On-Dock Rail Throughput (share)	3.4 (23.7%)	3.7 (25.7%)	6.0 (33.4%)	7.3 (33.3%)	8.2 32.5%)	11.5 (33.3%)	12.9 (29.8%)
Near-/Off-Dock Rail Throughput (share)	2.7 (18.5%)	2.0 (14.3%)	1.2 (6.6%)	1.5 (6.7%)	1.9 (7.6%)	2.3 (6.7%)	4.4 (10.2%)

Using the forecasted cargo volumes in TEUs from Table I-5 above, the chart below converts TEUs to containers. Please note that a full 25% of import containers is transloaded but that ½ of that goes "east" and ½ of that stays north of the Ports. That means 12.5% of the cargo containers imported are transloaded to domestic containers before going to one of the rail yards north of the Ports that are shown in Figure 2.

Table 4. San Pedro Bay Ports Intermodal Forecast, 2009. ***Table adapted from Tioga Report, 2009.***[xvii]

Year	TEUs	1 container = 1.85 TEUs	Total containers/year	Total containers that are transloaded north of the Ports = 12.5%
2012	14.3 Million		7.73 Million	996,250
2016	17.8		9.62	1,202,500
2020	21.8		11.78	1,472,500
2023	25.2		13.62	1,702,500
2030	34.6		18.7	
2035	43.2		23.25	

In 2016 there will be 1,020,500 transloaded containers heading north of the Ports to a rail yard, using the 25% of Port imports figure supplied by John Doherty of ACTA. If these containers ALL went to Hobart, they would more than "replace" the 1.1 million international cargo containers that were "diverted" to the SCIG in that year. The SCIG will handle 1.1 million containers in 2016 according to the DEIR's Executive Summary.

In scenario, the Hobart Yard would have the opportunity to be full again by 2016 – and there would be just as many trucks on the I-710 and other local freeways as there are today. In fact, counting the trucks carrying 1.1 million containers to the SCIG and potentially 1.0 million containers to Hobart – there would be TWICE as many trucks on the roads as there are now. No reduction in air pollution. No "health savings." Increased cancer risk. Increased noise.

In this scenario, the capacity of the Hobart Yard is 1,500,000. With 1,020,500 transloaded containers, there would still be space for 479,500 pure domestic containers.

BASED ON FUTURE CARGO FORECASTS, HOW QUICKLY COULD THE HOBART YARD ACTUALLY FILL UP WITH TRANSLOADED AND DOMESTIC CONTAINERS AFTER THE BNSF SCIG OPENS?

Scenario 3

But what if some of the transloaded containers went to the UP LATC or the UP Commerce Yards. Does that dramatically change the forecast for Hobart? First, these yards are significantly smaller as Table 5 demonstrates. In this Scenario, let's assume that there is a domestic to transload "split" of 50/50 at the two UP yards (noting also that UP Commerce handles 26% international containers and Hobart would handle 5 percent international cargo.) Let's go back to Scenario 1, in which Hobart in 2010 had 1,090,000 actual lifts, 59% of which were international. For that Scenario, we used what we consider faulty information in the SCIG DEIR—that is that only "pure domestic containers" are handled at the Hobart Yard. Therefore we "assumed" that the remaining 41% of the containers handled in 2010 were "pure domestic containers." For this Scenario, however, we look at Hobart having a more realistic 50-50 split of domestic containers and transloaded containers in 2010. (See Table 3 above). That would mean that the "pure domestic containers at Hobart in 2010 were ½ of 446,900 or 223,450. (Again, refer to Table 3 above).

We start with the 223,450 pure domestic containers as calculated above, and add a 3% increase per year. Handling of pure domestic containers is rising at a much slower rate than is transloading so we have added a small growth rate for pure domestic containers. 2010 pure domestic containers at Hobart were calculated at 223,450. If this number rose by 3% every year until 2016, there would be approximately 266,810 "pure domestic containers" handled by Hobart in 2016. There would leave 958,000 spaces for transloaded containers at Hobart.

Table 5. Future Space for Transloaded Containers at the UP and BNSF Rail Yards North of the Ports, if International Containers Leave Hobart for the SCIG

Yard	Ca-pacity in 2016	Int'l con-tainers?	If 50/50 domestic and transloaded	Space for trans-loads	Transloaded containers available in 2016 1,202,500	In 2016, total transloaded containers = 1,202,500 based on cargo projections in DEIR SCIG
UP LATC	250,000	0	125,000	125,000		125,000
UP Commerce	510,000	26% = 132,600 *Leaving 377,400 slots*	188,700	188,700		188,700
Hobart Eastern	200,000		BNSF and CARB say that this yard handles "only local domestic" containers	0		
Hobart	1.5 million	75,000 (5%)	266,810	1.16 million		958,000
					There would be more transloaded containers available for Hobart than there is even space for, if we assume a 50-50 split of domestic and transloaded at Hobart.	**958,000 transload spaces would be available for Hobart to have the oppor-tunity to fill**
	Scenario 3: Again, in 2016 the SCIG will have 1.1 million "lifts" according the DEIR. In 2016, there will be 1,202,500 transloaded containers available for the three rail yards, two of which are small compared to Hobart. Hobart would have space for at least 958,000 of these containers.					

	SCIG would have diverted 1.1 million containers and Hobart would have been able by 2016 to "fill" 958,000 of those slots, leaving a difference of only 142,000 containers. By early 2017, Hobart would have the opportunity to have MORE transloaded containers than the 1.1 million "diverted" to the SCIG. **In this scenario, by early 2017, there will be more transloaded containers on the I-710 and adjacent roads heading to Hobart than were so-called "eliminated" by diversion of international containers to the SCIG.**

Please also note: The LATC and Up Commerce handle a small % of international containers but these might move to the UP ICTF if it is approved and opens. This somewhat limits their ability to take a full load of transloaded containers, leaving more containers potentially needing to go to the Hobart Yard.

The DEIR says that the Hobart Yard will handle only domestic containers in the future, *thereby "…eliminat[ing] a part (estimated at 95%) of existing and future intermodal truck trips between the Port and the BNSF's Hobart Yard?" (DEIR at 3.10-25).* **Where in the DEIR is documentation provided for that statement?**

The simple answer is that we can find no documentation for this statement anywhere in the 4000+ page SCIG DEIR. We can, however, find many assertions to that effect in the DEIR and in the press.

BNSF president and CEO Matthew Rose described the advantages of the SCIG at a 2006 Town Hall Los Angeles keynote address, by noting how much shorter truck trips would be for containers currently going to the Hobart Yard once they are able to travel to the SCIG. He stated:

> *"… The Hobart Yard … is 20 miles away from the ports and handles, this year [2006], about 1.4 million containers and trailers. You can imagine if we could shift that volume near-dock or on-dock the impact that we could just have in terms of reducing congestion and improving air quality."*[xviii]
>
> - Matthew K. Rose, Chairman, President and CEO, Burlington Northern Santa Fe Corp.

Mr. Rose also added:[xix]

> **"Hobart is the largest inland intermodal facility in the world, and we look forward to being able to continue that as well."**

Despite Mr. Rose's assertions that the Hobart Yard will continue to thrive, the DEIR states over and over again that when the SCIG opens, truck trips on the I-710 Freeway from the Ports will be dramatically reduced. (See for example *DEIR*, at 2-11; 3.10-30; 3.10-25; 4-60; and 7-33.) The only reference to the future of Hobart Yard, however, is that it will handle 5% international cargo containers and otherwise handle "domestic" containers. (DEIR 3.10-25). The only documentation provided for assertions about what will happen to the Hobart Yard with/without the SCIG project appears to be a reference to "Personal communication, J. Hovland, 2009." "J. Hovland" is apparently John Hovland, director of marketing and facilities management for BNSF Railway in Fort Worth, Texas.

None of the following types of potential documentation about what could happen to the BNSF Hobart Yard are included in the DEIR:

- No memo from BNSF's J. Hovland about the future of the BNSF Hobart Yard.

- No memos describing exactly what BNSF plans to do with the Hobart Yard if the SCIG is approved.
- No affidavits from BNSF about its future plans for the Hobart Yard.
- No affidavits or memos from BNSF that state that the Hobart Yard will only be handling "pure" domestic containers (ones with goods that did not originate at the Ports)
- No affirmative statement saying that BNSF Hobart will not be accepting any international cargo in <u>transloaded</u> containers at the Hobart Yard if/when the SCIG is built.

Thus, the assertion that BNSF Hobart will "eliminate 95% of existing and future intermodal truck trips between the Port and the BNSF's Hobart Yard" is undocumented and untested.

This assertion presented as fact in the DEIR is also an **untested assumption** which is used in all of the DEIR's and Health Risk Assessment's (HRA) analyses and conclusions about truck volumes, near-roadway pollution, noise, EJ, air quality, and diesel cancer risk – an assumption that trucks from the Ports will no longer travel 24 miles to the Hobart yard if the SCIG is built. Using this untested assumption, the DEIR has calculated dramatic "health savings" and "pollution" savings that would result from "eliminating trucks" from the Ports to Hobart. The author has analyzed data on truck trips, transload volumes and traffic and concludes that the assertion utilized in all the DEIR and HRA analyses is incorrect and the assumptions based on it make the subsequent analyzes upon questionable, as will be demonstrated below.

HOW MANY MILES WOULD A <u>TRANSLOADED CONTAINER</u> TYPICALLY TRAVEL TO GET TO THE HOBART YARD?

Such a calculation includes miles covered by a truck driving an international container from the Ports to a typical transload center and then having another truck carrying the transloaded domestic container to the Hobart Yard. As we can see from Figure 1 in this report, showing transload centers, there are hundreds of transload centers between the Port and Hobart Yard. Let's use an example of one that is in South Gate, as pictured below in Figure 3 from the McGMAP report:

Figure 3. Maersk Transloading Facility in South Gate, CA

If the SCIG is built, there will be empty space at the Hobart Yard that could have the opportunity to handle transloaded containers. Calculations of the potential volume of transloaded containers that could originate at the Ports and end up at the Hobart Yard demonstrate that Hobart can continue to thrive as an intermodal rail yard with a large number of both domestic and transloaded containers from the Ports. Much of the goods originate at the Ports and make their way by truck up the I-710 Freeway (or other freeways) to the Hobart Yard – after having been transloaded into domestic containers, making <u>at least a 24-mile trip</u> before reaching Hobart. *See Table 6.*

See Table 6 below. Three very typical routes from the Port of L.A. to a transload center and then on to the Hobart Yard with a domestic container all would entail MORE truck miles traveled than the straight route from the POLA up the I-710 Freeway to the Hobart Yard with an international container. That means that if the international container lift load at Hobart went to the SCIG but the empty slots were replaced with a similar number of transloaded container lifts, the number of truck miles traveled would actually increase, including on local area freeways. Note the routes and mileages below.

Table 6. Distances of Direct Rail Container Trips versus Transloaded Container Trips from the Port of Los Angeles to the BNSF Hobart Yard

Starting Point	Destination #1	Destination #2	Total Miles Traveled	Miles saved or added compared to 24.3 miles on the I-710 or other local area freeways
Port of Los Angeles	To BNSF Hobart, 3770 East Washington Blvd., Commerce, CA		24.3 miles	
Port of Los Angeles	To South Gate Transload Facility	South Gate Maersk logistics facility at 5011 Firestone Place, South Gate, CA 90280 to Hobart Yard in Commerce	25.7 miles	+ 1.4 miles
Port of Los Angeles	To logistics facility in Santa Fe Springs at 11204 Norwalk Blvd Santa Fe Springs, CA 90670	Santa Fe Springs transload facility (Gale/Triangle) to Hobart Yard in Commerce	33.8 miles	+8.1 miles
Port of Los Angeles	To logistics facility in Carson, CA	Carson, CA to Hobart Yard in Commerec	26.6 miles	+2.3 miles including 7 miles on the I-110; 4 miles on the I-405 and 13 miles on the

				I-710.

Google Map of route from POLA to Carson logistics facility to Hobart Yard: 1 mile on surface streets; 7.1 miles on I-110; 1.4 miles on surface streets; 3.9 on the I-405; and 13.2 on the I-710. That adds up to about 26.6 miles.

3770 E Washington Blvd, Los Angeles, CA 90023

In other words, if transloaded containers replace the former international container slots that are "diverted" to the SCIG, then there would be more truck miles with the transloaded containers than currently exist with the international containers at Hobart – because transloaded containers always have to make a diversion to a transload center before going to Hobart.

A WORD ABOUT SEMANTICS

When people's lives and health are at stake, we cannot afford playing with semantics over what is inside of a 53-foot container and where the cargo inside originated.

What is a 40 foot container with goods originating at the Ports called? -- An "international"container

What is a 53 foot container with goods originating at the Ports called? – A "domestic" container.

What is INSIDE each of these containers? – goods that originated in another country, e.g., China, Vietnam, Korea!

A 53-foot container with goods from the Ports inside it cannot be camouflaged in the BNSF SCIG DEIR as though industry leaders at the Port of Los Angeles, BNSF Railway, Environ and other DEIR consultants are not aware of the transloading phenomenon and of exactly how far trucks travelled to get that container to the Hobart Yard from where the goods entered at the Ports.

To reiterate, many retailers these days are finding that using 53 foot containers and using the transloading process provides them more flexibility in getting their products, provide additional transit time to make decisions about where the transloaded domestic containers are heading, and they hold more contents, making them cheaper to ship on rail than 40-foot containers.[xx] The CEO of a company with transloading facilities, one located in Santa Fe Springs, told the author that transloading containers which originated at the Ports into 53-foot domestic containers and driving them to the BNSF Hobart Yard is a regular part of their business.[xxi] Since transloading is a surging trend and Hobart is the country's largest intermodal rail yard, Hobart is undoubtedly already handling more and more of these transloaded containers – and they would arrive on trucks that have traveled at least 24 miles to get to the Hobart yard because of their diversion to a transload center.

How does this reconcile with all the analyses in the DEIR? It does not. The analyses (air quality, HRA, noise, cumulative impacts, and more) in the entire DEIR need to be redone

with accurate information about transloading and affidavits about what will happen to the Hobart Yard once the SCIG opens.
We conclude that the DEIR fails to recognize that in the future the Hobart Yard could potentially retain a robust business handling transloaded containers that originated at the Port of L.A. and Long Beach that are full of international cargo. The DEIR further confuses the issue by the choice of words. It says the Hobart will be "95% international container free" when SCIG opens. It does not say that Hobart will be "95% free of international goods that originated at the Ports." The DEIR would have one believe that all of the containers handled by Hobart now and in the future are "pure domestic containers" with locally made products inside them, thereby ignoring the reality of the transload business (and of the U.S. economy).

Finally, we attach below a series of claims that have been made over and over again about the so-called diversion of trucks off the 710 Freeway that the SCIG will allegedly create. The DEIR needs to redo the DEIR and validate and test the assertions and assumptions upon which it makes these claims. The public's health in Wilmington, Carson and Long Beach depends on it – as does the health of the thousands of residents who live along the I-710 Freeway.

EXAMPLES OF CLAIMS BETWEEN 2005-2011 THAT THERE WILL BE PUBLIC HEALTH BENEFITS DUE TO ELIMINATING TRUCK TRAFFIC ON THE I-710 BY BUILDING THE SCIG

Even before the initial environmental review process began in 2005, BNSF made assertions about the public health benefits that the SCIG would bring, issuing a press release about the anticipated public health and quality of life benefits of the SCIG, quoting then Mayor of Los Angeles James Hahn:

> *"This near dock rail facility will eliminate nearly 1 million truck trips per year, benefiting our commuters, our communities and our environment."*
>
> - Former Los Angeles Mayor James Hahn. Quotation in BNSF press release: "BNSF's Proposed Near-Dock Facility Receives Support from L.A. Mayor Hahn and Councilwoman Hahn," February 10, 2005 [1]

In July 2007, the BNSF SCIG's promotional website, entitled *Communities Matter*, promised that the SCIG "will help reduce traffic on local highways" and "improve air quality."[2] As noted above, BNSF specifically claimed that the SCIG will ease the impact of trucks on the region's air quality and congestion, including the I-710 (Long Beach) Freeway. That freeway leads from the Ports to the BNSF Hobart Yard, the largest intermodal facility in the U.S., located in City of Commerce. As mentioned earlier, BNSF president and CEO Matthew Rose described the advantages of the SCIG at a 2006 Town Hall Los Angeles keynote address, by noting how much shorter truck trips would be for containers currently going to the Hobart Yard when they will go to the BNSF SCIG:

> *"… The Hobart Yard … is 20 miles away from the ports and handles, this year [2006], about 1.4 million containers and trailers. You can imagine if we could shift that volume near-dock or on-dock the impact that we could just have in terms of reducing congestion and improving air quality."*[xxii]
>
> - Matthew K. Rose, Chairman, President and CEO, Burlington Northern Santa Fe Corp.

Shifting millions of containers from the Hobart Yard to <u>on-dock rail</u> would indeed be advantageous, because on-dock rail does not involve the use of trucks to move containers off the port property. On-dock rail means that a container is taken off a ship and goes directly onto a train to its destination – no truck involved, thereby reducing air pollution.

Moving the containers to near-dock rail, on the other hand, requires trucking each container five miles one way to the near-dock SCIG facility, creating air pollution.

[2] Burlington Northern Santa Fe Railway's Southern California International Gateway website www.communitiesmatter.com/why.html.

But it is actually the rest of CEO Rose's statement (and the earlier statement of former Mayor James Hahn) about the SCIG that has captured the attention and admiration of many elected officials and even Port staff – BNSF's claim that the SCIG would take more than a million trucks off the I-710 Freeway, trucks that normally would have traveled from the Ports to the BNSF Hobart Yard in Commerce. From the Port's web site in 2007 (and still there in 2012):

> *"Today, port related containers moving between the BNSF railyard and the ports travel on the I-710 freeway. Once this facility [the SCIG] is fully operational, it is expected that one million port-related trucks could be eliminated from the I-710 freeway per year. Estimated year of completion is 2009*." (Citation: POLA website accessed 7-17-2007 and again on 1-29-2012).

It is important to note that the BNSF assertions over the past 5-7 years have been accepted even more widely than stated above. In fact, from the Governor's office to State of California advisory councils, to the Southern California Association of Governments, and to various industry stakeholders, the BNSF claims have been stated and re-stated as "fact."

The Governor's Goods Movement Action Plan selected SCIG –because it would eliminate trucks on the I-710:

"It would "reduce truck trips on Interstate 710." [3] "... SCIG ... will eliminate over a million truck trips per year on I-710."

- Gill V. Hicks, transportation consultant
  Chairman of California Marine and Intermodal Transportation System Advisory Council (CALMITSAC). Quotation in a BNSF press release, May 8, 2007: "BNSF Enhances Proposed Southern California International Gateway"[4]

"Such a facility could eliminate one million truck trips annually from the 710 Freeway..."

- Southern California Association of Governments
  Southern California Regional Strategy for Goods Movement: A Plan for Action. February 2005 (Amended March 2005)[5]

"Authorities estimate the [SCIG rail] yard could take as many as 1 million trucks off local roadways, including the Long Beach (710) freeway, annually."

- "Rail yard planners offer cleaner solutions"
  Long Beach Press Telegram May 8, 2007 [6]

"It is simple: take a million older trucks a year off the 710 Freeway and replace them with clean trucks delivering containers to rail much closer to the ports."

- Elizabeth Warren

Executive Director, FuturePorts
"BNSF Railway Enhances Proposed Southern California International Gateway" BNSF E-Release May 2007 [7]

Moreover, the Los Angeles Chamber of Commerce endorsement letter for the SCIG highlights:

> *"the significant air quality, traffic and safety improvements" that will have a "direct effect on improving the quality of life for communities in the port areas as well as those along the Interstate 710 Corridor and other freeways."* [8]

The claim that the SCIG will result in a million fewer trucks on the I-710 and other local freeways, thereby improving air quality and reducing the burden on southeast L.A. communities along the I-710 goods movement corridor, has been so widely asserted and repeated that it appears to be "fact;" it is now commonly accepted as "the truth." But the SCIG DEIR simply failed to evaluate the unverified assertions and untested assumptions behind those statements.

[7] http://www.communitiesmatter.com/erelease/0507/index.html
[8] Russell J. Hammer, President & CEO of the Los Angeles Chamber of Commerce; in a letter to BNSF Railway, June 16, 2005 http://www.communitiesmatter.com/SCIGletter0605.pdf

UNTESTED ASSERTIONS HAVE APPEARED ON THE PORT OF LOS ANGELES WEBSITE FOR YEARS

Despite statements by elected officials, newspaper reports and BNSF officials at multiple corporate levels, along with statements in the DEIR, no documentation to support the claims above has yet been provided. For more than seven years, even the Port of Los Angeles has accepted this as "fact" on its public web site:

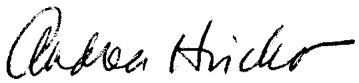
Accessed July 16, 2007 on POLA website:

"Today, port related containers moving between the BNSF railyard and the ports travel on the I-710 freeway. Once this facility is fully operational, it is expected that one million port-related trucks could be eliminated from the I-710 freeway per year."

Accessed January 29, 2012 on the POLA website:

"Southern California International Gateway"

The Port of Los Angeles is developing a new near dock rail facility, which will be operated by Burlington Northern Santa Fe (BNSF). This facility will be used to handle Port related intermodal containers. The proposed site for this facility is Port of Los Angeles property north of Pacific Coast Highway, south of Sepulveda Boulevard and west of the SR103. Today, port related containers moving between the BNSF railyard and the ports travel on the I-710 freeway. Once this facility is fully operational, it is expected that one million port-related trucks could be eliminated from the I-710 freeway per year. Estimated year of completion is 2009."



Since the statements were made before the BNSF SCIG Draft EIR/EIS was even completed, and since it has not yet been finalized by the Port, it might be reasonable to question whether the above web site statements might even be considered prejudicial.

CONCLUSION

The author of these comments concludes that the DEIR should be sent back, be redone and be recirculated for comment. She requests that the recirculated DEIR include an evaluation of whether the capacity that will be opened up at Hobart by building SCIG will be filled with additional freight truck trips to Hobart with transloaded containers that originated at the Ports – and that the impacts of that traffic and air pollution be re-considered in the new DEIR. The author also requests that the DEIR consultants document BNSF and other industry data about where containers are heading, and conduct interviews with key transloading center executives to develop an accurate picture of what is happening in southern California with regard to transloading practices. This is critical to an accurate BNSF SCIG DEIR, and it is needed to replace the virtually non-existent review of transloading that exists in the current DEIR and the undocumented statements about the fate of BNSF Hobart Yard after the SCIG opens, if it does. All analyses in a

revised DEIR for air quality, cancer risk, other health risks, noise, cumulative impacts, traffic, etc. will need to be redone once transloading statistics are included.

Thank you for your consideration.

US transloading growth reshaping cargo routing

Bill Mongelluzzo, Senior Editor | Mar 03, 2017 6:05PM EST

LONG BEACH, California — Increased transloading of merchandise imports from marine containers to domestic containers and trailers at major US seaports — rising from 52 percent of total intermodal volume through Los Angeles-Long Beach to 58 percent in five years — is reshaping containerized supply chains.

Data accumulated by industry analysts and industrial real estate experts reveal that this trend is underway, and they project that growth in transloading will continue unabated as a result of the convergence of the big-ship phenomenon and rapid growth in e-commerce fulfillment. The ability of importers to determine the final destination of the merchandise after the container reaches the US port, rather than two weeks earlier when it is loaded on the vessel in Asia, gives retailers more flexibility in routing. Beneficial cargo owners must further study their supply chains to determine the best routing for their needs.

Ports must invest in the marine terminal infrastructure and tall cranes needed to handle bigger and bigger ships. Industrial real estate developers must scramble to find suitable locations near major ports for transloading activities, and also for locations near urban cores to process last-mile deliveries for e-commerce fulfillment.

Seaports will continue to be where the action is in supply chain logistics. “The greatest concentration of this demand is in Southern California,” Rob Leachman, professor at the Institute of Transportation Studies at the University of California, Berkeley, told the 17th Annual TPM Conference this week in Long Beach. “The next greatest concentration is at ports that serve the other two, three, or four corners,” he said.

There are four to five load-center gateways for the the North American container trades. The so-called five-corner strategy of logistics involves the Pacific Northwest, which includes the

Northwest Seaport Alliance of Seattle and Tacoma and the British Columbia ports of Vancouver and Prince Rupert, Los Angeles-Long Beach, Houston, the South Atlantic ports of Savannah and Charleston, and the mid- and North Atlantic ports of Norfolk and New York-New Jersey.

In 2015, Los Angeles-Long Beach handled 50.7 percent of US containerized imports from Asia, other West Coast ports handled 12.2 percent, British Columbia had 4.4 percent, the Gulf ports 2.2 percent, South Atlantic ports 13.8 percent, and the Northeast 16.7 percent, Leachman said.

Cargo routing for imports from Asia, by far the largest sourcing area for merchandise imports, is affected greatly by cargo value. The highest-value imports such as electronic goods are concentrated in Los Angeles-Long Beach. Importers are willing to pay higher intermodal transportation costs to the interior in order to get high-cost or seasonal merchandise to the eastern half of the country as quickly as possible. Medium and low-cost imports are spread over the five corners to get the product closer to the consuming market at the lowest possible cost.

For example, Leachman found that 63.9 percent of electronics imports and 57.8 percent of auto parts imports enter the country through Southern California, but Los Angeles-Long Beach handles 47.4 percent of the lower-cost consumer goods such as furniture imports. By contrast, East and Gulf Coast ports do best when lower all-in transportation costs via all-water services from Asia provide access to population centers in their regions. The Northeast, South Atlantic, and Gulf ports combined handle more than 50 percent of the lowest cost containerized merchandise where price, rather than time-to-market, is the determining factor in cargo routing.

In supply chain logistics terms, the tendency of retailers to “push” their containers through seaports to the final destinations is growing less rapidly — or in some cases not at all — than pushing the 40-foot marine containers to large import distribution warehouses, transloading the merchandise into 53-foot domestic containers and trailers, and “pulling” the merchandise to regional distribution centers.

Leachman said this trend, coupled with growing e-commerce demand, is driving more freight to the push-pull model. “Push-pull is growing faster than overall imports, and push is growing slower than overall imports or even declining,” he said.

The trend toward more transloading was confirmed by Larry Gross, president of Gross Transportation and a partner at FTR. “Transloading is playing a larger role,” Gross said, but the “intermodal-unfriendly” west-to-east routing of intact containers will probably not be a growth sector in the coming years.

For example, in Southern California, which is the transloading capital of the country, transloading’s share of intermodal freight increased from 52 percent in 2011 to 58 percent in 2016, whereas intact intermodal’s share dropped from 47 percent in 2011 to 42 percent.

The merchandise imports will be carried by ever-larger ships. According to Drewry Shipping Consultants, 78 percent of the new vessel deliveries in 2017 will be vessels with capacities of 10,000 twenty-foot-equivalent units or higher, and more than half will be ships of 14,000 TEUs

capacity or greater. The message for the major gateway ports is that they better be able to handle these ships or they will lose market share.

Los Angeles-Long Beach has been handling weekly calls of vessels of 10,000 TEUs or greater for the past several years, and this has sent the ports and their terminal operators into a frenzy of marine terminal upgrades and the purchase of taller ship-to-shore cranes to be able to handle these vessels fully loaded.

Noel Hacegaba, managing director of commercial operations in Long Beach, said infrastructure and equipment comprise only half of the equation. Those big ships generate such a large surge of container discharges and reloads, 10,000 or more container exchanges per vessel call, that improved cargo-handling processes, immediate dray-offs of containers from the terminals, a focus on improved chassis availability, and enhanced data-sharing among all port users is at least as important as infrastructure investment, Hacegaba said.

Terminal efficiency takes on even greater importance with the surge of e-commerce fulfillment and the need for speed that consumers have created in receiving their shipments. Walter Kemmsies, managing director, economist, and chief strategist at Jones Lang LaSalle airports and seaports division, said a "looming conflict" could be in the making as the bigger ships call at fewer ports, take longer to unload, and generate more congestion at the gateways, but consumers want their purchases shipped to them in a day or less. This trend calls for import distribution centers to carry larger inventories so the merchandise can be pushed to intermediary facilities for delivery to consumers.

Kemmsies noted that e-commerce accounts for only 10 percent of retail sales, but about half of the new construction of industrial properties is for e-commerce. The growing demands of e-commerce fulfillment are beginning to affect the logistics strategy that has been present since the 2008 to 2009 economic recession. During the lean times, reducing transportation and inventory-carrying costs were most important. Now, the greatest fear of logistics managers is a "stock out" notification that upsets consumers and can lead to the dismissal of those employees in charge of having the right merchandise on hand when and where it is needed, he said. Therefore, costly investments in carrying additional inventory and building intermediate warehouses on costly land in urban core areas are more important than cost-cutting.

The implications of these trends for developers and users of industrial real estate are changes in the mix of distribution facility sizes, as well as the siting of those facilities, at the major gateways and in secondary and tertiary markets. Leachman said demand for national distribution centers of 500,000 to 1 million square feet in locations that serve ports will be strong, but so too will be demand for 1-million-plus sq ft e-commerce fulfillment centers and import warehouses.

Also emerging rapidly from the growth in e-commerce development is a need for intermediate facilities located between the large import and regional distribution facilities and the urban core. These facilities break down the shipments to the package level for shipment directly to the consumers' homes or to retail stores that are increasingly becoming pickup locations for merchandise ordered online.

E-commerce fulfillment in urban areas can be handled at facilities of 100,000 to 200,000 square feet, which are often found at in-fill sites. They can be older warehouses or former manufacturing sites that can be repurposed for e-commerce. This trend has grown so rapidly that in some of the larger, denser urban areas, developers are finding it increasingly difficult to locate these facilities, said Matt Mullarkey, senior vice president of strategic planning at CenterPoint Properties. The cost of land and labor obviously increase the closer developers get to the urban core, but the need for timely delivery of merchandise in the last mile makes location more important than those factors, he said.

The confluence of the big-ship phenomenon, the increase in transloading, and the last-mile requirements of e-commerce have retailers and other importers reviewing their supply chain strategies and possibly modifying them, Leachman said. Shippers must consider cost, efficiency, and time to market in order to determine the best path to each location they serve, he said.

THE MINUTES OF THE MEETING OF THE
I-710 CORRIDOR EIR/EIS PROJECT COMMITTEE
A Meeting Held at Progress Park
15500 Downey Ave.
Paramount, CA
January 30, 2014

Excerpt from the Minutes:

B. I-710 Traffic Forecast Update

Dave Levinsohn, URS, gave a PowerPoint presentation which summarized changes to the traffic model since the release of the Draft EIR/EIS. He identified key travel demand inputs that had been updated, including the SCIG and ICTF projects, new understanding of the transload truck patterns, the 2012 SCAG RTP travel demand model, and port cargo projections. Overall, the 2012 SCAR RTP model shows lower projected port truck volumes and greater volumes of non-port trucks on I-710 than the 2008 SCAG RTP model.

MINUTES OF THE MEETING OF THE
I-710 CORRIDOR PROJECT EIR/EIS
TECHNICAL ADVISORY COMMITTEE
16401 Paramount Blvd., Paramount, CA
June 19, 2013

Excerpt from the Minutes

Jerry Wood commented that the traffic forecasts will be analyzed with and without the near-dock rail yards, with and without the SR-710 north extension, and including new multi-modal and active transportation plans inputs, and new rail yards and transloading facilities information that has recently been developed or become available.

MINUTES OF THE MEETING OF THE I-710 CORRIDOR EIR/EIS PROJECT COMMITTEE

A Meeting Held at Progress Park

15500 Downey Ave. Paramount, CA

May 30, 2013

Excerpt from the Minutes:

Gill Hicks, Cambridge Systematics, gave a PowerPoint presentation regarding the goods movement assumptions. He said the SCIG and ICTF rail yards are now included in the No Build and various build alternatives. He said reductions had been made in the container volume at intermodal yards and the daily trips of automobiles to the ports. Mr. Hicks explained the projections for annual lifts at the intermodal rail yards and gave a detailed description of how and where transloading of marine containers takes place. Because of the advance in information systems, the revised EIR/EIS will assume a greater level of truck double-cycling and empty chassis re-use at intermodal yards. He said the next steps will include forecast modeling and a report on the initial model runs.
Patricia Ochoa, Coalition for Clean Air, read a letter from the Coalition for Environmental Health and Justice. She said the recommendation is that more time be taken to analyze the traffic assumptions before presenting them to the Project Committee.

Patricia Ochoa, Coalition for Clean Air, read a letter from the Coalition for Environmental Health and Justice. She said the recommendation is that more time be taken to analyze the traffic assumptions before presenting them to the Project Committee.

Angelo Logan, East Yard Communities for Environmental Justice, said this is very important and complicated. He said their recommendation is to take pause and allow this information to be well-vetted by all stakeholders.

MINUTES OF THE MEETING OF THE I-710 CORRIDOR PROJECT EIR/EIS TECHNICAL ADVISORY COMMITTEE 16401 Paramount Blvd., Paramount, CA August 21, 2013

Mr. Hicks said the 2035 forecast is for 110,000 daily truck trips to and from the ports and for 17,000 daily trips involved in transloading of port-related goods. He said the forecast is for an additional 14,000 intermodal daily trips that are not port-related and 172,000 daily non-intermodal truck trips in the I-710 study area that are not port-related. He said the 2035 numbers reflect a reduction from the previous forecast from 43.2 million to 41.4 million containers coming through the ports.

THE TRUCK AND TRANSLOAD REPORT:

An analysis

of unverified assertions and untested assumptions

in the BNSF SCIG DEIR

concerning future activities at the BNSF Hobart Yard

if the BNSF SCIG opens

Report submitted as comments
to the POLA on the SCIG DEIR
by
Andrea Hricko, MPH*
Professor of Preventive Medicine, Keck School of Medicine, USC
& Director of the Community Outreach and Engagement Program
of the Southern California Environmental Health Sciences Center

February 1, 2012

** A first draft of this report was completed by Andrea Hricko and Ariella Morrow in 2007, when Ms. Morrow was a graduate MPH student at USC Keck School of Medicine. Ms. Morrow is currently a medical student and has not reviewed the recently issued Draft Environmental Impact Report. We acknowledge her work and earlier efforts.*

Summary

BNSF Railway has proposed a new intermodal rail facility to be located "near-dock" -- four miles from the Ports of Los Angeles and Long Beach. A Draft Environmental Impact Report (DEIR) has been issued. That report concludes that the new rail yard, called the Southern California International Gateway or SCIG Project will reduce truck traffic, improve air quality and improve health in the region.

This analysis examines the assertions in the DEIR about how the claimed reduction in truck traffic will be accomplished. It examines the assumptions in the DEIR upon which other analyses (e.g., air quality) are based. It explores what might happen to the BNSF Hobart Yard if the SCIG opens, with claims in the DEIR stating that Hobart will handle only "domestic" containers and will no longer be handling any more than 5% of international cargo, thereby "shifting" trucks from the I-710 and I-110 Freeways a shorter distance to the new SCIG.

Definitions play a role in claims in the DEIR. It is important to note that "domestic containers" can be of two types:

- Transloaded containers - cargo that arrived at the Ports and was then taken out of the 40-foot containers at a transload facility and then placed into 53-foot containers before arriving at a rail yard, and
- "Pure" domestic cargo in either domestic 53-foot containers or trailers – cargo that has not passed through the Ports before arriving at the rail yard. *(See DEIR at 3.10-31)*

The analysis concludes that those who drafted the DEIR and supplied information for it (POLA, Environ, and BSNF) failed to consider the most recent trends in the industry with regard to a "surge" in transloading of international containers, a practice increasingly popular with retailers that has been well-reported in the logistics industry press and in goods movement reports. According to the director of the Alameda Corridor Transportation Authority, a full 25% of imported cargo containers from the Ports of Los Angeles and Long Beach are now transloaded into domestic containers before they leave Southern California on rail. The author concludes that by 2016 the BNSF Hobart Yard would have the opportunity to "replace" the volume of "lifts" (containers) that go to the new BNSF SCIG yard with transloaded containers. If this happens, it would mean that there will likely be no "reduction" in truck mileage on the I-710 when the SCIG opens. In fact, the volume of trucks on the road to the two railyards (SCIG and Hobart) would be double the volume that had gone to the BNSF Hobart Yard alone. Several scenarios are included in this report.

The analysis concludes that the assertions in the DEIR about 1) reduction of truck trips to the BNSF SCIG, including information about the volume of transloaded containers and other information about what the "domestic containers" will comprise, are undocumented, 2) the assumptions are untested, and 3) the conclusions in the DEIR about traffic and air pollution impacts – which are based on these assumptions – are inaccurate.

Using documented and up-to-date information about trends in transloading, this Truck and Transload Report concludes that by 2016 the BNSF Hobart Yard will have the opportunity to replace with transloaded "domestic" containers all the "truck trips" that would supposedly have "been eliminated" by switching international containers from Hobart to the new BNSF SCIG.

In addition, there will be nearly an equal number of trucks by 2016 to the Hobart Yard and to the new BNSF SCIG, indicating that there could be twice as much truck traffic on the Harbor area's roads and freeways than the DEIR claims.

More detail: as calculated in this report, based on Port cargo forecasts in the SCIG DEIR, there might be as many as 1,202,500 transloaded containers available for the Hobart Yard in 2016, meaning that the number of transloaded containers by 2016 could replace the number of international containers moved to SCIG in 2016 (projected at 1.1 million). This would indicate that all of the traffic counts in the DEIR are faulty. If the Hobart Yard is going to continue handling transloaded containers (which it already does, but which the DEIR fails to describe), then there will be no reduction of truck trips and miles on the I-710 Freeway assuming that imported cargo grows as forecasted and that transloading continues to capture an ever-growing share of how imported cargo leaves the Ports.

In addition, the distance from the Port to a typical transload center and then on to Hobart with a transloaded domestic container is more than the current 24 miles that trucks travel to deliver international containers, because of the diversion off the I-710 to the transload facility and often then back onto the I-710. This transload scenario makes all the calculations in the SCIG DEIR about reduced truck traffic along the I-710 questionable**.**

The author of these comments recommends sending the DEIR back to the drawing board, redoing it and recirculating it, and requiring that all of the unverified assertions and untested assumptions be fully documented – and that all analyses, including air quality impacts, traffic impacts, cancer risk in the HRA, cumulative impacts and other impacts of the proposed SCIG, based on these assertions and assumptions, be fully redone.

THE REPORT

We appreciate the opportunity to offer comments on the BNSF SCIG DEIR and have chosen to look at the truck, traffic and transloading issue in the form of a report.

What does the DEIR say about the proposed BNSF SCIG project and the future of the existing BNSF Hobart Yard?

The Southern California International Gateway ("SCIG") rail yard project is an intermodal rail facility proposed by the BNSF Railway and the Port of Los Angeles (POLA) that would increase the ability of both POLA and the Port of Long Beach to grow. The POLA released the project's Draft Environmental Impact Report (DEIR) in September 2012, with comments due on February 1, 2011.

The DEIR was prepared by Environ International. The DEIR's analyses of potential air quality impacts, traffic impacts, cancer risk, cumulative impacts and other impacts of the proposed SCIG all heavily rely on assertions in the DEIR about BNSF's major Southern California rail yard, Hobart, the country's largest intermodal facility, which is located 24 miles from the Ports at the northern end of the I-710 (Long Beach) Freeway. Drayage trucks will be "shifted" from Hobart to the SCIG, saving miles traveled and reducing air pollution, according to the Draft EIR:

*"The proposed Project would construct an intermodal transfer facility at a location approximately 4 miles from the Ports, the proposed Project would eliminate a part (estimated at 95%) of existing and future intermodal truck trips between the Port and the BNSF's Hobart Yard, which is located approximately 24 miles north of the Ports in the cities of Los Angeles and Commerce, by diverting them to the proposed SCIG facility." (*DEIR at 3.10-30) (emphasis added)

The DEIR continues:

*"On the I-710 freeway … it is estimated that the project will reduce over 1.3 million truck trips per year…. This is due to the fact that the trips will occur to SCIG rather than to Hobart Yard, thus eliminating the trips on the I-710." (*DEIR at 3.10-26 (emphasis added).

In addition, the DEIR states:

"The proposed Project would result in fewer truck trips on the surrounding freeway system, as drayage operations currently serving the Hobart Railyard near downtown Los Angeles utilizing I-110 and I-710 north of the Pacific Coast Highway would be switched to the proposed Project site utilizing the proposed Project truck routes. Thus, the existing longer-distance freeway system trips from the ports to downtown rail yards would be replaced by shorter-distance trips to/from the proposed Project along port-area roadways." DEIR at 3.10-45) (emphasis added).

The DEIR does state that a small number of international containers will still go to the Hobart Yard, indicating that the Yard will not be closing:

*"The baseline intermodal demand handled by the Hobart Yard would be handled by the proposed Project. In order to be conservative, some international container trips are assumed to be handled by the Hobart Yard under proposed Project conditions – five percent of the baseline operations."(*DEIR at 3.10-40, emphasis added).

And finally, below is a description of how the DEIR says it used all of these alleged shortened traffic routes to evaluate air pollution and other impacts:

"These changes in traffic patterns, which are evaluated in this EIR, are being proposed in order to shorten truck trips for movement of containers between ships and railyards), thereby easing traffic conditions on local freeways and reducing regional air quality impacts. On the I-710 freeway, which is the primary roadway facility that services current Hobart Yard traffic, it is estimated that the project will reduce over 1.3 million truck trips per year between the SCIG project site and the BNSF Hobart Yard. This is due to the fact that the trips will occur to SCIG rather than to Hobart Yard, thus eliminating trips on the I-710." (DEIR at 3.10-26) (emphasis added)

What types of cargo are <u>currently</u> handled at the BNSF Hobart Yard – in 2011?

The DEIR states the following about the BNSF Hobart Yard and other intermodal rail yards in the Ports area: (See DEIR at 1-13).

Off-Dock Rail

Off-dock railyards are located farther (more than five miles) from marine terminals. Currently, there are a total of five off-dock railyards, three operated by UP and two operated by BNSF, but only two handle substantial numbers of containers from the San Pedro Bay Ports: the BNSF Hobart Yard in Los Angeles/Commerce/Vernon and the UP East Los Angeles Yard (Figure 1-8). Both railyards are located near downtown Los Angeles, approximately 24 miles north of the Ports. The remaining off-dock railyards include the UP Los Angeles Trailer and Container Intermodal Facility (LATC), UP City of Industry yard, and the BNSF San Bernardino yard. In 2008 the East LA and Hobart yards handled most of the international cargo not handled by on-dock yards and the ICTF: 136,000 TEUs by East LA and 1.48 million by Hobart, which currently handles all of BNSF's non-on-dock international cargo. All of the off-dock railyards in the region, including Hobart, handle more domestic and transloaded containers than international containers.

Key Definitions

Off-Dock Railyard: railyard located more than five miles from a marine terminal.

We note that the last sentence in the DEIR above states that: **"All of the off-dock railyards in the region, including Hobart, handle more domestic and transloaded containers than international containers."** This statement is interesting in several ways. First, it is an admission that the Hobart Yard currently handles transloaded containers. But the statement is factually incorrect with regard to the makeup of the overall container load at Hobart – something that is critical to the DEIR's calculations. Using information from BNSF, **the California Air Resources Board and Los Angeles County Metropolitan Transportation Authority both show that at the Hobart Yard, 59% of the containers handled are international containers and 41% are domestic (including transloaded and "pure" domestic).**[i] That is, there are currently more international containers at Hobart Yard than domestic and transloaded containers. It seems odd in a DEIR of this magnitude to have such a basic fact about the BNSF Hobart facility be completely wrong. See figure from L.A. County Metro below:

Table A-6
UP and BNSF Intermodal Off-Dock Railyards
In the South Coast Air Basin
International vs. Domestic Containers

Railyard	International Containers (Port Containers)[a]	Domestic Containers (Non-Port / Warehouse / Transloading)[a]
BNSF San Bernardino	0%	100%
BNSF Hobart (includes BNSF Commerce/Eastern)	59%	41%
UP Commerce	24%	76%
UP ICTF/Dolores	100%	0%

B Basis for Emission Control Factors

The Union Pacific Intermodal Container Transfer Facility (UP ICTF) handles only international cargo containers. There are three large rail yards (and one small yard) north of the Ports that handle a combination of international containers, domestic containers, and transloaded containers, as shown in Table 1.

Table 1. Rail Intermodal Throughput Capacity, Adapted from Metro Table[ii] and California Air Resources Board[iii]

Facility	Capacity Lifts	2006 international lifts	Percent of Yard That is International Container Traffic	Percent of Yard That Handles Domestic Containers (Pure Domestic and Transloaded Domestic)
BNSF Hobart	1, 500,000*	808,086	59%	41%
UP East Los Angeles/Commerce	510,000	80,108	24%	76%
UP LATC	340,000	32,912	16%	84%
BNSF Eastern*		130,000 (2004)		

**BNSF counts capacity at this yard as 1.7 million, but the actual capacity according to the ARB is 1.5 million lifts. The rest is related to the BNSF Commerce Eastern yard, according to the ARB. The BNSF Eastern yard focuses on local domestic containers and handled 130,000 lifts in 2004, according to the California Air Resources Board.* http://www.arb.ca.gov/railyard/hra/bnsf_eastern_hra.pdf

Table A-5
Four High-Priority Railyards
Container Lift Activities, Forecasts, and Capacities
(April 2011)

Railyard	2005 (lifts) Actual	2010 (lifts) Actual	2015 (lifts) Projected	2020 (lifts) Projected	Annual Percent Growth from 2011 to 2020	Railroad Stated Capacity (lifts)
BNSF San Bernardino	555,000[a]	447,000[c]	546,000	668,000	4.1	660,000[e]
% change from 2005	–	-19%	-1.6%	+20%	–	–
BNSF Hobart	1,336,000[a]	1,090,000[c]	1,386,000	1,763,000	4.9	1,500,000[e,f]
% change from 2005	–	-19%	+3.6%	+32%	–	–
UP Commerce	345,000[b]	429,000[d]	534,000	664,000	4.4	510,000[e]

c. ARB staff, Harold Holmes, Personal communication with BNSF via email (January 17, 2011).
d. Union Pacific Fact Book, 2010, p. 15.
e. Los Angeles County Metropolitan Transportation Authority, *Technical Memorandum – I-710 Railroads Goods Movement Study, WBS Task ID:150.10.50*, February 2009, pp. 22-24.
f. Based on personal communications between BNSF and Harold Holmes via phone on May 20, 2011, staff determined that 1.5 million of 1.7 million lift capacity was attributed to BNSF Hobart Railyard only, with the balance attributed to BNSF Commerce/Eastern Railyard.

What are current transloading trends at the Ports of L.A. and Long Beach, what does the DEIR say about transloading, and why does transloading matter to analysis of the DEIR's assertions?

There is a surging industry trend: the practice called "transloading." The trend involves switching the contents of international containers into domestic containers at a location north of the Ports, in the 25-mile stretch between the Ports and the Hobart rail yard.

It works this way: 3 big-rig trucks pick up three international containers at the Ports. The containers are driven a few miles or up to 24 miles north of the Ports, and they are dropped off at a "transload center." At the transload center, the contents of the 20 or 40-foot "international" containers are emptied. The goods are then reloaded into 53-foot "domestic" containers. This trend is valuable for the retail industry, because the contents of 3 international containers fit into 2 domestic containers, reducing shipping costs and allowing for greater flexibility in selecting destinations for cargo once it has arrived in California.[iv]

The 53-foot transloaded "domestic containers" may "appear" to be "domestic" but <u>they are full of international goods.</u> And these transloaded containers travel at least 24 miles to get to the Hobart Yard.

The DEIR virtually ignores the latest trends in the goods movement industry with regard to transloading of international containers; in fact, the DEIR's statistics are based on completely outdated figures. The DEIR has a table (See Table 1-2 below) citing transload statistics,[v] referring to an unidentified source or report, simply "POLA, 2009." The text states that: "… approximately eight percent of import containers are transloaded to domestic international containers, a portion of which may then be drayed to an intermodal railyard for transport by rail to their eastern destinations." It also cites the Table 1-2 below as data used in developing intermodal rail forecasts. (See DEIR at 1-21).

Table 1-2. Mode Split of Containers Handled at the Ports of Los Angeles and Long Beach in 2008.

Container Mode	TEUs (Millions)	Percent of Total
Direct Rail (Direct Intermodal)		
- On-Dock	(3.4)	(23.7)
- Near-Dock	(1.06)	(7.4)
- Off-Dock	(1.68)	(11.1)
Total Direct Rail	6.14	42.2
Transload	1.12	7.8
Local/Domestic (Truck only)	7.07	50.0
Total	14.33	100%

Source: POLA, 2009.

:

Contrary to the claimed 2009 statistics cited in Table 1-2 (above) of the DEIR showing 7.8% transloaded containers, currently a full 25% of cargo coming into the Ports is transloaded to rail, according to the head of the Alameda Corridor Transportation Authority (ACTA), John Doherty). In an email exchange with the author of these comments, in October 2011,[vi] Mr. Doherty stated the following:

"Another simpler way of expressing the data (thereby avoiding the confusion of whether you are talking about % of outbound rail imports or % of port total imports) is as follows: about 40% of port imports go out of state by rail as ISO containers (20', 40', 45') with no transloading, about 25% go out by rail after transloading (48' and 53'), about 10% go out of state by truck after transloading (48' and 53'), and about 25% stay local both with and without transloading." *(John Doherty, ACTA, October 2011)*

The following table reflects the statistics from Mr. Doherty, which are his conclusions after having interviewed more than 100 shipping and transload experts.

Table 2. Where POLA and POLB Cargo Goes and by What Mode	
Mode	**%**
Out of state by rail in ISO containers (20', 40', 45') – with no transloading	40%
Out of state by rail after transloading into 48' and 53' containers	25%
Out of state by truck after transloading (48' and 53')	10%
Stay local both with and without transloading	25%
TOTAL CARGO	100%

The current documented statistic of 25% transloading of containers entering the Ports of LA and Long Beach versus the DEIR's statistic of 7.8% transloading (shown in DEIR Table 1-2) indicates a 320% error in the DEIR.

We note that in another section of the DEIR, a figure of 25% transloading is mentioned, with no citation, but the DEIR does nothing to explain the discrepancy with the 7.8% figure. The DEIR claims to use the 25% figure in calculating freight rail volumes for 2035. It does not discuss using either the 7.8% figure nor the 25% figure in doing any calculations about what the future will hold specifically for the Hobart Yard. See DEIR

at 4-92, reprinted below:

> Specifically, year 2035 freight rail volumes were developed using projections for direct intermodal containers from the ports (intact containers that are not transloaded); projections for non-intermodal port rail shipments (bulk, automobiles, and carload traffic); transloaded cargo containers (estimated, on the basis of historical data and recent SCAG studies, at 25 percent of all import containers; the I-170 EIR/EIS and current work being conducted for the SCAG 2012 RTP use this same assumption); non-port rail data and projections being developed for the 2012 RTP; historical lift data, by railyard, of marine and non-marine containers at off-dock railyards; off-dock railyard capacities (see Section 1.1.5.3); and volumes of domestic cargo in 53-foot containers or trailers that has not passed through the ports. Consistent with the ongoing I-710 EIR/EIS technical studies, a reasonable growth factor of two percent per year was assumed. The cumulative rail volumes also include 2035 projections of passenger trains, based upon data from SCAG and MetroLink. Rail volumes for 2046 were estimated by assuming that the growth in rail volumes beyond 2035 will come only from increases in domestic freight rail traffic.

The *Journal of Commerce*, the premier logistics industry journal, has written a number of articles about the dramatic surge in transloading, especially at the POLA and POLB:

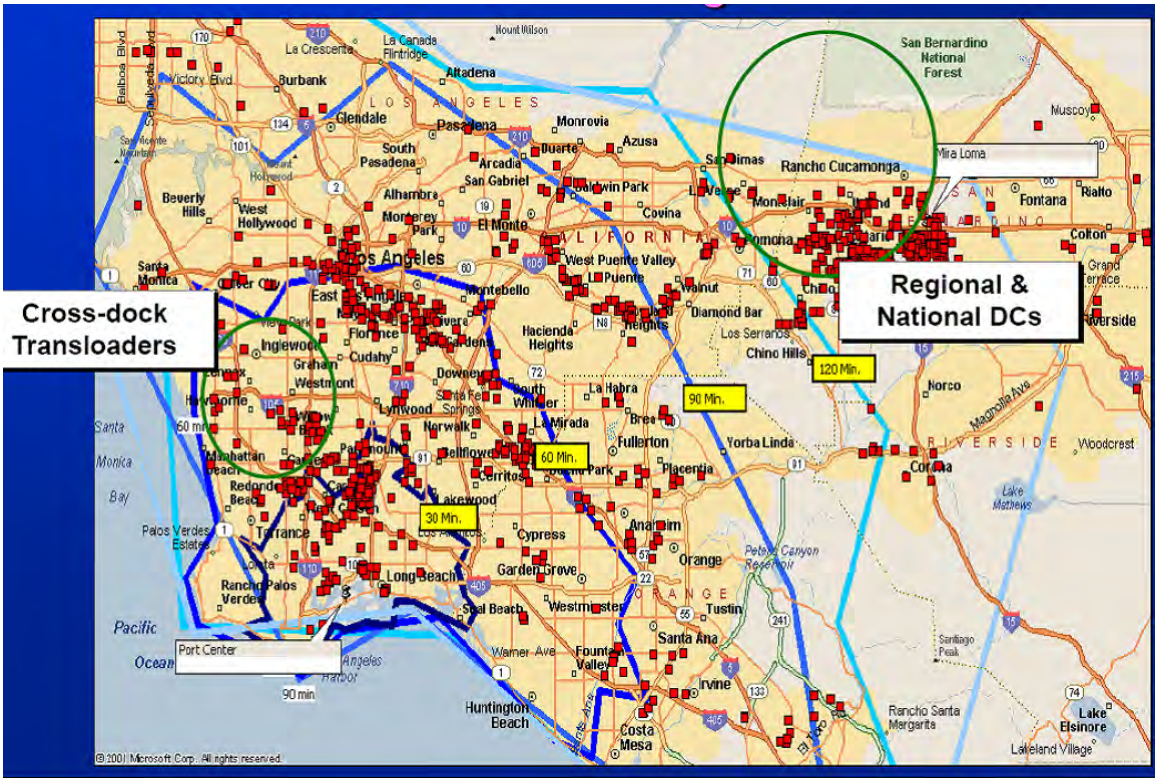
> *… "In an attempt to control transportation costs, retailers transload 40-foot marine containers into 53-foot domestic containers for inland movements. The contents of three marine containers can be loaded into two domestic containers."*[vii]

> *""… transloading took off during the recession, particularly at the ports of Los Angeles and Long Beach. According to the Alameda Corridor Transportation Authority, the share of goods arriving at LA-Long Beach transloaded into domestic containers grew significantly during the recession…. "That means that transload has a greater market share now. The pendulum has swung to transload," said John Doherty, CEO of the authority.""*[viii].

If, as noted above, 25% of imported cargo containers are being transloaded, where are the calculations in the DEIR that explain how this will impact/affect the NBSF Hobart Yard in the future? The author of this report cannot find such calculations.

The *Journal of Commerce* describes several reasons why retailers are embracing transloading:

> *"There have always been obvious economic benefits — transloading allows the contents of three international containers to be reloaded into two larger 53-foot trailers or domestic containers. … When the recession hit and shippers large and small went searching for transportation savings, transloading was a ready-made opportunity."*[ix]



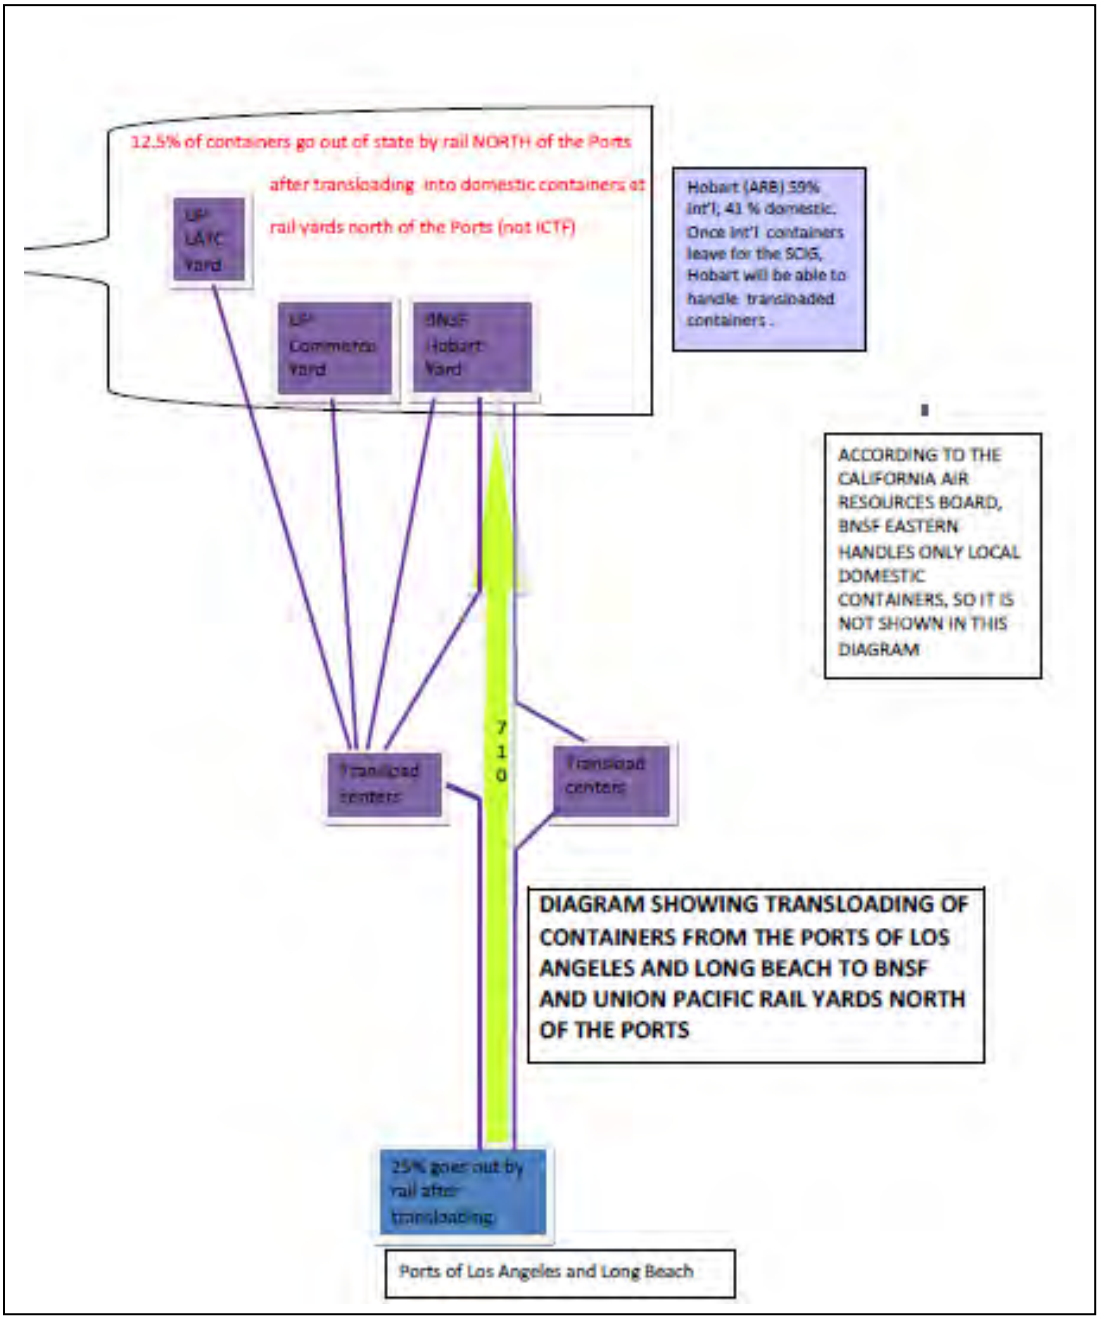
Lest anyone think that this transload trend might not have been common knowledge in the ports/logistics/rail industries long before the *Journal of Commerce* articles in 2011 (and long before the DEIR was released), please see the following excerpt from a Tioga Group report in 2008:[x]

> *"The Transload segment will be largely confined to the region between the Ports and downtown Los Angeles. This segment includes cargo that is "cross-docked" from international containers to domestic containers or trailers for onward movement by rail*

without spending significant time in inventory or undergoing value-added alterations. This cargo is typified by the Maersk Logistics activity in South Gate (Exhibit 11. As the aerial photo shows, this facility consists primarily of two-sided transfer sheds suitable for the "cross-dock" transfer operation, with minimal if any space for "warehousing…"…such operations are clustered within 15 miles of the Ports to maximize round-trip drayage productivity. Tioga studies have reinforced this finding."[xi]

See also the following reference, which states that as early as 2004 – 8 years ago – a full 12% of cargo was transloaded according to a 2004 study by the Alameda Corridor Transportation Authority (ACTA),[xii] which is also referenced in the 2006 Multi-County Goods Movement Action Plan (McGMAP).[xiii] The McGMAP report includes the following graphic, showing the high volume of transload facilities north of the the POLA/POLB and in the vicinity of the Hobart Yard. [xiv]

Figure 1. Transload Facilities North of the Ports in Los Angeles; McGMAP 2006.



The current surging transload trends are anticipated to continue,[xv] and if they do, this report calculates that transloading will allow the BSNF Hobart Yard an opportunity to replace the volume of containers that was diverted to the SCIG by 2016, if the SCIG becomes operational.

The graphic below shows the location of the major railyards in southern California that handle cargo from the Ports:

The sketch below shows the major rail yards handling transloaded cargo north of the Ports.

Figure 2. Major Railyards in Southern California Handling Cargo that Originated at the Ports (either in International Containers or Transloaded)

Sketch by Andrea Hricko

WHAT WOULD HAPPEN IF THE HOBART YARD TOOK ONLY DOMESTIC (NON-TRANSLOADED) CONTAINERS ONCE THE SCIG OPENS, AS THE DEIR IMPLIES?

SCENARIO 1.

Using 2010 actual statistics on lifts, the Hobart Yard would lose 59% of its lift capacity by shifting international containers to the SCIG. It would then replace the Hobart with 5% additional international containers. The remaining 41% of the Hobart yard handles domestic and transloaded containers. No information on the splits between domestic and transloaded at Hobart are in the DEIR or seemingly published elsewhere, we have assumed an even split in the two types. Note that BNSF to refer to all of the non-international containers it handles at Hobart as "domestic" containers, even though a good proportion of them are actually "transloaded"). See Table 3 below.

In 2010 there were 1,090,000 "actual" lifts at the Hobart Yard

Table 3. Where containers would go under Scenario 1 – The Hobart Yard, 2010, if SCIG had opened that year (last year with accurate figures for actual lifts, so this is a model)

Actual total lifts in 2010	Int'l lifts gone to SCIG (59%)	Add back 5% international containers as the DEIR states	Pure domestic containers* 41% (remaining space)	Total of pure domestic and 5% inter-national containers
1,090,000 **Note: capacity is 1,500,000**	**643,100**	**54,500**	**** After international containers go to SCIG there would be only "pure domestic" containers at the Hobart, according to the DEIR – these are containers that did not contain goods that originated at the Ports.*** ***That means, 41% of the remaining space at the Hobart yard after removing international containers***	***446,900 54,500 =501,400*** ***501,400*** ***This means the Hobart Yard would be only 33% full if the SCIG had opened in 2010 and if Hobart thereafter handled only pure domestic containers.*** ***That would leave 66% of the capacity EMPTY – or potentially available for 998,600 transloaded***

			would be "pure domestic containers." (If there are even that many to handle at Hobart	***containers (which is not mentioned in the SCIG DEIR).*** ***CAPACITY LEFT AT HOBART FOR 998,600 MORE CONTAINERS IF SCIG OPENED***

*ARB states that Hobart is 41% "domestic containers," including domestic and transloaded.

According to statements in the DEIR, the Hobart Yard will not be handling any international cargo that originated at the Ports if the SCIG opens. Let's accept that as factual for this scenario and see what would happen to the Hobart Yard. If SCIG had opened in 2010, and Hobart's international containers were shifted to SCIG, Hobart Yard would be handling only 33% of the lifts it handled in 2010. If it handled no additional transloaded containers with international cargo that originated at the Ports, it would be two-thirds empty." *(See other scenarios for how quickly it could fill up with transloaded containers).*

This is the ONLY scenario under which trucks from the Ports would be reduced on the I-710 Freeway. That is, for the DEIR to be correct, Hobart would handle only 5% international containers and also "pure" domestic containers with local goods. As the DEIR claims, it would not handle international goods that came in through the ports and were transloaded into 53-foot containers. It would be the largest intermodal rail yard in the U.S. operating 66% empty.

BASED ON FUTURE CARGO FORECASTS, HOW QUICKLY COULD THE HOBART YARD ACTUALLY FILL UP WITH TRANSLOADED AND DOMESTIC CONTAINERS AFTER THE BNSF SCIG OPENS?

SCENARIO 2. Recognizing that transloading as a trend is surging and is currently 25%, where does the 25% of transloaded cargo go? John Doherty, director of the Alameda Corridor Transportation Authority (ACTA) says that ½ of the transloaded cargo goes "east" – to City of Industry, Mira Loma, San Bernardino, etc. He says that the other ½ goes to the rail yards that are "north of the Ports" (UP Commerce, UP LATC and BSNF Hobart).[xvi]

Let's look at forecasts for the year 2016. See below; in 2016 it is estimated that there will be with 17.8 million TEUs at the twin ports. Let's estimate how many transloaded containers there would be and where they could possibly go.

Table from DEIR, below (DEIR, at 1-23). *Note it has inappropriate figures for near/off-dock rail throughput (that is, it does not account for 25% transloading).*

Table 1-5. 2009 San Pedro Bay Ports Direct Intermodal Cargo Forecast.

2009 San Pedro Bay Ports Direct Intermodal Cargo Forecast (shown in Million TEUs)							
Year	2008 (Actual)	2012	2016	2020	2023	2030	2035
Total San Pedro Bay Ports Cargo Volume	14.3	14.3	17.8	21.8	25.2	34.6	43.2
Total Direct Intermodal	6.1 (42.2%)	5.7 (40.0%)	7.1 (40.0%)	8.7 (40.0%)	10.1 (40.0%)	13.8 (40.0%)	17.3 (40.0%)
On-Dock Rail Throughput (share)	3.4 (23.7%)	3.7 (25.7%)	6.0 (33.4%)	7.3 (33.3%)	8.2 32.5%)	11.5 (33.3%)	12.9 (29.8%)
Near-/Off-Dock Rail Throughput (share)	2.7 (18.5%)	2.0 (14.3%)	1.2 (6.6%)	1.5 (6.7%)	1.9 (7.6%)	2.3 (6.7%)	4.4 (10.2%)

Using the forecasted cargo volumes in TEUs from Table I-5 above, the chart below converts TEUs to containers. Please note that a full 25% of import containers is transloaded but that ½ of that goes "east" and ½ of that stays north of the Ports. That means 12.5% of the cargo containers imported are transloaded to domestic containers before going to one of the rail yards north of the Ports that are shown in Figure 2.

Table 4. San Pedro Bay Ports Intermodal Forecast, 2009. ***Table adapted from Tioga Report, 2009.***[xvii]

Year	TEUs	1 container = 1.85 TEUs	Total containers/year	Total containers that are transloaded north of the Ports = 12.5%
2012	14.3 Million		7.73 Million	996,250
2016	17.8		9.62	1,202,500
2020	21.8		11.78	1,472,500
2023	25.2		13.62	1,702,500
2030	34.6		18.7	
2035	43.2		23.25	

In 2016 there will be 1,020,500 transloaded containers heading north of the Ports to a rail yard, using the 25% of Port imports figure supplied by John Doherty of ACTA. If these containers ALL went to Hobart, they would more than "replace" the 1.1 million international cargo containers that were "diverted" to the SCIG in that year. The SCIG will handle 1.1 million containers in 2016 according to the DEIR's Executive Summary.

In scenario, the Hobart Yard would have the opportunity to be full again by 2016 – and there would be just as many trucks on the I-710 and other local freeways as there are today. In fact, counting the trucks carrying 1.1 million containers to the SCIG and potentially 1.0 million containers to Hobart – there would be TWICE as many trucks on the roads as there are now. No reduction in air pollution. No "health savings." Increased cancer risk. Increased noise.

In this scenario, the capacity of the Hobart Yard is 1,500,000. With 1,020,500 transloaded containers, there would still be space for 479,500 pure domestic containers.

BASED ON FUTURE CARGO FORECASTS, HOW QUICKLY COULD THE HOBART YARD ACTUALLY FILL UP WITH TRANSLOADED AND DOMESTIC CONTAINERS AFTER THE BNSF SCIG OPENS?

Scenario 3

But what if some of the transloaded containers went to the UP LATC or the UP Commerce Yards. Does that dramatically change the forecast for Hobart? First, these yards are significantly smaller as Table 5 demonstrates. In this Scenario, let's assume that there is a domestic to transload "split" of 50/50 at the two UP yards (noting also that UP Commerce handles 26% international containers and Hobart would handle 5 percent international cargo.) Let's go back to Scenario 1, in which Hobart in 2010 had 1,090,000 actual lifts, 59% of which were international. For that Scenario, we used what we consider faulty information in the SCIG DEIR—that is that only "pure domestic containers" are handled at the Hobart Yard. Therefore we "assumed" that the remaining 41% of the containers handled in 2010 were "pure domestic containers." For this Scenario, however, we look at Hobart having a more realistic 50-50 split of domestic containers and transloaded containers in 2010. (See Table 3 above). That would mean that the "pure domestic containers at Hobart in 2010 were ½ of 446,900 or 223,450. (Again, refer to Table 3 above).

We start with the 223,450 pure domestic containers as calculated above, and add a 3% increase per year. Handling of pure domestic containers is rising at a much slower rate than is transloading so we have added a small growth rate for pure domestic containers. 2010 pure domestic containers at Hobart were calculated at 223,450. If this number rose by 3% every year until 2016, there would be approximately 266,810 "pure domestic containers" handled by Hobart in 2016. There would leave 958,000 spaces for transloaded containers at Hobart.

Table 5. Future Space for Transloaded Containers at the UP and BNSF Rail Yards North of the Ports, if International Containers Leave Hobart for the SCIG

Yard	Ca-pacity in 2016	Int'l con-tainers?	If 50/50 domestic and transloaded	Space for trans-loads	Transloaded containers available in 2016 1,202,500	In 2016, total transloaded containers = 1,202,500 based on cargo projections in DEIR SCIG
UP LATC	250,000	0	125,000	125,000		125,000
UP Commerce	510,000	26% = 132,600 *Leaving 377,400 slots*	188,700	188,700		188,700
Hobart Eastern	200,000		BNSF and CARB say that this yard handles "only local domestic" containers	0		
Hobart	1.5 million	75,000 (5%)	266,810	1.16 million		958,000
					There would be more transloaded containers available for Hobart than there is even space for, if we assume a 50-50 split of domestic and transloaded at Hobart.	**958,000 transload spaces would be available for Hobart to have the oppor-tunity to fill**
	Scenario 3: Again, in 2016 the SCIG will have 1.1 million "lifts" according the DEIR. In 2016, there will be 1,202,500 transloaded containers available for the three rail yards, two of which are small compared to Hobart. Hobart would have space for at least 958,000 of these containers.					

	SCIG would have diverted 1.1 million containers and Hobart would have been able by 2016 to "fill" 958,000 of those slots, leaving a difference of only 142,000 containers. By early 2017, Hobart would have the opportunity to have MORE transloaded containers than the 1.1 million "diverted" to the SCIG. **In this scenario, by early 2017, there will be more transloaded containers on the I-710 and adjacent roads heading to Hobart than were so-called "eliminated" by diversion of international containers to the SCIG.**

Please also note: The LATC and Up Commerce handle a small % of international containers but these might move to the UP ICTF if it is approved and opens. This somewhat limits their ability to take a full load of transloaded containers, leaving more containers potentially needing to go to the Hobart Yard.

The DEIR says that the Hobart Yard will handle only domestic containers in the future, *thereby "…eliminat[ing] a part (estimated at 95%) of existing and future intermodal truck trips between the Port and the BNSF's Hobart Yard?" (DEIR at 3.10-25).* **Where in the DEIR is documentation provided for that statement?**

The simple answer is that we can find no documentation for this statement anywhere in the 4000+ page SCIG DEIR. We can, however, find many assertions to that effect in the DEIR and in the press.

BNSF president and CEO Matthew Rose described the advantages of the SCIG at a 2006 Town Hall Los Angeles keynote address, by noting how much shorter truck trips would be for containers currently going to the Hobart Yard once they are able to travel to the SCIG. He stated:

> *"… The Hobart Yard … is 20 miles away from the ports and handles, this year [2006], about 1.4 million containers and trailers. You can imagine if we could shift that volume near-dock or on-dock the impact that we could just have in terms of reducing congestion and improving air quality."*[xviii]
>
> - Matthew K. Rose, Chairman, President and CEO, Burlington Northern Santa Fe Corp.

Mr. Rose also added:[xix]

> **"Hobart is the largest inland intermodal facility in the world, and we look forward to being able to continue that as well."**

Despite Mr. Rose's assertions that the Hobart Yard will continue to thrive, the DEIR states over and over again that when the SCIG opens, truck trips on the I-710 Freeway from the Ports will be dramatically reduced. (See for example *DEIR*, at 2-11; 3.10-30; 3.10-25; 4-60; and 7-33.) The only reference to the future of Hobart Yard, however, is that it will handle 5% international cargo containers and otherwise handle "domestic" containers. (DEIR 3.10-25). The only documentation provided for assertions about what will happen to the Hobart Yard with/without the SCIG project appears to be a reference to "Personal communication, J. Hovland, 2009." "J. Hovland" is apparently John Hovland, director of marketing and facilities management for BNSF Railway in Fort Worth, Texas.

None of the following types of potential documentation about what could happen to the BNSF Hobart Yard are included in the DEIR:

- No memo from BNSF's J. Hovland about the future of the BNSF Hobart Yard.

- No memos describing exactly what BNSF plans to do with the Hobart Yard if the SCIG is approved.
- No affidavits from BNSF about its future plans for the Hobart Yard.
- No affidavits or memos from BNSF that state that the Hobart Yard will only be handling "pure" domestic containers (ones with goods that did not originate at the Ports)
- No affirmative statement saying that BNSF Hobart will not be accepting any international cargo in <u>transloaded</u> containers at the Hobart Yard if/when the SCIG is built.

Thus, the assertion that BNSF Hobart will "eliminate 95% of existing and future intermodal truck trips between the Port and the BNSF's Hobart Yard" is undocumented and untested.

This assertion presented as fact in the DEIR is also an **untested assumption** which is used in all of the DEIR's and Health Risk Assessment's (HRA) analyses and conclusions about truck volumes, near-roadway pollution, noise, EJ, air quality, and diesel cancer risk – an assumption that trucks from the Ports will no longer travel 24 miles to the Hobart yard if the SCIG is built. Using this untested assumption, the DEIR has calculated dramatic "health savings" and "pollution" savings that would result from "eliminating trucks" from the Ports to Hobart. The author has analyzed data on truck trips, transload volumes and traffic and concludes that the assertion utilized in all the DEIR and HRA analyses is incorrect and the assumptions based on it make the subsequent analyzes upon questionable, as will be demonstrated below.

HOW MANY MILES WOULD A <u>TRANSLOADED CONTAINER</u> TYPICALLY TRAVEL TO GET TO THE HOBART YARD?

Such a calculation includes miles covered by a truck driving an international container from the Ports to a typical transload center and then having another truck carrying the transloaded domestic container to the Hobart Yard. As we can see from Figure 1 in this report, showing transload centers, there are hundreds of transload centers between the Port and Hobart Yard. Let's use an example of one that is in South Gate, as pictured below in Figure 3 from the McGMAP report:

Figure 3. Maersk Transloading Facility in South Gate, CA

If the SCIG is built, there will be empty space at the Hobart Yard that could have the opportunity to handle transloaded containers. Calculations of the potential volume of transloaded containers that could originate at the Ports and end up at the Hobart Yard demonstrate that Hobart can continue to thrive as an intermodal rail yard with a large number of both domestic and transloaded containers from the Ports. Much of the goods originate at the Ports and make their way by truck up the I-710 Freeway (or other freeways) to the Hobart Yard – after having been transloaded into domestic containers, making <u>at least a 24-mile trip</u> before reaching Hobart. *See Table 6.*

See Table 6 below. Three very typical routes from the Port of L.A. to a transload center and then on to the Hobart Yard with a domestic container all would entail MORE truck miles traveled than the straight route from the POLA up the I-710 Freeway to the Hobart Yard with an international container. That means that if the international container lift load at Hobart went to the SCIG but the empty slots were replaced with a similar number of transloaded container lifts, the number of truck miles traveled would actually increase, including on local area freeways. Note the routes and mileages below.

Table 6. Distances of Direct Rail Container Trips versus Transloaded Container Trips from the Port of Los Angeles to the BNSF Hobart Yard

Starting Point	Destination #1	Destination #2	Total Miles Traveled	Miles saved or added compared to 24.3 miles on the I-710 or other local area freeways
Port of Los Angeles	To BNSF Hobart, 3770 East Washington Blvd., Commerce, CA		24.3 miles	
Port of Los Angeles	To South Gate Transload Facility	South Gate Maersk logistics facility at 5011 Firestone Place, South Gate, CA 90280 to Hobart Yard in Commerce	25.7 miles	+ 1.4 miles
Port of Los Angeles	To logistics facility in Santa Fe Springs at 11204 Norwalk Blvd Santa Fe Springs, CA 90670	Santa Fe Springs transload facility (Gale/Triangle) to Hobart Yard in Commerce	33.8 miles	+8.1 miles
Port of Los Angeles	To logistics facility in Carson, CA	Carson, CA to Hobart Yard in Commerec	26.6 miles	+2.3 miles including 7 miles on the I-110; 4 miles on the I-405 and 13 miles on the

				I-710.

Google Map of route from POLA to Carson logistics facility to Hobart Yard: 1 mile on surface streets; 7.1 miles on I-110; 1.4 miles on surface streets; 3.9 on the I-405; and 13.2 on the I-710. That adds up to about 26.6 miles.

In other words, if transloaded containers replace the former international container slots that are "diverted" to the SCIG, then there would be more truck miles with the transloaded containers than currently exist with the international containers at Hobart – because transloaded containers always have to make a diversion to a transload center before going to Hobart.

A WORD ABOUT SEMANTICS

When people's lives and health are at stake, we cannot afford playing with semantics over what is inside of a 53-foot container and where the cargo inside originated.

What is a 40 foot container with goods originating at the Ports called? -- An "international"container

What is a 53 foot container with goods originating at the Ports called? – A "domestic" container.

What is INSIDE each of these containers? – goods that originated in another country, e.g., China, Vietnam, Korea!

A 53-foot container with goods from the Ports inside it cannot be camouflaged in the BNSF SCIG DEIR as though industry leaders at the Port of Los Angeles, BNSF Railway, Environ and other DEIR consultants are not aware of the transloading phenomenon and of exactly how far trucks travelled to get that container to the Hobart Yard from where the goods entered at the Ports.

To reiterate, many retailers these days are finding that using 53 foot containers and using the transloading process provides them more flexibility in getting their products, provide additional transit time to make decisions about where the transloaded domestic containers are heading, and they hold more contents, making them cheaper to ship on rail than 40-foot containers.[xx] The CEO of a company with transloading facilities, one located in Santa Fe Springs, told the author that transloading containers which originated at the Ports into 53-foot domestic containers and driving them to the BNSF Hobart Yard is a regular part of their business.[xxi] Since transloading is a surging trend and Hobart is the country's largest intermodal rail yard, Hobart is undoubtedly already handling more and more of these transloaded containers – and they would arrive on trucks that have traveled at least 24 miles to get to the Hobart yard because of their diversion to a transload center.

How does this reconcile with all the analyses in the DEIR? It does not. The analyses (air quality, HRA, noise, cumulative impacts, and more) in the entire DEIR need to be redone

with accurate information about transloading and affidavits about what will happen to the Hobart Yard once the SCIG opens.
We conclude that the DEIR fails to recognize that in the future the Hobart Yard could potentially retain a robust business handling transloaded containers that originated at the Port of L.A. and Long Beach that are full of international cargo. The DEIR further confuses the issue by the choice of words. It says the Hobart will be "95% international container free" when SCIG opens. It does not say that Hobart will be "95% free of international goods that originated at the Ports." The DEIR would have one believe that all of the containers handled by Hobart now and in the future are "pure domestic containers" with locally made products inside them, thereby ignoring the reality of the transload business (and of the U.S. economy).

Finally, we attach below a series of claims that have been made over and over again about the so-called diversion of trucks off the 710 Freeway that the SCIG will allegedly create. The DEIR needs to redo the DEIR and validate and test the assertions and assumptions upon which it makes these claims. The public's health in Wilmington, Carson and Long Beach depends on it – as does the health of the thousands of residents who live along the I-710 Freeway.

EXAMPLES OF CLAIMS BETWEEN 2005-2011 THAT THERE WILL BE PUBLIC HEALTH BENEFITS DUE TO ELIMINATING TRUCK TRAFFIC ON THE I-710 BY BUILDING THE SCIG

Even before the initial environmental review process began in 2005, BNSF made assertions about the public health benefits that the SCIG would bring, issuing a press release about the anticipated public health and quality of life benefits of the SCIG, quoting then Mayor of Los Angeles James Hahn:

> *"This near dock rail facility will eliminate nearly 1 million truck trips per year, benefiting our commuters, our communities and our environment."*
>
> - Former Los Angeles Mayor James Hahn. Quotation in BNSF press release: "BNSF's Proposed Near-Dock Facility Receives Support from L.A. Mayor Hahn and Councilwoman Hahn," February 10, 2005 [1]

In July 2007, the BNSF SCIG's promotional website, entitled *Communities Matter*, promised that the SCIG "will help reduce traffic on local highways" and "improve air quality."[2] As noted above, BNSF specifically claimed that the SCIG will ease the impact of trucks on the region's air quality and congestion, including the I-710 (Long Beach) Freeway. That freeway leads from the Ports to the BNSF Hobart Yard, the largest intermodal facility in the U.S., located in City of Commerce. As mentioned earlier, BNSF president and CEO Matthew Rose described the advantages of the SCIG at a 2006 Town Hall Los Angeles keynote address, by noting how much shorter truck trips would be for containers currently going to the Hobart Yard when they will go to the BNSF SCIG:

> *"… The Hobart Yard … is 20 miles away from the ports and handles, this year [2006], about 1.4 million containers and trailers. You can imagine if we could shift that volume near-dock or on-dock the impact that we could just have in terms of reducing congestion and improving air quality."*[xxii]
>
> - Matthew K. Rose, Chairman, President and CEO, Burlington Northern Santa Fe Corp.

Shifting millions of containers from the Hobart Yard to <u>on-dock rail</u> would indeed be advantageous, because on-dock rail does not involve the use of trucks to move containers off the port property. On-dock rail means that a container is taken off a ship and goes directly onto a train to its destination – no truck involved, thereby reducing air pollution.

Moving the containers to near-dock rail, on the other hand, requires trucking each container five miles one way to the near-dock SCIG facility, creating air pollution.

[2] Burlington Northern Santa Fe Railway's Southern California International Gateway website www.communitiesmatter.com/why.html.

But it is actually the rest of CEO Rose's statement (and the earlier statement of former Mayor James Hahn) about the SCIG that has captured the attention and admiration of many elected officials and even Port staff – BNSF's claim that the SCIG would take more than a million trucks off the I-710 Freeway, trucks that normally would have traveled from the Ports to the BNSF Hobart Yard in Commerce. From the Port's web site in 2007 (and still there in 2012):

> *"Today, port related containers moving between the BNSF railyard and the ports travel on the I-710 freeway. Once this facility [the SCIG] is fully operational, it is expected that one million port-related trucks could be eliminated from the I-710 freeway per year. Estimated year of completion is 2009*." (Citation: POLA website accessed 7-17-2007 and again on 1-29-2012).

It is important to note that the BNSF assertions over the past 5-7 years have been accepted even more widely than stated above. In fact, from the Governor's office to State of California advisory councils, to the Southern California Association of Governments, and to various industry stakeholders, the BNSF claims have been stated and re-stated as "fact."

The Governor's Goods Movement Action Plan selected SCIG –because it would eliminate trucks on the I-710:

"It would "reduce truck trips on Interstate 710." [3] "... SCIG ... will eliminate over a million truck trips per year on I-710."

- Gill V. Hicks, transportation consultant
  Chairman of California Marine and Intermodal Transportation System Advisory Council (CALMITSAC). Quotation in a BNSF press release, May 8, 2007: "BNSF Enhances Proposed Southern California International Gateway"[4]

"Such a facility could eliminate one million truck trips annually from the 710 Freeway..."

- Southern California Association of Governments
  Southern California Regional Strategy for Goods Movement: A Plan for Action. February 2005 (Amended March 2005)[5]

"Authorities estimate the [SCIG rail] yard could take as many as 1 million trucks off local roadways, including the Long Beach (710) freeway, annually."

- "Rail yard planners offer cleaner solutions"
  Long Beach Press Telegram May 8, 2007 [6]

"It is simple: take a million older trucks a year off the 710 Freeway and replace them with clean trucks delivering containers to rail much closer to the ports."

- Elizabeth Warren

Executive Director, FuturePorts
"BNSF Railway Enhances Proposed Southern California International Gateway" BNSF E-Release May 2007 [7]

Moreover, the Los Angeles Chamber of Commerce endorsement letter for the SCIG highlights:

> *"the significant air quality, traffic and safety improvements" that will have a "direct effect on improving the quality of life for communities in the port areas as well as those along the Interstate 710 Corridor and other freeways."* [8]

The claim that the SCIG will result in a million fewer trucks on the I-710 and other local freeways, thereby improving air quality and reducing the burden on southeast L.A. communities along the I-710 goods movement corridor, has been so widely asserted and repeated that it appears to be "fact;" it is now commonly accepted as "the truth." But the SCIG DEIR simply failed to evaluate the unverified assertions and untested assumptions behind those statements.

[7] http://www.communitiesmatter.com/erelease/0507/index.html
[8] Russell J. Hammer, President & CEO of the Los Angeles Chamber of Commerce; in a letter to BNSF Railway, June 16, 2005 http://www.communitiesmatter.com/SCIGletter0605.pdf

UNTESTED ASSERTIONS HAVE APPEARED ON THE PORT OF LOS ANGELES WEBSITE FOR YEARS

Despite statements by elected officials, newspaper reports and BNSF officials at multiple corporate levels, along with statements in the DEIR, no documentation to support the claims above has yet been provided. For more than seven years, even the Port of Los Angeles has accepted this as "fact" on its public web site:

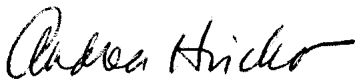
Accessed July 16, 2007 on POLA website:

"Today, port related containers moving between the BNSF railyard and the ports travel on the I-710 freeway. Once this facility is fully operational, it is expected that one million port-related trucks could be eliminated from the I-710 freeway per year."

Accessed January 29, 2012 on the POLA website:

"Southern California International Gateway"

The Port of Los Angeles is developing a new near dock rail facility, which will be operated by Burlington Northern Santa Fe (BNSF). This facility will be used to handle Port related intermodal containers. The proposed site for this facility is Port of Los Angeles property north of Pacific Coast Highway, south of Sepulveda Boulevard and west of the SR103. Today, port related containers moving between the BNSF railyard and the ports travel on the I-710 freeway. Once this facility is fully operational, it is expected that one million port-related trucks could be eliminated from the I-710 freeway per year. Estimated year of completion is 2009."



Since the statements were made before the BNSF SCIG Draft EIR/EIS was even completed, and since it has not yet been finalized by the Port, it might be reasonable to question whether the above web site statements might even be considered prejudicial.

CONCLUSION

The author of these comments concludes that the DEIR should be sent back, be redone and be recirculated for comment. She requests that the recirculated DEIR include an evaluation of whether the capacity that will be opened up at Hobart by building SCIG will be filled with additional freight truck trips to Hobart with transloaded containers that originated at the Ports – and that the impacts of that traffic and air pollution be re-considered in the new DEIR. The author also requests that the DEIR consultants document BNSF and other industry data about where containers are heading, and conduct interviews with key transloading center executives to develop an accurate picture of what is happening in southern California with regard to transloading practices. This is critical to an accurate BNSF SCIG DEIR, and it is needed to replace the virtually non-existent review of transloading that exists in the current DEIR and the undocumented statements about the fate of BNSF Hobart Yard after the SCIG opens, if it does. All analyses in a

revised DEIR for air quality, cancer risk, other health risks, noise, cumulative impacts, traffic, etc. will need to be redone once transloading statistics are included.

Thank you for your consideration.

US transloading growth reshaping cargo routing

Bill Mongelluzzo, Senior Editor | Mar 03, 2017 6:05PM EST

LONG BEACH, California — Increased transloading of merchandise imports from marine containers to domestic containers and trailers at major US seaports — rising from 52 percent of total intermodal volume through Los Angeles-Long Beach to 58 percent in five years — is reshaping containerized supply chains.

Data accumulated by industry analysts and industrial real estate experts reveal that this trend is underway, and they project that growth in transloading will continue unabated as a result of the convergence of the big-ship phenomenon and rapid growth in e-commerce fulfillment. The ability of importers to determine the final destination of the merchandise after the container reaches the US port, rather than two weeks earlier when it is loaded on the vessel in Asia, gives retailers more flexibility in routing. Beneficial cargo owners must further study their supply chains to determine the best routing for their needs.

Ports must invest in the marine terminal infrastructure and tall cranes needed to handle bigger and bigger ships. Industrial real estate developers must scramble to find suitable locations near major ports for transloading activities, and also for locations near urban cores to process last-mile deliveries for e-commerce fulfillment.

Seaports will continue to be where the action is in supply chain logistics. “The greatest concentration of this demand is in Southern California,” Rob Leachman, professor at the Institute of Transportation Studies at the University of California, Berkeley, told the 17th Annual TPM Conference this week in Long Beach. “The next greatest concentration is at ports that serve the other two, three, or four corners,” he said.

There are four to five load-center gateways for the the North American container trades. The so-called five-corner strategy of logistics involves the Pacific Northwest, which includes the

Northwest Seaport Alliance of Seattle and Tacoma and the British Columbia ports of Vancouver and Prince Rupert, Los Angeles-Long Beach, Houston, the South Atlantic ports of Savannah and Charleston, and the mid- and North Atlantic ports of Norfolk and New York-New Jersey.

In 2015, Los Angeles-Long Beach handled 50.7 percent of US containerized imports from Asia, other West Coast ports handled 12.2 percent, British Columbia had 4.4 percent, the Gulf ports 2.2 percent, South Atlantic ports 13.8 percent, and the Northeast 16.7 percent, Leachman said.

Cargo routing for imports from Asia, by far the largest sourcing area for merchandise imports, is affected greatly by cargo value. The highest-value imports such as electronic goods are concentrated in Los Angeles-Long Beach. Importers are willing to pay higher intermodal transportation costs to the interior in order to get high-cost or seasonal merchandise to the eastern half of the country as quickly as possible. Medium and low-cost imports are spread over the five corners to get the product closer to the consuming market at the lowest possible cost.

For example, Leachman found that 63.9 percent of electronics imports and 57.8 percent of auto parts imports enter the country through Southern California, but Los Angeles-Long Beach handles 47.4 percent of the lower-cost consumer goods such as furniture imports. By contrast, East and Gulf Coast ports do best when lower all-in transportation costs via all-water services from Asia provide access to population centers in their regions. The Northeast, South Atlantic, and Gulf ports combined handle more than 50 percent of the lowest cost containerized merchandise where price, rather than time-to-market, is the determining factor in cargo routing.

In supply chain logistics terms, the tendency of retailers to “push” their containers through seaports to the final destinations is growing less rapidly — or in some cases not at all — than pushing the 40-foot marine containers to large import distribution warehouses, transloading the merchandise into 53-foot domestic containers and trailers, and “pulling” the merchandise to regional distribution centers.

Leachman said this trend, coupled with growing e-commerce demand, is driving more freight to the push-pull model. “Push-pull is growing faster than overall imports, and push is growing slower than overall imports or even declining,” he said.

The trend toward more transloading was confirmed by Larry Gross, president of Gross Transportation and a partner at FTR. “Transloading is playing a larger role,” Gross said, but the “intermodal-unfriendly” west-to-east routing of intact containers will probably not be a growth sector in the coming years.

For example, in Southern California, which is the transloading capital of the country, transloading’s share of intermodal freight increased from 52 percent in 2011 to 58 percent in 2016, whereas intact intermodal’s share dropped from 47 percent in 2011 to 42 percent.

The merchandise imports will be carried by ever-larger ships. According to Drewry Shipping Consultants, 78 percent of the new vessel deliveries in 2017 will be vessels with capacities of 10,000 twenty-foot-equivalent units or higher, and more than half will be ships of 14,000 TEUs

capacity or greater. The message for the major gateway ports is that they better be able to handle these ships or they will lose market share.

Los Angeles-Long Beach has been handling weekly calls of vessels of 10,000 TEUs or greater for the past several years, and this has sent the ports and their terminal operators into a frenzy of marine terminal upgrades and the purchase of taller ship-to-shore cranes to be able to handle these vessels fully loaded.

Noel Hacegaba, managing director of commercial operations in Long Beach, said infrastructure and equipment comprise only half of the equation. Those big ships generate such a large surge of container discharges and reloads, 10,000 or more container exchanges per vessel call, that improved cargo-handling processes, immediate dray-offs of containers from the terminals, a focus on improved chassis availability, and enhanced data-sharing among all port users is at least as important as infrastructure investment, Hacegaba said.

Terminal efficiency takes on even greater importance with the surge of e-commerce fulfillment and the need for speed that consumers have created in receiving their shipments. Walter Kemmsies, managing director, economist, and chief strategist at Jones Lang LaSalle airports and seaports division, said a "looming conflict" could be in the making as the bigger ships call at fewer ports, take longer to unload, and generate more congestion at the gateways, but consumers want their purchases shipped to them in a day or less. This trend calls for import distribution centers to carry larger inventories so the merchandise can be pushed to intermediary facilities for delivery to consumers.

Kemmsies noted that e-commerce accounts for only 10 percent of retail sales, but about half of the new construction of industrial properties is for e-commerce. The growing demands of e-commerce fulfillment are beginning to affect the logistics strategy that has been present since the 2008 to 2009 economic recession. During the lean times, reducing transportation and inventory-carrying costs were most important. Now, the greatest fear of logistics managers is a "stock out" notification that upsets consumers and can lead to the dismissal of those employees in charge of having the right merchandise on hand when and where it is needed, he said. Therefore, costly investments in carrying additional inventory and building intermediate warehouses on costly land in urban core areas are more important than cost-cutting.

The implications of these trends for developers and users of industrial real estate are changes in the mix of distribution facility sizes, as well as the siting of those facilities, at the major gateways and in secondary and tertiary markets. Leachman said demand for national distribution centers of 500,000 to 1 million square feet in locations that serve ports will be strong, but so too will be demand for 1-million-plus sq ft e-commerce fulfillment centers and import warehouses.

Also emerging rapidly from the growth in e-commerce development is a need for intermediate facilities located between the large import and regional distribution facilities and the urban core. These facilities break down the shipments to the package level for shipment directly to the consumers' homes or to retail stores that are increasingly becoming pickup locations for merchandise ordered online.

E-commerce fulfillment in urban areas can be handled at facilities of 100,000 to 200,000 square feet, which are often found at in-fill sites. They can be older warehouses or former manufacturing sites that can be repurposed for e-commerce. This trend has grown so rapidly that in some of the larger, denser urban areas, developers are finding it increasingly difficult to locate these facilities, said Matt Mullarkey, senior vice president of strategic planning at CenterPoint Properties. The cost of land and labor obviously increase the closer developers get to the urban core, but the need for timely delivery of merchandise in the last mile makes location more important than those factors, he said.

The confluence of the big-ship phenomenon, the increase in transloading, and the last-mile requirements of e-commerce have retailers and other importers reviewing their supply chain strategies and possibly modifying them, Leachman said. Shippers must consider cost, efficiency, and time to market in order to determine the best path to each location they serve, he said.

APPENDIX C: TRAFFIC ASSUMPTIONS; TRANSLOAD COMMENTS AND REPORT

1. EXCERPTS FROM MINUTES OF I-710 CORRIDOR EIR/EIS PROJECT COMMITTEE
2. Transload Report by Andrea Hricko
3. Journal of Commerce transload statistics

1. EXCERPTS FROM MINUTES OF I-710 CORRIDOR EIR/EIS PROJECT COMMITTEE

THE MINUTES OF THE MEETING OF THE
I-710 CORRIDOR EIR/EIS PROJECT COMMITTEE
A Meeting Held at Progress Park
15500 Downey Ave.
Paramount, CA
January 30, 2014

Excerpt from the Minutes:

B. I-710 Traffic Forecast Update

Dave Levinsohn, URS, gave a PowerPoint presentation which summarized changes to the traffic model since the release of the Draft EIR/EIS. He identified key travel demand inputs that had been updated, including the SCIG and ICTF projects, new understanding of the transload truck patterns, the 2012 SCAG RTP travel demand model, and port cargo projections. Overall, the 2012 SCAR RTP model shows lower projected port truck volumes and greater volumes of non-port trucks on I-710 than the 2008 SCAG RTP model.

MINUTES OF THE MEETING OF THE
I-710 CORRIDOR PROJECT EIR/EIS
TECHNICAL ADVISORY COMMITTEE
16401 Paramount Blvd., Paramount, CA
June 19, 2013

Excerpt from the Minutes

Jerry Wood commented that the traffic forecasts will be analyzed with and without the near-dock rail yards, with and without the SR-710 north extension, and including new multi-modal and active transportation plans inputs, and new rail yards and transloading facilities information that has recently been developed or become available.

MINUTES OF THE MEETING OF THE I-710 CORRIDOR EIR/EIS PROJECT COMMITTEE

A Meeting Held at Progress Park

15500 Downey Ave. Paramount, CA

May 30, 2013

Excerpt from the Minutes:

Gill Hicks, Cambridge Systematics, gave a PowerPoint presentation regarding the goods movement assumptions. He said the SCIG and ICTF rail yards are now included in the No Build and various build alternatives. He said reductions had been made in the container volume at intermodal yards and the daily trips of automobiles to the ports. Mr. Hicks explained the projections for annual lifts at the intermodal rail yards and gave a detailed description of how and where transloading of marine containers takes place. Because of the advance in information systems, the revised EIR/EIS will assume a greater level of truck double-cycling and empty chassis re-use at intermodal yards. He said the next steps will include forecast modeling and a report on the initial model runs.
Patricia Ochoa, Coalition for Clean Air, read a letter from the Coalition for Environmental Health and Justice. She said the recommendation is that more time be taken to analyze the traffic assumptions before presenting them to the Project Committee.

Patricia Ochoa, Coalition for Clean Air, read a letter from the Coalition for Environmental Health and Justice. She said the recommendation is that more time be taken to analyze the traffic assumptions before presenting them to the Project Committee.

Angelo Logan, East Yard Communities for Environmental Justice, said this is very important and complicated. He said their recommendation is to take pause and allow this information to be well-vetted by all stakeholders.

MINUTES OF THE MEETING OF THE I-710 CORRIDOR PROJECT EIR/EIS TECHNICAL ADVISORY COMMITTEE 16401 Paramount Blvd., Paramount, CA August 21, 2013

Mr. Hicks said the 2035 forecast is for 110,000 daily truck trips to and from the ports and for 17,000 daily trips involved in transloading of port-related goods. He said the forecast is for an additional 14,000 intermodal daily trips that are not port-related and 172,000 daily non-intermodal truck trips in the I-710 study area that are not port-related. He said the 2035 numbers reflect a reduction from the previous forecast from 43.2 million to 41.4 million containers coming through the ports.

THE TRUCK AND TRANSLOAD REPORT:

An analysis

of unverified assertions and untested assumptions

in the BNSF SCIG DEIR

concerning future activities at the BNSF Hobart Yard

if the BNSF SCIG opens

Report submitted as comments
to the POLA on the SCIG DEIR
by
Andrea Hricko, MPH*
Professor of Preventive Medicine, Keck School of Medicine, USC
& Director of the Community Outreach and Engagement Program
of the Southern California Environmental Health Sciences Center

February 1, 2012

** A first draft of this report was completed by Andrea Hricko and Ariella Morrow in 2007, when Ms. Morrow was a graduate MPH student at USC Keck School of Medicine. Ms. Morrow is currently a medical student and has not reviewed the recently issued Draft Environmental Impact Report. We acknowledge her work and earlier efforts.*

Summary

BNSF Railway has proposed a new intermodal rail facility to be located "near-dock" -- four miles from the Ports of Los Angeles and Long Beach. A Draft Environmental Impact Report (DEIR) has been issued. That report concludes that the new rail yard, called the Southern California International Gateway or SCIG Project will reduce truck traffic, improve air quality and improve health in the region.

This analysis examines the assertions in the DEIR about how the claimed reduction in truck traffic will be accomplished. It examines the assumptions in the DEIR upon which other analyses (e.g., air quality) are based. It explores what might happen to the BNSF Hobart Yard if the SCIG opens, with claims in the DEIR stating that Hobart will handle only "domestic" containers and will no longer be handling any more than 5% of international cargo, thereby "shifting" trucks from the I-710 and I-110 Freeways a shorter distance to the new SCIG.

Definitions play a role in claims in the DEIR. It is important to note that "domestic containers" can be of two types:

- Transloaded containers - cargo that arrived at the Ports and was then taken out of the 40-foot containers at a transload facility and then placed into 53-foot containers before arriving at a rail yard, and
- "Pure" domestic cargo in either domestic 53-foot containers or trailers – cargo that has not passed through the Ports before arriving at the rail yard. *(See DEIR at 3.10-31)*

The analysis concludes that those who drafted the DEIR and supplied information for it (POLA, Environ, and BSNF) failed to consider the most recent trends in the industry with regard to a "surge" in transloading of international containers, a practice increasingly popular with retailers that has been well-reported in the logistics industry press and in goods movement reports. According to the director of the Alameda Corridor Transportation Authority, a full 25% of imported cargo containers from the Ports of Los Angeles and Long Beach are now transloaded into domestic containers before they leave Southern California on rail. The author concludes that by 2016 the BNSF Hobart Yard would have the opportunity to "replace" the volume of "lifts" (containers) that go to the new BNSF SCIG yard with transloaded containers. If this happens, it would mean that there will likely be no "reduction" in truck mileage on the I-710 when the SCIG opens. In fact, the volume of trucks on the road to the two railyards (SCIG and Hobart) would be double the volume that had gone to the BNSF Hobart Yard alone. Several scenarios are included in this report.

The analysis concludes that the assertions in the DEIR about 1) reduction of truck trips to the BNSF SCIG, including information about the volume of transloaded containers and other information about what the "domestic containers" will comprise, are undocumented, 2) the assumptions are untested, and 3) the conclusions in the DEIR about traffic and air pollution impacts – which are based on these assumptions – are inaccurate.

Using documented and up-to-date information about trends in transloading, this Truck and Transload Report concludes that by 2016 the BNSF Hobart Yard will have the opportunity to replace with transloaded "domestic" containers all the "truck trips" that would supposedly have "been eliminated" by switching international containers from Hobart to the new BNSF SCIG.

In addition, there will be nearly an equal number of trucks by 2016 to the Hobart Yard and to the new BNSF SCIG, indicating that there could be twice as much truck traffic on the Harbor area's roads and freeways than the DEIR claims.

More detail: as calculated in this report, based on Port cargo forecasts in the SCIG DEIR, there might be as many as 1,202,500 transloaded containers available for the Hobart Yard in 2016, meaning that the number of transloaded containers by 2016 could replace the number of international containers moved to SCIG in 2016 (projected at 1.1 million). This would indicate that all of the traffic counts in the DEIR are faulty. If the Hobart Yard is going to continue handling transloaded containers (which it already does, but which the DEIR fails to describe), then there will be no reduction of truck trips and miles on the I-710 Freeway assuming that imported cargo grows as forecasted and that transloading continues to capture an ever-growing share of how imported cargo leaves the Ports.

In addition, the distance from the Port to a typical transload center and then on to Hobart with a transloaded domestic container is more than the current 24 miles that trucks travel to deliver international containers, because of the diversion off the I-710 to the transload facility and often then back onto the I-710. This transload scenario makes all the calculations in the SCIG DEIR about reduced truck traffic along the I-710 questionable**.**

The author of these comments recommends sending the DEIR back to the drawing board, redoing it and recirculating it, and requiring that all of the unverified assertions and untested assumptions be fully documented – and that all analyses, including air quality impacts, traffic impacts, cancer risk in the HRA, cumulative impacts and other impacts of the proposed SCIG, based on these assertions and assumptions, be fully redone.

THE REPORT

We appreciate the opportunity to offer comments on the BNSF SCIG DEIR and have chosen to look at the truck, traffic and transloading issue in the form of a report.

What does the DEIR say about the proposed BNSF SCIG project and the future of the existing BNSF Hobart Yard?

The Southern California International Gateway ("SCIG") rail yard project is an intermodal rail facility proposed by the BNSF Railway and the Port of Los Angeles (POLA) that would increase the ability of both POLA and the Port of Long Beach to grow. The POLA released the project's Draft Environmental Impact Report (DEIR) in September 2012, with comments due on February 1, 2011.

The DEIR was prepared by Environ International. The DEIR's analyses of potential air quality impacts, traffic impacts, cancer risk, cumulative impacts and other impacts of the proposed SCIG all heavily rely on assertions in the DEIR about BNSF's major Southern California rail yard, Hobart, the country's largest intermodal facility, which is located 24 miles from the Ports at the northern end of the I-710 (Long Beach) Freeway. Drayage trucks will be "shifted" from Hobart to the SCIG, saving miles traveled and reducing air pollution, according to the Draft EIR:

*"The proposed Project would construct an intermodal transfer facility at a location approximately 4 miles from the Ports, the proposed Project would eliminate a part (estimated at 95%) of existing and future intermodal truck trips between the Port and the BNSF's Hobart Yard, which is located approximately 24 miles north of the Ports in the cities of Los Angeles and Commerce, by diverting them to the proposed SCIG facility." (*DEIR at 3.10-30) (emphasis added)

The DEIR continues:

*"On the I-710 freeway … it is estimated that the project will reduce over 1.3 million truck trips per year…. This is due to the fact that the trips will occur to SCIG rather than to Hobart Yard, thus eliminating the trips on the I-710." (*DEIR at 3.10-26 (emphasis added).

In addition, the DEIR states:

"The proposed Project would result in fewer truck trips on the surrounding freeway system, as drayage operations currently serving the Hobart Railyard near downtown Los Angeles utilizing I-110 and I-710 north of the Pacific Coast Highway would be switched to the proposed Project site utilizing the proposed Project truck routes. Thus, the existing longer-distance freeway system trips from the ports to downtown rail yards would be replaced by shorter-distance trips to/from the proposed Project along port-area roadways." DEIR at 3.10-45) (emphasis added).

The DEIR does state that a small number of international containers will still go to the Hobart Yard, indicating that the Yard will not be closing:

*"The baseline intermodal demand handled by the Hobart Yard would be handled by the proposed Project. In order to be conservative, some international container trips are assumed to be handled by the Hobart Yard under proposed Project conditions – five percent of the baseline operations."(*DEIR at 3.10-40, emphasis added).

And finally, below is a description of how the DEIR says it used all of these alleged shortened traffic routes to evaluate air pollution and other impacts:

"These changes in traffic patterns, which are evaluated in this EIR, are being proposed in order to shorten truck trips for movement of containers between ships and railyards), thereby easing traffic conditions on local freeways and reducing regional air quality impacts. On the I-710 freeway, which is the primary roadway facility that services current Hobart Yard traffic, it is estimated that the project will reduce over 1.3 million truck trips per year between the SCIG project site and the BNSF Hobart Yard. This is due to the fact that the trips will occur to SCIG rather than to Hobart Yard, thus eliminating trips on the I-710." (DEIR at 3.10-26) (emphasis added)

What types of cargo are <u>currently</u> handled at the BNSF Hobart Yard – in 2011?

The DEIR states the following about the BNSF Hobart Yard and other intermodal rail yards in the Ports area: (See DEIR at 1-13).

Off-Dock Rail

Off-dock railyards are located farther (more than five miles) from marine terminals. Currently, there are a total of five off-dock railyards, three operated by UP and two operated by BNSF, but only two handle substantial numbers of containers from the San Pedro Bay Ports: the BNSF Hobart Yard in Los Angeles/Commerce/Vernon and the UP East Los Angeles Yard (Figure 1-8). Both railyards are located near downtown Los Angeles, approximately 24 miles north of the Ports. The remaining off-dock railyards include the UP Los Angeles Trailer and Container Intermodal Facility (LATC), UP City of Industry yard, and the BNSF San Bernardino yard. In 2008 the East LA and Hobart yards handled most of the international cargo not handled by on-dock yards and the ICTF: 136,000 TEUs by East LA and 1.48 million by Hobart, which currently handles all of BNSF's non-on-dock international cargo. All of the off-dock railyards in the region, including Hobart, handle more domestic and transloaded containers than international containers.

Key Definitions

Off-Dock Railyard: railyard located more than five miles from a marine terminal.

We note that the last sentence in the DEIR above states that: **"All of the off-dock railyards in the region, including Hobart, handle more domestic and transloaded containers than international containers."** This statement is interesting in several ways. First, it is an admission that the Hobart Yard currently handles transloaded containers. But the statement is factually incorrect with regard to the makeup of the overall container load at Hobart – something that is critical to the DEIR's calculations. Using information from BNSF, **the California Air Resources Board and Los Angeles County Metropolitan Transportation Authority both show that at the Hobart Yard, 59% of the containers handled are international containers and 41% are domestic (including transloaded and "pure" domestic).**[i] That is, there are currently more international containers at Hobart Yard than domestic and transloaded containers. It seems odd in a DEIR of this magnitude to have such a basic fact about the BNSF Hobart facility be completely wrong. See figure from L.A. County Metro below:

Table A-6
UP and BNSF Intermodal Off-Dock Railyards
In the South Coast Air Basin
International vs. Domestic Containers

Railyard	International Containers (Port Containers)[a]	Domestic Containers (Non-Port / Warehouse / Transloading)[a]
BNSF San Bernardino	0%	100%
BNSF Hobart (includes BNSF Commerce/Eastern)	59%	41%
UP Commerce	24%	76%
UP ICTF/Dolores	100%	0%

B Basis for Emission Control Factors

The Union Pacific Intermodal Container Transfer Facility (UP ICTF) handles only international cargo containers. There are three large rail yards (and one small yard) north of the Ports that handle a combination of international containers, domestic containers, and transloaded containers, as shown in Table 1.

Table 1. Rail Intermodal Throughput Capacity, Adapted from Metro Table[ii] and California Air Resources Board[iii]

Facility	Capacity Lifts	2006 international lifts	Percent of Yard That is International Container Traffic	Percent of Yard That Handles Domestic Containers (Pure Domestic and Transloaded Domestic)
BNSF Hobart	1, 500,000*	808,086	59%	41%
UP East Los Angeles/Commerce	510,000	80,108	24%	76%
UP LATC	340,000	32,912	16%	84%
BNSF Eastern*		130,000 (2004)		

**BNSF counts capacity at this yard as 1.7 million, but the actual capacity according to the ARB is 1.5 million lifts. The rest is related to the BNSF Commerce Eastern yard, according to the ARB. The BNSF Eastern yard focuses on local domestic containers and handled 130,000 lifts in 2004, according to the California Air Resources Board.* http://www.arb.ca.gov/railyard/hra/bnsf_eastern_hra.pdf

Table A-5
Four High-Priority Railyards
Container Lift Activities, Forecasts, and Capacities
(April 2011)

Railyard	2005 (lifts) Actual	2010 (lifts) Actual	2015 (lifts) Projected	2020 (lifts) Projected	Annual Percent Growth from 2011 to 2020	Railroad Stated Capacity (lifts)
BNSF San Bernardino	555,000[a]	447,000[c]	546,000	668,000	4.1	660,000[e]
% change from 2005	–	-19%	-1.6%	+20%	–	–
BNSF Hobart	1,336,000[a]	1,090,000[c]	1,386,000	1,763,000	4.9	1,500,000[e,f]

b. Union Pacific Fact Book, 2005, p. 9.
c. ARB staff, Harold Holmes, Personal communication with BNSF via email (January 17, 2011).
d. Union Pacific Fact Book, 2010, p. 15.
e. Los Angeles County Metropolitan Transportation Authority, *Technical Memorandum – I-710 Railroads Goods Movement Study, WBS Task ID:150.10.50*, February 2009, pp. 22-24.
f. Based on personal communications between BNSF and Harold Holmes via phone on May 20, 2011, staff determined that 1.5 million of 1.7 million lift capacity was attributed to BNSF Hobart Railyard only, with the balance attributed to BNSF Commerce/Eastern Railyard.

What are current transloading trends at the Ports of L.A. and Long Beach, what does the DEIR say about transloading, and why does transloading matter to analysis of the DEIR's assertions?

There is a surging industry trend: the practice called "transloading." The trend involves switching the contents of international containers into domestic containers at a location north of the Ports, in the 25-mile stretch between the Ports and the Hobart rail yard.

It works this way: 3 big-rig trucks pick up three international containers at the Ports. The containers are driven a few miles or up to 24 miles north of the Ports, and they are dropped off at a "transload center." At the transload center, the contents of the 20 or 40-foot "international" containers are emptied. The goods are then reloaded into 53-foot "domestic" containers. This trend is valuable for the retail industry, because the contents of 3 international containers fit into 2 domestic containers, reducing shipping costs and allowing for greater flexibility in selecting destinations for cargo once it has arrived in California.[iv]

The 53-foot transloaded "domestic containers" may "appear" to be "domestic" but <u>they are full of international goods.</u> And these transloaded containers travel at least 24 miles to get to the Hobart Yard.

The DEIR virtually ignores the latest trends in the goods movement industry with regard to transloading of international containers; in fact, the DEIR's statistics are based on completely outdated figures. The DEIR has a table (See Table 1-2 below) citing transload statistics,[v] referring to an unidentified source or report, simply "POLA, 2009." The text states that: "… approximately eight percent of import containers are transloaded to domestic international containers, a portion of which may then be drayed to an intermodal railyard for transport by rail to their eastern destinations." It also cites the Table 1-2 below as data used in developing intermodal rail forecasts. (See DEIR at 1-21).

Table 1-2. Mode Split of Containers Handled at the Ports of Los Angeles and Long Beach in 2008.

Container Mode	TEUs (Millions)	Percent of Total
Direct Rail (Direct Intermodal)		
- On-Dock	(3.4)	(23.7)
- Near-Dock	(1.06)	(7.4)
- Off-Dock	(1.68)	(11.1)
Total Direct Rail	6.14	42.2
Transload	1.12	7.8
Local/Domestic (Truck only)	7.07	50.0
Total	14.33	100%

Source: POLA, 2009.

:

Contrary to the claimed 2009 statistics cited in Table 1-2 (above) of the DEIR showing 7.8% transloaded containers, currently a full 25% of cargo coming into the Ports is transloaded to rail, according to the head of the Alameda Corridor Transportation Authority (ACTA), John Doherty). In an email exchange with the author of these comments, in October 2011,[vi] Mr. Doherty stated the following:

"Another simpler way of expressing the data (thereby avoiding the confusion of whether you are talking about % of outbound rail imports or % of port total imports) is as follows: about 40% of port imports go out of state by rail as ISO containers (20', 40', 45') with no transloading, about 25% go out by rail after transloading (48' and 53'), about 10% go out of state by truck after transloading (48' and 53'), and about 25% stay local both with and without transloading." *(John Doherty, ACTA, October 2011)*

The following table reflects the statistics from Mr. Doherty, which are his conclusions after having interviewed more than 100 shipping and transload experts.

Table 2. Where POLA and POLB Cargo Goes and by What Mode	
Mode	**%**
Out of state by rail in ISO containers (20', 40', 45') – with no transloading	40%
Out of state by rail after transloading into 48' and 53' containers	25%
Out of state by truck after transloading (48' and 53')	10%
Stay local both with and without transloading	25%
TOTAL CARGO	100%

The current documented statistic of 25% transloading of containers entering the Ports of LA and Long Beach versus the DEIR's statistic of 7.8% transloading (shown in DEIR Table 1-2) indicates a 320% error in the DEIR.

We note that in another section of the DEIR, a figure of 25% transloading is mentioned, with no citation, but the DEIR does nothing to explain the discrepancy with the 7.8% figure. The DEIR claims to use the 25% figure in calculating freight rail volumes for 2035. It does not discuss using either the 7.8% figure nor the 25% figure in doing any calculations about what the future will hold specifically for the Hobart Yard. See DEIR

at 4-92, reprinted below:

> Specifically, year 2035 freight rail volumes were developed using projections for direct intermodal containers from the ports (intact containers that are not transloaded); projections for non-intermodal port rail shipments (bulk, automobiles, and carload traffic); transloaded cargo containers (estimated, on the basis of historical data and recent SCAG studies, at 25 percent of all import containers; the I-170 EIR/EIS and current work being conducted for the SCAG 2012 RTP use this same assumption); non-port rail data and projections being developed for the 2012 RTP; historical lift data, by railyard, of marine and non-marine containers at off-dock railyards; off-dock railyard capacities (see Section 1.1.5.3); and volumes of domestic cargo in 53-foot containers or trailers that has not passed through the ports. Consistent with the ongoing I-710 EIR/EIS technical studies, a reasonable growth factor of two percent per year was assumed. The cumulative rail volumes also include 2035 projections of passenger trains, based upon data from SCAG and MetroLink. Rail volumes for 2046 were estimated by assuming that the growth in rail volumes beyond 2035 will come only from increases in domestic freight rail traffic.

The *Journal of Commerce*, the premier logistics industry journal, has written a number of articles about the dramatic surge in transloading, especially at the POLA and POLB:

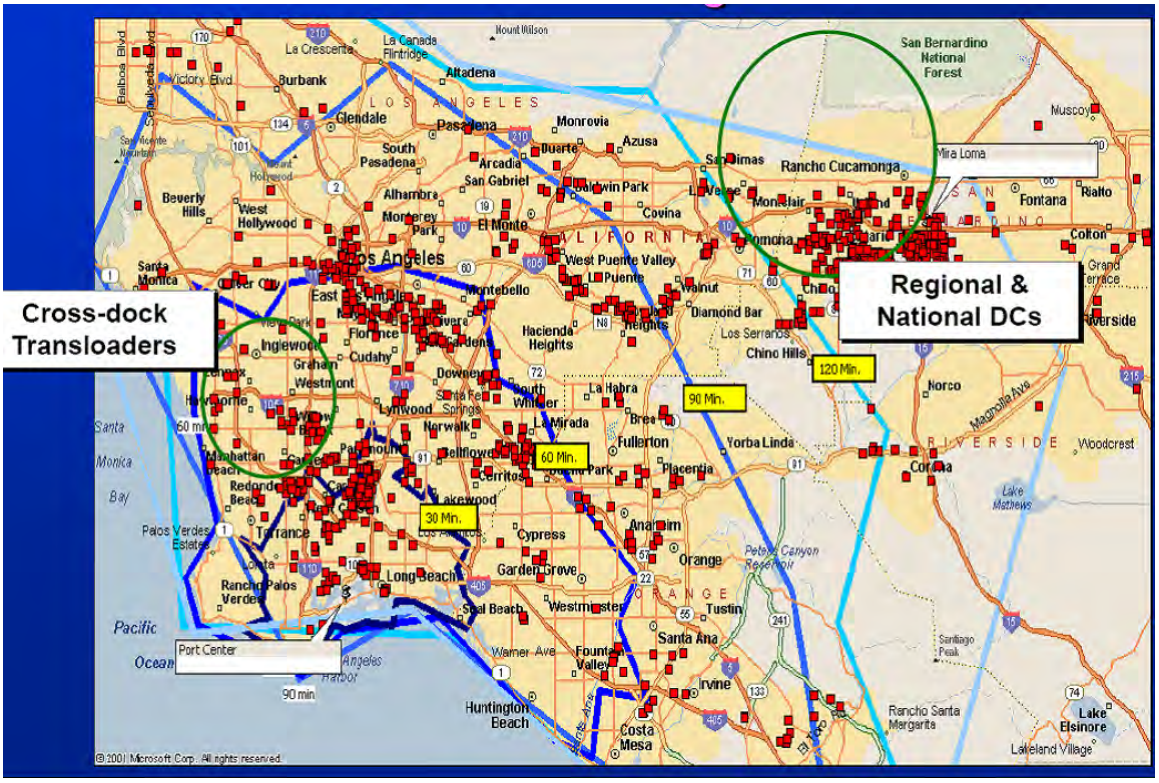
> *… "In an attempt to control transportation costs, retailers transload 40-foot marine containers into 53-foot domestic containers for inland movements. The contents of three marine containers can be loaded into two domestic containers."*[vii]

> *""… transloading took off during the recession, particularly at the ports of Los Angeles and Long Beach. According to the Alameda Corridor Transportation Authority, the share of goods arriving at LA-Long Beach transloaded into domestic containers grew significantly during the recession…. "That means that transload has a greater market share now. The pendulum has swung to transload," said John Doherty, CEO of the authority.""*[viii].

If, as noted above, 25% of imported cargo containers are being transloaded, where are the calculations in the DEIR that explain how this will impact/affect the NBSF Hobart Yard in the future? The author of this report cannot find such calculations.

The *Journal of Commerce* describes several reasons why retailers are embracing transloading:

> *"There have always been obvious economic benefits — transloading allows the contents of three international containers to be reloaded into two larger 53-foot trailers or domestic containers. … When the recession hit and shippers large and small went searching for transportation savings, transloading was a ready-made opportunity."*[ix]



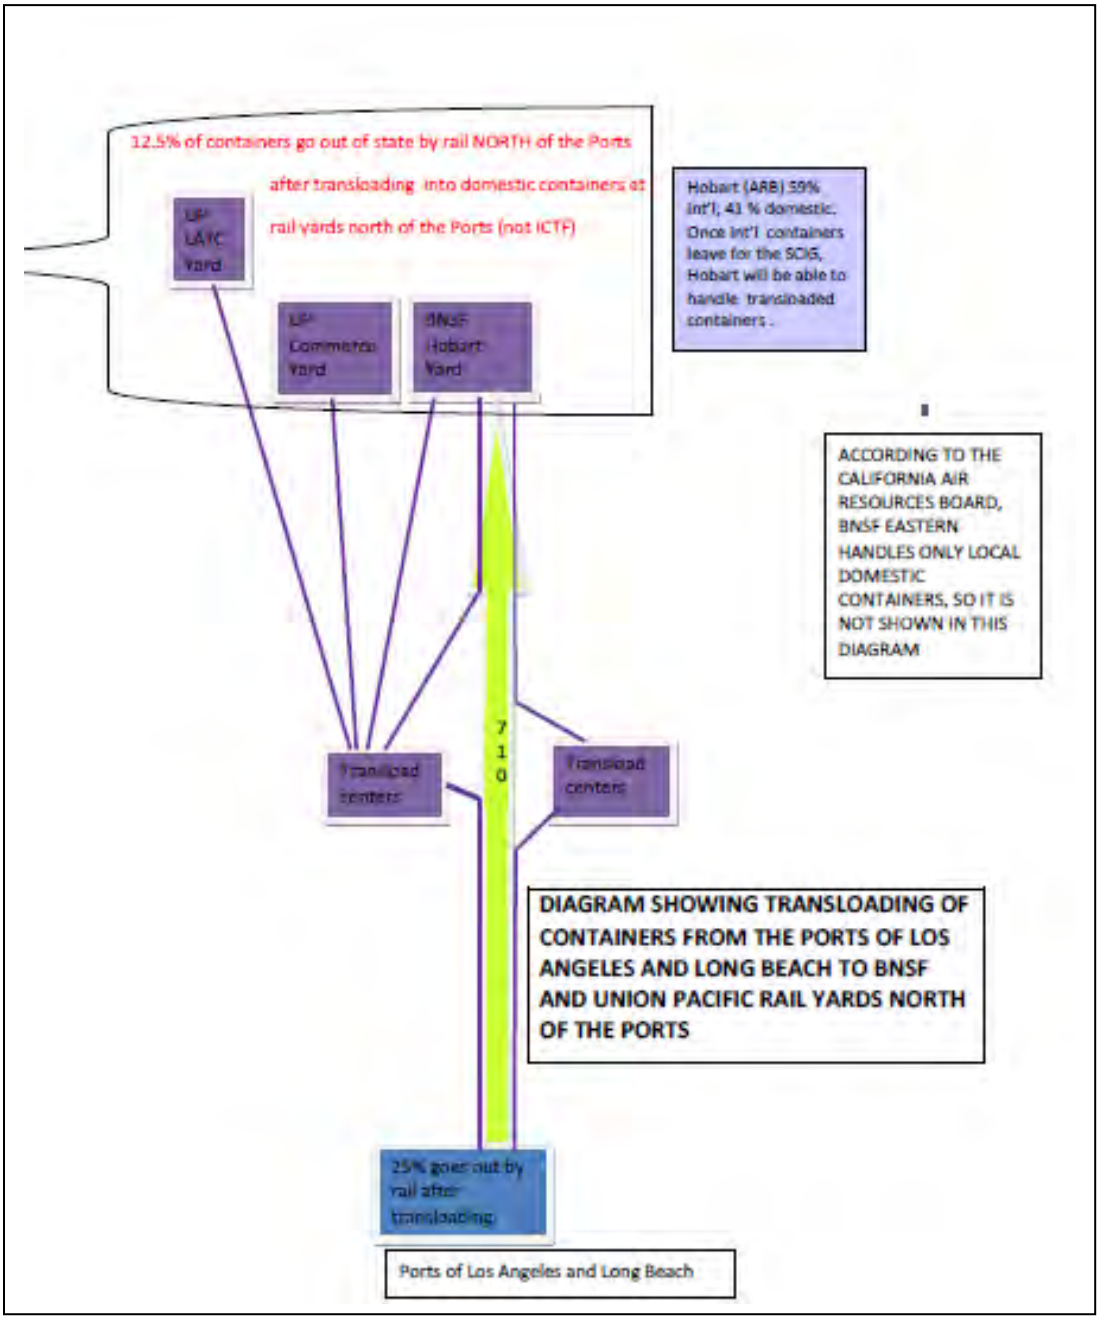
Lest anyone think that this transload trend might not have been common knowledge in the ports/logistics/rail industries long before the *Journal of Commerce* articles in 2011 (and long before the DEIR was released), please see the following excerpt from a Tioga Group report in 2008:[x]

> *"The Transload segment will be largely confined to the region between the Ports and downtown Los Angeles. This segment includes cargo that is "cross-docked" from international containers to domestic containers or trailers for onward movement by rail*

without spending significant time in inventory or undergoing value-added alterations. This cargo is typified by the Maersk Logistics activity in South Gate (Exhibit 11. As the aerial photo shows, this facility consists primarily of two-sided transfer sheds suitable for the "cross-dock" transfer operation, with minimal if any space for "warehousing…"…such operations are clustered within 15 miles of the Ports to maximize round-trip drayage productivity. Tioga studies have reinforced this finding."[xi]

See also the following reference, which states that as early as 2004 – 8 years ago – a full 12% of cargo was transloaded according to a 2004 study by the Alameda Corridor Transportation Authority (ACTA),[xii] which is also referenced in the 2006 Multi-County Goods Movement Action Plan (McGMAP).[xiii] The McGMAP report includes the following graphic, showing the high volume of transload facilities north of the the POLA/POLB and in the vicinity of the Hobart Yard. [xiv]

Figure 1. Transload Facilities North of the Ports in Los Angeles; McGMAP 2006.



The current surging transload trends are anticipated to continue,[xv] and if they do, this report calculates that transloading will allow the BSNF Hobart Yard an opportunity to replace the volume of containers that was diverted to the SCIG by 2016, if the SCIG becomes operational.

The graphic below shows the location of the major railyards in southern California that handle cargo from the Ports:

The sketch below shows the major rail yards handling transloaded cargo north of the Ports.

Figure 2. Major Railyards in Southern California Handling Cargo that Originated at the Ports (either in International Containers or Transloaded)

Sketch by Andrea Hricko

WHAT WOULD HAPPEN IF THE HOBART YARD TOOK ONLY DOMESTIC (NON-TRANSLOADED) CONTAINERS ONCE THE SCIG OPENS, AS THE DEIR IMPLIES?

SCENARIO 1.

Using 2010 actual statistics on lifts, the Hobart Yard would lose 59% of its lift capacity by shifting international containers to the SCIG. It would then replace the Hobart with 5% additional international containers. The remaining 41% of the Hobart yard handles domestic and transloaded containers. No information on the splits between domestic and transloaded at Hobart are in the DEIR or seemingly published elsewhere, we have assumed an even split in the two types. Note that BNSF to refer to all of the non-international containers it handles at Hobart as "domestic" containers, even though a good proportion of them are actually "transloaded"). See Table 3 below.

In 2010 there were 1,090,000 "actual" lifts at the Hobart Yard

Table 3. Where containers would go under Scenario 1 – The Hobart Yard, 2010, if SCIG had opened that year (last year with accurate figures for actual lifts, so this is a model)

Actual total lifts in 2010	Int'l lifts gone to SCIG (59%)	Add back 5% international containers as the DEIR states	Pure domestic containers* 41% (remaining space)	Total of pure domestic and 5% inter-national containers
1,090,000 **Note: capacity is 1,500,000**	**643,100**	**54,500**	**** After international containers go to SCIG there would be only "pure domestic" containers at the Hobart, according to the DEIR – these are containers that did not contain goods that originated at the Ports.*** ***That means, 41% of the remaining space at the Hobart yard after removing international containers***	***446,900 54,500 =501,400*** ***501,400*** ***This means the Hobart Yard would be only 33% full if the SCIG had opened in 2010 and if Hobart thereafter handled only pure domestic containers.*** ***That would leave 66% of the capacity EMPTY – or potentially available for 998,600 transloaded***

			would be "pure domestic containers." (If there are even that many to handle at Hobart	***containers (which is not mentioned in the SCIG DEIR).*** ***CAPACITY LEFT AT HOBART FOR 998,600 MORE CONTAINERS IF SCIG OPENED***

*ARB states that Hobart is 41% "domestic containers," including domestic and transloaded.

According to statements in the DEIR, the Hobart Yard will not be handling any international cargo that originated at the Ports if the SCIG opens. Let's accept that as factual for this scenario and see what would happen to the Hobart Yard. If SCIG had opened in 2010, and Hobart's international containers were shifted to SCIG, Hobart Yard would be handling only 33% of the lifts it handled in 2010. If it handled no additional transloaded containers with international cargo that originated at the Ports, it would be two-thirds empty." *(See other scenarios for how quickly it could fill up with transloaded containers).*

This is the ONLY scenario under which trucks from the Ports would be reduced on the I-710 Freeway. That is, for the DEIR to be correct, Hobart would handle only 5% international containers and also "pure" domestic containers with local goods. As the DEIR claims, it would not handle international goods that came in through the ports and were transloaded into 53-foot containers. It would be the largest intermodal rail yard in the U.S. operating 66% empty.

BASED ON FUTURE CARGO FORECASTS, HOW QUICKLY COULD THE HOBART YARD ACTUALLY FILL UP WITH TRANSLOADED AND DOMESTIC CONTAINERS AFTER THE BNSF SCIG OPENS?

SCENARIO 2. Recognizing that transloading as a trend is surging and is currently 25%, where does the 25% of transloaded cargo go? John Doherty, director of the Alameda Corridor Transportation Authority (ACTA) says that ½ of the transloaded cargo goes "east" – to City of Industry, Mira Loma, San Bernardino, etc. He says that the other ½ goes to the rail yards that are "north of the Ports" (UP Commerce, UP LATC and BSNF Hobart).[xvi]

Let's look at forecasts for the year 2016. See below; in 2016 it is estimated that there will be with 17.8 million TEUs at the twin ports. Let's estimate how many transloaded containers there would be and where they could possibly go.

Table from DEIR, below (DEIR, at 1-23). *Note it has inappropriate figures for near/off-dock rail throughput (that is, it does not account for 25% transloading).*

Table 1-5. 2009 San Pedro Bay Ports Direct Intermodal Cargo Forecast.

2009 San Pedro Bay Ports Direct Intermodal Cargo Forecast (shown in Million TEUs)							
Year	2008 (Actual)	2012	2016	2020	2023	2030	2035
Total San Pedro Bay Ports Cargo Volume	14.3	14.3	17.8	21.8	25.2	34.6	43.2
Total Direct Intermodal	6.1 (42.2%)	5.7 (40.0%)	7.1 (40.0%)	8.7 (40.0%)	10.1 (40.0%)	13.8 (40.0%)	17.3 (40.0%)
On-Dock Rail Throughput (share)	3.4 (23.7%)	3.7 (25.7%)	6.0 (33.4%)	7.3 (33.3%)	8.2 32.5%)	11.5 (33.3%)	12.9 (29.8%)
Near-/Off-Dock Rail Throughput (share)	2.7 (18.5%)	2.0 (14.3%)	1.2 (6.6%)	1.5 (6.7%)	1.9 (7.6%)	2.3 (6.7%)	4.4 (10.2%)

Using the forecasted cargo volumes in TEUs from Table I-5 above, the chart below converts TEUs to containers. Please note that a full 25% of import containers is transloaded but that ½ of that goes "east" and ½ of that stays north of the Ports. That means 12.5% of the cargo containers imported are transloaded to domestic containers before going to one of the rail yards north of the Ports that are shown in Figure 2.

Table 4. San Pedro Bay Ports Intermodal Forecast, 2009. ***Table adapted from Tioga Report, 2009.***[xvii]

Year	TEUs	1 container = 1.85 TEUs	Total containers/year	Total containers that are transloaded north of the Ports = 12.5%
2012	14.3 Million		7.73 Million	996,250
2016	17.8		9.62	1,202,500
2020	21.8		11.78	1,472,500
2023	25.2		13.62	1,702,500
2030	34.6		18.7	
2035	43.2		23.25	

In 2016 there will be 1,020,500 transloaded containers heading north of the Ports to a rail yard, using the 25% of Port imports figure supplied by John Doherty of ACTA. If these containers ALL went to Hobart, they would more than "replace" the 1.1 million international cargo containers that were "diverted" to the SCIG in that year. The SCIG will handle 1.1 million containers in 2016 according to the DEIR's Executive Summary.

In scenario, the Hobart Yard would have the opportunity to be full again by 2016 – and there would be just as many trucks on the I-710 and other local freeways as there are today. In fact, counting the trucks carrying 1.1 million containers to the SCIG and potentially 1.0 million containers to Hobart – there would be TWICE as many trucks on the roads as there are now. No reduction in air pollution. No "health savings." Increased cancer risk. Increased noise.

In this scenario, the capacity of the Hobart Yard is 1,500,000. With 1,020,500 transloaded containers, there would still be space for 479,500 pure domestic containers.

BASED ON FUTURE CARGO FORECASTS, HOW QUICKLY COULD THE HOBART YARD ACTUALLY FILL UP WITH TRANSLOADED AND DOMESTIC CONTAINERS AFTER THE BNSF SCIG OPENS?

Scenario 3

But what if some of the transloaded containers went to the UP LATC or the UP Commerce Yards. Does that dramatically change the forecast for Hobart? First, these yards are significantly smaller as Table 5 demonstrates. In this Scenario, let's assume that there is a domestic to transload "split" of 50/50 at the two UP yards (noting also that UP Commerce handles 26% international containers and Hobart would handle 5 percent international cargo.) Let's go back to Scenario 1, in which Hobart in 2010 had 1,090,000 actual lifts, 59% of which were international. For that Scenario, we used what we consider faulty information in the SCIG DEIR—that is that only "pure domestic containers" are handled at the Hobart Yard. Therefore we "assumed" that the remaining 41% of the containers handled in 2010 were "pure domestic containers." For this Scenario, however, we look at Hobart having a more realistic 50-50 split of domestic containers and transloaded containers in 2010. (See Table 3 above). That would mean that the "pure domestic containers at Hobart in 2010 were ½ of 446,900 or 223,450. (Again, refer to Table 3 above).

We start with the 223,450 pure domestic containers as calculated above, and add a 3% increase per year. Handling of pure domestic containers is rising at a much slower rate than is transloading so we have added a small growth rate for pure domestic containers. 2010 pure domestic containers at Hobart were calculated at 223,450. If this number rose by 3% every year until 2016, there would be approximately 266,810 "pure domestic containers" handled by Hobart in 2016. There would leave 958,000 spaces for transloaded containers at Hobart.

Table 5. Future Space for Transloaded Containers at the UP and BNSF Rail Yards North of the Ports, if International Containers Leave Hobart for the SCIG

Yard	Ca-pacity in 2016	Int'l con-tainers?	If 50/50 domestic and transloaded	Space for trans-loads	Transloaded containers available in 2016 1,202,500	In 2016, total transloaded containers = 1,202,500 based on cargo projections in DEIR SCIG
UP LATC	250,000	0	125,000	125,000		125,000
UP Commerce	510,000	26% = 132,600 *Leaving 377,400 slots*	188,700	188,700		188,700
Hobart Eastern	200,000		BNSF and CARB say that this yard handles "only local domestic" containers	0		
Hobart	1.5 million	75,000 (5%)	266,810	1.16 million		958,000
					There would be more transloaded containers available for Hobart than there is even space for, if we assume a 50-50 split of domestic and transloaded at Hobart.	**958,000 transload spaces would be available for Hobart to have the oppor-tunity to fill**
	Scenario 3: Again, in 2016 the SCIG will have 1.1 million "lifts" according the DEIR. In 2016, there will be 1,202,500 transloaded containers available for the three rail yards, two of which are small compared to Hobart. Hobart would have space for at least 958,000 of these containers.					

	SCIG would have diverted 1.1 million containers and Hobart would have been able by 2016 to "fill" 958,000 of those slots, leaving a difference of only 142,000 containers. By early 2017, Hobart would have the opportunity to have MORE transloaded containers than the 1.1 million "diverted" to the SCIG. **In this scenario, by early 2017, there will be more transloaded containers on the I-710 and adjacent roads heading to Hobart than were so-called "eliminated" by diversion of international containers to the SCIG.**

Please also note: The LATC and Up Commerce handle a small % of international containers but these might move to the UP ICTF if it is approved and opens. This somewhat limits their ability to take a full load of transloaded containers, leaving more containers potentially needing to go to the Hobart Yard.

The DEIR says that the Hobart Yard will handle only domestic containers in the future, *thereby "…eliminat[ing] a part (estimated at 95%) of existing and future intermodal truck trips between the Port and the BNSF's Hobart Yard?" (DEIR at 3.10-25).* **Where in the DEIR is documentation provided for that statement?**

The simple answer is that we can find no documentation for this statement anywhere in the 4000+ page SCIG DEIR. We can, however, find many assertions to that effect in the DEIR and in the press.

BNSF president and CEO Matthew Rose described the advantages of the SCIG at a 2006 Town Hall Los Angeles keynote address, by noting how much shorter truck trips would be for containers currently going to the Hobart Yard once they are able to travel to the SCIG. He stated:

> *"… The Hobart Yard … is 20 miles away from the ports and handles, this year [2006], about 1.4 million containers and trailers. You can imagine if we could shift that volume near-dock or on-dock the impact that we could just have in terms of reducing congestion and improving air quality."*[xviii]
>
> - Matthew K. Rose, Chairman, President and CEO, Burlington Northern Santa Fe Corp.

Mr. Rose also added:[xix]

> **"Hobart is the largest inland intermodal facility in the world, and we look forward to being able to continue that as well."**

Despite Mr. Rose's assertions that the Hobart Yard will continue to thrive, the DEIR states over and over again that when the SCIG opens, truck trips on the I-710 Freeway from the Ports will be dramatically reduced. (See for example *DEIR*, at 2-11; 3.10-30; 3.10-25; 4-60; and 7-33.) The only reference to the future of Hobart Yard, however, is that it will handle 5% international cargo containers and otherwise handle "domestic" containers. (DEIR 3.10-25). The only documentation provided for assertions about what will happen to the Hobart Yard with/without the SCIG project appears to be a reference to "Personal communication, J. Hovland, 2009." "J. Hovland" is apparently John Hovland, director of marketing and facilities management for BNSF Railway in Fort Worth, Texas.

None of the following types of potential documentation about what could happen to the BNSF Hobart Yard are included in the DEIR:

- No memo from BNSF's J. Hovland about the future of the BNSF Hobart Yard.

- No memos describing exactly what BNSF plans to do with the Hobart Yard if the SCIG is approved.
- No affidavits from BNSF about its future plans for the Hobart Yard.
- No affidavits or memos from BNSF that state that the Hobart Yard will only be handling "pure" domestic containers (ones with goods that did not originate at the Ports)
- No affirmative statement saying that BNSF Hobart will not be accepting any international cargo in <u>transloaded</u> containers at the Hobart Yard if/when the SCIG is built.

Thus, the assertion that BNSF Hobart will "eliminate 95% of existing and future intermodal truck trips between the Port and the BNSF's Hobart Yard" is undocumented and untested.

This assertion presented as fact in the DEIR is also an **untested assumption** which is used in all of the DEIR's and Health Risk Assessment's (HRA) analyses and conclusions about truck volumes, near-roadway pollution, noise, EJ, air quality, and diesel cancer risk – an assumption that trucks from the Ports will no longer travel 24 miles to the Hobart yard if the SCIG is built. Using this untested assumption, the DEIR has calculated dramatic "health savings" and "pollution" savings that would result from "eliminating trucks" from the Ports to Hobart. The author has analyzed data on truck trips, transload volumes and traffic and concludes that the assertion utilized in all the DEIR and HRA analyses is incorrect and the assumptions based on it make the subsequent analyzes upon questionable, as will be demonstrated below.

HOW MANY MILES WOULD A <u>TRANSLOADED CONTAINER</u> TYPICALLY TRAVEL TO GET TO THE HOBART YARD?

Such a calculation includes miles covered by a truck driving an international container from the Ports to a typical transload center and then having another truck carrying the transloaded domestic container to the Hobart Yard. As we can see from Figure 1 in this report, showing transload centers, there are hundreds of transload centers between the Port and Hobart Yard. Let's use an example of one that is in South Gate, as pictured below in Figure 3 from the McGMAP report:

Figure 3. Maersk Transloading Facility in South Gate, CA

If the SCIG is built, there will be empty space at the Hobart Yard that could have the opportunity to handle transloaded containers. Calculations of the potential volume of transloaded containers that could originate at the Ports and end up at the Hobart Yard demonstrate that Hobart can continue to thrive as an intermodal rail yard with a large number of both domestic and transloaded containers from the Ports. Much of the goods originate at the Ports and make their way by truck up the I-710 Freeway (or other freeways) to the Hobart Yard – after having been transloaded into domestic containers, making <u>at least a 24-mile trip</u> before reaching Hobart. *See Table 6.*

See Table 6 below. Three very typical routes from the Port of L.A. to a transload center and then on to the Hobart Yard with a domestic container all would entail MORE truck miles traveled than the straight route from the POLA up the I-710 Freeway to the Hobart Yard with an international container. That means that if the international container lift load at Hobart went to the SCIG but the empty slots were replaced with a similar number of transloaded container lifts, the number of truck miles traveled would actually increase, including on local area freeways. Note the routes and mileages below.

Table 6. Distances of Direct Rail Container Trips versus Transloaded Container Trips from the Port of Los Angeles to the BNSF Hobart Yard

Starting Point	Destination #1	Destination #2	Total Miles Traveled	Miles saved or added compared to 24.3 miles on the I-710 or other local area freeways
Port of Los Angeles	To BNSF Hobart, 3770 East Washington Blvd., Commerce, CA		24.3 miles	
Port of Los Angeles	To South Gate Transload Facility	South Gate Maersk logistics facility at 5011 Firestone Place, South Gate, CA 90280 to Hobart Yard in Commerce	25.7 miles	+ 1.4 miles
Port of Los Angeles	To logistics facility in Santa Fe Springs at 11204 Norwalk Blvd Santa Fe Springs, CA 90670	Santa Fe Springs transload facility (Gale/Triangle) to Hobart Yard in Commerce	33.8 miles	+8.1 miles
Port of Los Angeles	To logistics facility in Carson, CA	Carson, CA to Hobart Yard in Commerec	26.6 miles	+2.3 miles including 7 miles on the I-110; 4 miles on the I-405 and 13 miles on the

				I-710.

Google Map of route from POLA to Carson logistics facility to Hobart Yard: 1 mile on surface streets; 7.1 miles on I-110; 1.4 miles on surface streets; 3.9 on the I-405; and 13.2 on the I-710. That adds up to about 26.6 miles.

Total: **19.1 mi** – about **23 mins**
3770 E Washington Blvd, Los Angeles, CA 90023

In other words, if transloaded containers replace the former international container slots that are "diverted" to the SCIG, then there would be more truck miles with the transloaded containers than currently exist with the international containers at Hobart – because transloaded containers always have to make a diversion to a transload center before going to Hobart.

A WORD ABOUT SEMANTICS

When people's lives and health are at stake, we cannot afford playing with semantics over what is inside of a 53-foot container and where the cargo inside originated.

What is a 40 foot container with goods originating at the Ports called? -- An "international"container

What is a 53 foot container with goods originating at the Ports called? – A "domestic" container.

What is INSIDE each of these containers? – goods that originated in another country, e.g., China, Vietnam, Korea!

A 53-foot container with goods from the Ports inside it cannot be camouflaged in the BNSF SCIG DEIR as though industry leaders at the Port of Los Angeles, BNSF Railway, Environ and other DEIR consultants are not aware of the transloading phenomenon and of exactly how far trucks travelled to get that container to the Hobart Yard from where the goods entered at the Ports.

To reiterate, many retailers these days are finding that using 53 foot containers and using the transloading process provides them more flexibility in getting their products, provide additional transit time to make decisions about where the transloaded domestic containers are heading, and they hold more contents, making them cheaper to ship on rail than 40-foot containers.[xx] The CEO of a company with transloading facilities, one located in Santa Fe Springs, told the author that transloading containers which originated at the Ports into 53-foot domestic containers and driving them to the BNSF Hobart Yard is a regular part of their business.[xxi] Since transloading is a surging trend and Hobart is the country's largest intermodal rail yard, Hobart is undoubtedly already handling more and more of these transloaded containers – and they would arrive on trucks that have traveled at least 24 miles to get to the Hobart yard because of their diversion to a transload center.

How does this reconcile with all the analyses in the DEIR? It does not. The analyses (air quality, HRA, noise, cumulative impacts, and more) in the entire DEIR need to be redone

with accurate information about transloading and affidavits about what will happen to the Hobart Yard once the SCIG opens.
We conclude that the DEIR fails to recognize that in the future the Hobart Yard could potentially retain a robust business handling transloaded containers that originated at the Port of L.A. and Long Beach that are full of international cargo. The DEIR further confuses the issue by the choice of words. It says the Hobart will be "95% international container free" when SCIG opens. It does not say that Hobart will be "95% free of international goods that originated at the Ports." The DEIR would have one believe that all of the containers handled by Hobart now and in the future are "pure domestic containers" with locally made products inside them, thereby ignoring the reality of the transload business (and of the U.S. economy).

Finally, we attach below a series of claims that have been made over and over again about the so-called diversion of trucks off the 710 Freeway that the SCIG will allegedly create. The DEIR needs to redo the DEIR and validate and test the assertions and assumptions upon which it makes these claims. The public's health in Wilmington, Carson and Long Beach depends on it – as does the health of the thousands of residents who live along the I-710 Freeway.

EXAMPLES OF CLAIMS BETWEEN 2005-2011 THAT THERE WILL BE PUBLIC HEALTH BENEFITS DUE TO ELIMINATING TRUCK TRAFFIC ON THE I-710 BY BUILDING THE SCIG

Even before the initial environmental review process began in 2005, BNSF made assertions about the public health benefits that the SCIG would bring, issuing a press release about the anticipated public health and quality of life benefits of the SCIG, quoting then Mayor of Los Angeles James Hahn:

> *"This near dock rail facility will eliminate nearly 1 million truck trips per year, benefiting our commuters, our communities and our environment."*
>
> - Former Los Angeles Mayor James Hahn. Quotation in BNSF press release: "BNSF's Proposed Near-Dock Facility Receives Support from L.A. Mayor Hahn and Councilwoman Hahn," February 10, 2005 [1]

In July 2007, the BNSF SCIG's promotional website, entitled *Communities Matter*, promised that the SCIG "will help reduce traffic on local highways" and "improve air quality."[2] As noted above, BNSF specifically claimed that the SCIG will ease the impact of trucks on the region's air quality and congestion, including the I-710 (Long Beach) Freeway. That freeway leads from the Ports to the BNSF Hobart Yard, the largest intermodal facility in the U.S., located in City of Commerce. As mentioned earlier, BNSF president and CEO Matthew Rose described the advantages of the SCIG at a 2006 Town Hall Los Angeles keynote address, by noting how much shorter truck trips would be for containers currently going to the Hobart Yard when they will go to the BNSF SCIG:

> *"… The Hobart Yard … is 20 miles away from the ports and handles, this year [2006], about 1.4 million containers and trailers. You can imagine if we could shift that volume near-dock or on-dock the impact that we could just have in terms of reducing congestion and improving air quality."*[xxii]
>
> - Matthew K. Rose, Chairman, President and CEO, Burlington Northern Santa Fe Corp.

Shifting millions of containers from the Hobart Yard to <u>on-dock rail</u> would indeed be advantageous, because on-dock rail does not involve the use of trucks to move containers off the port property. On-dock rail means that a container is taken off a ship and goes directly onto a train to its destination – no truck involved, thereby reducing air pollution.

Moving the containers to near-dock rail, on the other hand, requires trucking each container five miles one way to the near-dock SCIG facility, creating air pollution.

[2] Burlington Northern Santa Fe Railway's Southern California International Gateway website www.communitiesmatter.com/why.html.

But it is actually the rest of CEO Rose's statement (and the earlier statement of former Mayor James Hahn) about the SCIG that has captured the attention and admiration of many elected officials and even Port staff – BNSF's claim that the SCIG would take more than a million trucks off the I-710 Freeway, trucks that normally would have traveled from the Ports to the BNSF Hobart Yard in Commerce. From the Port's web site in 2007 (and still there in 2012):

> *"Today, port related containers moving between the BNSF railyard and the ports travel on the I-710 freeway. Once this facility [the SCIG] is fully operational, it is expected that one million port-related trucks could be eliminated from the I-710 freeway per year. Estimated year of completion is 2009*." (Citation: POLA website accessed 7-17-2007 and again on 1-29-2012).

It is important to note that the BNSF assertions over the past 5-7 years have been accepted even more widely than stated above. In fact, from the Governor's office to State of California advisory councils, to the Southern California Association of Governments, and to various industry stakeholders, the BNSF claims have been stated and re-stated as "fact."

The Governor's Goods Movement Action Plan selected SCIG –because it would eliminate trucks on the I-710:

"It would "reduce truck trips on Interstate 710." [3] "... SCIG ... will eliminate over a million truck trips per year on I-710."

- Gill V. Hicks, transportation consultant
  Chairman of California Marine and Intermodal Transportation System Advisory Council (CALMITSAC). Quotation in a BNSF press release, May 8, 2007: "BNSF Enhances Proposed Southern California International Gateway"[4]

"Such a facility could eliminate one million truck trips annually from the 710 Freeway..."

- Southern California Association of Governments
  Southern California Regional Strategy for Goods Movement: A Plan for Action. February 2005 (Amended March 2005)[5]

"Authorities estimate the [SCIG rail] yard could take as many as 1 million trucks off local roadways, including the Long Beach (710) freeway, annually."

- "Rail yard planners offer cleaner solutions"
  Long Beach Press Telegram May 8, 2007 [6]

"It is simple: take a million older trucks a year off the 710 Freeway and replace them with clean trucks delivering containers to rail much closer to the ports."

- Elizabeth Warren

Executive Director, FuturePorts
"BNSF Railway Enhances Proposed Southern California International Gateway" BNSF E-Release May 2007 [7]

Moreover, the Los Angeles Chamber of Commerce endorsement letter for the SCIG highlights:

> *"the significant air quality, traffic and safety improvements" that will have a "direct effect on improving the quality of life for communities in the port areas as well as those along the Interstate 710 Corridor and other freeways."* [8]

The claim that the SCIG will result in a million fewer trucks on the I-710 and other local freeways, thereby improving air quality and reducing the burden on southeast L.A. communities along the I-710 goods movement corridor, has been so widely asserted and repeated that it appears to be "fact;" it is now commonly accepted as "the truth." But the SCIG DEIR simply failed to evaluate the unverified assertions and untested assumptions behind those statements.

[7] http://www.communitiesmatter.com/erelease/0507/index.html
[8] Russell J. Hammer, President & CEO of the Los Angeles Chamber of Commerce; in a letter to BNSF Railway, June 16, 2005 http://www.communitiesmatter.com/SCIGletter0605.pdf

UNTESTED ASSERTIONS HAVE APPEARED ON THE PORT OF LOS ANGELES WEBSITE FOR YEARS

Despite statements by elected officials, newspaper reports and BNSF officials at multiple corporate levels, along with statements in the DEIR, no documentation to support the claims above has yet been provided. For more than seven years, even the Port of Los Angeles has accepted this as "fact" on its public web site:

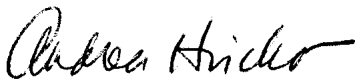
Accessed July 16, 2007 on POLA website:

"Today, port related containers moving between the BNSF railyard and the ports travel on the I-710 freeway. Once this facility is fully operational, it is expected that one million port-related trucks could be eliminated from the I-710 freeway per year."

Accessed January 29, 2012 on the POLA website:

"Southern California International Gateway"

The Port of Los Angeles is developing a new near dock rail facility, which will be operated by Burlington Northern Santa Fe (BNSF). This facility will be used to handle Port related intermodal containers. The proposed site for this facility is Port of Los Angeles property north of Pacific Coast Highway, south of Sepulveda Boulevard and west of the SR103. Today, port related containers moving between the BNSF railyard and the ports travel on the I-710 freeway. Once this facility is fully operational, it is expected that one million port-related trucks could be eliminated from the I-710 freeway per year. Estimated year of completion is 2009."



Since the statements were made before the BNSF SCIG Draft EIR/EIS was even completed, and since it has not yet been finalized by the Port, it might be reasonable to question whether the above web site statements might even be considered prejudicial.

CONCLUSION

The author of these comments concludes that the DEIR should be sent back, be redone and be recirculated for comment. She requests that the recirculated DEIR include an evaluation of whether the capacity that will be opened up at Hobart by building SCIG will be filled with additional freight truck trips to Hobart with transloaded containers that originated at the Ports – and that the impacts of that traffic and air pollution be re-considered in the new DEIR. The author also requests that the DEIR consultants document BNSF and other industry data about where containers are heading, and conduct interviews with key transloading center executives to develop an accurate picture of what is happening in southern California with regard to transloading practices. This is critical to an accurate BNSF SCIG DEIR, and it is needed to replace the virtually non-existent review of transloading that exists in the current DEIR and the undocumented statements about the fate of BNSF Hobart Yard after the SCIG opens, if it does. All analyses in a

revised DEIR for air quality, cancer risk, other health risks, noise, cumulative impacts, traffic, etc. will need to be redone once transloading statistics are included.

Thank you for your consideration.

US transloading growth reshaping cargo routing

Bill Mongelluzzo, Senior Editor | Mar 03, 2017 6:05PM EST

LONG BEACH, California — Increased transloading of merchandise imports from marine containers to domestic containers and trailers at major US seaports — rising from 52 percent of total intermodal volume through Los Angeles-Long Beach to 58 percent in five years — is reshaping containerized supply chains.

Data accumulated by industry analysts and industrial real estate experts reveal that this trend is underway, and they project that growth in transloading will continue unabated as a result of the convergence of the big-ship phenomenon and rapid growth in e-commerce fulfillment. The ability of importers to determine the final destination of the merchandise after the container reaches the US port, rather than two weeks earlier when it is loaded on the vessel in Asia, gives retailers more flexibility in routing. Beneficial cargo owners must further study their supply chains to determine the best routing for their needs.

Ports must invest in the marine terminal infrastructure and tall cranes needed to handle bigger and bigger ships. Industrial real estate developers must scramble to find suitable locations near major ports for transloading activities, and also for locations near urban cores to process last-mile deliveries for e-commerce fulfillment.

Seaports will continue to be where the action is in supply chain logistics. “The greatest concentration of this demand is in Southern California,” Rob Leachman, professor at the Institute of Transportation Studies at the University of California, Berkeley, told the 17th Annual TPM Conference this week in Long Beach. “The next greatest concentration is at ports that serve the other two, three, or four corners,” he said.

There are four to five load-center gateways for the the North American container trades. The so-called five-corner strategy of logistics involves the Pacific Northwest, which includes the

Northwest Seaport Alliance of Seattle and Tacoma and the British Columbia ports of Vancouver and Prince Rupert, Los Angeles-Long Beach, Houston, the South Atlantic ports of Savannah and Charleston, and the mid- and North Atlantic ports of Norfolk and New York-New Jersey.

In 2015, Los Angeles-Long Beach handled 50.7 percent of US containerized imports from Asia, other West Coast ports handled 12.2 percent, British Columbia had 4.4 percent, the Gulf ports 2.2 percent, South Atlantic ports 13.8 percent, and the Northeast 16.7 percent, Leachman said.

Cargo routing for imports from Asia, by far the largest sourcing area for merchandise imports, is affected greatly by cargo value. The highest-value imports such as electronic goods are concentrated in Los Angeles-Long Beach. Importers are willing to pay higher intermodal transportation costs to the interior in order to get high-cost or seasonal merchandise to the eastern half of the country as quickly as possible. Medium and low-cost imports are spread over the five corners to get the product closer to the consuming market at the lowest possible cost.

For example, Leachman found that 63.9 percent of electronics imports and 57.8 percent of auto parts imports enter the country through Southern California, but Los Angeles-Long Beach handles 47.4 percent of the lower-cost consumer goods such as furniture imports. By contrast, East and Gulf Coast ports do best when lower all-in transportation costs via all-water services from Asia provide access to population centers in their regions. The Northeast, South Atlantic, and Gulf ports combined handle more than 50 percent of the lowest cost containerized merchandise where price, rather than time-to-market, is the determining factor in cargo routing.

In supply chain logistics terms, the tendency of retailers to “push” their containers through seaports to the final destinations is growing less rapidly — or in some cases not at all — than pushing the 40-foot marine containers to large import distribution warehouses, transloading the merchandise into 53-foot domestic containers and trailers, and “pulling” the merchandise to regional distribution centers.

Leachman said this trend, coupled with growing e-commerce demand, is driving more freight to the push-pull model. “Push-pull is growing faster than overall imports, and push is growing slower than overall imports or even declining,” he said.

The trend toward more transloading was confirmed by Larry Gross, president of Gross Transportation and a partner at FTR. “Transloading is playing a larger role,” Gross said, but the “intermodal-unfriendly” west-to-east routing of intact containers will probably not be a growth sector in the coming years.

For example, in Southern California, which is the transloading capital of the country, transloading’s share of intermodal freight increased from 52 percent in 2011 to 58 percent in 2016, whereas intact intermodal’s share dropped from 47 percent in 2011 to 42 percent.

The merchandise imports will be carried by ever-larger ships. According to Drewry Shipping Consultants, 78 percent of the new vessel deliveries in 2017 will be vessels with capacities of 10,000 twenty-foot-equivalent units or higher, and more than half will be ships of 14,000 TEUs

capacity or greater. The message for the major gateway ports is that they better be able to handle these ships or they will lose market share.

Los Angeles-Long Beach has been handling weekly calls of vessels of 10,000 TEUs or greater for the past several years, and this has sent the ports and their terminal operators into a frenzy of marine terminal upgrades and the purchase of taller ship-to-shore cranes to be able to handle these vessels fully loaded.

Noel Hacegaba, managing director of commercial operations in Long Beach, said infrastructure and equipment comprise only half of the equation. Those big ships generate such a large surge of container discharges and reloads, 10,000 or more container exchanges per vessel call, that improved cargo-handling processes, immediate dray-offs of containers from the terminals, a focus on improved chassis availability, and enhanced data-sharing among all port users is at least as important as infrastructure investment, Hacegaba said.

Terminal efficiency takes on even greater importance with the surge of e-commerce fulfillment and the need for speed that consumers have created in receiving their shipments. Walter Kemmsies, managing director, economist, and chief strategist at Jones Lang LaSalle airports and seaports division, said a "looming conflict" could be in the making as the bigger ships call at fewer ports, take longer to unload, and generate more congestion at the gateways, but consumers want their purchases shipped to them in a day or less. This trend calls for import distribution centers to carry larger inventories so the merchandise can be pushed to intermediary facilities for delivery to consumers.

Kemmsies noted that e-commerce accounts for only 10 percent of retail sales, but about half of the new construction of industrial properties is for e-commerce. The growing demands of e-commerce fulfillment are beginning to affect the logistics strategy that has been present since the 2008 to 2009 economic recession. During the lean times, reducing transportation and inventory-carrying costs were most important. Now, the greatest fear of logistics managers is a "stock out" notification that upsets consumers and can lead to the dismissal of those employees in charge of having the right merchandise on hand when and where it is needed, he said. Therefore, costly investments in carrying additional inventory and building intermediate warehouses on costly land in urban core areas are more important than cost-cutting.

The implications of these trends for developers and users of industrial real estate are changes in the mix of distribution facility sizes, as well as the siting of those facilities, at the major gateways and in secondary and tertiary markets. Leachman said demand for national distribution centers of 500,000 to 1 million square feet in locations that serve ports will be strong, but so too will be demand for 1-million-plus sq ft e-commerce fulfillment centers and import warehouses.

Also emerging rapidly from the growth in e-commerce development is a need for intermediate facilities located between the large import and regional distribution facilities and the urban core. These facilities break down the shipments to the package level for shipment directly to the consumers' homes or to retail stores that are increasingly becoming pickup locations for merchandise ordered online.

E-commerce fulfillment in urban areas can be handled at facilities of 100,000 to 200,000 square feet, which are often found at in-fill sites. They can be older warehouses or former manufacturing sites that can be repurposed for e-commerce. This trend has grown so rapidly that in some of the larger, denser urban areas, developers are finding it increasingly difficult to locate these facilities, said Matt Mullarkey, senior vice president of strategic planning at CenterPoint Properties. The cost of land and labor obviously increase the closer developers get to the urban core, but the need for timely delivery of merchandise in the last mile makes location more important than those factors, he said.

The confluence of the big-ship phenomenon, the increase in transloading, and the last-mile requirements of e-commerce have retailers and other importers reviewing their supply chain strategies and possibly modifying them, Leachman said. Shippers must consider cost, efficiency, and time to market in order to determine the best path to each location they serve, he said.

POLICY BRIEF

Increasing Highway Capacity Unlikely to Relieve Traffic Congestion

Susan Handy
Department of Environmental Science and Policy
University of California, Davis

Contact Information:
slhandy@ucdavis.edu

Issue

Reducing traffic congestion is often proposed as a solution for improving fuel efficiency and reducing greenhouse gas (GHG) emissions. Traffic congestion has traditionally been addressed by adding additional roadway capacity via constructing entirely new roadways, adding additional lanes to existing roadways, or upgrading existing highways to controlled-access freeways. Numerous studies have examined the effectiveness of this approach and consistently show that adding capacity to roadways fails to alleviate congestion for long because it actually increases vehicle miles traveled (VMT).

An increase in VMT attributable to increases in roadway capacity where congestion is present is called "induced travel". The basic economic principles of supply and demand explain this phenomenon: adding capacity decreases travel time, in effect lowering the "price" of driving; and when prices go down, the quantity of driving goes up.[1] Induced travel counteracts the effectiveness of capacity expansion as a strategy for alleviating traffic congestion and offsets in part or in whole reductions in GHG emissions that would result from reduced congestion.

Key Research Findings

The quality of the evidence linking highway capacity expansion to increased VMT is high. All studies reviewed used time-series data and sophisticated econometric techniques to estimate the effect of increased capacity on congestion and VMT. All studies also controlled for other factors that might also affect VMT, including population growth, increases in income, other demographic factors, and changes in transit service.[2]

Increased roadway capacity induces additional VMT in the short-run and even more VMT in the long-run. A capacity expansion of 10% is likely to increase VMT by 3% to 6% in the short-run and 6% to 10% in the long-run. Increased capacity can lead to increased VMT in the short-run in several ways: if people shift from other modes to driving, if drivers make longer trips (by choosing longer routes and/or more distant destinations), or if drivers make more frequent trips.[3,4,5] Longer-term effects may also occur if households and businesses move to more distant locations or if development patterns become more dispersed in response to the capacity increase. One study concludes that the full impact of capacity expansion on VMT materializes within five years[6] and another concludes that the full effect takes as long as 10 years.[7]

Capacity expansion leads to a net increase in VMT, not simply a shifting of VMT from one road to another. Some argue that increased capacity does not generate new VMT but rather that drivers simply shift from slower and more congested roads to the new or newly expanded roadway. Evidence does not support this argument. One study found "no conclusive evidence that increases in state highway lane-miles have affected traffic on other roads"[8] while a more recent study concluded that "increasing lane kilometers for one type of road diverts little traffic from other types of roads".[9]

Increases in GHG emissions attributable to capacity expansion are substantial. One study predicted that the growth in VMT attributable to increased lane miles would produce an additional 43 million metric tons of CO_2 emissions in 2012 nationwide.[10]

Capacity expansion does not increase employment or other economic activity. Economic development and job creation are often cited as compelling reasons for expanding the capacity of roadways. However, most studies of the impact of capacity expansion on development in a metropolitan region find no net increase in employment or other economic activity, though investments do influence where within a region development occurs.[11, 12]

Conversely, reductions in roadway capacity tend to produce social and economic benefits without worsening traffic congestion. The removal of elevated freeway segments in San Francisco coupled with improvements to the at-grade Embarcadero and Octavia Boulevards has sparked an on-going revitalization of the surrounding areas while producing a significant drop in traffic.[13] Many cities in Europe have adopted the strategy of closing streets in the central business district to vehicle traffic as an approach to economic revitalization,[14] and this strategy is increasingly being adopted in cities the U.S., from New York City to San Francisco.

Closing the Induced Vehicle Travel Gap Between Research and Practice

Ronald T. Milam, Marc Birnbaum, Chris Ganson, Susan Handy, and Jerry Walters

Several studies have rigorously documented the induced travel effect, in which added highway capacity leads to added vehicle travel. Despite the evidence, transportation planning practice does not fully account for this phenomenon, with the result that estimates of the potential congestion-reducing benefits of added highway capacity may be overstated and estimates of potential environmental impacts understated. In 2015, the California Department of Transportation (Caltrans) sponsored a review of applicable induced vehicle travel research that could inform transportation analysis guidance in response to new laws in California such as Senate Bill 743 (S.B. 743), which prohibits the use of vehicle level of service (LOS) and similar measures as the sole basis for determining significant transportation impacts under the California Environmental Quality Act. Instead, vehicle miles traveled was selected to replace LOS under S.B. 743, and along with the new metric there will be a requirement to account for induced travel effects in analysis of roadway capacity expansion projects. The Caltrans review revealed an inconsistent lexicon in academic research and among practitioners, questions about research applicability, limitations in the sensitivity of travel forecasting models, and confusion about the appropriate use of induced vehicle travel elasticities from research. This paper summarizes the Caltrans review and shares the findings to advance understanding of induced vehicle travel effects and suggest steps for additional research.

"If you build it, they will come." This adaptation of the famous line from the 1989 movie "Field of Dreams" has been invoked in countless contexts. In the transportation context, it summarizes what happens when new highway lanes are built: more cars come. Several studies have documented this phenomenon (*1*), that is, the induced travel effect or, more specifically, the induced vehicle travel effect. However, despite the evidence, transportation planning practice does not fully account for the phenomenon, with the result that estimates of the potential congestion-reducing benefits of added highway capacity may be overstated and estimates of potential environmental impacts understated.

Transportation Research Record: Journal of the Transportation Research Board, No. 2653, 2017, pp. 10–16.
http://dx.doi.org/10.3141/2653-02

In 2015, the California Department of Transportation (Caltrans) sponsored a review of research on the induced travel effect to inform transportation analysis guid ance in response to new laws in California, such as Senate Bill 743. This bill prohibited the use of vehicle level of service (LOS) and similar measures as the sole basis for determining significant transportation impacts under the California Environmental Quality Act. Instead, vehicle miles traveled (VMT) was chosen to replace LOS under Senate Bill 743, and a companion to this new metric is a requirement to account for induced travel effects in analysis of projects that expand roadway capacity.

The Caltrans review found an inconsistent lexicon in academic research and among practitioners, questions about research applicability, limitations in the sensitivity of travel forecasting models, and confusion about the appropriate use of induced vehicle travel elasticities from research. This paper summarizes the review and includes definitions and background, a summary of the evidence for the magnitude of the induced travel effect, new research questions, and a discussion of the sensitivity of travel demand forecasting models to the induced travel effect. The paper concludes with a discussion of overall findings, desired research, and project analysis applications.

DEFINITIONS AND BACKGROUND

What is induced travel and how is it defined? A literature review identified many terms describing induced travel effects. Sorting these terms out will give practitioners a common understanding of the technical definitions. For the purposes of this paper, which focuses on practitioner guidance, the following terms are defined:

- Latent demand is the travel that would occur if the cost were lower (e.g., times were faster), that is, the travel that does not occur because costs are high (e.g., times are slow).
- Induced travel is the additional travel that occurs when the cost is lower (e.g., as a result of a capacity expansion that reduces travel times), that is, the additional travel that is induced by the lower costs that result from capacity expansion.
- Induced vehicle travel is additional vehicle travel that occurs when the cost is lower; this is a subset of all induced travel. For the purposes of this paper, the VMT level is used to measure additional vehicle travel.

Figure 1 shows the influence of roadway capacity expansion on vehicle traffic growth over time for a specific roadway segment.

Without new capacity, traffic growth, especially during peak hours, is constrained. Once capacity is added, traffic growth returns. A portion of the traffic growth is related to latent demand converting to

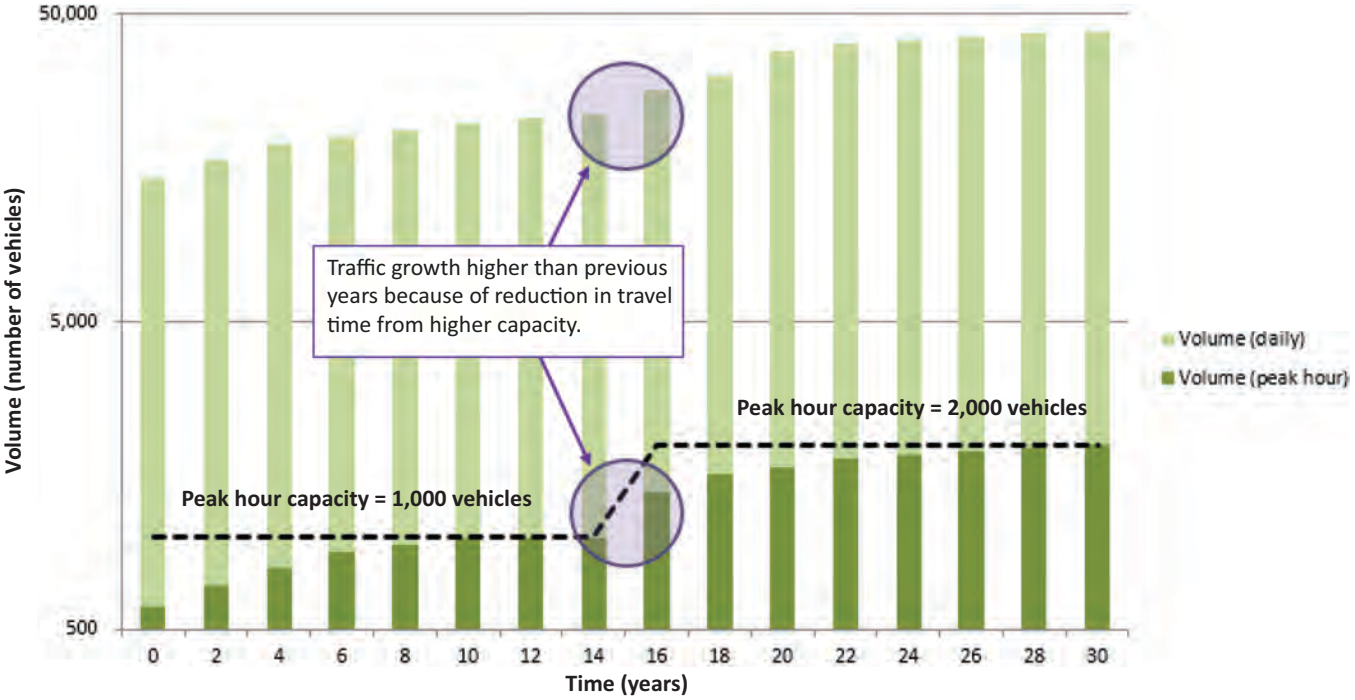

FIGURE 1 Example of induced travel: influence of capacity expansion on vehicle traffic growth.

actual vehicle travel on the network because of travel time improvements associated with the capacity increase. This conversion is the basis of the term "induced." Over the long term, traffic growth will reflect other factors, such as population and employment growth. Induced vehicle travel can include increased personal and commercial driving as a result of new or modified activities, shifts from non-auto modes to driving, and diversions from other roadways, all of which increase the level of VMT.

The induced travel effect occurs in situations in which traffic volumes are near capacity, so that congestion levels are high and travel times are longer than under free-flow conditions. In this situation, traffic growth is naturally constrained, as the long travel times deter travel and some demand for travel goes unmet—this is the latent demand. If new capacity is added and travel times improve, more people are likely to travel on this route—they are able to satisfy their latent demand (*2*). In the long term, traffic growth will reflect population and employment growth, which may be influenced by the added highway capacity.

Induced travel can be explained in terms of supply and demand. An increase in highway capacity represents a shift in the supply curve to the right: for the same volume of traffic, costs are lower (Figure 2). When the supply curve shifts to the right, it intersects the demand curve at a new point, at a higher travel volume than before. This increase is the induced vehicle travel. The greater the increase in supply, the greater the increase in travel volume, all else equal.

For an understanding of how capacity expansion increases the level of VMT, the individual components of how travelers respond to travel time reductions and within what time frames those changes

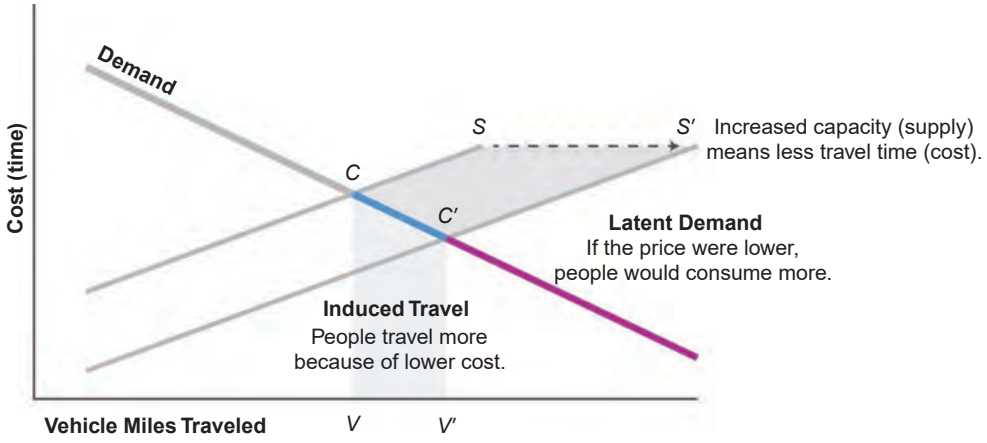

FIGURE 2 Supply and demand relationships for induced travel (*C* = initial cost; *C′* = new cost; *S* = initial supply/capacity; *S′* = new supply/capacity; *V* = initial VMT; *V′* = new VMT).

occur can be broken down. Travel time savings (as well as cost savings and reliability improvement) to a traveler can result in a change of route, change of schedule, change in activities that generate new trips (e.g., including unchaining previous trip tours), change in mode of travel, change to a more distant destination, and change in land development patterns. Of these effects, departure time changes do not represent new trips or new VMT levels but should be considered in transportation analysis because the effect can contribute to higher peak period travel demands. The other factors can affect the amount of VMT generally within the following periods:

- Short-term responses:
  1. New vehicle trips that would otherwise would not be made,
  2. Longer vehicle trips to more distant destinations,
  3. Shifts from other modes to driving, and
  4. Shifts from one driving route to another.
- Longer-term responses:
  5. Changes in land use development patterns (these are often more-dispersed, low-density patterns that are auto dependent) and
  6. Changes in overall growth.

The longer-term responses (Items 5 and 6) are sometimes referred to as induced growth, which leads to induced demand. In addition, Cervero defined induced investment to describe the phenomenon by which the increased vehicle traffic associated with highway investments leads public agencies to invest in projects that expand vehicle capacity (*3*). This phenomenon leads to a feedback loop that makes it difficult to solve congestion through roadway capacity expansion alone.

Despite the evidence supporting induced vehicle travel as a real and measurable effect, transportation planning practitioners have often challenged the concept and have not recognized the limitations of current travel forecasting models to fully account for these effects. Current travel forecasting models fall short when there is the lack of a feedback mechanism to trip generation and land use allocation. Trip generation models are largely static, and land use or socioeconomic forecasts are a fixed input in most model applications. The feedback mechanism would ideally respond to changes in the accessibility and travel time effects associated with capacity expansion projects to avoid downward biases in VMT forecasts, as discussed further below.

One outcome of the inconsistent consideration of induced travel in analysis of capacity expansion projects is legal challenges by interest groups typically opposed to the project (*4*). Often at the core of legal challenges are competing views related to induced vehicle travel in evaluation of the merits or impacts of a transportation capacity expansion project. In several cases, the courts have concluded that induced vehicle travel should be accounted for in environmental impact analysis since induced vehicle travel effects can reduce the benefits of capacity expansion and worsen air quality and greenhouse gas emissions.

Accurate assessment of induced vehicle travel requires a thorough understanding of how travel conditions are influenced by capacity constraints in the network. The change in travel times (and thus costs) caused by the project will influence the travel response. Capacity enhancements tend to have greater effects on induced travel under the following conditions:

- Low average speeds, high delays, and long travel times (often extending across parallel facilities);
- Clear evidence of peak spreading to multiple hours;
- Traffic growth that is lower than population and employment growth (when not a result of smart growth actions);
- Atypically high percentage of nondiscretionary trips (i.e., discretionary trips have been discouraged);
- Low fuel and parking prices (making travel time a higher proportion of total cost); and
- Observed trip routing distorted away from congested areas.

Even without these factors, induced vehicle travel effects may occur. For example, constructing a 65-mph freeway parallel to an existing uncongested 45-mph arterial could cause higher VMT levels from route shifts, travel to more distant destinations, or both. The new freeway route could require a longer travel distance, but the higher speed of the facility would offer a faster travel time and greater access to destinations further away.

Depending on the situation, projects for increasing vehicle capacity may differ in the types of travel they induce as well. In extreme cases, where congestion levels are substantial and alternative travel modes unavailable, induced travel may include work or school trips that tend to have less discretion and therefore the highest value to drivers. In others, where base conditions are not extreme or where modal alternatives exist, the travel response may induce lower-value vehicle trips with less economic benefit.

EVIDENCE FOR THE INDUCED TRAVEL EFFECT

Most research into the induced travel effect focuses on measuring the amount of induced vehicle travel (i.e., changes in VMT levels) with respect to changes in transportation network supply and it is expressed with an elasticity metric. Elasticity is the percentage change in a variable resulting from a percentage change in another variable. For VMT levels with respect to lane-miles, it is defined as the percentage change in total VMT resulting from a percentage change in lane-miles (number of lanes times centerline miles). The evidence has been reviewed in several publications (*2, 5, 6*).

The published research on induced vehicle travel represents a variety of study conditions, methodologies, and results. Studies vary across a range of factors, including terminology, time frame, geographic location and size, means of measuring variables, quality of data, and the type of statistical model used to determine the association between capacity change and change in VMT levels. Two studies differ in notable ways. Cervero used a path analysis to account for the two-way relationship between travel demand and supply (*3*). That study translated the addition of lane-miles into changes in travel speeds, which are the key cause of induced vehicle travel. The study also accounted for induced investment that can occur in response to growing travel over time or to anticipated increases in real estate values conferred by improved access to transportation. A limitation of Cervero's research is that it focused on corridors and did not directly measure the full networkwide effects that are often desirable for environmental impact analysis related to air quality and greenhouse gas emissions.

Duranton and Turner measured induced vehicle travel effects for urbanized areas throughout the United States by using a comprehensive data set based on metropolitan statistical areas (MSAs) (*1*). This study captures networkwide effects and considers induced vehicle travel effects on major urban roads and nonurban Interstates and more carefully distinguishes between induced vehicle travel and sources of traffic growth that may have been independent of the added road supply.

Overall, the elasticity of VMT levels to lane-miles from published research referenced in the review papers ranges from 0.0 to 0.68 for short-term effects and from 0.29 to 1.1 for long-term effects. Duranton and Turner, whose study is the most recent, estimated a long-term elasticity of approximately 1.0 for Interstate highways and major roadways within metropolitan areas (*1*). Two papers measured the elasticity of VMT levels to travel time as –0.3 to –0.5 for short-term effects and –0.4 to –1.0 for long-term effects (*1*). After reviewing the available studies, Handy and Boarnet recommended that an elasticity value close to 1.0 is the best estimate for the long-run effect of highway capacity on VMT levels (*5*). Elasticity values as summarized in Handy and Boarnet are presented in Table 1.

Based on the elasticities for the long-term condition, the congestion-relief effects of added lane-miles diminish over time and can result in higher long-term VMT levels and greater reliance on auto travel. This limited conclusion may not fully consider the two-way relationship between demand and supply. As Cervero notes, "Many induced-demand studies have suffered from methodological problems that, I believe, have distorted their findings" (*7,* p. 22). Cervero mentions that one of the problems is dealing with causality, and he asks, "Are rising traffic volumes caused by more road capacity? Or, might added road capacity be even more strongly caused by historical growth in traffic?" (*7,* p. 22). This question, known as simultaneity bias, was addressed by Cervero in his analysis; he concluded, "To the degree that the path model better captures causal relationships than previous studies, many past elasticity estimates could very well be inflated" (*3,* p. 159).

Other researchers, however, have also controlled for this bias, as explained by Handy and Boarnet (*5*):

> the studies use different approaches to addressing simultaneity bias, the possibility that VMT growth causes capacity expansions at the same time that capacity expansions cause VMT growth. Most common is the use of two-stage least squares regression with instrumental variables (Noland and Cowart 2000; Duranton and Turner 2011). This approach involves "instrumenting" the independent variable of interest (i.e., lane-miles) with an estimator based on exogenous variables that do not directly affect the dependent variable (i.e., VMT). (*5,* Technical Background Document, p. 5)

Even after accounting for the effect that VMT growth has on the construction of new capacity, research studies still found significant influence of capacity expansion on VMT levels (*5, 8*). However, the aggregate nature of the data and research analysis raises other questions about the specific sources of the added VMT. The research studies generally control for the following variables:

- Population growth,
- Changes in income, and
- Other exogenous variables (demographic, auto ownership, etc.).

Most of the research does not explain how much specific sources contribute to added VMT. An exception is the work of Duranton and Turner, who identified the following four potential sources as contributing to the added VMT (*1*):

- Increase in household driving—11% to 46%,
- Increase in commercial driving—18% to 28%,
- Migration (increase in population)—5% to 15%, and
- Diversion of traffic from other routes—0% to 10%.

This information is needed for understanding the potential underestimation of VMT that may occur in travel forecasting models. To capture all these potential sources, models need feedback processes that allow changes in accessibility and travel time to influence personal and commercial driving as well as long-term land use locations. The forecasting models should be able to isolate VMT levels associated with planned population and employment growth versus the induced VMT levels that may arise from not anticipating the full effect of network changes. As to the magnitude of the values, further investigation is warranted as explained below.

How Do Increases in Household Driving Contribute to the Increase in VMT Levels from New Capacity Expansion?

According to the national and California household travel surveys, per-household (and per-person) vehicle trip rates have remained relatively constant over time, so the increase largely would be associated with longer trips. Because the Duranton–Turner research used

TABLE 1 Impact of Capacity Expansion on VMT (*5*)

Study	Study Location (study type)	Study Years	Change in VMT/ Change in Lane-Miles	Time Period
Duranton and Turner (*1*)	United States (MSAs)	1983–2003	1.03	10 years
Cervero (*3*)	California (freeway corridors)	1980–1994	0.10 0.39	Short term Long term
Cervero and Hansen[a]	California (urban counties)	1976–1997	0.59 0.79	Short term (1 year) Intermediate (5 years)

data from 1983 to 2003, when VMT per capita was increasing, the finding may be reasonable but is generally applicable under similar circumstances. As shown in Figure 3, trends in VMT per capita in the past few years have included a mix of declines and increases.

If trip length changes are the main contributor to increased VMT levels from roadway capacity expansion, then enhancements or adjustments to travel forecasting model may require more than a feedback process to trip generation and long-term land use patterns. Further investigation of changes in trip length would be needed to inform trip distribution or destination choice models. Current distribution models are often limited by trip length frequency patterns established in the model's calibration year.

Is Road Supply Expansion Alone Sufficient to Accelerate the Overall Rate of Population and Employment Growth Within an Entire MSA?

Other researchers have suggested that roadway capacity expansion influences the geographic distribution of future population and employment growth within an MSA, but they did not provide evidence that road supply expansion could increase regional population and employment growth. This possibility has implications for forecasting VMT changes at regional scales versus project scales. Duranton and Turner suggested that an increase in MSA population explained between 5% and 15% of the increase in VMT levels from road supply expansion (*1*). This finding suggests that population and employment growth forecasts used in regional transportation plans should not be fixed. Instead, the forecasts would depend on the amount of roadway capacity expansion. Further, the location of capacity expansion projects would influence both the regional and project-scale allocation of population and employment growth.

Does the Use of Aggregate Data Based on Lane-Miles Instead of on Travel Time Changes Skew Elasticity Findings?

Although an increase in lane-miles is a supply change, not all lane-mile changes have the same influence on travel times, which is the key variable for influencing traveler response. Thus, do travel forecasting models provide a better estimate of short-term induced travel effects while elasticities found in research provide a better estimate of long-term effects?

The elasticity estimates demonstrate that VMT levels increase with lane-miles such that induced travel effects should be captured in transportation analysis when relevant to the technical questions under investigation. However, how best to account for induced vehicle travel effects does not have a single answer, especially considering recent VMT per capita trends and the myriad disruptive technology, demographic, and social trends. Also, almost all the research studies focused on Interstate or major roadways (i.e., arterials), although some differentiated between roadway widenings versus new roadway construction. Thus, little information is available on how the effects of induced vehicle travel may vary across the following roadway project types:

- High-occupancy vehicle lanes,
- High-occupancy toll lanes,
- Tolled lanes,
- Auxiliary lanes,
- Limited-access highways versus arterials, and
- Transportation systems management strategies:
  - Ramp metering and
  - Variable speed limits.

There is a lack of specific studies associated with these project types, but the induced vehicle travel research findings generally would apply to the extent that these project types reduce travel time. However, managed and tolled facilities may be designed to manage demand and could be used to keep VMT levels constant (or possibly reduce VMT levels), which Cervero points out is the key factor influencing travel changes (*3*).

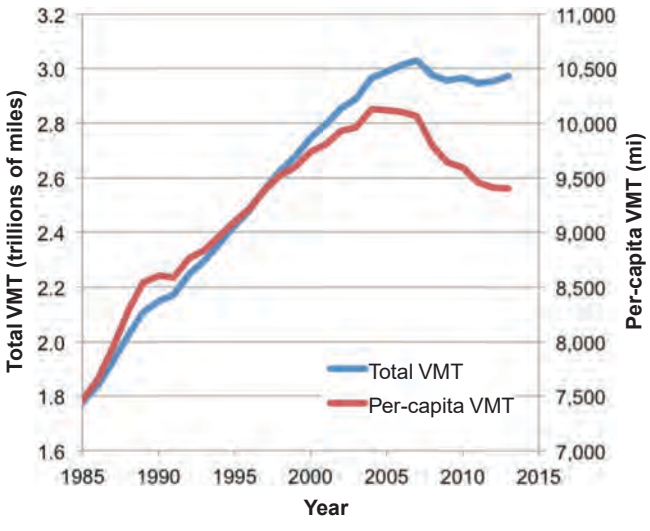

FIGURE 3 VMT trends. (Source: State Smart Transportation Initiative, FHWA, U.S. Census Bureau.)

TRAVEL MODEL SENSITIVITY

Schiffer et al. conducted a model sensitivity study in response to the lawsuit over the Legacy Parkway highway project in Salt Lake City, Utah (*6*). The sensitivity study was required as part of the settlement agreement among the Sierra Club, FHWA, FTA, and the Utah Department of Transportation. The study documented the measured change in VMT levels associated with roadway capacity expansion projects and the ability of travel forecasting models to capture induced vehicle travel effects fully. Today's travel forecasting models are not likely to have sufficient capability to predict induced demand and induced vehicle travel effects. Naess et al. noted that, "Although the phenomenon of induced traffic has been theorized for more than 60 years and is now widely accepted among transport researchers, the traffic-generating effects of road capacity expansion are still often neglected in transport modeling" (*9,* p. 291).

This deficiency in travel forecasting models is well understood among researchers and modeling experts and has been emphasized in various modeling literature. Litman said, "To predict generated traffic, transport models must incorporate 'feedback,' which reflects the impacts congestion has on travel behavior, and long-term changes in transport and land use patterns" (*2,* p. 13). He expanded on this statement by referencing other authors and concluded, "Most current traffic models can predict route and mode shifts, and some can predict changes in scheduling and destination, but few adjust trip frequency and most ignore the effects transport decisions have on land use development patterns" (*2,* p. 13).

The limitations of travel forecasting models to fully account for induced vehicle travel effects is a common argument used when forecast validity is questioned. Schiffer et al. addressed this topic and described what components of induced vehicle travel can be expected to be addressed in four-step travel forecasting models (*6*). Most urban area travel forecasting models include features to capture induced vehicle travel effects, but sensitivity testing is often necessary to verify the effectiveness of the features.

To assess sensitivity or accuracy of an individual travel forecasting model, testing should start with the following basic checklist of questions:

1. Newly generated trips. Does the model contain a feedback process by which person-trip generation is influenced by travel time estimates informed by network modifications (i.e., does trip generation vary with the level of roadway congestion)?
2. Longer trips. Does the model contain a feedback process by which trip distribution is influenced by changes in travel time? Is this influence limited by trip length patterns estimated for the calibration year?
3. Modal split. Does the model contain a mode choice process by which modal split is influenced by changes in travel time by mode?
4. Route diversions. Does the model contain a trip assignment process by which route choice is influenced by changes in travel time? This effect may not change the amount of overall travel, but it can be important for accurately forecasting location-specific traffic volumes for use in traffic operations analysis.
5. Time-of-day shifts. Does the model contain a temporal process by which departure time is influenced by changes in travel time? This effect is related to travel changes between time periods, not to the amount of overall travel; however, this effect can be important for accurately forecasting peak period traffic volumes for use in traffic operations analysis.
6. Land use development pattern shifts. Does the model contain a process by which long-term land use patterns are influenced by changes in accessibility and travel time?

In addition to sensitivity tests, questions could address travel time reliability, long-term auto ownership and availability rates (e.g., auto availability has expanded substantially with carsharing, microrentals, and transportation network companies), and public transit quality. All these factors can influence the induced vehicle travel effects and how travel changes in response to network modifications. Another form of testing is backcasts, for evaluating a model's ability to capture long-term effects on VMT levels. If a travel forecasting model can be shown to predict correctly increasing VMT per capita and total VMT for a period when historical growth in VMT levels exceeded population and employment growth, then the model has demonstrated the ability to predict long-term effects.

The most common limitations in current models (both four-step and activity based) is that feedback processes do not exist for long-term land use changes or trip generation when these models are used for project-level applications. Departure times may be fixed according to the use of preset periods representing a 24-h day. Although this does not adversely affect the total amount of travel for the 24-h day, it can influence the demand within individual periods. Trip distribution, mode choice, and trip assignment components of current practice models generally can capture the induced vehicle travel effects associated with Tests 2, 3, and 4 when feedback loops exist, have sufficient sensitivity, and are properly executed. However, model sensitivity testing must be done to verify that these components of the model have been properly specified and calibrated. A model structure may include an appropriate feedback structure, but testing is necessary to verify that the structure has been properly executed in the model environment and that errors have not been introduced in the model coding or data. Verifying that the model responds in the correct direction and magnitude is an important part of this testing. Another important check is the amount of variability or noise exhibited by the model that could distort the traffic and VMT estimates. In a regional context, and for some projects even at a corridor scale, the project impacts on travel could be relatively small, and model insensitivity or oversensitivity could significantly bias the estimate of VMT change relative to the VMT base.

CONCLUSIONS

Elasticity results demonstrate that the addition of lane-miles (especially in urban congested areas) causes increases in VMT levels that often dampen the ability of capacity expansion projects to relieve congestion and thereby generate higher levels of emissions. Handy and Boarnet supported this conclusion, noting that the quality of the evidence linking highway capacity expansion to VMT increases is relatively high (*5*). With long-term induced travel elasticity estimates reaching 1.0, a common conclusion, as stated by Duranton and Turner, is that "the extension [expansion] of most major roads is met with a proportional increase in traffic" (*1*). Their findings distinguished among the various sources of the traffic increase and indicated that the largest contributor to increases in VMT levels was more personal and commercial driving. Other contributors included route shifts and higher levels of population growth.

Research by Hansen and Huang (*10*) that used California-specific data reached similar conclusions about the overall long-term elasticities, although Cervero (*3*) revealed a lower long-term elasticity of about 0.80, of which only 0.39 was attributable to increased driving and growth with use of a methodology that also explained some of the two-way relationships between induced travel and induced growth and investment (*10*). According to Cervero, the path analysis approach, which was based on a long-term data set covering 14 years, revealed the following:

> The path analysis showed that for every 100 percent increase in capacity there'd be an eighty percent increase in travel, reflecting increased travel speeds and land use shifts along improved corridors. However, only around half the increases in speed and growth in building permits was due to the added capacity. Factors like employment and income growth accounted for the other half. Accordingly, the traffic gains that one can attribute to the added capacity is actually around half of eighty percent, or forty percent. (*7,* p. 26)

Other important findings in the research are as follows:

1. The induced vehicle travel effect size depends on the size of the geographic area and the size of the network change. The influence of an individual project is relative to its proportion of the larger network.
2. The induced vehicle travel effect size is influenced by other costs associated with driving, such as parking and fuel prices. When fuel prices are lower, the induced travel effects of expanded capacity tend to be higher as travel time becomes a greater share of travel costs in this situation (*5, 8*).
3. The induced vehicle travel effect is influenced by the starting level of congestion.

Beyond these conclusions, additional research is needed to evaluate further the following topics:

- Replicating the Duranton–Turner research at the metropolitan planning organization or county level (*1*),
- Isolating the specific contributing sources of added VMT (including determining whether new vehicle trips are related to creation of a trip that did not previously occur or the unchaining of a trip),
- Evaluating the effects of induced vehicle travel according to speed or travel time changes instead of lane-miles,
- Evaluating the effects of induced vehicle travel across facility and project types, and
- Evaluating the effects of induced vehicle travel under various levels of congestion and VMT per capita trends.

Although such research would be desirable, the research findings to date provide sufficient evidence that induced vehicle travel effects occur, are measurable, and should be accounted for in transportation analysis when relevant to the technical questions under investigation. Given the strength of the research findings, the next challenge is to connect the research to transportation planning practice and modeling so that effects of highway capacity on VMT levels are accurately captured.

PROJECT ANALYSIS APPLICATIONS

Beyond the research, how to address induced demand and induced vehicle travel in project analysis remains a significant question. Data and modeling limitations must be recognized and accounted for in the analytical process to avoid underestimates of induced travel effects. If a travel forecasting model is found to have limitations related to one or more of the induced vehicle travel components above, corrective actions can compensate for the limitation. Depending on project circumstances, this may be a qualitative or quantitative response. Project circumstances include the type of project, analysis purpose (alternatives analysis, design, or environmental impact analysis), resources, schedule, and controversy. When making a decision about the appropriate method, analysts should be aware of the expectations established in technical guidelines and environmental case law. In general, almost all the effects of induced vehicle travel can be accounted for with advanced travel forecasting models that account for the feedback effects of travel time (or travel cost) savings on travel behavior and long-term land use allocation. Failure to account for the feedback effects will result in underestimation of induced vehicle travel effects. Nevertheless, it is not always possible, feasible, or desirable to apply advanced models fully and appropriately for every transportation analysis.

At a minimum, induced vehicle travel effects should be acknowledged and discussed for capacity expansion projects that will reduce travel times. Acknowledgment should disclose any limitations related to the forecasting that may have not been sensitive to induced vehicle travel effects and how those effects could influence the analysis results. This effort could include a qualitative discussion or even simple elasticity-based estimates of VMT levels derived from the project's lane-mile changes. Disclosures should refer to the research findings on the subject presented above or to the most recent and relevant research available. This recommendation applies to regional and project scale analysis.

Quantification of induced vehicle travel effects becomes particularly important when capacity constraints are severe. The process for quantification will depend on the available travel forecasting models and their sensitivity to induced vehicle travel effects. A first level of quantification would calculate the model-produced elasticity of VMT levels to lane-miles under short-term and long-term conditions. For example, the short-term evaluation could compare the net change in VMT levels divided by the net change in lane-miles between the no-build and build scenarios with the research elasticity estimates of short-term responses such as those produced by Cervero (*3*). If the model fails to capture the full change expected in VMT levels, the VMT forecasts could be adjusted according to the elasticity differences. For long-term conditions, the elasticity values from research studies could be used as a benchmark for comparison. The research analysis controls for variables such as population growth, while travel demand models use population growth as a key variable in forecasting VMT levels. Hence, the travel demand model forecast of VMT levels should be higher than an estimate derived from long-term elasticity values found in the research.

ITE Journal May 2014

Changing the Paradigm of Traffic Impact Studies:

How Typical Traffic Studies Inhibit Sustainable Transportation

"The practice of focusing on automobile level of service (LOS) and traffic flow as part of environmental clearance has, ironically, actually inhibited sustainable transportation"

tation, that is, transit, bicycling, and walking. This paper describes the problems with current practices and suggests how transportation studies should be used to improve mobility and livability for all.

"Three implicit assumptions [in the use of LOS]:

1. Cars are more important than people
2. We should provide roadway capacity in excess of what is actually needed
3. New development should occur in suburban and exurban locations, rather than in established areas"

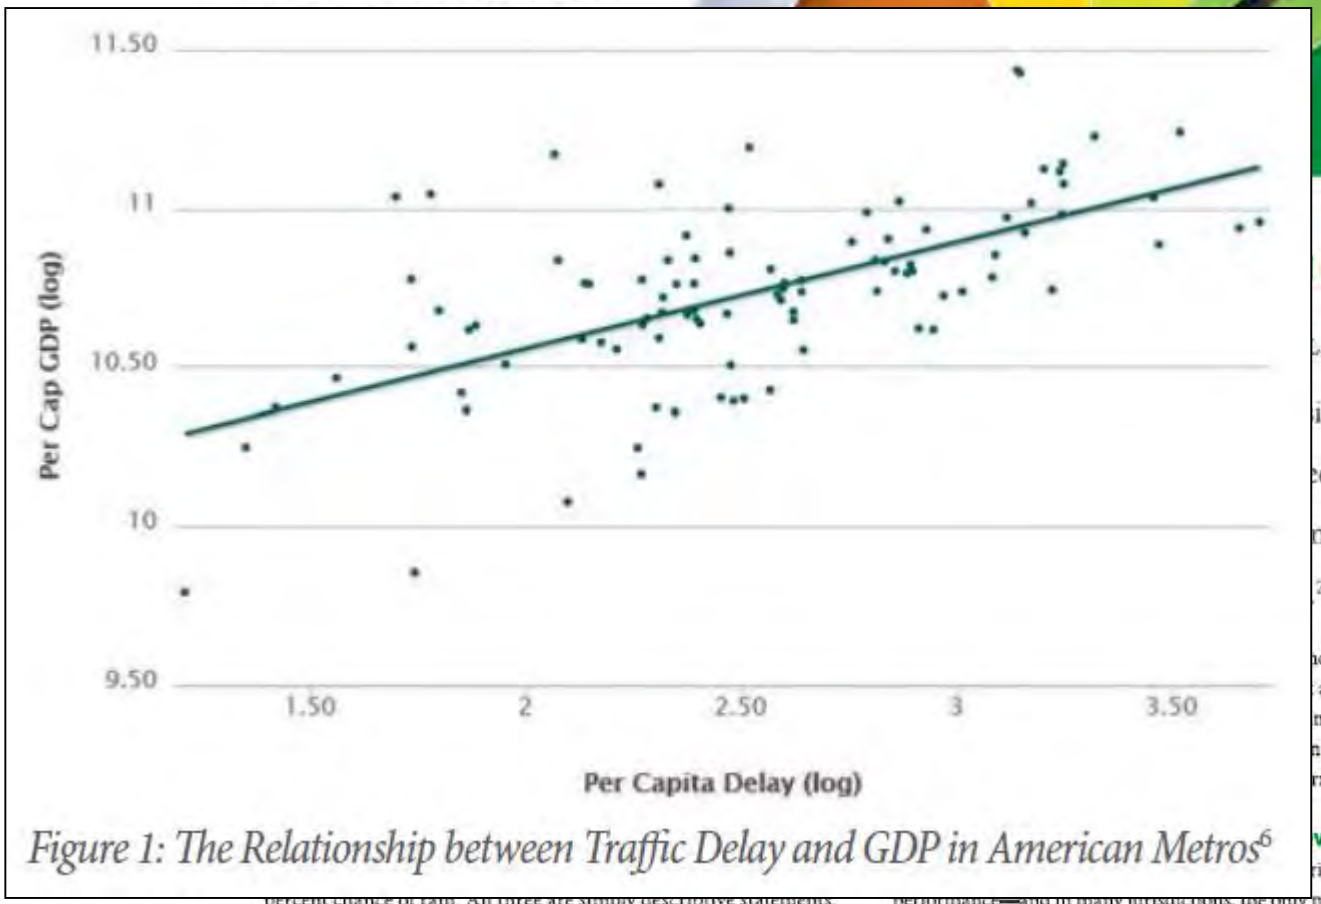

Figure 1: The Relationship between Traffic Delay and GDP in American Metros[6]

SB 743 and the shift to VMT

SB 743

- Prohibits the use of LOS in CEQA
  - Clarifies: auto delay ≠ env. impact
- Directs OPR to replace it with a metric that:
  1. Reduces GHGs
  2. Improves multimodal network
  3. Increases mixed use development
- OPR Implementation
  - Preliminary Evaluation of Alternative Transportation Metrics
  - Consensus on Vehicle Miles Travel (VMT)

Benefits of VMT as a Measure of Transportation Impact

1. Removes barriers to infill
2. Easier to model
3. Already used (e.g. for GHGs)
4. More accurate
5. Sees the big picture
6. Mitigation doesn't undo itself by inducing more car travel
7. Mitigation reduces long run maintenance burden
8. Mitigation forwards other environmental and human health factors

Impacts of High VMT Development

Environment

- Emissions
  - GHG
  - Regional pollutants
- Energy use
  - Transportation energy
  - Building energy
- Water
  - Water use
  - Runoff – flooding
  - Runoff – pollution
- Consumption of open space
  - Sensitive habitat
  - Agricultural land

Health

- Collisions
- Physical activity
- Emissions
  - GHGs
  - Regional pollutants
- Mental health

Cost

- Increased costs to state and local government
  - Roads
  - Other infrastructure
  - Schools
  - Services
- Increased private transportation cost
- Increased building costs (due to parking costs)
- Reduced productivity per acre due to parking
- Housing supply/demand mismatch → future blight

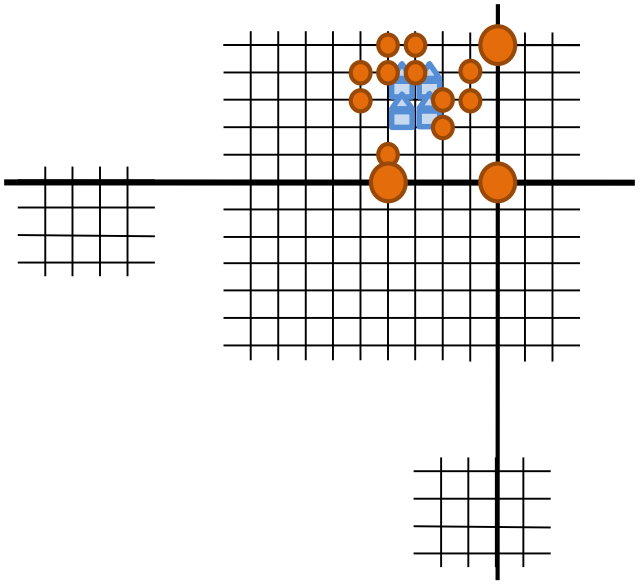
Implementation of VMT: Geography/Extent

Urban

- Lots of mitigation options, greatest *percent* VMT reduction
- VMT reduction benefits environment, health, cost here
- Streamline infill, transit, active transportation projects

Suburban

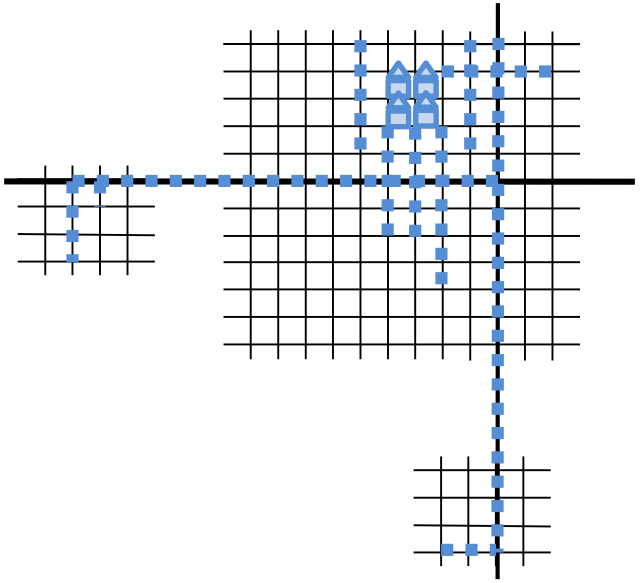
- Many mitigation options; greatest *absolute* VMT reduction
- VMT reduction benefits environment, health, cost here too



Rural

- Many mitigation options at the plan level, some at the project level
- Reducing VMT benefits environment, health, cost here too
- VMT mitigation helps maintain small town character, equity

Implementation: Land Use Projects



Old:

Analyze nearby intersections; if impact, add auto capacity or reduce project size

New:

VMT loaded onto the roadway network; if impact, adjust project to be more travel efficient (e.g. add TDM) or pay into VMT-reducing mitigation program

Implementation: Transit and Active Transport Projects

Old: Transit, active transportation projects slow automobile traffic, trigger LOS-based “impact to transportation”

New: Transit, active transportation presumed to reduce VMT unless demonstrated otherwise

Implementation: Roadway Expansion Projects

Old: Widen nearby intersections from rerouted/induced vehicle travel to mitigate LOS impacts; Induced VMT analysis required for GHG calculation

New: Estimate induced VMT; solution is to manage lanes, deploy ITS, or provide TDM

Implementation: Roadway Expansion Projects

Roadway expansion reduces travel time, which leads to:

1. Longer trips (↑ VMT)
2. Mode shift toward automobile (↑ VMT)
3. Newly generated trips (↑ VMT)
4. Route changes (can ↑ or ↓ or VMT)
5. More disperse land use development (↑ VMT)

All the result of basic supply and demand

Implementation: Roadway Expansion Projects

Empirical Study

- 20 academic studies quantify induced vehicle travel
- Long-run elasticities typically 0.6 to 1.0
- Recent California Air Resources Board Assessment:
  - Policy Brief

    http://www.arb.ca.gov/cc/sb375/policies/hwycapacity/highway_capacity_brief-4-21-14.pdf
  - Background Technical Document
    http://www.arb.ca.gov/cc/sb375/policies/hwycapacity/highway_capacity_bkgd-4-21-14.pdf
  - ARB declares literature review “Highest Confidence” for induced travel research

Implementation: Roadway Expansion Projects

How to estimate induced VMT

A travel demand model can estimate:

1. Longer trips
2. Mode shift toward automobile
3. Newly generated trips [in some cases]
4. Route changes

But not:

5. Land use changes

Implementation: Roadway Expansion Projects

How to estimate land use change (and VMT implications):

- Employ a land use model
- Employ an expert panel, e.g. using Delphi method
- Examine gap between modeled and typical empirical results; adjust and/or explain model results

Caltrans role in implementing SB 743

Caltrans' Role in Implementing SB 743

1. Rethinking approach on mitigating impacts to the state highway system

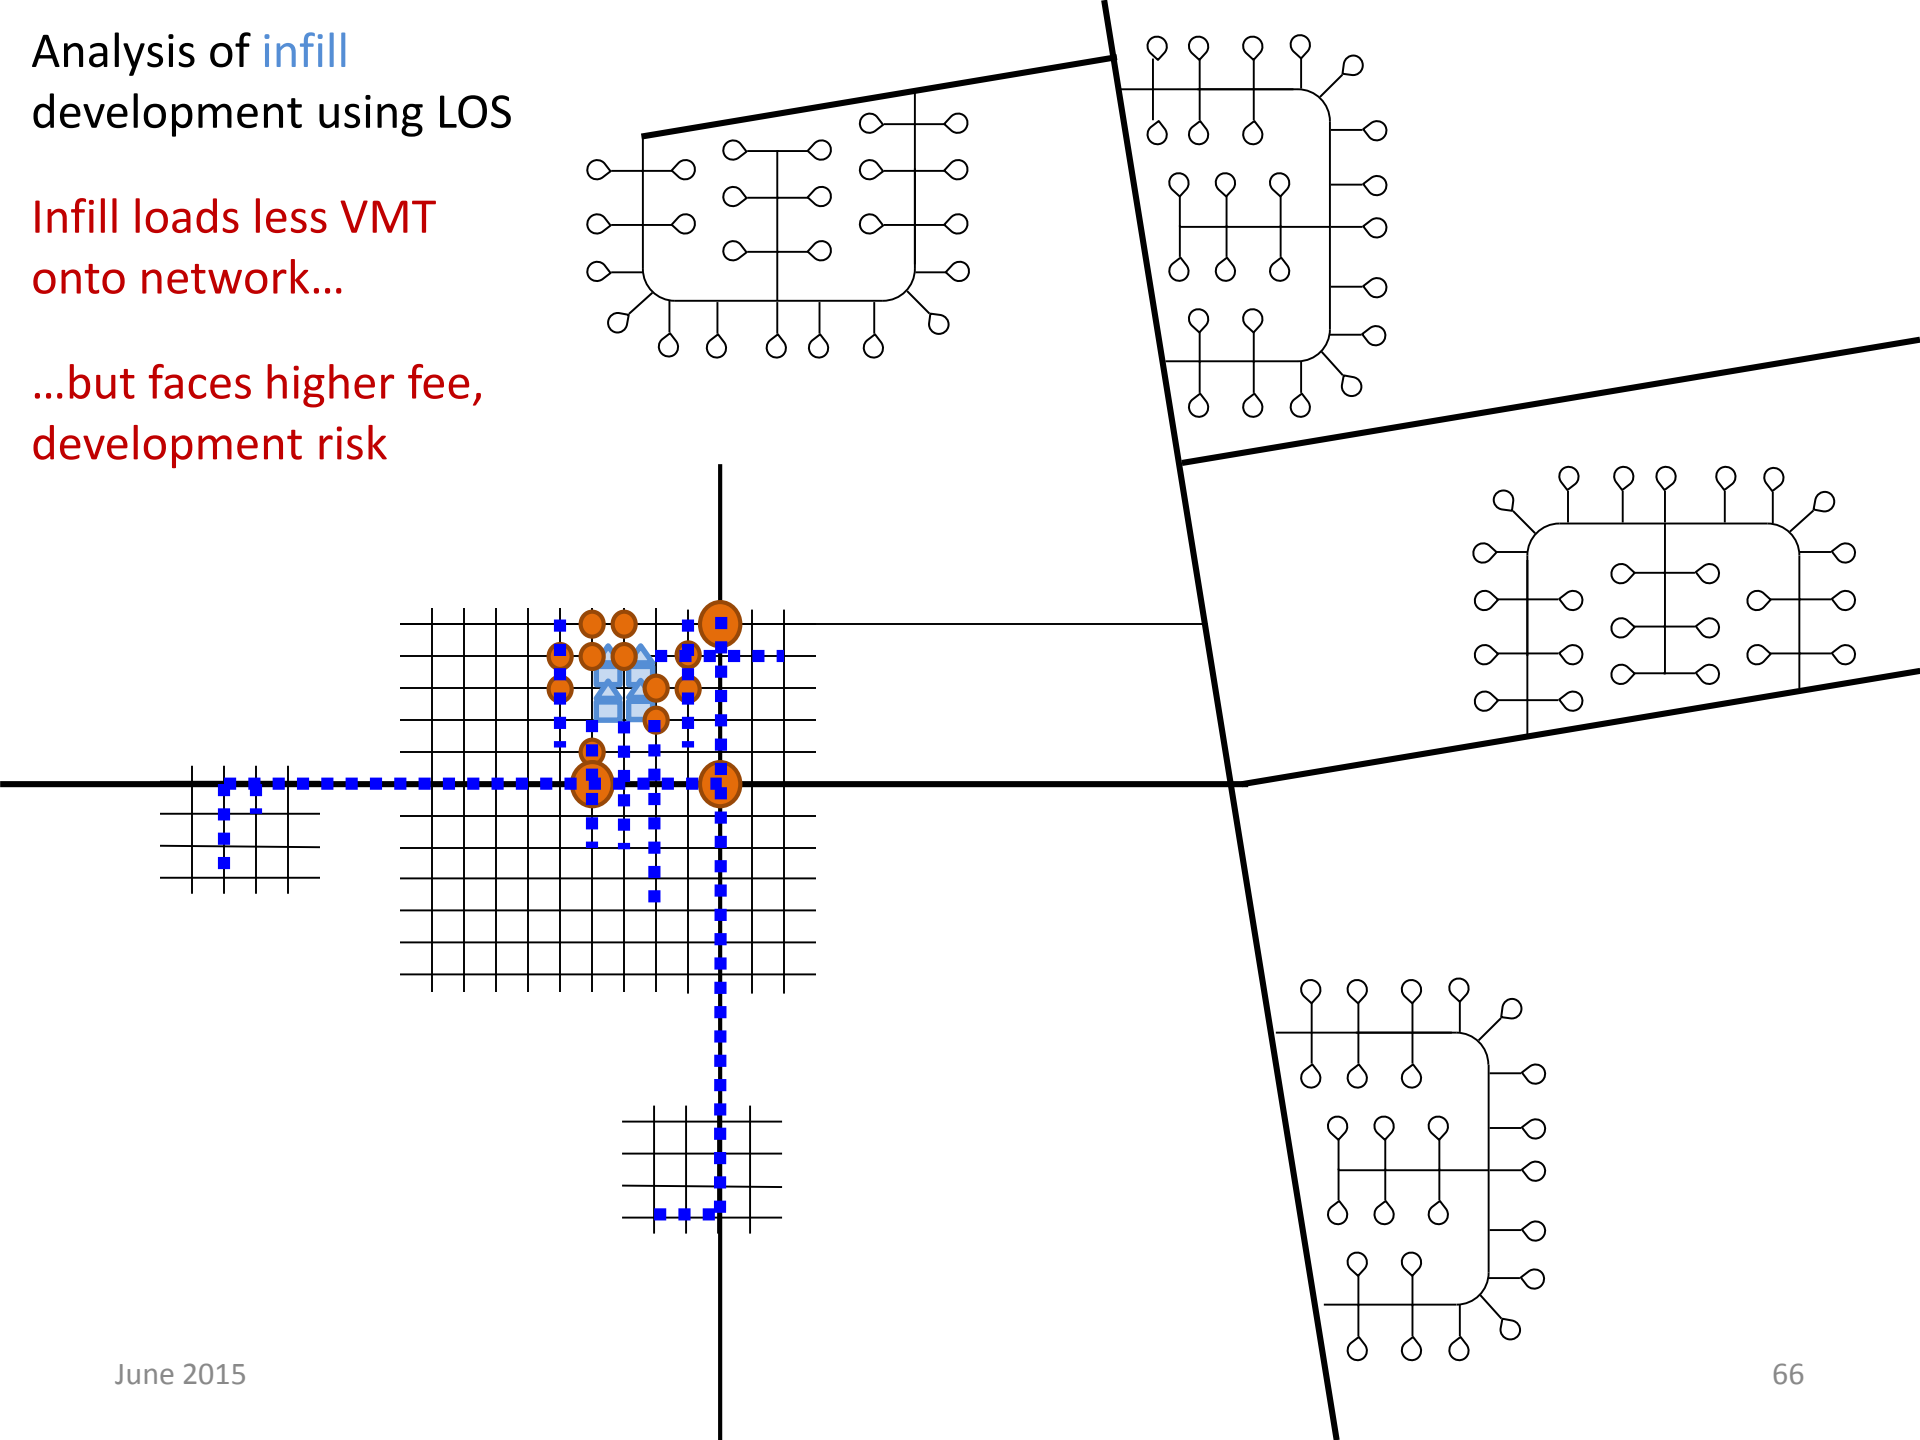
2. Measuring the effects of transportation investments

3. Developing the tools and models, undertaking research

Caltrans' Role in Implementing SB 743

1. **Rethinking approach on mitigating impacts to the state highway system**

Opportunity:

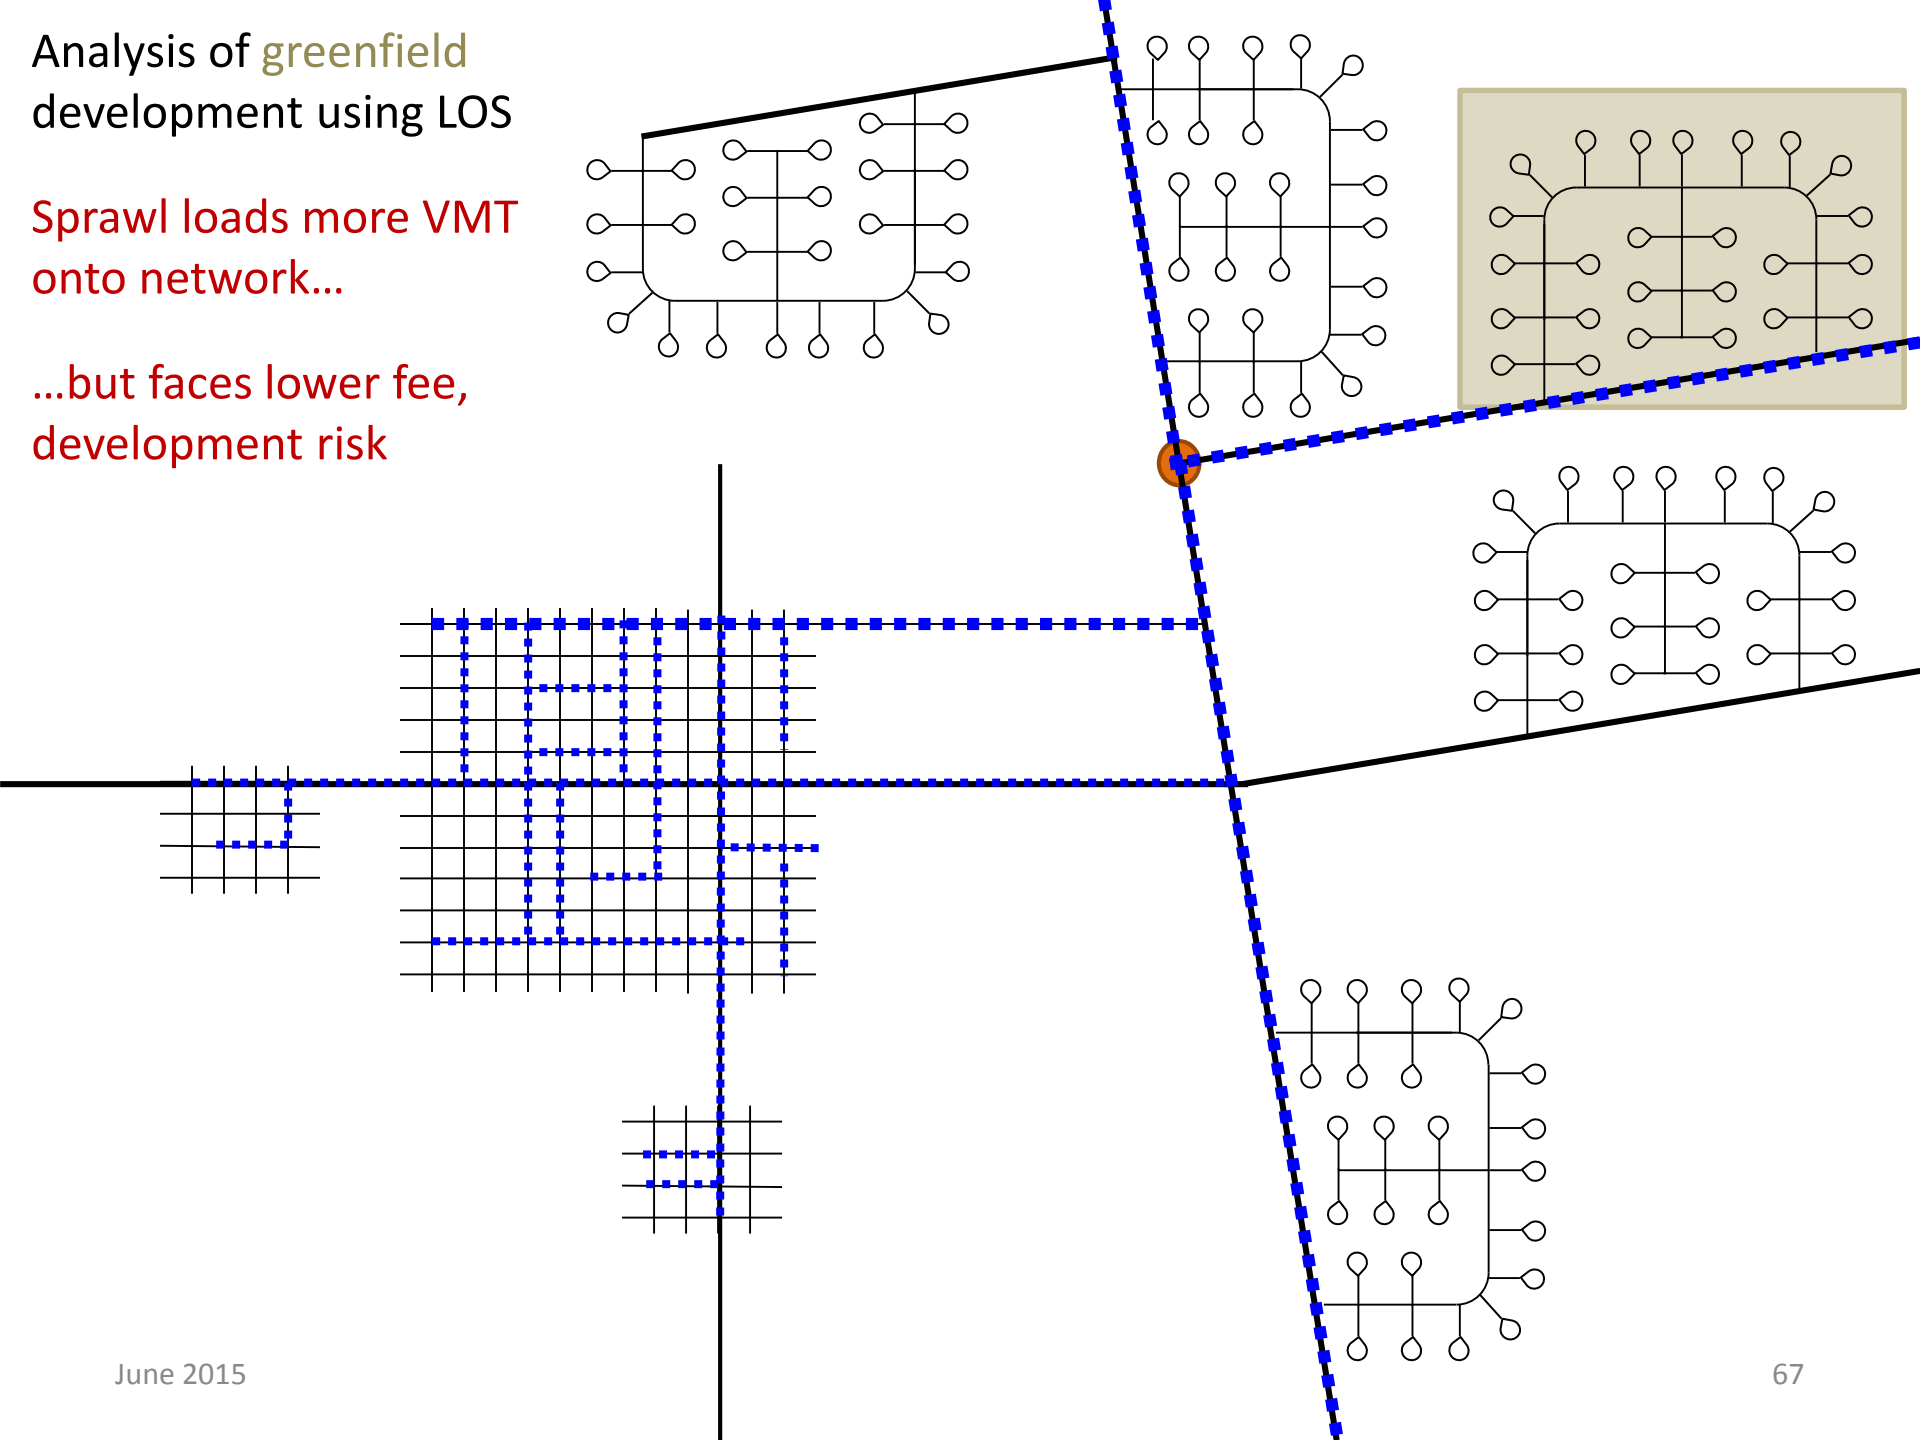


- Better, less costly solutions
- Improve *Access to Destinations*

E.g. shifting cost and risk burden away from infill development

Analysis of infill development using LOS

Infill loads less VMT onto network…



…but faces higher fee, development risk

Analysis of greenfield development using LOS

Sprawl loads more VMT onto network…

…but faces lower fee, development risk

Denver 1982		Denver 2007
1.09	Travel Time Index	1.31
50.6 minutes	Average travel time	49.6 minutes
46.4 mins	Travel time without traffic	37.9 minutes
4.2 mins	Extra rush hour delay	11.7 minutes

Caltrans' Role in Implementing SB 743

1. **Rethinking approach on mitigating impacts to the state highway system**

Pathways:

- Develop VMT-based impact fee program
- Develop improved analysis capabilities, and/or…
- Improve coordination with local and regional entities

Venues:

- OPR – CalSTA – Caltrans working group
- TAG-**TISG**
  - Interim guidance
  - Full guidance

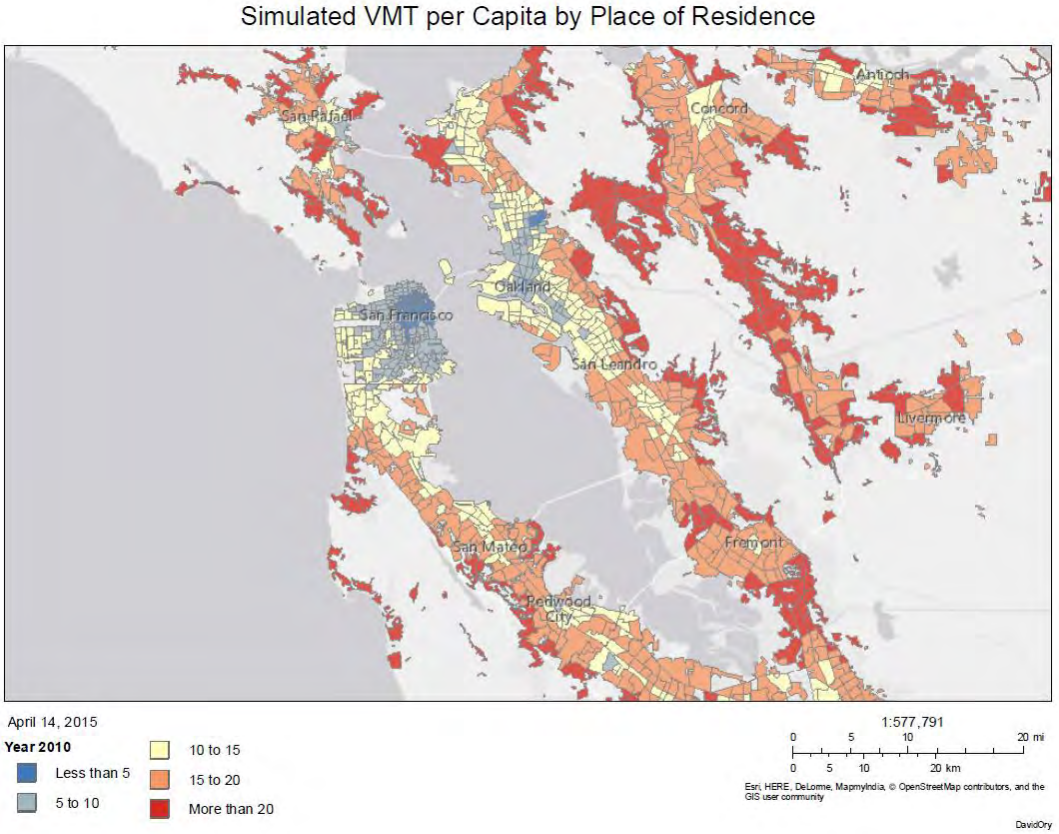
Caltrans' Role in Implementing SB 743

2. Measuring the effects of transportation investments

Opportunity:

- Improve legal adequacy of CEQA documents
- Accurate estimates of traffic outcomes of projects
- Accurate estimates of GHG outcomes of projects
- Accurate estimates of other environmental outcomes of projects

Venues:



- OPR – CalSTA – Caltrans working group
- **TAG**-TISG
- Coordination between CEQA Guidelines and Caltrans Guidelines

Caltrans' Role in Implementing SB 743

3. Developing the tools and models, undertaking research

Example:

- California Statewide Travel Demand Model

Caltrans' Role in Implementing SB 743

$Billions in transportation investments → $Trillions in land use investments

Thanks!

IP-39-1

The commenter's support of Alternative 7 and opposition to additional travel lanes for vehicles is acknowledged and included in the project record. As discussed in Section 1.2.2 in Chapter 1.0, Proposed Project, of the RDEIR/SDEIS, one of the purposes of the project is to improve air quality and public health. Caltrans, as lead agency under CEQA and NEPA (as assigned by the Federal Highway Administration [FHWA]), in cooperation with the Los Angeles County Metropolitan Transportation Authority (Metro), has identified Alternative 1 (No Build) as the Preferred Alternative. Please refer to Section 1.1 of this appendix for more information regarding the identification of the Preferred Alternative (Alternative 1 No Build), and to Section 1.3 of this appendix for more information regarding the ZE-only option.

IP-39-2

A subsection titled "Public Health Considerations" is included in each resource topic section in Chapter 3.0 at the end of the Environmental Consequences sections.

IP-39-3

It should be clarified that one of the purpose and need statements identified for the project is to "improve air quality and public health", rather than the project will unequivocally improve air quality and public health. Overall, air quality would be improved with the exception of small, near-roadway areas that would see an increase in pollutants. As was stated in Section 1.1 of the RDEIR/SDEIS, the *Major Corridor Study* was undertaken to address the I-710 Corridor's mobility and safety needs and to explore possible solutions for transportation improvements. This study concluded in 2005 and identified a community-based Locally Preferred Strategy of ten general purpose lanes next to four separated freight-movement lanes. The *Major Corridor Study* itself was also referenced in Section 1.1 but is not included in the RDEIR/SDEIS, which is a project-level environmental document. Alternative 1 (No Build) has been identified as the Preferred Alternative and therefore, the programmatic element of the build alternatives that would have provided funding for ZE/NZE trucks for use on the I-710 Corridor even in the absence of a dedicated freight corridor will not be implemented by Caltrans as the lead agency under CEQA and NEPA and as the owner/operator of the I-710 freeway.

The RDEIR/SDEIS did not fail to take into account the Tier 2 Community Impact Report and other recommendations resulting from the *Major Corridor Study*. Following an alternatives screening analysis performed after public scoping for the Draft EIR/EIS in 2008, the Locally Preferred Strategy became the basis for Alternatives 6A, 6B, and 6C evaluated in the Draft EIR/EIS circulated for public review in 2012. Since the release of the Draft EIR/EIS in 2012, more information regarding truck traffic patterns, other projects within the area, and public and agency requests required further development of the alternatives under consideration. More information

regarding the alternatives' development process was included in Section 2.5, Alternatives Considered but Eliminated from Further Discussion, of the RDEIR/SDEIS.

IP-39-4

Contrary to that indicated in this comment, inclusion of the BNSF Railroad Southern California International Gateway (SCIG) and UP Railroad near-dock intermodal Container Transfer Facility (CTF) projects are appropriate to include for the 2035 No Build Alternative, as it was a part of a collaborative process with the I-710 Technical Advisory Committee, as documented in the RDEIR/SDEIS (p. 1-31).

IP-39-5

Contrary to that indicated in this comment, the RDEIR/SDEIS did not make an assumption that the BNSF Hobart Yard would "essentially be empty." Inclusion of the BNSF Railroad Southern California International Gateway (SCIG) project is appropriate to include for the 2035 No Build Alternative, as it was a part of a collaborative process with the I-710 Technical Advisory Committee, as documented in the RDEIR/SDEIS (p. 1-31). As discussed on p.1-31 of the RDEIR/SDEIS, in 2013, the assumptions related to goods movement within the SCAG region were further developed and updated to more closely align with the changed economic conditions, drawing on the Updated Cargo Forecast (2009), the 2012 RTP Travel Demand Forecast Model (2012), the San Pedro Bay Ports estimates of marine terminal capacity (2013), Port cargo market shares (2013), and truck trip distribution (2013). The Model Input Data and Key Assumptions Technical Memorandum for Goods Movement (May 2013) was then reviewed and discussed by the I-710 Technical Advisory Committee and the Port growth assumptions were approved for use in traffic forecasting performed in support of this RDEIR/SDEIS. These assumptions include a 2035 total annual cargo container throughput at both Ports of 41.4 million 20-foot equivalent units (TEUs), and the construction and/or implementation of both the BNSF Railroad Southern California International Gateway (SCIG) near-dock intermodal yard and the expansion of the UP Railroad near-dock Intermodal Container Transfer Facility (ICTF).

Regarding the 2016 court decision that found that the SCIG EIR/EIS violated CEQA, a superseding January 12, 2018, Appeals Court decision reversed most of the objections in the 2016 court decision (e.g., confirming the adequacy of the final EIR regarding emissions at the Hobart railyard, greenhouse gas emissions, noise and traffic impact) and identified ways to resolve the one remaining CEQA issue (i.e., re-analysis of modeled particulate matter concentrations at a certain location). On April 11, 2018, the California Supreme Court denied a petition to review the Court of Appeal's January 2018 decision.

IP-39-6

The traffic forecasting for the I-710 *Major Corridor Study* was performed in 2002 for the future year 2030 while the traffic forecasting for the RDEIR/SDEIS was performed in 2013 for the future year 2035. During the 11 years between these traffic forecasts, the inputs to the traffic forecasting model inevitably changed, as did the traffic forecasting methodology. For instance, the economic recession of 2008-2014 changed the current values and future forecasts of population and employment and economic activity, both of which affect the traffic volume forecasts. In addition, changes in auto trip origin and destination patterns since the *Major Corridor Study* have contributed to the reduction in forecast auto traffic volumes on I-710 in the RDEIR/SDEIS. With respect to truck trips, SCAG and the Ports have observed and incorporated into the traffic forecasting models a better representation of changes in Port cargo mode shifts and trip destinations, as well as the continued changes in logistics, such as transloading. Therefore, traffic forecasts from these two studies cannot be directly compared.

IP-39-7

At the time of the commencement of technical studies, including detailed traffic forecasting, in support of the I-710 Corridor Project RDEIR/SDEIS, the Project Team reviewed the status of each of the SCIG and ICTF projects and came to the conclusion that they were reasonably foreseeable projects and in order to represent a likely future scenario, should be included in the No Build scenario. Because of the lead time necessary for the complex traffic modeling efforts on the I-710 Corridor Project, it was not possible to revise the No Build scenario and re-run the model, and all subsequence analyses that depend upon the traffic model, and still meet the schedule established for the project. In addition, in January 2018 the California Courts of Appeal ruled that the Port of Los Angeles and BNSF were in compliance with the majority of CEQA requirements in the SCIG Final EIR, with the exception of the air quality analysis of ambient air concentrations and associated cumulative impacts of such pollutant concentrations. The court further ordered that work on the project be suspended until such time that these deficiencies are addressed. On April 11, 2018, the California Supreme Court denied a petition to review the Court of Appeal's January 2018 decision. However, the Project Team maintains that there is sufficient evidence and rationale for retaining the SCIG project in the No Build scenario.

A Sensitivity Test was conducted that removed the SCIG and ICTF Expansion Projects from the I-710 Corridor traffic model to evaluate the effects on the I-710 Corridor transportation travel patterns. These sensitivity tests can be reviewed in more detail in the *I-710 Corridor Project RDEIR/SDEIS Travel Demand Modeling Methodology Technical Memorandum* (June 2017). In general, viewed from daily conditions for total vehicles, removal of the SCIG and ICTF expansion projects from the No Build scenario resulted in only a slight overall change in vehicles, with additional trucks using I-710 displacing some autos.

IP-39-8

Please refer to Response to Comment IP-39-7 for more information regarding the inclusion of ICTF in the No Build scenario.

IP-39-9

Caltrans and Metro both respectfully disagree that the RDEIR/SDEIS does not take into account the rise in transloading activity; in fact, an increase in transloading activity within the I-710 Corridor is cited as one of the major reasons why the project funding partners decided to move forward with a revised set of build alternatives analyzed in a recirculated draft document. Section 2.2.2 of the RDEIR/SDEIS, Revised Alternatives Development and Refinements, outlined the various changes and new information that merited revision to the build alternatives and a recirculated environmental document; specifically: "These updates to the regional traffic model provided a more comprehensive understanding of the traffic patterns and behavior within the Study Area and beyond, particularly related to goods movement…In addition to the potential effects of the SCIG and ICTF projects on truck travel patterns, more has been learned about Port cargo behaviors and their origins and destinations, particularly with regards to cargo transloading."

It is important to note that production of the complex technical analyses included in the RDEIR/SDEIS, many of which build and depend on each other, require a substantial amount of lead time, and the RDEIR/SDEIS traffic analyses analyzed an existing conditions year of 2012/2013. The difference in year alone could account for the difference in percentage of transloaded cargo; however, in any case, it is more than reasonable that differences in methodology and assumptions account for the percentage difference between the RDEIR/SDEIS and the cited article. Traffic and cargo assumptions for the RDEIR/SDEIS were determined in coordination with the Ports and SCAG and disclosed in the *I-710 Corridor Project RDEIR/SDEIS Travel Demand Modeling Methodology Technical Memorandum* (June 2017).

IP-39-10

It is important to note that although Senate Bill (SB) 743 was passed by the California State Legislature in 2013, a first draft of State CEQA Guidelines implementing SB 743 was not released until August 2014, and a revised Technical Advisory was released by the Governor's Office of Planning and Research in April 2018. The new State CEQA Guidelines sections created by SB 743 went into full effect statewide on January 1, 2020.[14] As stated in Response to Comment IP-39-1, the No Build Alternative has been selected as the Preferred Alternative. Therefore, it is not necessary for Caltrans to evaluate vehicle miles traveled (VMT) in the Final EIR/EIS. However, information regarding VMT as well as Vehicle Hours of Delay (VHD) was provided for the 2012

[14] Governor's Office of Planning and Research. SB 743 Frequently Asked Questions. Website: https://opr.ca.gov/ceqa/sb-743/faq.html#lead-agencies-begin (accessed October 29, 2022).

Baseline, the 2035 No Build Alternative, and the 2035 build alternatives in Table 4.3-1 of the RDEIR/SDEIS and is also provided in this Final EIR/EIS.

The issue of induced demand is very complex, involving various travel behavior responses, residential and business location decisions, and other factors that influence regional population and economic growth. While some of these responses may represent new trips, much of the observed increase in traffic comes from trips that were already being made before the increase in highway capacity, or reflect predictable behavior that is accounted for in travel demand forecasts. Accordingly, Caltrans' guidance on this topic of induced demand maintains that each project should be evaluated on a case-by-case basis.

"Induced travel" is characterized as the additional demand for travel that occurs as a result of a decrease in the generalized cost of travel, including both travel-time and out-of-pocket costs. I-710 is part of a highly congested metropolitan roadway network and is located within an urbanized area that is essentially built out. Given the high levels of congestion on I-710 in the peak periods, the I-710 travel demand forecast model is particularly sensitive to changes in travel times. The proposed improvements included in the build alternatives would improve speeds and would reduce travel times on I-710, which in turn would attract more traffic to the facility relative to the No Build Alternative. The predicted shifts in traffic were accounted for in the analysis presented in Section 3.5 of the RDEIR/SDEIS for both Alternatives 5C and 7.

IP-39-11

Please refer to Response to Comment IP-39-10 regarding SB 743. In the context of the cited example, improved level of service is an appropriate measure to apply to characterize improvement in vehicular travel time and mobility for surrounding communities at the local street interchanges with I-710 that are serving those communities.

IP-39-12

Detailed final design, construction, and staging plans and equipment location and timing is typically not determined until after a Final EIR/EIS is approved, should a build alternative be selected as the Preferred Alternative. Without location-specific construction activity information, modeling of location-specific air quality impacts was not possible and assumptions about those locations and the intensity/duration of construction activity at those locations would cause any dispersion modeling results (ambient or mobile source air toxics) to be speculative and misleading. However, a preliminary construction staging analysis was performed in order to demonstrate that the build alternatives could feasibly be constructed. The construction emissions scenarios presented in the AQ/GHG/HRA Technical Study (2017) and summarized in Section 3.24, Construction Impacts, of the RDEIR/SDEIS assumed a conservative (i.e., worst-case scenario) emissions analysis, drawn from the construction staging scenarios, in order to identify and disclose the range of potential impacts resulting from the build alternatives.

IP-39-13

Please refer to Response to Comment IP-39-7 for more information regarding the inclusion of SCIG and ICTF in the No Build Alternative scenario and the validity of the air quality analysis results.

IP-39-14

The Community Impact Assessment and Section 3.3.3.5 of the RDEIR/SDEIS accurately state that diesel-related mobile source air toxics (MSAT) emissions would decrease while total particulate matter emissions would increase. MSAT is the toxic components of gaseous and particulate emissions from on-road vehicle exhaust that may have chronic and acute health impacts. There are over 1,000 MSAT compounds, including DPM. Total traffic-related particulate matter emissions consist of (1) exhaust emissions (DPM), and (2) direct brake and tire wear and entrained road dust emissions (particulate matter from roadways lifted into the air by vehicle motion). Because particulate matter emissions are comprised of two components, it is possible for MSATs to decrease and for total particulate matter to increase if the increase in direct brake and tire wear and entrained road dust emissions outweighs the decrease in exhaust emissions.

IP-39-15

At this time, the definition of sensitive receptor, which was developed using various data sources as described in Section 3.2.7 of the AQ/GHG/HRA Revised Protocol (Appendix A of the AQ/GHG/HRA technical study), will not be expanded. However, should a build alternative be selected as the Preferred Alternative, facilities that would not receive filtration systems under Measures AQ-2 or C-8 (for more detail, please refer to Sections 3.13.4 and 3.3.3.8 of this Final EIR/EIS) may be eligible for Community Health Benefit Program funding, which could be used to implement these types of projects that meet specific criteria. However, since a build alternative has not been selected as the Preferred Alternative, this programmatic element will not be implemented by Caltrans as the lead agency under CEQA and NEPA and as the owner/operator of the I-710 freeway.

It is important to note that the Project Team worked closely with SCAQMD on various aspects of project planning, including the Community Health Benefit Program Please refer to Section 1.10 of this appendix for more information regarding the Community Health Benefit Program. SCAQMD comments and responses to those comments are included in this appendix, coded as R-3.

IP-39-16

Caltrans Traffic Noise Analysis Protocol is the Statewide methodology for determining reasonable (i.e., cost does not exceed total reasonable allowance) and feasible (i.e., achieving greater than a 5 dBA noise reduction) soundwalls. Caltrans Headquarters, and not Caltrans District 7, is responsible for establishing the protocol. However, as detailed in Section 3.14, Noise, of the

RDEIR/SDEIS, the build alternatives proposed soundwalls along I-710 in East Los Angeles, Paramount, and Long Beach. Proposed soundwalls are discussed in Section 3.14, Noise, and depicted on Figures 3.14-2 and 3.14-3 of the RDEIR/SDEIS. The excerpt from the Community Impact Assessment specifically refers to locations with environmental justice populations where soundwalls were found to not be reasonable and feasible. At those locations, additional mitigation is proposed (Measure C-6 in Section 9.3.9.1 of the Community Impact Assessment) for the build alternatives. Should a build alternative be selected as the Preferred Alternative, Measure C-6 would provide for interior noise abatement or other abatement measures at specific locations to reduce noise impacts to environmental justice populations resulting from the build alternatives where soundwalls were deemed acoustically not feasible. However, since the No Build Alternative was selected as the Preferred Alternative, soundwalls will not be constructed and Measure C-6 will not be implemented.

IP-39-17

It is unclear from this comment as to which technical analyses within the Community Impact Assessment that the commenter deemed incomplete at the time of release of the RDEIS/SDEIS. All technical analyses that were performed in support of the RDEIR/SDEIS were completed prior to circulation of the RDEIR/SDEIS.

IP-39-18

Caltrans and Metro acknowledge that the Project Committee voted that the Health Impact Assessment commissioned by the Gateway Cities COG be included in the Draft EIR/EIS analysis; however, it should be clarified that the Project Committee (along with the other committees that comprise the overall community outreach framework established for the project) is strictly an advisory body, and any decision or directive promulgated by the Project Committee does not bind Caltrans or Metro to a course of action. As NEPA and CEQA lead agency, ultimately, Caltrans has the final decision on inclusion of materials within the RDEIR/SDEIS and the Final EIR/EIS.

Neither FHWA nor Caltrans currently has an approved methodology addressing the health impacts of freeways, and these types of assessments are an emerging practice in the transportation sector in the United States. Currently, State Departments of Transportation generally have not yet begun to implement HIAs or related tools for transportation planning, with some exceptions. For example, San Francisco's Department of Public Health has employed the use of HIAs in evaluating the health impacts of transportation projects. The State of Massachusetts passed a law requiring HIAs on new transportation projects, and at least one is known to be complete (the McGrath Highway Corridor HIA). In addition, Caltrans Division of Research and Innovation is actively investigating the use of HIAs for transportation planning and

potential applicability to Caltrans projects.[15] However, it should also be noted that there are limitations associated with the preparation and use of Health Impact Assessments. According to an article published in 2000 in the British Medical Journal, "Currently there is neither an accepted gold standard nor even a simple, reliable, and evaluated method for carrying out health impact assessment" and "Several issues are unresolved in the methodology of health impact assessment…causal pathways are so complex that it is not often possible to say if an outcome will definitely be good or bad for the health of a population…The current evidence base for many health determinants is inadequate for accurately informing a process of assessment."[16] Hence, the preparation of an Air Quality/Health Risk Assessment for the I-710 Corridor Project was an effort to respond to the requests of the I-710 Corridor communities to study health-related impacts, while also ensuring the empirical analyses performed in support of the EIR/EIS process are factual and based on sound scientific, analytical, and/or engineering judgment.

IP-39-19

The environmental process as defined by NEPA and CEQA identify two major checkpoints wherein members of the public can submit information that will become part of the administrative record: public scoping, which was held for the Draft EIR/EIS from August 15 to September 30, 2008, and public circulation of a draft environmental document, held from June 29 to September 28, 2012, for the Draft EIR/EIS and from July 21 to October 23, 2017 for the RDEIR/SDEIS. All of the materials received during these periods have become part of the administrative record for the project. There is no legal requirement to include materials submitted to other agencies or organizations prior to the commencement of the environmental document process in the administrative record for the EIR/EIS.

IP-39-20

A great deal of material, including reports, studies, and meeting minutes was generated since the initiation of the *Major Corridor Study* in 2001, and through the initiation and development of the 2012 Draft EIR/EIS and RDEIR/SDEIS. Although the earlier materials may not be exhaustively available online, it does appear from the comment that the materials were made available upon request at the Gateway Cities COG's office. There is no legal requirement to provide all project-related materials online, particularly if they may be out of date or otherwise superseded.

3.13-44/3 The only areas where [NOx] increases occur are in the locations of the Southern California International Gateway (SCIG) Project in in the Port area and the SR-710 North Study (a portion of SR-710 north of Interstate 10 [I-10]). These two proposed projects are included in the 2035 I-710 Traffic Model, as they would be constructed by that time. Traffic (vehicles, cars, autos, and trucks) loadings are not provided for I-710, north of SR-60, andd SR-710 and reported truck traffic does not reflect projection of 180,000 vehicles/d and estimated 80+K cars and 80+K trucks-passenger car equivalence of 2.2-2.5 (= 35,000+ 53-ft trailer, heavy-duty trucks).
DEFINE/PROVIDE "truck traffic" for current, projected, and maximum capacity for SCIG and SR-60, and I-10, and "SR-710" AND Traffic Model - model flow chart and inputs/outputs for all relevant runs/operations for SCIG and SR-710 AND SR-60. IP-42-1

3.13-48/1 The only [PM/2.5] increases...occur in the Port areas where the proposed SCIG Project...and a portion of SR-710 north of I-10...proposed SR-710 North Study project would be located in 2035.
Traffic generated air pollutants are mentioned BUT not indicated in air quality considerations and modeling but traffic loadings are not provided for I-710, north of SR-60, andd SR-710 and reported truck traffic does not reflect projection of 180,000 vehicles/d and estimated 80+K cars and 80+K trucks-passenger car equivalence of 2.2-2.5 (= 35,000+ 53-ft trailer, heavy-duty trucks). IP-42-2
DEFINE/PROVIDE "air pollutants" for current, projected, and maximum capacity for SCIG and SR-60, and I-10, and "SR-710" AND Traffic Model - model flow chart and inputs/outputs for all relevant runs/operations for SCIG and SR-710 AND SR-60.

3.25-5/FIGURE 3.25-1 I-710 Corridor Project Cumulative Projects Study Area Alameda Corridor Projects not located within extent of map IP-42-3
T-2: SR710 North Study
T-18: SR60 Freeway Improvement Project
LD-87 : SR-710 Surplus Property Sales
Tables 3.25-1 & -2 :...SR 710 North Study (previously...SR-710 Project...) Confusing inclusion/exclusion of SR-710, SR-60, and SCIG.
REVISE/PROVIDE: as worst case condition, add all and include thorough traffic generations and associated noise, vibration, and air pollutants. IP-42-4

3.25-46/2 ...Preferred Alternative (Alternative 4B)...According to the Draft EIR/EIS prepared for the SR 710 North Study (formerly...SR-710 Project in the 2012...), all four of the SR 710 North Study Build Alternatives, including the Freeway Tunnel Alternative, would have direct, construction-related impacts on existing land uses and would require the acquisition and conversion of land currently planned for nontransportation uses into transportation uses. None of the

land use impacts associated with the SR 710 North Study Build Alternatives would affect the same cities as the I-710 Corridor Project.

3.25-47/1 Further, none of those inconsistencies specifically involve the I-710 Corridor Project. Although environmental documents are not available for the other listed projects,...that these projects would have an impact on State, regional, and/or local plans, implementation of avoidance, minimization, and/or mitigation measures would be required to comply with CEQA and/or NEPA. Therefore, the I-710 Corridor Project would not substantially contribute to a cumulative effect related to consistency with State, regional, and local plans because the project is generally consistent with area General Plan goals and policies, and because each General Plan amendment associated with any of the cumulative impacts would be evaluated by the city with jurisdiction over the proposed change.

3.25-49/3 REASONABLY FORESEEABLE ACTIONS. Reasonably foreseeable actions would occur in the areas that are planned for development or redevelopment, which include areas adjacent to the I-710 Corridor Project. Projects with the potential to contribute to cumulative growth-related effects in the RSA include: ....
SR 710 North Study
California High Speed Rail Project

3.25-51/1 The SR 710 North Study Build Alternatives and the California High Speed Rail Project would also enhance mobility and circulation in the region to accommodate existing and future population growth....future demand for goods movement...., the I-710 Corridor Project build alternatives would not contribute to cumulative adverse impacts related to growth.

3.25-56/4 The SCIG Project would result in disproportionate effects on minority and low-income populations as a result of significant unavoidable impacts related to aesthetics, cultural resources, and noise. Impacts...would be reduced through avoidance, minimization, and/or mitigation measures....may result in cumulative impacts in the RSA....projects in which no environmental documents are available (the I-5 Widening and HOV Lane Project and the California High Speed Rail Project), impacts to environmental justice communities could occur that would contribute to a cumulative impact.

3.25-57/4 Projects in which environmental documents are not available (the I-5 Widening and HOV Lane Project and the California High Speed Rail Project) could require acquisition and relocation of residential and nonresidential properties. According to the SR 710 North Study...58/1...

3.25-106/1 Although environmental documents are not available for..., and SR 710 North Study projects, any impacts to habitat for species dependent on riparian/riverine and aquatic habitats would be avoided, minimized, and/or mitigated in order to comply with CEQA and/or NEPA.
3.25-110/2 As stated in the Draft EIR/EIS for the SR 710 North Study,...The SR 710 North Study Draft EIR/EIS also indicates that the TSM/TDM Alternative...

SEPARATE EMAIL TO RK/DG WILL INCLUDE FORMATTED COPY MORE TO COME

3.7-15/2 Additionally, the Archaeological Sensitivity Study (2017) was conducted to identify areas with a higher potential occurrence of...historic archaeological resources within the original and Supplemental APEs. This study incorporated data from pedestrian surveys of accessible, undeveloped portions of the Supplemental APE; a review of historical maps and aerial photos; literature research; and a â€œproximity analysis.â€
3.12-3/3 The ISA included a search of government records to obtain a listing of properties or known incidents from State, Federal, or local regulatory databases for hazardous waste sites within the ISA Study Area, review of reasonably ascertainable historical information sources (aerial photographs,...of the proposed right-of-way for the build alternatives to identify readily visible contamination. Environmental Data Resources, Inc. (EDR) was subcontracted to conduct a search limited to within a one-mile radius...of the I-710 Corridor Project for facilities listed by regulatory agencies as potentially having environmental concerns.

IP-42-1

The purpose of the traffic and air quality analyses presented in the RDEIR/SDEIS was to identify and disclose the potential impacts associated with the proposed project, including truck traffic, NOx, and $PM_{2.5}$. The build alternatives only include the proposed transportation improvements to the I-710 Corridor between Ocean Blvd. and SR-60 as described in Chapter 2.0, Project Alternatives of this Final EIR/EIS. Both SCIG and the SR-710 North Project are projects that have been incorporated in the future No Build Alternative in the analysis of the I-710 Corridor Project. This information is included as part of the No Build Alternative so that readers of the RDEIR/SDEIS can isolate and thus better understand the effects of the proposed build alternatives, as well as cumulative effects. SCIG and the SR-710 North Project are separate, stand-alone projects and the commenter should consult the environmental documents prepared for those projects to understand in detail the truck traffic and air quality impacts of the "current, projected, and maximum: capacity for SCIG and SR-710" for each.

IP-42-2

Please refer to Response to Comment IP-42-1 regarding the SCIG and SR-710 North projects.

IP-42-3

This comment requests that Figure 3.25-1 in Section 3.25 be revised to include the SR-710 North Project, the SR-60 Freeway Improvement Project, and SR-710 Surplus Property Sales. Several reasonably foreseeable projects that are discussed in Section 3.25 are not depicted in Figure 3.25-1 because they have no discrete location, their location is unknown, or they are not located within the extent of the map. Although these projects are not shown on Figure 3.25-1, they were incorporated into the cumulative impact analysis.

IP-42-4

This comment appears to suggest that the SR-710 North Project, the SR-60 Freeway Improvement Project, and the Southern California International Gateway (SCIG) Project are not included in the cumulative impact analysis in Section 3.25 of the RDEIR/SDEIS. These projects are not included in Figure 3.25-1 either because they have no discrete location, their location is unknown, or they are not located within the extent of the map. However, these projects are included in Table 3.25-1 and considered in the overall cumulative impact analysis.

IP-42-5

The earliest aerial photographs provided by EDR, Inc. are dated 1928. The scope of the ISA included review of the historical information provided by EDR, Inc.

Subject:I-710 Corridor Project Recirculated Draft EIR/ Supplemental Draft EIS
RE: Public Comments

The RDEIR/SDEIS is incomplete and inadequate and must be withdrawn, revised, and recirculated, again. | IP-43-1

SPECIFIC COMMENTS.

es1-1/1 Within the I-710 Corridor Project Study Area (Study Area), the I-710 serves as the principal transportation connection for goods movement between POLA and POLB,...and the Burlington Northern Santa Fe (BNSF Railroad)/Union Pacific Railroad (UP Railroad) rail yards in...Commerce and Vernon.
DEFINE/PROVIDE "Goods Movement" rather than container, cargo, or freight movements. PROVIDE current and projected numerical levels for each. | IP-43-2
DEFINE/PROVIDE "rail yards" for the Study Area and for area of I-210/SR-134 x I-605 x SR-1 x I-110/I-5, e.g., UPRR Piggy-Back/LA-Central. PROVIDE current and projected numerical levels for each. | IP-43-3
PROVIDE current and projected numerical levels for each.
PROVIDE consistent abbreviation throughout document, e.g., UPRR & BNSF or BNSFRR. | IP-43-4

es1-2/Figure The Study Area for the I-710 Corridor
PROVIDE functional basis for the SA boundary, especially the 710 corridor to I-10 and Valley Blvd. | IP-43-5

es4-1/3 Highway congestion causes delays affecting personal mobility and goods movement and results in increased economic costs. Los Angeles Countyâ€™s goods movement system serves as a gateway for both international and

domestic commerce, especially within the Study Area, where POLA, POLB, and the BNSF/UP Railroad intermodal rail yards are located.
DEFINE/PROVIDE "Economic Costs" and "International Commerce" and "Domestic Commerce" related to the "Goods Movement System". IP-43-6
PROVIDE current and projected numerical levels for each.

es4-1/4 S.2.1.5 - Modal Interrelationships and System Linkages ...I-710 Corridor serves regional, statewide, and national needs for...the goods movement industry...is the principal transportation connection between POLB/POLA and the BNSF/UP Railroad intermodal rail yards...
DEFINE/PROVIDE for "Regional", "State", and "National" "goods movement industry". IP-43-7
PROVIDE current and projected numerical levels for each.

es4-1/Figure S.2.1.5-Modal Interrelationships and System Linkages Unnumbered graphic flow chart.
Goods are moved to and from the ports by both trains and trucks.
Figure not copiable, summarized as follows-

National Markets	Local Markets	State/SW Markets	National Markets
Rail			
	Off Dock Rail	Warehouse Transfer	National, State & Local Markets
Rail	Near Dock Rail		Rail Yard Destination

Ship To Train On Dock Rail Cranes Ships	Ship To Transfer (Drayage) Truck Cranes Ships	Ship To Regional Trucks Cranes Ships

DEFINE/PROVIDE for each linkage this In-Bound "Good", cargo, freight, and containers. IP-43-8
PROVIDE current and projected numerical levels for each Linkage, below.
Only for IN-BOUND, not including out-bound loaded and empties, PROVIDE same for "out-bound".
PROVIDE current, post-construction, and future 2035-40 numerical estimates/projections of sizes/weights of containers and non-containerized bulk goods/cargos/freights for each node in figure. IP-43-9

DEFINE/PROVIDE
- Off Dock-, Near Dock-, & On Dock-Rail
- Berth/Dock, Terminal and Port
- Current container throughput (in-/out-) for each dock/berth, terminal, and ports.

IP-43-10

- Rail Yard Destinations - #/ft of transfer and aggregation tracks located in each "yard".
  - South of SR-134 and west of I-605
- Current/Most Recent container throughput (in-/out- & lengths, 20-53ft; not TEUs) for each "yard".
- Transfer (Drayage) & Regional Trucks, including class/power, ages, fleet, and trailer sizes/lengths.
- Current container In-/Out- by length, NOT TEUs) for each dock/berth, terminal, and ports.

es4-2/1 BNSF and UP Railroads provide freight movement to destinations throughout the United States. Together, POLB/POLA is one of the largest container ports in the world, and port activity is projected to nearly triple in volume by 2035. The I-710 Corridor also provides key interstate commerce connections to east-west freeways (I-405, SR-91, I-105, I-5, SR-60, and Interstate 10 [I 10])....no improvements are planned to these facilities except for possible improvements to I-5 (from Interstate 605 [I-605] through the I-710 interchange)....
DEFINE/PROVIDE and make consistent use for freight/containers and highway designations.
BNSF/UP RR; I-10 or I 10 or Interstate 605, or I-5 vs I 10????. IP-43-11
Port - singular...San Pedro Ports, PoLA & PoLB.

Freight, goods, cargos, or containers.
Triple Volume: containers, tons, $$$, total, in-, out-bound containers/tons.
"Possible" improvements for E-W roads, clarify for SR-710 and SR-60...yes or no. IP-43-11

es4-2/3 S.2.2 - Project Purpose The purpose of the I-710 Corridor Project is as follows:...4 â€¢ Accommodate projected traffic volumes 5 â€¢ Address increased traffic volumes resulting from projected growth in population and employment, and in economic activities related to goods movement.
DEFINE/PROVIDE and make consistent use for underlinedterms/phrases.
Singular with five (sub)purposes. Purposes-&-needs are for NEPA; Objectives are for CEQA documents.
Compare Purposes, Needs, Goals, and "Objectives"; e.g., Objectives: numerical and scheduled interim targets required to achieve Project Goals. IP-43-12

2-22/6 In 2013, the Gateway Cities COG and Metro developed an â€œI-710 Project Zero-Emission Truck Commercialization Studyâ€ in order to evaluate the ZE truck technologies which might meet the needs of the I-710 Corridor Project and drayage users, and develop a business and commercialization plan. The study concluded that â€œzero-emission capable drayage....
DEFINE/PROVIDE and make consistent use for underlined terms/phrases.
"Might"???
Purposes & NEEDS are for NEPA; Objectives are for CEQA documents. IP-43-13

2-59/2 The power systems...could include, but are not limited to, road-connected wayside power..., as well as ZE hybrid power sources...A pure fuel-cell truck (with auxiliary battery) would also qualify as a ZE truck....currently being demonstrated in California,...particularly in drayage operations. The freight corridor in Alternative 7 is ZE â€œtechnology neutralâ€ ...of ZE heavy-duty truck in commercial mass production....
DEFINE/PROVIDE and make consistent use for underlined terms/phrases, e.g., "Freight", "Goods", "Cargo", "Mass", "Drayage", "Heavy Duty",.... IP-43-14

SR-710
1-1/1 The existing I-710 freeway mainline...South of Pacific Coast Hwy. (State Route 1 [SR-1]), the facility is designated as State Route 710, whereas north of Pacific Coast Hwy., the facility is designated as I-710. Figure 1.1-1 shows the regional location.
DEFINE/PROVIDE: Mainline and "regional location" and its relationship to later "SCAG" region. IP-43-15
Error "SR-710" south of SR-1, typically given as SR-47/I-710, Seaside Freeway, & Ocean Blvd.. IP-43-16
1-3/Fig.1.1-1 "Project Location" as a box in legend, not single line on image. IP-43-17
No rail context is provided, although text states 710 Project depends of "maximum" diversion of containers to rail systems, and therefore truck elements depend on railroad. IP-43-18

1-5/ FIGURE 1.1-2 Project Study Area - Study area usually provided prior to the "Project" line.
Westerly boundary includes all of the Alameda Corridor within Study. REVISE/PROVIDE. IP-43-19

Containers/Projections
1-21/1 With regard to future demand for cargo containers to be transported to and from the Ports by rail instead of truck, the I-710 Railroad Goods Movement Study (February 2009) found that while railroads have employed a variety of operational strategies to meet increased container demand from the Ports, including longer trains with higher utilization rates, the railroad system will not be able to handle all of the cargo demand even with the rail system operating at maximum capacity. Therefore, any additional containers would be transported via truck, which increases travel demand by truck on I-710.
This reference is out-of-date and superseded by later studies. REVISE/PROVIDE projections of 2016-17 references and comparisons of all referenced projections. PROVIDE projections for all containers.
Define/schedule/quantify "railroad system...maximum capacity" and "additional containers" including in-/out-bound and loaded/unloaded-empty containers. IP-43-20

1-30/4 Today, the POLB and POLA, the railroads, and the trucking industry provide goods movement not just within the Study Area, but also for the SCAG region, California, and the nation as a whole. Growth at the Ports to accommodate increased cargo demand is constrained primarily by...1-31/1...port facilities, as well as the efficiency with which containers can be unloaded from ships and reloaded onto trucks and/or the railroads...together handled 14 million annual TEUs in 2015 and are projected to grow to handle approximately 41.4 million TEUs by 2035.\7 The I-710 Corridor Project Initial Feasibility Analysis (IFA) was prepared in December 2008...select a cargo forecast ...In 2013, the assumptions related to goods movement within the SCAG region were further developed and updated to more closely align with the changed economic conditions, drawing on the Updated Cargo Forecast (2009), the 2012 RTP Travel Demand Forecast Model (2012), the San Pedro Bay Ports estimates of marine terminal capacity (2013), port cargo market shares (2013), and truck trip distribution (2013). The Model Input Data and Key Assumptions Technical Memorandum for Goods Movement (May 2013) was then reviewed and discussed by the I-710 Technical Advisory Committee and the Port growth assumptions were approved for use in traffic forecasting performed in support of this RDEIR/SDEIS. These assumptions include a 2035 total annual cargo container throughput at both ports of 41.4 million TEUs, and the construction and/or implementation of both the BNSF Railroad Southern California International Gateway (SCIG) near-dock intermodal yard and the expansion of the UP Railroad near-dock Intermodal Container Transfer Facility (ICTF). Informed assumptions were also made about the behavior of cargo, including the
ratio of inbound to outbound containers,
on-dock and off-dock cargo shares,
cargo origin and destinations, and
cargo transloading (wherein cargo in international containers is transferred to domestic truck trailers at transload centers or warehousing located within the region).
DEFINE/PROVIDE:

1-30/4 For more detail regarding the key assumptions underlying the future forecast of traffic volumes, please refer to the following reports: I-710 EIR/EIS Initial Feasibility Analysis (December 2008), the I-710 Railroad Goods Movement Study Technical Memorandum (February 2009), the Data and Key Assumptions Technical Memorandum for Goods Movement (May 2013), and the I-710 Corridor Project Travel Demand Modeling Methodology Report (June 2017).
DEFINE/PROVIDE "key

IP-43-21

1-30/4 Since the development of these assumptions, a comprehensive long-term unconstrained cargo forecast for the San Pedro Bay Ports was completed in February 2016 (Mercator 2016). This information was not available in time for incorporation into the technical analyses that informed this RDEIR/SDEIS (i.e., the travel demand forecasting was completed in 2014-15). The Mercator projection forecasts slower overall growth for the Ports than was forecast in previous studies, with the expected â€œbase caseâ€ scenario reaching approximately 34.3 million TEUs by 2035, and 41.1 million TEUs by 2040. However, the difference of 0.3 million TEU between the unconstrained Mercator forecast and the throughput assumption utilized for the I- 710 Corridor Project is not anticipated to substantially affect the traffic or other analyses performed for the project, as both scenarios project growth at the Ports beyond their current...
This reference is limited to only the Executive Summary without publicly available. REVISE and PROVIDE projections in the full report and reference.
DEFINE/PROVIDE:

IP-43-22

1-32/2 Based on the port cargo demand forecasts and how much of that cargo can be handled through maximum utilization of the railroad system (including expanded on-dock rail facilities at the Ports), there is still a high demand for movement of cargo containers by truck on the highway system, specifically I-710.

3.7-15/2 Additionally, the Archaeological Sensitivity Study (2017) was conducted to identify areas with a higher potential occurrence of prehistoric and historic archaeological resources within the original and Supplemental APEs. This study incorporated data from pedestrian surveys of accessible, undeveloped portions of the Supplemental APE; a review of historical maps and aerial photos; literature research; and a â€œproximity analysis.â€
DEFINE "I-710 Corridor needs", "goods movement", "project need", "logistics centers", "daily traffic transitions", and "transportation demand".

IP-43-23

As no project changes are proposed north of I-5 or Whittier Blvd., provide the rationale for north of 3rd ave., compared to SR-60.
REVISE/PROVIDE throughout document. IP-43-24

3.12-3/4 The ISA included a search of government records to obtain a listing of properties or known incidents from State, Federal, or local regulatory databases for hazardous waste sites within the ISA Study Area, review of reasonably ascertainable historical information sources (aerial photographs,...), and a site survey of the proposed right-of-way for the build alternatives to identify readily visible contamination.
Environmental Data Resources, Inc. (EDR) was subcontracted to conduct a search limited to within a one-mile radius (i.e., ASTM International [ASTM] standard) of the I-710 Corridor Project for facilities listed by regulatory agencies as potentially having environmental concerns. Due to the amount of properties identified in the records search (over 1,000 properties), no file reviews were conducted at the various State, Federal, or local regulatory agencies. IP-43-25
DEFINE REVISE/PROVIDE for "reasonable" and "ascertainable" throughout document.
First part of paragraph contradicts (a search wasconducted) the latter say NO REVIEW; REVISE/PROVIDE. IP-43-26
EDR aerial photos include 1923 (USArmy Air Serv.), also on wall of LA City Hall, Rm 525B) which were used by LA Plan.Dpt. for both historic resources and haz-mat...but not here.
aerial photos of pre-highway construction uses and potenti "I-710 Corridor needs", "goods movement", "project need", "logistics centers", "daily traffic transitions", and "transportation demand". IP-43-27
As no project changes are proposed north of I-5 or Whittier Blvd., provide the rationale for north of 3rd Ave., compared to SR-60. IP-43-28

3.10-1/1 3.10 GEOLOGY/SOILS/SEISMIC/TOPOGRAPHY The information...based on the following documents:
Geotechnical Final Report (January 2010)
Geotechnical Memorandum (...Transportation Division of Engineering Services, Geotechnical Services [May 2010]), for the northern portion of the Study Area Water Quality Assessment Report (March 2017).
DEFINE - "documents" vs "Technical Reports" and "References" in appendices IP-43-29
These reports are out-of-date...Geotechnical Final Report (URS, January 2010) is in Appendix H and has not been updated in 5+ years.
REVISE/PROVIDE up-to-date geotechnical setting, seismicity, and geological context. IP-43-30

3.10-7/4 No laboratory data is available regarding the expansion potential of site soils; however, based on review of the existing bridge Logs of Test Borings (LOTBs) for sites within the project area, the soils...are not highly expansive, but some fine grained soils susceptible to high degrees of expansion do exist.
DEFINE/REVISE/PROVIDE LOTBs, "highly expansive", "some fine grained soils", "susceptible to high degrees of expansion", "do exist"[locations] I-710 Corridor needs", "goods movement", "project need", "logistics centers", "daily traffic transitions", and "transportation demand". IP-43-31

3.10-7/5 Collapsible soils...metastable soil structures that are susceptible to collapse upon saturation.....Since no laboratory data is available regarding the collapsibility of soils in the area, it is not known if collapsible soils are present; however, the area is not known from existing mapping to have collapsible soils.
DEFINE "metastable" and "collapsible" soil and provide known examples with Study Area. IP-43-32
PROVIDE listing and coverage of relevant "existing mapping".
REQUIRE relevant measures to mitigate the lack of appropriate mapping and DATA. IP-43-33

3.10-9 Figure 3.10-1 Fault Zones Source: ESRI (2015); AECOM (2016)
3.11-5 Figure 3.11-1 Geologic Map Source: Saucedo, et al. (2003); Yerkes and Campbell (2005)
Two figures differ for Newport Fault Zone.
PROVIDE consistent coverage and locations of all known faults within the Study area. IP-43-34

3.10-11/Table 3.10-1 : Potential Seismic Sources
Fault Approximate Closest Distance to the Study Area (miles)

...maximum earthquake magnitudes and other fault parameters...
Table 3.10-1...currently being considered for seismic design of the I-710 Corridor Project.
Source: URS. I-710 Corridor Project Geotechnical Final Report (January 2010).
FN\1 Maximum moment magnitude earthquake reported by Caltrans (2009 ARS Online Website).
2 Distance noted is the closest distance to the surface trace of the fault...Caltrans (2009 ARS Online).
3 ...blind thrust fault that does not rupture the ground surface.
...distance to the upper limit of the rupture plane in the subsurface calculated using the fault location from Shaw et al. (2002) and the depth to top of rupture plane from Wills et al. (2008).
4 ...distance noted is the closest distance to the rupture plane in the subsurface calculated using the fault location provided in the Community Fault Model (2004)...depth to top of rupture plane from Wills et al. (2008).
DEFINE "potential" and "closest" vertically/horizontally and provide examples within Study Area; "currently being considered" with regard to ground acceleration for road and raised structures. | IP-43-35
PROVIDE listing/plotted epicenters of recorded seismic events - SCEqCtr. see listing below - and maps of projected surface and bedrock rupture planes. | IP-43-36
PROVIDE updated revised "I-710 Corridor Project Geotechnical Final Report" to mitigate the lack of appropriate mapping and DATA. | IP-43-37

3.10-11/2 The Newport-Inglewood Fault Zone consists of several fault segments and branch faults...in the project area: the Cherry Hill, the Pickler, the Northeast Flank, and the Reservoir Hill. The Cherry Hill Fault crosses the Study Area near the I-710/I-405 intersection.
DEFINE "several" and "segments"/"branch faults", "project area", and "Study area" for this and ALL faults within both the Project Area and Study Area, if different. | IP-43-38
PROVIDE listing/plotted fault segments, branches, and projections of ALL fault planes, especially in or adjacent to abandoned/producing oil fields. | IP-43-39

3.10-11/2 The Puente Hills Fault is a northerly dipping blind thrust fault...three distinct segments: Los Angeles, Santa Fe Springs, and Coyote Hills....Los Angeles segment trends beneath the Study Area,.... At its western end, the Santa Fe Springs segment...east of the I-710/I-105 interchange.
DEFINE/DELINEATE " dipping blind thrust fault", "distinct segments", and "Coyote Hills"/"branch faults", "project area", and "Study area" for this and ALL faults within Study Area. | IP-43-40
Coyote Hills is NOT shown in Fig. 3.10-1, but shown in Table 3.10/1. | IP-43-41
PROVIDE listing/plotted fault segments, branches, and projections of the Puente Hills Fault planes, especially in or adjacent to abandoned/producing oil fields and those associated with the Compton Fault. | IP-43-42

3.10-11/2 The Compton [C.-LosAlamitos & C.Blind Thrust] Fault extends northwest-southeast...At its closest point, this fault is less than one mile southwest of the southern end of the Study Area.
DEFINE/DELINATE "several" and "segments"/"branch faults", "project area", and "Study area" for the Compton Fault WITHIN the Study Area, not SW of END. | IP-43-43
PROVIDE listing/plotted fault segments, branches, and projections of the Compton fault planes, especially in or adjacent to abandoned/producing oil fields and those associated with the Compton Fault. | IP-43-44

3.10-12/1 The Palos Verdes Fault is a northwesterly trending fault that extends...southeasterly across the Palos Verdes Peninsula...offshore along the coast...Fault is...four miles southwest of the south end of the Study Area.
Not shown on Figure 3.10/1, but shown in Table 3.10/1. | IP-43-45
No discussion of Lower Elysian Park Blind shown in Figure 3.10/1 and Table 3.10/1. | IP-43-46
No mention of SCEqC recorded/located to these and others. | IP-43-47
DEFINE/DELINEATE "several" and "segments"/"branch faults", "project area", and "Study area" for this fault beyond the Study Area. | IP-43-48
PROVIDE listing/plotted fault segments, branches, and projections of ALL fault planes, especially south of the Study Area, SR-1, and shorelines. | IP-43-49

3.10-13/5 ...geotechnical constraints...include:

...ground accelerations due to...active faults and fault zones, including the Newport-Inglewood (Cherry Hills Fault), Puente Hills, Compton, and Palos Verdes Faults.
Fault rupture associated with the Cherry Hill segment of the Newport-Inglewood Fault Zone.
Liquefaction and seismically induced settlement in areas of shallow groundwater and loose alluvial soils.
Most of the Study Area is within an area identified as having the potential for liquefaction.
Earthquake-induced slope instability...liquefaction in areas of moderate to high liquefaction potential and near slopes such as the Los Angeles River.
DEFINE "acceleration", "active" and "segments"/"branch faults", "project area", and "Study area" for this and ALL faults within Study Area. | IP-43-50
PROVIDE listing/plotted fault segments, branches, and projections of ALL fault planes, especially in or adjacent to abandoned/producing oil fields. | IP-43-51

EXAMPLE from SCEqCenter - http://scedc.caltech.edu/.

IP-43-1

Caltrans and Metro both respectfully disagree that the RDEIR/SDEIS is inadequate and requires revising and recirculating. The RDEIR/SDEIS was prepared in accordance with Caltrans practices and procedures and various technical analyses were prepared in accordance with approved methodologies.

IP-43-2

“Goods movement” is utilized as a general term that describes container, cargo, and freight movements, both internationally and locally. Numerical and volume information was included in greater detail in Section 1.2.1.5, Modal Interrelationships and System Linkages, of the RDEIR/SDEIS, including current and projected volumes and mode shares.

IP-43-3

There are several different railyards referenced in the RDEIR/SDEIS. Near the northern terminus of the Study Area, the BNSF/UP Railroad intermodal yards are located within the cities of Commerce and Vernon. Near the Ports of Los Angeles and Long Beach, there are several near-dock and off-dock railyards, including Pier B and ICTF. Near-dock and off-dock railyards were described in more detail in Section 1.2.1.5, Modal Interrelationships and System Linkages, of the RDEIR/SDEIS, as well as shown on Figure 1.2-6. Also included in Section 1.2.1.5 was more information regarding existing and future capacity of the rail system.

IP-43-4

As part of the quality control process, the RDEIR/SDEIS underwent thorough technical editing and review. The acronym(s) used to describe each individual railyard or line can be found in Appendix G, List of Acronyms.

IP-43-5

As described in more detail in Section 1.1, Introduction, of the RDEIR/SDEIS, the Study Area (shown on Figure 1.1-2) “includes the portion of the I-710 Corridor from Ocean Blvd. in Long Beach to SR-60, a distance of approximately 19 miles and includes all or portions of the Ports, the Cities of Bell, Bell Gardens, Carson, Commerce, Compton, Cudahy, Downey, Huntington Park, Lakewood, Long Beach, Lynwood, Maywood, Paramount, Signal Hill, South Gate, and Vernon, as well as unincorporated areas of Los Angeles County, including the communities of East Los Angeles, Boyle Heights, Wilmington, and San Pedro. At the freeway-to-freeway interchanges, the Study Area extends east and west of the I-710 mainline…this is the general Study Area for the I-710 Corridor Project. Specific study areas have been established for individual environmental analyses (e.g., health risk assessment zone of influence and community impact assessment focus area).” The general Study Area was developed to be broad enough to

geographically encompass project-related impacts and allow for a reasonable range of alternatives to be analyzed, but focused to provide an appropriate frame of reference and context for project-related impacts. It is also important to emphasize that different resources utilized different study areas for the various analyses, and this general Study Area is indeed general.

IP-43-6

Within the given context (Section S.2.1.4 of the Executive Summary, “Highway congestion causes delays affecting personal mobility and goods movement and results in increased economic costs”), increased economic costs is intended to generally describe the gains and losses of money, time, and/or resources. There are several ways to define and calculate this specific cost, and this reference in the RDEIR/SDEIS is not intended to refer to a specific number, but rather a general concept.

“International commerce” and “domestic commerce” within the given context (also Section S.2.1.4 of the Executive Summary, “Los Angeles County’s goods movement system serves as a gateway for both international and domestic commerce”) are defined, per Merriam-Webster (Merriam-Webster, Inc., 2018, available at www.merriam-webster.com, accessed December 2018), as follows: “international” meaning “of, relating to, or affecting two or more nations”; “domestic” meaning “of, relating to, or originating within a country and especially one’s own country”; and “commerce” meaning “the exchange or buying and selling of commodities on a large scale involving transportation from place to place”. Again, each of these terms is intended to be a general descriptor.

IP-43-7

Per Merriam-Webster (2018) and/or within the context of the RDEIR/SDEIS, the following definitions are provided:

> **Regional:** “of, relating to, characteristic of, or serving a region” and the region’s role in goods movement
>
> **State:** it is assumed the commenter is referencing the use of the word “statewide” in Section S.2.1.5; this references the State of California and its role in goods movement
>
> **National:** “of or relating to a nation”; referencing national goods movement in a general sense.

Because these definitions provided and the usage of them is meant in general and for contextual information, current and projected numerical levels for each is not provided here. Numerical and volume information was included in greater detail in Section 1.2.1.5, Modal Interrelationships and System Linkages, of the RDEIR/SDEIS, including current and projected volumes and mode shares.

IP-43-8

The referenced figure can also be found full sized in Chapter 1.0, Proposed Project, (Figure 1.2-5) and is a schematic, which illustrates the interface between container ships and various transportation infrastructures. It is not intended to show a particular data set and has no date associated with it; therefore, current and projected numerical information is not provided. Numerical and volume information was included in greater detail in Section 1.2.1.5, Modal Interrelationships and System Linkages, of the RDEIR/SDEIS, including current and projected volumes and mode shares.

IP-43-9

Similar to the Response to Comment IP-43-8, the referenced figure is a schematic that was included for illustrative and contextual purposes. Current, post-construction, and future 2035-40 numerical estimates/projections of sizes/weights of containers and non-containerized bulk goods/cargos/freights for each node in figure are therefore not provided. Relevant numerical and volume information was included in greater detail in Section 1.2.1.5, Modal Interrelationships and System Linkages, of the RDEIR/SDEIS, including current and projected volumes and mode shares.

IP-43-10

Off-, near-, and on-dock rail was defined in Section 1.2.1.5 of the RDEIR/SDEIS. Specific throughput data for all docks/berths and terminals are not publicly available. Relevant numerical and volume information at the Port level was included in greater detail in Section 1.2.1.5, Modal Interrelationships and System Linkages, of the RDEIR/SDEIS, including current and projected volumes and mode shares. Similarly, the requests for railyard track lengths in feet, container throughput per yard and per berth/terminal, and truck data at this granular level are not publicly available and are not relevant to the project-related analyses, and will not be provided.

IP-43-11

The highway designations the commenter is referring to is a standard editing practice to fully define a term or phrase prior to using an abbreviation or acronym. For example, as cited in the comment, Interstate 10 is defined and the shortened version (I-10) then used in parenthesis. The shortened version is used from that point forward in the document. The shortened versions of I-405, SR-91, I-105, I-5, and SR-60 were previously defined in the Executive Summary. Please also refer to Response to Comment IP-43-4 regarding the project's quality control process.

The POLA/POLB is referred to as one facility (one Port complex) appropriately because of the use of the word "Together" at the beginning of the noted sentence: "*Together*, POLA/POLB is one of the largest container ports in the world [italics added]".

Please refer to Response to Comment IP-43-10 for clarification regarding container data.

SR-710 is a north-south route rather than an east-west route, so no improvements to SR-710 are being discussed in the referenced section. No known improvements to SR-60 are planned in the "system linkage" context (as in, where SR-60 connects to I-710) that is discussed in the referenced section.

IP-43-12

It is unclear what "underlined terms/phrases" the commenter is referencing.

The commenter is correct in indicating that "Purpose and Need" statements are specific to NEPA, whereas "project objectives" are specific to CEQA. However, according to the Caltrans Standard Environmental Reference (Volume 1, Chapter 36, Environmental Impact Report), the CEQA Statement of Objectives and Purpose "is the same as the purpose and need statement under NEPA." Therefore, the purpose and need statement outlined in Section 1.2 of the RDEIR/SDEIS serves both purposes.

IP-43-13

It is unclear what "underlined terms/phrases" the commenter is referencing.

The referenced sentence in Section 2.3.2.1 of the RDEIR/SDEIS reads "In 2013, the Gateway Cities COG and Metro developed an "I-710 Project Zero-Emission Truck Commercialization Study" in order to evaluate the ZE truck technologies *which might meet the needs* of the I-710 Corridor Project and drayage users, and develop a business and commercialization plan [italics added]." This is simply meant to indicate that of the several current and future truck technologies that could be of use on the build alternatives, it is possible that not all may be appropriate for deployment on I-710, and the referenced Commercialization Study evaluated technologies that might meet the needs of the build alternatives.

Please refer to Response to Comment IP-43-12 for clarification on Purpose and Need and Objectives under NEPA and CEQA, respectively.

IP-43-14

The following definitions are provided, from Merriam Webster (2018):

Freight: "goods to be shipped"

Goods: "something manufactured or produced for sale"

Cargo: "the goods or merchandise conveyed in a ship, airplane, or vehicle"

> **Mass**: “a large quantity, amount, or number”
>
> **Drayage**: “the work or cost of traveling by dray [which is defined as “a vehicle used to haul goods”]”

Heavy Duty trucks are defined in more detail in the *I-710 Corridor Project RDEIR/SDEIS Travel Demand Modeling Methodology Technical Memorandum* (June 2017) and are separated into classes as follows: light heavy-duty (8,500 to 14,000 lbs gross vehicle weight), medium heavy-duty (14,001 to 33,000 lbs gross vehicle weight), and heavy heavy-duty (over 33,000 lbs gross vehicle weight).

IP-43-15

The I-710 freeway mainline is merely intended as a descriptor of the I-710 facility in general. Figure 1.1-1, the regional location of the project, intends to show the location of the I-710 mainline within a larger context (e.g., the overall region). The usage of the term “region” is intended to be general and not necessarily the same as that of the SCAG region, which is a larger area specifically consisting of Imperial, Los Angeles, Orange, Riverside, San Bernardino, and Ventura Counties.

IP-43-16

In January 2014, Section 622 (which stated that “Route 710 is from Route 1 to Route 210 in Pasadena”[17]) of the California Streets and Highways Code was amended to include Section 622.1, which states “Route 710 shall also include that portion of the freeway between Route 1 and the northern end of Harbor Scenic Dr., that portion of Harbor Scenic Dr. to Ocean Blvd., that portion of Ocean Blvd. west of its intersection with Harbor Scenic Dr. to its junction with Seaside Blvd., and that portion of Seaside Blvd. from the junction with Ocean Blvd. to Route 47.”[18] The referenced text in Section 1.1, Introduction, of this Final EIR/EIS, has been updated accordingly.

IP-43-17

The relatively thick line was used in the legend and on the map due to legibility. No change to the legend or the map itself will be made at this point.

---

[17] California Legislative Information. Website: https://leginfo.legislature.ca.gov/faces/codes_displaySection.xhtml?lawCode=SHC&sectionNum=622 (accessed December 10, 2018).

[18] California Legislative Information. Website: https://leginfo.legislature.ca.gov/faces/codes _displaySection.xhtml?lawCode=SHC&sectionNum=622.1 (accessed December 10, 2018).

IP-43-18

It is important to note that the I-710 Corridor Project build alternatives do not "depend" on maximum diversion of goods to rail; rather, because based on Port cargo demand forecasts and how much of that cargo can be handled through maximum utilization of the railroad system (including expanded on-dock rail facilities at the Ports), there is still a high demand for movement of cargo containers by truck on the highway system, specifically I-710. Therefore, maximum diversion of goods to rail was used as an assumption underlying the traffic analysis performed for the project.

IP-43-19

No revisions to the referenced map will be made in response to this comment. The map is intended to provide the limits of the general Study Area and is not required to point out every facility within its limits, such as the Alameda Corridor. The location of the Alameda Corridor in relation to the I-710 mainline can be found on Figure 1.2-6 in Chapter 1.0, Proposed Project, of the Final EIR/EIS.

IP-43-20

"Additional" containers refers to the number of containers arriving/departing the Ports in 2035 beyond the number that the railroads will be able to carry, as the rail system in the region will have reached its operational capacity. The operational capacity is measured by the number of freight and passenger trains that can travel on a segment of track per day, within the operating rules and constraints governing the Class I railroads.

More recent studies (i.e., the *Southern California Association of Governments 2016 RTP/SCS Goods Movement Appendix* [April 2017]) have reaffirmed the key conclusions of the *I-710 Railroad Goods Movement Study* with regard to future container demand by rail exceeding the regional rail system capacity.

IP-43-21

This specific comment appears to be unfinished; however, the key assumptions being referred to in the title of the "Data and Key Assumptions Technical Memorandum for Goods Movement" (May 2013) are those assumptions that most affect the forecasts of goods movement in the I-710 Corridor which in turn inform the 2035 traffic forecasts developed for the RDEIR/SDEIS, and specifically relate to the key model input factors that are relevant to goods movement in the Study Area, including Port cargo throughput assumptions, split between inbound, outbound, and empty Port containers, distribution of Port truck trips by shift, distribution of Port cargo by market, distinguishing Port primary versus secondary Port truck trips, Port auto trips, goods movement intelligent transportation systems, truck capacities on the proposed freight corridor under

Alternative 7, and supply and demand at off-dock railyards. Not all metrics can be positively known or identified; therefore, intelligent and informed assumptions must be made. These 'key assumptions' are important to identify and disclose as they characterize traffic movement within the I-710 Corridor and inform the traffic modeling effort.

IP-43-22

The commenter is correct in indicating that the cited document (Mercator 2016) references only the Executive Summary for San Pedro Bay Long-Term Unconstrained Cargo Forecast (see Appendix M, References, for more information). At the time of preparation of the RDEIR/SDEIS, the full Mercator forecast was not publicly available and could not be obtained. However, sufficient information was included in the Executive Summary that was publicly available so that an informed judgment could be made regarding any substantive differences in the Mercator forecast and the forecast utilized in the traffic analysis for the I-710 Corridor Project.

IP-43-23

Please refer to Response to Comment IP-43-12 for more information regarding Purpose and Need. It is unclear from the comment what context the requests for definitions for "logistics centers", "daily traffic transitions" and "transportation demand" are in, as the phrases do not appear within the cited Section 3.7 (Cultural Resources). A more detailed discussion of goods movement within the I-710 Corridor can be found in Section 1.2.1.5, Modal Interrelationships and System Linkages, of the RDEIR/SDEIS.

IP-43-24

As shown in Figure 2.3-1, under both build alternatives, auxiliary lane and ramp improvements are proposed north of the I-5 interchange and just south of the SR-60 interchange. SR-60 was determined to be the northern logical termini for the project because, as described in Section 1.2.2.2, Independent Utility and Logical Termini, "SR-60 is one of the major east-west freeways that connects to the I-710 and serves logistics centers in the Inland Empire. Under the No Build Alternative in 2035, approximately 31 percent of daily traffic transitions to SR-60 at the northern terminus of the I-710 Corridor."

IP-43-25

As discussed in Section 3.12.2 of the RDEIR/SDEIS, reasonable and ascertainable historical information sources include aerial photographs, fire insurance maps, oil and gas maps, and topographic maps. It is important to note that Caltrans, as lead agency under CEQA and NEPA (as assigned by the Federal Highway Administration [FHWA]), in cooperation with the Los Angeles County Metropolitan Transportation Authority (Metro), has identified Alternative 1 (No Build) as the Preferred Alternative. Therefore, file reviews will not be completed to supplement

the ISA prior to completion of the Final EIR/EIS. Please refer to Section 1.1 of this appendix for further discussion on the identification of the Preferred Alternative.

IP-43-26

Section 3.12 of the Final EIR/EIS has been updated to clarify that additional file reviews have been conducted to supplement the on-line database reviews and assessments prepared for the project.

IP-43-27

Please refer to Response to Comment IP-43-23 regarding Purpose and Need.

IP-43-28

Please refer to Response to Comment IP-43-24 regarding the logical termini for the project.

IP-43-29

“Documents” is a general term and can refer to both formal technical reports and references used. The technical studies listed in Appendix H of the RDEIR/SDEIS were specifically prepared in support of the I-710 Corridor Project RDEIR/SDEIS (or, in some cases, for the Draft EIR/EIS released for public circulation in 2012) and are summarized in each resource section. Appendix M, References, lists the sources of information that were also consulted in the preparation of, but not directly prepared for, the RDEIR/SDEIS.

IP-43-30

This comment requests an update to the 2010 Geotechnical Final Report prepared by URS. Refinements to seismicity and geological context are regularly updated by the Caltrans’ Office of Earthquake Engineering (OEE). Similarly, Caltrans has updated its Seismic Design Criteria (SDC) since preparation of the 2010 report. Along with site specific foundation investigations, should a build alternative be selected as the Preferred Alternative, the SDC would be used to design new or modified structures. Because the broad characterization of subsurface conditions made in the 2010 report would not change significantly as result of Caltrans’ updates, there are no changes to the report’s recommendations. Therefore, an updated geotechnical study to support the Final EIR/EIS is not needed. However, clarifications regarding Caltrans’ OEE and SDC updates have been made in Section 3.10 of this Final EIR/EIS. However, as stated in Response to Comment IP-43-25, the No Build Alternative has been selected as the Preferred Alternative. Therefore, final geotechnical and foundation reports will not be prepared

IP-43-31

Logs of test borings (LOTBs) are provided in the *Geotechnical Final Report* (January 2010), which is an appendix to the EIR/EIS. The following geological and soil definitions are from the National Soil Survey Center Natural Resources Conservation Service (NRCS) *U.S. Department of Agriculture Field Book for Describing and Sampling Soils* (September 2012). “Highly expansive soil” is soil that is prone to large volume changes (swelling and shrinking) that are directly related to changes in water content. “Fine-grained soil” is a soil that has greater surface area and total porosity that requires a correspondingly greater carbonate quantity to fill voids and form equivalent carbonate stages compared to a coarse-textured soil. “Susceptible to high degrees of expansion” means the soil in the area described is considered highly expansive soil. The soil types described in this section “do exist” and are further described and illustrated in the *Geotechnical Final Report* (January 2010).

The I-710 Corridor “project need” is defined in Section 1.2.1 (Need for I-710 Corridor Project), “goods movement” refers to the movement of goods throughout an urban area by rail, roads and ships. Goods movement related to the Study Area is further described in Section 1.2. “Logistics centers” refers to the hub of a specific area where all the activities relating to transport, logistics, and goods distribution for national and international transit are carried out on a commercial basis, by various operators. “Daily traffic transitions” are described in the *I-710 Corridor Project Traffic Operations Analysis Report* (March 2017) and the *Intersection Traffic Impact Analysis Report* (March 2017), and “transportation demand” is described in the *I-710 Corridor Project EIR/EIS Travel Demand Modeling Methodology* (November 2016), appendices to the EIR/EIS.

IP-43-32

“Metastable” and “collapsible” soils were described in Section 3.10.2.1 of the RDEIR/SDEIS: “Collapsible soils are characterized by having metastable [metastable being defined by Merriam-Webster (2018) as “having or characterized by only a slight margin of stability] soil structures that are susceptible to collapse upon saturation.” An NRCS Soil Distribution Map was erroneously omitted from the Geotechnical Report posted on the Caltrans website; this has been included. As discussed in Section 3.10.3, should a build alternative be selected as the Preferred Alternative, Measure GEO-1 would be implemented, and would requiring, prior to completion of final design, Caltrans to prepare a design-level geotechnical report in accordance with the *Guidelines for Preparing Geotechnical Design Reports* (Caltrans 2006). Design-level geotechnical reports would precede development of grading and/or construction plans, and would provide detailed, site-specific design recommendations. Studies at this stage would provide specific design recommendations to mitigate geologic hazards as they relate to grading and construction of the build alternatives. A geotechnical design report would document soil-related constraints and hazards such as slope instability, settlement liquefaction, or related secondary seismic impacts that may be present. However, as stated in Response to Comment IP-43-25, the No Build

Alternative has been selected as the Preferred Alternative. Therefore, Measures GEO-1 will not be implemented.

IP-43-33

The appropriate mapping and data were taken into account when evaluating the impacts and proposed avoidance, minimization, and/or mitigation measures for the build alternatives. Please also refer to Response to Comment IP-43-32.

IP-43-34

The commenter acknowledges that the figures are from different sources, hence the potential inconsistency. The map included in Section 3.11, Paleontology, of the RDEIR/SDEIS provides the locations of faults only for reference purposes. In addition, the two maps are illustrated at different scales. No edits to either map will be made at this time.

IP-43-35

As discussed in Section 3.10.2.3 of the RDEIR/SDEIS, the seismic sources listed in Table 3.10-1 are known potential sources controlling the seismic design of the I-710 Corridor Project build alternatives. The distances in Table 3.10-1 are the closest horizontal distances from the Study Area to the faults. The maximum earthquake magnitudes and other fault parameters shown in Table 3.10-1 are those currently being considered for seismic design of the I-710 Corridor Project build alternatives. However, as stated in Response to Comment IP-43-25, the No Build Alternative has been selected as the Preferred Alternative. Therefore, no construction will occur and the Seismic Design Criteria will not be used.

IP-43-36

Active faults in the Study Area are mapped in Figure 3.10-1 of the RDEIR/SDEIS. As discussed in Section 3.10.3 of the RDEIR/SDEIS, should a build alternative be selected as the Preferred Alternative, Measure GEO-1 would be implemented, and would require that, prior to completion of final design, the California Department of Transportation (Caltrans) prepare a design-level geotechnical report in accordance with the *Guidelines for Preparing Geotechnical Design Reports* (Caltrans 2006). Structures would be designed using the Caltrans Seismic Design Criteria (SDC). The SDC would provide the minimum seismic requirements for highway bridges designed in California. A bridge's category and classification would determine its seismic performance level and which methods would be used for estimating the seismic demands and structural capabilities. For more information, please refer to Caltrans Division of Engineering Services, Office of Earthquake Engineering, Seismic Design Criteria. It is important to note that the No Build Alternative has been selected as the Preferred Alternative and Measure GEO-1 will not be implemented.

IP-43-37

As discussed in Section 3.10.3 of the RDEIR/SDEIS, should a build alternative be selected as the Preferred Alternative, Measure GEO-1 would be implemented, and would require that, prior to completion of final design, Caltrans would prepare a design-level geotechnical report in accordance with the *Guidelines for Preparing Geotechnical Design Reports* (Caltrans 2006). Design-level geotechnical reports would precede development of grading and/or construction plans, and they would provide detailed, site-specific design recommendations. Studies at this stage would provide specific design recommendations to mitigate geologic hazards as they relate to grading and construction of the build alternatives. A geotechnical design report would document soil-related constraints and hazards such as slope instability, settlement liquefaction, or related secondary seismic impacts that may be present. The Caltrans Project Engineer would incorporate the measures recommended in the design-level geotechnical report in the final design and specifications of either build alternative. The Caltrans Resident Engineer would require the construction contractor to implement the measures recommended in the design-level geotechnical report as included in the specifications of either build alternative. The I-710 Corridor Project Geotechnical Final Report was prepared in accordance with Caltrans guidance and will not be updated at this time. It is important to note that the No Build Alternative has been selected as the Preferred Alternative and Measure GEO-1 will not be implemented.

IP-43-38

The area of study for this report for the I-710 Corridor includes I-710 between Ocean Blvd. in the City of Long Beach and Noakes St. in the City of Commerce. At the freeway-to-freeway interchanges, the Study Area extends up to one mile east and west of I-710 for the I-405, SR-91, and I-105 interchanges. It also includes the major arterials such as E. Washington Blvd., S. Atlantic Blvd., Bandini Blvd., Slauson Ave., Gage Ave., Florence Ave., Firestone Blvd., Imperial Hwy., Rosecrans Ave., Compton Blvd., Alondra Blvd., Artesia Blvd., Long Beach Blvd., Del Amo Blvd., W. Wardlow Rd., W. Willow St., W. Pacific Coast Hwy., W. Anaheim St., 7th St., and Ocean Blvd. Figure 3.10-1 in Section 3.10 of the EIR/EIR depicts the fault zones within the Study Area. Segmentation is the breaking up of a fault along its length into several smaller faults, resulting in “fault segments” and “branch faults.”

IP-43-39

Please refer to Response to Comment IP-43-38 regarding fault zones. Active faults in the Study Area were mapped in Figure 3.10-1 of the RDEIR/SDEIS.

IP-43-40

If the fault plane terminates before it reaches the Earth’s surface, it is referred to as a blind thrust fault. Because of the lack of surface evidence, blind thrust faults are difficult to detect until they

rupture. As stated in Section 3.10.3, the Puente Hills Fault consists of three distinct segments: Los Angeles, Santa Fe Springs, and Coyote Hills. The West Coyote Hills are a low mountain range in northern Orange County, California. Branch faults are where two faults either separate or merge. The Study Area is mapped in Figure 3.10-1 of the RDEIR/SDEIS. The project area includes only the area where project improvements under the build alternatives would be completed.

IP-43-41

Table 3.10-1 does not include “Coyote Hills.” No change will be made to Figure 3.10-1 at this time.

IP-43-42

Please refer to Response to Comment IP-43-38 regarding fault zones.

IP-43-43

Please refer to Response to Comment IP-43-38 regarding fault zones.

IP-43-44

Refer to Response to Comment IP-43-38 regarding fault zones.

IP-43-45

Because the Palos Verdes Fault is approximately four miles southwest of the south end of the Study Area, it has not been included on Figure 3.10-1. It is still discussed in Section 3.10.

IP-43-46

Discussion of Lower Elysian Park blind, consistent with that included in section 3.4 (p. 3-5) of the 2010 Geotechnical Final Report, has been included in Section 3.10 of this Final EIR/EIS.

IP-43-47

Please refer to Response to Comment IP-43-36 regarding seismic demands and structural capabilities.

IP-43-48

Please refer to Response to Comment IP-43-38 regarding fault zones.

IP-43-49

Relevant fault information for the environmental analysis associated with the build alternatives was included on Figure 3.10-1 in Section 3.10 of the RDEIR/SDEIS.

IP-43-50

Ground acceleration is the acceleration of the ground during an earthquake. As defined in Figure 3.10-1 of the RDEIR/SDEIS, active faults are considered to have been active during Holocene time and to have a relatively high potential for surface rupture. A fault segment is a fault that is broken up into smaller faults. Branch faults are where two faults either separate or merge. Active faults in the Study Area are mapped in Figure 3.10-1 of the RDEIR/SDEIS. The project area includes only the area where project improvements under the build alternatives would be completed. Caltrans considers all quaternary faults in computing seismic hazards.

IP-43-51

Active faults in the Study Area are mapped in Figure 3.10-1 of the RDEIR/SDEIS.

IP-43-52

Caltrans annual average daily traffic (AADT) is defined as the total volume for the year divided by 365 days.[19] It is uncertain what the commenter is referring to regarding “Traffic or Vehicle volumes.” “Auto” is defined by Merriam-Webster (2018) as “automobile; a usually four-wheeled automotive vehicle designed for passenger transportation.” Average daily weekday volumes presented in Table 1.2-1 of the RDEIR/SDEIS represent traffic levels for a typical weekday (i.e., Monday through Friday, excluding holidays) as opposed to Saturday, Sunday, or Holiday levels. It is not intended to be an annualized average, which would be a metric labeled as Average Annual Daily Traffic or AADT. When collecting traffic counts, only Tuesdays, Wednesdays, and Thursdays are utilized to represent an average weekday. Calculations used to convert average weekday to an annual estimate vary depending upon the transportation mode or topic area under discussion. For example, to convert from an average weekday to yearly service estimate, one might use a multiplier of 312 days for transit service, or one might apply a multiplier of 250 days per year for trucks serving specific commercial enterprises that operate only on weekdays, excluding holidays.

[19] Caltrans. 2012. Traffic Census Program. 2012 Traffic Volumes. Website: http://www.dot.ca.gov/trafficops/census/volumes2012/ (accessed October 15, 2018).

IP-43-53

Please refer to Response to Comment IP-43-24 regarding the logical termini of the project.

IP-43-54

The forecasted increase in daily truck volumes on the I-710 segment between SR-60 and I-10 is 11,000 trucks per day for the No Build Alternative in 2035 compared to the 2012 Baseline. This is consistent with the forecasted increases in truck volumes for the segments of I-710 from the I-105 to the I-10, which range between 10,000-11,000 truck trips per day. Therefore, the increase in truck volume on this segment, while higher on a percentage basis than the neighboring segments, is no more significant than the forecasted increase in truck volumes on other segments of the I-710.

IP-43-55

Pacific Harbor Line, Inc., or PHL, provides rail transportation, maintenance and dispatching services to the Ports of Long Beach and Los Angeles. It provides the rail operations interface between the on-dock rail facilities at the Port terminals and the two Class 1 railroads serving the Ports via the Alameda Corridor. The information requested for PHL is at a level of detail greater than was needed to assess the I-710 Corridor Project in the RDEIR/SDEIS. Therefore, it has not been included in the study. Please refer to Section 1.9 of this appendix for more information regarding the Alameda Corridor and its interface with the I-710.

IP-43-56

The 2012 SCAG RTP/SCS was in effect at the outset of development of the EIR/EIS and the planning assumptions will be kept consistent. The I-710 Railroad Goods Movement Study was finalized in 2009 and has not been updated; however, more recent data were provided in the *I-710 Corridor Project RDEIR/SDEIS Travel Demand Modeling Methodology Technical Memorandum* (June 2017).

IP-43-57

The detailed information requested for projections of freight and container volumes for the years 2009 through 2017 were not required to assess the benefits, impacts, and costs of the I-710 Corridor Project build alternatives, which is based on information for a 2012 Baseline year and a 2035 forecast horizon year. The relevant freight demand information for those two years is included in the *Technical Memorandum – I-710 Corridor Project RDEIR/SDEIS Travel Demand Modeling Methodology* (June 2017).

IP-43-58

Please refer to Responses to Comments IP-43-2 and IP-43-7 regarding definitions for the referenced terms. A more detailed discussion of goods movement within the I-710 Corridor can be found in Section 1.2.1.5, Modal Interrelationships and System Linkages, of the RDEIR/SDEIS.

IP-43-59

Because containers come in various sizes for various purposes, a TEU (a 20-foot equivalent unit) is an industry-standard reference[20] and is generally used as an inexact unit of cargo capacity for descriptive purposes. Generally, a 40-foot container equals two TEUs. A 53-foot container is equivalent to 2.65 TEUs.

IP-43-60

The definition of the term transload is included in Appendix E and the definition of the term TEU is included in Appendix G of the RDEIR/SDEIS. Marine containers refer to those containers that are transported via ship, which are now typically 40 feet long and hence equal two TEUs. Larger domestic container refers to a standard 53-foot long cargo trailer that is in predominant use in the U.S. The cargo volume in three marine containers can generally fit into two domestic containers.

IP-43-61

Prior to approval, the RDEIR/SDEIS underwent a thorough editing process to ensure readability and usage of proper citations, references, and acronyms. The full text of references, a glossary of technical terms, and a list of acronyms/abbreviations were included as appendices to the RDEIR/SDEIS (Appendices M, E, and G, respectively). Appendix M, References, lists the sources of information that were also consulted in the preparation of, but not directly prepared for, the RDEIR/SDEIS. Appendix E, Glossary of Technical Terms, provides a full list of definitions for phrases and terms that may not be immediately known to the lay reader. Appendix G, List of Acronyms, provides a full list of acronyms used in the document. It should be noted that the definitions of each acronym used in the document were defined when the acronym was first used. Providing all definitions and references immediately within the body of the document would make the document cumbersome and repetitive.

[20] World Shipping Council. Partners in Trade. 2018. About the Industry. Containers. Website: http://www.worldshipping.org/about-the-industry/containers (accessed August 2, 2018).

IP-43-62

Please refer to Response to Comment IP-43-23 regarding the definitions of "goods movement", "project need", "logistics centers", "daily traffic transitions", and "transportation demand".

IP-43-63

Please refer to Response to Comment IP-43-24 regarding the logical termini for the project.

IP-43-64

The following correction will be made to the text in Section 3.6.2.3 of the RDEIR/SDEIS:

> The elevation of the I-710 Corridor Project varies from near sea level in the south to approximately 280 feet above mean sea level near SR-60 (United States Geological Survey [USGS] 1994).

IP-43-65

The referenced documents are technical or engineering studies prepared in support of the project. Appendices H and M provide a list of the technical studies and a list of references consulted in the preparation of, but not directly prepared for, the RDEIR/SDEIS. Standalone technical studies listed in Appendix H were available for download from Caltrans' website at http://www.dot.ca.gov/d7/env-docs/docs/710corr-eir/. The technical studies were not included in the body of the document, nor the appendices, due to their large file sizes and the fact that doing so would make the document much longer and more cumbersome for the reader. It should also be noted that a select few technical studies contained confidential information and were therefore not made available to the general public.

IP-43-66

Please refer to Response to Comment IP-43-24 regarding the logical termini of the project.

IP-43-67

It is unclear what the commenter is requesting regarding improvements between Third Ave. and SR-60. However, the Preferred Alternative (Alternative 1 No Build) does not include the construction of a separate, freight-only corridor.

IP-43-68

The general Study Area was depicted on Figure 1.1-2. It is important to note that specific study areas have been established for individual environmental analyses (e.g., health risk assessment zone of influence, and community impact assessment focus area). "Project sites" within the

referenced context simply means the locations of the various projects analyzed in the cumulative analysis. The distance provided is an estimate.

IP-43-69

Please refer to Responses to Comments IP-43-18 and IP-43-19 regarding the maximum diversion of goods to rail and the map depicting the general Study Area for the project.

IP-43-70

Please refer to Response to Comment IP-43-5 for more information regarding the Study Area. Within the context of the referenced section, “project area” and “project site” are meant to be a generalized description of the location of a project and the potential area of impacts related to a relevant project.

IP-43-71

Please refer to Responses to Comments IP-43-18 and IP-43-19 regarding the maximum diversion of goods to rail and the map depicting the general Study Area for the project.

IP-43-72

Terminal Island as a whole straddles the two Ports and is partially between the City of Long Beach limits and the City of Los Angeles limits. The portion that touches the Gerald Desmond Bridge as described in the noted sentence is part of the Port and City of Long Beach. Therefore, no change has been made to this sentence at this time.

IP-43-73

The purpose of the traffic and air quality analyses presented in the RDEIR/SDEIS was to identify and disclose the potential impacts associated with the proposed project, including truck traffic, NO_X, and $PM_{2.5}$. The build alternatives only include the proposed transportation improvements to the I-710 Corridor between Ocean Blvd. and SR-60 as described in Chapter 2.0, Project Alternatives, of this Final EIR/EIS. Both SCIG and the SR-710 North Project are projects that have been incorporated in the future No Build Conditions (Alternative 1) in the analysis of the I-710 Corridor Project. This information is included as part of the No Build Alternative so that readers of the RDEIR/SDEIS can isolate and thus better understand the effects of the proposed I-710 Corridor Project build alternatives, including the cumulative effects. SCIG and the SR-710 North Project are separate, stand-alone projects and the commenter should consult the environmental documents prepared for those projects to understand in detail the truck traffic and air quality impacts of the “current, projected, and maximum: capacity for SCIG and SR-710” for each.

IP-43-74

Please refer to Response to Comment IP-43-73 regarding the SCIG and SR-710 north projects.

IP-43-75

Please refer to Response to Comment IP-42-4 regarding noise, vibration, and air pollutants.

IP-43-76

The earliest aerial photographs provided by EDR, Inc. are dated 1928. The scope of the ISA included review of the historical information provided by EDR, Inc.

IP-43-77

Primary Port truck trips refer to trips with one trip end at the Ports. Secondary transload truck trips refer to trips by trucks hauling a 53-foot domestic container from a transload facility to an intermodal railyard, another facility within the Los Angeles region, or to a destination outside of the region.

IP-43-78

Cargo, containers, freight and goods are not considered technical terms. Terms listed in the noted appendix (Appendix E, Glossary of Technical Terms) are limited to those that are technical in nature or have a context-specific definition.

IP-43-79

As described in more detail in Response to Comment IP-43-22, the Mercator report was not a technical study prepared in support of the I-710 Corridor Project, and is therefore correctly listed only in Appendix M, References.

IP-43-80

General phrases and words such as goods and cargo containers were not included in the index. Including every noun or phrase within the index would likely render it ineffective, and the index is not intended to be a concordance (a comprehensive list of every word that appears within the document).

Subject:I-710 Corridor Project Recirculated Draft EIR/ Supplemental Draft EIS
RE: Public Comments

The RDEIR/SDEIS is incomplete and inadequate and must be withdrawn, revised, and recirculated, again. IP-44-1

SPECIFIC COMMENTS.

es1-1/1 Within the I-710 Corridor Project Study Area (Study Area), the I-710 serves as the principal transportation connection for goods movement between POLA and POLB,...and the Burlington Northern Santa Fe (BNSF Railroad)/Union Pacific Railroad (UP Railroad) rail yards in...Commerce and Vernon.
DEFINE/PROVIDE "Goods Movement" rather than container, cargo, or freight movements. PROVIDE current and projected numerical levels for each. IP-44-2
DEFINE/PROVIDE "rail yards" for the Study Area and for area of I-210/SR-134 x I-605 x SR-1 x I-110/I-5, e.g., UPRR Piggy-Back/LA-Central. PROVIDE current and projected numerical levels for each. IP-44-3
PROVIDE current and projected numerical levels for each.
PROVIDE consistent abbreviation throughout document, e.g., UPRR & BNSF or BNSFRR. IP-44-4

es1-2/Figure The Study Area for the I-710 Corridor
PROVIDE functional basis for the SA boundary, especially the 710 corridor to I-10 and Valley Blvd. IP-44-5

es4-1/3 Highway congestion causes delays affecting personal mobility and goods movement and results in increased economic costs. Los Angeles Countyâ€™s goods movement system serves as a gateway for both international and

domestic commerce, especially within the Study Area, where POLA, POLB, and the BNSF/UP Railroad intermodal rail yards are located.
DEFINE/PROVIDE "Economic Costs" and "International Commerce" and "Domestic Commerce" related to the "Goods Movement System". IP-44-6
PROVIDE current and projected numerical levels for each.

es4-1/4 S.2.1.5 - Modal Interrelationships and System Linkages ...I-710 Corridor serves regional, statewide, and national needs for...the goods movement industry...is the principal transportation connection between POLB/POLA and the BNSF/UP Railroad intermodal rail yards...
DEFINE/PROVIDE for "Regional", "State", and "National" "goods movement industry". IP-44-7
PROVIDE current and projected numerical levels for each.

es4-1/Figure S.2.1.5-Modal Interrelationships and System Linkages Unnumbered graphic flow chart.
Goods are moved to and from the ports by both trains and trucks.
Figure not copiable, summarized as follows-

National Markets	Local Markets	State/SW Markets	National Markets
Rail			
	Off Dock Rail	Warehouse Transfer	National, State & Local Markets
Rail	Near Dock Rail		Rail Yard Destination

Ship To Train On Dock Rail Cranes Ships	Ship To Transfer (Drayage) Truck Cranes Ships	Ship To Regional Trucks Cranes Ships

DEFINE/PROVIDE for each linkage this In-Bound "Good", cargo, freight, and containers. IP-44-8
PROVIDE current and projected numerical levels for each Linkage, below.
Only for IN-BOUND, not including out-bound loaded and empties, PROVIDE same for "out-bound".
PROVIDE current, post-construction, and future 2035-40 numerical estimates/projections of sizes/weights of containers and non-containerized bulk goods/cargos/freights for each node in figure. IP-44-9

DEFINE/PROVIDE
- Off Dock-, Near Dock-, & On Dock-Rail
- Berth/Dock, Terminal and Port
- Current container throughput (in-/out-) for each dock/berth, terminal, and ports.
- Rail Yard Destinations - #/ft of transfer and aggregation tracks located in each "yard". IP-44-10
  - South of SR-134 and west of I-605
- Current/Most Recent container throughput (in-/out- & lengths, 20-53ft; not TEUs) for each "yard".
- Transfer (Drayage) & Regional Trucks, including class/power, ages, fleet, and trailer sizes/lengths.
- Current container In-/Out- by length, NOT TEUs) for each dock/berth, terminal, and ports.

es4-2/1 BNSF and UP Railroads provide freight movement to destinations throughout the United States. Together, POLB/POLA is one of the largest container ports in the world, and port activity is projected to nearly triple in volume by 2035. The I-710 Corridor also provides key interstate commerce connections to east-west freeways (I-405, SR-91, I-105, I-5, SR-60, and Interstate 10 [I 10])....no improvements are planned to these facilities except for possible improvements to I-5 (from Interstate 605 [I-605] through the I-710 interchange)....
DEFINE/PROVIDE and make consistent use for freight/containers and highway designations.
BNSF/UP RR; I-10 or I 10 or Interstate 605, or I-5 vs I 10????. IP-44-11
Port - singular...San Pedro Ports, PoLA & PoLB.

Freight, goods, cargos, or containers.
Triple Volume: containers, tons, $$$, total, in-, out-bound containers/tons.
"Possible" improvements for E-W roads, clarify for SR-710 and SR-60...yes or no. IP-44-11

es4-2/3 S.2.2 - Project Purpose The purpose of the I-710 Corridor Project is as follows:...4 â€¢ Accommodate projected traffic volumes 5 â€¢ Address increased traffic volumes resulting from projected growth in population and employment, and in economic activities related to goods movement.
DEFINE/PROVIDE and make consistent use for underlinedterms/phrases.
Singular with five (sub)purposes. Purposes-&-needs are for NEPA; Objectives are for CEQA documents.
Compare Purposes, Needs, Goals, and "Objectives"; e.g., Objectives: numerical and scheduled interim targets required to achieve Project Goals. IP-44-12

2-22/6 In 2013, the Gateway Cities COG and Metro developed an â€œI-710 Project Zero-Emission Truck Commercialization Studyâ€ in order to evaluate the ZE truck technologies which might meet the needs of the I-710 Corridor Project and drayage users, and develop a business and commercialization plan. The study concluded that â€œzero-emission capable drayage....
DEFINE/PROVIDE and make consistent use for underlined terms/phrases.
"Might"???
Purposes & NEEDS are for NEPA; Objectives are for CEQA documents. IP-44-13

2-59/2 The power systems...could include, but are not limited to, road-connected wayside power..., as well as ZE hybrid power sources...A pure fuel-cell truck (with auxiliary battery) would also qualify as a ZE truck....currently being demonstrated in California,...particularly in drayage operations. The freight corridor in Alternative 7 is ZE â€œtechnology neutralâ€ ...of ZE heavy-duty truck in commercial mass production....
DEFINE/PROVIDE and make consistent use for underlined terms/phrases, e.g., "Freight", "Goods", "Cargo", "Mass", "Drayage", "Heavy Duty",.... IP-44-14

SR-710
1-1/1 The existing I-710 freeway mainline...South of Pacific Coast Hwy. (State Route 1 [SR-1]), the facility is designated as State Route 710, whereas north of Pacific Coast Hwy., the facility is designated as I-710. Figure 1.1-1 shows the regional location.
DEFINE/PROVIDE: Mainline and "regional location" and its relationship to later "SCAG" region. IP-44-15
Error "SR-710" south of SR-1, typically given as SR-47/I-710, Seaside Freeway, & Ocean Blvd.. IP-44-16
1-3/Fig.1.1-1 "Project Location" as a box in legend, not single line on image. IP-44-17
No rail context is provided, although text states 710 Project depends of "maximum" diversion of containers to rail systems, and therefore truck elements depend on railroad. IP-44-18

1-5/ FIGURE 1.1-2 Project Study Area - Study area usually provided prior to the "Project" line.
Westerly boundary includes all of the Alameda Corridor within Study. REVISE/PROVIDE. IP-44-19

Containers/Projections
1-21/1 With regard to future demand for cargo containers to be transported to and from the Ports by rail instead of truck, the I-710 Railroad Goods Movement Study (February 2009) found that while railroads have employed a variety of operational strategies to meet increased container demand from the Ports, including longer trains with higher utilization rates, the railroad system will not be able to handle all of the cargo demand even with the rail system operating at maximum capacity. Therefore, any additional containers would be transported via truck, which increases travel demand by truck on I-710.
This reference is out-of-date and superseded by later studies. REVISE/PROVIDE projections of 2016-17 references and comparisons of all referenced projections. PROVIDE projections for all containers.
Define/schedule/quantify "railroad system...maximum capacity" and "additional containers" including in-/out-bound and loaded/unloaded-empty containers. IP-44-20

1-30/4 Today, the POLB and POLA, the railroads, and the trucking industry provide goods movement not just within the Study Area, but also for the SCAG region, California, and the nation as a whole. Growth at the Ports to accommodate increased cargo demand is constrained primarily by...1-31/1...port facilities, as well as the efficiency with which containers can be unloaded from ships and reloaded onto trucks and/or the railroads...together handled 14 million annual TEUs in 2015 and are projected to grow to handle approximately 41.4 million TEUs by 2035.\7 The I-710 Corridor Project Initial Feasibility Analysis (IFA) was prepared in December 2008...select a cargo forecast ...In 2013, the assumptions related to goods movement within the SCAG region were further developed and updated to more closely align with the changed economic conditions, drawing on the Updated Cargo Forecast (2009), the 2012 RTP Travel Demand Forecast Model (2012), the San Pedro Bay Ports estimates of marine terminal capacity (2013), port cargo market shares (2013), and truck trip distribution (2013). The Model Input Data and Key Assumptions Technical Memorandum for Goods Movement (May 2013) was then reviewed and discussed by the I-710 Technical Advisory Committee and the Port growth assumptions were approved for use in traffic forecasting performed in support of this RDEIR/SDEIS. These assumptions include a 2035 total annual cargo container throughput at both ports of 41.4 million TEUs, and the construction and/or implementation of both the BNSF Railroad Southern California International Gateway (SCIG) near-dock intermodal yard and the expansion of the UP Railroad near-dock Intermodal Container Transfer Facility (ICTF). Informed assumptions were also made about the behavior of cargo, including the
ratio of inbound to outbound containers,
on-dock and off-dock cargo shares,
cargo origin and destinations, and
cargo transloading (wherein cargo in international containers is transferred to domestic truck trailers at transload centers or warehousing located within the region).
DEFINE/PROVIDE:

1-30/4 For more detail regarding the key assumptions underlying the future forecast of traffic volumes, please refer to the following reports: I-710 EIR/EIS Initial Feasibility Analysis (December 2008), the I-710 Railroad Goods Movement Study Technical Memorandum (February 2009), the Data and Key Assumptions Technical Memorandum for Goods Movement (May 2013), and the I-710 Corridor Project Travel Demand Modeling Methodology Report (June 2017).
DEFINE/PROVIDE "key

IP-44-21

1-30/4 Since the development of these assumptions, a comprehensive long-term unconstrained cargo forecast for the San Pedro Bay Ports was completed in February 2016 (Mercator 2016). This information was not available in time for incorporation into the technical analyses that informed this RDEIR/SDEIS (i.e., the travel demand forecasting was completed in 2014-15). The Mercator projection forecasts slower overall growth for the Ports than was forecast in previous studies, with the expected â€œbase caseâ€ scenario reaching approximately 34.3 million TEUs by 2035, and 41.1 million TEUs by 2040. However, the difference of 0.3 million TEU between the unconstrained Mercator forecast and the throughput assumption utilized for the I- 710 Corridor Project is not anticipated to substantially affect the traffic or other analyses performed for the project, as both scenarios project growth at the Ports beyond their current...
This reference is limited to only the Executive Summary without publicly available. REVISE and PROVIDE projections in the full report and reference.
DEFINE/PROVIDE:

IP-44-22

1-32/2 Based on the port cargo demand forecasts and how much of that cargo can be handled through maximum utilization of the railroad system (including expanded on-dock rail facilities at the Ports), there is still a high demand for movement of cargo containers by truck on the highway system, specifically I-710.

3.7-15/2 Additionally, the Archaeological Sensitivity Study (2017) was conducted to identify areas with a higher potential occurrence of prehistoric and historic archaeological resources within the original and Supplemental APEs. This study incorporated data from pedestrian surveys of accessible, undeveloped portions of the Supplemental APE; a review of historical maps and aerial photos; literature research; and a â€œproximity analysis.â€
DEFINE "I-710 Corridor needs", "goods movement", "project need", "logistics centers", "daily traffic transitions", and "transportation demand".

IP-44-23

As no project changes are proposed north of I-5 or Whittier Blvd., provide the rationale for north of 3rd ave., compared to SR-60.
REVISE/PROVIDE throughout document. IP-44-24

3.12-3/4 The ISA included a search of government records to obtain a listing of properties or known incidents from State, Federal, or local regulatory databases for hazardous waste sites within the ISA Study Area, review of reasonably ascertainable historical information sources (aerial photographs,...), and a site survey of the proposed right-of-way for the build alternatives to identify readily visible contamination.
Environmental Data Resources, Inc. (EDR) was subcontracted to conduct a search limited to within a one-mile radius (i.e., ASTM International [ASTM] standard) of the I-710 Corridor Project for facilities listed by regulatory agencies as potentially having environmental concerns. Due to the amount of properties identified in the records search (over 1,000 properties), no file reviews were conducted at the various State, Federal, or local regulatory agencies. IP-44-25
DEFINE REVISE/PROVIDE for "reasonable" and "ascertainable" throughout document.
First part of paragraph contradicts (a search wasconducted) the latter say NO REVIEW; REVISE/PROVIDE. IP-44-26
EDR aerial photos include 1923 (USArmy Air Serv.), also on wall of LA City Hall, Rm 525B) which were used by LA Plan.Dpt. for both historic resources and haz-mat...but not here. IP-44-27
aerial photos of pre-highway construction uses and potenti "I-710 Corridor needs", "goods movement", "project need", "logistics centers", "daily traffic transitions", and "transportation demand".
As no project changes are proposed north of I-5 or Whittier Blvd., provide the rationale for north of 3rd Ave., compared to SR-60. IP-44-28

3.10-1/1 3.10 GEOLOGY/SOILS/SEISMIC/TOPOGRAPHY The information...based on the following documents:
Geotechnical Final Report (January 2010)
Geotechnical Memorandum (...Transportation Division of Engineering Services, Geotechnical Services [May 2010]), for the northern portion of the Study Area Water Quality Assessment Report (March 2017).
DEFINE - "documents" vs "Technical Reports" and "References" in appendices IP-44-29
These reports are out-of-date...Geotechnical Final Report (URS, January 2010) is in Appendix H and has not been updated in 5+ years. IP-44-30
REVISE/PROVIDE up-to-date geotechnical setting, seismicity, and geological context.

3.10-7/4 No laboratory data is available regarding the expansion potential of site soils; however, based on review of the existing bridge Logs of Test Borings (LOTBs) for sites within the project area, the soils...are not highly expansive, but some fine grained soils susceptible to high degrees of expansion do exist.
DEFINE/REVISE/PROVIDE LOTBs, "highly expansive", "some fine grained soils", "susceptible to high degrees of expansion", "do exist"[locations] I-710 Corridor needs", "goods movement", "project need", "logistics centers", "daily traffic transitions", and "transportation demand". IP-44-31

3.10-7/5 Collapsible soils...metastable soil structures that are susceptible to collapse upon saturation.....Since no laboratory data is available regarding the collapsibility of soils in the area, it is not known if collapsible soils are present; however, the area is not known from existing mapping to have collapsible soils.
DEFINE "metastable" and "collapsible" soil and provide known examples with Study Area. IP-44-32
PROVIDE listing and coverage of relevant "existing mapping".
REQUIRE relevant measures to mitigate the lack of appropriate mapping and DATA. IP-44-33

3.10-9 Figure 3.10-1 Fault Zones Source: ESRI (2015); AECOM (2016)
3.11-5 Figure 3.11-1 Geologic Map Source: Saucedo, et al. (2003); Yerkes and Campbell (2005)
Two figures differ for Newport Fault Zone.
PROVIDE consistent coverage and locations of all known faults within the Study area. IP-44-34

3.10-11/Table 3.10-1 : Potential Seismic Sources
Fault Approximate Closest Distance to the Study Area (miles)

...maximum earthquake magnitudes and other fault parameters...
Table 3.10-1...currently being considered for seismic design of the I-710 Corridor Project.
Source: URS. I-710 Corridor Project Geotechnical Final Report (January 2010).
FN\1 Maximum moment magnitude earthquake reported by Caltrans (2009 ARS Online Website).
2 Distance noted is the closest distance to the surface trace of the fault...Caltrans (2009 ARS Online).
3 ...blind thrust fault that does not rupture the ground surface.
...distance to the upper limit of the rupture plane in the subsurface calculated using the fault location from Shaw et al. (2002) and the depth to top of rupture plane from Wills et al. (2008).
4 ...distance noted is the closest distance to the rupture plane in the subsurface calculated using the fault location provided in the Community Fault Model (2004)...depth to top of rupture plane from Wills et al. (2008).
DEFINE "potential" and "closest" vertically/horizontally and provide examples within Study Area; "currently being considered" with regard to ground acceleration for road and raised structures. | IP-44-35
PROVIDE listing/plotted epicenters of recorded seismic events - SCEqCtr. see listing below - and maps of projected surface and bedrock rupture planes. | IP-44-36
PROVIDE updated revised "I-710 Corridor Project Geotechnical Final Report" to mitigate the lack of appropriate mapping and DATA. | IP-44-37

3.10-11/2 The Newport-Inglewood Fault Zone consists of several fault segments and branch faults...in the project area: the Cherry Hill, the Pickler, the Northeast Flank, and the Reservoir Hill. The Cherry Hill Fault crosses the Study Area near the I-710/I-405 intersection.
DEFINE "several" and "segments"/"branch faults", "project area", and "Study area" for this and ALL faults within both the Project Area and Study Area, if different. | IP-44-38
PROVIDE listing/plotted fault segments, branches, and projections of ALL fault planes, especially in or adjacent to abandoned/producing oil fields. | IP-44-39

3.10-11/2 The Puente Hills Fault is a northerly dipping blind thrust fault...three distinct segments: Los Angeles, Santa Fe Springs, and Coyote Hills....Los Angeles segment trends beneath the Study Area,.... At its western end, the Santa Fe Springs segment...east of the I-710/I-105 interchange.
DEFINE/DELINEATE " dipping blind thrust fault", "distinct segments", and "Coyote Hills"/"branch faults", "project area", and "Study area" for this and ALL faults within Study Area. | IP-44-40
Coyote Hills is NOT shown in Fig. 3.10-1, but shown in Table 3.10/1. | IP-44-41
PROVIDE listing/plotted fault segments, branches, and projections of the Puente Hills Fault planes, especially in or adjacent to abandoned/producing oil fields and those associated with the Compton Fault. | IP-44-42

3.10-11/2 The Compton [C.-LosAlamitos & C.Blind Thrust] Fault extends northwest-southeast...At its closest point, this fault is less than one mile southwest of the southern end of the Study Area.
DEFINE/DELINATE "several" and "segments"/"branch faults", "project area", and "Study area" for the Compton Fault WITHIN the Study Area, not SW of END. | IP-44-43
PROVIDE listing/plotted fault segments, branches, and projections of the Compton fault planes, especially in or adjacent to abandoned/producing oil fields and those associated with the Compton Fault. | IP-44-44

3.10-12/1 The Palos Verdes Fault is a northwesterly trending fault that extends...southeasterly across the Palos Verdes Peninsula...offshore along the coast...Fault is...four miles southwest of the south end of the Study Area.
Not shown on Figure 3.10/1, but shown in Table 3.10/1. | IP-44-45
No discussion of Lower Elysian Park Blind shown in Figure 3.10/1 and Table 3.10/1. | IP-44-46
No mention of SCEqC recorded/located to these and others. | IP-44-47
DEFINE/DELINEATE "several" and "segments"/"branch faults", "project area", and "Study area" for this fault beyond the Study Area. | IP-44-48
PROVIDE listing/plotted fault segments, branches, and projections of ALL fault planes, especially south of the Study Area, SR-1, and shorelines. | IP-44-49

3.10-13/5 ...geotechnical constraints...include:

...ground accelerations due to...active faults and fault zones, including the Newport-Inglewood (Cherry Hills Fault), Puente Hills, Compton, and Palos Verdes Faults.
Fault rupture associated with the Cherry Hill segment of the Newport-Inglewood Fault Zone.
Liquefaction and seismically induced settlement in areas of shallow groundwater and loose alluvial soils.
Most of the Study Area is within an area identified as having the potential for liquefaction.
Earthquake-induced slope instability...liquefaction in areas of moderate to high liquefaction potential and near slopes such as the Los Angeles River.
DEFINE "acceleration", "active" and "segments"/"branch faults", "project area", and "Study area" for this and ALL faults within Study Area. | IP-44-50
PROVIDE listing/plotted fault segments, branches, and projections of ALL fault planes, especially in or adjacent to abandoned/producing oil fields. | IP-44-51

1-10/Table 1.2-1: I-710 Average Daily (Two-Way) Traffic Volumes Auto Truck Total
Source: AECOM. I-710 Corridor Project Traffic Operations Analysis Report (March 2017).
Caltrans DEIR/DEIS 2016 & TSM/TDM as the Locally Preferred Alternative, 2017 used Vehicle/Annual average daily volume of 180,000 vpd with truck representing 80-90,000 cars and PCEs of 2.2-2.5 v/truck
DEFINE "Average Daily" (week-day: 260 days; or 365 days), Traffic or Vehicle volumes; "auto". IP-44-52
As no/few project changes are proposed north of I-5 or Whittier Blvd., provide the rationale for north of 3rd Ave., compared to SR-60. IP-44-53
As no terminal segment of I-710 is included (with or without SR-710), the diversion of 9000-20,000 trucks appears as or more significant than the 11,000 - 10,000 trucks... and those for the I-5: 2000-3000 trucks. IP-44-54
REVISE/PROVIDE throughout document.

1-38/1 RAILROADS....rail network in the SCAG region, including the Study Area, is composed of BNSF and UP Railroad rail lines, terminals/yards, and on-dock rail terminals at the Ports. Rail routes include the Alameda Corridor, BNSF Railroadâ€™s San Bernardino Subdivision, and UP Railroadâ€™s Los Angeles and Alhambra Subdivisions.
No reference to Pacific Harbor Line, PHL. COMPARE/PROVIDE full description of current, projected, and maximum capacities...for both in-/out-bound. IP-44-55

1-38/1 The I-710 Railroad Goods Movement Study (2009)...projected demand in the movement of containerized freight...developing the 2035 travel demand forecasts for the I-710 Corridor Project...port cargo and operational characteristics of the railroads,...assumed that approximately 34.4 percent of the cargo growth (approximately 14.1 million annual TEUs) in 2035...either on-dock or off-dock intermodal terminals.\11...2015, the Alameda Corridor was operating 38 trains per day,\12...By 2035, the Alameda Corridor is projected to be operating 108 trains daily...sufficient capacity to handle the projected traffic. As of 2010, BNSF Railroadâ€™s San Bernardino Subdivision operated up to 99 trains per day (45 freight trains and 54 commuter trains) in its most heavily trafficked segments. By 2035, BNSFâ€™s San Bernardino Subdivision...operating up to 189 trains daily....\13 ...BNSF Railroad has constructed or has plans to construct three tracks on the San Bernardino Subdivision, sufficient capacity to handle the projected train volumes. The UP Railroad...with routing flexibility. According to the Regional Rail Simulation Update Summary Report...SCAGâ€™s November 2011..., 51 through-freight trains operated collectively over the subdivisions in 2010,...
GMS (2009) and SCAG 2011 are out-of-date...REMOVE/UPDATE for 2015-2017. IP-44-56
COMPARE/PROVIDE all referenced projections of cargo, freight, goods, and containers (for 20, 40, and 53-foot units) for 2009-2017 for all rail lines and yards and maximum right-of-way tracks or assumed x3 track sets. IP-44-57
DEFINE/PROVIDE "Goods Movement", and "movement of containerized freight",
DEFINE/PROVIDE "cargo growth" and "sufficient capacity", "projected train volumes [?=traffic?]" IP-44-58
PROVIDE comparisons of 20, 40, and 53ft. containers IP-44-59

1-38/1 \11 Some port cargo is â€œtransloadedâ€ , i.e., transferred from marine containers to larger domestic containers,...transloaded cargo moved by rail is above and beyond the 34.4 percent that is moved directly by rail.
\12 Alameda Corridor Transportation Authority. Website: http://www.acta.org/pdf/CorridorTrainCounts.pdf (accessed December 28, 2016).
\13 SCAG. 2013. On The Move: Southern California Delivers the Goods. Comprehensive Regional Goods Movement Plan and Implementation Strategy, final report. February. Website: http://www.freightworks.org/ DocumentLibrary/ CRGMPIS%20-%20Final%20%20-%20Chapter%204.pdf (accessed December 28, 2016).
DEFINE/PROVIDE "some", "cargo", "transferred/transloaded", "marine", "larger" [43, 48, 50, & 53ft compared to 20ft or TEUs], and "domestic" in the US, not just California. IP-44-60
Appendix E Glossary of Technical Terms & Appendix G List of Acronyms

Appendix H List of Technical Studies & Appendix M References
References/Citations, Definitions/Glossary, and Acronyms/Abbreviations are confused and not consistently used in document and are not conveniently placed within the document to assure public access.
COMBINE/REVISE/PROVIDE within the DEIR/DEIS text. IP-44-61

1-41/1 Given the needs within the I-710 Corridor and the projectâ€™s focus on goods movement as part of the project need, these are logical termini...and SR-60 is one of the major east-west freeways that connects to the I-710 and serves logistics centers in the Inland Empire. Under the No Build Alternative in 2035, approximately 31 percent of daily traffic transitions to SR-60 at the northern terminus...nearly one-third of the traffic exits I-710...and transportation demand decreases north of SR-60, terminating the project at SR-60 provides a rational endpoint.
DEFINE "I-710 Corridor needs", "goods movement", "project need", "logistics centers", "daily traffic transitions", and "transportation demand". IP-44-62
As no project changes are proposed north of I-5 or Whittier Blvd., provide the rationale for north of 3rd Ave., compared to SR-60. IP-44-63
REVISE/PROVIDE throughout document.

3.6-2/5 3.6.2.3 TOPOGRAPHY The I-710 Corridor Project is situated within the central part of the Los Angeles Basin. The elevation of the I-710 Corridor Project varies from near sea level in the south to approximately 180 280 feet above mean sea level near SR-60...[USGS] 1994;
Elevation is incorrect and appears to be for I-5 rather than SR-60.
Google Earth Pro, 2017. SR-60:273-304ft; Whittier: 194-216ft; I-5: 162-182,198ft elev. IP-44-64
REVISE/PROVIDE throughout document.

3.6-121/1 3.7 CULTURAL RESOURCES The information...based on the following technical reports: Historical Resources Evaluation Report (HRER) (April 2012).
Referenced Technical Report is not provided/included in appendices - H/M, not available to Public.
H-3 Flood Control Facilities Report (AECOM, January 2017).
Geotechnical Final Report (URS, January 2010).
HRER ???
I-710 Corridor Aesthetics Master Plan (Caltrans, February 2014). IP-44-65
Initial Feasibility Analysis Study Report (URS, December 2008).

M-21 GPA Consulting. 2017. Section 4(f) and 6(f) Evaluation....
M-23 Kachour, Jenna. 2016. Draft Supplemental Historical Resources Evaluation Report for the Interstate 710 Corridor Project
REVISE/PROVIDE throughout document references and PROVIDE in appendices:

3.25-18 Table 3.25-1: Past, Present and Foreseeable Future Projects in the I-710 Corridor Study Area
T-81 East-West Freight Corridor Project Southern California Association of Governments (SCAG) The project would establish truck-only lanes along the SR-60 corridor between I-710 in Los Angeles County and I-15.... Such a system would address the growing truck traffic and safety issues on core highways through the region and serve key goods movement industries....add capacity in congested corridors, improve truck operations and safety by separating trucks and autos and provide a platform for the introduction and adoption of zero- and near zero-emission technologies. Corridor concept planning is ongoing. No environmental analysis...(Source: SCAG 2016 RTP/SCS, Goods Movement Transportation System Appendix â€“ accessed December 27, 2016)
DEFINE "Study area" as related to SR-60 as maps do not consistently include SR-60. IP-44-66
The Project does not include improvement from Third Ave. to SR-60 that would verify against the proposed Truck-Lanes. Current Pavement Rehabilitation suffers from same lack of truck-related projections north of Third Ave. Same for SR-710. IP-44-67
REVISE/PROVIDE throughout document for SR-60 and SR-710.

3.25-43/2-3 3.25.4.1 LAND USE The information in this section.... The Study Area includes the portion of I-710 from Ocean Blvd. in Long Beach to SR-60, a distance of approximately 18 19 miles.
DEFINE "Study area", Project area, and Project sites; 18 miles to I-5 and 19+ miles to SR-60. | IP-44-68
The Project includes "maximum rail diversion" and "Study Area" includes railroads.
REVISE/PROVIDE throughout document. | IP-44-69

3.25-43/3 ...At the freeway-to-freeway interchanges, the Study Area extends one mile east and west of I-710 for the I-405, SR-91, I-105, and Interstate 5 (I-5) interchanges....For the purpose of this analysis, the RSA for land use is the Study Area, which includes parts of the Cities of..., Los Angeles,....
DEFINE "Study area", Project area, and Project sites. | IP-44-70
The Project Study Area extends more than 5 miles east and west from the I-710 at interchanges and the ROW. SR-1 has the widest E-W Study Area and SR-60/I-105 have the narrowest east-west width.
The Project includes "maximum rail diversion" and "Study Area" includes railroads.
REVISE/PROVIDE throughout document. | IP-44-71

1-37/1 The Gerald Desmond Bridge Project will replace the existing...Bridge, which connects Terminal Island (POLB) to SR-710 with a new six-lane bridge....
CONFUSED SR 710 / SR710 / SR-710 or I-710.
REVISE: Terminal Island is both PoLA and PoLB or SPP but "eastern T....I.... (POLB)" | IP-44-72

1-38/1 RAILROADS. The present rail network in the SCAG region,...Study Area, is composed of BNSF and UP Railroad rail lines, terminals/yards, and on-dock rail terminals at the Ports. Rail routes include the Alameda Corridor, BNSF Railroadâ€™s San Bernardino Subdivision, and UP Railroadâ€™s Los Angeles and Alhambra Subdivisions.

3.13-44/3 The only areas where [NOx] increases occur are in the locations of the Southern California International Gateway (SCIG) Project in in the Port area and the SR-710 North Study (a portion of SR-710 north of Interstate 10 [I-10]). These two proposed projects are included in the 2035 I-710 Traffic Model, as they would be constructed by that time.
Traffic (vehicles, cars, autos, and trucks) loadings are not provided for I-710, north of SR-60, andd SR-710 and reported truck traffic does not reflect projection of 180,000 vehicles/d and estimated 80+K cars and 80+K trucks-passenger car equivalence of 2.2-2.5 (= 35,000+ 53-ft trailer, heavy-duty trucks).
DEFINE/PROVIDE "truck traffic" for current, projected, and maximum capacity for SCIG and SR-60, and I-10, and "SR-710" AND Traffic Model - model flow chart and inputs/outputs for all relevant runs/operations for SCIG and SR-710 AND SR-60. | IP-44-73

3.13-48/1 The only [PM/2.5] increases...occur in the Port areas where the proposed SCIG Project...and a portion of SR-710 north of I-10...proposed SR-710 North Study project would be located in 2035.
Traffic generated air pollutants are mentioned BUT not indicated in air quality considerations and modeling but traffic loadings are not provided for I-710, north of SR-60, andd SR-710 and reported truck traffic does not reflect projection of 180,000 vehicles/d and estimated 80+K cars and 80+K trucks-passenger car equivalence of 2.2-2.5 (= 35,000+ 53-ft trailer, heavy-duty trucks).
DEFINE/PROVIDE "air pollutants" for current, projected, and maximum capacity for SCIG and SR-60, and I-10, and "SR-710" AND Traffic Model - model flow chart and inputs/outputs for all relevant runs/operations for SCIG and SR-710 AND SR-60. | IP-44-74

3.25-5/FIGURE 3.25-1 I-710 Corridor Project Cumulative Projects
Study Area

Projects not located within extent of map
T-2: SR710 North Study
T-18: SR60 Freeway Improvement Project
LD-87 : SR-710 Surplus Property Sales
Tables 3.25-1 & -2 :...SR 710 North Study (previously...SR-710 Project...)

Confusing inclusion/exclusion of SR-710, SR-60, and SCIG.
REVISE/PROVIDE: as worst case condition, add all and include thorough traffic generations and associated noise, vibration, and air pollutants. IP-44-75

3.7-15/2 Additionally, the Archaeological Sensitivity Study (2017) was conducted to identify areas with a higher potential occurrence of...historic archaeological resources within the original and Supplemental APEs. This study incorporated data from pedestrian surveys of accessible, undeveloped portions of the Supplemental APE; a review of historical maps and aerial photos; literature research; and a â€œproximity analysis.â€
3.12-3/3 The ISA included a search of government records to obtain a listing of properties or known incidents from State, Federal, or local regulatory databases for hazardous waste sites within the ISA Study Area, review of reasonably ascertainable historical information sources (aerial photographs,...of the proposed right-of-way for the build alternatives to identify readily visible contamination. Environmental Data Resources, Inc. (EDR) was subcontracted to conduct a search limited to within a one-mile radius...of the I-710 Corridor Project for facilities listed by regulatory agencies as potentially having environmental concerns.
Apdx H. List of Technical Studies. Archaeological Sensitivity Study for the Interstate 710 Corridor Project (Confidential Report) (LSA Associates, Inc., February 2017. Appendix to Supplemental Archaeological Survey Report).
No reference to borings reviews nor to 1923 available photos, mention is made of only 1928.
REVISE/PROVIDE thorough review of 1923 aerial photos for historic structures and potential users/facilities with or without visible contamination, e.g., crude oil tanks, vehicle/ship fuelling and car gasoline stations. IP-44-76

Cargo Container, not freight or goods container
3.2-6/FN
\3 Some port cargo is â€œtransloaded,â€ i.e., transferred from marine containers to larger domestic containers, and then moved by rail in these large containers. The transloaded cargo moved by rail is above and beyond the 34.4 percent that is moved directly by rail.

Subject:I-710 Corridor Project Recirculated Draft EIR/ Supplemental Draft EIS
RE: Public Comments

The RDEIR/SDEIS is incomplete and inadequate and must be withdrawn, revised, and recirculated, again. IP-45-1

SPECIFIC COMMENTS.

es1-1/1 Within the I-710 Corridor Project Study Area (Study Area), the I-710 serves as the principal transportation connection for goods movement between POLA and POLB,...and the Burlington Northern Santa Fe (BNSF Railroad)/Union Pacific Railroad (UP Railroad) rail yards in...Commerce and Vernon.
DEFINE/PROVIDE "Goods Movement" rather than container, cargo, or freight movements. PROVIDE current and projected numerical levels for each. IP-45-2
DEFINE/PROVIDE "rail yards" for the Study Area and for area of I-210/SR-134 x I-605 x SR-1 x I-110/I-5, e.g., UPRR Piggy-Back/LA-Central. PROVIDE current and projected numerical levels for each. IP-45-3
PROVIDE current and projected numerical levels for each.
PROVIDE consistent abbreviation throughout document, e.g., UPRR & BNSF or BNSFRR. IP-45-4

es1-2/Figure The Study Area for the I-710 Corridor
PROVIDE functional basis for the SA boundary, especially the 710 corridor to I-10 and Valley Blvd. IP-45-5

es4-1/3 Highway congestion causes delays affecting personal mobility and goods movement and results in increased economic costs. Los Angeles Countyâ€™s goods movement system serves as a gateway for both international and

domestic commerce, especially within the Study Area, where POLA, POLB, and the BNSF/UP Railroad intermodal rail yards are located.
DEFINE/PROVIDE "Economic Costs" and "International Commerce" and "Domestic Commerce" related to the "Goods Movement System". IP-45-6
PROVIDE current and projected numerical levels for each.

es4-1/4 S.2.1.5 - Modal Interrelationships and System Linkages ...I-710 Corridor serves regional, statewide, and national needs for...the goods movement industry...is the principal transportation connection between POLB/POLA and the BNSF/UP Railroad intermodal rail yards...
DEFINE/PROVIDE for "Regional", "State", and "National" "goods movement industry". IP-45-7
PROVIDE current and projected numerical levels for each.

es4-1/Figure S.2.1.5-Modal Interrelationships and System Linkages Unnumbered graphic flow chart.
Goods are moved to and from the ports by both trains and trucks.
Figure not copiable, summarized as follows-

National Markets	Local Markets	State/SW Markets	National Markets
Rail			
	Off Dock Rail	Warehouse Transfer	National, State & Local Markets
Rail	Near Dock Rail		Rail Yard Destination

Ship To Train On Dock Rail Cranes Ships	Ship To Transfer (Drayage) Truck Cranes Ships	Ship To Regional Trucks Cranes Ships

DEFINE/PROVIDE for each linkage this In-Bound "Good", cargo, freight, and containers. IP-45-8
PROVIDE current and projected numerical levels for each Linkage, below.
Only for IN-BOUND, not including out-bound loaded and empties, PROVIDE same for "out-bound".
PROVIDE current, post-construction, and future 2035-40 numerical estimates/projections of sizes/weights of containers and non-containerized bulk goods/cargos/freights for each node in figure. IP-45-9

DEFINE/PROVIDE
- Off Dock-, Near Dock-, & On Dock-Rail
- Berth/Dock, Terminal and Port
- Current container throughput (in-/out-) for each dock/berth, terminal, and ports.
- Rail Yard Destinations - #/ft of transfer and aggregation tracks located in each "yard". IP-45-10
  - South of SR-134 and west of I-605
- Current/Most Recent container throughput (in-/out- & lengths, 20-53ft; not TEUs) for each "yard".
- Transfer (Drayage) & Regional Trucks, including class/power, ages, fleet, and trailer sizes/lengths.
- Current container In-/Out- by length, NOT TEUs) for each dock/berth, terminal, and ports.

es4-2/1 BNSF and UP Railroads provide freight movement to destinations throughout the United States. Together, POLB/POLA is one of the largest container ports in the world, and port activity is projected to nearly triple in volume by 2035. The I-710 Corridor also provides key interstate commerce connections to east-west freeways (I-405, SR-91, I-105, I-5, SR-60, and Interstate 10 [I 10])....no improvements are planned to these facilities except for possible improvements to I-5 (from Interstate 605 [I-605] through the I-710 interchange)....
DEFINE/PROVIDE and make consistent use for freight/containers and highway designations. IP-45-11
BNSF/UP RR; I-10 or I 10 or Interstate 605, or I-5 vs I 10????.
Port - singular...San Pedro Ports, PoLA & PoLB.

Freight, goods, cargos, or containers.
Triple Volume: containers, tons, $$$, total, in-, out-bound containers/tons.
"Possible" improvements for E-W roads, clarify for SR-710 and SR-60...yes or no. IP-45-11

es4-2/3 S.2.2 - Project Purpose The purpose of the I-710 Corridor Project is as follows:...4 â€¢ Accommodate projected traffic volumes 5 â€¢ Address increased traffic volumes resulting from projected growth in population and employment, and in economic activities related to goods movement.
DEFINE/PROVIDE and make consistent use for underlinedterms/phrases.
Singular with five (sub)purposes. Purposes-&-needs are for NEPA; Objectives are for CEQA documents.
Compare Purposes, Needs, Goals, and "Objectives"; e.g., Objectives: numerical and scheduled interim targets required to achieve Project Goals. IP-45-12

2-22/6 In 2013, the Gateway Cities COG and Metro developed an â€œI-710 Project Zero-Emission Truck Commercialization Studyâ€ in order to evaluate the ZE truck technologies which might meet the needs of the I-710 Corridor Project and drayage users, and develop a business and commercialization plan. The study concluded that â€œzero-emission capable drayage....
DEFINE/PROVIDE and make consistent use for underlined terms/phrases.
"Might"???
Purposes & NEEDS are for NEPA; Objectives are for CEQA documents. IP-45-13

2-59/2 The power systems...could include, but are not limited to, road-connected wayside power..., as well as ZE hybrid power sources...A pure fuel-cell truck (with auxiliary battery) would also qualify as a ZE truck....currently being demonstrated in California,...particularly in drayage operations. The freight corridor in Alternative 7 is ZE â€œtechnology neutralâ€ ...of ZE heavy-duty truck in commercial mass production....
DEFINE/PROVIDE and make consistent use for underlined terms/phrases, e.g., "Freight", "Goods", "Cargo", "Mass", "Drayage", "Heavy Duty",.... IP-45-14

SR-710
1-1/1 The existing I-710 freeway mainline...South of Pacific Coast Hwy. (State Route 1 [SR-1]), the facility is designated as State Route 710, whereas north of Pacific Coast Hwy., the facility is designated as I-710. Figure 1.1-1 shows the regional location.
DEFINE/PROVIDE: Mainline and "regional location" and its relationship to later "SCAG" region. IP-45-15
Error "SR-710" south of SR-1, typically given as SR-47/I-710, Seaside Freeway, & Ocean Blvd.. IP-45-16
1-3/Fig.1.1-1 "Project Location" as a box in legend, not single line on image. IP-45-17
No rail context is provided, although text states 710 Project depends of "maximum" diversion of containers to rail systems, and therefore truck elements depend on railroad. IP-45-18

1-5/ FIGURE 1.1-2 Project Study Area - Study area usually provided prior to the "Project" line.
Westerly boundary includes all of the Alameda Corridor within Study. REVISE/PROVIDE. IP-45-19

Containers/Projections
1-21/1 With regard to future demand for cargo containers to be transported to and from the Ports by rail instead of truck, the I-710 Railroad Goods Movement Study (February 2009) found that while railroads have employed a variety of operational strategies to meet increased container demand from the Ports, including longer trains with higher utilization rates, the railroad system will not be able to handle all of the cargo demand even with the rail system operating at maximum capacity. Therefore, any additional containers would be transported via truck, which increases travel demand by truck on I-710.
This reference is out-of-date and superseded by later studies. REVISE/PROVIDE projections of 2016-17 references and comparisons of all referenced projections. PROVIDE projections for all containers.
Define/schedule/quantify "railroad system...maximum capacity" and "additional containers" including in-/out-bound and loaded/unloaded-empty containers. IP-45-20

1-30/4 Today, the POLB and POLA, the railroads, and the trucking industry provide goods movement not just within the Study Area, but also for the SCAG region, California, and the nation as a whole. Growth at the Ports to accommodate increased cargo demand is constrained primarily by...1-31/1...port facilities, as well as the efficiency with which containers can be unloaded from ships and reloaded onto trucks and/or the railroads...together handled 14 million annual TEUs in 2015 and are projected to grow to handle approximately 41.4 million TEUs by 2035.\7 The I-710 Corridor Project Initial Feasibility Analysis (IFA) was prepared in December 2008...select a cargo forecast ...In 2013, the assumptions related to goods movement within the SCAG region were further developed and updated to more closely align with the changed economic conditions, drawing on the Updated Cargo Forecast (2009), the 2012 RTP Travel Demand Forecast Model (2012), the San Pedro Bay Ports estimates of marine terminal capacity (2013), port cargo market shares (2013), and truck trip distribution (2013). The Model Input Data and Key Assumptions Technical Memorandum for Goods Movement (May 2013) was then reviewed and discussed by the I-710 Technical Advisory Committee and the Port growth assumptions were approved for use in traffic forecasting performed in support of this RDEIR/SDEIS. These assumptions include a 2035 total annual cargo container throughput at both ports of 41.4 million TEUs, and the construction and/or implementation of both the BNSF Railroad Southern California International Gateway (SCIG) near-dock intermodal yard and the expansion of the UP Railroad near-dock Intermodal Container Transfer Facility (ICTF). Informed assumptions were also made about the behavior of cargo, including the
ratio of inbound to outbound containers,
on-dock and off-dock cargo shares,
cargo origin and destinations, and
cargo transloading (wherein cargo in international containers is transferred to domestic truck trailers at transload centers or warehousing located within the region).
DEFINE/PROVIDE:

1-30/4 For more detail regarding the key assumptions underlying the future forecast of traffic volumes, please refer to the following reports: I-710 EIR/EIS Initial Feasibility Analysis (December 2008), the I-710 Railroad Goods Movement Study Technical Memorandum (February 2009), the Data and Key Assumptions Technical Memorandum for Goods Movement (May 2013), and the I-710 Corridor Project Travel Demand Modeling Methodology Report (June 2017).
DEFINE/PROVIDE "key

IP-45-21

1-30/4 Since the development of these assumptions, a comprehensive long-term unconstrained cargo forecast for the San Pedro Bay Ports was completed in February 2016 (Mercator 2016). This information was not available in time for incorporation into the technical analyses that informed this RDEIR/SDEIS (i.e., the travel demand forecasting was completed in 2014-15). The Mercator projection forecasts slower overall growth for the Ports than was forecast in previous studies, with the expected â€œbase caseâ€ scenario reaching approximately 34.3 million TEUs by 2035, and 41.1 million TEUs by 2040. However, the difference of 0.3 million TEU between the unconstrained Mercator forecast and the throughput assumption utilized for the I- 710 Corridor Project is not anticipated to substantially affect the traffic or other analyses performed for the project, as both scenarios project growth at the Ports beyond their current...
This reference is limited to only the Executive Summary without publicly available. REVISE and PROVIDE projections in the full report and reference.
DEFINE/PROVIDE:

IP-45-22

1-32/2 Based on the port cargo demand forecasts and how much of that cargo can be handled through maximum utilization of the railroad system (including expanded on-dock rail facilities at the Ports), there is still a high demand for movement of cargo containers by truck on the highway system, specifically I-710.

3.7-15/2 Additionally, the Archaeological Sensitivity Study (2017) was conducted to identify areas with a higher potential occurrence of prehistoric and historic archaeological resources within the original and Supplemental APEs. This study incorporated data from pedestrian surveys of accessible, undeveloped portions of the Supplemental APE; a review of historical maps and aerial photos; literature research; and a â€œproximity analysis.â€
DEFINE "I-710 Corridor needs", "goods movement", "project need", "logistics centers", "daily traffic transitions", and "transportation demand".

IP-45-23

As no project changes are proposed north of I-5 or Whittier Blvd., provide the rationale for north of 3rd ave., compared to SR-60.
REVISE/PROVIDE throughout document. IP-45-24

3.12-3/4 The ISA included a search of government records to obtain a listing of properties or known incidents from State, Federal, or local regulatory databases for hazardous waste sites within the ISA Study Area, review of reasonably ascertainable historical information sources (aerial photographs,...), and a site survey of the proposed right-of-way for the build alternatives to identify readily visible contamination.
Environmental Data Resources, Inc. (EDR) was subcontracted to conduct a search limited to within a one-mile radius (i.e., ASTM International [ASTM] standard) of the I-710 Corridor Project for facilities listed by regulatory agencies as potentially having environmental concerns. Due to the amount of properties identified in the records search (over 1,000 properties), no file reviews were conducted at the various State, Federal, or local regulatory agencies. IP-45-25
DEFINE REVISE/PROVIDE for "reasonable" and "ascertainable" throughout document.
First part of paragraph contradicts (a search wasconducted) the latter say NO REVIEW; REVISE/PROVIDE. IP-45-26
EDR aerial photos include 1923 (USArmy Air Serv.), also on wall of LA City Hall, Rm 525B) which were used by LA Plan.Dpt. for both historic resources and haz-mat...but not here.
aerial photos of pre-highway construction uses and potenti "I-710 Corridor needs", "goods movement", "project need", "logistics centers", "daily traffic transitions", and "transportation demand". IP-45-27
As no project changes are proposed north of I-5 or Whittier Blvd., provide the rationale for north of 3rd Ave., compared to SR-60. IP-45-28

3.10-1/1 3.10 GEOLOGY/SOILS/SEISMIC/TOPOGRAPHY The information...based on the following documents:
Geotechnical Final Report (January 2010)
Geotechnical Memorandum (...Transportation Division of Engineering Services, Geotechnical Services [May 2010]), for the northern portion of the Study Area Water Quality Assessment Report (March 2017).
DEFINE - "documents" vs "Technical Reports" and "References" in appendices IP-45-29
These reports are out-of-date...Geotechnical Final Report (URS, January 2010) is in Appendix H and has not been updated in 5+ years.
REVISE/PROVIDE up-to-date geotechnical setting, seismicity, and geological context. IP-45-30

3.10-7/4 No laboratory data is available regarding the expansion potential of site soils; however, based on review of the existing bridge Logs of Test Borings (LOTBs) for sites within the project area, the soils...are not highly expansive, but some fine grained soils susceptible to high degrees of expansion do exist.
DEFINE/REVISE/PROVIDE LOTBs, "highly expansive", "some fine grained soils", "susceptible to high degrees of expansion", "do exist"[locations] I-710 Corridor needs", "goods movement", "project need", "logistics centers", "daily traffic transitions", and "transportation demand". IP-45-31

3.10-7/5 Collapsible soils...metastable soil structures that are susceptible to collapse upon saturation.....Since no laboratory data is available regarding the collapsibility of soils in the area, it is not known if collapsible soils are present; however, the area is not known from existing mapping to have collapsible soils.
DEFINE "metastable" and "collapsible" soil and provide known examples with Study Area. IP-45-32
PROVIDE listing and coverage of relevant "existing mapping".
REQUIRE relevant measures to mitigate the lack of appropriate mapping and DATA. IP-45-33

3.10-9 Figure 3.10-1 Fault Zones Source: ESRI (2015); AECOM (2016)
3.11-5 Figure 3.11-1 Geologic Map Source: Saucedo, et al. (2003); Yerkes and Campbell (2005)
Two figures differ for Newport Fault Zone.
PROVIDE consistent coverage and locations of all known faults within the Study area. IP-45-34

3.10-11/Table 3.10-1 : Potential Seismic Sources
Fault Approximate Closest Distance to the Study Area (miles)

...maximum earthquake magnitudes and other fault parameters...

Table 3.10-1...currently being considered for seismic design of the I-710 Corridor Project.

Source: URS. I-710 Corridor Project Geotechnical Final Report (January 2010).

FN\1 Maximum moment magnitude earthquake reported by Caltrans (2009 ARS Online Website).

2 Distance noted is the closest distance to the surface trace of the fault...Caltrans (2009 ARS Online).

3 ...blind thrust fault that does not rupture the ground surface.

...distance to the upper limit of the rupture plane in the subsurface calculated using the fault location from Shaw et al. (2002) and the depth to top of rupture plane from Wills et al. (2008).

4 ...distance noted is the closest distance to the rupture plane in the subsurface calculated using the fault location provided in the Community Fault Model (2004)...depth to top of rupture plane from Wills et al. (2008).

DEFINE "potential" and "closest" vertically/horizontally and provide examples within Study Area; "currently being considered" with regard to ground acceleration for road and raised structures. | IP-45-35

PROVIDE listing/plotted epicenters of recorded seismic events - SCEqCtr. see listing below - and maps of projected surface and bedrock rupture planes. | IP-45-36

PROVIDE updated revised "I-710 Corridor Project Geotechnical Final Report" to mitigate the lack of appropriate mapping and DATA. | IP-45-37

3.10-11/2 The Newport-Inglewood Fault Zone consists of several fault segments and branch faults...in the project area: the Cherry Hill, the Pickler, the Northeast Flank, and the Reservoir Hill. The Cherry Hill Fault crosses the Study Area near the I-710/I-405 intersection.

DEFINE "several" and "segments"/"branch faults", "project area", and "Study area" for this and ALL faults within both the Project Area and Study Area, if different. | IP-45-38

PROVIDE listing/plotted fault segments, branches, and projections of ALL fault planes, especially in or adjacent to abandoned/producing oil fields. | IP-45-39

3.10-11/2 The Puente Hills Fault is a northerly dipping blind thrust fault...three distinct segments: Los Angeles, Santa Fe Springs, and Coyote Hills....Los Angeles segment trends beneath the Study Area,.... At its western end, the Santa Fe Springs segment...east of the I-710/I-105 interchange.

DEFINE/DELINEATE " dipping blind thrust fault", "distinct segments", and "Coyote Hills"/"branch faults", "project area", and "Study area" for this and ALL faults within Study Area. | IP-45-40

Coyote Hills is NOT shown in Fig. 3.10-1, but shown in Table 3.10/1. | IP-45-41

PROVIDE listing/plotted fault segments, branches, and projections of the Puente Hills Fault planes, especially in or adjacent to abandoned/producing oil fields and those associated with the Compton Fault. | IP-45-42

3.10-11/2 The Compton [C.-LosAlamitos & C.Blind Thrust] Fault extends northwest-southeast...At its closest point, this fault is less than one mile southwest of the southern end of the Study Area.

DEFINE/DELINATE "several" and "segments"/"branch faults", "project area", and "Study area" for the Compton Fault WITHIN the Study Area, not SW of END. | IP-45-43

PROVIDE listing/plotted fault segments, branches, and projections of the Compton fault planes, especially in or adjacent to abandoned/producing oil fields and those associated with the Compton Fault. | IP-45-44

3.10-12/1 The Palos Verdes Fault is a northwesterly trending fault that extends...southeasterly across the Palos Verdes Peninsula...offshore along the coast...Fault is...four miles southwest of the south end of the Study Area.

Not shown on Figure 3.10/1, but shown in Table 3.10/1. | IP-45-45

No discussion of Lower Elysian Park Blind shown in Figure 3.10/1 and Table 3.10/1. | IP-45-46

No mention of SCEqC recorded/located to these and others. | IP-45-47

DEFINE/DELINEATE "several" and "segments"/"branch faults", "project area", and "Study area" for this fault beyond the Study Area. | IP-45-48

PROVIDE listing/plotted fault segments, branches, and projections of ALL fault planes, especially south of the Study Area, SR-1, and shorelines. | IP-45-49

3.10-13/5 ...geotechnical constraints...include:

...ground accelerations due to...active faults and fault zones, including the Newport-Inglewood (Cherry Hills Fault), Puente Hills, Compton, and Palos Verdes Faults.
Fault rupture associated with the Cherry Hill segment of the Newport-Inglewood Fault Zone.
Liquefaction and seismically induced settlement in areas of shallow groundwater and loose alluvial soils.
Most of the Study Area is within an area identified as having the potential for liquefaction.
Earthquake-induced slope instability...liquefaction in areas of moderate to high liquefaction potential and near slopes such as the Los Angeles River.
DEFINE "acceleration", "active" and "segments"/"branch faults", "project area", and "Study area" for this and ALL faults within Study Area. | IP-45-50
PROVIDE listing/plotted fault segments, branches, and projections of ALL fault planes, especially in or adjacent to abandoned/producing oil fields. | IP-45-51

EXAMPLE from SCEqCenter - http://scedc.caltech.edu/.

1-10/Table 1.2-1: I-710 Average Daily (Two-Way) Traffic Volumes Auto Truck Total
Source: AECOM. I-710 Corridor Project Traffic Operations Analysis Report (March 2017).
Caltrans DEIR/DEIS 2016 & TSM/TDM as the Locally Preferred Alternative, 2017 used Vehicle/Annual average daily volume of 180,000 vpd with truck representing 80-90,000 cars and PCEs of 2.2-2.5 v/truck
DEFINE "Average Daily" (week-day: 260 days; or 365 days), Traffic or Vehicle volumes; "auto". | IP-45-52
As no/few project changes are proposed north of I-5 or Whittier Blvd., provide the rationale for north of 3rd Ave., compared to SR-60. | IP-45-53
As no terminal segment of I-710 is included (with or without SR-710), the diversion of 9000-20,000 trucks appears as or more significant than the 11,000 - 10,000 trucks... and those for the I-5: 2000-3000 trucks.
REVISE/PROVIDE throughout document. | IP-45-54

1-38/1 RAILROADS....rail network in the SCAG region, including the Study Area, is composed of BNSF and UP Railroad rail lines, terminals/yards, and on-dock rail terminals at the Ports. Rail routes include the Alameda Corridor, BNSF Railroadâ€™s San Bernardino Subdivision, and UP Railroadâ€™s Los Angeles and Alhambra Subdivisions.
No reference to Pacific Harbor Line, PHL. COMPARE/PROVIDE full description of current, projected, and maximum capacities...for both in-/out-bound. | IP-45-55

1-38/1 The I-710 Railroad Goods Movement Study (2009)...projected demand in the movement of containerized freight...developing the 2035 travel demand forecasts for the I-710 Corridor Project...port cargo and operational characteristics of the railroads,...assumed that approximately 34.4 percent of the cargo growth (approximately 14.1 million annual TEUs) in 2035...either on-dock or off-dock intermodal terminals.\11...2015, the Alameda Corridor was operating 38 trains per day,\12...By 2035, the Alameda Corridor is projected to be operating 108 trains daily...sufficient capacity to handle the projected traffic. As of 2010, BNSF Railroadâ€™s San Bernardino Subdivision operated up to 99 trains per day (45 freight trains and 54 commuter trains) in its most heavily trafficked segments. By 2035, BNSFâ€™s San Bernardino Subdivision...operating up to 189 trains daily....\13 ...BNSF Railroad has constructed or has plans to construct three tracks on the San Bernardino Subdivision, sufficient capacity to handle the projected train volumes. The UP Railroad...with routing flexibility. According to the Regional Rail Simulation Update Summary Report...SCAGâ€™s November 2011..., 51 through-freight trains operated collectively over the subdivisions in 2010,...
GMS (2009) and SCAG 2011 are out-of-date...REMOVE/UPDATE for 2015-2017. | IP-45-56
COMPARE/PROVIDE all referenced projections of cargo, freight, goods, and containers (for 20, 40, and 53-foot units) for 2009-2017 for all rail lines and yards and maximum right-of-way tracks or assumed x3 track sets. | IP-45-57
DEFINE/PROVIDE "Goods Movement", and "movement of containerized freight",
DEFINE/PROVIDE "cargo growth" and "sufficient capacity", "projected train volumes [?=traffic?]" | IP-45-58
PROVIDE comparisons of 20, 40, and 53ft. containers | IP-45-59

1-38/1 \11 Some port cargo is â€œtransloadedâ€ , i.e., transferred from marine containers to larger domestic containers,...transloaded cargo moved by rail is above and beyond the 34.4 percent that is moved directly by rail.
\12 Alameda Corridor Transportation Authority. Website: http://www.acta.org/pdf/CorridorTrainCounts.pdf (accessed December 28, 2016).
\13 SCAG. 2013. On The Move: Southern California Delivers the Goods. Comprehensive Regional Goods Movement Plan and Implementation Strategy, final report. February. Website: http://www.freightworks.org/ DocumentLibrary/ CRGMPIS%20-%20Final%20%20-%20Chapter%204.pdf (accessed December 28, 2016).
DEFINE/PROVIDE "some", "cargo", "transferred/transloaded", "marine", "larger" [43, 48, 50, & 53ft compared to 20ft or TEUs], and "domestic" in the US, not just California. | IP-45-60
Appendix E Glossary of Technical Terms & Appendix G List of Acronyms

Appendix H List of Technical Studies & Appendix M References
References/Citations, Definitions/Glossary, and Acronyms/Abbreviations are confused and not consistently used in document and are not conveniently placed within the document to assure public access.
COMBINE/REVISE/PROVIDE within the DEIR/DEIS text. IP-45-61

1-41/1 Given the needs within the I-710 Corridor and the projectâ€™s focus on goods movement as part of the project need, these are logical termini...and SR-60 is one of the major east-west freeways that connects to the I-710 and serves logistics centers in the Inland Empire. Under the No Build Alternative in 2035, approximately 31 percent of daily traffic transitions to SR-60 at the northern terminus...nearly one-third of the traffic exits I-710...and transportation demand decreases north of SR-60, terminating the project at SR-60 provides a rational endpoint.
DEFINE "I-710 Corridor needs", "goods movement", "project need", "logistics centers", "daily traffic transitions", and "transportation demand". IP-45-62
As no project changes are proposed north of I-5 or Whittier Blvd., provide the rationale for north of 3rd Ave., compared to SR-60. IP-45-63
REVISE/PROVIDE throughout document.

3.6-2/5 3.6.2.3 TOPOGRAPHY The I-710 Corridor Project is situated within the central part of the Los Angeles Basin. The elevation of the I-710 Corridor Project varies from near sea level in the south to approximately 180 280 feet above mean sea level near SR-60...[USGS] 1994;
Elevation is incorrect and appears to be for I-5 rather than SR-60.
Google Earth Pro, 2017. SR-60:273-304ft; Whittier: 194-216ft; I-5: 162-182,198ft elev. IP-45-64
REVISE/PROVIDE throughout document.

3.6-121/1 3.7 CULTURAL RESOURCES The information...based on the following technical reports: Historical Resources Evaluation Report (HRER) (April 2012).
Referenced Technical Report is not provided/included in appendices - H/M, not available to Public.
H-3 Flood Control Facilities Report (AECOM, January 2017).
Geotechnical Final Report (URS, January 2010).
HRER ???
I-710 Corridor Aesthetics Master Plan (Caltrans, February 2014). IP-45-65
Initial Feasibility Analysis Study Report (URS, December 2008).

M-21 GPA Consulting. 2017. Section 4(f) and 6(f) Evaluation....
M-23 Kachour, Jenna. 2016. Draft Supplemental Historical Resources Evaluation Report for the Interstate 710 Corridor Project
REVISE/PROVIDE throughout document references and PROVIDE in appendices:

3.25-18 Table 3.25-1: Past, Present and Foreseeable Future Projects in the I-710 Corridor Study Area
T-81 East-West Freight Corridor Project Southern California Association of Governments (SCAG) The project would establish truck-only lanes along the SR-60 corridor between I-710 in Los Angeles County and I-15.... Such a system would address the growing truck traffic and safety issues on core highways through the region and serve key goods movement industries....add capacity in congested corridors, improve truck operations and safety by separating trucks and autos and provide a platform for the introduction and adoption of zero- and near zero-emission technologies. Corridor concept planning is ongoing. No environmental analysis...(Source: SCAG 2016 RTP/SCS, Goods Movement Transportation System Appendix â€“ accessed December 27, 2016)
DEFINE "Study area" as related to SR-60 as maps do not consistently include SR-60. IP-45-66
The Project does not include improvement from Third Ave. to SR-60 that would verify against the proposed Truck-Lanes. Current Pavement Rehabilitation suffers from same lack of truck-related projections north of Third Ave. Same for SR-710. IP-45-67
REVISE/PROVIDE throughout document for SR-60 and SR-710.

3.25-43/2-3 3.25.4.1 LAND USE The information in this section.... The Study Area includes the portion of I-710 from Ocean Blvd. in Long Beach to SR-60, a distance of approximately 18 19 miles.
DEFINE "Study area", Project area, and Project sites; 18 miles to I-5 and 19+ miles to SR-60. | IP-45-68
The Project includes "maximum rail diversion" and "Study Area" includes railroads.
REVISE/PROVIDE throughout document. | IP-45-69

3.25-43/3 ...At the freeway-to-freeway interchanges, the Study Area extends one mile east and west of I-710 for the I-405, SR-91, I-105, and Interstate 5 (I-5) interchanges....For the purpose of this analysis, the RSA for land use is the Study Area, which includes parts of the Cities of..., Los Angeles,....
DEFINE "Study area", Project area, and Project sites. | IP-45-70
The Project Study Area extends more than 5 miles east and west from the I-710 at interchanges and the ROW. SR-1 has the widest E-W Study Area and SR-60/I-105 have the narrowest east-west width.
The Project includes "maximum rail diversion" and "Study Area" includes railroads.
REVISE/PROVIDE throughout document. | IP-45-71

1-37/1 The Gerald Desmond Bridge Project will replace the existing...Bridge, which connects Terminal Island (POLB) to SR-710 with a new six-lane bridge....
CONFUSED SR 710 / SR710 / SR-710 or I-710.
REVISE: Terminal Island is both PoLA and PoLB or SPP but "eastern T....I.... (POLB)" | IP-45-72

1-38/1 RAILROADS. The present rail network in the SCAG region,...Study Area, is composed of BNSF and UP Railroad rail lines, terminals/yards, and on-dock rail terminals at the Ports. Rail routes include the Alameda Corridor, BNSF Railroadâ€™s San Bernardino Subdivision, and UP Railroadâ€™s Los Angeles and Alhambra Subdivisions.

3.13-44/3 The only areas where [NOx] increases occur are in the locations of the Southern California International Gateway (SCIG) Project in in the Port area and the SR-710 North Study (a portion of SR-710 north of Interstate 10 [I-10]). These two proposed projects are included in the 2035 I-710 Traffic Model, as they would be constructed by that time.
Traffic (vehicles, cars, autos, and trucks) loadings are not provided for I-710, north of SR-60, andd SR-710 and reported truck traffic does not reflect projection of 180,000 vehicles/d and estimated 80+K cars and 80+K trucks-passenger car equivalence of 2.2-2.5 (= 35,000+ 53-ft trailer, heavy-duty trucks).
DEFINE/PROVIDE "truck traffic" for current, projected, and maximum capacity for SCIG and SR-60, and I-10, and "SR-710" AND Traffic Model - model flow chart and inputs/outputs for all relevant runs/operations for SCIG and SR-710 AND SR-60. | IP-45-73

3.13-48/1 The only [PM/2.5] increases...occur in the Port areas where the proposed SCIG Project...and a portion of SR-710 north of I-10...proposed SR-710 North Study project would be located in 2035.
Traffic generated air pollutants are mentioned BUT not indicated in air quality considerations and modeling but traffic loadings are not provided for I-710, north of SR-60, andd SR-710 and reported truck traffic does not reflect projection of 180,000 vehicles/d and estimated 80+K cars and 80+K trucks-passenger car equivalence of 2.2-2.5 (= 35,000+ 53-ft trailer, heavy-duty trucks).
DEFINE/PROVIDE "air pollutants" for current, projected, and maximum capacity for SCIG and SR-60, and I-10, and "SR-710" AND Traffic Model - model flow chart and inputs/outputs for all relevant runs/operations for SCIG and SR-710 AND SR-60. | IP-45-74

3.25-5/FIGURE 3.25-1 I-710 Corridor Project Cumulative Projects
Study Area

LD-87 : SR-710 Surplus Property Sales
Tables 3.25-1 & -2 :...SR 710 North Study (previously...SR-710 Project...)

Confusing inclusion/exclusion of SR-710, SR-60, and SCIG.
REVISE/PROVIDE: as worst case condition, add all and include thorough traffic generations and associated noise, vibration, and air pollutants. IP-45-75

3.7-15/2 Additionally, the Archaeological Sensitivity Study (2017) was conducted to identify areas with a higher potential occurrence of...historic archaeological resources within the original and Supplemental APEs. This study incorporated data from pedestrian surveys of accessible, undeveloped portions of the Supplemental APE; a review of historical maps and aerial photos; literature research; and a â€œproximity analysis.â€
3.12-3/3 The ISA included a search of government records to obtain a listing of properties or known incidents from State, Federal, or local regulatory databases for hazardous waste sites within the ISA Study Area, review of reasonably ascertainable historical information sources (aerial photographs,...of the proposed right-of-way for the build alternatives to identify readily visible contamination. Environmental Data Resources, Inc. (EDR) was subcontracted to conduct a search limited to within a one-mile radius...of the I-710 Corridor Project for facilities listed by regulatory agencies as potentially having environmental concerns.
Apdx H. List of Technical Studies. Archaeological Sensitivity Study for the Interstate 710 Corridor Project (Confidential Report) (LSA Associates, Inc., February 2017. Appendix to Supplemental Archaeological Survey Report).
No reference to borings reviews nor to 1923 available photos, mention is made of only 1928.
REVISE/PROVIDE thorough review of 1923 aerial photos for historic structures and potential users/facilities with or without visible contamination, e.g., crude oil tanks, vehicle/ship fuelling and car gasoline stations. IP-45-76

Cargo Container, not freight or goods container
3.2-6/FN
\3 Some port cargo is â€œtransloaded,â€ i.e., transferred from marine containers to larger domestic containers, and then moved by rail in these large containers. The transloaded cargo moved by rail is above and beyond the 34.4 percent that is moved directly by rail.

Subject: FW: I-710 South - Recirculated Draft Environmental Impact Report

Importance: High

FYI I-710 Constituent Comment

From: Rosemary Marin [mailto:rosie4cookielee@sbcglobal.net]
Sent: Monday, November 06, 2017 3:01 PM
To: Leal, Kathy
Subject: Re: I-710 South - Recirculated Draft Environmental Impact Report

I am writing this in response to the the parties involved with Caltrans and Metro's decision to relocate our home in order to expand the 710 Fwy. We understand that everyone would like the best outcome. But when does the best involve removing citizens out of their home? We have lived here for almost 50 years! We have worked very hard to achieve having our own home. We are comfortable in our neighborhood. And are close to all types of facilities including doctors, stores, and schools. At this time of our lives we are at an age of enjoying grandchildren and are not in any shape physically able to handle the thought of a move (losing our home). We have many memories here, we raised our children here. We wouldn't have that same quality of life if forced out. Furthermore, we are not in a financial situation where we could afford to pay higher taxes under your proposed move. It would be devestating for our family. IP-46-1

I also was made aware that there were other communites better fit to make this a successful connection to the 210 fwy but didn't happen and that there is a pending lawsuit by the city of Rosemead. Maybe theres a better alternatives. Please understand this is all I own and would not have anything left. IP-46-2

Thank you for giving us the opportunity to share our concerns.

Sincerely,

Greg & Tere Marin
425 S. Humphreys Ave
Los Angeles, CA 90022

- Rosemary Marin

IP-46-1

Caltrans and Metro thank the commenter for their input. The commenter's concern regarding the displacement of your residence is acknowledged and included in the project record. Caltrans, as lead agency under CEQA and NEPA (as assigned by the Federal Highway Administration [FHWA]), in cooperation with the Los Angeles County Metropolitan Transportation Authority (Metro), has identified Alternative 1 (No Build) as the Preferred Alternative. Therefore, the residence at 425 S. Humphreys Ave. in Los Angeles will not be acquired. Please refer to Section 1.1 of this appendix for further discussion on the identification of the Preferred Alternative.

IP-46-2

It appears the commenter is referring to the SR-710 North Project, a separate SR-710 project that is located north of the I-710 Corridor Project limits. The purpose and need of the SR-710 North Project includes completion of the regional transportation system by providing a linkage between the incomplete SR-710 freeway at Valley Blvd. in Los Angeles and the northern stub near SR-134/I-210 in Pasadena. The I-710 Corridor Project is an independent project intended to address the auto and truck traffic that travels the I-710 between the Port complex and SR-60, where nearly one-third of daily traffic is projected to exit I-710 in the 2035 No Build Alternative condition.

This page intentionally left blank

Ronald Kosinski Caltrans District 7, Division of Environmental Planning 100 South Main Street, MS 16A Los Angeles, CA 90012

The EIR is totally inadequate IP-47-1

Times have changed rendering this project obsolete.
Current Distribution is moving to the Inland Empire.
The project needs to go from the ports to the Inland Empire not to the non Existent 710 freeway north.
We built the wrong directed Alameda Corridor- North instead of EAST.
Since it's there why are trucks still carrying loads to the Rail Yards?
Ship by Rail to the Rail yards and let the truck load there- 710 problem solved
or better yet ship by Rail to the Inland Empire from the Port to destinations East and true local content back haul to LA
WE suggested that this be considered as an alternative in our previous comments. IP-47-2

S.5.10 - Geology, Soils, Seismic, and Topography

S.5.10.1 - Build Alternatives

The roadway, structures, and other features of the both build alternatives could be impacted by ground motion and liquefaction and possible ground rupture (deformation), to some degree.
Design and construction of the I-710 Corridor Project to current highway and structure design standards, including applicable seismic standards, would minimize the potential impacts on the build alternatives

Before you can design you must develop the Seismic Hazard for the design engineer.
The project has not come close to accomplishing this
For example the Newport-Inglewood fault is now connected to San Diego's Rose Canyon fault.
Ground motion is going to be much worse than considered especially at the longer periods that affect bridges.
Ground rupture is not characterized as mere “deformation” IP-47-3

In our opinion CalTrans design standards are not current – Especially as to the hazard of the Southern San Andreas effects on DEEP BASIN sites. see following IP-47-4

Table S-5 CEQA Significance Chart
A.iii ground failure has not been analyzed for long period ground motion or duration of shaking, Vertical has not been analyzed. X-Y-Z seismograms must be developed for sites of all critical structures
Bowl of Jello (Basin Excitement) and Perfect Storm (reflection/ interference, basin edge effects) effects must be considered
Fault rupture of the Newport Inglewood fault has not been adequately mitigated
A CEQA determination cannot yet be made IP-47-5

2.4 Alternatives Considered

We do not see where a Heavy Freight alternative directly to the Inland Empire was considered IP-47-6
We do not see where freeway/ freight improvements from the port through the Santa Ana River corridor to the Inland Empire was considered, IP-47-7

“the Enhanced Goods Movement by Rail component was removed from Alternative 3 because these projects and other efforts to maximize the amount of goods movement by rail would not be completed as part of the I-710 Corridor Project.
Bureaucratic Bull- they would render the I-710 lane expansions for trucks unnecessary, get trucks off the 710, other 710 improvements are relatively negligible IP-47-8

“implementing an advanced zero emission container movement technology within the I-710 Corridor.”
WE never suggested this- the I-710 corridor and the Alameda train corridor both run the wrong direction. IP-47-9

3.10.2.3 Faulting and Seismicity

Traditionally, earthquake scientists and engineers depended on formulas known as Ground Motion Prediction Equations, or GMPEs, to estimate how much shaking could occur in an earthquake. (NGA for example)
GMPEs are developed from observed, historical earthquakes from around the world.
While they can provide a good overall estimate of ground motions,
GMPEs may not apply to a specific region's geological structure.
Additionally, GMPEs only provide simplified measures of the ground shaking and not, for example, complete seismograms.
These measures are the basis for building code design, but for critical facilities (hospitals, dams, power plants, for example), the use of seismograms in conjunction with structural simulations may be required to better illustrate site effects and directivity
https://www.scec.org/article/304

THE CalTrans ARS tool utilizes GMPE's as do the online tools from USGS and CGS

The general, directional pattern in which a fault breaks can have a big impact on how way focus and propagate, known as ***directivity*. (directivity MUST be considered in latest codes)**
You can see this directivity effect in many SCEC simulations, where shaking is more intense in certain areas, in direction of the rupture.
This is due to the fault rupturing at a speed similar to that of the waves in the ground, creating a set of stacked waves in front of the rupture and resulting in larger ground shaking in the general direction of the rupture propagation. WE call this the "Doppler Effect"

IP-47-10

Los Angeles is "like a bowl of jelly" because the city is settled on a basin full of soft sediments.
When seismic waves go from stiff rocks to this kind of soft, loose material, they slow down and amplify, and may even reverberate within the basin, causing longer periods of shaking than normal.

These effects are known as *basin effects*. These effects are considered in a simplified fashion within the GMPEs, but they can be directly taken into account with physics-based simulations,
which consider the specific geometry of the rock/sediment interface in relation to the earthquake faults.
(NGA even when utilizing a Basin factor way underestimate basin effects)

There are both SITE and PATH Basin Effects both of which must be considered.

"Active faults within the Study Area are shown in Figure 3.10-1"
There is no figure for faults outside the study area that affect the study area
for example the Whittier-Elsinore Fault and the Thums fault are not shown even-though they would be in the map area and the Palos Verdes fault and Hollywood-Santa Monica faults could be easily shown.

IP-47-11

Fig 3.10-1 shows the Puente Hills Thrust twice- please explain

IP-47-12

Table 3.20-1 is very incomplete- see following
It is completely missing multiple segment breaks
The Lower Elysian Park thrust is shown on the map but is not in the Table
several of the Maximum Credible magnitudes are understated (Newport-Inglewood has been recently linked with Rose Canyon- Whittier-Elsinore has been extended and is now shown as 7.85
A Table such as 3.10 is the source for EARTHQUAKE SOURCES
so columns showing the footwall- hanging wall for thrust faults, direction toward (like Upper Elysian Park Thrust or away (like Northridge) must be added.
Do not show CalTrans (or for example Blake) as a source- show original sources (where CalTrans got their data)
Note that the Distance shown and what we get from ARS are quite different, even when translating Km to miles

IP-47-13

Table 3.10-1 notes

CGS uses a different methodology to show distance than CalTrans ARS- Show both

IP-47-14

CGS uses a different methodology to show “Near Fault than CalTrans- show both- and the 98 UBC way, which is completely different than measuring to the closest tangent of the fault plane.
Plot a line where the fault plane is 10 km deep- 98 CBC considers anything less to be 0.0 distance. For Example the 10 km deep line for the Santa Fe Springs segment is near the 60 freeway. 98CBC would consider this 0.0 not 10km- and then measure from the line.
Obviously the slope of the thrust fault makes a big difference.
note 3 Puente Hills and Puente Hills Blind thrust Los Angeles Segment on Map have both a hanging wall and footwall components as does Compton-Los Alimitos and Lower Elysian Park whereas Upper Elysian Park blind thrust- we commend using the closest point as the fault could easily rupture up-plane toward the project- but I'd also show the CalTrans ARS distance as shown in the following 710-SR60 Data. UEP only has a footwall component as project is off the edge.
Separate analysis is required of the faults in this case North of the dragon teeth lines- the North side being much more hazardous. Vertical Component must be shown.

IP-47-15

Mualchin, Lalliana. (2013). Review and Implications of Inputs for Seismic Hazard Analysis. 1-9. 10.1007/978-3-642-36197-5_101-1. In book: Encyclopedia of Earthquake Engineering, pp.1-9

Seismic Hazard Assessment / Edition 1 by Lalliana Mualchin Taylor and Francis

Seismic hazard assessment is useful for public safety and business purposes. Although science cannot tell when the next earthquake will occur, it can reasonably indicate where and how large one is expected to be. This book presents theory and applications of deterministic seismic hazard analysis (DSHA), an alternative approach to probabilistic seismic hazard analysis (PSHA), which, although commonly used among seismologists, produces results that are incongruent with experiences in the catastrophic earthquakes of Italy, Haiti, and Japan.

Coming soon

We suggest both a PSHA and DSHA

DSHA as SOURCE must still utilize PATH and Site effects

IP-47-16

GEO-1 page 3.10-14

Problem with deferring a site specific geotechnical report and only showing inadequate and simplified data is that it is impossible to determine if the project is feasible, and financially feasible- especially fly over interchanges and elevated structures.

this is the latest paper as of date of these comments

Probabilistic- Essential Services Structures must also consider deterministic

IP-47-25

https://pubs.usgs.gov/fs/2015/3009/

Field, E.H., and 2014 Working Group on California Earthquake Probabilities, 2015, UCERF3: A new earthquake forecast for California's complex fault system: U.S. Geological Survey 2015–3009, 6 p., https://dx.doi.org/10.3133/fs20153009.

"

"This is because of the inclusion of multifault ruptures, where earthquakes are no longer confined to separate, individual faults, but can occasionally rupture multiple faults simultaneously. "

ARS does not yet consider multisegment events- The Consultants (and FEIR) must Consider

Multisegment breaks which must be considered
Puente Hills Coyote Hills cascading into Santa Fe Springs into Los Angeles segments
Elsinore rupturing toward Whittier and Whittier extension
Rose Canyon rupturing into Newport-Inglewood
Raymond, Hollywood, Santa Monica, Malibu Coast
Oak Ridge Santa Susana, Sierra Madre
San Andreas Southern breaking toward 1857 rupture

Characterise these as SOURCE EFFECTS
You must consider hanging wall vs footwall
You must consider directivity
You must consider near fault effects
One method would be to overlay LANDERS data over the Strike Slip faults
Whittier Elsinore and Extension (to near Atlantic and the 10 freeway, slide it around for each study)
Rose Canyon-Newport Inglewood
Thums
Palos Verdes

IP-47-26

PATH EFFECTS (Basin effects in the PATH must be considered)

utilize the SCEC Unified Community Velocity Model (UCVM)

https://github.com/SCECcode/UCVMC/wiki

http://scec.usc.edu/scecpedia/UCVM

IP-47-27

SITE EFFECTS you have to do more than just cover number 1

1) The softness of the soil or rock beneath a site.

The elastic properties of Earth materials ranges from hard (difficult to deform--think granite) to soft (relatively easy to deform--think mud). Seismic waves travel faster through hard rocks than through softer rocks and sediments. As the waves pass from deeper harder to shallow softer rocks the slow down and get bigger in amplitude as the energy piles up. The softer the rock or soil under a site is, the larger the wave. Softer soils amplify ground motion.

2) The total thickness of soil to bedrock. Very deep especially when crossing the 91 and 105 areas

Related to the direct amplification effects of soft Earth materials, the geometry of the soft deposits can further distort ground motion at soft rock sites. Seismic waves entering sediment-filled valleys, such as the Duwamish River Valley, can trap seismic energy such that it reverberates like sound in an echo chamber. This can lead to both higher amplitudes and longer durations of shaking. Because such effects are geometric in nature, they depend on the characteristics of the incomong wave, and it's direction of approach...they can be very difficult to predict.

IP-47-28

3) Sedimentary basins (deep geologic structure).

This is essentially the same process as #2 above, but at a broader scale. As such, it impacts the lower frequency seismic waves, and can have more widespread effects and influence larger structures that tend to be more sensitive to low-frequency motions. Deep sedimentary basins can have a large effect on ground motion above them. Earthquake waves traveling at high velocity through the stiff, crystalline rock of the crust refract and slow dramatically when entering the basin. This increases the amplitude of the earthquake waves, and the sharp density contrast of the soft basin rocks with surrounding material can cause waves to reflect, trapping energy in the basin for a period of time. This extends the duration of shaking. Due to their size, these deep geologic structures can influence shaking over a wide area.

Now you can look at

4) Ground failure potential (see Liquefaction and Landslides).

Ground failures can be as spectacular as a large landslide or much more subtle where sub-surface liquefied soils lead to differential settlement of a structure above, but the results of both types of failure can lead to large losses.

You must analyze for both local faults and long period long duration ground motion from San Andreas

UCERF3 concurs with previous studies that consider the Southern San Andreas Fault the most likely to host a large earthquake.

IP-47-29

The CyberShake Project: Better Seismic Hazard Information for Engineers https://www.scec.org/article/304

Probabilistic- Essential Services Structures must also consider deterministic

IP-47-30

http://files.scec.org/s3fs-public/CFM_2013_LA_west_labeled.png

The SCEC Committee for Utilization of Ground Motion Simulations (or "UGMS Committee") is tasked to develop long-period response spectral acceleration maps for Los Angeles region for inclusion in NEHRP and ASCE 7 Seismic Provisions and in Los Angeles City Building Code. The maps would be based on 3-D numerical ground-motion simulations, and ground motions computed using latest empirical ground-motion prediction equations from the PEER NGA project. This project is coordinated with (1) the SCEC Ground Motion Simulation Validation Technical Activity Group (GMSV-TAG), (2) other SCEC projects, such as CyberShake and UCERF, and (3) the USGS national seismic hazard mapping project.

IP-47-31

We suggest that you work with USGS Pasadena Rob Graves

It is expected that Cybershake will be utilized during the life of your project

MCEr maps for southern California
Site Specific MCEr and Design Response Spectra per SECT 21.2, 21.3, 21.4 of ASCE 7-16
C.B.Crouse is the Chair of the SCEC Committee for the Utilizatrion of Ground Motions Simulations (UGMS)

page 3-10-11
The Newport-Inglewood Fault Zone extends approximately... All the way to Mexico IP-47-32

"The Compton Fault extends northwest-southeast for approximately 25 miles along the western edge of the Los Angeles Basin. At its closest point, this fault is less than one mile southwest of the southern end of the Study Area."
The map shows it running through the study area- please explain
actually it matters if is inside or outside the basin
and the project is over the hanging wall and requires a hanging wall factor in any case IP-47-33

3.10.2.4 Liquefaction "(1) intensity and duration of earthquake shaking,"
Liquefaction needs to be analyzed for long period ground motion AND for duration of shaking
USGS has not studied long period ground motion and long duration events
New formulas may have to be developed as just increasing the magnitude gives bogus results. The formulas use magnitude as a proxy for distance which gives inaccurate results as a true distance formula would attenuate short periods whereas increasing the magnitudes increases them IP-47-34

3.10-13 In general, the project facilities can be designed to accommodate the expected ground accelerations through compliance with
applicable building and seismic codes.
As a result, the potential for structural damage can
be substantially reduced or avoided through seismic engineering design.
True but first you have to have an accurate Seismic Analysis

The potential impacts to facilities and structures can be substantially
reduced based on design and construction, consistent with the recommendations of the
detailed geotechnical investigations prepared during final design.
There has been plenty of time to do a detailed geotechncial investigation and there is no enforceable mitigation that one will properly be done. What has been shown so far gives little credence that the scope will be adequate, IP-47-35

earthquake and seismic safety concerns would be issues that would be analyzed as part of the environmentaland engineering studies for the other transportation improvement projects included in Alternative 1. Some of these projects are already fast tracked and we see no detailed seismic study.
Martha Merimiam, author of the ARS tool has resigned. Has CalTrans even had a Seismologist since Lilliana Mualchin retired?

", deficiencies in the PSHA method are becoming recognized, and the use of the method is now becoming a focus of strong debate. Caltrans is in the process of producing the fourth edition of its DSH map. The reason for preferring the DSH method is that Caltrans believes it is more realistic than the probabilistic method for assessing earthquake hazards that may affect critical facilities, and is the best available method for insuring public safety. Its time-invariant values help to produce robust design criteria that are soundly based on physical evidence. And it is the method for which there is the least opportunity for unwelcome surprises.
Deterministic Earthquake Hazard Assessment by Public Agencies in California. Available from:
https://www.researchgate.net/publication/252949528_Deterministic_Earthquake_Hazard_Assessment_ IP-47-36

Maualchin connected the Rose Canyon and Newport-Inglewood faults are treated as a single fault line prior to 2005

Modern earthquake ground motion hazard mapping in California began following the 1971 San Fernando earthquake in the Los Angeles metropolitan area of southern California. Earthquake hazard assessment followed a traditional approach, later called Deterministic Seismic Hazard Analysis (DSHA) in order to distinguish it from the newer Probabilistic Seismic Hazard Analysis (PSHA). In DSHA, seismic hazard in the event of the Maximum Credible Earthquake (MCE) magnitude from each of the known seismogenic faults within and near the state are assessed. The likely occurrence of the MCE has been assumed qualitatively by using late Quaternary and younger faults that are presumed to be seismogenic, but not when or within what time intervals MCE may occur. MCE is the largest or upper-bound potential earthquake in moment magnitude, and it supersedes and automatically considers all other possible earthquakes on that fault. That moment magnitude is used for estimating ground motions by applying it to empirical attenuation relationships, and for calculating ground motions as in neo-DSHA (Zuccolo et al., 2008). The first deterministic California earthquake hazard map was published in 1974 by the California Division of Mines and Geology (CDMG) which has been called the California Geological Survey (CGS) since 2002, using the best available fault information and ground motion attenuation relationships at that time. The California Department of Transportation (Caltrans) later assumed responsibility for printing the refined and updated peak acceleration contour maps which were heavily utilized by geologists, seismologists, and engineers for many years. Some engineers involved in the siting process of large important projects, for example, dams and nuclear power plants, continued to challenge the map(s). The second edition map was completed in 1985 incorporating more faults, improving MCE's estimation method, and using new ground motion attenuation relationships from the latest published results at that time. CDMG eventually published the second edition map in 1992 following the Governor's Board of Inquiry on the 1989 Loma Prieta earthquake and at the demand of Caltrans. The third edition map was published by Caltrans in 1996 utilizing GIS technology to manage data that includes a simplified three-dimension geometry of faults and to facilitate efficient corrections and revisions of data and the map. The spatial relationship of fault hazards with highways, bridges or any other attribute can be efficiently managed and analyzed now in GIS at Caltrans. There has been great confidence in using DSHA in bridge engineering and other applications in California, and it can be confidently applied in any other earthquake-prone region. Earthquake hazards defined by DSHA are: (1) transparent and stable with robust MCE moment magnitudes; (2) flexible in their application to design considerations; (3) can easily incorporate advances in ground motion simulations; and (4) economical. DSHA and neo-DSHA have the same approach and applicability. The accuracy of DSHA has proven to be quite reasonable for practical applications within engineering design and always done with professional judgment. In the final analysis, DSHA is a reality-check for public safety and PSHA results. Although PSHA has been acclaimed as a better approach for seismic hazard assessment, it is DSHA, not PSHA, that has actually been used in seismic hazard assessment for building and bridge engineering, particularly in California.

Comments on the 710 Boondoggle
Project Alternatives
I prefer Alternative 1 until 710 North is approved.
I prefer the rail elements
I prefer NO project that increases Truck traffic for the east coast going through Downtown LA
I prefer a Heavy Rail Project from the Ports to Santa Ana Canyon with all truck transhipments done in the Inland Empire not Downtown Los Angeles.
All truck containers for Back east must not be hauled by truck to downtown LA but transported by rail to an inland empire yard. IP-47-37

I have no bjections to 5A
It is unclear how Bandini/ Atlantic is a Freeway to Freeway improvement on Fig 2.3.1 IP-47-38

6A I-710 Freight Corriordor we already have one It's called the Alameda Corridor
Both of these boodnggles need to run East not North
Move the freight yard to the Inland Empire
Zero emmission trucks are still unnecessary truck traffic except for local deliveries IP-47-39

The truck traffic served by 6A must be handled by the Alameda Corridor
Or Alameda Corridor East

Comments on Geology and Soils
Overview It appears that the 2010 study just “phoned it in”
Surficial and Subsurface Soils
Bedrock is not defined- evidently old stiff soils are considered bedrock
The depth to bedrock is much deeper in the 710/5&60 area
Without further analysis the depth to bedrock is irrelevant. The depths to high velocity is not shown. IP-47-40
SCEC has had a Basin Depth study available for more than 10 years yet it was not utilized.
There is a “Community Velocity Model” with first research published last century- it was not utilized. IP-47-41
The shape of the Los Angeles Channel is not shown or modeled. IP-47-42

Expansive and Collapsible Soils mut be analyzed not only at short periods/ durations of shaking but also at long periods- long durations of shaking. Shakeout had one such study. There are later- they must be utilized. IP-47-43

3.10.23
Faults and Seismicity- appears that the consult just “filled in the blanks”
“Active fault” “and potentially active fault” are building code term- It is not relevant to a CalTrans project (or Neuclear, hazardous waste etc) and while interesting are not controlling. IP-47-44

Table 3.10.1 contains erroneous information and analysis.
Puente Hills blind thrust. URS corp in doing a review for LACODPW “Beverly blvd bridge”
correctly determined that any subsurface thrust fault is determined according to CGS procedures.
First determine where the fault is 10km underground. That then becomes 0.0 distance.
The distance to the fault tip is irrelevant except where the project passes over it& distence to the fault plane... (see footnote 3- this explanation is just the first step in determining fault distence for “near field” calculations but the rest of the analysis is mission and must be supplied
Therefor the Approximate Closest Distance must be corrected to 0.0 IP-47-45

Extensive Comments on Puente Hills Thrust is attached and made a part of these comments.

URS also determined MCEMM as 7.5 for a multiple event for a Bridge project. Why only 7.3 here?
This large discrepancy must be explained.
URS correctly determined the distance to Whitter looking at the presumed trace across Whittier narrows not just the above ground trace in Whittier. (See Tan 2000) This would make the distence to 710-5 & 60 around 5.5 miles not 10.5
footnote 1 may be the easy way out but it is not correct- do your homework IP-47-46

There is no mention of the Lower Elysian Park thrust in the text but is shown in figure 3.2.-2 IP-47-47

There is no mention of the Carson Fault
There is no mention of the San Andreas Fault- distence is irrelevant. What is relevant is how much shaking can it generate. It is second to only the Puente Hills Thrust as to hazard in the northern part of the project. IP-47-48

In fig 3.10-1 The Puente Hills Thrust and Puente Hills Thrust Los Angeles Segment are bot shown
Ther is only ONE Puente Hill Thrust Please Explain IP-47-49
Palos Verdes is not shown, please show including offshore IP-47-50
Show the Whittier/ East Montebello/ Alhambra Wash fault It aligns NNE at the NE corner of the map just south of the 60 SR 19 intersection which is shown. IP-47-51
Add Compton Fault IP-47-52

3.20.34 Liquefaction
“The primary factors affecting the possibility of liquefaction in a soil deposit are: (1) intensity and
duration of earthquake shaking“
Study must be rerun with latest data. It must also be run with long period/ long duration seismology from the San Andreas. IP-47-53
The USGS has not studied long period- long duration events

3.10.31 Sloughing of the sides of the chanalized rivers must be studied and reported, using also the long period- long duration San Andreas data IP-47-54

“In general, the project facilities can
be designed to accommodate the expected ground accelerations through compliance with applicable building and seismic codes”.
Puffery, boilerplate we are talking about highways here not condos, there is no “seismic” code.
“the potential for structural damage can
be substantially reduced or avoided through seismic engineering design“
Is correct but without good data the engineer cannot design correctly IP-47-55

3.10.4
GEO-1 Provide the public the opportunity to comment as this EIR is not encouraging. The Specificiations for the Design level geotechnical report must be enumerated in the EIR IP-47-56

SCEC Tom Jordan writes in US DOE Office of Science “big iron”
The geological record suggests that huge earthquakes shook the southern part of the San Andreas Fault in 1713, 1614, 1565, 1462 and 1417. Because the intervals are between 50 and 100 years, seismologists calculate that southern California is overdue for an enormous shock. -

California, like many earthquake-prone areas of the world, has sedimentary basins filled with soft material that has eroded from mountains. Early settlers tended to establish their largest cities and towns in those flat basins - cities like Los Angeles and San Bernardino.
The soft basins “act like big bowls of jelly” during large earthquakes, Jordan says.

Seismic energy in the form of large-amplitude waves is injected into them, rattling around and causing enormous motion in the very areas where people and buildings are most concentrated.

Disastrous path
“Based on our calculations, we are finding that the basin regions, including Los Angeles, are getting larger shaking than is predicted by the standard methods,” Jordan says. “By improving the predictions, making them more realistic, we can help engineers make new buildings safer.”
The chance of a magnitude-8-or-greater earthquake on the southern San Andreas Fault in the next 30 years is just 2 percent, but the impact would be dramatic, especially if ground motion followed the basins toward high-population areas.
“You certainly wouldn’t want to be in that earthquake,” Jordan says. Especially in sedimentary basins, it would cause huge ground motions and last a long time.

The earthquake center has been generating large suites of earthquake simulations to estimate ground-shaking, taking into account three-dimensional effects, the directivity effect and the sedimentary basin effect.
“We model an ensemble of such earthquakes and attach probabilities to each. We start with an earthquake rupture forecast to select a large number of events that represent the possibilities for future earthquakes. We don’t know which will happen next.”

http://scec.usc.edu/research/cme/
http://scec.usc.edu/scecpedia/Community_Velocity_Model
SCEC's community velocity models (CVM's) provide detailed 3D properties for southern California.

CVM-H for use in fault systems analysis, strong ground motion prediction, and earthquake hazards assessment. The model describes seismic P- and S-wave velocities and densities, and is comprised of basin structures embedded in tomographic and teleseismic crust and upper mantle models.

Links broken Contact Harvard Andreas Plesch, John Shaw, Peter Suess
http://isites.harvard.edu/icb/icb.do?keyword=k93600&pageid=icb.page577442&pageContentId=icb.pagecontent1243182&state=maximize&view=view.do&viewParam_name=SCEC%20CVM%20Community%20Velocity%20Model/SCEC%20Community%20Velocity%20Modeul%20CVM-H

The CVM-H consists of basin structures defined using high-quality industry seismic reflection profiles and tens of thousands of direct velocity measurements from boreholes (Plesch et al., 2009; Süss and Shaw, 2003). The basin structures are also compatible with the locations and displacements of major faults represented in the SCEC Community Fault Model (CFM) (Plesch et al., 2007). These basin structures were used to develop travel time tomographic models of the crust (after Hauksson, 2000) extending to a depth of 35 km, and upper mantle teleseismic and surface wave models extending to a depth of 300 km (Prindle and Tanimoto, 2006). These various model components were integrated and used to perform a series of 3D adjoint tomographic inversions that highlight areas of the model that were responsible for mismatches between observed and synthetic waveforms (Tape et al, 2009). Sixteen tomographic iterations, requiring 6800 wavefield simulations, yielded perturbations to the starting model that have been incorporated in the latest model release.

CVM-S

http://www.data.scec.org/research-tools/3d-velocity.html
The purpose of the Three-Dimensional Community Velocity Model for Southern California is to provide a unified reference model for the several areas of research that depend of the subsurface velocity structure in their analysis. These include

strong motion modeling, seismicity location, and tomographic velocity modeling. It is also hoped that the geologic community will find the basin models useful because they are based on structures and interfaces that are largely derived from geologic structure models. The deeper sediment velocities themselves are obtained from empirical relationships that take into account age of the formation and depth of burial. The coefficients of these relationships are calibrated to sonic logs taken from boreholes in the region. Shallow sediment velocities are taken from geotechnical borehole measurements. Hardrock velocities are based on tomographic studies.
Vp-density: The new Vp-density relation is based on density measurements from oil well samples in the Los Angeles basin and the San Gabriel Valley, geotechnical boreholes throughout southern California, and 12 oil wells along the LARSE lines. The newly determined Vp-density ratio is constant, in contrast to the old relation. This is true even for low Vp, as defined by the geotechnical data. The new densities are higher, for a given Vp, than the old. This will tend to lower the Poisson ratio, which will lower Vp/Vs; that is, changing the Vp-density relation produces a new Vs model.

http://scec.usc.edu/research/cme/groups/broadband
The SCEC Broadband Platform is a software system which generates 0-10 Hz seismograms for historical and scenario earthquakes in California.

The goal of the SCEC Broadband Simulation Platform is to generate ground motions for a particular earthquake scenario using deterministic low-frequency and stochastic high-frequency simulations. It provides multiple approaches for generating the rupture description, modeling high- and low-frequency wave propagation, and incorporating site amplification effects. These codes have been validated against recorded ground motions from real events, to increase confidence in their results. With the Broadband Platform, a user can select which combination of approaches to use and simulate an earthquake, producing seismograms which include high and low frequency data. Ultimately these seismograms can be used to improve ground motion attenuation models, resulting in more accurate predictions of future ground motions for building engineers.

http://scec.usc.edu/scecpedia/CyberShake_Project
SCEC's CyberShake project utilizes 3D simulations and finite-fault rupture descriptions to compute deterministic (scenario-based) and probabilistic seismic hazard in Southern California.
CyberShake is a computationally intensive way to improve standard probabilistic seismic hazard analysis

The CyberShake computational approach improves on standard PSHA calculations in a number of ways including:

1. Wave propagation simulations more accurately describe the distribution of ground motions than the currently used ground motion prediction equations [GMPE].
2. Wave propagation simulations provide good estimates of both ground motion amplitude as well as ground motion duration. Ground motion duration is not available from empirical peak ground motion methods.

Jordan (USC) - SSA April 2011

Potrero Grande Sycline

Include but I think not controlling
Lower Elysian Park thrust
Carson Fault
Compton Fault

IP-47-57

Controlling
San Andreas Fault- distence is irrelevant.
What is relevant is how much shaking can it generate.
Especially at long periods and for long durations
Puente Hills Thrust (also vertical)
Whittier-Elsinore
Upper Elysian Park

IP-47-58

Liquefaction
"The primary factors affecting the possibility of liquefaction in a soil deposit are: (1) intensity and
duration of earthquake shaking"
Study must be rerun with latest data. It must also be run with long period/ long duration seismology from the San Andreas. There is a simulation in Shakeout.
The USGS has not studied long period- long duration events

IP-47-59

Sloughing of the sides of the chanalized rivers must be studied and reported, using also the long period- long duration San Andreas data

IP-47-60

SCEC Tom Jordan writes in US DOE Office of Science "big iron"
The geological record suggests that huge earthquakes shook the southern part of the San Andreas Fault in 1713, 1614, 1565, 1462 and 1417.
Because the intervals are between 50 and 100 years, seismologists calculate that southern California is overdue for an enormous shock. -

California, like many earthquake-prone areas of the world, has sedimentary basins filled with soft material that has eroded from mountains. Early settlers tended to establish their largest cities and towns in those flat basins – cities like Los Angeles and San Bernardino.
The soft basins "act like big bowls of jelly" during large earthquakes, Jordan says. Seismic energy in the form of large-amplitude waves is injected into them, rattling around and causing enormous motion in the very areas where people and buildings are most concentrated.

Disastrous path
"Based on our calculations, we are finding that the basin regions, including Los Angeles,
are getting larger shaking than is predicted by the standard methods,"
Jordan says. "By improving the predictions, making them more realistic, we can help engineers make new buildings safer."
The chance of a magnitude-8-or-greater earthquake on the southern San Andreas Fault in the next 30 years is just 2 percent, but the impact would be dramatic, especially if ground motion followed the basins toward high-population areas.
"You certainly wouldn't want to be in that earthquake," Jordan says.
Especially in sedimentary basins, it would cause huge ground motions and last a long time.

The earthquake center has been generating large suites of earthquake simulations to estimate ground-shaking, taking into account three-dimensional effects, the directivity effect and the sedimentary basin effect.
"We model an ensemble of such earthquakes and attach probabilities to each. We start with an earthquake rupture forecast to select a large number of events that represent the possibilities for future earthquakes. We don't know which will happen next."

http://scec.usc.edu/scecpedia/Community_Velocity_Model
SCEC's community velocity models (CVM's) provide detailed 3D properties for southern California.

CVM-H for use in fault systems analysis, strong ground motion prediction, and earthquake hazards assessment. The model describes seismic P- and S-wave velocities and densities, and is comprised of basin structures embedded in tomographic and teleseismic crust and upper mantle models.

Links broken Contact Harvard Andreas Plesch, John Shaw, Peter Suess
http://isites.harvard.edu/icb/icb.do?keyword=k93600&pageid=icb.page577442&pageContentId=icb.pagecontent1243182&state=maximize&view=view.do&viewParam_name=SCEC%20CVM%20Community%20Velocity%20Model/SCEC%20Community%20Velocity%20Modeul%20CVM-H

The CVM-H consists of basin structures defined using high-quality industry seismic reflection profiles and tens of thousands of direct velocity measurements from boreholes (Plesch et al., 2009; Süss and Shaw, 2003). The basin structures are also compatible with the locations and displacements of major faults represented in the SCEC Community Fault Model (CFM) (Plesch et al., 2007). These basin structures were used to develop travel time tomographic models of the crust (after Hauksson, 2000) extending to a depth of 35 km, and upper mantle teleseismic and surface wave models extending to a depth of 300 km (Prindle and Tanimoto, 2006). These various model components were integrated and used to perform a series of 3D adjoint tomographic inversions that highlight areas of the model that were responsible for mismatches between observed and synthetic waveforms (Tape et al, 2009). Sixteen tomographic iterations, requiring 6800 wavefield simulations, yielded perturbations to the starting model that have been incorporated in the latest model release.

For Scoping the above can give you the information you need on ground Motion, XYZ seismogrms etc for PHT
You also need the Shakeout, Terrashake, “Wall to Wall” and M8 simulation data from the San Andreas

IP-47-61

You can Calculate the Seismic Source effects, Path effects using the velocity model (CVM) and site effects (bowl of jello in this case) but good news the work has already been done.
What you can't do is just use magnitued distence relationships (which might work if there was rock all the way from seismic sources to a rock site) even with a basin depth factor. Just not adequate in Project area

IP-47-62

This page intentionally left blank

IP-47-1

Caltrans and Metro both respectfully disagree that the RDEIR/SDEIS is inadequate. More detailed responses to individual comments follow.

IP-47-2

I-710 between the Ports and SR-60 experiences elevated levels of traffic congestion, elevated truck volumes, elevated accident rates, and many design features in need of modernization. The I-710 Corridor serves trucks traveling to and from the San Pedro Bay Ports (Port trucks) as well as trucks using the freeway network to travel to and from various destinations and land uses throughout the Southern California region (non-Port trucks). In the future year (2035), a little over half of the daily truck volumes on I-710 would be Port truck trips and the remaining half of the daily truck volumes would be non-Port truck trips. Caltrans and Metro both respectfully disagree that improvements to I-710 are not needed or that the build alternatives are somehow obsolete. The decision to revise the set of build alternatives under consideration and prepare a RDEIR/SDEIS was made, at least partially, in response to new information regarding regional traffic patterns. This included a more comprehensive understanding of transloading, which serves to disperse traffic throughout the I-710 Corridor. Caltrans and Metro cannot mandate use of the Alameda Corridor; for more information regarding the Alameda Corridor and its interface with I-710, please refer to Section 1.9 of this appendix.

IP-47-3

As discussed in Section 3.10 of the RDEIR/SDEIS, the Caltrans' Office of Earthquake Engineering is responsible for assessing the seismic hazard for Caltrans projects. Structures are designed using the Caltrans Seismic Design Criteria (SDC). The SDC provide the minimum seismic requirements for highway bridges designed in California. A bridge's category and classification will determine its seismic performance level and which methods are used for estimating the seismic demands and structural capabilities. As discussed in Section 3.10.1 of this Final EIR/EIS, all new and modified bridge structures included in the build alternatives would be designed and constructed in accordance with Caltrans' latest seismic design criteria, thus minimizing public health risk concerns associated with structure collapses during an earthquake. However, Caltrans, as lead agency under CEQA and NEPA (as assigned by the Federal Highway Administration [FHWA]), in cooperation with the Los Angeles County Metropolitan Transportation Authority (Metro), has identified Alternative 1 (No Build) as the Preferred Alternative. Therefore, no structure collapses from new or modified bridge structures will occur. Please refer to Section 1.1 of this appendix for further discussion on the identification of the Preferred Alternative.

As discussed in Section 4.2.1 of the *Geotechnical Final Report* prepared for the project (URS 2010), surface fault rupture is ground deformation that occurs along the surface trace of the causative fault during an earthquake.

IP-47-4

The Caltrans *Highway Design Manual* (HDM) was revised and a 6th edition was released on July 2, 2018 (please refer to http://www.dot.ca.gov/design/manuals/hdm.html). As stated in the HDM, the manual establishes uniform policies and procedures to carry out the State highway design functions of the Department. The manual is neither intended as, nor does it establish, a legal standard for these functions. The standards, procedures, and requirements established and discussed in the manual are for the information and guidance of the officers and employees of the Department. Many of the instructions given in the manual are subject to amendment as conditions and experience warrant. Special situations may call for deviation from policies and procedures, subject to Division of Design approval, or such other approval as may be specifically provided for in the text of the manual. The manual is not a textbook or a substitute for engineering knowledge, experience, or judgment. It includes techniques as well as graphs and tables not ordinarily found in textbooks. These are intended as aids in the quick solutions of field and office problems. Except for new developments, no attempt is made to detail basic engineering techniques; for these, standard textbooks should be used.

It is assumed that the “hazard of the Southern San Andreas effects on deep basin sites” may be referring to enigmatic patterns recently observed in the San Bernardino basin. As stated in Response to Comment IP-47-3, the No Build Alternative has been selected as the Preferred Alternative. Therefore, construction will not occur, and there will be no hazards related to deep basin sites.

IP-47-5

As discussed in Section 3.10.3, should a build alternative be selected as the Preferred Alternative, Measure GEO-1 would be implemented, and would require that, prior to completion of final design, Caltrans would prepare a design-level geotechnical report in accordance with the *Guidelines for Preparing Geotechnical Design Reports* (Caltrans 2006). Design-level geotechnical reports would precede development of grading and/or construction plans, and they would provide detailed, site-specific design recommendations. Studies at this stage would provide specific design recommendations to mitigate geologic hazards as they relate to grading and construction of the build alternatives. A geotechnical design report would document soil-related constraints and hazards such as slope instability, settlement liquefaction, or related secondary seismic impacts that may be present. The CEQA determination included in Chapter 4.0, CEQA Evaluation, of the RDEIR/SDEIS, took into account the best information known at the current level of design of the build alternatives. Furthermore, it is not anticipated that any CEQA conclusions related to geology and soils would change based on design refinements as a result of the design-level geotechnical report outlined in Measure GEO-1. However, as stated in Response to Comment IP-47-3, the No Build Alternative has been selected as the Preferred Alternative. Therefore, no construction will occur, and Measure GEO-1 will not be implemented.

IP-47-6

There are already freight rail facilities in place that allow for rail traffic to travel from the Ports to the Inland Empire via San Bernardino County, utilizing the Alameda Corridor and Redondo Junction to transfer to the Union Pacific Alhambra or Los Angeles Subdivision. It is important to note that the Alameda Corridor-East project is currently under construction, which would improve the trade corridor rail mainlines in the San Gabriel Valley to provide for grade separations and safety and mobility upgrades in much the same manner as the Alameda Corridor. Because the I-710 Corridor Project build alternatives are generally limited in scope to the existing freeway, and the construction of a new freight rail facility spanning from the Ports to the Inland Empire (a distance of roughly 60 miles, as the crow flies) would have substantial environmental and social impacts in the highly dense and urbanized Southern California region, it was not considered as a stand-alone alternative.

IP-47-7

The Santa Ana River Corridor is roughly 17 miles southeast of the Ports of Los Angeles and Long Beach. It is unclear from the comment how the commenter intends for freeway/freight improvements from the Port to connect through the Santa Ana River Corridor to the Inland Empire.

IP-47-8

Please refer to Section 1.9 of this appendix for more information about the Alameda Corridor and its interface with the I-710 freeway. The maximization of goods movement by rail may relieve a minor degree of traffic congestion on I-710 but would not modernize the facility or provide needed safety upgrades.

IP-47-9

Caltrans and Metro both respectfully disagree that the I-710 freeway and the Alameda Corridor “run the wrong direction.” Based on the high levels of congestion and usage of the freeway, the demand for the freeway facility does exist, and improvements are warranted. Please also refer to Section 1.9 of this appendix for more information about the Alameda Corridor and its interface with the I-710 freeway.

IP-47-10

Please refer to Response to Comment IP-47-3 regarding faulting and seismicity.

IP-47-11

As discussed in Section 3.10.2.3 of the RDEIR/SDEIS, only active faults in the Study Area are mapped in Figure 3.10-1. Table 3.10-1 only lists known seismic sources that are capable of

producing seismic shaking that could be damaging to bridges and other structures and, therefore, would control the seismic design of the I-710 Corridor Project build alternatives. The Elsinore Fault Zone (Whittier) and Palos Verde Fault Zone are included in Table 3.10-1. As indicated in Section 3.4 of the Geotechnical Report (2010), other known potential seismic sources located at distances greater than 12 kilometers from the site are not listed since, based on our evaluation, those sources would not control the seismic design of the build alternatives.

IP-47-12

Figure 3.10-1 shows the Puente Hills Thrust, along with the Puente Hills Thrust – Los Angeles Segment, along with the Puente Hills Blind Thrust – Santa Fe Springs Segment. Each of these thrusts was labeled appropriately on the figure in the RDEIR/SDEIS. No further changes will be made to this figure.

IP-47-13

Active faults in the Study Area are mapped in Figure 3.10-1. The Lower Elysian Park Blind Thrust Fault crosses the alignment of the build alternatives at the intersection of Firestone Blvd. and I-710. Therefore, this fault is correctly mapped in Figure 3.10-1.

Table 3.10-1 only lists the most significant known seismic sources that are capable of producing seismic shaking that could be damaging to bridges and other structures and, therefore, would control the seismic design of the I-710 Corridor Project build alternatives. As discussed in Section 3.4 of the *Geotechnical Final Report* prepared for the project (URS 2010), the California Geological Survey has replaced the Lower Elysian Park Blind Thrust Fault as a seismic source with the Puente Hills thrust; therefore, the Lower Elysian Park Blind Thrust Fault would not be considered to have a significant influence on the build alternatives. Therefore, this fault is not included in Table 3.10-1 because this fault would not be considered a seismic source that would control the seismic design of the build alternatives.

Table 3.10-1 is intended to provide the public with information regarding primary seismic sources that are capable of producing seismic shaking that could be damaging to bridges and other structures and, therefore, would control the seismic design of the I-710 Corridor Project build alternatives. Additional information is not required in the table to inform the public of potential seismic sources that could affect the design of the build alternatives. The information contained in the current Caltrans SDC database does not alter the information provided in the *Geotechnical Final Report* or this Final EIR/EIS.

IP-47-14

Table 3.10-1 in the RDEIR/SDEIS is intended to provide the public with information regarding known seismic sources that are capable of producing seismic shaking that could be damaging to

bridges and other structures and, therefore, would control the seismic design of the I-710 Corridor Project build alternatives. Additional information is not required in the table to inform the public of potential seismic sources that could affect the design of the build alternatives.

As was stated in Section 3.10 of the RDEIR/SDEIS, the maximum earthquake magnitudes and other fault parameters shown in Table 3.10-1 are those currently being considered as controlling the seismic design of the I-710 Corridor Project build alternatives. While these data are sufficient to broadly characterize the subsurface conditions along the I-710 Corridor and provide preliminary opinions about the geotechnical constraints of the build alternatives, it is insufficient to provide specific recommendations at specific locations. However, as stated in Response to Comment IP-47-3, the No Build Alternative has been selected as the Preferred Alternative. Therefore, no impacts related to seismicity will occur.

IP-47-15

Please refer to Response to Comment IP-47-14 regarding seismicity.

IP-47-16

As discussed in Section 3.10 of the RDEIR/SDEIS, the Caltrans' Office of Earthquake Engineering is responsible for assessing the seismic hazard for Caltrans projects. As described in Section 2.1 of the *Geotechnical Final Report* prepared for the project (URS 2010), the following data sources were obtained from the Caltrans Office of Earthquake Engineering:

- 2009 Caltrans Deterministic PGA Map and ARS Online Report
- 2007 Fault Database
- 2008 United States Geological Survey (USGS) National Seismic Hazard Map, 2008 National Seismic Hazard Map Gridded Data (static) and the 2009 USGS Interactive Deaggragation Tool (Beta)
- Fault & Site Data Input Sheet
- Deterministic Response Spectrum Spreadsheet
- Probabilistic Response Spectrum Spreadsheet (based on the USGS data)
- Preliminary spectral acceleration and displacement curves (Caltrans SDC, Appendix B)
- Caltrans ARS Online

A complete list of these documents and tools with web links are listed in the Caltrans ARS Online website, http://dap3.dot.ca.gov/ARS_Online/.

A complete list of data sources used to characterize seismic and geologic hazards in the Study Area are included in Section 2.1 of the Geotechnical Final Report.

IP-47-17

It is not the purpose of the RDEIR/SDEIS to determine if the build alternatives would be either structurally feasible or financially feasible. As stated, the build alternatives could be impacted by ground motion and liquefaction and possible ground rupture (deformation), to some degree. Design and construction of the either build alternative to current highway and structure design standards, including applicable seismic standards, would minimize the potential impacts on the build alternatives. Given that there are more than 80 existing structures, including flyover interchanges and elevated structures, on the I-710 Corridor within the project limits, demonstrates the feasibility of structure construction. However, as stated in Response to Comment IP-47-3, the No Build Alternative has been selected as the Preferred Alternative. Therefore, the construction of new structures will not occur.

It is important to note that, as discussed in Section 3.10 of the RDEIR/SDEIS, the California Department of Transportation's (Caltrans) Office of Earthquake Engineering is responsible for assessing the seismic hazard for Caltrans projects. Structures are designed using the Caltrans Seismic Design Criteria (SDC). The SDC provide the minimum seismic requirements for highway bridges designed in California.

IP-47-18

The Overview of the ARkStorm Scenario (USGS Open File Report 2010–1312) summarizes the environmental effects, physical damages, economic and other losses in California as a result of the hypothetical flooding and high winds associated with a winter storm scenario called ARkStorm. The document is intended to engage emergency planners, businesses, universities, government agencies, and others in preparing for major natural disasters. The project also helps to set research goals and provides decision-making information for loss reduction and improved resiliency. However, the document is not intended as a design document.

Potential hydrology and floodplain impacts are discussed in Section 3.8 of the RDEIR/SDEIS. As specified in Measure FP-1 in Section 3.8.4, should a build alternative be selected as the Preferred Alternative, a Final Flood Control Facilities Report/Final Location Hydraulic Study would be prepared during final project design. The *Flood Control Facilities Report* (January 2017) assesses the risk of the floodplain impacts resulting from the build alternatives. However, as stated in Response to Comment IP-47-3, the No Build Alternative has been selected as the Preferred Alternative. Therefore, there will be no change in floodplain elevations as a result of the build alternatives.

IP-47-19

As discussed in Section 3.10.3 of the RDEIR/SDEIS, should a build alternative be selected as the Preferred Alternative, Measure GEO-1 would be implemented, and would require that, prior to completion of final design, the California Department of Transportation (Caltrans) would prepare a design-level geotechnical report in accordance with the *Guidelines for Preparing Geotechnical Design Reports* (Caltrans 2006). Design-level geotechnical reports would precede development of grading and/or construction plans, and they would provide detailed, site-specific design recommendations. Studies at this stage would provide specific design recommendations to mitigate geologic hazards as they relate to grading and construction of either build alternative. A geotechnical design report would document soil-related constraints and hazards such as slope instability, settlement liquefaction, or related secondary seismic impacts that may be present. However, as stated in Response to Comment IP-47-3, the No Build Alternative has been selected as the Preferred Alternative. Therefore, Measure GEO-1 will not be implemented.

It is important to note that, as discussed in Section 3.10 of the RDEIR/SDEIS, the California Department of Transportation's (Caltrans) Office of Earthquake Engineering is responsible for assessing the seismic hazard for Caltrans projects. Structures are designed using the Caltrans Seismic Design Criteria (SDC). The SDC provide the minimum seismic requirements for highway bridges designed in California. A bridge's category and classification will determine its seismic performance level and which methods are used for estimating the seismic demands and structural capabilities.

IP-47-20

Please refer to Response to Comment IP-47-16 regarding the data sources obtained from the Caltrans Office of Earthquake Engineering.

IP-47-21

Figure 3.10-1 includes active faults that lie within the Study Area, and has not been revised. Table 3.10-1 includes known seismic sources that are capable of producing seismic shaking that could be damaging to bridges and other structures, and would therefore control the seismic design of the I-710 Corridor Project build alternatives. Therefore, no further revisions to Figure 3.10-1 have been made.

IP-47-22

As discussed in Section 3.10.2.3 of the RDEIR/SDEIS, only active faults in the Study Area are mapped in Figure 3.10-1. Table 3.10-1 only lists known seismic sources that are capable of

producing seismic shaking that could be damaging to bridges and other structures and, therefore, would control the seismic design of the I-710 Corridor Project build alternatives.

IP-47-23

The commenter does not indicate why they believe that the information included in Table 3.10-1 of the RDEIR/SDEIS is inadequate. Please also refer to Responses to Comments IP-47-16 and IP-47-21 regarding the SCEC Community Fault Model.

IP-47-24

IP-47-28

Please refer to Response to Comment IP-47-17 regarding the SCEC Unified Community Velocity Model.

IP-47-29

As discussed in Section 3.10.2.3 of the RDEIR/SDEIS, only active faults in the Study Area are mapped in Figure 3.10-1. Table 3.10-1 only lists known seismic sources that are capable of producing seismic shaking that could be damaging to bridges and other structures and, therefore, would control the seismic design of the I-710 Corridor Project build alternatives. The San Andreas Fault is outside of the Study Area, and is not a known seismic source that is capable of producing seismic shaking that could be damaging to bridges and other structures in the Study Area and, therefore, would control the seismic design of the I-710 Corridor Project build alternatives.

IP-47-30

Please refer to Response to Comment IP-47-16 regarding the SCEC Community Fault Model.

IP-47-31

Please refer to Responses to Comments IP-47-16 and IP-47-17 regarding the SCEC Community Fault and SCEC Unified Community Velocity Models.

IP-47-32

The information included in Section 3.10.2.3 of the RDEIR/SDEIS, in regard to the location of the Newport-Inglewood Fault Zone, is consistent with information provided in the *Geotechnical Final Report* prepared for the project (URS 2010) as well as information provided from the Southern California Earthquake Data Center at http://scedc.caltech.edu/significant/newport. html.[21]

IP-47-33

In response to this comment, the following change has been made to the text in Section 3.10.2.3 of the RDEIR/SDEIS:

The Compton Fault extends northwest-southeast for approximately 25 miles along the western edge of the Los Angeles Basin. At its closest point, this fault is less than one mile southwest of the southern end of the ~~Study Area~~ project limits.

IP-47-34

Please refer to Responses to Comments IP-47-16 and IP-47-17 regarding the SCEC Community Fault and SCEC Unified Community Velocity Models.

IP-47-35

Please refer to Responses to Comments IP-47-16 and IP-47-17 regarding the SCEC Community Fault and SCEC Unified Community Velocity Models. Measure GEO-1 is listed in the Environmental Commitments Record for the build alternatives, which would, should a build alternative be selected as the Preferred Alternative, serve as the Mitigation Monitoring and Reporting Record in accordance with CEQA. Therefore, any measure listed therein, even if not considered CEQA-specific mitigation, would be enforceable under CEQA. However, as stated in Response to Comment IP-47-3, the No Build Alternative has been selected as the Preferred Alternative. Therefore, no construction or operation of the build alternatives will occur, and mitigation will be unnecessary.

[21] Southern California Earthquake Data Center (accessed October 24, 2018).

It is important to note that the design-level geotechnical report that would typically be prepared during final design is not an environmental document intended for public review and comment and is not typically made available to the general public.

IP-47-36

Please refer to Responses to Comments IP-47-16 and IP-47-17 regarding the SCEC Community Fault and SCEC Unified Community Velocity Models.

IP-47-37

The comments requesting enhanced goods movement by rail and a decrease in truck traffic, particularly within the downtown Los Angeles area, are acknowledged and included in the project record. Please refer to Section 1.1 of this appendix for more information about the identification of a Preferred Alternative.

IP-47-38

Figure 2.3-1 of the 2012 Draft EIR/EIS identified the Atlantic Blvd./Bandini Blvd. interchange as a local interchange improvement under the build alternatives, denoted by the lighter blue color and slightly smaller marker as shown in the legend, and not a freeway-to-freeway interchange improvement.

IP-47-39

Please refer to Section 1.9 of this appendix for more information about the Alameda Corridor and its interface with I-710. Based on the high levels of congestion and usage of the freeway in its current north-south configuration, the demand for the freeway facility does exist, and improvements proposed under the build alternatives are warranted. More is currently known about truck traffic patterns, including transloading, and according to SCAG's 2012 and 2016 RTP/SCS Goods Movement Appendices, truck patterns will only become more dispersed in the future.

IP-47-40

Please refer to Responses to Comments IP-47-16 and IP-47-17 regarding the SCEC Community Fault and SCEC Unified Community Velocity Models.

IP-47-41

Please refer to Responses to Comments IP-47-16 and IP-47-17 regarding the SCEC Community Fault and SCEC Unified Community Velocity Models.

IP-47-42

Please refer to Response to Comment IP-47-5 regarding design-level geotechnical reports. Section 3.10 (Geology/Soils/Seismic/Topography) of the RDEIR/SDEIS is intended to provide the public with information regarding potential seismic and geologic hazards that could be damaging to bridges and other structures and, therefore, would control the seismic design of the I-710 Corridor Project build alternatives. The shape of the Los Angeles River Channel is not relevant to inform the public of potential seismic and geologic hazards that could control the design of the build alternatives. Potential hydrology and floodplain impacts are included in Section 3.8 of this Final EIR/EIS.

Please leave comments in the comment box or mail to the address below by Monday, November 6, 2017 (3:00 PM):

East Los Angeles District Office
4801 E. 3rd Street
Los Angeles, CA 90022

I have the following comments on the Recirculated Draft Environmental Impact Report/Supplemental Draft Environmental Impact Statement (RDEIR/SDEIS) for the I-710 Corridor Project (please print and use additional sheets if necessary):

See Letter

Diane Portnov

634 S Burger Ave

Los Angeles, Ca 90022

November 4, 2017

I am writing you regarding the 710 project, I disagree with the extension that will impact my property that has been in my family since 1947. I lived in this neighborhood all my life, We have so much noise, dirt and dust that comes from the freeway, they did not even build the wall high enough. My main concern if the city decides to do the project I will lose the property my father had work so hard for . My father purchase in 1947 build a small one bedroom house and married my mom in 1949. I remember before he died and left it to me to never sell, The price of real estate is so high I would not be able to afford to purchase a home. Please do your best not to do the project, This property has been in my family for 70 years.

IP-48-1

IP-48-2

IP-48-3

Sincerely,

Diane Portnov

Diane Kornoff Portnov

IP-48-1

Caltrans and Metro thank the commenter for their input. The commenter's opposition to the extension is acknowledged and included in the project record. Caltrans, as lead agency under CEQA and NEPA (as assigned by the Federal Highway Administration [FHWA]), in cooperation with the Los Angeles County Metropolitan Transportation Authority (Metro), has identified Alternative 1 (No Build) as the Preferred Alternative. Please refer to Section 1.1 of this appendix for a discussion on the identification of the Preferred Alternative. It is important to note that the residence at 634 S. Burger Ave. would not be displaced under any of the alternatives proposed in the RDEIR/SDEIS.

IP-48-2

The build alternatives would result in increases in entrained road dust, tire wear, and break wear at near-roadway locations because they are a direct function of vehicle miles traveled. Should a build alternative be selected as the Preferred Alternative, a taller soundwall would be constructed to reduce freeway noise at the residences located along Burger Ave. in the City of Los Angeles. Specifically, a 16-foot-high soundwall (SW-517 for Alternative 5C and SW-717 for Alternative 7) was recommended to replace the existing 12-foot-high barrier. This soundwall would begin on the on-ramp from Olympic Blvd. onto the mainline northbound I-710 and overlap with an existing 12-foot-high barrier near Humphreys Ave. However, as stated in Response to Comment IP-48-1, the No Build Alternative has been selected as the Preferred Alternative. Therefore, this soundwall will not be constructed.

IP-48-3

The commenter's opposition to the project due to the displacement of people is acknowledged and included in the project record. However, as stated in Response to Comment IP-48-1, the No Build Alternative has been selected as the Preferred Alternative. Therefore, no acquisitions of residences or businesses will be necessary, and no displacements of people will occur.

I have the following comments on the Recirculated Draft Environmental Impact Report/Supplemental Draft Environmental Impact Statement (RDEIR/SDEIS) for the I-710 Corridor Project (please print and use additional sheets if necessary):

YOU SAY YOU ARE FIGHTING FOR OUR VOICES TO BE HEARD. HAH! YOU KNOW IF THIS PLAN IS ALREADY PLANNED OUT IT IS GOING TO GO ~~THROUGH~~ THROUGH! YOU HAVE FAMILIES WITH HAVE LIVED IN THESE HOMES FOR DECADES. WHO ~~HAVE~~ HAVE BEEN LIVING THERE DURING THE CLEAN AIR AMENDMENT "PROP 13" HAS ONLY PAY ABOUT $100 IN PROPERTY TAX! YOU WANT TO MOVE THEM OUT WHERE HOUSING IS SOOOO EXPENSIVE? PROPERTY TAX WILL BE ABOUT $10,000 A YEAR. WHO WORK CLOSE TO HOME. BUT NOW HAVE TO FIND A NEW HOME. WHAT HARDSHIPS IF NO-ONE WANTS TO MOVE?? THIS IS A BUNCH OF BULL-SHIT! THIS IS GOING THROUGH NO MATTER WHAT!

IP-49-1

Caltrans and Metro place a great deal of importance on the community input that has been a key aspect of the project development process since 2008, when the EIR/EIS process began. Many of the programmatic features included in the build alternatives analyzed in the RDEIR/SDEIS were included as a direct result of valuable public and agency input. Caltrans, as lead agency under CEQA and NEPA (as assigned by the Federal Highway Administration [FHWA]), in cooperation with the Los Angeles County Metropolitan Transportation Authority (Metro), has identified Alternative 1 (No Build) as the Preferred Alternative. Since a build alternative has not been selected as the Preferred Alternative, the programmatic elements described in Section 2.3.2.1 of this Final EIR/EIS will not be implemented by Caltrans as the lead agency under CEQA and NEPA and as the owner/operator of the I-710 freeway. Please refer to Section 1.1 of this appendix for further discussion on the identification of the Preferred Alternative and to Section 1.2 of this appendix for more details on the public outreach process over the life of the project.

IP-49-2

As stated in Response to Comment IP-49-1, the No Build Alternative has been selected as the Preferred Alternative. Therefore, no acquisitions of residences or businesses will be necessary, and no displacements of people will occur.

I have the following comments on the Recirculated Draft Environmental Impact Report/Supplemental Draft Environmental Impact Statement (RDEIR/SDEIS) for the I-710 Corridor Project (please print and use additional sheets if necessary):

In my city everyone has always suffered from pollution coming from the City of Vernon adding another polluting Freeway would just worsen our air. CC-2-1

This page intentionally left blank

CC-2-1

Caltrans and Metro thank the commenter for their input. As discussed in Section 1.2.2 in Chapter 1.0, Proposed Project, of the RDEIR/SDEIS, one of the purposes of the project is to improve air quality and public health. The I-710 Corridor Project's impacts on air quality were disclosed in the RDEIR/SDEIS and discussed in Section 3.13, Air Quality, in the RDEIR/SDEIS. Except for particulate matter emissions less than 10 microns in size (PM_{10}) for Alternative 5C and Alternative 7 and sulfur dioxide (SO_2) for Alternative 7, air toxic exhaust emissions (nitrogen oxides [NO_X], carbon monoxide [CO], particulate matter less than 2.5 microns in size [$PM_{2.5}$], and volatile organic compounds [VOC]) would be lower in 2035 with the build alternatives compared to the 2012 Baseline emissions. In 2035, the build alternatives would result in lower NO_X emissions compared to the 2035 No Build Alternative. PM_{10}, $PM_{2.5}$, CO, and SO_2 would increase, with the greatest increases that would occur under Alternative 7. The increases for these pollutants would be less than 190 pounds (lbs) per day under Alternative 5C and less than 640 lbs per day under Alternative 7.

For the build alternatives in 2035, the decrease in $PM_{2.5}$ from exhaust emissions would be greater than the increase in $PM_{2.5}$ from tire wear, brake wear, and entrained road dust emissions compared to the 2012 Baseline emissions. As a result, total $PM_{2.5}$ emissions in 2015 with the build alternatives would decrease when compared to the 2012 Baseline emissions. In the case of PM_{10} emissions, the increases in entrained road dust, tire wear, and brake wear (which are a direct function of vehicle miles traveled) that would result from the build alternatives would far outweigh the decrease in exhaust PM_{10}. Therefore, total PM_{10} emissions would increase in 2035 for the build alternatives when compared to 2012 Baseline.

The number of receptors near the I-710 Corridor that would experience increases in 24-hour PM_{10} emissions resulting from the build alternatives compared to the 2035 No Build Alternative would be larger for Alternative 7 than for Alternative 5C due to the increased traffic along the corridor. The 2035 build alternatives would result in no change to a slight decrease in near-roadway short-term $PM_{2.5}$ emissions when compared to the 2035 No Build Alternative at all modeled receptors near I-710. The public's exposure to ultrafine particles would decrease for all build alternatives in 2035 relative to the 2012 Baseline and the 2035 No Build Alternative, even near the I-710 freeway and freight corridor.

In summary, both build alternatives would generally improve air quality. However, there are a few near-roadway locations where there would be an increase in certain emissions. The build alternatives propose Measures AQ-2 and AQ-3 to reduce exposure to emissions at near-roadway locations resulting from the build alternatives. Should a build alternative be selected as the Preferred Alternative, Measure AQ-2 would provide for installation of air filtration systems for schools within 0.25 mile of I-710. Measure AQ-3 would require installation of solid barriers and

installation of vegetation where feasible (and where soundwalls are not proposed) to disperse pollution and reduce pollutant concentrations downwind.

In addition, the build alternatives include programmatic components to help improve air quality and public health in the I-710 Corridor. The I-710 Corridor Community Health Benefit Program is a programmatic component of the build alternatives and would take the form of a grant program structured to provide corridor communities the opportunity to implement projects or outreach activities that would improve air quality and public health related to I-710 travel and goods movement. However, Caltrans, as lead agency under CEQA and NEPA (as assigned by the Federal Highway Administration [FHWA]), in cooperation with the Los Angeles County Metropolitan Transportation Authority (Metro), has identified Alternative 1 (No Build) as the Preferred Alternative. Since a build alternative has not been selected as the Preferred Alternative, this programmatic element will not be implemented by Caltrans as the lead agency under CEQA and NEPA and as the owner/operator of the I-710 freeway. Please refer to Section 1.1 of this appendix for further discussion on the identification of the Preferred Alternative and Section 1.10 of this appendix for further information regarding the Community Health Benefit Program.

Organization: CBE

Translated comment:

1. We deserve a zero emissions corridor to protect the air quality. CC-3-1
2. We need local jobs. CC-3-2
3. The displacement will leave many people without housing when we are already struggling with where to live. CC-3-3

It is the reason why we are asking Caltrans to extend the comment period by 120 days. Thank you. CC-3-4

CC-3-1 (Comment was submitted in Spanish)

Caltrans and Metro thank the commenter for their input. The commenter's support of a ZE corridor is acknowledged and included in the project record. Please refer to Section 1.1 of this appendix for further discussion of the identification of the Preferred Alternative (Alternative 1 No Build) and to Section 1.3 for additional discussion of ZE options.

Caltrans y Metro agradecen al autor del comentario su aportación. El apoyo del comentarista a un corredor ZE se reconoce y se incluye en el registro del proyecto. Consulte la Sección 1.1 de este apéndice para obtener más información sobre la identificación de la Alternativa Preferida (Alternativa 1 Sin Construcción) y la Sección 1.3 para obtener más información sobre las opciones de ZE.

CC-3-2 (Comment was submitted in Spanish)

Caltrans, as lead agency under CEQA and NEPA (as assigned by the Federal Highway Administration [FHWA]), in cooperation with the Los Angeles County Metropolitan Transportation Authority (Metro), has identified Alternative 1 (No Build) as the Preferred Alternative. Therefore, no construction will occur and local hire programs will not be necessary. Please refer to Section 1.1 of this appendix for further discussion on the identification of the Preferred Alternative.

Caltrans, como agencia líder bajo CEQA y NEPA (según lo asignado por la Administración Federal de Carreteras [FHWA]), en cooperación con la Autoridad Metropolitana de Transporte del Condado de Los Ángeles (Metro), ha identificado la Alternativa 1 (No Construir) como la Alternativa Preferida. Por lo tanto, no se realizará ninguna construcción y no serán necesarios programas locales de alquiler. Por favor refiérase a la Sección 1.1 de este apéndice para mayor discusión sobre la identificación de la Alternativa Preferida.

CC-3-3 (Comment was submitted in Spanish)

The commenter's concern regarding displacement of people as a result of the build alternatives is acknowledged and included in the project record. As stated in Response to Comment CC-3-2, the No Build Alternative has been selected as the Preferred Alternative and therefore, no residential and business relocations will occur.

Se reconoce la preocupación del autor del comentario sobre el desplazamiento de personas como resultado de las alternativas de construcción y se incluye en el expediente del proyecto. Como se indicó en la respuesta al comentario CC-3-2, la alternativa de no construir ha sido seleccionada como la alternativa preferida y, por lo tanto, no se producirán reubicaciones residenciales ni comerciales.

CC-3-4 (Comment was submitted in Spanish)

Please refer to Section 1.2 of this appendix for further discussion regarding the extension of the public comment period.

Consulte la sección 1.2 de este apéndice para más información sobre la ampliación del periodo de comentarios públicos.

Please refer to Section 1.1 of this appendix for a discussion on the identification of the Preferred Alternative (Alternative 1 No Build) and to Section 1.3 for additional discussion of ZE options.

Caltrans y Metro agradecen al autor del comentario su aportación. El apoyo del comentarista a un corredor ZE se reconoce y se incluye en el registro del proyecto. Por favor refiérase a la Sección 1.1 de este apéndice para una discusión sobre la identificación de la Alternativa Preferida (Alternativa 1 No Construir) y a la Sección 1.3 para una discusión adicional de las opciones ZE.

CC-4-2 (Comment was submitted in Spanish)

As part of both build alternatives evaluated in the RDEIR/SDEIS, a Community Health Benefit Program is proposed that would take the form of a grant program structure to provide corridor communities the opportunity to implement projects or outreach activities that would improve air quality and public health related to travel and goods movement on I-710. However, Caltrans, as lead agency under CEQA and NEPA (as assigned by the Federal Highway Administration [FHWA]), in cooperation with the Los Angeles County Metropolitan Transportation Authority (Metro), has identified Alternative 1 (No Build) as the Preferred Alternative. Since a build alternative has not been selected as the Preferred Alternative, this programmatic element will not be implemented by Caltrans as the lead agency under CEQA and NEPA and as the owner/operator of the I-710 freeway. Please refer to Section 1.10 of this appendix for more details regarding the Community Health Benefit Program.

Como parte de ambas alternativas de construcción evaluadas en el RDEIR/SDEIS, se propone un Programa de Beneficios para la Salud de la Comunidad que adoptaría la forma de una estructura de programa de subvenciones para proporcionar a las comunidades del corredor la oportunidad de implementar proyectos o actividades de divulgación que mejorarían la calidad del aire y la salud pública en relación con los viajes y el movimiento de mercancías en la I-710. Sin embargo, Caltrans, como agencia líder bajo CEQA y NEPA (según lo asignado por la Administración Federal de Carreteras [FHWA]), en cooperación con la Autoridad Metropolitana de Transporte del Condado de Los Ángeles (Metro), ha identificado la Alternativa 1 (No Construir) como la Alternativa Preferida. Debido a que no se ha seleccionado una alternativa de construcción como la Alternativa Preferida, este elemento programático no será implementado por Caltrans como la agencia líder bajo CEQA y NEPA y como el propietario/operador de la autopista I-710. Consulte la Sección 1.10 de este apéndice para obtener más detalles sobre el Programa comunitario de beneficios para la salud.

CC-4-3 (Comment was submitted in Spanish)

The commenter's concern regarding displacement of people as a result of the build alternatives is acknowledged and included in the project record. As stated in Response to Comment CC-4-2, the No Build Alternative has been selected as the Preferred Alternative and therefore, no residential and business relocations will occur.

Se reconoce la preocupación del autor del comentario sobre el desplazamiento de personas como resultado de las alternativas de construcción y se incluye en el expediente del proyecto. Como se indicó en la respuesta al comentario CC-4-2, la alternativa de no construir ha sido seleccionada como la alternativa preferida y, por lo tanto, no se producirán reubicaciones residenciales ni comerciales.

CC-4-4 (Comment was submitted in Spanish)

Please refer to Section 1.2 of this appendix for further information regarding the extension of the public comment period.

Consulte la sección 1.2 de este apéndice para más información sobre la ampliación del periodo de comentarios públicos.

Mr. Ronald Kosinski
Caltrans District 7, Division of Environmental Planning
100 S. Main Street, MS 16A
Los Angeles, CA 90012

I have the following comments on the Recirculated Draft Environmental Impact Report/Supplemental Draft Environmental Impact Statement (RDEIR/SDEIS) for the I-710 Corridor Project (please print and use additional sheets if necessary):

TEACHER AND RESIDENT IN THE COMMUNITY FOR A TOTAL OF 18 YEARS. I RECOMMEND ANY CONSIDERATIONS AS PROPOSED TO BE STOPPED. ANY CHANGES IN SURROUNDING AREAS AND IN THE AREA WHERE I LIVE WOULD NEGATIVELY IMPACT THE ~~COMMUNITY~~ COMMUNITY AS A WHOLE. WHETHER IT IS THE SALVATION ARMY IN BELLFLOWER AND SURROUNDING COOPERATING BUSINESSES OR EAST L.A. WHERE 27 HOMES WOULD BE IMPACTED IN MY NEIGHBORHOOD. AT THIS TIME IN LOS ANGELES COUNTY WHEN HOMELESS IS EPIDEMIC - IT DOES NOT MAKE SENSE TO TAKE HOMES AWAY! ANOTHER CONCERN IS THE HEALTH IMPACT SOME ~~THAT~~ OF THESE ALTERNATIVES SUPPOSE - IT IS UNTHINKABLE TO REMOVE THE DIALYSIS CENTER AND TAKE SPACE FROM THE FIRE DEPARTMENT. IT WOULD ALSO, NEGATIVELY IMPACT THE QUALITY OF AIR FOR THE SURROUNDING COMMUNITY ESPECIALLY FOR THE RESIDENTS AND SCHOOLS. LAWS CAN BE ENFORCED OF THE TRUCKS →

TO CHANGE TO 2020 ~~2010~~ EMISSIONS WITHOUT ALL THE MESS CREATED BY THE 710 PROPOSED PLANS. CC-5-3

LASTLY, IT IS RIDICULOUS TO THINK THAT 90 DAYS IS ENOUGH TIME FOR RESIDENTS TO REVIEW SUCH A LARGE DOCUMENT WITHOUT ASSISTANCE. EVEN 120 DAYS DOES NOT SEEM ADEQUATE. CC-5-4

Mr. Ronald Kosinski
Caltrans District 7, Division of Environmental Planning
100 S. Main Street, MS 16A
Los Angeles, CA 90012

CC-5-1

Caltrans and Metro thank the commenter for their input. The commenter's concern regarding displacement of people as a result of the build alternatives is acknowledged and included in the project record. However, Caltrans, as lead agency under CEQA and NEPA (as assigned by the Federal Highway Administration [FHWA]), in cooperation with the Los Angeles County Metropolitan Transportation Authority (Metro), has identified Alternative 1 (No Build) as the Preferred Alternative. Therefore, there will be no residential and business relocations. Please refer to Section 1.1 of this appendix for further discussion on the identification of the Preferred Alternative.

CC-5-2

The commenter's opposition to the displacement of the dialysis center and acquisition of land from the fire station are acknowledged and included in the project record. As stated in Response to Comment CC-5-1, Alternative 1 (No Build) has been identified as the Preferred Alternative. Therefore, the DaVita Doctors Dialysis Center will not be displaced.

CC-5-3

The U.S. Environmental Protection Agency (USEPA), the California Air Resources Board (CARB), and the South Coast Air Quality Management District (SCAQMD) have the authority to enact regulations on emissions from vehicles operating in California. As stated in Section 4.2.4.1, of Chapter 4.0, California Environmental Quality Act Evaluation, of the RDEIR/SDEIS, Caltrans and Metro do not have authority to regulate vehicle emissions. However, as discussed in Section 1.2.2 in Chapter 1.0, Proposed Project, of the RDEIR/SDEIS, one of the purposes of the project is to improve air quality and public health. As discussed in Section 3.13, Air Quality, in the RDEIR/SDEIS, all build alternatives would generally improve air quality and reduce public health risk. Along the I-710 Corridor, air quality would be improved and public health risk would be reduced at most locations, but there are a few near-roadway locations where there would be an increase in certain emissions.

The build alternatives propose Measures AQ-2 and AQ-3 to reduce exposure to emissions at near-roadway locations. Should a build alternative be selected as the Preferred Alternative, Measure AQ-2 would provide for installation of air filtration systems for schools within 0.25 mile of I-710. Measure AQ-3 would provide for the installation of solid barriers and installation of vegetation where feasible (and where soundwalls are not proposed) to disperse pollution and reduce pollutant concentrations downwind. In addition, the build alternatives include programmatic components to help improve air quality and public health in the I-710 Corridor. As discussed in Section 2.3.2, Build Alternatives, in the Final EIR/EIS, the I-710 Clean Truck Program (referred to in the RDEIR/SDEIS as the I-710 Corridor Project Zero Emission/Near Zero Emission Truck Technology Deployment Program) is a programmatic component of the build alternatives.

This program would provide funding to individual owner-operators and privately owned truck fleets to subsidize the purchase of heavy-duty (Class 8) ZE/NZE trucks for use within the I-710 Corridor. However, since a build alternative has not been selected as the Preferred Alternative, this programmatic element will not be implemented by Caltrans as the lead agency under CEQA and NEPA and as the owner/operator of the I-710 freeway. Please refer to Section 1.3 of this appendix for additional discussion of ZE options.

CC-5-4

Please refer to Section 1.2 of this appendix for further information regarding the extension of the public comment period.

Organization:

Please leave comments in the comment box or mail to the address below by Monday, October 23, 2017:

Mr. Ronald Kosinski
Caltrans District 7, Division of Environmental Planning
100 S. Main Street, MS 16A
Los Angeles, CA 90012

I have the following comments on the Recirculated Draft Environmental Impact Report/Supplemental Draft Environmental Impact Statement (RDEIR/SDEIS) for the I-710 Corridor Project (please print and use additional sheets if necessary):

There was no consideration of the communities passing the 60 Fwy; although many of the residents there, send their children to school to the impacted areas!! We need at least 120 days to review the EIR/EIS. There needs to be an alternative that does not put zero-emmissions and housing displacement against each other!! CC-6-1 CC-6-2 CC-6-3

Metro Caltrans GATEWAY CITIES COUNCIL OF GOVERNMENTS 5 Port of LONG BEACH The Green Port THE PORT OF LOS ANGELES LA SCAG

This page intentionally left blank

CC-6-1

Caltrans and Metro thank the commenter for their input. The general project Study Area, as well as resource-specific study areas, were defined in accordance with Caltrans guidance and are intended to create a geographical context for the evaluation of environmental impacts. Because the project improvements associated with the build alternatives terminate south of the I-710/ SR-60 interchange, there would not be direct environmental impacts occurring to communities north of SR-60. However, some individual analyses, including the air quality analysis, do extend beyond the limits of the general Study Area map (please refer to the Air Quality/Health Risk Assessment maps included in Appendix Q of the Final EIR/EIS) in order to accurately capture the extent of potential impacts. In addition, schoolchildren that attend schools within the limits of the Study Area have been accounted for in the analysis of impacts to sensitive receptors and facilities, regardless of their residential address.

CC-6-2

Please refer to Section 1.2 in this appendix for further information regarding the extension of the public comment period.

CC-6-3

As discussed in further detail below, maximizing zero emission technology and minimizing displacements were both considered as part of the build alternatives.

As discussed in Section 2.3.2, Build Alternatives, in the Final EIR/EIS, the I-710 Clean Truck Program (referred to in the RDEIR/SDEIS as the I-710 Corridor Project Zero Emission/Near Zero Emission Truck Technology Deployment Program) is a programmatic component of the build alternatives. However, Caltrans, as lead agency under CEQA and NEPA (as assigned by the Federal Highway Administration [FHWA]), in cooperation with the Los Angeles County Metropolitan Transportation Authority (Metro), has identified Alternative 1 (No Build) as the Preferred Alternative. Since a build alternative has not been selected as the Preferred Alternative, programmatic elements such as the Zero Emission/Near Zero Emission Truck Technology Deployment Program (now known as the I-710 Clean Truck Program) will not be implemented by Caltrans as the lead agency under CEQA and NEPA and as the owner/operator of the I-710 freeway. Prior to selection of the No Build Alternative as the Preferred Alternative, the I-710 Clean Truck Program was being further defined to include a proposed governance structure, roles and responsibilities for program oversight, and provisions related to program enforceability (for more information, see Section 2.3.2.1 Common Features of the Build Alternatives and Appendix W of this Final EIR/EIS). Please refer to Section 1.1 of this appendix for further discussion on the identification of the Preferred Alternative.

Design refinements to the build alternatives to minimize acquisition of property and displacements have been ongoing since the start of the development of the build alternatives. While great effort has been made through the design review process to minimize right-of-way impacts to the greatest degree feasible, some relocations resulting from the build alternatives would be unavoidable in implementing 19 miles of freeway modernization. Please refer to Appendix T for more information on the design concepts evaluated in order to avoid displacements with the ZE freight corridor design concept. Because of the larger footprint that would be required to accommodate the ZE freight corridor, Alternative 7 would result in more right-of-way required and greater displacements than Alternative 5C. However, as stated above, Alternative 1 (No Build) was identified as the Preferred Alternative and therefore, no relocations will occur.

Lilia Servin
1144 Burger Ave.
Los Angeles, CA 90022

Translated comment:

I, Lilia Servin, do not agree with the Caltrans 710 freeway project because I've fought a lot for my house and to think that for this project I am going to be left without a house and now that I am old and won't have the possibility to have another house and it terrifies me to have to go to the street when there are already so many people there. I ask that you don't take away my house, you can send the boats to another port. CC-10-1

CC-10-1

Caltrans and Metro thank the commenter for their input. The commenter's concern regarding displacement and request that boats be sent to a different port are acknowledged and included in the project record. Caltrans and Metro do not control goods movement and do not have the authority to dictate alternative modes of goods transportation. However, Caltrans, as lead agency under CEQA and NEPA (as assigned by the Federal Highway Administration [FHWA]), in cooperation with the Los Angeles County Metropolitan Transportation Authority (Metro), has identified Alternative 1 (No Build) as the Preferred Alternative. Therefore, there will be no displacements. Please refer to Section 1.1 of this appendix for further discussion on the identification of the Preferred Alternative.

I have the following comments on the Recirculated Draft Environmental Impact Report/Supplemental Draft Environmental Impact Statement (RDEIR/SDEIS) for the I-710 Corridor Project (please print and use additional sheets if necessary):

Concerned about a few things: Bike lane & pedestrians? How do you plan on increasing the safety, will you increase the Lighting? on the bike path also? CC-13-1

• Also how Do you plan on zero emmisions from the trucks in the future? Are you going to offer incentives to company? tax write offs? CC-13-2

• What Do you Plan to do about the end of the 710? will extention stop going through Pasadena? CC-13-3

• With Hexavalent Chromium 6 in Paramount and in Compton an North Long Beach, What are your Plans on controling the air Pollution when you break up the Concreate? OR start your construction. CC-13-4

Metro Caltrans GATEWAY CITIES COUNCIL OF GOVERNMENTS 5 Port of LONG BEACH The Green Port THE PORT OF LOS ANGELES LA SCAG

This page intentionally left blank

CC-13-1

Caltrans and Metro thank the commenter for providing their input. The commenter's concern regarding safety and lighting of pedestrian and bicycle facilities is acknowledged and noted in the project record. As discussed in Chapter 2.0, Project Alternatives, the build alternatives would include widening of existing bridges and overcrossings to accommodate pedestrian and bicycle traffic, as well as construction of five pedestrian and bicycle-only bridges. Under the build alternatives, safety lighting would be provided on the modified and proposed pedestrian and bicycle facilities. However, Caltrans, as lead agency under CEQA and NEPA (as assigned by the Federal Highway Administration [FHWA]), in cooperation with the Los Angeles County Metropolitan Transportation Authority (Metro), has identified Alternative 1 (No Build) as the Preferred Alternative. Therefore, the pedestrian and improvements to pedestrian and bicycle facilities under the build alternatives will not be constructed. Please refer to Section 1.1 of this appendix for further discussion on the identification of the Preferred Alternative.

CC-13-2

As discussed in Section 2.3.2, Build Alternatives, in the Final EIR/EIS, the I-710 Clean Truck Program (referred to in the RDEIR/SDEIS as the I-710 Corridor Project Zero Emission/Near Zero Emission Truck Technology Deployment Program) is a programmatic component of the build alternatives. As stated in Response to Comment CC-13-1, Alternative 1 (No Build) has been selected as the Preferred Alternative. Since a build alternative has not been selected as the Preferred Alternative, programmatic elements such as the Zero Emission/Near Zero Emission Truck Technology Deployment Program (now known as the I-710 Clean Truck Program) will not be implemented by Caltrans as the lead agency under CEQA and NEPA and as the owner/operator of the I-710 freeway. Prior to selection of the No Build Alternative as the Preferred Alternative, the I-710 Clean Truck Program was being further defined to include a proposed governance structure, roles and responsibilities for program oversight, and provisions related to program enforceability (for more information, see Section 2.3.2.1, Common Features of the Build Alternatives, and Appendix W of this Final EIR/EIS).

CC-13-3

A Draft EIR/EIS was circulated for the SR-710 North Project in 2015, which studied five alternatives in depth, including transit and multimodal options as well as two variations on a freeway tunnel. After the receipt of substantial public comment, the Project Development Team identified the alternative that best addressed the purpose and need and the evaluation performance measures as the Single-Bore Freeway Tunnel with tolling and truck restrictions. However, in May 2017, the Metro Board of Directors unanimously voted to adopt the TSM/TDM Alternative as the locally preferred alternative for the SR-710 North Project and to direct those project funds to local operational improvements to address traffic congestion caused by the 4.5-mile gap in the freeway between Alhambra and Pasadena. The funds would be used to

implement improvements identified in the TSM/TDM Alternative studied in the Draft EIR/EIS including traffic signal upgrades and synchronization, local street and intersection improvements, improved connections to existing bus and rail service, and the promotion of rideshare options in the area. Additionally, remaining Measure R funds would be allocated to new improvement projects within the SR-710 North Project study area that would relieve traffic congestion directly related to the existing SR-710 gap in the transportation system. Caltrans identified the TSM/TDM Alternative as the Preferred Alternative in the Final EIR/EIS approved on November 26, 2018.

CC-13-4

As stated in Response to Comment CC-13-1, the No Build Alternative has been selected as the Preferred Alternative and therefore, no existing concrete will be broken up during construction activities.

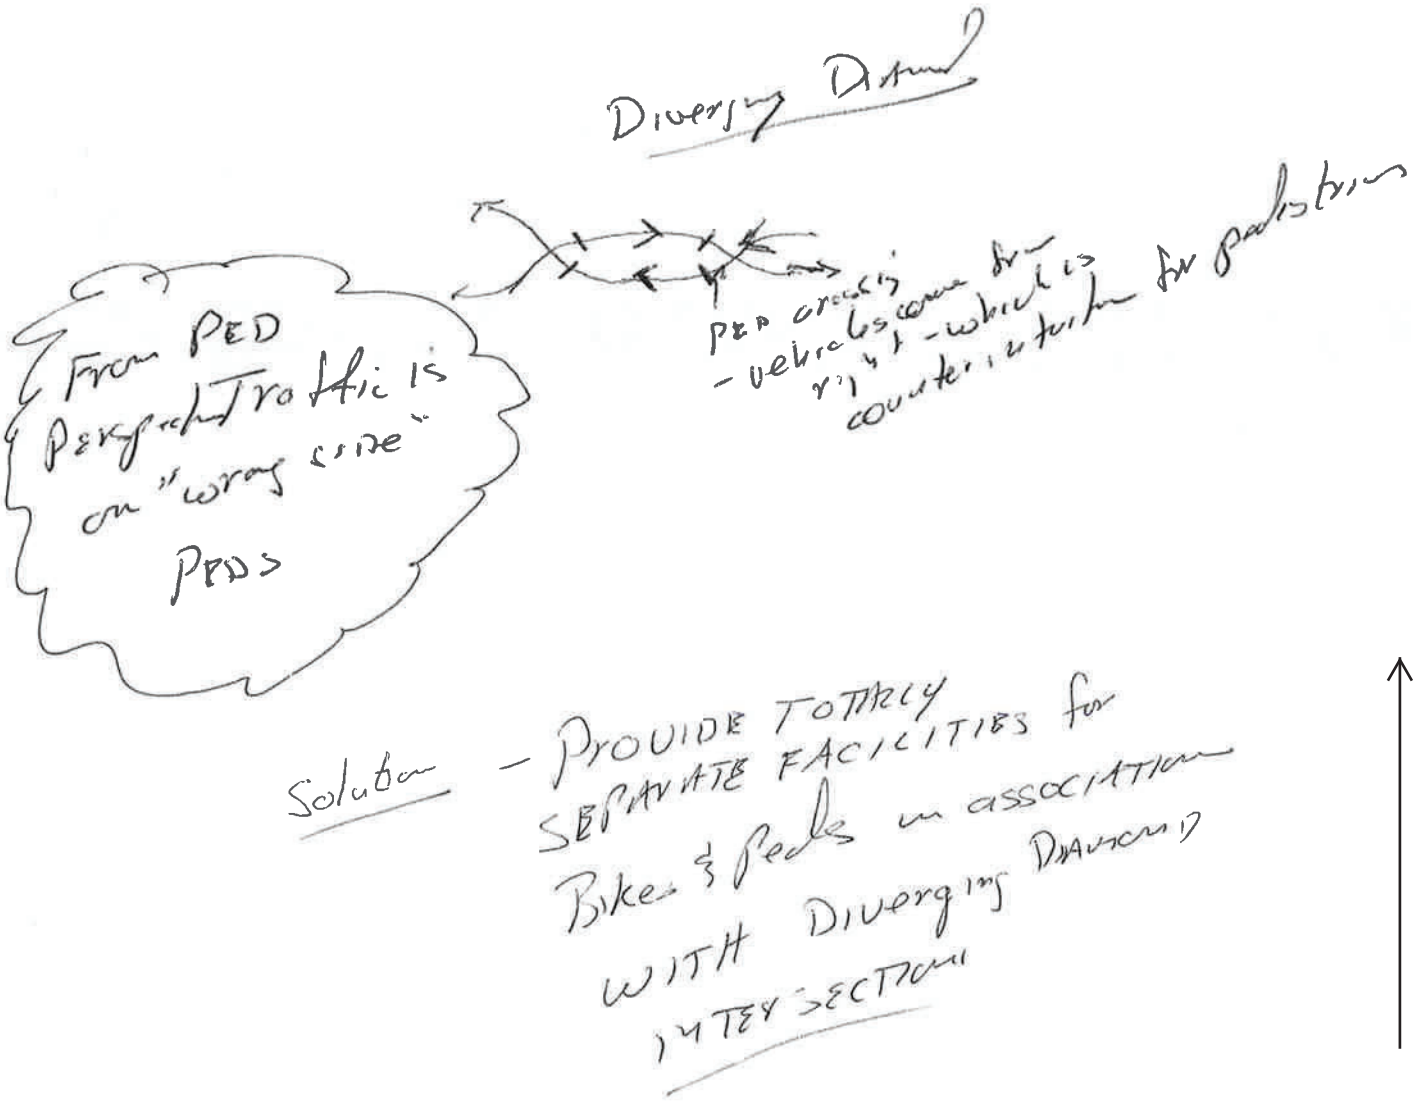
Organization: Bikeable Communities



Please leave comments in the comment box or mail to the address below by Monday, October 23, 2017:

Mr. Ronald Kosinski
Caltrans District 7, Division of Environmental Planning
100 S. Main Street, MS 16A
Los Angeles, CA 90012

I have the following comments on the Recirculated Draft Environmental Impact Report/Supplemental Draft Environmental Impact Statement (RDEIR/SDEIS) for the I-710 Corridor Project (please print and use additional sheets if necessary):

Diverging Diamond intersections are a disaster for Bikes & Pedestrians. THEY DO NOT make the intersections SAFER FOR your most vulnerable users. THEY DO NOT ELIMINATE THE HIGH-SPEED FREE RIGHTS which are so Dangerous for both Bikes & Peds. THEY encourage HIGHER SPEEDS - which is the leading cause of Injury & Death for Bicyclists & Pedestrians. For Pedestrians, traffic is coming from the right as you cross the street, which is totally counter intuitative for people use to vehicles driving on the right side

CC-14-1

CC-14-1

Mr. Ronald Kosinski
Caltrans District 7, Division of Environmental Planning
100 S. Main Street, MS 16A
Los Angeles, CA 90012

CC-14-1

As discussed in Section 3.5.1 of Section 3.5, Traffic and Transportation/Pedestrian and Bicycle Facilities, of the RDEIR/SDEIS, bicyclists and pedestrians were a consideration in the design of the build alternatives at all local interchanges, including diverging diamond interchange (DDI) configuration interchanges. Appropriate treatments were applied to balance vehicle, bicycle, and pedestrian use. Caltrans' *Complete Intersections:* A *Guide to Reconstructing Intersections and Interchanges for Bicyclists and Pedestrians* (2010) was used during the design process for the build alternatives, as was Caltrans' Design Information Bulletin (DIB) 90, "Diverging Diamond Interchange" and the *Highway Design Manual* (6th edition, December 2018). As discussed in Section 3.5.3.2, because sidewalks would be improved under the build alternatives, bikeways and trails would be maintained, and bicycle and pedestrian connectivity would be enhanced, the build alternatives would improve conditions for pedestrian and bicycle travel. In addition, as discussed in Section 2.3, with respect to "Complete Streets" improvements, the inclusion of pedestrian paths (sidewalks, curb ramps, and crosswalks) and sufficient outside shoulder width to accommodate Class II bikeways on local street crossings would be provided as part of local interchange modifications under the build alternatives. Since circulation of the RDEIR/SDEIS in 2017, Class IV bikeways have been integrated into the design of the build alternatives along some crossing arterials within the improvement limits for the build alternatives. A Class IV separated bikeway is for the exclusive use of bicycles, physically separated from motor traffic with a vertical feature. This Final EIR/EIS has been updated accordingly to reflect those additions.

As compared to existing conditions, DDI interchange designs would greatly reduce the number of unsignalized free right turns at the I-710 ramp termini. Between the two DDI intersections, only two right-turn movements would feature unsignalized pedestrian/bike crossings. The crosswalks at these locations were placed near the beginning of low-speed curves where vehicles would be required to be slow and visibility would be the greatest. Pedestrians would cross a single lane, with traffic approaching from one direction. Buffered bike lanes were featured between these right-turn lanes and through travel lanes consistent with treatments identified in Caltrans' Complete Intersections Guide, a best practice employed by engineers for right-turn lanes. Vehicle speeds would be significantly lower on local streets when passing through the ramp intersections of a DDI than through other interchange types.

Challenges to pedestrian channelization and wayfinding are addressed in the Federal Highway Administration's (FHWA) *Diverging Diamond Interchange Informational Guide* (Infoguide) (August 2014), which offers tested solutions implemented by various agencies across the country based on the unique requirements and constraints posed by each interchange site location. In regard to pedestrian expectations for approaching traffic, this guide suggests special pedestrian signage and/or pavement markings at the push-button, as well as a special speech message provided by the Accessible Pedestrian Signal (APS) devices for pedestrians with vision disabilities, would be provided at the I-710 crossing locations under the build alternatives. However, Caltrans, as lead

agency under CEQA and NEPA (as assigned by the Federal Highway Administration [FHWA]), in cooperation with the Los Angeles County Metropolitan Transportation Authority (Metro), has identified Alternative 1 (No Build) as the Preferred Alternative. Therefore, improvements to these interchanges and pedestrian and bicycle facilities will not be incorporated. Please refer to Section 1.1 of this appendix for further discussion on the identification of the Preferred Alternative.

Organization: East Yards Communities for Environmental Justice

Please leave comments in the comment box or mail to the address below by Monday, October 23, 2017:

Mr. Ronald Kosinski
Caltrans District 7, Division of Environmental Planning
100 S. Main Street, MS 16A
Los Angeles, CA 90012

I have the following comments on the Recirculated Draft Environmental Impact Report/Supplemental Draft Environmental Impact Statement (RDEIR/SDEIS) for the I-710 Corridor Project (please print and use additional sheets if necessary):

The I-710 Corridor Project should prioritize local hire to benefit people who live along the I-710, no displacement to keep people in their homes, and pushing for zero emissions technology to reduce air pollution along the freeway. Ultimately, we are asking representatives to stand with communities and request that an extension to the Draft Environmental Impact Report (DEIR) comment period to 120 days closing on Nov 21, 2017. CC-15-1 CC-15-2 CC-15-3 CC-15-4

This page intentionally left blank

CC-15-1

Caltrans and Metro thank the commenter for their input. Caltrans, as lead agency under CEQA and NEPA (as assigned by the Federal Highway Administration [FHWA]), in cooperation with the Los Angeles County Metropolitan Transportation Authority (Metro), has identified Alternative 1 (No Build) as the Preferred Alternative. Therefore, no construction will occur, and local hire programs will be unnecessary. Please refer to Section 1.1 of this appendix for further discussion on the identification of the Preferred Alternative.

CC-15-2

The commenter's concern regarding displacement of people as a result of the build alternatives is acknowledged and included in the project record. However, as stated in Response to Comment CC-15-1, the No Build Alternative has been selected as the Preferred Alternative. Therefore, residential and business relocations will not occur.

CC-15-3

The commenter's support of a ZE corridor is acknowledged and included in the project record. Please refer to Section 1.1 of this appendix for a discussion on the identification of the Preferred Alternative (No Build) and to Section 1.3 for additional discussion of ZE options.

CC-15-4

Please refer to Section 1.2 of this appendix regarding the extension of the public comment period.

Mr. Ronald Kosinski
Caltrans District 7, Division of Environmental Planning
100 S. Main Street, MS 16A
Los Angeles, CA 90012

I have the following comments on the Recirculated Draft Environmental Impact Report/Supplemental Draft Environmental Impact Statement (RDEIR/SDEIS) for the I-710 Corridor Project (please print and use additional sheets if necessary):

I understand why you all may not care about the community's health because you probably don't care about your own health. These emmissions will impact you too. No amount of money will save you. Building an expansion of the 710 WILL MURDER FAMILIES. It may be slow and indirect, but it's still murder. You may ~~not~~ only care about the money you make over murder, but just remember that that money was built on the backs of black & brown bodies. You didn't ~~earn~~ earn any of it. CC-16-1

Metro Caltrans GATEWAY CITIES COUNCIL OF GOVERNMENTS 5 Port of LONG BEACH The Green Port THE PORT OF LOS ANGELES LA SCAG

This page intentionally left blank

CC-16-1

Caltrans and Metro thank the commenter for their input. As discussed in Section 1.2.2 in Chapter 1.0, Proposed Project, of the RDEIR/SDEIS, one of the purposes of the project is to improve air quality and public health. As discussed in Section 3.13, Air Quality, and Section 4.2.4.1 of Chapter 4.0, California Environmental Quality Act Evaluation, in the RDEIR/SDEIS, all build alternatives would generally improve air quality and reduce public health risk. Along the I-710 Corridor, air quality would be improved and public health risk would be reduced at most locations, but there would be a few near-roadway locations where there would be an increase in certain emissions but no increase in cancer risk compared to the 2012 Baseline. When compared to the 2035 No Build Alternative, both build alternatives would reduce cancer risk at most locations; however, a small increase in cancer risk would occur at some locations within 100 meters of I-710. For Alternative 5C, the maximum increase in risk would be approximately three in one million. The primary location of the increased risk for Alternative 5C would occur along a small portion of I-710 just south of SR-60. For Alternative 7, the increase in risk would be less than one in one million.

The build alternatives propose Measures AQ-2 and AQ-3 to reduce exposure to emissions at near-roadway locations. Should a build alternative be selected as the Preferred Alternative, Measure AQ-2 would provide for installation of the air filtration systems for schools within 0.25 mile of I-710. Measure AQ-3 would require installation of solid barriers and installation of vegetation where soundwalls are not proposed to disperse pollution and reduce pollutant concentrations downwind. In addition, the build alternatives include programmatic components to help improve air quality and public health in the I-710 Corridor. The I-710 Corridor Community Health Benefit Program is a programmatic component of the build alternatives and would take the form of a grant program structured to provide corridor communities the opportunity to implement projects or outreach activities that would improve air quality and public health related to I-710 travel and goods movement. However, Caltrans, as lead agency under CEQA and NEPA (as assigned by the Federal Highway Administration [FHWA]), in cooperation with the Los Angeles County Metropolitan Transportation Authority (Metro), has identified Alternative 1 (No Build) as the Preferred Alternative. Since a build alternative has not been selected as the Preferred Alternative, this programmatic element will not be implemented by Caltrans as the lead agency under CEQA and NEPA and as the owner/operator of the I-710 freeway. Please refer to Section 1.1 of this appendix for further discussion on the identification of the Preferred Alternative and Section 1.10 of this appendix for more details regarding the Community Health Benefit Program.

Mr. Ronald Kosinski
Caltrans District 7, Division of Environmental Planning
100 S. Main Street, MS 16A
Los Angeles, CA 90012

Can you apply intelligent transportation principles to the isolated truck lanes. CC-17-1

must add landscaping to capture particulates CC-17-2

I have the following comments on the Recirculated Draft Environmental Impact Report/Supplemental Draft Environmental Impact Statement (RDEIR/SDEIS) for the I-710 Corridor Project (please print and use additional sheets if necessary):

Appreciate bike lanes on Del Amo to Blue Line station and under the I-710 freeway. Equestrians access must also be considered. CC-17-3

construction cannot be anywhere the Dominguez Gap nor DeForest Wetlands CC-17-4

dramatic increase in trips/day peak traffic.
Concerned about planning for very high density housing the city of Long Beach is promoting. Traffic on major corridor Del Amo is already excessive. Planning for 4 & 5 story residential buildings nearly will cause / add to extremely high traffic CC-17-5

This page intentionally left blank

CC-17-1

Caltrans and Metro thank the commenter for their input. However, Caltrans, as lead agency under CEQA and NEPA (as assigned by the Federal Highway Administration [FHWA]), in cooperation with the Los Angeles County Metropolitan Transportation Authority (Metro), has identified Alternative 1 (No Build) as the Preferred Alternative. Therefore, the TSM/TDM elements included as part of the build alternatives will not be implemented. Please refer to Section 1.1 of this appendix for further discussion on the identification of the Preferred Alternative.

CC-17-2

As discussed in Section 2.3.2.1 of this Final EIR/EIS, should a build alternative be selected as the Preferred Alternative, landscaping would be provided where necessary within the I-710 Corridor to provide aesthetic treatment, replacement planting, or mitigation planting. Features included as part of the build alternatives would include drought-tolerant and native landscaping, plants that would change colors with the seasons, and the use of vines where space is limited. In an effort to surpass the minimum tree removal-to-replacement ratio, the number of new trees, shrubs and foliage within State right-of-way would be maximized, and would be drought-resistant, and would have superior biosequestration and biofiltration capabilities.

With regard to landscaping for purposes of reducing exposure to particulate matter, the build alternatives propose Measure AQ-3 which, should a build alternative be selected as the Preferred Alternative, would require installation of solid barriers and installation of vegetation where feasible (and where soundwalls are not proposed) to disperse pollution and reduce pollutant concentrations downwind.

Although landscaping would serve to capture some particulates, the build alternatives would also include stormwater best management practices (BMPs) that would be designed specifically for stormwater treatment, including removal of particulates. As discussed in Section 3.9, Water Quality and Storm Water Runoff, proposed treatment BMPs as a part of the build alternatives would include biofiltration swales, media filters, infiltration/detention basin, wet basins, and gross solids removal devices. However, as stated in Response to Comment CC-17-1, the No Build Alternative has been selected as the Preferred Alternative and therefore, Measure AQ-3 and the referenced BMPs will not be implemented.

CC-17-3

The commenter's support of a bicycle lane on Del Amo Blvd. to the Blue Line Station and under I-710 is acknowledged and included in the project record. As discussed in Chapter 2.0, Project Alternatives, the build alternatives would include the widening of existing bridges and overcrossings, including at Del Amo Blvd., to accommodate pedestrian and bicycle traffic. Improvements under the build alternatives would include Americans with Disabilities Act of 1990

(ADA)-compliant sidewalks and sufficient room for bicycle lanes. In addition, the build alternatives would include five pedestrian and bicycle-only bridges. However, since the No Build Alternative has been selected as the Preferred Alternative, bicycle and pedestrian facilities will not be provided as part of the I-710 Corridor Project. Please refer to Responses to Comments L-26-3, L-26-16, L-26-20, and L-26-22 for a discussion of revisions to the RDEIR/SDEIS to incorporate discussion of equestrian facilities.

CC-17-4

The No Build Alternative (the Preferred Alternative) would not result in any permanent impacts within the Joint Dominguez Gap and Deforest Treatment Wetlands Project areas.

CC-17-5

Caltrans and Metro do not have the authority to dictate the types of residential development within the City of Long Beach. The City of Long Beach is responsible for adopting a General Plan Land Use Element and establishing zoning regulations that dictate density standards and approval of residential development within the City of Long Beach.

As discussed in Section 3.5.2.2, Existing and Future No Build Traffic Conditions, in Section 3.5, Traffic And Transportation/Pedestrian And Bicycle Facilities, of the RDEIR/SDEIS, segments of Del Amo Blvd. between Santa Fe Ave. and I-710 and between Cherry Ave. and Paramount Blvd. are arterial roadway segments that operate with a volume-to-capacity (V/C) ratio of 0.90 or greater (indicating level of service [LOS] E or F) in the 2012/2013 existing condition. As shown in Figure 3.5-8 in Section 3.5 of the RDEIR/SDEIS, Alternative 5C would impact the Del Amo Blvd./Santa Fe Ave., Del Amo Blvd./Long Beach Blvd., Del Amo Blvd./Atlantic Ave. Intersections (Intersections 34, 35, and 36). Alternative 7 would impact the Del Amo Blvd./Santa Fe Ave. and Del Amo Blvd./Long Beach Blvd. Intersections (Intersections 34 and 35). As detailed in Table 3.5-23 and Measure TR-1 in Section 3.5 of the RDEIR/SDEIS, the build alternatives propose improvements at these locations to mitigate for impacts resulting from the build alternatives at these intersections along Del Amo Blvd. Should a build alternative be selected as the Preferred Alternative, Measure TR-1 would improve intersection operations and delay to a level equivalent to, or better than, what would occur under the No Build Alternative at Study Area intersections impacted by the build alternatives. However, since the No Build Alternative has been selected as the Preferred Alternative, Measure TR-1 will not be implemented.

Each residential project within the City of Long Beach would be required to undergo environmental review and mitigate for traffic impacts, including potential impacts to Del Amo Blvd. Caltrans and Metro are not responsible to mitigate for traffic impacts to the arterial roadway system from residential development within the City of Long Beach.

Please leave comments in the comment box or mail to the address below by Monday, October 23, 2017:

Mr. Ronald Kosinski
Caltrans District 7, Division of Environmental Planning
100 S. Main Street, MS 16A
Los Angeles, CA 90012

I have the following comments on the Recirculated Draft Environmental Impact Report/Supplemental Draft Environmental Impact Statement (RDEIR/SDEIS) for the I-710 Corridor Project (please print and use additional sheets if necessary):

When Cesar Chavez is temporarily closed, how will the District be notified?
Will you work with us to provide an alternative recreation space for the students?

CC-20-1

Can the construction at the park be scheduled during the summer months?

This page intentionally left blank

CC-20-1

Caltrans and Metro thank the commenter for their input. The build alternatives propose Measure PR-13 in Section 3.1.3.3 of Section 3.1, Land Use, of the Final EIR/EIS and Section 5.1 of the Draft Section 4(f) Evaluation which, should a build alternative be selected as the Preferred Alternative, would include details about notification of the City of Long Beach Parks, Recreation and Marine Department regarding temporary closures in Cesar E. Chavez Park. Measure PR-13 has been revised to require notification of the LBUSD regarding park closures, should a build alternative be selected as the Preferred Alternative.

The build alternatives also propose Measure PR-12 in Section 3.1.3.3 of the RDEIR/SDEIS and Section 5.1 of the Draft Section 4(f) Evaluation which, should a build alternative be selected as the Preferred Alternative, would include details about coordination with the City of Long Beach regarding the replacement of the basketball courts in Cesar E. Chavez Park. Measure PR-12 has been revised to require coordination with LBUSD and construction during the summer months, as feasible, should a build alternative be selected as the Preferred Alternative.

A detailed construction schedule and time frame/duration for construction activities in Cesar E. Chavez Park had not been developed at the time the RDEIR/SDEIS was circulated for public review. However, Caltrans, as lead agency under CEQA and NEPA (as assigned by the Federal Highway Administration [FHWA]), in cooperation with the Los Angeles County Metropolitan Transportation Authority (Metro), has identified Alternative 1 (No Build) as the Preferred Alternative. Therefore, there will be no impacts to parks and recreational facilities in the City of Long Beach and Measures PR-12 and PR-13 will not be implemented. Please refer to Section 1.1 of this appendix for further discussion on the identification of the Preferred Alternative.

Los Angeles, CA 90012

I have the following comments on the Recirculated Draft Environmental Impact Report/Supplemental Draft Environmental Impact Statement (RDEIR/SDEIS) for the I-710 Corridor Project (please print and use additional sheets if necessary):

As stated in the document, there is a Joint-Use Agreement between the City of LB & LBUSD. The elementary school kids use the park for recess during the day.

The District's concern is regarding the design of the improvements along the park property because it needs to maintain public & student safety.

CC-21-1

What will the design be? block wall? wrought iron? chain link? KEEP SAFETY IN MIND

Metro Caltrans GATEWAY CITIES Port of LONG BEACH THE PORT OF LOS ANGELES SCAG

This page intentionally left blank

CC-21-1

Caltrans and Metro thank the commenter for their input. Caltrans requires that all projects incorporate current safety standards into project design. Therefore, should a build alternative be selected as the Preferred Alternative, all improvements along the I-710 Corridor, including those improvements at Cesar E. Chavez Park, would be constructed up to current safety standards to maintain public and student safety. The design details (e.g., block wall, wrought iron, or chain-link design options) had not been determined at the time the RDEIR/SDEIS was circulated for public review. However, Caltrans, as lead agency under CEQA and NEPA (as assigned by the Federal Highway Administration [FHWA]), in cooperation with the Los Angeles County Metropolitan Transportation Authority (Metro), has identified Alternative 1 (No Build) as the Preferred Alternative. Therefore, there will be no impacts to Cesar E. Chavez Park. Please refer to Section 1.1 of this appendix for further discussion on the identification of the Preferred Alternative.

Please leave comments in the comment box or mail to the address below by Monday, October 23, 2017:

Mr. Ronald Kosinski
Caltrans District 7, Division of Environmental Planning
100 S. Main Street, MS 16A
Los Angeles, CA 90012

I have the following comments on the Recirculated Draft Environmental Impact Report/Supplemental Draft Environmental Impact Statement (RDEIR/SDEIS) for the I-710 Corridor Project (please print and use additional sheets if necessary):

Separate bike and ped facilities at Hill and Spring will help but are not sufficient. Bicyclists and pedestrians will not...and should not be expected to go miles out of their way to be able to safely cross a street.

We propose: 1. Grade separated facilities at Anaheim, PCH and Del Amo

2. PCH: Complete streets (class 4) connections on PCH extending between Pacific Avenue on the East and Cabrillo High School on the west. CC-22-1

3. Anaheim: Complete streets (class 4) connections from Daisey Avenue to the east to 9th Street on the West.

4. Del Amo: Complete streets (class 4) connection to LA River on the east and Metro Blue Line on the west.

This page intentionally left blank

CC-22-1

As discussed in Section 3.5.3.1 of Section 3.5, Traffic and Transportation/Pedestrian and Bicycle Facilities, of the RDEIR/SDEIS, the build alternatives would provide facilities for bicycles and pedestrians in locations where local roadways would be affected by the construction of the build alternatives. Should a build alternative be selected as the Preferred Alternative, these facilities would be designed consistent with the local General Plan Circulation Element and would comply with ADA requirements. The build alternatives would improve pedestrian facilities (sidewalks) by replacing the old ones that would be removed as part of the build alternatives. Bike travel would also be improved as a result of the build alternatives by providing new pavement on the arterial bridges that would be replaced over I-710 and the Los Angeles River. Class I Bikeways within the Study Area would be maintained with the proposed build alternatives.

The addition of the pedestrian and bicycle-only overcrossings (five additional structures under Alternative 5C, and three under Alternative 7), proposed at locations in which gaps in freeway crossing opportunities have been identified, would also improve pedestrian and bicycle travel within the I-710 Corridor by introducing new connectivity points traversing the I-710 and the Los Angeles River (and in the case of the Pacific Place overcrossing, the I-405 and Metro Blue Line).

Feasible grade-separated bike and pedestrian facilities are not practical or desirable at Anaheim St., Pacific Coast Hwy. (PCH), or Del Amo Blvd. primarily due to the adjacent right-of-way impacts that would occur. In response to the City of Long Beach's General Plan update, Class IV bikeways have been incorporated into local street designs of the build alternatives where possible, along PCH, Anaheim St., and Del Amo Blvd. in the vicinity of the freeway interchanges. A Class IV separated bikeway is for the exclusive use of bicycles, physically separated from motor traffic with a vertical feature. This Final EIR/EIS has been revised to indicate the locations where Class IV bikeways have been incorporated into the design of the build alternatives. However, Caltrans, as lead agency under CEQA and NEPA (as assigned by the Federal Highway Administration [FHWA]), in cooperation with the Los Angeles County Metropolitan Transportation Authority (Metro), has identified Alternative 1 (No Build) as the Preferred Alternative. Therefore, improvements to and/or new bicycle/pedestrian facilities will not be improved and/or constructed. Please refer to Section 1.1 of this appendix for further discussion on the identification of the Preferred Alternative.

Mr. Ronald Kosinski
Caltrans District 7, Division of Environmental Planning
100 S. Main Street, MS 16A
Los Angeles, CA 90012

I have the following comments on the Recirculated Draft Environmental Impact Report/Supplemental Draft Environmental Impact Statement (RDEIR/SDEIS) for the I-710 Corridor Project (please print and use additional sheets if necessary):

Install pollution eating (algae moss) and green up the sound walls on the 710 Freeway.

The algae will filter pollution from 710 FWY

Use pollution eating screening advertisements Billboards on all 710 Ads, make the Air purifying billboards (scrubing pollution) mandatory.

CC-26-1

Metro Caltrans GATEWAY CITIES 5 Port of LONG BEACH The Green Port THE PORT OF LOS ANGELES LA SCAG

CC-26-1

Caltrans and Metro thank the commenter for their input. Caltrans, as lead agency under CEQA and NEPA (as assigned by the Federal Highway Administration [FHWA]), in cooperation with the Los Angeles County Metropolitan Transportation Authority (Metro), has identified Alternative 1 (No Build) as the Preferred Alternative and is discussed in more detail in Section 1.1 of this appendix. Therefore, there will be no need to install algae on soundwalls or provide air purifying billboards to filter pollution from the build alternatives.

Los Angeles, CA 90012

I have the following comments on the Recirculated Draft Environmental Impact Report/Supplemental Draft Environmental Impact Statement (RDEIR/SDEIS) for the I-710 Corridor Project (please print and use additional sheets if necessary):

We should be focusing on making the Gateway Cities safer and more to walk. This project works against those goals by further entrenching car only planning into Southern California CC-28-1

Also, this project works against California's Greenhouse Gas Reduction Goals by ~~[illegible]~~ encouraging additional vehicle travel through induced demand. CC-28-2

Finally the money spent on this project would be better spent on increasing the funding for public transit and ~~Rail~~ Goods movement via Rail. CC-28-3

Metro Caltrans GATEWAY CITIES 5 Port of LONG BEACH The Green Port THE PORT OF LOS ANGELES LA SCAG

This page intentionally left blank

CC-28-1

Caltrans and Metro thank the commenter for their input. The build alternatives would include improvements to improve pedestrian safety and mobility. As discussed in Section 2.3.2.1, Project Alternatives, the build alternatives would include widening of existing bridges and overcrossings to accommodate pedestrian and bicycle traffic. In addition, five pedestrian and bicycle-only bridges are proposed for Alternative 5C and three pedestrian and bicycle-only bridges are proposed for Alternative 7. However, Caltrans, as lead agency under CEQA and NEPA (as assigned by the Federal Highway Administration [FHWA]), in cooperation with the Los Angeles County Metropolitan Transportation Authority (Metro), has identified Alternative 1 (No Build) as the Preferred Alternative. Therefore, the improvements and/or new construction of pedestrian and bicycle-only bridges will not be constructed. Please refer to Section 1.1 of this appendix for further discussion on the identification of the Preferred Alternative.

CC-28-2

The issue of induced demand is very complex, involving various travel behavior responses, residential and business location decisions, and other factors that influence regional population and economic growth. While some of these responses may represent new trips, much of the observed increase in traffic comes from trips that were already being made before the increase in highway capacity, or reflect predictable behavior that is accounted for in travel demand forecasts. Accordingly, Caltrans' guidance on this topic of induced demand maintains that each project should be evaluated on a case-by-case basis.

"Induced travel" is characterized as the additional demand for travel that occurs as a result of a decrease in the generalized cost of travel, including both travel-time and out-of-pocket costs. I-710 is part of a highly congested metropolitan roadway network and is located within an urbanized area that is essentially built out. Given the high levels of congestion in the peak periods, the I-710 travel demand forecast model is particularly sensitive to changes in travel times. The proposed improvements included in the build alternatives would improve speeds and would reduce travel times on I-710, which would in turn attract more traffic to the facility relative to the no build condition. The predicted shifts in traffic were accounted for in the analysis presented in Section 3.5, Traffic and Transportation/Pedestrian and Bicycle Facilities, of the RDEIR/SDEIS for both Alternatives 5C and 7. Effects related to greenhouse gas emissions of the build alternatives have been updated in Section 4.4.3, of Chapter 4.0, California Environmental Quality Act Evaluation, in this Final EIR/EIS.

CC-28-3

A programmatic component of both build alternatives would substantially increase transit service on all Metro Rail and Rapid routes and local bus routes in the Study Area, as well as create three new high-frequency Express Bus and Rapid transit routes serving the corridor. Please refer to

Section 2.3.2.1 of this Final EIR/EIS for further details. However, as stated in Response to Comment CC-28-1, the No Build Alternative has been selected as the Preferred Alternative and therefore, the transit services proposed as part of the build alternatives will not be implemented.

Mr. Ronald Kosinski
Caltrans District 7, Division of Environmental Planning
100 S. Main Street, MS 16A
Los Angeles, CA 90012

I have the following comments on the Recirculated Draft Environmental Impact Report/Supplemental Draft Environmental Impact Statement (RDEIR/SDEIS) for the I-710 Corridor Project (please print and use additional sheets if necessary):

FREEWAY WIDENING HAS NEVER REDUCED CONGESTION OR POLLUTION LEVELS. HAVING ALTERNATIVE PLANS THAT DO NOT GUARANTEE POLICY CHANGES THAT MANDATE ZERO EMISSIONS - WILL NOT BE SUPPORTED BY THE COMMUNITY. OTHER MODES OF GOODS TRANSPORTATION SHOULD BE PROPOSED. CC-30-1

IN ADDITION, THE CITY OF LONG BEACH HAS PASSED LAND USE POLICY THAT INCREASES DENSITY. I DID NOT SEE THIS REFLECTED IN THE EIR. ALSO, THE 2028 OLYMPICS WILL ALSO INCREASE ADVERSE IMPACTS AND THIS SHOULD BE STUDIED. CC-30-2

Metro · Caltrans · GATEWAY CITIES · 5 · Port of LONG BEACH The Green Port · THE PORT OF LOS ANGELES · SCAG

I ALSO WOULD LIKE A 120 DAY EXTENSION.

CC-30-3

Mr. Ronald Kosinski
Caltrans District 7, Division of Environmental Planning
100 S. Main Street, MS 16A
Los Angeles, CA 90012

CC-30-1

Caltrans and Metro thank the commenter for their input. As discussed in Section 1.2.2 in Chapter 1.0, Proposed Project, of the RDEIR/SDEIS, two purposes of the project are to improve air quality and public health and accommodate projected traffic volumes. As discussed in Section 5.5, Traffic and Transportation/Pedestrian and Bicycle Facilities, the build alternatives would improve traffic operations along the I-710 Corridor. In addition, the build alternatives propose Measure TR-1 which would provide for intersection and roadway improvements to improve intersection operations and delay to a level equivalent to, or better than, what would occur under the No Build Alternative at Study Area intersections impacted by the build alternatives.

In addition, the build alternatives include programmatic components that would help improve traffic conditions on the arterial streets in the I-710 Study Area. As discussed in Section 2.3.2.1 in the RDEIR/SDEIS, the I-710 TSM/TDM/Congestion Relief Program would provide funding for traffic signal upgrades and coordination, safety improvements, traffic-calming measures, and intersection improvements on the arterial street system in the Study Area. The I-710 Corridor Project ITS/TSM/Congestion Relief Program intends to help address the I-710 Corridor Project goals of improving traffic safety, accommodating projected traffic volumes, and addressing increased traffic volumes resulting from projected growth in population, employment, and economic activities related to goods movement. This programmatic component of the build alternatives would provide funding to local governments to implement intersection projects within the I-710 Corridor Project Study Area to improve operations at congested intersection locations on the local roadway network. However, Caltrans, as lead agency under CEQA and NEPA (as assigned by the Federal Highway Administration [FHWA]), in cooperation with the Los Angeles County Metropolitan Transportation Authority (Metro), has identified Alternative 1 (No Build) as the Preferred Alternative. Since a build alternative has not been selected as the Preferred Alternative, this programmatic element will not be implemented by Caltrans as the lead agency under CEQA and NEPA and as the owner/operator of the I-710 freeway. Please refer to Section 1.1 of this appendix for further discussion on the identification of the Preferred Alternative.

As discussed in Section 3.13, Air Quality, in the RDEIR/SDEIS, all build alternatives would generally improve air quality and reduce public health risk. Along the I-710 Corridor, air quality would be improved and public health risk would be reduced at most locations, but there would be a few near-roadway locations where there would be an increase in certain emissions resulting from the build alternatives.

The build alternatives propose Measures AQ-2 and AQ-3 to reduce exposure to emissions at near-roadway locations. Should a build alternative be selected as the Preferred Alternative, Measure AQ-2 would provide for installation of air filtration systems for schools within 0.25 mile of I-710. Measure AQ-3 would require installation of solid barriers and installation of vegetation where feasible (and where soundwalls are not proposed) to disperse pollution and reduce

pollutant concentrations downwind. In addition, the build alternatives include programmatic components that would help improve air quality and public health in the I-710 Corridor. As discussed in Section 2.3.2, Build Alternatives, in the Final EIR/EIS, the I-710 Clean Truck Program (referred to in the RDEIR/SDEIS as the I-710 Corridor Project Zero Emission/Near Zero Emission Truck Technology Deployment Program) is a programmatic component of the build alternatives. This program would provide funding to individual owner-operators and privately owned truck fleets to subsidize the purchase of heavy-duty (Class 8) ZE/NZE trucks for use within the I-710 Corridor. However, as stated above, the No Build Alternative has been selected as the Preferred Alternative. Since a build alternative has not been selected as the Preferred Alternative, programmatic elements such as the Zero Emission/Near Zero Emission Truck Technology Deployment Program (now known as the I-710 Clean Truck Program) will not be implemented by Caltrans as the lead agency under CEQA and NEPA and as the owner/operator of the I-710 freeway. Prior to selection of the No Build Alternative as the Preferred Alternative, the I-710 Clean Truck Program was being further defined to include a proposed governance structure, roles and responsibilities for program oversight, and provisions related to program enforceability (for more information, see Section 2.3.2.1 Common Features of the Build Alternatives and Appendix W of this Final EIR/EIS).

The commenter’s opposition to plans that do not guarantee policy changes that mandate zero emissions is acknowledged and noted in the public record. Please refer to Section 1.3 of this appendix for additional discussion of ZE options.

Caltrans and Metro do not control goods movement and do not have authority to dictate alternative modes of goods transportation.

CC-30-2

This comment requests that Section 3.25, Cumulative Impacts, of the RDEIR/SDEIS be revised to reflect potential impacts related to recent changes to the City of Long Beach's land use policy that would allow increased density and the Los Angeles 2028 Summer Olympic Games. It is unclear which land use policy the commenter is referring to in this comment; however, the City of Long Beach is currently in the process of updating the Land Use and Urban Design Elements of its General Plan to increase density in certain parts of Long Beach. A Draft EIR related to the Long Beach General Plan Update was circulated for public review in Fall 2016. In February 2017, the Long Beach City Council directed that the Draft Land Use and Urban Design Elements be updated to consider input from the City Council and community. Given that the Draft Land Use and Urban Design Elements were being updated when the RDEIR/SDEIS was being prepared, limited information regarding the City of Long Beach's General Plan Update was available on which Caltrans and Metro could rely for the cumulative impacts analysis. State CEQA Guidelines Section 15187(d) encourages lead agencies to avoid engaging in speculation or conjecture when conducting environmental analyses. Based on the fact that the Draft Land Use and Urban Design

Elements were being refined when the RDEIR/SDEIS was being prepared, Caltrans and Metro elected to forgo including the Long Beach General Plan Update in the cumulative impacts analysis.

Some of the major transportation projects that are proposed to be completed prior to the Los Angeles 2028 Summer Olympics were already included in the cumulative analysis. These projects include the Crenshaw - LAX Transit Corridor (T-56), the Westside Purple Line Subway Extension (T-58), the West Santa Ana Branch right-of-way Corridor (Orange County Line to Union Station) (T-77), and the Regional Connector Transit Corridor Project (T-82). The cumulative analysis reflects the information that was available when the RDEIR/SDEIS was being prepared.

CC-30-3

Please refer to Section 1.2 of this appendix for more information regarding the comment period.

I have the following comments on the Recirculated Draft Environmental Impact Report/Supplemental Draft Environmental Impact Statement (RDEIR/SDEIS) for the I-710 Corridor Project (please print and use additional sheets if necessary):

I urge you to stop gentrification!! Rents are getting very high! Low income families are the most impacted!

CC-31-1

Metro Caltrans GATEWAY CITIES 5 Port of LONG BEACH The Green Port THE PORT OF LOS ANGELES LA SCAG

This page intentionally left blank

CC-31-1

Caltrans and Metro thank the commenter for their input. Caltrans is sympathetic to the economic realities facing the residents of the I-710 Corridor, as well as southern California in general, particularly low-income residents and renters. Caltrans has a comprehensive relocation process and the benefits afforded to displaced persons under the Uniform Act. Caltrans' goal when acquiring real property is to make impacted persons "whole" again and ideally would relocate displaced persons within their current neighborhood whenever possible. However, Caltrans, as lead agency under CEQA and NEPA (as assigned by the Federal Highway Administration [FHWA]), in cooperation with the Los Angeles County Metropolitan Transportation Authority (Metro), has identified Alternative 1 (No Build) as the Preferred Alternative. Therefore, relocations will not be necessary. Please refer to Section 1.1 of this appendix for further discussion on the identification of the Preferred Alternative. It is important to note that gentrification is a complex phenomenon related to politics, urban planning, economics, and social change, and should be addressed within those contexts, rather than in a project-level environmental document for a transportation infrastructure project.

Contaminacion -

Trafico

Parkin

Enfermedades.

de donde va a salir el dinero para construir este proyecto?

Public Hearing Comment Card CC-35

Rosa Batun
1074 S. Herbert Ave.
Los Angeles, CA 90023

Translated comment:

I do not agree for the following reasons:
Pollution | CC-35-1
Traffic | CC-35-2
Parking | CC-35-3
Diseases | CC-35-4
Where will the money come from to build this project? | CC-35-5

CC-35-1

Caltrans and Metro thank the commenter for their input. The commenter's opposition to the build alternatives due to pollution concerns is acknowledged and included in the project record. As discussed in Section 1.2.2 in Chapter 1.0, Proposed Project, of the RDEIR/SDEIS, one of the purposes of the project is to improve air quality and public health. As discussed in Section 3.13, Air Quality, in the RDEIR/SDEIS, all build alternatives would generally improve air quality and reduce public health risk. Along the I-710 Corridor, air quality would be improved and public health risk would be reduced at most locations, but there would be a few near-roadway locations where there would be an increase in certain emissions.

The build alternatives propose Measures AQ-2 and AQ-3 to reduce exposure to emissions at near-roadway locations. Should a build alternative be selected as the Preferred Alternative, Measure AQ-2 would provide for installation of air filtration systems for schools within 0.25 mile of I-710. Measure AQ-3 would require installation of solid barriers and installation of vegetation where feasible (and soundwalls are not proposed) to disperse pollution and reduce pollutant concentrations downwind. Additionally, the build alternatives include programmatic components to help improve air quality and public health in the I-710 Corridor. The I-710 Corridor Community Health Benefit Program is a programmatic component of the build alternatives and would take the form of a grant program structured to provide corridor communities the opportunity to implement projects or outreach activities that would improve air quality and public health related to I-710 travel and goods movement. However, Caltrans, as lead agency under CEQA and NEPA (as assigned by the Federal Highway Administration [FHWA]), in cooperation with the Los Angeles County Metropolitan Transportation Authority (Metro), has identified Alternative 1 (No Build) as the Preferred Alternative. Since a build alternative has not been selected as the Preferred Alternative, this programmatic element will not be implemented by Caltrans as the lead agency under CEQA and NEPA and as the owner/operator of the I-710 freeway. Please refer to Section 1.1 of this appendix for further discussion on the identification of the Preferred Alternative and Section 1.10 of this appendix for more detailed information regarding the Community Health Benefit Program.

CC-35-2

The commenter's opposition to the build alternatives due to traffic concerns is acknowledged and included in the project record. As discussed in Section 1.2.2 in Chapter 1.0, Proposed Project, of the RDEIR/SDEIS, the purpose of the project includes improving traffic safety, accommodating projected traffic volumes, and addressing increased traffic volumes resulting from projected growth in population; and employment, and economic activities related to goods movement. As discussed in Section 3.5, Traffic and Transportation/Pedestrian and Bicycle Facilities, the build alternatives would generally improve traffic operations along the I-710 Corridor. In addition, should a build alternative be selected as the Preferred Alternative, Measure TR-1 would provide for

intersection and roadway improvements that would improve intersection operations and delay to a level equivalent to, or better than, what would occur under the No Build Alternative at Study Area intersections impacted by the build alternatives. However, since the No Build Alternative has been selected as the Preferred Alternative, Measure TR-1 will not be implemented.

In addition, the build alternatives include programmatic components to help improve traffic conditions on the arterial streets in the I-710 Study Area. As discussed in Section 2.3.2, Build Alternatives, in the RDEIR/SDEIS, should a build alternative be selected as the Preferred Alternative, the I-710 TSM/TDM/Congestion Relief Program would provide funding for traffic signal upgrades and coordination, safety improvements, traffic-calming measures, and intersection improvements on the arterial street system in the Study Area. The intention of the I-710 Corridor Project ITS/TSM/Congestion Relief Program would be to help address the I-710 Corridor Project goals of improving traffic safety, accommodating projected traffic volumes, and addressing increased traffic volumes resulting from projected growth in population, employment, and economic activities related to goods movement. This programmatic component of the build alternatives would provide funding to local governments to implement projects within the I-710 Corridor Project Study Area to improve operations at congested intersection locations on the local roadway network. However, as stated in Response to Comment CC-35-1, the No Build Alternative has been selected as the Preferred Alternative. Since a build alternative has not been selected as the Preferred Alternative, this programmatic element will not be implemented by Caltrans as the lead agency under CEQA and NEPA and as the owner/operator of the I-710 freeway.

CC-35-3

The arterial parking restrictions proposed as part of the build alternatives are not included in the Preferred Alternative (Alternative 1 No Build).

CC-35-4

The commenter’s opposition to the build alternatives due to concerns about increased disease is acknowledged and included in the project record. As discussed in Section 1.2.2 in Chapter 1.0, Proposed Project, of the RDEIR/SDEIS, one of the purposes of the project is to improve air quality and public health. As discussed in Section 3.13, Air Quality, and Section 4.2.4.1 of Chapter 4.0, California Environmental Quality Act Evaluation, in the RDEIR/SDEIS, all build alternatives would generally improve air quality and reduce public health risk. Along the I-710 Corridor, air quality would be improved and public health risk would be reduced at most locations, but there would be a few near-roadway locations where there would be an increase in certain emissions. However, the build alternatives would decrease diesel particulate matter emissions (the primary contributor to air quality-related cancer risk) compared to both the 2012 Baseline and the 2035 No Build Alternative. Although emissions would increase at some near-roadway locations, there would not be an increase in cancer risk compared to 2012 Baseline conditions. When compared to the 2035 No Build Alternative, both build alternatives would reduce cancer risk at most locations; however,

a small increase in cancer risk would occur at some locations within 100 meters of I-710. For Alternative 5C, the maximum increase in risk would be approximately three in one million. The primary location of the increased risk for Alternative 5C would occur along a small portion of I-710 just south of SR-60. For Alternative 7, the increase in risk would be less than one in one million.

The build alternatives propose Measures AQ-2 and AQ-3 to reduce exposure to emissions at near-roadway locations. Should a build alternative be selected as the Preferred Alternative, Measure AQ-2 would provide for installation of air filtration systems for schools within 0.25 mile of I-710. Measure AQ-3 would require installation of solid barriers and installation of vegetation where feasible (and soundwalls are not proposed) to disperse pollution and reduce pollutant concentrations downwind. In addition, the build alternatives include programmatic components to help improve air quality and public health in the I-710 Corridor. The I-710 Corridor Community Health Benefit Program is a programmatic component of the build alternatives and would take the form of a grant program structured to provide corridor communities the opportunity to implement projects or outreach activities that would improve air quality and public health related to I-710 travel and goods movement. However, since a build alternative has not been selected as the Preferred Alternative, this programmatic element will not be implemented by Caltrans as the lead agency under CEQA and NEPA and as the owner/operator of the I-710 freeway. Please refer to Section 1.10 of this appendix for more information regarding the Community Health Benefit Program.

CC-35-5

As stated in Response to Comment CC-35-1, the No Build Alternative has been selected as the Preferred Alternative. Therefore, funding of a project will not be necessary.

Please leave comments in the comment box or mail to the address below by Monday, October 23, 2017:

Mr. Ronald Kosinski
Caltrans District 7, Division of Environmental Planning
100 S. Main Street, MS 16A
Los Angeles, CA 90012

I have the following comments on the Recirculated Draft Environmental Impact Report/Supplemental Draft Environmental Impact Statement (RDEIR/SDEIS) for the I-710 Corridor Project (please print and use additional sheets if necessary): I am a homeowner here, this is my community & with the various purposals rise major concerns; with projects costing 6.5 Billion & 11 Billion yet only 1 Billion to work with is alarming that such a project would be started without knowing where & when the funding will come from to complete. This will leave our community in limbo, our children left with no completion, while the pollution will continue and myself & neighbors will become ill unknowingly. The displacement of residents is occurring in or being allowed due to the status of the Community being a working lower income community. Please reconsider the purposals and think about Pollution & the future generations we live here.

CC-36-1

CC-36-2

This page intentionally left blank

CC-36-1

Caltrans and Metro thank the commenter for providing their input. Caltrans, as lead agency under CEQA and NEPA (as assigned by the Federal Highway Administration [FHWA]), in cooperation with the Los Angeles County Metropolitan Transportation Authority (Metro), has identified Alternative 1 (No Build) as the Preferred Alternative. Therefore, Therefore, funding of a project will not be necessary. Please refer to Section 1.1 of this appendix for further discussion on the identification of the Preferred Alternative. It should be noted that air quality and pollution are addressed in Section 3.13, Air Quality, of the Final EIR/EIS. This section concludes that the exposure of people to particulate matter-related morbidity and mortality health risks along I-710 should decrease as a result of the project alternatives relative to the 2012 Baseline with the exception of some near-roadway locations.

CC-36-2

The commenter's concern regarding displacement of people as a result of the build alternatives is acknowledged and included in the project record. However, as stated in Response to Comment CC-36-1, the No Build Alternative has been selected as the Preferred Alternative and therefore, residential and business relocations will not be necessary.

I have the following comments on the Recirculated Draft Environmental Impact Report/Supplemental Draft Environmental Impact Statement (RDEIR/SDEIS) for the I-710 Corridor Project (please print and use additional sheets if necessary):

I am a home-owner in West Long Beach. I am very excited about option SC-7. I look forward to seeing the 710 on ramps/off ramps updated but also possible bike routes along Hill St, joining West side to downtown. Living on the west side, we can feel isolated from the rest of Long Beach.

Thank you for this meeting!

Mr. Ronald Kosinski
Caltrans District 7, Division of Environmental Planning
100 S. Main Street, MS 16A
Los Angeles, CA 90012

I have the following comments on the Recirculated Draft Environmental Impact Report/Supplemental Draft Environmental Impact Statement (RDEIR/SDEIS) for the I-710 Corridor Project (please print and use additional sheets if necessary):

Opposed to 7 & 8. If 5C is implemented, ensure that visual and noise impacts to users of the LA River corridor and adjacent or abutting neighborhood residents are fully addressed and mitigated to a level of insignificance. No statements of overriding considerations on these issues, please! Use plant materials (e.g. vines) to the max. for sound walls to eliminate potential for grafitti. Morning glories are great - they grow like a weed!

CC-38-1

Metro · Caltrans · Gateway Cities Council of Governments · 5 · Port of Long Beach The Green Port · The Port of Los Angeles · SCAG

This page intentionally left blank

CC-38-1

Caltrans and Metro thank the commenter for their input. The commenter's opposition to Alternative 7 is acknowledged and included in the project record. Based on the analysis contained within Chapter 4.0, CEQA Evaluation, of the RDEIR/SDEIS, the build alternative would have some unavoidable significant impacts in relation to air quality, land use and planning, population and housing, and transportation and traffic. The analysis concluded that noise and visual impacts resulting from the build alternatives could be mitigated to below a level of significance. More detailed information regarding visual impacts is provided in Section 3.6, Visual/Aesthetics, of the RDEIR/SDEIS, and detailed information regarding noise impacts is provided in Section 3.14, Noise. The information within these sections was used to inform the CEQA determination for the build alternatives contained in Chapter 4.0.

Should a build alternative be selected as the Preferred Alternative, in accordance with the *I-710 Corridor Aesthetics Master Plan* (2014) and the landscape plan that would be developed during final design of either build alternative, strategies to reduce the instances of graffiti would be employed where appropriate. The build alternatives propose Measure VIS-4 in Section 3.6.4 of the RDEIR/SDEIS which would provide for landscaping the areas in front of soundwalls where feasible depending on the available space. Landscaping would include trees, shrubs, and/or vines. The suggestion set forth in this comment has been included in the project record. However, Caltrans, as lead agency under CEQA and NEPA (as assigned by the Federal Highway Administration [FHWA]), in cooperation with the Los Angeles County Metropolitan Transportation Authority (Metro), has identified Alternative 1 (No Build) as the Preferred Alternative. Therefore, Measure VIS-4 will not be implemented, and the commenter's suggestion cannot be taken into consideration. Please refer to Section 1.1 of this appendix for further discussion on the identification of the Preferred Alternative.

Mr. Ronald Kosinski
Caltrans District 7, Division of Environmental Planning
100 S. Main Street, MS 16A
Los Angeles, CA 90012

I have the following comments on the Recirculated Draft Environmental Impact Report/Supplemental Draft Environmental Impact Statement (RDEIR/SDEIS) for the I-710 Corridor Project (please print and use additional sheets if necessary):

I am opposed to the projects on the 710 because I am concerned about my children's health whom attend Humphreys Ave Elementary. CC-40-1

These projects would cut down parking to my community. CC-40-2

I believe that instead of adding more traffic to our community the money should be inverted in adding parks or more greeney. The filter being offered will not solve the polution when people & students go out of the buildings. CC-40-3 CC-40-4

This page intentionally left blank

CC-40-1

Caltrans and Metro thank the commenter for their input. The commenter's opposition to the build alternatives due to concerns about the health of your children is acknowledged and included in the project record. As discussed in Section 1.2.2 in Chapter 1.0, Proposed Project, of the RDEIR/SDEIS, one of the purposes of the project is to improve air quality and public health. As discussed in Section 3.13, Air Quality, and Section 4.2.4.1 of Chapter 4.0, California Environmental Quality Act Evaluation, in the RDEIR/SDEIS, all build alternatives would generally improve air quality and reduce public health risk. Along the I-710 Corridor, air quality would be improved and public health risk would be reduced at most locations, but there would be a few near-roadway locations where there would be an increase in certain emissions. The build alternatives propose Measure AQ-2 (outlined in more detail in Section 3.13.4) which has identified Humphreys Avenue Elementary School as a sensitive receptor within 0.25 mile of the I-710 and, should a build alternative be selected as the Preferred Alternative, would commit to providing an air filtration system, the specifics of which would be determined in coordination with the school district. Based on the contour maps provided in Section 3.3.3 of Section 3.3, Community Impacts, Humphreys Avenue Elementary School would not be within an area of $PM_{2.5}$ or PM_{10} increase under the build alternatives. It would fall within an area of incremental cancer risk increase of approximately one in one million, which is considered an "acceptable risk" in terms of environmental regulation.[1] However, Caltrans, as lead agency under CEQA and NEPA (as assigned by the Federal Highway Administration [FHWA]), in cooperation with the Los Angeles County Metropolitan Transportation Authority (Metro), has identified Alternative 1 (No Build) as the Preferred Alternative. Therefore, Measure AQ-2 will not be implemented. Please refer to Section 1.1 of this appendix for further discussion on the identification of the Preferred Alternative.

CC-40-2

The arterial parking restrictions proposed as part of the build alternatives are not included in the Preferred Alternative (Alternative 1 No Build).

CC-40-3

As stated in Response to Comment CC-40-1, the No Build Alternative has been selected as the Preferred Alternative. Therefore, no funding will be necessary. It is important to note that the provision of passive parkland and greenery could be projects that may be eligible for funding under the Community Health Benefit Program as described in Section 2.3.2.1 of the Final EIR/EIS, which is a programmatic element included as part of the build alternatives. However, since a build alternative has not been selected as the Preferred Alternative, this programmatic element will not be implemented by Caltrans as the lead agency under CEQA and NEPA and as

[1] World Health Organization (WHO). 2001. *Water Quality: Guidelines, Standards, and Health*. Website: http://www.who.int/water_sanitation_health/dwq/iwachap10.pdf (accessed June 26, 2018).

the owner/operator of the I-710 freeway. Please refer to Section 1.10 of this appendix for more detailed information regarding the Community Health Benefit Program.

CC-40-4

The build alternatives propose Measure AQ-2 which would include air filters that would be intended to remove pollutants from indoor air, where school children spend the majority of their time while at school. In addition to air filters, should a build alternative be selected as the Preferred Alternative, Measure AQ-3 would implement the installation of solid barriers and vegetation where feasible and where soundwalls are not proposed to disperse pollution and reduce pollutant concentrations downwind. However, as stated in Response to Comment CC-40-1, the No Build Alternative has been selected as the Preferred Alternative and therefore, Measures AQ-2 and AQ-3 will not be implemented.

Please leave comments in the comment box or mail to the address below by Monday, October 23, 2017:

Mr. Ronald Kosinski
Caltrans District 7, Division of Environmental Planning
100 S. Main Street, MS 16A
Los Angeles, CA 90012

I have the following comments on the Recirculated Draft Environmental Impact Report/Supplemental Draft Environmental Impact Statement (RDEIR/SDEIS) for the I-710 Corridor Project (please print and use additional sheets if necessary):

We need more calidad de aire en lugar de extender mas el freeway necesitamos ~~stuff~~ arboles, Parkes La Pared del freeway mas grande y Reducir el ruido y el humo delas Traeas. Dejen vivir ala gente en paz y no saquen a nadie de sus ~~ca~~ casas.

Public Hearing Comment Card CC-41

Blanca A. Fernandez
4362 Eagle St.
Los Angeles, CA 90022

Translated comment:

We need better air quality instead of extending the freeway. We need trees and parks. The freeway wall should be higher to reduce the noise and smoke from the trucks. Let the people live in peace and do not take anyone out of their homes. CC-41-1 CC-41-2 CC-41-3

CC-41-1 (Comment was submitted in Spanish)

Caltrans and Metro thank the commenter for their input. As discussed in Section 1.2.2 in Chapter 1.0, Proposed Project, of the RDEIR/SDEIS, one of the purposes of the project is to improve air quality and public health. As discussed in Section 3.13, Air Quality, in the RDEIR/SDEIS, all build alternatives would generally improve air quality and reduce public health risk except at a few near-roadway locations. The build alternatives propose Measures AQ-2 and AQ-3 to reduce exposure to emissions at near-roadway locations. Should a build alternative be selected as the Preferred Alternative, Measure AQ-2 would provide filtration systems for schools within 0.25 mile of I-710. Measure AQ-3 would require installation of solid barriers and vegetation where feasible (and where soundwalls are not proposed) to disperse pollution and reduce pollutant concentrations downwind. Additionally, the I-710 Corridor Community Health Benefit Program is a programmatic component of the build alternatives and would take the form of a grant program structured to provide corridor communities the opportunity to implement projects or outreach activities that would improve air quality and public health related to I-710 travel and goods movement. However, Caltrans, as lead agency under CEQA and NEPA (as assigned by the Federal Highway Administration [FHWA]), in cooperation with the Los Angeles County Metropolitan Transportation Authority (Metro), has identified Alternative 1 (No Build) as the Preferred Alternative. Since a build alternative has not been selected as the Preferred Alternative, this programmatic element will not be implemented by Caltrans as the lead agency under CEQA and NEPA and as the owner/operator of the I-710 freeway. Please refer to Section 1.1 of this appendix for further discussion on the identification of the Preferred Alternative and Section 1.10 of this appendix for more detailed information regarding the Community Health Benefit Program.

As discussed in Measure VIS-4 in Section 3.6.4 of Section 3.6, Visual/Aesthetics, of the RDEIR/SDEIS, should a build alternative be selected as the Preferred Alternative, areas in front of soundwalls would be landscaped where feasible depending on the available space. Landscaping would include trees, shrubs, and vines. Additionally, should a build alternative be selected as the Preferred Alternative, the build alternatives would provide enhancements to Cesar E. Chavez Park in the City of Long Beach. The enhancements to this park would improve access to the park and would provide for a larger contiguous recreation area. Further, projects that include upgrades for parks, added greenbelts, and/or vegetation barriers, buffer parks, or open space and landscaping may be eligible for funding from the Community Health Benefit Program, a programmatic element of the build alternatives. However, as stated above, the No Build Alternative has been selected as the Preferred Alternative. Since a build alternative has not been selected as the Preferred Alternative, this programmatic element will not be implemented by Caltrans as the lead agency under CEQA and NEPA and as the owner/operator of the I-710 freeway. In addition, Measure VIS-4 would not be implemented.

Caltrans y Metro agradecen al autor del comentario su aportación. Como se explica en la sección 1.2.2 del capítulo 1.0, Proyecto propuesto, de la RDEIR/SDEIS, uno de los objetivos del proyecto

es mejorar la calidad del aire y la salud pública. Como se indica en el apartado 3.13, Calidad del aire, de la RDEIR/SDEIS, todas las alternativas de construcción mejorarían en general la calidad del aire y reducirían el riesgo para la salud pública, excepto en unos pocos puntos cercanos a la carretera. Las alternativas de construcción proponen las medidas AQ-2 y AQ-3 para reducir la exposición a las emisiones en las proximidades de las carreteras. En caso de que se elija una alternativa de construcción como la Alternativa Preferida, la Medida AQ-2 proporcionaría sistemas de filtración para las escuelas situadas a 0,25 millas de la I-710. La medida AQ-3 exigiría la instalación de barreras sólidas y vegetación donde fuera factible (y donde no se propusieran pantallas acústicas) para dispersar la contaminación y reducir las concentraciones de contaminantes a favor del viento. Además, el Programa de Beneficios para la Salud de la Comunidad del Corredor I-710 es un componente programático de las alternativas de construcción y adoptaría la forma de un programa de subvenciones estructurado para proporcionar a las comunidades del corredor la oportunidad de implementar proyectos o actividades de divulgación que mejorarían la calidad del aire y la salud pública relacionadas con los viajes y el movimiento de mercancías por la I-710. Sin embargo, Caltrans, como agencia líder bajo CEQA y NEPA (según lo asignado por la Administración Federal de Carreteras [FHWA]), en cooperación con la Autoridad Metropolitana de Transporte del Condado de Los Ángeles (Metro), ha identificado la Alternativa 1 (No Construir) como la Alternativa Preferida. Debido a que no se ha seleccionado una alternativa de construcción como la Alternativa Preferida, este elemento programático no será implementado por Caltrans como la agencia líder bajo CEQA y NEPA y como el propietario/operador de la autopista I-710. Consulte la Sección 1.1 de este apéndice para obtener más información sobre la identificación de la Alternativa Preferida y la Sección 1.10 de este apéndice para obtener información más detallada sobre el Programa Comunitario de Beneficios para la Salud.

Como se analiza en la Medida VIS-4 en la Sección 3.6.4 de la Sección 3.6, Estética/Visual, de la RDEIR/SDEIS, en caso de que se seleccione una alternativa de construcción como la Alternativa Preferida, las áreas frente a las pantallas acústicas se ajardinarían cuando fuera factible según el espacio disponible. La jardinería incluiría árboles, arbustos y enredaderas. Además, si se selecciona una alternativa de construcción como la Alternativa Preferida, las alternativas de construcción proporcionarían mejoras al Parque Cesar E. Chavez en la Ciudad de Long Beach. Las mejoras a este parque mejorarían el acceso al parque y proporcionarían un área recreativa contigua más grande. Además, los proyectos que incluyen mejoras para los parques, cinturones verdes añadidos, y/o barreras de vegetación, parques de amortiguación, o espacio abierto y paisajismo pueden ser elegibles para la financiación del Programa de Beneficios de Salud de la Comunidad, un elemento programático de las alternativas de construcción. Sin embargo, como se ha indicado anteriormente, la alternativa de no construir ha sido seleccionada como la alternativa preferida. Ya que no se ha seleccionado una alternativa de construcción como la Alternativa Preferida, este elemento programático no será implementado por Caltrans como la agencia líder bajo CEQA y NEPA y como el dueño/operador de la autopista I-710. Además, no se aplicará la medida VIS-4.

CC-41-2 (Comment was submitted in Spanish)

The existing soundwall between 4362 Eagle St. and I-710 in Los Angeles is a 10-foot-tall wall. Additional noise abatement, in the form of a taller soundwall (up to 16 feet in height) was considered during preparation of the *Noise Study Report* (Caltrans 2016) due to noise impacts resulting from the build alternatives. However, per Caltrans Traffic Noise Analysis Protocol, taller soundwalls were not considered feasible (i.e., they would not achieve a greater than 5 A-weighted decibel [dBA] noise reduction), and therefore, were not incorporated into the build alternatives.

La barrea de sonido que existe entre 4362 Eagle Street y I-710 en Los Angeles es un muro de 10 pies de altura. Durante la preparación del Noise Study Report (Caltrans 2016), se consideró una reducción adicional del ruido, en forma de una barrera de sonido más alta (hasta 16 pies de altura). Sin embargo, según Caltrans Traffic Noise Analysis Protocol, barreras de sonido más altas no se consideraron factibles (es decir, no lograrían una reducción de ruido de más de 5 decibeles ponderados A [dBA]) y, por lo tanto, no se han incorporado al proyecto.

CC-41-3 (Comment was submitted in Spanish)

The commenter's concern regarding displacement of people as a result of the build alternatives is acknowledged and included in the project record. However, as stated in Response to Comment CC-41-1, the No Build Alternative has been selected as the Preferred Alternative and therefore, no residential and business relocations would occur.

Se reconoce la preocupación del autor del comentario respecto del desplazamiento de personas como resultado de las alternativas de construcción y se incluye en el expediente del proyecto. Sin embargo, como se indicó en la respuesta al comentario CC-41-1, la alternativa de no construir ha sido seleccionada como la alternativa preferida y, por lo tanto, no se producirían reubicaciones residenciales ni comerciales.

Please leave comments in the comment box or mail to the address below by Monday, October 23, 2017:

Mr. Ronald Kosinski
Caltrans District 7, Division of Environmental Planning
100 S. Main Street, MS 16A
Los Angeles, CA 90012

I have the following comments on the Recirculated Draft Environmental Impact Report/Supplemental Draft Environmental Impact Statement (RDEIR/SDEIS) for the I-710 Corridor Project (please print and use additional sheets if necessary):

instead of doing all these changes make the freeway wall taller CC-42-1

Put speed signs in our streets CC-42-2

Plant more trees and make our parks better. STOP CC-42-3

abusing our poor community where we live the freeway wall is so small the Gang members always jump it TO our Backyard TO steal from our garage and Paint gang signs.

Metro Caltrans GATEWAY CITIES COUNCIL OF GOVERNMENTS 5 Port of LONG BEACH The Green Port THE PORT OF LOS ANGELES LA SCAG

This page intentionally left blank

CC-42-1

Caltrans and Metro thank the commenter for their input. It is unclear which freeway wall the commenter is referring to here. Soundwall height is determined by feasibility and reasonableness as described in Section 3.14, Noise, of this Final EIR/EIS. However, some soundwalls are proposed under the I-710 Early Action Soundwall project and would be constructed prior to any I-710 Corridor Project improvements (wherever feasible) at a height appropriate to abate noise impacts adequately while also being cost-effective. Under the Early Action Soundwall Project, the existing wall, along southbound I-710 between Hubbard Street and Humphreys Avenue (No. 519 Segment 3E, in the *Feasibility Study for the I-710 Soundwall Early Action Project* [CH2M Hill, December 2012]) in East Los Angeles and adjacent to the address given by the commenter, could potentially be improved by way of aesthetic improvements and/or increased height (if the structural properties of the wall allow for it). Caltrans, as lead agency under CEQA and NEPA (as assigned by the Federal Highway Administration [FHWA]), in cooperation with the Los Angeles County Metropolitan Transportation Authority (Metro), has identified Alternative 1 (No Build) as the Preferred Alternative. Therefore, no soundwalls will be constructed as part of the build alternatives. Please refer to Section 1.1 of this appendix for further discussion on the identification of the Preferred Alternative.

CC-42-2

Signage on local streets, including the posting of speed limits, is not within the jurisdiction of Caltrans to implement. Rather, that is the responsibility of the local entity (the County of Los Angeles is the governing entity in unincorporated East Los Angeles). Concerns regarding local speed limits and signage should be brought to the attention of the office of Los Angeles County Supervisor Hilda Solis.

CC-42-3

As stated in Response to Comment CC-42-1, the No Build Alternative has been selected as the Preferred Alternative. Therefore, no funding will be necessary. Planting trees and passive park improvements are projects that may be eligible for funding under the Community Health Benefit Program (a programmatic element of the build alternatives) as described in Section 2.3.2.1 of this Final EIR/EIS. However, as stated above, the No Build Alternative has been selected as the Preferred Alternative. Therefore, this programmatic element will not be implemented by Caltrans as the lead agency under CEQA and NEPA and as the owner/operator of the I-710 freeway.

100 S. Main Street, MS 16A
Los Angeles, CA 90012

Tengo los siguientes comentarios sobre el Informe de Impacto Ambiental Preliminar Recirculado/Declaración de Impacto Ambiental Preliminar Suplementaria (RDEIR/SDEIS) para el Proyecto de la Ruta I-710 (por favor imprima y use hojas adicionales si es necesario):

Questions Lights
Sound Barrier
Wall along entrance
Fence
No homeless access
Time Frame

CC-43-1

Metro Caltrans GATEWAY CITIES COUNCIL OF GOVERNMENTS 5 Port of LONG BEACH The Green Port THE PORT OF LOS ANGELES LA SCAG

This page intentionally left blank

CC-43-1

Caltrans and Metro thank the commenter for their input. It is unclear which lights, soundwalls, walls along entrances, or fences that the commenter is specifically referring to, or the particular concerns associated with these elements. Please refer to Section 3.6, Visual/Aesthetics, of the Final EIR/EIS, for a discussion of lighting-related impacts that would occur as a result of the build alternatives and Section 3.14, Noise, for a discussion of soundwalls and noise impacts that would result from the build alternatives. The determination of the need for fencing and the specific fencing locations that could prohibit access to certain areas is typically defined during final design, should a build alternative be selected as the Preferred Alternative.

With regard to the commenter's question about time frame, should a build alternative be selected as the Preferred Alternative, the earliest that acquisition of right-of-way and construction activities would commence would be 2–3 years after approval of the Record of Decision.

However, Caltrans, as lead agency under CEQA and NEPA (as assigned by the Federal Highway Administration [FHWA]), in cooperation with the Los Angeles County Metropolitan Transportation Authority (Metro), has identified Alternative 1 (No Build) as the Preferred Alternative. Therefore, there will be no noise or lighting-related impacts from the build alternatives and acquisitions of right-of-way would not be necessary. Please refer to Section 1.1 of this appendix for further discussion on the identification of the Preferred Alternative.

PUBLIC HEARING COMMENT CARD

CC-44

Name: Esteban McKenzie

Street: 3117 E 65th St

City, State, Zip: Long Beach, CA 90805

Organization:

Please leave comments in the comment box or mail to the address below by Monday, October 23, 2017:

Mr. Ronald Kosinski
Caltrans District 7, Division of Environmental Planning
100 S. Main Street, MS 16A
Los Angeles, CA 90012

I have the following comments on the Recirculated Draft Environmental Impact Report/Supplemental Draft Environmental Impact Statement (RDEIR/SDEIS) for the I-710 Corridor Project (please print and use additional sheets if necessary):

As evidenced by the Fiasco that was the 405 widening, CalTrans has not shown that its projections are not very good at accounting for induced demand, or reducing VMT in accordance with state climate goals. I see no evidence that widening the 710 (at the cost of billions) would have any more long term benefit than the 405 widening. I am fully in agreement with reconfiguring intersections and ramps to smooth flow and reduce neighborhood impacts, as well as initiatives to fund improvements to active transportation + transit. However these should be done WITHOUT widening. Existing lanes can be repurposed as truck-only or bus-only lanes to boost freight or transit mobility without displacing people and increasing VMT

This page intentionally left blank

CC-44-1

The current design of the I-710 is unable to handle current and forecasted future traffic flows that are exacerbated by the mix of autos and heavy duty trucks entering and exiting the freeway at multiple locations up and down the 19-mile corridor. The geometrics of the freeway contribute to operational problems such as weave conditions that sap the existing capacity of the existing through lanes on the freeway. During the development of the build alternatives, a traffic operational analysis – using the Transportation Research Board's *Highway Capacity Manual* (HCM) (2010) procedures – was conducted on various conceptual designs in order to test, evaluate, and optimize the performance of various options and proposals, including separate lanes for trucks, auxiliary lanes, through lanes, braided on- and off-ramps, and re-positioning of freeway-to-freeway connectors. This work was reviewed at numerous stages in the design development process by Caltrans, FHWA, and members of the I-710 Technical Advisory Committee, which is comprised of public works directors and city engineers of the local jurisdictions that line the I-710 Corridor. The design concept and scope for the Alternative 5C represents a comprehensive reconfiguration of the I-710 Corridor, which would focus on making geometric improvements that would improve the operations of the I-710 freeway, such as auxiliary lanes, truck bypass lanes, redesign of local interchanges and freeway-to-freeway interchanges that would address the spacing and sequencing of on- and off- ramps, and collector-distributor roadways that would separate traffic entering and exiting the freeway from through traffic. Through lanes are only proposed for certain segments of the freeway in combination with the proposed geometric, operational and safety design improvements in order to optimize the performance of the overall freeway given right-of-way constraints and the need to minimize impacts to nearby residents and businesses. The results of the traffic operational analysis for the build alternatives, along with the operational performance of the future No Build Alternative, was summarized in Section 3.5, Traffic and Transportation/Pedestrian and Bicycle Facilities, of the RDEIR/SDEIS and presented in detail in the *Traffic Operations Analysis Report* (March 2017). This analysis demonstrates that the build alternatives would eliminate nearly all of the congestion bottlenecks on the I-710 freeway.

The issue of induced demand is very complex, involving various travel behavior responses, residential and business location decisions, and other factors that influence regional population and economic growth. While some of these responses may represent new trips, much of the observed increase in traffic comes from trips that were already being made before the increase in highway capacity, or that reflect predictable behavior that is accounted for in travel demand forecasts. Accordingly, Caltrans' guidance on this topic of induced demand maintains that each project should be evaluated on a case-by-case basis.

"Induced travel" is characterized as the additional demand for travel that occurs as a result of a decrease in the generalized cost of travel, including both travel-time and out-of-pocket costs. I-710 is part of a highly congested metropolitan roadway network and is located within an urbanized

area, which is essentially built out. Given the high levels of congestion in the peak periods, the I-710 travel demand forecast model is particularly sensitive to changes in travel times. The proposed improvements included in the build alternatives would improve speeds and would reduce travel times on I-710, which in turn would attract more traffic to the facility relative to the No Build condition. The predicted shifts in traffic are accounted for in the analysis presented in Sections 3.5, Traffic and Transportation/Pedestrian and Bicycle Facilities, and 3.13, Air Quality, of the I-710 RDEIR/SDEIS and this Final EIR/EIS for both Alternatives 5C and 7.

Truck-only and bus-only lanes on the I-710 freeway were assessed during the *I-710 Major Corridor Study* (2005) and were screened out of further consideration due to a variety of factors including the lack of physical and operational feasibility. In addition, refer to Section 2.4 of the RDEIR/SDEIS.

Concerns:
traffic. air polution. Noise. no funds. so how is project going to be compleld. instead of worring about eliminating traffic why not worry about hiring more law enforcement to answer non-emergency calls. or

CC-46-1

This page intentionally left blank

CC-46-1

Caltrans and Metro thank the commenter for their input. Caltrans, as lead agency under CEQA and NEPA (as assigned by the Federal Highway Administration [FHWA]), in cooperation with the Los Angeles County Metropolitan Transportation Authority (Metro), has identified Alternative 1 (No Build) as the Preferred Alternative. Therefore, funding of a project will be unnecessary. Please refer to Section 1.1 of this appendix for further discussion on the identification of the Preferred Alternative. It should be noted that, according to the analyses contained within Sections 3.5, Traffic, and 3.13, Air Quality, of the Final EIR/EIS, traffic congestion and air quality would be generally improved with implementation of the build alternatives, with the exception of some intersections (related to traffic) and some near-roadway locations (with regard to air quality). Noise impacts resulting from the build alternatives would be abated to the greatest extent that is reasonable and feasible through the installation of soundwalls (should a build alternative be selected as the Preferred Alternative) as discussed in greater detail in Section 3.14, Noise. However, as stated above, the No Build Alternative has been selected as the Preferred Alternative and therefore, the benefits the build alternatives would have provided related to air quality will not occur and soundwalls to abate noise will not be constructed.

This page intentionally left blank

CC-47-1

Caltrans and Metro thank the commenter for their input. Caltrans, as lead agency under CEQA and NEPA (as assigned by the Federal Highway Administration [FHWA]), in cooperation with the Los Angeles County Metropolitan Transportation Authority (Metro), has identified Alternative 1 (No Build) as the Preferred Alternative. Therefore, funding of a project will be unnecessary. Please refer to Section 1.1 of this appendix for further discussion on the identification of the Preferred Alternative.

CC-47-2

The commenter's concern regarding the loss of Fire Station No. 3 at 930 S. Eastern Avenue in East Los Angeles is acknowledged and included in the project record. None of the proposed build alternatives or design options would displace this fire station. According to Table 3.3-8, Permanent Direct and Indirect Impacts to Schools and Other Community Facilities, in Section 3.3.1.3 of Section 3.3, Community Impacts, of the RDEIR/SDEIS, the build alternatives would not result in direct impacts to the fire station. Design Options 3A and 3B would result in temporary construction-related access impacts to the station; however, both of these design options were withdrawn from further consideration. The displacement of a fire station within the City of Vernon (Vernon Fire Station No. 4, located at 4530 Bandini Boulevard) would occur under Alternative 5C. However, as stated in Response to Comment CC-47-1, the No Build Alternative has been selected as the Preferred Alternative, and therefore, there will be no impacts to either Fire Station No. 3 or Fire Station No. 4.

CC-47-3

Passive park improvements and tree planting may be projects eligible for funding under the Community Health Benefit Program (a programmatic element of the build alternatives) as described in Section 2.3.2.1 of the Final EIR/EIS. However, since a build alternative has not been selected as the Preferred Alternative, this programmatic element will not be implemented by Caltrans as the lead agency under CEQA and NEPA and as the owner/operator of the I-710 freeway. Please refer to Section 1.10 of this appendix for more details regarding the Community Health Benefit Program. It should be noted that tax proceeds from recreational marijuana sales are levied and collected at both the local and State levels and are not considered a funding source that is available to Caltrans.

CC-47-4

As discussed in Section 1.2.2 in Chapter 1.0, Proposed Project, of the RDEIR/SDEIS, one of the purposes of the project is to improve air quality and public health. As discussed in Section 3.13, Air Quality, in the RDEIR/SDEIS, all build alternatives would generally improve air quality and reduce public health risk except at a few near-roadway locations. The build alternatives propose Measures AQ-2 and AQ-3 to reduce exposure to emissions at near-roadway locations. Should a build alternative be selected as the Preferred Alternative, Measure AQ-2 would provide for

installation of air filtration systems for schools within 0.25 mile of I-710. Measure AQ-3 would require installation of solid barriers and installation of vegetation where feasible (and where soundwalls are not proposed) to disperse pollution and reduce pollutant concentrations downwind. Additionally, the I-710 Corridor Community Health Benefit Program is a programmatic component of the build alternatives and would take the form of a grant program structured to provide corridor communities the opportunity to implement projects or outreach activities that would improve air quality and public health related to I-710 travel and goods movement. However, since a build alternative has not been selected as the Preferred Alternative, this programmatic element will not be implemented by Caltrans as the lead agency under CEQA and NEPA and as the owner/operator of the I-710 freeway. Please refer to Section 1.10 of this appendix for a detailed discussion on the Community Health Benefit Program. In addition, since the No Build Alternative has been selected as the Preferred Alternative, peak period parking restrictions will not be implemented.

Mr. Ronald Kosinski
Caltrans District 7, Division of Environmental Planning
100 S. Main Street, MS 16A
Los Angeles, CA 90012

I have the following comments on the Recirculated Draft Environmental Impact Report/Supplemental Draft Environmental Impact Statement (RDEIR/SDEIS) for the I-710 Corridor Project (please print and use additional sheets if necessary):

- No to ~~out~~add more lines in the FWY — CC-48-1
- No more displacement of people — CC-48-2
- Reduce Trucks by enforcement, to use the Alameda corridor — CC-48-3
- Stop the waste of money by ~~doing~~ working on the freeway and then destroy the work To ~~re~~ do again and again and again. Talking about not having money. Ridiculous!!!! — CC-48-4
- Lets think out side the box. Get ideas from the community — CC-48-5

This page intentionally left blank

CC-48-1

Caltrans and Metro thank the commenter for their input. The I-710 Corridor is a vital transportation artery not only for the communities along the corridor, but also because it links the Ports to southern California and the rest of the nation via connections to other Interstate and State highways. An essential component of the regional, statewide, and national transportation system, it serves both passenger and goods movement vehicles. As a result of population growth, international cargo growth shipped through the Ports, increasing traffic volumes, and aging infrastructure, the I-710 Corridor experiences serious congestion and safety issues. There are no currently funded transportation improvements that would address the projected future transportation demand within the I-710 Corridor. Based on the analysis of environmental impacts and alternatives analysis done to date for the I-710 Corridor Project, the addition of a general-purpose lane in addition to the other improvements proposed under Alternative 5C was determined to be the best and most cost-effective solution to the transportation challenges currently faced by the I-710 Corridor. However, Caltrans, as lead agency under CEQA and NEPA (as assigned by the Federal Highway Administration [FHWA]), in cooperation with the Los Angeles County Metropolitan Transportation Authority (Metro), has identified Alternative 1 (No Build) as the Preferred Alternative. Please refer to Section 1.1 of this appendix for further discussion on the identification of the Preferred Alternative.

CC-48-2

The commenter's concern regarding displacement of people as a result of the build alternatives is acknowledged and included in the project record. However, as stated in Response to Comment CC-48-1, the No Build Alternative has been selected as the Preferred Alternative and therefore, no residential and business relocations will occur.

CC-48-3

Please refer to Section 1.9 of this appendix for further details regarding the Alameda Corridor. Caltrans does not have the authority to require or mandate the use of the Alameda Corridor.

CC-48-4

It is unclear whether the commenter is referring to a specific incident or providing a general comment. Generally, freeway projects are planned and programmed with a 20- or 25-year horizon beyond the opening year of the project. This is a general benchmark as the specific circumstances of each project are taken into account in project planning. Additionally, the horizon planning year for a project cannot be beyond the horizon year for the Metropolitan Planning Organization (in this case, the Southern California Association of Governments [SCAG]) Regional Transportation Plan. Projects of this scale and size take several years in order to plan, perform environmental analyses, and prepare construction documents, and so it can be common to note that construction

can occur on a route that is also undergoing future project planning. For example, the I-710 Long Life Pavement Rehabilitation Project is currently in construction along the I-710 Corridor to address necessary maintenance and pavement rehabilitation that is needed in the short term, whereas construction of an ultimate I-710 Corridor Project, should a build alternative be selected as the Preferred Alternative, would still be several years in the future.

CC-48-5

Please refer to Section 1.2 of this appendix for further details on the ongoing community outreach efforts through project development. The evaluation of the range of build alternatives in this Final EIR/EIS is a direct result of community and agency feedback on the original Draft EIR/EIS released for public review in 2012.

PUBLIC HEARING COMMENT CARD

CC-49

Name: Paulina Piña Garcia

Street: 3117 E. 65th St.

City, State, Zip: Long Beach, CA 90805

Organization:

Please leave comments in the comment box or mail to the address below by Monday, October 23, 2017:

Mr. Ronald Kosinski
Caltrans District 7, Division of Environmental Planning
100 S. Main Street, MS 16A
Los Angeles, CA 90012

I have the following comments on the Recirculated Draft Environmental Impact Report/Supplemental Draft Environmental Impact Statement (RDEIR/SDEIS) for the I-710 Corridor Project (please print and use additional sheets if necessary):

I am in support of a project that would at least provide maintenance & repair to the 710. If it is widened but there isn't any investment in maintaining a safe & functioning highway, then the purpose of the project gets lost. CC-49-1

I am particularly interested in knowing how CalTrans and Metro will be held accountable when it comes to ensuring that the project is environmentally safe, and, more crucially, that the most vulnerable communities who already suffer the consequences of pollution caused by the 710 are ensured good air quality and assistance in achieving/maintaining an overall safe environment. CC-49-2

This page intentionally left blank

CC-49-1

Caltrans and Metro thank the commenter for their input. The California legislature dictates how State revenues are spent on the transportation network and appropriates State funding for specific purposes. Maintenance activities are generally funded through the State Highway Operation and Protection Program (SHOPP), which provides funds for pavement rehabilitation, repair and preservation, emergency repairs, safety improvements, and other non-capacity-expanding projects on the State Highway System. This funding source is separate and distinct from the sources that would eventually provide funding for the I-710 Corridor Project improvements, should a build alternative be selected as the Preferred Alternative. In a response to California's transportation funding shortfall that has worsened in recent years, the Road Repair and Accountability Act of 2017 (also known as Senate Bill 1) was passed by the California legislature and signed by Governor Jerry Brown in April 2017. Senate Bill 1 modified how California's transportation system is funded by increasing or indexing the fuel excise tax and adjusting vehicle registration fees in order to better fund the maintenance and rehabilitation of State and local road infrastructure, as well as laying out performance measures for California's infrastructure investment. However, Caltrans, as lead agency under CEQA and NEPA (as assigned by the Federal Highway Administration [FHWA]), in cooperation with the Los Angeles County Metropolitan Transportation Authority (Metro), has identified Alternative 1 (No Build) as the Preferred Alternative. Therefore, funding for the project will not be necessary. Please refer to Section 1.1 of this appendix for further discussion on the identification of the Preferred Alternative.

CC-49-2

An analysis of the impacts to minority and low-income communities (known as "environmental justice" populations, many of whom reside directly adjacent to the I-710 freeway) resulting from the build alternatives was undertaken and included in Section 3.3.3 of Section 3.3, Community Impacts, of the RDEIR/SDEIS. Several measures included in this Final EIR/EIS would address impacts resulting from the build alternatives to these communities. Specifically, to address disproportionate impacts to environmental justice populations with regards to a number of resource areas, should a build alternative be selected as the Preferred Alternative, Measure C-7 would commit funding for various projects to these jurisdictions. Measure C-8 identified certain sensitive receptors under each build alternative and, should a build alternative be selected as the Preferred Alternative, would provide upgraded or new filtration or heating, ventilation, and air conditioning systems to these select facilities. All avoidance, minimization, and/or mitigation measures proposed by the build alternatives are listed in the Environmental Commitment Record (included as Appendix F to the Final EIR/EIS) which would act as the Mitigation Monitoring and Reporting Record under CEQA, legally binding Caltrans to carry out these measures, should a build alternative be selected as the Preferred Alternative. However, as stated in Response to Comment CC-49-1, the No Build Alternative has been selected as the Preferred Alternative and therefore, avoidance, minimization, and/or mitigation measures will not be implemented.

Metro Caltrans GATEWAY CITIES COUNCIL OF GOVERNMENTS 5 Port of LONG BEACH The Green Port THE PORT OF LOS ANGELES LA SCAG

This page intentionally left blank

CC-50-1

Caltrans and Metro thank the commenter for their input. The commenter's opposition to the build alternatives is acknowledged and included in the project record. As discussed in Section 1.2.2 in Chapter 1.0, Proposed Project, of the RDEIR/SDEIS, one of the purposes of the project is to improve air quality and public health. As discussed in Section 3.13, Air Quality, in the RDEIR/SDEIS, all build alternatives would generally improve air quality and reduce public health risk. Along the I-710 Corridor, air quality would be improved and public health risk would be reduced at most locations, but there would be a few near-roadway locations where there would be an increase in certain emissions. The build alternatives propose Measures AQ-2 and AQ-3 to reduce exposure to emissions at near-roadway locations. Should a build alternative be selected as the Preferred Alternative, Measure AQ-2 would provide for installation of air filtration systems for schools within 0.25 mile of I-710. Measure AQ-3 would require installation of solid barriers and installation of vegetation where feasible (and where soundwalls are not proposed) to disperse pollution and reduce pollutant concentrations downwind. However, Caltrans, as lead agency under CEQA and NEPA (as assigned by the Federal Highway Administration [FHWA]), in cooperation with the Los Angeles County Metropolitan Transportation Authority (Metro), has identified Alternative 1 (No Build) as the Preferred Alternative. Therefore, Measures AQ-2 and AQ-3 would not be implemented. In addition, the arterial parking restrictions proposed as part of the build alternatives are not included in the Preferred Alternative. Please refer to Section 1.1 of this appendix for further discussion on the identification of the Preferred Alternative and Section 1.6 of this appendix for more detailed information regarding the parking restrictions.

CC-50-2

The commenter's opposition to increased freeway noise is acknowledged and included in the project record. Should a build alternative be selected as the Preferred Alternative, a soundwall would be constructed to reduce freeway noise at the residences located along Burger Avenue in the City of Los Angeles. Specifically, a 16-foot-high soundwall (SW-517 under Alternative 5C, the Preferred Alternative, and SW-717 under Alternative 7) was recommended to replace the existing 12-foot high soundwall. Should a build alternative be selected as the Preferred Alternative, this soundwall would begin at the on-ramp from Olympic Boulevard onto the mainline northbound I-710 and would overlap with an existing 12-foot-high soundwall near Humphreys Avenue. However, as stated in Response to Comment CC-50-1, the No Build Alternative has been selected as the Preferred Alternative and therefore, these soundwalls will not be constructed as a part of the build alternatives.

CC-50-3

As stated in Response to Comment CC-50-1, the No Build Alternative has been selected as the Preferred Alternative and therefore, project funding will not be necessary.

No me gustaria que ISTRAN este proyecto porque nos afectaria a todos ho parking politos. Muchas enfermedades Asthma Cancer. Somos una communidad de bajos Recursos. que no Podemos comprar carros nuevos. para mejorar el Aire. y este nos van afectar mucho. nuestro animales se murieron por cancer.

Clementina Puga (CC-51)

(Page 2 of 2)

CC-51-1

Caltrans and Metro thank the commenter for their input. The commenter's opposition to the build alternatives is acknowledged and included in the project record. As discussed in Section 1.2.2 in Chapter 1.0, Proposed Project, of the RDEIR/SDEIS, one of the purposes of the project is to improve air quality and public health. As discussed in Section 3.13, Air Quality, in the RDEIR/SDEIS, all build alternatives would generally improve air quality and reduce public health risk. Along the I-710 Corridor, air quality would be improved and public health risk would be reduced at most locations, but there would be a few near-roadway locations where there would be an increase in certain emissions. The build alternatives propose Measures AQ-2 and AQ-3 to reduce exposure to emissions at near-roadway locations. Should a build alternative be selected as the Preferred Alternative, Measure AQ-2 would provide for installation of air filtration systems for schools within 0.25 mile of I-710. Measure AQ-3 would require installation of solid barriers and installation of vegetation where feasible (and where soundwalls are not proposed) to disperse pollution and reduce pollutant concentrations downwind. However, Caltrans, as lead agency under CEQA and NEPA (as assigned by the Federal Highway Administration [FHWA]), in cooperation with the Los Angeles County Metropolitan Transportation Authority (Metro), has identified Alternative 1 (No Build) as the Preferred Alternative. Therefore, Measures AQ-2 and AQ-3 will not be implemented. In addition, the arterial parking restrictions proposed as part of the build alternatives are not included in the Preferred Alternative. Please refer to Section 1.1 of this appendix for further discussion on the identification of the Preferred Alternative and to Section 1.6 of this appendix for more detailed information regarding the parking restrictions.

CC-51-2

As part of a programmatic element of the build alternatives, the I-710 Clean Truck Program (referred to in the RDEIR/SDEIS as the I-710 Corridor Project Zero Emission/Near Zero Emission Truck Technology Deployment Program) would fund ZE/NZE trucks for trucking companies and/or owner-operators traveling on the I-710 Corridor frequently. However, since a build alternative has not been selected as the Preferred Alternative, this programmatic element will not be implemented by Caltrans as the lead agency under CEQA and NEPA and as the owner/operator of the I-710 freeway. In addition, there is no requirement as part of the project, nor do Metro and Caltrans have the authority to require the general public to purchase energy-efficient vehicles.

PUBLIC HEARING COMMENT CARD

CC-52

Name: Shirley M. Ramirez Batun

Street: 1074 1/2 S. Herbert Ave

City, State, Zip: Los Angeles, CA 90023

Organization:

Please leave comments in the comment box or mail to the address below by Monday, October 23, 2017:

Mr. Ronald Kosinski
Caltrans District 7, Division of Environmental Planning
100 S. Main Street, MS 16A
Los Angeles, CA 90012

I have the following comments on the Recirculated Draft Environmental Impact Report/Supplemental Draft Environmental Impact Statement (RDEIR/SDEIS) for the I-710 Corridor Project (please print and use additional sheets if necessary):

The Community has been affected by ~~several~~ other freeways already creating poor air quality. The air filters will not help the residents, only limited to about 40 hours for the students. These kids and residents already have poor air. A couple trees will not fix it. The expansion will NOT alleviate congestion. Taller walls are disgusting and hiding the aweful plan from the people it is affecting. CC-52-1

This page intentionally left blank

CC-52-1

Caltrans and Metro thank the commenter for their input. The commenter's concern about air quality, opposition to taller soundwalls, and opposition to the build alternatives is acknowledged and noted in the project record.

As discussed in Section 1.2.2 in Chapter 1.0, Proposed Project, of the RDEIR/SDEIS, two of the purposes of the project are to improve air quality and public health and to accommodate projected traffic volumes. As discussed in Section 3.13, Air Quality, in the RDEIR/SDEIS, all build alternatives would generally improve air quality and reduce public health risk except at a few near-roadway locations. However, the build alternatives propose Measures AQ-2 and AQ-3 to reduce exposure to emissions at near-roadway locations. Should a build alternative be selected as the Preferred Alternative, Measure AQ-2 would provide for installation of air filtration systems for schools within 0.25 mile of I-710. Measure AQ-3 would provide for the installation of solid barriers and installation of vegetation where feasible (and where soundwalls are not proposed) to disperse pollution and reduce pollutant concentrations downwind. Additionally, the I-710 Corridor Community Health Benefit Program is a programmatic component of the build alternatives and would take the form of a grant program structured to provide corridor communities the opportunity to implement projects or outreach activities that would improve air quality and public health related to I-710 travel and goods movement. However, Caltrans, as lead agency under CEQA and NEPA (as assigned by the Federal Highway Administration [FHWA]), in cooperation with the Los Angeles County Metropolitan Transportation Authority (Metro), has identified Alternative 1 (No Build) as the Preferred Alternative. Therefore, Measures AQ-2 and AQ-3 will not be implemented and I-710 Corridor Community Health Benefit Program will not be implemented by Caltrans as the lead agency under CEQA and NEPA and as the owner/operator of the I-710 freeway. Please refer to Section 1.1 of this appendix for further discussion on the identification of the Preferred Alternative and to Section 1.10 of this appendix for more detailed information regarding the Community Health Benefit Program.

As discussed in Section 3.5, Traffic and Transportation/Pedestrian and Bicycle Facilities, the build alternatives would improve traffic operations along the I-710 Corridor. In addition, should a build alternative be selected as the Preferred Alternative, Measure TR-1 would provide for intersection and roadway improvements that would improve intersection operations and delay to a level equivalent to, or better than, what would occur under the No Build Alternative at Study Area intersections impacted by the build alternatives. In addition, the build alternatives include programmatic components to help improve traffic conditions on the arterial streets in the I-710 Study Area. As discussed in Section 2.3.2, Build Alternatives, in the RDEIR/SDEIS, should a build alternative be selected as the Preferred Alternative, the I-710 TSM/TDM/Congestion Relief Program would provide funding for traffic signal upgrades and coordination, safety improvements, traffic-calming measures, and intersection improvements on the arterial street system in the Study Area. The intention of the I-710 Corridor Project ITS/TSM/Congestion Relief Program would be

to help address the I-710 Corridor Project goals of improving traffic safety, accommodating projected traffic volumes, and addressing increased traffic volumes resulting from projected growth in population, employment, and economic activities related to goods movement. This programmatic component of the build alternatives would provide funding to local governments to implement projects within the I-710 Corridor Project Study Area to improve operations at congested intersection locations on the local roadway network. However, as stated above, the No Build Alternative has been selected as the Preferred Alternative and therefore, Measure TR-1 will not be implemented and I-710 Corridor Project ITS/TSM/Congestion Relief Program will not be implemented by Caltrans as the lead agency under CEQA and NEPA and as the owner/operator of the I-710 freeway.

Tengo los siguientes comentarios sobre el Informe de Impacto Ambiental Preliminar Recirculado/Declaración de Impacto Ambiental Preliminar Suplementaria (RDEIR/SDEIS) para el Proyecto de la Ruta I-710 (por favor imprima y use hojas adicionales si es necesario):

I am against the 710 freeway project because the pollution and noise from the construction will make pollution even worse and will also affect the kids in schools nearby. The main reason I am against it is because I do not want anyone from community to be displaced and I doubt any of the people in support of the project will pay for the new homes of people that get pushed out.

CC-53-1

CC-53-2

This page intentionally left blank

CC-53-1

Caltrans and Metro thank the commenter for their input. The build alternatives propose Measures CON-AQ-1 through CON-AQ-17 and CON-N-1 through CON-N-10, as described in Section 3.25, Construction Impacts, to address impacts related to construction-related air quality and noise, respectively. In addition, the provision of air filtration systems to schools within 0.25 mile of I-710 as described in Measure AQ-2 has been revised so that it would occur prior to the start of construction (should a build alternative be selected as the Preferred Alternative), and would help minimize construction-related impacts as well as operational impacts resulting from the build alternatives. However, Caltrans, as lead agency under CEQA and NEPA (as assigned by the Federal Highway Administration [FHWA]), in cooperation with the Los Angeles County Metropolitan Transportation Authority (Metro), has identified Alternative 1 (No Build) as the Preferred Alternative. Therefore, Measures CON-AQ-1 through CON-AQ-17 and CON-N-1 through CON-N-10 will not be implemented. Please refer to Section 1.1 of this appendix for further discussion on the identification of the Preferred Alternative.

CC-53-2

The commenter's concern regarding displacement of people as a result of the build alternatives is acknowledged and included in the project record. However, as stated in Response to Comment CC-53-1, the No Build Alternative has been selected as the Preferred Alternative and therefore, no residential and business relocations will occur.

I have the following comments on the Recirculated Draft Environmental Impact Report/Supplemental Draft Environmental Impact Statement (RDEIR/SDEIS) for the I-710 Corridor Project (please print and use additional sheets if necessary):

I'm totally against restricting parking on Atlantic Bl.

Parking already is very limited. It would be catastrophic to all businesses on Atlantic.

CC-54-1

What is going to be done with the trucks not meeting zero emissions from freeway truck lanes... overflow to street which in turn increases poor air quality and worse traffic.

CC-54-2

Metro Caltrans GATEWAY CITIES 5 Port of LONG BEACH The Green Port THE PORT OF LOS ANGELES SCAG

This page intentionally left blank

CC-54-1

Caltrans and Metro thank the commenter for their input. Caltrans, as lead agency under CEQA and NEPA (as assigned by the Federal Highway Administration [FHWA]), in cooperation with the Los Angeles County Metropolitan Transportation Authority (Metro), has identified Alternative 1 (No Build) as the Preferred Alternative. Therefore, the arterial parking restrictions proposed as part of the build alternatives will not be implemented. Please refer to Section 1.1 of this appendix for further discussion on the identification of the Preferred Alternative and to Section 1.6 of this appendix for more detailed information regarding the parking restrictions.

CC-54-2

All build alternatives would fund ZE trucks, regardless of whether a freight-only corridor is built. The I-710 Corridor Community Health Benefit Program is a programmatic component of the build alternatives and would take the form of a grant program structured to provide corridor communities the opportunity to implement projects or outreach activities that would improve air quality and public health related to I-710 travel and goods movement. However, since a build alternative has not been selected as the Preferred Alternative, this programmatic element will not be implemented by Caltrans as the lead agency under CEQA and NEPA and as the owner/operator of the I-710 freeway. Please refer to Section 1.10 of this appendix for more detailed information regarding the Community Health Benefit Program. Additionally, please refer to Section 1.3 for additional discussion of ZE options.

I have the following comments on the Recirculated Draft Environmental Impact Report/Supplemental Draft Environmental Impact Statement (RDEIR/SDEIS) for the I-710 Corridor Project (please print and use additional sheets if necessary):

The on ramp from the 710 North to the 91 east becomes one lane. This is dangerous because ~~the~~ traffic fights to get ahead in this one lane. It also backs traffic up the first lane of the 710 while traffic is going from 710 to 91. This on ramp has been outdated for at least 20 years. CC-55-1

Metro Caltrans GATEWAY CITIES COUNCIL OF GOVERNMENTS 5 Port of LONG BEACH The Green Port THE PORT OF LOS ANGELES SCAG

This page intentionally left blank

CC-55-1

Caltrans and Metro thank the commenter for this feedback regarding the existing northbound I-710 to the eastbound SR-91 connector. Under Alternative 5C, many freeway-to-freeway interchanges within the corridor would be improved. However, there would only be minor modifications at this interchange and this transition ramp in particular. The two-lane ramp from northbound I-710 must narrow to one lane near its merge point with SR-91, as there are right-of-way constraints in this area that make widening the SR-91 mainline challenging. Therefore, the lane reduction in the ramp would be necessary for vehicles to merge onto SR-91 within the available right-of-way. However, Caltrans, as lead agency under CEQA and NEPA (as assigned by the Federal Highway Administration [FHWA]), in cooperation with the Los Angeles County Metropolitan Transportation Authority (Metro), has identified Alternative 1 (No Build) as the Preferred Alternative. Therefore, no improvements will be made to the northbound I-710 to eastbound SR-91 connector. Please refer to Section 1.1 of this appendix for further discussion on the identification of the Preferred Alternative.

Los Angeles, CA 90022

Translated comment:

My name is Lilia Servin, I am a 73-year-old lady. I live alone, and all I have is my house, because I fear living on the streets. Now with this project, which doesn't seem right to me, what am I going to do if they want my house where I've lived for 47 years? Aside from the air pollution and also I want to say, why don't they do this project in Pasadena or Monterey Park? CC-56-1 CC-56-2

CC-56-1 (Comment submitted in Spanish)

Caltrans and Metro thank the commenter for their input. The commenter's concern regarding displacement of people as a result of the build alternatives is acknowledged and included in the project record. Caltrans, as lead agency under CEQA and NEPA (as assigned by the Federal Highway Administration [FHWA]), in cooperation with the Los Angeles County Metropolitan Transportation Authority (Metro), has identified Alternative 1 (No Build) as the Preferred Alternative. Therefore, the residence located at 1144 Burger Street in Los Angeles will not be displaced. Please refer to Section 1.1 of this appendix for further discussion on the identification of the Preferred Alternative.

Caltrans y Metro agradecen al autor del comentario su aportación. Se reconoce e incluye en el expediente del proyecto la preocupación del autor del comentario en relación con el desplazamiento de personas como resultado de las alternativas de construcción. Caltrans, como organismo principal en virtud de la CEQA y la NEPA (según lo asignado por la Administración Federal de Carreteras [FHWA]), en cooperación con la Autoridad Metropolitana de Transporte del Condado de Los Ángeles (Metro), ha identificado la Alternativa 1 (No Construir) como la Alternativa Preferida. Por lo tanto, la residencia ubicada en 1144 Burger Street en Los Ángeles no será desplazada. Consulte la Sección 1.1 de este apéndice para obtener más información sobre la identificación de la Variante Preferida.

CC-56-2 (Comment was submitted in Spanish)

Please refer to Section 3.13, Air Quality, of this Final EIR/EIS for a more detailed discussion of air quality impacts related to the project.

A Draft EIR/EIS was circulated for the SR-710 North Project in 2015, which studied five alternatives in depth, including multimodal options as well as two variations on a freeway tunnel. After the receipt of substantial public comment, the Project Development Team identified the alternative that best addressed the purpose and need and the evaluation performance measures as the Single-Bore Freeway Tunnel with tolling and truck restrictions. However, in May 2017, the Metro Board of Directors unanimously voted to adopt the TSM/TDM Alternative as the Locally Preferred Alternative and direct the SR-710 North Project funds to subsidize local operational improvements to address traffic congestion caused by the 4.5-mile gap in the freeway between Alhambra and Pasadena. The funds will be used to implement improvements identified in the TSM/TDM Alternative studied in the Draft EIR/EIS including traffic signal upgrades and synchronization, local street and intersection improvements, improved connections to existing bus and rail service, and the promotion of rideshare options in the area. Additionally, remaining Measure R funds would be allocated to new improvement projects within the SR-710 North Project study area that relieve traffic congestion directly related to the existing SR-710 gap in the transportation system. Caltrans identified the TSM/TDM Alternative as the Preferred Alternative in the Final EIR/EIS approved on November 26, 2018.

Consulte la Sección 3.13, Calidad del aire, de la presente Declaración final de impacto ambiental para obtener un análisis más detallado de los impactos sobre la calidad del aire relacionados con el proyecto.

En 2015, se distribuyó un Borrador del EIR/EIS para el Proyecto SR-710 Norte, que estudiaba cinco alternativas en profundidad, incluidas opciones multimodales, así como dos variaciones de un túnel de autopista. Después de la recepción de comentarios públicos sustanciales, el Equipo de Desarrollo del Proyecto identificó la alternativa que mejor abordaba el propósito y la necesidad y las medidas de rendimiento de evaluación como el túnel de autopista de perforación única con peaje y restricciones para camiones. Sin embargo, en mayo de 2017, el Consejo de Administración de Metro votó unánimemente a favor de adoptar la Alternativa TSM/TDM como la Alternativa Preferida Localmente y dirigir los fondos del Proyecto SR-710 Norte a subvencionar mejoras operativas locales para abordar la congestión del tráfico causada por la brecha de 4,5 millas en la autopista entre Alhambra y Pasadena. Los fondos se utilizarán para implementar mejoras identificadas en la Alternativa TSM/TDM estudiada en el Borrador del EIR/EIS, incluyendo mejoras y sincronización de señales de tráfico, mejoras en calles locales e intersecciones, conexiones mejoradas con el servicio de autobús y ferrocarril existente, y la promoción de opciones de viajes compartidos en la zona. Además, los fondos restantes de la Medida R se asignarían a nuevos proyectos de mejora dentro del área de estudio del Proyecto SR-710 Norte que alivien la congestión de tráfico directamente relacionada con la brecha existente en la SR 710 en el sistema de transporte. Caltrans identificó la Alternativa TSM/TDM como la Alternativa Preferida en el EIR/EIS Final aprobado el 26 de noviembre de 2018.

Mi Preocupasion es que es demasido Ruido mucho humo mira si abro las Ventanas es demosiada Tierra y no se daga el rudo seguido problemas de bronquios y alergias que no puede uno ni siquira afura

Public Hearing Comment Card CC-57

Catalina Tabullo
1126 S. Burger Ave.
Los Angeles, CA 90022

Translated comment:

My concern is that it is too much noise and a lot of smoke. If I open the windows it's too much dust, not to mention the noise. Follow by bronchial problems and allergies making it impossible for someone to be outside. CC-57-1 CC-57-2

CC-57-1

Caltrans and Metro thank the commenter for their input. The commenter's concern about freeway noise is acknowledged and included in the project record. Should a build alternative be selected as the Preferred Alternative, both build alternatives would include a soundwall to reduce freeway noise at the residences located along Burger Avenue in the City of Los Angeles. Specifically, a 16-foot-high soundwall (SW-517 under Alternative 5C, the Preferred Alternative, and SW-717 under Alternative 7) was recommended to replace the existing 12-foot-high soundwall. Should a build alternative be selected as the Preferred Alternative, this soundwall would begin at the on-ramp from Olympic Boulevard onto the mainline northbound I-710 and would overlap with an existing 12-foot-high soundwall near Humphreys Avenue. However, Caltrans, as lead agency under CEQA and NEPA (as assigned by the Federal Highway Administration [FHWA]), in cooperation with the Los Angeles County Metropolitan Transportation Authority (Metro), has identified Alternative 1 (No Build) as the Preferred Alternative. Therefore, this soundwall will not be constructed. Please refer to Section 1.1 of this appendix for further discussion on the identification of the Preferred Alternative.

CC-57-2

The commenter's concern about freeway smoke and dust is acknowledged and included in the project record. As discussed in Section 1.2.2 in Chapter 1.0, Proposed Project, of the RDEIR/SDEIS, one of the purposes of the project is to improve air quality and public health. As discussed in Section 3.13, Air Quality, in the RDEIR/SDEIS, all build alternatives would generally improve air quality and reduce public health risk except at a few near-roadway locations. However, the build alternatives propose Measures AQ-2 and AQ-3 to reduce exposure to emissions at near-roadway locations. Should a build alternative be selected as the Preferred Alternative, Measure AQ-2 would provide for installation of air filtration systems for schools within 0.25 mile of I-710. Measure AQ-3 would provide for the installation of solid barriers and installation of vegetation where feasible (and where soundwalls are not proposed) to disperse pollution and reduce pollutant concentrations downwind. Additionally, the I-710 Corridor Community Health Benefit Program is a programmatic component of the build alternatives and would take the form of a grant program structured to provide corridor communities the opportunity to implement projects or outreach activities that would improve air quality and public health related to I-710 travel and goods movement. However, since a build alternative has not been selected as the Preferred Alternative, this programmatic element will not be implemented by Caltrans as the lead agency under CEQA and NEPA and as the owner/operator of the I-710 freeway. Please refer to Section 1.10 of this appendix for more detailed information regarding the Community Health Benefit Program.

CC-60-2

Metro Caltrans GATEWAY CITIES 5 Port of LONG BEACH The Green Port THE PORT OF LOS ANGELES SCAG

This page intentionally left blank

CC-60-1

Caltrans and Metro thank the commenter for their input. The commenter is likely referring to two distinct projects that have been under construction on I-710 in recent years: the construction of a concrete median barrier that replaced a metal beam guardrail median (project cost $26 million), and the I-710 Long Life Pavement Rehabilitation Project, which is currently under construction (please refer to https://dot.ca.gov/caltrans-near-me/district-7/district-7-projects/d7-i710-rehab for further details). The installation of the concrete median barrier was necessary for safety and liability reasons and could not be deferred until the details of the Long Life Pavement Rehabilitation Project, which was not funded at the time, were known. Planning for the Long Life Pavement Rehabilitation Project began approximately one year before the median barrier project completed construction. The pavement project lowered portions of the freeway to increase bridge clearances for tall vehicles, rendering the new median too tall, which would therefore obstruct lines of sight in some areas. In those areas, the median was removed and replaced with a temporary barricade. This median removal cost was approximately $110,000. It was unfortunate that the two projects could not be coordinated, as Caltrans seeks to expend funding as efficiently as possible. However, the urgent need for the median project and the unknown funding and timing of the pavement project could not be reconciled.

CC-60-2

Please refer to Response to Comment CC-60-1 regarding the construction of a concrete median barrier that replaced a metal beam guardrail median and the I-710 Long Life Pavement Rehabilitation Project.

CSR NO. 14030

LOS ANGELES, CALIFORNIA, WEDNESDAY, AUGUST 23, 2017;

6:09 P.M.

-OOO-

MS. McCORMICK: Good evening, everyone. We actually are officially opening the meeting and we actually will have our presentation at 6:30. So if you can take the next 20 minutes or so to take a look at the different stations and then we're going to be resuming at 6:30.

(Whereupon, Arturo addressed the audience in Spanish.)

Okay. Thank you everyone. I'll let you know when we get started. It's going to be just about 20 minutes. Thank you.

(Off the record.)

MS. McCORMICK: Good evening, everyone. If I could have you have your seats, please. We're going to start our presentation. Great. Thank you so much. Good evening.

AUDIENCE: Good evening.

MS. McCORMICK: My name is Mary McCormick. I'm going to be your facilitator for the evening tonight. We are so happy you are here and very pleased that you are here. I know you all have very busy lives and it's important that we hear from you tonight and so thank you for your time. We really appreciate you being here. There are several items that I want to cover just really briefly before we get started. We have -- the bathrooms are straight back if you need to go to the restrooms.

On your way back there, you'll see an area for children. There is a children's area where they have color crayons in the children's activity center, but we would ask you to please be with your children. Please watch over them. It's near the Environmental Document table.

In addition we have some interpreters here, and I'll let them speak in just a moment, but we actually have Spanish speakers in each one of our stations as well. So if I would ask the staff in the back, would you please -- those of you who speak Spanish, if you would please raise your hands, and if you turn around, you'll see all of the speakers in the back who can help you. Thank you. I will get started shortly, but in the meantime, I'm going to turn it now over to Arturo, and as you can see, we also have ADA compliance. So let me go ahead and start with Arturo.

(Whereupon, Arturo addressed the audience in Spanish.)

MS. McCORMICK: So with that, we also have our ADA compliance, a sign language interpreter. So if there's anyone here who needs that, please let us know. Is there anyone here this evening that could use that?

Okay. Thank you very much. So with that, we actually will get started, and I'd like to welcome Ernesto Chavez from Metro. He will begin our program this evening. Oh, I'm sorry, just real quick. I wanted to say thank you. There are -- we have some elected officials this evening. Thank you for attending.

We have a Kimberly Ortega who is the Field Deputy for Supervisor Hilda Solis' office here this evening. Thank you for coming.

And Assemblymember, we have Evelyn Nuno who is the Field Representative for Assemblymember Cristina Garcia from the 58D. So, Evelyn. Great. Thank you, Evelyn. That's great.

We also have the mayor from the City of Commerce Orellia Rubo. Oh, there. Thank you for coming.

And we have the City of Commerce and we also have representatives from the City of Cerritos, and we have representatives from the City of Vernon here this evening.

So thank you very much for attending. We really appreciate it. So with that, I'd like to turn it now over to Ernesto from Metro.

MR. CHAVEZ: Thank you, Mary. Again, my name is Ernesto Chavez. I'm with LA Metro, and on behalf of LA Metro and also our partner agencies Caltrans, Gateway Cities COG, the Ports, everybody that's been -- every agency that's been sponsoring this project, I want to -- on behalf of them, I want to give you a welcome and thank you for joining us tonight. This is a very important project for Metro, for Caltrans, for all these agencies. It's a very important project for the region, for Southern California, especially to this Corridor, and we are grateful that you took time out of your busy schedules to come here tonight. We want to hear your input. This is very

important to us. We are reengaging. As you know, this process is a Recirculation of the Environmental Document. But we want to make sure we get it right. We want to make sure we understand what the concerns are, and so I can't thank you enough for being here, and hopefully you continue providing your input through this process which is going to take another probably more than a year or so. So it's taking a long time, but that's the way these things are, and we thank you for that patience as well. I'll take the message in Spanish too.

(Whereupon, Mr. Chavez addressed the audience in Spanish.)

MR. CHAVEZ: With that, I want to also introduce Ron McCain. He is going to provide a short presentation on the project. That will get us started. Thank you.

MS. McCORMICK: Also just to let you know, and forgive me for -- if you would like to speak this evening, we have speaker cards for you and we actually have someone who will come and pick them up. So please raise your hand if you would like a speaker card and make sure you have that. Also we have comment cards and that's really important for us to make sure that we receive your comments. There is one other item in the back. I wanted to let you know that we do have a comment section in the back as well. So during our meeting this evening, if you would like to go back to this quiet room, sit down, write your comments and submit those comments, you can do that and you can also do it via online. We can type it up as well, and we will

have someone in the back who can actually take your oral comments in both English and in Spanish for that comment period. So forgive me for not sharing that initially. I will be reminding you of that as we go through the evening, but with that, I'd like to turn that now over to Ron.

MR. McCAIN: Great. Thank you, Mary. Thank you, Ernesto. And good evening, everyone. I see a lot of familiar faces. So the presentation I'm going to share tonight you're going to say "Oh, I've seen that before," but I also see a lot of new faces so I hope you find the information helpful before we hear from you for your testimony.

The I-710 Corridor Project -- why are we doing this? What are the goals of the project? We want to provide this overview to help give you some context about what the need for the project is, what the goals of the project are, and what the alternatives are, and then what the process is. As Ernesto says it's a long process on how we help identifying a preferred alternative.

The project goals that are listed on this slide are not new. They have been part of the project -- really the foundation for the project, not just since the EIR/EIS process began in 2008, but dating back to the Major Corridor Study back in 2005, 2006. These goals are driven by key needs within this Corridor. Three primary ones. First, studies by the South Coast Air Quality Management District, other agencies,

educational institutions have shown that, with the high levels of air pollutant emissions particularly these in particular from trucks leads to high levels of health risk in the Corridor for cancer, asthma, and other health concerns. So our primary goal is improving air quality and reducing health risk. Second, the I-710 Freeway was designed and constructed over 50 years ago. A modern design of the I-710 will help improve safety and improve how the freeway operates, and, finally, the traffic on I-710. The traffic is there today, will continue to grow in the future as the population grows, as the employment grows, and as the (Inaudible response.) grows.

So we talk about our study area. What is the project? How long is it? It extends from Ocean Boulevard in Long Beach in the south, 19 miles to the north to the State Route 60 interchange up in East Los Angeles, and this slide highlights not only the length of the project but also the many communities that are affected or adjacent to I-710 who are affected by the project.

This slide -- I promise not to read it all, but this slide illustrates the robust community participation process that has been part of this project since it began. The community participation has really helped to define the project alternatives, it's helped to identify key issues of study for the project, and it's been an ongoing process and will continue to be ongoing after these public hearings through the preferred

alternative and onwards as the project moves into design and construction.

So we're here. I see some faces that were here five years ago when we held public hearings on our First Draft of the Environmental Impact Report/Environmental Impact Statement. I'm going to say "EIR/EIS" the rest of the evening. But a number of things have changed that caused us to prepare an updated document and to recirculate it for public review and to hold this additional set of public hearings. So some of the things that have changed have included changes in traffic patterns in the region based upon goods movement as well as where people work and live. There have been other projects that have either come online or have been pulled off or out of the planning process and so adjusting our settings to reflect those changes, but the last two bullets on this slide are really the most important ones. During our public review process in 2012, we heard many comments from the public requesting "We like the idea of zero emission." Here's our Emission Freight Corridor. "We don't like the idea of adding general purpose lanes." So one of the alternatives we're looking at does just that. And, finally, Motion 22.1, which was adopted by the Metro Board of Directors in October 2015, that has some important elements that are being addressed in this document as well, and I'll have another slide on that in a moment.

So what are the alternatives that are studied in our

document? There were three that were focused on. First is looking at the No Build. That is what is the effect of doing nothing at all. Second, Alternative 5C. This is the alternative that modernizes the 710 -- can we -- facilities, can we get the blinds because half of our audience is blinded. Thank you, Bob. We will do our best on that.

I'll continue with that and -- yeah, there we go. Okay. Good. Alternative 5C is an alternative that modernizes the I-710. It adds capacity to it. It is not -- unlike Alternative 7 which features the separated freight Corridor to provide -- accommodate zero emission, zero emission trucks. The next couple of slides will highlight or have a map to help illustrate the two Build Alternatives so you can see what the differences are. In Alternative 5C we do have some truck bypass lanes here at around the 710/405 interchange. Those truck bypass lanes will separate auto and truck movements, make it safer, and make it operate more efficiently. There's also some dedicated lanes down here at the very south end providing for direct connections from the I-710 into Downtown Long Beach.

What's shown in the green, this is where an additional general purpose or two lanes would be added in each direction along the freeway to add additional capacity to the freeway to handle that traffic. In addition to that, there's the light blue. We show areas where there's, what are called, auxiliary lanes. Auxiliary lanes are something, as you're aware, when you

enter the freeway onramp and then that lane just continues to the next off-ramp. It's not a true lane, but it makes for a smoother merging on traffic onto the freeway. And then, finally, all of the circles and the rectangles highlight interchanges along the freeway that would be improved and provide a more modern design.

Alternative 7. This is an alternative that, as I said, as you can see from the red that goes up and down the length of I-710, would add a separate zero emission -- or a separate freight Corridor for use only by zero emission or near zero emission trucks. The -- you'll see -- all though we have on the legend the green for adding a general purpose lane, there is no green on the slide because this alternative does not add any general purpose or lanes to the freeway. And then, finally, it does add auxiliary lanes and has the freeway interchange and local interchange modernization that we see in Alternative 5C.

In addition to the physical improvements of the I-710 that we look at in regard to Build Alternatives, there's a number of other programatic elements that are intended to also address those goals to improve air quality, reduce traffic congestion, and improve mobility. It includes a funding program for zero and near zero emission trucks. It includes funding for an I-710 Community Health and Benefit Program similar to the Port of Long Beach program that some of you may be familiar with. It includes intelligent transportation system, advanced

technologies for better communications to the motoring public. It includes an I-710 Congestion Relieve Program for improvements to the local intersections and local streets within the I-710 Corridor. It includes transit improvements. Improvements to bus service as well as to rail service. And then, finally, it also includes additional bicycle and pedestrian facilities in addition to the freeway improvements.

I mentioned Motion 22.1 in my introduction. Motion 22.1 was adopted by the Metro Board of Directors on October of 2015 and provided additional direction to the I-710 Project key as far as elements that should be addressed within the Environmental Document for the project but also other elements that were outside but in parallel to the EIR/EIS process. If you haven't already, there's a green fact sheet out at the table in front and that helps summarize what the elements of Motion 22.1 are and also provides the tables to let you know where in that very large Environmental Document information about Motion 22.1 is provided.

Metro continues to work on the other elements under items 2, 3 and 4 that are not within the document itself but are important parts of Motion 22.1 and to address those for the community. This is the pretty slide of all. This highlights -- and, again, I won't read it, but it highlights all the different studies that are prepared to go into an Environmental Impact Report addressing the human environment, air quality, noise,

visual environment, also the future environment. How does it affect the water? How does it affect other parts of our physical environment that we live in every day? We have with us tonight and we see the different stations around the room and in the adjoining room we also have copies of the document and the studies and we have many of our technical experts here tonight that you can engage if you have specific questions, whether it's about air, noise, about concerns about property impacts, we have those people here that can answer your questions for you specific to your property.

So the process we're going through, this -- this chart summarizes about a ten-year process. We began in September of 2008. We began, what's called, the introductory or process for the project. Showing the completion of our First Draft EIR/EIS five years ago in 2012. As I said we went back, went back to the drawing board, refined the alternatives, did additional studies, and so here's where we are tonight. We're here in our hearing of public review period but more important we're here to listen to you to hear your comments, questions, and concerns about the project.

After the public review period closes, which Caltrans on one of our public notices, it says "The public review period will close on September 22nd." An updated notice will be provided. Caltrans and Metro have agreed to extend the public review period another month to October 23rd. So once that

public review period is complete, we'll again compile and assess the public comments, address them, and work with Metro and Caltrans to develop the preferred alternative and then prepare a Final EIR/EIS which is effectively the decision document for the project.

Providing comments. This is the most important part of the public process in the Environmental Impact Report. There's many ways you can provide comments. Coming to this meeting and providing testimony either on our public microphone or the comment room in the back is one way to do it. There are comment cards that you can take home with you, study the document, submit comments later, and there's also the ability to submit just by good old US mail or via online. On the Caltrans website, there's a portal where you can provide comments as well. Here we've listed two websites, both the Metro and the Caltrans websites are places that, in addition to all the information you have here tonight, there's additional information about the project on those two websites. On the Caltrans website all of the documents we have here in hard copy are posted online so you can access them there and provide additional information for you.

So with that, I'm going to turn the presentation over to Ron Kosinski, the Deputy District Director of Environmental Planning for Caltrans. The public comment process is very important to all of us but especially to Ron and he'll share his

thoughts with you on that and then we'll hand it on to Mary McCormick, and she will help facilitate hearing your input for the public testimony. So thank you so much for your attention and we look forward to hearing your comments.

MR. KOSINSKI: All right. Thank you very much, Ron, and this is really the critical part of the meeting. We're appreciating the fact that you've listened to the presentation and it's a summary of the presentation and in the Environmental Document, obviously, there's a lot of more information that can help you -- help in generate the comments. So first of all, my message is thank you for listening, and in a minute, we're going to be wrapping this part up and going into your presentation of what issues do you have that are important that we need to look at.

One thing I'd like to mention is that all of the project alternatives have significant impacts on your community when you think about it. Doing nothing is -- if you like things the way they are, doing nothing has a terrible impact on your community. I mean, I looked through the records from 2006 and '07 in some of the community meetings we had there and one comment struck me quite significantly, I thought. Someone said -- was asked "What is the problem in this Corridor?" And they said simply "It's trucks, trucks, trucks. There's too many trucks in this Corridor and it's generating a lot of -- so that's really a critical issue that we're trying to address with zero emissions

of the trucks that we're talking about. The two Build Alternatives have impacts. You can't build things and make these improvements without having some community impacts, and so as a consequence, we're looking at what we do to avoid these impacts, minimize the impacts, mitigate the impacts, and maybe even do some enhancements to the community to make the impacts at least more palatable. It's not going to be a situation, however, where you're not impacted. One way or another, we don't do anything or if we do something, it's going to be an impact to the community.

I used to live in this community. When I was a kid, I was raised in Long Beach. I went to Addams Elementary School. I remember what the community was like at that point in time. I can tell you one thing has not changed -- there may be different types of -- different people, different developments that has taken place. One thing hasn't changed -- the community, and today is a good example. The community is a very tenacious community. They're involved in what's happening in their community and they want to have some input, and so, seriously, that's why we're here today and it's not much different than when I was a kid. There was a lot of things happening out here and I, my dad, and our whole family really got involved in some of the activities that were taking place. So that's been -- I spent that time here, I think, trying -- trying to make sure it's an improved community and all of our team is trying the

same thing. They're not much different than you are. I myself and the community are trying to make this community a better community by taking some type of action. So keep that in mind.

It's really -- again, it's really our time to listen to you and so I'm going to then pass this over to Mary and to remind you one more time that we have extended the (Inaudible response.) has asked for an extension to the 23rd of October and so we have extended that comment period to the 23rd of October because it's -- and that's the official comment period. Because it's really important that you have the time and you have the presence to read through the document and make some contributing comments because your input is really the critical input on this process. With that, Mary, take this over.

MS. McCORMICK: So I'd like to talk to you a little bit about what you see up here. Again, throughout the whole night, I'd like you to make sure that you know that you can submit a speaker card. We have 34 speaker cards currently, but we want to make sure that at any time during the evening that you're able to do that. Brad back here he's got his hand, just raise your hand, we will look and see you and make sure that you have a copy of it. Do you have one? Great. Thanks.

We have interpreters available throughout our comment period and I wanted to explain a little bit about how that works. We have three minutes for your speaking this evening. When you -- we have someone who is going to be speaking Spanish,

we do not want to penalize anybody for the fact that they are being interpreted; so we actually will shut the timer off during the time that the interpreter is speaking and then we'll turn it back on. So it's very even and very fair so everybody gets -- no one is short-cutted at any point.

I'm going to call up some names. It's kind of like baseball. We'll call some peoples' names up and we'll do two or three at a time. If you'd like -- they'll be someone speaking. If you would like to step up, so that you can just come up to the microphone afterwards, that would be great. So I'll just call those names and then just come on up. We have a court reporter here -- yeah, we have a court -- by the way, before I forget, here's the timer right here. So it's a red, yellow, and green timer. So when the red goes off, the three minutes is up. Our court reporter here is taking down every comment orally and so she has requested this evening that, when you come up to the microphone, please state your name clearly because she needs to type it out to make sure it's clear.

In addition to that, each comment you should know is part of the public record and we -- as again -- once again, we're just going to say it all night, we're here to hear and listen to you. So that's very important. In addition, if you feel that you would like to just send in your comment, again, I want to remind you, you don't have to stay the whole evening. If you need to get home, if you have other obligations, feel free to go

down to the comment. We have another court reporter just like this person here and she -- you can actually speak orally to her and she will track your comments and put it in the record. So you can do that, do it at your convenience and comfort, and then you can actually go home if you need to go home early. So if you feel like you can't stay, don't feel badly. You always have a chance to speak.

So with that, I actually am going to start our comments. So I would like Mr. Steve Lytle to come up. He's number -- he's our first speaker and right behind him would be Antonio, I believe, the name is Hicke, and then Heidi Liu. So, Steve, if you're available -- there you go and please go ahead and tilt that up if that makes it more comfortable for you.

MR. LYTLE: Hello. My name is Steve Lytle. I'm the director of the Salvation Army Bell Shelter. I appreciate the opportunity to speak with you tonight. I do have some concerns about what's being proposed. The Salvation Army has been in the City of Bell for 30 years and there are some adverse impacts from what's being proposed to the shelter. The latest homeless count conducted last January reported that the homeless population had a 23 percent increase overall, a veteran increase of 57 percent, and in Service Planning Area 7, which is this area in Southeast LA, there was a 50 percent increase in homelessness. So we're, obviously, in a crisis in terms of homelessness. You're seeing our homeless neighbors on the

streets everywhere we go and in Los Angeles, and the Salvation Army is trying to help address to end homelessness through the housing and services that we provide at the shelter.

Alternative 7 passes directly over a portion of our housing. We would lose 60 beds for veterans in ten modular homes. The freeway would also come so close that it may make the rest of the shelter, which would house another 400 people every night, uninhabitable. So we also partnered with the shelter partnership which is located adjacent to us. They would be similarly affected by Alternative 7. They have given us over $2 million worth of goods that our clients use: Clothing, blankets, furniture. And their warehouse facility is adjacent to ours and we have a very long-standing relationship. There are a number of other relationships that we've built in the local community. If the shelter is impacted, we would have to move. Those relationships would have to be started from scratch. T-1-1

So the location itself is very important. Also the fact that it's not easy to find a place to build a homeless shelter where it leads us -- because of this federal property, we lease from the federal property first. We're able to develop the shelter under the hospices of the federal government and then eventually acquire the property from the federal government, and now we work very closely with the City of Bell. So I just would like to reiterate that, with now over 58,000 homeless people in T-1-2

the County of Los Angeles, demolishing existing housing is not going to help reduce that number. We all need to be aware of the impacts of -- particularly of Alternative 7. Thank you. T-1-2

MS. McCORMICK: Thank you very much. We appreciate it. Antonio and then Heidi. Thank you. Go ahead.

MR. HICKE: Thank you. Good evening. My name is Antonio Hicke and I'm an attorney at Public Counsel and we are here representing the Bell Shelter. Public Counsel has a long track record of advancing affordable housing in equitable developments. Now, CEQA allows Caltrans to determine effects significance based on substantial evidence in the record including scientific and factual data in the circumstances of the surroundings. So, you know, before I discuss that, I do want to state that any displacement of the Bell Shelter would have devastating consequences on the residents, and we -- we submit is a substantial impact that could not be mitigated, but that being said as was mentioned, Service Planning Area 7, in which the Bell Shelter is located, experienced a 50 percent increase from last year in the number of people experiencing homelessness. Given the crucial services that the Bell Shelter provides, relocation of the Bell Shelter would have severe consequences for the most vulnerable members of our community. T-1-3

The significance of such an impact requires full mitigation. If not, we could see an increase in the number of people living on the street. Moreover, the impacts caused by T-1-4

the displacement of the Bell Shelter would be predominantly borne by an Environmental Justice Population in violation of federal requirements. So even if the shelter could be relocated, which as I said is a significant and unproven assumption, doing so would adversely and disproportionately impact the vulnerable individuals that it serves. Now, the projects adverse impacts on the Bell Shelter's environmental destitute population must also be fully mitigated. The Build Alternatives could potentially create impacts related to air quality, noise, and traffic as well as temporary construction impacts. Due to the vulnerable nature of the shelter residents, more than half of whom have two or more physical or mental health conditions, the Bell Shelter's Environmental Justice Community is especially susceptible to the project's effects.

Further evaluation and mitigation specifically addressing the recipients to the Bell Shelter services is necessary for compliance with federal law. The bottom line is that the effect of displacement of the Bell Shelter is a significant if not substantial impact which would have to be fully mitigated. The Build Alternatives would also have significant effects on the Bell Shelter's residents which must also be mitigated. In conclusion, we submit that in determining the feasibility of the project alternatives and in recognizing all of the effects on the Bell Shelter and its residents as significant, Caltrans should reject any alternative that results in the displacement

T-1-4

T-1-5

T-1-6

of the Bell Shelter. Thank you. T-1-6

MS. McCORMICK: Thank you. Heidi, just for two seconds before you go, I have Gabriela Collins who is next and Bob Eula, and if you could come to the end of the area down there, we'll start with you up at the back. So go ahead, Heidi. Thank you.

MS. LIU: Heidi Liu, Public Counsel. Any project alternative that involves displacement of --

MS. McCORMICK: You need to speak up.

MS. LIU: Any project alternative that involves the displacement of the Salvation Army's Bell Shelter must be rejected as infeasible because the detrimental consequences that would result cannot be mitigated. CEQA does not allow a project with significant impacts to be approved as proposed, but there are alternatives or mitigation measures available that would substantially reduce those impacts. This revised EIR incorrectly claims that relocation assistance would mitigate the project's potential displacement of the shelter to lessen T-1-7 significant levels ignoring the fact that the 2017 Relocation Impact Report actually found that there appears to be adequate replacement properties for all displacements except for the shelter and its partner organizations. As there are no identified sites for relocation, the proposed mitigation measures illegally postpone a crucial determination and are entirely insufficient to support any potential displacement of the shelter. In fact, the impacts resulting from displacement

fundamentally cannot be mitigated to lessen significant levels. T-1-7

First, it is unlikely that adequate relocation would even be possible given the shelter's size, sources of funding, and the many challenges inherited to homeless shelters. Under the City of Bell's current Municipal Code, there are no zones that permit a new shelter to be built. Even if sites and funding could be obtained, moving the shelter would destroy the long-standing service sectors and relationships that the Salvation Army has built over the last 30 years. The shelter T-1-8 would not be able to maintain its extraordinary assessment of that location. At least one project alternative is clearly available that would avoid displacement of Bell Shelter. Since it is possible to substantially reduce the project's adverse effects, state law requires decision-making agencies to do so and federal law requires further mitigation of any indirect impacts on the shelter's Environmental Justice Community. Thank you.

MS. McCORMICK: Thank you very much. Gabriela, Bob Eula, and then Carlos Runningwolf. Go right ahead. Thank you.

MS. COLLINS: Good evening. My name is Gabriela Collins. I'm with Southern California Edison. Thank you for the opportunity to comment. The I-710 Corridor Project represents an opportunity for actively improving air quality in the communities along the I-710 Freeway, many of which have been heavily impacted by air pollution from transportation.

Approximately 40 percent of the goods entering the Mayship are being moved through Southern California's ports and highways and the transportation sector is responsible for 36 percent of California's greenhouse gas emissions. Using clean energy to power transportation along the I-710 Corridor, particularly medium and heavy-duty vehicles, can help meet ground level ozone nitrogen oxide and particular emissions reduction requirements for cleaner air. T-1-9

SCE believes that Alternative 7, the Clean Emissions Freight Corridor, is the only alternative that would feasibly accomplish all the project's goals and support the project's purpose of improving air quality and public health. T-1-10

Additionally, SCE believes Alternative 7 should be a true zero emissions freight Corridor which means that zero tilt pipe pollutant emissions would be admitted while traveling within the Corridor. Active support for transportation electrification, particularly in goods movement, is needed now. By fueling a variety of vehicles, cars, public transportation, medium and heavy-duty trucks and industrial vehicles and equipment, with clean electric power instead of fossil fuels, we can help meet California's ambitious climate and environmental goals in the coming decade. Thank you. T-1-11

MS. McCORMICK: Thank you. Thanks very much. Bob and then Carlos Runningwolf.

MR. EULA: My name is Bob Eula. I've been on the 710

committee for ages. Thanks to the counsel for repeating me. But I want to comment on Metro, Caltrans for the people that are here. They've been working very hard on this for years now. So we got to give them credit for trying to help all of us, but I have a comment. I've been on the Ayers neighborhood for 72 years. I've been in Commerce working with the counsel, mayor, counselman, whatever, but I want to say, when you disrupt families from their homes -- my Ayers neighborhood is going to get hit pretty hard and across the tunnel on the other side of the 710. I've been working with the Public Planning Commission here for years, and I'm -- I'm down to it right now where we need homes for these people that are going to get disrupted because this city doesn't have any property tax. You go to another city, they're going to get hit hard and we have -- garbage pick up is free. This city is tremendous of any other city and we're going to disrupt this city with Caltrans. T-1-12

I know it's necessary. It's very necessary with these trucks. Our Commerce is hit hard with two rail lines. Please consider Judson to Harbor to the east side of Starling Avenue which is Industry. City counsel, I'm talking to everybody in the city now, these can be homes. There's industry now, but I know industry would swap with Ayers and put us over there. Industry is very cooperative in this city. So let's consider giving homes to these people that are going to be disrupted. I think my neighborhood is 58 homes and across the tunnel. Let's T-1-13

all consider -- Metro, Caltrans, let's all work together with the City of Commerce to not hurt these people and give them homes. T-1-13

MS. McCORMICK: Thank you. Carlos Runningwolf and then Sal Hernandez. Sal is next and then Mr. Keith Johnson. Carlos. Tilt that up.

MR. RUNNINGWOLF: My name is Carlos Runningwolf. I'm a resident of Commerce and I just want to go on record that I haven't received any public notice of any of these meetings at all. T-1-14

MS. McCORMICK: I'm sorry. You haven't received public notice of what?

MR. RUNNINGWOLF: Any meetings at all.

MS. McCORMICK: Okay.

MR. RUNNINGWOLF: That's all I wanted to say.

MS. McCORMICK: Okay. Thank you. Sal Hernandez. And then Mr. Keith Johnson.

MR. HERNANDEZ: Good evening.

MS. McCORMICK: Good evening.

MR. HERNANDEZ: My name is Sal Hernandez and I'm part of CBE, which is Communities for a Better Environment, and we consider about this break -- right here this we are fortunate that we have the biggest port in the nation, but also, with everything else, its challenges. This is the greatest challenge in our time for this port. And what we -- our concern is that

we have to make the biggest decision that we see there is many people specifically different consider on this project. So for that, we suggest that we need more time. We -- instead of 90 days, will you consider, you know, in opposition that we need 120 days so the community can participate with some issues. We the people of our great nation with great ideas, with great challenges. It gives us an opportunity but just give us the time. Not all the people knows about this project, either we think we do or we already do, they still -- many people do not know about this. They didn't have great ideas to come up with this challenge. T-1-15

So we want -- what? City? What do we want? 120 days extension so we can present our proposals to you so we together can get the best decision for this project. Thank you.

MS. McCORMICK: Thank you. Mr. Johnson and then Dan Hager and then -- let's see. Let me make sure. William Follansbee. So, Mr. Johnson, go ahead.

MR. JOHNSON: Good evening, everybody. My name is Keith Johnson, United States Marine Corps veteran. I just want to reiterate with this gentleman here, we need homes. I've been living in my truck for about eight years, seven years. I'm a veteran, United States Marine Corps. A friend of mine told me about the Salvation Army that I'm living in now. I've been there for a year and a half. They like family. They are my family. And the friendship that I received there is great. T-1-16

They got blackship, whiteship, greenships, but there is no ship like friendship and the Salvation Army is friendship. Thank you. T-1-16

MS. McCORMICK: Dan, William Follansbee, and then Tracy Pruitt. Go ahead, Dan.

MR. HAGER: Yeah. My name is Dan Hager. I am staying right now at one of the modular homes over there in Bell Shelter. I'm disabled. I am a veteran. I had some problems with the government with my disability and I ended up being homeless. They have gone out of their way to help me. You cannot take that away from people who may be needing it. I know it's not going to be affecting me by the time they tear it down, but the people that need it, they need something they know is going to be there, that has a history of being there, and right now the Bell Shelter definitely has a history and has been there for people, and it needs to continue. T-1-17

MS. McCORMICK: Thank you.

MR. HAGER: Thank you.

MS. McCORMICK: Thank you very much. William Follansbee and then Tracy Pruitt, and then Juan Garcia.

MR. FOLLANSBEE: Yes. I'm William Follansbee. I'm a client at the Salvation Army Shelter. First, I want to say real quick, I'll make a long story short, what Salvation Army has done for me. I did 23 years in prison. The government signed my parole. I was released October 25th in a black sweat suit

and given a $200 debit card and the Salvation Army took me in, gave me clothes, took me to the Social Security. I had no ID. I was lost. And they drove me around back and forth, back and forth. After four months, I finally got my ID. I got my driver's license. I bought a car, and without the Salvation Army, I don't know if I could (Inaudible response.). And I'm housed in that area that might be impacted by this bill here, and it's all veterans and I'd hate to see 60 veterans that served this country on the street. T-1-18

MS. McCORMICK: Thank you.

MR. FOLLANSBEE: That's all.

MS. McCORMICK: Thank you very much. Tracy.

MS. PRUITT: Hi --

MS. McCORMICK: And then Juan Garcia.

MS. PRUITT: -- hola, my name is Tracy Pruitt. I'm a resident at the Bell Shelter. I am in the houses where they house vets. You know, I really don't understand what's going on. I do but I don't, but we need those houses. You guys don't know. It would be so many people on the street. They help us save money. They show us how to live independently. People with mental problems -- they get us medication. They help us survive. They make us ready to go into the world. If you take that, we will have nothing. That's it. T-1-19

MS. McCORMICK: Thank you.

MS. PRUITT: Thank you.

MR. GARCIA: So my name is Juan Garcia. I work at the Salvation Army Bell Shelter. I'm the program coordinator for the Veteran Program and Transitional Housing Program there. As you can see, these are a couple of our veteran clients that we have here that just spoke out right now. There is just four individuals that participated right now out of another 300 individuals that we have currently in the Salvation Army Bell Shelter. Now, the Alternative 7 that they're proposing, that can actually have a great impact in our facility in our shelter premises, not only is it destroying about -- our modular home, which houses about 60 -- houses about 60 individuals, but also another part of the facilities of the shelter. The Salvation Army does shelter, not only assist veteran clients as a home for now providing them meals and food, but it also provides other services for veterans such as reported services for veteran families which they help out our clients with assistance to moving to their own apartment.

We also get -- have clients from the Department of Mental Health who are there as well. So a lot of our clients in there have some sort of disabilities, some sort of mental health assistance as well. So the proposition for Alternative 7 will have a great impact in our facility, destroying a lot of property in our grounds. Hopefully that doesn't go into effect. As you can tell, the Salvation Army Bell Shelter is helping out a lot of homeless individuals to get back on their feet, whether

T-1-20

it can be causes of, you know, being kicked out of an apartment, high rents, which is known here in California, but, definitely, it's a one-way stop into permanent housing. So definitely if we can have other alternatives that will not damage our facility, our premises for homeless individuals, that would be great. T-1-20

MS. McCORMICK: Thank you very much.

MR. GARCIA: Thank you.

MS. McCORMICK: I have a Hugo Lujan, then Alondra Garcia, and then Jose Silva.

If you can raise that. There you go.

MR. LUJAN: I'll just pull it out.

MS. McCORMICK: Sure, no problem.

MR. LUJAN: My name is Hugo Lujan. I am from East LA, but I have family in the City of Maywood, Lynwood, and Long Beach. So I'm coming to, one, make the request for 120 days for the comment period. I don't know if ya'll are aware, but there's like this bible-looking document in the back that would take literally like years for a regular resident to review. That is a summary of the presentation that we just got. In order for us to do an adequate review of it and inform ourselves of it, 60 days is not enough and now 90 days is still not enough. So we're wanting to make an official request for 120 days and also I want to uplift what Bob brought up here in the City of Commerce in terms of the issue of displacement. Within Motion 22.1 it was meant to reduce the displacement, but, in fact, it T-1-21 T-1-22

actually increased it in the City of Commerce. It increased it to Sydney. None of the options that are on the table would -- would not displace Sydney Drive on the other side of Bristol neighborhood. Right? So there was an increase of displacement within these options compared to the last EIR, and also when Bob is talking about displacement, we need to also take into consideration the housing crisis that we're going through presently and how that's going to be affecting, not only the City of Commerce, but all of the communities along the 710. So official request that include analysis of the housing crisis and also the 120 days. Thank you. T-1-22

MS. McCORMICK: Okay. Thank you.

MS. GARCIA: Hello, my name is Alondra Garcia, and I'm a resident from Huntington Park. I'm concerned that displacement will leave many folks without a shelter, many of whom are already struggling with housing. It is important for my community because there's already an increase in homelessness in the community and in the communities around me. With this expansion, most people will lose a place to go. Personally, I was homeless as well at some point and I knew that a place like the Bell Shelter could offer help to me and my family. For this reason, I'm urging Caltrans to extend the comment period by 120 days for the community to provide better resolutions. T-1-23 T-1-24

MS. McCORMICK: Thank you.

MR. SILVA: My name is Jose Luis Silva. I want this plan T-1-25

of the project 710 to be long term for 50 or 100 years for a better future for our generations to come, especially with a zero emissions. T-1-25

MS. McCORMICK: Thank you. Okay. Alicia Silva. We have Alicia Silva, Ramona Quezada, and Maria Kennedy. Alicia. She's --

MS. SILVA: My name is Alicia Silva, and I'm asking for an extension of 120 days. Thank you very much. T-1-26

MS. McCORMICK: Okay. Thank you. Ramona, Maria Kennedy, and then Lilia Delgado.

MS. QUEZADA: Good afternoon. My name is Ramona Quezada. It is important that we get 120 days extension to have better solutions. Thank you very much. T-1-27

MS. McCORMICK: Thank you.

MS. KENNEDY: Good afternoon. My name is Maria Kennedy and I live in Walnut Park. My concern is in regards to the almost zero emission. I think we deserve zero emission because the -- there's a lot of pollution already in the air in our community T-1-28 and also the housing -- the people who are going to be displaced. I think it is very important for those of us who just have a little roof on our head, but there's people that don't have these roof and then the housing is becoming very T-1-29 expensive, and that's why I'm asking Caltrans to offer an extension of 120 days so we can find better solutions and thank you for listening. T-1-30

MS. McCORMICK: Thank you. Thank you. Lilia Delgado and Yvette Espinoza, then Rosa Esquivel.

MS. DELGADO: Hi, my name is Lilia Delgado and I deserve zero emission Corridor in order to protect our quality because it is -- it is important for us -- because the most important for us is the town. So instead of 90 days, I ask for 130 days for getting ready analysis. T-1-31 T-1-32

MS. McCORMICK: Okay. Thank you.

MS. DELGADO: Thank you.

MS. McCORMICK: Yvette Espinoza, then Rosa Esquivel.

MS. ESPINOZA: Good evening, everyone. My name is Yvette Espinoza, and I'm a resident of the City of Huntington Park. I am a member of Youth for Environmental Justice from Communities for a Better Environment, and I am concerned about having a zero emission Corridor in my community to protect the air quality for not only myself but my friends, my family, and my community. We are working really hard to ensure that our community will have a clean and committed zero emission Corridor through the 710 Project because we will not just settle for just near zero emission. It is important for my community because, as it is, Huntington Park already has enough pollution due to the fact that we are a disadvantaged community of color. For this reason, I am urging Caltrans to extend the comment period by 120 days instead of the 90 to make certain that my community will be able to provide better solutions. Thank you. T-1-33 T-1-34

MS. McCORMICK: Thank you. Rosa and then Casey Corona. Arturo.

MS. ESQUIVEL: Good afternoon. My name is Rosa Esquivel. I come from the City of South Gate. 90 days is not enough. We want 120 days to have more time for analysis of a different kind. Thank you. T-1-35

MS. McCORMICK: Okay. Thank you. Casey Corona and then Kayleigh Wade, please. Go right ahead.

MS. CORONA: Good afternoon. My name is Casey Corona. I'm from Huntington Park and I'm on behalf of CBE, Communities for a Better Environment. I am concerned about the painted image of a cleaner environment based on the assumption you have proposed about zero emission vehicles being driven by the majority of the community that will be impacted by this project. We are mainly made up of lower income communities of color that do not have access to newer model cars that pose a lesser threat to the environment. Thank you. T-1-36

MS. McCORMICK: Thank you.

MS. WADE: Hi, my name is Kayleigh Wade, and I was born and raised in Lynwood. I'm here to ask for an extension of 120 days for a review period because Ron has once denied an extension to review the revised EIR because he said it encourages procrastination. 90 days is simply not enough. We are not procrastinators. We are community members who are very concerned about the issues this project will pose in our T-1-37

community -- Oh my gosh, I'm getting a phone call. Hold on. All right -- namely, displacement and how it affects people who are already struggling with housing as development in LA accelerates while ignoring the growing housing crisis. We want ample time to review a document that has in the past received very poor reviews from the federal government. We want further extension of the review period to 120 days rather than 90 days. Thank you.

T-1-37

T-1-38

T-1-39

MS. McCORMICK: Thank you. I would like to call up Dilia Ortega and then Maria Rivera and Gabriel Guerrero.

MS. ORTEGA: Hey, my name is Dilia Ortega. I grew up in Huntington Park and I currently live in South Gate. I'm here to request an extension of 120 days to allow for a thorough community input. The ETA gave a 2010 Draft EIR a fail for its weak Environmental Analysis. It's one of the worst grades any Environmental Document has received in the nation; so I think that having this extension will truly help community members put a good analysis, especially since currently our concerns are not being met. I think it's really important that the Zero Emissions Corridor is currently being pitted against the displacement of community resources like the shelter in both Bell and Long Beach, especially when other industries have been -- or especially when Caltrans has found a way to change the right of way and still keep other industries like the rail yard and the -- just like oil companies. So I think it's really

T-1-40

T-1-41

important to really figure out a way where we can still prioritize community health. We deserve emissions freight corridor and still maintain resources like the homeless shelter and the Multi-Service Center in Long Beach. Thank you. T-1-42

MS. McCORMICK: Great. Thank you. Maria.

MS. RIVERA: Hello, my name is Maria Rivera and I'm here from CBE representing Huntington Park, Maywood, Bell, Buena Park, South Gate, Cudahy, Florence, and Firestone and Bell Gardens and, of course, other cities. We are here -- me being once a homeless person, I'm about to be homeless again, but I'm praying on that. I'm here because I've lived it. I've lived it. I've been there 100 -- I was a year and a half homeless. I have a place, but it's been kind of hard to keep it because of the high rents and stuff like that, but I'm coming -- I'm still hoping to be in a home.

Anyway, my people, what do we want?

AUDIENCE: 120 days, 120 days, 120 days.

MS. RIVERA: My people have talked. 120 days extension. Thank you very much. T-1-43

MS. McCORMICK: Thank you. Gabriel and then Dinah Dominguez, please. Go ahead, please.

MR. GUERRERO: Hello, good evening. My name is Gabriel Guerrero and I've been living in the City of South Gate for 45 years, which at the same place I grows -- I raised up all my family, and I just live not even a mile from the 710, and I'm

really concerned about this project. This 710 Freeway -- we have been fighting for a lot of years, many, many years. So what I'm concerned is that -- I mean, the issues on the -- pollution, all those trailers in the 710. What I'm asking you guys 120 days extension to find solutions. Thank you very much. T-1-44

MS. McCORMICK: Thank you. Dinah Dominguez and then Richard Hernandez, please. Go ahead.

MS. DOMINGUEZ: Hi, my name is Dinah Dominguez. I'm here with Communities for a Better Environment. I have family in Huntington Park, and I'm here to request a 120-day extension of the review period. I want to reiterate that extending the review period is not procrastination. This is an issue that is very important to many people, many community members who are here today, and we want to make sure that there's a thorough analysis -- technical legal analysis of what's inside this really enormous EIR. Thank you. T-1-45

MS. McCORMICK: Thank you. Richard Hernandez and then Juan Vasquez. Richard and then Juan Vasquez.

MR. HERNANDEZ: Hi, my name is Richard Hernandez. I've lived in Commerce for quite some time, especially my mother but to hear that people will be displaced because of the project, I'm hoping that you have devised some kind of plan on acquiring some type of property to provide for -- to these people. They are a part of Commerce and they've probably lived here most of their lives, and I think it's totally unfair to them and to the T-1-46

community they've known since and also for that extension as far as being able to decipher all of the information that's been accumulated throughout all this time. That's basically it. Thank you. T-1-46 T-1-47

MS. McCORMICK: Okay. Thank you. Juan Vasquez and then Dr. Tom Williams.

MR. VASQUEZ: Good afternoon, my name is Juan Vasquez. I live on Sydney Street and thank you to the young man for addressing how all of a sudden we were in the plans and their option -- we're talking about Option A and Option B of displacement of 27 homes as well as a dialysis center. So I notice that that dialysis center services the area around here and I feel really bad for the people that go there and that will be displaced. Also for the fact that I've gone to one of your meetings before and you talked about zero emission and how we're getting a program. Just because you have the program doesn't necessarily mean that everyone is going to go out there and purchase these trucks. So at the same time you're talking about the freeway and you're preparing for the future but at the same time what makes you think that in the future it's not going to be just as crowded and we're going to be going back to this again. So our option for Sydney is No Build at all and also I would also like to say what the people are saying at least give them 120 days so they can look for better options than this. Thank you. T-1-48 T-1-49 T-1-50 T-1-51

MS. McCORMICK: Thank you. Tom Williams and then Clara Solis.

DR. WILLIAMS: Good evening.

MS. McCORMICK: Good evening.

DR. WILLIAMS: Dr. Tom Williams, Citizens Coalition for a Safe Community and Sierra Club Central Group. It's a big one, however, it's based upon two elements that are on the first board over here (Indicating.). One is traffic volume. The another one is goods movement. The project is based upon trucks, trucks, trucks, trucks, and more trucks, but we don't know how many trucks. For the SR-710, it is in hospice care and will change the whole dynamics because we estimated that there were 20,000 north, 20,000 southbound trucks that were going to come on the SR-710. Where do they go now if we don't have the SR-710? We're looking at the indirect secondary impacts of putting all of those 40,000 onto the I-5 downtown section. Lots of luck. So we're quite interested in the traffic volumes which are not on any of the boards and not specifically presented in the EIR. We're also concerned about where the numbers came from. One reference is Stags 2012 and that was based upon the year 2000 population. Well, that doesn't work. T-1-52

There's also a matter that the Ports of LA and Long Beach right now are having a Clean Air Action Plan, but it's not reflected within any of the documents I've seen and I've searched through the documents. There's also a report called T-1-53

the Mercator Report, only given usually in second summaries some place; however, it's not referenced even in the EIR/EIS. So we're looking at totally incomplete, inadequate EIR/EIS. Sierra Club Transportation Committee -- we have an alternative that's not even considered. Put it on a rail. Where is the rail? Because the ports are going. They have a cargo of 50 percent of the containers on a rail, but it's not reflected in the EIR/EIS. There's also a matter that the ports have a new environmental issue -- hazard; that is soft targets. What happens if there is a soft target 53-foot container that explodes on a bridge or under a major interchange say the I-5. So we look at it incomplete, inadequate, and I've only been working on it since 1992. Thank you.

T-1-54

T-1-55

T-1-56

MS. McCORMICK: Thank you. Clara Solis and then Priscilla Sanchez, please.

MS. SOLIS: Hi, I want to echo everybody else that I think 120 days is definitely needed. I just want to show a picture right here, this home in East Los Angeles on Sydney Street, 755 South Sydney is labeled "industrial." Is this an industrial place?

T-1-57

T-1-58

AUDIENCE: No.

MS. SOLIS: There's all kinds of errors in this document. It's -- I don't know -- I guess 10,000 pages long. How are we lay people to go through this lengthy document to defend our communities and make certain that our communities are well

represented? I certainly haven't had time to go through this document. Secondly, we would like an East LA meeting. Here we are at the beginning of the period. People haven't had time to digest this document. We want a meeting in East Los Angeles on -- at Humphries Elementary School; so that the residents in Humphries can address this. East -- the residents on Sydney -- Sydney Drive -- T-1-59

Am I too loud?

MS. McCORMICK: No, no, I couldn't hear you.

MS. SOLIS: Okay. The residents on Sydney Drive live within a triangle of freeways. There is the 710 Freeway, there's the 5 Freeway, and there's the 60 Freeway. These homes are very close to freeways. They will be impacted when there's widening plans on the 60, when there's widening plans on the 5. We've already been told they want to take businesses on Telegraph for the 5 although there's no money for it, thankfully, right now. So this community has to have time. It needs to have a voice in this project. Our East LA local advisory committee throughout our comments have always said no taking of any more homes in East Los Angeles because you've already taken enough. East Los Angeles has four freeways through it. It can't afford to have more houses taken. We -- this whole option, 3A and 3B, where the heck did that come from? It's like out of left field. It was never on the table and now you want to take all these homes. I'm -- I don't see that it T-1-60

has been analyzed 3A and 3B in the document. I haven't yet found it, but like I said, I don't have enough time in the health risk assessment concern that there's going to be more pollution brought because, even if there is zero emission -- with the near zero emission, there seems to be an increase over the No Build in pollution in East Los Angeles within this triangle because this East Los Angeles at the end of the project, it's impacted differently than a lot of the other areas. So this community needs to have time. It needs to be able to speak up about how this impacts them. Thank you. T-1-60 T-1-61 T-1-62

MS. McCORMICK: All right. Thank you.

MS. SANCHEZ: Hi, my name is Priscilla. I'm from Communities for a Better Environment/EJ and I live in South Gate and a lot of our family lives in South Gate and in Lynwood, and so first of all, I wanted to bring up a point that displacement is going to -- well, you're hoping on displacement -- you're planning on displacement on happening; right? And I don't understand how easing traffic is worth more than the lives of 100 people or 200, 300 people. I don't even understand how that's, like, even possible in your head. And the second one - what was it? Oh, yeah, so 90 days is not enough, like at all. So we urge for 120 days. Thank you. T-1-63 T-1-64

MS. McCORMICK: Thank you. I'd like to call up Frankie from Huntington Park, and I actually need your first and last name and then I'd like to call up Mark Lopez.

MS. LOPEZ: Hi, my name is Marilyn Lopez, but I go by "Frankie" --

MS. McCORMICK: Oh, I'm sorry. Your name again?

MS. LOPEZ: Frankie, but my birth name is Marilyn Lopez.

MS. McCORMICK: Maria Lopez.

MS. LOPEZ: Marilyn.

MS. McCORMICK: Marilyn Lopez. Thank you.

MS. LOPEZ: Yeah. So I want to talk about two things, which is the zero emission and also the homeless shelter. I think it's pretty messed up that you're going to, like, go over the homeless shelter when they don't even have, like, an official place to live and they have to live in a shelter and, you know, they don't have money to go somewhere else. They -- I mean, if they're living in a shelter, they most likely don't have anywhere else to go, and I know this, like, deal with, like, skid row where you don't want people there anymore and, like, going over a homeless shelter is going to bring more people into the streets, which is going to make even more skid rows, which is pretty messed up and, you know -- yeah, sorry. I have really bad anxiety. T-1-65

Also the zero emissions. I live in Huntington Park which is, like, pretty -- yeah, we're in the middle of five freeways and the 10 and the 710 is going to make it even worse and -- I'm sorry. I'm lightheaded.

MS. McCORMICK: Speak closer to the microphone.

MS. LOPEZ: We have a lot of major air polluters and we're right next to Vernon as well; so there's, like, a bunch of air pollution from there and pollution knows no boundaries; so it's just going to go everywhere; so the cities around the 710 aren't going to be the only ones affected and also, like, miles far from 710 are going to be affected from air pollution and, yeah, and also the 120 days is going to be really cool because 90 days isn't really enough. It's, like, three months; right? So four months is going to be by the end of the year, around there; so that's -- yeah. T-1-66 T-1-67

MS. McCORMICK: Okay. Thank you. Mark Lopez and then I have a B. Timberlake.

MR. LOPEZ: Hi, my name is Mark Lopez. I'm with East Yard Communities for Environmental Justice. I got a whole lot to say. I think all of us got a whole lot to say. We've been saying it to ya'll for years, and we feel like we have to say the same stuff. This time we got to say it so it's on the legal record in case we got to take ya'll to court -- right? -- so bear with us. Yeah. So the study doesn't reflect the full capacity of the facilities being proposed. That means that the impacts aren't being fully analyzed. I brought this up at a meeting. The consultants didn't know what I was talking about. Ron admitted that that was the case. I just want to make sure that's on the record. So this EIR is inadequate. If you need more explanation, we can talk about it in court. T-1-68

Nobody is here to do nothing, and I want to make sure to call that out. Ron, I think you kind of -- that's a false pretense when you're like "Well, doing nothing harms us; right?" Who is here to do nothing; right? Like that I think is an insult and indicative of how well this process has been. It feels like Caltrans has been trying to get our alternative -- our community alternative to look irrational this whole time; right? First it was the cost. They said it's going to cost too much and then a consultant came to a public meeting, I think it was a technical advisor committee meeting a couple years back, and they explained that Community Alternative 7 was actually billions of dollars less because of the lack of displacement and then I never saw that consultant again. Now I see that ya'll designed a Zero Emission Freight Corridor and it feels like you did it to maximize displacement -- right? -- to make it as if now we're in opposition with the shelter, we're in opposition with these homeless resources, when ya'll weren't even considering them in the first circulated document. We had to bring that up. You didn't even know they existed; right? So we're not going to let ya'll play us against each other because NCA said when we proposed an alternative that wouldn't displace them, and we don't see that here. We're not falling for that. It feels like it's all to try to justify 5C which ya'll have been trying to push for years. It's disgusting.

T-1-69

T-1-70

The third piece -- and CA7 called for an elevated lane

T-1-71

system. Make sure that's on the record. The third thing is DWPs reluctance to give up their land has been -- is an assumption and I've heard that admitted at a public meeting, that it's an assumption. DT is -- at the point of the preparation of this document, DWP wasn't talked to about taking that land. It was an assumption which is very different from the Alley River Process that a bunch of us are a part of, where it's an assumption they would be and then we'll figure that out; right? So I think DWP along with rail, I feel like rail is being prioritized in this project -- the rail yards, the rail lines. We need to be prioritized. Our communities need to be the priority here. T-1-71

So it's irrational to not maximize emissions reductions when we're in a health crisis. It's irrational not to maximize that. It's irrational to potentially displace businesses when we're constantly under an economic crisis with the unemployment rates in our community. That doesn't make sense. It's irrational to displace homes in a housing crisis. It doesn't make sense. It's -- it's irrational -- it's irrational to displace homeless services when we're in a homeless crisis. All these things are irrational, and if this is the best ya'll can come up to bring to the table, we need to be at the table together and we hope that this time ya'll consider us partners. T-1-72 T-1-73 T-1-74 T-1-75

MS. McCORMICK: Thank you because we have to wrap up your time now, please.

MR. LOPEZ: All right.

MS. McCORMICK: Thank you. Mr. Timberlake.

MR. TIMBERLAKE: Mr. B, as in boy, Timberlake.

MS. McCORMICK: Yes.

MR. TIMBERLAKE: Okay.

MS. McCORMICK: And then, I'm sorry, after you Eddie Torres is next. Thank you. Go right ahead.

MR. TIMBERLAKE: Everyone knows that the east part of the county, the part we're in here, is among the most polluted parts of all of Southern California. The 710 Freeway is one major source of pollution. Expanding the 710 Freeway, even if you pretend that you're going to offer incentives to provide zero or low emission trucks, is just going to increase the pollution. There is absolutely nothing that keeps existing dirty diesel trucks from driving on your expanded freeway or continuing to drive on the freeway as it is. There is nothing in these plans. You can try to bribe them. We've seen how well that happened -- that has worked out at the ports. I'm sorry. The fact is this community -- I've lived in Huntington Park. Now I live in Bell. This community -- these communities here have been at the end of a line for governmental agencies including Metro and Caltrans but especially Metro for decades, and Metro, just a few months ago, gave a big fat award to the City of South Pasadena by giving up on extending the 710 Freeway up to the Foothill Freeway. Now, why is it that those middle class people don't

T-1-76

have to have any pollution because, heavens, they're rich, but people here -- people that are here have to endure the diesel pollution. I mean, the fact is, when you expand the freeway, it fills up immediately. It doesn't, you know -- you don't have any grace period. It's -- you open the new lanes, they're full. So why is it that the EIR -- Draft EIR/EIS you set one over in Bristol library, which is nice for the people who live in Bristol, but it's really hard to get to. Why didn't you put it in Rosewood right next door the main library for Commerce? That's just a few blocks from the Atlantic Boulevard north south artery. I mean, I don't understand. It just seems like it's all designed to keep the community from participating in this process. The alternatives --

T-1-77

T-1-78

MS. McCORMICK: Could you wrap up your comments, sir, please. Thank you. Eddie Torres and then Nerexda Soto. Thank you.

MR. TORRES: Good afternoon, everybody. My -- good afternoon, everybody. My name is Eddie Torres, resident of East Los Angeles and also the president of the East L.A. Chamber of Commerce Directors. I think the Bell and City of Commerce and East Los Angeles should stick together in 20 percent of this, exchange phone numbers with some of the leaders, and not let Metro or Caltrans doing what they've been doing and that's hurting us than helping us. First of all, on behalf of the East L.A. Chamber of Commerce we request 120 days for the

T-1-79

Environmental Document to be reviewed. Also we request a meeting in East Los Angeles incorporating like Clara said at Humphries Elementary. T-1-79 T-1-80

I was part of the original East Los Angeles Technical Advisory Committee for over ten years. From the very start, we were telling Caltrans and Metro and Supervisory Office, it's unacceptable to take any more businesses, any more residents, any more homes. It's unacceptable and they promised us they would not. That's usually what Caltrans and Metro does. Case in point, Third Street. We're going to break down and start one third of the time and in six months all will be demolished. They worked on the exit of the 710 Freeway going north Olympic Boulevard, it was two years, they didn't touch it until the last six months. That's the kind of "BS" Caltrans does to us. We have a voice right now. We have leverage right now. We have to stick together. T-1-81

Also East Los Angeles is very dense. We're 130,000 residents. We're using commercial business property to put affordable housing and we're fighting that, and now Metro came up with this bright idea. It took all this money for them to figure out to take homes. It's ridiculous, but here's the case in point too, and I can prove this, those five individuals that sat on the East LA Technical Advisory Committee about ten years ago, we sat in the room with a gentleman called Jerry Woods. He was an engineer extravagance, knew everything. He said they had

a $2 million computer. They were going to come back and tell us all the options that were going to affect us from least to worst. So what we did is, when we left, we got an envelope, we talked amongst ourselves about closures and extensions and the yards and the rails, and we came up with all five options, put it in an envelope. He came back -- remember $2 million -- $2 million computer; right? We were on the money with everything. We don't need Caltrans to tell us what's going to help us, what's going to hurt us. We know how it's going to help us. We know how it's going to hurt us. That man right there I have a lot of respect for -- Mark Lopez (Indicating.). He just told me right now in confidence, but I'm going to repeat it because I'm not scared of repeating things, that he presented a document that would prevent this and he said --

AUDIENCE MEMBER: We all did it.

MR. TORRES: Okay. Raise your hand --

MS. McCORMICK: Eddie, you're out of time.

MR. TORRES: And I'm going to keep talking. I'm going to keep on talking --

MS. McCORMICK: Eddie --

MR. TORRES: Okay. Don't caught me off --

MS. McCORMICK: -- to be fair to everyone --

MR. TORRES: Let me finish then.

MS. McCORMICK: -- speakers.

MR. TORRES: So --

MS. McCORMICK: Please wrap up your comment.

MR. TORRES: -- he shared a document and they ignored it so they could devastate our community. Why? Money, for all the money. Thank you.

MS. McCORMICK: I'd like to ask Nerexda Soto to come up next, please, then Ricardo Gastolum and then Ernesto Gonzalez. Nerexda.

MR. GASTOLUM: My name is Ricardo Gastolum, and I live in the City of Huntington Park. I want to talk about the first point of the clean air and public health. How could you reassure us of something like this if someone that doesn't have a lot of income goes to the hospital and they charge them $150 and it takes about 24 hours to get any type of medical attention. There's a lot of pollution now a days and the hospitals are full with patients. The first people that suffer are children and the elderly. Ten percent of the children in schools -- they don't go to school. They miss school. We're talking of 65,000 students; so we're talking about 6,500 children a day that miss school. They get different diseases and they don't go to school and they don't graduate. 35 percent don't graduate. Where are we heading? What kind of communities are we going to have in the future? Those agencies that give these kind of permits should be punished. They are earning their money -- or their salaries from the people and they're not doing their jobs. They want us to call them when there is

T-1-82

something going on. How are you going to improve this. Having more lanes, there's going to be more traffic. If the majority of people are going to San Francisco or Oakland, why don't they send the ships over there. You know, there's ports over there too. Why do they have to come through our cities right here. Who is getting anything out of this? The people are going to keep suffering just because of some people? I want to know if in the future there's penalties or punishments for these people that are giving permits to companies that are causing more pollution. These people are supposed to work for the people and they are not helping the people. Thank you very much. T-1-82

MS. McCORMICK: Thank you. Before we go to the next person, are there anyone else who would like to have a speaker card? Okay. Thank you. Ricardo Gastolum. Pardon?

AUDIENCE MEMBER: That was him.

MS. McCORMICK: Then wait a second. I'm sorry. You're right. Thank you. Ernesto Gonzalez. Ernesto Gonzalez.

MR. GONZALEZ: Sorry about that.

MS. McCORMICK: It's okay.

MR. GONZALEZ: Yeah, Ernesto Gonzalez, resident of the City of Commerce. We are --- you know, we're one of the communities that's being impacted by displacement and the environmental hazards that goes with expanding the freeway, and we want to know -- you know, we want to have a concrete plan on how we're going to address the issue of displacing the residents. That's T-1-83

something that, you know, needs to be, you know, worked with the different municipalities because we -- you know, we don't want to displace our residents, especially residents of Commerce. You know, like people that live here, they don't want to move out of Commerce because we have great services. It's a great community to live in. So we need to address that issue of how we're going to keep people from Commerce in Commerce and people that are being displaced off of Sydney and in Bandini and Ayers, and also just thinking about, like, the environmental impacts in our community, I know, you know, a lot of people that were born, like, in Commerce, that grew up in Commerce, you know, are -- we're suffering the consequences in living in an impacted community and that's only going to exacerbate it. T-1-83

It's gone so bad that we recently started a special needs commission because of -- we have several kids that are being born with different types of respiratory illnesses, you know, different issues on the autism spectrum. So that's something that we are addressing as a city on the long-term impacts of living in this environment, and this -- these options do not address that. They only make it worse. Like, somebody mentioned, you know, it makes our housing crisis worse, it makes our environmental impacts worse, and there was one last thing. T-1-84

Oh, yeah, so we're asking for the extension of community input for 120 days even though that's not enough. It's -- what I heard was a 10,000-page document or something like that; so, T-1-85

yeah. So we definitely need to have more community input, more of a chance for people to really understand how this is going to affect our quality of life and what are the long-term impacts. This is a project that's permanent; right? So, you know, 120 days is the bare minimum. It's not even enough, you know. So thank you. T-1-85

MS. McCORMICK: Thank you very much. So we -- that is the end of our speaker cards, but it's not the end of our meeting. It's 8:00 o'clock -- it's about 8:05, and we are here until 9:00 p.m.. So I would encourage you to please go to the noise, traffic, and other stations, but just before we do that, I'd like to turn it back over to Ron to wrap up. If that would be okay with you. All right. And please be reminded that we have two more meetings with an opportunity for communities to be engaged with us. We're looking forward to talking to more folks. So that information is in the fact sheet at the information at the front desk as well.

MR. KOSINSKI: I really appreciate everybody spending the extra time that they did today to come here today. I'd like to say, number one, thank you. When we started the project working here in the 2000, 2001, 2002 to where we are today, the project that we had, the alternatives that we had, they've evolved, we've evolved from the 2008 document to the one we have now, and I project that they're going to be continuing to evolve. So thank you very much for your comments, for your issues. We

believe that they are serious issues. We certainly don't want to displace anybody. We will certainly take another look at all of the possible replacements and see if there is any way that we can avoid them because this is an issue. We certainly believe that there's a potential for mitigation -- housing and these types of things if in fact we have to displace people. But, again, I encourage you to continue to be involved. We will seriously consider the extension of time frame, and thank you for your time and, again, this is the opportunity for you to sit down with -- walk around and look at the maps and talk to the individual people here that we have to answer your questions and interact with them. So thank you again for your time.

MS. McCORMICK: Thank you very much and we'll make sure that you have the information. Don't forget the comment cards. We would like to get all your comment cards tonight and there are boxes on the way out and there's also boxes in the back. Thank you again. Good night. Close the meeting.

(Whereupon the hearing closes at 8:08 P.M..)

REPORTER'S CERTIFICATE

I, VANNA SAAVEDRA, CSR No. 14030, Certified Shorthand Reporter for the State of California, do hereby certify;

That said proceeding was taken before me at the time and place set forth and was taken down by me in shorthand and thereafter reduced to computerized transcription under my direction and supervision; and I hereby certify the foregoing is a full, true, and correct transcript of my shorthand notes so taken.

I further certify that I am neither counsel for nor related to any party to said action nor in any way interested in the outcome thereof.

Witness my hand this 26th day of August, 2017.

VANNA SAAVEDRA
Certified Shorthand Reporter No. 14030

This page intentionally left blank

T-1-1

The commenter's opposition to the displacement of the Salvation Army Bell Shelter is acknowledged and included in the project record. However, Caltrans, as lead agency under CEQA and NEPA (as assigned by the Federal Highway Administration [FHWA]), in cooperation with the Los Angeles County Metropolitan Transportation Authority (Metro), has identified Alternative 1 (No Build) as the Preferred Alternative. Therefore, displacements will not occur. Please refer to Section 1.1 of this appendix for further discussion on the identification of the Preferred Alternative.

T-1-2

The commenter's opposition to the displacement of the Salvation Army Bell Shelter is acknowledged and included in the project record. As stated in Response to Comment T-1-1, the No Build Alternative has been selected as the Preferred Alternative. Therefore, displacements would no longer be necessary. Please refer to Section 1.1 of this appendix for a discussion of the identification of the Preferred Alternative.

T-1-3

Caltrans and Metro thank you for your comment. Your opposition to the displacement of the Salvation Army Bell Shelter is acknowledged and included in the project record. As stated in Response to Comment T-1-1, the No Build Alternative has been selected as the Preferred Alternative. Therefore, displacements would no longer be necessary.

T-1-4

The commenter's opposition to the displacement of the Salvation Army Bell Shelter and the potential effects on environmental justice populations is acknowledged and included in the project record. As stated in Response to Comment T-1-1, the No Build Alternative has been selected as the Preferred Alternative. Therefore, displacements would no longer be necessary.

T-1-5

Mitigation measures have been proposed for air quality, noise, and traffic impacts, as well as temporary construction impacts resulting from the build alternatives. Please refer to Sections 3.13.4, Air Quality, 3.14.6, Noise, 3.5.4, Traffic, and 3.24.4, Construction Impacts, for specific avoidance, minimization, and/or mitigation measures proposed for the build alternatives for each respective resource area. In addition, environmental justice-specific mitigation has also been proposed to address the conclusion that the build alternatives as a whole would have a disproportionate adverse impact to minority and low-income populations in the corridor; refer to the measures detailed in Section 3.3.3.7 of the RDEIR/SDEIS. Specifically, should a build alternative be selected as the Preferred Alternative, Measure C-7 would provide individual cities

within the Study Area funding for targeted improvements that would improve air quality and public health, reduce traffic congestion, provide aesthetic/visual enhancements, and improve parks and recreation. However, as stated in Response to Comment T-1-1, the No Build Alternative has been selected as the Preferred Alternative. Therefore, impacts associated with the build alternatives would no longer occur.

T-1-6

The No Build Alternative has been selected as the Preferred Alternative, under which the Bell Shelter would not be displaced or relocated.

T-1-7

The commenter's opposition to the displacement of the Bell Shelter is acknowledged and included in the project record. As stated in Response to Comment T-1-1, the No Build Alternative has been selected as the Preferred Alternative. Therefore, displacements would no longer be necessary.

T-1-8

The commenter's provision of information regarding the difficulties in relocating a homeless shelter of this size as well as the interrelationships between the shelter and other entities in the area is acknowledged and included in the project record. As stated in Response to Comment T-1-1, the No Build Alternative has been selected as the Preferred Alternative. Therefore, the Preferred Alternative will not result in the displacement of Bell Shelter. Please refer to Section 1.1 of this appendix for a discussion of the identification of the Preferred Alternative.

T-1-9

Zero emission and near zero emission (ZE/NZE) trucks would help reduce diesel particulate matter (DPM) and nitrogen oxides (NO_X) in emissions from trucks operating on the I-710 Corridor. Please refer to Section 1.3 of this appendix for more detailed discussion regarding the I-710 Clean Truck Program. It should be noted that the I-710 Clean Truck Program is a programmatic element of the build alternatives. Since a build alternative has not been selected as the Preferred Alternative, this programmatic element will not be implemented by Caltrans as the lead agency under CEQA and NEPA and as the owner/operator of the I-710 freeway.

T-1-10

The commenter's support for Alternative 7 is acknowledged and included in the project record. However, Alternative 1, No Build, has been selected as the Preferred Alternative. Please refer to Section 1.1 of this appendix for a discussion on the identification of the Preferred Alternative.

T-1-11

The commenter's support of Alternative 7 and a ZE freight corridor is acknowledged and included in the project record. However, Alternative 1, No Build, has been selected as the Preferred Alternative. Please refer to Section 1.1 of this appendix for a discussion on the identification of the Preferred Alternative and Section 1.3 of this appendix for additional discussion of the I-710 Clean Truck Program. It should be noted that the I-710 Clean Truck Program is a programmatic element of the build alternatives. Since a build alternative has not been selected as the Preferred Alternative, this programmatic element will not be implemented by Caltrans as the lead agency under CEQA and NEPA and as the owner/operator of the I-710 freeway.

T-1-12

Caltrans and Metro thank the commenter for providing this information. Property tax impacts were discussed in Section 3.3.2.4 of the RDEIR/SDEIS, which, it is important to note, presented a worst-case scenario in which, under the build alternatives, no displaced parcels would be relocated within the affected cities or communities. As stated in Response to Comment T-1-1, the No Build Alternative has been selected as the Preferred Alternative. Therefore, no displacements or relocations will be necessary. In addition, please refer to Section 1.5 of this appendix for more information on the methodology used to assess property tax loss.

T-1-13

As stated in Response to Comment T-1-1, the No Build Alternative has been selected as the Preferred Alternative. Therefore, no displacements or relocations will be necessary.

T-1-14

Please refer to Section 1.2 of this appendix for further details on the community outreach efforts ongoing through project development. The commenter's name and address have been added to the distribution list for the project and will receive notice of release of this Final EIR/EIS.

T-1-15

Please refer to Section 1.2 of this appendix regarding the extension of the public comment period.

T-1-16

The commenter's concern regarding the displacement of the Salvation Army Bell Shelter is acknowledged and included in the project record. As stated in Response to Comment T-1-1, the No Build Alternative has been selected as the Preferred Alternative. Therefore, no displacements will be necessary.

T-1-17

The commenter's opposition to impacts to the Salvation Army Bell Shelter is acknowledged and included in the project record. As stated in Response to Comment T-1-1, the No Build Alternative has been selected as the Preferred Alternative. Therefore, displacements would no longer be necessary.

T-1-18

The commenter's concern regarding the displacement of the Salvation Army Bell Shelter is acknowledged and included in the project record. As stated in Response to Comment T-1-1, the No Build Alternative has been selected as the Preferred Alternative. Therefore, displacements would no longer be necessary.

T-1-19

The commenter's concern regarding the displacement of the Salvation Army Bell Shelter is acknowledged and included in the project record. As stated in Response to Comment T-1-1, the No Build Alternative has been selected as the Preferred Alternative. Therefore, displacements would no longer be necessary.

T-1-20

The commenter's concern regarding the displacement of the Salvation Army Bell Shelter and opposition to Alternative 7 are acknowledged and included in the project record. As stated in Response to Comment T-1-1, the No Build Alternative has been selected as the Preferred Alternative. Therefore, displacements would no longer be necessary. Please refer to Section 1.1 of this appendix for a discussion of the identification of the Preferred Alternative.

T-1-21

Please refer to Section 1.2 of this appendix regarding the extension of the public comment period.

T-1-22

The commenter states that Motion 22.1 was meant to reduce displacements, but actually increased them in the City of Commerce. The Metro Board of Directors passed Board Motion 22.1 in October 2015 that directed Metro and Caltrans to study a geometric design for Alternative 7 that avoids significant impacts and displacement of homes, businesses, and community resources. It should be noted that Motion 22.1 did not include this requirement for Alternative 5C. Design refinements to avoid or minimize impacts to existing land uses related to the temporary use and/or permanent acquisition of property under the build alternatives have been ongoing since the start of project development. Please refer to Appendix T, Avoidance Concepts Applicable to Alternative 7, of the RDEIR/SDEIS for more information on the evaluation of Alternative 7 designs to avoid displacements. Relocation impacts would be impossible to avoid under Alternative 7 because of the larger footprint required under this alternative. Alternative 7's larger footprint would be unavoidable because of the separated freight corridor and the necessary space required to provide adequate sight distance, curve radii, and grades for the ramps and other features associated with that structure. The RDEIR/SDEIS does not fail to comply with the requirements of Motion 22.1 because alternatives to avoid displacements were considered, although found to be infeasible. However, as stated in Response to Comment T-1-1, the No Build Alternative has been selected as the Preferred Alternative. Therefore, displacements would no longer be necessary.

T-1-23

The commenter's concern regarding the displacement of the Salvation Army Bell Shelter is acknowledged and included in the project record. As stated in Response to Comment T-1-1, the No Build Alternative has been selected as the Preferred Alternative. Therefore, displacements would no longer be necessary.

T-1-24

Please refer to Section 1.2 of this appendix regarding the extension of the public comment period.

T-1-25

The commenter's support of Alternative 7 and a ZE freight corridor is acknowledged and included in the project record. However, as stated in Response to Comment T-1-1, the No Build Alternative has been selected as the Preferred Alternative. Please refer to Section 1.1 of this appendix for a discussion on the identification of the Preferred Alternative and Section 1.3 of this appendix for additional discussion of the I-710 Clean Truck Program.

T-1-26

Please refer to Section 1.2 of this appendix regarding the extension of the public comment period.

T-1-27

Please refer to Section 1.2 of this appendix regarding the extension of the public comment period.

T-1-28

The commenter's support of a long-term plan for the I-710 and support of zero emissions is acknowledged and included in the project record. However, as stated in Response to Comment T-1-1, the No Build Alternative has been selected as the Preferred Alternative. Please refer to Section 1.1 of this appendix for a discussion on the identification of the Preferred Alternative and Section 1.3 of this appendix for additional discussion of the I-710 Clean Truck Program.

T-1-29

The commenter's concern regarding residential displacement as a result of the build alternatives is acknowledged and included in the project record. As stated in Response to Comment T-1-1, the No Build Alternative has been selected as the Preferred Alternative. Therefore, displacements would no longer be necessary.

T-1-30

Please refer to Section 1.2 of this appendix regarding the extension of the public comment period.

T-1-31

The commenter's support of a ZE corridor is acknowledged and included in the project record. However, as stated in Response to Comment T-1-1, the No Build Alternative has been selected as the Preferred Alternative. Please refer to Section 1.1 of this appendix for a discussion on the identification of the Preferred Alternative and Section 1.3 of this appendix for additional discussion of the I-710 Clean Truck Program.

T-1-32

Please refer to Section 1.2 of this appendix regarding the extension of the public comment period.

T-1-33

The commenter's support of a ZE corridor and concern about a near ZE corridor is acknowledged and included in the project record. However, as stated in Response to Comment T-1-1, the No Build Alternative has been selected as the Preferred Alternative. Please refer to Section 1.1 of

this appendix for a discussion on the identification of the Preferred Alternative and Section 1.3 of this appendix for additional discussion of the I-710 Clean Truck Program.

T-1-34

Please refer to Section 1.2 of this appendix regarding the extension of the public comment period.

T-1-35

Please refer to Section 1.2 of this appendix regarding the extension of the public comment period.

T-1-36

The commenter's concern regarding analytical assumptions is noted. Please note that the analyses undertaken for the project do not assume that ZE/NZE vehicles would be purchased or utilized by the general public in the future. However, the analyses do assume the presence and use of ZE and/or NZE trucks that would be funded by the project, should a build alternative be selected as the Preferred Alternative, through the I-710 Clean Truck Program (referred to in the RDEIR/SDEIS as the I-710 Corridor Project Zero Emission/Near Zero Emission Truck Technology Deployment Program), described in more detail in Section 2.3.2.1 of the Final EIR/EIS. This program would subsidize the purchase of heavy-duty ZE/NZE trucks for individual owner-operators' use within the I-710 Corridor. However, since a build alternative has not been selected as the Preferred Alternative, this programmatic element will not be implemented by Caltrans as the lead agency under CEQA and NEPA and as the owner/operator of the I-710 freeway.

T-1-37

Please refer to Section 1.2 of this appendix regarding the extension of the public comment period.

T-1-38

The commenter's concern regarding residential displacement as a result of the build alternatives is acknowledged and included in the project record. As stated in Response to Comment T-1-1, the No Build Alternative has been selected as the Preferred Alternative. Therefore, displacements would no longer be necessary.

T-1-39

Please refer to Section 1.2 of this appendix regarding the extension of the public comment period.

T-1-40

Please refer to Section 1.2 of this appendix for more information regarding the comment period for the RDEIR/SDEIS. It is true that United States Environmental Protection Agency (EPA)

considered the 2012 Draft EIS to have a rating of EU-3 (indicating that they perceived the analysis to be "Environmentally Unsatisfactory – Inadequate" per their Environmental Impact Statement rating system criteria). Comments and feedback received on the 2012 Draft EIR/EIS from the EPA as well as others were directly responsible for the development of the revised set of build alternatives analyzed in the RDEIR/SDEIS. In their comment letter on the 2017 RDEIR/SDEIS, the EPA rated the revised set of alternatives as EO-2 ("Environmental Objections – Insufficient Information") due to the need for sufficient assurance that ZE technology would be deployed as described by 2035. In response to this concern, further details of the I-710 Clean Truck Program (referred to in the RDEIR/SDEIS as the I-710 Corridor Project Zero Emission/Near Zero Emission Truck Technology Deployment Program) were developed and are included in Section 2.3.2.1 of this Final EIR/EIS. Further, in April 2020, the Metro Board of Directors programmed $50 million in Metro-controlled funds to provide funding for the initial deployment of the I-710 Clean Truck Program and to leverage the remaining funds required for full program implementation. However, since a build alternative has not been selected as the Preferred Alternative, this programmatic element will not be implemented by Caltrans as the lead agency under CEQA and NEPA and as the owner/operator of the I-710 freeway. Please see Section 2.3.2.1 of this Final EIR/EIS for further details.

T-1-41

As stated in Response to Comment T-1-1, the No Build Alternative has been selected as the Preferred Alternative. Therefore, no impacts to the Bell Shelter and Long Beach Multi-Service Center will occur, nor will any other displacements. Additionally, it should be noted that the build alternatives include programmatic elements that would help the corridor achieve improvements in congestion, air quality and overall community health. These would include the I-710 Clean Truck Program (referred to in the RDEIR/SDEIS as the I-710 Corridor Project Zero Emission/Near Zero Emission Truck Technology Deployment Program), the I-710 Corridor Community Health Benefit Program, and the I-710 Corridor Project ITS/TSM/Congestion Relief Program. However, since a build alternative has not been selected as the Preferred Alternative, these programmatic elements will not be implemented by Caltrans as the lead agency under CEQA and NEPA and as the owner/operator of the I-710 freeway. Please see Section 2.3.2.1 of this Final EIR/EIS for further details.

T-1-42

The commenter's support of a ZE corridor is acknowledged and included in the project record. However, as stated in Response to Comment T-1-1, the No Build Alternative has been selected as the Preferred Alternative. Please refer to Section 1.1 of this appendix for a discussion on the identification of the Preferred Alternative, and Section 1.3 of this appendix for additional discussion of the I-710 Clean Truck Program.

T-1-43

Please refer to Section 1.2 of this appendix regarding the extension of the public comment period.

T-1-44

Please refer to Section 1.2 of this appendix regarding the extension of the public comment period.

T-1-45

Please refer to Section 1.2 of this appendix regarding the extension of the public comment period.

T-1-46

The commenter's concern regarding residential displacement as a result of the build alternatives is acknowledged and included in the project record. As stated in Response to Comment T-1-1, the No Build Alternative has been selected as the Preferred Alternative. Therefore, displacements would no longer be necessary.

T-1-47

Please refer to Section 1.2 of this appendix regarding the extension of the public comment period.

T-1-48

The commenter's opposition to the displacement of the dialysis center is acknowledged and included in the project record. As stated in Response to Comment T-1-1, the No Build Alternative has been selected as the Preferred Alternative. Therefore, displacements would no longer be necessary.

T-1-49

The build alternatives include funding for ZE trucks as a programmatic element (referred to in the RDEIR/SDEIS as the I-710 Corridor Project Zero Emission/Near Zero Emission Truck Technology Deployment Program), as outlined in Section 2.3.2.1 of the RDEIR/SDEIS However, since a build alternative has not been selected as the Preferred Alternative, this programmatic element will not be implemented by Caltrans as the lead agency under CEQA and NEPA and as the owner/operator of the I-710 freeway. Please see Section 2.3.2.1 of this Final EIR/EIS for further details. Please refer to Section 1.3 of this appendix for additional discussion of the I-710 Clean Truck Program.

T-1-50

The commenter's support for the No Build Alternative is acknowledged and included in the project record. As stated in Response to Comment T-1-1, the No Build Alternative has been selected as

the Preferred Alternative. Please refer to Section 1.1 of this appendix for a discussion on the identification of the Preferred Alternative.

T-1-51

Please refer to Section 1.2 of this appendix regarding the extension of the public comment period.

T-1-52

SCAG's 2012–2035 regional travel demand forecast model utilized socio-economic data from the 2010 census, as well as traffic data collected in 2008 and 2009 to inform the travel demand forecasts developed for the 2012 Baseline year as well as the 2035 future year. The SR-710 North Project was included in the list of projects assumed in the year 2035 traffic forecasts supporting the RDEIR/SDEIS (please see Appendix U of the RDEIR/SDEIS). As reported in detail in Tables 4-1 and 4-2 of the *Traffic Operations Analysis Report* (2017), the bi-directional average daily truck volumes on the segment of I-710 between I-5 and SR-60 range from 30,000 under the Preferred Alternative (No Build Alternative), to 35,000 under the Alternative 5C. A sensitivity test forecast was performed to assess the impact of excluding the SR-710 North Project on 2035 traffic volumes on I-710. This sensitivity test was reported in detail in Section 10 of the *Technical Memorandum – I-710 Corridor Project RDEIR/SDEIS Travel Demand Modeling Methodology* (2017) and documents a small change in truck volumes. If SR-710 were to be constructed, it was projected to add 1,200 daily non-port trucks to the I-710 Corridor north of the Union Pacific (UP)/Burlington Northern Santa Fe (BNSF) intermodal rail yards. However, the number of Port (Ports of Los Angeles and Long Beach) trucks would drop by 600 trucks daily. This results in a net increase of 600 heavy-duty trucks on the I-710 Corridor that may be attributed to the SR-710 project in the future year (2035). This would represent a two percent net increase in heavy-duty trucks daily on I-710. The commenter is referred to the Final EIR/EIS released for the SR-710 North Project in 2018 to better understand the implications of constructing or not constructing the SR-710 North Project on the surrounding freeway system, including I-5.

T-1-53

This comment requests that this RDEIR/SDEIS be revised to include a discussion of the San Pedro Bay Ports Clean Air Action Plan (CAAP) Update, which was adopted in November 2017. The CAAP Update was included in the cumulative analysis as Project GM-9. The cumulative analysis also includes 46 improvement projects identified by the Port of Los Angeles and the Port of Long Beach.

T-1-54

The Mercator report was referenced on page 26 of Appendix M, References, of the RDEIR/SDEIS. It should be noted that the cited document (Mercator International, LLC and

Oxford Economics 2016) references only the Executive Summary for the San Pedro Bay Long-Term Unconstrained Cargo Forecast (refer to Appendix M, References, for more detailed information). At the time of preparation of the RDEIR/SDEIS, the full Mercator forecast was not publicly available and could not be obtained. However, sufficient information was included in the Executive Summary that was publicly available so that an informed judgment could be made regarding any substantive differences in the Mercator forecast and the forecast utilized in the traffic analysis for the I-710 Corridor Project.

T-1-55

Please refer to Section 1.9 of this appendix for more information regarding the Alameda Corridor and its interface with I-710.

T-1-56

Caltrans and Metro acknowledge that the Port of Los Angeles has begun evaluating the potential impacts due to the risk of terrorism in their environmental documents prepared for CEQA/NEPA compliance. This may be appropriate given the fact that the Port complex is a major economic driver and represents a substantial portion of national container terminal throughput, and therefore, could be deemed an attractive terrorist target for economic reasons rather than substantial loss of life. However, it is less certain whether a single surface transportation route would be similarly categorized. Additionally, Caltrans does not provide guidance as to how terrorism-related impacts would be evaluated in a CEQA/NEPA environmental document, and the State CEQA Guidelines do not specifically address the issue of terrorism. Therefore, a discussion of terrorism was not included in this Final EIR/EIS.

T-1-57

Please refer to Section 1.2 of this appendix regarding the extension of the public comment period.

T-1-58

The referenced property, 755 S. Sydney Dr., is shown on the Los Angeles County Assessor Portal to have an underlying land use code of 3100 (Industrial, light manufacturing). As indicated on the Existing Land Use Map (Figure 3.1-1), the portion of S. Sydney Dr. in this area is classified industrial according to Southern California Association of Governments (SCAG) 2012 land use data, although residential uses may be allowed/permitted on such land use designations. This is not erroneous; rather, it may be an instance of development that is not in conformance with the underlying land use zoning, or may have secured a variance or permit in order to do so legally.

T-1-59

In response to the requests for an additional public hearing, Metro and the Project Team provided support for a meeting held on October 18, 2017, at Humphreys Avenue Elementary School in East Los Angeles hosted by Los Angeles County Supervisor Hilda Solis. Although not a formal public hearing per the requirements of the Caltrans Project Development Procedures Manual, a presentation regarding the project was given, and an open question-and-answer period was held so that attendees wishing to speak were given the opportunity to do so. In addition, the office of Supervisor Solis procured a court reporter to record the question and answer session, and following the meeting, submitted the transcript of the meeting as a formal comment on the project. That submittal and the responses to those comments can be found as Response to Comment IP-19 in this appendix. In addition to Supervisor Solis' office providing a court reporter, the Project Team made the RDEIR/SDEIS and full suite of technical studies available at the meeting, as well as comment cards and laptop stations at which attendees could provide comments on the RDEIR/SDEIS online.

T-1-60

The impacts of all Design Options, including Options 3A and 3B, were evaluated in the RDEIR/SDEIS. However, as stated in Response to Comment T-1-1, the No Build Alternative has been selected as the Preferred Alternative and therefore, these design options will not be implemented.

T-1-61

Caltrans and Metro thank the commenter for their input. The commenter's concern of health impacts related to air quality near freeways is acknowledged and included in the project record. As discussed in Section 1.2.2 in Chapter 1.0, Proposed Project, of the RDEIR/SDEIS, one of the purposes of the project is to improve air quality and public health. As discussed in Section 3.13, Air Quality, in the RDEIR/SDEIS, all build alternatives would generally improve air quality and reduce public health risk. Along the I-710 Corridor, air quality would be improved and public health risk would be reduced at most locations, but there would be a few near-roadway locations where

there would be an increase in certain emissions but no increase in cancer risk compared to the 2012 Baseline. When compared to the 2035 No Build Alternative, both build alternatives would reduce cancer risk at most locations; however, a small increase in cancer risk would occur at some locations within 100 meters of I-710. For Alternative 5C, the maximum increase in risk would be approximately three in one million. The primary location of the increased risk for Alternative 5C would occur along a small portion of I-710 just south of SR-60. For Alternative 7, the increase in risk would be less than one in one million.

In addition to the information on health risk presented in the RDEIR/SDEIS, an East Los Angeles Local Advisory Committee (LAC) meeting was held in August 2017, which included the following tabulation of health risk assessment results for the I-710 Corridor and within East Los Angeles.

Modeled Cancer Risk

Scenario	Maximum Modeled Cancer Risk* Within 3 km of I-710	Maximum Modeled Cancer Risk* in East Los Angeles
2012 Baseline	1421	624
2035 Alternative 1	57	21
2035 Alternative 5C	45	18
2035 Alternative 7, 7-ZE	30	17

* Cancer risk in one million.
km = kilometer

Should a build alternative be selected as the Preferred Alternative, Measures AQ-2 and AQ-3 would reduce exposure to emissions at near-roadway locations. Measure AQ-2 would provide for installation of air filtration systems for schools within 0.25 mile of I-710. Measure AQ-3 would provide for the installation of solid barriers and installation of vegetation where soundwalls are not proposed to disperse pollution and reduce pollutant concentrations downwind. Additionally, the build alternatives include programmatic components to help improve air quality and public health in the I-710 Corridor. As discussed in Section 2.3.2, Build Alternatives, in the Final EIR/EIS, the I-710 Clean Truck Program (referred to in the RDEIR/SDEIS as the I-710 Corridor Project Zero Emission/Near Zero Emission Truck Technology Deployment Program) is a programmatic component of the build alternatives. This program would provide funding to individual owner-operators and privately owned truck fleets to subsidize the purchase of heavy-duty (Class 8) ZE/NZE trucks for use within the I-710 Corridor. Additionally, the I-710 Corridor Community Health Benefit Program is a programmatic component of the build alternatives and would take the form of a grant program structured to provide corridor communities the opportunity to implement projects or outreach activities that would improve air quality and public health related to I-710 travel and goods movement. However, since a build alternative has not been selected as the Preferred Alternative, these programmatic elements will not be implemented by Caltrans as the lead agency under CEQA and NEPA and as the owner/operator of the I-710 freeway.

In addition to the programs included as part of the I-710 Corridor Project build alternatives, the California Air Resources Board (CARB) and the South Coast Air Quality Management District (SCAQMD) are implementing programs and strategies to improve air quality near freeways. CARB is implementing several regulations such as the Truck and Bus Regulation, Pavley Standards, and Advanced Clean Cars Program to reduce emissions associated with vehicles traveling on the freeway. Besides this regulation, CARB is also in the process of developing other regulations that target buses and heavy-duty trucks such as the Innovative Clean Transit Regulation and the Advanced Clean Trucks Regulation. The SCAQMD is also implementing several control measures under the 2016 Air Quality Management Plan to encourage the deployment of ZE/NZE technologies.

T-1-62

Please refer to Section 1.2 of this appendix regarding the extension of the public comment period.

T-1-63

The commenter's concern regarding residential displacement as a result of the build alternatives is acknowledged and included in the project record. As stated in Response to Comment T-1-1, the No Build Alternative has been selected as the Preferred Alternative. Therefore, displacements would no longer be necessary.

T-1-64

Please refer to Section 1.2 of this appendix regarding the extension of the public comment period.

T-1-65

The commenter's concern regarding the displacement of the Salvation Army Bell Shelter is acknowledged and included in the project record. As stated in Response to Comment T-1-1, the No Build Alternative has been selected as the Preferred Alternative. Therefore, displacements would no longer be necessary.

T-1-66

The air quality modeling conducted for the project takes into account background pollutant concentrations in the air basin. Future air quality in the air basin is anticipated to improve due to changes in vehicle technology driven by State and local programs and regulations. As discussed in Section 1.2.2 in Chapter 1.0, Proposed Project, of the RDEIR/SDEIS, one of the purposes of the project is to improve air quality and public health. As discussed in Section 3.13, Air Quality, in the RDEIR/SDEIS, all build alternatives would generally improve air quality and reduce public health risk overall, with the exception of a few near-roadway locations. However, as stated in Response to Comment T-1-1, the No Build Alternative has been selected as the Preferred

Alternative and these improvement in air quality from the build alternatives would not be realized. Please refer to Section 1.1 of this appendix for a discussion on the identification of the Preferred Alternative.

T-1-67

Please refer to Section 1.2 of this appendix regarding the extension of the public comment period.

T-1-68

Caltrans respectfully disagrees with the assertion that the RDEIR is inadequate. Although specific comments on the elements of the analysis are not given by the commenter, it is indicated that the "full capacity of the facilities being proposed" is not reflected. The vehicular capacity of each build alternative was one of the inputs to the traffic model that ultimately forecast the future with-project traffic conditions, which were then in turn used in several other analyses, including those conducted for noise and air quality.

T-1-69

Caltrans, Metro, and the other I-710 Corridor Project funding partner agencies are extremely appreciative of the time and effort that was invested in developing the proposed Community Alternative program. As described in Chapter 2.0, Project Alternatives, of the Recirculated Draft EIR/Supplemental Draft EIS, many of the components of Community Alternative 7 (CA-7) have been integrated into Alternative 5C and Alternative 7, and those components of CA-7 that have not been integrated into Alternative 5C and Alternative 7 are addressed in other programs and projects being undertaken by Caltrans, Metro, and/or the Gateway Cities Council of Governments (Gateway Cities COG). However, as stated in Response to Comment T-1-1, the No Build Alternative has been selected as the Preferred Alternative. Please refer to Section 1.1 of this appendix for a discussion on the identification of the Preferred Alternative.

T-1-70

Caltrans and Metro respectfully disagree with the assertion that any portion of the project build alternatives was designed to maximize displacement; in fact, precisely the opposite is true. Additionally, in response to a portion of Motion 22.1, an analysis of right-of-way impacts under Alternative 7 and avoidance strategies was undertaken, which was summarized in Section 3.3.2.3, and included in its entirety in Appendix T of the RDEIR/SDEIS. It is important to keep in mind that particularly in dense urban areas such as the I-710 Corridor Project Study Area, avoidance of all right-of-way impacts would simply not be possible with any of the build alternatives, particularly when providing new structures that would require space for adequate sight distance, curve radii, and grades for ramps and other features. However, as stated in Response to Comment T-1-1, the No Build Alternative has been selected as the Preferred

Alternative. Therefore, there will be no displacements. Please refer to Section 1.1 of this appendix for a discussion on the identification of the Preferred Alternative.

T-1-71

The provision in Community Alternative 7 (CA-7) that called for an elevated lane system is acknowledged and included in the project record. The dedicated freight corridor component of Alternative 7 as evaluated in the RDEIR/SDEIS was elevated in several places in order to accommodate limited right-of-way within the existing I-710 Corridor. The suite of build alternatives evaluated in the RDEIR/SDEIS differed from the build alternatives evaluated in the 2012 Draft EIR/EIS in several ways; one of those ways was a redesign to avoid, as much as possible, the Los Angeles River and the utility corridor directly adjacent to the river. During development and preliminary design, coordination with various stakeholders showed that impacting these resources would be very complex, if even feasible. Alternatives 5C and 7 have avoided these resources wherever possible. However, it is important to know that while coordination with stakeholders occurs during the environmental document process, the specifics of right-of-way acquisition are not developed or known until a build alternative has been approved, final design has occurred, and project funding is secured (should a build alternative be selected as the Preferred Alternative). Therefore, many different types of assumptions must be employed during the development process for build alternatives. In addition, it is also important to note that should land need to be acquired from DWP for construction of project build alternatives, DWP (along with any other entity) would be compensated fairly and in accordance with Caltrans' relocation policies and procedures. Please refer to Section 1.5 of this appendix for more detailed information regarding relocations. Caltrans and Metro recognize the unique position of communities living within the I-710 Corridor and have strived to balance the needs of communities along with other corridor stakeholders. As stated in Response to Comment T-1-1, the No Build Alternative has been selected as the Preferred Alternative. Please refer to Section 1.1 of this appendix for a discussion on the identification of the Preferred Alternative.

T-1-72

The commenter's support of maximizing emission reduction is acknowledged and noted for the public record. Future air quality emissions would improve due to changes in vehicle technology driven by State and local programs and regulations. The project build alternatives include strategies and programs that would reduce air emissions and exposure in the I-710 Corridor. However, since a build alternative has not been selected as the Preferred Alternative, the programmatic elements will not be implemented by Caltrans as the lead agency under CEQA and NEPA and as the owner/operator of the I-710 freeway. Please refer to Section 1.3 of this appendix for additional discussion of the I-710 Clean Truck Program.

T-1-73

The commenter's concern regarding displacement of businesses as a result of the build alternatives is acknowledged and included in the project record. As stated in Response to Comment T-1-1, the No Build Alternative has been selected as the Preferred Alternative. Therefore, displacements would no longer be necessary.

T-1-74

The commenter's concern regarding displacement of people as a result of the build alternatives is acknowledged and included in the project record. As stated in Response to Comment T-1-1, the No Build Alternative has been selected as the Preferred Alternative. Therefore, displacements would no longer be necessary.

T-1-75

The commenter's concern regarding the displacement or elimination of homeless services is acknowledged and included in the project record. As stated in Response to Comment T-1-1, the No Build Alternative has been selected as the Preferred Alternative. Therefore, displacements would no longer be necessary.

T-1-76

Caltrans and Metro acknowledge that under either build alternative, diesel trucks would not be prohibited from accessing I-710. It is important to note that, as discussed in Section 3.13, Air Quality, in the RDEIR/SDEIS, all build alternatives would generally improve air quality and reduce public health risk. Along the I-710 Corridor, air quality would be improved and public health risk would be reduced at most locations, but there would be a few near-roadway locations where there would be an increase in certain emissions but no increase in cancer risk compared to the 2012 Baseline.

Alternative 5C also proposes to increase the number of ZE/NZE trucks operating on the I-710 freeway by at least 4,000. This would be achieved through the implementation of the I-710 Clean Truck Program (referred to in the RDEIR/SDEIS as the I-710 Corridor Project Zero Emission/Near Zero Emission Truck Technology Deployment Program). However, since a build alternative has not been selected as the Preferred Alternative, this programmatic element will not be implemented by Caltrans as the lead agency under CEQA and NEPA and as the owner/operator of the I-710 freeway. Please see Section 2.3.2.1 of this Final EIR/EIS for further details.

Further, SCAQMD, CARB, and the Ports have made great strides in offering incentive programs, combined with regulatory programs, to help turn over older, conventional diesel trucks into newer, cleaner diesel trucks that must meet higher, more rigorous standards. These fleet turnovers are projected to continue improving emissions along the I-710 Corridor in future years even if no improvements are made to I-710. Implementation of CARB's Truck and Bus Regulation and the

Ports' Clean Truck Programs is expected to accelerate fleet turnover to newer and cleaner (model year 2010 and beyond) trucks by 2023. The ZE/NZE trucks that would be deployed in the I-710 Corridor under the build alternatives would specifically be aimed at reducing both NO_X and DPM. While not all trucks on I-710 would elect to participate in the Program, a sufficient number of trucks would participate such that there would be some improvements along I-710. These reductions in DPM are mapped and can be most clearly seen in Appendix Q of the RDEIR/SDEIS.

T-1-77

It is assumed that the commenter is referring to a phenomenon known as "induced demand." The issue of induced demand is very complex, involving various travel behavior responses, residential and business location decisions, and other factors that influence regional population and economic growth. When capacity is added to freeways, traffic volumes on the freeways increase as motorists shift routes to take advantage of the improved travel conditions offered by the capacity increase. While some of these responses may represent new trips, much of the observed increase in traffic comes from trips that were already being made before the increase in highway capacity, or reflect predictable behavior that is accounted for in travel demand forecasts. Accordingly, Caltrans' guidance on this topic of induced demand maintains that each project should be evaluated on a case-by-case basis.

"Induced travel" is characterized as the additional demand for travel that occurs as a result of a decrease in the generalized cost of travel, including both travel-time and out-of-pocket costs. I-710 is part of a highly congested metropolitan roadway network and is located within an urbanized area, which is essentially built out. Given the high levels of congestion in the peak periods, the I-710 travel demand forecast model is particularly sensitive to changes in travel times. The proposed improvements included in the build alternatives would improve speeds and would reduce travel times on I-710, which in turn would attract more traffic to the facility relative to the No Build (Preferred Alternative) condition. The predicted shifts in traffic are accounted for in the analysis presented in Sections 3.5 and 3.13 of the RDEIR/SDEIS for both Alternatives 5C and 7. However, as stated in Response to Comment T-1-1, the No Build Alternative has been selected as the Preferred Alternative and these shifts in traffic would not occur. Please refer to Section 1.1 of this appendix for a discussion on the identification of the Preferred Alternative.

T-1-78

Caltrans and Metro appreciate this feedback regarding the relative accessibility of the locations at which a hard copy of the RDEIR/SDEIS was made available. For purposes of consistency and continuity for the general public, the libraries at which a hard copy of the RDEIR/SDEIS was made available were the same as those at which a hard copy of the 2012 Draft EIR/EIS was made available.

T-1-79

Please refer to Section 1.2 of this appendix regarding the extension of the public comment period.

T-1-80

In response to the requests for an additional public hearing, Metro and the Project Team provided support for a meeting held on October 18, 2017 at Humphreys Avenue Elementary School in East Los Angeles hosted by Los Angeles County Supervisor Hilda Solis. Although not a formal public hearing per the requirements of the Caltrans Project Development Procedures Manual, a presentation regarding the project was given, and an open question-and-answer period was held so that attendees wishing to speak were given the opportunity to do so. In addition, the office of Supervisor Solis procured a court reporter to record the question and answer session, and following the meeting, submitted the transcript of the meeting as a formal comment on the project. That submittal and the responses to those comments can be found as Response to Comment IP-19 in this appendix. In addition to Supervisor Solis' office providing a court reporter, the Project Team made the RDEIR/SDEIS and full suite of technical studies available at the meeting, as well as comment cards and laptop stations at which attendees could provide comments on the RDEIR/SDEIS online.

T-1-81

The commenter's concern regarding the displacement of businesses and residences in East Los Angeles are acknowledged and included in the project record. As stated in Response to Comment T-1-1, the No Build Alternative has been selected as the Preferred Alternative. Therefore, displacements would no longer be necessary. Please refer to Section 1.1 of this appendix for a discussion on the identification of the Preferred Alternative.

T-1-82

The build alternatives would improve air quality and public health while accommodating projected traffic volumes. As discussed in Section 3.13, Air Quality, in the RDEIR/SDEIS, all build alternatives would generally improve air quality and reduce public health risk. Along the I-710 Corridor, air quality would be improved and public health risk would be reduced at most locations, but there would be a few near-roadway locations where there would be an increase in certain emissions. However, as stated in Response to Comment T-1-1, the No Build Alternative has been

selected as the Preferred Alternative and these improvements from the build alternatives would not be realized.

Caltrans and Metro do not have authority to regulate costs for medical care or hospital wait time, address school attendance or graduation rates, or control goods movement or dictate alternative modes of goods transportation.

Should a build alternative be selected as the Preferred Alternative, Measures AQ-2 and AQ-3 would reduce exposure to emissions at near-roadway locations. Measure AQ-2 would provide for the installation of filtration systems on schools within 0.25 mile of I-710. Measure AQ-3 would provide for installation of solid barriers and installation of vegetation where soundwalls are not proposed to disperse pollution and reduce pollutant concentrations downwind. In addition, the project build alternatives include programmatic components to help improve air quality and public health in the I-710 Corridor. The I-710 Clean Truck Program (referred to in the RDEIR/SDEIS as the I-710 Corridor Project Zero Emission/Near Zero Emission Truck Technology Deployment Program) is a programmatic component of the build alternatives. This program would provide funding to individual owner-operators and privately owned truck fleets to subsidize the purchase of heavy-duty (Class 8) ZE/NZE trucks for use within the I-710 Corridor. Additionally, the I-710 Corridor Community Health Benefit Program is a programmatic component of the build alternatives and would take the form of a grant program structured to provide corridor communities the opportunity to implement projects or outreach activities that would improve air quality and public health related to I-710 travel and goods movement. However, since a build alternative has not been selected as the Preferred Alternative, these programmatic elements will not be implemented by Caltrans as the lead agency under CEQA and NEPA and as the owner/operator of the I-710 freeway. Please see Section 2.3.2.1 of this Final EIR/EIS for further details.

T-1-83

The commenter’s concern regarding residential displacement as a result of the build alternatives is acknowledged and included in the project record. As stated in Response to Comment T-1-1, the No Build Alternative has been selected as the Preferred Alternative. Therefore, displacements would no longer be necessary.

T-1-84

As discussed in Section 1.2.2 in Chapter 1.0, Proposed Project, of the RDEIR/SDEIS, one of the purposes of the project is to improve air quality and public health. As discussed in Section 3.13, Air Quality, in the RDEIR/SDEIS, all build alternatives would generally improve air quality and reduce public health risk. Along the I-710 Corridor, air quality would be improved and public health risk would be reduced at most locations, but there would be a few near-roadway locations where there would be an increase in certain emissions but no increase in cancer risk compared to the

2012 Baseline. However, as stated in Response to Comment T-1-1, the No Build Alternative has been selected as the Preferred Alternative. Please refer to Section 1.1 of this appendix for a discussion on the identification of the Preferred Alternative.

T-1-85

Please refer to Section 1.2 of this appendix regarding the extension of the public comment period.

PUBLIC HEARING

1-710 Corridor Project EIR/EIS

Wednesday, August 23, 2017

Evening Session

Reported by: Joyce Holbrook

I N D E X

PUBLIC COMMENTS	PAGE
	3

WEDNESDAY, AUGUST 23, 2017

CITY OF COMMERCE, CALIFORNIA

* * *

MR. GUILLERMO AYALA: I would just like to say that I'm in favor for more of the clean emissions truck route. I'm just -- the trucks, because they are what generate most of all the traffic on the 710. My backyard is the 710, so I constantly hear them honking and honking, slamming their brakes. You can hear them if they get their own lanes, because it's just not better for us, but it's better for them because now they don't have to worry about, you know, little cars cutting them off because we don't see them on the freeway, and they don't care. They think they are bigger than the big rigs and they are just going to get in where they're going to get in. That also causes the problems because the big rigs slam on their brakes, everybody in the back slams on their brakes causing it worse and worse. T-2-1 T-2-2

Also, I wouldn't want to lose my home. I've been there for 25 years, and my house is one of the ones that's going to get torn down, and all of my neighbors' houses. My name neighbors are mainly retired individuals who don't want to leave their T-2-3

houses because they paid them off, you know, the American dream, their own home. Now they are going to be taken away, and they more than likely won't be able to afford to live in the same community with what they are going to live in the community even renting because these even is expensive it's not rent control at all so you know people can charge whatever they want to charge you for rent. So, basically, I'm in favor of the route that wouldn't destroy people's homes. Just add the truck lanes. And that's it. Thank you. T-2-4

* * *

CARLOS RUNNING WOLFE MENDOZA:

Carlos Mendoza, and I wanted to be on public record, stated for the fact that through the whole entire process I've been living in Commerce for three and a half years, and I've never received a public notice as to the public meetings regarding this project, and I should have gotten some type of notice. So I feel my knowledge has been diminished as to the ramifications of the expansion of this project and the knowledge of the displacement of the eminent domain. T-2-5

I'd better keep it as a resident. So I'm

a resident and that would be my statement as to being placed on public record.

And one other thing is during the process of these meetings, I haven't seen a complaint format to voice complaints, like a Caltrans Title 5. Usually when a project of this magnitude, there would have been a table with a complaint process or a compiles data to be categorized as to due diligence on the complaint process versus eminent domain, the people displaced, the renters that are affected that may have to be moved, and what's the avenue in the format for them to move them to transition to gain housing, because housing is very limited and any displacement is going to be affected. That's the full statement. T-2-6 T-2-7

Regarding the Bell Shelter for the homeless, they would be a significant displacement factor for the homeless with the Bell Shelter because that is a huge facility. It's huge. And to find a place to replace it is going to be one large challenge. The homeless are under recorded. They are living underneath the freeways and bridges here and in the wash, and they are not actually being counted and tabulated correctly. So when -- so when and if the displacement of Bell Shelter is going to be removed -- and that's from the Salvation Army -- they have a T-2-8

large food pantry, a large facility for the handicap that are injured coming out of the hospital, they give them a rehab center so they can be rehabbed inside the facility as opposed to just being thrown out in the street. So it's not just a small facility, it's a large facility, and to reduplicate that is going to be next to impossible. And this should take into consideration the mitigating factors to dealing with the Bell Shelter and the Salvation Army. That's it. T-2-8

* * *

MS. HORNE: Linda Horne. My concerns are with -- I don't know when they are going to start this, but I know they are going to push through, but at the same time, they need to look into alternatives as far as double-decker highway all the way. They do it in San Francisco, and they have more earthquakes than we do. T-2-9

The emergency lanes on both sides of the freeway can hold equipment, instead of taking houses away from people. And they need to do something with the -- the way Alameda Street comes into the port and into the train. Everything goes that way to the ports, and they need to find out how they can make T-2-10 T-2-11

that an alternative exit to directly onto Alameda where everything -- all the trucking to Alameda, they go to the ITC or ITR -- what is it? ITC. It's a trucking terminal -- ITC. It's where Willow changes to Sepulveda. And that's where they load and unload trucks, and I live right there. I live on the Terminal Island Freeway. I live there -- the last street in Long Beach is Webster. So in between Willow and PCH. T-2-11

And I know that they have all these things going on with 710 and going to tear that all up, but an alternative is for all trucks, just like they do for the 105, they built it up and over. They can do the same damn thing there. And put it all on Alameda Street. I mean, you're not going to get away from getting the trucks out of the business area and stuff, and not everybody has a dime to get an electric truck, you know, that's a lot of people that are working hard. T-2-12

And then by doing that, if they did an upper deck freeway, they can have it 24/7. It can constantly go. T-2-13

The other thing is that they need to get information to all these people all the way down and let them know hard information -- send it, whatever, T-2-14

they do. Do it bulk mail. We work for the post office, so we know. Do it bulk mail, and just do a handout for everyone so that they are all informed all these people. Even in Long Beach, they don't know. Not everybody goes to the city council, and not everybody looks on the TV and not everybody is informed. Those houses -- they are going to take a lot of houses away on the west side, and they don't know it.

T-2-14

So the other thing that's -- Long Beach is just as industrial in that area on the west side of Long Beach, and that's on the other side of the river, the concrete river. But not only that, they have to have something that is going to have -- I lost my thought on that.

How are they going to impact these people and those communities? They need to get the message out now. Not later. We're not asking for 120 days. We're asking for the people to have that time to get in there and talk about that. They've got to be able to say something.

And then what was the other thing, Kathy, we are going do? She also lives on the west side also.

But the pollution, everybody -- the ports,

T-2-15

the trucking companies, and all of the gas, oil, places -- the refineries that are there -- all are a part of it, and they should be putting in quite a bit of money to take care of all of that stuff. T-2-15

Where we live, there's a high school, Cabrillo High School -- it used to be Navy projects -- all of this. The Cabrillo High School, Hudson Elementary to junior high and Reid.

MS. KATHY SUNIA: Webster.

MS. HORNE: Reid High School.

And then down over on the other side of Willow is Stevens Junior High, plus a little Webster Elementary school.

MS. KATHY SUNIA: Across.

MS. HORNE: All these people have all the kids and everybody, all of these years have got respiratory problems. So that's a big thing that they need to pitch in and take care of, too. So that's where a lot of money can come from. T-2-16

And another thing -- I know what I was going to say is -- now that they're deciding to take all of these places, these people need to get out and talk to some of these industry people and see what they can do for the community to put more housing in. Don't just dump on them, oh, you got to find that T-2-17

$400,000 home; we just sold yours for what -- 200. It makes no sense. You're living in Southern California, and these people are simpletons. They are not living high on the hog. They don't drive Rolls Royces. And they have junky cars that barely make it to work, and that's down there in Long Beach, same thing.

But double-decker the whole thing. That's an easy solution, the best solution. Put the trucks on the bottom, put the cars on top. T-2-18

You want to save the planet, tell them to just have them have special offers from manufacturers, because it's all about the money. It doesn't make any difference from the manufacturers to give -- to support these truck drivers and the companies who loan the cars to them as a business -- or the trucks to them -- as a business, to give them a discount, some kind of discount. Work it out so they can do the electric trucks. Duh. They need these people to get out and talk not just stand around and say oh, these are the statistics and these are the maps. It doesn't work like that. You got to go out and do your part too. You're ruining communities, and it's not justified any shape, way, or form. We just have to learn to stop bitching about it. T-2-19

But double-decker is about the best you're T-2-20

going to do. Taking people's homes away is not going to work. Not here, not in Southern California. T-2-20

Thank you very much.

T-2-1

The commenter's support of a clean emission truck route is acknowledged and included in the project record. However, Caltrans, as lead agency under CEQA and NEPA (as assigned by the Federal Highway Administration [FHWA]), in cooperation with the Los Angeles County Metropolitan Transportation Authority (Metro), has identified Alternative 1 (No Build) as the Preferred Alternative. Please refer to Section 1.1 of this appendix for further discussion on the identification of the Preferred Alternative. Please also refer to Section 1.3 of this appendix for additional discussion of the I-710 Clean Truck Program.

T-2-2

The commenter's concern regarding trucks slamming on their brakes to avoid an accident because cars cut them off is acknowledged and included in the project record. As discussed in Section 1.2.2 in Chapter 1.0, Proposed Project, of the RDEIR/SDEIS, the purpose of the project includes improving traffic safety. As discussed in Section 1.2.1.2, Capacity, Transportation Demand, and Safety, of the RDEIR/SDEIS, the relatively high incidence of accidents on the I-710 mainline and ramps appears to be the result of three main factors: (1) nonstandard geometrics and design features; (2) high traffic volumes; and (3) the mix of automobiles and heavy-duty trucks. By State law, heavy-duty trucks are restricted to the two right lanes of freeways. Most of the automobile/truck interaction occurs as automobiles maneuver to get on and off the I-710 mainline at the interchanges, therefore, crossing and traveling in these right two lanes. Additionally, trucks are slower to accelerate and slower to stop, which uses up more freeway capacity and also causes merging conflicts among these different vehicle types as automobile drivers weave in and out of traffic to avoid the slower-moving heavy-duty trucks. The difference in mass (weight) between a car and a heavy-duty truck makes an incident between these two vehicle types more consequential for the automobile. The I-710 Corridor Project build alternatives would modernize existing design elements of the I-710 freeway, such as the curves of on- and off-ramps that do not meet current design standards and the weaving sections between interchanges that are of insufficient length. Modernization of the I-710 design through the build alternatives would improve safety, which would result in accident rates on the I-710 Corridor that would be more reflective of the statewide average for a similar facility. This expected reduction in accidents would reduce public health risks related to traffic safety. However, as discussed in Response to Comment T-2-1, Caltrans, as lead agency under CEQA and NEPA (as assigned by the Federal Highway Administration [FHWA]), in cooperation with the Los Angeles County Metropolitan Transportation Authority (Metro), has identified Alternative 1 (No Build) as the Preferred Alternative. Please refer to Section 1.1 of this appendix for further discussion on the identification of the Preferred Alternative.

T-2-3

The commenter's concern regarding displacement of people as a result of the build alternatives is acknowledged and included in the project record. As stated in Response to Comment T-2-1, the No Build Alternative has been selected as the Preferred Alternative. Therefore, displacements would no longer be necessary.

T-2-4

The commenter's opposition to residential displacements and support of an alternative that only includes a truck route are acknowledged and noted in the public record. As stated in Response to Comment T-2-1, the No Build Alternative has been selected as the Preferred Alternative. Please refer to Section 1.1 for more information regarding the identification of the Preferred Alternative.

T-2-5

The commenter's name and address has been added to the distribution list for the project (Chapter 7.0 of the Final EIR/EIS). The availability of the RDEIR/SDEIS was advertised in several local newspapers per the requirements of CEQA and NEPA. Please refer to Chapter 5.0, Comments and Coordination, for further details on the circulation and distribution of the RDEIR/SDEIS.

T-2-6

The commenter is likely referring to Title VI of the Civil Rights Act of 1964, which states that no person in the United States shall, on the grounds of race, color, national origin, sex, age, or disability be excluded from participation in, be denied the benefits of, or be otherwise subjected to discrimination under any program or activity, receiving Federal financial assistance. A copy of Caltrans' Title VI Policy Statement was included in Appendix C of the RDEIR/SDEIS, which included a web link at which persons can obtain more information on filing a Title VI complaint. More information on Caltrans' Title VI Program can be found at https://dot.ca.gov/programs/local-assistance/guidance-and-oversight/title-vi or by calling (916) 324-8379.

T-2-7

The commenter's concern regarding displacement of people as a result of the project build alternatives is acknowledged and included in the project record. As stated in Response to Comment T-2-1, the No Build Alternative has been selected as the Preferred Alternative. Therefore, displacements would no longer be necessary.

T-2-8

The commenter's concern regarding the displacement of the Salvation Army Bell Shelter is acknowledged and included in the project record. As stated in Response to Comment T-2-1, the No Build Alternative has been selected as the Preferred Alternative. Therefore, displacements would no longer be necessary.

T-2-9

Elevated lanes and structures were considered and utilized in the design of both build alternatives (particularly for Alternative 7's separated freight-only corridor) where necessary and feasible. True "double-decking" of lanes was explored during the *I-710 Major Corridor Study* (initiated in January 2001 and found at https://www.metro.net/projects/i-710-corridor-project/feasibility-assessment/); however, opposition to the concept from some local jurisdictions and the potential for safety concerns from some stakeholders were raised, and so true double-decking was not brought forward as a stand-alone alternative during preliminary design. As stated in Response to Comment T-2-1, the No Build Alternative has been selected as the Preferred Alternative.

T-2-10

The build alternatives were designed to reduce, as much as possible, residential and business displacements. However, as stated in Response to Comment T-2-1, the No Build Alternative has been selected as the Preferred Alternative. Therefore, displacements would no longer be necessary.

T-2-11

Thank you for providing this feedback regarding Alameda St./SR-47 and its interface with the Intermodal Container Transfer Facility (ICTF). The I-710 Corridor Project build alternatives are not proposing any alterations to the SR-47 facility or local streets nearby, including Willow St./ Sepulveda Blvd., as they are approximately 4,000 feet west of the I-710 Corridor and do not have a nexus to the improvements proposed under the build alternatives. Additionally, as stated in Response to Comment T-2-1, the No Build Alternative has been selected as the Preferred Alternative.

T-2-12

As discussed in Section 3.5.2.2, under 2035 No Build conditions, more arterial roadway segments are projected to operate near or over capacity than under existing conditions. The results are attributed to the overall ambient traffic growth within the Study Area. Increases in roadway volumes are most prominently observed in Port truck volumes on all major north-south arterials and on east-west arterials south of Florence Ave. In general, without major improvements to the I-710, the traffic conditions on the arterial highway system will deteriorate further in the future.

The build alternatives would reduce congestion on I-710 and would thus reduce truck traffic on arterials. However, as stated in Response to Comment T-2-1, the No Build Alternative has been selected as the Preferred Alternative and these benefits would not be realized.

As a component of both build alternatives, the I-710 Corridor Project would fund ZE/NZE trucks that travel within the corridor through the implementation of the I-710 Clean Truck Program (referred to in the RDEIR/SDEIS as the I-710 Corridor Project Zero Emission/Near Zero Emission Truck Technology Deployment Program), which would provide funding to individual owner-operators and privately owned truck fleets to subsidize the purchase of heavy-duty ZE/NZE trucks for use within the I-710 Corridor. However, since a build alternative has not been selected as the Preferred Alternative, programmatic elements will not be implemented by Caltrans as the lead agency under CEQA and NEPA and as the owner/operator of the I-710 freeway. Please see Section 2.3.2.1 of this Final EIR/EIS for further details.

T-2-13

Please refer to Response to Comment T-2-9 regarding double-decking of the I-710 freeway.

T-2-14

Please refer to Section 1.2 of this appendix and Chapter 5.0, Comments and Coordination, of this Final EIR/EIS for more information regarding the outreach efforts ongoing through the life of the project. In addition to the advertising done in accordance with the requirements of CEQA and NEPA, individual postcards announcing the availability of the RDEIR/SDEIS and the public hearings were sent to residences and businesses within a 500-foot radius of the I-710 Corridor improvements.

T-2-15

The air quality modeling conducted for the project took into account background pollutant concentrations. Caltrans and Metro do not have authority to charge other entities for air quality improvements. However, as discussed in Section 1.2.2 in Chapter 1.0, Proposed Project, of the RDEIR/SDEIS, one of the purposes of the project is to improve air quality and public health. As discussed in Section 3.13, Air Quality, in the RDEIR/SDEIS, all build alternatives would generally improve air quality and would reduce public health risk except for a few near-roadway locations.

Should a build alternative be selected as the Preferred Alternative, Measures AQ-2 and AQ-3 would reduce emissions at near-roadway locations. Measure AQ-2 would provide for the installation of filters on the ventilation systems of schools near I-710. Measure AQ-3 would provide for the installation of solid barriers where soundwalls are not proposed and installation of vegetation to disperse pollution and reduce pollutant concentrations downwind. In addition, the I-710 Corridor Community Health Benefit Program is a programmatic component of the build

alternatives and would take the form of a grant program structured to provide corridor communities the opportunity to implement projects or outreach activities that would improve air quality and public health related to I-710 travel and goods movement. However, since a build alternative has not been selected as the Preferred Alternative, Measures AQ-2 and AQ-3 will not be implemented and the I-710 Community Health Benefit Program will not be implemented by Caltrans as the lead agency under CEQA and NEPA and as the owner/operator of the I-710 freeway. Please refer to Section 2.3.2.1 of this Final EIR/EIS for further details. Please also refer to Section 1.10 of this appendix for more detailed information regarding the Community Health Benefit Program.

T-2-16

As discussed in Chapter 2.0, Project Alternatives, of the RDEIR/SDEIS, the build alternatives include funding for air quality and health improvements. The I-710 Corridor Community Health Benefit Program is a programmatic component of the build alternatives and would take the form of a grant program structured to provide corridor communities the opportunity to implement projects or outreach activities that would improve air quality and public health related to I-710 travel and goods movement. However, since a build alternative has not been selected as the Preferred Alternative, this programmatic element will not be implemented by Caltrans as the lead agency under CEQA and NEPA and as the owner/operator of the I-710 freeway. Please refer to Section 2.3.2.1 of this Final EIR/EIS for further details. Please also refer to Section 1.10 of this appendix for more detailed information regarding the Community Health Benefit Program.

T-2-17

As stated in Response to Comment T-2-1, the No Build Alternative has been selected as the Preferred Alternative. Therefore, displacements would no longer be necessary.

T-2-18

Please refer to Response to Comment T-2-9 regarding double-decking of the I-710 freeway.

T-2-19

As a component of the build alternatives, ZE/NZE trucks that travel within the corridor would Be funded through the implementation of the I-710 Clean Truck Program (referred to in the RDEIR/SDEIS as the I-710 Corridor Project Zero Emission/Near Zero Emission Truck Technology Deployment Program), which would provide funding to individual owner-operators and privately owned truck fleets to subsidize the purchase of heavy-duty ZE/NZE trucks for use within the I-710 Corridor. However, since a build alternative has not been selected as the Preferred Alternative, this programmatic element will not be implemented by Caltrans as the lead agency under CEQA and NEPA and as the owner/operator of the I-710 freeway. Please refer to Section 2.3.2.1 of this Final EIR/EIS for further details.

As stated in Response to Comment T-2-1, the No Build Alternative has been selected as the Preferred Alternative. Therefore, displacements would no longer be necessary.

T-2-20

Please refer to Response to Comment T-2-9 regarding double-decking of the I-710 freeway.

PARAMOUNT, CA; SATURDAY, AUGUST 26, 2017;

10:35 A.M.

-OOO-

MS. MCCORMICK: Good morning, Everyone.

So glad to see you here this morning. Thank you so much for coming. We're actually going to get our meeting started today. My name is Mary McCormick.

I'm going to be the facilitator for us today. We're actually going to be looking forward to your comments, and if you haven't filled out a comment card yet, please do so. We also have speaker cards that we would like to make sure that you fill out if you would like to speak, and we will be going through our meeting this morning to make sure you have access to that. So if you don't want to speak now but you feel like you'd like to speak later, that's fine.

So with that, I'd like to turn it over now to Arturo, who is one of our translators, and we also have our A.D.A. sign language as well.

(Above translated in Spanish).

MS. MCCORMICK: So it looks like, just to confirm,

that we have -- are not -- anyone who needs sign language at this time?

(No responses.)

MS. MCCORMICK: Okay. Thank you.

So with that, we're going to open our meeting this morning. I actually would like to start off with Ernesto Chavez. Ernesto actually is our representative from Metro, and he will kick us off this morning.

Ernesto.

MR. CHAVEZ: Thank you, Mary.

And, again, my name is Ernesto Chavez. I'm with L.A. Metro, and on behalf of L.A. Metro but also the other agencies that have been collaborating for many years on this project, including Caltrans, SCAG (phonetically), the Ports of L.A. and Long Beach and on behalf of all the agencies, I want to give you a big thanks for coming here today, taking some time off from your Saturday to learn more about the project; but, also, more importantly, give us your input on the project.

We're very excited to have reached this milestone. We're very excited to have come this far, and we want to make sure that we get your input. We want to

make sure we do it right, that we understand what the concerns are.

This is a very important project for Metro. It's a very important project for the corridor, of course, and really for Southern California because of the importance of the 710 for our region so I want to thank you for that, and we look for forward to hearing from you today.

What we'll do now is I'm going to turn it over to Rob McCann. He's the environmental lead for our project. He's the environmental manager, and he's going to walk us through a short presentation, covering a summary of the project and the next steps as well.

(Above translated in Spanish)

MR. MCCANN: Thank you, Ernesto.

Good morning. As Ernesto said, I do have a brief presentation. I do promise to keep it brief with all that's important before we hear your testimony, provide you a little information about the goals of the project, about what the project alternatives are, the project studies we've conducted and what the project process is to identify preferred alternatives.

This first slide shows the project goals

that have been guiding the development of the I-710 project really since the beginning of the environmental process in 2008 but even before that with the major corridor study that was conducted from 2005 to 2007.

These goals are driven by the needs within the I-710 Corridor. The top of the list is improving air quality and reducing public health risks. Many studies have shown that within this corridor, because of the many trucks going to and from the ports, high diesel particulate emissions that result in high levels of risk for people who live and work in this community.

The second goal -- or the second need is the fact that the I-710 Freeway, it was designed and built over 50 years ago. Design standards have changed to accommodate different types of vehicles these days, make roadways safer so -- one of the needs is to improve the safety and improve how the I-710 functions.

The third need is just traffic. Traffic congestion, it exists today. It continues to grow as the population, the employment grows in the region and as the goods movement activity continues to grow from the ports.

The study area for the I-710 project is about 19 miles. It starts in the south in Long Beach at Ocean Boulevard, and it extends 19 miles up to the State Route 60 Freeway interchange in East Los Angeles, and

this slide highlights all the different communities along the I-710, both directly adjacent and nearby.

The project has been guided since we began working on the E.I.R. E.I.S. and prior to the major corridor study with a very robust community participation program for input from the community at all different levels, the local advisory committees, the corridor advisory committee, all the way up to the project committee and executive committee, elected officials from throughout the cities in the I-710 corridor.

The public input process has greatly influenced the alternatives themselves as well as the scope of the studies that we have conducted for the project.

There we go. So we're here today presenting to you the results of our -- of a -- what's called a Recirculated Draft Environmental Impact Report, Supplement Draft Environmental Impact Statement. That's a mouthful. So you see the abbreviation R.E.I.R. and S.D.I.S.

We are preparing this recirculated document. We originally circulated the document in 2012 that evaluated a set of alternatives then. We got a lot of public comment on it, and so at that time -- or since then, a number of things have changed, and that's what we

addressed in our Recirculated Draft E.I.R.

Traffic conditions have changed. Traffic patterns have changed as we dug a little bit deeper in terms of how traffic flows and how goods movement flows within the Southern California area.

Other projects -- some projects have been taken off the shelf. New projects are in the planning process. We wanted to take those into account. Probably the most important things that have changed our since our 2012 draft E.I.R. E.I.S. is certainly under public review. Again, the many comments we received, both on the alternatives themselves, concerns about the impacts, and so that had a great influence in terms of how those alternatives have been designed and what we are studying in our current document today.

And then the last slide, Motion 22.1, a very important motion, is approved by the Metro board of directors in October of 2015, providing direction as far as certain things that needed to be addressed in this document and also other elements that should be addressed outside or parallel to the I-710 corridor projector environmental process. I'll have a more detailed slide on that in a moment.

Let's talk about what the alternatives are. This slide lists the three alternatives, three basic

alternatives to look at. We'll start with looking at Alternative 1, which is a no build condition. That is no changes are made to I-710, just, you know, other projects may occur in the region that we take into account, but it does not assume any improvements to the I-710 Freeway.

So Alternative 5-C is one that modernizes I-710. It adds capacity, and it increases safety and mobility, and you can see the price tag on that is about six and a half million dollars.

Alternative 7 does not have any general purpose labels, but it does provide a dedicated clean emission freight corridor but also provides features to modernize the different interchanges along the I-710 Freeway, and the price tag on that is about $11 billion.

Those cost estimates are very high level estimates that cover construction, utility relocation, right of way acquisition, design and all the associated costs that come with developing a major freeway project.

The next couple of slides will give you a little bit more detail. The first one is Alternative 5-C. A couple of the key features on this one. Well, it doesn't have a dedicated freight corridor like Alternative 7. It does run the I-5 -- I'm sorry -- the I-405 interchange. It does have some truck bypass lanes to keep truck traffic separated from automobile traffic

to improve the safety and operation through the I-405 interchange. It also provides dedicated lanes that go on the south end, that go -- connect to and from downtown Long Beach.

Several locations, as shown on the green along the corridor, there are places where an additional general purpose lane or through lane is added in each direction, and that's highlighted in the areas in green.

We also have a number of locations where what are called auxiliary lanes are added. This is for if you're entering the freeway. Your entrance ramp then immediately exits the next interchange so it doesn't provide a through lane, but it makes that merge under the freeway a little bit smoother than if that auxiliary lane wasn't there.

And then, finally, the rectangles and circles show the different interchanges that would be upgraded and modernized to a more modern design configuration.

This map shows Alternative 7. As you can see, it has the dedicated clean emission freight corridor extending all the way from Long Beach out to the Commerce area. This would be a dedicated, separated freight corridor with two lanes of traffic in each direction.

When we say clean emissions, its use would

be restricted to only zero emissions trucks or near zero emissions trucks, and this improves the safety of the freeway by providing -- again, separating the truck traffic from the automobile traffic.

Although we show a general purpose lane on the legend here, you can see there's no general purpose lanes provided. That's one of the key changes that was made from the previous document wherein that -- from our 2012 document, we added a freight corridor but also a general purpose lane widening. Alternative 7 does not add the general purpose lane. And then similar to Alternative 5-C, it also has the auxiliary lanes, and the modifications to the different interchanges.

In addition to the physical improvements to the I-710 and interchanges, there's a number of other elements that are part of each build alternative. These are programmatic, meaning established programs that would not necessarily be funded by Metro. They would be funded in partnership with other agencies.

The first very important one is a program dedicated to providing funding for zero emission and near zero emission trucks within the corridor, as well as the funding differ between the two build alternatives but also provides funding for I-710 community health and benefit program similar to the program that the Port of

Long Beach has established to provide grant funding for different improvements within the community that would improve community health and provide other benefits.

From an operational standpoint, Intelligent Transportation Systems Advanced Technologies, things that help make the flow of the freeway smoother for the cities and the county and the I-710 congestion relief program, we have dedicated funding to improving intersections and local arterials adjacent to or within very close to the I-710 Freeway.

There's also a provision for transit improvement for enhancing both or expanding both bus service as well as rail service between the corridor and then finally providing bicycle and pedestrian facilities in connection to improve -- improve mobility for the people that are walking or riding their bicycles.

Motion 22.1, if you didn't already, there's a handout at our welcome desk up front that provides some details on Motion 22.1.

As I've said, this is a very important motion adopted by the Metro Board of Directors. The first element includes a number of items that were included that were specifically addressed within the project design and, of course, then within our environmental document, and this handout actually

provides a listing of each of those elements and where they can be reconfined, the discussion of them within the environmental document.

The other Items 2 through 4 are items that Metro has either completed or is in the progress of completing -- in the process of completing efforts in Parallel 2, the E.I.R. E.I.S. process.

This is our most colorful slide we have. It's intended -- I'm not going to read everything on here, but it illustrates the wide range of studies that we undertake to analyze those alternatives and analyze what the impacts are, whether it's for the human environment, whether it's for the physical environment, any element of the environment.

For all of our studies, we look at several things. We look at -- first, there's laws and regulations that guide us in terms of what things we need to analyze. We establish what are existing conditions today, the existing conditions today and what conditions would be like in the future if nothing is built.

Then we conduct impact analysis, looking at each of the alternatives and identifying what those impacts are, but we don't stop there. The key thing in the environmental process is that we identify adverse impacts, are there ways we can avoid, minimize or

mitigate those impacts? That's a very important part of the document and an important part of the public process in terms of what we want to hear from you in terms of ideas about how we can mitigate those impacts that we have identified.

So to learn more about that, we have a lot of information here for you today, and more importantly people that can explain that to you so a quick roadmap to our room today. If you have a specific question about how the build alternatives affect your property or your community, you can go over to our monitors there, our G.I.S. stations and provide them your address, and they can pull up your location and see how each of those two alternatives might affect you or your neighborhood.

Next to them, we have our design team, and they can answer all the detailed questions about the project design, and then for our different environmental stations, we have folks in the back, our air quality station.

Julia Lester and her team can talk about air quality and health risk effects. We have our noise team, Arnold Parmar from Caltrans that can about the noise and where the sound walls are proposed.

We have our visual team that can show you some visualizations what the project would look like. We

have our traffic team here. They can talk to you in more detail about traffic. For anything else that didn't get covered, we have a table with all the documents that staff, that can answer questions.

The process itself, as I've said, we started in 2008 to begin developing the environmental process, developing alternatives. We did a recirculated draft E.I.R. in 2012, received public comment on that. With that, we began to refine the alternatives and update our analysis, and that is where we are today is being able to present that analysis to you in terms of what the effects are of these revised alternatives.

Following completion of the public review period, we'll then work through that committee process I showed you earlier to define what the preferred alternatives should be with, of course, prepared responses to all the comments in our final E.I.R. E.I.S., and that final E.I.R. E.I.S. becomes the decision document for the project.

As we said, hearing from you is the important part and why we're here this morning and why we were in Commerce on Wednesday night and will be in Long Beach this coming Thursday for another public hearing.

The public comment period has been extended from the public notice you may have received. It's been

extended for a month to October 23rd, and there's many different ways you can comment, whether it's -- we have comment cards here, which you're welcome to leave with us today or take them home, think about it a little bit more. You can mail them in, take some extra copies to share with friends and neighbors.

You can provide testimony here as part of this hearing, or if you feel more comfortable just talking one on one with the court reporter, we have a court reporter in the adjoining room, and you can provide the testimony to them, and the e-mail address is listed here on the bottom of the slide if you wish to provide comments by e-mail.

The -- in addition to all the information we have for you today, there's a lot posted online both on the Caltrans website, which is listed here that has all of the -- not only the environmental document but all the different technical studies, and then Metro, they also have the project website that provides a great deal of information.

So with that, that wraps up my part of the presentation. I'm going to turn it over to Ron Kosinski, deputy district director of environmental planning for Caltrans here in Los Angeles. He will share a couple of thoughts with you about the importance of the public

input you're going to provide, and then we'll turn it over to Mary to conduct the public hearing.

So I thank you for your attention and welcome Ron.

MR. KOSINSKI: Thank you, Rob, and welcome to our second public hearing. We really appreciate you taking the time, as Rob and Ernesto mentioned, to come here on a Saturday to listen to the presentation, and we really thank you for listening.

The information is pretty extensive as we have multi-disciplinary people here who will be able to answer questions and talk to you about specifics after we're done here, but, primarily, we're here to listen to you and see what you have to say about options. You're the experts on your community. We know about your community somewhat, but you're the experts on your community so we're really anxious to hear what you have to say.

All the project alternatives have significant adverse impacts. Keep in mind, if we just leave things just the way they are, there's traffic and air quality issues associated with that that you're experiencing right now. So doing nothing has a significant impact on your life.

Building one of these two build

alternatives or looking at some of those options has a significant impact on your life so this is an important deliberation that we're taking today.

There were meetings, and initially in around 2001, 2002, some corridor studies and various people that actually are here today attended those meetings and -- both in terms of the public and members of our team.

So it's something that's been ongoing for a long time, and it's going to be continuing. We're going to have the comment period here to October 23rd, but after that, we still are probably a year, certainly into 2018 before we'll actually make a decision of what exactly we're going to recommend.

Now, I have spent some of my childhood in this community in Long Beach, and I know the community is a very tenacious community. It's a very active community and very involved, and we really, again, appreciate this effort that you're putting into it.

There's a strong sense of community here, and with that, we're looking forward to your input today. So I think I'm just going to close with that and say that Mary -- bring Mary back to run this meeting. We're going to have an organized method of collecting your comments, and I'll do a little wrap-up when we're done. So, again,

thank you for your time.

MS. MCCORMICK: So just to help us move along a little bit, this slide shows you a few things. For those of you who would like to make some comments today, I would like to remind you that you can do that through written and oral. We actually have court reporters here that can actually type up your oral comments.

We do have interpreters available as well so that, if somebody wants to go to an oral reporter, we can actually have a translation orally done, and it can be transcribed.

Also -- so for today, we're going to have three minutes per speaker. We'll have a little visual sign here for you to know that time is up, and we will need to have you state your name clearly. This is a public hearing. This is an official hearing, and we want to make sure we have your correct name as well.

We want to make sure that we're here to listen to everyone. It's a very important venue for you because you have access to experts here today. We have experts that are on air quality, noise, traffic, environmental, design. You have access to everyone today. So it's going to be -- it's very, very important that, if you do have any questions, that you have access to the experts who can help you.

So with that, I'd like to do a couple of things. I'm going to actually flip here, go back to this just to make sure that you have the addresses. We do have to go to the Caltrans website, but you can do your comments online.

Before I get started, I'd like to introduce some of the elected officials that we have here today. We actually have council member, Larry Forester, who is with the city of Signal Hill. Thank you, Larry, for attending. Thanks for being here.

We have a representative from Congresswoman Royball Allard's with Luis Castro. Thank you. He's the field deputy, and we actually have a council member here from the city of Glendale -- Lynwood -- sorry -- Salvador Alatorre is here, and we actually have the Los Angeles County Board of Supervisors represented from Janice Hahn and Michael Ervin is here. Thank you, Michael. Thanks for coming. We appreciate you being here.

So with that, what I'd like to do -- can we turn the lights up just so we have more lights up in the room please.

(A pause in the proceedings.)

MS. MCCORMICK: So what we'll do is I will call

your name and then I will call a second name, and the second name will be for someone so that you know you're up next just so that you can be prepared.

Our first speaker this morning is Dean Taylor. Dean, can you come up, and then we would like to have Jaquelyne Rodriguez up second. Thank you.

(A pause in the proceedings.)

MS. MCCORMICK: Good morning, Dean. It's on.

MR. TAYLOR: Good morning.

MS. MCCORMICK: Let's make sure it's on.

(A pause in the proceedings.)

MR. TAYLOR: Good morning. My name is Dean Taylor, and I represent Southern California Edison Company. The I-710 corridor project represents an opportunity for proactivity and improving air quality in the communities along the I-710, many of which have been heavily impacted by air pollution from transportation.

Approximately 40 percent of the goods entering the nation are going to be moved through Southern California ports and highways, and the transportation sector is responsible for 36 percent of

California's greenhouse gas emissions, 50 percent if you add in the refineries that supply fuel.

Using clean energy to power transportation along the I-710 corridor, particularly medium and heavy duty vehicles can help the ground level ozone, smog, nitrogen oxide in particular emissions reduction requirements for cleaner air.

Southern California Edison believes that Alternative 7, the clean emission freight corridor, is the only alternative that would feasibly accomplish all the project goals and support the project's purpose of improving air quality and public health.

T-3-1

Additionally, SCE believes that Alternative 7 should be a true zero emission freight corridor, which means that zero tailpipe pollutant emissions would be emitted while traveling along the corridor.

That would also allow for a plug-in hybrid which is similar technology along the corridor. I have support for transportation, electric (unintelligible), particularly goods movement is needed now, but fueling a variety of vehicles, cars, public transportation, medium and heavy duty vehicles, industrial vehicles and equipment with clean electric power instead of fossil fuels, we can help meet California's ambitious climate and environmental goals in the coming decade. Thank you.

MS. MCCORMICK: Thank you.

(A pause in the proceedings.)

MS. MCCORMICK: Jaquelyne Rodriguez and then Larry Forester.

MS. RODRIGUEZ: Thank you. My name is Jaquelyne Rodriguez. I'm a member of East Yard Communities for Environmental Justice, and on Saturday, August 12, a group of us went doorknocking through four blocks in Commerce, and a lot of the people who we spoke to had no idea that this process is happening or hadn't even heard that the E.I.R. was out, which to me just shows poor outreach on behalf of Caltrans.

That to me is very frustrating because, when I went to speak to them, they were all very agitated that this was happening again, and the community has been under displacement and air pollution for the past 15 years. T-3-2

So this would only increase their already horrible conditions that are existing in Commerce and also contribute to the homelessness issue in Los Angeles County, the entire Los Angeles County. T-3-3

Here, we are asking for 120 days because 90 days is not enough to get the entire community out here. T-3-4

On the Commerce meeting, we had a bunch of people come out because we went to speak to them. So if we had enough time to have them come out, this would be great to have them come voice their concerns, come voice -- some of them might even be in support of Community Alternative 7, which they helped develop. T-3-4

The Community Alternative 7 is what we're asking for zero emissions. We're asking for no displacement, and we're also asking for local hire. So if you would be kind enough to extend that to 120 days, that would mean a lot to us. Thank you. T-3-5

MS. MCCORMICK: Great. Thank you.

So next is Larry Forester and then Allan Crawford.

MR. FORESTER: Good morning. Larry Forester, council member of the city of Signal Hill for the last 20 years, and I actually served on the project's advisory committee for this project until my engineering sensibilities -- I have a B.S. in civil engineering were challenged by some things I wanted to add to the E.I.R. and E.I.S., and I backed out of it.

I am so happy that Supervisor Solis in 22.1 has taken those things and separated them. That was what caused me problems, but I will comment from my standpoint from my better than five years on the committee, and T-3-6

several of those people all know me up there.

The engineering work that you have done has been phenomenal, and I greatly appreciate it, and that's why I'm here to say thank you. T-3-6

MS. MCCORMICK: Great. Thank you very much.

(A pause in the proceedings.)

THE COURT: Allan Crawford and then Ruth Schwartz.

MR. CRAWFORD: My name is Allan Crawford with Bikeable Communities. I'd like to address the biking and ped issues. Bike and ped issues how they're addressed in the E.I.R., I use the word appalling.

There's basically one paragraph that says it should be better for bike and peds. We're going to widen the sidewalks. We're going to improve pavement, and, oh, by the way, we're going to do diverging diamond intersections, and we're going to use the Caltrans guide 2010 to guide us in that design. T-3-7

You go and look at that design and the final thing in the guide says, oh, there's not enough work on diverging diamonds to make any recommendations. So we're going to go forward with something that -- and you can look at the number of these that have been printed across the country, a dozen or something like

that -- there various parts of the country where very little or no study has been done on bike and peds.

Now, what happens? So a diverging diamond, as you guys know, basically crosses -- the traffic crosses to the opposite side of the road. As a pedestrian -- so I went up last week, and there's one of these in Reno, Nevada. T-3-7

So I said, well, let me go walk this to see how it feels. So I walked up, and I looked normally to my left for traffic. Oops, I just looked the wrong way. The traffic is coming from the right.

Let's go to P.C.H. Long Beach, and I have a series of photos that I'd like to share with you guys that show the number of students. We've got a high school on one side, Cabrillo. Most of the students live on the other side. We have very, very heavy truck traffic.

It's frightening. The photos you're going to -- how can kids do this? We have not solved those issues by going to divergent -- we slow traffic, which is good, although, in fact, traffic almost doesn't move there anyway because it's so congested so our request is do something as an alternative for bikes and peds. T-3-8

Diverging diamond is fine. That's what we need for traffic, but create separate bike and ped T-3-9

facilities. Now, I know we have three in Alternative 5 which helps, and in Alternative 7, those go away. we can't actually accommodate those coming across, the alternative -- the heavy freight corridor.

So I know the city of Long Beach is talking with you guys, but particularly (unintelligible) at Anaheim and at P.C.H., we need an alternative for bikes and peds. We're heading for vision zero in Long Beach just as L.A. has. This will get us nowhere near vision zero. T-3-9

Thank you.

MS. MCCORMICK: Great. Thank you very much.

Ruth Schwartz, and then I'd like to invite Hugo Lujah to come up next.

MS. SCHWARTZ: Hi. My name is Ruth Schwartz. I'm the director of Shelter Partnership, and we own property at 5600 Rickenbacker, Building 1101. It's a six acre parcel where that hundred thousand square foot warehouse we secure and distribute new goods on behalf of people who are homeless. Last year, we distributed ten million dollars in product to 237 agencies.

So we're kind of a core agency in the homeless system, assisting people in poverty, homeless and emancipated or foster youth. We've been working with your staff, you know, off and on for the last five years T-3-10

on this project and trying to understand the impact on our buildings, if we would have to be relocated.

Obviously, it's a great place for us because it's -- we serve all of L.A. County, and it's really in the middle of L.A. County. There was a building that we've actually -- we've actually built on the property, that -- the bigger property since 1989 and doing business, and recently in 2003, we took over the building we're in now on the complex, and in 2007, we were granted a deed for the properties, which provides us a lot more security from the federal government.

So I don't really understand all of the impacts. I'm just trying to come up to speed on it. So I thank you for this hearing, and it's been offered to us that we have a sitdown, which we did a couple of years ago to better understand the impact on our property and so -- just to say we're here and know we're -- you know, we'll do what it takes to understand and move forward in the best way, you know, that serves community needs overall, but we do -- we are concerned.

T-3-10

Thank you.

MS. MCCORMICK: Thank you.

Hugo Lujah and then Maggie Godoy.

MR. LUJAH: Hi, everyone. My name is Hugo Lujah, and I'm part of the East Yard Community for Environmental

Justice. I also have family living in Maywood, Lynwood, Long Beach and East L.A. I think I want to speak directly on to the comment in terms of the costs because I saw that one of the alternatives costs 6.5 billion and then the other zero emission would be 11 billion; right? T-3-11

I think to me it's important --

MS. MCCORMICK: Do you want me to go back?

MR. LUJAH: Yeah. Can you? I think it's important to understand that -- what that means -- right? -- because to me, as a person living within these communities, what -- an alternative for zero emission would mean, it would literally mean saving lives within my family. It would mean saving lives of my community members; right?

And understanding that -- according to the (unintelligible), we're already at the top 90 percent of community with the worst contamination conditions in the state, and one of the reasons is due to air contamination, and it's been due to -- in connection to diesel exhaust. T-3-12

And if you all don't know the U.S. studies, one vehicle, one truck, it equals 33 cars in smoke. The exhaust, the smoke that comes out of these trucks is diesel exhaust which is a carcinogen. It causes cancer.

So for me, 11 billion is a very big

difference than 6.5, but when you come in and layer the cost of our life and our medical expenses from our communities, 11 billion is nothing, and you also layer in the cost of not including the zero emission freight corridor, and the impact on our lives within the future, if it is in the zero emission corridor, 11 billion is nothing.

So we deserve the best for our community, and that includes the zero emission freight corridor. That is the only thing that I would personally accept for this project because, if it isn't, what we're basically saying is that the movement of trucks is more important than our lives, and that's not acceptable; right?

T-3-12

The other thing that I think is important to know is that the time that is given to us to comment on this project is as of now 90 days; right? And what Jackie said in terms of how long it took us to even mobilize the people in the city of Commerce, 90 days is not enough.

Like if you all take a look at the comment -- at the actual information -- the draft E.I.R. back there, it's like a huge bible, and it's a lot of information that I can't even read, and, also, it's important to know that the city of Commerce, Maywood, Lynwood and Huntington Park already submitted letters

T-3-13

requesting for an extension to 120 days, and so the more pressure that we build as community members and asking for 120 days, that's the least that we can get in order to fully participate as community members. T-3-13

Thank you.

MS. MCCORMICK: Thanks very much. Maggie Godoy and then Iris Verduzco.

MS. GODOY: Good morning. My name is Maggie Godoy, and I live in the city of Lynnwood. Do you need my address?

MS. MCCORMICK: No. We have that. Thank you.

MS. GODOY: Okay. I'm here because this is the second time I've been to a hearing like this, and I'm just barely learning and hearing that you have the 90 days to do this, and I'm asking for 120 days because like Hugo mentioned, you know, it's a lot of information, and even if I start bringing that information, I wouldn't be able to understand that because I have no clue what's going on. T-3-14

The only thing I do and I emphasize is that our communities are very important. That should be the number one thing in your plans because we are losing a lot of kids and also a lot of adults, you know, because of cancer. My daughter is one of them. So I need you guys to take this home and sleep on it and think about T-3-15

it. We want the best for our community, Lynwood. I represent Lynwood. Actually, I live in Lynwood, and we want the best for our community because we do deserve that. Thank you. Thank you. T-3-15

MS. MCCORMICK: Iris Verduzco and then Lily Martinez.

MS. VERDUZCO: Hi. My name is Iris Verdusco, and I'm here from the city of South Gate and representing East Yard Communities for Environmental Justice.

I'm a member of the organization, and as I'm sitting here and just really reflecting of where this protect has come along -- I've been involved in this process for about eight years now, and when I think about when the draft 2012 Environmental Impact Report was released, and we were commenting on that, I was preparing to enter my first year at the University of Southern California, and this fall I will be receiving my undergraduate degree from the university.

And so when I think about what has happened throughout that process and I think about where our communities have been talking about and the things that we've been expressing and to see that those things aren't reflected and we have these project alternatives, but I'm still wondering for these past several years, we've been advocating for Community Alternative 7, and the motion T-3-16

that Metro passed includes those elements, and I'm wondering where is that present in the reports? T-3-16

I appreciate the simulations that are here, but then I wonder where the ones that talk about the health impacts that our families will be receiving in conjunction to these alternative if they're -- T-3-17

MS. MCCORMICK: Just to let you know, they're in the back.

MS. VERDUZCO: Thank you.

And so when I really think about, you know, the things that our communities have been expressing and the things that we want to see move forward in this project, and so when we think about not building, you know, and how that still provides impacts, but we're thinking about the things that community members have been proposing so that includes the zero emission trucks, the biking and pedestrian improvements, the public transportation improvements, no displacement elements, local hire and community benefits, and thinking about how that also connects to the things that our communities have been struggling with, you know, in 2015 when we think about how (unintelligible) has impacted our local communities, and so those are things that we want to consider in thinking about how our communities and our health is really important, and so requesting that 120 T-3-18

days to have that public speaking period and have these conversations with our community members is really needed and is something that we would like to ask you all to really consider in moving forward with this project. T-3-18

Thank you.

MS. MCCORMICK: Thank you. Lily Martinez and then Gerald Cerda.

MS. MARTINEZ: Good morning. My name is Lily, and I am a representative of Paramount, and I'd like to start my comments by a show of hands how many people in the room actually live in Paramount near the freeway?

(There was a show of hands.)

MS. MARTINEZ: There is a few people. There is no one here. I got notice of this hearing like two days before with an attachment of over 3,000 pages to read, and I appreciate trying to get community participatory effort, but time after time, every time I have issues of the environment that are going to impact our health, very few people turn out because they don't know, and the communications are usually a very high literacy level. We're really not making an effort to include the real community that lives here in these public comments. T-3-19

I am here and the majority of the people

who live in the impact zone of the freeway are not representative of our community. I have three degrees. The last one is a masters in public health, and I'm looking for a school to do my doctorate.

93 percent of the children that live in our community are economically disadvantaged. We have about a 60 percent high school graduation rate, and only 8 percent of us actually graduate from college.

The reason why this happens is that we're creating these ghettos of no opportunity, and we can't leave. I'm living here on purpose. People are telling me why don't you leave, and I don't feel that's right. It's very unhealthy here. We're already -- all these communities that are along the 710 corridor are 5 percent of the most contaminated areas, and we appreciate being told that the modernization of the freeway is for us.

I go to a lot of the port meetings in L.A. and Long Beach, and the real reason why we're making the freeway better is that we want to move more containers across this corridor.

T-3-20

We're the main artery that feeds the whole country. As Dean said, the Port of Long Beach and L.A. combined travels 40 percent of all the goods of the United States. Something that no one has mentioned yet is California has a lot of earthquakes. There is a

T-3-21

possibility for natural disasters.

We want to increase that 40 percent to go higher. If we have a natural disaster or any kind of disaster in this area, stores, grocery stores only have a few days of food for the communities. T-3-21

What's going to happen if our ports are -- I-710 gets destroyed? We're going to starve the rest of the country. We're putting all our eggs in one basket. The other thing is that I would highly recommend having more participation of the public health department, and we're working in silence. T-3-22

This community participation here, we are just trying to fix the problem that we have with hexavalent chromium. It's 300 percent of healthy levels, and it's not fixed, and we're adding more environmental health impact issues to communities that's already overburdened. So we appreciate more communication between all these projects that are impacting our communities. T-3-23

MS. MCCORMICK: Okay. Thank you.

Gerald Cerda.

MR. CERDA: Thank you for coming. My name is Gerald. I'm also a resident of Paramount, and like the folks have mentioned, a lot of these concerns have been with the residents for sometime, and the first question I

asked when I came in because I was a little bit uncomfortable in not getting notification because I got it through a text by another resident -- is the notifications.

When you -- when I'm being told that they're being sent by the L.A. Times, I mean, we're 80 percent Hispanic here. The L.A. Times, I don't think, has a translation for Spanish.

When it's being sent to the city's web page, how many employees for the city are here today? That's a bottle neck. So the information is not being sent out to the residents, that's a concern, and it was mentioned the hexavalent chromium has been here for years, and it has not just been an issue for the residents, but the students and the school district right now is having a big item with the hexavalent chromium for testing. T-3-24

That's a big finger pointing right now with the agencies, and when you say we have the C.E.Q.A. and E.P.A., is the A.Q.M.D. also involved with this, or will there be another finger pointing when issues arise? T-3-25

I'm looking for -- to see if there's going to be concrete -- a lot of concrete breaking, a lot of concrete building, and the information that's being mentioned hexavalent chromium also comes from concrete. T-3-26

So that's a big issue that we're having with the city of Paramount right now. So if you add more hexavalent Chromium possibilities, it has to be looked at pretty close. T-3-26

The bike path mentioned, we've had issues with some folks that are staying in the bike path, in the riverbed where they come out here, they commit a crime, and then they disappear, and that's something that's difficult to track. We did have an assault where the individual died the next day. We're being told that this person was caught, but that's something that's safety for the residents. T-3-27

We have a lot of the issues with the air here in Paramount, but not only Paramount but through the entire riverbed. You can see driving down the 710, you can see these things happening, but that's something that needs to be addressed. T-3-28

And, you know, I know that the lady mentioned about providing items for some of these folks that are residing in the riverbed or next to the freeway, and that's a big plus. We do have to address that issue. T-3-29

The relocation of businesses, the relocation of residents, how is that going to be dealt with? I know it's been planned -- like I said, I'm just jumping on board as of yesterday so I have no information T-3-30

on this, and I will be looking at this just to bring myself more up to par. T-3-30

The historical landmarks, are there any historical landmarks that are going to be addressed? And the -- what's the average freeway width? What's it going to be -- what's it going to become? Is it going to affect the west side, the west side of the freeway the same as the east side, or is it going to affect one side more than the other side? T-3-31 T-3-32

And traffic for schools, school buses. Right now, we do have a turning lane that crosses through Rosecrans diagonally on the intersection of Rosecrans and Paramount, and I know the freeway is not that far from now. That usually gets congested during school hours. You know, we have kids going to the high school. Is that going to affect that area of Rosecrans Boulevard during the construction? T-3-33

And I also agree on extending the extension letters from the 90 days to 120 days to get more notification for the residents here in Paramount, not only here but the other cities that are going to be impacted as well, but this city here, we're having a lot of issues right now, and you can see there's no representation from the city here today. T-3-34

MS. MCCORMICK: Thank you.

MR. CERDA: Thank you.

MS. MCCORMICK: So I'd like two things. Is there anyone in the room here this morning that would like to have a speaker card or speak?

(No responses.)

MS. MCCORMICK: So we have everyone. Okay. Great.

Just as a reminder -- and I'm actually going to turn this back over to Ron -- there were several comments that I heard this morning that can be addressed in this room. There are several people here who can talk about air quality. They can talk about traffic. They can talk about congestion. They can talk about the alternatives, and they can go to the design, and they can make sure that you have the information and the answers to your questions.

So I really would encourage you to take advantage of the expertise that's here in the room. Don't leave the room without a question that we can try to help answer today. So with that, I'd like to turn this back over to Ron from Caltrans.

MR. KOSINSKI: Thanks, Mary. I was going to -- that was one of my big points too. These have been

really very helpful and insightful questions the community has been bringing up. I would say that a good percentage of them, the people in the room can answer, can find the information and get it to you.

If they can't get it to you today, we can mail it to you. So this is very helpful, and I just want to say thanks again for your listening and for your participation, and we have been listening to you, and we'll continue to listen to the community.

The project has evolved quite dramatically over the last 15 years from when we first started. To basically widen the freeway, take thousands of properties on both sides and declare victory, we're not doing that.

We've got a lot of additional enhancements to the community that have been added as part of the Community Alternative 7, and I think that they're very beneficial from a community standpoint.

I just want to close by saying no decision's going to be made anytime soon, certainly not this year. We're going to listen to all these comments and see how we can adjust the project even more to address the issues that you have if we can, and then we have this little issue with displacement. It's not a little issue. It's a major issue.

People want improvements, but they don't

want displacements. We certainly personally have that same goal, but is that a possibility that we can actually achieve? I can't say with certainty that is possible.

So keep in mind that we'll be listing to you, including your comments, making changes to the project based on the things that makes sense and then going through a decision-making process that involves a variety of committees for the next year or so and then finally coming to a final recommendation.

So, again, thank you very much for your time and your efforts today, and please go see the people here who know and have answers to a lot of the questions you have.

Thank you.

(A pause in the proceedings.)

MS. MCCORMICK: Thank you. So just real quick as we close, a couple of additional items. There is going to be another meeting, and we'll make sure that you have that information available for you. It's going to be next Thursday night from 6:00 p.m. to 8:00 p.m. It's going to be in the Long Beach area.

We have all that information with the sign-in people. Please come to that if you have. We are

very interested in getting as many people in the meetings as possible. That's our No. 1 focus.

Clearly, we need to do a little bit of a better job. Even on a Saturday morning, it would have been nice to have a little bit more folks here today.

So please share that information to your friends and families, and please ask them to come out. We really do want to hear from them. It's very important to us.

So with that, I'd like to officially close, but we're here for another couple of hours. So we're so grateful you came.

Thank you.

(The proceedings were concluded at 11:30 a.m.)

PENALTY OF PERJURY CERTIFICATE

I, the undersigned, declare under penalty of perjury that I have read the foregoing transcript, and I have made any corrections, additions or deletions that I was desirous of making; that the foregoing is a true and correct transcript of my testimony contained therein.

EXECUTED this _____day of _____, 2017, at _____, _____.

_____
Mary McCormick

REPORTER'S CERTIFICATE

STATE OF CALIFORNIA)
) ss.
COUNTY OF LOS ANGELES)

I, RONALD KIM, CSR No. 12299, Certified Shorthand Reporter for the State of California, do hereby certify;

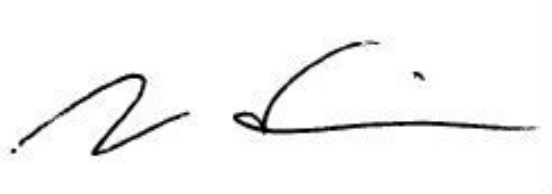
That the deponents named in the foregoing deposition, prior to being examined, was by me first duly sworn to testify to the truth, the whole truth and nothing but the truth;

That said deposition was taken before me at the time and place therein stated and was thereafter transcribed into print under my direction and supervision, and I hereby certify the foregoing deposition is a full, true, and correct transcript of my shorthand notes so taken.

I further certify that I am not of counsel nor attorney for either of the parties hereto or in any way interested in the event of this case and that I am not related to either of the parties hereto.

WITNESS my hand this 1st day of September, 2017.

_____



RONALD KIM, CSR No. 12299

CERTIFIED COPY CERTIFICATE

I, Ronald Kim, Certified Shorthand Reporter, No. 12299, hereby certify that the attached deposition is a correct and certified copy of the deposition of the deponent named in the foregoing deposition, taken before me at the time and place therein stated.

I declare under penalty of perjury that the foregoing is true and correct.

Executed at Covina, California, this 26th day of September, 2017.

Ronald Kim, CSR No. 12299

T-3-1

Caltrans and Metro thank the commenter for their comment. The commenter's support of Alternative 7 and the ZE corridor is acknowledged and included in the project record. However, Caltrans, as lead agency under CEQA and NEPA (as assigned by the Federal Highway Administration [FHWA]), in cooperation with the Los Angeles County Metropolitan Transportation Authority (Metro), has identified Alternative 1 (No Build) as the Preferred Alternative. Therefore, neither Alternative 5C nor 7 will be constructed. Please refer to Section 1.1 of this appendix for further discussion on the identification of the Preferred Alternative. Please also refer to Section 1.3 of this appendix for additional discussion of the I-710 Clean Truck Program.

T-3-2

Please refer to Section 1.2 of this appendix and Chapter 5.0, Comments and Coordination, of this Final EIR/EIS for more information regarding the outreach efforts ongoing through the life of the project. In addition to the advertising done in accordance with the requirements of CEQA and NEPA, individual postcards announcing the availability of the RDEIR/SDEIS and the public hearings were sent to residences and businesses within a 500-foot radius of the I-710 Corridor improvements.

T-3-3

Please refer to Section 1.5 of this appendix for a detailed discussion of the Caltrans relocation process, including compensation and displacements of environmental justice populations. Should a build alternative be selected as the Preferred Alternative, any persons displaced would be provided relocation assistance and would be relocated prior to demolition of the acquired properties; therefore, the build alternatives would not contribute appreciably to the homeless population. As stated in Response to Comment T-3-1, the No Build Alternative has been selected as the Preferred Alternative. Therefore, displacements would no longer be necessary.

T-3-4

Please refer to Section 1.2 of this appendix regarding the extension of the public comment period. Caltrans, Metro, and the other I-710 Corridor Project funding partner agencies are extremely appreciative of the time and effort that was invested in developing the proposed Community Alternative 7 (CA-7). As described in Chapter 2.0, Project Alternatives, of the RDEIR/SDEIS, many of the components of CA-7 were integrated into Alternatives 5C and Alternative 7. However, as stated in Response to Comment T-3-1, the No Build Alternative has been selected as the Preferred Alternative. Please refer to Section 1.1 of this appendix for further discussion on the identification of the Preferred Alternative.

T-3-5

The commenter's support of zero emissions, opposition to displacements, support of utilizing local hires, and request for extension of the public review period are acknowledged and included in the project record. As stated in Response to Comment T-3-1, the No Build Alternative has been selected as the Preferred Alternative. Therefore, displacements would no longer be necessary. Please refer to Section 1.1 of this appendix for a discussion on the identification of the Preferred Alternative, Section 1.2 of this appendix for a discussion on the community outreach and extension of the comment period for this project, and Section 1.3 of this appendix for additional discussion of the I-710 Clean Truck Program. Based on comments received from the public, the 60-day RDEIR/SDEIS public review period was extended to 90 days, from July 21, 2017 through October 23, 2017.

T-3-6

Caltrans and Metro thank the commenter for their support.

T-3-7

As discussed in Section 3.5.1 of the RDEIR/SDEIS, bicyclists and pedestrians were a consideration in the design of the build alternatives at all local interchanges, which included diverging diamond interchange (DDI) configuration interchanges. However, as stated in Response to Comment T-3-1, the No Build Alternative has been selected as the Preferred Alternative and therefore improvements to or creation of new pedestrian and bicycle facilities will not occur. Please refer to Section 1.1 of this appendix for further discussion on the identification of the Preferred Alternative.

T-3-8

Caltrans and Metro acknowledge the commenter's concerns regarding pedestrian and bicycle safety along the corridor. In the range of build alternatives evaluated in the 2012 Draft EIR/EIS, single-point urban interchanges at some local interchanges were considered, but withdrawn from the design of the revised set of build alternatives due to public input. However, as stated in Response to Comment T-3-1, the No Build Alternative has been selected as the Preferred Alternative and therefore, no improvements to pedestrian and bicycle safety will be realized.

T-3-9

The commenter is correct in that only three bicycle/pedestrian-only bridges crossing I-710, the Los Angeles River, and/or I-405 were proposed under Alternative 7 due to the presence of the freight corridor structure. It is also important to note that, should a build alternative be selected as the Preferred Alternative, where existing bridges and overcrossings would be modified by the build alternatives, pedestrian paths (sidewalks, curb ramps, and crosswalks) with sufficient

outside shoulder width to accommodate Class II bikeways on local street crossings would be provided as part of these modifications, in accordance with Caltrans' "Complete Streets" guidance. However, as stated in Response to Comment T-3-1, the No Build Alternative has been selected as the Preferred Alternative and these improvements will not be made. Please refer to Section 1.1 of this appendix for further discussion on the identification of the Preferred Alternative.

T-3-10

The commenter's concern regarding the effects of the build alternatives on the referenced parcel is acknowledged and included in the project record. However, as stated in Response to Comment T-2-1, the No Build Alternative has been selected as the Preferred Alternative. Therefore, displacements would no longer be necessary.

T-3-11

The commenter is referring to a slide discussing the preliminary cost estimates of the build alternatives that was presented in the Public Hearing presentation given by the Project Team. However, as stated in Response to Comment T-3-1, the No Build Alternative has been selected as the Preferred Alternative and therefore there will be no costs associated with constructing the build alternatives.

T-3-12

The commenter's support of Alternative 7 and a ZE corridor is acknowledged and included in the project record. However, as stated in Response to Comment T-3-1, the No Build Alternative has been selected as the Preferred Alternative. Please refer to Section 1.1 of this appendix for further discussion on the identification of the Preferred Alternative. Please also refer to Section 1.3 of this appendix for additional discussion of the I-710 Clean Truck Program.

T-3-13

Please refer to Section 1.2 of this appendix regarding the extension of the public comment period.

T-3-14

Please refer to Section 1.2 of this appendix regarding the extension of the public comment period.

T-3-15

As discussed in Section 1.2.2 in Chapter 1.0, Proposed Project, of the RDEIR/SDEIS, one of the purposes of the project is to improve air quality and public health. As discussed in Section 3.13, Air Quality, in the RDEIR/SDEIS, all build alternatives would generally improve air quality and reduce public health risk except at a few near-roadway locations. Should a build alternative be

selected as the Preferred Alternative, Measures AQ-2 and AQ-3 would reduce exposure to emissions at near-roadway locations. Measure AQ-2 would provide for the installation of filters on the ventilation systems of schools near I-710. Measure AQ-3 would provide for the installation of solid barriers where soundwalls are not proposed and installation of vegetation to disperse pollution and reduce pollutant concentrations downwind. However, as stated in Response to Comment T-3-1, the No Build Alternative has been selected as the Preferred Alternative and Measures AQ-2 and AQ-3 will not be implemented. Additionally, the I-710 Corridor Community Health Benefit Program is a programmatic component of the build alternatives and would take the form of a grant program structured to provide corridor communities the opportunity to implement projects or outreach activities that would improve air quality and public health related to I-710 travel and goods movement. However, since a build alternative has not been selected as the Preferred Alternative, this programmatic element will not be implemented by Caltrans as the lead agency under CEQA and NEPA and as the owner/operator of the I-710 freeway. Please refer to Section 2.3.2.1 of this Final EIR/EIS for further details. Please also refer to Section 1.10 of this appendix for more information regarding the Community Health Benefit Program.

T-3-16

Caltrans, Metro, and the other I-710 Corridor Project funding partner agencies are extremely appreciative of the time and effort that was invested in developing the proposed Community Alternative 7 (CA-7). As described in Chapter 2.0, Project Alternatives, of the RDEIR/SDEIS, many of the components of CA-7 have were integrated into Alternative 5C and Alternative 7 and those components of CA-7 that were not integrated into Alternative 5C and Alternative 7 were addressed in other programs and projects being undertaken by Caltrans, Metro, and/or the Gateway Cities COG. However, as stated in Response to Comment T-3-1, the No Build Alternative has been selected as the Preferred Alternative. Please refer to Section 1.1 of this appendix for further discussion on the identification of the Preferred Alternative. Since a build alternative has not been selected as the Preferred Alternative, programmatic elements will not be implemented by Caltrans as the lead agency under CEQA and NEPA and as the owner/operator of the I-710 freeway. Please refer to Section 2.3.2.1 of this Final EIR/EIS for further details.

T-3-17

Modeling results for health risk are included in Appendix Q of the RDEIR/SDEIS and summarized in Section 3.13 Air Quality. As discussed in Section 1.2.2 in Chapter 1.0, Proposed Project, of the RDEIR/SDEIS, one of the purposes of the project is to improve air quality and public health. As discussed in Section 3.13, Air Quality, in the RDEIR/SDEIS, all build alternatives would generally improve air quality and reduce public health risk. Along the I-710 Corridor, air quality would be improved and public health risk would be reduced at most locations, but there would be a few near-roadway locations where there would be an increase in certain emissions but no increase in cancer risk compared to the 2012 Baseline.

When compared to the 2035 No Build Alternative, both build alternatives would reduce cancer risk at most locations; however, a small increase in cancer risk would occur at some locations within 100 meters of I-710. For Alternative 5C, the maximum increase in risk would be approximately three in one million. The primary location of the increased risk for Alternative 5C would occur along a small portion of I-710 just south of SR-60. For Alternative 7, the increase in risk would be less than one in one million.

Should a build alternative be selected as the Preferred Alternative, Measures AQ-2 and AQ-3 would reduce emissions at near-roadway locations. Measure AQ-2 would provide for installation of filters on the ventilation systems of schools near I-710. Measure AQ-3 would provide for installation of solid barriers where soundwalls are not proposed and installation of vegetation to disperse pollution and reduce pollutant concentrations downwind. In addition, the build alternatives include programmatic components to help improve air quality and public health in the I-710 Corridor. The I-710 Corridor Community Health Benefit Program is a programmatic component of the build alternatives and would take the form of a grant program structured to provide corridor communities the opportunity to implement projects or outreach activities that would improve air quality and public health related to I-710 travel and goods movement. However, as stated in Response to Comment T-3-1, the No Build Alternative has been selected as the Preferred Alternative. Please refer to Section 1.1 of this appendix for further discussion on the identification of the Preferred Alternative. Since a build alternative has not been selected as the Preferred Alternative, Measures AQ-2 and AQ-3 would not be implemented and the programmatic elements of the build alternatives will not be implemented by Caltrans as the lead agency under CEQA and NEPA and as the owner/operator of the I-710 freeway. Please refer to Section 2.3.2.1 of this Final EIR/EIS for further details. Please also refer to Section 1.10 of this appendix for more information regarding the Community Health Benefit Program.

T-3-18

As stated in Response to Comment T-3-1, the No Build Alternative has been selected as the Preferred Alternative. Please refer to Section 1.1 of this appendix for further discussion on the identification of the Preferred Alternative. More information regarding Motion 22.1 and its elements can be found in Section 1.8 of this appendix. Further details regarding the I-710 Clean Truck Program are discussed in Section 1.3 of this appendix, and please refer to Section 1.6 of this appendix for more information about the relocation process and the benefits afforded to displaced persons under the Uniform Act. Finally, please refer to Section 1.2 of this appendix for more details regarding the length of the comment period for the RDEIR/SDEIS, as well as outreach efforts over the life of the project.

T-3-19

Please refer to Section 1.2 of this appendix and Chapter 5.0, Comments and Coordination, of the Final EIR/EIS for more information regarding the outreach efforts ongoing through the life of the

project. In addition to the advertising done in accordance with the requirements of CEQA and NEPA, individual postcards announcing the availability of the RDEIR/SDEIS and the public hearings were sent to residences and businesses within a 500-foot radius of the I-710 Corridor improvements.

It is Caltrans' goal that environmental documents are written with their audience in mind; that is, the general public. It can be difficult to balance that need with the often highly technical information and analyses contained within them and the requirements for disclosure under CEQA and NEPA. Part of the required review process for all Caltrans environmental documents is a "Technical Edit" Review which ensures, among other things, that plain language be used that can be understood by both the public and decision-makers. The I-710 Corridor Project RDEIR/SDEIS and this Final EIR/EIS were subject to this review, and the Project Team will continue to look for ways to simplify language that may be confusing or highly technical.

T-3-20

The Ports of Los Angeles and Long Beach (collectively, the San Pedro Bay Ports) together rank as the world's ninth busiest container Port complex and account for 32 percent of the nation's market share. Per the purpose statements identified for the I-710 Corridor Project (as described in more detail in Section 1.2 of this Final EIR/EIS), the build alternatives are would accommodate projected traffic volumes and would also address increased traffic volumes resulting from projected growth in population, employment, and economic activities related to goods movement. However, needs and purposes of the build alternatives are far greater than simply to accommodate more trucks on the I-710 facility. The I-710 freeway was designed in the 1950s and 1960s, before the dramatic increase in imports from Asia and containerization of oceangoing freight increased the cargo traffic at the San Pedro Bay Ports and before the extensive population growth in southern California since 1960. With a few exceptions, the I-710 has remained in the same configuration since it was originally built. Design features that are associated with current operational problems on I-710 include outdated local interchange designs, spacing between local interchanges, non-standard geometric features at freeway-to-freeway interchanges, non-standard weaving distances, narrow or nonexistent shoulders, narrow lane widths, and non-standard pavement. High traffic volumes, the existing freeway design, freeway congestion, and the interaction between cars and the high volume of trucks in the traffic stream all contribute to elevated accident rates when compared to similar facilities. The proposed improvements associated with the build alternatives are intended to make the facility safer and more efficient for all users, rather than simply increasing freight throughput. However, as stated in Response to Comment T-3-1, the No Build Alternative has been selected as the Preferred Alternative and these benefits would not be realized. Please refer to Section 1.1 of this appendix for further discussion on the identification of the Preferred Alternative.

T-3-21

Caltrans and Metro acknowledge that the potential occurrence of natural disasters, particularly earthquakes, is an unavoidable part of living in the Southern California region. However, it should be clarified that the increase in Port cargo throughput is due to multifaceted economic demands and the I-710 Corridor Project build alternatives are not intended to increase throughput; rather, they are intended to accommodate increased throughput. The build alternatives, which are intended to improve an existing and outdated transportation facility, would have no bearing on the economic and social outcome of the destruction of the Ports or I-710. However, as stated in Response to Comment T-3-1, the No Build Alternative has been selected as the Preferred Alternative.

T-3-22

The Los Angeles County Department of Public Health has been acting as a Participating Agency under the Federal Efficient Environmental Review process (originally the Safe, Accountable, Flexible, Efficient Transportation Equity Act: A Legacy for Users [SAFETEA-LU] Section 6002, now codified at 23 United States Code [USC] 139) for the I-710 Corridor Project since shortly after the commencement of the environmental document phase in 2008. Participating agencies are any Federal or non-Federal agency that may have an interest in the project. In their role as a Participating Agency, the Department of Public Health had early opportunities to review the purpose and need, range of alternatives, and technical methodologies used to support the EIS as they were being developed and prior to the release of the Draft EIR/EIS in 2012. In addition, they provided comments on the 2012 Draft EIR/EIS, which the Project Team considered when revising the build alternatives and developing the programmatic features set forth in the RDEIR/SDEIS.

T-3-23

This comment requests that the RDEIR/SDEIS be revised to address cumulative impacts from hexavalent chromium and communication between cumulative projects to address these impacts. As discussed in Section 3.12 of the RDEIR/SDEIS, operation and maintenance of the facilities proposed as part of Alternatives 5C and 7 would not introduce new sources of hazardous waste and materials, but would continue existing exposure to the transport of hazardous waste and materials associated with vehicles currently utilizing the I-710 Corridor. The build alternatives would have a beneficial effect by remediating any hazardous waste contamination, including chromium contamination, present on properties that would need to be acquired for the build alternatives. No new permanent hazardous waste/materials impacts beyond existing conditions related to hazardous materials would occur as a result of the build alternatives; therefore, there would be no adverse cumulative effects related to hazardous waste and materials from the build alternatives. However, as stated in Response to Comment T-3-1, the No Build Alternative has been selected as the Preferred Alternative.

T-3-24

Please refer to Section 1.2 of this appendix and Chapter 5.0, Comments and Coordination, of the Final EIR/EIS for more information regarding the outreach efforts ongoing through the life of the project. In addition to the advertising done in accordance with the requirements of CEQA and NEPA, individual postcards announcing the availability of the RDEIR/SDEIS and the public hearings were sent to residences and businesses within a 500-foot radius of the I-710 Corridor improvements proposed under the build alternatives. Advertisement of the availability of the RDEIR/SDEIS and public hearings was run in several local newspapers, including La Opinion, a Spanish-language daily newspaper published in Los Angeles and distributed throughout southern California. Many cities along the I-710 Corridor Study area disseminated notice via official City websites, as well.

T-3-25

Since the beginning of the project development process in 2008, EPA has acted as a Cooperating Agency under the Federal Efficient Environmental Review process (originally SAFETEA-LU Section 6002, now codified at 23 USC 139). Cooperating Agencies are defined as Federal agencies other than the lead agency that have jurisdiction by law or special expertise with respect to any environmental impact involved in a project. In their role as a Cooperating Agency, EPA had early opportunities to review the purpose and need, range of alternatives, and technical methodologies used to support the EIS as they were being developed and prior to the release of the Draft EIR/EIS in 2012. The Project Team has worked collaboratively with EPA over the life of the project on the Air Quality/Health Risk Assessment and Project-Level Conformity requirements and methodologies, as well as the environmental justice analysis.

Although not serving in a formal capacity as a Participating or Cooperating Agency, the SCAQMD has worked collaboratively with the I-710 Corridor Project Team to assist in the development of the Air Quality/Health Risk Assessment and Project-Level Conformity methodologies, assumptions regarding the fleet mix that underpinned the traffic and air quality analysis, as well as assisting in developing specifics and administration of the I-710 Clean Truck Program (referred to in the RDEIR/SDEIS as the I-710 Corridor Project Zero Emission/Near Zero Emission Truck Technology Deployment Program). Caltrans and Metro are highly appreciative of the time and effort set forth by these and other agencies during development of the Draft EIR/EIS and RDEIR/SDEIS. Please refer to Section 3.13.3.2 of this Final EIR/EIS for an updated discussion of project-level conformity.

T-3-26

As stated in Response to Comment T-3-1, the No Build Alternative has been selected as the Preferred Alternative. Therefore, no air quality impacts associated with construction dust will occur.

T-3-27

Metro and Caltrans are sympathetic to the potential issues related to encampments within the Los Angeles River and the associated bike path. However, the Los Angeles River and bike path are not within Metro or Caltrans' jurisdictions, and problems or issues related to safety should be referred to the respective law enforcement agency with jurisdiction. Please also note that persons utilizing State right-of-way in such a manner are unlawfully trespassing. As stated in Response to Comment T-3-1, the No Build Alternative has been selected as the Preferred Alternative.

T-3-28

The air quality modeling conducted for the project takes into account background pollutant concentrations. As discussed in Section 1.2.2 in Chapter 1.0, Proposed Project, of the RDEIR/SDEIS, one of the purposes of the project is to improve air quality and public health. The I-710 Corridor Project's impacts on air quality were disclosed in the RDEIR/SDEIS and discussed in Section 3.13, Air Quality, in the RDEIR/SDEIS. Except for PM_{10} for Alternative 5C and Alternative 7 and SO_2 for Alternative 7, air toxic exhaust emissions (NOx, CO, $PM_{2.5}$, and VOC) would be lower in 2035 with the project compared to the 2012 Baseline emissions. In 2035, the build alternatives would result in lower NO_X emissions compared to the 2035 No Build Alternative. PM_{10}, $PM_{2.5}$, CO, and SO_2 would increase, with the greatest increases occurring for Alternative 7. The increases for these pollutants would be less than 190 pounds (lbs) per day for Alternative 5C and less than 640 lbs per day for Alternative 7.

For the build alternatives in 2035, the decrease in $PM_{2.5}$ from exhaust emissions would be greater than the increase in $PM_{2.5}$ from tire wear, brake wear, and entrained road dust emissions compared to the 2012 Baseline emissions. As a result, total $PM_{2.5}$ emissions in 2015 with the build alternatives would decrease when compared to the 2012 Baseline emissions. In the case of PM_{10} emissions, the increases in entrained road dust, tire wear and break wear (which are a direct function of vehicle miles traveled) resulting from the build alternatives would far outweigh the decrease in exhaust PM_{10}. Therefore, total PM_{10} emissions would increase in 2035 for the build alternatives when compared to 2012 Baseline.

The number of receptors near I-710 that would experience increases in 24-hour PM_{10} emissions resulting from the build alternatives compared to the 2035 No Build Alternative would be larger for Alternative 7 than for Alternative 5C due to the increased traffic along the corridor. The 2035 build alternatives show no change to a slight decrease in near-roadway short-term $PM_{2.5}$ emissions when compared to the 2035 No Build Alternative at all modeled receptors near I-710. The public's exposure to ultrafine particles would decrease for all build alternatives in 2035 relative to the 2012 Baseline and 2035 No Build Alternative, even near the I-710 freeway and freight corridor.

In summary, both build alternatives would generally improve air quality but there are a few near-roadway locations where there would be an increase in certain emissions. Should a build alternative be selected as the Preferred Alternative, Measures AQ-2 and AQ-3 would reduce

emissions at near-roadway locations. Measure AQ-2 would provide for filters on the ventilation systems of schools near I-710. Measure AQ-3 would provide for installation of solid barriers where soundwalls are not proposed and installation of vegetation to disperse pollution and reduce pollutant concentrations downwind. In addition, the build alternatives include programmatic components to help improve air quality and public health in the I-710 Corridor. The I-710 Corridor Community Health Benefit Program is a programmatic component of the build alternatives and would take the form of a grant program structured to provide corridor communities the opportunity to implement projects or outreach activities that would improve air quality and public health related to I-710 travel and goods movement. However, as stated in Response to Comment T-3-1, the No Build Alternative has been selected as the Preferred Alternative. Please refer to Section 1.1 of this appendix for further discussion on the identification of the Preferred Alternative. Since a build alternative has not been selected as the Preferred Alternative, Measures AQ-2 and AQ-3 will not be implemented and the Community Health Benefit Program will not be implemented by Caltrans as the lead agency under CEQA and NEPA and as the owner/operator of the I-710 freeway. Please refer to Section 2.3.2.1 of this Final EIR/EIS for further details. Please refer to Section 1.10 of this appendix for more information regarding the Community Health Benefit Program.

T-3-29

Metro and Caltrans acknowledge the issues related to homelessness in the region; however, neither agency has the jurisdiction nor a mechanism to address this issue. The commenter is referred to the Los Angeles County Department of Public Social Services at www.dpss.lacounty.gov or (866) 613-3777.

T-3-30

Caltrans and Metro thank you for your comment. Your concern regarding displacement of people and businesses as a result of the build alternatives is acknowledged and included in the project record. As stated in Response to Comment T-3-1, the No Build Alternative has been selected as the Preferred Alternative. Therefore, displacements would no longer be necessary.

T-3-31

Table 3.7-1 in Section 3.7, Cultural Resources, of the RDEIR/SDEIS identified the built environment cultural resources within the Supplemental Area of Potential Effects (APE). With the exception of the Drake Park/Willmore City Historic Landmark District, these built environment resources are subject to both Section 106 and CEQA:

- UP Railroad (formerly Southern Pacific Railroad) in Los Angeles and Orange Counties (Primary No. 19-186110/30-176630). Two portions intersect I-710: south of Patata St. and south of Frontage Rd., both in the City of South Gate.

- UP Railroad in Los Angeles, Riverside, and San Bernardino Counties (Primary No. 19-186112). One portion intersects the I-710: south of Noakes St. in the City of Commerce.
- Dale's Donuts, 4502 E. Alondra Blvd., Compton
- Boulder Dam-Los Angeles 287.5-kilovolt Transmission Line (Primary No. 19-188983). One portion intersects the I-710: between Firestone Blvd. and Southern Ave., in the City of South Gate.
- Drake Park Historic District, located within the Drake Park/Willmore City Historic Landmark District (CEQA-only resource). The portion in the APE is the right-of-way along Daisy Ave., 9th St., and Magnolia Ave. in the City of Long Beach.

Section 3.7.3.1 explains that on September 20, 2012, the State Historic Preservation Officer (SHPO) concurred on the finding of No Adverse Effect to the Patata Street Segment and the Noakes Street Segment of the UP Railroad, Dale's Donuts, and the Boulder Dam-Los Angeles 287.5-kilovolt Transmission Line. Therefore, the build alternatives are not anticipated to have an adverse effect on historical resources pursuant to Section 106. Section 4.2.2.4 a). However, as stated in Response to Comment T-3-1, the No Build Alternative has been selected as the Preferred Alternative. Therefore, no impacts to historical resources will occur.

T-3-32

The locations of widening and corresponding right-of-way requirements for the build alternatives vary over the length of the 19-mile corridor. Some segments would widen and would thereby encroach to the east or to the west, some on both sides, and some not at all. Specific build alternative improvements can be found in Appendix O, Concept Plans, of the RDEIR/SDEIS. However, as stated in Response to Comment T-3-1, the No Build Alternative has been selected as the Preferred Alternative. Therefore, no impacts to rights-of-way will occur.

T-3-33

As stated in Response to Comment T-3-1, the No Build Alternative has been selected as the Preferred Alternative. Therefore, no impacts related to construction traffic will occur.

T-3-34

Please refer to Section 1.2 of this appendix regarding the extension of the public comment period.

I-710 CORRIDOR PROJECT PUBLIC HEARING

PARAMOUNT COMMUNITY CENTER

14400 PARAMOUNT BOULEVARD

PARAMOUNT, CALIFORNIA 90723

SATURDAY, AUGUST 26, 2017

OLIVIA D. LIZARRAGA
CERTIFIED STENOGRAPHIC REPORTER NO. 13475
JOB NO. 151106

PAGES 1-6

PARAMOUNT, CALIFORNIA, SATURDAY, AUGUST 26, 2017

(10:00 A.M.)

~oOo~

MS. MARTINEZ: MY NAME IS LILY MARTINEZ, L-I-L-Y, M-A-R-T-I-N-E-Z.

SO I HAVE ONE CONCERN ABOUT THE EXPANSION OF THE 710 FREEWAY FOR THE IMPROVEMENTS. THE MAIN REASON FOR THE EXPANSION OR THE IMPROVEMENTS IS THAT THE PORTS WANT TO INCREASE BUSINESS AND INCREASE THE VOLUME OF GOODS BEING TRANSPORTED THROUGH THE 710 FREEWAY. IT'S CURRENTLY AT 40 PERCENT, AND THEY WANT TO INCREASE THAT 40 PERCENT OF GOODS THAT TRAVEL THROUGHOUT THE NATION. AND I FEEL LIKE WE'RE PUTTING ALL OUR EGGS IN A BASKET.

CALIFORNIA HAS A LOT OF EARTHQUAKES. THERE COULD BE ANOTHER NATURAL DISASTER. AND IF WE'RE PUTTING ALL OUR EGGS IN ONE BASKET AND COMMUTING EVERYTHING FROM THE PORTS OF LA AND LONG BEACH THROUGH THE 710 FREEWAY, IF WE DO HAVE SOME KIND OF -- OR ANY KIND OF DISASTER, WE'RE GOING TO STARVE HALF OF THE NATION BECAUSE GROCERY STORES ONLY HAVE A LIMITED AMOUNT OF FOOD FOR PEOPLE IN THE COMMUNITY. I DON'T THINK IT'S A GOOD IDEA TO PUT ALL OF THE GOODS OF ALL THE COUNTRY OR HALF OF THEM IN JUST ONE PLACE. T-4-1

THE OTHER THING I'M CONCERNED ABOUT IS THE IMPACT ON THE ALREADY IMPACTED LOW-INCOME COMMUNITY THAT IS CREATED BY T-4-2

THE FREEWAY. BECAUSE OF THE NATURE OF THE TRAFFIC OF THE FREEWAY AND ALL OF THE ISSUES, ALL THE TRICKLE-DOWN ISSUES THAT HAPPEN BECAUSE OF THE 710 FREEWAY, IT DRIVES THE PRICES OF THE PROPERTIES DOWN AROUND THAT AREA, AND WE HAVE A HIGH CONCENTRATION OF LOW-INCOME FAMILIES THAT ARE THEN TRAPPED AND THEY CAN'T NOVEMBER ANYWHERE ELSE. THEY ARE KIND OF STUCK. T-4-2

THE 710 CORRIDOR IS THE ONLY AREA THAT HAS AFFORDABLE REAL ESTATE OR LOW-INCOME HOUSING BECAUSE NO ONE ELSE WANTS TO LIVE HERE BECAUSE OF THE CONTAMINATION. THE AREAS THAT ARE STRADDLING THE 710 FREEWAY HAVE MADE THE TOP 5 PERCENT OF THE MOST POLLUTED AREAS. THESE AREAS THAT STRADDLE THE FREEWAY ARE ALSO HIGHLY INDUSTRIALIZED ALREADY AND ARE ALREADY FACING A LOT OF CONTAMINATION ISSUES, AS IN THAT IN THESE ISSUES HAVE NOT BEEN ADDRESSED TO THE SATISFACTION OF THE COMMUNITY MEMBERS. AND THE ENVIRONMENTAL READINGS ARE STILL SHOWING THAT THESE AREAS ARE VERY CONTAMINATED. T-4-3

ANOTHER ISSUE THAT A LOT OF THE COMMUNITY MEMBERS ARE EXPRESSING IS THE FRUSTRATION OF LACK OF COMMUNICATION WITH THE COMMUNITY. THERE IS USUALLY VERY SHORT NOTICE GIVEN, AND WHEN THERE'S ATTACHMENTS FOR THE COMMUNITY TO READ, THEY ARE AT A VERY HIGH LITERACY LEVEL. AND WE FREQUENTLY GET THOUSANDS AND THOUSANDS OF PAGES ALL TOGETHER THAT WE'RE SUPPOSED TO REVIEW BEFORE COMING TO A MEETING TWO T-4-4

DAY AS LATER. T-4-4

THE COMMUNITY IS ALSO VERY DISSAPOINTED AND LOSING TRUST IN AQMD, BECAUSE OF THE WAY THAT BUSINESS IS BEING CONDUCTED. WE DO APPRECIATE THE PORT OF LONG BEACH AND THE PORT OF LA PROVIDING FUNDING FOR PUBLIC HEALTH PROGRAMING. HOWEVER, THESE ARE REMEDIATION FUNDS TO TACKLE PROBLEMS THAT HAVE ALREADY HAPPENED, AND THERE'S VERY LITTLE THAT WE CAN DO WITH THOSE FUNDS IN TERMS OF PREVENTION. THE COMMUNITY FEELS LIKE THEY DON'T HAVE A VOICE BECAUSE WE'RE TOLD WHAT'S GOING TO HAPPEN. AND WE'RE GIVEN LIMITED OPTIONS, AND THINGS HAPPEN REGARDLESS OF OUR OPINIONS OF IT. T-4-5

THE AREAS STRADDLING THE FREEWAY HAVE COMMUNITIES THAT HAVE VERY LITTLE EDUCATION, NOT MANY COLLEGE GRADUATES IN COMPARISON TO WHERE THE 710 ABRUPTLY ENDS IN PASADENA, WHERE MORE THAN 50 PERCENT OF THE PEOPLE HAVE A COLLEGE GRADUATION RATE AND HAVE A HIGH RATE OF COMPLETION OF HIGH SCHOOL. THE AREAS STRADDLING THE FREEWAY, LIKE PARAMOUNT, WHERE I LIVE, HAVE 60 PERCENT OR SO COMPLETION RATE OF HIGH SCHOOL AND ONLY AN 8 PERCENT COMPLETION RATE OF COLLEGE.

IT'S VERY DIFFICULT WHEN COMMUNICATIONS ARE AT HIGH LEVELS AND WE HAVE A LOT OF GRAPHS AND CHARTS THAT OUR COMMUNITY MEMBERS CAN'T READ. SO EVEN THOUGH WE MAKE COMMENTS, SOME OF THE COMMENTS ARE UNINFORMED BECAUSE WE HAVEN'T BEEN GIVEN CLEAR INFORMATION. T-4-6

(WHEREUPON THE PROCEEDING CONCLUDES AT 1:00 P.M.)

REPORTER'S CERTIFICATE

I, OLIVIA D. LIZARRAGA, C.S.R. No. 13475, a Certified Shorthand Reporter for the State of California, do hereby certify:

That said proceeding was taken before me at the time and place set forth and was taken down by me in shorthand and thereafter reduced to computerized transcription under my direction and supervision; and I hereby certify the foregoing is a full, true and correct transcript of my shorthand notes so taken.

I further certify that I am neither counsel for nor related to any party to said action nor in any way interested in the outcome thereof.

IN WITNESS WHEREOF, I have hereunto subscribed my name this 31st day of August, 2017.

_____

OLIVIA D. LIZARRAGA
Certified Shorthand Reporter No. 13475

CERTIFIED COPY CERTIFICATE

I, Olivia Lizarraga, Certified Shorthand Reporter, No. 13475, hereby certify that the attached is a correct and certified copy of the proceeding, taken before me at the time and place therein stated.

I declare under penalty of perjury that the foregoing is true and correct.

Executed at Covina, California this 31st day of August, 2017.

OLIVIA LIZARRAGA, C.S.R. No 13475

T-4-1

Caltrans and Metro acknowledge that the potential occurrence of natural disasters, particularly earthquakes, is an unavoidable part of living in the Southern California region. However, it should be clarified that the increase in Port cargo throughput is due to multifaceted economic demands and the I-710 Corridor Project build alternatives are not intended to increase throughput; rather, the build alternatives are intended to accommodate it. The commenter's point that, if the Ports or I-710 are somehow destroyed, such an occurrence would have the same economic and social outcome with or without the build alternatives, which are intended to improve an existing and outdated transportation facility. However, Caltrans, as lead agency under CEQA and NEPA (as assigned by the Federal Highway Administration [FHWA]), in cooperation with the Los Angeles County Metropolitan Transportation Authority (Metro), has identified Alternative 1 (No Build) as the Preferred Alternative. Please refer to Section 1.1 of this appendix for further discussion on the identification of the Preferred Alternative.

T-4-2

There are varied patterns in the effect of freeways on residential property values. Most studies recognize that freeway construction can produce conflicting influences on property values. They show both appreciation and loss in value for properties due to freeway construction. Some properties abutting the freeway or in very close proximity to it appear to suffer most of the adverse effects from the freeway, whereas net gain is shown in value in the general vicinity of the freeway due to increased accessibility. The environmental document does not specifically discuss property values as part of CEQA/NEPA analysis. Real estate market prices are mainly based on comparative sales in the area. Many factors contribute to market values, including location, the neighborhood, current real estate sales in the area, school system, crime, taxes, government services, parks/recreational, and the features of the home.

As stated in Response to Comment T-4-1, the No Build Alternative has been selected as the Preferred Alternative. Therefore, no changes to the I-710 freeway will occur as a result of the build alternatives.

T-4-3

This comment suggests that existing contamination issues in areas surrounding the I-710 freeway from freeway traffic and industrial uses have not been adequately addressed in the RDEIR/SDEIS, and that affordable or low-income housing is concentrated in this area due to this contamination. Tables 3.12-1 and 3.12-2 and Figures 3.12-1 and 3.12-2 in Section 3.12, Hazardous Waste/Materials includes a detailed inventory of the sites in the I-710 Study Area that are identified in the Initial Site Assessment (ISA) for the project as properties of potential environmental concern that would either be disturbed by full and partial acquisitions or by temporary construction easements (TCEs) under Alternatives 5C and 7, respectively. Therefore,

the RDEIR/SDEIS already acknowledges that contamination exists in the I-710 Corridor. The build alternatives would have a beneficial effect by remediating any hazardous waste contamination, including chromium contamination, present on properties that would need to be acquired for the build alternatives. No new permanent hazardous waste/materials impacts beyond existing conditions related to hazardous materials would occur as a result of the build alternatives; therefore, as described in Section 3.25, Cumulative Impacts, of the RDEIR/SDEIS, there would be no adverse cumulative effects related to hazardous waste and materials resulting from the build alternatives. However, as stated in Response to Comment T-4-1, the No Build Alternative has been selected as the Preferred Alternative. Please refer to Section 1.1 of this appendix for further discussion on the identification of the Preferred Alternative.

T-4-4

Please refer to Section 1.2 of this appendix and Chapter 5.0, Comments and Coordination, of the Final EIR/EIS for more information regarding the outreach efforts ongoing through the life of the project. In addition to the advertising done in accordance with the requirements of CEQA and NEPA, individual postcards announcing the availability of the RDEIR/SDEIS and the public hearings were sent to residences and businesses within a 500-foot radius of the I-710 Corridor improvements proposed under the build alternatives.

It is Caltrans' goal that environmental documents are written with their audience in mind; that is, the general public. It can be difficult to balance that need with the often highly technical information and analyses contained within them and the requirements for disclosure under CEQA and NEPA. Part of the required review process for all Caltrans environmental documents is a "Technical Edit" Review which ensures, among other things, that plain language be used that can be understood by both the public and decision-makers. The I-710 Corridor Project RDEIR/SDEIS and Final EIR/EIS were subject to this review, and the Project Team will continue to look for ways to simplify language that may be confusing or highly technical. In an effort to make information as accessible as possible, specialists on the Project Team were available at each public hearing to answer questions and clarify information.

T-4-5

The establishment of the Community Health Benefit Program, a programmatic element of the I-710 Corridor Project build alternatives, would provide grant funding for projects and outreach efforts intended to improve air quality and public health related to I-710 travel and goods movement. Should a build alternative be selected as the Preferred Alternative, preventative projects and measures, including education and communication programs, would be eligible for funding under the Program. However, as stated in Response to Comment T-4-1, the No Build Alternative has been selected as the Preferred Alternative. Since a build alternative has not been selected as the Preferred Alternative, programmatic elements will not be implemented by Caltrans

as the lead agency under CEQA and NEPA and as the owner/operator of the I-710 freeway. Please refer to Section 2.3.2.1 of this Final EIR/EIS for further details.

Feedback from the I-710 Corridor communities and other public and agency input on the 2012 Draft EIR/EIS was instrumental in the revisions to the build alternatives presented in the RDEIR/SDEIS, and the comments received on the RDEIR/SDEIS were factored into the identification of a Preferred Alternative. Please refer to Section 1.1 of this appendix for more details on the Preferred Alternative identification process.

T-4-6

Please refer to Response to Comment T-4-4 regarding the outreach efforts ongoing throughout the life of the project.

I-710 CORRIDOR PROJECT PUBLIC HEARING

CESAR E. CHAVEZ PARK COMMUNITY CENTER

LONG BEACH, CALIFORNIA 90802

THURSDAY, AUGUST 31, 2017

OLIVIA D. LIZARRAGA
CERTIFIED STENOGRAPHIC REPORTER NO. 13475
JOB NO. 151555

PAGES 1-77

(6:30 P.M.)

~OOO~

MS. MCCORMICK: GOOD EVENING, EVERYONE. MY NAME IS MARY MCCORMICK. I WILL BE YOUR FACILITATOR FOR THIS EVENING. WE'RE VERY HAPPY TO HAVE YOU HERE. WE'RE VERY EXCITED TO HEAR FROM YOU. TONIGHT IS A SPECIAL NIGHT SO THAT WE CAN MAKE SURE THAT WE MAKE OURSELVES AVAILABLE. AND ALSO I WANTED TO LET YOU KNOW, AS YOU KNOW, SEVERAL STATIONS IN THE BACK, NOISE THERE, ON MANY OF THE DIFFERENT STUDIES, WE HAVE NOISE, TRAFFIC, AND SO ON. BUT WE ALSO HAVE OUR FLAT SCREENS BACK THERE WITH GIS INFORMATION AND PROPERTY INFORMATION, AS WELL.

BUT THE MOST IMPORTANT THING THAT I WANT TO MAKE SURE YOU KNOW, TWO THINGS. THIS IS A PUBLIC HEARING, SO WE ACTUALLY ARE GOING TO BE RECORDING ALL OF THE COMMENTS THIS EVENING. IF YOU WOULD LIKE TO SPEAK, PLEASE SIGN A COMMENT SHEET, AND WE'LL MAKE SURE THAT YOUR COMMENTS ARE RECORDED IN A VARIETY OF WAYS. WE HAVE A COURT REPORTER HERE, WHO WILL BE RECORDING THE ORAL COMMENTS, BUT WE ALSO HAVE A COURT REPORTER IN THE BACK. SO IF YOU HAVE TO LEAVE OR YOU NEED TO GET HOME EARLY OR IF THERE'S ANY ISSUE THAT WAY, PLEASE FEEL FREE TO JUST GO AROUND THE CORNER, AND THE COURT REPORTER WILL TAKE YOUR ORAL COMMENTS. AND IT GOES INTO THE OFFICIAL RECORD, SO YOU DON'T HAVE TO STAY THE WHOLE NIGHT IF YOU

DON'T WANT TO.

ALSO, WE HAVE SPEAKER CARDS. AND IF YOU WOULD LIKE A SPEAKER CARD, PLEASE RAISE YOUR HAND IF YOU DON'T HAVE ONE ALREADY. WE'RE COLLECTING THEM. AND THROUGHOUT THE MEETING, ALSO, IF YOU WOULD LIKE TO SPEAK, I'LL BE REMINDING YOU AND IF YOU WOULD LIKE TO (INAUDIBLE) THE MEETING, YOU DON'T CHOSE TO DO SO NOW BUT WOULD LIKE TO DO THAT LATER, THAT'S GREAT. THAT'S NOT A PROBLEM.

SO WE WANT TO MAKE SURE WE GET STARTED. I'D LIKE TO INTRODUCE ROB -- SORRY. BEFORE I DO THAT, I HAVE A COUPLE THINGS, MANY THINGS TO THINK ABOUT TONIGHT. WE HAVE SOME (INAUDIBLE) OFFICIALS HERE, AND I WOULD LIKE TO JUST ACKNOWLEDGE THEM. THEY'RE HERE IN THE AUDIENCE. WITH THE CITY OF LONG BEACH, WE HAVE JONTHAN KRAUS, CHIEF OF STAFF, JONATHAN. AND THEN WE HAVE WITH CONGRESSMAN ALAN LOWENTHAL'S DISTRICT, CLAYTON HURST (PHONETIC.) CLAYTON, THANK YOU FOR JOINING US. COUNCILMAN GONZALEZ'S DISTRICT, CD1, (INAUDIBLE) THE DISTRICT MANAGER. THANK YOU FOR BEING HERE.

WE ALSO HAVE THE MAYOR OF THE CITY OF LONG BEACH METRO BOARD, DEPUTY SHARON WEISSMAN, THANK YOU FOR JOINING US TONIGHT. WE HAVE LESLIE (INAUDIBLE) FROM THE CITY OF COMPTON. GREAT. THANK YOU, THANK YOU FOR JOINING US. AND WITH THE CITY OF BELL GARDENS, CHAU VU, WHO IS THE DIRECTOR OF PUBLIC WORKS. OKAY. ALSO KEVIN JACKSON, WHO IS THE DEPUTY CITY MANAGER WITH THE CITY OF LONG BEACH. THANK YOU,

KEVIN, THANKS FOR JOINING US. AND WITH THE CITY OF LONG BEACH, WE'D LIKE TO INTRODUCE ROBERT URANGA, OUR COUNCILMEMBER. THANK YOU, THANKS FOR BEING HERE.

WE ALSO HAVE WITH US (INAUDIBLE) DONALD'S OFFICE, SARAH PATTERSON, HEY, SARA, THANK YOU. AND WITH SENATOR LARA, SUELY SARO, HI, THANK YOU FOR JOINING US. THANK YOU SO MUCH. THAT'S WONDERFUL THAT YOU'RE ALL HERE TONIGHT. WE REALLY APPRECIATE IT.

SO WITH THAT, I'D LIKE TO INTRODUCE ERNESTO CHAVEZ. HE'S GOING TO BEEN INTRODUCING OUR PROGRAM THIS EVENING, AND HE'S OUR REPRESENTATIVE FROM METRO, ERNESTO.

MR. CHAVEZ: THANK YOU, MARY.

MY NAME IS ERNESTO CHAVEZ. I'M WITH LA METRO, AND ON BEHALF OF LA METRO, BUT ALSO ALL THE AGENCIES THAT ARE PARTNERING WITH US ON THIS PROJECT -- CALTRANS, SCAG, THE PORTS OF LA AND LONG BEACH, I WANT TO GIVE YOU MY SINCERE WELCOME AND, MORE IMPORTANTLY, MY THANKS FOR COMING HERE TONIGHT AND TAKING SOME TIME FROM YOUR BUSY SCHEDULES TO COME LEARN ABOUT THE PROJECT, MORE IMPORTANTLY, GIVE US YOUR PROSPECTIVE ON THE PROJECT. IT'S TAKEN A LONG TIME TO GET HERE. WE'RE VERY EXCITED THAT WE'RE HERE. WE'RE VERY EXCITED THAT WE CAN HEAR FROM YOU TONIGHT.

THIS IS A VERY IMPORTANT PROJECT FOR METRO, FOR CALTRANS, FOR THIS CORRIDOR, BUT ALSO REALLY FOR ALL OF SOUTHERN CALIFORNIA. AND IT'S VERY IMPORTANT THAT WE HEAR

WHAT YOU HAVE TO SAY TONIGHT SO THAT WE CAN DO THE BEST PROJECT WE CAN.

THE FIRST THING WE'RE GOING TO DO BEFORE WE OPEN THE PUBLIC HEARING IS WE'RE GOING TO HEAR A PRESENTATION, AN OVERVIEW OF THE PROJECT, FROM OUR ENVIRONMENTAL MANAGER ROB MCCANN. HE'S GOING TO COME UP IN A SECOND, AND I'M GOING TO DO THIS INTRODUCTION IN SPANISH QUICKLY BEFORE WE DO THAT.

(SPEAKING IN SPANISH.)

MR. CHAVEZ: ROB MCCANN.

MR. MCCANN: THANK YOU, ERNESTO.

GOOD EVENING, EVERYONE. I WILL ONLY BE DOING MY PRESENTATION IN ENGLISH BECAUSE MY SPANISH IS NOWHERE GOOD AS ERNESTO'S.

THANK YOU AGAIN FOR COMING. AND AS BOTH ERNESTO AND MARY SAID, THE MOST IMPORTANT PART OF TONIGHT IS HEARING TESTIMONY FROM THE PUBLIC, YOUR THOUGHTS AND COMMENTS ABOUT THE PROJECT. WHAT I WANTED TO DO IS TO TAKE A FEW MINUTES. I SEE A LOT OF FAMILIAR FACES HERE BUT ALSO A LOT OF NEW FACES. JUST TO GIVE YOU A QUICK OVERVIEW OF THE PROJECT GOALS, THE ALTERNATIVES, THE STUDIES WERE DONE, AND THE OVERALL PROJECT APPROVAL PROCESS JUST TO GIVE YOU A COMMON UNDERSTANDING.

WE ARE GLAD TO SEE EVERYONE HERE TONIGHT. METRO AND CALTRANS HAVE DONE AN EXTENSIVE NOTIFICATION EFFORT, INCLUDING PUBLISHING NOTICES IN FIVE DIFFERENT PAPERS, FOUR

ENGLISH, ONE SPANISH THREE DIFFERENT TIMES OVER THE PAST FIVE WEEKS, E-MAIL BLASTS. THEY'VE DONE A MAIL-OUT TO ALL THE PROPERTIES WITHIN 500 FEET OF I-710. AND SO AGAIN, WE ARE VERY GLAD THAT YOU'RE HERE TONIGHT. LET'S START WITH THE PROJECT GOALS.

OKAY. THE PROJECT GOALS LISTED ON THIS SLIDE TO IMPROVE AIR QUALITY AND PUBLIC HEALTH, IMPROVE TRAFFIC SAFETY, PROVIDE A MODERN DESIGN, ADDRESS THE TRAFFIC VOLUME INCREASES, THESE ARE ALL THE RESULT -- THESE GOALS HAVE BEEN GUIDING THE PROJECT NOT JUST FOR THE YEARS WE'VE BEEN DOING THE ENVIRONMENTAL PROCESS BUT EVEN BEFORE THAT. THAT CAME OUT OF THE MAJOR CORRIDOR STUDY. THESE GOALS ARE DRIVEN BY THE NEEDS THAT ARE HERE WITHIN THE I-710 CORRIDOR. STUDIES BY AIR QUALITY MANAGEMENT DISTRICT AND VARIOUS UNIVERSITIES HAVE SHOWN HIGH LEVELS OF HEALTH RISK IN THE CORRIDORS AS A RESULT OF HIGH LEVELS OF DIESEL PARTICULATE EMISSIONS FROM THE MANY TRUCKS THAT ARE IN THE CORRIDOR.

THE PROJECT DESIGN -- THE I-710 FREEWAY WAS DESIGNED AND CONSTRUCTED OVER 50 YEARS AGO. THERE'S MUCH MORE MODERN DESIGNS THESE DAYS THAT CAN HELP MAKE A FREEWAY LIKE THE I-710 MUCH SAFER AND OPERATE MORE EFFICIENTLY. AND FINALLY, THE TRAFFIC CONGESTION. THERE'S TRAFFIC TODAY, THERE WILL BE MORE TRAFFIC IN THE FUTURE AS THE POPULATION OF THE AREA GROWS, THE EMPLOYMENT GROWS, AND GOODS MOVEMENT.

THE STUDY AREA OF THE I-710 EXTENDS 19 MILES FROM

OCEAN BOULEVARD IN THE SOUTH, HERE IN LONG BEACH, UP TO THE STATE ROUTE 60 INTERCHANGE IN EAST LA. THIS EXHIBIT SHOWS ALL THE DIFFERENT COMMUNITIES THAT ARE EITHER ADJACENT TO OR VERY CLOSE TO THE I-710 FREEWAY AND ALL HAVE BEEN COVERED IN OUR PROJECT STUDIES FOR THE PROJECT.

THE PROJECT HAS BEEN DRIVEN BY A VERY AGGRESSIVE COMMUNITY OUTREACH PROGRAM. PUBLIC INPUT HAS REALLY HAD A GREAT DEAL OF INFLUENCE, NOT ONLY THE ALTERNATIVES WE'RE STUDYING BUT IN THE SORTS OF THE ISSUES WE'RE LOOKING AT AND THE DEPTH OF THE STUDIES THAT WE'VE UNDERTAKEN. I'LL TALK ABOUT THOSE A LITTLE BETTER -- A LITTLE LATER. THE PUBLIC OUTREACH PROCESS IS ONGOING. THESE PUBLIC HEARINGS ARE JUST ONE SMALL PART OF IT. IT'S AN ONGOING PROCESS NOT ONLY THROUGH THE PROJECT APPROVAL TO GET TO A PREFERRED ALTERNATIVE BUT AS THE PROJECT EVENTUALLY ENTERS INTO THE DESIGN AND CONSTRUCTIONS PHASES.

SO WHAT'S CHANGED? MANY OF YOU KNOW THAT DURING OUR ENVIRONMENTAL PROCESS FIVE YEARS AGO, THEY CIRCULATED A DRAFT ENVIRONMENTAL IMPACT REPORT, DRAFT ENVIRONMENTAL IMPACT STATEMENT FOR PUBLIC REVIEW. BUT A LOT HAS CHANGED SINCE THEN, AND THAT'S WHAT CAUSED CALTRANS TO DECIDE AND METRO TO DECIDE TO LOOK AT A REFINED SET OF ALTERNATIVES AND ISSUE WHAT WE CALL THE RECIRCULATED DRAFT EIR, SUPPLEMENTAL DRAFT EIS, AND THAT IS WHAT WE HAVE HERE TONIGHT. I'LL TALK ABOUT AVAILABILITY A LITTLE BIT LATER. BUT THAT'S WHAT WE'RE

SEEKING YOUR INPUT ON, PROJECT ALTERNATIVES AS WELL AS THE INFORMATION PROVIDED IN THE RECIRCULATED DRAFT EIR, SUPPLEMENTAL DRAFT EIS.

MANY OF THE THINGS THAT HAVE CHANGED, CHANGES IN TERMS OF TRAFFIC, LONG-TERM TRAFFIC, ASSUMPTIONS THAT ARE BASED UPON POPULATION AND EMPLOYMENT GROWTH FORECAST FOR THE REGION. OTHER PROEJCTS THAT -- SOME PROJECTS THAT HAVE COME ONLINE, OTHERS THAT HAVE BEEN TAKEN OUT OF THE MIX AS FAR AS SOUTHERN CALIFORNIA INFRASTRUCTURE, SO TRYING TO ADDRESS THOSE CHANGES. THE MOST IMPORTANT CHANGES THAT HAVE OCCURRED IN THE LAST FIVE YEARS, THOUGH, ARE THE LAST TWO BULLET POINTS, AND THAT IS THE COMMENTS THAT CALTRANS RECEIVED ON THE 2012 DRAFT DOCUMENT, AGAIN, SIGNIFICANTLY INFLUENCED THE REFINEMENT TO THE ALTERNATIVES AND SOME OF THE ADDITIONAL STUDIES WE UNDERTOOK FOR THE PROJECT.

AND THEN FINALLY, MOTION 22.1, APPROVED BY THE METRO BOARD OF DIRECTORS ON OCTOBER 2015, THAT ADDRESSED MANY ISSUES OF IMPORTANCE TO THE COMMUNITY THAT WE'VE ADRESSED IN THE EIS, AND I'LL HAVE ANOTHER SLIDE ON THAT IN A MOMENT.

LET'S TALK ABOUT THE ALTERNATIVES FOR A MOMENT. IN OUR ENVIRONMENTAL DOCUMENT, THERE ARE THREE ALTERNATIVES WE STUDIED. THE FIRST ALTERNATIVE ONE, WHICH IS THE NO-BUILD ALTERNATIVE, THAT MEANS DOING NOTHING, AND WE COMPARE OUR CHANGES IN PROJECT CONDITIONS TO THAT NO-BUILD CONDITION, BOTH TODAY AND IN THE FUTURE, IN 2015.

OUR FIRST BUILD ALTERNATIVE IS ALTERNATIVE 5C. THIS MODERNIZES THE FREEWAY. IT DOES ADD SOME LANES, ADDS CAPACITY TO ADDRESS THE TRAFFIC, AND THAT COST IS ESTIMATED COST, ABOUT SIX-AND-A-HALF BILLIONS DOLLARS. THE OTHER BUILD ALTERNATIVE WE'RE STUDYING IS ALTERNATIVE SEVEN. THIS ALTERNATIVE ADDS A CLEAN EMISSION FREIGHT CORRIDOR THAT WOULD BE USED ONLY BY ZERO EMISSION OR NEAR-ZERO-EMISSIONS TRUCKS TO SEPARATE THE TRUCK TRAFFIC FROM THE AUTOMOBILE TRAFFIC. IT WOULD ALSO INCLUDE MODERNIZATION OF THE FREEWAY.

THE NEXT COUPLE SLIDES STATE A LITTLE BIT MORE DETAIL INTO EACH OF THESE ALTERNATIVES. THE FIRST ONE, ALTERNATIVE 5C, WE DON'T HAVE A TRUCK CORRIDOR. WE DO HAVE TRUCK BYPASS LANES AT THE I-710, 1-405 INTERCHANGE TO HELP SEPARATE AUTOMOBILE AND TRUCK TRAFFIC TO MAKE THAT A SAFER INTERCHANGE. THERE'S A DEDICATED LANE THAT WOULD GO FROM FROM THE FREEWAY TO DOWNTOWN LONG BEACH. THE GENERAL PURPOSE LANES, WHICH ARE SHOWN IN GREEN ON THE SLIDE, ARE -- WOULD BE ADDING ADDITIONAL LANES IN EACH DIRECTION, AND THE LOCATION IS SHOWN ON THE SLIDE.

THE BLUE CIRCLES AND RECTANGLES, THOSE INDICATE INTERCHANGES THAT WOULD BE REDESIGNED BASED ON MODERN DESIGN STANDARDS TO, AGAIN, IMPROVEMENT THE SAFETY AND IMPROVE HOW WELL THEY FUNCTION.

ALTERNATIVE SEVEN, MUCH DIFFERENT THAN ALTERNATIVE 5C. THIS DOES NOT ADD ANY GENERAL PURPOSE OR THROUGH LANES

TO THE 710 FREEWAY. AS YOU CAN SEE BY THE RED LINE, IT EXTENDS ALMOST THE ENTIRE LENGTH. IT WOULD ADD THAT DEDICATED CLEAN EMISSION FREIGHT CORRIDOR THAT WOULD PROVIDE TWO -- I'M SORRY, FOUR LANES, TWO IN EACH DIRECTION. THAT WOULD BE DEDICATED TO ONLY ZERO EMISSION AND NEAR-ZERO-EMISSION TRUCKS. THE OTHER FEATURES IT INCLUDES ARE VERY SIMILAR TO ALTERNATIVE 5C IN TERMS OF MODERNIZING THE VARIOUS INTERCHANGES, BOTH THE ARTERIAL INTERCHANGES AND SOME OF THE FREEWAY INTERCHANGES ALONG I-710.

IN ADDITION TO THE PHYSICAL IMPROVEMENTS TO I-710 THAT ARE DESCRIBED FOR EACH OF THE ALTERNATIVES, BOTH OF OUR BUILD ALTERNATIVES ALSO HAVE A NUMBER OF ELEMENTS THAT WE REFER TO AS PROBLEMATIC FEATURES. THESE WOULD BE DIFFERENT FUNDING PROGRAMS THAT METRO WOULD WORK WITH, OTHER AGENCIES THAT HELP FUND ZERO, NEAR-ZERO-EMISSION TRUCKS WITHIN THE CORRIDOR THAT WOULD BE DEDICATED TO BEING USED ONLY IN THE I-710 CORRIDOR. THAT WOULD PROVIDE FUNDING FOR AN I-710 COMMUNITY HEALTH AND BENEFIT PROGRAM PATTERNED CLOSELY AFTER THE PORT OF LONG BEACH'S PROGRAM, PROVIDE FUNDING FOR SMART TECHNOLOGY FOR INTELLIGENCE TRANSPORTATION SYSTEMS THAT HELP TRAFFIC FLOW BETTER.

THERE'S A DEDICATED PROGRAM TO IMPROVE LOCAL ROADWAY INTERSECTIONS AND LOCAL ARTERIAL ROADWAYS, PROVISION OF ADDITIONAL EXPANSION OF TRANSIT IMPROVEMENTS, BOTH BUS TRANSIT AND RAIL TRANSIT, AND THEN FINALLY ADDITIONAL BICYCLE

FACILITIES AND PEDESTRIAN CONNECTIONS. THAT WAS ONE OF THE FEATURES ADDED AS A RESULT OF MOTION 22.1.

22.1, THIS IS A VERY IMPORTANT MOTION ADOPTED BY THE METRO BOARD THAT REALLY HELPED TO GUIDE ADDITIONAL ANALYSES AND ADDITIONAL FEATURES OF THE PROJECT. IF YOU DIDN'T GET ONE ALREADY AT THE FRONT TABLE, THERE'S A HANDOUT DESCRIBING MOTION 22.1, AND ALSO DESCRIBING WHERE IN THE ENVIRONMENTAL DOCUMENT YOU CAN FIND INFORMATION ABOUT THE DIFFERENT ELEMENTS OF IT. THAT COVERS ITEMS ONE. THE OTHER THREE ELEMENTS ARE ONES -- THINGS THAT ARE NOT ADDRESSED WITHIN THE EIR/EIRS BUT THAT METRO AND CALTRANS ARE WORKING TO ADDRESS IN PARALLEL WITH THE EIR/EIRS PROCESS.

OUR MOST COLORFUL SLIDE OF THE NIGHT, THIS SLIDE IS MEAN TO BE ILLUSTRATIVE OF ALL OF THE DIFFERENT STUDIES THAT WE UNDERTAKE TO ADDRESS THOSE ALTERNATIVES I DESCRIBED. WE ANALYZED AFFECTS ON THE HUMAN ENVIRONMENT, THE NATURAL ENVIRONMENT, AND WHAT THAT REPRESENTS IS EACH OF THOSE SYMBOLS IS A DIFFERENT STUDY. WE HAVE COPIES OF THE STUDIES HERE TONIGHT. AND AS MARY SAID, WE HAVE SOME OF THE TECHNICAL EXPERTS HERE TONIGHT. IF YOU HAVE QUESTIONS ABOUT AIR QUALITY, HEALTH RISK, ABOUT NOISE, ABOUT TRAFFIC WE HAVE THE PEOPLE HERE THAT CAN ANSWER THOSE SPECIFIC QUESTIONS FOR YOU.

EACH OF THE TECHNICAL STUDIES, WE LOOKED AT WHAT ARE THE EXISTING CONDITIONS, WHAT ARE THE LAWS AND REGULATIONS WE

NEED TO ADDRESS AS PART OF THAT STUDY. WE THEN ANALYZED WHAT ARE THE IMPACTS THAT ARE ASSOCIATED, BOTH BENEFICIAL AS WELL AS POTENTIAL ADVERSE EFFECTS. AND THEN FINALLY, WE FOCUS ON WHERE WE DO HAVE ADVERSE EFFECTS, OTHER WAYS WE CAN AVOID THEM, MINIMIZE THEM, OR MITIGATE FOR THEM. AND THAT'S ALL A VERY IMPORTANT PART OF OUR TECHNICAL STUDIES AND OF OUR ENVIRONMENTAL DOCUMENT.

THE PROCESS FOR THE PROJECT, THIS ILLUSTRATES -- THIS CRAMS ABOUT TEN YEARS OF PROCESS INTO ONE SLIDE. WE BEGAN OUR ENVIRONMENTAL PROCESS IN 2008. AS I INDICATED, THEY CIRCULATED A DRAFT EIR/EIS FIVE YEARS AGO, IN 2012, TOOK THE PUBLIC SPEAK BACK, AND THEN WORKED TO DEVELOP A REVISED SET OF ALTERNATIVES AND THE STUDIES FOR THAT. AND SO HERE WE ARE TODAY WITH OUR REVISED ENVIRONMENTAL DOCUMENT AND HERE TO SEEK YOUR INPUT.

FOLLOWING THE CLOSE OF THE PUBLIC COMMENT PERIOD ON OCTOBER 23RD, WE WOULD THEN START TO WORK TO ADDRESS THOSE COMMENTS AND START TO WORK TO IDENTIFY WHAT THE PREFERRED ALTERNATIVE WOULD BE FOR THE I-710. THAT WOULD LEAD TO THE DECISION, FINAL DECISION DOCUMENT IN THE FINAL EIR/EIRS.

AS FOR AS HOW TO COMMENT ON THE DOCUMENT, THERE'S MANY WAYS YOU CAN DO THAT. THIS PUBLIC HEARING IS ONE OF THEM TONIGHT, AS MARY SAID. YOU HAVE THE OPPORTUNITY TO SPEAK PUBLICLY. IF YOU JUST WANT TO PROVIDE YOUR TESTIMONY TO THE COURT REPORTER OVER AT OUR COMMENT STATION, YOU'RE

WELCOME TO DO THAT. WE DO HAVE COMMENT CARDS THAT YOU'RE WELCOME TO EITHER WRITE COMMENTS DOWN TONIGHT OR LEAVE THEM WITH US OR TAKE SOME HOME. YOU MAY WANT TO GET MORE INFORMATION, AND THEN YOU CAN MAIL THAT IN TO US BEFORE THE COMMENT DUE DATE. THERE'S ALSO -- YOU CAN SUBMIT THEM BY REGULAR MAIL TO CALTRANS, AND YOU CAN ALSO SUBMIT THEM ON-LINE THROUGH THEIR PROJECT WEBSITE.

THERE'S A LOT OF INFORMATION WE HAVE HERE TONIGHT, BUT THERE'S A LOT MORE INFORMATION AVAILABLE ABOUT THE PROJECT. WE'VE LISTED HERE ON THIS SLIDE THE WEBSITES FOR BOTH CALTRANS AND FOR METRO, AND ON BOTH OF THOSE THERE'S MORE INFORMATION ABOUT THE PROJECT ITSELF AND THE VARIOUS MEETINGS AND OTHER OPPORTUNITIES THAT WILL BE -- HAD BEEN HELD AND WILL BE HELD IN THE FUTURE.

SO WITH THAT, I'M GOING TO WRAP UP MY PART OF THE PRESENTATION. I'M GOING TO HAND IT OVER TO RON KOSINSKI. RON IS THE DEPUTY DISTRICT DIRECTOR FOR CALTRANS DISTRICT 7, HERE IN LOS ANGELES. RON HAS A FEW WORDS TO SAY ABOUT THE IMPORTANCE OF THE PUBLIC COMMENT PROCESS, MITIGATION MEASURES, AND ALL KINDS OF GOOD THINGS, AND THEN WE WILL HAND IT OVER TO MARY TO FACILITATE THE HEARING SO WE CAN HEAR FROM YOU. THANK YOU FOR YOUR ATTENTION.

MR. KOSINSKI: THANK YOU VERY MUCH, ROBERT.

AND REALLY WE APPRECIATE VERY, VERY MUCH, THE TIME YOU'VE SPENT HERE TODAY THAT YOU'RE HERE LISTENING TO THE

THIS INFORMATION ON THIS VERY IMPORTANT PROJECT. AND WE RECOGNIZE AS A GROUP THAT'S BEEN WORKING ON THIS FOR A WHILE AND A LOT OF THE COMMUNITIES HAVE BEEN INVOLVED IN THIS FOR A LONG TIME, THAT ALL THE PROJECT ALTERNATIVES HAVE SIGNIFICANT ADVERSE AFFECT ON THE COMMUNITY. IF WE DO NOTHING, WE LEAVE THINGS JUST THE WAY THEY ARE. YOU'RE BASICALLY SEEING THESE TRUCKS AND THE VARIOUS HEALTH ISSUES THAT ARE RELATED TO THE TRAFFIC COMING FROM THE PORTS AND USING THE 710. I MEAN, THAT'S A SITUATION WHICH IS REALLY CHALLENGING, CERTAINLY FOR PEOPLE LIVING HERE.

I'D LIKE TO SAY, IT'S GREAT TO BE BACK IN LONG BEACH. I SPENT SOME OF MY CHILDHOOD IN THIS CITY, WENT TO JANE ADDAMS ELEMENTARY SCHOOL, HERE IN NORTH LONG BEACH. AND AS I WATCHED THE SLIDES ON HOUSTON, REMINDED ME BACK IN THE '50S, THAT ACTUALLY THIS AREA WAS FLOODED FROM THE LA RIVER, OVERFLOWED THE BANKS AND FLOODED ALL THE WAY TO ATLANTIC, I BELIEVE, BECAUSE I REMEMBER WE DIDN'T HAVE TO GO TO SCHOOL FOR A WHILE. AND SO THE CORPS OF ENGINEERS HAS DONE A GREAT JOB IN SOLVING THAT PROBLEM SINCE THEN, AND WE'D LIKE TO THINK THAT CALTRANS AND METRO AND THE TEAM THAT WE'VE PUT TOGETHER CAN ALSO COME UP WITH A CREATIVE SOLUTION TO THE TRANSPORTATION ISSUES AND THE HEALTH ISSUES THAT YOU'RE FACING CURRENTLY.

THE PROJECT HAS EVOLVED FROM AROUND 2000, 2001, WHEN WE STARTED THIS PROJECT AND WE HAD 12 ALTERNATIVES, TO WHERE

WE ARE RIGHT NOW. I BELIEVE THAT WE'VE BEEN LISTENING VERY CAREFULLY TO THE COMMUNITY, AND THE PROJECT THAT WE HAVE TODAY IS REALLY A GOOD REFLECTION OF A LOT OF THE IDEAS THAT THE COMMUNITY HAS COME UP WITH OVER THE YEARS TO MAKE THIS A BETTER PROJECT FOR YOU.

SO REALLY IT'S -- THE OTHER THING I WANT TO MENTION, SINCE I LIVED HERE, I REMEMBER, WE HAD A VERY STRONG SENSE OF COMMUNITY, AND AS I'VE GONE THROUGH AND MET PEOPLE IN THIS AREA, I CAN SEE THAT LONG BEACH ITSELF REMAINS A VERY STRONG AND TENACIOUS GROUP OF PEOPLE. SO WE APPLAUD THAT, AND WE'RE HERE AGAIN TO LISTEN TO YOU AND WHAT ISSUES THAT YOU CAN BRING UP AND HELP US MAKE THIS THE BEST PROJECT POSSIBLE FOR YOU, COMMUNITY, FOR YOUR COMMUNITY. WE'D LIKE TO SEE HOW WE CAN AVOID IMPACTS, MINIMIZE IMPACTS, MITIGATE IMPACTS AND, IN FACT, DO SOME ENHANCEMENTS TO THE COMMUNITY WITH THIS PROJECT.

SO WITH THAT, I'M GOING TO PASS THIS OVER TO MARY. AND AGAIN, WE'RE HERE TO LISTEN TO WHAT YOU HAVE TO SAY. THANK YOU.

MS. MCCORMICK: GREAT. THANK YOU, RON.

BEFORE I BEGIN, IS THERE ANYONE HERE WHO WOULD LIKE TO FILL OUT A SPEAKER CARD WHO HASN'T YET? WE HAVE SEVERAL HERE, OR COMMENT CARDS. YOU WANT A SPEAKER? SO WE HAVE SEVERAL SPEAKER CARDS TONIGHT, AND I KIND OF WANTED TO JUST WALK THROUGH THE PROCESS FOR YOU SO IT WOULD MAKE IT A LITTLE

EASIER. I'M GOING TO ACTUALLY CALL YOUR NAME UP, AND IF YOU WOULD LIKE TRANSLATION, WE HAVE TRANSLATORS WHO WILL LITERALLY COME TO THE MICROPHONE, AND EVERYONE WILL HAVE THREE MINUTES TO SPEAK. IF WE HAVE SOMEONE COME UP WHO IS TRANSLATED, WE LITERALLY STOP THE CLOCK DURING TRANSLATION, AND THEN WE START IS AGAIN SO IT'S VERY EVEN. EVERYBODY GETS A FAIR THREE MINUTES.

SO WE WANT TO MAKE SURE THAT -- YOU'LL SEE IT HERE. THERE'S A LITTLE TIMER HERE. AND SO AT RED, WHEN RED GOES OFF, YOUR TIME IS UP. IT'S A NON-VERBAL COMMUNICATION, AND WE ASK YOU TO WRAP UP YOUR COMMENT AT THAT TIME.

SO WHAT I'D LIKE TO DO NOW IS, I'D LIKE TO GET STARTED WITH EMILY RHODES, WHO IS OUR FIRST SPEAKER, AND THEN DAVE FORD IS NEXT.

MS. RHODES: HI, GOOD EVENING.

MS. MCCORMICK: I'M SORRY. EMILY, IF YOU DON'T MIND, JUST FOR EVERYBODY ELSE IN THE ROOM, WE DO HAVE A COURT REPORTER HERE, AND SHE DOES NEED YOU TO REPEAT YOUR NAME IF YOU DON'T MIND.

MS. RHODES: HI, MY NAME IS EMILY RHODES, AND I LIVE ON GAIL, BETWEEN HILL AND 20TH, AND THAT WOULD BE RIGHT WHERE THE BIKE PATH IS GOING TO GO OVER THE PROJECT IN MY NEIGHBORHOOD. SO IF I'M SITTING ON MY PORCH, I'M LOOKING AT THE SPIRAL THING OR HOWEVER YOU DESIGN IT. I WOULD LIKE -- RIGHT NOW, RIGHT WHERE YOU WANT TO PUT IT, HOMELESS PEOPLE

AND CRIMINALS ARE BREAKING THE FENCE THERE. SO THERE'S AN AREA BETWEEN THE HOUSES AND THE FREEWAY WALL, WHERE WE HAVE REGULARLY CALLED THE POLICE ABOUT BURGLARIES AND THERE -- SO THEY'RE LEAVING IN A SPACE ON GAIL, BETWEEN THE FREEWAY WALL AND THE HOUSES, SO WE ALWAYS HAVE TO CALL TO HAVE THE SHRUBS REMOVED, AND SOME PEOPLE HAD ATTEMPTED BREAK IN.

SO IF YOU DO PUT THAT ON HILL, I TOTALLY SEE HOW IT MAKES SINCE FOR GARFIELD AND HUDSON KIDS TO RIDE THEIR BIKE. BUT ON HILL AT BALTIC IS THREE -- A SMALL SIDEWALKS WITH THREE LARGE POSTS, AND IT'S RIGHT WHERE KIDS ARE GOING TO GO. LIKE, THAT'S THE CORNER OF THE SCHOOL OFFICE AT GARFIELD. SO IF WE WANT TO TALK ABOUT HOW THEY'RE GOING TO BIKE, I'D REALLY LIKE THE CITY OR SOME KIND PERSON TO JUST TAKE THOSE THREE POSTS OUT BECAUSE, LITERALLY, OUR KIDS, THEY HAVE ABOUT THIS MUCH SPACE TO SCOOT A BIKE THROUGH WITHOUT HOPPING THE CURB. SO THEY'RE GOING TO HOP THE CURB AND BE IN THE STREET AND GET HIT AGAIN.

SO IF WE DO HAVE IT ON HILL, I'D LIKE THOSE POSTS IN AT THE SOUTH WALL OF GARFIELD ELEMENTARY TO BE REMOVED BECAUSE KIDS HAVE TO RIDE ON THE SIDEWALK IF THEY'RE UNDER 15. IT'S NOT SAFE TO BE IN THE STREET. T-5-1

ALSO, IF MUIR COULD BE RAISED ON THE LBUSD LIST FOR FINE AIR FILTRATION BECAUSE THEY ARE GOING TO BE IN THE AREA THAT'S -- WHERE THERE'S A LOT OF DUST KICKED UP. AND SO FAR T-5-2

WE ASKED THEM TO PUT GARFIELD UP HIGHER, SO WE DID DO THAT, BUT MUIR IS ALSO ALONG THE FREEWAY WALL, CLOSE TO WHERE THEY'RE GOING TO DO THE EXPANSION. SO IF LONG BEACH UNIFIED COULD JUST POP MUIR UP TO THE TOP OF THE LIST, AND MAYBE -- LONG BEACH UNIFIED IS GOING TAKE A LONG TIME, SO MAYBE IF THEY STARTED AND CHANGE MUIR ON THE LIST, THOSE KIDS MIGHT HAVE FILTRATION WHEN YOU'RE DOING THIS PROJECT. SO, THANK YOU. T-5-2

MS. MCCORMICK: THANK YOU VERY MUCH.

DAVE, AND THEN DR. JILL JOHNSTON.

MR. FORD: MY NAME IS DAVE FORD. I'M WITH SOUTHERN CALIFORNIA EDISON. NOW, I-710 CORRIDOR REPRESENTS AN OPPORTUNITY FOR PROACTIVELY IMPROVING THE AIR QUALITY IN COMMUNITIES ALONG THE I-710 FREEWAY, MANY OF WHICH HAVE BEEN HEAVILY IMPACTED BY AIR POLLUTION FROM TRANSPORTATION. APPROXIMATELY 40 PERCENT OF ALL GOODS ENTERING THE NATION ARE BEING MOVED THROUGH SOUTHERN CALIFORNIA PORTS AND HIGHWAYS, AND THE TRANSPORTATION SECTOR IS RESPONSIBLE FOR 36 PERCENT OF CALIFORNIA GREENHOUSE EMISSIONS.

USING CLEAN ENERGY TO POWER TRANSPORTATION ALONG THE I-710 CORRIDOR, PARTICULARLY MEDIUM AND HEAVY-DUTY TRUCKS, CAN HELP MEET LOW-LEVEL OZONE SMOG. NITROGEN OXIDE, AND IN PARTICULAR, EMISSION REDUCTIONS REQUIRED FOR CLEANER AIR.

SCE BELIEVES THAT ALTERNATIVE SEVEN CLEAN EMISSION FREIGHT CORRIDOR IS THE ONLY ALTERNATIVE THAT WOULD FEASIBLY T-5-3

ACCOMPLISH ALL THE PROJECT'S GOALS AND SUPPORTS THE PROJECT'S PURPOSE OF IMPROVING PUBLIC HEALTH. ADDITIONALLY, EDISON BELIEVES ALTERNATIVE SEVEN WOULD BE A TRUE EMISSION ZERO-EMISSION-FREIGHT CORRIDOR, WHICH MEANS THAT ZERO TAILPIPE POLLUTION EMISSIONS WILL BE EMITTED WHILE TRAVELLING WITHIN THE CORRIDOR. ACTIVE SUPPORT FOR TRANSPORTATION, (INAUDIBLE), PARTICULARLY IN GOODS MOVEMENT, IS NEEDED NOW. T-5-3

BY FUELING A VARIETY OF VEHICLES, CARS, PUBLIC TRANSPORTATION, MEDIUM AND HEAVY-DUTY TRUCKS AND INDUSTRIAL VEHICLES AND EQUIPMENT WITH CLEAN ELECTRONIC POWER INSTEAD OF FOSSIL FUELS CAN HELP MEET CALIFORNIA'S AMBITIOUS ENVIRONMENTAL GOALS IN THE COMING DECADES. THANK YOU.

MS. MCCORMICK: THANK YOU VERY MUCH.

DR. JILL JOHNSTON AND THEN MICHAEL CLEMSON.

GO RIGHT AHEAD.

MS. JOHNSTON: GOOD EVENING, MY NAME IS JILL JOHNSTON. I'M ASSISTANT PROFESSOR OF PREVENTATIVE MEDICINE AT UNIVERSITY OF SOUTHERN CALIFORNIA. THANK YOU FOR THE OPPORTUNITY TO COMMENT ON THE DRAFT EIR TONIGHT.

SO AS WE KNOW, THE COMMUNITIES SITUATED ALONG THE 710 ARE SOME OF THE MOST ENVIRONMENTALLY BURDENED IN THE STATE IF WE LOOK AT THE CAL ENVIRON TRADE SCORES. MANY OF THESE COMMUNITES ARE IN THE TOP FIVE PERCENT OF THOSE SUFFERING FROM THE MOST POLLUTION ACROSS THE ENTIRE STATE AND ALSO MOST VULNERABLE TO THE ENVIRONMENT. WE ALSO KNOW THAT T-5-4

THERE'S A GROWING BODY OF EVIDENCE AROUND THE HIGH LEVELS OF AIR POLLUTANTS EMITTED FROM MAJOR FREEWAYS, MOTORWAYS, AND HIGHWAYS, INCLUDING ULTRAFINE PARTICLES, BLACK CARBON, OXIDES, (INAUDIBLE) AND CARBON MONOXIDE AND THAT PEOPLE LIVING HERE ARE OTHERWISE SPENDING A SUBSTANTIAL AMOUNT OF TIME CLOSE TO BUSY ROADWAYS AND FREEWAYS, ESPECIALLY WITHIN 300 METERS, ARE EXPOSED TO THESE POLLUTANTS, MUCH MORE SO THAN PEOPLE LIVING FARTHER AWAY. AND NEW STUDIES SHOW THAT EVEN DURING EARLY-MORNING HOURS, THERE COULD BE ELEVATED EXPOSURE TO ULTRA FINE PARTICLES THAT MAY EXTEND OVER ONE MILE FROM THE FREEWAY.

THERE'S ALSO A LARGE BODY OF EVIDENCE DOCUMENTING THAT THERE'S HEALTH-HAZARD EXPOSURE RELATED TO THESE TRAFFIC AIR POLLUTANTS, INCLUDING ELEVATED RISK OF DEVELOPMENT OF ASTHMA, WERE BASED ON (INAUDIBLE) CHILDREN AND INCREASED RISK OF CARDIAC AND PULMONARY INJURY AMONG THOSE WHO LIVE NEAR MAJOR FREEWAYS. WE ALSO KNOW THAT ADULTS WITH DIABETES ARE MORE SUSCEPTIBLE TO AMBIENT AIR POLLUTION AND ESPECIALLY HIGHER RATES OF MORBIDITY AND MORTALITY WHEN LIVING NEAR BUSY ROADWAYS. T-5-4

AND SO THERE'S BEEN AN EXTENSIVE BODY OF EVIDENCE THAT'S COME OUT OF USC CHILDREN'S HEALTH STUDY THAT'S BASED IN SOUTHERN CALIFORNIA, AND WE HOPE TO SEE A LOT OF THIS LITERATURE AND EVIDENCE DOCUMENTED THROUGHOUT THE EIR. AND SO THIS HAS SHOWN THAT LOCAL EXPOSURE TO TRAFFIC HAS ADVERSE

EFFECTS ON CHILDREN OF LUNG DEVELOPMENT, AND THESE EFFECTS ARE INDEPENDENT OF REGIONAL AIR QUALITY. BOTH LOCAL EXPOSURE TO FREEWAY AND REGIONAL AIR POLLUTANTS HAVE BEEN FOUND TO HAVE DETRIMENTAL EFFECTS ON LUNG FUNCTION AND GROWTH AND PRONOUNCED DEFICITS AMONG CHILDREN.

ALSO, I WANTED TO BRING UP SOME RECENT STUDIES FROM USC THAT LOOK AT THE COST ASSOCIATED WITH THE HEALTH BURDENS OF LIVING NEAR BUSY ROADWAYS. SO WHEN YOU LOOK AT LONG BEACH ALONE, IT'S ESTIMATED OF ABOUT $6.1 MILLION A YEAR IS RELATED TO ASTHMA CASES. WHEN WE LOOK ACROSS THE ENTIRE COUNTY, WE FOUND THAT THERE COULD BE A SAVINGS OF 108 TO 180,000,000 A YEAR OF ASTHMA-RELATED COSTS IF CHILDREN WERE NOT EXPOSED TO NEAR ROADWAY AIR POLLUTION, SUCH AS USING ZERO-EMISSIONS TECHNOLOGIES. THE COSTS DUE TO CORONARY HEART DISEASE ARE ESTIMATED TO BE 10 TO $22 BILLION A YEAR, WHEN WE FORECAST THAT OUT TO 2035. T-5-4

SO PRIOR EMISSIONS FROM TRAFFIC IS A MAJOR BURDEN ON THE LOCAL ECONOMY AS WELL AS THE HEALTH EFFECTS OF THE PEOPLE IN THE COMMUNITIES. THANK YOU.

MS. MCCORMICK: THANK YOU VERY MUCH.

MICHAEL AND THEN RENE CASTRO.

AND MICHAEL, COULD YOU PLEASE PRONOUNCE YOUR LAST NAME?

MR. CLEMSON: CLEMSON.

MS. MCCORMICK: CLEMSON. THANK YOU.

MR. CLEMSON: THANK YOU FOR COMING OUT AND LETTING US COMMENT ON THIS. I HAVE A FEW COMMENTS. THE FIRST ONE I WANT TO TALK ABOUT IS THE DOUBLE DIAMOND OVERPASS. I THINK IT MIGHT BE AN IMPROVEMENT ON PEDESTRIAN AND CYCLIST SAFETY, BUT IT'S STILL GOING TO SERVE AS A BARRIER FROM THE FOLKS IN EAST LONG BEACH TO THE FOLKS IN WEST LONG BEACH, THE CITY PUTTING IN A FEW MILLION DOLLARS IMPROVING STREETS, MAKING THEM MORE PEDESTRIAN FRIENDLY, AND I THINK THAT THAT'S GOING TO STOP, JUST LIKE EVERY OTHER PROJECT SEEMS TO STOP, AT THE 710 AND LEAVES THE REST OF THE COMMUNITY DISCONNECTED. T-5-5

THE OTHER THING IS THAT IT LOOKS LIKE THE TRAFFIC IMPACTS WERE BEING MEASURED ON LEVEL OF SERVICE VERSUS BMT, BASICALLY SAYING THAT WE NEED TO KEEP THE SPEEDS UP, AND THAT'S HOW WE'RE GOING TO DETERMINE IF THIS IS A SUCCESSFUL PROJECT AS OPPOSED TO REDUCING THE VEHICLE MILES TRAVELED. THE ESTIMATED IMPACTS SHOW REDUCTION OF DAILY TRAFFIC VOLUMES, WHICH DOESN'T REALLY MAKE SENSE. I DON'T THINK YOU HAVE A HIGHWAY EXPANSION, WHICH I'M NOT AWARE OF ANY HIGHWAY EXPANSION THAT HAS EVER SOLVED A CONGESTION PROBLEM OR REDUCED THE NUMBER OF VEHICLES ON THE ROAD. I THINK THAT THAT'S, YOU KNOW -- YOU'RE GOING TO SEE MORE DEMAND, YOU'RE GOING TO SEE MORE TRAFFIC ON CITY STREETS, AND YOU'RE GOING TO SEE MORE -- AND YOU'RE GOING TO SEE THE TRAVEL TIMES ON THE 710 REMAIN THE SAME. T-5-6

THE LAST THING I WANTED TO MENTION IS THAT T-5-7

ALTERNATIVE SEVEN KIND OF RELIES ON A LOT OF TECHNOLOGIES THAT AREN'T PROVEN RIGHT NOW. BATTERY TECHNOLOGY FOR TRUCKS, I DON'T THINK THAT'S TO THE POINT WHERE WE CAN RELY ON EMISSION -- PARTICULATE EMISSION OR GREENHOUSE GAS EMISSIONS REDUCTIONS FROM THOSE TECHNOLOGIES. THANK YOU. T-5-7

MS. MCCORMICK: THANKS VERY MUCH.

DR. TOM WILLIAMS.

MR. CASTRO: HI, GOOD EVENING, MY NAME IS RENE CASTRO. I WORK AT CENTURY VILLAGES AT CABRILLO. WE'RE RIGHT IN WHAT'S KNOWN AS THE DIESEL DEATH ZONE. WE ARE AN AFFORDABLE HOUSING COMMUNITY. WE PROVIDE AFFORDABLE HOUSING FOR 2,000 VETERANS -- 2,000 RESIDENTS PER YEAR, 600 OF THEM ARE VETERANS. THE REST ARE CHILDREN AND FAMILIES. THERE'S A HUGE AMOUNT OF ASTHMA AMONG OUR VETERANS, AS WELL AS OUR CHILDREN AND FAMILIES.

I BIKE RIDE. I'VE BEEN WORKING THERE FOR ABOUT A YEAR NOW, AND I BIKE RIDE TO WORK ABOUT THREE TIMES A WEEK. AND I WANT TO SHOW YOU, THIS IS SOMETHING I HAVE TO USE EVERY DAY. I'M 53 YEARS OLD. I'M VERY ACTIVE. BUT SINCE I'VE BEEN WORKING THERE, I HAVE TO USE THIS AIR FILTER IN ORDER TO BREATHE. IF I DON'T USE THIS AIR FILTER, MY LUNGS ARE ON FIRE. I'M VERY HEALTHY. I'M A VERY HEALTHY INDIVIDUAL. I DON'T LIVE THERE, BUT I SPEND ABOUT EIGHT TO TEN HOURS THERE A DAY. I JUST DO NOT KNOW HOW WE CAN PUT A PRICE ON OUR CHILDREN'S HEALTH. AND AS FOR ALTERNATIVE SEVEN, I CAN'T T-5-8

EVEN BELIEVE THIS IS A DISCUSSION.

I APPRECIATE THE OPPORTUNITY TO TALK TONIGHT. I'VE BEEN IN LONG BEACH FOR 20 YEARS, AND I REALLY SUPPORT THE RESIDENTS HERE TONIGHT. THANK YOU SO MUCH. T-5-8

MS. MCCORMICK: THANK YOU VERY MUCH.

DR. TOM WILLIAMS AND THEN WALTER SANTIAGO.

MR. WILLIAMS: DR. TOM WILIAMS, BEEN ON THIS SINCE 1992. HOWEVER, RIGHT NOW REPRESENTING THE SIERRA CLUB TRANSPORTATION COMMITTEE. AND BASICALLY RATHER THEN TRUCKS, TRUCKS, TRUCKS, AND MORE TRUCKS, WE WANT TO GET IT ON RAIL. AND ONE OF THE BASIC ELEMENTS IS THAT YOU HAVE PROJECTED TRAFFIC AND GOODS MOVEMENT. GOODS MOVEMENT EQUALS CONTAINERS. SO WHAT ARE THEY? WHO DID IT? BECAUSE EARLIER TODAY, THE AQMD AND PORTS OF LA AND LONG BEACH HAD A DISCUSSION FOR THREE HOURS REGARDING HOW MUCH YOU'RE GOING TO GIVE AND WHERE IT'S GOING TO GO. WILL IT GO TO THE ALAMEDA CORRIDOR, OR WILL IT GO BY 710? WE DON'T KNOW. T-5-9

SO WHILE WE DO HAVE WHAT IS CALLED THE CLEAN AIR ACTION PLAN, AND THAT'S IN PROGRESS RIGHT NOW, BUT IT'S NOT REFLECTED IN THE 710 DOCUMENTS. THEY ALSO HAVE THE AQMP OF AQMD FOR 2016, BUT THAT DOESN'T SEEM TO BE REPRESENTED, AND YOUR USING SCAG'S 2012 DATA FOR PROJECTION OF GROWTH? THAT WAS BASED UPON THE YEAR 2000 CENSUS. SO THE BASIC ELEMENTS OF ALL OF THE DISCUSSIONS ARE NOT WELL-DOCUMENTED, NOT A MIRACLE, NOT PHASE OVER THE SPAN OF THE CONSTRUCTION AND THE T-5-10

OPERATION OF THIS PROJECT.

SO, ONCE YOU GET TO THE NORTH END OF THE PROJECT, WHERE DO ALL THE TRUCKS GO? WE DON'T KNOW. AND IT'S CALLED SECONDARY IMPACTS. WILL THERE BE IMPACTES BEYOND THE THIRD STREET ON THE 710 OR BEYOND THE INTERCHANGE OF I-5? WE DON'T KNOW, AND THE RECORD DOESN'T REFLECT THAT. T-5-11

SO ALTERNATIVE ONE, IT HAS ENHANCED RAIL, BUT WE DON'T KNOW HOW ENHANCED BECAUSE RIGHT NOW IF YOU HAD 100-UNIT TRAINS A DAY, YOU WOULD NOT NEED THE EXPANSION FOR THE TRUCKS. 100-UNIT TRAINS IN THE ALAMEDA CORRIDOR. ALSO SUMMARIZING, WE NEED AN EXTENSION TO NOVEMBER THE 20TH FOR THE COMMENT PERIOD, AND WE NEED A REAL RAIL ALTERNATIVE FOR THE 710 PROJECT, AND WE WOULD BASICALLY GO GET IT ON RAIL. T-5-12

THANK YOU.

MS. MCCORMICK: THANK YOU.

WALTER SANTISO AND THEN OSCAR.

MR. SANTISO: MY NAME IS WALTER SANTISO. THANK YOU TO EVERYONE AND EVERYTHING THAT IS HERE THAT WASN'T CALLED BY NAME. YOU ARE ALSO IMPORTANT, ESPECIALLY THE CHILDREN HERE IN THIS ROOM.

THE TEN-YEAR DECISION THAT YOU HAVE, IT SHOULD TAKE THAT LONG. IT SHOULD TAKE 10, 20 YEARS TO STUDY BECAUSE OUR CHILDREN ARE GOING TO BE BREATHING IN THAT POISON, THAT POLLUTION IN THE WATER. IT'S IN THE LAND, IT'S IN THE AIR, AND IT'S SOMETHING THAT YOU CANNOT REMOVE. SO SOMETHING THAT

YOU MIGHT SAY "IT TAKES TEN YEARS," OUR CHILDREN HAVE TO LIVE AFTER US, AND IT'S AN IMPACT THAT YOU'RE NOT GOING TO BE ABLE TO TAKE AWAY.

HERE YOU DON'T HAVE DEDICATED FUNDS FOR ACTIVE TRANSPORT. I DIDN'T SEE ANY NUMBER FOR THAT, FOR THE TEENAGERS, FOR THE CYCLISTS, FOR THE YOUNG CHILDREN THAT THEY DON'T HAVE ACCESS TO CARS HERE IN LONG BEACH, ESPECIALLY HERE IN THE WEST AND THE NORTH SIDE, WHICH ARE TRUCKS BY THE 710 FREEWAY. SINCE I'VE LIVED HERE IN LONG BEACH, FOUR YEARS, BOTH OF MY YOUNG CHILDREN HAVE HAD AN INCREASE IN NOSE BLEEDS, IN HEADACHES, IN BODY ACHES, AND I ONLY LIVE JUST OVER THE BRIDGE. T-5-13

IF YOU'VE EVER COME DOWN WILLOW WALKING, WILLOW IS ABOUT MAYBE TWO-AND-A-HALF FEET. THAT HAS TO BE SHARED BY PEDESTRIANS AND CYCLISTS, AND WE HAVE TO CROSS THE 710 TWICE EACH WAY JUST TO GET TO WHERE WE'RE GOING, WHETHER IT'S TO THE CHURCH DOWN THE STREET OR TO GET SOME FAST FOOD, WHATEVER IT IS.

SO WHAT WE WANT IS, WE DON'T WANT YOU TO MITIGATE OR MINIMIZE IMPACTS. WE DON'T WANT ANY IMPACTS. THE WIDENING OF THE LANES AND OPERATIONAL IMPROVEMENT THAT I SAW ON FOUR OF YOUR SLIDES DIDN'T SAY ANYTHING ABOUT IMPROVING LUNG HEALTH OR CARDIAC HEALTH. SO THERE'S SO MANY THINGS MISSING JUST FROM YOUR PRESENTATION. I FEEL THAT WE ARE BEING TOLD LIES. THE PEOPLE IN THE BACK ARE JUST MARKETING WHY THIS T-5-14

PROJECT IS SO GREAT. I DON'T THINK THIS PROJECT IS GREAT. I THINK THAT ALTERNATIVE ONE IS THE ONLY WAY TO GO, WITH THE NO-BUILD. T-5-15

I'M REQUESTING AN EXTENSION TO THE EIR, THE COMMENT PERIOD TO 120 DAYS BECAUSE YOU MAY BE TRANSLATING IN ENGLISH AND IN SPANISH, BUT THERE'S MANY OTHER PEOPLE WHO LIVE IN LONG BEACH WHO SPEAK KAMAI, WHO SPEAK THAI, WHO SPEAK TAGALOG WHO YOU'RE NOT REPRESENTING. JUST BECAUSE YOU SPEAK SPANISH DOESN'T MEAN THAT YOU'RE INCLUSIVE. IT JUST MEANS YOU'RE FILLING OUT WHATEVER REQUIREMENT FOR THIS PARTICULAR AUDIENCE. T-5-16

THERE'S MANY PEOPLE LIVE IN THE APARTMENTS WHO ARE NOT HERE NOW, WHO ARE NOT INVITED. I WAS NOT INVITED BY YOU. I WAS INVITED BY ECR. THEY ARE THE ONLY PEOPLE WHO HAVE INFORMED ME CONTINUOUSLY ABOUT THE THINGS THAT ARE HAPPENING IN MY CITY, NOT YOU, NOT CITY COUNCIL, NOT METRO, NOT ALL THESE PEOPLE WHO ARE SPONSORING HERE. SO I THINK IT'S IRRESPONSIBLE TO SAY THAT THIS PROJECT IS GOING TO IMPROVE, WHEN ALL YOU'RE TALKING ABOUT EXPANDING AND WIDENING, AND IMPROVEMENT FOR THE TRUCKS, BUT NOT FOR US. WHAT YOU'RE SAYING ISN'T FOR US, SO PLEASE DON'T LIE TO US. T-5-17

MS. MCCORMICK: THANK YOU.

NEXT SPEAKER IS OSCAR, AND THAT'S THE ONLY NAME I HAVE, AND THEN EVANGELINA RAMIREZ. OSCAR? OKAY.

THANK YOU. GO RIGHT AHEAD, MA'AM.

MS. RAMIREZ: HI, EVERYBODY, MY NAME IS EVANGELINA RAMIREZ. I HAVE BEEN INVOLVED IN THE LONG BEACH COMMUNITY FOR THE LAST 24 YEARS. AND ONE OF THE THINGS THAT I WANT TO ASK YOU IS THE SAME THING LIKE THE OTHER GUY SAID. IT'S HARD FOR US TO UNDERSTAND THE LANGUAGE THAT YOU USE IN YOUR REPORTS AND YOUR THINGS. ONE OF THE THINGS THAT WE WANT TO ASK YOU IS GIVING THE COMMUNITY MORE TIME TO -- BUT NOT REALLY THE COMMUNITY, BUT OTHER ORGANIZATIONS TO HELP US TO UNDERSTAND WHAT IS GOING ON IN THOSE DOCUMENTS, THAT'S THE FIRST THING. T-5-18

THE SECOND THING THAT I WANT TO TALK ABOUT IS THE DISPLACEMENT FOR THOSE THAT ARE DISPLACED. WE HAVE -- I WORK WITH THE COMMUNITY, AND WE HAVE MANY MOMS THAT HAS BEEN HAVING DOMESTIC VIOLENCE. WHERE DO YOU THINK THAT I SEND THOSE MOMS WHEN THEY HAVE TO RUN AWAY FROM THEIR HOMES? TO THAT MULTI-SERVICE PLACE. IT'S THE PLACE THAT I SEND THOSE MOMS. WHEN WE HAVE OUR SUPPORT GROUPS, THEY HELP US TO GIVE THEM A PLACE WHERE TO SLEEP ON THE NIGHT. IF YOU MOVE OUT THAT PLACE, WHERE ARE THEY GOING TO BE? HOW WE CAN HELP THEM? HOW LONG IT'S GOING TO TAKE TO YOU GUYS TO REPLACE THAT FACILITY, THAT CENTER? HOW LONG? WHEN? WHERE? WHAT PLACE ARE YOU GOING TO CHOOSE TO PUT THEM AT? T-5-19

I HOPE YOU UNDERSTOOD ME. MY ENGLISH IS NOT 100 PERCENT, BUT I'M TRYING TO SPEAK IN ENGLISH BECAUSE IT'S IMPORTANT TO ME THAT THE PEOPLE FEEL WE NEED THAT HELP. WE

NEED TO KNOW ABOUT THAT PLACE. I'M INVOLVED WITH LONG BEACH ALLIANCE FOR CHILDREN WITH ASTHMA FOR MANY YEARS BECAUSE I HAVE A CHILD. RIGHT NOW INVOLVED WITH LONG BEACH RESIDENTS IN POWER BECAUSE I HAVE BEEN SEEING THE DISPLACEMENT NOT ONLY FOR ALL THESE THINGS THAT ARE HAPPENING. BECAUSE MANY CORPORATIONS ARE BUYING THE BUILDINGS, AND THEY ARE DISPLACING THE PEOPLE. AND YOU GUYS GOING TO DISPLACE THE ONLY PLACE THAT WE HAVE FOR THOSE HOMELESS PEOPLE, THE PEOPLE WHO DOESN'T HAVE ANY PLACE WHERE TO GO.

I WOULD LIKE TO KNOW WHERE AND WHEN THAT PLACE IS GOING TO BE REPLACED, AND AS SOON AS POSSIBLE, BECAUSE WE HAVE BEEN WAITING FOR MANY YEARS WITH THIS THING. I HAVE BEEN INVOLVED WITH THIS THING SINCE 1999, THAT MY DAUGHTER START HAVING ASTHMA. THANK YOU. T-5-20

MS. MCCORMICK: THANK YOU.

I'D LIKE TO CALL UP SELENA AZUETA AND JESSICA FIGUEROA.

MS. AZUETA: HI, GOOD EVENING. MY NAME IS SELENA AZUETA. I LIVE IN LONG BEACH IN THE WRIGLEY AREA, RIGHT ON 710 AND PCH. I AM PART OF LONG BEACH ALLIANCE FOR CHILDREN WITH ASTHMA. I HAVE TWO DAUGHTERS, ONE WHO HAS ASTHMA. I AM HERE TODAY TO VOICE MY CONCERN OVER MY CHILDREN'S HEALTH. WE'VE WORKED SO HARD IN CONTROLLING MY DAUGHTER'S TRIGGERS, AND WE DO SEE PAINFUL AND VERY SCARY ER VISITS. I WOULD LIKE FOR MY DAUGHTER AND OTHER CHILDREN WITH ASTHMA TO BE ABLE TO

STEP OUTSIDE WITHOUT FEAR OF TRIGGERING AN ASTHMA ATTACK BY ALL THE POLLUTION WE'RE SURROUNDED WITH.

WE NEED A REAL ZERO-EMISSIONS PLAN BECAUSE WHAT'S PROPOSED IS JUST NOT ENOUGH FOR OUR CHILDREN'S HEALTH. THANK YOU. T-5-21

MS. MCCORMICK: THANK YOU.

JESSICA AND THEN RIGHT AFTER, JORGE RIVERA.

GO RIGHT AHEAD.

MS. FIGUEROA: HI, GOOD AFTERNOON. MY NAME IS JESSICA FIGUEROA. I'M A COMMUNITY HEALTH WORKER FOR LONG BEACH ALLIANCE FOR CHILDREN WITH ASTHMA, ALSO KNOWN AS LACA. I PROVIDE ASTHMA HOME VISITS TO FAMILIES LIVING NEAR THE 710 FREEWAY.

WIDENING THE 710 FREEWAY CREATES MORE TRAFFIC. MORE TRAFFIC CREATES MORE HEALTH PROBLEMS SUCH ASTHMA, CANCER, MEMORY LOSS IN SENIORS, AND LOW BIRTH RATES. WIDENING THE T-5-22

710 FREEWAY CREATE DISPLACEMENT, WHERE HUNDREDS OF VULNERABLE PEOPLE OF COLOR WILL BE LEFT HOMELESS OR WOULD HAVE TO LOOK FOR A HOME THAT IS WAY BEYOND THEIR BUDGET. I KNOW, BECAUSE T-5-23

FAMILIES THAT I PROVIDE ASTHMA HOME VISITS TO LIVE NEAR THE 710 FREEWAY. THESE FAMILIES DON'T HAVE THE MEANS TO MOVE BECAUSE THEY LIVE PAYCHECK TO PAYCHECK.

SO WHAT DOES THE COMMUNITY WANT? WE WANT OUR VOICES TO BE HEARD. NO DISPLACEMENT. THANK YOU. T-5-24

MS. MCCORMICK: THANK YOU.

JORGE RIVERA, AND THEN AFTER YOU, SIR, IS REBECCA SERACOPOLOUS.

GO AHEAD.

MR. RIVERA: MY NAME IS JORGE RIVERA. I'M PROJECT DIRECTOR OF LIBRE, LONG BEACH RESIDENTS IN POWER. WE ARE A HOUSING JUSTICE ORGANIZATION HERE IN THE CITY OF LONG BEACH. WE FIGHT FOR RENTERS' RIGHTS AND MORE AFFORDABLE HOUSING, SO THIS PROJECT IS SOMETHING THAT IS CONNECTED TO OUR WORK BECAUSE, OBVIOUSLY, THERE IS GOING TO BE DISPLACEMENT, AND WE'RE REALLY CONCERNED WITH THAT.

WE ARE DEFINITELY CONCERNED ABOUT THE ZERO-EMISSIONS STANDARD. WE WANT ZERO EMISSIONS IF THIS IS GOING TO MOVE FORWARD. WE DON'T WANT NEAR ZERO EMISSIONS. AS IT STANDS RIGHT NOW, WE ALREADY SPOKE, YOU ALREADY HEARD FROM A LOT OF PEOPLE THAT HAVE CHILDREN WITH ASTHMA. WE HAVE A LOT OF FOLKS THAT HAVE ASTHMA, HAVE THE ISSUES, AND WE JUST DON'T NEED ANY ADDITIONAL POLLUANT IN OUR COMMUNITY. SO IF THIS IS GOING TO GO THROUGH, THEN WE WANT YOU TO REALLY WITHOLD AND UPHOLD MANDATE AND SPECIFIC ELEMENTS THAT ARE ACTUALLY GOING TO ACHIEVE A ZERO-EMISSION VISION, NOT A NEAR ZERO. THAT'S JUST NOT GOOD ENOUGH FOR OUR COMMUNITY. T-5-25

ALSO, WE ARE IMPROVING -- WE ARE TRYING TO IMPROVE THE HEALTH OF OUR HOMES AND THE CONDITIONS, AND SO WE JUST DON'T NEED ANY ADDITIONAL POLLUTANTS TO TRY TO FIGHT, FIGHT THE ISSUES THAT WE'RE ALREADY EXPERIENCING HEALTH-WISE. AS

IT STANDS RIGHT NOW IN THE DOWNTOWN AREA, OUR LIFE SPAN IS DECREASED BY SEVEN TO 11 YEARS, AND SO THE EXPANSION OF THE FREEWAY IS JUST GOING ADD TO THAT. SO IF YOU NEED TO TAKE ADDITIONAL TIME TO STUDY THIS, THEN I SAY, TAKE ADDITIONAL TIME. I'D RATHER YOU TAKE IT, THAN TAKE IT FROM OUR LIVES BECAUSE THAT'S WHAT'S IMPORTANT TO US. T-5-25

ALSO, WE'RE PART OF A LOCAL HIRE COALITION, AND WE TRY TO ENSURE THAT OUR RESIDENTS ARE RECEIVING JOBS SO THAT THEY CAN PAY RENT, ESPECIALLY WITH THE INCREASING RENTS IN OUR COMMUNITY. WE WANT TO ENSURE THAT YOU ARE ACTUALLY IMPLEMENTING A LOCAL HIRE POLICY, WHICH WAS SUPPOSED TO BE PUT IN BEFORE THE DRAFT EIR CAME OUT. AND SO WE HOPE THAT YOU FULFILL THAT PROMISE, THAT YOU MAKE SURE OUR RESIDENTS ARE GETTING JOBS, ESPECIALLY IF YOU'RE BRINGING A PROJECT INTO THIS PLACE, INTO THIS COMMUNITY, THAT'S GOING TO BE DISPLACING PEOPLE FROM THEIR HOMES. T-5-26

IT'S GOING TO BE DISPLACING THE MULTI-SERVICE CENTER, WHICH IS ALREADY SERVICING OUR HOMELESS POPULATION, AND WE DON'T HAVE ANY PROMISES THAT THAT'S GOING TO BE RELOCATED. SO WHAT'S GOING GOING TO HAPPEN IN THE MEANTIME? YOU THROWING MONEY AT THE PROBLEM BECAUSE YOU'RE DISPLACING A MULTI-SERVICE CENTER DOES NOT ENSURE THAT IT'S GOING TO FIND ANOTHER HOME, AND IT'S NOT GOING TO ENSURE THAT IT FINDS A HOME WHERE THE SERVICES ARE NEEDED. SO WE WANT TO MAKE SURE YOU'RE NOT DOING -- YOU'RE NOT DISPLACING THE SERVICES THAT T-5-27

ARE ALREADY ATTENDING TO OUR HOMELESS POPULATION.

AND WE ALSO WANT TO MAKE SURE THAT -- WE WANT TO REQUEST THE 120-DAY EXTENSION OF THE DRAFT EIR. OUR LOCAL DISTRICT PERSON, DINA GONZALEZ, HERE IN THE CITY OF LONG BEACH, WHO IS ALSO THE CHAIR OF THE I-710 PROJECT COMMITTEE JUST SENT IN A LETTER REQUESTING THE SAME. SO WE HOPE THAT YOU RECEIVE THAT LETTER AND YOU TAKE THAT INTO DEEP CONSIDERATION BECAUSE I SAW THAT TABLE WITH ALL THOSE DIFFERENT TOOK BOOKS OF 10,000 PAGES, AND WE NEED SOME TIME TO BE ABLE TO COMPILE A RESPONSE TO THAT. THANK YOU. T-5-28

MS. MCCORMICK: THANK YOU.

REBECCA, AND AFTER REBECCA IS MARTHA.

GO AHEAD.

MS. SERACOPOLOUS: HI, I'M REBECCA SERACOPOLOUS WITH BIKEABLE COMMUNITIES, A CYCLING ORGANIZATION HERE IN LONG BEACH. AND I WANT TO TALK ABOUT THE DIVERGENT DIAMOND INTERSECTIONS, THAT OPTION FIVE AND OPTION SEVEN ARE PROPOSINGING. WE ARE OPPOSED TO THAT BECAUSE THEY'RE SIMPLY NOT SAFE FOR PEDESTRIAN AND CYCLISTS. THEY DON'T WORK. THEY MAKE THE SITUATION WORSE, ESPECIALLY OFF THE 710 AND PCH. THAT SITUATION IS ALREADY BAD FOR KIDS CROSSING FROM THE EAST SIDE, TRYING TO GET TO CABRILLO HIGH SCHOOL EVERY DAY, HUNDREDS OF OF STUDENTS ON BIKES AND WALKING. T-5-29

AND WE'RE PROPOSING SEPARATE BIKE AND PEDESTRIAN FACILITIES AT ANAHEIM, PCH, AND DEL AMO, CLASS-ONE CYCLING T-5-30

FACILITIES, AND ON PCH, THE CONNECTION WOULD BE CLASS FOUR, FROM PACIFIC AVENUE ON THE EAST AND CABRILLO HIGH SCHOOL ON THE WEST, FOR ANAHEIM, CLASS-FOUR CONNECTIONS FROM DAISY AVENUE TO THE EAST TO NINTH STREET ON THE WEST, AND CLASS-FOUR CONNECTIONS FROM THE LA RIVER ON THE EAST AND THE METRO BLUE LINE ON THE WEST FOR DEL AMO. THANK YOU. T-5-30

MS. MCCORMICK: OKAY. THANKS VERY MUCH.

MARTHA AND THEN -- FORGIVE ME. (INAUDIBLE).

GO AHEAD.

MS. COTA: GOOD AFTERNOON, EVERYONE. MY NAME IS MARTHA COTA, AND I'M REPRESENTING LATINOS IN ACTION. I LIVE IN THE CITY OF LONG BEACH. AS EVA RAMIREZ SAID, IT IS INCREDIBLE, 1999. I AM LOOKING AT THOSE TWO GENTLEMAN THAT I HAVE BEEN SEEING FOR MANY YEARS. I'M GLAD THAT YOU'RE STILL HERE SO THAT I CAN TELL YOU THAT HOW IS IT THAT YEARS HAVE GONE BY, AND WE ARE STILL LISTENING AND TALKING ABOUT ALL THE NEEDS THAT THE COMMUNITY HAVE? DO YOU REALLY WANT TO HEAR WHAT OUR NEEDS ARE AND WHAT WE WANT? SO DO WHAT WE ARE ASKING FOR. T-5-31

DON'T WASTE ANY MORE MONEY INTO PUTTING THIS, TAKE THIS OUT, AND DOING SO MANY STUDIES. IT IS AMAZING THAT THAT STUDY HAS BEEN GOING ON FOR SO LONG AND NOTHING COMES OF IT. T-5-32 IN THE MEANTIME, CHILDREN AND THE FAMILIES AND COMMUNITIES ARE DYING OF CANCER, ASTHMA. AND MY SON HAS ASTHMA, AND SIX, SEVEN YEARS AGO, I ENDED UP HAVING ASTHMA MYSELF. AND IN

2009, I GOT CANCER. AND I DON'T THINK IT'S FAIR THAT COMPANIES ARE ALWAYS THINKING OF BENEFITS FOR THEMSELVES, FOR COMPANIES, AND CORPORATION BUT NOT FOR THE COMMUNITY.

AND I WOULD ASK YOU: HOW WOULD YOU FEEL IF YOU HAD HAD TO HAVE THAT JOB, EIGHT HOURS OF THE JOB THAT RENE CASTRO DOES? AND THEN I WOULD ASK YOU HOW YOU FEEL ABOUT HAVING THAT MASK AND WORKING WITH IT. AND THERE'S SOMETHING ELSE, THAT REPORT THAT YOU PUBLISH THAT HAS ABOUT 10,000 PAGES ON IT, HAS SO MANY CONCENTS AND WORDS AND EVERYTHING OR ALL KINDS OF TECHNICALITIES, HOW ARE WE GOING TO UNDERSTAND THAT? PLEASE BE AWARE. THANK YOU. T-5-33

MS. MCCORMICK: THANK YOU VERY MUCH.

MS. PAK: GOOD EVENING, MY NAME IS PAK (INAUDIBLE) I AM A RESIDENT OF LONG BEACH FOR THE PAST 25 YEARS. I LIVE HERE. I WORK HERE. I HAVE TWO CHILDREN, BOY HAS ALLERGIES, AND GIRL HAS ASTHMA. FOR THOSE OF YOU WHO ARE PARENTS, PROBABLY YOU CAN APPRECIATE MY CONCERNS AND ANXIETY AND WORRIES. WHEN YOUR OWN CHILDREN CANNOT BREATH, WHEN THEY HAVE HEALTH TROUBLES AND THEY CANNOT BREATH, AND YOU FEEL SO HELPLESS, YOU KNOW, YOU DON'T KNOW WHAT TO DO. I CRY, I WORRY, AND ALL I CAN RESORT TO IS GIVING THEM MORE MEDICATIONS, TAKING THEM TO THE HOSPITAL, TO THE EMERGENCY ROOM.

AND IT'S NOT LIKE I COULD JUST PACK MY BAG AND MOVE TO A BETTER LOCATION BECAUSE I'VE LIVED -- I BOUGHT A HOME.

I'VE LIVED AT THIS HOME FOR THE PAST 20 YEARS AND, YOU KNOW, I'VE WORKED, I SAVED MONEY TO PAY FOR THIS HOME, AND I CAN'T JUST LEAVE. SO PLEASE CONSIDER US AND AND OUR DIFFICULTIES IN YOUR STUDIES, IN YOUR DECISION-MAKING. YOU HAVE TO CONSIDER THE HUMAN FACTOR, YOU KNOW, THE PEOPLE WHO LIVE ALONG THIS PROJECT, YOU KNOW, THE PEOPLE WHO WORK, WHO TRY TO MAKE A LIVELIHOOD FOR THEMSELVES, FOR THEIR FAMILIES, AND WHO ARE TRYING TO LIVE IN THIS COMMUNITY AND MAKE THIS COMMUNITY WORK. T-5-34

I THINK THE BOOKS YOU HAVE IN THE BACK IS PROBABLY YOU GUYS WERE JUST PRODUCING THEM FOR YOUR OWN READING PLEASURE, BUT WE CAN'T UNDERSTAND THEM. THANK YOU.

MS. MCCORMICK: I'D LIKE TO INVITE LAURA CORTEZ TO COME UP, AND THEN JAN VICTOR ANDASON.

MS. CORTEZ: GOOD AFTERNOON, MY NAME IS LAURA CORTEZ WITH LONG BEACH ALLIANCE FOR CHILDREN WITH ASTHMA. I'M A RESIDENT OF THE CITY OF BELL GARDENS.

SO (INAUDIBLE) AND A FEW OTHERS HAVE MENTIONED, WE'VE BEEN AROUND THE STRUGGLE SINCE 2002. THEY HAVE SEEN -- WELL, THEY HAVE SEEN, REALLY, THE COMMUNITY MEMBERS COME, COMMUNITY MEMBERS GO, AND GET TIRED OF SAYING THE SAME THINGS FOR SO LONG. AND SO CALTRANS AND CONSULTANTS STILL DO NOT ADDRESS HOW IMPARITIVE IT IS TO LISTEN TO THE COMMUNITY. C8-7 AND 22.1 WERE COMMUNITY DRIVEN. 22.1 HAS NOT BEEN COMPLIED WITH. ZERO EMISSIONS IN THIS DOCUMENT IS A SMOKE T-5-35

SCREEN BECAUSE THERE IS NO SUBSTANCE OR ASSURANCE OF REAL ZERO EMISSIONS GOING DOWN THIS CORRIDOR.

T-5-35

DISPLACEMENT, ZERO EMISSIONS, AND COMMUNITY BENEFITS CAN ALL HAPPEN TOGETHER. WHEN YOU ALL STOP SAYING NO, AND INSTEAD STOP ASKING HOW, WE WILL FIND A SOLUTION. THANK YOU.

MS. MCCORMICK: JAN, AND THEN ALSO MARIA GARCIA.

CAN YOU GIVE US YOUR NAME AND -- FIRST AND LAST NAME, PLEASE.

MR. ANDASON: GOOD EVENING, MY NAME IS JAN VICTOR ANDASON. I AM A COMMUNITY MEMBER AND ORGANIZER WITH ECR COMMUNITIES FOR ENVIRONMENTAL JUSTICE. I ORGANIZE IN LONG BEACH, BUT I LIVE IN CARSON, THE CITY OF CARSON.

I IMMIGRATED FROM THE PHILIPPINES IN 1997, AND I MOVED TO WEST LONG BEACH, AND THEN SHORTLY, AFTER A COUPLE OF YEARS, SEVEN, SIX, SEVEN YEARS, WE MOVED TO CARSON. BUT IN THE TWO DECADES I'VE LIVED IN THE UNITED STATES, I'VE KNOWN POLLUTION. THAT'S THE ONLY AIR I'VE EVER BREATHED, TAKEN IN, AND THAT'S THE ONLY AIR I'VE EVER KNOWN. MY BROTHER WAS BORN A YEAR AFTER WE MOVED FROM THE PHILIPPINES, AND HE, IN HIS YOUNG LIFE, HAD TO DEAL EVERY SINGLE NIGHT WITH GETTING ON A NEBULIZER. AND IF YOU DON'T KNOW WHAT A NEBULIZER MEANS, IT MEANS THAT HE CAN'T BREATH AT NIGHT ON HIS OWN BECAUSE THE AIR IS SO BAD BECAUSE OF THE POLLUTION THAT WE DEAL WITH ON A DAILY BASIS, NOT JUST FROM THE 710, BUT EVERYTHING THAT WE ALREADY DEAL WITH.

AND THAT'S WHY I'M HERE TODAY. THAT'S WHY MANY OF US ARE HERE TODAY. WE'RE ASKING FOR REAL SOLUTIONS TO IMPROVE THE CONDITION OF OUR LIVES, NOT JUST HERE IN LONG BEACH, IN CARSON, BUT ACROSS THE REGION. AND SO FOR ME, THIS IS WHY MANY OF US ARE ASKING FOR ZERO EMISSIONS. IT'S NOT JUST THIS IDEA OF LET'S JUST THROW MONEY AROUND. BECAUSE IS IT REALLY -- IS THERE TOO GREAT OF A COST WHEN IT COMES TO PREVENTING HEALTH ISSUES, WHEN IT COMES TO INVESTING IN THE FUTURE GENERATIONS THAT'S GOING TO BE BREATHING IN THE AIR? IS THERE REALLY A COST THAT'S TOO HIGH? T-5-36

THAT'S WHY WE ARE ASKING NOT FOR NEAR ZERO EMISSIONS BUT FULL ZERO EMISSIONS. WHY IS THAT SO DIFFICULT, WHEN EVERYBODY BREATHS IN AIR? WHY IS IT SO DIFFICULT FOR US TO GET CLEAN AIR? AND SO FOR ME, THAT'S WHY I'M HERE, THAT'S WHY MANY OF THE FOLKS HAVE BEEN HERE SINCE 1999. AND I'M SURE FOLKS HAVE BEEN TALKING ABOUT THIS FOR YEARS. AND WHAT WE'RE ASKING, NOT JUST FOR YOU TO LISTEN, TO STUDY, BUT ACTUALLY GIVE US -- TO MAKE THE SOLUTIONS A REALITY BECAUSE AFTER THIS MEETING, WE'RE GOING GO BACK HOME, WE'RE GOING TO DRIVE UP THE 710, PROBABLY LIVE RIGHT NEXT TO THE CORRIDOR, AND WE'RE GOING TO DEAL NOT JUST WITH THE POLLUTION. WE'LL SEE THE PARTICULATES WHEN WE WIPE OUR WINDOWS, AND ON A DAILY BASIS, WITH OUR CHILDREN, OUR FRIENDS, OUR FAMILY GETTING ASTHMA ATTACKS. AND SO THAT'S WHY WE'RE PUSHING FOR ZERO EMISSIONS.

AND I ALSO WANT TO TALK ABOUT SOMETHING THAT'S REALLY IMPORTANT. A STRUGGLE IN THIS PROJECT TOO IS, HOW DO WE INVEST IN THE COMMUNITY NOT JUST AROUND HEALTH, BUT AROUND JOBS. RIGHT NOW IN LONG BEACH, WE'RE IN ONE OF THE ZIP CODE WITH THE HIGHEST UNEMPLOYMENT RATES. AND SO IF THIS IS A MULTI-BILLION-DOLLAR PROJECT, LET'S INVEST IN HEALTH. LET'S INVEST IN LOCAL JOBS FOR THE COMMUNITIES IMPACTED DAILY. AND LET'S MAKE THIS NOT JUST A PROJECT TO BUILD A BIGGER FREEWAY BUT INVESTMENT IN THE FUTURE OF OUR REGION, OF OUR COMMUNITY. AND THIS IS WHY WE'RE ALL HERE. THANK YOU. T-5-37

MS. MCCORMICK: MARIA GARCIA AND THEN YANELI PEREZ.

GO RIGHT AHEAD.

MS. GARCIA: THANK YOU. GOOD AFTERNOON, MY NAME IS MARIA GARCIA, AND I AM A LONG BEACH RESIDENT -- ACTUALLY, NORTH LONG BEACH, WHERE IT'S ONE OF THE PARTS IS MORE CONTAMINATED. AND I'M A MOTHER OF TWO KIDS, AND I'M ALSO A GRANDMA. AND I'M HERE BECAUSE BEING WORKING IN LONG BEACH AND (INAUDIBLE) WITH ASTHMA, SEEING ALL THESE YEARS, FOR 14 YEARS, ALL OF THESE FAMILIES SUFFERING WITH KIDS WITH ASTHMA JUST BEING IN EMERGENCY ROOM, HOSPITALIZED, YOU KNOW, I WOULD LOVE TO SEE YOU GUYS GO AND VISIT THE CHILD HAVING AN ASTHMA ATTACK IN THE HOSPITAL. IT'S SO DIFFICULT FOR PARENTS.

SO NOT ONLY THE FAMILIES I VISIT, YOU KNOW, MY FAMILY, YOUR FAMILIES, I WANT TO ENCOURAGE TO BE ZERO EMISSIONS, BECAUSE HAVING ZERO EMISSIONS IN ONE OF THE PARTS T-5-38

NOT NEAR ZERO, ZERO EMISSIONS. IT'S THE WAY WE ARE GOING TO BE GETTING THE BETTER HEALTH. AND ZERO EMISSIONS MUST INCLUDE EMISSIONS (INAUDIBLE) CORRIDOR BECAUSE EMISSIONS COMMUNITIES NEED TO CLEAN UP OUR AIR. WE DESERVE GOOD HEALTH AND OUR KIDS -- EXCUSE ME -- GROWING UP HEALTHY AND NOT SUFFERING ASTHMA OR ANOTHER RESPIRATORY PROBLEMS. T-5-38

I AM AGAINST DISPLACEMENT AND JUST WANT YOU ALL TO THINK, IF YOU WILL BE LIVING IN THOSE HOUSES BEING SENIORS AND LIVING ALL YOUR LIFE THERE, AND HOW YOU FEEL LIKE SOMEBODY COME AND SAY "GET OUT FROM YOUR HOUSE," FROM ONE DAY TO ANOTHER, AND YOU DON'T HAVE PLACE TO GO? I DON'T WANT TO THINK THESE SENIORS THEY ARE GOING TO BE HAVING A BETTER LIFE IF THEY MOVE. SO JUST CONSIDER WHEN YOU DISPLACE THESE COMMUNITY CENTERS, ALL THESE HOUSES YOU PLANNING TO MOVE FROM THE FREEWAYS, AROUND THE FREEWAYS, WHAT THESE PEOPLE, THEY ARE GOING TO BE DOING AND HOW THEIR LIFE IS GOING TO BE WITH THESE CHANGES, PUT IN, YOU KNOW, A LOT OF PRESSURES STRESS, AND MORE DIFFICULTIES IN THEIR HEALTH. SO THANK YOU SO MUCH FOR HEARING ME. I HOPE YOU KNOW MY THROAT DOESN'T -- T-5-39

MS. MCCORMICK: THANK YOU VERY MUCH.

MS. GARCIA: THANK YOU SO MUCH. THINK ABOUT IT.

MS. MCCORMICK: THANK YOU.

YANELI AND THEN MARIBEL FLOREZ.

MS. PEREZ: I DON'T KNOW HOW YOU COULD SIT THERE AND NOT HAVE A DRY EYE BECAUSE I MISS BEING OUTSIDE. I MISS

SEEING MY DAUGHTER PLAY OUTSIDE. I LIVE HERE TWO YEARS, AND I JUST SEE MY DAUGHTER SUFFER WITH ASTHMA THIS PAST WEEK. IT'S BEEN THE WORST FOR ME, SEEING HER BLEEDING OUT OF HER NOSE, WITH BLOOD CLOTS COMING OUT OF HER NOSE, NOT BEING ABLE TO BREATH AT NIGHT, HOPING. YOU JUST SIT THERE AND NOT THINK THAT WE NEED AIR TO BREATH, ALL THESE PEOPLE SUFFERING, AND YOU'RE KICKING THEM OUT OF THEIR HOUSE.

I MEAN, IT'S MY CHILD. YOU MAY NOT CARE BECAUSE SHE'S NOT YOUR CHILD, BUT SHE'S MINE. WHEN SHE CAN'T PLAY OUTSIDE -- I CAN'T LET HER PLAY OUTSIDE HERE, WHERE I LIVE, IN WILMINGTON. IT'S HORRIBLE. I HATE LIVING THERE. AND I JUST LEAVE AND GO SOMEWHERE ELSE BECAUSE I HAVE TO LIVE THERE BECAUSE OF MY MONEY PROBLEMS. AND THEN KNOWING THAT I HAVE CANCER, IT'S THE WORSE THING. I HAVE ASTHMA, CANCER. MY DAUGHTER HAS ASTHMA. IT'S JUST THE WORST, KNOWING THAT WE LIVE HERE AND THEN THE PEOPLE DON'T CARE ABOUT WILMINGTON OR LONG BEACH OR THE CLEAN AIR OR PEOPLE. IT'S JUST HORRIBLE.

AND WHAT I'M TRYING TO SAY IS THAT WE WANT ZERO EMISSIONS, JUST PLEASE CONSIDER IT, AND PLEASE THINK ABOUT IT OR PICK UP A FREAKING SOUL AND JUST DO IT. THANK YOU. T-5-40

MS. MCCORMICK: THANK YOU. AND THEN JENNIFER BEAVER.

MS. TORRES: HELLO, MY NAME IS NAREIDA TORRES, AND I'M A MEMBER OF THE LONG BEACH LATINOS IN ACTION CALIFORNIA. AND I'M FROM THE CITY OF LONG BEACH, WHERE I WAS GOING TO

TALK ABOUT THE EIR, THE EXPANSION THIS YEAR, THE NO DISPLACEMENT, ABOUT THE PEOPLE, LIKE THE ONE SHE'S BEEN PAYING HER HOUSE FOR 20 YEARS, AND YOU'RE JUST GOING TO TELL HER "OKAY. I'M THE BEST PLACE. I NEED TO GET OUT OF HERE," BECAUSE YOU'RE ONLY THINKING ABOUT MONEY, MONEY, MONEY, MONEY. EVERYBODY JUST THINKING ABOUT THAT. T-5-41

ANOTHER THING, IT'S ABOUT THE HEALTH OF THE PEOPLE HERE, IN THE CITY OF LONG BEACH. DON'T YOU SEE ALL THESE FREEWAYS AROUND US? WE HAVE THE 22. WE HAVE THE 605. WE HAVE THE 91. WE HAVE THE 405. AND THEN YOU WANT TO EXPAND THE 710, BUT YOU DON'T THINK ABOUT THE HEALTH OF THE PEOPLE HERE, IN THE CITY OF LONG BEACH. T-5-42

I'VE BEEN LIVING HERE SINCE 1994, AND ALL I'VE BEEN HEARING ABOUT IS ABOUT JUST THINKING ABOUT ALL THE PEOPLE, OF THEIR HEALTH. PEOPLE THAT HAS BEEN SUFFERING, YOU DON'T THINK ABOUT THAT. OTHER THING IS THAT YOU JUST THE ONLY THING IS THINKING ABOUT, LIKE YOU SAID, ABOUT MONEY, AND THE HEALTH OF THE PEOPLE, YOU DON'T THINK ABOUT THAT.

SO -- AND WHAT THEY HAVE BEEN TELLING YOU TOO IS ABOUT ALL THOSE PAPERS THAT YOU HAVE THERE, IT'S BEEN -- WE DON'T UNDERSTAND WHAT THEY SAY BECAUSE YOU ALL ARE ONLY THINKING ABOUT YOU. WHY YOU DON'T TAKE MORE DAYS, 120 DAYS MORE, SO WE CAN ALL KNOW WHAT IS ALL ABOUT, THAT. THANK YOU. T-5-43

MS. MCCORMICK: THANK YOU.

JENNIFER, AND THEN AFTER JENNIFER, ALLEN TOCA.

GO AHEAD.

MS. BEAVER: GOOD EVENING, AND THANK YOU FOR THE CHANCE TO COMMENT ABOUT THE PROPOSED 710 EXPANSION. JENNIFER BEAVER, PROUD WRIGLEY NEIGHBORHOOD RESIDENT FOR THE PAST 27 YEARS. AS MANY HAVE REFERENCED PREVIOUSLY, I HAVE A KIND OF A STRANGE FEELING OF DE-JA-VOUZ ALL OVER AGAIN. WE'VE BEEN TALKING ABOUT THE 710 FOR MANY YEARS, AND MANY OF THE ISSUES KEEP COMING UP AGAIN AND AGAIN.

ONE THING THAT A VERY ARTICULATE SPEAKER FROM USC MENTIONED EARLIER, PARTICULATES FROM THE 710 CAN TRAVEL UP TO A MILE, YET MR. MCCANN MENTIONED ONLY THOSE WITHIN ABOUT 500 FEET OF THE FREEWAY HAVE BEEN NOTICED ABOUT THE PROPOSED EXPANSION. I WOULD SUGGEST AND IMPLORE YOU TO EXTEND YOUR COMMUNITY OUTREACH TO THOSE WITHIN A MILE OF THE 710 FREEWAY, SO THAT THEY ALSO HAVE THE OPTION OF LEARNING HOW THIS PARTICULATE WILL AFFECT THEM. PLEASE EXTEND YOUR OUTREACH TO EVERYONE, THE BUSINESS AND THE RESIDENTS, WITHIN A MILE OF THE 710 FREEWAY, AND EXTENT THE COMMENT PERIOD AS WELL. THANK YOU. T-5-44

MS. MCCORMICK: THANK YOU.

ALLAN, AND THEN ELLIOTT GONZALEZ.

MR. TOLKOFF: GOOD EVENING, MY NAME IS ALLAN TOLKOFF. I'M A WRIGLEY RESIDENT ALSO. AND ONE OF THE POINTS THAT MY WIFE JUST MADE, I'LL CROSS OFF MY LIST. I'D LIKE TO

THANK MR. KOSINSKI, BECAUSE YOU SAID SOMETHING THAT -- I MEAN THIS IN THE MOST POLITE POSSIBLE WAY. I THINK HE HAD THE MOST TRUTH OF ANYTHING I'VE HEARD FROM ONE OF THE EXPERTS FROM OUT OF TOWN THAT'S TELLING US WHAT WE NEED. AND YOU SAID TONIGHT THAT NO MATTER WHAT HAPPENS WITH ALL THESE POTENTIALS, THEY WILL ALLL HAVE ADVERSE CONSEQUENCES FOR US. AND THAT WAS ABSOLUTELY BRILLIANT, BECAUSE IT'S TRUE.

I WOULD LIKE TO FURTHER REFINE THAT, IF YOU DON'T MIND, WITH MY OWN WORDS, AND IT BOILS DOWN TO THIS: THE WALLETS OF THE PEOPLE WHO WILL BENEFIT FROM THE PORT ARE MORE IMPORTANT THAN THE HEALTH OF THE PEOPLE WHO LIVE NEAR THE PORT.

SO ON TO MY SPECIFIC REQUESTS. WE'VE GOT -- I THINK THIS IS AN $8,000,000,000 PROJECT, AND THERE'S $1,000,000,000 ALREADY SET ASIDE, AND WE HAVE THIS ALAMEDA CORRIDOR THAT IS NOT TECHNICALLY DORMANT, BUT IT'S CERTAINLY UNDER-UTILIZED. WOULD YOU PLEASE CONSIDER TAKING SOME OF THIS MONEY, SUBSIDIZING THE PEOPLE WHO DRIVE THE TRUCKS TO PUT THEIR MATERIAL ON THE RAIL? T-5-45

MY SECOND SPECIFIC RECOMMENDATION IS: WHAT DO WE HAVE TO DO TO COME INTO THE 21ST CENTURY, LIKE SO MANY OTHER PORTS, AND UTILIZE ON-DOCK RAIL? I KNOW IT'S COMPLICATED. I'VE HEARD REPORTS ABOUT IT. BUT COME ON, FOLKS, IF WE CAN'T DO THIS IN THE UNITED STATES AND A LOT OF COUNTRIES CAN, I'M NOT BUYING WHAT'S BEING SOLD. I'M SORRY. WE CAN DO THIS T-5-46

BETTER.

HOW MUCH TIME HAVE I GOT LEFT, PLEASE?

MS. MCCORMICK: A LITTLE BIT MORE TIME.

MR. TOLKOFF: WELL, NOT JUST A LITTLE.

MS. MCCORMICK: KEEP GOING, YOU'VE GOT ABOUT A MINUTE.

MR. TOLKOFF: A MINUTE. I'D LIKE TO POINT OUT THE WONDERFUL PLANNING THAT OUR EXPERTS FROM OUT OF TOWN HAVE PROVIDED FOR US. WHEN MY LOVELY, WONDERFUL WIFE AND I MOVED HERE, WE ENTERED ESCROW 27 DAYS, (INAUDIBLE) YEARS, AND SIX DAYS AGO, ONE OF THE REASONS WE PICKED OUR WRIGLEY HOME IS BECAUSE, ACCORDING TO ALL THE EXPERTS, INCLUDING CALTRANS, THIS IS THE CLEANEST AIR IN THE UNITED STATES OF AMERICA. I AM NOT KIDDING YOU. WE ARE EDUCATED PEOPLE. WE ARE INTELLIGENT. WE KNOW HOW TO DO OUR RESEARCH.

WE PICKED THE HOME, IN PART, BECAUSE HE HAD A BABY COMING INTO THE WORLD. AND 20 YEARS LATER, THE WONDERFUL FOLKS AT USC SAID "OH, SORRY, THE EXPERTS WERE WRONG. IT'S ACTUALLY THE WORST AIR IN THE COUNTRY." THANK YOU, THANK YOU, REALLY.

LET ME POINT OUT A COUPLE OF OTHER PLANS THAT THE EXPERTS HAVE --

MS. MCCORMICK: IF I MAY ASK YOU TO WRAP UP YOUR COMMENTS.

MR. TOLKOFF: I'D BE HAPPY TO WRAP UP IF YOU DON'T

MIND.

MS. MCCORMICK: OKAY. GO AHEAD AND WRAP IT UP.

MR. TOLKOFF: YOU TOLD US HOW GREAT ABOUT 15 YEARS AGO THE ALAMEDA CORRIDOR WAS GOING TO BE, AND IT'S OBVIOUSLY BEEN PRETTY DARN CLOSE TO A FAILURE. NOW THE EXPERTS ARE TELLING US THAT TWO-AND-A HALF-BLOCKS EAST OF MY HOUSE, THE SALVATION FOR EVERYTHING, IS THE BLUE LINE AND, THEREFORE, WE SHOULD HAVE MORE DENSITY. SO 15 YEARS AGO A TRAIN FAILED, NOW IT'S GOING TO WORK, AND WE STILL AREN'T LOOKING AT THIS BOONDOGGLE OF MONEY THAT WE'VE SPENT OVER THERE. I THINK ITS $2,000,000,000, 15 YEARS AGO. WHEN ARE WE GOING TO GET OUR PLANNING DONE RIGHT, PLEASE? THANK YOU VERY MUCH FOR YOUR ATTENTION.

MS. MCCORMICK: THANK YOU. I'D LIKE TO INVITE ELLIOTT GONZALEZ AND THEN AMY RASMUSSEN AFTER YOU.

THANK YOU GO. RIGHT AHEAD, SIR.

MR. GONZALEZ: YES, SO I JUST WANTED TO --

MS. MCCORMICK: GIVE US YOUR NAME, SIR.

MR. GONZALEZ: ELLIOTT GONZALEZ.

MS. MCCORMICK: THANK YOU.

MR. GONZALEZ: I DO SUPPORT THE ADVOCACY FOR CLEAN ENERGY, INCLUDING ENERGY THAT'S RENEWABLE ENERGY. I'M WITH AN ORGANIZATION CALLED STOP FRACKING LONG BEACH. I'M A DEDICATED ENVIRONMENTALIST. AND ONE THING THAT I'VE BEEN STUDYING IS THE IMPACTS OF OIL LOGGING, OIL AND GAS, WHICH IS

THE SAME INDUSTRY. THE OIL INDUSTRY AND THE GAS INDUSTRY ARE THE SAME INDUSTRY, AND WE SPENT $390,000,000 IN CALIFORNIA ALONE. I WANT TO SHOW THAT THIS IS A PERFECT EXAMPLE OF WHAT THAT LOBBYING LOOKS LIKE.

SO THIS SUPPOSED NEAR-ZERO-TRUCK OPTION, THIS NEW TRUCK OPTION, IT'S PRETTY MUCH WHAT WE'VE SEEN OVER THE PAST DECADE, WHERE YOU'RE ASKING EVERYONE TO SWITCH OVER TO A NATURAL-GAS-BURNING VEHICLE. NATURAL GAS IS A FOSSIL FUEL. IT'S FRACKED USUALLY. IT'S EXTRACTED BY THE SAME PEOPLE WHO BROUGHT YOU OIL, BY THE SAME PEOPLE WHO BROUGHT YOU ALL THESE PROBLEMS THAT WE'RE TALKING ABOUT -- CANCER, ASTHMA, LIFE-THREATENING PROBLEMS, THINGS THAT PEOPLE LIVE WITH, THINGS THAT PEOPLE ARE DRYING FROM.

SO I JUST WANT TO MENTION THAT THAT'S WHAT THIS IS, THIS NEAR ZERO. WE'RE NOT ASKING FOR NEAR ZERO. WE'RE NOT SAYING WE NEED REDUCED NATURAL GAS. WE ARE SAYING WE NEED TO GO OFF OF FOSSIL FUELS. WE NEED CLEAN ENERGY. PEOPLE HAVE BEEN SAYING THAT FOR A LONG TIME NOW, "CLEAN ENERGY NOW." THAT'S AN OLD, THAT'S AN OLD SAYING. T-5-47

AND YOU LOOK NOW, THINGS ARE GETTING WARMER. CLIMATE CHANGE IS REAL, HAS ALWAYS BEEN REAL. THERE WAS A DEBATE DURING A TIME THERE SHOULD HAVE BEEN IMMEDIATE ACTION, AND NOW WE'RE IN A WARMING CLIMATE. IF WE ARE SERIOUS ABOUT TAKING ON CLIMATE CHANGE, THAT MEANS WE HAVE TO BE COMMITTED TO USING TECHNOLOGY THAT DOES NOT REQUIRE FOSSIL FUELS. THIS

FOSSIL FUEL MUST BE STORED, IT MUST BE EXTRACTED, AND IT'S VOLATILE IN EVERY STEP OF THE WAY.

ONCE IT IS BURNED INTO THE ATMOSPHERE, WHERE IT HAS NO BUSINESS BEING BURNED, IT WILL LEAD TO THE WARMING OF THE PLANET. IT WILL CONTINUE THAT, AND WILL MAKE IT MORE LIKELY OUR CHILDREN WILL HAVE A PLANET THAT IS UNINHABITABLE. WE KNOW THAT IS WHAT THE FUTURE IS GOING TO BE. WE NEED TO TAKE THAT SERIOUSLY. IF I KNOW THIS, AND I DON'T HAVE A COLLEGE DEGREE, I'M NOT REALLY THAT EDUCATED, I AM COMMITTED TO TAKING ON CLIMATE CHANGE. I TAKE THAT SERIOUSLY. BUT IF I KNOW THIS AND I'M NOT AN EXPERT, I'M SURE THAT THE EXPERTS KNOW THIS.

WHY IS IT THAT THE EXPERTS ARE PLANNING SOMETHING THAT REQUIRES FOSSIL FUELS? HOW ARE THEY PLANNING ON MAINTAINING INFRASTRUCTURE THAT RELIES ON FOSSIL FUELS IN 2017? WHY ARE WE TALKING ABOUT EXPANDING A FREEWAY IN 2017? NO, WE NEED TO TALK ABOUT EXPANDING THE METRO. WE NEED TO TALK ABOUT THE BIKE ROADWAYS. THESE AREN'T JUST LIKE SIDE PROJECTS. THIS IS THE INFRASTRUCTURE THAT WE HAVE ALWAYS BEEN CALLING FOR FOR THE PAST TWO OR THREE DECADES. T-5-48

YOU KNOW, WE ARE SEEING THE CHILDREN THAT HAVE ASTHMA ARE GROWING UP, AND THEY'RE NOW ADVOCATING FOR THE SAME THINGS THAT THEIR MOMS WERE ADVOCATING FOR. THIS IS REALLY SAD. SO, YOU KNOW, I CAME HERE REALLY FOR THE COMMUNITY, FOR ECR, FOR THE ALLIANCE FOR CHILDREN WITH

ASTHMA. I FEEL LIKE YOU GUYS NEVER REALLY LISTEN. YOU KNOW, NONE OF THESE COMMENTS ARE MOOT BUT, YOU KNOW, I DO SUPPORT THE COMMUNITY, SO THAT'S WHY I'M HERE.

MS. MCCORMICK: THANK YOU.

(INAUDIBLE) AND THEN KEVIN GOYNES.

GO AHEAD, AMY.

MS. RASMUSSEN: GOOD EVENING, MY NAME IS AMY CABRERRA RASMUSSEN. I'M AN ASSOCIATE PROFESSOR OF POLITICAL SCIENCE AT CAL STATE LONG BEACH, AND I RESEARCH ENVIRONMENTAL HEALTH POLICY ISSUES. I'VE ALSO BEEN WORK WITH THE BUILDING HEALTHY COMMUNITIES LONG BEACH ENVIRONMENTAL HEALTH WORK GROUP FOR SEVERAL YEARS, AND I'M HERE TONIGHT JUST TO ADD MY VOICE TO THE MANY COMMUNITY RESIDENTS AND ADVOCATES HERE TONIGHT, WHO HAVE BEEN WORKING ON THIS ISSUE FOR, AS YOU'VE HEARD, ALMOST TWO DECADES.

MAKE NO MISTAKE, WE ARE IN A PUBLIC HEALTH CRISIS HERE IN LONG BEACH AND IN SOUTHERN CALIFORNIA. COUNTLESS COMMUNITY VOICES OVER THE YEARS AND NUMEROUS MEDICAL AND (INAUDIBLE) STUDIES HAVE CLEARLY SUBSTANTIATED THE PUBLIC HEALTH IMPACT OF POLLUTION FOR GOODS MOVEMENT, AND WE KNOW THAT WORKING CLASS COMMUNITIES OF COLOR BEAR THE GREATEST BURDEN.

AS A POLITICAL SCIENTIST, I KNOW THAT PROBLEMS THAT SEEM OVERWHELMING IN SCOPE THAT GO ON FOR YEARS ARE DIFFICULT TO TACKLE. IT IS EVEN HARDER WHEN THESE CRISES ARE SLOW

MOVING, WITH MANY CAUSE TO BLAME, RATHER THAN BEING DRAMATIC OR SUDDEN LIKE, SAY, A HURRICANE. EVEN WHEN THESE TYPES OF OF PROBLEMS ARE TACKLED, PROGRESS IS USUALLY SLOW AND INCREMENTAL. YET, THE 710 PROJECT IS A RARE MOMENT WHERE REAL AND SIGNIFICANT IMPROVEMENTS TO COMMINITY HEALTH ARE POSSIBLE, BUT ONLY IF OUR ACTIONS AND PLANS ARE BOLD, THAT THEY HAVE TEETH, AND THAT THEY TRULY INCORPORATE COMMUNITY NEED AND PRIORITIES.

FIRST, I WOULD ECHO WHAT MANY OTHERS HAVE SAID, THAT THE COMMENT PERIOD NEEDS TO BE EXPANDED TO GIVE PEOPLE TIME TO BE ABLE TO UNDERSTAND THE DRAFT EIR. I HAVE A PH.D., AND I STILL HAVEN'T MADE IT THROUGH THE ENTIRE DRAFT. SECONDLY, THE PLAN SHOULD ENDORSE AND FULLY INCENTIVIZE ZERO EMISSIONS. PERIOD. NEAR ZERO IS NOT SUFFICIENT TO PROTECT PUBLIC HEALTH, AND I THINK THAT THAT COMMENT HAS BEEN MADE VERY CLEARLY HERE TONIGHT. THIRD, THE PROJECT MUST MAINTAIN COMMUNITY INTEGRITY. WHAT I MEAN BY THIS IS THAT WE MUST AVOID DISPLACEMENT WHEN AT ALL POSSIBLE. AND IF IT IS ABSOLUTELY UNAVOIDABLE, WE MUST PROVIDE ASSISTANCE FOR THOSE WHO ARE AFFECTED, ESPECIALLY VULNERABLE POPULATION, LIKE HOMELESS AND OTHERS.

FINALLY, I WOULD SAY THAT ANY ENACTED PLAN SHOULD PRIORITIZE AND FACILITE THE TRAINING AND HIRE OF LOCAL RESIDENTS FOR GOOD-PAYING JOBS TO HAVE THE MOST SIGNIFICANT LONGTERM -- IMPACT. IN SHORT, OUR POLICIES AND THE

T-5-49

T-5-50

T-5-51

T-5-52

IMPLEMENTATION MUST LIVE UP TO OUR VALUES. WHAT HAPPENS HERE, IN SOUTHERN CALIFORNIA, CAN IMPACT OUR COMMUNITY, BUT IT CAN ALSO CHANGE MARKET INCENTIVES, AND IT CAN SET AN EXAMPLE FOR THE STATE AND THE ENTIRE NATION. WHAT HAPPENS HERE MATTERS. THANK YOU VERY MUCH.

MS. MCCORMICK: THANK YOU.

HILDA AND THEN FATIMA CANERA.

YOU CAN PULL THAT DOWN. WE CAN HEAR YOU.

MS. DUENAS: HI, GOOD AFTERNOON. MAY NAME IS HILDA DUENAS. I LIVE IN THE BORDER OF CARSON AND LONG BEACH NEAR TO THE FREEWAY 710 AND 410 -- 405, SORRY. I AM MEMBER OF AND I SUPPORT LATINOS IN ACTION TOO. I'M HERE SUPPORTING MY COMMUNITY AND THE ORGANIZATION THAT I HAVE ALREADY MENTIONED. I AM ASKING FOR ZERO EMISSIONS. I AM REQUESTING 120 EXTRA DAYS IN ORDER TO REVIEW THE EIR. IT IS VERY PAINFUL FOR ME TO SEE OUR COMMUNITY SUFFERING AND FOR THE PAIN THAT PEOPLE ARE FEELING RIGHT HERE IN THIS ROOM, AND THEIR FAMILIES AND THEIR FRIENDS. I SYMPATHIZE WITH THEM BECAUSE I HAVE GONE THROUGH THE SAME SUFFERING MYSELF. T-5-53 T-5-54

MY YOUNGEST DAUGHTER ALSO HAS BEEN SUFFERING WITH ASTHMA. I ALSO HAVE MY SMALL GRANDSON, WHO IS FOUR YEARS OLD, AND HE'S HAVING RESPIRATORY PROBLEMS. OFTENTIMES WHEN I TAKE HIM TO THE PARK, HE WILL BE ILL. THE FOLLOWING DAY, HE GETS FEVER, THE CHILLS, AND THESE ARE VERY STRANGE ILLNESSES THAT SET ON SUDDENLY. I TAKE HIM TO THE PARK BECAUSE I LIVE

VERY CLOSE OR FEET AWAY FROM MANY FREEWAYS, AND WE GET A LOT OF AIR POLLUTION AND ALL OF THESE MOLECULES THAT COME INTO THE AIR THAT TRAILERS AND TRUCKS ARE EMITTING.

WHEN MY DAUGHTER WAS YOUNG, SHE WAS TO THE WEBSTER SCHOOL IN WEST LONG BEACH. I OFTEN TIMES HAD TO BE ABSENT FROM WORK OR LEAVE WORK BECAUSE I HAD TO TAKE HER TO THE DOCTOR OR HOSPITAL BECAUSE SHE HAD ASTHMA. AND THE REASON I'M HERE IS TO ASK YOU, ALL THE REPRESENTATIVES HERE, TO LISTEN TO US AND TO LISTEN TO ALL OUR COMMENTS FROM PEOPLE THAT ARE PRESENT, AS WELL AS PEOPLE THAT ARE NOT PRESENT TODAY, THAT WE LISTEN TO WHEN WE ARE IN OUR IN CITY HALL MEETINGS OR IN OUR OWN ORGANIZATIONAL MEETINGS, THEY HAVE A LOT OF COMPLAINTS, AND THEY NEED TO BE HEARD.

MS. MCCORMICK: THANK YOU.

MS. DUENAS: THANK YOU.

MS. MCCORMICK: FATIMA, AND THEN BELINDA WATSON.

CAN I HAVE YOUR NAME, PLEASE?

MS. CARRERA: HELLO, MY NAME IS FATIMA CARRERA, AND I AM A MEMBER OF EAST YARDS COMMUNITY FOR ENVIRONMENTAL JUSTICE, AND I AM HERE TO TALK ABOUT THE IMPACTS THAT THE EXPANSION WILL HAVE ON COMMUNITY MEMBERS SURROUNDING THE 710, FREEWAY, NOT ONLY IN TERMS OF HEALTH BUT ALSO IN TERMS OF THEIR LIVING SITUATIONS.

WE KNOW THAT DISPLACEMENT IS INEVITABLE. A COUPLE OF MY FRIENDS HAVE ALREADY RECEIVED, YOU KNOW, NOTIFICATIONS

THAT THEY WILL BE POTENTIALLY DISPLACED. THEY DON'T HAVE ANYWHERE ELSE TO MOVE, AS IS THE CASE FOR A LOT OF MEMBERS SURROUNDING THE 710 FREEWAY SINCE IT'S, YOU KNOW, LOW INCOME PEOPLE-OF-COLOR COMMUNITIES THAT WE'RE TALKING ABOUT. NOT ONLY WILL PRIVATE HOMES BE AFFECTED, BUT ALSO COMMUNITY RESOURCES, WHICH WE REALLY NEED IN THIS REGION, SUCH AS A MULTI-SERVICE CENTER, WHICH PROVIDES SHELTER FOR THE HOMELESS, AND KEEP IN MIND THAT THE LA AND THE LONG BEACH AREA IS CONSIDERED ONE OF THE MOST POPULATED AREAS IN TERMS OF HOMELESSNESS.

I LIVE RIGHT OFF THE 710 FREEWAY, RIGHT BETWEEN THE FLORENCE AND FIRESTONE EXITS, AND I HAVE BEEN LIVING THERE FOR THE PAST TEN YEARS, WHICH IS WHERE I MOVED WHEN I CAME HERE FROM MEXICO TEN YEARS AGO. I'VE BEEN A RUNNER FOR A WHILE, AND DUE TO THE LACK OF PARKS AND PLACES TO EXERCISE, WE'VE BEEN FORCED TO, LIKE, PRACTICE AND RUN AROUND MY NEIGHBORHOOD. SO HAVING, LIKE, RAILROADS, REFINERIES, 710 FREEWAY, LIKE, THE 405, WE'RE LIVING RIGHT IN THE MIDDLE OF FOUR MAJOR FREEWAYS. ALL THAT POLLUTION JUST KIND OF STICKS IN THE CENTER, AND WE'RE FORCED TO SOMEHOW LIVE WITH THAT.

I NO LONGER RUN, BUT MY SIBLINGS ARE NOW FORMING PART OF CROSS-COUNTRY TEAMS AND THE MARATHONS, PRACTICING FOR THE MARATHONS. FOR A WHILE NOW MY SISTER HAS BEEN EXPERIENCING RECURRING NOSE BLEEDS, AND THANKFULLY WE DON'T SUFFER FROM ASTHMA, BUT WE DO HAVE A MYRIAD OF DIFFERENT

ILLNESSES RUNNING THROUGH MY FAMILY. I KNOW THAT IT'S NOT JUST GENETIC BECAUSE GENETIC IS ONLY A SMALL PORTION, WHICH IS, IT CAN ONLY BRING ABOUT, LIKE, THE ILLNESS DUE TO THE ENVIRONMENTAL SITUATION OR -- YEAH, THAT WE LIVE IN.

SO I WANT TO ASK YOU TO INVEST ON ZERO EMISSIONS AND NOT NECESSARILY ON THE EXPANSION OF WHAT WOULD BE ANOTHER SOURCE OF ILLNESS FOR US, NOT ONLY IN TERMS OF ASTHMA AND CANCER BUT A MYRIAD OF OTHER PROBLEMS. ONE-DOLLAR INVESTMENT IN CLEAN AIR LEADS TO THREE TO $8 SAVING IN HEALTH COSTS, AND I THINK THAT WE SHOULD BE REALLY FOCUSING ON PREVENTION RATHER THAN STRESSING LATER ON IN THE FUTURE ABOUT HOW WE CAN SOLVE THOSE PROBLEMS. T-5-55

FINALLY WE ASK THAT YOU EXTEND THE COMMENTING PERIOD TO 120 DAYS. THANK YOU. T-5-56

MS. MCCORMICK: THANK YOU.

BELINDA AND THEN SUZANNE BROWN.

MS. WATSON: HI, I'M BELINDA WATSON, AND I AM CONCERNED ABOUT SOME OF THE IMPROVEMENTS THAT THEY WANT TO DO TO THE FREEWAY. MY FIRST TIME ACTUALLY EVER SEEING SOME OF THE RECOMMENDATIONS WAS JUST TODAY, SO -- BUT WHAT I SAW, I DIDN'T LIKE, IN THAT IT SEEMS LIKE THE FOCUS IS TO IMPROVE THE ACCESS ON THE -- NOT ACCESS, BUT ONCE YOU'RE ON THE FREEWAY, THE AMOUNT OF TIME ON THE FREEWAY, BUT IT'S NOT CONCERNED ABOUT GETTING ONTO THE FREEWAY.

SO IN THE PROPOSAL, THEY ARE REMOVING SOME ACCESS TO

THE 710 AND THE 405. I LIVE IN WRIGLEY, AND SO I'M VERY CLOSE TO THE 710 AND 405. SO THE REMOVING ACCESS TO THE 405 FROM OFF OF PACIFIC AND THEN REMOVING IT OFF OF WARDLOW, SO IN A WAY I WOULD BE HAPPY, BUT ON THE OTHER PART WOULD BE THAT NOW WE'RE GOING HAVE MORE CONGESTION ON WILLOW. SO GETTING ONTO WILLOW AND GETTING ONTO THE STREETS WHERE FREEWAY IS, IS GOING TO BE PROHIBITIVE AND NOT EFFECTIVE ONCE WE PUT INTO ALL THOSE CHANGES, SO I'M CONCERNED ABOUT THAT. T-5-57

I'M CONCERNED ABOUT THE MULTI-LEVEL, HAVING A MULTI-LEVEL FREEWAY THERE. BY HAVING MULTI-LEVEL, IT'S -- I HEAR THAT IT'S GOING TO BE FOR ZERO EMISSION AND THINGS LIKE THAT, BUT BECAUSE I LIVE NEXT TO THE METRO RAIL AS WELL, WHAT WAS SAID IN THE BEGINNING, IT COMES -- ONCE IT'S BUILT, THEN IT'S GOING TO BE USED FOR OTHER PURPOSES AS WELL AND MAY NOT DO WHAT'S IT'S INTENDED. I'M REALLY CONCERNED ABOUT IT BEING HIGH, ADDING MORE POLLUTION INTO THE NEIGHBORHOOD, AND ALSO SOUND. SO EVEN THOUGH THERE IS SOME PROPOSAL THERE, I'M JUST NOT CONVINCED THAT THAT WILL ACTUALLY HAPPEN BECAUSE OF WHAT WE HAVE ALREADY. T-5-58

I THINK I NEED MORE TIME TO UNDERSTAND WHAT THE IMPACT IS TO THE WARDLOW, WILLOW, WRIGLEY AREA SO THAT I CAN BEST UNDERSTAND WHAT'S BEING PROPOSED AND WHAT -- AND HOW I COULD MAKE SOME RECOMMENDATIONS FOR THE FUTURE. SO I WOULD LIKE IT TO BE EXTENDED, AS WELL. T-5-59

MS. MCCORMICK: OKAY. THANK YOU VERY MUCH.

SUZANNE.

MS. BROWN: GOOD EVENING.

MS. MCCORMICK: EXCUSE ME. AND THEN JIM DONNELY.

MS. BROWN: GOOD EVENING, MY NAME IS SUZANNE BROWN. I'M A SENIOR ATTORNEY AT THE LEGAL AID FOUNDATION OF LOS ANGELES IN THE LONG BEACH OFFICE, AND WE'RE ALSO A MEMBER OF (INAUDIBLE).

MY COMMENTS TONIGHT WILL BE FOCUSED ON OUR CONCERNS REGARDING DISPLACEMENTS AND LOSS OF ECONOMIC OPPORTUNITIES. THE LONG BEACH MULTI-SERVICE CENTER, WHICH IS THE PRIMARY POINT OF ENTRY FOR HOMELESS PERSONS SEEKING SERVICES IN LONG BEACH, WILL BE DISPLACED BY THE PROJECT. THE MSC HOUSES, 12 PUBLIC AND PRIVATE-PARTNER ORGANIZATIONS WHO PROMOTE SELF-SUFFICIENCY AND REBUILD THE LIVES OF THOSE EXPERIENCING HOMELESSNESS. THE MSC AVERAGES 26,000 CLIENT VISITS PER YEAR, AND SERVICES RANGE FROM SHOWERS, LAUNDRY, MAIL, MESSAGE CENTERS TO STREET OUTREACH, VAN (INAUDIBLE) TRANSPORTATION, MEDICAL CARE, INTEGRATED CASE MANAGEMENT, AND HOUSING ASSISTANCE.

RELOCATION OF THE MSC WILL BE INCREDIBLY DIFFICULT, IF NOT IMPOSSIBLE, DUE TO THE SENSITIVE NATURE OF ITS LAND USE. CALTRANS HAS TOLD US IN PRIVATE MEETINGS THAT IT'S VERY LIKELY THAT THE MULTI-SERVICE CENTER WILL BE RELOCATED OUTSIDE OF THE CITY OF LONG BEACH BECAUSE THERE IS NOWHERE ELSE IN THE CITY TO PLACE IT. THIS IS ABSOLUTELY

T-5-60

UNACCEPTABLE FOR THE RESIDENCE OF LONG BEACH WHO DEEPLY RELY ON THE SERVICES PROVIDED BY THE CENTER.

IN ADDITION TO OUR CONCERN ABOUT THE DISPLACEMENT OF THE MULTI-SERVICE CENTER, WE EXTREMELY CONCERNED ABOUT THE DISPLACEMENT OF THE BELL SHELTER AND THE HOMES IN COMMERCE. THIS FREEWAY CAN AND SHOULD BE DESIGNED WITHOUT ANY DISPLACEMENTS AT ALL. LASTLY, THE ISSUE OF DISPLACEMENTS, WE'VE BEEN TOLD BY CALTRANS IN SACRAMENTO THAT UNDOCUMENTED HOUSEHOLDS ALONG THE CORRIDOR ARE NOT ELIGIBLE FOR RELOCATIONS ASSISTANCE BECAUSE THIS WILL NOT BE APPROVED BY THE FEDERAL GOVERNMENT. SO IT IS UNACCEPTABLE FOR CALTRANS TO RELY ON RELOCATIONS LAWS TO SAY THAT EVERYTHING IS GOING TO BE OKAY FOR PEOPLE WHO ARE GOING TO LOSE THEIR HOMES, HAVE NO MONEY, AND BE ON THE STREET. T-5-60

ON THE ISSUE OF ECONOMIC DEVELOPMENT, DEPENDING ON WHICH ALTERNATIVE IS SELECTED, THE PROJECT WILL CREATE UP TO 180,000 NEW JOBS, MANY OF THOSE LIVING-WAGE CONSTRUCTION JOBS. IT IS ANTICIPATED THAT ALTERNATIVE SEVEN WOULD GENERATE EVEN MORE JOBS AS A RESULT OF THE ZERO-EMISSION TECHNOLOGY. WITHOUT A LOCAL AND TARGETED HIRING POLICY, LOW-INCOME RESIDENTS AND RESIDENTS OF COLOR ALONG THE CORRIDOR WILL NOT BENEFIT FROM THE VAST ECONOMIC DEVELOPMENT OPPORTUNITIES CREATED BY THIS PROJECT. UTILIZING A LOCAL AND TARGETED HIRING POLICY HAS THE ADDITIONAL BENEFIT OF REDUCING VEHICLE MILES TRAVELED TO WORK, WHICH (INAUDIBLE) REDUCES T-5-61

GREENHOUSE GAS EMISSIONS, SO IT ALSO HAS ENVIRONMENTAL BENEFITS AS WELL.

MOTION 22.1 VERY CLEARLY DIRECTED CALTRANS AND METRO TO DEVELOP A LOCAL AND TARGETED HIRING POLICY IN CONJUNCTION WITH COMMUNITY-BASED ORGANIZATIONS BY THE RELEASE OF THE EIR AT THE LATEST. OUR PHONE HAS NOT RUNG. WE HAVE NOT HAD ONE MEETING. THIS HAS NOT HAPPENED. THIS IS ALSO UNACCEPTIBLE. AND YES, WHILE, UNFORTUNATELY, FHWA PILOT PROGRAM THAT OBAMA STARTED THAT WOULD ALLOW FOR LOCAL HIRE WITH FEDERAL HIGHWAY FUNDS HAS BEEN RECENTLY DISCONTINUED AS OF LAST WEEK, WE CAN STILL HAVE A TARGETD HIRING POLICY WITH ANY DOLLARS FROM THE FEDERAL HIGHWAY ADMINISTRATION. WE CAN SEGMENT THOSE POLICIES, THOSE DOLLARS, AND USE EVERY OTHER DOLLAR FOR THIS PROJECT TO GET LOCAL AND LOW-INCOME HIRING SO OUR COMMUNITIES BENEFIT. THANK YOU. T-5-61

MS. MCCORMICK: THANK YOU.

MR. DANO: GOOD AFTERNOON, MY NAME IS JIM DANO. I ALSO LIVE VERY CLOSE BY. I LIVE OF OF SIXTH STREET AND THE 710 CORRIDOR HERE. I THINK THAT WE'RE LOOKING AT, TALKING ABOUT PARTICULATE MATTER. IT'S THE RUBBER. A LOT OF IT'S THE RUBBER THAT COMES OFF OF THE TRUCKS WITH THE -- ALSO THE DIESEL FULE. WE NEED TO HAVE ZERO-EMISSION.

IF YOU TALK TO THE PORT, IT'S ALL ABOUT BUSINESS, AND THIS IS ABOUT ALTERNATIVES. YOU'RE PUTTING BILLIONS AND BILLIONS OUT THERE. IT'S GOT TO BE A RAIL-TO-DOCK SYSTEM. T-5-62

IT SHOULD BE A MAG-LEV, WHICH IS THE MAGNETIC LEVITATION, THAT WILL CAUSE NO INERTIA, YOU DON'T HAVE ANY OF THE CARBON EXPULSIONS FROM THE SEMIS AND WHATNOT. THERE'S NO RUBBER DISLODGING. YOU CAN PUT IT -- IF YOU WANT TO, PUT IT RIGHT UP THE LA RIVER. TAKE IT ALL THE WAY UP BY RAIL, ALL THE WAY TO THE ANTELOPE VALLEY. PLENTY OF LAND, THEY GOT THAT BIG DISTRIBUTION CENTER, AND THEN FROM THERE, TRANSPORT IT TO WHERE YOU NEED. T-5-62

YOU'VE GOT FAR TO MUCH POPULATION HERE TO BE DEALING WITH THIS. QUITE HONESTLY, IF EVERYONE HERE WOULD RAISE THEIR HAND AND SAY, "WHO ISHERE FOR ZERO EMISSIONS?" I IMAGINE EVERYBODY WOULD SAY "I DON'T WANT ANY EMISSIONS. I DON'T WANT TO HAVE ANY OF THIS CARBON RAINING DOWN ON ME," CERTAINLY WITHOUT HAVING AN ELEVATED TRUCK ROUTE.

SINCE WE'RE TALKING BILLIONS OF DOLLARS, IN THE MEANTIME -- AND I ALSO SUFFERED FROM ASTHMA WHEN I WAS A CHILD. LUCKILY, I HAVE OUT GROWN MOST OF IT. WHY DON'T WE TAKE $1,000,000,000, OR A TEN PERCENT OF WHAT YOU'RE PROPOSING, AND SET UP, INSTANTLY, SATELLITE ASTHMA CENTERS ALONG THE 710, TO AFFECT ALL THESE KIDS THAT ARE DEALING WITH IT. PROBABLY ONE GENERATION, YOU'LL ELIMINATE ASTHMA IF YOU GIVE THEM ZERO EMISSIONS, GIVE THEM TREATMENT THAT THEY NEED RIGHT NOW, NOT SIX YEARS FROM NOW, NOT TEN YEARS FROM NOW. THAT GENERATION IS WASTED. IMMEDIATELY START DOING THAT, YOU MIGHT ONLY BE LOOKING AT TEN CENTERS UP AND DOWN THE T-5-63

CORRIDOR.

T-5-63

GET THEM THE HELP THEY NEED, AND LET'S QUIT PLAYING GAMES HERE. THIS IS ABOUT BUSINESS, THE PORT WANTS MONEY, YOU GUYS WANT MONEY, NOTHING AGAINST YOU, BUT YOU WANT MONEY TO BUILT THIS CORRIDOR OR WHATEVER IT IS THAT YOU'RE GOING TO BUILD, WHICHEVER WAY YOU'RE GOING TO DO IT, AND LET'S HELP THE POPULATION OUT. THANK YOU.

MS. MCCORMICK: THANKS.

IS KIMBERLY AMAYA HERE? AND THEN LAURIE ANGEL. KIMBERLY? AND THEN LAURIE.

MS. AMAYA: HELLO, GOOD EVENING, MY NAME IS KIMBERLY AMAYA, AND I'M A MEMBER OF EAST YARD COMMUNITIES FOR ENVIRONMENT JUSTICE. I AM -- I LIVE IN THE WEST SIDE OF LONG BEACH, AND I'M HERE TO SPEAK ABOUT THE ZERO EMISSION THAT WAS PROPOSED BECAUSE MY COMMUNITY IS ALREADY SUFFERING FROM THE DAILY IMPACTS OF POLLUTION, AND I PERSONALLY HAVE MANY FRIENDS, NEIGHBORS, AND FAMILY MEMBERS THAT HAVE ASTHMA, CANCER, OR OTHER TYPES OF DISEASES. AND I ALREADY -- SORRY. I PERSONALLY KNOW TWO PEOPLE WHO HAVE PASSED AWAY FROM AILMENTS, AND I WAS -- I JUST WANT TO SEE ZERO EMISSIONS IN THE PROJECT BECAUSE THE COMMUNITY, AS I SAID BEFORE, THEY'RE ALWAYS IMPACTED BY THE POLLUTION, AND WE DESERVE TO HAVE CLEAN AIR.

T-5-64

AND RECENTLY I WENT ON A TRIP WHERE WITH THE AIR WAS CLEAN AND FRESH, AND USUALLY I HAVE BREATHING PROBLEMS WHERE

CHEST PAINS. WHEN I WAS UP THERE, I -- ALL OF THOSE PROBLEMS WERE GONE. ONE DAY AFTER I CAME BACK, I HAD MY PROBLEMS AGAIN. AND EVEN LIKE EARLIER TODAY, MY CHEST FELT TIGHT, AND I WANT YOU TO INVEST MONEY IN ZERO EMISSIONS. I WANT TO SEE THE HEALTH OF THE COMMUNITY AND NEEDS ARE PUT FIRST. THE LIVES OF THE RESIDENTS SHOULD COME BEFORE THE PROFIT OF THE GOVERNMENTS. AND UNFORTUNATELY OR FORTUNATELY, IN THE END, THE HEALTH AND LIVES OF THE COMMUNITY WILL BE IN YOUR HANDS, AND YOUR NAMES WILL BE LINKED TO THIS FINAL DECISION.

I ALSO WANT TO REQUEST 120-DAY EXTENSION ON THE DEIR. AND THANK YOU. T-5-65

MS. MCCORMICK: YOU'RE WELCOME. THANK YOU.

LAURIE AND THEN JULIUS CLAWSON.

MS. ANGEL: MY NAME IS LAURIE ANGEL, AND I LIVE IN THE JANE EVANS NEIGHBORHOOD. I'M ACTIVE IN THE NEIGHBORHOOD ASSOCIATION. I'VE LIVED THERE ALMOST 30 YEARS.

THIS IS A NORTH LONG BEACH AREA, AND JUST LIKE THE WEST SIDE, WRIGLEY, IT'S A CHALLENGED AREA. WE GET THE BRUNT OF A LOT OF ENVIRONMENT JUSTICE ISSUES, AND I NEVER HAD ASTHMA UNTIL I MOVED HERE, AND NOW I HAVE IT. UNFORTUNATELY, THE ECONOMY SEEMS TO BE VERY DEPENDENT ON THE GROWTH OF THE PORT, AND PERSONALLY I THINK IT'S A BAD IDEA TO HAVE SO MUCH OF THE CONCENTRATED GOODS OF THE UNITED STATES IN ONE PLACE, JUST FROM A STRATEGIC POINT OF VIEW, ANYWAY. SO I THINK THE CONSTANT DRUM BEAT TO GROW AND ACCOMMODATE MORE GOODS

MOVEMENT, YOU KNOW, NOT ONLY IS IT HARMING US, BUT IT, YOU KNOW, IT'S JUST STRATEGICALLY NOT A GOOD THING TO DO.

THAT BEING SAID, I DO APPRECIATE THE WORK THAT WAS DONE ON THE DRAFT EIR. I HAVEN'T HAD A CHANCE TO READ THROUGH. I'M KIND OF DISAPPOINTED THAT WE ARE HERE, BASICALLY COMMENTING ON THE THOUSANDS OF PAGES THAT VERY, VERY FEW, IF ANY OF US, HAVE HAD A CHANCE TO TAKE A LOOK AT. AND I WAS WONDERING, HOW DO WE COMMENT ON IT WHEN WE HAVEN'T EVEN REALLY BEEN EXPOSED TO WHAT IT IS THAT YOU'RE PUTTING FORWARD? AND I THINK THIS IS KIND OF A CART BEFORE THE HORSE, AND THINK, TRUTHFULLY, GIVEN SOME IN-DEPTH HEARINGS THAT INFORMED THE COMMINITY ABOUT WHAT YOU'RE PLANNING ON DOING SO THAT WE'RE NOT -- I MEAN, WE ARE HEARING THE DRUM BEAT ABOUT ASTHMA AND HEALTH, BUT WE REALLY DON'T EVEN -- MOST OF US DON'T KNOW EXACTLY WHAT IT IS THAT YOU'RE EVEN PUTTING FORWARD. T-5-66

I APPRECIATE THE FACT THAT YOU'RE PLANNING ON HAVING SEPARATE TRUCK LANES. WE TALKED ABOUT THAT. IT'S DISAPPOINTING THAT WE HAVEN'T USED THE ALAMEDA CORRIDOR AND OTHER RAIL OPTIONS. AND I'M WONDERING IF THERE'S A WAY TO APPLY INTELLIGENT TRANSPORTATION FOR THE TRUCK LANES THAT ARE PLANNED, WHICH WOULD BE ZERO EMISSIONS, TO THE MOST PART, AS FAR AS I CAN TELL, AND HAVING IT APPLY TO THAT MOVEMENT. I BELIEVE THAT THEY'VE BEEN ABLE TO DO THAT WITH TRUCKS. AND AS DIFFICULT AS THE TRUCKS ARE FOR OUR TRAFFIC, HAVING THEM T-5-67

SEPARATED AND IN LIKE SOME KIND OF A CONVEYOR -- I AM NOT EXACTLY SURE HOW IT WORKS. IT MIGHT BE A VIABLE OPTION IF IT ISN'T TO AWFULLY EXPENSIVE. T-5-67

SO BASED ON THE FACT THAT THE COMMUNITY HAS NOT BEEN BROUGHT UP TO DATE ABOUT WHAT'S GOING ON WITH THE PLAN, I THINK IT'S IMPORTANT TO EXTEND THE PERIOD UNTIL AFTER YOU'VE HAD AN OPPORTUNITY TO SHARE MORE WITH THE COMMUNITY ABOUT WHAT IT IS THAT YOU'RE PLANNING ON DOING. A HALF AN HOUR WHERE YOU CAN HARDLY HAVE AN OPPORTUNITY TO SEE EACH STATION JUST REALLY WASN'T ENOUGH. THANK YOU. T-5-68

MS. MCCORMICK: THANK YOU.

AFTER JULIUS CALASON, AND THEN (INAUDIBLE).

MR. CALASON: GOOD EVENING, MY NAME IS JULIUS CALASON. I AM A MEMBER OF EAST YARD COMMUNITIES FOR ENVIRONMENTAL JUSTICE. I LIVE IN LONG BEACH, DISTRICT SEVEN, ZIP CODE, 90810. AND AS A WEST SIDE LONG BEACH RESIDENT FOR 13 YEARS, AIR POLLUTION HAS BECOME A NORMAL TO ME. I AM EXPOSED TO IT ON THE NORTH SIDE FROM THE 405 FREEWAY, THE WEST SIDE, THE REFINERIES, WHICH ONE OF THEM TO TO JUST GOT APPROVED TO EXPAND OPERATIONS, THE SOUTH SIDE, PACIFIC COAST HIGHWAY, WHERE A HIGH VOLUME OF TRUCKS PASS BY EVERY DAY, AND FINALLY ON THE EAST SIDE, THE I-710 FREEWAY, THE FOCAL POINT OF TONIGHT'S MEETING.

AND I WANT TO ECHO AND REINFORCE AND ASK, AS MANY OF THE PREVIOUS SPEAKERS THAT CAME BEFORE ME, IN THAT THIS T-5-69

PROJECT SHOULD PRIORITIZE A LOCAL HIRING POLICY, NO DISPLACEMENT OF HOMES, AND ADAPTING A ZERO-EMISSIONS TECHNOLOGY TO ACHIEVE THE FIRST GOAL EXPLICIT STATED IN THE DISPLAY BOARD IN THE BACK, WHICH IS TO IMPROVE AIR CARE QUALITY AND PUBLIC HEALTH. ULTIMATELY, WE WANT OUR REPRESENTATIVES OF THIS PROJECT TO STAND WITH THE COMMUNITY AND REQUEST THE DRAFT EIR COMMENT PERIOD BE EXTENDED TO 120 DAYS. T-5-69 T-5-70 T-5-71 T-5-72

AND WE CAN'T AND WE DON'T STOP COMING TO THESE MEETINGS MASS FORCE AND DROVES BECAUSE THIS IS PEOPLE'S LIVES, IT'S OUR LIVES THAT ARE AT STAKE. THANK YOU.

MS. MCCORMICK: THANK YOU.

(INAUDIBLE) AUGUSTINE, AND THEN BRIAN BREN.

MR. AUGUSTINE: GOOD EVENING, (INAUDIBLE) AUGUSTINE, 18-YEAR-OLD COLLEGE STUDENT, AND CURRENT RESIDENT OF LONG BEACH. I AM A MEMBER OF EAST YARD COMMUNITIES FOR ENVIRONMENT JUSTICE.

OVER THE YEARS HAVE I DEVELOPED THESE BREATHING PROBLEMS THAT WERE NON-EXISTANT TO ME PRIOR TO ME LIVING HERE. I LIVED IN THE PHILIPPINES FOR 13 YEARS, IN WHICH THOSE SUBURBAN PARTS WERE GRASSLANDS AND CLEAN AIR WERE PRESENT. AFTER MIGRATING HERE, I HAD GRADUALLY BREATHING PROBLEMS, AS STATED EARLIER. WHEN I JOINED THE EAST YARD COMMUNITES FOR ENVIRONMENTAL JUSTICE, I REALIZED THAT THE LIKELY REASON FOR THESE COMPLICATIONS ARE THE CARBON

EMISSIONS FROM CARS, TRUCKS, AND OTHER VEHICLES THAT PASS THROUGH THE STREETS AND THE HIGHWAYS, ALSO THE REFINERIES, BUT THAT'S A DIFFERENT STORY.

I LIVE ON FASHION AVENUE, WHICH IS VERY CLOSE TO BOTH THE LA RIVER AND 710 FREEWAY. I LOVE BIKING AND CYCLING OR WHICHEVER YOU WANT TO CALL IT. THIS PREVIOUS SUMMER I HAD BIKED TO DOWNTOWN LONG BEACH AND THE BEACH ALMOST EVERY WEEK, AND I WANT TO SUGGEST IMPROVEMENTS SUCH AS WIDENING THE BIKE PATH, ENSURING THAT BIKING IS SAFE EVEN DURING THE NIGHT. THIS WILL ENCOURAGE MORE PEOPLE TO BIKE AND REDUCE OUR CURRENT TOTAL EMISSIONS. T-5-73

ALSO, AS A COLLEGE STUDENT I TAKE THE BUS EVERY SINGLE DAY FROM PCH TO SANTA FE TO CAL STATE LONG BEACH, AND DOING SO MADE ME REALIZE THAT THESE BUSES ARE EVERYWHERE, IN THE STREETS AND MY NEIGHBORHOOD AND EVERYONE ELSE'S NEIGHBORHOODS. I WANT TO SEE ZERO EMISSIONS TO DECREASE THE POLLUTION WITH THE CLOSEST (INAUDIBLE) TO OUR RESIDENTS. ALSO, I WANT TO SEE ZERO-EMISSIONS TRUCKS THAT FREQUENTLY PASS THROUGH THE FREEWAY TO HELP DECREASE CITY POLLUTION, ESPECIALLY AROUND THE WRIGLEY AREA AND THE WEST SIDE OF LONG BEACH, WHICH I LIVE IN. T-5-74

WHY ZERO EMISSIONS? IT'S BECAUSE THE HEALTH OF OUR PEOPLE TAKES PRIORITY, ESPECIALLY THE HEALTH OF OUR POSTERITY. LET'S BE REAL AND NOT LIE TO OURSELVES ABOUT THIS BECAUSE IF AND ONLY IF THIS PROJECT IS ALL ABOUT MONEY AND

PROFIT WITHOUT REGARD TO THE HEALTH OF THE YOUNG, THEN THERE WILL BE NO ONE TO INVENST THE MONEY FOR IN THE NEAR FUTURE. THE EFFECT OF THESE PROJECTS WILL OUTLIVE THE MOST US, INCLUDING MYSELF AND THE YOUNGEST OF US, SO WHY NOT USE THE MONEY NOW TO MAKE THE BEST PROJECT ENVIRONMENTALLY SO OUR FUTURE GENERATIONS WILL HAVE LESS PROBLEMS TO DEAL WITH?

THIS IS OUR PEOPLE'S MONEY, AND WE WILL SPEND TO IT MAKE THE LIVES OF OUR CHILDREN AND GRANDCHILDREN BETTER, AND SO ON, BETTER. MY PUSH FOR THIS IMPROVEMENT INCLUDES AN EXTENSION OF THE REVIEWING OF THIS PROJECT BY RESIDENTS TO 120 DAYS, AND POSSIBLY EVEN MORE. THANK YOU. T-5-75

MS. MCCORMICK: THANK YOU.

MR. BREN: GOOD EVENING, MY NAME IS BRIAN BREN, I LIVE HERE FOR MORE THAN 30 YEARS. I'M CAMBODIAN AMERICAN. I'M NOT REPRESENTING THE CAMBODIAN COMMUNITY, BUT AS YOU KNOW, NOT JUST CAMBODIAN, COMMUNITY OUTSIDE CAMBODIA. I KNOW ABOUT THIS MEETING ABOUT TEN MINUTES AGO, BEFORE THE MEETING START. I'M NOT PREPARED TO TALK.

LIVING HERE MORE THAN 30 YEARS, I WITNESS A LOT. BACK IN THE '80S, I LIVE IN THE WEST SIDE. IN THE MORNING I TURNED GREY, AND PEOPLE SAY MAYBE I DON'T HAVE ENOUGH SLEEP. EVEN I HAVE ENOUGH SLEEP, MY EYES STILL TURNED RED. I SAID, "SOMETHING'S WRONG." DRIVING ON THE 710 FREEWAY, THE TRUCKS DRIVE SO FAR, A LOT OF TRUCK. BUT IN THE '80S, IT WAS VERY DANGEROUS.

AND WHAT HAPPENED TO ALAMEDA CORRIDOR? I LEARN THAT THEY SPENT ABOUT ALMOST $2,000,000,000 TO BUILD ALAMEDA CORRIDOR, AND I HOPE THAT CAN SOLVE A LOT OF PROBLEM. NOW COME HERE AGAIN, YOU WANT TO EXPAND THE FREEWAY, I BELIEVE EXPAND THE FREEWAY THAT WILL CROSS THE PEOPLE IN THE NEIGHBORHOOD. I THINK IT VERY LITTLE BENEFIT, TO MY OPINION. BENEFIT COMING IN MORE THAN THE TIME A MILLION TIMES. T-5-76

SO I KNOW YOU WORK VERY HARD, YOU BALANCE THAT, BUT THE POOR PEOPLE IN THE COMMUNITY, WHAT WILL THEY GET? YOU USED THE WORDS "PUBLIC SAFETY," 'SAFETY' TO IMPRESS THEM. BUT I DIDN'T SEE THAT. THEIR LIVES ARE IN DANGER, AND YOU SAY "PUBLIC SAFETY," AND THEIR LIVE ARE IN DANGER BY THE HEALTH ISSUE. T-5-77

SO I KNOW YOU WORK VERY HARD, YOU THINK CAREFULLY, BUT NOT BENEFIT TO THE COMMUNITY. I'M ASKING THE REPRESENTATIVE IN THIS TOWN, MAKE SURE THAT YOU TALK TO YOUR PEOPLE, PEOPLE THAT VOTE YOU TO BE IN THE OFFICE. YOU'RE NOT REPRESENTING BIGGER COMPANY. SO I KNOW AND I HOPE YOU CAN DO MORE TO THE COMMUNITY AND HEAR MORE. T-5-78

IT'S NOT JUST I KNOW EVERYONE HAS TO DO BUSINESS, BUT POOR PEOPLE IN THIS NEIGHBORHOOD, I DIDN'T SEE THEY DO ANYTHING. THEIR PROPERTY VALUE GO DOWN. MY FRIENDS CALL ME, OKAY, TAKE A WALK ON THE LA RIVER AND SAID SOME OF THE WATER SMELL AND SAID "YOU SHOULD GO TO THE AREA AWAY FROM THE 710 FREEWAY BECAUSE LOT OF, YOU KNOW, TRUCKS, A LOT OF POLLUTION

IN THERE." SO I SEE THEY BENEFIT A FEW BUT FOR PROGRAM TO MAKE THE COMMUNITY SILENT, BUT I DON'T THINK WE ARE GOING TO BE SILENT ANYMORE. SO PLEASE CONSIDER THAT OUR LIVES, SAFETY -- WHAT YOU SAID HERE -- IT'S NOT COMPARED TO OUR LIVES, REASONABLE, IN THIS KIND OF NEIGHBORHOOD. AND THANK YOU.

MS. MCCORMICK: THANK YOU, THANK YOU, BRIAN.

LEE WHITE, LEE WHITE, AND THEN BEATRIZ DESMOND.

MS. WHITE: HELLO, MY NAME IS LEE WHITE, AND I'M A RESIDENT OF COUNCIL DISTRICT SEVEN. I'M HERE TO TALK ABOUT MY PLEA FOR THE I-710 ZERO EMISSIONS, ZERO, AS IN NO NUMBER. T-5-79

I RECALL A CHRISTMAS WHERE MY ENTIRE FAMILY -- I HAVE TWO DAUGHTERS -- AND MY HUSBAND AND I ALMOST CANCELLED CHRISTMAS BECAUSE NONE OF US CAN BREATHE. WE WERE ALL VERY SICK FROM THE BAD AIR, HAVING LIVED IN THE WEST SIDE AT THE TIME. AND I DETERMINED THAT WASN'T GOING TO HAPPEN TO US, SO I DEMAND THAT WE HAVE CHRISTMAS. MY DAUGHTER AT THE TIME WAS DIAGNOSED WITH SEASONAL ASTHMA, BY I KNEW WHAT IT WAS. SHE WAS AFFECTED BY THE AIR THAT WE BREATHE WHEN SHE HAD THE WALK TO SCHOOL, WHEN SHE WOULD GO OUTSIDE TO PLAY, AND WHEN WE DID ANY ACTIVITIES. SHE WAS ALWAYS EFFECTED, ESPECIALLY IN THE SUMMER MONTHS, WHEN THERE WAS NO RAIN.

SO I AM HERE TO ASK THAT YOU ALL REALLY CONSIDER ZERO EMISSIONS. RIGHT NOW, EVEN SPEAKING, I WAS OUT FOR A WALK YESTERDAY, SCHOOL STARTED. AND SO I WALKED TO THE WEST T-5-80

SIDE. I LIVE IN WRIGLEY, AND GOING OVER THE BRIDGE AFTER HAVING NOT DONE SO FOR NEARLY A YEAR BECAUSE I'D BEEN INVOLVED WITH FAMILY ACTIVITIES AWAY FROM LONG BEACH, MY LUNGS BURNED AND HURT SO BAD JUST IN THAT SHORT DISTANCE. AND I HAVE BEEN VERY ACTIVE ALL MY LIFE, SO I HAD FORGOTTEN, AFTER NOT WALKING OVER THE BRIDGE, JUST HOW BAD IT IS.

THE OTHER THING IS WHEN WE WERE ON THE WEST SIDE AND WE KEPT GETTING SICK, AND I HAD NEVER BEEN SICK, WE DECIDED THAT IT WAS TIME TO MOVE, SO WE DECIDED TO BUY A HOUSE. THAT'S WHEN WE DECIDED TO BUY OUR HOME IN WRIGLEY. NOW, OVER THE NEARLY 18 YEARS SINCE THAT TIME, I HAVE WORKED WITH MY FAMILY TO HAVE A BETTER QUALITY OF LIFE AND START GARDENING. AND THEN I HAVE BEEN LEARNING, WHAT'S THE POINT IN GARDENING, WITH THE AIR BEING SO BAD THAT OUR SOIL IS CONTAMINATED? OUR SOIL. I WANT GOOD NUTRITION, AND I WANT TO MAKE THAT HAPPEN FOR MYSELF AND MY FAMILY, AND I'M LIMITED.

SO PLEASE TAKE THE CONSIDERATION OF MAKING OUR LIVES BETTER SO THAT WE CAN STAY IN HOUR COMMUNITY.

MS. MCCORMICK: THANK YOU VERY MUCH.

BEATRIZ.

MS. TALISMAN: GOOD EVENING, MY NAME IS BEATRIZ TALISMAN. I'M HERE REPRESENTING MY CHILDREN, WHO ARE NOT ABLE TO COME, AND REPRESENT THEMSELVES AND MYSELF. ALL THREE OF THEM, INCLUDING MYSELF, HAVE ASTHMA AND THIS IS WHAT I HAVE TO CARRY EVERY DAY OF MY LIFE, THIS. IT WAS VERY

DIFFICULT WHEN I FIRST GOT ACQUAINTED WITH THIS ILLNESS. I WAS VERY AFRAID. AND AS A MOM, IT IS VERY DIFFICULT HAVING ASTHMA MYSELF, BECAUSE IN ORDER TO TAKE CARE OF KIDS WITH ASTHMA, YOU SHOULD BE 100 PERCENT YOURSELF.

I ALSO HAVE BEEN TO THE HOSPITAL FOR A WEEK EVERY SINGLE DAY WITH MY CHILDREN. AND I HAVE A SON, A CHILD, WHO IS 14, ONE IS TEN, AND ONE IS FOUR, AND I HAVE TO KEEP TAKING THEM TO -- I HAVE TO TAKE ONE OF THEM ONE WEEK AND THEN ANOTHER ONE ANOTHER WEEK AND THEN THE THIRD ONE ANOTHER WEEK, AND IT IS VERY DIFFICULT FOR ME. AND I HAVE TO BECOME A NURSE. I HAVE TO LEARN TO BECOME A NURSE BECAUSE I HAVE TO KEEP GIVING THEM THEIR MEDICATION, EACH ONE OF THEM. AND I AM REALLY AFRAID OF FORGETTING WHEN I GIVE THE MEDICATION TO ONE OF THEM OR THE OTHER.

I WOULD ALSO LIKE FOR THESE REPRESENTATIVES TO GO TO THE HOSPITAL FOR ONE DAY AND TO SEE HOW CHILDREN CRY, HOW MOTHERS CRY, AND SOME OF THEM CANNOT BREATHE. AND THEY SHOULD BE ABLE TO GO AT LEAST ONE DAY, ONE TIME, AND THEY COULD SEE THAT SOMETIMES THERE'S NO BEDS FOR THE CHILDREN. THEY HAVE TO WAIT OUTSIDE. AND IT'S VERY DIFFICULT FOR ME AS A MOTHER TO LIVE THROUGH THAT. I WANT ZERO EMISSIONS SO THAT IT DOESN'T IMPACT MY CHILDREN. AND NOT JUST MY CHILDREN AND MYSELF, BUT OTHER FAMILIES AS WELL. T-5-81

AND I'M HERE BECAUSE I -- TO TELL THAT YOU I'M ALSO TAKING SOME CLASSES OR I HAVE TAKEN CLASSES AT THE ALLIANCE

IN LONG BEACH, AND I HAVE DONE -- I HAVE BEEN TAKING THOSE CLASSES FOR MY KIDS BECAUSE I REALLY NEED TO KNOW THE ILLNESS. IT IS SOMETHING YOU HAVE TO GET TO KNOW. THANK YOU.

MS. MCCORMICK: OKAY. THANK YOU VERY MUCH. SO I'M GOING TO REQUEST, IS THERE ANYONE ELSE HERE THAT WOULD LIKE TO SPEAK THIS EVENING? ONE PERSON? CAN YOU FILL OUT A SPEAKER CARD FOR US? OH, YOU SUBMITTED A SPEAKER CARD IN THE COMMENT BOX? WELL, COME ON UP, COME ON UP, AND WE'LL GET YOUR NAME. THANK YOU FOR MAKING SURE WE KNEW THAT YOU WERE HERE. GIVE US YOUR FIRST AND LAST NAME, PLEASE.

MS. MARTINEZ: MY NAME IS LILLY MARTINEZ, AND I WORK FOR THE CHILDREN'S CLINIC, SERVING CHILDREN AND THEIR FAMILIES. AND I WANTED TO START OFF BY THANKING EVERYONE THAT'S HERE. I KNOW OUR CONGRESSMAN LOWENTHAL'S OFFICE IS HERE AND CONGRESSWOMAN AND SENATOR LARA'S OFFICE IS HERE.

THIS IS MY WORK FAMILY. I WAS VERY, VERY SAD LAST WEEK ON SATURDAY. WE HAD THIS EXACT SAME MEETING IN THE CITY OF PARAMOUNT, WHERE ONLY EIGHT PERCENT OF US GO TO COLLEGE, AND THERE'S A 60 PERCENT HIGH SCHOOL GRADUATION RATE, AND MORE THAN 80 PERCENT OF US ARE BROWN. AND ONLY SEVEN PEOPLE CAME, AND THAT WAS REPRESENTING ONLY THREE OR FOUR HOUSEHOLDS, AND THAT INCLUDED MYSELF AND MY PARTNER.

I'M SO HAPPY THAT ALL OF YOU ARE HERE. THERE'S MORE DIVERSITY IN LONG BEACH, AND WE ALL WORK TOGETHER. IT'S A

VERY BIG CITY, BUT WE ALL KNOW EACH OTHER. I'M SO HAPPY THAT ALL OF OUR PUBLIC OFFICIALS ARE HERE, THE COMMUNITY-BASED ORGANIZATIONS, HOUSING ORGANIZATIONS, THE NEIGHBORHOOD ASSOCIATIONS ARE HERE, AND THIS IS HOW OUTREACH IS DONE. I'M SORRY CALTRANS, BUT WE REALLY NEED TO WORK ON OUTREACH IF WE WANT PEOPLE TO KNOW. T-5-82

THANK YOU, LABACA. THANK YOU, EAST YARD. THANK YOU, ALL OF THE ORGANIZATIONS HERE THAT DID THE OUTREACH. THIS IS MY FAMILY, AND THEY ARE HERE. I FEEL SO GOOD TODAY.

I JUST WANTED TO SAY THAT I WANTED TO ADD TO MY PUBLIC COMMENTS FROM LAST WEEK. I HAVE THREE THINGS TO CONSIDER. THE IMPACT OF TRAFFIC ON THE STREET. WE KEEP TALKING ABOUT THE FREEWAY, AND LAST WEEK I TALKED TO THE ENGINEERS THAT CAME FROM CALTRANS, AND THEY SAID THEY WERE MAKING REALLY GREAT IMPROVEMENTS ON THE RAMPS. AND I ASKED WHY ARE THOSE IMPROVMENTS BEING MADE, AND THEY SAID THAT THAT'S SO THAT THEY CAN MOVE MORE TRAFFIC FASTER THROUGH THESE AREAS.

LAST QUARTER, IN LAST THREE MONTHS, I STARTED FEELING THE IMPACTS. THE PORT OF LONG BEACH INCREASED THEIR VOLUME OF TRANSPORTATION OF CONTAINERS FIVE PERCENT, AND MY CITY, MY AREA STARTED TO LOOK LIKE WILMINGTON, AND WE ALREADY HEARD ONE OF THE RESIDENTS FROM WILMINGTON. T-5-83

THERE WAS A SLEW OF TRUCKS PARKED ALL THE WAY DOWN MY STREET AND ALL THE WAY IN FRONT OF THE SCHOOL. SCHOOL

STARTED, AND PARENTS COULD NOT PARK THEIR CARS TO DROP OF THEIR CHILDREN BECAUSE ALL THE TRUCKS WERE IN THE WAY. AND WE LITERALLY GET STUCK IN OUR NEIGHBORHOOD. I AM CAPTIVE IN MY NEIGHBORHOOD BECAUSE THERE'S A LONG LINE IN FRONT OF THE WAY -- ONLY WAY TO GET OUT OF MY HOUSE, AND I CAN'T GET OUT. SO PLEASE CONSIDER -- AND THIS MEANS THAT THERE'S -- THERE IS NO ZERO EMISSIONS. THE TRUCKS MIGHT BE CLEANER, BUT IF WE HAVE A LOT OF CARS SITTING THERE IN TRAFFIC IDLING, THEY'RE POLLUTING. T-5-83

I ALSO WANT TO CONSIDER THE RIPPLE EFFECT. THIS IS BECOMING MORE ATTRACTIVE TO ENVIRONMENT -- IT'S BECOMING A MORE ATTRACTIVE ENVIRONMENT FOR LOW-PAYING JOBS. WITH MORE TRAFFIC, WE'RE GOING TO BE MORE ATTRACTIVE TO MORE FACTORIES, MORE WAREHOUSES, AND COMPANIES THAT EMIT HAZARDOUS MATERIALS THAT PAY VERY, VERY POOR WAGES. WE NEED MORE VARIABILITY, MORE VARIABLE WORK OPPORTUNITIES IN OUR PLACE OF WHERE WE LIVE. T-5-84

LASTLY, I WANT YOU TO CONSIDER THE VALUE OF PEOPLE AND THE QUALITY OF LIFE. WE ARE LOW INCOME, WE'RE BROWN, AND WE'RE BLACK, AND THEY GET TAKEN ADVANTAGE OF TIME AFTER TIME. THERE'S A REASON WHY THE FREEWAY STOPS IN PASADENA. IT'S NOT BEING BUILT, AND CALTRANS, IN THOSE BIG ONE-FOOT-THICK BINDERS THAT SAYS YOU HAVE TO SELL BACK THE HOUSES BECAUSE YOU COULDN'T BUILD THERE. T-5-85

MS. MCCORMICK: COULD YOU WRAP UP YOUR COMMENTS,

PLEASE?

MS. MARTINEZ: I'LL WRAP IT UP.

MS. MCCORMICK: THANK YOU.

MS. MARTINEZ: WHAT'S HAPPEING IN OUR NEIGHBORHOOD IS THAT WE HAVE YARDS WITH CONTAINERS THAT ARE STACKED SO HIGH, UP TO THE LEVEL OF A THREE AND FOUR-STORY BUILDING. THIS HAS STANDING WATER, WHICH CREATE VECTOR, AND IT'S A PUBLIC-HEALTH ISSUE. AND THE OPEN CONTAINERS, BECAUSE WE'RE HAVING A HOUSING PROBLEM, THE HOMELESS TAKE ADVANTAGE OF THAT, AND THEY ARE NOW LIVING INSIDE OF THE OPEN CONTAINERS. THIS IS GOING TO INCREASE BLIGHT. WHICHEVER ONE OF THE OPTIONS WE PICK IS GOING TO INCREASE BLIGHT, INCREASE TRAFFIC, INCREASE NOISE, INCREASE CRIME, AND WE WANT PEOPLE TO COME FIRST BEFORE MONEY. T-5-86

MS. MCCORMICK: THANK YOU. THANK YOU VERY MUCH. THAT ACTUALLY CONCLUDES OUR COMMENT PERIOD AND OUR SPEAKER PERIOD. OUR STATIONS ARE STILL OPEN, BUT I'D LIKE TO CLOSE OUR MEETING THIS EVENING WITH SOME COMMENTS FROM RON KOSINSKI.

MR. KOSINSKI: FIRST OF ALL, THANKS TO THOSE THAT STAYED HERE THIS LONG, AND WE APPRECIATE YOUR COMMENTS, AS WE MENTIONED BEFORE. WE THOUGHT THERE'S SOME VERY, VERY THOUGHTFUL COMMENTS HERE. I'D LIKE TO POINT OUT, I'VE GOT ASTHMA. MY SIX-YEAR-OLD GRANDDAUGHTER HAS ASTHMA. SEVERAL MEMBERS OF OUR ENVIRONMENT TEAM HAVE ASTHMA. AS ONE OF THE

SPEAKERS POINTED OUT, OUR NUMBER-ONE GOAL HERE IS TO IMPROVE AIR QUALITY, IMPROVE HEALTH. SO WE'RE HERE VERY SERIOUSLY ABOUT IMPROVING HEALTH.

NO DECISION IS GOING TO BE MADE FOR SOME TIME ON WHAT TO DO. WE'RE CERTAINLY GOING TAKE ALL THESE COMMENTS INTO ACCOUNT. AND FOR THOSE OF YOU WHO WANT TO BE INVOLVED -- AND I THINK WE'RE GOING TO MAKE SURE THAT THE MAILING LIST OF THE PEOPLE WHO SIGNED UP TODAY IS GOING TO BE GIVEN TO OUR CONSULTANTS SO THAT YOU WILL BE GIVEN NOTICES OF ALL OF THE COMMUNITY MEETINGS, THE VERY EXTENSIVE STRUCTURE OF COMMUNITY MEETINGS THAT HAVE BEEN TAKING PLACE AND WILL CONTINUE TO TAKE PLACE OVER THE NEXT YEAR. AND SO WE ENCOURAGE YOU TO CONTINUE TO PARTICIPATE IN THAT PROCESS.

SO WITH THAT, I'M GOING TO WRAP THIS UP. AND AGAIN, THANK YOU FOR YOUR EFFORTS, AND PLEASE BE CAREFUL AND DRIVE SAFELY ON THE WAY HOME.

(WHEREUPON THE PROCEEDING CONCLUDES AT 8:42 P.M.)

REPORTER'S CERTIFICATE

I, OLIVIA D. LIZARRAGA, C.S.R. No. 13475, a Certified Shorthand Reporter for the State of California, do hereby certify:

That said proceeding was taken before me at the time and place set forth and was taken down by me in shorthand and thereafter reduced to computerized transcription under my direction and supervision; and I hereby certify the foregoing is a full, true and correct transcript of my shorthand notes so taken.

I further certify that I am neither counsel for nor related to any party to said action nor in any way interested in the outcome thereof.

IN WITNESS WHEREOF, I have hereunto subscribed my name this 12th day of September, 2017.

_____

OLIVIA D. LIZARRAGA
Certified Shorthand Reporter No. 13475

CERTIFIED COPY CERTIFICATE

I, Olivia Lizarraga, Certified Shorthand Reporter, No. 13475, hereby certify that the attached is a correct and certified copy of the proceeding, taken before me at the time and place therein stated.

I declare under penalty of perjury that the foregoing is true and correct.

Executed at Covina, California this 12th day of September, 2017.

OLIVIA LIZARRAGA, C.S.R. No 13475

This page intentionally left blank

T-5-1

Caltrans and Metro acknowledge the commenter's concern regarding safety for bicyclists and pedestrians. The intersection of Hill St. and Baltic Ave., at the southwest corner of James A. Garfield Elementary, is approximately 1,800 feet west of the I-710 mainline. No improvements are proposed here as part of the I-710 Corridor Project build alternatives, and this intersection is entirely within the jurisdiction of the City of Long Beach. The commenter is encouraged to contact the City with their concerns.

T-5-2

Caltrans and Metro acknowledge the commenter's concern regarding air quality related to construction dust. Should a build alternative be selected as the Preferred Alternative, Measure AQ-2 in Section 3.13.4, Air Quality, of the RDEIR/SDEIS would provide for the installation of filters on the ventilation systems of sensitive receptors near I-710, including Muir Elementary. Measure AQ-2 lists the schools alphabetically and does not indicate the order that the schools would receive the air filters. In response to this and other comments, Measure AQ-2 has been revised to indicate that, should a build alternative be selected as the Preferred Alternative, coordination with school districts and other entities would occur to provide for the filtration systems to be in place prior to the start of construction. However, Caltrans, as lead agency under CEQA and NEPA (as assigned by the Federal Highway Administration [FHWA]), in cooperation with the Los Angeles County Metropolitan Transportation Authority (Metro), has identified Alternative 1 (No Build) as the Preferred Alternative. Therefore, no construction related air quality impacts will occur and Measure AQ-2 will not be implemented. Please refer to Section 1.1 of this appendix for further discussion on the identification of the Preferred Alternative.

T-5-3

The commenter's support of Alternative 7 and clean emission freight corridor is acknowledged and included in the project record. However, as stated in Response to Comment T-5-2, the No Build Alternative has been selected as the Preferred Alternative. Please refer to Section 1.1 of this appendix for a discussion on the identification of the Preferred Alternative. and Section 1.3 of this appendix for additional discussion of the I-710 Clean Truck Program.

T-5-4

The commenter's concern of health impacts related to air quality near freeways is acknowledged and included in the project record. As discussed in Section 1.2.2 in Chapter 1.0, Proposed Project, of the RDEIR/SDEIS, one of the purposes of the project is to improve air quality and public health. As discussed in Section 3.13, Air Quality, in the RDEIR/SDEIS, all build alternatives would generally improve air quality and reduce public health risk. Along the I-710 Corridor, air quality would be improved with the build alternatives and public health risk would be reduced at most

locations, but there are a few near-roadway locations where there would be an increase in certain emissions.

Should a build alternative be selected as the Preferred Alternative, Measures AQ-2 and AQ-3 would reduce exposure to emissions at near-roadway locations. Measure AQ-2 would provide for installation of air filtration systems for schools within 0.25 mile of I-710. Measure AQ-3 would provide for the installation of solid barriers and installation of vegetation where soundwalls are not proposed to disperse pollution and reduce pollutant concentrations downwind. Additionally, the build alternatives included programmatic components to help improve air quality and public health in the I-710 Corridor. However, as stated in Response to Comment T-5-2, the No Build Alternative has been selected as the Preferred Alternative. Since a build alternative has not been selected as the Preferred Alternative, Measures AQ-2 and AQ-3 will not be implement and the programmatic elements will not be implemented by Caltrans as the lead agency under CEQA and NEPA and as the owner/operator of the I-710 freeway. Please refer to Section 2.3.2.1 of this Final EIR/EIS for further details. Please also refer to Section 1.10 of this appendix for more information regarding the Community Health Benefit Program.

Additionally, CARB and the SCAQMD are implementing programs and strategies to improve air quality near freeways. CARB is implementing several regulations such as the Truck and Bus Regulation, Pavley Standards, and Advanced Clean Cars Program to reduce emissions associated with vehicles traveling on the freeway. Besides this regulation, CARB is also in the process of developing other regulations that target buses and heavy-duty trucks such as the Innovative Clean Transit Regulation and the Advanced Clean Trucks Regulation. The SCAQMD is also implementing several control measures under the 2016 Air Quality Management Plan to encourage the deployment of ZE/NZE technologies.

T-5-5

As stated in Chapter 2.0, Project Alternatives, Section 2.3.2.1, in addition to the widening of existing bridges and overcrossings to accommodate bicycle and pedestrian traffic, five pedestrian and bicycle-only bridges are proposed under Alternative 5C and three pedestrian and bicycle-only bridges are proposed under Alternative 7. The bridges would span I-710, and in some cases the Los Angeles River or Metro Rail lines and would provide for improved bicycle and pedestrian connectivity within the corridor. However, as stated in Response to Comment T-5-2, the No Build Alternative has been selected as the Preferred Alternative and therefore these pedestrian and bicycle improvements would not be implemented. Please refer to Section 1.1 of this appendix for further discussion on the identification of the Preferred Alternative.

As stated in Chapter 2.0, Project Alternatives, of the RDEIR/SDEIS, several other transportation projects and studies in the Gateway Cities subregion (and beyond) have also progressed in their respective planning processes. The Gateway Cities COG, in coordination with Metro, developed several studies on Goods Movement, Commuter Rail, and other modes of transportation in the

area in order to inform their Strategic Transportation Plan (STP), an integrated transportation plan for the cities of the subregion. The STP is inclusive of freeways, arterial highways, transit, bikeways, pedestrian facilities, technology, and goods movement and provides an integrated, multimodal program of potential projects that move the member cities closer to achieving their goals of improving mobility, accessibility, sustainability, and the increased safety of the subregion's transportation system. The STP also includes a funding and financing plan for implementation purposes. Another important objective of the STP is to increase connectivity of the subregion's bicycle and pedestrian network by connecting gaps in the network and providing more connectivity to transit. Potential multi-jurisdictional bicycle and pedestrian projects are contained in the STP's Active Transportation Plan.[1]

T-5-6

When capacity is added to freeways, traffic volumes on the freeways increase as motorists shift routes to take advantage of the improved travel conditions offered by the capacity increase. While some of this traffic may represent new vehicle trips, much of the observed increase in traffic comes from trips that were already being made before the increase in highway capacity, or that reflect predictable behavior accounted for in travel demand forecasts. "Induced travel" is characterized as the additional demand for travel that occurs as a result of a decrease in the generalized cost of travel, including both travel-time and out-of-pocket costs. The I-710 Corridor is part of a highly congested metropolitan roadway network and is located within an urbanized area that is essentially built out. Given the high levels of congestion in peak periods, the I-710 travel demand forecast model is particularly sensitive to changes in travel times. The proposed improvements included in the build alternatives would improve speeds and would reduce travel times on the I-710, which in turn would attract more traffic to the facility relative to the No Build Alternative. The modernization of the current freeway design proposed as part of the build alternatives would improve traffic operations and safety, and the analysis shows that even carrying higher traffic volumes than the No Build Alternative, the build alternatives would provide an improved Level of Service (LOS), which is indicative of reduced traffic congestion. The predicted shifts in traffic were accounted for in the analysis presented in Section 3.5 of the RDEIR/SDEIS for both Alternatives 5C and 7. However, as stated in Response to Comment T-5-2, the No Build Alternative has been selected as the Preferred Alternative and the improvements to circulation under the build alternatives would not be realized. Please refer to Section 1.1 of this appendix for further discussion on the identification of the Preferred Alternative.

[1] Gateway Cities Council of Governments (Gateway Cities COG). Website: http://www.gatewaycog. org/gateway/initiatives-and-projects/strategic-transportation-plan/?cat=Strategic+Transportation+Plan +Resources.

T-5-7

As discussed in Section 2.3.2.3 in Chapter 2.0, Project Alternatives, of the RDEIR/SDEIS, because the future technology cannot be predicted with certainty, Alternative 7 was assumed to be ZE "technology neutral" so that it could accommodate at least one type of ZE heavy-duty truck that is in commercial mass production before the build alternatives would complete final design (should a build alternative be selected as the Preferred Alternative). Because construction would have been several years away, selection of specific technology would have been premature. Alternative 7 was analyzed as technology-neutral so that future selection of technology would not be artificially limited. However, as stated in Response to Comment T-5-2, the No Build Alternative has been selected as the Preferred Alternative and therefore, ZE technology will not be employed as part of the build alternatives.

T-5-8

As discussed in Section 1.2.2 in Chapter 1.0, Proposed Project, of the RDEIR/SDEIS, one of the purposes of the project is to improve air quality and public health. As discussed in Section 3.13, Air Quality, in the RDEIR/SDEIS, all build alternatives would generally improve air quality and reduce public health risk except at a few near-roadway locations. Should a build alternative be selected as the Preferred Alternative, Measure AQ-2 would provide for installation of filters on the ventilation systems of schools near I-710. Measure AQ-3 would provide for installation of solid barriers where soundwalls are not proposed and installation of vegetation to disperse pollution and reduce pollutant concentrations downwind. Additionally, the I-710 Corridor Community Health Benefit Program is a programmatic component of the build alternatives and would take the form of a grant program structured to provide corridor communities the opportunity to implement projects or outreach activities that would improve air quality and public health related to I-710 travel and goods movement. However, as stated in Response to Comment T-5-2, the No Build Alternative has been selected as the Preferred Alternative. Since a build alternative has not been selected as the Preferred Alternative, programmatic elements will not be implemented by Caltrans as the lead agency under CEQA and NEPA and as the owner/operator of the I-710 freeway. Please refer to Section 2.3.2.1 of this Final EIR/EIS for further details. Please also refer to Section 1.10 of this appendix for more information regarding the Community Health Benefit Program.

T-5-9

The projections of freight transportation supporting the analyses in the I-710 RDEIR/SDEIS are based upon, and consistent with, the forecasts and assumptions adopted by the Southern California Association of Governments (SCAG), which is the federally recognized regional transportation planning agency for a six-county region in the Los Angeles metropolitan area. Collaborating with the Ports of Long Beach and Los Angeles, Caltrans, Metro and other agencies, they have developed forecasts for the year 2035 of freight travel in their region. The I-710 Corridor travel demand forecast assumptions and methodology developed to forecast the volumes, modes, and routes of freight transport are described in the *Technical Memorandum – I-710 Corridor Project RDEIR/SDEIS Travel Demand Modeling Methodology* (June 2017). While there is always uncertainty in forecasts 20 years into the future, the forecasting methodology is based upon both observed travel relationships and causal factors and is calibrated and validated to closely replicate recent observed traffic volumes. However, as stated in Response to Comment T-5-2, the No Build Alternative has been selected as the Preferred Alternative. Please refer to Section 1.1 of this appendix for further discussion on the identification of the Preferred Alternative. Please also refer to Section 1.9 of this appendix for more information regarding the Alameda Corridor and its interface with I-710.

T-5-10

The San Pedro Bay Ports Clean Air Action Plan (CAAP) Update was adopted in November 2017. The cumulative analysis contained in Section 3.25 of the RDEIR/SDEIS reflects the information that was available at the time the RDEIR/SDEIS was being prepared. At that time, limited information regarding the CAAP Update was available. Similarly, the SCAG 2012 RTP/SCS was used as the basis for the growth and modeling assumptions, as it was the RTP/SCS in effect at the time analyses for the RDEIR/SDEIS began.

T-5-11

The RDEIR/SDEIS analyzed traffic impacts beyond the limits of the physical improvements associated with the I-710 Corridor Project build alternatives. As discussed in Section 3.5, Traffic and Transportation/Pedestrian and Bicycle Facilities, the traffic Study Area includes the portion of I-710 from Ocean Blvd. in Long Beach to State Route 60 (SR-60). At the freeway-to-freeway interchanges, the Study Area extends one mile east and west of I-710 for the I-405, SR-91, I-105, and I-5 interchanges. In addition, a total of 177 local arterial roadway segments were included in the traffic Study Area and are shown on Figure 3.5-5 of the RDEIR/SDEIS. However, as stated in Response to Comment T-5-2, the No Build Alternative has been selected as the Preferred Alternative. Please refer to Section 1.1 of this appendix for further discussion on the identification of the Preferred Alternative.

T-5-12

Please refer to Section 1.2 of this appendix regarding the extension of the public comment period. Additionally, with regard to future demand for cargo containers to be transported to and from the Ports by rail instead of truck, the *Final Technical Memorandum - I-710 Railroad Goods Movement Study* (February 2009) found that although the rail operators have implemented a variety of operational strategies to meet container demand from the Ports, including using longer trains with higher utilization rates, the railroad system in the Alameda Corridor will not be able to handle the total container demand even with the rail system operating at maximum capacity.

At the assumed 43.2 million annual 20-foot equivalent units (TEUs) and 50 percent rail mode share of Port container volumes in 2035, the Alameda Corridor is forecast to be used by 80 to 125 trains per day from on-dock and near-dock intermodal rail facilities. Historical data and forecast trends indicate that 50 percent of all Port container transport will be by truck due to the high number of container destinations within 350 miles of the San Pedro Bay Ports. Even with this assumption, at the forecast level of 43.2 million annual TEUs in 2035, the rail system will be approaching capacity carrying this share of containers.

Rail is less expensive for transporting cargo containers destined for locations more than 550 miles from the Ports. As a result, approximately 50 percent of the cargo from the Ports is transported by rail and 50 percent by truck (*Final Technical Memorandum – I-710 Railroad Goods Movement Study* [2009]). Please also refer to Section 1.9 of this appendix for more information regarding the Alameda Corridor and its interface with I-710.

T-5-13

As discussed in Chapter 2.0, Project Alternatives, the build alternatives would include widening of existing bridges and overcrossings to accommodate bicycle and pedestrian traffic. Build alternative improvements would include Americans with Disabilities Act of 1990 (ADA)-compliant sidewalks and sufficient room for Class II bicycle lanes.

In addition, the I-710 Corridor Project Intelligent Transportation Systems/Transportation System Management (ITS/TSM)/Congestion Relief Program is a programmatic element included in the build alternatives. This program would intend to help address the I-710 Corridor Project goals of improving traffic safety, accommodating projected traffic volumes, and addressing increased traffic volumes resulting from projected growth in population, employment, and economic activities related to goods movement. Any proposed improvements associated with the build alternatives would be required to account for the safe movement of bicycles and pedestrians and be consistent with “Complete Streets” principles. However, as stated in Response to Comment T-5-2, the No Build Alternative has been selected as the Preferred Alternative. Since a build alternative has not been selected as the Preferred Alternative, programmatic elements will not be implemented by

Caltrans as the lead agency under CEQA and NEPA and as the owner/operator of the I-710 freeway. Please refer to Section 2.3.2.1 of this Final EIR/EIS for further details.

T-5-14

The commenter's opposition to a project that results in any impacts and requires mitigation is acknowledged and noted in the project record. An Air Quality/Health Risk Assessment was conducted for the project and is discussed in Section 3.13, Air Quality, of the RDEIR/SDEIS. As discussed in Section 1.2.2 in Chapter 1.0, Proposed Project, of the RDEIR/SDEIS, one of the purposes of the project is to improve air quality and public health. As discussed in Section 3.13, Air Quality, in the RDEIR/SDEIS, all build alternatives would generally improve air quality and reduce public health risk. Along the I-710 Corridor, air quality would be improved and public health risk would be reduced at most locations, but there would be a few near-roadway locations where there would be an increase in certain emissions. However, the build alternatives would decrease DPM emissions (the primary contributor to air quality-related cancer risk) compared to both the 2012 Baseline and the 2035 No Build Alternative. Although emissions would increase at some near-roadway locations, there would not be an increase in cancer risk compared to 2012 Baseline conditions. When compared to the 2035 No Build Alternative, both build alternatives would reduce cancer risk at most locations; however, a small increase in cancer risk would occur at some locations within 100 meters of I-710. For Alternative 5C, the maximum increase in risk would be approximately three in one million. The primary location of the increased risk for Alternative 5C would occur along a small portion of I-710 just south of SR-60. For Alternative 7, the increase in risk would be less than one in one million.

Should a build alternative be selected as the Preferred Alternative, Measures AQ-2 and AQ-3 would reduce exposure to emissions at near-roadway locations. Measure AQ-2 would provide for the installation of filters on the ventilation systems of schools near I-710. Measure AQ-3 would provide for the installation of solid barriers where soundwalls are not proposed and installation of vegetation to disperse pollution and reduce pollutant concentrations downwind. In addition, the build alternatives include programmatic components to help improve air quality and public health in the I-710 Corridor. The I-710 Corridor Community Health Benefit Program is a programmatic component of the build alternatives and would take the form of a grant program structured to provide corridor communities the opportunity to implement projects or outreach activities that would improve air quality and public health related to I-710 travel and goods movement. However, as stated in Response to Comment T-5-2, the No Build Alternative has been selected as the Preferred Alternative. Since a build alternative has not been selected as the Preferred Alternative, programmatic elements will not be implemented by Caltrans as the lead agency under CEQA and NEPA and as the owner/operator of the I-710 freeway. Please refer to Section 2.3.2.1 of this Final EIR/EIS for further details. Please also refer to Section 1.10 of this appendix for more information on the Community Health Benefit Program.

T-5-15

The commenter's support for the No Build Alternative is acknowledged and included in the project record. As stated in Response to Comment T-5-2, the No Build Alternative has been selected as the Preferred Alternative. Please refer to Section 1.1 of this appendix for a discussion on the identification of the Preferred Alternative.

T-5-16

Please refer to Section 1.2 of this appendix for more details regarding the length of the comment period for the RDEIR/SDEIS, as well as outreach efforts over the life of the project. In an effort to make the RDEIR/SDEIS materials as accessible as possible, Metro and Caltrans translated the RDEIR/SDEIS executive summary into Spanish, Khmer, Korean, Tagalog, and Vietnamese. In addition, Spanish interpreters, Spanish-speaking staff, and American Sign Language interpreters were made available at all three public hearings, with a Khmer interpreter also being made available at the August 31, 2017 hearing in Long Beach (because of the large Cambodian population in the immediate area).

T-5-17

Please refer to Section 1.2 of this appendix and Chapter 5.0, Comments and Coordination, of this Final EIR/EIS for more information regarding the outreach efforts ongoing through the life of the project. In addition to the advertising done in accordance with the requirements of CEQA and NEPA, individual postcards announcing the availability of the RDEIR/SDEIS and the public hearings were sent to residences and businesses within a 500-foot radius of the I-710 Corridor improvements proposed under the build alternatives.

T-5-18

Please refer to Section 1.2 of this appendix regarding the extension of the public comment period. Caltrans and Metro acknowledge the size and complexity of the RDEIR/SDEIS, and that is why summaries were provided as part of the document. These summaries were provided in several languages to ensure readers throughout the corridor had an opportunity to understand the information presented.

T-5-19

The commenter's concern regarding the displacement of the Long Beach Multi-Service Center is acknowledged and included in the project record. However, as stated in Response to Comment T-5-2, the No Build Alternative has been selected as the Preferred Alternative. Therefore, displacements would no longer be necessary.

T-5-20

The commenter's concern regarding the displacement or elimination of homeless services associated with the build alternatives is acknowledged and included in the project record.

However, as stated in Response to Comment T-5-2, the No Build Alternative has been selected as the Preferred Alternative. Therefore, displacements would no longer be necessary.

T-5-21

The commenter's support of a ZE alternative is acknowledged and included in the project record. As stated in Response to Comment T-5-2, the No Build Alternative has been selected as the Preferred Alternative. Please refer to Section 1.1 of this appendix for a discussion on the identification of the Preferred Alternative and Section 1.3 of this appendix for additional discussion of I-710 Clean Truck Program.

T-5-22

As discussed in Section 1.2.2 in Chapter 1.0, Proposed Project, of the RDEIR/SDEIS, two of the purposes of the project are to accommodate projected traffic volumes and to improve air quality and public health. As discussed in Section 5.5, Traffic and Transportation/Pedestrian and Bicycle Facilities, the build alternatives would improve traffic operations along the I-710 Corridor. Increases in traffic volumes along I-710 are anticipated due to regional growth in traffic. The I-710 Corridor Project build alternatives are proposed to accommodate projected traffic growth.

As discussed in Section 3.13, Air Quality, in the RDEIR/SDEIS, all build alternatives would generally improve air quality and reduce public health risk except at a few near-roadway locations. Should a build alternative be selected as the Preferred Alternative, Measures AQ-2 and AQ-3 would reduce exposure to emissions at near-roadway locations. Measure AQ-2 would provide for the installation of filters on the ventilation systems of schools near I-710. Measure AQ-3 would provide for installation of solid barriers where soundwalls are not proposed and installation of vegetation to disperse pollution and reduce pollutant concentrations downwind. Additionally, the I-710 Corridor Community Health Benefit Program is a programmatic component of the build alternatives and would take the form of a grant program structured to provide corridor communities the opportunity to implement projects or outreach activities that would improve air quality and public health related to I-710 travel and goods movement. However, as stated in Response to Comment T-5-2, the No Build Alternative has been selected as the Preferred Alternative. Since a build alternative has not been selected as the Preferred Alternative, programmatic elements will not be implemented by Caltrans as the lead agency under CEQA and NEPA and as the owner/operator of the I-710 freeway. Please refer to Section 2.3.2.1 of this Final EIR/EIS for further details. Please also refer to Section 1.10 for more information regarding the Community Health Benefit Program.

T-5-23

The commenter's concern regarding displacement of people as a result of the build alternatives is acknowledged and included in the project record. However, as stated in Response to Comment

T-5-2, the No Build Alternative has been selected as the Preferred Alternative. Therefore, displacements would no longer be necessary.

T-5-24

The commenter's concern regarding displacement of people as a result of the build alternatives is acknowledged and included in the project record. However, as stated in Response to Comment T-5-2, the No Build Alternative has been selected as the Preferred Alternative. Therefore, displacements would no longer be necessary.

T-5-25

The commenter's support of a ZE alternative is acknowledged and included in the project record. However, as stated in Response to Comment T-5-2, the No Build Alternative has been selected as the Preferred Alternative. Please refer to Section 1.1 of this appendix for a discussion on the identification of the Preferred Alternative and Section 1.3 of this appendix for additional discussion of the I-710 Clean Truck Program. As discussed in Section 1.2.2 in Chapter 1.0, Proposed Project, of the RDEIR/SDEIS, one of the purposes of the project is to improve air quality and public health. As discussed in Section 3.13, Air Quality, in the RDEIR/SDEIS, all build alternatives would generally improve air quality and reduce public health risk. Along the I-710 Corridor, air quality would be improved and public health risk would be reduced at most locations, but there would be a few near-roadway locations where there would be an increase in certain emissions. However, the build alternatives would decrease DPM emissions (the primary contributor to air quality-related cancer risk) compared to both the 2012 Baseline and the 2035 No Build Alternative. Although emissions would increase at some near-roadway locations, there would not be an increase in cancer risk compared to 2012 Baseline conditions. When compared to the 2035 No Build Alternative, both build alternatives would reduce cancer risk at most locations; however, a small increase in cancer risk would occur at some locations within 100 meters of I-710. For Alternative 5C, the maximum increase in risk would be approximately three in one million. The primary location of the increased risk for Alternative 5C would occur along a small portion of I-710 just south of SR-60. For Alternative 7, the increase in risk would be less than one in one million.

Should a build alternative be selected as the Preferred Alternative, Measures AQ-2 and AQ-3 would reduce exposure to emissions at near-roadway locations. Measure AQ-2 would provide for installation of filters on the ventilation systems of schools near I-710. Measure AQ-3 would provide for installation of solid barriers where soundwalls are not proposed and installation of vegetation to disperse pollution and reduce pollutant concentrations downwind. In addition, the build alternatives include programmatic components to help improve air quality and public health in the I-710 Corridor. The I-710 Corridor Community Health Benefit Program is a programmatic component of the build alternatives and would take the form of a grant program structured to provide corridor communities the opportunity to implement projects or outreach activities that would improve air quality and public health related to I-710 travel and goods movement. However,

as stated in Response to Comment T-5-2, the No Build Alternative has been selected as the Preferred Alternative. Since a build alternative has not been selected as the Preferred Alternative, programmatic elements will not be implemented by Caltrans as the lead agency under CEQA and NEPA and as the owner/operator of the I-710 freeway. Please refer to Section 2.3.2.1 of this Final EIR/EIS for further details. Please also refer to Section 1.10 of this appendix for more information regarding the Community Health Benefit Program.

T-5-26

As stated in Response to Comment T-5-2, the No Build Alternative has been selected as the Preferred Alternative. Therefore, implementation of local hire programs will no longer be applicable.

T-5-27

The commenter's concern regarding the displacement of the Long Beach Multi-Service Center is acknowledged and included in the project record. However, as stated in Response to Comment T-5-2, the No Build Alternative has been selected as the Preferred Alternative. Therefore, displacements would no longer be necessary.

T-5-28

Please refer to Section 1.2 of this appendix regarding the extension of the public comment period.

T-5-29

As discussed in Section 3.5.1 of the RDEIR/SDEIS, bicyclists and pedestrians were a consideration in the design of the build alternatives at all local interchanges, including diverging diamond interchange (DDI) configuration interchanges. Should a build alternative be selected as the Preferred Alternative, appropriate treatments would be applied to balance vehicle, bicycle, and pedestrian use. Should a build alternative be selected as the Preferred Alternative, Caltrans' *Complete Intersections: A Guide to Reconstructing Intersections and Interchanges for Bicyclists and Pedestrians* (Complete Intersections Guide) (2010) would be used during the design process, as would Caltrans' Design Information Bulletin (DIB) 90, *Diverging Diamond Interchange,* and the *Highway Design Manual* (6th edition, December 2018). Also, because sidewalks would be improved, bikeways and trails would be maintained, and bicycle and pedestrian connectivity would be enhanced, the I-710 Corridor Project build alternatives would improve conditions for pedestrian and bicycle travel. In addition, as discussed in Section 2.3, with respect to "Complete Streets" improvements associated with the build alternatives, the inclusion of pedestrian paths (sidewalks, curb ramps, and crosswalks) and sufficient outside shoulder width to accommodate Class II bikeways on local street crossings would be provided as part of local interchange modifications. However, as stated in Response to Comment T-5-2, the No Build Alternative has been selected as the Preferred Alternative and no changes to roadways and associated bikeways and pedestrian facilities will occur as a result of the build alternatives. Please refer to Section 1.1 of this appendix for further discussion on the identification of the Preferred Alternative.

T-5-30

As stated in Response to Comment T-5-2, the No Build Alternative has been selected as the Preferred Alternative. Please refer to Section 1.1 of this appendix for further discussion on the identification of the Preferred Alternative. Therefore, no changes to roadways and associated bikeways and pedestrian facilities will occur as result of the build alternatives. Please also refer to Response to Comment T-5-29 regarding pedestrian and bicycle facilities.

T-5-31

Please refer to Section 1.2 of this appendix and Chapter 5.0, Comments and Coordination, of this Final EIR/EIS for more information regarding the outreach efforts ongoing through the life of the project. Public input over the life of the project development process has been invaluable in revising and refining the build alternatives, programmatic elements, and mitigation measures outlined in this Final EIR/EIS and, as discussed in more detail in Section 1.1 of this appendix, one of several balancing factors in the identification of a Preferred Alternative.

T-5-32

The I-710 Corridor Project build alternatives span approximately 19 miles and over a dozen local jurisdictions in a dense, highly urbanized area of Los Angeles County. The I-710 freeway serves as a local connector as well as a goods movement connection to the rest of the world via the Ports of Los Angeles and Long Beach. Hence, development of the build alternatives has taken time to ensure that all the necessary stakeholders have been appropriately consulted and coordinated with and to ensure that the public participation components of applicable State and Federal laws have been complied with. The input provided by stakeholders has been invaluable in creating build alternatives that are sensitive to the needs of the communities and also addressing the transportation needs of the I-710. For more information regarding the public outreach process of the project, please refer to Section 1.2 of this appendix.

T-5-33

It is Caltrans' goal that environmental documents are written with their audience in mind; that is, the general public. It can be difficult to balance that need with the often highly technical information and analyses contained within them and the requirements for disclosure under CEQA and NEPA. Part of the required review process for all Caltrans environmental documents is a "Technical Edit" Review which ensures, among other things, that plain language be used that can be understood by both the public and decision-makers. The I-710 Corridor Project RDEIR/SDEIS and this Final EIR/EIS were subject to this review, and the Project Team will continue to look for ways to simplify language that may be confusing or highly technical. In an effort to make information as accessible as possible, specialists on the Project Team were available at each public hearing to answer questions and clarify information.

T-5-34

Both CEQA and NEPA require impacts to the human environment be assessed as a result of the project in addition to assessing impacts to the physical and biological environment, and that information can be found the RDEIR/SDEIS and this Final EIR/EIS in Section 3.1, Land Use, Section 3.2, Growth, Section 3.3, Community Impacts, Section 3.4, Utilities and Emergency Services, Section 3.5, Traffic and Transportation/Pedestrian and Bicycle Facilities, Section 3.6, Visual/Aesthetics, and Section 3.7, Cultural Resources. As stated in Response to Comment T-5-2, the No Build Alternative has been selected as the Preferred Alternative. Therefore, no impacts to the human or physical environment will occur.

T-5-35

Please refer to Section 1.8 of this appendix for detailed information on how the I-710 Corridor Project complied with Motion 22.1. Regarding zero emissions, the RDEIR/SDEIS analyzed Alternative 7, which included a "Clean-Emission Freight Corridor" that would restrict the use of the freight corridor to ZE/NZE trucks rather than conventionally powered diesel trucks. The build

alternatives include programmatic elements which includes a I-710 Clean Truck Program. However, as stated in Response to Comment T-5-2, the No Build Alternative has been selected as the Preferred Alternative. Since a build alternative has not been selected as the Preferred Alternative, programmatic elements will not be implemented by Caltrans as the lead agency under CEQA and NEPA and as the owner/operator of the I-710 freeway. Please refer to Section 2.3.2.1 of this Final EIR/EIS for further details. Please also refer to Section 1.3 of this appendix for additional discussion of the I-710 Clean Truck Program.

T-5-36

The commenter's support of a ZE alternative is acknowledged and included in the project record. Please refer to Section 1.1 of this appendix for a discussion on the identification of the Preferred Alternative and Section 1.3 of this appendix for additional discussion of the I-710 Clean Truck Program.

T-5-37

The I-710 Corridor Project build alternatives would utilize local hire programs. In addition, the build alternatives include programmatic components that would help improve air quality and public health in the I-710 Corridor. The I-710 Corridor Community Health Benefit Program is a programmatic component of the build alternatives and would take the form of a grant program structured to provide corridor communities the opportunity to implement projects or outreach activities that would improve air quality and public health related to I-710 travel and goods movement. However, since a build alternative has not been selected as the Preferred Alternative, the local hire program and the programmatic elements proposed as part of the build alternatives will not be implemented by Caltrans as the lead agency under CEQA and NEPA and as the owner/operator of the I-710 freeway. Please refer to Section 2.3.2.1 of this Final EIR/EIS for further details. Please also refer to Section 1.10 of this appendix for more information regarding the Community Health Benefit Program.

T-5-38

The commenter's support of a ZE alternative is acknowledged and included in the project record. However, as stated in Response to Comment T-5-2, the No Build Alternative has been selected as the Preferred Alternative. Please refer to Section 1.1 of this appendix for a discussion on the identification of the Preferred Alternative and Section 1.3 of this appendix for additional discussion of the I-710 Clean Truck Program.

T-5-39

The commenter's concern regarding displacement of people as a result of the build alternatives is acknowledged and included in the project record. As stated in Response to Comment T-5-2,

the No Build Alternative has been selected as the Preferred Alternative. Therefore, displacements would no longer be necessary.

T-5-40

The commenter's support of a ZE alternative is acknowledged and included in the project record. However, as stated in Response to Comment T-5-2, the No Build Alternative has been selected as the Preferred Alternative. Please refer to Section 1.1 of this appendix for a discussion on the identification of the Preferred Alternative and Section 1.3 of this appendix for additional discussion of the I-710 Clean Truck Program.

T-5-41

The commenter's concern regarding displacement of people as a result of the build alternatives is acknowledged and included in the project record. As stated in Response to Comment T-5-2, the No Build Alternative has been selected as the Preferred Alternative. Therefore, displacements would no longer be necessary.

T-5-42

Health risk was considered as part of the environmental analysis in the RDEIR/SDEIS. As discussed in Section 1.2.2 in Chapter 1.0, Proposed Project, of the RDEIR/SDEIS, one of the purposes of the project is to improve air quality and public health. As discussed in Section 3.13, Air Quality, in the RDEIR/SDEIS, all build alternatives would generally improve air quality and reduce public health risk. Along the I-710 Corridor, air quality would be improved and public health risk would be reduced at most locations, but there would be a few near-roadway locations where there would be an increase in certain emissions. However, the build alternatives would decrease DPM emissions (the primary contributor to air-quality-related cancer risk) compared to both the 2012 Baseline and the 2035 No Build Alternative. Although emissions would increase at some near-roadway locations, there would not be an increase in cancer risk compared to 2012 Baseline conditions. When compared to the 2035 No Build Alternative, both build alternatives would reduce cancer risk at most locations; however, a small increase in cancer risk would occur at some locations within 100 meters of I-710. For Alternative 5C, the maximum increase in risk would be approximately three in one million. The primary location of the increased risk for Alternative 5C would occur along a small portion of I-710 just south of SR-60. For Alternative 7, the increase in risk would be less than one in one million.

Should a build alternative be selected as the Preferred Alternative, Measures AQ-2 and AQ-3 would reduce exposure to emissions at near-roadway locations. Measure AQ-2 would provide for the installation of filters on the ventilation systems of schools near I-710. Measure AQ-3 would provide for the installation of solid barriers where soundwalls are not proposed and installation of vegetation to disperse pollution and reduce pollutant concentrations downwind. In addition, the build alternatives include programmatic components to help improve air quality and public health

in the I-710 Corridor. The I-710 Corridor Community Health Benefit Program is a programmatic component of the build alternatives and would take the form of a grant program structured to provide corridor communities the opportunity to implement projects or outreach activities that would improve air quality and public health related to I-710 travel and goods movement. However, as stated in Response to Comment T-5-2, the No Build Alternative has been selected as the Preferred Alternative. Since a build alternative has not been selected as the Preferred Alternative, programmatic elements will not be implemented by Caltrans as the lead agency under CEQA and NEPA and as the owner/operator of the I-710 freeway. Please refer to Section 2.3.2.1 of this Final EIR/EIS for further details. Please also refer to Section 1.10 of this appendix for more information regarding the Community Health Benefit Program.

T-5-43

Please refer to Section 1.2 of this appendix regarding the extension of the public comment period.

T-5-44

Please refer to Section 1.2 of this appendix and Chapter 5.0, Comments and Coordination, of the Final EIR/EIS for more information regarding the outreach efforts ongoing through the life of the project. Although the use of postcard notification was limited to a 500-foot radius of the I-710 freeway, other methods of notification served a much larger area, such as advertisements in public newspapers.

T-5-45

Please refer to Section 1.9 of this appendix for more information regarding the Alameda Corridor and its interface with the I-710 Corridor. However, as stated in Response to Comment T-5-2, the No Build Alternative has been selected as the Preferred Alternative.

T-5-46

According to cargo forecasts provided by the San Pedro Bay Ports for the I-710 studies, the future horizon year forecast for cargo volume at the two Ports is projected to be nearly 41.4 million twenty-foot equivalents (TEUs) by year 2035, compared to 14.1 million in the base year of 2012. Maximum goods movement by rail is an underlying assumption of all the alternatives analyzed in the I-710 Corridor Project EIR/EIS.

By 2035, it is estimated that 40 percent of Port container traffic will be carried by rail, either on-dock (30.5 percent) where trains are loaded and formed within the marine terminals, or at near-dock/off-dock rail facilities (9.5 percent) where containers are carried by truck to rail facilities near the Ports or within the Los Angeles region. This compares with approximately 26 percent on-dock rail in 2012. While the percentage increase in on-dock rail seems small, due to the large forecast

increase in total container volumes handled by the Ports, the on-dock rail container volume itself is forecast to increase by over 300 percent.

With regard to future demand for cargo containers to be transported to and from the Ports by rail, the *Final Technical Memorandum – I-710 Railroad Goods Movement Study* (February 2009) found that although the rail operators have implemented a variety of operational strategies to meet container demand from the Ports, including using longer trains with higher utilization rates, the freight railroad system alone will not be able to handle the total container demand.

There are constraints that limit the ability of the overall rail system to handle more freight beyond a 40 percent share in the future. While there is a clear desire to increase the percentage of on-dock rail, there is not enough physical space within the marine terminals to load and build trains to meet the projected demand without further physical expansion of the Ports. The San Pedro Bay Ports have recently undertaken additional rail studies to examine ways to further maximize efficiencies of terminal operations in order to boost train operations to the greatest extent feasible with their goal of achieving 30-35 percent of total container volume being handled on-dock.

However, the primary reason why on-dock rail cannot serve all of the Port cargo trips within the region is because many of these trips (60 percent of the cargo in 2035) are either true local truck trips or they are transload-secondary trips. Freight rail is a less expensive mode of transporting cargo containers destined for inland locations more than 550 miles from the Ports. On the other hand, shorter, highly dispersed trips throughout the SCAG region (i.e., true local truck trips, transload-secondary truck trips) can only be served by trucks using the region's freeway and roadway network.

A true local truck trip is a truck trip from the Ports that carries a cargo container to a local warehouse or distribution center or retail store within the SCAG region. Approximately 80 percent of the Port truck trips (i.e., those trips that originate at the Ports) are destined to locations within 20 miles of the Ports; 16 percent are headed to the Inland Empire or Orange County, and the remaining 6 percent to North Los Angeles County/San Gabriel Valley or other local destinations within the region.

Transloading is when cargo, which arrives in international containers, is transferred to domestic containers at transload centers or warehousing located throughout the SCAG region. Once transloaded, cargo within domestic trailers is carried by truck to other destinations within the region, or it is carried by truck to intermodal (off-dock) rail yards within the region for transport by rail to destinations outside of Southern California.

T-5-47

The commenter's support of a ZE alternative is acknowledged and included in the project record. However, as stated in Response to Comment T-5-2, the No Build Alternative has been selected

as the Preferred Alternative. Please refer to Section 1.1 of this appendix for a discussion on the identification of the Preferred Alternative and Section 1.3 of this appendix for additional discussion of the I-710 Clean Truck Program.

T-5-48

The infrastructure improvements proposed under both build alternatives would accommodate ZE/NZE passenger vehicles and trucks in the exact same manner in which the current gasoline-powered vehicles are accommodated. In addition to infrastructure, the I-710 Clean Truck Program (referred to in the RDEIR/SDEIS as the I-710 Corridor Project Zero Emission/Near Zero Emission Truck Technology Deployment Program), which is a programmatic element of the build alternatives, would subsidize the purchase and use of ZE/NZE heavy-duty trucks within the I-710 Corridor. Transit and bicycle/pedestrian improvements, including a programmatic transit element, are proposed as part of the build alternatives, but transit and bicycle/pedestrian improvements alone would not meet the purpose and need for the project, specifically the need to address goods movement within the corridor. However, as stated in Response to Comment T-5-2, the No Build Alternative has been selected as the Preferred Alternative. Since a build alternative has not been selected as the Preferred Alternative, programmatic elements will not be implemented by Caltrans as the lead agency under CEQA and NEPA and as the owner/operator of the I-710 freeway. Please refer to Section 2.3.2.1 of this Final EIR/EIS for further details.

T-5-49

Please refer to Section 1.2 of this appendix regarding the extension of the public comment period.

T-5-50

The commenter's support of a ZE alternative is acknowledged and included in the project record. However, as stated in Response to Comment T-5-2, the No Build Alternative has been selected as the Preferred Alternative. Please refer to Section 1.1 of this appendix for a discussion on the identification of the Preferred Alternative and Section 1.3 of this appendix for additional discussion of the I-710 Clean Truck Program.

T-5-51

The commenter states that displacements must be avoided whenever possible and, if not avoidable, assistance should be provided to those affected by displacements. Design refinements to minimize acquisition of property and displacements under the build alternatives have been ongoing since the start of project development. As stated in Response to Comment T-5-2, the No Build Alternative has been selected as the Preferred Alternative. Therefore, displacements would no longer be necessary.

T-5-52

As stated in Response to Comment T-5-2, the No Build Alternative has been selected as the Preferred Alternative. Therefore, implementation of local hire programs will no longer be applicable.

T-5-53

The commenter's support of a ZE alternative is acknowledged and included in the project record. However, as stated in Response to Comment T-5-2, the No Build Alternative has been selected as the Preferred Alternative. Please refer to Section 1.1 of this appendix for a discussion on the identification of the Preferred Alternative and Section 1.3 of this appendix for additional discussion of the I-710 Clean Truck Program.

T-5-54

Please refer to Section 1.2 of this appendix regarding the extension of the public comment period.

T-5-55

The commenter's support of a ZE alternative is acknowledged and included in the project record. Please refer to Section 1.1 of this appendix for a discussion on the identification of the Preferred Alternative and Section 1.3 of this appendix for additional discussion of the I-710 Clean Truck Program. As discussed in Section 1.2.2 in Chapter 1.0, Proposed Project, of the RDEIR/SDEIS, one of the purposes of the project is to improve air quality and public health. As discussed in Section 3.13, Air Quality, in the RDEIR/SDEIS, all build alternatives would generally improve air quality and reduce public health risk. Along the I-710 Corridor, air quality would be improved and public health risk would be reduced at most locations, but there would be a few near-roadway locations where there would be an increase in certain emissions. However, the build alternatives would decrease DPM emissions (the primary contributor to air-quality-related cancer risk) compared to both the 2012 Baseline and the 2035 No Build Alternative. Although emissions would increase at some near-roadway locations, there would not be an increase in cancer risk compared to 2012 Baseline conditions. When compared to the 2035 No Build Alternative, both build alternatives would reduce cancer risk at most locations; however, a small increase in cancer risk would occur at some locations within 100 meters of I-710. For Alternative 5C, the maximum increase in risk would be approximately three in one million. The primary location of the increased risk for Alternative 5C would occur along a small portion of I-710 just south of SR-60. For Alternative 7, the increase in risk would be less than one in one million.

Should a build alternative be selected as the Preferred Alternative, Measures AQ-2 and AQ-3 would reduce exposure to emissions at near-roadway locations. Measure AQ-2 would provide for the installation of filters on the ventilation systems of schools near I-710. Measure AQ-3 would provide for the installation of solid barriers where soundwalls are not proposed and installation of vegetation to disperse pollution and reduce pollutant concentrations downwind. In addition, the build alternatives include programmatic components to help improve air quality and public health

in the I-710 Corridor. The I-710 Corridor Community Health Benefit Program is a programmatic component of the build alternatives and would take the form of a grant program structured to provide corridor communities the opportunity to implement projects or outreach activities that would improve air quality and public health related to I-710 travel and goods movement. However, as stated in Response to Comment T-5-2, the No Build Alternative has been selected as the Preferred Alternative. Since a build alternative has not been selected as the Preferred Alternative, programmatic elements will not be implemented by Caltrans as the lead agency under CEQA and NEPA and as the owner/operator of the I-710 freeway. Please refer to Section 2.3.2.1 of this Final EIR/EIS for further details. Please also refer to Section 1.10 of this appendix for more detailed information on the Community Health Benefit Program.

T-5-56

Please refer to Section 1.2 of this appendix regarding the extension of the public comment period.

T-5-57

Generally, long-term benefits of the I-710 Corridor Project build alternatives would include improvements to access and congestion relief on highways and local roadways. Although it would be possible that some freeway users, such as those originating in the Wrigley area of Long Beach, would experience longer travel times to access the freeway system, travel times on I-710 would be shorter. The build alternatives proposed improvements to remove the multiple bottlenecks at the I-710/I-405 freeway-to-freeway interchanges would require the removal of the Pacific Ave. and Wardlow Rd. ramps. However, as stated in Response to Comment T-5-2, the No Build Alternative has been selected as the Preferred Alternative. Please refer to Section 1.1 of this appendix for a discussion on the identification of the Preferred Alternative.

T-5-58

The multi-level feature described by the commenter is the freight-only corridor proposed under Alternative 7 which would be elevated in several places along the I-710 Corridor. Alternative 7 has not been identified as the Preferred Alternative. Multi-level, grade-separated roadway structures are common features at freeway-to-freeway interchanges. To address existing safety and operational deficiencies at these locations, these multi-level structures were integral to all build alternatives that were considered. However, as stated in Response to Comment T-5-2, the No Build Alternative has been selected as the Preferred Alternative and these multi-level structures will not be constructed.

T-5-59

Please refer to Section 1.2 of this appendix regarding the extension of the public comment period.

T-5-60

The commenter's concern regarding the potential displacement of the Multi-Service Center and Bell Shelter is acknowledged and included in the project record. As stated in Response to Comment T-5-2, the No Build Alternative has been selected as the Preferred Alternative. Therefore, displacements would no longer be necessary.

T-5-61

As stated in Response to Comment T-5-2, the No Build Alternative has been selected as the Preferred Alternative. Therefore, implementation of local hire programs will no longer be applicable. Please refer to Section 1.8 of this appendix for more information on Motion 22.1.

T-5-62

The I-710 Corridor serves many different kinds of trucks, headed to a wide variety of land uses distributed throughout the I-710 Corridor Study Area and within the greater Los Angeles metropolitan area. While much of the cargo that moves through the Ports is directly loaded onto rail at on-dock and near-dock rail facilities, many freight containers have local destinations throughout the region. Approximately 80 percent of the Port trucks are traveling to locations within 20 miles of the Ports and must rely on the local and regional freeway/roadway network to complete their journeys. The widely dispersed nature of the origin and destination points for trucks utilizing I-710 is mainly governed by the numerous locations of the land uses throughout the region – transload facilities, intermodal facilities, warehousing, industrial, manufacturing, and commercial uses - that receive and distribute goods. With regard to the desire for ZE vehicles, the I-710 Corridor Project build alternatives would include a program that would deploy ZE/NZE trucks on I-710, which would reduce DPM on the I-710 freeway relative to the No Build conditions. However, as stated in Response to Comment T-5-2, the No Build Alternative has been selected as the Preferred Alternative. Since a build alternative has not been selected as the Preferred Alternative, programmatic elements will not be implemented by Caltrans as the lead agency under CEQA and NEPA and as the owner/operator of the I-710 freeway. Please refer to Section 2.3.2.1 of this Final EIR/EIS for further details. Please also refer to Section 1.3 of this appendix and Response to Comment T-5-46 regarding the I-710 Clean Truck Program.

T-5-63

As discussed in Section 1.2.2 in Chapter 1.0, Proposed Project, of the RDEIR/SDEIS, one of the purposes of the project is to improve air quality and public health. As discussed in Section 3.13, Air Quality, in the RDEIR/SDEIS, all build alternatives would generally improve air quality and reduce public health risk except at a few near-roadway locations. Should a build alternative be selected as the Preferred Alternative, Measures AQ-2 and AQ-3 would reduce exposure to emissions at near-roadway locations. Measure AQ-2 would provide for the installation of filters on the ventilation systems of schools near I-710. Measure AQ-3 would require installation of solid

barriers where soundwalls are not proposed and installation of vegetation to disperse pollution and reduce pollutant concentrations downwind. Additionally, the I-710 Corridor Community Health Benefit Program is a programmatic component of the build alternatives and would take the form of a grant program structured to provide corridor communities the opportunity to implement projects or outreach activities that would improve air quality and public health related to I-710 travel and goods movement. However, as stated in Response to Comment T-5-2, the No Build Alternative has been selected as the Preferred Alternative. Since a build alternative has not been selected as the Preferred Alternative, Measures AQ-2 and AQ-3 will not be implemented and the Community Health Benefit Program will not be implemented by Caltrans as the lead agency under CEQA and NEPA and as the owner/operator of the I-710 freeway. Please refer to Section 2.3.2.1 of this Final EIR/EIS for further details. Please refer to Section 1.10 of this appendix for more detailed information regarding the Community Health Benefit Program.

T-5-64

The commenter's support of a ZE alternative is acknowledged and included in the project record. However, as stated in Response to Comment T-5-2, the No Build Alternative has been selected as the Preferred Alternative. Please refer to Section 1.1 of this appendix for a discussion on the identification of the Preferred Alternative and Section 1.3 of this appendix for additional discussion of the I-710 Clean Truck Program. In addition, please refer to Response to Comment T-5-63.

T-5-65

Please refer to Section 1.2 of this appendix regarding the extension of the public comment period.

T-5-66

Please refer to Section 1.2 of this appendix and Chapter 5.0, Comments and Coordination, of the Final EIR/EIS for more information regarding the outreach efforts ongoing through the life of the project. Public input over the life of the project development process has been invaluable in revising and refining the build alternatives, programmatic elements, and mitigation measures outlined in the Final EIR/EIS and, as discussed in more detail in Section 1.1 of this appendix, one of several balancing factors in the identification of a Preferred Alternative. The I-710 Corridor Project Team is aware that the RDEIR/SDEIS and Final EIR/EIS contain technical information and analyses and have held hundreds of meetings over the life of the project to brief local elected officials, community groups, local committees, and others about the project and its potential impacts.

T-5-67

As discussed in Section 2.3.2.2, Alternative 7: I-710 Modernization Plus Freight Corridor (Zero-Emissions Vehicles), Alternative 7 also included the assumption that all trucks using the freight corridor would have an automated vehicle control system that would steer, brake, and accelerate

the trucks under computer control while traveling on the freight corridor. Because the future technology cannot be predicted with certainty, the exact technology has not been determined. Alternative 7 was analyzed in the RDEIR/SDEIS as ZE "technology neutral" so that it would be able to accommodate at least one type of ZE heavy-duty truck that is in commercial mass production before the project would complete final design (should Alternative 7 be selected as the Preferred Alternative). Because the design Alternative 5C does not include a separate dedicated freight-only corridor, platooning strategies like the ones outlined in the comment are not feasible. However, as stated in Response to Comment T-5-2, the No Build Alternative has been selected as the Preferred Alternative. Please refer to Section 1.1 of this appendix for a discussion on the identification of the Preferred Alternative.

T-5-68

Please refer to Section 1.2 of this appendix regarding the extension of the public comment period.

T-5-69

As stated in Response to Comment T-5-2, the No Build Alternative has been selected as the Preferred Alternative. Therefore, implementation of local hire programs will no longer be applicable.

T-5-70

The commenter's concern regarding displacement of people as a result of the build alternatives is acknowledged and included in the project record. As stated in Response to Comment T-5-2, the No Build Alternative has been selected as the Preferred Alternative. Therefore, displacements would no longer be necessary.

T-5-71

The commenter's support of ZE technology is acknowledged and included in the project record. However, as stated in Response to Comment T-5-2, the No Build Alternative has been selected as the Preferred Alternative. Please refer to Section 1.1 of this appendix for a discussion on the identification of the Preferred Alternative and Section 1.3 of this appendix for additional discussion of the I-710 Clean Truck Program.

T-5-72

Please refer to Section 1.2 of this appendix regarding the extension of the public comment period.

T-5-73

As discussed in Chapter 2.0, Project Alternatives, and Section 2.3.2.1 of this Final EIR/EIS, the build alternatives would include widening of existing bridges and overcrossings to accommodate

bicycle and pedestrian traffic. Improvements would include ADA-compliant sidewalks and sufficient room for Class II bicycle lanes. The appropriate safety lighting would be provided at night on the modified and proposed pedestrian and bicycle facilities of the build alternatives. However, as stated in Response to Comment T-5-2, the No Build Alternative has been selected as the Preferred Alternative and therefore improvements to pedestrian and bicycle facilities will not be implemented. Please refer to Section 1.1 of this appendix for a discussion on the identification of the Preferred Alternative.

T-5-74

The commenter's support of ZE trucks is acknowledged and included in the project record. However, as stated in Response to Comment T-5-2, the No Build Alternative has been selected as the Preferred Alternative. Please refer to Section 1.1 of this appendix for a discussion on the identification of the Preferred Alternative and Section 1.3 of this appendix for additional discussion of the I-710 Clean Truck Program.

T-5-75

Please refer to Section 1.2 of this appendix regarding the extension of the public comment period.

T-5-76

As stated in Response to Comment T-5-2, the No Build Alternative has been selected as the Preferred Alternative. Please refer to Section 1.1 of this appendix for a discussion on the identification of the Preferred Alternative. Please also refer to Section 1.9 of this appendix for more information regarding the Alameda Corridor and its interface with the I-710 Corridor.

T-5-77

It should be clarified that the use of the terms safety and public safety within the context of the I-710 Corridor Project purpose and need statement refers to improving traffic conditions and the geometric design of the roadway related to collisions and truck/auto mix, and is not related to air quality. As discussed in Section 1.2.2 in Chapter 1.0, Proposed Project, of the RDEIR/SDEIS, another purpose of the project is to improve air quality and public health. As discussed in Section 3.13, Air Quality, in the RDEIR/SDEIS, all build alternatives would generally improve air quality and reduce public health risk. Along the I-710 Corridor, air quality would be improved and public health risk would be reduced at most locations, but there are a few near-roadway locations where there would be an increase in certain emissions.

Should a build alternative be selected as the Preferred Alternative, Measures AQ-2 and AQ-3 would reduce exposure to emissions at near-roadway locations. Measure AQ-2 would provide for the installation of filters on the ventilation systems of schools near I-710. Measure AQ-3 would provide for installation of solid barriers where soundwalls are not proposed and installation of

vegetation to disperse pollution and reduce pollutant concentrations downwind. In addition, the build alternatives include programmatic components to help improve air quality and public health in the I-710 Corridor. The I-710 Corridor Community Health Benefit Program is a programmatic component of the build alternatives and would take the form of a grant program structured to provide corridor communities the opportunity to implement projects or outreach activities that would improve air quality and public health related to I-710 travel and goods movement. However, as stated in Response to Comment T-5-2, the No Build Alternative has been selected as the Preferred Alternative. Since a build alternative has not been selected as the Preferred Alternative, Measures AQ-2 and AQ-3 will not be implemented, and the Community Health Benefit Program will not be implemented by Caltrans as the lead agency under CEQA and NEPA and as the owner/operator of the I-710 freeway. Please refer to Section 2.3.2.1 of this Final EIR/EIS for further details. Please also refer to Section 1.10 of this appendix for more information regarding the Community Health Benefit Program.

T-5-78

In order to assist local officials in disseminating information to their constituents, the I-710 Corridor Project Team conducted briefings with local elected officials upon request on the project and potential impacts over the life of the project development efforts.

T-5-79

The commenter's support of zero emissions is acknowledged and included in the project record. However, as stated in Response to Comment T-5-2, the No Build Alternative has been selected as the Preferred Alternative. Please refer to Section 1.1 of this appendix for a discussion on the identification of the Preferred Alternative and Section 1.3 of this appendix for additional discussion of the I-710 Clean Truck Program.

T-5-80

Please refer to Response to Comment T-5-79 regarding the zero-emissions freight corridor.

T-5-81

Please also refer to Response to Comment T-5-79 regarding the zero-emissions freight corridor. As discussed in Section 1.2.2 in Chapter 1.0, Proposed Project, of the RDEIR/SDEIS, one of the purposes of the project is to improve air quality and public health. The I-710 Corridor Community Health Benefit Program is a programmatic component of the build alternatives and would take the form of a grant program structured to provide corridor communities the opportunity to implement projects or outreach activities that would improve air quality and public health related to I-710 travel and goods movement. However, as stated in Response to Comment T-5-2, the No Build Alternative has been selected as the Preferred Alternative. Since a build alternative has not been selected as the Preferred Alternative, programmatic elements will not be implemented by Caltrans

as the lead agency under CEQA and NEPA and as the owner/operator of the I-710 freeway. Please refer to Section 2.3.2.1 of this Final EIR/EIS for further details. Please also refer to Section 1.10 of this appendix for more detailed information regarding the Community Health Benefit Program.

T-5-82

Please refer to Section 1.2 of this appendix and Chapter 5.0, Comments and Coordination, of the Final EIR/EIS for more information regarding the outreach efforts ongoing through the life of the project. In addition to the advertising done in accordance with the requirements of CEQA and NEPA, individual postcards announcing the availability of the RDEIR/SDEIS and the public hearings were sent to residences and businesses within a 500-foot radius of the improvements proposed for the build alternatives.

T-5-83

Please refer to Section 1.3 of this appendix for more information regarding the I-710 Clean Truck Program. As was described in more detail in Section 1.2.1.2 of the RDEIR/SDEIS, based on an examination of existing travel conditions and projected future traffic (2035), the I-710 Corridor currently experiences, and will continue to experience, capacity and operational problems due to a number of interrelated factors, including, but not limited to, lack of major facility improvements, extensive population growth in the area, the containerization of ocean-going freight, and significant growth in international trade. Therefore, as indicated in Section 1.2.2.1 of the RDEIR/SDEIS, the proposed build alternatives intend to accommodate projected traffic volumes and to address increased traffic volumes resulting from projected growth in population, employment, and economic activities related to goods movement. Truck traffic backing up into communities in the I-710 Corridor is one of the issues that the build alternatives were designed to address so that there would be an improvement in traffic flow and reduction in travel times on I-710, and would thus attract more truck trips to use I-710 rather than city streets.

Additionally, the air quality analyses performed for the RDEIR/SDEIS account for pollutant emissions from both autos and trucks, as well as the effects of traffic congestion and associated idling.

However, as stated in Response to Comment T-5-2, the No Build Alternative has been selected as the Preferred Alternative improvements to circulation resulting from the build alternatives would not be realized. Please refer to Section 1.1 of this appendix for a discussion on the identification of the Preferred Alternative.

T-5-84

The Project Team thanks you for your comments. Caltrans and Metro acknowledge the fact that its proximity to the Ports makes the I-710 Corridor area attractive to trucking and warehousing

operations; however, as transportation agencies, Caltrans and Metro do not have the authority to regulate the wages paid by those industries. Also, as stated in Response to Comment T-5-2, the No Build Alternative has been selected as the Preferred Alternative.

T-5-85

Caltrans and Metro acknowledge that the I-710 Corridor is home to a substantial number of minority and low-income communities. In order to address potentially disproportionate impacts to these environmental justice populations resulting from the build alternatives, Measures C-6, C-7 and C-8 (please refer to Section 3.3.3.7 of this Final EIR/EIS) were proposed. In addition, the Community Health Benefit Program proposed as a programmatic element of the build alternatives would give funding preference to projects benefitting environmental justice populations nearest the I-710 freeway facility. However, as stated in Response to Comment T-5-2, the No Build Alternative has been selected as the Preferred Alternative. Since a build alternative has not been selected as the Preferred Alternative, Measures C-6, C-7, and C-8 will not be implemented and the Community Health Benefit Program will not be implemented by Caltrans as the lead agency under CEQA and NEPA and as the owner/operator of the I-710 freeway. Please refer to Section 2.3.2.1 of this Final EIR/EIS for further details. Please also refer to Section 1.10 of this appendix for more detailed information regarding the Community Health Benefit Program.

Additionally, it should be noted that Caltrans is legally obligated to sell the State-owned homes along what is known as the “Meridian Corridor” by Assembly Bill 580, which codified amendments to California Government Code 54237 in 2016.

T-5-86

It is unclear from the comment where these stacked containers are occurring within the I-710 Corridor area. However, container storage is not allowed within State right-of-way. Caltrans and Metro are sympathetic to the issues raised in the comment, and the commenter is encouraged to contact the local jurisdiction to resolve these issues. Please refer to Response to Comment T-5-83 for more information regarding traffic within the corridor. However, as stated in Response to Comment T-5-2, the No Build Alternative has been selected as the Preferred Alternative. Therefore, no impacts will occur as a result of the build alternatives.

Reported By: Vanna Saavedra, CSR
CSR NO. 14030

LONG BEACH, CALIFORNIA, THURSDAY, AUGUST 31, 2017;

6:40 P.M.

-OOO-

MS. SYRACOPOULOS: So I'm with Bikeable Communities. We're a cycling nonprofit here in Long Beach and we would like to see alternative bike and pedestrian facilities specifically on Del Amo, PCH, and Anaheim. The separate bike and pedestrian facilities at Hill and Spring will help but are not sufficient. Bicyclists and pedestrians will not and should not be expected to go miles out of their way to be able to safely cross a street. We propose grade separated facilities at Anaheim, PCH, and Del Amo. With PCH, complete streets Class 4 connections on PCH extending between Pacific Avenue on the east and Cabrillo High School on the west. On Anaheim, complete streets Class 4 connections from Daisy Avenue to the east to Ninth Street on the west. And on Del Amo, complete streets Class 4 connection to the LA River on the east and Metro Blue line on the west. That's it. T-6-1

MS. SHOAG: I am just asking for a 120-day extension so there's time for everyone to review all of the materials. T-6-2

(Whereupon, the comment period closed at 8:44 P.M..)

REPORTER'S CERTIFICATE

I, VANNA SAAVEDRA, CSR No. 14030, Certified Shorthand Reporter for the State of California, do hereby certify;

That said proceeding was taken before me at the time and place set forth and was taken down by me in shorthand and thereafter reduced to computerized transcription under my direction and supervision; and I hereby certify the foregoing is a full, true, and correct transcript of my shorthand notes so taken.

I further certify that I am neither counsel for nor related to any party to said action nor in any way interested in the outcome thereof.

Witness my hand this 6th day of September, 2017.

VANNA SAAVEDRA
Certified Shorthand Reporter No. 14030

T-6-1

As discussed in Section 3.5.1 of the RDEIR/SDEIS, bicyclists and pedestrians were a consideration in the design of the build alternatives at of all local interchanges, including diverging diamond interchange (DDI) configuration interchanges. Should a build alternative be selected as the Preferred Alternative, appropriate treatments would be applied to balance vehicle, bicycle, and pedestrian use. Should a build alternative be selected as the Preferred Alternative, Caltrans' *Complete Intersections: A Guide to Reconstructing Intersections and Interchanges for Bicyclists and Pedestrians* (Complete Intersections Guide) (2010) would be used during the design process for either of the build alternatives, as would Caltrans' Design Information Bulletin (DIB) 90, *Diverging Diamond Interchange,* and the *Highway Design Manual* (6th edition, December 2018). Also, because sidewalks would be improved, bikeways and trails would be maintained, and bicycle and pedestrian connectivity would be enhanced, the I-710 Corridor Project build alternatives would improve conditions for pedestrian and bicycle travel. In addition, as discussed in Section 2.3, with respect to "Complete Streets" improvements associated with the build alternatives, the inclusion of pedestrian paths (sidewalks, curb ramps, and crosswalks) and sufficient outside shoulder width to accommodate Class II bikeways on local street crossings would be provided as part of local interchange modifications. However, Caltrans, as lead agency under CEQA and NEPA (as assigned by the Federal Highway Administration [FHWA]), in cooperation with the Los Angeles County Metropolitan Transportation Authority (Metro), has identified Alternative 1 (No Build) as the Preferred Alternative and therefore, improvements to pedestrian and bicycle facilities will not be implemented. Please refer to Section 1.1 of this appendix for further discussion on the identification of the Preferred Alternative. Since the No Build Alternative has been selected as the Preferred Alternative, no changes to roadways and associated bikeways and pedestrian facilities will occur as result of the build alternatives.

T-6-2

Please refer to Section 1.2 of this appendix regarding the extension of the public comment period.

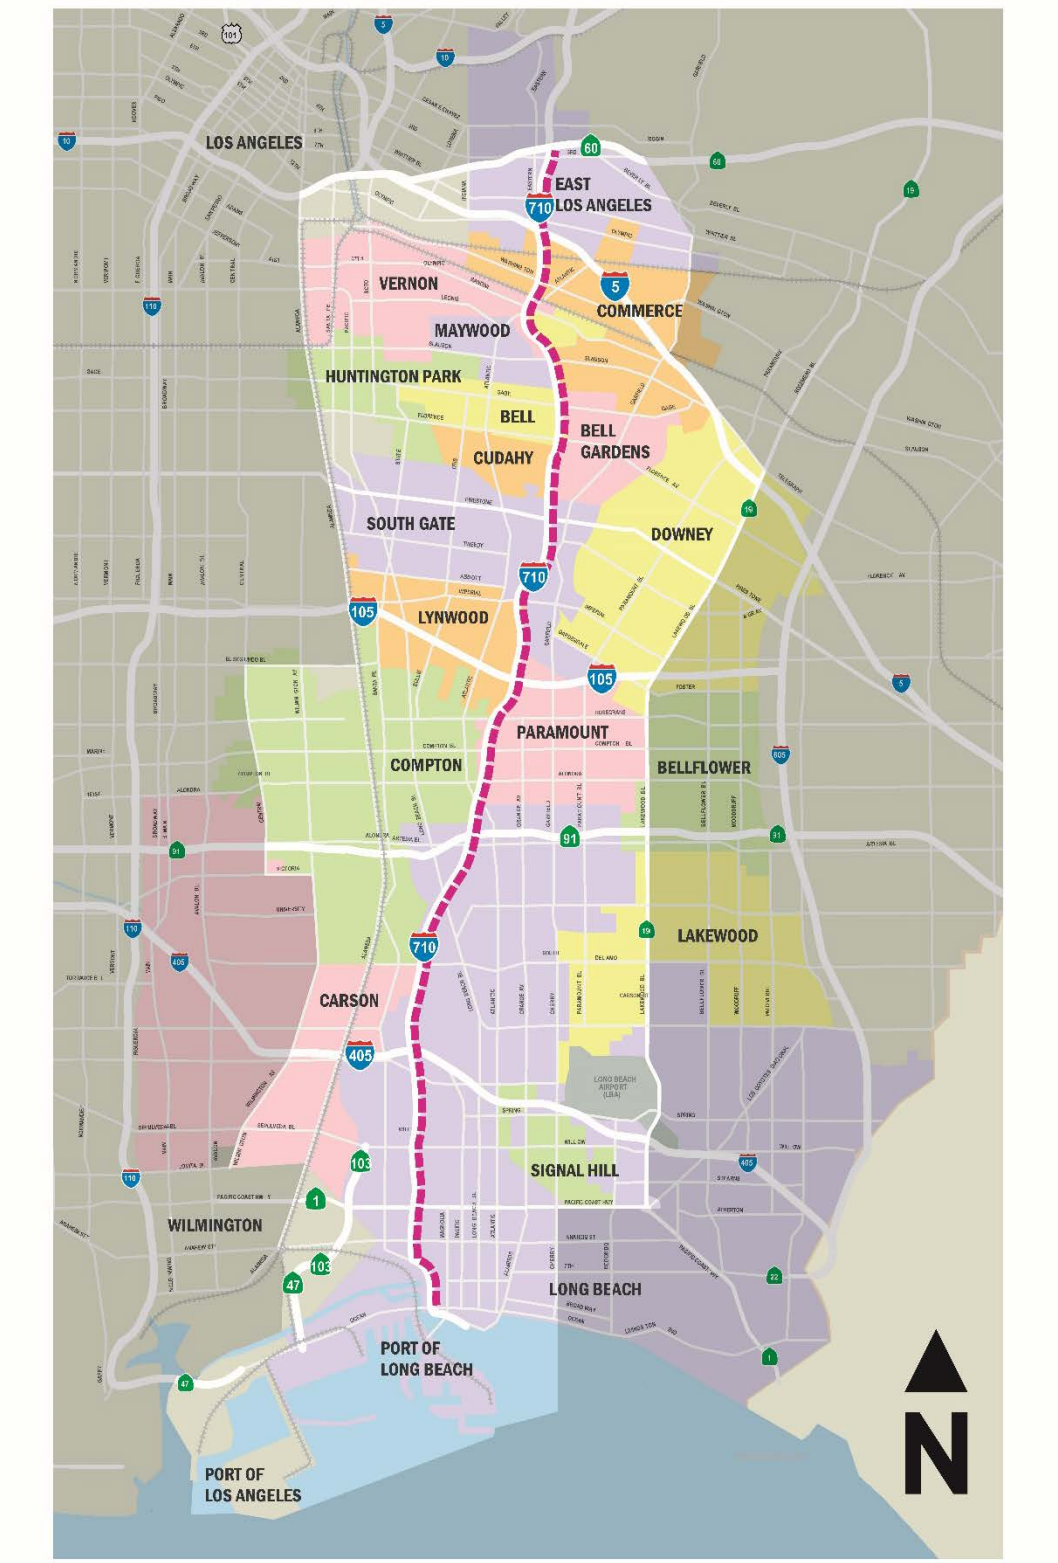
Appendix E – Schematics for Potential Construction Segments, Initial Construction Stage – Early Action Program (EAP)

I-710 Clean Truck Program

1. Introduction



The I-710 Clean Truck Program (or "Program") is an element of the I-710 Project that will put 4,000 zero- and near-zero emissions trucks on I-710, so that 4,000 fewer diesel trucks would travel through I-710 communities. The I-710 Clean Truck Program is designed to improve both existing and future air quality for people that live, work, and play near the I-710 freeway.

As part of the overall I-710 Project, the I-710 Clean Truck Program will be implemented in parallel with the proposed operational and capacity improvements to the I-710 freeway as well as in conjunction with other I-710 programs, including the I-710 Early Action Soundwall Program, the I-710 Community Health Benefit Program, and the I-710 Congestion Relief Program. For a complete description of the entire I-710 Project, please refer to Chapter 2 of the I-710 Corridor Project Environmental Impact Report/Environmental Impact Statement (EIR/EIS.) While there are several programs and initiatives throughout the state and the Southern California region that seek to implement near zero- and zero-emissions trucks, the I-710 Clean Truck Program focuses exclusively on the I-710 Corridor. See Figure 1, I-710 Corridor Study Area, for a map of the I-710 Corridor.

Chief among these other state and regional programs are: California's Hybrid and Zero-Emission Truck and Bus Voucher Incentive Project (HVIP), the Carl Moyer Memorial Air Quality Standards Attainment Program (Carl Moyer Program), and the San Pedro Bay Ports Clean Air Action Plan (CAAP). As the I-710 Clean Truck Program is further developed and moves into implementation, Metro will continue to coordinate with the California Air Resources Board, the South Coast Air Quality Management District, and the Ports of Los Angeles / Long Beach as part of an integrated approach to achieving cleaner air associated with heavy duty truck movement. A key forum for these cooperative discussions will be the I-710 Air Quality Steering Committee (I-710 Steering Committee), which is described under Program Organization Roles and Responsibilities.

The I-710 Clean Truck Program is structured to bring NZE/ZE trucks specifically to the I-710 Corridor communities and thus it supplements and complements the HVIP, Carl Moyer, and CAAP programs. The basis of the I-710 Clean Truck Program is the deployment of 4,000 NZE/ZE trucks within the I-710 Corridor, which would otherwise not occur through these other programs as the I-710 Project is developed and implemented. Moreover, these additional I-710 Program trucks would be required to travel within the I-710 Corridor as opposed to elsewhere within the region.

Figure 1. I-710 Corridor Study Area

As part of its strategy to advance goods movement technologies throughout Los Angeles County - including near zero- and zero-emissions trucks – Metro established the Countywide Clean Truck Initiative (CCTI) in late 2019. Please see Appendix A for information on Metro's Countywide Clean Truck Initiative. Several of the goals of the CCTI are shared by the I-710 Clean Truck Program. The I-710 Clean Truck Program is an early initiative within the CCTI. Further, the CCTI provides a useful institutional basis, as well as organizational support, for the I-710 Clean Truck Program.

2. Program Organization

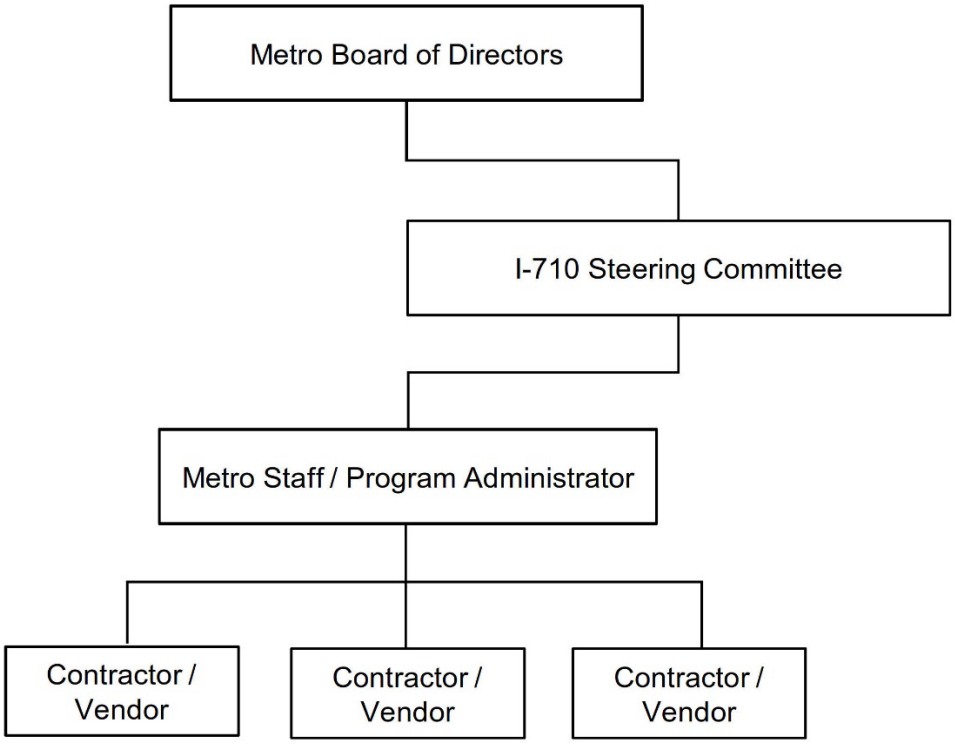
2.1. I-710 Clean Truck Program Memorandum of Understanding

In October 2019, a Memorandum of Understanding (MOU) was executed among the Los Angeles County Metropolitan Transportation Authority (Metro), the California Department of Transportation - District 7 (Caltrans – District 7), the Gateway Cities Council of Governments (Gateway Cities COG), and the Southern California Association of Governments (SCAG) to establish the framework for the development of the I-710 Clean Truck Program. The MOU also provided for the formation of the I-710 Steering Committee, which is charged with guiding the development of the I-710 Clean Truck Program. Please refer to Appendix B for a copy of the *Memorandum of Understanding Creating the I-710 Corridor Air Quality Steering Committee*.

The MOU also outlined the primary responsibilities of the I-710 Steering Committee, which are to:

a. Further develop implementation details, including eligibility requirements, institutional arrangements, management, and administration for the Clean Truck Emissions Program.*
b. Explore and identify funding opportunities, financial impact, and other implementation factors along with the development of a phasing plan for the achievement of the funding target developed by Caltrans and Metro for the Clean Truck Emissions Program, and the more comprehensive goals, based on existing and new potential funding, including local, state, federal and private resources. This includes collaborating with the Port of Long Beach, the Port of Los Angeles, and the South Coast Air Quality Management District in identifying funding and project/program opportunities to implement.
c. Develop a strategy that outlines the progressive transition to ZEVs in the I-710 Corridor starting with the latest feasible and sustainable technologies.
d. Identify and evaluate other potential strategies to address the air quality concerns in the I-710 Corridor.
e. Obtain or assist with obtaining funding to implement the Clean Truck Emissions Program and more comprehensive programs.
f. Issue quarterly reports on the development and progress toward the established and agreed upon goals. The progress reports will be presented to the governing bodies of the participating agencies and those of other agencies as necessary.

* Please note that the "Clean Truck Emissions Program" referenced in the MOU has been titled the I-710 Clean Truck Program.



2.2. Implementing Agency

Metro will serve as the Implementing Agency and Program Administrator for the I-710 Clean Truck Program, with the assistance of the I-710 Steering Committee.

2.3. Organization Chart

Figure 2 illustrates the organizational framework for the I-710 Clean Truck Program.

Figure 2. I-710 Clean Truck Program Organization Chart

Metro Board of Directors: As the implementing agency, the Metro Board of Directors will have full responsibility and authority for I-710 Clean Truck Program development and implementation. The Metro Board of Directors will also have final approval of all major policy decisions related to the Program. Consistent with the I-710 Corridor EIR/EIS and conformity finding, the Board will provide overall policy direction on Program goals, objectives, and implementation through Board action. The Metro Board will also provide a public forum to review and consider features of the I-710 Clean Truck Program, including public board meetings and reports on various aspects and progress made on implementing the Program.

I-710 Steering Committee: The membership of the I-710 Steering Committee will be a steering committee drawn largely from the larger CCTI Working Group and supplemented by additional stakeholders – specifically those representatives from selected agencies and localities who have a focused interest in the I-710 Corridor and who are prepared to devote

the time and effort to successfully launch and oversee the Program. At a minimum, the I-710 Steering Committee will include the signatory parties of the I-710 Clean Truck Program MOU – Metro, Caltrans-District 7, Gateway Cities COG, and SCAG – along with representatives from FHWA, SCAQMD, CARB, EPA, the Port of Long Beach, and the Port of Los Angeles. In addition to the responsibilities outlined in the I-710 Clean Truck Program MOU, the I-710 Steering Committee will ensure consistency with Board-approved Program goals and objectives as well as ensure that Program milestones and Program NZE/ZE travel requirements are met. The I-710 Steering Committee will also review, advise, and make recommendations on all key facets of Program development, implementation, and funding, as well as Program tracking, monitoring, and reporting.

Metro Staff / Program Administrator: Metro will serve as the day to day Administrator for the Program. The function of Program Administrator will be performed by Metro staff or by a contractor hired by Metro or by a combination of the two. The Program Administrator will be responsible for developing proposals and options to present to the I-710 Steering Committee on Program development, implementation, funding opportunities, rankings and selections, and Program awards. The Program Administrator will also be responsible for day to day activities associated with managing contracts with recipients of Program funds, managing agreements with partner agencies for grants and funding, developing fiscal plans and budgets, ensuring compliance with Program requirements, tracking NZE/ZE truck vehicle miles traveled (VMT), and preparing status reports and presentations to the I-710 Steering Committee and Metro Board of Directors.

Contractors / Vendors: At its discretion, Metro may elect to contract with consultants, agencies, organizations, or vendors to implement specific tasks associated with Program Administration. These activities could include, but not limited to, tasks such as procuring software and Automated Vehicle Locator (AVL) equipment to monitor NZE/ZE truck travel within the I-710 Corridor; development and maintenance of a NZE/ZE truck VMT data base; Program website development and maintenance; and preparation of grant proposals; along with specialty services related to zero emissions technologies, financial and auditing services, and marketing services for Program outreach and recruitment.

Further detail on roles and responsibilities associated with Program development, implementation, and management is outlined in Appendix C, I-710 Clean Truck Program Roles and Responsibilities.

3. Program Goals and Milestones

3.1. Near Zero Emissions / Zero Emissions (NZE/ZE) Trucks

The primary goal of the I-710 Clean Truck Program is to improve both existing and future air quality within the Corridor, especially for those who are located near the I-710 freeway. Of

particular concern is diesel particulate matter from the projected operation of heavy duty trucks on I-710 that contributes to cancer risk and other public health concerns within the I-710 Corridor.

The I-710 Clean Truck Program seeks to accomplish this goal by deploying 4,000 NZE/ZE trucks in the I-710 Corridor by 2035. A significant portion of the truck trips that are currently served by diesel trucks on I-710 would be taken over by these NZE/ZE trucks. Through implementation of the Program, the number of diesel truck trips on I-710 would be reduced relative to the future No Build condition. Therefore, a related objective of the Program is to reduce the number of I-710 diesel truck trips, both now and in the future, by the time the I-710 Corridor Project is constructed by 2035.

Original forecasts for the I-710 Clean Truck Program estimated that for 4,000 trucks to be deployed, approximately $100 million in incentive funding would be needed for truck owner-operators to enable them to transition from diesel trucks to near zero- and zero emissions trucks. In March 2017, the Metro Board of Directors raised the funding target level for the Program from $100 million to $200 million. [Note: the cost for the full Program will ultimately depend upon the future costs of developing near zero and zero emissions vehicle technologies relative to the costs of owning and operating conventional diesel trucks among other factors.] In April 2020, the Metro Board programmed $50 million in locally controlled funds to provide funding for the Initial Deployment Phase of the I-710 Clean Truck Program and to leverage the remaining funds required for full Program implementation.

The following milestones, as shown in Figure 3, have been established for the I-710 Clean Truck Program based on funds identified to date, targets established by the Metro Board of Directors, and the anticipated pace of freeway construction for the overall I-710 Project.

Figure 3. I-710 Clean Truck Program Major Milestones

Deployment Phase	Timeframe	NZE/ZE Trucks
Initial Phase *	2022 - 2025	600 NZE/ZE Trucks
Phase 2	2026 – 2030	1,700 NZE/ZE Trucks
Phase 3	2031 - 2035	1,700 NZE/ZE Trucks
Full Program (Total)	2022 - 2035	4,000 NZE/ZE Trucks

* To date, Metro has secured $50 million to implement the Initial Phase of the I-710 Clean Truck Program

It is Metro's intention, along with support from Caltrans District 7, the Gateway Cities COG, SCAG, and SCAQMD, to begin the I-710 Clean Truck Program as soon as feasible upon approval of the I-710 Corridor Project EIR/EIS. It is important to the communities that line the I-710 freeway to

begin to turn over diesel trucks to NZE/ZE trucks as soon as possible to maximize the air quality benefits to be achieved through the Program. As stated above, Metro has already secured $50 million and intends to utilize these funds for the Initial Deployment Phase and to help secure more funding for the overall Program for subsequent phases.

The Initial Deployment Phase, including the approach used to determine the level of NZE/ZE trucks and diesel truck trip reductions in the I-710 Corridor, is described in Section 10, Initial Deployment Phase - Technical Demonstration.

Responsibility for ensuring Program compliance with achieving reasonable progress towards planned milestones for NZE/ZE Truck Deployment shall reside with the I-710 Steering Committee, with technical support provided by Metro. See Appendix C, I-710 Clean Truck Program Roles and Responsibilities. Throughout the duration of the Program, the I-710 Steering Committee shall monitor and review plans for construction staging on an annual basis to ensure that appropriate levels of NZE/ZE trucks are proposed and delivered through the Program to match the pace of freeway construction and to ensure reasonable progress towards each planned milestone. The I-710 Steering Committee shall also review the number of diesel truck trips to be reduced for each planned, future construction stage relative to the No Build condition using methods and metrics similar to those outlined in Section 10, Initial Deployment Phase – Technical Demonstration. Another important aspect of this compliance process is to ensure that recipients of Program funds meet their NZE/ZE travel requirements, as measured by vehicle miles traveled in the I-710 Corridor. See Section 8, Tracking, Monitoring, and Reporting for further details on this aspect of the Program.

3.2. Zero Emission Truck Fueling/Charging Infrastructure

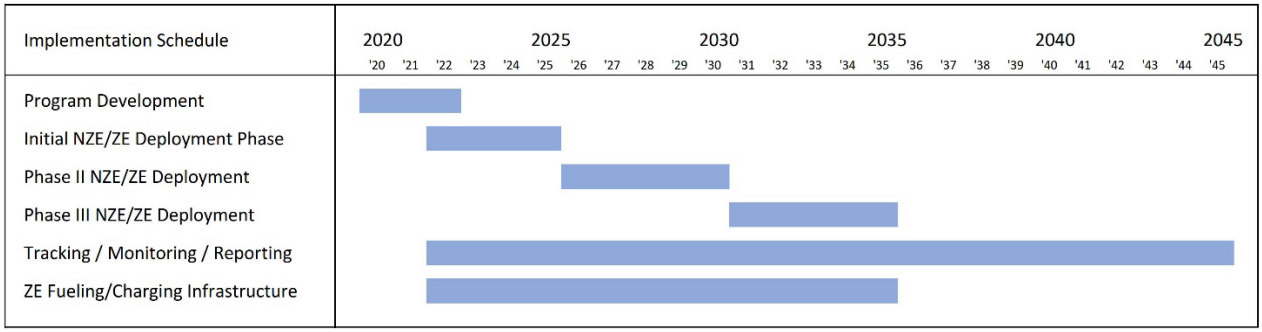
In addition to the deployment of 4,000 NZE/ZE trucks needed to reduce diesel truck trips in the I-710 Corridor, another goal of the I-710 Clean Truck Program is to assist in the future market transition from diesel and near zero emissions trucks over to zero emissions trucks to facilitate reductions in greenhouse gases as a means to help combat climate change. For this reason, the I-710 Clean Truck Program includes a program feature that allows for the funding of up to 20 electric charging stations and 10 hydrogen refueling stations for zero emissions heavy duty trucks. The main purpose of the power infrastructure feature of the Program is to encourage the future development and deployment of zero emissions trucks through the provision of seed funding of selected charging/hydrogen refueling projects within the I-710 Corridor. [Note: near zero emissions trucks do not utilize electrical charging or hydrogen refueling stations.]

The charging and refueling stations will be targeted to locations served by heavy duty vehicles such as intermodal terminals (ports/rail yards) and warehouse/distribution centers within the travel shed of the I-710 Corridor. This infrastructure effort will be accomplished in partnership with the Ports, Freight railroads and other stakeholders.

As Program Administrator, Metro staff will be responsible for working with the I-710 Steering Committee to develop the Program criteria for partnering with agencies, local jurisdictions, non-

profit, and private organizations to help facilitate the development of the electric charging stations/hydrogen fueling stations within the I-710 Corridor. The Program criteria shall consider factors such as proposed site location, feasibility, capacity, implementation timeline, operational efficacy, as well as the capability and financial reliability of the Partner Agency(s)/Organization(s). The I-710 Steering Committee will assist Metro by helping to identify partner agencies and organizations that will be responsible for constructing the stations. The I-710 Steering Committee will also review, advise, and make recommendations on conditions and terms of Partner agreements for recipients of Program seed funding for the siting and development of the proposed electric charging stations/hydrogen refueling stations within the I-710 Corridor.

The Partner agreements for the Zero Emission Truck Fueling/Charging Infrastructure projects will be implemented between 2022 and 2035. The initial round of funding for this aspect of the I-710 Clean Truck Program will be established within three years after the Final EIR/EIS is conclusively determined to be valid under CEQA and NEPA or by final judgment or final adjudication.



4. Schedule for Implementation

As explained above, it is Metro's intention to begin the I-710 Clean Truck Program as soon as feasible upon approval of the I-710 Corridor Project EIR/EIS.

The I-710 Clean Truck Program will be implemented in parallel with the other elements of the overall I-710 Project once the Final EIR/EIS is conclusively determined to be valid under CEQA and NEPA or by final judgment or final adjudication. The first annual funding contribution for the program will be provided either prior to or within twelve months of the programmed allocation of construction funding for I-710. The I-710 Clean Truck Program will be scaled consistent with the staged construction of the I-710 Project. Full deployment of the I-710 near zero- and zero-emissions trucks is projected to occur by 2035.

The following schedule, provided in Figure 4, has been developed for program implementation consistent with the planned milestones described in Section 3, Program Goals and Milestones.

Figure 4. I-710 Clean Truck Program Implementation Schedule

As shown in Figure 4, full Program deployment of all 4,000 NZE/ZE trucks would occur prior to 2035. However, the duration of the Program would extend for a minimum of ten years beyond 2035 to ensure that all recipients of project funds meet their I-710 travel requirements as well as other Program requirements for the full life of the NZE/ZE trucks to be funded through the I-710 Clean Truck Program.

5. Program Eligibility Requirements

5.1. Eligible Participants

Individual owner-operators, as well as privately-owned fleets with heavy duty trucks that travel frequently on I-710, would be eligible to receive incentive funding (or lease subsidies) for the acquisition of near zero- and zero-emissions trucks through the Program.

5.2. Emissions Standards

In order to qualify for Program funding, NZE/ZE trucks must meet minimum requirements for emissions standards and amount of travel within the I-710 Corridor. Heavy-duty (Class 8) trucks must meet minimum requirements for near zero- and zero-emissions standards by being certified by the California Air Resources Board (CARB) at or below the optional 90% lower oxides of nitrogen (NOx) standard of 0.02 grams per brake horsepower-hour of oxides of nitrogen (g/bhp-hour NOx) and/or by meeting current CARB and/or South Coast Air Quality Management District (SCAQMD) zero emissions technology definitions. No diesel-powered truck would be eligible.

The I-710 Clean Truck Program will not prescribe any specific ZE or NZE technology for eligibility as long as the minimum requirements for emissions standards are met. In this regard, the I-710 Clean Truck Program is technology neutral. As it is the objective of the Program to encourage participation in order to maximize NZE/ZE travel within the I-710 Corridor and eliminate diesel truck emissions, several different near zero-emissions and zero-emissions technologies, ranging from liquified natural gas (LNG) and compressed natural gas (CNG) powered vehicles to battery electric (BEV) and hydrogen fuel cell vehicles, currently qualify for Program funding.

As the I-710 Clean Truck Program matures and new vehicle technologies are developed, Metro will work with the I-710 Steering Committee to monitor emerging or new NZE/ZE technologies to assess their potential eligibility to meet the emissions standards established for the Program. It is envisioned that zero emissions vehicle technologies will become commercially available in the future. The I-710 Steering Committee will also develop strategies to incentivize the progressive transition to ZE vehicles in the I-710 Corridor starting with the latest feasible and sustainable technologies.

5.3. I-710 Travel Requirements

In order to receive Program funds, owners/operators must agree to requirements for travel in the I-710 Corridor. This agreement will be specified in a contractual agreement with each funding

recipient. Funding recipients will be required to consistently meet average weekday vehicle miles traveled (VMT) thresholds within the twenty-mile I-710 Corridor. VMT is a measure that takes into account both the number of NZE/ZE heavy duty truck trips (i.e., volumes) as well as the distances that those NZE/ZE heavy duty trucks travel within the I-710 Corridor during these trips. VMT is a measure that also accommodates a wide variety of travel patterns within the I-710 Corridor, as some NZE/ZE trucks will make many, short trips and yet others will make fewer, but longer distance trips to achieve their VMT goals.

To ensure compliance with Program criteria, the truck owners would need to report travel on I-710. It is currently envisioned that the VMT data would be collected via an automated vehicle locator, a GIS monitoring device, based on geofencing within the I-710 Corridor, which would be certified annually. In addition, the vehicle locator VMT data will be gathered and reported to allow for six-month check ins, so that the I-710 Steering Committee can monitor VMT compliance for recipient trucks. It is anticipated this information would be made available online (with adequate privacy protections in place) to individual truck owner-operators and to Metro staff. NZE/ZE trucks which receive Program incentive funds for purchase will be monitored for a minimum of ten years to ensure that the NZE/ZE truck is utilized within the I-710 Corridor. For additional discussion on Program monitoring activities and compliance, please refer to Section 8, Tracking, Monitoring, and Reporting.

As stated above, there will be a minimum VMT travel commitment for each NZE/ZE truck that receives Program funds. The minimum commitment will be structured to reach the VMT estimates in the EIR/EIS analysis, which are based on VMT Program averages per truck. The objective of the Program is to produce 42.5 VMT per NZE/ZE truck per weekday for the Program, *in aggregate, on average*, for each deployment phase up to 4,000 NZE/ZE trucks, which will be reported annually. Metro staff, under the guidance of the I-710 Steering Committee, will monitor and report Program compliance via an annual report. The Metro Board has the authority to fund additional NZE/ZE trucks (or offer other incentives) to ensure that the Program continues to meet its NZE/ZE VMT goals.

The methodologies utilized in the I-710 Corridor EIR/EIS to establish these VMT thresholds for the full I-710 Clean Truck Program are provided in Appendix D. Appendix D also includes information on the projected number of diesel truck trip reductions for the full Program of 4,000 NZE/ZE trucks when implemented in conjunction with the I-710 freeway improvements included in the overall I-710 Project (Alternative 5C).

As the Program matures, the I-710 Steering Committee may include provisions in the Program to allow for variations or tiering in individual truck VMT requirements for future applicants to optimize NZE/ZE travel in the I-710 Corridor in aggregate. In other words, some trucks may receive more Program dollars for higher VMT travel requirements and others less, just as long as the Program I-710 NZE/ZE VMT totals are consistent with the EIR/EIS estimates and meet or exceed targets established for each NZE/ZE truck deployment phase.

Further, in order to ensure that the progression of Program NZE/ZE deployment matches the actual pace of I-710 freeway construction as the I-710 Project is implemented, NZE/ZE truck deployment levels and corresponding VMT targets will be established for each major construction stage as these construction stages are identified, prioritized, and programmed for implementation. *At a minimum, the construction of any segment along I-710 shall not result in an increase of diesel truck trips relative to the No Build condition.* An example of this process is provided in Section 10, Initial Deployment Phase - Technical Demonstration.

5.4. Other Program Requirements

At this stage, it is envisioned that all Program trucks would be new NZE/ZE trucks or new NZE/ZE engines. Metro staff and the I-710 Steering Committee will establish minimum maintenance requirements for NZE/ZE trucks that receive project funds, including those needed to maintain the truck's warranty. Further, it is advised that these minimum maintenance requirements be tailored to the specific manufacturer recommendations for NZE/ZE trucks. For example, the Program recipient would be required to adhere to the guidelines and schedules for maintenance established by the manufacturers including, but not limited to, regularly scheduled maintenance items as listed in each truck owner's / maintenance manual (e.g., oil changes, brake inspections / changes, filter replacements, lubrications, fluid checks and top offs) and the proper use and upkeep of the emissions control system(s) on each truck. All Program NZE/ZE trucks shall comply with all CARB truck operational requirements for near zero-emissions (low NOx) and zero-emissions vehicles.

There is no age requirement for I-710 diesel trucks that will be displaced by the I-710 Clean Truck Program NZE/ZE trucks. However, information on the age and type of diesel truck may be collected during the application process to evaluate the strength of the application and/or used in the ranking of awards. As the I-710 Clean Truck Program matures, additional requirements may be added in keeping with future CARB rule-making and the future commercial availability of ZE trucks.

6. Program Development

6.1. Program Recruitment

As the I-710 Clean Truck Program is a voluntary, competitive award program, an important part of Program Development will be in identifying potential Program applicants for recruitment into the Program, especially for the first few years of the Program. Metro staff will work with SCAQMD, the Ports, members of the trucking industry, members of the I-710 Steering Committee, and other key stakeholders to develop lists of potential candidates for the Program. Special attention will be given to targeting those truck fleets and owner-operators that serve originations and destinations in the I-710 travel shed and that perform a drayage function within the I-710 Corridor. Under the guidance of the I-710 Steering Committee, Metro will also develop a promotional, educational, and recruitment plan for the I-710 Clean Truck Program. This will include the implementation of a website dedicated to the I-710 Clean Truck Program as well as a social media

presence. The Program website will provide information on Program application guidelines and requirements; schedules and deadlines for each recruitment cycle; description of ranking criteria and scoring for Program awards; Program incentives and penalties; and sample contracts and sample completed application forms. The website will also provide a forum for responding to questions and answers from Program applicants. In addition, a series of public workshops will be held prior to each recruitment cycle to promote the I-710 Clean Truck Program, provide educational materials, and to obtain feedback from potential applicants.

6.2. Program Manual

As part of Program Development, Metro and the I-710 Steering Committee will develop an I-710 Clean Truck Manual, which addresses the following elements and features:

- Program Application Materials / Guidelines / Appendices
- Program Eligibility Requirements, which must include specific Program eligibility criteria that have been developed to date (i.e., heavy-heavy duty trucks [Class 8] that adhere to accepted SCAQMD/CARB standards for near zero-emissions and zero-emissions trucks.)
- Description of NZE/ZE Truck VMT requirements and procedures consistent with Program milestones established for each deployment phase
- Description of funding incentives
- Description of Program penalties
- Program NZE/ZE truck maintenance requirements and certifications
- Description of Program auditing requirements
- Program educational, recruiting, promotional materials for posting on the I-710 Clean Truck Program website
- Sample contract for recipients of Program funds

The I-710 Clean Truck Manual will be reviewed and approved by the Metro Board of Directors. The Manual will be a living document, which may be updated for each deployment phase, per the recommendation of the I-710 Steering Committee.

For more information on roles and responsibilities for Program Development, please refer to Appendix C, I-710 Clean Truck Program Roles and Responsibilities.

7. Program Implementation

For *each* deployment phase of the I-710 Truck Program, there will be a recruitment cycle and a call for Program applications.

The I-710 Steering Committee will play a significant role in this process. The I-710 Steering Committee shall review, advise, and make recommendations on the following aspects of Program implementation, including:

- Review and confirm NZE/ZE truck levels for each Deployment Phase up to the full Program total of 4,000 NZE/ZE trucks
- Review and confirm minimum NZE/ZE truck requirements for Program funding recipients to optimize NZE/ZE travel in the I-710 Corridor for each Deployment Phase
- Timelines for Program application/award process for Each Deployment Phase
- Verify and provide input on emerging or new NZE/ZE vehicle technologies that meet NZE/ZE standards per the Program Eligibility Criteria
- Funding incentives per ZE truck for each Deployment Phase
- Funding Incentives per NZE Truck for each Deployment Phase
- Program ranking criteria and weighting for each Deployment Phase, which take into account factors such as: age and type of trucks to be displaced, history of travel in the I-710 Corridor, projected NZE/ZE travel in the I-710 Corridor, equity/disadvantaged community status, and amount of requested incentive funds.
- Need for additional Program incentives or penalties, if warranted.

Once the Program applications have been received for each deployment phase, the I-710 Steering Committee shall:

- Review, advise, and make recommendations for Program rankings of Program applicants for each Deployment Phase.
- Make recommendations of Program awards for each Deployment Phase.

The I-710 Steering Committee shall also review, advise, and make recommendations on proposals for the development of electrical charging stations/hydrogen refueling stations on an on-going basis. This task shall include reviewing conditions and terms of Partner agreements.

The Metro Board of Directors shall have authority and responsibility for the following activities during Program implementation:

- Upon completion of first I-710 Project construction stage (the Early Action Program), validate and approve additional I-710 Project construction stages.
- Approval of scope and funding plan for each I-710 Project construction stage subsequent to the first one (the Early Action Program). The scope and funding plan for each construction stage helps determine the size, scope and schedule needed for each I-710 Clean Truck Program Deployment Phase.
- Approval of funding and NZE/ZE truck deployment levels for each I-710 Clean Truck Program Deployment Phase.

- Approval of Program subsidy awards for each I-710 Clean Truck Deployment Phase.
- Approval of final proposals and award of seed funding for the development and implementation of selected electric charging stations/hydrogen fueling stations within the I-710 Corridor. Approval of Partner agreements.
- Award of contracts for Program management support.
- Review of staff reports on Program status (annual review). Includes communication to the public and major stakeholders (including EPA) as to the development and implementation of the Program on an annual basis.

8. Tracking, Monitoring, and Reporting

8.1. Compliance with I-710 VMT Travel Requirements

To be eligible for funding from the I-710 Clean Truck Program, there will be minimum requirements for travel on the I-710 freeway. Upon Program award, truck funding recipients will be required to enter into a contractual agreement, which will include a provision that addresses the requirement that the NZE/ZE trucks operate on I-710 for the full ten-year period as well as meet I-710 Corridor VMT travel requirements.

As with other truck funding programs, compliance will be assessed annually, typically through a global positioning system (GPS-based) automatic vehicle locator or similar system that would log mileage within the I-710 Corridor limits. For a period of ten years after the funding is provided for purchase, a recipient truck that does not meet the annual minimum VMT requirement within the I-710 Corridor, will be required to reimburse one-fifth of the Program funding, or potentially up to their full Program funding amount. If the recipient truck fails to meet the annual VMT requirement for two years, all Program funding for that truck would have to be reimbursed. If the truck is sold during the ten-year period after funding is provided, the purchaser will be required to comply with the Program requirements. If the Program funding incentives are provided via a subsidized lease and if the NZE/ZE truck fails to meet its I-710 VMT travel requirement, then the operator of the NZE/ZE truck would be required to relinquish the truck for use by another Program applicant.

So that the I-710 Steering Committee can monitor VMT compliance for recipient trucks, the vehicle locator VMT data will be gathered and reported by Metro staff to allow for six-month check ins. Ideally, this information would be made available online (with adequate privacy protections in place) to individual truck owner-operators and to Metro staff to provide early warning indicators so that corrective action can be taken by recipients to get back on track before penalties are invoked. See Appendix C, I-710 Clean Truck Program Roles and Responsibilities.

In cases where full compliance is not achieved, then the reimbursed funds would be folded back into the Program for reallocation to a new (or the next) NZE/ZE truck applicant for travel on I-710. The I-710 Steering Committee may elect to change the specifics of the contract terms and Program requirements to optimize compliance and/or to maximize participation in the Program.

The I-710 Steering Committee will also monitor compliance for the Program as a whole and will have responsibility for implementing additional restrictions, penalties, incentives, or measures that may be included in the contractual agreement for future applicants to ensure that the Program continues to meet its NZE/ZE VMT and NZE/ZE truck goals. *At a minimum, the construction of any segment along I-710 shall not result in an increase of diesel truck trips relative to the No Build condition.*

Further, the budgets established for each deployment phase of the I-710 Clean Truck Program shall include a budgetary line item for an Incentive Reserve, which will provide contingency funding for added Program incentives that may be needed to fund additional NZE/ZE trucks or to encourage increases in NZE/ZE vehicle miles traveled as a corrective action to bring the Program back into compliance in order to meet its NZE/ZE VMT goals. Expenditures from the Incentive Reserve shall be managed by Metro, based on recommendations provided by the I-710 Steering Committee. The Incentive Reserve shall be set at 10% of the NZE/ZE Truck Incentive Funding levels established for each deployment phase. For an example of this budget allocation step, please refer to Section 10.5, Cost Breakdown - Initial Deployment Phase.

8.2. Other Compliance Activities and Reporting

Metro staff, under the guidance of the I-710 Steering Committee, will perform the following activities throughout the duration of the I-710 Clean Truck Program:

- Monitor individual NZE/ZE Truck VMT. Conduct 6-month check ins with incentive funding recipients. Recommend actions and follow through with implementing measures for funding recipients who need to get back on track.
- As warranted, develop proposals and options for corrective actions to demonstrate reasonable progress towards Program milestones for each deployment phase, including identification of need for additional Program incentives and/or penalties.
- Manage contracts with Program funding recipients. Oversee disbursement of incentive funds or vouchers. Ensure certification and compliance with contract terms, including NZE/ZE vehicle certifications, maintenance and warranty requirements.
- Monitor and enforce Partner agreements for the development of electric charging stations/hydrogen fueling stations.
- Provide annual staff reports to the Metro Board regarding Program status, including tracking of Program NZE/ZE Truck VMT.

Metro staff shall also:

- Provide regular reports on Program Revenues and Expenditures to the Metro Board (annual) and to the I-710 Steering Committee (quarterly).
- Arrange for Program audits and reporting to the I-710 Steering Committee and Metro Board.

- Update RTP/FTIP, as warranted, to reflect most current status of I-710 Clean Truck Program funding schedule.

9. Funding for the I-710 Clean Truck Program

The I-710 Clean Truck Program is part of the overall I-710 Project, which is included in the Financially-Constrained Plan element of the Adopted 2020 RTP under Project ID No. LA0B952. The estimated cost of the I-710 Clean Truck Program is accounted for in the overall $5.941 billion cost of the I-710 Project.

Estimates produced for the I-710 Corridor EIR/EIS show that approximately $100 million is needed to fund the Clean Truck Program. Metro and the I-710 Steering Committee will utilize a full suite of tools such as incentives, engine replacement, and joint funding opportunities to deliver 4,000 NZE/ZE trucks in the corridor. At this stage, the ultimate cost of the Program to fund 4,000 NZE/ZE trucks is not fully known as future incentive costs to turn over diesel trucks to NZE/ZE trucks will continue to shift based on the relative commercial availability of NZE/ZE trucks and based on market penetration of these technologies. To alleviate any doubt about the intent of Metro to implement the Program, the Metro Board raised the target level of the full Program to $200 million in March 2017 and directed staff to work with the I-710 Steering Committee and stakeholders to identify and secure the funds. It is important to note that the $200 million target may not be needed due to commercial bulk pricing, engine costs, new technology and other factors.

In April 2020, the Metro Board allocated $50 million in locally controlled funds to provide funding for the Initial Deployment Phase and to leverage the remaining $150 million. This initial infusion of $50 million represents a significant investment in the Program and underscores the agency's commitment to ensuring the Program's success.

With the assistance of the I-710 Steering Committee, Metro will continue to consider and pursue additional funding sources for the I-710 Clean Truck Program. These entities will work together to seek and utilize funding to implement the Program and will collaborate with other programs in the region to create a more informed and comprehensive approach to NZE/ZE deployment in the region. It is hoped that the initial investment of $50 million will make the I-710 Program more competitive for these funding sources as it offers local matching funds to attract additional regional, state, and federal funding to the I-710 Corridor, including TCEP funds, Prop 1B, CMAQ, and potentially state Cap and Trade funding.

10. Initial Deployment Phase - Technical Demonstration

As stated above, Metro has already allocated $50 million for the Initial Deployment Phase of the I-710 Clean Truck Program and to help leverage additional funds for the full Program of 4,000 NZE/ZE Trucks.

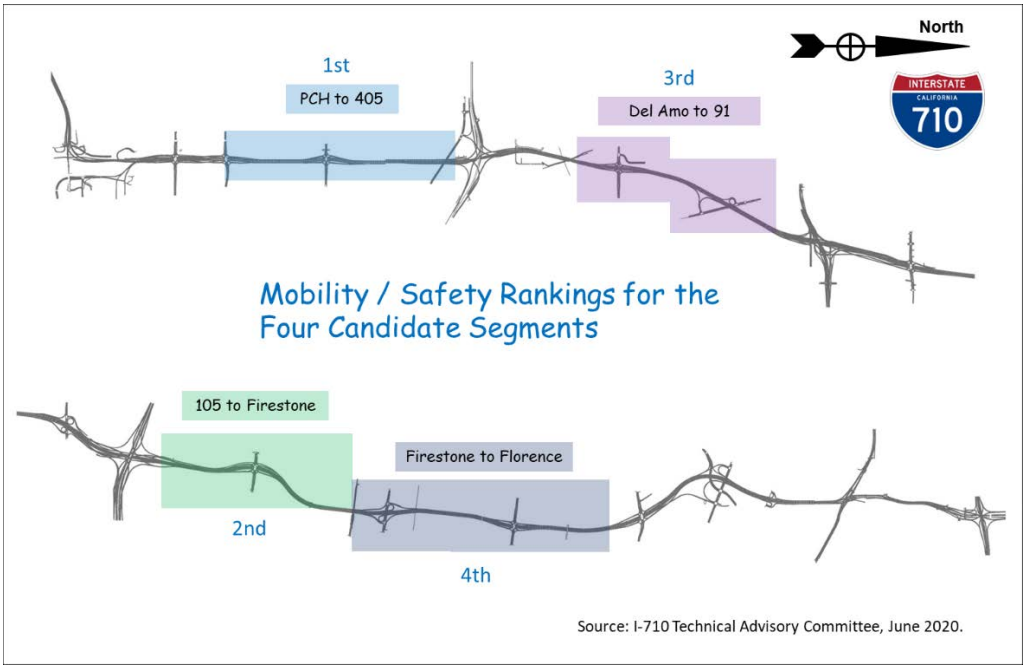
At a minimum, the Initial Deployment Phase must meet two critical objectives: (1) it must be feasible given the $50 million in funds that have been identified to date, and (2) the proposed level of NZE/ZE trucks in the Initial Deployment Phase must be sufficient to offset any potential increase in diesel truck trips for any of the initial construction stages on the I-710 freeway relative to the No Build condition. This section presents the relevant technical information used to define the Initial Deployment Phase. The following discussion also provides a technical demonstration of the major steps and technical considerations that should be taken into account in order to establish NZE/ZE truck levels and NZE/ZE VMT targets for each construction stage as the I-710 Project is implemented, using an early example drawn from the I-710 Project.

Please note that the methods utilized to provide the technical demonstration for the Initial Deployment Phase are the same as those used in the EIR/EIS analysis for the full I-710 Clean Truck Program assuming construction of the entire I-710 freeway project. Please refer to Appendix D for information on these methodologies and technical results for the full Program.

10.1. Candidate Construction Stages – I-710 Early Action Program

While the initial construction stage for I-710 has yet to be selected, Metro is currently working with the I-710 Technical Advisory Committee, its partner agencies, and the local jurisdictions within the I-710 Corridor to prioritize and select which construction segments should be first for design and eventual construction. This consultation process has yet to be completed, which will be necessary before the Metro Board makes its final determination. To date, the candidate list of construction segments has been narrowed to four potential segments on I-710, which are portrayed in Figure 5.

Figure 5. I-710 Early Action Program: Four Candidate Segments



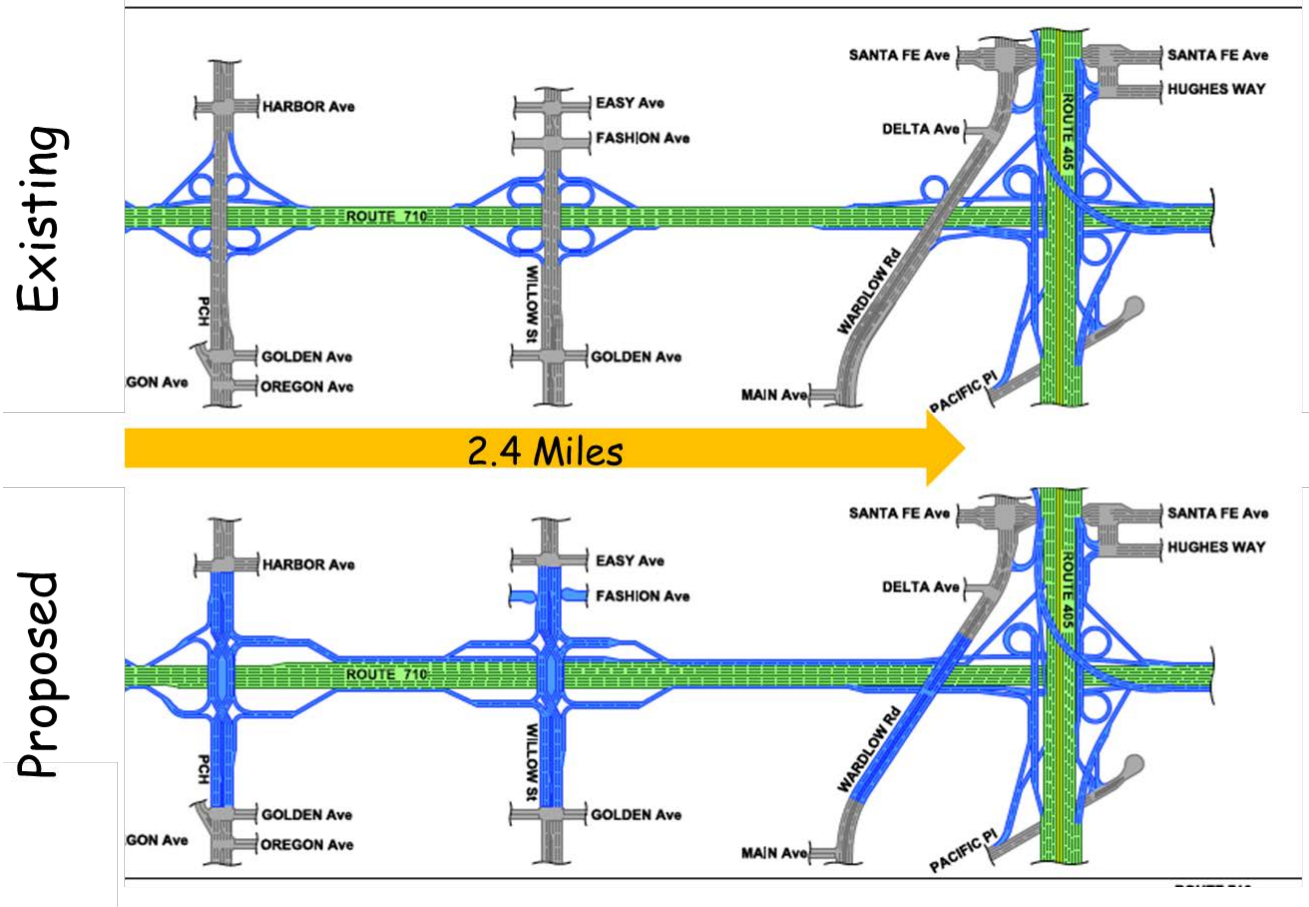


Figure 5 also presents the technical rankings of the candidate segments based on their relative ability to improve mobility and safety within the I-710 Corridor.

10.2. I-710, Pacific Coast Highway to I-405 Connectors

Of the four candidate segments on I-710, the proposed improvements in the segment between Pacific Coast Highway (PCH) and I-405 are the most extensive in terms of both physical and operational capacity relative to the other three. Schematics that portray the proposed geometric improvements for the four candidate segments are provided in Appendix E, Schematics for Potential Construction Segments.

This means that the I-710 (PCH to I-405) Segment would result in the greatest future increase in vehicle volumes relative to the no build condition, as both cars and trucks change their travel patterns to take advantage of improved travel conditions on I-710 relative to other route choices. As a consequence, Metro's technical team used this construction stage as a test case to define the Initial Deployment Phase for the I-710 Clean Truck Program. See the schematic provided in Figure 6 for a depiction of the proposed freeway improvements relative to the no build condition on I-710, between PCH and the I-405 freeway connectors.

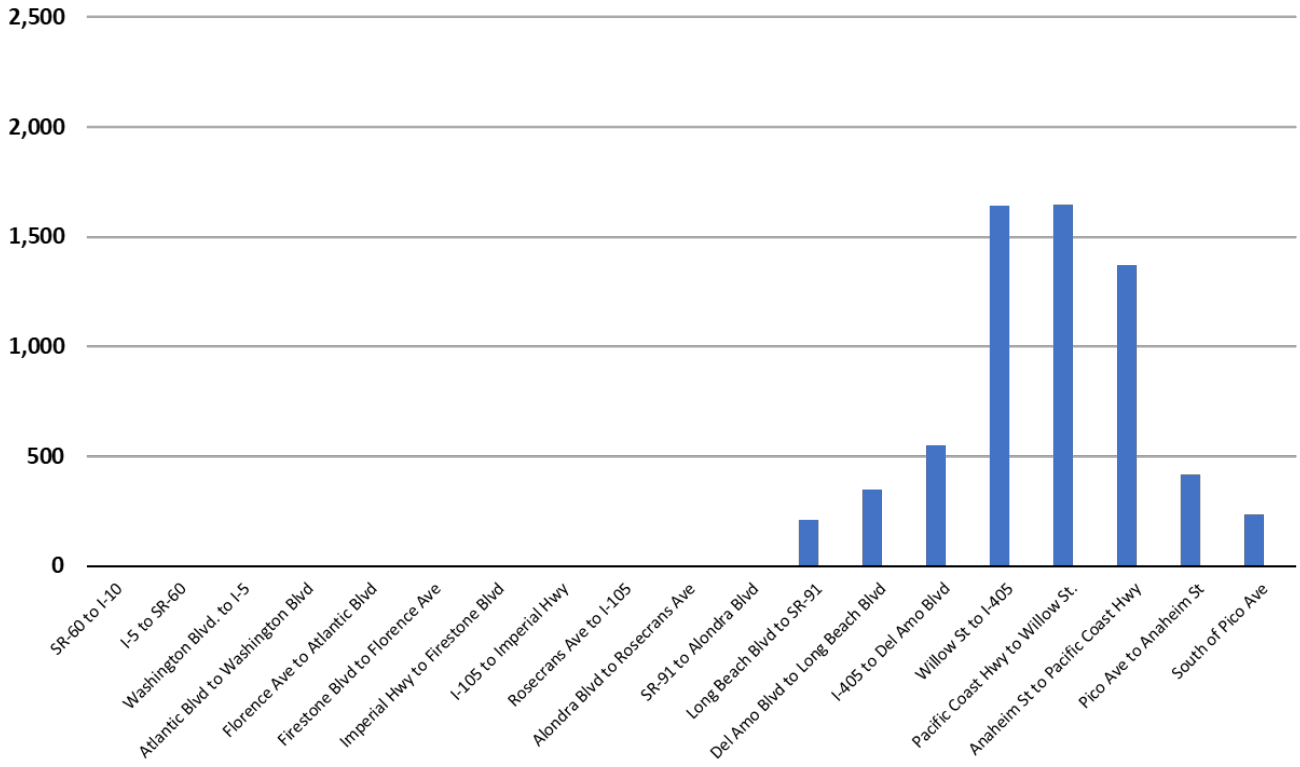

Figure 6. I-710: PCH to I-405 - Early Action Construction Segment

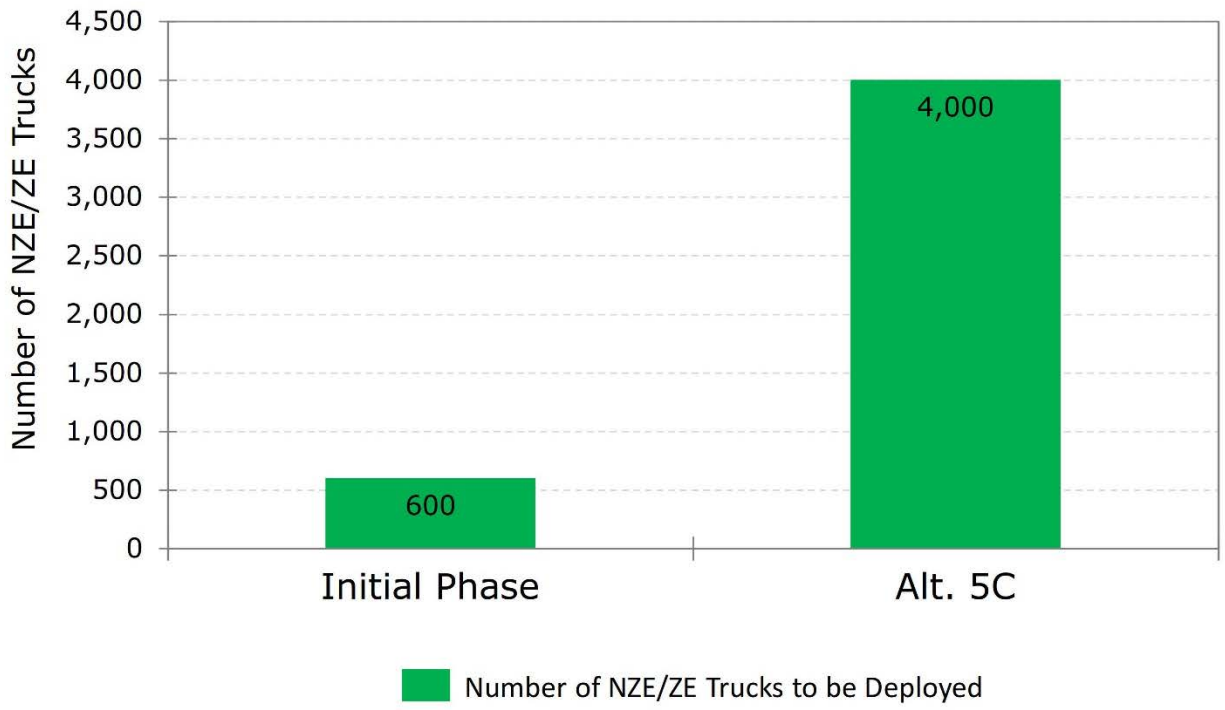
The technical team utilized the I-710 travel demand forecasting model to estimate the increases in truck traffic for the I-710, PCH to I-405 construction segment relative to the no build condition for the year 2035. This produced a "worst case" traffic increase scenario. The methodologies used to produce these results are the same as what was used to produce the traffic forecasts for the traffic operational analysis and as inputs for the air quality analysis used in the I-710 EIR/EIS.

The traffic results for the I-710: PCH to I-405 Construction Segment are portrayed in Figure 7.

Figure 7. Projected Increase in Daily Truck Trips in the I-710 Corridor
I-710: PCH to I-405 Early Action Construction Segment



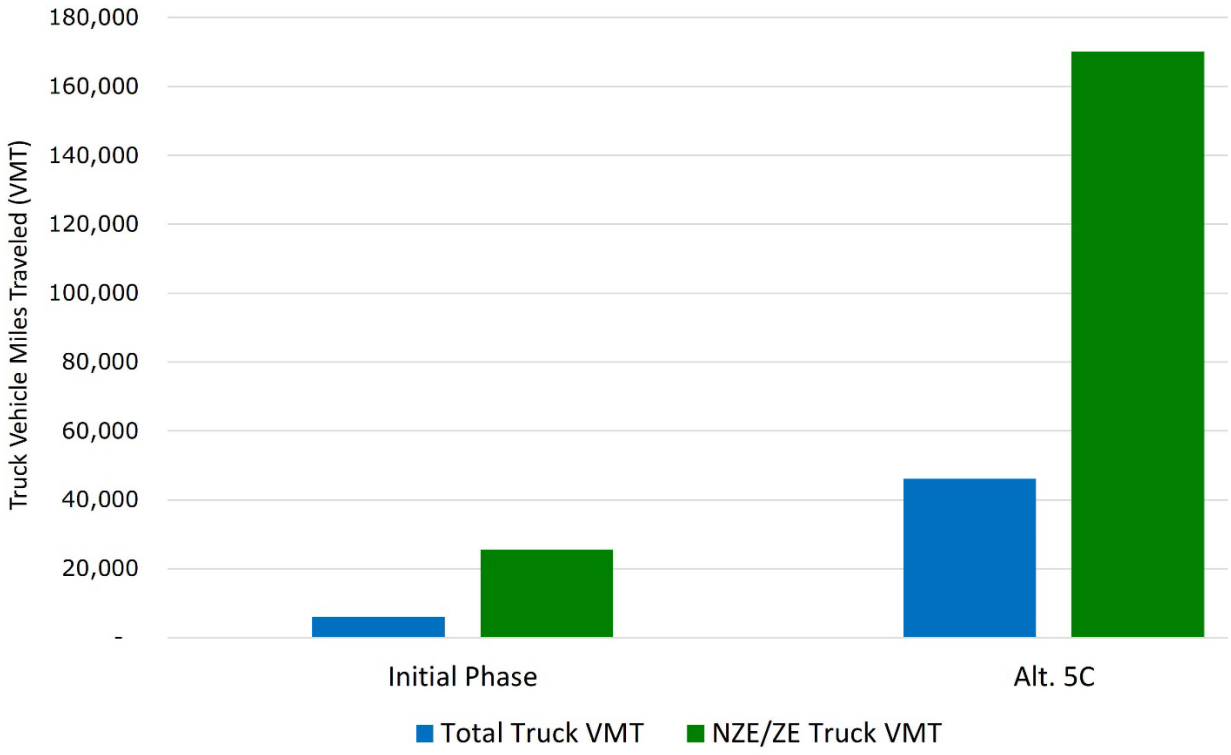
Source: I-710 Travel Demand Forecast Model

It is important to note that based on the model results, freeway improvements to just a single, discrete section of I-710 only influence traffic changes in the direct vicinity of the proposed construction segment. In this case, the effect tapers off completely by the time that these traffic flows reach the SR-91 freeway.

10.3. Establishing the Level of NZE/ZE Trucks for the Initial Deployment Phase

Based on the initial allocation of $50 million, the technical team produced a preliminary estimate of 600 NZE/ZE trucks for the Initial Deployment Phase. The Initial Deployment Phase would represent the first step of the I-710 Clean Truck Program, as depicted in Figure 8.

Figure 8. NZE/ZE Trucks for the Initial Deployment Phase

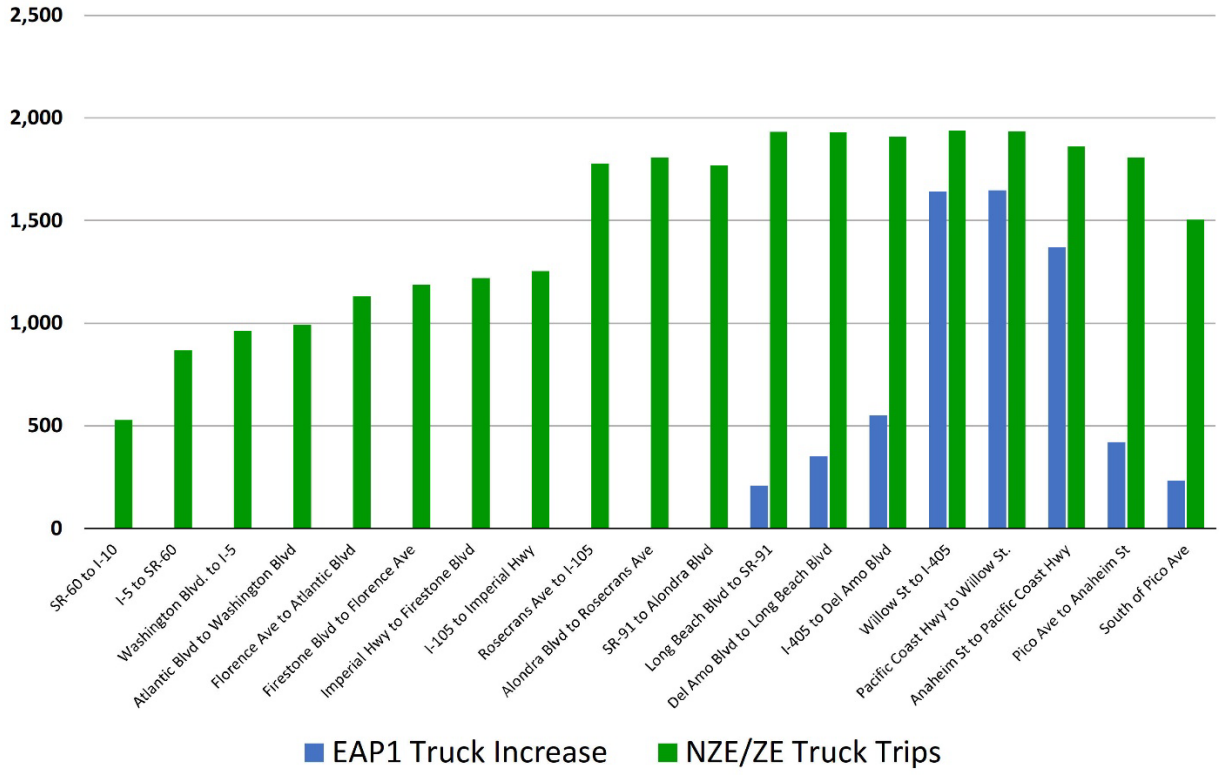


These 600 NZE/ZE trucks in the Initial Phase would be deployed along the entire twenty-mile I-710 Corridor.

Using the same NZE/ZE Truck to average daily NZE/ZE Trip conversion factors and average NZE/ZE truck trip lengths described in Appendix D, NZE/ZE Methodologies, an estimate of the NZE/ZE travel (vehicle miles traveled) was produced for the Initial Phase. For 600 NZE/ZE trucks, this results in 25,500 VMT per average weekday which would become NZE/ZE on I-710 as a consequence of the Initial Deployment Phase.

The green bars in Figure 9 show the total amount of daily truck VMT which would be NZE/ZE for the Initial Deployment Phase of 600 NZE/ZE trucks and compares that to the amount of daily truck NZE/ZE VMT for the full Program of 4,000 NZE/ZE trucks under Alternative 5C. The corresponding blue bars in the figure below, shows how much total daily truck VMT increases in the I-710 Corridor as a result of the I-710: PCH to I-405 construction stage and as a result of implementing the planned freeway improvements for the entire I-710 Project (Alternative 5C) respectively.

Figure 9. Change in Daily Truck VMT Relative to the No Build Alternative, I-710 (Ocean to SR-60)



In this case, VMT is being used as a metric to make sure that the amount of daily NZE/ZE Truck VMT from the I-710 Clean Truck Program exceeds the projected increase in daily Truck VMT attributable to the proposed freeway improvements. Figure 9 shows that this is true for both the Initial Phase and for the I-710 Clean Truck Program as a whole.

In this technical demonstration, it is also important to ensure that the projected number of daily NZE/ZE truck trips for the Initial Deployment Phase exceeds the daily increase in projected truck trips associated with the implementation of the I-710: PCH to I-405 construction segment for all key segments within the I-710 Corridor.

Using the amount of NZE/ZE truck VMT from Figure 9 that was calculated for the Initial Deployment Phase relative to total daily I-710 Corridor truck VMT from the I-710 forecast model, it is possible to estimate the fraction of daily truck trips that will be NZE/ZE under the Initial Deployment Phase within the I-710 Corridor. The result from this calculation step is portrayed in the green bars in Figure 10.

Figure 10. Daily NZE/ZE Truck Trips from the Initial Deployment Phase Compared Side by Side with the Projected Increase in Daily Truck Trips from the I-710: PCH to I-405 Construction Stage within the I-710 Corridor

The green bars in Figure 10 show the projected daily NZE/ZE truck trips in the I-710 Corridor relative to the no build condition attributable to the 600 NZE/ZE trucks included in the Initial Deployment Phase. It is important to note that the Initial Deployment Phase of the I-710 Clean Truck Program would occur throughout the twenty-mile I-710 Corridor as opposed to being limited to any single section. The blue bars in Figure 10 portray the projected increase in daily truck trips that would occur as a consequence of implementing the I-710, PCH to I-405 Construction Segment (labeled EAP1 in Figure 10). This test demonstrates that the number of daily NZE/ZE truck trips exceed the projected increase daily truck trips for the tested construction stage. Moreover, this pattern holds true for all segments within the I-710 Corridor, even the section on I-710 between PCH and I-405.

Both the Daily NZE/ZE VMT measure and the Daily NZE/ZE Truck Trip measure provides the technical data necessary to demonstrate that 600 NZE/ZE trucks are appropriate level of NZE/ZE trucks for the Initial Deployment Phase. Also, since the I-710: PCH to I-405 construction stage is the largest of the candidate segments in terms of traffic, the number of NZE/ZE trucks included in the Initial Deployment Phase is also sufficient to pair with any of the potential construction segments currently under consideration.

10.4. Estimating the Diesel Truck Trip Reductions for the Initial Deployment Phase

An important objective of the deployment of near zero- and zero-emissions trucks in the I-710 Corridor is to reduce the number of diesel truck trips that would take place in the I-710 Corridor. Therefore, a final step in the data calculations for the Initial Deployment Phase is to estimate the diesel truck trip reductions for the 600 NZE/ZE trucks, once the average number of daily NZE/ZE truck trips have been determined as described in the above discussion.

Table 1 on the following page, portrays this data for each segment within the I-710 Corridor. The average daily truck trips for the No Build Alternative and for the I-710: PCH to I-405 construction stage (EAP1), shown in Columns [4] and [8] respectively, were produced by the I-710 travel demand forecast model using the methods that were applied in I-710 EIR/EIS analyses. It is important to note that the average daily truck trips in Columns [4] and [8] encompass light- and medium-heavy duty trucks in addition to heavy-heavy duty trucks. The I-710 model is able to provide these breakdowns by truck weight class. Column [7] in Table 1 shows the estimated NZE/ZE truck trips that would occur due to the deployment of 600 NZE/ZE trucks in the Initial Deployment Phase of the I-710 Clean Truck Program. Per the I-710 Clean Truck Program criteria, only heavy-heavy duty trucks (Class 8) trucks are eligible for Program incentive funding. Using factors on fuel type distribution by vehicle classification for Los Angeles County drawn from CARB's Emissions Factors (EMFAC2014) model, it is possible to estimate the number of gasoline versus diesel trucks for each segment in the I-710 Corridor for both the No Build and the Initial Deployment Phase/Construction Stage (EAP) scenarios assuming deployment by the Year 2024. This data is portrayed in Columns [1], [2], [5], and [6]. The number of diesel truck trip reductions in the I-710 Corridor that are shown in Column [9] is produced by directly comparing Column [5] with Column [1].

The orange bars in the bar chart shown in Figure 11, highlights these average daily diesel trip reductions in the I-710 Corridor attributable to the Initial Deployment Phase. This data also reflects the assumed implementation of the Initial Construction Stage, I-710: PCH to I-405, which was used as the worst case traffic option for this technical demonstration.

Table 1. Change in Daily Truck Volumes by Fuel Type – Initial Phase

Segment	I-710 Corridor Truck Volumes - Heavy Duty Trucks[1] (Annual Average Daily Traffic)											
	No Build				Initial Deployment Phase				Change in AADT Volumes (Increase / Decrease)

	[1]	[2]	[3]	[4]	[5]	[6]	[7]	[8]	[9]	[10]	[11]	[12]

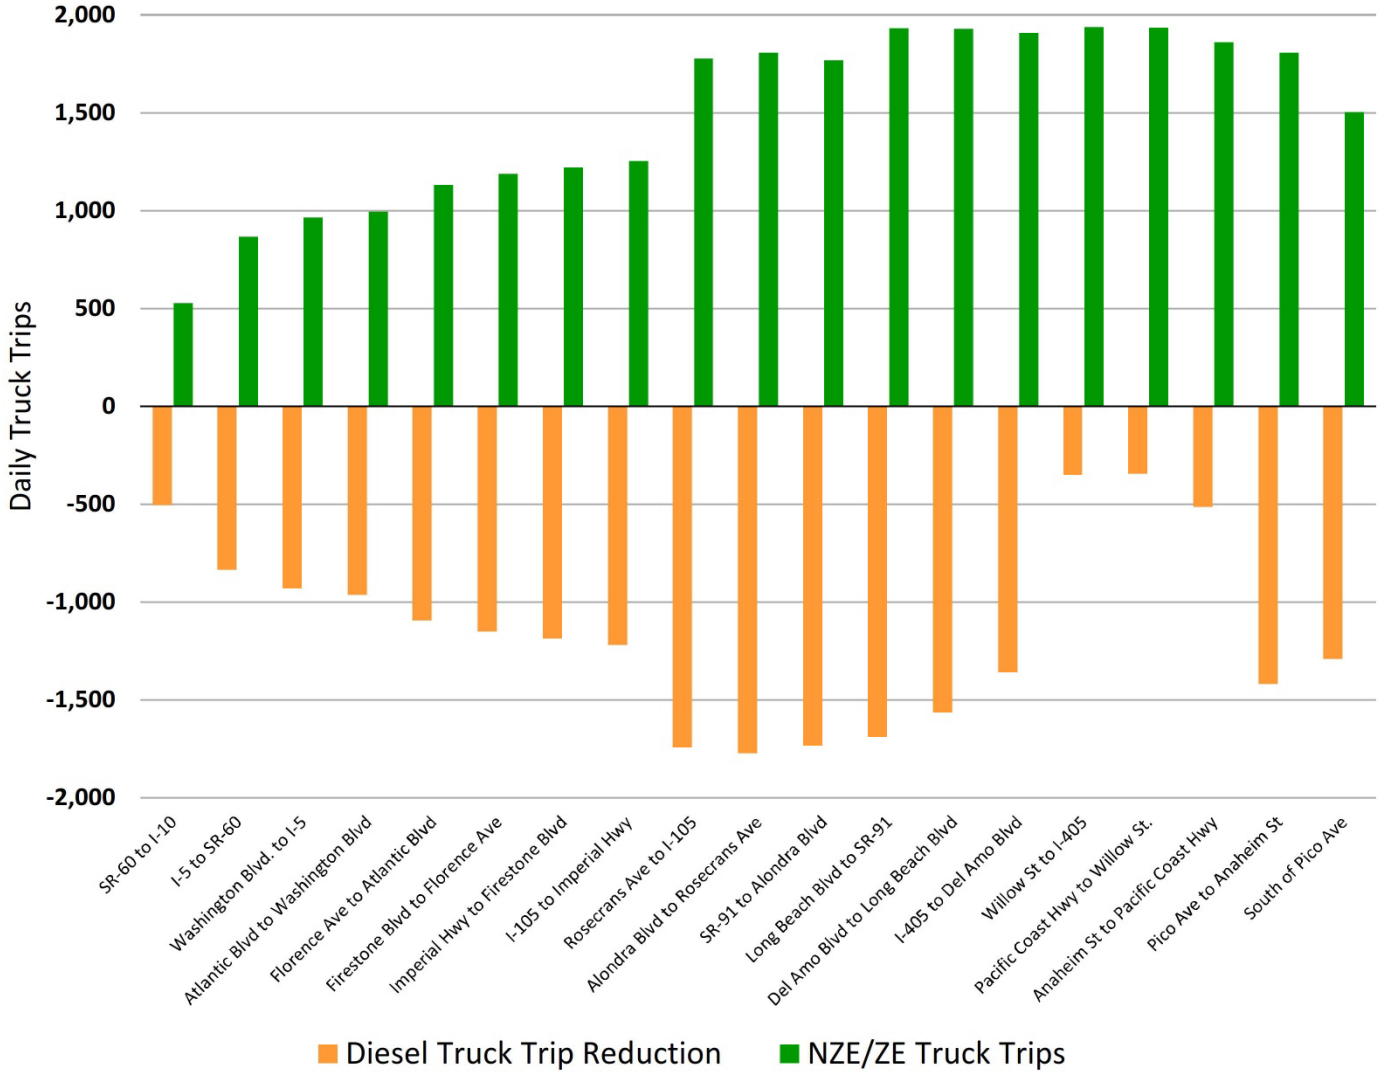
Notes:

[1] Post processed vehicle trips were generated for calendar year 2035. Total truck trips include heavy duty truck vehicle classes (including port trucks).

[2] The share of diesel/non-diesel trips by fuel type is estimated using the EMFAC2014 vehicle fleet distribution determined from the EMFAC2014 output for VMT in Los Angeles County in 2024.

[3] Gasoline truck trips also include natural gas truck trips that do not meet the standard of a NZE/ZE vehicle.

[4] Total truck trips are the sum of diesel, gasoline, natural gas, and NZE/ZE trips.



[5] NZE/ZE trips under EAP include the I-710 NZE/ZE Truck Deployment Program.

Abbreviations:

NZE/ZE - near zero emission/zero emission

AADT - annual average daily traffic

Figure 11. Reduction in Daily Diesel Truck Trips for the Initial Deployment Phase (Year 2024) with I-710: PCH to I-405 Initial Construction Stage, I-710 Corridor

10.5. Cost Breakdown – Initial Deployment Phase

The estimated Program costs for the Initial Deployment Phase range from 41 million to 50 million dollars as shown in Figure 12. This budget estimate includes funding for NZE/ZE Truck Incentives for the 600 NZE/ZE trucks that have been identified for the Initial Deployment Phase.

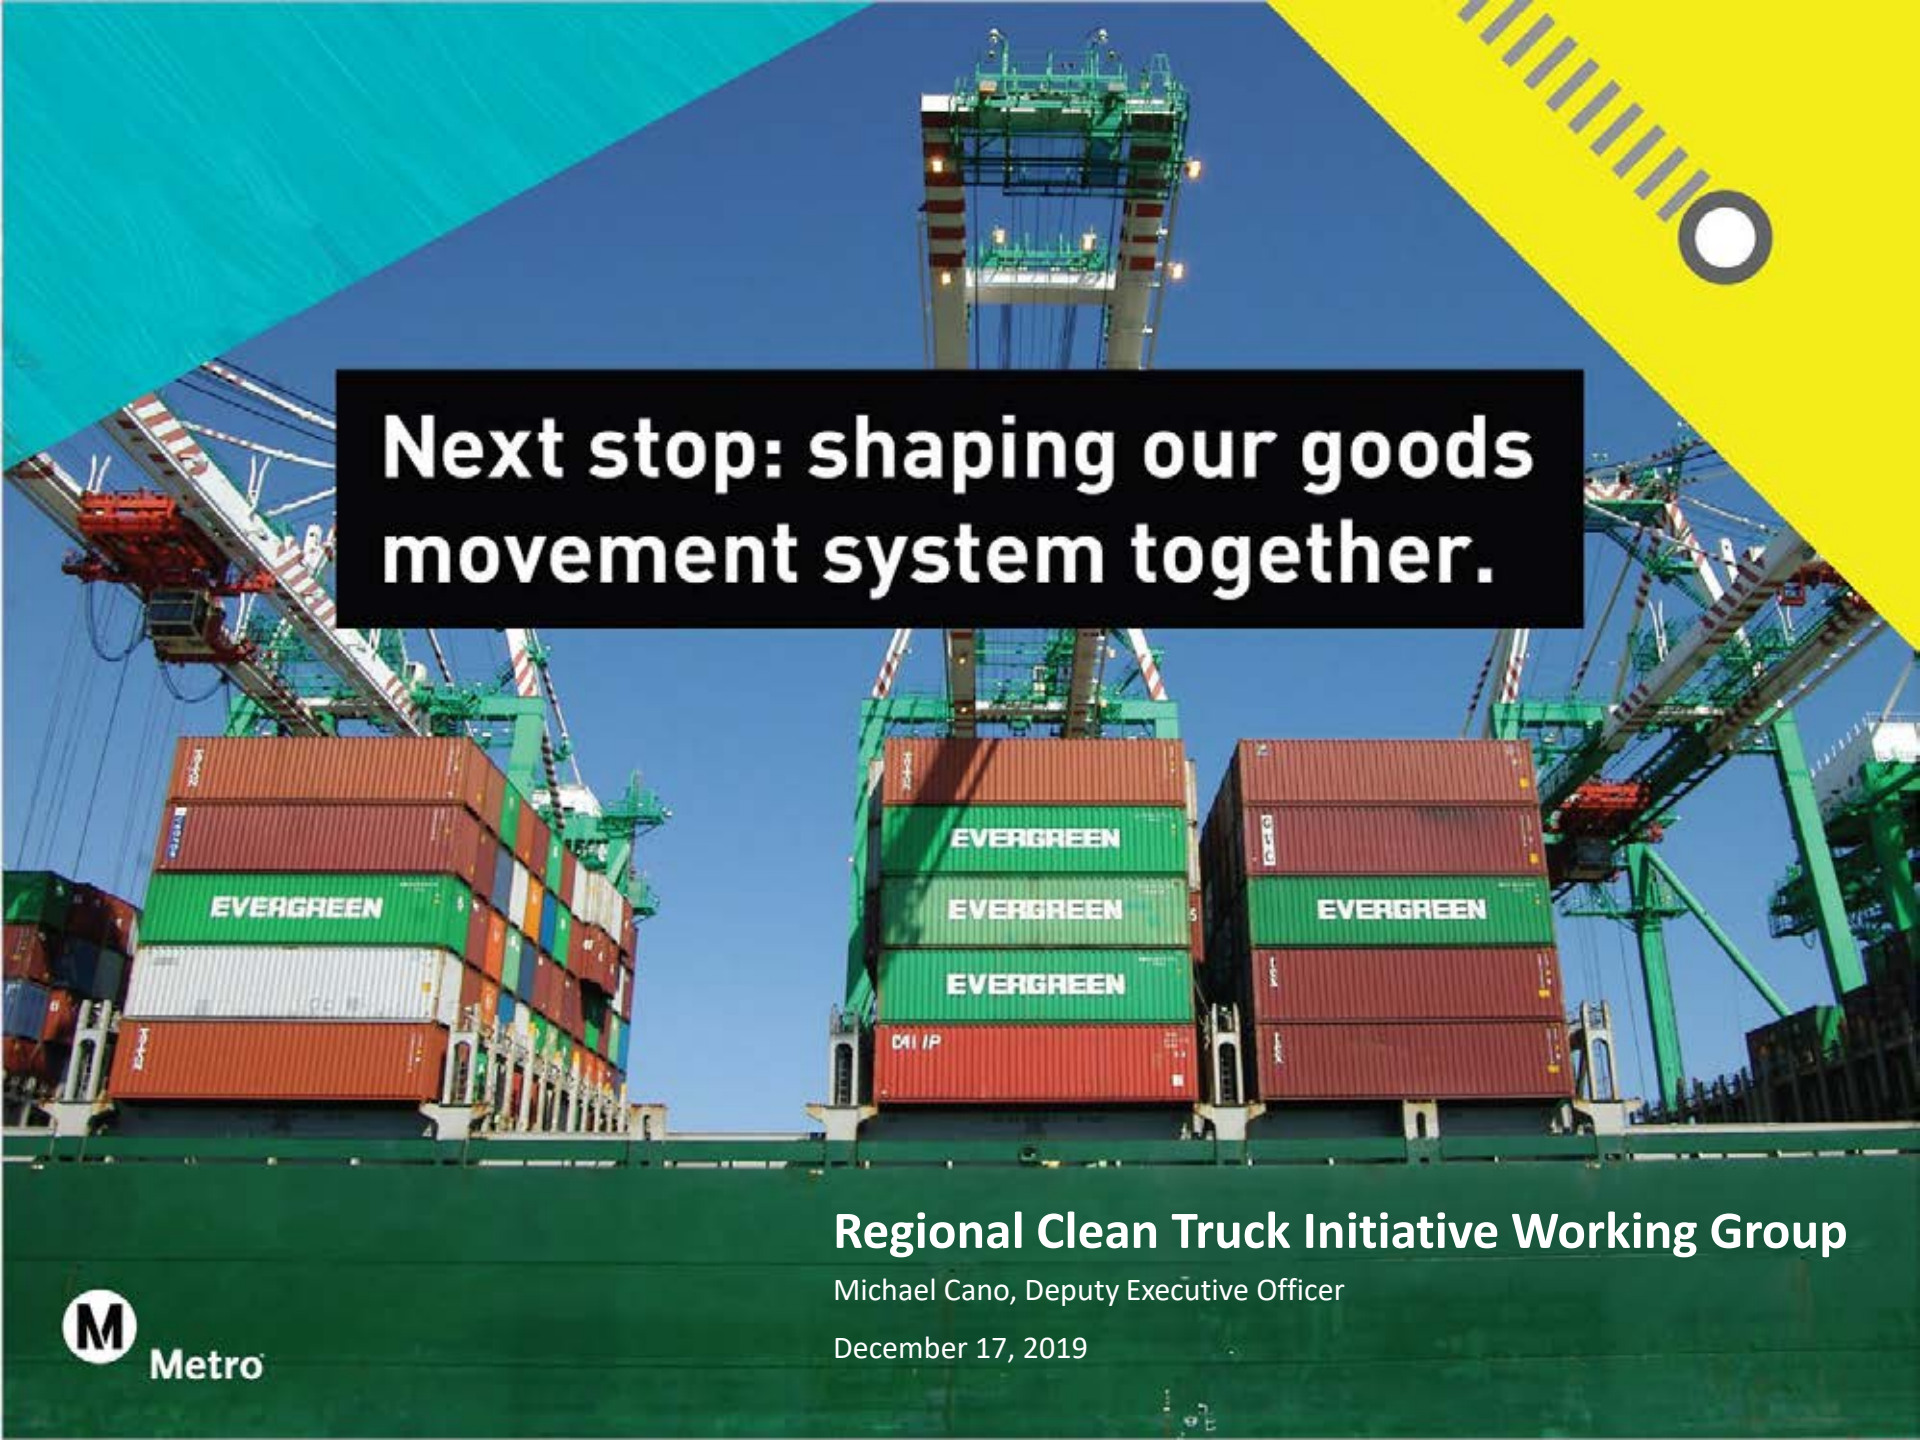
Figure 12. Estimated Costs – Initial Deployment Phase

	Low Scenario[1] Assume CARB HVIP Program Incentives	High Scenario[2] CARB HVIP Program Incentives x 25%
NZE/ZE Truck Incentives[3]	$ 33,300,000	$ 41,625,000
Incentive Reserve (@ 10%)[4]	$ 3,330,000	$ 4,162,500
Administrative & Support Costs[5]	$ 2,000,000	$2,000,000
ZE Power Infrastructure (Seed Funding)[6]	$ 2,000,000	$ 2,000,000
Total Estimated Cost	$ 40,630,000	$ 49,787,500

Notes:
1. Low Scenario assumes same as CARB HVIP Program Incentive Amounts per Class 8 ZE (BEV) and Low NOx (11.9 L Engine) Vehicle.
2. High Scenario assumes 25% higher cost over CARB HVIP unit incentive costs for Class 8 ZE (BEV) and Low NOx (11.9 L Engine) Vehicle.
3. Assumes 600 (Class 8) NZE/ZE Trucks, with 90% NZE and 10% ZE split.
4. Recommended Incentive Reserve is 10% of Estimated NZE/ZE Program Truck Incentive Cost.
5. Includes contractors, vendors, and monitoring/tracking systems.
6. Seed funding for Zero Emissions Power Infrastructure (electric charging stations, hydrogen refueling stations).

To address future uncertainty associated with the cost to own and operate ZE and NZE trucks relative to conventional diesel trucks in the I-710 Corridor, both a Low and a High Funding Scenario was developed to fully capture the potential range in costs for this budgetary line item. The Low Scenario utilizes current Funding Tables from CARB's HVIP Program to identify the unit costs for incentivizing zero emissions heavy duty vehicles ($150,000 per Class 8 battery electric truck) and for near zero emissions heavy duty vehicles ($45,000 per Low NOx Certified 11.9 Liter/0.02 g/bhp-hr Engine.) Given the present lack of commercial availability of zero emissions trucks, it is likely that demand for incentive funds from I-710 Clean Truck Program applicants will lean much more heavily towards near zero emissions vehicles. Therefore, for the purpose of this budget estimate, a split of 90% near zero-emissions trucks and 10% zero-emissions trucks was assumed for the 600 NZE/ZE trucks identified for the Initial Deployment Phase. [Note: the actual ratio of near zero-emissions trucks to zero emissions trucks may vary based on the number of applications received and based on the ranking and Program awards recommended by the I-710 Steering Committee during the first three years of the Program.]

For the upper end of the Program cost range, a High Funding Scenario was also developed. The High Funding Scenario adds a contingency factor of 25% to the NZE/ZE Truck Incentive



Funding in order to encourage full Program participation, should future NZE/ZE vehicle incentive requirements prove to be higher than anticipated upon Program implementation.

In addition, an Incentive Reserve has been established for the Initial Deployment Phase. Once the I-710 Clean Truck Program is up and running, it will be important to monitor Program NZE/ZE truck travel in the I-710 Corridor to ensure that Program certification requirements and VMT travel targets are met. For example, if some Program participants should fall behind their VMT goals in the I-710 Corridor, then it may be necessary to take corrective action, which could include enacting additional penalties, measures, or incentives for the Program as a whole. The purpose of the Incentive Reserve is to provide the resources needed to fund additional NZE/ZE trucks or to encourage increases in NZE/ZE vehicle miles traveled should those supplemental incentives prove to be necessary in order to bring the Program back into compliance with regard to its VMT goals. Expenditures from the Incentive Reserve shall be managed by Metro, based on recommendations provided by the I-710 Steering Committee. For the Initial Deployment Phase, the Incentive Reserve is set at 10% of the NZE/ZE Truck Incentive Funding levels for both the Low and the High Funding Scenarios.

Lastly, the budget for the Initial Deployment Phase accounts for Administrative & Support costs that will be necessary to manage the Program. The budget also accounts for seed funding to initiate Partnership Agreements to help facilitate the development of the electric charging stations/hydrogen fueling stations within the I-710 Corridor to further encourage the transition to zero emissions vehicles, which is another objective of the I-710 Clean Truck Program.

APPENDIX A

Metro's Countywide Clean Truck Initiative

Regional Clean Truck Initiative Working Group

Michael Cano, Deputy Executive Officer

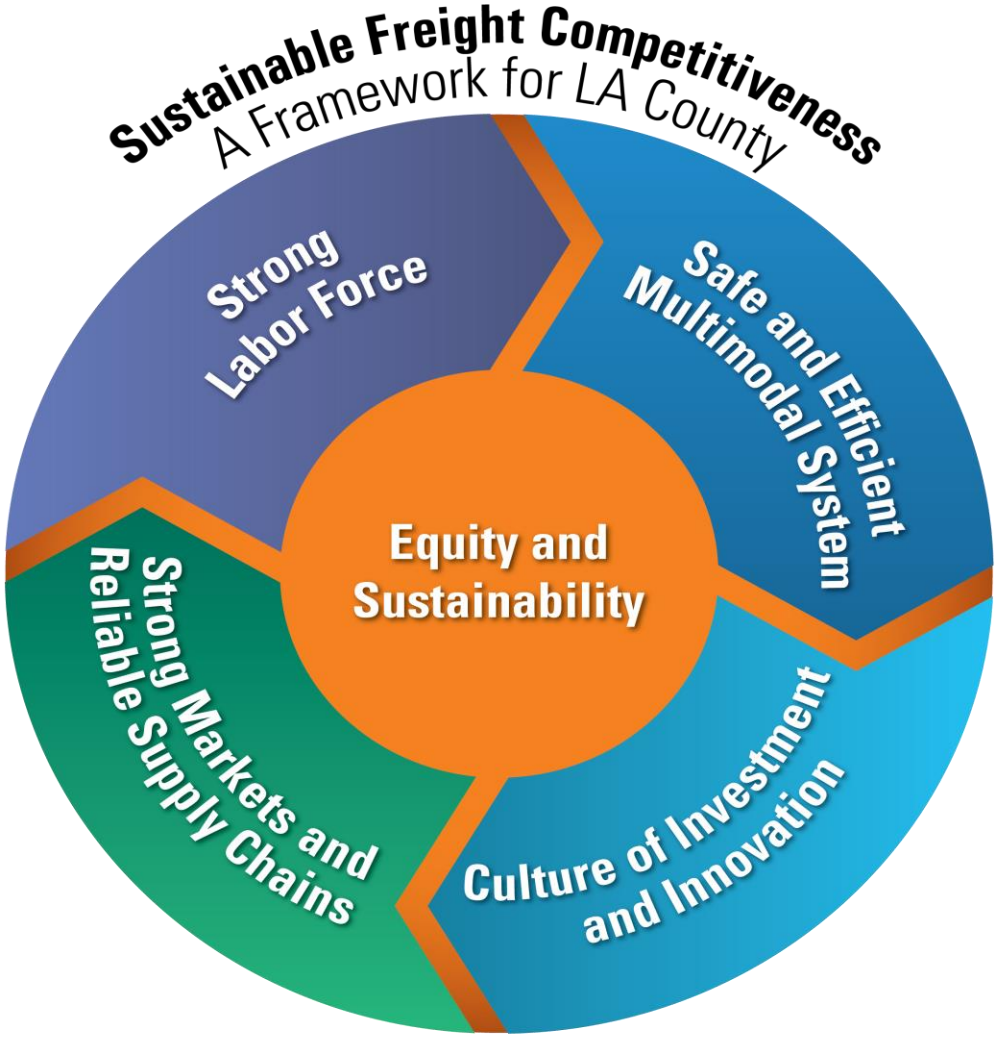
December 17, 2019

Metro

Vision Statement

Metro's Mission: *To provide a world-class transportation system that enhances quality of life for all who live, work, and play within LA County.*

Goods Movement Strategic Plan Vision: Metro will become…



> …a ***national leader*** and ***regional partner*** in implementing a modern, responsive, resilient, and effective freight transportation system through policies, programs, and projects that support a competitive global economy.

> …a steward of ***equitable and sustainable investments*** and ***technological innovation*** that will increase regional economic competitiveness, advance environmental goals, and provide access to opportunity for County residents.

Metro

Sustainable Freight Competitiveness

Metro

Metro's Coordinated Planning Efforts

Metro

Public Health Impacts of Air Quality

The South Coast Air Basin – home to Los Angeles County – has the worst air quality in the nation

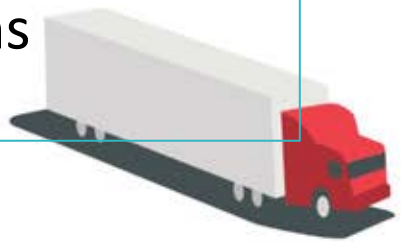
Primary source of air pollution comes from tailpipe emissions associated with the transportation sector – particularly from heavy-duty trucks

The residents along the I-710 suffer from poor air quality and public health impacts associated with truck movement along the corridor

Major equity impacts for some of the more vulnerable communities in Los Angeles County

Metro

Public Health Impacts of Air Quality



Traffic-related air pollutants known to impact public health include:

Pollutants:

- Ozone
- Diesel particulate matter
- PM_{10}
- $PM_{2.5}$
- Ultrafine particulates
- Carbon monoxide
- Nitrogen dioxide
- Sulfur dioxide
- Lead
- Benzene
- Formaldehyde
- Acrolein
- Acetaldehyde

Health Impacts:

- Asthma
- Respiratory diseases
- Cardiovascular diseases
- Cancer
- Premature death
- Mortality
- Preterm and low-weight births

Metro

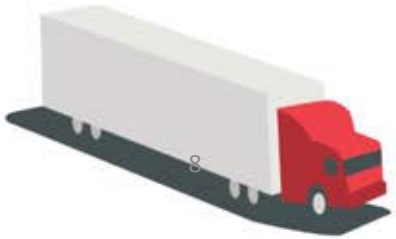
Metro Board Directives

Metro Board Motions (March 2018) – I-710 South EIR/EIS

5.1: Hahn, Solis, Garcia & Dupont-Walker

- Change the ZE/NZE truck technology program to the **phased-in** "ZE Truck Technology Development Program".
- Increase program funding from $100 million to $200 million, and include in the Program **incentives and grants investment in the acceleration of ZE technology both for long-hauling trucks and for freeway infrastructure**, including but not limited to, "under the pavement" vehicle charging capacity as options to consider.
- **Convene a working group** to develop a policy recommendation for a full, ZE only, dedicated lane…on the entire 19-mile long stretch of the 710 freeway as part of the re-evaluation of the remaining elements of Alternative 5C after the Early Action Projects have been completed.

Metro



Metro Board Directives

5.2: Solis, Garcia, Ridley-Thomas, Butts, Najarian, & Hahn

Direct the CEO to establish **a working group** with the freight industry, air quality regulators, transportation and metropolitan planning agencies, the Gateway COG and other relevant stakeholders to **explore the lead authorities, financial impact and other implementation factors** related to:

- **Develop a strategic plan** that is consistent with the South Coast Air Quality Management Plans, **which expedites the transition from diesel freight trucks to NZE vehicles as soon as possible and outlines a transition to ZE vehicles as the cleanest, most reliable technology becomes available**
- Host an **industry forum** aimed at stimulating and accelerating the deployment of cleaner freight truck alternatives. Forum shall include topics such as: funding/financing, P3, new technologies, on/off dock rail support facilities, best practices R&D, demonstration projects, creative purchase/lease incentive programs, etc.

Metro

Governor's Executive Order N-19-19

Governor Newsome Issued the Executive Order (EO) in September 2019

Main Points:

- Leverage available state funding "to help reverse the trend of increased fuel consumption and reduce greenhouse gas emissions associated with the transportation sector".
- CalSTA Secretary David Kim will engage stakeholders on how best to implement the EO
- Implemented partially through California Freight Mobility Plan 2020 (in draft form now)

EXECUTIVE DEPARTMENT
STATE OF CALIFORNIA

EXECUTIVE ORDER N-19-19

WHEREAS California is proof that a bold climate agenda is good for the economy, for workers, for health and for our future, as evidenced by our state having achieved record economic growth while reaching some of the strongest climate goals in the world; and

WHEREAS in the face of inaction on climate change from the federal government, California is a global leader in climate change mitigation efforts through bold climate goals and actions, as well as leadership in the US Climate Alliance and Under2 Coalition, using the state's power as the fifth largest economy in the world to drive positive action; and

WHEREAS California has ambitious and essential climate goals to transition to a healthier, more sustainable and more inclusive economy, including: reducing greenhouse gas emissions 40 percent below 1990 levels by 2030; providing 100 percent of the state's electricity from clean energy sources by 2045; reducing methane emissions and hydrofluorocarbon gases by 40 percent; and adding five million zero-emission vehicles to California's roads by 2030; and

WHEREAS California has made substantial, measurable progress on many of the goals enumerated above, but in recent years, direct tailpipe emission from cars, ships, diesel trains, airplanes, and other transportation sources have remained a stubborn driver of greenhouse gas emissions, totaling 40.1 percent of all greenhouse gas emissions statewide; and

WHEREAS the California Air Resources Board has a fifty-year history of leading the globe in addressing harmful pollution through innovative air pollution control standards, including the nation's first NOx emissions standards for motor vehicles; and

WHEREAS California's renewable energy targets have spurred innovation and private investment in new technologies with California leading the nation in clean technology patents and bringing in more than 50 percent of all clean energy investment in the nation; and

WHEREAS the state has made significant progress in lowering greenhouse gas emissions and mitigating climate risk in California's own state government operations and public schools; and

WHEREAS achieving California's climate goals will require concerted commitment and partnership by government, the private sector, and California residents.

Goals for Today's Working Group

Framework for the Clean Truck Initiative

Goals for this group:

- Develop a comprehensive, timely, fundable, implementable and broadly supported Clean Truck Initiative for the Metro Board to support, invest in, and seek supporting policies and vital funding through partnership with regional, state and federal stakeholders and agencies

- Provide a clear accounting of the landscape of cleaner truck technology – including equity community concerns, barriers to implementation, status of technology, infrastructure needs, truck driver needs, and funding needs – to inform the Metro Board on clean truck issues through the Metro Goods Movement Strategic Plan

- Become a recurrent advisory group to the Metro Board for all issues related to the implementation of clean truck technology within LA County

Concept for Working Group Meetings

Today:

- Convene stakeholders to explain purpose of the regional Clean Truck Initiative
- Through presentation and a constructive dialogue, identify the key challenges, barriers, opportunities, and community needs that surround the development of the Initiative
- Identify additional areas of inquiry for this working group and additional stakeholders for outreach by Metro
- Listen, share, discuss. No decisions made today on the specifics of a funding plan or preferred technology

Concept for Working Group Meetings

Next Meetings (Early 2020):

- Report back on comprehensive assessment of issues raised at the first meeting
- Develop the equity framework associated with implementing the Clean Truck Initiative
- Identify and discuss existing efforts to implement clean truck technology (e.g., Port Clean Truck Program, Gateway COG 710 Prototype, LACI) – and how the Initiative can complement and support these efforts
- Identify and discuss policy needs and available funding opportunities
- Construct the Clean Truck Initiative in a collaborative manner with the purpose of it being presented to the Metro Board for consideration

Truck Information

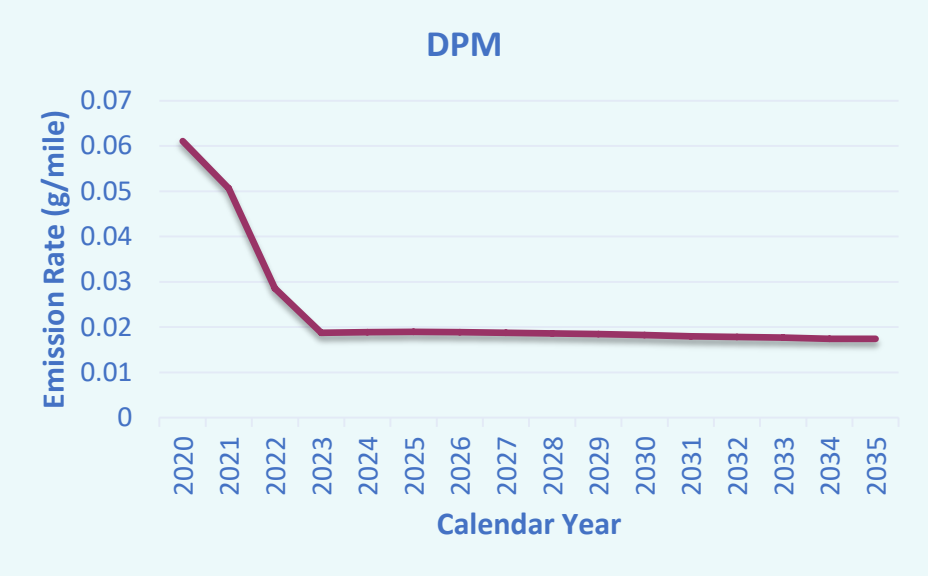
Truck Tailpipe Emissions Factors

Pollutants of Concern (Heavy-Duty Truck Tailpipe Emissions)	**Diesel Trucks (in 2035)**	**ZE / NZE Trucks**	**ZE Trucks**
NO_X	0.2 g/bhp-hr	0.02 g/bhp-hr	0.00 g/bhp-hr
PM_{10} / $PM_{2.5}$	0.01 g/bhp-hr	0.01 g/bhp-hr	0.00 g/bhp-hr
Major toxics	DPM and diesel gaseous toxics	NG toxics (gaseous and particulate)	0

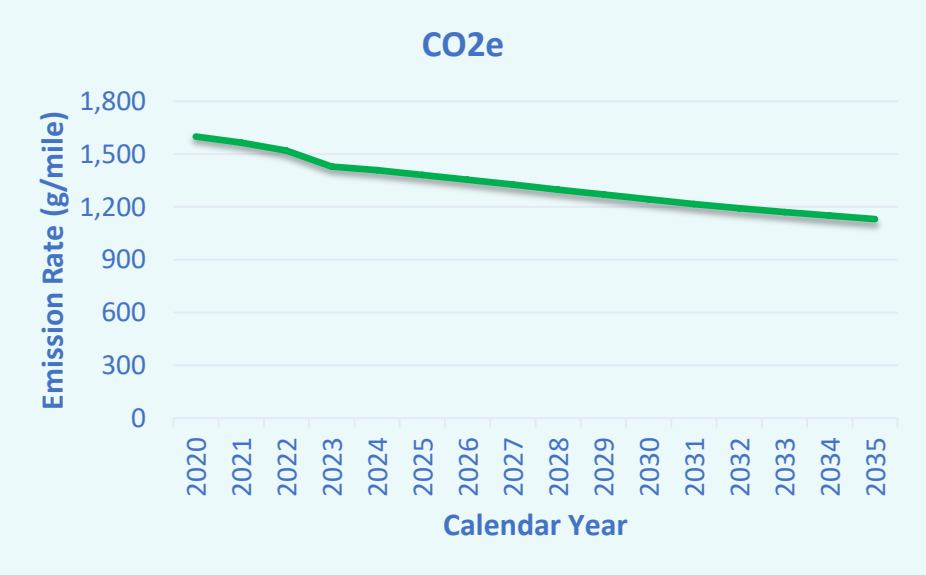
DPM: Diesel Particulate Matter
NG: Natural Gas

Compare NZE & ZE Truck Performance

	Conventional Diesel Truck 	Near Zero Emission Truck 	Zero Emission Truck 
			
Diesel Particulate Matter* (DPM) (lb/10,000 miles)	0.38	0	0
Nitrogen Oxides* (NO_X) (lb/10,000 miles)	54.4	5.4	0
Greenhouse Gases* (GHG) (MT CO_2e/10,000 miles)	11.3	11.3	0
Approx. number of Trucks per $100 million of Funding**	N/A	4,000 Trucks	1,520 Trucks



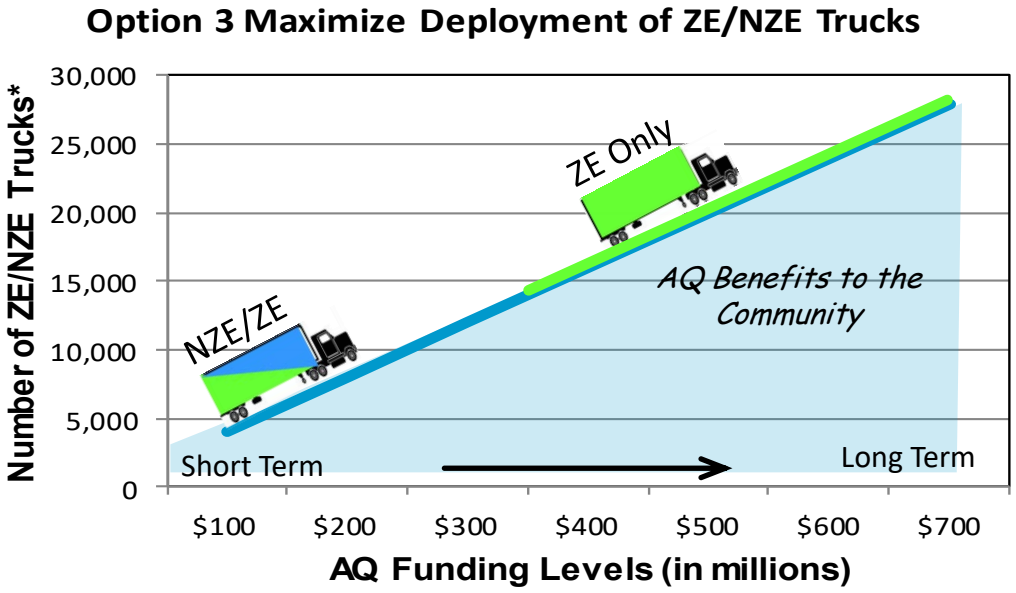
* Running Exhaust emission factors are based on EMFAC2017 for heavy-heavy duty trucks in Los Angeles County for calendar year 2035.



** Unit costs represent incremental, average costs of zero emissions trucks (battery electric, fuel cell vehicles) from I-710 Zero Emissions Truck Commercialization Study, assuming pre-2035 deployment (Calstart, 2013).

Metro

Emission Rate Trends for Conventional Diesel Trucks



Metro

I-710 ZE/NZE Deployment Strategy

Maximize Number of "Clean Emissions" Trucks and Air Quality Benefits

- Begin with mix of ZE and NZE trucks in the near term
- Transition to ZE trucks as ZE trucks become commercially available and affordable.
- Partner with SCAQMD, EPA, CARB to pursue grant funding outside of the project programmed funds to support health-benefit investments.

Introduction

The Los Angeles Metro has initiated a Goods Movement Strategic Plan (Plan) for Los Angeles County to address the issues facing goods movement throughout the region. The Plan will focus on improving the region's multimodal freight system, a critical element of LA County's overall surface transportation system.

Through collaboration and dialogue with the many goods movement stakeholders in Los Angeles County, Metro has identified the urgent need, as an early action program of the Goods Movement Strategic Plan, to develop a regional strategy and implementation plan to accelerate the introduction of cleaner truck technology on our many highways and local roads. This initiative will build upon ongoing efforts undertaken in Los Angeles County, such as the Clean Truck Program implemented by the Ports of Long Beach and Los Angeles as part of the Clean Air Action Plan and the Mobile Source Air Pollution Reduction Review Committee investments for cleaner truck technology implementation.

The purpose of the Clean Truck Initiative Working Group is to develop the regional cleaner truck initiative for the Goods Movement Strategic Plan and the Gateway Cities' proposal. The outcomes of the discussion with the key stakeholders will be presented at the next Freight Working Group meeting in March 2020.

Clean Truck Initiative Working Group

The Clean Truck Initiative Working Group Meeting was held at Gateway Cities Council of Governments on December 17, 2019. The meeting was attended by 58 participants from a wide range of public, private and non-governmental sector organizations.

This meeting was organized into two parts: opening remarks and an overview of Metro's Regional Clean Truck Initiative, followed by a group discussion. The introductions and opening remarks were presented by Michael Cano, Deputy Executive Officer, Goods Movement and State Policy and Programming, Metro. He then provided a brief overview of Metro's Regional Clean Truck Initiative. After the introduction and overview, Hilary Norton, Commissioner, California Transportation Commission was invited to the podium to provide opening remarks.

Bill Van Amburg, Executive Vice President, Calstart opened up the group discussion portion of the meeting by providing a overview of the various topics and issues that would be the focus of the discussion. Mr. Cano, supported by Marnie Primmer, Executive Director, FuturePorts facilitated the discussion. Participants provided their thoughts on the first two topics, State of

Technology and Infrastructure Deployment. After a short break, the room re-assembled to explore the remaining topics: Trucking Industry Perspective, Funding Sources and Regulatory Environment.

Prior to the meeting, the Working Group received an overview of the agenda, as well as two Metro Board Motions that were passed on March 1, 2018 related to the I-710 South EIR/EIS Project. After the group discussion, participants engaged in a lightning round and the meeting was concluded.

Agenda Items

A. Welcome & Introductions (Michael Cano, Deputy Executive Officer, Metro)

Michael Cano opened the meeting and reviewed the agenda that included an overview of what was to be presented. He then thanked Nancy Pfeffer, Executive Director, Gateway Cities Council of Governments for hosting the meeting. Participants then went around the room for self-introductions

B. Opening Remarks (Michael Cano, Metro)

Mr. Cano's opening remarks began with highlighting the importance of the Goods Movement Strategic Plan for LA County. He acknowledged that goods movement is complex and involves many needs in the region and affects many people and communities. Creating a Plan takes a lot of work, collaboration and partnership. The Plan will be presented to the Metro Board for review and consideration in 2020.

Mr. Cano reiterated that Metro's vision is to provide a world-class transportation system that enhances quality of life for individuals in LA County. Goods movement takes a backseat in interest in the transportation industry, however, Mr. Cano noted the issues associated with goods movement, such as air quality. The Strategic Plan Vision that is being developed envisions Metro as a national leader and regional partner within a framework of equitable and sustainable investments.

The Clean Truck Initiative is a part of a broader element in the Plan focused on clean freight. Metro has been reaching out to rail partners, including Metrolink and Lossan in the discussion of ways to make clean locomotives and improve the air quality in the region. The Plan will be an outcome of discussions with stakeholders on a sustainable

freight competitiveness framework for LA County, which includes listening to all stakeholders. The ultimate goal is to create a higher quality of life for those who live in LA, to breathe better air quality and to be able to travel efficiently in the region. Mr. Cano emphasized that this idea is driving the Goods Movement Plan.

He mentioned the Vision 2028 was adopted by the Metro Board. He hopes to broaden the definition of what mobility means and what it entails. Metro's Long Range Transportation Plan (LRTP) is currently being developed in parallel with Vision 2028. These Plans are all guided by the Equity Platform.

C. Overview: Metro's Clean Truck Initiative (Michael Cano, Metro)

Mr. Cano went on to describe some of the issues that are associated with the 710 EIR, including air quality and public health. The purpose of this meeting is to partner with agencies, such as AQMD and SCAG, to implement projects and programs to improve the air quality in the impacted communities. Primary source of poor air pollution comes from tailpipe emissions. Does not want to lose sight of the major issues surrounding the 710 project, especially the imbalance of equity that affects the communities surrounding the area. The work that Metro is doing in the Freight Working Group and other conversations that take place with stakeholders are, ultimately, to improve the quality of life for those communities that are negatively impacted. Mr. Cano noted that currently, the Board is made up of all five LA County Supervisors, Mayor Garcetti and his appointees, and representatives from all four sectors of LA County (Gateway Cities, South Bay, San Gabriel Valley and North Counties).

Mr. Cano highlighted the two motions that were passed in March 2018. The first motion was passed to phase in zero-emissions technology. The goal for this is to make the 710 a near zero-emission corridor. The second motion that was passed the same day was to create a Working Group for these efforts. The Clean Truck Initiative Working Group, among other stakeholder meetings, will satisfy this Board motion. He hopes that the meetings will identify the barriers, challenges and tools that are necessary to develop effective policies. Ultimately, this practice will become an institutionalized element to work with stakeholders to solve clean truck issues for the years to come. Mr. Cano's goal is to have that incorporated in the Plan that will be presented to the Board. The purpose of the Clean Truck Initiative Working Group is to lay the groundwork for what is

needed to move forward and to discuss other clean truck efforts that are taking place at other agencies such as the ports, and AQMD.

After the overview, Mr. Cano introduced Hilary Norton, California Transportation Commissioner who provided opening remarks.

D. Opening Remarks from CTC Commissioners and Board Officers (Hilary Norton, Commissioner, CTC)

Ms. Norton took the podium and thanked Mr. Cano, Metro and Gateway Cities for planning the Clean Truck Initiative Working Group. She highlighted California Freight Mobility Plan, which the CTC will finalize in 2020. Ms. Norton mentioned that when the region succeeds economically, the state succeeds as well. She thanked everyone in the room for their collaboration and is excited to move forward with an efficient Plan.

Mr. Cano took a moment to recognize representatives from LA County Board of Supervisors' Offices, including Supervisor Solis and Supervisor Hahn. Mr. Cano then called upon Bill Van Amburg, Executive Vice President, Calstart to transition into the group discussion portion of the meeting.

E. Group Discussion

Mr. Van Amburg was asked to shed light on the context of certain issues that would be brought up during the group discussions. He made a note that the discussion topics were separated into five sections: State of Technology, Infrastructure Deployment, Trucking Industry Perspective, Funding Sources and Regulatory Environment.

State of Technology is the core category of discussion. Mr. Van Amburg reported that a few years ago, Calstart, on behalf of Metro and Gateway Cities, created a commercialization plan for zero emission transportation for the 710 corridor. He highlighted the progress and steps that have been made to reach that goal. He noted that Calstart has also been making strides assessing needs of users and working with the State of California to develop an investment strategy. There has been rapid progress and interest in urban delivery, transit, bus and heavy regional.

He highlighted the shifts in the industry, mentioning that today you can't implement a program at scale. It is crucial to think and as, "What is the strategy for using multiple technologies" and "How do we support these multiple technologies appropriately? He

also encouraged participants to think about rapid evolution of technology because there is no one-size-fits-all approach. There is significant, ongoing pressure to reduce carbon emissions. There needs to be 60% or more reduction of NOx and other pollutants from transportation. There has been progress in finding solutions and multiple pathways are being discovered, such as ultra-low carbon fuel, including electricity or natural gas use fuel. There is a tremendous pressure on diesel, which is causing the current administration to move forward with a plan to use a version to lower NOx in trucking in real-world conditions. Renewable fuels are increasingly available because of the low-carbon fuel standard in California. Energy storage is steadily decreasing in size and cost, while increasing in capability. Trucks are moving from the pilot stage and carrying cargo, and new capabilities are emerging. We are aligning with what we're seeing around the world. We need to grow that supply chain if we want to lower the cost. It is important for the region to focus on this effort, drive the market, and help others adopt these technologies.

Mr. Cano returned to the podium to thank Mr. Van Amburg and introduce Marnie Primmer, Executive Director, FuturePorts as a moderator for the group discussion. He then opened the floor to participants to begin the discussion.

Julia Lester, 710 Air Quality Consultant, Ramboll, then provided a brief presentation related to trucks and their impact on air quality.

*Please see **Appendix F, slides 14-18** for the Truck Information section of the presentation, **Appendix G** for the Calstart Presentation and **Appendix H** for the Group Discussion Transcription.*

F. Break

Participants discussed the first two topic areas, State of Technology and Infrastructure Deployment. Mr. Cano dismissed the room for a short break. At the conclusion of the break, participants gathered to discuss the remaining three topics: Trucking Industry Perspective, Funding Sources, and Regulatory Environment.

G. Adjournment

At the conclusion of the group discussion, Mr. Cano thanked the Metro and the Consultant team for their efforts, and the Working Group participants for their attendance. He dismissed the participants at 3:00 PM.

Appendix A: Agenda

Los Angeles Metro

Los Angeles County Goods Movement Strategic Plan

Clean Truck Initiative Working Group Agenda

December 17, 2019 12:00 PM – 3:00 PM 16401 Paramount Blvd., Paramount, CA 90723

12:00 – 12:20 PM **Gathering/Networking/Lunch**

12:20 – 12:30 PM **Welcome and Introductions – Michael Cano**

12:30 – 12:45 PM **Overview: Metro's Regional Clean Truck Initiative**

12:45 – 12:55 PM **Opening Remarks from CTC Commissioners and Board Officers**

12:55 – 2:45 PM **Group Discussion Introduction – Michael Cano**

Purpose of the discussion is to help us better understand participant Perspectives on the key issues most significantly impacting Implementation of a clean truck initiative regionally and specifically for the I-710 Corridor. The outcome of this discussion will help inform our thinking on the potential for a countywide Clean Truck Initiative as an early action program in the Goods Movement Strategic Plan covering strategies and policies to pursue, and how best to prioritize goals to implement this initiative in a focused and expedited manner.

For each topic area listed below, we would like to cover the Key Questions in our discussion:

- ***Topic Areas for Discussion***
  - 1:00 PM State of Technology
  - 1:25 PM Infrastructure Deployment
  - 1:45 -1:55 PM Break
  - 1:55 PM Trucking Industry Perspective
  - 2:15 PM Funding Sources
  - 2:25 PM Regulatory Environment
- ***Key Questions on the Clean Truck Program***
  - What are the challenges facing LA County in developing a Clean Truck Initiative?
  - What strategies (policies, projects, programs) could address these?
  - Are there immediate steps that can be taken ("early wins") to address these issues?
  - What should Metro do to pursue these? What should Metro not do?
  - How can Metro develop a fundable, implementable program?

2:45 – 3:00 PM Lightning Round, Next Steps, and Wrap Up

Metro

11/25/2019

Ian MacMillan
AQMD
21865 Copley Drive
Diamond Bar, CA 91765

Dear Ian,

Metro's Goods Movement Planning Team, in support of our development of the Los Angeles County Goods Movement Strategic Plan, invites you to participate in a special working group meeting focused on the development of a regional clean truck initiative on December 17, 2019 from 12:00 PM – 3:00 PM at Gateway Cities Council of Governments, 16401 Paramount Blvd. Paramount, CA 90723. Lunch will be available starting at noon.

Through collaboration and dialogue with the many goods movement stakeholders in Los Angeles County, Metro has identified the urgent need, as an early action program of our Goods Movement Strategic Plan, to develop a regional strategy and implementation plan to accelerate the introduction of cleaner truck technology on our many highways and local roads. This initiative will build upon ongoing efforts undertaken in Los Angeles County, such as the Clean Truck Program implemented by the Ports of Long Beach and Los Angeles as part of the Clean Air Action Plan and the Mobile Source Air Pollution Reduction Review Committee investments for cleaner truck technology implementation.

To accomplish this important goal, Metro understands that it must bring together key experts and leaders across the region with knowledge of the various elements that will be necessary to develop a successful regional clean truck program. At this meeting we anticipate a robust and honest discussion on the many existing obstacles and barriers to such a program, opportunities and strategies to overcome these challenges, and how best to shape this initiative to achieve success through collaboration among and broad support from our key stakeholders.

As part of this initiative, Metro recognizes the need to prioritize a strategy to deliver cleaner trucks to be operated along the heavily traveled Interstate 710 that serves our Ports, intermodal rail yards, logistics centers, and other freight needs along the corridor. To that end the Gateway Cities Council of Governments has developed a concept paper, titled the *I-710 Clean Truck Prototype Incentive Program*, to catalyze a focused discussion on the various issues involved with introducing cleaner truck technology that will relieve the health impacts suffered by disadvantaged communities adjacent to this vital trade corridor in accordance with the commitments made by the Metro Board in the I-710 environmental document. We will receive a presentation on this concept and hold a discussion on how best to implement such a proposal as part of our working group meeting.

We highly value your expertise and knowledge of this subject matter and would greatly appreciate your input at our December 17th meeting. We plan to convene this group of stakeholders on a regular basis to develop the regional cleaner truck initiative for our Goods Movement Strategic Plan and the Gateway Cities' proposal. The outcomes of this discussion

Metro

with you and other key stakeholders will be presented at the next Freight Working Group meeting in March 2020.

We look forward to engaging in meaningful dialogue with you and our stakeholders on this important initiative, and we would ask that you send your RSVP to Akiko Yamagami at YamagamiA@metro.net . We appreciate your input, your support, and your leadership in helping Metro accomplish this regional vision and in helping our team develop a transformative Goods Movement Strategic Plan to serve the many needs of our residents in Los Angeles County.

With great appreciation,

Michael Cano
Metro | Deputy Executive Officer, Goods Movement

Appendix D: Meeting Hand-Outs

File#: 2018-0053, **File Type:** Motion / Motion Response **Agenda Number:** 5.1

REGULAR BOARD MEETING
MARCH 1, 2018

REVISED Motion by:

HAHN, SOLIS, GARCIA, AND DUPONT-WALKER

Related to Item 5: I-710 South EIR/EIS Project

The 710 Freeway is a major transportation corridor not only for daily commuters, but also for freight movement from the Ports of Los Angeles and Long Beach to the nation. While "goods movement" is a major economic driver for our region, it comes at a high cost for the many communities and residents along the 19 mile freeway. For many years, children and adults alike have suffered from serious health issues as a result of the pollution emitted by the trucks delivering freight inland, and neighborhoods have been severely impacted by congestion and traffic. This freeway is known as the "diesel death zone."

For 15 years, Metro has partnered with Caltrans, the Gateway Cities Council of Governments, the Ports, the individual cities along the 710, community activists and others, to develop different 'alternatives' to re-imagine the 710 in a way that balances commerce and environmental responsibility.

There are now three alternatives for the Metro Board to choose from: "No Build", "Sc" and "7." Both include a funding target of $100 million for the purchase of "Near Zero" (NZE) or "Zero" emission (ZE) trucks that would travel on the 710 corridor. Yet, according to AQMD, even taking into consideration either build alternative, "the region will need substantial additional emission reductions to attain the National Ambient Air Quality Standards." Additionally, Metro has reported that greenhouse gas tailpipe emissions would be reduced by nearly the same levels for either alternative.

Dedicating the funding exclusively to "zero emission" technology once is available and requiring only ZE vehicles be allowed - once they are constructed - could improve air quality standards significantly. The technology for long haul trucks that would emit NO poisonous fumes is emerging quickly, as exhibited by leading auto manufacturers such as Tesla and Daimler AG. Freeways in China, Israel and Norway are being constructed to have electric chargers embedded under the pavement, thus enabling electric vehicles - both cars and long haul trucks - to charge their batteries as they are moving. This significant investment by Metro can be a game-changing accelerator of "zero emission" technology, eliminating the need to subsidize "near zero" emission vehicles.

The future 710 freeway must not be a "diesel death zone" but a corridor where freight can be moved quickly without impairing the health of communities alongside the 710 Freeway. Both can be

achieved.

SUBJECT: REVISED MOTION BY DIRECTORS HAHN, SOLIS, GARCIA, AND DUPONT-WALKER

WE THEREFORE MOVE to direct the Metro CEO and Staff to, as part of, staff recommended Locally Preferred Alternative Sc:

A. Change the Zero Emission/Near Zero Emission truck technology development program to the phased-in "Zero Emission Truck Technology Development Program."

B. Increase program funding target from $100 million to $200 million, and include in the Program incentives and grants investment in the acceleration of zero emission technology both for long hauling trucks and for freeway infrastructure, including but not limited to, "under the pavement" vehicle charging capacity as options to consider.

C. Convene a working group comprised of the California Air Resources Board (GARB), California State Department of Transportation (Caltrans), Southern California Association of Governments (SCAG), South Coast Air Quality Management District (AQMD), California Transportation Commission (CTC), the Ports of Los Angeles and Long Beach, zero-emission industry experts and other key stakeholders to develop a policy recommendation for a full, zero-emission only, dedicated lane including, but not limited to "rechargeable roadways" on the entire 19 mile long stretch of the 710 freeway, and include this as part of thefinal EIR/EIS document, presented in the September2018 Metro board meeting. as part of the reevaluation of the remaining elements of Alternative Sc, after the Early Action Projects have been completed.

File #: 2018-0068, **File Type:** Motion / Motion Response **Agenda Number: 5.2**

REGULAR BOARD MEETING
MARCH 1, 2018

Motion by:

SOLIS, GARCIA, RIDLEY-THOMAS, BUTTS, NAJARIAN, AND HAHN

Related to Item 5: 1-710 South Corridor Project

Local communities along the 1-710 freeway are plagued with life-threatening health ailments resulting from traffic-related pollution in the corridor. As such, communities have been united and explicitly clear that existing conditions are simply unacceptable and they demand and deserve relief. Nevertheless, gaining consensus on a Locally Preferred Alternative for the 1-710 South Corridor Project has been incredibly challenging due to limited right of way, public health concerns and sensitivities surrounding environmental and social justice issues.

After years of vigorous scientific environmental impact analysis, multiple engineering design variations, extensive community outreach, and thoroughly exploring all feasible alternatives, Metro staff has concluded that Alternative 5C is the most viable and cost-effective solution to maximize regional benefits related to safety, mobility, health and the environment while minimizing impacts to local communities. However, the air quality benefits proposed by Alt. 5C are largely contingent on substantial funding becoming available to deploy near-zero and zero-emission trucks to reduce pollutants such as diesel particulate matter, nitrogen oxide, carbon dioxide and others. Moreover, the regional mobility benefits rely on the assumption that passenger vehicle trips are transferred to the mainline freeway versus utilizing local arterials and residential streets, which helps alleviate "cut-through traffic" in surrounding communities. Unless these assumptions materialize the primary goals of this project may not come to fruition. It may be prudent to take a more modest approach to improving the 1-710 South corridor.

An Alt. 5C Early Action Program presents an opportunity to utilize programmed funding to sequence and complete smaller scale projects over the next decade and realize incremental benefits as soon as possible.

Any deviation from implementing viable and reasonable solutions as soon as possible will only prolong the necessary relief and further place these communities at risk.

SUBJECT: MOTION BY DIRECTORS SOLIS, GARCIA, RIDLEY-THOMAS, BUTTS, NAJARIAN, AND HAHN

WE THEREFORE MOVE that the Board adopt Alternative 5C as the Locally Preferred Alternative for the 1-710 South Corridor Project FEIR/FEIS (inclusive of Motion 22.1 from October 2015) and expedite the delivery of an Early Action Program (EAP) that emphasizes the following:

A. Projects that deliver the most immediate and significant benefits related to safety, mobility and air quality;

B. Projects that can be implemented with minimal or no displacement of residences, businesses, and sensitive land uses;

C. Developing a local/targeted hiring policy that is applicable to any and all eligible funding sources;

D. Conduct an operational performance analysis upon completion of the Early Action Program utilizing the most current State and local evaluation measures and standards to re-evaluate and re-validate the remaining elements of Alternative 5C, especially identifying opportunities to further reduce property impacts;

E. Return to the board upon completion of the aforementioned directive to seek further consideration and authorization related to implementing the balance of improvements in Alternative 5C.

FURTHER MOVE that the Board direct the CEO to establish a working group with the freight industry, air quality regulators, transportation and metropolitan planning agencies, the Gateway Council of Governments and other relevant stakeholders to explore the lead authorities, financial impact and other implementation factors related to:

A. Develop a strategic plan that is consistent with the South Coast Air Quality Management Plans, which expedites the transition from diesel freight trucks to near-zero emission vehicles as soon as possible and outlines a transition to zero-emission vehicles as thecleanest, most reliable technology becomes available;

B. Host an industry forum aimed at stimulating and accelerating the deployment of cleaner freight truck alternatives. The forum shall include, but not be limited to topics such as funding and financing, public-private partnerships, new technologies, on- and off-dock rail support facilities, best practices research and development, demonstration programs (example: rechargeable roadways), creative purchase/lease incentive programs, etc.;

C. Develop and evaluate multiple scenarios for a comprehensive congestion demand management program, to be evaluated independently, that focuses on separating freight and non-freight vehicles (i.e. dedicated toll lanes) within the existing rights of way on freeways facilities throughout Los Angeles County with priority on Near-Zero and Zero-Emission vehicles;

D. Develop an overarching transportation demand management (TOM) strategy consistent with the larger, previously approved TOM strategy development process that will minimize the impact of goods movements and people in the surrounding communities along the 1-710 corridor.

FURTHER MOVE that the CEO works with the Gateway Cities Council of Governments to assess the effectiveness and recommend potential improvements to the community participation structure that was established for the environmental review period. Report back to the board in 120 days.

FURTHER MOVE that, as part of its NextGen Bus Study, Metro evaluate the feasibility of implementing high-frequency bus service in accordance with Motion 22.1 (October 2015).

Appendix F: Regional Clean Truck Initiative Working Group Presentation

Regional Clean Truck Initiative Working Group

Michael Cano, Deputy Executive Officer

December 17, 2019

Metro

Vision Statement

Metro's Mission: *To provide a world-class transportation system that enhances quality of life for all who live, work, and play within LA County.*

Goods Movement Strategic Plan Vision: Metro will become…

> …a ***national leader*** and ***regional partner*** in implementing a modern, responsive, resilient, and effective freight transportation system through policies, programs, and projects that support a competitive global economy.

> …a steward of ***equitable and sustainable investments*** and ***technological innovation*** that will increase regional economic competitiveness, advance environmental goals, and provide access to opportunity for County residents.

Metro

Sustainable Freight Competitiveness

®Metro

Metro's Coordinated Planning Efforts

Metro

Public Health Impacts of Air Quality

The South Coast Air Basin – home to Los Angeles County – has the worst air quality in the nation

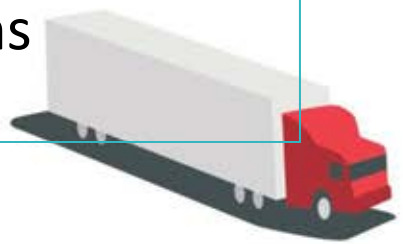
Primary source of air pollution comes from tailpipe emissions associated with the transportation sector – particularly from heavy-duty trucks

The residents along the I-710 suffer from poor air quality and public health impacts associated with truck movement along the corridor

Major equity impacts for some of the more vulnerable communities in Los Angeles County

Metro

Public Health Impacts of Air Quality



Traffic-related air pollutants known to impact public health include:

Pollutants:

- Ozone
- Diesel particulate matter
- PM_{10}
- $PM_{2.5}$
- Ultrafine particulates
- Carbon monoxide
- Nitrogen dioxide
- Sulfur dioxide
- Lead
- Benzene
- Formaldehyde
- Acrolein
- Acetaldehyde

Health Impacts:

- Asthma
- Respiratory diseases
- Cardiovascular diseases
- Cancer
- Premature death
- Mortality
- Preterm and low-weight births

Metro

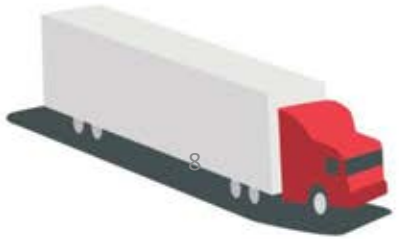
Metro Board Directives

Metro Board Motions (March 2018) – I-710 South EIR/EIS

5.1 : Hahn, Solis, Garcia & Dupont-Walker

- Change the ZE/NZE truck technology program to the **phased-in** "ZE Truck Technology Development Program".
- Increase program funding from $100 million to $200 million, and include in the Program **incentives and grants investment in the acceleration of ZE technology both for long-hauling trucks and for freeway infrastructure**, including but not limited to, "under the pavement" vehicle charging capacity as options to consider.
- **Convene a working group** to develop a policy recommendation for a full, ZE only, dedicated lane…on the entire 19-mile long stretch of the 710 freeway as part of the re-evaluation of the remaining elements of Alternative 5C after the Early Action Projects have been completed.

Metro



Metro Board Directives

5.2 : Solis, Garcia, Ridley-Thomas, Butts, Najarian, & Hahn

Direct the CEO to establish **a working group** with the freight industry, air quality regulators, transportation and metropolitan planning agencies, the Gateway COG and other relevant stakeholders to **explore the lead authorities, financial impact and other implementation factors** related to:

- **Develop a strategic plan** that is consistent with the South Coast Air Quality Management Plans, **which expedites the transition from diesel freight trucks to NZE vehicles as soon as possible and outlines a transition to ZE vehicles as the cleanest, most reliable technology becomes available**
- Host an **industry forum** aimed at stimulating and accelerating the deployment of cleaner freight truck alternatives. Forum shall include topics such as: funding/financing, P3, new technologies, on/off dock rail support facilities, best practices R&D, demonstration projects, creative purchase/lease incentive programs, etc.

Metro

Governor's Executive Order N-19-19

Governor Newsome Issued the Executive Order (EO) in September 2019

Main Points:

- Leverage available state funding "to help reverse the trend of increased fuel consumption and reduce greenhouse gas emissions associated with the transportation sector".
- CalSTA Secretary David Kim will engage stakeholders on how best to implement the EO
- Implemented partially through California Freight Mobility Plan 2020 (in draft form now)

EXECUTIVE DEPARTMENT
STATE OF CALIFORNIA

EXECUTIVE ORDER N-19-19

WHEREAS California is proof that a bold climate agenda is good for the economy, for workers, for health and for our future, as evidenced by our state having achieved record economic growth while reaching some of the strongest climate goals in the world; and

WHEREAS in the face of inaction on climate change from the federal government, California is a global leader in climate change mitigation efforts through bold climate goals and actions, as well as leadership in the US Climate Alliance and Under2 Coalition, using the state's power as the fifth largest economy in the world to drive positive action; and

WHEREAS California has ambitious and essential climate goals to transition to a healthier, more sustainable and more inclusive economy, including: reducing greenhouse gas emissions 40 percent below 1990 levels by 2030; providing 100 percent of the state's electricity from clean energy sources by 2045; reducing methane emissions and hydrofluorocarbon gases by 40 percent; and adding five million zero-emission vehicles to California's roads by 2030; and

WHEREAS California has made substantial, measurable progress on many of the goals enumerated above, but in recent years, direct tailpipe emission from cars, ships, diesel trains, airplanes, and other transportation sources have remained a stubborn driver of greenhouse gas emissions, totaling 40.1 percent of all greenhouse gas emissions statewide; and

WHEREAS the California Air Resources Board has a fifty-year history of leading the globe in addressing harmful pollution through innovative air pollution control standards, including the nation's first NOx emissions standards for motor vehicles; and

WHEREAS California's renewable energy targets have spurred innovation and private investment in new technologies with California leading the nation in clean technology patents and bringing in more than 50 percent of all clean energy investment in the nation; and

WHEREAS the state has made significant progress in lowering greenhouse gas emissions and mitigating climate risk in California's own state government operations and public schools; and

WHEREAS achieving California's climate goals will require concerted commitment and partnership by government, the private sector, and California residents,

Goals for Today's Working Group

Framework for the Clean Truck Initiative

Goals for this group:

- Develop a comprehensive, timely, fundable, implementable and broadly supported Clean Truck Initiative for the Metro Board to support, invest in, and seek supporting policies and vital funding through partnership with regional, state and federal stakeholders and agencies

- Provide a clear accounting of the landscape of cleaner truck technology – including equity community concerns, barriers to implementation, status of technology, infrastructure needs, truck driver needs, and funding needs – to inform the Metro Board on clean truck issues through the Metro Goods Movement Strategic Plan

- Become a recurrent advisory group to the Metro Board for all issues related to the implementation of clean truck technology within LA County

Concept for Working Group Meetings

Today:

- Convene stakeholders to explain purpose of the regional Clean Truck Initiative
- Through presentation and a constructive dialogue, identify the key challenges, barriers, opportunities, and community needs that surround the development of the Initiative
- Identify additional areas of inquiry for this working group and additional stakeholders for outreach by Metro
- Listen, share, discuss. No decisions made today on the specifics of a funding plan or preferred technology

Concept for Working Group Meetings

Next Meetings (Early 2020):

- Report back on comprehensive assessment of issues raised at the first meeting
- Develop the equity framework associated with implementing the Clean Truck Initiative
- Identify and discuss existing efforts to implement clean truck technology (e.g., Port Clean Truck Program, Gateway COG 710 Prototype, LACI) – and how the Initiative can complement and support these efforts
- Identify and discuss policy needs and available funding opportunities
- Construct the Clean Truck Initiative in a collaborative manner with the purpose of it being presented to the Metro Board for consideration

Truck Information

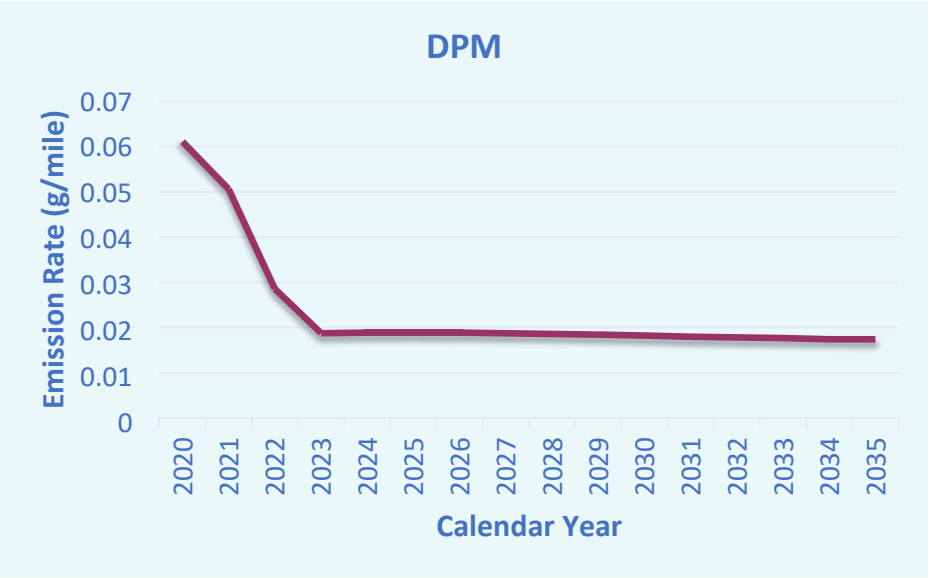
Truck Tailpipe Emissions Factors

Pollutants of Concern (Heavy-Duty Truck Tailpipe Emissions)	**Diesel Trucks (in 2035)**	**ZE / NZE Trucks**	**ZE Trucks**
NO_X	0.2 g/bhp-hr	0.02 g/bhp-hr	0.00 g/bhp-hr
PM_{10} / $PM_{2.5}$	0.01 g/bhp-hr	0.01 g/bhp-hr	0.00 g/bhp-hr
Major toxics	DPM and diesel gaseous toxics	NG toxics (gaseous and particulate)	0

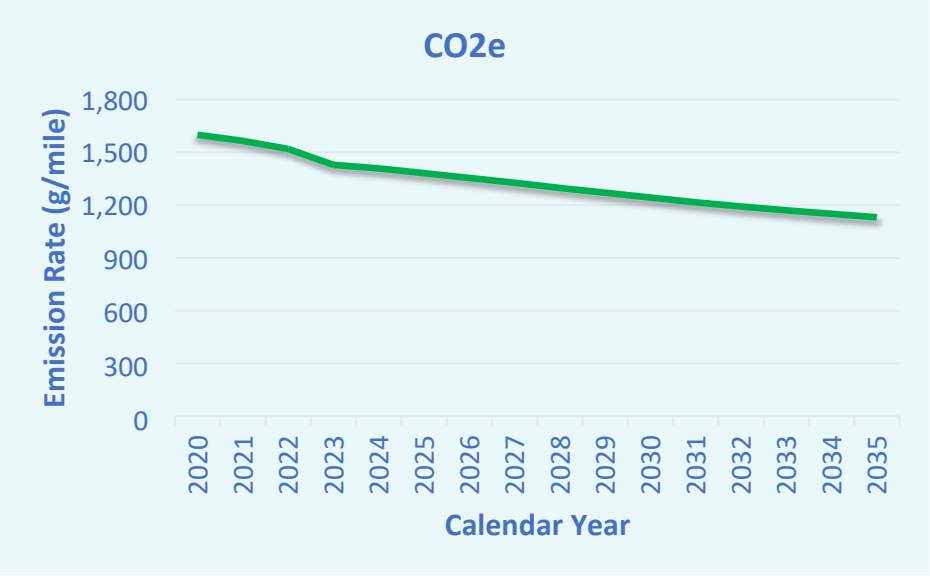
DPM: Diesel Particulate Matter
NG: Natural Gas

Compare NZE & ZE Truck Performance

	Conventional Diesel Truck 	Near Zero Emission Truck 	Zero Emission Truck 
			
Diesel Particulate Matter* (DPM) (lb/10,000 miles)	0.38	0	0
Nitrogen Oxides* (NO_X) (lb/10,000 miles)	54.4	5.4	0
Greenhouse Gases* (GHG) (MT CO_2e/10,000 miles)	11.3	11.3	0
Approx. number of Trucks per $100 million of Funding**	N/A	4,000 Trucks	1,520 Trucks



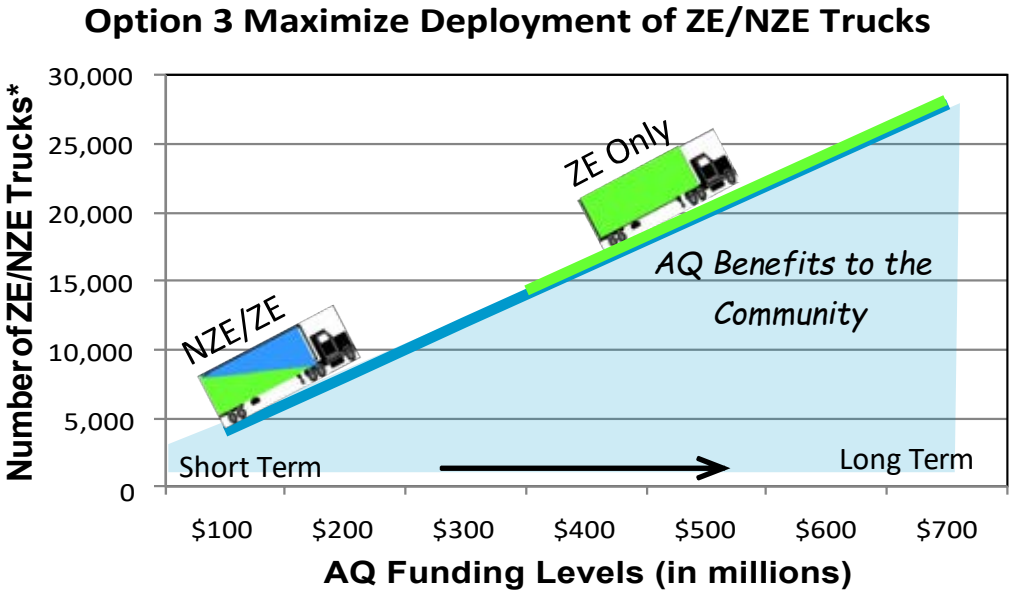
* Running Exhaust emission factors are based on EMFAC2017 for heavy-heavy duty trucks in Los Angeles County for calendar year 2035.



** Unit costs represent incremental, average costs of zero emissions trucks (battery electric, fuel cell vehicles) from I-710 Zero Emissions Truck Commercialization Study, assuming pre-2035 deployment (Calstart, 2013).

Metro

Emission Rate Trends for Conventional Diesel Trucks



Metro

I-710 ZE/NZE Deployment Strategy

Maximize Number of "Clean Emissions" Trucks and Air Quality Benefits

- Begin with mix of ZE and NZE trucks in the near term
- Transition to ZE trucks as ZE trucks become commercially available and affordable.
- Partner with SCAQMD, EPA, CARB to pursue grant funding outside of the project programmed funds to support health-benefit investments.

Metro

Appendix G: Calstart Presentation

State of Technology

- Rapid evolution underway – there is no one fixed answer, there will be multiple solutions in play and capabilities in five years will be much greater than today – multiple ways to get low NOx, low carbon good movement
- Tremendous pressure on diesel to meet fuel economy and air emissions standards at same time – 0.015-0.05 NOx coming
- Renewable fuels increasingly available due to LCFS but have production limits
- Energy storage (batteries) steadily decreasing in size, cost and increasing in capability – Class 8 regional trucks now in multiple demonstrations
- Growing global supply chain for ZE and NZE components and vehicles is leading to steady cost reductions

Most current strategy and investment plan: https://ww2.arb.ca.gov/sites/default/files/2019-09/fy1920fundingplan-appd.pdf

Infrastructure Deployment

- Transit buses are the learning platform for HD on ZE (battery electric and H2 fuel cell)
- Different model for users – fuel providers new, lead times for installation extended; requires more planning
- For battery electric, first infrastructure at depots/yards; will expand to regional charging “hubs” and along corridors;
- For H2, ideally need high-volume centralized sites with production on site or near
- Truck stop owners becoming interested in electricity and H2
- Public infrastructure decent for natural gas in key regions and some corridors; providers will build as demand grows

Most current strategy and investment plan: https://ww2.arb.ca.gov/sites/default/files/2019-09/fy1920fundingplan-appd.pdf

Trucking Industry Perspective

- Manufacturers
  - Realize transformation to lower carbon and emissions trucks and equipment coming – part of global market
  - Are investing in new tech and platforms and all OEMs have some ZE platforms coming by 2021/22
  - Concerned about market demand and acceptance and infrastructure on pace of change needed
- Users
  - Larger operations exploring business case and use profiles; TCO looks good in increasing # of applications; smaller operations need support and information
  - Concerned with first price; infrastructure timing and roll-out; service and support
  - Realize it will take a change in process – some looking at “all-in” lease covering infra, maintenance

Most current strategy and investment plan: https://ww2.arb.ca.gov/sites/default/files/2019-09/fy1920fundingplan-appd.pdf

Funding Sources

- In State
  - California has most aggressive funding and investment in US; maybe second only to China – need multi-year commitment
  - CARB (demos, pilots and early market purchase incentives – HVIP, CORE)
  - CalSTA – infrastructure and transit
  - CEC – infrastructure, fuel development
  - Utilities – infrastructure deployment
  - Ports – Clean Air Plan and investments (infrastructure)
  - Air districts – program state and local funds regionally for vehicle deployment incentives (Moyer, MSRC, 617, VW)
  - New local sales tax to raise funds for goods movement investments under consideration for So Cal
  - Metro – local tax measures added to federal
- Federal
  - DOE – demonstration and development
  - FHWA – corridors of national concern; clean corridors (infrastructure) – new STA could include funding of infrastructure
  - MARAD - harborcraft

Most current strategy and investment plan: https://ww2.arb.ca.gov/sites/default/files/2019-09/fy1920fundingplan-appd.pdf

Regulatory Environment

- **SB 32 (Climate Change) – cut GHG emissions 40% below 1990 levels by 2030; goal 80% GHG cut by 2050 – updated to carbon neutral by 2045**
- **Extreme Air Quality Non-attainment (LA Region, Central Valley) – deadlines in 2023 and 2031**
- Gov. Executive Order – 50% petroleum reduction by 2030
- Low Carbon Fuel Standard (LCFS) – secured through 2030
- Utilities – 50% renewable energy by 2030 – updated to 50% by 2026; 60% by 2030; 100% by 2045
- Carbon Cap and Trade – secured through 2030 (funding)
- **Clean Air Action Plan at San Pedro Ports – ZE operations by 2030; ZE trucks by 2035; differential rate structure for clean trucks by ~2023**
- **Advanced Clean Truck Rule – proposed rule by end of 2019; 3+% trucks ZEV starting 2023**
- Sustainable Freight Plan – being acted on and invested in

Table A-1. ZEV Sales Percentage Schedule

Model Year	Class 2b-3 Group*	Class 4-8 Group	Class 7-8 Tractors Group
2024	3%	7%	3%
2025	5%	9%	5%
2026	7%	11%	7%
2027	9%	13%	9%
2028	11%	24%	11%
2029	13%	37%	13%
2030 and beyond	15%	50%	15%

*Excluding pickup trucks until the 2027 model year

- CPUC rule making on M/HD EV infrastructure investments from utilities – approved ~$1B investment and rate recovery
- HVIP (Clean Truck and Bus Incentives) - $142m in 2019/20

Most current strategy and investment plan: https://ww2.arb.ca.gov/sites/default/files/2019-09/fy1920fundingplan-appd.pdf

Clean Truck Initiative Working Group – Group Discussion

State of Technology

Michael Cano, Metro: Let's start with the CNG folks. Who is comfortable talking about CNG in terms of what is the actual state of technology and availability of trucks and the standards that they are meeting?

Justin Loyear, Cummins Westport: As far as availability and scaling, Cummins makes about three million diesel and natural gas engines a year. Right now, we're into the 10 thousands in a year as far as natural gas is concerned. When you say scalability, writing a check and having them done, it can happen. We build the natural gas engines on the same lines that the diesel engines get built on. All the major truck manufacturers offer our engines; there was a big back log with trucks as far as purchasing ability, but that back log is gone now. There are no delays as far as trucks being built here. We're operating with very large customers right now like UPS, and LA Metro is one of our largest natural gas operating customers right now. I believe that they placed an order for about 400 buses and most of those are natural gas and we're in the process of building them right now. Natural gas is here, it's ready, available and scalable.

Bill Van Amburg, Calstart: To add a little more color to what Justin just said, last quarter we reached a milestone in southern California, that is we sold over 100 engines of these low NOx engines in the Ports of Long Beach and LA, a lot of that truck traffic travels up and down the 710 Corridor. These are all new engines that were mentioned earlier, the new technology that was introduced in 2018. There's been a strong market demand and we have support from our friends at AQMD with grant funding to make that possible because these trucks have to compete in the market against the existing fleet of various diesel trucks and it's hard to do no matter what type of clean truck it is. These are very expensive pieces of equipment and they have to compete with virtually free diesel trucks. By the end of this year, the Ports will have about 150 of these low NOx trucks. This is where we can legally haul 95,000 pounds on public roads which is heavier than the 80,000 pounds. It's a very exciting project.

Genevieve Guiliano, USC/METRANS: I have a question I'm hoping somebody in the room can answer. Is there anybody who can talk about the availability of hybrid technology trucks?

Enzo Bauk, US Hybrid: We attach the hybrid with a hand transmission that is low NOx, but we also produce hybrids that use more battery fuel. This is called series hybrid. Most of these technologies are running at the Port of Long Beach right now.

Marnie Primmer, FuturePorts: When we talk about technology, we are thinking about different aspects of technology. First, there is the engine technology. Then, there is also infrastructure that supports the deployment of alternative fuel vehicles in and around the ports around the 710 Corridor, in order to make those vehicles efficient and successful in implementing zero or a near-zero emissions strategy. Can we have someone talk about some of the infrastructure that is being put in place to support this technology?

Damon Hannaman, SoCal Edison: We have been doing some pilots with the Port of Long Beach, but right now we are really focused on our transport program. It is our offering to provide infrastructure to the energy-user customer. We will be installing infrastructure, pulling in our equipment, installing panels for the customer. It is what we call a make-ready position for electric vehicle servicing equipment. Right now, we are in the middle of two pilot programs for the Port of Long Beach. One is our battery-electric cranes, but we are finishing laying infrastructure support and tractors on a charging system for that. Outside of the terminal, we have a project with SSA Marine. They have vehicles that will be moving cargo from their terminals to locations where we will be providing infrastructure support there too. This program right now has about 60 applications. We would love to have this all taken care of within five years.

Steve Lantz, South Bay Council of Governments: When you talk about electrifying drayage and buses, are you using the same common facility? What is the business plan for this?

Damon Hannaman, SoCal Edison: We don't have a public location, but there are plans for truck stops. The program has a minimum requirement of two vehicles. We know that everyone is not going to transform their fleets immediately, so we are going to work with them and grow. We are working with transit agencies outside of this group and looking at shared sites, like regional depots. There might be some solutions there. We're looking at lower voltage over longer periods of time.

Marnie Primmer, FuturePorts: Are there innovations on the technology side for the infrastructure as well as the engine technology?

Damon Hannaman, SoCal Edison: We are not only looking at the lower power units, but we are also looking at 200 KW units at 48 volts, so you can go from a very short charge time to a longer charge time, and that's the major operation on these. A lot of the yard tractors we are looking at shorter charge times to meet the needs of their labor. We are looking at that for our drayage vehicles too.

Nancy Pfeffer, Gateway Cities Council of Governments: I heard you have an investment program of $350 million dollars, are your priorities driven simply by customer's requests?

Damon Hannaman, SoCal Edison: Customers have to apply for the program, and they have to own and operate the site they manage. We have not gotten into a public site yet, but I'm sure that's not far behind. We have two charging units to Port of LA and Port of Long Beach. There will be public charging at those locations.

Hilary Norton, CTC: As you're comparing technologies, are we also looking at where trucks are idling overnight and the air quality issues about those locations? We're addressing air quality issues in terms of infrastructure. Are we also quantifying the size of cargo space among all the different types of technologies? The cargo space is not the same. It's important as we are trying to take on these different comparisons. We need to look at gains and losses and how to make up the overall cost.

Matt Miyasato, AQMD: To answer Dr. Guiliano's question, hybrids are not what they were originally, but I think now they have gone all on electric and it's refreshing to see. Right now, we are working on developing different technologies for the DOE. When we talk about scales, it is great to have these prototypes to show what can be done, but we need to work with the big OEM's. The only technology that is commercially available that is on the market that's cost-effective is natural gas. It is about 90 percent cleaner. We would love to see something else. When we look at 10 years out, we're looking at more electric technology. In the meantime, its good to have smaller class sizes. We see that as a great asset if you have near zero or natural gases.

Joe Lyou, Coalition for Clean Air: This is a glass half empty, glass half full situation. There is no perfect solution at this point in time. We are looking at battery electric and natural gas solutions. As Matt says, nobody is looking at a combination. Nobody is going that route for production. There is a draw back no matter where you go. If its electric, it takes too long to charge, uses too much energy. But that is a glass half full point of view because cost of battery is going down, energy density is improving. All the issues are being addressed. Trucks are expensive and limiting and we know infrastructure is a problem. We are investing in that and all the problems can eventually go away. It would be nice to have a leader in natural gas. The cost will come down, so there are reasons to be optimistic. We need to invest in near zero emissions so we can solve these issues faster. We need a pathway to get to zero. Unless we invest, we can't achieve our goals.

Marnie Primmer, FuturePorts: I'm hearing it's an "all the above" , not an "either or" solution .

Joe Lyou, Coalition for Clean Air: In terms of policymakers, we have to invest in zero emissions to get there. In the short term, we have the Clean Air Act and requirements for that. The sanctions we face are not as heinous - it is going to be real and devastating. There won't be funding for those transportation projects. If we don't work at all levels, it is impossible to get where we need to get.

Luke Klipp, City of Long Beach: I wanted to note that hearing all the different numbers with technology and engines is challenging. What is the current state and expectation of how things are going to change? What would it look like with a specific investment? I have no idea what some of the numbers mean. Frankly, what I'm getting from this discussion is that we are far from an environment where there is an overwhelming amount of vehicles that are zero or near-zero emissions and I am not sure how we are going to get there.

Michael Cano, Metro: Thank you. As someone who has been in both worlds, the translation of this to policy makers is a significant task in itself. They need to understand recommendations in order to make decisions and what it all means.

Vincent Pellecchia, BYD Motors: When we are talking about moving freight, we are talking about different types of trucks. The trucks that BYD makes are the duty cycle and range that our customers ask for. In terms of drayage, it is shorter. For tractors, we are providing the amount of time customers need to complete duty cycles. There are no complaints of charge because we work with customers on what charge times they need. Electricity is becoming cleaner. We can produce at a significant scale, and BYD is commercially available.

Angelo Logan, Moving Forward: I wanted to say having a conversation about technology is premature until we have a better understanding of what the truck initiative is. Right now, it is all inclusive. We have no understanding of what the scope is. I want us to have a better understanding of what the scope and operations are. It will help us understand what infrastructure needs are and the range. Can we get a better understanding? Ours is regional and I want to know, how does that fit into the development of the 710 process and region at large?

Michael Cano, Metro: That's a fair question. The intent of this initiative is regional for LA County. We understand the strategies involved are different for Corridors. We have to tailor the approach to the need. We have truck initiatives to implement on the 710 Corridor. The 710 Corridor strategy may be different than the regional discussion. We have issues on the 57, 60, in the San Gabriel Valley, and many other areas. What we're trying to do now is get information out there and find solutions that can be applied on a regional basis as well as to meet the needs of specific corridors. The issues on the 710 overlap greatly, but we will keep that in mind. This is more gathering for the entire region so we can understand investments made for different areas and the region. We need scopes and a concept of what we are doing for different projects.

Person D: We should be keeping an eye on other technologies that we can be using. People are getting smarter about using battery storage, especially mobile charging sites. But also there are challenges in using battery storage and incurring excess weight costs.

Sue Dexter, USC/METRANS: I have recently been talking to drayage operators along the 710. I have asked, what is your range requirement between charges? They are saying between 200-300 miles. From an operation perspective, that is what I am hearing as a researcher.

Julia Lester, 710 Air Quality Consultant, Ramboll, then provided a brief presentation related to trucks and their impact on air quality. She began her presentation by discussing truck tailpipe emissions factors and provided a chart that showed pollutants of concern that are in heavy-duty truck tailpipe emissions and compared that to diesel trucks in 2035, ZE and NZE trucks. Ms. Lester noted that NZE trucks are 90% less NOx emissions than diesel trucks. The presentation then continued with a comparison of NZE and ZE truck performance, followed by emission rate trends for conventional diesel trucks. Participants were informed that there are more cost-effective benefits from NZE, especially as technology matures and moves toward ZE. Ms. Lester concluded by discussing the I-710 ZE/NZE Deployment Strategy. Following the presentation, participants were given the opportunity to ask questions and continue the group discussion.

*Please see **Appendix F, slides 14-18** for the Truck Information section of the presentation.*

The following comments relate to Ms. Lester's presentation.

Weston LaBar, Harbor Trucking Association: Where do you get the definition of a near-zero emissions engine?

Julia Lester, Ramboll: The near- zero emissions engine was first discussed in the 2016 Air Quality Management Plan, spearheaded with the Environmental Protection Agency. The definition at that time was it was the lowest demonstrated NOx level which was .02 or 90% reduction.

Weston LaBar, Harbor Trucking Association: To use .02 as a reduction is problematic at this point in time and it is not an acceptable legal definition. The EPA has not come up with that yet. We have argued that in order to enforce a near-zero emissions standard, there has to be some sort of approval by EPA, which at this point in time, there is not. With the port, they do not have the ability to move forward with a Clean Truck Program fee until there is a legal definition of what near-zero emissions standard is. Our understanding with the EPA is that they are working toward a federal standard which might be higher than .02. To move forward with that will create legal issues with those who try to pursue a standard without the legal authority to do so.

Sydney Vergis, California Air Resources Board: I would contend that we both have a very different legal opinion on that, as well as our ability to implement our own program.

Julia Lester, Ramboll: These are for incentive programs, and not legal a legal standard.

Kevin Maggay, SoCal Gas: I do not have legal opinion to share. I don't think the slide illustrates that natural gas engines operate much more efficiently versus diesel. That 90% reduction can be modified. The greenhouse gases shows the same number. This is not enough to get people to switch over. It's important to show the scale of the problem here.

Julia Lester, Ramboll: I do not disagree with what you are saying now, as this was prepared a couple of years ago and I know things have changed.

Bill Van Amburg, Calstart: Do everything you can now and plan for a transition later. You do not want to pin yourself in a corner but have a policy that encourages rapid change. We need to start building early versions. Players are already in the market and ramping up. Have duel path ways and have global commercial vehicles drive to zero. You can do it right now, but maybe over time; in the meantime, have the cleanest carbon fuels available now. Another thing is that the market structures can have beneficial results on user choice. POLA and POLB are looking at different pricing models. A clean truck will pay less and a dirtier truck will pay more. If I can do three or four turns a day instead of two, I will figure out how to make a cleaner truck work. That can be a powerful tool. CARB does have a voluntary low NOx standard. There are various pieces of California legislation already at voluntary low NOx standards.

Todd Campbell, Clean Energy Fuels: I wanted to touch on the argument that a standard has a short shelf life. Where we stand in a legal position of .02 that is going to move. It could be .015 and that would be good for breathers if it was. Thank you, Julia, for your presentation. The numbers that were used looked to be certification numbers. There are two ways to look at emissions- certification and lifecycle. We need to look more at life cycle. The grid does have impacts and there are emissions that are happening. I hope we do that. The second thing, more important than CNG and hybrid, we need to figure this out and how we build the technology. This is a real threat to our region. It is air pollution and diesel. It has been a great tool, but it is impacting peoples lives. Diesel emissions are five to nine times higher. This has been backed up by UC Riverside, and we need to pay attention when looking at certification numbers that were established in 2010. They are far worse now.

Matt Miyasato, AQMD: We are going to be faced with challenges. Weston and PMSA might not take to that. About 160,000 vehicles in the slide, what class of vehicles were covered?

Julia Lester, Ramboll: I believe the 160,000 was class eight.

Matt Schrap, California Fleet Solutions/ Velocity Vehicle Group: For understanding technology availability, it would be helpful to have a breakdown of how the truck classes work. We operate 1,500 vehicles in California. There are different weight classes. When I look at medium duty, there is more potential for near-zero emissions. This is there today and it is happening. ZE is beautiful, but there's some interim stuff that needs to happen. If my clients and Weston's members are not ready to step up to this, they are not going to do it. They will use diesel trucks until they are forced not to in 2035.

Waqas Rehman, LA County, First District: I heard there was a requirement by 2023. What kind of reduction will be required even with the 710 Corridor project? I need a better understanding of that.

Julia Lester, Ramboll: The zero-emissions and near zero emission meets the requirements under CEQA analysis. The AQMD people are the experts. The most difficult road is ozone standard. ZE or NZE get us where we need to be going.

Damon Hannaman, SoCal Edison: We are focused on reduction. We want emissions-free sources. Our plan is to be 80 percent emissions free by 2030 and completely free by 2045. We are processing 35,000 connections for systems. We are working with customers on infrastructure charging, but also working with energy restorage. There will be a mix of things, but we are working toward being completely emissions free.

Trucking Industry Perspective

After a short break, participants re-assembled to discuss the remaining topics.

Michael Cano, Metro: What are the challenges and goals for this program for it to be successful in trucking?

Weston LaBar, Harbor Trucking Association: Earlier I wanted to point out that there are certain requirements that should take place when we mandate things. From a member standpoint, we need the opportunity to have an even playing field. We have had members that have been procuring near-ZE vehicles, then if the standard got changed to 0.15, all of those folks invested in equipment would get penalized for buying equipment too early. That is why we need a definition that is enforced for these things. We have concerns but our goal is to work with stakeholders to have a sustainable corridor. We have two focuses. How are we a sustainable partner in the supply chain? How can we meet the economic demands of our customers? This needs to be a partnership.

Let me tell you our concerns because they are different than what you might think. There are short-term concerns over the technology and cost. We feel like between now and 2035 we can get an affordable ZE truck. We will demonstrate pilot programs. We have members that have ZE and NZE trucks. The feedback is that a ZE truck does not do what a diesel truck does. If you are an overweight company, public policy is a big issue. A battery truck is heavier. Unless we get an exemption, we are having issues. That puts us at a disadvantage. From a policy standpoint we are not able to meet those standards because of weight. We also have local municipalities that are putting into place, based on allocations from SB1, they are putting fees on the trucking industry. Carson is a great example. Carson gets the same amount of funding as Beverly Hills because they have the same population, however, the impact is different. The have an extended overweight corridor and they have turned to the trucking industry to fill the funding

gap. We now have to pay a road impact or mitigation fee. My members are now subjected to possibly paying a fee because they invested in what they thought was a solution. This needs to be clarified at a state level. It's not fair to put a fee on a truck just because it is heavier. We have members that procured ZE trucks. The ports will tell you trucking has been great at finding a path. We do not have a resolution to our issues. That is a disincentive to move toward ZE. We have weight issues, fee issues, fee issues on technologies, what is exempt? Are we going to be double taxed on the 710 Corridor? Is it intended that we will carry the load for the entire industry? That is unreasonable and unfair. There are policy issues that need to be addressed. I do want to thank Clean Energy and SoCal Gas for helping us. We are doing our part, but we have issues. I have to pay a 12% sales tax on a truck. We need to look at trucks that are made and bought in California. That is a huge opportunity. We can redeploy that work since the aerospace industry is dwindling. If there is something taken up by the State, lets create incentives. That handles the policy stuff.

For infrastructure, a huge concern is that we have members that have 250 trucks. They have their third BYD truck, but they are capped at three. We have smaller carriers that have no ability to get more electric infrastructure, so they are capped at two. We need some assemblance of what the rates are going to look like. My members need clarification and infrastructure to be ready if we are going to deploy technology. We have lessons learned from the first Clean Truck Program. We need more demo programs and pilot programs. If we mandate things that don't work, it will set things back. Member are testing ZE tech and EV solutions, but we need standards from the EV community as well. There are different concerns beyond cost or availability.

In all, we are looking for a partnership for a reasonable pathway. All we hear is that we are the dirty truckers killing everyone up and down the710 Corridor. We have invested more resources than anyone else has. The ports made us get more expensive equipment and we have less productivity. Whatever we can do to lower the cost and increase productivity, that allows us to be more profitable, make ports more competitive, and be beneficial for everyone. This is a multi-faceted approach. We want to have a sustainable solution, but we need environmental folks to work with us.

Bill Van Amburg, Calstart: How do we actually reward people who are buying clean technology? Originally, it was one of the goals for the 710. It is good to list problems and start tackling them. Let's take legislation out there and work together. I also agree to not pay taxes on incremental cost. These are doable actions if we can work together.

Weston LaBar, Harbor Trucking Association: I'm hoping there is going to be an openness to that. We find that we are often the target but get no credit for progress. If you bought something, a truck brought it. One of the real things we deal with is everyone wants their package within 24 hours but they don't want a warehouse located where they live. We would like to see a real study done on a lifecycle on manufacturing and energy standpoint. What is the true emissions of a truck? How is the power generated? I do not know the effects on climate change. We know what it does for air quality, but we need more academic studies. A lot of the matters are coming from brakes and tires, which are not surprising, but these are new things we need to understand and not just put a band-aid on it.

Kevin Maggay, SoCal Gas I think the weight is an issue and there should be exemptions. But this is not entirely fair for disadvantaged communities. I have cautions about weight exemptions.

Person F: I know we talked about technology getting better, but I have a question related to infrastructure. There are no standards for charging equipment. To buy a ZE truck, you need a charger. How do we overcome that challenge? Does the grid have the capacity for that many trucks on the road? Do we have capacity for that many charging ports? What do I do if there is a blackout? I will need to run my business. I think we need several different technologies and not just electric. Those are the big challenges that I see.

Damon Hannaman, SoCal Edison: There are a couple more things I want to touch on. Utilities have programs available to push electrification through that the municipalities do not have yet and that does need to be pushed. EVSC and SoCal Edison is helping push those standards through programs. Finally, we are developing demand response programs to help manage the cost after implementing new technology.

As far as the other concerns, wildfires and things like that have been specific to circuits and there are ways to be strategic in alerting customers at least an hour in advance. If there is a large blackout, electricity is not the only thing that will not be available. Gas and others will be affected as well. In terms of grid capacity, the state has flattened out in consumption due to energy-saving policies and there is a lot of room for growth.

Regulatory Environment

Todd Campbell, Clean Energy Fuels: DOE and natural gas can work in the state. We should never have a policy that punishes early adopters of new technology, because that is unfair. The industry has worked together for a weight exemption and we should work together toward a bill to eliminate the sales tax.

Alison Linder, SCAG: I just wanted to point out some of SCAG's interests and that is how to best support these emerging technologies. There needs to be more public charging infrastructure, but also how do we make that work?

Genevieve Guiliano, USC/METRANS: We should be encouraging the issue of standards at the State level. There is an opportunity to build in standards so that they lasts in the long run. Also, drayage is not the majority of trucking. There needs to be a broader market for this and we need an industry-wide perspective, or else the costs will never go down.

Sydney Vergis, California Air Resources Board: In any serious study on life-cycle analysis comparing diesel trucks to ZE trucks, the lowest NOx will be ZE. SB1 does mandate that any heavy-duty truck that is not compliant starting January 1 will have their DMV registration revoked. It does not matter what kind of long-haul you have, if it is not 2010 or newer then no registration. Appropriations for grant programs happen annually. Also the Advanced Clean Truck Regulation mandated that manufacturers Class 4-8 will have to fit a manual requirement. This is already currently in progress and there are more regulations in the works.

Wayne Nastri, AQMD: 2020 will be a big deal for us. Contingency measures will need to be submitted to the USEPA. If I were a pessimistic person, I would say that the federal government would most likely reject those contingency measures and start sanctions which will impact everyone in this room. If I were a skeptic, I would say that the current administration wants to punish California by seeing cargo in the ports divert. The administration might want to look at directing cargo to other US Ports. The largest emissions reduction now needs to be 45 percent lower NOx by 2023). SB-732 gives voters the decision to invest in technology if they want to or not. It has been calculated that $1-2 billion dollar a year will be spent in years to come just in conforming in technology.

Niki Okuk, Calstart: This is in response to Sydney's comment earlier, but 40 percent of trucks need to retire within three years. Truckers and owners will be scrambling to buy trucks. They will be looking to diesel, but now there is an opportunity to put the clean trucks on their radars.

APPENDIX B

Memorandum of Understanding Creating the I-710 Corridor Air Quality Steering Committee

Memorandum of Understanding
Creating the I-710 Corridor Air Quality Steering Committee to Implement the I-710 Clean Truck Emissions Program

This Memorandum of Understanding Creating the I-710 Corridor Air Quality Steering Committee to Implement the I-710 Clean Truck Emissions Program ("MOU") is entered into between the Los Angeles County Metropolitan Transportation Authority ("Metro"), the California Department of Transportation ("Caltrans"), the Southern California Association of Governments ("SCAG"), and the Gateway Cities Council of Governments ("Gateway Cities COG"), (collectively the "Parties"). In order to implement the program contemplated herein, the Parties have voluntarily arrived at the following mutual understandings and agreements.

Recitals

WHEREAS, the I-710 Freeway is a major transportation corridor (I-710 Corridor) accommodating both daily commutes and significant freight movement to and from the Ports of Los Angeles and Long Beach.

WHEREAS, Caltrans and Metro have partnered with the Gateway Cities COG, the Ports of Los Angeles and Long Beach, the Cities along the I-710 Corridor, and community groups and worked with the California Air Resources Board (CARB), SCAG and the South Coast Air Quality Management District (SCAQMD) to identify features for the I-710 Corridor Project that improve mobility, support commerce, and address air quality and public health concerns in the corridor.

WHEREAS, Caltrans and Metro have prepared a draft Environmental Impact Statement and Environmental Impact Report ("EIS/EIR") for the I-710 Corridor Project. On March 1, 2018, the Metro Board of Directors identified Alternative 5C as the Locally Preferred Alternative ("LPA") for the I-710 Corridor Project. Caltrans has endorsed Metro's recommendation to advance Alternative 5C as the Preferred Alternative through the I-710 EIS/EIR. Alternative 5C includes the I-710 Zero Emission/Near Zero Emission Truck Technology Deployment Program (also known as the I-710 Clean Truck Emissions Program or "Program" herein) as a focused I-710 incentive program for heavy-duty trucks that meet or exceed CARB's 0.02 g/bhp-hr NOx standard (i.e., Zero Emission ("ZE")/Near Zero Emission ("NZE") trucks).

WHEREAS, within the greater project area, several agencies have published commitments to development of ZE/NZE trucks and understand that deployment will take a collaborative approach. The Parties will form a Steering Committee (and invite other agencies to join the Steering Committee) to implement the I-710 Clean Truck Emissions Program (which qualifies for and contributes to each agency's plans and goals as identified and summarized below and more comprehensibly described in Appendix A) in the I-710 Corridor to improve air quality for communities along the corridor.

a. SCAQMD: 2016 Air Quality Management Plan ("AQMP") seeks to leverage strong federal, state, and local partnerships to secure incentive funding and supporting infrastructure for early deployment of zero and near-zero technologies, inclusive of the mobile source sector, specifically heavy-duty trucks.

b. SCAG: 2012-2035 Regional Transportation Plan/Sustainable Communities Strategy and 2016-2040 Regional Transportation Plan/Sustainable Communities Strategy include a commitment to reduce emissions from transportation sources to comply with SB 375 by pledging to a broad deployment of zero and near zero emission transportation technologies especially in the goods movement system.

c. Port of Long Beach: The 2017 San Pedro Bay Ports Clean Air Action Plan ("CAAP") Update set the Port of LB on the path to zero emission goods movement, with a goal of transitioning terminal equipment to zero emissions by 2030 and on-road trucks by 2035.

d. Port of Los Angeles: The Zero Emission Technologies effort, including the San Pedro Bay Ports CAAP, Zero Emissions Roadmap commits to finding new ways to reduce emissions from ships, trains, trucks, harbor craft, and cargo handling equipment with the goal of eliminating all pollution from port-related operations. The Port Zero-Emissions White Paper outlines a specific plan of action including expanded development and testing of zero emission technologies, identification of new strategic funding opportunities, and new planning for long-term infrastructure development.

e. California Air Resources Board: The CARB Mobile Source Strategy: Further Deployment of Cleaner Technologies: On-Road Heavy-Duty Vehicles control measure in the 2016 AQMP and CARB's related State Implementation Plan ("SIP") submittal to USEPA commits to expanding and enhancing existing incentive funding and innovative funding programs for heavy-duty vehicles to increase the emphasis on and support for purchase of near-zero and zero emission equipment. Furthermore, full implementation of this CARB measure would require funding approximately 15,000 to 20,000 trucks per year over a seven year period, depending upon the availability of vehicles and engines certified to the ZE and/or NZE standards.

f. USEPA: The National ZEV Investment Plan commits to $1.2 billion (outside California) and $800 million (within California) for a total of $2 billion in funding over 10 years for zero emission vehicle ("ZEV") infrastructure, education, and access. The funding supports the increased adoption of ZEV technology by installing ZEV fueling infrastructure (for both electric- and hydrogen-powered cars), funding brand-neutral consumer awareness campaigns that will help grow the ZEV vehicle market, and investing in projects such as car-sharing programs that will increase access to ZEVs for all consumers in California, including those in lower-income and disadvantaged communities.

The Clean Diesel Program provides support for projects that protect human health and improve air quality by reducing harmful emissions from diesel engines. This program includes grants and rebates funded under the Diesel Emissions Reduction Act ("DERA"). The program solicited proposals nationwide for projects that achieve significant reductions in diesel emissions in terms of tons of pollution produced and exposure, particularly from fleets operating in areas designated by the Administrator as poor air quality areas. Eligible diesel vehicles, engines and equipment include school buses, class 5 – class 8 heavy-duty highway vehicles, locomotive engines, marine engines, nonroad engines, and equipment or vehicles used in construction, handling of

cargo (including at ports or airports), agriculture, mining or energy production (including stationary generators and pumps).

The Cleaner Trucks Initiative ("CTI") is a future planned rulemaking to update standards for nitrogen oxide ("NOx") emissions from highway heavy-duty trucks and engines. USEPA expects that heavy-duty trucks will be responsible for one-third of NOx emissions from transportation in 2025. Updating these standards will result in NOx reductions from mobile sources and could be one important way that allows areas across the U.S. to meet National Ambient Air Quality Standards for ozone and particulate matter.

WHEREAS, the Parties to this MOU wish to implement the I-710 Clean Truck Emissions Program (which qualifies for and contributes to each agency's plans and goals discussed above) in the I-710 Corridor to improve air quality for communities along the corridor. The purpose of this MOU is to clarify the Parties' interests, commitments, roles and responsibilities in the implementation of the I-710 Clean Truck Emissions Program.

THEREFORE, in furtherance of this MOU and incorporating by reference the above Recitals, the Parties agree as follows:

1.0 I-710 Clean Truck Emissions Program

The I-710 Phased-In Zero Emission Truck Technology Development Program (also known as the I-710 Clean Truck Emissions Program) is a component of Alternative 5C, also known as the Preferred Alternative ("PA"), for the I-710 Corridor Improvement Project. The Clean Truck Emissions Program would seek funding to assist individual owner-operators and privately owned truck fleets to subsidize the purchase of heavy duty zero or near zero emission trucks for use within the I-710 Corridor as well as seed money for electric charging stations and hydrogen refueling stations within the I-710 Corridor. The recharging/refueling stations would be constructed near locations served by heavy-duty vehicles such as intermodal terminals at the ports, rail yards, warehouses, and distribution centers. The Clean Truck Emissions Program is consistent with goals and strategies of the SCAQMD 2016 AQMP and the 2016 AQMP Funding Plan, as well as other similar clean technology incentive programs administered by the SCAQMD. The Clean Truck Emissions Program is also consistent with the plans, goals and strategies of the other Parties to this MOU as described above.

2.0 I-710 Corridor Air Quality Steering Committee

The Clean Truck Emissions Program addresses one element of the overall air quality/environmental improvement needs of the corridor. It will take a collaborative effort of all the Parties and Steering Committee members to be able to bring the Parties' plans and goals to fruition. Therefore, the Parties agree to form the I-710 Corridor Air Quality Steering Committee ("Committee"),that will consist of the Parties to this MOU and subsequent invited agencies, funding partners and industry engine/truck providers and users. The formation of the Committee will allow for a more comprehensive approach and faster implementation of the improvements/incentives, goals, plans and the Clean Truck Emissions Program. The Parties to this MOU agree to have a representative actively serve on the Committee.

3.0 Responsibilities of the Committee

The Committee will:

a. Further develop implementation details, including eligibility requirements, institutional arrangements, management, and administration for the Clean Truck Emissions Program.

b. Explore and identify funding opportunities, financial impact, and other implementation factors along with the development of a phasing plan for the achievement of the funding target developed by Caltrans and Metro for the Clean Truck Emissions Program, and the more comprehensive goals, based on existing and new potential funding, including local, state, federal and private resources. This includes collaborating with the Port of Long Beach, the Port of Los Angeles and the South Coast Air Quality Management District in identifying funding and project/program opportunities to implement.

c. Develop a strategy that outlines progressive transition to ZEVs in the corridor starting with the latest feasible and sustainable technologies.

d. Identify and evaluate other potential strategies to address the air quality concerns in the corridor.

e. Obtain or assist with obtaining funding to implement the Clean Truck Emissions Program and more comprehensive programs.

f. Issue quarterly reports on the development and progress toward the established and agreed upon goals. The progress reports will be presented to the governing bodies of the participating agencies and those of other agencies, as necessary.

4.0 TERM

4.1. The term of this MOU will begin on the Effective Date and shall continue until Program is fully implemented or until terminated by the Parties.

5.0 AMENDMENT

5.1. Amendment of any provision of this MOU shall be effective only if in writing and signed by authorized representatives of the Parties.

6.0 MISCELLANEOUS

6.1. Effective Date. The date the last signatory executes the MOU.

6.2. Assignment. The Parties shall not assign rights or responsibilities under this MOU without written permission from the remaining Parties.

6.3. Governing Law; Venue. This MOU, and any claims relating to or arising out of this MOU, whether arising in contract, tort, or otherwise, shall be governed and construed in accordance with the laws of the State of California, without giving effect to conflicts of laws and principles. Any action or proceeding between the

Parties relating to this MOU shall take place in the State of California in the County of Los Angeles.

6.4. Notices. Any notice required or permitted hereunder shall be in writing and shall be given to each Party's Designated Representative at the address below, or at such other address as the Party may hereafter specify in writing. Such notice shall be deemed given: upon personal delivery to the appropriate address; or three (3) business days after the date of mailing if sent by certified or registered mail; or one (1) business day after the date of deposit with a commercial courier service offering next business day service with confirmation of delivery. Each Party may change the Designated Representative as needed and shall provide notice to the other Parties by email of the change.

6.5. Dispute Resolution. In the event of any dispute between the Parties arising out of or in connection with this MOU, the Parties shall attempt, promptly and in good faith, to resolve any such dispute. If the Parties are unable to resolve any such dispute within a reasonable time (not to exceed thirty (30) days), then either Party may submit such dispute to non-binding mediation in Los Angeles County, California. Each Party shall bear its own expenses in connection with the mediation and share equally the fees and expenses of the mediator. If the dispute cannot be resolved through mediation within a reasonable time, then the Parties shall be free to pursue any right or remedy available to them under applicable law. The requirements of this section shall not preclude a Party from pursuing equitable relief, if delay in seeking such relief may result in irreparable harm to such Party.

6.6. Force Majeure. Subject to the express provisions of Section 4 (Term) above, no Party will be deemed in default of this MOU to the extent that performance of its obligations or attempts to cure any breach are delayed or prevented by reason of any event beyond the reasonable control of such Party, which event was not caused by such Party's negligence and could not have been avoided by such Party's commercially reasonable efforts (including, but not limited to, any act of God, fire, earthquake, natural disaster, accident, pandemic, labor unrest, civil disobedience, acts of terrorism or act of government), and provided further that such Party gives other Parties written notice thereof promptly and, in any event, within five (5) business days of discovery thereof, and thereafter uses its best efforts to continue to so perform or cure. In the event of such a force majeure event, the time for performance or cure will be extended for a period equal to the duration of the force majeure event plus reasonable repair timeframes, but in no event more than thirty (30) days unless agreed upon by the Parties.

6.7. No Third Party Beneficiaries. This MOU is executed and entered into by the Parties solely for their benefit, and for no other party (including without limitation any individual employee, officer, director, contractor or agent of a Party).

6.8. Counterparts. This MOU may be executed in one or more counterparts, each of which shall be deemed an original and all of which together shall constitute one instrument.

6.9. Waiver; Modification. No amendment, modification, waiver or supplement shall be made with respect to this MOU or any provision of this MOU by course of

performance, or by the failure of a Party to object to a deviation from the terms of this MOU. Any waiver, modification or amendment of any provision of this MOU shall be effective only if in writing and signed by authorized representatives of the Parties.

6.10. Complete Understanding. This MOU and any attached exhibits, schedules and addenda, all of which are incorporated into this MOU by this reference, constitute the full and complete understanding and agreement of the Parties relating to the subject matter hereof and supersede all prior understandings and agreements relating to such subject matter. The provisions of this MOU shall prevail over any conflicting provisions in any purchase order, acceptance notice or other document generated by the Parties except as expressly provided in the preceding sentence.

7.0 EXECUTION

7.1. By their signatures below, each of the following represents that it has authority to execute this MOU and to bind the Party on whose behalf the execution is made.

IN WITNESS WHEREOF, this MOU has been executed by each of the Parties as of the date set forth next to such Party's authorized representative's signature.

Appendix A

Examples of Agencies Plans and Goals to Implement Clean Truck Emissions Technology

a. SCAQMD: 2016 Air Quality Management Plan (AQMP)

Page 5 Executive Summary: *Identify and secure significant funding for incentives to implement early deployment and commercialization of zero and near-zero technologies. The 2016 AQMP control strategy strongly relies on a transition to zero and near-zero emission technologies in the mobile source sector, including automobiles, transit buses, medium- and heavy-duty trucks, and off-road applications. The plan focuses on existing commercialized technologies and energy sources including their supporting infrastructure, along with newer technologies that are nearing commercialization based on recent demonstration programs and limited test markets. Prioritizing and expanding funding in Environmental Justice (EJ) areas will be sought.*

Page 4-3: *The 2016 AQMP relies strongly upon partnerships at federal, state, and local levels, seeking to expand existing collaborations and establish new coalitions. These strategies include aggressive new regulations and development of incentive funding and supporting infrastructure for early deployment of advanced control technologies… The SCAQMD will continue to support technology demonstration projects for both mobile and stationary sources and will work to create new or expanded funding opportunities for earlier deployment of cleaner technologies, thus contributing to a smooth transition to zero and near-zero emission technologies in the mobile and stationary source sectors.*

b. SCAG: 2016-2040 Regional Transportation Plan/Sustainable Communities Strategy

Page 107: *The 2016 RTP/SCS focuses on a two-pronged approach for achieving an efficient freight system that reduces environmental impacts. For the near term, the regional strategy supports the deployment of commercially available low-emission trucks and locomotives while centering on continued investments into improved system efficiencies. For example, the region envisions increased market penetration of technologies already in use, such as heavy-duty hybrid trucks and natural gas trucks. Applying ITS solutions to improve operational efficiency is also recommended. In the longer term, the strategy focuses on advancing technologies – taking critical steps now toward the phased implementation of a zero- and near zero-emission freight system. SCAG is cognizant of the need to incorporate evolving technologies with plans for new infrastructure. These include technologies to fuel vehicles, as well as to charge batteries and provide power. The plan to develop and deploy advanced technologies includes phased implementation, during which technology needs are defined, prototypes are tested and developed, and efforts are scaled up. The phases are summarized as follows:*

- *Phase 1: Project Scoping and Evaluation of Existing Work*
- *Phase 2: Evaluation, Development and Prototype Demonstrations*
- *Phase 3: Initial Deployment and Operational Demonstration*

- *Phase 4: Full-Scale Demonstrations and Commercial Deployment*

Page 43: *The* 2016 RTP/SCS Goods Movement Appendix *further details an updated environmental action plan for the goods movement system that builds on regional progress to date. This includes an Action Plan for Advancement of Zero-Emission Technology. As the four phases of the updated action plan are reviewed, the text also points to progress made related to specific action steps identified in 2012. The technology development and deployment plan is inclusive of all stages of technology development and deployment: beginning from an initial definition of key operational parameters, moving through prototype development, initial demonstration and evaluation, and eventually a staged roll-out. This start-to-finish framework is useful as there are many potential technologies available, each at different stages of readiness.*

Significant regional actions will be needed in order to realize this vision of a zero- and near zero-emission freight transportation system that meets regional objectives for long-term sustainability and can also meet the performance objectives required by industry. SCAG may act together with key partner agencies such as the Port of Los Angeles, the Port of Long Beach, the SCAQMD and the region's county transportation commissions to update and implement this plan as needed. Since SCAG adopted the 2012 RTP/SCS, the region has attracted outside funding and committed its own funding to support research and development efforts. Several studies have been conducted to date that contribute to "project scoping" by providing a greater understanding of the regional truck market and how truck use defines key performance parameters such as range and power needs. To evaluate and develop prototypes, three large-scale research and development efforts are underway to develop and test zero-emission trucks and charging infrastructure. These projects require continuing collaboration between original equipment manufacturers and public sector agencies.

c. Port of Long Beach

The 2017 San Pedro Bay Ports Clean Air Action Plan Update set the Port of Long Beach on the path to zero-emission goods movement, with a goal of transitioning terminal equipment to zero emissions by 2030 and on-road trucks by 2035.

d. Port of Los Angeles: Zero Emission Technologies

Although significant emissions reductions have been achieved under the San Pedro Bay Ports Clean Air Action Plan (CAAP), the Ports of Los Angeles and Long Beach (the San Pedro Bay Ports) continue to place great emphasis on green development, including a particular focus on zero emission technologies. Fostering the development of zero emission technologies is not only a key component of the Ports' plans to achieve their voluntary air quality goals, but it will also help to greatly reduce regional greenhouse gas emissions. To that effect, the San Pedro Bay Ports prepared a Zero-Emissions Roadmap designed to guide their actions going forward.

e. California Air Resources Board (CARB): 2016 AQMP Appendix IV-B CARB Mobile Source Strategy: "Further Deployment of Cleaner Technologies: On-Road Heavy-Duty Vehicles"

Page IV-B-50: *Overview: The goal of this proposed measure is to identify concepts that will further reduce NOx emissions. These concepts will include additional incentive funding and developing technologies to accelerate the penetration of near-zero and zero equipment beyond the rate of natural turnover achieved through implementation of the other proposed measures identified for on-road heavy-duty vehicles. This measure is specifically for the South Coast.*

Page IV-B-51: *Expand and enhance existing incentive and other innovative funding programs for heavy-duty vehicles to increase the emphasis on and support for purchase of near-zero and zero equipment. Funding mechanisms would target technologies that meet either lower NOx standards or are hybrid/zero-emission technologies. If incentive funding is the primary mechanism to achieve the scope of further technology deployment described above, funding would be required for approximately 15,000 to 20,000 trucks per year over a seven year period, depending upon the availability of zero-emission vehicles and engines certified to [C]ARB's optional low-NOx standards of 0.05 g/bhp-hr and 0.02 g/bhp-hr or other advanced hybrid/zero-emission technologies. The incentive funding required for this effort would go beyond the amount currently authorized for existing programs through 2023. Continued incentive funding post-2023 to further accelerate the deployment of trucks meeting or exceeding a 0.02 g/bhp-hr standard would provide additional reductions for 2031.*

Determination of the needed resources will be based on assessment of the incremental cost of technologies, cost effectiveness, and the type of financing mechanism employed. Funding needs and mechanisms will be identified working in collaboration with the District and other State agencies over the next several months.

f. USEPA: National ZEV Investment Plan

Page 3: *As required by Appendix C to the 2.0-Liter Partial Consent Decree entered by the U.S. District Court for the Northern District of California on October 25, 2016, Volkswagen Group of America is investing $1.2 billion over the next 10 years in zero emission vehicle (ZEV) infrastructure, education, and access outside California to support the increased adoption of ZEV technology in the United States, representing the largest commitment of its kind to date. Based on figures from the Council of Economic Advisors and U.S. Department of Transportation related to highway and transit investments, the $1.2 billion being spent here is estimated to support up to 15,000 jobs throughout the United States over the 10 year course of the investment [Dept. of Transportation, Council of Economic Advisors]. The first cycle of a separate investment of $800 million in California is the subject of the California ZEV Investment Plan, which was submitted to the California Air Resources Board on March 8.*

APPENDIX C

I-710 Clean Truck Program Roles and Responsibilities

I-710 Clean Truck Program Roles and Responsibilities

	Metro Staff / Metro Contractor (Program Administrator)	I-710 Steering Committee	Metro Board
Program Goals and Objectives	• Provides recommendations to the Metro Board for Program goals, objectives and implementation of the I-710 Clean Truck Program.	• Ensure Consistency with Board-approved Program goals and objectives as well as related Program milestones and Program NZE/ZE vehicle miles traveled (VMT) Targets.	• Consistent with the I-710 Corridor EIR/EIS and conformity finding, provide overall policy direction on Program goals, objectives and implementation through Board action. • Provide public forum to review and consider aspects of the I-710 Clean Truck Program, including public board meetings and reports on various aspects of and progress made on implementing the Program.
Program Development	• Develop and maintain Roster of I-710 Steering Committee Members • Provide Logistics and Support for Regular I-710 Steering Committee Meetings, including agendas and documentation of meeting minutes and actions • Develop Proposals and Present Options to the I-710 Steering Committee regarding: – Program Application Materials / Guidelines / Appendices – Program Eligibility Requirements, which must include specific Program Eligibility Criteria that have been developed to date (i.e., heavy-heavy duty trucks [Class 8] that adhere to accepted SCAQMD/CARB standards for zero emissions and near zero emissions trucks.) – Description of NZE/ZE Truck VMT Requirements and Procedures consistent with Program milestones established for each Deployment Phase – Description of Funding Incentives – Description of Program Penalties – Program NZE/ZE Truck Maintenance Requirements and Certifications – Description of Program Auditing Requirements – Program Educational, Recruiting, Promotional Materials for posting on the I-710 Clean Truck Program Website – Sample contract for recipients of Program funds – Criteria for partnering with agencies, local jurisdictions, non-profit, and private organizations to help facilitate the development of electric charging stations/hydrogen fueling stations within the I-710 Corridor. Criteria would include items such as proposed site location, feasibility, capacity, implementation timeline, operational efficacy, as well as the capability and financial reliability of the Partner Agency(s)/Organization(s). – Sample partner agreement for recipients of Program seed funding for electric charging stations/hydrogen refueling stations.	• Review, advise, and make recommendations on the I-710 Clean Truck Program Manual, including: – Program Application Materials / Guidelines / Appendices – Program Eligibility Requirements, which must include specific Program Eligibility Criteria that have been developed to date (i.e., heavy-heavy duty trucks [Class 8] that adhere to accepted SCAQMD/CARB standards for zero emissions and near zero emissions trucks.) – Minimum NZE/ZE Truck VMT Requirements and Procedures consistent with Program milestones established for each Deployment Phase – Funding Incentives – Program Penalties – Program NZE/ZE Truck Maintenance Requirements and Certifications – Program Auditing Requirements – Sample contract for recipients of Program funds • Review and advise on criteria for partnering with agencies, local jurisdictions, non-profit, and private organizations to help facilitate the development of electric charging stations/hydrogen fueling stations within the I-710 Corridor. Review sample partner agreement for recipients of Program seed funding for electric charging stations/hydrogen refueling stations. • Review Program Educational, Recruiting, Promotional Materials for posting on the I-710 Clean Truck Program Website • Make independent recommendations and provide suggestions to improve the Program, increase Program applicants and participation, and optimize NZE/ZE travel within the I-710 Corridor. • In addition to the I-710 Clean Truck Program, the I-710 Steering Committee will also share information to help inform the work of Metro's overall Countywide Clean Truck Initiative (CCTI), including sharing lessons learned and Program considerations for future phases of the CCTI.	• Review and offer input to the membership of the I-710 Steering Committee. • Approve the I-710 Clean Truck Program Manual, which includes: – Program Application Materials / Guidelines / Appendices – Program Eligibility Requirements, which must include specific Program Eligibility Criteria that have been developed to date (i.e., heavy-heavy duty trucks [Class 8] that adhere to accepted SCAQMD/CARB standards for zero emissions and near zero emissions trucks.) – Minimum NZE/ZE Truck VMT Requirements and Procedures – Funding Incentives – Program Penalties – Program NZE/ZE Truck Maintenance Requirements and Certifications – Program Auditing Requirements – Sample contract for recipients of Program funds • Approve criteria for partnering with agencies, local jurisdictions, non-profit, and private organizations to help facilitate the development of electric charging stations/hydrogen fueling stations within the I-710 Corridor.

* The I-710 Clean Truck Program is a voluntary, competitive grant award program. The delivery of Funding Incentives has yet to be determined and could take the form of voucher incentives towards the purchase of NZE/ZE heavy duty trucks or subsidized lease of NZE/ZE heavy duty trucks, among other delivery options.

	Metro Staff / Metro Contractor (Program Administrator)	I-710 Steering Committee	Metro Board
Program Implementation	• Provide regular reports on I-710 freeway programming and construction schedule, by major construction stage, to the I-710 Steering Committee. • Develop Proposals and Present Options to the I-710 Steering Committee regarding: – Timelines for Program Application/Award Process for Each Deployment Phase – Emerging or new NZE/ZE vehicle technologies that meet NZE/ZE standards per the Program Eligibility Criteria – Funding Incentives per ZE Truck for Each Deployment Phase – Funding Incentives per NZE Truck for Each Deployment Phase – Program Ranking Criteria & Weighting for Each Deployment Phase, which take into account factors such as: age and type of trucks to be displaced, history of travel in the I-710 Corridor, projected NZE/ZE travel in the I-710 Corridor, equity/disadvantaged community status, amount of requested incentive funds. – Need for additional Program Incentives or Penalties, if warranted • Conduct workshops to educate potential Program applicants. • Conduct call for applications for each NZE/ZE Truck Deployment Phase. • Review applications for completeness. Follow up with project applicants during application process. • Perform ranking analysis. Develop and present initial ranking recommendations for presentation to the I-710 Steering Committee. • Write staff reports to the Metro Board on recommended Program awards. • Implement contracts with Program funding recipients. Oversee disbursement of incentive funds or vouchers. • Identify partner agencies and organizations to facilitate the development of selected electric charging stations/hydrogen fueling stations within the I-710 Corridor. Develop proposals and make recommendations to the I-710 Steering Committee regarding award or contributions of Program seed funding for worthy projects per the Program criteria. Draft and implement Partner Agreements.	• Review, advise, and make recommendations on the I-710 Clean Truck Program, including: – Review and confirm NZE/ZE truck levels for *each* Deployment Phase up to full Program total of 4,000 NZE/ZE trucks – Review and confirm minimum NZE/ZE truck requirements for Program funding recipients to optimize NZE/ZE travel in the I-710 Corridor for each Deployment Phase – Timelines for Program Application/Award Process for Each Deployment Phase – Verify and provide input on Emerging or new NZE/ZE vehicle technologies that meet NZE/ZE standards per the Program Eligibility Criteria – Funding Incentives per ZE Truck for Each Deployment Phase – Funding Incentives per NZE Truck for Each Deployment Phase – Program Ranking Criteria & Weighting for Each Deployment Phase, which take into account factors such as: age and type of trucks to be displaced, history of travel in the I-710 Corridor, projected NZE/ZE travel in the I-710 Corridor, equity/disadvantaged community status, amount of requested incentive funds. – Need for additional Program Incentives or Penalties, if warranted. • Review, advise, and make recommendations for Program rankings of project applicants for Each Deployment Phase. • Make recommendations of Program awards for each Deployment Phase. • Review, advise, and make recommendations on proposals for the development of electrical charging stations/hydrogen refueling stations. Review conditions and terms of Partner Agreements.	• Upon completion of first I-710 Project construction stage (the Early Action Program), validate and approve additional I-710 Project construction stages. • Approval of scope and funding plan for each I-710 Project construction stage subsequent to the first one (the Early Action Program). The scope and funding plan for each construction stage helps determine the size, scope and schedule needed for each I-710 Clean Truck Program Deployment Phase. • Approval of funding and NZE/ZE truck deployment levels for each I-710 Clean Truck Program Deployment Phase. • Approval of Program subsidy awards for each I-710 Clean Truck Deployment Phase. • Approval of final proposals and award of seed funding for the development and implementation of selected electric charging stations/hydrogen fueling stations within the I-710 Corridor. Approval of Partner Agreements. • Award of contracts for Program Management support. • Review of staff reports on Program status (annual review). Includes communication to the public and major stakeholders (including EPA) as to the development and implementation of the Program on an annual basis.
Funding, Revenues, and Expenditures	• Develop annual Program budgets (capital and operating). • Work with the I-710 Steering Committee to identify funding opportunities. • Develop and submit grant proposals for regional, state, and federal funds. • Work with partner agencies and organizations to identify grant opportunities and funding sources to support the development and	• Review annual Program budgets (capital and operating). • Work with Metro/Program Administrator to identify funding opportunities for the Program. • Advise and provide input to support the development of grant proposals for regional, state, and federal funds. • Review fiscal plans for the I-710 Clean Truck Program for each Deployment Phase.	• Approval of fiscal plans and funding levels for the I-710 Clean Truck Program for each Deployment Phase. • Programming of approved $50 million as needed for the Program. • Approval of annual Program budgets (capital and operating).

* The I-710 Clean Truck Program is a voluntary, competitive grant award program. The delivery of Funding Incentives has yet to be determined and could take the form of voucher incentives towards the purchase of NZE/ZE heavy duty trucks or subsidized lease of NZE/ZE heavy duty trucks, among other delivery options.

	Metro Staff / Metro Contractor (Program Administrator)	I-710 Steering Committee	Metro Board
Funding, Revenues, and Expenditures (Continued)	implementation of electrical charging/hydrogen fueling stations for zero emissions trucks. • Develop fiscal plans for the I-710 Clean Truck Program for each Deployment Phase. • Program I-710 Clean Truck Program funds as part of the Metro budget process. • Program seed funding for electric charging station/hydrogen fueling station Partner Agreements as part of the Metro budget process. • Provide regular reports on Program Revenues and Expenditures to the Metro Board (annual) and to the I-710 Steering Committee (quarterly). • Update RTP/FTIP, as warranted, to reflect most current status of I-710 Clean Truck Program funding schedule.	• Review reports on Program Revenues and Expenditures on a regular (quarterly) basis.	
Tracking, Monitoring, and Reporting	• Establish Geo-Fencing Limits for the I-710 Corridor. • Procure/Disseminate Automated Vehicle Locator (AVL) Equipment or equivalent to Program Recipients, including third-party certification that equipment has been permanently affixed to the NZE/ZE vehicles. • Establish I-710 Clean Truck Program Website (also see Program Development above). • Establish and maintain NZE/ZE Truck VMT Tracking Database. • Track Program Awards. • Monitor NZE/ZE Truck VMT. Conduct 6-month check ins. Recommend actions and follow through with implementing measures for funding recipients who need to get back on track. • As warranted, develop proposals and options for corrective actions to demonstrate reasonable progress towards Program milestones for each deployment phase, including identification of need for additional Program incentives and/or penalties. • Monitor and enforce Partner Agreements for the development of electric charging stations/hydrogen fueling stations. • Write Staff Reports to the Metro Board regarding Program Status, including tracking of Program NZE/ZE Truck VMT.	• Provide Program oversight to ensure consistency with Program Objectives, Program Milestones, and Program NZE/ZE VMT Requirements. • Review status reports and monitor Program NZE/ZE VMT. • Review, advise, and make recommendations on corrective actions required to demonstrate reasonable progress towards Program milestones for each deployment phase.	• Review Program status, including tracking of Program NZE/ZE Truck VMT. • Authorize course corrections for the Program, as warranted, to ensure consistency with Program Objectives, Program Milestones, and Program NZE/ZE VMT targets.

* The I-710 Clean Truck Program is a voluntary, competitive grant award program. The delivery of Funding Incentives has yet to be determined and could take the form of voucher incentives towards the purchase of NZE/ZE heavy duty trucks or subsidized lease of NZE/ZE heavy duty trucks, among other delivery options.

APPENDIX D

I-710 Clean Truck Program
ZE/NZE Truck Vehicle Miles Traveled (VMT) Methodologies

FULL PROGRAM
4,000 ZE/NZE Trucks

<table>
<tr><th colspan="3">I-710 Corridor Project RDEIR/SDEIS
Response to Comments on “Not a Project of Air Quality Concern” Path</th></tr>
<tr><th>Reference</th><th>Comments</th><th>Responses</th></tr>
<tr><td>September 14, 2018 Teleconference Call Information Request
(Ben Machol)</td><td>Please provide additional information on the methodology that was used to develop the 24.64% ZE/NZE VMT estimate on I-710 for the 4,000 ZE/NZE trucks from the I-710 ZE/NZE Incentive Program.</td><td>The factors used to produce the VMT estimate for the I-710 ZE/NZE Truck Deployment Program were developed based on detailed discussions related to major I-710 truck markets and travel patterns in the I-710 Corridor. These discussions were conducted with SCAQMD staff over a period of several months between Feb. 2014 and May 2015. These steps are outlined as follows.
➢ The original focus for the I-710 ZE/NZE truck methodology was the proposed ZE/NZE Freight Corridor included in Alternative 7:
• The I-710 Travel Demand Forecast Model reports average daily vehicle trips for the Freight Corridor. Only trucks are eligible to use the Freight Corridor and the model assigned trucks to the Freight Corridor based on the relative attractiveness (in terms of travel times) of the Freight Corridor compared to other travel choices such as the adjacent I-710 general purpose lanes. The physical configuration of the Freight Corridor allowed for a straightforward examination of types of trips taking place, by truck travel market (Port trips, Transload-Secondary trips, Intermodal Domestic trips, and Pure Domestic trips [Light-, Medium- and Heavy-Heavies]), by average trip length.
• Using the above truck travel market analysis, Freight Corridor truck trips were converted into numbers of trucks (i.e., based on the average number of round trips per truck market type over the course of an average weekday). This step produced an estimate of the numbers of Freight Corridor trucks that would need to be incentivized to turn ZE/NZE for Alternative 7.
• The next step was to obtain an estimate endorsed by SCAQMD (with input from CARB) on a reliable, average unit incentive subsidy cost per ZE/NZE truck class [Light-, Medium-, and Heavy-Heavy] for the future year to utilize in the analysis. The unit costs were applied to the numbers of ZE/NZE trucks estimated for the Freight Corridor to produce a total ZE/NZE truck fleet cost estimate for Alternative 7.
➢ The same factors and steps developed for the Alternative 7 ZE/NZE methodology were utilized for the Preferred Alternative (Alternative 5C), only in reverse sequence:
• A target level cost for the ZE/NZE program component was established first ($100m). [Note: Alternative 5C was originally developed to be a more practical, less costly fall back option to Alternative 7. The internal target level of $100m for the ZE/NZE funding program was the maximum amount judged to be potentially feasible.]
• To optimize these program dollars and maximize air quality benefits, the funding for Alternative 5C was steered exclusively to Heavy-Heavy Duty Trucks (HHDT). The</td></tr>
</table>

		average unit ZE/NZE subsidy costs (average of $25k per Heavy-Heavy Duty Truck) developed for Alternative 7 were applied to the $100 m Alternative 5C target level ZE/NZE program cost to estimate the number of ZE/NZE trucks for Alternative 5C. [$1,000,000 Program / $25,000 per Truck ZE/NZE Incentive Cost = 4,000 ZE/NZE Trucks] • Using the same conversion factors developed for Alternative 7, the numbers of trucks were converted from trucks into average daily truck trips according to the respective major truck travel markets (Port trips, Transload-Secondary trips, Intermodal Domestic trips, and Pure Domestic trips). Further, since the subsidies would be provided to recipients on a VMT basis (i.e., eligible trucks would need to demonstrate that they traveled frequently on I-710 for sufficient distances), an estimate of the minimum VMT requirement for eligibility was established for the Program that aligned with the average trip lengths on I-710 for the high propensity truck travel markets (i.e., the Port trips, Transload-Secondary trips, Intermodal Domestic trips) as well as those Pure Domestic Heavy-Heavy Duty trips that would also make more than one roundtrip per day on I-710 on average. This is because even though the I-710 Corridor is over 19 miles in length per direction, not all of the trucks travel the full length of the Corridor. [No. of Round Trips per Truck per Weekday x No. of Directional Trips per Round Trip x Average Directional Trip Length x No. of ZE/NZE Trucks = Total Estimated ZE/NZE I-710 HHD Truck VMT. Or, 2 x 2 x 10.625 x 4,000 = 170,000.] • In order to estimate the percentage of I-710 HHD Truck VMT that would be ZE/NZE, total Daily HHD Truck VMT was extracted from the I-710 Travel Demand Forecast Model for Alternative 5C for the I-710 freeway traffic links only. [I-710 ZE/NZE HHDT VMT / I-710 HHDT VMT = I-710 ZE/NZE HHDT VMT Percentage. Or 170,000 / 689,925 = 24.64%.] • This last step – the I-710 ZE/NZE Program VMT conversion to the 24.64 percentage – was necessary for Alternative 5C, but not for Alternative 7. Since it is a funding program, the specific, future distribution of these ZE/NZE trips (i.e., exactly which individual trucks will be funded or the precise mix of the ZE/NZE fleet among the potential truck travel markets or where each truck enters and exits I-710) cannot be known; only that the funding program will produce a certain share or level of ZE/NZE VMT on I-710 based on the program requirements. This percentage was applied even-handedly to the Heavy-Heavy Duty Truck traffic – as only Heavy-Heavy Duty Trucks are eligible for program funds – to provide the final ZE/NZE estimates for I-710 traffic for the proposed project.

Notes:
[1] Total truck trips include heavy duty truck vehicle classes (including port trucks).
[2] The share of diesel/non-diesel trips by fuel type is estimated using the EMFAC2014 vehicle fleet distribution determined from the EMFAC2014 output for VMT in Los Angeles County in 2035.
[3] Gasoline truck trips also include natural gas truck trips that do not meet the standard of a ZE/NZE vehicle.
[4] Total truck trips are the sum of diesel, gasoline, natural gas, and ZE/NZE trips.
[5] ZE/NZE trips under Alternative 5C include the I-710 ZE/NZE Truck Deployment Program.

Abbreviations:
ZE/NZE - zero emission/near-zero emission
AADT - annual average daily traffic

Diesel Truck Trips on I-710

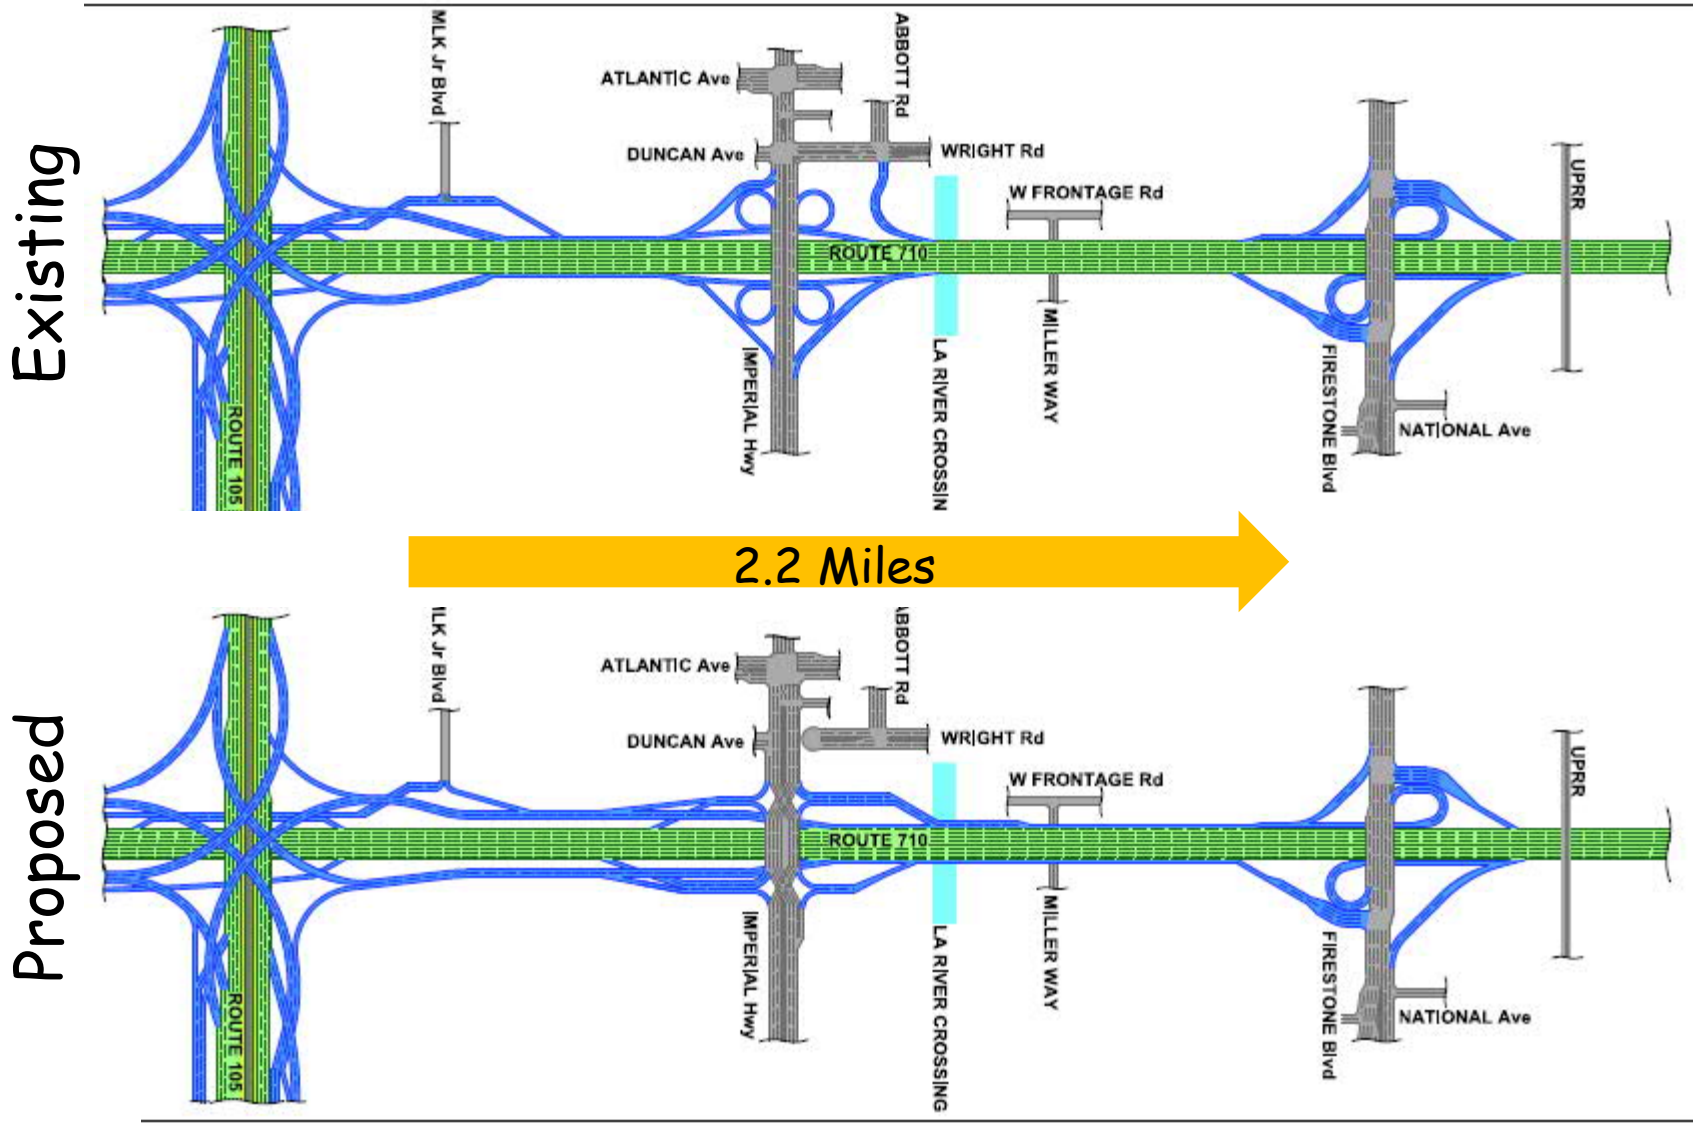
Notes:
[1] Total vehicle trips include drive alone autos/shared ride vehicles and heavy duty truck vehicle classes (including port trucks).
[2] The share of diesel/non-diesel trips by fuel type is estimated using the EMFAC2014 vehicle fleet distribution determined from the EMFAC2014 output for VMT in Los Angeles County in 2035.
[3] Gasoline vehicle trips also include natural gas vehicle trips that do not meet the standard of a ZE/NZE vehicle.
[4] ZE/NZE vehicle trips include electric automobiles. Under Alternative 5C, ZE/NZE trips also include the I-710 ZE/NZE Truck Deployment Program.
[5] Total trips are the sum of diesel, gasoline, natural gas, and ZE/NZE trips.

Abbreviations:
ZE/NZE - zero emission/near-zero emission
AADT - annual average daily traffic

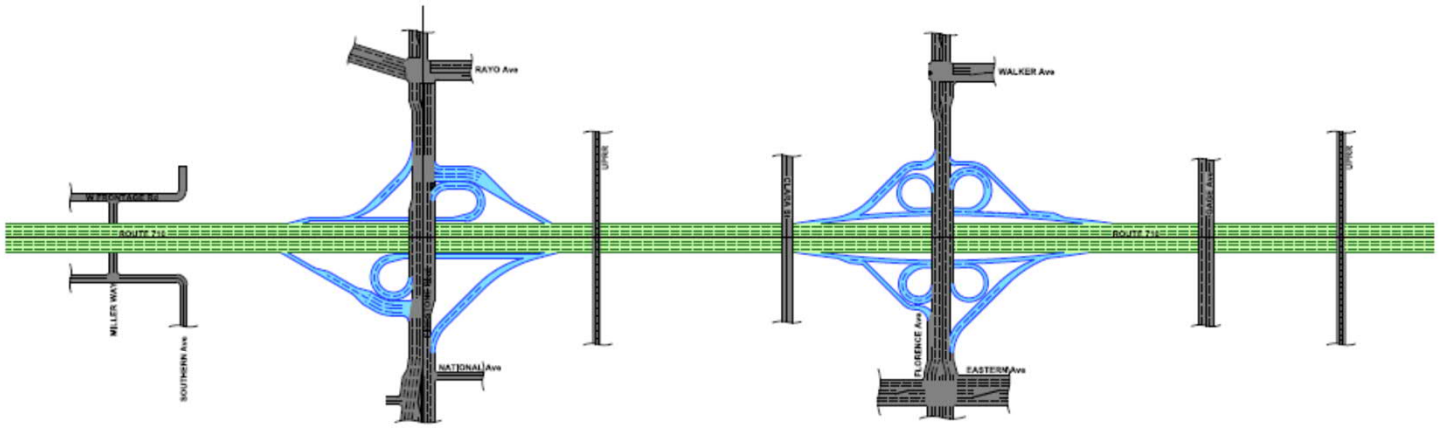
APPENDIX E

Schematics for Potential Construction Segments Initial Construction Stage – Early Action Program (EAP)

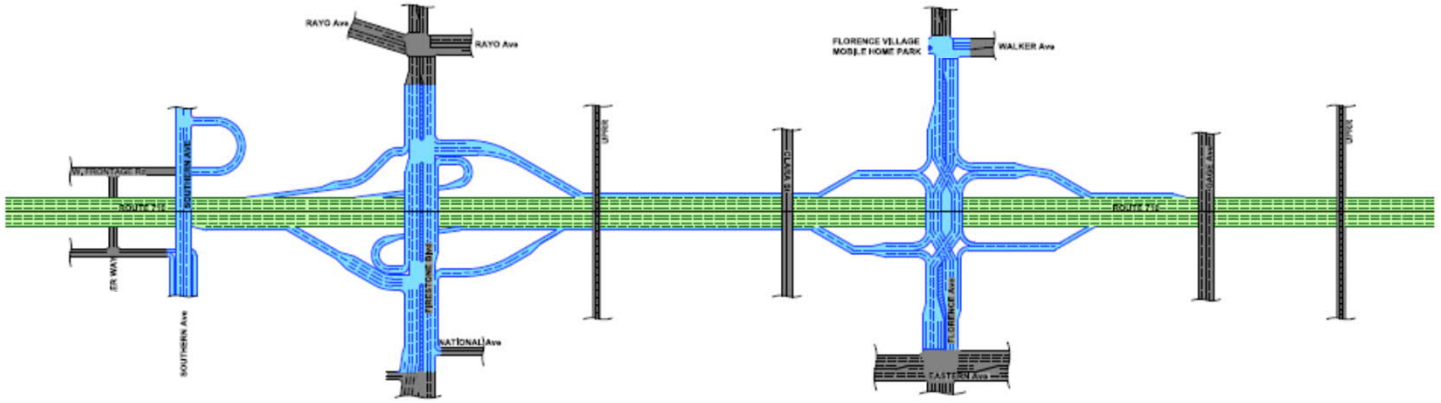


I-710: PCH to I-405

I-710: Del Amo to SR-91



I-710: I-105 to Firestone



I-710: Firestone to Florence
