,809
Infiltration of Natural Runoff	7,500
Artificial Recharge	7,895
Total Inflow	**22,044**
Outflow	
2017 Groundwater Pumping	14,573
Natural Outflow	6,220
Total Outflow	**20,793**
Annual Balance	**+1,251**

Groundwater overdraft within the Mission Creek Subbasin (excluding artificial recharge) is now estimated to have averaged up to 9,000 acre feet per year (AF/Yr) (14,000 acre feet (AF) water produced - 5,000 AF non-consumptive return = 9,000 AF of groundwater overdraft) during the last five years. Cumulative overdraft offset by artificial recharge is estimated to be roughly 98,000 AF (DWA, 2015).[26]

Regional water levels have been declining since the early 1950's due to scarce annual precipitation and groundwater extractions (DWR 2003). Water levels have declined in portions of the Mission Creek Subbasin approximately 100 feet between the years 1936 and 2003. Based on DWA's 2015-2016 Engineer's Report for the Mission Creek Subbasin, cumulative overdraft offset by artificial recharge is estimated at 100,000 AF.[27]

Due to continuing overdraft conditions in the Mission Creek Subbasin, CVWD and DWA began constructing facilities to replenish the Mission Creek Subbasin in October 2001. Facilities were completed in June 2002 and in December 2002, DWA and CVWD began recharge activities in the Mission Creek Subbasin. The current replenishment program is effectively increasing water levels and is expected to stabilize or reverse the water level decline.[28]

Currently, MSWD has groundwater elevation monitoring wells and has been the exclusive monitoring and reporting agency to California Statewide Groundwater

Elevation Monitoring (CASGEM) for groundwater conditions in the Mission Creek Subbasin and Garnet Hill Subbasin (portion of Indio Subbasin).[29]

MSWD, DWA, and CVWD now jointly manage the Mission Creek Subbasin under the terms of the Mission Creek Settlement Agreement (December, 2004). This agreement and the 2014 Mission Creek Groundwater Replenishment Agreement between CVWD and DWA specify that the available SWP water will be allocated between the Mission Creek and Indio Subbasins in proportion to the amount of water produced or diverted from each Subbasin during the preceding year. In 2018, production from the Mission Creek Subbasin was about 8.2 percent of the combined production from these two Subbasins.[30]

Since there is no physical connection to SWP facilities in the Coachella Valley, in the 1970s, CVWD and DWA signed a water exchange agreement with the Metropolitan Water District of Southern California (Metropolitan) to deliver an equivalent amount of Colorado River water from Metropolitan's Colorado River Aqueduct (CRA) in exchange for CVWD's and DWA's SWP water; referred to herein as SWP Exchange Water.

Deliveries of SWP Exchange Water from the CRA to the Mission Creek Groundwater Replenishment Facility began in 2003. The spreading facilities consist of 57 acres of percolation ponds (47 acres wetted bottom area). According to the 2013 MC-GH WMP, since the commencement of recharge activities, an average of approximately 12,007 acre-ft/yr of water has been recharged in the basin with recharge ranging from 100 to 33,210 acre-ft/yr. A portion of the recharge represents advanced delivery of SWP Exchange Water, further discussed in **Section 4.3.2.2**. **Table 4-2** summarizes the total volume of water delivered for artificial recharge in the Mission Creek. Based on evaluation of CIMIS seasonal evapotranspiration data, it is conservatively estimated that 2 percent of the recharged water is evaporated from the spreading facilities and 98 percent of the water reaches the groundwater basin.[31]

Source: DWA Engineer's Report, May 2018. Note that the flows presented in Table 4-2 only consist of SWP Exchange Water and do not include flows due to natural recharge or evaporation losses.

The historical annual change in storage for the Mission Creek subbasin is presented on **Figure 4-2**. It is observed that groundwater storage declined from 1936 until imported water recharge activities were started in the Mission Creek subbasin in 2003. Increasing values are reflective of additions to total groundwater storage (due to higher recharge than pumping), and declining values are reflective of decreases in total groundwater storage (pumping greater than recharge). The effect of imported water recharge is clearly seen for the Mission Creek Subbasin since 2003. During periods of relatively high recharge (2005-2006 and 2010-2011), groundwater storage increased whereas in periods of lower recharge (2003-2004 and 2007-2009), groundwater storage declined. As of 2010, about 160,000 acre-ft of water has been lost from storage since 1936.[32]

Figure 4-2
Historical Annual in Groundwater Storage – Mission Creek Subbasin
1978 - 2018[33]

4.3.1.2 Garnet Hill Subbasin

MSWD produces groundwater from the Garnet Hill Subbasin through one (1) active well. While the Project will not rely on the Garnet Hill Subbasin to meet demand, the subbasins are intertied, as described herein.

The Garnet Hill Subbasin which lies immediately south of the Mission Creek Subbasin, underlies approximately 20 square miles and is subordinate to the Indio Subbasin (DWR, 2003). The basin is bounded on the north by the Banning fault, on the south by the Garnet Hill fault, and on the east and west by non-water to semi-water bearing rocks.[34]

The area between the Garnet Hill fault and the Banning fault, named the Garnet Hill subarea by DWR (2003), was considered a distinct Subbasin by the USGS because of the effectiveness of the Banning and Garnet Hill faults as barriers to groundwater

[33] Mission Creek Subbasin Annual Report for Water Year 2017-2018
[34] MSWD 2015 UWMP, p. 6-12

movement. This is illustrated by a difference of 170 feet in groundwater level elevation in a horizontal distance of 3,200 feet across the Garnet Hill fault, as measured in Spring 1961.[35]

The Garnet Hill Subbasin is considered an unconfined aquifer with a saturated thickness of 1,000 feet or more and an estimated total storage capacity on the order of 1.0 MAF (DWR 2003). The Subbasin is naturally recharged by subsurface flow from the Mission Creek Subbasin and runoff from the Whitewater River watershed on the west. Irrigation return flow and discharges from municipal and individual subsurface wastewater disposal systems also contribute to recharge but is considered very small. Total 2009 inflow to the Garnet Hill Subbasin is estimated at 25,150 acre-feet (Psomas, 2010).[36]

The primary outflows from the Garnet Hill Subbasin are across the Garnet Hill Fault to the Indio Subbasin. In addition, limited groundwater production for domestic, agricultural and commercial use also occurs but has only recently been of any significance. Groundwater production has varied over the years, ranging from a high of over 4,000 AFY in the early 1950s to less than 50 AFY in the mid-1980s. Currently, groundwater production is estimated at between 300-500 AFY (PSOMAS, 2010). MSWD constructed Well 33 in the Garnet Hill Subbasin with production since 2007. MSWD, CVWD and DWA have jointly developed the Mission Creek/Garnet Hill Water Management Plan for this Subbasin along with the Mission Creek Subbasin (MWH, 2013).[37]

4.3.1.3 Desert Hot Springs Subbasin

The Desert Hot Springs Subbasin is bounded to the north by the Little San Bernardino Mountains and to the southwest by the Mission Creek Fault and to the southeast by the San Andreas Fault. The San Andreas Fault separates the Desert Hot Springs Subbasin from the Mission Creek and Indio Subbasins and serves as an effective barrier to groundwater flow. The Desert Hot Springs Subbasin is not extensively developed except in the area of Desert Hot Springs. Relatively poor groundwater quality has limited the use of this Subbasin for potable supply. Total groundwater storage capacity for the Desert Hot Springs Subbasin is estimated to be 4.1 MAF (DWR 2003). No municipal groundwater production is reported to occur in the Subbasin (CVWD, 2010).[38]

[38] MSWD 2015 UWMP, p. 6-12

4.3.1.4 Indio Subbasin

The Indio Subbasin, part of what was once referred to as the Whitewater Subbasin, comprises the major portion of the floor of the Coachella Valley and encompasses approximately 400 square miles. Beginning approximately one mile west of the junction of State Highway 111 and Interstate 10, the Indio Subbasin extends southeast approximately 70 miles to the Salton Sea. The Subbasin is bordered on the southwest by the Santa Rosa and San Jacinto Mountains, and is separated from the Garnet Hill, Mission Creek and Desert Hot Springs Subbasins to the north and east by the Garnet Hill and San Andreas Faults.[39]

The limit of the Indio Subbasin along the base of the San Jacinto Mountains and the northeast portion of the Santa Rosa Mountains coincides with the Coachella Valley Groundwater Basin boundary. The Garnet Hill Fault, which extends southeastward from the north side of San Gorgonio Pass to the Indio Hills, is a relatively effective barrier to groundwater movement in the Garnet Hill Subbasin. The San Andreas Fault, extending southeastward from the junction of the Mission Creek and Banning faults in the Indio Hills and continuing out of the basin on the east flank of the Salton Sea, is also an effective barrier to groundwater movement. The historic fluctuations of water levels within the Indio Subbasin indicate a steady decline in the levels throughout the Subbasin prior to 1949.[40]

MSWD currently produces groundwater from the Indio Subbasin, as defined herein, through two (2) active wells; however, the Project will not rely on the Indio Subbasin to meet demand. Of note, DWR considers the Garnet Hill Subbasin as part of the Indio Subbasin; however, they are considered separate basins at the regional/local level and herein.

4.3.1.5 Cabazon Storage Unit of the San Gorgonio Pass Subbasin

MSWD produces groundwater from the San Gorgonio Pass Subbasin through two (2) active wells. However, the Project will not rely on the San Gorgonio Pass Subbasin to meet demand. A portion of the MSWD western service area is underlain by the San Gorgonio Pass Subbasin. The portion of the Coachella Valley Groundwater Basin that lies entirely within the San Gorgonio Pass is described as the San Gorgonio Pass Subbasin (DWR 1964). This Subbasin is bounded on the north by the San Bernardino Mountains and by semi-permeable rocks, and on the south by the San Jacinto Mountains. A surface drainage divide between the Colorado River and South Coastal Hydrologic Study Areas bounds the Subbasin on the west. The eastern boundary is

[39] MSWD 2015 UWMP, p. 6-13
[40] MSWD 2015 UWMP, p. 6-13

formed by a bedrock constriction that creates a groundwater cascade into the Indio Subbasin (DWR 1964).[41]

The main water bearing deposits in the Subbasin are Holocene and Pleistocene age alluvium and Pliocene to Pleistocene age San Timoteo Formation. Holocene alluvium is mostly gravel and sand and, where saturated, would yield water readily to wells. Within the Subbasin, these deposits lie largely above the water table and contribute little water to wells. Holocene alluvium is found in the tributaries of the Subbasin and allows runoff to infiltrate and recharge the Subbasin (DWR, 1987). Older, Pleistocene-age alluvium contains sand and gravel, but also large amounts of clay and silt. These deposits yield moderate amounts of water to wells (DWR 1987).[42]

Groundwater levels throughout the Subbasin declined significantly from 1933 through 1939 during the construction of the San Jacinto Tunnel as large quantities of groundwater were pumped and diverted into the Indio Subbasin (SGPWA 2001). Groundwater levels in the eastern part of the Subbasin rose or stayed the same between 1967 and 1987 (DWR, 1987). Total storage capacity of the Subbasin was estimated to be about 2.7 MAF by DWR (1964). A re-evaluation by DWR (1987) estimates total storage capacity to be about 2.2 MAF.[43]

The San Gorgonio Pass Subbasin is subdivided into a series of storage units that include: the Banning Bench, Banning, Beaumont, and Cabazon storage units (Boyd, 1969). The Cabazon storage unit within the San Gorgonio Basin is recharged naturally with runoff from the adjacent San Jacinto and San Bernardino Mountains.[44]

The Cabazon storage unit encompasses approximately 11 square miles. The Cabazon storage unit is located near the western boundary of the MSWD boundary. MSWD operates two (2) wells in the Cabazon storage unit. Other groundwater users in the Cabazon storage unit include Desert Hills Premium Outlets and Cabazon Water District.

4.3.1.6 District Groundwater Production

Historical groundwater production for each District well and for each subbasin from 2010 through 2018 is shown in **Table 4-3**. A summary of groundwater pumped by the District by subbasin from 2011 through 2015 is shown in **Table 4-4**.

4.3.2 Imported Water

Both CVWD and DWA are State Water Contractors. However, there is no conveyance system in place to deliver SWP water to the Coachella Valley. Conversely, imported water from the Colorado River is delivered to Southern California agencies through the Colorado River Aqueduct (CRA) that traverses through the Coachella Valley. As such, both DWA and CVWD have entered into separate agreements with Metropolitan to receive Colorado River water in exchange for State Water Project (SWP) water on an acre-foot-for-acre-foot basis (SWP Exchange Water).

In 1997, DWA worked with Metropolitan to get a 48-inch turnout constructed along the CRA system just south of Indian Avenue and west of Worsley Road. In addition, DWA acquired property, approximately 190 acres, near the turnout to construct spreading basins to hold the Colorado River water as it percolates downward into the Mission Creek Subbasin. In 2002, DWA completed construction of the Mission Creek Recharge Facilities with a series of 13 recharge basins and a combined surface area of 57 acres. Replenishments efforts began in 2003 and, to date, a cumulative total of approximately 161,588 AF of supplemental water has been recharged into the Mission Creek Subbasin.[45]

The Indio Subbasin has been replenished using SWP Exchange Water since 1973. Administered by CVWD, Colorado River water is recharged in two separate Whitewater River Groundwater Replenishment facilities. To date, approximately 3,447,907 AF of supplemental water has been recharged into the Indio Subbasin.[46]

The spreading of Metropolitan's SWP in the Mission Creek Subbasin benefits the City of Desert Hot Springs and MSWD. MSWD pays DWA's replenish assessment for every AF of supplemental water extracted from the Mission Creek Subbasin.

4.3.2.1 Colorado River Water

Colorado River supplies are important to the Coachella Valley for two primary reasons. First, and as further discussed below, a substantial portion of California's share of Colorado River water is allocated directly to CVWD. Second, much of the replenishment supplies used in the Valley come from MWD's allocation of Colorado River water, via the exchange agreement for SWP supplies, also further discussed in the following.

Colorado River water has been a major source of supply for the Coachella Valley since 1949 with the completion of the Coachella Canal.[47] The Colorado River is managed and operated in accordance with the Law of the River, the collection of interstate compacts, federal and state legislation, various agreements and contracts, an international treaty, a U.S. Supreme Court decree, and federal administrative actions that govern the rights to use of Colorado River water within the seven Colorado River Basin states. The Colorado River Compact, signed in 1922, apportioned the waters of the Colorado River Basin between the Upper Colorado River Basin (Colorado, Wyoming, Utah, and New Mexico) and the Lower Basin (Nevada, Arizona, and

[45] CVWD Engineer's Report on Water Supply and Replenishment Assessment 2019-2020, Table 3-2.
[46] CVWD Engineer's Report on Water Supply and Replenishment Assessment 2019-2020, Table 4-2.
[47] 2010 CVWMP, p. 4-13.

California). The Colorado River Compact allocates 15 million AFY of Colorado River water: 7.5 million AFY to the Upper Basin and 7.5 million AFY to the Lower Basin, plus up to 1 million AFY of surplus supplies. The Lower Basin's water was further apportioned among the three Lower Basin states by the Boulder Canyon Project Act in 1928 and the 1964 U.S. Supreme Court decree in Arizona v. California. Arizona's basic annual apportionment is 2.8 million AFY, California's is 4.4 million AFY, and Nevada's is 0.3 million AFY. California has been diverting up to 5.3 million AFY in recent years, using the unused portions of the Arizona and Nevada entitlements. Mexico is entitled to 1.5 million AFY of the Colorado River under the 1944 United States-Mexico Treaty for Utilization of Waters of the Colorado and Tijuana Rivers and of the Rio Grande. However, this treaty did not specify a required quality for water entering Mexico. In 1973, the United States and Mexico signed Minute No. 242 of the International Boundary and Water Commission requiring certain water quality standards for water entering Mexico.[48]

California's apportionment of Colorado River water is allocated by the 1931 Seven Party Agreement among Palo Verde Irrigation District (PVID), Imperial Irrigation District (IID), CVWD and Metropolitan. The three remaining parties, the City and the County of San Diego and the City of Los Angeles, are now part of Metropolitan. The allocations defined in the Seven Party Agreement are shown in **Table 4-5** below. In its 1979 supplemental decree in the Arizona v. California case, the United States Supreme Court also assigned "present perfected rights" to the use of river water to a number of individuals, water districts, towns and Indian tribes along the river. These rights, which total approximately 2,875,000 AFY, are charged against California's 4.4 million AFY allocation and must be satisfied first in times of shortage. Under the 1970 Criteria for Coordinated Long-Range Operation of the Colorado River Reservoirs (Operating Criteria), the Secretary of the Interior determines how much water is to be allocated for use in Arizona, California and Nevada and whether a surplus, normal or shortage condition exists. The Secretary may allocate additional water if surplus conditions exist on the River (see additional discussion below).[49]

[49] 2010 CVWMP, p. 4-13.

Table 4-5
Priorities and Water Delivery Contracts
California Seven Party Agreement of 1931

Priority	Description	Acre-ft/year
1	Palo Verde Irrigation District gross area of 104,500 acres of Coachella Valley lands	3,850,000
2	Yuma Project (Reservation Division) not exceeding a gross area of 25,000 acres within California	
3(a)	IID, CVWD and lands in Imperial and Coachella Valley's to be served by the All American Canal	
3(b)	Palo Verde Irrigation District – 16,000 acres of mesa lands	
4	Metropolitan Water District of Southern California for use on coastal plain	550,000
	Subtotal – California Basic Apportionment	4,400,000
5(a)	Metropolitan Water District of Southern California for use on coastal plain	550,000
5(b)	Metropolitan Water District of Southern California for use on coastal plain	112,000
6(a)	IID and lands in the Imperial and Coachella Valley's to be served by the All American Canal	300,000
6(b)	Palo Verde Irrigation District – 16,000 acres of mesa lands	
	Total	**5,362,000**

Sources: United States Bureau of Reclamation, http://www.usbr.gov; Coachella Valley Water Management Plan Update, January 2012, p. 4-14, Table 4-2.

California's Colorado River supply is protected by the 1968 Colorado River Basin Project Act, which provides that in years of insufficient supply on the main stream of the Colorado River, supplies to the Central Arizona Project shall be reduced to zero before California will be reduced below 4.4 million AF in any year. This assures full supplies to the Coachella Valley except in periods of extreme drought. As further described below, delivery analyses performed for the Interim Guidelines for Lower Basin Shortages and Coordinated Operations for Lakes Powell and Mead indicated that that California would only experience shortages if the total shortage in the Lower Basin exceeds 1.7 million AFY.[50]

The Coachella Canal (Canal) is a branch of the All-American Canal that brings Colorado River water into the Imperial and Coachella Valleys. Historically, CVWD received approximately 330,000 AFY of Priority 3A Colorado River water delivered via the Coachella Canal. The Canal originates at Drop 1 on the All-American Canal and extends approximately 122 miles, terminating in CVWD's Lake Cahuilla. The service

[50] 2010 CVWMP, p. 4-14.

area for Colorado River water delivery under CVWD's contract with Reclamation is defined as Improvement District No. 1 (ID-1) which encompasses most of the East Valley and a portion of the West Valley north of Interstate 10. Under the 1931 California Seven Party Agreement, CVWD has water rights to Colorado River water as part of the first 3.85 million AFY allocated to California. CVWD is in the third priority position along with IID.[51]

Quantification Settlement Agreement

Although the rights and relative priorities to Colorado River supplies as discussed above remain established under the *Law of the River*, an additional framework applies in California. In 2003, CVWD, IID and Metropolitan successfully completed negotiation of the Quantification Settlement Agreement (QSA). The QSA quantifies the Colorado River water allocations of California's agricultural water contractors for the next 75 years and provides for the transfer of water between agencies.

Specific programs under the QSA include lining portions of the All-American and Coachella Canals, which conserve approximately 96,000 acre-feet annually. As a result, about 80,000 acre-feet of conserved water is delivered to the San Diego County Water Authority ("SDCWA") by exchange with Metropolitan. Metropolitan also takes delivery of 16,000 acre-feet annually that will be made available for the benefit of the La Jolla, Pala, Pauma, Rincon and San Pasqual Bands of Mission Indians, the San Luis Rey River Indian Water Authority, the City of Escondido and the Vista Irrigation District, upon completion of a water rights settlement and once certain conditions are met. An amendment to the 1988 Conservation Agreement between Metropolitan and IID and an associated 1989 Approval Agreement among Metropolitan, IID, CVWD and PVID, extended the term of the 1988 Conservation Agreement and limited the single year amount of water used by CVWD to 20,000 acre-feet. Also included under the QSA is the Delivery and Exchange Agreement between Metropolitan and CVWD that provides for Metropolitan to deliver annually up to 35,000 acre-feet of Metropolitan's State Water Project contractual water to CVWD by exchange with Metropolitan's available Colorado River supplies. In calendar year 2011, under a supplemental agreement with CVWD, Metropolitan delivered 105,000 acre-feet, which consisted of the full 35,000 acre-feet for 2011 plus advance delivery of the full contractual amounts for 2012 and 2013.[52]

Under the QSA, CVWD has a base allotment of 330,000 AFY. In accordance with the QSA, CVWD has entered into water transfer agreements with Metropolitan and IID that increase CVWD supplies as shown in **Table 4-6** below.[53]

[51] 2010 CVWMP, p. 4-14.

Table 4-6
CVWD Deliveries under the QSA

Component	2015 Amount (AFY)	2026-2047 Amount (AFY)	2048-2077 Amount (AFY)
Base Allotment	330,000	330,000	330,000
Less Coachella Canal Lining (to SDCWA)	-26,000	-26,000	-26,000
Less Miscellaneous/Indian PPRs	-3,000	-3,000	-3,000
1988 MWD/IID Approval Agreement	20,000	20,000	20,000
First IID/CVWD Transfer	36,000	50,000	50,000
Second IID/CVWD Transfer	0	53,000	0
MWD/CVWD Replacement Water[1]	0	0	50,000
MWD/CVWD SWP Transfer[2]	35,000	35,000	35,000
Total Diversion at Imperial Dam	**392,000**	**459,000**	**456,000**
Less Conveyance Losses[3]	-14,000	-14,000	-14,000
Total Deliveries to CVWD	**378,000**	**445,000**	**442,000**

[1] MWD assumes the obligation to provide 50,000 AFY of replacement water after 2048.
[2] The 35,000 AFY may be delivered at either Imperial Dam or Whitewater River and is not subject to SWP or Colorado River reliability.
[3] Conveyance losses and regulatory water based on 2009-2014 averages.
Source: CVWD 2015 UWMP, Table 6-3, p. 6-13

As of 2015, CVWD receives 378,000 AFY of Colorado River water deliveries under the QSA. see **Table 4-6** above. This includes the base entitlement of 330,000 AFY, Metropolitan/IID Approval of 20,000 AFY, 36,000 AFY of IID/CVWD First transfer, and 35,000 AFY of Metropolitan/SWP transfer. It also includes the 26,000 AFY transferred to San Diego County Water Authority (SDCWA) as part of the Coachella Canal lining project and the 3,000 AFY transfer to Indian Present Perfected Rights (PPRs). CVWD's allocation of Colorado River water will increase to 419,000 AFY in 2018, and 459,000 AFY in 2026, the reduce to 456,000 AFY in 2048 and remain at that level for the remaining 75 year term of the QSA.[54] As further discussed below, legal challenges were filed against the QSA in 2003. While several of the issues have been resolved, the litigation continues and will likely take several more years to complete.

Factors Affecting Colorado River Supplies

Several important factors have the potential to affect the long-term availability and reliability of Colorado River supplies in the Coachella Valley. Among those factors are drought conditions in the Colorado River Basin; water requirements for

[54] CVWD 2015 UWMP, pp. 6-12 to 6-13.

endangered species and habitat protection; climate change; and lawsuits challenging the validity of the QSA. A detailed discussion of these factors is presented below.

Drought Conditions and Interim Guidelines

Drought conditions in the Colorado River Basin are well documented. The period from 2000 through 2007 was the driest eight-year period in the 100-year historical record of the Colorado River. This drought in the Colorado River Basin reduced Colorado River system storage, while demands for Colorado River water supplies continued to increase. From October 1, 1999 through September 30, 2007, storage in Colorado River reservoirs decreased from 55.8 million AF (approximately 94 percent of capacity) to 32.1 million AF (approximately 54 percent of capacity), and was as low as 29.7 million AF (approximately 52 percent of capacity) in 2004. In November 2010, Lake Powell and Lake Mead were at 62 percent and 38 percent of their storage capacities, respectively (Reclamation, 2010b). As of January 2020, Lake Powell and Lake Mead were at 51 percent and 43 percent of their respective storage capacities, with total system storage reported at 52 percent capacity.[55]

In January 2001, the Secretary of the Interior adopted guidelines (the "Interim Surplus Guidelines") for use through 2016 in determining if there is surplus Colorado River water available for use in California, Arizona and Nevada. The Interim Surplus Guidelines were amended in 2007, with the new Guidelines extending through 2026. The Interim Surplus Guidelines contain a series of benchmarks for reductions in agricultural use of Colorado River water within California by set dates.[56]

The purposes of the Guidelines are to: (1) improve Reclamation's management of the Colorado River by considering trade-offs between the frequency and magnitude of reductions of water deliveries, and considering the effects on water storage in Lake Powell and Lake Mead, where Reclamation will also consider the effects on water supply, power production, recreation, and other environmental resources; (2) provide mainstream United States users of Colorado River water, particularly those in the Lower Division states, a greater degree of predictability with respect to the amount of annual water deliveries in future years, particularly under drought and low reservoir conditions; and (3) provide additional mechanisms for the storage and delivery of water supplies in Lake Mead to increase the flexibility of meeting water use needs from Lake Mead, particularly under drought and low reservoir conditions.[57]

[55] Lower Colorado Region Available Reservoir Elevations and Contents. Available at: http://www.usbr.gov/lc/region/g4000/hourly/rivops.html" http://www.usbr.gov/lc/region/g4000/hourly/rivops.html
[56] 2010 CVWMP, p. 4-28.
[57] 2010 CVWMP, p. 4-28.

As a result of the interim guidelines, recipients of Colorado River water, including CVWD, will receive deliveries with a higher degree of reliability. Due to California's Colorado River priority system, all delivery shortages would be borne by Metropolitan, which has a lower priority than CVWD (Reclamation, 2007). Consequently, no reduction in CVWD's Colorado River supplies is projected at this time.[58]

Protected Species and Other Environmental Issues

Federal and state environmental laws protecting fish species and other wildlife species have the potential to affect Colorado River operations. A number of species that are on either "endangered" or "threatened" lists under the ESAs are present in the area of the Lower Colorado River, including among others, the bonytail chub, razorback sucker, southwestern willow flycatcher and Yuma clapper rail. To address this issue, a broad-based state/federal/tribal/private regional partnership that includes water, hydroelectric power and wildlife management agencies in Arizona, California and Nevada have developed a multi-species conservation program for the main stem of the Lower Colorado River (the Lower Colorado River Multi-Species Conservation Program or "MSCP"). The MSCP allows Metropolitan to obtain federal and state permits for any incidental take of protected species resulting from current and future water and power operations of its Colorado River facilities and to minimize any uncertainty from additional listings of endangered species. The MSCP also covers operations of federal dams and power plants on the river that deliver water and hydroelectric power for use by Metropolitan and other agencies. The MSCP covers 27 species and habitat in the Lower Colorado River from Lake Mead to the Mexican border for a term of 50 years. Over the 50 year term of the program, the total cost to Metropolitan will be about $88.5 million (in 2003 dollars), and annual costs will range between $0.8 million and $4.7 million (in 2003 dollars).[59]

Potential Climate Change Impacts

Climate change has the potential to affect imported water supplies. Potential effects of global warming could also increase water demand within the Coachella Valley. Although precise estimates of potential future impacts of climate change on runoff throughout the Colorado River basin cannot be predicted with certainty, reports and data have been developed that address changes in climate and hydrology within that region. These impacts may include decrease in annual flow and increased variability, including more frequent and more severe droughts. Furthermore, even without precise knowledge of the effects, increasing temperatures alone would likely increase

[58] 2010 CVWMP, p. 4-28.
[59] MWDSC 2015 Official Statement, Special Variable Rate Water revenue Refunding Bonds, Appendix A, pp. A-23 to A-24.

losses due to evaporation and sublimation, resulting in reduced runoff.[60] More specifically, the Bureau of Reclamation's 2011 SECURE Water Act Report identifies the following climate challenges in the Colorado River basin: (1) on average, Colorado River Basin temperature is projects to increase by 5 to 6 degrees Fahrenheit during the 21st century, with slightly larger increases projected in the upper Colorado Basin; (2) precipitation is projected to increase by 2.1 percent in the upper Basin while declining by 1.6 percent in the lower Basin by 2050; (3) mean annual runoff is projected to decrease by 8.5 percent by 2050; and (4) warmer conditions will likely transition snowfall to rainfall, producing more December through March runoff and less April through July runoff.[61]

The 2011 SECURE Water Act Report also discussed potential future impacts for water and environmental resources in the Colorado River Basin. The Report notes that spring and early summer runoff reductions could translate into a drop in water supply for meeting irrigation demands and adversely impacting hydropower operations at smaller reservoirs; increased winter runoff may require infrastructure modifications or flood control rule changes to preserve flood protection, which could further reduce warm season water supplies; warmer conditions might result in increased stress on fisheries, shifts in geographic ranges, increased water demands for instream ecosystems and thermoelectric power production, increased power demands for municipal uses, including cooling, and increased likelihood of invasive species infiltrations, where endangered species issues might also be exacerbated; and warming could also lead to significant reservoir evaporation, increased agricultural water demands and losses during water conveyance and irrigation. (Id.)

In response to climate change issues, Reclamation is taking a lead role in assessing risks to Western U.S. water resources and is dedicated to mitigating risks to ensure long-term water resource sustainability. Where opportunities exist, Reclamation has begun adaptation actions in response to climate stresses as well as land use, population growth, invasive species and others. These activities include extending water supplies, water conservation, hydropower production, planning for future operations and supporting rural water development. For example, a 2010-2011 Pilot Run of the Yuma Desalting Plant increased water supplies in the lower Basin through conservation by an estimated 29,000 acre-feet, enough to supply as many as 150,000 people for one year. At Hoover Dam, new wide head range turbines are being installed that will allow more efficient power generation over a wider range of lake levels than existing turbines. Furthermore, the Department of the Interior High Priority Goal for Climate includes activities of the Landscape Conservation Cooperatives and Climate Science Centers, assessing vulnerabilities to the natural

[60] 2010 CVWMP, pp. 5-15 to 5-16.
[61] See, U.S. Department of the Interior, Bureau of Reclamation, Basin Report, Colorado River (http://www.usbr.gov/climate/SECURE/docs/coloradobasinfactsheet.pdf).

and cultural resources management by the Department and activities to adapt to the stresses of climate change. (Id.)[62]

According to DWR, increased air temperature will result in earlier snow melt runoff and a greater proportion of runoff due to rainfall. Because reservoir storage in the Colorado River basin is so large in comparison to annual basin runoff (roughly four times average runoff), a change in the timing of annual runoff would not be expected to significantly affect basin yield.[63]

Potential climate change impacts also were evaluated in the Environmental Impact Study (EIS) on the BOR interim surplus guidelines discussed above. The guidelines extend through 2026, providing the opportunity to gain valuable operating experience through the management of Lake Powell and Lake Mead, particularly for low flow reservoir conditions, and to improve the bases for making additional future operational decisions during the interim period and thereafter. The shortage sharing guidelines are crafted to include operational elements that would respond if potential impacts of climate change and increased hydrologic variability occur. The guidelines include coordinated operational elements that allow for adjustment of Lake Powell releases to respond to low average storage conditions in Lake Powell or Lake Mead. In addition, the guidelines enhance conservation opportunities in lower basin and retention of water in Lake Mead.[64]

While impacts from climate change cannot be quantified at this time, Coachella Valley water supplies are uniquely protected from potential impacts of climate change and corresponding shortages by: (1) California's first priority for Colorado River water supplies in the lower Colorado River basin, and (2) Coachella's high priority for Colorado River supplies among California users of Colorado River water.[65]

QSA Litigation

On November 5, 2003, IID filed a validation action in Imperial County Superior Court, seeking a judicial determination that thirteen agreements associated with the IID/SDCWA water transfer and the QSA are valid, legal and binding. Other lawsuits also were filed contemporaneously challenging the execution, approval and implementation of the QSA on various grounds. All of the QSA cases were coordinated in Sacramento Superior Court. Between early 2004 and late 2009, a

[62] See also, United States Geological Survey, Effects of Climate Change and Land Use on Water Resources in the Upper Colorado Basin, Fact Sheet 2010-3123, January 2011.
[63] Progress on Incorporating Climate Change into Management of California's Water Resources, Technical Memorandum Report, California Department of Water Resources, October 2006.
[64] 2010 CVWMP, pp. 5-15 to 5-16.
[65] 2010 CVWMP, p. 5-16.

number of pretrial challenges and dispositive motions were filed by the parties and ruled on by the court, which reduced the number of active cases and narrowed the issues for trial, the first phase of which began in November 2009 and concluded in December 2009. One of the key issues in this first phase was the constitutionality of the QSA Joint Powers Agreement, pursuant to which IID, CVWD and SDCWA agreed to commit $163 million toward certain mitigation and restoration costs associated with implementation of the QSA and related agreements, and the State agreed to be responsible for any costs exceeding this amount. A final judgment was issued on February 11, 2010, in which the trial court held that the State's commitment was unconditional in nature and, as such, violated the appropriation requirement and debt limitation under the California Constitution. The trial court also invalidated eleven other agreements, including the QSA, because they were inextricably interrelated with the QSA Joint Powers Agreement. Lastly, the trial court ruled that all other claims rose by the parties, including CEQA claims related to the QSA Programmatic EIR and the IID Transfer Project EIR, were moot.[66]

In March 2010, Metropolitan, IID, CVWD, SDCWA, the State and others filed notices of appeal challenging various aspects of the trial court's ruling. On December 7, 2011, the Court of Appeal issued its ruling reversing, in part, the trial court's ruling. In particular, the Court held that while the State's commitment to fund mitigation costs in excess of $163 million was unconditional, actual payment of such costs was subject to a valid appropriation by the Legislature, as required under the California Constitution. Moreover, the State's commitment did not create a present debt in excess of the State Constitution's $300,000 debt limit. Thus, the QSA Joint Powers Agreement was held to be constitutional. The Court of Appeal also rejected other challenges to this agreement, including that it was beyond the State's authority, there was no "meeting of the minds," and there was a conflict of interest. In light of its ruling, the court of appeal remanded the matter back to the trial court for further proceedings on the claims that had been dismissed as moot, including the CEQA claims.

On June 4, 2013, the trial court issued its ruling on remand, validating the QSA and eleven related agreements while denying the remaining legal challenges that were brought against the QSA. Among other important rulings, the court upheld the CEQA review that was prepared for the QSA. Among its decisions on specific environmental issues, the court determined that the potential air quality impacts to the Salton Sea were adequately analyzed under CEQA. The court also found that the use of a baseline consisting of existing and predicted future conditions of the Salton Sea was appropriate to measure the impacts of the long-term water transfers. It denied

[66] 2010 CVWMP, pp. 4-28 to 4-29; MWDSC 2015 Official Statement, Special Variable Rate Water revenue Refunding Bonds, Appendix A, p. A-21.

project opponents' arguments that more alternatives should have been considered and found that the water agencies' conclusion that use and transfer of water to the San Diego area would not induce growth was supported by record evidence. The court also addressed the nature of changes made to the agreements after the environmental documentation was completed and the procedural decision of water districts to designate themselves as "co-lead agencies" under CEQA, finding that these decisions did not violate CEQA. As a result, the court concluded that the record supported the lead agencies' conclusions relating to CEQA and upheld the validity of the QSA and eleven related agreements.

In January 2010, a separate complaint was filed by the County of Imperial and the Imperial County Air Pollution Control District alleging that execution and implementation of three QSA-related agreements violate the federal National Environmental Policy Act (NEPA) and the federal Clean Air Act (CAA). The complaint named the Department of the Interior, Secretary of the Interior, Bureau of Reclamation and Commissioner of Reclamation as defendants, and Metropolitan, CVWD, IID and SDCWA as real parties in interest. With respect to NEPA, the complaint alleged that the environmental impact statement prepared by the Bureau of Reclamation failed to adequately analyze potential impacts on the Salton Sea and on land use, growth and socioeconomics; improperly segmented various project components; failed to address cumulative impacts; and failed to address mitigation of potential impacts. With respect to the CAA, the complaint alleged that the Bureau of Reclamation failed to conduct a conformity analysis as required under the Act and Imperial County Air Pollution Control District's own rules. In April 2012, the court ruled against the plaintiffs and in favor of the defendants on all claims. The court held that the plaintiffs lacked standing to pursue NEPA and CAA claims and that the NEPA claims lacked merit. In May 2012, the plaintiffs filed a notice of appeal and the non-federal defendants filed a notice of cross-appeal. Briefing on all appeals was completed in 2013, and in May 2014 the United States Court of Appeals for the Ninth Circuit issued a decision that upheld the District Court ruling and found that no violations of NEPA or the CAA occurred in connection with the QSA.

Colorado River Basin Study

In December 2012, the Bureau of Reclamation (BOR) issued its Colorado River Basin Water Supply and Demand Study (2012 Study). According to BOR, the 2012 Study was prepared against the backdrop of challenges and complexities of ensuring a sustainable water supply and meeting future demand in the Colorado River system. Notably, the 2012 Study recognizes that because of the Colorado River system's ability to store approximately 60 million acre-feet of water (or nearly four years of average natural flow of the River), all requested deliveries have been met in the Lower Basin, despite recently experiencing the worst 11-year drought in the last

century.[67] The 2012 Study concludes that, without additional future water management actions among the Upper and Lower Basin states, a wide range of future imbalances is plausible, primarily due to uncertainties inherent in future water supply.[68] Comparing the median long-term water supply projections against the median long-term water demand projections, and factoring in the myriad factors having the potential to affect the availability and reliability of River supplies and demands (such as climate change, species and other environmental issues, social trends, economic and legal forces, and technical capabilities), the 2012 Study shows that a long-term projected imbalance of 3.2 million acre-feet or more could occur by the year 2060. To address such potential long-term imbalances, the 2012 Study identifies and discusses a broad range of potential options to resolve the differences between water supply and demand. During the study period, over 150 options were received and organized into four groups: (1) those that increase Basin water supplies; (2) those that reduce Basin water demands; (3) those that focus on modifying operations; and (4) those that focus primarily on Basin governance.[69] Moreover, recognizing that no single option is likely sufficient to resolve potential water supply and demand imbalances, the 2012 Study developed groups and portfolios of options to reflect different adaptive strategies.[70] Importantly, the 2012 Study recognizes that *complete* elimination of Basin vulnerability is not likely obtainable, yet concludes that implementation of various adaptive management options results in a significant reduction in vulnerability (e.g., the percentage of future scenarios resulting in Lake Mead elevations being less than 1,000 feet msl is reduced from 19 percent to only 3 percent).[71] Indeed the 2012 Study states that implementation of management portfolios are projected to be successful in significantly improving the resiliency of Basin resources to vulnerable hydrologic conditions. Similar to the extraordinary conservation and management efforts being undertaking throughout the Coachella Valley, the 2012 Study concludes that supply augmentation, water reuse and conservation will be critical tools in managing potential supply and demand imbalances.

4.3.2.2 State Water Project (SWP) Water

The SWP delivers water supplies from the Sacramento Delta to areas throughout the State, including Southern California. The system includes 660 miles of aqueduct and conveyance facilities extending from Lake Oroville in the north to Lake Perris in the south.

[67] 2012 Study, Executive Summary, p. ES-1.
[68] 2012 Study, Executive Summary, p. ES-6.
[69] 2012 Study, Executive Summary, p. ES-7.
[70] 2012 Study, Executive Summary, p. ES-11.
[71] 2012 Study, Executive Summary, p. ES-14.

SWP Contracts

The California Department of Water Resources (DWR) holds direct contracts to deliver SWP supplies to 29 contracting agencies that hold particular allotments to the annual yield of the SWP. These contracts run until 2035, with terms for renewal, and form the basis for the construction, operation and maintenance of the SWP. There are several different SWP Contract Water types including Table A. Table A water is delivered in accordance with contractual allotments and is given first priority for delivery.

CVWD and DWA are both State Water Contractors. CVWD's original right to SWP supply (Table A Allotment) was 23,100 acre-feet per year (ac-ft/yr) and DWA's original SWP Table A allotment was 38,100 ac-ft/yr, for a combined Table A allotment of 61,200 ac-ft/yr. In 2004, CVWD purchased an additional 9,900 ac-ft/yr of SWP water from the Tulare Lake Basin Water Storage District, which brought CVWD's SWP Table A Allotment to 33,000 ac-ft/yr. In 2007, CVWD and DWA made a second purchase of SWP water from the Tulare Lake Basin Water Storage District. CVWD purchased 5,250 ac-ft/yr and DWA purchased 1,750 ac-ft/yr. Also in 2007, CVWD and DWA completed the transfer of 12,000 ac-ft/yr and 4,000 ac-ft/yr, respectively, from the Berrenda Mesa Water District. These acquisitions brought CVWD's annual SWP Table A Allotment to 50,250 ac-ft/yr, and DWA's annual SWP Table A Allotment to 43,850 ac-ft/yr. In addition to these amounts, CVWD and DWA have entered an agreement with MWD whereby MWD has permanently transferred 88,100 ac-ft/yr and 11,900 ac-ft/yr of SWP Table A Allotments to CVWD and DWA, respectively. Generally, the agreement enables MWD to call back certain amounts during dry and critical dry years, where in other years CVWD and DWA recharge the SWP supplies within the Coachella Valley Groundwater Basin. In sum, and as further provided herein, up to 138,350 ac-ft/yr of SWP Table A Allotment is available to CVWD, and up to 55,750 ac-ft/yr is available to DWA. **Table 4-7** summarizes the CVWD and DWA total allocations of Table A SWP water.

In addition to the SWP allotments discussed above, CVWD and DWA secured additional rights to SWP supplies pursuant to a 2003 exchange agreement with Metropolitan. Historically, Metropolitan has not made full use of its SWP Table A Amounts in normal and wet years. Under the 2003 exchange agreement, CVWD and DWA acquired 100,000 AFY of Metropolitan's SWP Table A water as a permanent transfer, commencing in 2005. The terms of the agreement provide that Metropolitan has the option to call back the transferred water under certain conditions. This option must be exercised no later than April 30 of each year. Metropolitan's callback options are to be exercised in two 50,000 AF blocks. To estimate conservatively the average supply from this transfer, two scenarios are considered – without and with call-back. Without call-back, CVWD and DWA can receive SWP Exchange Water based on the

estimated DWR reliability (see discussion below). With call-back, it is assumed that Metropolitan would exercise its option to callback the 100,000 AFY in four wet years out of every 10 years and the amount of water called back would be deducted from average SWP exchange deliveries. The actual frequency of callback would depend on the availability of Metropolitan's water supplies to meet its demands, the price of the callback water, and the ability of Metropolitan to store or use the callback water. Since 2005, Metropolitan has exercised its call-back option only once in 2005.

Table 4-7
State Water Project Water Sources (AFY)

	Original SWP Table A	Tulare Lake Basin Transfer #1	Tulare Lake Basin Transfer #2	MWD Transfer	Berrenda Mesa Transfer	Total
CVWD	23,100	9,900	5,250	88,100	12,000	138,350
DWA	38,100		1,750	11,900	4,000	55,750
Total:	**61,200**	**9,900**	**7,000**	**100,000**	**16,000**	**194,100**

Source: 2010 CVWMP Update, Table 4-4
[1]CVWD purchase of Table A water from the Tulare Lake Basin Water Storage District in 2004.
[2]CVWD and DWA purchase of Table A SWP water from Tulare Lake Basin in 2007.
[3]CVWD and DWA acquired Metropolitan's SWP Table A water as a permanent transfer Under the 2003 Exchange Agreement.
[4]CVWD and DWA transfer of Table A water from the Berrenda Mesa Water District in 2007.

CVWD and DWA, as SWP contractors, have the ability to purchase additional SWP supplies on an interruptible basis as the opportunity presents. Contractors may choose to offer their allocated Table A water in excess of their needs, designated Turnback Pool water, to other contractors through two pools (A and B) in February and March of a given year. This water can be purchased for 50 percent (Pool A) or 25 percent (Pool B) of the Delta Water Charge plus the Variable OMP&R Transportation and Off-Aqueduct Power Charges. The first significant purchase by CVWD and DWA occurred from 1996 through 1999 when large amounts of Turnback Pool water were available. Available Turnback Pool water is allocated between interested parties based on their Table A amounts. During that period, CVWD and DWA purchased 276,000 acre-feet of water for recharge at Whitewater.[72]

SWP contractors may also receive water under Article 21 of their contracts. Article 21 water is water that SWP contractors may receive on a short-term basis in addition to their Table A water, if they request it. Article 21 water is used by many SWP contractors to help meet demands when allocations are less than 100 percent.[73]

[72] Mission Creek-Garnet Hill Subbasins Water Management Plan, Final Report, January 2013.
[73] DWR 2017 Final Delivery Capability Report, p. 20.

Notably, Article 21 water is typically available only in wet years and when aqueduct capacity is available. Article 21 water is apportioned to those contractors requesting it in the same proportion as their Table A water. According to DWR, Article 21 water is available to a SWP contractor only if the following conditions are met: "Excess water" is flowing through the Delta; the contractor is able to use the surplus water directly, such as by offsetting the use of groundwater that would otherwise occur, or can store it in its own system; delivering the water will not interfere with Table A allocations and SWP operations; and capacity is not being used for SWP purposes or scheduled SWP deliveries.[74] The cost of Article 21 water is the Variable OMP&R Transportation and Off-Aqueduct Power Charges and any incremental DWR power cost. CVWD and DWA purchased 35,600 acre-feet of Article 21 water in 2000 and 800 acre-feet in 2002 and 2003.[75] According to DWR, the estimated long-term average availability of Article 21 water is 50,000 acre-feet per year under current conditions, with variations according to average, dry-period and wet-period conditions.[76]

Another potentially available, intermittent source of SWP water to the Coachella Valley is the Yuba River Accord Dry Year Water Purchase Program. In March 2008, CVWD and DWA entered into separate agreements with DWR for the purchase and conveyance of supplemental SWP water under the Yuba River Accord Dry Year Water Purchase Program, which provides dry year supply through a water purchase agreement between DWR and Yuba County Water Agency (YCWA). The agreement was part of the Lower Yuba River Accord, which settled long stranding operational and environmental issues over in-stream flow requirements for the lower Yuba River. Yuba Accord water transfers include both surface water and groundwater substitution transfers for an estimated total of up to 140,000 AFY. The available water is allocated among participating SWP contractors based on their Table A Amounts. It is estimated that CVWD and DWA may be able to purchase up to 4 percent of Table A or 5,600 AFY, and 1.3 percent or 1,820 AFY, respectively, for a total of 7,420 AFY. The amount of water available for purchase in a given year varies and will be based on DWR's determination of the Water Year Classification. These agreements provide for the exchange of these supplies with Metropolitan for CRA water in accordance with existing exchange agreements. CVWD and DWA obtained 1,836 AF in 2008 and 3,482 AF in 2009 from this program.[77]

Historic Initial and Final Allocations and Historic Deliveries

Table 4-8, above, summarizes the historic initial and final allocations of SWP Table A water starting in 1991 and extending to 2018. The table also shows imported water deliveries to the East Whitewater Subbasin.

MWD Exchange Agreements

Since currently there is no conveyance facility to deliver SWP water to the Coachella Valley, CVWD and DWA cannot directly receive their SWP supplies. Instead, pursuant to certain exchange agreements, the CVWD and DWA SWP water is delivered to Metropolitan, which in turn delivers an equal amount of CRA water to CVWD and DWA to be recharged at the Levy, Whitewater and Mission Creek recharge facilities. CVWD and DWA are required to pay for their respective SWP costs and MWD is required to pay for its CRA costs. The original exchange agreements were entered in 1967. In 1983, the agreements were extended to 2035 (CVWD-Metropolitan, 1983; DWA-Metropolitan, 1983).

CVWD has operated a pilot recharge facility at Dike 4 near Avenue 62 since 1997. Construction of the full scale Levy facility was completed in mid-2009. Thereafter, substantially more recharge has occurred in the East Whitewater Subbasin. The Levy facility has an estimated capacity to recharge 40,000 AFY. In addition to the Levy facility, CVWD is planning construction of the Martinez Canyon recharge facility that is expected to recharge between 20,000 and 40,000 AFY on an average basis. The 2010 CVWMP considers alternative recharge scenarios to effectively recharge imported water at Whitewater, Levy, and Martinez to provide the greatest benefit for the groundwater basin.

SWP Reliability

DWR issues the State Water Project Delivery Capability Report every two years, with the most recent final version issued in March 2018 (the DWR 2017 Report). In its last several updates, DWR has projected reductions in average SWP water deliveries in comparison to 2005. The DWR 2017 Report identifies several factors that have the potential to affect the availability and reliability of SWP supplies. Although the DWR 2017 Report presents an extremely conservative projection of SWP delivery reliability, it remains the best available information concerning the SWP. Following is information and a brief summary of several factors identified in the DWR 2017 Report as having the potential to affect the availability and reliability of SWP supplies.

FWS and NMFS Biological Opinions

In December 2008 and June 2009, respectively, the United States Fish and Wildlife Service (FWS) and the National Marine Fisheries Service (NMFS) issued biological opinions (BiOps) setting forth each agency's conclusions regarding the effects that the proposed long-term coordinated operations of the SWP and Central Valley Project (CVP) would have on threatened and endangered fish species in the Delta.[78] Both BiOps conclude that the operation of the SWP and CVP as proposed by DWR and the Bureau of Reclamation would jeopardize the continued existence of the protected species. Because FWS and NMFS reached "jeopardy" conclusions, each was required by the federal Endangered Species Act (ESA) to develop a Reasonable and Prudent Alternative (RPA) to the proposed project, and to include that RPA in its respective BiOp. According to their terms, the RPAs developed and adopted by FWS and NMFS impose various new restrictions and requirements on SWP and CVP operations.

As applied to the SWP, the RPAs included in the BiOps have the potential to result in substantially reduced water exports from the Delta. Preliminary estimates prepared by DWR have indicated that, in comparison to the level of SWP exports from the Delta that previously were authorized under State Board Decision 1641 (D-1641),[79] the FWS BiOp could reduce SWP deliveries by 18 to 29 percent during average and dry conditions, respectively, and the NMFS BiOp could reduce SWP deliveries by an additional 10 percent (for an aggregate reduction of 28 to 39 percent). Those potential reductions, however, cannot be predicted with certainty because the RPA restrictions are dependent upon highly variable factors such as hydrologic conditions affecting Delta water supplies, flow conditions in the Delta, migratory and reproductive patterns of the protected species, and numerous other non-project factors that impact the health and abundance of fish species and their habitats. As further discussed below, the RPA restrictions contained in the BiOps have been expressly accounted for in DWR's 2015 Report and future projections of SWP deliveries.

[78] The December 15, 2008 FWS BiOp evaluated impacts to the delta smelt. The June 4, 2009 NMFS BiOp evaluated impacts to winter-run and spring-run Chinook salmon, steelhead, green sturgeon, and resident killer whales.

[79] D-1641 implements the objectives of the 1995 Bay-Delta Plan and imposes flow and water quality objectives to assure protection of beneficial uses in the Delta. The requirements of D-1641 address, among other things, standards for fish and wildlife protection, municipal and industrial water quality, agricultural water quality, and salinity. D-1641 imposed a new operating regime for the Delta, including measures such as X2, an export/inflow ratio, and the Vernalis Adaptive Management Program (VAMP). The standards under D-1641 are accomplished through requirements and conditions imposed on the water right permits for the SWP, the CVP and others. (*See*, California Water Plan Update 2009, Regional Reports Volume 3, Sacramento-San Joaquin River Delta at DB-6.)

FWS BiOp Litigation

In early 2009, the State Water Contractors, the San Luis Delta-Mendota Water Authority, and several individual water agencies holding contracts for SWP and CVP supplies filed legal challenges against the FWS BiOp regarding delta smelt.[80] In November 2009, the Federal District Court of the Eastern District of California granted summary judgment on the claim made by several plaintiffs that the federal defendants violated the National Environmental Policy Act (NEPA) by failing to perform NEPA analysis prior to provisionally adopting and implementing the FWS BiOp and RPA. Further, in May 2010, the court issued Findings of Fact and Conclusions of Law on a motion for preliminary injunction, which confirmed the court's prior NEPA ruling and also determined that plaintiffs were likely to prevail on their claims that FWS violated the federal ESA and the Administrative Procedure Act (APA) in adopting the RPA for delta smelt. Thereafter, the parties filed motions for summary judgment to obtain a final ruling in the cases, and those motions were argued in early July 2010. In March 2011, the court issued a final decision that invalidated the FWS BiOp and RPA in several respects and ordered FWS to prepare a new BiOp. FWS and others appealed that decision to the Ninth Circuit Court of Appeals. In March 2014, the Court of Appeals issued an opinion that reversed the District Court decision and determined that the FWS BiOp and RPA did not violate the ESA or the APA. The Court of Appeals ruled, however, that the Bureau of Reclamation (BOR) must prepare an Environmental Impact Statement under NEPA to evaluate the effects of the BiOp. To date that NEPA analysis has not been completed. In the meantime, FWS, DWR and BOR continue to use the RPA measures as a guideline for restricting SWP and CVP operations to protect delta smelt.

NMFS BiOp Litigation

After issuance of the NMFS BiOp in June 2009, the State Water Contractors and other water agencies filed legal challenges against the BiOp.[81] In May 2010, the Federal District Court for the Eastern District of California ruled that the federal defendants violated NEPA by failing to analyze the impact of the BiOp and RPA on humans and the human environment. The court also ruled that plaintiffs were likely to prevail on their claims that NMFS violated the federal ESA and the APA in adopting the RPA. As with the delta smelt litigation, the parties also filed motions for summary judgment to obtain a final ruling in the cases. In September 2011, the court issued a final decision that invalidated the NMFS BiOp and RPA and ordered NMFS to prepare a new BiOp. In December 2014, the Court of Appeals issued an opinion that reversed the District Court decision and held that NMFS's BiOp was sufficient and that NMFS's

[80] *The Consolidated Delta Smelt Cases*, E.D. Cal. 1:09-CV-00407-OWW-GSA.
[81] *The Consolidated Salmon Cases*, E.D. Cal. 1:09-CV-1053-OWW-DLB.

adoption of the BiOp was not arbitrary and capricious. Similar to the delta smelt case (above), the Court of Appeals ruled that the Bureau of Reclamation (BOR) must prepare an Environmental Impact Statement under NEPA to evaluate the effects of the NMFS BiOp. To date that NEPA analysis has not been completed. Meanwhile, NMFS, DWR and BOR continue to use the RPA measures as a guideline for restricting SWP and CVP operations to protect listed anadromous.

Consistency Determination Litigation

Because the delta smelt and salmon species that are the subject of the FWS and NMFS BiOps are also protected under the California Endangered Species Act (CESA), the SWP and CVP are required to obtain take authorization for project operations from the California Department of Fish and Wildlife (DFW, formerly Department of Fish and Game). In July 2009 and September 2009, respectively, DFW issued "consistency determinations" which found that SWP and CVP operations do not violate CESA to the extent that such operations are in compliance with the RPAs set forth in the FWS and NMFS BiOps. Because the consistency determinations are issued under state law, and thus could remain in effect even if the federal BiOps were overturned, the State Water Contractors and the Kern County Water Agency filed legal challenges against the consistency determinations. The cases were stayed for years pending the final outcome of *The Consolidated Delta Smelt Cases* and *The Consolidated Salmon Cases*.[82] In late 2015, the legal challenges against the consistency determinations were dismissed, thus generally the RPAs in the federal BiOps serve as the regulatory framework for take authorization under CESA.

Longfin Smelt Protections

Regulatory actions related to longfin smelt also have the potential to affect the availability and reliability of SWP supplies. In February 2008, longfin smelt were listed as a "candidate" species under CESA, and DFW imposed certain interim restrictions on SWP operations for the protection of longfin smelt and its critical habitat. In February 2009, shortly before longfin smelt were officially listed as a "threatened" species under CESA, DFW issued Incidental Take Permit No. 2081-2009-001-03 (the Permit) to DWR, which imposes various terms and conditions on the ongoing and long-term operations of SWP facilities in the Delta. The operating restrictions under the Permit are based in large part on the restrictions imposed on the SWP by the 2008 FWS BiOp for delta smelt (see above). The resulting water supply reductions under the Permit depend on several variable factors, such as Delta hydrology, migratory and reproductive patters of longfin smelt, and other factors

[82] *See*, *e.g.*, *State Water Contractors v. Cal. Dept. of Fish and Game*, Sac. Sup. Ct. Case No. 34-2010-80000552; *State Water Contractors v. Cal. Dept. of Fish and Game*, Sac. Sup. Ct. Case No. 34-2010-80000560.

affecting species abundance in the Delta. Notably, DWR has not indicated whether any particular reductions in SWP exports are likely to result from the Permit. In March 2009, a legal challenge was filed against the Permit.[83] Although that litigation has been currently stayed pursuant to a stipulation of the parties, the challenge puts DFW's ability to enforce the Permit into question.

Development of Delta Plan and Delta Flow Criteria Pursuant to New State Laws

In November 2009, the California Legislature enacted SBx7-1 as part of a comprehensive package related to water supply reliability, ecosystem health, and the Delta.[84] Among other things, SBx7 1 creates the Delta Stewardship Council (Council) and directs the Council to develop a management plan for the Delta by January 1, 2012 (the Delta Plan). In May 2013, the Council approved and certified a Final Programmatic Environmental Impact Report (PEIR) for the proposed Delta Plan. Various agencies and organizations have filed legal challenges against the PEIR. (See, *State Water Contractors et al. v. Delta Stewardship Council*, Sacramento County Superior Court, Judicial Council Coordinated Proceeding No. 4758.) The coordinated challenges allege that the Council exceeded its authority under the Sacramento-San Joaquin Delta Reform Act of 2009 and failed to analyze the Plan's impacts under the California Environmental Quality Act. The court has scheduled a Case Management Conference for September 21, 2015. The litigation is expected to take many years to resolve, and at this point the potential outcome of the litigation or its related effects are too speculative to determine or meaningfully evaluate.

In addition, the State Board was directed to develop flow criteria for the Delta to protect public trust resources, including fish, wildlife, recreation and scenic enjoyment, and DFW was required to identify quantifiable biological objectives and flow criteria for species of concern in the Delta. In August 2010, the State Board adopted Resolution No. 2010-0039 approving its report entitled "Development of Flow Criteria for the Sacramento-San Joaquin Delta Ecosystem" (Flow Criteria). The State Board report concludes that substantially higher flows are needed through the Delta than what has occurred in previous decades in order to benefit zooplankton and various fish species.[85] Separately, in September 2010, DFW issued a draft report entitled "Quantifiable Biological Objectives and Flow Criteria for Aquatic and Terrestrial Species of Concern Dependent on the Delta" (DFW Report). The DFW Report is based on similar biological objectives and recommends Delta flows similar

[83] *See State Water Contractors v. California Dept. of Fish and Game, et al.*, Sac. Sup. Ct. Case No. 34-2009-80000203.
[84] SBX7-1 became effective February 3, 2010 and adds Division 35 to the California Water Code (commencing with Section 85300). Division 35 is referred to as the Sacramento-San Joaquin Delta Reform Act of 2009.
[85] Flow Criteria at 5-8.

to those set forth in the State Board's Flow Criteria.[86] The court held a Case Management Conference on September 21, 2015, at which time the court established hearing dates spanning from January to May 2016 related to the various causes of action in the case. Also of importance, both the State Board and DFW acknowledge that their recommended flow criteria do not have any regulatory or adjudicatory effect, although they may be used to inform the Council as it prepares the Delta Plan, and may be considered as the Bay Delta Conservation Plan (BDCP) process moves forward.[87]

Public Trust Challenge to Delta Exports

In 2010, environmental and fisheries advocates filed suit in Sacramento County Superior Court alleging that water exports from the Delta violate the public trust doctrine and are unconstitutional. (See, *California Water Impact Network v. SWRCB* (Sac. County Sup. Ct. Case No. 34-2010-80000653.) The plaintiffs in that case seek to compel the State Board to adopt and enforce flow, salinity, and temperature standards in the Delta. DWR is also a respondent in the case, and State Water Contractors (SWC) have intervened as parties. DWR and the SWC contend that plaintiffs' claims already have been determined by litigation related to the State Board Water Right Decision 1641 that is now final. In 2011, the United States Bureau of Reclamation, which was named as a real party in interest, filed a statement that it will not waive sovereign immunity. An administrative record has not been submitted and currently there is no activity in the case.

Monterey Plus Litigation

In 2010, the Central Delta Water Agency and others filed suit in Sacramento County Superior Court to invalidate the Monterey Plus EIR and the Monterey Plus Project. (See, *Central Delta Water Agency, et al. v. DWR* (Sac. County Sup. Ct. Case No. 34-2010-80000561.) In April 2012, the court entered an order bifurcating the issues for a series of trials. Phase one, dealing with affirmative defenses based upon statute of limitations, laches, and mootness was tried by the court in November 2012. In January 2013, the court issued its final statement of decision, finding that plaintiffs' second and third causes of action (for reverse validation and mandamus) were untimely. The court also found that challenges to the DWR-KWBA transfer were barred by certain defenses. The hearing on the remaining CEQA cause of action challenging the sufficiency of the 2010 EIR was held in January 2014. The Central Delta I and Rosedale CEQA challenges were consolidated for a combined hearing on the CEQA issues. The court issued its ruling in March 2014, rejecting most of the

[86] DFW Report at 13.
[87] Flow Criteria at 3, 10; DFG Report at ES-4.

plaintiffs' challenges, yet determining that the EIR's discussion of the Kern Water Bank's future impacts requires further analysis. The hearing on the remedies phase related to the analysis of the Kern Water Bank was held in September 2014. The court issued a final ruling in October 2014 requiring decertification of the Monterey Plus Amendment EIR, noting however that DWR is not required to prepare an entirely new EIR and that only the new EIR sections will be subject to challenge. Importantly, prior project approvals are to remain in place and the Kern Water Bank may continue to operate while DWR corrects the EIR. Plaintiffs filed an appeal in December 2014 and the appeal process is in its early stages.

DWR 2017 SWP Final Delivery Capability Report

DWR continues to evaluate the issues affecting SWP exports from the Delta and how those issues may affect the long-term availability and reliability of SWP deliveries to water agencies that hold SWP contracts. As indicated above, in March 2018, DWR released its 2017 SWP Final Delivery Capability Report. According to the 2017 Report, the average delivery of contractual SWP Table A supply is projected to be 62 percent under current conditions.[88] Within that long-term average, SWP Table A deliveries can range from 8 percent (single dry year) to 99 percent (single wet year) of contractual amounts under current conditions.[89] Under current conditions, contractual amounts are projected to range from 28 to 33 percent during multiple-dry year periods, and from 76 to 95 percent during multiple wet periods.[90]

To ensure a conservative analysis, the DWR 2017 Report expressly assumes and accounts for the institutional, environmental, regulatory, and legal factors affecting SWP supplies, including but not limited to: water quality constraints, fishery protections, other D-1641 requirements, and the operational limitations imposed by the FWS and NMFS BiOps that are discussed above. The 2017 Report also considers the potential effects of Delta levee failures and other seismic or flood events.[91] Notably, the 2015 Report assumes that all of these restrictions and limitations will remain in place over the next 20-year period and that no actions to improve the Delta will occur, even though numerous legal challenges, various Delta restoration processes, and new legal requirements for Delta improvements are currently underway (i.e., Bay Delta Conservation Plan, Delta Vision, Delta Plan, etc.). Finally, DWR's long-term SWP delivery reliability analyses incorporate assumptions intended to account for potential supply shortfalls related to global climate change.[92] These

[88] DWR 2017 Final Delivery Capability Report, pp. 25, Table 5-5.
[89] DWR 2017 Final Delivery Capability Report, pp. 24-25, Tables 5-4 and 5-5.
[90] DWR 2015 Final Delivery Capability Report, pp. 25-27, Tables 6-3 and 6-4.
[91] See, e.g., DWR 2017 Final Delivery Capability Report, pp. 10-13.
[92] See, e.g., DWR 2017 Final Delivery Capability Report, pp. 10-13.

and other factors result in DWR presenting an extremely conservative projection of SWP delivery reliability in its 2017 Report.

DWR's most recently published SWP Delivery Capability Report (2017) demonstrates that the projected long-term average delivery amounts of contractual SWP Table A supplies are essentially the same as those projected in the Final 2013 Report (e.g. 62 percent). As noted, the projections developed by DWR are predicated on extremely conservative assumptions, which make the projections useful from a long-range urban water supply planning perspective.[93] While various factors could lead DWR to increase its projections in its next scheduled Report, the 2017 Report remains the best available information concerning the long-term delivery reliability of SWP supplies.

As shown on **Table 4-5** above, even though the DWR 2017 Report demonstrates an average 60 percent delivery reliability for SWP Table A supplies over the next 20-year projection, the 2010 CVWMP is even more conservative in its assumption of 50 percent. Indeed, notwithstanding the 2017 Report, the 2010 CVWMP assumes future SWP Table A deliveries to the Coachella Valley to be only 50 percent of Table A to account for potential water reductions that could occur in the absence of programs to balance Delta environmental concerns and water supply needs, the DWR 2017 Report was not available during the CVWMP preparation.[94] In light of the SWP reliability discussion presented above, in particular the BDCP implementation program, the CVWMP 50 percent reliability assumption is extremely conservative.

4.3.2.3 Surface Water

Surface water flow in the City of Desert Hot Springs consists of ephemeral or intermittent streams that originate in the San Bernardino and Little San Bernardino mountains. Mission Creek is the only stream that flows to the valley floor on a relatively consistent basis, but the stream usually disappears underground a short distance from its entrance into the valley.[95] The District does not use, or plan to use, self-supplied surface water as part of its water supply.

4.3.2.4 Recycled Water

MSWD operates two wastewater treatment facilities that have a combined capacity of 2.18 mgd. Both MSWD wastewater treatment plants use an extended aeration

[93] See, e.g., *Sonoma County Water Coalition v. Sonoma County Water Agency* (2010) 189 Cal.App.4th 33; *Watsonville Pilots Association v. City of Watsonville* (2010) 183 Cal.App.4th 1059; *Vineyard Area Citizens for Responsible Growth v. City of Rancho Cordova* (2007) 40 Cal.4th 412.
[94] 2010 CVWMP Update, Section 4.3.3, SWP Deliveries; see also 2011 SPEIR, pages 3-6 to 3-7.
[95] 2013 MC-GH WMP, p. 4-1

process for treatment and dispose of the secondary wastewater, which is not disinfected, in adjacent percolation/evaporation ponds located within the plant on the southwest (potable water) side of the Mission Creek Fault. In addition, effluent is used for irrigation and maintenance at the treatment plants. The District currently does not have recycled water use within their service area; however, there are plans to use recycled water for the irrigation of golf courses, parks, medians and greenbelts in the future once their Regional Wastewater Treatment Plant is operational.[96]

4.3.2.5 Desalinated Water

Desalination has been identified as a potential solution for increasing water supplies and reducing groundwater overdraft for the Coachella Valley region. However, desalination requires complicated technologies and is a high energy consuming technology. Desalination offers many potential benefits including: increases water supply and reliability during drought periods, reduced dependency on imported supplies by developing a local supply source, protection of public health, and facilitates more recycling and reuse, given the lower salinity of the source. Desalination strategies being considered by the Coachella Valley IRWMP region include: CVWD Agricultural Drain Water Desalination Project, CVWD Desalination Pilot Project, and Desalination of Colorado River Water. However, the District does not currently use self-supplied desalinated water as part of its water supply.[97]

4.3.2.6 Water Transfers and Purchases

The District has not entered into any agreements for the transfer or exchange of water. However, the District cooperates with DWA and Metropolitan for the Desert Water Agency/Coachella Valley Water District (DWCV) SWP Table A Transfer and the DWCV Advance Delivery Program.[98]

4.3.3 Summary of Water Supply Sources

MSWD currently receives 100 percent of its water supply from groundwater production and does not purchase imported water from a water wholesaler. However, CVWD and DWA are remediating the overdraft condition of the groundwater in the Upper Coachella Valley by replenishment with Colorado River and State Water Project (SWP) Exchange Water from Metropolitan. District groundwater meets all Federal and State primary and secondary water quality standards without treatment (other than chlorination for disinfection) with the exceptions that groundwater from Well Nos. 26A, 28, and 34 is treated at each well site to meet the primary water quality

[96] MSWD 2015 UWMP, p. 6-25

[98] MSWD 2015 UWMP, p. 6-28

standard for uranium. Construction of the proposed West Valley Water Reclamation Facility is projected to complete by 2022, with tertiary treatment facilities for recycled water to be included in a subsequent phase and anticipated to accommodate a recycled water demand of 1,120 AFY. District water supplies for 2015 and projected District water supplies through 2040 are shown in **Table 4-9**.[99]

Table 4-9
Current and Projected Water Supplies

Water Supply Source	Additional Detail	Current Water Supply	Projected Water Supply			
		2015	2020	2025	2030	2035
Groundwater	Coachella Valley Basin / District Wells	8,430	9,469	10,508	11,547	12,586
Recycled Water	RWWTP	1,120	2,200	3,600	5,000	6,400
Total:		**9,550**	**11,669**	**14,108**	**16,547**	**18,986**

4.4 Analysis of Water Supply and Demand

As noted herein, the supply and demand analyses for the DHS 109 Project are based in large part on MSWD's 2015 UWMP and the 2013 MC-GH WMP. MSWD's 2015 UWMP was prepared in accordance with the Urban Water Management Planning Act, as most recently amended by SBx7-7. Among other analyses, the MSWD 2015 UWMP and the 2013 MC-GH WMP identified total projected water demands, and demonstrate that total projected water supplies will be sufficient to meet those demands through 2035 and beyond. Also discussed above, the 2013 MC-GH WMP developed the strategies to manage the water resources to meet demands, throughout CVWD's and MSWD's service areas that receive groundwater from the Mission Creek and Garnet Hill Subbasins (including DHS 109), reliably while protecting water quality in a sustainable and cost-effective manner.[100] Although substantial growth has been forecasted for the Coachella Valley, the rate of growth had slowed in the early part of the 2010s due to widespread economic downturn. As described in the 2013 MC-GH WMP, this slowdown will affect growth in the Planning Area in the short-term (next five to ten years), it is likely that growth will resume and steadily continue in the Planning Area during the 35-year planning horizon of the WMP.

As outlined in the Sections above, water conservation is a major component of future water management in the Coachella Valley. As presented above, MSWD is committed

[99] MSWD 2015 UWMP, p. 6-29
[100] 2013 MC-GH WMP, p. 7-28

to reducing their per capita urban water demand in accordance with SBx7-7. The 2013 MC-GH WMP calls for developing additional water conservation programs during the next 30 years. In addition, since the requirements of SBx7-7 do not apply to private producers, CVWD, DWA and MSWD will coordinate with the top private producers in the Planning Area, and offer assistance for making efficient use of the water they extract. MSWD's 2009 Water Efficient Landscape Guidelines establish effective water efficient landscape requirements for newly installed and rehabilitated landscapes and reduce demands.

All water delivered to end users is obtained from the groundwater basin, which is continuously recharged with supplemental imported supplies as discussed above. As provided throughout this WSA, and in the 2013 MC-GH WMP, the managed basin is capable of ensuring a sufficient and sustainable water supply to meet existing water demands and the demands associated with projected growth throughout the region (specifically including MSWD's service area and the proposed DHS 109 Project) during normal, single-dry and multiple-dry periods throughout the 20-year projection and beyond. In addition, CVWD, DWA and MSWD developed many programs to maximize the water resources available to them including recharge of its Colorado River and SWP supplies, recycled water, and various conservation measures, such as tiered water rates, a landscaping ordinance, outreach and education. The 2013 MC-GH WMP and DWA/CVWD replenishment assessment programs, in which MSWD fully participates, establish a comprehensive and managed effort to eliminate the overuse of local groundwater supplies.

The analysis herein evaluates whether the total projected water supplies available to MSWD, by virtue of its membership and participation in the regional efforts of the 2013 MC-GH WMP, are sufficient to meet the water demands of the DHS 109 Project in addition to other existing and planned future uses within MSWD's service area. The supply and demand assessment includes three scenarios over the 20-year projection as required by SB 610: normal water years, single-dry years, and multiple-dry years. As presented in **Section 3**, MSWD's water demands are projected to grow from 7,252 AFY in 2015 to 12,586 AFY in 2040. As shown in **Section 2**, the estimated Project demands are 910 AFY, representing approximately 17 percent of MSWD's projected growth. **Tables 4-10, 4-11, and 4-12** outline the water supply and demand scenarios for normal, single-dry and multiple-dry years respectively. As described in MSWD's 2015 UWMP, District demands for groundwater are estimated to increase by 5 percent during single dry-year and multiple dry-year supply scenarios. Recycled water demands are not projected to increase because recycled water supply is fixed.

Table 4-10
Normal Water Year Supply and Demand Comparison (AFY)

4.5 Conclusions

The water supply for the proposed DHS 109 Project will be the Mission Creek Subbasin in the Coachella Valley with supplemental water supplies that are recharged to the Basin on an ongoing basis. Groundwater storage will be used in dry years to support potential differences between demands and supply. The groundwater basin has a capacity of approximately 2.6 million acre-feet and is estimated to contain about 1.4 million acre-feet, simulating the benefits of a very large conjunctive use reservoir. It

is capable of meeting the water demands of the surrounding communities for extended periods during normal, single-dry and multiple-dry year conditions.

As discussed in the 2013 MC-GH WMP and MSWD's 2015 UWMP, and this WSA, CVWD, DWA and MSWD have many programs to maximize the water resources available, including but not limited to recharge of the basin using Colorado River and SWP supplies, direct use and recharge of recycled water, and comprehensive water conservation practices such as tiered water rates, landscaping ordinances, outreach and education. The DWA/CVWD groundwater replenishment programs establish a comprehensive and managed effort to reduce and eliminate overuse of local groundwater resources. These programs allow DWA and CVWD to maintain the groundwater basin as its primary water supply and to recharge the groundwater basin as its other supplies are available and needed to meet existing and projected demands within its overall service areas.

Based on the information, analysis, and conclusions documented in this WSA, substantial evidence exists to support a determination that the total projected water supplies available to MSWD during normal, single dry, and multiple dry water years during a 20-year projection are sufficient to meet the projected water demand associated with the proposed DHS 109 Project, in addition to MSWD's existing and planned future uses, including commercial and industrial uses. This conclusion is based on, among other things, the volume of water available in the regional aquifer, MSWD's current and planned local water management programs and projects, and DWA and CVWD's current and planned local and regional management programs and water supply projects to supplement and sustain regional groundwater supplies. Additionally, MSWD, CVWD, and DWA have committed sufficient resources to further implement the primary elements of the MSWD 2015 UWMP and the 2013 MC-GH WMP, including source substitution, water conservation, and purchases of additional water supplies. Furthermore, as set forth in this WSA and the DHS 109 Industrial Park Project development plans, the Project will incorporate various water conservation elements adopted by MSWD and/or DWA in accordance with SBx7-7. These include conservation elements for indoor and outdoor uses throughout the Project. These efforts may further reduce the ultimate water demands of the Project.

As provided by Water Code section 10914, nothing in this WSA is intended to create a right or entitlement to water service or any specific level of water service, and nothing herein is intended to impose, expand or limit any duty concerning MSWD's obligation to provide certain levels of service to existing or future potential customers.[101] MSWD retains the right, in its sole discretion, to evaluate from time to

[101] Water Code § 10914(a)-(b).

time whether the projected demands associated with the Project continue to fall within MSWD's forecasted demand or planned future uses.

SECTION 5
WATER SUPPLY VERIFICATION

5.1 General

The DHS 109 Project is proposing more than 650,000 square feet of floor area of industrial, manufacturing, or processing plant, or industrial park and is therefore pursuant to the Subdivision Map Act as the requirements of Senate Bill 221. Further discussion can be found in **Section 1.1**.

5.2 Water Source

The Project's industrial water demands are proposed to be provided by groundwater. The Water Supply Verification (WSV) addresses: (1) information included in the MSWD's 2015 UWMP; (2) issues related to groundwater recharge of non-groundwater sources, namely Colorado River water and SWP water; and (3) consideration of the litigation regarding the Quantification Settlement Agreement.

5.3 Supporting Documentation

The WSV relies on MSWD's 2015 UWMP, as permitted by Government Code 66473.7(c).

5.4 Factors of Reliability

5.4.1 General

Government Code 66473.7(a) requires that when determining "sufficient water supply", the following factors be considered:

- The availability of water supply over a historical record of at least 20 years
- The applicability of MSWD's Water Shortage Contingency Analysis that includes actions to be undertaken by the public water system in response to water supply shortages.
- The reduction of water supply to a specific user by ordinance or resolution.
- The reasonable amount of groundwater supply that can be relied upon, considering its natural sources as well as the supporting recharge sources within agreements for Colorado River water and SWP water.

5.4.2 Historical Availability of Supply

MSWD currently receives 100 percent of its water supply from the subbasins within the Coachella Valley Groundwater Basin, which underlies the District's water service area. None of the groundwater basins in the Coachella Valley are adjudicated, therefore, there are no legal agreements limiting MSWD's pumping from any of the subbasins.[102] The District has been dependent upon groundwater as its only source of domestic water supply for several decades. MSWD's 2015 UWMP reviewed the historical use of water in the District. In 2010, MSWD total groundwater production was 8,665 acre-feet and current (2015) groundwater production is at approximately 7,252 acre-feet annually. Deliveries of Colorado River water and MWD SWP transfer water help offset the groundwater use. As of 2015, CVWD receives 378,000 AFY of Colorado River water deliveries under the QSA.[103] In addition, SWP deliveries were 35,000 AFY to the Coachella Valley in 2015 and are expected to remain.

5.4.3 Water Shortage Contingency

The MSWD has developed a Water Shortage Contingency Plan and is discussed in its 2015 UWMP. As detailed in the 2015 UWMP, during water shortages, the District has the ability to meet its demands by applying Water Conservation Stages. These stages impose phases of mandatory reduction of water use up to 50 percent and consist of three stages that help reduce water use within the District's system in order to meet use-reduction targets. The Water Conservation Stages and action is summarized in Table 5-1.

Table 5-1
Water Shortage Contingency Plan

Stage	Percent Supply Reduction	Water Supply Condition
1	10%	Voluntary conservation
1A	10%	Mandatory conservation
2	15%	A threatened water supply shortage which could affect the District's ability to provide water for ordinary domestic and commercial uses. Mandatory conservation
3	50%	A water shortage emergency in which the District may be prevented from meeting the water demands of its customers. Mandatory conservation

[102] MSWD 2015 UWMP, Section 6
[103] CVWD 2015 UWMP, p. 6-12

The General Manager of the District shall monitor supply and demand for water on a daily basis and determine the level of the Water Conservation Stage needed. The Manager shall notify the Board of Directors of the implementation as well as the termination of the stages.

5.4.4 Reduction of Water Supply

There are no expected reductions in the water supply. This is based on, among other things, the volume of water available in the regional aquifer, MSWD's current and planned local water management programs and projects, and DWA and CVWD's current and planned local and regional management programs and water supply projects to supplement and sustain regional groundwater supplies. Additionally, MSWD, CVWD, and DWA have committed sufficient resources to further implement the primary elements of the MSWD 2015 UWMP and the 2013 MC-GH WMP, including source substitution, water conservation, and purchases of additional water supplies.

5.4.5 SWP and Colorado River Water

The Coachella Valley Groundwater Basin has the capacity to meet the Project's needs and future demands presented in MSWD's 2015 UWMP, the 2013 MC-GH WMP, and in this supplemental study. In the event that additional conservation and/or supply limitations are necessary, the Project would adhere to any and all limitations associated with this potential reduction in supply.

5.5 Impacts to Other Projects

The DHS 109 Project is within the projected water demands of MSWD's 2015 UWMP and should not have a significant impact on other potable and non-potable water user. In addition, the Project will not affect the water supply for future housing projects.

The Project will comply with MSWD's Water Efficient Landscaping Guidelines. Based on the findings of the WSV, it is expected that the impacts to the groundwater basin are fully mitigated.

5.6 Rights to Groundwater

None of the groundwater basins in the Coachella Valley are adjudicated, therefore, there are no legal agreements limiting MSWD's pumping from any of the subbasins.[104] The District has been dependent upon groundwater as its only source of domestic

[104] MSWD 2015 UWMP, Section 6

water supply for several decades and can continue to do so for needed supply of the Project.

5.7 Verification

This WSV provides verification that adequate water supply for the Project is available, as required by California Government Code Section 66473.7.

Appendix K

Soboba Standard Tribal Conditions

Standard Environmental / Tribal Mitigation Conditions

1. The applicant/developer shall adhere to all mitigation measures and monitoring program requirements mandated by the City of Desert Hot Springs.

2. If the project involves any ground disturbance Applicant / Developer shall hire a paleontological monitor and shall be responsible for payment of all related expenses. If paleontological resources are encountered, adequate funding shall be provided to collect, curate and report on these resources to ensure the values inherent in the resources are adequately characterized and preserved.

3. The applicant/developer shall provide tribe(s) which have initiated formal consultation under AB 52 the following:
   a) Cultural resources inventory of the project area (by a qualified archaeologist) prior to any development activities in the area.
   b) Copy of the records search with associated survey reports and site records from the information center.
   c) Copies of any cultural resource documentation (report and site records) generation in connection with this project.

4. The applicant/developer shall have on site during any ground disturbing activities (including archeological surveys) a designated Cultural Resource / Tribal Monitor(s) from the consulting tribe(s) which have initiated formal consultation under AB 52. Should buried cultural resource be encountered, the Monitor(s) may request that desiccative construction halt and the Monitor(s) shall notify a Qualified Archeologist to investigate and, if necessary, prepare a mitigation plan for submission to the State Historic Preservation Officer and each of the consulting Tribal Preservation Office's.

5. In the event that human remains (or remains that may be human) are discovered at the project site during grading or earthmoving, the construction contractors, project archaeologist, and/or designated Native American Monitor(s) shall immediately stop all activities within 100 feet of the find. The project proponent shall then inform the Riverside County Coroner and the City of Desert Hot Springs immediately, and the coroner shall be permitted to examine the remains as required by California Health and Safety Code Section 7050.5(b). Section 7050.5 requires that excavation be stopped in the vicinity of discovered human remains until the coroner can determine whether the remains are those of a Native American. If human remains are determined as those of Native American origin, the applicant shall comply with the state relating to the disposition of Native American burials that fall within the jurisdiction of the NAHC (PRC Section 5097). The coroner shall contact the NAHC to determine the most likely descendant(s). The MLD shall complete his or her inspection and make recommendations or preferences for treatment within 48 hours of being granted access to the site. The Disposition of the remains shall be overseen by the most likely descendant(s) to determine the most appropriate means of treating the human remains and any associated grave artifacts. The specific locations of Native American burials and reburials will be proprietary and not disclosed to the general public. The County Coroner will notify the Native American Heritage Commission in accordance with California Public Resources Code 5097.98. According to California Health and Safety Code, six or more human burials at one location constitute a cemetery (Section 8100), and disturbance of Native American cemeteries is a felony (Section 7052) determined in consultation between the project proponent and the MLD. In the event that the project proponent and the MLD are in disagreement regarding the disposition of the remains, State law will apply and the median and decision process will occur with the NAHC (see Public Resources Code Section 5097.98(e) and 5097.94(k)).

6. **MM 1 - Prior to grading permit issuance:** If there are any changes to project site design and/or proposed grades, the Applicant shall contact the consulting tribes to provide an electronic copy of the revised plans for review. Additional consultation shall occur between the City of Desert Hot Springs, Applicant, and consulting tribes to discuss the proposed changes and to review any new impacts and/or potential avoidance/preservation of the cultural resources on the Project. The Applicant will make all attempts to avoid and/or preserve in place as many as possible of the cultural resources located on the project site if the site design and/or proposed grades should be revised in consult with the City of Desert Hot Springs. In specific circumstances where existing and/or new resources are determined to be unavoidable and/or unable to be preserved in place despite all feasible alternatives, the developer shall make every effort to relocate the resource to a nearby open space or designated location on the property that is not subject any future development, erosion or flooding.

7. **Archaeological Monitoring:** The Developer, the City and the consulting tribe(s) shall develop an archaeological monitoring plan to address details, timing and responsibilities of all archaeological activities that will occur at the project site, when it is determined by either the city or the consulting tribe(s) to be necessary. Details of the plan may include:
   a) Project grading and development scheduling;
   b) The development of a rotating or simultaneous schedule in coordination with the applicant and the Project Archeologist for designated Native American Tribal Monitors from the consulting tribes during grading, excavation and ground disturbing activities on the site: including the scheduling, safety requirements, duties, scope of work, and Native American Tribal Monitors' authority to stop and redirect grading activities in coordination with all Project archaeologists;
   c) The protocols and stipulations that the Developer, City of Desert Hot Springs, the consulting tribes and Project archaeologist will follow in the event of inadvertent cultural resources discoveries, including any newly discovered cultural resource deposits that shall be subject to a cultural resources evaluation;
   d) Archaeological Monitoring Plan shall take into account the potential impacts to undiscovered buried archaeological and cultural resources and procedures to protect in place and/or mitigate such impacts.

8. **MM 3 - Treatment and Disposition of Cultural Resources:** In the event that Native American cultural resources, items of cultural patrimony, or Tribal Cultural Resources are inadvertently discovered during the course of grading for this Project. The following procedures will be carried out for treatment and disposition of the discoveries:
   a) Temporary Curation and Storage: During the course of construction, all discovered resources shall be temporarily curated in a secure location onsite or at the offices of the project archaeologist. The removal of any artifacts from the project site will need to be thoroughly inventoried with tribal monitor oversite of the process; and
   b) Treatment and Final Disposition: The landowner(s) shall relinquish ownership of all cultural resources, including sacred items, burial goods, and all archaeological artifacts and non-human remains as part of the required mitigation for impacts to cultural resources. The applicant shall relinquish the artifacts through one or more of the following methods and provide the City of Desert Hot Springs with evidence of same:
      i. Accommodate the process for onsite reburial of the discovered items with the consulting Native American tribes or bands. This shall include measures and provisions to protect the future reburial area from any future impacts. Reburial shall not occur until all cataloguing and basic recordation have been completed;

ii. A curation agreement with an appropriate qualified repository within Riverside County that meets federal standards per 36 CFR Part 79 and therefore would be professionally curated and made available to other archaeologists/researchers for further study. The collections and associated records shall be transferred, including title, to an appropriate curation facility within Riverside County, to be accompanied by payment of the fees necessary for permanent curation:

iii. For purposes of conflict resolution, if more than one Native American tribe or band is involved with the project and cannot come to an agreement as to the disposition of cultural materials, they shall be curated at the Western Science Center or Agua Caliente Cultural Museum.

At the completion of grading, excavation and ground disturbing activities on the site a Phase IV Monitoring Report shall be submitted to the City of Desert Hot Springs documenting monitoring activities conducted by the project Archaeologist and Native Tribal Monitors within 60 days of completion of grading. This report shall document the impacts to the known resources on the property; describe how each mitigation measure was fulfilled; document the type of cultural resources recovered and the disposition of such resources; provide evidence of the required cultural sensitivity training for the construction staff held during the required pre-grade meeting; and, in a confidential appendix, include the daily/weekly monitoring notes from the archaeologist. All reports produced will be submitted to the consulting tribes and Eastern Information Center and interested tribes

Appendix L

Consultation Summary

November 19, 2020
21228

On May 6, 2020, AB 52 notification letters were sent to 13 Native American tribal governments or designated tribal representatives via certified mail. Of the 13 tribes or tribal representatives (in some cases multiple letters were sent to representatives of the same tribe), two responses were received.

Responses and consultation requests were received from the following tribes:

- Soboba Band of Luiseño Indians (May 28, 2020): A letter was received from Mr. Joseph Ontiveros to request consultation. An email was received from Ms. Jessica Valdez from the Tribe to request consultation for another project on August 17, 2020. A follow up and dates of availability were sent on August 21, 2020. It was agreed that the consultation call will include a discussion of the other projects that the Tribe received notification for in the earlier months. Mr. Ontiveros submitted a response on September 24, 2020 to initiate formal consultation. On September 28, 2020, Mr. Ontiveros received a date and time of availability. A conference call was scheduled with Joseph Ontiveros to discuss the project, along with other projects that the Tribe received in the earlier months. This call was scheduled on October 6, 2020 due to the limitations from the pandemic. On October 14, 2020, Mr. Ontiveros forwarded the proposed standard environmental/tribal mitigation conditions. The proposed standard environmental/tribal mitigation conditions received would be relevant to the other projects in process with the City. The language was forwarded to the Agua Caliente Band of Cahuilla Indians for comment on October 16, 2020. Receiving no comments from the Agua Caliente Band of Cahuilla Indians, Mr. Ontiveros was notified on October 29, 2020 that no comments have been received. On November 9, 2020, a letter was sent to Mr. Ontiveros to confirm the consultation process is concluded.
- Agua Caliente Band of Cahuilla Indians (July 15, 2020): The Tribe stated that the project area is not located within the boundaries of the ACBCI Reservation but is within the Tribe's Traditional Use Area. The Agua Caliente Band of Cahuilla Indians requested formal government to government consultation and requested any prepared technical reports and data regarding the project such as a cultural resources inventory, a copy of the records search with associated survey reports and site records, copies of reports and site records, and requested the presence of an approved Agua Caliente Native American Cultural Resources Monitor during ground disturbing activities (including archaeological testing and surveys). A conference call was scheduled with Pattie Garcia-Plotkin to discuss the project, along with other projects that the Tribe received in the earlier months. This call was scheduled on September 23, 2020 due to the limitations from the pandemic. Ms. Plotkin indicated that the Tribe would provide recommendations in writing regarding the appropriate mitigation language to address their concerns. In addition to a follow up request being sent to Ms. Plotkin on October 9, 202, a copy of the proposed standard environmental/tribal mitigation conditions from Joseph Ontiveros from the Soboba Band of Luiseno Indians also was provided to Ms. Plotkin on October 16, 2020 for review and comment. On October 23, 2020, the Tribe reviewed the documents and have provided the following comments:
    - At this time the concerns of the ACBCI THPO have been addressed and proper mitigation measures have been proposed to ensure the protection of tribal cultural resources. This letter shall conclude our AB52 consultation efforts.
    - Before ground disturbing activities begin please contact the Tribal Historic Preservation Office at ACBCI-THPO@aguacaliente.net to arrange cultural monitoring.

Pursuant to PRC 21080.3.1(d), each tribal government or representative was given 30 days upon receipt of the AB 52 notification letter to provide a request for consultation on the Project. Two of the 13 tribal representatives responded to the initial notification letter, with two requesting consultation and additional reports. No additional responses or requests were received. The City of Desert Hot Springs, as lead agency, has fulfilled its obligations under AB 52 to engage in tribal consultation with all other tribal governments.

Appendix M

Mitigation Monitoring and Reporting Program

MITIGATION MONITORING AND REPORTING PROGRAM

This Mitigation Monitoring and Reporting Program (MMRP) identifies mitigation measures incorporated into the Initial Study/Mitigated Negative Declaration (IS/MND) for the Church at the Red Door Project (Project). For each mitigation measure, the MMRP identifies the mitigation measure, the implementation entity, the timing for implementation, and the date of completion with sign-off for verification purposes.

MITIGATION MONITORING AND REPORTING PROGRAM

	Mitigation Measure	Implementation Entity	Timing for Implementation	Date of Completion/ Initials
Air Quality				
AQ-1	Architectural coatings applied to project buildings are to be limited to 30 grams per liter VOC and traffic paints shall be limited to 100g/L VOC content	Project Proponent/ Construction Contractor	Prior to the issuance of a Building Permit.	
Biological Resources				
BIO-1	A burrowing owl relocation plan shall be prepared and approved by the CDFW to passively relocate the BUOW. In addition, compensatory mitigation as per the CVMSHCP would be required for the loss of occupied habitat. The CVMSHCP requires 6 acres per pair.	Project Proponent/ Construction Contractor/ Biologist	Prior to Construction (at least 14 days prior to and within 24 hours immediately before ground disturbing activities)	
BIO-2	Due to appropriate habitat and confirmed presence on the project site recorded in the CNDDB from 2006, preconstruction surveys during the growing season for the Coachella Valley milk-vetch shall be conducted prior to any earth work activities.	Project Proponent/ Construction Contractor/ Biologist	Prior to Construction (no more than 14 days prior to initiation of ground disturbance	

	Mitigation Measure	Implementation Entity	Timing for Implementation	Date of Completion/ Initials
			and vegetation removal activities)	
BIO-3	Bird nesting season generally extends from February 1 through September 15 in southern California and specifically, April 15 through August 31 for migratory passerine birds. To avoid impacts to nesting birds (common and special status) during the nesting season, a qualified Avian Biologist will conduct pre-construction Nesting Bird Surveys (NBS) prior to project-related disturbance to nest able vegetation to identify any active nests. If no active nests are found, no further action will be required. If an active nest is found, the qualified Avian Biologist will set appropriate no-work buffers around the nest which will be based upon the nesting species, its sensitivity to disturbance, nesting stage and expected types, intensity and duration of disturbance. The nests and buffer zones shall be field checked weekly by a qualified biological monitor. The approved no-work buffer zone shall be clearly marked in the field, within which no disturbance activity shall commence until the qualified biologist has determined the young birds have successfully fledged and the nest is inactive.	Project Proponent/ Construction Contractor/ Biologist	Prior to Construction (no more than 14 days prior to initiation of ground disturbance and vegetation removal activities)	
BIO-4	The Applicant shall pay a fee for the impacts of development on covered species and their habitats to the City to be used by the Coachella Valley Conservation Commission (CVCC) to minimize and mitigate impacts of taking and provide for conservation of the covered and non-covered species through the acquisition and maintenance of habitat.	Project Proponent/ Construction Contractor/ Biologist	Prior to Construction (no more than 14 days prior to initiation of ground disturbance and vegetation removal activities)	

	Mitigation Measure	Implementation Entity	Timing for Implementation	Date of Completion/ Initials
BIO-5	The applicant shall implement the following CVMSHCP Land Use Adjacency Guidelines requirements and restrictions as listed below and shall be adhered to during construction and for post construction operation for any project within the project site that lies adjacent to Conservation Areas. The project proponent shall coordinate with the Coachella Conservation Commission (CVCC) and CVCC staff shall review plans for all planning areas adjacent to the Conservation Area and determine whether the proposed improvements are consistent with the CVMSHCP. 1) *Drainage* – Proposed Development adjacent to or within a Conservation Area shall incorporate plans to ensure that the quantity and quality of runoff discharged to the adjacent Conservation Area is not altered in an adverse way when compared with existing conditions. Stormwater systems shall be designed to prevent the release of toxins, chemicals, petroleum products, exotic plant materials or other elements that might degrade or harm biological resources or ecosystem processes within the adjacent Conservation Area. 2) *Toxics* – Land uses proposed adjacent to or within a Conservation Area that use chemicals or generate byproducts such as manure that are potentially toxic or may adversely affect wildlife and plant species, Habitat, or water quality shall incorporate measures to ensure that application of such chemicals does not result in any discharge to the adjacent Conservation Area. 3) *Lighting* – For proposed Development adjacent to or within a Conservation Area, lighting shall be shielded and directed	Project Proponent/ Construction Contractor/ Biologist	Prior to Construction (no more than 14 days prior to initiation of ground disturbance and vegetation removal activities)	

Mitigation Measure	Implementation Entity	Timing for Implementation	Date of Completion/ Initials
toward the developed area. Landscape shielding or other appropriate methods shall be incorporated in project designs to minimize the effects of lighting adjacent to or within the adjacent Conservation Area in accordance with the guidelines to be included in the Implementation Manual. 4) *Noise* – Proposed Development adjacent to or within a Conservation Area that generates noise in excess of 75 dBA Leq hourly shall incorporate setbacks, berms, or walls, as appropriate, to minimize the effects of noise on the adjacent Conservation Area in accordance with guidelines to be included in the Implementation Manual. 5) *Invasive* – Invasive, non-native plant species shall not be incorporated in the landscape for land uses adjacent to or within a Conservation Area. Landscape treatments within or adjacent to a Conservation Area shall incorporate native plant materials to the maximum extent feasible; recommended native species are listed in Table 4-112. The plants listed in Table 4-113 shall not be used within or adjacent to or within a Conservation area. The list may be amended from time to time through a Minor Amendment with Wildlife Agency Concurrence. 6) *Barriers* –Land uses adjacent to or within a Conservation Area shall incorporate barriers in individual project designs to minimize unauthorized public access, domestic animal predation, illegal trespass, or dumping in a Conservation Area. Such barriers may include native landscaping, rocks/boulders, fencing, walls and/or signage.			

	Mitigation Measure	Implementation Entity	Timing for Implementation	Date of Completion/ Initials
	7) *Grading/Land Development* –Manufactured slopes associated with site Development shall not extend into adjacent land in a Conservation Area			
BIO-6	A site specific final acoustical analysis is required once a final site specific site plan is made available in order to demonstrate compliance with the CVMSCHP noise threshold. If the results of the acoustical analysis conclude that proposed development will exceed acceptable noise levels, the proposed development project shall be redesigned to ensure consistency with the CVMSHCP Adjacency noise requirements.	Project Proponent/ Construction Contractor/ Biologist	Prior to Construction (no more than 14 days prior to initiation of ground disturbance and vegetation removal activities)	
Cultural Resources				
CR-1	If during the course of excavation, grading or construction, artifacts or other archaeological resources are discovered, all work in the immediate area of the find shall be halted and the project proponent or his/her designee shall immediately notify the City Planner. A qualified archaeologist shall be present on site during initial ground disturbing activities at the expense of the project proponent. In addition, the archaeologist should monitor the first day and provide a recommendation on further monitoring once subsurface strata is visible. If evaluated as eligible and the find cannot be avoided, the archaeologist must prepare and submit a data recovery plan to the City Planner. Upon approval, the data recovery plan shall be implemented. Work shall resume after consultation with the City and implementation of the recovery plan by the archaeologist.	Project Proponent/ Construction Contractor/ Architectural Historian	Final Design Phase/Prior to Construction	

	Mitigation Measure	Implementation Entity	Timing for Implementation	Date of Completion/ Initials
CR-2	If human remains are uncovered during excavation or grading activities on the project site, there shall be no further excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent human remains until: A) The Riverside County Coroner and Desert Hot Springs Police Department have been contacted and determined that no investigation of the cause of death is required, and B) If the coroner determines the remains to be Native American: The coroner shall contact the NAHC within 24 hours. The NAHC shall designate the person or persons it believes to be the MLD of the decreased Native American. The MLD may make recommendations to the landowner or person responsible for the excavation work, for means of treating or disposing of, with appropriate dignity, the human remains and any associated grave goods as provided in Public Resources Code Section 5097.98. The City and developer shall work with the designated MLD to determine the final disposition of the remains.	Project Proponent/ Construction Contractor/ Architectural Historian	Final Design Phase/Prior to Construction	
Geology and Soils				
GEO-1	All phases of project development that include earthwork in regard to Foundation Design, Settlements, Lateral Design, Retaining Walls, Expansive Soils, Concrete Slabs-on-Grade, and General Site Grading shall be performed in accordance with the geotechnical recommendations presented in the *Geotechnical Investigation* prepared by Sladden Engineering, as applicable.	Project Proponent/ Construction Contractor	Final Design and Construction	
GEO-2	All proposed structures shall be engineer designed and constructed to earthquake-resistant parameters in compliance with the 2016 edition of the California Building Code (CBC).	Project Proponent/ Construction Contractor/	Pre-Construction and Construction (during ground disturbing	

	Mitigation Measure	Implementation Entity	Timing for Implementation	Date of Completion/ Initials
		Paleontological Monitor	activities exceeding three feet)	
GEO-3	In the event that a fossil discovery is made during the course of project construction, in accordance with the SVP guidelines, a qualified professional Paleontologist must be retained in order to examine the find and determine if further paleontological resources mitigation is warranted. Recovered specimens must be identified and curated at a repository with permanent retrievable storage that would allow for further research in the future.	Project Proponent/ Construction Contractor/ Paleontological Monitor	Pre-Construction and Construction (during ground disturbing activities exceeding three feet)	
Hazards and Hazardous Materials				
HAZ-1	Prior to issuance of Certificate of Occupancy, the project applicant that proposes to recycle onsite wastewater involving the use of a reverse osmosis (RO) wastewater purification system shall provide the City with information on how concentrated levels of TDS and brine solutions will be disposed of. Proof of contract with a license hazardous waste hauler that will be responsible for removing all hazardous wastewater and solid waste generated at the cultivation site will be required.	Project Proponent / Construction Contractor/Environmental Monitor	Pre-construction and during construction: Prior to and during ground disturbing activities.	
HAZ-2	Any individual project site activity that proposes the use and storage of hazardous materials that exceeds the criteria threshold quantity per HSC standards, shall prepare a Hazardous Materials Business Emergency Plan (HMBEP) to be reviewed and approved by Riverside County Fire Department and the Department of Environmental Health (DEH). The HMBEP shall be posted in a visible location of the project premises and shall list all hazardous materials to be used onsite in a documented Material Safety Data Sheet (MSDS). The HMBEP shall include a training program to instruct employee staff of the methods for the safe handling of hazardous materials, address emergency coordination, proper use of	Project Proponent / Construction Contractor/Environmental Monitor	Pre-construction and during construction: Prior to and during ground disturbing activities.	

Mitigation Measure		Implementation Entity	Timing for Implementation	Date of Completion/ Initials
	protective equipment and abatement procedures in the event of an accidental spill or release of hazardous materials and provide an evacuation plan for employee staff in the event of any emergency. The HMBEP shall include a Spill Prevention and Countermeasure Plan (SPCC) to address procedures and protocol for staff employees to exercise in the event of an accidental spill or release of hazardous materials. The SPCC shall also include a required Spill Prevention Containment Kit to be utilized and easily visible and accessible to employee staff in the event of an accidental spill of hazardous materials. All individual project site activities will adhere to SB 95 Section 140 Section 11362.775 when utilizing volatile solvents for manufacturing concentrated cannabis.			
Hydrology and Water Quality				
HYD-1	In order to protect the project site from flooding caused by Mission Creek during the 100-year storm event, the perimeter wall along the west side of Street "F", from 15th Street down to 16th Street, will be designed to accommodate a combination of flood wall and screen wall. Conversely, the perimeter wall along the east side of Atlantic Avenue, from 15th Street down to the southerly limit of Lot 33 will be designed to accommodate a combination of flood wall and screen wall. The actual height of the flood wall along the depth of the footing will be determined during the final design phase of this project.	Project Proponent / Construction Contractor	Pre-construction and during construction: Prior to the issuance of building permits and during project construction.	
Noise				
NOI-1	The proposed project will adhere to the following measures to reduce construction noise and vibration: • During all project site excavation and grading on-site, construction contractors shall equip all construction equipment, fixed or mobile, with properly operating and	Project Proponent/ Construction Contractor	During Construction	

	Mitigation Measure	Implementation Entity	Timing for Implementation	Date of Completion/ Initials
	maintained mufflers, consistent with manufacturer standards. • The contractor shall place all stationary construction equipment so that emitted noise is directed away from the noise sensitive receptors nearest the project site. • Equipment shall be shut off and not left to idle when not in use. • The contractor shall locate equipment staging in areas that will create the greatest distance between construction-related noise/vibration sources and sensitive receptors nearest the project site during all project construction. • Jackhammers, pneumatic equipment and all other portable stationary noise sources shall be shielded and noise shall be directed away from sensitive receptors.			
Transportation				
TIA-1	The proposed project will construct the following offsite intersections improvements to achieve acceptable LOS during peak hours for the impacted study area intersections for Existing Plus Project and Existing Plus Ambient (2021) Plus Project traffic conditions: **Existing Plus Project Offsite Improvements** • No. 3 – Indian Canyon Drive at Dillon Road ○ Install traffic signal (signal warrant currently satisfied under Existing conditions)	Project Proponent/ Construction Contractor	During construction	

	Mitigation Measure	Implementation Entity	Timing for Implementation	Date of Completion/ Initials
	○ Provide northbound left turn lane ○ Provide southbound left turn lane ○ Provide eastbound left turn lane ○ Provide westbound left turn lane • No. 9 – Little Morongo Road at 15th Avenue ○ Install traffic signal ○ Provide southbound left turn lane ○ Provide westbound left turn lane ○ Provide westbound right turn lane • No. 14 – Palm Drive at Two Bunch Palms Trail ○ Provide eastbound right-turn overlap phasing • No. 17 – Palm Drive at Dillon Road Provide eastbound right-turn overlap phasing			
TIA-2	**Existing Plus Ambient (2021) Plus Project Offsite Improvements** • No. 3 – Indian Canyon Drive at Dillon Road ○ Install traffic signal (signal warrant currently satisfied under Existing conditions) ○ Provide northbound left turn lane ○ Provide southbound left turn lane ○ Provide eastbound left turn lane ○ Provide westbound left turn lane	Project Proponent/ Construction Contractor	During construction	

	Mitigation Measure	Implementation Entity	Timing for Implementation	Date of Completion/ Initials
	• No. 9 – Little Morongo Road at 15th Avenue o Install traffic signal o Provide southbound left turn lane o Provide westbound left turn lane o Provide westbound right turn lane • No. 14 – Palm Drive at Two Bunch Palms Trail o Provide eastbound right turn overlap phasing • No. 17 – Palm Drive at Dillon Road o Provide eastbound right turn overlap phasing			
TIA-3	**Existing Plus Ambient (2021) Plus Project Plus Cumulative Offsite Improvements** • No.2 – Indian Canyon Drive at Pierson Boulevard o Install traffic signal (signal warrant currently satisfied under Existing conditions) o Provide northbound left turn lane o Provide southbound left turn lane o Provide eastbound left turn lane o Provide westbound left turn lane • No. 3 – Indian Canyon Drive at Dillon Road o Install traffic signal (signal warrant currently satisfied under Existing conditions)	Project Proponent/ Construction Contractor	During construction	

Mitigation Measure	Implementation Entity	Timing for Implementation	Date of Completion/ Initials
○ Provide northbound left turn lane ○ Provide northbound right turn lane with overlap phasing ○ Provide southbound left turn lane ○ Provide southbound right turn lane ○ Provide eastbound left turn lane ○ Provide eastbound right turn lane ○ Provide two westbound left turn lanes • No. 7 – Little Morongo Road at Pierson Boulevard ○ Install traffic signal ○ Provide northbound left turn lane ○ Provide southbound left turn lane ○ Provide eastbound left turn lane ○ Provide westbound left turn lane • No. 8 – Little Morongo Road at Two Bunch Palms Trail ○ Install traffic signal (signal warrant currently satisfied under Existing conditions) ○ Provide northbound left turn lane ○ Provide northbound right turn lane ○ Provide southbound left turn lane ○ Provide eastbound left turn lane ○ Provide two westbound left turn lanes			

Mitigation Measure	Implementation Entity	Timing for Implementation	Date of Completion/ Initials
• No. 9 – Little Morongo Road at 15th Avenue ○ Install traffic signal ○ Provide southbound left turn lane ○ Provide westbound left turn lane ○ Provide westbound right turn lane ○ Provide second northbound through lane • No. 10 – Little Morongo Road at Dillon Road ○ Install traffic signal (signal warrant currently satisfied under Existing conditions) ○ Provide northbound left turn lane ○ Provide southbound left turn lane ○ Provide second eastbound left turn lane ○ Provide westbound right turn lane • No. 11 – Atlantic Avenue at Dillon Road ○ Restrict southbound left turn • No. 14 – Palm Drive at Two Bunch Palms Trail ○ Provide second northbound left turn lane ○ Provide third southbound through lane ○ Provide eastbound right turn overlap phasing • No. 16 – Palm Drive at Camino Aventura ○ Install traffic signal (signal warrant currently satisfied under Existing conditions)			

	Mitigation Measure	Implementation Entity	Timing for Implementation	Date of Completion/ Initials
	• No. 17 – Palm Drive at Dillon Road ○ Provide third southbound through lane ○ Provide southbound right turn overlap phasing Provide eastbound right turn overlap phasing			
TIA-4	The project proponent will contribute on a fair share basis through the City's Development Impact Fee Circulation Systems Streets, Traffic Signals, and Bridges Program, or in dollar equivalent in lieu mitigation contributions, in the implementation of recommended improvements.	Project proponent	Pre-construction: Prior to issuance of building permit	
Tribal Cultural Resources				
TBL-1	**Prior to grading permit issuance:** If there are any changes to project site design and/or proposed grades, the Applicant shall contact the consulting tribes to provide an electronic copy of the revised plans for review. Additional consultation shall occur between the City of Desert Hot Springs, Applicant, and consulting tribes to discuss the proposed changes and to review any new impacts and/or potential avoidance/preservation of the cultural resources on the Project. The Applicant will make all attempts to avoid and/or preserve in place as many as possible of the cultural resources located on the project site if the site design and/or proposed grades should be revised in consult with the City of Desert Hot Springs. In specific circumstances where existing and/or new resources are determined to be unavoidable and/or unable to be preserved in place despite all feasible	Project Proponent/ Construction Contractor	Prior to the issuance of a Grading Permit for any earth-moving operations.	

Mitigation Measure	Implementation Entity	Timing for Implementation	Date of Completion/ Initials
alternatives, the developer shall make every effort to relocate the resource to a nearby open space or designated location on the property that is not subject any future development, erosion or flooding. **Tribal Monitoring:** The Developer, the City of Desert Hot Springs,the Agua Caliente Tribe of Cahuilla Indians, and the Saboba Tribe of Luiseño Indians shall develop an Tribal Monitoring plan to address details, timing and responsibilities of all monitoring activities that will occur at the project site, when it is determined by either the city or the consulting tribe(s) to be necessary. Details of the plan may include: a) Project grading and development scheduling; b) The development of a rotating or simultaneous schedule in coordination with the applicant and the designated Native American Tribal Monitors from both the Agua Caliente Tribe of Cahuilla Indians, and the Saboba Tribe of Luiseño Indians during grading, excavation and ground disturbing activities on the site: including the scheduling, safety requirements, duties, scope of work, and Native American Tribal Monitors' authority to stop and redirect grading activities in coordination with all Tribal Representatives; c) The protocols and stipulations that the Developer, City of Desert Hot Springs, the consulting tribes will follow in the event of inadvertent tribal/cultural resources			

	Mitigation Measure	Implementation Entity	Timing for Implementation	Date of Completion/ Initials
	discoveries, including any newly discovered cultural resource deposits that shall be subject to a tribal/cultural resources evaluation; d) The Tribal/Cultural Monitoring Plan shall take into account the potential impacts to undiscovered buried archaeological and cultural resources and procedures to protect in place and/or mitigate such impacts.			
TBL-2	**Treatment and Disposition of Cultural Resources:** In the event that Native American cultural resources, items of cultural patrimony, or Tribal Cultural Resources are inadvertently discovered during the course of grading for this Project. The following procedures will be carried out for treatment and disposition of the discoveries: a) Temporary Curation and Storage: During the course of construction, all discovered resources shall be temporarily curated in a secure location onsite or at the offices of the project archaeologist. The removal of any artifacts from the project site will need to be thoroughly inventoried with tribal monitor oversite of the process; and b) Treatment and Final Disposition: The landowner(s) shall relinquish ownership of all cultural resources, including sacred items, burial goods, and all archaeological artifacts and non-human remains as	Project Proponent/ Construction Contractor	Prior to the issuance of a Grading Permit for any earth-moving operations.	

Mitigation Measure	Implementation Entity	Timing for Implementation	Date of Completion/ Initials
part of the required mitigation for impacts to cultural resources. The applicant shall relinquish the artifacts through one or more of the following methods and provide the City of Desert Hot Springs with evidence of same: i. Accommodate the process for onsite reburial of the discovered items with the consulting Native American tribes or bands. This shall include measures and provisions to protect the future reburial area from any future impacts. Reburial shall not occur until all cataloguing and basic recordation have been completed; ii. A curation agreement with an appropriate qualified repository within Riverside County that meets federal standards per 36 CFR Part 79 and therefore would be professionally curated and made available to other archaeologists/researchers for further study. The collections and associated records shall be transferred, including title, to an appropriate curation facility within Riverside County, to be accompanied by payment of the fees necessary for permanent curation: iii. For purposes of conflict resolution, if more than one Native American tribe or band is involved with the project and cannot come to			

Mitigation Measure	Implementation Entity	Timing for Implementation	Date of Completion/ Initials
an agreement as to the disposition of cultural materials, they shall be curated at the Western Science Center or Agua Caliente Cultural Museum. At the completion of grading, excavation and ground disturbing activities on the site a Phase IV Monitoring Report shall be submitted to the City of Desert Hot Springs documenting monitoring activities conducted by the project Archaeologist and Native Tribal Monitors within 60 days of completion of grading. This report shall document the impacts to the known resources on the property; describe how each mitigation measure was fulfilled; document the type of cultural resources recovered and the disposition of such resources; provide evidence of the required cultural sensitivity training for the construction staff held during the required pre-grade meeting; and, in a confidential appendix, include the daily/weekly monitoring notes from the archaeologist. All reports produced will be submitted to the consulting tribes and Eastern Information Center and interested tribes.
