PHASE I ENVIRONMENTAL SITE ASSESSMENT REPORT

2311 North Hollywood Way
Burbank, California 91505

Report Date: May 18, 2020
Partner Project No. 20-279443.1

Prepared for:

LaTerra Development, LLC
1880 Century Park East, Suite 1017
Los Angeles, California 90067

PARTNER
Engineering and Science, Inc.

May 18, 2020

Mr. Justin Fleming
LaTerra Development, LLC
1880 Century Park East, Suite 1017
Los Angeles, California 90067

Subject: Phase I Environmental Site Assessment
2311 North Hollywood Way
Burbank, California 91505
Partner Project No. 20-279443.1

Dear Mr. Fleming:

Partner Engineering and Science, Inc. (Partner) is pleased to provide the results of the *Phase I Environmental Site Assessment* (Phase I ESA) report of the abovementioned address (the "subject property"). This assessment was performed in conformance with the scope and limitations as detailed in the ASTM Practice E1527-13 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process.

This assessment included a site reconnaissance as well as research and interviews with representatives of the public, property ownership, site manager, and regulatory agencies. An assessment was made, conclusions stated, and recommendations outlined.

We appreciate the opportunity to provide environmental services to you. If you have any questions concerning this report, or if we can assist you in any other matter, please contact me at (310) 765-7243.

Sincerely,

Jenny Redlin
Relationship Manager

EXECUTIVE SUMMARY

Partner Engineering and Science, Inc. (Partner) has performed a Phase I Environmental Site Assessment (ESA) in accordance with the scope of work and limitations of ASTM Standard Practice E1527-13, the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (AAI) (40 CFR Part 312) and set forth by LaTerra Development, LLC for the property located at 2311 North Hollywood Way in Burbank, Los Angeles County, California (the "subject property"). The Phase I Environmental Site Assessment is designed to provide LaTerra Development, LLC with an assessment concerning environmental conditions (limited to those issues identified in the report) as they exist at the subject property.

Property Description

The subject property is located on the northwestern corner of North Hollywood Way and Valhalla Drive within a mixed commercial and industrial area of Los Angeles County. Please refer to the table below for further description of the subject property:

Subject Property Data	
Address:	2311 North Hollywood Way, Burbank, California
Property Use:	Commercial – Retail
Land Acreage (Ac):	10.43 Ac
Number of Buildings:	Three
Number of Floors:	One
Gross Building Area (SF):	104,404 SF (Total)
Date of Construction:	1962
Assessor's Parcel Number (APN):	2463-001-019
Type of Construction:	Concrete-Tilt-Up, Slab-on-Grade
Current Tenants:	Fry's Electronics
Site Assessment Performed By:	Louis Mowers of Partner
Site Assessment Conducted On:	April 16, 2020

The subject property is currently occupied by Fry's Electronics for commercial storage and retail use. Onsite operations consist of electronic and miscellaneous product sales, storage, distribution, online pick-up, automotive stereo installation, delivery reception, and typical management and maintenance practices. The subject property consists of three one-story buildings. The main commercial building is located on the southern section of the property with the additional two buildings, one used for an abandoned HVAC system housing, and the other used as a currently non-operational automotive stereo installation garage, located on the western side of the primary structure. In addition to the current structures, the subject property is also improved with asphalt paved parking areas, concrete walkways, a caged delivery center, and associated landscaping.

Based on review of historical sources, the subject property was formerly undeveloped land from as early as 1894; and developed as a dairy with associated residential structures and a store between circa-1928 and the early-1960s. By 1962, the subject property was redeveloped with the current commercial structure on the southern portion and Lockheed Martin (referred to as Plant A-1 South) occupied the property from

1969 to December 1995 for use as offices, a vehicle maintenance shop and parking. Additionally, a gasoline service station/automotive repair operation was developed on the northeastern portion of the subject property in 1962, which was acquired by Lockheed Martin in the mid-1960s and utilized as a gasoline service station/automotive repair operation for Lockheed fleet vehicles until closure in 1992. The subject property has been occupied by Fry's Electronics for retail use since at least 1995. Significant tenants at the subject property include Shoman Dairy (1950s), Lockheed Martin (1960s-1995), Unimart (1962-1986), and Fry's Electronics (1995-Present).

The immediately surrounding properties consist of Burbank Airport Rent-a-Car center to the north across Vanowen Street and Empire Avenue; multi-tenant commercial/industrial to the south across Valhalla Drive; Army National Guard to the southwest across Valhalla Dive; Public Storage across the intersection of North Hollywood Way and Valhalla Drive; Logix Smarter Banking to the east across North Hollywood Way; and Motion Picture Costum, Midnight Oil Agency, and ARRI Inc. to the west.

According to the Regional Water Quality Control Board (RWQCB) online database GeoTracker, a previous subsurface investigation conducted on the subject property (1995) indicates the depth to groundwater in the vicinity of the subject property is approximately 156 feet below ground surface (bgs) and groundwater flow is inferred to be toward the southeast.

Findings

A *recognized environmental condition (REC)* refers to the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: due to release to the environment; under conditions indicative of a release to the environment; or under conditions that pose a material threat of a future release to the environment. The following was identified during the course of this assessment:

- The subject property is located within the boundaries of the Burbank Operable Unit (BOU) of the San Fernando Valley North Hollywood National Priorities List (NPL) site, an area of known groundwater contamination. Constituents of Concern (COCs) that have been identified include semi-volatile organic compounds (SVOCs), Volatile Organic Compounds (VOCs) and chromium. The subject property was one of many sites investigated by RWQCB and USEPA as a potential responsible party (PRP) of the groundwater contamination. On July 6, 1995 a letter was issued to Lockheed by RWQCB indicating the subject property would no longer be under investigation for potential groundwater contamination for VOCs and the subject property (former Lockheed Plant A-1 South) and current ownership (Gort Limited) were noted to be excluded from the requirements of the Cleanup and Abatement Order No. 87-161, which is associated with the cleanup of several Lockheed plants in the Burbank area.

  Former site occupant, Lockheed Martin, monitors groundwater within the BOU to comply with the provisions of a USEPA Consent Decree (#91-4527-MRP) filed March 1992, and the CRWQCB Cleanup and Abatement Order (#87-161) dated December 1987. As part of the NPL investigation, two groundwater monitoring wells, A-1-CW04 and A-1-CW09, were installed in the north and northeast portion of the subject property, respectively. A third well, monitoring well A-1-CW05 was co-located with monitoring well A-1-CW04 at a later date. Partner contacted Ms. Anita Fang

with CRWQCD regarding the most recent groundwater monitoring results on file with the agency for the BOU. A review of an Annual Groundwater Monitoring Report, Second Quarter 2017 Burbank Operable Unit, provided by Ms. Fang indicates 1,2,3 Trichloropropane (1,2,3 TCP), 1,4 Dioxane, various other VOCs (including Tetrachloroethylene (PCE) and Trichloroethene (TCE), hexavalent chromium and chromium were detected in the onsite wells at levels above the reporting limit (RL), with an increasing trend of 1,2,3 TCP concentrations. Chromium was detected in well A-1-CW04 at 0.88 ug/L which exceeds the Maximum Contaminant Level (MCL).

Lockheed Martin has conducted groundwater monitoring of the onsite wells since approximately 1996 and has been identified as a potential contributor to the regional groundwater contamination. As discussed, the current property owner (Gort, Ltd) has not been identified as a potential responsible party (PRP) and it is unlikely the subject property owner would be responsible for future remediation activities since NFA was issued in 1995. Furthermore, based on the depth to groundwater, review of the most recent groundwater analytical results, and commercial usage of the subject property, a vapor intrusion condition (VIC) is unlikely to exist at the subject property. The location of the subject property within the Burbank Operable Unit of the San Fernando Valley NPL investigation, the identification of a former site occupant as a potential contributor to the regional impact, and the reported VOC and chromium groundwater contamination identified in onsite wells is considered a REC for the subject property; however, based on the lack of an apparent VIC and issuance of an NFA letter with regards to the former subject property operations, Partner recommends no further investigation at this time with regards to this regional groundwater contamination case.

A *controlled recognized environmental condition (CREC)* refers to a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls. The following was identified during the course of this assessment:

- Based on review of historical sources, by 1962, the subject property was redeveloped with the current commercial structure on the southern portion and Lockheed Martin (referred to as Plant A-1 South) occupied the property from 1969 to December 1995 for use as offices, a vehicle maintenance shop and parking. Additionally, a gasoline service station/automotive repair operation was developed on the northeastern portion of the subject property in 1962, which was acquired by Lockheed Martin in the mid-1960s and utilized as a gasoline service station/automotive repair operation for Lockheed fleet vehicles until closure in 1992. The subject property has been occupied by Fry's Electronics for retail use since at least 1995.

  The subject property at 2311 North Hollywood Way was identified in the regulatory database report under the names Lockheed Martin, Gort Limited and Fry's Electronics. Based on information provided in a previous Phase I ESA report (PSI, 1998) and from a file review, this former operation included four (4) 12,000-gallon gasoline/diesel/tetrachloroethylene (PCE) USTs, one 550-gallon waste oil UST, one concrete 1,600-gallon clarifier and seven (7) dispensers. The

UST containing PCE served as a central supply point for Lockheed's other plants in the Burbank area. The former gasoline service station/automotive repair operation was demolished in 1992 and the former underground storage tank (USTs) and clarifier were removed as part of the demolition. Additionally, other features including hydraulic lifts and storm drains were removed during this demolition under the supervision of the Burbank Fire Department. Following removal of the USTs and other associated features of potential concern, a total of twenty-one soil samples were collected from the excavated areas. According to the analytical results, subsurface soil was found to be impacted with PCE, diesel fuel and hydraulic oil.

Between 1992 and 1995, seven (7) subsurface investigations were conducted at the subject property in relation to this reported release to the subsurface as a result of the former operations, and a total of 426 soil samples were collected from the former service station during this period. The 1992 subsurface investigation included 78 soil borings to depths of 10 to 40 feet bgs, and soil samples collected from varying intervals were analyzed for VOCs, PCBs, and TPH. According to the analytical results, TPH impacts were generally confined to the upper 10 feet of soil. Elevated VOC impacts were also generally limited to the upper 10 feet of soil, with one boring noting PCE impacts extending to 25 feet bgs. In 1993, a Soil Gas Survey was conducted on the subject property to further evaluate the extent of the subsurface impacts. A total of 181 soil-gas samples were collected from 159 locations across the subject property at depths ranging from 5 to 25 feet bgs, and the samples were analyzed for VOCs. According to the analytical results, twelve of the sample collected from the 5-foot depth contained PCE in excess of 0.1 mg/L, with one sample exceeding 1.0 mg/L. None of the samples collected from the 20-foot depth contained concentrations of PCE above 1.0 mg/L. Additional site characterization was conducted in 1994/1995 which included additional soil borings and sampling and additional soil vapor sampling. A total of 18 of the 426 soil samples contained concentrations of PCE above 1 mg/kg.

Based on review of the Final Soil Remediation Report dated May 22, 1995 by Lockheed Martin Corporation, approximately 1,380 tons of PCE- and diesel/oil-impacted soil was excavated and removed from the subject property. Following removal, a total of 109 confirmation soil samples were collected from the base and sidewalls of the excavation and analyzed for VOCs, TPH, and lead. According to the analytical results, the confirmation soil samples all contained less than 150 ug/kg of PCE. As such, the excavations were backfilled with approved clean fill, and a request for closure was submitted with the report. Based on review of the 1995 final soil remediation report, in a letter dated July 5, 1995, the California Regional Water Quality Control Board (RWQCB) issued a No Further Action status to the subject property and indicated the subject property had been remediated in accordance with Cleanup and Abatement Order No. 87-161. As such, the subject property (former Lockheed Plant A-1 South) and current ownership (Gort Limited) were noted to be excluded from the requirements of the Cleanup and Abatement Order No. 87-161, which is associated with the cleanup of several Lockheed plants in the Burbank area. Based on the regulatory closure with residual PCE-impacted soil left in place, the historical usage of the subject property and associated closed release case are considered a CREC for the subject property. As such, prior to any redevelopment activities and due to the presence of residual PCE-impacted soil

in the subsurface, Partner recommends a soil vapor survey be conducted to evaluate potential vapor intrusion issues for any future onsite buildings. Additionally, if the redevelopment plan includes subterranean levels, Partner recommends implementing a Soil Management Plan (SMP).

A *historical recognized environmental condition (HREC)* refers to a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls. The following was identified during the course of this assessment:

- Partner did not identify any HRECs during the course of this assessment.

An *environmental issue* refers to environmental concerns identified by Partner, which do not qualify as RECs; however, warrant further discussion. The following was identified during the course of this assessment:

- Due to the age of the subject property buildings, there is a potential that asbestos-containing material (ACM) and/or lead-based paint (LBP) are present. Readily visible suspect ACMs and painted surfaces were observed in good condition. The identified suspect ACMs and LBPs would need to be sampled to confirm the presence or absence of asbestos or lead prior to any renovation or demolition activities to prevent potential exposure to workers and/or building occupants.

Conclusions, Opinions and Recommendations

Partner has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 of 2311 North Hollywood Way in Burbank, Los Angeles County, California (the "subject property"). Any exceptions to, or deletions from, this practice are described in Section 1.5 of this report.

This assessment has revealed evidence of a REC, CREC and environmental issue in connection with the subject property. Based on the conclusions of this assessment, Partner recommends the following:

- Prior to any redevelopment activities and due to the presence of residual PCE-impacted soil in the subsurface, Partner recommends a soil vapor survey be conducted to evaluate potential vapor intrusion issues for any future onsite buildings. Additionally, if the redevelopment plan includes subterranean levels, Partner recommends implementing a Soil Management Plan (SMP).
- An Operations and Maintenance (O&M) Program should be implemented in order to safely manage the suspect ACMs and LBP located at the subject property.

1.0 INTRODUCTION

Partner Engineering and Science, Inc. (Partner) has performed a Phase I Environmental Site Assessment (ESA) in conformance with the scope and limitations of ASTM Standard Practice E1527-13 and the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (AAI) (40 CFR Part 312) for the property located at 2311 North Hollywood Way in Burbank, Los Angeles County, California (the "subject property"). Any exceptions to, or deletions from, this scope of work are described in the report.

1.1 Purpose

The purpose of this ESA is to identify existing or potential Recognized Environmental Conditions (as defined by ASTM Standard E1527-13) affecting the subject property that: 1) constitute or result in a material violation or a potential material violation of any applicable environmental law; 2) impose any material constraints on the operation of the subject property or require a material change in the use thereof; 3) require clean-up, remedial action or other response with respect to Hazardous Substances or Petroleum Products on or affecting the subject property under any applicable environmental law; 4) may affect the value of the subject property; and 5) may require specific actions to be performed with regard to such conditions and circumstances. The information contained in the ESA Report will be used by Client to: 1) evaluate its legal and financial liabilities for transactions related to foreclosure, purchase, sale, loan origination, loan workout or seller financing; 2) evaluate the subject property's overall development potential, the associated market value and the impact of applicable laws that restrict financial and other types of assistance for the future development of the subject property; and/or 3) determine whether specific actions are required to be performed prior to the foreclosure, purchase, sale, loan origination, loan workout or seller financing of the subject property.

This ESA was performed to permit the *User* to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on scope of Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) (42 U.S.C. §9601) liability (hereinafter, the "*landowner liability protections*," or "*LLPs*"). ASTM Standard E1527-13 constitutes "*all appropriate inquiry* into the previous ownership and uses of the *property* consistent with good commercial or customary practice" as defined at 42 U.S.C. §9601(35)(B).

1.2 Scope of Work

The scope of work for this ESA is in accordance with the requirements of ASTM Standard E1527-13. This assessment included: 1) a property and adjacent site reconnaissance; 2) interviews with key personnel; 3) a review of historical sources; 4) a review of regulatory agency records; and 5) a review of a regulatory database report provided by a third-party vendor. Partner contacted local agencies, such as environmental health departments, fire departments and building departments in order to determine any current and/or former hazardous substances usage, storage and/or releases of hazardous substances on the subject property. Additionally, Partner researched information on the presence of activity and use limitations (AULs) at these agencies. As defined by ASTM E1527-13, AULs are the legal or physical restrictions or limitations on the use of, or access to, a site or facility: 1) to reduce or eliminate potential

exposure to hazardous substances or petroleum products in the soil or groundwater on the subject property; or 2) to prevent activities that could interfere with the effectiveness of a response action, in order to ensure maintenance of a condition of no significant risk to public health or the environment. These legal or physical restrictions, which may include institutional and/or engineering controls (IC/ECs), are intended to prevent adverse impacts to individuals or populations that may be exposed to hazardous substances and petroleum products in the soil or groundwater on the property.

If requested by Client, this report may also include the identification, discussion of, and/or limited sampling of asbestos-containing materials (ACMs), lead-based paint (LBP), mold, and/or radon.

1.3 Limitations

Partner warrants that the findings and conclusions contained herein were accomplished in accordance with the methodologies set forth in the Scope of Work. These methodologies are described as representing good commercial and customary practice for conducting an ESA of a property for the purpose of identifying recognized environmental conditions. There is a possibility that even with the proper application of these methodologies there may exist on the subject property conditions that could not be identified within the scope of the assessment or which were not reasonably identifiable from the available information. Partner believes that the information obtained from the record review and the interviews concerning the subject property is reliable. However, Partner cannot and does not warrant or guarantee that the information provided by these other sources is accurate or complete. The conclusions and findings set forth in this report are strictly limited in time and scope to the date of the evaluations. The conclusions presented in the report are based solely on the services described therein, and not on scientific tasks or procedures beyond the scope of agreed-upon services or the time and budgeting restraints imposed by the Client. No other warranties are implied or expressed.

Some of the information provided in this report is based upon personal interviews, and research of available documents, records, and maps held by the appropriate government and private agencies. This report is subject to the limitations of historical documentation, availability, and accuracy of pertinent records, and the personal recollections of those persons contacted.

This practice does not address requirements of any state or local laws or of any federal laws other than the all appropriate inquiry provisions of the LLPs. Further, this report does not intend to address all of the safety concerns, if any, associated with the subject property.

Environmental concerns, which are beyond the scope of a Phase I ESA as defined by ASTM include the following: ACMs, LBP, radon, and lead in drinking water. These issues may affect environmental risk at the subject property and may warrant discussion and/or assessment; however, are considered non-scope issues. If specifically requested by the Client, these non-scope issues are discussed in Section 6.3.

1.4 User Reliance

LaTerra Development, LLC engaged Partner to perform this assessment in accordance with an agreement governing the nature, scope and purpose of the work as well as other matters critical to the engagement. All reports, both verbal and written, are for the sole use and benefit of LaTerra Development, LLC. Either

verbally or in writing, third parties may come into possession of this report or all or part of the information generated as a result of this work. In the absence of a written agreement with Partner granting such rights, no third parties shall have rights of recourse or recovery whatsoever under any course of action against Partner, its officers, employees, vendors, successors or assigns. Any such unauthorized user shall be responsible to protect, indemnify and hold Partner, Client and their respective officers, employees, vendors, successors and assigns harmless from any and all claims, damages, losses, liabilities, expenses (including reasonable attorneys' fees) and costs attributable to such Use. Unauthorized use of this report shall constitute acceptance of and commitment to these responsibilities, which shall be irrevocable and shall apply regardless of the cause of action or legal theory pled or asserted. Additional legal penalties may apply.

1.5 Limiting Conditions

The findings and conclusions contain all of the limitations inherent in these methodologies that are referred to in ASTM E1527-13.

Specific limitations and exceptions to this ESA are more specifically set forth below:

- Interviews with past owners, operators and occupants were not reasonably ascertainable and thus constitute a data gap. Based on information obtained from other historical sources (as discussed in Section 3.0), this data gap is not expected to alter the findings of this assessment.
- Partner requested information relative to deed restrictions and environmental liens, a title search, and completion of a pre-survey questionnaire from the Report User. This information was not provided at the time of the assessment. Based on information obtained from other historical sources (as discussed in Section 3.0), this data gap is not expected to alter the findings of this assessment.
- Partner was unable to determine the property use at 5-year intervals, which constitutes a data gap. Except for property tax files and recorded land title records, which were not considered to be sufficiently useful, Partner reviewed all standard historical sources and conducted appropriate interviews.

2.0 SITE DESCRIPTION

2.1 Site Location and Legal Description

The subject property at 2311 North Hollywood Way in Burbank, California is located on the northwestern corner of North Hollywood way and Valhalla Drive. According to the Los Angeles County Assessor, the subject property is legally described as "*P M 269-99-100 LOT 1*", and ownership is currently vested in GORT Limited since 1995.

Please refer to Figure 1: Site Location Map, Figure 2: Site Plan, Figure 3: Topographic Map, and Appendix A: Site Photographs for the location and site characteristics of the subject property.

2.2 Current Property Use

The subject property is currently occupied by Fry's Electronics for commercial storage and retail use. Onsite operations consist of electronic and miscellaneous product sales, storage, distribution, online pick-up, automotive stereo installation, delivery reception, and typical management and maintenance practices. The subject property consists of three one-story buildings. The main commercial building is located on the southern section of the property with the additional two buildings, one used for an abandoned HVAC system housing, and the other used as a currently non-operational automotive stereo installation garage, located on the western side of the primary structure. In addition to the current structures, the subject property is also improved with asphalt paved parking areas, concrete walkways, a caged delivery center, and associated landscaping.

The subject property is designated C-3 for Commercial General Business development by the City of Burbank.

The subject property was identified as a Resource Conservation Recovery Act (RCRA) site, Hazardous Waste Manifest Data (HAZNET) and Hazardous Waste Tracking Systems (HWTS) site, Clandestine Drug Lab (CDL) and Enforcement Action (EDL) site, CalEPA Hazardous Waste (CERS HAZ WASTE) site, Underground Storage Tank (SWEEPS UST) and Facility Inventory Database UST (FID UST) site, and Well Investigation Program (WIP) site in the regulatory database report, as further discussed in Section 4.2.

2.3 Current Use of Adjacent Properties

The subject property is located within a mixed commercial and industrial area of Los Angeles County. During the vicinity reconnaissance, Partner observed the following land use on properties in the immediate vicinity of the subject property:

Immediately Surrounding Properties	
North:	Vanowen Street and Empire Avenue beyond which is Burbank Airport Rent-a-Car center (2501 North Hollywood Way)
South:	Valhalla Drive beyond which is multi-tenant commercial/industrial (3520 Valhalla Drive and 2243 North Hollywood Way)
Southwest	Valhalla Drive beyond which is the Army National Guard (3800 Valhalla Drive)
Southeast	The intersection of North Hollywood Way and Valhalla Drive beyond which is Public Storage (2240 North Hollywood Way)

Immediately Surrounding Properties

East: North Hollywood Way beyond which is Logix Smarter Banking (2328 North Hollywood Way)

West: Motion Picture Costume, Midnight Oil Agency, and ARRI Inc. (3811 Valhalla Drive, and 3800 and 3700 Vanowen Street)

Several adjacent properties were identified in the regulatory database report, as further discussed below in Section 4.2.

2.4 Physical Setting Sources

2.4.1 Topography

The United States Geological Survey (USGS) *Burbank, California* Quadrangle 7.5-minute series topographic map was reviewed for this ESA. According to the contour lines on the topographic map, the subject property is located at approximately 660 feet above mean sea level (MSL). The contour lines in the area of the subject property indicate the area is sloping gently toward the south-southeast. The subject property is depicted on the 2012 map as shaded indicating development,

A copy of the most recent topographic map is included as Figure 3 of this report.

2.4.2 Hydrology

According to topographic map interpretation, the direction of groundwater flow in the vicinity of the subject property is inferred to be toward the southeast. The nearest surface water in the vicinity of the subject property is the Santa Ana Canal located approximately 300-feet to the northeast of the subject property. No settling ponds, lagoons, surface impoundments, wetlands or natural catch basins were observed at the subject property during this assessment.

According to available information, a public water system operated by the Burbank Department of Public Works and Engineering serves the subject property vicinity. The sources of public water for Burbank are surface water purchased from the Metropolitan Water District (MWD) that receives its water from the Northern Sierra Mountains in California and the Colorado River.

According to the Regional Water Quality Control Board (RWQCB) online database GeoTracker, a previous subsurface investigation conducted on the subject property (1995) indicates the depth to groundwater in the vicinity of the subject property is approximately 156 feet below ground surface (bgs).

2.4.3 Geology/Soils

The subject property is situated within the southeastern portion of the San Fernando Valley in the Transverse Ranges physiographic province of the State of California. The San Fernando Valley is a sedimentary basin located between the Verdugo and San Gabriel Mountains to the northeast, Santa Monica Mountains to the south, Santa Susan Mountains to the north, and the Simi Hills to the west. The site vicinity is underlain by alluvial deposits of Holocene and Pleistocene age, comprised of unconsolidated to weakly lithified valley-fill sediments deposited as coalescing alluvial fans along the surrounding mountain fronts. The soils in the southeastern portion of the Valley are mainly gravel and

sand with localized lenses of clay and silt overlying sandstones and conglomerates of the Tertiary-aged Topanga Formation which overlies a basement complex of granitic and metamorphic rocks.

Soils encountered during onsite assessments in the 1990s were described as silty sand, sand, and sand with gravel to 85 feet bgs. Fine sands and lenses of silty sand were encountered at 10 and 30 feet bgs.

2.4.4 Flood Zone Information

Partner performed a review of the Flood Insurance Rate Map, published by the Federal Emergency Management Agency. According to Community Panel Number 06037C1328F, dated September 26, 2008, the subject property appears to be located in Zone X, an area located outside of the 100-year and 500-year flood plains.

3.0 HISTORICAL INFORMATION

Partner obtained historical use information about the subject property from a variety of sources. A chronological listing of the historical data found is summarized in the table below:

Historical Use Information		
Period/Date	**Source**	**Description/Use**
1894-1902	Topographic Maps	Undeveloped land
1928-circa 1962	Aerial Photographs, City Directories, Sanborn Maps, Topographic Maps	Developed with a Dairy
Circa 1966-1962	Aerial Photographs, City Directories, Sanborn Maps, Topographic Maps	Developed with a Store
1962-1992	Aerial Photographs, City Directories, Sanborn Maps, Topographic Maps	Commercial - Used as Administrative Offices, Gas Station and Maintenance
1995-Present	Aerial Photographs, City Directories, Sanborn Maps, Topographic Maps	Used as an Electronics Store

Based on review of historical sources, the subject property was formerly undeveloped land from as early as 1894; and developed as a dairy with associated residential structures and a store between circa-1928 and the early-1960s. By 1962, the subject property was redeveloped with the current commercial structure on the southern portion and Lockheed Martin (referred to as Plant A-1 South) occupied the property from 1969 to December 1995 for use as offices, a vehicle maintenance shop and parking. Additionally, a gasoline service station/automotive repair operation was developed on the northeastern portion of the subject property in 1962, which was acquired by Lockheed Martin in the mid-1960s and utilized as a gasoline service station/automotive repair operation for Lockheed fleet vehicles until closure in 1992. The subject property has been occupied by Fry's Electronics for retail use since at least 1995. Significant tenants at the subject property include Shoman Dairy (1950s), Lockheed Martin (1960s-1995), Unimart (1962-1986), and Fry's Electronics (1995-Present). Potential environmental concerns were identified in association with the USTs formerly located on the subject property, and a former occupied identified as a potentially responsible party (PRP) of known regional groundwater contamination as further discussed below and in Section 4.2.

- Based on review of historical sources, by 1962, the subject property was redeveloped with the current commercial structure on the southern portion and Lockheed Martin (referred to as Plant A-1 South) occupied the property from 1969 to December 1995 for use as offices, a vehicle maintenance shop and parking. Additionally, a gasoline service station/automotive repair operation was developed on the northeastern portion of the subject property in 1962, which was acquired by Lockheed Martin in the mid-1960s and utilized as a gasoline service station/automotive repair operation for Lockheed fleet vehicles until closure in 1992. The subject property has been occupied by Fry's Electronics for retail use since at least 1995.

  The subject property at 2311 North Hollywood Way was identified in the regulatory database report under the names Lockheed Martin, Gort Limited and Fry's Electronics. Based on information provided in a previous Phase I ESA report (PSI, 1998) and from a file review, this former operation included four (4) 12,000-gallon gasoline/diesel/tetrachloroethylene (PCE) USTs,

one 550-gallon waste oil UST, one concrete 1,600-gallon clarifier and seven (7) dispensers. The UST containing PCE served as a central supply point for Lockheed's other plants in the Burbank area. The former gasoline service station/automotive repair operation was demolished in 1992 and the former underground storage tank (USTs) and clarifier were removed as part of the demolition. Additionally, other features including hydraulic lifts and storm drains were removed during this demolition under the supervision of the Burbank Fire Department. Following removal of the USTs and other associated features of potential concern, a total of twenty-one soil samples were collected from the excavated areas. According to the analytical results, subsurface soil was found to be impacted with PCE, diesel fuel and hydraulic oil.

Between 1992 and 1995, seven (7) subsurface investigations were conducted at the subject property in relation to this reported release to the subsurface as a result of the former operations, and a total of 426 soil samples were collected from the former service station during this period. The 1992 subsurface investigation included 78 soil borings to depths of 10 to 40 feet bgs, and soil samples collected from varying intervals were analyzed for VOCs, PCBs, and TPH. According to the analytical results, TPH impacts were generally confined to the upper 10 feet of soil. Elevated VOC impacts were also generally limited to the upper 10 feet of soil, with one boring noting PCE impacts extending to 25 feet bgs. In 1993, a Soil Gas Survey was conducted on the subject property to further evaluate the extent of the subsurface impacts. A total of 181 soil-gas samples were collected from 159 locations across the subject property at depths ranging from 5 to 25 feet bgs, and the samples were analyzed for VOCs. According to the analytical results, twelve of the sample collected from the 5-foot depth contained PCE in excess of 0.1 mg/L, with one sample exceeding 1.0 mg/L. None of the samples collected from the 20-foot depth contained concentrations of PCE above 1.0 mg/L. Additional site characterization was conducted in 1994/1995 which included additional soil borings and sampling and additional soil vapor sampling. A total of 18 of the 426 soil samples contained concentrations of PCE above 1 mg/kg.

Based on review of the Final Soil Remediation Report dated May 22, 1995 by Lockheed Martin Corporation, approximately 1,380 tons of PCE- and diesel/oil-impacted soil was excavated and removed from the subject property. Following removal, a total of 109 confirmation soil samples were collected from the base and sidewalls of the excavation and analyzed for VOCs, TPH, and lead. According to the analytical results, the confirmation soil samples all contained less than 150 ug/kg of PCE. As such, the excavations were backfilled with approved clean fill, and a request for closure was submitted with the report. Based on review of the 1995 final soil remediation report, in a letter dated July 5, 1995, the California Regional Water Quality Control Board (RWQCB) issued a No Further Action status to the subject property and indicated the subject property had been remediated in accordance with Cleanup and Abatement Order No. 87-161. As such, the subject property (former Lockheed Plant A-1 South) and current ownership (Gort Limited) were noted to be excluded from the requirements of the Cleanup and Abatement Order No. 87-161, which is associated with the cleanup of several Lockheed plants in the Burbank area. Based on the regulatory closure with residual PCE-impacted soil left in place, the historical usage of the subject property and associated closed release case are considered a CREC for the subject property. As

such, prior to any redevelopment activities and due to the presence of residual PCE-impacted soil in the subsurface, Partner recommends a soil vapor survey be conducted to evaluate potential vapor intrusion issues for any future onsite buildings. Additionally, if the redevelopment plan includes subterranean levels, Partner recommends implementing a Soil Management Plan (SMP).

- The subject property is located within the boundaries of the Burbank Operable Unit (BOU) of the San Fernando Valley North Hollywood National Priorities List (NPL) site, an area of known groundwater contamination. Constituents of Concern (COCs) that have been identified include semi-volatile organic compounds (SVOCs), Volatile Organic Compounds (VOCs) and chromium. The subject property was one of many sites investigated by RWQCB and USEPA as a potential responsible party (PRP) of the groundwater contamination. On July 6, 1995 a letter was issued to Lockheed by RWQCB indicating the subject property would no longer be under investigation for potential groundwater contamination for VOCs and the subject property (former Lockheed Plant A-1 South) and current ownership (Gort Limited) were noted to be excluded from the requirements of the Cleanup and Abatement Order No. 87-161, which is associated with the cleanup of several Lockheed plants in the Burbank area.

  Former site occupant, Lockheed Martin, monitors groundwater within the BOU to comply with the provisions of a USEPA Consent Decree (#91-4527-MRP) filed March 1992, and the CRWQCB Cleanup and Abatement Order (#87-161) dated December 1987. As part of the NPL investigation, two groundwater monitoring wells, A-1-CW04 and A-1-CW09, were installed in the north and northeast portion of the subject property, respectively. A third well, monitoring well A-1-CW05 was co-located with monitoring well A-1-CW04 at a later date. Partner contacted Ms. Anita Fang with CRWQCD regarding the most recent groundwater monitoring results on file with the agency for the BOU. A review of an Annual Groundwater Monitoring Report, Second Quarter 2017 Burbank Operable Unit, provided by Ms. Fang indicates 1,2,3 Trichloropropane (1,2,3 TCP), 1,4 Dioxane, various other VOCs (including Tetrachloroethylene (PCE) and Trichloroethene (TCE), hexavalent chromium and chromium were detected in the onsite wells at levels above the reporting limit (RL), with an increasing trend of 1,2,3 TCP concentrations. Chromium was detected in well A-1-CW04 at 0.88 ug/L which exceeds the Maximum Contaminant Level (MCL).

  Lockheed Martin has conducted groundwater monitoring of the onsite wells since approximately 1996 and has been identified as a potential contributor to the regional groundwater contamination. As discussed, the current property owner (Gort, Ltd) has not been identified as a potential responsible party (PRP) and it is unlikely the subject property owner would be responsible for future remediation activities since NFA was issued in 1995. Furthermore, based on the depth to groundwater, review of the most recent groundwater analytical results, and commercial usage of the subject property, a vapor intrusion condition (VIC) is unlikely to exist at the subject property. The location of the subject property within the Burbank Operable Unit of the San Fernando Valley NPL investigation, the identification of a former site occupant as a potential contributor to the regional impact, and the reported VOC and chromium groundwater contamination identified in onsite wells is considered a REC for the subject property; however,

based on the lack of an apparent VIC and issuance of an NFA letter with regards to the former subject property operations, Partner recommends no further investigation at this time with regards to this regional groundwater contamination case.

3.1 Aerial Photograph Review

Partner obtained available aerial photographs of the subject property and surrounding area from Environmental Data Resources (EDR) on April 9, 2020. The following was observed on the subject property and adjacent properties during the aerial photograph review:

Date: 1928,1938	***Scale: 1"=500'***
Subject Property:	Appears to be developed with a possible commercial dairy operation with several structures on the central and east portions of the property and two square enclosures. The south and west portions appear to be grassland undeveloped
North:	Appears to be developed with a farmstead and agricultural fields across an unimproved road and railroad track in 1928. By 1938 the farmstead is no longer present and the property appears to be part of an airfield
South:	Appears to be agricultural across an unimproved road
East:	Appears to be developed with a farmstead and agricultural fields across an unimproved road
West:	Appears to possibly be and agricultural field with an orchard. A possible cemetery is present further west

Date: 1948,1952,1954	***Scale: 1"=500'***
Subject Property:	Several small structures are located on the central and southeast portion of the property. A paved parking area has been developed on the east side of the property. An unimproved parking area is located in the northwest portion of the property. The remainder of the site appears grass-covered.
North:	A very large commercial complex has been developed across two paved roads and railroad tracks, as part of an airport
South:	Developed with a commercial building, a baseball field and parking lot, across a aved road. By 1954 the baseball field had been developed as a parking lot
East:	Developed with a paved parking lot, vacant filed and possible mobile home park to the southeast
West:	Developed with a vacant land and a large paved parking lot

Date: 1964	***Scale: 1"=500'***
Subject Property:	Developed with a large commercial building on the south portion of the property. A long, rectangular shaped building is present on the north portion of the site with the remainder of the property developed as a paved parking lot
North:	No significant changes visible
South:	No significant changes visible
East:	Developed with a large parking lot and commercial buildings, and possible mobile homes to the southeast
West:	Developed with a large parking lot and commercial building

Date: 1970	***Scale: 1"=500'***
Subject Property:	No significant changes visible. The rectangular building on north portion of property appears to be fenced off from the rest of the property
North:	No significant changes visible
South:	No significant changes visible
East:	Vacant land. North Hollywood Way appears to have been temporarily detoured or re-routed and is no longer present along the east property boundary
West:	No significant changes visible

Date: 1977,1981	***Scale: 1"=500'***
Subject Property:	No significant changes visible
North:	No significant changes visible
South:	Developed with three commercial buildings
East:	North Hollywood Way has been redeveloped and is present along the east property boundary with a commercial building and parking lot beyond
West:	No significant changes visible

Date: 1989	***Scale: 1"=500'***
Subject Property:	A building addition has been constructed on the west side of the north rectangular building
North:	No significant changes visible
South:	No significant changes visible
East:	Developed with two commercial buildings
West:	No significant changes visible

Date: 1994	***Scale: 1"=500'***
Subject Property:	The rectangular building on the north portion of the property has been razed and the area appears to have been graded excavated and graded. The remainder of the property is occupied by the large commercial building and paved parking
North:	No significant changes visible
South:	No significant changes visible
East:	One commercial building has been razed
West:	No significant changes visible

Date: 2002,2005	***Scale: 1"=500'***
Subject Property:	The north portion of the property has been redeveloped as a parking lot
North:	The large commercial/industrial complex has been razed and excavated and the entire area has been graded
South:	No significant changes visible
East:	No significant changes visible
West:	A commercial building has been constructed on the former parking lot

Date: 2009,2012,2016	***Scale: 1"=500'***
Subject Property:	No significant changes visible
North:	Redeveloped as a large parking lot
South:	No significant changes visible

Date:	*2009,2012,2016*	*Scale:*	*1"=500'*
East:	No significant changes visible		
West:	No significant changes visible		

Copies of select aerial photographs are included in Appendix B of this report.

3.2 Fire Insurance Maps

Partner reviewed the collection of Sanborn Fire insurance maps from Environmental Data Resources (EDR) on April 9, 2020. The following was observed on the subject property and adjacent properties during the fire insurance map review:

Date:	*1953*
Subject Property:	The subject property was occupied by a dairy which included a milking shed, storage area, milk house, two storage shed, two wood silos and four dwellings
North:	Appears occupied with an industrial type facility across West Vanowen Street, a railroad track and West Empire Avenue. The facility includes a plate shop, extrusion area, transfer switch yard, medical storage with acetylene, and a paint shop
South:	A softball field and National Guard Armory are depicted across West Valhalla Drive
East:	North Hollywood Way is depicted. The east side of North Hollywood Boulevard is not depicted on this map
West:	No development depicted

Date:	*1954,1956,1960*
Subject Property:	No significant changes depicted
North:	No significant changes depicted
South:	A National Guard Armory and a parking lot are depicted across West Valhalla Drive
East:	A house trailer park is depicted to the southeast across North Hollywood Way
West:	No significant changes depicted

Date:	*1966,1968*
Subject Property:	The property has been redeveloped and a store constructed of reinforced concrete with steel columns and beams has been developed on the south portion of the property. A rectangular feature labelled as "gas & oil" is depicted in the northeast corner of the property. A parking lot is depicted north of the building
North:	No significant changes depicted
South:	No significant changes depicted
East:	No significant changes depicted
West:	No significant changes depicted

Date:	*1969*
Subject Property:	The subject property is occupied by Lockheed Aircraft Corporate Offices. The gas and oil area is depicted in the northeast corner of the property with parking north of the building
North:	No significant changes depicted
South:	No significant changes depicted
East:	No significant changes depicted
West:	No significant changes depicted

Copies of reviewed Sanborn Maps are included in Appendix B of this report.

3.3 City Directories

Partner reviewed historical city directories obtained from Environmental Data Resources (EDR) on April 14, 2020 for past names and businesses that were listed for the subject property and adjacent properties. The findings are presented in the following table:

City Directory Search for 2311 North Hollywood Way (Subject Property)	
Year(s)	**Occupant Listed**
1950	Shoman Dairy
1956	Shoman Dairy, Manuel Rocha, Wayne Dennis
1967	W G Products Inc Shoes
1970	Lockheed-California Company Corporation, Federal Credit Union and Employee Recreation Club
1971	Lockheed California Company, Employees Credit Union, Group Insurance
1975,1980	Employees Credit Union, Group Insurance
1985	Administrative Offices, Certificate Rates Recording, Collection Department, Lockheed Air Terminal Inc., Lockheed Aircraft Employees Federal Credit Union and Administrative Offices
1999,2004,2006	Frys Electronics
2009,2015	Frys Electronics

According to the city directory review, the subject property was occupied by a dairy and an office building. The historical usage of the subject property is discussed further in Section 3.0.

City Directory Search for Adjacent Properties	
Year(s)	**Occupant Listed**
1950,1956	Multiple Individual Tenant Names (2240 N. Hollywood Way)
1962	Multiple Individual Tenant Names (2240 N. Hollywood Way)
1970	Multiple Individual Tenant Names (2240 N. Hollywood Way) Polich Benedict Construction (2340 N. Hollywood Way)
1975	Sale & Service (2231 N. Hollywood Way) Multiple individual tenant names (2240 N. Hollywood Way)
1976	Westinghouse Elevator (2231 N. Hollywood Way) Multiple Individual Tenant Names (2240 N. Hollywood Way)
1980	Barrow Fabrics Inc. (3520 W. Valhalla Dr.) Westinghouse Elevator (2231 N. Hollywood Way) Multiple Individual Tenant Names (2240 N. Hollywood Way)
1981	Barrow Fabrics Inc. (3520 W. Valhalla Dr.) Westinghouse Elevator Co (2231 N. Hollywood Way)
1985	Westinghouse Elevator Co, Construction Business Development (2231 N. Hollywood Way) Multiple Individual Tenant Names (2240 N. Hollywood Way) Lockheed Federal Credit Union, Loan Department, Weber Aircraft Co (2340 N. Hollywood Way)
1986	Barrow Fabrics Inc. (3520 W. Valhalla Dr.) Westinghouse Elevator Co (2311 N. Hollywood Way)
1990	Barrow Fabrics Inc (3520 W. Valhalla Dr.)

City Directory Search for Adjacent Properties

Year(s)	Occupant Listed
1991	Unitel Mobile (2231 N. Hollywood Way) Multiple Individual Tenant Names (2240 N. Hollywood Way) University of Laverne, B&P The Spaceconnection, Daniell Engineering, Que (2340 N. Hollywood Way)
1994	Barrow Fabrics Inc (3520 W. Valhalla Dr.) Sonic Edge, Unitel Mobile (2231 N. Hollywood Way) Multiple Individual Tenant Names (2240 N. Hollywood Way) Lockheed Federal Credit Union (2340 N. Hollywood Way)
1995	Unitel Mobile, Sonic Edge (2231 N. Hollywood Way) Multiple Individual Tenant Names (2240 N. Hollywood Way)
1999	Ampex, Quantegy Inc. (3520 W. Valhalla Dr.) Sling Shot Records (2231 N. Hollywood Way) Pacific Radio Electronics Inc (2243 N. Hollywood Way) Multiple Individual Tenant Names (2240 N. Hollywood Way)
2001	Quantegy Inc. (3520 W. Valhalla Dr.) Pacific Radio Electronics (2243 N. Hollywood Way)
2004	Quantegy Inc. (3520 W. Valhalla Dr.) Sonic Atmospheres Inc., Craig Huxley (2231 N. Hollywood Way) Pacific Radio Electronics (2243 N. Hollywood Way) Irene Hidalgo (2240 N. Hollywood Way) Lockheed Martin (2340 N. Hollywood Way)
2006	Archives, Pactitle (3520 W. Valhalla Dr.) Omegacase Company Inc (2231 N. Hollywood Way) Pac Radio Electronics Inc (2243 N. Hollywood Way) CTGY (2340 N. Hollywood Way)
2009	Pacific Title Archives (3520 W. Valhalla Dr.) Omega Case Co Inc (2231 N. Hollywood Way) Pacific Radio Exchange Inc (2243 N. Hollywood Way) Lockheed Federal Credit Union, University of Laverne, LFCU Brokerage Inc, (2340 N. Hollywood Way)
2015	Flashpoint Graphix (3520 W. Valhalla Dr.) Omega Case Company Inc (2231 N. Hollywood Way) Trew Audio LA, Pacific Radio Electronics (2243 N. Hollywood Way) Public Storage (2240 N. Hollywood Way) CTGY (2340 N Hollywood Way)

Based on the city directory review, no environmentally sensitive listings (such as dry cleaners, automotive facilities, etc.) were identified for the adjacent property addresses; however, listings identified in the regulatory database report are discussed further in Section 4.2.3.

Copies of reviewed city directories are included in Appendix B of this report.

3.4 Historical Topographic Maps

Partner reviewed historical topographic maps obtained from Environmental Data Resources (EDR) on April 9, 2020. The following was observed on the subject property and adjacent properties during the topographic map review:

Date: 1894,1896,1898,1900,1902	
Subject Property:	No development depicted. A sandy area, possibly part of a stream bed, is indicated in the northeast portion of the property
North:	No development depicted across a roadway
South:	No development depicted
East:	A small residential-type structure is depicted across a roadway
West:	No development depicted

Date: 1920,1921	
Subject Property:	A small residential-like structure is depicted in the east portion of the subject property
North:	Developed with a railroad track and roadway. An intermittent stream is depicted adjacent to the northeast of the subject property and across the roadway
South:	No significant changes depicted
East:	An intermittent stream and railroad tracks are depicted
West:	No significant changes depicted

Date: 1926	
Subject Property:	Two small residential-type structures are depicted on the south portion of the property
North:	The intermittent stream is no longer depicted across Empire Avenue and the Southern and Pacific Railroad
South:	No development depicted across a roadway or driveway
East:	No development depicted across Hollywood Way
West:	No development depicted. A cemetery is depicted further west

Date: 1948	
Subject Property:	Five small structures are depicted on the south and east portion of the property
North:	A large commercial building and numerous smaller buildings are depicted as part of Lockheed Air Terminal. Runways are depicted further northwest
South:	No development depicted across a roadway or driveway
East:	Three small structures are depicted to the southeast
West:	No development depicted. Two small structures and Valhalla Memorial Park are depicted further west

Date: 1953	
Subject Property:	No significant changes depicted
North:	No significant changes depicted
South:	Three commercial buildings are depicted
East:	The Providence School is depicted to the further east and southeast
West:	No significant changes depicted

Date:	***1966,1972,1994***
Subject Property:	The subject property is in an area referred to as Vega. A large commercial building is depicted on the south portion of the property. A small rectangular structure is depicted in the northeast corner of the property.
North:	No significant changes depicted
South:	An Armory is depicted across a driveway
East:	No significant changes visible
West:	A commercial structure is depicted

Date:	***2012***
Subject Property:	No manmade structures other than roadways, governmental, academic and religious institutions are depicted on this map
North:	No manmade structures other than roadways, governmental, academic and religious institutions are depicted on this map
South:	No manmade structures other than roadways, governmental, academic and religious institutions are depicted on this map
East:	No manmade structures other than roadways, governmental, academic and religious institutions are depicted on this map
West:	No manmade structures other than roadways, governmental, academic and religious institutions are depicted on this map

Copies of reviewed topographic maps are included in Appendix B of this report.

4.0 REGULATORY RECORDS REVIEW

4.1 Regulatory Agencies

4.1.1 State Department

Regulatory Agency Data	
Name of Agency:	California Environmental Protection Agency (Cal/EPA)
Agency Website:	https://calepa.ca.gov/
Agency Address:	1001 I Street, Sacramento, California 95814
Agency Phone Number:	(916) 323-2514
Date of Contact:	April 10, 2020
Method of Communication:	Online
Summary of Communication:	Information is on file with Cal/EPA for former site occupant Lockheed Martin, as further discussed below in Section 4.2.2.

4.1.2 Fire Department

Regulatory Agency Data	
Name of Agency:	Burbank Fire Department (BFD)
Agency Address:	311 East Orange Grove, Burbank, California 91502
Agency Phone Number:	(818) 238-3458
Date of Contact:	April 10, 2020
Method of Communication:	Telephone Request (April 10 and 20), Email Request (April 13)
Summary of Communication:	Records provided by BFD indicated the subject property utilized small quantities of hazardous substances and has submitted numerous hazardous materials inventory forms under Fry's Electronics. A Business Activities Declaration form dated 2006 indicates no USTs or ASTs were located on the subject property at that time. Partner also reviewed online information with RWQCB and Los Angeles County Fire Department for any available UST information. In addition to the site address, a search was also conducted under three other possible historic addresses that could have been associated with the subject property. No UST information was available with BFD for any of the addresses searched.

4.1.3 Air Pollution Control Agency

Regulatory Agency Data	
Name of Agency:	South Coast Air Quality Management District (SCAQMD)
Agency Website:	http://www.aqmd.gov/webappl/fim/default.htm
Agency Address:	21865 Copley Drive, Diamond Bar, California 91765
Agency Phone Number:	(909) 396-2000
Name of Agency:	South Coast Air Quality Management District (SCAQMD)
Method of Communication:	Online
Summary of Communication:	No Permits to Operate (PTO), Notices of Violation (NOV), or Notices

Regulatory Agency Data	
	to Comply (NTC) or the presence of AULs, dry cleaning machines, or USTs were on file for the subject property in the SCAQMD online database.

4.1.4 Regional Water Quality Agency

Regulatory Agency Data	
Name of Agency:	California Regional Water Quality Control Board (CRWQCB) – Los Angeles, Region 4
Agency Website:	http://geotracker.waterboards.ca.gov/
Agency Address:	320 West 4th Street, Los Angeles, California 90013
Agency Phone Number:	(213) 576-6600
Date of Contact:	April 14, 2020
Method of Communication:	Online
Summary of Communication	The subject property has conducted soil cleanup activities associated with four USTs, and asbestos cleanup activities. The subject property is also located within the San Fernando Valley NPL site boundaries. Partner conducted a regulatory file review with regards to the subject property release case, which is described further in Section 3.0. Copies of the CRWQCB file and associated cleanup reports are provided in Appendix B.

4.1.5 Department of Toxic Substances Control

Regulatory Agency Data	
Name of Agency:	California Department of Toxic Substances Control (DTSC)
Agency Websites:	http://www.envirostor.dtsc.ca.gov/public/ http://hwts.dtsc.ca.gov/report_list.cfm
Agency Address:	1001 I Street, Sacramento, California 95814
Agency Phone Number:	(916) 255-3687
Date of Contact:	April 14, 2020
Method of Communication:	Online
Summary of Communication:	According to the records reviewed, the subject property, identified as Lockheed Martin Corporation at 2311 North Hollywood Way, is listed in the Hazardous Waste Tracking System (HWTS) online database under EPA ID No. CAD982504052. A hazardous waste manifest record was recorded in June 1990, listed as inactive in June 1998 and was last updated in August 2004. Manifests were reported in 1993, 1994, and 1995 as a generator.

4.1.6 Building Department

Regulatory Agency Data	
Name of Agency:	Burbank Building Department (BBD)
Agency Address:	150 North 3rd Street, Burbank, California 91502

Regulatory Agency Data	
Agency Phone Number:	(818) 238-5564
Date of Contact:	July 23, 2018
Method of Communication:	In Person
Summary of Communication:	Due to Covid-19 the public is not allowed access to BBD to view historical building permits on file with the agency. A review conducted of the BBD online database indicates three records are on file for the subject property; a Conditional Use permit (#PL0801916) dated February 2008 for installation of a wireless communication monopole; Building Permit #BS1214071 dated December 2012 for new roof installation for Fry's Electronics; and, Building Permit #BS1303664 dated March 2013 for relocation of accessible parking stalls.

4.1.7 Planning Department

Regulatory Agency Data	
Name of Agency:	Burbank Planning Department (BPD)
Agency Address:	150 North 3rd Street, Burbank, California 91502
Agency Phone Number:	(818) 238-5250
Date of Contact:	April 18, 2020
Method of Communication:	Online
Summary of Communication:	According to records reviewed, the subject property is zoned C-3 for Commercial General Business Development by the City of Burbank.

4.1.8 Oil & Gas Exploration

Regulatory Agency Data	
Name of Agency:	California Department of Conservation Division of Oil, Gas and Geothermal Resources (DOGGR) – Southern District
Agency Website:	https://maps.conservation.ca.gov/doggr/wellfinder/#close
Agency Address:	5816 Corporate Avenue, Suite 100, Cypress, California 90630
Agency Phone Number:	(916) 324-0850
Date of Contact:	April 18, 2020
Method of Communication:	Online
Summary of Communication:	According to DOGGR, no oil or gas wells are located on or adjacent to the subject property.

4.1.9 Assessor's Office

Regulatory Agency Data	
Name of Agency:	Los Angeles County Office of the Assessor (LACOA)
Agency Website:	http://maps.assessor.lacounty.gov
Agency Address:	500 West Temple Street, Room 225, Los Angeles, California 90012
Agency Phone Number:	(213) 974-2111
Date of Contact:	April 16, 2020
Method of Communication:	Online
Summary of Communication:	According to records reviewed, the subject property is identified by

Assessor's Parcel Number (APN) 2463-001-019. The current building was constructed in 1962 on a 10.43-acre lot.

Copies of pertinent documents obtained from the above-referenced regulatory agencies (if available) are included in Appendix B of this report.

4.2 Mapped Database Records Search

Information from standard federal, state, county, and city environmental record sources was provided by Environmental Data Resources, Inc. (EDR). Data from governmental agency lists are updated and integrated into one database, which is updated as these data are released. The information contained in this report was compiled from publicly available sources and the locations of the sites are plotted utilizing a geographic information system, which geocodes the site addresses. The accuracy of the geocoded locations is approximately +/-300 feet.

Using the ASTM definition of migration, Partner considers the migration of hazardous substances or petroleum products in any form onto the subject property during the evaluation of each site listed on the radius report, which includes solid, liquid, and vapor.

4.2.1 Regulatory Database Summary

Radius Report Data

Database	Search Radius (mile)	Subject Property	Adjacent Properties	Sites of Concern
Federal NPL or Delisted NPL Site	1.00	N	N	**Y**
Federal CERCLIS Site	0.50	N	N	N
Federal CERCLIS-NFRAP Site	0.50	N	N	N
Federal RCRA CORRACTS Facility	1.00	N	N	N
Federal RCRA TSDF Facility	0.50	N	N	N
Federal RCRA Generators Site (LQG, SQG, CESQG)	0.25	**Y**	**Y**	N
Federal IC/EC Registries	0.50	N	N	N
Federal ERNS Site	Subject Property	N	N	N
State/Tribal Equivalent NPL	1.00	N	N	N
State/Tribal Equivalent CERCLIS	1.00	N	N	N
State/Tribal Landfill/Solid Waste Disposal Site	0.50	N	N	N
State/Tribal Leaking Storage Tank Site	0.50	**Y**/N	N	N
State/Tribal Registered Storage Tank Sites (UST/AST)	0.25	**Y**	**Y**	N
State/Tribal Voluntary Cleanup Sites (VCP)	0.50	N	N	N
State/Tribal Spills	0.50	N	N	N
Federal Brownfield Sites	0.50	N	N	N
State Brownfield Sites	0.50	N	N	N
EDR MGP	Varies	N	N	N
EDR US Hist Auto Station	Varies	N	N	N
EDR US Hist Cleaners	Varies	N	N	N

4.2.2 Subject Property Listings

The subject property is identified as a CA CERS, CA WIP, CA FID UST, CA SWEEPS UST, CA CERS HAZ WASTE, CA CPS-SLIC, CA HWTS, CA HAZNET, CA CDL, CA ENF, RCRA NonGen/NLR, FINSD and ECHO site in the regulatory database report. Several of the databases including FINDS and ECHO are cross-referenced database listings, as discussed below:

- The subject property is identified on the RCRA non-generator and CA CERS HAZ Waste database as a non-generator of hazardous waste, no longer required to report. A form was filed in 1992 and 1996 as a large quantity generator, and in 1998 as a non-generator of hazardous waste under Lockheed Martin. A form was filed in 2019 under Fry's Electronics as a RCRA non-generator. No violations have been reported. Based on the nature of the listing and lack of violations, this listing is not expected to represent a REC for the subject property.
- The subject property at 2311 North Hollywood Way was identified in the regulatory database report under the names Lockheed Martin, Gort Limited and Fry's Electronics. Based on information provided in a previous Phase I ESA report (PSI, 1998) and from a file review, this former operation included four (4) 12,000-gallon gasoline/diesel/tetrachloroethylene (PCE) USTs, one 550-gallon waste oil UST, one concrete 1,600-gallon clarifier and seven (7) dispensers. The UST containing PCE served as a central supply point for Lockheed's other plants in the Burbank area. The former gasoline service station/automotive repair operation was demolished in 1992 and the former underground storage tank (USTs) and clarifier were removed as part of the demolition. Additionally, other features including hydraulic lifts and storm drains were removed during this demolition under the supervision of the Burbank Fire Department. Following removal of the USTs and other associated features of potential concern, a total of twenty-one soil samples were collected from the excavated areas. According to the analytical results, subsurface soil was found to be impacted with PCE, diesel fuel and hydraulic oil.

  Between 1992 and 1995, seven (7) subsurface investigations were conducted at the subject property in relation to this reported release to the subsurface as a result of the former operations, and a total of 426 soil samples were collected from the former service station during this period. The 1992 subsurface investigation included 78 soil borings to depths of 10 to 40 feet bgs, and soil samples collected from varying intervals were analyzed for VOCs, PCBs, and TPH. According to the analytical results, TPH impacts were generally confined to the upper 10 feet of soil. Elevated VOC impacts were also generally limited to the upper 10 feet of soil, with one boring noting PCE impacts extending to 25 feet bgs. In 1993, a Soil Gas Survey was conducted on the subject property to further evaluate the extent of the subsurface impacts. A total of 181 soil-gas samples were collected from 159 locations across the subject property at depths ranging from 5 to 25 feet bgs, and the samples were analyzed for VOCs. According to the analytical results, twelve of the sample collected from the 5-foot depth contained PCE in excess of 0.1 mg/L, with one sample exceeding 1.0 mg/L. None of the samples collected from the 20-foot depth contained concentrations of PCE above 1.0 mg/L. Additional site characterization was conducted in

1994/1995 which included additional soil borings and sampling and additional soil vapor sampling. A total of 18 of the 426 soil samples contained concentrations of PCE above 1 mg/kg.

Based on review of the Final Soil Remediation Report dated May 22, 1995 by Lockheed Martin Corporation, approximately 1,380 tons of PCE- and diesel/oil-impacted soil was excavated and removed from the subject property. Following removal, a total of 109 confirmation soil samples were collected from the base and sidewalls of the excavation and analyzed for VOCs, TPH, and lead. According to the analytical results, the confirmation soil samples all contained less than 150 ug/kg of PCE. As such, the excavations were backfilled with approved clean fill, and a request for closure was submitted with the report. Based on review of the 1995 final soil remediation report, in a letter dated July 5, 1995, the California Regional Water Quality Control Board (RWQCB) issued a No Further Action status to the subject property and indicated the subject property had been remediated in accordance with Cleanup and Abatement Order No. 87-161. As such, the subject property (former Lockheed Plant A-1 South) and current ownership (Gort Limited) were noted to be excluded from the requirements of the Cleanup and Abatement Order No. 87-161, which is associated with the cleanup of several Lockheed plants in the Burbank area. Based on the regulatory closure with residual PCE-impacted soil left in place, the historical usage of the subject property and associated closed release case are considered a CREC for the subject property. As such, prior to any redevelopment activities and due to the presence of residual PCE-impacted soil in the subsurface, Partner recommends a soil vapor survey be conducted to evaluate potential vapor intrusion issues for any future onsite buildings. Additionally, if the redevelopment plan includes subterranean levels, Partner recommends implementing a Soil Management Plan (SMP).

- The subject property was identified on the CA CDL and CA ENF databases as a clandestine mobile lab site. In 2003 illegal drug lab equipment and materials were found in a vehicle parked on the subject property. The car was removed, and cleanup was conducted by local authorities. Based on the nature of the database and lack of reported releases to the subsurface, these listings are not expected to represent a REC for the subject property.

- The subject property is located within the boundaries of the Burbank Operable Unit (BOU) of the San Fernando Valley North Hollywood National Priorities List (NPL) site, an area of known groundwater contamination. Constituents of Concern (COCs) that have been identified include semi-volatile organic compounds (SVOCs), Volatile Organic Compounds (VOCs) and chromium. The subject property was one of many sites investigated by RWQCB and USEPA as a potential responsible party (PRP) of the groundwater contamination. On July 6, 1995 a letter was issued to Lockheed by RWQCB indicating the subject property would no longer be under investigation for potential groundwater contamination for VOCs and the subject property (former Lockheed Plant A-1 South) and current ownership (Gort Limited) were noted to be excluded from the requirements of the Cleanup and Abatement Order No. 87-161, which is associated with the cleanup of several Lockheed plants in the Burbank area.

  Former site occupant, Lockheed Martin, monitors groundwater within the BOU to comply with the provisions of a USEPA Consent Decree (#91-4527-MRP) filed March 1992, and the CRWQCB

Cleanup and Abatement Order (#87-161) dated December 1987. As part of the NPL investigation, two groundwater monitoring wells, A-1-CW04 and A-1-CW09, were installed in the north and northeast portion of the subject property, respectively. A third well, monitoring well A-1-CW05 was co-located with monitoring well A-1-CW04 at a later date. Partner contacted Ms. Anita Fang with CRWQCD regarding the most recent groundwater monitoring results on file with the agency for the BOU. A review of an Annual Groundwater Monitoring Report, Second Quarter 2017 Burbank Operable Unit, provided by Ms. Fang indicates 1,2,3 Trichloropropane (1,2,3 TCP), 1,4 Dioxane, various other VOCs (including Tetrachloroethylene (PCE) and Trichloroethene (TCE), hexavalent chromium and chromium were detected in the onsite wells at levels above the reporting limit (RL), with an increasing trend of 1,2,3 TCP concentrations. Chromium was detected in well A-1-CW04 at 0.88 ug/L which exceeds the Maximum Contaminant Level (MCL).

Lockheed Martin has conducted groundwater monitoring of the onsite wells since approximately 1996 and has been identified as a potential contributor to the regional groundwater contamination. As discussed, the current property owner (Gort, Ltd) has not been identified as a potential responsible party (PRP) and it is unlikely the subject property owner would be responsible for future remediation activities since NFA was issued in 1995. Furthermore, based on the depth to groundwater, review of the most recent groundwater analytical results, and commercial usage of the subject property, a vapor intrusion condition (VIC) is unlikely to exist at the subject property. The location of the subject property within the Burbank Operable Unit of the San Fernando Valley NPL investigation, the identification of a former site occupant as a potential contributor to the regional impact, and the reported VOC and chromium groundwater contamination identified in onsite wells is considered a REC for the subject property; however, based on the lack of an apparent VIC and issuance of an NFA letter with regards to the former subject property operations, Partner recommends no further investigation at this time with regards to this regional groundwater contamination case.

The subject property is identified as a WIP (Well Investigation Program) site on the database report and the status of the site is listed as "Active". The subject property was investigated by either having been sent a questionnaire or having a walk-through inspection conducted by RWQCB personnel. As discussed, the subject property was issued an NFA in 1995. Therefore, the WIP listing is not considered a REC.

4.2.3 Adjacent Property Listings

Several adjacent properties were identified in the regulatory database report, as discussed below:

- A property identified as Quantegy Inc. at 3800 West Valhalla Drive is located adjacent to the south, down and cross gradient of the subject property. This site is identified as a LA CO HMS (Industrial Waste and Underground Storage Tank Site) under Quantegy Inc. and a CA WIP site under Barrow Fabrics Inc. and is located within the San Fernando Valley NPL site currently under investigation and remediation. This site has not been identified as having had a release. There is no information on file for this site address with RWQCB or BFD. According to the WIP listing the

status of this site is listed as "Historical". As referenced above, RWQCB locates and abates sources of pollutants affecting these wells and oversees remediation. To identify the sources or responsible parties, this site was investigated by either having been sent a questionnaire or a walk-through inspection was conducted by RWQCB personnel. RWQCB did not identify this as an active site. No additional information was provided in the database report and this facility is not listed on any regulatory release database that would indicate an unauthorized release or compliance violations. Based on the above information, and location with regard to groundwater flow direction, this facility is not expected to represent a REC for the subject property.

- A property identified as National Guard Repair Garage FMS #13 / Organizational Maintenance Shop / Burbank OMS 13 at 3800 Valhalla Drive is located adjacent to the southwest portion of the subject property, down and cross gradient. This site is listed on several databases including CA CERS HAZ WASTE, CA HIST UST, CA SWEEPS UST, RCRA NonGen/NLR, and CA WIP. This facility is listed on the CA HIST UST database as having had three USTs and on the CA SWEEPS database as having two active USTs containing diesel and unleaded gasoline. A review of UST information on file with RWQCB indicates the tanks were installed in the 1950s. No additional information was provided in the database report and no information was discovered in Geotracker. In addition, this site is not listed on any regulatory release database that would indicate an unauthorized release or compliance violations.

  This facility also filed a form in 1986 as a small quantity generator of hazardous waste and in 1987 as a non-generator of hazardous waste, no longer required to report. No violations have been reported on the RCRA database. Numerous compliance inspections have been conducted of the facility and one violation was noted on the CERS database for failure to dispose of hazardous waste within a 90-day period. This facility is also listed on the WIP database as an historical site. Based on the above information and location with regard to groundwater flow direction, this facility is not expected to represent a REC for the subject property.

- A property identified as Calstart at 3601 Empire Avenue is located adjacent to the north, up and cross gradient of the subject property. This facility filed a form in 1996 as a small quantity generator of hazardous waste. Wastes identified included alkaline solution with metals which were recycled. No violations have been noted and no further information was provided in the database report. Based on the nature of the listing, lack of a documented release, and location with regard to groundwater flow direction, this facility is not expected to represent a REC for the subject property.

- A property identified as Vega Aircraft is located north of the subject property, on the north side of Empire Avenue, up and cross gradient of the subject property. This site is listed as a Formerly Used Defense Site (FUDS) in the database report. FUDS sites are former defense properties which the US Army Corps of Engineers was formerly or is actively working on cleanup actions. This area was formerly occupied by a large industrial complex associated with the airport and was razed between 1994 and 2002. The entire area has been redeveloped. Based on this information,

identification of the source, and location with regard to estimated groundwater flow, this site is not expected to represent a REC for the subject property.

- A property identified as Tylie Jones and Associates is located at 2240 Screenland Drive, adjacent to the south, down and cross gradient of the subject property. This facility is listed as a CA WIP site. The file status is listed as "Historical". As referenced above, RWQCB locates and abates sources of pollutants affecting these wells and oversees remediation. RWQCB did not identify this as an active site. No additional information was provided in the database report and this site is not listed on any regulatory release database that would indicate an unauthorized release or compliance violations. Based on the above information, and location with regard to groundwater flow direction, this facility is not expected to represent a REC for the subject property.

- A property identified as Lockheed Federal Credit Union at 2340 N Hollywood Way, is located adjacent to the east across North Hollywood Way, down gradient of the subject property. This site is listed on the CA CERS TANKS, CA HAZNET, CA CERS, and CA HWTS databases. A UST is identified on this property. Routine inspections are completed by Burbank Fire Department and compliance violations have been issued for failure to submit a UST permit, and the presence of water in the UST sump. The violations were corrected, and the facility returned to compliance.

  This facility was identified on the RCRA-SQG and HAZNET databases for producing wastes listed as unspecified solvent mixture. A form was filed in 1980 as a large quantity generator and in 1996 as a small quantity generator. No violations have been reported. No additional information was provided in the database report and this site is not listed on any regulatory release database that would indicate an unauthorized release has occurred. Based on lack of a documented release and down gradient location with regard to groundwater flow, this site is not expected to represent a REC for the subject property.

- A property identified as Midnight Oil Agency at 3800 Vanowen Street, is located adjacent to the west and up-gradient of the subject property. This facility is listed as a CA CERS HAZ Waste, CA EMI and CA CERS site in the database report. This facility is listed as a hazardous waste generator and chemical storage facility and has reported air emissions with SCAQMD. Compliance inspections has been conducted by the Burbank and Los Angeles County Fire Department. Violations have been issued by the fire departments for failure to label hazardous waste containers. Forms were filed between 1995 and 2003 as a RCRA hazardous waste generator. Wastes listed included ignitable, corrosive, silver, and spent nonhalogenated wastes. No violations were reported on the RCRA database. This site is not listed on any regulatory release database that would indicate an unauthorized release has occurred. Based on lack of a documented release, this site is not expected to represent a REC for the subject property.

Based on the findings, vapor migration is not expected to represent a significant environmental concern at this time.

4.2.4 Sites of Concern Listings

The following potential site of concern is identified in the regulatory database report:

- The subject property is located within the boundaries of the Burbank Operable Unit (BOU) of the San Fernando Valley North Hollywood National Priorities List (NPL) site, an area of known groundwater contamination. Constituents of Concern (COCs) that have been identified include semi-volatile organic compounds (SVOCs), Volatile Organic Compounds (VOCs) and chromium. The subject property was one of many sites investigated by RWQCB and USEPA as a potential responsible party (PRP) of the groundwater contamination. On July 6, 1995 a letter was issued to Lockheed by RWQCB indicating the subject property would no longer be under investigation for potential groundwater contamination for VOCs and the subject property (former Lockheed Plant A-1 South) and current ownership (Gort Limited) were noted to be excluded from the requirements of the Cleanup and Abatement Order No. 87-161, which is associated with the cleanup of several Lockheed plants in the Burbank area.

  Former site occupant, Lockheed Martin, monitors groundwater within the BOU to comply with the provisions of a USEPA Consent Decree (#91-4527-MRP) filed March 1992, and the CRWQCB Cleanup and Abatement Order (#87-161) dated December 1987. As part of the NPL investigation, two groundwater monitoring wells, A-1-CW04 and A-1-CW09, were installed in the north and northeast portion of the subject property, respectively. A third well, monitoring well A-1-CW05 was co-located with monitoring well A-1-CW04 at a later date. Partner contacted Ms. Anita Fang with CRWQCD regarding the most recent groundwater monitoring results on file with the agency for the BOU. A review of an Annual Groundwater Monitoring Report, Second Quarter 2017 Burbank Operable Unit, provided by Ms. Fang indicates 1,2,3 Trichloropropane (1,2,3 TCP), 1,4 Dioxane, various other VOCs (including Tetrachloroethylene (PCE) and Trichloroethene (TCE), hexavalent chromium and chromium were detected in the onsite wells at levels above the reporting limit (RL), with an increasing trend of 1,2,3 TCP concentrations. Chromium was detected in well A-1-CW04 at 0.88 ug/L which exceeds the Maximum Contaminant Level (MCL).

  Lockheed Martin has conducted groundwater monitoring of the onsite wells since approximately 1996 and has been identified as a potential contributor to the regional groundwater contamination. As discussed, the current property owner (Gort, Ltd) has not been identified as a potential responsible party (PRP) and it is unlikely the subject property owner would be responsible for future remediation activities since NFA was issued in 1995. Furthermore, based on the depth to groundwater, review of the most recent groundwater analytical results, and commercial usage of the subject property, a vapor intrusion condition (VIC) is unlikely to exist at the subject property. The location of the subject property within the Burbank Operable Unit of the San Fernando Valley NPL investigation, the identification of a former site occupant as a potential contributor to the regional impact, and the reported VOC and chromium groundwater contamination identified in onsite wells is considered a REC for the subject property; however, based on the lack of an apparent VIC and issuance of an NFA letter with regards to the former subject property operations, Partner recommends no further investigation at this time with regards to this regional groundwater contamination case.

No other sites of concern are identified in the regulatory database report. Listed sites within the specified search radius of the subject property which appeared on local, State, or Federally published lists of sites that have had releases of hazardous substances, have been granted regulatory closure, were determined to be of sufficient distance, and/or are situated hydrologically cross- or down-gradient such that impact to the subject property is unlikely. Based on the findings, vapor migration is not expected to represent a significant environmental concern at this time.

4.2.5 Orphan Listings

The San Fernando Valley Groundwater Basin is identified as a CA CHMIRS, CA BOND EXP. PLAN site in the orphan summary of the regulatory database report, as previously discussed in Sections 4.2.2, 4.2.3 and 4.2.4.

A copy of the regulatory database report is included in Appendix C of this report.

5.0 USER PROVIDED INFORMATION AND INTERVIEWS

In order to qualify for one of the *Landowner Liability Protections (LLPs)* offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the *Brownfields Amendments*), the *User* must conduct the following inquiries required by 40 CFR 312.25, 312.28, 312.29, 312.30, and 312.31. The *User* should provide the following information to the *environmental professional*. Failure to provide this information could result in a determination that *all appropriate inquiries* is not complete. The *User* is asked to provide information or knowledge of the following:

- Review Title and Judicial Records for Environmental Liens and AULs
- Specialized Knowledge or Experience of the User
- Actual Knowledge of the User
- Reason for Significantly Lower Purchase Price
- Commonly Known or *Reasonably Ascertainable* information
- Degree of Obviousness
- Reason for Preparation of this Phase I ESA

Fulfillment of these user responsibilities is key to qualification for the identified defenses to CERCLA liability. Partner requested our Client to provide information to satisfy User Responsibilities as identified in Section 6 of the ASTM guidance.

Pursuant to ASTM E1527-13, Partner requested the following site information from LaTerra Development, LLC (User of this report).

User Responsibilities

Item	Provided By User	Not Provided By User	Discussed Below	Does Not Apply
Environmental Pre-Survey Questionnaire			**X**	
Title Records, Environmental Liens, and AULs			**X**	
Specialized Knowledge			**X**	
Actual Knowledge			**X**	
Valuation Reduction for Environmental Issues			**X**	
Identification of Key Site Manager	**Section 5.1.3**			
Reason for Performing Phase I ESA	**Section 1.1**			
Prior Environmental Reports	**X**		**X**	
Other				**X**

5.1 Interviews

5.1.1 Interview with Owner

The owner of the subject property identified as Gort, A California Limited Partnership, was not available to be interviewed at the time of the assessment. Mr. Kevin Robins, representative for the subject property owner, was not aware of any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the subject property; any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the subject property; or any notices from a governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products.

5.1.2 Interview with Report User

Please refer to Section 5.2 below for information requested from the Report User.

5.1.3 Interview with Key Site Manager

Mr. Caesar Perez , key site manager, indicated that he had no information pertaining to any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the subject property; any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the subject property; or any notices from a governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products.

5.1.4 Interviews with Past Owners, Operators and Occupants

Interviews with past owners, operators and occupants were not conducted since information regarding the potential for contamination at the subject property was obtained from other sources.

5.1.5 Interview with Others

As the subject property is not an abandoned property as defined in ASTM 1527-13, interview with others were not performed.

5.2 User Provided Information

5.2.1 Title Records, Environmental Liens, and AULs

Partner was not provided with title records or environmental lien and AUL information for review as part of this assessment.

5.2.2 Specialized Knowledge

No specialized knowledge of environmental conditions associated with the subject property was provided by the User at the time of the assessment.

5.2.3 Actual Knowledge of the User

No actual knowledge of any environmental lien or AULs encumbering the subject property or in connection with the subject property was provided by the User at the time of the assessment.

5.2.4 Valuation Reduction for Environmental Issues

No knowledge of valuation reductions associated with the subject property was provided by the User at the time of the assessment.

5.2.5 Commonly Known or Reasonably Ascertainable Information

The User did not provide information that is commonly known or *reasonably ascertainable* within the local community about the subject property at the time of the assessment.

5.2.6 Previous Reports and Other Provided Documentation

The following information was provided to Partner for review during the course of this assessment:

Phase I Environmental Site Assessment, Professional Service Industries, Inc. (November 9, 1998)

Professional Service Industries, Inc. (PSI) prepared this report on behalf of Gort LTD., LP and USG Annuity & Life Company c/o ING Investment Management, LLC. The assessment was performed in accordance with ASTM Standard E1527-97. The assessment consisted of a site reconnaissance, interviews with knowledgeable personnel, review of historical information, and a review of federal, state and local regulatory databases. This assessment included an extra parcel to the west. Pertinent information contained in this report is summarized below:

- At the time of the 1998 assessment, the subject property consisted of two parcels of land totaling 12.21-acres in size and developed with an approximately 97,405 square-foot commercial building occupied by Fry's Electronics.
- According to the report, the subject property was formerly undeveloped land from as early as 1894; and developed as a dairy with associated residential structures and a store between circa-1928 and the early-1960s. By 1962, the subject property was redeveloped with the current commercial structure on the southern portion and Lockheed Martin (referred to as Plant A-1 South) occupied the property from 1969 to December 1995 for use as offices, a vehicle maintenance shop and parking. Additionally, a gasoline service station/automotive repair operation was developed on the northeastern portion of the subject property in 1962, which was acquired by Lockheed Martin in the mid-1960s and utilized as a gasoline service station/automotive repair operation for Lockheed fleet vehicles until closure in 1992. The subject property had been occupied by Fry's Electronics for retail use since at least 1995.
- Based on information provided in the report, this former operation included four (4) 12,000-gallon gasoline/diesel/tetrachloroethylene (PCE) USTs, one 550-gallon waste oil UST, one concrete 1,600-gallon clarifier and seven (7) dispensers. The UST containing PCE served as a central supply point for Lockheed's other plants in the Burbank area. The former gasoline service station/automotive repair operation was demolished in 1992 and the former underground storage tank (USTs) and clarifier were removed as part of the demolition. Additionally, other features including hydraulic lifts and storm drains were removed during this demolition under the supervision of the Burbank Fire Department. Following removal of the USTs and other associated

features of potential concern, a total of twenty-one soil samples were collected from the excavated areas. According to the analytical results, subsurface soil was found to be impacted with PCE, diesel fuel and hydraulic oil.

Between 1992 and 1995, seven (7) subsurface investigations were conducted at the subject property in relation to this reported release to the subsurface as a result of the former operations, and a total of 426 soil samples were collected from the former service station during this period. A total of 18 of the 426 soil samples contained concentrations of PCE above 1 mg/kg. As such, approximately 1,380 tons of PCE-impacted soil was excavated and removed from the subject property, and confirmation soil samples collected from the base and sidewalls of the excavation contained less than 150 ug/kg of PCE. As such, in a letter dated July 5, 1995, the California Regional Water Quality Control Board (RWQCB) issued a No Further Action status to the subject property and indicated the subject property had been remediated in accordance with Cleanup and Abatement Order No. 87-161. As such, PSI concluded the historical use of the subject property was not a REC.

PSI identified no RECs and recommended no further investigation.

Copies of pertinent pages reviewed are included in Appendix B of this report.

6.0 SITE RECONNAISSANCE

The weather at the time of the site visit was sunny and clear. Refer to Section 1.5 for limitations encountered during the field reconnaissance and Sections 2.1 and 2.2 for subject property operations. The table below provides the site assessment details:

Site Assessment Data	
Site Assessment Performed By:	Claudia Cook
Site Assessment Conducted On:	April 16, 2020

The table below provides the subject property personnel interviewed during the field reconnaissance:

Site Visit Personnel for 2311 North Hollywood Way (Subject Property)			
Name	**Title/Role**	**Contact Number**	**Site Walk* Yes/No**
Mr. Cesar Perez	Store General Manager	(818) 524-0423	Yes

* Accompanied Partner during the field reconnaissance activities and provided information pertaining to the current operations and maintenance of the subject property

Environmental concerns were identified during the onsite reconnaissance related to indications of former subsurface investigations, etc., as further discussed in Sections 6.1 and 6.2.

6.1 General Site Characteristics

6.1.1 Solid Waste Disposal

Solid waste generated at the subject property is disposed of in commercial dumpsters located on the southeastern section of the subject property on the subject property. An independent solid waste disposal contractor, Burbank Refuse, removes solid waste from the subject property. According to property personnel, only household and office-type trash is collected in the on-site solid waste dumpsters. No evidence of illegal dumping of solid waste was observed during the Partner site reconnaissance.

6.1.2 Sewage Discharge and Disposal

Sanitary discharges on the subject property are directed into the municipal sanitary sewer system. The City of Burbank services the subject property vicinity. No wastewater treatment facilities or septic systems were observed or reported on the subject property.

6.1.3 Surface Water Drainage

Storm water is removed from the subject property primarily by sheet flow action across the paved surfaces towards storm water drains located throughout the subject property and in the public right of way. The subject property is connected to a municipal owned and maintained sewer system.

The subject property does not appear to be a designated wetland area, based on information obtained from the United States Department of Agriculture; however, a comprehensive wetlands survey would be required in order to formally determine actual wetlands on the subject property. No surface impoundments, wetlands, natural catch basins, settling ponds, or lagoons are located on the subject property. No drywells were identified on the subject property.

6.1.4 Source of Heating and Cooling

Heating and cooling systems as well as domestic hot water equipment are fueled by electricity and natural gas provided by Southern California Edison and the Southern California Gas Company. Heating and cooling are provided by HVAC packaged units. There are three pad-mounted units at grade along the east elevation of the building and ten units mounted on the roof. Cooling is provided by direct expansion and appears to utilize R-410A refrigerant while heating is provided by gas-fired heating coils. The car audio installation building contains one roof-mounted evaporative swamp cooler unit.

6.1.5 Wells and Cisterns

No aboveground evidence of wells or cisterns was observed during the site reconnaissance.

6.1.6 Wastewater

Domestic wastewater generated at the subject property is disposed by means of the sanitary sewer system. No industrial process is currently performed at the subject property.

6.1.7 Septic Systems

No septic systems were observed or reported on the subject property.

6.1.8 Additional Site Observations

Partner observed at least one groundwater monitoring well on the northeastern corner of the subject property. This well appeared to be in good operating condition. The site contact was unaware of the nature of the well and or current operations. This feature is further discussed in Sections 4.2.2 and 4.2.4.

6.2 Potential Environmental Hazards

6.2.1 Hazardous Substances and Petroleum Products Used or Stored at the Site

No evidence of the use of reportable quantities of hazardous substances was observed on the subject property. Small quantities of general maintenance supplies were found to be properly labeled and stored at the time of the assessment with no signs of leaks, stains, or spills. The storage and use of maintenance supplies does not appear to pose a significant threat to the environmental integrity of the subject property at this time.

6.2.2 Aboveground & Underground Hazardous Substance or Petroleum Product Storage Tanks (ASTs/USTs)

No evidence of current or former ASTs or USTs was observed during the site reconnaissance.

6.2.3 Evidence of Releases

No spills, stains or other indications that a surficial release has occurred at the subject property were observed.

6.2.4 Polychlorinated Biphenyls (PCBs)

Older transformers and other electrical equipment could contain PCBs at a level that subjects them to regulation by the U.S. EPA. PCBs in electrical equipment are controlled by United States Environmental

Protection Agency regulations 40 CFR, Part 761. Under the regulations, there are three categories into which electrical equipment can be classified: 1) Less than 50 parts per million (ppm) of PCBs – "*Non-PCB;*" 2) 50 ppm-500 ppm – "*PCB-Contaminated;*" and, 3) Greater than 500 ppm – "*PCB-Containing.*" The manufacture, process, or distribution in commerce or use of any PCB in any manner other than in a totally enclosed manner was prohibited after July 2, 1979.

The on-site reconnaissance addressed indoor and outdoor transformers that may contain PCBs. Two pad-mounted transformers, and three dry interior transformers were observed on the subject property. The transformers are not labeled indicating PCB content. No staining or leakage was observed in the vicinity of the transformers. Based on the good condition of the equipment, the transformers are not expected to represent a significant environmental concern.

The subject property is equipped with three dock levelers along the cargo loading bay on the southeastern corner of the subject property. The levelers appear to be in good condition, undergoing annual inspections and repairs by the ownership, with no signs of leaks or staining; therefore, they are not expected to represent a significant environmental concern.

Additionally, no other potential PCB-containing equipment (interior transformers, oil-filled switches, hoists, lifts, dock levelers, hydraulic elevators, balers, etc.) was observed on the subject property during Partner's reconnaissance.

6.2.5 Strong, Pungent or Noxious Odors

No strong, pungent or noxious odors were evident during the site reconnaissance.

6.2.6 Pools of Liquid

No pools of liquid were observed on the subject property during the site reconnaissance.

6.2.7 Drains, Sumps and Clarifiers

No drains, sumps, or clarifiers, other than those associated with storm water removal, were observed on the subject property during the site reconnaissance.

6.2.8 Pits, Ponds and Lagoons

No pits, ponds or lagoons were observed on the subject property.

6.2.9 Stressed Vegetation

No stressed vegetation was observed on the subject property.

6.2.10 Additional Potential Environmental Hazards

No additional environmental hazards, including landfill activities or radiological hazards, were observed.

6.3 Non-ASTM Services

6.3.1 Asbestos-Containing Materials (ACMs)

Asbestos is the name given to a number of naturally occurring, fibrous silicate minerals mined for their useful properties such as thermal insulation, chemical and thermal stability, and high tensile strength. The

Occupational Safety and Health Administration (OSHA) regulation 29 CFR 1926.1101 requires certain construction materials to be presumed to contain asbestos, for purposes of this regulation. All thermal system insulation (TSI), surfacing material, and asphalt/vinyl flooring that are present in a building that have not been appropriately tested are "presumed asbestos-containing material" (PACM).

The subject property buildings were constructed in 1962. A limited, visual evaluation of accessible areas for the presence of suspect ACMs at the subject property was conducted. The objective of this visual survey was to note the presence and condition of suspect ACM observed. Please refer to the table below for identified suspect ACMs:

Suspect ACMs

Suspect ACM	Location	Friable Yes/No	Physical Condition
Drywall Systems	Throughout Building Interior	No	Good
Floor Tiles	Throughout Building Interior	No	Good
Floor Tile Mastic	Throughout Building Interior	No	Good

The limited visual survey consisted of noting observable materials (materials which were readily accessible and visible during the course of the site reconnaissance) that are commonly known to potentially contain asbestos. This activity was not designed to discover all sources of suspect ACM, PACM, or asbestos at the site; or to comply with any regulations and/or laws relative to planned disturbance of building materials such as renovation or demolition, or any other regulatory purpose. Rather, it is intended to give the User an indication if significant (significant due to quantity, accessibility, or condition) potential sources of ACM or PACM are present at the subject property. Additional sampling, assessment, and evaluation will be warranted for any other use.

Partner was not provided building plans or specifications for review, which may have been useful in determining areas likely to have used ACM.

According to the US EPA, ACM and PACM that is intact and in good condition can, in general, be managed safely in-place under an Operations and Maintenance (O&M) Program until removal is dictated by renovation, demolition, or deteriorating material condition. Prior to any disturbance of the construction materials within this facility, a comprehensive ACM survey is recommended.

6.3.2 Lead-Based Paint (LBP)

Lead is a highly toxic metal that affects virtually every system of the body. LBP is defined as any paint, varnish, stain, or other applied coating that has 1 mg/cm^2 (or 5,000 ug/g or 0.5% by weight) or more of lead. Congress passed the Residential Lead-Based Paint Hazard Reduction Act of 1992, also known as "Title X", to protect families from exposure to lead from paint, dust, and soil. Under Section 1017 of Title X, intact LBP on most walls and ceilings is not considered a "hazard," although the condition of the paint should be monitored and maintained to ensure that it does not become deteriorated. Further, Section 1018 of this law directed the Housing and Urban Development (HUD) and the US EPA to require the disclosure of known information on LBP and LBP hazards before the sale or lease of most housing built before 1978.

Based on the age of the subject property buildings (pre-1978), there is a potential that LBP is present. Interior and exterior painted surfaces were observed in good condition and therefore not expected to represent a "hazard," although the condition of the paint should be monitored and maintained to ensure that it does not become deteriorated.

Actual material samples would need to be collected in order to determine if LBP is present.

6.3.3 Radon

Radon is a colorless, odorless, naturally occurring, radioactive, inert, gaseous element formed by radioactive decay of radium (Ra) atoms. The US EPA has prepared a map to assist National, State, and local organizations to target their resources and to implement radon-resistant building codes. The map divides the country into three Radon Zones, according to the table below:

EPA Radon Zones		
EPA Zones	**Average Predicted Radon Levels**	**Potential**
Zone 1	Exceed 4.0 pCi/L	Highest
Zone 2	Between 2.0 and 4.0 pCi/L	Moderate
Zone 3	Less than 2.0 pCi/L	Low

It is important to note that the EPA has found homes with elevated levels of radon in all three zones, and the US EPA recommends site-specific testing in order to determine radon levels at a specific location. However, the map does give a valuable indication of the propensity of radon gas accumulation in structures.

Radon sampling was not conducted as part of this assessment. Review of the US EPA Map of Radon Zones places the subject property in Zone 2. Based upon the radon zone classification, radon is not considered to be a significant environmental concern.

6.3.4 Lead in Drinking Water

According to available information, a public water system operated by the Burbank Department of Public Works and Engineering serves the subject property vicinity. The sources of public water for Burbank are surface water purchased from the Metropolitan Water District (MWD) that received its water from the Northern Sierra Mountains in California and the Colorado River. According to the Burbank and the 2018 Annual Water Quality Report, water supplied to the subject property is in compliance with all State and Federal regulations pertaining to drinking water standards, including lead and copper. Water sampling was not conducted to verify water quality.

6.3.5 Mold

Molds are microscopic organisms found virtually everywhere, indoors and outdoors. Mold will grow and multiply under the right conditions, needing only sufficient moisture (e.g.in the form of very high humidity, condensation, or water from a leaking pipe, etc.) and organic material (e.g., ceiling tile, drywall, paper, or natural fiber carpet padding).

Partner observed accessible, interior areas for the subject property buildings for significant evidence of mold growth with the exceptions detailed in Section 1.5 of this report; however, this ESA should not be

used as a mold survey or inspection. Additionally, this limited assessment was not designed to assess all areas of potential mold growth that may be affected by mold growth on the subject property. Rather, it is intended to give the client an indication as to whether or not conspicuous (based on observed areas) mold growth is present at the subject property. This evaluation did not include a review of pipe chases, mechanical systems, or areas behind enclosed walls and ceilings.

No obvious indications of water damage or mold growth were observed during Partner's visual assessment.

6.4 Adjacent Property Reconnaissance

The adjacent property reconnaissance consisted of observing the adjacent properties from the subject property premises.

6.4.1 PCBs

Two pole-mounted transformers and at least three pad-mounted transformers were observed on the adjacent properties. No staining or leakage was observed in the vicinity of the transformers. Based on these observations, the presence of adjacent transformers is not expected to represent a significant environmental concern.

No additional items of environmental concern were identified on the adjacent properties during the site assessment, including hazardous substances, petroleum products, ASTs, USTs, evidence of releases, PCBs, strong or noxious odors, pools of liquids, sumps or clarifiers, pits or lagoons, stressed vegetation, or any other potential environmental hazards

7.0 FINDINGS AND CONCLUSIONS

Findings

A *recognized environmental condition (REC)* refers to the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: due to release to the environment; under conditions indicative of a release to the environment; or under conditions that pose a material threat of a future release to the environment. The following was identified during the course of this assessment:

- The subject property is located within the boundaries of the Burbank Operable Unit (BOU) of the San Fernando Valley North Hollywood National Priorities List (NPL) site, an area of known groundwater contamination. Constituents of Concern (COCs) that have been identified include semi-volatile organic compounds (SVOCs), Volatile Organic Compounds (VOCs) and chromium. The subject property was one of many sites investigated by RWQCB and USEPA as a potential responsible party (PRP) of the groundwater contamination. On July 6, 1995 a letter was issued to Lockheed by RWQCB indicating the subject property would no longer be under investigation for potential groundwater contamination for VOCs and the subject property (former Lockheed Plant A-1 South) and current ownership (Gort Limited) were noted to be excluded from the requirements of the Cleanup and Abatement Order No. 87-161, which is associated with the cleanup of several Lockheed plants in the Burbank area.

  Former site occupant, Lockheed Martin, monitors groundwater within the BOU to comply with the provisions of a USEPA Consent Decree (#91-4527-MRP) filed March 1992, and the CRWQCB Cleanup and Abatement Order (#87-161) dated December 1987. As part of the NPL investigation, two groundwater monitoring wells, A-1-CW04 and A-1-CW09, were installed in the north and northeast portion of the subject property, respectively. A third well, monitoring well A-1-CW05 was co-located with monitoring well A-1-CW04 at a later date. Partner contacted Ms. Anita Fang with CRWQCD regarding the most recent groundwater monitoring results on file with the agency for the BOU. A review of an Annual Groundwater Monitoring Report, Second Quarter 2017 Burbank Operable Unit, provided by Ms. Fang indicates 1,2,3 Trichloropropane (1,2,3 TCP), 1,4 Dioxane, various other VOCs (including Tetrachloroethylene (PCE) and Trichloroethene (TCE), hexavalent chromium and chromium were detected in the onsite wells at levels above the reporting limit (RL), with an increasing trend of 1,2,3 TCP concentrations. Chromium was detected in well A-1-CW04 at 0.88 ug/L which exceeds the Maximum Contaminant Level (MCL).

  Lockheed Martin has conducted groundwater monitoring of the onsite wells since approximately 1996 and has been identified as a potential contributor to the regional groundwater contamination. As discussed, the current property owner (Gort, Ltd) has not been identified as a potential responsible party (PRP) and it is unlikely the subject property owner would be responsible for future remediation activities since NFA was issued in 1995. Furthermore, based on the depth to groundwater, review of the most recent groundwater analytical results, and commercial usage of the subject property, a vapor intrusion condition (VIC) is unlikely to exist at the subject property. The location of the subject property within the Burbank Operable Unit of the

San Fernando Valley NPL investigation, the identification of a former site occupant as a potential contributor to the regional impact, and the reported VOC and chromium groundwater contamination identified in onsite wells is considered a REC for the subject property; however, based on the lack of an apparent VIC and issuance of an NFA letter with regards to the former subject property operations, Partner recommends no further investigation at this time with regards to this regional groundwater contamination case.

A *controlled recognized environmental condition (CREC)* refers to a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls. The following was identified during the course of this assessment:

- Based on review of historical sources, by 1962, the subject property was redeveloped with the current commercial structure on the southern portion and Lockheed Martin (referred to as Plant A-1 South) occupied the property from 1969 to December 1995 for use as offices, a vehicle maintenance shop and parking. Additionally, a gasoline service station/automotive repair operation was developed on the northeastern portion of the subject property in 1962, which was acquired by Lockheed Martin in the mid-1960s and utilized as a gasoline service station/automotive repair operation for Lockheed fleet vehicles until closure in 1992. The subject property has been occupied by Fry's Electronics for retail use since at least 1995.

  The subject property at 2311 North Hollywood Way was identified in the regulatory database report under the names Lockheed Martin, Gort Limited and Fry's Electronics. Based on information provided in a previous Phase I ESA report (PSI, 1998) and from a file review, this former operation included four (4) 12,000-gallon gasoline/diesel/tetrachloroethylene (PCE) USTs, one 550-gallon waste oil UST, one concrete 1,600-gallon clarifier and seven (7) dispensers. The UST containing PCE served as a central supply point for Lockheed's other plants in the Burbank area. The former gasoline service station/automotive repair operation was demolished in 1992 and the former underground storage tank (USTs) and clarifier were removed as part of the demolition. Additionally, other features including hydraulic lifts and storm drains were removed during this demolition under the supervision of the Burbank Fire Department. Following removal of the USTs and other associated features of potential concern, a total of twenty-one soil samples were collected from the excavated areas. According to the analytical results, subsurface soil was found to be impacted with PCE, diesel fuel and hydraulic oil.

  Between 1992 and 1995, seven (7) subsurface investigations were conducted at the subject property in relation to this reported release to the subsurface as a result of the former operations, and a total of 426 soil samples were collected from the former service station during this period. The 1992 subsurface investigation included 78 soil borings to depths of 10 to 40 feet bgs, and soil samples collected from varying intervals were analyzed for VOCs, PCBs, and TPH. According to the analytical results, TPH impacts were generally confined to the upper 10 feet of soil. Elevated VOC impacts were also generally limited to the upper 10 feet of soil, with one boring noting PCE

impacts extending to 25 feet bgs. In 1993, a Soil Gas Survey was conducted on the subject property to further evaluate the extent of the subsurface impacts. A total of 181 soil-gas samples were collected from 159 locations across the subject property at depths ranging from 5 to 25 feet bgs, and the samples were analyzed for VOCs. According to the analytical results, twelve of the sample collected from the 5-foot depth contained PCE in excess of 0.1 mg/L, with one sample exceeding 1.0 mg/L. None of the samples collected from the 20-foot depth contained concentrations of PCE above 1.0 mg/L. Additional site characterization was conducted in 1994/1995 which included additional soil borings and sampling and additional soil vapor sampling. A total of 18 of the 426 soil samples contained concentrations of PCE above 1 mg/kg.

Based on review of the Final Soil Remediation Report dated May 22, 1995 by Lockheed Martin Corporation, approximately 1,380 tons of PCE- and diesel/oil-impacted soil was excavated and removed from the subject property. Following removal, a total of 109 confirmation soil samples were collected from the base and sidewalls of the excavation and analyzed for VOCs, TPH, and lead. According to the analytical results, the confirmation soil samples all contained less than 150 ug/kg of PCE. As such, the excavations were backfilled with approved clean fill, and a request for closure was submitted with the report. Based on review of the 1995 final soil remediation report, in a letter dated July 5, 1995, the California Regional Water Quality Control Board (RWQCB) issued a No Further Action status to the subject property and indicated the subject property had been remediated in accordance with Cleanup and Abatement Order No. 87-161. As such, the subject property (former Lockheed Plant A-1 South) and current ownership (Gort Limited) were noted to be excluded from the requirements of the Cleanup and Abatement Order No. 87-161, which is associated with the cleanup of several Lockheed plants in the Burbank area. Based on the regulatory closure with residual PCE-impacted soil left in place, the historical usage of the subject property and associated closed release case are considered a CREC for the subject property. As such, prior to any redevelopment activities and due to the presence of residual PCE-impacted soil in the subsurface, Partner recommends a soil vapor survey be conducted to evaluate potential vapor intrusion issues for any future onsite buildings. Additionally, if the redevelopment plan includes subterranean levels, Partner recommends implementing a Soil Management Plan (SMP).

A *historical recognized environmental condition (HREC)* refers to a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls. The following was identified during the course of this assessment:

- Partner did not identify any HRECs during the course of this assessment.

An *environmental issue* refers to environmental concerns identified by Partner, which do not qualify as RECs; however, warrant further discussion. The following was identified during the course of this assessment:

- Due to the age of the subject property buildings, there is a potential that asbestos-containing material (ACM) and/or lead-based paint (LBP) are present. Readily visible suspect ACMs and painted surfaces were observed in good condition. The identified suspect ACMs and LBPs would need to be sampled to confirm the presence or absence of asbestos or lead prior to any renovation or demolition activities to prevent potential exposure to workers and/or building occupants.

Conclusions, Opinions and Recommendations

Partner has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 of 2311 North Hollywood Way in Burbank, Los Angeles County, California (the "subject property"). Any exceptions to, or deletions from, this practice are described in Section 1.5 of this report.

This assessment has revealed evidence of a REC, CREC and environmental issue in connection with the subject property. Based on the conclusions of this assessment, Partner recommends the following:

- Prior to any redevelopment activities and due to the presence of residual PCE-impacted soil in the subsurface, Partner recommends a soil vapor survey be conducted to evaluate potential vapor intrusion issues for any future onsite buildings. Additionally, if the redevelopment plan includes subterranean levels, Partner recommends implementing a Soil Management Plan (SMP).
- An Operations and Maintenance (O&M) Program should be implemented in order to safely manage the suspect ACMs and LBP located at the subject property.

8.0 SIGNATURES OF ENVIRONMENTAL PROFESSIONALS

Partner has performed a Phase I Environmental Site Assessment of the property located at 2311 North Hollywood Way in Burbank, Los Angeles County, California in conformance with the scope and limitations of the protocol and the limitations stated earlier in this report. Exceptions to or deletions from this protocol are discussed earlier in this report.

By signing below, Partner declares that, to the best of our professional knowledge and belief, we meet the definition of *Environmental Professional* as defined in §312.10 of 40 CFR §312. Partner has the specific qualifications based on education, training, and experience to assess a *property* of the nature, history, and setting of the subject *property*. Partner has developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. **NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OR DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT.** Purchaser accepts this Report "AS IS". Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction orforecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2015. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

BUSINESS PLAN ANNUAL RENEWAL CERTIFICATION

Hazardous Materials Inventory

I have reviewed my inventory and certify the following:

- ☐ **Add:** Complete one **Hazardous Materials Inventory—Chemical Description Form** checking the "Add" box to add each hazardous material that you have not previously disclosed. Submit one form per chemical.
- ☐ **Delete:** Write "delete" across the **Hazardous Materials Inventory—Chemical Description Form** checking the "Delete" box to delete any previously disclosed hazardous material that is no longer used. Submit one form per chemical.
- ☐ **Revise:** Write the correct amounts, locations, or container type that has changed checking the "Revise" box to reflect the accuracy of any previously reported hazardous material on each **Hazardous Materials Inventory—Chemical Description Form**. Submit one form per chemical.
- ☐ **EPCRA Compliance:** Fill in the EPCRA field on the **Hazardous Materials Inventory—Chemical Description Form** and **sign** for any hazardous material type and quantity identified on 40 CFR Part 355, Appendix A—The List of Extremely Hazardous Substances and Their Threshold Planning Quantities.
- ☐ **No Change:** The previously submitted inventory is accurate.

Consolidated Contingency Plan (CCP)

I have reviewed the CCP and certify that the CCP on file with your agency is accurate and current in accordance with the following conditions:

- ☐ **Modification:** Significant changes in facility personnel or operations required a revision of the CCP. Complete, **sign**, and submit a new CCP with this form.
- ☐ **No Change:** There have not been any significant changes in the facility's personnel and operations that require a revision to the current CCP.

Cal-ARP Program

I reviewed the threshold quantities in Section 2770.5 of Title 19 of the California Code of Regulations and certify that any regulated substance complies with the following registration requirement:

- ☐ **Add:** Complete the **Cal-ARP Program Regulated Substance Registration** form only if the regulated substance is at or above the threshold quantity (TQ). Submit one form per chemical.
- ☐ **No Change:** The previously submitted registration for regulated substance(s) is accurate.

ANNUAL CERTIFICATION

I certify under penalty of law that I have personally examined the information submitted herein and believe the submitted information is complete, accurate, and up to date. Also, no hazardous materials subject to the inventory requirements of this Chapter, (California Health & Safety Code Chapter 6.95) are being handled that are not listed on the most recently submitted annual inventory form.

NOTE: Please submit the Business Owner/Operator Identification Form with this Page

Does your facility . . .	If Yes, please complete these pages of the UPCF. . .	
A. HAZARDOUS MATERIALS		
Have on site (for any purpose) hazardous materials at or above 55 gallons for liquids, 500 pounds for solids, or 200 cubic feet for compressed gases (include liquids in ASTs and USTs); or the applicable Federal threshold quantity for an extremely hazardous substance specified in 40 CFR Part 355, Appendix A or B; or handle radiological materials in quantities for which an emergency plan is required pursuant to 10 CFR Parts 30, 40 or 70?	☒ YES ☒ NO 4	✔ HAZARDOUS MATERIALS INVENTORY – CHEMICAL DESC ✔ CONSOLIDATED CONTINGENCY PLAN (Section I and Site Map(s)) ✔ TRAINING PLAN
B. UNDERGROUND STORAGE TANKS (USTs)		✔ UST FACILITY
1. Own or operate underground storage tanks?	☐ YES ☒ NO 5	✔ UST TANK (one page per tank)
2. Intend to upgrade existing or install new USTs?	☐ YES ☒ NO 6	✔ UST FACILITY ✔ UST TANK (one per tank) ✔ UST INSTALLATION - CERTIFICATE OF COMPLIANCE (one page per tank)
3. Need to report closing a UST?	☐ YES ☒ NO 7	✔ UST TANK (closure portion –one page per tank)
C. ABOVE GROUND PETROLEUM STORAGE TANKS (ASTs)		
Own or operate ASTs above these thresholds: any tank capacity is greater than 660 gallons, or the total capacity for the facility is greater than 1,320 gallons?	☐ YES ☒ NO 8	NO FORM REQUIRED TO CUPA's
D. HAZARDOUS WASTE		
1. Generate hazardous waste?	☐ YES ☒ NO 9	✔ EPA ID NUMBER – provide at the top of this page. ✔ As a generator, answer YES to Item E2b and complete Waste Generator Form.
2. Recycle more than 100 kg/month of excluded or exempted recyclable materials (per HSC 25143.2)?	☐ YES ☒ NO 10	✔ RECYCLABLE MATERIALS REPORT
3. Treat hazardous waste on site?	☐ YES ☒ NO 11	✔ ON-SITE HAZARDOUS WASTE TREATMENT – FACILITY ✔ ON-SITE HAZARDOUS WASTE TREATMENT – UNIT (one page per unit)
4. Treatment subject to financial assurance requirements (for Permit by Rule and Conditional Authorization)?	☐ YES ☒ NO 12	✔ CERTIFICATION OF FINANCIAL ASSURANCE
5. Consolidate hazardous waste generated at a remote site?	☐ YES ☒ NO 13	✔ REMOTE WASTE / CONSOLIDATION SITE ANNUAL NOTIFICATION
6. Need to report the closure/removal of a tank that was classified as hazardous waste and cleaned on-site?	☐ YES ☒ NO 14	✔ HAZARDOUS WASTE TANK CLOSURE CERTIFICATION
E. LOCAL REQUIREMENTS		15
1. REGULATED SUBSTANCES Have Regulated Substances (RS) including Extremely Hazardous Substances (EHS) stored on site at greater than the threshold planning quantities established by the California Accidental Release Program (CalARP)?	☐ YES ☒ NO 15a	In addition to Hazardous Materials requirements, complete: ✔ REGULATED SUBSTANCE REGISTRATION ✔ RISK MANAGEMENT PLAN (when required)
2. OTHER REQUIREMENTS		
a. Have hazardous materials stored on site at or above a threshold amount established by a CUPA's or PA's local ordinance?	☐ YES ☒ NO 15b	✔ Consult local CUPA or PA for added reporting requirements.
b. Required by a CUPA or PA to provide other information?	☐ YES ☒ NO 15c	✔ WASTE GENERATOR FORM (LA County)

Subject: **00745 – FRY'S ELECTRONICS INC**
2311 N HOLLYWOOD WAY

California Health & Safety Code, Chapter 6.95, Article 1 and Burbank Municipal Code §15-1-2701-5.1 require all businesses that store, use, or handle hazardous materials in quantities that meet or exceed the thresholds established in Health & Safety Code §25503.6 (as indicated below), to submit a completed Hazardous Materials Inventory Disclosure Statement annually. Our records indicate that you meet these requirements.

The established thresholds are a hazardous material or a mixture containing a hazardous material in an aggregate quantity at any one time during the reporting year equal to or greater than a ***TOTAL weight of 500 pounds***, or a ***TOTAL volume of 55 gallons***, or a ***TOTAL volume of 200 cubic feet*** at standard temperature and pressure for compressed gas, or the threshold quantity (if less than 500 pounds) for regulated substances. A mixture that contains one percent (1%) or more of a hazardous ingredient is a hazardous material. A mixture that contains one tenth of one percent (.1%) or more of a carcinogen is a hazardous material. The *California Accidental Release Prevention (CalARP) Program* requires all regulated substance handlers to register with the Burbank Fire Department. Our records indicate that you meet these requirements.

These Hazardous Materials Inventory Disclosure forms are currently part of a Consolidated Permit Package issued by the Los Angeles County Certified Unified Program Agency (LACoCUPA). Please carefully read the instructions, complete the enclosed forms, and sign where indicated. Return ***ORIGINAL*** forms to the Burbank Fire Department with original signatures by ***March 1, 2008***. Failure to submit a properly completed and signed Business Plan Annual Renewal Certification statement, signed Business Owner / Operator Identification page, and Business Activities page by the due date could result in civil penalties. A self-addressed envelope is enclosed for your convenience.

BE SURE TO RETAIN A COPY FOR YOUR RECORDS.

See attached schedule for your submittal requirements.

If you have ...	Then complete, sign, and submit the following forms:
no changes to your inventory or Consolidated Contingency Plan,	1. Business Plan Annual Renewal Certification Form – signed; 2. HazMat Owner and Operator Identification page – signed; and 3. HazMat Business Activities page
no changes to your inventory or Consolidated Contingency Plan, but you are subject to EPCRA,	1. Business Plan Annual Renewal Certification Form – signed; 2. HazMat Owner and Operator Identification page – signed; 3. HazMat Business Activities page; and 4. Hazardous Materials Inventory Statement — sign each hazardous material being reported as an extremely hazardous substance.
changes to your inventory,	1. Business Plan Annual Renewal Certification Form – signed; 2. HazMat Owner and Operator Identification page – signed; 3. HazMat Business Activities page; and 4. Hazardous Materials Inventory — Chemical Description Form to add new reportable hazardous materials. Make as many copies as you need to disclose each reportable hazardous material that you will handle in 2008;
changes to your Consolidated Contingency Plan,	1. Business Plan Annual Renewal Certification Form – signed; 2. HazMat Owner and Operator Identification page – signed; 3. HazMat Business Activities page; and 4. A revised Consolidated Contingency Plan form.
a chemical that is at or above the threshold quantity for a regulated substance.	1. Business Plan Annual Renewal Certification Form – signed; 2. HazMat Owner and Operator Identification page – signed; 3. HazMat Business Activities page; and 4. A Cal-ARP Program Regulated Substances Registration form.

Forms can now be downloaded from our website at *http://www.Burbankfire.US/Mainpage.Htm*. These forms may be completed on your computer by using Microsoft Word. If you are unable to download the required forms from our website, or have questions, or need assistance, please contact the Fire Prevention Bureau at (818) 238-3473.

Thank you for your cooperation.

Jorge Martinez, Fire Safety Analyst

HAZARDOUS MATERIALS REPORTING FORMS

Enclosed is your most recent Hazardous Materials Inventory Statement based on the latest information available. Please carefully review it for accuracy. The requirements for submitting a consolidated Contingency Plan have changed (see * on page 1). If you require assistance in completing these forms, please feel free to contact the Burbank Fire Department, Hazardous Materials Division, at (818) 238-3475, Monday through Friday 7:30 to 9:00 AM and 1:00 to 4:00 PM.

Return to the Burbank Fire Department this Re-Certification Procedure Page signed and dated along with a newly completed and signed Business Activities Form, Business Owner/Operator Identification Form, and any other appropriate and/or requested forms on or before March 1. ***Failure to complete and return these forms by March 1 may result in fines and penalties. Keep a copy of the entire package for your records.*** *To avoid late penalties, this Department recommends use of CERTIFIED MAIL to ensure delivery of these forms before the March 1 deadline.*

RE-CERTIFICATION PROCEDURE

Please check the appropriate box(es)

HAZARDOUS MATERIALS:

☐ **Delete:** If you no longer handle a material on the Inventory Statement provided, ***draw a line*** through the discontinued material, and ***complete a Chemical Description form writing "DELETE"*** across the form for each material you no longer handle.

☐ **Add:** If you are handling materials not previously disclosed, ***make copies of Chemical Description form and complete*** all information on the form (one form per material).

☐ **Revise/Update:** Cross out any errors on the Inventory Statement and Clearly Print the correct information. ***Make copies of Chemical Description form and complete*** all information on the form ***indicating "REVISE"*** (one form per material).

☐ **No Change:** There has been no change in the quantity of any hazardous material as reported, ***return the Inventory Statement we provided*** along with a newly completed and signed ***Business Activities Form, Business Owner/Operator Identification Form***, and this ***Re-Certification Procedure page*** signed and dated.

BURBANK FIRE DEPT
12 APR 07 06 58

CONSOLIDATED CONTINGENCY PLAN:

☐ **Change:** Mark this Box if you are updating the Consolidated Contingency Plan.

☒ **No Change:** Mark this box if the Consolidated Contingency Plan on file is correct and complete.

REGULATED SUBSTANCE REGISTRATION:

☐ **Regulated Substance Registration:** If you are handling a Regulated Substance not previously disclosed, you must also *complete the Regulated Substance Registration Form*. Complete only if substance is at or above threshold Quantity (TQ). A list of Regulated Substances is attached for reference.

THE SUBMITTAL OF THE HAZARDOUS MATERIALS BURBANK REPORTING FORMS CONTAIN ALL OF THE REQUIRED STATE & FEDERAL INVENTORY INFORMATION AND SATIFIES THE REQUIREMENTS OF BOTH STATE & FEDERAL REGULATIONS.

ANNUAL CERTIFICATION

I certify under penalty of law that I have personally examined the information submitted herein and believe the submitted information is complete, accurate, and up to date. Also, no hazardous materials subject to the inventory requirements of this chapter, (California Health & Safety Code Chapter 6.95) are being handled that are not listed on the most recently submitted annual inventory form.

San Jose CA 95112-

SUBJECT: **00745 - FRY'S ELECTRONICS INC**
2311 N HOLLYWOOD WAY

In July 1997, the City of Burbank became part of the Los Angeles County Certified Unified Program Agency (LACoCUPA). The LACoCUPA consolidates six environmental programs. The City of Burbank is responsible for the management of four of these six programs. They include Underground Storage Tanks, Hazardous Materials Disclosure and Response, Risk Management, and enforcement of the Hazardous Materials Management requirements of the Fire Code.

California Health & Safety Code, Chapter 6.95, Article 1 and Burbank Municipal Code §15-1-8001-3.3 require all businesses that store, use, or handle hazardous materials in quantities that meet or exceed the thresholds established in Health & Safety Code §25503.6, must submit a completed Hazardous Materials Inventory Disclosure Statement annually. Our records indicate that you meet these requirements.

Enclosed you will find the following forms which you are required to complete and submit to us by March 1, 2007:

✓ **The Hazardous Materials Annual Re-Certification Procedure**
A list of the hazardous materials identified at your facility may be included in the package. Review it carefully. You may complete and sign and submit the Annual Re-Certification Procedure for the Hazardous Materials Disclosure Report only, provided you can attest to the following:

- The most recent information submitted to the Burbank Fire Department is complete, accurate and up to date. (See attached list)
- There have been no changes in the quantities of hazardous materials as reported in the most recent submittal.
- No hazardous materials subject to the inventory reporting requirements are being handled that are not listed in the most recently submitted inventory report.
- The most recently submitted annual inventory report contains information required by Section 11022 of Title 42 of the United States Code.

FH

✓ **The Facility Information Section**
Everyone is required to submit their signed Facility Information for 2007. This form has been filled out with the information we currently have on file. If there are any blanks, please complete this information. If there are any changes, please cross out the filled in information and write in your new information.

✓ **The Hazardous Materials Section**
These forms are provided for your convenience to be completed if you have added any new Hazardous Materials, deleted any Hazardous Materials, or if there are any changes in quantities or substances to be reported.

These Hazardous Materials Inventory Disclosure forms are currently part of a Consolidated Permit Package issued by the Los Angeles County Certified Unified Program Agency (LACoCUPA). Please carefully read the instructions, complete the appropriate forms, and sign where indicated. Return ***ORIGINAL*** forms to the Burbank Fire Department by ***March 1, 2007***. Failure to submit a properly completed Inventory or signed Annual Re-Certification Statement by the due date could result in civil penalties. A self-addressed envelope is enclosed for your convenience. **BE SURE TO RETAIN A COPY FOR YOUR RECORDS.**

You can now request the Hazardous Materials and the Consolidated Contingency Plan forms to be sent to you by Email. These forms may be completed on your computer by using Microsoft Word. If you have any questions, or if we can be of any assistance, please contact the Fire Prevention Bureau at (818) 238-3475.

Thank you for your cooperation.

Jorge Martinez, Fire Safety Analyst

UNIFIED PROGRAM (UP) FORM

CONSOLIDATED CONTINGENCY PLAN

COVER PAGE

For Year 2006

FACILITY IDENTIFICATION

BUSINESS NAME 3		FACILITY ID # 1
Fry's Electronics, Inc.		**00745**
SITE ADDRESS 103	CITY 104	ZIP CODE 105
2311 No. Hollywood Way	**Burbank**	**91505**

The Consolidated Contingency Plan provides businesses a format to comply with the emergency planning requirements of the following three written hazardous materials emergency response plans required in California:

- Hazardous Materials Business Plan (HSC Chapter 6.95 Section 25504 (b) and 19 CCR Sections 2729-2732),
- Hazardous Waste Generator Contingency Plan (22 CCR Section 66264.52), and,
- Underground Storage Tank Emergency Response Plan and Monitoring Program (23 CCR Sections 2632 and 2641).

This format is designed to reduce duplication in the preparation and use of emergency response plans at the same facility, and to improve the coordination between facility response personnel and local, state, and federal emergency responders during an emergency. Use the chart below to determine which sections of the Consolidated Contingency Plan need to be completed for your facility. If you are unsure as to which programs your facility is subject to, refer to the Business Activities Page.

PROGRAMS	SECTION(S) TO BE COMPLETED
Hazardous Materials Business Plan (HMBP)	Cover Page, Section I, and Site Map(s)
Hazardous Waste Generator (HWG)	Cover Page, Section I, and Site Map(s)
Underground Storage Tank (UST)	Cover Page, Sections I and II, and Site Map(s)
HMBP, HWG, UST	Cover Page, Sections I and II, and Site Map(s)

A copy of the plan shall be submitted to your local CUPA and at least one copy of the plan shall be maintained at the facility for use in the event of an emergency and for inspection by the local agency. Describe below where a copy of your Contingency Plan, including the hazardous material inventories and Site Map(s), is located at your business:

FEB 06 18 PM '06 BURBANK FIRE DEPT

PLAN CERTIFICATION

I certify under penalty of law that I have personally examined and I am familiar with the information provided by this plan and to the best of my knowledge the information is accurate, complete, and true.

PRINTED NAME OF OWNER/ OPERATOR	TITLE OF OWNER/OPERATOR
KATHRYN J. KOLDER	EXECUTIVE VICE PRESIDENT
SIGNATURE OF OWNER/ OPERATOR	DATE
	2/27/06

We appreciate the effort of local businesses in completing these plans and will assist in every possible way. If you have any questions, please contact your local CUPA or PA.

III. EMERGENCY RESPONSE PLANS AND PROCEDURES

A. *Notifications*

Your business is required by State Law to provide an immediate verbal report of any release or threatened release of a hazardous material to local fire emergency response personnel, this Unified Program Agency (CUPA or PA), and the Office of Emergency Services. If you have a release or threatened release of hazardous materials, immediately call:

FIRE / PARAMEDICS / POLICE / SHERIFF PHONE: 911

AFTER the local emergency response personnel are notified, you shall then notify this Unified Program Agency and the Office of Emergency Services.

Local Unified Program Agency: (818) 238-3475
State Office of Emergency Service: (800) 852-7550 or (916) 262-1621
National Response Center: (800) 424-8802

Information to be provided during Notification:

- Your name and the telephone number from where you are calling.
- Exact address of the release or threatened release.
- Date, time, cause, and type of incident (e.g. fire, air release, spill etc.)
- Material and quantity of the release, to the extent known.
- Current condition of the facility.
- Extent of injuries, if any.
- Possible hazards to public health and/ or the environment outside of the facility.

B. *Emergency Medical Facility*

List the local emergency medical facility that will be used by your business in the event of an accident or injury caused by a release or threatened release of hazardous material

HOSPITAL/CLINIC:	PHONE:
St. Joseph Occupational Health Center	**(818) 953-4402**
ADDRESS: **3413 Pacific Avenue**	
CITY: **Burbank, Calfornia**	ZIP CODE: **91505**

OFFICIAL USE ONLY	DATE RECEIVED	REVIEWED BY		

SECTION I: BUSINESS PLAN AND CONTINGENCY PLAN

C. *Private Emergency Response* n/a

DOES YOUR BUSINESS HAVE A PRIVATE ON-SITE EMERGENCY RESPONSE TEAM? ☐ Yes ☐ No

If yes, provide an attachment that describes what policies and procedures your business will follow to notify your on-site emergency response team in the event of a release or threatened release of hazardous materials.

CLEANUP/DISPOSAL CONTRACTOR

List the contractor that will provide cleanup services in the event of a release.

NAME OF CONTRACTOR	PHONE NO
ADDRESS	
CITY	ZIP CODE

D. *Arrangements With Emergency Responders* n/a

If you have made special (i.e. contractual) arrangements with any police department, fire department, hospital, contractor, or State or local emergency response team to coordinate emergency services, describe those arrangements on the lines below:

E. *Evacuation Plan*

1. The following alarm signal(s) will be used to begin evacuation of the facility *(check all which apply)*:

☒ Verbal ☒ Telephone *(including cellular)* ☒ Alarm System ☒ Public Address System ☒ Intercom
☐ Pagers ☐ Portable Radio ☐ Other *(specify):*

2. ☒ Evacuation map is prominently displayed throughout the facility.

3. ☒ Individual(s) responsible for coordinating evacuation including spreading the alarm and confirming the business has been evacuated:

Store Manager. Loss Pervention & Safety Department

F. *Earthquake Vulnerability*

Identify areas of the facility where releases could occur or would require immediate inspection or isolation because of the vulnerability to earthquake related ground motion.

☐ Hazardous Waste/ Hazardous Materials Storage Areas ☐ Production Floor ☐ Process Lines
☐ Bench / Lab ☐ Waste Treatment ☐ Other

Identify mechanical systems where releases could occur or would require immediate inspection or isolation because of the vulnerability to earthquake related ground motion.

☐ Utilities ☒ Sprinkler Systems ☐ Cabinets ☐ Shelves
☐ Racks ☒ Pressure Vessels ☐ Gas Cylinders ☐ Tanks
☐ Process Piping ☒ Shutoff Valves ☐ Other:

SECTION I: BUSINESS PLAN AND CONTINGENCY PLAN

G. ***Emergency Procedures***

Briefly describe your business standard operating procedures in the event of a release or threatened release of hazardous materials:

SEE ATTACHED

1. **PREVENTION** (prevent the hazard) - Describe the kinds of hazards associated with the hazardous materials present at your facility. What actions would your business take to prevent these hazards from occurring? You may include a discussion of safety and storage procedures.

The only potential hazard would be in relation to the tanks of Helium and Propane stored at this location. The Helium tank is secured with two chains in the customer service department cage. The Propane tank is stored under supervised conditions in the mobile electronics installation department. Both tanks are inspected on a monthly basis.

2. **MITIGATION** (reduce the hazard) - Describe what is done to lessen the harm or the damage to person(s), property, or the environment, and prevent what has occurred from getting worse or spreading. What is your immediate response to a leak, spill, fire, explosion, or airborne release at your business?

Fry's regularly inspects these tanks to ensure that they are secured with proper valves and covers. In the event of a release or explotion, Fry's personnel would implement the Contingency and Training Program by immediately evacuating the store and contacting the emergency services.

3. **ABATEMENT** (remove the hazard) - Describe what you would do to stop and remove the hazard. How do you handle the complete process of stopping a release, cleaning up, and disposing of released materials at your facility?

Fry's does not handle this procedure directly. Instead, Fry's would allow emergency services to abate the hazard. However, Fry's would provide any/all assistance to emergency services as directed or required.

SECTION I: BUSINESS PLAN AND CONTINGENCY PLAN

IV. EMERGENCY EQUIPMENT

22 CCR, Section 66265.52(e) [as referenced by Section 66262.34(a)(3)] requires that emergency equipment at the facility be listed. Completion of the following Emergency Equipment Inventory Table meets this requirement

EMERGENCY EQUIPMENT INVENTORY TABLE

1. Equip Category	2. Equipment Type	3. Location *	4. Description**
Personal Protective, Equipment, Safety Equipment, and First Aid Equipment	☐ Cartridge Respirators

CHEMICALS IDENTIFIED AT:

00745 FRY'S ELECTRONCIS – 2311 No. HOLLYWOOD WAY BURBANK

As of February 20, 2006, the following is a list of inventory found in the janitors' closet.

(1) Three gallons Pink Hand Soap;
(2) One gallon Cove Base; (Dry Wall Plaster)
(3) Two gallon Multi Purpose Cleaner;
(4) One gallon Glass Cleaner;
(5) One 12.5 OZ. Can Furniture Polish;
(6) One gallon Metal Coil Cleaner;
(7) Four/Five gallon cans Floor Stripper;
(8) Twelve/Seven OZ. Cans Room Deodorant;
(9) Two dozen Toilet Bowl Deodorant Blocks;
(10) Four 50lbs Bags Polymer Repair.

Fry's ELECTRONICS

EMERGENCY COMMUNICATIONS

In an emergency, it is imperative that accurate information is quickly relayed to the proper decision-makers at the Home Office. When multiple individuals are communicating different information to different decision-makers, the risk of poor or slow decisions being made increases.

Every emergency situation is unique and the task of communicating information is extremely important. Therefore, our goal is as follows:

TO ESTABLISH ONE CENTRALIZED LINE OF COMMUNICATION OUT OF THE STORE, TO ONE CENTRALIZED COMMUNICATIONS CENTER IN THE HOME OFFICE ... AS QUICKLY AS POSSIBLE.

To accomplish this, follow the below listed guidelines:

1. Call 911 first, whenever an emergency situation warrants it.

2. Then, the Store Manager/PIC and Loss Prevention department should call the Director of Loss Prevention & Safety.

3. Once communication has been established, the Store Manager and one member of the Loss Prevention department will remain together during the emergency if possible, and discontinue any communication to any other associate at the Home Office.

4. The Director of Loss Prevention and Safety will establish communication with the Executive Vice President, President, or CEO.

5. If the Director of Loss Prevention & Safety is unreachable then call the Executive Vice President, President, or CEO.

District Manager of Store M&O Cell	
Director of Loss Prevention & Safety Cell	

POST AT THE PIC PODIUM AND LP OFFICE

SECTION 5 – EARTHQUAKE

A. When the Shaking Starts

1. Move away from windows, hanging light fixtures, hanging signs, and high shelving.
2. Take cover under a desk or strong table.
3. Don't run.
4. Don't run outside the building.
5. Don't panic.
6. Don't use telephones.

B. When the Shaking Stops

1. Follow the Store Manager or PIC's instructions.
2. The Store Manager or PIC will assess the situation and proceed according to the below listed guidelines.

C. If The Earthquake Is Severe

Evacuate the building following the Evacuation Plan, and notify the Store M&O District Manager and the Loss Prevention & Safety District Manager as soon as possible.

IF TIME AND SAFETY PERMIT, DO THE FOLLOWING:

1. Check for injuries (Do not move the injured unless it is life threatening to keep them there).
2. Shut off the gas main. (Refer to Section 9, Gas Leak)
3. Shut off the electrical main if there is damage to the internal wiring.
4. Secure cash registers and high-value merchandise.
5. Clean up chemical spill with heavy-duty rubber gloves. (Refer to Section 10, Hazardous Materials)
6. Check for water or sewage leaks or broken electrical wiring.
7. If bathroom fixtures, water fountains, or landscaping sprinklers are leaking, shut off the domestic water.
8. If there is no fire and if fire sprinkler pipes are leaking, and it appears that substantial water damage will occur, you may shut off the fire riser. If the threat of fire is great and the leak is not major, you may not want to shut them off.
9. Prepare the store for aftershocks. (Is there a potential hazard that could cause major damage with another good aftershock?)
10. Secure all exits and set the alarm.

11. To turn electrical back on first, turn each individual breaker to the "off" position. Next, turn the electrical main on and one by one, turn on each individual breaker. If no problems occur as each breaker is turned on, continue to the next breaker.

12. Do not turn the gas on at this time. Wait for the gas company or Maintenance to give the approval to turn it back on.

D. Basic Communication Information

1. Check all phones and fax machines to make sure they are on the hook.

2. Use the phone for emergency communications only.

3. If you must dial the phone, pick up the receiver and leave it off the hook until you receive a dial tone.

4. Do not flash the receiver hook! This will only delay the call.

5. Dial the number immediately after receiving the dial tone or else you will not be able to make the call.

6. Do not walk away from the phone with the receiver off. You will receive a dial tone if the equipment is not damaged.

SECTION 6 - EVACUATION PLAN – STORES

1. Designate a primary meeting place outside the building where all associates will meet. This place should be far enough away from the building and away from potential hazards, like power lines. A secondary meeting place should also be designated in the event that the primary meeting place is not safe.

2. Loss Prevention will place the Evacuation Map at all DSC podiums, the PIC podium, Customer Relations, and break room. The map must show the associate meeting place.

3. Call Randy Fry, Kathy Kolder or John Fry for permission to evacuate if circumstances permit. The decision to evacuate will be made by the Store/Asst. Manager or PIC when circumstances warrant it.

4. The PIC will make an announcement using the example language, *"Attention Fry's Customers and Associates. We ask that you evacuate the building. Please calmly walk to the nearest emergency exit. Fry's Associates, go to the associate meeting place."* Repeat as often as necessary and as long as is safe to do so. Stores without a centralized paging system should make the announcement from each DSC podium throughout the store.

5. Associates must provide additional assistance to any disabled customers or associates to ensure they exit the building safely.

6. If safe to do so, Loss Prevention will check the bathrooms, offices, and presentation rooms to make sure all individuals are exiting the building.

7. Each DSC will take the Daily Coverage Report with them to the associate meeting place.

8. Each DSC will be responsible to account for all of their associates at the meeting place.

9. The DSC will inform the PIC when all associates are accounted for or who is missing.

10. All associates are to remain in the meeting place until the PIC gives notification that it is safe to return to the store or leave the premises.

11. The PIC must be alert to determine if new hazards (downed power lines, ruptured gas lines etc.) have made the evacuation itself unsafe, or if the primary meeting place is not safe. If the primary meeting place is unsafe, the PIC will decide to meet in the secondary place.

12. If prolonged evacuation is required and it is safe to do so, Loss Prevention will secure the building and set the alarm.

13. Loss Prevention will determine with the Store Manager if it is necessary to have a Loss Prevention Officer remain at the site, if it is safe, to watch the building.

SECTION 7 – EVACUATION PLAN – HOME OFFICE

1. Loss Prevention will post an Evacuation Map in each department and in the associate break room.
2. The designated meeting place for each department is on the map.
3. If safe to do so, Loss Prevention will check the bathrooms and offices to make sure all associates have exited the building.
4. Each department will quickly and quietly exit the building and meet in the pre-designated area outside the office.
5. The department supervisor will account for each person in their department.
6. The department supervisor will be alert to determine if any new hazards (downed power lines, ruptured gas lines, etc.) have made the evacuation itself unsafe. If the primary meeting place is unsafe, the supervisor will determine a secondary meeting place.
7. Loss Prevention will meet with each group to ensure all associates are accounted for.
8. All associates are to remain in the meeting area until Loss Prevention gives notification that is safe to go back into the building or leave the premises.

SECTION 8 – FIRE

NOTE: The safety of our customers and associates must be the primary consideration at all times when dealing with emergency situations. All associates should know the location of all fire exits and fire extinguishers. All associates should receive prior teaching of what to do in case they detect a fire.

A. If You Smell Smoke

1. Notify the PIC immediately.
2. The PIC will ask Loss Prevention to assist in investigating the source of the smell.

B. If A Fire Is Detected

1. Call the Fire Department by dialing 911.
2. Have an associate meet the Fire Department outside to direct them to the location of the fire.
3. If it is safe to do so, locate a fire extinguisher and attempt to put out the fire.
4. If you are unable to put out the fire quickly with an extinguisher, the PIC will take steps to evacuate the building following Fry's Evacuation Plan.
5. If safe to do so, attempt to minimize any property damage.
6. Loss Prevention will document the incident, including the cause of the fire and the damage done.
7. Loss Prevention will take photographs and send them to the Home Office Legal Department along with any videotape if applicable.

SECTION 9 - GAS LEAK

A. If You Smell Gas

1. Notify the PIC immediately.

2. The PIC will ask Loss Prevention to assist in investigating the source of the smell.

B. If a Gas Leak is Reported (Do all of the following at the same time.)

1. Shut off the gas by following the below listed procedure:

   - Get a crescent wrench from Loss Prevention.
   - Go to the gas main.
   - Turn the shut-off valve a quarter turn.

2. Evacuate the area of the leak.

3. Do your best to prevent sparks of any kind.

4. Air out the building.

Call the gas company before turning the gas back on.

SECTION 10 - HAZARDOUS MATERIALS

Each chemical has its own unique method of cleaning up spills, so refer to the Material Safety Data Sheets for the chemicals we use and sell for the appropriate clean-up procedures. In case of a spill, proceed as follows:

1. Identify the material, its properties, and clean-up procedures.
2. You should have kitty litter available in your store for simple spills, like motor oil.
3. If you are unsure on how to clean up a chemical spill, consult the local Hazardous Materials Team or Fire Department for additional information.
4. Use the appropriate personal protective equipment.
5. If there are noxious fumes, evacuate the area.
6. Seek medical care immediately if someone is contaminated with a hazardous material.
7. If safe, mitigate or eliminate the source of the spill (close valves, cap bottles, etc.).
8. Do not let material go down a drain, or into a waterway, basement, or confined space.
9. Complete notifications to regulatory agencies if required.

SECTION 11 - POWER FAILURE

A. If There Is A Power Failure

1. Notify the District Manager of Store M&O. If the District Manager is not available, contact the President or Executive Vice President.

2. Notify the I.S. department.

3. Inform all the above about the following conditions:

   - Is the back up power working?
   - How much of the store is lit?
   - How much natural light is in the store?
   - What are the weather conditions?
   - Are there any factors that would negatively impact the safety of our customers or the protection of our assets?
   - If any of the variables change that would affect the store's ability to stay open during the outage, contact the District Manager of Store M&O for instructions.

4. Have all associates acquire a flashlight from their DSC podium or the PIC.

5. Have all associates immediately give "TK" service to all customers in the store by staying with them with the flashlight to guide them safely while the lights are out.

6. All associates not with a customer should move to the front of the store and escort customers one at a time using a flashlight. The associate will stay with the customer the entire time they are shopping and then return to the front for the next customer.

7. Associates are not to store-use flashlights and batteries without the PIC's approval.

8. Assign one responsible associate to guard each fire exit door for the entire duration that the power is out.

9. The Loss Prevention and store management teams will check the store to remove any safety hazards.

10. Call Randy Fry, Kathy Kolder, or John Fry for permission to evacuate if circumstances permit. The decision to evacuate will be made by the Store/Asst. Manager or PIC when circumstances warrant it.

SECTION 13 - WATER LEAK

A. DOMESTIC WATER - This is the water that is used in the café, drinking fountains, bathrooms, and the landscape sprinklers.

1. All PIC's and Loss Prevention should know where the emergency shut off valve is located. (Refer to Section 2, Map of Electrical, Gas, & Water Shut-Offs)

2. Shut off the water valve when you have major leaks.

B. FIRE SPRINKLER WATER - This is a separate system from the domestic water.

1. There will typically be 3-4 pipes that are 6"-12" in diameter. Each pipe (riser) will disperse water to the sprinkler heads in a different part of the building.

2. A map should be posted at the risers that show which risers control which part of the building.

3. PIC's and Loss Prevention should be trained on this procedure before the need occurs to execute it.

When an actual emergency occurs, there is no time for indecision. Following the correct procedure may save thousands of dollars worth of merchandise from being ruined. If a sprinkler head is broken or the pipes are leaking, you MUST do the following:

C. Water Shut Off

1. Turn the shut-off valve that is located on the front of the riser to the OFF position. (This stops the flow of water into the pipe, however a lot of water is already in the pipes.)

2. Locate the "MAIN (a.k.a. AUXILIARY) DRAIN VALVE." (It may be next to the shut-off valve in some stores or outside in others.)

3. OPEN the Main (Auxiliary) Drain valve. (This drains the water that is already in the sprinkler pipes. If you don't do this, water will continue to drain from the sprinkler head for 30–60 minutes.)

4. The water will stop flowing in approximately 1 minute.

5. The fire alarm will activate when the water begins flowing. Alarms will also activate showing that the valve is closed. If it is a false alarm, notify the alarm company and instruct them to **not** send the Fire Department

6. To reset the system, close the main (auxiliary) drain valve and SLOWLY open the riser shut-off valve. (If you open the valve all the way quickly, it may create too much pressure and damage the pipes.)

7. Check for leaks.

8. Call the alarm company and reset the fire alarm system.

HAZARDOUS MATERIALS COMMUNICATION PROGRAM

WHAT'S IN THIS POLICY?

A. You Have a Right To Know
B. List of Hazardous Substances
   1. Café
   2. Sales Floor
   3. Janitorial
      - Outside Janitorial Company
      - Fry's Associates
   4. Car Electronics Installation
   5. Proposition 65 (California Only)
C. Material Safety Data Sheets (MSDS)
D. Labeling
E. Health Hazard Data Key Words
F. Associate Information & Training
G. Informing Contractors
H. Inquiries and Questions

A. You Have a Right To Know

In 1983, the Federal Government established the OSHA Hazard Communication Standard. This standard is designed to protect employees who use hazardous materials on the job. The Hazard Communication Standard states that companies which use hazardous materials must provide their employees with information and training on the proper handling and use of these materials.

You, as an associate of Fry's Electronics, have a Right To Know about the hazardous materials used in your work area and the potential effects of these materials upon your health and safety.

In compliance with Federal OSHA guidelines, Fry's Electronics has conducted an assessment of the hazards in the workplace. The Director of Loss Prevention & Safety has full authority and responsibility for implementing and maintaining this program. The Director of Loss Prevention & Safety has prepared and will keep current an inventory list of all known hazardous substances present in Fry's workplace.

NO OTHER CHEMICAL MAY BE USED IN OUR STORES UNLESS IT HAS BEEN APPROVED BY THE DIRECTOR OF LOSS PREVENTION & SAFETY. THIS INCLUDES CHEMICALS THAT CAN BE PURCHASED AT A GROCERY STORE.

Chemicals can cause serious harm to you and therefore Fry's Electronics will only allow approved chemicals into our building. Some chemicals we sell to customers and others we use. This policy is designed to educate you about what chemicals are allowed in the building, the proper use of those chemicals and the appropriate personal protective equipment needed when working with chemicals. All authorized chemicals will have a Material Safety Data Sheet available in the Store Manager's office. There are MSDS's also available in the café for the chemicals that are present there. These sheets have important information about hazardous components, spill/leak procedures, first aid information, protective measures, and more. Familiarize yourself with these sheets for your own protection.

B. LIST OF HAZARDOUS SUBSTANCES

1. USED IN CAFÉ DEPT. – CHEMICALS PRESENT AND PERSONAL PROTECTIVE EQUIPMENT NEEDED

NAME OF CHEMICAL	HEALTH HAZARD	GLOVES	SPLASH GOGGLES
LIQUID DETERGENT CONCENTRATE	**DANGER**	**YES**	**YES**
LIQUID RINSE CONCENTRATE	CAUTION	NO	NO
LIQUID SANITIZER CONCENTRATE	**DANGER**	**YES**	**YES**
POT & PAN DETERGENT CONCENTRATE	WARNING	**YES** (IF PROLONGED OR REPEATED EXPOSURE)	**YES** (IF SPLASHING MAY OCCUR)
POT & PAN SANITIZER CONCENTRATE	**DANGER**	**YES**	**YES**
FRUIT & VEGGIE WASH CONCENTRATE	**DANGER**	**YES**	**YES**
GLASS CLEANER CONCENTRATE	WARNING	**YES**	**YES**
ALL PURPOSE CLEANER CONCENTRATE	CAUTION	NO	NO
FLOOR CLEANER CONCENTRATE	CAUTION	NO	NO
FOOD CONTACT SANITIZER CONCENTRATE	**DANGER**	**YES**	**YES**
HAND SOAP	CAUTION	NO	NO
ESPRESSO MACHINE CLEANER	CAUTION	NO	NO
BLEACH	**DANGER**	**YES**	**YES**
COMPRESSED CO2 GAS-(EXPLOSIVE HAZARD) **CYLINDERS MUST BE ATTACHED TO THE WALLS WITH CHAINS OR STRAPS.**		NO	NO

Most of these chemicals are used in the EcoLab system. The concentrated chemical is placed in the dispenser and the associate uses a diluted form of the chemical in a secondary container. **USE CAUTION WHEN WORKING WITH THE CONCENTRATE. ALL CONTAINERS MUST BE LABELED WITH THE CHEMICAL THAT IS INSIDE.** Fry's uses this system in order to limit your exposure to chemicals.

Chemicals should be stored in an orderly fashion on lower shelves in order to prevent spills.

2. SALES FLOOR

We sell many chemicals in our store. Each one has an MSDS in a binder in the Store Manager's Office.

We also have compressed gas (Helium) in the Customer Service Sales area. This is an explosive hazard.

Helium cylinders must be attached to the walls with chains or straps.

3. JANITORIAL

♦ CHEMICALS USED BY OUTSIDE JANITORIAL SERVICE – NOT BY FRY'S ASSOCIATES - AND PERSONAL PROTECTIVE EQUIPMENT NEEDED. *(Note: Fry's associates should not remove these items from the janitorial service area. Fry's associates should not use these chemicals at any time.)*			
NAME OF CHEMICAL	**HEALTH HAZARD**	**GLOVES**	**SPLASH GOGGLES**
1030 FLOOR FINISH	WARNING	**YES**	**YES**
1140 FLOOR FINISH	WARNING	**YES**	**YES**
808 FINISH STRIPPER	WARNING	**YES**	**YES**
815 FINISH STRIPPER	WARNING	**YES**	**YES**
1000 MAINTAINER/ RESTORER	CAUTION	**YES**	**YES**
JOHNSON WAX	CAUTION	NO	NO
TOP FLITE PLUS ALL PURPOSE CLEANER	WARNING	**YES**	**YES**
DEEP BLUE GLASS & SURFACE CLEANER	WARNING	**YES**	**YES**
M.A.D. MILD ACID DETERGENT	**DANGER**	**YES**	**YES**
CONSUME	CAUTION	**YES**	**YES**
BIG D AEROSOL DEODORANTS	CAUTION	**YES**	**YES**
PUSH LIQUID BACTERIA/DIGESTER	CAUTION	NO	NO
AF315 NEUTRAL PH DISINFECTANT	WARNING	**YES**	**YES**
PH7 NEUTRAL CLEANER	CAUTION	**YES**	**YES**
BONBET LIQUID DRY CARPET CLEANER	WARNING	**YES**	**YES** (MAKE SURE VENTILATION IS ADEQUATE)
ES-STEAM EXTRACTION CLEANER	WARNING	**YES**	**YES** (MAKE SURE VENTILATION IS ADEQUATE)
NILODOR POLYMER URINAL SCREEN	CAUTION	NO	**OPTIONAL**

♦ CHEMICALS USED BY FRY'S ASSOCIATES AND PERSONAL PROTECTIVE EQUIPMENT NEEDED			
NAME OF CHEMICAL	**HEALTH HAZARD**	**GLOVES**	**SPLASH GOGGLES**
ALL PURPOSE DILUTED CLEANER FROM CAFE	CAUTION	**NO**	**NO**
WINDEX	NONE	**NO**	**NO**
FURNITURE POLISH	CAUTION	**YES** (FOR PROLONGED USE)	**YES**
STAINLESS STEEL CLEANER	CAUTION	NO	NO
GOO-GONE	CAUTION	**YES** (IF SIGNIFICANT SPLASHING)	**YES** (FOR PROLONGED USE)

4. CAR ELECTRONICS INSTALLATION

♦ CHEMICALS USED BY FRY'S CAR ELECTRONICS INSTALLATION DEPT. AND PERSONAL PROTECTIVE EQUIPMENT NEEDED			
NAME OF CHEMICAL	**HEALTH HAZARD**	**GLOVES**	**SPLASH GOGGLES**
SPRAY ADHESIVE	WARNING	**YES**	**YES**
GLUE STICKS	CAUTION	**YES** (IF WORKING WITH MOLTEN MATERIAL)	**YES** (IF WORKING WITH MOLTEN MATERIAL)
3M STRIP CAULK	CAUTION	NO	NO

5. PROP. 65 (CALIFORNIA ONLY)

There are chemicals in our store that are known to the state of California to cause cancer, birth defects, or other reproductive harm.

- Carbonless paper (receipt tape)
- Diesel fuel (trucks and emergency generators)
- Solder (on salesfloor)
- Chemical lead
- Plastic coated cables (coax, data cables etc...)

To address exposures to Proposition 65 chemicals, the Director of Loss Prevention & Safety has provided clear and reasonable warnings to individuals prior to exposure by means of signs that are posted on each side of the aisles where these products are sold or used.

C. MATERIAL SAFETY DATA SHEETS (MSDS)

Federal law requires that copies of these sheets are available to our associates. The chemical manufacturer provides these sheets that contains detailed information about a specific hazardous material that is on the materials inventory. An MSDS contains the following information:

- Identity (name of the substance)
- Physical Hazards
- Health Hazards
- Routes of body entry
- Permissible Exposure limits (PEL)
- Carcinogenic Factors (cancer causing)
- Safe Handling Procedures
- Data of Sheet Preparation
- Control Measures (Personal Protective Equipment)
- Emergency First Aid
- Contact information (for the preparer of the sheet)
- Special Instructions

The Director of Loss Prevention & Safety is responsible for obtaining the MSDS's, reviewing them for completeness, and maintaining the data sheet system for the company. In the reviewing of incoming sheets, if new and significant health/safety information becomes available, this new information is passed on immediately to the affected associates by additional training sessions, posted memos, and other means of communication.

If MSDS's are missing or new hazardous substance(s) in use do not have MSDS's, please contact the Director of Loss Prevention & Safety at 408-487-4500. A new MSDS will be requested from the manufacturer.

You must read these sheets so that you have all the information that you need to work safely. There are copies in the café and a copy in the MSDS binder in the Store Manager's office.

You would use an MSDS, for example, if you spilled the Quaternary Food Contact Surface Sanitizer concentrate. Specific instructions for cleaning up a spill are written in the MSDS.

D. LABELING

ALL containers of hazardous materials must have legible labels identifying the material and warning associates of its potential hazards. The label must be placed in a conspicuous location on the container. Never use unlabeled containers to store any of the chemicals that are on this list. Every container must be properly labeled so that you know exactly what is inside the container. Never place one chemical in to a container that is labeled for a different container.

Fry's policy is all primary and secondary containers are labeled as follows:

LABEL INFORMATION	PRIMARY CONTAINER	SECONDARY CONTAINER
THE PRODUCT NAME	✔	✔
A WARNING STATEMENT, MESSAGE OR SYMBOL	✔	✔
NAME AND ADDRESS OF THE MANUFACTURER	✔	

Containers must be re-labeled if damaged or defaced.

E. HEALTH HAZARD DATA KEY WORDS

Each chemical we use will have the following hazard description name or number on the MSDS and on the label.

HEALTH HAZARD CLASSIFICATION NAME	HEALTH HAZARD CLASSIFICATION NUMBER	DESCRIPTION
DEADLY	**4**	THIS MEANS THE CHEMICAL MAY BE DEADLY.
EXTREME DANGER	**3**	THIS MEANS THAT THE CHEMICAL MAY BE TOXIC, CORROSIVE, OR FLAMMABLE. THE CHEMICAL MAY CAUSE PERMANENT BLINDNESS OR CHEMICAL BURNS. IT WOULD BE HARMFUL OR FATAL IF SWALLOWED.
WARNING *(DANGEROUS)*	**2**	CAUSES MODERATE IRRITATION. PROLONGED EXPOSURE CAUSES IRRITATION OR NAUSEA STOMACH DISTRESS IF SWALLOWED.
CAUTION *(SLIGHT HAZARD)*	**1**	THIS MEANS THE CHEMICAL MAY CAUSE IRRITATION TO SKIN AND EYES. IF SWALLOWED, MAY CAUSE STOMACH DISTRESS, NAUSEA, OR VOMITING.
NONE	**0**	NO HAZARD

F. ASSOCIATE INFORMATION AND TRAINING

Associates are to attend a health and safety training session set up by the Loss Prevention and Safety Department Manager prior to starting work. This training session will provide information on the following:

- The requirements of the hazard communication regulation, including the associate's rights under the regulation.
- The location and availability of the written hazard communication program.
- Any operation in the work area, including non-routine tasks, where hazardous substances or Prop 65 carcinogens/reproductive toxins are present and exposures are likely to occur.
- Methods and observation techniques used to determine the presence or release of hazardous substances in the work area.
- Protective practices the company has taken to minimize or prevent exposure to these substances.
- How to read labels and review MSDS's to obtain hazard information.
- Physical and health effects of the hazardous substances.
- Symptoms of overexposure.
- Emphasizes associates' need to practice reducing and preventing exposure to these hazardous substances by engineering controls, work practices, and use of personal protective equipment.
- Emergency and first-aid procedures to follow if associates are exposed to hazardous substances.
- The location and interpretation of warning signs or placards to communicate that a chemical known to cause cancer or reproductive toxicity is used in the workplace.

Associates will receive additional training when a new hazard is introduced into the workplace.

G. INFORMING CONTRACTORS

To ensure that outside contractors (janitorial employees) work safely in our stores and to protect our associates from chemicals used by outside contractors, the Director of Loss Prevention and Safety is responsible for giving and receiving the following information from contractor:

- Hazardous substances, including Proposition 65 chemicals, to which they may be exposed while on the job site as well as substances they will be bringing into the workplace. We will provide contractors with information on our labeling system and access to the MSDS's.

- Precautions and protective measures our associates may take to minimize the possibility of exposure.

H. INQUIRIES AND QUESTIONS

If anyone has questions about this plan, please contact the Director of Loss Prevention and Safety at the Home Office. Our Plan will be maintained by the Director of Loss Prevention and Safety to ensure that the policies are carried out and the plan is effective.

RCRA	Generator	Trans. 1	Trans. 2	TSDF	Alt. TSDF

Waste Code Matrix as a spreadsheet

The Department of Toxics Substances Control (DTSC) takes every precaution to ensure the accuracy of data in the Hazardous Waste Tracking System (HWTS). However, because of the large number of manifests handled, inaccuracies in the submitted data, limitations of the manifest system and the technical limitations of the database, DTSC cannot guarantee that the data accurately reflect what was actually transported or produced.

Report Generation Date: 04/19/2020

GENERAL NOTES

1. SURVEYOR HAS RELIED UPON INFORMATION SUPPLIED IN THE CURRENT TITLE REPORT BY FIRST AMERICAN TITLE INSURANCE COMPANY REPORT NO. 9831646-21 DATED SEPTEMBER 25, 1998 TO DISCLOSE RECORD EASEMENTS THAT BURDEN OR BENEFIT THIS PROPERTY.
2. BUILDING SETBACK LINES SHOWN HEREON REFLECT THE INFORMATION AS EXPLAINED BY THE CITY REPRESENTATIVE INDICATED HEREON.
3. THE PHRASE "FLOOD HAZARD" WITHIN THE CERTIFICATION HEREON REFERS TO "SPECIAL FLOOD HAZARD AREA" AS DEFINED BY FEMA AND THE NFIP AND ONLY REFERS TO THOSE AREAS ON FLOOD INSURANCE RATE MAPS AS BEING WITHIN ZONES A OR V OF SAID MAPS.
4. BY OBSERVATION NO CEMETERIES ARE KNOWN OR FOUND ON SUBJECT PROPERTY.
5. NO MONUMENTATION WAS FOUND OR SET AT THE PROPERTY CORNERS UNLESS NOTED OTHERWISE.
6. ASSESSORS PARCEL NUMBERS FOR THIS PROPERTY ARE 2463-001-019 & 2463-001-020.
7. BEARINGS AND DISTANCES ARE RECORD AND MEASURED PER PARCEL MAP NO. 24143 BOOK 269, PAGES 99 & 100, RECORDS OF SAID COUNTY, UNLESS NOTED OTHERWISE.
8. SURVEYOR TAKES NO RESPONSIBILITY OF ITEMS OMITTED DUE TO A RESULT OF VISUAL OBSTRUCTIONS.
9. THE BUILDING SQUARE FOOTAGE INDICATED ON THIS PLAN IS BASED ON EXTERIOR DIMENSIONS AT GROUND LEVEL ONLY.
10. THIS PLAN AND/OR DATA FILES INCLUDING ALL CONTENTS HEREIN ARE FOR THE SOLE USES AND PARTIES INDICATED HEREON. ANY DEVIATION OR MISUSES OF THIS PLAN AND/OR DATA FILES WITHOUT PRIOR WRITTEN AGREEMENTS BY ANACAL ENGINEERING IS PROHIBITED AND IS THE RESPONSIBILITY OF THE PARTIES USING SAID DRAWING AND/OR DATA FILES, UPON THE REUSE OF THIS PLAN AND/OR DATA FILES ANACAL ENGINEERING RELINQUISHES ALL RESPONSIBILITIES OF THE ACCURACY AND GENERAL CONTENT OF SAID PLAN AND/OR DATA FILES CONTAINED HEREIN.
11. SITE AS CONSTRUCTED IS LEGAL NO CONFORMING.

LEGAL DESCRIPTION

THE LAND REFERRED TO IN THIS COMMITMENT IS IN THE STATE OF CALIFORNIA, COUNTY OF LOS ANGELES, AND IS DESCRIBED AS FOLLOWS:

PARCEL A:

PARCEL 1 OF PARCEL MAP NO. 24143, IN THE CITY OF BURBANK, AS PER MAP FILED IN BOOK 269 PAGES 99 AND 100 OF PARCEL MAPS, IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY.

PARCEL B:

PARCEL 2 OF PARCEL NO. 24143, IN THE CITY OF BURBANK, AS PER MAP FILED IN BOOK 269 PAGES 99 AND 100 OF PARCEL MAPS, IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY.

PARCEL B1:

A STRIP OF LAND FOR A RECIPROCAL DRIVEWAY EASEMENT 28.00 FEET WIDE OVER THAT PORTION OF THE SOUTHWEST QUARTER OF THE SOUTHEAST QUARTER OF SECTION 4 AND THAT PORTION OF THE NORTH HALF OF THE NORTHWEST QUARTER OF THE NORTH-EAST QUARTER OF SECTION 9 IN TOWNSHIP 1 NORTH, RANGE 14 WEST, SAN BERNARDINO MERIDIAN, IN THE CITY OF BURBANK, ACCORDING TO THE OFFICIAL PLAT OF SAID LANDS, LYING 4.83 FEET WESTERLY AND 23.17 FEET EASTERLY OF THE FOLLOWING DESCRIBED LINE:

BEGINNING AT THE INTERSECTION OF THE CENTERLINE OF VALHALLA DRIVE, 60 FEET WIDE, AS DESCRIBED IN THE DEED TO THE CITY OF BURBANK, RECORDED MARCH 9, 1925 AS INSTRUMENT NO. 755 IN BOOK 4837 PAGE 169, OFFICIAL RECORDS, WITH THE EASTERLY LINE OF TRACT 6618, AS PER MAP RECORDED IN BOOK 69 PAGE 86 OF MAPS, RECORDS OF SAID COUNTY; THENCE ALONG SAID EASTERLY LINE, NORTH 0° 58' 30" EAST 330.00 FEET; THENCE PARALLEL WITH SAID CENTERLINE, SOUTH 89° 03' 49" EAST 460.00 FEET TO THE TRUE POINT OF BEGINNING.

THENCE PARALLEL WITH SAID EASTERLY LINE AND ITS NORTHERLY PROLONGATION; NORTH 0° 58' 30" EAST 383.95 FEET; THENCE NORTH 13° 24' 07" EAST 27.00 FEET TO A LINE THAT IS PARALLEL WITH AND DISTANT SOUTHWESTERLY 60.00 FEET, MEASURED AT RIGHT ANGLES, FROM THE SOUTHWESTERLY LINE OF THE SOUTHERN PACIFIC RAILROAD RIGHT OF WAY (COAST LINE, 100.00 FEET WIDE).

THE SIDELINES OF SAID STRIP ARE TO BE EXTENDED OR SHORTENED SO AS TO TERMINATE SOUTHERLY IN SAID ABOVE DESCRIBED COURSE HAVING A BEARING AND LENGTH OF "SOUTH 89° 03' 49" EAST 460.00 FEET; AND NORTHERLY IN SAID LAST DESCRIBED PARALLEL LINE.

EXCEPT THEREFROM THAT PORTION LYING WITHIN THE LINES OF PARCEL "A" DESCRIBED ABOVE.

METES AND BOUNDS DESCRIPTION

PARCELS 1 AND 2 OF PARCEL MAP NO. 24143 IN THE CITY OF BURBANK, COUNTY OF LOS ANGELES, STATE OF CALIFORNIA, ON A MAP FILED IN BOOK 269, PAGES 99 AND 100 OF PARCEL MAPS IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY, DESCRIBED AS FOLLOWS:

BEGINNING AT THE SOUTHWEST CORNER OF SAID PARCEL 1, SAID POINT BEING ON THE NORTHERLY LINE OF VALHALLA DRIVE, 60 FEET WIDE;
THENCE ALONG SAID NORTHERLY LINE SOUTH 89° 06' 57" EAST 900.41 FEET TO THE BEGINNING OF A CURVE CONCAVE NORTHWESTERLY WITH A RADIUS OF 15.00 FEET;
THENCE NORTHEASTERLY ALONG SAID CURVE THROUGH A CENTRAL ANGLE OF 89° 52' 05" A LENGTH OF 23.59 FEET TO A POINT OF TANGENCY ON THE WESTERLY LINE OF HOLLYWOOD WAY;
THENCE NORTH 01° 00' 58" WEST ALONG SAID WESTERLY LINE 470.17 FEET TO THE BEGINNING OF A CURVE CONCAVE SOUTHWESTERLY WITH A RADIUS OF 15.00 FEET;
THENCE NORTHWESTERLY ALONG SAID CURVE THROUGH A CENTRAL ANGLE OF 76° 36' 28", A LENGTH OF 20.06 FEET TO A POINT OF TANGENCY ON THE SOUTHWESTERLY LINE OF VAN OWEN DRIVE;
THENCE ALONG SAID SOUTHWESTERLY LINE, NORTH 75° 35' 30" WEST 30.38 FEET;
THENCE NORTH 69° 54' 23" WEST 181.11 FEET;
THENCE NORTH 74° 29' 114" WEST 262.37 FEET;
THENCE NORTH 76° 35' 53" WEST 358.83 FEET TO THE NORTHWESTERLY CORNER OF PARCEL 2 OF SAID PARCEL MAP 24143;
THENCE SOUTH 00° 58' 30" WEST ALONG THE WESTERLY LINE OF SAID PARCEL 2, 383.95 FEET TO THE SOUTHWESTERLY CORNER OF PARCEL 2 AND ALONG THE LINE OF PARCEL 1;
THENCE NORTH 89° 03' 49" WEST ALONG THE LINE OF PARCEL 1, 93.33 FEET TO THE MOST NORTHWESTERLY CORNER OF PARCEL 1;
THENCE SOUTH 00° 58' 30" WEST ALONG THE MOST WESTERLY LINE OF LOT 1, 300.00 FEET TO THE POINT OF BEGINNING.

THIS DESCRIPTION IS INTENDING TO DESCRIBE ALL THAT PROPERTY FOUND FOUND IN TITLE REPORT NO. 9831646-21, DATED SEPTEMBER 25, 1998, BY FIRST AMERICAN TITLE INSURANCE COMPANY:

SURVEYORS CERTIFICATE

TO: U.S.G. ANNUITY & LIFE COMPANY &/OR ITS SUCCESSORS & ASSIGNS & FIRST AMERICAN TITLE INSURANCE COMPANY & GORT, L.P.

I HEREBY CERTIFY THAT THIS SURVEY WAS PREPARED FROM AN ACTUAL ON-THE-GROUND INSTRUMENT SURVEY OF THE SUBJECT PREMISES; THAT THE SAME ACCURATELY SHOWS THE LOCATION OF THE BOUNDARIES OF THE SUBJECT PREMISES AND THE LOCATION OF ALL STREETS, HIGHWAYS, ALLEYS AND PUBLIC WAYS CROSSING OR ABUTTING SAID PREMISES; THAT THE DIMENSIONS OF THE IMPROVEMENTS AND THE LOCATIONS THEREOF WITH RESPECT TO THE BOUNDARIES ARE ACCURATELY SHOWN AS THE SAME WERE SITUATED ON MARCH 19, 1996, THAT THERE ARE NO ENCROACHMENTS BY IMPROVEMENTS APPURTENANT TO ADJOINING PREMISES UPON THE SUBJECT PREMISES, NOR FROM THE SUBJECT PREMISES UNLESS SHOWN HEREON; THAT ALL BUILDINGS AND STRUCTURES LIE WHOLLY WITHIN ALL APPLICABLE BUILDING RESTRICTION LINES, IF ANY, AND DO NOT VIOLATE ANY RESTRICTION OR OTHER RECORDED AGREEMENT SET FORTH IN THE TITLE COMMITMENT OR THE SUBJECT PREMISES DATED SEPTEMBER 25, 1998, OF WHICH WE HAVE BEEN MADE AWARE OF, ISSUED TO YOU BY FIRST AMERICAN TITLE INSURANCE COMPANY THAT ALL EASEMENTS AND RIGHTS OF WAY WHICH ARE APPURTENANT TO OR BURDEN THE SUBJECT PREMISES AND (I) ARE REFERRED TO IN THE TITLE COMMITMENT, OR (II) ARE APPARENT FROM A VISUAL INSPECTION, ARE DELINEATED HEREON; AND THAT THE SUBJECT PREMISES ARE NOT IN A SPECIAL FLOOD HAZARD AREA.

ACCESS TO AND EGRESS FROM THE SUBJECT PREMISES AND THE IMPROVEMENTS AND STRUCTURES THEREON ARE PROVIDED VIA THE MEANS INDICATED HEREON. MUNICIPAL WATER, MUNICIPAL STORM SEWER AND MUNICIPAL SANITARY SEWER FACILITIES AND TELEPHONE, GAS AND ELECTRIC SERVICES OF PUBLIC UTILITIES ARE AVAILABLE IN THE LOCATION INDICATED HEREON. THIS SURVEY REFLECTS BOUNDARY LINES OF THE PREMISES WHICH "CLOSE" BY ENGINEERING CALCULATION.

I FURTHER CERTIFY THAT THIS PLAT AND THE SURVEY ON WHICH IT IS BASED WERE MADE IN ACCORDANCE WITH THE "MINIMUM STANDARD DETAIL REQUIREMENTS FOR ALTA/ACSM LAND TITLE SURVEYS", JOINTLY ESTABLISHED AND ADOPTED BY ALTA AND ACSM IN 1997; AND MEETS THE ACCURACY REQUIREMENTS OF A CLASS A SURVEY, AS AS INCLUDING ITEMS 2,3,4,6,7(a)(a1)(c),8,9,10,11, 13 & 15 OF TABLE AS DEFINED THEREIN.

SOIL REMEDIATION FINAL REPORT, LOCKHEED PLANT A-1 SOUTH, BUILDING 76A (File No. 104.0675)(Cleanup and Abatement Order No. 87-161)

Your May 25, 1995, letter transmitted the "Final Report of Soil Remediation for Building 76A, Lockheed Plant A-1 South".

Based on our review of the report, no further remediation is required as it appears that the contaminated areas identified by previous site investigations have been remediated to the extent possible that would greatly reduce the threat to the groundwater beneath the site. Confirmatory soil samplings and testings have indicated that this site has been remediated in accordance with Cleanup and Abatement Order No. 87-161 issued by this Regional Board on December 10, 1987.

As a result, the Lockheed Plant A-1 South site is hereby excluded from requirements set forth in Cleanup and Abatement Order No. 87-161. This does not release any other Lockheed sites from this Order. In addition, Lockheed should continue monitoring the groundwater monitoring well at the site. In the event that Lockheed sells this property, the new owner(s) must provide Lockheed and their consultants continued access to the property for the purpose of monitoring the on-site well.

Please call Alex Carlos at (213) 266-7583 if you have any questions.

SUBJECT: Transmittal - *Annual Groundwater Monitoring Report, Second Quarter 2017, Burbank Operable Unit, Burbank, California*

Dear Mr. Riley:

On Behalf of Lockheed Martin Corporation please find enclosed a copy of the Annual Groundwater Monitoring Report, Second Quarter 2016, Burbank Operable Unit, Burbank, California. This report presents the second quarter groundwater elevation measurements and groundwater quality data from the BOU monitoring well network including the Pacific Airmotive Corporation monitoring wells. A tabulation of the volume of groundwater extracted by the BOU for the reporting period is also included.

As discussed, a response to the comments provided by the U.S. EPA [EPA Review of "Annual Groundwater Monitoring Report Second Quarter 2016, Burbank Operable Unit, Burbank, California" (August 2016)] on 01 May 2017 is provided as Attachment 1 to this letter. The 2017 BOU Report has been modified based on those comments that would apply to this year's report.

If you have any questions regarding the enclosed document, please contact Stan Phillips at robert.s.phillips@lmco.com or (817) 495-0251 or myself at Thomas.villeneuve@tetratech.com or 9093825109.

Sincerely,
TETRA TECH, INC.

Thomas J. Villeneuve, P.E.
BOU and Burbank Soils Program Manager

Response to EPA Comments dated May 1, 2017 to the August 2016

Annual Groundwater Monitoring Report, Second Quarter 2016, Burbank Operble Unit, Burbank, California

EPA Comments		Response
		It was agreed in communications with the EPA that because of the timing of the comments on the 2016 BOU Groundwater Monitoring Report, the 2016 document would not be modified, but their comments would be used to modify the 2017 Annual BOU Groundwater Monitoring Report as appropriate.
1	Section 1.0, Introduction, Page 1-1 – Third paragraph states the activities were conducted in accordance with the Revised Operational Sampling Plan (OSP). The Sampling and Analysis Plan Addendum (Tetra Tech, 2016) for low flow sampling should also be referenced here.	The OSP was updated in early 2017 and is referenced in Section 1.0 and in other places in the text were appropriate.
2	Section 2.2.1, Pump Removal, Page 2-1 – Please add a description regarding the decontamination and disposal procedures for the pumps and associated piping.	The August 2017 report (Section 2.5.1, Low-Flow Pump Installation) includes a description of how the pumps and associated piping (pulled from the wells that were modified to low-flow pumps) were decontaminated and stored for off-site disposal. It notes that the pumps and piping were were pressure washed and placed in roll-off bins for offsite disposal. Based on information provided by the Off-Site Rule (OSR) contact for USEPA Region IX, the pumps and piping will be taken to Clean Harbors in Buttonwillow, California, (one of USEPA's approved CERCLA waste facilities) after the waste profiles have been completed.
3	Section 2.4.1, Low-Flow Sampling, Pages 2-4 and 2-5 – Please add a description regarding any deviations to the SAP Addendum for low flow sampling, similar to Section 2.5 for the OSP.	Deviations from the OSP during the April 2017 monitoring event are documented in section 2.9 of the report.
4	Section 4.1, Groundwater Elevations, Page 4-1 (and Table 1) – An EPA comment on the 2015 annual groundwater monitoring report noted that water levels were collected over a 3-week period and suggested that water levels be measured over a shorter timeframe (generally 1-2 days). Per Table 1, most Spring 2016 water levels were measured over the period of April 4-7, although some measurements were collected on April 2 (1), April 9 (6), April 13 (1), April 15 (2), and April 18 (1). Although the overall window for measurements (about 2 weeks) is an improvement over 2015, efforts should be made in the future to further compress this range. Monitoring wells 3872R, MW-04, MW-05, MW-06, SW-1, and SW-5 have not been surveyed. These wells should be surveyed prior to the next groundwater monitoring event.	Not all wells are accessable during the gauging event. The field crews do what they can to collect the measurements in as short a time frame as possible. Water level measurements were collected during the April 2017 monitoring event on April 18, 19, and 20. Monitoring wells 3872R, MW-04, MW-05, MW-06, SW-1, SW-5, OW-VO1R, OW-V02R, and OW-V03R were surveyed on May 25, 2017 and OW-V08 was surveyed on June 6, 2017. The survey data was utilized in this report to calculate groundwater elevations and plot their locations. This is documented in section 2.4 of the monitoring report.
5	Section 4.2.7, Results of Stratification Testing, Pages 4-7 and 4-8 – This section describes the results of the stratification testing, notes that overall higher concentrations were found in the deeper samples compared to the shallow samples, and state that future samples will be collected from the deeper zone in these wells. Based on the data presented, EPA agrees with this approach for these wells.	Comment noted.
6	Section 6.3.2, Horizontal Gradients, Page 6-7 – This section refers to the water level evaluation for the WT HSU using the triangulated irregular network (TIN) approach, as depicted on Figure 30. However, the text should acknowledge that the direction of the horizontal gradient in triangles U, V, W, and X is to the southeast, indicating that groundwater in the area generally south of Burbank Boulevard is not likely being captured by the extraction wells.	The TIN values for those triangles that cross or are below the capture line will be acknowledged in future documents. In 2017, the groundwater contours and the TINs support that capture from the BOU extraction wells extends south to approximately West Allan and Wyoming Avenue in the central-western portion of the BOU and Chandler Boulevard in the eastern portion of the BOU. The horizontal gradients calculated for triangles EE, FF, GG, and HH support partial capture in those regions. The horizontal gradients in triangles KK and LL do not support capture in those regions.
7	Sections 6.4 (Chemicals of Concern Concentration Trends) and 6.5 (Capture Zone Summary) – These sections focus on the four identified well pairs south of Burbank Boulevard. Well 3872N is not part of the four well pairs, but is identified in the OSP as essential for capture zone evaluation, mass flux evaluation, and characterization. This well showed a significant increase in PCE from 612 µg/L (2015) to 1,890 µg/L (2016). Further monitoring is required to evaluate whether this constitutes a long-term increasing trend. Please include this well in the discussion in these sections, including a possible explanation for the increased PCE concentration.	The concentration of PCE in 2017 in monitoring well 3872N was 310 ug/l. This concentration is more consistent with historical concentarations. The trend analysis for PCE in this well indicates the concentrations in the well are stable. The 2016 concentration appears anomalous. As we do with all monitoring wells that are located south of the BOU extractions wells, we will continue to watch the concentraton trends in 3872N as more data is collected.
8	Table 2 – Second Quarter 2016 Groundwater Elevation Data – It appears that the table should consist of the first three pages only; the last three pages should be deleted as they appear to repeat content from the first three pages, but have incomplete screened interval values for several wells.	The table was checked to confirm the error did not carry over into this years report.
9	Table 4 - Second Quarter 2016 Groundwater Well Maintenance Table	
9.1	The proposed maintenance items appear to capture most, but not all, of the primary maintenance related items noted in the field data sheets provided in Appendix B. For example, many of the wells were noted to have gasket seals that required replacement, which is included in Table 4. However, other problems such as missing bolts, missing locks, cracked surface pads, and standing water are not captured in Table 4. Please revise Table 4 to include all significant maintenance items.	The majority of the maintenanace items noted in 2016 field logs have been remedied and are documented in the 2017 report. In the 2017 report, the table (now Table 2) has been modified to include additional details based on the well inspection activities conducted in April 2017.
9.2	Table 4 should include a schedule to address the required repairs. Repairs should be completed in a timely manner. In addition, completed repairs can be documented in the "Prior Well Repairs" column to serve as an updated maintenance log.	Table 2 in the August 2017 report has been revised to include the prior repairs to serve as an updated maintenance log. The monitoring wells identified for repair in the 2017 report will be repaired prior to the April 2018 monitoring event.
9.3	Please identify the specific wells and approximate schedule for installation of dedicated low-flow sampling pumps in Table 4. The wells initially selected for low-flow pump installation were identified in the initial version of this table, as included in the LMC letter dated March 21, 2016 (Response to USEPA Comments - Annual Groundwater Monitoring Report Second Quarter 2015).	The installation of the new low-flow pumps is acknowledged in the 2017 report. Any new pump installations will be identifed and documented in future monitoring reports. New wells are being equiped with low flow pumps.
11	Appendix B – Field Data Sheets –The "final pump depth" should be populated for wells with dedicated pumps to meet the OSP requirement of groundwater sample collection depth. The depth can be included from known sources, such as Table 1 for low-flow pump intake depths, and/or confirmed in the field with a depth sounder. This is particularly important for wells sampled with portable low-flow pumps, such as SW-1 and SW-5, to verify that the pump is placed at the desirable depth.	The field data sheets included in the August 2017 report include the final pump intake depth of the newly installed low-flow pumps and the intake depth of any portable pumps used to collect the samples.

EXECUTIVE SUMMARY

The Burbank Operable Unit (BOU) is part of the North Hollywood National Priorities List site in the San Fernando Valley. Lockheed Martin monitors groundwater within the BOU to comply with the provisions of the United States Environmental Protection Agency (USEPA) Consent Decree (Docket No. 91-4527-MRP [Tx]) filed on March 25, 1992, and California Regional Water Quality Control Board, Los Angeles Region (LARWQCB) Cleanup and Abatement Order No. 87-161, dated December 17, 1987.

The Second Quarter 2017 BOU groundwater monitoring event was implemented in accordance with the 2017 Revised OSP; (Tetra Tech, 2017b). The intent of the program is to provide the data necessary to evaluate groundwater conditions at the BOU, including the near-field and far-field effects of the extraction well field pump and treat system.

Groundwater Monitoring Well Maintenance

In preparation for the second quarter 2017 groundwater monitoring event, several monitoring well maintenance activities were completed in March and April, 2017:

- The dedicated high-volume pumps and associated piping were removed from 52 monitoring wells and replaced with dedicated low-flow pumps.
- A total of 9 groundwater monitoring wells were redeveloped or cleaned out. This includes A-1-CW07, B-5-CW03, B-6-CW16, C-1-CW05, C-1-CW06, 3852L, 3852M, and 4949C.
- Well maintenance activities were completed at 70 of the BOU monitoring wells. This included replacement of well lid gaskets, adding or replacing well tags, re-tapping the existing bolt holes, and replacing the standard six-point bolts with five-point bolts.
- Five new groundwater monitoring wells (B-1-CW30 through B-1-CW34) were constructed in October and November 2016 within the former Plant B-1 facility, as described in the Supplemental Site Investigation Report, Former Lockheed Martin Plant B-1, Burbank, California (Tetra Tech, 2017a).
- Three observation wells (OW-VO1R, OW-VO2R, and OW-VO3R) were installed to replace existing wells, one new observation well (OW-VO8) was installed, and one observation well (OW-VO6) was repaired within the BOU between February and April 2017, in accordance

with Work Plan – Well Installation and Replacement, Burbank Operable Unit, Burbank, California (Tetra Tech, 2016d).

Groundwater Elevations and Gradients

During the second quarter 2017 groundwater monitoring event, groundwater levels were measured in 98 monitoring wells. Based on those measurements, the local shallow groundwater flow direction was predominantly southeasterly in the northwest portion of the BOU and southerly in the northeast portion of the BOU, and it converged in a flow direction toward the cones of depression created by the operation of the BOU extraction wells. The second quarter 2017 groundwater elevation data indicate that the dominant direction of shallow groundwater flow immediately south of the BOU extraction wells was reversed from its natural southeasterly flow direction, to a northerly flow direction in response to the extraction well pumping (northeasterly flow direction in the western portion of the BOU). These groundwater trends extend to Victory Boulevard in the western portion of the BOU, West Allan and Wyoming Avenue in the central-western portion of the BOU, and to Chandler Boulevard in the eastern portion of the BOU. Beyond these boundaries the groundwater flow direction shows influence from pumping, but ultimately reverts to its natural southeasterly direction.

The local groundwater flow direction in the B HSU during the second quarter 2017 groundwater monitoring event was generally the same as the local groundwater flow direction observed in the WT HSUs with a couple exceptions. The groundwater flow does not converge on BOU extraction wells VO1 through VO7 as it does in the WT HSUs but you do see a groundwater depression centered on BOU extraction well VO8.

Groundwater-elevation data for selected monitoring wells were used to evaluate horizontal hydraulic gradients (direction and magnitude) within the BOU using a TIN. This horizontal hydraulic gradient analysis was completed using data collected in the April 2017 gauging event and a TIN defined by monitoring wells distributed in the WT HSU. The TIN map prepared for the WT HSUs shows that the hydraulic gradient in the area immediately to the south of the groundwater extraction well system is directly influenced by pumping, showing very steep gradients and in some instances a reversal from the regional trend and indicating very strong hydraulic capture. Farther to the south the direction of groundwater flow appears to be affected by extraction, but the hydraulic

gradient is not as steep. The degree of hydraulic capture dissipates and may be absent completely south of most of the BOU southern boundary.

Water Quality Results

Sixty-five groundwater monitoring wells were sampled during the Second Quarter 2017 monitoring event, 42 completed in the WT HSU and 23 completed in the B HSU. The samples collected were tested for VOCs, 1,2,3-TCP, 1,4-dioxane, total chromium, and hexavalent chromium. Twenty-one organic and two inorganic analytes were detected. Isoconcentration maps were prepared for six primary chemicals of concern: PCE, TCE, 1,2,3-TCP, 1,4-dioxane, total chromium, and hexavalent chromium. Results for the primary chemicals of concern were as follows:

- PCE was detected in 59 of the primary (non-duplicate) samples, 37 of which exceeded the MCL (5 µg/L). Concentrations in the WT HSUs ranged from <0.20 µg/L to 630 µg/L (monitoring well B-1-CW33). Concentrations exceeding the MCL extended over much of the BOU with the highest concentrations detected at the northwest corner of the former Plant B-1 and trending southeast beneath former Plant B-1 and extending to Magnolia Boulevard. Concentrations in the B HSU ranged from <0.20 µg/L to 48 µg/L (monitoring well 3850R). Concentrations exceeding the MCL were not as widely distributed as in the shallower HSUs, with the highest concentrations detected adjacent to the extraction wells on Vanowen Street.
- TCE was detected in 53 of the samples, 35 of which exceeded the MCL. The detected concentrations ranged from 0.29 µg/L (monitoring well C-1-CW05) to 240 µg/L (monitoring wells 3872L and B-1-CW13). Concentrations exceeding the MCL extended over much of the BOU with the highest concentrations detected downgradient of former Building 85 and extending to Magnolia Boulevard. Concentrations in the B HSU ranged from <0.29 µg/L to 32 µg/L (monitoring well 3862E). Concentrations exceeding the MCL were not as widely distributed as in the shallower HSUs, with the highest concentrations detected south of the BOU. Additionally, elevated concentrations were detected in the southern portion of the former Plant B-6 area and continuing southeast beneath former Building 85 and extending to Vanowen Street.
- 1,2,3-TCP was detected in 31 of the samples, 30 of which exceeded the DWNL (0.005 µg/L). Concentrations in the WT HSUs ranged from <0.0025 µg/L to 87 µg/L (monitoring well A-1-CW08). Concentrations exceeding the DWNL extended over much of the BOU with the highest concentrations detected down gradient of the former Plant B-6 area, north of former Building 85, and along Vanowen Street. Concentrations in the B HSU ranged from <0.0025 µg/L to 0.29 µg/L (monitoring well 3852H). Concentrations exceeding the DWNL were not as widely distributed as in the WT HSUs, with the highest concentrations detected near Burbank Boulevard.
- 1,4-Dioxane was detected in 11 of the samples, 11 of which exceeded the DWNL (1.0 µg/L). Concentrations in the WT HSUs ranged from <0.28 µg/L to 3.7 µg/L (monitoring well A-1-CW09). Concentrations exceeding the DWNL are spare, but spread out through the BOU

specifically at former Plants A-1-S, B-1, and C-1 as well as downgradient of Former Building 371. Concentrations in the B HSU ranged from <0.28 µg/L to 2.3 µg/L (monitoring well A-1-CW05). Similar to the WT HSUs, concentrations exceeding the DWNL extended around the former Plant B-6 and A-1 areas of the BOU, with the highest concentrations detected at the former Plant A-1-S.

- Total chromium was detected in 65 of the samples, 2 of which exceeded the MCL (50 µg/L). Concentrations in the WT HSUs ranged from 1.05 J (A-1-CW03R) to 82.9 µg/L (monitoring well C-1-CW07). One sample from the eastern portion of the BOU near the former Weber Aircraft facility and one sample near former Plant C-1 had concentrations detected exceeding the MCL. Concentrations in the B HSU ranged from 0.600 µg/L (monitoring well C-1-CW02 to 7.85 µg/L (3872S). No concentrations were detected that exceeded the MCL.
- Hexavalent Chromium was detected in 58 samples, 5 of which exceeded the MCL (10 µg/L). Concentrations in the WT HSUs range from 0.010 µg/L µg/L (monitoring well A-1-CW03R) to 20 µg/L (monitoring well B-1-CW17). Four of the 5 samples that exceeded the MCL are located in the central to southern portions of former Plant B-1. The other sample that exceeded the MCL is located immediately outside of the northeastern boundary of the BOU. Concentrations in the B HSU ranged from 0.021 µg/L (monitoring well 3850R) to 7.9 µg/L (monitoring well 3872S). No concentrations were detected above the MCL.

Statistical Trend Analyses

Statistical trend analyses were conducted using chemical data from the 65 monitoring wells sampled during the second quarter 2017 BOU groundwater monitoring event. The analysis was performed for the six primary chemicals of concern: PCE, TCE, 1,2,3-TCP, 1,4-dioxane, total chromium, and hexavalent chromium. Therefore, a total of 390 trends were tested. The MAROS, developed by the Air Force Center for Environmental Excellence (Air Force Center for Environmental Excellence, 2006), was used for the analyses. The MAROS is a statistical database application developed to assist with groundwater quality data trend analysis and long-term monitoring optimization at contaminated groundwater sites. BOU data from first quarter 1996 to second quarter 2017 were analyzed.

Statistical analysis indicated that for various reasons (insufficient data, no statistical trend, or no detections), a significant trend could not be determined for 43% of the datasets that were tested, particularly for 1,2,3-TCP, 1,4-dioxane, total chromium, and hexavalent chromium. Statistical analysis also indicated that 29% of the datasets had decreasing or probably decreasing concentration trends, 17% were stable, and 11% had increasing concentration trends. The trend analysis showed that those trends that were significant were generally small. Over half of the decreasing concentrations trends were for TCE and PCE concentrations, scattered throughout the BOU; about

half of the stable trends were for total chromium and hexavalent chromium concentrations; and 1,2,3-TCP and 1,4-dioxane concentrations upgradient of the BOU extraction wells in the former Plant B-6 area are generally increasing. With the exception of the increasing 1,2,3-TCP trend in monitoring wells 3852M and 3872L, all monitoring wells with increasing trends for one or more of the compounds of concern are upgradient of the BOU extraction wells or within the area captured by the extraction wells. The magnitude of the changes in concentration of 1,2,3-TCP in monitoring wells 3852M and 3872L are small (0.016 µg/L/yr and 0.006 µg/L/yr, respectively).

Capture Zone Evaluation

Several lines of evidence were examined to evaluate the extent of capture resulting from the BOU extraction system and assess the effectiveness of the system in hydraulically containing the various chemical of concern plumes within the BOU. The results of the evaluation were as follows:

- The operational data from the extraction system indicated that groundwater is being extracted and that VOC mass is still being removed from the aquifer.
- Vertical hydraulic gradients indicated that pumping from the WT HSUs is inducing or increasing upward vertical gradients between the B HSU and the WT HSUs.
- The WT-HSU potentiometric map developed from the groundwater level measurements supports that the BOU extraction wells capture groundwater across most of the BOU north of Vanowen Street and south of the extraction wells toward Chandler Boulevard and Wyoming and West Allan Avenue.
- The TIN was developed from the same data as the potentiometric maps. The TIN for the WT HSUs supports that capture from the BOU extraction wells extends south to approximately Wyoming and West Allan Avenue in the central-western portion of the BOU and Chandler in the eastern portion of the BOU.
- The trend analysis for the eight downgradient performance monitoring wells yielded the following results: insufficient data (none), decreasing (16 results), increasing (2 results), no trend (14 results), probably decreasing (3 results), probably increasing (none), stable (8 results), and ND (5 results). The two increasing trends (1,2,3-TCP in monitoring wells 3852M and 3872L) had a limited data set (at least five analyses from each well from 2007 to 2017) and the magnitude of the change was small.

The lines of evidence suggest that the BOU extraction system exerts hydraulic control on the plumes originating from the BOU and it extends to Wyoming and West Allan Avenue in the central-western portion of the BOU and Chandler Boulevard in the eastern portion of the BOU, and the extraction system inhibits the migration of site-related chemicals of concern.

Burbank Operable Unit Extraction System Performance

Based on the data from the BOU monthly operation reports for the current reporting period (May 2016 through April 2017), an estimated 3,129,230,274 gallons of groundwater was extracted (average extraction rate of 5,937 gallons per minute) and approximately 3,697 pounds of volatile organic compounds (VOCs) were treated by the Burbank Operable Unit (BOU) treatment system. Multiple lines of evidence suggest that at current extraction rates the BOU extraction system exerts hydraulic control in the WT HSUs that extends to West Allan and Wyoming Avenue in the central-western portion of the BOU and Chandler Boulevard in the eastern portion of the BOU, and inhibits the migration of site-related chemicals of concern.

The upward hydraulic gradient (potentially pulling contaminant mass from the B HSU to the WT HSUs) exhibited in much of the southern portion of the BOU inhibits the migration of site-related chemicals of concern, where present, in the deeper HSU. The data also indicates that groundwater in the B HSU proximal to BOU extraction well VO8 is being captured by the pumping at this well.

While the BOU extraction system produces groundwater that is treated and deliver for consumption, water quality data from the treatment plant was not presented or reviewed as part of this report and therefore the second objective cannot be discussed as part of this report.

SECTION 1
INTRODUCTION

On behalf of Lockheed Martin Corporation (Lockheed Martin), Tetra Tech has prepared this report to present the results of the ongoing annual groundwater-quality monitoring for the Burbank Operable Unit (BOU) monitoring well field. The BOU is located in Burbank, California (Figure 1).

The BOU is part of the North Hollywood National Priorities List site in the San Fernando Valley. Lockheed Martin monitors groundwater within the BOU to comply with the provisions of the United States Environmental Protection Agency (USEPA) Consent Decree (Docket No. 91-4527-MRP [Tx]) filed on March 25, 1992, and California Regional Water Quality Control Board, Los Angeles Region (LARWQCB) Cleanup and Abatement Order No. 87-161, dated December 17, 1987.

The second quarter 2017 groundwater monitoring activities were conducted in accordance with the *Revised Operational Sampling Plan* (OSP; Tetra Tech, 2017b), which describe the objectives, decision process, analytical methods, and procedures for sampling the groundwater monitoring well network. The purposes of the BOU groundwater monitoring program are to monitor the chemical plume conditions and the performance of hydraulic capture by the ongoing groundwater treatment system. The site background and current conceptual site model for the BOU are presented in Appendix A.

1.1 HISTORICAL OVERVIEW

Groundwater monitoring was first initiated at the BOU in 1986. Since the late 1990s, the Groundwater Monitoring Plan has been implemented in accordance with the 1997 *Draft Phase 2 Operational Sampling Plan* (HSI Geotrans, 1997) and with modifications requested by the regulatory community. The Groundwater Monitoring Plan has evolved to incorporate additional requests by the USEPA and the LARWQCB. The following list presents the modifications made to the Groundwater Monitoring Plan.

- June 28, 2001 – USEPA Method 8260B for volatile organic compounds (VOCs), including Freon-113 and methyl-tert-butyl ether, replaced USEPA Methods 8010 and 8020 for halogenated volatile organic and purgeable aromatic compounds, respectively. LARWQCB directed analysis of hexavalent chromium by USEPA Method 218.6 (LARWQCB, 2001).

- March 28, 2002 – Analysis for 1,2,3-trichloropropane (1,2,3-TCP) was added to the Groundwater Monitoring Plan (LARWQCB, 2002a).

- November 18, 2002 – Monitoring wells B-6-CW01, B-6-CW02, B-6-CW03, B-6-CW03R, and B-6-CW16 were added to the Groundwater Monitoring Plan to be sampled for VOCs and heavy metals, and 1,2,3-TCP was to be included in the discussion and analysis of chemicals of concern in the groundwater monitoring reports (LARWQCB, 2002b).

- December 16, 2003 – A LARWQCB letter required Lockheed Martin to sample for emergent chemicals (perchlorate, n-nitrosodimethylamine, 1,4-dioxane) in addition to 1,2,3-TCP and hexavalent chromium as part of the BOU Groundwater Monitoring Plan, and to prepare a separate technical report summarizing the results (LARWQCB, 2003).

- September 2004 – The USEPA *Five-Year Review Report for Burbank Operable Unit, San Fernando Valley (Area 1) Superfund Site, Los Angeles County, California* required that Lockheed Martin continue to "monitor upgradient wells for emerging contaminants" and "evaluate the spatial distribution and concentration of emergent contaminants with respect to the BOU" (USEPA, 2004).

- December 8, 2004 – An LARWQCB letter to Lockheed Martin provided comments on the *Technical Report on Emergent Chemicals within the Burbank Operable Unit, Burbank, California* and reduced emergent chemical sampling to specific wells (LARWQCB, 2004).

- April 27, 2005 – A Lockheed Martin letter to USEPA, with a copy to LARWQCB, requested a change in BOU Groundwater Monitoring Plan sampling schedule - from first and third quarter to second and fourth quarter (Lockheed Martin, 2005).

- October 20, 2005 – A USEPA letter to General Electric requested sampling of eight monitoring wells at the former Pacific Airmotive Corporation site (USEPA, 2005). Due to a settlement agreement between Lockheed Martin and Pacific Airmotive Corporation (an indirect wholly owned subsidiary of General Electric), Lockheed Martin is responsible for monitoring and reporting for these wells. The Pacific Airmotive Corporation groundwater monitoring event is now conducted concurrently with the BOU Groundwater Monitoring Plan on a semiannual basis.

- February 10, 2006 – A USEPA letter to Lockheed Martin requested sampling of nine BOU monitoring wells in the vicinity of former Plants B-5 and C-1 (USEPA, 2006a).

- November 3, 2006 – A USEPA letter to Lockheed Martin concurred with proposed changes to sampling frequency for specific constituents (USEPA, 2006b; USEPA, 2007).

- October 22, 2010 – A USEPA letter to Lockheed Martin requested monitoring of 14 BOU wells as part of the North Hollywood Operable Unit Baseline Sampling Program (USEPA, 2010b).

- November 3, 2010 – A USEPA email to Lockheed Martin and General Electric approved their request to combine Pacific Airmotive Corporation and BOU semiannual reports (USEPA, 2010c).

- February 25, 2011 – A USEPA letter requested Lockheed Martin and other potentially responsible parties within the San Fernando Valley to change sampling schedules to April

and October in order to coincide with basin-wide remedial investigation sampling events (USEPA, 2011).

- April, 2013 – A comprehensive sampling event was performed at the BOU (Arcadis, 2013). The goal was to collect contemporaneous data for emerging compounds with detection limits for the BOU consistent with the larger San Fernando Valley Superfund site.
- March 26, 2014 – An OSP was prepared for the BOU and submitted to the USEPA (Arcadis, 2014).
- February 16, 2016 – A monitoring well replacement evaluation was prepared and submitted to the USEPA (Tetra Tech, 2016a). This document detailed the evaluation for the replacement of three monitoring wells that were destroyed in 2015 due to California Department of Transportation (Caltrans) and Metrolink construction activities.
- March 21, 2016 – A Sampling and Analysis Plan Addendum was prepared for the BOU to describe procedures for low-flow sampling and submitted to the USEPA (Tetra Tech, 2016c).
- March 31, 2017 – the OSP was updated and a revised document was submitted to the US EPA (Tetra Tech 2017).

1.2 CURRENT GROUNDWATER MONITORING PROGRAM OBJECTIVES

The 2017 OSP (Tetra Tech, 2017b) presents a groundwater monitoring program that provides the data necessary to evaluate groundwater conditions at the BOU, including the near-field and far-field effects of the BOU extraction well field. The four primary objectives of the long-term groundwater monitoring program are to accomplish the following:

- Verify containment of the 5 micrograms per liter (µg/L) tetrachloroethene (PCE) and 100 µg/L trichloroethene (TCE) plumes in groundwater
- Collect sufficient data to evaluate groundwater extraction system performance with respect to mass removal
- Characterize the nature and extent of emerging compounds
- Characterize the nature and extent of the primary chemicals of concern (PCE and TCE) to refine and update the conceptual site model

1.3 REPORT ORGANIZATION

This report is organized into the following sections:

- Section 1 – Introduction: This section presents the purpose of the BOU Groundwater Monitoring Plan and provides a brief description of the regulatory history at the BOU.

- Section 2 – Summary of Groundwater Monitoring: This section provides a description of groundwater monitoring, measurements, and quality assurance and quality control procedures.
- Section 3 – Groundwater Sampling Data Validation: This section summarizes compliance with the data quality objectives and requirements.
- Section 4 – Groundwater Monitoring Results: This section presents the analytical results of the groundwater monitoring activities.
- Section 5 – Statistical Trend Analyses: This section assesses statistical trends in site chemicals of concern over time.
- Section 6 – Capture Zone Evaluation: This section provides an evaluation of the groundwater treatment system's effectiveness in maintaining hydraulic capture.
- Section 7 – Summary and Conclusions: This section presents analyses and conclusions with recommendations, where appropriate, for additional or reduced future monitoring.
- Section 8 – References: This section provides a list of documents referenced in this report.

Tables and figures are presented at the conclusion of the report, and in the order in which they are introduced in the text. With one exception, the appendices are presented at the conclusion of the report, and in the order in which they are introduced in the text. The laboratory reports appear in Appendix G.

SECTION 2
SUMMARY OF GROUNDWATER MONITORING

This section summarizes the second quarter 2017 groundwater monitoring and quality assurance (QA) and quality control (QC) procedures conducted at the BOU. The results from this monitoring event are discussed in Section 4. The BOU monitoring well network is shown on Figure 2.

2.1 GROUNDWATER MONITORING WELL REPLACEMENT EVALUATION

In 2016, Lockheed Martin prepared a monitoring well replacement evaluation for the replacement of monitoring wells 3860H, 4959J, and 4959H. Nearby facility monitoring wells SW-1 and SW-5 were selected to replace former monitoring wells 4959H and 4959J, respectively, and these monitoring wells were sampled as part of the current groundwater monitoring event (Tetra Tech, 2016d). A new monitoring well (to be designated as 3860HR) will be installed in the vicinity of former monitoring well 3860H; this work is anticipated to take place in summer 2017.

2.2 INSTALLATION OF GROUNDWATER MONITORING WELLS AT FORMER PLANT B-1

Between October and November 2016, five new groundwater monitoring wells (B-1-CW30 through B-1-CW34) were constructed within the former Plant B-1 facility, as described in the *Supplemental Site Investigation Report, Former Lockheed Martin Plant B-1, Burbank, California* (Tetra Tech, 2017a). The locations of the groundwater monitoring wells are shown on Figure 2. As required by the LARWQCB, the groundwater monitoring wells will be monitored quarterly for one year for total chromium, hexavalent chromium, volatile organic compounds, and emerging contaminants. After one year, the wells will be included in the routine BOU groundwater monitoring program and the constituents to be tested for and the frequency of groundwater monitoring will be reevaluated. Because these wells were sampled concurrently with the annual BOU groundwater monitoring activities, the groundwater elevations and analytical data from these wells are included in this report.

2.3 INSTALLATION OF OBSERVATION WELLS OW-VO1R, OW-VO2R, OW-VO3R, AND OW-VO8 AND REPAIR OF OW-VO6

From February through early April 2017, three observation wells (OW-VO1R, OW-VO2R, and OW-VO3R) were installed to replace existing wells, one new observation well (OW-VO8) was installed, and one observation well (OW-VO6) was repaired within the BOU in accordance with *Work Plan – Well Installation and Replacement, Burbank Operable Unit, Burbank, California (Tetra Tech, 2016d)*. The location of these wells are presented on Figure 2.

- Observation wells OW-VO2R and OW-VO3R were installed and the packer within OW-VO6 was replaced because the vertical differences in hydraulic head between the water table aquifer and deeper units measured in these wells appear to be inconsistent with expected hydraulic conditions within the groundwater monitoring network.
- Observation well OW-VO1 was originally to be rehabilitated; however, because of the well condition a new well OW-V01R was installed and OW-VO1 was abandoned.
- A new observation well was installed adjacent to extraction VO-8. The purpose OW-VO8 was evaluate the influence of VO-8 within the water table and deeper zone.

A report presenting the details of the well installations, abandonments, and repairs will be submitted under separate cover and will include the installation of replacement well 3860H-R (Section 2.1).

2.4 SURVEY OF GROUNDWATER MONITORING WELLS

On May 25 and June 6, 2017, Lockheed Martin surveyed the new observation well locations as well as the six monitoring well locations (3872R, MW-04, MW-05, MW-06, SW-1, and SW-5) identified during the April 2016 sampling event as requiring resurveying. The survey data was used to calculate groundwater elevation data at these well and will be incorporated into the EPA's database.

2.5 MONITORING WELL MAINTENANCE ACTIVITIES

2.5.1 Low-Flow Pump Installation

In November 2016, *Revised Technical Memorandum – Low-Flow Pump Intake Selection, Burbank Operable Unit, Burbank California* (Tetra Tech, 2016e) was prepared to document the transition from a high-volume to low-volume groundwater sampling protocol in 52 monitoring wells that are a part of the BOU. These 52 monitoring wells are identified on Table 1.

In March 2017, the high-flow pumps were removed in all 52 monitoring wells. However, low-flow pumps were only installed in 48 of the 52 monitoring wells. No pumps were install in the remaining

four wells (B-1-CW29, B-5-CW03, B-6-CW17, and C-1-CW06) because these wells were dry at the time of installation. All high-flow pumps and the associated piping removed from the 52 wells were pressure washed and placed in bins for offsite disposal. Based on information provided by the Off-Site Rule (OSR) contact for USEPA Region IX, the pumps and piping will be taken to Clean Harbors in Buttonwillow, California, which is on the USEPA's approved list of disposal facilities for CERCLA waste.

2.5.2 Well Redevelopment

Prior to the installation of the dedicated low-flow pumps, the 52 monitoring wells shown on Table 1 were gauged to determine if debris had accumulated in the monitoring wells. Based on the gauging results (shown on Table 1), 9 of the 52 monitoring wells had accumulated debris that completely filled the sumps (most monitoring wells have 5-feet-long sumps underlying the screened intervals) and partially obstructed the screens. The development results are described below:

- A-1-CW07: The well construction details for the well notes a total depth (TD) of 229 feet bgs. The well was noted to be dry with an initial measured TD of 214.30 feet bgs. A magnet was used to clean out any metallic debris that may have accumulated at the bottom of the well. After pulling up approximately one third of a 5-gallon bucket of debris, TD was remeasured at 210.52 feet bgs. Based on the condition of the well casing, the well was likely collapsing. Further evaluation for a replacement for A-1-CW07 is recommended.
- B-5-CW03: The well was noted to be dry during the redevelopment activities with a measured TD of 228.93 feet bgs. Alternating the use of an overshot tool to stir up the debris at the bottom of the well and a magnet was used to pull up rust and metal fragments. Overall, less than 0.25 feet of metallic debris was pulled from the bottom of the well. Approximately 2 feet of debris remains in the well.
- B-6-CW16: The well was redeveloped by bailing, swabbing with a surge block, bailing again, and pumping until water quality parameters stabilized. All debris within the screened section of the well casing appears to have been removed. Approximately 6.5 feet of sediment was removed with 2.5 feet of debris remaining in the sump.
- C-1-CW03: The well was redeveloped by bailing, swabbing with a surge block, bailing again, and pumping until water quality parameters stabilized. All debris within the screened section of the well casing appears to have been removed. Approximately 3 feet of sediment was removed with less than 0.5 feet of debris remaining in the sump.
- C-1-CW05: The well was redeveloped by bailing, swabbing with a surge block, bailing again, and pumping until water quality parameters stabilized. All debris within the screened section of the well casing appears to have been removed. Approximately 1 foot of sediment was removed with 1 foot of debris remaining in the sump.

- C-1-CW06: The well was noted to be dry during the redevelopment activities with a measured TD of 247.80 feet bgs. Alternating the use of an overshot tool to stir up the debris at the bottom of the well and a magnet was used to pull up metallic debris. No metallic debris was recovered during the use of the magnet.
- 3852L: The well was redeveloped by bailing, swabbing with a surge block, bailing again, and pumping until water quality parameters stabilized. All debris within the screened section of the well casing appears to have been removed. Approximately 2 feet of sediment was removed.
- 3852M: The well was redeveloped by bailing, swabbing with a surge block, bailing again, and pumping until water quality parameters stabilized. All debris within the screened section of the well casing appears to have been removed. Approximately 1.5 feet of sediment was removed with 2.5 feet of debris remaining in the sump.
- 4949C: The well was redeveloped by bailing, swabbing with a surge block, bailing again, and pumping until water quality parameters stabilized. All debris within the screened section of the well casing appears to have been removed. Approximately 9 feet of sediment was removed.

2.5.3 Groundwater Monitoring Well Inspections and Maintenance

The conditions of the monitoring wells that were scheduled for water level gauging or groundwater sampling were assessed during the monitoring period. The field inspection forms are included in Appendix B.

The maintenance items previously identified in 2016 were also completed in 70 of the BOU monitoring wells during the reporting period. These items included replacement of well lid gaskets, adding or replacing well tags, re-tapping the existing bolt holes, and replacing the standard six-point bolts with five-point bolts.

All 105 of the wells included in the April monitoring event were inspected as part of the monitoring event. Field logs documenting the condition of each well and the recommended maintenance are included in Appendix B. A summary of the well inspections and maintenance conducted during this reporting period are provided in Table 2.

2.6 GROUNDWATER-LEVEL MEASUREMENTS.

Groundwater levels were measured in 105 BOU monitoring wells in April 2017. Groundwater-level measurements and calculated elevation data for the second quarter of 2017 are summarized in Table 3. The procedures utilized to measure water levels are described in the *Revised Operational*

Sampling Plan (OSP; Arcadis, 2014). The field data sheets compiled during the elevation measurements are included in Appendix B.

2.7 TRANSDUCER MEASUREMENTS

Transducers are installed in 23 monitoring wells selected to collect continuous water level data (at 15-minute increments) throughout the year. During monitoring well sounding activities, data recorded by data-logging pressure transducers at the selected groundwater monitoring wells were downloaded and analyzed for the purposes of evaluating the downgradient capture boundary. Transducer data were adjusted with barometric pressure measurements and confirmed with field measurements collected with a hand-held water level meter at the time data were downloaded. The transducer data are presented in Appendix C.

2.8 GROUNDWATER SAMPLING

2.8.1 Low-Flow Sampling

A total of 74 monitoring wells were identified for sampling during the second quarter 2017 groundwater monitoring event using a low-flow sampling methodology in accordance with the procedures specified in the revised OSP (Tetra Tech, 2017b),. This includes five new groundwater monitoring wells installed in October and November 2016 at the former Plant B-1 under the direction of the LARWQCB. These wells were sampled concurrently with the OSP monitoring wells.

Groundwater samples were successfully collected from 65 monitoring wells during the second quarter 2017 groundwater monitoring event with 42 completed in the WT HSU and 23 completed in the B HSU. The remaining nine wells (3850M, 3860J, 4949C, A-1-CW07, B-1-CW29, B-5-CW03, B-6-CW17, C-1-CW06, and MW-01) were not sampled because the wells were either dry or did not have enough water for the pumps to draw a sampling. The list of monitoring wells sampled and the analytical program are presented in Table 4. Field purge logs are presented in Appendix B.

2.8.2 Quality Assurance and Quality Control

In accordance with the OSP's QA/QC guidance, duplicate samples, trip blanks, and equipment blanks were collected for each applicable analytical method to assess reproducibility and whether cross-contamination of the environmental samples occurred during sampling and handling or while

in transit. Duplicate samples were collected at a frequency of 10% to assess sampling and analytical precision. Trip blanks for VOC and 1,2,3-TCP analyses were provided by the laboratory and placed inside each cooler containing groundwater samples to be analyzed for VOCs and/or 1,2,3-TCP.

Because dedicated low-flow pumps were used, no equipment blanks were collected as part of the second quarter 2017 sampling activities. The data validation findings are discussed in Section 3.

2.9 DEVIATIONS FROM THE REVISED OPERATIONAL SAMPLING PLAN

There were some deviations from the OSP and SAP Addendum, as follows:

- Monitoring well 3850S was not gauged because the monitoring well vault was unable to be opened. The monitoring well has been added to the maintenance list and the well vault will be serviced or removed prior to the next sampling event.
- Monitoring wells A-1-CW07, B-1-CW29, B-5-CW03, B-6-CW17, C-1-CW06 and MW-01 were dry during the monitoring event. Therefore, the monitoring wells were not sampled.
- Monitoring well 3850M, 3860J, and 4949C had insufficient water to sample.

SECTION 3
GROUNDWATER SAMPLING DATA VALIDATION

The objective of data validation is to identify any questionable or invalid laboratory measurements. Data validation entails a review of the QC data and the raw data or summary data to verify that the laboratory was operating within required limits and that the analytical results were correctly transcribed from the instrument readouts. In addition, data validation indicates which, if any, environmental samples were related to out-of-control QC samples.

The data were validated using the most recent versions of the USEPA's National Functional Guidelines for data validation available at the time of project initiation, where appropriate (USEPA, 2016b and 2016c). These procedures and criteria may be modified, as necessary, to address project-specific and method-specific criteria, control limits, and procedures. Data validation consists of data screening, checking, reviewing, editing, and interpretation to document analytical data quality and to determine whether the quality is sufficient to meet the data quality objectives (DQOs).

The data validator verifies that reduction of laboratory measurements and laboratory reporting of analytical parameters is in accordance with the procedures specified for each analytical method and/or as specified in the OSP. Any deviations from the analytical method or any special reporting requirements apart from those specified in the OSP are documented.

In order to assess the suitability of analytical results to support groundwater monitoring decisions, the BOU groundwater monitoring program QC manager undertook the following procedures:

- Checked extraction and analysis holding time
- Reviewed laboratory reports and chain-of-custody documentation for errors and omissions
- Checked laboratory reports for correct reporting limits and units
- Checked surrogate, laboratory control sample (LCS), laboratory control sample duplicate (LCSD), and matrix spike (MS), and matrix spike duplicate (MSD) results
- Assessed blank results and noted any detected analytes, their respective concentrations, and any impact to associated samples
- Assessed sample internal standard responses and surrogate recoveries

- Reviewed instrument calibrations
- Compared laboratory and field duplicate sample results and noted any significant variations

Specific QA indicators were evaluated to assess the overall usability of the data. These indicators included accuracy, precision, representativeness, comparability, and completeness. The parameters are described below.

- Accuracy is established by reviewing spiked sample analysis. The LCS measures the accuracy of the instrument, and the LCS results for this dataset were all found to be within control limits. Therefore, the accuracy for the sampling event was satisfactory.
- Precision is established by calculating the relative percent difference (RPD) values for MS/MSD pairs and field duplicates. The RPD values calculated for the sampling event show that greater than 95% of the RPDs calculated were within control limits. Therefore, the precision for the sampling event was satisfactory.
- Representativeness is established by using standard field sampling techniques. Because the field sampling was conducted in accordance with the OSP and by following established standard operating procedures, the sampling is judged to have adequate representativeness. Therefore, the representativeness for the sampling event was satisfactory.
- Comparability of the data is preserved if the analytical analyses are conducted under approved and vetted USEPA analytical methods. Because the USEPA methods are constructed with comparability built into the methods, by using approved analytical methods for the BOU project, the BOU data are comparable. Therefore, the comparability for the sampling event was satisfactory.
- Completeness is measured by determining the amount of valid data produced by the laboratory as compared to the total possible data from the chain. This dataset had no rejected data, and all samples were analyzed as per the chains. The data completeness is 100%, which exceeds the 90% criterion. Therefore, the completeness for the sampling event was satisfactory.

Based upon the data review, the data are considered usable as qualified. A QA/QC summary is presented in Appendix D. Data validation summary tables are included in Appendix D as well. All testing was provided by the Eurofins Calscience, a California Department of Public Health-accredited environmental laboratory. The laboratory analytical data packages, which include all environmental, field QC, and laboratory QC results, are provided in Appendix G.

SECTION 4
GROUNDWATER MONITORING RESULTS

This section provides the results and interpretations of the groundwater monitoring event.

4.1 GROUNDWATER ELEVATIONS

Groundwater elevations for the second quarter 2017 monitoring event are presented in Table 3. Potentiometric maps based on the groundwater elevation data are shown on Figures 3 and 4 for the WT HSUs and B HSU, respectively. The potentiometric surface maps were generated using an historic understanding of groundwater flow and data from current extraction system operations.

Extraction Well	Date Observation Well was Measured	Daily Total Pumped (gallons)					
		16-Apr-17	17-Apr-17	18-Apr-17	19-Apr-17	20-Apr-17	21-Apr-17
VO1	4/19/2017	0	0	0	0	0	0
VO2	4/19/2017	1,725,798	1,717,897	1,661,598	1,729,045	1,729,484	1,728,935
VO3	4/19/2017	0	0	0	0	0	0
VO4	4/20/2017	1,124,398	1,117,581	1,075,935	1,132,763	1,135,808	1,134,567
VO5	4/20/2017	1,674,028	1,681,589	1,675,570	1,713,193	1,714,287	1,712,318
VO6	4/20/2017	0	0	0	0	0	0
VO7	4/20/2017	1,678,693	1,670,613	871,700	0	0	0
VO8	4/19/2017	0	0	832,967	1,763,441	1,737,906	1,725,718

4.1.1 Water Table Hydrostratigraphic Units

The local groundwater flow direction during the second quarter 2017 groundwater monitoring event was predominantly southeasterly in the northwest portion of the BOU and southerly in the northeast portion of the BOU, and it converged in a flow direction toward the cones of depression created by the operation of the BOU extraction wells. The second quarter 2017 groundwater elevation data indicate that the dominant direction of groundwater flow immediately south of the BOU extraction wells was reversed from its natural southeasterly flow direction, to a northerly flow direction in response to the extraction well pumping (northeasterly flow direction in the western portion of the

BOU). These groundwater trends extend to Victory Boulevard in the western portion of the BOU, West Allan and Wyoming Avenue in the central-western portion of the BOU, and to at least Chandler Boulevard in the eastern portion of the BOU. Beyond these boundaries the groundwater flow direction shows influence from pumping, but ultimately reverts to its natural southeasterly direction.

Groundwater extraction appeared to be the dominant influence on groundwater flow within the monitoring well network. Groundwater extraction created a northwest-aligned trough with respect to the water table surface, creating a series of coalescing cones of depression surrounding the BOU extraction wells, as shown on Figure 3.

4.1.2 B-Zone Hydrostratigraphic Unit

The local groundwater flow direction in the B HSU during the second quarter 2017 groundwater monitoring event, as shown on Figure 4, was generally the same as the local groundwater flow direction observed in the WT HSUs. The greater drawdown observed at extraction well V08 in the second quarter 2017 compared with the second quarter 2016 is due to the inclusion of data from new observation well OW-V08B.

4.1.3 Groundwater-Level Trends

Groundwater elevation trends were evaluated by examining annual precipitation data, cumulative pumping data from the BOU extraction system, and hydrographs for the monitoring wells included in the monitoring program. Hydrographs showing piezometric surface elevations over time were used to evaluate long-term trends in groundwater elevations (Appendix C). The hydrographs are generally dominated by a few long-term trends, as described below.

- The groundwater elevation within the BOU generally declined from 1988 to late 1992.
- The trend reversed in 1992, and groundwater elevations generally rose through early 1996 (with a minor dip in 1995).
- From early 1996 (the beginning of groundwater extraction at the BOU) through 2004, groundwater elevation generally decreased.
- From 2004 through early 2007, groundwater elevation rose.
- From early 2006 through 2010, groundwater elevation stabilized (on average).
- Groundwater elevation rose from late 2010 to the second quarter of 2013.

- Groundwater elevation declined from the second quarter of 2013 to the second quarter of 2017.

Figure 5 shows hydrographs from three clustered sets of monitoring wells and annual precipitation on the same graph. The three monitoring well clusters are from north of the extraction system in the Plant B-6 area, from near the extraction system in the Plant B-1 area, and from south of the extraction system. Each paired set of monitoring wells includes a monitoring well completed in one of the WT HSUs and one completed in the B HSU. The precipitation data are from the Valley Pumping Plant and/or the Bob Hope Airport in Burbank (Weather Warehouse, 2011; Weather Underground, 2017). Although the data are limited, prior to the startup of the BOU extraction system in 1996 there appears to be some correlation between precipitation and general water-level elevation. However, the dominant factor driving groundwater elevation changes is likely groundwater extraction in the basin and at nearby extraction wells, rather than a direct relationship to precipitation. This can be observed in the steepening hydraulic gradient between the upgradient Plant B-6 cluster and the Plant B-1 cluster after pumping began. While there are slight differences between how the monitoring well clusters from the different areas of the BOU respond over time, they generally track together. A review of the hydrographs also reveal an increase in the upward vertical gradient between all three paired monitoring wells after the BOU extraction system was started up, particularly in the B-1 pair that are nearest to the extraction system.

4.2 ANALYTICAL DATA SUMMARY

Sixty-five groundwater monitoring wells were sampled during the second quarter 2017 monitoring event. The samples collected were tested for VOCs, 1,2,3-TCP, 1,4-dioxane, total chromium, and hexavalent chromium. Twenty-one organic and two inorganic analytes were detected. A summary by monitoring well of the validated laboratory analytical results for the analytes detected during the water quality monitoring event is presented in Table 5. Only results for analytes that were detected at concentrations above their respective method detection limits are shown in Table 5. Analytical results that were above a regulatory threshold (i.e., California Department of Public Health maximum contaminant level [MCL] or California Department of Public Health drinking water notification level [DWNL]) are shown in bold type and the cell is highlighted in Table 5. A further summary of the analytes detected, associated regulatory thresholds, number of exceedances, and the range of concentrations detected is presented in Table 6.

Figures 6 through 17 show isocontours of PCE, TCE, 1,2,3-TCP, 1,4-dioxane, total chromium, and hexavalent chromium in the WT HSUs and the B HSU based on the analytical results from the 2017 sampling event. These compounds were selected for contouring because they are considered either primary or emerging chemicals of concern. Initial contours for the groundwater concentration data were generated with C Tech's Earth Volumetric Studio software using a kriging algorithm. These contours were then adjusted by hand based on professional judgment.

4.2.1 Tetrachloroethene

PCE has an MCL of 5 µg/L. It was detected in 59 of the primary (non-duplicate) samples, 37 of which exceeded the MCL. The detected concentrations ranged from 0.20 µg/L (monitoring well B-6-CW05) to 630 µg/L (monitoring well B-1-CW33).

Concentrations in the WT HSUs ranged from <0.20 µg/L to 630 µg/L (monitoring well B-1-CW33). Concentrations exceeding the MCL extended over much of the BOU with the highest concentrations detected at the northwest corner of the former Plant B-1 and trending southeast beneath former Plant B-1 and extending to Magnolia Boulevard (Figure 6).

Concentrations in the B HSU ranged from <0.20 µg/L to 48 µg/L (monitoring well 3850R). Concentrations exceeding the MCL were not as widely distributed as in the shallower HSUs, with the highest concentrations detected adjacent to the extraction wells on Vanowen Street (Figure 7).

4.2.2 Trichloroethene

TCE has an MCL of 5 µg/L. It was detected in 53 of the samples, 35 of which exceeded the MCL. The detected concentrations ranged from 0.29 µg/L (monitoring well C-1-CW05) to 240 µg/L (monitoring wells 3872L and B-1-CW13).

Concentrations in the WT HSUs ranged from <0.29 µg/L to 240 µg/L (monitoring wells 3872L and B-1-CW13). Concentrations exceeding the MCL extended over much of the BOU with the highest concentrations detected downgradient of former Building 85 and extending to Magnolia Boulevard (Figure 8).

Concentrations in the B HSU ranged from <0.29 µg/L to 32 µg/L (monitoring well 3862E). Concentrations exceeding the MCL were not as widely distributed as in the shallower HSUs, with the highest concentrations detected south of the BOU. Additionally, elevated concentrations were

detected in the southern portion of the former Plant B-6 area and continuing southeast beneath former Building 85 and extending to Vanowen Street (Figure 9).

4.2.3 1,2,3-Trichloropropane

The analyte 1,2,3-TCP has a DWNL of 0.005 µg/L. It was detected in 31 of the samples, 30 of which exceeded the DWNL. The detected concentrations ranged from 0.0045 µg/L (monitoring well 3861F) to 87 µg/L (monitoring well A-1-CW08).

Concentrations in the WT HSUs ranged from <0.0025 µg/L to 87 µg/L (monitoring well A-1-CW08). Concentrations exceeding the DWNL extended over much of the BOU with the highest concentrations detected down gradient of the former Plant B-6 area, north of former Building 85, and along Vanowen Street (Figure 10).

Concentrations in the B HSU ranged from <0.0025 µg/L to 0.29 µg/L (monitoring well 3852H). Concentrations exceeding the DWNL were not as widely distributed as in the WT HSUs, with the highest concentrations detected near Burbank Boulevard (Figure 11).

4.2.4 1,4-Dioxane

The analyte 1,4-dioxane has a DWNL of 1.0 µg/L. It was detected in 11 of the samples, 11 of which exceeded the DWNL. The detected concentrations ranged from 1.0 µg/L (monitoring well B-1-CW11) to 3.7 µg/L (monitoring well A-1-CW09).

Concentrations in the WT HSUs ranged from <0.28 µg/L to 3.7 µg/L (monitoring well A-1-CW09). Concentrations exceeding the DWNL are limited but spread out through the BOU specifically at former Plants A-1-S, B-1, and C-1 as well as downgradient of Former Building 371(Figure 12).

Concentrations in the B HSU ranged from <0.28 µg/L to 2.3 µg/L (monitoring well A-1-CW05). Similar to the WT HSUs, concentrations exceeding the DWNL extended around the former Plant B-6 and A-1 areas of the BOU, with the highest concentrations detected at the former Plant A-1-S (Figure 13).

4.2.5 Total Chromium

Total chromium has an MCL of 50 µg/L. It was detected in 65 of the samples, 2 of which exceeded the MCL. The detected concentrations ranged from 0.600 µg/L (monitoring well C-1-CW02) to 82.9 µg/L (monitoring well C-1-CW07).

Concentrations in the WT HSUs ranged from 1.05 J (A-1-CW03R) to 82.9 µg/L (monitoring well C-1-CW07). One sample from the eastern portion of the BOU near the former Weber Aircraft facility and one sample near former Plant C-1 had concentrations detected exceeding the MCL (Figure 14).

Concentrations in the B HSU ranged from 0.600 µg/L (monitoring well C-1-CW02 to 7.85 µg/L (3872S). No concentrations were detected that exceeded the MCL (Figure 15).

4.2.6 Hexavalent Chromium

Hexavalent chromium has an MCL of 10 µg/L. It was detected in 58 samples, 5 of which exceeded the MCL. The detected concentrations ranged from 0.010 µg/L µg/L (monitoring well A-1-CW03R) to 20 µg/L (monitoring well B-1-CW17).

Concentrations in the WT HSUs range from 0.010 µg/L µg/L (monitoring well A-1-CW03R) to 20 µg/L (monitoring well B-1-CW17). Four of the 5 samples that exceeded the MCL are located in the central to southern portions of former Plant B-1. The other sample that exceeded the MCL is located immediately outside of the northeastern boundary of the BOU (Figure 16).

Concentrations in the B HSU ranged from 0.021 µg/L (monitoring well 3850R) to 7.9 µg/L (monitoring well 3872S). No concentrations were detected above the MCL (Figure 17).

SECTION 5
STATISTICAL TREND ANALYSES

Statistical trend analyses were conducted using chemical data from the 65 monitoring wells sampled as part of the 2017 BOU groundwater monitoring program. The analysis was performed for the six primary chemicals of concern: PCE, TCE, 1,2,3-TCP, 1,4-dioxane, total chromium, and hexavalent chromium. Therefore, a total of 390 trends were tested. The Monitoring and Remediation Optimization System (MAROS), developed by the Air Force Center for Environmental Excellence (Air Force Center for Environmental Excellence, 2006), was used for the analyses. MAROS is a statistical database application developed to assist with groundwater quality data trend analysis and long-term monitoring optimization at contaminated groundwater sites. BOU data from first quarter 1996 (i.e., full-scale implementation of the groundwater extraction system) to second quarter 2017 were analyzed. A summary of the statistical-trend analyses is provided in Appendix E.

5.1 STATISTICAL ANALYSIS METHODS

The software performs parametric and nonparametric trend analyses to evaluate temporal and spatial contaminant trends using Mann-Kendall and linear regression methods. Brief descriptions of the methods follow.

5.1.1 Mann-Kendall Analysis

This statistical procedure was used to evaluate the data for trends. It is a nonparametric statistical procedure that is well suited for analyzing trends in data over time. The Mann-Kendall test for trend is suitable for analyzing data that follow a normal or non-normal distribution pattern. The Mann-Kendall test has no distributional assumptions and allows for irregularly spaced measurement periods or missing data. The advantage with this approach involves the cases where outliers in the data would produce biased estimates of the least squares estimated slope.

5.1.2 Linear Regression Analysis

This parametric statistical procedure was used to calculate the magnitude of the trends. A parametric statistical procedure is typically used for analyzing trends in data over time and requires a normal statistical distribution of the data.

5.2 STATISTICAL TREND CATEGORIES

There are seven statistical concentration trend types derived from Mann-Kendall analysis: 1) decreasing, 2) increasing, 3) no trend (displaying two sets of conditions), 4) probably decreasing, 5) probably increasing, 6) stable, and 7) non-detect (ND; all sample results are below the detection limit). If a location has fewer than four quarters of data, then the Mann-Kendall analysis cannot be run and not applicable (NA) would be applied to the results. These statistical concentration trend types are determined by the following conditions:

Mann-Kendall Statistic (S)	Confidence in Trend	Concentration Trend
S > 0	> 95%	Increasing
S > 0	90 - 95%	Probably Increasing
S > 0	< 90%	No Trend
S ≤ 0	< 90% and COV ≥ 1	No Trend
S ≤ 0	< 90% and COV < 1	Stable
S < 0	90 - 95%	Probably Decreasing
S < 0	> 95%	Decreasing
ND	-	Non-detect
NA	-	Not applicable

Notes: > - Greater than
< - Less than
≤ - Less than or equal to
COV - Coefficient of Variation
S - Mann-Kendall statistic
ND - All results non-detect
NA - Not applicable, less than four quarters of data

The Mann-Kendall statistic (S) measures the trend in the data. Positive values indicate an increase in constituent concentrations over time, whereas negative values indicate a decrease in constituent concentrations over time. The strength of the trend is proportional to the magnitude of the Mann-Kendall Statistic (i.e., large magnitudes indicate a strong trend).

The Coefficient of Variation (COV) is a statistical measure of how the individual data points vary about the mean value. Values less than or near 1.00 indicate that the data form a relatively close

group about the mean value. Values larger than 1.00 indicate that the data show a greater degree of scatter about the mean.

"Confidence in Trend" is the statistical confidence that the constituent concentration is increasing (S>0) or decreasing (S<0).

If there were insufficient data or fewer than four sampling events, then "not applicable (NA)" was applied to the results.

5.3 RESULTS OF STATISTICAL ANALYSES

The overall results of the Mann-Kendall trend analyses are presented on Table 7. The breakdown of the overall trends were similar to 2016 but the number of stable trends decreased by approximately 5% and the number of decreasing trends increased by 5%. The number of analysis indicting insufficient data increased because of the addition of the new wells. The statistical analysis tested 390 datasets to evaluate for trends. The statistical analysis yielded a result of either insufficient data, ND, or no trend for 169 of the datasets tested. The decreasing or probably decreasing trend monitoring wells totaled 115, and the magnitude of the trends ranged from -182 to -0.0013 micrograms per liter per year (µg/L/yr). The decreasing trends as a percentage for the period analyzed ranged from -24 to -0.47 percent per year (%/yr). Sixty-six monitoring wells demonstrated a stable trend. Forty monitoring wells demonstrated an increasing or probably increasing trend, and the magnitude of the trends ranged from 0.00062 to 8.76 µg/L/yr. The increasing trends as a percentage for the period analyzed ranged from 0.82 to 88%/yr. Four of the increasing trends as a percentage change were 20%/yr or higher. The magnitudes of the trends are discussed by chemical of concern in the following subsections. Table 8 provides a more detailed summary of the trend analysis by monitoring well for those monitoring wells demonstrating an increasing or probably increasing trend for one or more of the primary chemicals of concern. Historical chemical of concern data for each monitoring well sampled are provided in Appendix E. The table of historical data includes a summary by monitoring well of all analytical results for the six chemicals of concern.

Time versus concentration graphs for the 17 monitoring wells identified in the OSP are presented in Appendix E; monitoring well 3860H was also identified in the OSP, but the monitoring well was destroyed in 2015 so a time versus concentration graph was not included.

5.3.1 Tetrachloroethene

Figures 18 and 19 summarize the trend analysis results for PCE in the WT HSUs and B HSU, respectively. The statistical analysis for PCE yielded a result of either insufficient data, ND, or no trend for 12 of the monitoring wells tested. The decreasing or probably decreasing trend monitoring wells totaled 37, and the magnitude of the trends ranged from -182 to -0.07. The decreasing trends as a percentage for the period analyzed ranged from -18.3 to -2.01%/yr. The decreasing trends in the WT were scattered throughout the BOU. The decreasing trends in the B HSU are primarily adjacent to the BOU extraction wells and to the north near former the Plant B-6 area. Thirteen monitoring wells demonstrated a stable trend. Three monitoring wells demonstrated an increasing or probably increasing trend, and the magnitude of the trends ranged from 0.02 to 3.80 µg/L/yr. The increasing trends as a percentage for the period analyzed ranged from 2.92 to 3.65%/yr. There were no increasing or probably increasing trends identified in the WT HSU wells. Three increasing trend wells were identified in the B HSU. Two wells were adjacent to the BOU extraction wells and one well was upgradient of the BOU extraction wells. All three monitoring wells are within the area captured by the BOU extraction wells. The magnitude of the increasing trends and the percentage these changes in concentration represent are not large.

The following B-HSU monitoring wells exhibited increasing or probably increasing trends:

- 3850R: The 2017 concentration in this well was 48 micrograms per liter (µg/L). This well is located between extraction well VO6 and VO7 and upgradient of VO8. The magnitude of the increasing trend is 3.80 µg/L/yr and represents a change of 2.92%/yr over the period analyzed.
- B-1-CW28: The 2017 concentration in this well was 13 µg/L. This well is located between BOU extraction wells VO5 and VO6 and upgradient of VO8. The magnitude of the increasing trend is 0.91 µg/L/yr and represents a change of 3.65%/yr over the period analyzed.
- B-6-CW02: The 2017 concentration in this well was 0.56 µg/L. This well is located upgradient of the BOU extraction wells. The magnitude of the increasing trend is 0.02 µg/L/yr and represents a change of 3.29%/yr over the period analyzed. The analyte PCE has never been detected in this well at a concentration exceeding the MCL.

5.3.2 Trichloroethene

Figures 20 and 21 show the trend analysis results for TCE in the WT HSUs and the B HSU, respectively. The statistical analysis for TCE yielded a result of either insufficient data, ND, or no trend for 16 of the monitoring wells tested. The decreasing or probably decreasing trend monitoring

wells totaled 39, and the magnitude of the trends ranged from -50 to -0.02 µg/L/yr. The decreasing trends as a percentage for the period analyzed ranged from -22 to -0.47%/yr. The decreasing trends in the WT HSUs were scattered throughout the BOU. The decreasing trends in the B HSU are primarily adjacent to or south of the BOU extraction wells. Eight monitoring wells demonstrated a stable trend. Two monitoring wells demonstrated an increasing or probably increasing trend, and the magnitude of the trends ranged from 0.14 to 2.38 µg/L/yr. The increasing trends as a percentage for the period analyzed ranged from 1.41 to 3.83%/yr. The single increasing or probably increasing trend in the WT HSUs was 3830S, located south of former Plant B-5 and is upgradient of the BOU extraction system. The increasing trend in the B HSU was adjacent to the BOU extraction wells (within the area captured by the BOU extraction wells). The magnitude of the increasing trend and the percentage this change in concentration represent is not large.

The following WT-HSU monitoring well exhibited a probably increasing trend:

- 3830S: The 2017 concentration in this well was 85 µg/L. This well is located south of former Plant B-5 and is upgradient of the BOU extraction system. The magnitude of the probably increasing trend is 2.38 µg/L/yr and represents a change of 3.83%/yr over the period analyzed.

The following B-HSU monitoring well exhibited an increasing trend:

- 3850R: The 2017 concentration in this well was 7.8 µg/L. This well is located between extraction well VO6 and VO7 and upgradient of VO8. The magnitude of the increasing trend is 0.14 µg/L/yr and represents a change of 1.41%/yr over the period analyzed.

5.3.3 1,2,3-Trichloropropane

The analyte 1,2,3-TCP has historically been analyzed by two methods: as part of the standard VOC analyses (currently USEPA Method 8260B), which has a higher detection limit, and by low-level 1,2,3-TCP analyses (currently USEPA Method 8260B SIM), which has a lower detection limit. All 1,2,3-TCP data from 1996 to 2000 was a result of the VOC analyses (i.e., higher detection limits, generally several orders of magnitude higher than current 1,2,3-TCP concentrations). The MAROS application assigns a value of one-half of the detection limit in the case of non-detects. Therefore, the MAROS application would assign higher 1,2,3-TCP concentrations to the early 1,2,3-TCP non-detects which would skew the statistical analysis. To account for this, non-detects with high detection limits were not included in the 1,2,3-TCP statistical analysis.

Figures 22 and 23 show the trend analysis results for 1,2,3-TCP in the WT HSUs and the B HSU, respectively. The statistical analysis for 1,2,3-TCP yielded a result of either insufficient data, ND, or no trend for 44 of the monitoring wells tested. The decreasing or probably decreasing trend monitoring wells totaled 7, and the magnitude of the trends ranged from -1.01 to -0.006 µg/L/yr. The decreasing trends as a percentage for the period analyzed ranged from -14.6 to -5.11%/yr. The decreasing trends in the WT HSUs were located at or upgradient of the extraction wells, the southwest boundary, and just south of the southern boundary of the BOU. There were no decreasing trends in the B HSU. Two monitoring wells demonstrated a stable trend. Twelve monitoring wells demonstrated an increasing or probably increasing trend, and the magnitude of the trends ranged from 0.00062 to 1.41 µg/L/yr. The increasing trends as a percentage for the period analyzed ranged from 2.56 to 29%/yr. The increasing trends in the WT HSUs are scattered throughout the BOU and are within the area captured by the BOU extraction wells or upgradient of them, with the exception of monitoring wells 3852L, 3852M, and 3872N. The single increasing or probably increasing trend in the B HSUs was 3850R, located between extraction wells VO6 and VO7 and upgradient of VO8. With the exception of some of the Pacific Airmotive Corporation monitoring wells and monitoring well A-1-CW04, the magnitude of the increasing trends and the percentage these changes in concentration represent are not large.

The following WT-HSU monitoring wells exhibited increasing or probably increasing trends:

- MW-03: The 2017 concentration in this well was 0.93 µg/L. This well is located within the former Pacific Airmotive Corporation/Plant B-6 area and is upgradient of the BOU extraction wells. The magnitude of the increasing trend is 0.43 µg/L/yr and represents a change of 13.5%/yr over the period analyzed.
- MW-04: The 2017 concentration in this well was 0.96 µg/L. This well is located within the former Pacific Airmotive Corporation/Plant B-6 area and is upgradient of the BOU extraction wells. The magnitude of the increasing trend is 0.22 µg/L/yr and represents a change of 20%/yr over the period analyzed.
- MW-07: The 2017 concentration in this well was 0.60 µg/L. This well is located within the former Pacific Airmotive Corporation/Plant B-6 area and is upgradient of the BOU extraction wells. The magnitude of the increasing trend is 0.07 µg/L/yr and represents a change of 18.1%/yr over the period analyzed.
- MW-08: The 2017 concentration in this well was 0.93 µg/L. This well is located within the former Pacific Airmotive Corporation/Plant B-6 area and is upgradient of the BOU extraction wells. The magnitude of the increasing trend is 0.20 µg/L/yr and represents a change of 15.7%/yr over the period analyzed.

- 3852L: The 2017 concentration in this well was 0.032 µg/L. This well is located 4,000 feet south of the nearest BOU extraction well and is at the edge of the area captured by the BOU extraction wells. The magnitude of the increasing trend is 0.0080 µg/L/yr and represents a change of 8.94 %/yr over the period analyzed.
- 3852M: The 2017 concentration in this well was 0.21 µg/L. This well is located 5,000 feet south of the nearest BOU extraction well and appears to be south of the area of influence of the BOU extraction wells. The magnitude of the increasing trend is 0.016 µg/L/yr and represents a change of 12.4%/yr over the period analyzed.
- 3872L: The 2017 concentration in this well was 0.095 µg/L. This well is located 4,750 feet south of the nearest BOU extraction well and appears to be south of the area of influence of the BOU extraction wells. The magnitude of the increasing trend is 0.006 µg/L/yr and represents a change of 11.7%/yr over the period analyzed.
- A-1-CW04: The 2017 concentration in this well was 25 µg/L. This well is located is located in the former Plant A-1 area and is upgradient of BOU extraction well VO7. The magnitude of the increasing trend is 1.78 µg/L/yr and represents a change of 29%/yr over the period analyzed.
- A-1-CW08: The 2017 concentration in this well was 87 µg/L. This well is located downgradient of the former Plant B-6 and upgradient of the BOU extraction system. The magnitude of the increasing trend is 1.41 µg/L/yr and represents a change of 2.56%/yr over the period analyzed.
- A-1-CW09: The 2017 concentration in this well was 15 µg/L. This well is located is located in the former Plant A-1 area and is upgradient of BOU extraction well VO7. The magnitude of the probably increasing trend is 0.30 µg/L/yr and represents a change of 6.75%/yr over the period analyzed.
- B-1-CW13: The 2017 concentration in this well was 13 µg/L. This well is located between and within the influence of BOU extraction wells VO5 and VO6 and upgradient of VO8. The magnitude of the increasing trend is 0.88 µg/L/yr and represents a change of 5.48%/yr over the period analyzed.

The following B-HSU monitoring well exhibited an increasing trend:

- 3850R: The 2017 concentration in this well was 0.0074 µg/L. This well is located between extraction well VO6 and VO7 and upgradient of VO8. The magnitude of the increasing trend is 0.00062 µg/L/yr and represents a change of 7.67%/yr over the period analyzed.

5.3.4 1,4-Dioxane

Figures 24 and 25 show the trend analysis results for 1,4-dioxane in the WT HSUs and the B HSU, respectively. The statistical analysis for 1,4-dioxane yielded a result of either insufficient data, ND, or no trend for 30 of the monitoring wells tested. The decreasing or probably decreasing trend monitoring wells totaled 11, and the magnitude of the trends ranged from -24 to -0.01 µg/L/yr. The decreasing trends as a percentage for the period analyzed ranged from -24 to -2.92%/yr. The

decreasing trends in the WT HSUs are scattered throughout the BOU. There was one probably decreasing trends in the B HSU, 3850R, located between extraction well VO6 and VO7 and upgradient of VO8. Thirteen monitoring wells demonstrated a stable trend. Eleven monitoring wells demonstrated an increasing or probably increasing trend, and the magnitude of the trends ranged from 0.003 to 0.53 µg/L/yr. The increasing trends as a percentage for the period analyzed ranged from 1.08 to 11.5%/yr. The increasing trends in the WT and B HSUs were generally adjacent to and north of the extraction wells. All of the increasing trend monitoring wells are upgradient of the extraction wells or within the area captured by the BOU extraction wells. The magnitude of the increasing trends and the percentage these changes in concentration represent are not large.

The following WT-HSU monitoring wells exhibited increasing or probably increasing trends:

- MW-03: The analyte 1,4-dioxane was not detected in this well in 2017. This well is located within the former Pacific Airmotive Corporation/Plant B-6 area and is upgradient of the BOU extraction wells. The magnitude of the increasing trend is 0.07 µg/L/yr and represents a change of 7.12%/yr over the period analyzed.
- MW-04: The analyte 1,4-dioxane was not detected in this well in 2017. This well is located within the former Pacific Airmotive Corporation/Plant B-6 area and is upgradient of the BOU extraction wells. The magnitude of the increasing trend is 0.06 µg/L/yr and represents a change of 7.67%/yr over the period analyzed.
- MW-08: The analyte 1,4-dioxane was not detected in this well in 2017. This well is located within the former Pacific Airmotive Corporation/Plant B-6 area and is upgradient of the BOU extraction wells. The magnitude of the increasing trend is 0.53 µg/L/yr and represents a change of 11.0%/yr over the period analyzed.
- 3852F: The 2017 concentration in this well was 1.5 µg/L. This well is located 5,000 feet south of the nearest BOU extraction well and appears to be south of the area of influence of the BOU extraction wells. The magnitude of the increasing trend is 0.06 µg/L/yr and represents a change of 10.6%/yr over the period analyzed.
- A-1-CW09: The 2017 concentration in this well was 3.7 µg/L. This well is located in the former Plant A-1 area and upgradient of BOU extraction well VO7. The magnitude of the probably increasing trend is 0.16 µg/L/yr and represents a change of 9.49%/yr over the period analyzed.
- B-1-CW13: The 2017 concentration in this well was 2.0 µg/L. This well is located between and within the influence of BOU extraction wells VO5 and VO6 and upgradient of VO8. The magnitude of the increasing trend is 0.05 µg/L/yr and represents a change of 5.66%/yr over the period analyzed.
- B-1-CW17: The 2017 concentration in this well was 2.9 µg/L. This well is located on the downgradient edge of the influence of the extraction well VO1. The magnitude of the

increasing trend is 0.09 µg/L/yr and represents a change of 8.94%/yr over the period analyzed.

- C-1-CW08: The analyte 1,4-dioxane was not detected in this well in 2017. This well is located within the former Plant C-1 area and is upgradient of the BOU extraction wells. The magnitude of the increasing trend is 0.04 µg/L/yr and represents a change of 4.4%/yr over the period analyzed.

The following B-HSU monitoring wells exhibited increasing or probably increasing trends:

- B-6-CW14: The 2017 concentration in this well was 1.8 µg/L. This well is located in the former Plant B-1 area and upgradient of the BOU extraction system. The magnitude of the increasing trend is 0.10 µg/L/yr and represents a change of 11.5%/yr over the period analyzed.
- C-1-CW02: The analyte 1,4-dioxane was not detected in this well in 2017. This well is located upgradient of the former Plant C-1 area and is upgradient of the BOU extraction wells. The magnitude of the increasing trend is 0.02 µg/L/yr and represents a change of 4.75%/yr over the period analyzed.
- C-1-CW05: The analyte 1,4-dioxane was not detected in this well in 2017. This well is located east of the former Plant B-5 area. The magnitude of the increasing trend is 0.003 µg/L/yr and represents a change of 1.08%/yr over the period analyzed. The analyte 1,4-dioxane has never been detected in this well at a concentration exceeding the notification level.

5.3.5 Total Chromium

Figures 26 and 27 show the trend analysis results for total chromium in the WT HSUs and the B HSU, respectively. The statistical analysis for total chromium yielded a result of either insufficient data, ND, or no trend for 40 of the monitoring wells tested. The decreasing or probably decreasing trend monitoring wells totaled ten, and the magnitude of the trends ranged from -15.3 to -0.10 µg/L/yr. The decreasing trends as a percentage for the period analyzed ranged from -11.0 to -0.77%/yr. The decreasing trends in the WT and B HSUs are scattered throughout the BOU. Twelve monitoring wells demonstrated a stable trend. Three monitoring wells demonstrated an increasing or probably increasing trend, and the magnitude of the trends ranged from 0.13 to 0.42 µg/L/yr. The increasing trends as a percentage for the period analyzed ranged from 5.29 to 7.85%/yr. All of the increasing trend monitoring wells in the WT and B HSUs are located adjacent to or upgradient of the BOU extraction wells, and within the area captured by the extraction wells. The magnitude of the increasing trends and the percentage these changes in concentration represent are not large.

The following WT-HSU monitoring wells exhibited increasing or probably increasing trends:

- 3860K: The 2017 concentration in this well was 3.44 µg/L. This well is located is located downgradient of the former Pacific Airmotive Corporation/Plant B-6 area and is upgradient of the BOU extraction wells. The magnitude of the probably increasing trend is 0.22 µg/L/yr and represents a change of 5.48%/yr over the period analyzed. Total chromium has never been detected in this well at a concentration exceeding the MCL.
- B-6-CW16: The 2017 concentration in this well was 28.9 µg/L. This well is located downgradient of the former Plant B-6 and upgradient of the BOU extraction system. The magnitude of the increasing trend is 0.42 µg/L/yr and represents a change of 7.85%/yr over the period analyzed. Total chromium has never been detected in this well at a concentration exceeding the MCL.

The following B-HSU monitoring well exhibited a probably increasing trend:

- B-6-CW02: The 2017 concentration in this well was 2.95 µg/L. This well is located within the former Pacific Airmotive Corporation/Plant B-6 area and is upgradient of the BOU extraction wells. The magnitude of the probably increasing trend is 0.13 µg/L/yr and represents a change of 5.29%/yr over the period analyzed. Total chromium has never been detected in this well at a concentration exceeding the MCL.

5.3.6 Hexavalent Chromium

Figures 28 and 29 show the trend analysis results for hexavalent chromium in the WT HSUs and the B HSU, respectively. The statistical analysis for hexavalent chromium yielded a result of either insufficient data, ND, or no trend for 27 of the monitoring wells tested. The decreasing or probably decreasing trend monitoring wells totaled 11, and the magnitude of the trends ranged from -2.81 to -0.01 µg/L/yr. The decreasing trends as a percentage for the period analyzed ranged from -12.6 to -2.19%/yr. The decreasing trends in the WT HSUs are scattered across the BOU. The three decreasing trends in the B HSU are located at Building 371 and just immediately south of the BOU extraction wells. Eighteen monitoring wells demonstrated a stable trend. Nine monitoring wells demonstrated increasing or probably increasing trends, and the magnitude of the trends ranged from 0.03 to 8.76 µg/L/yr. The increasing trends as a percentage for the period analyzed ranged from 0.82 to 88 %/yr. The trends in the WT HSUs appear to be primarily located adjacent to or upgradient of the BOU extraction wells, and within the area captured by the extraction wells. The increasing trends in the B HSU are primarily south of the extraction wells and appears to be outside of the area captured by the extraction wells.

The following WT-HSU monitoring wells exhibited increasing or probably increasing trends:

- MW-04: The 2017 concentration in this well was 2.2 µg/L. This well is located within the former Pacific Airmotive Corporation/Plant B-6 area and is upgradient of the BOU extraction wells. The magnitude of the increasing trend is 0.05 µg/L/yr and represents a

change of 3.65%/yr over the period analyzed. Hexavalent chromium has never been detected in this well at a concentration exceeding the MCL.

- MW-08: The 2017 concentration in this well was 2.1 µg/L. This well is located within the former Pacific Airmotive Corporation/Plant B-6 area and is upgradient of the BOU extraction wells. The magnitude of the increasing trend is 0.10 µg/L/yr and represents a change of 7.12%/yr over the period analyzed. Hexavalent chromium has never been detected in this well at a concentration exceeding the MCL.

- 3870D: The 2017 concentration in this well was 17 µg/L. The well is located in the northeast corner of the BOU east of Interstate 5. The well appears to be upgradient of the BOU extraction system. The magnitude of the increasing trend is 8.76 µg/L/yr and represents a change of 88%/yr over the period analyzed.

- 3872N: The 2017 concentration in this well was 6.7 µg/L. This well is located 4,750 feet south of the nearest BOU extraction well and appears to be south of the area of influence of the BOU extraction wells. The magnitude of the increasing trend is 2.49 µg/L/yr and represents a change of 80%/yr over the period analyzed. Hexavalent chromium has never been detected in this well at a concentration exceeding the MCL.

- C-1-CW03: The 2017 concentration in this well was 0.88 µg/L. This well is located upgradient of the former Plant C-1 area and is upgradient of the BOU extraction wells. The magnitude of the increasing trend is 0.03 µg/L/yr and represents a change of 7.67%/yr over the period analyzed. Hexavalent chromium has never been detected in this well at a concentration exceeding the MCL.

The following B-HSU monitoring well exhibited a probably increasing trend:

- 3851N: The current concentration in this well is 1.2 µg/L. The well is located 2000 feet south of the nearest BOU extraction well. The magnitude of the increasing trend is 0.01 µg/L/yr and represents a change of 2.19 %/yr over the period analyzed. Hexavalent chromium has never been detected in this well at a concentration exceeding the MCL.

- 3852H: The 2017 concentration in this well was 1.1 µg/L. This well is located 4,750 feet south of the nearest BOU extraction well and appears to be south of the area of influence of the BOU extraction wells. The magnitude of the probably increasing trend is 0.01 µg/L/yr and represents a change of 0.82%/yr over the period analyzed. Hexavalent chromium has never been detected in this well at a concentration exceeding the MCL.

- 3861F: The 2017 concentration in this well was 4.9 µg/L. The well is located 1600 feet south of the nearest BOU extraction well and appears to be on the downgradient edge of the influence of the BOU extraction wells. The magnitude of the increasing trend is 0.04 µg/L/yr and represents a change of 1.41 %/yr over the period analyzed. Hexavalent chromium has never been detected in this well at a concentration exceeding the MCL.

- B-6-CW02: The 2017 concentration in this well was 2.5 µg/L. This well is located upgradient of the BOU extraction wells. The magnitude of the increasing trend is 0.03 µg/L/yr and represents a change of 4.02%/yr over the period analyzed. Hexavalent chromium has never been detected in this well at a concentration exceeding the MCL.

5.4 COMPOUNDS OF CONCERN COMPARISON

During the USEPA's review of the 2013 BOU Annual Groundwater Monitoring and Emerging Compounds Report (Arcadis 2013), the USEPA requested that the analytical results for the compounds of concern (PCE, TCE, 1,2,3-TCP, 1,4-dioxane, total chromium, and hexavalent chromium) be compared to previous results to look for increases in concentrations. The concern was that limited or variable datasets can be problematic for statistical analysis and that inspection of the most recent data may identify a possible increasing trend before statistical analysis will. Specifically it was requested that the data be evaluated for the three following criteria:

- Criteria 1- Determine if detected concentration represents a new maximum for that monitoring well
- Criteria 2 - Determine if detected concentration exceeds the water-quality objectives for the first time in a period of two years
- Criteria 3 - Determine if the concentration is greater than the previous reported concentration by a factor of 50% or more and if it is in excess of the water quality objectives

Sixty-five monitoring wells were sampled and tested in 2017 and there are six primary compounds of concern, therefore, each of the three criteria were applied against 390 datasets. The same datasets used for the statistical analysis (January 1996 to the present) was used for this evaluation as well. Table 9 presents the result of the analysis and the matrix below summarizes the results.

- Criteria 1 – 40 of the 390 results represented a new maximum
- Criteria 2 – 3 of the 390 results represented a new exceedance of the MCL/DWNL since May 2014
- Criteria 3 – 29 of the 390 results represented an exceedance of the MCL/DWNL and the concentration was more than 50% higher than the last known concentration for that monitoring well.

Summary of Data Comparison						
	Wells That Met Criteria 1: New Maximum Concentration		**Wells That Met Criteria 2: New Exceedance of MCL/DWNL since March 2016**		**Wells That Met Criteria 3: Exceedance of the MCL/DWNL and 50% Higher than Last Measured Concentration**	
Analyte	**Number of Wells**	**Concentration Range (µg/L)**	**Number of Wells**	**Concentration Range (µg/L)**	**Number of wells**	**Concentration Range (µg/L)**
PCE	5	13.0 - 630	0	NA	7	14.0 - 630
TCE	5	0.29 - 200	0	NA	11	12.0 - 240
1,2,3-TCP	5	0.0011 - 25	0	NA	5	0.057 - 25
1,4-Dioxane	5	1.5 - 3.7	1	1.5	4	1.5 - 3.7
Total Chromium	2	0.028 - 17	1	16	1	16
Hexavalent Chromium	15	29 - 47	1	82.9	1	82.9
Total	40	NA	3	NA	29	NA

Note: NA – not applicable

The following observations were made while compiling these data:

- Several of the cases where one or more of these criteria were met were for monitoring wells where analytical detection limits have decreased, resulting in current detections at concentrations well below the former detection limits. The reduced detection limits are generally due to increased sensitivities of the analytical methods.
- Many monitoring wells have limited datasets (as few as four or five analyses since 1996) and provide less perspective over time or previous data for comparison.
- Some of the cases where these criteria were met were in areas where there is likely downgradient migration from higher concentration areas; or small upward changes in concentration in areas of known impacts.
- Five new wells were installed in the Plant B-1 area 2016. Twelve of the criteria 1 and eight of the criteria 3 exceedances were associated with those new wells.

Neither criteria 1, 2, or 3 identified any changes in concentration or plume morphology beyond those already presented on the isoconcentration maps or identified in the trend analysis that warrant further investigation at this time.

SECTION 6
CAPTURE ZONE EVALUATION

The systematic approach outlined in the USEPA guidance document *A Systematic Approach for Evaluation of Capture Zones at Pump and Treat Systems* (USEPA, 2008) was followed to assess the current status of hydraulic capture at the BOU. Data collected from October 2016 through early April 2017 were evaluated to assess capture. The lines of evidence collected from the site and used to complete the evaluation included the following: summation of extraction system operation, evaluation of the measured groundwater levels, analysis of hydraulic gradients (horizontal and vertical), concentration trend analyses, and a review of water-level trends during the reporting period. The following sections present a summary of each of these diagnostic components.

6.1 BOU EXTRACTION SYSTEM

The City of Burbank compiles extraction well discharge rates and water treatment plant operational data in monthly operations reports that are provided to the California Department of Public Health and the USEPA. These reports include the total daily volume of water pumped from each of the BOU extraction wells and the influent/effluent concentrations of the contaminants of concern. Table 10 provides a summary of monthly groundwater production from each of the eight groundwater extraction wells from May 2016 through April 2017.

Based on the data from the BOU monthly operation reports for the current reporting period (May 2016 through April 2017), an estimated 3,129,230,274 gallons of groundwater was extracted (average extraction rate of 5,937 gallons per minute) and approximately 3,697 pounds of volatile organic compounds (VOCs) were treated by the Burbank Operable Unit (BOU) treatment system (see Table 11). The estimated mass of VOCs removed by the BOU extraction wells and treatment system are based on the average monthly influent concentrations of total VOCs and the total volume of influent to the water treatment plant.

Since inception of the treatment system in 1996 through April 2017, the BOU has extracted an estimated 64,387,442,880 gallons of groundwater and removed approximately 259,422 pounds of VOCs. A summary of the cumulative volume of water and estimated mass of VOCs treated by year from 1996 through April 2017 is provided in Appendix F.

All eight BOU extractions wells operated during the period reported. Extraction wells VO2, VO4, VO6, and VO8 were operating 91%, 79%, 78% and 80% of the period reported, respectively, and produced approximately 65% of the total volume pumped. The remaining four extraction wells were operating 34% to 52% of the period reported, and produced approximately 5% to 12% of the total volume pumped.

6.2 MEASURED GROUNDWATER LEVELS

Figures 3 and 4 present the potentiometric surface contours in the WT HSUs and the B HSU, respectively. Elevation data shown on both figures indicate that groundwater flows from northwest toward southeast across the BOU. The best indication of the steady-state hydraulic gradient (absent the effects of groundwater extraction) is shown in the western area of the Bob Hope Airport where groundwater flows from northwest to southeast at a gradient of 0.002 foot/foot.

Groundwater extraction appeared to be the dominant influence on groundwater flow within the monitoring well network. Groundwater extraction created a northwest-aligned trough with respect to the water table, creating a series of coalescing cones of depression beneath the BOU extraction wells. All of the BOU extraction wells are located in a linear alignment along or projecting east of Vanowen Street with the exception of VO8, which is located one block south of VO6. Figure 3 shows, in detail, the considerable cone of depression formed by the BOU extraction well system to capture contaminated groundwater present in the WT HSUs. Figure 3 also shows that the dominant direction of groundwater flow immediately south of the BOU was reversed from its natural southeasterly flow direction, as it followed a northerly flow direction into the cones of depression created by the BOU extraction wells. The influence of VO8 can be seen in the southward extension of the extraction system cone of depression apparent to the south of VO5 and VO6 toward Victory Boulevard (Figure 3 and 4).

The local groundwater flow direction in the B HSU was generally the same as the local groundwater flow direction observed in the WT HSUs: toward the southeast and converging on the area of groundwater extraction.

There appears to be a hydraulic divide in the vicinity of monitoring wells 3862D and 3872Q, in which the water table elevation contours exhibited changes in direction. These changes in direction

indicate the approximate location of the southern limit of hydraulic capture, which is shown on Figure 3.

The data from select monitoring wells equipped with pressure transducers were converted to hydrographs and are presented in Appendix C. The result is a series of very detailed hydrographs for the reporting period from October 2016 through April 2017. From October 2016 through early April 2017, the groundwater levels in BOU monitoring wells generally declined.

The following observations are based upon a review of the data presented in the hydrographs in Appendix C:

- Graph C-7: Groundwater monitoring wells 3851M (WT HSUs) and 3851N (B HSU), located approximately 1,300 feet southwest of extraction well VO8, 2,000 feet southwest of extraction well VO6, and 1,800 feet south of extraction well VO7, exhibited influence from changes in pumping in all three BOU extraction wells. The influence from changes in pumping was up to 0.6 feet in magnitude. The greatest influence seems to be from changes in pumping at VO8. There was consistently approximately 0.5 feet of head difference between these two monitoring wells indicating an upward vertical gradient.
- Graph C-9: Groundwater monitoring well 3852L (WT HSUs), located approximately 2,800 feet south of extraction well VO8, 4,000 feet south of extraction well VO6, and 4,200 feet south of extraction well VO7, exhibited a slight response to changes in pumping in VO8. There was no observable response to changes in pumping in VO6 or VO7.
- Graph C-12: Groundwater monitoring well 3861D (WT HSUs), located approximately 190 feet southwest of extraction well VO3, 180 feet south of extraction well VO4, and 2,500 feet east of extraction well VO8, exhibited response to changes in pumping in all three extraction wells. The response to pumping was typically less than 0.5 feet in magnitude. Groundwater monitoring well 3861F (B HSU), co-located with 3861D, exhibited response to changes in pumping in all three BOU extraction wells. The response to changes in pumping was up to 1 foot in magnitude, and the greatest influence appeared to be from VO8. There was consistently approximately 4 feet of head difference between these two monitoring wells indicating a vertical gradient upward.
- Graph C-15: Groundwater monitoring well 3871H (WT HSUs), located approximately 2,300 feet south of extraction well VO1 and 2,700 feet southeast of extraction well VO2, exhibited response to changes in pumping in both VO1 and VO2. The response to changes in pumping in VO1 was greater (up to 1.25 feet, compared to 1 foot from pumping in VO2). Water levels fluctuated up to 2.5 feet when both pumps were operating.
- Graph C-19: Groundwater monitoring well 3880 (WT HSUs), located approximately 2,600 feet northeast of extraction well VO1, exhibited a slight response to changes in pumping in VO1.
- Graph C-22: Groundwater monitoring well A-1-CW04 (WT HSUs), located approximately 1,100 feet west of extraction well VO7 and 2,600 feet northwest of extraction well VO8,

exhibited significant response to changes in pumping in VO7 and slight response to changes in pumping in VO8. Groundwater monitoring well A-1-CW05 (B HSU), approximately co-located with A-1-CW04, exhibited response to pumping in both VO7 and VO8. There was consistently approximately 1 foot or more of head difference between these two monitoring wells indicating an upward vertical gradient.

- Graph C-24: Groundwater monitoring well B-1-CW12 (WT HSUs), located approximately 600 feet east of extraction well VO1, historically exhibited significant response to pumping in VO1, with fluctuations up to 2 feet or more in magnitude when pumping stops and starts in extraction well VO1. Groundwater monitoring well B-1-CW11 (B HSU), co-located with B-1-CW12, exhibited responses to pumping rate changes in VO1, with fluctuations generally on the order of 1 to 1.5 feet in magnitude. There is consistently more than 5 feet of head difference between these two monitoring wells indicating a vertical gradient upward. The shallow WT HSU is controlled by pumping from the western end of the groundwater extraction system. While pumping influenced the B HSU, water levels in the both zones declined during the reporting period.

- Graph C-25: Groundwater monitoring well B-1-CW13 (WT HSUs), located approximately 500 feet west of extraction well VO5 and 800 feet east of extraction well VO6, exhibited response to changes in pumping in both VO5 and VO6. The response to changes in pumping in VO5 was greater (2.5 feet or greater, compared to 1.5 feet from changes in pumping in VO6). The water levels fluctuated up to 3 feet when both pumps were operating.

- Graph C-27: Groundwater monitoring well B-1-CW17 (WT HSUs), located approximately 2,000 feet southeast of extraction well VO1, exhibited some response to changes in pumping in VO1, with fluctuations up to 0.2 feet in magnitude. Groundwater monitoring well B-1-CW20 (B HSU), located approximately 1,500 feet southeast of extraction well VO1, appeared to exhibit a larger response to changes in pumping in VO1, with fluctuations generally on the order of 0.75 feet in magnitude.

- Graph C-28: Groundwater monitoring well B-1-CW25 (WT HSUs), located approximately 300 feet east of extraction well VO4 and 600 feet west of extraction well VO3, exhibited response to changes in pumping in both VO3 and VO4. The response to changes in pumping in VO4 was greater (up to 3 feet). The largest influence was when both extraction wells were pumping.

Figure 30 shows changes in the elevation of the WT HSUs from six monitoring wells within the BOU: monitoring wells B-6-CW-17 and 3850V (upgradient of the BOU extraction wells); monitoring well B-1-CW25 (between BOU extraction wells VO3 and VO4); and monitoring wells 3861D and Tt-PW-02 (downgradient of the BOU extraction wells VO3 and VO4). Unfortunately B-6-CW-17 is dry and the data is not useable. These monitoring wells represent a line that approximately parallels the direction of groundwater flow from northwest (upgradient) to southeast (downgradient). Water levels in the upgradient monitoring wells were higher than either the downgradient or extraction system monitoring wells. Due to their proximity to the BOU extraction wells, the water levels in the extraction well monitoring wells showed the greatest fluctuations from

changes in pumping. Data presented in Figure 30 also show that the water level in Tt-PW-02, the farthest downgradient monitoring well on the hydrograph, is higher than the extraction system monitoring wells. The water level in 3861D, located between the extraction system monitoring wells and Tt-PW-02, was general higher than the water level in the extraction system monitoring wells and lower than monitoring well Tt-PW-02. Supporting that during the period represented, the groundwater along the profile represented by the graph is flowing toward the extraction system.

6.3 HYDRAULIC GRADIENTS

6.3.1 Vertical Gradients

Groundwater-elevation data for selected monitoring well-cluster sets were used to evaluate the vertical hydraulic gradient at various points in the BOU and potential vertical groundwater flow. The vertical gradient (i) between the B HSU and the WT HSUs was calculated for the monitoring well-cluster sets by the following formula:

$i = dh/dl,$

where dh equals the difference between the groundwater elevations in the B HSU and overlying HSU, and dl equals the distance between the midpoint of the B HSU monitoring well screen and the midpoint of the saturated portion of the overlying HSU monitoring well screen. The direction and magnitude of the vertical gradient between the B HSU and the overlying WT HSUs at each monitoring well-cluster set are presented in Table 12.

The results indicate that there was a predominately upward vertical gradient over much of the BOU. This upward gradient is caused by the influence due to groundwater extraction (due to the fact that the BOU extraction wells are predominantly drawing from the WT HSUs), which lowers the WT HSUs' water level to elevations below the top of the B HSU's potentiometric surface. The magnitude of the upward gradient was generally greater in the monitoring well clusters that are closer to the BOU extraction wells.

A number of the transducers were installed in monitoring well clusters so the vertical hydraulic gradient can be evaluated. Monitoring well clusters near BOU extraction wells (B-1-CW12 [WT HSUs] and B-1-CW11 [B HSU]; Appendix C, Graph C-24) appear to show an upward vertical hydraulic gradient as a result of pumping from the WT HSUs. Similar upward gradients are observed

on the hydrographs for B-1-CW17 (WT HSUs) and B-1-CW20 (B HSU); 3861D (WT HSUs) and 3861F (B HSU); and 3851M (WT HSUs) and 3851N (B HSU); and A-1-CW04 (WT HSUs) and A-1-CW05 (B HSU) (Appendix C, Graphs C-27, C-12, C-7, and C-22, respectively). It should be noted that upward vertical hydraulic gradients are demonstrated over the full six-month period, suggesting that all pumping configurations from October 2016 through early April 2017 were capable of maintaining upward gradients for these subsets of monitoring wells.

6.3.2 Horizontal Gradients

Groundwater-elevation data for selected monitoring wells were used to evaluate horizontal hydraulic gradients (direction and magnitude) within the BOU using a triangulated irregular network (TIN). This horizontal hydraulic gradient analysis was completed using data collected during the April 2017 gauging event and TINs defined by monitoring wells distributed in the WT HSUs and the B HSU. The TIN segments established for this evaluation are shown on Figures 31 and 32 for the WT HSUs and the B HSU, respectively. As shown on these figures, the TIN cells are located adjacent to and immediately downgradient of the BOU extraction system. Consequently, the application of this diagnostic tool can help determine the near-well and downgradient extent of capture generated by the BOU extraction system.

A total of 38 TIN segments were defined for the WT HSUs (A through LL) and 25 TIN segments were defined for the B HSU (A through Y) to determine the direction and magnitude of the horizontal hydraulic gradients in the respective HSUs (Figures 31 and 32).

6.3.2.1 WT HSU TIN Results

Based on review of Figure 31, the hydraulic gradient in the area immediately to the south and east of the groundwater extraction well system are directly influenced by pumping, showing steep gradients and in some instances a reversal from the southeast-oriented regional trend, indicating strong hydraulic capture.

South of Victory Boulevard (triangles AA, BB, and CC), the direction of groundwater flow appears to ultimately result in flow toward the extraction system, but the hydraulic gradient is not as steep. Further to the south, the horizontal gradients calculated for triangles EE, FF, GG, and HH support partial capture in this region. However, the horizontal gradients in triangles KK and LL do not support capture in those regions.

6.3.2.2 B-Zone HSU TIN Results

The TIN map prepared for the B HSU (Figure 32) shows that groundwater directly adjacent to extraction well VO8 is influenced by pumping, and the influence quickly dissipates to the south, southwest, and west.

6.4 CHEMICALS OF CONCERN CONCENTRATION TRENDS

Concentration trends constitute another element in the evaluation of hydraulic capture. Per the guidance provided in *A Systematic Approach for Evaluation of Capture Zones at Pump and Treat Systems* (USEPA, 2008), contaminant concentrations should be monitored at locations downgradient of the capture zone to demonstrate capture. Contaminant concentrations can be monitored at two types of downgradient locations: sentinel monitoring wells or downgradient performance monitoring wells. Sentinel monitoring wells are located downgradient of the capture zone and concentrations are below background concentrations. Downgradient performance monitoring wells are located downgradient of the capture zone and are impacted above background concentrations. Four monitoring well pairs completed in both the WT-HSU and the B-HSU have been identified as downgradient performance monitoring wells: 3852M (WT HSUs) and 3852N (B HSU), 3862D (WT HSUs) and 3862E (B HSU), 3872L (WT HSUs) and 3872M (B HSU), and 3872Q (WT HSUs) and 3872S (B HSU). All of these monitoring wells are located south of Burbank Boulevard.

Results of the statistical trend analyses for the chemicals of concern are presented on Figures 18 through 29. Results presented on these figures correspond to the Mann-Kendall and the linear regression tests performed on data points covering the time period from first quarter 1996 to the most recent sampling event in April 2017, as presented in Section 5 and Appendix E. As discussed in Section 5 of this report, there are seven statistical concentration trend types that can be derived for the Mann-Kendall analysis: 1) decreasing, 2) increasing, 3) no trend (displaying two sets of conditions), 4) probably decreasing, 5) probably increasing, 6) stable, and 7) non-detect (ND; all sample results are below the detection limit). If a location has fewer than four quarters of data, then the Mann-Kendall analysis cannot be run and not applicable (NA) would be applied to the results. Trends for the 4 pairs of monitoring wells identified above are discussed by analyte below.

6.4.1 Tetrachloroethene Concentration Trends

The trend analysis for the eight downgradient performance monitoring wells yielded the following results: insufficient data (none), decreasing (six monitoring wells: 3852M, 3852N, 3862D, 3862E, 3872M, and 3872Q), increasing (none), no trend (one monitoring well: 3872L), probably decreasing (one monitoring well: 3872S), probably increasing (none), stable (none), and ND (none). The magnitudes of the decreasing and probably decreasing trends ranged from -34 to -0.93 micrograms per liter per year (µg/L/yr) in the WT HSUs and from -3.5 to -0.09 µg/L/yr in the B HSU.

6.4.2 Trichloroethene Concentration Trends

The trend analysis for the eight downgradient performance monitoring wells yielded the following results: insufficient data (none), decreasing (seven monitoring wells: 3852M, 3852N, 3862D, 3862E, 3872M, 3872Q, and 3872S), increasing (none), no trend (one monitoring well: 3872L), probably decreasing (none), probably increasing (none), stable (none), and ND (none). The magnitudes of the decreasing trends were -30 to -0.42 µg/L/yr in the WT HSUs and -1.64 to -0.03 µg/L/yr in the B HSU.

6.4.3 1,2,3-Trichloropropane Concentration Trends

The trend analysis for the eight downgradient performance monitoring wells yielded the following results: insufficient data (none), decreasing (one monitoring well: 3872Q), increasing (two monitoring wells: 3852M and 3872L), no trend (five monitoring wells: 3852N, 3862D, 3862E, 3872M, and 3872S), probably decreasing (none), probably increasing (none), stable (none), and ND (none). The magnitude of the single decreasing trend was -0.023 µg/L/yr in the WT HSUs. The magnitude of the increasing trend wells in the WT HSUs was 0.006 µg/L/yr and 0.016 µg/L/yr.

6.4.4 1,4-Dioxane Concentration Trends

The trend analysis for the eight downgradient performance monitoring wells yielded the following results: insufficient data (none), decreasing (one monitoring well: 3862D), increasing (none), no trend (none), probably decreasing (none), probably increasing (none), stable (two monitoring wells: 3852M and 3862E), and ND (five monitoring wells: 3852N, 3872L, 3872M, 3872Q, and 3872S). The magnitude of the single decreasing trend in the WT HSUs was -0.01 µg/L/yr.

6.4.5 Total Chromium Concentration Trends

The trend analysis for the eight downgradient performance monitoring wells yielded the following results: insufficient data (none), decreasing (none), increasing (none), no trend (three monitoring wells: 3852N, 3862E, and 3872Q), probably decreasing (two monitoring wells: 3852M and 3862D), probably increasing (none), stable (three monitoring wells: 3872L, 3872M, and 3872S), and ND (none). The magnitude of the decreasing trend wells was -0.14 µg/L/yr and -0.11 µg/L/yr (WT HSUs).

6.4.6 Hexavalent Chromium Concentration Trends

The trend analysis for the eight downgradient performance monitoring wells yielded the following results: insufficient data (none), decreasing (one monitoring well: 3862D), increasing (none), no trend (four monitoring wells: 3852M, 3852N, 3872L, and 3872M), probably decreasing (none), probably increasing (none), stable (three monitoring wells: 3862E, 3872Q, and 3872S), and ND (none). The magnitude of the decreasing trend was -0.50 µg/L/yr (WT HSUs).

6.5 CAPTURE ZONE SUMMARY

For this report, several lines of evidence were examined to evaluate the extent of capture resulting from the BOU extraction system and assess the effectiveness of the system in hydraulically containing the various chemical of concern plumes within the BOU. The lines of evidence included the following:

- The operational data from the extraction system indicated that groundwater is being extracted and that significant VOC mass is being removed from the aquifer.
- Vertical hydraulic gradients indicated that pumping from the WT HSUs is inducing or increasing upward vertical gradients between the B HSU and the WT HSUs.
- The WT-HSU potentiometric map developed from the groundwater level measurements supports that the BOU extraction wells capture groundwater across most of the BOU north of Vanowen Street and south of the extraction wells toward Chandler Boulevard and Wyoming and West Allan Avenue (Figure 3).
- The TIN for the WT HSUs were developed from the same data as the potentiometric maps. The TIN supports that capture from the BOU extraction wells extends south to approximately West Allan and Wyoming Avenue in the central-western portion of the BOU and Chandler Boulevard in the eastern portion of the BOU.

- The trend analysis for the eight downgradient performance monitoring wells yielded the following results: insufficient data (none), decreasing (16 results), increasing (2 results), no trend (14 results), probably decreasing (3 results), probably increasing (none), stable (8 results), and ND (5 results). The two increasing trends (1,2,3-TCP in monitoring wells 3852M and 3872L) had a limited data set (at least five analyses from each well from 2007 to 2017) and the magnitude of the change was small.

The lines of evidence suggest that the BOU extraction system exerts lateral hydraulic control for the extent of contaminants of concern within the BOU. The BOU extraction system can be expected to inhibit the migration of site-related chemicals of concern that are present within the WT HSUs upgradient (north) of the southern limits of hydraulic control in each hydrostratigraphic unit. This interpretation is consistent with past BOU groundwater monitoring reports and recent modelling within the San Fernando Valley (Tetra Tech, 2015c).

SECTION 7
CONCEPTUAL SITE MODEL EVALUATION

The groundwater monitoring results for the second quarter 2017 do not materially differ from results obtained during previous groundwater monitoring events, with the exception that as shown in Figure 5 the overall groundwater elevation at the site continues to drop, also drawdown in the vicinity of extraction well V08 is now depicted on the potentiometric surface maps (Figure 3 and 4). This difference is due to the inclusion of water level data from newly-installed observation wells OW-V08A and OW-V08B rather than changes in field conditions, and represents an improvement in the accuracy of depiction of the cone of depression around the BOU extraction well field. This new data helps better define the influence extraction well VO8 is having on both the water table and the B HSUs. The repair and/or replacement of OWVO1, OW-VO2, OW-VO3, and OW-VO6 has helped to better define the influence of their associated BOU extraction wells. The new wells at Plant B-1 have refined the potentiometric and the isoconcentration mapping in that area as well.

SECTION 8
SUMMARY AND CONCLUSIONS

The Second Quarter 2017 BOU groundwater monitoring event was implemented in accordance with the 2017 Revised OSP; (Tetra Tech, 2017b). The intent of the program is to provide the data necessary to evaluate groundwater conditions at the BOU, including the near-field and far-field effects of the extraction well field.

8.1 GROUNDWATER MONITORING WELL MAINTENANCE

In preparation for the second quarter 2017 groundwater monitoring event, several monitoring well maintenance activities were completed in March and April, 2017:

- The dedicated high-volume pumps and associated piping were removed from 52 monitoring wells and replaced with dedicated low-flow pumps.
- A total of 9 groundwater monitoring wells were redeveloped, cleaned out, or attempted to be cleaned out. This includes A-1-CW07, B-5-CW03, B-6-CW16, C-1-CW05, C-1-CW06, 3852L, 3852M, and 4949C.
- Additional well maintenance activities were completed at 70 of the BOU monitoring wells. This included replacement of well lid gaskets, adding or replacing well tags, re-tapping the existing bolt holes, and replacing the standard six-point bolts with five-point bolts.

8.2 GROUNDWATER ELEVATIONS AND GRADIENTS

During the second quarter 2017 groundwater monitoring event, groundwater levels were measured in 105 monitoring wells. Groundwater elevation contours for the WT HSUs and B HSU are shown on Figures 3 and 4, respectively. Based on those measurements, the local shallow groundwater flow direction was predominantly southeasterly in the northwest portion of the BOU and southerly in the northeast portion of the BOU, and it converged in a flow direction toward the cones of depression created by the operation of the BOU extraction wells. The second quarter 2017 groundwater elevation data indicate that the dominant direction of groundwater flow immediately south of the BOU extraction wells was reversed from its natural southeasterly flow direction, to a northerly flow direction in response to the extraction well pumping (northeasterly flow direction in the western portion of the BOU). These groundwater trends extend to Victory Boulevard in the western portion of the BOU, West Allan and Wyoming Avenue in the central-western portion of the BOU, and to at

least Chandler Boulevard in the eastern portion of the BOU. Beyond these boundaries the groundwater flow direction shows influence from pumping, but ultimately reverts to its natural southeasterly direction.

The local groundwater flow direction in the B HSU during the second quarter 2017 groundwater monitoring event was generally the same as the local groundwater flow direction observed in the WT HSUs. The greater drawdown observed at extraction well V08 in the second quarter 2017 compared with the second quarter 2016 is due to the inclusion of data from new observation well OW-V08B.

Groundwater-elevation data for selected monitoring wells were used to evaluate horizontal hydraulic gradients (direction and magnitude) within the BOU using a TIN. This horizontal hydraulic gradient analysis was completed using data collected during the April 2017 gauging event and TINs defined by monitoring wells distributed in the WT HSUs and the B HSU. These TIN cells are located adjacent to and immediately downgradient of the BOU extraction system. Consequently, the application of this diagnostic tool can help determine the near-well and downgradient extent of capture generated by the BOU extraction system.

Based on the TIN map for the WT HSUs, the hydraulic gradient in the area immediately to the south and east of the groundwater extraction well system are directly influenced by pumping, showing steep gradients and in some instances a reversal from the southeast-oriented regional trend, indicating strong hydraulic capture. Farther to the south, the direction of groundwater flow appears to ultimately result in flow toward the extraction system, but the hydraulic gradient is not as steep. The degree of hydraulic capture dissipates along the southwestern operable unit boundary during the second quarter 2017 monitoring event.

Based on the TIN map for the B HSU, groundwater directly adjacent to extraction well VO8 is influenced by pumping, and the influence quickly dissipates to the south, southwest, and west.

8.3 WATER QUALITY RESULTS

Sixty-five groundwater monitoring wells were sampled during the Second Quarter 2017 monitoring event, 42 completed in the WT HSU and 23 completed in the B HSU. The samples collected were tested for VOCs, 1,2,3-TCP, 1,4-dioxane, total chromium, and hexavalent chromium.

The data were validated using the most recent versions of the USEPA's *National Functional Guidelines* for data validation available at the time of project initiation, where appropriate (USEPA, 2008 and 2010a). Based upon the data review, the data are considered usable as qualified. All testing was provided by the Eurofins Calscience, a California Department of Public Health-accredited environmental laboratory.

Twenty-one organic and two inorganic analytes were detected. Isoconcentration maps were prepared for six primary chemicals of concern: PCE, TCE, 1,2,3-TCP, 1,4-dioxane, total chromium, and hexavalent chromium.

- PCE was detected in 59 of the primary (non-duplicate) samples, 37 of which exceeded the MCL (5 µg/L). Concentrations in the WT HSUs ranged from <0.20 µg/L to 630 µg/L (monitoring well B-1-CW33). Concentrations exceeding the MCL extended over much of the BOU with the highest concentrations detected at the northwest corner of the former Plant B-1 and trending southeast beneath former Plant B-1 and extending to Magnolia Boulevard. Concentrations in the B HSU ranged from <0.20 µg/L to 48 µg/L (monitoring well 3850R). Concentrations exceeding the MCL were not as widely distributed as in the shallower HSUs, with the highest concentrations detected adjacent to the extraction wells on Vanowen Street.
- TCE was detected in 53 of the samples, 35 of which exceeded the MCL. The detected concentrations ranged from 0.29 µg/L (monitoring well C-1-CW05) to 240 µg/L (monitoring wells 3872L and B-1-CW13). Concentrations exceeding the MCL extended over much of the BOU with the highest concentrations detected downgradient of former Building 85 and extending to Magnolia Boulevard. Concentrations in the B HSU ranged from <0.29 µg/L to 32 µg/L (monitoring well 3862E). Concentrations exceeding the MCL were not as widely distributed as in the shallower HSUs, with the highest concentrations detected south of the BOU. Additionally, elevated concentrations were detected in the southern portion of the former Plant B-6 area and continuing southeast beneath former Building 85 and extending to Vanowen Street.
- 1,2,3-TCP was detected in 31 of the samples, 30 of which exceeded the DWNL (0.005 µg/L). Concentrations in the WT HSUs ranged from <0.0025 µg/L to 87 µg/L (monitoring well A-1-CW08). Concentrations exceeding the DWNL extended over much of the BOU with the highest concentrations detected down gradient of the former Plant B-6 area, north of former Building 85, and along Vanowen Street. Concentrations in the B HSU ranged from <0.0025 µg/L to 0.29 µg/L (monitoring well 3852H). Concentrations exceeding the DWNL were not as widely distributed as in the WT HSUs, with the highest concentrations detected near Burbank Boulevard.
- 1,4-Dioxane was detected in 11 of the samples, 11 of which exceeded the DWNL (1.0 µg/L). Concentrations in the WT HSUs ranged from <0.28 µg/L to 3.7 µg/L (monitoring well A-1-CW09). Concentrations exceeding the DWNL are spare, but spread out through the BOU specifically at former Plants A-1-S, B-1, and C-1 as well as downgradient of Former Building 371. Concentrations in the B HSU ranged from <0.28 µg/L to 2.3 µg/L (monitoring well A-1-CW05). Similar to the WT HSUs, concentrations exceeding the DWNL extended

around the former Plant B-6 and A-1 areas of the BOU, with the highest concentrations detected at the former Plant A-1-S.

- Total chromium was detected in 65 of the samples, 2 of which exceeded the MCL (50 µg/L). Concentrations in the WT HSUs ranged from 1.05 J (A-1-CW03R) to 82.9 µg/L (monitoring well C-1-CW07). One sample from the eastern portion of the BOU near the former Weber Aircraft facility and one sample near former Plant C-1 had concentrations detected exceeding the MCL. Concentrations in the B HSU ranged from 0.600 µg/L (monitoring well C-1-CW02 to 7.85 µg/L (3872S). No concentrations were detected that exceeded the MCL.
- Hexavalent Chromium was detected in 58 samples, 5 of which exceeded the MCL (10 µg/L). Concentrations in the WT HSUs range from 0.010 µg/L µg/L (monitoring well A-1-CW03R) to 20 µg/L (monitoring well B-1-CW17). Four of the 5 samples that exceeded the MCL are located in the central to southern portions of former Plant B-1. The other sample that exceeded the MCL is located immediately outside of the northeastern boundary of the BOU. Concentrations in the B HSU ranged from 0.021 µg/L (monitoring well 3850R) to 7.9 µg/L (monitoring well 3872S). No concentrations were detected above the MCL.

8.4 STATISTICAL TREND ANALYSES

Statistical trend analyses were conducted using chemical data from the 65 monitoring wells sampled during the second quarter 2017 BOU groundwater monitoring event. The analysis was performed for the six primary chemicals of concern: PCE, TCE, 1,2,3-TCP, 1,4-dioxane, total chromium, and hexavalent chromium. Therefore, a total of 390 trends were tested. The MAROS, developed by the Air Force Center for Environmental Excellence (Air Force Center for Environmental Excellence, 2006), was used for the analyses. The MAROS is a statistical database application developed to assist with groundwater quality data trend analysis and long-term monitoring optimization at contaminated groundwater sites. BOU data from first quarter 1996 to second quarter 2017 were analyzed.

Statistical analysis indicated that for various reasons (insufficient data, no statistical trend, or no detections), a significant trend could not be determined for 43% of the datasets that were tested, particularly for 1,2,3-TCP, 1,4-dioxane, total chromium, and hexavalent chromium. Statistical analysis also indicated that 29% of the datasets had decreasing or probably decreasing concentration trends, 17% were stable, and 11% had increasing concentration trends. The trend analysis showed that those trends that were significant were generally small. Over half of the decreasing concentrations trends were for TCE and PCE concentrations, scattered throughout the BOU; about half of the stable trends were for total chromium and hexavalent chromium concentrations; and 1,2,3-TCP and 1,4-dioxane concentrations upgradient of the BOU extraction wells in the former Plant B-6 area are generally increasing. With the exception of the increasing 1,2,3-TCP trend in

monitoring wells 3852M and 3872L, all monitoring wells with increasing trends for one or more of the compounds of concern are upgradient of the BOU extraction wells or within the area captured by the extraction wells. The magnitude of the changes in concentration of 1,2,3-TCP in monitoring wells 3852M and 3872L are small (0.016 µg/L/yr and 0.006 µg/L/yr, respectively).

8.5 CAPTURE ZONE EVALUATION

Several lines of evidence were examined to evaluate the extent of capture resulting from the BOU extraction system and assess the effectiveness of the system in hydraulically containing the various chemical of concern plumes within the BOU. The lines of evidence included the following:

- The operational data from the extraction system indicated that groundwater is being extracted and that VOC mass is still being removed from the aquifer.
- Vertical hydraulic gradients indicated that pumping from the WT HSUs is inducing or increasing upward vertical gradients between the B HSU and the WT HSUs.
- The WT-HSU potentiometric map developed from the groundwater level measurements supports that the BOU extraction wells capture groundwater across most of the BOU north of Vanowen Street and south of the extraction wells toward Chandler Boulevard and Wyoming and West Allan Avenue.
- The TIN for the WT HSUs were developed from the same data as the potentiometric maps. The TIN supports that capture from the BOU extraction wells extends south to approximately West Allan and Wyoming Avenue in the central-western portion of the BOU and Chandler Boulevard in the eastern portion of the BOU.
- The trend analysis for the eight downgradient performance monitoring wells yielded the following results: insufficient data (none), decreasing (16 results), increasing (2 results), no trend (14 results), probably decreasing (3 results), probably increasing (none), stable (8 results), and ND (5 results). The two increasing trends (1,2,3-TCP in monitoring wells 3852M and 3872L) had a limited data set (at least five analyses from each well from 2007 to 2017) and the magnitude of the change was small.

The lines of evidence suggest that the BOU extraction system exerts hydraulic control on the plumes originating from the BOU and it extends to near West Allan and Wyoming Avenue in the central-western portion of the BOU and Chandler Boulevard in the eastern portion of the BOU, and the extraction system inhibits the migration of site-related chemicals of concern.

8.6 BURBANK OPERABLE UNIT EXTRACTION SYSTEM PERFORMANCE

Based on the data from the BOU monthly operation reports for the current reporting period (May 2016 through April 2017), an estimated 3,129,230,274 gallons of groundwater was extracted (average extraction rate of 5,937 gallons per minute) and approximately 3,697 pounds of volatile organic compounds (VOCs) were treated by the Burbank Operable Unit (BOU) treatment system. Per the 1997 Explanation of Significant Difference (USEPA, 1997), the USEPA contends that:

> The City of Burbank can substantially accept and has committed to accept, an average of 9,000 gpm from the interim remedy facilities.
>
> Due to elimination of reinjection from the project, the Burbank OU groundwater extraction rate will not be a continuous 9,000 gpm. The instantaneous extraction rate will fluctuate with the City of Burbank's water demand. In recognition of the likelihood that it will not be possible to extract groundwater at a rate of 9,000 gpm, twenty-four hours a day, three hundred and sixty-five days a year, EPA is specifying that the new extraction rate will be achieved as an average rate, not an instantaneous rate.
>
> EPA has also decided to suspend the 9,000 gpm extraction rate requirement during times when nitrate levels in the extracted groundwater exceed 50 mg/L as nitrate.

Multiple lines of evidence suggest that at current extraction rates the BOU extraction system exerts hydraulic control in the WT HSUs that extends to near to near West Allan and Wyoming Avenue in the central-western portion of the BOU and Chandler Boulevard in the eastern portion of the BOU, and inhibits the migration of site-related chemicals of concern. The upward hydraulic gradient (potentially pulling contaminant mass from the B HSU to the WT HSUs) exhibited in much of the southern portion of the BOU inhibits the migration of site-related chemicals of concern, where present, in the deeper HSU.

The *Revised Operational Sampling Plan* (Tetra Tech, 2017b) states the following:

> The Record of Decision for the Burbank Operable Unit was signed in June 1989. An Explanation of Significant Difference was signed in November 1990 and a second Explanation of Significant Difference was signed in February 1997. The selected remedy

addressed the volatile organic compound- contaminated groundwater plume in the Burbank area. As described in the Record of Decision and Explanations of Significant Differences, the interim remedial action selected for the Burbank Operable Unit was designed to achieve two objectives:

1. To partially control the movement and spread of groundwater contaminants in the Burbank Operable Unit area, while contributing to aquifer restoration

2. To address the public health threat posed by contamination of the City of Burbank's public water supply wells by providing residents in the area with a water supply that meets State and Federal drinking water standards.

Based on the data and the analyses presented in this report, Tetra Tech concludes that the first objective of the remedial action is being met. While the BOU extraction system produces groundwater that is treated and deliver for consumption, water quality data from the treatment plant was not presented or reviewed as part of this report and therefore the second objective cannot be discussed as part of this report.

8.7 RECOMMENDATIONS

The following recommendations are proposed for the BOU groundwater monitoring program:

- Implement the repairs identified during the monitoring well inspections.
- Continue performing the monitoring well inspections annually.
- Install and sample the replacement monitoring well for 3860H (as described in the *Work Plan – Well Installation and Replacement* (Tetra Tech, 2016d).
- Evaluate a replacement monitoring well for A-1-CW07.
- Reduce the transducer recording frequency. Currently, transducers record data in 15-minute increments. Recommend changing the frequency to record data every 6 hours.
- Remove transducer from B-6-CW17 and evaluate placement nearby well.

Lockheed Martin Corporation
Burbank Operable Unit, Burbank, California

Well ID	Street Address	Property Description	Property Owner	Wells With Transducer	Wells With Nitrogen Well Packers	Dedicated Pump Type	Dedicated High-Volume Pump Model	Dedicated Low-Flow Pump Model	Depth of Low-Flow Pump Intake *(feet bgs)*	Total Depth *(feet bgs)*	Screen Interval *(feet bgs)*	Well Repairs to Date	Notes	Proposed Maintenance
3870E	Irving Dr. at Kaeler St									520	475 - 515		No pump	
3871G						•	1/2 HP / 230 V			140	95 - 135	2005: Pump serviced - November 22, 2005		
3871H				•				BESST P200	220	246	200 - 241	2017: Installed low-flow pump; replaced well gasket; replaced interior well tag; replaced bolts (penta-bolts).		
3871J								BESST P200	278.5	289	274 - 284	2017: Installed low-flow pump; replaced well gasket; replaced interior well tag; replaced bolts (penta-bolts).		
3872K								BESST P200	174.5	125	70 - 120	2017: Installed low-flow pump; replaced well gasket; replaced interior well tag; replaced bolts (penta-bolts).		
3872L						•	1/2 HP / 230 V			195	160 - 190			
3872M								BESST P200	296	309	274 - 304	2017: Installed low-flow pump; replaced well gasket; replaced interior well tag; replaced bolts (penta-bolts).		
3872N								BESST P200	133.5	149	124 - 144	2017: Installed low-flow pump; replaced well gasket; replaced interior well tag; replaced bolts (penta-bolts).		
3872P							1/2 HP / 230 V			254	229 - 249			
3872Q								BESST P200	127.5	138	93 - 133	2016: Ant colony cleared 2017: Installed low-flow pump; replaced well gasket; replaced interior well tag; replaced bolts (penta-bolts).		
3872R							1/2 HP / 230 V			228	193 - 223	2017: Surveyed		
3872S								BESST P200	284.5	300	275 - 295	2017: Installed low-flow pump; replaced well gasket; replaced interior well tag; replaced bolts (penta-bolts).		
3880	Amherst Drive south of N 3rd Street	Sidewalk		•				BESST P200	164.5	175	120 - 170	2014: Well developed on 3/27/14 2017: Installed low-flow pump; replaced well gasket; replaced interior well tag; replaced bolts (penta-bolts).		
4948	Along San Fernando Road	Railroad right-of-way	SCRRA / Metrolink					QED	291.5	302	247 - 297	2012-2013: Pump removed 2016: low-flow pump installed 2017: replaced well gasket; replaced interior well tag; replaced bolts.	Located in railroad ROW	
4949C	Along San Fernando Road	Railroad right-of-way	SCRRA / Metrolink					BESST P200	266.5	277	222 - 272	2017: Installed low-flow pump; replaced well gasket; replaced interior well tag; replaced bolts (penta-bolts).	Located in railroad ROW. Pump not functioning (2016)	
A-1-CW01						•	1.0 HP / 230V			570	560 - 570			
A-1-CW02	Located in VSP airport parking lot	Private Parking Lot						BESST P200	354.5	362	350 - 360	2017: Installed low-flow pump; replaced well gasket; replaced interior well tag; replaced bolts (penta-bolts).	Notify property owner/tenant prior to arrival	
A-1-CW03	Located in VSP airport parking lot	Private Parking Lot				•	1/2 HP / 230 V			200	175 - 195		Generally dry	
A-1-CW03R	Located in VSP airport parking lot							BESST P200	264.5	285	245 - 285	2017: Installed low-flow pump; replaced well gasket; replaced interior well tag; replaced bolts (penta-bolts).	Notify property owner/tenant prior to arrival	
A-1-CW04		Private Parking Lot	LA Graphic Company	•				BESST P200	232.4	245	200 - 240	2017: Installed low-flow pump; replaced well gasket; replaced interior well tag; replaced bolts (penta-bolts).	Provide 2-day notice (prefers email contact) to property owner/tenant prior to arrival	
A-1-CW05	2220 N. Hollywood Way, Burbank, CA	Airport Budget Car Rental Parking Lot	Budget Car Rental Company	•				BESST P200	365.5	381	336 - 376	2017: Installed low-flow pump; replaced well gasket; replaced interior well tag; replaced bolts (penta-bolts).		
A-1-CW06						•	1/2 HP / 115 V			557	522 - 552			
A-1-CW07	Located in Yahoo parking lot	Yahoo Parking Lot	Yahoo							229	174 - 224	2014 Well developed and pump removed April 2014 2016: well redeveloped 2017: Well dry; replaced well box; replaced interior well tag. Used magnet to clear metal debris in well.	Unable to get to water table because of debris/obstruction. Well has likely collapsed.	2017: Recommend abandonment and replacement of well.
A-1-CW08	Bob Hope Airport	Airport Parking Lot C	City of Burbank					BESST P200	229.5	240	175 - 235	2017: Installed low-flow pump; replaced well gasket; replaced interior well tag; replaced bolts (penta-bolts).	Provide 2-day notice to property owner/tenant prior to arrival.	
A-1-CW09								BESST P200	221.5	232	187 - 227	2017: Installed low-flow pump; replaced well gasket; replaced interior well tag; replaced bolts (penta-bolts).		2017: Apron surrounding well monument may need to be repaired. Low priority, complete in near future.
B-1-CW11				•				BESST P200	322	335	300 - 330	2017: Installed low-flow pump; replaced well gasket; replaced interior well tag; replaced bolts (penta-bolts).		
B-1-CW12				•				BESST P200	164.5	175	120 - 170	2017: Installed low-flow pump; replaced well gasket; replaced interior well tag; replaced bolts (penta-bolts).		
B-1-CW13	Located in Kid's Castle parking lot	Kid's Castle Parking Lot	Kid's Castle	•				•	205.5	215	150 - 210	2014: Well developed April 2014; pump removed April 2014; low-flow pump installed 2016; Replaced well gasket; replaced interior well tag; replaced bolts.		
B-1-CW16	Located in Disney Parking lot	Disney Parking Lot	The Walt Disney Co.			•	1/2 HP / 230 V			195	140 - 190	2005: Pump serviced - November 29, 2005	Pump is potentially bad	
B-1-CW17	Located in Costco parking lot	Costco Parking Lot	Costco	•				BESST P200	157.3	170	125 - 165	2017: Installed low-flow pump; replaced interior well tag; replaced bolts (penta-bolts).	Traffic control required	2017: Requires larger gasket replacement due to size of manhole cover. Replace with new gasket before April 2018 monitoring event.
B-1-CW20		Dirt Lot		•				BESST P200	294.5	310	285 - 305	2017: Installed low-flow pump; replaced interior well tag; replaced bolts (penta-bolts).		2017: Requires larger gasket replacement due to size of manhole cover. Replace with new gasket before April 2018 monitoring event.

Table 2
Second Quarter 2017 Groundwater Well Maintenance Table

2017 BOU Annual Groundwater Monitoring Report
Lockheed Martin Corporation
Burbank Operable Unit, Burbank, California

Well ID	Street Address	Property Description	Property Owner	Wells With Transducer	Wells With Nitrogen Well Packers	Dedicated Pump Type	Dedicated High-Volume Pump Model	Dedicated Low-Flow Pump Model	Depth of Low-Flow Pump Intake *(feet bgs)*	Total Depth *(feet bgs)*	Screen Interval *(feet bgs)*	Well Repairs to Date	Notes	Proposed Maintenance
B-1-CW25	Within the line of production wells on Vanowen Street	Street	City of Burbank	•				BESST P200	184.5	195	150 - 190	2017: Installed low-flow pump; placed well gasket; placed interior well tag.		2017: Replace lid. Current lid does not have holes to bolt lid onto the monument. Replace lid and add gasket before April 2018 monitoring event
B-1-CW27	Within the line of production wells on Vanowen Street	Street	City of Burbank					BESST P200	323.5	339	314 - 334	2017: Installed low-flow pump; replaced well gasket; replaced interior well tag; replaced bolts (penta-bolts).		
B-1-CW28	Located in Kid's Castle parking lot	Kid's Castle Parking Lot	Kid's Castle					BESST P200	335.5	351	326 - 346	2017: Installed low-flow pump; replaced well gasket; replaced interior well tag; replaced bolts (penta-bolts).		
B-1-CW29	100 ft NW of NW corner of building (City size well lid)	Hometown Buffet Parking Lot						BESST P200	165.5	176	131 - 171	2017: Replaced interior well tag. Pump not placed because well is dry.	City size well lid, 100 ft NW of Hometown Buffet; traffic control required	2017: Requires larger gasket replacement due to size of manhole cover. Replace with new gasket before April 2018 monitoring event.
B-1-CW30								QED	183	196	156 - 196		2016: well installed.	
B-1-CW31								QED	188.5	205	165 - 206		2016: well installed.	
B-1-CW32								QED	163.6	180	140 - 180		2016: well installed.	
B-1-CW33								QED	204	218	179 - 219		2016: well installed.	
B-1-CW34								QED	169	185	145 - 185		2016: well installed.	
B-5-CW01	4400 block of Empire Avenue	Southwest Parking Lot	Union Pacific			•	1 1/2 HP / 230 V			552	542 - 552			
B-5-CW02	4400 block of Empire Avenue	Southwest Parking Lot	Union Pacific	•				BESST P200	344.5	350	340 - 350	2017: Installed low-flow pump; replaced well gasket; replaced interior well tag; replaced bolts (penta-bolts).	10/13/12- AEC installed combo lock: 1717 to access with big trailer.	
B-5-CW03	4400 block of Empire Avenue	Southwest Parking Lot	Union Pacific	•				BESST P200	225.5	231	211 - 231	2012: Drop pipe repaired 2017: eplaced well gasket; replaced interior well tag; replaced bolts.Pump not placed because well was dry.		
B-6-CW01						•	1 1/2 HP / 230 V			590	580 - 590			
B-6-CW02				•				BESST P200	334.5	340	330 - 340	2017: Installed low-flow pump; replaced well gasket; replaced interior well tag; replaced bolts (penta-bolts).		
B-6-CW03						•	1/2 HP / 230 V			215	185 - 215		Generally dry	
B-6-CW03R	Located in a trucking/movie parking lot (Spots 187 and 241)	Trucking/Movie Parking Lot				•	1/2 HP / 230 V			265	240 - 260	2005: Pump serviced - November 23, 2005	Pump requires 230V extension cord for sampling. No starter box required	
B-6-CW04						•	2 HP / 230 V			520	510 - 520		Notify property owner/tenant 24 hours prior to access	
B-6-CW05		Commercial - Ford Property	Ford					•	349.5	355	345 - 355	2016: Low-flow pump installed 2017: Replaced well gasket; replaced interior well tag; replaced bolts.	Notify property owner/tenant 24 hours prior to access	
B-6-CW06		Commercial - Ford Property	Ford			•	1/2 HP / 230 V			235	215 - 235		Notify property owner/tenant 24 hours prior to access	
B-6-CW07						•	1 1/2 HP / 230V			502	492 - 502			
B-6-CW08	Bob Hope Airport	Private Parking Lot						•	366	371	361 - 371	2016: Pump removed and low-flow pump installed 2017: replaced well gasket; replaced interior well tag; replaced bolts.		
B-6-CW09	Bob Hope Airport	Private Parking Lot				•	1/2 HP / 230 V			262	242 - 262			2017: Apron surrounding well monument may need to be repaired. Low priority, complete in near future.
B-6-CW10	Bob Hope Airport	Airport Parking Lot A						•	249	258	203 - 253	2014: Obstruction removed April 2014 2016: low-flow pump installed 2017: replaced well gasket; replaced interior well tag; replaced bolts.	Notify property owner/tenant 24 hours prior to access	
B-6-CW14	Bob Hope Airport	Airport Parking Lot A						BESST P200	354.5	370	325 - 365	2017: Installed low-flow pump; replaced well gasket; replaced interior well tag; replaced bolts (penta-bolts).	Notify property owner/tenant 24 hours prior to access.	
B-6-CW15						•	3/4 HP / 230 V			615	560 - 610			
B-6-CW16										265	210 - 260		No pump

NOTES:
Historical information included in this matrix is a collaboration of information provided by Lockheed Martin, dated 9/14/11 and information obtained from the United States Environmental Protection Agency San Fernando Valley database.
bgs = below ground surface
btoc = below top of casing
EPA = ENVIRONMENTAL PROTECTION AGENCY
HP = horsepower
NA = NOT APPLICABLE
NR = NON-ROUTINE
O = OPERATIONAL MONITORING WELL
HSU = ydrostratigraphic unit
OSP = Operational Sampling Plan
PAC = Pacific Airmotive Corporation
WELL
R = ROUTINE MONITORING WELL
SVOC = SEMI-VOLATILE ORGANIC COMPOUND
TCP = TRICHLOROPROPANE
TDS = TOTAL DISSOLVED SOLIDS
SCRRA = Southern CaliforniaRegional Rail Authority
V = volt
VOC = VOLATILE ORGANIC COMPOUND
WB =CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD REQUIRED WELL
WT = water table
X = OPERATIONAL SAMPLING PLAN

MCL/DWNL (µg/L)			50	10	--	80	13	0.5	80	1000 (1)	5	0.5	6	6	5	17 (1)	5	150	1,200	200	5	5	150	0.005 (1)	1 (1)

Notes:

Only analytes positively detected are presented in this table. For a complete list, refer to the laboratory data package.

µg/L - micrograms per liter

<# - Analyte not detected; method detection limit concentration is shown.

A = A hydrostratigraphic unit

A' = A' hydrostratigraphic unit

B = B hydrostratigraphic unit

OA = older alluvium

X = X hydrostratigraphic unit

Y = Y hydrostratigraphic unit

HSU = hydrostratigraphic unit

WT = water table

DWNL - California Department of Public Health drinking water notification level

MCL - California Department of Public Health maximum contaminant level

MDL - Method detection limit

Bold - MCL or DWNL exceeded

(1) - DWNL

"--" - MCL or DWNL not available.

J, J-, J+: - The analyte was positively identified, but the analyte concentration is an estimated value. The "J" qualifier may also be accompanied by a "+" sign or a "-"sign which indicates a positive or negative bias of the qualified result

U - The analyte was found in a field blank; the detection in the field sample is suspected as coming from cross contamination not native to the sample, and the detection level was raised and the data was qualified as not detected

UJ - Analyses were performed for the compound or analyte, but it was not detected and the sample quantitation or detection limit is an estimated quantity due to poor accuracy or precision.

c - The Matrix Spike (MS) and/or Matrix Spike Duplicate (MSD) recoveries were outside control limits

f - The duplicate samples Relative Percent Difference (RPD) was outside the control limit

p - The result was qualified based on professional judgment

q - The analyte detection was below the Practical Quantitation Limit (PQL)

k - The analyte was found in a field blank

Table 6
Second Quarter 2016 Summary of Chemicals Detected

2016 Annual Groundwater Monitoring Report
Lockheed Martin Corporation
Burbank Operable Unit, Burbank, CA

Organic Analytes Detected	Total Number of Samples Analyzed [1]	Total Number of Detections [1]	Number of Detections Exceeding MCL or DWNL [1]	MCL / DWNL (µg/L)	Minimum Concentration Detected (µg/L)	Maximum Concentration Detected (µg/L)
1,4-Dioxane	65	11	11	1 [2]	1.0	3.7
Acetone	65	13	0	--	4.0	11
Bromodichloromethane	65	3	0	80 [3]	0.20	0.80
Methyl tert-Butyl Ether	65	5	0	13	0.230	1.6
Carbon Tetrachloride	65	25	15	0.5	0.280	3.1

Notes:

Shading identifies increasing and probably increasing trends

Highlighting indicates locations where the magnitude of the increasing or probably increasing trend represents greater than a 20% change per year

µg/L/yr - microgram per liter per year

%/yr - percent change per year

A - A hydrostratigraphic unit

A' - A' hydrostratigraphic unit

B - B hydrostratigraphic unit

X - X hydrostratigraphic unit

HSU - hydrostratigraphic unit

WT - water table

Table 9
Noted Changes In Concentrations in Second Quarter 2017

2017 Annual Groundwater Monitoring Report
Lockheed Martin Corporation
Burbank Operable Unit, Burbank, CA

Sampling Location	Screened HSU	Sample Date	Compound	Q2 2017 Concentration (µg/L)	New Maximum Concentration (Y/N)	Exceeds MCL/DWNL First Time in Two Years (Y/N)	>1.5X Increase Since Most Recently Reported Concentration and Exceeds MCL/DWNL	Comments
3851M	X/A (WT)	4/3/2017	1,2,3-TCP	**0.057**	**N**	N	**Y**	Concentration was similar in 2015 (0.053 µg/L) and the concentration in 2016 was (0.034 µg/L); trend analysis indicates the concentration are stable
3872L	A (WT)	4/3/2017	1,2,3-TCP	**0.095**	**Y**	N	**Y**	Trend analysis identified an increasing trend with a magnitude of
A-1-CW04	A (WT)	4/10/2017	1,2,3-TCP	**25**	**Y**	N	**Y**	Trend analysis identified an increasing trend with a magnitude of
A-1-CW09	X (WT)	4/11/2017	1,2,3-TCP	**15.0**	**Y**	N	N	Trend analysis identified an increasing trend with a magnitude of
B-1-CW32	A' (WT)	4/5/2017	1,2,3-TCP	**0.011**	**Y**	N	N	New well installed in late 2016, this is the second time it has been sampled; first result was 0.0086 µg/L
B-6-CW10	X (WT)	4/24/2017	1,2,3-TCP	**1.50**	**Y**	N	**Y**	Concentration in 2014 (0.981 µg/L) and the concentration was 0.485 µg/L in 2016; trend analysis indicates there is no trend
MW-08	X/A (WT)	4/7/2017	1,2,3-TCP	**0.93**	N	N	**Y**	Trend analysis identified an increasing trend with a magnitude of
3852F	X (WT)	4/12/2017	1,4-Dioxane	**1.50**	**Y**	**Y**	**Y**	This well has been tested for this compound seven times and it has been detected near the detection limits twice (0.75 µg/L in 2016 and 1.5 µg/L in 2017); trend analysis identified a probably increasing trend with a magnitude of (0.06 µg/L/yr)
A-1-CW04	A (WT)	4/10/2017	1,4-Dioxane	**2.00**	N	N	**Y**	Concentrations detected in 2014 and 2015 were very similar; trend analysis indicates the concentration are stable
A-1-CW09	X (WT)	4/11/2017	1,4-Dioxane	**3.70**	**Y**	N	**Y**	Trend analysis identified an increasing trend with a magnitude of
B-1-CW13	X (WT)	4/12/2017	1,4-Dioxane	**2.00**	**Y**	N	**Y**	Trend analysis identified an increasing trend with a magnitude of
B-1-CW17	A'/X (WT)	4/4/2017	1,4-Dioxane	**2.90**	**Y**	N	N	Trend analysis identified an increasing trend with a magnitude of
B-6-CW14	B	4/6/2017	1,4-Dioxane	**1.80**	**Y**	N	N	Trend analysis identified an increasing trend with a magnitude of
3851N	B	4/4/2017	Hex Chrome	1.20	**Y**	N	N	Trend analysis identified a probably increasing trend with a magnitude of (0.01 µg/L/yr)

Noted Changes In Concentrations in Second Quarter 2017

2017 Annual Groundwater Monitoring Report
Lockheed Martin Corporation
Burbank Operable Unit, Burbank, CA

Sampling Location	Screened HSU	Sample Date	Compound	Q2 2017 Concentration (µg/L)	New Maximum Concentration (Y/N)	Exceeds MCL/DWNL First Time in Two Years (Y/N)	>1.5X Increase Since Most Recently Reported Concentration and Exceeds MCL/DWNL	Comments
3852F	X (WT)	4/12/2017	Hex Chrome	2.70	**Y**	N	N	Concentration was similar in 2013 (2.5 µg/L) and the concentration in 2016 was (1.57 µg/L); trend analysis indicates no trend
3852N	B	4/3/2017	Hex Chrome	2.50	**Y**	N	N	Concentration in 2015 was (2.1 µg/L) and the concentration in 2016 was (1.5 µg/L); trend analysis indicates no trend
3861D	X (WT)	4/7/2017	Hex Chrome	6.80	**Y**	N	N	Concentration in 2004 was (5.8 µg/L), in 2014 the concentration was (4.3 µg/L) and the concentration in 2016 was (3.03 µg/L); trend analysis indicates the concentrations are stable
3861F	B	4/7/2017	Hex Chrome	4.90	**Y**	N	N	The concentration in 2016 was (3.89 µg/L); trend analysis identified an probably increasing trend with a magnitude of (0.04 µg/L/yr)
3870D	K (WT)	4/5/2017	Hex Chrome	17.00	**Y**	N	N	The concentration in 2015 was (16.3 µg/L); trend analysis identified an increasing trend with a magnitude of (8.76 µg/L/yr)
3871H	A (WT)	4/7/2017	Hex Chrome	9.60	**Y**	N	N	Concentration in 2004 was (7.8 µg/L), in 2015 the concentration was (6.21 µg/L) and the concentration in 2016 was (2.81 µg/L); trend analysis indicates no trend
3872L	A (WT)	4/3/2017	Hex Chrome	4.40	**Y**	N	N	Concentration in 2015 the concentration was (3.78 µg/L) and the concentration in 2016 was (2.93 µg/L); trend analysis indicates no trend
3872M	B/OA	4/3/2017	Hex Chrome	4.40	**Y**	N	N	Concentration in 2015 the concentration was (3.97 µg/L) and the concentration in 2016 was (3.13 µg/L); trend analysis indicates no trend
3872N	X (WT)	4/3/2017	Hex Chrome	6.70	**Y**	N	N	Concentration in 2015 the concentration was (5.51 µg/L) and the concentration in 2016 was (2.84 µg/L); trend analysis identified an increasing trend with a magnitude of (2.49 µg/L/yr)
3872S	B	4/5/2017	Hex Chrome	7.90	**Y**	N	N	Concentration in 2007 was (7.4 µg/L), in 2015 the concentration was (6.38 µg/L) and the concentration in 2016 was (4.47 µg/L); trend analysis indicates the concentrations are stable
B-1-CW27	B	4/10/2017	Hex Chrome	5.20	**Y**	N	N	Concentration in 2006 was (4.5 µg/L) and the concentration in 2016 was (3.89 µg/L); trend analysis indicates no trend
B-1-CW31	A' (WT)	4/6/2017	Hex Chrome	**16.0**	**Y**	**Y**	**Y**	New well installed in late 2016, this is the second time it has been sampled; first result was (6.0 µg/L)

Table 9
Noted Changes In Concentrations in Second Quarter 2017

2017 Annual Groundwater Monitoring Report
Lockheed Martin Corporation
Burbank Operable Unit, Burbank, CA

Sampling Location	Screened HSU	Sample Date	Compound	Q2 2017 Concentration (µg/L)	New Maximum Concentration (Y/N)	Exceeds MCL/DWNL First Time in Two Years (Y/N)	>1.5X Increase Since Most Recently Reported Concentration and Exceeds MCL/DWNL	Comments
B-6-CW02	B	4/6/2017	Hex Chrome	2.50	**Y**	N	N	Trend analysis identified an probably increasing trend with a magnitude of (0.03 µg/L/yr)
C-1-CW08	A (WT)	4/12/2017	Hex Chrome	1.10	**Y**	N	N	Concentrations have been similar in the past; trend analysis identified a probably decreasing trend with a magnitude of (-0.01 µg/L/yr); trend is likely a result of past elevataed detection
3872L	A (WT)	4/3/2017	PCE	**300**	N	N	**Y**	Concentration has been an order of magnitude higher in the past; trend analysis identified no trend
B-1-CW30	A' (WT)	4/6/2017	PCE	**110**	**Y**	N	**Y**	New well installed in late 2016, this is the second time it has been sampled; first result was (54.0 µg/L)
B-1-CW31	A' (WT)	4/6/2017	PCE	**55**	**Y**	N	**Y**	New well installed in late 2016, this is the second time it has been sampled; first result was (15.0 µg/L)
B-1-CW32	A' (WT)	4/5/2017	PCE	**14.0**	**Y**	N	**Y**	New well installed in late 2016, this is the second time it has been sampled; first result was (8.5 µg/L)
B-1-CW33	A' (WT)	4/6/2017	PCE	**630**	**Y**	N	**Y**	New well installed in late 2016, this is the second time it has been sampled; first result was (390.0 µg/L)
B-1-CW34	A' (WT)	4/5/2017	PCE	**13.0**	**Y**	N	N	New well installed in late 2016, this is the second time it has been sampled; first result was (8.7 µg/L)
MW-08	X/A (WT)	4/7/2017	PCE	**71**	N	N	**Y**	Concentrations were two orders of magnitude higher in the past; concentration in 2015 was (150 µg/L); trend analysis identified a decreasing trend with a magnitude of (-3.47 µg/L/yr)
SW-5	X/A/Y (WT)	4/10/2017	PCE	**51**	N	N	**Y**	Concentrations were two orders of magnitude higher in the past; this is the third time it has been sampled in the recent past; trend analysis identified a decreasing trend with a magnitude of (-12.3 µg/L/yr)
3851M	X/A (WT)	4/3/2017	TCE	**12.0**	N	N	**Y**	Concentrations were three orders of magnitude higher in the past; concentration in 2016 was (8 ug/L); trend analysis identified a decreasing trend with a magnitude of (-2.11 µg/L/yr)
3861D	X (WT)	4/7/2017	TCE	**160**	N	N	**Y**	Concentrations were an order of magnitude higher in the past; concentration in 2014 was (604 ug/L); trend analysis identified a decreasing trend with a magnitude of (-48 µg/L/yr)

Table 9
Noted Changes In Concentrations in Second Quarter 2017

2017 Annual Groundwater Monitoring Report
Lockheed Martin Corporation
Burbank Operable Unit, Burbank, CA

Sampling Location	Screened HSU	Sample Date	Compound	Q2 2017 Concentration (µg/L)	New Maximum Concentration (Y/N)	Exceeds MCL/DWNL First Time in Two Years (Y/N)	>1.5X Increase Since Most Recently Reported Concentration and Exceeds MCL/DWNL	Comments
3872L	A (WT)	4/3/2017	TCE	**240**	N	N	**Y**	Concentrations in the past were three times higher but in the recent past they have been at least three times less; trend analysis identified no trend
B-1-CW25	A' (WT)	4/24/2017	TCE	**19.0**	N	N	**Y**	Concentrations were three orders of magnitude higher in the past; concentration in 2015 was (22.6 ug/L); trend analysis identified a decreasing trend with a magnitude of (-31 µg/L/yr)
B-1-CW30	A' (WT)	4/6/2017	TCE	**200**	**Y**	N	**Y**	New well installed in late 2016, this is the second time it has been sampled; first result was (110 µg/L)
B-1-CW31	A' (WT)	4/6/2017	TCE	**47**	**Y**	N	**Y**	New well installed in late 2016, this is the second time it has been sampled; first result was (4.5 µg/L)
B-1-CW32	A' (WT)	4/5/2017	TCE	**110**	**Y**	N	**Y**	New well installed in late 2016, this is the second time it has been sampled; first result was (64 µg/L)
B-1-CW34	A' (WT)	4/5/2017	TCE	**22**	**Y**	N	N	New well installed in late 2016, this is the second time it has been sampled; first result was (17 µg/L)
C-1-CW05	B	4/6/2017	TCE	0.29	**Y**	N	N	This is the first time the compound has been detected in this well; it appears to be the result of lower detection limits
MW-04	X/A (WT)	4/10/2017	TCE	**21**	N	N	**Y**	Concentrations were similar in 2015 (19.9 µg/L), trend analysis identified a decreasing trend with a magnitude of (-0.44 µg/L/yr)
MW-07	X/A (WT)	4/7/2017	TCE	**17.0**	N	N	**Y**	Concentration in 2015 was (5.35 µg/L) and the concentration in 2016 was (4.59 µg/L); trend analysis identified a decreasing trend with a magnitude of (-0.25 µg/L/yr)
MW-08	X/A (WT)	4/7/2017	TCE	**24**	N	N	**Y**	Concentrations were an order of magnitude higher in the past; concentration in 2015 was (87 ug/L); trend analysis identified a decreasing trend with a magnitude of (-1.69 µg/L/yr)
SW-5	X/A/Y (WT)	4/10/2017	TCE	**32**	N	N	**Y**	Concentrations were an order of magnitude higher in the past; this is the third time it has been sampled in the recent past; trend analysis identified a decreasing trend with a magnitude of (-4.85 µg/L/yr)
B-1-CW32	A' (WT)	4/5/2017	Total Chrome	47	**Y**	N	N	New well installed in late 2016, this is the second time it has been sampled; first result was (40.9 µg/L)
B-6-CW16	X/A (WT)	4/25/2017	Total Chrome	29	**Y**	N	N	Concentration in 2016 (23.7 µg/L), trend analysis identified an increasing trend with a magnitude of (0.42 µg/L/yr)

Table 9
Noted Changes In Concentrations in Second Quarter 2017

2017 Annual Groundwater Monitoring Report
Lockheed Martin Corporation
Burbank Operable Unit, Burbank, CA

Sampling Location	Screened HSU	Sample Date	Compound	Q2 2017 Concentration (µg/L)	New Maximum Concentration (Y/N)	Exceeds MCL/DWNL First Time in Two Years (Y/N)	>1.5X Increase Since Most Recently Reported Concentration and Exceeds MCL/DWNL	Comments
C-1-CW07	Y (WT)	4/12/2017	Total Chrome	**82.9**	N	**Y**	**Y**	Concentration in 2016 (11.7 µg/L), trend analysis identified no trend

Notes: DWNL - California Department of Public Health drinking water notification level
MCL - California Department of Public Health maximum contaminant level
µg/L - micrograms per liter
µg/L/yr - micrograms per liter per year
ND - non-detect
N - no concentration is not a new maximum or does not exceed criteria identified
A - A hydrostratigraphic unit
A' - A' hydrostratigraphic unit
B - B hydrostratigraphic unit
HSU - hydrostratigraphic unit
OA - older alluvium
WT -water table
X - X hydrostratigraphic unit
Y - Y hydrostratigraphic unit
Y - Concentration does exceed criteria identified

APPENDICES

Appendix A
Conceptual Site Model

Annual Groundwater Monitoring Report, Second Quarter 2017

Lockheed Martin Corporation

Burbank Operable Unit, Burbank, CA

APPENDIX A
SITE BACKGROUND AND CONCEPTUAL SITE MODEL

This appendix summarizes the site background and conceptual site model (CSM) for the Burbank Operable Unit (BOU) based on the current and previous investigations. The discussion is divided into five main subsections: site background, physical setting, geology, hydrogeology, and groundwater quality.

1.1 SITE BACKGROUND

1.1.1 Site History

From the 1920s to the early 1990s, Lockheed Martin and several aircraft manufacturing/maintenance facilities operated within and around the vicinity of the Burbank Airport (currently the Bob Hope Airport). Lockheed Martin owned and operated a total of nine facilities within the current BOU area. The primary operations at the facilities included the manufacturing and assembly of aircraft and associated components. Other operations performed at the plants included research and development activities, and production of aviation devices. Supporting activities included manufacturing, machining, and assembling of various parts; parts cleaning and painting; and tooling and welding. Primary and support activities required the use and storage of fuel oils, gasoline, paints, primers, and chemicals. Types of oils used included hydraulic, cutting, and lubricating oils. Types of chemicals used included solvents, acids, caustics, and descalers.

Operations at the various plants were discontinued in the early 1990s, and structures associated with the facilities have been demolished. Most of the facilities have been redeveloped into commercial property.

1.1.2 Regulatory Framework

In 1980, the California Department of Health (DOH, currently called the California Department of Health Services (DHS)) requested that all major water providers sample and analyze groundwater

for contamination. Based on analyses of groundwater samples collected within the southeastern portion of the San Fernando Valley(SFV), trichloroethylene (TCE) and tetrachloroethylene (PCE) were detected consistently in a large number of production wells within the North Hollywood and Burbank area at concentrations greater than the maximum contaminant level (MCL) for drinking water. As a result, the United States Environmental Protection Agency (EPA) provided federal funding for the Los Angeles Department of Water and Power to conduct a two-year study to define the extent of contamination. The results of the study, published in 1983, revealed widespread VOC-contaminated groundwater in the SFV.

In 1986, North Hollywood and Burbank were added to the National Priorities List and designated as the North Hollywood and Burbank Operable Units (NHOU and BOU) of Area 1 of the SFV Superfund Site. In October 1988, a Feasibility Study was completed within the BOU.

In June of 1989, a Record of Decision (ROD) for an interim groundwater remedy at the BOU was signed. In March 1992, EPA entered into a Consent Decree (CD) with Lockheed Martin, the City of Burbank, and Weber Aircraft, Inc. Two Explanation of Significant Differences (ESDs) were also signed and incorporated to the 1989 ROD between 1990 and 1997. The CD, ROD, and ESDs stipulated that Lockheed Martin was to design and construct a 9,000-gallon per minute (gpm) groundwater extraction and treatment system that must meet MCLs and SALs, with the exception of nitrate. Furthermore, Lockheed Martin would operate the system for 2 years.

In June 1998, a second Consent Decree was entered. This provided for continued operations and maintenance of the BOU treatment system by the City of Burbank at 9,000 gpm. Funding was to be provided by a trust fund established and funded by parties to the CD.

Since 1996, the BOU treatment system has been fully operational, with downtime attributed to unexpected maintenance/design issues, new chemicals of concern (primarily 1,2,3-trichloropropane (1,2,3-TCP)), and well pump and controls problems. The concentration of PCE and TCE in groundwater effluent from the treatment system has been less than MCLs. Treated groundwater from the blendpoint, which is served to consumers, has met all DHS contaminant goals set forth in the operating permit, as well as the drinking water MCL cleanup goals.

1.1.3 Groundwater Monitoring Program

The groundwater-monitoring program (GMP) for the BOU is conducted in accordance an Operational Sampling Plan (OSP), which describes the objectives, schedule, rationale, analytical methods, and procedures for sampling the groundwater monitoring-well network. The OSP has evolved since its inception in 1997 with the *Draft Phase 2 OSP (HIS Geotrans, 1997)* to incorporate additional requests by the EPA and the California Regional Water Quality Control Board, Los Angeles Region (LARWQCB).

In April 2012, Lockheed Martin submitted the Revised Phase 2 OSP to the EPA that proposed modifications to the BOU GMP (Strategic Engineering & Science, 2012). The 2012 Revised OSP included a groundwater monitoring optimization plan that presented the rationale for selection of COCs for the BOU GMP and elimination of other analytes (e.g., semivolatile organic compounds, pesticides, polychlorinated biphenyls, and radionuclides). During a meeting between Lockheed Martin and the EPA on August 22, 2012, EPA requested implementation of a comprehensive sampling event in order to refine the OSP. A Comprehensive Sampling Event Work Plan was subsequently prepared and submitted to the EPA on February 11, 2013. In April 2013, the EPA approved the revised OSP and Comprehensive Sampling Event Work Plan.

In 2014, Lockheed Martin submitted another Revised OSP (Arcadis, 2014) to the EPA that proposed modifications to optimize the long-term GMP and implement a monitoring schedule that coincides with the EPA's revised Basinwide Groundwater Monitoring Program schedule: every second and fourth quarter for groundwater level monitoring and every second quarter for groundwater sampling for chemical analyses.

In 2017, Lockheed Martin submitted a Revised OSP Addendum (Tetra Tech, 2017) that referenced changes to the groundwater monitoring well network, and included procedures for sampling BOU wells using a low-flow sampling protocol and modifications to the Quality Assurance Project Plan reflecting the current BOU groundwater monitoring project team and data validation procedures.

1.2 PHYSICAL SETTING

The BOU is located in the southeastern portion of the San Fernando Valley (SFV) in the City of Burbank, California. The SFV is a 260-square-mile physiographic basin located in the Transverse Ranges province in southern California. The SFV is bounded to the south by the Santa Monica Mountains, to the west by the Simi Hills, to the north by the Santa Susana and San Gabriel Mountains, and to the east-northeast by the Verdugo and San Gabriel Mountains.

1.3 GEOLOGY

Geologic units underlying the SFV generally consist of the following (from oldest to youngest):

- Mesozoic and older plutonic and metamorphic rocks (crystalline basement)
- Tertiary-age marine sandstone, mudstone, and shale (sedimentary bedrock)
- Unconsolidated Plio-Pleistocene marine and non-marine sediments
- Unconsolidated Quaternary alluvial deposits

The basement and bedrock units crop out in the surrounding hills and mountains that form the valley boundaries. The eastern margin of the valley is bounded by the plutonic and metamorphic rocks of the Verdugo Mountains. The northern margin of the valley is bounded by the sedimentary rocks of the Santa Susana Mountains and the plutonic and metamorphic rocks of the San Gabriel Mountains. The western edge of the valley is defined by the Simi Hills where sedimentary rock is exposed. The southern margin is defined by the Santa Monica Mountains where sedimentary and igneous rocks are exposed.

The Quaternary alluvium beneath the BOU consists of Holocene younger alluvium and Pleistocene older alluvium. The younger alluvium extends from the ground surface to a depth of up to 410 feet below ground surface (bgs). The older alluvium extends from the base of the younger alluvium to depths of up to 1,200 feet bgs or more. The contact between the younger and older alluvium has been reported to be marked by a distinct basal cobble layer (HSI Geotrans, 1997).

The younger alluvium consists of coarse-grained sand, gravel, and cobbles interbedded with finer-grained units of sand, silty sand, sandy silt, silt, and clay. Individual units within the younger alluvium vary in elevation and thickness; the contacts between the units have a northeast-trending

strike and dip towards the southeast. The lithology of the upper portion of the older alluvium varies from sand, gravel, and boulders in the northwestern portion of the BOU to interbedded silt and sand in the eastern and southern portions. The deeper portion of the older alluvium consists of silt and sand with interbedded gravel (HSI Geotrans, 1997.)

The northwest-trending Verdugo fault zone runs along the northeastern boundary of the BOU. The fault zone has been interpreted to be a low-permeability zone that can both impede and direct the flow of groundwater.

1.4 HYDROGEOLOGY

The BOU is located in the San Fernando Basin, which is characterized as water-bearing alluvium that overlies a non-water-bearing bedrock complex of older sedimentary rock formations and crystalline and metamorphic basement complex rock. Groundwater enters the basin by infiltration of surface-water runoff from the highlands, by deep penetration of rain on the valley floor, and by artificial means such as irrigation return or induced recharge. Outflow of groundwater from the basin is through groundwater extraction and a small amount of flow (surface and groundwater) through the Los Angeles Narrows, located southeast of the BOU. Groundwater in the vicinity of the BOU flows mainly through two sedimentary units: the Pleistocene older alluvium and the Holocene younger alluvium. The aquifer in the older alluvium has been observed to be locally semi-confined to confined by clay and silt units, whereas the aquifer in the younger alluvium is generally unconfined to semi-confined depending upon the location and thickness of the fine-grained units (HSI Geotrans, 1997).

The aquifer in the younger alluvium within the BOU has been divided into five hydrostratigraphic units (HSUs) based on electrical resistivity responses in geophysical logs (Hargis & Associates, 1991; Simon Hydro Search, 1993). The five HSUs of the younger alluvium are identified from upper to lower as A′, X, A, Y, and B (HSI Geotrans, 1997). The A′, A, and B HSUs are generally comprised of coarser-grained material (coarse-grained sand, gravel, and cobbles). The X and Y HSUs separate the three HSUs listed above (A′, A, B), and consist of relatively finer-grained material (sand, silty sand, and silt). Based on the stratigraphic position of the units and the groundwater gradient, the A′ HSU, the X HSU, or the A HSU may locally represent water table

conditions depending on geographic location within the project area, and are collectively referred to as water table (WT) HSUs.

The five HSUs of the younger alluvium are encountered throughout much of the southeastern San Fernando Basin. During the 1991 installation of groundwater monitoring wells 3860J, 3870D, 3870E, and 3880 northeast of the BOU, however, boring data and geophysical logs confirmed the absence of the five HSUs and identified the presence of finer-grained silty sands and sandy silts (Hargis and Associates, 1991). Based on the data, a separate HSU with distinct lithology was identified as the K HSU (also considered a WT HSU).

1.5 GROUNDWATER QUALITY

Lockheed Martin has monitored groundwater quality at the BOU since 1986. Based on analysis of the historical data, the following analytes have been selected as primary chemicals of concern for the BOU site: tetrachloroethene (PCE), trichloroethene (TCE), 1,2,3-trichloropropane (1,2,3-TCP), 1,4-dioxane, total chromium, and hexavalent chromium (Tetra Tech, 2004). Overall, TCE and PCE concentrations in shallow groundwater have decreased since data was first collected in 1993. Additionally, analytical results from well clusters have shown that TCE and PCE concentrations in wells screened in the lower HSUs are generally one to two orders of magnitude less than in the WT wells (Earth Tech, 2000; Tetra Tech, 2011).

Pump Settings: CPM: 2 PSI: 187 Recharge: 20 Discharge: 10

Comments: Valve high pressure bot

PARAMETERS FOR WATER QUALITY STABILIZATION	
Temperature collect readings	Conductivity ± 3 %
pH ± 0.1	DO ± 0.3 mg/L
Turbidity < 10 NTUs (If > 10 NTUs ± 10 %)	
WL ± 0.1 foot	ORP ± 10 mV

Note:
If volatiles are detected in the breathing zone during the initial screening, the breathing zone will be periodically monitored during purging and sampling activities.
All water levels and pump depths are measured from the reference point (notch) in the top of the well casing.
If no reference point is observed then the casing high point should be notched and measurements should be collected from this point.
Every attempt should be made to limit water level drawdown to less than 0.33 feet and purge rate to less than 0.5 L/min.

Note:

If volatiles are detected in the breathing zone during the initial screening, the breathing zone will be periodically monitored during purging and sampling activities.

All water levels and pump depths are measured from the reference point (notch) in the top of the well casing.

If no reference point is observed then the casing high point should be notched and measurements should be collected from this point.

Every attempt should be made to limit water level drawdown to less than 0.33 feet and purge rate to less than 0.5 L/min.

Water level at time of sampling (ft btoc): 138.07 Turbidity at time of sampling: 2.79

Pump Settings: CPM: 2 PSI: 80 Recharge: 20 Discharge: 10

Comments:

PARAMETERS FOR WATER QUALITY STABILIZATION	
Temperature collect readings	Conductivity ± 3 %
pH ± 0.1	DO ± 0.3 mg/L
Turbidity < 10 NTUs (if > 10 NTUs ± 10 %)	
WL ± 0.1 foot	ORP ± 10 mV

Note:

If volatiles are detected in the breathing zone during the initial screening, the breathing zone will be periodically monitored during purging and sampling activities.

All water levels and pump depths are measured from the reference point (notch) in the top of the well casing.

If no reference point is observed then the casing high point should be marked and measurements should be collected from this point.

Every attempt should be made to limit water level drawdown to less than 0.33 feet and purge rate to less than 0.5 L/min.

Colorimetric test (taken prior to sampling) Sulfide (mg/L): — Fe^{+2} (mg/L): — D.O. (ppm): 3.59

Water level at time of sampling (ft btoc): 226.55 Turbidity at time of sampling: 2.51

Pump Settings: CPM: 3 PSI: 111 Recharge: 20 Discharge: 10

Comments:

PARAMETERS FOR WATER QUALITY STABILIZATION	
Temperature collect readings	Conductivity ± 3 %
pH ± 0.1	DO ± 0.3 mg/L
Turbidity < 10 NTUs: ± 10 NTUs ± 10 %	
WL ± 0.1 feet	ORP ± 10 mV

Note:

If volatiles are detected in the breathing zone during the initial screening, the breathing zone will be periodically monitored during purging and sampling activities.

All water levels and pump depths are measured from the reference point (notch) in the top of the well casing.

If no reference point is observed then the casing high point should be notched and measurements should be collected from this point.

Every attempt should be made to limit water level drawdown to less than 0.33 feet and purge rate to less than 0.5 L/min.

Comments:

PARAMETERS FOR WATER QUALITY STABILIZATION	
Temperature collect readings	Conductivity ± 3 %
pH ± 0.1	DO ± 0.2 mg/L
Turbidity < 10 NTUs (if > 10 NTUs ± 10 %)	
WL ± 0.1 feet	ORP ± 20 mV

Note:

If volatiles are detected in the breathing zone during the initial screening, the breathing zone will be periodically monitored during purging and sampling activities.

All water levels and pump depths are measured from the reference point (notch) in the top of the well casing.

If no reference point is observed then the casing high point should be notched and measurements should be collected from this point.

Every attempt should be made to limit water level drawdown to less than 0.33 feet and purge rate to less than 0.5 L/min.

Colorimetric test (taken prior to sampling) Sulfide (mg/L): — Fe^{+2} (mg/L): — D.O. (ppm): —

Water level at time of sampling (ft btoc): 154.60 Turbidity at time of sampling: 6.36

Pump Settings: CPM: — PSI: — Recharge: — Discharge: —

Comments:

PARAMETERS FOR WATER QUALITY STABILIZATION	
Temperature collect readings	Conductivity ± 3 %
pH ± 0.1	DO ± 0.3 mg/L
Turbidity < 10 NTUs (if > 10 NTUs ± 10 %)	
WL ± 0.1 feet	ORP ± 10 mV

Note:

If volatiles are detected in the breathing zone during the initial screening, the breathing zone will be periodically monitored during purging and sampling activities.

All water levels and pump depths are measured from the reference point (notch) in the top of the well casing.

If no reference point is observed then the casing high point should be notched and measurements should be collected from this point.

Every attempt should be made to limit water level drawdown to less than 0.33 feet and purge rate to less than 0.5 L/min.

Colorimetric test (taken prior to sampling) Sulfide (mg/L): — Fe^{+2} (mg/L): — D.O. (ppm): —

Water level at time of sampling (ft btoc): ~~2607~~ 257.07 Turbidity at time of sampling: 1.64

Pump Settings: CPM: — PSI: — Recharge: — Discharge: —

Comments:

PARAMETERS FOR WATER QUALITY STABILIZATION	
Temperature (collect readings)	Conductivity ± 3 %
pH ± 0.1	DO ± 0.3 mg/L
Turbidity < 10 NTUs (if > 10 NTUs ± 10 %)	
WL ± 0.1 feet	ORP ± 10 mV

Note:

If volatiles are detected in the breathing zone during the initial screening, the breathing zone will be periodically monitored during purging and sampling activities.

All water levels and pump depths are measured from the reference point (notch) in the top of the well casing.

If no reference point is observed then the casing high point should be notched and measurements should be collected from this point.

Every attempt should be made to limit water level drawdown to less than 0.33 feet and purge rate to less than 0.5 L/min.

Data Validation Summary

Annual Groundwater Monitoring Report, Second Quarter 2017

Lockheed Martin Corporation

Burbank Operable Unit, Burbank, CA

TETRA TECH, INC.
DATA VALIDATION SUMMARY REPORT

TO: **Thomas Villeneuve, Project Manager; Robert Sabater, Deputy Project Manager**

FROM: **Michael Wilson, Senior Chemist**

DATE: **May 31, 2017**

SUBJECT: **One Hundred Percent Data Validation Review for the Burbank Operational Unit (BOU) Groundwater Sample Analyses Data Results from Eurofins Calscience Laboratory in Garden Grove, CA**

Introduction

This report summarizes the findings from data validation efforts conducted on one hundred percent of the sample data results for Lockheed Martin Corporation's (LMC) BOU soil project. The validation guidance used in evaluating the data is presented in the current versions of *USEPA National Functional Guidelines for Inorganic Data Review* and *USEPA National Functional Guidelines for Organic Data Review.* The data were audited at a Level II effort. The Level II effort requires review of all applicable Quality Control (QC) sample results as it relates to the field data under review. Level II effort also determines the usability of the data based on the Data Quality Objectives (DQOs) for the project.

Executive Summary

The Eurofins Calscience data for the project were contained in one Sample Delivery Groups (SDGs) designated as 17-01-0944.

The total data set consisted of 5460 individual (per analyte) results from environmental samples analyses. The number of samples per analytical method (or method group) is given below.

1. Sixty five samples for Hexavalent Chromium by Method E218.6
2. Sixty five samples for Total Chromium by Method SW6020
3. Sixty five samples for VOCs by Method SW8260B
4. Sixty five samples for 12,3-Trichloropropane by Method SW8270C M Isotope Dilution
5. Sixty five samples for 1,4-Dioxane by Method SW8270M

The samples were logged into the lab under compliant Chain of Custody documentation with no exceptions noted. The samples were analyzed in one or two preparation batch per analytical method per SDG. All QC samples were reviewed and if the QC result caused the data to be qualified the reason for the qualification was identified.

The data showed the laboratory analyzed all samples in accordance with method guidelines. The instances where qualification was required are listed below and explained under individual method sections. All other data is of known precision and accuracy and did not require any qualification and can be used as stated.

All data for this BOU sampling event were usable for their intended purpose.

Evaluation Criteria

The data were evaluated by results from the following Quality Control (QC) entities.

- Method/Field Blanks
- Laboratory Control Samples
- Holding Times
- Surrogate Recovery (Organic Methods)
- Spiked and Field Duplicate Compliance
- Calibration Compliance
- Compound Identification
- Analytical Method Compliance

Chain-of-Custody (COC) forms were reviewed and no unresolved discrepancies were noted.

Evaluation of Accuracy, Precision, Representativeness, Comparability, and Completeness

1. Accuracy is established by reviewing spiked sample analysis. A blank spike (LCS) measures the accuracy of the instrument and the LCS results for this data set were all found to be within control limits. Therefore, accuracy for the BOU project meets the Data Quality Objectives (DQO).

2. Precision is established by calculating the RPD values for MS/MSD pairs and field duplicates. The RPD values calculated for the BOU project show that >95% of the RPD calculated were within control limits. Therefore, the precision for the BOU projects meets the DQO.

3. Representativeness is established by using standard field sampling techniques. Because the field sampling was conducted under approved work plans and by following an established SOP, the sampling is judge to have adequate representativeness. The DQO was met.

4. Comparability of the data is preserved if the analytical analyses are conducted under approved and vetted EPA analytical methods. Because the EPA methods are constructed with comparability built into the methods. By using approved analytical methods for the BOU project, the BOU data is comparable. The DQO was met.

5. Completeness is measured by determine the amount of valid data produced by the laboratory as compared to the total possible data from the chain. This data set had no rejected data and all samples were analyzed as per the chains. Therefore, the data completeness is 100% which is above the 90% criterion. The DQO was met.

Validation Qualifiers and Comment Descriptors Definitions

<u>Qualifier Definitions</u>

The upper case letters are used to denote NFG allowed qualifiers.

J- Estimated. The associated numerical value is an estimated quantity with a negative bias. The analyte was detected but the reported value may not be accurate or precise. The data are usable as estimated values.

J+ Estimated. The associated numerical value is an estimated quantity with a positive bias. The analyte was detected but the reported value may not be accurate or precise. The data are usable as estimated values.

J Estimated. The associated numerical value is an estimated quantity. It is not possible to assess the direction of the potential bias. The analyte was detected but the reported value may not be accurate or precise. The "J" qualification indicates the data fell outside the QC limits, but the exceedance was not sufficient to cause rejection of the data. The data the data are usable as estimated values.

R Rejected. The data is unusable (the compound or analyte may or may not be present). Use of the "R" qualifier indicates a significant variance from functional guideline acceptance criteria. Either resampling or reanalysis is necessary to determine the presence or absence of the rejected analyte.

U Not detected. Analyses were performed for the compound or analyte, but it was not detected. The "U" designation is also applied to suspected blank contamination. The "U" flag is used to qualify any result that is detected in an environmental sample and associated blank at less than the PQL. For example, when any blank has a detection of the analyte that is below the PQL, and any associated field samples to that blank that also has detections of analytes below the PQL, then the samples are qualified as not detected at the PQL level. However, the data result is not censored by using the default PQL level and instead have the blank level reported in the sample qualified as not detected.

UJ Estimated/Not detected. Analyses were performed for the compound or analyte, but it was not detected and the sample quantitation or detection limit is an estimated quantity due to poor accuracy or precision. This qualification is also used to flag possible false negative results in the case where low bias in the analytical system is indicated by low calibration response, surrogate, or other spike recovery.

Qualifier Descriptor Comments

a: The analyte was found in the method blank.

b: The surrogate spike recovery was outside control limits.

c: The Matrix Spike and/or Matrix Spike Duplicate recoveries were outside control limits.

d: The Laboratory Control Sample (LCS) recovery was outside control limits.

e: A holding time violation occurred.

f: The duplicate samples Relative Percent Difference (RPD) was outside the control limit.

g: The datum met prescribed method criteria.

h: The method requires a confirmation result, but none was performed.

k: The analyte was found in a field blank.

l: The second column confirmation result indicates the analyte was not confirmed.

p: The result was qualified based on professional judgment.

q: The analyte detection was below the Practical Quantitation Limit (PQL).

r: The result is above the instrument's calibration range.

t: The sample temperature was outside acceptance criteria.

n: The laboratory case narrative indicated a QC problem.

1.0 Hexavalent Chromium by Method E218.6

1.1 Method/Field Blanks

The method blanks and field blanks reported no detections of target analytes above the detection limit. One method blank was extracted for each preparation batch. The method blanks were compliant with the analytical method.

1.2 Laboratory Control Samples

The laboratory control sample (LCS) analysis showed the method required spiked analytes were recovered within control limits. One LCS was extracted for each preparation batch. The LCSs were compliant with the analytical method.

1.3 Holding Times

All extraction and analysis holding times were in compliance.

1.4 Surrogate Recovery

Surrogates do not apply to method E218.6

1.5 Spiked and Field Duplicate Compliance

The matrix spike/matrix spike duplicate analyses and field duplicates were performed and found to be in compliance with the control limits.

1.6 Calibration Compliance

The calibration of the analytical instrument met criteria.

1.7 Compound Identification

All reported compound detections were identified by the correct retention time.

1.8 Analytical Method Compliance

The Level II data review showed the data to be method compliant.

1.9 Conclusions

Based on the results of this Level II Data Validation effort, it is concluded that the data for method E218.6 are usable as reported. The target analyte identifications are considered correct and reliable. The DQOs were satisfied as per the Work Plan and the data is usable for its intended purpose. The DQOs were satisfied as per the Work Plan and the data is usable for its intended purpose.

2.0 Total Chromium by Method SW6020

2.1 Method/Field Blanks

The method and field blanks showed no Chromium detections.

2.2 Laboratory Control Samples

The laboratory control sample (LCS) analysis showed the method required spiked analytes were recovered within control limits. One LCS was extracted for each preparation batch. The LCSs were compliant with the analytical method.

2.3 Holding Times

All extraction and analysis holding times were met.

2.4 Surrogate Recovery

This method does not use surrogates.

2.5 Spiked and Field Duplicate Compliance

The matrix spike/matrix spike duplicate analyses were performed and found they were in compliance with control limits.

Field duplicate results that exceeded the RPD requirement cause o.18% of the data to be qualified as estimated and assigned a “J” qualifier. The estimated data is usable as estimated values

2.6 Calibration Compliance

The calibration of the analytical instrument met criteria.

2.7 Compound Identification

Compound identification meet method guidelines.

2.8 Analytical Method Compliance

The Level II data review showed the data to be method compliant.

2.9 Conclusions

Based on the results of this Level II Data Validation effort, it is concluded that the data for method SW6010B are usable as reported and qualified. The target analyte identifications are considered correct and reliable The DQOs were satisfied as per the Work Plan and the data is usable for its intended purpose.

3.0 Volatile Organic Compounds (VOCs) by Method SW8260B

3.1 Method/Field Blanks

The method blanks reported no detection of a target analyte. One method blank was extracted for each preparation batch.

Field blank contamination caused 0.12% of the data to be qualified as not detected and assigned a "U" qualifier. The data is usable as not detected values.

3.2 Laboratory Control Samples

The laboratory control sample (LCS) analysis showed the method required spiked analytes were recovered within control limits. One LCS was extracted for each preparation batch. The LCSs were compliant with the analytical method.

3.3 Holding Times

All extraction and analysis holding times were met.

3.4 Surrogate Recovery

All surrogates were within limits.

3.5 Spiked and Field Duplicate Compliance

The matrix spike/matrix spike duplicate analyses and field duplicates were performed and found there were in compliance except as listed below.

MS/MSD recovery outside control limits caused 0.025% of the data to be qualified as estimated and assigned a "J" qualifier. The estimated data is usable for the intended purpose.

3.6 Calibration Compliance

The calibration of the analytical instrument met criteria.

3.7 Compound Identification

All compounds were correctly identified.

3.8 Analytical Method Compliance

The Level II data review showed the data to be method compliant.

3.9 Conclusions

Based on the results of this Level II Data Validation effort, it is concluded that the data for method SW8260B are usable as reported and qualified. The target analyte identifications are considered correct and reliable The DQOs were satisfied as per the Work Plan and the data is usable for its intended purpose.

4.0 Low Level 1,2,3-Trichloropropane by Method SW8260B SIM

4.1 Method/Field Blanks

The method blanks and field blanks reported no detection of a target analyte. One method blank was extracted for each preparation batch.

4.2 Laboratory Control Samples

The laboratory control sample (LCS) analysis showed the method required spiked analytes were recovered within control limits. One LCS was extracted for each preparation batch. The LCSs were compliant with the analytical method.

4.3 Holding Times

All extraction and analysis holding times were met.

4.4 Surrogate Recovery

All surrogates were within limits.

4.5 Spiked and Field Duplicate Compliance

The matrix spike/matrix spike duplicate analyses and field duplicates were performed and found they were in compliance with the control limits except as listed below.

MS/MSD recovery outside control limits caused 9.2% of the data to be qualified as estimated and assigned a "J" qualifier. The estimated data is usable for the intended purpose.

4.6 Calibration Compliance

The calibration of the analytical instrument met criteria.

4.7 Compound Identification

All compounds were correctly identified.

4.8 Analytical Method Compliance

The Level II data review showed the data to be method compliant.

4.9 Conclusions

Based on the results of this Level II Data Validation effort, it is concluded that the data for method SW8260B SIM are usable as reported and qualified. The target analyte identifications are considered correct and reliable The DQOs were satisfied as per the Work Plan and the data is usable for its intended purpose.

5.0 Low level 1,4-Dioxane by Method SW8270C ID

5.1 Method/Field Blanks

The method blanks and field blanks reported no detection of a target analyte. One method blank was extracted for each preparation batch.

5.2 Laboratory Control Samples

The laboratory control sample (LCS) analysis showed the method required spiked analytes were recovered within control limits. One LCS was extracted for each preparation batch. The LCSs were compliant with the analytical method.

5.3 Holding Times

All extraction and analysis holding times were met.

5.4 Surrogate Recovery

All surrogates were within limits.

5.5 Spiked and Field Duplicate Compliance

The matrix spike/matrix spike duplicate analyses and field duplicates were performed and found there were no results outside control limits

5.6 Calibration Compliance

The calibration of the analytical instrument met criteria.

5.7 Compound Identification

All compounds were correctly identified.

5.8 Analytical Method Compliance

The Level II data review showed the data to be method compliant.

5.9 Conclusions

Based on the results of this Level II Data Validation effort, it is concluded that the data for method SW8270C ID are usable as reported and qualified. The target analyte identifications are considered correct and reliable The DQOs were satisfied as per the Work Plan and the data is usable for its intended purpose.

Eurofins Calscience, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

Work Order Narrative

Work Order: 17-04-1908 Page 1 of 1

Condition Upon Receipt:

Samples were received under Chain-of-Custody (COC) on 04/25/17. They were assigned to Work Order 17-04-1908.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

Glossary of Terms and Qualifiers

Work Order: 17-04-1908 Page 1 of 1

Qualifiers	Definition
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
CI	See case narrative.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.
	Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.
	Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.
	A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

Eurofins Calscience, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

Work Order Narrative

Work Order: 17-04-1778 Page 1 of 1

Condition Upon Receipt:

Samples were received under Chain-of-Custody (COC) on 04/24/17. They were assigned to Work Order 17-04-1778.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

Glossary of Terms and Qualifiers

Work Order: 17-04-1778 Page 1 of 1

Qualifiers	Definition
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
CI	See case narrative.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.
	Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.
	Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.
	A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

Eurofins Calscience, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

Work Order Narrative

Work Order: 17-04-1160 Page 1 of 1

Condition Upon Receipt:

Samples were received under Chain-of-Custody (COC) on 04/14/17. They were assigned to Work Order 17-04-1160.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

Glossary of Terms and Qualifiers

Work Order: 17-04-1160 Page 1 of 1

Qualifiers	Definition
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
CI	See case narrative.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.
	Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.
	Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.
	A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

Eurofins Calscience, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

Work Order Narrative

Work Order: 17-04-1061 Page 1 of 1

Condition Upon Receipt:

Samples were received under Chain-of-Custody (COC) on 04/13/17. They were assigned to Work Order 17-04-1061.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

Glossary of Terms and Qualifiers

Work Order: 17-04-1061 Page 1 of 1

Qualifiers	Definition
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
CI	See case narrative.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.
	Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.
	Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.
	A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

Eurofins Calscience, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

Work Order Narrative

Work Order: 17-04-0940 Page 1 of 1

Condition Upon Receipt:

Samples were received under Chain-of-Custody (COC) on 04/12/17. They were assigned to Work Order 17-04-0940.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

Glossary of Terms and Qualifiers

Work Order: 17-04-0940 Page 1 of 1

Qualifiers	Definition
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
CI	See case narrative.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.
	Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.
	Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.
	A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

SAMPLE ANOMALY REPORT

DATE: 04 / 12 / 2017

SAMPLES, CONTAINERS, AND LABELS:

Comments

- ☐ Sample(s) NOT RECEIVED but listed on COC
- ☐ Sample(s) received but NOT LISTED on COC
- ☐ Holding time expired (list client or ECI sample ID and analysis)
- ☐ Insufficient sample amount for requested analysis (list analysis)
- ☐ Improper container(s) used (list analysis)
- ☐ Improper preservative used (list analysis)
- ☐ No preservative noted on COC or label (list analysis and notify lab)
- ☐ Sample container(s) not labeled
- ☐ Client sample label(s) illegible (list container type and analysis)
- ☑ Client sample label(s) do not match COC (comment)
  - ☐ Project information
  - ☐ Client sample ID
  - ☐ Sampling date and/or time
  - ☑ Number of container(s)
  - ☐ Requested analysis
- ☐ Sample container(s) compromised (comment)
  - ☐ Broken
  - ☐ Water present in sample container
- ☐ Air sample container(s) compromised (comment)
  - ☐ Flat
  - ☐ Very low in volume
  - ☐ Leaking (not transferred; duplicate bag submitted)
  - ☐ Leaking (transferred into ECI Tedlar™ bags*)
  - ☐ Leaking (transferred into client's Tedlar™ bags*)

(-4)(-5) received 9 containers instead of 13
(received 6 vials instead of 10)

* Transferred at client's request.

Eurofins Calscience, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

Work Order Narrative

Work Order: 17-04-0840 Page 1 of 1

Condition Upon Receipt:

Samples were received under Chain-of-Custody (COC) on 04/11/17. They were assigned to Work Order 17-04-0840.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

Glossary of Terms and Qualifiers

Work Order: 17-04-0840 Page 1 of 1

Qualifiers	Definition
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
CI	See case narrative.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.
	Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.
	Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.
	A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

Eurofins Calscience, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

Work Order Narrative

Work Order: 17-04-0729 Page 1 of 1

Condition Upon Receipt:

Samples were received under Chain-of-Custody (COC) on 04/10/17. They were assigned to Work Order 17-04-0729.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

Glossary of Terms and Qualifiers

Work Order: 17-04-0729 Page 1 of 1

Qualifiers	Definition
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
CI	See case narrative.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.
	Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.
	Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.
	A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

Eurofins Calscience, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

Work Order Narrative

Work Order: 17-04-0598 Page 1 of 1

Condition Upon Receipt:

Samples were received under Chain-of-Custody (COC) on 04/07/17. They were assigned to Work Order 17-04-0598.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

Glossary of Terms and Qualifiers

Work Order: 17-04-0598 Page 1 of 1

Qualifiers	Definition
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
CI	See case narrative.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.
	Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.
	Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.
	A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

Eurofins Calscience, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

Work Order Narrative

Work Order: 17-04-0454 Page 1 of 1

Condition Upon Receipt:

Samples were received under Chain-of-Custody (COC) on 04/06/17. They were assigned to Work Order 17-04-0454.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

Detections Summary

Client: Tetra Tech, Inc.
301 E. Vanderbilt Way, Suite 450
San Bernardino, CA 92408-3562

Work Order: 17-04-0454
Project Name: LMC BOU
Received: 04/06/17

Attn: Robert Sabater

Client SampleID / Analyte	Result	Qualifiers	RL	Units	Method	Extraction
C-1-CW05-N-17Q2 (17-04-0454-7)						
Chromium, Hexavalent	0.18		0.020	ug/L	EPA 218.6	N/A
Chromium	0.000735	J	0.000402*	mg/L	EPA 6020	EPA 3020A Total
1,1-Dichloroethane	1.1		0.50	ug/L	EPA 8260B	EPA 5030C
Dichlorodifluoromethane	1.9		1.0	ug/L	EPA 8260B	EPA 5030C
Tetrachloroethene	0.68		0.50	ug/L	EPA 8260B	EPA 5030C
Trichloroethene	0.29	J	0.29*	ug/L	EPA 8260B	EPA 5030C
c-1,2-Dichloroethene	0.30	J	0.20*	ug/L	EPA 8260B	EPA 5030C
B-6-CW02-N-17Q2 (17-04-0454-8)						
Chromium, Hexavalent	2.5		0.020	ug/L	EPA 218.6	N/A
Chromium	0.00295		0.00100	mg/L	EPA 6020	EPA 3020A Total
Chloroform	0.35	J	0.20*	ug/L	EPA 8260B	EPA 5030C
Tetrachloroethene	0.56		0.50	ug/L	EPA 8260B	EPA 5030C
B-6-CW02-FD-17Q2 (17-04-0454-9)						
Chromium, Hexavalent	2.5		0.020	ug/L	EPA 218.6	N/A
Chromium	0.00311		0.00100	mg/L	EPA 6020	EPA 3020A Total
Acetone	4.2	J	4.0*	ug/L	EPA 8260B	EPA 5030C
Chloroform	0.37	J	0.20*	ug/L	EPA 8260B	EPA 5030C
Tetrachloroethene	0.54		0.50	ug/L	EPA 8260B	EPA 5030C

Subcontracted analyses, if any, are not included in this summary.

Glossary of Terms and Qualifiers

Work Order: 17-04-0454 Page 1 of 1

Qualifiers	Definition
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
CI	See case narrative.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.
	Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.
	Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.
	A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

SAMPLE ANOMALY REPORT

DATE: 04 / 06 / 2017

SAMPLES, CONTAINERS, AND LABELS:

Comments

- ☐ Sample(s) NOT RECEIVED but listed on COC
- ☐ Sample(s) received but NOT LISTED on COC
- ☐ Holding time expired (list client or ECI sample ID and analysis)
- ☐ Insufficient sample amount for requested analysis (list analysis)
- ☐ Improper container(s) used (list analysis)
- ☐ Improper preservative used (list analysis)
- ☐ No preservative noted on COC or label (list analysis and notify lab)
- ☐ Sample container(s) not labeled
- ☐ Client sample label(s) illegible (list container type and analysis)
- ☑ Client sample label(s) do not match COC (comment)
  - ☐ Project information
  - ☐ Client sample ID
  - ☐ Sampling date and/or time
  - ☑ Number of container(s)
  - ☐ Requested analysis
- ☐ Sample container(s) compromised (comment)
  - ☐ Broken
  - ☐ Water present in sample container
- ☐ Air sample container(s) compromised (comment)
  - ☐ Flat
  - ☐ Very low in volume
  - ☐ Leaking (not transferred; duplicate bag submitted)
  - ☐ Leaking (transferred into ECI Tedlar™ bags*)
  - ☐ Leaking (transferred into client's Tedlar™ bags*)

* Transferred at client's request.

(-8)(-9) Received 9 containers instead of 13.
1 x 250ml Plastic Bottle
1 x 500mL Amber glass Bottle
1 x 250ml Plastic Bottle w/ HNO3
6 x vials w/ HCL

Eurofins Calscience, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

Work Order Narrative

Work Order: 17-04-0322 Page 1 of 1

Condition Upon Receipt:

Samples were received under Chain-of-Custody (COC) on 04/05/17. They were assigned to Work Order 17-04-0322.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

Glossary of Terms and Qualifiers

Work Order: 17-04-0322 Page 1 of 1

Qualifiers	Definition
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
CI	See case narrative.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.
	Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.
	Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.
	A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

Work Order Narrative

Work Order: 17-04-0177 Page 1 of 1

Condition Upon Receipt:

Samples were received under Chain-of-Custody (COC) on 04/04/17. They were assigned to Work Order 17-04-0177.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

Glossary of Terms and Qualifiers

Work Order: 17-04-0177 Page 1 of 1

Qualifiers	Definition
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
CI	See case narrative.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.
	Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.
	Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.
	A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

Erick Ovalle

From: Calder, Vanessa <Vanessa.Calder@tetratech.com>
Sent: Thursday, April 06, 2017 5:22 PM
To: Erick Ovalle
Subject: Re: 04/04/2017 COC

Hi Erick,

In regards to lines 4,5 and 6 of the COC dated 04/04/2017. Please use the sample id's found on the bottles sample labels. The id's listed on the COC are incomplete.

For example, line 4 lists sample as 3831Q. This should be 3831Q-N-17Q2. The following lines 5 and 6 should be labeled following the same pattern.

Thank you for catching my mistake, apologies for the inconvenience.

Thank you,
Vanessa

Eurofins Calscience, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

Work Order Narrative

Work Order: 17-04-0067 Page 1 of 1

Condition Upon Receipt:

Samples were received under Chain-of-Custody (COC) on 04/03/17. They were assigned to Work Order 17-04-0067.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

Glossary of Terms and Qualifiers

Work Order: 17-04-0067 Page 1 of 1

Qualifiers	Definition
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
CI	See case narrative.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.
	Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.
	Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.
	A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

IMPORTANT-READ CAREFULLY: THIS COMMITMENT IS AN OFFER TO ISSUE ONE OR MORE TITLE INSURANCE POLICIES. ALL CLAIMS OR REMEDIES SOUGHT AGAINST THE COMPANY INVOLVING THE CONTENT OF THIS COMMITMENT OR THE POLICY MUST BE BASED SOLELY IN CONTRACT.

THIS COMMITMENT IS NOT AN ABSTRACT OF TITLE, REPORT OF THE CONDITION OF TITLE, LEGAL OPINION, OPINION OF TITLE, OR OTHER REPRESENTATION OF THE STATUS OF TITLE. THE PROCEDURES USED BY THE COMPANY TO DETERMINE INSURABILITY OF THE TITLE, INCLUDING ANY SEARCH AND EXAMINATION, ARE PROPRIETARY TO THE COMPANY, WERE PERFORMED SOLELY FOR THE BENEFIT OF THE COMPANY, AND CREATE NO EXTRACONTRACTUAL LIABILITY TO ANY PERSON, INCLUDING A PROPOSED INSURED.

THE COMPANY'S OBLIGATION UNDER THIS COMMITMENT IS TO ISSUE A POLICY TO A PROPOSED INSURED IDENTIFIED IN SCHEDULE A IN ACCORDANCE WITH THE TERMS AND PROVISIONS OF THIS COMMITMENT. THE COMPANY HAS NO LIABILITY OR OBLIGATION INVOLVING THE CONTENT OF THIS COMMITMENT TO ANY OTHER PERSON.

COMMITMENT TO ISSUE POLICY

Subject to the Notice; Schedule B, Part I-Requirements; Schedule B, Part II-Exceptions; and the Commitment Conditions, ***First American Title Insurance Company***, a Nebraska Corporation (the "Company"), commits to issue the Policy according to the terms and provisions of this Commitment. This Commitment is effective as of the Commitment Date shown in Schedule A for each Policy described in Schedule A, only when the Company has entered in Schedule A both the specified dollar amount as the Proposed Policy Amount and the name of the Proposed Insured.

If all of the Schedule B, Part I-Requirements have not been met within six months after the Commitment Date, this Commitment terminates and the Company's liability and obligation end.

COMMITMENT CONDITIONS

1. DEFINITIONS

(a) "Knowledge" or "Known": Actual or imputed knowledge, but not constructive notice imparted by the Public Records.
(b) "Land": The land described in Schedule A and affixed improvements that by law constitute real property. The term "Land" does not include any property beyond the lines of the area described in Schedule A, nor any right, title, interest, estate, or easement in abutting streets, roads, avenues, alleys, lanes, ways, or waterways, but this does not modify or limit the extent that a right of access to and from the Land is to be insured by the Policy.
(c) "Mortgage": A mortgage, deed of trust, or other security instrument, including one evidenced by electronic means authorized by law.
(d) "Policy": Each contract of title insurance, in a form adopted by the American Land Title Association, issued or to be issued by the Company pursuant to this Commitment.
(e) "Proposed Insured": Each person identified in Schedule A as the Proposed Insured of each Policy to be issued pursuant to this Commitment.
(f) "Proposed Policy Amount": Each dollar amount specified in Schedule A as the Proposed Policy Amount of each Policy to be issued pursuant to this Commitment.
(g) "Public Records": Records established under state statutes at the Commitment Date for the purpose of imparting constructive notice of matters relating to real property to purchasers for value and without Knowledge.
(h) "Title": The estate or interest described in Schedule A.

2. If all of the Schedule B, Part I—Requirements have not been met within the time period specified in the Commitment to Issue Policy, this Commitment terminates and the Company's liability and obligation end.

3. The Company's liability and obligation is limited by and this Commitment is not valid without:
(a) the Notice;
(b) the Commitment to Issue Policy;
(c) the Commitment Conditions;
(d) Schedule A;
(e) Schedule B, Part I—Requirements; and
(f) Schedule B, Part II—Exceptions.

4. COMPANY'S RIGHT TO AMEND

The Company may amend this Commitment at any time. If the Company amends this Commitment to add a defect, lien, encumbrance, adverse claim, or other matter recorded in the Public Records prior to the Commitment Date, any liability of the Company is limited by Commitment Condition 5. The Company shall not be liable for any other amendment to this Commitment.

5. LIMITATIONS OF LIABILITY

(a) The Company's liability under Commitment Condition 4 is limited to the Proposed Insured's actual expense incurred in the interval between the Company's delivery to the Proposed Insured of the Commitment and the delivery of the amended Commitment, resulting from the Proposed Insured's good faith reliance to:
  (i) comply with the Schedule B, Part I—Requirements;
  (ii) eliminate, with the Company's written consent, any Schedule B, Part II—Exceptions; or
  (iii) acquire the Title or create the Mortgage covered by this Commitment.
(b) The Company shall not be liable under Commitment Condition 5(a) if the Proposed Insured requested the amendment or had Knowledge of the matter and did not notify the Company about it in writing.
(c) The Company will only have liability under Commitment Condition 4 if the Proposed Insured would not have incurred the expense had the Commitment included the added matter when the Commitment was first delivered to the Proposed Insured.
(d) The Company's liability shall not exceed the lesser of the Proposed Insured's actual expense incurred in good faith and described in Commitment Conditions 5(a)(i) through 5(a)(iii) or the Proposed Policy Amount.
(e) The Company shall not be liable for the content of the Transaction Identification Data, if any.
(f) In no event shall the Company be obligated to issue the Policy referred to in this Commitment unless all of the Schedule B, Part I—Requirements have been met to the satisfaction of the Company.
(g) In any event, the Company's liability is limited by the terms and provisions of the Policy.

The use of this Form (or any derivative thereof) is restricted to ALTA licensees and ALTA members in good standing as of the date of use. All other uses are prohibited. Reprinted under license from the American Land Title Association.

6. LIABILITY OF THE COMPANY MUST BE BASED ON THIS COMMITMENT

(a) Only a Proposed Insured identified in Schedule A, and no other person, may make a claim under this Commitment.
(b) Any claim must be based in contract and must be restricted solely to the terms and provisions of this Commitment.
(c) Until the Policy is issued, this Commitment, as last revised, is the exclusive and entire agreement between the parties with respect to the subject matter of this Commitment and supersedes all prior commitment negotiations, representations, and proposals of any kind, whether written or oral, express or implied, relating to the subject matter of this Commitment.
(d) The deletion or modification of any Schedule B, Part II—Exception does not constitute an agreement or obligation to provide coverage beyond the terms and provisions of this Commitment or the Policy.
(e) Any amendment or endorsement to this Commitment must be in writing and authenticated by a person authorized by the Company.
(f) When the Policy is issued, all liability and obligation under this Commitment will end and the Company's only liability will be under the Policy.

7. IF THIS COMMITMENT HAS BEEN ISSUED BY AN ISSUING AGENT

The issuing agent is the Company's agent only for the limited purpose of issuing title insurance commitments and policies. The issuing agent is not the Company's agent for the purpose of providing closing or settlement services.

8. PRO-FORMA POLICY

The Company may provide, at the request of a Proposed Insured, a pro-forma policy illustrating the coverage that the Company may provide. A pro-forma policy neither reflects the status of Title at the time that the pro-forma policy is delivered to a Proposed Insured, nor is it a commitment to insure.

9. ARBITRATION

Arbitration provision intentionally removed.

Commitment No.: NCS-1009167-ONT1

SCHEDULE B, PART I

Requirements

All of the following Requirements must be met:

A. The Proposed Insured must notify the Company in writing of the name of any party not referred to in this Commitment who will obtain an interest in the Land or who will make a loan on the Land. The Company may then make additional Requirements or Exceptions.

B. Pay the agreed amount for the estate or interest to be insured.

C. Pay the premiums, fees, and charges for the Policy to the Company.

D. Documents satisfactory to the Company that convey the Title or create the Mortgage to be insured, or both, must be properly authorized, executed, delivered, and recorded in the Public Records.

E. Releases(s) or Reconveyance(s) of Item(s): None

F. Other: None

G. You must give us the following information:
   a. Any off record leases, surveys, etc.
   b. Statement(s) of Identity, all parties.
   c. Other:

Prior to closing, the Company must confirm whether the county recording office in which the Land is located has changed its access policies due to the COVID-19 outbreak. If recording has been restricted, specific underwriting approval is required; and, additional requirements or exceptions may be made.

The following additional requirements, as indicated by "X", must be met:

[X] H. Provide information regarding any off-record matters, which may include, but are not limited to: leases, recent works of improvement, or commitment statements in effect under the Environmental Responsibility Acceptance Act, Civil Code Section 850, et seq.

The Company's Owner's Affidavit form (as provided by the company) must be completed and submitted prior to close in order to satisfy this requirement. This Commitment will then be subject to such further exceptions and/or requirements as may be deemed necessary.

[] I. An ALTA/NSPS survey of recent date, which complies with the current minimum standard

detail requirements for ALTA/NSPS land title surveys, must be submitted to the Company for review. This Commitment will then be subject to such further exceptions and/or requirements as may be deemed necessary.

[] J. The following LLC documentation is required from:

(i) a copy of the Articles of Organization
(ii) a copy of the Operating Agreement, if applicable
(iii) a Certificate of Good Standing and/or other evidence of current Authority to Conduct Business within the State
(iv) express Company Consent to the current transaction

[X] K. The following partnership documentation is required **:**

(i) a copy of the partnership agreement, including all applicable amendments thereto
(ii) a Certificate of Good Standing and/or other evidence of current Authority to Conduct Business within the State
(iii) express Partnership Consent to the current transaction

[] L. The following corporation documentation is required:

(i) a copy of the Articles of Incorporation
(ii) a copy of the Bylaws, including all applicable Amendments thereto
(iii) a Certificate of Good Standing and/or other evidence of current Authority to Conduct Business within the State
(iv) express Corporate Resolution consenting to the current transaction

[X] M. Based upon the Company's review of that certain partnership/operating agreement dated **Not disclosed** for the proposed insured herein, the following requirements must be met:
Any further amendments to said agreement must be submitted to the Company, together with an affidavit from one of the general partners or members stating that it is a true copy, that said partnership or limited liability company is in full force and effect, and that there have been no further amendments to the agreement. This Commitment will then be subject to such further requirements as may be deemed necessary.

[] N. A copy of the complete lease, as referenced in Schedule A, #3 herein, together with any amendments and/or assignments thereto, must be submitted to the Company for review, along with an affidavit executed by the present lessee stating that it is a true copy, that the lease is in full force and effect, and that there have been no further amendments to the lease. This Commitment will then be subject to such further requirements as may be deemed necessary.

[X] O. Approval from the Company's Underwriting Department must be obtained for issuance of the policy contemplated herein and any endorsements requested thereunder. This Commitment will then be subject to such further requirements as may be required to obtain such approval.

[] P. Potential additional requirements, if ALTA Extended coverage is contemplated hereunder, and work on the land has commenced prior to close, some or all of the following requirements, and any other requirements which may be deemed necessary, may need to be met:

Commitment No.: NCS-1009167-ONT1

SCHEDULE B, PART II

Exceptions

THIS COMMITMENT DOES NOT REPUBLISH ANY COVENANT, CONDITION, RESTRICTION, OR LIMITATION CONTAINED IN ANY DOCUMENT REFERRED TO IN THIS COMMITMENT TO THE EXTENT THAT THE SPECIFIC COVENANT, CONDITION, RESTRICTION, OR LIMITATION VIOLATES STATE OR FEDERAL LAW BASED ON RACE, COLOR, RELIGION, SEX, SEXUAL ORIENTATION, GENDER IDENTITY, HANDICAP, FAMILIAL STATUS, OR NATIONAL ORIGIN.

The Policy will not insure against loss or damage resulting from the terms and provisions of any lease or easement identified in Schedule A, and will include the following Exceptions unless cleared to the satisfaction of the Company:

1. Any defect, lien, encumbrance, adverse claim, or other matter that appears for the first time in the Public Records or is created, attaches, or is disclosed between the Commitment Date and the date on which all of the Schedule B, Part I-Requirements are met.
