[1] Based on CalEEMod default values. Note, there are two scenarios for project construction which differ in the material movement amounts in the grading phase. However, the construction equipment activity for both scenarios is expected to be the same.

[2] Construction equipment greater than 50 hp used at the site shall be mitigated to meet USEPA Tier 4 Final emission standards for PM10 and PM2.5. If Tier 4 Final equipment is viable but not available, all construction equipment larger than 50 horsepower used at the site shall meet USEPA emission standards for Tier 3 engines and include particulate matter emissions control equivalent to CARB Level 3 verifiable diesel emission control devices. To be conservative, this analysis assumed that Tier 3 engines with particulate matter emissions control equivalent to CARB Level 3 verifiable diesel emission control devices would be used on-site to model the potential mitigated construction emissions if Tier 4 final equipment is not available.

Building Construction	96	44	0	104
Paving	15	0	0	0
Architectural Coating	19	0	0	0

Notes:

[1] Trips are presented as one-way trips per day.

[2] Worker and vendor trips are based on CalEEMod defaults. The one-way trip lengths for worker and vendor trips is assumed the CalEEMod default values of 14.3 and 8.8 miles, respectively.

[3] Hauling trips reflect CalEEMod defaults based on Project-specific estimates of material movement shown in Table 4-8. The one-way trip length for hauling trips is assumed to be the CalEEMod default value of 20 miles.

[4] Project construction includes nighttime concrete pours on eight days during the building construction phase where 52 concrete trucks would visit the site per day (104 one-way trips per day). This 8 day activity is expected to occur in December 2026. For purposes of this analysis, these concrete trucks are modeled as heavy-heavy duty vendor truck trips in CalEEMod with a CalEEMod default one-way trip length of 8.8 miles.

Enclosed Parking with Elevator	369,143	0	0	0	0	0	0	0	0	0	0	369,143	0
Parking Lot	327,400	0	0	0	0	0	0	0	0	0	0	327,400	0

Notes:

[1] Total CalEEMod default natural gas usages broken down into end use distribution based on Appendix C in the CalEEMod handbook, where the "Other Equipment" category includes space cooling, refrigeration, and miscellaneous uses. Available at: https://www.caleemod.com/documents/handbook/appendices/appendix_c.pdf. Accessed: October 2025.

[2] The proposed Project will not have any natural gas usage at the gasoline dispensing facility. Hence, the CalEEMod default natural gas usage for the gasoline dispensing facility were converted into equivalent electricity usages by multiplying by the ratio of efficiencies between natural gas and equivalent electric appliances for 2022. Typical efficiency values for space heating (100% for electric and 81% for natural gas), water heating (98% for electric and 82% for natural gas), and cooking (71% for electric and 35% for natural gas) are available at: https://www.eia.gov/analysis/studies/buildings/equipcosts/pdf/appendix-a.pdf. Accessed: October 2025. The ratio of natural gas and electric efficiencies for the "Other Equipment" category was conservatively assumed to be 1:1.

[3] The proposed Project operational electricity and natural gas usage is assumed to be equal to CalEEMod defaults for all CalEEMod land use subtypes except the gasoline/service station. For this land use the operational natural gas usage is assumed to be zero based on Project-specific information. The electricity usage is higher than the CalEEMod defaults to account for electrification of CalEEMod default natural gas usage.

Conversion Factors:

3,412.14 Btu/kWh

Abbreviations:

Btu - British thermal units
CalEEMod - California Emissions Estimator Model
kBtu - thousand British thermal units
kWh - kilowatt-hour
NG - natural gas
yr - year

Table 4-15. Vegetation Land Use Change Assumptions
El Dorado Hills Costco Project
El Dorado Hills, California

Emission Source	Vegetation Land Use Type - Vegetation Soil Type [1,2]	CO_2 Accumulation [3] (MT CO_2e/acre/yr)	Acres, Existing Condition [4]	Acres, Proposed Project [4]
Soil Carbon Accumulation	Other - Inceptisols	1.00	14.97	7.31
Soil Carbon Accumulation	Urban - Inceptisols	0.0	0.00	7.66

Emission Source	Cover Type	CO_2 Accumulation [3] (MT CO_2e/acre/yr)	Acres, Existing Condition [4]	Acres, Proposed Project [4]
Above and Belowground Biomass Carbon Accumulation	Grassland	0.43	14.97	7.31
Above and Belowground Biomass Carbon Accumulation	Urban	0	0.00	7.66

Notes:

[1] Vegetation Land Use Type "Other" was chosen as all other CalEEMod Vegetation Land Use Types do not fit the description of the project site.

[2] Vegetation Soil Type at the Project location was determined using UC Davis' SoilWeb online geospatial tool.

[3] CO_2 Accumulation is based on CalEEMod default values. The Vegetation Land Use Type, "Other", does not have a CalEEMod default CO_2 Accumulation value for Inceptisols. Therefore, the CO_2 Accumulation for Inceptisols under the Vegetation Land Use Type, Other, was estimated as the average of CO_2 Accumulation for Inceptisols for all available Land Use Types.

[4] Acreage of vegetation cover is based on project-specific information.

CalEEMod - California Emissions Estimator Model

CO_2 - carbon dioxide

CO_2e - carbon dioxide equivalent

MT - metric ton

UC Davis - University of California, Davis

yr - year

Table 4-16. Estimating GHG Emission Benefits of On-Site Electric Vehicle Chargers
El Dorado Hills Costco Project
El Dorado Hills, California

Estimated VMT Reduction from Electric Vehicle Charging Stations		
Total Power Provided by On-Site DC Fast Chargers [1]	1,800	kW
Electricity Emission Factor [2]	0.00	MT CO_2e/MWh
Fuel Economy of Plug-In Hybrid/Electric Vehicle [3]	0.35	kWh/mile
Gasoline CO_2e Emission While Running [4]	320	g/mile
Annual Energy Consumption by EV Chargers [5]	3,705,480	kWh/year
Annual Electric VMT Generated by EV Chargers [6]	9,479,164	miles/year
Annual Electric VMT Generated by Project [7]	378,916	miles/year
Annual Gasoline VMT Reduction [8]	9,100,248	miles/year
Estimated GHG Emission Reductions from Electric Vehicle Charging Stations		
GHG Emissions of Gasoline-Powered Vehicles [9]	2,908	MT CO_2e/year
GHG Emissions of Electric-Powered Vehicles [10]	0	MT CO_2e/year
GHG Emissions Reduction [11]	2,908	MT CO_2e/year

Constants:

Loss for DC Fast Chargers [12]	10%	
Assumed Hours of Usage [13]	5.6	hours/day
Days per year	365	days/year

Notes:

[1] The Project will provide five (5) 360 kW power units, which will feed into ten on-site DC fast chargers.

[2] For the Proposed Project, 100% renewable electrical power will be supplied by Pacific Gas & Electric (PG&E), as Costco has a Clean Energy Contract with PG&E.

[3] The average fuel efficiencies for electric and plug-in hybrid passenger vehicles that would use the on-site DC fast chargers was obtained from **Table B-13**.

[4] The emission factor for gasoline-powered passenger vehicles was obtained from **Table B-14** and is presented as CO2e, which includes CO2, CH4, and N2O emissions, weighted by their respective 100-year global warming potentials, based upon the IPCC AR4 Assessment.

[5] Annual energy consumed by on-site DC fast chargers is estimated as a product of the total power provided by the chargers and the assumed hours of usage.

[6] The annual electric VMT generated by the EV chargers is estimated using the annual energy supplied to electric and plug-in hybrid electric vehicles using the on-site EV chargers and the fuel economy of these vehicles. The energy supplied by the EV charger is calculated using the annual energy consumed by the chargers and the potential losses associated with DC fast chargers.

[7] The annual electric VMT generated by the Project was obtained from Table 4-9 in the EDH Costco Project Energy Technical Report. This is the electric miles traveled by vehicles visiting the Project that is expected to occur regardless of the EV chargers.

[8] Annual gasoline VMT reduction is estimated as the difference in the annual electric VMT generated by the EV chargers and the annual electric VMT generated by the Proposed Project, which would occur regardless of the EV chargers.

[9] GHG emissions of gasoline-powered vehicles is calculated as a product of the annual gasoline VMT reduction and the GHG emission factor for gasoline-powered passenger vehicles.

[10] GHG emissions of electric-powered vehicles is zero because the tailpipe GHG emissions of these vehicles is zero and the GHG emission factor of the electricity delivered to these vehicles by the on-site EV chargers is also zero, as described in **footnote 2** above.

[11] GHG emissions reductions generated by the on-site EV chargers is calculated as the difference of GHG emissions of gasoline-powered vehicles and electric-powered vehicles.

[12] The losses associated with delivery of electricity from DC fast chargers to electric and plug-in hybrid vehicles is assumed to be 10%. Reference available here: https://insideevs.com/features/711659/ev-charger-efficiency-losses/. Accessed: October 2025.

[13] The assumed hours of usage are based on recently published charger utilization data for publicly available DC fast chargers operating in California. References include the following reports published by Paren: "State of the Industry Report: US EV Fast Charging", for Q1 2025 and Q2 2025. Available at: https://www.paren.app/. Accessed: October 2025.

Generators [3]	9.6	MT CO_2e/yr
On-Site Electric Vehicle Chargers [5]	-2,908	MT CO_2e/yr
Operational Emissions	**2,167**	**MT CO_2e/yr**
Calculated Efficiency Metric [6]	**13.1**	**MT CO_2e/1,000 sqft**
Operational GHG Efficiency Metric Threshold [7]	**26.5**	**MT CO_2e/1,000 sqft**
Exceeds Threshold?	NO	**-**

Notes:

[1] Emissions are presented as CO_2e, which include CO_2, CH_4, and N_2O emissions, weighted by their respective global warming potentials.

[2] Emissions totals may not add up due to rounding.

[3] Obtained from CalEEMod output file for the proposed Project operation in **Appendix B-1**.

[4] Obtained from **Table B-12** in **Appendix B**.

[5] Emission reductions associated with on-site electric vehicle chargers are obtained from **Table 4-16**.

[6] Efficiency metric is calculated as the total operational emissions divided by the building square footage of the Project (165,200 sqft).

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
Discount Club	165	1000sqft	3.79	165,000	318,349	—	—	—
Gasoline/Service Station	16.0	Pump	0.30	2,259	0.00	—	—	—

Parking Lot	617	Space	8.58	0.00	0.00	—	—	—
Enclosed Parking with Elevator	214	Space	2.30	100,000	0.00	—	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

Sector	#	Measure Title
Construction	C-5	Use Advanced Engine Tiers
Construction	C-6	Use Diesel Particulate Filters

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

5. Activity Data

5.1. Construction Schedule

Phase Name	Phase Type	Start Date	End Date	Days Per Week	Work Days per Phase	Phase Description
Site Preparation	Site Preparation	7/1/2026	8/6/2026	7.00	37.0	—
Grading	Grading	8/7/2026	1/27/2027	7.00	174	—
Building Construction	Building Construction	8/7/2026	5/17/2027	7.00	284	—
Paving	Paving	1/28/2027	4/16/2027	7.00	79.0	—
Architectural Coating	Architectural Coating	3/17/2027	5/17/2027	7.00	62.0	—

5.2. Off-Road Equipment

5.2.1. Unmitigated

Phase Name	Equipment Type	Fuel Type	Engine Tier	Number per Day	Hours Per Day	Horsepower	Load Factor
Site Preparation	Rubber Tired Dozers	Diesel	Average	3.00	8.00	367	0.40
Site Preparation	Tractors/Loaders/Backhoes	Diesel	Average	4.00	8.00	84.0	0.37
Grading	Graders	Diesel	Average	1.00	8.00	148	0.41
Grading	Excavators	Diesel	Average	2.00	8.00	36.0	0.38
Grading	Tractors/Loaders/Backhoes	Diesel	Average	2.00	8.00	84.0	0.37
Grading	Scrapers	Diesel	Average	2.00	8.00	423	0.48
Grading	Rubber Tired Dozers	Diesel	Average	1.00	8.00	367	0.40
Building Construction	Forklifts	Diesel	Average	3.00	8.00	82.0	0.20
Building Construction	Generator Sets	Diesel	Average	1.00	8.00	14.0	0.74
Building Construction	Cranes	Diesel	Average	1.00	7.00	367	0.29
Building Construction	Welders	Diesel	Average	1.00	8.00	46.0	0.45
Building Construction	Tractors/Loaders/Backhoes	Diesel	Average	3.00	7.00	84.0	0.37
Paving	Pavers	Diesel	Average	2.00	8.00	81.0	0.42
Paving	Paving Equipment	Diesel	Average	2.00	8.00	89.0	0.36

Paving	Rollers	Diesel	Average	2.00	8.00	36.0	0.38
Architectural Coating	Air Compressors	Diesel	Average	1.00	6.00	37.0	0.48

5.2.2. Mitigated

Phase Name	Equipment Type	Fuel Type	Engine Tier	Number per Day	Hours Per Day	Horsepower	Load Factor
Site Preparation	Rubber Tired Dozers	Diesel	Tier 3	3.00	8.00	367	0.40
Site Preparation	Tractors/Loaders/Backhoes	Diesel	Tier 3	4.00	8.00	84.0	0.37
Grading	Graders	Diesel	Tier 3	1.00	8.00	148	0.41
Grading	Excavators	Diesel	Average	2.00	8.00	36.0	0.38
Grading	Tractors/Loaders/Backhoes	Diesel	Tier 3	2.00	8.00	84.0	0.37
Grading	Scrapers	Diesel	Tier 3	2.00	8.00	423	0.48
Grading	Rubber Tired Dozers	Diesel	Tier 3	1.00	8.00	367	0.40

5.4. Vehicles

5.4.1. Construction Vehicle Control Strategies

Non-applicable. No control strategies activated by user.

5.5. Architectural Coatings

Phase Name	Residential Interior Area Coated (sq ft)	Residential Exterior Area Coated (sq ft)	Non-Residential Interior Area Coated (sq ft)	Non-Residential Exterior Area Coated (sq ft)	Parking Area Coated (sq ft)
Architectural Coating	0.00	0.00	255,397	84,130	28,436

5.6. Dust Mitigation

5.6.1. Construction Earthmoving Activities

Phase Name	Material Imported (Cubic Yards)	Material Exported (Cubic Yards)	Acres Graded (acres)	Material Demolished (sq. ft.)	Acres Paved (acres)
Grading	54,000	—	522	0.00	—
Paving	0.00	0.00	0.00	0.00	10.9

5.6.2. Construction Earthmoving Control Strategies

Control Strategies Applied	Frequency (per day)	PM10 Reduction	PM2.5 Reduction
Water Exposed Area	2	61%	61%

5.7. Construction Paving

Land Use	Area Paved (acres)	% Asphalt
Discount Club	0.00	0%
Gasoline/Service Station	0.00	0%
Parking Lot	8.58	100%
Enclosed Parking with Elevator	2.30	100%

5.8. Construction Electricity Consumption and Emissions Factors

kWh per Year and Emission Factor (lb/MWh)

Year	kWh per Year	CO2	CH4	N2O
2026	0.00	204	0.03	< 0.005
2027	0.00	204	0.03	< 0.005

5.18. Vegetation

5.18.1. Land Use Change

5.18.1.1. Unmitigated

Vegetation Land Use Type	Vegetation Soil Type	Initial Acres	Final Acres

5.18.1.2. Mitigated

Vegetation Land Use Type	Vegetation Soil Type	Initial Acres	Final Acres

5.18.1. Biomass Cover Type

5.18.1.1. Unmitigated

Biomass Cover Type	Initial Acres	Final Acres

5.18.1.2. Mitigated

Biomass Cover Type	Initial Acres	Final Acres

5.18.2. Sequestration

5.18.2.1. Unmitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)

5.18.2.2. Mitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)

8. User Changes to Default Data

Screen	Justification
Characteristics: Utility Information	—
Land Use	Based on project-specific information.
Construction: Construction Phases	Based on project-specific information.
Construction: Dust From Material Movement	Construction material movement based on project-specific information. Watering 2x/day based on Rule 223-1, Table 1.
Construction: Architectural Coatings	Updated the VOC emission factor based on EDCAPCD Rule 215 Limits.
Construction: Electricity	—
Construction: On-Road Fugitive Dust	Percent paved roads updated based on Project-specific information.

5.4. Vehicles

5.4.1. Construction Vehicle Control Strategies

Non-applicable. No control strategies activated by user.

5.5. Architectural Coatings

Phase Name	Residential Interior Area Coated (sq ft)	Residential Exterior Area Coated (sq ft)	Non-Residential Interior Area Coated (sq ft)	Non-Residential Exterior Area Coated (sq ft)	Parking Area Coated (sq ft)
Architectural Coating	0.00	0.00	255,397	84,130	28,436

5.6. Dust Mitigation

5.6.1. Construction Earthmoving Activities

Phase Name	Material Imported (Cubic Yards)	Material Exported (Cubic Yards)	Acres Graded (acres)	Material Demolished (sq. ft.)	Acres Paved (acres)
Grading	107,000	53,000	522	0.00	—
Paving	0.00	0.00	0.00	0.00	10.9

5.6.2. Construction Earthmoving Control Strategies

Control Strategies Applied	Frequency (per day)	PM10 Reduction	PM2.5 Reduction
Water Exposed Area	2	61%	61%

5.7. Construction Paving

Land Use	Area Paved (acres)	% Asphalt
Discount Club	0.00	0%
Gasoline/Service Station	0.00	0%
Parking Lot	8.58	100%
Enclosed Parking with Elevator	2.30	100%

5.8. Construction Electricity Consumption and Emissions Factors

kWh per Year and Emission Factor (lb/MWh)

Year	kWh per Year	CO2	CH4	N2O
2026	0.00	204	0.03	< 0.005
2027	0.00	204	0.03	< 0.005

5.18. Vegetation

5.18.1. Land Use Change

5.18.1.1. Unmitigated

Vegetation Land Use Type	Vegetation Soil Type	Initial Acres	Final Acres

5.18.1.2. Mitigated

Vegetation Land Use Type	Vegetation Soil Type	Initial Acres	Final Acres

5.18.1. Biomass Cover Type

5.18.1.1. Unmitigated

Biomass Cover Type	Initial Acres	Final Acres

5.18.1.2. Mitigated

Biomass Cover Type	Initial Acres	Final Acres

5.18.2. Sequestration

5.18.2.1. Unmitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)

5.18.2.2. Mitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)

8. User Changes to Default Data

Screen	Justification
Characteristics: Utility Information	—
Land Use	Based on project-specific information.
Construction: Construction Phases	Based on project-specific information.
Construction: Dust From Material Movement	Construction material movement based on project-specific information. Watering 2x/day based on Rule 223-1, Table 1.
Construction: Architectural Coatings	Updated the VOC emission factor based on EDCAPCD Rule 215 Limits.
Construction: Electricity	—
Construction: On-Road Fugitive Dust	Percent paved roads updated based on Project-specific information.

APPENDIX A-3
CALEEMOD MODEL RUN FOR CONCRETE TRUCK EMISSIONS DURING PROJECT CONSTRUCTION

EDH Costco Construction - Concrete Trucks Custom Report

Table of Contents

1. Basic Project Information

1.1. Basic Project Information

1.2. Land Use Types

1.3. User-Selected Emission Reduction Measures by Emissions Sector

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

2.2. Construction Emissions by Year, Unmitigated

3. Construction Emissions Details

3.1. Building Construction - Concrete Pour (2026) - Unmitigated

4. Operations Emissions Details

4.10. Soil Carbon Accumulation By Vegetation Type

4.10.1. Soil Carbon Accumulation By Vegetation Type - Unmitigated

4.10.2. Above and Belowground Carbon Accumulation by Land Use Type - Unmitigated

4.10.3. Avoided and Sequestered Emissions by Species - Unmitigated

5. Activity Data

5.1. Construction Schedule

5. Activity Data

5.1. Construction Schedule

Phase Name	Phase Type	Start Date	End Date	Days Per Week	Work Days per Phase	Phase Description
Building Construction - Concrete Pour	Building Construction	12/3/2026	12/10/2026	7.00	8.00	—

5.2. Off-Road Equipment

5.2.1. Unmitigated

Phase Name	Equipment Type	Fuel Type	Engine Tier	Number per Day	Hours Per Day	Horsepower	Load Factor

5.3. Construction Vehicles

5.3.1. Unmitigated

Phase Name	Trip Type	One-Way Trips per Day	Miles per Trip	Vehicle Mix
Building Construction - Concrete Pour	—	—	—	—
Building Construction - Concrete Pour	Worker	0.00	0.00	LDA,LDT1,LDT2
Building Construction - Concrete Pour	Vendor	104	8.80	HHDT
Building Construction - Concrete Pour	Hauling	0.00	0.00	HHDT
Building Construction - Concrete Pour	Onsite truck	—	—	HHDT

5.4. Vehicles

5.4.1. Construction Vehicle Control Strategies

Non-applicable. No control strategies activated by user.

5.5. Architectural Coatings

Phase Name	Residential Interior Area Coated (sq ft)	Residential Exterior Area Coated (sq ft)	Non-Residential Interior Area Coated (sq ft)	Non-Residential Exterior Area Coated (sq ft)	Parking Area Coated (sq ft)

5.6. Dust Mitigation

5.6.1. Construction Earthmoving Activities

Phase Name	Material Imported (cy)	Material Exported (cy)	Acres Graded (acres)	Material Demolished (sq. ft.)	Acres Paved (acres)

5.6.2. Construction Earthmoving Control Strategies

Non-applicable. No control strategies activated by user.

5.7. Construction Paving

Land Use	Area Paved (acres)	% Asphalt
Discount Club	0.00	0%

5.8. Construction Electricity Consumption and Emissions Factors

kWh per Year and Emission Factor (lb/MWh)

Year	kWh per Year	CO2	CH4	N2O
2026	0.00	204	0.03	< 0.005

5.18. Vegetation

5.18.1. Land Use Change

5.18.1.1. Unmitigated

Vegetation Land Use Type	Vegetation Soil Type	Initial Acres	Final Acres

5.18.1. Biomass Cover Type

5.18.1.1. Unmitigated

Biomass Cover Type	Initial Acres	Final Acres

5.18.2. Sequestration

5.18.2.1. Unmitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)

8. User Changes to Default Data

Screen	Justification
Characteristics: Utility Information	—
Land Use	Project-specific information was provided by the Project Applicant.
Construction: Construction Phases	Based on project-specific information.
Construction: Off-Road Equipment	Concrete truck run only.
Construction: Trips and VMT	Vendor fleet mix based on project-specific information.
Construction: Electricity	—
Construction: On-Road Fugitive Dust	Percent paved roads updated based on Project-specific information.

5. Activity Data

5.1. Construction Schedule

Phase Name	Phase Type	Start Date	End Date	Days Per Week	Work Days per Phase	Phase Description
Linear, Grubbing & Land Clearing	Linear, Grubbing & Land Clearing	7/1/2026	7/26/2026	7.00	26.0	—
Linear, Grading & Excavation	Linear, Grading & Excavation	7/27/2026	11/8/2026	7.00	105	—
Linear, Drainage, Utilities, & Sub-Grade	Linear, Drainage, Utilities, & Sub-Grade	11/9/2026	2/8/2027	7.00	92.0	—
Linear, Paving	Linear, Paving	2/9/2027	3/19/2027	7.00	39.0	—

5.2. Off-Road Equipment

5.2.1. Unmitigated

Phase Name	Equipment Type	Fuel Type	Engine Tier	Number per Day	Hours Per Day	Horsepower	Load Factor
Linear, Grubbing & Land Clearing	Crawler Tractors	Diesel	Average	1.00	8.00	87.0	0.43
Linear, Grubbing & Land Clearing	Excavators	Diesel	Average	2.00	8.00	36.0	0.38
Linear, Grubbing & Land Clearing	Signal Boards	Electric	Average	1.00	8.00	6.00	0.82
Linear, Grading & Excavation	Crawler Tractors	Diesel	Average	1.00	8.00	87.0	0.43
Linear, Grading & Excavation	Rollers	Diesel	Average	2.00	8.00	36.0	0.38
Linear, Grading & Excavation	Signal Boards	Electric	Average	1.00	8.00	6.00	0.82
Linear, Drainage, Utilities, & Sub-Grade	Air Compressors	Diesel	Average	1.00	8.00	37.0	0.48
Linear, Drainage, Utilities, & Sub-Grade	Plate Compactors	Diesel	Average	1.00	8.00	8.00	0.43

Linear, Drainage, Utilities, & Sub-Grade	Pumps	Diesel	Average	1.00	8.00	11.0	0.74
Linear, Drainage, Utilities, & Sub-Grade	Rough Terrain Forklifts	Diesel	Average	1.00	8.00	96.0	0.40
Linear, Drainage, Utilities, & Sub-Grade	Scrapers	Diesel	Average	1.00	8.00	423	0.48
Linear, Drainage, Utilities, & Sub-Grade	Signal Boards	Electric	Average	1.00	8.00	6.00	0.82
Linear, Paving	Pavers	Diesel	Average	1.00	8.00	81.0	0.42
Linear, Paving	Paving Equipment	Diesel	Average	1.00	8.00	89.0	0.36
Linear, Paving	Signal Boards	Electric	Average	1.00	8.00	6.00	0.82

5.2.2. Mitigated

Phase Name	Equipment Type	Fuel Type	Engine Tier	Number per Day	Hours Per Day	Horsepower	Load Factor
Linear, Grubbing & Land Clearing	Crawler Tractors	Diesel	Tier 3	1.00	8.00	87.0	0.43
Linear, Grubbing & Land Clearing	Excavators	Diesel	Average	2.00	8.00	36.0	0.38
Linear, Grubbing & Land Clearing	Signal Boards	Electric	Average	1.00	8.00	6.00	0.82
Linear, Grading & Excavation	Crawler Tractors	Diesel	Tier 3	1.00	8.00	87.0	0.43
Linear, Grading & Excavation	Rollers	Diesel	Average	2.00	8.00	36.0	0.38
Linear, Grading & Excavation	Signal Boards	Electric	Average	1.00	8.00	6.00	0.82
Linear, Drainage, Utilities, & Sub-Grade	Air Compressors	Diesel	Average	1.00	8.00	37.0	0.48
Linear, Drainage, Utilities, & Sub-Grade	Plate Compactors	Diesel	Average	1.00	8.00	8.00	0.43
Linear, Drainage, Utilities, & Sub-Grade	Pumps	Diesel	Average	1.00	8.00	11.0	0.74

Linear, Drainage, Utilities, & Sub-Grade	Rough Terrain Forklifts	Diesel	Tier 3	1.00	8.00	96.0	0.40
Linear, Drainage, Utilities, & Sub-Grade	Scrapers	Diesel	Tier 3	1.00	8.00	423	0.48
Linear, Drainage, Utilities, & Sub-Grade	Signal Boards	Electric	Average	1.00	8.00	6.00	0.82
Linear, Paving	Pavers	Diesel	Tier 3	1.00	8.00	81.0	0.42
Linear, Paving	Paving Equipment	Diesel	Tier 3	1.00	8.00	89.0	0.36
Linear, Paving	Signal Boards	Electric	Average	1.00	8.00	6.00	0.82

Linear, Paving	Onsite truck	—	—	HHDT

5.4. Vehicles

5.4.1. Construction Vehicle Control Strategies

Non-applicable. No control strategies activated by user.

5.5. Architectural Coatings

Phase Name	Residential Interior Area Coated (sq ft)	Residential Exterior Area Coated (sq ft)	Non-Residential Interior Area Coated (sq ft)	Non-Residential Exterior Area Coated (sq ft)	Parking Area Coated (sq ft)

5.6. Dust Mitigation

5.6.1. Construction Earthmoving Activities

Phase Name	Material Imported (Cubic Yards)	Material Exported (Cubic Yards)	Acres Graded (acres)	Material Demolished (Ton of Debris)	Acres Paved (acres)
Linear, Grubbing & Land Clearing	0.00	0.00	0.00	1,284	—
Linear, Grading & Excavation	70.0	—	7.20	0.00	—

5.6.2. Construction Earthmoving Control Strategies

Control Strategies Applied	Frequency (per day)	PM10 Reduction	PM2.5 Reduction
Water Exposed Area	2	61%	61%
Water Demolished Area	2	36%	36%

5.7. Construction Paving

Land Use	Area Paved (acres)	% Asphalt
Road Widening	7.20	100%

5.8. Construction Electricity Consumption and Emissions Factors

kWh per Year and Emission Factor (lb/MWh)

Year	kWh per Year	CO2	CH4	N2O
2026	88.1	204	0.03	< 0.005
2027	58.7	204	0.03	< 0.005

5.18. Vegetation

5.18.1. Land Use Change

5.18.1.1. Unmitigated

Vegetation Land Use Type	Vegetation Soil Type	Initial Acres	Final Acres

5.18.1.2. Mitigated

Vegetation Land Use Type	Vegetation Soil Type	Initial Acres	Final Acres

5.18.1. Biomass Cover Type

5.18.1.1. Unmitigated

Biomass Cover Type	Initial Acres	Final Acres

5.18.1.2. Mitigated

Biomass Cover Type	Initial Acres	Final Acres

5.18.2. Sequestration

5.18.2.1. Unmitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)

5.18.2.2. Mitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)

8. User Changes to Default Data

Screen	Justification
Construction: Demolition	Construction demolition material movement based on project-specific information. Watering 2x/day based on Rule 223-1, Table 1.
Construction: Trips and VMT	—
Construction: Construction Phases	Based on project-specific information.
Construction: Dust From Material Movement	Construction material movement based on project-specific information. Watering 2x/day based on Rule 223-1, Table 1.
Characteristics: Utility Information	—
Construction: Electricity	—
Construction: Off-Road Equipment	Equipment list updated to account for overlap of Project Construction and Site Access and Roadway Improvements Construction.
Construction: On-Road Fugitive Dust	Percent paved roads updated based on Project-specific information.

APPENDIX A-5
CONSTRUCTION EMISSION CALCULATION TABLES

List of Tables

Table A-1: Greenhouse Gas Emission Factors for Concrete Truck Idling

Table A-2: Greenhouse Gas Emissions from Concrete Trucks During Project Construction

Table A-1. Greenhouse Gas Emission Factors for Concrete Truck Idling
El Dorado Hills Costco Project
El Dorado Hills, California

EMFAC Vehicle Class	Fuel Type	Concrete Truck Fleet Mix [1]	CO_2 Emission Factor [2] (grams/idle-minute)	CH_4 Emission Factor [2] (grams/idle-minute)	N_2O Emission Factor [2] (grams/idle-minute)
HHDT	Diesel	100%	95	0.0018	0
Weighted Average Emission Factor [3]			95	0.0018	0

Notes:

[1] Concrete trucks are conservatively assumed to be diesel-fueled HHDT.

[2] Idling emission factors were obtained from the default EMFAC2021 project-level output for El Dorado (MC) sub-area in calendar year 2026.

[3] Weighted average emission factors for concrete trucks are calculated as the sumproduct of the project specific fleet mix and the emission factors for the individual vehicle class/fuel categories within that fleet mix.

Abbreviations:

CH_4 - methane

CO_2 - carbon dioxide

EMFAC - EMission FACtors model

HHDT - Heavy Heavy-Duty Truck

MC - Mountain County

N_2O - nitrous oxide

Table A-2. Greenhouse Gas Emissions from Concrete Trucks During Project Construction
El Dorado Hills Costco Project
El Dorado Hills, California

Concrete Truck Activity	Number of Days of Concrete Truck Activity [1] (days)	Daily Trips [1] (round trips/day)	Annual Trips (round trips/year)	Idle Duration [1] (minutes/ round trip)	CO_2 Emissions (MT/year)	CH_4 Emissions (MT/year)	N_2O Emissions (MT/year)	CO_2e Emissions (MT/year)
Idling [2]	8	52	416	60	2.4	4.5E-05	0	2.4
On-Road Travel [3]	8	52	416	-	15	9.8E-05	0.0023	15
Total Emissions					**17**	**1.4E-04**	**0.0023**	**18**

Notes:

[1] Based on Project-specific information.

[2] Idling emissions were estimated as a product of the emission factors from **Table A-1**, the idle duration per round trip, and the number of round trips per year.

[3] Obtained from the CalEEMod model run for concrete trucks in **Appendix A-3**.

Abbreviations:

CalEEMod - CALifornia Emissions Estimator MODel
CH_4 - methane
CO_2 - carbon dioxide
CO_2e - carbon dioxide equivalents
MT - metric tons
N_2O - nitrous oxide

APPENDIX B
EMISSION CALCULATIONS FOR PROJECT OPERATION

CALEEMOD MODEL RUN FOR PROJECT OPERATION

EDH Costco Operation Custom Report

Table of Contents

1. Basic Project Information

1.1. Basic Project Information

1.2. Land Use Types

1.3. User-Selected Emission Reduction Measures by Emissions Sector

2. Emissions Summary

2.4. Operations Emissions Compared Against Thresholds

2.5. Operations Emissions by Sector, Unmitigated

2.6. Operations Emissions by Sector, Mitigated

4. Operations Emissions Details

4.1. Mobile Emissions by Land Use

4.1.1. Unmitigated

4.1.2. Mitigated

4.2. Energy

4.2.1. Electricity Emissions By Land Use - Unmitigated

4.2.2. Electricity Emissions By Land Use - Mitigated

4.2.3. Natural Gas Emissions By Land Use - Unmitigated

4.2.4. Natural Gas Emissions By Land Use - Mitigated

4.3. Area Emissions by Source

4.3.1. Unmitigated

4.3.2. Mitigated

4.4. Water Emissions by Land Use

4.4.1. Unmitigated

4.4.2. Mitigated

4.5. Waste Emissions by Land Use

4.5.1. Unmitigated

4.5.2. Mitigated

4.6. Refrigerant Emissions by Land Use

4.6.1. Unmitigated

4.6.2. Mitigated

4.7. Offroad Emissions By Equipment Type

4.7.1. Unmitigated

4.7.2. Mitigated

4.8. Stationary Emissions By Equipment Type

4.8.1. Unmitigated

4.8.2. Mitigated

4.9. User Defined Emissions By Equipment Type

4.9.1. Unmitigated

4.9.2. Mitigated

4.10. Soil Carbon Accumulation By Vegetation Type

4.10.1. Soil Carbon Accumulation By Vegetation Type - Unmitigated

4.10.2. Above and Belowground Carbon Accumulation by Land Use Type - Unmitigated

4.10.3. Avoided and Sequestered Emissions by Species - Unmitigated

4.10.4. Soil Carbon Accumulation By Vegetation Type - Mitigated

4.10.5. Above and Belowground Carbon Accumulation by Land Use Type - Mitigated

4.10.6. Avoided and Sequestered Emissions by Species - Mitigated

5. Activity Data

5.9. Operational Mobile Sources

5.9.1. Unmitigated

5.9.2. Mitigated

5.10. Operational Area Sources

5.10.1. Hearths

5.10.1.1. Unmitigated

5.10.1.2. Mitigated

5.10.2. Architectural Coatings

5.10.3. Landscape Equipment

5.10.4. Landscape Equipment - Mitigated

5.11. Operational Energy Consumption

5.11.1. Unmitigated

5.11.2. Mitigated

5.12. Operational Water and Wastewater Consumption

5.12.1. Unmitigated

5.12.2. Mitigated

5.13. Operational Waste Generation

5.13.1. Unmitigated

5.13.2. Mitigated

5.14. Operational Refrigeration and Air Conditioning Equipment

5.14.1. Unmitigated

5.14.2. Mitigated

5.15. Operational Off-Road Equipment

5.15.1. Unmitigated

5.15.2. Mitigated

5.16. Stationary Sources

5.16.1. Emergency Generators and Fire Pumps

5.16.2. Process Boilers

5.17. User Defined

5.18. Vegetation

5.18.1. Land Use Change

5.18.1.1. Unmitigated

5.18.1.2. Mitigated

5.18.1. Biomass Cover Type

5.18.1.1. Unmitigated

5.18.1.2. Mitigated

5.18.2. Sequestration

5.18.2.1. Unmitigated

5.18.2.2. Mitigated

8. User Changes to Default Data

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	EDH Costco Operation
Operational Year	2027
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	2.70
Precipitation (days)	9.40
Location	38.659852, -121.056799
County	El Dorado-Mountain County
City	Unincorporated
Air District	El Dorado County AQMD
Air Basin	Mountain Counties
TAZ	406
EDFZ	4
Electric Utility	Pacific Gas & Electric Company
Gas Utility	Pacific Gas & Electric
App Version	2022.1.1.29

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
Discount Club	165	1000sqft	3.79	165,000	318,349	—	—	—
Gasoline/Service Station	16.0	Pump	0.30	2,259	0.00	—	—	—

Enclosed Parking with Elevator	214	Space	2.30	100,000	0.00	—	—	—
Parking Lot	617	Space	8.58	0.00	0.00	—	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

Sector	#	Measure Title
Water	W-4	Require Low-Flow Water Fixtures
Water	W-5	Design Water-Efficient Landscapes

2. Emissions Summary

2.4. Operations Emissions Compared Against Thresholds

4. Operations Emissions Details

4.1. Mobile Emissions by Land Use

4.1.1. Unmitigated

Mobile source emissions results are presented in Sections 2.6. No further detailed breakdown of emissions is available.

4.1.2. Mitigated

Mobile source emissions results are presented in Sections 2.5. No further detailed breakdown of emissions is available.

4.2. Energy

4.2.1. Electricity Emissions By Land Use - Unmitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

Warehouse and Tire Center Delivery Trucks [5]	90	26	26	2,340	2,340	-	-	8,238	741,420	61,785	-
TRUs for Warehouse Delivery Trucks [6]	-	-	-	-	-	-	-	-	-	-	413,269

Notes:

[1] Weekday passenger vehicle trip and VMT information were obtained from the El Dorado Costco CEQA Analysis, dated July 23, 2025. Weekend passenger trip and VMT information were provided by Kittelson and Associates.

[2] GDF customer vehicles represent vehicles used by the patrons of the fuel station.

[3] Warehouse and employee vehicles represent vehicles used by patrons of the warehouse and employee vehicles.

[4] Idle duration for passenger vehicles visiting the gas station was provided by Kittelson & Associates.

[5] Trip lengths and trip rates for delivery trucks are based on Project-specific information. The annual VMT is estimated as a product of trip length and annual average trips. The annual idle duration for delivery trucks is estimated as a product of idle duration per round trip and annual round trips. The idle duration per round trip is assumed to be 15 minutes (maximum 5 minutes at project site entry, maximum 5 minutes at the fuel tank and maximum 5 minutes at project site exit), consistent with the CARB Air Toxic Control Measure to Limit Diesel-Fueled Commercial Motor Vehicle Idling. Available at https://ww2.arb.ca.gov/our-work/programs/atcm-to-limit-vehicle-idling/about. Accessed: March 2025.

[6] Annual TRU operational duration is estimated based on total operational time per TRU and the number of TRUs per year, as provided in the TRU Trip Information below.

[7] The on-site TRU operational time during truck idling is assumed to 15 minutes as described above in footnote 3. Note, the TRUs are not expected to idle for more than 5 minutes at the dock while unloading goods at the warehouse.

[8] The on-site warehouse delivery truck travel distance was estimated based on the proposed Project site layout. The off-site warehouse delivery truck travel distance was calculated by subtracting the on-site travel distance from the total trip length for the warehouse delivery truck.

[9] The on-site and off-site average truck travel speed are consistent with CARB's assumptions in Appendix I of the Proposed Amendments to the ATCM Measure for In-Use Diesel-Fueled TRU and TRU Generator Sets, and Facilities Where TRUs Operate. Available at: https://ww2.arb.ca.gov/sites/default/files/barcu/board/rulemaking/tru2021/appi.pdf. Accessed: March 2025.

[10] The on-site and off-site TRU operational time during warehouse delivery truck travel was calculated by dividing the on-site and off-site truck travel distances by their corresponding average truck travel speeds, respectively.

[11] The total operational time per TRU includes the operational time during on-site and off-site truck travel and on-site truck idling.

[12] The number of TRUs per day is based on Project-specific information. The total number of TRU uses per year was estimated by multiplying the daily number of TRUs by 365 operational days per year.

TRU Trip Information:

On-Site Operational Time During Truck Idling [7]	15	minutes/round trip per TRU
On-Site Truck Travel Distance [8]	0.2	miles/round trip
On-Site Average Truck Travel Speed [9]	5	miles/hour
On-Site Operational Time During Truck Travel [10]	2.9	minutes/round trip per TRU
Off-Site Truck Travel Distance [8]	179.8	miles/round trip
Off-Site Average Truck Travel Speed [9]	30	miles/hour
Off-Site Operational Time During Truck Travel [10]	360	minutes/round trip per TRU
Total Operational Time [11]	377.4	minutes/TRU
Number of TRUs [12]	3	TRUs/day
Number of TRUs [12]	1,095	TRUs/year

Abbreviations:

ATCM - Airborne Toxic Control Measure
CARB - California Air Resources Board
CEQA - California Environmental Quality Act
GDF - gasoline dispensing facility
mi - mile
min - minute
TRU - transport refrigeration unit
VMT - vehicle miles traveled

Table B-2. Passenger Vehicle Fleet Mix for El Dorado County
El Dorado Hills Costco Project
El Dorado Hills, California

EMFAC Vehicle Class	CalEEMod Default Fleet Mix [1]	Passenger Vehicle Fleet Mix [2]
LDA	37.9%	43.7%
LDT1	5.2%	6.0%
LDT2	26.3%	30.4%
MDV	17.3%	19.9%

MDV	Plug-in Hybrid	8,766	0.26%	0.25%
MDV	Electricity	9,787	-	0.28%
MDV	Diesel	15,203	-	0.44%

Notes:

[1] Default EMFAC2021 output for the El Dorado (MC) sub-area in calendar year 2027.

[2] The Project-specific vehicle fleet mix for passenger vehicles visiting the GDF represents vehicles used by patrons of the fuel station; they are conservatively assumed to be plug-in hybrids and gasoline-fueled vehicles only. The fleet mix is estimated by apportioning the passenger vehicle fleet mix for El Dorado County (**Table B-2**) into the project specific fuel types (gasoline and plug-in hybrid) within each passenger vehicle EMFAC vehicle class (LDA, LDT1, LDT2, and MDV) using the default EMFAC VMT output for those fuel types.

[3] The Project-specific vehicle fleet mix for warehouse and employee passenger vehicles represents the vehicles used by patrons and employees of the warehouse. The fleet mix is estimated by apportioning the passenger vehicle fleet mix for El Dorado County (**Table B-2**) within each passenger vehicle EMFAC vehicle class (LDA, LDT1, LDT2, and MDV) using the default EMFAC VMT output for the default fuel types (gasoline, plug-in hybrid, electricity, and diesel).

Abbreviations:

EMFAC - EMission FACtors model
GDF - gasoline dispensing facility
LDA - light duty automobiles
LDT - light-duty trucks
MC - Mountain County
MDV - medium-duty vehicle
VMT - vehicle miles traveled

Fuel Delivery Trucks [5]	19	3,650	69,350	27,375	-	138	0.0001	0.021	145
Warehouse and Tire Center Delivery Trucks [5]	90	8,238	741,420	61,785	-	1,457	0.0011	0.23	1,525
TRUs for Warehouse Delivery Trucks [6]	-	-	-	-	413,269	49	0.0020	0.0004	49
					Total Emissions [7]	**4,576**	**0.45**	**0.48**	**4,731**

Notes:

[1] Data obtained from **Table B-1**.

[2] CO_2, CH_4, N_2O emissions for on-road vehicles include running exhaust, starting exhaust, and idling exhaust. These emissions were estimated using emission factors from **Tables B-4 through B-10** along with annual VMT, trips, and idle duration.

[3] Total GHG emissions are presented as CO_2e, which include CO_2, CH_4, and N_2O emissions, weighted by their respective global warming potentials.

[4] Passenger vehicle trip emissions include travel (running exhaust) and starting exhaust emissions that are estimated using the number of one-way trips, and idling exhaust emissions that are estimated using the idle duration.

[5] Delivery truck trip emissions include travel (running exhaust) emssions that are estimated using the number of one-way trips, and idling exhaust emissions that are estimated using the idle duration. Note, there are no starting exhaust emissions for trucks as these are de minimis for diesel-fueled internal combustion engines.

[6] TRU emissions were estimated using emission factors from **Table B-11** and the annual TRU operational duration.

[7] Emissions totals may not add up due to rounding. Emissions shown as zero may be non-zero values; however, they are below a meaningful reporting level for this analysis.

Global Warming Potentials: [2]

CO_2	1
CH_4	25
N_2O	298

Abbreviations:
CH_4 - methane
CO_2 - carbon dioxide
CO_2e - carbon dioxide equivalent
GDF - gasoline dispensing facility
GHG - greenhouse gas
mi - mile
min - minute
MT - metric ton
N_2O - nitrous oxide
TRU - transport refrigeration unit
VMT - vehicle miles traveled
yr - year

Table B-13. Average Fuel Economy for Electric Miles Traveled by Warehouse and Employee Passenger Vehicles
El Dorado Hills Costco Project
El Dorado Hills, California

EMFAC Vehicle Class	Fuel	Project Specific Fleet Mix [1]	Fuel Economy [2,3] (mi/kWh)
LDA	Plug-in Hybrid	1.58%	3.31
LDA	Electricity	3.57%	2.59
LDT1	Plug-in Hybrid	0.02%	3.31
LDT1	Electricity	0.03%	2.59
LDT2	Plug-in Hybrid	0.37%	3.31
LDT2	Electricity	0.24%	2.59
MDV	Plug-in Hybrid	0.25%	3.31
MDV	Electricity	0.28%	2.59
Fleet Average Fuel Economy			**2.84**

Notes:

[1] Obtained from **Table B-3.**

[2] The average fuel efficiency for passenger vehicles operating in El Dorado (MC) sub-area in calendar year 2027 is obtained from EMFAC2021.

[3] The fleet average fuel efficiency for electric and plug-in hybrid passenger vehicles is estimated based on the Project-specific fleet mix and the fuel economy obtained from EMFAC2021 for each EMFAC vehicle class and fuel combination.

Abbreviations:

LDA - light duty automobiles
EMFAC - California Air Resources Board Emissions Factor Model
kWh - kilowatt-hour
LDT - light-duty trucks
MC - Mountain County
MDV - medium-duty vehicle
mi - mile

Table B-14. Greenhouse Gas Emission Factors for Gasoline-Fueled Passenger Vehicles Visiting the Project Site - Running Exhaust
El Dorado Hills Costco Project
El Dorado Hills, California

EMFAC Vehicle Class	Fuel Type	Project Specific Fleet Mix [1]	CO_2 Emission Factor [2] (g/mi)	CH_4 Emission Factor [2] (g/mi)	N_2O Emission Factor [2] (g/mi)
LDA	Gasoline	42.0%	266	0.0019	0.0042
LDA	Plug-in Hybrid	1.7%	294	0.0010	0.0013
LDT1	Gasoline	6.0%	329	0.0059	0.0090

LDT2	Gasoline	30.0%	333	0.0025	0.0053
LDT2	Plug-in Hybrid	0.4%	294	0.0010	0.0013
MDV	Gasoline	19.7%	405	0.0032	0.0064
MDV	Plug-in Hybrid	0.3%	294	0.0010	0.0013
Weighted Average Emission Factor for Gasoline VMT [3]			318	0.0025	0.0052

Notes:

[1] The Project-specific fleet mix for passenger vehicles visiting the GDF are obtained from **Table B-3**.

[2] The running exhaust emission factors for each EMFAC vehicle class/fuel combination for gasoline VMT were obtained from the default EMFAC2021 output for El Dorado (MC) sub-area calendar year 2027.

[3] Weighted average emission factors for passenger vehicles visiting the Project site are calculated as the sumproduct of the Project-specific fleet mix and the emission factors for the individual vehicle class/fuel categories within that fleet mix.

Abbreviations:

CH_4 - methane
CO_2 - carbon dioxide
EMFAC - EMission FACtors model
g/mi - grams per mile
GDF - gasoline dispensing facility
LDA - Light-Duty Automobile
LDT - Light-Duty Truck
MC - Mountain County
MDV - Medium-Duty Vehicle
N_2O - nitrous oxide
VMT - vehicle miles traveled

APPENDIX C
PROJECT EVALUATION AGAINST RELEVANT PLANS

List of Tables

Table C-1: Project Evaluation Against CARB's 2022 Scoping Plan Update

Table C-3: Project Evaluation Against El Dorado County Regional Transportation Plan 2020-2040

Table C-1. Project Evaluation Against CARB's 2022 Scoping Plan Update
El Dorado Hills Costco Project
El Dorado Hills, California

Priority Areas [1]	Priority GHG Reduction Strategies [1]	Does it Conflict?
Transportation Electrification	• Convert local government fleets to ZEVs and provide EV charging at public sites • Create a jurisdiction-specific ZEV ecosystem to support deployment of ZEVs statewide (such as building standards that exceed state building codes, permit streamlining, infrastructure siting, consumer education, preferential parking policies, and ZEV readiness plans)	**Does Not Conflict.** These strategies would be developed and implemented by local government fleets and the County rather than an individual project. However, the Proposed Project will meet the Voluntary Tier 1 Electric Vehicle Charging Standards as defined in the 2025 California Green Building Standards Code[2] by installing ten DC fast chargers that provide a total power of 1,800 kW. Additionally, these chargers will be powered by 100% renewable electrical power supplied by Pacific Gas & Electric (PG&E), as Costco has a Clean Energy Contract with PG&E.
VMT Reduction	• Reduce or eliminate minimum parking standards • Implement Complete Streets policies and investments, consistent with general plan circulation element requirements • Increase access to public transit by increasing density of development near transit, improving transit service by increasing service frequency, creating bus priority lanes, reducing or eliminating fares, microtransit, etc. • Increase public access to clean mobility options by planning for and investing in electric shuttles, bike share, car share, and walking • Implement parking pricing or transportation demand management pricing strategies • Amend zoning or development codes to enable mixed-use, walkable, transit-oriented, and compact infill development (such as increasing the allowable density of a neighborhood) • Preserve natural and working lands by implementing land use policies that guide development toward infill areas and do not convert "greenfield" land to urban uses (e.g., green belts, strategic conservation easements)	**Does Not Conflict.** These strategies would be developed and implemented by the County rather than an individual project. However, the Proposed Project includes several features and mitigation measures that align with this priority area as noted below: • The Proposed Project will implement **Mitigation Measure 3.14-2a: Provide a Mandatory Commute Reduction Program for Costco Employees** and **Mitigation Measure 3.14-2b: Implement Pedestrian Network Improvements** which would reduce vehicle miles travelled by employees by developing and implementing the following measures: (1) commute trip reduction marketing, (2) a ridesharing program for employees, (3) on-site end-of-trip bicycle facilities, and (4) pedestrian network improvements in the vicinity of the Project site. • The Project site is an infill development located near an El Dorado Transit bus route (50 Express) and bus stop (El Dorado Transit Park & Ride), therefore placing jobs that are accessible via public transit. Additionally the Project is located adjacent to homes, thereby providing retail and jobs near a housing-rich area served by El Dorado Transit. • While the Project does generate an increase in VMT,[3] the VMT analysis does not take into account the Costco trips "replacing" existing trips currently going to other retailers. Furthermore, the Project is expected to serve the existing population of the area by providing more convenient access to Costco services. The Project will allow customers to have multiple needs served in one trip, including but not limited to: eye exams, purchase of household goods and groceries, furniture store, appliance store, liquor store, and refueling at a gasoline dispensing facility. The VMT modeling does not measure the benefit of one Costco trip replacing multiple trips, and given these factors, it is likely that Costco members make fewer total retail shopping trips in a month or a year when they have the option of shopping at Costco than they would make if they did not have a Costco nearby.
Building Decarbonization	• Adopt all-electric new construction reach codes for residential and commercial uses • Adopt policies and incentive programs to implement energy efficiency retrofits for existing buildings, such as weatherization, lighting upgrades, and replacing energy-intensive appliances and equipment with more efficient systems (such as Energy Star-rated equipment and equipment controllers) • Adopt policies and incentive programs to electrify all appliances and equipment in existing buildings such as appliance rebates, existing building reach codes, or time of sale electrification ordinances • Facilitate deployment of renewable energy production and distribution and energy storage on privately owned land uses (e.g., permit streamlining, information sharing) • Deploy renewable energy production and energy storage directly in new public projects and on existing public facilities (e.g., solar photovoltaic systems on rooftops of municipal buildings and on canopies in public parking lots, battery storage systems in municipal buildings)	**Does Not Conflict.** These strategies would be developed and implemented by the County rather than an individual project. However, the Proposed Project will incorporate several sustainability and energy efficiency measures including green building practices as required by the 2025 California Green Building Standards Code.[2] Refer to **Section 1.2** of this report for a detailed listing of these measures. Notably, the proposed Project operations will be powered 100% renewable electrical power supplied by PG&E, as Costco has a Clean Energy Contract with PG&E. The use of renewable electricity would facilitate deployment of renewable energy production.

EV - electric vehicle
GHG - greenhouse gas
kW - kilowatt
ZEV - zero emission vehicle

Table C-2. Project Evaluation Against 2020 SACOG MTP/SCS
El Dorado Hills Costco Project
El Dorado Hills, California

Priority Policy Areas [1]	Supporting Policies [1]	Does it Conflict?
Build vibrant places for today's and tomorrow's residents	**POLICY 1**: Provide incentives, information, tools, technical assistance, and encouragement to support implementation of the Sacramento region's Sustainable Communities Strategy. **POLICY 2**: Pursue funding opportunities that support the infrastructure improvements needed to support new housing and employment opportunities in existing urban, suburban, and rural communities.	**Does Not Conflict.** These policies would be implemented by the County rather than an individual project. However, the Proposed Project would create new employment opportunities, and is located near an El Dorado Transit bus route (50 Express) and bus stop (El Dorado Transit Park & Ride), therefore placing jobs that are accessible via public transit. Additionally the Project is located adjacent to homes, therefore the Project would provide retail and jobs near a housing-rich area served by El Dorado Transit.
Foster the next generation of mobility solutions	**POLICY 3**: Implement pilot projects aimed at making microtransit and micromobility (such as bike and scooter share) work for urban, suburban, rural, and low-income areas of the region. **POLICY 4**: Pursue flexibility in state and federal funding sources to enable testing and implementation of innovative mobility solutions that are affordable, accessible, and reduce greenhouse gas emissions. **POLICY 5**: Support innovative education and transportation demand management programs covering all parts of the region, to offer a variety of alternatives to driving alone. **POLICY 6**: Pursue new funding and planning opportunities to support electric vehicle infrastructure and programs for both private vehicles and public transit fleets. **POLICY 7**: Support transit agencies and local governments looking to secure funds to improve the frequency, hours of service, and coverage of productive bus service (including bus rapid transit, express bus, and more frequent fixed-route service). **POLICY 8**: Support more seamless travel through better traveler information for trip planning, reliable service and coordination between operators for transit, shared mobility and other first/last mile connections.	**Does Not Conflict.** These policies would be implemented by the County rather than an individual project. However, the Proposed Project includes a number of features and mitigation measures that align with these policies as noted below: • The Proposed Project will implement **Mitigation Measure 3.14-2a: Provide a Mandatory Commute Reduction Program for Costco Employees** and **Mitigation Measure 3.14-2b: Implement Pedestrian Network Improvements** which would reduce vehicle miles travelled by employees by developing and implementing the following measures: (1) commute trip reduction marketing, (2) a ridesharing program for employees, (3) on-site end-of-trip bicycle facilities, and (4) pedestrian network improvements in the vicinity of the Project site. • The Project site is an infill development located near an El Dorado Transit bus route (50 Express) and bus stop (El Dorado Transit Park & Ride), therefore placing jobs that are accessible via public transit. Additionally the Project is located adjacent to homes, thereby providing retail and jobs near a housing-rich area served by El Dorado Transit. • The Proposed Project will meet the Voluntary Tier 1 Electric Vehicle Charging Standards as defined in the 2025 California Green Building Standards Code[2] by installing ten DC fast chargers that provide a total power of 1,800 kW. Additionally, these chargers will be powered by 100% renewable electrical power supplied by Pacific Gas & Electric (PG&E), as Costco has a Clean Energy Contract with PG&E.
Modernize the way we pay for transportation infrastructure	**POLICY 9**: Pursue new and reformed transportation funding methods and sources to implement the MTP/SCS that are stable, predictable, flexible, and adequate to operate, maintain, and expand the transportation system. Mileage-based fees/PayGo should replace, not be on top of, existing state fuel taxes. **POLICY 10**: Find solutions and reliable funding sources to meet the maintenance needs of roads that support rural economies, natural resource-based industries, agriculture, farm-to-market routes, and freight corridors. **POLICY 11**: Initiate a leadership role in testing and piloting roadway pricing mechanisms, such as facility-based tolling and mileage-based fees, in partnership with the state, federal, and local agencies and private sector organizations. **POLICY 12**: Take steps to implement tolling or pricing of specific lanes on major facilities, such as freeways, to improve traffic management, reliability, and operations of those facilities and to help raise funding for the cost of building and maintaining large capital investments. **POLICY 13**: All new major expansion projects on the region's freeways and expressways should be planned for eventual deployment of pricing options to both manage demand and provide a financing mechanism for capital costs. Any pricing strategy pursued should be sensitive to changes in roadway demand during different parts of the day (peak/off-peak) with the objective of managing demand and providing travel choice. **POLICY 14**: Revenues generated from facility-based pricing should be used to build and maintain a regional network of paid express lanes and, where surplus revenue is available, on strategic transit services (e.g., express buses) or other mobility solutions that can reduce vehicle miles traveled and provide multiple travel options along priced corridors. **POLICY 15**: New taxes and fees, including mileage based fees, intended to raise additional funding for transportation purposes should prioritize closing the gap for system maintenance and state-of-good repair needs before investing in system expansion. **POLICY 16**: When implementing pricing strategies, both paid express lanes and mileage-based fees/PayGo, the region should make every effort to avoid negatively impacting lower income and rural households. For regional implementation of PayGo, explore innovative options for setting fees, such as including off-setting incentives for non-vehicular travel, off-sets to fees for disadvantaged households, and keying fee rates to maintenance and fix-if-first goals.	**Does Not Conflict.** These policies would be implemented by the County rather than an individual project. The Proposed Project would not conflict with the County's ability to implement these strategies.

Table C-2. Project Evaluation Against 2020 SACOG MTP/SCS
El Dorado Hills Costco Project
El Dorado Hills, California

Priority Policy Areas [1]	Supporting Policies [1]	Does it Conflict?
Build and maintain a safe, resilient, and multimodal transportation system	**POLICY 17**: Reduce the growing system maintenance funding gap by prioritizing spending flexible revenues on state-of-good repair improvements before investing in system expansion. **POLICY 18**: System expansion investments that are not directly paid for by new development should be focused on fixing major bottlenecks that exist today, and/or incentivize development opportunities in infill areas. **POLICY 19**: Transit expansion, particularly light rail and other fixed infrastructure transit options, should be targeted at communities with supportive land use policies and development patterns that will generate transit ridership and improve the cost recovery rates for transit service. **POLICY 20**: Prioritize cost effective safety improvements that will help the region eliminate fatal transportation related accidents. **POLICY 21**: Transportation infrastructure investments should be planned and built in a way that makes the system more resilient to extreme weather events and natural disasters. **POLICY 22**: Invest in bicycle and pedestrian infrastructure to encourage healthy, active transportation trips and provide recreational opportunities for residents and visitors. **POLICY 23**: Prioritize and incentivize transportation investments that benefit environmental justice communities. **POLICY 24**: Invest in transportation improvements that improve access to major economic assets and job centers. **POLICY 25**: Prioritize investments in transportation improvements that reduce greenhouse gas emissions and vehicle miles traveled.	**Does Not Conflict.** These policies would be implemented by the County rather than an individual project. However, the Proposed Project includes a number of features and mitigation measures that align with these policies as noted below: • The Proposed Project will implement **Mitigation Measure 3.14-2a: Provide a Mandatory Commute Reduction Program for Costco Employees** and **Mitigation Measure 3.14-2b: Implement Pedestrian Network Improvements** which would reduce vehicle miles traveled by employees by developing and implementing the following measures: (1) commute trip reduction marketing, (2) a ridesharing program for employees, (3) on-site end-of-trip bicycle facilities, and (4) pedestrian network improvements in the vicinity of the Project site. Note, the pedestrian network improvements include (1) constructing sidewalks along the project frontage on Clarksville Crossing and Silva Valley Parkway and (2) constructing sidewalks north of the project frontage on the east side of Silva Valley Parkway to connect to the existing sidewalk near Oak Meadow Elementary School and providing connectivity with the surrounding neighborhood. • The Proposed Project will implement offsite transportation improvements in coordination with the County to address compliance with the El Dorado County Transportation and Circulation Element policies. This would include (1) the addition of a new signalized intersection on Silva Valley Parkway, shared with the South Site's main driveway, (2) the addition of a new signalized intersection with Silva Valley Parkway shared with the North Site, (3) installation of a partial traffic signal at the intersection of Silva Valley Parkway and Clarksville Crossing, (4) installation of 150-foot dual northbound left turn lanes at the proposed signalized intersection of Silva Valley Parkway and the project driveway, and (5) the addition of a northbound right turn lane, change in the right turn phase to be permissive and overlap, and increase of the westbound left turn storage length at the intersection of White Rock Road and Valley View Parkway-Vine Street. These improvements to the transportation infrastructure would help meet the existing and future needs of the Project. • The Project site is an infill development located near an El Dorado Transit bus route (50 Express) and bus stop (El Dorado Transit Park & Ride), therefore placing jobs that are accessible via public transit. Additionally the Project is located adjacent to homes, thereby providing retail and jobs near a housing-rich area served by El Dorado Transit. • The Proposed Project will meet the Voluntary Tier 1 Electric Vehicle Charging Standards as defined in the 2025 California Green Building Standards Code[2] by installing ten DC fast chargers that provide a total power of 1,800 kW. Additionally, these chargers will be powered by 100% renewable electrical power supplied by Pacific Gas & Electric (PG&E), as Costco has a Clean Energy Contract with PG&E. This will reduce the greenhouse gas emissions from on-road vehicles travelling in the County.

Table C-3. Project Evaluation Against El Dorado County Regional Transportation Plan 2020-2040
El Dorado Hills Costco Project
El Dorado Hills, California

Goal [1]	Objective [1]	Does it Conflict?
Integrate local and regional land use, air quality, and transportation planning to create a transportation system which supports the needs of the system user, enhances the economy, preserves the environment, and protects the community character.	**Objective A**: Provide transportation planning support services to local jurisdictions regarding the transportation impacts of local land use decisions. **Objective B**: Support local, state, and regional jurisdictions to ensure the transportation infrastructure meets existing and future needs.	**Does Not Conflict.** Although this goal is not the responsibility of an individual commercial development project, the Proposed Project will implement several offsite transportation improvements in coordination with the County to address the existing and future needs of the region in the immediate vicinity of the Project site. These include (1) the addition of a new signalized intersection on Silva Valley Parkway, shared with the South Site's main driveway, (2) the addition of a new signalized intersection with Silva Valley Parkway shared with the North Site, (3) installation of a partial traffic signal at the intersection of Silva Valley Parkway and Clarksville Crossing, (4) installation of 150-foot dual northbound left turn lanes at the proposed signalized intersection of Silva Valley Parkway and the project driveway, and (5) the addition of a northbound right turn lane, change in the right turn phase to be permissive and overlap, and increase of the westbound left turn storage length at the intersection of White Rock Road and Valley View Parkway-Vine Street. Additionally, the Proposed Project would develop the following pedestrian network improvements as part of **Mitigation Measure 3.14-2b: Implement Pedestrian Network Improvements**: (1) constructing sidewalks along the project frontage on Clarksville Crossing and Silva Valley Parkway and (2) constructing sidewalks north of the project frontage on the east side of Silva Valley Parkway to connect to the existing sidewalk near Oak Meadow Elementary School and providing connectivity with the surrounding neighborhood.
Encourage sustainable transportation options, embrace new technologies and develop climate adaptation and resiliency strategies.	**Objective A**: Support transportation planning and programs which aid in achieving regional air quality goals and develop strategies to lessen the impacts of severe weather events and wildfire. **Objective B**: Support the necessary infrastructure and develop innovative programs to support multimodal, technology-based shared ride solutions.	**Does Not Conflict.** Although this goal is not the responsibility of an individual commercial development project, the Project would support multimodal transport by implementing **Mitigation Measure 3.14-2a: Provide a Mandatory Commute Reduction Program for Costco Employees** and **Mitigation Measure 3.14-2b: Implement Pedestrian Network Improvements**. These mitigation measures include the implementation of the following measures: (1) commute trip reduction marketing, (2) a ridesharing program for employees, (3) on-site end-of-trip bicycle facilities, and (4) pedestrian network improvements in the vicinity of the Project site. Note, the pedestrian network improvements include (1) constructing sidewalks along the project frontage on Clarksville Crossing and Silva Valley Parkway and (2) constructing sidewalks north of the project frontage on the east side of Silva Valley Parkway to connect to the existing sidewalk near Oak Meadow Elementary School and providing connectivity with the surrounding neighborhood. Additionally, the Project site is an infill development located near an El Dorado Transit bus route (50 Express) and bus stop (El Dorado Transit Park & Ride), therefore placing jobs that are accessible via public transit. The Project is also located adjacent to homes, thereby providing retail and jobs near a housing-rich area served by El Dorado Transit. Besides this, the Proposed Project will meet the Voluntary Tier 1 Electric Vehicle Charging Standards as defined in the 2025 California Green Building Standards Code[2] by installing ten DC fast chargers that provide a total power of 1,800 kW. Additionally, these chargers will be powered by 100% renewable electrical power supplied by Pacific Gas & Electric (PG&E), as Costco has a Clean Energy Contract with PG&E. This will reduce emissions from on-road vehicles travelling in the County and aid in achieving the regional air quality goals.
Optimize the existing local, interregional and regionally significant roadway system to support improved maintenance, increased throughput, improved safety and multi-modal mobility.	**Objective A**: Maintain the existing transportation system at a standard which furthers its life and viability and continues to support the region's current and future transportation needs. **Objective B**: Develop and retrofit transportation facilities and corridors to improve safety, enhance community character, and improve multi-modal mobility.	**Does Not Conflict.** Although this is a goal is not the responsibility of an individual commercial development project, the Proposed Project will implement several offsite transportation improvements in coordination with the County to support the existing and future transportation needs of the region in the immediate vicinity of the Project site. These include (1) the addition of a new signalized intersection on Silva Valley Parkway, shared with the South Site's main driveway, (2) the addition of a new signalized intersection with Silva Valley Parkway shared with the North Site, (3) installation of a partial traffic signal at the intersection of Silva Valley Parkway and Clarksville Crossing, (4) installation of 150-foot dual northbound left turn lanes at the proposed signalized intersection of Silva Valley Parkway and the project driveway, and (5) the addition of a northbound right turn lane, change in the right turn phase to be permissive and overlap, and increase of the westbound left turn storage length at the intersection of White Rock Road and Valley View Parkway-Vine Street. Additionally, the Project would support multimodal transport by implementing **Mitigation Measure 3.14-2a: Provide a Mandatory Commute Reduction Program for Costco Employees** and **Mitigation Measure 3.14-2b: Implement Pedestrian Network Improvements**. These mitigation measures include the implementation of the following measures: (1) commute trip reduction marketing, (2) a ridesharing program for employees, (3) on-site end-of-trip bicycle facilities, and (4) pedestrian network improvements in the vicinity of the Project site. Note, the pedestrian network improvements include (1) constructing sidewalks along the project frontage on Clarksville Crossing and Silva Valley Parkway and (2) constructing sidewalks north of the project frontage on the east side of Silva Valley Parkway to connect to the existing sidewalk near Oak Meadow Elementary School and providing connectivity with the surrounding neighborhood.

Table C-3. Project Evaluation Against El Dorado County Regional Transportation Plan 2020-2040
El Dorado Hills Costco Project
El Dorado Hills, California

Goal [1]	Objective [1]	Does it Conflict?
Promote a convenient, desirable, and reliable regional and interregional public transit system for residents and visitors travelling within, to, and beyond El Dorado County.	**Objective A**: Focus transit service provision to the region's diverse characteristics. **Objective B**: Promote a transit system that is responsive to the needs of transit-dependent persons.	**Does Not Conflict.** Although this goal is not the responsibility of an individual commercial development project, the Project is an infill development located near an El Dorado Transit bus route, therefore placing jobs that are accessible via public transit. The El Dorado bus route connects to the larger Sacramento Metropolitan transit network and encourages use of local transit and rail to commute to the Project. The Project is also located adjacent to homes, thereby providing retail and jobs near a housing-rich area served by El Dorado Transit.
Promote and preserve aviation facilities and services that complement the regional transportation system, support emergency response, and enhance economic activities.	**Objective A**: Promote the operation, preservation, and maintenance of a regional system of public use general aviation airports.	**Does Not Conflict.** While this goal is not the responsibility of an individual commercial development project, the Proposed Project would not conflict with the EDCTC's ability to meet this goal.
Promote a safe, convenient, and efficient active transportation system for all users.	**Objective A**: Plan and develop a continuous, safe, and easily accessible pedestrian and bikeway network throughout the region connecting urban, suburban, and rural communities. **Objective B**: Support local jurisdictions in providing an active transportation system that emphasizes the health, safety, and wellbeing of people as part of a multi-modal transportation system.	**Does Not Conflict.** Although this goal is not the responsibility of an individual commercial development project, the Proposed Project would support the development of an active transportation system in the vicinity of the Project site by implementing **Mitigation Measure 3.14-2b: Implement Pedestrian Network Improvements**. This mitigation measure includes the implementation of (1) on-site end-of-trip bicycle facilities, and (2) pedestrian network improvements. The pedestrian network improvements include (1) constructing sidewalks along the project frontage on Clarksville Crossing and Silva Valley Parkway and (2) constructing sidewalks north of the project frontage on the east side of Silva Valley Parkway to connect to the existing sidewalk near Oak Meadow Elementary School and providing connectivity with the surrounding neighborhood.
Develop and support an integrated transportation system that incorporates corridor-based solutions and public awareness programs which support alternative transportation modes and reduce the impacts of single-occupant vehicle travel.	**Objective A**: Support local jurisdictions and partners in developing corridor-based solutions to congestion reduction and support alternatives to the single occupant vehicle. **Objective B**: Support advancement of Transportation Demand Management in a manner which reflects the needs of the region and remains current with new technologies in transportation.	**Does Not Conflict.** Although this goal is not the responsibility of an individual commercial development project, the Proposed Project would support the development of alternative transportation models by implementing **Mitigation Measure 3.14-2a: Provide a Mandatory Commute Reduction Program for Costco Employees** and **Mitigation Measure 3.14-2b: Implement Pedestrian Network Improvements**. These mitigation measures includes the implementation of the following measures: (1) commute trip reduction marketing, (2) a ridesharing program for employees, (3) on-site end-of-trip bicycle facilities, and (4) pedestrian network improvements in the vicinity of the Project site. Note, the pedestrian network improvements include (1) constructing sidewalks along the project frontage on Clarksville Crossing and Silva Valley Parkway and (2) constructing sidewalks north of the project frontage on the east side of Silva Valley Parkway to connect to the existing sidewalk near Oak Meadow Elementary School and providing connectivity with the surrounding neighborhood. Additionally, the Project site is an infill development located near an El Dorado Transit bus route (50 Express) and bus stop (El Dorado Transit Park & Ride), therefore placing jobs that are accessible via public transit. The Project is also located adjacent to homes, thereby providing retail and jobs near a housing-rich area served by El Dorado Transit.
Secure maximum available funding and pursue new sources of funds for maintenance, expansion, and improvement of all modes of transportation facilities and services.	**Objective A**: Obtain funding for vital transportation needs through all sources. **Objective B**: Identify innovative and sustainable funding strategies for vital transportation needs where conventional funding sources are insufficient.	**Does Not Conflict.** While this goal is not the responsibility of an individual commercial development project, the Proposed Project would not conflict with the EDCTC's ability to meet this goal.

1. INTRODUCTION

Ramboll Americas Engineering Solutions, Inc. (Ramboll) was retained to prepare a Technical Report on the air quality (AQ), greenhouse gas (GHG), and energy impacts for potential future development in the North Site Remainder Area ("Remainder Area Development"), in addition to the AQ, GHG, and Energy technical reports for the proposed El Dorado Hills (EDH) Costco Project located north of the Silva Valley Parkway/US 50 interchange in the El Dorado Hills community area of the unincorporated El Dorado County in California. For simplicity, the North Site Remainder Area and the proposed EDH Costco Project are collectively referred to hereafter as the proposed Project.

This Technical Report analyzes the AQ, GHG, and energy impacts of the potential Remainder Area Development at a program/plan level. Specifically, it describes the maximum development assumptions for the Remainder Area Development and estimates criteria air pollutant emissions, GHG emissions, and energy use associated with the construction and operations of this development. Additionally, this report evaluates the potential aggregate AQ, GHG, and energy impacts of the proposed Project (both the North Site Remainder Area and the EDH Costco Project).

1.1 Existing Conditions

The Project site is currently vacant grassland with scattered oak trees and seasonal drainage features. There are no permanent structures on the site. The southern edge of the property directly abuts the US 50 right-of-way, while the western boundary is adjacent to Clarksville Crossing. An approximate 7.75-acre portion of the northern site is reserved for a planned future extension of Country Club Drive, which is not part of the proposed Project.

Surrounding land uses include:

- North: Single-family residential uses and Oak Meadow Elementary School
- East: Vacant land, Tong Road, and single-family residential uses
- South: U.S. Highway 50 and Tong Road
- West: Clarksville Crossing roadway, open space, and undeveloped land

1.2 Potential Development in the North Site Remainder Area

An approximately 13.79-acre out-parcel on the North Site would remain undeveloped at this time (North Site Remainder Area). The EDH Costco Project proposes no development for the North Site Remainder Area. However, future development of the North Site Remainder Area would be made more reasonably foreseeable by the proposed annexation of the entire North Site into the El Dorado Irrigation District and the El Dorado Hills Fire Department service areas. Since such annexations are assumed to facilitate possible future development of the North Site Remainder Area, even though there is not even a conceptual or contemplated plan for build out of that land, this analysis conservatively assumes that such land would be developed consistent with the General Plan and zoning designations and density. The assumed potential commercial development of the North Site Remainder Area is approximately 138,000 square feet and 316 employees. The future extension of Country Club Drive (County Capital Improvement Project No. 36105008), when constructed by the County, would occupy a portion of the North Site near its northern edge, though the future extension is an independent project proposed by, and to be undertaken by, the County and is not analyzed as a part of the proposed Project.

2. SIGNIFICANCE THRESHOLDS

The Remainder Area Development would be adjacent to the EDH Costco Project and is subject to the identical regulatory settings and significance thresholds previously described for the EDH Costco Project in the technical reports.[1,2,3] The analysis provided in this technical memorandum evaluates whether the Project would result in any potentially significant impacts regarding the following questions:

Threshold AQ-1. Would the Project conflict with or obstruct implementation of the applicable air quality plan?

Threshold AQ-2. Would the Project result in a cumulatively considerable net increase of any criteria pollutant for which the Project region is non-attainment under an applicable federal or state ambient air quality standard?

Threshold AQ-3. Would the Project expose sensitive receptors to substantial pollutant concentrations?

Threshold AQ-4. Would the Project result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?

Threshold GHG-1. Would the Project generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment?

Threshold GHG-2. Would the Project conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of GHGs?

Threshold ENE-1. Would the Project result in a potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during Project construction or operation?

Threshold ENE-2. Would the Project conflict with or obstruct a state or local plan for renewable energy or energy efficiency?

2.1 Approach to Significance

As described in Section 3.2 of the EDH Costco Project Air Quality Technical Report, the El Dorado County Air Quality Management District (EDCAQMD) has established significance thresholds to assess the impacts of project-related construction and operational emissions, in its California Environmental Quality Act (CEQA) Guide. Table 3-1 in the EDH Costco Project Air Quality Technical Report shows the quantitative mass daily thresholds for construction and operation as adopted by the EDCAQMD reactive organic gases (ROG) and nitrogen oxides (NO_X) emissions. The analysis summarized in this report estimates program/plan level construction and operational mass emissions for the proposed Project and compares the emissions to these significance thresholds.

EDCAQMD has also established significance thresholds for other criteria air pollutants (CAPs) including carbon monoxide (CO), particulate matter less than 10 microns in diameter (PM_{10}), sulfur dioxide (SO_2), nitrogen dioxide, sulfates, lead, hydrogen sulfide (H_2S), and visibility-reducing particles. Project-related emissions of these pollutants are considered to

[1] Ramboll. 2025. EDH Costco Project Air Quality Technical Report.

[2] Ramboll. 2025. EDH Costco Project Greenhouse Gas Technical Report.

[3] Ramboll. 2025. EDH Costco Project Energy Technical Report.

have significant impacts if these emissions will cause or contribute to a violation of the applicable national or state ambient air quality standard. The EDCAQMD provides screening techniques to evaluate if a project's CAP emissions would have a less-than-significant impact in Chapters 4 and 6 of the EDCAQMD CEQA Guide.[4] This analysis in this report estimates the program/plan level construction and operational mass emissions of CO, PM_{10}, sulfur oxides (SO_X), and NO_X for the proposed Project and evaluates the significance of their impacts using these screening techniques established in the EDCAQMD CEQA Guide.[5]

The EDCAQMD has also established significance thresholds to assess health risk impacts of TACs from project-related emission sources on nearby sensitive receptors including residents and other human populations, which are applicable to the program-level impact analysis in this report.[6] These include a maximum incremental cancer risk of one-in-a-million (or ten-in-a-million if best available control technology for toxics (T-BACT) is applied), and incremental chronic and acute hazard indices (HIs) of 1. The analysis summarized in this report evaluates the human health risk impacts from on-site construction and operational emissions against these significance thresholds established by EDCAQMD.

This Technical Report also performs a qualitative assessment of odors from the proposed Project to evaluate if they would have the potential to generate odorous emissions that would meet the statutory definition for nuisance, in accordance with the EDCAQMD CEQA Guide.[7]

This report, relative to Threshold AQ-1, evaluates whether the proposed Project would conflict with applicable plans related to emissions, including the regional air quality attainment plans. This report, relative to Threshold AQ-2, quantifies the proposed Project's emissions during construction and operations and compares those results to the applicable EDCAQMD thresholds. Relative to Threshold AQ-3, this report includes a CO hotspots analysis and a semi-quantitative assessment of the potential health risk impacts to sensitive receptors. This report, relative to Threshold AQ-4, evaluates the potential for odor-generating activities from the proposed Project.

As discussed in Section 3.2 of the EDH Costco Greenhouse Gas Technical Report, El Dorado County provides some basic information on climate change including an overview of GHG regulations and local, state, and national efforts to address climate change; however, it has not established a quantitative or qualitative guidance to evaluate GHG emission impacts of development projects under CEQA.[8] Additionally, EDCAQMD has also not set quantitative GHG significance thresholds. In the absence of a quantitative GHG threshold from El Dorado County and EDCAQMD, this Technical Report assessed significance of GHG impacts for Threshold GHG-1 against the Placer County Air Pollution Control District (PCAPCD) GHG significance thresholds (Table 3-1 of the EDH Costco Greenhouse Gas Technical Report), in consultation with EDCAQMD and El Dorado County.

[7] Ibid.

[8] Ibid.

PCAPCD's GHG significance thresholds are reasonable to assess significance in the absence of a quantitative threshold from EDCAQMD because Placer County is similar to El Dorado County demographically, geographically, and meteorologically. Both Placer County and El Dorado County have similar land use patterns (i.e., they are both heavily made up of rural and suburban areas), with similar rates of population growth. Additionally, both counties have similar terrain and lie within the same air basin. Because of this, PCAPCD's quantitative GHG thresholds were used to assess significance against the Project relative to Threshold GHG-1.

Relative to Threshold GHG-2, this report evaluates whether the Project would conflict with the 2022 Scoping Plan Update,[9] Sacramento Area Council of Governments' (SACOG's) 2020 future Metropolitan Transportation Plan & Sustainable Communities Strategy (MTP/SCS),[10] and the El Dorado County Regional Transportation Plan (RTP) 2020-2040.[11]

This report evaluates the proposed Project's energy consumption against the six categories of potential energy-related environmental impacts from Appendix F of the CEQA Guidelines:

1. The Project's energy requirements and its energy use efficiencies by amount and fuel type for each stage of the Project including construction, operation, maintenance and/or removal. If appropriate the energy intensiveness of materials may be discussed.
2. The effects of the Project on local and regional energy supplies and on requirements for additional capacity.
3. The effects of the Project on peak and base period demands for electricity and other forms of energy.
4. The degree to which the Project complies with existing energy standards.
5. The effects of the Project on energy resources.
6. The Project's projected transportation energy use requirements and its overall use of efficient transportation alternatives.

This report, relative to Threshold ENE-1, assesses the proposed Project's electricity, natural gas, and fossil fuel consumption during construction and operation by way of the six questions above. This report, relative to Threshold ENE-2, evaluates whether the proposed Project would conflict with applicable plans related to renewable energy and energy efficiency.

3. EMISSIONS INVENTORIES AND ENERGY PROJECTIONS

This section provides a brief description of the methodology that Ramboll used to develop CAP, GHG, and energy inventories associated with the Remainder Area Development, which include one-time emissions from construction and long-term operational emissions. This section also presents the CAP, GHG, and energy inventories of the North Site Remainder Area and the proposed Project.

The analysis in this report utilized the California Emissions Estimator Model (CalEEMod) version 2022.1 methodology to quantify CAP and GHG emissions for the Remainder Area Development (**Appendix A**). This report presents assumptions only when they differ from the analysis for the EDH Costco Project, detailed in the EDH Costco Project's technical reports. Unless otherwise stated, CalEEMod default parameters were used to estimate the emission inventories.

As presented in **Section 1**, the Remainder Area Development would, at a maximum, develop 138,000 square feet of commercial/retail land uses, categorized as regional shopping center in CalEEMod. The remaining area of the parcel is conservatively assumed to be developed into asphalt-paved parking lots, totaling approximately 10.6 acres. The land use assumptions used to generate CalEEMod default construction and operational activities are included in **Appendix A**.

Construction of the North Site Remainder Area is assumed to start as early as May 2027, immediately after the EDH Costco Project construction concludes. Operation of the North Site Remainder Area is assumed to start as soon as the construction concludes.

3.1 Construction Emission Inventories and Energy Projection

Construction schedule, off-road equipment activities and on-road vehicle trip assumptions are provided in **Appendix B**. Because the material movement volumes required to construct in the Remainder Area are currently unknown, they are conservatively assumed to be the same as EDH Costco Project's Construction Scenario 2.

Criteria Air Pollutant Inventory

Average daily construction emissions for each quarter of the North Site Remainder Area construction are calculated based on CalEEMod outputs and are included in **Appendix C**.

Table 3-1 summarizes the average daily criteria pollutant emissions from construction of the North Site Remainder Area as compared to the applicable EDCAQMD thresholds. As shown in this table, the average daily unmitigated emissions of ROG and NO_X from the construction of the Remainder Area Development are below EDCAQMD's thresholds for construction. While EDCAQMD has not adopted mass daily numerical thresholds for other CAP emissions from construction, the EDCAQMD CEQA Guide[12] states that if ROG and NO_X exhaust emissions from construction are deemed not significant, then exhaust emissions of CO and PM_{10} may also be deemed not significant. Hence, air quality impacts of all CAPs (ROG, NO_X, CO, and

[12] EDCAQMD. 2002. Guide to Air Quality Assessment. February. Available at: https://www.eldoradocounty.ca.gov/files/assets/county/v/1/documents/government/air-quality/guide-to-air-quality-assessment.pdf. Accessed: October 2025.

PM_{10}) from the exhaust of construction equipment and on-road vehicles associated with the construction of the North Site Remainder Area are less than significant.

The EDCAQMD CEQA Guide[13] states that fugitive dust PM_{10} emissions may be assumed to be not significant, if the project complies with EDCAQMD Rule 223 and Rule 223-1 for fugitive dust control by implementing control measures that will prevent visible dust beyond the project property lines. The proposed Project will comply with these fugitive dust control rules. Hence, the air quality impacts of fugitive dust emissions from the construction North Site Remainder Area are less than significant.

North Site Remainder Area construction activities are expected to generate negligible emissions of SO_2, sulfates, lead, and H_2S. Therefore, the air quality impacts of these emissions from the construction of the North Site Remainder Area are also less than significant.

Although EDCAQMD has established separate daily mass significance thresholds for short-term construction and long-term operational phases of development projects, this analysis conservatively compares the combined average daily emissions from the construction of the Remainder Area land and the EDH Costco Project operation to EDCAQMD's mass daily construction thresholds. As shown in **Table 3-2**, these combined unmitigated average daily emissions exceed EDCAQMD's construction threshold for ROG but remain below the threshold for NO_X.

Mitigated Criteria Air Pollutant Inventory

In order to ensure that the combined average daily ROG emissions from the construction of the Remainder Area Development and the EDH Costco Project operation are below the EDCAQMD's mass daily construction thresholds, the following mitigation measure will be implemented during the construction of the Remainder Area.

- **Mitigation Measure 3.2-2: Architectural Coating Volatile Organic Compound (VOC) Limits for Development of the North Site Remainder Area**

  Future building construction of the North Site Remainder Area shall only use architectural coatings with a VOC content not exceeding 100 grams per liter during construction for all interior and exterior spaces. This requirement shall be included in plans submitted for review by the County prior to the issuance of building permits.

Additionally, the following mitigation measures that will be implemented during the construction of the EDH Costco Project to address health risk impacts and asbestos dust will also apply to the construction of the Remainder Area Development:

- **Mitigation Measure 3.2-4a: Apply Tier-4 Emission Standards to Diesel-Powered Off-Road Equipment**

  Construction equipment greater than 50 horsepower (hp) used at the site shall meet Environmental Protection Agency (EPA) Tier 4 Final emission standards for PM_{10} and particulate matter less than 2.5 microns in diameter ($PM_{2.5}$), if available. If Tier 4 Final equipment is not available, all construction equipment larger than 50 hp used at the site shall meet EPA emission standards for Tier 3 engines and include particulate matter emissions control equivalent to California Air Resources Board (CARB) Level 3 verifiable

[13] Ibid.

diesel emission control devices. This requirement shall apply to the construction of the Costco project and construction of the North Site Remainder Area.

- **Mitigation Measure 3.2-4b: Implement Asbestos Dust Mitigation Consistent with EDCAQMD Rule 223-1**

  An Asbestos Dust Mitigation Plan shall be prepared and submitted to the EDCAQMD and the County for review and approval by EDCAQMD for implementation during construction on the Costco project, future development of the North Site Remainder Area, and for off-site roadway improvements (if the presence of naturally occurring asbestos (NOA) is confirmed). The Asbestos Dust Mitigation Plan shall comply with the El Dorado County Code Chapter 8.44 (Asbestos and Dust Protection) and EDCAQMD Rule 223-2, which provides performance standards for ensuring that adverse impacts do not result from asbestos dust during construction.

Table 3-3 summarizes the average daily mitigated criteria pollutant emissions from construction of the North Site Remainder Area as compared to the applicable EDCAQMD thresholds. As shown in this table, the average daily unmitigated emissions of ROG and NO_X from the construction of the Remainder Area Development are below EDCAQMD's thresholds for construction. While EDCAQMD has not adopted mass daily numerical thresholds for other CAP emissions from construction, the EDCAQMD CEQA Guide[14] states that if ROG and NO_X exhaust emissions from construction are deemed not significant, then exhaust emissions of CO and PM_{10} may also be deemed not significant. Hence, air quality impacts of all CAPs (ROG, NO_X, CO, and PM_{10}) from the exhaust of construction equipment and on-road vehicles associated with the construction of the North Site Remainder Area are less than significant.

The EDCAQMD CEQA Guide[15] states that fugitive dust PM_{10} emissions may be assumed to be not significant, if the project complies with EDCAQMD Rule 223 and Rule 223-1 for fugitive dust control by implementing control measures that will prevent visible dust beyond the project property lines. The proposed Project will comply with these fugitive dust control rules. Hence, the air quality impacts of fugitive dust emissions from the construction North Site Remainder Area are less than significant.

North Site Remainder Area construction activities are expected to generate negligible emissions of SO_2, sulfates, lead, and H_2S. Therefore, the air quality impacts of these emissions from the construction of the North Site Remainder Area are also less than significant.

Although EDCAQMD has established separate daily mass significance thresholds for short-term construction and long-term operational phases of development projects, this analysis conservatively compares the combined average daily mitigated emissions from the construction of the Remainder Area land and the EDH Costco Project operation to EDCAQMD's mass daily construction thresholds. As shown in **Table 3-4,** with the inclusion of **Mitigation Measure 3.2-2**, which involves using low VOC paints during construction of the Remainder Area land uses, the combined average daily construction and operation emissions are below EDCAQMD's construction mass daily significance thresholds for both ROG and NO_X.

[14] EDCAQMD. 2002. Guide to Air Quality Assessment. February. Available at: https://www.eldoradocounty.ca.gov/files/assets/county/v/1/documents/government/air-quality/guide-to-air-quality-assessment.pdf. Accessed: October 2025.

[15] Ibid.

Greenhouse Gas Emissions Inventory

GHG emissions associated with the construction of the North Site Remainder Area are estimated using CalEEMod (**Appendix A**) and summarized in **Table 3-5**. As shown in **Table 3-5**, the annual GHG emissions associated with the construction of the North Site Remainder Area are less than the PCAPCD's GHG significance threshold for construction.[16]

Energy Projection

Energy consumption associated with the construction of the North Site Remainder Area are estimated using methodologies described in Section 4.1 of the EDH Costco Energy Technical Report and summarized in **Table 3-6**. Additional details on the fuel consumption of off-road construction equipment and on-road vehicle use during the North Site Remainder Area construction are provided in **Appendix D**.

3.2 Operational Emission Inventories and Energy Projection

A summary of the key assumptions associated with the operation of the North Site Remainder Area including mobile source activity, County-specific consumer product emission factors, and GHG emission factors for electricity are provided in **Appendix E**. These assumptions were incorporated into the CalEEMod model run in **Appendix A**.

Criteria Air Pollutant Inventory

Table 3-7 summarizes the maximum daily criteria air pollutant emissions associated with the operation of the North Site Remainder Area and the EDH Costco Project. As shown in this table, the maximum daily ROG and NO_X emissions associated with proposed Project (North Site Remainder Area and EDH Costco Project) operation are below EDCAQMD's mass daily significance thresholds for operation.

While EDCAQMD has not adopted mass daily numerical thresholds for other CAP emissions, it considers a project to have a significant impact on air quality if it will cause or contribute significantly to a violation of the National Ambient Air Quality Standards or California Ambient Air Quality Standards for CO, PM_{10}, SO_2, sulfates, lead, H_2S.

The EDCAQMD CEQA Guide[17] states that development projects, with land use types similar to the proposed Project, that are deemed less than significant for ROG and NO_X emissions based on land use size screening criteria, can also be considered less than significant for CO emissions. Using this screening approach, we can consider the air quality impacts of CO emissions from the proposed Project operation to be less than significant because the proposed Project's ROG and NO_X emissions are less than EDCAQMD's mass daily significance thresholds. Hence, the air quality impacts of operational CO emissions from the proposed Project are less than significant.

The EDCAQMD CEQA Guide[18] states that PM_{10} emissions from land development projects primarily associated with gasoline-powered vehicles may be assumed to be insignificant if the projects do not generate heavy-duty diesel vehicle trips in greater proportion than the

[16] PCAPCD CEQA Handbook. 2017. Chapter 2 Thresholds of Significance. Available at: https://www.placerair.org/DocumentCenter/View/2047/Chapter-2-Thresholds-of-Significance-PDF. Accessed: October 2025.

[17] EDCAQMD. 2002. Guide to Air Quality Assessment. February. Available at: https://www.eldoradocounty.ca.gov/files/assets/county/v/1/documents/government/air-quality/guide-to-air-quality-assessment.pdf. Accessed: October 2025.

[18] Ibid.

general mix of such trips in public roadways. The proposed Project is not expected to generate heavy-duty diesel vehicle trips in greater proportion than the general mix of such trips in public roadways in the vicinity of the Project site and the air quality impacts of operational PM_{10} emissions from the proposed Project are less than significant.[19]

The EDCAQMD CEQA Guide[20] states that emissions associated with project operations that are less than 10 pounds per day of a pollutant may be presumed to have impacts that are not significant for that pollutant. Since SO_X emissions associated with the proposed Project operation are less than 10 pounds per day (**Table 3-7**), emissions of these pollutants are less than significant.

The proposed Project is a development project that is not a significant source of lead, sulfates, and H_2S. Hence, the emissions of these pollutants are less than significant.

Finally, according to the EDCAQMD CEQA Guide,[21] visibility impacts from development projects can be considered less than significant. Therefore, the proposed Project impacts on visibility are less then significant.

Greenhouse Gas Emissions Inventory

Table 3-8 summarizes the annual operational GHG emissions associated with the operation of the proposed Project (3,954 metric tonnes of carbon dioxide equivalent emissions per year (MT CO_2e per year) for the North Site Remainder Area and the EDH Costco Project). Because the exact energy efficiency and sustainability features of the North Site Remainder Area are not known at the time of preparation of this report, GHG reduction features of EDH Costco Project were not assumed for the Remainder Area Development.

PCAPCD CEQA Guidelines[22] have a three-tiered approach for assessing GHG emissions from land use projects. For projects with annual operational GHG emissions between 1,100 and 10,000 MT CO_2e per year, PCAPCD recommends applying its GHG Efficiency Matrix to determine significance.

As shown in **Table 3-8**, the proposed Project's estimated annual operational emissions fall within this range. Based on a total building square footage of 303,200 square feet (138,000 square feet for the North Site Remainder Area and 165,200 square feet for the EDH Costco Project), the calculated GHG efficiency for the proposed Project is 13.04 MT CO_2e per 1,000 square feet.[23] This is below the applicable conservative threshold of 26.5 MT CO_2e per 1,000 square feet for nonresidential projects located in urban areas, as defined by PCAPCD.

[19] As noted in Section 4.3.6 of the Air Quality Technical Report, the heavy-duty diesel vehicle trips generated by the EDH Costco Project are less than 0.25% of the total Project trips. Additionally, for purposes of this analysis the heavy-duty diesel vehicle trips generated by the Remainder Area as assumed to be similar to the general fleet mix in El Dorado County, based on the default fleet mix in CalEEMod. Hence, the fraction of heavy-duty diesel vehicle trips generated by the proposed Project (EDH Costco and North Site Remainder Area) will be lower than the approximately 6% of heavy-duty diesel trucks operating on the roads in El Dorado County.

[20] Ibid.

[21] Ibid.

[22] PCAPCD CEQA Handbook. 2017. Chapter 2 Thresholds of Significance. Available at: https://www.placerair.org/DocumentCenter/View/2047/Chapter-2-Thresholds-of-Significance-PDF. Accessed: October 2025.

[23] Note, the Proposed Project GHG efficiency would be 16.94 MT CO_2e per 1,000 square feet if the analysis accounted for the greenhouse gas emission benefits associated with only the mandatory electric vehicle charging requirements (1,097 kW total power) in the 2025 California Green Building Standards Code. This value is also below the applicable conservative threshold of 26.5 MT CO_2e per 1,000 square feet for non-residential projects located in urban areas, as defined by PCAPCD.

Therefore, the proposed Project's operational GHG emissions are considered to be less than significant.

Energy Projection

Energy consumption associated with the operation of the North Site Remainder Area are estimated using methodologies described in Section 4.2 of the EDH Costco Energy Technical Report and summarized in **Table 3-9**. Additional details on the operational electricity, natural gas, diesel and gasoline consumption are provided in **Appendix F**.

4. PROGRAM-LEVEL AIR QUALITY IMPACT ANALYSIS

This section assesses the significance of the proposed Project's air pollutant emissions for purposes of CEQA.

4.1 Threshold AQ-1: Would the Project conflict with or obstruct implementation of the applicable air quality plan?

According to the EDCAQMD CEQA Guide,[24] development projects in the Mountain Counties Air Basin portion of the County are considered consistent with the applicable air quality plan if:

1. The Project does not require a change in the existing land use designation (e.g., a general plan amendment or rezone), and projected emissions of ROG and NO_X from the Project are equal or less than the emissions anticipated for the site if developed under the existing land use designation;
2. The Project does not exceed the "project alone" significance criteria;
3. The lead agency for the Project requires the Project to implement any applicable emission reduction measures contained in and/or derived from the air quality attainment plan; and
4. The Project complies with all applicable district rules and regulations.

El Dorado County's General Plan designates the Project site as Commercial (C). Zoning includes Commercial Regional–Planned Development (CR-PD), with smaller areas of Commercial Limited and Transportation Corridor. Once operational, the proposed Project would be a regional commercial center, which is consistent with the existing designation of the County's General Plan and zoning. Hence, the anticipated growth associated with the Project is generally accounted for in the 2023 Ozone Plan[25] and would be accounted for in forthcoming attainment plans.

As described in **Section 3.1** and **Section 3.2**, the air quality impacts of CAPs associated with the proposed Project construction and operation are less than significant. Therefore, the proposed Project does not exceed the "project alone" significance criteria.

The applicable air quality attainment plans for the Project area are the Sacramento Regional 8-hour Ozone Attainment and Reasonable Further Progress Plan[26] and $PM_{2.5}$ Maintenance Plan and Redesignation Request.[27] As such the proposed Project would not result in a cumulatively considerable net increase of any criteria pollutant for which the Project region is non-attainment under these plans (see **Section 4.2** below for further details). Hence, the

[24] EDCAQMD. 2002. Guide to Air Quality Assessment. February. Available at: https://www.eldoradocounty.ca.gov/files/assets/county/v/1/documents/government/air-quality/guide-to-air-quality-assessment.pdf. Accessed: October 2025.

[25] Sacramento Region Air Quality Plans. Available at: https://ww2.arb.ca.gov/our-work/programs/california-state-implementation-plans/nonattainment-area-plans/sacramento-region. Accessed: October 2025.

[26] Ibid.

[27] EDCAQMD, Placer County Air Pollution Control District, SMAQMD, and Yolo-Solano Air Quality Management District. $PM_{2.5}$ Implementation/Maintenance Plan and Redesignation Request for Sacramento $PM_{2.5}$ Nonattainment Area. October 24. Available at: http://www.airquality.org/ProgramCoordination/Documents/PM2.5%20Imp%20and%20Redesignation%202013.pdf. Accessed: October 2025.

proposed Project is not required to implement any additional mitigation measures contained in these plans.

As described in **Section 3.1** of this report and Sections 4.2.3 and 5.1.1 of the EDH Costco Project Air Quality Technical Report the proposed Project would comply with EDCAQMD Rules 223-1 and 223-2 for fugitive dust control[28] and asbestos hazard mitigation[29] during construction. The proposed Project is located in an area where NOA could be present.[30] Although the proposed Project's Geotechnical Study[31] concluded that the potential for NOA to be encountered at levels at or exceeding regulatory threshold level is considered low, the proposed Project would implement asbestos dust mitigation measures consistent with EDCAQMD Rule 223-1 through the implementation of **Mitigation Measure 3.2-4b**. The proposed Project would also comply with all other applicable EDCAQMD rules.

Therefore, the proposed Project would not conflict with or obstruct implementation of the applicable air quality plans for the Project region.

4.2 Threshold AQ-2: Would the Project result in a cumulatively considerable net increase of any criteria pollutant for which the Project region is non-attainment under an applicable federal or state ambient air quality standard?

As discussed in the EDH Costco Project Air Quality Technical Report, the Project region is currently designated as non-attainment for the State 1-hour ozone (O_3) standard, the federal and the State 8-hour O_3 standard, the State PM_{10} standards, and the federal 24-hour $PM_{2.5}$ standard.

The two primary precursors for O_3 formation are ROG and NO_X. Table 4-12 of the EDH Costco Air Quality Report, and **Table 3-1** and **Table 3-7** of this report present the average daily and maximum daily ROG and NO_X emissions associated with the proposed Project construction and operation. Emissions of these O_3 precursors (ROG and NO_X) are below the EDCAQMD mass daily significance thresholds. Additionally, as described in Section 4.2.6 of the EDH Costco Air Quality Report and **Section 3** of this report, impacts of particulate matter emissions from the proposed Project construction and operation are less than significant. Hence, the proposed Project would not result in a cumulatively considerable net increase in any criteria pollutant for which the Project region is non-attainment under an applicable federal or state ambient air quality standard.

[31] Kleinfelder, 2024. Geotechnical Study, Proposed Costco Fuel Facility, Silva Valley Parkway, El Dorado Hills, California, CW# 18-0487. December 2024.

4.3 Threshold AQ-3: Would the Project expose sensitive receptors to substantial pollutant concentrations?

4.3.1 CO Hotspots

As discussed in Section 6.2 of the AQ Technical Report, according to the PCAPCD guidance, the CO emissions from a proposed Project's operations would be less than significant if CO emissions from vehicle operations are less than 550 pounds per day (lbs/day). As shown in **Table 3-7**, the CO emissions from mobile sources associated with the proposed Project are less than 550 lbs/day. Thus, the increase in CO emissions from the project-related increased traffic volumes at affected intersections and the on-site gasoline fueling station are less than significant and the proposed Project would not expose sensitive receptors to substantial concentrations of localized CO.

4.3.2 Health Risk Thresholds

As described in Section 7.3.1 of the EDH Costco Project Air Quality Technical Report, the cancer risk, non-cancer chronic and acute HIs at the maximally impacted residential and other sensitive receptors associated with the mitigated toxic air contaminant (TAC) emissions from the EDH Costco Project construction and operation are below EDCAQMD significance thresholds. Specifically, the maximum incremental cancer risk, non-cancer chronic and acute HIs for the Costco EDH Project are estimated to be 4.13 in a million, 0.02, and 0.50 respectively (Refer to Table 5-5 in the EDH Costco Project Air Quality Technical Report).

The primary sources of TAC emissions associated with the North Site Remainder Parcel are diesel particulate matter (DPM) emissions from construction equipment, construction trucks, and operational trucks. The construction equipment, construction truck activity, and operational truck activity associated with the development of the North Site Remainder Parcel are generally expected to be similar/lower than that of the EDH Costco Project as maximum square footage of the of commercial/retail land uses that would be developed on the North Site Remainder Area (138,000 square feet) is lower than the square footage of the warehouse that would be developed by the EDH Costco Project (165,000 square foot). Hence, the DPM emissions from the North Site Remainder Parcel and its associated cancer and chronic impacts will be similar or less than that associated with the EDH Costco Project. As a result, the maximum cancer risk and chronic HI associated with the proposed Project (North Site Remainder Area and EDH Costco Project) are expected to be less than 8.5 in a million and 0.05 respectively which are below EDCAQMD significance thresholds.

Additionally, since the North Site Remainder Parcel is expected to be developed as general retail land uses, we do not expect it to be a significant source of TACs that have acute impacts. Therefore, the acute HI for the proposed Project (North Site Remainder Area and EDH Costco Project) is expected to be similar to that of the EDH Costco Project which is below EDCAQMD significance threshold.

Therefore, the Project is not expected to expose sensitive receptors to substantial TAC concentrations.

4.4 Threshold AQ-4: Would the Project result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?

According to the EDCAQMD CEQA Guide,[32] common types of facilities known to produce odors include wastewater treatment plants, landfills and composting facilities, petroleum refineries, manufacturing plants such as asphalt batch plants and chemical/fiberglass manufacturing, painting and coating operations, food processing plants, rendering plants, and coffee roasters. The proposed Project would not include any of these land uses that have been identified by the EDCAQMD as being associated with odor generation and thus would not result in odors adversely affecting a substantial number of people. In addition, the proposed Project does not propose to locate any sensitive receptors near an existing source of objectional odors.

4.4.1 Construction Odors

Construction activities associated with potential odor include equipment exhaust (i.e., from off-road construction equipment), paving, and architectural coating. There are no unusual Project characteristics or construction processes that would require the use of equipment that would be more fuel intensive than is used for comparable construction activities, nor equipment that would not conform to current emission standards. It is expected that these impacts would be short-term in duration and typical of comparable activities, therefore the impacts would not adversely affect a substantial number of people and would be less than significant.

4.4.2 Operational Odors

As discussed above, the proposed Project is a commercial and retail development and does not propose any odor-generating facilities identified by the EDCAQMD. However, the proposed Project does include a gasoline fueling station. During the operation of the Project, VOCs released at the gasoline station due to refueling, spillage, and hose permeation would be controlled to minimize odors (i.e., nozzles equipped with Phase II Enhanced Vapor Recovery systems). Therefore, odor impact from the gasoline fueling station would not affect a substantial number of people and would be less than significant.

There may be some potential for other small-scale, localized odor issues to emerge around some of the proposed Project sources, such as solid waste collection, wastewater or stormwater collection/conveyance, or food preparation. However, these localized short-term odors would not affect a substantial number of people. Therefore, the proposed Project's operational odor impact is considered less than significant.

[32] EDCAQMD. 2002. Guide to Air Quality Assessment. February. Available at: https://www.eldoradocounty.ca.gov/files/assets/county/v/1/documents/government/air-quality/guide-to-air-quality-assessment.pdf. Accessed: October 2025.

5. PROGRAM-LEVEL GREENHOUSE GAS EMISSIONS IMPACT ANALYSIS

This section discusses the assessment of the proposed Project's GHG emissions against the CEQA significance thresholds outlined in **Section 2**.

5.1 Threshold GHG-1: Would the Project generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment?

As noted in **Section 2.1**, in the absence of a quantitative GHG threshold from El Dorado County and EDCAQMD, this Technical Report assesses significance of the proposed Project's GHG impacts for Threshold 1 against the PCAPCD's GHG significance thresholds.

Total GHG emissions for each year of the proposed Project construction are summarized in Table 4-13 of the EDH Costco Project Greenhouse Gas Technical Report and **Table 3-5** of this report. As shown in these tables, the annual GHG emissions associated with the construction of the proposed Project (1,708 MT CO_2e in 2026, 1,866 MT CO_2e in 2027, and 197 MT CO_2e in 2028) are less than the PCAPCD's bright-line GHG significance threshold of 10,000 MT CO_2e/year for construction.

The proposed Project's annual operational GHG emissions were estimated to be 3,954 MT CO_2e per year (**Table 3-8**). These emissions are between PCAPCD's de minimis GHG emissions level (1,100 MT CO_2e/yr) and bright-line GHG significance threshold (10,000 MT CO_2e/yr) for project operation. Therefore, to evaluate the GHG impacts we estimated the proposed Project's efficiency metric in accordance with the PCAPCD's Air Quality Handbook.[33] This calculated efficiency metric (13.04 MT CO_2e per 1,000 square feet) shown in **Table 3-8**, is less than the lower of the two applicable efficiency matrix thresholds in PCAPCD's Air Quality Handbook for the operational phase of land use projects:

1. 26.5 MT CO2e/1,000 square feet for a project in an urban land use setting; and
2. 27.3 MT CO2e/1,000 square feet for a project in rural land use setting.

Therefore, the GHG emissions associated with the construction and operation of the proposed Project would not have a significant impact on the environment.

5.2 Threshold GHG-2: Would the Project conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of GHGs?

As noted in **Section 2.1**, this Technical Report assesses the significance of the proposed Project's GHG impacts for Threshold 2 based on whether it would conflict with the 2022 Scoping Plan Update,[34] SACOG's 2020 MTP/SCS,[35] and El Dorado County RTP 2020-2040.[36]

[35] SACOG. 2020. 2020 SACOG MTP/SCS. Available at: https://www.sacog.org/home/showpublisheddocument/76/638212804736270000. Accessed: October 2025.

[36] El Dorado County Transportation Commission. 2020. El Dorado County Regional Transportation Plan 2020-2040. November 5. Available at: https://www.edctc.org/files/2859e4e3f/RTP+2040.pdf. Accessed: October 2025.

5.2.1 2022 Scoping Plan Update

The 2022 Scoping Plan Update has a table of priority GHG reduction strategies that can be utilized by local governments. The three main priority areas addressed in this table are "Transportation Electrification", "vehicle miles travelled (VMT) Reduction", and "Building Decarbonization".[37] These measures represent the core strategies that local jurisdictions in California can implement to reduce GHGs in alignment with State goals.

The proposed Project would not conflict with the implementation of the 2022 Scoping Plan Update and Statewide Emission Reduction Targets and includes the several features and mitigation measures that support the three main priority areas for GHG reduction as described below.

While project-level design features and details are not available for the potential developments in the North Site Remainder Area at the time of preparation of this program-level analysis, the North Site Remainder Area would introduce retail/commercial land uses that are consistent with the zoning designation in a highway hub. Hence, the proposed Project, i.e., the North Site Remainder Area and the Costco EDH Project, would create new employment opportunities. Additionally, the Project site is an infill development located near an El Dorado Transit bus route (50 Express) and bus stop (El Dorado Transit Park & Ride), therefore placing jobs that are accessible via public transit. The El Dorado bus route connects to the larger Sacramento Metropolitan transit network and encourages use of local transit and rail to commute to the proposed Project. Furthermore, the proposed Project is located adjacent to homes, therefore the proposed Project would provide retail and jobs near a housing-rich area served by El Dorado Transit. Lastly, the proposed Project will implement **Mitigation Measure 3.14-2c: Develop a Transportation Demand Management (TDM) Program and Implement VMT Reduction Measures for Subsequent Developments in the North Site Remainder Area** which requires each project applicant of future proposed projects located within the North Site Remainder Area to either demonstrate through a technical analysis that its project would not exceed County VMT thresholds or implement VMT-reducing infrastructure and/or strategies within the commercial facility to mitigate those impacts. If VMT thresholds are exceeded, the applicant shall prepare and submit a TDM Plan to the County for approval, which shall include a series of measures to reduce project-related VMT. Measures may include strategies such as ridesharing initiatives (e.g., carpooling), subsidizing employee use of public transit, and promoting bicycling, walking, and the use of public transit. As noted in Section 5.2.1 of the GHG Technical Report, the EDH Costco Project will meet the Voluntary Tier 1 Electric Vehicle Charging Standards as defined in the 2025 California Green Building Standards Code[38] by installing ten direct current fast chargers that provide a total power of 1,800 kW. Additionally, these chargers will be powered by 100% renewable electrical power supplied by Pacific Gas & Electric (PG&E), as Costco has a Clean Energy Contract with PG&E. Furthermore, the Remainder Area will be required to meet the Mandatory Electric Vehicle Charging Standards as defined in the California Green Building Standards Code.

[37] CARB. 2022. Final 2022 Scoping Plan Update and Appendices. December. Available at: https://ww2.arb.ca.gov/our-work/programs/ab-32-climate-change-scoping-plan/2022-scoping-plan-documents. Accessed: October 2025.

[38] 2025 California Green Building Standards Code, Title 24, Part 11. Available online at: https://codes.iccsafe.org/content/CAGBC2025P1. Accessed: October 2025.

Additionally, as noted in Section 5.2.1 of the GHG Technical Report, the EDH Costco Project will incorporate several sustainability and energy efficiency measures including green building practices as required by the 2025 California Green Building Standards Code.[39] Refer to Section 1.2 of the GHG Technical Report for a detailed listing of these measures. Notably, the EDH Costco Project operations will be powered 100% renewable electrical power supplied by PG&E, as Costco has a Clean Energy Contract with PG&E. Furthermore, the Remainder Area will be required to meet the California Green Building Standards Code, which includes a number of energy-saving requirements for new developments.

Based on the proposed Project elements described above, the Project would not interfere with the implementation of the 2022 Scoping Plan Update and would include elements that support the goals of the plan.

5.2.2 SACOG 2020 MTP/SCS

The proposed Project would not conflict with the State's GHG reduction goals and strategies as discussed in the SACOG's 2020 MTP/SCS,[40] which fall into four priority policy areas:

1. Build vibrant places for today's and tomorrow's residents;
2. Foster the next generation of mobility solutions;
3. Modernize the way we pay for transportation infrastructure; and
4. Build and maintain a safe, reliable, and multimodal transportation system.

The proposed Project would not conflict with the implementation of the SACOG's 2020 MTP/SCS and has several elements that are expected to support the main priority policy in SACOG's 2020 MTP/SCS. As noted in **Section 5.2.1**, the Project is an infill development that would create new employment opportunities and is located near an El Dorado Transit bus route (50 Express) and bus stop (El Dorado Transit Park & Ride), therefore placing jobs that are accessible via public transit. The El Dorado bus route connects to the larger Sacramento Metropolitan transit network and encourages use of local transit and rail to commute to the Project. Furthermore, the Project is located adjacent to homes, therefore the Project would provide retail and jobs near a housing-rich area served by El Dorado Transit.

Moreover, as noted in **Section 5.2.1**, the proposed Project will implement **Mitigation Measure 3.14-2c: Develop a TDM Program and Implement VMT Reduction Measures for Subsequent Developments in the North Site Remainder Area** which requires each project applicant of future proposed projects located within the North Site Remainder Area to either demonstrate through a technical analysis that its project would not exceed County VMT thresholds or implement VMT-reducing infrastructure and/or strategies within the commercial facility to mitigate those impacts. If VMT thresholds are exceeded, the applicant shall prepare and submit a TDM Plan to the County for approval, which shall include a series of measures to reduce project-related VMT. Measures may include strategies such as ridesharing initiatives (e.g., carpooling), subsidizing employee use of public transit, and promoting bicycling, walking, and the use of public transit.

[39] 2025 California Green Building Standards Code, Title 24, Part 11. Available online at: https://codes.iccsafe.org/content/CAGBC2025P1. Accessed: October 2025.

[40] SACOG. 2020. Metropolitan Transportation Plan/Sustainable Communities Strategy. Available at: https://www.sacog.org/home/showpublisheddocument/76/638212804736270000. Accessed: October 2025.

Additionally, as noted in Section 5.2.2 of the GHG Technical Report, the EDH Costco Project would implement pedestrian network improvements as part of **Mitigation Measure 3.14-2b**, and would implement several off-site transportation improvements in coordination with the County to address the existing and future needs of the region in the immediate vicinity of the Project site.

Based on the proposed Project elements described above, the Project would not interfere with the implementation of the SACOG's 2020 MTP/SCS and would include elements that support the goals of the plan.

5.2.3 El Dorado County RTP 2020-2040

The proposed Project would not conflict with the El Dorado County 2020-2040 RTP,[41] which includes the following main goals: to improve highways, streets, and regional/inter-regional roadways, public transit, aviation, freight movement, non-motorized transportation, transportation systems management, integrated land use, air quality, and transportation planning, and funding.

The Project supports the objectives of the El Dorado County Regional Transportation Plan by providing sidewalks, bike lanes, and pedestrian connections. As noted in **Section 5.2.1**, the Project is an infill development that would create new employment opportunities and is located near an El Dorado Transit bus route (50 Express) and bus stop (El Dorado Transit Park & Ride), thereby creating jobs that are accessible via public transit. The El Dorado bus route connects to the larger Sacramento Metropolitan transit network and encourages use of local transit and rail to commute to the Project. Furthermore, the Project is located adjacent to homes, therefore the Project would provide retail and jobs near a housing-rich area served by El Dorado Transit.

Additionally, as noted in **Section 5.2.1**, the proposed Project will implement **Mitigation Measure 3.14-2c: Develop a TDM Program and Implement VMT Reduction Measures for Subsequent Developments in the North Site Remainder Area** which requires each project applicant of future proposed projects located within the North Site Remainder Area to either demonstrate through a technical analysis that its project would not exceed County VMT thresholds or implement VMT-reducing infrastructure and/or strategies within the commercial facility to mitigate those impacts. If VMT thresholds are exceeded, the applicant shall prepare and submit a TDM Plan to the County for approval, which shall include a series of measures to reduce project-related VMT. Measures may include strategies such as ridesharing initiatives (e.g., carpooling), subsidizing employee use of public transit, and promoting bicycling, walking, and the use of public transit.

Further, as described in Section 5.2.2 of the GHG Technical Report, the Project would include pedestrian network improvements as part of **Mitigation Measure 3.14-2b**, and would implement several off-site transportation improvements in coordination with the County to address the existing and future needs of the region in the immediate vicinity of the Project site.

Based on the proposed Project elements described above, the proposed Project would not interfere with the implementation of the El Dorado County 2020-2040 RTP and would include elements that support the goals of the plan.

[41] El Dorado County Transportation Commission. 2020. El Dorado County Regional Transportation Plan 2020-2040. November 5. Available at: https://www.edctc.org/files/2859e4e3f/RTP+2040.pdf. Accessed: October 2025.

5.3 Summary

As discussed in **Section 5.1**, the proposed Project is expected to result in GHG emissions that are below PCAPCD GHG thresholds for operation and construction. Additionally, as described in **Section 5.2**, the proposed Project would not conflict with the 2022 Scoping Plan Update, SACOG's 2020 MTP/SCS, or the El Dorado County RTP 2020-2040. Therefore, the proposed Project's GHG emissions will be less than significant in the context of Threshold 1 and Threshold 2. Based on the analysis above, the proposed Project's GHG emissions are not cumulatively considerable, and the proposed Project is less than significant for cumulative GHG impacts.

6. PROGRAM-LEVEL ENERGY IMPACT ANALYSIS

This section discusses the assessment of the Project's energy demand against the CEQA significance thresholds outlined in **Section 2**.

6.1 Threshold ENE-1: Would the Project result in a potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during Project construction or operation?

6.1.1 Energy Requirements and Energy Use Efficiencies

This section addresses the following category of environmental impact described in Appendix F of the CEQA Guidelines:

> *The project's energy requirements and its energy use efficiencies by amount and fuel type for each stage of the project including construction, operation, maintenance and/or removal. If appropriate the energy intensiveness of materials may be discussed.*

Construction of the proposed Project (North Site Remainder Area and the EDH Costco Project) would result in one-time energy consumption in the form of gasoline and diesel, shown in **Table 3-6**. There are no unusual characteristics that would require the use of equipment that would be more energy intensive than is used for comparable activities, or equipment that would not conform to the current emissions standards (and related fuel efficiencies).

The operational energy use of the proposed Project is summarized in **Table 3-7**. As expected, the program-level energy use would be greater than the energy use from the EDH Costco Project. However, neither the EDH Costco Project nor the Remainder Area Development would have unusual project characteristics that would require electricity, gasoline, natural gas, and diesel consumption that would be more energy intensive than is used for comparable activities, or equipment that would not conform to current emissions standards (and related fuel efficiencies). For example, CARB has adopted an approach to passenger vehicles that combines the control of smog-causing pollutants and GHG emissions into a single coordinated package of standards. The approach also includes efforts to support and accelerate the numbers of plug-in hybrids and zero-emissions vehicles in California. As such, operation of the proposed Project is expected to use decreasing amounts of fuel over time, due to advances in fuel economy.

6.1.2 Local and Regional Energy Supplies

This section addresses the following category of environmental impact described in Appendix F of the CEQA Guidelines:

> *The effects of the project on local and regional energy supplies and on requirements for additional capacity.*

The off-road construction equipment used during Project construction are primarily diesel-fueled. (see **Table D-1** for additional details on construction of the North Site Remainder Area and Table 4-2 of the EDH Costco Project Energy Technical Report for construction of the EDH Costco Project). Additionally, the fleet mix for construction mobile sources is expected to be gasoline-powered and diesel-powered, based on the CalEEMod default fleet mix for worker, vendor, and hauling vehicles (see **Table D-2** for additional

details on the construction of the North Site Remainder Area and Table 4-4 of the EDH Costco Project Energy Technical Report for construction of the EDH Costco Project). Hence, the proposed Project is not expected to use any natural gas during construction.

As shown in **Table 3-6**, relative to annual countywide fuel usage projections, the proposed Project construction would use up to 0.02% of gasoline, 1.23% of diesel, and 0.000004% of electricity in the year when the most construction would occur (2027). Relative to annual statewide fuel usage projections, the proposed Project construction would use up to 0.00010% of gasoline, 0.00405% of diesel, and 0.00000002% of electricity in the year when the most construction would occur (2027). Because construction of the proposed Project is expected to occur in three years, fuel use during construction would also be temporary and negligible.

Table 3-9 summarizes the proposed Project's operational energy use compared to countywide and statewide fuel usage projections. The estimated electricity usage for the proposed Project operations are anticipated to be approximately 0.57% of the projected countywide demand in 2028, and 0.00272% of the statewide energy demand. The natural gas usage of the proposed Project operations are estimated to be 0.08% of the total countywide natural gas consumption and 0.00024% of the total statewide natural gas consumption. The proposed Project's anticipated gasoline usage is anticipated to be 0.68% of the countywide consumption and 0.00323% of the statewide consumption. As far as the proposed Project's diesel consumption goes, it is estimated to be 1.39% of the projected countywide consumption and 0.0045% of the statewide consumption. Based on these relative percentages, the proposed Project's operational energy usage would not have a substantial impact on the local or regional energy supplies or capacity.

6.1.3 Peak and Base Period Demands

This section addresses the following category of environmental impact described in Appendix F of the CEQA Guidelines:

> *The effects of the project on peak and base period demands for electricity and other forms of energy.*

The proposed Project construction would only include minor pieces of electric-powered equipment and hence would not impact the peak and base period demands for electricity.

The proposed Project operation will not have a substantial impact on the peak and base period demands for electricity or other forms of energy. Further details and reasoning on the peak demand are described below.

In 2023, California's peak grid demand was 44,534 megawatts (MW).[42] PG&E recorded a peak demand of 19,995 MW in 2023.[43] In comparison, the Project's maximum demand is

[42] California ISO. California ISO Peak Load History 1998 through 2024. Available at: https://www.caiso.com/documents/californiaisopeakloadhistory.pdf. Accessed: October 2025.

[43] California Energy Commission. 2023. Electricity and Gas Demand Forecast. Available at: https://efiling.energy.ca.gov/GetDocument.aspx?tn=253660&DocumentContentId=88907. Accessed: October 2025.

expected to be approximately 1.9 MW in 2028,[44] Therefore, the proposed Project's operations will have a relatively negligible effect on statewide and PG&E peak demands.

6.1.4 Existing Energy Standards

This section addresses the following category of environmental impact described in Appendix F of the CEQA Guidelines:

The degree to which the project complies with existing energy standards.

The proposed Project construction requires use of on-road trucks for soil hauling and deliveries, and off-road equipment such as excavators, tractors/loaders/backhoes, forklifts, and graders. The construction activities would comply with the five-minute idling limit in the Commercial Motor Vehicle Idling Regulation[45] and the Off-Road Regulation.[46] Additionally, on-road trucks used during Project construction would be compliant with the requirements of the Tractor-Trailer Greenhouse Gas Regulation.[47]

The proposed Project's anticipated operational energy use is summarized in **Table 3-9**. There are no unusual project characteristics that would require the use of gasoline, diesel, natural gas, or electricity that would be more energy intensive than is used for comparable activities, equipment, or vehicles that would not conform to current emissions standards (and related fuel efficiencies). Additionally, as described in Section 5.1.4.2 of the EDH Costco Project Energy Technical Report, the proposed Project would meet or exceed the Title 24 energy efficiency standards in effect at the time of building permit application. Any passenger vehicles and trucks trips generated by the proposed Project would comply with existing and new state-wide vehicle efficiency regulations discussed further in **Section 6.1.6**. Furthermore, the proposed delivery trucks accessing the site would comply with the State's Commercial Motor Vehicle Idling Regulation, similar to the construction vehicles discussed above.

Therefore, the proposed Project will comply with all applicable energy standards and its energy impacts are less than significant.

6.1.5 Energy Resources

This section addresses the following category of environmental impact described in Appendix F of the CEQA Guidelines:

The effects of the project on energy resources.

As discussed in **Sections 6.1.2** and **6.1.3**, the proposed Project's use of energy will not have a substantial effect on statewide or regional energy resources. Hence, the proposed Project will not significantly impact energy resources, and its energy impacts are less than significant.

---

[44] This is a conservative estimate since it was derived by dividing the total electricity energy required for the proposed Project operation by the annual operating hours for the proposed Costco warehouse, though some sources of electricity would operate 24 hours per day for every day of the year.

[47] CARB. Tractor-Trailer Greenhouse Gas Regulation. Available here: https://ww2.arb.ca.gov/our work/programs/ttghg-regulation/regulatory-and-guidance-documents. Accessed: October 2025.

6.1.6 Transportation Energy Use

This section addresses the following category of environmental impact described in Appendix F of the CEQA Guidelines:

> *The project's projected transportation energy use requirements and its overall use of efficient transportation alternatives.*

Conventional gasoline, diesel, and natural gas vehicles consume gasoline, diesel, or natural gas, whereas electric vehicles (EVs) consume electricity that can be sourced by fossil fuels or renewables. EVs, including battery-electric vehicles and plug-in hybrid electric vehicles, comprise a growing fraction of the passenger vehicles on the roads in California. EV adoption is expected to increase over the upcoming decades due in part to improvements in battery technology and public initiatives and goals. This increase in EV adoption will decrease the fuel requirements due to transportation. New statewide regulations have been instated which will reduce emissions and fuel requirements from cars and trucks. Gasoline, diesel, and natural gas usage for the mobile sources associated with the proposed Project operation are expected to decrease over time as fleets become more fuel-efficient and switch to more electric-powered vehicles. Overall, the proposed Project would not result in wasteful, inefficient, or unnecessary consumption of transportation energy.

6.1.7 Summary

Based on the above analysis of each of the environmental impact factors identified in CEQA Guidelines Appendix F, the potential for the proposed Project to result in wasteful, inefficient, or unnecessary consumption of fuel or energy, and conversely to fail to incorporate energy efficiency measures into equipment use, transportation or other project features is less than significant.

6.2 Threshold ENE-2: Would the Project conflict with or obstruct a state or local plan for renewable energy or energy efficiency?

The proposed Project would comply with any applicable local and state plans, regulations, and policies for renewable energy or energy efficiency to the extent required by law. However, because project-level design features and details are not available for the potential developments in the North Site Remainder Area at the time of preparation of this program-level analysis, specific energy efficiency features for the Remainder Area Development will be described in any future applications filed with the County and the associated project-level review of potential environmental impacts under CEQA.

Furthermore, as show in Appendix A of the EDH Costco Project Energy Technical Report, the EDH Costco Project will commit to specific energy efficiency and renewable energy features, including but not limited to, meeting the Voluntary Tier 1 Electric Vehicle Charging Standards as defined in the 2025 California Green Building Standards Code,[48] installation of efficient irrigation systems and high-efficiency restroom fixtures, use of LED lamps, and use of building surface materials with greater solar reflectivity. Therefore, considered as a whole, the proposed Project would not conflict with or obstruct a state or local Plan for renewable energy or energy efficiency.

8. User Changes to Default Data

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	North Site Remainder Area
Construction Start Date	5/18/2027
Operational Year	2028
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	2.70
Precipitation (days)	9.40
Location	38.659852, -121.056799
County	El Dorado-Mountain County
City	Unincorporated
Air District	El Dorado County AQMD
Air Basin	Mountain Counties
TAZ	406
EDFZ	4
Electric Utility	Pacific Gas & Electric Company
Gas Utility	Pacific Gas & Electric
App Version	2022.1.1.29

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
Regional Shopping Center	138	1000sqft	3.17	138,000	0.00	—	—	—

Parking Lot	10.6	Acre	10.6	0.00	0.00	—	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

Sector	#	Measure Title
Construction	C-5	Use Advanced Engine Tiers
Construction	C-6	Use Diesel Particulate Filters
Construction	C-13	Use Low-VOC Paints for Construction

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

4. Operations Emissions Details

4.1. Mobile Emissions by Land Use

4.1.1. Unmitigated

Mobile source emissions results are presented in Sections 2.6. No further detailed breakdown of emissions is available.

4.1.2. Mitigated

Mobile source emissions results are presented in Sections 2.5. No further detailed breakdown of emissions is available.

4.2. Energy

4.2.1. Electricity Emissions By Land Use - Unmitigated

5.4. Vehicles

5.4.1. Construction Vehicle Control Strategies

Non-applicable. No control strategies activated by user.

5.5. Architectural Coatings

Phase Name	Residential Interior Area Coated (sq ft)	Residential Exterior Area Coated (sq ft)	Non-Residential Interior Area Coated (sq ft)	Non-Residential Exterior Area Coated (sq ft)	Parking Area Coated (sq ft)
Architectural Coating	0.00	0.00	207,000	69,000	27,756

5.6. Dust Mitigation

5.6.1. Construction Earthmoving Activities

Phase Name	Material Imported (cy)	Material Exported (cy)	Acres Graded (acres)	Material Demolished (sq. ft.)	Acres Paved (acres)
Site Preparation	—	—	15.0	0.00	—
Grading	107,000	53,000	90.0	0.00	—
Paving	0.00	0.00	0.00	0.00	10.6

5.6.2. Construction Earthmoving Control Strategies

Control Strategies Applied	Frequency (per day)	PM10 Reduction	PM2.5 Reduction

Water Exposed Area	2	61%	61%

5.7. Construction Paving

Land Use	Area Paved (acres)	% Asphalt
Regional Shopping Center	0.00	0%
Parking Lot	10.6	100%

5.8. Construction Electricity Consumption and Emissions Factors

kWh per Year and Emission Factor (lb/MWh)

Year	kWh per Year	CO2	CH4	N2O
2027	0.00	204	0.03	< 0.005
2028	0.00	204	0.03	< 0.005

5.9. Operational Mobile Sources

5.9.1. Unmitigated

Land Use Type	Trips/Weekday	Trips/Saturday	Trips/Sunday	Trips/Year	VMT/Weekday	VMT/Saturday	VMT/Sunday	VMT/Year
Total all Land Uses	2,536	2,536	2,536	925,640	11,462	11,462	11,462	4,183,630

5.9.2. Mitigated

Land Use Type	Trips/Weekday	Trips/Saturday	Trips/Sunday	Trips/Year	VMT/Weekday	VMT/Saturday	VMT/Sunday	VMT/Year
Total all Land Uses	2,536	2,536	2,536	925,640	11,462	11,462	11,462	4,183,630

5.10. Operational Area Sources

5.10.1. Hearths

5.10.1.1. Unmitigated

5.10.1.2. Mitigated

5.10.2. Architectural Coatings

Residential Interior Area Coated (sq ft)	Residential Exterior Area Coated (sq ft)	Non-Residential Interior Area Coated (sq ft)	Non-Residential Exterior Area Coated (sq ft)	Parking Area Coated (sq ft)
0	0.00	207,000	69,000	27,756

5.10.3. Landscape Equipment

Season	Unit	Value
Snow Days	day/yr	0.00
Summer Days	day/yr	180

5.10.4. Landscape Equipment - Mitigated

Season	Unit	Value
Snow Days	day/yr	0.00
Summer Days	day/yr	180

5.11. Operational Energy Consumption

5.11.1. Unmitigated

Electricity (kWh/yr) and CO2 and CH4 and N2O and Natural Gas (kBTU/yr)

Land Use	Electricity (kWh/yr)	CO2	CH4	N2O	Natural Gas (kBTU/yr)
Regional Shopping Center	1,202,266	79.7	0.0330	0.0040	1,190,333
Parking Lot	405,244	79.7	0.0330	0.0040	0.00

Notes:

[1] Based on CalEEMod default values.

[2] The mitigation measure requires that construction equipment greater than 50 hp used at the site shall be mitigated to meet USEPA Tier 4 Final emission standards for PM_{10} and $PM_{2.5}$. If Tier 4 Final equipment is viable but not available, all construction equipment larger than 50 horsepower used at the site shall meet USEPA emission standards for Tier 3 engines and include particulate matter emissions control equivalent to CARB Level 3 verifiable diesel emission control devices. To be conservative, this analysis assumed that off-road construction equipment larger than 50 horsepower are equipped with Tier 3 engines and DPFs for the mitigated emissions.

Abbreviations:

CalEEMod - California Emissions Estimator Model
CARB - California Air Resources Board
DPF - Diesel Particulate Filter
hp - horsepower
N/A - not available
PM_{10} - particulate matter less than 10 microns in diameter
$PM_{2.5}$ - particulate matter less than 2.5 microns in diameter
USEPA - United States Environmental Protection Agency

Table B-3. Construction Trip Assumptions - North Site Remainder Area
El Dorado Hills Costco Project
El Dorado Hills, California

Construction Phase Name	Worker Trips per Day [1,2]	Vendor Trips per Day [1,2]	Hauling Trips per Day [1,2]
Site Preparation	18	0	0
Grading	20	0	667
Building Construction	44	23	0
Paving	15	0	0
Architectural Coating	9	0	0

Notes:

[1] Trips are presented as one-way trips per day.

[2] Worker, vendor, and hauling trips are based on CalEEMod defaults. The one-way trip lengths for worker, vendor, and hauling trips are assumed to be the CalEEMod default values of 14.3 miles, 8.8 miles, and 20.0 miles, respectively.

Notes:

[1] Construction phases and duration are based on CalEEMod defaults. Refer to **Appendix B** for further details.

[2] Based on CalEEMod defaults.

[3] Estimated by summing up the maximum daily emissions for the construction phase. Maximum daily emissions for the Site Preparation; Grading; Building Construction; Paving; and Architectural Coating phases are obtained from **Appendix A**.

[4] For purposes of this analysis SO_X emissions are assumed to be equal to SO_2.

[5] Particulate matter emissions include exhaust emissions from off-road construction equipment, fugitive dust emissions from on-site construction activities, and exhaust/tire wear/brake wear/entrained road dust emissions from on-road vehicles associated with project construction. As noted in Section 4.2.3 of the Air Quality Technical Report, fugitive dust emissions will be controlled by watering the construction site twice daily in accordance with the EDCAQMD Rule 223-1. Particulate matter emissions presented here account for these control measures for fugitive dust emissions.

[6] Estimated by multiplying the maximum daily emissions by the number of construction days for each construction phase.

APPENDIX D
CONSTRUCTION ENERGY CALCULATIONS

List of Tables

Table D-1: Off-Road Equipment Fuel Consumption During Construction - North Site Remainder Area
Table D-2: On-Road Vehicle Fuel Consumption During Construction - North Site Remainder Area

Table D-1. Off-Road Equipment Fuel Consumption During Construction - North Site Remainder Area
El Dorado Hills Costco Project
El Dorado Hills, California

Construction Phase Name	CO_2 Emissions [1] (MT/yr)	Diesel Consumption [2] (gallons/yr)
Site Preparation (2027)	24.0	2,354
Grading (2027)	89.8	8,794
Building Construction (2027)	204.4	20,021
Building Construction (2028)	121.8	11,929
Paving (2028)	13.7	1,343
Architectural Coating (2028)	1.2	119

Constants:

10.21 kg CO_2/gallon diesel consumed in combustion engines [3]

1,000 kg CO_2/MT CO_2

Notes:

[1] Exhaust CO_2 emissions from off-road construction equipment used during the Site Preparation; Grading; Building Construction; Paving; and Architectural Coating construction phases that occur during remainder area development construction are obtained from the CalEEMod model run shown in **Appendix A**.

[2] Diesel consumption of off-road construction equipment during each construction phase is estimated as a ratio of the CO_2 emissions from these equipment to the CO_2 emission factor per gallon of diesel consumed.

[3] Obtained from the USEPA GHG Emission Factors Hub. Available at: https://www.epa.gov/system/files/documents/2025-01/ghg-emission-factors-hub-2025.pdf. Accessed: June 2025.

Architectural Coating (2028)	20	8.83	-	-	14.3	-	-	2,526	-	-	94	-	-

Notes:

[1] Construction phases and duration (**Table B-1**) are based on CalEEMod defaults. Refer to **Section 3** of the report for further details.

[2] The number of worker and vendor trips represent CalEEMod defaults based on the construction equipment used in each construction phase. The number of hauling trips were estimated by CalEEMod based on volume of soil that would be imported/exported during construction. Refer to **Appendix B** for further details.

[3] The trip lengths for on-road vehicles used during construction are CalEEMod default values.

[4] Estimated based on trip rates, trip length, and phase duration.

[5] Fuel consumption of on-road vehicles used during each construction phase are estimated as a product of the vehicle miles traveled by each vehicle type and its fuel consumption rate in gallons per mile.

[6] Fuel consumption rates for on-road vehicles are calculated using vehicle class-specific fuel consumption data from EMFAC2021 (see the supporting table below, which presents EMFAC2021 outputs for 2027 and 2028 in El Dorado-Mountain County), the fleet mix for each trip type (worker, vendor, and hauling), and vehicle miles traveled. The fleet mix for the worker, vendor, and hauling trucks are based on CalEEMod defaults. Worker vehicles are assumed to be gasoline fueled and include light duty automobiles and trucks (25% LDA, 50% LDT1, 25% LDT2). Vendor vehicles are assumed to be diesel fueled and include heavy heavy-duty trucks and medium heavy duty trucks (50% HHDT and 50% MHDT). Hauling vehicles are assumed to be diesel fueled and include heavy heavy-duty trucks (100% HHDT).

Fuel Consumption Rates by Vehicle Type: [6]

Worker Vehicles in 2027:	0.0378 gallons/mile
Worker Vehicles in 2028:	0.0371 gallons/mile
Vendor Vehicles in 2027:	0.2019 gallons/mile
Vendor Vehicles in 2028:	0.2001 gallons/mile
Haul Trucks in 2027:	0.1998 gallons/mile

Abbreviations:

CalEEMod - California Emissions Estimator Model
EMFAC - EMission FACtors model
HHDT - heavy heavy-duty trucks
LDA - light-duty automobile
LDT - light-duty truck
MHDT - medium heavy-duty trucks

Countywide ROG Inventory for Consumer Product Usage [1] (tons/day)	County Population [2]	Total Building Square Footage in the County [3] (sqft)	ROG Emission Factors for Consumer Product Usage [4] (lb/sqft/day)
1.354	188,380	220,388,409	1.23E-05

Notes:

[1] ROG consumer products inventory for El Dorado County in calendar year 2028 was obtained from the California Emissions Projection Analysis Model, CEPAM2019v1.04. Available at: https://ww2.arb.ca.gov/applications/cepam2019v1-04-standard-emission-tool. Accessed: May 2025.

[2] Population estimates for El Dorado County in 2020 and 2028 were obtained from the State of California Department of Finance website. Available at: https://dof.ca.gov/forecasting/demographics/projections/. Accessed: May 2025.

[3] Total building square footage in 2028 was estimated as the product of the countywide building square footage per person in 2020 multiplied by the population projection for El Dorado County in calendar Year 2028.

[4] The consumer product ROG emission factor for consumer product usage is calculated as the ratio of the countywide ROG inventory for consumer product usage to the total building square footage in the county.

[5] Total building square footage in El Dorado County for 2020 was obtained from FEMA HAZUS-MH software (version 7.0). Available at: https://msc.fema.gov/portal/resources/hazus. Accessed: May 2025.

Constants:

El Dorado County Population [2] in Calendar Year 2020:	191,522
Total Building Square Footage [5] in El Dorado County in 2020:	224,064,279

Conversion Factor:

2000 lb/ton

Abbreviations:

FEMA - Federal Emergency Management Agency
lb - pound
ROG - reactive organic compounds
sqft - square foot

Table E-3. Utility GHG Emission Factor Associated with Renewable Portfolio Standard
El Dorado Hills Costco Project
El Dorado Hills, California

Energy Generated (MWh)

	2020	2021	2022	Average	Units
CO_2 Intensity Factor per Total Energy Generated [1]	160	98	56	105	lbs CO_2/MWh generated
% of Total Energy From Renewables [2]	35.1%	47.7%	38.5%	40.4%	
CO_2 Intensity Factor per Total Non-Renewable Energy [3]	247	187	91	176	lbs CO_2/MWh generated

Calculated Intensity Factors for Total Energy Delivered [4]

2027 RPS (52% Renewable Energy)	118.3	89.9	43.7	84.3	lbs CO_2/MWh generated
2028	111.8	84.9	41.3	79.7	lbs CO_2/MWh generated
2030 RPS (60% Renewable Energy)	98.6	75.0	36.4	70.3	lbs CO_2/MWh generated

Notes:

[1] Obtained from PG&E's 2024 Corporate Sustainability Reports. Note that 2023 values are not provided because they are subject to regulatory approval and verification at the time of this report preparation.

[2] Obtained from PG&E's 2021, 2022, and 2023 Corporate Sustainability Reports.

[3] The emissions metric presented here is calculated based on the total CO_2 emissions for total energy generated divided by the energy generated from non-renewable sources.

[4] The intensity factors for default RPS assumption are estimated multiplying the maximum allowable percentage of non-renewable energy per RPS and the CO_2 intensity factor per total non-renewable energy calculated above. The RPS minimum targets for renewable energy delivered are 52% for 2027 and 60% for 2030 per Senate Bill 100. The estimate provided here assumes that renewable energy sources do not result in any CO_2 emissions.

Abbreviations:

CO_2 - carbon dioxide

GHG - greenhouse gases

lbs - pounds

MWh - megawatt-hour

PG&E - Pacific Gas and Electric

RPS - Renewable Portfolio Standards

Phase I Environmental Assessment

June 13, 2024
Kleinfelder Project No.: 20193180.002A

Costco Wholesale Corporation
9 Corporate, Suite 230
Irvine, California 92606

Attention: Mr. Micheal Okuma
AVP Real Estate Development

SUBJECT: Phase I Environmental Site Assessment
Proposed Costco Wholesale Warehouse and Gasoline Station
Assessor's Parcel Numbers (APNs): 122-720-002, 122-720-018, 122-720-019, 122-720-020, and 122-720-021
Silva Valley Parkway
El Dorado Hills, El Dorado County, California 95762
CW# 18-0487

Dear Ms. Okuma:

Enclosed is the Phase I Environmental Site Assessment (ESA) report for the above-referenced property. We trust the information presented in this report meets your needs at this time.

An executive summary is provided. However, we recommend that the report be read in its entirety for a comprehensive understanding of the items contained therein.

We appreciate the opportunity to provide these services to Costco Wholesale Corporation. If you have questions regarding this report or if we can be of further service, please do not hesitate to contact me at 949.727.4466 or Mr. Andy Franks, Kleinfelder's Client Account Manager for Costco, at 480.650.4905.

Sincerely,

KLEINFELDER

Paolo Dizon
Project Manager

1 EXECUTIVE SUMMARY

This report documents a Phase I Environmental Site Assessment (ESA) performed by Kleinfelder, Inc. (Kleinfelder) for Costco Wholesale Corporation (Costco / Client), of a property located north of United States Highway 50 (US-50)/El Dorado Freeway, on the west and east sides of Silva Valley Parkway in the unincorporated community of El Dorado Hills, El Dorado County, California (the "Subject Property"). Kleinfelder understands the Client plans to purchase the property in connection with the construction of a Costco Wholesale Warehouse and gasoline station.

This report was prepared using the ASTM International Designation E 1527-21, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* (the "ASTM Standard"), the All Appropriate Inquiry (AAI) section of the Small Business Liability Relief and Brownfields Revitalization Act (the Federal Brownfields Law), and Costco's Development Requirements, Version 2022, dated October 28, 2022. The Phase I ESA findings include the following:

- The Subject Property is located approximately 75-feet north of the US-50 and Silva Valley Parkway interchange and is bisected by Silva Valley Parkway and Clarksville Crossing within the unincorporated community of El Dorado Hills, El Dorado County, California (see Figure 1). The northeastern portion of the Subject Property consists of approximately 24.83 acres of land that is identified by the El Dorado County Assessor's Office as Assessor's Parcel Numbers (APNs) 122-720-019, 122-720-020, and 122-720-021. The southwestern portion of the Subject Property consists of approximately 17.63 acres of land that is identified as APNs 122-720-002 and 122-720-018.

- Based on Kleinfelder's review of historical information and aerial photographs, the Subject Property was historically an undeveloped hillside that was used as grazing land. Farm/ranch structures occupied to the north corner of APN 122-720-018 from at least 1937 through 1973. Remnants of these structures are still present based on Kleinfelder's May 2024 reconnaissance. Natural drainage channels cross the Subject Property and remnants of a dam remain present across the drainage channel in the central portion of APN 122-720-018. By at least 2006, Silva Valley Parkway (present-day Clarksville Crossing) was constructed, bisecting present-day APN 122-720-018. Earthwork appears to have occurred in the southern portion of APN 122-720-020 between 2012 and 2016 based on aerial photographs. This earthwork appears to be related to the US-50 (El

Copyright 2024 Kleinfelder

Dorado Freeway) construction activities, and realignment of Silva Valley Parkway and Tong Road in 2012 and 2013.

This is further substantiated with a transmittal letter dated May 17, 2012, between DeSilva Gates Construction LP (DeSilva), to the El Dorado County Department of Transportation (DOT) and the owner of the Subject Property, EDH 52, to allow for the placement of approximately 21,000-cubic yards (CY) of material on the Subject Property that had been, or was proposed to be, generated from the US-50 High-Occupancy Vehicle (HOV) Lane Project.

Furthermore, two Asbestos Dust Mitigation Plan Applications were approved by the El Dorado County Air Quality Management District (AQMD) in 2012 and 2013 for grading and excavation activities associated with the construction of the US-50 and Silva Valley Parkway interchange south of the Subject Property. A March 2008 Caltrans report, entitled *Aerially Deposited Lead, Naturally Occurring Asbestos and Lead Containing Paint Site Investigation and Bridge Survey Report, Highway 50 Site Investigation, Post Mile 2.90 to 8.89,* was included with the 2012 Asbestos Dust Mitigation Plan Application. This report indicated that 30 composite soil samples and one rock chip sample were collected and analyzed for the presence of naturally occurring asbestos (NOA). One sample was reported to contain less than 0.25 percent chrysotile asbestos, while remaining samples did not contain detectable NOA. Additionally, five paint-chip samples were collected from the yellow median traffic stripe within the project boundaries and were analyzed for total lead and chromium. Total lead and chromium were detected in the soil samples analyzed; however, the concentrations were reportedly below California hazardous waste threshold levels. Figure 2 presented in the Caltrans report indicates that the southern portion of present-day APN 122-720-020 was used to temporarily stockpile soil that was to be covered with plastic and surrounded by fiber rolls.

A Rough Grading Plan was included in the 2013 Asbestos Dust Mitigation Plan Application, which was dated August 2013. The Rough Grading Plan indicates that 20,000 CY of existing stockpiled soil and an additional 100,000 CY of soil from a ‘Borrow Area’ would be used as part of the construction of a future US-50 off-ramp, and the future alignments of Tong Road and Silva Valley Parkway. The Borrow Area was shown to be on the southern portion of the northeastern portion of the Subject Property with a 10-foot-wide maintenance access road to the area.

Copyright 2024 Kleinfelder

- At the time of Kleinfelder's reconnaissance, the Subject Property was observed to consist of an undeveloped hillside, with remnants of several concrete structures (concrete dam, trough, foundations, walls, and blocks), which may be related to the former ranching operations that were historically conducted on the Subject Property. An earthen embankment was observed in the north-central portion of APN 122-720-021, which may be related with drainage control at the Subject Property. Utilities including a water utility vault with standpipes were observed immediately adjoining the Subject Property to the south, along Clarksville Crossing/Old Silva Parkway.

- Kleinfelder previously prepared two Phase I ESAs (2019a and 2019b) for the Subject Property. As part of the scope of services for these reports, non-scope evaluations of wetlands and surface water; and threatened, endangered, and other protected species were performed by Kleinfelder's subcontractor, Moore Biological Consultants (Moore, 2019a and 2019b). The findings include the following:

  - During Moore's reconnaissance, the Subject Property was observed to consist of open hillsides supporting annual grassland vegetation, which sloped down generally from the northeast to the southwest. The grasslands were noted to be moderately to highly disturbed from grazing, grading, construction of adjacent parcels, disking for weed abatement, and off-road vehicle trespass.

  - An intermittent creek and ephemeral creek were observed flowing north to south across the northeastern portion of the Subject Property. Two seasonal wetland areas were observed near the southern ends of these waterways.

  - Two ephemeral creeks, flowing from the northeast to southwest, and one seasonal wetland swale, located in the creek, were observed on the southwestern portion of the Subject Property.

  - No special status wildlife or plant species were observed during the Subject Property reconnaissance. Ten special status plants were identified during database research as potentially occurring at the Subject Property. Due to lack of habitat, it is unlikely these special status plants would occur at the Subject Property. Multiple special status species were documented in the Subject Property vicinity; however, upon review of the available habitat and distribution of regional occurrences, in Moore's opinion, most of the species are unlikely to occur at the Subject Property.

  - A blue elderberry shrub was observed near the northern boundary of the Subject Property. This shrub can be home to the blue elderberry beetle; however, no sign of

Copyright 2024 Kleinfelder

the beetle was observed on this shrub, and due to the elevation of the location of the shrub, it is unlikely the beetle will occur at this location. However, presence of the blue elderberry shrub may require that one mitigation credit be purchased from the United States Fish and Wildlife Service (USFWS), and the shrub relocated. Based on the Subject Property observations, in Moore's opinion, it is unlikely the beetle will occur at the Subject Property.

- Burrowing owls, Swainson's Hawk, and migratory birds have the potential to occur on the Subject Property.

- Kleinfelder's evaluation has identified no adjoining or other nearby facility considered likely to have affected the environmental condition of soil, soil vapor, or groundwater beneath the Subject Property.

- Wetlands are mapped on the Subject Property. Based on Kleinfelder's further review of the USFWS National Wetlands Inventory (NWI) for the Subject Property and surrounding area, a freshwater emergent wetland traverses the western portion of APN 122-720-018, in the area west of Clarksville Crossing. Additionally, as documented by in the biological assessments performed at the Subject Property by Moore (Moore 2019a, 2019b), two ephemeral creeks and one intermittent creek are also present on the Subject Property. Furthermore, three seasonal wetlands were identified.

Based on the results of the Phase I ESA, this assessment has revealed no evidence of recognized environmental conditions (RECs), historical RECs (HRECs), or controlled RECs (CRECs) associated with the Subject Property.

The following Business Environmental Risks (BERs) in connection with the Subject Property were identified:

- NOA has been identified in the Subject Property vicinity, and portions of the Subject Property are located within asbestos buffer zones. Limited NOA soil sampling was performed for the construction of US-50 and roadways adjacent to the Subject Property; however, since specific locations of those samples are not known, the collection and analysis of additional NOA samples is recommended if Costco desires a greater level of certainty of the potential presence of NOA in shallow soil at the Subject Property. Additionally, the preparation of an Asbestos Dust Mitigation Plan for El Dorado County Air Quality Management District (AQMD) is recommended prior to construction at the Subject Property.

Copyright 2024 Kleinfelder

- Multiple concrete structures (including a pit and trough) were observed on the Subject Property. As there is the potential for dumping in these structures, and though the former use is assumed to be associated with former ranching operations, that has not been confirmed. Therefore, Kleinfelder recommends environmental monitoring and observation of the removal of this structure and, if contamination is suspected, collection of soil samples from beneath these structures is recommended. Additionally, the concrete remnants from the former structures may contain asbestos. Sampling for asbestos in concrete is also recommended for all structures and/or features.

- A portion of the Subject Property, APN 122-720-002, which encompasses approximately 0.52 acre of land, is identified in the NEPASearch™ Map Report as a California Protected Areas Database (CPAD) site and a California Government Lands site. Based on Kleinfelder's review of the CPAD and the California Conservation Easement Database, APN 122-720-002 is identified as a county regional park (RP) with open access. As such, Kleinfelder submitted a request for additional information from the County of El Dorado to determine what limitations there may be for construction and development as it pertains to the CPAD sites. As of the date of this report, Kleinfelder has not received an update. If pertinent information is received that alters the conclusions of this assessment, Kleinfelder will issue an addendum under separate cover. Kleinfelder recommends that coordination be conducted with El Dorado County to determine construction and overall development constraints.
- An intermittent creek, two ephemeral creeks, two seasonal wetlands, and a freshwater emergent wetland were observed and/or are documented on the Subject Property. As further discussed in Section 7.2, it is Kleinfelder's understanding that wetland fill permit applications have been submitted; however, permits will not be issued until the Clean Water Act (CWA) Section 401 certification has been issued.
- Burrowing owls, Swainson's hawk, and migratory birds have the potential to occur on the Subject Property; therefore, pre-construction surveys for these species are recommended.
- A blue elderberry shrub, which can be home to the blue elderberry beetle, was observed near the northern boundary of the Subject Property. A mitigation credit may need to be acquired to move the blue elderberry shrub in the northern portion of the Subject Property.

Deviations and *de minimis* findings are discussed in Section 8 of this report. This report is subject to the limitations in Section 2.5.

Copyright 2024 Kleinfelder

2 INTRODUCTION

This report is a summary of work performed using the guidelines set forth in the Standard Practice, the AAI section of the Federal Brownfields Law, and Costco's Development Requirements, Version 2022, dated October 28, 2022. This report also generally conforms to the Standard Practice's suggested table of contents. Minor format modifications have been made to the ASTM Standard's suggested table of contents to assist in better reading and understanding the report findings.

2.1 PURPOSE

The purpose of this Phase I ESA is to identify, to the extent feasible pursuant to the scope of services defined in our Contract Amendment Request No. 2, dated May 31, 2024, and limitations discussed in this report, RECs and other environmental issues related to the Subject Property.

As defined in the ASTM Standard, a REC is:

> *"1) The presence of hazardous substances or petroleum products due to a release to the environment; (2) likely presence of hazardous substances or petroleum products due to a release or likely release to the environment; or (3) presence of hazardous materials or petroleum products under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions."*
>
> *Note: '"Likely' is that which is neither certain nor proved, but can be expected or believed by a reasonable observer based on the logic and/or experience of the environmental professional, and/or available evidence, as stated in the report to support the opinion given therein."*

As defined in the ASTM Standard, a *de minimis* condition is:

> *"A condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies."*

As defined in the ASTM Standard a CREC is:

> *"…a recognized environmental condition resulting from a past release of hazardous substances or petroleum products affecting the Subject Property that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the*

Copyright 2024 Kleinfelder

issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use limitations, activity and use limitations, institutional controls, or engineering controls).”

Additionally, the 2021 ASTM Standard defines HRECs, as:

“…a past release of any hazardous substances or petroleum products that has affected the Subject Property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to environmental controls.”

The final decision regarding whether a past release is an HREC rests with the environmental professional (EP) and will be influenced by the current impact (if any) of the past release to the Subject Property and current regulations.

Finally, the Standard Practice defines a BER as:

“…a risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated in this practice. Consideration of business environmental risk issues may involve addressing one or more non-scope considerations...”

This report describes Kleinfelder’s assessment methodology and documents our findings, subject to the limitations presented in Section 2.5 of this report.

The Kleinfelder professionals conducting this Phase I ESA included Ms. Erin Abendroth, who oversaw the Subject Property reconnaissance; Ms. Victoria Golston, primary author of this report; and Ms. Lizanne Simmons, who provided technical review of the report and project oversight. Resumes can be provided upon request.

2.2 DETAILED SCOPE OF SERVICES

The following sections describe Kleinfelder’s work scope:

- Section 2, **Introduction**, includes a discussion of the purpose/reason for performing the Phase I ESA, additional services requested by the Client (e.g., an evaluation of business environmental risk factors associated with the Subject Property), significant assumptions

Copyright 2024 Kleinfelder

(e.g., property boundaries if not marked in the field), limitations, exceptions, special terms and conditions (e.g., contractual), and user reliance parameters.

- Section 3, **Subject Property Description**, is a compilation of information concerning the Subject Property location, legal description (if provided by the Client), current and proposed use of the Subject Property, a description of structures and improvements on the Subject Property at the time of Kleinfelder's assessment, and adjoining property use.
- Section 4, **Records Review**, is a compilation of Kleinfelder's review of several databases available from Federal, State, and local regulatory agencies regarding hazardous substance use, storage, or disposal at the Subject Property and non-Subject Property facilities within the search distances specified in the ASTM Standard. Records provided by the Client are summarized and copies of relevant documents are included in the appendices of this report. Physical setting sources (including topography and soil and groundwater conditions) and typical Client-provided information (e.g., title records, environmental liens, specialized knowledge, valuation reduction for environmental issues, and owner, property manager, and occupant information) are also summarized in this section. Other interviews with people knowledgeable about the Subject Property (including the Client) are included in Section 7.
- Section 5, **History of the Subject Property**, summarizes the history of the Subject Property and adjoining properties. This Subject Property history is based on various sources, which may include a review of historical aerial photographs, Sanborn Fire Insurance Maps, city or suburban directories, historical topographic maps, building department records, and results of previous Subject Property assessments (if any and reasonably ascertainable).
- Section 6, **Subject Property Reconnaissance**, describes Kleinfelder's observations during the Subject Property reconnaissance. The methodology used and limiting conditions, are described.
- Section 7, **Interviews**, is a summary of telephone and personal interviews performed with "Key Site Managers" that may include the Subject Property owner/manager, occupants/tenants, local government officials, and the Client. Additional interview sources may be contacted if Key Site Managers were not available prior to production of this report and may include adjoining landowners and people with historical knowledge of the area.
- Section 8, **Evaluation**, is a presentation of our findings and opinions regarding the information in Sections 3 through 7, and presents our conclusions regarding the presence

Copyright 2024 Kleinfelder

of RECs, HRECs, CRECs, BERS, and *de minimis* conditions connected with the Subject Property, and Kleinfelder's recommendations.

- Section 9, **References**, is a summary of some of the resources used to compile this report.

A statement of qualifications of the signatories of this report is provided in Appendix A, and pertinent documentation regarding the Subject Property is included in Appendices B through D.

2.3 ADDITIONAL SERVICES

Kleinfelder's scope of services as part of this Phase I ESA did not include ASTM Standard Practice non-scope evaluations of environmental regulatory compliance, asbestos-containing materials (ACMs), radon, lead-based paint (LBP), lead in drinking water, regulatory compliance, cultural and historical resources, industrial hygiene, health and safety, ecological resources, indoor air quality, and high-voltage power lines that may be required for a Phase I ESA pursuant to Costco's Development Requirements publication (revised October 28, 2022). Kleinfelder did a preliminary database review of historic, archaeological resources, wetlands, and endangered species in the Subject Property vicinity. This review is summarized in Section 8.3.

2.4 SIGNIFICANT ASSUMPTIONS

Kleinfelder does not guarantee the accuracy of the information supplied by its sources but reserves the right to rely on this information in formulating a professional opinion on the potential for contamination at the Subject Property. Kleinfelder also assumes the Client provided all applicable and available environmental records and specialized knowledge regarding the Subject Property. Kleinfelder has not made other significant assumptions during the performance of this Phase I ESA.

If specific information was not available, Kleinfelder also made assumptions for this Phase I ESA regarding the surficial groundwater flow direction at the Subject Property based on observed conditions and a review of United States Geological Survey (USGS) Topographic Maps and online USGS StreamStats drainage basin delineation tool. Kleinfelder assumed that historical aerial photographs, topographic maps, and other information was representative of conditions during periods between coverage.

2.5 LIMITATIONS AND EXCEPTIONS

Phase I ESAs are non-comprehensive by nature and may not identify all environmental problems and will not eliminate all risk. This report is a qualitative assessment. Kleinfelder offers a range of

Copyright 2024 Kleinfelder

investigative and engineering services to suit the needs of its clients, including more quantitative investigations. Although risk can never be eliminated, more detailed and extensive investigations yield more information, which may help the Client understand and better manage risks. Since such detailed services involve greater expense, Kleinfelder asks its clients to participate in identifying the level of service that will provide them with an acceptable level of risk. Please contact the signatories of this report if you would like to discuss this issue of risk further.

Kleinfelder performed this Phase I ESA consistent with the guidelines set forth in the ASTM Standard Practice; Costco's Development Requirements, Version 2022 publication (dated October 28, 2022); and the proposed scope of services subsequently approved by Costco. No other warranty, either express or implied, is made. Environmental issues not specifically addressed in this report were beyond the scope of Kleinfelder's services and not included in the evaluation.

This report may be used only by Costco. Land or facility use, conditions on and off the Subject Property, regulations, or other factors may change over time, and additional work may be required with the passage of time. Since activities at the Subject Property and regulations beyond Kleinfelder's control may change at any time after the completion of this report, the observations, findings, and opinions provided herein are considered valid only as of the date of the Subject Property visit. Pursuant to Section 4.6 of the Standard Practice, this report should not be relied upon after 180 days from the date of its oldest component (May 22, 2024), which is November 18, 2024. No party other than the Client may rely on this report without prior written authorization from Kleinfelder. Based on the intended use of the report, Kleinfelder may require that additional work be performed and that an updated report be issued. Non-compliance with any of these requirements by the Client or anyone else will release Kleinfelder from any liability resulting from the use of this report by any unauthorized party, but only to the extent of any such non-compliance by the Client.

The Phase I ESA has been conducted in accordance with, and conforms to, the Costco Wholesale Development Requirements Document and the latest edition of ASTM E 1527. This assessment has been prepared for the sole use of Costco Wholesale Corporation. Its contents should not be relied upon by other parties without the express written consent of Costco Wholesale Corporation.

Copyright 2024 Kleinfelder

3 SUBJECT PROPERTY DESCRIPTION

The Subject Property description is presented in this section and describes the condition of the Subject Property at the time of the Phase I ESA. The Subject Property location is shown on Figure 1. Tables 3-1 through 3-4 summarize the physical characteristics of the Subject Property and adjoining properties.

3.1 LOCATION AND LEGAL DESCRIPTION

The information presented in Table 3-1 denotes the physical location and legal description of the Subject Property. This information was obtained from review of various maps (such as topographic maps and tax assessor maps), aerial photographs, public records at City and/or County offices, interviews, and/or information provided by the Client.

Table 3-1
Location and Legal Description

PARAMETER	INFORMATION/COMMENTS
LOCATION	The Subject Property is located north of US-50/ El Dorado Freeway, on the west and east sides of Silva Valley Parkway in the unincorporated community of El Dorado Hills, El Dorado County, California (see Figure 1).
LEGAL DESCRIPTION	The legal description of the Subject Property parcels is presented in the *EDR Environmental Lien and AUL Search* report (EDR, 2024a) provided in Appendix C.
ASSESSOR'S PARCEL NUMBER	The Subject Property is situated on five parcels of land identified by El Dorado County Assessor's Office as APNs 122-720-002, 122-720-018, 122-720-019, 122-720-020, and 122-720-021. A copy of the El Dorado County Parcel Map is included in Appendix C.
ADDRESS(ES)	There is no address associated with the Subject Property.
SECTION, TOWNSHIP, AND RANGE	Township 9 North, Range 8 East, Sections 1 and 2, Mount Diablo Baseline and Principal Meridian.
ZONING	Based on information obtained from the El Dorado County Planning Services Department and Kleinfelder's review of the Rezone Exhibit for EDH52, Sheet No. RZ 12 of 12, prepared by RSC Engineering, dated April 23, 2021, Subject Property parcel APN 122-720-002 is zoned 'CL' for Commercial Limited; and APNs 122-720-018, 122-720-019, 122-720-020, and 122-720-021 are zoned 'CR-PD' for Commercial Regional Planned Development.

Copyright 2024 Kleinfelder

3.2 CURRENT / PROPOSED USE OF THE PROPERTY

The Subject Property is currently undeveloped hillside, with remnants of several concrete structures which may be related to the former ranching operations that were historically conducted on the Subject Property. Current and proposed Subject Property uses are described in Table 3-2.

Table 3-2
Current and Proposed Uses

PARAMETER	GENERAL OBSERVATIONS
CURRENT USE	Vacant, undeveloped hillside.
PROPOSED USE	Costco Wholesale Warehouse, gasoline station, and associated asphalt-paved parking lot.

3.3 DESCRIPTION OF STRUCTURES / IMPROVEMENTS

Structures and/or improvements observed on the Subject Property at the time of Kleinfelder's reconnaissance are described in Table 3-3.

Table 3-3
Structures and improvements

PARAMETER	GENERAL OBSERVATIONS
STRUCTURES	The Subject Property is currently undeveloped hillside, with remnants of several concrete structures (concrete foundations, walls, concrete blocks, etc.) which may be related to the former ranching operations that were historically conducted on the Subject Property.
IMPROVEMENTS	The Subject Property is currently undeveloped land. Improvements include a concrete dam and water trough, chain-link fencing, and utility infrastructure.

3.4 CURRENT USES OF ADJOINING PROPERTIES

Kleinfelder performed a brief drive-by survey of the properties immediately adjoining to the Subject Property on May 23 and 28, 2024. A summary of the observations from the drive-by and a review of recent aerial photographs regarding the surrounding properties is presented in Table 3-4 and shown on Figure 2, Subject Property Vicinity Map.

Copyright 2024 Kleinfelder

Table 3-4
Adjoining Properties

DIRECTION	LAND USE DESCRIPTION
NORTH	The Subject Property is adjoined to the north by a residential neighborhood. Oak Meadow Elementary School is located north and northwest of the Subject Property.
EAST	The northeastern portion of the Subject Property is adjoined to the east by undeveloped land. Residential dwellings adjoin the Subject Property near the northeast corner. The main component of the southwestern portion of the Subject Property is adjoined to the east by Silva Valley Parkway, beyond which are three parcels of the Subject Property (APNs 122-720-019, 122-720-020, and 122-720-021). Adjoining the western most section of APN 122-720-018 to the east is Clarksville Crossing (Old Silva Valley Parkway), beyond which is the remaining portion of APN 122-720-018 (Subject Property) and APN 122-720-002 (Subject Property).
SOUTH	The northeastern portion of the Subject Property is adjoined to the south by Tong Road, followed by the US-50 off-ramp and US-50. The southwestern portion of the Subject Property is adjoined to the south by a remnant of Tong Road from before the realignment project, beyond which is the US-50 on-ramp, followed by US-50.
WEST	The western most portion of the Subject Property is adjoined to the west by undeveloped land. The main component of APN 122-720-018 located in the southwestern portion of the Subject Property is adjoined to the west by Clarksville Crossing (Old Silva Valley Parkway). The northeastern portion of the Subject Property is adjoined to the west by Silva Valley Parkway, beyond which is the Subject Property (APN 122-720-002 and 122-720-018).

Based on our observations, hazardous materials and petroleum products were not directly observed to be stored on the properties adjoining the Subject Property at the time of the Subject Property. No other indications of obvious or suspect RECs were apparent on the adjoining properties at the time of Kleinfelder's Subject Property reconnaissance.

Copyright 2024 Kleinfelder

4 RECORDS REVIEW

4.1 STANDARD ENVIRONMENTAL RECORD SOURCES

The purpose of the records review is to obtain and review records that would help to evaluate RECs in connection with the Subject Property and bordering properties. Federal, State, and local regulatory agencies publish databases or "lists" of businesses and properties that handle hazardous materials or hazardous waste or are the known location of a release of hazardous substances to soil and/or groundwater. These databases are available for review and/or purchase at the regulatory agencies, or the information may be obtained through a commercial database service. Kleinfelder contracted a commercial database service, EDR Lightbox (EDR), of Shelton, Connecticut, to perform the government database search for listings within the appropriate Standard Practice minimum search distance of the Subject Property, and the distances set forth in Costco's Development Requirements, Version 2022, dated October 28, 2022. Included in the EDR Radius Map™ Report with GeoCheck® (EDR, 2024b) is a listing of specific databases outlined by the Standard Practice. A listing of the search distances, databases evaluated, dates the databases were last updated, and types of information contained in each database are included in the regulatory database search report provided in Appendix B of this report.

EDR utilizes a geographical information system to plot the locations of reported spills, leaks, incidents, etc. Kleinfelder reviews this information to help establish if the Subject Property or nearby properties are listed in the databases and lists. Each of the listings was reviewed by Kleinfelder to assess whether the corresponding property details included in EDR's report revealed a potential environmental impact to the Subject Property. Many listings in the report were concluded not to have the potential to impact the Subject Property based on the following, or a combination thereof:

- The listed property was located at a distance where the facility is unlikely to impact the Subject Property based on Kleinfelder's evaluation of the relevant data in EDR's report and knowledge of the Subject Property vicinity.
- The listed property is located in a down-gradient or cross-gradient direction from the Subject Property, based on the anticipated direction of groundwater flow at the property being evaluated, and is located at a distance such that it is unlikely to impact the Subject Property. Judgements as to down- or cross-gradient direction are best made if groundwater flow direction is available for a specific property.

Copyright 2024 Kleinfelder

- The listed property is identified in the Underground Storage Tank (UST) or Resource Conservation and Recovery Act-Small Quantity Generator (RCRA-SQG) databases and does not immediately adjoin the Subject Property. The property is furthermore not listed in other databases that reported a release of a hazardous substance or petroleum product and/or is not listed as having environmental violations. The listing of a facility on these databases alone is not indicative of an unauthorized release.
- The listing for the facility suggested a short-term release had occurred (e.g., from incidental traffic accidents or involving limited quantities of chemicals from illegal drug labs found at residences), with associated response actions completed.
- The quantity of the hazardous substances or petroleum product released from an off-Subject Property, non-adjoining facility was not judged to have resulted in contamination above the most stringent criteria requiring regulatory action. Therefore, no impact to the Subject Property is anticipated.
- The listed property record indicates that the property was characterized, the reported release affected soil only, the listed property was not on or adjacent to the Subject Property, and the release was not recognized as indicative of area-wide conditions or was characterized as a soil removal action only.
- The listed property record indicates that contamination on the property is limited to relatively non-mobile contaminants, including polyaromatic hydrocarbons (PAHs) and metals, in soil only, on a non-adjacent property.
- The listed property record indicates that the case for the property has been closed to the satisfaction of the designated lead regulatory agency and residual contamination, if present, is not considered likely to affect the Subject Property based on one or more of the criteria mentioned in the bulleted items above (a condition referred to by the ASTM Standard as an HREC).

Based on these criteria indicating no material threat of a release that affected the Subject Property and/or no release that could require future regulatory agency oversight, the listings concluded not to have the potential to impact the Subject Property were not evaluated further and are not discussed in the following sections.

4.2 RESULTS OF DATABASE SEARCH

The remaining property listings, if applicable, were reviewed to assess whether these properties had environmental releases that may have resulted in RECs in connection with the Subject

Copyright 2024 Kleinfelder

Property. Listed properties for which a reported release may have resulted in a REC in connection with the Subject Property were further assessed by performing a review of agency files available through the GeoTracker™ website (https://geotracker.waterboards.ca.gov/) operated by the State Water Resources Control Board (SWRCB), and/or review of other relevant regulatory agency websites to evaluate whether the listed release represents a potential impact to the Subject Property.

4.3 SPECIAL TERMS AND CONDITIONS

No special terms and conditions were agreed to by the Client and Kleinfelder.

4.3.1 Subject Property Listings

Based on Kleinfelder's review of the EDR Radius Map™ Report with GeoCheck® (EDR, 2024b), the Subject Property was not listed in local, state, or federal databases searched by EDR.

4.3.2 Non-Subject Property Listings

Based on Kleinfelder's review, seven facilities in the Subject Property vicinity were listed in various databases searched by EDR. Three of these listings were further reviewed as to the potential to impact the Subject Property as summarized below.

Serrano Elementary School (Serrano Parkway/Silva Valley Parkway)

The school is located adjacent to the northwest corner of the Subject Property (Oak Meadow Elementary School). As further discussed in Section 4.4.10, this facility is included in the EnviroStor database as the location of the then-proposed school was identified as having a potential for NOA, arsenic, and lead in soil. Based on the evaluation conducted by the Department of Toxic Substances Control (DTSC), it was concluded that no actual or potential hazardous materials release(s) were identified which would pose a threat to human health or the environment under any land use. Therefore, a no further action with respect to investigation and remediation of hazardous substances at the site was granted.

Silver Dove Elementary School (Silver Dove Way/Bass Lake Road)

This school is located approximately 4,175-feet east of the Subject Property. This facility was listed in the DTSC EnviroStor database. The listing indicates that there was the potential for NOA in soil. The status of the case was listed as requiring "No Further Action" as no releases to soil or groundwater were reported and the case is closed, this facility is not considered a REC.

Copyright 2024 Kleinfelder

El Dorado Hills Reclamation (4525 Serrano)

The El Dorado Hills Reclamation site is identified as approximately 3,520-feet north/northwest of the Subject Property. This facility was listed in the Enforcement Action (ENF), California Integrated Water Quality System (CIWQS), and California Environmental Reporting System (CERS) databases. This facility handles wastewater and stormwater. This facility operated under a NPDES permit from April 1994 through June 2001. The ENF listing is for an "administrative enforcement with civil liability (penalty) and violation of a waste discharge requirement (WDR)". As no releases to soil or groundwater were reported; this facility is not considered a REC.

Based on the criteria listed in Section 4.1, no additional non-Subject Property listings were reviewed for REC evaluation.

4.3.3 Orphan List

Facilities not plotted by EDR due to poor or inadequate address information are referred to as orphan sites. Based on Kleinfelder's review of the orphan summary/unmapped site report, no orphan facilities were listed in the EDR report.

4.4 OTHER RECORDS REVIEWED / AGENCIES CONTACTED

The following additional sources of environmental records were reviewed during this Phase I ESA for the purposes of meeting the ASTM Standard Practice. Local regulatory agencies were contacted for reasonably ascertainable and practically reviewable documentation regarding RECs present at the Subject Property and adjoining facilities. Summaries of interviews with local regulatory agency representatives, when performed, are included in Section 7 of this report (with interview documentation included in Appendix C). Information was obtained or reviewed from the following agencies:

☒ ..... Pipeline and Hazardous Materials Safety Administration (PHMSA), National Pipeline Mapping System (NPMS)
☒ ..... State of California, California Geologic Energy Management Division (CalGEM)
☒ ..... El Dorado Hills Community Services District (EDHCSD)
☒ ..... El Dorado County Air Quality Management District (AQMD)
☒ ..... El Dorado County Planning and Building Services
☒ ..... El Dorado County Environmental Management (EDCEM)
☒ ..... El Dorado Hills Fire Department
☒ ..... El Dorado and Alpine Counties Department of Agriculture – Weights and Measures

Information/responses from the agencies contacted and agency databases reviewed is presented in the following subsections:

4.4.1 Pipeline and Hazardous Materials Safety Administration (PHMSA), National Pipeline Mapping System (NPMS)

Pipeline information is available at the PHMSA's online NPMS website (https://www.npms.phmsa.dot.gov). Kleinfelder researched pipeline information on the website on May 31, 2024, for the Subject Property and vicinity. Based on Kleinfelder's review of the NPMS website, no mapped natural gas transmission pipelines or hazardous liquid pipelines are located on the Subject Property. The closest active gas transmission pipeline (natural gas) is located approximately 0.7-mile southwest of the Subject Property (Pipeline ID 0617-06). A copy of the NPMS map information is included in Appendix C.

4.4.2 State of California, California Geologic Energy Management Division (CalGEM)

Kleinfelder searched the CalGEM website (https://maps.conservation.ca.gov/) on May 8, 2024 for oil and gas wells at the Subject Property and in the Subject Property's immediate vicinity. No oil and gas wells were located on or within the vicinity of the Subject Property. A copy of the CalGEM map results is presented in Appendix C.

4.4.3 El Dorado Hills Community Services District (EDHCSD)

Kleinfelder contacted the EDHCSD on May 31, 2024 for available files pertaining to the Subject Property. On June 5, 2024, the EDHCSD indicated that no records were located as it pertains to the Subject Property. A copy of the records request and response is included in Appendix C.

4.4.4 El Dorado County Air Quality Management District (AQMD)

Kleinfelder contacted the El Dorado County AQMD on May 22, 2024 for available files pertaining to the Subject Property. On June 6, 2024, the El Dorado County AQMD indicated that they do not maintain any files pertaining to the Subject Property. A copy of the records request and response is included in Appendix C.

4.4.5 El Dorado County Planning and Building Services

Kleinfelder submitted a written request to the El Dorado County Planning and Building Services on May 22, 2024, for files regarding environmental conditions pertaining to the Subject Property.

Copyright 2024 Kleinfelder

On May 28, 2024, the El Dorado County Planning and Building Services indicated that no building permits were associated with the Subject Property parcels.

Furthermore, on May 29, 2024, the El Dorado County Planning Services responded with multiple records. A summary of pertinent information is outlined below:

Assessor's Map Bk. 122 – Pg. 72, County of El Dorado, CA, Rev. April 6, 2010.

Based on Assessor's Map Block 122, Page 72, prepared by the El Dorado County Assessor's, dated April 6, 2010, the Subject Property formerly consisted of APN 122-720-02, as well as a portion of APN 122-720-09. The boundaries of APN 122-720-02 in 2010 match the existing boundaries of APN 122-720-002 in 2024 and former APN 122-720-09 encompassed an area of approximately 57.78 acres.

Re: Hwy 50 HOV Bass Lake to Cameron Park, prepared by DeSilva Gates Construction, dated May 17, 2012.

Included in a transmittal dated May 17, 2012 is a document titled *Agreement Between a Contractor Working on State/County Facilities and a Real Property Owner for the Placement of Construction Related Material Outside of State/County Right-of-Way.* Under this Agreement, DeSilva entered into a contract with the El Dorado County DOT. The owner of APN 122-720-09 (EDH 52) agreed to allow the DeSilva to place approximately 21,000 CY of material, such as soil, asphalt, grindings, cold planning grindings, and other material on the property. The owner would then take ownership of the material at the time it was deposited on the property. The material was disclosed to include, but not limited to:

- Trace amounts of NOA (less than 0.25 percent) are present in the material excavated from mile marker 2.9 to 6.7 on State Route 50 in El Dorado County;
- Lead has been detected in the material to be excavated from unpaved areas of the highway. Levels of lead found within the project limits range from less than 5.0 to 150 milligrams per kilogram (mg/kg), with an average concentration of 16.1 mg/kg;
- Residue from grinding or cold planing operations contain lead from paint and thermoplastic. The average lead concentrations were reported to be less than 1,000 mg/kg total lead, and 5 milligrams per liter (mg/L) soluble lead. This residue was considered non-hazardous.

Copyright 2024 Kleinfelder

As outlined above, the Subject Property formerly occupied a portion of APN 122-720-09. Based on the available information, the location of the stockpiled material is unclear.

EDH Retail Shopping Center Project, prepared by First Carbon Solutions, file name dated August 15, 2015.

First Carbon Solutions (FCS) prepared a deliverable outlining 13 tasks for the proposed 40.50-acre project site located north of US-50/Silva Valley Parkway Interchange, which was bounded by former Silva Valley Parkway to the west, a single-family residential subdivision and Oak Meadow Elementary School to the north, undeveloped land to the east, and Tong Road to the south. This area was identified as containing annual grassland with scattered oak trees. Additionally, a large quantity of fill material was reportedly present that was placed there as part of the addition of the HOV lanes on US-50. Furthermore, unpaved roads and remnants of prior development are also present on the site.

The project was to include the future realignment of Silva Valley Parkway, where it would bisect the project site from northwest to southeast. The realigned Silva Valley Parkway would also have a new interchange with US-50. FCS indicates that the applicant sought to move the fill from the area north of the realigned road to the area to the south, mass grade both sites, and install utilities within the realigned Silva Valley Parkway.

Traffic Impact Analysis for EDH 52 Site, Silva Valley Parkway North of US 50, El Dorado Hills, El Dorado County CA, prepared by KDAnderson & Associates, Inc., dated September 1, 2015.

KDAnderson & Associates prepared a Traffic Impact Analysis for the EDH 52 project which was proposed to include a retail center located on Silva Valley Parkway in El Dorado Hills. The project site is located north of US-50, and east of Old Silva Valley Parkway. Silva Valley Parkway was proposed to bisect the project. The location of the project is north of the Silva Valley Parkway Interchange which was reportedly scheduled to be open in 2016. Once completed, Silva Valley Road would be named Old Silva Valley Road, and Silva Valley Parkway would connect White Rock Road south of US-50.

A copy of the records request and pertinent records are included in Appendix C.

4.4.6 El Dorado County Environmental Management (EDCEM)

Kleinfelder submitted a written request to the El Dorado County Environmental Management (EDCEM) on May 22, 2024, for files regarding the Subject Property. On May 29, 2024, the

Copyright 2024 Kleinfelder

EDCEM indicated that no records could be located for the Subject Property. A copy of the records request and response is included in Appendix C.

4.4.7 El Dorado Hills Fire Department

Kleinfelder submitted a records request to the El Dorado Hills Fire Department on May 31, 2024 for files regarding environmental conditions pertaining to the Subject Property. As of the date of this report, Kleinfelder has not received an update. If pertinent information is received that alters the conclusions of this assessment, Kleinfelder will issue an addendum under separate cover.

4.4.8 El Dorado and Alpine Counties Department of Agriculture – Weights and Measures

Kleinfelder submitted a records request to the Weights and Measures Department on May 31, 2024 for files regarding environmental conditions pertaining to the Subject Property. As of the date of this report, Kleinfelder has not received an update. If pertinent information is received that alters the conclusions of this assessment, Kleinfelder will issue an addendum under separate cover.

4.4.9 State Water Resources Control Board

Kleinfelder reviewed the SWRCB GeoTracker™ database (http://geotracker.waterboards.ca.gov/) on April 10, 2024, for information pertaining to the Subject Property and adjoining properties. The Subject Property and adjoining properties are not listed in the GeoTracker™ database. A copy of the GeoTracker™ search results map is included in Appendix C.

4.4.10 Department of Toxic Substances Control

Kleinfelder reviewed the DTSC's EnviroStor website (https://www.envirostor.dtsc.ca.gov/public/) on April 10, 2024, for available files pertaining to the Subject Property and adjoining properties. The Subject Property was not listed in the DTSC's database. Adjoining the Subject Property at the northwest corner is a listing for Serrano Elementary School. Based on Kleinfelder's review of available records, this listing is for the proposed development of an elementary school located south of Serrano Parkway and east of Silva Valley Parkway, which coincides with Oak Meadow Elementary School located at 7701 Silva Valley Parkway.

In a letter dated January 14, 2000 prepared by the DTSC, the DTSC references and summarizes a December 1999 Phase I ESA and Geological Hazard Assessment prepared by Youngdahl &

Copyright 2024 Kleinfelder

Associates, Inc. (Youngdahl). At the time of Youngdahl's report preparation, the proposed school site was undeveloped grasslands and was utilized for the stockpiling of rock from the adjacent residential construction sites. The Phase I ESA also noted the proximity of the proposed school site to known and suspected sources of NOA. A geotechnical consulting firm had also been retained by the housing developer to monitor cut and fill operations. The geotechnical firm reportedly did not observe asbestos-laden material being placed on or near the proposed school site but suggested that sampling be performed to confirm the absence of asbestos.

In a document entitled "Docket No. HAS-A 99/00-168", the DTSC entered into an Environmental Oversight Agreement with Buckeye Union School District. The purpose of this agreement is for the School District to conduct a Preliminary Endangerment Assessment (PEA) under the oversight of the DTSC. This document also indicates that the proposed school site had been used for livestock grazing purposes only, and the adjoining properties (which includes the Subject Property), were used as an undeveloped grazing land.

In a letter dated June 29, 2000 prepared by the DTSC, the DTSC acknowledges their review of the Youngdahl's PEA dated May 19, 2000 which was prepared to document the hazardous substance characterization actions taken at the subject site. The PEA documented sampling and analysis of asbestos, lead, and arsenic in soil. It is further documented that asbestos, arsenic, and lead were found at levels equal to or less than background concentrations. Based on the DTSC's evaluation of the PEA, the DTSC concluded that no actual or potential hazardous materials release was identified which would pose a threat to human health or the environment under any land use. Therefore, it was DTSC's determination that no further action was necessary with respect to investigation and remediation of hazardous substances at the site.

A copy of the EnviroStor search results and pertinent information is included in Appendix C.

4.5 PHYSICAL SETTING SOURCE(S)

Table 4-1 presents information concerning the physical setting of the Subject Property. The information was primarily obtained from published maps.

Copyright 2024 Kleinfelder

TABLE 4-1
Physical Setting

DATA	GENERAL INFORMATION
USGS TOPOGRAPHIC QUADRANGLE	Based on the USGS Clarksville Quadrangle 7.5-Minute Series (Topographic) Map, dated 2021, the Subject Property elevation is between approximately 700 and 800 feet above mean sea level (msl).
SOIL TYPE	According to the soil composition information provided in the physical setting section of The EDR Radius Map™ Report with GeoCheck®, the soil components beneath the Subject Property are identified as Auburn silt loam (EDR, 2024b).
OIL AND GAS WELLS	Information concerning oil and gas fields was obtained by Kleinfelder on May 8, 2024, from the CalGEM online database (https://maps.conservation.ca.gov). Based on Kleinfelder's review, there are no oil and gas wells located on or within the vicinity of the Subject Property. Additional information concerning oil and gas fields is presented in Section 4.3.2. A copy of the Well Finder search results is presented in Appendix C.

Table 4-2 presents information concerning regional geology and hydrogeology. The information was obtained from published maps and other sources.

TABLE 4-2
Regional Geology and Hydrogeology

PHYSICAL PARAMETER	INFORMATION/COMMENTS
REGIONAL PHYSIOGRAPHY AND GEOLOGY	The Subject Property is situated between the Great Valley and Sierra Nevada Geomorphic Provinces of California. The Great Valley Geomorphic Province is an alluvial plain about 50-miles wide and 400-miles long that includes the Sacramento Valley as its northern portion, and the San Joaquin Valley as its central and southern portion. The Great Valley is a trough in which sediments have been deposited almost continuously since the Jurassic. The Sierra Nevada Geomorphic Province is a tilted fault block characterized as a high multiple scarp mountain range that slopes gently to the west, and dips under the Great Valley (California Geological Survey [CGS], 2002). The Sierras are characterized by deep cut valleys that drain into the Great Valley. The high Sierras are granitic with the surrounding bedrock being metamorphic. The Subject Property is located on Jurassic-Triassic metavolcanics rocks, which consist of basaltic and andesitic volcanic rocks, tuff, and volcanic breccia. The Bear Mountain Fault Zone is located approximately 1-mile west of the Subject Property and extends northwest to southeast from Folsom Lake along the Sierra Nevada foothills (Strand and Koenig, 1965).
REGIONAL HYDROGEOLOGY	Based on review of the California Department of Water Resources (CDWR) website, Groundwater Basin Boundary Assessment Tool (ca.gov), the Subject Property is not located within an area with a groundwater basin (CDWR, 2019).

Copyright 2024 Kleinfelder

TABLE 4-2 (Continued)
Regional Geology and Hydrogeology

PHYSICAL PARAMETER	INFORMATION/COMMENTS
DEPTH TO GROUNDWATER DIRECTION OF ANTICIPATED FLOW [1]	Groundwater was not encountered during Kleinfelder's geotechnical investigation to the maximum depth explored of approximately 25 feet below ground surface (bgs). However, perched groundwater was encountered in two test pits at depths of approximately 7 to 8 feet bgs. These pits were located near a seasonal creek, which runs through the Subject Property. Based on the Subject Property topography and our review of nearby clean up facilities, groundwater in the vicinity of the Subject Property generally flows to the southwest *(Case Closure Summary, Shell-Branded Service Station, 3405 Coach Lane, Cameron Park, CA, 2012).*
REGIONAL GROUNDWATER QUALITY PROBLEMS	There are no known regional groundwater contaminated plumes (EDR, 2024b).
WATER SUPPLY	The Subject Property has not been developed.
FLOOD ZONE DESIGNATION	Kleinfelder reviewed FEMA FIRM Map Number 06017C0725E, dated September 26, 2008. The Subject Property is located in Zone X, an area of minimal flood hazard. Zone X is an area outside the Special Flood Hazard Area and is higher than the elevation of the 0.2-percent annual chance flood. A copy of the flood plain map is included in Appendix C.

[1] Groundwater flow direction is based on regional information sources. Subject Property-specific conditions may vary due to a variety of factors including geologic anomalies, utilities, nearby pumping wells (if present), and others.

4.6 USER PROVIDED INFORMATION

Kleinfelder understands Costco is interested in purchasing the Subject Property for use of a proposed Costco Wholesale Warehouse and gasoline station. Information regarding the current owners/occupants of the Subject Property is summarized in Table 4-3.

Table 4-3
Owner and Occupant Information

ENTITY	NAME
OWNER	According to *The EDR Environmental Lien and AUL Search* reports (EDR, 2024a), the current owner of APN 122-720-002 is 'John C & Lesley Ann Kemp TR', and the current owner of APNs 122-70-018, 122-70-019, 122-70-020, and 122-70-021 is 'EDH 52'.
OCCUPANT(S)	The Subject Property is vacant and unoccupied.

Summaries of interviews of key individuals with knowledge of the Subject Property ("Key Site Managers") are provided in Section 7. The following sections present information provided to Kleinfelder by the Client.

Copyright 2024 Kleinfelder

4.7 TITLE RECORDS

Chain-of-title information for the Subject Property was not provided by the Client. Therefore, a review of a chain-of-title report was not reviewed as part of this Phase I ESA.

4.8 ENVIRONMENTAL LIENS AND USAGE LIMITATIONS

According to information provided in EDR's regulatory agency database search report (EDR, 2024b), no known recorded land-use environmental deed restrictions pertaining to the Subject Property are listed in the State Liens Database. Kleinfelder's review of *The EDR Environmental Lien and AUL Search* reports (EDR, 2024a) indicated no environmental liens or activity and use limitations (AULs) are associated with the Subject Property (Appendix C).

4.9 VALUE REDUCTION

As part of the ASTM Standard Practice process, information is to be gathered regarding the prospective purchase price of the Subject Property relative to its fair market value. If there appears to be a value reduction, that reduction must be identified with respect to whether the difference may be attributed to environmental degradation of the property. On May 28, 2024, Mr. Michael Okuma on behalf of Costco indicated that the purchase price reflects the fair market value of the property.

4.10 OTHER INFORMATION / DOCUMENTS PROVIDED

During the preparation of this Phase I ESA, Kleinfelder reviewed the following report regarding the Subject Property:

Initial Site Assessment, Silva Valley Pkwy/SR50 Interchange, 03-ED-50, KP 3.1 (PM 1.7), El Dorado Hills, California, prepared by Blackburn Consulting, Inc., dated April 2007.

Blackburn Consulting, Inc. (BCI) prepared an Initial Site Assessment (ISA) on behalf of Mark Thomas and Company (MTCo) for the El Dorado County DOT's proposed new interchange located east of the Silva Valley Road underpass on US-50, near El Dorado Hills, California. The purpose of this assessment was to identify potential soil and groundwater issues in the area of the proposed interchange, of which the Subject Property occupies a portion of.

This report identifies the Subject Property APNs 122-720-019, 122-720-020, 122-720-021, and the majority of APN 122-720-018 as "Parcel 1 APN 108-030-1010 EDH 52". Parcel 1 also includes present-day APN 122-720-014 (non-Subject Property area) which encompasses a portion of Silva

Copyright 2024 Kleinfelder

Valley Parkway located between the northern and southern portions of the Subject Property, as well as the areas south and southeast of APN 122-720-018.

This investigation was preformed to assess environmental conditions for the proposed US-50 underpass and Silva Valley Parkway interchange improvements. No hazardous material issues were identified in this report. The subject parcel was undeveloped and used for grazing. Low grasses, trees, and numerous shallow drainages and seasonal streams were documented to cover the majority of Parcel 1. Concrete structures/ruins (past use unknown) and associated debris were observed on this parcel. This report indicates that based on archaeological research reviewed by BCI, this parcel was used as a ranch. Potential concerns identified included issues associated with a former farm residence's leach fields/septic tanks and buried heating tanks. BCI recommended assessing the concrete structures for potential lead and asbestos. Parcel 1 was also identified as being in an area with NOA. A NOA monitoring plan was noted to be required prior to grading including having a geologist intermittently on-site to oversee the grading. BMPs for dust control were also recommended. BCI also concluded that Parcel 1 included former cattle grazing and crop land, and therefore, there was a low to moderate potential for residual pesticides, herbicides, and fungicides to be present.

This report identifies Subject Property APN 122-720-002 as "Parcel 2 APN 107-130-0110 El Dorado Hills Investors". At the time of BCI's reconnaissance, a barbed wire fence bordered the parcel. No obvious soil and/or groundwater contamination or hazardous materials issues were observed; however, a soil stockpile of unknown origin was observed to cover the majority of the parcel. BCI also indicated that as the entire project area encompasses an area of NOA bearing rocks and soils, and development and/or construction must comply with applicable rules and regulations, as written by El Dorado County Environmental Health Department as also determined on Parcel 1.

Updated Initial Site Assessment (ISA), Silva Valley PARKWAY/State Route 50 Interchange (03-ED-50, KP 3.1, PM 1.7), El Dorado County, California, prepared by Blackburn Consulting, Inc., dated February 23, 2010.

BCI prepared an Updated ISA in February 2010 to document significant changes in site use and/or facilities that may indicate the potential for hazardous materials and/or petroleum hydrocarbon contamination within or adjacent to the project area since the 2007 ISA and to also document the following items:

- A database search performed in February 2010;

Copyright 2024 Kleinfelder

- Review of BCI's ISA for US-50/El Dorado Boulevard Interchange (EA 03-2E5100) and Pedestrian Overcrossing Project (EA 03-2E4700) El Dorado Hills, CA BCI File No. 1072.5 dated May 2009;
- BCI's Review of Geocon's Aerially Deposited Lead, Naturally Occurring Asbestos, and Lead Containing Paint Site Investigation and Bridge Survey/Highway 50 Report, dated March 10, 2008.
- A site visit performed on February 18, 2010.

Based on BCI's evaluation, no significant changes in site use were identified. Supplemental information for several non-Subject Property parcels were obtained and summarized in this Update ISA.

Geotechnical Report, EDH 52, Silva Valley Parkway at US 50, Rough Site Grading and Preliminary Foundation Design, El Dorado Hills, prepared by Blackburn Consulting, Inc., dated March 2013.

BCI prepared a Geotechnical Report to provide information for rough grading and preliminary foundation design, pavement, and utility installation considerations for Parcel 1, EDH 52 site. This report summarized a geotechnical investigation performed on Subject Property parcels. Based on rough grading plans, the EDH 52 site (Subject Property) was proposed to split diagonally by the new Silva Valley Parkway which was proposed to be constructed as part of the new interchange. The southwestern portion was identified as Area 1, and the northeastern portion was identified as Area 2.

Based on BCI's geotechnical investigation performed at the Subject Property, Mesozoic-age metavolcanics and metasedimentary rocks were present at shallow depths beneath the project area. Northwest trending faults, fault zones, and foliation characterize the region. NOA is mapped in the project area. Southwest trending drainage was observed at the Subject Property. An old dam was observed in the drainage feature extending through the center of the main portion of APN 122-720-018. Residual structures were also observed in the northern portion of APN 122-720-018.

Four bores (B1 through B4) and 11 test pits (TP1 through TP11) were advanced during this investigation. Bores were completed to depths between 24.2 and 40 feet bgs. The test pits were typically 2- to 3-feet wide, 8- to 12-feet long, and 3- to 8-feet deep. Soils observed included 1 to 2 feet of sandy silt with gravel, over 1.5 to 5 feet of decomposed weathered metavolcanic rock, over weathered metavolcanic rock. Groundwater was not encountered.

Copyright 2024 Kleinfelder

Bores were drilled to auger refusal prior to coring. Based on the soil and rock conditions in the test pits, bores, BCI concluded that the soil and rock at the Subject Property should be excavatable with conventional grading equipment such as scrapers, dozers, backhoes, and excavators to the depth of refusal encountered in the test pits (depths between 5.5 and 8 feet bgs in Area 1 and 2.5 to 7 feet bgs in Area 2). Furthermore, BCI concludes that blasting may be required to facilitate excavation at depths greater than approximately 15 to 20 feet bgs.

BCI also indicated that asbestos minerals were not present in the rocks observed, but they also indicate that the western portion of the Subject Property falls with the EL Dorado County Environmental Management "Asbestos Review Area".

Phase I Environmental Site Assessment, Proposed Costco Warehouse and Gas Station, West-Southwest of Silva Valley Parkway, El Dorado Hills, El Dorado County, California, CW: 18-0487, Kleinfelder File No. 20193180.001A/LH19R100805, prepared by Kleinfelder, dated September 9, 2019.

Kleinfelder prepared a Phase I ESA on behalf of Costco for the southwestern portion of the Subject Property, excluding the small portion of APN 122-720-018 which is located south of Clarksville Road (formerly identified as Old Silva Valley Parkway). Improvements included a concrete dam and water trough, chain-link fencing, and utility infrastructure. Additionally, as part of the Phase I ESA, an evaluation of wetlands and surface water; and threatened, endangered, and other protected species was performed.

This assessment revealed no evidence of RECs, HRECs, or CRECs, although the following environmental conditions were noted because of potential impact to construction activity.

- Based on the location of the southwestern portion of Subject Property being within the asbestos buffer zone, preparation of an Asbestos Dust Mitigation Plan for AQMD was recommended prior to construction.

- Concrete structures, including a pit of unknown use were observed at the time of Kleinfelder's reconnaissance. It was determined that as there was a potential for dumping in the pit, and in the vicinity of the former structures, Kleinfelder recommended environmental monitoring and observation of the removal of these structures. If contamination was suspected, collection of soil samples from beneath these structures

Copyright 2024 Kleinfelder

would be performed. Additionally, as asbestos may be present in the concrete remnants, sampling for asbestos in the concrete was recommended.

- Two ephemeral creeks and one seasonal wetland swale were observed. Kleinfelder recommended that a wetland delineation be performed.

- Burrowing owls, Swainson's hawk, and migratory birds have the potential to occur on the Subject Property; therefore, pre-construction surveys for these species was recommended.

No non-Subject Property facilities were considered likely to have affected soil, soil vapor, or groundwater beneath the Subject Property.

Phase I Environmental Site Assessment, Proposed Costco Warehouse and Gas Station, Silva Valley Parkway, El Dorado Hills, El Dorado County, California, CW: 18-0487, Kleinfelder File No. 20193180.001A/LH19R91616, dated September 27, 2019.

Kleinfelder prepared a Phase I ESA on behalf of Costco for the northeastern portion of the Subject Property, which is situated north of the intersection of Silva Valley Parkway and Tong Road, approximately 725-feet north of Highway 50. At the time of report preparation, this area was part of a larger parcel of land identified as APN 122-720-15. This parcel consisted of land on both the north and south sides of Silva Valley Parkway. Kleinfelder's scope of services also included an evaluation of wetlands and surface water; and threatened, endangered, and other protected species, which was performed by Kleinfelder's subcontractor, Moore.

At the time of Kleinfelder's reconnaissance, the northeastern portion of the Subject Property was observed to be vacant land. This assessment revealed no evidence of RECs, HRECs, or CRECs. The following environmental conditions were noted because of potential impact to construction activity.

- NOA has been identified in the vicinity of the Subject Property. Limited NOA soil sampling was performed for the construction of Highway 50 and roadways adjacent to the Subject Property; however, since specific locations of those samples are not known, the collection and analysis of additional NOA samples in shallow soils was recommended. Additionally, the preparation of an Asbestos Dust Mitigation Plan for AQMD was recommended prior to construction at the Subject Property.
- A concrete structure (probably to provide water for grazing livestock) was observed on the Subject Property. Kleinfelder concluded that as there was a potential for dumping in this

Copyright 2024 Kleinfelder

structure. As such, Kleinfelder recommended environmental monitoring and observation of the removal of this structure. If contamination was suspected, collection of soil samples from beneath this structure was recommended.

- Two seasonal wetlands were observed on the Subject Property. Kleinfelder recommended that a wetland delineation be performed in the spring.
- Burrowing owls, Swainson's hawk, and migratory birds have the potential to occur on the Subject Property; therefore, pre-construction surveys for these species were recommended.
- A blue elderberry shrub, which can be home to the blue elderberry beetle, was observed near the northern boundary of the Subject Property. A mitigation credit may need to be acquired to move the elderberry shrub.

No non-Subject Property facilities were considered likely to have affected soil, soil vapor, or groundwater beneath the Subject Property.

Preliminary Site Preparation Recommendations, Proposed Costco Wholesale Warehouse and Fuel Facility, Silva Valley Parkway, El Dorado Hills, California, CW# 18-0487, Kleinfelder File No. 20193141.001A/LH19M103348, prepared by Kleinfelder, dated October 31, 2019.

Kleinfelder prepared a draft memorandum to provide preliminary site preparation recommendations for the majority of the southwestern portion of the Subject Property, which encompassed an area of approximately 17 acres of land. It was Kleinfelder's understanding that Costco proposed to construct an approximately 152,000-square-foot warehouse, gasoline station, and a two-level parking structure. Additional surface parking and landscape islands were also planned around the new gasoline station.

At the time of Kleinfelder's reconnaissance, the southwestern portion of the Subject Property was undeveloped with rolling hills, with much of the area covered by low-lying vegetation (weeds and shrubs) and animal burrows. Additionally, a seasonal creek was noted on the Subject Property.

Subsurface conditions were explored by drilling 3 bores/rock cores (KB-1, KB-3, and KB-4), excavating 26 test pits (TP-1 through TP-26), and performing a seismic refraction survey. The seismic refraction survey was performed to evaluate the rippability of the bedrock rock material. Soil materials encountered during the explorations consisted of colluvium/residual soil overlying bedrock. The colluvium/residual soil consisted primarily of clayey soils with varying amounts of silt and gravel and varied in depth from approximately 1.5 and 5.5 feet bgs. Below the

Copyright 2024 Kleinfelder

colluvium/residual soil, bedrock comprised of weathered and fractured metavolcanic rock underlain by little-weathered, intact rock. The rock increased in strength and decreased in weathering and fracture amount with depth. Localized deposits of artificial fill material were encountered in a few test pits. The fill consisted of sandy lean clays with variable amounts of gravel and cobbles. Perched groundwater was encountered in a few test pits between depths of approximately 7 and 8 feet bgs. These test pits were located near the seasonal creek.

This memorandum also mentions Kleinfelder's investigation of the northeastern portion of the Subject Property which was conducted in April 2019. Based on Kleinfelder's working knowledge of the project, these investigations were not documented in a report.

Draft Geotechnical Study, Proposed Costco Wholesale Warehouse and Fuel Facility, Silva Valley Parkway, El Dorado Hills, California, CW# 18-0487, Kleinfelder File No. 20193141.001A/SJO19R103500, prepared by Kleinfelder, dated November 5, 2019.

Kleinfelder prepared a draft geotechnical study report to evaluate soil, bedrock, and groundwater conditions at the southwestern portion of the Subject Property, as well as provide geotechnical recommendations for project design and construction. At the time of Kleinfelder's field exploration, much of the southwestern portion of the Subject Property was covered by low-lying vegetation (weeds and shrubs) and animal burrows.

The scope of Kleinfelder's geotechnical study consisted of a literature review, subsurface explorations, geotechnical laboratory testing, engineering evaluation and analysis, and preparation of a final deliverable.

Subsurface conditions at the Subject Property were explored by drilling three boreholes/rock cores, excavating 26 test pits and performing a seismic refraction survey as previously discussed in Kleinfelder's 2019 Preliminary Site Preparation Recommendations memorandum.

Copyright 2024 Kleinfelder

5 SUBJECT PROPERTY HISTORY

The history of the Subject Property was researched to identify obvious uses. Historical land use was researched to the first developed use, or back to 1940, whichever was earlier or readily available. Table 5-1 summarizes the availability of information reviewed during this assessment.

Table 5-1
Historical Information Sources

SOURCE	YEARS REVIEWED	SOURCE / AVAILABILITY

5.1 SANBORN FIRE INSURANCE MAPS

Sanborn Fire Insurance Maps provide historical land use information for some metropolitan areas and small, established towns. Kleinfelder requested EDR to search its library of Sanborn Fire Insurance Maps for maps of the Subject Property. EDR responded that Sanborn Fire Insurance Maps were not available for the Subject Property (EDR, 2024c) (Appendix D).

5.2 AERIAL PHOTOGRAPHS

A review of historical aerial photography may indicate past activities at a property that may not be documented by other means or observed during a reconnaissance visit. The effectiveness of this technique depends on the scale and quality of the photographs and the available coverage. Aerial photographs were obtained from several historical photograph collections through EDR (2024d) and span a period of 83 years. A tabulation of the aerial photographs reviewed by Kleinfelder is presented in Table 5-2. Copies of the aerial photographs provided by EDR are included in Appendix D.

Copyright 2024 Kleinfelder

Table 5-2
Historical Aerial Photographs Reviewed

YEAR	APPROXIMATE SCALE	SUMMARY
1937 1940	1 inch = 500 feet	**Subject Property:** The Subject Property appears to be agricultural land (grazing). Two creeks appear to extend north-south across the western half of the northeastern portion of the Subject Property. Three trees are also present in the southeast corner of the Subject Property. The southwestern portion of the Subject Property appears to be developed with a farmhouse and associated structures. Multiple trees are also present south of the farmhouse. A creek also appears to be present in the central portion, which extends northeast to southwest, where it connects with the eastern-most creek observed in the northeastern portion of the Subject Property. A dirt track also extends north through the eastern portion of the southwestern portion of the Subject Property, where it veers northwest, and then west towards the farmhouse. **Surrounding Area:** The adjoining properties appear to be agricultural land (grazing). Dirt roads are present throughout the surrounding area, including the western boundary of the southwestern portion of the Subject Property. Several farmhouses are also present southwest of the Subject Property (not adjoining). By at least 1940, construction of US-50 to the south also appears to be underway.
1952	1 inch = 500 feet	**Subject Property:** The Subject Property appears to remain generally the same and is developed with agricultural land (grazing). **Surrounding Area:** The adjoining properties appear generally the same. By at least 1952, there appears to be a small structure adjoining the northwest corner of the Subject Property. The development of US-50 to the south appears to be complete.
1962	1 inch = 500 feet	**Subject Property:** The northeastern portion of the Subject Property appears to remain similar to the 1952 aerial photograph. The previously observed dirt track which traversed the southwestern portion of the Subject Property through the eastern portion is no longer visible. The dirt track first observed in 1937 which separates the two sections of the southwestern portion of the Subject Property now extends onto Subject Property from the southwest corner where it traverses the Subject Property in a northeasterly direction, and then turns east/northeast. **Surrounding Area:** The dirt track that was observed passing through the southern portion of the southwestern corner of the Subject Property extends further east/northeast towards the area immediately adjoining the southeast corner of the northeastern portion of the Subject Property where it forms two loop turnabouts.

Copyright 2024 Kleinfelder

Table 5-2 (Continued)
Historical Aerial Photographs Reviewed

YEAR	APPROXIMATE SCALE	SUMMARY
1966	1 inch = 500 feet	**Subject Property:** The Subject Property appears to remain similar to the 1962 aerial photograph with agricultural land (grazing). **Surrounding Area:** The adjoining properties appear generally the same. A paved road that extends in a general east-west direction travels south of the Subject Property (Tong Road), where it intersects with another paved road between the two sections of the southwestern portion of the Subject Property. This paved road extends approximately 200-feet north where it then connects with a dirt road extending north. US-50 appears further developed with west and east bound lanes.
1972 1984	1 inch = 500 feet	**Subject Property:** The Subject Property appears generally similar to the 1966 aerial photograph, except that the farmhouse is no longer present in the southwestern portion of the Subject Property, although some farm structures appear to remain. **Surrounding Area:** The adjoining properties appear generally the same. The farmhouse structure southwest of the Subject Property is no longer appears to be present, although there appears to be some smaller structures that remain.
1993	1 inch = 500 feet	**Subject Property:** The Subject Property appears generally similar to the 1984 aerial photograph. More developed dirt tracks appear to extend along the northern and eastern boundaries of the northeastern portion of the Subject Property. Additionally, dirt tracks also appear to be present along the western edge of the smaller portion of present-day APN 122-720-018. **Surrounding Area:** The adjoining properties appear generally the same, though there appears to be recent grading activities that have been conducted northwest of the Subject Property.
2006 2009	1 inch = 500 feet	**Subject Property:** The Subject Property appears generally similar with clear dirt tracks extending across the Subject Property. A dirt track extends across the northeastern portion east to west across the Subject Property. This dirt track extends into the southwestern portion of the Subject Property where it breaks off into two tracks, one heading west towards remnants of the of some farm structures, and one heading south towards the southwest corner of the Subject Property. **Surrounding Area:** The properties adjoining to the north and northwest appear to match their existing configuration with residential housing present north and northeast of the Subject Property, and Oak Meadow Elementary School present to the northwest. Former Silva Valley Parkway is also developed between the two sections of present-day APN 122-720-018. West of the Subject Property remains undeveloped land, beyond which is a residential neighborhood.

Copyright 2024 Kleinfelder

Table 5-2 (Continued)
Historical Aerial Photographs Reviewed

YEAR	APPROXIMATE SCALE	SUMMARY
2012	1 inch = 500 feet	**Subject Property:** The northeastern portion of the Subject Property appears to have a graded, raised (or cut) half-circle section in southeast corner. Dirt tracks extend to this area from the northeast, northwest, west, and south. The southwestern portion of the Subject Property appears similar to the 2009 aerial photograph; however, the dirt tracks crossing the area appear to be more apparent. Additionally, the dirt track that extended from the half-circle to the south, crosses over into the southwestern portion of the Subject Property in the southeast corner. **Surrounding Area:** The adjoining properties remain generally the same, although US-50 appears to have been widened.
2016 2020	1 inch = 500 feet	**Subject Property**: The northeastern portion of the Subject Property appears generally the same, except that the three trees first observed in 1937 no longer appear to be present, and the raised or cut section appears to have been graded. The southwestern portion of the Subject Property also appears generally the same, except that the dirt tracks no longer appear to be in use. **Surrounding Area:** The US-50/Silva Valley Parkway interchange project also appears to be complete, as Silva Valley Parkway has now been realigned and bisects the Subject Property east of present-day APN 122-720-018. Additionally, Tong Road now begins near the southern boundary of present-day APN 122-720-020, and travels east. A remnant of former Tong Road remains present south of the APN 122-720-002.

Note: Aerial photographs only provide information concerning indications of land use, and no conclusions regarding the release of hazardous substances or petroleum products can be drawn from the review of photographs alone.

5.3 CITY DIRECTORIES

City directories provide information regarding property occupants by address. Kleinfelder requested EDR to perform a search of its database for properties located along Silva Valley Parkway and Tong Road. EDR provided an EDR-City Directory Abstract report, included in Appendix D, (EDR, 2024e). As the Subject Property parcels are not assigned street addresses, the Subject Property was not identified.

5.4 HISTORICAL TOPOGRAPHIC MAP REVIEW

Kleinfelder obtained information regarding historical topographic maps of the vicinity of the Subject Property from EDR (2024f). The topographic maps reviewed for this assessment are listed in Table 5-3 and copies of the maps are included in Appendix D.

Copyright 2024 Kleinfelder

Table 5-3
Historical Topographic Maps Reviewed

YEAR	SCALE	SUMMARY
1891 1892 1893	1:125,000 1:125,000 1:125,000	**Subject Property:** The Subject Property is shown as undeveloped land consisting of a hill sloping to the south/southwest. **Surrounding Area:** The surrounding area is shown as undeveloped land, with unidentified roads to the north, west, and south. Clarksville is indicated to be southeast of the Subject Property.
1941 1944	1:62,500 1:62,500	**Subject Property:** The Subject Property remains mostly undeveloped land. A structure is present near the north corner of the main portion of present-day APN 122-720-018. **Surrounding Area:** The surrounding area is shown as undeveloped land, with an unimproved road that is present along the western boundary of the main portion of present-day APN 122-720-018. A road has been developed south of the Subject Property that is consistent with US-50.
1953	1:24,000	**Subject Property:** The Subject Property remains mostly undeveloped land. The structure on the northern portion of present-day APN 122-720-018 appears to have been repositioned on the map slightly to the east. **Surrounding Area:** The surrounding area remains generally the same. The road located south of the Subject Property has now been identified as US-50.
1973 1980	1:24,000 1:24,000	**Subject Property:** The Subject Property remains generally the same. By 1980, the structure located in the northern portion of present-day APN 122-720-018 is no longer visible on the 1980 topographic map. **Surrounding Area:** The surrounding area remains generally the same as the 1953 topographic map. An unnamed road that is consistent with the former configuration of Tong Road extends east to west south of the Subject Property. This paved road extends north bisecting present-day APN 122-720-018, where it then terminates approximately 200-feet north before connecting with unimproved dirt road. US-50 has been further developed with west and east bound lanes.
2012 2015	1:24,000 1:24,000	**Subject Property:** The 2012 and 2015 topographic maps are similar in appearance to the 1980 topographic. These maps show physical features (e.g., roads and surface water) with no structures. **Surrounding Area:** Silva Valley Parkway bisects the two sections of present-day APN 122-720-018, where it curves and continues to the north/northwest and turns near the northwest corner of present-day APN 122-720-021. Tong Road is also identified to the south. If should be noted that Silva Valley Parkway and Tong Road are depicted in their former configurations prior to the reconfiguration as part of the US-50/Silva Valley Parkway interchange project. Development of a residential neighborhood is evident north of the Subject Property based on the development of roadways.

Table 5-3 (Continued)
Historical Topographic Maps Reviewed

YEAR	SCALE	SUMMARY
2018 2021	1:24,000 1:24,000	**Subject Property:** The Subject Property is depicted with no features. **Surrounding Area:** The surrounding areas appear generally similar to on the present-day conditions. Silva Valley Parkway alignment matches the present-day conditions, as it bisects the Subject Property into two sections. Tong Road is also no longer present south of APN 122-720-018 and matches its current configuration where it begins south of present-day APN 122-720-020. Furthermore, the configuration of the US-50/Silva Valley Parkway interchange also matches current conditions.

No RECs were identified based on Kleinfelder's review of the topographic maps.

5.5 BUILDING PERMITS

EDR provided a Building Permit Report, included in Appendix D, (EDR, 2024g). No building permits were identified for the Subject Property.

Copyright 2024 Kleinfelder

6 SUBJECT PROPERTY RECONNAISSANCE

Kleinfelder's Phase I ESA activities included a Subject Property reconnaissance. This section summarizes the findings from the Subject Property reconnaissance.

6.1 METHODOLOGY AND LIMITING CONDITIONS

Ms. Erin Abendroth of Kleinfelder performed a reconnaissance of the Subject Property and vicinity on May 23 and May 28, 2024. The Subject Property reconnaissance included a visual inspection of the Subject Property to assist in identifying the presence or likely presence of hazardous substances or petroleum hydrocarbons under conditions that indicate an existing release, a past release, or threat of release into structures, soil, groundwater, or surface water at the Subject Property (i.e., RECs). Observations of readily apparent environmental conditions are summarized in Table 6-1, and color photographs of the Subject Property are presented on Figures 3 through 21. The approximate Subject Property boundaries are shown on Figure 2.

6.2 GENERAL SUBJECT PROPERTY SETTING

The Subject Property is located north of US Highway 50 to the west and east of Silva Valley Parkway, El Dorado Hills, El Dorado County, California, and was observed to be undeveloped land with seasonal grasses at the time of Kleinfelder's reconnaissance.

6.3 SUBJECT PROPERTY OBSERVATIONS

Kleinfelder's Subject Property observations are summarized in Table 6-1.

TABLE 6-1
Subject Property Observations

GENERAL OBSERVATIONS	REMARKS	OBSERVED	NOT OBSERVED
Current use	The Subject Property is currently an undeveloped hillside.	X	
Current use likely to indicate RECs			X
Past use	The Subject Property was historically utilized for ranching operations.		X
Past use likely to indicate RECs			X

TABLE 6-1 (Continued)
Subject Property Observations

GENERAL OBSERVATIONS	REMARKS	OBSERVED	NOT OBSERVED
Structures	A concrete-lined basin was observed in the central portion of the northern half of the Subject Property. This structure was likely used as a watering hole for grazing animals. Remnants of several concrete structures were observed on the northeastern portion of APN 122-720-018. A concrete dam was observed on the northeastern portion of APN 122-720-018, blocking the seasonal creek bisecting the Subject Property.	X	
Roads	Silva Valley Parkway bisects the Subject Property into two main sections, the northeastern and southwestern portions. The southwestern portion of the Subject Property consists of two areas that are divided by Clarksville Crossing.	X	
Topography of Subject Property and surrounding area	The Subject Property consists of vacant, undeveloped hillside and generally slopes towards the southwest.	X	
Interior and exterior observations or environmental conditions that may involve the use, storage, disposal or generation of hazardous substances or petroleum products.		**OBSERVED**	**NOT OBSERVED**
ASTs			X
Below grade vaults	Evidence of subsurface utility vaults and storm drains were observed along Silva Valley Parkway and Clarksville Road.	X	
Burned or buried debris			X
Chemical storage			X
Chemical mixing areas			X
Discolored soil or water			X
Ditches, streams	Three creeks were observed on the Subject Property. Two seasonal streams were observed starting at the northern property boundary. These streams are located on the western half of the Subject Property and trend towards the southwest. No water was observed in these streams at the time *(continued)*

Wells (dry)			X
Wells (oil and gas)			X

6.4 RESULTS OF SUBJECT PROPERTY RECONNAISSANCE

At the time of Kleinfelder's reconnaissance, the Subject Property was observed to consist of an undeveloped field primarily consisting of seasonal grasses. The Subject Property is hilly, with elevations that generally decrease to the west-southwest. Two streams were observed beginning at the northern property boundary, trending to the southwest. These two streams meet up with a

Copyright 2024 Kleinfelder

south-flowing stream located west of Clarksville Road. An earthen embankment and a metal corrugated pipe were observed along the easternmost stream on the northern portion of the Subject Property. A concrete dam was also observed along this stream, located in the center of the southern portion of the Subject Property.

Several concrete structures were observed throughout the Subject Property. A square, concrete structure with a circular basin in the middle was observed beneath a bush in the center of the northern portion of the Subject Property. Remnant ranching structures and a rectangular concrete basin were observed in the southern portion of the Subject Property, located northwest of the easternmost stream. A pile of concrete rubble was observed next to the remnant ranch structure. The purpose of the basins is not certain; however, they were likely used to provide water for grazing animals.

Two Pacific Telephone utility markers were observed on the southern portion of the Subject Property, located both west- and east-of Clarksville Road. Other signs of subsurface utilities included electrical transformers located adjacent to Clarksville Road south of former Tong Road, a subsurface utility vault and two standpipes located adjacent to Clarksville Road north of former Tong Road, storm drains located along Silva Valley Parkway and Clarksville Road, and a water valve and vault box located west of Clarksville Road.

A discarded vacuum cleaner and trash can were observed west of Clarksville Road.

The surrounding area consisted of residential homes and an elementary school to the north, vacant hillside followed by residential homes to the west, Highway 50 to the south, and vacant hillside to the east.

Copyright 2024 Kleinfelder

7 INTERVIEWS

Key Site Managers are contacted to obtain current and historical environmental information concerning the Subject Property. The following sections highlight information revealed during the interviews.

7.1 INTERVIEW WITH CLIENT

A User questionnaire was submitted to Mr. Michael Okuma on May 28, 2024. Mr. Okuma responded that same day indicating that he has no knowledge of the Subject Property. A copy of the completed User questionnaire is included in Appendix C.

7.2 INTERVIEW WITH OWNER/MANAGER

Kleinfelder provided Costco an interview questionnaire to be delivered to the property owner for completion. On May 28, 2024, Mr. Angelo Christie, Project Manager for AKT Investments, Inc., responded on behalf of the property owner. Mr. Christie indicated that wetland fill permit applications had been submitted, but permits had not yet been issued until the CWA Section 401 certification had been issued. Mr. Christie also indicated that he was unaware if the Subject Property had ever been served by a septic system. Mr. Christie further indicated that no crops are present or have been grown on the Subject Property, and to his knowledge, no fertilizers had been applied to the site. Mr. Christie also further indicated that there is a recycled water line located near the northwest corner of APN 122-720-018 between Clarksville Crossing and Silva Valley Parkway. Additionally, a 48-inch storm drain was previously daylighted in this same general area. A copy of the completed property/owner questionnaire is included in Appendix C.

7.3 INTERVIEW WITH OCCUPANT(S)

There were no occupants at the time of Subject Property reconnaissance.

7.4 INTERVIEWS WITH LOCAL GOVERNMENT OFFICIALS

Regulatory agency communication is summarized Section 4.3.

Copyright 2024 Kleinfelder

8 EVALUATION

Kleinfelder performed this Phase I ESA of the Subject Property in conformance with the scope and limitations of the ASTM Standard Practice, the scope of services in our Contract Amendment Request No. 2, dated May 31, 2024, and in accordance with Costco's Development Requirements, Version 2022, dated October 28, 2022. The following sections describe Kleinfelder's findings and provide general background information about the Subject Property. Findings address RECs, HRECs, CRECs, and notation of *de minimis* quantities, as applicable to the Subject Property. In summary, Kleinfelder's assessment revealed the following information concerning the Subject Property:

8.1 BACKGROUND

The following is a summary of the Subject Property background information:

- The Subject Property is located on the north side of the US-50 and Silva Valley Parkway interchange and is bisected by Silva Valley Parkway within the unincorporated community of El Dorado Hills, El Dorado County, California (see Figure 1). The northeastern portion of the Subject Property consists of approximately 24.83 acres of land that is identified by the El Dorado County Assessor's Office as APNs 122-720-019, 122-720-020, and 122-720-021. The southwestern portion of the Subject Property consists of approximately 17.63 acres of land that is identified as APNs 122-720-002 and 122-720-018.

- Based on Kleinfelder's review of historical information and aerial photographs, the Subject Property was historically an undeveloped hillside that was used as grazing land. Farm/ranch structures occupied to the north corner of APN 122-720-018 from at least 1937 through 1973. Remnants of these structures are still present based on Kleinfelder's May 2024 reconnaissance. Natural drainage channels cross the Subject Property and remnants of a dam remain present across the drainage channel in the central portion of APN 122-720-018. By at least 2006, Silva Valley Parkway (present-day Clarksville Crossing) was constructed, bisecting present-day APN 122-720-018. Earthwork appears to have occurred in the southern portion of APN 122-720-020 between 2012 and 2016 based on aerial photographs. This earthwork appears to be related to the US-50 (El Dorado Freeway) construction activities, and realignment of Silva Valley Parkway and Tong Road in 2012 and 2013.

Copyright 2024 Kleinfelder

8.2 FINDINGS AND OPINIONS

The following is a summary of findings and opinions for the Subject Property:

- At the time of Kleinfelder's reconnaissance, the Subject Property was observed to consist of an undeveloped hillside, with remnants of several concrete structures (concrete dam, trough, foundations, walls, and blocks), which may be related to the former ranching operations that were historically conducted on the Subject Property. An earthen embankment was observed in the north-central portion of APN 122-720-021, which may be related with drainage control at the Subject Property. Utilities including a water utility vault with standpipes were observed immediately adjoining the Subject Property to the south, along Clarksville Crossing/Old Silva Parkway.
- Kleinfelder's evaluation has identified no adjoining or other nearby facility considered likely to have affected the environmental condition of soil, soil vapor, or groundwater beneath the Subject Property.
- Wetlands are mapped on the Subject Property. Based on Kleinfelder's further review of the USFWS NWI for the Subject Property and surrounding area, a freshwater emergent wetland traverses the western portion of APN 122-720-018, in the area west of Clarksville Crossing. Additionally, as documented by in the biological assessments performed at the Subject Property by Moore (Moore 2019a, 2019b), two ephemeral creeks and one intermittent creek are also present on the Subject Property. Furthermore, three seasonal wetlands were identified.
- NOA has been identified in the Subject Property vicinity, and portions of the Subject Property are located within asbestos buffer zones. Limited NOA soil sampling was performed for the construction of US-50 and roadways adjacent to the Subject Property; however, since specific locations of those samples are not known, the collection and analysis of additional NOA samples is recommended if Costco desires a greater level of certainty of the potential presence of NOA in shallow soil at the Subject Property

8.3 DEVIATIONS AND ADDITIONAL SERVICES

Kleinfelder's scope of services did not include ASTM Standard Practice non-scope evaluations of environmental regulatory compliance that may be required for a Phase I ESA pursuant to Costco's Development Requirements publication (revised October 28, 2022). In addition, the Phase I ESA did not include an assessment for radon, lead in drinking water, molds and mildews, indoor air

Copyright 2024 Kleinfelder

quality, industrial hygiene, health and safety, and other ASTM Standard Practice non-scope considerations not described herein.

Kleinfelder's scope of services included a preliminary review of a database search, EDR NEPASearch™ Map Report (EDR, 2024h), for historical sites, wetlands, and threatened, endangered, and other protected species at or in the vicinity of the Subject Property pursuant to Development Requirements, Version 2022, dated October 28, 2022. A summary of the findings is provided below.

- No U.S. Federal Lands sites are located within a 1-mile radius of the Subject Property.
- No U.S. Wilderness Preservation areas were identified within a 1-mile radius of the Subject Property.
- The NEPASearch™ Map Report indicates that no CPAD sites are located within the Subject Property boundaries and that multiple listings were identified within a 1-mile radius of the Subject Property. The closest identified listing is for an unnamed county park (Holding ID: 54199) located approximately 870-feet south of the Subject Property. This park is further identified as a park with open access and no known mandate for protection. However, based on Kleinfelder's further review of the NEPASearch™ Map Report, correspondence with EDR, and Kleinfelder's further review of the CPAD and the California Conservation Easement Database website (https://www.mapcollaborator.org/cpad/) operated by the GreenInfo Network, APN 122-720-002 (Subject Property) is considered a CPAD site.

  Furthermore, based on Kleinfelder's review of available information, APN 122-720-002 is identified as a RP with open access (Unit ID: 35646, Super Unit ID: 3446). Furthermore, a RP with open access (Unit ID: 35695, Super Unit ID: 3446), encompassing an area of approximately 0.2 acre of land north of APN 122-720-021 and south of the residential homes located at 4848, 4854, 4860, 4866, 4872, 4880, and 4886 Village Green Drive, is present off site. On June 5, 2024, Kleinfelder submitted a request for additional information from the County of El Dorado to determine what limitations there may be for construction and development as it pertains to the CPAD sites. As of the date of this report, Kleinfelder has not received an update. If pertinent information is received that alters the conclusions of this assessment, Kleinfelder will issue an addendum under separate cover. Kleinfelder recommends that coordination be conducted with El Dorado County to determine construction and overall development constraints.

Copyright 2024 Kleinfelder

- Multiple California Government Lands site listings are identified. The closest identified California Government Lands site listing is unnamed; however, based on the listed direction and distance from the Subject Property and confirmation from EDR, it is consistent with APN 122-720-002 of the Subject Property which is identified as a regional park.
- Threatened, endangered, or species of concern were listed as present in Federal Endangered Species Lists for California and El Dorado County. Based on Moore's biological assessments and field verification surveys summarized under separate cover (Moore 2019a, 2019b), the findings include the following:
    - An intermittent creek and ephemeral creek were observed flowing north to south across the northeastern portion of the Subject Property. Two seasonal wetland areas were observed near the southern ends of these waterways.
    - Two ephemeral creeks, flowing from the northeast to southwest, and one seasonal wetland swale, located in the creek, were observed on the southwestern portion of the Subject Property.
    - No special status wildlife or plant species were observed during the Subject Property reconnaissance. Ten special status plants were identified during database research as potentially occurring at the Subject Property. Due to lack of habitat, it is unlikely these special status plants would occur at the Subject Property. Multiple special status species were documented in the Subject Property vicinity; however, upon review of the available habitat and distribution of regional occurrences, in Moore's opinion, most of the species are unlikely to occur at the Subject Property.
    - A blue elderberry shrub was observed near the northern boundary of the Subject Property. This shrub can be home to the blue elderberry beetle; however, no sign of the beetle was observed on this shrub, and due to the elevation of the location of the shrub, it is unlikely the beetle will occur at this location. However, presence of the blue elderberry shrub may require that one mitigation credit be purchased from the USFWS, and the shrub relocated. Based on the Subject Property observations, in Moore's opinion, it is unlikely the beetle will occur at the Subject Property.
    - Burrowing owls, Swainson's Hawk, and migratory birds have the potential to occur on the Subject Property.
- The EDR NEPASearch™ Map Report indicated that no U.S. Proclamation Boundary sites were identified within a 1-mile radius of the Subject Property.

Copyright 2024 Kleinfelder

- Wetlands are mapped on the Subject Property. Based on Kleinfelder's further review of the USFWS NWI for the Subject Property and surrounding area, a freshwater emergent wetland traverses the western portion of APN 122-720-018, in the area west of Clarksville Crossing. Additionally, as documented by in the biological assessments performed at the Subject Property by Moore (Moore 2019a, 2019b), two ephemeral creeks and one intermittent creek are also present on the Subject Property. Furthermore, three seasonal wetlands were identified.

No other additional services were provided by Kleinfelder for this Phase I ESA.

8.4 CONCLUSIONS AND RECOMMENDATIONS

Kleinfelder has performed a Phase I ESA in conformance with the scope and limitations of ASTM Practice E 1527-21 of the property located approximately 75-feet north of the US-50 and Silva Valley Parkway interchange and is bisected by Silva Valley Parkway and Clarksville Crossing within the unincorporated community of El Dorado Hills, El Dorado County, California. Any exceptions to, or deletions from, this practice are described in Section 8.3 of this report.

Based on the results of the Phase I ESA, this assessment has revealed no evidence of RECs, CRECs, or HRECs associated with the Subject Property.

The following BERs in connection with the Subject Property were identified:

- NOA has been identified in the Subject Property vicinity, and portions of the Subject Property are located within asbestos buffer zones. Limited NOA soil sampling was performed for the construction of US-50 and roadways adjacent to the Subject Property; however, since specific locations of those samples are not known, the collection and analysis of additional NOA samples is recommended if Costco desires a greater level of certainty of the potential presence of NOA in shallow soil at the Subject Property. Additionally, the preparation of an Asbestos Dust Mitigation Plan for AQMD is recommended prior to construction at the Subject Property.

- Multiple concrete structures (including a pit and trough) were observed on the Subject Property. As there is the potential for dumping in these structures, and though the former use is assumed to be associated with former ranching operations, that has not been confirmed. Therefore, Kleinfelder recommends environmental monitoring and observation of the removal of this structure and, if contamination is suspected, collection of soil samples from beneath these structures is recommended. Additionally, the concrete

Copyright 2024 Kleinfelder

remnants from the former structures may contain asbestos. Sampling for asbestos in concrete is also recommended for all structures and/or features.

- A portion of the Subject Property, APN 122-720-002, which encompasses approximately 0.52 acre of land, is identified in the NEPASearch™ Map Report as a CPAD site and a California Government Lands site. Based on Kleinfelder's review of the CPAD and the California Conservation Easement Database, APN 122-720-002 is identified as a county RP with open access. As such, Kleinfelder submitted a request for additional information from the County of El Dorado to determine what limitations there may be for construction and development as it pertains to the CPAD sites. As of the date of this report, Kleinfelder has not received an update. If pertinent information is received that alters the conclusions of this assessment, Kleinfelder will issue an addendum under separate cover. Kleinfelder recommends that coordination be conducted with El Dorado County to determine construction and overall development constraints.
- An intermittent creek, two ephemeral creeks, two seasonal wetlands, and a freshwater emergent wetland were observed and/or are documented on the Subject Property. As discussed in Section 7.2, it is Kleinfelder's understanding that wetland fill permit applications have been submitted; however, permits will not be issued until the CWA Section 401 certification has been issued.
- Burrowing owls, Swainson's hawk, and migratory birds have the potential to occur on the Subject Property; therefore, pre-construction surveys for these species are recommended.
- A blue elderberry shrub, which can be home to the blue elderberry beetle, was observed near the northern boundary of the Subject Property. A mitigation credit may need to be acquired to move the blue elderberry shrub in the northern portion of the Subject Property.

8.5 DATA GAPS

Kleinfelder attempted to obtain reasonably ascertainable information regarding the Subject Property consistent with ASTM Standard E1527-21. Despite good faith efforts by the environmental professional(s) to gather the necessary information, data gaps, a lack of information, or inability to obtain information as required by the ASTM Standard, were encountered during the completion of this Phase I ESA.

- Gaps in historical sources greater than ten years (1893 and 1937, and 1993 and 2006).

Copyright 2024 Kleinfelder

- Agency request responses have not been received from El Dorado County as it pertains to the CPAD site, El Dorado and Alpine Counties Department of Agriculture – Weights and Measures, and the El Dorado Hills Fire Department.

The gaps in the historical topographic maps and aerial photographs, in addition to the absence of information from the El Dorado and Alpine Counties Department of Agriculture – Weights and Measures, and the El Dorado Hills Fire Department are not considered significant data gaps based on other information reviewed as part of this Phase I ESA. Additional coordination with El Dorado County is recommended prior to construction and development on Subject Property parcel 122-720-002, as it is unclear what construction and overall development constraints there may be.

STATEMENT OF QUALIFICATIONS

Copyright 2024 Kleinfelder

STATEMENT OF QUALIFICATIONS

We declare that to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in Section 312.10 of 40 CFR 312. We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all-appropriate inquiries in conformance with the standards and practices set forth in CFR Part 312.

Victoria A. Golston
Environmental Scientist

Lizanne Simmons, PG
Senior Principal Geologist

The resumes of above-listed environmental professionals performing this Phase I ESA are on file at the Kleinfelder office and are available upon request.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

EXECUTIVE SUMMARY

TARGET PROPERTY SEARCH RESULTS

The target property was not listed in any of the databases searched by EDR.

DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable ") government records either on the target property or within the search radius around the target property for the following databases:

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL ---------- National Priority List
Proposed NPL ---------- Proposed National Priority List Sites
NPL LIENS ---------- Federal Superfund Liens

Lists of Federal Delisted NPL sites

Delisted NPL ---------- National Priority List Deletions

Lists of Federal sites subject to CERCLA removals and CERCLA orders

FEDERAL FACILITY ---------- Federal Facility Site Information listing
SEMS ---------- Superfund Enterprise Management System

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE ---------- Superfund Enterprise Management System Archive

Lists of Federal RCRA facilities undergoing Corrective Action

CORRACTS ---------- Corrective Action Report

Lists of Federal RCRA TSD facilities

RCRA-TSDF ---------- RCRA - Treatment, Storage and Disposal

Lists of Federal RCRA generators

RCRA-LQG ---------- RCRA - Large Quantity Generators
RCRA-SQG ---------- RCRA - Small Quantity Generators
RCRA-VSQG ---------- RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

Federal institutional controls / engineering controls registries

LUCIS ---------- Land Use Control Information System

US ENG CONTROLS ..... Engineering Controls Sites List
US INST CONTROLS ..... Institutional Controls Sites List

Federal ERNS list

ERNS ..... Emergency Response Notification System

Lists of state- and tribal (Superfund) equivalent sites

RESPONSE ..... State Response Sites

Lists of state and tribal landfills and solid waste disposal facilities

SWF/LF ..... Solid Waste Information System

Lists of state and tribal leaking storage tanks

LUST ..... Geotracker's Leaking Underground Fuel Tank Report
INDIAN LUST ..... Leaking Underground Storage Tanks on Indian Land
CPS-SLIC ..... Statewide SLIC Cases

Lists of state and tribal registered storage tanks

FEMA UST ..... Underground Storage Tank Listing
UST ..... Active UST Facilities
AST ..... Aboveground Petroleum Storage Tank Facilities
INDIAN UST ..... Underground Storage Tanks on Indian Land

Lists of state and tribal voluntary cleanup sites

INDIAN VCP ..... Voluntary Cleanup Priority Listing
VCP ..... Voluntary Cleanup Program Properties

Lists of state and tribal brownfield sites

BROWNFIELDS ..... Considered Brownfieds Sites Listing

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where

environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 01/22/2024 has revealed that there are 2 ENVIROSTOR sites within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
SERRANO ELEMENTARY S	***SERRANO PARKWAY/SILV***	***NNW 1/4 - 1/2 (0.311 mi.)***	***3***	***10***
Facility Id: 09020004				
Status: No Further Action				
SILVER DOVE ELEMENTA	***SILVER DOVE WAY/BASS***	***E 1/2 - 1 (0.884 mi.)***	***7***	***27***
Facility Id: 09000003				
Status: No Further Action				

ADDITIONAL ENVIRONMENTAL RECORDS

Other Ascertainable Records

CUPA Listings: A listing of sites included in the county's Certified Unified Program Agency database. California's Secretary for Environmental Protection established the unified hazardous materials and hazardous waste regulatory program as required by chapter 6.11 of the California Health and Safety Code. The Unified Program consolidates the administration, permits, inspections, and enforcement activities.

A review of the CUPA Listings list, as provided by EDR, has revealed that there are 4 CUPA Listings sites within approximately 0.5 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
PG&E: CLARKSVILLE SU	JOERGER RD	SSW 1/8 - 1/4 (0.207 mi.)	1	9
Database: CUPA EL DORADO, Date of Government Version: 08/08/2022				
Status: Active, billable				
NEHEMIAH CONSTRUCTIO	1400 WHITE ROCK RD	S 1/4 - 1/2 (0.261 mi.)	2	9
Database: CUPA EL DORADO, Date of Government Version: 08/08/2022				
Status: Inactive, non-billable				
AT&T MOBILITY - WHIT	***7000 ROSSMORE LN***	***SSW 1/4 - 1/2 (0.377 mi.)***	***4***	***14***
Database: CUPA EL DORADO, Date of Government Version: 08/08/2022				
Status: Inactive, non-billable				
Status: Active, billable				
REGAL EDH STADIUM 14	***2101 VINE ST***	***SSW 1/4 - 1/2 (0.492 mi.)***	***5***	***21***
Database: CUPA EL DORADO, Date of Government Version: 08/08/2022				
Status: Active, billable				

ENF: A listing of Water Board Enforcement Actions. Formal is everything except Oral/Verbal Communication, Notice of Violation, Expedited Payment Letter, and Staff Enforcement Letter.

A review of the ENF list, as provided by EDR, and dated 01/16/2024 has revealed that there is 1 ENF site within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

		NO SITES FOUND			

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 02/29/2024

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 02/29/2024

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 02/29/2024

Lists of Federal sites subject to CERCLA removals and CERCLA orders

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 12/20/2023
Date Data Arrived at EDR: 12/20/2023
Date Made Active in Reports: 01/24/2024
Number of Days to Update: 35

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 01/29/2024

Data Release Frequency: Quarterly

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 12/04/2023

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 12/04/2023

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated
RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO: Facilities in Industries that May Be Handling PFAS Listing

Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

PFAS ECHO FIRE TRAINING: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PART 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

AQUEOUS FOAM NRC: Aqueous Foam Related Incidents Listing

The National Response Center (NRC) serves as an emergency call center that fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. The spreadsheets posted to the NRC website contain initial incident data that has not been validated or investigated by a federal/state response agency. Response center calls from 1990 to the most recent complete calendar year where there was indication of Aqueous Film Forming Foam (AFFF) usage are included in this dataset. NRC calls may reference AFFF usage in the ?Material Involved? or ?Incident Description? fields.

CHROME PLATING: Chrome Plating Facilities Listing

This listing represents chrome plating facilities the California State Water Resources Control Board staff identified as possibly being a source of Per- and polyfluoroalkyl substance (PFAS) contamination. Sites and locations were identified by staff with the Division of Water Quality in the California State Water Board. Data was collected from the CA Air Resources Board 2013 and 2018 - Cr VI emission survey, CA Emission Inventory, CA HAZ Waste discharge database and by reviewing storm water permits. Former chrome plating sites are also included that are open site investigation or remediation cases with the Regional Water Quality Control Boards and the Department of Toxic Substances Control.

Data Release Frequency: Varies

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing
In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

CERS: CalEPA Regulated Site Portal Data

The CalEPA Regulated Site Portal database combines data about environmentally regulated sites and facilities in California into a single database. It combines data from a variety of state and federal databases, and provides an overview of regulated activities across the spectrum of environmental programs for any given location in California. These activities include hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials

UST FINDER: UST Finder Database

EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

GEOCHECK ®- PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

COSTCO EL DORADO HILLS
COSTCO EL DORADO HILLS
EL DORADO HILLS, CA 95762

TARGET PROPERTY COORDINATES

Latitude (North):	38.661584 - 38° 39' 41.70''
Longitude (West):	121.056507 - 121° 3' 23.43''
Universal Tranverse Mercator:	Zone 10
UTM X (Meters):	669100.7
UTM Y (Meters):	4280808.0
Elevation:	762 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	50005916 CLARKSVILLE, CA
Version Date:	2021

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

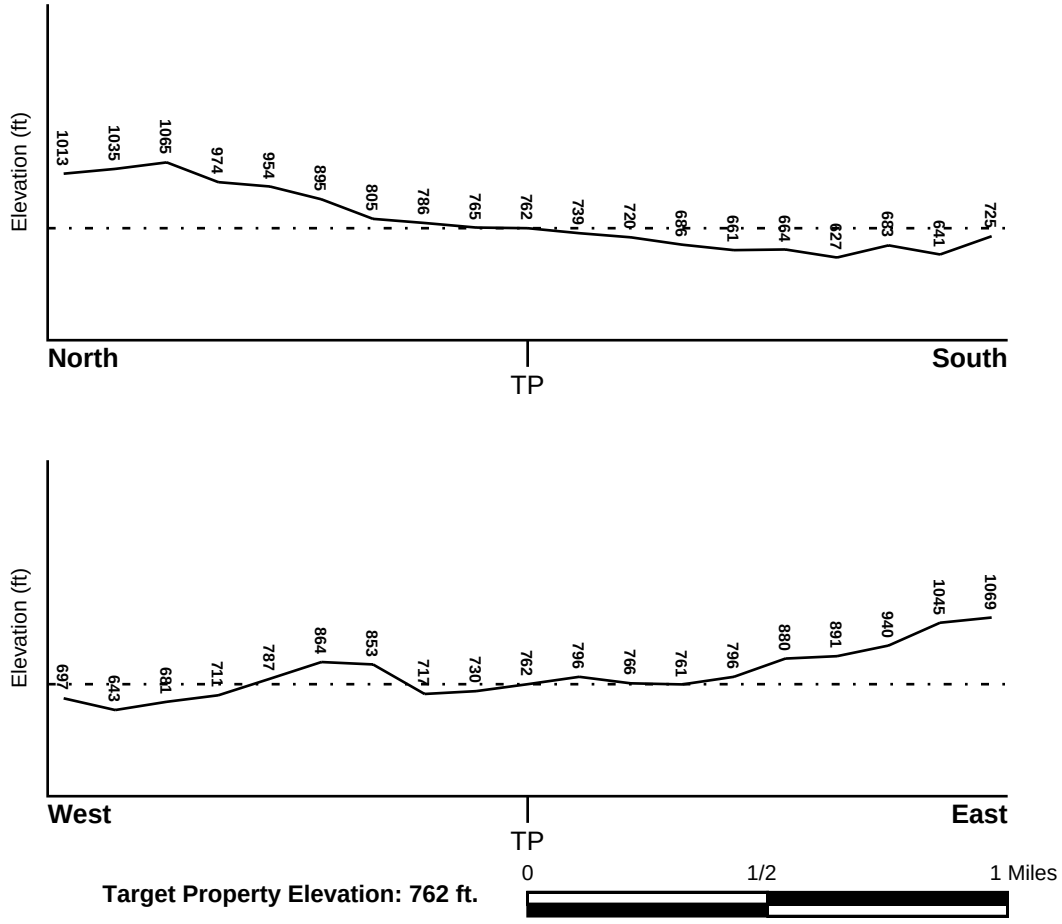
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Target Property Elevation: 762 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06017C0725E	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
06067C0140H	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
CLARKSVILLE	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: AUBURN

Soil Surface Texture: silt loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 48 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	14 inches	silt loam	Not reported	Not reported	Max: Min:	Max: Min:
2	14 inches	18 inches	unweathered bedrock	Not reported	Not reported	Max: Min:	Max: Min:

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

Department of Conservation
Telephone: 916-445-9686
Geothermal well means a well constructed to extract or return water to the ground after it has been used for heating or cooling purposes. Geothermal wells in California (except for wells on federal leases which are administered by the Bureau of Land Management) are permitted, drilled, operated, and permanently sealed and closed (plugged and abandoned) under requirements and procedures administered by the Geothermal Section of the Department of Conservations Geologic Energy Management Division (CalGEM, formerly DOGGR).

PHYSICAL SETTING SOURCE RECORDS SEARCHED

California Earthquake Fault Lines
Source: California Division of Mines and Geology
The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

RADON

State Database: CA Radon
Source: Department of Public Health
Telephone: 916-210-8558
Radon Database for California

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

EDR Environmental Lien and AUL Search

The EDR Environmental Lien Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations (AULs), such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel number and/or legal description
- search for ownership information
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.
- search for publicly available environmental encumbering instrument(s) filed on or after the recording of the current deed; between the recording of the current deed and the most current publicly available date
- provide a copy of any environmental encumbrance(s)
- provide a copy of the current deed when available

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

BUILDING DESIGN CRITERIA

6/3/2024

ASSESSOR'S PARCEL NUMBER: 122-720-002

SEISMIC ZONE **	To be determined using the CBC section 1613 earthquake loads. Except: Effective June 10, 2016, parcels in Tahoe within Alquist-Priolo Earthquake Fault Zones require a Geologic Report.**
BASIC WIND SPEED **	**Your basic/ultimate wind speed shall be determined from CBC Figure 1609.3 or CRC Figure R301.2(5).**
SOIL BEARING **	**West Slope Single Family Dwelling - 1000 lbs per square foot** Your Seismic Design Category is C A single family dwelling will not require a Geotechnical investigation report. All commercial projects within the county require a Soils Report by a California licensed soils engineer as part of the permit application submittal. Additional grading information.
CONVENTIONAL LIGHT FRAME CONSTRUCTION	Allowed using criteria found in section 2308 of the California Building Code.
GROUND SNOW LOAD **	**The Ground Snow (Pg) is: Pg = 20 lbs/sq. ft** Note: the absolute minimum **roof** snow load is 20 lbs/sq.ft.
FROST LINE	Parts of El Dorado County may have snow coverage and freezing temperatures in the mountain regions during the winter season. Currently the county does not experience any frost deeper than the foundation requirement of a minimum 12 inches into undisturbed soil for the west slope or a minimum 18 inches in the Tahoe Basin.
FLOOD ZONES	**Flood Review not required**
CLIMATE ZONES	**Climate Zone is 12**
FIRE SAFE REGULATIONS	Fire Safe Regulations Required in all portions of the County. Contact **EL DORADO HILLS WATR/FIRE** for additional regulations and information. Water fire flow calculations for a parcel may be required by the fire district prior to permit issuance. These calculations may affect the design of your structure.
FIRE HAZARD SEVERITY ZONE	**The Fire Hazard Severity Zone is "Moderate"** Building codes require building modification to meet requirements of Wildland-Urban Interface Building Standards.**
FIRE SPRINKLER REQUIREMENTS	Fire sprinklers required in all Single Family Dwellings to be designed using section R313 of the 2016 California Residential Code or NFPA 13D standard.
RADON GAS	Your structure is the the Tahoe Basin. Contact Environmental Management for information pertaining to Radon Gas in the Tahoe Basin. Additional information may be found on the following website: Radon in California.
WATER DISTRICTS	Your project is within the **EL DORADO IRRIGATION DIST** water district. Contact the district for information and requirements.
ZONING SETBACK	Zoning setback requirements are established by Planning Services.

Buildings not designed by a State of California licensed architect or engineer must meet the requirements of a conventional light frame and brace wall construction design as outlined in the 2019 California Building Codes, Part 2, Vol. 2 § 2308 or the 2019 California Residential Code.

** If a California licensed architect or engineer is required they shall verify the site conditions affecting the building design per the 2019 California Building Code and the 2019 California Residential Code.

Thank you for submitting your public records request. A copy is included below for your records.

EDHCSD Public Records Request

Full Name	Victoria Golston
Organization (if any)	Kleinfelder
Mailing Address	24411 Ridge Route Drive Suite 225
Phone Number	+1 (405) 426-2596
Email Address	vgolston@kleinfelder.com
Information/Records Requested	Kleinfelder is currently performing a Phase I Environmental Site Assessment in connection with the parcels identified as APNs 122-720-002, 122-720-018, 122-720-019, 122-720-020, and 122-720-021 located near Silva Valley Parkway and US-50. Kleinfelder is requesting a review of any and all files regarding environmental conditions at the above referenced APNs, including but not limited to: spill or leaks, above or below ground bulk storage tanks, piping, sumps, pits, septic systems, dumpsters, drainage systems, stormwater conveyance or detention systems, waste or chemical storage/disposal areas, historic fill, oil-filled electrical equipment, potable supply wells, ordnance and explosives (OE) investigations, or any other potential area of environmental concern. Additionally, Kleinfelder is requesting a review of any information that you may maintain regarding

	groundwater supply or monitoring wells in the area, permits, inspections, citations, and any known impact identified at this facility. Please let me know if you have any questions.
Records Format Desired	Electronic

Dear Ms. Golston,

The El Dorado Hills Community Services District (District) has completed its search for records responsive to your Public Records Request (PRR) submitted on May 31, 2024. It has been determined there are **no responsive documents** in the District's possession.

As a suggestion, you may want to reach out to El Dorado County, El Dorado Irrigation District, and/or El Dorado Fire to see if they possess the records you are seeking.

This response hereby fulfills your PRR to the District.

Best regards,

EL DORADO HILLS
COMMUNITY SERVICES DISTRICT

Hi Lauren,

This is just a follow-up to our phone conversation. Thank you again for reaching out. Air Quality Management District does not have any responsive records regarding the APNs in your request.

Please let us know if AQMD can be of further assistance.

Thank you,

Michelle Drehobl

Hello,

A Public Records Request (P006930-052224) was submitted through the El Dorado County Public Records Center on May 22, 2024. A message received from “County of El Dorado” of May 22 indicates that the request is being processed, but the status in the Records Center shows that the Request has been completed with no records found.

Please let me know if this records request was processed and if any records were found.

Thank you!
Lauren

Good morning,

I'm so sorry about this, I looked at each of these parcel numbers this morning and none of them have any building permits attached to them which means building services would not be able to find anything for you. There were however several projects, these are managed by planning. The link below should take you to a page which will allow you to input each parcel number and what information you would like from planning, and they can process this request.

PRA P006932-052224 – Response Letter - Due May 31,2024

Dear Lauren Yarbough,

Pursuant to Government Code section 7922.535, et seq., I am writing in response to your Public Records Act ("PRA") request, received on May 22,2023, regarding Records Requested regarding Kleinfelder who is currently performing a Phase I Environmental Site Assessment in connection with APNs 122-720-002, 122-720-018, 122-720-019, 122-720-020, and 122-720-021 (Silva Valley Parkway, El Dorado Hills, CA). There is no address associated with the site. Kleinfelder is requesting a review of any and all files regarding environmental conditions at the above referenced APNs, including but not limited to: spill or leaks, above or below ground bulk storage tanks, piping, sumps, pits, septic systems, dumpsters, drainage systems, stormwater conveyance or detention systems, waste or chemical storage/disposal areas, historic fill, oil-filled electrical equipment, potable supply wells, ordinance and explosives (OE) investigations, or any other potential area of environmental concern. Additionally, Kleinfelder is requesting a review of any information that you may

maintain regarding groundwater supply or monitoring wells in the area, permits, inspections, citations, and any known impact identified at this property. I am submitting this letter within the ten-day period for response set out in Government Code section 7922.535(a).

The County is still in the process of gathering records responsive to your request. The County estimates that these records will be produced by June 14, 2024.

The County Planning Services has completed their portion of the request. For records released today, you may access the records by visiting the El Dorado County Public Record Center at the following link: Public Record Center. Click on "View My Requests" and log in with your email address and password. If you are a first-time user, please click "Create Account" and enter your information in the required fields. If you have any trouble accessing the records, please let us know so we can help resolve any problems.

Please note that all public record requests are limited only to records maintained in the normal course of business by the County and records that are within the County's custody, control, and access. Please also note that we will not produce records that are privileged or otherwise exempt from disclosure pursuant to State and Federal laws, including exemptions identified in Government Code section 7923.600, et seq., and additional exemptions specifically incorporated under Government Code section 7927.705. This includes documents pertaining to pending litigation or claims, and documents protected by the attorney-client privilege, attorney work product, and official information privileges.

If you have any additional comments or clarifications, please contact our office at 530-621-5355 or email us at planning@edcgov.us.

Sincerely,

Planning Services

RE: PUBLIC RECORDS REQUEST of May 22, 2024, Reference # P006929-052224

Dear Lauren,

The County received the following public records request from you on May 22, 2024.

Kleinfelder is currently performing a Phase I Environmental Site Assessment in connection with APNs 122-720-002, 122-720-018, 122-720-019, 122-720-020, and 122-720-021 (Silva Valley Parkway, El Dorado Hills, CA). There is no address associated with the site.

Kleinfelder is requesting a review of any and all files regarding environmental conditions at the above referenced APNs, including but not limited to: spill or leaks, above or below ground bulk storage tanks, piping, sumps, pits, septic systems, dumpsters, drainage systems, stormwater conveyance or detention systems, waste or chemical storage/disposal areas, historic fill, oil-filled electrical equipment, potable supply wells, ordinance and explosives (OE) investigations, or any other potential area of environmental concern.

Additionally, Kleinfelder is requesting a review of any information that you may maintain regarding groundwater supply or monitoring wells in the area, permits, inspections, citations, and any known impact identified at this property. Please let me know if you have any questions.

The County has reviewed its files and has determined there are no records responsive to your request.

To review California's public records law please visit the California Legislative Information page.

If you have any questions, or wish to discuss this further, you may contact my office at 530-621-5300.

Sincerely,

Jaclyn Scaggs

BUCKEYE UNION SCHOOL DISTRICT, SERRANO ELEMENTARY SCHOOL SITE, SERRANO PARKWAY, EL DORADO HILLS, EL DORADO COUNTY

Dear Mr. Bush:

The Department of Toxic Substances Control (DTSC) has completed review of the document Phase I Environmental Site Assessment and Geological Hazard Assessment (Phase I), dated December 1999, prepared by Youngdahl & Associates Inc., El Dorado Hills. DTSC staff inspected the proposed school site on January 10, 2000. Based on this visit, and DTSC's review of the information presented and discussed in the Phase I Report, completion of a Preliminary Endangerment Assessment (PEA) is recommended for this property. The PEA is to determine whether a release or threatened release of hazardous materials that pose a threat to public health or the environment exists at the property.

According to the Phase I, this approximately 19-acre site and surroundings were undeveloped grasslands prior to the current residential development activity. The proposed school site is now used for stockpiling rock from adjacent residential construction sites. The site visit by DTSC staff revealed that the proposed school site is central to a large residential development project where cut and fill operations are largely complete and final grading and construction of residential units is in progress. The Phase I notes the proximity of the site to known and suspected sources of naturally occurring asbestos. A geotechnical consulting firm, retained by the developer to monitor cut and fill operations, reports that no observable asbestos-laden material was placed on or near the proposed school site but suggests that sampling to confirm the absence of asbestos may be appropriate. In addition, Phase I reconnaissance-level inspection of the site revealed no asbestos sources but the Phase I acknowledges that this is not definitive and recommends that the presence or absence of naturally occurring asbestos be evaluated during subsequent phases of development of the subdivision and construction of the school site. DTSC,

therefore, concludes that additional investigation of naturally occurring asbestos is necessary. As a result, we recommend that this site be directed to enter DTSC's Voluntary Cleanup Program (VCP) for completion of a PEA.

Please contact Mr. Richard Hume at (916) 255-3690 if you have questions regarding this determination or to discuss entering the VCP.

I. INTRODUCTION.

1.1 Parties. The California Environmental Protection Agency, Department of Toxic Substances Control (DTSC) enters into this Environmental Oversight Agreement (Agreement) with Buckeye Union School District (Proponent).

1.2 Site. The proposed Serrano Elementary School Site is located south of Serrano Parkway and east of Silva Valley Parkway within the Serrano Subdivision in El Dorado Hills, El Dorado County, California. The property consists of approximately 8.5 acres and is identified by Assessor's Parcel Number 114-150-23-100. Diagrams of the Site and location map are attached as Exhibit A and Exhibit B.

1.3 Jurisdiction. This Agreement is entered into by DTSC and Proponent pursuant to Health and Safety Code (H&SC) section 25355.5(a)(1)(C). This section authorizes DTSC to enter into an enforceable agreement with Proponents to oversee the characterization and Oversight of the Sites.

1.4 Purpose. The purpose of this Agreement is for the Proponent to conduct a Preliminary Endangerment Assessment under the oversight of DTSC. The purpose of this Agreement is also for DTSC to obtain reimbursement from the Proponent for DTSC's oversight costs.

II. BACKGROUND

2.1 Ownership. Site 1 is owned by the El Dorado Hills Development Company.

2.2 Substances Found at Site. The Phase One Reports show that the soil maybe contaminated with hazardous substances, including asbestos.

2.3 Physical Description. The Site consists of an irregularly shaped parcel of undeveloped land that is currently established within an active construction area. The property in the vicinity is currently being developed as residential homes. The Site consists of well-drained Auburn slit loam soils that are underlain by hard metamorphic rocks. The Site is within a zone 2 on the U.S.EPA's Map of Radon Zones. This property is currently used for the stockpiling of rock from adjacent construction activity.

2.4 Site History. The Site had been used for livestock grazing purposes only. The adjacent properties to the north, south, east, and west were used as an undeveloped grazing land.

III. AGREEMENT

3.0 IT IS HEREBY AGREED THAT DTSC will provide review and oversight of the response activities conducted by the Proponent in accordance with the Scope of Work contained in Exhibit C. The Proponent shall conduct the activities in the manner specified herein and in accordance with the schedule specified in Exhibit E. All work shall be performed consistent with H&SC section 25300 et seq., as amended; the National Contingency Plan (40 Code of Federal Regulations (CFR) Part 300), as amended; U.S. EPA and DTSC Superfund guidance documents regarding site investigation and remediation.

3.1 Scope of Work and DTSC Oversight. DTSC shall review and provide Proponent with written comments on all Proponent deliverables as described in Exhibit C (Scope of Work) and other documents applicable to the scope of the project. DTSC shall provide oversight of field activities, including sampling and remedial activities, as appropriate. DTSC's completion of activities described above shall constitute DTSC's complete performance under this Agreement.

3.2 Additional Activities. Additional activities may be conducted and DTSC oversight provided by amendment to this Agreement or Exhibits hereto in accordance with Paragraph 3.17. If DTSC expects additional oversight costs to be incurred related to these additional activities, it will provide an estimate of the additional oversight cost to the Proponent.

3.3 Agreement Managers. James Tjosvold, Branch Chief is designated by DTSC as its Manager for this Agreement. ~~Janett~~ Jeanette Thomas, District Business Manager is assigned by the Proponent as Manager for this Agreement. Each Party to this Agreement shall provide at least ten (10) days advance written notice to the other of any change in its designated manager.

3.4 Notices and Submittals. All notices, documents and communications required to be given under this Agreement, unless otherwise specified herein, shall be sent to the respective parties at the following addresses in a manner that produces a record of the sending of the notice, document or communication such as certified mail, overnight delivery service, facsimile transmission or courier hand delivery service:

3.4.1 To DTSC:
James Tjosvold, Branch Chief
Attn: Ed Cargile
Department of Toxic Substances Control
Site Mitigation Program
10151 Croydon Way, Suite 3
Sacramento, CA 95827-2106

3.4.2 To the Proponent:
Ms Jeanette Thomas
Buckeye Union School District
P.O. Box 547
Shingle Springs, CA 95682

3.4.3 To the Property Owner:
El Dorado Hills Development Company
Attn: Sam Miller
4525 Serrano Parkway
El Dorado Hills, CA 95726

3.5 DTSC Review and Approval. If DTSC determines that any report, plan, schedule or other document submitted for approval pursuant to this Agreement fails to comply with this Agreement or fails to protect public health or safety or the environment, DTSC may (a) Return comments to the Proponent with recommended changes; or (b) Modify the document as deemed necessary and approve the document as modified.

3.6 Communications. All DTSC approvals and decisions made regarding submittals and notifications will be communicated to the Proponent in writing by DTSC's Agreement Manager or his/her designee. No informal advice, guidance, or suggestions or comments by DTSC regarding reports, plans, specifications, schedules or any other writings by the Proponent shall be construed to relieve the Proponent of the obligation to obtain such written approvals.

3.7 Endangerment During Implementation. In the event DTSC determines that any activity (whether or not pursued in compliance with this Agreement) may pose an imminent or substantial endangerment to the health and safety of people on the Site or in the surrounding area or to the environment, DTSC may order the Proponent to stop further implementation of this Agreement for such period of time as may be needed to abate the endangerment.

3.8 Payment. The Proponent agrees to pay (1) all costs incurred by DTSC in association with preparation of this Agreement and for review of documents submitted prior to the effective date of the Agreement, and (2) all costs incurred by DTSC in providing oversight pursuant to this Agreement, including review of the documents described in Exhibit C and associated documents, and in providing oversight of field activities. An estimate of DTSC's oversight costs is attached as Exhibit D. It is understood by the parties that Exhibit D is an estimate and cannot be relied upon as the final cost figure. DTSC will bill the Proponent quarterly. Proponent agrees to make payment within sixty (60) days of receipt of DTSC's billing. Such billings will reflect any amounts that have been advanced to DTSC by the Proponent.

50% of $8,446 per Ed Cargile 6/13/00

3.8.1 In anticipation of services to be rendered, Proponent shall make an advance payment of ~~$16,892~~ to DTSC. That payment shall be made no later than ten (10) days after this Agreement is fully executed. If the Proponent's advance payment does not cover all costs payable to DTSC under this paragraph, Proponent agrees to pay the additional costs within sixty (60) days of receipt of a bill from DTSC.

3.8.2 If any bill is not paid by the Proponent within sixty (60) days after it is sent by DTSC, the Proponent may be deemed to be in material default of this Agreement.

3.8.3 All payments made by the Proponent pursuant to this Agreement shall be by check made payable to the "Department of Toxic Substances Control", and bearing on its face the project code for the site (Site Code #104061) and the docket number of this Agreement.

Payments shall be sent to:

Department of Toxic Substances Control
Accounting/Cashier
400 P Street, 4th Floor
P.O. Box 806
Sacramento, California 95812-0806

A photocopy of the check shall be sent concurrently to DTSC's Agreement Manager/Regional Branch Chief.

3.8.4 If the advance payment exceeds DTSC's actual oversight costs, DTSC will provide an accounting for expenses and refund the difference within one hundred-twenty (120) days after termination of this Agreement in accordance with Paragraph 3.18. In no other case shall the Proponent be entitled to a refund from DTSC or to assert a claim against DTSC for any amount paid or expended under this Agreement.

3.9 Condition Precedent. It is expressly understood and agreed that DTSC's receipt of the advance payment described in Paragraph 3.8.1. is a condition precedent to DTSC's obligation to provide oversight, review and/or comment on documents.

3.10 Record Retention. DTSC shall retain all cost records associated with the work performed under this Agreement for such time periods as may be required by applicable state law. The Proponent may request to inspect all documents which support DTSC's cost determination in accordance with the Public Records Act, Government Code section 6250 et seq.

3.11 Project Coordinator. The work performed pursuant to this Agreement shall be under the direction and supervision of a qualified project coordinator, with expertise in hazardous substance site Oversight. The Proponent shall submit: a) the name and address of the project coordinator; and b) in order to demonstrate expertise in hazardous substance site Oversight, the resume of the coordinator. The Proponent shall promptly notify DTSC of any change in the identity of the Project Coordinator. All engineering and geological work shall be conducted in conformance with applicable state law, including but not limited to, Business and Professions Code sections 6735 and 7835.

3.12 Access. Proponent shall provide, and/or obtain access to the Site and offsite areas to which access is necessary to implement this Agreement. Such access shall be provided to DTSC's employees, contractors, and consultants at all reasonable times. Nothing in this paragraph is intended or shall be construed to limit in any way the right of entry or inspection that DTSC or any other agency may otherwise have by operation of any law. DTSC and its authorized representatives shall have the authority to enter and move freely about all properties at the Sites at all reasonable times for purposes including, but not limited to: inspecting records, operating logs, sampling and analytic data, and contracts relating to this Site; reviewing the progress of the Proponent in carrying out the terms of this Agreement; conducting such tests as DTSC may deem necessary; and verifying the data submitted to DTSC by the Proponent.

3.13 Sampling, Data and Document Availability. When requested by DTSC, the Proponent shall make available to DTSC, and shall provide copies of, all data and information concerning contamination at the Site, including technical records and contractual documents, sampling and monitoring information and photographs and maps, whether or not such data and information was developed pursuant to this Agreement.

3.14 Notification of Field Activities. The Proponent shall inform DTSC at least seven (7) days in advance of all field activities pursuant to this Agreement and shall allow DTSC and its authorized representatives to take duplicates of any samples collected by the Proponent pursuant to this Agreement.

3.15 Notification of Environmental Condition. The Proponent shall notify DTSC's Agreement Manager immediately upon learning of any condition posing an immediate threat to public health or safety or the environment. Within seven (7) days of the onset of such a condition, the Proponent shall furnish a report to DTSC, signed by the Proponent's Agreement Manager, setting forth the events which occurred and the measures taken in the response thereto.

3.16 Preservation of Documentation. The Proponent shall maintain a central repository of the data, reports, and other documents prepared pursuant to this Agreement. All such data, reports and other documents shall be preserved by the Proponent for a minimum of six (6) years after the conclusion of all activities carried out under this Agreement. If DTSC requests that some or all of these documents be preserved for a longer period of time, the Proponent shall either comply with that request, deliver the documents to DTSC, or permit DTSC to copy the documents prior to destruction. The Proponent shall notify DTSC in writing at least ninety (90) days prior to the expiration of the six-year minimum retention period before destroying any documents prepared pursuant to this Agreement. If any litigation, claim, negotiation, audit or other action involving the records has been started before the expiration of the six year period, the related records shall be retained until the completion and resolution of all issues arising therefrom or until the end of the six-year period, which ever is later.

3.17 Amendments. This Agreement may be amended or modified solely upon written consent of all parties. Such amendments or modifications may be proposed by any party and shall be effective the third business day following the day the last party signing the amendment or modification sends its notification of signing to the other party. The parties may agree to a different effective date.

3.18 Termination for Convenience. Except as otherwise provided in this Paragraph, each party to this Agreement reserves the right unilaterally to terminate this Agreement for any reason. Termination may be accomplished by giving a thirty (30) day advance written notice of the election to terminate this Agreement to the other Party In the event that this Agreement is terminated under this Paragraph, the Proponent shall be responsible for DTSC costs through the effective date of termination.

3.19 Exhibits. All exhibits attached to this Agreement are incorporated herein by this reference.

3.20 Time Periods. Unless otherwise specified, time periods begin from the date this Agreement is fully executed, and "days" means calendar days. "Business days" means all calendar days that are not weekends or official State holidays.

3.21 Proponent Liabilities. Nothing in this Agreement shall constitute or be considered a satisfaction or release from liability for any condition or claim arising as a result of Proponent's past, current, or future operations. Nothing in this Agreement is intended or shall be construed to limit the rights of any of the parties with respect to claims arising out of or relating to the deposit or disposal at any other location of substances removed from the Site.

3.22 Government Liabilities. The State of California (State) shall not be liable for any injuries or damages to persons or property resulting from acts or omissions by the Proponent or by related parties in carrying out activities pursuant to this Agreement, nor shall the State of California be held as a party to any contract entered into by the Proponent or its agents in carrying out the activities pursuant to this Agreement.

3.23 Third Party Actions. In the event that the Proponent is a party to any suit or claim for damages or contribution relating to the Site to which DTSC is not a party, the Proponent shall notify DTSC in writing within ten (10) days after service of the complaint in the third-party action. Proponent shall pay all costs incurred by DTSC relating to such third-party actions, including but not limited to responding to subpoenas.

3.24 Reservation of Rights. DTSC and the Proponent reserve the following rights.

3.24.1 DTSC reserves its right to pursue cost recovery under the Comprehensive Environmental Response, Compensation and Liability act of 1980 (CERCLA), as amended, the California Health and Safety Code section 25360, and any other applicable section of the law.

3.24.2 Nothing in this Agreement is intended or shall be construed to limit or preclude DTSC from taking any action authorized by law or equity to protect public health and safety or the environment and recovering the costs thereof.

3.24.3 Nothing in this Agreement shall constitute or be construed as a waiver of the Proponent's rights, (including any covenant not to sue or release) with respect to any claim, cause of action, or demand in law or equity that the Proponent may have against any "person", as defined in Section 101(21) of CERCLA, or Health and Safety Code section 25319, that is not a signatory to this Agreement.

3.24.4 By entering into this Agreement, Proponent does not admit to any fact, fault or liability under any statute or regulation.

3.25 Compliance with Applicable Laws. Nothing in this Agreement shall relieve the Proponent from complying with all applicable laws and regulations, and the Proponent shall conform all actions required by this Agreement with all applicable federal, state and local laws and regulations.

3.26 California Law. This Agreement shall be governed, performed and interpreted under the laws of the State of California.

3.27 Severability. If any portion of this Agreement is ultimately determined not to be enforceable, that portion will be severed from the Agreement and the severability shall not affect the enforceability of the remaining terms of the Agreement.

3.28 Parties Bound. This Agreement applies to and is binding, jointly and severally, upon each signatory and its officers, directors, agents, receivers, trustees, heirs, executors, administrators, successors, and assigns, and upon any successor agency of the State of California that may have responsibility for and jurisdiction over the subject matter of this Agreement. No change in the ownership or corporate or business status of any signatory, or of the facility or Site shall alter any signatory's responsibilities under this Agreement.

3.29 Effective Date. The effective date of this Agreement is the date when this Agreement is fully executed.

3.30 Representative Authority. Each undersigned representative of the parties to this Agreement certifies that she or he is fully authorized to enter into the terms and conditions of this Agreement and to execute and legally bind the parties to this Agreement.

3.31 Counterparts. This Agreement may be executed and delivered in any number of counterparts, each of which when executed and delivered shall be deemed to be an original, but such counterparts shall together constitute one and the same document.

PROPOSED SERRANO ELEMENTARY SCHOOL, EL DORADO HILLS, CALIFORNIA ENVIRONMENTAL OVERSIGHT AGREEMENT, DOCKET NO. HSA-A 99/00-168

Dear Mr. Bush:

The Department of Toxic Substances Control (DTSC) has completed review of the Preliminary Endangerment Assessment (PEA), dated May 19, 2000, and received on May 25, 2000, prepared for the subject site by Youngdahl Consulting Group, Inc., El Dorado Hills, to document the hazardous substance characterization actions taken at the subject site.

According to the information provided, the site is undeveloped and near the West Branch of the Bear Mountain Fault Zone, a feature known locally to be associated with asbestos. The PEA indicates that soil sampling and analysis were conducted for the following chemicals: 1) Asbestos (CARB Method 435), 2) total Lead (EPA Method 6010), and 3) total Arsenic (EPA Method 7060). The results show that asbestos, arsenic, and lead were found at levels equal to or less than background. The data provided indicates that the calculated risks for this property are less than the acceptable residential risk value. Chemicals of concern concentrations at the site do not exceed levels appropriate for unrestricted land use.

Based on DTSC's evaluation of the PEA, no actual or potential hazardous materials release was indicated which would pose a threat to human health or the environment under any land use. Therefore, DTSC determines that no further action is necessary with respect to investigation and remediation of hazardous substances at the site. As with any real property, if previously unidentified contamination is discovered at the site, additional assessment, investigation, and/or cleanup may be required.

Printed on Recycled Paper

If you have any questions regarding this determination, please contact Mr. Ed Cargile at (916) 255-3703.

Sincerely,

James L. Tjosvold, P.E., Chief
Northern California-Central Cleanup Operations Branch

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:20,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: El Dorado Area, California
Survey Area Data: Version 15, Aug 31, 2023

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Apr 23, 2022—Apr 24, 2022

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

The pin displayed on the map is an approximate point selected by the user and does not represent an authoritative property location.

This map complies with FEMA's standards for the use of digital flood maps if it is not void as described below. The basemap shown complies with FEMA's basemap accuracy standards

The flood hazard information is derived directly from the authoritative NFHL web services provided by FEMA. This map was exported on 6/5/2024 at 11:01 AM and does not reflect changes or amendments subsequent to this date and time. The NFHL and effective information may change or become superseded by new data over time.

This map image is void if the one or more of the following map elements do not appear: basemap imagery, flood zone labels, legend, scale bar, map creation date, community identifiers, FIRM panel number, and FIRM effective date. Map images for unmapped and unmodernized areas cannot be used for regulatory purposes.

EDH RETAIL SHOPPING CENTER PROJECT

Project ~~Understanding~~ Background

The ~~40.50 gross-acre~~ project site is located in the unincorporated community of El Dorado Hills, El Dorado County, California. ~~The project site~~ and is located on the north side of the U.S. 50/Silva Valley Parkway interchange and is bounded by the existing alignment of Silva Valley Parkway (west), a single-family residential subdivision and Oak Meadow Elementary School (north), undeveloped land (east), and Tong Road (south). Most of the project site contains annual grassland, with scattered oak trees. ~~A large quantity of fill exists onsite that was placed there as part of the addition of High Occupancy Vehicle lanes on U.S. 50. There are unpaved roads and remnants of prior development on the site.~~ The project site is designated "Commercial" by the El Dorado County General Plan and zoned "Commercial – Planned Development [C-PD]" by the El Dorado County Zoning Ordinance.

Take out

The future alignment of Silva Valley Parkway bisects the project site from northwest-to-southeast. The realigned Silva Valley Parkway would have a new interchange with U.S. 50. The proposed project has reserved right-of-way for the roadway realignment and interchange project, as well as the future Country Club Drive, which is not part of this project. The net acreage of the project site is 31.82 acres. Of this figure, 16.09 acres is located north of the realigned roadway and 15.73 acres is located to the south.

Condense to five brief desc. of planned development

The applicant seeks to move the fill from the north site to the south site, mass grade both sites, and install utilities within the realigned Silva Valley Parkway as part of the initial phase of the project. As part of a later phase, both sites would be developed to support up 250,000square feet of commercial uses. The North site is contemplated to support three major tenants of approximately 38,000, 35,000, and 10,000 square feet, and five smaller outparcels containing a gas station, three retail pads, and one additional pad. The South site is contemplated to support two major tenants of approximately 37,500 and 32,700 square feet, and seven smaller outparcels containing a gas station, fast food, restaurant, and shops and. Access to the North and South sites would be taken via a new signalized intersection on the realigned Silva Valley Parkway. Fuel access to the South site would be taken from the old Silva Valley Parkway. The project applicant is requesting approval of a Planned Development Application from the County of El Dorado.

The EIR will provide a "worst case" project-level analysis for the level of development contemplated by the project. At a minimum, the EIR would provide full project-level coverage for the initial phase of the project (e.g., relocation of fill, mass grading, and utility installation) and describe the subsequent phases at a conceptual project-level, including identifying the maximum development potential and rage of end uses contemplated. Subsequent environmental review (e.g., an Addendum) may be necessary should the actual commercial proposed onsite vary from those described conceptually in the EIR.

Assumption

Finally, please note that this scope of work does not include a traffic analysis, as the County of El Dorado has a separate process for scoping traffic studies. As such, it is assumed that the applicant will independently initiate this process with the County and subsequently retain a third-party traffic consultant to prepare the traffic analysis.

SCOPE OF WORK

Task 1: Project Initiation

FCS's Project Manager and other key team members will meet with County staff to clarify and confirm the project description, identify key contacts, discuss scheduling targets, and obtain copies of the project plans and other relevant information. It is assumed that site visit will occur the same day as the kick-off meeting.

Task 2: Technical Studies

Subtask 2.1: Air Quality/Greenhouse Gas Analysis

FCS will prepare an Air Quality/Greenhouse Gas Analysis to evaluate project emissions of criteria pollutants and greenhouse gases. The analysis will be provided in a stand-alone Air Quality and Greenhouse Gas Report (Report) and a separate Health Risk Assessment (HRA). The HRA will serve as a complete document addressing potential health risk impacts generated by the project. The analysis and conclusions of the HRA will be summarized in the Report, which will address all CEQA impact criteria for air quality and greenhouse gases.

Subtask 2.1.1: Background Information

Both the Report and HRA will contain relevant background information. For the Report, a description of air pollutants, a description of greenhouse gases, the regulatory environment surrounding air pollution and climate change, potential impacts of climate change, and the existing air quality conditions in the project area will be provided. For the HRA, a description of toxic air contaminants (TACs), regulatory environment surrounding TACs and health risks, and the existing conditions in the project area will be provided.

Subtask 2.1.2: Criteria Air Pollutant and Greenhouse Gas Emission Estimation

Emissions associated with construction and operation will be estimated using the latest version of CalEEMod. FCS will identify which project configuration would be the 'worst-case' scenario for criteria pollutant and greenhouse gas generation. FCS assumes that the Report will estimate criteria air pollutant and greenhouse gas emissions from one project scenario. The pollutants that will be estimated include the following: reactive organic gases (ROG), oxides of nitrogen (NOX), particulate matter (PM10 and PM2.5), carbon dioxide, methane, and nitrous oxide. Construction would generate air pollutant emissions from demolition, equipment exhaust, on-road employee and materials trips, and soil disturbance. During operation, there would be emissions from the motor vehicles that would access the project site as well as generation of on-site emissions. In addition, greenhouse gas emissions would indirectly emitted from electricity consumption, water use, wastewater generation, and waste generation by the project. Air pollutant emissions will be compared with the El Dorado County Air Pollution Control District's (Air District) project-level and cumulative significance thresholds.

Subtask 2.1.3: Carbon Monoxide (CO) Hot-Spot Analysis

FCS will screen the project's potential to generate a CO hotspot using the Air District's screening guidance. If the project exceeds the screening criteria, a carbon monoxide hot-spot analysis will be conducted for up to 4 intersections with the highest potential for congestion using the California Department of Transportation Caline4 model, the EMFAC2011 model, and information from the traffic study.

Subtask 2.1.4: Toxic Air Contaminants Health Risk Assessment

The primary focus will be on performing the air dispersion modeling for the project using diesel particulate matter and benzene impacts and as the indicator for health risks. Estimates of health risk from the adjacent freeway and any nearby stationary sources will be included in the analysis to provide a comprehensive project and cumulative-level health risk assessment. FCS will identify which project configuration would be the 'worst-case' scenario for the purposes of the HRA. FCS assumes that the HRA will only analyze one project scenario.

Air Dispersion Modeling

The USPEA Industrial Source Complex (ISC) air dispersion model will be used unless the Air District can provide suitable meteorological files that are compatible with the USEPA AERMOD air dispersion model.

FCS will prepare the HRA utilizing guidance contained in the Air District's CEQA Handbook and the California Air Pollution Control Officers Association's (CAPCOA) guidance document Health Risk Assessment for Proposed Land Use Projects.

Estimate the cancer risks, non-cancer hazards, and PM2.5 concentrations associated with the above identified TAC emission sources.

FCS will prepare a technical report along with relevant exhibits and appendices that will document the methods, assumptions, and results of the health risk assessment.

This task includes one draft of the report and response to one set of comments from the applicant/County.

The analysis will include an assessment of the potential health impacts to nearby sensitive receptors from exposure to diesel particulate matter during construction and operational activities. Diesel particulate matter has been identified by the ARB as a carcinogenic substance. Sources of diesel particulate matter include off-road construction equipment and diesel delivery trucks that would travel to and from and idle at the various components of the project.

Subtask 2.1.5: Odor and Asbestos

FCS will use the Air District's screening guidance to determine the project's potential significance for exposing receptors to substantial odor or risk from disturbance of naturally occurring asbestos or asbestos containing materials.

Subtask 2.1.6: Greenhouse Gas Analysis

Neither the County of El Dorado nor the Air District has adopted thresholds of significance for greenhouse gas emissions. In addition, the County of El Dorado does not have an adopted Climate Action Plan. FCS will estimate construction and operational greenhouse gas emissions, and will use the Air District's recommendation to utilize the AB 32 emission reduction goal. FCS will determine project consistency with the applicable portions of the California Air Resources Board Scoping Plan for AB 32. A correlation between the targets in AB 32 and a significant impact on the environment will be determined.

Subtask 2.1.8: Emissions Reductions and Significance Findings

If necessary, project design features and mitigation measures will be identified that would reduce impacts. Any reduction of emissions from these measures will be quantified. Sources of measures include but are not limited to the Office of the California Attorney General and the California Air Pollution Control Officers Association's report, Quantifying Greenhouse Gas Mitigation Measures. Significance findings will be addressed before and after mitigation for all potential impacts.

Subtask 2.2: Noise Analysis

Extant Acoustical will prepare a Noise Analysis to evaluate project-related construction and operational noise impacts on surrounding land uses. The analysis will be wholly contained in the EIR and the supporting technical data will be appended to the document.

Subtask 2.2.1: Project Start-up, Data Acquisition, and Document Review

Extant will coordinate with FCS and designated project team to obtain relevant project information necessary to provide acoustic, noise and vibration services for the project. Extant will evaluate, catalog and adapt project materials and documentation for use in the technical noise analysis and preparation of the EIR noise chapter. Project materials and documentation pertinent to the preparation of the analysis typically include, design drawings, current plan sets and mapping of the project area, construction data (equipment inventory, truck trips, number of personnel, construction duration/rate, and schedule), Project traffic analysis (incorporating ADT traffic volumes for roadways in the project study area), surrounding land use information and all previously conducted analyses relating to the project.

Subtask 2.2.2: Noise Monitoring and Characterization

Extant will conduct a noise monitoring program throughout the project vicinity to characterize baseline ambient acoustical conditions in the area. Quantification of the existing ambient noise environment will include an evaluation of existing ambient noise levels, transportation noise levels and stationary/point-source noise levels in the project study area. An Extant noise analyst will perform an evaluation of the Project vicinity, cataloging and documenting residential and other noise-sensitive land uses, geographic information, land-uses and information on potential acoustical constraints the project may encounter. The measurement survey will serve to adequately establish baseline noise levels, provide context for the analysis and document the existing ambient noise environment in the project area.

An Extant noise analyst will perform a detailed evaluation of acoustical environment in the project study area; the noise monitoring program is anticipated to include noise monitoring at up to six (6) locations in the project area. Short-term (approximately 15 to 30 minutes in duration) attended noise measurements will be conducted to provide adequate representation and relative exposure of noise-sensitive receptors at up to four (4) locations. Additionally, continuous long-term unattended noise measurements will be conducted at up to two (2) locations in the project study area (approximately 24 hours in duration). Noise level data will be used for establishing existing baseline noise level in the project vicinity and will serve as a basis of evaluation for future noise levels at receivers within the project area.

Monitoring locations will be selected to represent locations of key interest in the project area; such as property lines, noise-sensitive receptors; additionally, monitoring location will be chosen to adequately represent of noise sources in the Project vicinity. Extant will coordinate with FCS or the designated project team member as directed to coordinate access as required.

Subtask 2.2.3: Noise Modeling and Analysis

Extant will predict and analyze existing and future short-term (i.e., construction) and long-term (i.e., transportation, land-use compatibility, stationary sources, etc.) noise levels in the project vicinity. The analysis will be based on existing documentation, observations and noise measurement data from the field surveys; applicable project materials, proposed land uses and through the application of accepted noise prediction methodologies. Extant will utilize the three-dimensional computerized noise simulation model SoundPLAN®, to comprehensively model noise levels for the project and immediate vicinity, taking into account site topography, vegetation/ground types and the built environment.

Extant will analyze potential short-term, construction-related noise impacts associated with the project (e.g., on-site heavy-duty equipment, generators, pumps, etc.). Construction-related noise impacts will be assessed with respect to nearby noise-sensitive receptors and their relative exposure (accounting for intervening topography, barriers, distance, etc.). The analysis will be based on application of FHWA Roadway Construction Noise Model (RCNM) and Federal Transit Administration reference noise level data, and utilize accepted industry-standard modeling techniques.

Transportation noise in the project area appears to be associated with traffic along the local and regional roadway network (primarily U.S. 50 and Silva Valley Parkway). Traffic noise levels for the local and regional roadway network will be incorporated into the noise model based on traffic volumes (ADT volumes) obtained in the traffic/transportation analysis prepared for the Project. Transportation related noise will be analyzed through the application of Federal Highway Administration (FHWA) traffic noise prediction methodologies.

Stationary noise sources (e.g., industrial, mechanical, etc.) in the project area, identified during field surveys, on aerial photography and on existing documentation, along with future stationary noise sources will be incorporated into and analyzed in the noise model. Existing stationary noise sources will

be analyzed based on noise monitoring data collected during the field survey, empirical/reference noise level data and accepted prediction methodologies.

Based on the available project information, future stationary-source, point-source and on-site noise sources will be evaluated and discussed at a qualitative level. Future stationary noise sources are anticipated to primarily include delivery activities, parking lot activities, and mechanical equipment. General discussions will outline typical noise generating sources and activities associated with the proposed land uses.

The significance of short-term and long-term noise impacts will be evaluated based on comparisons with applicable criteria from local and state regulatory agencies. Mitigation measures along with their relative effectiveness will be provided where significant and potentially significant noise impacts are anticipated.

Draft Technical Noise Report

Subtask 2.2.4: ~~Report Preparation and Deliverables~~

~~Extant will~~ prepare a draft technical noise chapter suitable for inclusion in the EIR. The EIR noise section will include a brief introduction and summary of relevant project information pertinent to the noise analysis. The existing noise setting in the project study area will be described and the baseline noise environment established based on the ambient noise monitoring and characterization ~~conducted by Extant~~. The noise monitoring locations and representative noise prediction locations will be presented. Relevant background information, including noise fundamentals, terminology, and a summary of applicable regulatory framework will be presented. Based on the regulatory criteria applicable to the project, thresholds of significance will be outlined and established.

Noise prediction methodologies and the relevant modeling assumptions will be outlined. Potential project-generated noise impacts will be identified, noise levels discussed and evaluated against the significance thresholds. Where potential impacts are predicted, ~~Extant will~~ further implement the noise model in evaluating noise control strategies and mitigation measures. Mitigation measures and their relative effectiveness will be outlined and findings of significance presented with mitigation incorporated as necessary.

~~Extant will~~ submit the draft technical noise report for review and comment to ~~FCS~~. A final technical noise report, incorporating necessary updates will be prepared and ~~submitted to FCS for incorporation~~ into the EIR.

Task 3: Notice of Preparation/Scoping Meeting

~~FCS will~~ prepare a Notice of Preparation (NOP) in accordance with requirements of CEQA Guidelines Section 15082. ~~Issuance of the NOP is the first milestone in the CEQA process and announces a lead agency's intent to prepare an EIR~~. The NOP will identify the project location, provide a summary of the project characteristics, and list probable environmental effects, supported by color graphics. The County will be responsible for distributing the NOP to the State Clearinghouse and other public agencies. The

Cons may submit NOP to SCH

County will provide mailing labels to FCS for local distribution (0.25 mile radius). This scope of work assumes that an Initial Study will not be prepared.

Following release of the NOP, this scope of work assumes that the County will hold a scoping meeting in El Dorado County, which FCS representatives will attend. FCS will coordinate with County staff regarding the location and format of the scoping meeting and will be responsible for preparing any materials or displays used during the meeting. FCS will be available to present an overview of the NOP and CEQA process. All public comments received at the scoping meeting will be documented in the Draft EIR.

Deliverables

- One (1) electronic version (via email) of the Administrative Draft NOP to the County of El Dorado
- Ten (10) hard copies and one (1) electronic version (via email) of the final NOP to the County of El Dorado

Task 4: Administrative Draft EIR

FCS will prepare an Administrative Draft EIR in accordance with the applicable requirements contained in CEQA Guidelines Sections 15120 through 15132. The Administrative Draft EIR will contain analysis supported by graphics and tables. The document will identify potentially significant impacts, feasible mitigation measures, and the residual significance after mitigation has been implemented. The contents of the Administrative Draft EIR will be as follows:

Executive Summary

In accordance with CEQA Guidelines Section 15123, the Executive Summary will contain a summary of the project, list the project alternatives, identify areas of controversy, and provide a matrix listing environmental impacts and mitigation measures, and the residual significance of all impacts.

Introduction

FCS will prepare the introduction including the purpose and background of the project, the determination of the lead agency, scope of the EIR, and the document's organization.

Project Description

Pursuant to CEQA Guidelines Section 15124, the project description will identify the project location, describe the project characteristics (including any offsite improvements), list the project objectives, identify necessary approvals, and list other agencies that may use the document. This section will provide color graphics of project boundaries and plans.

Aesthetics, Light, and Glare

The proposed project contemplates the development of commercial uses on the project site that is undeveloped and contains annual grassland and scattered oak trees. FCS will perform site

reconnaissance and document existing conditions with photographs. FCS will use plans and images provided by the applicant (e.g., site plan, elevations, perspectives, landscaping plan, etc.) as the basis for evaluating the expected change in visual character and light and glare, including the effects of building height and massing, compatibility with surrounding uses, alterations of views, and the effects of new lighting sources.

Air Quality/Greenhouse Gas Emissions

Construction and operational activities that would emit criteria air pollutants and greenhouse gas emissions. FCS will prepare the Air Quality/Greenhouse Gas Emissions section (refer to the description under Task 2, Technical Studies) and identify impacts and mitigation (as appropriate). The supporting technical data will be provided as an appendix to the EIR.

Biological Resources

The project site contains annual grass land and scattered oak trees. The project applicant commissioned Foothill Associates to prepare a Biological Assessment, a Wetland Delineation, and Arborist Surveys for the project. FCS will use these Biological Resources technical studies to assess the significance of impacts and identify necessary mitigation. The biological reports will be provided as an appendix to the EIR.

Cultural Resources

The project site contains undeveloped land and, therefore, may contain undiscovered cultural resources (e.g., artifacts, fossils, etc.). The project applicant commissioned Foothill Associates to prepare a Cultural Resources Assessment for the project site. FCS will use the Cultural Resource Assessment as the basis for assessing the significance of impacts and identify necessary mitigation. The Cultural Resource Assessment will be provided as an appendix to the EIR.

Geology, Soils, and Seismicity

The proposed project would involve the development of commercial uses within a seismically active region of California. If available, FCS will use a geotechnical report provided by the applicant as the basis for assessing geological impacts and identifying mitigation. Should a geotechnical report not be available, FCS will rely on resources such as the El Dorado County General Plan and information provided by the United States Geological Survey and California Geological Survey.

Hazards and Hazardous Materials

The project site contains undeveloped land that supports annual grassland and scattered oak trees. If available, FCS will use a Phase I Environmental Site Assessment (Phase I ESA) provided by the applicant as the basis for assessing hazards, hazardous materials impacts, and identifying mitigation. Should a Phase I ESA not be available, FCS will assess hazards and hazardous materials impacts through methods such as site reconnaissance and review of resources such as the El Dorado County General Plan and the State Water Resources Control Board "Geotracker" database.

Hydrology and Water Quality

Development of the proposed project would involve construction and operation activities that have the potential to create polluted runoff, increase impervious surface coverage, and create downstream drainage problems. Of particular concern is runoff from construction and operational activities into nearby waterways. If available, FCS will use a hydrology/storm water report or drainage plans provided by the applicant as the basis for assessing the significance of impacts and identify necessary mitigation. Should such reports or plans not be available, FCS will assess hydrology and water quality impacts through methods such as site reconnaissance and review of resources such as the El Dorado County General Plan, El Dorado County Municipal Code, and Regional Water Quality Control Board documents.

Land Use

The proposed project would involve changes to the underlying land use at the project site. As such, the project would be assessed for consistency with both the General Plan and Municipal Code. Consistency with all applicable General Plan goals and policies will be provided in a matrix format. Additionally, the proposed commercial and residential uses will be assessed in accordance with the development standards set forth in the General Plan and Municipal Code.

Noise

Construction and operational activities that would emit noise that may adverse impact nearby sensitive receptors. Extant Acoustical will prepare the Noise section (refer to the description under Task 2, Technical Studies) and identify impacts and mitigation (as appropriate). The supporting technical data will be provided as an appendix to the EIR.

Public Services and Utilities

FCS will evaluate existing public service and utility providers and evaluate project impacts in terms of the need to construct new or expand existing facilities, acquire additional supplies, generate effluent that exceeds the permitted capacity, etc. To the extent that information is readily available, FCS will use information provided by the applicant's civil engineer about anticipated utility loads (e.g., water demand, sewage generation, etc.). As appropriate, FCS will consult with public service and utility providers and summarize the findings in the EIR. The following public services and utility systems will be analyzed:

- Fire Protection/Emergency Medical Services
- Police Protection
- Water Supply
- Wastewater
- Storm Drainage
- Solid Waste
- Energy

Transportation

The proposed project involves the development of new commercial and residential uses on the project site, which have the potential to generate new trips, alter traffic circulation patterns, create a need for roadway improvements, and increase the use of public transit, bicycle, and pedestrian modes of transportation. As previously discussed, this scope of work assumes the project applicant will retain a traffic consultant to prepare a transportation analysis. FCS will use the transportation analysis as the basis for assessing transportation impacts and identifying mitigation. The transportation analysis will be provided as an appendix to the EIR.

Cumulative Effects

In accordance with CEQA Guidelines Section 15130, the EIR will address the cumulative effects of the proposed project in combination with other projects. As set forth in the CEQA Guidelines, the cumulative analysis will focus on impacts that the project has a significant incremental contribution towards, reflect the severity of the impacts and their likelihood of occurrence, and be guided by standards of practicality and reasonableness.

Alternatives

Pursuant to CEQA Guidelines Section 15126.6, the EIR will evaluate a range of feasible alternatives to the proposed project. One of the alternatives will be the CEQA-mandated "No Project Alternative," which is the circumstance under which the project does not proceed. FCS will evaluate up to three additional alternatives, likely consisting of a combination of a reduction in project size and alternate uses. In addition, the Alternatives section will address the feasibility of an alternative location, as well as any alternatives that were initially considered but rejected from further consideration.

Effects Found Not To Be Significant

CEQA Guidelines Section 15143 establishes that EIRs shall focus on significant impacts on the environment and need not discuss in detail effects that are clearly insignificant or unlikely to occur. Accordingly, the following topical areas are anticipated to be scoped out to the Effects Found Not to Be Significant section of the EIR:

- Mineral Resources
- Population and Housing
- Recreation

This section will also address certain checklist items within topical areas that will be evaluated in detail in the EIR (e.g., hydrology and water quality), but which are clearly insignificant or unlikely to occur (e.g., tsunami inundation).

Other CEQA Required Sections

This section will address the CEQA-required issues of significant environmental effects that cannot be avoided (CEQA Guidelines Section 15126[b]), significant irreversible environmental changes (CEQA

Guidelines Section 15126[c]), growth inducement (CEQA Guidelines Section 15126[d]), and energy conservation (CEQA Guidelines Appendix F).

Persons and Organizations Consulted/List of Preparers

In accordance with CEQA Guidelines Section 15129, the EIR will identify all agencies, organizations, and individuals consulted during the preparation of the document, as well as the agency representatives and firms that were involved with EIR preparation.

References

This section will list all resources used in the preparation of the EIR.

Technical Appendices

Pursuant to CEQA Guidelines Section 15147, supporting technical information will be appended to the EIR as technical appendices. This includes but is not limited to technical studies, modeling data, and correspondence.

Deliverables

- Eight (8) hard copies and one (1) electronic version (via FTP upload) of the Administrative Draft EIR ~~to the County of El Dorado~~

Task 5: Screencheck Draft EIR

Upon receipt of a consolidated set of staff comments on the Administrative Draft EIR, ~~FCS will~~ prepare a Screencheck Draft EIR for County staff review. The Screencheck Draft EIR ~~is intended to~~ verify that staff comments were addressed and will document text changes in strikeout–underline format. Unresolved comments will be flagged for resolution.

Deliverables

- One (1) electronic version (via FTP upload) of the Screencheck Draft EIR ~~to County of El Dorado~~

Task 6: Draft EIR

~~Once County staff provides~~ final comments on the Screencheck Draft EIR, ~~FCS will~~ proceed with finalizing and producing the Draft EIR for public review. ~~FCS will~~ provide copies of the Draft EIR to ~~the~~ County ~~of El Dorado~~, which will be responsible for local distribution, noticing, and posting. ~~FCS will~~ provide copies of the EIR to the State Clearinghouse, which will distribute the document to state agencies.

Deliverables

- (30) hard copies (appendices on CD), (20) CDs, and (1) reproducible master copy (unbound) of the Draft EIR ~~to the County of El Dorado~~
- (15) Executive Summary hard copies and (15) CDs of the Draft EIR and the signed Notice of Completion form ~~to the State Clearinghouse~~

Task 7: Administrative Final EIR

~~FCS will~~ prepare an Administrative Final EIR in accordance with the applicable requirements contained in CEQA Guidelines Sections 15088 and 15089. The Administrative Final EIR will list all agencies, organizations, and individuals who submitted written comments on the Draft EIR during the public review period and provide written responses to those comments. In addition, ~~the scope of work assumes that the~~ County will hold a public hearing on the Draft EIR, at which time oral testimony on the document will be received. ~~FCS will~~ coordinate with County staff regarding the location and format of the meeting and will be responsible for preparing any materials or displays used during the meeting. ~~FCS~~ will provide written responses to oral comments received at the public hearing. ~~(Note that this scope of work assumes that the~~ County will provide ~~FCS~~ with a transcript, meeting minutes, video recording, or other form of documentation of the proceedings.~~)~~ To enhance readability and avoid redundancy, ~~FCS~~ will use Master Responses to address frequent and reoccurring comments on the Draft EIR's analysis. Additionally, the Administrative Final EIR will contain an Errata, which will document minor changes to the Draft EIR text in strikeout–underline format.

This scope of work allocates a total of 100 hours for FCS technical staff to respond to comments received on the Draft EIR, in additional to administrative, editorial, GIS, and junior staff time to prepare the document. If the volume or complexity of comments requires more than 100 hours to respond to comments, FCS will request authorization from the County for additional budget.

Deliverables

- Six (6) hard copies and one (1) electronic version (via FTP upload) of the Administrative Final EIR ~~to the County of El Dorado~~

Task 8: Screencheck Final EIR

Upon receipt of a consolidated set of staff comments on the Administrative Final EIR, ~~FCS will~~ prepare a Screencheck Final EIR for County staff review. The Screencheck Final EIR ~~is intended to~~ verify that staff comments were addressed and will document text changes in strikeout–underline format. Unresolved comments will be flagged for resolution.

Deliverables

- One (1) electronic version (via FTP upload) of the Screencheck Final EIR ~~to County of El Dorado~~

Task 9: Final EIR

Upon receipt of County's
~~Once County staff provides~~ final comments on the Screencheck Final EIR, ~~FCS will~~ Cons shall proceed with finalizing and producing the Final EIR for public review. ~~FCS will~~ Cons shall provide copies of the Final EIR to ~~the~~ County ~~of El Dorado,~~ which will be responsible for local distribution, noticing, and posting. ~~FCS will~~ Cons shall send copies of the Final EIR directly to state agencies that commented on the Draft EIR. (make optional at County's CA's discretion)

→ is this also sent to SCH? (yes)

Deliverables

Cons shall submit to County
- (15) Fifteen hard copies (appendices on CD), (15) fifteen CDs, and 1 one reproducible master copy (unbound) of the Final EIR ~~to the County of El Dorado.~~

Cons shall submit to
- One (1) CD of the Final EIR ~~to~~ each state agency that commented on the Draft EIR (~~FCS will be responsible for this task~~).

Task 10: Mitigation Monitoring and Reporting Program

Cons shall
~~FCS~~ will prepare a comprehensive Mitigation Monitoring and Reporting Program (MMRP), pursuant to CEQA Guidelines Section 15097. The MMRP will contain all mitigation measures identified in the EIR. This comprehensive MMRP will provide ~~the applicant team and County staff with~~ a single source of reference to the full range of mitigation measures to be implemented. For each measure or group of similar measures, the agency responsible for ensuring proper implementation will be identified, along with the timing and method of verification. ~~FCS will~~ Cons shall provide a draft version of the MMRP for County review. Upon receipt of County comments, ~~FCS will~~ Cons shall prepare the final version of the MMRP. Copies of the MMRP will be included in the Final EIR submittal.

Deliverables

Cons. shall submit to County
- One (1) electronic version of the draft MMRP ~~to County of El Dorado~~
- Three (3) hard copies of the MMRP ~~to County of El Dorado~~ (an electronic version will be provided on the same CD as the Final EIR)

Task 11: Findings of Fact/Statement of Overriding Considerations

Cons. shall prepare the FOF/SOC in accordance with
CEQA Guidelines Section 15091 ~~requires the preparation of Findings of Fact~~ for each significant effect identified in an EIR. Each finding ~~must~~ shall be accompanied by a brief explanation for the rationale of the finding. Additionally, if an (1) EIR identifies one or more significant unavoidable impacts, ~~CEQA Guidelines Section 15093 requires the preparation of~~ Cons. shall prepare a Statement of Overriding Considerations that explains why the economic, legal, social, technological, or other benefits of the project outweigh its significant impacts. ~~FCS will prepare the Findings of Fact and (if necessary) the Statement of Overriding~~ Cons

~~Considerations.~~ A draft version ~~will~~ shall be provided to County staff for review. Upon receipt of County comments, ~~a final version will be provided to the County.~~ Cons shall provide County with a final version.

Deliverables

Cons. shall submit to County ---

- One (1) electronic draft version of the Findings of Fact and Statement of Overriding Considerations ~~to the County of El Dorado~~
- One (1) electronic final version of the Findings of Fact and Statement of Overriding Considerations ~~to the County of El Dorado~~

Task 12: Meeting Attendance

of meetings to be determined

Cons shall ~~FCS will~~ meet by phone with County staff during the EIR preparation process to discuss and resolve problems, develop strategies, and participate in communications. ~~This proposal and its associated budget cover attendance by~~ Cons's Project Manager ~~at~~ shall attend up to ten (10) meetings ~~in El Dorado~~ with County or ~~conference call, which~~ in person or conference call including public hearings. A not-to-exceed budget has been established to cover meeting attendance. If County staff requests additional meeting attendance by ~~FCS staff~~, or if the amount of time involved in these meetings exceeds the initial budget allocation, ~~FCS~~ Cons will notify County staff of the additional costs and obtain authorization for the extra meeting time. Should the cost of additional meetings exceed the amount of the Agreement, it shall require an amendment.

Task 13: Project Management

In addition to the research, analysis, communications, and report writing tasks described above, ~~FCS will~~ Cons shall perform a variety of project management duties to ensure that the EIR meets ~~the applicant and the~~ CEQA ? County's standards of quality, ~~and that it is delivered on time and within budget.~~ These duties will shall include, but not be limited to, team supervision and coordination, oral and written communications with ~~the applicant and~~ not allowed County staff, project accounting, and quality assurance review by Cons ~~FCS's~~ Project Director and Technical Editor of all deliverable products. These services ~~also will~~ shall also include ongoing support to ~~applicant and~~ " " County staff, such as providing input to staff reports, regular schedule updates, and discussions of technical issues. ~~This task assumes 100 hours of staff time.~~ Cost proposal long.

Assumptions

Tasks Outside of Scope of Work

Below are tasks Cons ~~FCS~~ has identified as being outside of its scope of work for the proposed project.

Newspaper Noticing/Local Noticing

Cons ~~FCS~~ assumes that County staff will be responsible for noticing the Planning Commission and Board of Supervisors meetings at which the EIR will be considered for adoption. This includes publication of legal notices in newspapers and mailing of notices to surrounding property owners and interested parties.

Notice of Determination Filing/Payment of Fees

FCS assumes that the applicant team or County staff will file the Notice of Determination (if necessary) with the El Dorado County Clerk's Office within 5 business days of project approval. The purpose of the Notice of Determination filing is to limit the legal challenge period to 30 days. If a Notice of Determination is not filed within 5 business days of certification, the legal challenge period defaults to 180 days.

The Notice of Determination filing requires payment of the California Department of Fish and Wildlife CEQA filing fee (currently $2,995.25) and a County handling fee (currently $50). This scope of work assumes that the applicant will be responsible for paying these fees.

SCHEDULE AND FEES

Schedule

Task	Week
Project Initiation/Commence Technical Studies	1
Submit Administrative Draft NOP	2
Receive County Comments on Administrative Draft NOP	3
Release Notice of Preparation for Public Review	3
Close of Public Review Period	7
Submit Administrative Draft EIR to County	11
Receive County Comments on Administrative Draft EIR	13
Submit Screencheck Draft EIR to County	14
Receive County Comments on Screencheck Draft EIR	15
Release Draft EIR for Public Review	16
Close of Public Review Period	22
Submit Administrative Final EIR to County	24
Receive County Comments on Administrative Final EIR	25
Submit Screencheck Final EIR and MMRP to County	26
Receive County Comments on Screencheck Final EIR and MMRP	27
Release Final EIR and MMRP	28
Prepare Findings of Fact and Statement of Overriding Considerations	28
Public Meeting(s)	To Be Determined
File Notice of Determination	Within 5 Business Days of Project Approval

Incorporate into SOW for individual tasks

* Need a rate schedule

* Need list of subs & lump sum costs.

FEES

FCS has prepared the following budget identifying the costs of each task.

Task	Fee
Project Initiation	$5,500
Technical Study: Air Quality/Greenhouse Gases Analysis	$8,500
Technical Study: Health Risk Assessment	$14,500
Technical Study: Noise Analysis	$8,500
Notice of Preparation/Scoping	$5,500
Administrative Draft EIR	$59,000
Screencheck Draft EIR	$14,500
Draft EIR	$5,000
Administrative Final EIR	$16,000
Screencheck Final EIR	$7,000
Final EIR	$4,000
Mitigation Monitoring and Reporting Program	$1,500
Findings of Fact and Statement of Overriding Considerations	$6,500
Meeting Attendance	$14,500
Project Management	$18,000
Direct Costs	$8,500
Total FCS Professional Fee	**$197,000**

Add task #'s

* Add std. cost allocation and modification lang. No moving costs w/out CA approval, No sub to cons moving.

The assumptions used in calculating the above fees are:

- The fee is valid for up to 30 days from the date of this scope, after which it may be subject to revision.
- County staff will be responsible for distribution of public review documents.
- This price is based upon completion of the work within the proposed schedule. If delays occur, an amendment of the price would be warranted to accommodate additional project management and other costs, and to reflect adjustments for updated billing rates.
- Costs have been allocated to tasks, based upon FCS's proposed approach. During the work, FCS may, on its sole authority, re-allocate costs among tasks and/or direct costs, as circumstances warrant, so long as the adjustments maintain the total price within its authorized amount.

Nope! Subject to CA approval

- The FCS Project Manager will be the primary representative at the project meeting and public hearing.

Are these included in Direct Costs?

- Printing costs are based on the method of printing and binding proposed, numbers of copies proposed as work products, and estimated page lengths. Document printing costs are estimated and will be finalized at the time of printing. On further clarification of the documents (paper and/or digital CD) that the applicant team or County staff will need during the preparation effort, FCS will specifically identify a detailed reproduction work plan with more specific costs.

Scope of Work Modifications

Move to SOW Assumptions Cons

FCS assumes a stable and complete project description and project plan set at project initiation. In the event the project description and/or scope of work change to a degree that alters the fee estimate, FCS will contact the applicant team or County staff in writing to submit a revised fee for mutual agreement, and a contract amendment will be processed. Requests for additional work will be documented, and a completion timetable and estimated fee will be submitted for applicant team or County approval.

Cost Proposal — Cons — Cost Proposal — Any increase in CP will require an — shall — Cost estimate shall — is CA's

Invoice Billing

Invoice billing will be on a monthly basis as determined by percentage of work completed.

EL DORADO COUNTY
BOARD OF SUPERVISORS
AGENDA TRANSMITTAL

AGENDA TITLE: Village P Specific Plan (District I)		
DEPARTMENT: Planning	DATE: 8/15/94	CAO USE ONLY
CONTACT: R. Britzman for T. Parilo	PHONE: 5355	

DEPARTMENT SUMMARY AND REQUESTED BOARD ACTION:
While working with the Specific Plan for Village P of the El Dorado Hills Specific Plan (Silva Valley Interchange area), staff identified numerous concerns which require the attention and action by the Board, including modifications to the Public Review Draft General Plan, Project Description and Alternative, and action on further processing of the Village P Specific Plan amendment. The modifications are required to correct the General Plan Land use maps due to the erroneous location of the El Dorado Hills Specific Plan boundary. Due to this locational error, and the disappearance of the El Dorado Hills Area Plan, a "white hole" was created on all three land use proposals. Please refer to the attached exhibits which define the Area Plan land use/Specific Plan boundary, the "white hole" and the staff suggested land uses for the "white hole" area.
RECOMMENDATION: In response to the issues which are described and discussed

10-059 REV. 5/10/91

RECOMMENDATION (continued)

later herein, staff recommends the Board take the following actions:

1. Approve the corrected Specific Plan boundary on the Public Review Draft General Plan, Project Description and General Plan Alternate as noted on Exhibit A.

2. Designate Village P within the Specific Plan Commercial area as noted on Exhibit C for the Public Review Draft, Project Description and General Plan Alternative.

3. Designate the remainder of the Specific Plan as noted on Exhibit C on the Public Review Draft, Project Description and General Plan Alternative as follows:

   a. Commercial land use within Village V north of U.S. Highway 50 and that portion of Village Q south of U.S. Highway 50;

   b. Village Q north of U.S. Highway 50 should be designated Medium Density Residential; and

   c. Village V south of U.S. Highway 50 should be designated Research and Development.

4. Designate Research and Development land use within the Project Description for those lands within that portion of the "white hole" located south of U.S. 50 and easterly of White Rock Road, for those lands not included within the Specific Plan, and relocate the Community Boundary as noted on Exhibit C. The remaining portion of this "white hole" should be designated Low Density Residential. All of these same lands shall be designated Low Density Residential for the General Plan Alternative and Public Review Draft General Plan.

5. Direct staff to add policies to the Public Review Draft General Plan, the Project Description and General Plan Alternative, requiring Silva Valley Interchange lands to be developed under the Planned Development Overlay zone concept, subject to the applicable design review policies of the El Dorado Hills Specific Plan, the draft Scenic Corridor Ordinance and the "draft" Village P Design Guidelines dated January 29, 1993.

6. Direct staff to suspend processing of the Specific Plan amendment for Village P until the General Plan is complete. The emphasis of the Specific Plan should be to amend the El Dorado Hills Specific Plan with a "simplified" version of an amendment for Village P. The contract with the consultant should be terminated. Staff would complete the amendment processing upon completion of the General Plan.

DISCUSSION OF ISSUES

1. **The Public Review Draft General Plan (PRDGP), Project Description and Alternate all place the Specific Plan boundary south of the interchange too far to the southeast.**

   Discussion: The misstatement of the location of the Specific Plan Boundary is clearly an error which could normally be corrected by staff. In this instance, however, it is also the Community boundary, and thereby implies urban uses will be permitted to occur within the area so prescribed by the boundary. Since the land use changes needed to fill the "white hole" are a significant determination and a part of this boundary line location, Board direction is needed. The discussion of the land use issues follow in 2 and 3 below.

2&3. **With the acceptance of the PRDGP as our interim General Plan, Villages P, Q and V in the El Dorado Hills Specific Plan, which were never given a land use designation, became "white holes" when the Area Plans were superseded by the PRDGP. (The same condition exists on the Project Description and Alternative).**

   Discussion: Due to the uncertainty of the design and final location of the Silva Valley Interchange when the Specific Plan was adopted in 1987, the area around the potential interchange location was left without proposed land use designations. It was determined the voids could be resolved after the preliminary design of the interchange was completed. At that time, the El Dorado Hills/Salmon Falls Area Plan was still valid and provided land use direction for those excluded villages.

   The PRDGP simply designated this area as part of the El Dorado Hills Specific Plan, noting the adopted uses within the Specific Plan shall apply. Since the Specific Plan did not adopt land uses for Villages P, Q and V, "white holes" were created (Exhibit B).

   To fill these "white holes" the PRDGP, Project Description and General Plan Alternate should be modified in this area to reflect appropriate land uses. Exhibit C notes those land uses proposed by staff for these voids within the Specific Plan and adjacent voids discussed in 3 below. It is critical to have these lands appropriately designated to provide the correct information for the General Plan EIR.

   Unlike the number 3 issue which follows, the planning for this area has a long-term significance since it was fully understood with the adoption of the El Dorado Hills Specific Plan that the remaining Villages around the interchange would be assigned land use designations and zoning. To fulfill the obligations within the adopted Specific Plan and permit continued processing of an amendment to the Specific Plan, if desired, general plan land uses must be designated on the PRDGP in order to find consistency of the Specific Plan with the General Plan, as required by State planning law.

DISCUSSION OF ISSUES

4. **The area between the actual Specific Plan Boundary (Exhibit A) and the Community Boundary noted on Exhibit B leaves yet another "white hole" since this land was also erroneously noted on the PRDGP and other Plans a part of the Specific Plan.**

Discussion: This "white hole" area contains approximately 60 acres. The El Dorado Hills Area Plan designated approximately 18 acres of this total as Multifamily Residential and the remaining approximately 32 acres as High Density Residential (Exhibit A). Being near the interchange, approximately 30 acres west of White Rock Road would be a valid location for multifamily development or research/development and offices.

The staff suggested revision to the Project Description for the area west of White Rock Road is Research and Development, with the remainder easterly of White Rock being designated Low Density Residential, as noted in Exhibit C. The research and development use was proposed in-lieu of multifamily, since it is believed this use designation would be more adaptable to the hillside terrain which occupies much of this site. The Community Boundary was also modified using the White Rock Road and future interchange ramp as a clearer separation of the urban and rural use in the area.

Unlike the Village P priority noted above, this area is not a part of the Specific Plan, and there is no County obligation to designate land use or process a Specific Plan amendment for these lands. Therefore, there is no need to establish urban uses at this time. Instead, staff is only recommending significant urban land use changes to a portion of the "white hole" to the Project Description to permit environmental assessment of the more intense use in one of the land use options. The lower intensity designation of Low Density Residential will be noted on the PRDGP and the Alternate.

The staff proposal "down plans" some of the Matz property southeasterly of White Rock Road since this area was designated High Density Residential on the Area Plan. Given the nearness to U.S. Highway 50, the desirability of these lands for a high density residential use is questionable due to noise and air quality impacts. Further, since the Matz property is one of the many Inclusion Requests, it is staff's opinion a significant change at this time on the remainder of the Matz property would be inconsistent with the most recent Board direction on Inclusion requests.

. **There is a need to support the proposed land use designations noted in 2 and 3 above by adding a few policies to the applicable Plan option as may be necessary to link urban use designations to specific design requirements.**

Discussion: The design of the proposed uses in the near vicinity of the interchange are important due to their high level of visibility and the relationship to the El Dorado Hills Specific Plan, being an entrance into that area. To insure development is consistent with the Specific Plan and

DISCUSSION OF ISSUES

with U.S. Highway 50 Corridor considerations, policies should be added to the three General Plan options which would require eventual rezoning to Commercial or Research and Development to include a Planned Development Overlay District. Additionally, policies would reference the following guides in the review of development plans: the applicable El Dorado Hills design criteria; the "draft" Village P Design Guidelines; and the draft Scenic Highway Corridor Ordinance. These policies combined with other existing policies for the U.S. Highway 50 corridor, provide sufficient visual and safety direction for any project within the interchange area.

6. **Progress to date in the development of the Specific Plan for Village P has slowed due to higher staff priorities, exhausted consultant budget, and the necessity to make significant changes to the draft plan generated by the consultant. Further, it is questionable whether there are any advantages for the County to complete the Specific Plan amendment at this time.**

Discussion: The contract funds with the consultant have been exhausted, yet it is estimated there may be roughly 200 to 300 hours of staff/consultant time (or $16,000 to $24,000) required to modify the draft plan, complete the draft and final environmental assessments, and proceed through the hearing/adoption process. Should we continue with the Specific Plan amendment, it is recommended the work be completed by staff.

However, this type of Specific Plan is complicated by the commercial use proposed and the long time period before the interchange will be constructed and land uses permitted. With the time span potentially being 10 years or longer, many of the design issues are nebulous, subject to change when the interchange is completed and also subject to the economic demands occurring at that point in time. Based on the El Dorado Hills Specific Plan experience, numerous changes in site design and use will occur before the project is ever constructed. Additionally, the environmental documentation prepared to complete the Specific Plan will, in part by necessity, be repeated whenever a discretionary project is proposed within the Village.

There is little to be gained from the continued processing of the Specific Plan amendment for Village P in advance of the General Plan. With the existing PRDGP policies and the ultimate requirement the Village P lands be zoned Planned Development, the County could have full control over the development of lands within the Village without a specific plan.

Should it be the desire of the Board to complete the Specific Plan amendment, staff would suggest the amendment be kept as simple as possible and that it await the final adoption of the General Plan. The consultant's draft document is quite extensive. It is staff's belief this volume can be cut substantially, simply addressing only the critical policy changes necessary to make the Village P area consistent with the adopted El Dorado Hills Specific Plan. This simplification would substantially reduce the estimated hours to complete the amendment.

NOTES:

1. THE PURPOSE OF THIS SURVEY IS TO DELINEATE AND SHOW THE MONUMENTATION OF THE LOT LINE ADJUSTMENT BLA 02-39, APPROVED JULY 15, 2002 AS REQUIRED BY SECTION 8762 (A-E) OF THE LAND SURVEYORS ACT.

2. ALL LOTS SHOWN HEREON ARE SUBJECT TO THE REQUIREMENTS OF THE EL DORADO HILLS SPECIFIC PLAN AND THE PROVISIONS OF THE DEVELOPMENT AGREEMENT ENTERED INTO BETWEEN EL DORADO HILLS INVESTORS, LTD., AND THE COUNTY OF EL DORADO ON MARCH 28, 1989, RECORDED IN BOOK 3108 AT PAGE 105 O.R.

3. FOR THE DELINEATION OF EXISTING EASEMENTS THAT AFFECT THE PARCELS SHOWN HEREON, SEE THE MAPS AND OFFICIAL RECORDS LISTED UNDER REFERENCES. THE OMISSION OF ANY EASEMENT DOES NOT CONSTITUTE ITS ABANDONMENT.

4. THE BOUNDARY OF TRACT 2 SHOWN HEREON WAS COMPILED FROM RECORD DATA PER P.M. 47-63 EXCEPT FOR THE ADJUSTED AREA ALONG THE SOUTHERLY LINE OF TRACT 1 AS SHOWN ON SHEET 3.

5. TRACT 1 SHOWN HEREON IS DESIGNATED A PARK SITE.

6. TRACT 2 IS FOR OPEN SPACE AND RESTRICTED TO FINANCING ONLY PER NOTE 2 OF P.M. 47-63.

COMBINED
EL DORADO COUNTY RESOURCE CONSERVATION DISTRICT
AND
EL DORADO COUNTY DEPARTMENT OF TRANSPORTATION
EROSION CONTROL REQUIREMENTS AND SPECIFICATIONS
FEBRUARY 2005

I. MINIMUM CONSTRUCTION SITE STORM WATER MANAGEMENT PRACTICES (MARCH 31, 2004)

The storm water management practices described below are the minimum, required water quality protection measures applicable to all construction sites below 3000 feet in elevation, within Western El Dorado County. This listing does not include the various inspection, record keeping, training and reporting requirements. Additionally, there will be instances where project and site conditions require supplementing or deviating from these minimum protection requirements. The contractor is expected to deploy measures sufficient to achieve compliance with the County's Grading Ordinance; and, as applicable (projects which involve one acre or more of disturbed soil or are part of a larger common plan of development that encompasses one acre or more of disturbed soil), with the State Water Resources Control Board's (SWRCB) NPDES General Permit for Storm Water Discharges Associated with Construction Activity.

A. SCHEDULING

Construction shall be scheduled to minimize construction activities in "high-risk areas" and the amount of active disturbed soil areas, during the rainy season (Oct. 15th to May 1st). "High-risk areas" include those areas within 50 feet of USGS watercourses, 100-year flood plains, regulated wetlands, and where slopes exceed 16%.

Unless specifically authorized by the County's on-site representative, during the rainy season the contractor shall not schedule construction activities in "high risk areas" or schedule to have more than 5 acres of active disturbed soil area. As an alternative to these restrictions, the contractor may elect to assure that these areas are fully protected by "Sediment Basins" or "Treatment", in addition to the normally required "effective combination" of soil stabilization, sediment barriers and basins / traps.

Where permanent storm water treatment devices are to be constructed, these devices should, whenever feasible, be constructed as an early work item.

B. PRESERVATION OF EXISTING VEGETATION AND PROTECT ENVIRONMENTALLY SENSITIVE AREAS

Prior to the commencement of soil-disturbing activities, areas of existing vegetation that are to remain and environmentally sensitive areas (i.e. wetlands, protected habitats, etc) shall be fenced for protection. In general, site designs shall preserve existing vegetation to the maximum extent possible; and during construction, existing vegetation shall be preserved (and protected by fencing) for as long as

possible to minimize erosion.

C. STORM WATER RUN-ON AND CONCENTRATED FLOWS

Existing watercourses shall be protected; and if diverted, handled in a non-eroding fashion. To the extent feasible, all concentrated water flows shall be channeled away from disturbed soil areas / stockpiles. Concentrated water flows shall be conveyed in a non-eroding fashion.

D. STOCKPILE MANAGEMENT

Stockpiles shall be managed as follows:

Soil stockpiles

Rainy season:

- Covered, or protected with soil stabilization measures & perimeter sediment barriers

Non-rainy season:

- Covered or protected with perimeter sediment barriers

- Concrete/asphalt rubble, rock and aggregate base/sub-base
  - Covered or protected with perimeter sediment barriers
- "Cold mix" asphalt
  - Covered

E. SEDIMENT TRACKING CONTROL

Appropriate measures shall be deployed to minimize any tracking of sediment off-site by vehicles and/or equipment. These measures include stabilized construction entrances/exits & roadways, and tire washing. Where tracking occurs, streets shall be swept using a pickup sweeper with water supply.

F. NON-STORM WATER MANAGEMENT

Non-storm water discharges shall be minimized to the extent feasible. Sediment-laden non-storm water is required to be filtered (or equivalent treatment) prior to discharging. Measures required to manage non-storm water discharges include: water conservation practices, dust control, material storage practices, vehicle/equipment operation and maintenance requirements, waste management practices, and spill prevention/control measures.

G. DISTURBED SOIL AREA MANAGEMENT

Disturbed soil areas (DSA) shall be protected with an "effective combination" of measures including soil stabilization, sediment barriers and basins / traps. There may be situations where "Sediment Basins" or "Treatment" are able to substitute as alternative control measures to the normally required "effective combination" of soil stabilization, sediment barriers and basins / traps. However, when substituting these measures, the contractor must be prepared to demonstrate that the sediment load within storm water discharges from the construction site does not exceed natural or pre-construction levels.

1. Soil stabilization measures include:
   - Hydraulic mulch (ref. CASQA BMP # EC-3)
   - Hydroseeding (ref. CASQA BMP # EC-4)
   - Suitably stabilized, non-polluting straw / wood / organic mulch (ref.

CASQA BMP #'s EC-6 & EC-8)
- Geotextiles, mats, plastic covers and erosion control blankets (ref. CASQA BMP # EC-7)
- Stabilized construction roadways (ref. CASQA BMP # TC-2)

2. Sediment barriers include:
   - Silt fences (ref. CASQA BMP # SE-1)
   - Sand/gravel bag barriers (ref. CASQA BMP #'s SE-6 & SE-8)
   - Straw bale barriers (ref. CASQA BMP # SE-9)
   - Fiber rolls (ref. CASQA BMP # SE-5)
3. Basin / traps include:
   - Desilting basins (ref. Caltrans BMPs)
   - Sediment traps (ref. Caltrans BMPs)
4. On DSAs with slope lengths greater than 10 feet, the following measures shall be deployed:

   a. Rainy season (Oct. 15th to May 1st):

   Non-active areas (no soil disturbing activities for 21 or more days)
   - On slopes equal to or flatter than 1:20 (V/H), soil stabilization
   - On slopes steeper than 1:20 (V/H), soil stabilization and sediment barriers

   Active areas
   - On slopes steeper than 1:20 (V/H), sediment barriers
   - On slopes steeper than 1:2 (V/H) with slope lengths greater than 50 feet: soil stabilization; sediment barriers; and where feasible, basins / traps

   b. Non-rainy season:

   Non-active areas (no soil disturbing activities for 21 or more days)
   - On slopes steeper than 1:2 (V/H), sediment barriers
5. General:

- Protection shall be deployed on non-active DSAs within 14 days from the cessation of soil-disturbing activities or one day prior to the predicted (40% or more chance) onset of significant precipitation, whichever occurs first. Protection shall be deployed on active DSAs prior to the predicted (40% or more chance) onset of significant precipitation.

- Properly drained terraces, at least 8 feet wide, shall be provided at intervals not more than every 25 feet in height on all permanent slopes and non-active DSAs exceeding 30 feet in height.

- "Sediment Basin:" A basin with a capacity equivalent to at least 3600 cubic feet of storage (as measured from the bottom of the basin to the principal outlet) per acre draining into the basin. The length of the basin shall be more than twice the basin's width (length is determined by measuring the distance

between the inlet and the outlet). The depth of the basin must not be less than three feet nor greater than five feet.

- "Treatment": A combination of basin and treatment engineered to capture and treat (to remove 0.01 mm sized particles and larger) the 10-year, 6-hour rain event using Q=CxIxA where C=0.5 and I ranges from 0.286 (El Dorado Hills) to 0.500 (Sly Park).

PERMANENT AREA PLANTING SPECIFICATIONS (JULY 1999)

A. SCOPE – Establishing vegetation on severely eroding areas or areas with an erosion potential. Its purpose is to stabilized the soil, minimize or prevent damage from sediment and runoff to downstream areas, protect wildlife habitat, and maintain aesthetic qualities.

B. AREAS TO BE SEEDED, TIMING OF SEEDING – Complete revegetation and stabilization of all disturbed soils, both within and outside county rights-of-way, will be accomplished with specified amounts and types of vegetative species, mulch and fertilizer material. See Major Land Resource Area exhibits MLRA 18 OR 22.
All erosion and sediment control practices performed after October 15, shall follow grading specification "F" (WINTERIZATION) – in Item I, GRADING AND DRAINAGE REQUIREMENTS.

C. MATERIAL

1. Seed – All seed shall be delivered to the site tagged and labeled in accordance with the California Agricultural Code and shall be acceptable to the County Agricultural Commissioner.

   Seed shall be of a quality which has a minimum pure live seed content of 80% (% purity x % germination) and weed seed shall not exceed 0.5% of the aggregate of pure live seed and other materials. Legume seed shall be inoculated with inoculate specific to its needs within two hours prior to seeding. Inoculants shall not be used later than the date indicated on the container or as otherwise specified. All inoculated seed shall be labeled to

show weight of seed, date of inoculation, and the weight and source of inoculant materials.

2. Fertilizer – A commercial fertilizer shall be Ammonium Phosphate and contain a minimum of 16% nitrogen, 20% phosphorus and 0% potash, uniform in composition, dry and free flowing, pelleted or granular.

All fertilizer shall be delivered in unbroken or unopened containers, labeled in accordance with applicable state regulations and bearing the warranty of the producer for the grade furnished.

3. Mulch – Mulch shall be one of the following materials as approved by the government representative.

4. Straw – Straw shall be new straw derived from rice, wheat, oats, or barley and be free of mold and noxious weed seed. Straw shall be furnished in air dry bales. Evidence shall be furnished that clearance has been obtained from the County Agricultural Commissioner, as required by law, before straw obtained from outside the county in which it is to be used is delivered to the site of the work.

5. Wood Fiber Mulch – Wood fiber mulch is a wood cellulose fiber that contains no germinating or growth inhibiting factors. It is colored with a non-toxic, water soluble, green dye to provide a proper gauge for metering over ground surfaces. It has the property to be evenly dispersed and suspended when agitated in water.

D. SEEDING REQUIREMENTS

1. General – All seeding, fertilizer and mulching operations shall begin when approval is given by the appropriate County Engineer or Conservation District representative.

2. Seedbed Preparation – The entire area to be seeded shall be reasonably smooth and conform the desired shape before actual seedbed preparation is begun. Any debris which would interfere with seeding operations, growth or maintenance of the vegetative cover will be removed. The area to be seeded shall have a firm seedbed which has previously been roughened by scarifying, disking, harrowing, chiseling, or otherwise worked to a depth of two to four inches (2" – 4"). No implement shall be used that will create an excessive amount of downward movement of soil or clods of sloping areas. Seedbed may be prepared at time of completion of earth-moving work.

3. Fertilizing – Fertilizer shall be distributed uniformly over the seedbed at the rate of 500 pounds per acre, and shall be in such physical condition to insure uniform application over the area to be fertilized. Fertilizer may be applied in any way that will result in uniform distribution. The fertilizer shall be incorporated into the soil.

4. Seeding – Seed shall be broadcast by hand, mechanical hand seeder, power operated seeder, hydroseeder or other approved equipment. 'Seed

shall have a soil cover of not more than one-half inch. Seeding will be carried out using either of the following methods:

Method 1 The seed may be drilled, not to exceed one-half (1/2) inch deep and cultipacked or rolled once over with a corrugated roller on all areas where equipment can be operated safely. Seed operations will be across the slope.

Method 2 The seed may be applied in a slurry mix of wood cellulose fiber distributed uniformly at the prescribed rate (see Item E.2, Wood Celulose Fiber -Hydro-mulching, below). The application unit used for "Hydro Mulch" shall be equipped with an agitator to maintain the seed and mulch in suspension within the unit's tank prior to and during application.

Method 3 Where emergency treatment of exposed soils extends beyond October 15, emergency mulching without seed will be prescribed (see Item I-F Grading & Drainage Requirements – **WINTERIZATION**, above).

E. METHOD OF MULCH PLACEMENT AREAS AS FOLLOWS:

1. Straw Mulch – The 4000 pounds of straw mulch **per acre** shall be applied by hand, blower, or other suitable equipment. If straw is applied with a blower, it shall not be chopped in lengths less than six (6) inches. To prevent removal of straw by wind, the mulch will be anchored in place. Anchoring process as approved may include using hand tools, mulching rollers, disks, netting, or similar types of suitable equipment.

Acceptable Methods for Anchoring Straw Mulch:

a. On areas where a seedbed has been prepared, the straw may be tucked in with a mulching roller or straw crimper that punches the mulch in the ground to a depth of approximately two (2) inches. On areas inaccessible to equipment, mulch can be anchored using hand tools such as spade, shovel or other suitable equipment.

b. Straw may be anchored by using fiber netting, properly stapled down and with anchor trenches to cover the netting at top and bottom. Mulch net should be durable and capable of withstanding a minimum of one-year's weathering without disintegrating. Netting should be provided to allow for shrinkage and for stapling with anchor pins. Anchor pins need to be of sufficient length and properly placed to anchor the net. Chopped straw that is shorter than 6 inches must be anchored with a suitable netting. Anchor pins shall be of rigid 0.12 inches diameter or heavier galvanized wire with a minimum length of 10 inches of hook, "J" type pins, or 0.09 inch diameter or heavier with a minimum 6 inches for U-type staples. Anchor pins will be inserted full length at a maximum of three foot spacing at all ends and along lap joints, and at a maximum of five-foot spacing at intermediate points and along edges when using mulch materials wider than 60 inches.

c. Straw may be anchored on slopes less than equal to 2 horizontal to 1 vertical by using wood fiber material applied in a slurry with hydroseeding equipment. All mulching materials must be acceptable to the Agricultural Commissioner of El Dorado County, California, as to plant quarantine regulations.

2. Wood Cellulose Fiber – Hydro Mulch A wood fiber mulch at a rate of 2000 pounds per acre may be applied hydraulically in a water slurry. The wood fiber mulch, seed, and fertilizer can be mixed and applied hydraulically in the form of a slurry. **Tackifier shall be used for all slopes greater than 3:1 on highly erodible soils and applied according to manufacturer's recommendations.**

Special Note: A minimum 70% seed germination with at least 1" growth must be obtained by December 1st, or area must be covered with straw mulch. (Section E-1)

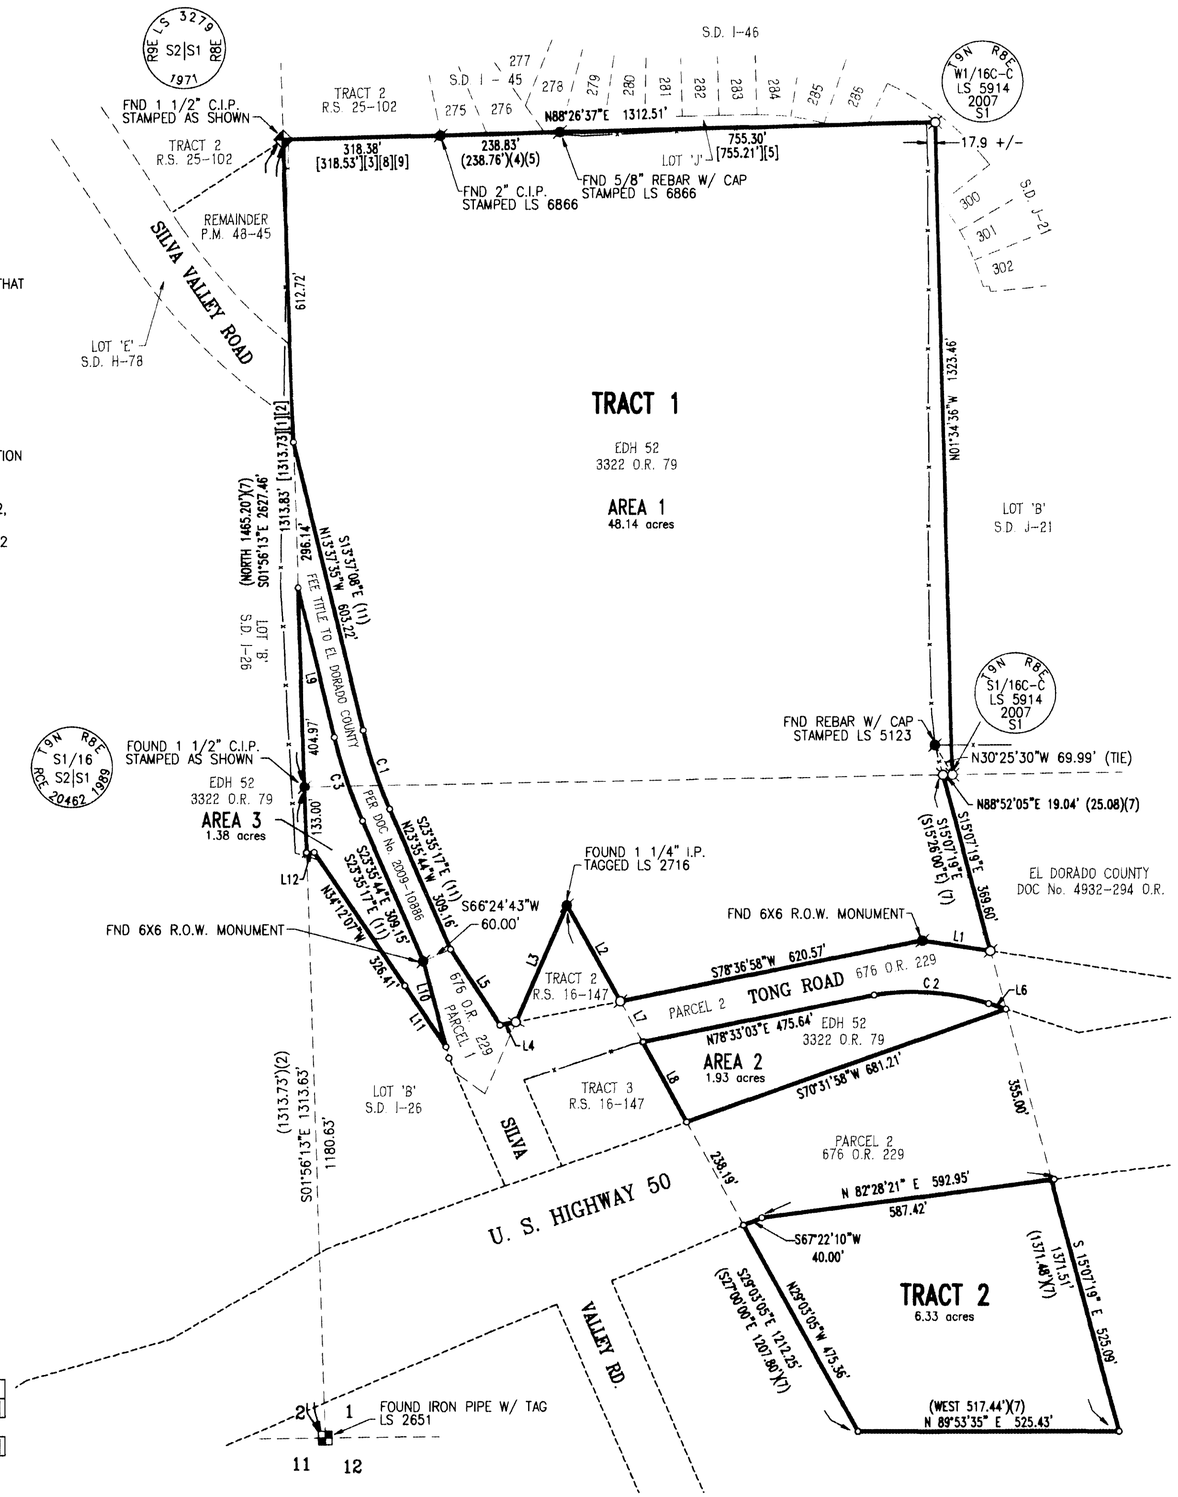
BASIS OF BEARINGS

THE BASIS OF BEARING FOR THIS SURVEY IS IDENTICAL TO THAT CERTAIN RECORD OF SURVEY FILED IN THE OFFICE OF THE COUNTY RECORDER OF EL DORADO COUNTY IN BOOK 16 OF SURVEYS, PAGE 147, WHICH IS THE CALIFORNIA COORDINATE SYSTEM, ZONE II. ALL DISTANCES ARE GROUND DISTANCES. MULTIPLY DISTANCE SHOWN BY 0.99991 TO OBTAIN GRID DISTANCE.



NOTE

1) THE PURPOSE OF THIS SURVEY IS TO COMPLY WITH SECTION 8762(B)(4) OF THE PROFESSIONAL LAND SURVEYORS ACT.

2) TRACT 1 INCLUDES THE LANDS DESCRIBED IN BOOK 3322, PAGE 79, EXCEPTING THOSE PORTIONS GRANTED TO THE COUNTY OF EL DORADO IN DOC. NO. 2009-10886. TRACT 2 REFLECTS THE BALANCE OF ASSESSOR'S PARCEL NO. 122-720-09. IT IS NOT THE INTENT OF THIS SURVEY TO REFLECT LINES OF ACTUAL OWNERSHIP.

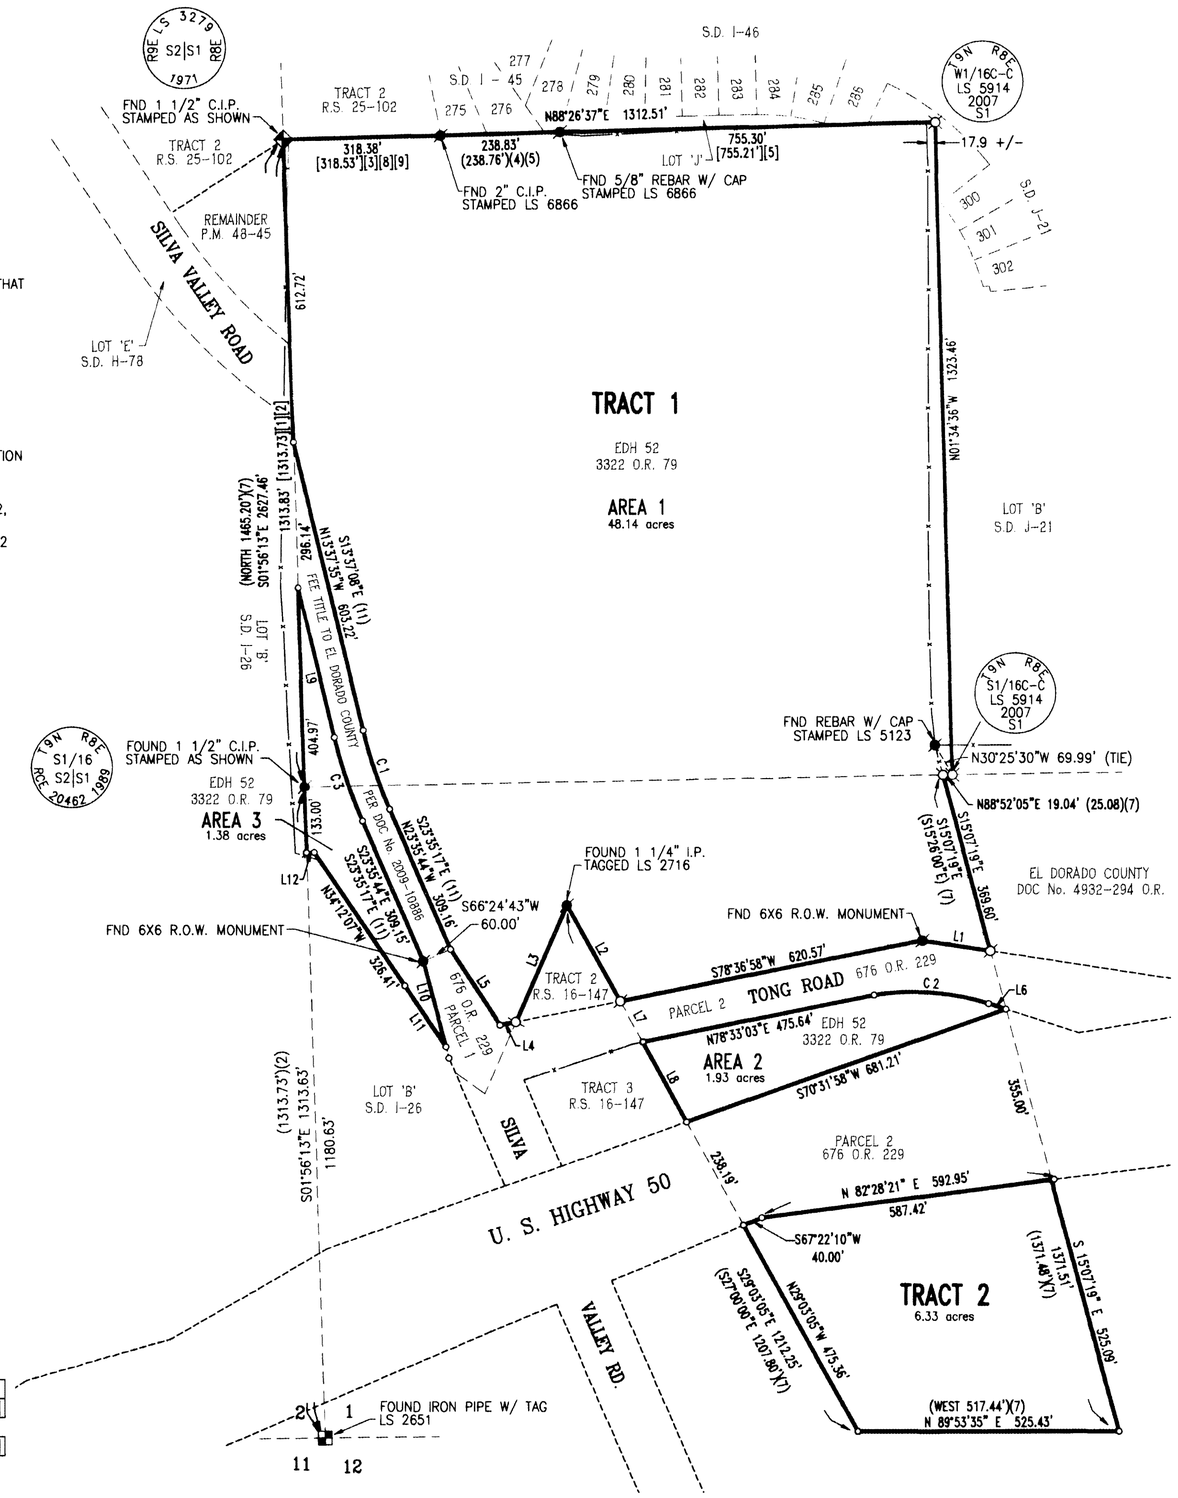
BASIS OF BEARINGS

THE BASIS OF BEARING FOR THIS SURVEY IS IDENTICAL TO THAT CERTAIN RECORD OF SURVEY FILED IN THE OFFICE OF THE COUNTY RECORDER OF EL DORADO COUNTY IN BOOK 16 OF SURVEYS, PAGE 147, WHICH IS THE CALIFORNIA COORDINATE SYSTEM, ZONE II. ALL DISTANCES ARE GROUND DISTANCES. MULTIPLY DISTANCE SHOWN BY 0.99991 TO OBTAIN GRID DISTANCE.



NOTE

1) THE PURPOSE OF THIS SURVEY IS TO COMPLY WITH SECTION 8762(B)(4) OF THE PROFESSIONAL LAND SURVEYORS ACT.

2) TRACT 1 INCLUDES THE LANDS DESCRIBED IN BOOK 3322, PAGE 79, EXCEPTING THOSE PORTIONS GRANTED TO THE COUNTY OF EL DORADO IN DOC. NO. 2009-10886. TRACT 2 REFLECTS THE BALANCE OF ASSESSOR'S PARCEL NO. 122-720-09. IT IS NOT THE INTENT OF THIS SURVEY TO REFLECT LINES OF ACTUAL OWNERSHIP.

AGREEMENT BETWEEN A CONTRACTOR WORKING ON STATE/COUNTY FACILITIES AND A REAL PROPERTY OWNER FOR THE PLACEMENT OF CONSTRUCTION RELATED MATERIAL OUTSIDE OF STATE/COUNTY RIGHT-OF-WAY (Page 1 of 3)

County Contract No.: 53113 State Contract No.: 03-3A7124

County/Route/Kilometer post: 03-ED-50- PM 2.90 TO PM 6.70

DeSilva Gates Construction LP ("Contractor") has entered into Contract No. 53113 ("Contract"), with the El Dorado County Department of Transportation and is working under Encroachment Permit No. 0312-NDP0147, issued by the State of California, Department of Transportation (hereafter collectively referred to as "Departments"), for work that is described as follows: U.S. 50 HOV Lanes Phase 2A ("Project").

The owner, EDH 52, a California general partnership, ("Owner") of the real property ("Property") located at El Dorado Hills, El Dorado County, California (Assessor's Parcel Number 122-720-09) agrees to allow the placement on the Property by the Contractor of approximately 21,000 cubic yards of Material (such as soil, asphalt grindings, cold planing grindings and other material) ("Material") that has been or will be generated from the Project. The Material is the subject of a Report entitled Highway 50 Site Investigation, Post Mile 2.90 to 8.79 (Contract No. 03A1368; Task Order No. 22, EA 03-3A7121) Aerially Deposited Lead, Naturally Occurring Asbestos, and Lead-Containing Paint Site Investigation and Bridge Survey Report.

Owner agrees that the Contractor will take ownership of the Material at the time it is loaded on trucks and that Owner will take ownership of the Material at the time it is deposited on the Property.
Contractor and Owner shall obtain all necessary permits, licenses and clearances prior to placing Material on the Property.

By submission of this agreement to the Departments, Contractor and Owner are acknowledging that they have been informed of all restrictions, laws, disclosures, and permit requirements associated with the deposit of the Material from the Project on to the Property and have agreed to abide by the same. These laws, restrictions, and disclosures include but are not limited to:

- Trace amounts (less than 0.25 percent) of naturally occurring asbestos (NOA) are present in the Material to be excavated from Post Mile 2.9 to 6.7 on State Route 50 in El Dorado County.
- Lead has been detected in the Material to be excavated from unpaved areas of the highway. Levels of lead found within the project limits range from less than 5.0 to 150 mg/kg total lead with an average concentration of 16.1 mg/kg total lead as analyzed by EPA. Test Method 6010 or EPA Test Method 7000 series and based upon a 95% Upper Confidence Limit.

AGREEMENT BETWEEN A CONTRACTOR WORKING ON STATE/COUNTY FACILITIES AND A REAL PROPERTY OWNER FOR THE PLACEMENT OF CONSTRUCTION RELATED MATERIAL OUTSIDE OF STATE/COUNTY RIGHT-OF-WAY (Page 2 of 3)

County Contract No.: 53113 State Contract No.: 03-3A7124

County/Route/Kilometer post: 03-ED-50- PM 2.90 TO PM 6.70

- Residue from grinding or cold planing operations contains lead from paint and thermoplastic. The average lead concentrations are less than 1,000 mg/kg total lead and 5 mg/L soluble lead. This residue is a nonhazardous waste and does not contain heavy metals in concentrations that exceed thresholds established by the Health and Safety Code and 22 CA Code of Regs and is not regulated under the Federal Resource Conservation and Recovery Act (RCRA, 42 USC§ 6901 et seq.

- Local Ordinances - Grading permits may be required for the placement, filling, excavation and/or deposit of the Material on the Property.

- California Fish and Game Code (Section 1602), "Lake or Stream Bed Alteration Agreement" - A permit is required prior to the placement of material in a location where it can pass into waters of the state, directly or indirectly through causes such as erosion or maintenance.

- California Fish and Game Code (Section 5650) - A prohibition against the deposition of petroleum products (including asphalt), or any material deleterious to fish, plants, or birds where it can pass into the waters of the state.

- Federal Clean Water Act (Section 301 and 402), "General Permit for Discharges of Storm Water Associated with Construction Activity" - A permit is required prior to soil disturbance of an area of one acre or more.

- Federal Clean Water Act (Section 404), "Permit for Discharge of Dredged or Fill Material" - A permit from the United States Army Corps of Engineers may be required for the discharge of fill material into waters of the United States including wetlands.

Owner and Contractor agree that the Material will be transported, deposited and left in a manner that will not cause injury or harm to any person or property. If an injury or harm does occur to any person or property or should any litigation arise as a result of the transporting and depositing of the Material on to the Property, the Owner and Contractor agree to indemnify, defend, protect, and hold harmless the Departments in any action in law or equity, regardless of manner or form.

AGREEMENT BETWEEN A CONTRACTOR WORKING ON STATE/COUNTY FACILITIES AND A REAL PROPERTY OWNER FOR THE PLACEMENT OF CONSTRUCTION RELATED MATERIAL OUTSIDE OF STATE/COUNTY RIGHT-OF-WAY (Page 3 of 3)

County Contract No.: 53113 State Contract No.: 03-3A7124

County/Route/Kilometer post: 03-ED-50- PM 2.90 TO PM 6.70

Pursuant to the Contract, Owner acknowledges Contractor will submit this Agreement to the Departments as evidence that the Owner has authorized the placement of the Material on the Property. Owner acknowledges that the Contractor is not authorized to make any representations or agreements on behalf of the Departments. Contractor and Owner agree that the Departments are not subject to any and all obligations to Owner made by Contractor under this Agreement.

Owner and Contractor acknowledge that they have had the opportunity to seek independent legal advice with respect to the meaning, implications and advisability of entering into and executing this Agreement.

County of El Dorado

Notice of Preparation of a Draft Environmental Impact Report

and Notice of Public Scoping Meeting for the

Central El Dorado Hills Specific Plan

Date: February 20, 2013

To: Interested Parties

From: Rommel (Mel) Pabalinas, Senior Planner, County of El Dorado

Subject: Notice of Preparation of a Draft Environmental Impact Report and Notice of Public Scoping Meeting for the Central El Dorado Hills Specific Plan (File No. SP12-0002)

The County of El Dorado (County) will be the lead agency under the California Environmental Quality Act (CEQA) for preparation of an Environmental Impact Report (EIR) for the Central El Dorado Hills Specific Plan in El Dorado County. The purpose of this 30-day Notice of Preparation (NOP) and notice of public scoping meeting is to solicit comments from public agencies and interested persons regarding the scope and content of the environmental information and analyses, including the significant environmental impacts, reasonable alternatives, and mitigation measures that should be included in the Draft EIR (pursuant to CEQA Guidelines Section 15082). The location, project description, proposed entitlement requests, and potential environmental effects of the proposed Central El Dorado Hills Specific Plan are summarized in the attached materials.

Please provide written comments to **Mr. Rommel (Mel) Pabalinas, Senior Planner, at the address shown, by 5:00 p.m. on March 22, 2013**. Keep in mind that there will be another opportunity to submit detailed comments when the draft EIR is released for public review. Please mail, email or fax your comments to:

Rommel (Mel) Pabalinas, Senior Planner
El Dorado County Development Services Department, Planning Division
2850 Fairlane Court, Building C
Placerville, CA 95667
Email: rommel.pabalinas@edcgov.us
Fax: (530) 642-0508

The County will hold a public scoping meeting to provide additional information about the project and to receive verbal and written comments.

Date: Thursday, March 14, 2013
Time: 6:30 p.m. to 8:30 p.m.
Where: Oak Meadow Elementary School, Multipurpose Room, 7701 Silva Valley Parkway, El Dorado Hills, CA 95762

The scoping meeting format will be an open house; interested parties may arrive at any time during the 2-hour window to receive information on the project or provide comments.

NOTICE OF PREPARATION OF

A DRAFT ENVIRONMENTAL IMPACT REPORT (EIR)
AND NOTICE OF PUBLIC SCOPING MEETING
FOR THE
CENTRAL EL DORADO HILLS SPECIFIC PLAN

Project Information

Location: The proposed project is located in El Dorado Hills, California, an unincorporated area of El Dorado County (County) that is approximately 23 miles east of Sacramento and 20 miles west of Placerville (Figure 1, Regional Location). The proposed Central El Dorado Hills Specific Plan (CEDHSP) (project) includes two planning areas, as shown in Figure 2, Project Location: the Serrano Westside planning area east of the intersection of El Dorado Hills Boulevard and Serrano Parkway, and the Pedregal planning area west of El Dorado Hills Boulevard between Wilson and Olson Way, adjacent to the Ridgeview subdivision.

Serrano Westside is immediately north of U.S. Highway 50 (US 50) and less than 2 miles south of Folsom Lake. Existing land uses adjacent to the Serrano Westside planning area include office and retail uses to the south and west (Raley's and La Borgata) and single-family residential uses at the Serrano Community to the east. The proposed Serrano Westside development would surround the El Dorado Hills Fire Station (located on Wilson Way east of El Dorado Hills Boulevard) to the north, east, and south. Undeveloped land, an archery range, and two schools (Oak Ridge High School and Silva Valley Elementary School) are located north of the project.

The Pedregal planning area is less than 1 mile north of US 50 and less than 2 miles south of Folsom Lake. The Pedregal planning area is immediately adjacent to low-density residential uses (the existing Ridgeview neighborhood) to the west and three existing multi-family developments (the Copper Hill Apartments, El Dorado Village Apartments, and Sterling Ranch Apartments) along El Dorado Hills Boulevard to the east.

Project Description: The proposed CEDHSP, which would occur in the Serrano Westside Planning Area and Pedregal Planning Area, includes the development of up to 1,028 dwelling units, 11 acres of public facility/recreational use or 50,000 square feet of commercial use, 15 acres of public village park, and 85 acres of public parks and open space in the center of the El Dorado Hills Community. The proposed project also includes implementation of the CEDHSP and an amendment to the existing El Dorado Hills Specific Plan (EDHSP) approved in 1987 to transfer the density at Serrano Village D-1, Lots C and D to the proposed project. The approximately 155-acre Serrano Westside planning area would be an extension of the existing Serrano development with gated residential neighborhoods and would include approximately 763 dwelling units, civic or commercial, and village park development. The approximately 102-acre Pedregal planning area would include residential neighborhoods of approximately 265 dwelling units, which may or may not be gated. Table 1 shows the proposed land use designations in the Serrano Westside and Pedregal planning areas. These designations are also shown in Figure 3, Proposed Land Use Designations.

Table 1. Proposed Land Use Summary (Acres)

Land Use	Serrano Westside (% of total area)	Pedregal (% of total area)
Residential		
LDR: Low-Density Residential (1.5 Du/Ac)	-	43 (17%)
MDR-L: Medium-Density Residential – Low (5 - 8 average Du/Ac)	23 (9%)	-
MDR-H: Medium-Density Residential – High (9 - 14 average Du/Ac)	36 (14%)	-
HDR: High-Density Residential (15 - 24 average Du/Ac)	16 (6%)	13 (5%)
Civic – Limited Commercial		
C-LC: Civic Limited Commercial	11 (4%)	-
Public Facilities		
VP: Village Park	15 (6%)	-
Open Space		
OS: Open Space	46 (18%)	39 (15%)
Roads and Landscaped Lots	8 (3%)	6 (2%)
Total	256 (100%)	
Du/Ac = dwelling units per acre - = no acres		

The proposed project includes onsite and offsite infrastructure to serve the development. The EIR will analyze any related offsite infrastructure. Buildout will likely occur over several years and ultimately the timeframe be determined by housing market conditions.

Proposed Entitlement Requests: The proposed project includes an amendment to the existing EDHSP to transfer the density at Serrano Village D-1, Lots C and D to the project. Specifically, the proposed entitlements that would be required to implement the CEDHSP include: amendments to the EDHSP and County general plan, adoption and implementation of the CEDHSP, and rezoning. In addition, the project would require the County's approval of a development agreement, financing plan, and subsequent development permits and entitlements including a Development Plan and Tentative Maps. The proposed CEDHSP consists of the following requests.

- Amendment to the El Dorado Hills Specific Plan (EDHSP) consisting of: A) Transfer a total of 58.53 acres and associated EDHSP-vested density affecting portions of APN 121-040-20, 121-040-29, 121-040-31 and 121-120-22 from EDHSP area to CEDHSP area; B) Transfer a total of 1.89 acres affecting portions of APN 121-160-03 from CEDHSP area to EDHSP area.
- General Plan Amendment to:
    - Amend the General Plan Land Use Map designation of subject lands within CEDHSP from High-Density Residential (HDR) (1 - 5 Du/Ac), Multi-Family Residential (MFR) (5 - 24 Du/Ac), Commercial (C), Open Space (OS) and AP-EDHSP to Adopted Plan-Central El

Dorado Hills Specific Plan (AP-CEDHSP) and CEDHSP land use designations Low-Density Residential (LDR) (1.5 average Du/Ac), Open Space (OS), High-Density Residential (HDR) (15 - 24 average Du/Ac), Medium-Density Residential-High (MDR-H) (9 - 14 average Du/Ac), Medium-Density Residential-Low (MDR-L) (5 - 8 Du/Ac), Civic-Limited Commercial (C-LC), and Village Park (VP).

  - Amend General Plan Land Use Map designation of transferred lands within AP-EDHSP as Open Space (OS).

- Rezoning to:
  - Amend zone districts from One-Family Residential District (R1), One-Family Residential-Planned Development District (R1-PD), Limited-Multi-Family Residential District (R2), Recreational Facility (RF), and Open Space (OS) to CEDHSP zone districts Multi residential-Planned Development (RM1-PD, RM2-PD, RM3-PD), One-Family Residential-Planned Development District (R1-PD), Civic-Limited Commercial-Planned Development (C1-PD), Village Park-Planned Development (RF1-PD), Private Open Space- Planned Development (OS1-PD) and Corps Restricted-Planned Development (OS2-PD).
  - Amend zone designation of transferred lands within AP-EDHSP as Open Space (OS).
- Specific Plan for the proposed Central El Dorado Hills Specific Plan for the development of a 256-acre project site consisting of up to 1,028 dwelling units, 11 acres of public facility/recreational use or 50,000 square foot of commercial use, 15 acres of public village park, and 85 acres of private parks and open space.

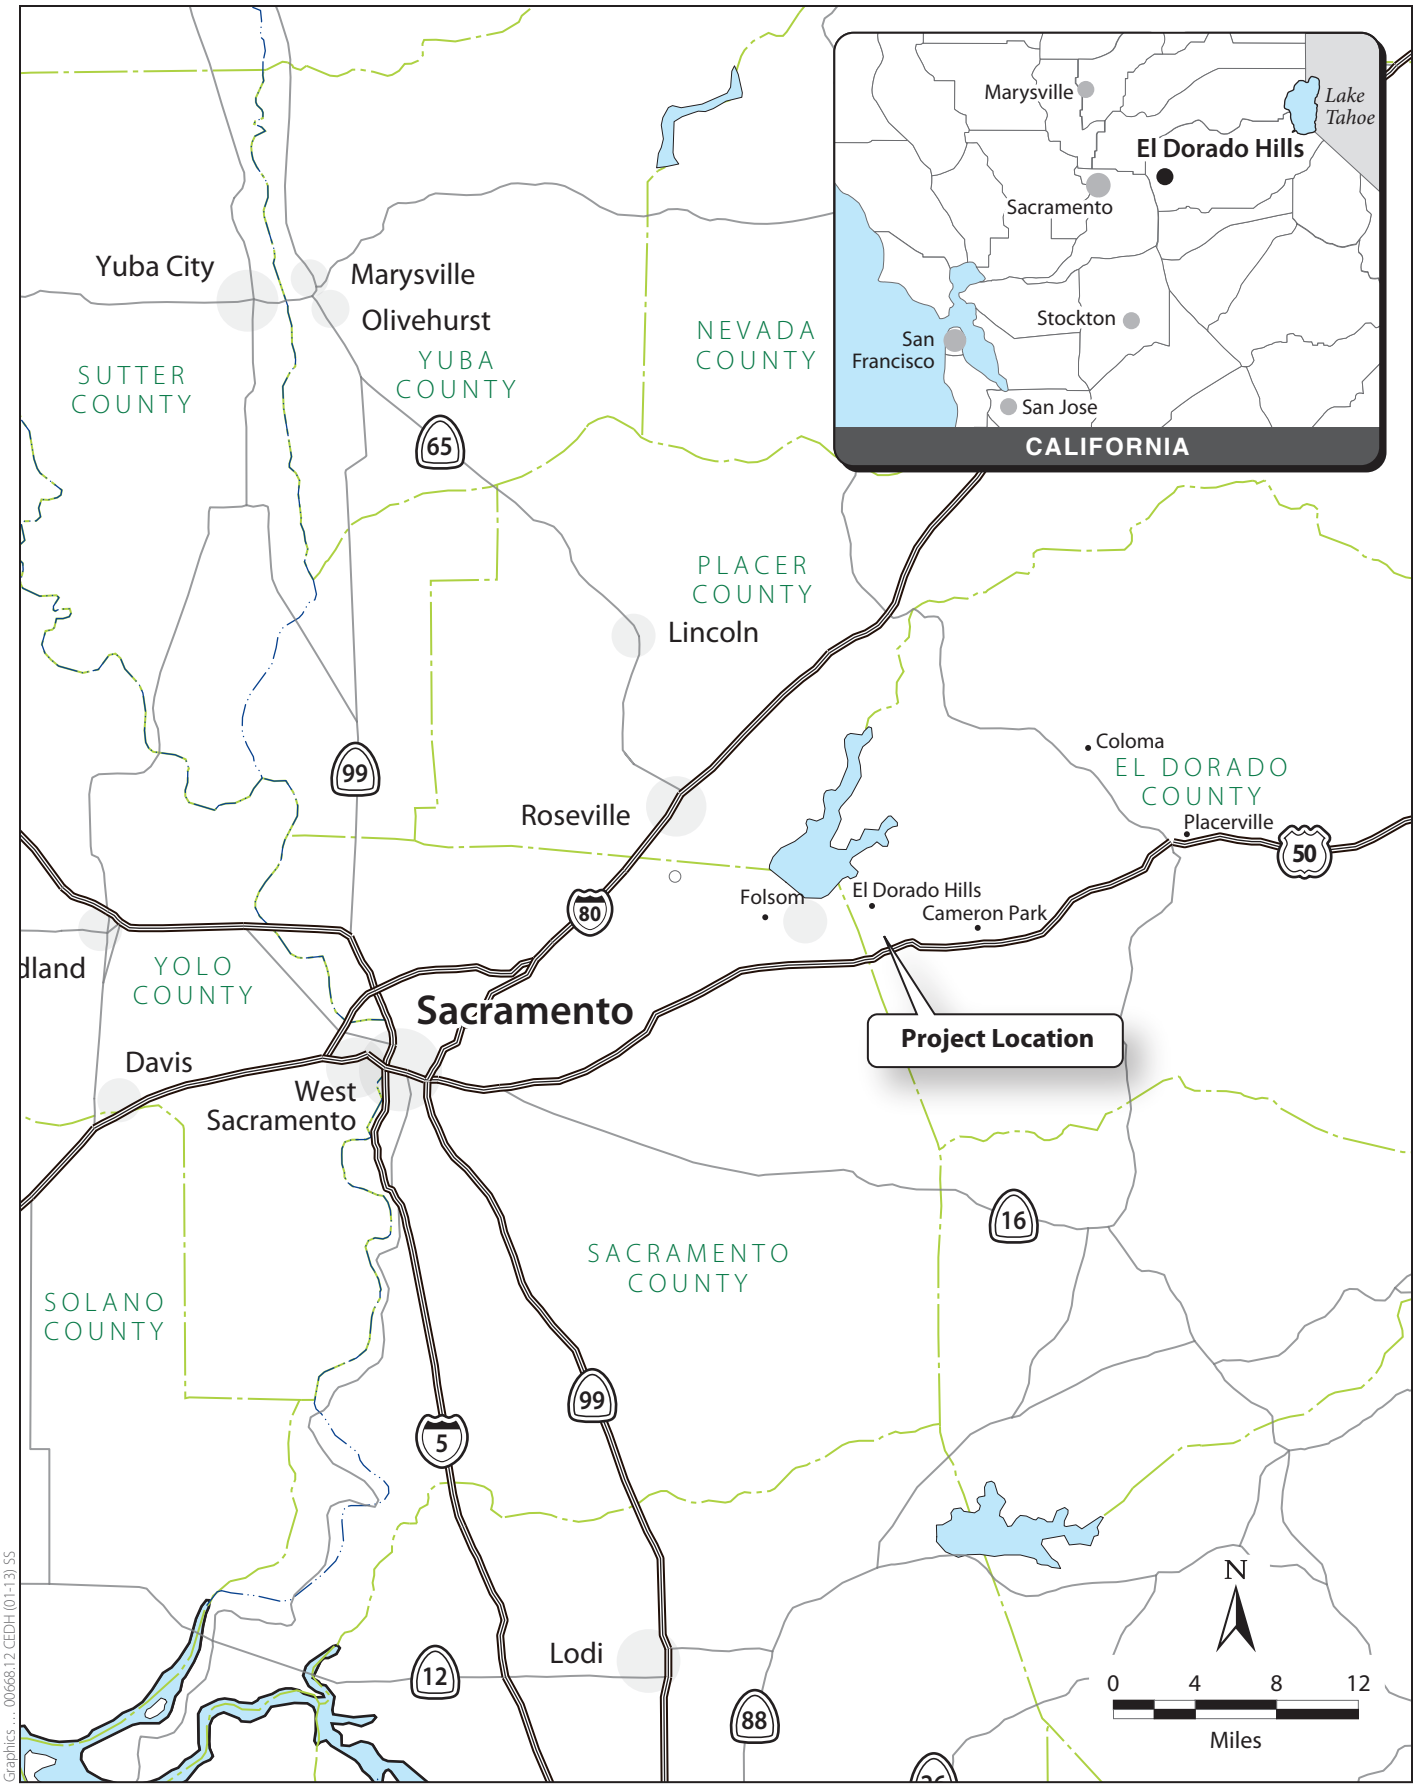
Environmental Effects

Probable Environmental Effects: Based on a preliminary environmental analysis of the CEDHSP, the County has determined that the full range of issues identified in the CEQA Guidelines, listed below, shall be addressed in the EIR.

- Air Quality
- Biological Resources
- Cultural Resources
- Geology, Soils, Minerals, and Paleontology
- Greenhouse Gas Emissions
- Hazards and Hazardous Materials
- Hydrology, Water Quality, and Water Resources
- Land Use Planning and Agricultural Resources
- Noise and Vibration
- Population and Housing
- Public Services and Utilities
- Recreation
- Traffic and Circulation
- Visual Resources

In addition to the above areas, the Draft EIR will also evaluate the potential cumulative and growth-inducing effects of the project, as required by CEQA. Reasonably foreseeable future projects will be considered in the Draft EIR, including, but not limited to, the proposed Village of Marble Valley Specific Plan, the proposed Lime Rock Valley Specific Plan, and the proposed Dixon Ranch Residential Project. Applications have been submitted to the County for these projects, and they are currently undergoing CEQA review.

Comments and suggestions are requested regarding the environmental issues that will be analyzed in the EIR during the 30-day public comment period for the NOP.

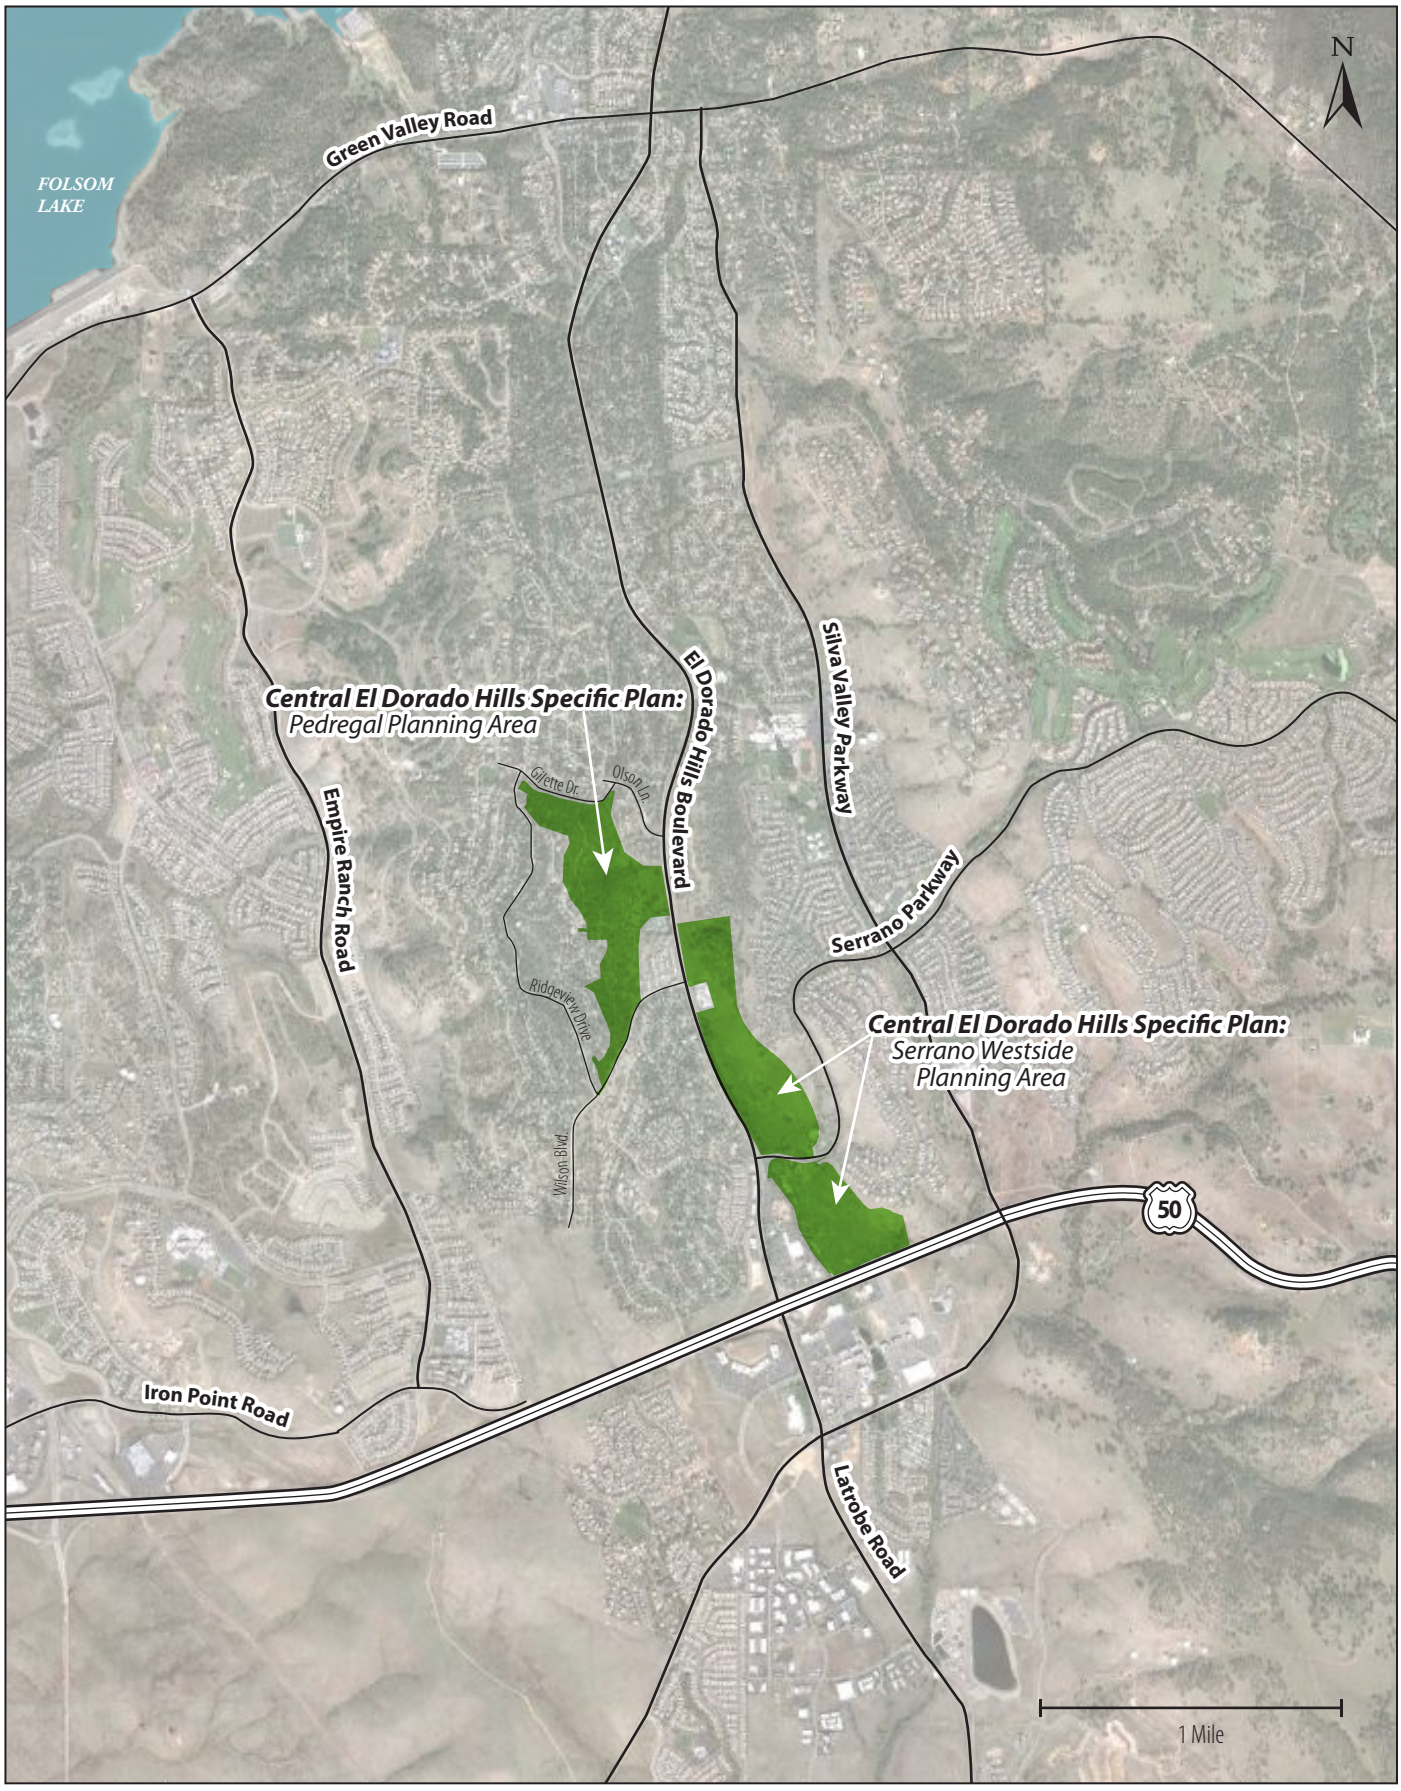


Potential Alternatives to be addressed in the EIR: In accordance with section 15126.6 of the State CEQA Guidelines, an EIR must "describe a range of reasonable alternatives to the Project, or to the location of the Project, which would feasibly attain most the basic objectives of the Project, but would avoid or substantially lessen any of the significant effects of the Project, and evaluate the comparative merits of the alternatives." As required by CEQA, the EIR will evaluate a No Project Alternative, which will assume development of the proposed project site under the currently adopted general plan and zoning designations. Aside from the no project alternative, the County has not yet determined what additional alternatives to the project will be evaluated in the EIR. These will be identified during the environmental review process. Once selected, the alternatives will be analyzed at a qualitative level of detail in the Draft EIR for comparison against the impacts identified for the proposed project, consistent with the requirements of CEQA.

Public Scoping Meeting

The County will hold a public scoping meeting to provide additional information about the project and to receive verbal and written input on Thursday, March 14, 2013 from 6:30 p.m. to 8:30 p.m. at Oak Meadow Elementary School, Multipurpose Room, 7701 Silva Valley Parkway, El Dorado Hills, CA 95762. The scoping meeting format will be an open house; interested parties may arrive at any time during the 2-hour window to receive information on the project or provide input.

Requests for Additional Information



If you have any questions, please contact Rommel (Mel) Pabalinas at the County of El Dorado, Development Services Department, Planning Division, 2850 Fairlane Court, Building C, Placerville, CA 95667, by telephone at (530) 621-5363, or by email to rommel.pabalinas@edcgov.us.

County of El Dorado

Notice of Preparation of a Draft Environmental Impact Report

and Notice of Public Scoping Meeting for the

Central El Dorado Hills Specific Plan

Date: February 20, 2013

To: Interested Parties

From: Rommel (Mel) Pabalinas, Senior Planner, County of El Dorado

Subject: Notice of Preparation of a Draft Environmental Impact Report and Notice of Public Scoping Meeting for the Central El Dorado Hills Specific Plan (File No. SP12-0002)

The County of El Dorado (County) will be the lead agency under the California Environmental Quality Act (CEQA) for preparation of an Environmental Impact Report (EIR) for the Central El Dorado Hills Specific Plan in El Dorado County. The purpose of this 30-day Notice of Preparation (NOP) and notice of public scoping meeting is to solicit comments from public agencies and interested persons regarding the scope and content of the environmental information and analyses, including the significant environmental impacts, reasonable alternatives, and mitigation measures that should be included in the Draft EIR (pursuant to CEQA Guidelines Section 15082). The location, project description, proposed entitlement requests, and potential environmental effects of the proposed Central El Dorado Hills Specific Plan are summarized in the attached materials.

Please provide written comments to **Mr. Rommel (Mel) Pabalinas, Senior Planner, at the address shown, by 5:00 p.m. on March 22, 2013**. Keep in mind that there will be another opportunity to submit detailed comments when the draft EIR is released for public review. Please mail, email or fax your comments to:

Rommel (Mel) Pabalinas, Senior Planner
El Dorado County Development Services Department, Planning Division
2850 Fairlane Court, Building C
Placerville, CA 95667
Email: rommel.pabalinas@edcgov.us
Fax: (530) 642-0508

The County will hold a public scoping meeting to provide additional information about the project and to receive verbal and written comments.

Date: Thursday, March 14, 2013
Time: 6:30 p.m. to 8:30 p.m.
Where: Oak Meadow Elementary School, Multipurpose Room, 7701 Silva Valley Parkway, El Dorado Hills, CA 95762

The scoping meeting format will be an open house; interested parties may arrive at any time during the 2-hour window to receive information on the project or provide comments.

NOTICE OF PREPARATION OF

A DRAFT ENVIRONMENTAL IMPACT REPORT (EIR)
AND NOTICE OF PUBLIC SCOPING MEETING
FOR THE
CENTRAL EL DORADO HILLS SPECIFIC PLAN

Project Information

Location: The proposed project is located in El Dorado Hills, California, an unincorporated area of El Dorado County (County) that is approximately 23 miles east of Sacramento and 20 miles west of Placerville (Figure 1, Regional Location). The proposed Central El Dorado Hills Specific Plan (CEDHSP) (project) includes two planning areas, as shown in Figure 2, Project Location: the Serrano Westside planning area east of the intersection of El Dorado Hills Boulevard and Serrano Parkway, and the Pedregal planning area west of El Dorado Hills Boulevard between Wilson and Olson Way, adjacent to the Ridgeview subdivision.

Serrano Westside is immediately north of U.S. Highway 50 (US 50) and less than 2 miles south of Folsom Lake. Existing land uses adjacent to the Serrano Westside planning area include office and retail uses to the south and west (Raley's and La Borgata) and single-family residential uses at the Serrano Community to the east. The proposed Serrano Westside development would surround the El Dorado Hills Fire Station (located on Wilson Way east of El Dorado Hills Boulevard) to the north, east, and south. Undeveloped land, an archery range, and two schools (Oak Ridge High School and Silva Valley Elementary School) are located north of the project.

The Pedregal planning area is less than 1 mile north of US 50 and less than 2 miles south of Folsom Lake. The Pedregal planning area is immediately adjacent to low-density residential uses (the existing Ridgeview neighborhood) to the west and three existing multi-family developments (the Copper Hill Apartments, El Dorado Village Apartments, and Sterling Ranch Apartments) along El Dorado Hills Boulevard to the east.

Project Description: The proposed CEDHSP, which would occur in the Serrano Westside Planning Area and Pedregal Planning Area, includes the development of up to 1,028 dwelling units, 11 acres of public facility/recreational use or 50,000 square feet of commercial use, 15 acres of public village park, and 85 acres of public parks and open space in the center of the El Dorado Hills Community. The proposed project also includes implementation of the CEDHSP and an amendment to the existing El Dorado Hills Specific Plan (EDHSP) approved in 1987 to transfer the density at Serrano Village D-1, Lots C and D to the proposed project. The approximately 155-acre Serrano Westside planning area would be an extension of the existing Serrano development with gated residential neighborhoods and would include approximately 763 dwelling units, civic or commercial, and village park development. The approximately 102-acre Pedregal planning area would include residential neighborhoods of approximately 265 dwelling units, which may or may not be gated. Table 1 shows the proposed land use designations in the Serrano Westside and Pedregal planning areas. These designations are also shown in Figure 3, Proposed Land Use Designations.

Table 1. Proposed Land Use Summary (Acres)

Land Use	Serrano Westside (% of total area)	Pedregal (% of total area)
Residential		
LDR: Low-Density Residential (1.5 Du/Ac)	-	43 (17%)
MDR-L: Medium-Density Residential – Low (5 - 8 average Du/Ac)	23 (9%)	-
MDR-H: Medium-Density Residential – High (9 - 14 average Du/Ac)	36 (14%)	-
HDR: High-Density Residential (15 - 24 average Du/Ac)	16 (6%)	13 (5%)
Civic – Limited Commercial		
C-LC: Civic Limited Commercial	11 (4%)	-
Public Facilities		
VP: Village Park	15 (6%)	-
Open Space		
OS: Open Space	46 (18%)	39 (15%)
Roads and Landscaped Lots	8 (3%)	6 (2%)
Total	256 (100%)	
Du/Ac = dwelling units per acre - = no acres		

The proposed project includes onsite and offsite infrastructure to serve the development. The EIR will analyze any related offsite infrastructure. Buildout will likely occur over several years and ultimately the timeframe be determined by housing market conditions.

Proposed Entitlement Requests: The proposed project includes an amendment to the existing EDHSP to transfer the density at Serrano Village D-1, Lots C and D to the project. Specifically, the proposed entitlements that would be required to implement the CEDHSP include: amendments to the EDHSP and County general plan, adoption and implementation of the CEDHSP, and rezoning. In addition, the project would require the County's approval of a development agreement, financing plan, and subsequent development permits and entitlements including a Development Plan and Tentative Maps. The proposed CEDHSP consists of the following requests.

- Amendment to the El Dorado Hills Specific Plan (EDHSP) consisting of: A) Transfer a total of 58.53 acres and associated EDHSP-vested density affecting portions of APN 121-040-20, 121-040-29, 121-040-31 and 121-120-22 from EDHSP area to CEDHSP area; B) Transfer a total of 1.89 acres affecting portions of APN 121-160-03 from CEDHSP area to EDHSP area.
- General Plan Amendment to:
    - Amend the General Plan Land Use Map designation of subject lands within CEDHSP from High-Density Residential (HDR) (1 - 5 Du/Ac), Multi-Family Residential (MFR) (5 - 24 Du/Ac), Commercial (C), Open Space (OS) and AP-EDHSP to Adopted Plan-Central El

Dorado Hills Specific Plan (AP-CEDHSP) and CEDHSP land use designations Low-Density Residential (LDR) (1.5 average Du/Ac), Open Space (OS), High-Density Residential (HDR) (15 - 24 average Du/Ac), Medium-Density Residential-High (MDR-H) (9 - 14 average Du/Ac), Medium-Density Residential-Low (MDR-L) (5 - 8 Du/Ac), Civic-Limited Commercial (C-LC), and Village Park (VP).

  - Amend General Plan Land Use Map designation of transferred lands within AP-EDHSP as Open Space (OS).

- Rezoning to:
  - Amend zone districts from One-Family Residential District (R1), One-Family Residential-Planned Development District (R1-PD), Limited-Multi-Family Residential District (R2), Recreational Facility (RF), and Open Space (OS) to CEDHSP zone districts Multi residential-Planned Development (RM1-PD, RM2-PD, RM3-PD), One-Family Residential-Planned Development District (R1-PD), Civic-Limited Commercial-Planned Development (C1-PD), Village Park-Planned Development (RF1-PD), Private Open Space- Planned Development (OS1-PD) and Corps Restricted-Planned Development (OS2-PD).
  - Amend zone designation of transferred lands within AP-EDHSP as Open Space (OS).
- Specific Plan for the proposed Central El Dorado Hills Specific Plan for the development of a 256-acre project site consisting of up to 1,028 dwelling units, 11 acres of public facility/recreational use or 50,000 square foot of commercial use, 15 acres of public village park, and 85 acres of private parks and open space.

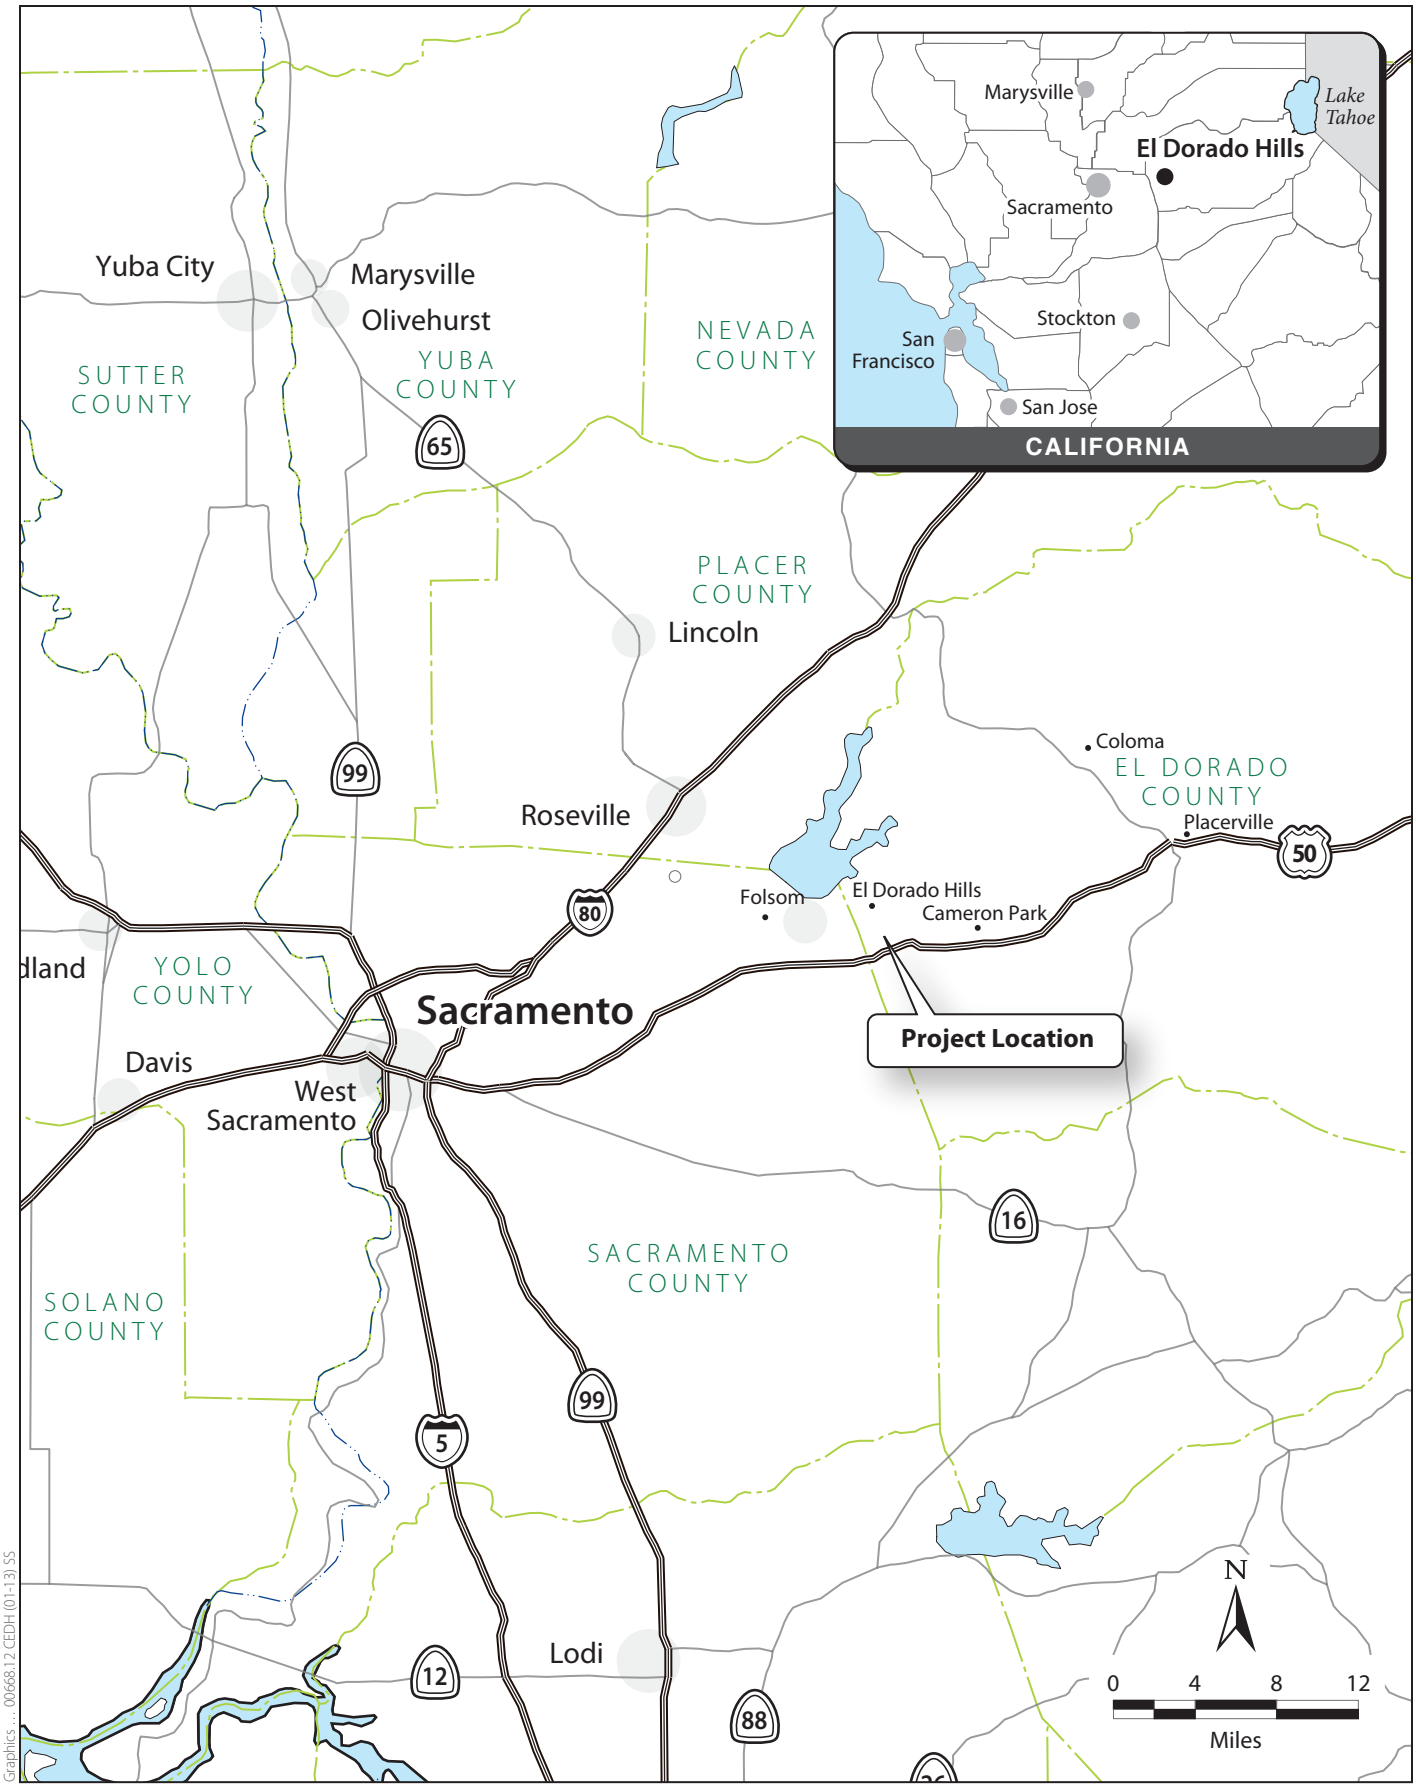
Environmental Effects

Probable Environmental Effects: Based on a preliminary environmental analysis of the CEDHSP, the County has determined that the full range of issues identified in the CEQA Guidelines, listed below, shall be addressed in the EIR.

- Air Quality
- Biological Resources
- Cultural Resources
- Geology, Soils, Minerals, and Paleontology
- Greenhouse Gas Emissions
- Hazards and Hazardous Materials
- Hydrology, Water Quality, and Water Resources
- Land Use Planning and Agricultural Resources
- Noise and Vibration
- Population and Housing
- Public Services and Utilities
- Recreation
- Traffic and Circulation
- Visual Resources

In addition to the above areas, the Draft EIR will also evaluate the potential cumulative and growth-inducing effects of the project, as required by CEQA. Reasonably foreseeable future projects will be considered in the Draft EIR, including, but not limited to, the proposed Village of Marble Valley Specific Plan, the proposed Lime Rock Valley Specific Plan, and the proposed Dixon Ranch Residential Project. Applications have been submitted to the County for these projects, and they are currently undergoing CEQA review.

Comments and suggestions are requested regarding the environmental issues that will be analyzed in the EIR during the 30-day public comment period for the NOP.

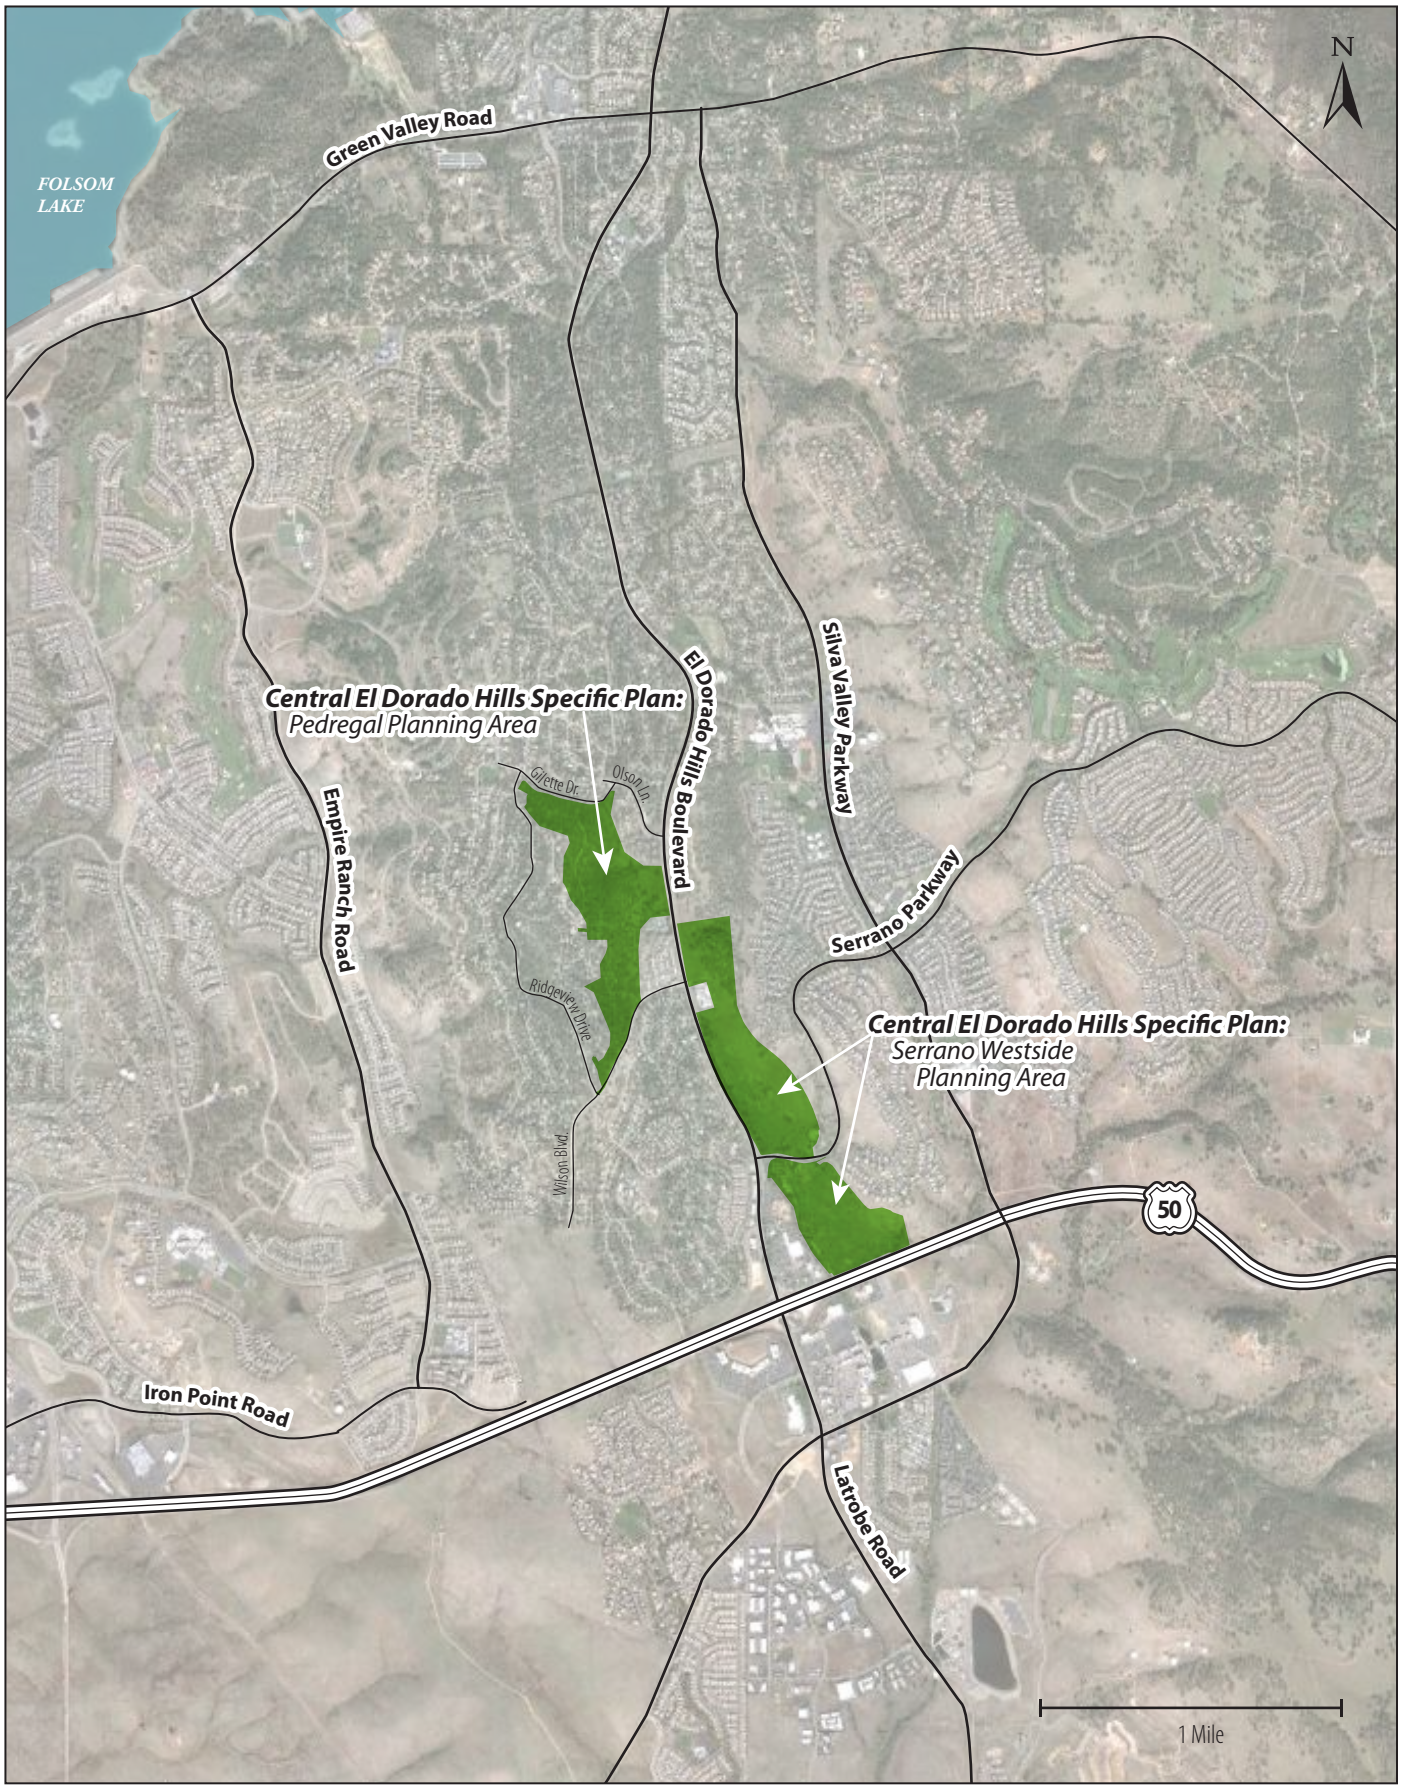


Potential Alternatives to be addressed in the EIR: In accordance with section 15126.6 of the State CEQA Guidelines, an EIR must "describe a range of reasonable alternatives to the Project, or to the location of the Project, which would feasibly attain most the basic objectives of the Project, but would avoid or substantially lessen any of the significant effects of the Project, and evaluate the comparative merits of the alternatives." As required by CEQA, the EIR will evaluate a No Project Alternative, which will assume development of the proposed project site under the currently adopted general plan and zoning designations. Aside from the no project alternative, the County has not yet determined what additional alternatives to the project will be evaluated in the EIR. These will be identified during the environmental review process. Once selected, the alternatives will be analyzed at a qualitative level of detail in the Draft EIR for comparison against the impacts identified for the proposed project, consistent with the requirements of CEQA.

Public Scoping Meeting

The County will hold a public scoping meeting to provide additional information about the project and to receive verbal and written input on Thursday, March 14, 2013 from 6:30 p.m. to 8:30 p.m. at Oak Meadow Elementary School, Multipurpose Room, 7701 Silva Valley Parkway, El Dorado Hills, CA 95762. The scoping meeting format will be an open house; interested parties may arrive at any time during the 2-hour window to receive information on the project or provide input.

Requests for Additional Information



If you have any questions, please contact Rommel (Mel) Pabalinas at the County of El Dorado, Development Services Department, Planning Division, 2850 Fairlane Court, Building C, Placerville, CA 95667, by telephone at (530) 621-5363, or by email to rommel.pabalinas@edcgov.us.

County of El Dorado

Notice of Preparation of a Draft Environmental Impact Report

and Notice of Public Scoping Meeting for the

Central El Dorado Hills Specific Plan

Date: February __, 2013

To: Interested Parties

From: El Dorado County Administrator's Office

Subject: Notice of Preparation of a Draft Environmental Impact Report and Notice of Public Scoping Meeting for the Central El Dorado Hills Specific Plan (File No. SP12-0002)

The County of El Dorado (County) will be the lead agency under the California Environmental Quality Act (CEQA) for preparation of an Environmental Impact Report (EIR) for the Central El Dorado Hills Specific Plan in El Dorado County. The purpose of this Notice of Preparation (NOP) and notice of public scoping meeting is to solicit comments from public agencies and interested persons regarding the scope and content of the environmental information and analyses, including the significant environmental impacts, reasonable alternatives, and mitigation measures that should be included in the Draft EIR (pursuant to CEQA Guidelines Section 15082~~802~~). The location, project description, proposed entitlement requests, and potential environmental effects of the proposed Central El Dorado Hills Specific Plan are summarized in the attached materials.

Please provide written comments to **Mr. Rommel (Mel) Pabalinas, Senior Planner**, at the address shown, by 5:00 p.m. on March X, 2013. Keep in mind that there will be another opportunity to submit detailed comments when the draft EIR is released for public review. Please mail, email or fax your comments to:

Rommel (Mel) Pabalinas, Senior Planner
El Dorado County Development Services Department, Planning Division
2850 Fairlane Court, Building C
Placerville, CA 95667
Email: rommel.pabalinas@edcgov.us
Fax: (530) 642-0508

The County will hold a public scoping meeting to provide additional information about the project and to receive verbal and written input on Thursday, March 14, 2013 from 6:30 p.m. to 8:30 p.m. at Oak Meadow Elementary School, Multipurpose Room, 7701 Silva Valley Parkway, El Dorado Hills, CA 95762. The scoping meeting format will be an open house; interested parties may arrive at any time during the 2-hour window to receive information on the project or provide input.

NOTICE OF PREPARATION OF

A DRAFT ENVIRONMENTAL IMPACT REPORT (EIR)
AND NOTICE OF PUBLIC SCOPING MEETING
FOR THE
CENTRAL EL DORADO HILLS SPECIFIC PLAN

Project Information

Location: The proposed project is located in El Dorado Hills, California, an unincorporated area of El Dorado County (County) that is approximately 23 miles east of Sacramento and 20 miles west of Placerville (Figure 1, Regional Location). The proposed Central El Dorado Hills Specific Plan (CEDHSP) (project) includes two planning areas, as shown in Figure 2, Project Location: the Serrano Westside planning area east of the intersection of El Dorado Hills Boulevard and Serrano Parkway, and the Pedregal planning area west of El Dorado Hills Boulevard between Wilson and Olson Way, adjacent to the Ridgeview subdivision.

Commented [Mel1]: Please amend all Figures (cites VMVSP instead of CEDHSP)

Serrano Westside is immediately north of U.S. Highway 50 (US 50) and less than 2 miles south of Folsom Lake. Existing land uses adjacent to the Serrano Westside planning area include office and retail uses to the south and west (Raley's and La Borgata) and single-family residential uses at the Serrano Community to the east. The proposed Serrano Westside development would surround the El Dorado Hills Fire Station (located on Wilson Way east of El Dorado Hills Boulevard) to the north, east, and south. Undeveloped land, an archery range, and two schools (Oak Ridge High School and Silva Valley Elementary School) are located north of the project.

The Pedregal planning area is less than 1 mile north of US 50 and less than 2 miles south of Folsom Lake. The Pedregal planning area is immediately adjacent to low-density residential uses (the existing Ridgeview neighborhood) to the west and three existing multi-family developments (the Copper Hill Apartments, El Dorado Village Apartments, and Sterling Ranch Apartments) along El Dorado Hills Boulevard to the east.

Project Description: The proposed CEDHSP, which would occur in the Serrano Westside Planning Area and Pedregal Planning Area, includes the development of up to 1,028 dwelling units, 11.7 acres of public facility/recreational use or 50,000 square feet of commercial use, 15.3 acres of public village park, and ~~85~~ 84.9 acres of public parks and open space in the center of the El Dorado Hills Community. The proposed project also includes implementation of the CEDHSP and an amendment to the existing El Dorado Hills Specific Plan (EDHSP) approved in 1987 to transfer the density at Serrano Village D-1, Lots C and D to the proposed project~~, and to reduce the density in the Pedregal planning area~~. The approximately 155-acre Serrano Westside planning area would be an extension of the existing Serrano development with gated residential neighborhoods and would include approximately 763 dwelling units, civic or commercial, and village park development. The approximately 102-acre Pedregal planning area would include residential neighborhoods of approximately 265 dwelling units, which may or may not be gated. Table 1 shows the proposed land use designations in the Serrano Westside and Pedregal planning areas. These designations are also shown in Figure 3, Proposed Land Use Designations.

Table 1. Proposed Land Use Summary (Acres)

Land Use	Serrano Westside (% of total area)	Pedregal (% of total area)
Residential		
LDR: Low-Density Residential (1.5 Du/Ac)	-	43.4 (17%)
MDR-L: Medium-Density Residential – Low (5 - 8 Du/Ac)	23.2 (9%)	-
MDR-H: Medium-Density Residential – High (9 - 14 Du/Ac)	35.7 (14%)	-
HDR: High-Density Residential (15 - 24 Du/Ac)	15.4 (6%)	12.9 (5%)
Civic – Limited Commercial		
C-LC: Civic Limited Commercial	11.7 (5%)	-
Public Facilities		
VP: Village Park	15.3 (6%)	-
Open Space		
OS: Open Space	45.8 (18%)	39.1 (15%)
Roads and Landscaped Lots	7.7 (3%)	6.2 (2%)
Total	154.8 (61%)	101.6 (39%)
Du/Ac = dwelling units per acre ~~1.~~ = no acres		

The proposed project includes onsite and offsite infrastructure to serve the development. The EIR will analyze any related offsite infrastructure. Buildout will likely occur over several years and ultimately the timeframe be determined by housing market conditions.

Proposed Entitlement Requests: The proposed project includes an amendment to the existing EDHSP to transfer the density at Serrano Village D-1, Lots C and D to the project~~, and an amendment to the general plan to reduce the density at the Pedregal planning area~~. Specifically, the proposed entitlements that would be required to implement the CEDHSP include: amendments to the EDHSP and County general plan, adoption and implementation of the CEDHSP, and rezoning. In addition, the project would require the County's approval of a development agreement, financing plan, and subsequent development permits and entitlements including a Development Plan and Tentative Maps. The proposed CEDHSP consists of the following requests.

~~1.~~• Amendment to the El Dorado Hills Specific Plan (EDHSP) consisting of: A) Transfer a total of 58.53 acres and associated EDHSP-vested density affecting portions of APN 121-040-20, 121-040-29, 121-040-31 and 121-120-22 from EDHSP area to CEDHSP area; B) Transfer a total of 1.89 acres affecting portions of APN 121-160-03 from CEDHSP area to EDHSP area.

~~2.~~• General Plan Amendment to:

Formatted: Bulleted + Level: 1 + Aligned at: 0.25" + Indent at: 0.5", Tab stops: Not at 0.5"

Formatted: Bulleted + Level: 1 + Aligned at: 0.25" + Indent at: 0.5", Tab stops: Not at 0.5"

1. Amend the General Plan Land Use Map designation of subject lands within CEDHSP from High-Density Residential (HDR) (1 - 5 Du/Ac), Multi-Family Residential (MFR) (5 - 24 Du/Ac), Commercial (C), Open Space (OS) and AP-EDHSP to Adopted Plan-Central El Dorado Hills Specific Plan (AP-CEDHSP) and CEDHSP land use designations Low-Density Residential (LDR) (1.5 Du/Ac), Open Space (OS), High-Density Residential (HDR) (15 - 24 Du/Ac), Medium-Density Residential-High (MDR-H) (9 - 14 Du/Ac), Medium-Density Residential-Low (MDR-L) (5 - 8 Du/Ac), Civic-Limited Commercial (C-LC), and Village Park (VP).
2. Amend General Plan Land Use Map designation of transferred lands within AP-EDHSP as Open Space (OS).

3. Rezoning to:
   1. Amend zone districts from One-Family Residential District (R1), One-Family Residential-Planned Development District (R1-PD), Limited-Multi-Family Residential District (R2), Recreational Facility (RF), and Open Space (OS) to CEDHSP zone districts Multi residential-Planned Development (RM1-PD, RM2-PD, RM3-PD), One-Family Residential-Planned Development District (R1-PD), Civic-Limited Commercial-Planned Development (C1-PD), Village Park-Planned Development (RF1-PD), Private Open Space- Planned Development (OS1-PD) and Corps Restricted-Planned Development (OS2-PD).
   2. Amend zone designation of transferred lands within AP-EDHSP as Open Space (OS).
4. Specific Plan for the proposed Central El Dorado Hills Specific Plan for the development of a 256-acre project site consisting of up to 1,028 dwelling units, 11.7 acres of public facility/recreational use or 50,000 square foot of commercial use, 15.3 acres of public village park, and 85 84.9 acres of private parks and open space.

Environmental Effects

Probable Environmental Effects: Based on a preliminary environmental analysis of the CEDHSP, the County has determined that the full range of issues identified in the CEQA Guidelines, listed below, ~~should~~ shall be addressed in the EIR.

1. Air Quality
2. Biological Resources
3. Cultural Resources
4. Geology, Soils, Minerals, and Paleontology
5. Greenhouse Gas Emissions
6. Hazards and Hazardous Materials
7. Hydrology, Water Quality, and Water Resources
8. Land Use Planning and Agricultural Resources
9. Noise and Vibration
10. Population and Housing
11. Public Services and Utilities
12. Recreation
13. Traffic and Circulation
1. Visual Resources

Formatted: Bulleted + Level: 1 + Aligned at: 0.25" + Indent at: 0.5", Tab stops: Not at 0.5"

In addition to the above areas, the Draft EIR will also evaluate the potential cumulative and growth-inducing effects of the project, as required by CEQA. Reasonably foreseeable future projects will be considered in the Draft EIR, including, but not limited to, the proposed Village of Marble Valley Specific

Plan, ~~and~~ the proposed Lime Rock Valley Specific Plan, and the proposed Dixon Ranch Residential Project. Applications have been submitted to the County for these ~~two~~ projects, and they are currently undergoing CEQA review.

Comments and suggestions are requested regarding the environmental issues that will be analyzed in the EIR during the 30-day public comment period for the NOP.

Potential Alternatives to be addressed in the EIR: In accordance with section 15126.6 of the State CEQA Guidelines, an EIR must "describe a range of reasonable alternatives to the Project, or to the location of the Project, which would feasibly attain most the basic objectives of the Project, but would avoid or substantially lessen any of the significant effects of the Project, and evaluate the comparative merits of the alternatives." As required by CEQA, the EIR will evaluate a No Project Alternative, which will assume development of the proposed project site under the currently adopted general plan and zoning designations. Aside from the no project alternative, the County has not yet determined what additional alternatives to the project will be evaluated in the EIR. These will be identified during the environmental review process. Once selected, the alternatives will be analyzed at a qualitative level of detail in the Draft EIR for comparison against the impacts identified for the proposed project, consistent with the requirements of CEQA.

Public Scoping Meeting

The County will hold a public scoping meeting to provide additional information about the project and to receive verbal and written input on Thursday, March 14, 2013 from 6:30 p.m. to 8:30 p.m. at Oak Meadow Elementary School, Multipurpose Room, 7701 Silva Valley Parkway, El Dorado Hills, CA 95762. The scoping meeting format will be an open house; interested parties may arrive at any time during the 2-hour window to receive information on the project or provide input.

Requests for Additional Information

If you have any questions, please contact Rommel (Mel) Pabalinas at the County of El Dorado, Development Services Department, Planning Division, 2850 Fairlane Court, Building C, Placerville, CA 95667, by telephone at (530) 621-5363, or by email to rommel.pabalinas@edcgov.us.

Mike,

Thanks.

Tom,

Attached is all the documentation we have. I believe that your group has the signed Engineer's block as I recall seeing it.

Thor

FirstCarbon Solutions
2015 Fee Schedule

FirstCarbon Solutions (FCS) provides consulting services in environmental impact assessment and regulatory compliance, planning, air quality and greenhouse gases, biological and cultural resources management. Compensation is based on the following fee schedule and charges.

Hourly Labor Rates

President/ Vice President	$250 – 290 USD
Director	$160 – 260 USD
Senior Project Manager/Senior Scientist/ Senior Regulatory Scientist	$110 – 175 USD
Project Manager/Regulatory Scientist	$100 – 150 USD
Assistant Project Manager/Assistant Regulatory Scientist	$80 – 125 USD
Environmental Planner	$70 – 90 USD
Environmental Analyst/Regulatory Analyst	$60 – 75 USD
Research Analyst	$50 – 60 USD
Publications Coordinator/Technical Editor	$90 – 180 USD
GIS Analyst	$70 – 125 USD
Graphics Designer/GIS Technician	$65 – 90 USD
Word Processor	$65 – 70 USD
Administrative Assistant/Accounting/Clerical	$55 – 60 USD
Reprographics Assistant/Intern	$55 USD

Other Labor Rates

Labor rates for expert testimony, litigation support, and depositions/court appearances will be billed at a minimum of two times the above rates. If additional services are authorized during the performance of a contract, compensation will be based on the fee schedule in effect at the time the services are authorized.

Direct Expenses

Direct expenses are billed at the amount charged, plus 15% administrative fee.

1. Out-of-pocket expenses-including, but not limited to, travel, messenger service, reprographics, lodging, meals, blueprint, reproduction, and photographic services: Cost, as charged to FCS.
2. Subcontractors' fees: As quoted.
3. Passenger Cars: $0.565 per mile.
4. Four-wheel drive vehicles: $75.00 per day (0.565 per mile).
5. Reproduction and Color Copies: See Reprographics Fee Schedule provided as necessary.
6. Records checks: Fees vary with facility and project.
7. USFWS/CDFG impacts or mitigation fees.
8. Museum curation: fees vary with the city and project.
9. Cultural resources storage/curation of fossil and artifact collections: Cost, as charged to FCS.
10. Per Diem: $71.00 per day. This is the USA Federal Rate. Lodging surcharge may apply in high rate areas.

Terms

Compensation and direct expenses are invoiced monthly and payable upon receipt or as codified in project specific contract.

Rates effective June 1, 2014

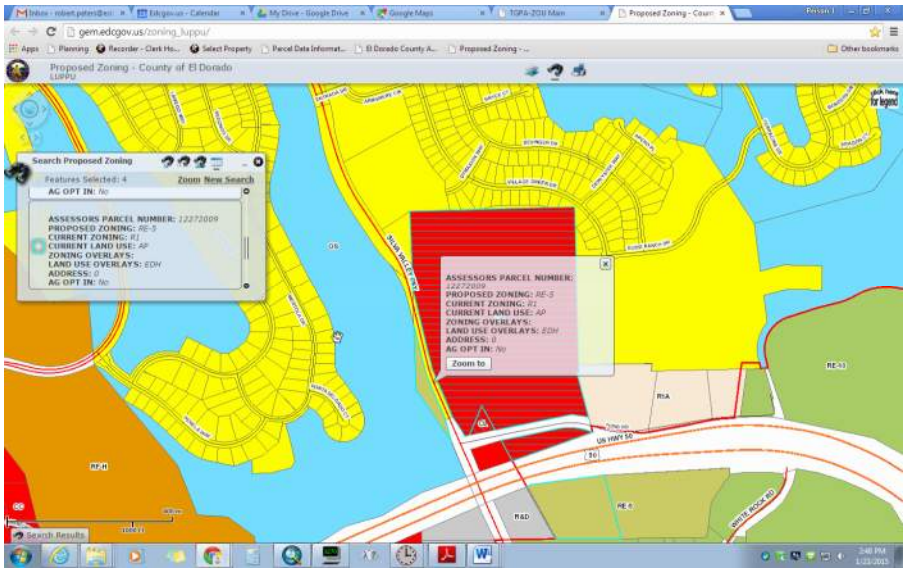
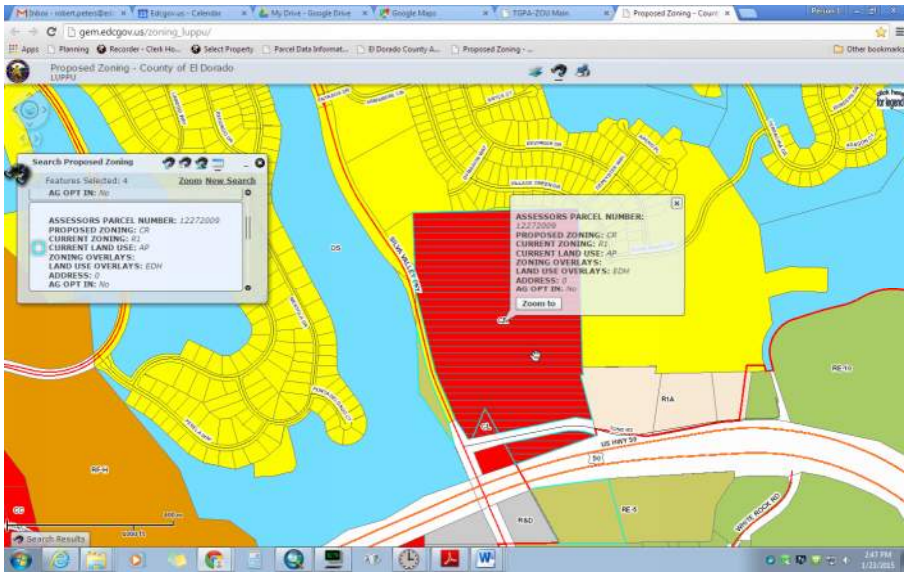
Team Project Meeting No.1

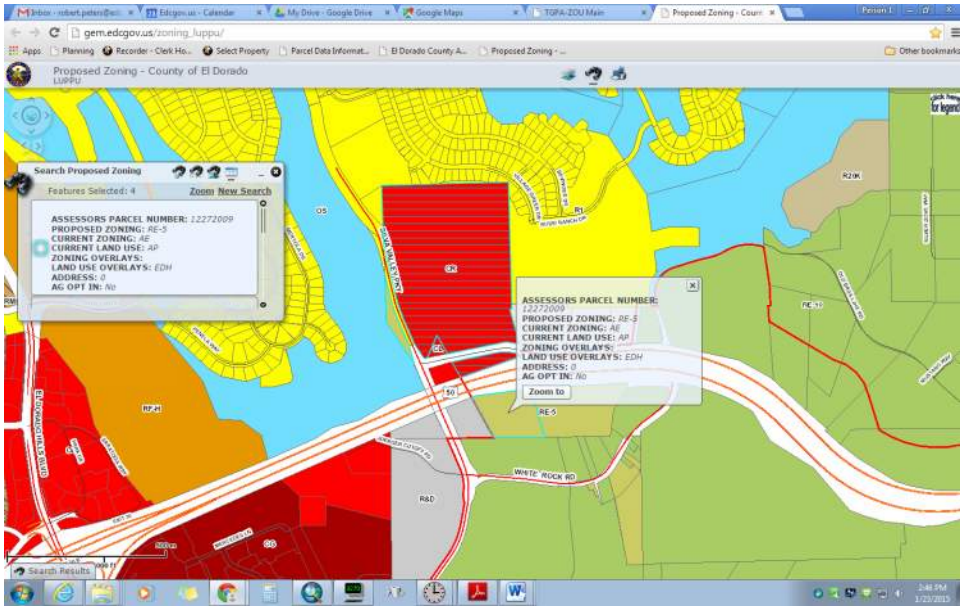
January 13, 2015



AGENDA



1. Project Issues and Priorities
    a. Commercial Project—top priority for the BOS
    b. Permit Processing
        1. Meet Permit Streamlining Act timeline
        2. 30-Day Completeness/Incompleteness Determine letter (due by February 5, 2015)
            a) Set up for TAC even if its deemed Incomplete?
        3. Need PFFP/Fiscal Impact Analysis per GPP 10.2.__.__?
    c. Planning
        1. Consistency with GP Policies, Ordinance, DISM,
        2. Cursory review for consistency (if applicable) with El Dorado Hills Specific Plan (Site is identified as Village P in EDHSP but was ultimately not approved to be a part of EDHSP)
        3. Site and Architectural Design
        4. Standard Waivers
        5. Consistency/conflict with adjacent projects (Serrano Village A-14-Mel's project) and Country Club Drive alignment (with A-14 project)
    d. CEQA
        1. Scoping Meeting and NOP set up
        2. Get 1 mile noticing for NOP from applicant
2. Schedules and Coordination
    a. List of Agencies
    b. Public Meetings (Public Outreach, Agency Coordination, Public Contact)
    c. Regular staff meetings (you and I with Lillian and Roger); Coordination with



3. Other topics:
    a. Consulting Services Assistance on CEQA and Limited Application processing?
    b. WBS Schedule Update
    c. Future Public Outreach/Workshop
    d. Get input from Mark Millard of Permit Center on PD "do's and don'ts"

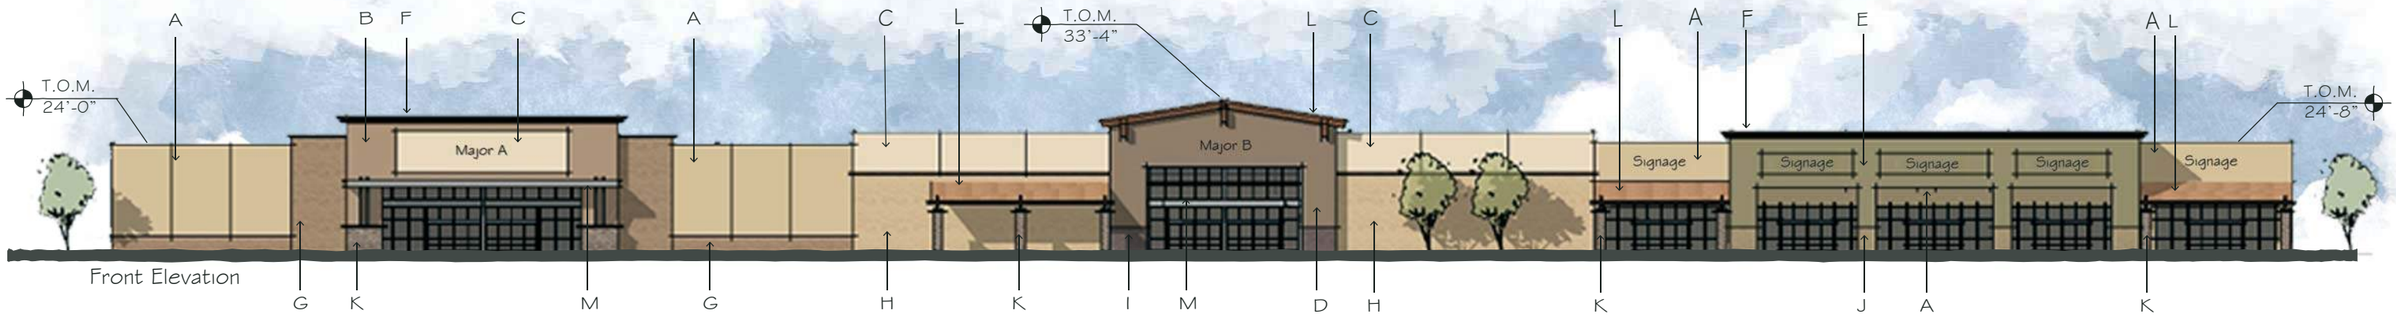
EDC GIS – Current Land Use Zoning

EDH Retail Shopping Center

Team Project Meeting No. 2
January 23, 2015
1:00-2:00 PM
TAC Conference Room

Scheduled Attendees: Lillian MacLeod, Mel Pabalinas, Rob Peters

Agenda



1. Review the Required Submittal Information for Planned Development
    a. Missing "Forms and Maps Required" checklist items.
    b. Site plan revisions required.
        i. Request revisions now or after preliminary TAC to allow revisions to include TAC comments.
    c. Inconsistencies between submitted plans.
        i. Request revisions now or after preliminary TAC to allow revisions to include TAC comments.
    d. Completeness/Incompleteness determination.

2. Potential Project Issues
    a. Revisions to project description prior to TAC.
    b. Timing of submittal of required studies.
    c. Potential conflicts with on-site oak woodland mitigation identified in PD 13-0002.
    d. Potential conflicts with future commercial subdivision of property (through Parcel Map or Waiver) due to the remainder of the parcel zoning and general plan designations.
    e. Project shows maximum of 350,000 square feet of development; however, the site plan only identifies 305,650 square feet. Need clarification on the other 44,350 square feet of development.

3. Upcoming Meetings
    a. Meeting with applicant on Wednesday at 2:00 (1-28-15)
        i. Discuss potential incomplete items and preliminary advisories/issues.
        ii. Discuss timing of submittal of required studies.
        iii. Applicant timeframes and expectations.
    b. Meeting with Transportation on Thursday at 9:30-10:30 (1-29-15)
        i. Project submittal overview.

ii. Discuss Country Club Drive alignment.
iii. Discuss lack of drainage study, traffic study and other potential incomplete items for DOT review.

Key Plan

DESIGN REPRESENTATION ONLY - NOT FOR CONSTRUCTION The building images shown are a representation of the current design intent only. The building images may not reflect variations in color, tone, hue, tint, shading, ambient light intensity, materials, texture, contrast, font style, construction variations required by building codes or inspectors, material availability or final design detailing.

EDH RETAIL SHOPPING CENTER PROJECT

Project Understanding

The 40.50 gross-acre project site is located in the unincorporated community of El Dorado Hills, El Dorado County, California. The project site is located on the north side of the U.S. 50/Silva Valley Parkway interchange and is bounded by the existing alignment of Silva Valley Parkway (west), a single-family residential subdivision and Oak Meadow Elementary School (north), undeveloped land (east), and Tong Road (south). Most of the project site contains annual grassland, with scattered oak trees. A large quantity of fill exists onsite that was placed there as part of the addition of High Occupancy Vehicle lanes on U.S. 50. There are unpaved roads and remnants of prior development on the site. The project site is designated "Commercial" by the El Dorado County General Plan and zoned "Commercial – Planned Development [C-PD]" by the El Dorado County Zoning Ordinance.

The future alignment of Silva Valley Parkway bisects the project site from northwest-to-southeast. The realigned Silva Valley Parkway would have a new interchange with U.S. 50. The proposed project has reserved right-of-way for the roadway realignment and interchange project, as well as the future Country Club Drive, which is not part of this project. The net acreage of the project site is 31.82 acres. Of this figure, 16.09 acres is located north of the realigned roadway and 15.73 acres is located to the south.

The applicant seeks to move the fill from the north site to the south site, mass grade both sites, and install utilities within the realigned Silva Valley Parkway as part of the initial phase of the project. As part of a later phase, both sites would be developed to support up 250,000square feet of commercial uses. The North site is contemplated to support three major tenants of approximately 38,000, 35,000, and 10,000 square feet, and five smaller outparcels containing a gas station, three retail pads, and one additional pad. The South site is contemplated to support two major tenants of approximately 37,500 and 32,700 square feet, and seven smaller outparcels containing a gas station, fast food, restaurant, and shops and. Access to the North and South sites would be taken via a new signalized intersection on the realigned Silva Valley Parkway. Fuel access to the South site would be taken from the old Silva Valley Parkway. The project applicant is requesting approval of a Planned Development Application from the County of El Dorado.

The EIR will provide a "worst case" project-level analysis for the level of development contemplated by the project. At a minimum, the EIR would provide full project-level coverage for the initial phase of the project (e.g., relocation of fill, mass grading, and utility installation) and describe the subsequent phases at a conceptual project-level, including identifying the maximum development potential and rage of end uses contemplated. Subsequent environmental review (e.g., an Addendum) may be necessary should the actual commercial proposed onsite vary from those described conceptually in the EIR.

Finally, please note that this scope of work does not include a traffic analysis, as the County of El Dorado has a separate process for scoping traffic studies. As such, it is assumed that the applicant will independently initiate this process with the County and subsequently retain a third-party traffic consultant to prepare the traffic analysis.

SCOPE OF WORK

Task 1: Project Initiation

FCS's Project Manager and other key team members will meet with County staff to clarify and confirm the project description, identify key contacts, discuss scheduling targets, and obtain copies of the project plans and other relevant information. It is assumed that site visit will occur the same day as the kick-off meeting.

Task 2: Technical Studies

Subtask 2.1: Air Quality/Greenhouse Gas Analysis

FCS will prepare an Air Quality/Greenhouse Gas Analysis to evaluate project emissions of criteria pollutants and greenhouse gases. The analysis will be provided in a stand-alone Air Quality and Greenhouse Gas Report (Report) and a separate Health Risk Assessment (HRA). The HRA will serve as a complete document addressing potential health risk impacts generated by the project. The analysis and conclusions of the HRA will be summarized in the Report, which will address all CEQA impact criteria for air quality and greenhouse gases.

Subtask 2.1.1: Background Information

Both the Report and HRA will contain relevant background information. For the Report, a description of air pollutants, a description of greenhouse gases, the regulatory environment surrounding air pollution and climate change, potential impacts of climate change, and the existing air quality conditions in the project area will be provided. For the HRA, a description of toxic air contaminants (TACs), regulatory environment surrounding TACs and health risks, and the existing conditions in the project area will be provided.

Subtask 2.1.2: Criteria Air Pollutant and Greenhouse Gas Emission Estimation

Emissions associated with construction and operation will be estimated using the latest version of CalEEMod. FCS will identify which project configuration would be the 'worst-case' scenario for criteria pollutant and greenhouse gas generation. FCS assumes that the Report will estimate criteria air pollutant and greenhouse gas emissions from one project scenario. The pollutants that will be estimated include the following: reactive organic gases (ROG), oxides of nitrogen (NOX), particulate matter (PM10 and PM2.5), carbon dioxide, methane, and nitrous oxide. Construction would generate air pollutant emissions from demolition, equipment exhaust, on-road employee and materials trips, and soil disturbance. During operation, there would be emissions from the motor vehicles that would access the project site as well as generation of on-site emissions. In addition, greenhouse gas emissions would indirectly emitted from electricity consumption, water use, wastewater generation, and waste generation by the project. Air pollutant emissions will be compared with the El Dorado County Air Pollution Control District's (Air District) project-level and cumulative significance thresholds.

Subtask 2.1.3: Carbon Monoxide (CO) Hot-Spot Analysis

FCS will screen the project's potential to generate a CO hotspot using the Air District's screening guidance. If the project exceeds the screening criteria, a carbon monoxide hot-spot analysis will be conducted for up to 4 intersections with the highest potential for congestion using the California Department of Transportation Caline4 model, the EMFAC2011 model, and information from the traffic study.

Subtask 2.1.4: Toxic Air Contaminants Health Risk Assessment

The primary focus will be on performing the air dispersion modeling for the project using diesel particulate matter and benzene impacts and as the indicator for health risks. Estimates of health risk from the adjacent freeway, and any nearby stationary sources will be included in the analysis to provide a comprehensive project and cumulative-level health risk assessment. FCS will identify which project configuration would be the 'worst-case' scenario for the purposes of the HRA. FCS assumes that the HRA will only analyze one project scenario.

Air Dispersion Modeling

The USPEA Industrial Source Complex (ISC) air dispersion model will be used unless the Air District can provide suitable meteorological files that are compatible with the USEPA AERMOD air dispersion model.

FCS will prepare the HRA utilizing guidance contained in the Air District's CEQA Handbook and the California Air Pollution Control Officers Association's (CAPCOA) guidance document Health Risk Assessment for Proposed Land Use Projects.

Estimate the cancer risks, non-cancer hazards, and PM2.5 concentrations associated with the above identified TAC emission sources.

FCS will prepare a technical report along with relevant exhibits and appendices that will document the methods, assumptions, and results of the health risk assessment.

This task includes one draft of the report and response to one set of comments from the applicant/County.

The analysis will include an assessment of the potential health impacts to nearby sensitive receptors from exposure to diesel particulate matter during construction and operational activities. Diesel particulate matter has been identified by the ARB as a carcinogenic substance. Sources of diesel particulate matter include off-road construction equipment and diesel delivery trucks that would travel to and from and idle at the various components of the project.

Subtask 2.1.5: Odor and Asbestos

FCS will use the Air District's screening guidance to determine the project's potential significance for exposing receptors to substantial odor or risk from disturbance of naturally occurring asbestos or asbestos containing materials.

Subtask 2.1.6: Greenhouse Gas Analysis

Neither the County of El Dorado nor the Air District has adopted thresholds of significance for greenhouse gas emissions. In addition, the County of El Dorado does not have an adopted Climate Action Plan. FCS will estimate construction and operational greenhouse gas emissions, and will use the Air District's recommendation to utilize the AB 32 emission reduction goal. FCS will determine project consistency with the applicable portions of the California Air Resources Board Scoping Plan for AB 32. A correlation between the targets in AB 32 and a significant impact on the environment will be determined.

Subtask 2.1.8: Emissions Reductions and Significance Findings

If necessary, project design features and mitigation measures will be identified that would reduce impacts. Any reduction of emissions from these measures will be quantified. Sources of measures include but are not limited to the Office of the California Attorney General and the California Air Pollution Control Officers Association's report, Quantifying Greenhouse Gas Mitigation Measures. Significance findings will be addressed before and after mitigation for all potential impacts.

Subtask 2.2: Noise Analysis

Extant Acoustical will prepare a Noise Analysis to evaluate project-related construction and operational noise impacts on surrounding land uses. The analysis will be wholly contained in the EIR and the supporting technical data will be appended to the document.

Subtask 2.2.1: Project Start-up, Data Acquisition, and Document Review

Extant will coordinate with FCS and designated project team to obtain relevant project information necessary to provide acoustic, noise and vibration services for the project. Extant will evaluate, catalog and adapt project materials and documentation for use in the technical noise analysis and preparation of the EIR noise chapter. Project materials and documentation pertinent to the preparation of the analysis typically include: design drawings, current plan sets and mapping of the project area, construction data (equipment inventory, truck trips, number of personnel, construction duration/rate, and schedule), Project traffic analysis (incorporating ADT traffic volumes for roadways in the project study area), surrounding land use information and all previously conducted analyses relating to the project.

Subtask 2.2.2: Noise Monitoring and Characterization

Extant will conduct a noise monitoring program throughout the project vicinity to characterize baseline ambient acoustical conditions in the area. Quantification of the existing ambient noise environment will include an evaluation of existing ambient noise levels, transportation noise levels and stationary/point-source noise levels in the project study area. An Extant noise analyst will perform an evaluation of the Project vicinity, cataloging and documenting residential and other noise-sensitive land uses, geographic information, land-uses and information on potential acoustical constraints the project may encounter. The measurement survey will serve to adequately establish baseline noise levels, provide context for the analysis and document the existing ambient noise environment in the project area.

An Extant noise analyst will perform a detailed evaluation of acoustical environment in the project study area; the noise monitoring program is anticipated to include noise monitoring at up to six (6) locations in the project area. Short-term (approximately 15 to 30 minutes in duration) attended noise measurements will be conducted to provide adequate representation and relative exposure of noise-sensitive receptors at up to four (4) locations. Additionally, continuous long-term unattended noise measurements will be conducted at up to two (2) locations in the project study area (approximately 24 hours in duration). Noise level data will be used for establishing existing baseline noise level in the project vicinity and will serve as a basis of evaluation for future noise levels at receivers within the project area.

Monitoring locations will be selected to represent locations of key interest in the project area; such as property lines, noise-sensitive receptors; additionally, monitoring location will be chosen to adequately represent of noise sources in the Project vicinity. Extant will coordinate with FCS or the designated project team member as directed to coordinate access as required.

Subtask 2.2.3: Noise Modeling and Analysis

Extant will predict and analyze existing and future short-term (i.e., construction) and long-term (i.e., transportation, land-use compatibility, stationary sources, etc.) noise levels in the project vicinity. The analysis will be based on existing documentation, observations and noise measurement data from the field surveys; applicable project materials, proposed land uses and through the application of accepted noise prediction methodologies. Extant will utilize the three-dimensional computerized noise simulation model SoundPLAN®, to comprehensively model noise levels for the project and immediate vicinity, taking into account site topography, vegetation/ground types and the built environment.

Extant will analyze potential short-term, construction-related noise impacts associated with the project (e.g., on-site heavy-duty equipment, generators, pumps, etc.). Construction-related noise impacts will be assessed with respect to nearby noise-sensitive receptors and their relative exposure (accounting for intervening topography, barriers, distance, etc.). The analysis will be based on application of FHWA Roadway Construction Noise Model (RCNM) and Federal Transit Administration reference noise level data, and utilize accepted industry-standard modeling techniques.

Transportation noise in the project area appears to be associated with traffic along the local and regional roadway network (primarily U.S. 50 and Silva Valley Parkway). Traffic noise levels for the local and regional roadway network will be incorporated into the noise model based on traffic volumes (ADT volumes) obtained in the traffic/transportation analysis prepared for the Project. Transportation related noise will be analyzed through the application of Federal Highway Administration (FHWA) traffic noise prediction methodologies.

Stationary noise sources (e.g., industrial, mechanical, etc.) in the project area, identified during field surveys, on aerial photography and on existing documentation; along with future stationary noise sources will be incorporated into and analyzed in the noise model. Existing stationary noise sources will

be analyzed based on noise monitoring data collected during the field survey, empirical/reference noise level data and accepted prediction methodologies.

Based on the available project information, future stationary-source, point-source and on-site noise sources will be evaluated and discussed at a qualitative level. Future stationary noise sources are anticipated to primarily include delivery activities, parking lot activities, and mechanical equipment. General discussions will outline typical noise generating sources and activities associated with the proposed land uses.

The significance of short-term and long-term noise impacts will be evaluated based on comparisons with applicable criteria from local and state regulatory agencies. Mitigation measures along with their relative effectiveness will be provided where significant and potentially significant noise impacts are anticipated.

Subtask 2.2.4: Report Preparation and Deliverables

Extant will prepare a draft technical noise chapter suitable for inclusion in the EIR. The EIR noise section will include a brief introduction and summary of relevant project information pertinent to the noise analysis. The existing noise setting in the project study area will be described and the baseline noise environment established, based on the ambient noise monitoring and characterization conducted by Extant. The noise monitoring locations and representative noise prediction locations will be presented. Relevant background information, including noise fundamentals, terminology, and a summary of applicable regulatory framework will be presented. Based on the regulatory criteria applicable to the project, thresholds of significance will be outlined and established.

Noise prediction methodologies and the relevant modeling assumptions will be outlined. Potential project-generated noise impacts will be identified; noise levels discussed and evaluated against the significance thresholds. Where potential impacts are predicted, Extant will further implement the noise model in evaluating noise control strategies and mitigation measures. Mitigation measures and their relative effectiveness will be outlined and findings of significance presented with mitigation incorporated as necessary.

Extant will submit the draft technical noise report for review and comment to FCS. A final technical noise report, incorporating necessary updates will be prepared and submitted to FCS for incorporation into the EIR.

Task 3: Notice of Preparation/Scoping Meeting

FCS will prepare a Notice of Preparation (NOP) in accordance with requirements of CEQA Guidelines Section 15082. Issuance of the NOP is the first milestone in the CEQA process and announces a lead agency's intent to prepare an EIR. The NOP will identify the project location, provide a summary of the project characteristics, and list probable environmental effects, supported by color graphics. The County will be responsible for distributing the NOP to the State Clearinghouse and other public agencies. The

County will provide mailing labels to FCS for local distribution (0.25 mile radius). This scope of work assumes that an Initial Study will not be prepared.

Following release of the NOP, this scope of work assumes that the County will hold a scoping meeting in El Dorado County, which FCS representatives will attend. FCS will coordinate with County staff regarding the location and format of the scoping meeting and will be responsible for preparing any materials or displays used during the meeting. FCS will be available to present an overview of the NOP and CEQA process. All public comments received at the scoping meeting will be documented in the Draft EIR.

Deliverables

- One (1) electronic version (via email) of the Administrative Draft NOP to the County of El Dorado
- Ten (10) hard copies and one (1) electronic version (via email) of the final NOP to the County of El Dorado

Task 4: Administrative Draft EIR

FCS will prepare an Administrative Draft EIR in accordance with the applicable requirements contained in CEQA Guidelines Sections 15120 through 15132. The Administrative Draft EIR will contain analysis supported by graphics and tables. The document will identify potentially significant impacts, feasible mitigation measures, and the residual significance after mitigation has been implemented. The contents of the Administrative Draft EIR will be as follows:

Executive Summary

In accordance with CEQA Guidelines Section 15123, the Executive Summary will contain a summary of the project, list the project alternatives, identify areas of controversy, and provide a matrix listing environmental impacts and mitigation measures, and the residual significance of all impacts.

Introduction

FCS will prepare the introduction including the purpose and background of the project, the determination of the lead agency, scope of the EIR, and the document's organization.

Project Description

Pursuant to CEQA Guidelines Section 15124, the project description will identify the project location, describe the project characteristics (including any offsite improvements), list the project objectives, identify necessary approvals, and list other agencies that may use the document. This section will provide color graphics of project boundaries and plans.

Aesthetics, Light, and Glare

The proposed project contemplates the development of commercial uses on the project site that is undeveloped and contains annual grassland and scattered oak trees. FCS will perform site

reconnaissance and document existing conditions with photographs. FCS will use plans and images provided by the applicant (e.g., site plan, elevations, perspectives, landscaping plan, etc.) as the basis for evaluating the expected change in visual character and light and glare, including the effects of building height and massing, compatibility with surrounding uses, alterations of views, and the effects of new lighting sources.

Air Quality/Greenhouse Gas Emissions

Construction and operational activities that would emit criteria air pollutants and greenhouse gas emissions. FCS will prepare the Air Quality/Greenhouse Gas Emissions section (refer to the description under Task 2, Technical Studies) and identify impacts and mitigation (as appropriate). The supporting technical data will be provided as an appendix to the EIR.

Biological Resources

The project site contains annual grass land and scattered oak trees. The project applicant commissioned Foothill Associates to prepare a Biological Assessment, a Wetland Delineation, and Arborist Surveys for the project. FCS will use these Biological Resources technical studies to assess the significance of impacts and identify necessary mitigation. The biological reports will be provided as an appendix to the EIR.

Cultural Resources

The project site contains undeveloped land and, therefore, may contain undiscovered cultural resources (e.g., artifacts, fossils, etc.). The project applicant commissioned Foothill Associates to prepare a Cultural Resources Assessment for the project site. FCS will use the Cultural Resource Assessment as the basis for assessing the significance of impacts and identify necessary mitigation. The Cultural Resource Assessment will be provided as an appendix to the EIR.

Geology, Soils, and Seismicity

The proposed project would involve the development of commercial uses within a seismically active region of California. If available, FCS will use a geotechnical report provided by the applicant as the basis for assessing geological impacts and identifying mitigation. Should a geotechnical report not be available, FCS will rely on resources such as the El Dorado County General Plan and information provided the United States Geological Survey and California Geological Survey.

Hazards and Hazardous Materials

The project site contains undeveloped land that supports annual grassland and scattered oak trees. If available, FCS will use a Phase I Environmental Site Assessment (Phase I ESA) provided by the applicant as the basis for assessing hazards, hazardous materials impacts, and identifying mitigation. Should a Phase I ESA not be available, FCS will assess hazards and hazardous materials impacts through methods such as site reconnaissance and review of resources such as the El Dorado County General Plan and the State Water Resources Control Board “Geotracker” database.

Hydrology and Water Quality

Development of the proposed project would involve construction and operation activities that have the potential to create polluted runoff, increase impervious surface coverage, and create downstream drainage problems. Of particular concern is runoff from construction and operational activities into nearby waterways. If available, FCS will use a hydrology/storm water report or drainage plans provided by the applicant as the basis for assessing the significance of impacts and identify necessary mitigation. Should such reports or plans not be available, FCS will assess hydrology and water quality impacts through methods such as site reconnaissance and review of resources such as the El Dorado County General Plan, El Dorado County Municipal Code, and Regional Water Quality Control Board documents.

Land Use

The proposed project would involve changes to the underlying land use at the project site. As such, the project would be assessed for consistency with both the General Plan and Municipal Code. Consistency with all applicable General Plan goals and policies will be provided in a matrix format. Additionally, the proposed commercial and residential uses will be assessed in accordance with the development standards set forth in the General Plan and Municipal Code.

Noise

Construction and operational activities that would emit noise that may adverse impact nearby sensitive receptors. Extant Acoustical will prepare the Noise section (refer to the description under Task 2, Technical Studies) and identify impacts and mitigation (as appropriate). The supporting technical data will be provided as an appendix to the EIR.

Public Services and Utilities

FCS will evaluate existing public service and utility providers and evaluate project impacts in terms of the need to construct new or expand existing facilities, acquire additional supplies, generate effluent that exceeds the permitted capacity, etc. To the extent that information is readily available, FCS will use information provided by the applicant's civil engineer about anticipated utility loads (e.g., water demand, sewage generation, etc.). As appropriate, FCS will consult with public service and utility providers and summarize the findings in the EIR. The following public services and utility systems will be analyzed:

- Fire Protection/Emergency Medical Services
- Police Protection
- Water Supply
- Wastewater
- Storm Drainage
- Solid Waste
- Energy

Transportation

The proposed project involves the development of new commercial and residential uses on the project site, which have the potential to generate new trips, alter traffic circulation patterns, create a need for roadway improvements, and increase the use of public transit, bicycle, and pedestrian modes of transportation. As previously discussed, this scope of work assumes the project applicant will retain a traffic consultant to prepare a transportation analysis. FCS will use the transportation analysis as the basis for assessing transportation impacts and identifying mitigation. The transportation analysis will be provided as an appendix to the EIR.

Cumulative Effects

In accordance with CEQA Guidelines Section 15130, the EIR will address the cumulative effects of the proposed project in combination with other projects. As set forth in the CEQA Guidelines, the cumulative analysis will focus on impacts that the project has a significant incremental contribution towards, reflect the severity of the impacts and their likelihood of occurrence, and be guided by standards of practicality and reasonableness.

Alternatives

Pursuant to CEQA Guidelines Section 15126.6, the EIR will evaluate a range of feasible alternatives to the proposed project. One of the alternatives will be the CEQA-mandated "No Project Alternative," which is the circumstance under which the project does not proceed. FCS will evaluate up to three additional alternatives, likely consisting of a combination of a reduction in project size and alternate uses. In addition, the Alternatives section will address the feasibility of an alternative location, as well as any alternatives that were initially considered but rejected from further consideration.

Effects Found Not To Be Significant

CEQA Guidelines Section 15143 establishes that EIRs shall focus on significant impacts on the environment and need not discuss in detail effects that are clearly insignificant or unlikely to occur. Accordingly, the following topical areas are anticipated to be scoped out to the Effects Found Not to Be Significant section of the EIR:

- Mineral Resources
- Population and Housing
- Recreation

This section will also address certain checklist items within topical areas that will be evaluated in detail in the EIR (e.g., hydrology and water quality), but which are clearly insignificant or unlikely to occur (e.g., tsunami inundation).

Other CEQA Required Sections

This section will address the CEQA-required issues of significant environmental effects that cannot be avoided (CEQA Guidelines Section 15126[b]), significant irreversible environmental changes (CEQA

Guidelines Section 15126[c]), growth inducement (CEQA Guidelines Section 15126[d]), and energy conservation (CEQA Guidelines Appendix F).

Persons and Organizations Consulted/List of Preparers

In accordance with CEQA Guidelines Section 15129, the EIR will identify all agencies, organizations, and individuals consulted during the preparation of the document, as well as the agency representatives and firms that were involved with EIR preparation.

References

This section will list all resources used in the preparation of the EIR.

Technical Appendices

Pursuant to CEQA Guidelines Section 15147, supporting technical information will be appended to the EIR as technical appendices. This includes but is not limited to technical studies, modeling data, and correspondence.

Deliverables

- Eight (8) hard copies and one (1) electronic version (via FTP upload) of the Administrative Draft EIR to the County of El Dorado

Task 5: Screencheck Draft EIR

Upon receipt of a consolidated set of staff comments on the Administrative Draft EIR, FCS will prepare a Screencheck Draft EIR for County staff review. The Screencheck Draft EIR is intended to verify that staff comments were addressed and will document text changes in strikeout–underline format. Unresolved comments will be flagged for resolution.

Deliverables

- One (1) electronic version (via FTP upload) of the Screencheck Draft EIR to County of El Dorado

Task 6: Draft EIR

Once County staff provides final comments on the Screencheck Draft EIR, FCS will proceed with finalizing and producing the Draft EIR for public review. FCS will provide copies of the Draft EIR to the County of El Dorado, which will be responsible for local distribution, noticing, and posting. FCS will provide copies of the EIR to the State Clearinghouse, which will distribute the document to state agencies.

Deliverables

- 30 hard copies (appendices on CD), 20 CDs, and 1 reproducible master copy (unbound) of the Draft EIR to the County of El Dorado
- 15 Executive Summary hard copies and 15 CDs of the Draft EIR and the signed Notice of Completion form to the State Clearinghouse

Task 7: Administrative Final EIR

FCS will prepare an Administrative Final EIR in accordance with the applicable requirements contained in CEQA Guidelines Sections 15088 and 15089. The Administrative Final EIR will list all agencies, organizations, and individuals who submitted written comments on the Draft EIR during the public review period and provide written responses to those comments. In addition, the scope of work assumes that the County will hold a public hearing on the Draft EIR, at which time oral testimony on the document will be received. FCS will coordinate with County staff regarding the location and format of the meeting and will be responsible for preparing any materials or displays used during the meeting. FCS will provide written responses to oral comments received at the public hearing. (Note that this scope of work assumes that the County will provide FCS with a transcript, meeting minutes, video recording, or other form of documentation of the proceedings.) To enhance readability and avoid redundancy, FCS will use Master Responses to address frequent and reoccurring comments on the Draft EIR's analysis. Additionally, the Administrative Final EIR will contain an Errata, which will document minor changes to the Draft EIR text in strikeout–underline format.

This scope of work allocates a total of 100 hours for FCS technical staff to respond to comments received on the Draft EIR, in additional to administrative, editorial, GIS, and junior staff time to prepare the document. If the volume or complexity of comments requires more than 100 hours to respond to comments, FCS will request authorization from the County for additional budget.

Deliverables

- Six (6) hard copies and one (1) electronic version (via FTP upload) of the Administrative Final EIR to the County of El Dorado

Task 8: Screencheck Final EIR

Upon receipt of a consolidated set of staff comments on the Administrative Final EIR, FCS will prepare a Screencheck Final EIR for County staff review. The Screencheck Final EIR is intended to verify that staff comments were addressed and will document text changes in strikeout–underline format. Unresolved comments will be flagged for resolution.

Deliverables

- One (1) electronic version (via FTP upload) of the Screencheck Final EIR to County of El Dorado

Task 9: Final EIR

Once County staff provides final comments on the Screencheck Final EIR, FCS will proceed with finalizing and producing the Final EIR for public review. FCS will provide copies of the Final EIR to the County of El Dorado, which will be responsible for local distribution, noticing, and posting. FCS will send copies of the Final EIR directly to state agencies that commented on the Draft EIR.

Deliverables

- 15 hard copies (appendices on CD), 15 CDs, and 1 reproducible master copy (unbound) of the Final EIR to the County of El Dorado.
- One (1) CD of the Final EIR to each state agency that commented on the Draft EIR (FCS will be responsible for this task).

Task 10: Mitigation Monitoring and Reporting Program

FCS will prepare a comprehensive Mitigation Monitoring and Reporting Program (MMRP), pursuant to CEQA Guidelines Section 15097. The MMRP will contain all mitigation measures identified in the EIR. This comprehensive MMRP will provide the applicant team and County staff with a single source of reference to the full range of mitigation measures to be implemented. For each measure or group of similar measures, the agency responsible for ensuring proper implementation will be identified, along with the timing and method of verification. FCS will provide a draft version of the MMRP for County review. Upon receipt of County comments, FCS will prepare the final version of the MMRP. Copies of the MMRP will be included in the Final EIR submittal.

Deliverables

- One (1) electronic version of the draft MMRP to County of El Dorado
- Three (3) hard copies of the MMRP to County of El Dorado (an electronic version will be provided on the same CD as the Final EIR)

Task 11: Findings of Fact/Statement of Overriding Considerations

CEQA Guidelines Section 15091 requires the preparation of Findings of Fact for each significant effect identified in an EIR. Each finding must be accompanied by a brief explanation for the rationale of the finding. Additionally, if an EIR identifies one or more significant unavoidable impacts, CEQA Guidelines Section 15093 requires the preparation of a Statement of Overriding Considerations that explains why the economic, legal, social, technological, or other benefits of the project outweigh its significant impacts. FCS will prepare the Findings of Fact and (if necessary) the Statement of Overriding

Considerations. A draft version will be provided to County staff for review. Upon receipt of County comments, a final version will be provided to the County.

Deliverables

- One (1) electronic draft version of the Findings of Fact and Statement of Overriding Considerations to the County of El Dorado
- One (1) electronic final version of the Findings of Fact and Statement of Overriding Considerations to the County of El Dorado

Task 12: Meeting Attendance

FCS will meet by phone with County staff during the EIR preparation process to discuss and resolve problems, develop strategies, and participate in communications. This proposal and its associated budget cover attendance by FCS's Project Manager at ten (10) meetings in El Dorado County or conference call, which includes public hearings. A not-to-exceed budget has been established to cover meeting attendance. If County staff requests additional meeting attendance by FCS staff, or if the amount of time involved in these meetings exceeds the initial budget allocation, FCS will notify County staff of the additional costs and obtain authorization for the extra meeting time.

Task 13: Project Management

In addition to the research, analysis, communications, and report writing tasks described above, FCS will perform a variety of project management duties to ensure that the EIR meets the applicant and the County's standards of quality, and that it is delivered on time and within budget. These duties will include team supervision and coordination, oral and written communications with the applicant and County staff, project accounting, and quality assurance review by FCS's Project Director and Technical Editor of all deliverable products. These services also will include ongoing support to applicant and County staff, such as providing input to staff reports, regular schedule updates, and discussions of technical issues. This task assumes 100 hours of staff time.

Tasks Outside of Scope of Work

Below are tasks FCS has identified as being outside of its scope of work for the proposed project.

Newspaper Noticing/Local Noticing

FCS assumes that County staff will be responsible for noticing the Planning Commission and Board of Supervisors meetings at which the EIR will be considered for adoption. This includes publication of legal notices in newspapers and mailing of notices to surrounding property owners and interested parties.

Notice of Determination Filing/Payment of Fees

FCS assumes that the applicant team or County staff will file the Notice of Determination (if necessary) with the El Dorado County Clerk's Office within 5 business days of project approval. The purpose of the Notice of Determination filing is to limit the legal challenge period to 30 days. If a Notice of Determination is not filed within 5 business days of certification, the legal challenge period defaults to 180 days.

The Notice of Determination filing requires payment of the California Department of Fish and Wildlife CEQA filing fee (currently $2,995.25) and a County handling fee (currently $50). This scope of work assumes that the applicant will be responsible for paying these fees.

SCHEDULE AND FEES

Schedule

Task	Week
Project Initiation/Commence Technical Studies	1
Submit Administrative Draft NOP	2
Receive County Comments on Administrative Draft NOP	3
Release Notice of Preparation for Public Review	3
Close of Public Review Period	7
Submit Administrative Draft EIR to County	11
Receive County Comments on Administrative Draft EIR	13
Submit Screencheck Draft EIR to County	14
Receive County Comments on Screencheck Draft EIR	15
Release Draft EIR for Public Review	16
Close of Public Review Period	22
Submit Administrative Final EIR to County	24
Receive County Comments on Administrative Final EIR	25
Submit Screencheck Final EIR and MMRP to County	26
Receive County Comments on Screencheck Final EIR and MMRP	27
Release Final EIR and MMRP	28
Prepare Findings of Fact and Statement of Overriding Considerations	28
Public Meeting(s)	To Be Determined
File Notice of Determination	Within 5 Business Days of Project Approval

FEES

FCS has prepared the following budget identifying the costs of each task.

Task	Fee
Project Initiation	$5,500
Technical Study: Air Quality/Greenhouse Gases Analysis	$8,500
Technical Study: Health Risk Assessment	$14,500
Technical Study: Noise Analysis	$8,500
Notice of Preparation/Scoping	$5,500
Administrative Draft EIR	$59,000
Screencheck Draft EIR	$14,500
Draft EIR	$5,000
Administrative Final EIR	$16,000
Screencheck Final EIR	$7,000
Final EIR	$4,000
Mitigation Monitoring and Reporting Program	$1,500
Findings of Fact and Statement of Overriding Considerations	$6,500
Meeting Attendance	$14,500
Project Management	$18,000
Direct Costs	$8,500
Total FCS Professional Fee	**$197,000**

The assumptions used in calculating the above fees are:

- The fee is valid for up to 30 days from the date of this scope, after which it may be subject to revision.
- County staff will be responsible for distribution of public review documents.
- This price is based upon completion of the work within the proposed schedule. If delays occur, an amendment of the price would be warranted to accommodate additional project management and other costs, and to reflect adjustments for updated billing rates.
- Costs have been allocated to tasks, based upon FCS's proposed approach. During the work, FCS may, on its sole authority, re-allocate costs among tasks and/or direct costs, as circumstances warrant, so long as the adjustments maintain the total price within its authorized amount.
- The FCS Project Manager will be the primary representative at the project meeting and public hearing.

- Printing costs are based on the method of printing and binding proposed, numbers of copies proposed as work products, and estimated page lengths. Document printing costs are estimated and will be finalized at the time of printing. On further clarification of the documents (paper and/or digital CD) that the applicant team or County staff will need during the preparation effort, FCS will specifically identify a detailed reproduction work plan with more specific costs.

Scope of Work Modifications

FCS assumes a stable and complete project description and project plan set at project initiation. In the event the project description and/or scope of work change to a degree that alters the fee estimate, FCS will contact the applicant team or County staff in writing to submit a revised fee for mutual agreement, and a contract amendment will be processed. Requests for additional work will be documented, and a completion timetable and estimated fee will be submitted for applicant team or County approval.

Invoice Billing

Invoice billing will be on a monthly basis as determined by percentage of work completed.

EDH 52 SITE
TRAFFIC IMPACT ANALYSIS

EXECUTIVE SUMMARY

Project Description. The EDH 52 project is a proposed retail center located on Silva Valley Parkway in El Dorado Hills. The project is located north of US 50 and east of Old Silva Valley Road. Silva Valley Parkway will bisect the project. The east side of the project will include a 106,000 square foot of retail shopping and a gas station with 12 vehicle fueling positions. The west side of the project will include 96,900 square feet of retail shopping, a 4,000 square foot fast food restaurant with drive-through window, a 7,500 square foot sit-down restaurant and a 12 fueling position gas station with car wash.

Access to the site will be as follows:

East Side
- Right-in, right-out access along Silva Valley Parkway at Tong Road to the gas station
- Signalized full access about midway between US 50 and Old Silva Road

West Side
- Signalized full access about midway between US 50 and Old Silva Road
- Full access along Old Silva Valley Road
- Right-in, right-out along Old Silva Road

The project is expected to generate approximately 15,390 daily trips on a weekday basis. The project will generate 722 trips during the a.m. peak hour and 1,285 trips during the p.m. peak hour. After discounting pass-by/diverted link trips and internally captured trips the project will generate 8,405 new daily trips, 433 new a.m. peak hour trips and 723 new p.m. peak hour trips.

Existing Setting - Traffic. The location of the project is in western El Dorado County, north of the Silva Valley Parkway Interchange which is scheduled to open in 2016. The interchange is east of the existing Silva Valley Road undercrossing of US 50. Once completed, the existing Silva Valley Road will be named Old Silva Valley Road and Silva Valley Parkway will connect to White Rock Road south of US 50. New traffic counts were conducted in February 2015 at intersections along Silva Valley Parkway. Traffic volumes along White Rock Road were obtained from the Supplemental Traffic Impact Analysis for East Ridge Village, prepared by *TKear, Transportation Planning and Management, Inc.*

Two study intersections will operate at LOS F. These include the Silva Valley Parkway / Entrada Drive intersection and the Silva Valley Parkway / Oak Meadow Elementary School driveway. Both intersections currently meet the peak hour traffic signal warrant in the A.M. peak hour.

The County intends to install a "soft" prohibition (i.e. restricted left turn signing) along Entrada Drive to restrict left turn movements from Entrada Drive to southbound Silva Valley Parkway coinciding with the opening of the Silva Valley interchange. Left turning traffic will use Serrano Parkway to enter onto Silva Valley Parkway. The LOS will improve to acceptable conditions with this modification.

A traffic signal should be installed at the Silva Valley Parkway / Oak Meadow Elementary School driveway. This will improve the intersection level of service to LOS B conditions (12.8 seconds).

Existing Setting – Non-Automotive. The project will be constructed adjacent to the US 50 / Silva Valley Interchange. Silva Valley Parkway is currently being constructed and will connect White Rock Road in the south to the existing four lane section of Silva Valley Parkway in the north. Sidewalk and bike lanes will be constructed as part of this project.

Sidewalk is present along the east side of Silva Valley Parkway beginning at the Oak Meadow Elementary School and heading north while a natural surface walking path is available on the west side of the roadway from Serrano Parkway to about ¼ mile north of the US 50 undercrossing where it connects to a pathway to Ponta Delgado Court. The interchange project will construct sidewalk along the west side of Old Silva Valley Parkway from White Rock Road to Silva Valley Parkway.

In the project vicinity, bike lanes exist along Silva Valley Parkway north of the site, generally from the south end of Oak Meadow Elementary School. A connection to the natural surface path is available along the roadway. The interchange project will extend the bike lanes within the project limits and connect to both the existing facilities along Silva Valley Parkway and White Rock Road. In addition, the project will add bike lanes along Old Silva Valley Road and provide an alternative for bicyclists to avoid the interchange.

2016 Conditions. 2016 conditions were evaluated as the baseline condition and coincide with the opening of the US 50 / Silva Valley Parkway interchange. The countywide regional travel demand forecasting model was used as the basis for developing future volume forecasts in the study area. The 2010 calibrated model was re-run with the interchange in place. A straight line interpolation was then completed between the 2010 and 2035 models along the roadway segments to determine expected growth rates along the study roadways. With the opening of the Silva Valley Parkway interchange it was expected that traffic at the El Dorado Blvd Interchange and throughout the El Dorado Hills area will shift with some roadway segments and intersections experiencing increases or decreases in traffic.

The 2016 analysis assumes local improvements have been completed along Silva Valley Parkway with the completion of the US 50 / Silva Valley Parkway interchange. The interchange will include a four lane roadway with a diamond interchange (L-2) for the westbound ramps and an L-7 partial cloverleaf configuration for the eastbound ramps. Old Silva Valley Road will be maintained and connect to Silva Valley Parkway at two locations, about 1,000' north of the westbound ramps and about 1,000' south of the eastbound ramps. The south intersection will be signalized as part of the interchange project while the north intersection will be stop controlled

along Old Silva Valley Road. With the interchange completed, the Tong Road intersection will become right-in, right-out access only. The westbound Serrano Parkway approach to Silva Valley Parkway will also be modified by changing the inside through to a left turn lane; this approach will include two left turn lanes and a through-right lane. A "soft" turn restriction (i.e. signage) will be added to the Entrada Drive approach to Silva Valley Parkway, restricting left turn movements during peak hours. Traffic in the peak hours will use Village Green Drive to Serrano Parkway and then make a left turn onto southbound Silva Valley Parkway to head south.

One study intersection, the Silva Valley Parkway / Oak Meadow Elementary School driveway will operate at LOS F. The intersection will meet the peak hour traffic signal warrant in the a.m. peak hour. As noted in the Existing Conditions a traffic signal is identified and should be installed at the school driveway. This will improve the intersection level of service to LOS B conditions (14.4 seconds).

The westbound roadway along US 50 between Bass Lake Road and Silva Valley Parkway will operate at LOS F in 2016. The County has an identified project, #71330 that will add an auxiliary lane to westbound US 50 on this segment. The project is identified for construction between FY 24/25 and FY 33/34.

The westbound roadway along US 50 between Silva Valley Parkway and El Dorado Hills Blvd will operate at LOS F in 2016. The County has an identified project, #53120 that will add an auxiliary lane to westbound US 50 on this segment. The project is identified for construction between FY 24/25 and FY 33/34.

2016 Plus Project Traffic Impacts. The proposed project will contribute to the traffic volumes along Silva Valley Parkway, White Rock Road, US 50 and the surrounding roadways.

The project shall contribute its fair share to the cost of regional circulation improvements via the existing countywide traffic impact mitigation (TIM) fee program, and no other mitigations are identified.

The Silva Valley Parkway / Oak Meadow Elementary School driveway will operate below the County's LOS threshold. This intersection will operate at LOS F in the A.M. peak hour and meet the peak hour traffic signal warrant in that time period. With signalization the intersection will operate at LOS B (15.4 seconds). The project should contribute their fair share to construct the traffic signal. The fair share is determined by dividing the project traffic by the difference in Cumulative plus Project traffic minus Existing traffic. The fair share for this project is 9.8%.

The westbound roadway along US 50 between Bass Lake Road and Silva Valley Parkway will operate at LOS F under 2016 plus Project conditions. The County has an identified project, #71330 that will add an auxiliary lane to westbound US 50 on this segment. This project is identified for construction between FY 24/25 and FY 33/34. Until the lane is added, this segment will operate with a **significant and unavoidable impact**.

The westbound roadway along US 50 between Silva Valley Parkway and El Dorado Hills Blvd will operate at LOS F under 2016 plus Project conditions. The County has an identified project,

#53120 that will add an auxiliary lane to westbound US 50 on this segment. The project is identified for construction between FY 24/25 and FY 33/34. Until the lane is added, this segment will operate with a **significant and unavoidable impact**.

2025 Background Setting. The analysis of the near term 2025 cumulative condition is intended to consider the impact of this project ten years from the current year. Under El Dorado County guidelines the 2025 volumes were calculated using a straight line interpolation between existing traffic levels and projected 2035 traffic projections. The configuration of the study area streets and intersections will remain as they are projected to exist with the opening of the Silva Valley Parkway / US 50 interchange in 2016.

One study intersection, the Silva Valley Parkway / Oak Meadow Elementary School driveway will operate at LOS F and will meet the peak hour traffic signal warrant in the a.m. peak hour. As noted in the Existing Conditions a traffic signal is identified and should be installed at the school driveway. This will improve the intersection level of service to LOS B conditions (13.1 seconds).

The westbound roadway along US 50 between Bass Lake Road and Silva Valley Parkway will operate at LOS F in 2016. The County has an identified project, #71330 that will add an auxiliary lane to westbound US 50 on this segment. The project is identified for construction between FY 24/25 and FY 33/34.

The westbound roadway along US 50 between Silva Valley Parkway and El Dorado Hills Blvd will operate at LOS F in 2016. The County has an identified project, #53120 that will add an auxiliary lane to westbound US 50 on this segment. The project is identified for construction between FY 24/25 and FY 33/34.

2025 plus Project Traffic Impacts. With the addition of project traffic to all intersections and roadways, one intersection will operate below the County LOS threshold. This is the Silva Valley Parkway / Oak Meadow School intersection which will operate with the minor street approach at LOS F during the a.m. peak hour. The Silva Valley Parkway / Oak Meadow School intersection meets the peak hour signal warrant in the a.m. peak hour.

The Silva Valley Parkway / Oak Meadow Elementary School driveway will operate at LOS B (13.5 seconds) with the intersection signalized as previously noted.

The westbound roadway along US 50 between Bass Lake Road and Silva Valley Parkway will operate at LOS F under 2016 plus Project conditions. The County has an identified project, #71330 that will add an auxiliary lane to westbound US 50 on this segment. This project is identified for construction between FY 24/25 and FY 33/34. Until the lane is added, this segment will operate with a **significant and unavoidable impact**.

The westbound roadway along US 50 between Silva Valley Parkway and El Dorado Hills Blvd will operate at LOS F under 2016 plus Project conditions. The County has an identified project, #53120 that will add an auxiliary lane to westbound US 50 on this segment. The project is identified for construction between FY 24/25 and FY 33/34. Until the lane is added, this segment will operate with a **significant and unavoidable impact**.

2035 Setting. The analysis of the long term cumulative impact analysis is intended to consider the impact of this project within the context of conditions occurring under the El Dorado County General Plan in the Year 2035. The Bass Lake Road / Country Club Road intersection was also analyzed as part of the Cumulative Impacts scenario. The most recent countywide regional travel demand forecasting model was used as the basis for developing future volumes forecasts in the study area. The cumulative analysis assumes regional circulation system improvements will be completed between 2026 and 2035 and are identified in the County's Capital Improvement Program (CIP). The identified projects include:

- Modification of the US 50 / Silva Valley Interchange; this includes addition of free right turn on-ramps for both eastbound and westbound directions and a free northbound on-ramp to eastbound US 50;
- the completion of Country Club Drive from Silva Valley Parkway to east of Bass Lake Road. This includes a two-lane roadway and realignment of Country Club Drive in various segments between Silva Valley Parkway and Bass Lake Road. The Country Club Drive extension is assumed to intersect the Silva Valley Parkway / Old Silva Valley Road intersection. The Silva Valley Parkway / Old Silva Valley Road - Country Club Drive intersection is assumed to be signalized with the following lane configuration – left lane, through lane and through-right lanes along Silva Valley Parkway and a left lane and a through-right lane along the Old Silva Valley Road – Country Club Drive approaches. In addition, it is assumed that the Bass Lake Road intersection will be signalized with left turn lanes installed along each approach to the intersection;
- widening of White Rock Road from west of Old Silva Valley Road to just east of Post Street; this includes widening of the segment to a six lane roadway;
- addition of a third general use westbound lane on US 50; and
- signalization of the Silva Valley Parkway / Golden Eagle Lane intersection.

One intersection will operate at an LOS F condition. This is the Silva Valley Parkway / Oak Meadow Elementary School driveway which will meet the peak hour signal warrant in the A.M. peak hour.

As noted in the Existing Conditions a traffic signal is identified and should be installed at the school driveway. This will improve the intersection level of service to an LOS A condition (8.6 seconds).

2035 plus Project Impacts. The distribution of project traffic in the 2035 buildout condition was developed based on the select zone analysis using the County's traffic model and the project location within the model. The residential component of the TAZ #163 was excluded so that the trip distribution reflected specifically the retail portion (i.e. the project) of the TAZ at future year buildout.

The Silva Valley Parkway / Oak Meadow Elementary School driveway will operate below the County's LOS threshold. This intersection will operate at LOS F in the a.m. peak hour and meet the peak hour traffic signal warrant in that time period. The intersection will operate at LOS B (8.7 seconds) with the intersection signalized as previously noted.

EDH 52 SITE
TRAFFIC IMPACT ANALYSIS

INTRODUCTION

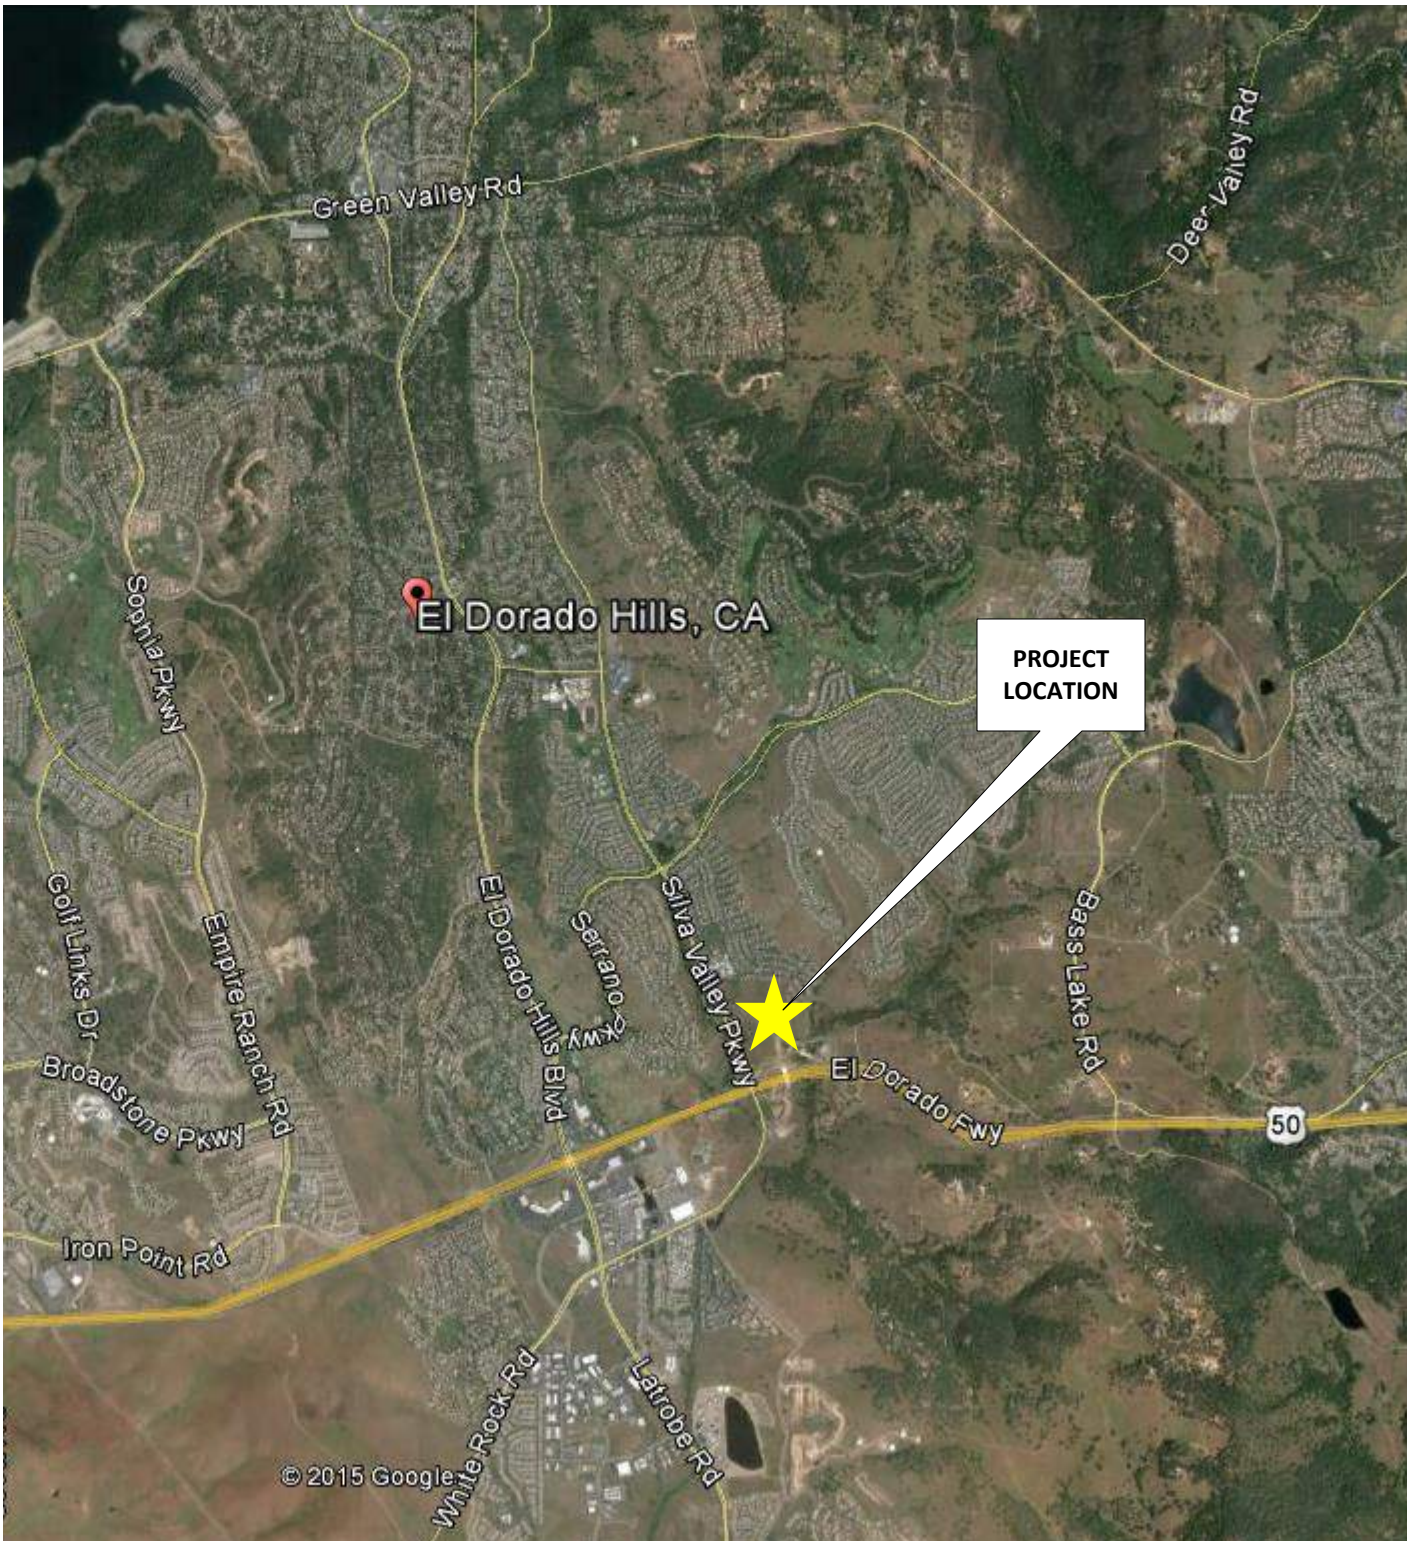
Study Purpose and Objectives

This study evaluates the traffic impacts for a proposed retail center on Silva Valley Parkway in El Dorado Hills in western El Dorado County. The project is located north of US 50 and east of Old Silva Valley Road. Silva Valley Parkway will bisect the project. The east side of the project will include a 106,000 square foot of retail shopping and a gas station with 12 vehicle fueling positions. The west side of the project will include 96,900 square feet of retail shopping, a 4,000 square foot fast food restaurant with drive-through window, a 7,500 square foot sit-down restaurant and a 12 fueling position gas station with car wash. Access to the site will be as follows:

East Side
- Right-in, right-out access along Silva Valley Parkway at Tong Road to the gas station
- Signalized full access about midway between US 50 and Old Silva Road

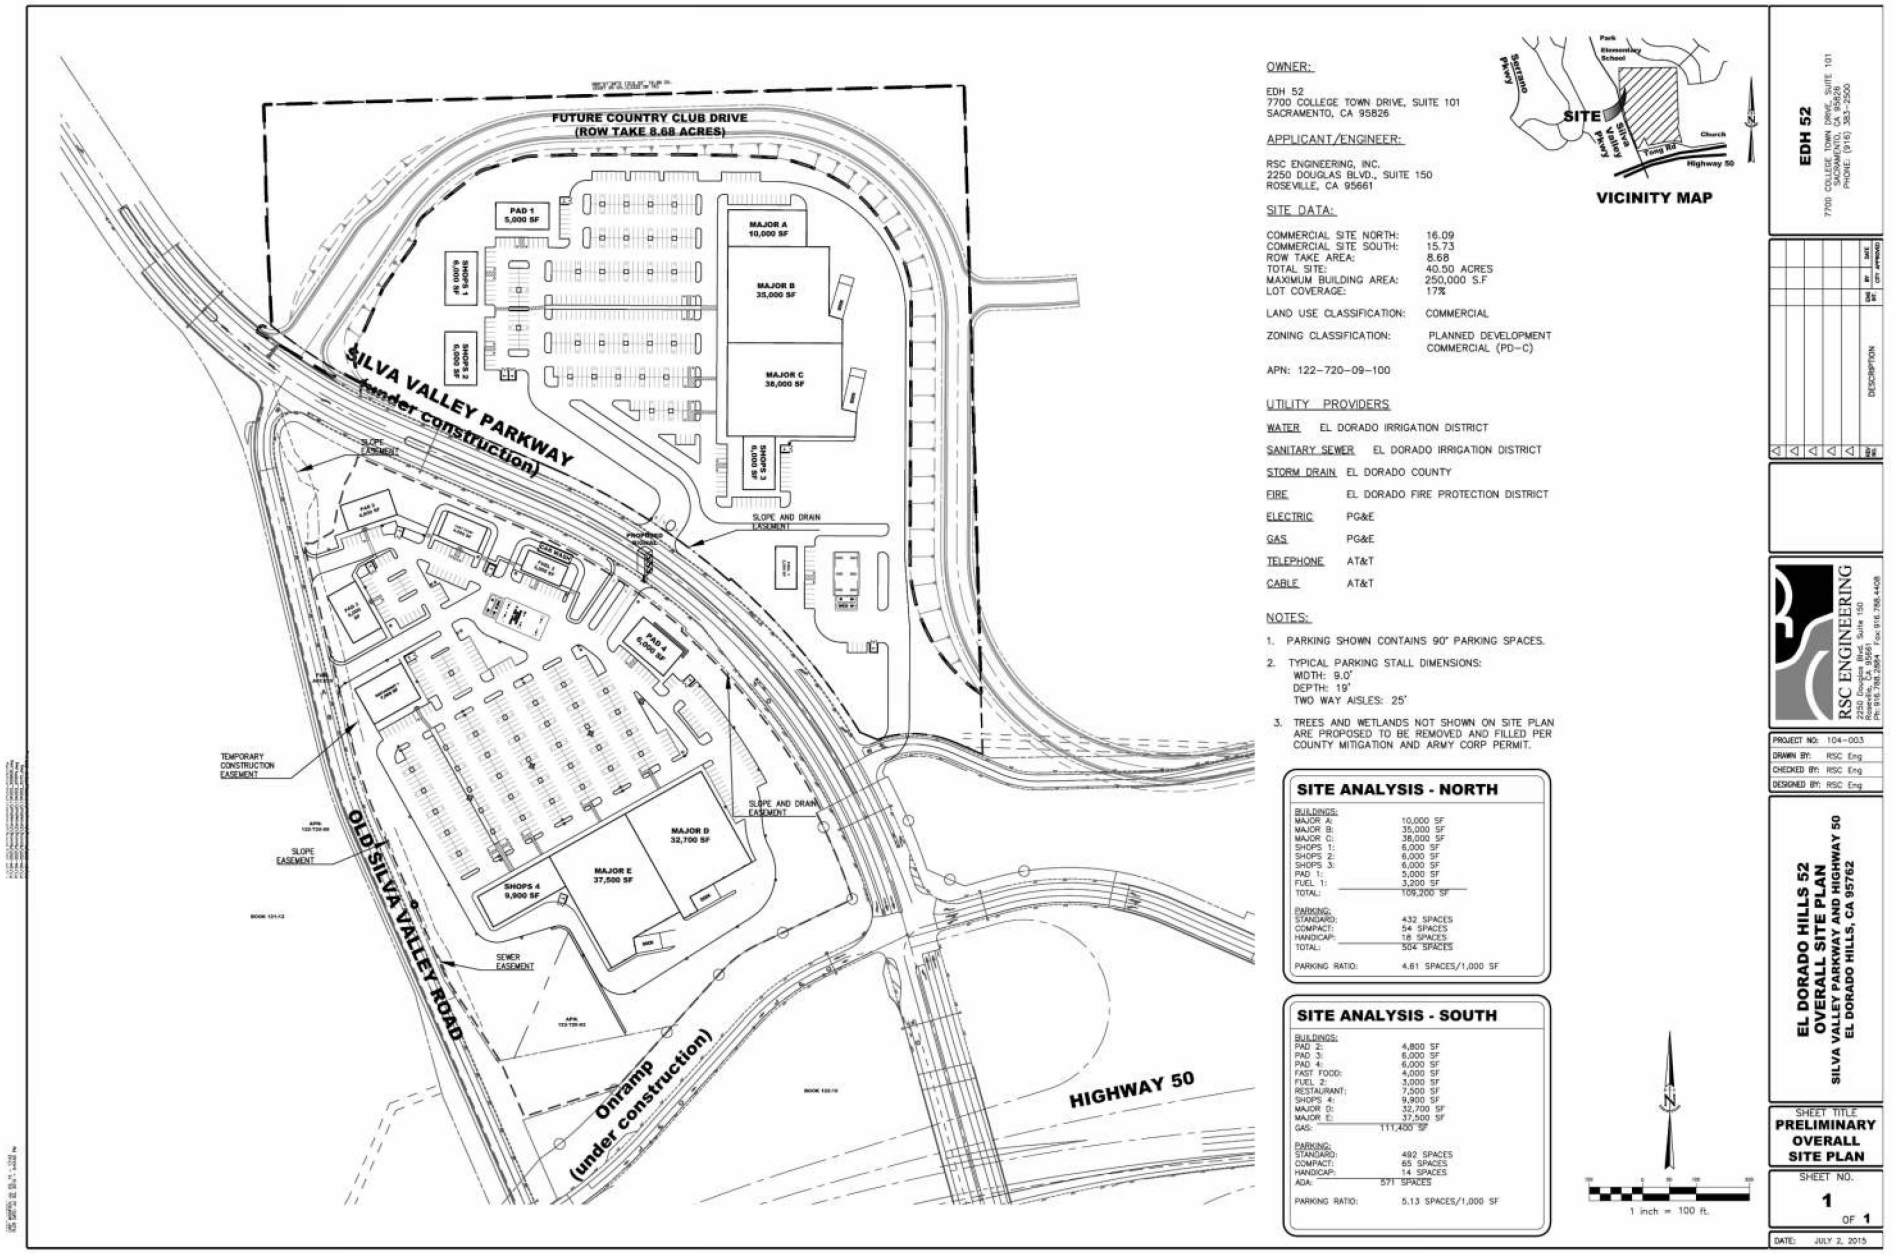
West Side
- Signalized full access about midway between US 50 and Old Silva Road
- Full access along Old Silva Valley Road
- Right-in, right-out along Old Silva Road

The study addresses the following scenarios:



1. Existing (2015) Traffic Conditions
2. Existing (2016) Traffic Conditions (Silva Valley Interchange opened)
3. Existing (2016) Plus Project Traffic Conditions
4. 2025 Traffic Conditions
5. 2025 Plus Project Conditions
6. 2035 Traffic Conditions
7. 2035 Plus Project Conditions

The objective of this study is to identify those roads and street intersections that may be impacted by development of this project.



Project Description

The EDH 52 project includes a combination of retail uses bisected by Silva Valley Parkway which is currently under construction. The west side of the site will include 96,900 square feet of retail shopping, a 4,000 square foot fast food restaurant with drive-through window, a 7,500 square foot sit-down restaurant and a 12 vehicle fueling position gas station with car wash. The

east side will include 106,000 square feet of retail shopping and a gas station with 12 fueling positions. Access to the site will be along Silva Valley Parkway and Old Silva Valley Road. The site will have right-in, right out access along northbound Silva Valley Parkway at Tong Road providing direct access to the gas station on the east side of the site, full access to both sites via a new intersection on Silva Valley Parkway about midway between US 50 and Old Silva Valley Road and along Old Silva Valley Road. The future Country Club Drive extension will loop around the outside of the east side retail area and connect to the Silva Valley Parkway / Old Silva Valley Road intersection. No site access is proposed along Country Club Drive. Figure 1 presents a map of the vicinity with the project location relative to the project area while Figure 2 presents the proposed project configuration.

EXISTING SETTING

Study Area

This study addresses traffic conditions at 13 intersections, seven roadway segments and four freeway ramp junctions. The study intersections are shown in Figure 3. The limits of the study area were identified in consultation with El Dorado County staff and Kittelson & Associates [KAI], the County's traffic consultant. The text that follows describes the facilities included in this analysis. The quality of traffic flow is typically governed by the operation of major intersections and the daily volume of traffic along the roadways. The study locations include:

Study Area Roadways and Intersections

Silva Valley Parkway is an arterial roadway that extends for roughly 4 miles from US 50 to Green Valley Road. The southern segment is currently under construction that will widen the roadway to a four lane facility between US 50 to south of Oak Meadow Elementary School. Between Oak Meadow Elementary School and Harvard Way the roadway is four lanes while north of Harvard Way the roadway is two lanes.

Old Silva Valley Road is an existing roadway that connects White Rock Road in the south to Silva Valley Parkway in the north. Upon completion of the Silva Valley Parkway interchange this roadway will become a local roadway with connections to the new Silva Valley Parkway north and south of US 50.

US 50 between El Dorado Hills Blvd and Bass Lane Road and the Silva Valley Interchange is a seven lane freeway with four eastbound lanes and three westbound lanes. The carpool lanes are available outside of peak hours for general use.

Country Club Drive is an existing roadway that extends west from Cameron Park Drive in Cameron Park to Bass Lake Road. As part of the Bass Lake Specific Plan a future two-lane extension of Country Club Drive will be constructed to connect to Silva Valley Parkway.

Tong Road is an existing roadway that extends east from Silva Valley Parkway towards Bass Lake Road. With the proposed project Tong Road will become a right-in, right-out access to the proposed gas station on the east side of Silva Valley Parkway.

White Rock Road is an east-west arterial roadway that extends from Silva Valley Parkway to the Sacramento County line, where it continues west to Grant Line Road and International Drive in Rancho Cordova. The roadway is currently two lanes between Silva Valley Parkway and Monte Verde Drive; at Monte Verde Drive the roadway widens to a four lane roadway until just west of Windfield Way.

The **Silva Valley Parkway / Harvard Way Street intersection** is a four-way signalized intersection. Oak Ridge High School is located in the southwest quadrant of the intersection while Rolling Hills Middle School has direct access on the east approach of the intersection. The northbound approach includes a left turn lane and a through-right lane while the southbound

approach includes a left lane, a through lane and a right lane. The eastbound Harvard Way approach includes a left lane, a through lane and a right lane while the westbound Rolling Hills Middle School approach includes a left lane and a through-right lane; the eastbound and westbound approaches are split phased while the Silva Valley Parkway approaches have protected left turns.

The **Silva Valley Parkway / Golden Eagle Lane intersection** is a four way minor leg stop controlled intersection. The Silva Valley Parkway approaches include a left turn lane, a through lane and a through-right lane while the Golden Eagle Lane approaches are a single lane.

The **Silva Valley Parkway / Serrano Parkway intersection** is a four-way signalized intersection. The northbound approach includes a left turn lane, two through lanes and a free right turn lane while the southbound approach includes a left turn lane, a through lane and a through-right lane. The Serrano Parkway approaches include a left turn lane, a through lane and a through-right lane; however, the County will be modifying the westbound approach with the completion of the Silva Valley interchange to include dual left lanes and a through-right lane.

The **Silva Valley Parkway / Entrada Lane intersection** is a minor leg stop controlled tee intersection. The southbound Silva Valley Parkway approach includes a left turn lane and two through lanes while the northbound approach includes a through lane and a through-right lane while the Entrada Lane approach is a single lane. With the completion of the Silva Valley Parkway interchange access from Entrada Lane will be limited to right turns only during peak hours through the use of "soft" sign restrictions. Entrada Lane traffic heading south will use Serrano Parkway to access southbound Silva Valley Parkway.

The **Silva Valley Parkway / Oak Meadow Elementary School intersection** is stop controlled along the Oak Meadow Elementary School driveway. The southbound Silva Valley Parkway approach includes a left turn lane and a through lane while the northbound approach includes a through lane and a through-right lane; the driveway approach is a single lane.

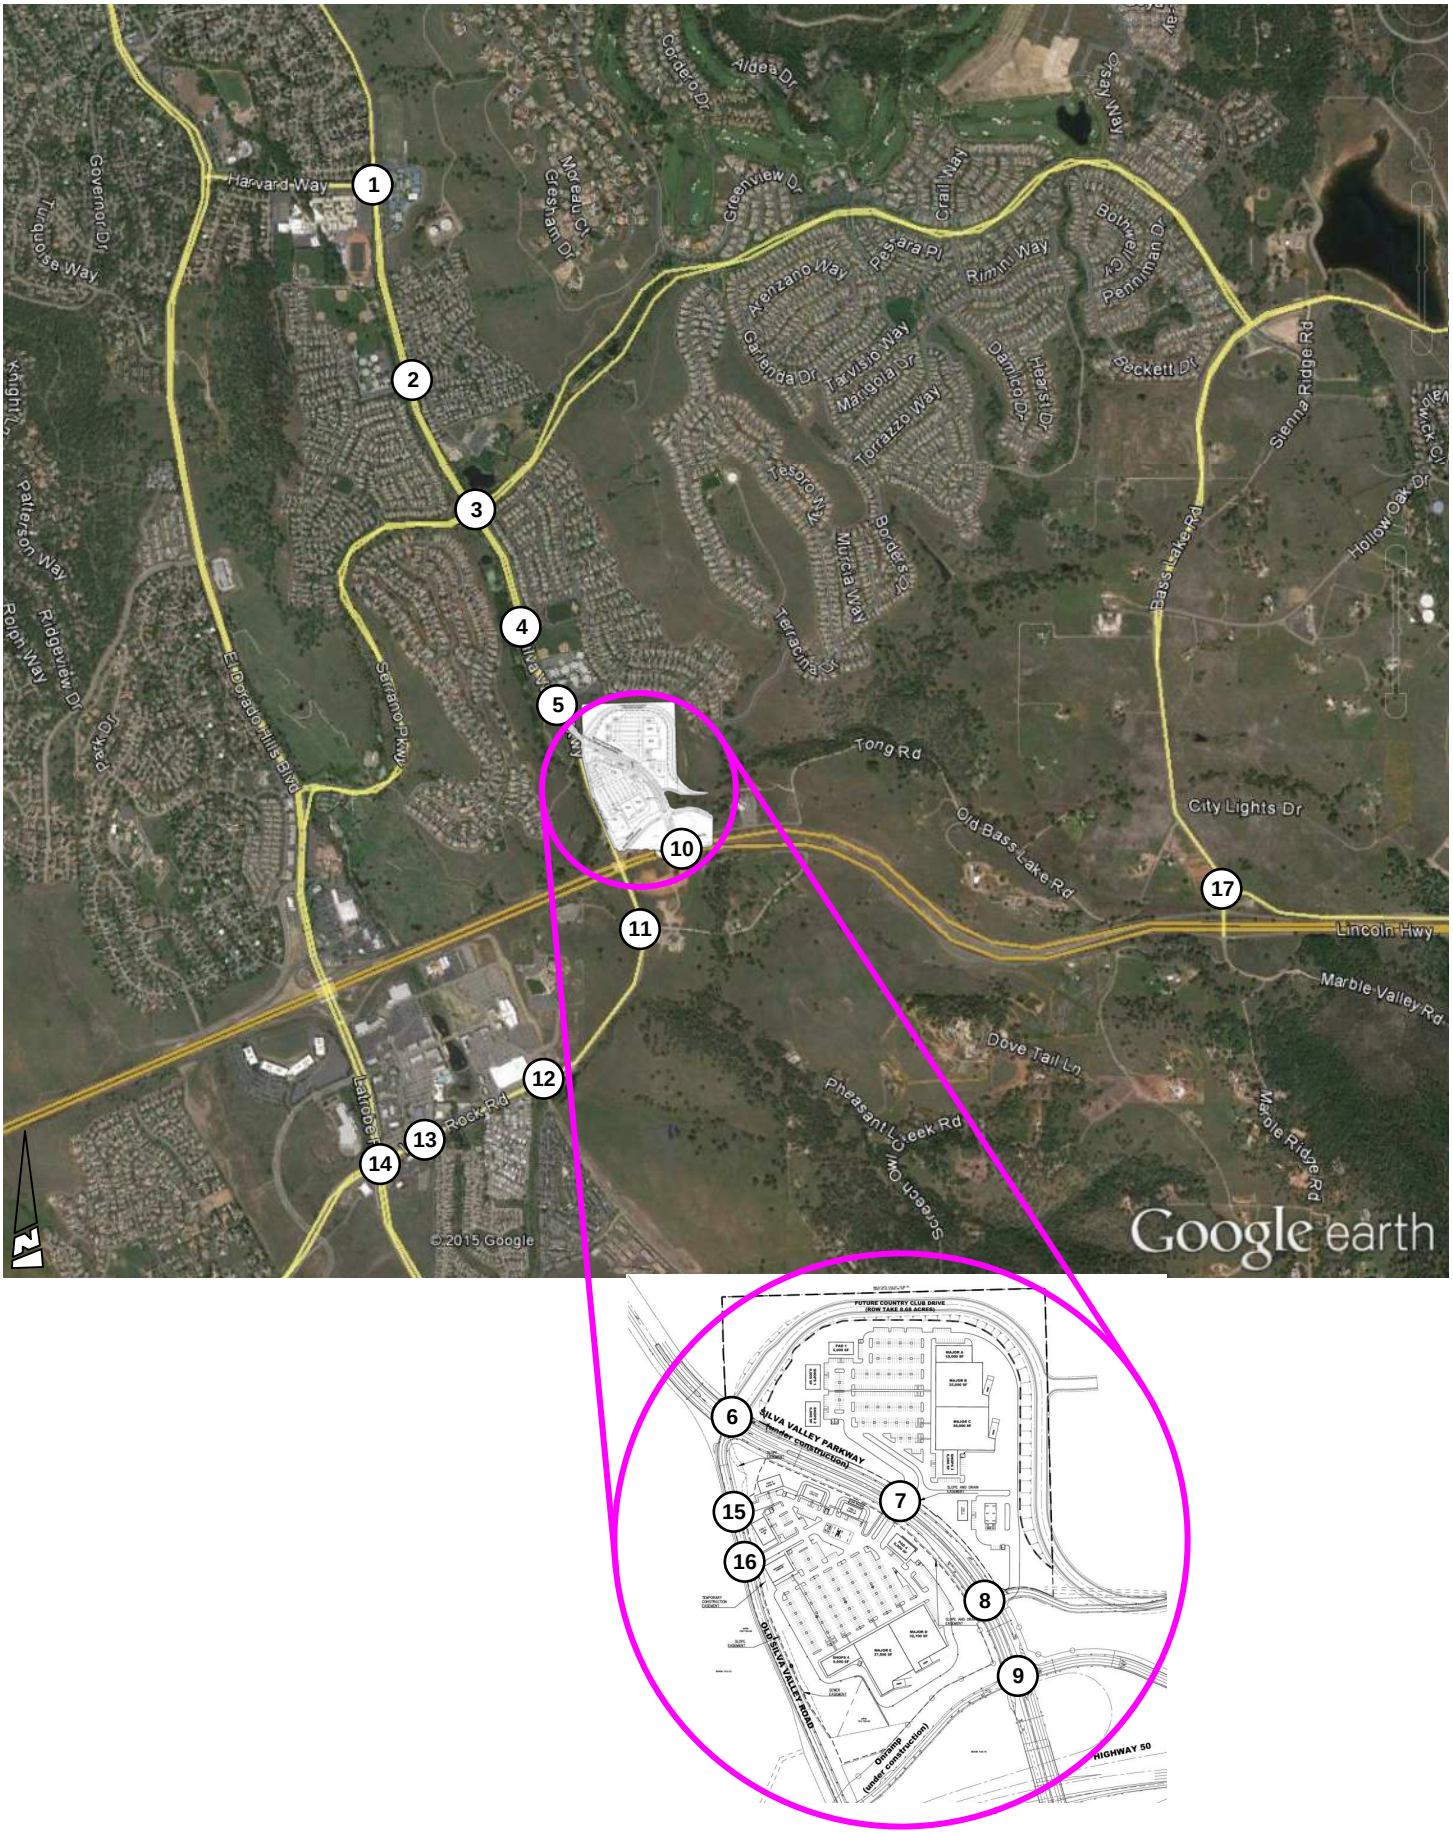
The **Silva Valley Parkway / Old Silva Valley Road (north) intersection** is a future tee intersection that will be opened with the completion of the Silva Valley Parkway interchange. Old Silva Valley Road will be stop controlled and include a single lane approach. Northbound Silva Valley Parkway will include a left turn lane and two through lanes while the southbound approach will include a through lane and a through-right lane.

The **Silva Valley Parkway / Tong Road intersection** is a tee intersection that is stop controlled along Tong Road. With the opening of the Silva Valley Parkway interchange Tong Road will have right-in, right-out movements only. Silva Valley Parkway will have two northbound through lanes and a right turn lane while the southbound approach will include three through lanes. Tong Road will include a single stop controlled approach.

The **Silva Valley Parkway / Old Silva Valley Road (south) intersection** is a future four-way intersection that will be opened with the completion of the Silva Valley Road interchange. The intersection will be signalized and provide access to Joerger Cut-off Road, currently accessible along the existing Silva Valley Road. When completed the northbound Silva Valley Parkway

approach will include a left turn lane, a through lane and a through-right lane while the southbound approach will include a left turn lane, two through lanes and a right turn lane. The approaches along Old Silva Valley Road will include a left-through lane and a right turn lane.

The **White Rock Road / Valley View Parkway – Vine Street intersection** is a four-way signalized intersection. All of the approaches include a left turn lane and a through-right lane. The intersection has protected left turns along White Rock Road and a split phase along the Valley View Parkway-Vine Street approaches.



The **White Rock Road / Post Street intersection** is a four-way signalized intersection. The westbound White Rock Road approach includes a left turn lane, a through lane and a through-right lane while the eastbound approach includes a left turn lane, two through lanes and a right turn lane. The Post Street approaches include a left turn lane and a through-right lane. All left turns operate in protected phases.

The **White Rock Road / Latrobe Road intersection** is a four-way signalized intersection. The northbound Latrobe Road approach includes a left turn lane, four through lanes and a right turn lane while the southbound approach includes two left turn lanes, three through lanes and a right turn lane. The westbound White Rock Road approach includes two left turn lanes, two through lanes and a right lane while the eastbound approach includes two left turn lanes, a through lane and a through-right lane. All left turns operate in protected phases.

Study Area Freeway Ramp Junctions

In addition to analyzing intersections, the traffic-related effects of the proposed project on freeway ramp junctions were assessed for this traffic impact study. Ramp junctions that would serve as major access routes, and would be affected by project-related traffic, were analyzed. The following ramp junctions were analyzed under 2016, 2025 and 2025 conditions without and with the project:

1. US 50 at Silva Valley Parkway westbound on-ramp merge
2. US 50 at Silva Valley Parkway westbound off-ramp diverge
3. US 50 at Silva Valley Parkway eastbound on-ramp merge
4. US 50 at Silva Valley Parkway eastbound off-ramp diverge

Level of Service Analysis

Methodology. *Level of Service Analysis* has been employed to provide a basis for describing existing traffic conditions and for evaluating the significance of project traffic impacts. Level of Service measures the *quality* of traffic flow and is represented by letter designations from "A" to "F", with a grade of "A" referring to the best conditions, and "F" representing the worst conditions. The guidelines and analyses used for this report follow El Dorado County standards. Local agencies adopt minimum Level of Service standards for their facilities. Intersection Levels of Service presented in this analysis are based on the weighted average total delay per vehicle for the intersection as a whole based on the thresholds shown in Table 1.

TABLE 1
LEVEL OF SERVICE DEFINITIONS

Level of Service	Signalized Intersection	Unsignalized Intersection	Roadway (Daily)
"A"	Uncongested operations, all queues clear in a single-signal cycle. Delay ≤ 10.0 sec	Little or no delay. Delay ≤ 10 sec/veh	Completely free flow.
"B"	Uncongested operations, all queues clear in a single cycle. Delay > 10.0 sec and ≤ 20.0 sec	Short traffic delays. Delay > 10 sec/veh and ≤ 15 sec/veh	Free flow, presence of other vehicles noticeable.
"C"	Light congestion, occasional backups on critical approaches. Delay > 20.0 sec and ≤ 35.0 sec	Average traffic delays. Delay > 15 sec/veh and ≤ 25 sec/veh	Ability to maneuver and select operating speed affected.
"D"	Significant congestion of critical approaches but intersection functional. Cars required to wait through more than one cycle during short peaks. No long queues formed. Delay > 35.0 sec and ≤ 55.0 sec	Long traffic delays. Delay > 25 sec/veh and ≤ 35 sec/veh	Unstable flow, speeds and ability to maneuver restricted.
"E"	Severe congestion with some long standing queues on critical approaches. Blockage of intersection may occur if traffic signal does not provide for protected turning movements. Traffic queue may block nearby intersection(s) upstream of critical approach(es). Delay > 55.0 sec and ≤ 80.0 sec	Very long traffic delays, failure, extreme congestion. Delay > 35 sec/veh and ≤ 50 sec/veh	At or near capacity, flow quite unstable.
"F"	Total breakdown, stop-and-go operation. Delay > 80.0 sec	Intersection blocked by external causes. Delay > 50 sec/veh	Forced flow, breakdown.

2000 Highway Capacity Manual, Transportation Research Board (TRB) Special Report 209.

Roadway Segments

The quality of traffic flow on County roads can also be determined based on the daily traffic volumes and generalized Level of Service thresholds. General "planning level" daily volume

thresholds presented in the El Dorado County General Plan EIR and Transportation Impact Study Guidelines can be used to identify operating Levels of Service on streets and highways. These thresholds are shown in Table 2.

TABLE 2
EL DORADO COUNTY
PEAK HOUR ROADWAY SEGMENT LEVEL OF SERVICE

Code	Functional Class Codes	Maximum Daily Traffic Volume Per Lane Level of Service				
		A	B	C	D	E
2A	Two-Lane Arterial	---	---	850	1,540	1,650
4AU	Four-Lane Arterial – Undivided	---	---	1,760	3,070	3,130
4AD	Four-Lane Arterial – Divided	---	---	1,850	3,220	3,290
6AD	Six-Lane Arterial – Divided	---	---	2,760	4,680	4,710
4M	Four-Lane Multi-Highway (Two Dir)	---	2,240	3,230	4,250	4,970
2F	Two Freeway Lanes (One Dir)	---	2,070	2,880	3,590	4,150
2FA	Two Freeway Lanes + Auxiliary Lane (One Dir)	---	2,610	3,630	4,520	5,230
3F	Three Freeway Lanes (One Dir)	---	3,100	4,320	5,380	6,230
3FA	Three Freeway Lanes + Auxiliary Lane (One Dir)	---	3,640	5,070	6,320	7,310
4F	Four Freeway Lanes (One Dir)	---	4,140	5,760	7,180	8,310

Freeway Ramp Junction Level of Service Analysis Procedures

Freeway ramp junctions are areas where freeway on-ramps merge into freeways, and where freeway off-ramps diverge from freeways. Freeway ramp junctions which are considered to be potentially affected by project-related traffic were analyzed for this traffic impact study.

Freeway ramp junction areas were analyzed for this traffic impact study using methods described in Chapter 13 of the *Highway Capacity Manual 2010* (Transportation Research Board 2010). McTrans *HCS 2010 Highway Capacity Software* was used to perform the ramp junction LOS calculations for this traffic impact study.

The analysis of these facilities involves calculating the density of vehicles on a freeway facility, expressed as passenger cars per mile per lane. The LOS designation is based on the vehicle density. Table 3 presents the relationship of vehicle density to LOS for ramp junctions.

TABLE 3
FREEWAY RAMP MERGE / DIVERGE

Level of Service	Vehicle Density	Operating Characteristics
A	≤ 10	Represents unrestricted operations. Density is low enough to permit smooth merging and diverging, with virtually no turbulence in traffic stream.
B	>10 x ≤20	Merging and diverging maneuvers become noticeable to through drivers, and minimal turbulence occurs. Merging drivers must adjust speeds to accomplish smooth transitions from acceleration lane to freeway.
C	>20 x ≤28	Speed within influence area declines as turbulence levels become noticeable. Ramp and freeway vehicles begin to adjust speeds to accomplish smooth transitions.
D	>28 x ≤35	Turbulence levels in influence area become intrusive; virtually all vehicles slow to accommodate merging and diverging traffic. Some ramp queues may form at heavily used on-ramps, but freeway operations remain stable.
E	>35	Conditions approach capacity. Speeds reduce significant and turbulence if felt by virtually all drivers. Flow levels approach capacity and small changes in demand and/or disruption within traffic stream can cause both ramp and freeway queues to form.
F	Demand exceeds capacity	Demand exceeds capacity. Substantial disruption and queuing are present.

El Dorado County Intersection Thresholds of Significance. El Dorado County identifies LOS 'E' as the acceptable Level of Service on roadways and state highways within the unincorporated areas of the County in the Community Regions and LOS D in the Rural Centers and Rural Regions except as specified in the General Plan. The *2000 Highway Capacity Manual* (HCM) and *2010* HCM were used to provide a basis for describing existing traffic conditions and for evaluating the significance of project traffic impacts. The 2000 HCM was used to analyze signalized intersections while the 2010 HCM was used to analyze unsignalized intersections. The 2000 methodology is consistent with analyses on recently completed adjacent projects. An impact is considered significant if the project causes an intersection to change from LOS E to LOS F. Worsening of existing facilities already operating at unacceptable Levels of Service is also considered a significant impact. The County's General Plan Policy TC-Xe defines "worsen" as any of the following conditions:

a. a 2% increase in traffic during the a.m. peak hour, p.m. peak hour or daily trips, or
b. the addition of 100 or more daily trips, or
c. the addition of 10 or more trips during the a.m. peak hour or the p.m. peak hour.

Existing Levels of Service

Intersection Levels of Service. Figure 4 presents the existing lane configurations and current peak hour traffic volumes at intersections in the study area. Traffic volumes along Silva Valley Parkway were counted in February 2015. Traffic volumes along White Rock Road were obtained from the Supplemental Traffic Impact Analysis for East Ridge Village, prepared by *TKear, Transportation Planning and Management, Inc.*

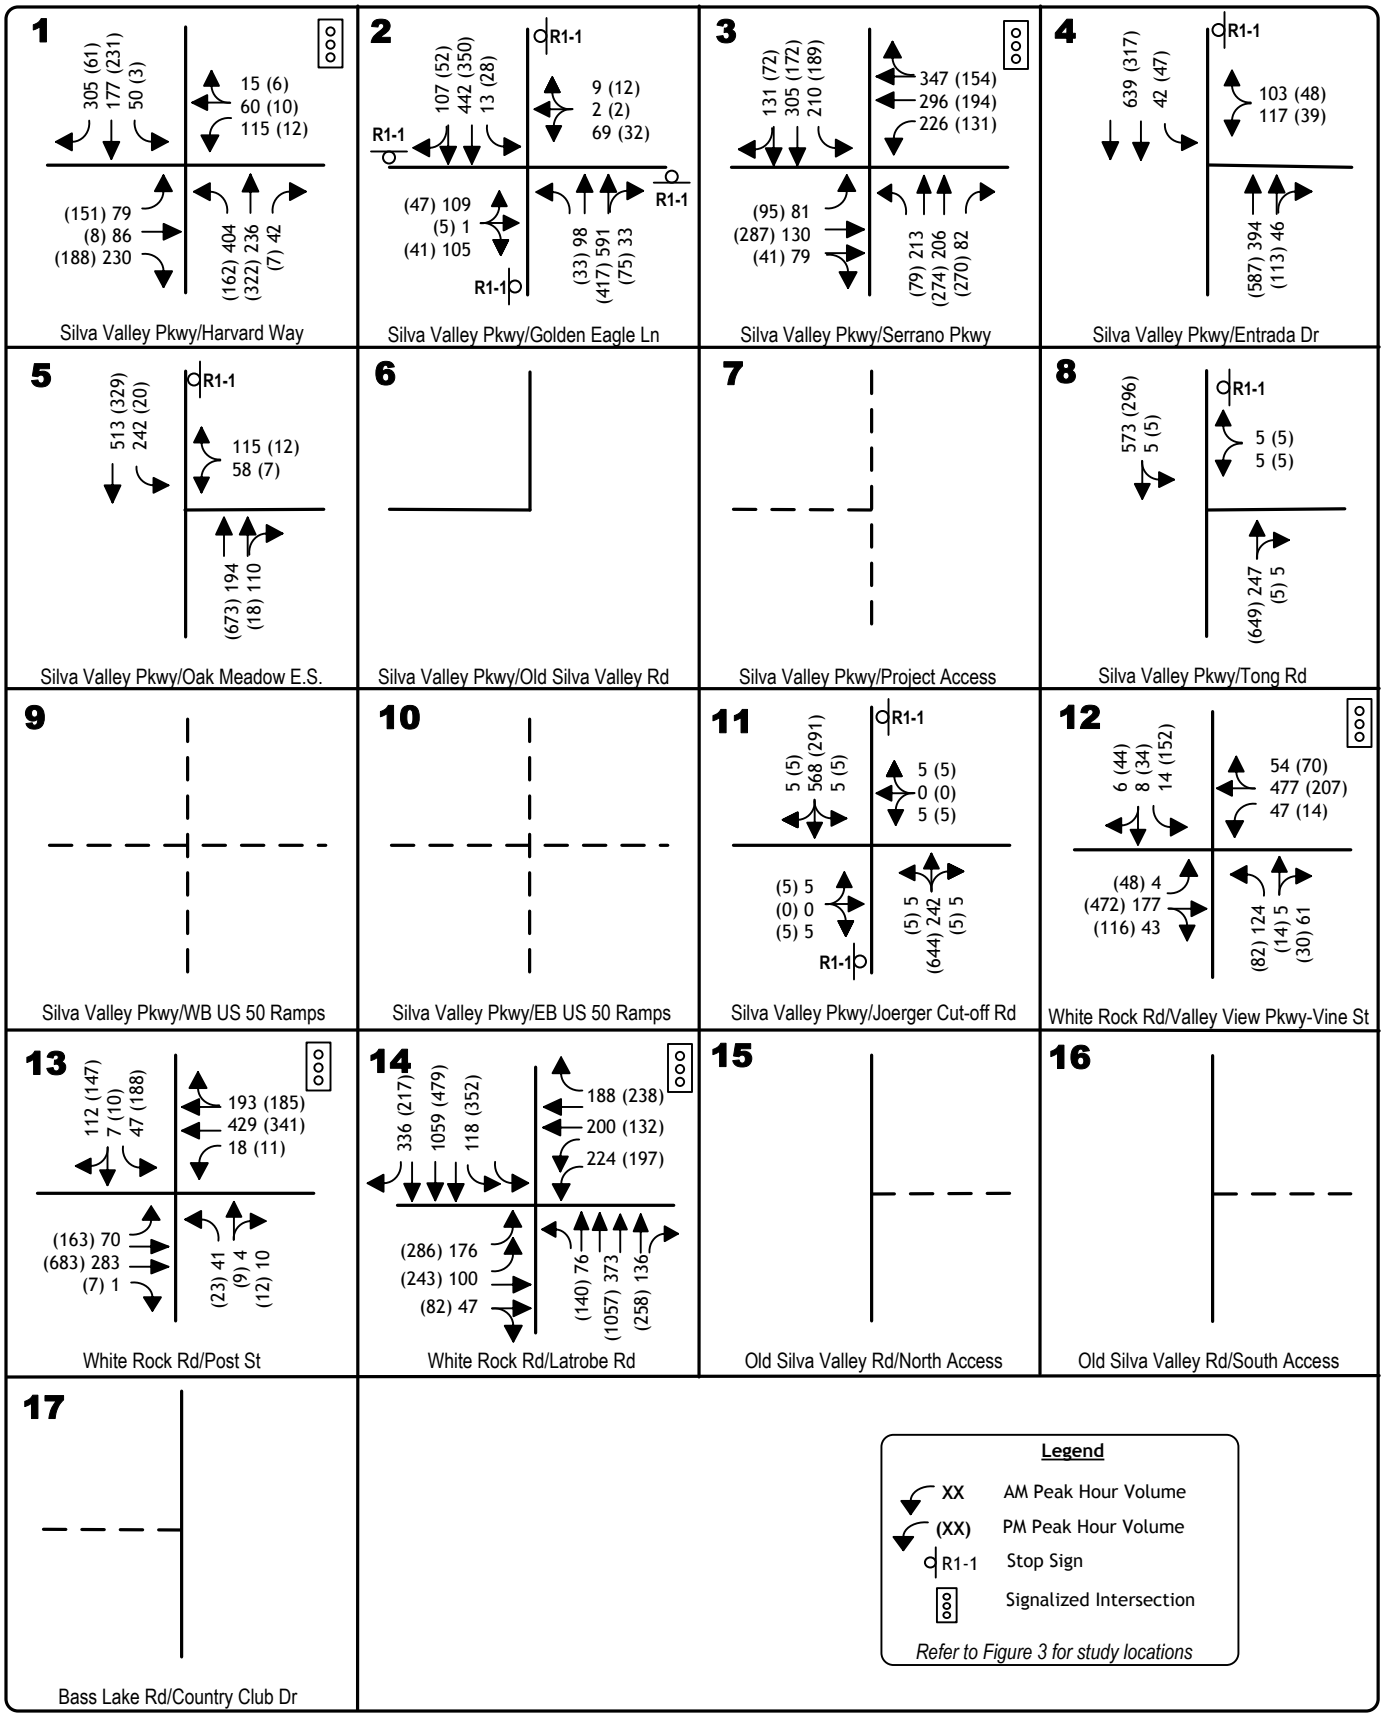

Table 4 summarizes current levels of service at the ten study area intersections during the a.m. and p.m. peak hours. Two intersections will operate below the County's LOS threshold. These include the Silva Valley Parkway / Entrada Drive intersections and the Silva Valley Parkway / Oak Meadow School intersection. Both minor street approaches operate at LOS F during the a.m. peak hour. Both intersections meet the peak hour signal warrant in the a.m. peak hour.

TABLE 4
EXISTING PEAK HOUR LEVELS OF SERVICE AT INTERSECTIONS

Location	Control	AM Peak Hour Intersection		PM Peak Hour Intersection		Meets Peak Hour Traffic Signal Warrant?
		LOS	Average Delay	LOS	Average Delay	
1. Silva Valley Pkwy / Harvard Way	Signal	D	38.1	C	22.8	N/A
2. Silva Valley Pkwy / Golden Eagle Ln	AWS

Roadway Segments. The quality of traffic flow on County roads can be determined based on the daily traffic volumes and generalized level of service thresholds. Table 5 presents existing levels of service for roadway segments based on the thresholds contained in the El Dorado County GP. All roadways will operate within acceptable levels of service, at LOS E or better.

Queuing

Table 6 presents information regarding current peak period queuing in lanes at signalized study intersections. In each case, the available storage has been presented along with current peak hour traffic volumes and the 95th percentile queue length for left turn lanes. On approaches with multiple turn lanes the longest queue is identified.

Most intersections have lane storage capacity that can accommodate peak period queues. Those 95th percentile queues with length exceeding the available storage have been highlighted. The 95th percentile queue exceeds available storage in nine locations.

Public Transit

El Dorado Transit (EDT) operates buses throughout El Dorado County. In the vicinity of the site, there is no currently scheduled bus service. A park-and-ride lot is available on Post Street off of White Rock Road for commuters to downtown Sacramento. EDT operates seven morning trips to Sacramento, leaving 5:45 a.m. and 8:30 a.m. EDT also operates two trips from Sacramento arriving in El Dorado Hills at 8:00 a.m. and 9:42 a.m. These routes operate Monday through Friday. In the p.m. EDT operates eight trips that stop in El Dorado Hills between 3:30 p.m. and 7:00 p.m. They also operate two trips into Sacramento leaving at 2:25 p.m. and 5:05 p.m.

Non-Motorized Transportation

The available facilities for bicycles and pedestrians in the area of the project were inventoried.

Sidewalks / Trails. The project will be constructed adjacent to the US 50 / Silva Valley Interchange. Silva Valley Parkway is currently being constructed and will connect White Rock Road in the south to the existing four lane section of Silva Valley Parkway in the north. Sidewalk and bike lanes will be constructed as part of this project.

Sidewalk is present along the east side of Silva Valley Parkway beginning at the Oak Meadow Elementary School and heading north while a natural surface walking path is available on the west side of the roadway from Serrano Parkway to about ¼ mile north of the US 50 undercrossing where it connects to a pathway to Ponta Delgado Court. The interchange project will construct sidewalk along the west side of Old Silva Valley Parkway from White Rock Road to Silva Valley Parkway.

Bicycle Facilities. In the project vicinity, bike lanes exist along Silva Valley Parkway north of the site, generally from the south end of Oak Meadow Elementary School. A connection to the natural surface path is available along the roadway. The interchange project will extend the bike lanes within the project limits and connect to both the existing facilities along Silva Valley Parkway and White Rock Road. In addition, the project will add bike lanes along Old Silva Valley Road and provide an alternative for bicyclists to avoid the interchange.

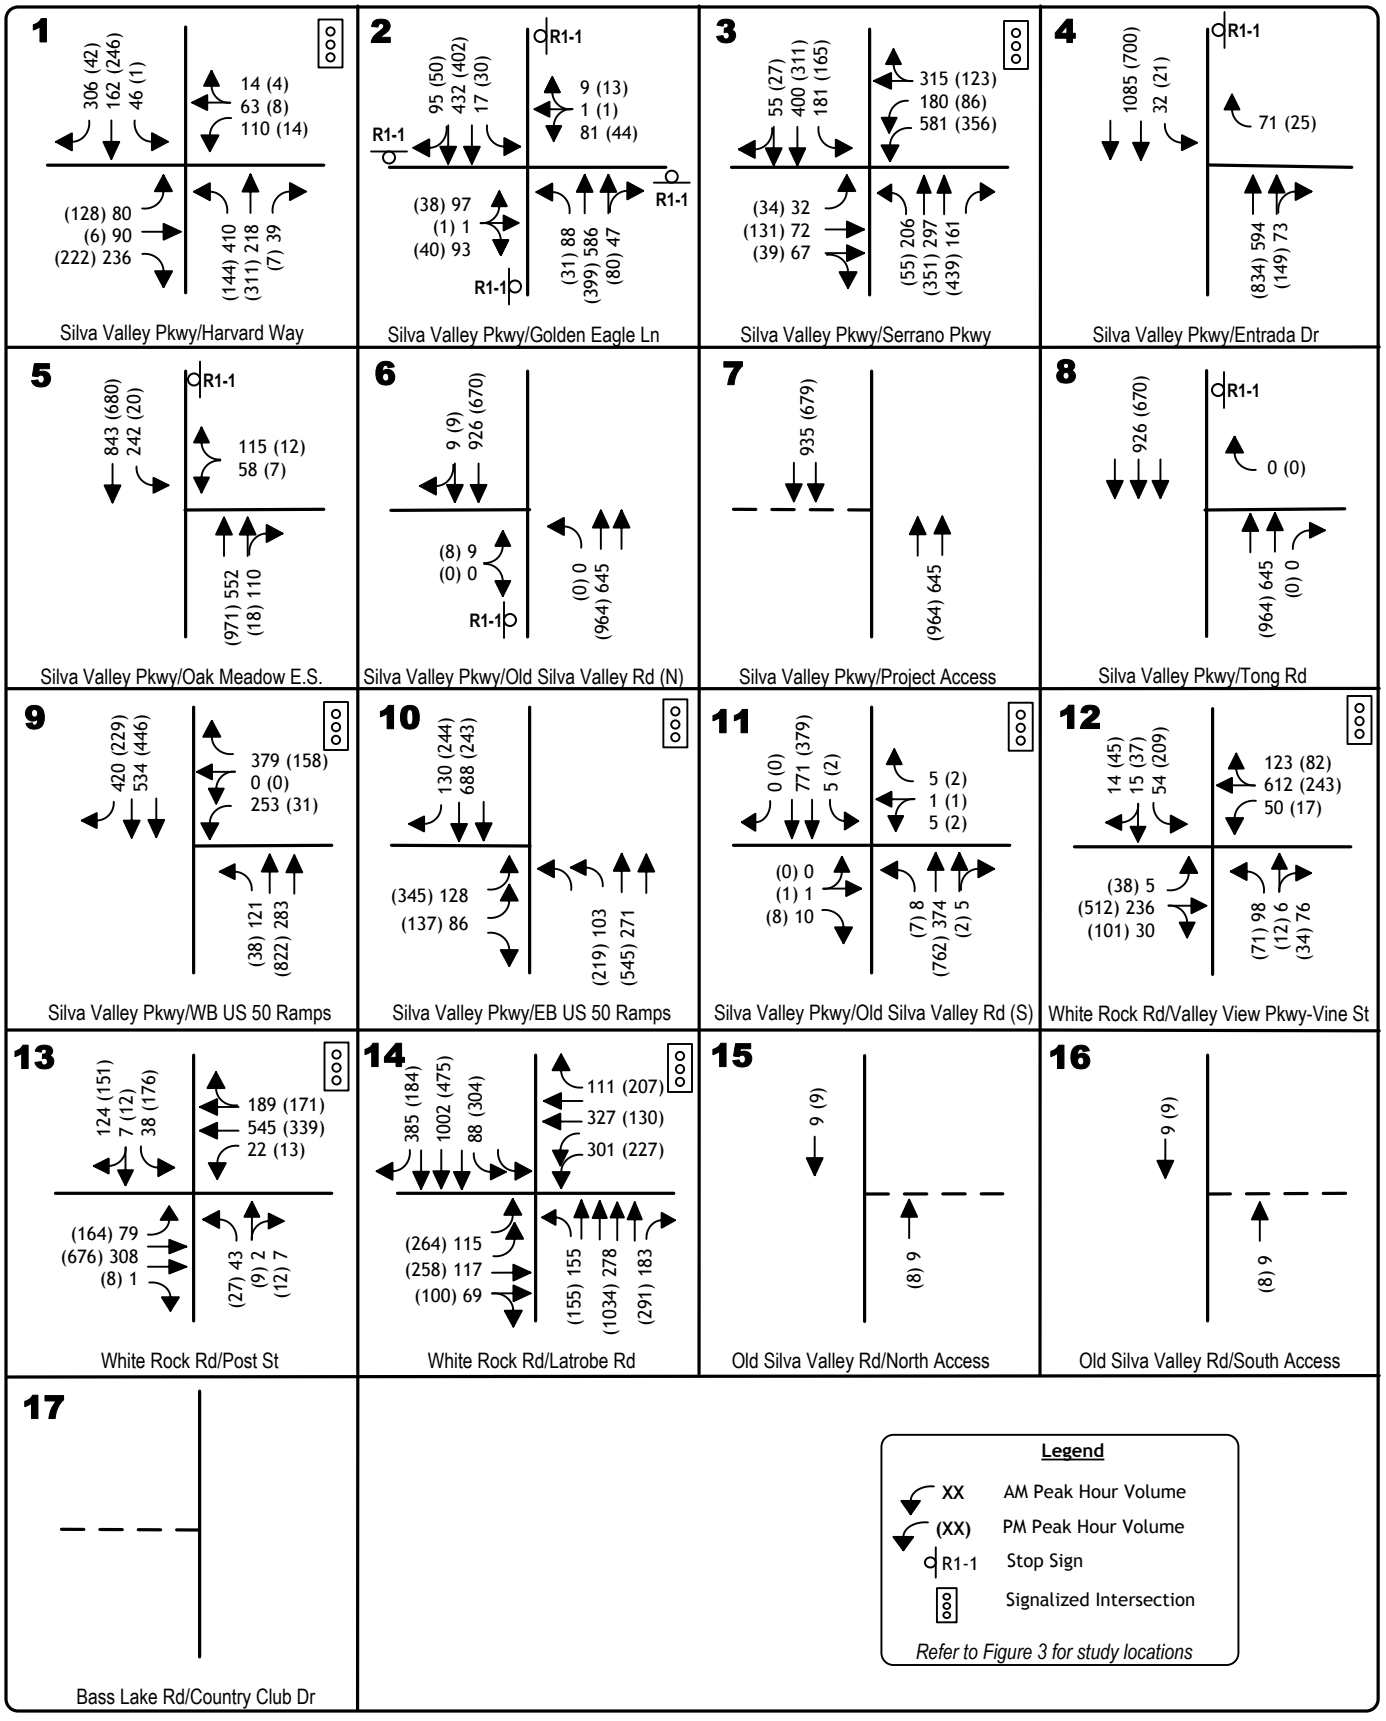
2016 CONDITIONS

2016 conditions were evaluated as the baseline condition and coincide with the opening of the US 50 / Silva Valley Parkway interchange. The countywide regional travel demand forecasting model was used as the basis for developing future volume forecasts in the study area. The 2010 calibrated model was re-run with the interchange in place. A straight line interpolation was then completed between the 2010 and 2035 models along the roadway segments to determine expected growth rates along the study roadways. With the opening of the Silva Valley Parkway interchange it was expected that traffic at the El Dorado Blvd Interchange and throughout the El Dorado Hills area will shift with some roadway segments and intersections experiencing increases or decreases in traffic.

The growth rates were applied to current a.m. and p.m. peak hour turning movements, and the results were balanced using the techniques contained in the Transportation Research Board's (TRB's) National Cooperative Highway Research Program (NCHRP) Report 255, *Highway Traffic Data for Urbanized Area Project Planning and Design*. The NCHRP 255 method applies the individual growth rates to the intersection turning movement volumes and uses an iterative process to balance and adjust the resulting forecasts to match total inbound and outbound flows.

Year 2016 Lane Configurations. The 2016 analysis assumes local improvements have been completed along Silva Valley Parkway with the completion of the US 50 / Silva Valley Parkway interchange. The interchange will include a four lane roadway with a diamond interchange (L-2) for the westbound ramps and an L-7 partial cloverleaf configuration for the eastbound ramps. Old Silva Valley Road will be maintained and connect to Silva Valley Parkway at two locations, about 1,000' north of the westbound ramps and about 1,000' south of the eastbound ramps. The south intersection will be signalized as part of the interchange project while the north intersection will be stop controlled along Old Silva Valley Road. With the interchange completed, the Tong Road intersection will become right-in, right-out access only. The westbound Serrano Parkway approach to Silva Valley Parkway will also be modified by changing the inside through lane to a left turn lane; this approach will include two left turn lanes and a through-right lane. A "soft" turn restriction (i.e. signage) will be added to the Entrada Drive approach to Silva Valley Parkway, restricting left turn movements during peak hours. Traffic in the peak hours will use Village Green Drive to Serrano Parkway and then make a left turn onto southbound Silva Valley Parkway to head south.

2016 Levels of Service



2016 Intersection Levels of Service. Figure 5 summarizes the turning movements and lane configurations for the Baseline 2016 Conditions scenario.

Table 7 summarizes current Levels of Service at the 13 study area intersections during the a.m. and p.m. peak hours. The Silva Valley Parkway / Oak Meadow School intersection will operate below the County's LOS threshold with the minor street approach operating at LOS F during the a.m. peak hour. This intersection meets the peak hour signal warrant in the a.m. peak hour.

2016 TRAFFIC VOLUMES AND LANE CONFIGURATIONS

KD Anderson & Associates, Inc.
Transportation Engineers

2016 Roadway Segments. Table 8 presents existing levels of service for roadway segments based on the thresholds contained in the El Dorado County GP. All roadways except westbound US 50 will operate within acceptable levels of service, at LOS E or better. The westbound lanes, with two general traffic lanes and HOV lane will operate at LOS F in the a.m. peak hour along both segments east and west of the Silva Valley Parkway interchange.

2016 Freeway Ramp Junction Levels of Service. The County's Travel Demand Model was used to develop directional peak hour freeway volumes at the Silva Valley Parkway Interchange. Traffic volumes for 2015 were developed by using the 2010 and 2035 volumes and straight line interpolation. These volumes were then compared to the most recent 2013 peak hour freeway volumes along US 50 east of the Latrobe Road - El Dorado Hills Blvd interchange (PM 0.857). The model results for 2015 are consistent with current freeway volumes, at about 7,000 vehicles per hour. 2016 volumes were developed by interpolating the model volumes, and this methodology was also used to develop 2025 freeway volumes.

The westbound peak a.m. through volume along US 50 is about 4,759 passenger cars per hour (pcph) while the eastbound through volume is about 2,366 pcph. During the p.m. peak hour the westbound through volume is about 2,815 pcph while the eastbound through volume is about 4,573 pcph.

2016 Queuing

Table 10 presents information regarding current peak period queuing in lanes at signalized study intersections. In each case, the available storage has been presented along with current peak hour traffic volumes and the 95th percentile queue length for left turn lanes. On approaches with multiple turn lanes the longest queue is identified.

Most intersections have lane storage capacity that can accommodate peak period queues. Those 95th percentile queues with length exceeding the available storage have been highlighted. The 95th percentile queue exceeds available storage in ten locations.

2016 PLUS PROJECT IMPACTS

Project Characteristics

The development of this project will attract additional traffic to the project site. The amount of additional traffic on a particular section of the street network is dependent upon two factors:

- Trip Generation, the number of new trips generated by the project, and
- Trip Distribution and Assignment, the specific routes that the new traffic takes.

Trip Generation. Trip generation is determined by identifying the type and size of land use being developed. Recognized sources of trip generation data may then be used to calculate the total number of trip ends.

The site is bisected by Silva Valley Parkway. The west side of the project will include 96,900 square feet of retail shopping, a 4,000 square foot fast food restaurant with drive-through window, a 7,500 square foot sit-down restaurant and a 12 fueling position gas station with car wash. The east side of the project will include 106,000 square foot of retail shopping and a gas station with 12 vehicle fueling positions.

The trip generation of the project was computed using trip generation rates published in *Trip Generation* (Institute of Transportation Engineers, 9th Edition, 2013) based on the projected uses. Table 11 displays the daily, a.m. peak hour, and p.m. peak hour trip generation for the site.

Automobile trips generated by commercial projects fit into two categories. Some trips will be made by patrons who would not otherwise be on the local street system and who go out of their way to reach the site. These are **"New"** trips. Other trips will be made by patrons who are already in the roadway network, and are therefore not adding "new" trips to the overall system. **"Pass-by"** trips would be made by motorists who are already driving by the site as part of another trip. Peak hour pass-by trips are common on commuter routes as motorists stop on their way home to visit the neighborhood grocery. **"Diverted-Link"** trips are made by shoppers who are already making a trip to an alternative destination but would instead change their travel pattern to visit the new business which is more conveniently located.

A reduction of new trips was also considered based on 'internally captured' trips. A characteristic of mixed-use development is that trips between the various land uses can be made on the site, and none of these internal trips are made on the major street system. It is reasonable to assume that some trips will be made between the various uses on the sites. An internal capture rate is generally defined as a percentage reduction that is applied to trip generation estimates for individual land uses to account for the trips internal to the site. The methodology contained in NCHRP 684 was used to develop internal trip capture rates. NCHRP identifies six land uses including office, retail, restaurant, cinema/entertainment, residential and hotel. For this project the retail and restaurant uses were used in their estimation tool. Because of the bisected site internal trips also used the Silva Valley Parkway / Old Silva Valley Road intersection to cross between the two sites.

ITE research has suggested typical "pass-by" percentages for various retail land uses where appreciable background traffic occurs. The share of project trips falling into each category can vary over the day. Table 11 presents the "pass-by" reductions and internally captured used for this study. Application of these rates yields a total of 6,145 daily 'pass-by' trips, 260 'pass-by' a.m. peak hour trips and 521 'pass-by' p.m. peak hour trips. Internal trips are projected to account for 840 daily trips, 29 a.m. peak hour trips and 41 p.m. peak hour trips. After accounting for this traffic, the project is expected to generate 8,405 'new' daily trips, 433 'new' a.m. peak hour trips and 723 'new' p.m. peak hour trips.

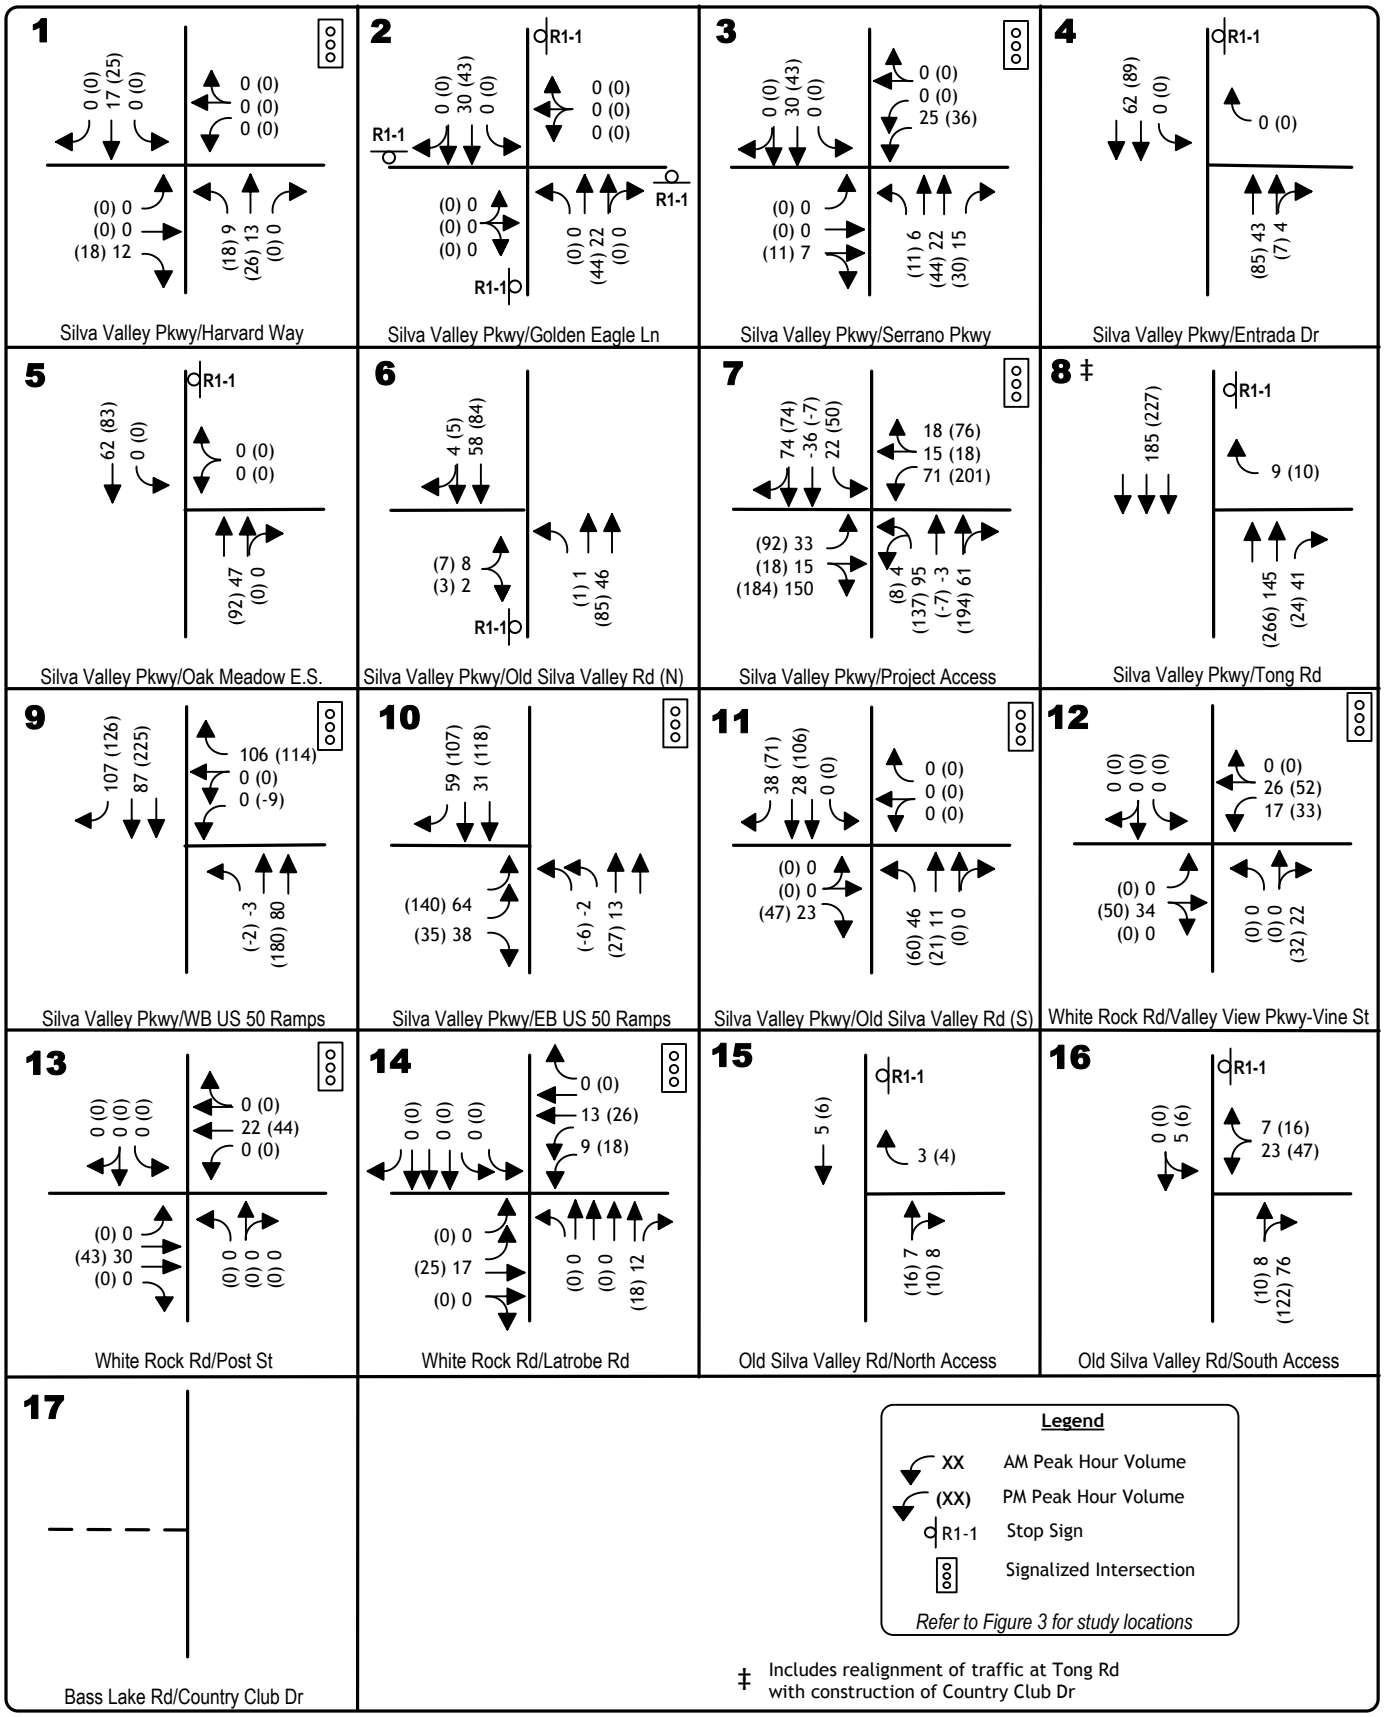
Trip Distribution & Assignment. The distribution of project traffic was developed based on a select zone analysis using the current County traffic model, the project location within the model and adjusting the percentages based on near term development along El Dorado Hills Blvd – Latrobe Road, Silva Valley Parkway and Bass Lake Road. The residential component of the particular traffic analysis zone (TAZ), TAZ #163 was excluded prior to running the model so that the trip distribution reflected specifically the retail portion (i.e. the project) of the TAZ.



'New' project trips are expected to be oriented to the west, south and east in varying percentages, which is shown in Table 12. The distribution of "pass-by trips" is shown in Table 13. As indicated, the directionality of the pass-by trips will vary based on the volume of background traffic on each road during different periods of the day. Figure 6 illustrates the total project trips.

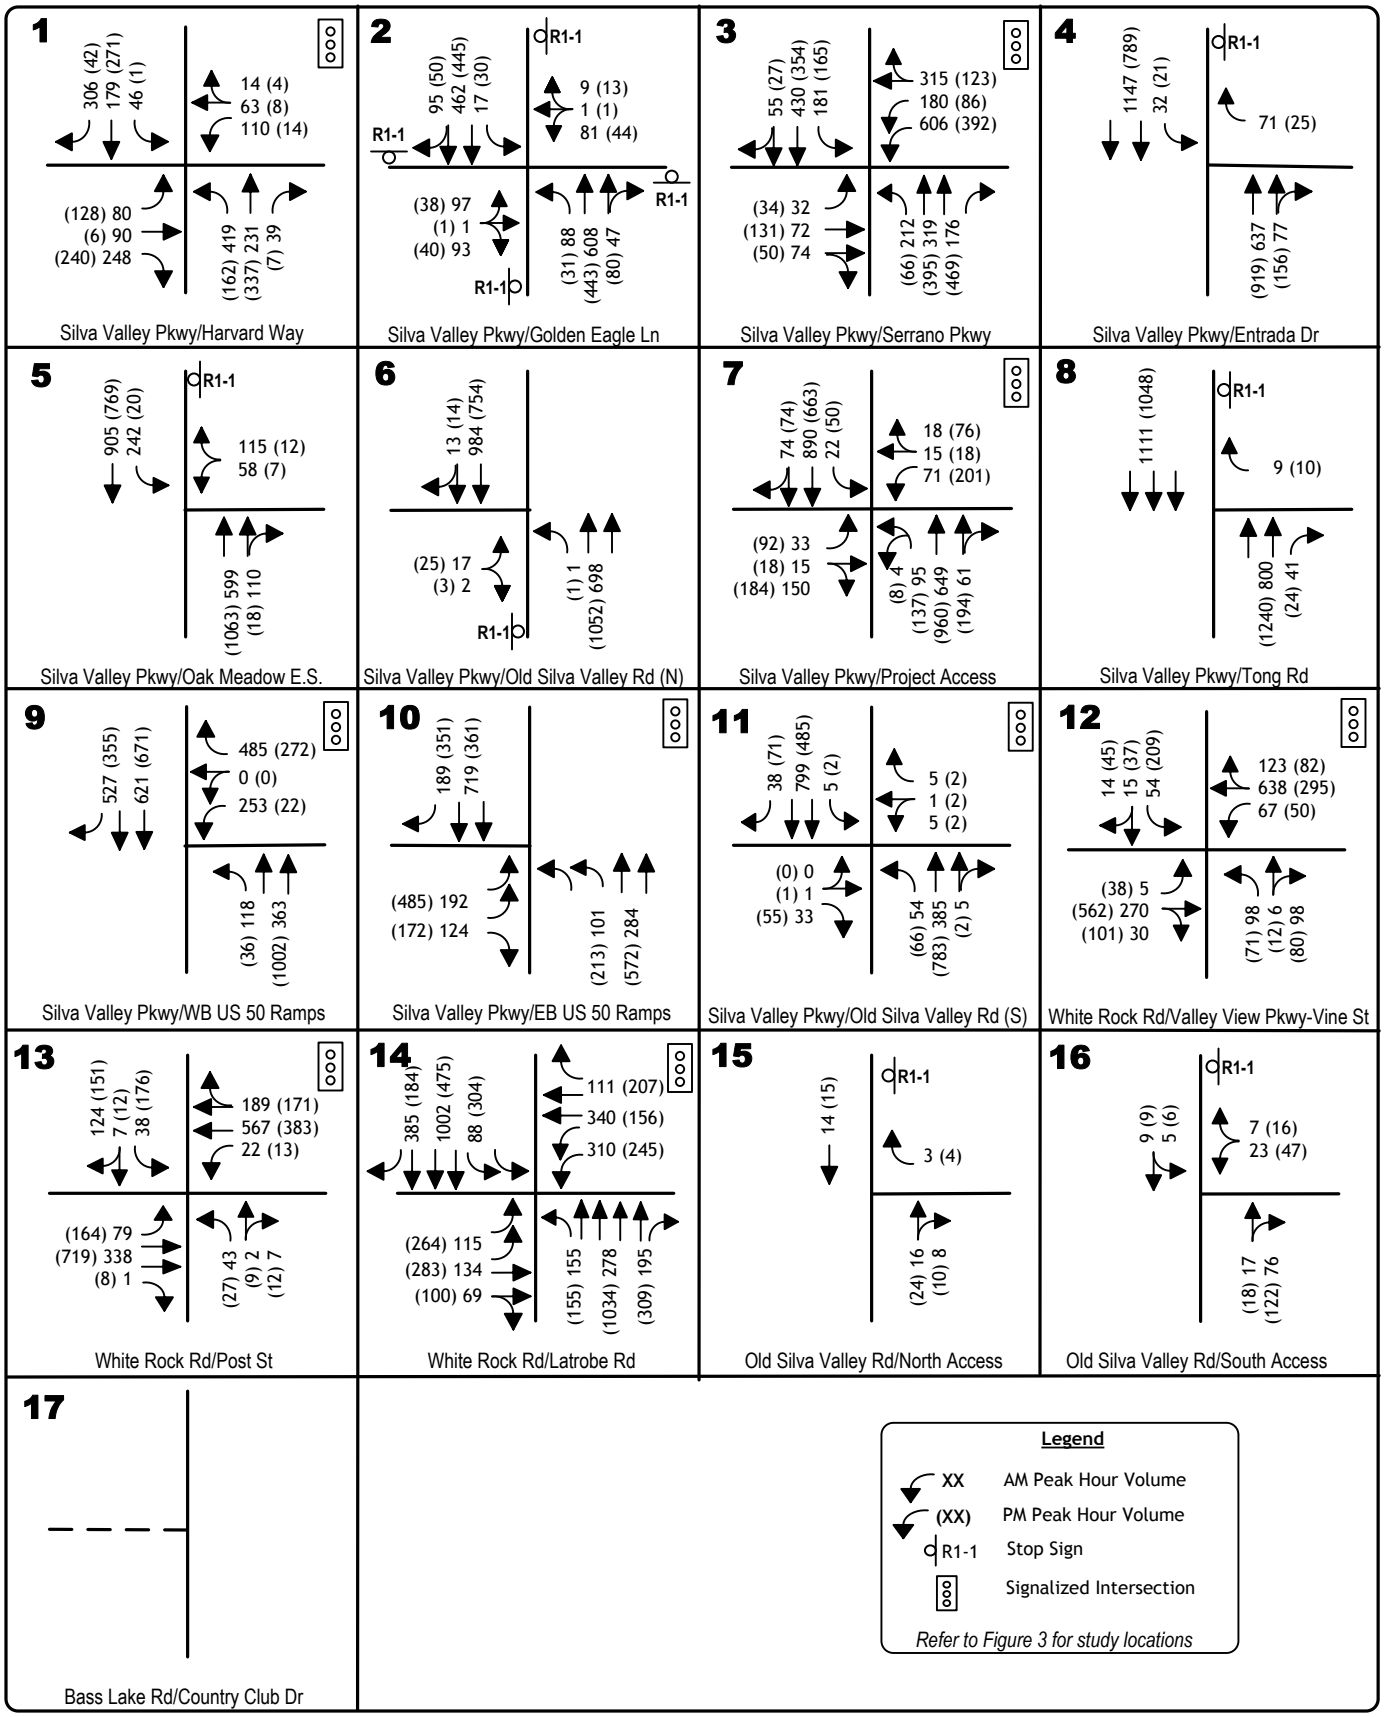
2016, 2025 PROJECT ONLY
TRAFFIC VOLUMES AND LANE CONFIGURATIONS

Project Improvements

Improvements will be made to Silva Valley Parkway and to the local intersections as part of the project. The project will use the existing Tong Road intersection as a right-in, right out driveway access to the gas station and retail shops on the east side of the site. A full access signalized intersection is proposed to provide primary access to the entire site. Left turn lanes, a through lane and a through-right lane will be provided along Silva Valley Parkway with left and through-right lanes provided along the project driveway approaches. Two access driveways will also be constructed along Old Silva Valley Road. The southerly driveway will provide full access and is assumed to include a left turn lane for southbound traffic. The northern driveway will provide right-in, right-out access only.

2016 Plus Project Conditions

The impacts of developing and operating the project uses on the site have been identified by superimposing project traffic onto background conditions. Figure 7 displays the "2016 Plus Project" condition for each study intersection in both a.m. and p.m. peak hours. Resulting intersection Levels of Service were then calculated and used as the basis for evaluating potential project impacts.



2016 plus Project Intersection Levels of Service. Table 14 displays the peak hour Levels of Service at each study intersection comparing the 2016 Baseline Levels of Service with the Levels of Service occurring with this project. The Silva Valley Parkway / Oak Meadow School intersection will operate below the County's LOS threshold with the minor street approach operating at LOS F during the a.m. peak hour. This intersection meets the peak hour signal warrant in the a.m. peak hour.

TRAFFIC VOLUMES AND LANE CONFIGURATIONS

KD Anderson & Associates, Inc.
Transportation Engineers

6260-13 LT 9/1/2015

figure 7

2016 plus Project Roadway Segments. Table 15 presents existing Levels of Service for roadway segments based on the thresholds contained in the El Dorado County GP. With the project all roadways except westbound US 50 will operate within acceptable levels of service, at LOS E or better. The westbound lanes, with two general traffic lanes and HOV lane will operate at LOS F in the AM peak hour along both segments east and west of the Silva Valley Parkway interchange.

2016 plus Project Freeway Ramp Junction Levels of Service. The westbound peak through AM volume along US 50 is about 4,762 passenger cars per hour (pcph) while the eastbound through volume is about 2,364 pcph. During the PM peak hour the westbound through volume is about 2,816 pcph while the eastbound through volume is about 4,577 pcph.

Table 16 presents a summary of existing AM peak hour and PM peak hour LOS at the four ramp junctions. The worksheets presenting the calculation of LOS are included in the technical appendix. All on- and off- ramps are projected to operate at LOS D or better.

2016 plus Project Queuing

Table 17 presents information regarding current peak period queuing in lanes at signalized study intersections. The available storage is been presented along with projected peak hour traffic volumes and the 95th percentile queue length for left turn lanes. On approaches with multiple turn lanes the longest queue is identified.

Most intersections have lane storage capacity that can accommodate peak period queues. Those 95th percentile queues with length exceeding the available storage have been highlighted. The 95th percentile queue exceeds available storage in eleven locations.

Non-Automotive Transportation Impacts. Development of the project may result in pedestrians or bicyclists traveling to the site. Pedestrians and cyclists will have access to the project from the neighborhoods along Silva Valley Parkway to the north including the trail system that connects subdivisions to Silva Valley Parkway. Cyclists using Silva Valley Parkway could be expected to stop at the project as part of ride with origin and destination elsewhere. Pedestrian and bicycle traffic from the south will be able to use Silva Valley Parkway or Old Silva Valley Road to access the project; it is expected that most would use Old Silva Valley Road as this provides a bypass from interchange traffic.

Emergency Vehicle Access. The primary access for fire and medical response could be from any of three stations, El Dorado Hills Station 84 located along Francisco Drive, from Station 86 along Bass Lake Road, or from Station 87, the Golden Foothill Station. Access to the east side of the site will allow full access along Silva Valley Parkway from either the Tong Road (gas station entrance) or project access intersections along Silva Valley Parkway while response to the west side will be full access from either the Silva Valley Parkway / Main Access intersection or via Old Silva Valley Road.

NEAR TERM FUTURE IMPACTS (2025)

Basis for Traffic Volume Forecasts

The analysis of the near term 2025 cumulative condition is intended to consider the impact of this project ten years from the current year. Under El Dorado County guidelines the 2025 volumes were calculated using a straight line interpolation between existing traffic levels and projected 2035 traffic projections. The study intersections were balanced using the techniques described in NCHRP Report 255 using the interpolated roadway segment volumes.

2025 Lane Configurations. The configuration of the study area streets and intersections will remain as they are projected to exist with the opening of the Silva Valley Parkway / US 50 interchange in 2016.

2025 Levels of Service

2025 Intersection Levels of Service. Figure 8 displays the 2025 traffic volumes for each study intersection under the No Project conditions. Table 18 summarizes 2025 Levels of Service at the 13 study area intersections during the a.m. and p.m. peak hours. One intersection will operate below the County's LOS threshold, Silva Valley Parkway at Oak Meadow School which will operate at LOS F during the A.M. peak hour. This intersection meets the peak hour signal warrant in the A.M. peak hour.

2025 TRAFFIC VOLUMES AND LANE CONFIGURATIONS

KD Anderson & Associates, Inc.
Transportation Engineers

2025 Roadway Segments. Table 19 presents existing Levels of Service for roadway segments based on the thresholds contained in the El Dorado County GP. All roadways except westbound US 50 will operate within acceptable levels of service, at LOS E or better. The westbound lanes, with two general traffic lanes and HOV lane will operate at LOS F in the AM peak hour along both segments east and west of the Silva Valley Parkway interchange.

2025 Freeway Ramp Junction Levels of Service. As indicated earlier the County's Travel Demand Model and straight line interpolation was used to develop directional peak hour freeway volumes at the Silva Valley Parkway Interchange.

The westbound peak AM through volume along US 50 is about 4,942 passenger cars per hour (pcph) while the eastbound through volume is about 2,758 pcph. During the PM peak hour the westbound through volume is about 3,146 pcph while the eastbound through volume is about 4,880 pcph.

Table 20 presents a summary of existing AM peak hour and PM peak hour LOS at the four ramp junctions. The worksheets presenting the calculation of LOS are included in the technical appendix. All on- and off- ramps are projected to operate at LOS D or better.

2025 Queuing. Table 21 presents information regarding current peak period queuing in lanes at signalized study intersections. In each case, the available storage has been presented along with current peak hour traffic volumes and the 95th percentile queue length for left turn lanes. On approaches with multiple turn lanes the longest queue is identified.

Most intersections have lane storage capacity that can accommodate peak period queues. Those 95th percentile queues with length exceeding the available storage have been highlighted. The 95th percentile queue exceeds available storage in nine locations.

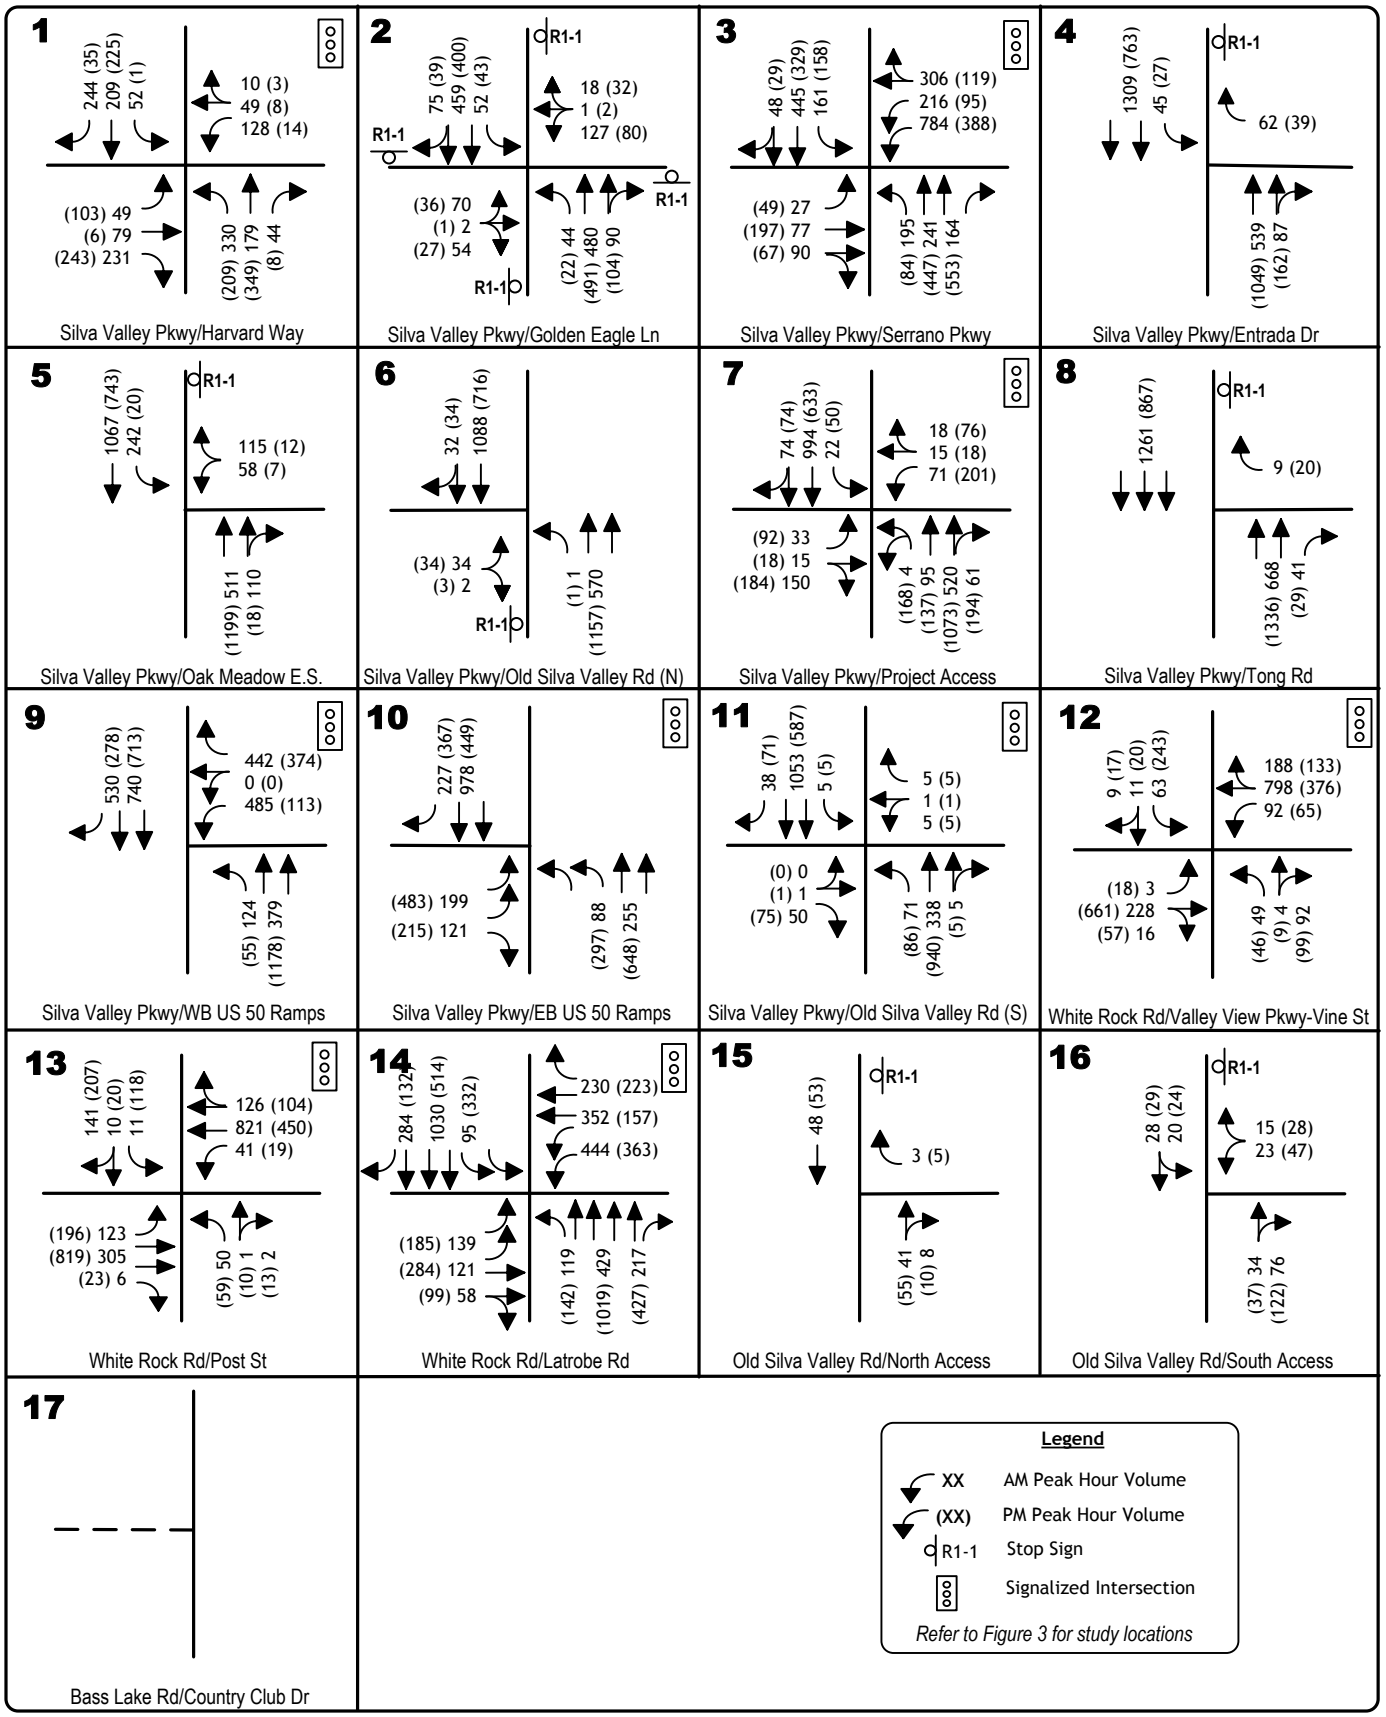
2025 Plus Project Conditions



The impacts of developing and operating the project uses on the site have been identified by superimposing project traffic onto background 2025 conditions. Figure 9 displays the "2025 Plus Project" condition for each study intersection in both a.m. and p.m. peak hours. Resulting intersection Levels of Service were then calculated and used as the basis for evaluating potential project impacts.

2025 plus Project Intersection Levels of Service. Table 22 displays the peak hour Levels of Service at each study intersection comparing the "2025 No Project" Levels of Service with the Levels of Service occurring under "2025 Plus Project" conditions. One intersection, the Silva Valley Parkway / Oak Meadow School intersection will operate below the County LOS threshold. The minor street approach will operate at LOS F during the A.M. peak hour. This intersection meets the peak hour signal warrant in the A.M. peak hour.

2025 plus Project Roadway Segments. Table 23 presents 2025 plus Project Levels of Service for roadway segments based on the thresholds contained in the El Dorado County GP. With the project all roadways except westbound US 50 will operate within acceptable levels of service, at LOS E or better. The westbound lanes, with two general traffic lanes and HOV lane will operate at LOS F in the AM peak hour along both segments east and west of the Silva Valley Parkway interchange.

2025 plus Project Freeway Ramp Junction Levels of Service. The westbound peak AM through volume along US 50 is about 4,948 passenger cars per hour (pcph) while the eastbound through volume is about 2,752 pcph. During the PM peak hour the westbound through volume is about 3,146 pcph while the eastbound through volume is about 4,890 pcph.

Table 24 presents a summary of 2025 plus Project AM peak hour and PM peak hour LOS at the four ramp junctions. The worksheets presenting the calculation of LOS are included in the technical appendix. All on- and off- ramps are projected to operate at LOS D or better.

Notes: - WB = westbound. EB = eastbound Density expressed in passenger cars per mile per lane.								

2025 plus Project Queuing. Table 25 presents information regarding current peak period queuing in lanes at signalized study intersections. The available storage is been presented along with projected peak hour traffic volumes and the 95th percentile queue length for left turn lanes. On approaches with multiple turn lanes the longest queue is identified.

Most intersections have lane storage capacity that can accommodate peak period queues. Those 95th percentile queues with length exceeding the available storage have been highlighted. The 95th percentile queue exceeds available storage in thirteen locations.

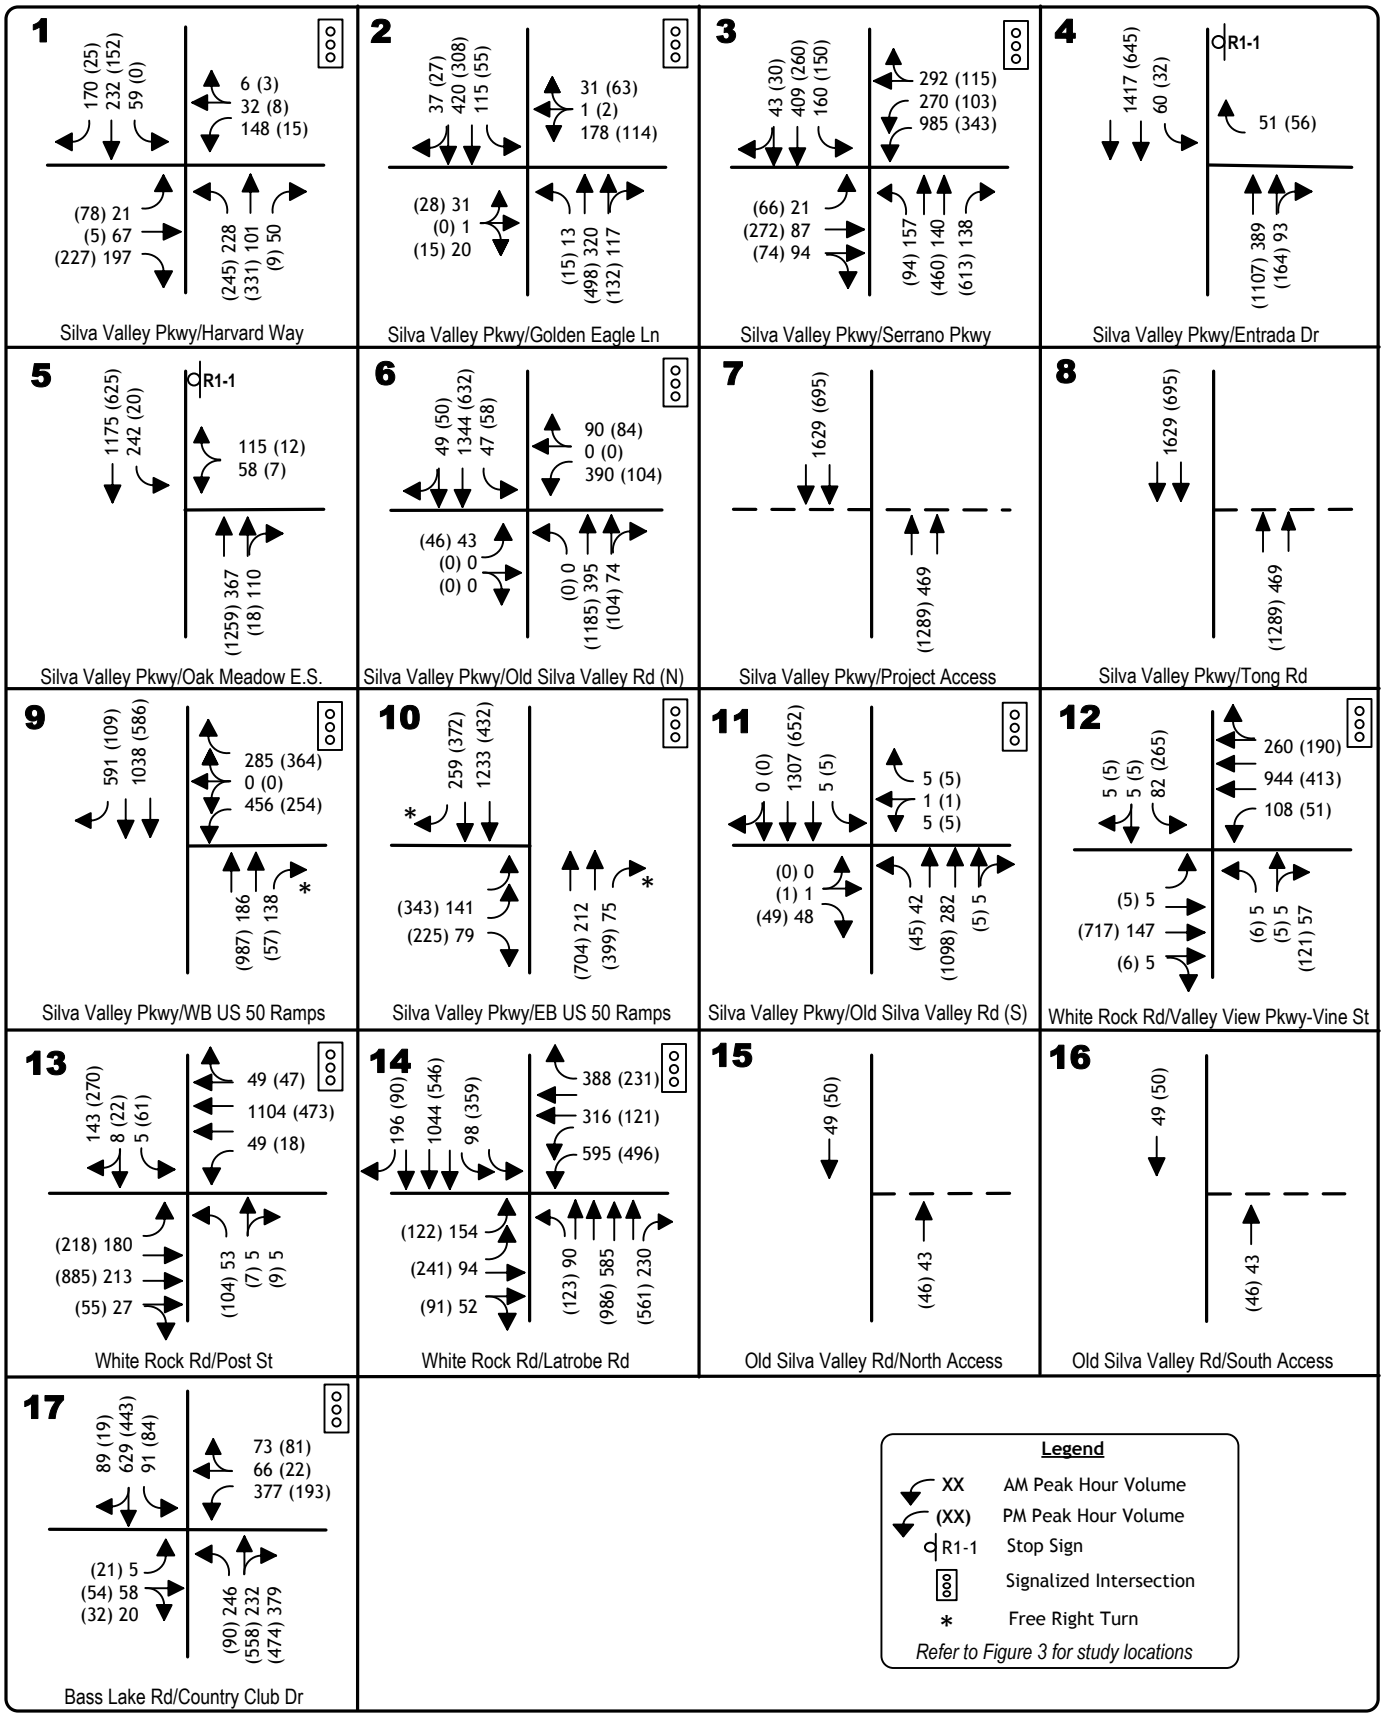
CUMULATIVE IMPACTS (2035)

The analysis of the long term cumulative impact analysis is intended to consider the impact of this project within the context of conditions occurring under the El Dorado County General Plan in the Year 2035. The Bass Lake Road / Country Club Road intersection was also analyzed as part of the Cumulative Impacts scenario.

Basis for Analysis - Regional Traffic Growth. The most recent countywide regional travel demand forecasting model was used as the basis for developing future volumes forecasts in the study area. The study intersections were balanced using the techniques described in NCHRP Report 255.

Year 2035 Lane Configurations. The cumulative analysis assumes regional circulation system improvements will be completed between 2026 and 2035 and are identified in the County's Capital Improvement Program (CIP). The identified projects include:

- Modification of the US 50 / Silva Valley Interchange; this includes addition of free right turn on-ramps for both eastbound and westbound directions and a free northbound on-ramp to eastbound US 50;
- the completion of Country Club Drive from Silva Valley Parkway to east of Bass Lake Road. This includes a two-lane roadway and realignment of Country Club Drive in various segments between Silva Valley Parkway and Bass Lake Road. The Country Club Drive extension is assumed to intersect the Silva Valley Parkway / Old Silva Valley Road intersection. The Silva Valley Parkway / Old Silva Valley Road - Country Club Drive intersection is assumed to be signalized with the following lane configuration – left lane, through lane and through-right lanes along Silva Valley Parkway and a left lane and a through-right lane along the Old Silva Valley Road – Country Club Drive approaches. In addition, it is assumed that the Bass Lake Road intersection will be signalized with left turn lanes installed along each approach to the intersection;
- widening of White Rock Road from west of Old Silva Valley Road to just east of Post Street; this includes widening of the segment to a six lane roadway;
- addition of a third general use westbound lane on US 50; and
- signalization of the Silva Valley Parkway / Golden Eagle Lane intersection.



2035 Levels of Service

2035 Intersection Levels of Service. Figure 10 displays the 2035 traffic volumes for each study intersection under the No Project conditions. Table 26 summarizes 2035 Levels of Service at the 14 study area intersections during the a.m. and p.m. peak hours. One intersection, Silva Valley Parkway at Oak Meadow School will operate below the County's LOS threshold. This intersection will operate at LOS F during the A.M. peak hour. The intersection Silva Valley Parkway / Oak Meadow School intersection meets the peak hour signal warrant in the A.M. peak hour.

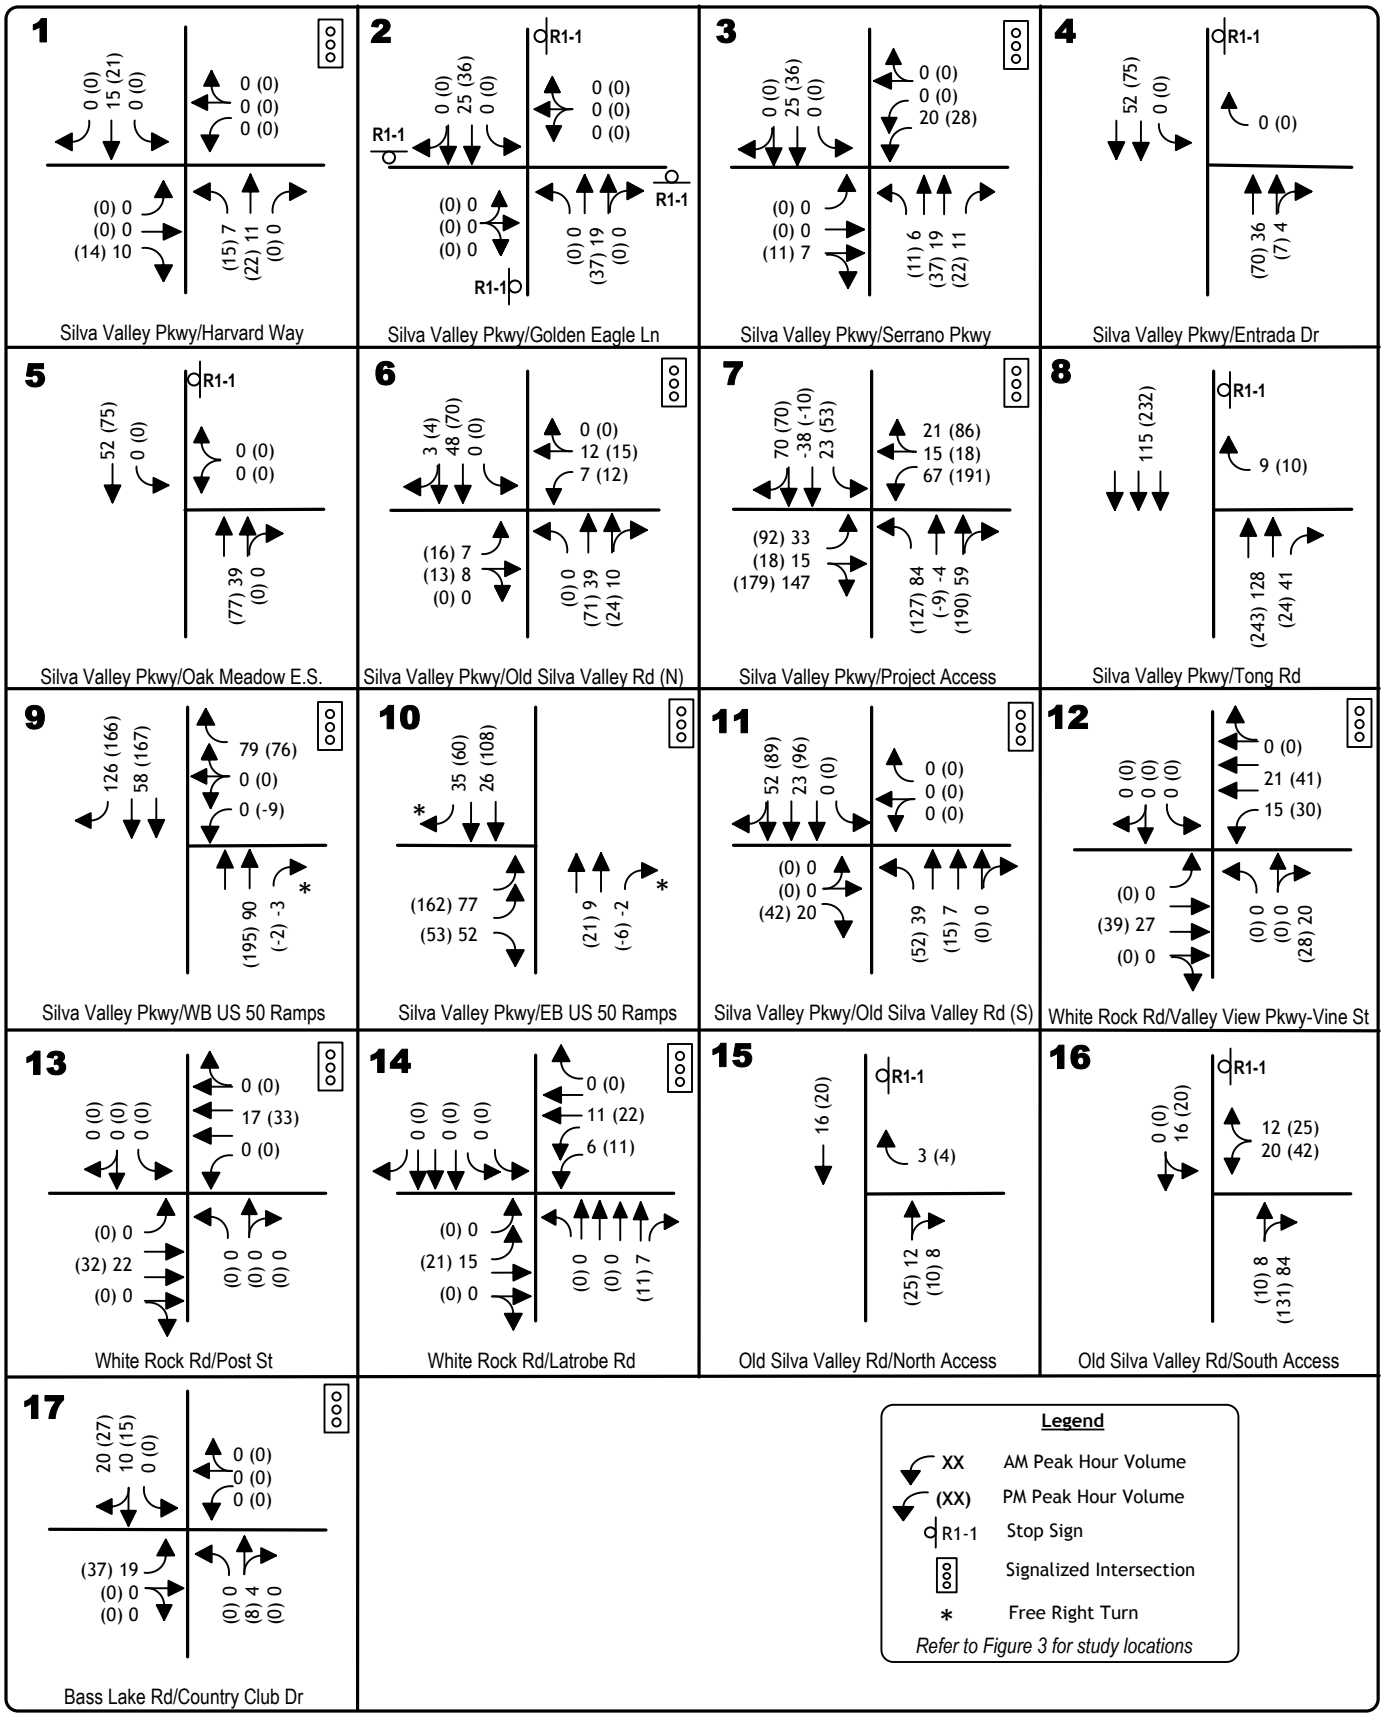
2035 Plus Project Conditions

The impacts of developing and operating the project uses on the site were identified by superimposing project traffic onto background 2035 conditions.



Trip Distribution & Assignment. The distribution of project traffic in the 2035 buildout condition was developed based on the select zone analysis using the County's traffic model and the project location within the model. The residential component of the TAZ #163 was excluded so that the trip distribution reflected specifically the retail portion (i.e. the project) of the TAZ at future year buildout.

'New' project trips are expected to be oriented to the west, south and east in varying percentages, which is shown in Table 30. Figure 11 illustrates the total project trips.

TABLE 30
PROJECT NEW TRIP DISTRIBUTION

Route	% of Total Trips
North on Silva Valley Parkway	
North on Silva Valley Parkway	6%
West on Harvard Way	4%
West on Serrano Parkway	3%
East on Serrano Parkway	6%
East on Entrada Dr	2%
South on White Rock Road	
West of Latrobe Road	6%
South on Latrobe Road	3%
between Valley View Parkway and Post St	2%
south on Valley View Parkway	8%
East	
East on Tong Road / Country Club Drive	12%
East on US 50	7%
West	
West on US 50	41%
Total	100%

Figure 12 presents the "2035 Plus Project" condition for each study intersection in both a.m. and p.m. peak hours. Resulting intersection Levels of Service were then calculated and used as the basis for evaluating potential project impacts.

Intersection Levels of Service. Table 31 displays the peak hour Levels of Service at each study intersection comparing the "2035 No Project" Levels of Service with the Levels of Service occurring under "2035 Plus Project" Levels of Service conditions. One intersection, the Silva Valley Parkway / Oak Meadow School intersection will operate below the County LOS threshold. This intersection will operate with the minor street approach at LOS F during the A.M. peak hour. The intersection meets the peak hour signal warrant in the A.M. peak hour.

2035 plus Project Roadway Segments. Table 32 presents existing Levels of Service for roadway segments based on the thresholds contained in the El Dorado County GP. All roadways will operate within acceptable levels of service, at LOS E or better.

2035 plus Project Freeway Ramp Junction Levels of Service. Table 26 presents a summary of 2035 plus Project AM peak hour and PM peak hour LOS at the six ramp junctions. The worksheets presenting the calculation of LOS are included in the technical appendix. All on- and off- ramps are projected to operate at LOS D or better.

Silva Valley Parkway WB On-Ramp (Loop)	5,155	135	14.5	B	3,514	55	2.8	A

Notes: - WB = westbound. EB = eastbound
Density expressed in passenger cars per mile per lane.

Queuing. Table 27 presents information regarding current peak period queuing in lanes at signalized study intersections. The available storage is been presented along with projected peak hour traffic volumes and the 95th percentile queue length for left turn lanes. On approaches with multiple turn lanes the longest queue is identified.

Most intersections have lane storage capacity that can accommodate peak period queues. Those 95th percentile queues with length exceeding the available storage have been highlighted. The 95th percentile queue exceeds available storage in fifteen locations.

FINDINGS / RECOMMENDATIONS / MITIGATIONS

The preceding analysis has identified project impacts that may occur without mitigation. The text that follows identifies a strategy for mitigating the impacts of the proposed project. Recommendations are identified for improving facilities that have deficiencies in the roadway network without the project. If the project causes a significant impact, mitigations are identified for the facility.

Existing Conditions

Two study intersections will operate at LOS F. These include the Silva Valley Parkway / Entrada Drive intersection and the Silva Valley Parkway / Oak Meadow Elementary School driveway. Both intersections currently meet the peak hour traffic signal warrant in the A.M. peak hour.

- The County intends to install a "soft" prohibition (i.e. restricted left turn signing) along Entrada Drive to restrict left turn movements from Entrada Drive to southbound Silva Valley Parkway coinciding with the opening of the Silva Valley interchange. Left turning traffic will use Serrano Parkway to enter onto Silva Valley Parkway. The LOS will improve to acceptable conditions with this modification.

- A traffic signal should be installed at the Silva Valley Parkway / Oak Meadow Elementary School driveway. This will improve the intersection level of service to LOS B conditions (12.8 seconds).

No other recommendations are made.

2016 Conditions

- One study intersection, the Silva Valley Parkway / Oak Meadow Elementary School driveway will operate at LOS F. The intersection will meet the peak hour traffic signal warrant in the A.M. peak hour. As noted in the Existing Conditions a traffic signal is identified and should be installed at the school driveway. This will improve the intersection level of service to LOS B conditions (14.4 seconds).

- The westbound roadway along US 50 between Bass Lake Road and Silva Valley Parkway will operate at LOS F in 2016. The County has an identified project, #71330 that will add an auxiliary lane to westbound US 50 on this segment. The project is identified for construction between FY 24/25 and FY 33/34.

- The westbound roadway along US 50 between Silva Valley Parkway and El Dorado Hills Blvd will operate at LOS F in 2016. The County has an identified project, #53120 that will add an auxiliary lane to westbound US 50 on this segment. The project is identified for construction between FY 24/25 and FY 33/34.

No other recommendations are made.

Mitigations for 2016 + Project Conditions

- The project shall contribute its fair share to the cost of regional circulation improvements via the existing countywide traffic impact mitigation (TIM) fee program.

- The Silva Valley Parkway / Oak Meadow Elementary School driveway will operate below the County's LOS threshold. This intersection will operate at LOS F in the A.M. peak hour and meet the peak hour traffic signal warrant in that time period. With signalization the intersection will operate at LOS B (15.4 seconds). The project should contribute their fair share to construct the traffic signal. The fair share is determined by dividing the project traffic by the difference in Cumulative plus Project traffic minus Existing traffic. The fair share for this project is 9.8%.

- The westbound roadway along US 50 between Bass Lake Road and Silva Valley Parkway will operate at LOS F under 2016 plus Project conditions. The County has an identified project, #71330 that will add an auxiliary lane to westbound US 50 on this segment. This project is identified for construction between FY 24/25 and FY 33/34. Until the lane is added this segment will operate with a **significant and unavoidable impact**.

- The westbound roadway along US 50 between Silva Valley Parkway and El Dorado Hills Blvd will operate at LOS F under 2016 plus Project conditions. The County has an identified project, #53120 that will add an auxiliary lane to westbound US 50 on this segment. The project is identified for construction between FY 24/25 and FY 33/34. Until the lane is added this segment will operate with a **significant and unavoidable impact**.

No other mitigations are identified.

2025 Conditions

- One study intersection, the Silva Valley Parkway / Oak Meadow Elementary School driveway will operate at LOS F and will meet the peak hour traffic signal warrant in the A.M. peak hour. As noted in the Existing Conditions a traffic signal is identified and should be installed at the school driveway. This will improve the intersection level of service to LOS B conditions (13.1 seconds).

- The westbound roadway along US 50 between Bass Lake Road and Silva Valley Parkway will operate at LOS F in 2016. The County has an identified project, #71330 that will add an auxiliary lane to westbound US 50 on this segment. The project is identified for construction between FY 24/25 and FY 33/34.

- The westbound roadway along US 50 between Silva Valley Parkway and El Dorado Hills Blvd will operate at LOS F in 2016. The County has an identified project, #53120 that will add an auxiliary lane to westbound US 50 on this segment. The project is identified for construction between FY 24/25 and FY 33/34.

No other recommendations are made.

Mitigations for 2025 + Project Conditions

- The Silva Valley Parkway / Oak Meadow Elementary School driveway will operate below the County's LOS threshold. This intersection will operate at LOS F in the A.M. peak hour and meet the peak hour traffic signal warrant in that time period. With signalization the intersection will operate at LOS B (13.5 seconds). The fair share has been identified in the 2016 plus Project Mitigations.

- The westbound roadway along US 50 between Bass Lake Road and Silva Valley Parkway will operate at LOS F under 2016 plus Project conditions. The County has an identified project, #71330 that will add an auxiliary lane to westbound US 50 on this segment. This project is identified for construction between FY 24/25 and FY 33/34. Until the lane is added this segment will operate with a **significant and unavoidable impact**.

- The westbound roadway along US 50 between Silva Valley Parkway and El Dorado Hills Blvd will operate at LOS F under 2016 plus Project conditions. The County has an identified project, #53120 that will add an auxiliary lane to westbound US 50 on this segment. The project is identified for construction between FY 24/25 and FY 33/34. Until the lane is added this segment will operate with a **significant and unavoidable impact**.

No other mitigations are identified.

2035 Conditions

One intersection will operate at an LOS F condition. This is the Silva Valley Parkway / Oak Meadow Elementary School driveway which will meet the peak hour signal warrant in the A.M. peak hour.

- As noted in the Existing Conditions a traffic signal is identified and should be installed at the school driveway. This will improve the intersection level of service to an LOS A condition (8.6 seconds).

No other improvement recommendations have been made.

Mitigations for 2035 + Project Conditions

- The Silva Valley Parkway / Oak Meadow Elementary School driveway will operate below the County's LOS threshold. This intersection will operate at LOS F in the A.M. peak hour and meet the peak hour traffic signal warrant in that time period. With signalization the intersection will operate at LOS B (8.7 seconds). The fair share has been identified in the 2016 plus Project Mitigations.

No other mitigations are identified.

Intersection Summary

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.
m Volume for 95th percentile queue is metered by upstream signal.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Upstream Adj Ramp		Downstream Adj Ramp
☐ Yes ☐ On	Freeway Number of Lanes, N: 4	☐ Yes ☐ On
☑ No ☐ Off	Ramp Number of Lanes, N: 1	☑ No ☐ Off
L_{up} = ft	Acceleration Lane Length, L_A:	L_{down} = ft
V_u = veh/h	Deceleration Lane Length L_D: 1000	V_D = veh/h
	Freeway Volume, V_F: 5145	
	Ramp Volume, V_R: 741	
	Freeway Free-Flow Speed, S_{FF}: 55.0	
	Ramp Free-Flow Speed, S_{FR}: 35.0	

Conversion to pc/h Under Base Conditions

(pc/h)	V (Veh/hr)	PHF	Terrain	%Truck	%Rv	f_{HV}	f_p	$v = V/PHF \times f_{HV} \times f_p$
Freeway	5145	0.94	Level	3	1	0.983	1.00	5566
Ramp	741	0.94	Level	3	1	0.983	1.00	802
UpStream								
DownStream								

Merge Areas

Estimation of v_{12}

$V_{12} = V_F (P_{FM})$

L_{EQ} = (Equation 13-6 or 13-7)

P_{FM} = using Equation (Exhibit 13-6)

V_{12} = pc/h

V_3 or V_{av34} pc/h (Equation 13-14 or 13-17)

Is V_3 or V_{av34} > 2,700 pc/h? ☐ Yes ☐ No

Is V_3 or V_{av34} > 1.5 * V_{12}/2 ☐ Yes ☐ No

If Yes, V_{12a} = pc/h (Equation 13-16, 13-18, or 13-19)

Capacity Checks

	Actual	Capacity		LOS F?
V_{FO}		Exhibit 13-8		

Flow Entering Merge Influence Area

	Actual	Max Desirable		Violation?
V_{R12}		Exhibit 13-8		

Level of Service Determination (if not F)

$D_R = 5.475 + 0.00734\ v_R + 0.0078\ V_{12} - 0.00627\ L_A$

D_R = (pc/mi/ln)

LOS = (Exhibit 13-2)

Speed Determination

M_S = (Exibit 13-11)

S_R = mph (Exhibit 13-11)

S_0 = mph (Exhibit 13-11)

S = mph (Exhibit 13-13)

Diverge Areas

Estimation of v_{12}

$V_{12} = V_R + (V_F - V_R)P_{FD}$

L_{EQ} = (Equation 13-12 or 13-13)

P_{FD} = 0.436 using Equation (Exhibit 13-7)

V_{12} = 2879 pc/h

V_3 or V_{av34} 1343 pc/h (Equation 13-14 or 13-17)

Is V_3 or V_{av34} > 2,700 pc/h? ☐ Yes ☑ No

Is V_3 or V_{av34} > 1.5 * V_{12}/2 ☐ Yes ☑ No

If Yes, V_{12a} = pc/h (Equation 13-16, 13-18, or 13-19)

Capacity Checks

	Actual	Capacity		LOS F?

	Actual	Capacity		LOS F?
V_F		Exhibit 13-8		
$V_{FO} = V_F - V_R$		Exhibit 13-8		
V_R		Exhibit 13-10		

Flow Entering Diverge Influence Area

	Actual	Max Desirable		Violation?
V_{12}		Exhibit 13-8		

Level of Service Determination (if not F)

$D_R = 4.252 + 0.0086 V_{12} - 0.009 L_D$

D_R = (pc/mi/ln)

LOS = (Exhibit 13-2)

Speed Determination

D_s = (Exhibit 13-12)

S_R = mph (Exhibit 13-12)

S_0 = mph (Exhibit 13-12)

S = mph (Exhibit 13-13)

RAMPS AND RAMP JUNCTIONS WORKSHEET

General Information / Site Information

Analyst	Shijo	Freeway/Dir of Travel	US 50 WB
Agency or Company	KD Anderson & Associates	Junction	Silva Valley WB Off-Ramp
Date Performed	4/7/2015	Jurisdiction	El Dorado County
Analysis Time Period	PM Peak Hour	Analysis Year	2035

Project Description 2035 No EDH 52 Project

Inputs

Upstream Adj Ramp		Downstream Adj Ramp
☐ Yes ☐ On	Freeway Number of Lanes, N: 4	☐ Yes ☐ On
☑ No ☐ Off	Ramp Number of Lanes, N: 1	☑ No ☐ Off
L_{up} = ft	Acceleration Lane Length, L_A:	L_{down} = ft
V_u = veh/h	Deceleration Lane Length L_D: 1000	V_D = veh/h
	Freeway Volume, V_F: 3514	
	Ramp Volume, V_R: 618	
	Freeway Free-Flow Speed, S_{FF}: 55.0	
	Ramp Free-Flow Speed, S_{FR}: 35.0	

Conversion to pc/h Under Base Conditions

(pc/h)	V (Veh/hr)	PHF	Terrain	%Truck	%Rv	f_{HV}	f_p	v = V/PHF x f_{HV} x f_p
Freeway	3514	0.94	Level	3	1	0.983	1.00	3802
Ramp	618	0.94	Level	3	1	0.983	1.00	669
UpStream								
DownStream								

Merge Areas

Estimation of v_{12}

$V_{12} = V_F (P_{FM})$

L_{EQ} = (Equation 13-6 or 13-7)

P_{FM} = using Equation (Exhibit 13-6)

V_{12} = pc/h

V_3 or V_{av34} pc/h (Equation 13-14 or 13-17)

Is V_3 or V_{av34} > 2,700 pc/h? ☐ Yes ☐ No

Is V_3 or V_{av34} > 1.5 * V_{12}/2 ☐ Yes ☐ No

If Yes, V_{12a} = pc/h (Equation 13-16, 13-18, or 13-19)

Capacity Checks

	Actual	Capacity		LOS F?
V_{FO}		Exhibit 13-8		

Flow Entering Merge Influence Area

	Actual	Max Desirable		Violation?
V_{R12}		Exhibit 13-8		

Level of Service Determination (if not F)

$D_R = 5.475 + 0.00734\ v_R + 0.0078\ V_{12} - 0.00627\ L_A$

D_R = (pc/mi/ln)

LOS = (Exhibit 13-2)

Speed Determination

M_S = (Exibit 13-11)

S_R = mph (Exhibit 13-11)

S_0 = mph (Exhibit 13-11)

S = mph (Exhibit 13-13)

Diverge Areas

Estimation of v_{12}

$V_{12} = V_R + (V_F - V_R)P_{FD}$

L_{EQ} = (Equation 13-12 or 13-13)

P_{FD} = 0.436 using Equation (Exhibit 13-7)

V_{12} = 2035 pc/h

V_3 or V_{av34} 883 pc/h (Equation 13-14 or 13-17)

Is V_3 or V_{av34} > 2,700 pc/h? ☐ Yes ☑ No

Is V_3 or V_{av34} > 1.5 * V_{12}/2 ☐ Yes ☑ No

If Yes, V_{12a} = pc/h (Equation 13-16, 13-18, or 13-19)

Capacity Checks

	Actual	Capacity		LOS F?
V_F	3802	Exhibit 13-8	9000	No
$V_{FO} = V_F - V_R$	3133	Exhibit 13-8	9000	No
V_R	669	Exhibit 13-10	2000	No

Flow Entering Diverge Influence Area

	Actual	Max Desirable		Violation?
V_{12}	2035	Exhibit 13-8	4400:All	No

Level of Service Determination (if not F)

$D_R = 4.252 + 0.0086\ V_{12} - 0.009\ L_D$

D_R = 12.8 (pc/mi/ln)
