NOTICE OF PREPARATION AND NOTICE OF SCOPING MEETING FOR AN ENVIRONMENTAL IMPACT REPORT

Date: June 28, 2021

To: Responsible Agencies, Agencies with Jurisdiction by Law, Trustee Agencies, Involved Federal Agencies, and Agencies/Organizations/Individuals Requesting Notice

From: County of Alameda, Public Works Agency

Subject: Notice of Preparation of an Environmental Impact Report for the Niles Canyon Trail Project

The County of Alameda (Lead Agency) will prepare an Environmental Impact Report (EIR) for the proposed Niles Canyon Trail Project (project). The proposed project would construct a six-mile, Class 1,[1] multi-use trail for pedestrians, bicyclists, and equestrians between the unincorporated community of Sunol and Niles District of the City of Fremont, both in Alameda County. In addition, the project would provide a critical link to Palomares Road bypassing State Route 84 (SR-84) and would expand the Alameda Creek Trail, which provides a direct connection to the 500-mile San Francisco Bay Trail.

This Notice of Preparation (NOP) is being distributed to applicable responsible agencies, trustee agencies, and interested parties as required by the California Environmental Quality Act (CEQA) and CEQA Guidelines Section 15082. Comments from agencies and interested parties are requested as to the scope and content of the environmental review in connection with the proposed project. The County is particularly interested in hearing from public agencies regarding their objectives for environmental information to be included in the EIR that is germane to those public agencies' statutory responsibilities pertaining to the project, and how such information in the EIR will inform such agencies when considering issuing permits or other approvals for project-related activities. The purpose of the EIR will be to evaluate the specific environmental effects of the project.

Due to the time limits mandated by State law, public agencies and members of the public are requested to send their responses to the NOP to the County at the address and person provided below as soon as possible but not later than 30 days after publication of the NOP, or by **Tuesday, July 27, 2021, 5:00 p.m.** Agencies and organizations are requested to provide a contact name in your organization for any further consultation.

[1] Class 1 Bikeways (Bike Paths) are paved rights-of-way completely separated from streets. Bike paths are often located along waterfronts, creeks, railroad rights-of-way or freeways with a limited number of cross streets and driveways. These paths are typically shared with pedestrians and often called mixed-use paths.

PROJECT LOCATION

The project site consists of an approximately six-mile trail alignment through Niles Canyon between the Niles District in the City of Fremont and the unincorporated community of Sunol in Alameda County. The project site is defined as the proposed trail alignment, which would be approximately 14 feet wide and extend approximately 6 miles in length. Refer to **Figure 1** for the project's regional location.

The project area and vicinity is characterized by a variety of conditions, including urban and built environments, State Route-84, the Union Pacific and Niles Canyon railroad tracks, and the Sunol Aqueduct. Topography along the proposed trail alignment ranges from relatively flat within the urban lands of Fremont and along existing roadways to very steep within the undeveloped lands along Alameda Creek. The majority of the proposed trail alignment would run along Alameda Creek, which flows from east to west and eventually drains to the San Francisco Bay.

The majority of the proposed trail alignment would be located within public right-of-way (e.g., City of Fremont, Caltrans) or on lands owned by public agencies, including East Bay Regional Park District (EBRPD), Alameda County and the San Francisco Public Utilities Commission (SFPUC). Some private properties would also be traversed.

PROJECT OVERVIEW

The proposed multi-use trail would be developed in three phases. Each phase would be independent in service and function. **Figure 2** depicts the proposed conceptual trail alignment. The phases are:

Phase 1 – Niles District to Palomares Road. The first phase would complete the connection from the Niles District in the City of Fremont to Palomares Road. To provide independent utility, the project would need to create a new crossing of SR-84 parallel to the Farwell Bridge.

Phase 2 – Palomares Road to Brightside Railroad Yard. The second phase would begin at Palomares Road and end at the Brightside Railroad Yard.

Phase 3 – Brightside to Sunol. The final phase would complete the trail between Niles and Sunol.

The multi-use trail would be open to hikers, bicyclists, and equestrians. The proposed trail would consist of a 10-foot wide, all-weather surface with 2-foot shoulders on either side composed of decomposed granite. The trail surface would likely consist of 4 inches of asphalt concrete atop 6 inches of class II aggregate base. The trail would meet accessibility guidelines, meaning that the grade in the direction of travel would be less than 5 percent and the cross slope would be no more than 2 percent. The trail design would incorporate several different barrier options to separate trail users from railroad and highway traffic. These barriers would be designed to accommodate wildlife passage. In addition, retaining walls would need to be installed in some locations to accommodate slope cuts. These walls would be sculpted concrete with soil nail tiebacks.

The project would include provisions of staging areas with sufficient parking to avoid impacts to surrounding neighborhoods from visitors' vehicles. Staging areas would be created at both Niles and Sunol, as well as Palomares Road. In addition, existing staging areas associated with the Alameda Creek Trail could support the need for parking.

AREAS OF POTENTIAL ENVIRONMENTAL EFFECT

The EIR will analyze the environmental impacts of all three phases of project implementation – Phase 1 will be evaluated at the project level; Phases 2 and 3 will be evaluated at a programmatic level. The EIR will analyze the significant environmental effects associated with all aspects of the project, including construction, operation, and maintenance.

Based on the Lead Agency's understanding of the environmental issues associated with the proposed project, a comprehensive EIR will be prepared. The topics anticipated to require analysis in the EIR will include, but not be limited to the following: aesthetics; air quality; biological resources; cultural resources; geology and soils; greenhouse gas emissions; hazards and hazardous materials; hydrology and water quality; land use and planning; noise; transportation; tribal cultural resources; and wildfire. The Lead Agency will not prepare an Initial Study for this project.

POTENTIAL ALTERNATIVES TO BE EVALUATED IN THE DRAFT EIR

In accordance with Section 15126.6 of the State CEQA Guidelines, an EIR must "describe a range of reasonable alternatives to the project, or to the location of the project, which would feasibly attain most of the basic objectives of the project, but would avoid or substantially lessen any of the significant effects of the project, and evaluate the comparative merits of the alternatives." As required by CEQA, the Draft EIR will evaluate a No Project Alternative. Aside from the No Project Alternative, the County has not yet determined what additional alternatives to the project will be evaluated in the Draft EIR. Comments on this NOP may inform the alternatives selected for analysis. Once selected, the alternatives will be analyzed at a qualitative level of detail in the Draft EIR for comparison against the impacts identified for the proposed project, consistent with the requirements of CEQA. As required by CEQA Guidelines Section 15126.6 (e)(2) the Draft EIR will identify the environmentally superior alternative, including one other than the No Project Alternative.

INTENDED USES OF THE DRAFT EIR

The Draft EIR will evaluate the environmental effects associated with the implementation of the proposed Niles Canyon Trail Project. The Draft EIR is intended for public participation and disclosure, and ultimately for consideration by the County in making a decision about whether or not to approve the project, as well as for use by other agencies, as needed. Upon incorporation of public and agency comments on the Draft EIR, the County anticipates preparing and publishing a Final EIR. The County will then determine whether to certify the EIR in compliance with the CEQA Statute and Guidelines, and the County and other agencies, as needed, will determine whether to issue permits for the project.

NOTICE OF SCOPING MEETING AND REQUEST FOR WRITTEN COMMENTS

The Lead Agency solicits comments regarding the scope and content of the EIR from all interested parties requesting notice, responsible agencies, agencies with jurisdiction by law, trustee agencies, and involved agencies. Comments should focus on discussion of possible impacts on the physical environment, ways in which potential adverse effects might be minimized, and alternatives to the proposed project in light of the EIR's purpose to provide useful and accurate information about such factors. In addition, comments may be provided at the meeting indicated below.

State CEQA Guidelines set the review and comment period for an NOP to end 30 days after publication. Therefore, the County requests comments on this NOP be received no later than the close of business (5:00 p.m.) on **Tuesday, July 27, 2021.** Please send written comments to:

Jim Browne, Acting Environmental Services Supervisor
Alameda County Public Works Agency
399 Elmhurst Street
Hayward, CA 94554
Email: jimb@acpwa.org

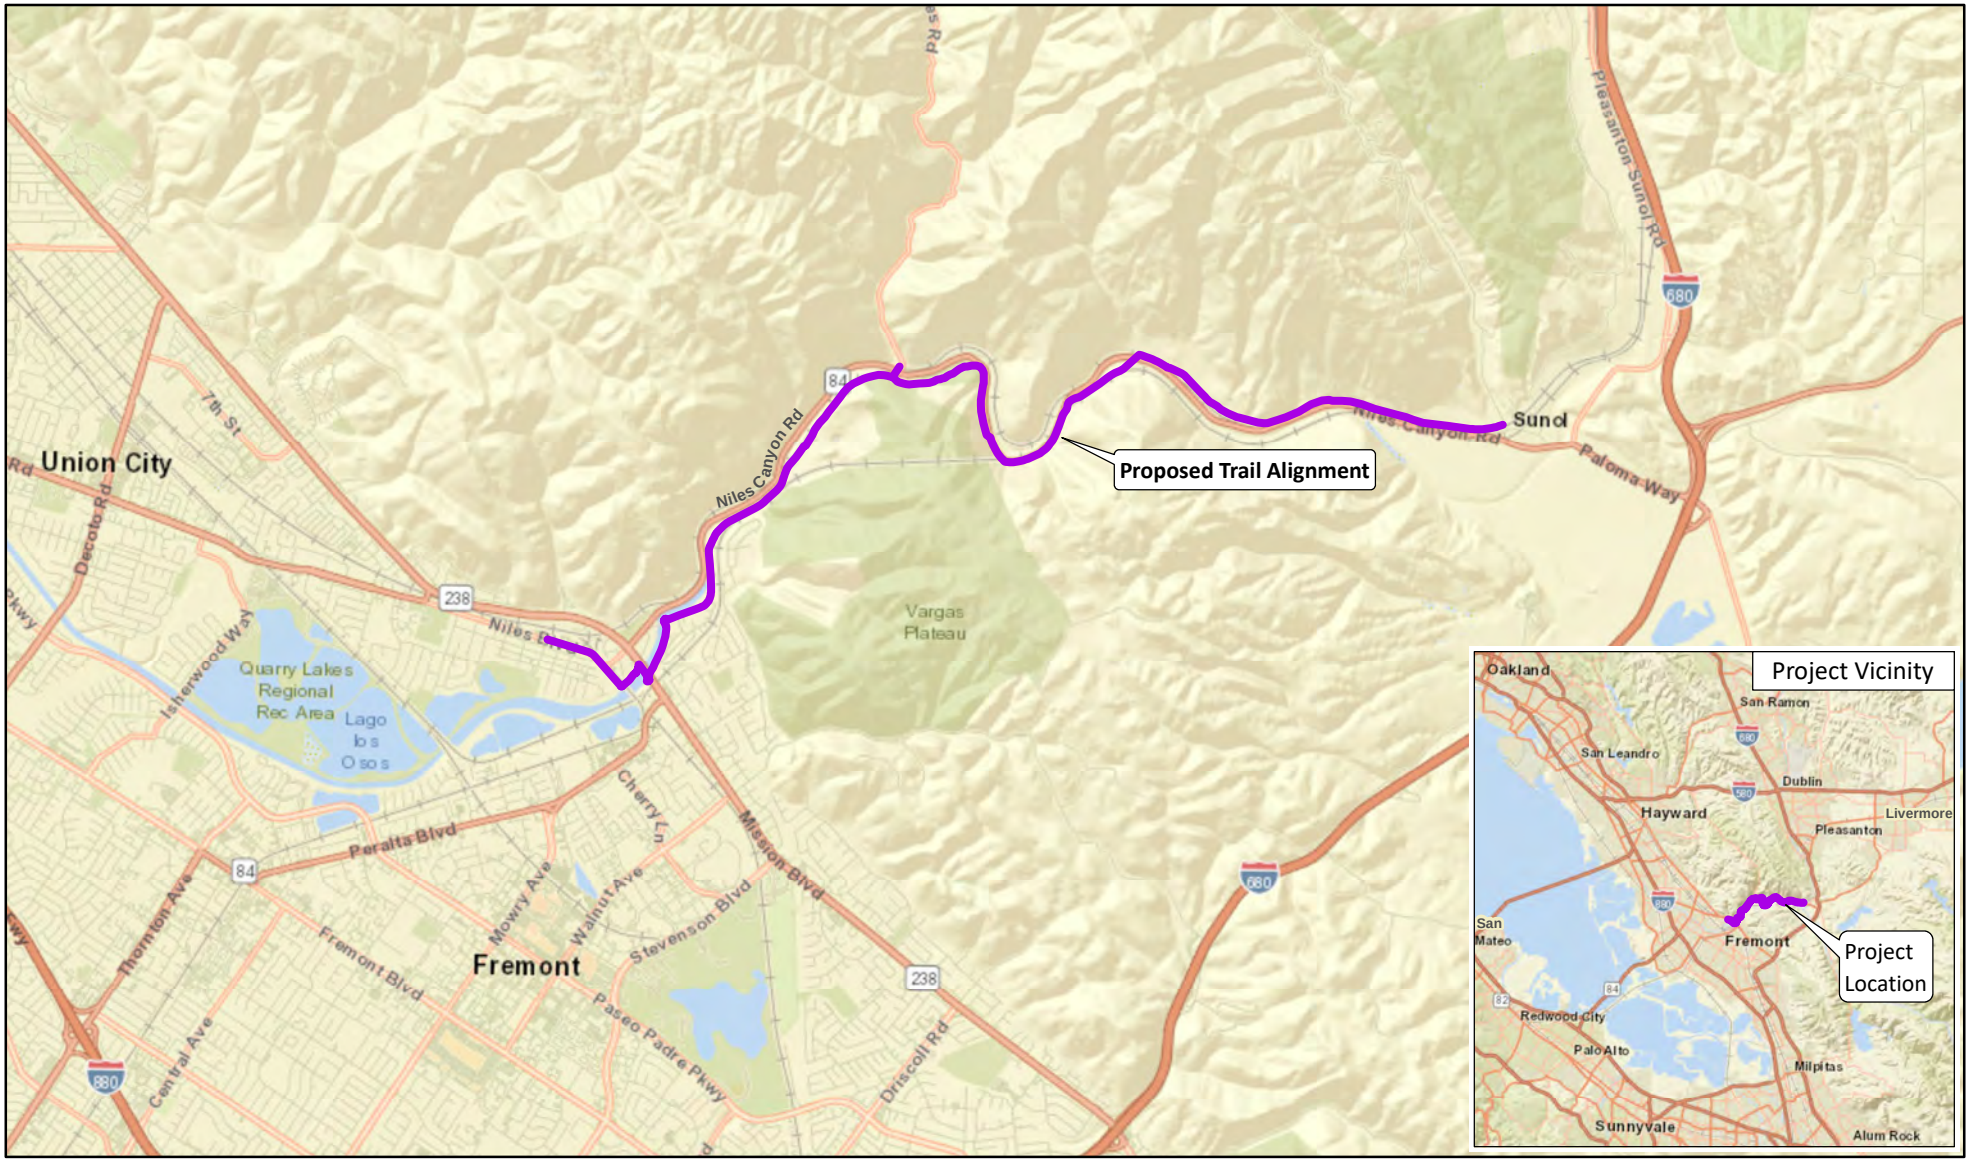

Scoping Meeting: Given the current Executive Order N-33-20 by the Governor of the State of California and the State of Emergency regarding the COVID-19 crisis, a scoping meeting is tentatively scheduled for the project via teleconference and video conference on Thursday, July 15, 2021 from 6:00 p.m. to 8:00 p.m. Final scheduling and instructions for joining the teleconference and video conference will be provided on the County website, at: https://www.acpwa.org/project-information/niles-canyon-trail-project.

All interested parties are invited to submit written comments on the scope of the EIR to assist in identifying issues to be addressed in the EIR.

Dear Mr. Browne:

Subject: Notice of Preparation of an Environmental Impact Report for the Niles Canyon Trail Project

Alameda County Water District (ACWD) has reviewed the Notice of Preparation of an Environmental Impact Report (EIR) for the Niles Canyon Trail Project ("Project").

ACWD supplies water to a population of over 357,000 in the cities of Fremont, Newark, and Union City. ACWD was formed in 1914 by an act of the California Legislature for the purpose of protecting water in the Niles Cone Groundwater Basin and conserving the water of the Alameda Creek. Local runoff along with imported water from the State Water Project is percolated into the Niles Cone Groundwater Basin through recharge in Alameda Creek itself and through recharge ponds within and adjacent to the Quarry Lakes Regional Recreational Area. This water is subsequently recovered through groundwater production wells and provided as potable supply to ACWD's customers. Drinking water from four drinking water production facilities is delivered to customers via a network consisting of over 900 miles of transmission and distribution mains. ACWD has strong interests in protecting and preserving the water quality and supply in Alameda Creek and its tributaries, ensuring the protection of the groundwater basin, and maintaining reliable, safe drinking water to customers in the Tri-Cities. In addition, as a longstanding member of the Alameda Creek Fisheries Restoration Workgroup, ACWD has also been working with multiple local and regional stakeholders on a program to restore a steelhead fishery to the Alameda Creek watershed. ACWD is supportive of this project, with the inclusion of appropriate measures to protect water quality and steelhead, as it provides greater public access to the Alameda Creek watershed which will help promote a greater understanding and appreciation of the natural environment and water supply.

ACWD would appreciate your consideration of the following comments while developing the EIR:

1. Alameda Creek and Watershed Protection: The Project area includes a critical portion of Alameda Creek. ACWD is particularly concerned with potential impacts that the project and subsequent public use of the trail may have on water quality, water supply, and fisheries restoration in Alameda Creek. ACWD supports the inclusion of interpretive signage to inform trail users about the important roles the Niles Canyon serves in the watershed for water supply, species migration, and habitat. Additionally, ACWD has a need to maintain suitable quality of the water in Alameda Creek for groundwater recharge and its subsequent use as a drinking water supply. ACWD requests that the following potentially significant impacts to the protection of Alameda Creek and its watershed be fully considered in the EIR and during the final project design and planning efforts:

    a. Pollution Prevention: ACWD would like to emphasize the importance of selecting Best Management Practices (BMPs) which minimize adverse impacts to the quality of water in Alameda Creek. ACWD has a strong interest in ensuring the highest level of water quality possible in Alameda Creek and its watershed during and after construction, including operations and public use of the trail, and encourages any permanent pollution prevention improvements accomplished by construction and long-term use of the Project.

    b. Surface Water Protection from Runoff: The Project is located along Niles Canyon, an important segment of the Alameda Creek watershed which provides local water supplies and conveyance for ACWD's water supply operations to recharge the Niles Cone Groundwater Basin, a critical water supply for the cities of Fremont, Newark, and Union City. Future improvements contemplated under the Project, such as construction and increased vehicular parking within the Niles Canyon or adjacent to Alameda Creek pose increased risks for the direct release of fuel or other contaminating chemicals into the adjacent and underlying waterway due to accidental spills or vehicular accidents. Appropriate safeguards and controls should be incorporated as mitigations into the EIR to help prevent the direct release of contaminated runoff to the environment. These design measures will help reduce the threat of contamination to the water used for recharging the groundwater basin which constitutes a significant portion of ACWD's drinking water supply.

    c. Protect Water Quality, Habitat, and Threatened Species from Trail Users: If constructed, the Project would increase public access to the Niles Canyon and Alameda Creek, which could lead to the introduction of litter, waste, and other potential contaminants that could degrade water quality for a critical habitat for threatened fish species. The Project should be designed to prevent the public from illegally entering Alameda Creek throughout Niles Canyon, causing harm to habitat, impacting migration of salmonids, poaching, and to prevent litter and other wastes generated by trail users from polluting Alameda Creek. The EIR should include mitigations and controls, including enforcement, to protect water quality from potential impacts due to use of the proposed trail.

d. Notification: In the event of a hazardous material spill or other pollution event in the Alameda Creek watershed, ACWD would like Project proponents to set-up a 24-hour rapid notification system (e.g., phone numbers, contact names) to immediately alert ACWD of water quality incidents upstream of our facilities so actions can be taken to prevent pollution of potable groundwater supply. This plan can be coordinated with the Water Supply Supervisor, Leonard Ash, who can be reached at (510) 668-6539 and Leonard.Ash@acwd.com.

2. Future Steelhead Migration in the Alameda Creek Watershed: ACWD, in a joint effort with the Alameda County Flood Control and Water Conservation District (ACFCD), is currently constructing a fish ladder to provide passage through Lower Alameda Creek over ACWD's Rubber Dam No. 1 and the ACFCD drop structure which have historically hindered the passage of migratory fish. When this fish passage project is completed in 2022, along with ACWD's previously-completed fish ladder and screening facilities in the creek, the upper Alameda Creek Watershed will be accessible to migrating *O. mykiss* and other anadromous fish such as salmon. The Project's EIR should anticipate the future occurrence of this federally threatened species within the watershed and should confirm the Project incorporates appropriate measures in the Project design, construction, and operation, including recreation operations and management of public access.

3. Water Conveyance Infrastructure: ACWD relies on Alameda Creek, including within the Project area, for raw water conveyance of water supplies from the State Water Project. This source water conveyance always needs to remain in service to maintain ACWD's ability to provide adequate water supplies to the community. ACWD requests that Project proponents closely coordinate with ACWD regarding all design, construction and scheduling activities that may impact channel flow or access to Alameda Creek during the construction and throughout operation of the Project.

4. Groundwater:

   a. Groundwater Well Protection/Destruction: In order to protect the groundwater basin, each well located within or immediately adjacent to the project area must be identified and be in compliance with ACWD Ordinance No. 2010-01.

   b. Existing Hazardous Material Contamination: The EIR should acknowledge that as part of ACWD's Groundwater Protection Program, ACWD entered into Cooperative Agreements with the California Regional Water Quality Control Board – San Francisco Bay Region (Regional Board) and the cities of Fremont and Union City, which allows ACWD to provide technical oversight for the investigation and remediation of Leaking Underground Fuel Tank (LUFT) sites and sites where the pollution is attributed to spills or leaks from structures other than underground fuel tanks now referred to as Site Cleanup Program sites or SCP (formerly known as Spills, Leaks, Investigation, and Cleanup sites or SLIC sites). ACWD also coordinates cleanup site activities overseen by the Department of Toxic Substances Control or DTSC. As a result of the above information, the EIR

should require Project proponents to coordinate with appropriate regulatory agencies, such as the Regional Board, Department of Toxic Substances Control, and ACWD, prior to any proposed work at known or suspected cleanup sites.

The EIR should also identify where known open or closed LUFT and SCP sites are located adjacent to or within the project area. Should soil and/or groundwater near the railroad tracks be disturbed, any potential contaminants emanating from the railroad tracks and the risks they may pose should also be addressed by the EIR.

c. Drilling Permit Requirement: As required by ACWD Ordinance No. 2010-01, drilling permits are required prior to the start of any subsurface drilling activities for wells, exploratory holes, and other excavations including the installation of support piers or piles within the cities of Fremont and Union City. Application for a permit may be obtained from ACWD's Engineering Department, at 43885 South Grimmer Boulevard, Fremont or online at http://www.acwd.org. All permitted work requires scheduling for inspection; therefore, all drilling activities must be coordinated with ACWD prior to the start of any field work.

5. Utilities and Service Systems:

   a. ACWD has existing visible and buried facilities within Old Canyon Road. The Project must avoid disturbing utilities, or relocate them in coordination with ACWD, at Project's expense, if they must be relocated.

   b. The EIR should acknowledge the presence and potential importance of the existing Sunol Aqueduct (also referred to as the Niles Canyon Aqueduct) between Fremont and Sunol. The Project Plans should identify and show the location of the existing Sunol Aqueduct. The EIR should confirm that the Project will pose no impacts to the Sunol Aqueduct facility and that the aqueduct will remain and be protected and unaffected by the proposed Project, including proposed earthwork, bridges, retaining walls, embankment slopes, hillside anchor cables, and new trail. ACWD requests that the trail alignment and Project design take into account the preservation of the aqueduct, the need to maintain safe access to the aqueduct, and its potential reoperation as a water supply conveyance facility.

6. ACWD Contacts: The following ACWD contacts are provided so that the Alameda County Public Works Agency can coordinate with ACWD as needed during the CEQA process:

   - Michelle Myers, Groundwater Resources Manager at (510) 668-4454, or by email at michelle.myers@acwd.com, for coordination regarding ACWD's groundwater resources.

   - Kit Soo, Well Ordinance Program Coordinator, at (510) 668-4455, or by email at kit.soo@acwd.com for coordination regarding groundwater wells and drilling permits.

- Juni Rotter, Development Services Manager, at (510) 668-4472, or by email at juniet.rotter@acwd.com, for coordination regarding public water systems and water services.

- Leonard Ash, Water Supply Supervisor, at (510) 668-6539, or by email at leonard.ash@acwd.com, for coordination regarding Alameda Creek Watershed, future steelhead migration, and water supply.

Thank you for the opportunity to comment on the Niles Canyon Trail Project at this time.

Sincerely,

Ed Stevenson
General Manager

Re: Scoping Comments on Niles Canyon Trail Project

Please consider these scoping comments from the Alameda Creek Alliance on the Niles Canyon Trail Project. The Alameda Creek Alliance is a 2,000-member strong community watershed group, dedicated to protecting and restoring the natural ecosystems of the Alameda Creek watershed. The Alameda Creek Alliance has been working to protect and restore the Alameda Creek watershed since 1997.

The Alameda Creek Alliance enthusiastically supports the construction and operation of the proposed Niles Canyon Trail Project. This trail segment will be a positive and valuable public amenity. It will connect the public to Alameda Creek and Niles Canyon, with opportunities for recreation and auto-free transportation, as well as benefits for environmental education and stream conservation.

The Niles Canyon Trail is an important link between Niles and Sunol. A trail through the canyon separate from Highway 84 is the only safe route for pedestrians, bicyclists and equestrians. The trail is also a regionally critical connector between the Bay Trail and parks and trails in Sunol, Pleasanton and Livermore. The trail could eventually link to Vargas Plateau and other East Bay parks. The first phase of the trail will provide immediate recreation and non-motorized transportation benefits by connecting Niles to Palomares Road.

Completion of the trail will bring much-needed public agency management, oversight and stewardship to Niles Canyon, which is suffering from unregulated impacts due to trash dumping, poaching, and water pollution.

The 2017 Project Study Report for the trail project identified potential sensitive habitat types and special-status species along the general trail route. Focused protocol surveys should be conducted for special-status plant and animal species in Niles Canyon along the general trail route. Some of the special-status wildlife species identified in the 2017 report are unlikely to occur along the proposed trail route (such as California tiger salamander, foothill yellow-legged frog, California red-legged frog, burrowing owl, and tricolored blackbird), which can be confirmed by protocol surveys.

We believe that direct impacts from construction to special-status wildlife species that are likely to occur in Niles Canyon (such as Alameda whipsnake, steelhead trout, dusky-footed woodrat, western pond turtle, and roosting bats) can be avoided by pre-construction surveys, exclusion methods, timing of construction, and other best management practices. Careful and informed alignment of the trail should help to avoid direct impacts to sensitive wildlife habitat and any populations of special-status plants. Bridges over small and large creek crossings and wetlands

should avoid direct impacts to wetlands, jurisdictional waters, and aquatic habitats.

There is some potential for the trail and associated fences and retaining walls to hinder or block migration for some terrestrial wildlife species. The EIR for the project should disclose where long stretches of fencing or retaining walls are proposed, and potential impacts of these structures on wildlife movement. Given that the trail will be fairly wide and paved, with somewhat regular travel by humans, bicycles, horses, and possibly service vehicles during daylight hours, the EIR should disclose the potential for road-kill (or trail-kill) of special-status wildlife species, or the potential hinderance of wildlife movement. Strategically placed under-crossings of the trail could facilitate safe wildlife movement, especially for smaller wildlife.

One species that should be given special consideration for safe movement across (or under) the trail is the Alameda whipsnake. Niles Canyon has been identified as an important connective corridor for the Alameda whipsnake in the federal recovery plan (U.S. Fish and Wildlife Service. 2002. Draft Recovery Plan for Chaparral and Scrub Community Species East of San Francisco Bay, California). The whipsnake recovery plan notes that the Niles Canyon-Sunol corridor already has physical barriers that could impede or prohibit the movement of whipsnakes (heavy vehicular traffic along Niles Canyon Road, two sets of railroad tracks, Alameda Creek itself, and the “secret sidewalk”). The recovery plan notes that the degree to which these existing barriers discourage or halt the movement of whipsnakes is unclear, and also that suitable vegetation for whipsnakes is limited in this corridor.

If the EIR determines that there could be significant impacts to Alameda whipsnakes from construction or operation of the trail, one potential mitigation would be to contribute to a project to improve opportunities for whipsnake movement past potential barriers in Niles Canyon (Niles Canyon Road being the obvious barrier of most concern). The recovery plan (USFWS 2002; p. 2-99) identifies investigating and implementing safe passage for whipsnakes across Niles Canyon Road, including barrier removal or construction of under-crossings, as an important recovery action. At the least, the trail should not create additional potential barriers to whipsnake movement. A project coordinated with Caltrans and the U.S. Fish and Wildlife Service to provide or improve a few under-crossings for whipsnakes (and other wildlife) under Niles Canyon Road at optimal locations in the canyon would be a potentially valuable mitigation measure.

The EIR should discuss and assess the current environmental impacts in Niles Canyon without the trail, from lack of agency oversight and management, which results in trespassing, dumping of trash, human waste in and near water sources, water pollution, poaching, and illegal encampments. The EIR should discuss how planned operation and management of the trail will address and alleviate these existing impacts, as well as reduce potential future impacts from trail users. For example: installation and maintenance of bathrooms; installation of trash cans throughout the canyon and regular cleanup of trash; restricted or limited access to the creek for swimming; signage and features to prevent off-trail travel; and routine patrols by agency law enforcement.

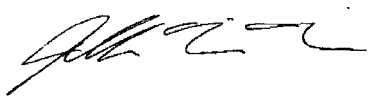

We strongly encourage the use of educational signage throughout the canyon along the trail as a mitigation measure for potential direct and indirect impacts from trail users on wildlife and wildlife habitat, water quality, and erosion. Vandal-proof educational signage that explains and interprets the valuable natural resources along Alameda Creek and Niles Canyon can have a positive impact in reducing the potential for littering and off-trail travel.

The EIR should discuss and assess the potential for spread of invasive plants in Niles Canyon by trail construction and use. A potential mitigation measure could be removal and control of invasive plant species along the trail route. Pre-construction surveys along the trail route for invasive plant species would allow for removal of any existing invasive plants during construction of the trail, and a regular (annual or biennial) coordinated removal of invasive plants along the trail could be included as a management measure to prevent spread of weeds.

The most significant environmental impact from trail construction is likely to be from removal of trees along the trail alignment. Most of the trees to be removed will likely be coast live oaks, a fairly common vegetation type, but which will require mitigation. There is some potential for localized impacts from removal of riparian trees, or sycamore alluvial woodland habitat, which is a more rare vegetation type. Streamside sycamores provide food, shade, streambank stability, and important habitat for trout, bats, birds, and other wildlife. Any removal of mature western sycamore trees should be avoided, if possible, by trail alignment. For any riparian or sycamore trees that are not avoidable and are removed, the project should fully mitigate the impacts.

Suitable projects and locations in the East Bay for tree planting as mitigation for riparian tree impacts are difficult to find and get approval from regulatory agencies. A potential mitigation for impacts to riparian or sycamore trees is to work with the Alameda Creek Alliance, Caltrans, and the SFPUC to set up and contribute to a Sunol Valley riparian tree planting fund. The Sunol Valley provides the best opportunity in the Alameda Creek watershed for sycamore planting and is the most important stream reach for riparian restoration efforts. Other agencies such as the SFPUC and entities such as Oliver DeSilva will be pursuing riparian restoration in the Sunol Valley. Caltrans may have riparian tree mitigation obligations from their current State Route 84 Niles Canyon Safety Improvements Projects (Niles Canyon Medium-Term Safety Improvements Project and Alameda Creek Bridge Replacement Project). Mitigation funds from the Niles Canyon Trail Project could combine with Caltrans mitigation funds from their Niles Canyon projects that would be specifically earmarked for riparian tree planting in the Sunol Valley.

Thank you for the opportunity to comment.

Re: Niles Canyon Trail Project – Notice of Preparation (NOP) of a Draft Environmental Impact Report (DEIR)

Dear Jim Browne:

Thank you for including the California Department of Transportation (Caltrans) in the environmental review process for this Project. We are committed to ensuring that impacts to the State's multimodal transportation system and to our natural environment are identified and mitigated to support a safe, sustainable, integrated and efficient transportation system. The following comments are based on our review of the June 2021 NOP.

Project Understanding

The proposed project would construct a six-mile, Class I, multi-use trail for pedestrians, bicyclists, and equestrians between the unincorporated community of Sunol and Niles District of the City of Fremont, both in Alameda County. The project would provide a critical link to Palomares Road bypassing State Route (SR)-84 and would expand the Alameda Creek Trail, which provides a direct connection to the 500-mile San Francisco Bay Trail. For Caltrans projects related to Niles Canyon, please visit https://dot.ca.gov/caltrans-near-me/district-4/d4-projects/d4-84-niles-canyon-safety-improvements.

Transportation Impact Study

Please prepare a transportation impact study to show any potential project impacts to SR-84. The study should clearly define which areas of the trail would encroach the State Right-of-Way (ROW) and identify any anticipated impacts to SR-84. Specify the number of parking spaces that would be provided at the proposed staging areas and the expected number of project peak hour trips.

Hydrology
Identify any impacts to the base floodplain and mitigate those impacts as necessary. Identify and address any impacts to the existing drainage system. For example, existing roadside ditches that are filled in would need to be re-established, and culverts impacted by the project would need to be extended or relocated. Provide additional drainage as necessary. Also, any additional flow to the State ROW must be metered to pre-project levels.

Construction-Related Impacts
Any utilities that are proposed, moved or modified within the State ROW shall be discussed. If utilities are impacted by the project, provide site plans that show the location of existing and/or proposed utilities. These modifications require a Caltrans-issued encroachment permit.

Potential impacts to the State ROW from project-related temporary access points should be analyzed. Mitigation for significant impacts due to construction and noise should be identified. Project work that requires movement of oversized or excessive load vehicles, and/or travel lane closures on SR-84 requires a transportation permit that is issued by Caltrans. To apply, visit: https://dot.ca.gov/programs/traffic-operations/transportation-permits.

Prior to construction, coordination may be required with Caltrans to develop a Transportation Management Plan (TMP) to reduce construction traffic impacts to the State Transportation Network (STN).

Lead Agency
As the Lead Agency, the Alameda County Public Works Agency is responsible for all project mitigation, including any needed improvements to the STN. The project's fair share contribution, financing, scheduling, implementation responsibilities and lead agency monitoring should be fully discussed for all proposed mitigation measures.

Equitable Access
If any Caltrans facilities are impacted by the project, those facilities must meet American Disabilities Act (ADA) Standards after project completion. As well, the project must maintain bicycle and pedestrian access during construction. These access considerations support Caltrans' equity mission to provide a safe, sustainable, and equitable transportation network for all users.

Encroachment Permit
Please be advised that any permanent work or temporary traffic control that encroaches onto SR-84 requires a Caltrans-issued encroachment permit. All proposed work on State ROW must be in accordance to Caltrans Standards. As part of the encroachment permit submittal process, you may be asked by the Office of

Encroachment Permits to submit a completed encroachment permit application package, digital set of plans clearly delineating the State ROW, digital copy of signed, dated and stamped (include stamp expiration date) traffic control plans, this comment letter, your response to the comment letter, and where applicable, the following items: new or amended Maintenance Agreement (MA), approved Design Standard Decision Document (DSDD), approved encroachment exception request, and/or airspace lease agreement. Your application package may be emailed to D4Permits@dot.ca.gov.

To download the permit application and to obtain more information on all required documentation, visit https://dot.ca.gov/programs/traffic-operations/ep/applications.

Thank you again for including Caltrans in the environmental review process. Should you have any questions regarding this letter, please contact Yunsheng Luo at Yunsheng.Luo@dot.ca.gov. Additionally, for future notifications and requests for review of new projects, please email LDIGR-D4@dot.ca.gov.

Sincerely,

MARK LEONG
District Branch Chief

East Bay Regional Park District

2950 PERALTA OAKS COURT • OAKLAND • CALIFORNIA • 94605-0381 • T: 1-888-EBPARKS • F: 510-569-4319 • TRS RELAY: 711 • EBPARKS.ORG

Jim Browne, Acting Environmental Services Supervisor
Alameda County Public Works Agency
399 Elmhurst Street
Hayward, CA 94554
Email: jimb@acpwa.org

Dear Mr. Browne,

The East Bay Regional Park District (Park District) appreciates the opportunity to provide comments in response to the Notice of Preparation (NOP) of a Draft Environmental Impact Report (DEIR) for the Niles Canyon Trail (project). The Park District has been a partner in this effort for decades and led the feasibility study released in 2015 in partnership with Alameda County (County) and other members of the Technical Advisory Committee. The project is identified on the Park District's Master Plan map as a section of the San Francisco Bay to San Joaquin River Trail that ultimately connects the San Francisco Bay Trail in Fremont to the Marsh Creek Trail in Brentwood.

The project consists of the development of approximately six miles of Class I trail connecting the Niles district in the City of Fremont to the unincorporated town of Sunol. Due to the compact and complex nature of Niles Canyon the project's preferred alignment proposes to share various corridors of existing infrastructure that travel through the canyon, such as, the Niles Canyon Railway, the defunct Sunol Aqueduct, and Highway 84. The project is proposed to be constructed in three phases if approved.

The Park District understands that neither operational responsibility, nor funding to fully design, construct, and operate the trail has been identified at this early stage. The goal of this stage of the project is to analyze phase one at a project level, and phases two and three at a programmatic level.

Parking is a concern that has been raised by many individuals and organizations in recent public meetings. The Park District agrees that parking needs to be thoroughly analyzed at both the west and east ends of the project, and the development of additional parking should be considered to meet the potential demand for the trail. In addition, identifying parking at strategic locations along the trail should be considered, including at Palomares and Bright Side.

The project is regionally significant as it could connect to several regional trails, regional parks, local parks, and transit facilities. The connection to these other public amenities, both existing and planned, should be carefully considered. The Park District is happy to work with the County to ensure that the project is an integral part of the regional network and provides a significant link as both a recreational and transportation facility.

The Park District is supportive of the County's efforts to analyze the potential impacts to determine the best path forward. The phased approach and associated level of analysis is appropriate and strategic given the enormity of the project. Completing environmental analysis will help the project compete for funding for the design and construction of phase one. The Park District looks forward to continuing a partnership with the County to move this regionally significant project forward. Please contact me at 510-544-2609 or swilson@ebparks.org if you have any questions.

Sincerely,

Suzanne Wilson

Dear Mr Browne,
Just wish to say that I am in favor of providing a link to the Palomares Road, and thus expanding the Alameda Creek Trail.

Thanks so much,
Marian Fricano

To: Browne, Jim
Subject: The Niles Canyon Road ("Trail")

Follow Up Flag: Follow up
Flag Status: Flagged

Proposed Niles Canyon ⍰Trail⍰

1. We've been misled. We were told that the trail would be elevated (using the "secret sidewalk"), and that no habitat would be destroyed. It's not true. The preferred option destroys a huge amount of habitat with a 14' wide clearcut including 10' wide pavement, especially at the start and end of the road (10' of pavement is a road, not a trail).

2. The proposal touts a "wildlife friendly fence", but I doubt that all deer, for example, can jump over it. It (and the presence of humans on the road) would prevent animals from getting to the creek to drink.

3. The proposed railroad fence would block all animals larger than a lizard. No deer could jump over it. The huge vertical cuts would interfere with animals' need to travel.

4. The proposal claims that Niles Canyon is the only east-west travel option. That's, frankly, a lie! Calaveras Road runs roughly parallel to Niles Canyon and provides access from Milpitas (just two BART stops from Fremont - the west end of the canyon) to Sunol. Bicyclists and anyone else can use it safely, since there is no high-speed traffic. I drove the road this morning, to see for myself. There were dozens of bicyclists riding the road, in both directions, including many gray-haired men and ladies and one guy on a recumbent bike. I attached a couple of photos. The cars and motorcycles were going from 10-20 MPH, due to the many curves. The scenery was just as lovely as Niles Canyon, including the huge Calaveras Reservoir, and because of everyone's slow speed, you could actually enjoy it.

5. No one needs a paved "trail". Pavement is bad for horses and unpleasant for hikers. Horses and hikers could be accommodated by a 2'-3' wide unpaved trail, without wildlife-blocking fences. Stepping off the trail would allow anyone to pass. There is no good reason to allow bicycles on any unpaved trail. Any bicyclists who want to go there can, of course, walk - just like everyone else. Bicycles generate erosion and endanger hikers and equestrians. Mountain bikers love to claim that they are being "excluded" when bikes are prohibited, but it's an obvious lie.

6. The maps (deliberately?) don't show the location of the creek, but it appears that the road would be very close to the creek, destroying a 14' wide swath of priceless riparian habitat - the most valuable habitat that exists. Why would any organization that claims to support conservation make such a huge mistake - and lie about it?

7. There isn't high demand for travel through the canyon, or there would have been bus service through it long ago. Anyone who wants to travel to the "micro-town" of Sunol can drive, walk, or ride a horse through the canyon on a narrow trail, or take Calaveras Road.

8. The road would destroy critical habitat for the Alameda whipsnake, per the Department of the Interior⍰s Fish and Wildlife Service.

9. We are in the midst of the Sixth Extinction crisis, which is being caused primarily by the loss of habitat. E. O. Wilson is calling for Half Earth: 50% of the Earth to be set aside for conserving our wildlife. That is already a

compromise, since we all know that 50% is not enough to protect all species. Recently even that compromise was watered down, into the ﷺ (30% of the Earth protected by 2030) proposal, which President Biden is supporting. By supporting the Niles Canyon road, the Sierra Club is thumbing its nose at even the weakest of these proposals.

The Club should rescind its support for the Niles Canyon road!

--

Machine-Free Trails Association

I am working on creating wildlife habitat that is off-limits to humans ("pure habitat"). Want to help?
(I spent the previous 8 years fighting auto dependence and road construction.)

Wildlife must be given top priority, because they can't protect themselves from us.

Please don't put a cell phone next to any part of your body that you are fond of!

Stop obeying dictators and incompetent leaders from this time forward! Please share this message as widely as possible!

Re: 2021060647, Niles Canyon Trail Project, Alameda County

Dear Mr. Browne:

The Native American Heritage Commission (NAHC) has received the Notice of Preparation (NOP), Draft Environmental Impact Report (DEIR) or Early Consultation for the project referenced above. The California Environmental Quality Act (CEQA) (Pub. Resources Code §21000 et seq.), specifically Public Resources Code §21084.1, states that a project that may cause a substantial adverse change in the significance of a historical resource, is a project that may have a significant effect on the environment. (Pub. Resources Code § 21084.1; Cal. Code Regs., tit.14, §15064.5 (b) (CEQA Guidelines §15064.5 (b)). If there is substantial evidence, in light of the whole record before a lead agency, that a project may have a significant effect on the environment, an Environmental Impact Report (EIR) shall be prepared. (Pub. Resources Code §21080 (d); Cal. Code Regs., tit. 14, § 5064 subd.(a)(1) (CEQA Guidelines §15064 (a)(1)). In order to determine whether a project will cause a substantial adverse change in the significance of a historical resource, a lead agency will need to determine whether there are historical resources within the area of potential effect (APE).

CEQA was amended significantly in 2014. Assembly Bill 52 (Gatto, Chapter 532, Statutes of 2014) (AB 52) amended CEQA to create a separate category of cultural resources, "tribal cultural resources" (Pub. Resources Code §21074) and provides that a project with an effect that may cause a substantial adverse change in the significance of a tribal cultural resource is a project that may have a significant effect on the environment. (Pub. Resources Code §21084.2). Public agencies shall, when feasible, avoid damaging effects to any tribal cultural resource. (Pub. Resources Code §21084.3 (a)). **AB 52 applies to any project for which a notice of preparation, a notice of negative declaration, or a mitigated negative declaration is filed on or after July 1, 2015.** If your project involves the adoption of or amendment to a general plan or a specific plan, or the designation or proposed designation of open space, on or after March 1, 2005, it may also be subject to Senate Bill 18 (Burton, Chapter 905, Statutes of 2004) (SB 18). **Both SB 18 and AB 52 have tribal consultation requirements.** If your project is also subject to the federal National Environmental Policy Act (42 U.S.C. § 4321 et seq.) (NEPA), the tribal consultation requirements of Section 106 of the National Historic Preservation Act of 1966 (154 U.S.C. 300101, 36 C.F.R. §800 et seq.) may also apply.

The NAHC recommends consultation with California Native American tribes that are traditionally and culturally affiliated with the geographic area of your proposed project as early as possible in order to avoid inadvertent discoveries of Native American human remains and best protect tribal cultural resources. Below is a brief summary of portions of AB 52 and SB 18 as well as the NAHC's recommendations for conducting cultural resources assessments.

Consult your legal counsel about compliance with AB 52 and SB 18 as well as compliance with any other applicable laws.

AB 52

AB 52 has added to CEQA the additional requirements listed below, along with many other requirements:

1. Fourteen Day Period to Provide Notice of Completion of an Application/Decision to Undertake a Project: Within fourteen (14) days of determining that an application for a project is complete or of a decision by a public agency to undertake a project, a lead agency shall provide formal notification to a designated contact of, or tribal representative of, traditionally and culturally affiliated California Native American tribes that have requested notice, to be accomplished by at least one written notice that includes:

- **a.** A brief description of the project.
- **b.** The lead agency contact information.
- **c.** Notification that the California Native American tribe has 30 days to request consultation. (Pub. Resources Code §21080.3.1 (d)).
- **d.** A "California Native American tribe" is defined as a Native American tribe located in California that is on the contact list maintained by the NAHC for the purposes of Chapter 905 of Statutes of 2004 (SB 18). (Pub. Resources Code §21073).

2. Begin Consultation Within 30 Days of Receiving a Tribe's Request for Consultation and Before Releasing a Negative Declaration, Mitigated Negative Declaration, or Environmental Impact Report: A lead agency shall begin the consultation process within 30 days of receiving a request for consultation from a California Native American tribe that is traditionally and culturally affiliated with the geographic area of the proposed project. (Pub. Resources Code §21080.3.1, subds. (d) and (e)) and prior to the release of a negative declaration, mitigated negative declaration or Environmental Impact Report. (Pub. Resources Code §21080.3.1(b)).

- **a.** For purposes of AB 52, "consultation shall have the same meaning as provided in Gov. Code §65352.4 (SB 18). (Pub. Resources Code §21080.3.1 (b)).

3. Mandatory Topics of Consultation If Requested by a Tribe: The following topics of consultation, if a tribe requests to discuss them, are mandatory topics of consultation:

- **a.** Alternatives to the project.
- **b.** Recommended mitigation measures.
- **c.** Significant effects. (Pub. Resources Code §21080.3.2 (a)).

4. Discretionary Topics of Consultation: The following topics are discretionary topics of consultation:

- **a.** Type of environmental review necessary.
- **b.** Significance of the tribal cultural resources.
- **c.** Significance of the project's impacts on tribal cultural resources.
- **d.** If necessary, project alternatives or appropriate measures for preservation or mitigation that the tribe may recommend to the lead agency. (Pub. Resources Code §21080.3.2 (a)).

5. Confidentiality of Information Submitted by a Tribe During the Environmental Review Process: With some exceptions, any information, including but not limited to, the location, description, and use of tribal cultural resources submitted by a California Native American tribe during the environmental review process shall not be included in the environmental document or otherwise disclosed by the lead agency or any other public agency to the public, consistent with Government Code §6254 (r) and §6254.10. Any information submitted by a California Native American tribe during the consultation or environmental review process shall be published in a confidential appendix to the environmental document unless the tribe that provided the information consents, in writing, to the disclosure of some or all of the information to the public. (Pub. Resources Code §21082.3 (c)(1)).

6. Discussion of Impacts to Tribal Cultural Resources in the Environmental Document: If a project may have a significant impact on a tribal cultural resource, the lead agency's environmental document shall discuss both of the following:

- **a.** Whether the proposed project has a significant impact on an identified tribal cultural resource.
- **b.** Whether feasible alternatives or mitigation measures, including those measures that may be agreed to pursuant to Public Resources Code §21082.3, subdivision (a), avoid or substantially lessen the impact on the identified tribal cultural resource. (Pub. Resources Code §21082.3 (b)).

7. Conclusion of Consultation: Consultation with a tribe shall be considered concluded when either of the following occurs:

a. The parties agree to measures to mitigate or avoid a significant effect, if a significant effect exists, on a tribal cultural resource; or

b. A party, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached. (Pub. Resources Code §21080.3.2 (b)).

8. Recommending Mitigation Measures Agreed Upon in Consultation in the Environmental Document: Any mitigation measures agreed upon in the consultation conducted pursuant to Public Resources Code §21080.3.2 shall be recommended for inclusion in the environmental document and in an adopted mitigation monitoring and reporting program, if determined to avoid or lessen the impact pursuant to Public Resources Code §21082.3, subdivision (b), paragraph 2, and shall be fully enforceable. (Pub. Resources Code §21082.3 (a)).

9. Required Consideration of Feasible Mitigation: If mitigation measures recommended by the staff of the lead agency as a result of the consultation process are not included in the environmental document or if there are no agreed upon mitigation measures at the conclusion of consultation, or if consultation does not occur, and if substantial evidence demonstrates that a project will cause a significant effect to a tribal cultural resource, the lead agency shall consider feasible mitigation pursuant to Public Resources Code §21084.3 (b). (Pub. Resources Code §21082.3 (e)).

10. Examples of Mitigation Measures That, If Feasible, May Be Considered to Avoid or Minimize Significant Adverse Impacts to Tribal Cultural Resources:

a. Avoidance and preservation of the resources in place, including, but not limited to:

i. Planning and construction to avoid the resources and protect the cultural and natural context.

ii. Planning greenspace, parks, or other open space, to incorporate the resources with culturally appropriate protection and management criteria.

b. Treating the resource with culturally appropriate dignity, taking into account the tribal cultural values and meaning of the resource, including, but not limited to, the following:

i. Protecting the cultural character and integrity of the resource.

ii. Protecting the traditional use of the resource.

iii. Protecting the confidentiality of the resource.

c. Permanent conservation easements or other interests in real property, with culturally appropriate management criteria for the purposes of preserving or utilizing the resources or places.

d. Protecting the resource. (Pub. Resource Code §21084.3 (b)).

e. Please note that a federally recognized California Native American tribe or a non-federally recognized California Native American tribe that is on the contact list maintained by the NAHC to protect a California prehistoric, archaeological, cultural, spiritual, or ceremonial place may acquire and hold conservation easements if the conservation easement is voluntarily conveyed. (Civ. Code §815.3 (c)).

f. Please note that it is the policy of the state that Native American remains and associated grave artifacts shall be repatriated. (Pub. Resources Code §5097.991).

11. Prerequisites for Certifying an Environmental Impact Report or Adopting a Mitigated Negative Declaration or Negative Declaration with a Significant Impact on an Identified Tribal Cultural Resource: An Environmental Impact Report may not be certified, nor may a mitigated negative declaration or a negative declaration be adopted unless one of the following occurs:

a. The consultation process between the tribes and the lead agency has occurred as provided in Public Resources Code §21080.3.1 and §21080.3.2 and concluded pursuant to Public Resources Code §21080.3.2.

b. The tribe that requested consultation failed to provide comments to the lead agency or otherwise failed to engage in the consultation process.

c. The lead agency provided notice of the project to the tribe in compliance with Public Resources Code §21080.3.1 (d) and the tribe failed to request consultation within 30 days. (Pub. Resources Code §21082.3 (d)).

The NAHC's PowerPoint presentation titled, "Tribal Consultation Under AB 52: Requirements and Best Practices" may be found online at: http://nahc.ca.gov/wp-content/uploads/2015/10/AB52TribalConsultation_CalEPAPDF.pdf

SB 18

SB 18 applies to local governments and requires local governments to contact, provide notice to, refer plans to, and consult with tribes prior to the adoption or amendment of a general plan or a specific plan, or the designation of open space. (Gov. Code §65352.3). Local governments should consult the Governor's Office of Planning and Research's "Tribal Consultation Guidelines," which can be found online at: https://www.opr.ca.gov/docs/09_14_05_Updated_Guidelines_922.pdf.

Some of SB 18's provisions include:

1. Tribal Consultation: If a local government considers a proposal to adopt or amend a general plan or a specific plan, or to designate open space it is required to contact the appropriate tribes identified by the NAHC by requesting a "Tribal Consultation List." If a tribe, once contacted, requests consultation the local government must consult with the tribe on the plan proposal. **A tribe has 90 days from the date of receipt of notification to request consultation unless a shorter timeframe has been agreed to by the tribe.** (Gov. Code §65352.3 (a)(2)).
2. No Statutory Time Limit on SB 18 Tribal Consultation. There is no statutory time limit on SB 18 tribal consultation.
3. Confidentiality: Consistent with the guidelines developed and adopted by the Office of Planning and Research pursuant to Gov. Code §65040.2, the city or county shall protect the confidentiality of the information concerning the specific identity, location, character, and use of places, features and objects described in Public Resources Code §5097.9 and §5097.993 that are within the city's or county's jurisdiction. (Gov. Code §65352.3 (b)).
4. Conclusion of SB 18 Tribal Consultation: Consultation should be concluded at the point in which:
    a. The parties to the consultation come to a mutual agreement concerning the appropriate measures for preservation or mitigation; or
    b. Either the local government or the tribe, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached concerning the appropriate measures of preservation or mitigation. (Tribal Consultation Guidelines, Governor's Office of Planning and Research (2005) at p. 18).

Agencies should be aware that neither AB 52 nor SB 18 precludes agencies from initiating tribal consultation with tribes that are traditionally and culturally affiliated with their jurisdictions before the timeframes provided in AB 52 and SB 18. For that reason, we urge you to continue to request Native American Tribal Contact Lists and "Sacred Lands File" searches from the NAHC. The request forms can be found online at: http://nahc.ca.gov/resources/forms/.

NAHC Recommendations for Cultural Resources Assessments

To adequately assess the existence and significance of tribal cultural resources and plan for avoidance, preservation in place, or barring both, mitigation of project-related impacts to tribal cultural resources, the NAHC recommends the following actions:

1. Contact the appropriate regional California Historical Research Information System (CHRIS) Center (http://ohp.parks.ca.gov/?page_id=1068) for an archaeological records search. The records search will determine:
    a. If part or all of the APE has been previously surveyed for cultural resources.
    b. If any known cultural resources have already been recorded on or adjacent to the APE.
    c. If the probability is low, moderate, or high that cultural resources are located in the APE.
    d. If a survey is required to determine whether previously unrecorded cultural resources are present.

2. If an archaeological inventory survey is required, the final stage is the preparation of a professional report detailing the findings and recommendations of the records search and field survey.
    a. The final report containing site forms, site significance, and mitigation measures should be submitted immediately to the planning department. All information regarding site locations, Native American human remains, and associated funerary objects should be in a separate confidential addendum and not be made available for public disclosure.
    b. The final written report should be submitted within 3 months after work has been completed to the appropriate regional CHRIS center.

3. Contact the NAHC for:
   a. A Sacred Lands File search. Remember that tribes do not always record their sacred sites in the Sacred Lands File, nor are they required to do so. A Sacred Lands File search is not a substitute for consultation with tribes that are traditionally and culturally affiliated with the geographic area of the project's APE.
   b. A Native American Tribal Consultation List of appropriate tribes for consultation concerning the project site and to assist in planning for avoidance, preservation in place, or, failing both, mitigation measures.

4. Remember that the lack of surface evidence of archaeological resources (including tribal cultural resources) does not preclude their subsurface existence.
   a. Lead agencies should include in their mitigation and monitoring reporting program plan provisions for the identification and evaluation of inadvertently discovered archaeological resources per Cal. Code Regs., tit. 14, §15064.5(f) (CEQA Guidelines §15064.5(f)). In areas of identified archaeological sensitivity, a certified archaeologist and a culturally affiliated Native American with knowledge of cultural resources should monitor all ground-disturbing activities.
   b. Lead agencies should include in their mitigation and monitoring reporting program plans provisions for the disposition of recovered cultural items that are not burial associated in consultation with culturally affiliated Native Americans.
   c. Lead agencies should include in their mitigation and monitoring reporting program plans provisions for the treatment and disposition of inadvertently discovered Native American human remains. Health and Safety Code §7050.5, Public Resources Code §5097.98, and Cal. Code Regs., tit. 14, §15064.5, subdivisions (d) and (e) (CEQA Guidelines §15064.5, subds. (d) and (e)) address the processes to be followed in the event of an inadvertent discovery of any Native American human remains and associated grave goods in a location other than a dedicated cemetery.

If you have any questions or need additional information, please contact me at my email address: Sarah.Fonseca@nahc.ca.gov.

Sincerely,

Sarah Fonseca

Subject: Niles Canyon Trail response

To those sponsoring the Niles Canyon trail:

We are the Farwell Family who own the ranch that parallels the north side of Niles Canyon Rd from the NCRY rail yard to the Palomares Rd junction. We attended your July 15th ZOOM call and want to respond to the proposed trail as outlined on slides 29-37 of your presentation. As an owner of one third of property along the north side of Niles Canyon between Sunol and Mission Blvd, we have several questions:

1. The map of the proposed path does not contain a detailed description of its location especially around the NCRY railyard, our entrance at both 5400 & 5500 Niles Canyon Rd, or the junction of Palomares Rd and Niles Canyon Rd, which is the southwest corner of our property. We are very concerned that constructing a path, especially one as wide as 14‘ (figure 11-5, slide 28), will become a major civil project that could become prohibitively expensive especially the construction costs to preserve our 3 ranch entrances, building 2 or

perhaps 3 bike bridges as well as a parking lot at the intersection of Palomares Rd and Niles Canyon Rd near "Farwell" California. For instance, can a major bridge like the one depicted in figure 11-21 & 11-22 (slide 44-46) located at figure 11-23 really be constructed safely and for a reasonable cost in this narrow location? It appears that the same challenge, if not greater, will also be confronted at the Palomares Niles Canyon Junction as detailed in Figure 11-30 & 11-31 on slides 54 & 55. Neither bridge passing over Niles Canyon Rd. may satisfy the intentions of the Scenic Highway Act.

2. 4. As discussed in Caltrans' description of the Arroyo Bridge project currently under construction and referenced in the zoom call (https://dot.ca.gov/caltrans-near-me/district-4/d4-projects/d4-alameda-84-arroyo-de-la-laguna-bridge-project), it appears Caltrans is already constructing a bike and multiuse path along a portion of Niles Canyon RD: "At completion, the finished structure would provide two 12-foot-wide lanes, a 14-foot-wide shared east-west pedestrian path on the south side of the bridge, standard 42-inch-high barriers, 9-foot-wide shoulders to accommodate 6-foot-wide bicycle lanes, and a 2 foot-wide painted median rumble strip. The shared sidewalk would be protected from the roadway by concrete railing and include curb ramps that meet the standards of the Americans with Disabilities Act." While this project only covers a small section of Niles Canyon Rd. at least it provides a margin of safety for bike riders, although it may not be safe for performance bike riding. Perhaps like Contra Costa County & State Parks constructed on Mt Diablo, Caltrans and/or Alameda County can add bicycle lanes and/or turnouts to protect bicyclists who are traversing the canyon. By doing this, bicycle and auto safety would be enhanced and the canyon's designation as a scenic highway preserved.

3. Whether the trail runs on the north or south side of Niles Canyon Rd. but especially if it extends along the north side of Niles Canyon Rd along our property line, we are very concerned about the maintenance, upkeep, safety & security of the path and the possibility of people intruding onto our private property. We have several small rental homes located at 5500 that contain seniors as well as very young children. We have already encountered unsavory

people wandering onto our property that had to be removed by the Alameda County Sheriff's dept. We would prefer avoiding any further intrusions by the public onto our ranch.

4. As a working ranch, we use and appreciate horses but also understand the potential challenge of mixing them with kids, runners, baby carriages & bikes, performance or leisure, especially along a confined, enclosed path. Perhaps the mixed use objective for this path is incompatible with public safety?

We look forward to your response especially our request for a more detailed map of the various trail options. Please forward our response to any interested parties working on this project that we inadvertently forgot to copy. Thanks again for the well prepared zoom presentation. We look forward to continued dialogue…

Subject: Niles Canyon Trail NOP Scoping meeting

Jim –

I want to see detailed definitions on how the trail will be maintained, monitored, and cleaned, as well as protecting the Niles Canyon Railway, the UP railway, and Alameda Creek from the trail users.

Managing these details may have more environmental impact than the actual trail after construction mitigations.

Subject: Archaeological Resources Survey Study for the Niles Canyon Trail Project in Alameda County, California (LSA Project No. STU2001)

Dear Ms. Lo:

LSA conducted an archaeological resources survey study (study) for the proposed Niles Canyon Trail Project (project) in Alameda County, California. Study work (which consisted of background research and a field survey) was completed per the requirements of the California Environmental Quality Act of 1970 (CEQA).

This study was prepared to: (1) identify archaeological deposits that may meet the CEQA definition of a historical resource (California Public Resources Code [PRC] Section 21084.1) or a unique archaeological resource (PRC Section 21083.2) and that may be impacted by the proposed project; (2) assess the potential for human remains; and (3) recommend mitigation, additional study, or consultation outreach that may be required to address potential impacts to such resources and/or remains. This report has been prepared by Associate/Senior Cultural Resources Manager Kerrie Collison, M.A., Registered Professional Archaeologist (RPA) 28731436.

PROJECT DESCRIPTION AND LOCATION

The proposed project would construct a 6-mile, Class 1, multi-use trail between the Niles District in the City of Fremont and the unincorporated community of Sunol through Niles Canyon in Alameda County. The multi-use trail would be open to hikers, bicyclists, and equestrians. The proposed trail would consist of a 10-foot wide, all-weather surface with 2-foot shoulders on either side composed of decomposed granite or aggregate. The trail surface would likely consist of 4 inches of asphalt concrete atop 6 inches of class II aggregate base.

The trail is proposed to be developed in three phases (see Figures 1 and 2; all figures are provided in Attachment B). Each phase would be independent in service and function. The phases are:

- **Phase 1 – Vallejo Mill to Palomares Road.** The first phase would complete the connection from Vallejo Mill to Palomares Road. To provide independent utility, the project would need to create a new crossing of State Route 84 (SR-84) parallel to the Farwell Bridge.

- **Phase 2 – Palomares Road to Old Highway 84/UPRR Access Road.** The second phase would begin at Palomares Road and end at Old Highway 84/UPRR Access Road on the south side of SR-84.

- **Phase 3 – Old Highway 84/UPRR Access Road to Sunol.** The final phase would complete the trail between Niles and Sunol, extending from the UPRR Access Road to the community of Sunol, either along the north side of SR-84 through the Brightside Rail Yard (Alternate 1) or on the south side of SR-84 ending at the Sunol Water Temple (Alternate 2).

This study analyzes all three phases – Phase 1 is evaluated at the project level; Phases 2 and 3 are evaluated at the programmatic level at the end of this report.

The Phase 1 project site is depicted on the United States Geological Survey (USGS) *Niles, California* 7.5-minute topographic quadrangle map in Sections 10, 11, 15, 16, 21, and 22 of Township 4 South, Range 1 West, Mount Diablo Baseline and Meridian (USGS 1980; see Figure 1).

BACKGROUND RESEARCH

Northwest Information Center

On May 24, 2022, Jessika Akmenkalns (Researcher at the Northwest Information Center [NWIC]) conducted a record search at the NWIC of the California Historical Resources Information System in Rohnert Park. The NWIC, an affiliate of the California Office of Historic Preservation (OHP), is the official repository of cultural resources records and reports for Alameda County. The record search included a review of all recorded historic-period and precontact cultural resources within a 0.25-mile radius of the Phase 1 project site, as well as a review of known cultural resources surveys and excavation reports.

The record search results (NWIC File No. 21-1757; see Attachment C) indicate that 17 previous cultural resources studies have included a portion of the Phase 1 project site and that 26 previous cultural resources studies have included a portion of the 0.25-mile search radius. The 17 previous cultural studies that included a portion of the Phase 1 project site consist of 13 surveys (S-000622, S-000727, S-000898, S-002607, S-014067, S-022820, S-024041, S-031996, S-035457, S-036481, S-048490, S-052670, and S-053063), 1 archaeological testing program (S-013554), 1 archaeological monitoring (S-033061), 1 historic resources evaluation (S-042549), and 1 archaeological evaluation (S-050893). An estimated 50 percent of the Phase 1 project site and 0.25-mile radius has been studied.

As a result of previous cultural resources studies, 7 cultural resources have been recorded in the project site and 7 cultural resources have been recorded within 0.25 mile of the Phase 1 project site. The 7 cultural resources within the Phase 1 project site consist of P-01-000025 (a prehistoric village site), P-01-002192 (the historic-period Sunol Aqueduct), P-01-003280 (the historic-period Niles Old Town Complex), P-01-008189 (the historic-period Farwell Underpass), P-01-011357 (the historic-period Niles Canyon Railroad Historic District), P-01-011452 (the historic-period Alameda Creek Water Conveyance System), and P-01-011827 (the historic-period alignment of Alameda Creek). Of these 7 resources mapped within the Phase 1 project site, only P-01-000025 is archaeological in nature.

The 7 cultural resources within 0.25 mile of the Phase 1 project site consist of P-01-000227 (the historic-period Vallejo Mill, which also contains prehistoric components), P-01-001783 (the historic-period Southern Pacific Railroad), P-01-002190 (the historic-period Western Pacific Railroad), P-01-010778 (an isolated prehistoric artifact), P-01-011604 (isolated prehistoric artifacts), informal resource C-1519 (a prehistoric village), and informal resource C-1520 (a collection of prehistoric houses).

Aerial Photographs and Maps

Aerial photographs and historic maps that include the Phase 1 project site were also reviewed (USGS n.d.; NETR n.d.). The results of the review are presented in Table A.

Table A: Aerial Photograph and Historic Map Review

Map/Photograph	Results
1906 *Pleasanton, California* map (Scale 1:62,500)	The Phase 1 project site is not developed with any buildings. Alameda Creek and a railroad are directly adjacent to the Phase 1 project site.
1941 *Pleasanton, California* map (Scale 1:62,500)	Buildings are depicted near the eastern terminus of Old Canyon Road.
1946 aerial photograph	Buildings are present near the eastern terminus of Old Canyon Road.
1953 *Niles, California* map (Scale 1:24,000)	The buildings near the eastern terminus of Old Canyon Road are labeled as a pottery plant. A pipeline is depicted and labeled adjacent to the railroad.

Compiled by LSA (2023) from the United States Geological Survey (n.d.) and National Environmental Title Research (n.d.).

A review of additional aerial photographs did not result in a definitive demolition date of the pottery plant buildings near the Phase 1 project site.

Native American Heritage Commission

LSA submitted a request to the Native American Heritage Commission (NAHC) to request a review of the Sacred Lands File (SLF) for the presence of Native American cultural resources that the proposed project might impact. The NAHC maintains the SLF database and is the official State repository of Native American sacred-site location records in California.

Cody Campagne, NAHC Cultural Resources Analyst, responded on May 17, 2022, that the SLF search resulted in negative findings for sacred lands in the vicinity of the project site (see Attachment D). LSA understands that Alameda County Public Works Agency is conducting Assembly Bill 52 Native American consultation for the project.

Additional Background Research

Geologic deposits exist under surficial sediments of the project site, specifically sandstone, shale, and conglomerate deposits that date to the Paleocene (66 million to 56 million years ago) (CGS 2015).

ARCHAEOLOGICAL FIELD SURVEY

On September 9, 2022, LSA archaeologist Kerrie Collison conducted a pedestrian survey of the Phase 1 project site along with two representatives of the North Valley Yokuts Tribe. The survey was conducted utilizing transects spaced fewer than 3 meters apart and began near the intersection of Old Canyon Road and Clarke Drive. The entire length of the proposed Phase 1 trail segment as depicted on field maps following Old Canyon Road and the California Pottery Company Road to Palomares Road and back was walked. The proposed Phase 1 trail alignment is depicted following the ridge top on the south side of the Niles Canyon Railroad District. Due to access and safety issues, the survey followed the railroad alignment up to and across Weller Bridge. Special attention was paid to rodent burrow holes and aprons as well as the vicinity of the recorded location of P-01-000025 (Photograph 1). Portions of the Phase 1 project site were unpaved and contained vegetation and duff as ground cover, while other portions were paved or covered with gravel.

Photograph 1: Disked field near recorded location of P-01-000025. View to south.No archaeological resources or human remains were identified during the field survey of the Phase 1 project site, including near the recorded location of P-01-000025.

SUMMARY AND RECOMMENDATIONS

This study consisted of background research and a field survey. No human remains were identified within the project site as a result of the archaeological resources survey study. One archaeological resource (P-01-000025) was identified within the project site as a result of the record search, but no surficial remnants of the resource were observed during the survey. The Phase 1 project site has some sensitivity for cultural resources due to the number of prehistoric sites in the area and because Alameda Creek, which is directly adjacent to the Phase 1 project site, would have served as a food and water source for Native American populations in the area.

While no surficial remnants of P-01-000025 were observed during the archaeological field survey, there is still potential for subsurface archaeological deposits associated with the resource to exist within the Phase 1 project site. As such, LSA recommends that an archaeologist (either an archaeologist who meets the Secretary of the Interior's Professional Qualifications Standards for Archeology or an archaeologist supervised by such an archaeologist) monitor all ground-disturbing activities associated with project implementation within the recorded boundary of and within 100 feet of the boundary of the recorded location of resource P-01-000025 (see Figure 3), including clearing and grubbing activities. Archaeological monitoring should occur on a full-time basis during these excavation activities until the Project Archaeologist, based on the archaeological monitor's observations, is satisfied that there is little likelihood of encountering intact archaeological deposits. The Project Archaeologist may also determine whether it is appropriate to reduce monitoring to spot-checking on a part-time basis. In the event that archaeological resources are identified during project activities, work should be halted immediately within 25 meters of the find until the nature and significance of the find is assessed, and it is determined whether any additional study or treatment of the find is warranted. The archaeologist would develop proper mitigation measures required for the discovery per California Code of Regulations [CCR], Title 14, Chapter 3, Section 15064.5(f)). Additional studies could include, but would not be limited to, collection and documentation of artifacts, documentation of the cultural resources on State of California Department of Parks and Recreation Series 523 forms, or subsurface testing. Upon completion of the monitoring and, if necessary, mitigation, the archaeologist should prepare a report to document the methods and results of the monitoring. The final report should be submitted to the NWIC.

Based on conversations between LSA and representatives of the North Valley Yokuts Tribe during the field survey, it is likely that Native American monitoring will also be requested for portions of the trail that undergo archaeological monitoring. However, the final extent of Native American monitoring will be determined separately as a result of Assembly Bill 52 consultation.

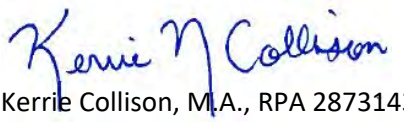

For Phases 2 and 3 of the overall Niles Canyon Trail Project, LSA recommends that Phase I cultural resources studies (which would include a record search, background research, field survey, and any additional fieldwork such as subsurface testing, if determined necessary) be conducted as part of project-specific environmental documentation for each phase.

In the event that human remains are encountered at any time during project work, State Health and Safety Code Section 7050.5 states that no further disturbance shall occur until the Alameda County Coroner has made a determination of origin and disposition pursuant to State PRC Section 5097.98. The County Coroner must be notified of the find immediately. If the remains are determined to be Native American, the County Coroner would notify the NAHC within 24 hours, which would determine and notify a Most Likely Descendant (MLD). With the permission of the landowner or his/her authorized representative, the MLD may inspect the site of the discovery. The MLD shall complete the inspection and make recommendations or preferences for treatment within 48 hours of being granted access to the site. The MLD's recommendations may include scientific removal and nondestructive analysis of human remains and items associated with Native American burials, preservation of Native American human remains and associated items in place, relinquishment of Native American human remains and associated items to the descendants for treatment, or any other culturally appropriate treatment.

If you have any questions concerning the content of this letter report, please contact me at kerrie.collison@lsa.net.

Sincerely,

Re: Native American Tribal Consultation, Pursuant to the Assembly Bill 52 (AB 52), Amendments to the California Environmental Quality Act (CEQA) (Chapter 532, Statutes of 2014), Public Resources Code Sections 5097.94 (m), 21073, 21074, 21080.3.1, 21080.3.2, 21082.3, 21083.09, 21084.2 and 21084.3, Niles Canyon Trail Phase 1 Project, Alameda County

Dear Mr. Browne:

Pursuant to Public Resources Code section 21080.3.1 (c), attached is a consultation list of tribes that are traditionally and culturally affiliated with the geographic area of the above-listed project. Please note that the intent of the AB 52 amendments to CEQA is to avoid and/or mitigate impacts to tribal cultural resources, (Pub. Resources Code §21084.3 (a)) ("Public agencies shall, when feasible, avoid damaging effects to any tribal cultural resource.")

Public Resources Code sections 21080.3.1 and 21084.3(c) require CEQA lead agencies to consult with California Native American tribes that have requested notice from such agencies of proposed projects in the geographic area that are traditionally and culturally affiliated with the tribes on projects for which a Notice of Preparation or Notice of Negative Declaration or Mitigated Negative Declaration has been filed on or after July 1, 2015. Specifically, Public Resources Code section 21080.3.1 (d) provides:

Within 14 days of determining that an application for a project is complete or a decision by a public agency to undertake a project, the lead agency shall provide formal notification to the designated contact of, or a tribal representative of, traditionally and culturally affiliated California Native American tribes that have requested notice, which shall be accomplished by means of at least one written notification that includes a brief description of the proposed project and its location, the lead agency contact information, and a notification that the California Native American tribe has 30 days to request consultation pursuant to this section.

The AB 52 amendments to CEQA law does not preclude initiating consultation with the tribes that are culturally and traditionally affiliated within your jurisdiction prior to receiving requests for notification of projects in the tribe's areas of traditional and cultural affiliation. The Native American Heritage Commission (NAHC) recommends, but does not require, early consultation as a best practice to ensure that lead agencies receive sufficient information about cultural resources in a project area to avoid damaging effects to tribal cultural resources.

The NAHC also recommends, but does not require that agencies should also include with their notification letters, information regarding any cultural resources assessment that has been completed on the area of potential effect (APE), such as:

1. The results of any record search that may have been conducted at an Information Center of the California Historical Resources Information System (CHRIS), including, but not limited to:

- A listing of any and all known cultural resources that have already been recorded on or adjacent to the APE, such as known archaeological sites;
- Copies of any and all cultural resource records and study reports that may have been provided by the Information Center as part of the records search response;
- Whether the records search indicates a low, moderate, or high probability that unrecorded cultural resources are located in the APE; and
- If a survey is recommended by the Information Center to determine whether previously unrecorded cultural resources are present.

2. The results of any archaeological inventory survey that was conducted, including:

- Any report that may contain site forms, site significance, and suggested mitigation measures.

  All information regarding site locations, Native American human remains, and associated funerary objects should be in a separate confidential addendum, and not be made available for public disclosure in accordance with Government Code section 6254.10.

3. The result of any Sacred Lands File (SLF) check conducted through the Native American Heritage Commission was negative.

4. Any ethnographic studies conducted for any area including all or part of the APE; and

5. Any geotechnical reports regarding all or part of the APE.

Lead agencies should be aware that records maintained by the NAHC and CHRIS are not exhaustive and a negative response to these searches does not preclude the existence of a tribal cultural resource. A tribe may be the only source of information regarding the existence of a tribal cultural resource.

This information will aid tribes in determining whether to request formal consultation. In the event that they do, having the information beforehand will help to facilitate the consultation process.

If you receive notification of change of addresses and phone numbers from tribes, please notify the NAHC. With your assistance, we can assure that our consultation list remains current.

If you have any questions, please contact me at my email address: Cody.Campagne@nahc.ca.gov.

Sincerely,

Cody Campagne

Subject: Built Environment Cultural Resource with Phase 1 – Niles District to Palomares Road segment of the Proposed Niles Canyon Trail Alignment, Fremont, Alameda County, California (LSA Project No.: STU2001; Phase 06)

Dear Ms. Lo:

This letter report presents the results of supplemental research and a cultural resources field survey of the Phase 1 segment of the proposed Niles Canyon Trail Alignment between Niles District to Palomares Road in Alameda County, California. The proposed trail would provide a 10-foot wide, accessible, and all-weather surface trail through Niles Canyon, linking the Niles district of the City of Fremont with the Town of Sunol.

This letter report of findings augments an earlier memorandum documenting the results of a "desktop cultural resources review" for the proposed project, including of all three phases prepared by LSA in May 2020 (LSA 2020). LSA's earlier desktop study consisted of "a review of an archival records search completed for the project on December 15, 2014, at the Northwest Information Center (NWIC) at Sonoma State University. The 2020 LSA memorandum summarized potential cultural resource constraints for the project and recommended next steps. The 2020 LSA memorandum found the following that apply to built environment (i.e., architectural) cultural resources:

- There are eleven (11) recorded cultural resources that are within or adjacent to the proposed trail.
- Cultural resources within or adjacent to the proposed trial consist of historic-period infrastructure, including water conveyance systems, railroads, bridges, and telegraph poles.
- Seven (7) of the eleven cultural resources are listed in, or appear eligible for, the NRHP and CRHR.
- Caltrans oversight will be required for the project and will require outreach and consultation with Native American tribes.
- A cultural resources field survey will be conducted.
- To minimize potential impacts to cultural resources, the project should use existing paved or previously disturbed surfaces when feasible.

This letter report of findings was prepared in response to recommendations listed in the 2020 LSA memorandum that are specific to built environment cultural resources. This updated built

environment cultural resources analysis is based on Phase 1 Field Maps for the proposed trail alignment dated July 21, 2022 (Attachment A).

Based on supplemental background research, a review of the cultural resource site records and field observations, LSA concludes the previously recorded resources within Phase 1 segment retain the aspects of their integrity that convey their significance as historic properties for the purposes of Section 106 of the National Historic Preservation Act and as historical resources for the purposes of the California Environmental Quality Act (CEQA). No new additional built environment resources were identified.

The methods, analysis, and conclusions of this letter report of findings are presented in the sections that follow. See Appendix B for Department of Parks and Recreation (DPR) 523 Series forms for the resources listed above.

BACKGROUND RESEARCH

This section discusses additional background research conducted for this study to identify cultural resources within the APE, and to assess the potential for such resources and builds off the study prepared in 2020. The supplemental background research included a review of the NWIC records search results, a review of national, state, and local historical registers and inventories for updated information and a pedestrian field survey of the entire Phase 1 segment by an LSA Architectural Historian who meets the Secretary of the Interior's *Professional Qualification Standards* (36 CFR Part 61) The results of these tasks are described and summarized below. Please refer to Attachments B and C for copies of the cultural resource records obtained from the NWIC and the California Department of Transportation (Caltrans) for more specific resource information and eligibility analysis.

Records Search

On May 24, 2022, NWIC Researcher Jessika Akmenkalns conducted a record search (File No. 21-1757). The NWIC, an affiliate of the California Office of Historic Preservation (OHP) is the official state repository of cultural resources records and reports for Alameda County. The record search included a review of all recorded historic-period and precontact cultural resources within a 0.25-mile radius of the Phase 1 project site, as well as a review of known cultural resources surveys and excavation reports. The results section below focuses on built environment resources only.

Results. Based on supplemental background research, a review of the cultural resource site records and field observations, LSA concludes that of the fourteen-previously recorded resources with the segment and a 0.25-mile radius, the following five built environment resources are located within Phase 1 segment:

- **P-01-002192/CA-ALA-583H; Sunol Aqueduct of the Spring Valley Water Company.** This resource consists of a 4.9-mile-long water conveyance structure paralleling Alameda Creek between Niles and Sunol. This segment was constructed in 1923 and replaced an earlier wood box flues built in 1898-1900. The segment of the Sunol Aqueduct was evaluated in 1998 and assigned a California Historical Resource Status Code of "3," indicating that it "[a]ppears eligible for listing in the National Register [of Historic Places]" (NRHP). This segment of the Sunol

Aqueduct is a historical resource for the purposes of the California Environmental Quality Act (CEQA).

- **P-01-003280; Niles Old Town Complex.** This resource consists of a "complex of historic sites and existing resources about [José de Jesús] Vallejo Mill (old Spanish town) and early transcontinental Railroad Depot terminus and small town with remainder of Essanay Studio activities and concentration of Victorian commercial and residential structures." A rough sketch map prepared circa 1974 depicts an approximately six-square block concentration as the anchor to the complex with the Niles Blvd the Essanay Studio, the Niles Depot, and a segment of "Old Vallejo Street" that in turn leads to the Vallejo Mills site lying between the railroad to the north and Niles Canyon Road to the south. According to a "Historic Resources Inventory" form prepared by the Mission peak Heritage Foundation in April 1974, the complex consists of complex contains seven sites and seventeen structural or built environment elements. The Niles Old Town Complex was assigned a California Historical Resource Status Code of "7R," indicating that it was "[i]dentified in Reconnaissance Level Survey or in an Area of Potential Effect (APE): Not evaluated." LSA reviewed the Niles old Town Complex during a field survey, and it appears eligible as a historic district for associations the early economic and residential history of Niles and for the buildings' collective architectural qualities. For the purposes of this project, the Niles Old Town Complex is assumed to a historical resource for the purposes of CEQA.

- **P-01-008189; Farwell Bridge (a.k.a. Farwell Underpass); Caltrans Bridge #33-0035.** This resource consists of a five-span structure that carries a single-railroad track over State Route 84 (SR 84) and Alameda Creek at the intersection of Palomares Road. This structure was built in two phases, the first phase comprising the eastern abutment that carries the railroad over SR 84 in 1865-66 and a second phase in 1896 that corresponds to the construction of the railroad bridge over Alameda Creek. The Caltrans Historic Bridge Inventory for State Agency Bridges indicates this bridge was built in 1932, however, as an evaluation by Caltrans Architectural Historian Andrew Hope suggests, this date may reflect when "the plate-girder span over the highway was replaced or enlarged at that time", in addition, "the [concrete] facing of stone piers and abutments with concrete may have also occurred at that time" (Hope 1994:2).

  This resource was assigned a California Historical Resource Status Code of "1D" on October 13, 2010, indicating that it is a "[c]ontributor to a multi-component resource like a district listed in the N[ational] R[egister] by the Keeper [of the National register]/ Listed in C[alifornia] R[egister] of H[isotrical] R[esources]" (CRHR). In addition, the September 2022 edition of the Caltrans Historic Bridge Inventory for State Agency Bridges indicates this structure was assigned a Historic Significance rating of "2" indicating it "Bridge is eligible for NRHP." The Farwell Bridge/Underpass is a historical resource for the purposes of CEQA.

- **P-01-011357; Southern Pacific Railroad – Alameda Canyon Line (a.k.a., Niles Canyon Transcontinental Railroad Historic District, Niles Canyon Railroad District).** This resource consists of a six-mile segment of railroad that winds through Niles Canyon, from Sunol Railroad Station on the east to the Niles Railroad Station on the west. The resource is classified as a historic district and its contributing elements include the railroad alignment through Niles Canyon, the railroad grade, ties and ballast, a telegraph line, and a code line "and all other structural components of the line" (Scantlebury 2004). The boundary is determined by

geographical and historical characteristics. This resource was recoded as a district in 2004 and assigned a California Historical Resource Status Code of "1S," in 2010 indicating that it is "[i]ndividually listed in the NR[HP] by the Keeper [of the National Register]. Listed in the CR[HR]." Southern Pacific Railroad – Alameda Canyon Line (a.k.a., Niles Canyon Transcontinental Railroad Historic District, Niles Canyon Railroad District) is a historical resource for the purposes of CEQA.

- **P-01-011452; Spring Valley Water Company Conveyance System.** This resource consists of the Sunol Dam, Sunol Aqueduct, Sunol Valley Filtration Galleries, Niles Dam, and the Niles Regulating Reservoir, as well as two sets of transbay pipelines. The Alameda Headquarters for the system is located on the western boundary of Alameda Creek and includes 22 buildings and structures that were associated with the daily operations of Alameda Division of the Spring Valley Water Company. These resources were constructed between 1898 and 1930. This resource was evaluated in 2002 and assigned a California Historical Resource Status Code of "3," indicating that it "[a]ppears eligible for listing in the NRHP." The Spring Valley Water Company Conveyance System is a historical resource for the purposes of CEQA.

The following three built environment resources are located within 0.25-mile radius of the Phase 1 segment:

- **P-01-000227/CA-ALA-548/H; Vallejo Mill.** According to an archaeological site report prepared in 1992, this approximately 2.5-acre resource consists of "the remains of Jose de Vallejo's flour mills. The site contains the buried remains of the foundation of the first 1841 adobe flour mill, as well as the visible above-ground stone foundation of a second mill and accompanying wheel well, constructed in 1856. There is an extensive historic artifact scatter visible, as well as a faint ditch, the function of which is unknown. Excavations in 1986 also produced a few aboriginal artifacts." This resource appears also recorded as P-01-003281. On August 2, 2020, this resource was assigned a California Historical Resource Status Code of "3S," indicating that it "[a]ppears eligible for N[ationa] R[egister] individually through survey evaluation." In 1932, the Vallejo Mill was designed California Historic Landmark (No. 46). The Vallejo Mill is a historical resource for the purposes of CEQA.

- **P-01-001783; Southern Pacific Railroad.** Please refer to P-01-0011357 above for more information regarding the segment of former Southern Pacific railroad in this area.

- **P-01-002190; Western Pacific Railroad (Niles Canyon Segment).** This resource consists of a six-mile segment of the former Western Pacific Railroad (now the Union Pacific Railroad). This segment is part of a larger linear resource that crosses two counties. According to an evaluation by Caltrans architectural historian William Kostura, "[o]utside of Oakland, but within Alameda County, a six-mile segment of the Western Pacific Railroad's line through Niles Canyon was evaluated by Caltrans in 1998 and was determined to be eligible for the National Register. That segment was found to possess significance because it still demonstrates the technical achievements of building a transcontinental railroad through very difficult terrain, because it possesses an unaltered setting, and because it contributed to breaking the Southern Pacific Railroad's monopoly in the San Francisco Bay Area. The 1998 evaluation by Caltrans assigned a California Historical Resource Status Code of "3S," indicating that this segment of the former

Western Pacific Railroad "[a]ppears eligible for N[ationa] R[egister] individually through survey evaluation." The this segment of the former Western Pacific Railroad is a historical resource for the purposes of CEQA.

Literature Review

LSA reviewed the following local and State inventories for built environment cultural resources in and adjacent to the project site.

- *California Inventory of Historic Resources* (California Department of Parks and Recreation 1976);
- *Five Views: An Ethnic Historic Site Survey for California* (California Office of Historic Preservation 1988);
- *California Points of Historical Interest* (California Office of Historic Preservation 1992);
- *California Historical Landmarks* (California Office of Historic Preservation 1996);
- *An Architectural Guidebook to San Francisco and the Bay Area* (Cerny 2007);
- *A Living Legacy: Historic Architecture of the East Bay* (Wilson 1987); and
- *Built Environment Resources Directory: Alameda County* (California Office of Historic Preservation 2023). The directory includes the listings of the National Register of Historic Places (NRHP), National Historic Landmarks, CRHR, California Historical Landmarks, and California Points of Historical Interest.

Results. A review of State inventories and secondary literature did not identify any additional historical resources within or adjacent to the Phase 1 segment.

FIELD REVIEW

LSA architectural historian Michael Hibma conducted a field review of the Phase 1 segment on September 9, 2022. The survey documented the condition of the four previously recorded resources and their setting within the Phase 1 segment in field notes and photographs.

Results. Mr. Hibma arrived at the western terminus of the Phase 1 segment near the intersection of Old Canyon Road and Clarke Drive and walked the entire length of the proposed trail segment as depicted on field maps following Old Canyon Road and the California Pottery Company Road to Palomares Road and back. As noted in the 2020 records search, a segment of the Sunol Aqueduct, a segment of the Spring Valley Creek Water Conveyance System, the Niles Canyon Railroad District, and the Farwell Bridge were identified. The proposed trail alignment is depicted following the ridge top on the south side of the Niles Canyon Railroad District. Due to access and safety, the survey followed the railroad alignment up to and across Weller Bridge. The survey did not identify any additional built environment cultural resources 45 years old or older that warranted evaluation. The historical resources in the survey area respond to the topographical constraints of this narrow gorge in the southern end of the Diablo Range and characterizes the landscape as one whose historical pattern is of movement, whether it be people, trains, automobiles, or water.

The surveyed area appears in fair condition as evidence of regular use near the end of Old Canyon Road and to the east beyond a gate onto the California Potter Company Road. Segments of intact asphalt paving were observed; however, the trail is largely unpaved. The western end of Phase 1 appears to be a former two-lane road in a rural setting, later abandoned, that has fallen into disrepair over the last several decades. The survey did not identify any additional, non-previously evaluated built environment resources, materials, or features that appear 45 years old or older in the Phase 1 segment to warrant evaluation.[1]

HISTORICAL CONTEXT AND ELIGIBILITY EVALUATIONS

Please see Attachment B for DPR 523 Series form records, which contain NRHP based eligibility evaluation of the four identified built environment resources identified in Phase 1 segment of the proposed Niles Canyon Trail Alignment.

CONCLUSION

Supplemental background research, including a literature review, and a field review by an architectural historian identified the following four previously recorded built environment cultural resources more than 45 years old in the Phase 1 segment. The following resources were identified and appear eligible for inclusion in the NRHP or CRHR individually or as contributing element to an identified historic district and are historical resources for the purposes of CEQA (Public Resources Code Section 21084.1).

Name	Address/ Location	Community	NRHP and CRHR Eligibility California Historical Resource Status Code	CEQA Historical Resource?
P-01-002192/ CA-ALA-583H; Sunol Aqueduct of the Spring Valley Water Company	Within Phase 1 survey area.	Niles (vic)	"3," = [a]ppears eligible for listing in the NR[HP]"	Yes
P-01-003280; Niles Old Town Complex. This	Within Phase 1 survey area	Niles	"7R," indicating that it was "[i]dentified in Reconnaissance Level Survey or in an Area of Potential Effect (APE): Not evaluated."	Yes*
P-01-008189; Farwell Bridge (a.k.a. Farwell Underpass) Caltrans Bridge #33-0035	State Route 84 and Alameda Creek	Niles (vic)	"2S4" = "individually determined eligible for NR[HP] pursuant to Section 106 without review by SHPO. Listed in CRHR."	Yes

[1] The California Office of Historic Preservation guidance encourages a 45-year threshold for evaluation as "*there is commonly a five year lag between resource identification and the date that planning decisions are made. It explicitly encourages the collection of data about resources that may become eligible for the NRHP or California Register of Historic Resources (CRHR) within that planning period*. Moreover, "*OHP recognizes that there are a wide range of reasons for recording historical resources. It is understandable that within the constraints of a survey's objectives it is not always reasonable or appropriate to record all historical resources as defined here. Professional judgement in the field is essential when determining whether or not a resource warrants recordation*" (Office of Historic Preservation 1995:2).

Name	Address/ Location	Community	NRHP and CRHR Eligibility California Historical Resource Status Code	CEQA Historical Resource?
P-01-011357; Southern Pacific Railroad – Alameda Canyon Line (a.k.a., Niles Canyon Transcontinental Railroad Historic District).	Within Phase 1 survey area.	Niles (vic)	"1S," = "[i]ndividually listed in the NR[HP] by the Keeper. Listed in the CR[HR]."	Yes
P-01-011452; Spring Valley Water Company Conveyance System	Portions within Phase 1 survey area.	Niles (vic)	"3," indicating that it "[a]ppears eligible for listing in the NRHP."	Yes

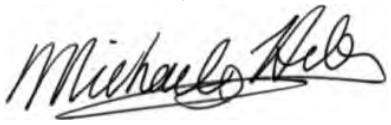

Source: California Historical Resource Status Codes (California Department of Parks and Recreation 2020).
*- appears eligible as a historic district by LSA architectural historian as a result of background research and field survey.

This letter report of findings identified four did not identify additional built environment cultural resources that may meet the definition of a historic property (36 CFR Part 800.16(l)(1)) or as a historical resource for the purposes of CEQA (Public Resources Code Section 21084.1).

As no additional built environment cultural resources were identified in the segment surveyed LSA did not prepare a Historical Resources Evaluation Report (HRER) or additional California Department of Parks and Recreation 523 Series forms (DPR 523 forms) to Caltrans standards.

Sincerely,

LSA Associates, Inc.

Michael Hibma, M.A., AICP
Associate/Architectural Historian

PREPARER'S QUALIFICATIONS

Michael Hibma, M.A., AICP, prepared this letter report of findings. Mr. Hibma is an architectural historian in the Point Richmond, California, office of LSA and has over 15 years of experience in cultural resources management. Mr. Hibma holds an M.A. in History from California State University, Sacramento; meets the Secretary of the Interior's *Professional Qualifications Standards* as an architectural historian and historian (48 CFR 44716); and is certified by the American Institute of Certified Planners (AICP #32009).

Aqueduct is located on the south side of Alameda Creek, in Niles Canyon, from Sunol Dam west of the town of Sunol to Niles Reservoir east of the Niles District in Fremont.

*P3a. Description (Describe the resource and its major elements. Include design, materials, condition, alterations, size, setting & boundaries):

The Sunol Aqueduct (also called the Niles Canyon Aqueduct) is a 4.9-mile long water conveyance device which parallels Alameda Creek in Niles Canyon between the communities of Sunol and the Niles District of Fremont in southern Alameda County. It is one part of a larger whole, the Alameda Creek System developed by Spring Valley Water Company which is now part of the Hetch Hetchy System administered by the Water Supply Division of the San Francisco Public Utilities Commission. This linear resource evaluation will focus on the Sunol Aqueduct in Niles Canyon, and will give general information on closely-related components of the Alameda Creek System which lie outside Niles Canyon. A complete evaluation of the system in the San Francisco Bay area using a district evaluation is recommended before the San Francisco Public Utilities Commission undertakes the planned changes to this part of the system.

Page 2 of 25 **Resource Name or #:** (Assigned by recorder) Sunol Aqueduct

L1. **Historic and/or Common Name:** Sunol Aqueduct of Spring Valley Water Company's Alameda Creek System

L2a. **Portion Described:** __ Entire Resource X Segment __ Point Observation **Designation:** Sunol Aqueduct

b. **Location of point or segment:** (Provide UTM coordinates, legal description, and any other useful location data. Show the area that has been field inspected on a Location Map.)

UTM end points: Niles Reservoir: Easting 591860, Northing 4159800; Sunol Dam: Easting 597030, Northing 4161210.

L3. **Description:** (Describe construction details, materials, and artifacts found at this segment/point. Provide plans/sections as appropriate.)

The aqueduct structure was built in four sections of varying length, interspersed between five sections of concrete-lined tunnel cut into hillsides. The reinforced concrete aqueduct is rectangular in section, approximately 6.5' square in exterior dimensions, and rests on an excavated bench along the south side of Niles Canyon; at some locations the structure is almost buried, with only the top surface visible. For more information please refer to the Primary Record Form and continuation sheets.

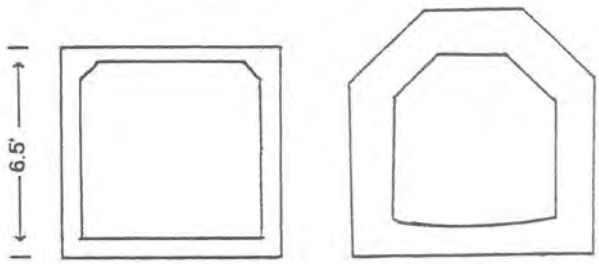

Within the current project's Area of Potential Effects the conduit is partially buried beneath fill at the south side of the Alameda Creek Bridge which carries State Route 84 (Bridge # 33-0039 at postmile 14.32/KP23.05).

L4. **Dimensions:** (In feet for historic features and meters for prehistoric features)

Facing: N/A

a. Top Width 6.5' (est.)
b. Bottom Width 6.5' (est.)
c. Height or Depth 6.5' (est.)
d. Length of Segment 4.9 miles

L4e. **Sketch of Cross-Sections** (include scale)

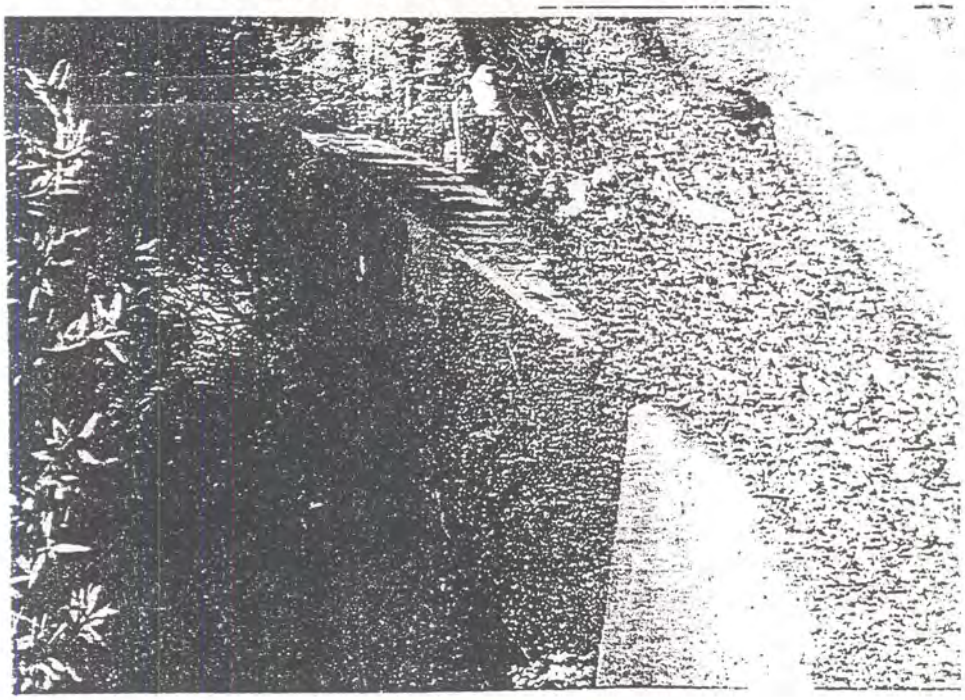

Typical box flume Typical tunnel

L5. **Associated Resources:**
Please refer to the Primary Record Form and continuation sheets.

L6. **Setting:** (Describe natural features, landscape characteristics, slope, etc., as appropriate.)
Setting is heavily wooded and twisting Niles Canyon, cut through by Alameda Creek.

L7. **Integrity Considerations:**
Integrity of the Sunol Aqueduct is very high (less than 1% has been altered). For detailed information, please refer to the Building, Structure, and Object form and continuation sheets.

L8b. **Description of Photo, Map, or Drawing** (View, scale, etc.)
Looking southwest. View shows partial burial by fill at edge of state highway.

BUILDING, STRUCTURE AND OBJECT RECORD

CA-ALA-583

Page 3 of 25

*NRHP Status Code 3

*Resource Name or # (Assigned by recorder) Sunol Aqueduct

B1. Historic Name: Sunol Aqueduct of Spring Valley Water Company's Alameda Creek System
B2. Common Name: (also known as Niles Canyon Aqueduct)
B3. Original Use: water conveyance B4. Present Use: same
*B5. Architectural Style: N/A
*B6. Construction History: (Construction date, alterations, and date of alterations)

First constructed 1898-1900; wood flumes replaced with concrete box flumes in 1923. A small concrete structure was erected c. 1965 on top of the aqueduct structure approximately 1 1/4 miles west of Sunol Dam to permit chlorination of water.

*B7. Moved? X No __ Yes __ Unknown Date: _____ Original Location: _____
*B8. Related Features:

The Sunol Aqueduct is one segment of an extremely extensive system; please refer to Primary Form for more information.

B9a. Architect: Spring Valley Water Company (company engineers) b. Builder: N/A
*B10. Significance: Theme: Urban water supply Area San Francisco Bay area / northern California
Period(s) of Significance 1887-1930 (entire Alameda Creek System); 1900-1930 (this segment of system)
Property Type aqueduct Applicable Criteria A, potentially C
(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

Spring Valley Water Company's Alameda Creek System is eligible for the National Register of Historic Places and for the California Register of Historical Resources, with Sunol Aqueduct as a contributing component of the system. This evaluation will establish the significance of the Alameda Creek System as a whole, but only the Sunol Aqueduct segment of the system will be evaluated for its integrity. The system is significant on the local and regional levels under Criterion A for its association with the history of urban water supply in northern California. Among water projects for California cities, Spring Valley Water Company's Alameda Creek System stands out as an early project which for its time went an extraordinary geographical distance from its customer base to obtain a water supply. In addition, the Alameda Creek System is an unusually late example of a private water company providing services for a municipality (characteristic of the nineteenth century), in contrast to the trend toward governmental ownership of public utilities during the twentieth century. A larger context of San Francisco's water supply history will be given so that this segment of the entire system can be sufficiently evaluated. This context treats the major events and issues in San Francisco's quest for a water supply, but a complete analysis of all the elements of San Francisco's water system is beyond the scope of the current project.

a

P3a. Description (continued from Primary Record Form)

The visible aqueduct structure was built in four sections of varying length, interspersed between five sections of concrete-lined tunnel cut into hillsides. The reinforced concrete aqueduct is rectangular in section, approximately 6.5' square in exterior dimensions, and rests on an excavated bench along the south side of twisting Niles Canyon; at some locations the aqueduct is almost buried, with only the top surface visible. There are two elevated sections of aqueduct above gullies or uneven topography; one is a high, open-spandrel concrete arch bridge supporting the aqueduct, spanning 88 feet; the other is a 500-foot long section carried on concrete trestle. The diversion, or beginning, point of the aqueduct is Sunol Dam west of Sunol, where waters from Alameda Creek and other sources are collected in buried filtration galleries and collect behind Sunol Dam before entering the aqueduct. The aqueduct's end point is five miles west at Niles Reservoir, a rectangular earthen reservoir lined with concrete, having a five million gallon capacity. To the west of Niles Reservoir, large-diameter pipes convey the water to the east shore of San Francisco Bay, under the bay, and up the San Francisco peninsula to Crystal Springs Reservoir, from which additional pipelines carry water to San Francisco.

The Sunol Aqueduct of the Alameda Creek System preceded the development of the Hetch Hetchy Aqueduct (San Francisco Water and Power System), but eventually became part of the Hetch Hetchy system. The Hetch Hetchy System ultimately has aqueducts, reservoirs, or related facilities in the following counties: San Francisco, San Mateo, Santa Clara, Alameda, San Joaquin, Stanislaus, and Tuolumne. Evaluation of the entire system is beyond the scope of this project.

Associated Resources

In addition to the Sunol Aqueduct (but beyond the scope of this evaluation), the main surviving components of the Alameda Creek System developed by Spring Valley Water Company include: Sunol Dam, Sunol Water Temple, Sunol Valley Filter Beds, artesian wells, pumps and pipelines in Pleasanton (1898-1903); and the Calaveras (1914-1925) and San Antonio (1965) reservoirs. Additional components are the complex of caretakers' houses, offices, barns, maintenance buildings, and landscaped grounds at the company's Alameda County headquarters in Sunol, as well as small maintenance sheds scattered throughout the system. The ruins of Vallejo's Mills (Archaeological site # CA-ALA-548/H) dating from 1841 and 1856, the remnants of Vallejo's aqueduct on the north side of Alameda Creek (originally constructed 1841 and/or 1856, reconstructed 1887-1888), and Niles Dam (1841-1856; reconstructed 1887-1888) all predate the period of significance of the resource under consideration. Other associated resources in Alameda County which predate the Sunol Aqueduct (but which have not been observed by this author) may include: mostly buried pipelines from Niles via Centerville to Dumbarton Point on the east shore of San Francisco Bay (1887-1888); and two pair of submarine pipelines under San Francisco Bay (Bay Division Pipelines 1 & 2, 1888, 1902).

Other resources well beyond the Alameda Creek System include O'Shaughnessy Dam/Hetch Hetchy Reservoir and other Sierra reservoirs and watershed; many hydroelectric powerhouses and transmission lines; the Hetch Hetchy Aqueduct and tunnels through the Coast Range; pipelines from Niles to Irvington (both districts are now part of Fremont), the Irvington Substation; Bay Division Pipelines Nos. 3 & 4 via Milpitas and Sunnyvale to Crystal Springs Reservoir; five reservoirs in San Mateo County on the San Francisco peninsula; 13 additional reservoirs within the city of San Francisco, as well as the water transmission system within the city.

B10. **Significance** (continued from Building, Structure and Object Record)

Historical Context: To Quench San Francisco's Thirst

The location of San Francisco on a sandy peninsula surrounded on three sides by salt water and without substantial natural fresh water supplies meant that early on in its history, city dwellers had to confront the problem of water supply. During the Gold Rush period, water was sold by the barrel by various entrepreneurs who carted water across the Golden Gate from Marin County. Several competing private companies were franchised by the city government to supply water from various sources in and around San Francisco. This was the beginning of a trend which became common in California and throughout the West, as cities had to reach out increasingly farther away to secure a water supply for municipal use.

Spring Valley Water Works was chartered in 1858 and soon took over some of its competitors, eventually becoming the only private company franchised to supply the city with water. Spring Valley Water Works (later Spring Valley Water Company, hereafter abbreviated as SVWC) gradually gained complete control of nearly all of the water sources in the city, as well as available water sources and watersheds on the Peninsula. In 1861-1862 SVWC developed its first reservoir in San Mateo County, bringing water to the city via tunnel and flume from beyond the county line.

Already by the mid-1860s there was a growing concern that the city would outgrow its peninsula water supply. Construction of a second reservoir south of city limits began in 1868; other dams and conduits in the city and on the peninsula were constructed in ensuing years, including Crystal Springs Dam (1888, raised 1891 and 1911) in San Mateo County. Swiss-trained Hermann Schussler, Chief Engineer of SVWC from 1866 to 1908, designed the unique concrete construction of Crystal Springs Dam which survived both the 1906 and 1989 earthquakes. This concept of using inter-basin water transfers was introduced in California in the 1870s-1880s.

The increasing population of San Francisco by the 1870s and the consequent demand for water impelled SVWC and city leaders to look even farther afield for future water supplies, based on the dominant belief that progress and city growth went hand-in-hand. Concerns were voiced about the city's reliance on a single private company to deliver water, and about the water company's inadequate supply, poor service, and high rates. In 1874 San Francisco received approval from the state legislature to create a municipal water system. The newly-constituted San Francisco Water Commission investigated several potential sources, including the Sierra Nevada, 160 miles away, and Alameda Creek in southern Alameda County, over 30 miles away across San Francisco Bay. The city was unable to act as quickly as SVWC, which purchased the lands and water rights to Alameda Creek and its tributaries beginning in 1875.

Over the next 50 years there were many attempts to buy SVWC and make it a municipal utility, but voters consistently defeated these measures due to the exorbitant price, in spite of nearly constant squabbles over water rates. In the meantime, the City of San Francisco further pursued the possibility of a water supply from the Sierras, a project beyond the capacity of a private company to finance. In 1900, a new San Francisco charter mandated the public ownership of utilities. With a municipal water system now a legal requirement, the problem persisted of how to acquire SVWC, whether by negotiated sale or by condemnation and purchase.

Unable to agree on a price for the SVWC, and concerned that all of SVWC's potential supply still would not meet future needs of the city, the city looked toward the Sierras. By 1900-1901 under Mayor Phelan, fourteen possible sources of water were studied by City Engineer Carl Grunsky, which resulted in the decision that the Tuolumne River system, later called Hetch Hetchy, was the answer to a municipal water supply. Approval by the Secretary of the Interior to fill Hetch Hetchy Valley, located in Yosemite National Park, was first sought by San Francisco in 1902 and denied. A federal permit was finally issued in 1908 following the 1906 Earthquake and subsequent fire and a change in city administration. Over objections of early environmentalists, including John Muir, the Raker Act was signed by President Woodrow Wilson in 1913. The Raker Act enabled the construction of Hetch Hetchy Reservoir and aqueduct, and reflected the Progressive values of the time in its concern for providing an ample supply of clean water for citizens and to promote urban development.

B10. **Significance** (continued)

Under the direction of City Engineer Michael O'Shaughnessy, construction of San Francisco's Hetch Hetchy System began in 1914. The dam at Hetch Hetchy Reservoir, named for its engineer, was completed in 1923 and raised in height in 1938. A large system of hydroelectric powerhouses, transmission lines, tunnels and pipelines to convey water through the Sierra mountains, foothills, across the San Joaquin Valley and through the Coast Range was constructed from 1914 to 1934. In 1934 the first Sierra water was delivered to San Francisco.

The Raker Act of 1914 stipulated that the city could not sell or give away any of its water or hydroelectric power to a private firm. Since Spring Valley Water Company still owned San Francisco's reservoirs and water distribution system in the bay area, it appeared that the effective solution would be for the city to purchase SVWC. Meanwhile, continuing disputes over water rates led to a 1921 agreement negotiated by the State Railroad Commission between the city and SVWC: the agreement allowed rate hikes in return for SVWC's promise to develop its Alameda County properties to their full potential, and to cooperate in the planning of the city's Hetch Hetchy project. SVWC was directed to finish Calaveras Reservoir and to build other structures in order to nearly double the supply of water from its Alameda Division (an increase of 24 million gallons per day). The improvements undertaken in Niles Canyon can be seen as the private company's last efforts to prove its efficiency— perhaps with a hope of retaining its monopoly over local supply— as evidenced by the company's public relations efforts conducted between 1922 and 1930 in the publication of a company magazine, *San Francisco Water.*

The sale of SVWC to the city took years to occur because voters kept turning down bond issues due to the water company's high price. Not until 1928 did voters give their assent to a purchase plan. The purchase of the private firm finally took place in 1930, when San Francisco Water Department, under the direction of the city's Public Utilities Commission, took over all of the company's holdings.

Historical Context: Comparison with Other Water Systems in California

It appears that in northern California, no other major city or private water company reached as far away to obtain a water supply so early on, or built a conveyance system on such a large scale. Most cities drew on available local supplies, but eventually reached a point at which additional water had to be acquired from a greater distance. San Francisco had the largest population of any city in the state until 1920. Because of this early population growth, San Francisco and SVWC had to confront the problems of bringing water over a significant distance— and crossing a major obstacle, San Francisco Bay— early in its history. The only comparable system, in terms of date and scope, would be the San Diego Flume Company's 1889 Cuyamaca Dam and 35-mile system of tunnels and wood flume on trestle to bring water to San Diego, which had less than a fifth of San Francisco's population at the time. (The remaining elements were found to be ineligible for the National Register in 1981 because only the dam and a few tunnels survive, in much-altered form.) The Owens Valley-Los Angeles Aqueduct conveyed Sierra waters 250 miles to Los Angeles, but its construction (1908-1913) began twenty years after SVWC's first delivery of water from Alameda Creek to San Francisco. Other cities in the San Francisco Bay area had smaller populations and relied on local supplies for many years. Not until the 1923 did a coalition of East Bay cities form the East Bay Municipal Utility District which took over the private water companies that had served the region. A system to bring Sierra waters to the East Bay cities was constructed in 1925-1929.

Early Uses of Alameda Creek in Niles Canyon

The Sunol Aqueduct, the subject of this evaluation, is not the first water conveyance device to utilize the waters of Alameda Creek. In 1841 José de Jesús Vallejo constructed a flour mill at mouth of Niles Canyon, powered by water from Alameda Creek. Vallejo, who was the brother of General Mariano Guadalupe Vallejo, was granted the Rancho Arroyo de la Alameda at the mouth of Niles Canyon the following year. In 1856, Vallejo built a second mill in the same area; neither mill has survived but archaeological excavations have been carried out which have identified the foundations (archaeological site #CA-ALA-548/H is now Vallejo Mill Historical Park, administered by the city of Fremont). Vallejo constructed a dam of locally-quarried stone upstream from his mill (according to local tradition, Niles Dam is the site of Vallejo's dam) and an aqueduct along the north side of Alameda Creek which carried water to the mill. Sources disagree as to whether Vallejo's aqueduct was built in 1841 or 1856, or whether simply a second flume was added in 1856. Examination and comparison of a number of sources suggests that the aqueduct was of two types of construction: a stone-lined aqueduct which ran for approximately 2500 feet from Niles Dam to a point just east of the Southern Pacific Railroad Rosewarnes bridge over Alameda Creek at Dresser, and from Dresser to the mill there was a wood flume. (To locate the surviving features along Alameda Creek, please refer to the location map following the continuation sheets of this form.)

B10. **Significance** (continued)

Vallejo's mill was an important industry— and almost the only industry— in southern Alameda County for the time, and was a successful enterprise as long as wheat was the primary crop in the area; by the 1880s a shift to fruit production was well underway. A settlement grew up around the mill during the 1850s and 1860s. The town of Vallejo's Mills was eclipsed by the nearby town of Niles founded by the Central Pacific Railroad in 1877, a few years after the transcontinental railroad was constructed through Niles Canyon in 1865-1869.

During the early 1870s a group of local farmers in Washington Township, nervous about the rumors of attention to Alameda Creek water shown by San Francisco interests, banded together to form Washington and Murray Township Water Company (incorporated 1871), and began work on an irrigation ditch from the mouth of Niles Canyon to Centerville in 1874. In 1873 a landowner in Sunol Valley, Charles Hadsell, announced his intention to condemn waters of Alameda and Calaveras Creeks; Hadsell was one of five investors in the newly-incorporated Alameda Water Company. Newspapers of the time reported that the stated intent of the Alameda Water Company was to supply San Francisco, Oakland, and other cities and towns with water. It appears that Alameda Water Company had acquired a controlling interest in Washington and Murray Township Water Company in 1874 and also had acquired Vallejo's Mills at the mouth of Niles Canyon and renovated it.

The Spring Valley Water Company Era Begins in Niles Canyon

In 1875, Spring Valley Water Works of San Francisco purchased for one million dollars 1,915 acres in Sunol and Calaveras valleys, water rights to Alameda Creek, plus Vallejo's Mills in Niles from Alameda Water Company. At the time the transaction was said to be one of the largest ever recorded at the Alameda County Recorder's Office. In subsequent years SVWC continued to purchase additional riparian rights and watershed lands downstream and upstream along Alameda and Calaveras creeks near the county line separating Alameda and Santa Clara counties, where Calaveras and San Antonio reservoirs would be built in the future.

SVWC closed Vallejo's Mills in 1884, but had other plans for the waters of Alameda Creek. When the water company's plan to convey the waters to San Francisco became known, area farmers protested. The farmers, who depended on the waters of the creek for their orchards, contended that the soil would become too dry for farming and that salt water from the bay would intrude into the water table if SVWC siphoned off the creek. According to a November 1887 article in the *San Francisco Examiner*, there was objection in the East Bay to "the invasion of Alameda County by a foreign water company;" Spring Valley was even called "the great water monopolist of Alameda County." Niles area landowners, township officials, and even the mayor of Oakland voiced concerns that the waters of Alameda Creek ought to be reserved for the use of the cities and towns of Alameda County, and that San Francisco should go to the Sierras for water. Newspapers reported that wells at Niles, which had been fed by underground waters of Alameda Creek, began to go dry in the late summer of 1888, not long after SVWC began to pipe water across the bay. At least one lawsuit was brought against SVWC, but Spring Valley's riparian rights evidently were upheld. Spring Valley sold some water to customers in the immediate area, or exchanged water for the riparian rights of creekside landowners, but most of the water was bound for San Francisco. The Alameda County Board of Supervisors granted SVWC the right of way for its pipes, allowing Spring Valley's construction project to begin.

According to company records, SVWC constructed Niles Dam in 1887-1888; it appears that SVWC more likely re-constructed the stone dam built by Vallejo by capping it with concrete and adding a fish ladder. The dam still exists, located 1.8 miles east of Mission Boulevard (it should not be confused with another submerged dam or weir across Alameda Creek, constructed in 1923 by the U. S. Geological Survey as a stream gauging station, located one mile east of Mission Boulevard).

In 1887-1888 SVWC also rebuilt or repaired Vallejo's stone-lined aqueduct. According to an 1891 article in the *Oakland Enquirer*, "so good was the workmanship of the stone aqueduct, that the company merely roofed it over with brick and used it as a portion of their underground waterway to the city." Covering the aqueduct also increased its capacity to as much as 7 million gallons per day. In a 1910 inventory of company property, Vallejo's aqueduct was described as follows: "Stone aqueduct, three (3) feet six (6) inches by three (3) feet, brick lined and arched over by brick

B10. **Significance** (continued)

arch, with manholes; two thousand seven hundred (2,700) feet long." Several sections of the stone and brick aqueduct have been found for the present study; it now has a thin layer of concrete over the brick, probably added when the aqueduct temporarily was put into service again in 1923. The aqueduct measures approximately 4.5' in exterior diameter. It lies within state highway right of way on the north side of the highway, at the edge of paved road. Located about 1.4 miles east of Mission Boulevard, the longest visible section is roughly 60 feet long; other remnants are obscured by accumulated soil and brush. Portions of the conduit are missing due to landslides and resultant road clean-up.

Vallejo's redwood flume (3131' long) was reconstructed by SVWC also in 1887-1888, this time leading not to Vallejo's Mills, but to SVWC's first transbay pipeline. (Please refer to the system maps on continuation sheets.) A 36"-diameter wrought iron pipeline beginning above the town of Niles carried water from the aqueduct to the shore of San Francisco Bay; a buried pipeline was constructed from Niles to the bay via Centerville and Newark. Near the bay the pipeline was carried above the marsh by a wood trestle 16,000' long to Dumbarton Point. The obstacle of San Francisco Bay was dealt with by two 16" submarine pipes designed with ball joints which were laid at the bottom of that narrow point of the bay (6400') from Dumbarton Point to Ravenswood on the western bay shore. At Ravenswood the two pipes became one again, and were routed to Crystal Springs Reservoir. The aqueduct and 28.5-mile pipeline could furnish approximately 8 to 10 million gallons per day, depending on the seasonal flow of Alameda Creek.

Further Development of Alameda Creek System, 1898-1903

Spring Valley Water Company began a major new phase of development of its Alameda County properties in 1898-1900, which had been urged by Chief Engineer Schussler since 1865. In Sunol Valley Schussler had noted the existence of underground gravel beds through which flowed the waters of upper Alameda Creek. Schussler designed a system of subterranean filter galleries buried in the aquifer, essentially reinforced concrete tunnels with perforated sides to collect water flowing through the gravel beds. Also collected was water flowing from Arroyo de la Laguna Creek from the north.

Sunol Dam was constructed on Alameda Creek about three-quarters mile west of the town of Sunol at a place called Silver Springs to cause the waters to back up into and saturate the gravel beds and enter the filter galleries. The filter galleries lead below ground to Sunol Dam. Mostly submerged, Sunol Dam is 187' long and 28' high, of concrete construction with a fish ladder on the north side and a concrete bulkhead at the south side, at which point Tunnel No. 1 of Sunol Aqueduct begins.

The new Sunol Aqueduct followed an entirely new alignment from the old route of Vallejo's aqueduct on the north side of Niles Canyon. By diverting the creek farther upstream at Sunol, the head, or force of water flow, was increased. The new Sunol Dam was at an elevation 75' higher than Niles Dam farther downstream where the pipeline had originally begun. The higher upstream separation of San Francisco's water supply from the waters of Alameda Creek was also done to improve the sanitation of the water supply, because scenic Niles Canyon had become a popular picnic and camping destination by the 1880s. (Already in 1892 SVWC had threatened to have campers and picnickers arrested for larceny if they were caught using the waters of the creek in Niles Canyon and Sunol Glen, apparently due to concern over water quality.)

The new aqueduct was constructed on a ledge or bench excavated from the hillside south of and above the bed of Alameda Creek. Having a total length of 25,900 feet from Sunol to Niles, the 1900 aqueduct combined two types of construction: four sections of redwood flume (with a capacity of 21 million gallons per day, totaling 11,300' in length) interspersed with five sections of concrete-lined tunnel (capacity 70 million gallons per day, total length 25,900'). The tunnel cut through the hillside to shorten the distance along the twisting canyon. The tunnel's average interior dimensions are 5'6" high by 5' wide, with walls, bottom and sides about 14" thick; in section the tunnel is box-shaped with a three-part segmented top.

SVWC constructed a second pair of transbay submarine pipelines, 22" in diameter in 1902. This project doubled the capacity of the Alameda Creek System to 16 million gallons per day. Capacity of the lines on the peninsula side was increased in 1903. In a related expansion of the Alameda Creek System, the "Pleasanton Well Fields" containing over 100 artesian wells in Pleasanton, five miles north of Sunol in the Livermore Valley, were developed in 1903 with appurtenances to send the water down Arroyo de la Laguna Creek to the Sunol Filter beds.

B10. **Significance** (continued)

The earthquake of 1906 caused little direct damage to the Alameda Creek System of SVWC. Additional concern developed over San Francisco's water supply as a result of the failure of water delivery in San Francisco during the emergency. This gradually set into motion events which would lead to the expansion of the water system, and its eventual takeover by the City of San Francisco.

In 1910, Spring Valley Water Company constructed the Sunol Water Temple to commemorate the joining of the waters of Alameda and Calaveras creeks with artesian waters from the Pleasanton Well Field, at the time an important engineering feat. The temple is attributed to San Francisco architect Willis Polk, west coast designer for the office of D. H. Burnham of Chicago; Polk designed a number of properties for SVWC. The Water Temple's classical design is based on the ancient Roman Temple of Vesta at Tivoli near Rome.

Enlargement of the Sunol Aqueduct, 1922-1923

Following the 1921 negotiated agreement with the City of San Francisco, the water company planned to increase the capacity of Sunol Aqueduct to convey water from Calaveras Reservoir (to be completed in 1925). This project was under the direction of George A. Elliott, SVWC's Chief Engineer from 1914 to 1930. The redwood flume sections of the Sunol Aqueduct as constructed in 1900 only had a capacity of 21 million gallons per day; this was less than half of the capacity of the concrete-lined tunnels built in 1900. The 1923 improvements were to bring the flume sections up to 70 million gallons per day, equivalent to the concrete-lined tunnels. When constructed in 1900, redwood flumes were a relatively inexpensive type of conduit, but wood flumes rot and must be replaced every 15 to 25 years. The 1923 work can be seen as replacement of the original structure with a view toward greater permanence, as well as to utilize the maximum capacity of the aqueduct.

Comprised of four long box (covered) flumes of reinforced concrete, the new construction was joined to the concrete-lined tunnels of 1900. Interior dimensions of the 1923 box flume sections of the aqueduct are 5' x 6' with walls and bottom 6" thick and top 4" thick. The four concrete box flume sections appear to follow the same alignment as the 1900 flumes, but in two locations new elevated structures were designed to span depressed topographical contours. A concrete arch bridge with open spandrels carrying the concrete box flume has an 88' span over a 70' deep, 100' wide gully, and was designed by Edward A. Nickel of SVWC Engineering Dept. Also designed by Nickel as part of the 1923 project is a reinforced concrete trestle, 500' long by 20' deep.

SVWC took advantage of the parallel Western Pacific Railroad (constructed through Niles Canyon 1908-1910) and had two spur tracks set up to bring materials to the construction sites. Construction began 1 April 1923 and progressed rapidly: at one point 900 feet of aqueduct were completed every week; the aqueduct was completed 15 September 1923.

During construction the old Vallejo conduit was temporarily put into service again to bring water to the transbay pipeline at Niles. Concern about water contamination compelled SVWC to fence off Alameda Creek to prevent public use during the summer of 1923, and SVWC installed a temporary chlorination plant at Niles.

In 1923, SVWC also constructed Niles Reservoir above Niles at the junction of the Sunol Aqueduct and the transbay pipeline to regulate the flow of water between them. The structure is an earthen reservoir with concrete lining. Interior concrete columns support a nearly flat gable wooden roof approximately 180' by 320' in overall footprint; capacity is 5 million gallons.

Upgrading of the water conveyance system from the East Bay to the San Francisco peninsula was undertaken in 1924. A new 48" pipeline (Pipeline No. 1) was installed (buried) from Niles Reservoir along a new route, paralleling the Western Pacific Railroad south to Irvington to join the 60" Hetch Hetchy pipelines then under construction by the San Francisco Water Department.

Construction of Calaveras Reservoir began in 1914 but was not completed until 1925 due to a failure of the dam during construction in 1918. Calaveras was the highest earth-fill dam in the world when completed, and holds 31.56 billion gallons with a 139-square mile watershed. The dam features a rock-faced, arched dam surface and an outlet tower with a

B10. **Significance** (continued)

classical architectural treatment reminiscent of Sunol Water Temple. Calaveras was the first significant East Bay addition to San Francisco's local water storage system, and the last major development under private ownership. Calaveras provided roughly twice the storage capacity of Spring Valley's reservoirs on the Peninsula.

Alterations to the Present

Few alterations to the Sunol Aqueduct have been made since it was upgraded in 1923 to its full capacity and current appearance. In terms of physical changes, a small concrete structure was erected c. 1965 on top of the aqueduct structure approximately 1 1/4 miles west of Sunol Dam to permit chlorination of water. Maintenance and repair of the aqueduct and patching occasional leaks is undertaken by San Francisco Water Department, although keeping the aqueduct clear of overgrowth has declined in recent years. At a few locations the aqueduct has become obscured and nearly buried under road fill, including when the Division of Highways (now Caltrans) constructed a new bridge over Alameda Creek at Brightside in 1946-1948.

The primary change to the aqueduct occurred in 1934, when water from Calaveras and San Antonio reservoirs and Alameda Creek watershed was re-routed to San Francisco through the Hetch Hetchy pipelines, thereby bypassing Niles Canyon and the Sunol Aqueduct. The Coast Range Tunnel of the Hetch Hetchy System goes under the East Bay hills to Irvington; the huge Hetch Hetchy pipelines meet the bay at Dumbarton Point at the same location where SVWC's original pipeline of 1887-1888 once did. Since 1934, when the Hetch Hetchy pipelines were completed, the Sunol Aqueduct has been used mainly for local water customers in Niles Canyon. At present, San Francisco Water Department plans to phase out this local service, and has begun a replacement project of well drilling for its few Niles Canyon customers. Primarily due to liability concerns, plans are under way to sell the Sunol Aqueduct and the land owned by San Francisco Water Department in Niles Canyon.

Major alterations to the original Alameda Creek System but not directly related to the Sunol Aqueduct include the following. Since 1949 no water has been diverted from the Pleasanton well fields in the Livermore Valley due to a low water table. The Pleasanton pumping plant structure, designed by Willis Polk, was demolished at an unknown date. The roof of Sunol Water Temple has been removed due to safety concerns, and stored. A tunnel from upper Alameda Creek to Calaveras Reservoir was completed in 1931 to increase capacity, and the reservoir was seismically strengthened in 1975. San Antonio Reservoir/ Turner Dam was completed in 1965. A Filtration and Pumping Plant at Sunol was constructed in 1966 and expanded in 1976. Pipelines from Niles to San Francisco Bay have been abandoned.

Integrity

This discussion will assess the integrity of the Sunol Aqueduct as a component of the Alameda Creek System; an integrity evaluation of the entire Alameda Creek System is beyond the scope of this project.

Integrity of the Sunol Aqueduct, or the ability to convey its significance, is high because the Hetch Hetchy pipelines to the south have effectively bypassed the Sunol Aqueduct since 1934. The Sunol Aqueduct has a high degree of integrity of location and setting: much of Niles Canyon is owned by San Francisco Water Department, East Bay Regional Park District, or in large parcels which have remained relatively undeveloped due to the hilly terrain. Integrity of design, materials, and workmanship are also very high, because only minor changes to the aqueduct have been carried out since its completion in 1923.

According to a recent survey of water conveyance systems in California, it is fairly common for early water systems, particularly those for irrigation, to be absorbed by later systems, and to reflect more than one construction method or conduit type. The history of the Alameda Creek System is an excellent example of this characteristic, because it includes a dam from an earlier water use, it altered a pre-existing aqueduct, and contains components dating from 1898 through 1925. The Alameda Creek System, in turn, was subsumed into the much larger Hetch Hetchy System. As noted above, the original pipelines leading from the Niles end of the aqueduct to San Francisco Bay have been abandoned, so that the Sunol Aqueduct has been severed from its original function, to convey water to San Francisco.

B10. **Significance** (continued)

Boundary of the Eligible Property

The boundary of the eligible property, Sunol Aqueduct, is the footprint of the structure itself, from Sunol Dam to Niles Reservoir.

Periods of Significance

The period of significance of the Alameda Creek System as developed by Spring Valley Water Company is 1887 to 1930 (the Sunol Aqueduct, as a segment of this system, would have a shorter period of significance, from 1900-1930). The system's period of significance begins with SVWC's first development of Alameda Creek as a water source for San Francisco in 1887, the construction of filter galleries, Sunol Dam and Sunol Aqueduct in 1898-1900 and the development of the Pleasanton Well Fields in 1903. Also included in this period of significance are the 1923 upgrade of the aqueduct to increase its capacity, and the completion of Calaveras Dam in 1925, the last major project under private company ownership. The period of significance ends with the change from a private water company to municipal ownership in 1930. This end date also roughly coincides with the city's completion of the Hetch Hetchy aqueduct in 1934 which brought exponentially more water to San Francisco, and which overshadowed the function of the Sunol Aqueduct.

National Register Eligibility

Sunol Aqueduct, the segment of the Alameda Creek System under consideration, is eligible for the National Register of Historic Places and for the California Register of Historical Resources in California. Significance is on the local and regional levels under Criterion A for its association with the history of urban water supply in California. The Alameda Creek System as a whole appears likely to be significant because stands out in the context of northern California as a very early project which for its time went a considerable distance from its customer base to obtain a water supply. In addition, the Alameda Creek System is an unusually late example of a private water company providing services for a municipality as was typical of the nineteenth century, in contrast to the trend toward governmental ownership of public utilities during the twentieth century.

Criterion A

The Sunol Aqueduct of the Alameda Creek System is a predecessor of the great Hetch Hetchy System (constructed 1914-1934), and it also largely predates the Owens Valley Aqueduct to Los Angeles (constructed 1908-1913). The system represents an early, ambitious effort by a private company to go farther afield to obtain a city water supply, before the public ownership of utilities became the norm during the 20th century in a legacy of the Progressive era. The City of San Francisco continued to do business with privately-owned SVWC until 1930. This endurance of a private utility serving a major city is in marked contrast to the City of Los Angeles's quest for water. Los Angeles formed a municipal water department by 1903, when it had less than a third of San Francisco's population.

Potential Eligibility under Criterion C

The Alameda Creek System appears likely to be additionally eligible under Criterion C as a work of engineering and because it embodies the distinctive characteristics of a type, period, and method of construction. At minimum the Sunol filter galleries of the Alameda Creek System appear to be eligible under Criterion C, but a formal evaluation is beyond the scope of this project. Spring Valley's Chief Engineer Schussler observed this geologic formation and planned for its eventual use before 1875, when he successfully persuaded SVWC to purchase the Sunol Valley filter beds. This was a very early use of an aquifer to store and collect water, planned before State Engineer William Hammond Hall had published his surveys in 1880 and 1888 which noted the frequent occurrence of aquifers in California's gravely coastal geology.

The Sunol Aqueduct's concrete-lined tunnels constructed in 1900 may be additionally significant under Criterion C as a work of engineering, but we do not have sufficient information as yet to make a definitive evaluation. The 1923 concrete box flume which replaced the wood flume built in 1900 appears to be a somewhat unusual solution (as compared with the more common riveted iron pipes) but not a technologically advanced one. The concrete arch bridge which carries the aqueduct is a handsome design. By 1923, the concrete arched bridge carrying a flume had been in use in California for some time, notably in the Modesto Irrigation District, built c. 1915. The concrete arch bridge carrying the aqueduct may be the only survival of its kind in California, though this has not been verified. In addition, the 1923 project received little notice in engineering journals of the day.

B10. Significance (continued)

Other System Designations of Significance

Neither the Alameda Creek System as a whole nor the Sunol Aqueduct has been evaluated previously under National Register criteria. No evidence could be found in SHPO records, as provided by the Northwest Information Center/ California Archaeological Inventory. However, the San Francisco Public Utilities Commission began to prepare a National Register application in 1995 for the Sunol Water Temple as part of an unsuccessful application for Transportation Enhancement Activities funding, although the National Register nomination was never completed. The *California Inventory of Historic Resources* (1976) lists the "San Francisco Water Temple" at Sunol.

The American Society of Civil Engineers (ASCE) designated the Sunol Water Temple, Sunol Dam and filtration galleries as a Historic Civil Engineering Landmark in 1976. Sunol Dam and filter galleries "represent an original method of utilizing California's characteristically gravely coastal geology and subsurface flowing water courses to develop and filter a municipal water supply." According to the ASCE, Spring Valley Water Company's novel system of subsurface water entrapment served as a model for a similar system in Los Angeles.

Lower Crystal Springs Dam in San Mateo County was formally determined eligible for the National Register of Historic Places in 1989, and was designated a Civil Engineering Landmark in 1976 for its advanced construction methods and design.

The San Joaquin Pipelines, as a section of the Hetch Hetchy System, was proposed for National Register eligibility in 1995. The Hetch Hetchy Project's Coast Range Tunnel, the longest water tunnel in the world when completed, was designated a Civil Engineering Landmark by the ASCE in 1976.

A related resource, Vallejo Flour Mill is California Historical Landmark No. 46. The mill (site) is listed in the *California Inventory of Historic Resources* (1976) and is additionally listed in the State Office of Historic Preservation's Historic Property Data Files (with National Register status of 3S, meaning that it appears eligible for individual National Register listing).

Re: Eligibility Determinations for the Farwell Underpass (Bridge #33-0035), Post Mile 13.03, Route 84, Alameda County.

Dear Mr. Markle:

Thank you for submitting to our office your August 2, 1994 letter and supporting documentation regarding your determination of eligibility for the Farwell Underpass (Bridge #33-0035) located at post mile 13.03, Route 84, Alameda County. The underpass is scheduled for future seismic retrofit work, and was not included in Caltran's statewide bridge survey. The bridge was built in 1906 as a replacement for an earlier crossing of Alameda Creek at this location.

You are seeking our comments on your determination of the eligibility of the Farwell Underpass for inclusion on the National Register of Historic Places (NRHP) in accordance with Section 106 of the National Historic Preservation Act. Our review of the submitted documentation leads us to concur with your determination that the Farwell Underpass is ineligible for inclusion on the NRHP under any of the criteria established by 36 CFR 60.4. The structure has no strong associations with significant historic events or persons, nor is it architecturally significant.

Thank you again for seeking our comments on your project. If you have any questions, please contact staff historian Clarence Caesar at (916) 653-8902.

Sincerely,

Cherilyn Widell
State Historic Preservation Officer

REC'D FHWA

METADATA SHEET

P-01-011357

A District Record had been mistakenly added as a supplement to the primary record for the Western Pacific Railroad, P-01-002190. It was also incorrectly mapped in GIS. It has now been separated out and given its' own Primary Number as a District (Niles Canyon Railroad District) and remapped to match the description and location stated in the record.

Two records were included with the district record for elements of the district. These have now been given individual primary numbers.

Please see the individual Primary Numbers for these resources:

***P3a. Description:**

The Farwell Bridge (resource #2), like Dresser Bridge (resource #3) is a structure that is primarily a blend of two construction eras and carries a single railroad track over State Route 84 and Alameda Creek. The steel bridge super-structure was built in 1896, ten years prior to Dresser, by Edge Moor Bridge Works of Edge Moor, Delaware. It is a pin-connected structure, a construction technique once commonly used and now rarely found. The truss design is a Pratt, originally designed by Thomas and Caleb Pratt in 1844.

> ...[it is] a design with vertical compression members and diagonal tension members. The Pratts' patent application illustrated a combination structure with wooden compression members, although the vast majority of Pratt trusses built in the United States were entirely of metal. The Pratt truss achieved enormous popularity because of its strength and straightforward design. It was not a complicated structure that required complex shop work, and it was adaptable to a wide variety of situations. (Great American Bridges and Dams)

P3a. Description, continued from page 5

Three stone abutments and piers are essentially original to the 1865/6 structure; some have been reinforced, patched or coated with concrete since. Two additional piers were constructed in 1896 between existing original piers and abutments.

This bridge is a five-span structure. The highway is spanned by a steel girder deck structure 21 meters (69 feet) long, with a concrete retaining wall at its east end and a stone pier at its west end. Extending west from the pier is a Warren pony truss approximately 32 meters (75 feet) long, followed by a Pratt half-hip through truss, approximately 50 meters (165 feet) long, which spans the creek. The center beams are supported separately from the side plates at the abutments and piers by an additional masonry support atop the existing work. The pier between the two truss spans is concrete. Because the piers are not perpendicular to the trusses, the two truss frames that make up the creek span are offset, so that corresponding end panels are of different lengths. The trusses are made up of solid and lattice-braced members with riveted and pinned connections. At the west end of the bridge are two short steel girder deck spans, each less than 10 meters (32 feet) in length, supported by piers and an abutment that are the result of alternating building periods (1865/6 and 1896), and materials (stone and concrete). On either end of the Pratt truss the year, 1896, has been cut into tension members.

Railroad bridge over State Route 84, just east of Palomares Road (post mile 13.03)

P3. Description (Describe the resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries):

The Farwell Underpass is a five-span structure which carries a single railroad track over State Route 84 and Alameda Creek. The highway is spanned by a steel girder deck structure 21 meters (69') long, with a concrete abutment and retaining wall at its east end and a stone pier at its west end. Extending west from the pier is a Warren pony truss approximately 23 m (75') long, followed by a Pratt half-hip through truss, approximately 50 m (165') long, which spans the creek. The pier between the two truss spans is concrete or concrete-faced stone. Because the piers are not perpendicular to the trusses, the two truss frames which make up the creek span are offset, so that corresponding end panels are of different lengths. The trusses are made up of solid and lattice-braced members with riveted and pinned connections. At the west end of the bridge are two short steel girder deck spans, each less than 10 m (32') in length, supported by piers and an abutment that are either concrete or concrete-faced stone. A metal plaque attached to the bridge lists the builder (American Bridge Company) and date (1906).

B13. Significance: Theme: _____ Area: _____
Period of Significance: _____ Property Type: _____ Applicable Criteria: _____
(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

This steel truss bridge, fabricated by the American Bridge Company for the Southern Pacific Railroad, does not meet the criteria for inclusion in the National Register of Historic Places. It is not significant for its age or size and does not possess significant artistic or aesthetic values. At approximately 50 meters (165'), the main span approaches the normal upper limit for the use of a Pratt half-hip truss. However, the overall design of this multi-span structure evidences a conservative approach to a routine engineering problem.

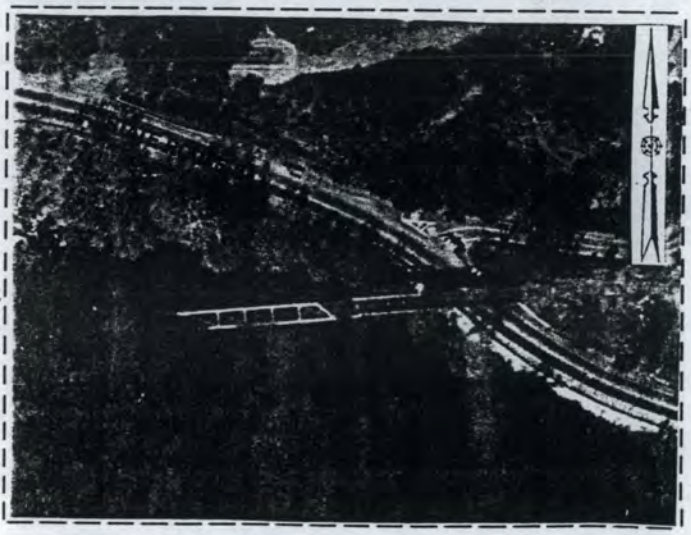

The railroad line through Niles Valley is the original route of the Transcontinental Railroad from Sacramento to Niles, where it then turned north to Oakland. However, this bridge is not associated with the initial period of the Transcontinental Railroad, as it was constructed in 1906 as a replacement for an earlier crossing of Alameda Creek at this location. By the time of its construction in 1906, there were several alternative routes by rail to the Bay Area. The American Bridge Company dominated metal truss bridge manufacturing in the first decades of the twentieth century, and built many railroad and highway bridges in California during this period. In addition, this bridge is not associated with significant persons or events in local or regional history.

METADATA SHEET

P-01-011357

A District Record had been mistakenly added as a supplement to the primary record for the Western Pacific Railroad, P-01-002190. It was also incorrectly mapped in GIS. It has now been separated out and given its' own Primary Number as a District (Niles Canyon Railroad District) and remapped to match the description and location stated in the record.

Two records were included with the district record for elements of the district. These have now been given individual primary numbers.

Please see the individual Primary Numbers for these resources:

Page 1 of ____

*NRHP Status Code 2S4

*Resource Name or # (Assigned by recorder) Niles Canyon Railroad

D1. Historic Name: ~~Western Pacific~~/Southern Pacific Railroad – Alameda Canyon Line

D2. Common Name: Niles Canyon Railroad

***D3. Detailed Description**

The Niles Canyon Railroad winds through the narrow gorge of Niles Canyon. It roughly parallels a portion of State Highway 84; Alameda Creek and its associated riparian habitat; a newer rail line, the Western Pacific (completed in 1909, not to be confused with the 1865 Western Pacific); the San Francisco Public Utility District's aqueduct carrying water from Hetch-Hetchy dam, across the bay and into reservoirs; and a second water-conveyance system, abandoned in 1900.

Although the rails and ties have been replaced in kind, for maintenance reasons, since the period of significance (1865-1912), the railroad bed, the two railroad bridge substructures and superstructures, and a dry-masonry culvert are still extant. This report focuses on the integrity of two primary contributing elements of Niles Canyon Railroad: Dresser and Farwell Railroad Bridges. Because the Niles Canyon Safety Project intersects the railroad only at the two bridges, the Area of Potential Effect excludes all other features of the railroad.

~~See continuation sheet, page 10.~~

***D4. Boundary Description:**

The boundary of this resource is the leg of the railroad that runs through Niles Canyon, from the Sunol Railroad Station on the eastern end, to the Niles Railroad Station, on the western end of the canyon. The total length is approximately six miles. The boundary is confined to the rails, railroad bed, associated bridges, culverts, and all other structural components of the line.

***D5. Boundary Justification:**

This boundary was determined by both geographical and historical characteristics. Niles Canyon is a rugged, winding gorge that runs east/west, and contains the Alameda Creek. The approximately six mile long narrow canyon contains little development today, nor did it historically. As part of the original Transcontinental railroad, the Niles Canyon line was the first to connect the San Francisco Bay Area to the Central Valley and points east. At each end of the canyon is a small town; Sunol on the east end and Niles on the west, both of which have railroad stations dating from the period of significance. While there were stops in the canyon, including at Dresser and Farwell Bridges, there were no stations in the canyon. This railroad branch line is currently owned by Alameda county and run by the Pacific Locomotive Association, a non-profit railroad history and preservation group that runs a twice-monthly excursion ride using historic rolling stock.

D6. **Significance: Theme** Transportation, commerce, settlement, engineering and technological development
Area local and regional **Period of Significance** 1865 - 1912 **Applicable Criteria** A & C

The Niles Canyon railroad is eligible for the National Register of Historic Places, with the Dresser Bridge and the Farwell Bridge as contributing components of the line. This evaluation will establish the significance of the Niles Canyon railroad as an original leg of the Transcontinental Railroad, but only the Dresser Bridge and the Farwell Bridge will be evaluated for their individual integrity.

This rail line is significant on local and regional levels under Criterion A for its association with the transcontinental railroad and associated history of transportation, commerce, and settlement. Subsequent alterations to the line and the bridges within the period of significance (1865-1912) are indicative of changes in use patterns, and reflective of growth of the state in terms of both population and economy. These changes to the line and bridges are significant on a local and regional level; the line today exists in a relatively unaltered setting.

Additionally, the Niles Canyon railroad is significant under Criterion C on local and regional levels for its association with the Transcontinental Railroad, and as an example of the progression of technological development in railroad bridge construction. Subsequent alterations to the line and the bridges within the period of significance (1865-1912) are indicative of advances in bridge construction technology, undertaken to facilitate increased use and load. Characteristic is the retention of elements of the original structure as well as the addition of components to accommodate changing needs and incorporate advances in technology.

10. Significance

The Niles Canyon railroad is eligible for the National Register of Historic Places, with the Dresser Bridge and the Farwell Bridge as a contributing components of the line. This evaluation will establish the significance of the Niles Canyon railroad as an original leg of the Transcontinental Railroad, but only the Dresser Bridge and the Farwell Bridge will be evaluated for their individual integrity.

This rail line is significant on local and regional levels under Criterion A for its association with the Transcontinental Railroad and associated history of transportation, commerce, and settlement. Subsequent alterations to the line and the bridges within the period of significance (1865-1912) are indicative of changes in use patterns, and reflective of growth of the state in terms of both population and economy. These changes to the line and bridges are significant on a local and regional level; the line today exists in a relatively unaltered setting.

Niles Canyon railroad is not eligible under Criterion B, for its association with the lives of persons significant in our past. Although it can be considered associated with the "Big Four" of the Southern Pacific Railroad, Leland Stanford, Mark Hopkins, Collis P. Huntington, and Charles Crocker, this line was not initiated by them as an original portion of the Transcontinental railroad. Because there are many resources associated with these men, and the Niles Canyon line of the railroad was only a minor railroad branch and had only a limited association with the Transcontinental railroad, it is not significant under Criterion B in comparison with other properties built by Stanford et al.

The Niles Canyon railroad is significant under Criterion C on local and regional levels for its association with the Transcontinental Railroad, and as an example of the progression of technological development in railroad bridge construction. Subsequent alterations to the line and the bridges within the period of significance (1865-1906) are indicative of advances in bridge construction technology, undertaken to facilitate increased use and load. Characteristic is the retention of elements of the original structure as well as the addition of components to accommodate changing needs and incorporate advances in technology.

Niles Canyon railroad is also not eligible under Criterion D, for it is not likely to yield information important in our history. This railroad and its associated components do not appear to contain any as yet unretrieved data.

Historic Context:

<u>The Transcontinental Railroad</u>

The historical significance of the Transcontinental Railroad, and its impact on the growth and settlement of the Western states has been widely acknowledged, supported by a great deal of research and documentation. An in-depth history of the system is therefore unnecessary for the purpose of this evaluation. The following is a brief discussion of the impact the railroad had on the growth and development of California, and the key players who promoted the railroad's construction, so that its association with the Niles Canyon line can be established.

A motivating factor in the construction of the Transcontinental Railroad was not just to join the East to the West, but the anticipated economic and trade benefit it would yield, even beyond the West coast into the Asian markets. After years of studies and debates in the selection of the route, construction of the railroad finally began in Sacramento on January 8, 1863 and in Omaha on December 2, 1863. But the Civil War sent supply rates soaring, limited available labor, and restricted capital investment. As a result, by February 1864, only 18 miles of rail had been laid in California and none were laid in Omaha until the spring of 1865. This forced the railroads to ask for further assistance from the government, a request which was granted in the form of the Act of 1864, which virtually doubled the resources available to the companies and ensured the project's completion.

Between the years of 1864 and 1869 a total of 1,775 miles of rail were laid to complete the railroad link across the continent. This effort was perhaps the largest single construction project ever undertaken within the country. The task was enormous, both logistically and financially. Construction of the Transcontinental line was fraught with exceptionally difficult obstacles, in particular crossing the Sierra Nevada Mountains, that sorely taxed the technological capabilities of the day.

a

The driving of the last spike in 1869 touched off a national celebration, but for the Central Pacific's Big Four – prominent West Coast businessmen, entrepreneurs, and builders of the Central and Southern Pacific Railroads, Leland Stanford, Mark Hopkins, Collis P. Huntington, and Charles Crocker – there was little time to relax. They were in debt, and the expected demand for railroad services had not materialized. The Suez Canal, also completed in 1869, siphoned off Far Eastern trade; Nevada business had declined as the silver mines played out; and California's population was not large or prosperous enough to provide a market for the railroad. The Big Four had built ahead of the frontier, so they used the railroad to open the West to settlement and thus to build their own markets.

Through a huge public relations campaign, Central Pacific (Southern Pacific after 1885) promoted the West and encouraged settlement. The company owned vast tracts of land in California and other Western states through land grants received for railroad construction, and it built new towns on land that the railroad owned. The railroad company promoted California agriculture, taught farmers better farming methods, and sent display trains around the country to attract farmers westward and to create demand for western products. Their *Sunset* magazine lured tourists and settlers with promotional articles proclaiming the state's attractions. They built luxury hotels for wealthy tourists and supported naming Yosemite a national park, all to build California as a major tourist destination and increase its own markets.

The First Niles Canyon Railroad

In 1862 the Pacific Railroad Act granted the Central Pacific the right to build a railroad "from the eastern boundary of California, to the navigable waters of the Sacramento River or to the City of San Francisco."[1] The Big Four were either too distracted with the magnitude of building the line crossing the Sierra Nevada to be concerned with their western connections, or believed that the existing river boat connections were sufficient, and did not make specific plans for the western terminus of the line.

After a great deal of pressure from San Francisco politicians and capitalists, the Central Pacific assigned their rights to build between Sacramento and "the Pacific," to a group of San Francisco capitalists who were currently building the San Francisco and San Jose Railroad (SF&SJ). The group, lead by Judge Timothy Dame, incorporated the new Western Pacific Railroad on December 13, 1862.

The railroad they proposed to build was to be about 120 miles long, running south from Sacramento, through Stockton, then west over the Altamont Pass, across the Livermore Valley (then known as the Almador Valley), to Pleasanton, then continue through Niles Canyon then south to San Jose, where it would meet the San Francisco and San Jose Railroad. This route, seemingly circuitous, was determined to be the most direct by default. Niles Canyon, known then as Alameda Canyon, was the widest passage through the coastal mountains that separated the San Francisco Bay Area from points east. Additionally, the line would incorporate stops at several communities along the way. The only more direct alternative was to construct a line along the unstable terrain of the Suisun-Benicia shoreline and marshland, to the Carquinez Strait, which could then be forded by ferry. Although this route would later prove to take less travel time than the Niles Canyon route, and eventually become the main line, the difficulty in building a heavy structure on the soft marshland eliminated the route during the early planning stages.

Concurrent with the planning of the Western Pacific's San Jose to Sacramento line, another company, the San Francisco & Oakland Railroad, was making plans to connect downtown Oakland with ferries to San Francisco. This line would ultimately become the western terminus of the railroad line through Niles.

In December 1863, the railroad filed papers in Santa Clara County naming Alexander Houston and Charles McLaughlin, who had only recently completed the SF&SJ, as the contractors for the new line. The same papers included the cost of the contract ($5,400,000 for the entire line), the terms of payment (only $480,000 was cash, the remainder was in the form of land grants, county bonds and stock) and finally gave Houston and McLaughlin the first mortgage on the line. Houston and McLaughlin in turn sub-contracted much of the work to the firm of Cox & Arnold, who had also worked on the SF&SJ. In January 1865 construction for the Western Pacific started in San Jose.

The first section of 20 miles was completed in October 1866. It ran from San Jose to Farwell in Niles Canyon.

> Western Pacific Railroad – First Section Completed – Pleasure Excursion –The contractors having completed the first twenty miles of the Western Pacific Railroad from San Jose to Stockton, the Superintendent, B.F.

a

> Mann, Esq. tendered an invitation to the citizens of San Jose, and the public generally, to take a free ride over the road, on Tuesday, which invitation, as might have been expected, was extensively accepted... The road passes through a most delightful section of country and appears to be built in a thorough and most substantial manner. The amount of work done in the Alameda canyon is immense. The road winds around through the deep gorge, over huge bridges and viaducts, and amidst scenery at once grand and terrific. When completed, a trip from San Jose to Stockton will present more varied and beautiful scenery than perhaps any other road in the country. The excursion was a splendid express, and was accomplished without accident of any kind.

After the completion of the first section a dispute between the contractors, the sub-contractors, and financiers of the line resulted in a work stoppage. Newspapers reported rumors that the contractors had failed, the sub-contractors had not been paid, and liens had been filed against the company. Over the next two years, the only activity was behind the scenes, when first the financiers, then the contractors sold their interests in the Western Pacific's partially-constructed San Jose to Sacramento line to the Central Pacific Railroad. Among Central Pacific's Big Four, Stanford was the proponent of the purchase, while Huntington and Hopkins were less certain. Ultimately Stanford prevailed, and the line fell into Central Pacific's hands. Stanford became the president of the railroad, and as a result the line was known as the "Governor's Road."

Work resumed on the Western Pacific in early 1869, but this time from the eastern end at Sacramento. With the imminent completion of the Transcontinental line, work, material, and men were shifted to the Western Pacific. On September 8, 1869, four months after the symbolic "last spike" was driven in Promontory, Utah, the line from Sacramento through Niles Canyon to the Alameda Pier was opened.

With the Central Pacific ownership came several changes west of Niles Canyon. First they redirected the line, adding connections first to Alameda, over an expanded San Francisco and Alameda railroad to a San Francisco ferry connection, and later to Oakland, to the site of what would become the Oakland Mole. At the mouth of Niles Canyon they built a new line along the north side of the creek, bypassing one of the large bridges and passing through what would become the town of Niles to meet the old line at a spot named San Jose Junction. They then added a new "cutoff" south from Niles intersecting the original line near Mission San Jose and abandoned the original alignment along the south side of the creek. New "standard" building designs, including larger depots, square water towers, and covered bridges were incorporated.

In 1871, just two years after the completion of the line through Niles Canyon, the Central Pacific began planning for a shorter route, and focused their efforts along the Suisun-Benicia shoreline and the Carquinez Strait. In 1876 they leased the fiscally and physically failing California Pacific Railroad, which included a line from Sacramento to Vallejo. A year later they began integrating a new railroad with the existing line. Construction was difficult, for the heavy rails kept sinking and hundreds of thousands of tons of rock and gravel had to be poured into the unstable marshland before the lines were sufficiently stable. Although it was to continue to require a great deal of maintenance, the line was finally usable, and became the connecting line of the Transcontinental Railroad from Sacramento to Oakland in December of 1879. The rail stopped in Benicia where it was met by the ferry Solano which was designed to carry the trains to Port Costa on the other side of the Carquinez Strait. A line had been built linking Port Costa to Oakland the previous year.

With the loss of the transcontinental passenger trains, the Niles Canyon route initially lost importance, and for about the next 20 years was only a minor line, primarily used by local trains. As a result of accounting issues, Central Pacific was gradually absorbed into the Southern Pacific Railroad Company holdings; by 1885 the Niles Canyon line was officially part of the Southern Pacific Railroad. Other than routine maintenance, few changes or improvements were made during this period. But the coming of the turn of the century found the railroad facing new pressures. The region had developed both industrially and agriculturally, and consequently the railroad was heavily used for transporting goods. Increased freight tonnage strained the carrying capacity of the railroad, and newly-built railroad cars and locomotives were getting larger and heavier. Huntington recognized that, to maintain the viability of the railroad and stay competitive, the infrastructure had to be significantly upgraded.

As a result of these pressures, the Niles Canyon line was heavily rebuilt; new stations were built at Niles, Sunol, and Pleasanton, new signals were added, heavier rail was installed, and minor track realignments were undertaken. The work included replacing the wooden bridges, which were now 30 years old, and likely lacked structural integrity. In 1896 the bridge at Farwell was replaced with a new steel span. Meanwhile, the Big Four were dying off, with Collis P. Huntington the last to go in 1900. With Huntington's death, the railroad passed into the hands of E. H. Harriman, who accelerated upgrades throughout the system.

a

Niles Canyon became the primary freight line between San Francisco, Salinas and points south and east. The new traffic patterns were amplified with the construction of the Dumbarton cutoff, which included the first bridge across the San Francisco Bay. At both ends of the canyon, and sporadically along the line, industries and communities grew, as reliable transportation enabled local development. In 1905 a brick works was opened in the canyon. The following year, 1906, the railroad bridge known as Dresser was replaced by a steel structure. Concurrently J.Gould was building a new, competitive branch line through Niles Canyon. The Western Pacific (not to be confused with the Western Pacific of 1862) was built to the modern standards of the day, further inspiring Harriman to aggressively upgrade the infrastructure of the Southern Pacific branch line through Niles Canyon.

Niles and Pleasanton became major shipping points for fruit, flowers and other agricultural goods. New towns were established at Decoto and Sunol. On weekends, city residents crowded the picnic and camp grounds in the canyon. In 1912 a new road was built through the canyon, resulting in a loss of train passenger business. All Southern Pacific passenger service ended in Niles Canyon in 1936. Shipping patterns changed from rail to truck, and, as shipments fell and the road continued to be improved, the line saw less traffic. Finally in 1984, the Southern Pacific closed the Niles Canyon and Dumbarton Bridge tracks. The Niles Canyon line was then sold to Alameda County. Today rail travel in Niles Canyon has resumed on a very limited basis; sightseeing excursions by historic rail cars are offered on the first and third Sunday of each month.

The Bridges:

Three railroad bridges were built in 1865/6 in Niles Canyon, west of Sunol, to accommodate this leg of the Transcontinental Railroad; two are in the APE. These include the Dresser Bridge (resource #1), and the Farwell Bridge (resource #2). The original bridges and stone work were documented in a series of Railroad Commissioner's reports filed with the Secretary of the Interior and signed by U.S. Grant. Eleven bridges between San Jose and Farwell were described in "The Report of the Commissioners on the 1st Section" filed December 10, 1866." Although not specifically named, four bridges are described as "Howe [Truss] Bridges", and would have included the three in Niles Canyon: Dresser, Farwell, as well as another crossing the Alameda Creek near Niles. There is no remaining evidence of this third Niles Canyon bridge.

The bridges ranged in length from 332 to 488 feet and were supported by stone abutments and piers. The Dresser Bridge was 380 feet long, and consisted of two spans of wooden Howe truss (190 feet each). The Farwell Bridge was three spans totaling 488 feet in length. Photographic evidence indicates that the 1865/6 bridges were open trusses that were likely covered in the 1869 construction period. There are no records of rebuilding these bridges prior to the construction of the extant bridges; it is likely the original bridges survived until 1906 (Dresser) and 1896 (Farwell) and were replaced when they became structurally unsound and obsolete. The current steel bridges were built as part of the general system upgrade, as a response to competition, and to accommodate increases in locomotive weights, and in conjunction with the construction of the Dumbarton railroad bridge across the San Francisco Bay, which opened in 1909.

When discussing the technological developments made during the period of significance, as represented by both the Dresser Bridge and the Farwell Bridge, it is also important to note the acceleration of technological advances made toward the end of the 19th century. This is illustrated by the "pin-connected" system used to construct the 1896 Farwell Bridge and the more advanced "riveted-through" method used to construct the 1906 Dresser Bridge. Today railroad bridges designed and constructed like the Dresser Bridge are still commonly found, whereas few bridges built with the pin-connected system used on the Farwell Bridge have survived. While no formal survey has been made, Farwell appears to be one of very few surviving examples of this kind of construction in California.

> During most of the late 19th century, American truss bridges used pin connections to hold the various members together. This form of connection required holes to be drilled in the ends of members that were then aligned with one another. Then a cylindrical pin, similar to a large metal dowel, was slipped through the opening to form the structural connection. Pin connections were popular because they allowed for speedy erection of trusses and, theoretically, they made it easier to analyze stresses in a truss. They were also susceptible to loosening, however, especially under the shaking caused by fast-moving trains.

In contrast to pins, riveted connections provided a solid, rigid means of joining together the truss members. Riveted connections could not be easily hand driven in the field, however, and this problem seriously impeded their use for bridge construction until the development of portable pneumatic riveting systems in the late

a

1880s and 1890s. Warren trusses, which were rarely built with pin connections, became quite popular with the advent of widespread field riveting. (Great American Bridges and Dams, pages 28-9)

Integrity:

Integrity is the ability of a property to convey its significance. When applying the seven aspects of integrity, location, design, setting, materials, workmanship, feeling, and association, to the Dresser and Farwell Railroad Bridges, it is apparent that, while there is some loss of integrity, enough has been retained to convey their significance.

These bridges were previously determined to be ineligible for listing on the National Register of Historic Places in a survey undertaken in 1992 by the California Department of Transportation. The California State Historic Preservation Officer concurred with the finding of ineligibility of the Dresser Bridge, but did not comment on the finding of ineligibility of the Farwell Bridge. The earlier evaluations argued that the bridges did not retain high degrees of integrity, primarily due to the reconstruction of the bridge super-structures in 1896 and 1906; the potential historical significance of the newer structures was not considered in these earlier evaluations.

When applying the seven aspects of integrity to these bridges, it is necessary to consider that, while they have undergone significant alterations over time, the alterations have occurred primarily within the period of significance, as defined by this evaluation. The period of significance includes two important periods of railroad history in California: 1) the construction of the final line of the Transcontinental Railroad, which was an engineering feat and influenced the economic and settlement patterns of the region; and 2) the technological advances and the economic/corporate developments which inspired the owners of the railroad to alter the system to accommodate bigger, faster, and more efficient trains.

The bridges have undergone continuous maintenance beyond the period of significance, particularly in the areas of design, materials and workmanship. Yet they are still able to provide physical evidence of the early construction. Due to the nature of the structure and its intensive use, and the location of several of the piers in a creek given to frequent flooding, the structures can be considered dynamic. Had maintenance not been performed on a regular basis in order to sustain their original use, the bridges likely would not have retained enough structural integrity to carry trains today. Considering this, the bridges have retained a remarkable amount of material, approximately 75% to 85%, from the period of significance, and, consequently, workmanship and design. The 1865/6 abutments and the alternating 1865/6 and 1896/1906 piers remain largely intact. The abutments adjacent to Caltrans' right-of-way were veneered with removable concrete during a region-wide series of seismic upgrades in the last fifteen years. Those piers not immediately adjacent to the road have not experienced alterations greater than routine maintenance which, out of necessity, means the reinforcement of existing material as well as occasional replacement of material on an as-needed basis. The bridge super-structures have also undergone routine maintenance, including track and tie replacement as needed. The most significant alteration to either bridge was the replacement of a single span of the Farwell Bridge. The steel girder deck currently spanning Highway 84 was replaced in 1932; the original stone abutment was not replaced, but can be seen about twelve feet east of the current concrete abutment. The 1896 Pratt truss bridge structure remains intact.

The location of the bridges has not changed from that of the historic period. The setting remains remarkably the same, as is illustrated by 19th-century photographs. The bridges were built in response to the canyon's varying elevations and the primary natural feature, the Alameda Creek, all of which have retained a high level of integrity. The greater environment is a rugged gorge of folded land formations that grew randomly around the year-round Alameda Creek. The resulting steep hills and gullies of Niles Canyon are covered with annual grasses and oaks, as well as other natural vegetation. Little development has occurred in the canyon. By the time the first railroad and bridges were built, Vallejo's water-conveyance system was already in place, directing a portion of the creek to his mill at the western end of the canyon. A few large rural ranches had also already been established. Today some have been subdivided, however the character of the landscape remains as large rural, and minimally-developed parcels with boundaries influenced by the steep terrain of the canyon walls. A now-defunct pottery manufacturing company stands at the site where clay brick had been made during the 19th century, using the same clay soil found at that location. The tracks of the 20th-century Western Pacific Railroad, completed in 1909, and the aqueduct built by the Spring Valley Water Company, completed in 1926, do not compromise the setting of the subject bridges in Niles Canyon.

Although a travel-way has existed through the canyon since prehistoric times, the road today has changed in orientation, size, and most dramatically, use since the construction of the railroad. The road, Highway 84, has altered the setting of the railroad and its bridges more than any other feature. For example, in 1932 a portion of the Farwell Bridge was replaced to accommodate automobile traffic beneath it. In addition to altering the setting, the road has replaced the railroad as the primary mode of

a

transportation through the canyon, thus compromising the integrity of the historical feeling. This is most noticeable at the bridges where the two transportation modes cross, however on different planes. This loss of integrity of setting, feeling, and association is minimal, for when riding in the train the interaction with the highway goes virtually unnoticed, and the bridges are still able to express their sense of feeling and association with the Niles Canyon railroad.

The railroad has been maintained and is still in operation, however minimally, thanks to a local group of railroad enthusiasts. The retained feeling and association is largely due to the Pacific Locomotive Association who "operates the Niles Canyon Railway as a living history museum interpreting the importance of our heritage railroads in the development of California and the nation." Although the bridges do not appear on any official lists of historic resources (local, regional, state, or national), they are historic resources that are popular and can be appreciated in association with the Niles Canyon railroad. In addition, the Pacific Locomotive Association has railroad artifacts on display at the Niles Railroad Station and has plans to restore the Sunol Railroad Station and develop educational interpretive displays at that site.

Conclusion:

In conclusion, the Dresser Railroad Bridge and the Farwell Railroad Bridge of the Niles Canyon railroad, which was an original leg of the Transcontinental Railroad, appear to be eligible as contributors to the Niles Canyon railroad for the National Register of Historic Places, significant under Criteria A and C, with a period of significance from 1865/6 to 1906. These bridges have also been evaluated in accordance with Section 15064.5(a) (2)-(3) of the CEQA Guidelines, using the criteria outlined in Section 5024.1 of the California Public Resources Code, and are historical resources for the purpose of CEQA, eligible under Criteria 1 and 3.

The Spring Valley Water Company's Alameda Creek system, constructed from 1898 to 1930, consists of the water conveyance system developed along the Alameda Creek as well as the several properties associated with the functioning of that system. The water conveyance system is composed of the Sunol Dam, Sunol Aqueduct, Sunol Valley Filtration Galleries, Niles Dam, and the Niles Regulating Reservoir, as well as two sets of transbay pipelines. The Alameda Headquarters for the system is located on the western boundary of Alameda Creek and includes 22 buildings and structures that were associated with the daily operations of Alameda Division of the Spring Valley Water Company. (See Continuation Sheet).

District Record (continued)

D3. Detailed Description:

This district is located in southern Alameda County and follows Alameda creek from the upper end of Niles Canyon to the lower end. Niles, at the lower end of the canyon, is at an elevation of 126 feet, at the point where the canyon meets the coastal plain of San Francisco Bay. It is terminus of this system and the location of Niles Regulating Reservoir and the beginning the system's transbay pipelines. The upper end of the project area is located at the site where the waters of Alameda Creek flow out of the wide and gently sloping Sunol Valley and into steep narrow Niles Canyon. The Spring Valley Water Company (SVWC) built several buildings and structures that were associated with the maintenance of this system at the upper end of Niles Canyon. They are included as part of this report. The project area is about five miles long when measured along the creek's path down the winding canyon. Niles Canyon Road, the Sunol Aqueduct, and tracks of the Union Pacific and the Burlington Northern Santa Fe railroads (not part of this system) all run down the canyon along the hillsides above the creek. Vegetation along the creek bed is riparian with grass, coastal scrub brush, and oaks on the hillsides.

D4. Boundary Description:

The boundary for the Spring Valley Water Company's Alameda Creek system is irregularly shaped and largely defined by the course of Alameda Creek. At the eastern end of the system, the boundaries are the widest and take in the large parcel that forms the current San Francisco Water Department Sunol Headquarters, including the Sunol Water Temple and the filter galleries. This parcel abuts Alameda Creek where the boundary takes in the Sunol Dam and its control tower and then the boundary becomes the footprint of the aqueduct itself and continues in this fashion, 5 miles down Niles Canyon to the Niles Dam also included in the boundaries. Within the footprint of the Sunol aqueduct, are two additional structures associated with the aqueduct, the arch bridge and the trestle. At the southwestern edge of the canyon, the boundary widens to include the parcel containing the Niles Regulating Reservoir, which abuts Alameda Creek.

D5. Boundary Justification:

The Office of Historic Preservation offers the following guidance concerning the determination of district boundaries: "Boundaries should encompass, but not exceed, the extent of the significant resources and land area that contribute to the importance of the district."[1] Taken in its entirety, the Alameda Creek water conveyance system includes all of the components that historically make up the water conveyance system constructed by the Spring Valley Water Company as well as those buildings and structures that make up the Alameda Headquarters of the SVWC.

D6. Significance

Summary Significance

The Spring Valley Water Company's Alameda Creek system appears to meet the criteria for listing as a district in the National Register of Historic Places and the California Register of Historic Resources. It appears to be eligible under Criteria A (Criterion 1), as an important and early development within the context of the urban water supply in California, and Criterion C (Criterion 3), for its design and its innovative use of engineering to utilize the natural features, mainly the gravel beds of Alameda Creek. Under Criterion A (Criterion 1), the Alameda Creek system is significant as one of a few early water conveyance system designed specifically to meet the needs of a large urban population. It predated the other two similar systems, Hetch Hetchy (constructed 1914-1934) and the Owens Valley water project (constructed 1908-1913), which provided a constant and crucial water supply for San Francisco and Los Angeles. The Spring Valley Water Company, a private water company, built the water conveyance system during the Progressive Era when most municipalities had achieved public ownership of their water supplies, making it a relatively late example of a privately developed water supply. The SVWC served San Francisco until 1930, and was one of the last private water companies to serve a major city.[2]

Under Criterion C (Criterion 3), the Alameda Creek system appears to meet the criteria as a significant work of engineering design because it represents distinctive characteristics of a type, period, and method of construction. Chief SVWC Engineer Herman Schussler, made use of the geological formation of the Sunol Valley gravel beds and the naturally occurring subsurface water flow. Schussler encouraged the SVWC to purchase land and riparian rights along Alameda Creek as early as the 1870s in order to develop the creek as an additional source of water for San Francisco. This design represents an early use of an aquifer and subsurface water flow to store and collect water, planned before State Engineer William Hammond Hall published his surveys in 1880 and 1888, that noted the occurrence of aquifers in California's coastal geology.

This collection of resources appears to be eligible as a district because the significance rests on the group as a whole. The Keeper of the National Register has defined a National Register-eligible historic district as follows: "A district possesses a significant concentration, linkage, or continuity of sites, buildings, structures, or objects united historically or aesthetically by plan or physical development."[3] The operative terms in this definition are that it must be a "significant concentration, linkage, or continuity" of properties, and that the properties must be "united historically or aesthetically by plan or physical development." In addition, a historic district may include buildings that lack individual distinction, providing that the district as a whole is significant. The Keeper addresses this issue in National Register Bulletin 15:

> A district can comprise both features that lack individual distinction and individually distinctive features that serve as focal points. It may even be considered eligible if all of the components lack individual distinction, provided that the grouping achieves significance as a whole within its historic context. In either case, the majority of the components that add to the district's historic

[2] *Historic Property Survey Report for the Seismic Retrofit of Alameda Creek Bridge and Overhead, Alameda County, 04-ALA-84, PM14.32, EA 14670K (July 1998)* Department of Parks and Recreation Form 523, Sunol Aqueduct, 11.
[3] USDI, NPS, "How to Apply the National Register Criteria for Evaluation," *National Register Bulletin 15* (Washington, D.C.: 1991), 5.

character, even if they are individually undistinguished, must possess integrity, as must the district as a whole.[4]

The SVWC's Alameda Creek system appears to meet both considerations. First, the collection of resources is "united historically or aesthetically by plan or physical development." Second, the collection is a "significant concentration." Although the collection of resources, individually have been modified to some degree, the district retains sufficient integrity to warrant consideration for listing in the National Register. Only the headquarters complex appears to have lost sufficient integrity that would change its status as part of the district to a non-contributor.

In addition to appearing eligible as a district, several components of the Spring Valley Water Company's Alameda Creek system have been either been evaluated as individual resources or appear to be individually eligible for inclusion in the National Register of Historic Places and the California Register of Historic Resources. Caltrans prepared a report in 1998 documenting the Sunol Aqueduct and at the time found that it appeared to be eligible for the National Register under Criterion A for its association with the history of urban water supply in California. The current National Register status of the aqueduct in the CHRIS list is a 2 or "eligible by consensus determination." In addition to the aqueduct, the Sunol Dam, Niles Dam, and Sunol Filter Galleries were recommended as individually eligible for the National Register and California Register by JRP in 2000; this evaluation was retained and the resultant DPR523 forms for each dam are included in this report. Sunol Dam was recommended as eligible under Criterion A (Criterion 1) for its association with urban water supply history and under Criterion C (Criterion 3) because the construction represents a significant example of a significant design by master engineer Herman Schussler. Niles Dam is also eligible under Criterion A (Criterion 1), for the reasons mentioned above as well as under Criterion B (Criterion 2) for its association with Don Jose de Jesus Vallejo. Copies of the relevant primary forms from previous projects are included as part of the documentation for this district.

Besides Niles Dam and Sunol Dam, the Sunol Water Temple, appears to be individually eligible as well as a contributing resource for the National Register and California Register. Under Criterion C (Criterion 3), the Sunol Water Temple appears to be a significant example of a master architect, Willis Polk. Although a relatively simple architectural commission, the design is representative of Polk's versatility as a designer and his commitment to the principles of academic eclecticism. The tenets of this movement embodied a reaction to the alleged excesses of the Victorian era by exercising restraint in application of design. Simplicity, dignity, and refinement were fundamental values for Polk and history offered the best means to developing sensitivity towards formal design considerations. His simple yet elegant design for the temple, influenced by the study of historical models illustrates his commitment to these principles.

The table below summarizes the current status of each property as well as the recommendations based on this report.

Table 1. List of Contributing and Non-Contributing Properties to the Spring Valley Water Company's Alameda Creek System District

Resource Name	Year Built	Associated Resources	Previous Survey and recommendations	NRHP/CRHR Status
Sunol Headquarters Complex	Circa 1875-present	22 buildings, structures, objects, and landscape features	No previous survey	6 (Non-Contributor)
Sunol Water Temple	1910	Fountain, Carrefour, concrete gates, and pumphouse	No previous survey	3B (Contributor and individually eligible)
Sunol Filter Galleries	1920	None	Previous survey; 3S	3D (Contributor)
Sunol Dam	1900	Control Tower	Previous survey; 3S	3B(Contributor and individually eligible)
Sunol Aqueduct	1900, 1921	Arch Bridge, trestle	Previous survey; 2	3B (Contributor and individually eligible)
Niles Dam	1878	None	Previous survey; 3S	3B (Contributor and individually eligible)
Niles Regulating Reservoir	1923	None	No previous survey	3D (Contributor)

Context for the Development of the Alameda Creek System

Early Settlement in the Niles Canyon and Sunol Valley

Niles Canyon was sparsely settled prior to Spring Valley Water Company's development of Alameda Creek in the late 19th century and the lands that make up the project area were originally part of two ranchos, Rancho Arroyo de la Alameda and El Valle de San Jose. The ranchos in the region predominantly engaged in cattle ranching.

Rancho El Valle de San Jose

At the western end of the project area in the Sunol Valley, Rancho El Valle de San Jose was granted to Antonio M. Pico, Augustin Bernal, and M.D. Bernal in 1839.[5] Don Antonio Sunol acquired the rancho through his wife, Delores Bernal, sister of Augustin Bernal, and the Sunol family was responsible for settlement of the western boundary of the rancho. Don Antonio resided in San Jose and there is some confusion as to which member of the Sunol family actually resided on the rancho. However, it appears that it was Sunol's son, Jose Narcisso, built the Sunol adobes.[6] The Sunol adobes were located on the present site of the San Francisco Water Department's Sunol Headquarters.

[5] J.N. Bowman and George W. Hendry, *The Spanish and Mexican adobe and other buildings in the nine San Francisco Bay counties, 1776 to about 1850*, MS., [Berkeley, California: 1940-1945?], 639.
[6] *San Francisco Water*, Volume 1, Number 2, 3.

Charles Hadsell acquired a portion of the rancho between 1856 and 1862 from Narcisso Sunol, and late 19th century Alameda County maps (Figure 1) show that Hadsell accumulated substantial land holdings in the Sunol Valley.[7] Historic accounts indicate that he rehabilitated the Sunol adobe and lived in the house for years with his wife Annie, three children, and nephew.[8] This property became known as the "Hadsell place," and like many farmers in Southern Alameda County, he grew wheat. Hadsell began to transition to orchard farming in the 1870s as Alameda County farmers learned that orchard farming, particularly specialty crops such as walnuts and apricots, was much more lucrative than grain farming. The area's fruit and nursery industry were given a boost when an infestation of scale on fruit trees in San Jose's orchards and nurseries prompted the California Nursery Company to move operations to Niles 1865.[9] Nearby Alameda Creek provided the necessary water for irrigation of the orchards. Hadsell had a small orchard adjacent to his residence, and constructed a ditch to irrigate the orchards with water from Alameda Creek.[10]

Rancho Arroyo de la Alameda

On the eastern end of the project area, at the mouth of Niles Canyon, Rancho Arroyo de la Alameda encompassed 17,705.38 acres and was granted to Don Jose Vallejo in 1842, one year after he established a flourmill on Alameda Creek. Vallejo was familiar with mill operation because he was instructed by his father, Ignacio, on dam and aqueduct construction techniques. Igancio Vallejo had installed irrigation systems in San Luis Obispo, Carmel and other locations in California. In 1824 Jose built a gristmill powered by draft animals and around 1830 he operated his father's mill near Watsonville. Thereafter, Jose Vallejo constructed a dam, aqueduct, and his first mill (made of adobe) in 1841 at the base of Niles Canyon. Grinding stones for the mill came from Spain and when one of the stones was later broken, it was used as a doorstep at a second mill.

Vallejo constructed a second larger mill of redwood and stone in 1856 and then used the adobe as a storage shed (Figure 2).[11] After the construction of the second mill, a settlement known as Vallejo Mills grew up around the mill in Niles Canyon.[12] The ruins of Vallejo's Mill dating from 1841 to 1856, represents one of the earliest water conveyance devices in California (Archeological Site No. CA-ALA-528/H), one of the earliest appropriative water rights in the state, and one of the earliest industries in Alameda County.

[11] Author Ruy E. Kern believes that the grinding stones for Vallejo's Mills actually came from other California mills and the story of Spanish and French origins of the stones is folklore. His theory on the stone's origins is found in Ruy E. Kern, "The Vallejo Flour Mills and the Rancho Arroyo de la Alameda, [1990]." (photocopy), Bancroft Library, University of California, Berkeley. On page 83 of Kern's *The Vallejo's of Mission San Jose* (Fremont, California: Mission Peak Heritage Foundation, 1983), he notes the inscription of a bronze plaque at Vallejo's first mill: "In 1841, Don J. J. Vallejo, built an adobe mill on Alameda Creek near Niles. Millstone made in Spain. Spring Valley Water Works Company – 1923." The exact date of construction of Vallejo's second mill is unclear. Several sources give the date of 1856; however, in 1878 Thompson and West's *New Historical Atlas of Alameda County, California Illustrated* gave the date of 1853: "Here Don José Vallejo in 1853, at great expense constructed a flouring mill with the water for motive power, which he conducted in a long flume from the Alameda Creek."

[12] Elizabeth Krase, *Historic Property Survey Report for the Seismic Retrofit of Alameda Creek Bridge and Overhead, Alameda County, 04-ALA-84, PM14.32, EA 14670K (July 1998).* Department of Parks and Recreation Form 523, Sunol Aqueduct, 6-7; Ruy Kern, "The Vallejo Flour Mills and the Rancho Arroyo de la Alameda, 3; The Country Club of Washington Township Research Committee, 141; Kern, *The Vallejo's of Mission San Jose.* v, 77.

By 1848 the Mexican Period had come to an end, yet many of the area's new settlers carried on the agricultural tradition with small family farmsteads. By the 1850s American farmers were also growing wheat and barley in what is now southern Alameda County and throughout the Santa Clara Valley, as part of an economic transformation in the entire state. The climate and soil were rapidly recognized as some of the best in the country for growing grains, which soon became the dominant agricultural crop in the state, remaining prominent in the region until the 1890s when farmers in the Midwest started to grow wheat in great quantities.[13]

Additionally, the Central Pacific Railroad laid tracks through Niles Canyon between 1865 and 1869. The Niles railroad station was built only 1,200 feet west of Vallejo's mills. In 1877 the railroad established the town of Niles (named for an executive for the Central Pacific Railroad) which gradually eclipsed the nearby settlement of Vallejo Mills. Nevertheless, the mills continued to play a vital role in the valley's agricultural development until the 1880s, when fruit production began to supplant wheat growing.[14] As mentioned above, the fruit industry expanded in Alameda County with the arrival of California Nursery Company in Niles. In the early 1870s raising vegetables for the San Francisco market became an important business that was dominated by farmers of Portuguese descent who had settled in the area.[15]

Spring Valley Water Company: San Francisco's Search for Water

San Franciscans began to look for distant sources of water for their fast growing city because the peninsular city was without a substantial or reliable source of water. In the Gold Rush era, water was sold by the barrel by entrepreneurs who transported their precious cargo across the Golden Gate from Marin County. Like other cities in the American West, San Francisco franchised competing private companies to supply the city with water from various local sources; however, the first seven decades of the history of water supply in San Francisco are dominated by Spring Valley Water Company. In 1858, George Ensign organized the Spring Valley Water Works and the company built its first reservoir in San Mateo County in 1862 bringing water to San Francisco by way of a tunnel and flume system.[16] (The company eventually became the Spring Valley Water Company in 1903, and will be referred to hereafter as SVWC for the sake of clarity.)[17] The company absorbed the San Francisco City Water Company, incorporated one year after the SVWC, taking over the Lobos Creek supply and its structures. The company became the sole provider of water to the city. Even at that early date it was seen that the city would soon outgrow the water supply available to them on the peninsula and as the demand for water increased, SVWC began to explore other possibilities.

---

[13] Shinn, *Historical Sketches of Southern Alameda County,* 5-6.

[14] In December 1884, two years after Vallejo's death, the mill ceased operations. The last miller, William Gorgass, committed suicide by poison in the mill at the time. *Oakland Examiner,* May 16, 1891; The Country Club of Washington Township Research Committee, 141; Kern, *The Vallejo's of Mission San Jose*, 83.

[15] Thompson and West, *New Historical Atlas of Alameda County, California, Illustrated,* 129: Krase, *Historic Property Survey Report*, 7; *Oakland Examiner,* May 16, 1891; The Country Club of Washington Township Research Committee, 142.

[16] The name "Spring Valley" comes from the company's original source of water, a small spring in San Francisco called Valley Spring.

[17] Krase, *Historic Property Survey Report*, 7; "Spring Valley: An Historical Review," *San Francisco Water* Volume 1 Number 2, January, 1926, 30.

City leaders were not only concerned with the potential shortage of water but also with the wisdom of relying on a single private company to develop water sources and deliver water to the city. Additionally, the SVWC was seen as charging high rates for poor service. In 1874 the state legislature passed an act that allowed the city to create a municipal water system, and soon after the city created the San Francisco Water Commission. Over the next five decades the city made several attempts to purchase SVWC but voters failed to approve the deals primarily because of the high price demanded by the company. The City's water commission also investigated the possibility of developing distant water sources for the city. The commission looked at sources in the Sierra Nevada 160 miles to the east, and the Alameda Creek drainage 30 miles across the bay; but before the commission could act the SVWC bought the water rights to Alameda Creek in 1875.[18]

Spring Valley Water Company and Alameda Creek: 1875-1898

At the same time fruit orchards began to dominate agricultural crops in Alameda County, the Spring Valley Water Company gradually started buying property and water rights along the Alameda Creek. The history of Spring Valley Water Company is well-documented elsewhere and this history will mainly deal with the development of the Alameda County properties.[19] Herman Schussler, chief engineer, recommended the development in the Alameda Creek watershed as early as 1865, because of the natural advantage of the gravel beds in the area. Financial troubles, however, prevented the SVWC from developing the Alameda Creek watershed until the late 19th century.

Agriculturalists in Alameda County, especially orchardists who depended on the creek for irrigation purposes, made efforts to protect the water from San Francisco water interests. Local farmers and residents hastily organized the Washington and Murray Township Water Company in just five days in 1871 in response to rumors of a preemptive land acquisition by the SVWC. The company began to build an irrigation ditch from the mouth of Niles Canyon to Centerville in 1874, but before it was finished the newly incorporated Alameda Water Company acquired a controlling interest in the Washington and Murray Township Water Company and bought the Vallejo flourmills. Charles Hadsell was one of five partners who had controlling interest in the incorporated Alameda Water Company and a year early stated that he planned to condemn water from Alameda and Calaveras Creeks. Newspaper accounts report that the intent of the Alameda Water Company was to supply San Francisco with water from these creeks.[20] However, SVWC preempted the Alameda Water Company and purchased the Washington and Murray Township Water Company and 1,915 acres in Sunol and Calaveras Valleys.[21] Shortly after this purchase in 1885, SVWC began to develop the Alameda Creek system as a reliable water source for the City of San Francisco, which at the time only had a one-year supply of water left in their reservoirs on the peninsula.

[18] Krase, *Historic Property Survey Report*, 7.
[19] Marianne Babel's "A History of Spring Valley Water Company" is a complete history of the development of SVWC.
[20] *Oakland Enquirer*, "Spring Valley Share", December 3, 1888.
[21] Elizabeth Krase, *Historic Property Survey, 7.*

Despite the local protest, the Alameda County Board of Supervisors granted SVWC the right of way for its pipes, allowing the SVWC project to begin. The company built a small cottage at the Sunol site, circa 1875, that served as the foreman's cottage for the Alameda Creek system construction.[22] The earliest work on the water conveyance system mainly included rebuilding the earlier system built by Don Jose Vallejo at Vallejo Mills. The SVWC first rebuilt and raised Niles Dam by capping Vallejo's original stone dam with concrete and replacing the wooden fish ladder with a concrete ladder. The stone-lined aqueduct constructed by Vallejo was found to be in good condition, and the SVWC covered it with a brick and mortar arched roof complete with manholes.[23] Covering the aqueduct increased the capacity to as much as seven million gallons of water a day. Water diverted by the dam ran down Vallejo's old aqueduct and flume.[24]

In 1887, the SVWC reconstructed the 3,131 foot long redwood flume built by Vallejo and connected to the aqueduct. Instead of carrying the water to the mill, it conveyed water to the city via a 36" pipe beginning one and three-quarter miles above Vallejo's Mill and running through Centerville and Newark to Dumbarton Point. The pipeline crossed the bay salt marsh at Dumbarton Point with 16,000 feet of pipeline resting on wood trestles. Twin 16" submarine pipes fitted with ball joints and laid across the bottom of the narrow point of the bay brought the water 6,400 feet to Ravenswood on the San Francisco peninsula. From Ravenswood a single pipeline led to Crystal Springs Reservoir, which then supplied the city with water. Depending on the seasonal flow of Alameda Creek the 28.5-mile pipeline and aqueduct supplied eight to ten million gallons per day. Niles Dam and aqueduct remained in operation only until 1900 when the Sunol Dam and aqueduct came into use. Several disadvantages lead to the discontinuation of the Niles system. In addition to pollution problems, turbidity in the water during flooding on the creek sometimes made it necessary to cut off the supply. Also, low flow levels late in the season were not enough to maintain an even draft.[25]

Improvements to the SVWC system: 1898-1921

Spring Valley Water Company began a new phase of development with their Alameda County properties starting in 1898, which included construction of a new water conveyance system and a headquarters complex in Sunol. Construction of the new water delivery system started with Sunol Dam. Located at the upper end of the canyon, the dam was 75 feet higher in elevation than the Niles Dam, and was constructed in 1900 with the aim of increasing the water supply. It was also to allay the public's fears of pollution of the city's water because by the 1880s, an increasing number of people came to Niles Canyon to picnic and camp in close proximity to Alameda Creek.

[22] Leonard Metcalf, *Inventory of the physical properties and structures of the Spring Valley Water Company in San Francisco, San Mateo, Santa Clara and Alameda Counties, California, as of December 31, 1913*, unpublished, 73.

[23] The May 16, 1891 issue of the *Oakland Examiner* noted the condition of the old aqueduct: "so good was the workmanship of the stone aqueduct, that the company merely roofed it over with brick and used it as a portion of their underground waterway to the city."

[24] Marianne Babal, "A History of the Spring Valley Water Company," 39; C. D. Marx, C. G. Hyde and C. E. Grunsky, "San Francisco Water Supply Investigations. Discharge of Calaveras and Alameda Creeks," MS., August 1912, San Francisco Water Department Archives, 16.

[25] Spring Valley Water Works, "Specifications for the Construction of an Iron Pipeline for the Spring Valley Water Works, July 12, 1887"; Krase, *Historic Property Survey* 7, 8; Cyril Williams Jr., "Report on the Water Supply of the Alameda Creek Watershed," 1912, MS., San Francisco Water Department Archives, 549.

The Sunol Valley is a gravel-filled depression at the upper end of Niles canyon; most of water caught in the 600 square miles of drainage from Alameda Creek must pass through the upper entrance of Niles Canyon on its way downstream.[26] Longtime SVWC Chief Engineer Herman Schussler designed a system to tap the underground waters; he had urged the construction of a dam at this location since 1865. The 28-foot high concrete arch dam caused the underground flows to back up into the Sunol Valley gravel beds. The company installed a reinforced concrete tunnel 8,985 feet long, called a filter gallery, on the bedrock at the bottom of the gravel beds. The filter gallery extended into the valley parallel to Alameda Creek, and was equipped with several thousand screened brass pipes 1¼" and 1½" in diameter that pierced the walls of the gallery. The pipes served to drain the water from the gravel. Water flowed into the filter gallery that was connected to an aqueduct leading 25,900 feet to Niles. The gallery typically produced five million gallons daily; in flood conditions flows might rise to 20 million gallons.

The SVWC built the Sunol Aqueduct at the same time as the Sunol Dam. The aqueduct followed a different alignment than the old Vallejo flume on the north side of the canyon. It sat on a bench carved from the hillside and ran a total length of 25,900 feet from Sunol to Niles. The aqueduct was formed by a combination of redwood flume and five sections of concrete-lined tunnel. The aqueduct conveyed water from Sunol Valley and Pleasanton Well Fields and from Calaveras Reservoir. Water from Calaveras Reservoir joined water from the Pleasanton pipeline in the Sunol Valley at the Sunol Water Temple. From the Water Temple an underground concrete conduit ran to the north side of Sunol Dam. It then passed through the dam to the south side where it entered the first of five tunnels that, together with above-ground sections of concrete conduit, formed the 4.9 mile-long Sunol Aqueduct.[27] The aqueduct conveyed the water down the south side of the canyon to Niles regulating reservoir. After the completion of the Sunol Aqueduct in 1900, Niles Dam served only to supply the riparian rights of landowners downstream.[28]

Expansion and takeover of SVWC: 1922-1930

At the same time that the SVWC was developing its Alameda Creek system, civic-minded interests in San Francisco continued plans for the city to take over the private water company. Efforts to acquire SVWC had started early in its history, and in 1900 San Francisco's citizens adopted a new city charter that mandated creation of a municipal water system. On five separate occasions, the citizens of San Francisco voted to reject purchase of the SVWC.[29] In between these votes, the City of San Francisco and SVWC negotiated an acquisition price for the cost of the water works. Acquiring the SVWC became a necessity, but the city's voters routinely rejected measures to pay for the acquisition of the water company. The 1906 earthquake did little direct damage to the Alameda Creek's dams and aqueducts, but the failure of the water system in San Francisco during the emergency prompted the enlargement of the system and was the seminal event that led to the takeover of SVWC by the city.

---

[26] The area of southern Alameda County has particularly abundant gravel beds. The book *History of Washington Township* reports that the town of Niles claims to have the first major gravel pit used by the state. Seventy-five railroad cars of gravel from a pit not far from Vallejo's Mills were used in the construction of the amphitheater on the UC Berkeley campus.

[27] In 1998 the California State Office of Historic Preservation agreed that the Sunol Aqueduct is eligible for listing in the National Register of Historic Places.

[28] In 1923 the old Niles system was put temporarily back in use when reconstruction work was being done on the Sunol Aqueduct. Lewis E. Aslibau, "Preliminary Report on the Usefulness of Structures Spring Valley Water Company," MS. Water Resources Center Archives, Bancroft Library, University of California, Berkeley, 2.

[29] Marianne Babel, *A History of Spring Valley Water Company*, 75.

Although SVWC and the City continued to negotiate terms of a buyout for many years, SVWC continued to improve the Alameda Creek system. The company installed a second set of submarine transbay pipelines in 1902. The lines were also extended on the peninsula side, which doubled the capacity of the Alameda Creek system to 16 million gallons a day. In 1903, the water-filled gravel beds of Pleasanton in the Livermore Valley, five miles north of Sunol, were added to the system. The company installed 28,000 foot long 30" pipe in 1909 to deliver water from the Pleasanton Well fields to the Sunol Filter Beds, and the Sunol filter galleries were extended in 1917.[30] The company also building several new buildings at the Sunol Headquarters, including a superintendents' cottage, a new barn, a separate water system for the caretaker's cottage, a barn, chicken coop, and an agricultural department. At this time SWVC began to plant crops on the lands adjacent to Alameda Creek. The walnuts and peaches produced in 1909 were sold to company employees. By 1910, the acreage for orchards increased and the SWVC began to sell its produce in San Francisco.[31]

The City of San Francisco still pushed ahead with their plans to pursue other water sources in the Sierras and continued negotiations to acquire the SVWC. In 1913, Congress passed the Raker Act and it was signed into law by President Woodrow Wilson, and granted water and power resource right-of-ways on the Tuolumne River, in Yosemite National Park to San Francisco. Under the direction of engineer Michael M. O'Shaughnessy, the City began building the Hetch Hetchy system in 1914. Additionally, the Raker Act also stipulated that the City could not sell or give away any of its water or hydroelectric power to a private firm. This provision required the City to purchase the SVWC because it still owned the City's water distribution system. Continued disputes between the City and SVWC lead the State Railroad Commission to broker an agreement between the parties that allowed water rate increases in return for SVWC developing the Alameda County properties to their full potential and cooperating in planning the Hetch Hetchy pipelines. SVWC enlarged the Sunol aqueduct in 1922 and 1923 and constructed the Niles regulating reservoir in 1923. Construction also continued on Calaveras Reservoir, which had been set back by a failure in the dam. Finally, as the Hetch Hetchy system neared completion, the city's voters agreed to purchase SVWC in 1928; the actual sale took place in 1930 and cost the City nearly $40 million.[32]

Soon after the sale, the SVWC reorganized into Spring Valley Company Limited to dispose of the remaining real property. The company owned approximately 16,679 acres of which substantial portion were agricultural lands in Alameda County. The onset of the depression in the 1930s hampered the sale of this property and the company granted sharecropping leases to portions of the lands in Alameda County. By 1944, SVWC sold the remainder of the property and the company filed for a certificate of winding down and dissolution.

Since the purchase the Alameda Creek System, the City of San Francisco has used the SVWC's Alameda creek system and the administrative complex has served as its Sunol Headquarters. The City has added several buildings to the site. The water delivery system has mainly been used to supply the local residents with water since the completion of the Hetch Hetchy system, and the Sunol Water Temple has been opened to the public as part of a regional park.

PHASE I ENVIRONMENTAL SITE ASSESSMENT

Dear Mr. Stevens:

ENGEO is pleased to present our phase I environmental site assessment of the subject property (Property), located in Fremont, California. The attached report includes a description of the site assessment activities, along with ENGEO's findings, opinions, and conclusions regarding the Property.

ENGEO has the specific qualifications based on education, training, and experience to assess the nature, history, and setting of the Property, and has developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312 and the American Society for Testing and Materials (ASTM) Practice E1527-21. We declare that, to the best of our professional knowledge and belief, the responsible charge for this study meets the definition of Environmental Professional as defined in Section 312.10 of 40 CFR Part 312 and ASTM E1527-21.

We are pleased to be of service to you on this project. If you have any questions concerning the contents of our report, please contact us.

Sincerely,

ENGEO Incorporated

EXECUTIVE SUMMARY

ENGEO conducted a phase I environmental site assessment for the subject property located in Fremont, California (Property). The Property is approximately 7 acres in area.

The Property consists of a 5.8-mile-long corridor that traverses Niles Canyon and links east Fremont with unincorporated Sunol. The Property is located within the public right-of-way. It is mostly vacant and undeveloped and highly vegetated. Review of historical records indicates that the Property has remained undeveloped land since at least 1906. The proposed site use of the Property is a pedestrian, bike, and equestrian trail. The proposed 10-foot-wide improvements will utilize existing roadway, railway, and aqueduct corridors. The trail improvements are currently in the Environmental Impact Assessment (EIR) review process.

This assessment included a review of local, state, tribal, and federal environmental record sources, standard historical sources, aerial photographs, fire insurance maps and physical setting sources. A reconnaissance of the Property was completed to review site use and current conditions to check for the storage, use, production, or disposal of hazardous or potentially hazardous materials and to conduct written/oral interviews with persons knowledgeable about current and past site use.

The site reconnaissance and records review did find documentation or physical evidence of soil, soil gas, or groundwater impairments associated with the use or past use of the Property. A review of regulatory databases maintained by county, state, tribal, and federal agencies found documentation of hazardous materials violations or discharge on the Property and did identify contaminated facilities within the appropriate ASTM search distances that would reasonably be expected to impact the Property.

Based on the findings of this assessment, no Recognized Environmental Conditions (RECs), no historical RECs, and no controlled RECs were identified for the Property.

Based on the review of regulatory databases and site reconnaissance, we present information on features of potential environmental concern that were either contained in the databases or observed on the Property. These features were not considered to be RECs. We briefly discuss each feature below.

Niles Canyon Railway and Union Pacific Railway

Two railroad tracks, Niles Canyon and Union Pacific, extend through Niles Canyon parallel to the Property, such that at some locations, the Property may be within 20 feet of railroad tracks. Niles Canyon Railroad has operated since 1869, and the Union Pacific Railroad has operated since 1909. Niles Canyon Railway is generally to the north of the Property and the Union Pacific Railroad is generally south of the Property. Towards the eastern side of the Property, both railroads lie to the south. Railroads are commonly associated with the presence of lead, arsenic, total petroleum hydrocarbons (TPH), and polynuclear aromatic hydrocarbons (PNAs).

Mission Clay Products

Mission Clay Products was a pottery and clay mining facility directly south of the Property, about 1 mile from the western end. The facility was first developed in 1907. Two fuel oil vaults and two underground storage tanks were installed at the facility over time. These vaults and tanks were

DRAFT

removed in 1987 to 2000, along with 15,593 tons of soil impacted with TPH. Additional excavations were conducted in 2019 in areas where soil and groundwater were still impacted. Small amounts of floating petroleum hydrocarbons (less than 2 inches in diameter) that resembled degraded crude oil were observed in a seasonal isolated channel near the Alameda Creek. Soil was excavated and about 3.6 million gallons of TPH-impacted groundwater were pumped from the excavations and treated on the until no TPH remained, other than an area by the railroad tracks, so as to not disturb the railroad. This area was treated with PersolfOx, a chemical oxidizer. The Property may overlap with this section of the Mission Clay site and with the groundwater plume that extends from the Mission Clay site to Alameda Creek.

We have performed a phase I environmental site assessment in general conformance with the scope and limitations of ASTM E1527-21 and the standards and practices of the All Appropriate Inquiry – Final Rule (40 Code of Federal Regulations Part 312). Any exception to, or deletions from this practice are described in Section 8.1 of the report.

It is our opinion that the findings of this study are based on a sufficient level of information obtained during our contracted scope of services to render a conclusion as to whether additional appropriate investigation is required to identify the presence or likely presence of a REC. The following data gap was identified.

- Due to the site use of the Property as a trail, there is no title report associated with the Property. The Property is located within public land that is not associated with Assessor's Parcel Numbers (APNs), and traverses multiple sites.

The data gap identified during this process does not affect the conclusions as to the presence or lack of presence of RECs at the Property.

Given the noted features of potential environmental concern, we recommend the following.

- A phase II environmental site assessment should be performed to address potential contamination associated with the adjacent railroads. This would include surface soil sampling along sections of the Property that are near railroad tracks to determine if lead, arsenic, TPH, and/or PNAs are present on the Property.
- A soil management plan should be prepared prior to grading and trail construction to address potential impacts, particularly near the former Mission Clay Products facility.

Please note, the findings from this report are valid until June 30, 2024, and updates of portions of the assessment may be necessary after December 30, 2023.

DRAFT

1.0 INTRODUCTION

1.1 PURPOSE OF PHASE I ENVIRONMENTAL SITE ASSESSMENT

This assessment was performed at the request of CSW/Stuber-Stroeh for the purpose of evaluating the planned trail development as part of the Environmental Impact Review (EIR) process. The objective of this phase I environmental site assessment is to identify Recognized Environmental Conditions (RECs) associated with the Property. As defined in the ASTM Standard Practice E1527-21, an REC is "(1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment."

1.2 DETAILED SCOPE OF SERVICES

The scope of services performed included the following.

- A review of publicly available and practicably reviewable standard local, state, tribal, and federal environmental record sources.
- A review of publicly available and practicably reviewable standard historical sources, aerial photographs, fire insurance maps and physical setting sources.
- A reconnaissance of the Property to review site use and current conditions. The reconnaissance was conducted to check for the storage, use, production or disposal of hazardous or potentially hazardous materials.
- Written/oral Interviews with owners/occupants and public sector officials.
- Preparation of this report with our findings, opinions, and conclusions.

1.3 SITE LOCATION AND DESCRIPTION

The Property is located in Niles Canyon within Alameda County, California (Figures 1 and 2). The approximately 5.8-mile-long Property is on primarily public land and is currently vacant.

1.4 CURRENT USE OF PROPERTY AND ADJOINING PROPERTIES

The Property is currently vacant, vegetated land that transverses Niles Canyon from Old Canyon Road in Fremont to Foothill Road in Sunol. It is bordered to the north and/or south, depending on the section of the Property, by Alameda Creek and two sets of railroad tracks.

Based on a review of current records and our site reconnaissance, the adjoining site users are summarized below.

DRAFT

TABLE 1.4-1: Adjoining Site Uses

DIRECTION	SITE USE
North	Alameda Creek, Niles Canyon Road, railroad tracks
South	Railroad tracks and Alameda Creek
East	Old Canyon Road, Fremont
West	Foothill Road, Sunol

1.5 SITE AND VICINITY CHARACTERISTICS

According to published topographic maps, site grades at the Property ranges from approximately Elevation 80 feet in the west to approximately Elevation 300 feet in the middle sections of the Property. Review of the Geologic Map of the Niles Quadrangle, Alameda County, California Geologic Map (Dibblee, 2005) found that the Property is underlain by Quaternary-aged sand and gravel of major stream channels (Qg) in the area near the Alameda Creek, and the Panoche Formation, which contains clay shale or claystone (Kp) and sandstone (Kps) from the late Cretaceous period. In addition, a few portions of the Property are underlain by alluvial gravel, sand, and clay of valley areas (Qa) and landslide rubble from upslope rocks (Qls).

Geocheck – Physical Setting Source Summary of the Environmental Data Resources, Inc. (EDR) report (Appendix A) indicated two federal United States Geological Survey (USGS) and 11 state wells located within 1 mile of the Property. Well Number 0110019-001 is mapped approximately 250 feet north of the Property and no groundwater level measurements are reported for this well.

We reviewed the Department of Water Resources On-line Water Data Library for depth to water in the vicinity of the Property. The website identified seven wells within 1 mile of the Property.

We reviewed EnviroStor, a website maintained by the State of California Department of Toxic Substances Control, and GeoTracker, a website maintained by the State of California Water Resources Control Board, for nearby facilities with records that include depth-to-groundwater measurements. The following information was obtained regarding local groundwater conditions.

TABLE 1.5-1: Local Groundwater Conditions

PROXIMITY TO PROPERTY	REPORTED DEPTH TO GROUNDWATER	REPORTED GROUNDWATER FLOW DIRECTION
Adjacent	25.02 to 27.02 feet	Southwest
500 feet southeast	15 to 32 feet	Southwest
890 feet east	24 feet	Southwest

The site-specific depth to groundwater and direction of groundwater flow were not determined as part of this assessment. Fluctuations in groundwater levels may occur seasonally and over a period of years due to variations in precipitation, temperature, irrigation, and other factors.

We reviewed the Department of Conservation, Geologic Energy Management (CalGEM), website and map database to determine if any historic oil or gas wells were located within the Property. No oil or gas wells were mapped within 1 mile of the Property.

DRAFT

We reviewed the National Pipeline Mapping System (NPMS) public viewer website for information about petroleum, natural gas, or hazardous liquid storage, processing, or transmission facilities in the vicinity of the Property. No facilities and one gas transmission pipeline were mapped within ¼ mile of the Property. The pipeline is operated by Pacific Gas & Electric and is actively transporting natural gas. No accidents are reported near the Property. The pipeline extends for about 2 miles adjacent to the eastern half of the Property and appears to lie beneath Niles Canyon Road.

1.6 INDOOR AIR QUALITY

An evaluation of indoor air quality, mold, or radon was not included as part of the contracted scope of services. The California Department of Public Health has conducted studies of radon risks throughout the state, sorted by zip code. Results of the studies indicate that 63 tests were conducted within the 94536 Property zip code, with three tests exceeding the current EPA action level of 4 picocuries per liter (pCi/L)[1]. Thirty tests were conducted within the 94586 Property zip code, with six tests exceeding the current EPA action level of 4 pCi/L.

In accordance with ASTM E2600-15 (Tier 1) (*Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions*); there are five potential petroleum hydrocarbon sources for vapor intrusion within 1/10 mile of the Property and no volatile organic compound (VOCs) sources within 1/3 mile of the Property.

2.0 RECORDS REVIEW

2.1 PROPERTY RECORDS

2.1.1 Title Report/Ownership

The Title Report lists recorded land title detail, ownership fees, leases, land contracts, easements, liens, deficiencies, and other encumbrances attached to or recorded against a subject property. Laws and regulations pertaining to land trusts vary from state to state and the detail of information presented in a Title Report can vary greatly by jurisdiction. As a result, ENGEO utilizes a Title Report, when provided to us, as a supplement to other historical record sources. ENGEO assumes that any environmental lien, activity use limitations (AUL), and/or institutional controls for the Property are noted in the Preliminary Title Report.

Due to the site use of the Property as a trail, there is no title report associated with the Property as it is on mostly public land and traverse multiple sites.

2.1.2 Environmental Liens and Activity Use Limitations

We reviewed two engineering control (EC) and institutional control (IC) registries: EnviroStor, a website maintained by the State of California Department of Toxic Substances Control, and GeoTracker, a website maintained by the State of California Water Resources Control Board, for environmental liens or AULs associated with the Property. No records of environmental liens or AULs were noted.

[1] California Department of Public Health – Radon Program– (https://www.cdph.ca.gov/Programs/CEH/DRSEM/CDPH%20Document%20Library/EMB/Radon/Radon%20Test%20Results.pdf).

DRAFT

2.2 HISTORICAL RECORD SOURCES

The purpose of the historical record review is to develop a history of the previous uses or occupancies of the Property and surrounding areas to identify those uses or occupancies that are likely to have led to recognized environmental conditions on the Property.

2.2.1 Historical Topographic Maps/Aerial Photographs/Sanborn Maps

Historical USGS topographic maps and aerial photographs maps were reviewed to determine if discernible changes pertaining to the Property had been recorded. EDR provided the following maps and photographs, presented in Appendices B and C. A Sanborn fire insurance map search did not identify maps for the Property; the search report is presented in Appendix D.

TABLE 2.2.1-1: Historical Review Summary

HISTORICAL MAP/PHOTOGRAPH	YEARS
Topographic Maps	1906, 1941, 1947, 1953, 1960, 1961, 1968, 1973, 1978, 1980, 2012, 2015, 2018
Aerial Photographs	1939, 1946, 1948, 1954, 1958, 1963, 1968, 1979, 1982, 1993, 2006, 2009, 2012, 2016, 2020
Sanborn Maps	N/A

Topographic maps show that Alameda Creek, the adjacent Niles Canyon Road, and Niles Canyon Railroad have existed in their approximate current alignments at least since 1906. At this time, a few structures were situated along the creek and road. A 1939 photograph shows that a parcel south of the Property on the Sunol end has been graded. By 1941, a railroad tunnel has been built through the canyon mountains about ½ mile south of the Fremont side of the Property, and a cluster of buildings for a pottery plant appears close to the Fremont end of the Property. A 1946 photograph confirms that the pottery plant has been developed and is located next to a small agricultural plot. In 1953, a pipeline is mapped parallel to the entirety of the Property, which is later labelled in 1961 as the Sunol Aqueduct. In 1958, the graded parcel south of the Sunol terminus of the Property has been divided into agricultural fields. By 1968, grading and development is visible at the Niles Canyon Railroad Yard and the Pacific Railroad Association in the midsection of the Property. Residential plots are visible to the east of the railyard. Aerials from 2006 show that some of the agricultural plots in Sunol have been converted to solar panel facilities.

2.2.2 City Directory

City Directories, published since the 18th century for major towns and cities, list the name of the resident or business associated with each address. A city directory search conducted by EDR is located in Appendix E. The City Directory did not return any findings for the Property, as the Property is not associated with any addresses.

2.3 ENVIRONMENTAL RECORD SOURCES

EDR performed a search of federal, tribal, state, and local databases regarding the Property and nearby properties. Details regarding the databases searched by EDR are provided in Appendix A. A list of the facilities documented by EDR within the approximate minimum search distance of the Property is provided below.

DRAFT

2.3.1 Environmental Records

2.3.1.1 Property

The Property is not listed on Environmental Record source databases.

2.3.1.2 Other Properties

The following databases include facilities listed within the appropriate ASTM search distances of the Property on Environmental Records sources.

Niles Canyon Railway and Union Pacific Railway

Two railroad tracks, Niles Canyon and Union Pacific, extend through Niles Canyon parallel to the Property, such that at some locations, the Property may be within 20 feet of railroad tracks. Niles Canyon Railroad has operated since 1869, and the Union Pacific Railroad has operated since 1909. Niles Canyon Railway is generally to the north of the Property and the Union Pacific Railroad is generally south of the Property. Towards the eastern side of the Property, both railroads lie to the south. Railroads are commonly associated with the presence of lead, arsenic, total petroleum hydrocarbons (TPH), and polynuclear aromatic hydrocarbons (PNAs).

Mission Clay Products

Mission Clay Products was a pottery and clay mining facility directly south of the Property, about 1 mile from the western end. The facility was first developed in 1907. Two fuel oil vaults and two underground storage tanks were installed at the facility over time. These vaults and tanks were removed in 1987 to 2000, along with 15,593 tons of soil impacted with TPH. Additional excavations were conducted in 2019 in areas where soil and groundwater were still impacted. Small amounts of floating petroleum hydrocarbons (less than 2 inches in diameter) that resembled degraded crude oil were observed in a seasonal isolated channel near the Alameda Creek. Soil was excavated and about 3.6 million gallons of TPH-impacted groundwater were pumped from the excavations and treated until no TPH remained, other than an area by the railroad tracks, so as to not disturb the railroad. This area was treated with PersolfOx, a chemical oxidizer. The Property may overlap with this section of the Mission Clay site and with the groundwater plume that extends from the Mission Clay site to Alameda Creek.

DRAFT

To address the contamination left near the railroad, a trench was excavated between the railroad and Alameda Creek in a way to allow ongoing monitoring and treatment of groundwater passing through the trench.

Niles Canyon Railway, Sunol Depot

In 2014, a surface spill of oil from a locomotive occurred on the railroad tracks near the Niles Canyon Railway station and museum, located at 6 Kilkare Road, about 35 feet south of the eastern end of the Property. The railroad representative estimated that only 2 to 5 gallons of No. 6 Fuel Oil spilled onto the train tracks. In July of 2016, remediation occurred, which included removing four drums of soil and ballast and confirmation sampling. The remediation report concluded that no major impacts resulted from the spill. However, a Notice to Comply statement from the ACDEH stated that oil was found in a nearby well and that it may be associated with the spill. Given that the surface contamination has been removed, deeper oil impacts are not likely to have an effect on the Property given the use as a trail.

Based on the distances to the identified database sites, regional topographic gradient, and the EDR findings, it is unlikely that the above-stated database sites pose an environmental risk to the Property. Many properties are on the "Orphan Summary" list, with a total of 145. Some of them appear to be located beyond the ASTM recommended radius search criteria, but others are within the search criteria. Some of the Orphans are duplicates of listings on the EDR Radius Report. Many of the Orphans are vehicle incidents on Niles Canyon Road or on the railroad tracks that resulted in injury and/or a fuel leak or are associated with Alameda Creek. One Orphan at 12565 Foothill Road #B may overlap with the Property and is reported to have had 4 tons of asbestos-containing waste that was disposed of by landfill or surface impoundment.

2.4 REGULATORY AGENCY FILES AND RECORDS

The following agencies were contacted pertaining to possible past development and/or activity at the Property.

TABLE 2.4-1: Regulatory Agency Records

NAME OF AGENCY	RECORDS REVIEWED
City of Fremont Environmental Services	We contacted the City of Fremont Environmental Services on June 30, 2023, regarding environmental records for the Property. Environmental Services indicated they have no files pertaining to the Property.
City of Fremont Fire Department	We contacted the City of Fremont Fire Department on June 30, 2023, regarding environmental records for the Property. The Fire Department indicated they have no files pertaining to the Property.
Alameda County Public Works Agency	We contacted the Alameda County Public Works Agency regarding environmental records for the Property on July 5, 2023. The Public Works Agency indicated they have no files pertaining to the Property.
Alameda County Department of Environmental Health	We contacted the Alameda County Department of Environmental Health on June 30, 2023, regarding environmental records for the Property. The Alameda County Department of Environmental Health indicated they have no files pertaining to the Property and directed us to GeoTracker.

DRAFT

NAME OF AGENCY	RECORDS REVIEWED
Alameda County Water District	We contacted the Alameda County Water District on June 30, 2023, regarding environmental records for the Property. The Water District indicated they have no files pertaining to the Property, and directed us to GeoTracker
Alameda County Fire Department	We contacted the Alameda County Fire Department on June 30, 2023, regarding environmental records for the Property. The Alameda County Fire Department indicated they have no files pertaining to the Property.
California State Water Resources Control Board	We reviewed GeoTracker, the website maintained by the State Water Resources Control Board, for files pertaining to the Property. No listings were found for the Property.
Department of Toxic Substances Control (DTSC)	We reviewed EnviroStor, the website maintained by DTSC, for files pertaining to the Property. No listings were found for the Property.

3.0 SITE RECONNAISSANCE

3.1 METHODOLOGY

We conducted a reconnaissance of the Property on July 14, 2023. The reconnaissance was performed by Rian Montagh, a staff environmental engineer of ENGEO. The Property was viewed for hazardous materials storage, superficial staining or discoloration, debris, stressed vegetation, or other conditions that may be indicative of potential sources of soil or groundwater contamination. The Property was also checked for evidence of fill/ventilation pipes, ground subsidence, or other evidence of existing or preexisting underground storage tanks. Photographs taken during the site reconnaissance are presented in Figure 4.

The Property resides on undeveloped land with heavy vegetation and follows Alameda Creek. Due to these characteristics, limitations to the reconnaissance include lack of direct access to some parts of the Property. Therefore, some parts of the site reconnaissance were conducted adjacent to the Property, on Niles Canyon Road.

3.2 GENERAL SITE SETTING

The Property extends 5.8 miles east to west in a heavily vegetated valley along Alameda Creek. This Property spans from Fremont to Sunol, passing through Dresser and Brightside. The westernmost end of the Property is the developed Alameda Creek trail and tapers off into an unpaved trail 900 feet from the western end of the Property. Two railroad tracks, Niles Canyon Road and Alameda Creek extend alongside the Property. Some storm damage was observed on the banks of the Alameda Creek, as shown in Figure 3.

3.3 SITE OBSERVATIONS

The following table summarizes our observations during the reconnaissance.

DRAFT

TABLE 3.3-1: Site Observations

FEATURE TYPE	OBSERVATIONS
Structures	No structures were observed on the Property during the site reconnaissance.
Hazardous Substances and Petroleum Products in Connection with Identified Uses	No hazardous substances or petroleum products were observed within the Property during the site reconnaissance.
Storage Tanks (underground and above-ground)	No above-ground storage tanks or evidence of existing underground storage tanks were observed during the site reconnaissance.
Roads	The Property extends adjacent to Niles Canyon Road and two railroad tracks. Old Canyon Road bounds the Property to the south at the western end of the Property. The Niles Canyon Staging Area parking lot lies at the west end of the Property. The Niles Canyon Railway parking lot resides at the eastern end of the Property.
Strong, Pungent, or Noxious Odors and Their Sources	No odors indicative of hazardous materials or petroleum material impacts were noted at the time of the reconnaissance.
Standing Surface Water and Pools or Sumps Containing Liquids Likely to be Hazardous Substances or Petroleum Products	No pools of potentially hazardous liquid were observed within the Property at the time of our reconnaissance.
Drums, Totes, and Intermediate Bulk Containers	One drum from Zep Inc., a cleaning products manufacturer, was observed on the Property at the time of the reconnaissance.
Polychlorinated Biphenyls (PCBs) Containing Equipment	Two transformers, potential PCB-containing equipment, were observed at the eastern end of the Property during our site reconnaissance.
Hazardous Substances and Petroleum Product Containers	No hazardous substance or petroleum product containers were observed on the Property at the time of our reconnaissance.
Stains or Corrosion on Floors, Walls, or Ceilings (Except Water Staining)	No stains or corrosion on floors, walls, or ceilings were observed on the Property at the time of our reconnaissance.
Drains and Sumps	No drains or sumps were observed within the Property at the time of our reconnaissance.
Pits, Ponds, and Lagoons	No pits, ponds, or lagoons were observed within the Property at the time of our reconnaissance.
Stained Soil/Pavement	No stained soil or pavement were observed within the Property at the time of our reconnaissance.
Stressed Vegetation	No signs of stressed vegetation were observed on the Property at the time of our reconnaissance.
Solid Waste/Debris	Debris was observed at the western end of the Property. Debris included, but was not limited to, cardboard, plastic, wood, furniture, clothing, food, and electronics.
Stockpiles/Fill Material	No stockpiles or fill material were observed on the Property during the reconnaissance.
Wastewater	No wastewater conveyance systems were observed at the Property during the reconnaissance.
Wells	No wells were found within the Property during our site reconnaissance.
Septic Systems	No septic systems were found within the Property during our site reconnaissance.

DRAFT

3.4 ASBESTOS, LEAD, AND PCB-CONTAINING MATERIALS

No structures are currently located on the Property.

4.0 INTERVIEWS

Mr. Robert Stevens completed a Client-based environmental site questionnaire pertaining to applicable environmental information regarding the Property on July 19, 2023. In the questionnaire, Mr. Stevens identified the Mission Clay site as a potentially environmentally related issue with the Property. Mr. Stevens cited Mission Clay as a known site that is associated with releases and activity and land use restrictions. The questionnaire is presented in its entirety in Appendix F.

Mr. Robert Stevens also completed a Key Site Manager-related environmental site questionnaire pertaining to applicable environmental information regarding the Property, on July 19, 2023. In the questionnaire, Mr. Stevens identified Mission Clay as a known industrial site on the Property. The questionnaire is presented in its entirety in Appendix F.

5.0 FINDINGS AND OPINIONS

This assessment included a review of local, state, tribal, and federal environmental record sources, standard historical sources, aerial photographs, fire insurance maps and physical setting sources. A reconnaissance of the Property was completed to review site use and current conditions to check for the storage, use, production, or disposal of hazardous or potentially hazardous materials and to conduct written/oral interviews with persons knowledgeable about current and past site use.

The site reconnaissance and records review did find documentation or physical evidence of soil, soil gas, or groundwater impairments associated with the use or past use of the Property. A review of regulatory databases maintained by county, state, tribal, and federal agencies found documentation of hazardous materials violations or discharge on the Property and did identify contaminated facilities within the appropriate ASTM search distances that would reasonably be expected to impact the Property.

Based on the findings of this assessment, no RECs, no historical RECs, and no controlled RECs were identified for the Property.

Based on the review of regulatory databases and site reconnaissance, we present information on features of potential environmental concern that were either contained in the databases or observed on the Property. These features were not considered to be RECs. We briefly discuss each feature below.

<u>Niles Canyon Railway and Union Pacific Railway</u>

Two railroad tracks, Niles Canyon and Union Pacific, extend through Niles Canyon parallel to the Property, such that at some locations, the Property may be within 20 feet of railroad tracks. Niles Canyon Railroad has operated since 1869, and the Union Pacific Railroad has operated since 1909. Niles Canyon Railway is generally to the north of the Property and the Union Pacific Railroad is generally south of the Property. Towards the eastern side of the Property, both

DRAFT

railroads lie to the south. Railroads are commonly associated with the presence of lead, arsenic, total petroleum hydrocarbons (TPH), and polynuclear aromatic hydrocarbons (PNAs).

Mission Clay Products

Mission Clay Products was a pottery and clay mining facility directly south of the Property, about 1 mile from the western end. The facility was first developed in 1907. Two fuel oil vaults and two underground storage tanks were installed at the facility over time. These vaults and tanks were removed in 1987 to 2000, along with 15,593 tons of soil impacted with TPH. Additional excavations were conducted in 2019 in areas where soil and groundwater were still impacted. Small amounts of floating petroleum hydrocarbons (less than 2 inches in diameter) that resembled degraded crude oil were observed in a seasonal isolated channel near the Alameda Creek. Soil was excavated and about 3.6 million gallons of TPH-impacted groundwater were pumped from the excavations and treated on the until no TPH remained, other than an area by the railroad tracks, so as to not disturb the railroad. This area was treated with PersolfOx, a chemical oxidizer. The Property may overlap with this section of the Mission Clay site and with the groundwater plume that extends from the Mission Clay site to Alameda Creek.

5.1 SIGNIFICANT DATA GAPS

It is our opinion that the findings of this study are based on a sufficient level of information obtained during our contracted scope of services to render a conclusion as to whether additional appropriate investigation is required to identify the presence or likely presence of a REC. The following data gap was identified.

- Due to the site use of the Property as a trail, there is no title report associated with the Property. The Property is located within public land that is not associated with Assessor's Parcel Numbers, and traverse multiple sites.

The data gap identified during this process does not affect the conclusions as to the presence or lack of presence of RECs at the Property.

5.2 SIGNIFICANT ASSUMPTIONS OR DEVIATIONS FROM ASTM STANDARD PRACTICE

There were no significant deviations from ASTM Standard Practice E1527-21 in the preparation of this report.

6.0 CONCLUSIONS

It is our opinion that the findings of this study are based on a sufficient level of information obtained during our contracted scope of services to render a conclusion as to whether additional appropriate investigation is required to identify the presence or likely presence of a REC.

We have performed a phase I environmental site assessment in general conformance with the scope and limitations of ASTM E1527-21 and the standards and practices of the All Appropriate Inquiry – Final Rule (40 Code of Federal Regulations Part 312) of the Property. Any exception to, or deletions from this practice are described in Section 8.1 of the report.

DRAFT

Given the noted features of potential environmental concern, we recommend the following.

- A phase II environmental site assessment should be performed to address potential contamination associated with the adjacent railroads. This would include surface soil sampling along sections of the Property that are near railroad tracks to determine if lead, arsenic, TPH, and/or PNAs are present on the Property.
- A soil management plan should be prepared prior to grading and trail construction to address potential impacts, particularly near the former Mission Clay Products facility.

7.0 LIMITATIONS

7.1 LIMITATIONS AND EXCEPTIONS OF ASSESSMENT

The professional staff at ENGEO strives to perform its services in a proper and professional manner with reasonable care and competence but is not infallible. The recommendations and conclusions presented in this report were based on the findings of our study, which were developed solely from the contracted services. The findings of the report are based in part on contracted database research, out-of-house reports, and personal communications. The opinions formed by ENGEO are based on the assumed accuracy of the relied upon data in conjunction with our relevant professional experience related to such data interpretation. We assume no liability for the validity of the materials relied upon in the preparation of this report.

This document must not be subject to unauthorized reuse; that is, reuse without written authorization of ENGEO. Such authorization is essential because it requires ENGEO to evaluate the document's applicability given new circumstances, not the least of which is passage of time. The findings from a phase I environmental site assessment are valid for 1 year after from the earliest date of the following components: records review, site reconnaissance, interviews, declaration by environmental professional. Updates of portions of the assessment may be necessary after a period of 180 days of the earliest date of the four components.

A more extensive assessment that would include a subsurface exploration with laboratory testing of soil, soil gas, and groundwater samples could provide more definitive information concerning site-specific conditions. If additional assessment activities are considered for the Property and if other entities are retained to provide such services, ENGEO cannot be held responsible for any and all claims arising from or resulting from the performance of such services by other persons or entities. ENGEO can also not be held responsible from any and all claims arising or resulting from clarifications, adjustments, modifications, discrepancies or other changes necessary to reflect changed field or other conditions.

7.2 SPECIAL TERMS AND CONDITIONS

We have prepared this report for the exclusive use of our client, CSW/Stuber-Stroeh Engineering Group, Inc. It is recognized and agreed that ENGEO has assumed responsibility only for undertaking the study for the Client. The responsibility for disclosures or reports to a third party and for remedial or mitigative action shall be solely that of the Client.

This phase I environmental site assessment is not intended to represent a complete soil, soil gas, or groundwater characterization, nor define the depth or extent of soil, soil gas, or groundwater contamination. It is intended to provide an evaluation of potential environmental concerns associated with the use of the Property. Laboratory testing of soil, soil gas, or groundwater

DRAFT

samples was not within the scope of the contracted services. The assessment did not include an asbestos survey, an evaluation of lead-based paint, an inspection of light ballasts for polychlorinated biphenyls (PCBs), or a mold survey. A radon evaluation was not performed.

This report is based upon field and other conditions discovered at the time of preparation of ENGEO's assessment. Visual observations referenced in this report are intended only to represent conditions at the time of the reconnaissance. We would not be aware of site contamination, such as dumping and/or accidental spillage, which occurred subsequent to the reconnaissance conducted by ENGEO personnel.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527-21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

NILES CANYON PEDESTRIAN TRAIL
FREMONT, CA 94539

TARGET PROPERTY SEARCH RESULTS

The Target Property was identified in the following databases.

Page Numbers and Map Identifcations refer to the EDR Area/Corridor Report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Lists of Registered Storage Tanks

SWEEPS UST: SWEEPS UST Listing

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there is 1 SWEEPS UST site within the requested target property.

Site	Address	Map ID / Focus Map(s)	Page
TYLER RANCH Status: A Tank Status: A Comp Number: 64487	***12371 FOOTHILL***	***B8 / 9***	***53***

HIST UST: Hazardous Substance Storage Container Database

A review of the HIST UST list, as provided by EDR, and dated 10/15/1990 has revealed that there is 1 HIST UST site within the requested target property.

Site	Address	Map ID / Focus Map(s)	Page
TYLER RANCH Facility Id: 00000064487	***12371 FOOTHILL ROAD***	***B6 / 9***	***51***

Other Ascertainable Records

HIST CORTESE: Hazardous Waste & Substance Site List

A review of the HIST CORTESE list, as provided by EDR, and dated 04/01/2001 has revealed that there is 1 HIST CORTESE site within the requested target property.

Site	Address	Map ID / Focus Map(s)	Page
TYLER RANCH Reg Id: 01-2000	***12371 FOOTHILL***	***B8 / 9***	***53***

HAZNET: Facility and Manifest Data

A review of the HAZNET list, as provided by EDR, and dated 12/31/2021 has revealed that there are 3 HAZNET sites within the requested target property.

Site	Address	Map ID / Focus Map(s)	Page

EDR RECOVERED GOVERNMENT ARCHIVES

Exclusive Recovered Govt. Archives

RGA LUST: Recovered Government Archive Leaking Underground Storage Tank

A review of the RGA LUST list, as provided by EDR, has revealed that there is 1 RGA LUST site within the requested target property.

Site	Address	Map ID / Focus Map(s)	Page
TYLER RANCH	12371 FOOTHILL RD	B7 / 9	52

EXECUTIVE SUMMARY

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Page Numbers and Map Identifcations refer to the EDR Area/Corridor Report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 04/26/2023 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the requested target property.

Site	Address	Direction / Distance	Map ID / Focus Map(s)	Page
HENKEL SURFACE TECHN Site ID: 0901178 EPA Id: CAD009152364	***37899 NILES BOULEVAR***	***SW 1/4 - 1/2 (0.480 mi.)***	***I50 / 11***	***162***

Lists of Federal RCRA facilities undergoing Corrective Action

CORRACTS: Corrective Action Report

A review of the CORRACTS list, as provided by EDR, and dated 03/06/2023 has revealed that there is 1 CORRACTS site within approximately1 mile of the requested target property.

Site	Address	Direction / Distance	Map ID / Focus Map(s)	Page
HENKEL SURFACE TECHN EPA ID:: CAD009152364	***37899 NILES BOULEVAR***	***SW 1/4 - 1/2 (0.480 mi.)***	***I50 / 11***	***162***

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

A review of the RCRA-TSDF list, as provided by EDR, and dated 03/06/2023 has revealed that there is 1 RCRA-TSDF site within approximately 0.5 miles of the requested target property.

Site	Address	Direction / Distance	Map ID / Focus Map(s)	Page
HENKEL SURFACE TECHN EPA ID:: CAD009152364	***37899 NILES BOULEVAR***	***SW 1/4 - 1/2 (0.480 mi.)***	***I50 / 11***	***162***

EXECUTIVE SUMMARY

Lists of Federal RCRA generators

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

A review of the RCRA-VSQG list, as provided by EDR, and dated 03/06/2023 has revealed that there is 1 RCRA-VSQG site within approximately 0.25 miles of the requested target property.

Site	Address	Direction / Distance	Map ID / Focus Map(s)	Page
SFPUC SUNOL FIRE PUM EPA ID:: CAR000300434	11772 MAIN STREET	ESE 1/8 - 1/4 (0.159 mi.)	F35 / 10	104

Lists of state- and tribal (Superfund) equivalent sites

RWQCB Region:	SAN FRANCISCO BAY RWQCB (REGION 2)
Site History:	The subject property (Site) is a former clay product operation on approximately 80 acres of rural land located at the end of Old Niles Canyon Road in Fremont. The central portion of the Site, comprised of nearly 6 acres, was the clay production area was dating back to 1907 (California Pressed Brick Company, CPD, began brick production to meet demand post 1906 earthquake). In 1927, the California Pottery Company purchased the Property and continued operations, more or less continuously, until 1960. At some time in its ownership, California Pottery installed a 1,000‐gallon underground storage tank (UST) for gasoline at the oil house. The property was bought by Mission Clay Products (MCP) in 1960 and focused on production of clay sewer pipe. UNDERGROUND STORAGE TANKS (USTs) At an undetermined point, MCP installed a 10,000‐gallon UST for diesel near the oil house (Figure 2). With the introduction of alternative sewer pipe materials and the phasing out of clay sewer pipe, the plant gradually lost market share until it was closed in May 1992. REMOVAL ACTIVITIES The fuel oil vaults, USTs and oil house were all removed prior to 2000. The two USTs were removed from the Site in the late 1980s. The 1,000‐gallon gasoline UST was removed in 1987, and the 10,000‐gallon diesel UST was removed in 1989. Haley & Aldrich acknowledge the assistance of Herb Cartwright, former MCP employee, in ascertaining the former location of the 10,000‐gallon UST; this location had not been documented prior to the Updated Data Gap Investigation Report (Haley & Aldrich 2015a). Both USTs were removed under the supervision of the Fremont Fire Department (FFD). The fuel oil vaults were removed by E.&L.C. Company in November 2000 (AEI Consultants 2001). At the time of removal, approximately 15,593 tons of soil impacted by petroleum hydrocarbons were excavated and removed (AEI Consultants 2001).

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Eval General Type: Compliance Evaluation Inspection
Eval Date: 04-09-2019
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Alameda County Dept. of Environmental Health (ACDEH) inspector arrived on-site at AT&T CALIFORNIA - PE030 located at 11823 Main St. Sunol, CA 94586 to conduct a routine inspection of the Hazardous Materials Business Plan (HMBP) program and to confirm compliance in applicable Health and Safety Code, Div. 20 Chp. 6.95. ACDEH met with Mr. Gary Chimienti the facility's environmental health manager who granted consent and assisted ACDEH with this inspection. Facility/Site Description: - AT&T operates as a telecommunication company and this location is one of the company's cell towers. - The facility has a valid ACDEH operating permit. The permit is valid from 09/02/2018 - 09/01/2019. - Training records for three years were available for review during this inspection. - This location is owned by AT&T. - This cell tower stores lead-acid batteries and 293-gallon of Diesel fuel. The diesel fuel is used for the backup generator. - O... [TRUNCATED: Refer to full Inspection Report]

Eval General Type: Compliance Evaluation Inspection
Eval Date: 10-11-2022
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Routine triennial hazardous materials business plan (HMBP) inspection. Met with manager Valerie Ingraham. Consent to inspect facility given by manager. Facility is an AT&T telecoms site. Materials are for backup power. Materials on site are: batteries, diesel. Next complete annual HMBP re-certification is due to CERS on or before 02/14/23. A complete CERS HMBP certification consists of Facility, Inventory, and Plans. Signatures not collected due to COVID protocols.

Eval General Type: Compliance Evaluation Inspection

AT&T CALIFORNINA - PE030 (Continued) **S121784007**

Eval Date: 12-16-2016
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Routine Hazardous Materials Business Plan (HMBP) inspection for AT&T California located at 11823 Main St. Sunol. Permission to perform the inspection was granted by Gary Chimienti, Environmental Site Manager. The business activities page has the Hazardous Waste Generator box checked, however no waste is recorded as generated in the last three years and there is no on-going waste generation at the site. EPA ID number CAT080020373 is inactive. CORRECTIVE ACTION: Determine if the site is an active hazardous waste generator. If it is not, correct the business activities page. If it is active, reactivate the EPA ID number and ensure all hazardous waste is properly handled. Complete and send a notice of your determination to the ACDEH inspector by 1/14/2017.

RWQCB Region:	SAN FRANCISCO BAY RWQCB (REGION 2)
Site History:	The Site is located in Fremont, California at the end of Old Canyon Road and occupies approximately 80 acres of a northwest facing slope of Niles Canyon. The central portion of the Site, comprised of approximately 6 acres, was formerly a clay product manufacturing facility and clay mine. Manufacturing began around 1907, when the California Pressed Brick Company (CPB) constructed a brick manufacturing plant and clay mine on]Site to take advantage of the high demand for brick following the 1906 earthquake. The plant and attendant facilities were concentrated on the relatively level plateau at the center of the Site, shown as the cleared area in the center of Figure 2. Although not detailed in the local histories, mining presumably began at the same time and was focused on the slope east of the plant. At about the same time, CPB constructed two fuel

MISSION CLAY PRODUCTS - SCP (Continued) **S121476045**

oil vaults north of the factory building. The lateral dimensions of the vaults were 22 feet (ft) by 10 ft and 22 ft by 20 ft; both vaults were 9 ft deep. CPB expanded through 1910, when it was producing 100,000 bricks a day. However, by 1917, CPB had collapsed and the property was purchased at public auction and then leased to the Terra Cotta Pipe Company until 1923, when it was sold to Terra Cotta. In 1927, the California Pottery Company purchased the Property and continued operations, more or less continuously, until 1960. At some time in its ownership, California Pottery installed a 1,000]gallon underground storage tank (UST) for gasoline at the oil house. The property was bought by Mission Clay Products (MCP) in 1960 and focused on production of clay sewer pipe. At an undetermined point, MCP installed a 10,000]gallon UST for diesel near the oil house. With the introduction of alternative sewer pipe materials and the phasing out of clay sewer pipe, the plant gradually lost market share until it was closed in May 1992. The fuel oil vaults, USTs and oil house were all removed prior to 2000. The two USTs were removed from the Site in the late 1980s. The 1,000]gallon gasoline UST was removed in 1987, and the 10,000]gallon diesel UST was removed in 1989. Haley & Aldrich acknowledge the assistance of Herb Cartwright, former MCP employee, in ascertaining the former location of the 10,000]gallon UST; this location had not been documented prior to the Updated Data Gap Investigation Report. Both USTs were removed under the supervision of the City of Fremont Fire Department. The fuel oil vaults were removed by E.&L.C. Company in November 2000. At the time of removal, approximately 15,593 tons of soil impacted by petroleum hydrocarbons were excavated and removed.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Citation: HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)
Violation Description: Failure to include in the SPCC Plan an adequate discussion of the facility's conformance with the requirements of 40 CFR Part 112, and other effective discharge prevention and containment procedures listed in Part 112, or any applicable more stringent State rules, regulations, and guidelines.
Violation Notes: Returned to compliance on 07/23/2018. OBSERVATION: The facility failed to implement a Spill Prevention Control and Countermeasure (SPCC) Plan as indicated by the following observations: a.) The facility failed to maintain records of inspections and tests for a period of three years as the facility indicated on their SPCC Plan (See Table G-5 Inspections, Testing, RecordKeeping, and Personnel Training (pg. 6 of 25). b.) The facility failed to provide the annual discharge prevention briefings to all oil-handling personnel to assure adequate understanding of the SPCC Plan for the facility. Such briefings highlight and describe past reportable discharges or failures, malfunctioning components, and any recently developed precautionary measures. CORRECTIVE ACTION: a.) Record monthly visual inspections for the Railroad Tank Car PSPX 7501, Oil Shed #1, Sealed drums stored outdoors, and Enginehouse. Note: ACDEH to provide inspection log template. b.) Immediately provide an annual discharge prevention [Truncated]

Eval Date: 03-19-2015
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Doug Debs escorts Robert Weston and Barbara Jakub through facility and adjacent storage areas. Observe many empty drums that have not been de-headed and cleaned, two approximately 6,000 gallon single wall steel underground storage tanks that have been dropped off at the facility for possible reuse. No certification paperwork was received with these tanks to determine if the tanks have been cleaned. Additionally, two 1,000 gallon fiberglass tanks formerly containing organic phosphorous sulfite and sodium chromate fiberglass tanks were found at the facility.

Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: ON-SITE INSPECTION PERFORMED MARCH 19, 2015. INSPECTION REPORT COMPILED BY ROBERT WESTON AND BARBARA JAKUB. INVENTORY IN SPCC PLAN IS INCORRECTLY REPORTED. TANK FACILITY STATEMENT INCLUDES SOLIDS, AND LOCOMOTIVES THAT ARE NOT SUBJECT TO SPCC IMPLEMENTATION. REVISE FACILITY STATEMENT TO REFLECT ONLY THOSE MATERIALS CAPTURED BY APSA. (PLEASE NOTE THAT THE TANK FACILITY STATEMENT FOR THE GOLDEN GATE RAILROAD ON THE CONTIGUOUS PROPERTY UNNECESSARILY INCLUDED LOCOMOTIVE FUEL THAT IS REPORTABLE. NO SPCC REQUIRED FOR GGRM AT THIS TIME.)

Eval Date: 06-05-2018
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: The purpose of the inspection was to determine Niles Canyon Railway compliance with applicable Health and Safety Code, Division 20, Chp. 6.95, 6.5 and the California Code of Regulations (CCR), Title 22. Alameda County Dept. of Environmental Health (ACDEH) inspector arrived on-site at Niles Canyon Railway located at 5550 Niles Canyon Rd. Sunol, CA 94586 to conduct a routine announced inspection of Hazardous Materials Business Plan (HMBP), Hazardous Waste Generator (HWG), Aboveground Petroleum Storage Act (APSA) and Clean Water programs. ACDEH met with Doug Debs the facility's hazmat manager who granted consent and assisted ACDEH with this inspection. Facility/Site Description: - Niles Canyon Railway (NCRy) is a museum railroad which provides services such as historic train ride to the public, using vintage railroad cars & locomotives. - The museum has motive power containers (steam and diesel locomotive fuel tanks, diesel locomotive crankcases, fule tanks on [Truncated]

RWQCB Region:	SAN FRANCISCO BAY RWQCB (REGION 2)
Site History:	This fuel leak case addresses unauthorized releases that occurred at different times in three separate areas: Three USTs (550-gallon diesel, 550-gallon gasoline, and 1,000-gallon gasoline USTs) at the Sunol Yard, 505 Paloma Way, Sunol, CA; Oil Spill Area approximately 100 feet south of the former USTs at the Sunol Yard, 505 Paloma Way, Sunol, CA; Three USTs (10,000-gallon diesel, 400-gallon lube, and 400-gallon waste oil USTs) at the Sunol Pump Station, Sunol, CA. Each of these three areas is discussed in separate sections below. This case closure addresses the areas affected by the three unauthorized releases above and does not include evaluations of conditions in other areas of the facility. Three USTs (550-gallon diesel, 550-gallon gasoline, and 1,000-gallon gasoline USTs) at the Sunol Yard, 505 Paloma Way, Sunol, CA The Sunol Yard is currently used as a municipal corporation yard. The surrounding area is generally agricultural with some surface mining. In February 1987, three USTs, consisting of one 550-gallon regular gasoline UST, one 1,000-gallon unleaded gasoline UST, and one 550-gallon diesel UST, were integrity tested. The 1,000-gallon regular gasoline UST system was found to be leaking. A leak in a piping coupling was repaired. A soil sample collected 1.5 feet below the piping contained 810 ppm of total petroleum hydrocarbons as gasoline (TPHg). On March 30, 1987, a three-foot diameter area was excavated beneath the suction pump. At a depth of 4 feet bgs, photoionization (PID) meter readings indicated 1,500 to 2,000 ppm of petroleum hydrocarbons vapors. Two slant soil borings (SB-1 and SB-2) were advanced to the capillary fringe (approximately 12 feet bgs) below the suction pump. Soil samples collected from the borings did not contain TPHg at concentrations above the reporting limit. Additional soil removal was conducted on June 26, 1987 to remove contaminated soil directly below the pump. A hole with a diameter of approximately 2.5 feet was excavated to a depth of 9.5 feet bgs. At a depth of 8 feet bgs, the soil had PID readings of 600 to 800 ppm. At a depth of 9.5 feet bgs, the soil appeared clean with no PID readings. A soil sample collected from the bottom of the excavation did not contain TPHg at concentrations above the reporting limit. The three USTs were removed from the southern portion of the Sunol Maintenance Yard in May 1990. Total petroleum hydrocarbons as gasoline (TPHg) and TPH as diesel (TPHd) were detected in soil samples collected from the tank excavation at

SFPUC SUNOL YARD AND PUMP STATION (Continued) **S103955223**

concentrations up to 7.6 and 40 ppm, respectively. Benzene was detected at concentrations up to 0.7 ppm. On August 22 and 23, 1991, three soil borings were advanced to a depth of 30 feet bgs and were converted into monitoring wells (MW-1 through MW-3). The monitoring wells were monitored quarterly from February 1992 to January 1993. TPHg, TPHd, TOG, BTEX, and VOCs were not detected at concentrations exceeding reporting limits in groundwater samples from the monitoring wells. Oil Spill Area approximately 100 feet south of the former USTs at the Sunol Yard, 505 Paloma Way, Sunol, CA An unlined sump near the southeast corner of a storage shed in the Sunol Maintenance Yard was reportedly used for disposal of waste oil and other liquids. The storage shed was located approximately 50 feet southwest of the three USTs in the Maintenance Yard. In November 1989, an area approximately 225 spare feet in size was excavated to a depth of 5 to 7.5 feet bgs in the Oil Spill Area. During excavation, soil samples collected from the most visibly contaminated zones contained up to 31,000 ppm of Total Oil and Grease (TOG), various VOCs at concentrations ranging from 0.3 to 3.2 ppm, and elevated concentrations of metals. Soil samples collected at a depth of 7 feet bgs from the bottom of the excavation contained Total Recoverable Petroleum Hydrocarbons (TRPH) at concentrations up to 290 ppm. Soil samples from the sidewall of the excavation at a depth of approximately 3 feet below the concrete foundation of the shop/storage shed contained 12,000 ppm of TRPH. The excavation was deepened to 7.5 feet bgs where additional confirmation soil samples were collected. The confirmation soil samples contained TOG at a concentration of 120 ppm. The excavation was not extended further beneath the building foundation to remove residual contamination to avoid damaging the concrete foundation slab. Soil from the excavation was stockpiled for future bioremediation. On August 22, 2002, a soil boring was advanced beneath the storage shed to a depth of 20 feet below grade. The boring (MY-1) originated 3 feet from the shed and was angled at 14 degrees to terminate 20 feet below the shed. TPHd was detected in soil samples from the boring at concentrations of 1.3 to 3.1 milligrams per kilogram (mg/kg) but TPHd was not detected in one grab groundwater sample collected from the boring. Oil and grease, TPHg, BTEX, MTBE, and VOCs were not detected in the soil or groundwater samples from the angled boring. Three additional soil borings (MY-2 through MY-4) were advanced south and southwest (downgradient) of the Oil Spill Area and the three former USTs to evaluate the extent of contamination. No chemicals of concern were detected at concentrations greater than reporting limits in soil or groundwater samples from the downgradient borings. Three USTs (10,000-gallon diesel, 400-gallon lube oil, and 400-gallon waste oil USTs) at the Sunol Pump Station, Sunol, CA The Sunol Pump Station is approximately 1 mile west of the I-680 Freeway and one half mile south not the City of Sunol. The site is bounded on the south by Alameda Creek, which flows in a channel with an elevation that is approximately 15 feet below surface grade at the site. Three underground storage tanks (USTs), consisting of one 10,000-gallon diesel UST and two 400-gallon waste oil USTs, were removed from the Sunol Pump Station in November 1993. Total petroleum hydrocarbons as diesel (TPHd), oil and grease, and semi-volatile organic compounds (SVOCs) were detected in soil samples collected from the tank excavations. On June 25, 1993, six soil borings (BH-1 through BH-6) were advanced to evaluate conditions around the three USTs at the Sunol Pump Station. TOG was detected in one soil sample from BH-6 at a concentration of 60 ppm. A soil sample collected from a depth of 15

SFPUC SUNOL YARD AND PUMP STATION (Continued) **S103955223**

feet bgs from boring BH-4 contained TOG at a concentration of 90 ppm and TPHd at a concentration of 410 ppm. Soil samples from the remaining soil borings did not contain petroleum hydrocarbons at concentrations above the reporting limits. On July 27, 1995, approximately 60 cubic yards of soil was excavated in the area between the former oil and diesel USTs. Impacted soil was observed between depths of 8 to 14 feet bgs in the excavation. The excavation was terminated at a depth of 16 feet bgs based on portable infrared (IR) testing of two soil samples, which indicated that TRPH concentrations were less than 100 ppm. Approximately 15 cubic yards of impacted soil were excavated beneath the lube oil tank before the excavation was terminated at a depth of 8 feet bgs based on IR readings. However, confirmation soil samples from the sidewalls of the two excavations contained up to 3,200 ppm of TPHd and 7,000 ppm of TOG. On August 7, 1995, a second phase of excavation was conducted to remove approximately 5 cubic yards of soil. Confirmation soil samples collected from the excavation sidewalls following the second phase of excavation contained less than 100 ppm of TRPH with the exception of a sidewall sample from the east side of the lube oil excavation which contained 120 ppm TRPH. Excavation was terminated in the east sidewall to avoid undermining the pump station building foundation.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	5 Year Review Reports
Completed Date:	04/25/2003
Comments:	Completed Five-Year Review. Investigations into petroleum hydrocarbon contamination in the 1980s and 1990s overseen by the Regional Water Quality Control Board (RWQCB) found that approximately 34,000 pounds of oil bound to approximately 26,000 cubic yards of soil beneath the tanks and that groundwater was contaminated with petroleum hydrocarbons. In 1997, an asphalt cap was constructed over the tank area. By 2001, groundwater monitoring had been reduced. The data so far indicates that the oil in the soil is stable, with no significant leaching to groundwater. Henkel is currently working with RWQCB, the Alameda County Water District, and the city of Fremont to remediate the Site for residential development. According to a Site Investigation Report submitted in October 2002, elevated concentrations of 2,4,5-T, 2,4-D, zinc, chromium, and total petroleum hydrocarbons were detected. In an approval letter dated December 20,2002, the RWQCB indicated that the Site was suitable for residential development subject to several conditions. Among these conditions were that the Site either be remediated to levels that allow unrestricted use, or risk managed to assure that future residents not be exposed to unhealthy levels of contamination. RWQCB noted in its letter that it was reluctant to utilize the letter option, a primary concern being the oil contamination beneath the

HENKEL SURFACE TECHNOLOGIES (Continued) **1000240433**

former UST area.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Certification
Completed Date: 06/06/1989
Comments: DTSC certified the remediation of contaminated soil in the former herbicide storage area. The Regional Water Quality Control Board continued to oversee investigations and remedial options related to petroleum hydrocarbon contamination beneath the Site following DTSC's certification.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 01/31/1992
Comments: Construction at a 20 inch diameter, 65 foot deep caisson/observation well that will be used to recover immiscible hydrocarbons in the groundwater by manual or passive skimming.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 10/25/1988
Comments: Approximately 1148 cubic yards of herbicide-contaminated soil were excavated and transported offsite for disposal from the former herbicide storage area. Post excavation sampling indicated that the highest residual levels of herbicides remaining in soil were 2.1 ppm of 2,4-D, well below current risk-based soil screening levels for residential land use. An asphalt cap was placed over the area of excavation as an additional measure of protection, although was not needed because contamination was remediated to unrestricted levels.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Workplan
Completed Date: 04/28/1988
Comments: Not reported

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 03/24/1987
Comments: Completed SS. In 1981, sampling performed by DTSC (formerly the Department of Health Services, Toxic Substances Control Division) found levels of 2,4-D and 2,4,5-T. Based on these results, approximately 300 cubic yards of shallow soils were excavated, along with several buried drums discovered during the excavation. DTSC approved the cleanup of this area in a letter dated October 28,1982. In 1984, underground storage tanks (USTs) associated with the herbicide manufacturing process were cleaned and removed from the Site. Soil sampling indicated significant herbicide contamination existed beneath the tanks. During the removal of one of the tanks, black oil was observed in the excavation. In 1985, DTSC requested that Amchem further study the Site to define areas of historical spills. Meanwhile, the observation of black oil in an excavation was reported to the SF Regional Water Quality Control Board (RWQCB).

HENKEL SURFACE TECHNOLOGIES (Continued) **1000240433**

During the investigations, 2,4-D and 2,4,5-T were found in soils at the Site at various concentrations and depths. The highest concentrations of herbicides in soil were 14,000 ppm of 2,4,5-T and 15,000 ppm of 2,4-D. Herbicides in groundwater were detected sporadically and at low levels, and did not warrant remedial action.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Assessment Report
Completed Date: 07/01/1986
Comments: Completed PA. A 2,4-D surface spill in 1978 triggered a series of soil and groundwater investigations at the Site.

Site History: Cleanup actions conducted in the past by Henkel Corporation did not fully address residual site contaminants. The current property owner LENNAR Homes is voluntarily conducting additional soil cleanup to address these residual contaminants. Engeo Consultants conducted data gap investigations in March and April 2014 in preparation of development, and prepared a soil cleanup plan. LENNAR Homes plans to redevelop the Site with townhomes, commercial units, a community center, and associated landscape areas. The LENNAR Homes team initiated outreach efforts in October 2013 and held community outreach meetings on January 22, 2014 and May 8, 2014. The supplemental soil cleanup work began September 2014 and was completed in August 2015. The purpose of this supplemental cleanup was to remove any residual soil impacts which could pose a risk for residential development. The supplemental cleanup is now complete, the contaminated soils have been all removed therefore, the property is now suitable for residential land use. The cleanup included removal of low-level dioxins in near-surface soils within the grassy field area. Confirmatory testing has verified the grassy field areas is now suitable for unrestricted residential land use.A final report will be submitted to the Regional Water Board staff in October 2015.A revised deed restriction and site risk management plan will be submitted to the Regional Water Board in 2019, after the revised project is heard by the City of Fremont. If you have any questions or would like to review a full copy of the Removal Action Work Plan it is available on the State s electronic records database (GeoTracker, Site Documents) and at the Water Board s office at 1515 Clay Street, Suite 1400, Oakland, CA 94612.

Environmental Interest/Information System:
California Department of Toxic Substances Control EnviroStor System (DTSC-EnviroStor) is an online search and Geographic Information System (GIS) tool for identifying sites that have known contamination or sites for which there may be reasons to investigate further. The EnviroStor database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites.
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for

HENKEL SURFACE TECHNOLOGIES (Continued) **1000240433**

generators, transporters, and treatment, storage, and disposal facilities.
US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
HAZARDOUS WASTE BIENNIAL REPORTER

Background Info:	A foundry and an engine manufacturing machine shop were located at the Site from 1907 to 1920. The Site was used for cannery operations from 1920 to 1944. Fuel oil, or "bunker C oil" was

AMCHEM PRODUCTS, INC (Continued) **S100833240**

stored in historic concrete underground storage tanks (UST). The Site was purchased by Amchem in 1952. Cannery operations equipment, including the concrete USTs, were removed prior to the purchase by Amchem. Between 1952 and 1980, metal-treating chemicals and herbicides containing 2,4-dichlorophenoxyacetic acid (2,4-D) and 2,4,5-trichlorophenoxyacetic acid (2,4,5- T) were formulated at the plant. In 1980, Henkel of America (Henkel, now Henkel Surface Technologies) purchased the Fremont facility, and herbicide production was discontinued. However, Henkel continued the production of metal-treating chemicals. On March 20, 2002, Henkel discontinued all its operations at the Site. Henkel is currently working with regulatory agencies to remediate the Site for residential development.

Comments Date: 01311992
Comments: Completed RA.
Comments Date: 03241987
Comments: Completed SS. In 1981, sampling performed by DTSC (formerly the
Comments Date: 03241987
Comments: Department of Health Services, Toxic Substances Control
Comments Date: 03241987
Comments: Division) found levels of 2,4-D and 2,4,5-T. Based on these
Comments Date: 03241987
Comments: results, approximately 300 cubic yards of shallow soils were
Comments Date: 03241987
Comments: excavated, along with several buried drums discovered during the
Comments Date: 03241987
Comments: excavation. DTSC approved the cleanup of this area in a letter
Comments Date: 03241987
Comments: dated October 28,1982. In 1984, underground storage tanks
Comments Date: 03241987
Comments: (USTs) associated with the herbicide manufacturing process were
Comments Date: 03241987
Comments: cleaned and removed from the Site. Soil sampling indicated
Comments Date: 03241987
Comments: significant herbicide contamination existed beneath the tanks.
Comments Date: 03241987
Comments: During the removal of one of the tanks, black oil was observed
Comments Date: 03241987
Comments: in the excavation. In 1985, DTSC requested that Amchem further
Comments Date: 03241987
Comments: study the Site to define areas of historical spills. Meanwhile,
Comments Date: 03241987
Comments: the observation of black oil in an excavation was reported to
Comments Date: 03241987
Comments: the SF Regional Water Quality Control Board (RWQCB). During the
Comments Date: 03241987
Comments: investigations, 2,4-D and 2,4,5-T were found in soils at the
Comments Date: 03241987
Comments: Site at various concentrations and depths. The highest
Comments Date: 03241987
Comments: concentrations of herbicides in soil were 14,000 ppm of 2,4,5-T
Comments Date: 03241987
Comments: and 15,000 ppm of 2,4-D. Herbicides in groundwater were
Comments Date: 03241987
Comments: detected sporadically and at low levels, and did not warrant
Comments Date: 03241987
Comments: remedial action.

AMCHEM PRODUCTS, INC (Continued) **S100833240**

Comments Date:	04252003
Comments:	Completed Five-Year Review. Investigations into petroleum
Comments Date:	04252003
Comments:	hydrocarbon contamination in the 1980s and 1990s found that
Comments Date:	04252003
Comments:	approximately 34,000 pounds of oil bound to approximately 26,000
Comments Date:	04252003
Comments:	cubic yards of soil beneath the tanks and that groundwater was
Comments Date:	04252003
Comments:	contaminated with petroleum hydrocarbons. In 1997, an asphalt
Comments Date:	04252003
Comments:	cap was constructed over the tank area. By 2001, groundwater
Comments Date:	04252003
Comments:	monitoring had been reduced. The data so far indicates that the
Comments Date:	04252003
Comments:	oil in the soil is stable, with no significant leaching to
Comments Date:	04252003
Comments:	groundwater. Henkel is currently working with regulatory
Comments Date:	04252003
Comments:	agencies to remediate the Site for residential development.
Comments Date:	04252003
Comments:	According to a Site Investigation Report submitted in October
Comments Date:	04252003
Comments:	2002, elevated concentrations of 2,4,5-T, 2,4-D, zinc, chromium,
Comments Date:	04252003
Comments:	and total petroleum hydrocarbons were detected. In an approval
Comments Date:	04252003
Comments:	letter dated December 20,2002, the RWQCB indicated that the Site
Comments Date:	04252003
Comments:	was suitable for residential development subject to several
Comments Date:	04252003
Comments:	conditions. Among these conditions were that the Site either be
Comments Date:	04252003
Comments:	remediated to levels that allow unrestricted use, or risk
Comments Date:	04252003
Comments:	managed to assure that future residents not be exposed to
Comments Date:	04252003
Comments:	unhealthy levels of contamination. RWQCB noted in its letter
Comments Date:	04252003
Comments:	that it was reluctant to utilize the letter option, a primary
Comments Date:	04252003
Comments:	concern being the oil contamination beneath the former UST area.
Comments Date:	05301989
Comments:	Completed FRA. A RAP was implemented during the months of
Comments Date:	05301989
Comments:	August through October of 1988. Approximately 1148 cubic yards
Comments Date:	05301989
Comments:	of herbicide-contaminated soil were excavated and transported
Comments Date:	05301989
Comments:	offsite for disposal. Post excavation sampling indicated that
Comments Date:	05301989
Comments:	the highest residual levels of herbicides remaining in soil were
Comments Date:	05301989
Comments:	2.1 ppm of 2,4-D, well below current risk-based soil screening
Comments Date:	05301989
Comments:	levels for residential land use.
Comments Date:	06301989

AMCHEM PRODUCTS, INC (Continued) **S100833240**

Comments:	Certified Site.
Comments Date:	07011986
Comments:	Completed PA. A 2,4-D surface spill in 1978 triggered a series

CA BOND EXP. PLAN:

Reponsible Party:	RESPONSIBLE PARTY-LEAD SITE CLEANUP WORKPLAN
Project Revenue Source Company:	Not reported
Project Revenue Source Addr:	Not reported
Project Revenue Source City,St,Zip:	Not reported
Project Revenue Source Desc:	The responsible party, Amchem Products, Inc., is funding all remedial investigative activities. DHS has entered into a consent order with Amchem and Union Carbide for cleanup of herbicide contamination. DHS will recover 100 percent of its past direct costs plus staff costs and overhead related to the project. The responsible parties will pay all costs associated with cleanup and have agreed to pay for DHS oversight costs for the herbicide cleanup on a quarterly basis. DHS has budgeted $50,000 for oversight of the herbicide cleanup.
Site Description:	Union Carbide operated a chemical formulation facility from 1952 until 1980, when ownership was transferred to Amchem. The Company manufactures acid and alkali-based cleaning compounds, and until July, 1980, blended bases to form herbicides such as Silvex, 2-4-D (2-4 dichlorophenoxyacetic acid) and 2,4,5-T (2,4,5-trichlorophenoxyacetic acid).
Hazardous Waste Desc:	Extensive herbicide contamination of the soil has been discovered. Up to 15,000 parts per million (ppm) 2,4-D and 2,4,5-T were discovered in soil down to a depth of 20 feet.
Threat To Public Health & Env:	The site is located in a major ground water recharge area. Herbicide contaminated soils could migrate into ground water.
Site Activity Status:	Numerous investigations have been conducted since February, 1978 when a herbicide spill from a railroad tank car occurred. Herbicide contamination is being remediated pursuant to a DHS consent order. The RAP has been submitted and approved by DHS. Soil removal was started in August, 1988. About 500 cubic yards of contaminated soil will be excavated and disposed of at Grassy Mountain Disposal Facility in Utah.

RWQCB Region: SAN FRANCISCO BAY RWQCB (REGION 2)
Site History: The subject property (Site) is located on the northern side of Niles Blvd, bounded on the north by an active railroad track that continues along the eastern border of the parcel. The Site currently is developed with asphalt pavement cover and an older, single-story wooden-frame facility which houses offices and auto repair facility for the current occupant, Niles Smog & Service, an auto smog and repair business. Four (4) gasoline underground storage tanks (USTs) were removed off-Site in March 1988. Soil samples collected from the excavation at the time of the UST removals contained up to 2,900 ppm TPH-G, 11 ppm benzene, 170 ppm toluene, and 110 ppm xylenes. An ACWD letter dated December 20, 1994 refers to a sample analysis performed by Trace Analysis Laboratory dated February 27, 1990. The groundwater samples from this analysis contained 11,000 ppb TPH-G, 1,700 ppb benzene, 240 ppb toluene, 1,700 ppb ethylbenzene, and 1,700 ppb xylenes.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 04/26/2023

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Lists of Federal sites subject to CERCLA removals and CERCLA orders

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 03/26/2023

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

Data Release Frequency: Quarterly

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated
RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS WQP: Ambient Environmental Sampling for PFAS

The Water Quality Portal (WQP) is a part of a modernized repository storing ambient sampling data for all environmental media and tissue samples. A wide range of federal, state, tribal and local governments, academic and non-governmental organizations and individuals submit project details and sampling results to this public repository. The information is commonly used for research and assessments of environmental quality.

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits.

PFAS ECHO: Facilities in Industries that May Be Handling PFAS Listing

Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

PFAS ECHO FIRE TRAINING: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PART 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

AQUEOUS FOAM NRC: Aqueous Foam Related Incidents Listing

The National Response Center (NRC) serves as an emergency call center that fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. The spreadsheets posted to the NRC website contain initial incident data that has not been validated or investigated by a federal/state response agency. Response center calls from 1990 to the most recent complete calendar year where there was indication of Aqueous Film Forming Foam (AFFF) usage are included in this dataset. NRC calls may reference AFFF usage in the ?Material Involved? or ?Incident Description? fields.

Data Release Frequency: Quarterly

HAZNET: Facility and Manifest Data
Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners
EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on private school locations in the United States.
Daycare Centers: Licensed Facilities
Source: Department of Social Services
Telephone: 916-657-4041

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

State Wetlands Data: Wetland Inventory
Source: Department of Fish and Wildlife
Telephone: 916-445-0411

Groundwater Ambient Monitoring & Assessment Program
State Water Resources Control Board
Telephone: 916-341-5577
The GAMA Program is Californias comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Heath Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

California Oil and Gas Well Locations
Source: Dept of Conservation, Geologic Energy Management Division
Telephone: 916-323-1779
Oil and Gas well locations in the state.

California Earthquake Fault Lines
Source: California Division of Mines and Geology
The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Engeo Inc. were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Contact: Jenna Keith

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Engeo Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

Certification # 5B0C-460F-9C15

PO # NA

Project 17268.000.000

UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

Sanborn® Library search results

Certification #: 5B0C-460F-9C15

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- ☑ Library of Congress
- ☑ University Publications of America
- ☑ EDR Private Collection

The Sanborn Library LLC Since 1866™

Limited Permission To Make Copies

Engeo Inc. (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at approximately five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through current. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 1320 feet of the target property.

Summary information obtained is provided in the text of this report.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

APPENDIX F

ENVIRONMENTAL SITE ASSESSMENT QUESTIONNAIRES (2)

ENVIRONMENTAL SITE ASSESSMENT QUESTIONNAIRE
FOR CLIENT

To evaluate the potential for possible environmentally related impacts and site contamination the following information is requested. This questionnaire is to be completed by the user of the phase one environmental site assessment, or their authorized representative.

PART I

1. Property address and Assessor's Parcel Number (APN):

   The project is generally located within publicly owned lands of Alameda County, Caltrans, San Francisco Public Utilities Commission, East Bay Regional Park District, and the City of Fremont. A small segment is within public property but within a trail easment.

2. Current property owner (name, address, voice/fax number):

   See above.

3. Date current property owner assumed title of property:

   Most have been owned by the respective agency for more than 50 years.

4. Current property development/improvements:

   Most is undeveloped.

5. Past property use, development/improvements:

   On the west side, there is the former Mission Clay property that made pipe. On the east side, there is agricultural uses.

6. Neighboring property uses:

   Residential, open space, and rail.

PART II

		Yes	No	N/A
1.	Are you aware of any environmental cleanup liens against the *property* that are filed under federal, tribal, local or state law?	☐	☑	
2.	Are you aware of any activity and land use limitations, such as engineering controls, land use restrictions, or institutional controls that are in place at the property and/or have been filed or recorded in a registry under federal, tribal, state or local law?	☑	☐	
3.	Do you have any specialized knowledge or experience related to the *property* or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the *property* or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?	☐	☑	
4.	If a property transaction is occurring in conjunction with this environmental assessment, does the purchase price of this *property* reasonably reflect the fair market value of the *property*?	☐	☐	☑
5.	If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the *property?*	☐	☐	☑
6.	Are you aware of any commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example, (a) do you know of specific chemicals that are present or once were present at the *property*? (b) do you know of spills or other chemical releases that have taken place at the *property*? (c) do you know of any environmental cleanups that have taken place at the *property*?	☑	☐	
7.	Based on your knowledge and experience related to the *property* are there any obvious indicators that point to the presence or likely presence of contamination at the *property*?	☐	☑	

If a "Yes" response was provided to any of the above questions, please provide details below:

I certify that the information herein is true and correct to the best of my knowledge as of the date signed below.

Name (Printed/Typed): Robert Stevens

Signature: Robert Stevens Date: 07.19.2023

ENVIRONMENTAL SITE ASSESSMENT QUESTIONNAIRE
FOR KEY SITE MANAGER

To evaluate the potential for possible environmentally related impacts and site contamination the following information is requested. This questionnaire is to be preferably completed by the current property owner, or owner representative, leasing agent, or other person having good knowledge of the uses and physical characteristics of the property (Key Site Manager).

PART I

1. Property Address/Location and Assessor's Parcel Number (APN):

   See above response.

2. Current property owner (name, address, voice/fax number):

3. Date current property owner assumed title of property:

4. Current property development/improvements:

5. Past property use, development/improvements:

6. Neighboring property uses:

PART II - The following questions should be answered to the best of your knowledge.

1.	Is/has the *property* or any adjoining property used/been used for industrial purposes?	☑ Yes	☐ No
2.	Has the *property* or any adjoining property been used as a gasoline station, motor repair facility, commercial printing facility, dry cleaners, photo developing laboratory, junkyard or landfill, or as a waste treatment, storage, disposal, processing, or recycling facility?	☐ Yes	☑ No
3.	Are there currently, or have there been previously, any damaged or discarded automotive or industrial batteries, or pesticides, paints, or other chemicals in individual containers of greater than 5 gal in volume or 50 gal in the aggregate, stored on or used at the *property* or at the facility?	☐ Yes	☑ No
4.	Has undocumented soil been brought onto the property at any time? If yes, estimated quantity is _____ cubic yards.	☐ Yes	☑ No
5.	Has soil been brought onto the property that originated from a contaminated site or that is of an unknown origin?	☐ Yes	☑ No
6.	Are there currently, or have there been previously, any pits, ponds, or lagoons located on the *property* in connection with waste treatment or waste disposal?	☐ Yes	☑ No
7.	Is there currently, or has there been previously, any stained soil on the *property*?	☐ Yes	☑ No
8.	Are there currently, or have there been previously, any registered or unregistered storage tanks (above or underground) located on the *property*?	☐ Yes	☑ No
9.	Are there currently, or have there been previously, any vent pipes, fill pipes, or access ways indicating a fill pipe protruding from the ground on the *property* or adjacent to any structure located on the *property*?	☐ Yes	☑ No
10.	Are there currently, or have there been previously, any flooring, drains, or walls located within the facility that are stained by substances other than water or are emitting foul odors?	☐ Yes	☑ No
11.	Are there any domestic, irrigation or monitoring wells on the property?	☐ Yes	☑ No
12.	If the *property* is served by a private well or non-public water system, have contaminants been identified in the well or system that exceed guidelines applicable to the water system or has the well been designated as contaminated by any government environmental/health agency?	☐ Yes	☑ No
13.	Have you been informed of the past or current existence of *hazardous substances* or *petroleum products* or environmental violations with respect to the *property* or any facility located on the *property*?	☐ Yes	☑ No
14.	Have there been any *environmental site assessments* of the *property* or facility that indicated the presence of *hazardous substances* or *petroleum products* on, or contamination of, the *property* or recommended further assessment of the *property*?	☐ Yes	☑ No
15.	Have there been any past, threatened, or pending lawsuits or administrative proceedings concerning a release or threatened release of any *hazardous substance* or *petroleum products* involving the *property*?	☐ Yes	☑ No
16.	Has there been any past agricultural use of the *property*, such as orchards or seed crop cultivation?	☐ Yes	☑ No
17.	Have any *hazardous substances* or *petroleum products*, unidentified waste materials, tires, automotive or industrial batteries or any other waste materials been dumped above grade, buried and/or burned on the *property*?	☐ Yes	☑ No
18.	Is there a transformer, capacitor, or any hydraulic equipment for which there are any records indicating the presence of PCBs?	☐ Yes	☑ No

If a "Yes" response was provided to any of the above questions, please provide details below:

Mission Clay see above.

I certify that the information herein is true and correct to the best of my knowledge as of the date signed below.

SPECIALIZATIONS
- Environmental Assessments and Remediation
- Environmental Restoration
- Water Quality Studies
- Water Wells/Hydrogeology

Since 1985, Shawn has been managing groundwater supply evaluations, hydrogeologic studies, chemical assessments, Phase I and II Site Assessments, UST site investigations, risk-based corrective action (RBCA), VOC remediation, and agricultural impact evaluations. He serves as Principal-in-Charge or Project Manager with extensive expertise in environmental and hazardous materials projects involving groundwater, hydrology, contaminant fate and transport, and complex remediation programs. A renowned expert in his field, Shawn has successfully solved many difficult environmental challenges to achieve desired project outcomes.

SELECT PROJECT EXPERIENCE

Heritage Fields, Great Park Neighborhoods—Irvine, CA
Principal in Charge. Shawn provided principal oversight of the preparation of over 50 phase I and Phase II Environmental Site Assessments for the former El Toro Marine Corps Air Station (MCAS). The site is currently under development as a large-scale mixed-use development including several schools, residential subdivisions, recreational facilities and commercial development. Shawn also provided consultation regarding environmental site characterization and remediation at the site.

Hanover Cannery Park Project No. 14-473—San Jose, CA
Principal in Charge. Shawn provided principal oversight and review of the Phase I ESA, and soil, groundwater, and soil gas sampling. The historical use of the site resulted in chlorinated solvent impacts to groundwater and soil gas. Results were communicated to the client as well as the oversight regulatory agency to come with the proposed remediation. The project consists of redeveloping an approximately 9-acre commercial/industrial property listed on the California Regional Water Quality Control Board's GeoTracker database as an open site assessment cleanup program site. Elevated concentrations of VOCs (specifically PCE and TCE) have been previously detected in soil, groundwater, and soil gas at the property.

Mission Village—Valencia, CA
Principal in Charge. Shawn provided principal oversight of multiple phase I/II environmental site assessments and site remediation. The project site consists of a large scale, residential and mixed-use subdivision, which was a former oil/gas production field, with more than 40 abandoned oil/gas wells.

Vita Pakt—Covina, CA
Principal in Charge. Shawn provided principal oversight of phase I/II environmental site assessments and risk evaluations. The approximately 5.9-acre site formerly operated as fruit processing and dehydration business (ceased operation by 2016) and is planned to be redeveloped into residential housing. Subsurface soil gas impacts were identified in association with past operations.

Innovation at Warm Springs—Fremont, CA
Principal in Charge. Shawn provided oversight of the preparation of Phase I and II ESAs, along with a Preliminary Endangerment Assessment (PEA) for a new elementary school site. The approximately 109-acre site is currently occupied by a parking lot, warehouse buildings, agricultural fields, and UPRR railroad tracks. The southern portion of the Property was a part of the former auto manufacturing and distribution facility jointly owned by Toyota and General Motors. The northern portion of the Property has been used for agricultural purposes since at least the late 1930s. Additionally, railroad tracks are present along the eastern boundary of the Property.

Former gasoline ASTs existed on the Property, along with a pump station and fuel dispensers, which were removed in 2010. The former car wash area also had a wastewater recovery system, which included oil/water separators, clarifiers, and interceptor tanks. One UST was located in the southeast portion of the agricultural fields, which was removed in 2004. Four 10,000-gallon diesel and gasoline USTs were formerly located in the southwestern portion of the Property in the haul-away parking lot area. Mixed-use redevelopment is planned for the Property. A phase II ESA was recommended for the Site, including soil and groundwater sampling.

277 Fairchild 228/236 Evandale Ave—Mountain View, CA
Principal in Charge. Shawn provided oversight of soil, groundwater and soil gas characterizations, risk evaluations and Response Action Plan preparation under USEPA oversight. The site is within the Middlefield-Ellis-Whisman (MEW) Superfund site, contaminated with chlorinated solvents from legacy semiconductor plant operations. On-going remedial activities included soil vapor extraction, groundwater treatment using bioaugmentation, and groundwater/soil gas monitoring. The proposed site development consists of detached single-family homes and townhomes.

The Rivers—West Sacramento, CA
Principal in Charge. Shawn provided oversight of during the preparation of a Removal Action Workplan (RAW) in coordination with CAL-EPA DTSC. The property is a proposed charter school site. ENGEO performed environmental site characterization work to address residual pesticide contamination die to historic termiticide applications. A Removal Action Workplan was developed under the oversight of CAL-EPA to excavate and remove the pesticide impacted soils. Remedial activities were completed in 2018 and DTSC issued a “no further action” letter.

Sparklizing Cleaners and Laundry—Fremont, CA
Group Leader, Principal in Charge, Project Manager. Shawn provided principal review and data analysis for this former dry cleaning facility, which had released tetrachloroethylene (PCE) to site soil and groundwater.

The project site consists of a dry-cleaning facility located within a commercial/retail center. Dry-cleaning operations have been conducted at the facility since 1974 and have resulted in chlorinated solvent impacts to soil and groundwater beneath the site. As a result, the CRWQCB opened a Spills, Leaks, Investigations, and Cleanups (SLIC) case and the site was referred to the Alameda County Water District (ACWD) for lead agency oversight. A series of soil and

groundwater investigations identified a source area beneath the drycleaner suite and an adjoining retail suite. ENGEO prepared a Corrective Action Plan (CAP) and coordinated the in-situ chemical oxidation program, which consisted of injecting 35,000 gallons of potassium permanganate to the subsurface to oxidize chlorinated solvents. The project is currently in the post remediation monitoring phase.

Pleasant Hill BART Station—Walnut Creek, CA
Principal in Charge. Shawn provided oversight, data analysis and consultation during the preparation of a Phase II Environmental Site Assessment. The property is an existing BART station that encompasses 20 acres, including the platform/station area, electrical facilities, a parking garage and additional paved parking areas.

Westshore—Richmond, CA
Project Manager. Shawn conducted Phase I and II Site Assessments, risk evaluations and prepared a soil management plan. The property was a former automotive manufacturing plant proposed for a multi-unit condominium development, including a 6-story podium structure to include five residential floors with 269 units and one parking floor.

Rancho Miramonte—Chino, CA
Principal in Charge. Shawn performed Principal review of ENGEO's environmental documents for this large former dairy facility, proposed for a large-scale detached single-family residential subdivision. Issues with the site included former leaking USTs, nitrate impacts from manure disposal, and surface water impairments. The project was approved for development by the County Environmental Health Department.

Hercules Property—Hercules, CA
Project Manager. Shawn provided oversight of a Phase I Environmental Site Assessment, site asbestos survey, site characterization, and demolition observation/contaminant assessment. The project area consists of ±167 acres located near and along the southeastern shore of San Pablo Bay in Hercules. The property was once a portion of a 1300-acre manufacturing facility that was operated by DuPont from 1879 to 1913 and Hercules Incorporated from 1913 to 1979. The planned development includes single/multi-family residential development with some commercial components.

Highlands Ranch—Pittsburgh, CA
Principal in Charge. Shawn provided oversight, data analysis, and collaboration with RWQCB personnel. The project site consists of a 140-acre portion of the former Chevron Los Medanos Tank Farm located in Pittsburg, California. The site was historically occupied by 24 crude oil tanks and four wax ponds. Remediation of the crude oil tank and wax pond locations was conducted according to a remedial action plan (RAP) and oversight was provided by the CRWQCB. Remediation was performed over a period of four months and consisted of excavating approximately 110,000 cubic yards of impacted soil and placing the material in windrows for ex-situ bioremediation.

MEMORANDUM

TO: Shanna Guiler

FROM: Robert Stevens, PE, TE

CC: Mike Vidra

DATE: 03.25.2022

SUBJECT: Trail users and associated parking demand and traffic generated by the Niles Canyon Trail

This memorandum estimates trail use, parking demand, and traffic generated from the development of the Niles Canyon Trail. The project will be constructed in three phases. Phase 1 is the segment that extends from the existing Alameda Creek staging area to Palomares Road with its gateway in Niles. Phases 2 and 3 extend the trail to the unincorporated Alameda County community of Sunol. This analysis focuses primarily focuses on Phase 1, which will be initially constructed. We expect to use user and parking data collected in Phase 1 to help refind the demand for phases 2 and 3.

Trail Demand

Predicting trail user data is complicated. However, as the Niles Canyon Trail can be considered an extension of the Alameda Creek Trail (ACT), we have acquired data from the East Bay Regional Park District (EBRPD) on user demand at three locations along the ACT as shown in Figure 1 and described as follows:

- Site 5 – At Dry Creek
- Site 6 – Near Quary lakes
- Site 7 – Near Ardenwood Boulevard

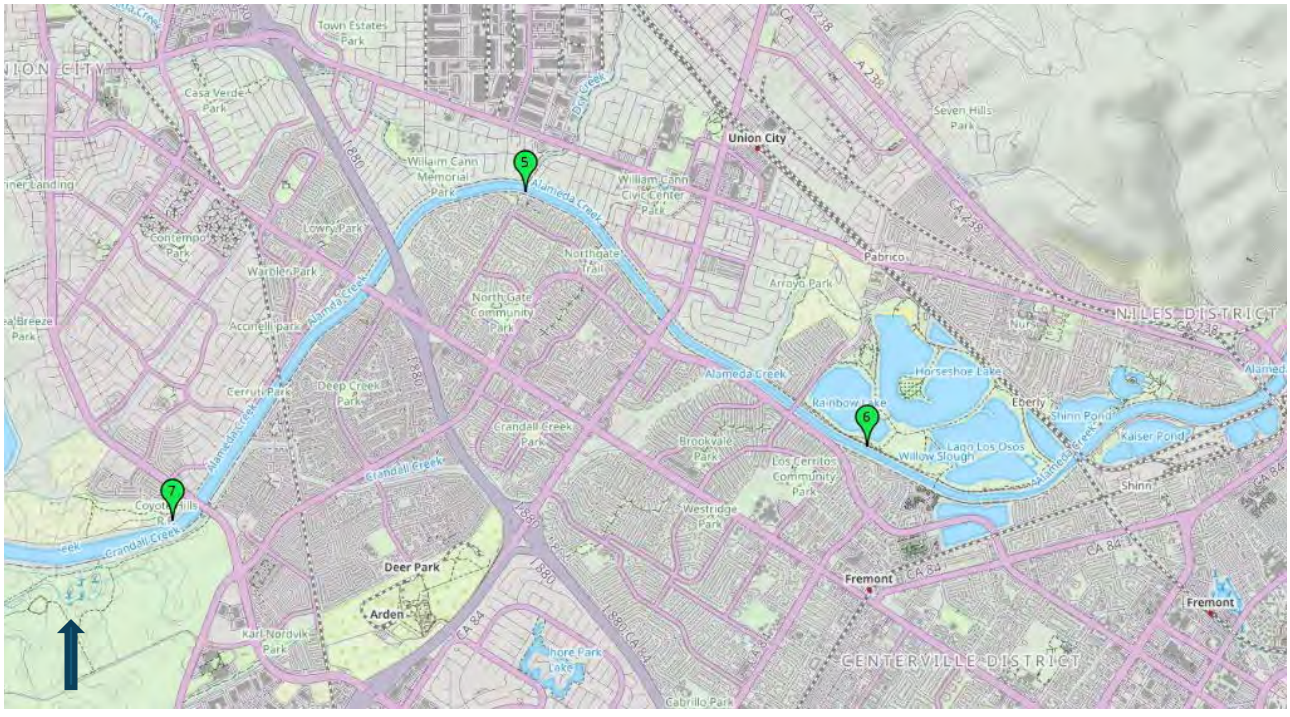

Figure 1 – EBRBD Trail Counters along the Alameda Creek Trail

Looking at the 2021 user data, the following summarizes average daily trips per day of the week as well as peak day use at each location:

Table 1. Average Daily and Peak Day Trips in 2021

	Location 5	Location 6	Location 7
Monday	229	191	104
Tuesday	216	195	100
Wednesday	218	186	103
Thursday	215	191	96
Friday	227	183	103
Saturday	352	233	136
Sunday	352	223	135
Peak Trip	824	508	303

The average daily trail users from September 2010 to February 2022 for sites 5, 6, and 7 is 245, 185, and 110 respectively. Thus, when comparing these values to the 2021 data, trail use remains reasonably consistent indicating that COVID-19 did not create a major impact on demand.

In general, the weekends have heavier use than the weekdays. Looking at the sites, locations 6 and 7 have more similar land uses as the Niles Canyon Trail, so they represent a reasonable approximation of users. Averaging between the two, this would represent about 180 average daily trail users. The trails are generally used from 6 AM to about 8 PM, with peaks in the morning and evening as shown in the following figure for location 6 during 2021.

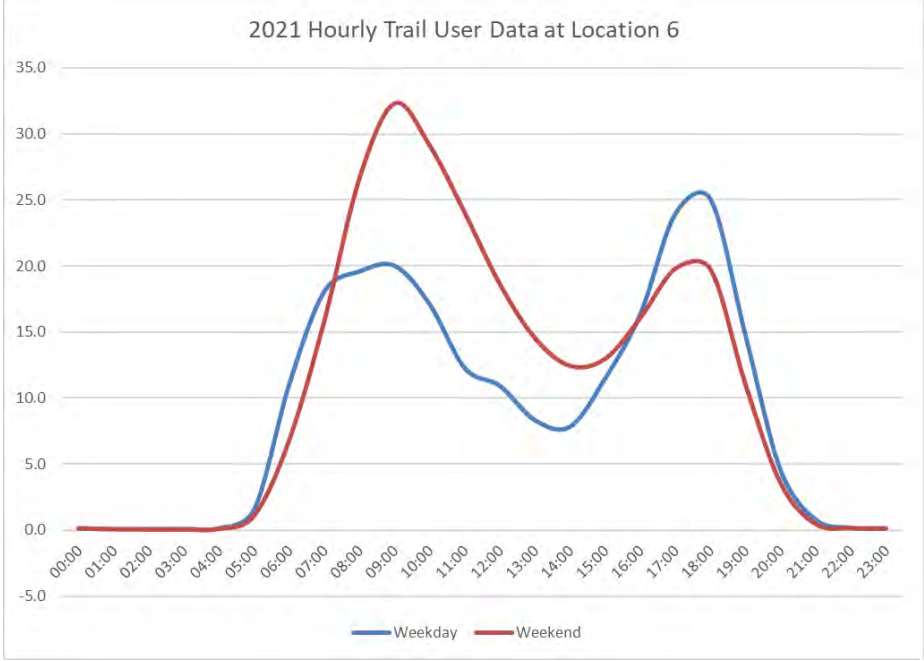

Figure 2 – Hourly Trail User Data at Location 6

During the peak hour, there are a little more than 30 trails users on the trail on a Saturday at 9 AM and about 25 using the trail on a weekday at 6 PM.

The total length of the proposed trail is approximately 6 miles, which compares approximately with the Alameda Creek trail illustrated in Figure 1, which is almost 5 miles. If we assume an average trail user can travel about 3 miles in an hour and spends about 1.5 hours on site, the majority of users typically only access a small segment of the trail traveling about 1.5 miles out and back. These users will gain access at staging areas located in Niles, Palomares Road, and Sunol.

If we were to assume that each of the three segments of trail could have 30 users during the peak period, that would be a total of about 90 users. However, because the population density in Niles is much higher than Sunol, these users would not be uniformly distributed. The Stroll and Roll events held in 2015, 2017, and 2019 are helpful at gaging the distribution of users at the staging area. Typically, 60% of the users originate in Niles and 40% in Sunol. Therefore, if we assumed 60% of the 90 total users originated in Niles, that would be 54 with the remaining 36 gaining access in Sunol. Assuming that 10% of the Niles users will access at Palomares, that would be 6 with the remaining 48 in Niles.

We would expect that many trail users would live near the staging area or would travel together rather than in sole occupancy vehicles. To be conservative, we will assume that 50% of the peak users require parking. The following summarizes peak parking demand.

Table 2. Peak Trail User Parking Demand

Staging Area	Peak User Demand	Parking Stall Demand
Niles	48	24
Palomares Road	6	3
Sunol	36	18

Like the peak hour analysis, the average day demand of 180 users can be distributed as follows:

Table 3. Total Trail User Demand per Day

Staging Area	Total User Demand per Day	One Way Vehicle Trips
Niles	292	146
Palomares Road	32	16
Sunol	216	108

Parking Assessment

The project intends to create enhancements to link trail users to parking facilities at Alameda Creek and within downtown Niles. Based upon our observations, the Farmer's Market, which occurs in Downtown Niles consumes all available parking during the peak Saturday morning trail use. Thus, the project proposes to offer parking at the currently underutilized Vallejo Mill facility to serve users entering the trail at Niles. This facility has the ability to be expanded based upon trail demand. Figure 3 illustrates parking demand for various locations within Niles collected on November 12, 13, and 14, 2021.

For the Sunol side of the trail, there is no public parking available except at the Tyler Staging Area currently under construction by the EBRPD. Conceptually, the EBRPD could share this parking area with the Niles Canyon Trail. The July 2012 Initial Study and Mitigated Negative Declaration prepared by the EBRPD for the Pleasanton Ridge Regional Park Land Use Plan concluded that the Tyler Ranch Staging Area would fill to capacity twice daily on a peak day such as a Sunday in spring. The report notes that this is a "conservative" assumption. Thus, for the majority of the time, the parking stalls would be vacant. Therefore, there is an opportunity to share parking with the Niles Canyon Trail.

The following table illustrates peak period parking for the Niles Canyon Trail.

Table 4. Availability of Parking Stalls.

Parking Area	Total Number of Stalls	Occupancy During Peak Period	Available Number of Stalls During Peak
Town Plaza - Niles	76	>100%	0
Railroad Depot – Niles	122	93%	8
Alameda Creek – Niles	13	100%	0
Vallejo Mill - Niles	30	<25%	22
Palomares – Niles	13	Not Applicable	13
Tyler Ranch - Sunol	70	About 50%	35

Thus, there is a small deficit in the number of parking stalls at the Niles staging area. The recommendation is to add approximately 10 more stalls to the parking area. At the Sunol side, Alameda County should monitor parking at Tyler Ranch to determine if sufficient parking exists during peak periods to server both the Niles Canyon and EBRPD use.

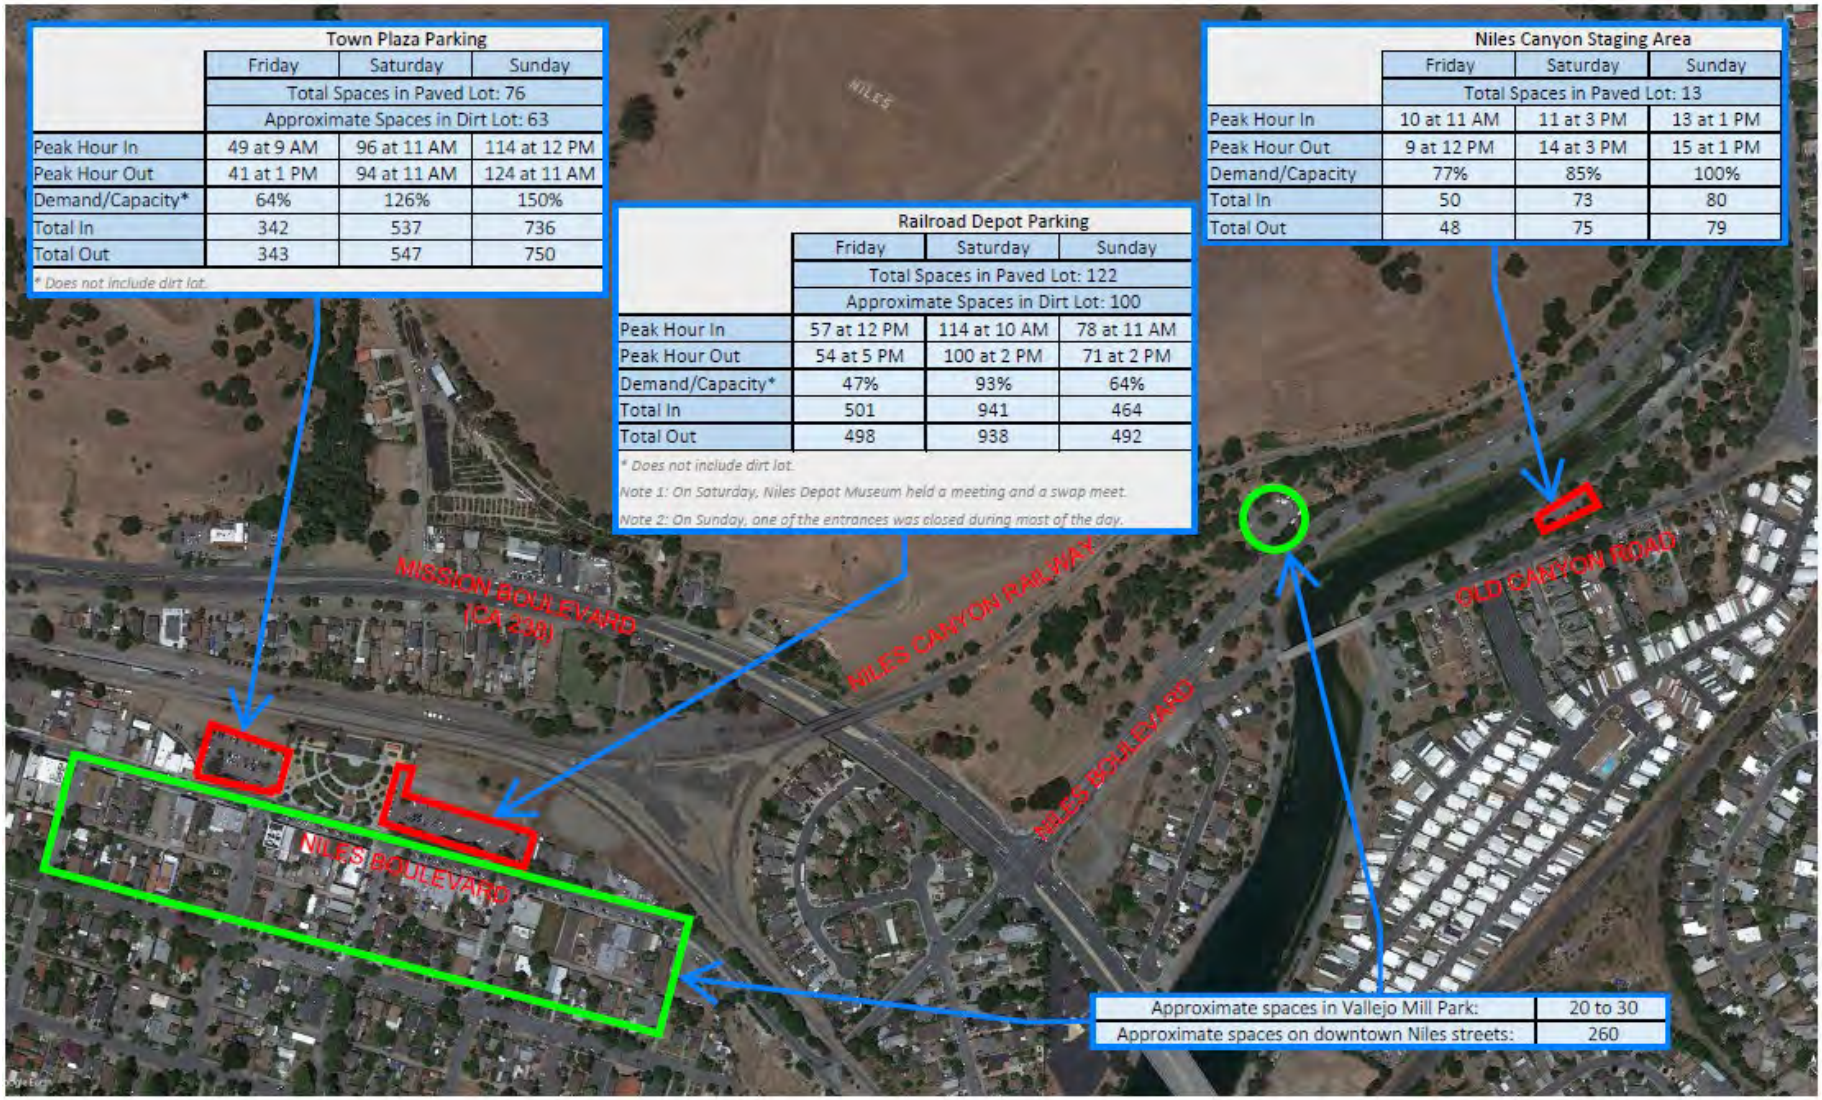

Figure 3 – Available Parking in the Niles District

Vehicle Trips

Table 3 above illustrates the total number of vehicle trips anticipated to visit the staging area during a 24 hour period. The total vehicle trips are double as visitors travel in and out from a staging area as noted in the following table:

Table 5. Total Vehicle Trips to Staging Areas

Staging Area	Total Vehicle Trips
Vallejo Mill - Niles	292
Palomares – Niles	32
Tyler Ranch - Sunol	216

According to the State of California Department of Transportation, State Route 84 has an Annual Average Daily Traffic volume of 15,000 vehicles. Thus, the additional trips generated by the trail are insignificant.

The Initial Study and Mitigated Negative Declaration (IS-MND) prepared by the East Bay Regional Park District for the Pleasanton Ridge Regional Park Land Use Plan evaluated traffic for the Tyle Ranch Staging Area. The report found that the project would generate a peak total of 360 daily vehicle trips, which would only occur several days each year. This typically would occur on Sundays and holidays and therefore would generate few vehicle trips during the weekday peak commute traffic periods. Since existing average daily traffic on Foothill Road is about 200 vehicles (confirmed by a traffic count in January 2022), the IS-MND notes that the probability of traffic delays on Foothill Road due to the additional traffic would be low.

Recommendations

Predicting trail user data is difficult. Fortunately, data is available for other regional trails that can help in the planning process. As trail use typically peaks on the weekends, it does not conflict with commute traffic. However, high trail demand can create complications in neighborhoods should insufficient off street parking be provided by the project. To manage the Niles Canyon Trail, we recommend the following:

1. Develop maps and wayfinding system to guide users to parking for the Niles Canyon trail.
2. Establish no parking zone along Old Canyon Road.
3. Provide trail connectivity to parking provided in downtown Niles and Vallejo Mill.
4. Expand the parking at Vallejo Mill by no less than 10 stalls.
5. Upon completion of phase 1 of the Niles Canyon Trail, record daily trail use for a period of 1 year to determine average and peak data. Include interview to determine how users get to the trail.
6. Upon completion of the Tyler Ranch staging area, record hourly parking data for one month in spring to determine average and peak data. This should also include a holiday weekend where the EBRPD typically expects high user demand.

By developing the trail incrementally and collecting data on use, future planners can guide phases 2 and 3 of Niles Canyon Trail that minimize impact on residents and stakeholders within Niles Canyon.
