Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

File Location:	Regional Board
Potential Media Affected:	Indoor Air, Soil, Soil Vapor
Potential Contaminants of Concern:	Benzene, Other Chlorinated Hydrocarbons, Tetrachloroethylene (PCE), Toluene, Trichloroethylene (TCE), Xylene
Site History:	The subject site (Site) was a former machine shop, then used as a parking lot from the 1990s-2002. PCE was encountered in soil and soil gas mostly in area of the former machine shop, however lower concentrations of benzene, toluene, ethylbenzene, and xylenes were also detected at the Site. Soil excavation was completed at the Site in 2004 and a sub-slab vapor barrier and passive ventilation system were installed when the Site was redeveloped as Grand Avenue affordable housing in 2005-2006. The Site has completed 1 year of indoor air and sub-slab monitoring. The Site received a No Further Action letter on May 12, 2011. COCs: Primarily chlorinated solvents, minor BTEX Status: Soil excavation completed, sub-slab vapor barrier and passive vent sys installed, site completed 1 yr of indoor air and sub slab mon. Ready for Closure Review HHRA: Submitted and reviewed/approved by OEHHA Env Cov: No Env Just: No? Low income

Environmental Interest/Information System
California Department of Toxic Substances Control EnviroStor System (DTSC-EnviroStor) is an online search and Geographic Information System (GIS) tool for identifying sites that have known contamination or sites for which there may be reasons to investigate further. The EnviroStor database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 12/16/2014
Date Data Arrived at EDR: 01/08/2015
Date Made Active in Reports: 02/09/2015
Number of Days to Update: 32

Source: EPA
Telephone: N/A
Last EDR Contact: 04/08/2015
Next Scheduled EDR Contact: 07/20/2015
Data Release Frequency: Quarterly

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 12/16/2014
Date Data Arrived at EDR: 01/08/2015
Date Made Active in Reports: 02/09/2015

Telephone: N/A
Last EDR Contact: 04/08/2015
Next Scheduled EDR Contact: 07/20/2015
Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991
Date Data Arrived at EDR: 02/02/1994
Date Made Active in Reports: 03/30/1994

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 10/25/2013
Date Data Arrived at EDR: 11/11/2013

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Local Lists of Hazardous waste / Contaminated Sites

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR US Hist Auto Stat: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Licensed Facilities
Source: Department of Social Services
Telephone: 916-657-4041

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

East Map:	34118-A2 LOS ANGELES, CA
Most Recent Revision:	1994

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

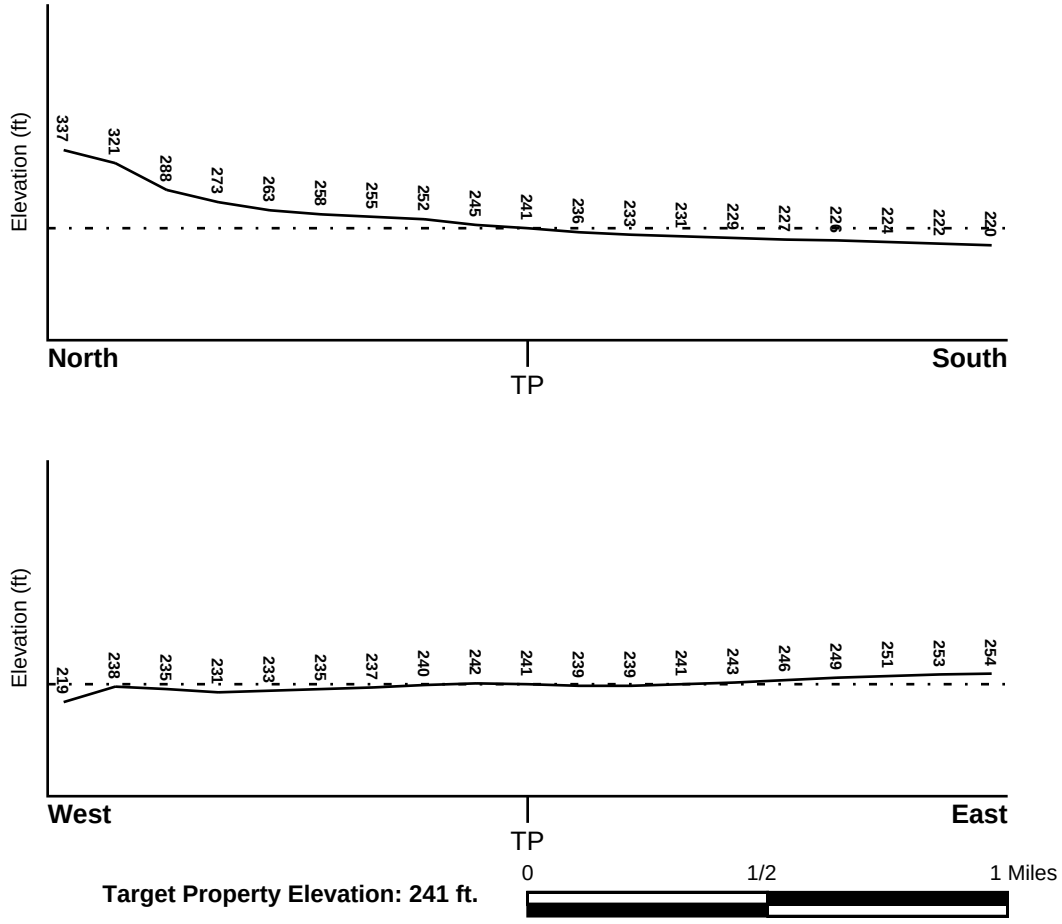
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General South

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Target Property Elevation: 241 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County	FEMA Flood Electronic Data
LOS ANGELES, CA	YES - refer to the Overview Map and Detail Map

Flood Plain Panel at Target Property: 06037C - FEMA DFIRM Flood data

Additional Panels in search area: Not Reported

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
HOLLYWOOD	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1/2 - 1 Mile NE
Site Name:	SO CALIF RAPID TRANSIT DISTRICT
Site EPA ID Number:	CAD981989841
Groundwater Flow Direction:	GENERALLY SE.
Measured Depth to Water:	approximately 37 feet.
Hydraulic Connection:	The uppermost aquifer at the site is the Gaspur aquifer. The Gaspur aquifer is hydraulically connected to underlying aquifers.
Sole Source Aquifer:	No information about a sole source aquifer is available
Data Quality:	Information is inferred in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
A3	1/2 - 1 Mile SE	Not Reported
A4	1/2 - 1 Mile SE	Not Reported

For additional site information, refer to Physical Setting Source Map Findings.

* ©1996 Site--specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Quaternary
Series:	Quaternary
Code:	Q *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratifed Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures:
sandy loam
gravelly - sandy loam
silt loam
clay
fine sand
gravelly - sand
sand
fine sandy loam

Surficial Soil Types:
sandy loam
gravelly - sandy loam
silt loam
clay
fine sand
gravelly - sand
sand
fine sandy loam

Shallow Soil Types:
fine sandy loam
gravelly - loam
sandy clay
sandy clay loam
clay
silty clay
sand

Deeper Soil Types:
gravelly - sandy loam
sandy loam
very gravelly - sandy loam
stratified
very fine sandy loam
weathered bedrock
sand
gravelly - fine sandy loam
silty clay loam
clay loam

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

Basement	0.933 pCi/L	100%	0%	0%

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

RADON

State Database: CA Radon
Source: Department of Health Services
Telephone: 916-324-2208
Radon Database for California

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities
Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater
Source: Department of Commerce, National Oceanic and Atmospheric Administration

California Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines, prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

AHERA Asbestos Contractor Supervisor (DOSH Approval #CA-011-03)

Summary of Professional Experience

Ms. Bisson has 10 years of experience in the environmental and industrial hygiene service industries. Since 2004, she has worked for a San Diego-based environmental consulting firm and has supported national environmental and engineering firms in conducting due diligence assessments. She has significant experience in due diligence assessments for a variety of property types and the needs and requirements of varied number of reporting standards, including ASTM standards, EPA's All Appropriate Inquiry (AAI), and customized client formats. Specifically, Ms. Bisson has performed Phase I Environmental Site Assessments, Environmental Transaction Screens, Asbestos Surveys, Lead-based Paint Surveys, Radon Studies, Mold Assessments, and Lead-in-water sampling and analysis.

Ms. Bisson's due diligence and consulting experience spans throughout the United States for a wide range of clients that include brokers, attorneys, banks real estate investors and developers, as well as foreclosed properties. This background and experience is applicable in dealing with the multi-faceted aspects of due diligence consulting as well as providing a sound knowledge of approaches to identifying, evaluating and solving environmental and engineering conditions as well as risks. Ms. Bisson has completed projects under multiple programs and guidelines including; ASTM, SBA, AHERA, CALOSHA (DOSH), SCAQMD, EPA & Environmental Health Care Agencies and client specific guidelines.

Ms. Bisson has performed Phase I Environmental Site Assessments, Asbestos Testing and Project Management duties on all types of commercial properties including but not limited to: mobile home parks, multi-family complexes, skilled nursing / assisted living facilities, low and high rise commercial buildings, retail properties, and industrial facilities. Assessments include pre-site preparation and research, analyzing photos from property inspection, quality report writing, and on going post-site research and investigation.

In Addition Ms. Bisson has a diverse science teaching background in educational science and enrichment programs utilizing social-curricula and activities that promote science learning, social development and group responsibility, Ms. Bisson provides a clear understanding of report writing that encompasses details and clear direction in terms the clients can understand.

Finally, Ms. Bisson's diversity across residential, industrial, municipal, and commercial environments is a major contribution to Partner Engineering and Science's Associate team in the West, Southwest, Pacific Northwest, Southeast, Northeast, Rocky Mountain regions of the United States.

Steve G. Kovach
Project Manager

Education
B.A. - Botany, Miami University (Ohio)
Minor - Conservation and the Environment

Summary of Professional Experience
Mr. Kovach has over thirteen years of experience in a broad range of environmental and engineering disciplines including: engineering and environmental due diligence services, industrial air, water, and wastewater permit compliance and monitoring, hazardous waste management and disposal, electrical utilities projects, environmental engineering projects, and wetland ecology research. Mr. Kovach has worked closely with regulatory agencies including the United States Environmental Protection Agency, California Department of Toxic Substance Control, California State Water Resources Control Board, California Integrated Waste Management Board, Bay Area Air Quality Management District, East Bay Municipal Utilities District, and the United States Department of Energy.

Specifically, Mr. Kovach has performed Phase I Environmental Site Assessments, Environmental Transaction Screens, Property Condition Assessments (PCAs), Regulatory Compliance Assessments, Asbestos sampling, Lead-based Paint sampling, Radon Studies, Lead-in-water sampling, permit compliance, hazardous waste storage and handling, air quality monitoring, and environmental emergency responses.

Finally, Mr. Kovach's diversity of experience with residential, industrial, municipal, and commercial environments is a major contribution to Partner Engineering and Science's Associate team in the San Francisco Bay Area and throughout the United States.

Jay Grenfell
National Client Manager

PARTNER Engineering and Science, Inc.

Education
B.A. in Environmental Science, University of California at Berkeley

Registrations
Registered Environmental Assessor, California, #07798 (program canceled in July 2012)
LEED Accredited Professional, United States Green Building Council

Summary of Professional Experience
Mr. Grenfell has over 14 years experience in the environmental consulting industry and has worked in various disciplines, including regulatory compliance, EH&S, asbestos abatement, air monitoring, Tier II reporting, Phase II ESAs, and environmental due diligence practices, including Phase I ESAs and PCAs. Mr. Grenfell's primary area of expertise is in the environmental due diligence field, where he has performed hundreds of Phase I ESAs and has managed thousands of due diligence projects.

Mr. Grenfell has conducted and managed Phase I ESAs on industrial, office, multi-family, government, retail, and hospitality properties. Most notably, Mr. Grenfell has managed multiple large multi-site due diligence portfolios for varied and demanding clients, including a 300-site portfolio of Class A high-rise office buildings. He has developed scopes of work, mentored field personnel, identified environmental risks, and regularly provides detailed reports within strict deadlines.

Mr. Grenfell is familiar with all aspects of due diligence property assessments and reporting standards, including Fannie Mae DUS, Freddie Mac, HUD, and is especially knowledgeable on EPA's All Appropriate Inquiry and ASTM E1527-05. In addition, he has worked with diverse client groups with unique client-specific scopes of work and reporting requirements.

A sample of Mr. Grenfell's project experience includes:

- Completed hundreds of Phase I ESAs on multi-family properties, commercial office buildings, shopping centers, gasoline stations, hotels, dry cleaners, auto repair shops, and industrial facilities, including a former blueprint and film manufacturing facility. Areas of concern included former chemical storage/transfer areas, areas of drainage/deteriorated piping, historical groundwater dispersion wells, and former underground storage tanks systems.
- Managed numerous multi-site portfolios, including a 300-site portfolio of Class A high-rise office buildings, at the time valued as the largest real estate transaction in history.
- Reviewed and evaluated hundreds of third-party Phase I, Phase II and Phase III reports
- Conducted eight Phase II Site Assessments at gasoline stations over a four-day period, coordinating and supervising the advancement of soil borings and collected soil and groundwater samples. Documented results in concise, well-written reports.

- Managed a compliance evaluation team at an 8,000 employee, 24-hour aircraft maintenance center, evaluating environmental regulatory compliance. Provided solutions and established protocols for ensuring compliance.
- Conducted 3rd-party reviews of over 150 gasoline stations, documenting previous report findings and providing a matrix listing issues and updated risk-based recommendations.

Currently, Mr. Grenfell provides management and senior review expertise of Phase I ESAs, transaction screens, and other product types, and is extensively involved in project management and client communications, maintaining an emphasis on providing exemplary client service. Mr. Grenfell is responsible for ensuring consistency and quality of due diligence services and ensuring that client-specific requirements are met, as well as the requirements of ASTM and AAI standards. Mr. Grenfell displays excellent written and verbal communication skills, effectively communicating environmental risks in a succinct fashion by distilling assorted information into pertinent findings and conclusions. Mr. Grenfell excels at providing effective risk-based results for multiple demanding client groups.

Mr. Grenfell has worked with national and regional lenders, banks, investors, equity stakeholders, and property owners, including:

- Bank of America
- Principal Real Estate
- Wachovia
- Wells Fargo
- Morgan Stanley
- Merrill Lynch
- Prudential
- Nationwide Life
- Bear Stearns
- Blackstone Group
- Principal Financial
- Countrywide
- Capmark Finance
- Cingular Wireless

Mr. Grenfell is also a LEED Accredited Professional (AP) who has studied energy auditing practices in commercial buildings and continues to explore energy efficiency and green business practices in the built environment.

Finally, Mr. Grenfell's diversity across managing projects across industrial, residential, retail, and commercial environments, as well as his diverse project experience, is a major contribution to Partner Engineering and Science's Project Management team.

Subject: Phase I Environmental Site Assessment
1147-1151 South Main Street
Los Angeles, California 90015
Partner Project No. 18-230966.1

Dear Mr. Taban:

Partner Engineering and Science, Inc. (Partner) is pleased to provide the results of the *Phase I Environmental Site Assessment* (Phase I ESA) report of the abovementioned address (the "subject property"). This assessment was performed in conformance with the scope and limitations as detailed in the ASTM Practice E1527-13 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process.

This assessment included a site reconnaissance as well as research and interviews with representatives of the public, property ownership, site manager, and regulatory agencies. An assessment was made, conclusions stated, and recommendations outlined.

We appreciate the opportunity to provide environmental services to you. If you have any questions concerning this report, or if we can assist you in any other matter, please contact me at (415) 992-3755.

Sincerely,

Jay Grenfell
Relationship Manager

EXECUTIVE SUMMARY

Partner Engineering and Science, Inc. (Partner) has performed a Phase I Environmental Site Assessment (ESA) in accordance with the scope of work and limitations of ASTM Standard Practice E1527-13, the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (AAI) (40 CFR Part 312) and set forth by Jade Enterprises for the property located at 1147-1151 South Main Street in the City of Los Angeles, Los Angeles County, California (the "subject property"). The Phase I Environmental Site Assessment is designed to provide Jade Enterprises with an assessment concerning environmental conditions (limited to those issues identified in the report) as they exist at the subject property.

Property Description

The subject property is located on the west side of Main Street within a commercial area of Los Angeles, California. Please refer to the table below for further description of the subject property:

Subject Property Data	
Addresses:	1147-1151 South Main Street, Los Angeles, California
Property Use:	Commercial
Land Acreage (Ac):	0.134 Ac (Parcel A); 0.134 Ac (Parcel B)
Number of Buildings:	Two
Number of Floors:	One with mezzanine
Gross Building Area (SF):	4,800 SF (Building A); 4,800 SF (Building B)
Date of Construction:	1986 (Building A); 1986 (Building B)
Assessor's Parcel Number (APN):	513-017-017 (Parcel A); 5139-017-018 (Parcel B)
Type of Construction:	Concrete
Current Tenants:	Steal a Sofa (building A) and Main Ace Fashion Accessory (building B)
Site Assessment Performed By:	Francisco Gonzalez of Partner
Site Assessment Conducted On:	November 6, 2018

The subject property is currently occupied by Steal a Sofa (building A, located on Parcel A) and Main Ace Fashion Accessory (building B, located on Parcel B) for commercial use. Onsite operations consist of retail furniture and accessory sales. The two buildings cover the majority of the parcel footprints; however, the subject property is additionally improved with several asphalt-pave parking spaces to the northeast of each building.

According to available historical sources, the subject property was formerly developed as part of the grounds of a large residential property between 1888 and circa 1894; Huntington School between 1906 and circa 1911; fender and auto body shop between 1929 and circa 1945: printing shop between 1948 and circa 1983; and developed with the current structure in 1986. Tenants of the subject property include Martin Alfd used cars (1933); Dewey Ches O Hazel used cars (1937-1942); a printer (1945-circa 1970s); The Fiet Company (1977-1986); Lucky International Trading (1990-2010); AF Designs Co Inc and Korus Sales Co (2006-2014); and Steal a Sofa and Main Ace Fashion (Present).

The immediately surrounding properties consist of parking to the north; S. H. Handbag to the south; several retail shops to the east across South Main Street; and parking to the west across an alley.

According to the Regional Water Quality Control Board's (RWQCB) GeoTracker database for a site located 0.32-mile southeast of the subject property (504 West Olympic Boulevard), the depth and direction of groundwater in the vicinity of the subject property is inferred to be approximately 49 feet below ground surface (bgs) and flow toward the south-southwest.

Findings

A *recognized environmental condition (REC)* refers to the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: due to release to the environment; under conditions indicative of a release to the environment; or under conditions that pose a material threat of a future release to the environment. The following was identified during the course of this assessment:

- Partner did not identify any recognized environmental conditions during the course of this assessment.

A *controlled recognized environmental condition (CREC)* refers to a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls. The following was identified during the course of this assessment:

- Partner did not identify any controlled recognized environmental conditions during the course of this assessment.

A *historical recognized environmental condition (HREC)* refers to a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls. The following was identified during the course of this assessment:

- Partner did not identify any historical recognized environmental conditions during the course of this assessment.

An *environmental issue* refers to environmental concerns identified by Partner, which do not qualify as RECs; however, warrant further discussion. The following was identified during the course of this assessment:

- The subject property historically operated as an auto body repair shop during the early 1940s and was identified by EDR in historical resources as an automobile repairing facility in 1942. According to a review of building permits, the tenant occupying the subject property at that time was operating as a fender and auto body repair shop which was converted to a print shop by 1945. Auto body repair shops frequently utilize paints, thinners, welding gasses, fillers and other materials but less frequently use oils, other automotive fluids and degreasers such as chlorinated solvents which full service drivetrain repair shops might use and are more persistent in the environment. Furthermore, the subject property was demolished, regraded and completely redeveloped in 1986. Based on the presumed nature of auto body repair operations, the elapsed time since the occupancy and redevelopment of the property, the historical auto body shop operations are not expected to represent a significant environmental concern.

- According to a review of Sanborn maps and building permit records, the subject property was formerly occupied by a print shop from 1945 to circa 1970. Many printing industries generate waste ink, ink sludges and use cleaners that might contain solvents or heavy metals. Overall, the print shop operations appear to have been limited to one portion of a relatively small building. Additionally, the former building was completely demolished in 1986, regraded and developed with the current two buildings that year. Based on the relatively limited scale of printing operations depicted on the Sanborn maps, the elapsed time since the occupancy and subsequent redevelopment of the property, the historical print shop operations are not expected to represent a significant environmental concern.

Conclusions, Opinions and Recommendations

Partner has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 of 1147-1151 South Main Street in the City of Los Angeles, Los Angeles County, California (the "subject property"). Any exceptions to, or deletions from, this practice are described in Section 1.5 of this report.

This assessment has revealed no evidence of recognized environmental conditions in connection with the subject property. Based on the conclusions of this assessment, Partner recommends no additional investigation of the subject property at this time.

1.0 INTRODUCTION

Partner Engineering and Science, Inc. (Partner) has performed a Phase I Environmental Site Assessment (ESA) in conformance with the scope and limitations of ASTM Standard Practice E1527-13 and the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (AAI) (40 CFR Part 312) for the property located at 1147-1151 South Main Street in the City of Los Angeles, Los Angeles County, California (the "subject property"). Any exceptions to, or deletions from, this scope of work are described in the report.

1.1 Purpose

The purpose of this ESA is to identify existing or potential Recognized Environmental Conditions (as defined by ASTM Standard E1527-13) affecting the subject property that: 1) constitute or result in a material violation or a potential material violation of any applicable environmental law; 2) impose any material constraints on the operation of the subject property or require a material change in the use thereof; 3) require clean-up, remedial action or other response with respect to Hazardous Substances or Petroleum Products on or affecting the subject property under any applicable environmental law; 4) may affect the value of the subject property; and 5) may require specific actions to be performed with regard to such conditions and circumstances. The information contained in the ESA Report will be used by Client to: 1) evaluate its legal and financial liabilities for transactions related to foreclosure, purchase, sale, loan origination, loan workout or seller financing; 2) evaluate the subject property's overall development potential, the associated market value and the impact of applicable laws that restrict financial and other types of assistance for the future development of the subject property; and/or 3) determine whether specific actions are required to be performed prior to the foreclosure, purchase, sale, loan origination, loan workout or seller financing of the subject property.

This ESA was performed to permit the *User* to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on scope of Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) (42 U.S.C. §9601) liability (hereinafter, the "*landowner liability protections*," or "*LLPs*"). ASTM Standard E1527-13 constitutes "*all appropriate inquiry* into the previous ownership and uses of the *property* consistent with good commercial or customary practice" as defined at 42 U.S.C. §9601(35) (B).

1.2 Scope of Work

The scope of work for this ESA is in accordance with the requirements of ASTM Standard E1527-13. This assessment included: 1) a property and adjacent site reconnaissance; 2) interviews with key personnel; 3) a review of historical sources; 4) a review of regulatory agency records; and 5) a review of a regulatory database report provided by a third-party vendor. Partner contacted local agencies, such as environmental health departments, fire departments and building departments in order to determine any current and/or former hazardous substances usage, storage and/or releases of hazardous substances on the subject property. Additionally, Partner researched information on the presence of activity and use limitations (AULs) at these agencies. As defined by ASTM E1527-13, AULs are the legal or physical restrictions or limitations on the use of, or access to, a site or facility: 1) to reduce or eliminate potential exposure to hazardous substances or petroleum products in the soil or groundwater on the subject property; or 2) to prevent

activities that could interfere with the effectiveness of a response action, in order to ensure maintenance of a condition of no significant risk to public health or the environment. These legal or physical restrictions, which may include institutional and/or engineering controls (IC/ECs), are intended to prevent adverse impacts to individuals or populations that may be exposed to hazardous substances and petroleum products in the soil or groundwater on the property.

If requested by Client, this report may also include the identification, discussion of, and/or limited sampling of asbestos-containing materials (ACMs), lead-based paint (LBP), mold, and/or radon.

1.3 Limitations

Partner warrants that the findings and conclusions contained herein were accomplished in accordance with the methodologies set forth in the Scope of Work. These methodologies are described as representing good commercial and customary practice for conducting an ESA of a property for the purpose of identifying recognized environmental conditions. There is a possibility that even with the proper application of these methodologies there may exist on the subject property conditions that could not be identified within the scope of the assessment or which were not reasonably identifiable from the available information. Partner believes that the information obtained from the record review and the interviews concerning the subject property is reliable. However, Partner cannot and does not warrant or guarantee that the information provided by these other sources is accurate or complete. The conclusions and findings set forth in this report are strictly limited in time and scope to the date of the evaluations. The conclusions presented in the report are based solely on the services described therein, and not on scientific tasks or procedures beyond the scope of agreed-upon services or the time and budgeting restraints imposed by the Client. No other warranties are implied or expressed.

Some of the information provided in this report is based upon personal interviews, and research of available documents, records, and maps held by the appropriate government and private agencies. This report is subject to the limitations of historical documentation, availability, and accuracy of pertinent records, and the personal recollections of those persons contacted.

This practice does not address requirements of any state or local laws or of any federal laws other than the all appropriate inquiry provisions of the LLPs. Further, this report does not intend to address all of the safety concerns, if any, associated with the subject property.

Environmental concerns, which are beyond the scope of a Phase I ESA as defined by ASTM include the following: ACMs, LBP, radon, and lead in drinking water. These issues may affect environmental risk at the subject property and may warrant discussion and/or assessment; however, are considered non-scope issues. If specifically requested by the Client, these non-scope issues are discussed in Section 6.3.

1.4 User Reliance

Jade Enterprises engaged Partner to perform this assessment in accordance with an agreement governing the nature, scope and purpose of the work as well as other matters critical to the engagement. All reports, both verbal and written, are for the sole use and benefit of Jade Enterprises. Either verbally or in writing, third parties may come into possession of this report or all or part of the information generated as a result of this work. In the absence of a written agreement with Partner granting such rights, no third parties shall have rights of recourse or recovery whatsoever under any course of action against Partner, its officers,

employees, vendors, successors or assigns. Any such unauthorized user shall be responsible to protect, indemnify and hold Partner, Client and their respective officers, employees, vendors, successors and assigns harmless from any and all claims, damages, losses, liabilities, expenses (including reasonable attorneys' fees) and costs attributable to such Use. Unauthorized use of this report shall constitute acceptance of and commitment to these responsibilities, which shall be irrevocable and shall apply regardless of the cause of action or legal theory pled or asserted. Additional legal penalties may apply.

This report has been completed under specific Terms and Conditions relating to scope, relying parties, limitations of liability, indemnification, dispute resolution, and other factors relevant to any reliance on this report. Any parties relying on this report do so having accepted Partner's standard Terms and Conditions, a copy of which can be found at http: / www.partneresi.com/terms-and-conditions.php.

1.5 Limiting Conditions

The findings and conclusions contain all of the limitations inherent in these methodologies that are referred to in ASTM E1527-13.

Specific limitations and exceptions to this ESA are more specifically set forth below:

- Interviews with past owners, operators and occupants were not reasonably ascertainable and thus constitute a data gap. Based on information obtained from other historical sources (as discussed in Section 3.0), this data gap is not expected to alter the findings of this assessment.
- Partner requested information relative to deed restrictions and environmental liens, a title search, and completion of a pre-survey questionnaire from the Report User. This information was not provided at the time of the assessment.
- Partner was unable to determine the property use at 5-year intervals, which constitutes a data gap. Information concerning historical use of the subject property was unavailable from 1985 to 1906, and from 1991 to 1922. Except for property tax files and recorded land title records, which were not considered to be sufficiently useful, Partner reviewed all standard historical sources and conducted appropriate interviews.
- Partner's view of the ground during the site assessment was obstructed due to excessive storage. Based on information obtained from other sources, this limitation is not expected to alter the overall findings of this assessment.

2.0 SITE DESCRIPTION

2.1 Site Location and Legal Description

The subject property at 1147-1151 South Main Street in Los Angeles, California is located on the west side of South Main Street. According to the Los Angeles County Assessor, the subject property is legally described as "TRACT NO 2289 LOT 36" for parcel A and "TRACT NO 2289 LOT 37" for parcel B.

Please refer to Figure 1: Site Location Map, Figure 2: Site Plan, Figure 3: Topographic Map, and Appendix A: Site Photographs for the location and site characteristics of the subject property.

2.2 Current Property Use

The subject property is currently occupied by Steal a Sofa (building A, located on Parcel A) and Main Ace Fashion Accessory (building B, located on Parcel B) for commercial use. Onsite operations consist of retail furniture and accessory sales. The two buildings cover the majority of the parcel footprints; however, the subject property is additionally improved with several asphalt-pave parking spaces to the northeast of each building.

The subject property is designated for commercial development by the City of Los Angeles.

The subject property was identified as an Environmental Data Resources (EDR) Hist Auto site in the regulatory database report, as further discussed in Section 4.2.

2.3 Current Use of Adjacent Properties

The subject property is located within a commercial area of Los Angeles County. During the vicinity reconnaissance, Partner observed the following land use on properties in the immediate vicinity of the subject property:

Immediately Surrounding Properties	
North:	Parking (1127-1137 South Main Street)
South:	S.H. Handbag (1155 South Main Street)
East:	South Main Street beyond which are retail shops: BJ Import Wholesale, Two Ten and Missy USA Handbags (1132-1144 South Main Street)
West:	Alley beyond which is parking (1140-1168 South Broadway)

The adjacent property to the north was identified as an EDR Hist Auto site in the regulatory database report, as discussed in Section 4.2.

2.4 Physical Setting Sources

2.4.1 Topography

According to the contour lines on the topographic map, the subject property is located at approximately 240 feet above mean sea level (MSL). The contour lines in the area of the subject property indicate the area is sloping gently toward the southeast. The subject property is not depicted with structures on the 2015 map.

A copy of the most recent topographic map is included as Figure 3 of this report.

2.4.2 Hydrology

According to the Regional Water Quality Control Board's (RWQCB) GeoTracker database for a site located 0.32-mile southeast of the subject property (504 West Olympic Boulevard), the depth and direction of groundwater in the vicinity of the subject property is inferred to be approximately 49 feet below ground surface (bgs) and flow toward the south-southwest.

The nearest surface water in the vicinity of the subject property is the Los Angeles River located approximately 1.75 miles and east of the subject property. No settling ponds, lagoons, surface impoundments, wetlands or natural catch basins were observed at the subject property during this assessment.

According to available information, a public water system operated by the Los Angeles Department of Water and Power (LADWP) serves the subject property vicinity. According to a representative of the LADWP, shallow groundwater beneath the subject property is not utilized for domestic purposes. The sources of public water for the City of Los Angeles are surface water from the Colorado River Aqueduct & Los Angeles Aqueduct) as well as groundwater.

2.4.3 Geology/Soils

The subject property is located within the Coastal Plain of Los Angeles County. According to the United States Department of Agriculture's Report and General Soil Map for Los Angeles County, the area surrounding the subject property is underlain by soils of the Ramona-Placentia Association. The soils of this association occur on gently sloping terraces between elevations from near sea level and 1,300 feet. Ramona soils make up about 80 percent and Placentia 15 percent of the association. Ramona soils in the Los Angeles basin are over 60 inches deep, are well drained and have slow subsoil permeability. They are characterized by brown to reddish-brown, heavy loam, loam, or sandy loam surface layers about 18 inches thick. Sub-soils are brown to reddish-brown, dense clay loam or clay about 30 inches thick. The substratum is brown to reddish-brown loam or light clay loam. Some sub-soils may be stratified beds of silt to sand. Areas with up to 60 percent by volume stones and cobbles also occur. Available water holding capacity is 8.0 to 10.0 inches for 60 inches of soil depth. Water holding capacity is reduced by the percentage of coarse fragments in those areas containing stones and cobbles. Placentia soils are over 18 inches deep, are moderately well drained and have very slow subsoil permeability. They are characterized by brown to reddish-brown loam or sandy loam surface layers abruptly underlain by a dense, dark reddish-brown, clay loam subsoil at about 18 inches. The substratum occurs at about 48 inches and is brown loam. The dense subsoil restricts the movement of air and water and the development of roots and is therefore considered limiting for effective soil depth. Occasional areas have sub-soils composed mainly of gravelly deposits and some have an iron-cemented hardpan. Available water-holding capacity is about 2.0 to 2.5 inches for 18 inches of effective soil depth.

2.4.4 Flood Zone Information

Partner performed a review of the Flood Insurance Rate Map, published by the Federal Emergency Management Agency. According to Community Panel Number 1620 (Map No. 06037C1620F), dated September 26, 2008, the subject property appears to be located in Zone X, an area located outside of the 100-year and 500-year flood plains.

3.0 HISTORICAL INFORMATION

Partner obtained historical use information about the subject property from a variety of sources. A chronological listing of the historical data found is summarized in the table below:

Historical Use Information		
Period/Date	**Source**	**Description/Use**
1888-1894	Sanborn Maps	Grounds of large Residence
1906-1911	Sanborn Maps, Building Records	Grounds of Private School
1922-1929	Aerial Photographs, Topographic Maps, Building Records	Public Garage
1929-1945	Aerial Photographs, Building Records, City Directories, Sanborn Maps	Fender and Auto Body Shop
1950-1983	Sanborn Maps, Building Records	Printing Shop
1986-Present	Aerial Photographs, Building Records, City Directories	Commercial

Tenants of the subject property include Martin Alfd used cars (1933); Dewey Ches O Hazel used cars (1937-1942); a printer (1945-circa 1970s); The Fiet Company (1977-1986); Lucky International Trading (1990-2010); AF Designs Co Inc and Korus Sales Co (2006-2014); and Steal a Sofa and Main Ace Fashion (Present).

The subject property historically operated as an auto body repair shop during the early 1940s and was identified by EDR in historical resources as an automobile repairing facility in 1942. According to a review of building permits, the tenant occupying the subject property at that time was operating as a fender and auto body repair shop which was converted to a print shop by 1945. Auto body repair shops frequently utilize paints, thinners, welding gasses, fillers and other materials but less frequently use oils, other automotive fluids and degreasers such as chlorinated solvents which full service drivetrain repair shops might use and are more persistent in the environment. Furthermore, the subject property was demolished, regraded and completely redeveloped in 1986. Based on the presumed nature of auto body repair operations, the elapsed time since the occupancy and redevelopment of the property, the historical auto body shop operations are not expected to represent a significant environmental concern.

According to a review of Sanborn maps and building permit records, the subject property was formerly occupied by a print shop from 1945 to circa 1970. Many printing industries generate waste ink, ink sludges and use cleaners that might contain solvents or heavy metals. Overall, the print shop operations appear to have been limited to one portion of a relatively small building. Additionally, the former building was completely demolished in 1986, regraded and developed with the current two buildings that year. Based on the relatively limited scale of printing operations depicted on the Sanborn maps, the elapsed time since the occupancy and subsequent redevelopment of the property, the historical print shop operations are not expected to represent a significant environmental concern.

No other potential environmental concerns were identified in association with the current or former use of the subject property.

3.1 Aerial Photograph Review

Partner obtained available aerial photographs of the subject property and surrounding area from EDR on November 9, 2018. The following observations were noted to be visible on the subject property and adjacent properties during the aerial photograph review:

Date: 1923		***Scale: 1"=500'***
Subject Property:	Appears developed with one building with parking	
North:	Appears developed with parking and two buildings	
South:	Appears developed as parking	
East:	Appears developed with two buildings across a street	
West:	Appears developed as parking	

Date: 1928, 1938, 1948, 1952		***Scale: 1"=500'***
Subject Property:	No significant changes visible	
North:	No significant changes visible	
South:	No significant changes visible	
East:	No significant changes visible	
West:	Additional development with one building in the north portion of property	

Date: 1964, 1970		***Scale: 1"=500'***
Subject Property:	No significant changes visible	
North:	No significant changes visible	
South:	No significant changes visible	
East:	Appears developed with parking on the southern portion of property and one building on the northern portion of property across South Main Street	
West:	No significant changes visible	

Date: 1977		***Scale: 1"=500'***
Subject Property:	No significant changes visible	
North:	No significant changes visible, with the exception of an additional building on the southern portion of property	
South:	No significant changes visible	
East:	No significant changes visible	
West:	No significant changes visible	

Date: 1983		***Scale: 1"=500'***
Subject Property:	No significant changes visible	
North:	No significant changes visible	
South:	No significant changes visible	
East:	No significant changes visible, with exception of an additional building to the southern portion of property	
West:	No significant changes visible	

Date: 1989, 1994, 2002, 2005, 2009, 2012, 2016		***Scale: 1"=500'***
Subject Property:	Developed with the two current buildings	
North:	No significant changes visible	
South:	Developed with current building	
East:	No significant changes visible	

Date:	*1989, 1994, 2002, 2005, 2009, 2012, 2016*	*Scale:*	*1"=500'*
West:	No significant changes visible		

Copies of select aerial photographs are included in Appendix B of this report.

3.2 Fire Insurance Maps

Partner reviewed the collection of Sanborn Fire insurance maps from EDR on November 9, 2018. The following observations were noted to be depicted on the subject property and adjacent properties during the fire insurance map review:

Date:	*1888*
Subject Property:	Depicted as vacant, used in conjunction with Residence and Ornamental grounds of OW Childs
North:	Depicted as the Lawn Tennis Grounds, used in conjunction with Residence and Ornamental grounds of OW Childs
South:	Depicted as vacant
East:	Depicted as vacant across South Main Street
West:	Depicted as vacant

Date:	*1894, 1906*
Subject Property:	No significant changes depicted though by 1906 the residence is depicted as a school
North:	Depicted as vacant
South:	No significant changes depicted
East:	No significant changes depicted
West:	No significant changes depicted

Date:	*1950, 1953*
Subject Property:	Depicted as a two story building, with a print shop on the first floor. The building was reinforced concrete with wood truss on plastered walls. A stationary storage is depicted to the northwest portion of the property (1147-1151 South Main Street)
North:	Depicted as auto sales (1135 Main Street), stores (1127-1131 Main Street), and private garage mad of reinforced concrete (1121-1123 Main Street)
South:	Depicted as auto sales
East:	Southern portion of property depicted as a market with a wood roof, cold storage, and warehouse to the south (1138-1444 South Main Street). Northern portion of property depicted as paint store (1134-1132 South Main Street)
West:	Depicted as auto park to the southern portion of the property. North portion of property is depicted as printing (1144 Broadway)

Date:	*1954*
Subject Property:	Not depicted on map
North:	Not depicted on map
South:	Not depicted on map
East:	No significant changes depicted
West:	Not depicted on map

Date: 1955

Subject Property: No significant changes
North: No significant changes depicted
South: No significant changes depicted
East: Not depicted on map
West: No significant changes depicted

Date: 1958

Subject Property: No significant changes depicted
North: No significant changes depicted
South: Depicted as parking space
East: Not depicted on map
West: No significant changes depicted

Date: 1959

Subject Property: Not depicted on map
North: Not depicted on map
South: Not depicted on map
East: Depicted as parking, auto seats and cover shop across Main Street
West: Not depicted on map

Date: 1960, 1962, 1963

Subject Property: No significant changes depicted
North: No significant changes depicted
South: No significant changes depicted
East: No significant changes depicted
West: No significant changes depicted

Date: 1967

Subject Property: No significant changes depicted
North: No significant changes depicted
South: No significant changes depicted
East: No significant changes depicted
West: No significant changes depicted

Date: 1968

Subject Property: No significant changes depicted
North: No significant changes depicted
South: No significant changes depicted
East: Not depicted on map
West: No significant changes depicted

Date: 1970	
Subject Property:	No significant changes depicted
North:	No significant changes depicted
South:	No significant changes depicted
East:	No significant changes depicted
West:	No significant changes depicted

Copies of reviewed Sanborn Maps are included in Appendix B of this report.

3.3 City Directories

Partner reviewed historical city directories obtained from EDR on November 9, 2018 for past names and businesses that were listed for the subject property and adjacent properties. The findings are presented in the following table:

City Directory Search for 1147-1151 South Main Street (Subject Property)

Year(s)	Occupant Listed
1920-1932	Not Listed
1933	Martin Alfd used cars (1151 South Main Street)
1937	Dewey Ches O Hazel used cars (1147 South Main Street)
1942	Dewey Chas O Hazel C used cars (1147 South Main Street); Moore & Pfeif Philip Moore Carl Pfeif auto repre (1151 South Main Street)
1944-1980	Not Listed
1981	Feit Co Inc (1151 South Main Street)
1985-1986	Not Listed
1990	Jayco Imprtrs, Lucky Internatl Trading (1147 South Main Street); Prestige Plus, Beaugal Fashion Jewlery, Charming (1151 South Main Street)
1991-2004	Not Listed
2006	Lucky Internatl Trading (1147 South Main Street); Korus Pantyhose, SC 2000 Inc (1151 South Main Street)
2010	AF Designs Co Inc, Lucky International Trading, Sigma USA Jewelry Inc (1147 South Main Street); JDK 2000 Inc, Korus Sales Co (1151 South Main Street)
2014	AF Designs Co Inc (1147 South Main Street); Korus Sales Co (1151 South Main Street)

According to the city directory review, the subject property was historically occupied by Moore & Philip Moore Carl Pfeif auto repre and Dewey Ches O Hazel used cars.

City Directory Search for Adjacent Properties

Year(s)	Occupant Listed
1924	Los Angeles Cycle Club (1123 South Main Street), Cohen Harry auto wrecker (1131 South Main Street); Taylor Oliver auto park (1144 South Broadway)
1929	Carter Jos F Virgina used cars (1125 South Main Street); Hengen Maude restr (1131 South Main Street); Grumman used cars (1137 South Main Street); Plummer henry Faith auto park (1146 South Broadway)

City Directory Search for Adjacent Properties	
Year(s)	**Occupant Listed**
1933	Green & Critelle (1131 South Main Street); West Coast Stationery & Printing (1144 South Broadway)
1937	Dikey Sanders used cars (1155 South Main Street); CARR Chas A garage (1123 South Main Street); Kurkjian Armenag (1127 South Main Street); Hammerman Harry (1131 South Main Street); West Coast Stationery & Printing (1144 South Broadway); Plummer Henry Faith auto park (1146 South Broadway)
1942	CARR Chas A garage (1123 South Main Street); Liberty Press Irving Dorfman Herman (1127 South Main Street); West Coast Stationary (1144 South Broadway); Plummer Henry Faith auto park (1146 South Broadway)
1958	Garcia Albert Auto Top Shop (1132 South Main Street); Sullivan Printing Co (1150 South Main Street)
1976	Typesetting Co (1127 South Main Street); Capital Sewing Machine (1129 South Main Street); California Belting & Leather Co (1131 South Main Street)
1981	L Monde International (1137 South Main Street)
1986	KML Enterprise (1123 South Main Street); Main Ace Jewelry Co (1127 South Main Street); Royal A Co (1131 South Main Street); Watch & Jewelry (1137 South Main Street); Y & S International Co Inc
1990	DH Imports (1155 South Main Street); KML Enterprise (1123 South Main Street); Price Mart (1125 South Main Street); Leona Interantl Inc (1127 South Main Street); Main Eleven (1131 South Main Street); Watch & Jewelry Co (1137 South Main Street); June trading (1132 South Main Street)
2000	Lucky International Trading (1144 Broadway)
2006	SHTrading(1155 South Main Street); Accessories (1123 South Main Street); Eleven main (1125 South Main Street); Rina Rich (1127 South Main Street); Repetto Inc (1131 South Main Street); Supply (1137 South Main Street); Trading International Lucky (1144 Broadway); BJ Co (1132 South Main Street); Jaydee Designs (1150 South Main Street)
2010	J&S Trading Co (1155 South Main Street), Moka Handbags & ACC LLC (1123 South Main Street); Main Eleven Trading (1125 South Main Street); Princess Trading (1127 South Main Street); Repetto Inc (1131 South Main Street); Daniel Beauty Supply (1137 South Main Street); BJ Company (1132 South Main Street); Zenma Inc (1150 South Main Street)
2014	DK Hawaiian Collection Inc (1123 South Main Street); Main Eleven Trading (1125 South Main Street); Repetto Inc (1131 South Main Street); Daniel Beauty Supply (1137 South Main Street); BJ Company (1132 South Main Street); Sierra Trading (1150 South Main Street)

According to the city directory review, the adjacent properties have been occupied by an auto wrecker (1131 South Main Street), Plummer henry Faith auto park (1146 South Broadway), Garcia Albert Auto Top Shop (1132 South Main Street), and Carter Jos F Virgina used cars (1125 South Main Street)

Copies of reviewed city directories are included in Appendix B of this report.

3.4 Historical Topographic Maps

Partner reviewed historical topographic maps obtained from Environmental Data Resources (EDR) on November 9, 2018. The following observations were noted to be depicted on the subject property and adjacent properties during the topographic map review:

Date: 1894, 1896, 1898, 1900, 1902, 1920, 1921	
Subject Property:	No structures depicted

Date:	***1894, 1896, 1898, 1900, 1902, 1920, 1921***
North:	Depicted with a building
South:	No structures depicted
East:	Depicted with no structures across South Main Street
West:	No structures depicted

Date:	***1928***
Subject Property:	Depicted with a building
North:	Depicted with a building
South:	Depicted with a building to the south and vacant to the west
East:	Depicted with building across South Main Street
West:	Depicted with a building

Date:	***1953, 1966, 1972, 1981, 1991, 1994***
Subject Property:	Shaded pink to represent urban development; no features are depicted
North:	Shaded pink to represent urban development; no features are depicted
South:	Shaded pink to represent urban development; no features are depicted
East:	Shaded pink to represent urban development; no features are depicted
West:	Shaded pink to represent urban development; no features are depicted

Date:	***2012***
Subject Property:	No structures depicted
North:	No structures depicted
South:	No structures depicted
East:	No structures depicted
West:	No structures depicted

Copies of reviewed topographic maps are included in Appendix B of this report.

4.0 REGULATORY RECORDS REVIEW

4.1 Regulatory Agencies

4.1.1 Health Department

Regulatory Agency Data	
Name of Agency:	Los Angeles County Fire Department, Health and Hazardous Materials Division (HHMD)
Point of Contact:	https://www.fire.lacounty.gov/hhmd/
Agency Address:	1320 North Eastern Avenue, Los Angeles CA 90063
Agency Phone Number:	(323) 881-2411
Date of Contact:	October 26, 2018
Method of Communication:	Online
Summary of Communication:	No records regarding hazardous substance use, storage or releases, or the presence of USTs and AULs on the subject property were on file with the LAHHMD.

4.1.2 Fire Department

Regulatory Agency Data	
Name of Agency:	Los Angeles Fire Department (LAFD) Hazardous Materials (HazMat) and LAFD Underground Tank Unit (UGT)
Point of Contact:	LAFD CUPA
Agency Address:	200 North Main Street, 17th Floor, Los Angeles, California 90012
Agency Phone Number:	(213) 978-3700
Date of Contact:	October 26, 2018
Method of Communication:	http://www.lafd.org/public-records
Summary of Communication:	No records regarding hazardous substance use, storage, or releases, or the presence of USTs were on file with the Underground Tank or Hazardous Materials units (as confirmed by searching addresses on their on-line spreadsheets for active and inactive USTs and hazardous materials use).

4.1.3 Air Pollution Control Agency

Regulatory Agency Data	
Name of Agency:	Air Quality Management District (AQMD)
Source:	http://www3.aqmd.gov/webappl/fim/prog/search.aspx
Agency Phone Number:	(909) 396-2000
Date of Contact:	October 26, 2018
Method of Communication:	Online Facility Information Detail (FINDS) database
Summary of Communication:	No Permits to Operate (PTO), Notices of Violation (NOV), or Notices to Comply (NTC) or the presence of AULs, dry cleaning machines, or USTs were on file for the subject property with the AQMD.

4.1.4 Regional Water Quality Agency

Regulatory Agency Data	
Name of Agency:	Regional Water Quality Control Board (RWQCB)
Point of Contact:	http://geotracker.waterboards.ca.gov/default.asp
Agency Address:	320 W 4th St #200, Los Angeles, California
Agency Phone Number:	(916) 341-5791
Date of Contact:	October 26, 2018
Method of Communication:	Online
Summary of Communication:	No records regarding hazardous substance use, storage or releases, or the presence of USTs and AULs on the subject property were on file with the RWQCB.

4.1.5 Department of Toxic Substances Control

Regulatory Agency Data	
Name of Agency:	California Department of Toxic Substances Control (DTSC)
Point of Contact:	http://www.envirostor.dtsc.ca.gov/public/ http://hwts.dtsc.ca.gov/report_search.cfm?id=5
Agency Address:	1001 I Street, Sacramento, California
Agency Phone Number:	(800) 728-6942
Date of Contact:	October 26, 2018
Method of Communication:	Online
Summary of Communication:	No records regarding hazardous substance use, storage or releases, or the presence of USTs and AULs on the subject property were on file with the Envirostor and Hazardous Waste Tracking System databases.

4.1.6 Building Department

Regulatory Agency Data	
Name of Agency:	City of Los Angeles Building and Safety Department
Point of Contact:	http://ladbsdoc.lacity.org/idispublic/
Agency Address:	201 North Figueroa Street, Los Angeles, CA 90012
Agency Phone Number:	(213) 482-0000
Date of Contact:	October 26, 2018
Method of Communication:	Online
Summary of Communication:	Records were available for review, as further discussed in the following table:

Building Records Reviewed for 1147-1151 South Main Street (Subject Property)

Year(s)	Owner/Applicant	Description
1911	Huntington	Repair fire damage at private school
1922	Spencer	Addition to public garage
1929	Winslow Felix	Move roof sign at public garage (1151 South Main Street)
1941	CC	Certificate of Occupancy (illegible use)

Building Records Reviewed for 1147-1151 South Main Street (Subject Property)		
Year(s)	**Owner/Applicant**	**Description**
1945	Patric Auto Wr's	Install new shop office at auto body repair (1151 South Main Street)
1945	West Coast Stationary and Printing	Building Permit for building alteration, from body and fender shop to print shop (1151 Main Street)
1948	Coast Stationary	Certificate of Occupancy for one-story printing shop and storage (1151 South Main Street)
1953	West Coast Stationary	Certificate of Occupancy for print shop (1147 South Main Street)
1954	West Coast Stationary Company	Certificate of Occupancy for print shop (1151 South Main Street)
1977	Feit Company	Add office and customer service in warehouse (1151 South Main Street)
1977	Feit Company	Close exterior opening in warehouse and office (1147 South Main Street)
1981	Feit	Building Permits for mezzanine additions (1147-1151 South Main Street)
1986	Feit	Building Permit for demolition (1147-1151 South Main Street)
1986	Israel Feit	Grading Permit
1987	Israel Feit	Certificate of Occupancy for one-story retail store (1147 South Main Street)
1987	Israel Feit	Certificate of Occupancy for one-story retail store (1151 South Main Street)

4.1.7 Planning Department

Regulatory Agency Data	
Name of Agency:	Los Angeles Department of City Planning (LAPD)
Point of Contact:	http://zimas.lacity.org/
Agency Address:	3031 Los Angeles Boulevard, Los Angeles 90503
Agency Phone Number:	(310) 618-5990
Date of Contact:	October 26, 2018
Method of Communication:	Online
Summary of Communication:	According to records reviewed, the subject property is zoned C2-4 for commercial development by the City of Los Angeles.

4.1.8 Oil & Gas Exploration

Regulatory Agency Data	
Name of Agency:	California Division of Oil, Gas and Geothermal Resources (DOGGR)
Point of Contact:	http://maps.conservation.ca.gov/doggr/#close
Agency Address:	801 K Street, MS 24-01, Sacramento, California
Agency Phone Number:	(916) 322-1080
Date of Contact:	October 26, 2018
Method of Communication:	Online

Regulatory Agency Data	
Summary of Communication:	According to DOGGR, no oil or gas wells are located on or adjacent to the subject property.

4.1.9 Assessor's Office

Regulatory Agency Data	
Name of Agency:	Los Angeles County Assessor (LACA)
Point of Contact:	http://maps.assessor.lacounty.gov/mapping/viewer.asp
Agency Address:	500 West Temple Street Room 225, Los Angeles 90012
Agency Phone Number:	(888) 807-2111
Date of Contact:	October 26, 2018
Method of Communication:	Online
Summary of Communication:	According to records reviewed, the subject property is identified by two Assessor Parcel Numbers (APNs). Parcel A is identified as 5139-017-017 and parcel B is identified 5139-017-018. Both buildings were constructed in 1986 and total 4,800 SF each.

4.1.10 LA Sanitation District

Regulatory Agency Data	
Name of Agency:	Bureau of Sanitation, City of Los Angeles
Point of Contact:	Mia Kang
Agency Address:	200 N Spring St, Los Angeles, CA 90012
Agency Phone Number:	(323) 342-6111
Date of Contact:	October 26, 2018
Method of Communication:	Faxed Request
Summary of Communication:	No records regarding industrial waste permits, on the subject property were on file with the LA Sanitation District.

A copy of pertinent documents is not included in Appendix B of this report.

4.2 Mapped Database Records Search

Information from standard federal, state, county, and city environmental record sources was provided by EDR. Data from governmental agency lists are updated and integrated into one database, which is updated as these data are released. The information contained in this report was compiled from publicly available sources and the locations of the sites are plotted utilizing a geographic information system, which geocodes the site addresses. The accuracy of the geocoded locations is approximately +/-300 feet.

Using the ASTM definition of migration, Partner considers the migration of hazardous substances or petroleum products in any form onto the subject property during the evaluation of each site listed on the radius report, which includes solid, liquid, and vapor.

4.2.1 Regulatory Database Summary

Radius Report Data				
Database	**Search Radius (mile)**	**Subject Property**	**Adjacent Properties**	**Sites of Concern**
Federal NPL or Delisted NPL Site	1.00	N	N	N

Radius Report Data				
Database	**Search Radius (mile)**	**Subject Property**	**Adjacent Properties**	**Sites of Concern**
Federal CERCLIS Site	0.50	N	N	N
Federal CERCLIS-NFRAP Site	0.50	N	N	N
Federal RCRA CORRACTS Facility	1.00	N	N	N
Federal RCRA TSDF Facility	0.50	N	N	N
Federal RCRA Generators Site (LQG, SQG, CESQG)	0.25	N	N	N
Federal IC/EC Registries	0.50	N	N	N
Federal ERNS Site	Subject Property	N	N	N
State/Tribal Equivalent NPL	1.00	N	N	N
State/Tribal Equivalent CERCLIS	1.00	N	N	N
State/Tribal Landfill/Solid Waste Disposal Site	0.50	N	N	N
State/Tribal Leaking Storage Tank Site	0.50	N	N	N
State/Tribal Registered Storage Tank Sites (UST/AST)	0.25	N	N	N
State/Tribal Voluntary Cleanup Sites (VCP)	0.50	N	N	N
State/Tribal Spills	0.50	N	N	N
Federal Brownfield Sites	0.50	N	N	N
State Brownfield Sites	0.50	N	N	N
EDR MGP	1.00	N	N	N
EDR US Hist Auto Station	0.125	**Y**	**Y**	N
EDR US Hist Cleaners	0.125	N	N	N

4.2.2 Subject Property Listings

The subject property is identified as an EDR Hist Auto site in the regulatory database report, as discussed below:

- The subject property, identified as Moore Pfeif at 1151 South Main Street, was identified by EDR in historical resources as an automobile repairing facility in 1942. According to a review of building permits, the tenant occupying the subject property at that time was operating as a fender and auto body repair shop which was converted to a print shop by 1945. Auto body repair shops frequently utilize paints, thinners, welding gasses, fillers and other materials but less frequently use oils, other automotive fluids and degreasers such as chlorinated solvents which full service drivetrain repair shops might use and are more persistent in the environment. Furthermore, the subject property was demolished, regraded and completely redeveloped in 1986. Based on the presumed nature of auto body repair operations, the elapsed time since the occupancy and redevelopment of the property, this listing is not expected to represent a significant environmental concern.

4.2.3 Adjacent Property Listings

The adjacent property to the north was identified as EDR Historical Auto Station site in the regulatory database report, as discussed below:

- The adjacent property, identified as Station#23 at 1131 South Main Street, is located adjacent to the north of the subject property. According to the database report, Station #23 operated a gasoline service station on the premises in 1982. No additional information was provided in the database report. This site is not listed not any release database that would impact the subject property. Additionally, a review of building permit records for this property revealed the use to be retail stores between the 1950s and 1980s and city directories for this address revealed no evidence of a gas station. Based on the lack of a documented gas station at this site, this listing is not expected to represent a significant environmental concern.

Based on the findings, vapor migration is not expected to represent a significant environmental concern at this time.

4.2.4 Sites of Concern Listings

No sites of concern are identified in the regulatory database report.

Based on the findings, vapor migration is not expected to represent a significant environmental concern at this time.

4.2.5 Orphan Listings

No orphan listings of concern are identified in the regulatory database report.

A copy of the regulatory database report is included as Appendix C of this report.

5.0 USER PROVIDED INFORMATION AND INTERVIEWS

In order to qualify for one of the *Landowner Liability Protections (LLPs)* offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the *Brownfields Amendments*), the *User* must conduct the following inquiries required by 40 CFR 312.25, 312.28, 312.29, 312.30, and 312.31. The *User* should provide the following information to the *environmental professional*. Failure to provide this information could result in a determination that *all appropriate inquiries* is not complete. The *User* is asked to provide information or knowledge of the following:

- Review Title and Judicial Records for Environmental Liens and AULs
- Specialized Knowledge or Experience of the User
- Actual Knowledge of the User
- Reason for Significantly Lower Purchase Price
- Commonly Known or *Reasonably Ascertainable* information
- Degree of Obviousness
- Reason for Preparation of this Phase I ESA

Fulfillment of these user responsibilities is key to qualification for the identified defenses to CERCLA liability. Partner requested our Client to provide information to satisfy User Responsibilities as identified in Section 6 of the ASTM guidance.

Pursuant to ASTM E1527-13, Partner requested the following site information from Jade Enterprises (User of this report).

User Responsibilities				
Item	**Provided by User**	**Not Provided by User**	**Discussed Below**	**Does Not Apply**

5.1 Interviews

5.1.1 Interview with Owner

Mr. Doran Tajkef, a representative of the subject property owner, was not aware of any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the subject property; any pending, threatened, or past administrative proceedings relevant to hazardous substances or

petroleum products in, on, or from the subject property; or any notices from a governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products.

5.1.2 Interview with Report User

Mr. Taban, report user, was not aware of any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the subject property; any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the subject property; or any notices from a governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products.

5.1.3 Interview with Key Site Manager

Mr. Dan Daneshrad, key site manager, indicated that he information pertaining to any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the subject property; any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the subject property; or any notices from a governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products.

5.1.4 Interviews with Past Owners, Operators and Occupants

Interviews with past owners, operators and occupants were not reasonably ascertainable and thus constitute a data gap.

5.1.5 Interview with Others

As the subject property is not an abandoned property as defined in ASTM 1527-13, interview with others were not performed.

5.2 User Provided Information

5.2.1 Title Records, Environmental Liens, and AULs

Partner was not provided with title records or environmental lien and AUL information for review as part of this assessment.

5.2.2 Specialized Knowledge

The User did not have specialized knowledge of environmental conditions associated with the subject property at the time of the assessment.

5.2.3 Actual Knowledge of the User

The User was not aware of environmental liens and/or AULs encumbering the subject property or in connection with the subject property at the time of the assessment.

5.2.4 Valuation Reduction for Environmental Issues

The User was not aware of any reductions in property value due to environmental issues.

5.2.5 Commonly Known or Reasonably Ascertainable Information

The User did not provide information that is commonly known or *reasonably ascertainable* within the local community about the subject property at the time of the assessment.

5.2.6 Previous Reports and Other Provided Documentation

No previous reports or other pertinent documentation was provided to Partner for review during the course of this assessment.

6.0 SITE RECONNAISSANCE

The weather at the time of the site visit was sunny and clear. Refer to Section 1.5 for limitations encountered during the field reconnaissance and Sections 2.1 and 2.2 for subject property operations. The table below provides the site assessment details:

Site Assessment Data	
Site Assessment Performed By:	Francisco Gonzalez
Site Assessment Conducted On:	November 6, 2018

The table below provides the subject property personnel interviewed during the field reconnaissance:

Site Visit Personnel for 1147-1151 South Main Street (Subject Property)			
Name	**Title/Role**	**Contact Number**	**Site Walk* Yes/No**
Dan Daneshrad	Key Site Manager	(213) 270-2248	Yes

* Accompanied Partner during the field reconnaissance activities and provided information pertaining to the current operations and maintenance of the subject property

No potential environmental concerns were identified during the onsite reconnaissance.

6.1 General Site Characteristics

6.1.1 Solid Waste Disposal

Solid waste generated at the subject property is disposed of in commercial dumpsters located northwest on the subject property. An independent solid waste disposal contractor removes solid waste from the subject property. No evidence of illegal dumping of solid waste was observed during the Partner site reconnaissance.

6.1.2 Sewage Discharge and Disposal

Sanitary discharges on the subject property are directed into the municipal sanitary sewer system. The City of Los Angeles services the subject property vicinity. No wastewater treatment facilities or septic systems are observed or reported on the subject property.

6.1.3 Surface Water Drainage

Storm water is removed from the subject property primarily by direction to a municipal owned and maintained sewer system.

The subject property does not appear to be a designated wetland area, based on information obtained from the United States Fish & Wildlife Service; however, a comprehensive wetlands survey would be required in order to formally determine actual wetlands on the subject property. No surface impoundments, wetlands, natural catch basins, settling ponds, or lagoons are located on the subject property. No drywells were identified on the subject property.

6.1.4 Source of Heating and Cooling

Heating and cooling systems as well as domestic hot water equipment are fueled by electricity and natural gas provided by Los Angeles Department of Water and Power and Southern California Gas Company.

6.1.5 Wells and Cisterns

No aboveground evidence of wells or cisterns was observed during the site reconnaissance.

6.1.6 Wastewater

Domestic wastewater generated at the subject property is disposed by means of the sanitary sewer system. No industrial process is currently performed at the subject property.

6.1.7 Septic Systems

No septic systems were observed or reported on the subject property.

6.1.8 Additional Site Observations

No additional general site characteristics were observed during the site reconnaissance.

6.2 Potential Environmental Hazards

6.2.1 Hazardous Substances and Petroleum Products Used or Stored at the Site

No evidence of the use of reportable quantities of hazardous substances was observed on the subject property. Small quantities of general maintenance supplies were found to be properly labeled and stored at the time of the assessment with no signs of leaks, stains, or spills. The storage and use of maintenance supplies does not appear to pose a significant threat to the environmental integrity of the subject property at this time.

6.2.2 Aboveground & Underground Hazardous Substance or Petroleum Product Storage Tanks (ASTs/USTs)

No evidence of current or former ASTs or USTs was observed during the site reconnaissance.

6.2.3 Evidence of Releases

No spills, stains or other indications that a surficial release has occurred at the subject property were observed.

6.2.4 Polychlorinated Biphenyls (PCBs)

No potential PCB-containing equipment (transformers, oil-filled switches, hoists, lifts, dock levelers, hydraulic elevators, etc.) was observed on the subject property during Partner's reconnaissance.

6.2.5 Strong, Pungent or Noxious Odors

No strong, pungent or noxious odors were evident during the site reconnaissance.

6.2.6 Pools of Liquid

No pools of liquid were observed on the subject property during the site reconnaissance.

6.2.7 Drains, Sumps and Clarifiers

No drains, sumps, or clarifiers, other than those associated with storm water removal, were observed on the subject property during the site reconnaissance.

6.2.8 Pits, Ponds and Lagoons

No pits, ponds or lagoons were observed on the subject property.

6.2.9 Stressed Vegetation

No stressed vegetation was observed on the subject property.

6.2.10 Additional Potential Environmental Hazards

No additional environmental hazards, including landfill activities or radiological hazards, were observed.

6.3 Non-ASTM Services

6.3.1 Asbestos-Containing Materials (ACMs)

Asbestos is the name given to a number of naturally occurring, fibrous silicate minerals mined for their useful properties such as thermal insulation, chemical and thermal stability, and high tensile strength. The Occupational Safety and Health Administration (OSHA) regulation 29 CFR 1926.1101 requires certain construction materials to be presumed to contain asbestos, for purposes of this regulation. All thermal system insulation (TSI), surfacing material, and asphalt/vinyl flooring that are present in a building constructed prior to 1981 and have not been appropriately tested are "presumed asbestos-containing material" (PACM).

The subject property buildings were constructed in 1986. As such, an asbestos evaluation was not required by the scope of services; however, please refer to the table below for observed materials that would be considered suspect ACMs in the event of a thorough survey:

Suspect ACMs

Suspect ACM	Location	Friable Yes/No	Physical Condition
Drywall Systems	Throughout Building Interior	No	Good
Stucco	Throughout Building Exterior	No	Good

The limited visual survey consisted of noting observable materials (materials which were readily accessible and visible during the course of the site reconnaissance) that are commonly known to potentially contain asbestos. This activity was not designed to discover all sources of suspect ACM, PACM, or asbestos at the site; or to comply with any regulations and/or laws relative to planned disturbance of building materials such as renovation or demolition, or any other regulatory purpose. Rather, it is intended to give the User an indication if significant (significant due to quantity, accessibility, or condition) potential sources of ACM or PACM are present at the subject property. Additional sampling, assessment, and evaluation will be warranted for any other use.

Partner was not provided building plans or specifications for review, which may have been useful in determining areas likely to have used ACM.

According to the US EPA, ACM and PACM that is intact and in good condition can, in general, be managed safely in-place under an Operations and Maintenance (O&M) Program until removal is dictated by renovation, demolition, or deteriorating material condition. Prior to any disturbance of the construction materials within this facility, a comprehensive ACM survey is recommended.

6.3.2 Lead-Based Paint (LBP)

Lead is a highly toxic metal that affects virtually every system of the body. LBP is defined as any paint, varnish, stain, or other applied coating that has 1 mg/cm^2 (or 5,000 ug/g or 0.5% by weight) or more of lead. Congress passed the Residential Lead-Based Paint Hazard Reduction Act of 1992, also known as "Title X", to protect families from exposure to lead from paint, dust, and soil. Under Section 1017 of Title X, intact LBP on most walls and ceilings is not considered a "hazard," although the condition of the paint should be monitored and maintained to ensure that it does not become deteriorated. Further, Section 1018 of this law directed the Housing and Urban Development (HUD) and the US EPA to require the disclosure of known information on LBP and LBP hazards before the sale or lease of most housing built before 1978.

It is unlikely that LBP is present in buildings constructed after 1977. Therefore, due to the age of the subject property buildings, it is unlikely that LBP is present.

6.3.3 Radon

Radon is a colorless, odorless, naturally occurring, radioactive, inert, gaseous element formed by radioactive decay of radium (Ra) atoms. The US EPA has prepared a map to assist National, State, and local organizations to target their resources and to implement radon-resistant building codes. The map divides the country into three Radon Zones, according to the table below:

EPA Radon Zones

EPA Zones	Average Predicted Radon Levels	Potential
Zone 1	Exceed 4.0 pCi/L	Highest
Zone 2	Between 2.0 and 4.0 pCi/L	Moderate
Zone 3	Less than 2.0 pCi/L	Low

It is important to note that the EPA has found homes with elevated levels of radon in all three zones, and the US EPA recommends site-specific testing in order to determine radon levels at a specific location. However, the map does give a valuable indication of the propensity of radon gas accumulation in structures.

Radon sampling was not conducted as part of this assessment. Review of the US EPA Map of Radon Zones places the subject property in Zone 2. Based upon the radon zone classification, radon is not considered to be a significant environmental concern.

6.3.4 Lead in Drinking Water

According to available information, a public water system operated by the Los Angeles Department of Water and Power (LADWP) serves the subject property vicinity. According to a representative of the LADWP, the sources of public water for the City of Los Angeles are surface water (Colorado River Aqueduct & Los Angeles Aqueduct) as well as groundwater. According to the 2017 Annual Water Quality Report, water supplied to the subject property is in compliance with all State and Federal regulations pertaining to drinking water standards, including lead and copper. Water sampling was not conducted to verify water quality.

6.3.5 Mold

Molds are microscopic organisms found virtually everywhere, indoors and outdoors. Mold will grow and multiply under the right conditions, needing only sufficient moisture (e.g.in the form of very high humidity,

condensation, or water from a leaking pipe, etc.) and organic material (e.g., ceiling tile, drywall, paper, or natural fiber carpet padding).

Partner observed accessible, interior areas for the subject property buildings for significant evidence of mold growth with the exceptions detailed in Section 1.5 of this report; however, this ESA should not be used as a mold survey or inspection. Additionally, this limited assessment was not designed to assess all areas of potential mold growth that may be affected by mold growth on the subject property. Rather, it is intended to give the client an indication as to whether or not conspicuous (based on observed areas) mold growth is present at the subject property. This evaluation did not include a review of pipe chases, mechanical systems, or areas behind enclosed walls and ceilings.

No obvious indications of water damage or mold growth were observed during Partner's visual assessment.

6.4 Adjacent Property Reconnaissance

The adjacent property reconnaissance consisted of observing the adjacent properties from the subject property premises. No items of environmental concern were identified on the adjacent properties during the site assessment, including hazardous substances, petroleum products, ASTs, USTs, evidence of releases, PCBs, strong or noxious odors, pools of liquids, sumps or clarifiers, pits or lagoons, stressed vegetation, or any other potential environmental hazards.

7.0 FINDINGS AND CONCLUSIONS

Findings

A *recognized environmental condition (REC)* refers to the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: due to release to the environment; under conditions indicative of a release to the environment; or under conditions that pose a material threat of a future release to the environment. The following was identified during the course of this assessment:

- Partner did not identify any recognized environmental conditions during the course of this assessment.

A *controlled recognized environmental condition (CREC)* refers to a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls. The following was identified during the course of this assessment:

- Partner did not identify any controlled recognized environmental conditions during the course of this assessment.

A *historical recognized environmental condition (HREC)* refers to a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls. The following was identified during the course of this assessment:

- Partner did not identify any historical recognized environmental conditions during the course of this assessment.

An *environmental issue* refers to environmental concerns identified by Partner, which do not qualify as RECs; however, warrant further discussion. The following was identified during the course of this assessment:

- The subject property historically operated as an auto body repair shop during the early 1940s and was identified by EDR in historical resources as an automobile repairing facility in 1942. According to a review of building permits, the tenant occupying the subject property at that time was operating as a fender and auto body repair shop which was converted to a print shop by 1945. Auto body repair shops frequently utilize paints, thinners, welding gasses, fillers and other materials but less frequently use oils, other automotive fluids and degreasers such as chlorinated solvents which full service drivetrain repair shops might use and are more persistent in the environment. Furthermore, the subject property was demolished, regraded and completely redeveloped in 1986. Based on the presumed nature of auto body repair operations, the elapsed time since the occupancy and redevelopment of the property, the historical auto body shop operations are not expected to represent a significant environmental concern.
- According to a review of Sanborn maps and building permit records, the subject property was formerly occupied by a print shop from 1945 to circa 1970. Many printing industries generate waste

ink, ink sludges and use cleaners that might contain solvents or heavy metals. Overall, the print shop operations appear to have been limited to one portion of a relatively small building. Additionally, the former building was completely demolished in 1986, regraded and developed with the current two buildings that year. Based on the relatively limited scale of printing operations depicted on the Sanborn maps, the elapsed time since the occupancy and subsequent redevelopment of the property, the historical print shop operations are not expected to represent a significant environmental concern.

Conclusions, Opinions and Recommendations

Partner has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 of 1147-1151 South Main Street in the City of Los Angeles, Los Angeles County, California (the "subject property"). Any exceptions to, or deletions from, this practice are described in Section 1.5 of this report.

This assessment has revealed no evidence of recognized environmental conditions in connection with the subject property. Based on the conclusions of this assessment, Partner recommends no additional investigation of the subject property at this time.

8.0 SIGNATURES OF ENVIRONMENTAL PROFESSIONALS

Partner has performed a Phase I Environmental Site Assessment of the property located at 1147-1151 South Main Street in the City of Los Angeles, Los Angeles County, California in conformance with the scope and limitations of the protocol and the limitations stated earlier in this report. Exceptions to or deletions from this protocol are discussed earlier in this report.

By signing below, Partner declares that, to the best of our professional knowledge and belief, we meet the definition of *Environmental Professional* as defined in §312.10 of 40 CFR §312. Partner has the specific qualifications based on education, training, and experience to assess a *property* of the nature, history, and setting of the subject *property*. Partner has developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Partner Engineering and Science, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

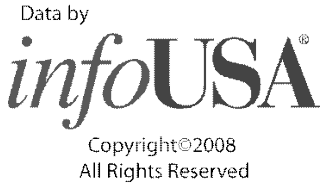
EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.



Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 332 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

EDR Historical Topo Map Report

10/31/18

Site Name:

1147-1151 S Main
1147-1151 S Main Street
LOS ANGELES, CA 90015
EDR Inquiry # 5471372.4

Client Name:

Partner Engineering and Science, Inc.
2154 Torrance Blvd, Suite 200
Torrance, CA 90501-0000
Contact: Max Mcbride

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Partner Engineering and Science, Inc. were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Search Results:

P.O.# 18-230966.1
Project: 18-230966.1

Coordinates:

Latitude:	34.03829 34° 2' 18" North

BOARD OF PUBLIC WORKS

DEPARTMENT OF BUILDINGS

Application to Alter, Repair or Demolish

Application is hereby made to the Board of Public Works (Chief Inspector of Buildings), of the City of Los Angeles, for the approval of this detailed statement of specifications herewith submitted for the alteration, repair or demolition of the building herein described. All provisions of the building ordinances and state laws shall be complied with in the alterations of said building, whether herein specified or not. It is also understood the granting of a permit on this application does not grant any right or privilege for the alteration, repair or demolition of the building herein described, on any public street or alley or on any land or portion thereof, the title or right of possession to which is in litigation by, or is disputed by the City, County or State; or as giving or granting any right or privilege to use the said structure or building for any purpose which is, or may hereafter be prohibited by ordinance of the City of Los Angeles.

BOARD OF PUBLIC WORKS

DEPARTMENT OF BUILDINGS

Application to Alter, Repair or Demolish

To the Board of Public Works of the City of Los Angeles:

Application is hereby made to the Board of Public Works of the City of Los Angeles, through the office of the Chief Inspector of Buildings, for a building permit in accordance with the description and for the purpose hereinafter set forth. This application is made subject to the following conditions, which are hereby agreed to by the undersigned applicant and which shall be deemed conditions entering into the exercise of the permit:

First: That the permit does not grant any right or privilege to erect any building or other structure therein described, or any portion thereof, upon any street, alley, or other public place or portion thereof.

Second: That the permit does not grant any right or privilege to use any building or other structure therein described, or any portion thereof, for any purpose that is, or may hereafter be prohibited by ordinance of the City of Los Angeles.

Third: That the granting of the permit does not affect or prejudice any claim of title to, or right of possession in, the property described in such permit.

BUILDING DIVISION

3 DEPARTMENT OF BUILDING AND SAFETY

Application to Alter, Repair or Demolish

To the Board of Building and Safety Commissioners of the City of Los Angeles:

Application is hereby made to the Board of Building and Safety Commissioners of the City of Los Angeles, through the office of the Superintendent of Building, for a building permit in accordance with the description and for the purpose hereinafter set forth. This application is made subject to the following conditions, which are hereby agreed to by the undersigned applicant and which shall be deemed conditions entering into the exercise of the permit:

First: That the permit does not grant any right or privilege to erect any building or other structure therein described, or any portion thereof, upon any street, alley, or other public place or portion thereof.

Second: That the permit does not grant any right or privilege to use any building or other structure therein described, or any portion thereof, for any purpose that is, or may hereafter be prohibited by ordinance of the City of Los Angeles.

Third: That the granting of the permit does not affect or prejudice any claim of title to, or right of possession in, the property described in such permit.

STATEMENT OF RESPONSIBILITY

I certify that in doing the work specified herein I will not employ any person in violation of the Labor Code of the State of California relating to workmen's compensation insurance.

"This permit is an application for inspection, the issuance of which is not an approval or an authorization of the work specified herein. This permit does not authorize or permit, nor shall it be construed as authorizing or permitting the violation or failure to comply with any applicable law. Neither the City of Los Angeles, nor any board, department, officer or employee thereof make any warranty or shall be responsible for the performance or results of any work described herein, or the condition of the property or soil upon which such work is performed." (See Sec. 91.0202 L.A.M.C.)

DECLARATIONS AND CERTIFICATIONS

LICENSED CONTRACTORS DECLARATION

16. I hereby affirm that I am licensed under the provisions of Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code, and my license is in full force and effect.

Date 11-6 Lic. Class B-1 Lic. Number 467028 Contractor [signature] (Signature)

OWNER-BUILDER DECLARATION

17. I hereby affirm that I am exempt from the Contractor's License Law for the following reason (Sec. 7031.5, Business and Professions Code: Any city or county which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is licensed pursuant to the provisions of the Contractor's License Law (Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code) or that he is exempt therefrom and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500).):

☐ I, as owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving that he did not build or improve for the purpose of sale.).

☐ I, as owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who contracts for such projects with a contractor(s) licensed pursuant to the Contractor's License Law.).

☐ I am exempt under Sec. _____, B. & P. C. for this reason _____

Date _____ Owner's Signature _____

WORKERS' COMPENSATION DECLARATION

18. I hereby affirm that I have a certificate of consent to self-insure, or a certificate of Worker's Compensation Insurance, or a certified copy thereof (Sec. 3800, Lab. C.).

Policy No. WC 26022 Insurance Company FAIRMONT INS.

☐ Certified copy is hereby furnished.

☐ Certified copy is filed with the Los Angeles City Dept. of Bldg. & Safety.

Date 11-6-86 Applicant's Signature [signature]

Applicant's Mailing Address _____

CERTIFICATE OF EXEMPTION FROM WORKERS' COMPENSATION INSURANCE

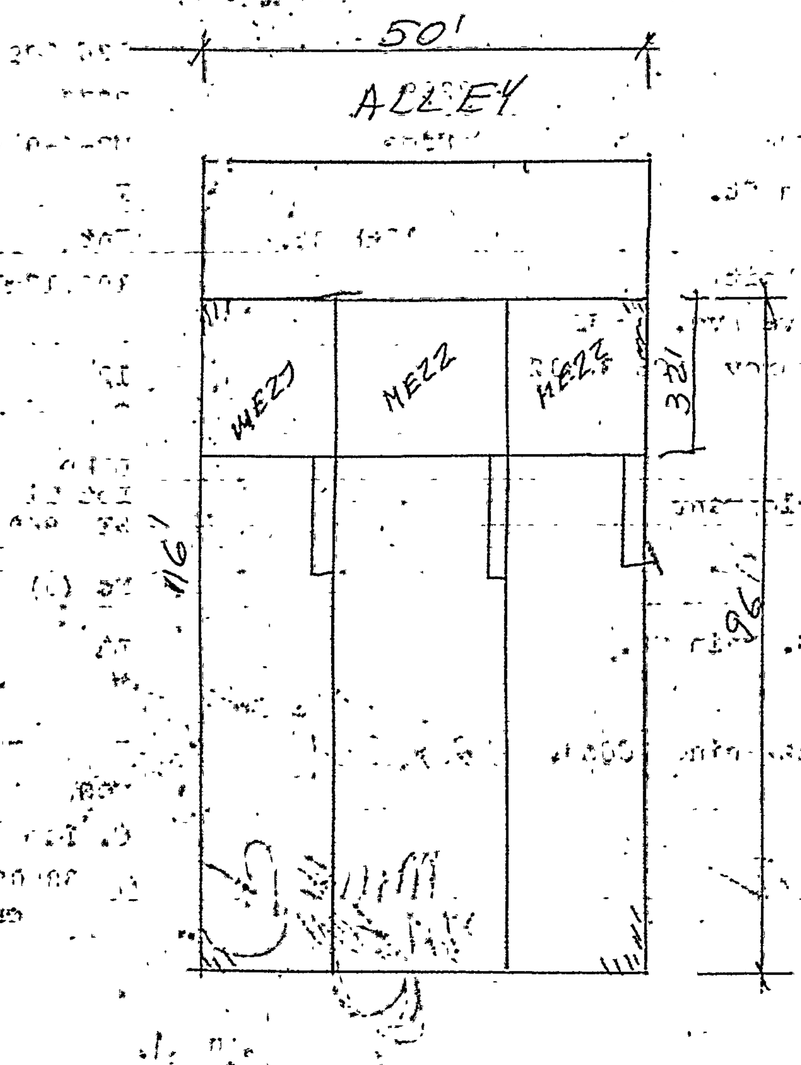
19. I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the Workers' Compensation Laws of California.

Date _____ Applicant's Signature _____

NOTICE TO APPLICANT: If, after making this Certificate of Exemption, you should become subject to the Workers' Compensation provisions of the Labor Code, you must forthwith comply with such provisions or this permit shall be deemed revoked.

CONSTRUCTION LENDING AGENCY

20. I hereby affirm that there is a construction lending agency for the performance of the work for which this permit is issued (Sec. 3097, Civ. C.).



Lender's Name _____ Lender's Address _____

21. I certify that I have read this application and state that the above information is correct. I agree to comply with all city and county ordinances and state laws relating to building construction, and hereby authorize representatives of this city to enter upon the above-mentioned property for inspection purposes.

I realize that this permit is an application for inspection, that it does not approve or authorize the work specified herein, that it does not authorize or permit any violation or failure to comply with any applicable law, that neither the city of Los Angeles nor any board, department, officer or employee thereof make any warranty or shall be responsible for the performance or results of any work described herein or the condition of the property or soil upon which such work is performed. (See Sec. 91.0202 LAMC)

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/01/2018 has revealed that there are 2 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/01/2018 has revealed that there are 8 RCRA-SQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 07/30/2018 has revealed that there are 21 ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, has revealed that there are 5 UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/01/2018 has revealed that there are 3 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 29 EDR Hist Auto sites within approximately 0.125 miles of the target property.

FINDS:

Registry ID: 110002902967

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Registry ID: 110059795495

Environmental Interest/Information System
STATE MASTER

ICIS (Integrated Compliance Information System) is the Integrated

ANACOMP INC (Continued) **1000857889**

Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

. Waste code: 331
. Waste name: Off-specification, aged, or surplus organics

. Waste code: 341
. Waste name: Organic liquids (nonsolvents) with halogens

. Waste code: 343
. Waste name: Unspecified organic liquid mixture

. Waste code: 352
. Waste name: Other organic solids

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D002

NASCO PETROLEUM LLC (Continued) **1016452950**

. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Violation Status: No violations found

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

CITY OF LOS ANGELES - MERCY HOUSING PROJECT (Continued) **S106386932**

File Location: Regional Board
Potential Media Affected: Indoor Air, Soil, Soil Vapor
Potential Contaminants of Concern: Benzene, Other Chlorinated Hydrocarbons, Tetrachloroethylene (PCE), Toluene, Trichloroethylene (TCE), Xylene
Site History: The subject site (Site) was a former machine shop, then used as a parking lot from the 1990s-2002. PCE was encountered in soil and soil gas mostly in area of the former machine shop, however lower concentrations of benzene, toluene, ethylbenzene, and xylenes were also detected at the Site. Soil excavation was completed at the Site in 2004 and a sub-slab vapor barrier and passive ventilation system were installed when the Site was redeveloped as Grand Avenue affordable housing in 2005-2006. The Site has completed 1 year of indoor air and sub-slab monitoring. The Site received a No Further Action letter on May 12, 2011. COCs: Primarily chlorinated solvents, minor BTEX Status: Soil excavation completed, sub-slab vapor barrier and passive vent sys installed, site completed 1 yr of indoor air and sub slab mon. Ready for Closure Review HHRA: Submitted and reviewed/approved by OEHHA Env Cov: No Env Just: No? Low income housing?

ACE PLATING CO., INC. (Continued) **S105632824**

CPS-SLIC:

Region:	STATE
Facility Status:	**Open - Site Assessment**
Status Date:	06/06/2013
Global Id:	T10000004814
Lead Agency:	LOS ANGELES RWQCB (REGION 4)
Lead Agency Case Number:	Not reported
Latitude:	34.0392409
Longitude:	-118.245909
Case Type:	Cleanup Program Site
Case Worker:	RV
Local Agency:	Not reported
RB Case Number:	1290
File Location:	Regional Board
Potential Media Affected:	Aquifer used for drinking water supply, Contaminated Surface / Structure, Soil, Soil Vapor
Potential Contaminants of Concern:	Tetrachloroethylene (PCE), Trichloroethylene (TCE), Chromium, Chromium VI
Site History:	Plating operations started in the mid-1910s in the southwestern portion of the Site until 2005. Ace Plating owned and conducted plating related operations on the 11 contiguous parcels, specifically electrochemical coating of metal parts. Numerous assessments conducted at the site indicate that the soil is impacted with VOCs and metals. The soil vapor has been sampled throughout the Site with tetrachloroethene (PCE) concentrations at 5 feet below ground surface (bgs) ranging from 7.9 micrograms per liter (a%g/L) to 87 a%g/L. The soil vapor data is limited at depths greater than 30 feet bgs. At 60 feet bgs and below, PCE concentrations range from 39 a%g/L below the Assembly Room to 127 a%g/L offsite on Crocker Street. The lateral extent of shallow PCE greater than 12 a%g/L is only defined on the east side. The source of the PCE is unknown but slightly higher concentrations exist in the central portions of the Plating Rooms. Chromium concentrations ranged from 1.5 mg/kg to 4,300 mg/kg for total chromium and from 0.92 to 840 mg/kg for hexavalent chromium. The maximum concentrations were both collected from SSVW-2 at 1 foot bgs located in the alley between the Crocker Street and Towne Avenue buildings and is adjacent to the location of the former chromium tanks. Outside of the area impacted by the former chromium tanks, the maximum chromium concentration is 4200 mg/kg for total chromium and 94 mg/kg for hexavalent chromium at MW-1. Degreasers that contained PCE were utilized in Plating Rooms 1 and 2 from 1993 to 2001. The maximum PCE concentration is 0.150 mg/kg and was sampled 4 feet deep in the vicinity of the former nickel dip tank in Plating Room 2. Two groundwater monitoring wells have been installed. Hexavalent chromium was not detected above the laboratory detection limits in any of the groundwater samples collected. Tetrachloroethylene (PCE) and 1,1-dichloroethene are the only VOC detected in groundwater, with the maximum concentration detected in MW-3 at a concentration of 33 ug/L and 2.7 ug/L, respectively.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 07/17/2018

Next Scheduled EDR Contact: 01/14/2019
Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991
Date Data Arrived at EDR: 02/02/1994

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 07/17/2018

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 11/07/2016
Date Data Arrived at EDR: 01/05/2017

Next Scheduled EDR Contact: 10/15/2018
Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 03/01/2018

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 03/01/2018

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 05/18/2018

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing
In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 08/10/2018
Date Data Arrived at EDR: 08/10/2018
Date Made Active in Reports: 09/10/2018

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

East Map:	5630795 LOS ANGELES, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

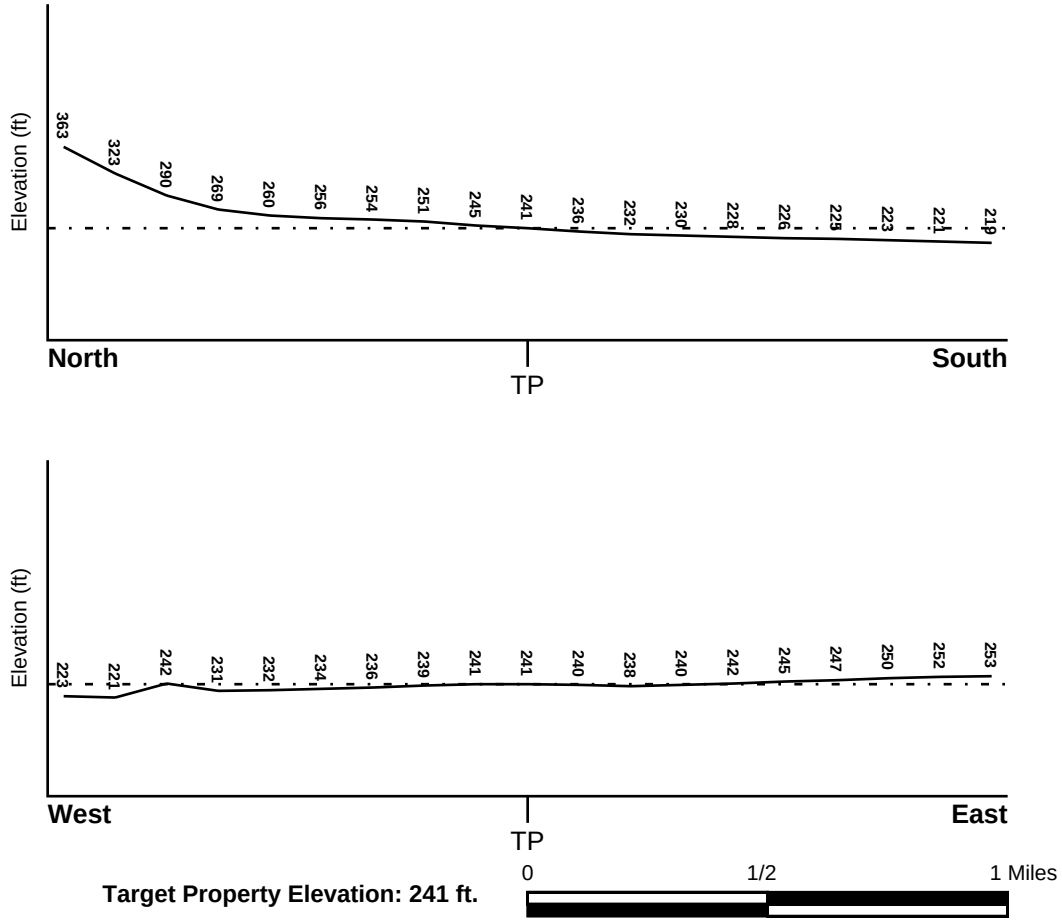
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General South

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06037C1620F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
06037C1636F	FEMA FIRM Flood data
06037C1638F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
HOLLYWOOD	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1/2 - 1 Mile NE
Site Name:	SO CALIF RAPID TRANSIT DISTRICT
Site EPA ID Number:	CAD981989841
Groundwater Flow Direction:	GENERALLY SE.
Measured Depth to Water:	approximately 37 feet.
Hydraulic Connection:	The uppermost aquifer at the site is the Gaspur aquifer. The Gaspur aquifer is hydraulically connected to underlying aquifers.
Sole Source Aquifer:	No information about a sole source aquifer is available
Data Quality:	Information is inferred in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

* ©1996 Site--specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Quaternary
Series:	Quaternary
Code:	Q *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratifed Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures:
sandy loam
gravelly - sandy loam
silt loam
clay
fine sand
gravelly - sand
sand
fine sandy loam

Surficial Soil Types:
sandy loam
gravelly - sandy loam
silt loam
clay
fine sand
gravelly - sand
sand
fine sandy loam

Shallow Soil Types:
fine sandy loam
gravelly - loam
sandy clay
sandy clay loam
clay
silty clay
sand

Deeper Soil Types:
gravelly - sandy loam
sandy loam
very gravelly - sandy loam
stratified
very fine sandy loam
weathered bedrock
sand
gravelly - fine sandy loam
silty clay loam
clay loam

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish and Wildlife
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

APPENDIX D: QUALIFICATIONS/INSURANCE

PARTNER

PARTNER

David Gerhardstein
Environmental Project Manager

Education

B.S. Environmental Science, Wright State University, Dayton, Ohio

Registrations

40-hour HAZWOPER

Highlights

8 years of experience in the environmental consulting industry
Phase I Environmental Site Assessments
Subsurface investigation
Hazard mitigation
Health and Safety Services

Experience Summary

Mr. Gerhardstein has significant experience in due diligence assessments for a variety of property types and the needs and requirements of varied number of reporting standards including ASTM standards, EPA's All Appropriate Inquiry (AAI), and customized client formats. Specifically, Mr. Gerhardstein has conducted and managed hundreds of Phase I environmental site assessments across industrial, commercial, multi-family residential, institutional and hospitality properties.

Mr. Gerhardstein further has performed dozens of Phase II subsurface investigations and has extensive experience related to remediation design and oversight, regulatory compliance assessments, soil, water and air sampling and analysis, vapor intrusion assessments and mitigation, and design, operation and maintenance of remediation systems.

Mr. Gerhardstein has worked for a wide range of clients that include financial institutions, real estate developers, brokers, investment groups, and Fortune 100 companies in the automotive, energy and heavy manufacturing industries.

Project Experience

Transfer of Industrial Facilities, Multiple Sites. Mr. Gerhardstein provided services for transfer of a portfolio of 14 industrial facilities located across the states of Kansas, Missouri, Nebraska, South Dakota, and Tennessee. He conducted site visits, interviewed key-personnel and prepared final reports. Additionally, he performed Phase II investigations at nine of the properties. He coordinated subcontractors and laboratory services, conducted subsurface analysis and sampling, and managed disposal of investigation derived waste.

Chlorinated Solvent Vapor Intrusion Mitigation, Former Automotive and Semiconductor Manufacturing Facilities, Dayton, Ohio and Mountain View, California. Mr. Gerhardstein managed tasks for two Superfund vapor intrusion sites in the states of Ohio and California. Duties included coordinating between regulators, clients and interested parties. He was responsible for inspecting numerous residential and commercial properties to assess potential vapor intrusion pathways. He managed the associated air sampling programs, worked on design of mitigation measures, oversaw installation of mitigation systems and implemented monitoring plans to ensure efficacy.

Chlorinated Solvent Groundwater Plume Management, Active Automotive Manufacturing Facility, Vandalia, Ohio. TCE plume at an active automotive parts manufacturing facility. Responsibilities included evaluating performance of a pump-and-treat system installed to prevent further offsite contaminant migration and assistance in design and implementation of multiple system upgrades. He was responsible for monitoring system performance to ensure compliance with an NPDES permit for effluent discharge to surface water. He further performed groundwater, surface water and drinking water sampling activities, completed associated reports and managed hazardous investigation derived waste.

Methane Intrusion Mitigation, Former Landfill, San Rafael, California. Mr. Gerhardstein oversaw installation of a methane monitoring and mitigation system at a new retail development constructed atop a former landfill. Duties included ensuring that system construction details matched design criteria, troubleshooting and optimizing system performance, and conducting regular monitoring to ensure proper functionality. He prepared reports related to system construction and operation and worked with local regulators to design an ongoing methane monitoring program at the property.

Additionally, Mr. Gerhardstein has experience in the following areas:

- Pilot testing, design, optimization, operation and maintenance of groundwater and soil gas remediation systems
- Use of a wide range of environmental field equipment including multiple soil and groundwater sampling methods, PIDs, nuclear density gauges, soil gas and landfill monitoring equipment, and air sampling and monitoring equipment
- Subsurface investigation techniques including direct push, hollow-stem auger and sonic drilling
- Vapor intrusion assessment, sampling and mitigation solutions
- Manufactured gas plant site characterization and remediation

PARTNER

Jay Grenfell, REPA, LEED AP
National Client Manager, Principal

Education

B.A, Environmental Science, University of California at Berkeley

Registrations

Registered Environmental Property Assessor, National Registry of Environmental Professionals
LEED Accredited Professional, United States Green Building Council

Highlights

16 years in the environmental consulting industry
Experience in various disciplines, including regulatory compliance, asbestos abatement, point source air monitoring, Tier II reporting, and Environmental Health & Safety consulting services.

Experience Summary

Mr. Grenfell currently serves as a National Client Manager providing risk management solutions to clients' due diligence and engineering needs. Mr. Grenfell's breadth of experience and understanding of commercial real estate transactions from both an equity investment and lending view allow him to provide risk management consulting that align with client objectives.

Mr. Grenfell conducted and managed thousands of Phase I ESAs on industrial, office, multi-family, government, retail, and hospitality properties prior to assuming his role as a client manager and business development professional. His experience also includes management of large multi-site portfolios for varied and demanding stakeholders, where he mentored field assessors, identifying environmental risks, and provided detailed reports within demanding deadlines. Mr. Grenfell experience includes understanding and coordinating a full suite of due diligence services, including Phase II subsurface investigations, Property Condition Assessments, Seismic Risk Assessments, ALTA Surveys, Asbestos and Lead Surveys, and Energy Audits.

Mr. Grenfell has worked for nationwide and local clients that include commercial developers, mortgage bankers, real estate brokers, individual investors, equity/institutional investment groups, and financial lending institutions, including CMBS lenders, SBA lenders, and GSA (Fannie and Freddie) lenders.

Project Experience

Multi-Site Portfolio, Nationwide. Managed performance and delivery of summary matrix and complete reports for a 300-site portfolio of Class A high-rise office buildings, at the time valued as the largest real estate transaction in history. Lead scheduled conference calls summarizing and evaluating environmental liabilities for a large stakeholder group.

Phase II Subsurface Investigations, Kansas City, Missouri. Conducted eight Phase II Site Assessments at gasoline stations over a four-day period, coordinating and supervising the advancement of soil borings and collected soil and groundwater samples. Documented results in concise, well-written reports.

Industrial Compliance Evaluation, San Francisco, CA. Managed a compliance evaluation team at an 8,000 employee, 24-hour aircraft maintenance center, evaluating environmental regulatory compliance. Provided solutions and established protocols for ensuring compliance.

Third-Party Report Reviews, Chicago, IL. Conducted 3rd-party reviews of over 150 gasoline stations, documenting previous report findings and providing a matrix listing issues and updated risk-based recommendations.

High Rise Office Buildings, San Francisco. Worked with technical team to manage pre-acquisition due diligence for equity investor of high rise office buildings in downtown San Francisco. Included equity PCA with specialty evaluations of façade, MEP, Fire and Life Safety, Roof, and ADA. Provided red flag analysis and summary costs tables within 48 hours of initial site visits with final reports provided within 10 business days.

Multi-Site Portfolio, California. Managed performance and delivery of summary matrix and complete reports for a 150-site portfolio of fast food restaurants providing environmental and property condition assessments with specialty evaluations of roofs and MEP systems.

EXECUTIVE SUMMARY

FINDINGS

Andersen Environmental has performed a Phase I Environmental Site Assessment (Phase I) for Jade Enterprises (Client) for an industrial property located at 1155 and 1165 South Main Street, in Los Angeles County and the City of Los Angeles, California, Assessor's Parcel Numbers: 5139-017-015 and 5139-017-016. The research conducted for this study and the report prepared are in conformance with the United States Environmental Protection Agency (USEPA) All Appropriate Inquiry (AAI) standard and the American Society for Testing and Materials (ASTM) E 1527-13 scope of work.

Site Description

According to our research and information provided by the Client, the following addresses have been found to be associated with the subject property: 1155, 1157, 1159, 1161, and 1165 South Main Street and 111 West 12th Street, Los Angeles, California. The subject property is located at the northern intersection of South Main Street and West 12th Street in the City of Los Angeles. The subject property is 0.33 acres in size and contains two single-story structures which are approximately 8,530 (1165 South Main Street) and 4,900 (1155 South Main Street) square feet in size, respectively. At the time of the site reconnaissance, the structure 1165 South Main Street was divided into five wholesale retail units: Ellie's Fashion (1159A South Main Street), Miss Handbag (1159B South Main Street), Fast Vehicle's Registration Services (1159C South Main Street), vacant space and Polly Trading Company (both 111 West 12th Street). The structure 1155 South Main Street was divided into three retail spaces: Pro Vision Sunglasses (1157 South Main Street) and S.H. Handbags Luggage Backpack (1155A and 1155B South Main Street). The exterior portions of the property consist of an enclosed asphalt paved parking area to the north. The surrounding area is mostly used for commercial purposes. Groundwater is estimated to be between approximately 30- and 40-feet below ground surface in the area of the site.

No significant hazardous material storage or recognized environmental conditions were observed at the site. Those interviewed, as persons familiar with the site were not aware of any negative environmental conditions associated with the property.

Historical Land Use

According to Andersen Environmental's interpretation of the historical research data, the subject property was undeveloped in 1906. In 1921, the south portion of the property (1165 South Main Street parcel) was improved with the existing commercial structure for automotive sales purposes. By 1927, the north portion (1155 South Main Street parcel) was utilized as a parking lot and the structure in the south portion was used for tire sales. By 1950, the structure in the south portion was utilized for tire sales and rebuilding operations and clothing manufacturing. The north portion had been improved with a small office structure and was utilized for automobile sales. By 1967, the clothing manufacturing operations had ceased and the space was utilized for commercial retail purposes. The tire sales and rebuilding operations remained until at least 1987. Sometime prior to 1987, the small office structure was demolished and the north portion was improved with the existing commercial structure. The structure was originally utilized for warehouse purposes. Historical occupants of 1165 South Main Street include: Perfect Tire Company (1927-1928), Crest Embroidery Company (1958), Novisoff & Sons Tire Company (1958), Nadler Sales (1976), and Winston Tire Company (1976-2004). In 2000, both structures were altered for use as apparel and accessory retail, including clothing stores, trading companies, and sunglasses retail. In 2013, one of the retail spaces was converted into office space. Historical occupants since 2000 have included: M&M Trading (2000), Ruida Enterprises Incorporated (2006-2008), SH Trading (2000-2013), ProVision Sunglasses Company (2000-2013), and Weseries (2013).

- The subject property was historically utilized for auto repair operations including tire rebuilding from 1906 to 2004. For more information, please refer to the Environmental Data Search Section below.
- The subject property was historically utilized for clothing manufacturing. However, as clothing manufacturing typically consists of garment cutting/sewing and does not typically include the use of solvents and oils, the former operations are not expected to represent a significant environmental concern to the subject property.
- Occupants of the commercial structure developed in the north portion of the subject property in 1986 were not determined for the period 1986 to 1999. According to building permit records, the structure was inspected as a warehouse in 1987 and by 2000 the structure was converted for commercial retail use. Based on the foregoing, the stringent regulatory oversight during this period (post-1980s) and the lack of evidence to suggest significant industrial operations at the structure, this limitation is not expected to represent a significant environmental concern for the subject property.
- Historical occupants were not determined for the commercial structure in the south of the subject property for period between 1928 and 1949. However, the structure was utilized for the same purposes in 1927 and 1950 (tire sales and repair). Based on the foregoing, it is assumed that the structure was utilized for the same purposes between 1928 and 1949 and this limitation is not expected to represent a significant environmental concern for the subject property.

Environmental Data Search

- **Winston Tire Company #51 (1161-1165 South Main Street) –** The subject property was listed on the Facility and Manifest Data (HAZNET) database. According to the listing, between 1993 and 2000, Winston Tire Company generated hazardous wastes including unspecified aqueous solution, oil/water separation sludge, aqueous solution with total organic residues less than 10 percent, and unspecified solvent mixture. Oil/water separation sludge is indicative of the presence of a clarifier at the subject property. During the site reconnaissance, the majority of the concrete floors in the structure formerly occupied by Winston Tire Company (1165 South Main Street parcel) were not observable. Please refer to the discussion of Los Angeles County Department of Health Services, Public Health Investigations (LACDHS PHI) files below for more information.
- There are no properties within 100-feet of the subject property where a release is considered likely or a known release has occurred.
- In our opinion, none of the other sites listed on the regulatory database report pose a significant threat to the subject property as there is no indication of a release at the respective sites, a release has occurred but groundwater has not been impacted, a release has occurred but the case is closed, or the sites are located cross or down gradient of the subject property and in excess of 1/10 mile from the subject property.
- The Los Angeles Regional Water Quality Control Board (LARWQCB), Department of Toxic Substances (DTSC), South Coast Air Quality Management District (SCAQMD), Los Angeles Fire Department (LAFD) Hazardous Materials Division (LAFD HazMat), LAFD Central Industrial Unit (LAFD CIU), LAFD Underground Storage Tank Division (LAFD UST), Los Angeles County Department of Health Services, Public Health Investigations (LACDHS PHI), and City of Los Angeles Bureau of Sanitation (LABS) were contacted regarding contaminated groundwater, toxic substances, air emissions equipment, hazardous materials, underground storage tank and industrial wastewater files for the subject property. Additionally, the State Water Resources Control Board (SWRCB) GeoTracker, DTSC EnviroStor, and SCAQMD Facility Information Detail (FIND) databases were reviewed for files for the subject property.

- According to a review of the databases and responses to our requests, there are no files for the subject property with the exception of the following:
- According to files provided by the LACDHS PHI, an inspection report from August 19, 1995 listed two 55-gallon drums of waste oil disposed by Evergreen Environmental, one 55-gallon drum of used oil filters, one 55-gallon drum of antifreeze, and 30 gallons of parts cleaner. A Notice of Violation was issued to Winston Tires for overflowing waste oil and antifreeze drums, and there were floor drains noted. The inspector asked about the presence of a clarifier, but it was not confirmed whether a clarifier existed or not. An inspection report from July 6, 1998 listed 30 gallons of parts cleaner disposed by Safety Kleen, 55 gallons of antifreeze disposed by Asbury Oil, and 100 gallons of waste oil and used oil filters disposed by Asbury Oil at the Winston Tires auto repair garage on the subject property. The subject property was historically utilized for auto repair operations including tire rebuilding from 1906 to 2004. Records pertaining to the use of hazardous materials for the auto repair tenants prior to 1995 were not available as they operated during a time when the regulatory measures governing the use of hazardous materials of this nature were not as stringent as they are today. Based on the long term duration of the auto repair operations onsite (approximately 98 years), likely use of hazardous materials during a time without stringent regulatory oversight, and documented drains and likely associated clarifier (preferential pathways to the subsurface), the former auto repair operations at the subject property are considered to be a recognized environmental condition.
- At the time this report was issued, no response has been received from LACDHS PHI for 1165 South Main Street. Additionally, no response has been received from SCAQMD for the address 1157 South Main Street. Should relevant information be obtained from these agencies subsequent to issuing this report, an addendum will be prepared and provided to the Client. However, based on the quality of information obtained from other sources, this limitation is not expected to significantly alter the findings of this investigation.

- The user did not provide Andersen Environmental any information either verbally or in writing (i.e. Title Report) regarding environmental cleanup liens or activity and use limitations encumbering the subject property. An environmental lien search was not requested by the user; however, based on our review of the DTSC EnviroStor Database, no environmental liens enforced by the DTSC were identified.

Additional Issues

- Based on the age of the structure associated with 1165 South Main Street (1921), there is a potential for asbestos containing building materials within the structure, however, no testing was completed as part of this report. Potential asbestos-containing materials include mastic associated with linoleum and tile flooring. The ACM appeared to be in good condition. Based on the age of the structure associated with 1155 South Main Street (1981), the potential for asbestos containing building materials within the structure is considered to be low. However, individual suspect materials would need to be tested in order to confirm the presence or non-presence of asbestos.
- Based on the age of the structure associated with 1165 South Main Street (1921), there is a potential for lead based paint within the structure. Painted surfaces appeared to be in good condition. However, no testing was completed as part of this report. Based on the age of the structure associated with 1155 South Main Street (1981), the potential for lead based paint within the structure is considered to be low.
- According to our research, radon potential at the subject property is considered low.

- Andersen Environmental did not observe visible or olfactory indications of the presence of mold, nor did Andersen Environmental observe obvious indications of significant water damage.
- The City of Los Angeles Methane Zone map was reviewed to determine if the subject property is located in a methane or methane buffer zone. According to the map reviewed, the subject property is located within a methane buffer zone. Due to the potential environmental risk associated with construction in Methane Zones, the property owner may be required to conduct a methane assessment prior to the redevelopment of the subject property and methane mitigation systems may be required (Division 71 of the Los Angeles Building Code).

CONCLUSIONS

Andersen Environmental has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice 1527-13, at 1155 and 1165 South Main Street, Los Angeles, California, the subject property. Any exceptions to or deletions from this practice are described in the individual sections of this report. This assessment has revealed no evidence of recognized environmental conditions in connection with the subject property except for the following:

Recognized Environmental Conditions (REC)
The potential for hazardous materials to impact the property subsurface from former auto repair operations at the subject property for 98 years (1906 to 2004) with documented drains and likely associated clarifier represents a REC.

Historic Recognized Environmental Condition (HREC)
In our opinion, no HRECs were revealed during the course of our assessment

Controlled Recognized Environmental Condition (CREC)
In our opinion, no CRECs were revealed during the course of our assessment.

RECOMMENDATIONS

Based on the foregoing, a Phase II Environmental Site Assessment is recommended.

1.0 INTRODUCTION

Andersen Environmental has performed a Phase I Environmental Site Assessment (Phase I) for the property located at 1155 and 1165 South Main Street, in Los Angeles County and the City of Los Angeles, California (Subject Property). This report has been prepared for the sole use of Jade Enterprises (Client).

The research conducted for this study and the report prepared are in general conformance with the EPA "All Appropriate Inquiries" standard and the ASTM 1527-13 "Standard Practices for Environmental Site Assessments: Phase I Environmental Site Assessment Process". The primary purpose for performing a Phase I ESA is to "…permit a user to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations (commonly known as landowner liability protections) on Comprehensive Emergency Response Compensation and Liability Act (CERCLA) liability." (ASTM, 2013) An environmental site assessment meeting or exceeding this practice and completed less than 180 days prior to the date of acquisition is presumed to be valid under this standard. In order to maintain landowner liability protections, the user also has a "continuing obligation to not interfere with activity and use limitations associated with the property," must take "reasonable steps to prevent releases" and must "comply with legal release reporting obligations." (ASTM, 2013) Further, it is the goal of this study to identify business risks related to the property associated with environmental conditions. This investigation is not an environmental compliance audit and is not designed to determine if the operations of an existing facility are in compliance with applicable environmental laws and regulations.

The goal of this process is to identify any (1) recognized environmental conditions (RECs), (2) historic recognized environmental conditions (HRECs), and/or (3) controlled recognized environmental conditions (CRECs) associated with the subject property.

1. A **recognized environmental condition** is defined as "…the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment." This definition does not include *de minimis* conditions defined as "a condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies" (ASTM, 2013).

2. A **historical recognized environmental condition** is defined as "a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls)." (ASTM, 2013). The HREC designation requires the comparison of residual contamination concentrations, if any, to currently regulatory standards.

3. A **controlled recognized environmental condition** is defined as "a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls)" (ASTM, 2013).

In order to identify environmental conditions at the site, the Phase I ESA includes a site inspection, interviews with parties familiar with the property, historical research into the past uses of the property, and an environmental records search with regard to the subject property, adjoining and immediately surrounding properties, and the surrounding area. In addition, Andersen Environmental provides an opinion regarding the potential for asbestos containing materials, lead-based paints, mold, radon, oil and gas exploration, and methane as they relate to the subject property. Reviewing those documents that are publicly available, reasonably ascertainable, and practically reviewable controls the completeness of this assessment. The inability to review documents which do not exist or are not publicly available, reasonably ascertainable, or practically reviewable may result in a data gap.

1.1 Significant Assumptions

While this report provides an overview of potential environmental concerns, both past and present, the environmental assessment is limited by the availability of information at the time of the assessment. It is possible that unreported disposal of waste or illegal activities impairing the environmental status of the property may have occurred which could not be identified. The conclusions and recommendations regarding environmental conditions that are presented in this report are based on a scope of work authorized by the Client. Note, however, that virtually no scope of work, no matter how exhaustive, can identify all contaminants or all conditions above and below ground.

1.2 Limitations and Exceptions

This report has been prepared in accordance with generally accepted environmental methodologies referred to in ASTM 1527-2013, and contains all of the limitations inherent in these methodologies. No other warranties, expressed or implied, are made as to the professional services provided under the terms of our contract and included in this report. The conclusions of this report are based in part, on the information provided by others. The possibility remains that unexpected environmental conditions may be encountered at the site in locations not specifically investigated. The services performed and outlined in this report were based, in part, upon visual observations of the site and attendant structures. Our opinion cannot be extended to portions of the site that were unavailable for direct observation, reasonably beyond the control of Andersen Environmental. The objective of this report was to assess environmental conditions at the site, within the context of our contract and existing environmental regulations within the applicable jurisdiction. Evaluating compliance of past or future owners with applicable local, provincial, and federal government laws and regulations was not included in our contract for services. Our observations relating to the condition of environmental media at the site are described in this report. It should be noted that compounds or materials other than those described could be present in the site environment.

1.3 Reliance

This report has been prepared for the sole use of the Jade Enterprises. The contents should not be relied upon by any other parties without the express written consent of the Jade Enterprises and Andersen Environmental.

1.4 User Responsibilities

The United States Environmental Protection Agency (USEPA) All Appropriate Inquiry (AAI) and ASTM E 1527-13 Phase I Standards require that the user conduct independent research and consider certain information before purchasing a property:

- Obtain a recent (less than 180 days old) title report prepared for the subject property. The report should be reviewed to obtain information regarding environmental clean-up liens or activity and use limitations (AULs) with regard to the subject property. If environmental cleanup liens or AULs encumbering the subject property or in connection with the subject property are identified, the user should provide that information to the Environmental Professional (Andersen Environmental). If the

user has actual knowledge of environmental cleanup liens or AULs encumbering the subject property or in connection with the subject property, the user should provide that information to the Environmental Professional (Andersen Environmental).

- The user should provide the Environmental Professional (Andersen Environmental) with any specialized knowledge the user has with regard to recognized environmental conditions in connection with the property.
- If the user is aware of any commonly known information in the community about the subject property with respect to recognized environmental conditions, the user should provide the information to the Environmental Professional (Andersen Environmental).
- If this Phase I ESA was prepared as due diligence for a property transaction, it is the responsibility of the user to consider the relationship of the purchase price to the fair market value of the property. If the purchase price is significantly lower than the fair market value, the user should identify the alternate reason for the low purchase price if the lower purchase price is not related to the property being affected by hazardous substances or petroleum products.

2.0 SITE DESCRIPTION

Andersen Environmental has performed a Phase I for an industrial property located at 1155 and 1165 South Main Street, in Los Angeles County and the City of Los Angeles, California. The subject property is located at the northern intersection of South Main Street and West 12th Street in the City of Los Angeles. The subject property is 0.33 acres in size and contains two single-story structures which are approximately 8,530 (1165 South Main Street) and 4,900 (1155 South Main Street) square feet in size, respectively. At the time of the site reconnaissance, the structure 1165 South Main Street was divided into five wholesale retail units: Ellie's Fashion (1159A South Main Street), Miss Handbag (1159B South Main Street), Fast Vehicle's Registration Services (1159C South Main Street), vacant space and Polly Trading Company (both 111 West 12th Street). The structure 1155 South Main Street was divided into three retail spaces: Pro Vision Sunglasses (1157 South Main Street) and S.H. Handbags Luggage Backpack (1155A and 1155B South Main Street). The exterior portions of the property consist of an enclosed asphalt paved parking area to the north. The surrounding area is mostly used for commercial purposes.

Natural gas services are provided to the subject property by the Southern California Gas Company. Electric, potable water and sewer services are provided by the City of Los Angeles Department of Water and Power (LADWP).

2.1 CURRENT AND HISTORICAL ADDRESSES

According to our research and information provided by the Client, the following addresses have been found to be associated with the subject property: 1155, 1157, 1159, 1161, and 1165 South Main Street and 111 West 12th Street, Los Angeles, California.

2.2 LEGAL DESCRIPTION

According to the Los Angeles County Assessor's Office, the subject property is located in the City of Los Angeles, and is described by the Assessor's Parcel Numbers: 5139-017-015 and 5139-017-016.

2.3 PHYSICAL SETTING

The elevation of the subject property is approximately 241 feet above sea level (USGS Hollywood, CA 7.5 minute topographic quadrangle). Based on our review of the GeoCheck Section of the EDR Radius report, the subject property is not situated within a 100-year FEMA Flood Zone. No wetlands were identified at the property or adjoining/immediately surrounding properties. Based on our review of groundwater data presented in the State Water Resources Control Board (SWRCB) Geotracker website, groundwater was detected at a leaking underground storage tank site (504 West Olympic Boulevard) approximately 0.35 mile north-northwest of the subject property at between approximately 30- and 40-feet below ground surface. However, perched and semi-perched aquifers may be present beneath the site. Based on topographic map interpretation, regional groundwater flow direction is estimated to be to the southwest; however local groundwater flow direction may vary.

3.0 SITE RECONNAISSANCE / INTERVIEWS

3.1 SITE RECONNAISSANCE

On March 6, 2014, Mr. Gareth Howell of Andersen Environmental conducted a site reconnaissance of the subject property. The site inspection was conducted to attempt to identify current site use(s), current hazardous materials storage, and evidence of past site uses and hazardous material storage and to identify evidence of other recognized environmental conditions. The following table summarizes our Site Reconnaissance observations:

Yes	No	Observed Feature(s)
☐	☒	Hazardous Substances and Petroleum Products Containers
☐	☒	Underground and/or Aboveground Storage Tanks
☐	☒	Drains/Sumps/Clarifiers/Sewer Interceptors/Septic Systems
☐	☒	Stained or Corroded Surfaces/Stained Soil or Stressed Vegetation
☐	☒	Pits/Ponds/Lagoons/Wetlands
☐	☒	Electrical Equipment with the Potential to contain Fluids
☐	☒	Production or Monitoring Wells
☐	☒	Evidence of Solid Waste Disposal/Dumping/Fill Areas

3.1.1 EXTERIOR OBSERVATIONS

The subject property is developed with two single-story adjoining structures which occupy the majority of the subject property. The exterior portions of the property consist of an enclosed asphalt paved area to the north which is utilized for parking. The asphalt appeared to be in good condition with no indication of significant staining or cracking. No recognized environmental conditions were observed in this portion of the site.

3.1.2 INTERIOR OBSERVATIONS

The subject property is developed with two adjoining structures: one single-story brick structure with mezzanine level (1165 South Main Street, approximately 8,532 square feet) and one single-story concrete masonry unit (CMU) structure with mezzanine level (1155 South Main Street, approximately 4,900 square feet). At the time of the site reconnaissance, 1165 South Main Street was divided into five wholesale retail units: Ellie's Fashion (1159A South Main Street), Miss Handbag (1159B South Main Street), Fast Vehicle's Registration Services (1159C South Main Street), vacant space and Polly Trading Company (both 111 West 12th Street). 1155 South Main Street was divided into three retail spaces: Pro Vision Sunglasses (1157 South Main Street) and S.H. Handbags Luggage Backpack (1155A and 1155B South Main Street). Building materials observed included carpet, linoleum, concrete, wooden, and tile flooring, acoustic

ceilings and drywall partitions and ceilings. Each unit followed a similar design with retail space at the front, storage at the rear, and office space on the mezzanine level. No significant hazardous material storage or recognized environmental conditions were observed in the interior portions of the site.

3.1.3 RECONNAISSANCE LIMITATIONS

Due to the large number of boxes stored within the two units associated with 111 West 12th Street, Andersen Environmental was unable to observe the condition of all concrete floor surfaces in these units. Concrete surfaces observed appeared to be in good condition. However, the subject property was formerly utilized for auto repair operations. For more information please refer to Section 5.1.

3.2 ADJOINING AND IMMEDIATELY SURROUNDING PROPERTIES

The adjoining and immediately surrounding properties (within 100-feet of the subject property boundary) were visually and physically observed from public right-of ways and the subject property in an attempt to identify recognized environmental conditions. Our observations are summarized in the following table:

Location	Address(es)	Uses/Observations
North	1144 and 1148 Broadway	Two commercial structures (Auto Title Loans and vacant)
Northeast	1147 and 1151 South Main Street	Commercial retail – Lucky Import (1147A), Main Ace (1147C), Korus (1151A) and SC 2000 (1151C)
Northwest	1158 and 1168 Broadway	Parking lot
Southeast	1140 – 1162 South Main Street	Multiple commercial retail – Two Ten (1140 and 1140 ½), Lim Creations (1142), Missy USA Handbags (1142 ½, 1144, and 1144 ½), June (1146), Stephanie Handbags (1148), Track (1152), Main Group Importer and Distributor (1154 and 1156) and General Perfume (1162)
Southwest	1201 South Main Street	Parking lot

The adjoining/immediately surrounding properties to the southwest and northeast were listed on the regulatory database report and are further discussed in Section 5.2 below.

3.3 SURROUNDING AREA OBSERVATIONS

3.3.1 SURROUNDING PROPERTY USES

The surrounding area is mostly developed for commercial purposes, including apparel and accessory retail stores. Other noted uses include parking lots to the south and west of the subject property. No dry cleaner facilities or gas stations were observed in the immediate vicinity of the subject property.

3.3.2 SURROUNDING GEOGRAPHY

The surrounding area is mostly flat with a slight topographic slope to the southwest. No nearby hills or bedrock outcroppings were observed in the area of the site. No lakes, ponds, rivers or streams were observed in the surrounding area.

3.4 INTERVIEWS

3.4.1 Property Owner – Mr. Victor Lee, the property owner, completed an environmental questionnaire, dated March 11, 2014. Mr. Lee is unaware of any recognized environmental conditions with respect to the subject property.

3.4.2 Key Site Manager – The owner of the property is the key site manager and completed an environmental questionnaire for the purposes of this report. Please see above.

3.4.3 Property Occupants – No occupants were available for interview during the completion of this report.

3.4.4 Past Owners, Operators and Occupants – Past owners, operators and occupants were not able to be identified for an interview for this report.

3.4.5 Prospective Purchaser – Mr. Brian Taban, the prospective purchaser, completed a potential purchaser questionnaire for the purpose of this report, dated March 3, 2014. Mr. Taban was unaware of any recognized environmental conditions such as underground storage tanks or any generated hazardous materials associated with the property.

3.5 USER PROVIDED INFORMATION

The United States Environmental Protection Agency (USEPA) All Appropriate Inquiry (AAI) and ASTM 1527-13 Phase I Standards require that the Report User conduct independent research and consider certain information before purchasing a property. Andersen Environmental recommends that the User documents completion of the following items:

3.5.1 LIEN SEARCH

The User is required to obtain a recent (less than 180 days old) title report prepared for the subject property. The report should be reviewed to obtain information regarding environmental clean-up liens or activity and use limitations with regard to the subject property. If environmental cleanup liens or activity and use limitations encumbering the subject property or in connection with the subject property are identified, the User should provide that information to the Environmental Professional (Andersen Environmental). If the User has actual knowledge of environmental cleanup liens or activity and use limitations encumbering the subject property or in connection with the subject property, the User should provide that information to the Environmental Professional (Andersen Environmental).

- The user did not provide Andersen Environmental any information either verbally or in writing (i.e. Title Report) regarding environmental cleanup liens or activity and use limitations encumbering the subject property. An environmental lien search was not requested by the user; however, based on our review of the Department of Toxic Substances Control (DTSC) EnviroStor Database, no environmental liens enforced by the DTSC were identified.

3.5.2 SPECIALIZED KNOWLEDGE

The User should provide the Environmental Professional (Andersen Environmental) with any specialized knowledge the User has with regard to recognized environmental conditions in connection with the property.

- The User has no specialized knowledge with respect to recognized environmental conditions in connection with the property.

3.5.3 COMMONLY KNOWN OR REASONABLY ASCERTAINABLE INFORMATION

If the User is aware of any commonly known information in the community about the subject property with respect to recognized environmental conditions, the User should provide the information to the Environmental Professional (Andersen Environmental).

- The User is not aware of any commonly known information in the community about the subject property with respect to recognized environmental conditions.

3.5.4 PROPERTY VALUATION

If this Phase I ESA was prepared as due diligence for a property transaction, it is the responsibility of the User to consider the relationship of the purchase price to the fair market value of the property. If the purchase price is significantly lower than the fair market value, the User should identify the alternate reason for the low purchase price if the lower purchase price is not related to the property being affected by hazardous substances or petroleum products.

- According to the User, the purchase price generally reflects the fair market value of the property.

3.5.5 PURPOSE OF PERFORMING PHASE I ESA

- According to the User, the user is a prospective purchaser of the subject property and the Phase I is being performed to qualify for landowner liability protections under CERCLA as well as identify business risks related to the property associated with environmental conditions.

3.6 USER PROVIDED DOCUMENTS

- No documents were provided to Andersen Environmental by the Report User.

4.0 HISTORICAL LAND USE

A review of historical data derived from standard historical resources is provided in this section. The objective of consulting historical sources is to develop a history of the previous uses of the property and surrounding area, in order to help identify the likelihood of past uses having led to recognized environmental conditions in connection with the property. During our historical review, acute attention is paid to the subject property. Data relating to the adjoining and immediately surrounding properties (within 100-feet of the subject property boundary) and the surrounding area is reviewed to the extent that it is revealed in the course of researching the property itself.

4.1 AERIAL PHOTOGRAPHY REVIEW

Aerial Photography of many portions of the United States dates back to the 1920's. Items searched for in each photograph included, but were not limited to: evidence of tanks, gas stations, industrial site usage, water drainage pathways, areas which show evidence of drums or excessive debris, discolored or stained soils, areas of distressed vegetation, et cetera.

Aerial Photograph Coverage was available from Environmental Data Resources (EDR) for the years: 1927, 1938, 1948, 1952, 1964, 1972, 1981, 1989, 1994, 2005, 2009, 2010, and 2012. A summary of our observations is presented in the following table.

<table>
<tr><th colspan="4">1927</th></tr>
<tr><th rowspan="2">Subject Property</th><th colspan="2" rowspan="2">Adjoining and Notable Immediately Surrounding Property Observations</th><th rowspan="2">Notable Observations of the Surrounding Area</th></tr>
<tr></tr>
<tr><td rowspan="5">Subject property appears to be developed with one commercial structure in the south portion, and parking spaces in the north portion.</td><td>Direction</td><td>Observation</td><td rowspan="5">Surrounding area appears to be primarily commercial/industrial, with a structure characteristic of a gasoline service station to the southeast.</td></tr>

1964, 1972, 1981			
Subject Property	**Adjoining and Notable Immediately Surrounding Property Observations**		**Notable Observations of the Surrounding Area**
	Direction	**Observation**	
Subject property appears to be developed with one commercial structure in the south portion, and parking spaces in the north portion.	North	Small commercial structure and pavement used for parking spaces.	Surrounding area appears to be primarily commercial or industrial, with increased amounts of parking lots by 1981.
	Northeast	Commercial	
	Northwest	Parking lot	
	Southeast	Commercial	
	Southwest	Commercial and parking. Parking only by 1972.	
1989, 1994, 2005, 2009, 2010 and 2012			
Subject Property	**Adjoining and Notable Immediately Surrounding Property Observations**		**Notable Observations of the Surrounding Area**
	Direction	**Observation**	
Subject property appears to be developed with a commercial structure in the north portion and a commercial structure in the south portion.	North	Commercial structure and pavement.	Surrounding area appears to be a combination of commercial and industrial development with parking lots.
	Northeast	Commercial	
	Northwest	Parking lot	
	Southeast	Commercial	
	Southwest	Parking lot (across South Main Street)	

- The northwest adjoining property was occupied by a structure characteristic of a gasoline service station from at least 1938 until sometime before 1964. For more information, refer to Section 4.5.2.
- The surrounding area to the southeast of the subject property was occupied by a structure characteristic of a gasoline service station from at least 1927 until sometime before 1964. According to a review of the environmental database report, the site is not listed on any of databases indicative of a release associated with former gas station operations. Based on the foregoing, and the cross-gradient location of the site, the former gas station is not expected to represent a significant environmental concern to the subject property.

4.2 BUILDING DEPARTMENT RECORDS REVIEW

The addresses identified as current and historical addresses for the subject property were researched at the City of Los Angeles Building Division. Items considered in the course of the building permit review are previous site usage, previous ownership, and the construction or demolition of any structures that may have had a negative environmental impact on the property. The following table summarizes relevant building permits obtained and reviewed:

111 West 12th Street

Date	Owner/Occupant	Purpose
08/10/2000	Young G. & Soon O Joo	Change of use from auto repair garage to retail
08/10/2000	Young G & Soon O Joo	Convert existing retail store into four separate tenant spaces

1155 South Main Street

Date	Owner/Occupant	Purpose
08/18/1986	Young Gi Joo	Inspection of a warehouse structure.
04/22/1987	Young Gi Joo	Certificate of occupancy for a one store warehouse structure

1159 South Main Street

Date	Owner/Occupant	Purpose
06/25/1924	G Kenley	Alteration to a four story structure used as restaurant and garage
08/01/1924	Kennley, Inc	Alteration to one story structure used as an auto shop and restaurant
10/08/1929	Huntington Land Co	Alteration to a structure used as a store
12/29/1953	Henry J Novisoh	Repairs to one story structure used as a tire store
01/09/1958	J. Nowisoff	Repairs to a structure used for clothing manufacturing
08/06/2013	Edward Kim and Kyung H	Change of use to existing retail to an office

1161 South Main Street

Date	Owner/Occupant	Purpose
12/06/1927	Perfect Made Tire Company	Alteration to a one story structure used as a store
05/04/1928	Perfect Made Tire Company	Alteration to a one story structure used as a store
10/08/1929	Huntington Land Co	Alteration to a structure used as a store
12/29/1953	Henry J Novisoh	Repairs to one story structure used as a tire store
06/09/1958	US Rubber Company (Nofisoff & Sons)	Alteration to a tire store
10/05/1970	Tom and Gene Novisoff	Alteration to an auto tire store
05/12/1987	Winston Tire	Alteration to a tire shop
08/10/2000	Young G and Soon O	Alteration to multitenant retail structure

1163 South Main Street

Date	Owner/Occupant	Purpose
06/13/1921	Huntington Land and Improvement	Permit to build a foundation
06/18/1921	Huntington Land and Improvement	Permit to erect a one store building to be used for auto sales
05/12/1987	Winston Tire	Alteration to a tire shop

1165 South Main Street

Date	Owner/Occupant	Purpose
09/10/1919	JG Griffith	Addition to show room and shop
06/13/1921	Huntington Land and Improvement	Permit to build a foundation
06/18/1921	Huntington Land and Improvement	Permit to erect a one story building to be used for auto sales
09/21/1936	Brown	Alteration to a structural used as a café
05/12/1987	Winston Tire	Alteration to a tire shop

- There were no building permits identified for the other current or historical site addresses.

- Building permits indicate the property was historically utilized for auto repair operations and tire sales. For more information related to former operations please refer to Section 4.5.1.

4.3 CITY DIRECTORY REVIEW

City directories have been published since the 1800's and provide detailed occupant information for the property and its surrounding area at five-year intervals. The purpose of the City Directory research is to attempt to determine the businesses that historically occupied the subject property. Historical City Directories provided by EDR and reviewed by Andersen Environmental are listed below.

1155 South Main Street

Date	Listing
1920-1999	Address not listed in research source
2000, 2006, 2013	SH Trading
2000	Joo Young

1157 South Main Street

Date	Listing
1920-1999	Address not listed in research source
2000, 2006, 2008, 2013	ProVision Sunglasses Company

1159 South Main Street

Date	Listing
1920-1957	Address not listed in research source
1958	Crest Embroidery Company
1976	Nadler Sales
2000	M&M Trading, Rina Rich
2006, 2008	Ruida Enterprises Inc
2013	Weseries

1161 South Main Street

Date	Listing
1920-1975	Address not listed in research source
1976	Winston Tire Company
1958	Novisoff & Sons Tire Company

1165 South Main Street

Date	Listing
1920-1999	Address not listed in research source
2000	Joo Young

111 West 12th Street

Date	Listing
1920-1957	Address not listed in research source
1958	Isaacs Geo Gisla of California Sportswear
1981	Knights of Round Table Distribution
1990	Family Fashion
2000	Hobbs Discount
2006, 2008	J & K USA Wigs Factory, International Gift and Fashion
2013	Polly Trading Company Inc, Herbs Inc.

- Listings for adjoining and immediately surrounding properties reviewed during the course of researching the subject property did not reveal any uses of concern, with the exception of the north adjoining property 1144 South Broadway which was occupied by West Coast Stationery & Printing Company from at least 1929 to 1976. For more information, refer to Section 4.5.2.

4.4 SANBORN MAP REVIEW

Originally compiled by the Sanborn Map Company of Pelham, New York for fire insurance companies to assess fire risks related to building materials and hazardous materials storage, today Sanborn Maps are an invaluable tool for Environmental Professionals in determining historical site use and the potential for environmental conditions. Sanborn Map Coverage is available from as early as 1867 in some cities. Although Sanborn maps were created for approximately twelve thousand cities and towns in the United States, Canada, and Mexico, Sanborn Map Coverage is not available in newer and more rural communities. Sanborn Map Coverage was available from EDR for the years: 1888, 1894, 1906, 1950, 1953, 1955, 1958, 1960, 1962, 1963, 1967, 1968, and 1970. A summary of our observations is presented in the following table.

1888, 1894 and 1906			
Subject Property	**Adjoining and Notable Immediately Surrounding Property Observations**		**Notable Observations of the Surrounding Area**
	Direction	**Observation**	
Subject property is undeveloped.	North	Landscaped	Surrounding area is occupied by an estate, some residential structures, and undeveloped land. Some commercial development by 1906.
	Northeast	Undeveloped	
	Northwest	Undeveloped	
	Southeast	Undeveloped in 1888. Auto repair and machine shop by 1906	
	Southwest	Undeveloped lots and a residential structure. Skating rink by 1906 (across South Main Street)	
1950, 1953 and 1955			
Subject Property	**Adjoining and Notable Immediately Surrounding Property Observations**		**Notable Observations of the Surrounding Area**
	Direction	**Observation**	
Subject property is occupied by a tire sale and rebuilding structure, a clothing manufacturing structure in the south portion, and an auto sales lot in the north portion.	North	Auto park (across alley)	Surrounding area is primarily commercial with an exhibition hall to the west and a gasoline service station to the southeast.
	Northeast	Commercial printing and stationary storage structures.	
	Northwest	Gasoline service station in 1950,vacant by 1953 (across alley)	
	Southeast	Restaurant and garage (across 12th Street)	
	Southwest	Not depicted in 1950 or 1955. Commercial in 1953 (across South Main Street)	

1958, 1960, 1962 and 1963			
Subject Property	**Adjoining and Notable Immediately Surrounding Property Observations**		**Notable Observations of the Surrounding Area**
	Direction	**Observation**	
Subject property is occupied by a structure used for tire sales and rebuilding and embroidery in the south portion with a parking lot in the north portion.	North	Auto park (across alley)	Surrounding area is primarily commercial, with some industrial repair shops by 1960, and a gasoline service station to the southeast.
	Northeast	Commercial printing and stationary storage structures	
	Northwest	Vacant	
	Southeast	Not depicted in 1958, 1962, or 1963. Restaurant and a multilith rebuilding structure by 1960 (across South Main Street)	
	Southwest	Garage and restaurant-store by 1960 (across 12th Street)	
1967 and 1968			
Subject Property	**Adjoining and Notable Immediately Surrounding Property Observations**		**Notable Observations of the Surrounding Area**
	Direction	**Observation**	
Subject property is occupied by a structure used for tire sales and rebuilding in the west portion and parking in the east portion.	North	Auto park (across alley)	Surrounding area is commercial and industrial, with a gasoline service station to the southeast (not depicted in 1968).
	Northeast	Commercial printing and stationary storage structures	
	Northwest	Vacant	
	Southeast	Commercial, including cloth printing and cutting. Not depicted in 1968. (across South Main Street)	
	Southwest	Gasoline service station and truck parking (across 12th Street)	
1970			
Subject Property	**Adjoining and Notable Immediately Surrounding Property Observations**		**Notable Observations of the Surrounding Area**
	Direction	**Observation**	
Subject property is occupied by a structure used for tire sales and rebuilding in the west portion and parking in the east portion.	North	Auto park (across alley)	Surrounding area consists of commercial and industrial development.
	Northeast	Commercial printing and stationary storage structures	
	Northwest	Vacant	
	Southeast	Commercial, including cloth printing and cutting. Not depicted in 1968.	
	Southwest	Gasoline service station and truck parking (across 12th Street)	

- Sanborn maps indicated the following historical street addresses associated with the subject property: 1159 and 1165 South Main Street. These addresses were researched during the completion of this report.
- The southeast adjoining property was occupied by an automobile repair shop and machine shop at least from 1906 until sometime before 1950. For more information, refer to Section 4.5.2.
- The northwest adjoining property was occupied by a gasoline service station from at least 1950- 1953. For information, refer to Section 4.5.2.
- The southeast adjoining property was occupied by a commercial printing company from at least 1950-1970. For more information, refer to Section 4.5.2.
- The southwest adjoining property was occupied by a gasoline service station at least from 1967 to 1970. For more information, refer to Section 5.2.

4.5 HISTORICAL SUMMARY

4.5.1 SUBJECT PROPERTY

According to Andersen Environmental's interpretation of the historical research data, the subject property was undeveloped in 1906. In 1921, the south portion of the property (1165 South Main Street parcel) was improved with the existing commercial structure for automotive sales purposes. By 1927, the north portion (1155 South Main Street parcel) was utilized as a parking lot and the structure in the south portion was used for tire sales. By 1950, the structure in the south portion was utilized for tire sales and rebuilding operations and clothing manufacturing. The north portion had been improved with a small office structure and was utilized for automobile sales. By 1967, the clothing manufacturing operations had ceased and the space was utilized for commercial retail purposes. The tire sales and rebuilding operations remained until at least 1987. Sometime prior to 1987, the small office structure was demolished and the north portion was improved with the existing commercial structure. The structure was originally utilized for warehouse purposes. Historical occupants of 1165 South Main Street include: Perfect Tire Company (1927-1928), Crest Embroidery Company (1958), Novisoff & Sons Tire Company (1958), Nadler Sales (1976), and Winston Tire Company (1976-2004). In 2000, both structures were altered for use as apparel and accessory retail, including clothing stores, trading companies, and sunglasses retail. In 2013, one of the retail spaces was converted into office space. Historical occupants since 2000 have included: M&M Trading (2000), Ruida Enterprises Incorporated (2006-2008), SH Trading (2000-2013), ProVision Sunglasses Company (2000-2013), and Weseries (2013).

- The subject property was historically utilized for auto repair operations including tire rebuilding from 1906 to 2004. For more information, please refer to Section 6.0.
- The subject property was historically utilized for clothing manufacturing. However, as clothing manufacturing typically consists of garment cutting/sewing and does not typically include the use of solvents and oils, the former operations are not expected to represent a significant environmental concern to the subject property.

4.5.2 ADJOINING AND IMMEDIATELY SURROUNDING PROPERTIES

According to Andersen Environmental's interpretation of the historical research data, the adjoining and immediately surrounding properties were developed for commercial purposes sometime between 1886 and 1906. By 1906, the southeast adjoining property was developed with an automobile repair shop and a machine shop, which remained until sometime before 1950. The northwest adjoining property was occupied by a gasoline service station from at least 1927 until sometime between 1963 and 1964. Commercial development progressed over time. Historical occupants include: Lucky International Trading

Company (2000-2013), West Coast Stationary (1929-1976) and Taylor Oliver Auto Park (1924) at the north adjoining property (1144 South Broadway), Phils Place (1976-2000), Zackon Louis (1967-1971), and Minni Used Autos (1929) at the northwest adjoining property (1158 South Broadway), Lucky International Trading (2000-2013), Sigma Jewelery (2000-2008) at the northeast adjoining property (1147 South Main Street), 210 US Trading Corporation (2000-2013), and Fashion Supplies Company (1990) at the southeast adjoining property (1140 South Main Street), Infinity Jewlery Company (2000), Sierra Trading Incorporated (2006-2008), and Sullivan Printing Company (1958) at the southeast adjoining property (1150 South Main Street), Rodeo Handbag (2008), Lexy Handbag (2006) and Joram Trading (2000) at the southeast adjoining property (1158 South Main Street), and Robeworks (2013) at the southwest adjoining property.

- The north, northeast, and southeast adjoining and immediately surrounding properties were historically utilized for commercial printing operations. Printing operations represent a potential environmental concern due to the potential use of solvents, specifically during cleaning of printing presses. However, based on the lack of evidence of a release of hazardous substances associated with these former printing operations, they are not expected to represent a significant environmental concern.
- Historical research indicates that the northwest adjoining property was occupied by a structure characteristic of a gasoline service station from at least 1938 until sometime before 1964. Currently, the property is developed as a paved parking lot. Information pertaining to the status of any underground storage tanks (USTs) associated with former gas station operations has not been discovered during the course of this research. The site is not listed on any of the databases indicative of a release in the environmental database report. The presence of a former gasoline service station within 100 feet of the subject property represents a potential vapor encroachment condition for the subject property. However, based on the lack of evidence of a release from any UST(s) associated with the former gasoline service station, a potential vapor intrusion condition is considered unlikely. Based on the foregoing, and the down-gradient location of the tanks, the tanks at the adjoining property are not expected to represent a significant environmental concern to the subject property. Based on the foregoing, the former gasoline service station at the northwest adjoining property is not expected to represent a significant environmental concern for the subject property.
- The southwest adjoining property was occupied by a gasoline service station at least from 1967 to 1970. For more information, refer to Section 5.2.
- The southeast adjoining property was occupied by an automobile repair shop and machine shop at least from 1906 until sometime before 1950. Auto repair operations represent a potential concern due to the potential use of solvents. However, the site is not listed on the environmental database report. Based on the lack of evidence to suggest a release of hazardous substances at the site, the former auto repair at the adjoining property is not expected to represent a significant environmental concern to the subject property.

4.5.3 SURROUNDING AREA

According to Andersen Environmental's interpretation of the historical research data, the surrounding area was developed partially for residential purposes by 1888. Some commercial development emerged by 1906. Sometime prior to 1950 a gasoline service station was built to the southeast of the subject property. This gasoline service station remained until sometime prior to 1970. Commercial development progressed over time, with some buildings being demolished and replaced by parking lots.

4.6 HISTORICAL DATA GAPS

Occupants of the commercial structure developed in the north portion of the subject property in 1986 were not determined for the period 1986 to 1999. According to building permit records, the structure was inspected as a warehouse in 1987 and by 2000 the structure was converted for commercial retail use. Based

on the foregoing, the stringent regulatory oversight during this period (post-1980s) and the lack of evidence to suggest significant industrial operations at the structure, this limitation is not expected to represent a significant environmental concern for the subject property.

Historical occupants were not determined for the commercial structure in the south of the subject property for period between 1928 and 1949. However, the structure was utilized for the same purposes in 1927 and 1950 (tire sales and repair). Based on the foregoing, it is assumed that the structure was utilized for the same purposes between 1928 and 1949 and this limitation is not expected to represent a significant environmental concern for the subject property.

5.0 REGULATORY DATABASE REPORT

A radial database search was conducted in accordance with the specifications defined in ASTM E 1527-13 which sets the radial search distances for each regulatory database. The radial database search was conducted by EDR on March 3, 2014. A copy of the database report is presented in Appendix II of this report. The following table summarizes required databases reviewed, the approximate search distances, and indicates if the subject site, adjoining/immediately surrounding properties or surrounding sites are listed on the respective database.

Following the table are summaries of the information found in the relevant database listings and our opinion regarding the potential for the subject property to be impacted. Our opinion is based on the information found in the database listings, through other historical and regulatory resources, "Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions" (ASTM E2600-10), and assumed groundwater flow direction. As discussed in Section 2.3, groundwater in the vicinity of the subject property is assumed to flow to the southwest.

DATABASE	Search Distance (Miles)	Subject Site (Yes/No)	Adjacent Site (Yes/No)	Total Sites (#)
Federal National Priorities List (NPL)	1.0	NO	NO	0
Federal De-listed NPL	1.0	NO	NO	0
Federal CERCLIS	0.5	NO	NO	1
Federal CERCLIS NFRAP	0.5	NO	NO	0
Federal RCRA CORRACTS	1.0	NO	NO	0
Federal RCRA non-CORRACTS TSD	0.5	NO	NO	0
Federal RCRA Generators	0.25	NO	NO	10
Federal Institutional/Engineering Controls	0.5	NO	NO	0
Federal ERNS	Property	NO	NO	0
State/Tribal Equivalent NPL	1.0	NO	NO	0
State/Tribal Equivalent CERCLIS	0.5	NO	NO	16
State/Tribal Landfill	0.5	NO	NO	0
State/Tribal Underground Storage Tank (UST)	0.25	NO	NO	30
State/Tribal Leaking Underground Storage Tank (LUST/SLIC)	0.5	NO	NO	10/3
State/Tribal Institutional/Engineering Controls	0.5	NO	NO	0
State/Tribal Voluntary Clean-up Sites	0.5	NO	NO	0
State/Tribal Brownfield Sites	0.5	NO	NO	0

5.1 SUBJECT PROPERTY

Winston Tire Company #51 (1161-1165 South Main Street) – The subject property was listed on the Facility and Manifest Data (HAZNET) database. According to the listing, between 1993 and 2000, Winston Tire Company generated hazardous wastes including unspecified aqueous solution, oil/water separation sludge, aqueous solution with total organic residues less than 10 percent, and unspecified solvent mixture. Oil/water separation sludge is indicative of the presence of a clarifier at the subject property. During the site reconnaissance, the majority of the concrete floors in the structure formerly occupied by Winston Tire Company (1165 South Main Street parcel) were not observable. Please refer to Section 6.0 for more information.

5.2 ADJOINING AND IMMEDIATELY SURROUNDING PROPERTIES

Ryder Truck Rental (100 West 12th Street) – The southwest adjoining property across West 12th Street (hydrologically down-gradient) is listed on the Hazardous Substance Storage Container Database (HIST UST) database. According to the listing, the site operated a 10,000-gallon waste underground storage tank (UST). The owner name and address is listed as Herald Examiner at 1201 South Main Street. For more information refer to the listing below.

Los Angeles Herald Examiner (1201 South Main Street) – The southwest adjoining property across West 12th Street (hydrologically down-gradient) is listed on the HIST UST, Facility Inventory Database (CA FID UST), and Statewide Environmental Evaluation and Planning System Underground Storage Tank (SWEEPS UST) databases. Historical research indicates that the site was occupied by a gasoline service station and truck yard at least from 1967 to 1970. According to the listings, the site operated a 9,950-gallon diesel UST. Additionally, according to listings for a historical address associated with the property, the site also operated a 10,000-gallon waste UST (Ryder Truck Rental above). The location of the tanks is not indicated within the listings or any resources researched for the purposes of this report. As such the potential presence of the USTs within 100 feet of the subject property represents a potential vapor encroachment condition for the subject property. However, based on the lack of evidence of a release from the USTs, a potential vapor intrusion condition is considered unlikely. Based on the foregoing, and the down-gradient location of the tanks, the tanks at the adjoining property are not expected to represent a significant environmental concern to the subject property.

Moore Pfeif (1151 South Main Street) – The northeast adjoining property (hydrologically up-gradient) is listed on the EDR US Historical Auto Station (EDR US Hist Auto Stat) database. According to the listing, the site operated an automobile repairing facility in 1942. The site is not listed on any of the databases indicative of a release. Based on the lack of evidence of a release, the former automobile repair operations at the adjoining property are not expected to represent a significant environmental concern to the subject property.

No other adjoining/immediately surrounding properties (within 100-feet) were listed on any of the regulatory databases researched or the listings were not associated with the storage or disposal of hazardous wastes including aboveground or underground storage tanks, did not indicate a known chemical release, and did not indicate a property use where the use of hazardous chemicals would be expected.

5.3 SURROUNDING AREA

In our opinion, none of the other sites listed on the regulatory database report pose a significant threat to the subject property as there is no indication of a release at the respective sites, a release has occurred but groundwater has not been impacted, a release has occurred but the case is closed, or the sites are located cross or down gradient of the subject property and in excess of 1/10 mile from the subject property.

5.4 ORPHAN SITES

Orphan sites are unmappable sites which appear in a list form in the Radius Map Report rather than on the standard Radius Map. Twenty orphan sites were identified in the Radius Map Report prepared for this site. The sites were manually mapped to determine the location of the site relative to the subject property and groundwater gradient. The following conclusions were made:

In our opinion, none of the orphan sites listed pose a significant threat to the subject property as there is no indication of a release at the respective sites, a release has occurred but groundwater has not been impacted, a release has occurred but the case is closed, or the sites are located cross or down gradient of the subject property and in excess of 1/10 mile from the subject property.

6.0 AGENCY FILE REVIEWS

6.1 STATE AGENCIES

The regional offices of the Los Angeles Regional Water Quality Control Board (LARWQCB), Department of Toxic Substances (DTSC), and South Coast Air Quality Management District (SCAQMD) were contacted regarding permits and site investigation files for the subject property. Additionally, the State Water Resources Control Board (SWRCB) GeoTracker, DTSC EnviroStor, and SCAQMD Facility Information Detail (FIND) databases were reviewed for files for the subject property.

- According to responses to our requests, there are no files for the subject property.

The Division of Oil, Gas, and Geothermal Resources (DOGGR) Online Mapping System was reviewed for information pertaining to oil and gas exploration on or nearby the subject property.

- No oil wells were identified within 500 feet of the subject property.

6.2 CITY/COUNTY AGENCIES

The Los Angeles Fire Department (LAFD) Hazardous Materials Division (LAFD HazMat), LAFD Central Industrial Unit (LAFD CIU), LAFD Underground Storage Tank Division (LAFD UST), Los Angeles County Department of Health Services, Public Health Investigations (LACDHS PHI), and City of Los Angeles Bureau of Sanitation (LABS) were contacted regarding hazardous materials, underground storage tank, and industrial waste discharge records for the subject property.

- According to files provided by the LACDHS PHI, an inspection report from August 19, 1995 listed two 55-gallon drums of waste oil disposed by Evergreen Environmental, one 55-gallon drum of used oil filters, one 55-gallon drum of antifreeze, and 30 gallons of parts cleaner. A Notice of Violation was issued to Winston Tires for overflowing waste oil and antifreeze drums, and there were floor drains noted. The inspector asked about the presence of a clarifier, but it was not confirmed whether a clarifier existed or not. An inspection report from July 6, 1998 listed 30 gallons of parts cleaner disposed by Safety Kleen, 55 gallons of antifreeze disposed by Asbury Oil, and 100 gallons of waste oil and used oil filters disposed by Asbury Oil at the Winston Tires auto repair garage on the subject property. The subject property was historically utilized for auto repair operations including tire rebuilding from 1906 to 2004. Records pertaining to the use of hazardous materials for the auto repair tenants prior to 1995 were not available as they operated during a time when the regulatory measures governing the use of hazardous materials of this nature were not as stringent as they are today. Based on the long term duration of the auto repair operations onsite (approximately 98 years), likely use of hazardous materials during a time without stringent regulatory oversight, and documented drains and likely associated clarifier (preferential pathways to the subsurface), the former auto repair operations at the subject property are considered to be a recognized environmental condition.
- According to responses to our requests, there are no files for the subject property.

6.3 AGENCY FILE REVIEW LIMITATIONS

- At the time this report was issued, no response has been received from LACDHS PHI for 1165 South Main Street. Additionally, no response has been received from SCAQMD for the address 1157 South Main Street. Should relevant information be obtained from these agencies subsequent to issuing this report, an addendum will be prepared and provided to the Client. However, based on the quality of information obtained from other sources, this limitation is not expected to significantly alter the findings of this investigation.

7.0 NON-SCOPE ENVIRONMENTAL RISKS

ASTM Standard E1527-13 identifies additional conditions which, should they exist at the subject property, may create a human health risk to the occupants of the site. These risks may also create additional costs to the property owner in the form of identification, operations & maintenance, and cleanup or remediation.

7.1 ASBESTOS CONTAINING BUILDING MATERIALS

Asbestos is a group of naturally occurring minerals used in certain products, such as building materials and vehicle brakes, to resist heat and corrosion. Asbestos includes: chrysotile, amosite, crocidolite, tremolite asbestos, anthophyllite asbestos, actinolite asbestos, and any of these materials that have been chemically treated and/or altered.

The inhalation of asbestos fibers by workers can cause serious diseases of the lungs and other organs that may not appear until years after the exposure has occurred. For instance, asbestosis can cause a buildup of scar-like tissue in the lungs and result in loss of lung function. Asbestos fibers associated with these health risks are too small to be seen with the naked eye, and smokers are at higher risk of developing some asbestos-related diseases.

Asbestos-containing materials (ACM) do not always pose a hazard to occupants and workers in buildings that contain these materials. Intact, undisturbed ACMs generally do not pose a health risk. ACMs may become hazardous and pose an inhalation risk when they are damaged, disturbed in some manner, or deteriorate over time and asbestos fibers are released into building air.

ACM can be found in a multitude of building products which include acoustical texture, fire-proofing, joint compound, attic and wall insulation, resilient flooring, mastic, recessed lighting fixtures, wiring, elevator brakes, fire doors, piping insulation, piping joints, duct insulation, duct tape, siding and roofing materials (tar/shingles), textured paint, stucco, concrete, and swimming pool plaster.

Local jurisdictions have specific laws and regulations regarding asbestos and actions including building renovations and building demolition.

- Based on the age of the structure associated with 1165 South Main Street (1921), there is a potential for asbestos containing building materials at the site, however, no testing was completed as part of this report. Potential asbestos-containing materials include mastic associated with linoleum and tile flooring. Potential ACMs appeared to be in good condition. Based on the age of the structure associated with 1155 South Main Street (1981), the potential for asbestos containing building materials is considered to be low. However, individual suspect materials would need to be tested in order to confirm the presence or non-presence of asbestos.

7.2 LEAD-BASED PAINT

Although lead-based paint has been taken off the market, it is approximated that 80 percent of buildings built prior to 1978 contain lead paint. Even at low levels, lead poisoning can cause IQ deficiencies, reading and learning disabilities, impaired hearing, reduced attention spans, hyperactivity and other behavior problems with children under 6 years old being most at risk.

Lead is a highly toxic metal that was used for many years in products found in and around our homes and commercial buildings. Lead can be found in dust from moving parts of windows and doors that are painted with lead-based paint, wood trim, walls, cabinets in kitchens and bathrooms, porches, stairs, railings, fire escapes, lamp posts, and soil.

Since the 1980's, lead has been phased out in gasoline, reduced in drinking water, reduced in industrial air pollution, and banned or has been limited in use in consumer products.

Between the Environmental Protection Agency (EPA), Department of Housing and Urban Development (HUD), Occupational Safety & Health Administration (OSHA), California Department of Public Health (CDPH), each state has various action limits have been placed with the overall objective being an attempt to prevent human exposure and contamination of the surrounding environment.

- Based on the age of the structure associated with 1165 South Main Street (1921), there is a potential for lead based paint within the structure. Painted surfaces appeared to be in good condition. However, no testing was completed as part of this report. Based on the age of the structure associated with 1155 South Main Street (1981), the potential for lead based paint within the structure is considered to be low.

7.3 RADON

Radon is a radioactive gas that has been found in structures all over the United States. Radon is produced from the natural breakdown of uranium in soil, rock, and water. Radon typically moves up through the ground to the air above and into structures through cracks and other holes in the foundation. Movement of radon through the earth is strongly influenced by moisture content and permeability of soil, porosity, and degree of fracturing in rocks, as well as surface meteorological conditions. High levels of radon have been discovered in every state.

Radon cannot be seen, smelled, or tasted. Breathing air-containing radon may increase the risk of getting lung cancer. The Surgeon General of the United States has warned that radon is the second leading cause of lung cancer in the United States today.

Testing for the presence of radon is fairly inexpensive, simple and the only way to be certain of the on-site concentration. Various types of sampling methods exist to determine the concentration. On-site radon sampling was not performed during the completion of this assessment.

- Based on our research at the United States Environmental Protection Agency (USEPA), the average radon concentrations for Los Angeles County are between 2.0 pCi/L and 4.0 pCi/L, below the 4.0 pCi/L action level set by the USEPA. However, site specific radon levels vary greatly within the EPA radon zones and on-site radon measurements would need to be collected in order to determine the subject property radon levels.

7.4 WETLANDS

According to the Clean Water Act, a wetland is "those areas that are inundated or saturated by surface or groundwater at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions." Wetland areas have been identified as ecologically diverse and sensitive areas and are generally subject to more stringent development, re-development, and building regulations.

- The U.S. Fish and Wildlife Service National Wetlands Inventory was reviewed to determine if the subject property is situated within an identified wetland. According to the USFWS, the subject property is not located within a wetland area.

7.5 MOLD

Mold and mildew are simple, microscopic organisms that can grow virtually anywhere if they have adequate moisture, nutrients and appropriate temperatures. Depending on the particular mold or fungus (mildew), growing colonies can be almost any color from white to black. Most household molds and fungi (mildews) are black, grey, or charcoal colored. Spores of dozens of kinds of mold and fungus (mildew) are present at all times in indoor and outdoor air. These spores can settle, germinate and grow wherever good growth conditions are found. They can grow on soil, plants, dead plant materials, foods, fabrics, paper,

wood and many other materials. Most molds are not harmful. In fact, molds have important roles in the environment and in living systems. In soil molds play a crucial part in decomposition of organic matter and in making nutrients available to plants.

Molds and fungi (mildews) however, can be very destructive to materials on which they grow, and are usually unwelcome and unhelpful in homes. They cause staining, decomposition (rotting of materials) and objectionable, musty odors. Where colonies are extensive they can also produce enough spores, and by-products to be harmful to health. Many of the by-products of mold and fungus (mildew) are irritating to skin, eyes and respiratory tracts. Some molds produce true allergic sensitization and allergic reactions in susceptible people. Some molds produce toxic by-products that could be harmful to skin, and poisonous if ingested or inhaled in quantity. Persons with compromised immune systems may even experience systemic fungal infections of the respiratory tract.

Andersen Environmental observed a limited amount of interior areas of the subject building(s) in order to identify the significant, visible presence of mold. This activity was not intended to discover all areas which may be affected by mold growth at the subject property. Potential areas of mold not observed as part of this limited assessment, include but are not limited to, possibly in pipe chases, HVAC systems and behind enclosed walls and ceilings, may be present on the subject property. A complete mold assessment, which may include various types of sampling, would be required to determine if mold levels within the subject building(s) are at levels acceptable by industry standards.

- Andersen Environmental did not observe visible or olfactory indications of the presence of mold, nor did Andersen Environmental observe obvious indications of significant water damage. No sampling was conducted as part of this assessment.

7.6 METHANE GAS

In response to growing concern regarding methane intrusion into buildings and to the potential for methane build-up underneath buildings, certain municipalities have established methane requirements for structures based on the proximity to oil wells and landfills. If a subject property is located in the proximity of active or abandoned oil wells or landfills, methane mitigation devices installed prior to construction activities at a subject property may be necessary.

- The City of Los Angeles Methane Zone map was reviewed to determine if the subject property is located in a methane or methane buffer zone. According to the map reviewed, the subject property is located within a methane buffer zone. Due to the potential environmental risk associated with construction in Methane Zones, the property owner may be required to conduct a methane assessment prior to the redevelopment of the subject property and methane mitigation systems may be required (Division 71 of the Los Angeles Building Code).

8.0 FINDINGS

Andersen Environmental has performed a Phase I Environmental Site Assessment (Phase I) for Jade Enterprises (Client) for an industrial property located at 1155 and 1165 South Main Street, in Los Angeles County and the City of Los Angeles, California, Assessor's Parcel Numbers: 5139-017-015 and 5139-017-016. The research conducted for this study and the report prepared are in conformance with the United States Environmental Protection Agency (USEPA) All Appropriate Inquiry (AAI) standard and the American Society for Testing and Materials (ASTM) E 1527-13 scope of work.

Site Description

According to our research and information provided by the Client, the following addresses have been found to be associated with the subject property: 1155, 1157, 1159, 1161, and 1165 South Main Street and 111 West 12th Street, Los Angeles, California. The subject property is located at the northern intersection of South Main Street and West 12th Street in the City of Los Angeles. The subject property is 0.33 acres in size and contains two single-story structures which are approximately 8,530 (1165 South Main Street) and 4,900 (1155 South Main Street) square feet in size, respectively. At the time of the site reconnaissance, the structure 1165 South Main Street was divided into five wholesale retail units: Ellie's Fashion (1159A South Main Street), Miss Handbag (1159B South Main Street), Fast Vehicle's Registration Services (1159C South Main Street), vacant space and Polly Trading Company (both 111 West 12th Street). The structure 1155 South Main Street was divided into three retail spaces: Pro Vision Sunglasses (1157 South Main Street) and S.H. Handbags Luggage Backpack (1155A and 1155B South Main Street). The exterior portions of the property consist of an enclosed asphalt paved parking area to the north. The surrounding area is mostly used for commercial purposes. Groundwater is estimated to be between approximately 30- and 40-feet below ground surface in the area of the site.

No significant hazardous material storage or recognized environmental conditions were observed at the site. Those interviewed, as persons familiar with the site were not aware of any negative environmental conditions associated with the property.

Historical Land Use

According to Andersen Environmental's interpretation of the historical research data, the subject property was undeveloped in 1906. In 1921, the south portion of the property (1165 South Main Street parcel) was improved with the existing commercial structure for automotive sales purposes. By 1927, the north portion (1155 South Main Street parcel) was utilized as a parking lot and the structure in the south portion was used for tire sales. By 1950, the structure in the south portion was utilized for tire sales and rebuilding operations and clothing manufacturing. The north portion had been improved with a small office structure and was utilized for automobile sales. By 1967, the clothing manufacturing operations had ceased and the space was utilized for commercial retail purposes. The tire sales and rebuilding operations remained until at least 1987. Sometime prior to 1987, the small office structure was demolished and the north portion was improved with the existing commercial structure. The structure was originally utilized for warehouse purposes. Historical occupants of 1165 South Main Street include: Perfect Tire Company (1927-1928), Crest Embroidery Company (1958), Novisoff & Sons Tire Company (1958), Nadler Sales (1976), and Winston Tire Company (1976-2004). In 2000, both structures were altered for use as apparel and accessory retail, including clothing stores, trading companies, and sunglasses retail. In 2013, one of the retail spaces was converted into office space. Historical occupants since 2000 have included: M&M Trading (2000), Ruida Enterprises Incorporated (2006-2008), SH Trading (2000-2013), ProVision Sunglasses Company (2000-2013), and Weseries (2013).

- The subject property was historically utilized for auto repair operations including tire rebuilding from 1906 to 2004. For more information, please refer to the Environmental Data Search Section below.

- The subject property was historically utilized for clothing manufacturing. However, as clothing manufacturing typically consists of garment cutting/sewing and does not typically include the use of solvents and oils, the former operations are not expected to represent a significant environmental concern to the subject property.
- Occupants of the commercial structure developed in the north portion of the subject property in 1986 were not determined for the period 1986 to 1999. According to building permit records, the structure was inspected as a warehouse in 1987 and by 2000 the structure was converted for commercial retail use. Based on the foregoing, the stringent regulatory oversight during this period (post-1980s) and the lack of evidence to suggest significant industrial operations at the structure, this limitation is not expected to represent a significant environmental concern for the subject property.
- Historical occupants were not determined for the commercial structure in the south of the subject property for period between 1928 and 1949. However, the structure was utilized for the same purposes in 1927 and 1950 (tire sales and repair). Based on the foregoing, it is assumed that the structure was utilized for the same purposes between 1928 and 1949 and this limitation is not expected to represent a significant environmental concern for the subject property.

Environmental Data Search

- **Winston Tire Company #51 (1161-1165 South Main Street) –** The subject property was listed on the Facility and Manifest Data (HAZNET) database. According to the listing, between 1993 and 2000, Winston Tire Company generated hazardous wastes including unspecified aqueous solution, oil/water separation sludge, aqueous solution with total organic residues less than 10 percent, and unspecified solvent mixture. Oil/water separation sludge is indicative of the presence of a clarifier at the subject property. During the site reconnaissance, the majority of the concrete floors in the structure formerly occupied by Winston Tire Company (1165 South Main Street parcel) were not observable. Please refer to the discussion of Los Angeles County Department of Health Services, Public Health Investigations (LACDHS PHI) files below for more information.
- There are no properties within 100-feet of the subject property where a release is considered likely or a known release has occurred.
- In our opinion, none of the other sites listed on the regulatory database report pose a significant threat to the subject property as there is no indication of a release at the respective sites, a release has occurred but groundwater has not been impacted, a release has occurred but the case is closed, or the sites are located cross or down gradient of the subject property and in excess of 1/10 mile from the subject property.
- The Los Angeles Regional Water Quality Control Board (LARWQCB), Department of Toxic Substances (DTSC), South Coast Air Quality Management District (SCAQMD), Los Angeles Fire Department (LAFD) Hazardous Materials Division (LAFD HazMat), LAFD Central Industrial Unit (LAFD CIU), LAFD Underground Storage Tank Division (LAFD UST), Los Angeles County Department of Health Services, Public Health Investigations (LACDHS PHI), and City of Los Angeles Bureau of Sanitation (LABS) were contacted regarding contaminated groundwater, toxic substances, air emissions equipment, hazardous materials, underground storage tank and industrial wastewater files for the subject property. Additionally, the State Water Resources Control Board (SWRCB) GeoTracker, DTSC EnviroStor, and SCAQMD Facility Information Detail (FIND) databases were reviewed for files for the subject property.
    - According to a review of the databases and responses to our requests, there are no files for the subject property with the exception of the following:

- According to files provided by the LACDHS PHI, an inspection report from August 19, 1995 listed two 55-gallon drums of waste oil disposed by Evergreen Environmental, one 55-gallon drum of used oil filters, one 55-gallon drum of antifreeze, and 30 gallons of parts cleaner. A Notice of Violation was issued to Winston Tires for overflowing waste oil and antifreeze drums, and there were floor drains noted. The inspector asked about the presence of a clarifier, but it was not confirmed whether a clarifier existed or not. An inspection report from July 6, 1998 listed 30 gallons of parts cleaner disposed by Safety Kleen, 55 gallons of antifreeze disposed by Asbury Oil, and 100 gallons of waste oil and used oil filters disposed by Asbury Oil at the Winston Tires auto repair garage on the subject property. The subject property was historically utilized for auto repair operations including tire rebuilding from 1906 to 2004. Records pertaining to the use of hazardous materials for the auto repair tenants prior to 1995 were not available as they operated during a time when the regulatory measures governing the use of hazardous materials of this nature were not as stringent as they are today. Based on the long term duration of the auto repair operations onsite (approximately 98 years), likely use of hazardous materials during a time without stringent regulatory oversight, and documented drains and likely associated clarifier (preferential pathways to the subsurface), the former auto repair operations at the subject property are considered to be a recognized environmental condition.
- At the time this report was issued, no response has been received from LACDHS PHI for 1165 South Main Street. Additionally, no response has been received from SCAQMD for the address 1157 South Main Street. Should relevant information be obtained from these agencies subsequent to issuing this report, an addendum will be prepared and provided to the Client. However, based on the quality of information obtained from other sources, this limitation is not expected to significantly alter the findings of this investigation.

- The user did not provide Andersen Environmental any information either verbally or in writing (i.e. Title Report) regarding environmental cleanup liens or activity and use limitations encumbering the subject property. An environmental lien search was not requested by the user; however, based on our review of the DTSC EnviroStor Database, no environmental liens enforced by the DTSC were identified.

Additional Issues

- Based on the age of the structure associated with 1165 South Main Street (1921), there is a potential for asbestos containing building materials within the structure, however, no testing was completed as part of this report. Potential asbestos-containing materials include mastic associated with linoleum and tile flooring. The ACM appeared to be in good condition. Based on the age of the structure associated with 1155 South Main Street (1981), the potential for asbestos containing building materials within the structure is considered to be low. However, individual suspect materials would need to be tested in order to confirm the presence or non-presence of asbestos.
- Based on the age of the structure associated with 1165 South Main Street (1921), there is a potential for lead based paint within the structure. Painted surfaces appeared to be in good condition. However, no testing was completed as part of this report. Based on the age of the structure associated with 1155 South Main Street (1981), the potential for lead based paint within the structure is considered to be low.
- According to our research, radon potential at the subject property is considered low.
- Andersen Environmental did not observe visible or olfactory indications of the presence of mold, nor did Andersen Environmental observe obvious indications of significant water damage.

- The City of Los Angeles Methane Zone map was reviewed to determine if the subject property is located in a methane or methane buffer zone. According to the map reviewed, the subject property is located within a methane buffer zone. Due to the potential environmental risk associated with construction in Methane Zones, the property owner may be required to conduct a methane assessment prior to the redevelopment of the subject property and methane mitigation systems may be required (Division 71 of the Los Angeles Building Code).

CONCLUSIONS

Andersen Environmental has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice 1527-13, at 1155 and 1165 South Main Street, Los Angeles, California, the subject property. Any exceptions to or deletions from this practice are described in the individual sections of this report. This assessment has revealed no evidence of recognized environmental conditions in connection with the subject property except for the following:

Recognized Environmental Conditions (REC)
The potential for hazardous materials to impact the property subsurface from former auto repair operations at the subject property for 98 years (1906 to 2004) with documented drains and likely associated clarifier represents a REC.

Historic Recognized Environmental Condition (HREC)
In our opinion, no HRECs were revealed during the course of our assessment

Controlled Recognized Environmental Condition (CREC)
In our opinion, no CRECs were revealed during the course of our assessment.

RECOMMENDATIONS

Based on the foregoing, a Phase II Environmental Site Assessment is recommended.

SIGNATURES

I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

INTRODUCTION

Andersen Environmental has performed a Phase II Environmental Site Assessment (ESA) for the property located at 1155 and 1165 South Main Street in Los Angeles, California (the Site). The assessment was based on a Phase I ESA conducted by Andersen Environmental dated March 14, 2014 (Andersen project #1402-398), which identified a Recognized Environmental Concern (RECs) at the Site. Based on a review of historical documentation, former site uses included auto repair/tire sales from the 1900s to 1990s. Additionally, HAZNET listings in the environmental database report oil/water separation sludge from 1993 to 2000, which is typically indicative of a clarifier or similar feature.

The former presence of auto repair operations and likely use of hazardous materials during a time without stringent regulatory oversight, as well as documented drains and the potentially associated clarifier (preferential pathways to the subsurface), at the Site were considered to be a recognized environmental condition. As such, Andersen conducted this Phase II ESA in an attempt to evaluate whether former operations have significantly impacted the subsurface of the Site. Contaminants of concern included petroleum hydrocarbons and VOCs in soil and soil vapor.

SITE INFORMATION

SITE LOCATION AND DESCRIPTION

The Site is located at the northern intersection of South Main Street and West 12th Street in the City of Los Angeles (Figure 1). The subject property is 0.33 acres in size and contains two single-story structures which are approximately 8,530 (1165 South Main Street) and 4,900 (1155 South Main Street) square feet in size, respectively (Figure 2). The structure 1165 South Main Street was divided into five wholesale retail units: Ellie's Fashion (1159A South Main Street), Miss Handbag (1159B South Main Street), Fast Vehicle's Registration Services (1159C South Main Street), vacant space and Polly Trading Company (both 111 West 12th Street). The structure 1155 South Main Street was divided into three retail spaces: Pro Vision Sunglasses (1157 South Main Street) and S.H. Handbags Luggage Backpack (1155A and 1155B South Main Street). The exterior portions of the property consist of an enclosed asphalt paved parking area to the north. The surrounding area is mostly used for commercial purposes.

According to the Phase I ESA, former auto repair operations, including the likely location of the oil/water separation sludge feature, were limited to the southern portion of the property.

REGIONAL GEOLOGIC AND HYDROGEOLOGIC SETTING

The Site is located in the Los Angeles Basin, which is a part of the Peninsular Range geologic province, between the Pacific Ocean and the Inglewood-Newport Fault Zone. The Peninsular Range province, which is characterized by northwest-trending topographic and structural features, is bound by the Transverse Range province to the north and the Colorado Desert Province to the east. The inland part of the Peninsular Range province consists of numerous mountain ranges that are composed predominantly of igneous and metamorphic rocks of Mesozoic and Paleozoic age. An irregular coastal plain is located on the western edge of the province (including the Los Angeles Coastal Plain and Basin), which is composed predominantly of marine and non-marine clastic deposits of Upper Cretaceous, Tertiary and Quaternary age.

The Site is located south of the hills of the Silver Lake area. The Site is underlain with Quaternary-aged surficial sediment deposits of Holocene and Pleistocene age. These deposits are generally characterized as clay, sand and gravel alluvium including sediments of minor stream channels and alluvial fan sediments (Geologic Map of the Hollywood and Burbank Quadrangles, USGS, 1991).

These sediments are underlain by the Fernando Formation of Pliocene age, a consolidated but crumbly gray to greenish-gray claystone-siltstone, in part sandy, which is vaguely bedded and locally fossiliferous. Beneath the Fernando Formation is an unnamed shale of Miocene age (geologically associated with the Puente formation, upper Modelo Formation and Sisquoc Shale), which is characterized as tan to light gray semi-friable sandstone including thin interbeds of micaceous silty clay shale. Within the vicinity of the Site, the shale appears to dip to the south. The Fernando Formation and unnamed shale surface to the north and northeast.

LOCAL GEOLOGIC AND HYDROGEOLOGIC SETTING

The elevation of the Site is approximately 241 feet above mean sea level (USGS Hollywood, California 7.5 minute topographic quadrangle; Figure 1). Surface topography dips gradually to the south and southwest. According to the Geologic Map of the Hollywood and Burbank Quadrangles, USGS, 1991, the Site is located on the eastern portion of the Los Angeles Downtown Oil Field.

Based on a review of groundwater data presented in the State Water Resources Control Board (SWRCB) Geotracker website, groundwater was detected at a leaking underground storage tank site (504 West Olympic Boulevard) approximately 0.35 miles north-northwest of the subject property at between approximately 30- and 40-feet below ground surface. However, perched and semi-perched aquifers may be present beneath the site. Based on topographic map interpretation, regional groundwater flow direction is estimated to be to the southwest; however local groundwater flow direction may vary.

FIELD ACTIVITIES

FIELD PREPARATION

Prior to conducting field activities, Andersen Environmental personnel marked the work area in white paint. Underground Services Alert (USA) was notified of the pending fieldwork a minimum of 48 hours before mobilization. Boring locations were subsequently checked for utility conflicts, access limitations and other hindrances or issues which may have been encountered during fieldwork. No conflicts with utilities were identified in the chosen boring locations.

Prior to field activities, an additional Site inspection was conducted to further evaluate potential subsurface features and evidence of former operations. Prior to drilling activities, four areas of patching were observed within the Site structure (Figure 2), and boring locations were biased towards such features. No currently-present clarifier was identified during the site reconnaissance in the areas with exposed concrete. Site tenants provided reasonable access below merchandise and stored items to perform the visual inspection. Some areas within tenant spaces were refinished with linoleum and alternative floor coverings, and in such areas inspection below these features are not possible.

Remaining boring locations were distributed throughout the areas if investigation to provide reasonable lateral coverage.

SOIL VAPOR SAMPLING

On May 9, 2014 Andersen Environmental directed Optimal Technologies (Optimal) to perform soil vapor sampling and analysis in eight soil vapor boring locations (SV-1 through SV-8; Figure 2). Soil vapor sampling was performed by hydraulically pushing soil vapor probes to a depth of 5.0 feet below ground surface (bgs). An electric rotary hammer drill was used to drill a 1.0-inch diameter hole through the overlying surface to allow probe placement when required. The same electric hammer drill was used to push probes in areas of resistance during placement. At each sampling location an electric vacuum pump

set to draw 0.2 liters per minute (L/min) of soil vapor was attached to the probe and purged prior to sample collection. Vapor samples were obtained in SGE gas-tight syringes by drawing the sample through a luer-lock connection which connects the sampling probe and the vacuum pump.

Each sample was analyzed on-site by immediately injected the recovered vapor into a gas chromatograph/purge and trap after collection. New tubing was used at each sampling point to prevent cross contamination. All analyses were performed via Modified EPA Method 8260B on a laboratory-grade Hewlett Packard model 5890 Series II gas chromatograph equipped with a Hewlett Packard model 5971 Mass Spectra Detector and Tekmar LSC 2000 Purge and Trap. An SGE capillary column using helium as the carrier gas was used to perform all analysis. All results were collected on a personal computer utilizing Hewlett Packard's 5971 MS and chromatographic data collection and handling system. A copy of the Optimal Technologies report is attached in the supporting documents section of this report.

SOIL SAMPLING

Upon completion of soil vapor sampling, two soil samples (B1-5' and B2-5') were collected from two of the abandoned soil vapor probe locations (SV4 and SV8, respectively) determined by Andersen Environmental's field personnel to be the areas most likely to be in the vicinity of subsurface soils which may have been impacted by former auto repair operations at the site (Figure 2). Soil sampling was conducted adjacent to suspected concrete patching.

Soil borings were advanced by driving an approximately one-inch diameter drive rod to the terminal depth using a rotary hammer drill. Soil samples were collected at depths of 5-feet bgs by advancing an approximately 0.5-foot pre-cleaned steel sampling tube below the drive rod and immediately retrieving it. The samples were immediately sealed with Teflon® liners and firm-fitting caps, labeled, logged on a chain of custody and chilled pending transportation and submittal to Positive Lab Service of Los Angeles, California (a State-certified analytical laboratory).

Soils encountered during this assessment were described as silty sands (USCS soil classification "SM"), fine- to medium- grained, dense. No groundwater was encountered during this assessment.

ANALYTICAL SCHEDULE

SOIL VAPOR ANALYTICAL SCHEDULE

All soil vapor samples were analyzed on-site for VOCs by Modified EPA Method 8260B.

SOIL ANALYTICAL SCHEDULE

Soil samples B1-5' and B2-5' were selected for analysis Extractable Range Petroleum Hydrocarbons (ERPH) by EPA Method 8015M and Volatile Organic Compounds (VOCs) by EPA Method 8260B.

ANALYTICAL RESULTS

SOIL VAPOR ANALYTICAL RESULTS

A summary of soil vapor analytical results for VOCs are presented in Table 1. The full laboratory analytical report is provided as part of the Optimal Technologies report in Appendix A.

No VOCs were detected in any soil vapor samples analyzed during this assessment; therefore VOCs in soil vapor do not pose a significant concern to the environment or human health within the areas investigated.

SOIL ANALYTICAL RESULTS

A summary of soil analytical results for ERPH and VOCs is presented in Tables 2 and 3, respectively. The full laboratory analytical report is presented as Appendix B.

Laboratory analysis of Sample B2-5' detected diesel range petroleum hydrocarbons (C13-C22) at a concentration of 3.13 milligrams per kilogram (mg/kg). The detected was compared to Maximum Soil Screening Levels established by the Los Angeles Regional Water Quality Control Board (LARWQCB) in their May 1996 Guidebook. MSSLs are determined based on sample distance above groundwater. The concentration of petroleum hydrocarbons detected in Sample B2-5' is significantly less than the MSSL of 1,000 mg/kg for sites with distance to groundwater between 20 and 150 feet. Petroleum hydrocarbons were not detected in Sample B1-5'.

Therefore, it is the opinion of Andersen Environmental that petroleum hydrocarbons in the locations sampled does not pose a significant threat to human health or the environment at this time.

No VOCs were detected in any soil samples analyzed by EPA Method 8260B; therefore VOCs in soil do not pose a significant concern to the environment within the areas investigated.

CONCLUSIONS AND RECOMMENDATIONS

Andersen Environmental has performed a Phase II ESA for the site located at 1155 and 1165 South Main Street in Los Angeles, California. The assessment was based on a Phase I ESA conducted by Andersen Environmental dated March 14, 2014, which recommended evaluation of the subsurface to confirm former auto repair / tire sales operations and potential former/current clarifier had not significantly impacted the subsurface. Results of the current investigation are summarized as follows:

- A total of eight soil vapor probes were advanced throughout the property to acquire soil vapor samples within the area of the former auto repair operations and suspected associated clarifier area. All soil vapor samples were analyzed for VOCs by Modified EPA Method 8260B. No VOCs were detected in any soil vapor samples analyzed during this assessment; therefore VOCs in soil vapor do not pose a significant concern to the environment within the areas investigated.
- A total of two soil samples were collected adjacent to concrete patching in the auto repair area. Both soil samples were analyzed for ERPH via EPA Method 8015M and VOCs via EPA method 8260B. Sample B2-5' detected diesel range petroleum hydrocarbons (TPH C13-C22) at a maximum concentration of 3.13 mg/kg, which is significantly less than the site specific MSSL of 1000 mg/kg, and is considered to be *de minimis*. Therefore, it is Andersen Environmental's opinion that ERPH does not currently represent a risk to human health or the environment within the area sampled.
- No VOCs were detected in any soil samples analyzed during this assessment; therefore VOCs in soil do not pose a significant concern to the environment within the areas investigated.

Based on results of this investigation, Andersen Environmental recommends no further assessment of Site features identified at this time in the areas investigated. During redevelopment and/or removal of floor coverings (including carpeting and tiles) in the southern and eastern portion of the Site, if any currently-unidentified features such as remnants of a clarifier are identified, please contact Andersen Environmental to inspect and evaluate the feature(s) at that time.

APPENDIX A

OPTIMAL TECHNOLOGIES SOIL VAPORY SURVEY LETTER REPORT

OPTIMAL TECHNOLOGY
Specializing in Environmental Field Services

May 12, 2014

Mr. Shayan Simantob
Andersen Environmental
5261 West Imperial Highway
Los Angeles, CA 90045

Dear Mr. Simantob:

This letter presents the results of the soil vapor investigation conducted by Optimal Technology (Optimal), for Andersen Environmental on May 9, 2014. The study was performed at 1155 S. Main Street, Los Angeles, California.

Optimal was contracted to perform a soil vapor survey at this site to screen for possible chlorinated solvents and aromatic hydrocarbons. The primary objective of this soil vapor investigation was to determine if soil vapor contamination is present in the subsurface soil.

Gas Sampling Method

Gas sampling was performed by hydraulically pushing soil gas probes to a depth of 5.0 feet below ground surface (bgs). An electric rotary hammer drill was used to drill a 1.0-inch diameter hole through the overlying surface to allow probe placement when required. The same electric hammer drill was used to push probes in areas of resistance during placement.

At each sampling location an electric vacuum pump set to draw 0.2 liters per minute (L/min) of soil vapor was attached to the probe and purged prior to sample collection. Vapor samples were obtained in SGE gas-tight syringes by drawing the sample through a luer-lock connection which connects the sampling probe and the vacuum pump. Samples were immediately injected into the gas chromatograph/purge and trap after collection. New tubing was used at each sampling point to prevent cross contamination.

All analyses were performed on a laboratory grade Hewlett Packard model 5890 Series II gas chromatograph equipped with a Hewlett Packard model 5971 Mass Spectra Detector and Tekmar LSC 2000 Purge and Trap. An SGE capillary column using helium as the carrier gas was used to perform all analysis. All results were collected on a personal computer utilizing Hewlett Packard's 5971 MS and chromatographic data collection and handling system.

Quality Assurance

5-Point Calibration
The initial five point calibration consisted of 20, 50, 100, 200 and 500 ul injections of the calibration standard. A calibration factor on each analyte was generated using a best fit line method using the HP data system. If the r^2 factor generated from this line was not greater than 0.990, an additional five point calibration would have been performed. Method reporting limits were calculated to be 0.01-1.0 micrograms per Liter (ug/L) for the individual compounds.

A daily calibration check and end of run calibration check was performed using a pre-mixed standard supplied by Scotty Analyzed Gases. The standard contained common halogenated solvents and aromatic hydrocarbons (see Table 1). The individual compound concentrations in the standards ranged between 0.025 nanograms per microliter (ng/ul) and 0.25 ng/ul.

TABLE 1

Dichlorodifluoromethane	Carbon Tetrachloride	Chloroethane
Trichlorofluoromethane	1,2-Dichloroethane	Benzene
1,1-Dichloroethene	Trichloroethene	Toluene
Methylene Chloride	1,1,2-Trichloroethane	Ethylbenzene
trans-1,2-Dichloroethene	Tetrachloroethene	m-/p-Xylene
1,1-Dichloroethane	Chloroform	o-Xylene
cis-1,2-Dichloroethene	1,1,1,2-Tetrachloroethane	Vinyl Chloride
1,1,1-Trichloroethane	1,1,2,2-Tetrachloroethane	Freon 113
4-Methyl-2-Pentanone	Cyclohexane	Acetone
Chlorobenzene	2-Butanone	Isobutane

Sample Replicates
A replicate analysis (duplicate) was run to evaluate the reproducibility of the sampling system and instrument. The difference between samples did not vary more than 20%.

Equipment Blanks
Blanks were run at the beginning of each workday and after calibrations. The blanks were collected using an ambient air sample. These blanks checked the septum, syringe, GC column, GC detector and the ambient air. Contamination was not found in any of the blanks analyzed during this investigation. Blank results are given along with the sample results.

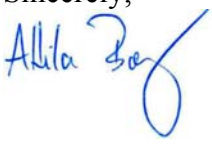
Tracer Gas
A tracer gas was applied to the soil gas probes near each point of connection in which ambient air could enter the sampling system. These points include the top of the sampling probe where the tubing meets the probe connection and the surface bentonite seals. Isobutane was used as the tracer gas, found in common shaving cream. No Isobutane was found in any of the samples collected.

Scope of Work

To achieve the objective of this investigation a total of 9 vapor samples were collected from 8 locations at the site. Sampling depths, vacuum readings, purge volume and sampling volumes are given on the analytical results page. All the collected vapor samples were analyzed on-site using Optimal's mobile laboratory.

Subsurface Conditions

Soil conditions offered sampling flows at 0" water vacuum. Depth to groundwater was unknown at the time of the investigation.



Results

During this vapor investigation none of the compounds listed in Table 1 above were detected above the listed reporting limits. A complete table of analytical results is included with this report.

Disclaimer

All conclusions presented in this letter are based solely on the information collected by the soil vapor survey conducted by Optimal Technology. Soil vapor testing is only a subsurface screening tool and does not represent actual contaminant concentrations in either the soil and/or groundwater. We enjoyed working with you on this project and look forward to future projects. If you have any questions please contact me at (877) 764-5427.

Sincerely,

Attila Baly
Project Manager

Los Angeles, California 90017

November 29, 2018

1.0 Introduction: GeoKinetics has completed a subsurface methane gas investigation at the property located at 1123 - 1161 South Main Street, in the City of Los Angeles. The location of the subject property is shown in Figure 1 while a recent aerial photograph of the site is provided as Figure 2. We understand that a thirty story mixed-use building with three above ground parking levels is planned at the proposed project. The subject property is located in the Los Angeles Downtown Oil Field as it has been mapped by the California Department of Conservation, Division of Oil, Gas & Geothermal Resources (DOGGR). No oil wells are shown to exist at the property based upon our review of the DOGGR oil field map. The closest mapped oil well (Nasco Petroleum, LLC., "LA Unit" #12) is located approximately 800 feet southwest of the subject property. As a result, it is within a Methane Zone designated by LADBS. It will therefore be necessary to incorporate methane gas mitigation measures into the design of the proposed structure in accordance with LADBS requirements

Under the current building code, the nature and extent of the required mitigation measures are partially dependent upon the concentration and pressure of any methane gas that may be present at the site. The current investigation has been performed for the purpose of documenting the concentration and pressure of methane gas in the subsurface of the subject property such that appropriate mitigative improvements can be specified. This report presents the results of the subsurface gas investigation as well as associated methane mitigation recommendations in accordance with typical LADBS requirements.

2.0 Background: The presence of methane gas in the subsurface is common within former oil production areas and other locations where organic material - such as grass, leaves, wood, manure, etc. - are present in the soil. Biogenic methane is generated by the bacteriological digestion, or biodegradation, of organic matter in the absence of oxygen. Methane of thermogenic or petrogenic origin may also be present in surficial soils as a result of its upward migration from deeper oil and gas bearing zones. Our experience indicates methane gas is common and can be found in the soil at a relatively high percentage of building sites in southern California. Methane is not toxic, however it is combustible and potentially explosive at concentrations above 55,000 ppm in the presence of oxygen. This concentration is referred to as its Lower Explosive Level or LEL. Methane is lighter than air and therefore has a natural tendency to rise to the ground surface where it typically dissipates into the atmosphere. The presence of non-pressurized methane at shallow depths beneath the ground surface is normally not problematic. The rates at which the methane is generated and/or migrates towards the ground surface are slow enough such that the gas dissipates naturally under normal circumstances. However, as methane migrates to the ground surface, the

potential exists for its accumulation beneath slab-on-grade foundation systems or other relatively impermeable ground coverings. If the gas accumulates to high concentrations, and becomes pressurized, and a crack or other penetration is present in the floor slab of the structure, detectable levels of methane may enter the interior of the building. Improvements - such as sub-slab vent lines or gas membranes - are generally required by LADBS as a precautionary measure for new structures at Methane Zone sites.

3.0 Field Investigation: The field work associated with the methane gas investigation at the subject property included the installation and monitoring of three (3) multi-stage subsurface gas probes. The locations of these gas probes are shown in Figure 2. The subsurface gas probes were installed on November 9th, 2018 and they were subsequently monitored on November 12th and 14th, 2018. The gas probes were installed using direct push drilling equipment to minimize the disturbance to the subsurface environment. A schematic illustrating the general configuration of the gas probes is provided as Figure 3. The LADBS guidelines require that individual sampling tips be installed at depths of 5, 10, and 20 feet below the lowest floor level of the building. A schematic illustrating the general configuration of the gas probes is provided as Figure 3. The maximum depth was not able to be reached in boring P-2 due to refusal. Each sampling tip was embedded within a 12-inch interval of washed Monterey #3 sand. Bentonite clay seals were placed above and below each sand interval in order to isolate the gas sampling tips. Gas tight quick connect fittings were installed on the ends of the polyethylene tubing at the ground surface in order to seal the probes between monitoring events. Flush-mounted vaults were installed at the ground surface to protect the installations.

As discussed previously, the installations were monitored on November 12th and 14th, 2018. All monitoring was performed during periods of falling barometric pressure. The subsurface gas pressure relative to atmospheric, and the concentrations of methane, oxygen, and carbon dioxide, were measured in the subsurface probes during each monitoring event. The monitoring equipment that was utilized and the associated detection limits, or resolutions, are summarized in Table 1. As indicated, subsurface gas pressures were measured to the nearest 0.05 inches of water prior to each sampling event using a Magnahelic gauge while the barometric pressure was measured and recorded to the nearest 0.1 inches of mercury using a digital barometer. The gas probe methane, oxygen, and carbon dioxide concentrations were measured in the field using a portable, methane specific, LANDTEC GEM2000-PLUS infra-red gas analyzer. A volume of gas equivalent to approximately ten times that of the ¼-inch diameter polyethylene gas probe tube was extracted through the LANDTEC GEM2000-PLUS during the monitoring process. Steady state readings were generally obtained after

approximately two tubing volumes of gas had been extracted. The highest methane reading displayed in each instance was recorded. The LANDTEC GEM2000-PLUS was calibrated at the beginning and the end of each day of monitoring using a certified mixture of 15% methane, 15% carbon dioxide, and 70% nitrogen calibration gas (Note: all gas concentrations referred to in this report are on a volumetric basis). A Photovac Flame Ionization Detector (FID) was used to confirm combustible gas levels at selected probes where sufficient oxygen was present in the probe to operate the FID. The gas levels measured with both detectors were found to be consistent. Combustible gas concentrations in excess of 100 ppm were not detected with the FID.

Ambient gas levels in the air four feet above the ground surface were recorded at the site periodically during the monitoring. In each instance, the measured gas level fell within the following range:

Gas	Measured Range
Methane	<0.1%
Carbon Dioxide	<0.1%
Oxygen	20.7% – 20.8%

4.0 Results: The pressures and concentrations measured in each of the subsurface gas probes during the monitoring events are summarized in Table 2. As indicated, methane gas was not detected in any of the gas probe installations.

There were no elevated soil gas pressure readings measured in any of the gas probes above 0.00 inches of water. As such, there was no indication of elevated soil gas pressures associated with methane generation or migration.

The concentration of oxygen in the atmosphere at sea level is approximately 21%. The subsurface oxygen levels were found to be slightly depressed below typical atmospheric levels at each of the gas probe installations. The lowest subsurface oxygen level recorded at the site was 18.8% while the average oxygen concentration measured in the gas probes was approximately 19.6%. The average concentration of carbon dioxide in the atmosphere at sea level is approximately 0.03%. Subsurface carbon dioxide levels were slightly elevated above typical atmospheric levels in each of the gas probes. The highest carbon dioxide concentration measured at the site was 0.8% while the average carbon dioxide concentration measured in the gas probes was approximately 0.3%. The slightly depressed subsurface oxygen levels and slightly elevated carbon

dioxide levels suggest residual organic matter entrained within the near surface soils is being biodegraded under aerobic conditions.

Based upon the measured methane levels and the corresponding soil gas pressures, we conclude the property should be classified as a Level I site with a Design Methane Pressure of #2" of water in accordance with LADBS guidelines. A copy of the LADBS methane testing compliance form for this project is included as Attachment A for your reference.

As discussed previously, the property is shown to be located within a Methane Zone. The following primary methane mitigation measures are typically required by LADBS for new Level I slab-on-grade structures within the methane zone:

1. **Sub-Slab Vent System:** A series of perforated vent lines and an associated 2" thick gravel blanket must be installed beneath the floor slab of the proposed structure. The perforated vent lines are connected to solid vent piping that extends through the walls or pipe chases of the building to outlets above the roof line. A dewatering system (sump and pump) must be installed if the design high groundwater level for the project is not at least one foot below the lowest vent piping elevation. Based on the historic groundwater levels, no dewatering system is required.

2. **Impervious Membrane:** A continuous gas membrane is required below the floor slab of the building. This membrane must be sealed against footings, pilings, and utilities to form a gas-tight barrier beneath the building.

3. **Utility Trench Dams:** A section of impervious backfill consisting of compacted native soil or sand / cement slurry must be installed in utility trenches that extend beneath the perimeter of the building in order to prevent methane gas from migrating beneath the structure through sand bedding or backfill.

4. **Conduit Seals:** Gas tight seals must be installed on all conduits (e.g. electrical, cable T.V., telephone, etc.) that extend to the interior of the structure. The purpose of these seals is to prevent methane gas from entering subsurface cracks or discontinuities in the conduits and subsequently migrating to the interior of the building.

There are exceptions in the City Methane Ordinance (Ordinance No. 175790) that allow some of the requirements outlined above to be omitted, or modified,

under certain conditions. These possible exceptions should be considered as the building plans are developed in order to determine the specific mitigative measures that will be required for the project.

5.0 Closing: This investigation has been performed with the degree of skill and care ordinarily exercised by engineers practicing in this, and similar, localities. No other warranty, expressed or implied, is given regarding the conclusions or professional opinions presented in this report. The scope of this report is limited to the matters expressly covered herein. This report is presented for the sole use of Jade Enterprises, LLC and may not be relied upon by any other party without written authorization from GeoKinetics. All recommendations, findings, and conclusions presented in this report are based upon facts and circumstances as they existed at the time this report was prepared. A change in any fact or circumstance upon which this report is based may necessitate re-evaluation and/or modification of the recommendations, findings, and conclusions presented herein. Due to the nature of this type of investigation, uncertainty exists with respect to the subsurface conditions that are present between boring / sampling locations. The subsurface methane concentrations at the site could vary over time and may change in response to site modifications. The methane levels identified in this report represent the concentrations that were measured at the time of the current investigation. Higher or lower concentrations could occur in the future. If the level of inherent uncertainty is unacceptable, additional sampling and/or testing should be considered.

We hope this information is helpful to you. Please do not hesitate to contact the undersigned if you have any questions or comments.

Sincerely,
GEOKINETICS, INC.

Kevin J. Lea, RCE
Senior Project Engineer

REGISTERED PROFESSIONAL ENGINEER GLENN D. TOFANI No. GE 2496 Exp. 06-30-19 GEOTECHNICAL STATE OF CALIFORNIA

REGISTERED PROFESSIONAL ENGINEER GLENN D. TOFANI No. C 44229 Exp. 06-30-19 CIVIL STATE OF CALIFORNIA

I hereby certify that I have tested the above site for the purpose of methane mitigation, and that all procedures were conducted by a City of Los Angeles licensed testing agency in conformity with the requirements of the LADBS Information Bulletin P/BC 2002-101. Where the inspection and testing of all or part of the work above is delegated, full responsibility shall be assumed by the licensed engineer or geologist whose signature is affixed thereon.

Signed: Glenn D. Tofani **Date:** 11-26-18

Required Data:

- Project is in a *METHANE ZONE*
- Depth to ground water observed during testing was: >20 feet below existing ground surface.
- Depth of Historical High Ground Water Table Elevation* is ~115 ft below existing ground surface.
- Design Methane Concentration**: < 100 parts per million in volume (ppmv).
- Design Methane Pressure***: ≤ 2 inches of water column.
- Methane Design Level: I

De-watering:

- De-watering is Not required.
- Pump discharge rate N/A gallons per minute.
- Reference geology or soil report: N/A

Additional Investigation:

- Additional investigation was Not conducted.

Latest Grading on Site:

- Date of last grading on site was: Years ago
- Explanation of the effect on soil gas survey results by grading operations: N/A
- Building Excavation: Not Yet Initiated

Notes:

* Historical High Ground Water Table Elevation Shall mean the highest recorded elevation of ground water based on historical records and field investigations as determined by the engineer for the methane mitigation system.

** Design Methane Concentration shall mean the highest recorded measured methane concentration from either shallow soil gas test or any gas probe set on the site.

*** Design Methane Pressure shall mean the highest total pressure measured from any Gas Probe Set on the site.

As a covered entity under Title II of the Americans with Disabilities Act, the City of Los Angeles does not discriminate on the basis of disability and, upon request, will provide reasonable accommodation to ensure equal access to its programs, services and activities. For efficient handling of information internally and in the internet, conversion to this new format of code related and administrative information bulletins including MGD and RGA that were previously issued will allow flexibility and timely distribution of information to the public.

June 6, 2019

Ms. Elise Lorenzana, Senior Environmental Planner
Parker Environmental Consultants
23822 Valencia Boulevard, Suite 301
Valencia, CA 91355

Dear Ms. Lorenzana:

Subject: Los Angeles Department of Water and Power
Water and Electricity Connection Services Request
Main Street Tower Project

The Los Angeles Department of Water and Power (LADWP) is in receipt of your letter dated May 21, 2019 requesting LADWP's ability to provide water and electric services for the Main Street Tower Project (Project). (Thomas Brothers Maps, Page 634, E6)

The Project is the Main Street Tower Project and is located at 1123-1161 S. Main Street and 111 W. 12th Street, Los Angeles, CA 90015. The Project site is generally bound by 12th Street to the south, Main Street to the east, a surface parking lot to the north, and an alleyway to the west.

The Project site totals approximately 48,906 square feet of lot area (1.12 acres) and is currently developed with four commercial buildings totaling 18,232 square feet of floor area and a paved surface parking lot. The proposed Project includes the demolition of the existing structures and the construction, use, and maintenance of a 30-story mixed-use development with 363 dwelling units and 12,500 square feet of ground floor commercial space. The dwelling units will consist of 122 studio units, 133 one-bedroom units, 96 two-bedroom units, and 12 three-bedroom units.

We are providing information for consideration and incorporation into the planning, design, and development efforts for the proposed Project. Regarding water needs for the proposed Project, this letter does not constitute a response to a Water Supply Assessment (WSA) pursuant to California State Water Code Sections 10910-10915 for development projects to determine the availability of long-term water supply. Depending on the Project scope, a WSA by the water supply agency may need to be requested by

the California Environmental Quality Act (CEQA) Lead Agency and completed prior to issuing a draft Negative Declaration or draft Environmental Impact Report (EIR).

If a Lead Agency determines that the proposed Project parameters (e.g., development details such as type, square footage, anticipated water demand, population increase, etc.) are such that they are subject to state law requiring a WSA, a separate request must be made in writing and sent to:

Mr. Richard Harasick
Senior Assistant General Manager – Water System
Los Angeles Department of Water and Power
111 North Hope Street, Room 1455
Los Angeles, CA 90012

If you have any further questions regarding the water supply assessment process, please contact Mr. Delon Kwan at (213) 367-2166 or by e-mail at Delon.Kwan@ladwp.com,

Below you will find some information about water needs.

Water Needs

As the Project proceeds further in the design phase, we recommend the Project applicant or designated Project Management Engineer contact Mr. Hugo Torres at (213) 367-2130 or by e-mail at Hugo.Torres@ladwp.com to make arrangements for water supply service needs.

The following responses are provided regarding impacts to water service.

1. Please describe sizes and capacities of existing water mains that would serve the project site and the surrounding area (e.g., along _____). Please include a map illustrating your description.

   There are the following water mains near the project site:
   - **S. Main St.: 12" (inch) C.I. pipe on the west side of S. Main St.**
   - **W. 12th St.: 24" (inch) STL. Pipe on south side of S. 12th St. and reduced to 12" (inch) D.I. pipe at the west side of the intersection of 12th St. and Main St. as shown on the enclosed water service map 126-207.**

2. Are there any existing water service problems/deficiencies in the Project area?

   There are no known water service problems/deficiencies.

3. If water service problems/deficiencies exist, how would they affect the proposed project, and how would you suggest those effects be mitigated by the project developer?

   There are no known water service problems/deficiencies.

4. Would there be a disruption in water service in the project area when "hooking-up" the proposed project? If so, about how long would the disruption last?

   Water services are usually "hot-tapped" so as to avoid any disruptions in water services. Disruptions to the property are controlled by the Developer in that they will "hook-up" to our meter after the service is installed.

   "Hooking-up" rarely results in disruption in water service within the proposed project. In special instances, where the main needs to be isolated in order to install the service, a typical disruption may last for a few hours.

5. Would the DWP be able to accommodate the Project's demand for water service with the existing infrastructure in the Project area?

   LADWP should be able to provide the domestic needs of the project from the existing water system.

6. If the answer to question five is "no," what new infrastructure or upgrades would be needed to meet the proposed project's demand for water?

   LADWP cannot determine the impact on the existing water system until the fire demands of the project are known. Once a determination of the fire demands has been made, LADWP will assess the need for additional facilities, if needed.

7. Would the DWP be able to accommodate the proposed project's demand for water service with existing water supplies?

   If the proposed Project is within the City's General Plan and the C2's Zone allowable use and area limits, LADWP should be able to provide the domestic needs of the Project from the existing water system. LADWP cannot determine the impact on the existing water system until the proposed water demands and fire demands of the project are known. Once a determination of the water and fire demands have been made, LADWP will assess the need for additional facilities.

8. Would the water pressure and supply in the project area be adequate to meet the Los Angeles Fire Department's fire flow and residual water pressure requirements with implementation of the proposed project?

The private engineer shall request from the Los Angeles Fire Department (LAFD) the required fire flow requirements for the Project. Please contact the Hydrant and Access Unit of the LAFD at (213)482-6543. The LADWP will then determine whether the existing system is capable of meeting these requirements. Water main replacement may be required if fire flow requirements cannot be met.

The water pressure and water supply in the Project area met the Los Angeles Department of Building and Safety (LADBS) and LAFD requirements at the time it was constructed. However, with implementation of the proposed Project, upgrades to the existing water system may be required to meet the current LADBS and LAFD requirements for specific projects.

To determine the residual pressure, applicant/owner must apply for a Service Advisory Request (SAR/Fire Flow Report). The applicant/owner must know what the fire demand is prior to applying for a SAR. Based on the fire service demand, existing water facilities may need to be upgraded. Applications and information can be found on our website at: https://www.ladwp.com/ladwp/faces/commercial/c-customerservice/c-cs-waterservices/c-cs-ws-waterpressure

9. In order to assess the proposed project's future consumption of water, please provide your recommended rates. Land Use: _____ gallons / dwelling unit (DU) / day

For estimating a project's indoor water demand, we use applicable sewer generation factors (sgf). Please refer to the current factors at the following link: http://www.lacitysan.org/fmd/pdf/sfcfeerates.pdf or contact the LADWP Water Resources' Development group for a copy of the factors. The sgf have also been enclosed with this response letter.

For outdoor (landscape) water demand, we use California Code of Regulations Title 23. Division 2. Chapter 2.7. Model Water Efficient Landscape Ordinance. Please refer to the following link: http://www.water.ca.gov/wateruseefficiency/landscapeordinance/

If the proposed project scope includes cooling tower(s), consult a mechanical engineer to estimate the cooling water demand.

Applicants are encouraged to commit to water conservation measures that are beyond the current codes and ordinances, to lower the net additional water demand for the proposed project.

Power Needs

It should be noted that the Project applicant may be financially responsible for some of infrastructure improvements (e.g., installation of electric power facilities or service connections) necessary to serve the proposed Project.

As the Project proceeds further, please contact one of our Engineering Offices, as listed on Pages 1-4 of the Electric Service Requirements (available on-line at www.ladwp.com) for dealing with power services and infrastructure needs.

1. Please describe the sizes and voltages of existing electrical distribution lines that would serve the project site and the surrounding area (e.g., along _____). Please include a map illustrating your description.

   - **Three underground 4.8kV circuits are adjacent to the project site along S. Main St. There is one 4.8kV circuit adjacent to the project site along W. 12th St.**
   - **Two underground 34.5kV circuits are adjacent to the project sire along W. 12th St.**

   LADWP may possibly require space for a minimum of two pads for electrical equipment within the property with the required clearances and LADWP should have accessibility to the equipment.

   LADWP does not release/provide electrical distribution maps.

2. Are there any existing electricity service problems/deficiencies in the project area?

   No; however, the cumulative effect of this and other new and added loads in the area may require near term and/or future additions to distribution system capacity. The project would require on-site transformation facility.

3. If electricity service problems/deficiencies exist, how would they affect the proposed project, and how would you suggest those effects be mitigated by the project developer?

   This cannot be answered without review of the project developer's electrical drawings and load schedules. However, the cumulative effects of this and other projects in the area will require the LADWP to construct additional distribution facilities in the future. This project will require on-sire transformation and may require underground line extension on public streets.

4. Would there be a disruption in electrical service in the project area when "hooking-up" the proposed project? If so, about how long would the disruption last?

This cannot be answered without determining the method and voltage of service. If the connection of this project necessitates a disruption, certain procedures and processes will be followed to limit the disruption to a small area.

5. Would the DWP be able to accommodate the proposed project's demand for electricity service with the existing infrastructure in the project area?

   This cannot be answered without review of the Project developer's electrical drawings and load schedules. However, the cumulative effects of this and other Projects in the area will require the LADWP to construct additional distribution facilities in the future.

6. If the answer to five is "no," what new infrastructure would be needed to meet the proposed project's demand for electricity?

   This Project will require on-site transformation and may require underground line extension on public streets.

7. Would the DWP be able to accommodate the proposed project's demand for electricity with existing electricity supplies?

   Electric service is available and will be provided in accordance with the LADWP's Rules Governing Water and Electric Service (available on-line at https://www.ladwp.com under Commercial/Customer Service/Electric Services/Codes & Specifications). The availability of electricity is dependent upon adequate generating capacity and adequate fuel supplies. The estimated power requirement for this proposed Project is part of the total load growth forecast for the City of Los Angeles (City) and has been taken into account in the planned growth of the City's power system.

   LADWP's load growth forecast incorporates construction activity and is built into the commercial floor space model; the McGraw Hill Construction report identifies all large projects. In planning sufficient future resources, LADWP's Power Integrated Resource Plan incorporates the estimated power requirement for the proposed Project through the load forecast input and has planned sufficient resources to supply the electricity needs.

8. In order to assess the proposed project's future consumption of electricity, please provide us with your recommended rates. Land Use: multi-family residential = Kilowatt-hour / unit / year

   LADWP does not provide consumption rates.

Water Conservation

LADWP is always looking for means to assist its customers to use water resources more efficiently and welcomes the opportunity to work with new developments to identify water conservation opportunities. Some water conservation measures are enclosed. The LADWP website contains a current list of the available rebates and incentive programs, including the performance based Custom Water Conservation Technical Assistance Program (WCTAP, https://www.ladwp.com/ladwp/faces/wcnav_externalId/a-w-cstm-wtr-prjct-tap?_adf.ctrl-state=h8fsat92s_4&_afrLoop=3392823718109) for commercial, industrial, institutional and multi-family residential customers up to $250,000 for the installation of pre-approved equipment which demonstrates water savings. Mr. Mark Gentili is the Water Conservation Program Manager and can be reached at (213) 367-8556 or by e-mail at Mark.Gentili@ladwp.com. See the following link for LADWP water conservation rebate information on our website: https://www.ladwp.com/ladwp/faces/ladwp/aboutus/a-water/a-w-conservation

Energy Efficiency

LADWP suggests consideration and incorporation of energy- efficient design measures (enclosed) for building new commercial and/or remodeling existing facilities. Implementation of applicable measures would exceed Title 24 energy efficiency requirements. LADWP continues to offer a number of energy efficiency programs to reduce peak electrical demand and energy costs. For further information please contact Ms. Lucia Alvelais, Utility Services Manager, at (213) 367-4939 or by e-mail at Lucia.Alvelais@ladwp.com. See the following link for LADWP energy efficiency rebate information on our website: https://www.ladwp.com/ladwp/faces/ladwp/aboutus/a-power/a-p-energyefficiencyandrebates

Solar Energy

Solar power is a renewable, nonpolluting energy source that can help reduce our dependence on fossil fuels. Mr. Yamen Nanne is the Solar Energy Program Manager and can be reached at (213) 367-2585 or by e-mail at Yamen.Nanne@ladwp.com.

For more information about the Solar Incentive Program, please visit the LADWP website: www.ladwp.com/solar or www.ladwp.com/fit regarding the Feed-In Tariff Program.

For more information on other rebates and programs, please visit the LADWP website:https://www.ladwp.com/ladwp/faces/ladwp/commercial/c-savemoney/c-sm-rebatesandprograms

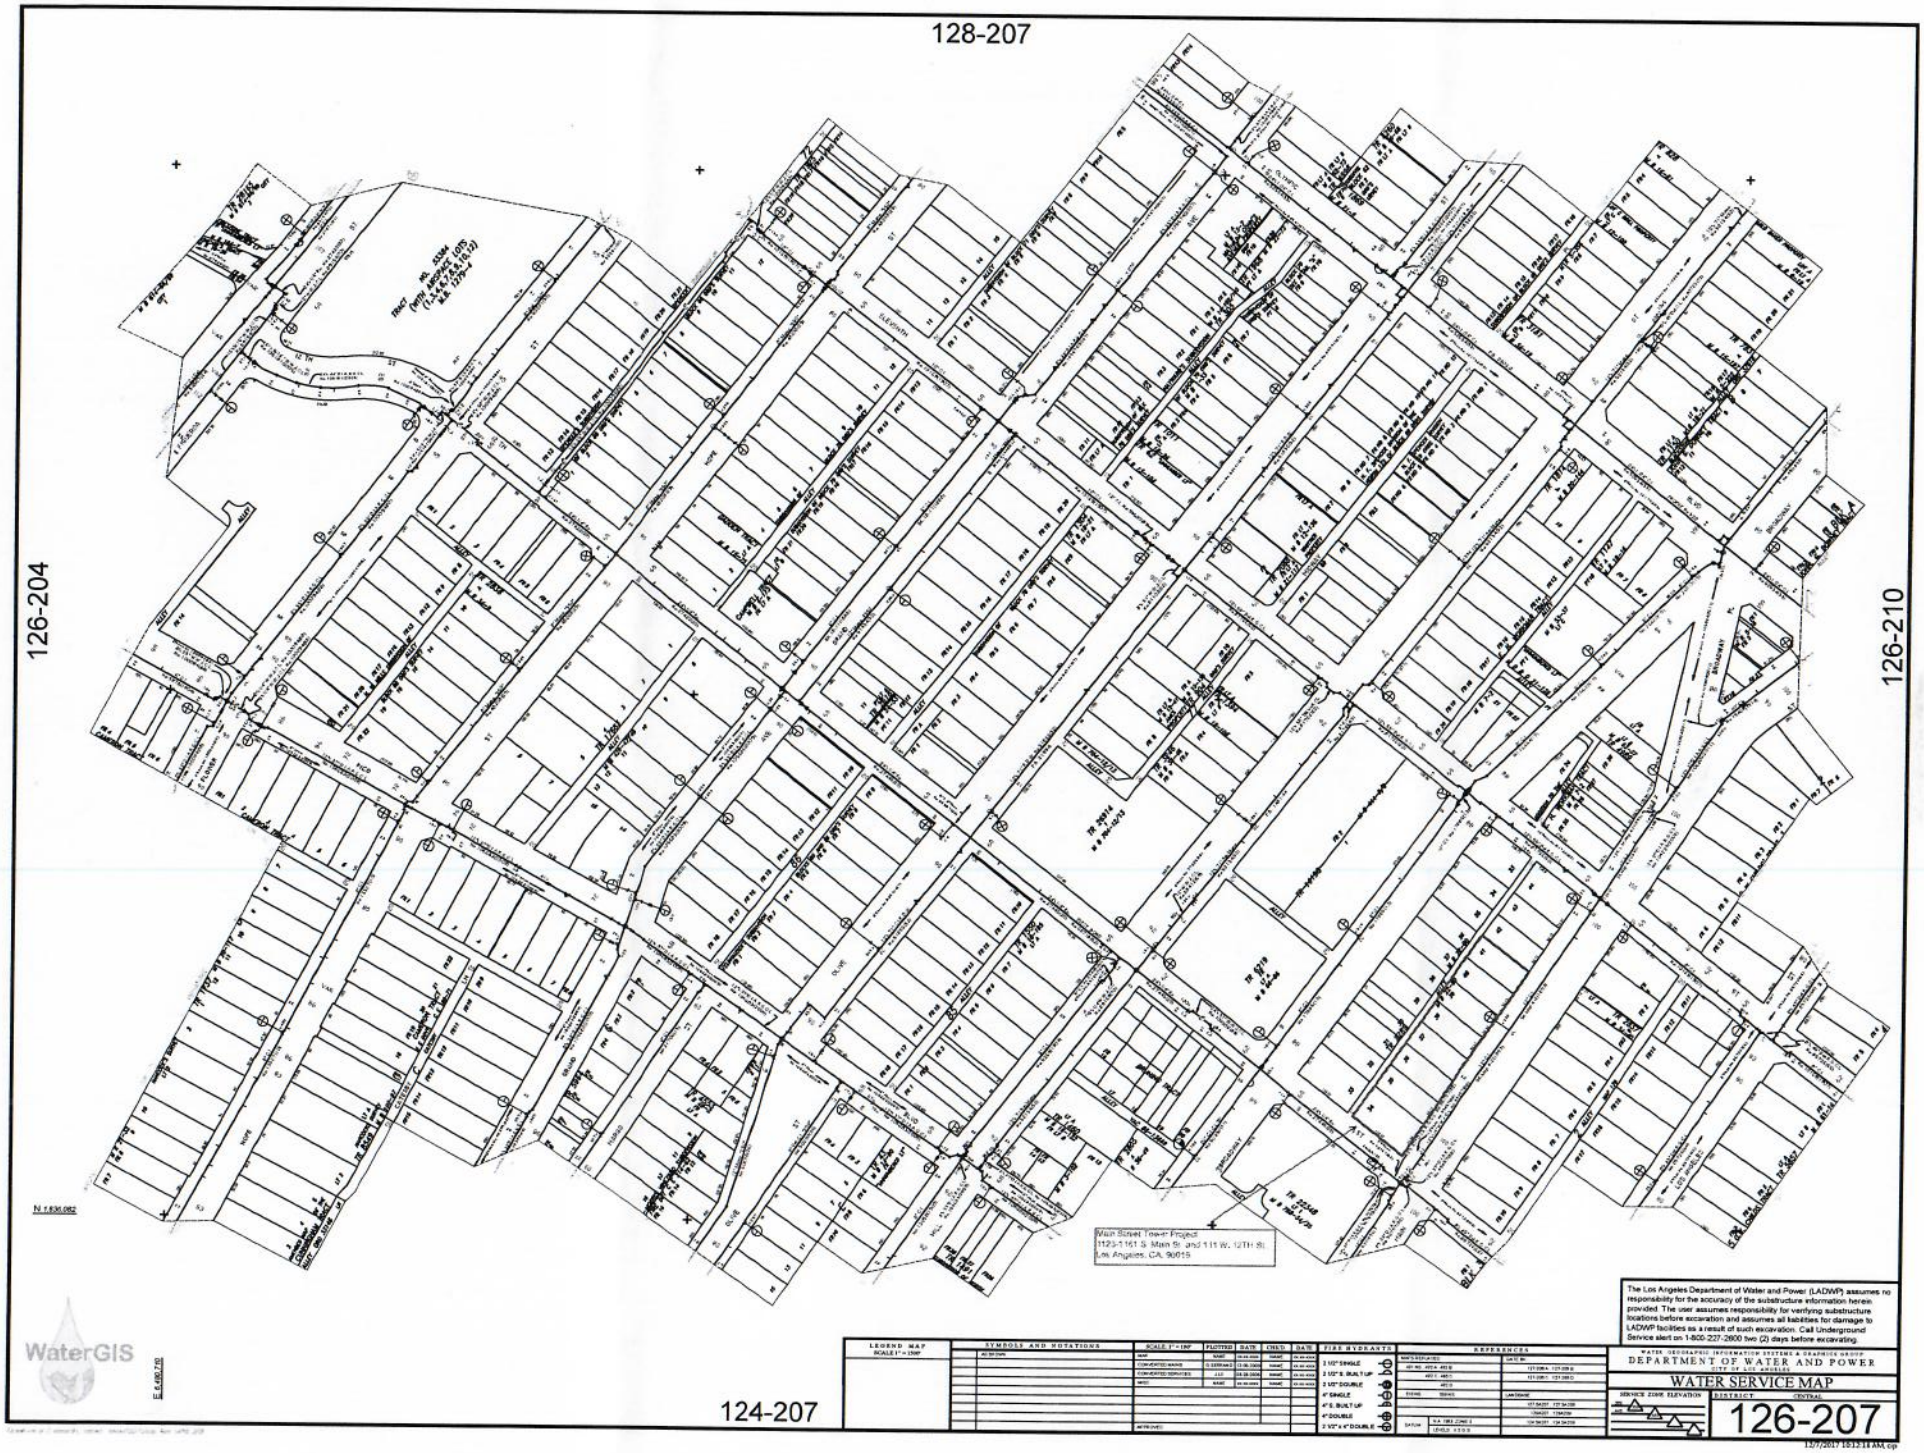
Electric Vehicle Transportation

LADWP is encouraging the installation of convenient electric vehicle (EV) charging stations for the home, workplace, and public charging to support the adoption of EVs in the City of Los Angeles. Mr. Louis Ting is the Power Engineering Manager in charge of this program and can be reached at (213) 367-0239 or via email at Louis.Ting@ladwp.com.

For more information on LADWP EV discount rates and charging incentives for residential and business customers, please visit the website: www.ladwp.com/ev. If you would like a Customer Service Representative to answer your questions or review your account and help you decide on the best option, please call us at 1-866-484-0433 or email us at PluginLA@ladwp.com.

Please include LADWP in your mailing list and address it to the attention of Mr. Charles C. Holloway in Room 1044 for review of the environmental document for the proposed Project.

Mr. Charles C. Holloway
Manager of Environmental Planning and Assessment
Los Angeles Department of Water and Power
111 North Hope Street, Room 1044
Los Angeles, CA 90012



If there are any additional questions on this utility services request, please contact Ms. Kathryn Laudeman of the Environmental Assessment Group at (213) 367-6376.

Sincerely,

Nadia J Parker for

Charles Holloway
Manager of Environmental Planning and Assessment

FOOTNOTES TO SGFs TABLE

(a) SFC rates for these facilities have historically been published in SFC ordinances.

(b) Bureau of Sanitation will determine the flow based on the information given by applicants for facilities with industrial discharge. The flow will be redetermined by Sanitation inspectors annually based on water bills. If the actual flow exceeds the previous year's determined flow, the applicants will be charged for the difference.
If this type of facility is exempt from an industrial discharge permit, only the domestic SFC will be assessed.

(c) The SFC for a bar shall be the sum of SFC's for all areas based on the SGF for each area (ex. fixed seat area, public table area, dancing area).

(d) The determination of SGF for juice bars and coffee houses previously depended on the extent of the actual food preparation in house, not by the types of food provided. Food is assumed to be prepared offsite and as such, the three prior subcategories have been consolidated.

1) SGF for no pastry baking and no food preparation is 720 gpd/1000 gr.sq.ft.
2) SGF for pastry baking only and no food preparation is 720 gpd/1000 gr.sq.ft.
3) SGF for complete food preparation is 25 gpd/seat, the same as a fast food restaurant.

Juice bars and coffee houses do not serve any alcoholic drinks.

(e) Building construction includes trailers, field offices, etc.

(f) Cocktail lounge usually does not serve prepared food.

(g) Cold storage facilities are categorized as follow:

1) No Sales - the cold storage facility is used only for temporary storage, no selling is involved. For example, cold storage facilities at the harbor temporarily store seafood until it is distributed.
2) Cold storage w/ retail sales - the primary function of this facility is to support the wholesale/retail operation of a store, such as supermarket freezers, refrigerators, etc.

(h) Counseling centers include marriage counseling centers, alcohol/drug rehabilitation /dependency centers, nutrition centers, diet centers, etc.

(i) Part-time basis schools or dance studios should be charged as retail area - 50 gpd /1000 gr.sq.ft. Full-time basis schools should be charged by the number of students.

(j) Domestic waste is estimated at 50 gpd/1,000 square feet in addition to total process flow.

(k) Bureau of Sanitation will determine if an industrial permit is needed for health spas. The first year flow is based on 650 gpd/1000 gr.sq.ft., and the Sanitation inspectors will redetermine the flow annually based on water bill from the previous year. The applicants are responsible for paying the difference of SFC.

Health club/spa includes lobby area, workout floors, aerobic rooms, swimming pools, Jacuzzi, sauna, locker rooms, showers, and restrooms. If a health club/spa has a gymnasium type of facility, this portion should be charged separately at the gymnasium SFC rate.

Gymnasiums include basketball court, volleyball court, and any other large open space with low occupancy density.

(l) Lobby of retail includes lounges, holding rooms, or waiting area, etc.

(m) Full service post offices include U.S. Postal Service, UPS, Federal Express, DHL, and etc.

(n) The SGF for a college dormitory based on student capacity also includes the SGF for the dormitory cafeterias.

(o) A bedroom is defined as an enclosed subdivision with 50 sq.ft. or more floor area in a residential building commonly used for sleeping purpose, and is partitioned off to form a habitable room.

(p) The SGF for schools based on the student capacity, covers the following facilities:

1) classrooms and lecture halls
2) professors' offices
3) administration offices
4) laboratories for classes or research
5) libraries
6) bookstores
7) student/professor lounges
8) school cafeterias
9) warehouses and storage areas
10) auditoriums
11) gymnasiums
12) restrooms

It does not include water used by schools for swimming pools. When a school files an application for addition of any of the foregoing facilities, the student population will be reassessed and the total gpd for the new facility will be based on the number of students increased since the last SFC was paid or when the City implemented the SFC for the first time. The SFC for any school facility (ex. stadium, dormitory, etc.) not listed above, will be based on the designated SGF for that category.

(q) The SFC for a TV or motion picture studio shall be the sum of SFC's for different facilities in the studio, based on the SGF for each facility. A studio may include one or more of the following facilities: audience viewing room, filming room, film processing, storage area, etc.

(r) No independent tanning salons with shower were encountered during 1996 survey.

(s) Alternative basis of charge for City's consideration. The prior square footage basis is also presented should the City decide to continue charging on that basis.

LADWP WATER & ENERGY CONSERVATION MEASURES

IMPACT ON THE WATER SYSTEM

If the estimated water requirements for the proposed project can be served by existing water mains in the adjacent street(s), water service will be provided routinely in accordance with the Los Angeles Department of Water and Power's (LADWP) Rules and Regulations (available on-line at www.ladwp.com under Commercial/Customer Service/Water Services under the title, Rules Governing Water & Electric Service. If the estimated water requirements are greater than the available capacity of the existing distribution facilities, special arrangements must be made with the LADWP to enlarge the supply line(s). Supply main enlargement will cause short-term impacts on the environment due to construction activities.

In terms of the City's overall water supply condition, the water requirement for any project that is consistent with the City's General Plan has been taken into account in the planned growth in water demand. Together with local groundwater sources, the City operates the Los Angeles-Owens River Aqueduct and purchases water from the Metropolitan Water District of Southern California. These three sources, along with recycled water, will supply the City's water needs for many years to come.

Statewide drought conditions in the mid-1970s and late 1980s dramatically illustrated the need for water conservation in periods of water shortage. However, water should be conserved in Southern California even in years of normal climate because efficient use of water allows increased water storage for use in dry years as well as making water available for beneficial environmental uses. In addition, electrical energy is required to treat and deliver all water supplies to the City and the rest of Southern California. Conserving water contributes to statewide energy conservation efforts. Practicing water conservation also results in decreased customer operating costs.

WATER CONSERVATION

LADWP assists residential, commercial, and industrial customers in their efforts to conserve water. Below is a list of some of the water conservation requirements in Los Angeles for new construction and when fixtures are replaced in existing buildings. Also included are further voluntary recommendations to save water.

1. High efficiency water closets, high efficiency urinals, water-saving showerheads, and low flow faucets must be installed in new constructions and may be retrofitted in existing buildings. The flow rates of new plumbing fixtures must comply with the most stringent of the following: Los Angeles City Ordinance No. 180822 (http://clkrep.lacity.org/onlinedocs/2009/09-0510_ord_180822.pdf), the 2014 Los Angeles Plumbing Code and the 2013 California Green Building Standards Code (CALGreen), the 2014 Los Angeles Green Building Code.

2. New installations of air conditioning systems that utilize evaporative cooling (i.e. employ cooling towers) shall operate at a minimum of 5.5 cycles of concentration. Single pass cooling systems are prohibited in most cases.

3. Energy Star rated dishwashers must be installed for new construction and when replacing existing units in most cases. Water conserving clothes washers are available from many manufacturers and should be selected. Water saved by these appliances also saves energy in that the water used by these appliances is typically heated.

4. The design of the hot water plumbing system should be such that it minimizes the delivery time for hot water. This may be accomplished through the use of a demand type or a timed and temperature control type hot water recirculation system, point-of-use water heaters, and/or a parallel piping system which all help reduce the pipe length between the fixture and the point of supply of the hot water.

5. Landscape areas utilize a significant volume of the water delivered by LADWP and represent a great potential for water conservation. The State adopted landscape regulations for landscape areas over 2,500 square feet that apply for new constructions and when existing landscapes are renovated. These regulations are addressed by Los Angeles City Ordinance No. 170978 and the City of Los Angeles Irrigation Guidelines (http://cityplanning.lacity.org/Forms_Procedures/2405.pdf) and require submittal of a landscape document package prepared and signed by a licensed professional architect, engineer or contractor to the Department of Building and Safety for review. Please contact the Los Angeles City Planning Department for further information.

6. The landscape irrigation system should be designed, installed, and tested to provide uniform irrigation coverage for each zone. Sprinkler head patterns must be adjusted to minimize over spray onto walkways and streets. Each zone (sprinkler valve) should water plants having similar watering needs (do not mix shrubs, flowers and turf in the same watering zone).

7. Automatic irrigation timers should be set to irrigate landscapes during early morning or late evening hours to reduce water losses from evaporation. Adjust irrigation run times for all zones seasonally, reducing watering times and frequency in the cooler months (fall, winter, spring). Adjust sprinkler timer run times to avoid water runoff, especially when irrigating sloped property.

8. The City of Los Angeles has enacted legislation to address the water supply shortages caused by the recent statewide drought. Los Angeles City Ordinance No. 181288 (http://clkrep.lacity.org/onlinedocs/2009/09-0369-s9_ord_181288.pdf) also known as the Emergency Water Conservation Plan imposes phased water rationing during drought conditions and imposes penalties

for users that do not comply. When water rationing is in effect, landscape irrigation is prohibited between the hours of 9:00 AM and 4:00 PM. Specific watering days and maximum irrigation rates are also defined in this ordinance. When water rationing is in effect, it can be extremely difficult to establish certain types of new landscapes. The landscape architect must take this into consideration in selecting the plant type and the landscape design.

9. Selection of drought-tolerant, low water consuming plant varieties should be used to reduce irrigation water consumption. For a list of plant varieties with their irrigation requirements, refer to the State Guide for Landscape Irrigation which can be found at, (http://www.water.ca.gov/pubs/planning/guide_to_estimating_irrigation_water_needs_of_landscape_plantings_in_ca/wucols.pdf), or consult a landscape architect.

10. Graywater and other alternate water source systems are now addressed in the California Plumbing Code for residential and non-residential buildings. Graywater is semi clean wastewater generated and collected on-site by the building's plumbing system from showers, bathtubs, bathroom sinks and clothes washers but does not include wastewater from toilets, dishwashers or kitchen sinks. The collected graywater is then reused on-site for various beneficial uses. The Plumbing Code addresses the proper collection, handling, treatment and use of Alternate Water Sources.

    The use of graywater reduces the demand for potable water. Please see the attached link for information regarding the installation graywater systems in Los Angeles for residential properties: http://www.ladwp.com under Residential/Go Green.

11. The City continues to expand its purple pipe distribution system of recycled water. The availability of recycled water should be investigated as a source to irrigate large landscaped areas and for toilet and urinal flushing.

LADWP is always looking for means to assist its customers to use water resources more efficiently and welcomes the opportunity to work with new developments to identify water conservation opportunities. Some water conservation measures are enclosed. The LADWP website contains a current list of the available rebates and incentive programs, including the performance based Custom Water Conservation Technical Assistance Program (TAP). Mr. Mark Gentili is the Water Conservation Program Manager and can be reached at (213) 367-8556 or by e-mail at Mark.Gentili@ladwp.com. See the following link for LADWP water conservation rebate information on our website:
https://www.ladwp.com/ladwp/faces/ladwp/aboutus/a-water/a-w-conservation

COMMERCIAL ENERGY EFFICIENCY MEASURES

During the design process, the applicant should consult with the Los Angeles Department of Water and Power, Conservation and Sustainability Programs Section,

regarding possible energy efficiency measures. The Conservation and Sustainability Programs Section encourages customers to consider design alternatives and information to maximize the efficiency of the building envelope, heating, ventilation, and air conditioning, building lighting, water heating, and building mechanical systems. The applicant shall incorporate measures to meet or, if possible, exceed minimum energy efficiency standards for: (1) Title 24, Part 6 of the California Code of Regulations (Title 24); (2) California Green Building Standards Code (CALGreen); (3) Los Angeles Green Building Code. In addition to energy efficiency technical assistance, the LADWP may offer financial incentives for energy designs that exceed minimum energy efficiency standards.

1. Built-in appliances, refrigerators, and space-conditioning equipment should exceed the minimum efficiency levels mandated in the Title 24.

2. Install high-efficiency air conditioning controlled by a computerized energy-management system in the office and retail spaces which provides the following:

    - A variable air-volume system which results in minimum energy consumption and avoids hot water energy consumption for terminal reheat;

    - A 100-percent outdoor air-economizer cycle to obtain free cooling in appropriate climate zones during dry climatic periods;

    - Sequentially staged operation of air-conditioning equipment in accordance with building demands; and

    - The isolation of air conditioning to any selected floor or floors.

3. Consider the applicability of the use of thermal energy storage to handle cooling loads.

4. Cascade ventilation air from high-priority areas before being exhausted, thereby decreasing the volume of ventilation air required. For example, air could be cascaded from occupied space to corridors and then to mechanical spaces before being exhausted.

5. Recycle lighting system heat for space heating during cool weather. Exhaust lighting-system heat from the buildings, via ceiling plenums, to reduce cooling loads in warm weather.

6. Install low and medium static-pressure terminal units and ductwork to reduce energy consumption by air-distribution systems.

7. Ensure that buildings are well sealed to prevent outside air from infiltrating and increasing interior space-conditioning loads. Where applicable, design building

entrances with vestibules to restrict infiltration of unconditioned air and exhausting of conditioned air.

8. Building commissioning should be completed prior to issuance of the certificate of occupancy to verify that the building systems components meet the project requirements.

9. Finish exterior walls with light-colored materials and high-emissivity characteristics to reduce cooling loads. Finish interior walls with light-colored materials to reflect more light and, thus, increase lighting efficiency.

10. Use a white reflective material for roofing meeting California standards for reflectivity and emissivity to reject heat. The Los Angeles Municipal Code now mandates cool roof materials for all new and complete replacement roofs installed in the City of Los Angeles.

11. Install thermal insulation in walls and ceilings, which exceeds requirements established by Title 24.

12. Design window systems to reduce thermal gain and loss, thus, reducing cooling loads during warm weather and heating loads during cool weather.

13. Install heat-rejecting window treatments, such as films, blinds, draperies, or others on appropriate exposures.

14. Install LED lamps or fixtures, which give the highest light output per watt of electricity consumed, for all street and parking lot lighting to reduce electricity consumption. Install an astronomical time switch control to meet your projects design needs.

15. Install automatic daylighting controls and dimmable electronic ballasts, to light fixtures near windows and skylights, to maximize the use of natural daylight available and reduce artificial lighting load.

16. Install occupant-controlled thermostats to permit individual adjustment of heating, and cooling to avoid unnecessary energy consumption.

17. Install a lighting control system to automatically control interior and exterior lights in public areas and will also energize emergency egress lights when an emergency occurs.

18. Control mechanical systems (HVAC and lighting) in the building with timing systems to prevent accidental or inappropriate conditioning or lighting of unoccupied space.

19. Incorporate windowless walls or passive solar inset of windows into the project for appropriate exposures.

20. Design project to focus pedestrian activity within sheltered outdoor areas.

21. Install individual occupant sensors indoors, where appropriate, to automatically turn lights off when an area is vacated.

22. Install the manufacturers recommended lamp and ballast combination for all fluorescent light fixtures to provide the most efficient light output. Use reflectors to direct maximum levels of light to work surfaces.

For additional information concerning these conservation measures, please contact Ms. Lucia Alvelais, Utility Services Manager, at (213) 367-4939. Also, please visit the Los Angeles Department of Building and Safety's website for information on CALGreen and the Los Angeles Green Building Code (http://ladbs.org/LADBSWeb/green-bldg.jsf). Additional water and energy code compliance tips as well as various useful Green Building links are available on the LADWP website at the following location: http://www.ladwp.com under Commercial/Go Green.

W&P ConsrvtnMeasures v.10302015

FORM. GEN. 160 (Rev. 6-80)

CITY OF LOS ANGELES

INTER-DEPARTMENTAL CORRESPONDENCE

July 10, 2019

To: Parker Environmental Consultants
Attn: Elise Lorenzana
23822 Valencia Blvd.
Santa Clarita, CA 91355
Van Nuys, CA 91406

From: Los Angeles City Fire Department

Subject: Request for Fire Services Report

PROJECT NAME: **MAIN STREET TOWER PROJECT**
PROJECT APPLICANT: **PARKER ENVIRONMENTAL CONSULTANTS**
PROJECT LOCATION: **1123-1161 S. MAIN STREET AND 111 W. 12TH STREET, LOS ANGELES, CA 90015**

PROJECT DESCRIPTION:

The Proposed Project includes the demolition of the existing structures and the construction, use, and maintenance of a 30-story, mixed-use development with 363 dwelling units and 12,500 square feet of ground floor commercial space.

The following comments are furnished in response to your request for this Department to review the proposed development:

FIRE FLOW:

The adequacy of fire protection for a given area is based on required fire-flow, response distance from existing fire stations, and this Department's judgment for needs in the area. In general, the required fire-flow is closely related to land use. The quantity of water necessary for fire protection varies with the type of development, life hazard, occupancy, and the degree of fire hazard.

Fire-flow requirements vary from 2,000 gallons per minute (G.P.M.) in low density residential areas to 12,000 G.P.M. in high-density commercial or industrial areas. A minimum residual water pressure of 20 pounds per square inch (P.S.I.) is to remain in the water system, with the required gallons per minute flowing. The required fire-flow for this project has been set at **6,000 to 9,000 G.P.M. from four to six fire hydrants flowing simultaneously.**

Improvements to the water system in this area may be required to provide 6,000 to 9,000 G.P.M. fire-flow. The cost of improving the water system may be charged to the developer. For more detailed information regarding water main improvements, the developer shall contact the Water Services Section of the Department of Water and Power.

RESPONSE DISTANCE:

Based on a required fire-flow of 6,000 to 9,000 G.P.M., the first-due Engine Company should be within 1 mile(s), the first-due Truck Company within 1 1/2 mile(s).

FIRE STATIONS:
The Fire Department has existing fire stations at the following locations for initial response into the area of the proposed development: **1123 S. MAIN STREET**

DISTANCE		SERVICES & EQUIPMENT	STAFF
0.7	**Fire Station No. 10** 1335 S. Olive Street Los Angeles, CA 90015	Paramedic Rescue Ambulance, BLS Rescue Ambulance and Assessment Light Force	**14**
0.9	**Fire Station No. 9** 430 E. 7th Street Los Angeles, CA 90014	2 Assessment Engines, BLS Truck and 2 Paramedic Rescue Ambulances, BLS Rescue Ambulance and Fast Response Unit	**22**
2.0	**Fire Station No. 11** 1819 W. 7th Street Los Angeles, CA 90057	Assessment Engine, Paramedic Rescue Ambulance, BLS Rescue Ambulance, Light Force	**14**
1.9	**Fire Station No. 3** 108 N. Fremont Avenue Los Angeles, CA 90012	Task Force, Paramedic Rescue Ambulance, BLS Rescue Ambulance, Emergency Lighting Unit, Command Post Vehicle, Medical Supply Trailer and Back-up US&R Apparatus	**16**
2.4	**Fire Station No. 15** 3000 S. Hoover Los Angeles, CA 90007	Engine, Assessment Light Force, Paramedic Rescue Ambulance	**12**

Based on these criteria (response distance from existing fire stations), fire protection would be considered **adequate.**

The Los Angeles Fire Department continually evaluates fire station placement and overall Department services for the entire City, as well as specific areas. The development of this proposed project, along with other approved and planned projects in the immediate area, may result in the need for the following:

1. Increased staffing for existing facilities. (I.E., Paramedic Rescue Ambulance and EMT Rescue Ambulance resources.)
2. Additional fire protection facilities.
3. Relocation of present fire protection facilities.

For additional information, please contact the Fire Development Services Section, Hydrants & Access Unit at **(213) 482-6543.**

RALPH M. TERRAZAS,
Fire Chief

June 12, 2019

Ms. Elise Lorenzana
Senior Environmental Planning
Parker Environmental Planner
23822 Valencia Boulevard, Suite 301
Santa Clarita, California 91355

Dear Ms. Lorenzana:

The proposed Main Street Tower Project falls within the geographical boundaries of the Los Angeles Police Department's Central Area. A project of this size could have a minor impact on police services in the Central Area. The Department is available to advise you on crime prevention features appropriate for the design of the property in this project. The Department strongly recommends that the developers contact Community Outreach and Development Division, Crime Prevention Through Environmental Design, Officer Christopher Gibson, at (213) 486-6000.

Upon completion of the project, you are encouraged to provide the Central Area Commanding Officer with a diagram of each portion of the property. The diagram should include access routes and any additional information that might facilitate police response.

Should you have any questions, please contact Officer Christopher Gibson, Community Outreach and Development Division, at (213) 486-6000.

Very truly yours,

MICHEL R. MOORE
Chief of Police

AARON C. PONCE, Captain
Commanding Officer
Community Outreach and Development Division

Enclosure

The proposed Main Street Tower Project will be under the jurisdiction of Central Community Police Station, located at 251 East 6th Street, Los Angeles, CA 90014. Telephone Number (213) 833-3707.

The project site is approximately 0.9 miles and 5 minutes without traffic from the Police Station in Reporting District (RD) 0185.

Central Geographic Area is approximately 4.5 square miles and consists of 52 Reporting Districts. The service boundaries for Central Area are as follows: Stadium Way, Pasadena Freeway to the North, Washington Boulevard, 7th Street to the South, Los Angeles River to the East, and the Harbor Freeway to the West.

It has approximately 370 sworn personnel and 30 civilian support staff assigned. It is a culturally diverse community with a population of approximately 40,000 people. The officer to resident ratio is; 1 officer to 108 residents in Central Area. Additionally, there are special service teams available within the LAPD to service Central Area.

Central Station's emergency response system is directly linked to the Los Angeles Police Department Communications Division's Dispatch Centers. Communications Division has the responsibility to staff and answer, on a 24-hour basis, the telephones upon which calls for service are received. This includes 911 emergency calls (police, fire, and paramedic). Communication Division handles only police related calls for the City.

The average response time to emergency calls for service in Central Area during 2018 was 2.8 minutes. The average response time for non-emergency calls for service in Central Area during 2018 was 19.6 minutes.

Crime Statistics for all Central Area:

CRIMES	YTD 2018	YTD 2017	YDT 2016
HOMICIDE	14	21	11

SUBJECT: Environmental Impact Report Information Requested for: ***MAIN STREET TOWER PROJECT,*** *1123-1161 South Main Street and 111 West 12th Street, Los Angeles, CA 90015. The project is planned to construct 363 residential units: 122 studio units, 133 1-Bedroom units, 96 2-Bedroom units, and 12 3-Bedroom units, including retail/commercial use.*

Included please find a ***LAUSD Schools Enrollments and Capacities Report*** for the schools and programs serving the project address. This report contains the most recent data available on operating capacities and enrollments, and is designed to address any questions pertaining to overcrowding and factors related to school capacity. All schools operate on single track calendar.

Please note that no new school construction is planned and the data in this report *already take into account*: portable classrooms on site, additions being built onto existing schools, student permits and transfers, programs serving choice areas, and any other operational activities or educational programming affecting the operating capacities and enrollments among LAUSD schools.

Additional information on LAUSD's Capital Improvement programs can be found on the Facilities Services Division main webpage at http://www.laschools.org/new-site/. Listings of residential schools and other programs serving the project can be found using LAUSD's Residential School Finder at http://rsi.lausd.net/ResidentSchoolIdentifier/.

The Developer Fee Justification Study with student generation rates can be found online at https://achieve.lausd.net/domain/921.

MASTER PLANNING AND DEMOGRAPHICS RESPONSE TO SPECIFIC QUESTIONS

Questions: 1 and 2 The project is located in a **HS** attendance choice/option area. Please see LAUSD Schools Enrollments and Capacities Report details;

Question: 3 Please contact the LAUSD Developer Fee Program Office (DFPO) at (213) 241-0715 if more information regarding fees and student generation rates is needed.

ATTACHMENTS

1. LAUSD SCHOOLS ENROLLMENTS AND CAPACITIES REPORT

2. BOUNDARY DESCRIPTIONS FOR SCHOOLS SERVING PROPOSED PROJECT
   Boundary descriptions for existing schools identified as serving the proposed project

Sincerely,

Rena Perez, Director

PROJECT SERVED: MAIN STREET TOWER PROJECT, 1123-1161 South Main Street and 111 West 12th Street, Los Angeles, CA 90015. The project is planned to construct 363 residential units: 122 studio units, 133 1-Bedroom units, 96 2-Bedroom units, and 12 3-Bedroom units, including retail/commercial use.

[a] Schools & programs that are part of a "school choice area" pull enrollments from the area school(s) that have resident attendance boundaries.
Seating overage/shortage and overcrowding is calculated and reported for the school choice area as a whole; capacity and actual enrollment is reported for each individual school and/or program listed in the shaded cells.

Schools Planned to Relieve Known Overcrowding

NONE

see next page

NOTES:

[1] School's ID code.

[2] School's name

[3] School's operating capacity. The maximum number of students the school can serve with the school's classroom utilization. Excludes capacity allocated to charter co-locations. Includes capacity for magnet programs.

[4] The total number of students living in the school's attendance area and who are eligible to attend the school at the start of the reported school year, plus students enrolled at any on-site magnet centers.

[5] The number of students actually attending the school at the start of the reported school year, including magnet students.

[6] Reported school year seating overage or (shortage): equal to (capacity) - (resident enrollment).

[7] Reported school year overcrowding status of school. The school is overcrowded if any of these conditions exist:
-There is a seating shortage.
-There is a seating overage of LESS THAN or EQUAL TO a margin of 20 seats.

[8] Projected 5-year total number of students living in the school's attendance area and who are eligible to attend the school as of the start of the school year. Includes magnet students.

[9] Projected seating overage or (shortage): equal to (capacity) - (projected enrollment).

[10] Projected overcrowding status of school. The school will be considered overcrowded in the future if any of these conditions exist:
-There is a seating shortage in the future.
-There is a seating overage of LESS THAN or EQUAL TO a margin of 20 seats in the future.

[°] Magnet Schools with Resident Kindergarten Enrollment: Resident enrollment is reported for Kindergarten only. Actual enrollment is reported for all grades in school. Projected data not reported.

[*] Enrollment is by application only.

Main Street Tower Project
Request for Information
Los Angeles Public Library Response
June 21, 2019

1. Which libraries would serve the proposed project? Please provide:

    a. Name and address

    b. Size of facility (square feet)

    c. Staffing levels

    d. Collection size/ Circulation

    e. Service population for associated library

    f. Special facilities available for public use

Answer:

The following Los Angeles Public Library locations would serve the project area:

- Central Library, page 3
- Chinatown Branch Library, page 4
- Echo Park Branch Library, page 5
- Little Tokyo Branch Library, page 6
- Pico Union Branch Library, page 7

Please see the respective pages for each location for answers to questions above

2. Are there plans to build any new libraries that would serve the project area?

Answer:

There are no current plans to build new libraries that would serve this project area.

Additional Information:

On February 8, 2007, The Board of Library Commissioners approved a new Branch Facilities Plan. This Plan includes criteria for new Libraries, which recommends new size standards for the provision of LAPL facilities – 12,500 s.f. for community with less than 45,000 population and 14,500 s.f. for community with more than 45,000 population and up to 20,000 s.f. for a Regional branch. It also recommends that when a community reaches a population of 90,000, an additional branch library should be considered for the area.

Any increase in the residential and/or commuter-adjusted population that is in close proximity to a library has a direct impact on library services with increased demands for library staffing, materials, computers, and information services. Therefore, mitigation measures may be necessary in order to lessen the impact to these services to a level that is appropriate for a given service population in accordance to the February 8, 2007 Board of Library Commissioners approved Branch Facilities Plan.

The Los Angeles Public Library recommends a mitigation fee of $200 per capita based upon the projected population of the development. The funds will be used for staff, books, computers and other library materials. It is recommended that mitigation fees be paid for by the developer.

Location Name

Central Library

Address
630 W. 5th Street
Los Angeles, CA 90071

Hours

Mon: 10-8, Tue: 10-8, Wed: 10-8, Thu: 10-8, Fri: 9:30-5:30

05/23/2019

ALEX IRVINE
633 W 5TH ST
LOS ANGELES, CA, 90017

Dear Alex Irvine,

SEWER AVAILABILITY: 1123-1161 S Main St & 111 W 12th St

The Bureau of Sanitation has reviewed your request of 05/22/2019 for sewer availability at **1123-1161 S MAIN ST & 111 W 12TH ST**. Based on their analysis, it has been determined on 05/23/2019 that there is capacity available to handle the anticipated discharge from your proposed project(s) as indicated in the attached copy of the Sewer Capacity Availability Request (SCAR) .

This determination is valid for 180 days from the date shown on the Sewer Capacity Availability request (SCAR) approved by the Bureau of Sanitation.

While there is hydraulic capacity available in the local sewer system at this time, availability of sewer treatment capacity will be determined at the Bureau of Engineering Public Counter upon presentation of this letter. A Sewer Connection Permit may also be obtained at the same counter provided treatment capacity is available at the time of application.

A Sewerage Facilities Charge is due on all new buildings constructed within the City. The amount of this charge will be determined when application is made for your building permit and the Bureau of Engineering has the opportunity to review the building plans. To facilitate this determination a preliminary set of plans should be submitted to Bureau of Engineering District Office, Public Counter.

Provision for a clean out structure and/or a sewer trap satisfactory to the Department of Building and Safety may be required as part of the sewer connection permit.

Sincerely,

Elaine Lei

Central District, Bureau of Engineering

Scar Request Number: 2934

City of Los Angeles
Bureau of Engineering

SEWER CAPACITY AVAILABILITY REVIEW FEE (SCARF) - Frequently Asked Questions

SCAR stands for Sewer Capacity Availability Review that is performed by the Department of Public Works, Bureau of Sanitation. This review evaluates the existing sewer system to determine if there is adequate capacity to safely convey sewage from proposed development projects, proposed construction projects, proposed groundwater dewatering projects and proposed increases of sewage from existing facilities. The SCAR Fee (SCARF) recovers the cost, incurred by the City, in performing the review for any SCAR request that is expected to generate 10,000 gallons per day (gpd) of sewage.

The SCARF is based on the effort required to perform data collection and engineering analysis in completing a SCAR. A brief summary of that effort includes, but is not limited to, the following:

1. Research and trace sewer flow levels upstream and downstream of the point of connection.
2. Conduct field surveys to observe and record flow levels. Coordinate with maintenance staff to inspect sewer maintenance holes and conduct smoke and dye testing if necessary.
3. Review recent gauging data and in some cases closed circuit TV inspection (CCTV) videos.
4. Perform gauging and CCTV inspection if recent data is not available.
5. Research the project location area for other recently approved SCARs to evaluate the cumulated impact of all known SCARs on the sewer system.
6. Calculate the impact of the proposed additional sewage discharge on the existing sewer system as it will be impacted from the approved SCARs from Item 6 above. This includes tracing the cumulative impacts of all known SCARs, along with the subject SCAR, downstream to insure sufficient capacity exist throughout the system.
7. Correspond with the applicant for additional information and project and clarification as necessary.
8. Work with the applicant to find alternative sewer connection points and solutions if sufficient capacity does not exist at the desired point of connection.

Questions and Answers:

1. **When is the SCARF applied, or charged?**
   It applies to all applicants seeking a Sewer Capacity Availability Review (SCAR). SCARs are generally required for Sewer Facility Certificate applications exceeding 10,000 gpd, or request from a property owner seeking to increase their discharge thru their existing connection by 10,000 gpd or more, or any groundwater related project that discharges 10,000 gpd or more, or any proposed or future development for a project that could result in a discharge of 10,000 gpd.
2. **Why is the SCARF being charged now when it has not been in the past?**
   The City has seen a dramatic increase in the number of SCARs over 10,000 gpd in the last few years and has needed to increase its resources, i.e., staff and gauging efforts, to respond to them. The funds collected thru SCARF will help the City pay for these additional resources and will be paid by developers and property owners that receive the benefit from the SCAR effort.
3. **Where does the SCARF get paid?**
   The Department of Public Works, Bureau of Engineering (BOE) collects the fee at its public counters. Once the fee is paid then BOE prepares a SCAR request and forwards it to the BOS where it is reviewed and then returned to BOE. BOE then informs the applicant of the result. In some cases, BOS works directly with the applicant during the review of the SCAR to seek additional information and work out alternative solutions

City of Los Angeles
Bureau of Engineering

Sewer Capacity Availability Request (SCAR)

To: Bureau of Sanitation
The following request is submitted to you on behalf of the applicant requesting to connect to the public sewer system. Please verify that the capacity exists at the requested location for the proposed developments shown below. The results are good for 180 days from the date the sewer capacity approval from the Bureau of Sanitation.

CITY OF LOS ANGELES
INTERDEPARTMENTAL CORRESPONDENCE

Date: June 24, 2021

To: Vincent P. Bertoni, Director
Department of City Planning
Attention: Deputy Advisory Agency

From: Bertram Moklebust, Principal Engineer
Permit Case Management Division
Bureau of Engineering

Subject: Vesting Tentative Tract Map No. 82463

Transmitted is a print of vesting tentative map of Tract Map No. 82463 stamp-dated February 25, 2020 located at 1123-1161 South Main Street (north of 12th Street) in Council District No. 14.

This map has been filed for a merger of land into 1-lot for the construction of a mixed-use development. The subdivision layout is generally satisfactory as submitted.

There are existing sewers available in the streets adjoining the subdivision. This tract will connect to the public sewer system and will not result in violation of the California Water Code. I therefore recommend that you make the necessary determination.

I recommend that the vesting tentative map of Tract No. 82463 be approved, subject to the standard conditions issued by your department and the following special conditions:

1. That a 2-foot wide strip of land be dedicated along 12th Street adjoining the tract to complete a 32-foot wide half right-of-way in accordance with Modified 1-Way Collector Street Standards and a 15-foot by 15-foot corner cut or 20-foot radius property line return at the intersection with Main Street.

2. Provide a 3-foot wide public sidewalk easement along 12th Street adjoining the subdivision in accordance with Modified 1-Way Collector Street of the Downtown Street Standards.

3. Provide a 2-foot wide public sidewalk easement along Main

Street adjoining the subdivision in accordance with Modified 2-Way Avenue I of the Downtown Street Standards.

4. That a 4-foot wide strip of land be dedicated along the Alley adjoining the subdivision in accordance to Alley Standards.

5. That the subdivider make a request to the Central District Office of the Bureau of Engineering to determine the capacity of existing sewers in this area.

6. That no portion of the building shall encroach above or below public sidewalk easement area and the public right-of-way.

7. That Board of Public Works approval be obtained, prior to the recordation of the final map, for the removal of any tree in the existing or proposed right-of-way area. The Bureau of Street Services, Urban Forestry Division, is the lead agency for obtaining Board of Public Works approval for removal of such trees.

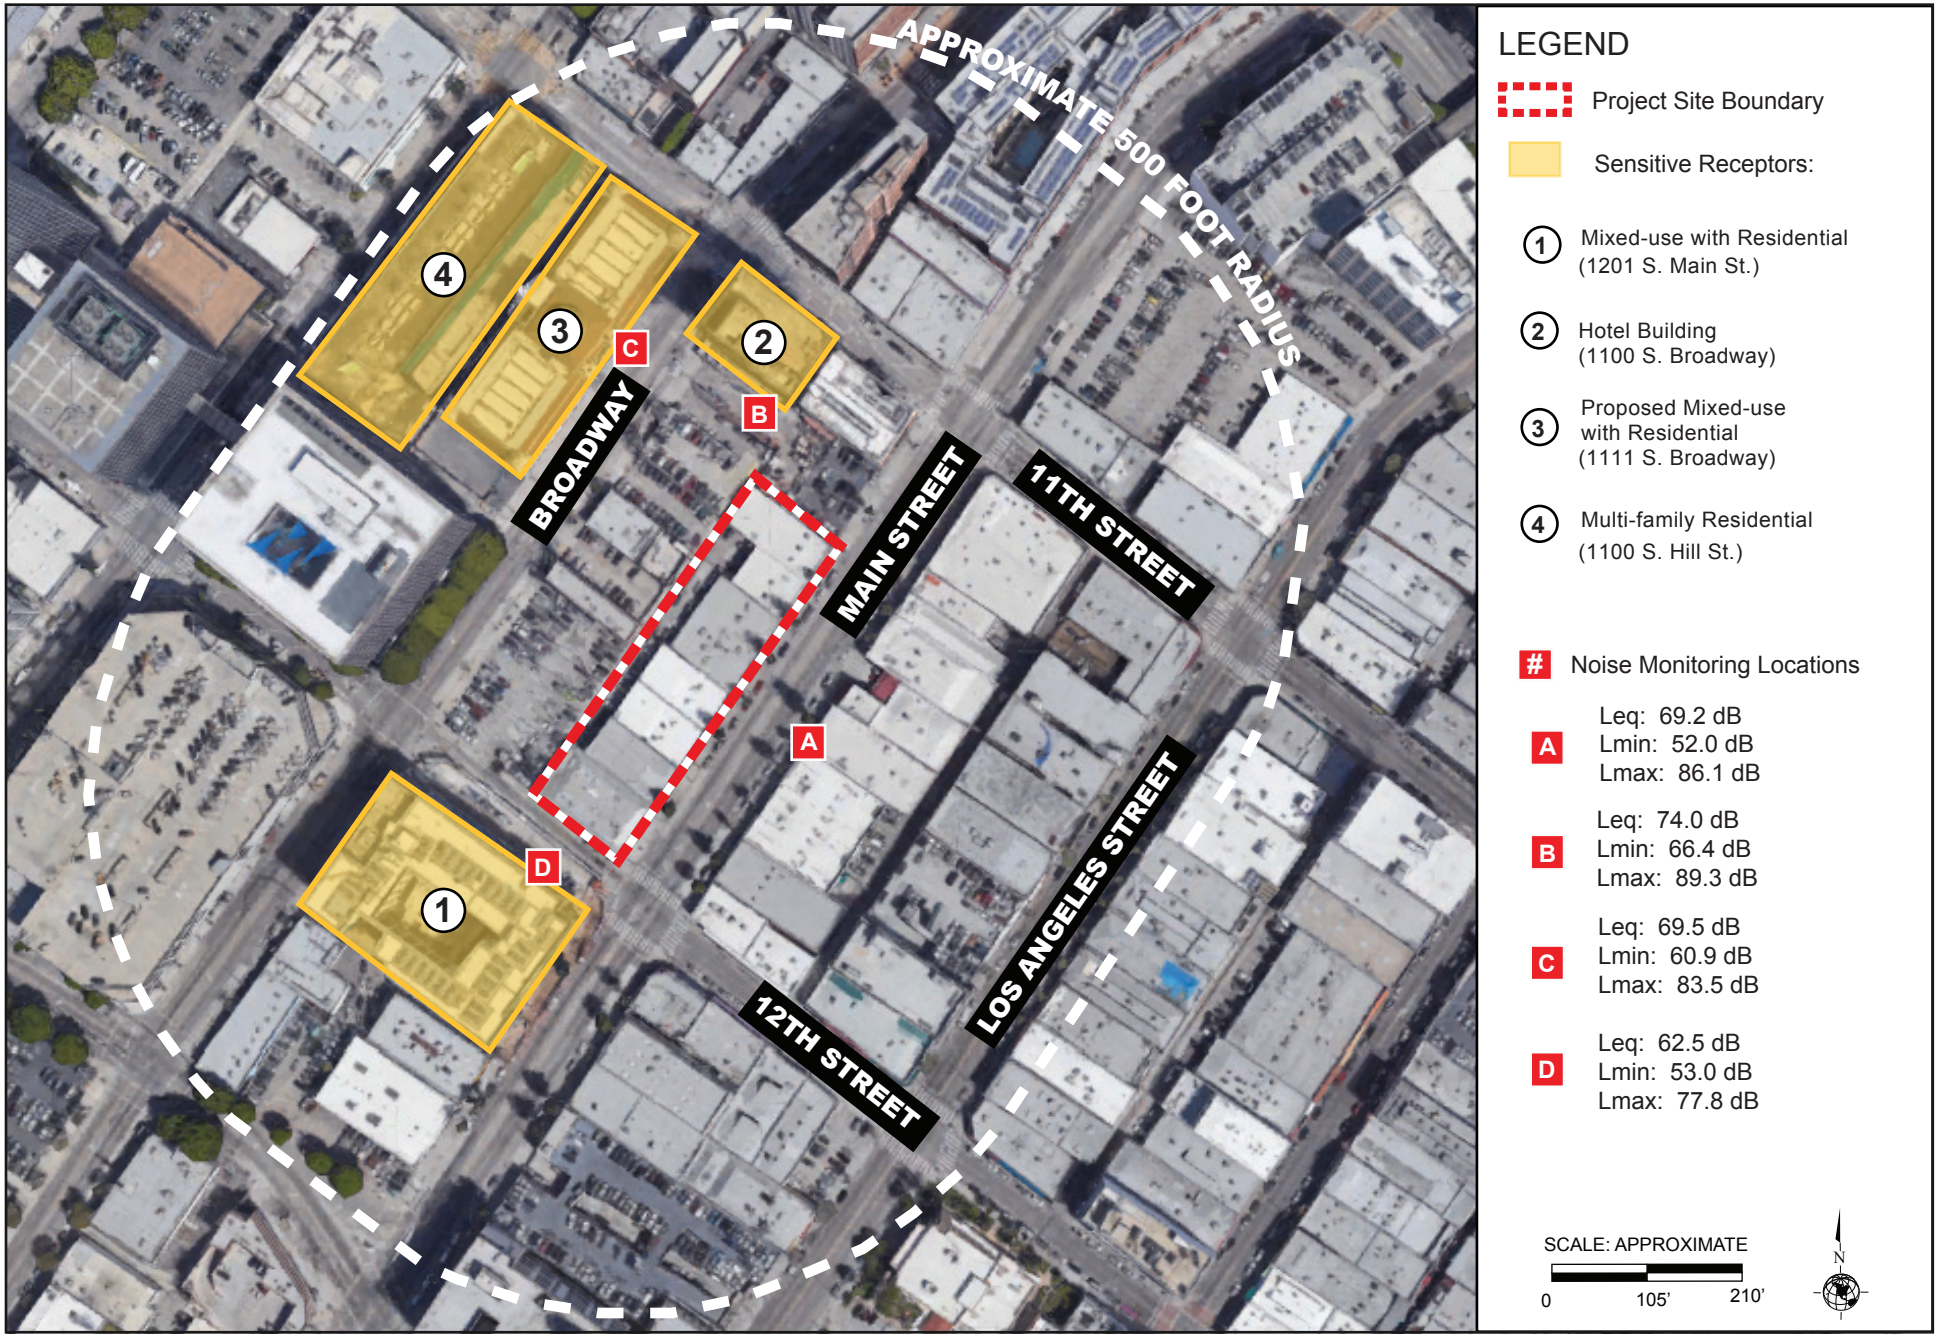
8. That the following improvements be either constructed prior to recordation of the final map or that the construction be suitably guaranteed:

    a) Improve 12th Street being dedicated and adjoining the subdivision by the construction a full-width concrete sidewalk including in the sidewalk easement areas, concrete curb and gutter. Repair and or replace any damaged asphalt pavement including any necessary removal and reconstruction of the existing improvements all satisfactory to the City Engineer.

    b) Improve Main Street being dedicated and adjoining the subdivision by the construction of additional sidewalk in the easement areas. Repair and or replace all damaged, cracked or off-grade sidewalk, concrete curb, gutter, bus pad, roadway pavement and any necessary tree wells and any necessary removal and reconstruction of existing improvements. Any proposed driveway aprons along Main Street require Department of Transportation's approval.

    c) Improve the alley by the construction of a 2-foot concrete longitudinal gutter and suitable surfacing including the reconstruction of the alley intersection with 12th Street and any necessary removal and reconstruction of the existing improvements all

satisfactory to the City Engineer. The existing alley is in poor condition and the entire full alley reconstruction is necessary since vehicular access to this subdivision is proposed from the alley adjoining the tract.



d) Construct any necessary on-site mainline and house connection sewers satisfactory to the City Engineer.

Any questions regarding this report should be directed to Ms. Quyen Phan of the Permit Case Management Division located at 201 N. Figueroa Street, Suite 290 or by calling (213) 808-8604.

	Small Bulldozer	12	0.003	0.01

Source: California Department of Transportation, Transportation and Construction Vibration Guidance Manual, Sept 2013.
*The peak vibration levels at the nearby sensitive receptors during project construction represents the highest instantaneous vibration level that would be generated periodically during a worst-case construction activity and does not represent continuous vibration levels occurring throughout the construction day or period. Note: heavier equipment were not included (large bulldozer, caisson drilling), since the Project Site would not involve caisson drilling.

APPENDIX J.1: CEQA VMT Analysis

City of Los Angeles Department of Transportation (LADOT) Interdepartmental Correspondence Re: Updated Transportation Impact Assessment For The Proposed Mixed-Use Project At 1123 – 1161 South Main Street (ENV-2018-7379-EAF/VTT-82463/ZA- 2018-7378-ZV-TDR-SPR), DOT Case No. CEN18-47813, December 19, 2019.

Crain & Associates, Main Street Tower, 1123-1161 S. Main Street, Supplemental Vehicle Miles Traveled Analysis, November 21, 2019.

FORM GEN. 160A (Rev. 1/82)

CITY OF LOS ANGELES

INTER-DEPARTMENTAL CORRESPONDENCE

1123 – 1161 S Main St
DOT Case No. CEN18-47813

Date: December 19, 2019

To: Debbie Lawrence, Senior City Planner
Department of City Planning

From: Wes Pringle, Transportation Engineer
Department of Transportation

Subject: **UPDATED TRANSPORTATION IMPACT ASSESSMENT FOR THE PROPOSED MIXED-USE PROJECT AT 1123 – 1161 SOUTH MAIN STREET (ENV-2018-7379-EAF/VTT-82463/ZA-2018-7378-ZV-TDR-SPR)**

On July 22, 2019, the Department of Transportation (DOT) issued a traffic assessment report to the Department of City Planning for the mixed-use project at 1123 – 1161 South Main Street, which was subject to a transportation analysis dated June 4, 2019 prepared by Crain and Associates (Crain). However, subsequent to the release of this report, on July 30, 2019, pursuant to Senate Bill (SB) 743 and the recent changes to Section 15064.3 of the State's California Environmental Quality Act (CEQA) Guidelines, the City of Los Angeles adopted vehicle miles traveled (VMT) as the criteria by which to determine transportation impacts under CEQA. Therefore, in response to this action the applicant submitted a VMT analysis for the proposed project in addition to the previous analysis dated June 4, 2019. Please replace the previous DOT assessment letter dated July 22, 2019, in its entirety, with this report which addresses the totality of the transportation analysis.

The DOT has reviewed the transportation analysis prepared by Crain, dated November 21, 2019, for the proposed mixed-use project located at 1123 – 1161 South Main Street. In compliance with SB 743 and the CEQA, a VMT analysis is required to identify the project's ability to promote the reduction of green-house gas emissions, access to diverse land uses, and the development of multi-modal networks. The significance of a project's impact in this regard is measured against the VMT thresholds established in DOT's Transportation Assessment Guidelines (TAG), as described below.

DISCUSSION AND FINDINGS

A. Project Description

The project proposes to remove an existing 26,710 square feet commercial building located on the northwest corner of Main Street and 12th Street within a Transit Oriented Community (TOC) Affordable Housing Incentive Area Tier 3 and construct a 30-story mixed-use development with 363 residential dwelling units and 12,500 square feet of commercial retail space. The project will provide parking for 373 vehicles on-site within the ground floor and levels two through four. The adjacent north-south alley along the west side of the project will provide primary vehicular access to the project as illustrated in **Attachment A**. The applicant proposes to modify operations of the adjacent alley by restricting access to southbound vehicles only. A secondary driveway on Main Street would provide access to ground floor parking, parking on levels two through four, and the alley. The project is expected to be completed by 2026.

B. CEQA Screening Threshold

Prior to accounting for trip reductions resulting from the application of Transportation Demand Management (TDM) Strategies, a trip generation analysis was conducted to determine if the project would exceed 250 daily vehicle trips screening threshold. Using the City of Los Angeles VMT Calculator tool, which draws upon trip rate estimates published in the Institute of Transportation Engineers (ITE) Trip Generation Manual, 9th Edition as well as applying trip generation adjustments when applicable, based on sociodemographic data and the built environment factors of the project's surroundings, it was determined that the project **does** exceed the net 250 daily vehicle trips threshold. A copy of the VMT calculator reports including the screening page with the corresponding net daily trips estimate is provided as **Attachment B** to this report.

C. Transportation Impacts

On July 30, 2019, pursuant to SB 743 and the recent changes to Section 15064.3 of the State's CEQA Guidelines, the City of Los Angeles adopted VMT as a criteria in determining transportation impacts under CEQA. The new DOT TAG provide instructions on preparing transportation assessments for land use proposals and defines the significant impact thresholds.

The DOT VMT Calculator tool measures project impact in terms of Household VMT per Capita and Work VMT per Employee. DOT identified distinct thresholds for significant VMT impacts for each of the seven Area Planning Commission (APC) areas in the City. For the Central APC area, in which the project is located, the following thresholds have been established:

- Household VMT per Capita: 6.0
- Work VMT per Employee: 7.6

As cited in the VMT Analysis report, prepared by Crain, the proposed project is projected to have a Household VMT per capita of 5.1. The project retail space of 12,500 square feet is considered local serving since it is less than 50,000 square feet. Therefore, it is concluded that implementation of the Project would have a less than significant Household and Work VMT impact.

D. Access and Circulation

During the preparation of the new CEQA guidelines, the State's Office of Planning and Research stressed that lead agencies can continue to apply traditional operational analysis requirements to inform land use decisions provided that such analyses were outside of the CEQA process. The authority for requiring non-CEQA transportation analysis and requiring improvements to address potential circulation deficiencies, lies in the City of Los Angeles' Site Plan Review authority as established in Section 16.05 of the Los Angeles Municipal Code (LAMC). Therefore, DOT continues to require and review a project's site access, circulation, and operational plan to determine if any access enhancements, transit amenities, intersection improvements, traffic signal upgrades, neighborhood traffic calming, or other improvements are needed. In accordance with this authority, the project has completed a circulation analysis using a "level of service" screening methodology that indicates that the trips generated by the proposed development will not likely result in adverse circulation

conditions at several locations. DOT has reviewed this analysis and determined that it adequately discloses operational concerns. A copy of the circulation analysis table that summarizes these potential deficiencies is provided as **Attachment C** to this report.

PROJECT REQUIREMENTS

A. Parking Requirements
The project will provide a total of 373 residential and commercial vehicle parking spaces onsite. The project will also provide 195 bicycle parking spaces. The applicant should check with the Departments of Building and Safety and City Planning on the number of parking spaces required for a TOC Tier 3 project.

B. Highway Dedication and Street Widening Requirements
Per the Mobility Element of the General Plan, **Main Street**, Modified Avenue I, would require a 34-foot half-width roadway within a 50-foot half-width right-of-way; **12th Street**, a Modified Collector Street, would require a 20-foot half-width roadway within a 32-foot half-width right-of-way; and the adjacent alley would require a 10-foot half-width right-of-way. The applicant should check with BOE's Land Development Group to determine if there are any other applicable highway dedication, street widening and/or sidewalk requirements for this project.

C. Project Access and Circulation
The conceptual site plan for the project (see **Attachment A**) is acceptable to DOT. However, the review of this study does not constitute approval of the dimensions for any new proposed driveway. This requires separate review and approval and should be coordinated with DOT's Citywide Planning Coordination Section (201 North Figueroa Street, 5th Floor, Room 550, at 213-482-7024). In order to minimize and prevent last minute building design changes, the applicant should contact DOT for driveway width and internal circulation requirements prior to the commencement of building or parking layout design.

D. Worksite Traffic Control Requirements
DOT recommends that a construction work site traffic control plan be submitted to DOT's Citywide Temporary Traffic Control Section or Permit Plan Review Section for review and approval prior to the start of any construction work. Refer to http://ladot.lacity.org/what-we-do/plan-review to determine which section to coordinate review of the work site traffic control plan. The plan should show the location of any roadway or sidewalk closures, traffic detours, haul routes, hours of operation, protective devices, warning signs and access to abutting properties. DOT also recommends that all construction related truck traffic be restricted to off-peak hours to the extent feasible.

E. Development Review Fees
Section 19.15 of the LAMC identifies specific fees for traffic study review, condition clearance, and permit issuance. The applicant shall comply with any applicable fees per this ordinance.

If you have any questions, please contact Eileen Hunt of my staff at (213) 972-8481.

CITY OF LOS ANGELES VMT CALCULATOR Version 1.2

Project Screening Criteria: Is this project required to conduct a vehicle miles traveled analysis?

Project Information

Project: Main Street Tower
Scenario: With Project
Address: 34.038794, -118.258703

If the project is replacing an existing number of residential units with a smaller number of residential units, is the proposed project located within one-half mile of a fixed-rail or fixed-guideway transit station?

○ Yes ○ No

Existing Land Use

Land Use Type	Value	Unit
Retail | General Retail	26.71	ksf
Retail | General Retail	26.71	ksf

☐ Click here to add a single custom land use type (will be included in the above list)

Proposed Project Land Use

Land Use Type	Value	Unit
Retail | General Retail	12.5	ksf
Housing | Multi-Family	363	DU
Retail | General Retail	12.5	ksf

☐ Click here to add a single custom land use type (will be included in the above list)

Project Screening Summary

Existing Land Use	Proposed Project
684 Daily Vehicle Trips	1,401 Daily Vehicle Trips
4,359 Daily VMT	7,386 Daily VMT

Tier 1 Screening Criteria

Project will have less residential units compared to existing residential units & is within one-half mile of a fixed-rail station. ☐

Tier 2 Screening Criteria

The net increase in daily trips < 250 trips	717 Net Daily Trips
The net increase in daily VMT ≤ 0	3,027 Net Daily VMT
The proposed project consists of only retail land uses ≤ 50,000 square feet total.	12.500 ksf

The proposed project is required to perform VMT analysis.

Measuring the Miles

CRAIN & ASSOCIATES
Transportation Planning / Traffic Engineering

EMAIL TRANSMITTED

November 21, 2019

Mr. Wes Pringle
Transportation Engineering Associate III
Metro Development Review
City of Los Angeles Department of Transportation
100 S. Main Street, 9th Floor
Los Angeles, CA 90012

RE: Main Street Tower, 1123-1161 S. Main Street
Supplemental Vehicle Miles Traveled Analysis

Dear Wes,

In June 2019, Crain & Associates prepared a transportation impact study for the Main Street Tower project (the "Project"). The Project is proposed to be a 30-story high-rise residential mixed use building, with 363 residential dwelling units and approximately 12,500 square feet of ground-floor commercial retail space. The results of the transportation analysis determined that the addition of Project-related traffic would not result in significant impacts at any of the seven study intersections, any Congestion Management Program (CMP) monitoring locations, public transit, or residential street facilities. The transportation impact study was conducted based on the procedures outlined in the City of Los Angeles Department of Transportation (LADOT) *Transportation Impact Study Guidelines* (December 2016), which determined impact significance based on intersection level of service (LOS) and Project-related change in intersection volume-to-capacity (V/C) ratio. The LADOT prepared an assessment letter in July 2019 agreeing with the findings of the transportation impact study.

Culver City, CA 90230
310 473 6508 (main)
310 444 9771 (fax)
www.crainandassociates.com

However, following the passage of Senate Bill 743 (SB 743), the State of California's Governor's Office of Planning and Research (OPR) was tasked with developing new guidelines for evaluating transportation impacts under the California Environmental Quality Act (CEQA). These guidelines were intended to shift the transportation performance metric from automobile delay and LOS to one that would promote the reduction of greenhouse gas emissions and the development of multimodal and diverse transportation networks. As a result, OPR determined that, under the proposed update to the CEQA guidelines, vehicle miles traveled (VMT) would be established as the primary metric for evaluating environmental and transportation impacts.

In response to the updates to the CEQA guidelines, the LADOT updated the City's *Transportation Assessment Guidelines* (TAG) in July 2019 to conform to the requirements of SB 743. The TAG replaced the *Transportation Impact Study Guidelines* (December 2016) and shifted the performance metric for evaluating transportation impacts under CEQA from LOS to VMT for studies completed within the City. The TAG establishes thresholds to identify development projects that would cause substantial VMT.

While the transportation impact study for the Project has been approved by the LADOT, a supplemental VMT analysis has been performed per the new TAG in the event that the Project does not receive entitlements prior to July 1, 2020 (the State's official deadline for required VMT compliance for all development projects). This technical letter presents the supplemental VMT analysis for the proposed Project.

Project Description

The Project is located at the northwest corner of Main Street and 12th Street, at 1123-1161 S. Main Street, in the Central City Community Plan area of the City of Los Angeles (the "site"). The site is generally bounded by a parking lot to the north, 12th Street to the south, Main Street to the east, and a north-south alley to the west. The existing on-site uses consist of approximately 26,710 square feet of specialty retail businesses, mainly selling jewelry, cosmetics, handbags, and other fashion accessories. This existing retail space would be removed in conjunction with development of the Project. The Project's proposed uses are divisible into two primary categories: residential and commercial retail. The residential component of the Project would consist of up to 363 residential dwelling units. The commercial component of the Project would consist of 12,500 square feet of floor area on the ground level.

VMT Impact Criteria and VMT Calculator

The City has updated the TAG to ensure compliance with Section 15064.3, subdivision (b)(1) of the CEQA Guidelines, which asks if a development project would result in a substantial increase in VMT. The TAG sets the following criteria for determining significant transportation impacts based on VMT:

> *For a land use project, would the project conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)(1)?*

To assist in determining which development projects would conflict with CEQA Guidelines section 15064.3, subdivision (b)(1), the TAG establishes two screening criteria to evaluate whether further analysis of a land use project's impact based on VMT is required. Both of the following criteria must be met in order to require further analysis of a land use project's VMT contribution:

1. The land use project would generate a net increase of 250 or more daily vehicle trips.
2. The project would generate a net increase in daily VMT.

In addition, the TAG provides specific instructions for evaluating the VMT contribution of retail and restaurant uses. Should a land use project contain retail or restaurant components that are small-scale or local-serving in nature, the retail/restaurant portion of the land use project can be assumed not to result in a significant VMT impact. The retail/restaurant component of a land use project can be considered small-scale or local-serving if the total retail and restaurant square footage does not exceed 50,000 square feet. For a mixed-use development, if the retail/restaurant component does not exceed 50,000 square feet in size, the retail/restaurant portion of the land use project can be considered to have a less-than-significant VMT impact; however, the remaining portions of the land use project are subject to further VMT analysis if the above two screening criteria are met.

After the initial screening, the TAG provides guidance for further analysis of the VMT contribution of a land use project. Under the updated TAG, two forms of VMT are analyzed: (1) household VMT per capita and (2) work VMT per employee. The household VMT per capita is the home-based VMT produced by the residential component of a land use project divided by the number of residents within the development. The work VMT per employee is the home-based work VMT attracted by the non-residential uses of a land use project divided by the

number of employees within the development. As outlined in the updated TAG, in order for a proposed land use project to have a less-than-significant VMT impact, two criteria must be met: (1) the land use project's household VMT per capita must not exceed 15 percent below the average household VMT per capita, and (2) the land use project's work VMT per employee must not exceed 15 percent below the average work VMT per employee. The thresholds corresponding to 15 percent below the average household VMT per capita and average work VMT per capita were individually determined for each of the seven Area Planning Commission (APC) areas within the City and are shown in Table 1. The Area Planning Commission area in which a land use project is located determines the appropriate significance thresholds to be applied.

Table 1
VMT Significant Impact Thresholds

Area Planning Commission	Daily Household VMT per Capita	Daily Work VMT per Employee
Central	6.0	7.6
East LA	7.2	12.7
Harbor	9.2	12.3
North Valley	9.2	15.0
South LA	6.0	11.6
South Valley	9.4	11.6
West LA	7.4	11.1

Along with the updated TAG, LADOT developed the City of Los Angeles VMT Calculator Version 1.2 (the "VMT Calculator"), which calculates the daily vehicle trips, daily VMT, daily household VMT per capita, and daily work VMT per employee for land use projects. The VMT Calculator utilizes average daily trip generation rates from the Institute of Transportation Engineers (ITE) *Trip Generation Manual* (9th Edition, 2012) and empirical trip generation data to determine the base daily trips associated with a land use project. The number of daily trips is further refined using data from the Environmental Protection Agency's (EPA's) Mixed-Use (MXD) Model and the City's Travel Demand Forecasting (TDF) Model.

The VMT Calculator also determines population and employment estimates for a land use project based on rates developed from U.S. Census data for the City of Los Angeles and employment data from a variety of sources, including the Los Angeles Unified School District

and the San Diego Association of Governments (SANDAG). The VMT Calculator then uses trip length information from the TDF Model, in combination with the daily trips and population/employment estimates, to calculate the land use project's daily VMT, household VMT per capita, and work VMT per capita. The VMT Calculator also provides a menu of Transportation Demand Management (TDM) strategies that can be implemented for a land use project, either as project features or mitigation measures, to reduce the project's daily vehicle trips and VMT. Further detail on the VMT Calculator can be found in the *City of Los Angeles VMT Calculator Documentation* (November 2019).

Project VMT Calculations

To determine whether the Project requires further VMT analysis, the Project's existing and proposed land uses were inputted into the VMT Calculator. As shown in Attachment 1, the Housing (Multi-Family) and Retail (General Retail) land use rates were applied to the corresponding proposed Project uses. For screening purposes, the Retail (General Retail) land use rates were applied to the existing land use, as no specialty retail land use code is available within the VMT Calculator. As shown, based on the VMT Calculator, the Project would generate 717 net daily trips and 3,027 net daily VMT (proposed minus existing). As the Project would generate more than 250 net daily trips and would result in a net increase in daily VMT, the Project would meet both screening criteria and further VMT analysis is required.

The VMT Calculator was then utilized to determine household VMT per capita and the work VMT per employee. To be conservative, although the Project proposes to incorporate TDM strategies (such as reducing the Project parking supply from the standard amount required per City Municipal Code and providing short- and long-term bicycle parking supplies), implementation of these strategies was not considered for the Project's VMT calculation. The VMT Calculator determined that the residential portion of the Project would generate a household VMT per capita of 5.1. Since the Project is located within the Central Area Planning Commission area, the appropriate threshold of significance with which to compare the Project's household VMT estimate is 6.0 daily household VMT per capita, as shown in Table 1. Therefore, the Project is expected to have a less-than-significant VMT impact based on the residential component. Since the Project's retail component would not exceed 50,000 square feet, the retail component was determined not to have a significant VMT impact and the work VMT per employee was not calculated for the Project. Thus, the residential and retail

components of the proposed Project would result in less-than-significant VMT impacts under the updated TAG.

Please contact me if you have any questions.

Sincerely,

Ryan J. Kelly, T.E.
Senior Transportation Engineer

Non-CEQA Transportation Analysis

- City of Los Angeles Department of Transportation (LADOT) Interdepartmental Correspondence Re: Transportation Impact Assessment For The Proposed Mixed-Use Project At 1123 – 1161 South Main Street (ENV-2018-7379-EAF/VTT-82463/ZA- 2018-7378-ZV-TDR-SPR), DOT Case No. CEN18-47813, July 22, 2019.

- Crain & Associates, Transportation Impact Study for the Proposed Main Street Tower Project, City of Los Angeles, June 4, 2019.

[This Page Intentionally Left Blank]

FORM GEN. 160A (Rev. 1/82)

CITY OF LOS ANGELES

INTER-DEPARTMENTAL CORRESPONDENCE

1123 – 1161 Main St
DOT Case No. CEN 18-47813

Date: July 22, 2019

To: Heather Bleemers, Senior City Planner
Department of City Planning

From: Wes Pringle, Transportation Engineer
Department of Transportation

Subject: **TRANSPORTATION IMPACT ANALYSIS FOR THE PROPOSED MIXED-USE PROJECT AT 1123 - 1161 MAIN STREET (ENV-2018-7379-EAF/VTT-82463/ZA-2018-7378-ZV-TDR-SPR)**

The Department of Transportation (DOT) has reviewed the transportation analysis prepared by Crain and Associates, Inc., dated June 2019, for the proposed mixed-use project located at 1123 - 1161 Main Street. In order to evaluate the effects of the project's traffic on the available transportation infrastructure, the significance of the project's traffic impacts is measured in terms of change to the volume-to-capacity (V/C) ratio between the "future no project" and the "future with project" scenarios. This change in the V/C ratio is compared to established threshold standards to assess the project-related traffic impacts. The transportation study included the analysis of **seven** signalized intersections. Based on DOT's current traffic impact criteria[1], none of the intersections would be significantly impacted by project-related traffic. The results of the transportation analysis, which accounted for other known development projects in estimating potential cumulative impacts and adequately evaluated the project's transportation impacts on the surrounding community, are summarized in **Attachment 1.**

DISCUSSION AND FINDINGS

A. Project Description

The project proposes to remove an existing 26,710 square feet commercial building located on the northwest corner of Main Street and 12th Street within a Transit Oriented Community (TOC) Affordable Housing Incentive Area and construct a 30-story mixed-use development with 363 residential dwelling units and 12,500 square feet of commercial retail space. The project will provide parking for 373 vehicles on-site within the ground floor and levels two thru four. The adjacent north-south alley along the west side of the project will provide vehicular access to the project as illustrated in **Attachment 2**. The applicant proposes to modify operations of the adjacent alley by restricting access to southbound vehicles only. The project is expected to be completed by 2026.

B. Trip Generation

The project is estimated to generate an approximate net increase of 463 daily trips, a net increase of 69 trips during the a.m. peak hour and a net increase of 40 trips during the p.m. peak hour. The trip generation estimates are based on formulas published by the Institute of Transportation Engineers (ITE) Trip Generation, 10th Edition, 2017. A copy of the project trip generation table can be found in **Attachment 3**.

[1] Per DOT's Traffic Study Policies and Procedures, a significant impact is identified as an increase in the Critical Movement Analysis (CMA) value, due to project related traffic, of 0.01 or more when the final ("with project") Level of Service (LOS) is LOS E or F; an increase of 0.020 or more when the final LOS is LOS D; or an increase of 0.040 or more when the final LOS is LOS C.

C. Freeway Analysis

The traffic study did not include a freeway impact analysis because project does not generate more than the 150 directional trips threshold for CMP freeway monitoring segments or further analysis. No additional freeway analysis was required.

PROJECT REQUIREMENTS

Non-CEQA-Related Requirements

To comply with transportation and mobility goals and provisions of adopted City plans and ordinances, the applicant should be required to implement the following:

A. Parking Requirements

The project will provide a total of 373 residential and commercial vehicle parking spaces onsite. The project will also provide 195 bicycle parking spaces. The applicant should check with the Departments of Building and Safety and City Planning on the number of parking spaces required for a TOC Tier 3 project.

B. Highway Dedication and Street Widening Requirements

On January 20, 2016, the City Council adopted the Mobility Plan 2035 which represents the new Mobility Element of the General Plan. A key feature of the updated plan is to revise street standards in an effort to provide a more enhanced balance between traffic flow and other important street functions including transit routes and stops, pedestrian environments, bicycle routes, building design and site access, etc. Per the new Mobility Element, **Main Street**, a Modified Avenue I, would require a 34-foot half-width roadway within a 50-foot half-width right-of-way; **Twelfth Street,** a Modified Collector Street, would require a 20-foot half-width roadway within a 32-foot half-width right-of-way; and the adjacent alley would require a 10-foot half-width right-of-way. The applicant should check with BOE's Land Development Group to determine if there are any other applicable highway dedication, street widening and/or sidewalk requirements for this project.

C. Project Access and Circulation

The conceptual site plan for the project (see **Attachment 2**) is acceptable to DOT. However, the review of this study does not constitute approval of the dimensions for any new proposed driveways or operational change of the adjacent alley. This requires separate review and approval and should be coordinated with DOT's Citywide Planning Coordination Section (201 North Figueroa Street, 5th Floor, Room 550, at 213-482-7024). In order to minimize and prevent last minute building design changes, the applicant should contact DOT for driveway width and internal circulation requirements prior to the commencement of building or parking layout design.

D. Worksite Traffic Control Requirements

DOT recommends that a construction work site traffic control plan be submitted to DOT's Citywide Temporary Traffic Control Section or Permit Plan Review Section for review and approval prior to the start of any construction work. Refer to http://ladot.lacity.org/what-we-do/plan-review to determine which section to coordinate review of the work site traffic control plan. The plan should show the location of any roadway or sidewalk closures, traffic detours, haul routes, hours of operation, protective devices, warning signs and access to abutting properties. DOT also recommends that all construction related truck traffic be restricted to off-peak hours to the extent feasible.

E. Development Review Fees
An ordinance adding Section 19.15 to the Los Angeles Municipal Code relative to application fees paid to DOT for permit issuance activities was adopted by the Los Angeles City Council in 2009 and updated in 2014. Ordinance No. 183270 identifies specific fees for traffic study review, condition clearance, and permit issuance. The applicant shall comply with any applicable fees per this ordinance.

If you have any questions, please contact Kaylinn Pell of my staff at (213) 972-4993.

Notes:

1) ITE *Trip Generation Manual* (10th Edition, 2017) trip generation rates and equations applied. For Land Use Code 222 (Multifamily Housing [High-Rise]), rates for the Dense Multi-Use Urban setting were used, as this setting is more applicable to the Project site than the General Urban/Suburban setting and there is an adequate number of studies in the peak-hour time period datasets. For Land Use Code 820 (Shopping Center), rates for the General Urban/Suburban setting were used, as no daily rate is provided for the Dense Multi-Use Urban setting and the peak-hour rates are based on very limited data. Transit/walk adjustments were, therefore, only applied to the Shopping Center land use.
2) du = Dwelling Units; ksf = Thousands of Square Feet of Gross Leasable Floor Area.
3) 10 percent internal capture adjustment assumed. The internal capture adjustment is applied to the lower peak-hour trip-generating component of the uses sharing trips with each other (Shopping Center use). The internal trips for the higher trip-generating component (Multifamily Housing use) are then balanced with the internal trips to/from the lower trip-generating component.
4) Consistent with current LADOT *Transportation Impact Study Guidelines* , a 15 percent transit/walk adjustment has been assumed for the Shopping Center use (given that the Project is located within an approximately one-quarter mile walking distance of Metro rapid bus and rail service, and such an adjustment is not already accounted for in the General Urban/Suburban setting baseline trip rates).
5) Based on Attachment D of the current LADOT *Transportation Impact Study Guidelines* , appropriate pass-by trip adjustments have been applied to the Shopping Center land use category.

INTRODUCTION

Crain & Associates has prepared this transportation impact study to assess the potential traffic impacts of the Main Street Tower project (the "Project"), a proposed 30-story high rise residential mixed-use building. The proposed residential component of the Project would consist of up to 363 residential dwelling units. The proposed commercial component of the Project would consist of approximately 12,500 square feet of ground-floor commercial retail space. The Project site is presently occupied by approximately 26,710 square feet of active specialty retail space (a diversity of businesses selling jewelry, cosmetics, handbags, and other fashion accessories). This existing retail space would be removed in conjunction with development of the Project.

The Project is located at the northwest corner Main Street & 12th Street, at 1123-1161 S. Main Street, in the Central City Community Plan area of the City of Los Angeles (the "site"). The site is generally bounded by a parking lot to the north, 12th Street to the south, Main Street to the east, and a north-south alley to the west. Project parking would be provided on-site on the ground level and levels two through four. Primary residential and commercial retail access/egress would be via the alley at the west side of the site. From the alley, a full-access driveway would provide a connection to the limited commercial retail parking on the ground level and the vast majority of the residential parking in the above-ground parking levels. Americans with Disabilities Act (ADA) accessible parking spaces would be provided at the ground level with access via separate one-way inbound and outbound driveways from the alley. A secondary driveway would access the parking on the ground level from the west side of Main Street, between 11th and 12th Streets, serving both residential and commercial retail uses, and it would connect to the parking on levels two through four and the one-way alley at the rear of the site. As part of the Project, the alley at the rear of the site would

be converted to one-way southbound operation. The location of the Project site is shown in Figure 1, Project Site Vicinity and Study Intersection Location Map.

This analysis was prepared in accordance with the assumptions, methodologies, and procedures outlined in the City of Los Angeles Department of Transportation ("LADOT") *Transportation Impact Study Guidelines* (December 2016). The analysis is also consistent with the guidelines in the Congestion Management Program (CMP) for Los Angeles County. The scope of work contained in this report was presented to and approved by the LADOT in a Transportation Impact Study Memorandum of Understanding (MOU), signed and approved on March 21, 2019 (Appendix E). The MOU outlined the preparation of a detailed analysis of existing (2019) and future (2026) traffic conditions, during the weekday AM and PM peak hours, at the seven signalized intersections near the Project site expected to experience the most substantial Project-related traffic impacts. The Project study area contains the following seven study intersections, which are also depicted in Figure 1:

Study Intersections

1. Broadway & Olympic Boulevard
2. Broadway & 11th Street
3. Main Street & 9th Street
4. Main Street & Olympic Boulevard
5. Main Street & 11th Street
6. Main Street & 12th Street
7. Main Street & Pico Boulevard

The following traffic conditions have been analyzed: Existing (2019) traffic volumes, Existing (2019) Plus Project traffic volumes, Future (2026) Without Project traffic volumes, and Future (2026) With Project traffic volumes. The analyses of future (2026)

conditions included cumulative traffic attributable to ambient growth and related projects within the Project study area.

PROJECT DESCRIPTION

Under consideration is the Main Street Tower project (the "Project") to be located on an approximately 1.12-acre parcel at the northwest corner of the intersection of Main Street & 12th Street in the Central City Community Plan area of the City of Los Angeles (the "site"). The site is generally bounded by a parking lot to the north, 12th Street to the south, Main Street to the east, and a north-south alley to the west. The existing on-site uses consist of approximately 26,710 square feet of specialty retail businesses, mainly selling jewelry, cosmetics, handbags, and other fashion accessories. Occupancy records for the existing buildings are provided in Appendix A. This existing retail space would be removed in conjunction with development of the Project. The Project's proposed uses are divisible into two primary categories: residential and commercial retail. The residential component of the Project would consist of up to 363 residential dwelling units. The commercial component of the Project would consist of 12,500 square feet of floor area on the ground level.

As shown in Figure 2, Conceptual Project Site Plan, the Project would provide on-site parking on the ground floor and within levels two through four. Primary residential and commercial retail access/egress would be via the alley at the rear of the site. From the alley, a full-access driveway would provide a connection to the limited commercial retail parking on the ground level and the vast majority of the residential parking in the above-ground levels. ADA parking spaces would be provided at the ground level with access via separate one-way inbound and outbound driveways from the alley. A secondary driveway would access the parking on the ground level from the west side of Main Street, between 11th and 12th Streets, serving both residential and commercial uses, and it would connect to the parking on levels two through four and the one-way alley at the rear of the site. As part of the Project, the alley at the rear of the site would be converted to one-way southbound operation.

PH (310) 473 6508 F (310) 444 9771
www.crainandassociates.com

Approximately 355 parking spaces would be provided within levels two through four of the Project for the proposed residential uses. In addition, eight ADA parking spaces would be provided at the ground level for the proposed residential uses. The commercial retail uses would be provided with 10 parking spaces (including one ADA space) at the ground level. Therefore, the overall parking provided on-site would total 373 parking spaces. This parking supply would meet the requirements of the City of Los Angeles Municipal Code (LAMC).

The Project would take measures to align with the City's Vision Zero Los Angeles Initiative. Vision Zero was launched by Executive Order Number 10 in August 2015 with the goals of reducing traffic fatalities by 20 percent by 2017 and eliminating all traffic fatalities citywide by 2025. Vision Zero specifically seeks to implement traffic safety treatments at intersections and along roadway segments to improve safety for pedestrians, bicyclists, and other vulnerable road users. Development projects proposed on a roadway identified as part of the City's High Injury Network (HIN) should be designed to enhance safety. The Project is not located on a HIN roadway.

Although the Project is not located within the HIN, the Project would take measures to align with Vision Zero policies. The Project plans to provide 23 short-term and 172 long-term bicycle parking spaces, as well as a bicycle service area adjacent to a portion of the short- and long-term spaces on the ground floor, thereby incentivizing Project residents to travel via bicycle and creating a bicycle-friendly environment surrounding the Project. A portion of the short-term bicycle parking spaces and an enclosed retail patio area will be provided along the Project's Main Street frontage, adjacent to the proposed commercial retail space, thus enriching the existing pedestrian/bicyclist experience and activating the block as a pedestrian/bicyclist-safe environment.

The Project would also embrace the objectives of the City of Los Angeles Mobility Plan 2035, which includes the goals and policies of the City of Los Angeles 2010 Bicycle

Plan. The Mobility Plan 2035 aims to complete its proposed paths, protected cycle tracks, bicycle lanes, routes, and priority Neighborhood Enhanced Network roadway segments by 2035. The Project will not impede the Mobility Plan 2035 improvements which have already been realized, and the Project will support the implementation of future improvements. The Project site has been designed with consideration for the ultimate roadway and right-of-way dimensions for Main Street, 12th Street, and the alley, per the Mobility Plan 2035.

ENVIRONMENTAL SETTING

The Project is located at 1123-1161 S. Main Street. Situated within the Central City Community Plan area of the City, the Project site is generally bounded by a parking lot to the north, 12th Street to the south, Main Street to the east, and a north-south alley to the west.

The Project site is surrounded by a diverse urban area comprised of industrial, commercial, medical, government, institutional, residential, office, school, and retail land uses. The larger of these uses include the Herald Examiner Building, located to the northwest on Broadway and 11th Street, and the Los Angeles City Public Works Building, located to the west on Broadway and 12th Street. Educational institutions nearby include the Green Dot Public Schools and the Coast Career Institute.

The Project site and surrounding uses in the Central City Community Plan area are well-served by Freeways, Boulevards, Avenues, and Collector Streets. Freeways are located around the Project site and provide convenient access to the larger, regional roadway network. In the Project study area, Olympic Boulevard is classified as a Boulevard II between Broadway and Maple Avenue, per the City of Los Angeles Mobility Plan 2035. Pico Boulevard is designated as an Avenue I (between Flower Street and Broadway), while Olympic Boulevard (west of Broadway) and Main Street (south of 9th Street) are each classified as Modified Avenue I. Similarly, 9th Street is an Avenue II roadway (east of Main Street), while 9th Street (west of Olive Street) and Broadway are each designated as Modified Avenue II. There are two roadways in the study area which carry the Modified Avenue III designation: 9th Street (between Olive Street and Main Street) and Pico Boulevard (between Broadway and Main Street). In addition to these boulevards and avenues, the Project study area also encompasses two Modified Collector Streets (11th Street and 12th Street), as well as a Modified Local Street (Pico

Boulevard, east of Main Street). The Project study area transportation facilities, depicted previously in Figure 1, are described below in more detail.

Existing Freeways

Regional access to the Project vicinity is provided via multiple freeways, including the Harbor Freeway (State Route 110 [SR-110]), Hollywood Freeway (U.S. Highway 101 [US-101]), and Santa Monica Freeway (Interstate 10 [I-10]). These freeways all have interchanges with the surface street network in the greater Project vicinity. The following paragraphs describe each of these freeways in more detail. The annual average daily traffic (AADT) volumes provided are from the most current (2017) data available through the State of California Department of Transportation ("Caltrans") website.

The Harbor Freeway (SR-110) begins as Interstate 110 (I-110) in San Pedro to the south, becoming SR-110 as it passes through Downtown Los Angeles and continues northeasterly as the Arroyo Seco Parkway into the City of Pasadena. It provides access for the Project to the greater Los Angeles metropolitan area. The freeway is an eight- to ten-lane facility in the Project study area and has interchanges with the Hollywood Freeway and with the Santa Monica Freeway. South of Olympic Boulevard, the Harbor Freeway experiences AADT volumes of approximately 279,000 vehicles per day. A northbound on-ramp and southbound on- and off-ramps are provided on 11th Street, and northbound on- and off-ramps are provided on 9th Street. Several additional northbound and southbound, entering and exiting ramps are provided near 8th Street and 5th/6th Streets.

The Hollywood Freeway (US-101) is a north-south highway spanning the country's west coastline, beginning in the Seattle area of Washington State and terminating where it merges with the Golden State Freeway (Interstate 5 [I-5]) near the southeast corner of

Downtown Los Angeles. Near the Project site, the Hollywood Freeway generally provides four to five mixed-flow lanes in each direction, with AADT volumes of approximately 200,000 vehicles per day west of Los Angeles Street. The nearest eastbound on- and off-ramps on the Hollywood Freeway are provided on Broadway. Westbound on-ramp access is located on Los Angeles Street, with a westbound off-ramp connecting to Alameda Street. These ramps are all approximately 1.5 miles north of the Project site.

The Santa Monica Freeway (I-10) extends eastward from its origin in the City of Santa Monica, past the Project study area and across the country as a main southern east-west interstate. The Santa Monica Freeway is located approximately one-half mile south of the Project site and generally provides four to five mainline travel lanes per direction, with auxiliary lanes provided between certain ramp locations and at its interchange with the Harbor Freeway (SR-110). This freeway carries AADT volume of approximately 259,000 vehicles per day west of Los Angeles Street. The nearest westbound on-ramp is provided at the intersection of Grand Avenue & 17th Street, and westbound traffic can exit the freeway via an off-ramp to Los Angeles Street. Eastbound traffic can access the freeway via an on-ramp on Los Angeles Street and an off-ramp to Grand Avenue.

Existing Highways and Streets

9th Street is an east-west roadway located roughly 1,500 feet north of the Project site. In the Project vicinity, 9th Street is designated as a Modified Avenue II west of Olive Street, a Modified Avenue III between Olive Street and Main Street, and an Avenue II east of Main Street. 9th Street starts in Mid-Wilshire, runs discontinuously to roughly Crenshaw Boulevard, passes through Koreatown (sharing the more commonly used name, James M. Wood Boulevard), and travels through Downtown Los Angeles until it becomes Olympic Boulevard. From the Harbor Freeway (SR-110) to Santee Street, 9th

Street runs one-way, providing roughly two to three eastbound travel lanes with right- and left-turn channelization at many intersections. East of Santee Street, 9th Street usually features two travel lanes in each direction. Near the Project site, lanes on 9th Street are roughly nine to eleven feet wide. Parking is generally allowed on 9th Street.

11th Street is an east-west Modified Collector Street located less than 200 feet north of the Project site. 11th Street is disjoint near its western terminus in Koreatown, and stretches continuously between Hoover Street and San Pedro Street. This roadway generally features one travel lane in each direction, with limited left-turn channelization. As part of the MyFigueroa Streetscape Project (MyFig), six blocks of 11th Street between Figueroa and Broadway have been reduced from two westbound travel lanes to one westbound travel lane. This improvement accommodates vehicles and the future Los Angeles Streetcar, along with providing a one-way westbound bicycle facility with a painted buffer on the north side of the street, and on-street parking to be located on the south side of the street. A sharrow route is featured between Los Angeles Street and Figueroa Street.

12th Street is an east-west Modified Collector Street that forms the southern boundary of the Project site. The roadway runs discontinuously through the City from Cochran Avenue in the Mid-City neighborhood to its easterly terminus with Pico Boulevard in the Boyle Heights community. Near the Project site, 12th Street runs continuously between Figueroa Street and Hooper Avenue. Between Figueroa Street and Wall Street, 12th Street provides one-way eastbound travel, typically with two through lanes and occasional left- and right-turn channelization. Near the Project site, lanes on 12th Street range from approximately ten to twelve feet in width. Parking is generally allowed on both the north and south sides of 12th Street within the Project study area.

Broadway is a north-south Modified Avenue II within the Project study area, and is located approximately 150 feet west of the Project site. This roadway extends from

Montecito Heights through Chinatown, Downtown Los Angeles, Southeast Los Angeles, South Park, Harbor Gateway North, Willowbrook, and Carson, where it merges with Main Street. North of Downtown Los Angeles, Broadway generally features two through travel lanes in each direction, with a center two-way left-turn lane (TWLTL) in segments, along with left-turn channelization at major intersections. Within part of Downtown Los Angeles (between approximately 2nd Street and 11th Street), Broadway provides two northbound through travel lanes and one southbound through travel lane. South of Downtown Los Angeles, Broadway provides two through travel lanes in each direction, with left-turn channelization at most intersections and is intermittently separated by a TWLTL. On-street parking is permitted on most segments of Broadway outside of Downtown Los Angeles and is permitted intermittently on Broadway within Downtown Los Angeles. Near the Project site, most lanes on Broadway feature a width between roughly nine and twelve feet. Broadway features bicycle routes with shared-arrows (sharrows) through parts of Downtown Los Angeles. Broadway connects to the Hollywood Freeway (US-101) with a northbound on-ramp and a southbound off-ramp (at Aliso Street).

Main Street is a north-south roadway that forms the eastern boundary of the Project site. This roadway traverses continuously from Montecito Heights in the north to Wilmington in the south, passing through the communities of Chinatown, Downtown Los Angeles, South Los Angeles, Willowbrook, and Carson. Near the Project site, Main Street is designated as a Modified Avenue I. For the most part, Main Street offers two travel lanes in each direction with a TWLTL and left-turn channelization at select intersections. Near the Project site, there are two travel lanes in the northbound direction and one travel lane southbound. Near the Project site, the roadway maintains lane widths of roughly nine to eleven feet. Main Street becomes a one-way street between 9th Street and Alameda Street, typically providing three to four northbound

through lanes. Between 16th Street and Cesar E Chavez Avenue, Main Street features bicycle lanes, although these lanes are only provided for northbound bicycle traffic in some segments, mainly north of 9th Street. Near the Project site, on-street parking is generally allowed on most sections of Main Street.

Olympic Boulevard is an east-west roadway located approximately 800 feet north of the Project site. Near the Project site, Olympic Boulevard is designated as a Modified Avenue I west of Broadway, a Boulevard II between Broadway and Maple Avenue, and a Modified Avenue III east of Maple Avenue. This roadway extends from the Pacific Coast to just past Montebello Boulevard, with a discontinuous section in Downtown Los Angeles. This roadway is striped generally with two through travel lanes, left-turn channelization at most intersections, and right-turn channelization at select intersections. One notable exception to this striping configuration is between Maple Avenue and San Julian Street, where Olympic Boulevard typically features one through travel lane in each direction, with left-turn channelization. Near the Project site, lanes typically feature widths between nine and ten feet. Within the Project vicinity, Olympic Boulevard generally allows limited on street parking, with tow-away restrictions during peak hours to increase roadway vehicular capacity.

Pico Boulevard is an east-west roadway located approximately 500 feet south of the Project site. This roadway extends from the Fashion District near Downtown Los Angeles, through Pico Union, Mid-City, Pico-Robertson, Century City, Rancho Park, West Los Angeles, and the City of Santa Monica, before reaching its western terminus near the Pacific Ocean. In the Project vicinity, Pico Boulevard is designated as an Avenue I west of Broadway, a Modified Avenue III between Broadway and Main Street, and a Modified Local Street east of Main Street. In the Project study area, the roadway generally provides one to two travel lanes per direction, and right- and left-turn channelization at major intersections. Near the Project site, lanes on Pico Boulevard

range from approximately nine to twelve feet wide. On-street parking is generally permitted along Pico Boulevard, however many segments have tow-away parking restrictions during peak periods to increase roadway vehicular capacity.

Existing (2019) Traffic Volumes

Traffic volumes for existing conditions were obtained from manual traffic counts conducted between 2016 and 2019 at the study area intersections. Due to ongoing construction in the direct Project vicinity, it was necessary to obtain traffic counts unaffected by construction in order to represent typical weekday conditions. Current traffic counts unaffected by ongoing construction could not be obtained for the intersections of Broadway & Olympic Boulevard and Broadway & 11th Street.

Thus, traffic counts conducted in 2016 for these two intersections were taken from previous project transportation impact studies prepared for the LADOT. Although these traffic counts are more than two years old, they represent typical traffic conditions for their year of collection. In accordance with the LADOT *Transportation Impact Study Guidelines* (December 2016), the remaining five intersection traffic counts for this study were completed in January 2019 on a typical weekday during the morning and afternoon peak commute periods, which range from 7:00 to 10:00 AM and 3:00 to 6:00 PM, respectively.

Peak-hour volumes were determined individually for each intersection based on the highest-volume four consecutive 15-minute periods for all vehicular movements. In order to account for potential increases in traffic volumes between the count dates in 2016 and the existing analysis year of 2019, the historical traffic counts were factored upward by 1.0 percent compounded annually in order to develop 2019 traffic volumes. This growth rate has been determined by LADOT to be appropriate for recent growth in Downtown Los Angeles.

The Existing (2019) AM and PM peak-hour volumes at the study intersections are illustrated in Figures 3(a) and 3(b), respectively. The intersection count data sheets are provided in Appendix B.

Information pertaining to intersection characteristics, such as geometrics, traffic signal operations, and on-street parking restrictions were obtained from field checks and City engineering plans. The existing lane configurations and traffic control conditions for the study intersections are illustrated in Appendix C.

Existing Public Transportation

The roadways adjacent to the Project site are served by several bus lines managed by multiple transit operators that include the Los Angeles County Metropolitan Transportation Authority ("Metro"), LADOT DASH and Commuter Express, Santa Monica Big Blue Bus ("BBB"), City of Gardena ("GTrans"), and Montebello Bus Lines. The Project site's proximity to the Pico Rail Station, approximately one-half mile west, and the 7th Street / Metro Center Station, less than one mile northwest, provides opportunities to access other Metro rail services, Amtrak, Metrolink, and numerous bus routes served by Metro, LADOT, and other municipal bus operators. The bus lines within a "reasonable walking distance" (approximately one-quarter mile) of the Project site are shown in Figure 4 and described below.

Metro

Lines 2 and 302 provide east-west service between Downtown Los Angeles, Echo Park, Silver Lake, Hollywood, West Hollywood, Beverly Hills, and Westwood. Lines 2 and 302 follow the same route, but Line 302 makes limited stops in the middle of the route, providing faster service. The nearest westbound stop for both lines is located at the intersection of Broadway & 12th Street. Eastbound passengers can board both lines near the corner of Hill Street & 12th Street. Line 2 operates daily

with headways of approximately 5 to 15 minutes during the weekday AM and PM peak hours. Saturday, Sunday, and holiday service operates on headways of approximately 13 to 60 minutes. Line 302 operates weekdays only, with headways of approximately 20 to 40 minutes during AM and PM peak hours.

Line 4 traverses east-west from West Los Angeles to Downtown Los Angeles via Santa Monica Boulevard and Sunset Boulevard. While most service on this route ends in West Los Angeles at the San Diego Freeway (I-405), coverage extends west to Downtown Santa Monica during the early morning, evening, and late-night periods. Near the Project site, Line 4 stops in the westbound direction near the intersection of Broadway & 12th Street and in the eastbound direction near the intersection of Hill Street & Olympic Boulevard. Line 4 runs daily, with weekday AM and PM peak-hour headways of approximately 9 to 12 minutes. Saturday service is provided roughly every 10 to 15 minutes. Buses run on Sundays and holidays with approximately 12- to 30-minute headways.

Line 10 travels east-west between Downtown Los Angeles and West Hollywood, mostly along Melrose Avenue and Temple Street. Near the Project site, Line 10 stops in both eastbound and westbound directions near the intersection of Main Street & 11th Street, and eastbound at the intersection of Main Street & 12th Street. Line 10 operates daily, with AM and PM peak-hour headways of approximately 8 to 15 minutes. Weekend service is provided at roughly 20- to 30-minute headways.

Line 14 provides east-west service, traveling between Downtown Los Angeles, Westlake, Rampart Village, Larchmont Village, Fairfax, and Beverly Hills mainly via Beverly Boulevard. Near the Project Site, westbound buses stop near the intersection of Olive Street & Pico Boulevard and eastbound buses stop near the intersection of Hill Street & Pico Boulevard. Line 14 operates daily, with headways of approximately 5 to 8 minutes during the weekday AM and PM peak hours.

Saturday, Sunday, and holiday service operates with headways of approximately 15 to 30 minutes.

Line 28 provides east-west service, traveling between Eagle Rock, Glassell Park, Downtown Los Angeles, Koreatown, Beverly Hills, and Century City, mostly via Olympic Boulevard and Eagle Rock Boulevard. Near the Project Site, both eastbound and westbound bus stops are located near the intersection of Hill Street & Olympic Boulevard. Line 28 operates daily, with headways of approximately 6 to 15 minutes during weekday AM and PM peak hours. Saturday, Sunday, and holiday service operates on headways of approximately 10 to 15 minutes.

Lines 30 and 330 provide east-west service between East Los Angeles, Boyle Heights, Downtown Los Angeles, Mid-City, Beverly Grove, and the Sunset Strip in West Hollywood. Lines 30 and 330 follow the same route from West Hollywood through Downtown Los Angeles, but Line 330 terminates in Downtown Los Angeles and makes limited stops in the middle of the route, providing faster service. The nearest eastbound stop for both lines is located near the intersection of Broadway & 12th Street. Westbound passengers can board both lines near the corner of Main Street & 12th Street. Line 30 operates daily with headways of approximately 6 to 12 minutes during the weekday AM and PM peak hours. Saturday, Sunday, and holiday service operates on headways of approximately 8 to 15 minutes. Line 330 operates weekdays only, with headways of approximately 20 to 30 minutes during the AM and PM peak hours.

Line 33 provides east-west service between Downtown Los Angeles, Culver City, Venice, and Santa Monica via Venice Boulevard. Near the Project site, Line 33 stops in both directions near the corner of Main Street & 11th Street. Line 33 operates daily with headways of approximately 6 to 15 minutes during the weekday

AM and PM peak hours. Saturday, Sunday, and holiday service is provided with roughly 15- to 25-minute headways.

Line 35 travels east-west, primarily along Washington Boulevard, connecting Downtown Los Angeles, Pico Union, Mid-City, and eastern Culver City. Service on Line 35 typically terminates near the corner of Broadway & Venice Boulevard, just over one-quarter mile south of the Project site and outside the abovementioned "reasonable walking distance." Limited late-night service stops near the Project site, with eastbound and westbound service provided near the intersection of Broadway & 12th Street. Line 35 operates on roughly 12-minute headways during the weekday AM and PM peak hours; however, no peak-hour service passes directly by the Project site. Saturday service is offered approximately every 15 minutes. Buses on Sundays and holidays arrive with roughly 20-minute frequency. For all days of service, Line 35 directly passes near the Project site only after 7:00 PM.

Line 37 provides east-west service between Downtown Los Angeles, University Park, Jefferson, and eastern Culver City generally via Adams Boulevard. Near the Project Site, westbound Line 37 buses stop near the corner of Grand Avenue & 11th Street, slightly outside the "reasonable walking distance" of one-quarter mile. To continue further into Downtown Los Angeles, a transfer is required to Line 14, which has a bus stop near the intersection of Olive Street & 11th Street. Line 37 operates daily, with headways of approximately 5 to 8 minutes during the weekday AM and PM peak hours. Saturday, Sunday, and holiday service operates on headways of approximately 15 to 30 minutes.

Line 38 traverses east-west, mainly via Jefferson Boulevard, from Downtown Los Angeles to University of Southern California, Jefferson Park, and eastern Culver City. Most service on Line 38 terminates at Broadway & Venice Boulevard,

approximately one-half mile south of the Project site, outside of the abovementioned “reasonable walking distance.” Late-night routes, however, extend northbound, passing near the Project site. Westbound and eastbound bus stops are provided near the intersection of Broadway & 12th Street. Line 38 operates daily on roughly 12- to 24-minute headways during weekday AM and PM peak hours; however, no peak-hour service passes directly by the Project site. Saturday service is offered approximately every 30 minutes. Buses on Sundays and holidays arrive with roughly 40-minute frequency. For all days of service, Line 38 only directly passes near the Project site after 9:00 PM.

Line 40 operates north-south local service connecting Chinatown, Downtown Los Angeles, Leimert Park, Inglewood, Hawthorne, and Redondo Beach. Late-night service on Line 40 also connects to the Los Angeles International Airport Bus Center. Near the Project site, service in both directions is provided at stops near the intersection of Broadway & 12th Street. Line 40 runs on approximate headways of 7 to 12 minutes during the weekday AM and PM peak hours. Weekend and holiday service is provided on roughly 15-minute intervals.

Line 45 provides north-south service between Lincoln Heights, Downtown Los Angeles, South Los Angeles, and Rosewood. Near the Project site, northbound and southbound bus stops can be accessed near the corner of Broadway & 12th Street. Line 45 operates daily, with headways of approximately 4 to 8 minutes during weekday AM and PM peak hours. Saturday service is provided approximately every 8 to 15 minutes. Sunday and holiday service operates on headways of approximately 10 to 15 minutes.

Line 48 travels north-south between Downtown Los Angeles, South Los Angeles, and Willowbrook, mainly via San Pedro Street and Main Street. Near the Project site, service in the southbound direction stops near the intersection of Main Street &

12th Street. The northbound direction of Line 48 terminates at Main Street & Venice Boulevard, and a transfer is required to Line 10 to continue northbound into Downtown Los Angeles. Line 48 operates on approximate headways of 8 to 15 minutes during the weekday AM and PM peak hours. Saturday service runs on roughly 20-minute frequencies. Sunday and holiday service is provided approximately every 30 to 40 minutes.

Lines 55 and 355 provide north-south service between Downtown Los Angeles, Southeast Los Angeles, Watts, and Willowbrook, generally via Compton Avenue. Lines 55 and 355 follow the same route, but Line 355 makes limited stops in the middle of the route, providing faster service. Near the Project site, both lines feature stops in both directions near the intersection of Main Street & 11th Street for northbound travel and near the intersection of Main Street & 12th Street for southbound travel. Line 55 operates daily with headways of approximately 8 to 15 minutes during the weekday AM and PM peak hours. Saturday, Sunday, and holiday service operates on headways of approximately 12 to 23 minutes. Line 355 operates weekdays only, with headways of approximately 8 to 60 minutes during AM and PM peak hours.

Line 66 provides east-west service between Montebello, East Los Angeles, Downtown Los Angeles, Koreatown, and Wilshire Center, via 8th Street and Olympic Boulevard. Near the Project site, eastbound service stops near the intersection of Main Street & 9th Street. Westbound service stops near the intersection of Spring Street & 8th Street, which is outside of the one-quarter mile "reasonable walking distance." Line 66 operates daily, with headways of approximately 3 to 12 minutes during the weekday AM and PM peak hours. Saturday service is provided approximately every 5 to 14 minutes. Sunday and holiday service operates on headways of approximately 20 minutes.

Line 70 provides east-west service between El Monte, Monterey Park, East Los Angeles, and Downtown Los Angeles. Near the Project site, eastbound service stops near the intersection of Olive Street & 11th Street. Westbound service stops near the intersection of Grand Avenue & 11th Street, slightly outside of the one-quarter mile "reasonable walking distance." Line 70 operates daily, with headways of approximately 10 to 15 minutes during the weekday AM and PM peak hours. Saturday service is provided approximately every 16 minutes. Sunday and holiday service operates on headways of approximately 12 to 15 minutes.

Line 71 provides east-west service between the California State University Los Angeles Station, City Terrace, Chinatown, and Downtown Los Angeles. Near the Project site, eastbound service stops near the intersection of Olive Street & 11th Street. Westbound service stops near the intersection of Grand Avenue & 11th Street, slightly outside of the one-quarter mile "reasonable walking distance." Line 71 operates daily, with headways of approximately 15 to 35 minutes during weekday AM and PM peak hours. Saturday, Sunday, and holiday service is provided approximately every 60 minutes.

Line 76 provides east-west service between El Monte, Rosemead, Alhambra, and Downtown Los Angeles mainly via Valley Boulevard. Near the Project site, eastbound service stops near the intersection of Olive Street & 11th Street. Westbound service stops near the intersection of Grand Avenue & 11th Street, just outside of the one-quarter mile "reasonable walking distance." Line 76 operates daily, with headways of approximately 12 to 15 minutes during the weekday AM and PM peak hours. Saturday, Sunday, and holiday service operates on headways of approximately 15 to 20 minutes.

Lines 78, 79, and 378 provide east-west service between the Arcadia, Alhambra, El Sereno, and Downtown Los Angeles. Lines 78 and 378 follow the same route, with

an eastern terminus in South Arcadia. Line 79 follows the same route as Lines 78 and 378 from Downtown Los Angeles to South Pasadena, but then veers north as it approaches South Pasadena. Line 378 makes limited stops in the middle of its route, providing faster service than Line 78. Near the Project site, all three lines follow the same route and provide an eastbound stop near the intersection of Olive Street & 11th Street. Westbound service stops near the intersection of Grand Avenue & 11th Street, slightly outside of the one-quarter mile "reasonable walking distance." Line 78 operates daily, with headways of approximately 6 to 20 minutes during the weekday AM and PM peak hours. Saturday, Sunday, and holiday service is provided approximately every 14 to 30 minutes. Line 79 operates daily, with headways of approximately 15 to 30 minutes during the weekday AM and PM peak hours. Saturday, Sunday, and holiday service is provided approximately every 15 to 20 minutes. Line 378 operates on weekdays only, with headways of approximately 11 to 28 minutes during the AM and PM peak hours.

Line 83 provides north-south service between Eagle Rock, Highland Park, Cypress Park, and Downtown Los Angeles. Near the Project site, southbound service stops near the intersection of Main Street & 11th Street, and northbound service stops near the intersection of Hill Street & 12th Street. Line 83 operates daily, with headways of approximately 20 to 30 minutes during the weekday AM and PM peak hours. Saturday, Sunday, and holiday service operates on headways of approximately 30 minutes.

Lines 90 and 91 provide north-south service between San Fernando, La Crescenta, Glendale, and Downtown Los Angeles, mainly via Foothill Boulevard and Glendale Avenue. Line 90 provides service between San Fernando and Downtown Los Angeles. Line 91 follows the same route, but it truncates service at its northern terminus in Sunland. Passengers can board both lines in either direction near the

intersection of Hill Street & 12th Street. Line 90 operates daily with headways of approximately 12 to 30 minutes during the weekday AM and PM peak hours. Line 91 operates daily with headways of approximately 30 to 50 minutes during the weekday AM and PM peak hours. Saturday, Sunday, and holiday service is provided approximately every 60 minutes per line.

Line 92 runs north-south, serving Sylmar, Sun Valley, Burbank, Glendale, Echo Park, and Downtown Los Angeles. The southern terminus of Line 92 is located near the Project site on Main Street at Olympic Boulevard. Near this intersection, passengers can board northbound service and alight southbound service. Line 92 operates on weekday with headways of approximately 16 to 20 minutes during the AM and PM peak hours. Saturday service is provided roughly every 26 to 30 minutes, and Sunday and holiday service runs approximately every 40 minutes.

Lines 94 is a north-south oriented route which operates between Sylmar, Burbank, Glendale, and Downtown Los Angeles via San Fernando Road and Hill Street. Near the Project site, Line 94 provides stops in both directions near the intersection of Hill Street & 12th Street. Line 94 operates daily, with headways of approximately 15 to 20 minutes during the weekday AM and PM peak hours. Saturday, Sunday, and holiday service is provided approximately every 20 minutes.

Line 96 provides north-south service between Burbank, Griffith Park, Chinatown, and Downtown Los Angeles. Near the Project site, northbound service stops near the intersection of Olive Street & 11th Street. Southbound service stops near the intersection of Grand Avenue & 11th Street, slightly outside of the one-quarter mile "reasonable walking distance." Line 96 operates daily, with headways of approximately 30 to 35 minutes during the weekday AM and PM peak hours. Saturday, Sunday, and holiday service operates on headways of approximately 50 to 60 minutes.

Line 728 provides east-west service between Union Station, Downtown Los Angeles, Koreatown, Miracle Mile, Beverly Hills, and Century City. Line 728 is part of the greater Metro Rapid Program, which uses a bus signal priority system in combination with frequent stops limited to major intersections in order to minimize travel time. Near the Project site, Line 728 provides stops in both directions near the intersection of Hill Street & Olympic Boulevard, which is slightly outside of the one-quarter mile "reasonable walking distance." Line 728 operates on weekdays with headways of approximately 10 to 15 minutes during the AM and PM peak hours. Line 728 does not provide service on Saturdays, Sundays, or holidays.

Line 733 provides east-west service between Downtown Los Angeles, Culver City, Venice, and Santa Monica via Venice Boulevard. Line 733 follows the same route as Line 33, but Line 733 is a Metro Rapid Line that uses a bus signal priority system in combination with frequent stops limited to major intersections in order to minimize travel time. Near the Project site, Line 733 provides stops in both directions near the intersection of Main Street & 11th Street. Line 733 operates daily, with headways of approximately 10 to 15 minutes during the weekday AM and PM peak hours. Saturday, Sunday, and holiday service is provided with approximately 20- to 25-minute headways.

Line 745 provides north-south service between Los Angeles Union Station, Chinatown, Downtown Los Angeles, and South Los Angeles, terminating at the Harbor Freeway Green Line Light Rail Station. Line 745 is a Metro Rapid Line, with limited stops reserved for major intersections. In the Project vicinity, the nearest northbound and southbound bus stops are located near the corner of Broadway & Pico Boulevard. Line 745 operates daily with headways of approximately 5 to 13 minutes during the weekday AM and PM peak hours. Saturday service is offered approximately every 12 to 20 minutes. Line 745 operates on Sundays and holidays with headways of approximately 25 to 30 minutes.

Line 770 provides east-west service between Downtown Los Angeles, Chinatown, Boyle Heights, Monterey Park, and El Monte, terminating at the El Monte Station. Line 770 is a Metro Rapid Line, with limited stops reserved for major intersections. Near the Project site, northbound service stops near the intersection of Olive Street & Pico Boulevard. Southbound service stops near the intersection of Grand Avenue & Pico Boulevard. Both bus stops are located slightly outside of the one-quarter mile "reasonable walking distance." Line 770 operates with headways of approximately 10 to 15 minutes during the weekday AM and PM peak hours. Saturday service is offered approximately every 20 minutes. Line 770 does not provide service on Sundays or holidays.

Line 794 is a north-south oriented route which operates between San Fernando, Burbank, Glendale, and Downtown Los Angeles via San Fernando Road and Hill Street. Line 794 follows the same route as Line 94, but as a Metro Rapid Line, stops are limited to major intersections in order to minimize travel time. Near the Project site, Line 794 provides northbound and southbound stops near the intersection of Hill Street and Pico Boulevard. Line 794 operates on weekdays, with headways of approximately 15 to 20 minutes during the AM and PM peak hours. Line 794 does not offer service on Saturdays, Sundays, or holidays.

LADOT

Commuter Express 409 provides north-south express service between Sunland, Tujunga, La Crescenta, La Canada, Glendale, and Downtown Los Angeles. Limited service extends farther north to Sylmar. The southern terminus of Commuter Express 409 is located near the Project site. Passengers can board northbound buses and alight southbound buses from the end of the line, near the corner of Hill Street & 12th Street. Commuter Express 409 offers southbound service in the morning and northbound service in the evening. Service operates

weekdays only, with headways of approximately 10 to 20 minutes during the AM and PM peak hours.

Commuter Express 431 is an east-west commuter express line that runs between the communities of Westwood, Rancho Park, Palms, Downtown Los Angeles, and Union Station. The main portion of the route operates along the Santa Monica Freeway (I-10), Venice Boulevard, Grand Avenue, Olive Street, and Temple Street. Within the vicinity of the Project site, eastbound service stops near the intersection of Olive Street & 12th Street. Westbound service stops near the intersection of Grand Avenue & Pico Boulevard, outside of the one-quarter mile "reasonable walking distance." Commuter Express 431 offers eastbound service in the morning and westbound service in the evening. Commuter Express 431 operates on weekdays, with AM and PM peak-hour headways of approximately 25 to 35 minutes. This line does not operate on weekends and holidays.

Commuter Express 437 is an east-west commuter express line that runs between the communities of Venice, Marina Del Rey, Mar Vista, Culver City, and Downtown Los Angeles. The main portion of the route operates along Culver Boulevard, the Santa Monica Freeway (I-10), Grand Avenue, Olive Street, and Temple Street. Within the Project vicinity, eastbound service stops near the intersection of Olive Street & 12th Street. Westbound service stops near the intersection of Grand Avenue & Pico Boulevard, outside of the one-quarter mile "reasonable walking distance." This commuter line operates on weekdays with AM peak-period service from Venice to Downtown with headways of approximately 15 to 24 minutes, and PM peak-period service from Downtown to Venice with headways of approximately 15 to 55 minutes. Commuter Express 437 does not operate on weekends and holidays.

DASH Downtown D runs north-south between Union Station and Los Angeles Trade Technical College, via Downtown Los Angeles. In the Project vicinity, DASH Downtown D stops in both directions near the intersection of Hill Street & 12th Street. DASH Downtown D operates weekdays only, with approximate 5-minute headways during the AM and PM peak hours.

DASH Downtown E provides north-south service, between Westlake, Downtown Los Angeles, and the Fashion District. In the Project vicinity, DASH Downtown E stops in both directions near the intersection of Los Angeles Street & 12th Street. DASH Downtown E operates with headways of approximately 5 minutes during the weekday AM and PM peak hours. Saturday service is provided approximately every 10 minutes. Sunday service operates on headways of approximately 15 minutes. There is no holiday service.

GTrans

Line 1X runs from Redondo Beach to Downtown Los Angeles and travels through the communities of Hawthorne, Torrance, and Gardena. This line is an express route, which runs nonstop via the Harbor Freeway (I-110) between Gardena and Downtown Los Angeles. Near the Project site, service in both directions stops near the intersection of Main Street & 11th Street. Line 1X primarily operates on weekdays, with limited service on weekends that terminates at the Harbor Gateway Transit Center and does not continue to Downtown Los Angeles. Service on Line 1X runs on approximately 30- to 40-minute headways during the weekday AM and PM peak hours. Weekend and holiday service operates on 45-minute headways, and does not run near the Project site.

Santa Monica BBB

Rapid 10 provides express service between Santa Monica and Union Station. Near the Project site, Rapid 10 stops near the intersection of Olive Street & Olympic Boulevard, with drop-off-only eastbound service. Drop-off only eastbound service is provided near Olive Street & Pico Boulevard during the AM peak hour. Pick-up-only westbound service is provided near the corner of Grand Avenue & Pico Boulevard during the PM peak hour. Both bus stop locations are slightly outside the one-quarter mile "reasonable walking distance," as described above. Rapid 10 operates only during the weekday AM and PM peak hours, with headways of 30 minutes. Rapid 10 does not operate on weekends and holidays.

Montebello Bus Line

Line 50 provides east-west service between La Mirada, Whittier, Pico Rivera, Commerce, Boyle Heights, and Downtown Los Angeles via Washington Boulevard and Hill Street. Near the Project site, bus stops are located at the intersection of Hill Street & 12th Street for eastbound and westbound directions of travel. Line 50 operates during the weekday AM and PM peak hours with headways of approximately 25 to 45 minutes. Saturday and holiday service is provided approximately every 60 minutes. There is no service on Sundays.

As evidenced by the above information, the Project site and surrounding area are well served by public transit. When transfer opportunities are considered, the site is very accessible to and from the greater Los Angeles region via public transit. Thus, it is expected that some of the person trips generated by the Project would utilize public transit as the primary travel mode instead of private vehicles.

Analysis of Existing (2019) Traffic Conditions

The seven study intersections listed below were analyzed for existing traffic conditions. All of these intersections are signalized. They were selected in consultation with the LADOT for the analysis of potential Project traffic impacts. Per current LADOT policy, when determining which intersections should be included in the impact analysis for development projects, only signalized locations should be included. Unsignalized intersections should be evaluated solely to determine the need for the installation of a traffic signal or other traffic control devices, but will not be included in the impact analysis. The existing peak-hour traffic volumes for these intersections were discussed previously and presented in Figures 3(a) and 3(b). These volumes, along with information pertaining to intersection geometrics, traffic signal operations, and on-street parking restrictions were analyzed using established traffic engineering techniques.

1. Broadway & Olympic Boulevard
2. Broadway & 11th Street
3. Main Street & 9th Street
4. Main Street & Olympic Boulevard
5. Main Street & 11th Street
6. Main Street & 12th Street
7. Main Street & Pico Boulevard

The LADOT *Transportation Impact Study Guidelines* (December 2016) require the use of the Critical Movement Analysis (CMA) methodology to analyze signalized intersections for land use development projects. This methodology is based on procedures outlined in the Transportation Research Board Circular 212, Interim Materials on Highway Capacity. Using the CMA procedures, a determination can be made of the operating characteristics of an intersection in terms of the Level of Service

for different levels of traffic volume and other variables, such as critical signal phases and the number and type of traffic lanes.

The term “Level of Service” (LOS) describes the quality of traffic flow. LOS A through C are indicative of excellent-to-good traffic flow conditions. LOS D corresponds with fair conditions that may experience substantial delay during portions of the peak hours, but without excessive backups. LOS E represents poor conditions, with volumes at or near the capacity of the intersection and long lines of vehicles that may have to wait through several signal cycles. LOS F is characteristic of failure (i.e., the intersection is overloaded, vehicular movements may be restricted or prevented, and delays and queue lengths become increasingly longer).

A determination of the LOS at an intersection can be obtained through a summation of the critical movement volumes, on a per lane basis, at that intersection. Critical movement volumes are the highest total conflicting traffic volumes for each signal phase. Once the sum of the critical movement volumes has been obtained, the values in Table 1 can be used to determine the appropriate LOS.

Table 1
Critical Movement Volume Ranges*
For Determining Levels of Service (LOS)

	Maximum Sum of Critical Volumes (Vehicles/Hour)		
LOS	**Two Phases**	**Three Phases**	**Four or More Phases**
A	900	855	825
B	1,050	1,000	965
C	1,200	1,140	1,100
D	1,350	1,275	1,225
E	1,500	1,425	1,375
F	----------Not Applicable----------		

* For planning applications only.

Capacity is the total maximum hourly volume of vehicles in the intersection critical lanes that has a reasonable expectation of passing through the intersection under the prevailing roadway and traffic conditions. For planning purposes, the capacity for signalized intersections equates to the maximum critical movement value at LOS E, as indicated in Table 1.

The CMA volume-to-capacity (V/C) ratios used in this study were calculated by dividing the sum of the critical movement volumes by the appropriate capacity value for the type of signal control present or proposed at the subject intersections. A description of the different LOS and their corresponding V/C values is shown in Table 2.

Table 2
Level of Service (LOS)
As a Function of V/C Ratios

LOS	Range of V/C Ratios
A	0.000 - 0.600
B	0.601 - 0.700
C	0.701 - 0.800
D	0.801 - 0.900
E	0.901 - 1.000
F	≥ 1.001

Applying this analysis procedure, the V/C ratio and corresponding LOS can be calculated for each study intersection for Existing (2019) traffic conditions. These standard CMA calculations are also adjusted to account for signal enhancements not considered in the CMA methodology, including the effects of intersections currently operating under the City's Automated Traffic Surveillance and Control (ATSAC) system or the upgraded Adaptive Traffic Control System (ATCS). ATSAC/ATCS is a highly sophisticated computerized system that continually monitors traffic demand at signalized intersections within the system and modifies signal timing in real time to maximize capacity and decrease overall delay.

The ATSAC system has been recognized to increase intersection capacity by approximately seven percent. The upgrade to ATCS is able to increase capacity by an additional three percent, resulting in a total 10 percent increase in intersection capacity. Therefore, per LADOT policy, the standard V/C ratios were decreased by 0.070 where only the ATSAC system is in effect and by 0.100 where the combined ATSAC/ATCS is in effect. Per discussions with LADOT staff, five study intersections currently operate under the combined ATSAC/ATCS system (Broadway & Olympic Boulevard, Main Street & 9th Street, Main Street & Olympic Boulevard, Main Street & 11th Street, and Main Street & 12th Street). The remaining two study intersections (Broadway & 11th Street and Main Street & Pico Boulevard) currently operate under only the ATSAC system. Existing (2019) and Future (2026) ATSAC and ATCS conditions are displayed graphically for the study intersections in Appendix C.

The analyses of Existing (2019) AM and PM peak-hour conditions at the study intersections are summarized in Table 3. As shown in Table 3, all seven study intersections currently operate at LOS A during both peak hours, except for the intersection of Broadway & 11th Street. That intersection operates at LOS A during the AM peak hour and LOS D during the PM peak hour. All CMA/LOS calculations were performed using the standard LADOT LOS Worksheet. The CMA/LOS calculation worksheets for the seven study intersections are included in Appendix D.

Table 3
Critical Movement Analysis (CMA) & Level of Service (LOS) Summary Existing (2019) Traffic Conditions

No.	Intersection	Peak Hour	V/C Ratio	LOS
1	Broadway &	AM	0.396	A
	Olympic Boulevard	PM	0.585	A
2	Broadway &	AM	0.360	A
	11th Street	PM	0.873	D
3	Main Street &	AM	0.354	A
	9th Street	PM	0.482	A
4	Main Street &	AM	0.404	A
	Olympic Boulevard	PM	0.519	A
5	Main Street &	AM	0.212	A
	11th Street	PM	0.336	A
6	Main Street &	AM	0.260	A
	12th Street	PM	0.319	A
7	Main Street &	AM	0.401	A
	Pico Boulevard	PM	0.557	A

PROJECT TRAFFIC

The following section describes the methodology and procedures used to determine the trip generation, distribution, and assignment of traffic resulting from the Project. The Project's proposed uses are divisible into two primary categories: residential and commercial retail. The residential component of the Project would consist of up to 363 high-rise multifamily dwelling units. The proposed commercial component of the Project would consist of approximately 12,500 square feet of ground-floor commercial space. The Project site is presently occupied by approximately 26,710 square feet of active specialty retail space (a diversity of businesses selling jewelry, cosmetics, handbags, and other fashion accessories). Occupancy records for the existing buildings are provided in Appendix A. This existing retail space would be removed in conjunction with development of the Project. Project vehicular access/egress and parking are described at the end of this section.

Project Trip Generation

Per the approved Memorandum of Understanding (MOU) signed by LADOT staff on March 21, 2019 and included as Appendix E of this report, the Institute of Transportation Engineers (ITE) *Trip Generation Manual* (10th Edition, 2017) was used to develop the traffic characteristics of the Project. The trip generation equations and rates in the ITE manual are nationally recognized and are used as the basis for most transportation impact studies conducted in the City of Los Angeles and surrounding region. Information was obtained from the *Trip Generation Manual* for ITE Land Use Code (LUC) 222 – Multifamily Housing (High-Rise) and LUC 820 – Shopping Center. Table 4 presents the trip generation rates used to generate the daily and peak-hour traffic volumes for the Project.

Table 4
Project Trip Generation Rates[1]

Multifamily Housing (High-Rise), ITE LUC 222 - General Urban/Suburban setting (trips per dwelling unit)

Daily:	T = 2.07 (DU)
AM Peak Hour:	T = 0.21 (DU); IB = 12%, OB = 88%
PM Peak Hour:	T = 0.19 (DU); IB = 70%, OB = 30%

Shopping Center, ITE LUC 820 - General Urban/Suburban setting (trips per 1,000 square feet of gross floor area)

Daily:	T = 37.75 (A)
AM Peak Hour:	T = 0.94 (A); IB = 62%, OB = 38%
PM Peak Hour:	T = 3.81 (A); IB = 48%, OB = 52%

Notes

[1] Source: Institute of Transportation Engineers (ITE) *Trip Generation Manual* (10th Edition, 2017).

By applying the trip rates provided in Table 4, baseline daily, AM peak-hour, and PM peak-hour trips were calculated for the Project uses. As these rates do not account for such trip-reducing factors as internally captured trips, significant transit usage and/or walk trip potential, or pass-by trips, the baseline trips reflect a conservative condition. These trip-reducing factors are important considerations in determining the actual traffic-generating characteristics of a project and, therefore, adjustments were made to the Project's baseline trip generation estimates.

Given the mix of proposed uses on the Project site, it is expected that there would be trip interactions between individual uses that would not require the use of a vehicle. It is generally recognized that residents, employees, visitors, and patrons of a site will utilize other on-site uses if they are conveniently located and/or provide useful services or amenities, with the level of interaction dependent upon the number of residents, employees, visitors, and patrons; service providers; accessibility; and other factors[1]. For the Project, some of the residents and employees would be expected to patronize the on-site commercial retail uses. Thus, a reduction in trips between the residential and commercial retail uses would be expected. Based on the mix of uses, an internal

[1] Institute of Transportation Engineers (ITE) *Trip Generation Handbook* (3rd Edition, 2017).

capture adjustment of 10 percent, based on the Project's commercial retail land use baseline trips, has conservatively been assumed for the proposed Project. This internal capture adjustment has been approved by LADOT staff in an MOU signed on March 21, 2019 and included as Appendix E.

The use of public transportation is an important consideration in the evaluation of a project's trip-generating potential. As noted previously in the Existing Public Transportation section of this report, the Project is well served by bus and rail lines of multiple transit operators. These transit operators provide both local and regional routes that are readily accessible to Project residents, employees, visitors, and patrons. Significant transit use is not accounted for in the ITE *Trip Generation Manual* General Urban/Suburban setting trip rates and equations. Because the trip rates for the General Urban/Suburban setting do not consider significant transit connectivity, adjustments were made to the Project trip generation to account for transit usage associated with the proposed and existing commercial retail land uses. Based on the abundance of available transit options within a comfortable walking distance of the Project site (including Metro Rapid Bus service), a combined transit/walk adjustment of 15 percent has been assumed for the Project's proposed and existing commercial retail land uses. This transit/walk adjustment has been approved by LADOT staff in an MOU signed on March 21, 2019 and included as Appendix E.

Trip reduction factors for the Project also account for the presence of "pass-by" trips. As some motorists pass by the Project, the specific convenient facilities provided by the Project (or other factors) produce a stop at the site. Such activity is considered to be an interim stop along a trip which existed irrespective of the development of the Project, and therefore vehicles making these stops are not considered to be newly generated Project-related traffic. The LADOT has developed a series of recommended pass-by trip reduction percentages for various development types and sizes. In line with these

guidelines, pass-by trip reductions were applied to the Project's commercial land uses (proposed commercial retail and existing specialty retail). Each of the pass-by trip adjustment factors has been approved by LADOT staff in an MOU signed on March 21, 2019 and included as Appendix E.

Based on the trip generation rates and aforementioned trip reduction factors, projections of the amount of traffic to be generated for the Project were derived. Table 5 summarizes the trip generation for the Project. As shown in Table 5, once completed and occupied, the Project is anticipated to generate a total of 463 net trips per day, with 69 net trips during the AM peak hour and 40 net trips during the PM peak hour. These peak-hour trips were distributed to analyze Project impacts at the seven study intersections.

Per LADOT policy and as a conservative procedure, trip reductions for commercial use pass-by activity were not applied to the Project's driveways and appropriate site-adjacent intersections, since pass-by trips, while not new to the area roadways, would be included in the number of vehicles that enter and exit the site's driveways and appropriate site-adjacent intersection turning movements required for Project access and egress. The additional Project pass-by traffic volumes at the Project driveways and appropriate site-adjacent intersections were also calculated. These calculations indicate that approximately -248 net pass-by trips per day, with -6 net pass-by trips during the AM peak hour and -25 net pass-by trips during the PM peak hour, would access the Project driveways. It should be noted that the net negative volumes during all three time periods are due to the existing commercial retail floor area to be removed exceeding the proposed commercial retail floor area. These pass-by traffic volumes were added to the net traffic volumes in order to estimate Project transportation impacts at the site-adjacent study intersection of Main Street & 12th Street.

Notes:

1) ITE *Trip Generation Manual* (10th Edition, 2017) trip generation rates and equations applied. For Land Use Code 222 (Multifamily Housing [High-Rise]), trip rates for the Dense Multi-Use Urban setting were used, as this setting is more applicable to the Project site than the General Urban/Suburban setting and there is an adequate number of studies in the peak-hour time period datasets. For Land Use Code 820 (Shopping Center), rates for the General Urban/Suburban setting were used, as no daily rate is provided for the Dense Multi-Use Urban setting and the peak-hour rates are based on very limited data. Transit/walk adjustments were, therefore, only applied to the Shopping Center land use.
2) du = Dwelling Units; ksf = Thousands of Square Feet of Gross Leasable Floor Area.
3) 10 percent internal capture adjustment assumed. The internal capture adjustment is applied to the lower peak-hour trip-generating component of the uses sharing trips with each other (Shopping Center use). The internal trips for the higher trip-generating component (Multifamily Housing use) are then balanced with the internal trips to/from the lower trip-generating component. These assumptions follow the general methodology recommended for mixed-use development trip generation in the ITE *Trip Generation Handbook* (3rd Edition, 2017).
4) Consistent with current LADOT *Transportation Impact Study Guidelines* , a 15 percent transit/walk adjustment has been assumed for the Shopping Center use (given that the Project is located within an approximately one-quarter mile walking distance of Metro rapid bus service, and such an adjustment is not already accounted for in the General Urban/Suburban setting baseline trip rates).
5) Based on Attachment D of the current LADOT *Transportation Impact Study Guidelines* , appropriate pass-by trip adjustments have been applied to the Shopping Center land use category.

Project Trip Distribution and Assignment

Estimation of the geographic distribution of Project trips was the next step in the analytical process. The primary factors affecting the trip distribution patterns are the nature of the Project uses, existing traffic patterns, characteristics of the surrounding roadway system, geographic location of the Project site and its proximity to freeways and major travel routes, employment centers to which residents would likely be attracted, residential areas from which employees would likely be drawn, and the various regions generating visitors and patrons. The Project trip distribution patterns were developed for two aggregate land-use categories -- residential and commercial -- in order to reflect better the differences in trip directionality, origin/destination land uses, and Project access/egress between these categories.

The existing specialty retail uses have, conservatively, been assumed to have the same distribution pattern as the proposed commercial retail uses. Without a robust parking supply, patrons of the existing commercial uses now circulate through the local surface street system for nearby parking when arriving to shop. Such local circulation in search of parking will not be required for the proposed commercial uses. Based on the abovementioned factors, the overall project trip distribution percentages were determined separately for the residential and commercial components of the Project, and are summarized in Table 6. The LADOT approved these trip distribution assumptions in an MOU signed on March 21, 2019 and included as Appendix E.

The general distribution percentages shown in Table 6 were then disaggregated and assigned to specific routes and intersections that are expected to be used for Project access/egress. The estimated Project trip assignment percentages for the residential and commercial uses at the study intersections were reviewed and approved by LADOT staff in an MOU signed on March 21, 2019 and included as Appendix E. The Project's

proposed residential and commercial trip distribution percentages are presented in Figures 5(a) and 5(b), respectively.

Table 6
Project Directional Trip Distribution Percentages

Direction	Land Use	
	Residential	Commercial
North	40%	30%
South	15%	22%
East	20%	18%
West	25%	30%
Total	100%	100%

Applying these inbound and outbound percentages to the Project trip generation, the traffic volumes for the Project were determined for the seven study intersections. As described previously and per LADOT policy, Project pass-by trips have been included only at the site-adjacent intersection of Main Street & 12th Street. The Project-only AM and PM peak-hour traffic volumes are depicted in Figures 6(a) and 6(b), respectively.

Project Parking and Access

Parking for the Project would be provided in accordance with the requirements of the LAMC. The Project would provide on-site parking on the ground floor and within levels two through four. Primary residential and commercial access/egress would be via the alley at the rear of the site. From the alley, a full-access driveway would provide a connection to the limited commercial parking on the ground level and the vast majority of the residential parking in levels two through four. ADA parking spaces would be provided at the ground level with access via separate one-way inbound and outbound driveways from the alley. A secondary driveway would access the ground floor parking from the west side of Main Street, between 11th and 12th Streets, serving both residential and commercial retail uses, and it would connect to the parking available on

levels two through four and the one-way alley at the rear of the site. As part of the Project, the alley at the rear of the site would be converted to one-way southbound operation. The conceptual Project site plan was shown previously in Figure 2.

Based on the Project's proposed mix of uses and the parking regulations of the LAMC and Los Angeles City Bicycle Parking Ordinance, adequate parking would be provided for the Project. Approximately 355 parking spaces would be provided within the Project's above-ground parking levels for the proposed residential uses. In addition, eight ADA accessible parking spaces would be provided at the ground level for the proposed residential uses. The commercial uses would be provided with 10 parking spaces (including one ADA space) at the ground level. Thus, the overall parking supply would consist of 373 parking spaces. The Project would also provide 195 bicycle parking spaces (23 short-term and 172 long-term). No off-site parking impacts are anticipated as a result of this Project.

EXISTING PLUS PROJECT TRAFFIC CONDITIONS

Based on the December 16, 2010 decision of the California Sixth District Court of Appeal in the *Sunnyvale West Neighborhood Association v. City of Sunnyvale City Council* case, an additional traffic impact analysis has been performed for the Project. In the *Sunnyvale* case, the Court of Appeal found, based on the facts of that case, the impacts of a project must be compared "against current, existing physical conditions." While the facts of the *Sunnyvale* case may be distinguishable from this case, in the interest of fullest disclosure an analysis of Existing (2019) Plus Project AM and PM peak-hour conditions was performed.

The Existing (2019) Plus Project traffic volumes were determined by superimposing the Project-only traffic volumes onto the Existing (2019) traffic volumes. The Existing (2019) Plus Project traffic volumes at the study intersections are shown in Figures 7(a) and 7(b) for the AM and PM peak hours, respectively. The analysis of Existing (2019) Plus Project traffic conditions at the study intersections was performed using the analysis procedures described previously in this report. The results of the analysis of Existing (2019) Plus Project traffic conditions at the study intersections are summarized in Table 8 of the following section and are discussed therein.

FUTURE TRAFFIC CONDITIONS

There are a number of other projects either under construction or planned for development in the surrounding area that may contribute future traffic to the study locations. For this reason, the analysis of future traffic conditions was expanded to include potential traffic volume increases expected to be generated by those other projects. In order to evaluate future traffic conditions in the Project area, an analysis of Existing (2019) traffic volumes was first conducted, as described previously. For the analysis of future conditions, an ambient traffic growth factor of 1.0 percent per year, compounded annually, was applied to these existing volumes at the seven study intersections to develop future year (2026) baseline traffic volumes. Given that the Project is currently estimated to be completed in 2026, that year was selected as the future study year.

The inclusion of the annual growth factor generally accounts for area-wide traffic increases. To ensure a conservative estimate of cumulative traffic conditions, the traffic generated by "related projects" in the study area was also added to the future baseline traffic volumes. The total future volumes, including those due to related projects, formed the basis for the Future (2026) Without Project condition. Finally, the traffic expected to be generated by the Project was analyzed as an incremental addition to the Future (2026) Without Project condition, resulting in the Future (2026) With Project condition.

Ambient Traffic Growth

Based on an analysis of traffic growth projections for the Central City Community Plan area, the LADOT recommended the application of an ambient traffic growth factor of 1.0 percent per year for future traffic growth. This growth factor was used to account for increases in traffic due to potential development projects not yet proposed or outside

the study area. Compounded annually, the ambient traffic growth factor was applied to the existing (2019) traffic volumes to develop the estimated baseline volumes for the future study year (2026).

Related Projects

In addition to the use of the ambient growth rate, listings of potential projects located in the surrounding area ("related projects") that might be developed or under construction within the study time frame were obtained from the LADOT and City of Los Angeles Planning Department. Recently published transportation impact studies and environmental reports for development projects in the area were also reviewed. Per a November 28, 2018 update to the related project selection criteria in the LADOT *Transportation Impact Study Guidelines*, related projects from these sources and within an approximate 0.6-mile radius of the Project site were included. Refinement of the information resulted in a total of 57 related projects in the surrounding area that could add traffic to the study intersections.

The locations of the related projects are shown in Figure 8, Related Project Location Map. The related project locations, descriptions, and trip generation estimates are summarized in Table 7. The number of trips expected to be generated by the related projects was obtained from information provided by public agencies, transportation impact studies, and environmental reports, to the extent available. For related projects with incomplete trip generation and/or peak-hour directional (inbound/outbound) distribution information, estimates were determined by applying the appropriate trip rates and/or directional splits from the ITE *Trip Generation Manual* (10th Edition, 2017).

For the analysis of Future (2026) Without Project traffic conditions, each related project's generated trips were distributed and assigned to the study area circulation system, using methodologies similar to those previously described for the Project trip

distribution and assignment. Summing the individual related project traffic volume assignments, the total related project traffic volumes at the study intersections were calculated and are shown in Figures 9(a) and 9(b) for the AM and PM peak hours, respectively.

It should be noted that the inclusion of these related projects, as described, results in future (2026) traffic condition forecasts that are conservative for the purposes of impact analysis. As stated previously, the 1.0 percent ambient traffic growth factor, approved by the LADOT, accounts for the general traffic growth expected throughout the study area. The overlay of traffic volumes resulting from the 57 identified related projects represents a conservative projection of future traffic volumes. It is likely that some of the identified projects will not be approved or constructed as described. It is also probable that some of these projects will be delayed in their construction beyond the future (buildout) study year of the Project. In addition, none of the mitigation measures proposed in the traffic analyses performed for these related projects have been assumed under future conditions. Therefore, the future condition of the study area roadway infrastructure has also been forecast conservatively.

Highway System Improvements

In order to better analyze future traffic conditions in the Project area, an investigation regarding relevant future transportation improvements to the roadway system infrastructure in the study area was conducted. No traffic improvements were identified as scheduled for implementation that would affect use of the existing street system.

Per information provided by LADOT, and as described earlier, five of the study intersections currently operate under the City's combined ATSAC/ATCS system. The remaining two intersections (Broadway & 11th Street and Main Street & Pico Boulevard) operate under only the ATSAC system. City staff has indicated there is no definitive

timeline for implementation of the combined ATSAC/ATCS system at these two locations. Therefore, the intersections were conservatively assumed to continue to operate under only the ATSAC system for future (2026) conditions.

In addition to these traffic signal enhancements, the goals and policies of the City's *2010 Bicycle Plan* (City of Los Angeles Department of Planning, adopted March 1, 2011) have been folded into the Mobility Plan 2035. It is a Mobility Plan objective to complete the proposed paths, protected cycle tracks, bicycle lanes, routes, and priority Neighborhood Enhanced Network roadway segments by 2035. While some of these improvements have already been realized, the following improvements are scheduled for implementation within the Project study area:

- 11th Street will add a Tier 1 protected bicycle lane between Figueroa Street and Main Street. This bicycle facility has recently been installed as part of the Figueroa Corridor Streetscape project (MyFigueroa). The lane configurations for the study intersections along 11th Street reflect the addition of this facility and no passenger vehicle lane or phasing configuration modifications are anticipated.

- Pico Boulevard will add Tier 3 bicycle lanes from Gateway Boulevard to Central Avenue. Vehicular lanes will likely be reconfigured to accommodate these bicycle lanes.

- Main Street will add Tier 1 protected bicycle lanes between Mission Road and Imperial Highway. Vehicular lanes may be reconfigured to accommodate these bicycle lanes.

Per information provided by LADOT staff, design and construction of the Pico Boulevard bicycle lanes and the Main Street protected bicycle lanes is not expected between now and the Project buildout year of 2026. As such, no changes to the study area intersection geometrics and/or traffic control conditions due to bicycle facility

improvements have been assumed under future (2026) traffic conditions in this traffic impact analysis.

A review of the LADOT Transportation Capital Improvement Projects and Bureau of Engineering Street Improvement Master Schedule revealed one improvement project (the Los Angeles Streetcar Project) that could affect operations at the study intersection locations:

- The Los Angeles Streetcar project would construct a streetcar route along an approximate four-mile loop around Downtown Los Angeles. While the construction and operation of this streetcar would likely affect the lane or phasing configurations along Broadway within the Project study area, plans have not been finalized and there is no set route. The Final Environmental Impact Report was issued on October 24, 2016, but there is currently no finalized timeline for completion. Therefore, roadway changes associated with the Los Angeles Streetcar Project have not been assumed under future (2026) traffic conditions in this traffic impact analysis.

Analysis of Future (2026) Traffic Conditions

The analysis of future traffic conditions at the study intersections was performed using the same analysis procedures described previously in this report. As described in the previous section, all existing geometrics and/or traffic control conditions are assumed to prevail for the analysis of future area traffic conditions.

As described earlier, future (2026) baseline traffic volumes for the Without Project condition were determined by superimposing area-wide ambient traffic growth and the total related projects traffic volumes onto the existing (2019) traffic volumes. The Future (2026) Without Project traffic volumes are depicted in Figures 10(a) and 10(b) for the AM and PM peak hours, respectively.

Project volumes [Figures 6(a) and 6(b)], as determined earlier, were then added to the Future (2026) Without Project traffic volumes to develop the Future (2026) With Project traffic volumes. The Future (2026) With Project volumes were then used to determine traffic impacts directly attributable to the Project. The Future (2026) With Project AM and PM peak-hour traffic volumes are shown in Figures 11(a) and 11(b), respectively.

The results of the analysis of existing and future traffic conditions at the study intersections are summarized in Table 8. As shown in Table 8, following the addition of Project-related traffic to Existing traffic conditions, all intersections would maintain the same LOS during both peak hours. Six study intersections would operate at LOS A during both peak hours, and one intersection would operate at LOS D during one peak hour (Broadway & 11th Street - PM peak hour).

As shown, under Future (2026) Without Project conditions, traffic operations are expected to degrade when compared with existing conditions due to the ambient and related project traffic volume growth. Under Future (2026) Without Project conditions, three study intersections would operate at LOS C or better during both peak hours, three intersections would operate at LOS D during one peak hour (Broadway & Olympic Boulevard, Main Street & Olympic Boulevard, Main Street & Pico Boulevard – all during the PM peak hour), and one intersection would operate at LOS F during one peak hour (Broadway & 11th Street - PM peak hour).

Under Future (2026) With Project conditions, following the addition of Project-related traffic to Future (2026) Without Project conditions, all intersections would maintain the same LOS during both peak hours. Under Future (2026) With Project conditions, three study intersections would continue to operate at LOS C or better during both peak hours, three intersections would continue to operate at LOS D during one peak hour (Broadway & Olympic Boulevard, Main Street & Olympic Boulevard, Main Street & Pico Boulevard – all during the PM peak hour), and one intersection would continue to

operate at LOS F during one peak hour (Broadway & 11th Street - PM peak hour). The CMA/LOS calculation worksheets are included in Appendix D.

Significant Traffic Impact Criteria

The LADOT defines a significant intersection traffic impact attributable to a project based on a "stepped scale," with intersections experiencing high V/C ratios being more sensitive to additional traffic than those operating with more available capacity. According to LADOT policy, a significant impact is identified as an increase in the V/C ratio, due to Project-related traffic under future buildout conditions, of 0.010 or more when the final (with Project) LOS is E or F, a V/C ratio increase of 0.020 or more when the final LOS is D, or an increase of 0.040 or more when the final LOS is C. No significant impacts are deemed to occur at LOS A or B, as these operating conditions exhibit sufficient surplus capacities to accommodate large traffic increases with little effect on traffic delays. These criteria are summarized below in Table 9.

Table 9
LADOT Criteria for Significant Intersection Traffic Impacts

LOS	Final V/C Ratio	Project-Related Increase in V/C Ratio
C	> 0.700 - 0.800	equal to or greater than 0.040
D	> 0.800 - 0.900	equal to or greater than 0.020
E, F	> 0.900	equal to or greater than 0.010

These LADOT criteria were applied for the seven study intersections. Based on these criteria and as shown previously in Table 8, the Project would not significantly impact any of the study intersections during either peak hour.

Congestion Management Program (CMP) Impact Analysis

The traffic impact guidelines of the current 2010 CMP for Los Angeles County require analysis of all CMP arterial monitoring locations where a project could add a total of 50

or more trips during either peak hour. Additionally, all freeway monitoring locations where a project could add 150 or more trips in either direction during the peak hours are to be analyzed.

The nearest CMP arterial monitoring locations to the Project site are the intersection of Alameda Street and Washington Boulevard (approximately 1.7 miles southeast of the Project site) and the intersection of Alvarado Street and Wilshire Boulevard (approximately 1.7 miles northwest). Based on a review of the Project trip generation [shown in Table 5] and the Project trip distribution patterns [shown in Figures 5(a) and 5(b)], the Project is expected to contribute minimal traffic volumes to these CMP monitoring intersections during the weekday AM and PM peak hours (fewer than five trips at each intersection, during each peak hour). Further, it is expected that Project traffic volume contributions to more distant CMP arterial monitoring locations would be even lower, given that Project traffic would disperse across an increasing number of roadways when farther from the Project site. With Project traffic contributions well below the 50-trip threshold, no significant Project impacts to CMP arterial monitoring locations are forecast and no additional arterial intersection analysis is necessary.

In terms of CMP freeway monitoring segment analysis, a review of the Project's trip generation indicates that the Project would not generate more than 69 net directional (inbound or outbound) trips during either peak hour. Therefore, the Project would contribute well below the 150 directional-trip threshold to all CMP freeway monitoring segments, no significant Project impacts to CMP freeway monitoring locations are forecast, and no additional freeway analysis is necessary.

The local CMP also requires that all projects consider potential transit impacts. As shown in Table 5, transit adjustments were applied to the proposed and existing commercial uses only, since the trip generation rates applied to the residential use already account for transit availability and usage. The net vehicle trips via transit/walk

adjustments were developed for the proposed and existing commercial uses, but they must still be determined for the proposed residential use.

The transit impact review was undertaken per the 2010 CMP guidelines. As the Project is located within one-quarter mile of multiple Metro Rapid Bus facilities, a transit/walk factor of 15 percent of baseline vehicle trips was conservatively assumed for the residential use. This transit/walk factor is consistent with the LADOT *Transportation Impact Study Guidelines* (December 2016). The baseline vehicular trip generation estimates for the proposed residential use were 751 vehicles per day, with 76 AM peak-hour and 69 PM peak-hour vehicle trips. As described in the Project Traffic section, the proposed residential use baseline trip estimates already reflect transit adjustments, so these trips correspond to the 85 percent of total trips accessing the site via non-transit facilities. Therefore, to calculate the 15 percent of total trips using transit facilities, the baseline trips were multiplied by a factor of 0.1765 (15÷85), resulting in transit/walk vehicle trip reductions of 133 vehicles per day, including 13 AM peak-hour and 12 PM peak-hour trips.

These proposed residential use vehicle trip reductions were combined with those calculated for the commercial uses [see Table 5], yielding net vehicle trip reductions of 53 daily trips, including 11 AM peak-hour and 4 PM peak-hour trips[2]. Per 2010 CMP guidelines, person transit trips can be estimated by multiplying the transit vehicle trip reductions by a conversion factor of 1.4. Therefore, the number of net Project person transit trips would be approximately 74 daily person transit trips, with 15 AM peak-hour and 6 PM peak-hour person transit trips.

Given that the capacity of one standard bus is 40 riders, and there are 40+ bus lines with a reasonable walking distance of the Project site, with several more bus lines and

[2] Proposed residential use transit/walk vehicle trip reductions (133 daily, 13 AM peak-hour, 12 PM peak-hour) + proposed commercial use transit/walk vehicle trip reductions (71 daily, 2 AM peak-hour, 7 PM peak-hour) – existing commercial use transit/walk vehicle trip reductions (151 daily, 4 AM peak-hour, 15 PM peak-hour).

rail facilities slightly outside the reasonable walking distance (but within approximately one-half mile), these daily and peak-hour levels of Project transit ridership are anticipated to have a minimal impact on the surrounding transit network. Therefore, it is expected that the incremental additions of Project person transit trips would not have a significant impact on transit service in the study area.

Residential Street/Neighborhood Intrusion Impact Analysis

In order to address local residential neighborhood concerns, the LADOT requires the preparation of a residential street impact analysis if a development project meets certain conditions. These conditions include the proposed development project being non-residential and non-school in nature, with an anticipated significant traffic contribution to a congested arterial (with intersections operating at LOS E or F) in the presence of local residential street(s) that provide viable alternate route(s). The Project has proposed commercial and residential components, but the proposed commercial component measures only 12,500 square feet in floor area and generates minimal vehicle trips. Accounting for the removal of the existing commercial uses, the non-residential portion of the Project generates net negative vehicle trips during all analyzed time periods. Further, given the location of the Project site, there are no viable local street diversion routes available to avoid congested arterial streets and intersections. Therefore, the Project is not expected to significantly impact local residential streets and no further analysis is required.

MITIGATION MEASURES

As indicated in the preceding traffic analysis, the proposed Main Street Tower project is not expected to significantly impact any of the seven study intersections, any CMP monitoring locations, public transit, or residential street facilities. Therefore, no transportation-related mitigation measures are required for the Project.

APPENDIX A

PROJECT SITE EXISTING OCCUPANCY RECORDS

Address: 1123-1161 S. Main Street and 111 W. 12th Street

Address	Land Use	Square Feet
1123-1139 S. Main Street	Parking Lot	--

APPENDIX E

TRAFFIC STUDY MEMORANDUM OF UNDERSTANDING (DATED MARCH 20, 2019 AND SIGNED ON MARCH 21, 2019)

LADOT

Transportation Impact Study Memorandum of Understanding (MOU)

This MOU acknowledges that the Transportation Impact Study for the following Project will be prepared in accordance with the latest version of LADOT's Transportation Impact Study Guidelines:

I. PROJECT INFORMATION

Project Name: Main Street Tower

Project Address: 1123-1161 S. Main Street, Los Angeles, CA 90015

Project Description: The proposed project consists of the construction of a 30-story high-rise residential mixed-use building, with up to 363 residential dwelling units and 12,500 square feet of ground-floor commercial uses, and the removal of all existing uses, including approximately 26,710 square feet of active retail uses. Primary access for the residential and commercial uses will be provided via driveways intersecting the north-south alley between Broadway and Main Street. Secondary access will be provided for the residential uses via a full-access driveway intersecting Main Street.

LADOT Project Case Number: _____ Project Site Plan attached? *(Required)* ■ Yes ☐ No

II. TRIP GENERATION

Geographic Distribution (Residential): N 40.00% S 15.00% E 20.00% W 20.00%

Geographic Distribution: N 30.00 % S 22.00 % E 18.00 % W 30.00 % (Commercial)

Illustration of Project trip distribution percentages at Study intersections attached? *(Required)* ■ Yes ☐ No

Trip Generation Adjustments *(Exact amount of credit subject to approval by LADOT)*

	Yes	No
Transit Usage	■	☐
Transportation Demand Management	☐	■
Existing Active Land Use	■	☐
Previous Land Use	☐	■
Internal Trip	■	☐
Pass-By Trip	■	☐

Source of Trip Generation Rate(s)? ☐ ITE 9th Edition ■ Other: ITE Trip Generation Manual (10th Edition, 2017)

Trip generation table including a description of the proposed land uses, ITE rates, estimated morning and afternoon peak hour volumes (ins/outs/totals), proposed trip credits, etc. attached? *(Required)* ■ Yes ☐ No

	IN	OUT	TOTAL
AM Trips	5	64	69
PM Trips	34	6	40

III. STUDY AREA AND ASSUMPTIONS

Project Buildout Year: 2026 Ambient or CMP Growth Rate: 1.00 % Per Yr.

Related Projects List, researched by the consultant and approved by LADOT, attached? *(Required)* ☐ Yes ■ No

Related project list will be requested from LADOT at time of MOU submittal.

Subject to Freeway Impact Analysis, in addition to CMP Analysis? *(Freeway analysis screening filter must be included in this MOU; selecting "yes" implies that at least one criteria was satisfied)* ☐ Yes ■ No

Map of Study Intersections attached? *(May be subject to LADOT revision after initial impact analysis)* ■ Yes ☐ No

Is this Project located on a street within the High Injury Network? ☐ Yes ■ No

Notes:

1) ITE *Trip Generation Manual* (10th Edition, 2017) trip generation rates and equations applied. For Land Use Code 222 (Multifamily Housing [High-Rise]), rates for the Dense Multi-Use Urban setting were used, as this setting is more applicable to the Project site than the General Urban/Suburban setting and there is an adequate number of studies in the peak-hour time period datasets. For Land Use Code 820 (Shopping Center), rates for the General Urban/Suburban setting were used, as no daily rate is provided for the Dense Multi-Use Urban setting and the peak-hour rates are based on very limited data. Transit/walk adjustments were, therefore, only applied to the Shopping Center land use.
2) du = Dwelling Units; ksf = Thousands of Square Feet of Gross Leasable Floor Area.
3) 10 percent internal capture adjustment assumed. The internal capture adjustment is applied to the lower peak-hour trip-generating component of the uses sharing trips with each other (Shopping Center use). The internal trips for the higher trip-generating component (Multifamily Housing use) are then balanced with the internal trips to/from the lower trip-generating component.
4) Consistent with current LADOT *Transportation Impact Study Guidelines* , a 15 percent transit/walk adjustment has been assumed for the Shopping Center use (given that the Project is located within an approximately one-quarter mile walking distance of Metro rapid bus and rail service, and such an adjustment is not already accounted for in the General Urban/Suburban setting baseline trip rates).
5) Based on Attachment D of the current LADOT *Transportation Impact Study Guidelines* , appropriate pass-by trip adjustments have been applied to the Shopping Center land use category.

RELATED PROJECTS LIST

(The related projects list will be requested from LADOT when we submit the MOU package for review.)

ATTACHMENT 5

FREEWAY IMPACT ANALYSIS SCREENING

MAIN STREET TOWER PROJECT
FREEWAY IMPACT ANALYSIS SCREENING

The following State of California Department of Transportation ("Caltrans") freeway impact analysis screening has been performed for the Main Street Tower project (the "Project") as part of the Transportation Impact Study Memorandum of Understanding (MOU), per the criteria set forth in the October 2013 *Agreement Between City of Los Angeles and Caltrans District 7 on Freeway Impact Analysis Procedures* (the "Agreement") and the December 2015 *First Amendment to the Agreement between LADOT and Caltrans District 7 on Freeway Impact Analysis Procedures* (the "Amendment").

Agreement and Amendment Freeway Impact Analysis Screening Criteria

Per Section 3 of the Agreement and the Amendment, the "City will require Project applicants to work with Caltrans and prepare a Freeway Impact Analysis, utilizing Caltrans' "Guide for the Preparation of Traffic Impact Studies" ("TIS Guide"), for land use proposals that meet any of the following criteria:

- The project's peak hour trips would result in a 1-percent or more increase to the freeway mainline capacity of a freeway segment operating at level-of-service (LOS) E or F (based on an assumed capacity of 2,000 vehicles per hour per lane); or
- The project's peak hour trips would result in a 2-percent or more increase to the freeway mainline capacity of a freeway segment operating at LOS D (based on an assumed capacity of 2,000 vehicles per hour per lane); or
- The project's peak hour trips would result in a 1-percent or more increase to the capacity of a freeway off-ramp operating at LOS E or F (based on an assumed ramp capacity of 850 vehicles per hour per lane); or
- The project's peak hour trips would result in a 2-percent or more increase to the capacity of a freeway off-ramp operating at LOS D (based on an assumed ramp capacity of 850 vehicles per hour per lane)."

Project Traffic Volume Contributions to State Facilities

In order to estimate the Project's traffic volume contributions to the freeway mainline and off-ramp locations most likely to be impacted by Project-related traffic, the Project's trip generation was first determined. In order to develop the traffic characteristics of the Project, the latest and most up-to-date version of the Institute of Transportation Engineers (ITE) *Trip Generation Manual* (10th Edition, 2017) was used. The trip generation rates in the ITE manual are nationally recognized and are used as the basis for most traffic studies conducted in the City of Los Angeles and surrounding region. Attachment 3 of this Transportation Impact Study MOU presents the trip generation rates and summary for the Project's weekday daily, AM peak-hour,

and PM peak-hour traffic volumes. As shown, appropriate trip credits were applied to the baseline trip generation estimates to account for internally captured trips, use of public transportation, walk-trip potential, and pass-by trip activity.

Estimation of the geographic distribution of Project trips was the next step in the analytical process. Project trip distribution patterns were developed based on the Project uses, existing traffic patterns, characteristics of the surrounding roadway system, the geographic location of the Project site and its proximity to freeways and major travel routes, employment centers to which residents would likely be attracted, residential areas from which employees would likely be drawn, and the various regions generating visitors and patrons. Based on the abovementioned factors, the overall Project trip distribution percentages were determined and are summarized in Attachment 2 of this Transportation Impact Study MOU.

The Project trip generation and trip distribution patterns were then used to determine the Project traffic volume contributions to State facilities in the vicinity of the Project site. Table 1 summarizes the anticipated Project traffic volume contributions to the freeway mainline and off-ramp locations most likely to be impacted by Project traffic.

Freeway Mainline Segment Impact Analysis Screening

In order to perform the freeway mainline segment impact analysis screening, an initial check was performed to see if the directional mainline segments most likely to be impacted by Project traffic would meet the trigger Project traffic volume contributions assuming the most constrained operations on each segment. This initial freeway mainline segment impact screening analysis is shown in Table 2. Per the Agreement, the trigger percentage is a 2 percent or more increase in traffic volumes for a mainline segment at LOS D or a 1 percent or more increase for a segment at LOS E/F. The volume increases are relative to an assumed mainline segment capacity of 2,000 vehicles per hour per lane, per the Agreement. Therefore, the 1 percent trigger percentage was applied assuming LOS E/F freeway mainline operations.

Comparing the traffic volume contributions required to trigger a freeway segment impact analysis at LOS E/F with the anticipated Project volume contributions at each location, the thresholds would not be triggered at either of the two (2) directional segment locations. Therefore, a freeway mainline segment impact analysis is not required.

Freeway Off-Ramp Impact Analysis Screening

In order to perform the freeway off-ramp impact analysis screening, an initial check was performed to see if the off-ramp location most likely to be impacted by Project traffic would meet the trigger traffic volume contributions assuming the most constrained operations for the off-ramp. This initial freeway off-ramp screening analysis is shown in Table 2. Per the Agreement, the trigger percentage is a 2 percent or more increase in traffic volumes for a freeway off-ramp operating at LOS D or a 1 percent or more increase for an off-ramp at LOS E/F. These volume

increases are relative to the assumed capacity of 850 vehicles per hour per lane, per the Agreement and Amendment. Therefore, the 1 percent trigger percentage was applied assuming LOS E/F freeway off-ramp operations.

Comparing the traffic volume contributions required to trigger a freeway off-ramp impact analysis at LOS E/F with the anticipated Project volume contributions at the location, the thresholds would not be triggered at the one (1) freeway off-ramp location. Therefore, a freeway off-ramp impact analysis is not required.

LADOT

Transportation Impact Study Memorandum of Understanding (MOU)

This MOU acknowledges that the Transportation Impact Study for the following Project will be prepared in accordance with the latest version of LADOT's Transportation Impact Study Guidelines:

I. PROJECT INFORMATION

Project Name: Main Street Tower

Project Address: 1123-1161 S. Main Street, Los Angeles, CA 90015

Project Description: The proposed project consists of the construction of a 30-story high-rise residential mixed-use building, with up to 363 residential dwelling units and 12,500 square feet of ground-floor commercial uses, and the removal of all existing uses, including approximately 26,710 square feet of active retail uses. Primary access for the residential and commercial uses will be provided via driveways intersecting the north-south alley between Broadway and Main Street. Secondary access will be provided for the residential uses via a full-access driveway intersecting Main Street.

LADOT Project Case Number: CEN18-47813 Project Site Plan attached? *(Required)* ■ Yes ☐ No

II. TRIP GENERATION

Geographic Distribution (Residential): N 40.00% S 15.00% E 20.00% W 20.00%

Geographic Distribution (Commercial): N 30.00 % S 22.00 % E 18.00 % W 30.00 %

RELATED PROJECTS LIST

(The related projects list will be requested from LADOT when we submit the MOU package for review.)

ATTACHMENT 5

FREEWAY IMPACT ANALYSIS SCREENING

MAIN STREET TOWER PROJECT
FREEWAY IMPACT ANALYSIS SCREENING

The following State of California Department of Transportation ("Caltrans") freeway impact analysis screening has been performed for the Main Street Tower project (the "Project") as part of the Transportation Impact Study Memorandum of Understanding (MOU), per the criteria set forth in the October 2013 *Agreement Between City of Los Angeles and Caltrans District 7 on Freeway Impact Analysis Procedures* (the "Agreement") and the December 2015 *First Amendment to the Agreement between LADOT and Caltrans District 7 on Freeway Impact Analysis Procedures* (the "Amendment").

Agreement and Amendment Freeway Impact Analysis Screening Criteria

Per Section 3 of the Agreement and the Amendment, the "City will require Project applicants to work with Caltrans and prepare a Freeway Impact Analysis, utilizing Caltrans' "Guide for the Preparation of Traffic Impact Studies" ("TIS Guide"), for land use proposals that meet any of the following criteria:

- The project's peak hour trips would result in a 1-percent or more increase to the freeway mainline capacity of a freeway segment operating at level-of-service (LOS) E or F (based on an assumed capacity of 2,000 vehicles per hour per lane); or
- The project's peak hour trips would result in a 2-percent or more increase to the freeway mainline capacity of a freeway segment operating at LOS D (based on an assumed capacity of 2,000 vehicles per hour per lane); or
- The project's peak hour trips would result in a 1-percent or more increase to the capacity of a freeway off-ramp operating at LOS E or F (based on an assumed ramp capacity of 850 vehicles per hour per lane); or
- The project's peak hour trips would result in a 2-percent or more increase to the capacity of a freeway off-ramp operating at LOS D (based on an assumed ramp capacity of 850 vehicles per hour per lane)."

Project Traffic Volume Contributions to State Facilities

In order to estimate the Project's traffic volume contributions to the freeway mainline and off-ramp locations most likely to be impacted by Project-related traffic, the Project's trip generation was first determined. In order to develop the traffic characteristics of the Project, the latest and most up-to-date version of the Institute of Transportation Engineers (ITE) *Trip Generation Manual* (10th Edition, 2017) was used. The trip generation rates in the ITE manual are nationally recognized and are used as the basis for most traffic studies conducted in the City of Los Angeles and surrounding region. Attachment 3 of this Transportation Impact Study MOU presents the trip generation rates and summary for the Project's weekday daily, AM peak-hour,

and PM peak-hour traffic volumes. As shown, appropriate trip credits were applied to the baseline trip generation estimates to account for internally captured trips, use of public transportation, walk-trip potential, and pass-by trip activity.

Estimation of the geographic distribution of Project trips was the next step in the analytical process. Project trip distribution patterns were developed based on the Project uses, existing traffic patterns, characteristics of the surrounding roadway system, the geographic location of the Project site and its proximity to freeways and major travel routes, employment centers to which residents would likely be attracted, residential areas from which employees would likely be drawn, and the various regions generating visitors and patrons. Based on the abovementioned factors, the overall Project trip distribution percentages were determined and are summarized in Attachment 2 of this Transportation Impact Study MOU.

The Project trip generation and trip distribution patterns were then used to determine the Project traffic volume contributions to State facilities in the vicinity of the Project site. Table 1 summarizes the anticipated Project traffic volume contributions to the freeway mainline and off-ramp locations most likely to be impacted by Project traffic.

Freeway Mainline Segment Impact Analysis Screening

In order to perform the freeway mainline segment impact analysis screening, an initial check was performed to see if the directional mainline segments most likely to be impacted by Project traffic would meet the trigger Project traffic volume contributions assuming the most constrained operations on each segment. This initial freeway mainline segment impact screening analysis is shown in Table 2. Per the Agreement, the trigger percentage is a 2 percent or more increase in traffic volumes for a mainline segment at LOS D or a 1 percent or more increase for a segment at LOS E/F. The volume increases are relative to an assumed mainline segment capacity of 2,000 vehicles per hour per lane, per the Agreement. Therefore, the 1 percent trigger percentage was applied assuming LOS E/F freeway mainline operations.

Comparing the traffic volume contributions required to trigger a freeway segment impact analysis at LOS E/F with the anticipated Project volume contributions at each location, the thresholds would not be triggered at either of the two (2) directional segment locations. Therefore, a freeway mainline segment impact analysis is not required.

Freeway Off-Ramp Impact Analysis Screening

In order to perform the freeway off-ramp impact analysis screening, an initial check was performed to see if the off-ramp location most likely to be impacted by Project traffic would meet the trigger traffic volume contributions assuming the most constrained operations for the off-ramp. This initial freeway off-ramp screening analysis is shown in Table 2. Per the Agreement, the trigger percentage is a 2 percent or more increase in traffic volumes for a freeway off-ramp operating at LOS D or a 1 percent or more increase for an off-ramp at LOS E/F. These volume

increases are relative to the assumed capacity of 850 vehicles per hour per lane, per the Agreement and Amendment. Therefore, the 1 percent trigger percentage was applied assuming LOS E/F freeway off-ramp operations.

Comparing the traffic volume contributions required to trigger a freeway off-ramp impact analysis at LOS E/F with the anticipated Project volume contributions at the location, the thresholds would not be triggered at the one (1) freeway off-ramp location. Therefore, a freeway off-ramp impact analysis is not required.

EXECUTIVE SUMMARY

JADE Enterprises retained Dudek to conduct a Tribal Cultural Resources (TCRs) study for the Main Street Tower Project (project) for compliance with the California Environmental Quality Act (CEQA). The project site is located in the Central City North Community Plan Area of the City of Los Angeles, approximately 14 miles east of the Pacific Ocean. The project site is located within a heavily populated area at 1123-1165 South Main Street. The project is bound by East 12th Street to the southwest, commercial properties and associated parking lots to the northwest, two apartment buildings to the northeast, and South Main Street to the southeast. The project falls on public land survey system (PLSS) Township 1 South, Range 13 West, within an unsectioned portion of the *Hollywood*, CA 7.5-minute USGS Quadrangle

The present study documents the results of a California Historical Resources Information Systems (CHRIS) records search conducted at the South Central Coastal Information Center (SCCIC), and a search of the Native American Heritage Commission (NAHC) Sacred Lands File (SLF). This report further includes a cultural context and in-depth review of archival, academic, and ethnographic information. No Native American resources were identified within the project site or the surrounding area through the SCCIC records search (completed January 31, 2019) or through a search of the NAHC SLF (completed January 31, 2019). The project site has been substantially disturbed by previous construction, and is largely unsuited to support the presence of significant buried cultural resources or TCRs.

Given that no TCR has been identified that could be affected, no mitigation relating to TCRs is necessary. Should consultation result in the identification of a TCR that may be impacted by the project, appropriate measures must be included in the environmental document. The City is likely to adopt a standard condition of approval for unanticipated tribal cultural resources which is sufficient to avoid significant impacts. Based on current information, impacts to TCRs would be less than significant

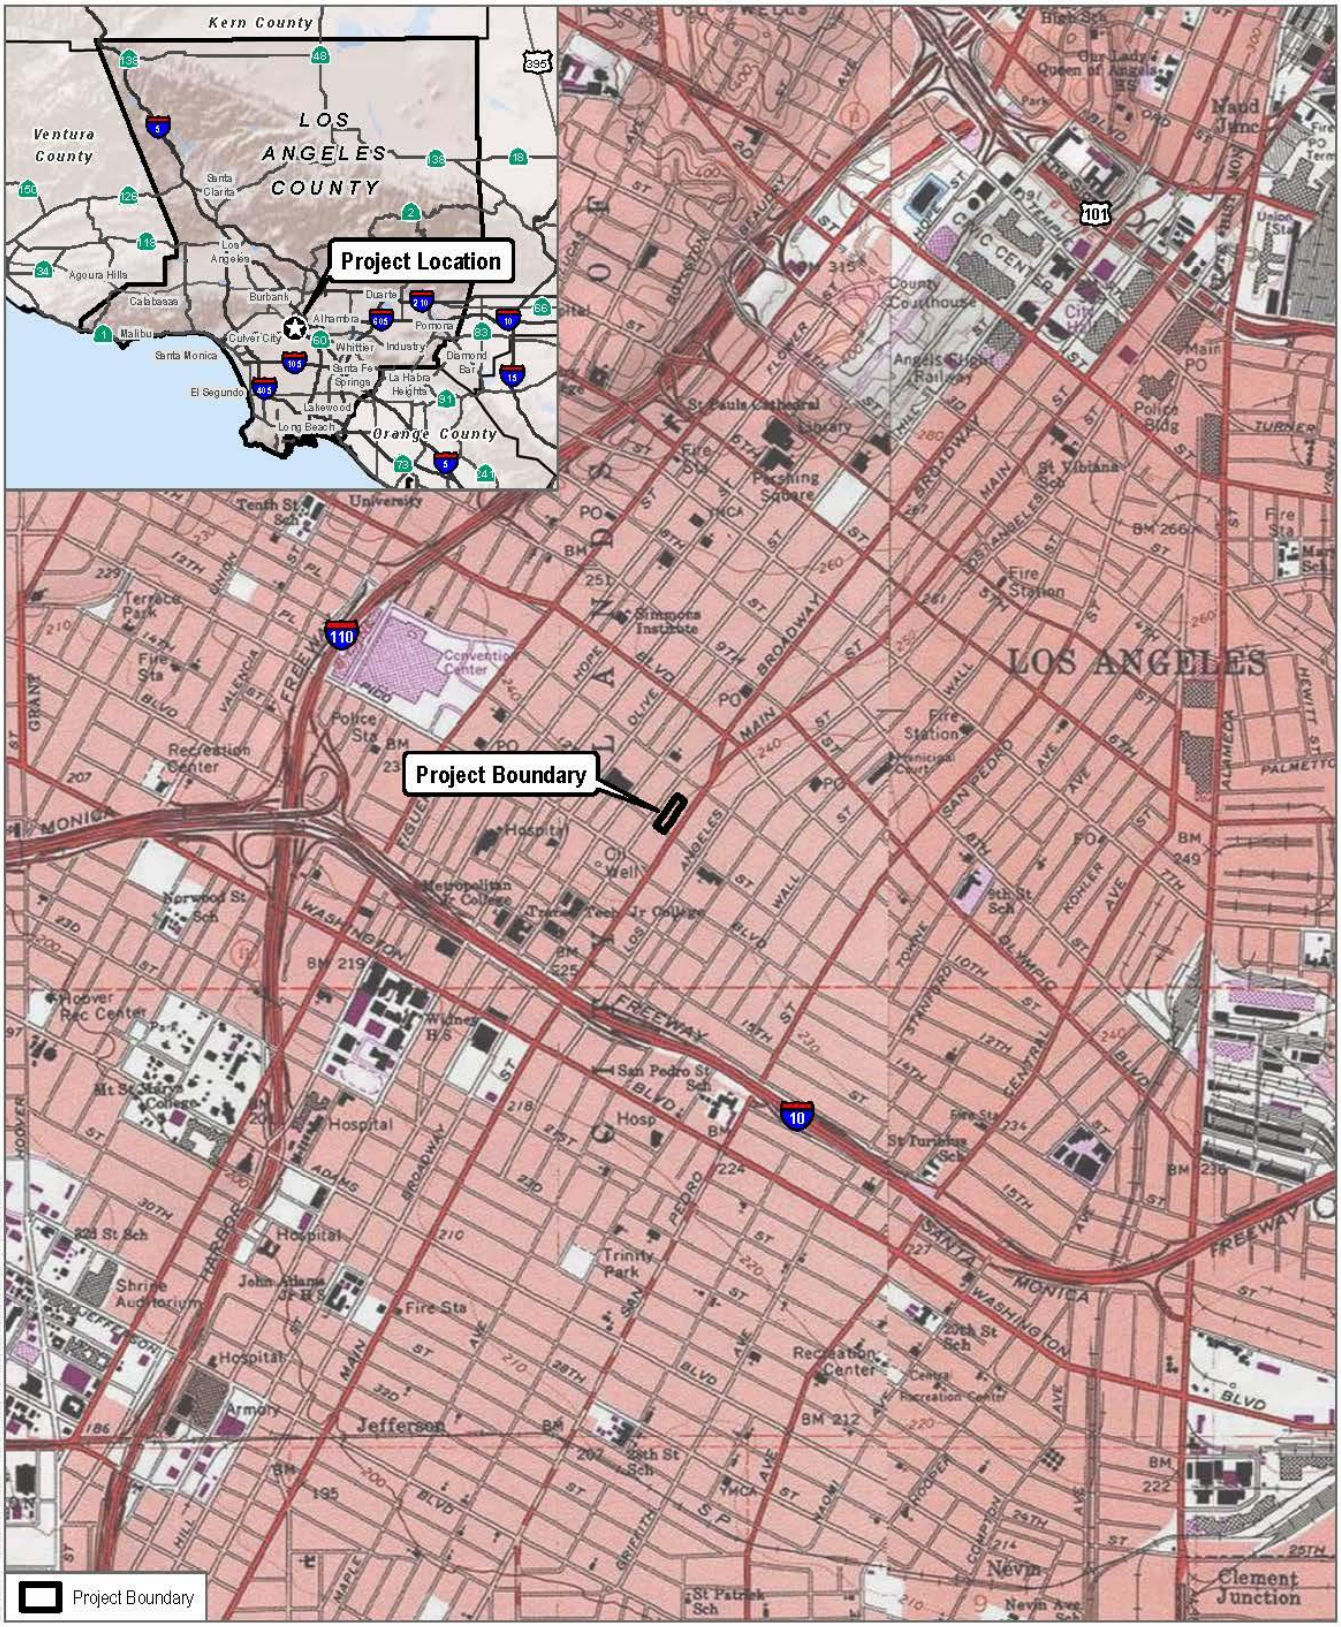
1 INTRODUCTION

JADE Enterprises, LLC retained Dudek to conduct a Tribal Cultural Resources (TCRs) study for the Main Street Towers Project (project) for compliance with the California Environmental Quality Act (CEQA). The present study documents the results of a California Historical Resources Information Systems (CHRIS) records search conducted at the South Central Coastal Information Center (SCCIC), and a search of the Native American Heritage Commission (NAHC) Sacred Lands File (SLF). This report further includes a cultural context and in-depth review of archival, academic, and ethnographic information.

1.1 Project Personnel

Adam Giacinto, MA, RPA, acted as principal archaeological and ethnographic investigator, Erica Nicolay, MA, drafted the present report, completed the SCCIC records search, and contacted the NAHC. Linda Kry, BA, provided management oversight and contributed to the present report. Micah Hale, PhD, RPA, reviewed recommendations for regulatory compliance.



1.2 Project Location

The project site is located in the Central City North Community Plan Area of the City of Los Angeles, approximately 13 miles east of the Pacific Ocean. The 48,906-square-foot site (project) is located within a heavily populated area at 1123-1165 South Main Street and encompasses five parcels including Assessor Parcel Numbers (APNs) 5139-015, -016, -017-018, and -029. The project falls on public land survey system (PLSS) Township 1 South, Range 13 West, within an unsectioned portion of the *Hollywood*, CA 7.5-minute USGS Quadrangle (Figure 1). Currently the project site contains a parking lot encompassing addresses 1123-1137 South Main Street and are collectively listed under address 1127, and four commercial retail buildings at 1147, 1151, 1155, and 1165 South Main Street. The project is bound by East 12th Street to the southwest, commercial properties and associated parking lots to the northwest, two commercial lots to the northeast, and South Main Street to the southeast (Figure 2).

1.3 Project Description

The project proposes a new mixed-use development on a site located in the Central City North Community Plan area of the City of Los Angeles. The project would include a 30-story development, with 363 apartments, above a four-story podium with 12,500 square feet of retail. The apartments would include 122 studio units, 133 one-bedroom units, 96 two-bedroom units, and 12 three bedroom units. There would be approximately 35,216 square-feet of outdoor common open space, made up of two roof decks. The project would also include approximately 8,804 square feet of landscaped area. Additionally, the project would include parking for 373 cars and 195 bicycles. All parking for the development would be locating above ground. All existing commercial retail building within the project site would be demolished.

2 REGULATORY SETTING

This section includes a discussion of the applicable state laws, ordinances, regulations, and standards governing cultural resources, which must be adhered to before and during construction of the proposed project.

2.1 State

2.1.1 The California Register of Historical Resources (CRHR)

In California, the term "historical resource" includes, but is not limited to, "any object, building, structure, site, area, place, record, or manuscript which is historically or archaeologically significant, or is significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California" (California Public Resources Code (PRC), Section 5020.1(j)). In 1992, the California legislature established the California Register of Historical Resources (CRHR) "to be used by state and local agencies, private groups, and citizens to identify the state's historical resources and to indicate what properties are to be protected, to the extent prudent and feasible, from substantial adverse change" (PRC Section 5024.1(a)). The criteria for listing resources on the CRHR were expressly developed to be in accordance with previously established criteria developed for listing in the National Register of Historic Places (NRHP), enumerated below. According to PRC Section 5024.1(c)(1–4), a resource is considered historically significant if it (i) retains "substantial integrity," and (ii) meets at least one of the following criteria:

(1) Is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage.

(2) Is associated with the lives of persons important in our past.

(3) Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values.

(4) Has yielded, or may be likely to yield, information important in prehistory or history.

In order to understand the historic importance of a resource, sufficient time must have passed to obtain a scholarly perspective on the events or individuals associated with the resource. A resource less than 50 years old may be considered for listing in the CRHR if it can be demonstrated that sufficient time has passed to understand its historical importance (see 14 California Code of Regulations [CCR] 4852(d)(2)).

The CRHR protects cultural resources by requiring evaluations of the significance of prehistoric and historic resources. The criteria for the CRHR are nearly identical to those for the NRHP, and properties listed or formally designated as eligible for listing in the NRHP are automatically listed in the CRHR, as are the state landmarks and points of interest. The CRHR also includes properties designated under local ordinances or identified through local historical resource surveys.

2.1.2 California Environmental Quality Act

As described further, the following CEQA statutes (PRC Section 21000 et seq.) and CEQA Guidelines (14 CCR 15000 et seq.) are of relevance to the analysis of archaeological, historic, and tribal cultural resources:

- PRC Section 21083.2(g) defines "unique archaeological resource."
- PRC Section 21084.1 and CEQA Guidelines Section 15064.5(a) defines "historical resources." In addition, CEQA Guidelines Section 15064.5(b) defines the phrase "substantial adverse change in the significance of an historical resource"; it also defines the circumstances when a project would materially impair the significance of a historical resource.
- PRC Section 21074(a) defines "tribal cultural resources."
- PRC Section 5097.98 and CEQA Guidelines Section 15064.5(e) set forth standards and steps to be employed following the accidental discovery of human remains in any location other than a dedicated ceremony.
- PRC Sections 21083.2(b) and 21083.2(c) and CEQA Guidelines Section 15126.4 provide information regarding the mitigation framework for archaeological and historic resources, including examples of preservation-in-place mitigation measures. Preservation in place is the preferred manner of mitigating impacts to significant archaeological sites because it maintains the relationship between artifacts and the archaeological context, and may also help avoid conflict with religious or cultural values of groups associated with the archaeological site(s).

More specifically, under CEQA, a project may have a significant effect on the environment if it may cause "a substantial adverse change in the significance of an historical resource" (PRC Section 21084.1; CEQA Guidelines Section 15064.5(b)). If a site is listed or eligible for listing in the CRHR, or included in a local register of historic resources, or identified as significant in a historical resources survey (meeting the requirements of PRC Section 5024.1(q)), it is an "historical resource" and is presumed to be historically or culturally significant for purposes of CEQA (PRC Section 21084.1; CEQA Guidelines Section 15064.5(a)). The lead agency is not precluded from determining that a resource is a historical resource even if it does not fall within this presumption (PRC Section 21084.1; CEQA Guidelines Section 15064.5(a)).

A "substantial adverse change in the significance of an historical resource" reflecting a significant effect under CEQA means "physical demolition, destruction, relocation, or alteration of the resource or its immediate surroundings such that the significance of an historical resource would be materially impaired" (CEQA Guidelines Section 15064.5(b)(1); PRC Section 5020.1(q)). In turn, the significance of a historical resource is materially impaired when a project does any of the following:

(1) Demolishes or materially alters in an adverse manner those physical characteristics of an historical resource that convey its historical significance and that justify its inclusion in, or eligibility for, inclusion in the California Register; or

(2) Demolishes or materially alters in an adverse manner those physical characteristics that account for its inclusion in a local register of historical resources pursuant to Section 5020.1(k) of the PRC or its identification in an historical resources survey meeting the requirements of Section 5024.1(g) of the PRC, unless the public agency reviewing the effects of the project establishes by a preponderance of evidence that the resource is not historically or culturally significant; or

(3) Demolishes or materially alters in an adverse manner those physical characteristics of a historical resource that convey its historical significance and that justify its eligibility for inclusion in the California Register as determined by a lead agency for purposes of CEQA (CEQA Guidelines Section 15064.5(b)(2)).

Pursuant to these sections, the CEQA inquiry begins with evaluating whether a project site contains any "historical resources," then evaluates whether that project will cause a substantial adverse change in the significance of a historical resource such that the resource's historical significance is materially impaired.

If it can be demonstrated that a project will cause damage to a unique archaeological resource, the lead agency may require reasonable efforts be made to permit any or all of these resources to be preserved in place or left in an undisturbed state. To the extent that they cannot be left undisturbed, mitigation measures are required (PRC Sections 21083.2(a)–(c)).

Section 21083.2(g) defines a unique archaeological resource as an archaeological artifact, object, or site about which it can be clearly demonstrated that without merely adding to the current body of knowledge, there is a high probability that it meets any of the following criteria:

(1) Contains information needed to answer important scientific research questions and that there is a demonstrable public interest in that information.

(2) Has a special and particular quality such as being the oldest of its type or the best available example of its type.

(3) Is directly associated with a scientifically recognized important prehistoric or historic event or person (PRC Section 21083.2(g)).

Impacts on non-unique archaeological resources are generally not considered a significant environmental impact (PRC Section 21083.2(a); CEQA Guidelines Section 15064.5(c)(4)). However, if a non-unique archaeological resource qualifies as a TCR (PRC Sections 21074(c) and 21083.2(h)), further consideration of significant impacts is required.

CEQA Guidelines Section 15064.5 assigns special importance to human remains and specifies procedures to be used when Native American remains are discovered. As described below, these procedures are detailed in PRC Section 5097.98.

2.1.3 California Health and Safety Code Section 7050.5

California law protects Native American burials, skeletal remains, and associated grave goods, regardless of their antiquity, and provides for the sensitive treatment and disposition of those remains. California Health and Safety Code Section 7050.5 requires that if human remains are discovered in any place other than a dedicated cemetery, no further disturbance or excavation of the site or nearby area reasonably suspected to contain human remains shall occur until the county coroner has examined the remains (Section 7050.5(b)). PRC Section 5097.98 also outlines the process to be followed in the event that remains are discovered. If the coroner determines or has reason to believe the remains are those of a Native American, the coroner must contact NAHC within 24 hours (Section 7050.5(c)). NAHC will notify the "most likely descendant." With the permission of the landowner, the most likely descendant may inspect the site of discovery. The inspection must be completed within 48 hours of notification of the most likely descendant by NAHC. The most likely descendant may recommend means of treating or disposing of, with appropriate dignity, the human remains and items associated with Native Americans.

2.2 Local Regulations

2.2.1 Los Angeles Historic-Cultural Monuments

Local landmarks in the City of Los Angeles are known as Historic-Cultural Monument (HCMs) and are under the aegis of the Planning Department, Office of Historic Resources. They are defined in the Cultural Heritage Ordinance as follows (Los Angeles Municipal Code Section 22.171.7, added by Ordinance No. 178,402, effective April 2, 2007):

> Historic-Cultural Monument (Monument) is any site (including significant trees or other plant life located on the site), building or structure of particular historic or cultural significance to the City of Los Angeles, including historic structures or sites in which the broad cultural, economic or social history of the nation, State or community is reflected or exemplified; or which is identified with historic personages or with important events in the main currents of national, State or local history; or which embodies the distinguishing characteristics of an architectural type specimen, inherently valuable for a study of a period, style or method of construction; or a notable work of a master builder, designer, or architect whose individual genius influenced his or her age.

This definition has been broken down into four HCM designation criteria that closely parallel the existing NRHP and CRHR criteria – the HCM:

1. Is identified with important events in the main currents of national, State or local history, or exemplifies significant contributions to the broad cultural, political, economic or social history of the nation, state, city, or community; or

2. Is associated with the lives of Historic Personages important to national, state, city, or local history; or

3. Embodies the distinctive characteristics of a style, type, period, or method of construction; or represents a notable work of a master designer, builder or architect whose genius influenced his or her age; or possesses high artistic values; or

4. Has yielded, or has the potential to yield, information important to the pre-history or history of the nation, state, city or community.

INTENTIONALLY LEFT BLANK

3 ENVIRONMENTAL SETTING

3.1 Environmental Setting and Current Conditions

The northern half of the project site was recently razed and converted into a parking lot, while the southern half of the project site is currently developed with four commercial buildings. The project site is located within a highly urbanized area, surrounded by existing and planned development. Surrounding uses in the immediate vicinity of the project site include commercial, office and residential uses to the east and west; residential uses to the north; commercial and office uses to the west; and commercial and residential uses to the south. One residential building to the northeast of the project site at the corner of South Broadway and West 11th Street, is currently under renovation.

The project site is situated in the valley representing Downtown Los Angeles, approximately 13 miles northeast of the Pacific Ocean and approximately 1.2 miles west of the Los Angeles River. Existing development is underlain by Quaternary alluvium and marine deposits, generally dating between the Pliocene and the Holocene. Soils are dominated by the Urban land, commercial, complex, associated with low-slope alluvial conditions (USDA 2019). Due the size and nature of past development associated with the surroundings structures and existing paved area native subsurface soils with potential to support the presence of cultural deposits have likely been disturbed.

INTENTIONALLY LEFT BLANK

4 CULTURAL SETTING

4.1 Prehistoric Overview

Evidence for continuous human occupation in Southern California spans the last 10,000 years. Various attempts to parse out variability in archaeological assemblages over this broad period have led to the development of several cultural chronologies; some of these are based on geologic time, most are based on temporal trends in archaeological assemblages, and others are interpretive reconstructions. To be more inclusive, this research employs a common set of generalized terms used to describe chronological trends in assemblage composition: Paleoindian (pre-5500 BC), Archaic (8000 BC–AD 500), Late Prehistoric (AD 500–1769), and Ethnohistoric (post-AD 1769).

4.1.1 Paleoindian Period (pre-5500 BC)

Evidence for Paleoindian occupation in the region is tenuous. Our knowledge of associated cultural pattern(s) is informed by a relatively sparse body of data that has been collected from within an area extending from coastal San Diego, through the Mojave Desert, and beyond. One of the earliest dated archaeological assemblages in the region is located in coastal Southern California (though contemporaneous sites are present in the Channel Islands) derives from SDI-4669/W-12 in La Jolla. A human burial from SDI-4669 was radiocarbon dated to 9,590–9,920 years before present (95.4% probability) (Hector 2006). The burial is part of a larger site complex that contained more than 29 human burials associated with an assemblage that fits the Archaic profile (i.e., large amounts of ground stone, battered cobbles, and expedient flake tools). In contrast, typical Paleoindian assemblages include large stemmed projectile points, high proportions of formal lithic tools, bifacial lithic reduction strategies, and relatively small proportions of ground stone tools. Prime examples of this pattern are sites that were studied by Emma Lou Davis (1978) on Naval Air Weapons Station China Lake near Ridgecrest, California. These sites contained fluted and unfluted stemmed points and large numbers of formal flake tools (e.g., shaped scrapers, blades). Other typical Paleoindian sites include the Komodo site (MNO-679)—a multi-component fluted point site, and MNO-680—a single component Great Basined Stemmed point site (see Basgall et al. 2002). At MNO-679 and -680, ground stone tools were rare while finely made projectile points were common.

Warren et al. (2004) claimed that a biface (prehistoric stone tool that has been flaked on both faces), manufacturing tradition present at the Harris site complex (SDI-149) is representative of typical Paleoindian occupation in the region that possibly dates between 10,365 and 8,200 BC (Warren et al. 2004). Termed San Dieguito (see also Rogers 1945), assemblages at the Harris site are qualitatively distinct from most others in region because the site has large numbers of finely made bifaces (including projectile points), formal flake tools, a biface reduction trajectory, and relatively small amounts of processing tools (see also Warren 1968). Despite the unique assemblage composition, the definition of San Dieguito as a separate cultural tradition is hotly debated. Gallegos (1987) suggested that the San Dieguito pattern is simply an inland manifestation of a broader economic pattern. Gallegos's interpretation of San Dieguito has been widely accepted in recent years, in part

because of the difficulty in distinguishing San Dieguito components from other assemblage constituents. In other words, it is easier to ignore San Dieguito as a distinct socioeconomic pattern than it is to draw it out of mixed assemblages.

The large number of finished bifaces (i.e., projectile points and non-projectile blades), along with large numbers of formal flake tools at the Harris site complex, is very different than nearly all other assemblages throughout the region, regardless of age. Warren et al. (2004) made this point, tabulating basic assemblage constituents for key early Holocene sites. Producing finely made bifaces and formal flake tools implies that relatively large amounts of time were spent for tool manufacture. Such a strategy contrasts with the expedient flake-based tools and cobble-core reduction strategy that typifies non-San Dieguito Archaic sites. It can be inferred from the uniquely high degree of San Dieguito assemblage formality that the Harris site complex represents a distinct economic strategy from non-San Dieguito assemblages.

San Dieguito sites are rare in the inland valleys, with one possible candidate, RIV-2798/H, located on the shore of Lake Elsinore. Excavations at Locus B at RIV-2798/H produced a toolkit consisting predominately of flaked stone tools, including crescents, points, and bifaces, and lesser amounts of groundstone tools, among other items (Grenda 1997). A calibrated and reservoir-corrected radiocarbon date from a shell produced a date of 6630 BC. Grenda (1997) suggested this site represents seasonal exploitation of lacustrine resources and small game and resembles coastal San Dieguito assemblages and spatial patterning.

If San Dieguito truly represents a distinct socioeconomic strategy from the non-San Dieguito Archaic processing regime, its rarity implies that it was not only short-lived, but that it was not as economically successful as the Archaic strategy. Such a conclusion would fit with other trends in Southern California deserts, where hunting-related tools were replaced by processing tools during the early Holocene (see Basgall and Hall 1990).

4.1.2 Archaic Period (8000 BC – AD 500)

The more than 2,500-year overlap between the presumed age of Paleoindian occupations and the Archaic period highlights the difficulty in defining a cultural chronology in Southern California. If San Dieguito is the only recognized Paleoindian component in the coastal Southern California, then the dominance of hunting tools implies that it derives from Great Basin adaptive strategies and is not necessarily a local adaptation. Warren et al. (2004) admitted as much, citing strong desert connections with San Dieguito. Thus, the Archaic pattern is the earliest local socioeconomic adaptation in the region (see Hale 2001, 2009).

The Archaic pattern, which has also been termed the Millingstone Horizon (among others), is relatively easy to define with assemblages that consist primarily of processing tools, such as millingstones, handstones, battered cobbles, heavy crude scrapers, incipient flake-based tools, and cobble-core reduction. These assemblages occur in all environments across the region with little variability in tool composition. Low assemblage variability over time and space among Archaic sites has been equated with cultural conservatism (see Basgall and Hall 1990; Byrd and Reddy 2002; Warren 1968; Warren et al. 2004). Despite enormous

amounts of archaeological work at Archaic sites, little change in assemblage composition occurred until the bow and arrow was adopted around AD 500, as well as ceramics at approximately the same time (Griset 1996; Hale 2009). Even then, assemblage formality remained low. After the bow was adopted, small arrow points appear in large quantities and already low amounts of formal flake tools are replaced by increasing amounts of expedient flake tools. Similarly, shaped millingstones and handstones decreased in proportion relative to expedient, unshaped ground stone tools (Hale 2009). Thus, the terminus of the Archaic period is equally as hard to define as its beginning because basic assemblage constituents and patterns of manufacturing investment remain stable, complemented only by the addition of the bow and ceramics.

4.1.3 Late Prehistoric Period (AD 500–1769)

The period of time following the Archaic and before Ethnohistoric times (AD 1769) is commonly referred to as the Late Prehistoric (Rogers 1945; Wallace 1955; Warren et al. 2004); however, several other subdivisions continue to be used to describe various shifts in assemblage composition. In general, this period is defined by the addition of arrow points and ceramics, as well as the widespread use of bedrock mortars. The fundamental Late Prehistoric assemblage is very similar to the Archaic pattern, but includes arrow points and large quantities of fine debitage from producing arrow points, ceramics, and cremations. The appearance of mortars and pestles is difficult to place in time because most mortars are on bedrock surfaces. Some argue that the Ethnohistoric intensive acorn economy extends as far back as AD 500 (Bean and Shipek 1978). However, there is no substantial evidence that reliance on acorns, and the accompanying use of mortars and pestles, occurred before AD 1400. Millingstones and handstones persisted in higher frequencies than mortars and pestles until the last 500 years (Basgall and Hall 1990); even then, weighing the economic significance of millingstone-handstone versus mortar-pestle technology is tenuous due to incomplete information on archaeological assemblages.

4.2 Ethnographic Overview

The history of the Native American communities prior to the mid-1700s has largely been reconstructed through later mission-period and early ethnographic accounts. The first records of the Native American inhabitants of the region come predominantly from European merchants, missionaries, military personnel, and explorers. These brief, and generally peripheral, accounts were prepared with the intent of furthering respective colonial and economic aims and were combined with observations of the landscape. They were not intended to be unbiased accounts regarding the cultural structures and community practices of the newly encountered cultural groups. The establishment of the missions in the region brought more extensive documentation of Native American communities, though these groups did not become the focus of formal and in-depth ethnographic study until the early twentieth century (Bean and Shipek 1978; Boscana 1846; Geiger and Meighan 1976; Harrington 1934; Laylander 2000; Sparkman 1908; White 1963). The principal intent of these researchers was to record the precontact, culturally specific practices, ideologies, and languages that had survived the destabilizing effects of missionization and colonialism. This research, often understood as "salvage ethnography," was driven by the understanding that traditional knowledge was being lost due to the impacts of modernization and cultural

assimilation. Alfred Kroeber applied his "memory culture" approach (Lightfoot 2005, p. 32) by recording languages and oral histories within the region. Ethnographic research by Dubois, Kroeber, Harrington, Spier, and others during the early twentieth century seemed to indicate that traditional cultural practices and beliefs survived among local Native American communities.

It is important to note that even though there were many informants for these early ethnographies who were able to provide information from personal experiences about native life before the Europeans, a significantly large proportion of these informants were born after 1850 (Heizer and Nissen 1973); therefore, the documentation of pre-contact, aboriginal culture was being increasingly supplied by individuals born in California after considerable contact with Europeans. As Robert F. Heizer (1978) stated, this is an important issue to note when examining these ethnographies, since considerable culture change had undoubtedly occurred by 1850 among the Native American survivors of California. This is also a particularly important consideration for studies focused on TCRs; where concepts of "cultural resource" and the importance of traditional cultural places are intended to be interpreted based on the values expressed by present-day Native American representatives and may vary from archaeological values (Giacinto 2012).

Based on ethnographic information, it is believed that at least 88 different languages were spoken from Baja California Sur to the southern Oregon state border at the time of Spanish contact (Johnson and Lorenz 2006, p. 34). The distribution of recorded Native American languages has been dispersed as a geographic mosaic across California through six primary language families (Golla 2007).

Victor Golla has contended that one can interpret the amount of variability within specific language groups as being associated with the relative "time depth" of the speaking populations (Golla 2007, p. 80) A large amount of variation within the language of a group represents a greater time depth then a group's language with less internal diversity. One method that he has employed is by drawing comparisons with historically documented changes in Germanic and Romantic language groups. Golla has observed that the "absolute chronology of the internal diversification within a language family" can be correlated with archaeological dates (2007, p. 71). This type of interpretation is modeled on concepts of genetic drift and gene flows that are associated with migration and population isolation in the biological sciences.

The tribes of this area have traditionally spoken Takic languages that may be assigned to the larger Uto–Aztecan family (Golla 2007, p. 74). These groups include the Gabrielino, Cahuilla, and Serrano. Golla has interpreted the amount of internal diversity within these language-speaking communities to reflect a time depth of approximately 2,000 years. Other researchers have contended that Takic may have diverged from Uto–Aztecan ca. 2600 BC–AD 1, which was later followed by the diversification within the Takic speaking tribes, occurring approximately 1500 BC–AD 1000 (Laylander 2010).

4.2.1 Gabrielino/Tongva

Based on evidence presented through past archaeological investigations, the Gabrielino appear to have arrived in the Los Angeles Basin around 500 B.C. Surrounding native groups included the Chumash and Tataviam to the northwest, the Serrano and Cahuilla to the northeast, and the Juaneño and Luiseño to the southeast.

The names by which Native Americans identified themselves have, for the most part, been lost and replaced by those derived by the Spanish people administering the local Missions. These names were not necessarily representative of a specific ethnic or tribal group, and traditional tribal names are unknown in the post-Contact period. The name "Gabrielino" was first established by the Spanish from the San Gabriel Mission and included people from the established Gabrielino area as well as other social groups (Bean and Smith 1978; Kroeber 1925). Many modern Native Americans commonly referred to as Gabrielino identify themselves as descendants of the indigenous people living across the plains of the Los Angeles Basin and refer to themselves as the Tongva (King 1994). This term is used here in reference to the pre-Contact inhabitants of the Los Angeles Basin and their descendants.

The Tongva established large, permanent villages along rivers and streams, and lived in sheltered areas along the coast. Tongva lands included the greater Los Angeles Basin and three Channel Islands, San Clemente, San Nicolas, and Santa Catalina and stretched from the foothills of the San Gabriel Mountains to the Pacific Ocean. Tribal population has been estimated to be at least 5,000 (Bean and Smith 1978), but recent ethnohistoric work suggests a much larger population, approaching 10,000 (O'Neil 2002). Archaeological sites composed of villages with various sized structures have been identified through the Los Angeles Basin. Within the permanent village sites, the Tongva constructed large, circular, domed houses made of willow poles thatched with tule, each of which could hold upwards of 50 people (Bean and Smith 1978). Other structures constructed throughout the villages probably served as sweathouses, menstrual huts, ceremonial enclosures, and communal granaries. Cleared fields for races and games, such as lacrosse and pole throwing, were created adjacent to Tongva villages (McCawley 1996).

The largest, and best documented, ethnographic Tongva village in the vicinity was that of *Yanga* (also known as *Yaangna*, *Janga*, and *Yabit*), which was in the vicinity of the downtown Los Angeles. It is important to note that the village was reported to have been identified multiple times throughout the 19th century within the area located north of present day Temple Street as far as Union Station. This falls approximately 1.2 miles to 2 miles north of the Project site, as will be discussed in greater detail in following sections (McCawley 1996:56-57; NEA and King 2004). This village was reportedly first encountered by the Portola expedition in 1769. In 1771, Mission San Gabriel was established. Yanga provided a large number of the recruitments to this mission; however, following the founding of the Pueblo of Los Angeles in 1781, opportunities for local paid work became increasingly common, which had the result of reducing the number of Native American neophytes from the immediately surrounding area (NEA and King 2004). Mission records indicate that 179 Gabrieleno inhabitants of Yanga were recruited to San Gabriel Mission (NEA and King 2004: 104). Based on this

information, Yanga may have been the most populated village in the Western Gabrieleno territory. Second in size, and less thoroughly documented, the village of Cahuenga was located slightly closer, just north of the Cahuenga Pass

Father Juan Crespi passed through the area near this village on August 2-3, 1769. The pertinent sections from his translated diary are provided here:

> Sage for refreshment is very plentiful at all three rivers and very good here at the Porciúncula [the Los Angeles River]. At once on our reaching here, eight heathens came over from a good sized village encamped at this pleasing spot among some trees. They came bringing two or three large bowls or baskets half-full of very good sage with other sorts of grass seeds that they consume; all brought their bows and arrows but with the strings removed from the bows. In his hands the chief bore strings of shell beads of the sort that they use, and on reaching the camp they threw the handfuls of these beads at each of us. Some of the heathens came up smoking on pipes made of baked clay, and they blew three mouthfuls of smoke into the air toward each one of us. The Captain and myself gave them tobacco, and he gave them our own kind of beads, and accepted the sage from them and gave us a share of it for refreshment; and very delicious sage it is for that purpose.

We set out at a half past six in the morning from this pleasing, lush river and valley of Our Lady of Angeles of La Porciúncula. We crossed the river here where it is carrying a good deal of water almost at ground level, and on crossing it, came into a great vineyard of grapevines and countless rose bushes having a great many open blossoms, all of it very dark friable soil. Keeping upon a westerly course over very grass-grown, entirely level soils with grand grasses, on going about half a league we came upon the village belonging to this place, where they came out to meet and see us, and men, women, and children in good numbers, on approaching they commenced howling at us though they had been wolves, just as before back at the spot called San Francisco Solano. We greeted them and they wished to give us seeds. As we had nothing at hand to carry them in, we refused [Brown 2002:339-341, 343].The environment surrounding the Tongva included mountains, foothills, valleys, deserts, riparian, estuarine, and open and rocky coastal eco-niches. Like most native Californians, acorns (the processing of which was established by the early Intermediate Period) were the staple food source. Acorns were supplemented by the roots, leaves, seeds, and fruits of a wide variety of flora (e.g., islay, cactus, yucca, sages, and agave). Fresh water and saltwater fish, shellfish, birds, reptiles, and insects, as well as large and small mammals, were also consumed (Bean and Smith 1978:546; Kroeber 1925; McCawley 1996).

Tools and implements used by the Tongva to gather and collect food resources included the bow and arrow, traps, nets, blinds, throwing sticks and slings, spears, harpoons, and hooks. Trade between the mainland and the Channel Islands Groups was conducted using plank canoes as well as tule balsa canoes. These canoes were also used for general fishing and travel (McCawley 1996).

The collected food resources were processed food with hammerstones and anvils, mortars and pestles, manos and metates, strainers, leaching baskets and bowls, knives, bone saws, and wooden drying racks. Catalina Island steatite was used to make ollas and cooking vessels (Blackburn 1963; Kroeber 1925; McCawley 1996).

The Chinigchinich cult, centered on the last of a series of heroic mythological figures, was the basis of religious life at the time of Spanish contact. The Chinigchinich cult not only provided laws and institutions, but it also taught people how to dance, which was the primary religious act for this society. The Chinigchinich religion seems to have been relatively new when the Spanish arrived. It was spreading south into the Southern Takic groups even as Christian missions were being built. This cult may be the result of a mixture of native and Christian belief systems and practices (McCawley 1996).

Inhumation of deceased Tongva was the more common method of burial on the Channel Islands while neighboring mainland coast people performed cremation (Harrington 1942; McCawley 1996). Cremation ashes have been found buried within stone bowls and in shell dishes (Ashby and Winterbourne 1966), as well as scattered among broken ground stone implements (Cleland et al. 2007). Supporting this finding in the archaeological record, ethnographic descriptions have provided an elaborate mourning ceremony. Offerings varied with the sex and status of the deceased (Johnston 1962; McCawley 1996; Reid 1926). At the behest of the Spanish missionaries, cremation essentially ceased during the post-Contact period (McCawley 1996).

4.3 Historic-Period Overview

Post-Contact history for the State of California is generally divided into three periods: the Spanish Period (1769–1821), Mexican Period (1821–1848), and American Period (1846–present). Although Spanish, Russian, and British explorers visited the area for brief periods between 1529 and 1769, the Spanish Period in California begins with the establishment in 1769 of a settlement at San Diego and the founding of Mission San Diego de Alcalá, the first of 21 missions constructed between 1769 and 1823. Independence from Spain in 1821 marks the beginning of the Mexican Period, and the signing of the Treaty of Guadalupe Hidalgo in 1848, ending the Mexican–American War, signals the beginning of the American Period when California became a territory of the United States.

4.3.1 Spanish Period (1769–1821)

Spanish explorers made sailing expeditions along the coast of southern California between the mid-1500s and mid-1700s. In search of the legendary Northwest Passage, Juan Rodríquez Cabrillo stopped in 1542 at present-day San Diego Bay. With his crew, Cabrillo explored the shorelines of present Catalina Island as well as San Pedro and Santa Monica Bays. Much of the present California and Oregon coastline was mapped and recorded in the next half-century by Spanish naval officer Sebastián Vizcaíno. Vizcaíno's crew also landed on Santa Catalina Island and at San Pedro and Santa Monica Bays, giving each location its long-standing name. The Spanish crown laid claim to California based on the surveys conducted by Cabrillo and Vizcaíno (Bancroft 1885; Gumprecht 1999).

More than 200 years passed before Spain began the colonization and inland exploration of Alta California. The 1769 overland expedition by Captain Gaspar de Portolá marks the beginning of California's Historic period, occurring just after the King of Spain installed the Franciscan Order to direct religious and colonization matters in assigned territories of the Americas. With a band of 64 soldiers, missionaries, Baja (lower) California Native Americans, and Mexican civilians, Portolá established the Presidio of San Diego, a fortified military outpost, as the first Spanish settlement in Alta California. In July of 1769, while Portolá was exploring southern California, Franciscan Fr. Junípero Serra founded Mission San Diego de Alcalá at Presidio Hill, the first of the 21 missions that would be established in Alta California by the Spanish and the Franciscan Order between 1769 and 1823.

The Portolá expedition first reached the present-day boundaries of Los Angeles in August 1769, thereby becoming the first Europeans to visit the area. Father Crespi named "the campsite by the river Nuestra Señora la Reina de los Angeles de la Porciúncula" or "Our Lady the Queen of the Angels of the Porciúncula." Two years later, Friar Junípero Serra returned to the valley to establish a Catholic mission, the Mission San Gabriel Arcángel, on September 8, 1771 (Kyle 2002). Mission San Fernando Rey de España was established nearly 30 years later on September 8, 1797.

4.3.2 Mexican Period (1821–1846)

A major emphasis during the Spanish Period in California was the construction of missions and associated presidios to integrate the Native American population into Christianity and communal enterprise. Incentives were also provided to bring settlers to pueblos or towns, but just three pueblos were established during the Spanish Period, only two of which were successful and remain as California cities (San José and Los Angeles). Several factors kept growth within Alta California to a minimum, including the threat of foreign invasion, political dissatisfaction, and unrest among the indigenous population. After more than a decade of intermittent rebellion and warfare, New Spain (Mexico and the California territory) won independence from Spain in 1821. In 1822, the Mexican legislative body in California ended isolationist policies designed to protect the Spanish monopoly on trade, and decreed California ports open to foreign merchants (Dallas 1955).

Extensive land grants were established in the interior during the Mexican Period, in part to increase the population inland from the more settled coastal areas where the Spanish had first concentrated their colonization efforts. Nine ranchos were granted between 1837 and 1846 in the future Orange County (Middlebrook 2005). Among the first ranchos deeded within the future Orange County were Manuel Nieto's Rancho Las Bolsas (partially in future Los Angeles County), granted by Spanish Governor Pedro Fages in 1784, and the Rancho Santiago de Santa Ana, granted by Governor José Joaquín Arrillaga to José Antonio Yorba and Juan Pablo Peralta in 1810 (Hallan-Gibson 1986). The secularization of the missions (enacted 1833) following Mexico's independence from Spain resulted in the subdivision of former mission lands and establishment of many additional ranchos.

During the supremacy of the ranchos (1834–1848), landowners largely focused on the cattle industry and devoted large tracts to grazing. Cattle hides became a primary southern California export, providing a

commodity to trade for goods from the east and other areas in the United States and Mexico. The number of nonnative inhabitants increased during this period because of the influx of explorers, trappers, and ranchers associated with the land grants. The rising California population contributed to the introduction and rise of diseases foreign to the Native American population, who had no associated immunities.

4.3.3 American Period (1846–Present)

War in 1846 between Mexico and the United States precipitated the Battle of Chino, a clash between resident Californios and Americans in the San Bernardino area. The Mexican-American War ended with the Treaty of Guadalupe Hidalgo in 1848, ushering California into its American Period.

California officially became a state with the Compromise of 1850, which also designated Utah and New Mexico (with present-day Arizona) as U.S. Territories (Waugh 2003). Horticulture and livestock, based primarily on cattle as the currency and staple of the rancho system, continued to dominate the southern California economy through 1850s. The Gold Rush began in 1848, and with the influx of people seeking gold, cattle were no longer desired mainly for their hides but also as a source of meat and other goods. During the 1850s cattle boom, rancho vaqueros drove large herds from southern to northern California to feed that region's burgeoning mining and commercial boom. Cattle were at first driven along major trails or roads such as the Gila Trail or Southern Overland Trail, then were transported by trains when available. The cattle boom ended for southern California as neighbor states and territories drove herds to northern California at reduced prices. Operation of the huge ranchos became increasingly difficult, and droughts severely reduced their productivity (Cleland 2005).

4.4 Project Site Historic Context

4.4.1 City of Los Angeles

In 1781, a group of 11 Mexican families traveled from Mission San Gabriel Arcángel to establish a new pueblo called El Pueblo de la Reyna de Los Angeles (The Pueblo of the Queen of the Angels). This settlement consisted of a small group of adobe-brick houses and streets and would eventually be known as the Ciudad de Los Angeles (City of Angels), which incorporated on April 4, 1850, only two years after the Mexican-American War and five months prior to California achieving statehood. Settlement of the Los Angeles region continued in the early American Period. The County of Los Angeles was established on February 18, 1850, one of 27 counties established in the months prior to California acquiring official statehood in the United States. Many of the ranchos in the area now known as Los Angeles County remained intact after the United States took possession of California; however, a severe drought in the 1860s resulted in many of the ranchos being sold or otherwise acquired by Americans. Most of these ranchos were subdivided into agricultural parcels or towns (Dumke 1944). Nonetheless, ranching retained its importance, and by the late 1860s, Los Angeles was one of the top dairy production centers in the country (Rolle 2003). By 1876, Los Angeles County reportedly had a population of 30,000 persons (Dumke 1944).

Los Angeles maintained its role as a regional business center and the development of citriculture in the late 1800s and early 1900s further strengthened this status (Caughey and Caughey 1977). These factors, combined with the expansion of port facilities and railroads throughout the region, contributed to the impact of the real estate boom of the 1880s on Los Angeles (Caughey and Caughey 1977; Dumke 1944).

By the late 1800s, government leaders recognized the need for water to sustain the growing population in the Los Angeles area. Irish immigrant William Mulholland personified the city's efforts for a stable water supply (Dumke 1944; Nadeau 1997). By 1913, the City of Los Angeles had purchased large tracts of land in the Owens Valley and Mulholland planned and completed the construction of the 240-mile aqueduct that brought the valley's water to the city (Nadeau 1997).

Los Angeles continued to grow in the twentieth century, in part due to the discovery of oil in the area and its strategic location as a wartime port. The county's mild climate and successful economy continued to draw new residents in the late 1900s, with much of the county transformed from ranches and farms into residential subdivisions surrounding commercial and industrial centers. Hollywood's development into the entertainment capital of the world and southern California's booming aerospace industry were key factors in the county's growth in the twentieth century.

5 BACKGROUND RESEARCH

5.1 SCCIC Records Search

On January 31, 2019, Dudek completed a search of the CHRIS at the SCCIC, located on the campus of California State University, Fullerton of the project site and a 0.5 mile record search area. This search included mapped prehistoric, historical, and built-environment resources; Department of Parks and Recreation (DPR) site records; technical reports; archival resources; and ethnographic references. The confidential records search results are also provided in Appendix A.

5.1.1 Previously Conducted Cultural Resource Studies

Results of the cultural resources records search indicated that 38 previous cultural resource studies have been conducted within the records search area between 1978 and 2017. None of the studies identified overlap the project site. Table 1, below, summarizes all 38 previously conducted cultural resource studies within the 0.5-mile record search area.

One report, LA-13239 prepared by Cogstone Environmental, identifies the extent of the Zanja Madre (Gust 2017). The Zanja Madre network and subsequent additional zanja segments were Los Angeles' original irrigation system, and the network is thought to have run throughout the city in various branches, predominantly along major roads. The location of many of the segments are unconfirmed; however, the believed route has been mapped by Gumprecht (2001) who incorporated information from multiple historical works, particularly a report on irrigation by State Engineer William Hamilton Hall (Hall 1888). Using Gumprecht's 2001 work, Cogstone Environmental prepared a series of maps for the Downtown Los Angeles area, which show two unconfirmed sections of a historical-era water conveyance system. One segment is mapped as running south along or near Los Angeles Street to the east and the second segment is mapped as running south along or near Olive Street to the west, approximately 0.19 east and 0.25 miles west of the project site, respectively.

5.1.2 Previously Recorded Cultural Resources

SCCIC records indicate that a total of 47 previously recorded cultural resources fall within the records search area, none of which are within the project site. Of these, 46 are historic-era buildings or structures. The remaining resource consists of a historic-era trash deposit (P-19-002454). Table 2 summarizes all previously recorded resources identified during the CHRIS record search. Confidential Appendix A includes the complete SCCIC records search results, including information related to historical buildings. No prehistoric sites or resources documented to be of specific Native American origin have been previously recorded within a half-mile of the project site. No resources identified within this records search area are documented in association with historic-era zanja features, which has been represented on historical maps to have run 0.25 miles west of the project site. No physical evidence of the zanja system has been documented to date in the vicinity. A brief history and explanation of the zanja system is provided below.

The Zanja System

As previously mentioned, Report LA-13229 has mapped segments of the Zanja Madre running approximately 0.25 miles northwest and 0.19 miles to the southeast of the project area (Gust 2012). This report uses historic and ethnographic evidence to map the zanja network, and no physical evidence of the zanja system has been identified or otherwise confirmed along this mapped segment nearest the project site. The closest physically confirmed segment of the zanja network has been unearthed approximately 2 miles to the northeast of the project site, the most recent being at Blossom Plaza on North Broadway (2.2 miles northeast) in 2014.

The Zanja Madre network and subsequent additional zanja segments were Los Angeles' original irrigation system, and the network is thought to have run throughout the city in various branches, predominantly along major roads. The water conveyance system consisted of interconnected ditches known as "zanjas" and was established in 1781 at the same time that El Pueblo de la Reyna de Los Angeles (The Town of Los Angeles) was founded. The first segment of the system was known as the Zanja Madre, and is thought to have run

from a point on the Los Angeles River north of the city, south near present-day Main Street terminating near the Plaza, present-day Union Station (Gumprecht 2001: 58). Though researchers and the public often use the term "Zanja Madre" to refer to the larger water conveyance network, this term more accurately describes just the initial component established during the Spanish Period. The segments that were added on later were numbered and grouped based on what part of the city they reached and where on the Los Angeles River they drew water. The size of Los Angeles did not necessitate an expansive system for the first half of the nineteenth century, and there were only three additional segments by 1849. As the city rapidly grew, water become a growing concern particularly because much of the land was agricultural and irrigation was crucial to farmers' success. As a result, several new zanja segments were constructed post-1855 (Gumprecht 2001: 58-61).

By 1870, the Zanja Madre, being the most important canal in the system, was maintained at a width of ten feet along its entire length, and eight other zanja segments had also been built within the city (Gumprecht 2001: 61). By the late nineteenth century, there were a total of 19 zanja segments. The segments had been lined with concrete or cement piping, which was more efficient and safer than open ditches (Gumprecht 2001: 72, 88). The Zanja system largely faded into disuse by the early twentieth century as the system began to face increased criticism for its inefficiency and imprecision (Gumprecht 2001: 89).

The zanja segments that are mapped nearest to the project site have been identified in Gumprecht 2001 and Hall 1888 as Zanja No. 8 (0.25 miles west of the project site) and Zanja No. 5 (0.19 miles to the east). Zanja No. 8 has been described as including 8,300 feet, all of which was cement pipe or open concrete conduit by 1888, which ran from the end of the Zanja Madre, at the intersection of South Main Street and East 1st Street, south down South Main Street until East 8th Street where it turned roughly west until reaching South Olive Street. There it turned and ran generally southwest until eventually meeting another zanja segment, Zanja No. 8-R, at the intersection of West 18th Street and South Figueroa Street (Gumprecht 2001: 76-77; Hall 1888: 543-551). Zanja No. 5 also runs from the end of the Zanja Madre, and runs in a generally southern route, meandering between Wall Street and South Main Street until reaching West Washington Boulevard, at which point Zanja No. 5 runs directly in line with South Main Street. At East Adams Boulevard, an offshoot of Zanja No. 5 runs directly west along East Adams Boulevard before turning due south along South Grand Avenue. Both segments of Zanja No. 5 terminate at West Exposition Boulevard.

5.1.3 Review of Historic Aerials and Maps

Dudek consulted historic maps and aerial photographs to understand development of the project site and surrounding properties. Topographic maps are available from 1894 to the present and aerial images are available from 1952 to the present (NETR 2018).

Topographic maps indicate that the project site and vicinity had already begun to be developed by the late nineteenth century. Over the first three decades of the twentieth century the project site and vicinity experienced an increase in development, though topographic maps are generally inadequate in capturing the minute changes within the project site and surrounding blocks to acquire an in depth understanding of

development over time. By the 1930s topographic maps show the project site and vicinity as completely developed.

The first historic aerial from 1948 shows that the project site and immediate vicinity were completely developed by this time. The area is characterized mainly by medium sized developments, possibly apartment complexes, with associated parking lots in some cases. The project site itself appears to be developed with five buildings and two parking lots. The lots directly to the west of the project site were developed with parking lots and two buildings, which may be the extant structures. There are no obvious changes to the project site vicinity between 1948 and 1972, though there were several buildings that had been demolished in the immediate vicinity during this time. Between 1964 and 1972, historic aerials indicate that two new buildings had been built in the northern half of the project site. Between 1980 and 1989, the project site had been completely built out and several other developments had been completed in the nearby vicinity. There were no changes to the project site between 1989 and 2014, though the immediate vicinity experienced various developments and redevelopments during this time. Between 2014 and 2017, the three northern buildings in the project site were demolished and a parking lot was developed in their place.

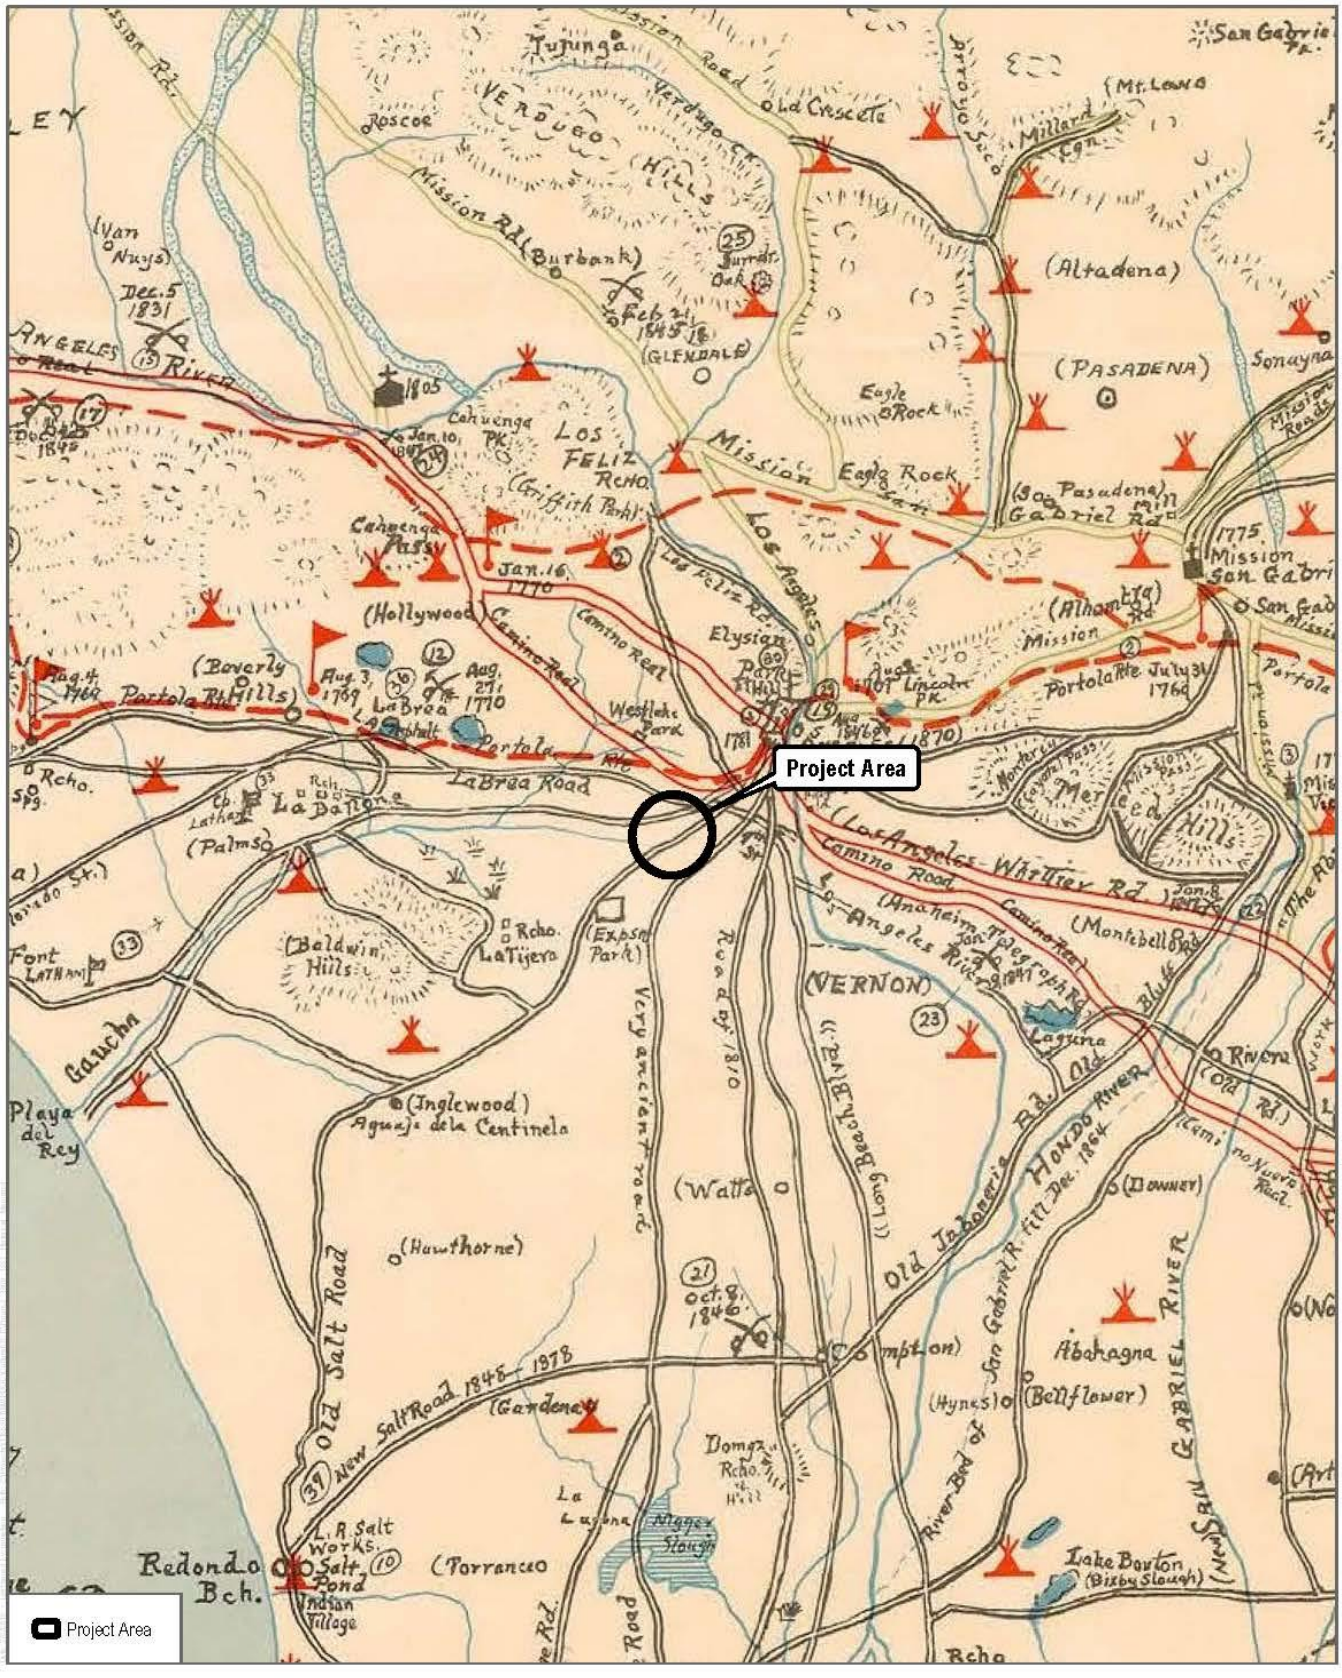
5.2 Native American Correspondence

5.2.1 NAHC Sacred Lands File Search

As part of the process of identifying cultural resources within or near the project, Dudek contacted the NAHC to request a review of the SLF on January 29, 2019. The NAHC emailed a response on January 31, 2019, which indicated that the SLF search was completed with negative results. Because the SLF search does not include an exhaustive list of Native American cultural resources, the NAHC suggested contacting Native American individuals and/or tribal organizations who may have direct knowledge of cultural resources in or near the Project. The NAHC provided the contact information of ten individuals and/or tribal organizations with whom to contact along with the SLF search results. No additional tribal outreach was conducted by Dudek. Documents related to the NAHC SLF search are included in Appendix B.

5.3 Ethnographic Research and Review of Academic Literature

Dudek cultural resources specialists reviewed pertinent academic and ethnographic literature for information pertaining to past Native American use of the project site. This review included consideration of sources commonly identified though consultation, notably the 1938 Kirkman-Harriman Historical Map often referenced by the Gabrieleño Band of Mission Indians-Kizh Nation (Figure 3). Based on this map, the project site is located directly north of a road labeled "Old Salt Road," which ran from roughly the location of present day Union Station southwest until reaching South La Cienega where it turns south, running until hitting the hills of Palos Verdes. At this point the road runs at the base of the hills until terminating at San Pedro Bay. The project site is approximately 2.5 miles southwest of the intersection of multiple roads and trails. The nearest Native American settlement, identified by a red Native American structure on the map, is located approximately 6 miles southwest, south of Baldwin hills. It should be noted that this map is highly generalized



due to scale and age, and may be somewhat inaccurate with regard to distance and location of mapped features. Additionally, this map was prepared based on review of historic documents and notes more than 100 years following secularization of the missions (in 1833). Although the map contains no specific primary references, it matches with the details documented by the Portola expedition (circa 1769-1770). While the map is a valuable representation of post-mission history, substantiation of the specific location and uses of the represented individual features would require review of archaeological or other primary documentation on a case-by-case basis.

At the time of Portola's expedition, and through the subsequent mission period, the area surrounding the project site would have been occupied by Western Gabrieleno/Tongva inhabitants (Figure 4 and Figure 5). Use of Gabrielino as a language has not been documented since the 1930s (Golla 2011). One study made an effort to map the traditional Gabrieleno/Tongva cultural use area through documented family kinships included in mission records (NEA and King 2004). This process allowed for the identification of clusters of tribal villages (settlements) with greater relative frequencies of related or married individuals than surrounding areas (Figure 6). Traditional cultural use area boundaries, as informed by other ethnographic and archaeological evidence, were then drawn around these clusters. The relative sizes of these villages were also inferred from their relative number of mission-period recruits. The nearest village site to the project site was *Yaanga* (also called *Yabit* in NEA and King 2004), located in roughly the area of the present Los Angeles Plaza Church just west of Union Station, approximately 2.6 miles northeast of the project site. *Yaanga*, though not depicted on the Kirkman-Harriman map, is referenced in several archaeological and ethnographic works including Dakin 1978, Johnston 1962, McCawley 1996, and Morris et al. 2016. *Yaanga* is described as being the "Indian precursor of modern Los Angeles" as the city was originally established within its boundaries (McCawley 1996: 57). Mission records indicate that 179 Gabrieleño inhabitants of *Yaanga* were recruited to San Gabriel Mission, indicating that it may have been the most populated village in the Western Gabrieleño territory (NEA and King 2004: 104).

In general, the mapped position of *Yaanga* has been substantiated through archaeological evidence, although the archaeological record has been substantially compromised by rapid and early urbanization throughout much of the region. Ethnographic research indicates that after the founding of Los Angeles, the Native American settlement of *Yaanga* was forcibly moved, and by 1813 Native Americans in the area had regrouped to the south. This new village, known as *Rancheria de los Poblanos,* was located near the northwest corner of Los Angeles and First Street, approximately 1.3 miles north of the project site (Morris et al 201: 94). This second village site was only occupied until about 1836, after which Native American communities in Los Angeles were relocated gain east of the Los Angeles River. After 1836, Native Americans were forcibly relocated another three times, in 1845, 1846, and 1847 (Morris et al. 2016: 94).

No archaeological evidence of the nearest village depicted on the 1938 Kirkman-Harriman map was provided in the SCCIC records search results or review of other archaeological information, however these fell outside of the archaeological records search area. Based on review of pertinent academic and ethnographic information, the project falls within the boundaries of the Gabrieleño/Tongva traditional territory, however,

no Native American TCRs have been previously documented in areas that may be impacted by the project. However, though the project site is not documented within the noted boundaries of any mapped villages, it is located near several natural resources that may have been utilized by prehistoric and protohistoric peoples, particularly the Los Angeles River, which ran directly to the east of the project site.

6 FINDINGS AND RECOMMENDATIONS

6.1 Summary of Impacts to Tribal Cultural Resources

A project with an effect that may cause a substantial adverse change in the significance of a TCR is a project that may have a significant effect on the environment (PRC Section 21084.2.). No Native American resources have been identified within the project site or the surrounding search radius through the records search at the SCCIC (completed January 31, 2019) or through a search of the NAHC SLF (completed January 31, 2019). Ethnographic research indicates that, the Project site is located approximately 2.6 miles south of the location of a Native American village, known as *Yaanga*, and near natural resources which would have been important to Native Americans in prehistoric and protohistoric times. However, the Project site and surrounding neighborhoods have been extensively developed throughout the twentieth century. Based on current information, if the following recommendations are followed, impacts to TCRs would be less than significant.

6.2 Recommendations

An appropriate approach to potential impacts to TCRs is developed in response to the identified presence of a TCR by California Native American Tribes through the process of consultation.

While no TCRs are anticipated to be affected by the project, the City has established a standard condition of approval to address inadvertent discovery of TCRs. Should TCRs be inadvertently encountered, this condition of approval provides for temporarily halting construction activities near the encounter and notifying the City and Native American tribes that have informed the City they are traditionally and culturally affiliated with the geographic area of the proposed project. If the City determines that a potential resource appears to be a TCR (as defined by PRC Section 21074), the City would provide any affected tribe a reasonable period of time to conduct a site visit and make recommendations regarding the monitoring of future ground disturbance activities, as well as the treatment and disposition of any discovered TCRs. The Applicant would then implement the tribe's recommendations if a qualified archaeologist reasonably concludes that the tribe's recommendations are reasonable and feasible. The recommendations would then be incorporated into a TCR monitoring plan and once the plan is approved by the City, ground disturbance activities could recommence. In accordance with the condition of approval, all activities would be conducted in accordance with regulatory requirements. As a result, potential impacts to TCRs would continue to be less than significant.
