Attention: Mr. Arnold Vice

Dear Mr. Vice,

Smith-Emery GeoServices herewith submits our "Environmental Soil and Soil Vapor Sampling, 11640-11730 Valley Boulevard, El Monte, California," SEG Report No. G-20-2308 prepared for Arrow Environmental International. If you have any questions regarding this document, please contact us at (213) 699-7812.

Respectfully submitted,

SMITH - EMERY GEOSERVICES

AYESHA SYEDA
Manager of GeoServices

EXECUTIVE SUMMARY

Smith-Emery GeoServices (SEG) has conducted an Environmental Soil and Vapor Sampling at 11640-11730 Valley Boulevard in the City of El Monte, County of Los Angeles, and State of California. The scope of work was based on a SEG Soil and Vapor Workplan dated February 2, 2021 and approval letter from Los Angeles County Fire Department dated February 12, 2021.

SEG was retained by Arrow Environmental International to conduct this investigation, the scope of which was based on review of the letter prepared by SCS Engineers dated July 14, 2020 and Terracon Phase I ESA report dated June 10, 2020 that recommended further investigation with regulatory agency oversight.

Previous environmental investigations included a 2020 Terracon Phase I report that recommended investigation at a dispenser area, automotive service areas, paint booths and associated areas, clarifier, and patched/service bay areas. A no further action was required at the site in connection with the three former USTs due to known removal of tanks and associated impacted soils resulting in a regulatory closure letter.

Low concentrations of TPH and PCE were found in shallow soil samples (2 and 5 feet) in the previous site investigations conducted by EGL in July of 2013; no further action was recommended by EGL. Additional investigation (8 soil boring/14 soil vapor) completed by EGL in September 2013 revealed that diesel and oil range petroleum hydrocarbons were detected in several soil samples highest being at concentrations found at one location on the southern portion (hot spot/currently known as BH-23). PCE, bromodichloromethane, and chloroform were detected in several soil vapor samples collected from the site.

Based on review of EGLs July and September 2013 investigations, SCS Engineers recommended that investigations be conducted with local agency oversight, development should not be conducted until deemed suitable by a regulatory agency, and a soils management plan be implemented to address any presence of staining and/or odors are identified during soils excavation/construction activities.

SEG conducted subsurface soils investigations at 27 selected locations to a depth of 10 feet below ground surface (bgs) and soil vapor investigations at 10 selected locations within

the property to approximate depths range from 2 to 47 feet bgs. The areas that were investigated included the former service bay areas, historical hydraulic hoists, former clarifier area, former paint booth, former compressor room, existing office building area, and other selected locations within the property.

Based upon the results of the soil vapor data collected in this program, there is evidence of fuel additives (Benzene, Naphthalene, Toluene, Xylenes, MIBK, and MEK,) and/or solvents (PCE/TCE) to be present in all of the Twenty-five (25) soil vapor samples. Twenty (20) of the soil vapor samples (PCE concentration range 17.6 µ/m^3 to 342 µ/$m^{3)}$ exceed the DTSC screening levels for residential air of 15.3 µg/m^3 for PCE (AF- 0.03). Tetrachloroethylene (PCE) is the only reported compound that exceeds the soil gas screening level for a residential receptor using the most conservative soil gas attenuation factor of 0.03. The highest PCE value at the shallowest sampling depth (SV-4-5') is 66.7 µg/m3. This is about 4.5 times higher than the PCE screening level of 15.3 µg/m^3. At SV-6, no 5-foot sample exists, but the PCE in the 10-foot sample is 240 µg/m^3. Based upon the vertical profiles at the other locations, it is likely the PCE value would be less at 5-foot below ground surface (bgs). At the seven other locations with 5-foot data, the PCE concentrations were all less than 23 µg/m3. This is only 50% above the most stringent screening level of 15 µg/m^3. In general, values do appear to increase with depth which suggest a deep source; possibly the known impacted regional San Gabriel Valley groundwater. Please refer to Section 6, Health Risk Assessment for a detailed discussion.

Of the 27 subsurface soils locations investigated petroleum hydrocarbons were not detected at 13 of the locations. Gasoline petroleum hydrocarbon was found in one soil sample in shallow subsurface soil (2 feet) at concentrations of 3.48 mg/kg which is below the SFRWQCB screening levels of 430 mg/kg. Diesel petroleum hydrocarbons were found in nine soil samples and oil range petroleum hydrocarbons were found in 14 soil samples; highest being at concentrations 222 mg/kg and 1,020 mg/kg; however, not exceeding the SFRWQCB levels 260 mg/kg and 1,200 mg/kg. No PCBs were detected in any of the samples that had detectable petroleum hydrocarbons.

Various VOCs, Hexavalent Chromium, and Chlorinated Pesticides/Organochlorine Pesticides (OCPs) were detected in one soil sample which was below the regulatory action levels. The PCBs were not detected in any of soil samples analyzed. The pH in the soil samples ranged from 6.61 and 9.27, which are within expected parameters. CAM 17 Total Metals were found in soils samples to be present at concentrations below levels which require hazardous waste characterization. Arsenic was identified in soil samples exceeding the regulatory action levels. However, these concentrations are below the acceptable California Background concentration of Arsenic. The STLC-lead was identified in two soil samples at concentrations below the DTSC California Hazardous Waste Classification.

Based on results of our subsurface investigation SEG does not recommend any further environmental site investigation. However, in our opinion, a Soils & Soil Vapor Management Plan be prepared to facilitate media (soil/soil vapor) management during potential future construction and excavation activities at the site. The Plan would identify steps to be taken during the course of development in the event that indications of elevated vapors in ambient air, impacted soil (e.g. presence of staining, odors, etc.), and/or any abandoned buried structures (e.g. hydraulic hoist systems) are identified.

1.0 INTRODUCTION / PURPOSE

This report summarizes the results of the Environmental Soil and Soil Vapor Sampling conducted at 11640-11730 Valley Boulevard in El Monte, California on March 8, 9, and 10 of 2021. The investigations were conducted at a total of 37 selected locations to provide additional site data and to determine contaminant concentrations of soil and vapor at selected areas of concern which include former paint booths, former hydraulic hoists, former clarifier and/or locations where impacted soils were identified during previous environmental investigations and at areas of concern not previously investigated. Based on SCS Engineers review of Phase I and II environmental reports conducted at the subject site by Terracon and Environmental Geotechnology Laboratory (EGL) dated 2012, 2013, 2018, and 2020, SCS recommended that any future investigations and/or development of the property be conducted with regulatory agency oversight and approval. (Please refer to the attached Soil and Vapor Workplan prepared by SEG dated February 2, 2021 and Los Angeles County Fire Department approval letter dated February 12, 2021 for more details).

The scope of work was based on the approved Soil and Vapor Workplan dated February 2, 2021, the approval letter from Los Angeles County Fire Department dated February 12, 2021. The location of the site is shown on the Vicinity Map, Plate No. 1. The subsurface soil and soil vapor sample locations are shown on the Plot Plan (Plates No. 2A, 2B, and 2C). The Soil Vapor Probe Diagrams are shown on the Plot Plan (Plate 2D). The analytical results for soil and soil vapor samples are tabulated in Tables 1, 2, 3, and 4. Copies of the laboratory analytical reports for the soil and soil vapor samples are included in Appendix A. The literature referenced is listed in Appendix B.

1.1 SITE DESCRIPTION

The site is located at 11640-11730 Valley Boulevard, in the City of El Monte, California. The subject property is approximately 2.78-acre in size and is presently vacant and paved with concrete and asphalt. According to the Los Angeles County Assessor's office and the City of El Monte Department of Building and Safety websites, the site is located in the City of El Monte, and State of California. The site is comprised of six contiguous parcels (Assessor parcel numbers: 8566-021-010, 8566-021-011, 8566-021-012, 8566-021-013, 8566-021-014 and 8566-021-015) and zoned as Mixed-Multi Use (MMU).

1.2 SITE OWNERSHIP

The site is currently owned by New S.W.S. Southland Real Estate, LLC with a mailing address of 11730 Valley Boulevard, El Monte, California 91732.

1.3 PREVIOUS ENVIRONMENTAL INVESTIGATIONS

According to Phase I Environmental Site Assessment reports by Terracon (2012/2018/2020), the site was undeveloped land and/or orchards from the 1890s until prior to 1928, when the western portion of the site was developed with three single-family residences and the eastern portion of the site remained as orchards. The orchards were cleared by the late 1940s. An office building was developed in 1948 and the central-eastern portion of the site was developed as an automotive dealership which included sales and service buildings along with three underground storage tanks (USTs) in the early 1960s. By the late 1970s, the remaining western portions of former automotive dealership were developed, and the site operated as auto sales and servicing through the mid-2000s. Site activities ended sometime in the mid-2000s and the property was vacant from the mid-2000s through 2017. The automotive dealership buildings were demolished in 2017. Previous occupants onsite consisted of automotive dealerships (automotive servicing/and auto body repairing), custom rim & tire, retail store, manufacturing, warehouse, a real estate office, and an insurance agency. With the exception of the office building at the southeastern portion of the site, the site is presently vacant and is being used by Toyota of Longo for parking purposes. According to Ms. Agnes So (owner) with New S.W.S. Southland Real Estate, LLC, the site is proposed for redevelopment of residential buildings

The 2020 Terracon Phase I report recommended investigation in the areas of concern including the former dispenser area, former automotive service areas, former paint booths and associated areas, former clarifier, and patches present at the former service bay areas. Regarding the historical USTs, the report stated that, the former diesel and waste oil USTs were removed from the site on January 8, 1987 and confirmation soil sampling identified petroleum hydrocarbon impacted subsurface soils. The investigation identified elevated petroleum hydrocarbon concentrations in the shallow soils beneath the former 550-gallon waste oil UST and relatively low petroleum hydrocarbon concentrations below the bottoms of the two other former USTs. Approximately 23 tons of impacted soils were removed from

beneath the 550 gallons waste oil UST and the excavations were backfilled and re paved. In 1990, the DPW requested additional investigation of the former 1,000-gallion diesel UST and the former 280-gallon waste oil excavation to evaluate the concentrations detected in these areas during the initial investigation. An additional investigation conducted to evaluate soil conditions to a maximum depth of 40 feet bgs did not report any detectable concentrations of petroleum hydrocarbons or VOCs beneath either of the USTs. A Closure Certification letter was issued by the DPW for the USTs removal and subsequent investigation and remediation, dated September 15, 1992.

The July 2020 SCS report summarized the finding of previous investigations including one completed in July 24, 2013 by Environmental Geotechnology Laboratory, Inc. (EGL). Four soil borings to maximum depth of 5 feet (sampled at 2 & 5 feet) below ground surface (bgs) were completed at the former dispenser island associated with the former 1,000-gallon diesel UST, the former clarifier, the former 280-gallon waste oil UST, and the former service building. Two soil samples were collected from each soil boring at depths of 2 and 5 feet bgs. Analytical results for the soil samples revealed detections of Volatile Organics (VOC; EPA 8260B method), Total Petroleum Hydrocarbon chains (TPH; EPA 8015M method) and Lead (EPA 7420 Method) were detected at laboratory testing limits but the concentrations reported were lower than the Cal EPA screening levels and the California Regional Water Quality Control Board maximum soil screening levels. Therefore, no further investigation or testing was recommended. Please note that subsurface investigations at all the areas of concern which include the former paint booths, former hydraulic hoists, and deeper depths at the former clarifier were not completed in this investigation.

An additional investigation was completed by EGL in September 2013 that consisted of collecting soil samples from 8 borings extending to a maximum depth of 10 feet below ground surface (bgs) for analysis of volatile organic compounds (VOCs) by EPA Method 8260, petroleum hydrocarbons by (modified) EPA Method 8015, and California regulated (CCR Title 22) metals. In addition, soil vapor samples were collected at 14 temporary soil vapor probe locations for VOC analysis (samples could not be collected from an additional two probe locations). Probes were set at depths of 5 and 10 feet bgs. Please note that TPH and PCE were reported in the shallow soil samples collected at 2 and 5 feet bgs in the previous site investigations conducted in July 2013. Diesel and oil range petroleum

hydrocarbons were detected in several soil samples with the highest concentration levels being reported at 1,540 and 1,610 mg/kg which exceed the SFRWQCB level of 1,200 mg/kg was found at one location on the southern portion (hot spot/currently BH-23). PCE, bromodichloromethane, and chloroform were detected in several soil vapor samples collected from the site.

Based on review of EGLs July and September 2013 investigations, SCS concluded the following "SCS believes that the soil vapor investigation was adequate to assess the presence of VOCs on the Property, we do not believe that the 8 borings conducted as part of the September 2013 together with the four borings completed as part of the July 24, 2013 EGL investigation were adequate to assess the extensive automobile operation that previously occupied the Property. For example, available figures for the southeast corner show what appear to be at least 5 lifts in the service bays, yet only one boring (B-10) was installed in this area. Hydraulic fluid leaks are common with in-ground lifts and each location warrants investigation. SCS would recommend additional borings within the service bays near each of the former lifts and other operations of concern. In summary, the data from the investigation completed by EGL indicate releases of petroleum hydrocarbons and VOCs on the Property that should be characterized further. It is also SCS's opinion that a more extensive investigation of soil in previous service areas is warranted." SCS report recommended the following:

- Any future investigations of the Property be conducted with regulatory agency oversight. Regulatory agencies that can provide oversite consist of: the Los Angeles County Fire Department, Site Mitigation Unit; Los Angeles Regional Water Quality Control Board; or, the DTSC.

- Development of the Property for residential purposes should not be conducted until a letter has been received from a regulatory agency that indicates the Property is suitable for development for residential use.

SCS concurs with Terracon's Phase I recommendation that a Media Management Plan be prepared to facilitate media (soil, soil vapor, groundwater) management during potential future construction and excavation activities at the site. The Media Management Plan would identify steps to be taken during the course of development in the event that indications of impacted soil (e.g. presence of staining, odors, etc.) are identified.

2.0 SCOPE OF SERVICES

Our scope of work consisted of the following: Implementation of Environmental Soil and Vapor Sampling Workplan and site-specific Health and Safety Plan approved by Los Angeles County Fire Department, project management, pre-marking of proposed sampling locations, notification of underground service alert (USA) for utility clearance of public utilities, a ground penetrating radar (GPR) survey to identify the former clarifier location, collection of soil vapor samples from 10 vapor probes locations at selected depths range from 5 to 50 feet bgs, collection of subsurface soil samples from 27 boring locations at selected depths of approximately 2, 5, and 10 feet bgs, observation and documentation of the field work, sample submission to a State Certified Laboratory, and the preparation of this report presenting our findings and conclusions.

3.0 FIELD EXPLORATION

3.1 SUBSURFACE SOIL VAPOR SAMPLING

On March 8, 2021 soil vapor probe installations were conducted by Strongarm and SEG personnel utilizing a Geoprobe 6620DT track rig (direct push method). A total of ten soil vapor probe locations (SV-1, SV-2, SV-3, SV-4, SV-5, SV-6, SV-7, SV-8, SV-9, & SV-10) were installed at selected locations within the property. Dual nested probes were installed at eight of the probe (SV-1, SV-2, SV-3, SV-4, SV-7, SV-8, SV-9, and SV-10) locations to approximate depths of 5' and 15 feet bgs. A quintuple nested probe was installed at the SV-5 location to approximate depths of 10, 20, 30, 40, and 47 feet bgs. Quadruple nested probe was installed at SV-6 location to approximate depths of 10, 20, 30, and 40 feet bgs (Plot Plan - Plate 2D). The soil vapor probe installations of SV-5 and SV-6 locations were terminated at approximate depths of 47 and 40 feet bgs respectively due to refusal conditions. The SV-1 location was moved to approximately 20 feet northeast of the original suspected location due to presence of asphalt patch visualized during the geophysical survey conducted by Ground Penetrating Radar System, LLC (GPRS). According to the survey, the soil lithology at the site was consistent and could not confirm the locations of where the clarifier was excavated and removed. The geophysical survey report is included in Appendix A. The SV-4 location was moved three feet to the west from the original location due to site condition (flooded area). Soil vapor samples were collected by American Environmental Testing laboratory (AETL) personnel in an attempt to provide additional site data and to investigate soil and vapor contaminant concentrations at selected areas of concern which included abandoned hydraulic hoists and/or locations which indicated impacted soils during previous environmental investigations and areas of concern not previously investigated.

The subsurface soil vapor sampling locations relative to onsite features are shown on the Plot Plan - Plates No. 2A, 2B, & 2C. The procedures used to install each soil vapor probe, test for leaks during sample collection, and collect soil vapor samples are described in the following sections:

3.2 SOIL VAPOR INSTALLATION METHODS

Temporary soil vapor probes, also known as soil vapor implants, were installed at selected locations (SV1 through SV10) using Geoprobe 6620DT track rig (direct push method). A soil vapor implant was installed following direct push methods which involves the advancement of an approximate 2.5-inch diameter stainless steel probe rod. The soil vapor probes were constructed in general accordance with DTSC Guidelines, using temporary 1" Airstone filters, 1/8" Nylaflow tubing, and a valve at the termination. The probe tip was set within a 12” sand pack, with a minimum of 12” dry granular bentonite above the sand. Upon completion of sampling, the vapor probes were removed without excavation, the boreholes were backfilled with bentonite, and the surface of each location was patched accordingly. The details on soil vapor probe installations are provided in the Plot Plan - Soil Vapor Probe Diagram Plate No. 2D.

3.3 SURFACE SEALS

The top of the vapor probe was sealed with hydrated bentonite to create an appropriate air tight seal.

3.4 EQUILIBRATION TIME

Upon completion, the probe was allowed to set for two hours prior to sampling to allow the hydrated bentonite time to properly seal, and the subsurface soil gas to equilibrate.

3.5 LEAK TESTING THE SAMPLE TRAIN AND PROBES

Prior to purging or sampling, a shut-in leak test was conducted by AETL personnel to check for leaks in the above-ground sampling system. This test consisted of assembling the above-ground valves, lines, and fittings downstream from the top of the probe, evacuating the system (to a minimum measured vacuum of 100 inches of water), and observing the vacuum gauge for at least one minute to identify any system leaks.

A leak check compound (LCC) was used to check the integrity of the bentonite seal and to quantify ambient air leakage into the soil vapor sample. A tracer compound, Isopropyl alcohol, was used by AETL personnel to test for leaks around the probe and along the

sampling system. The tracer was placed around the probe rod at the surface and along the sampling train during each sample collection event. Although the tracer analyte does not impact analytical results, it is an indicator of a leak in the system. If the tracer is detected at values > 10 µg/L, another sample is typically collected.

The leak compound isopropyl alcohol was not detected in any of the soil vapor samples analyzed, indicating that an airtight seal was obtained and maintained during the sampling at soil vapor boring locations.

3.6 SAMPLE CONTAINERS (SOIL GAS)

Soil vapor sampling was performed by AETL personnel. Soil vapor was withdrawn from the end of the inert nylaflow tubing that extends from the sampling tip to the surface using a pump and regulator to complete the purge and a summa canister fill with sub atmospheric pressure using an adjustable valve for collecting the sample.

3.7 PROBE PURGING

A minimum of three (3) purge volumes were removed from each boring prior to sampling by AETL. Purge rate never exceeded the DTSC maximum of 200 milliliters per minute, nor did vacuum exceeded 100 inches of water, during soil vapor sampling procedures.

3.8 FIELD RECORDS

The SEG personnel maintained a log sheet summarizing:

Sample identification	Weather conditions
Probe location	Soil gas purge volumes
Date and time of sample collection	Volume of soil gas extracted
Sampling depth	Apparent moisture content (dry, moist or saturated etc.) of the sampling zone
Identity of samplers	

Chain of custody protocols and records were used to track samples from sampling point to analysis.

3.9 SUBSURFACE SOIL SAMPLING

On March 9 and 10, 2021, a total of 27 soil boring locations (15- former service bay/hoist areas; 1-hot spot area, 2- former clarifier areas; 1-former paint booth area, 1-former compressor area, 1- former dispenser area; 2- existing office areas, 2-southwest portion of the property, 1-southern portion, and 1-northwest corner) were advanced at the site utilizing a Geoprobe 6620DT track rig (direct push method). All soil borings were advanced to maximum depth of 10 feet bgs within the property. Soil samples were collected to approximate depths which varied from 2' to 10' bgs. All soil boring locations were selected to address concerns due to former auto repair operations at the subject site. The general layout of the site and the boring locations are shown on the Plot Plan, Plates No. 2A, 2B, & 2C.

3.10 SOIL BORING ADVANCEMENT

The concrete floor surfaces were cored at selected boring locations utilizing coring machine to allow for boring access. Soil sampling was conducted utilizing a Geoprobe 6620DT track rig to the proposed depth. The borings were advanced to the desired sampling depths using soil probe rods lined with an acetate soil sampling tube and advanced into undisturbed soil using a direct push system.

3.11 BORINGS, SAMPLING INTERVALS, AND DEPTHS

Advance a total of twenty seven (27) soil borings at the following area:

Location	Number of Borings	Sampling Depth in Feet
Former Service Bay/Hoist Area (BH-2, BH-6, BH-8, BH-9, BH-10, BH-11, BH-12, BH-13, BH-18, BH-19, BH-20, BH-21, BH-22, BH-24, & BH-25)	15	5 and 10
Hot Spot Area (BH-23)	1	2, 5 and 10
Former Clarifier Area (BH-4 and BH-5)	2	5 and 10
Former Paint Booth Area (BH-7)	1	2, 5 and 10
Former Compressor Area (BH-3)	1	2, 5 and 10
Former Dispenser Area (BH-14)	1	2, 5 and 10
Existing Office Area (BH-1 and BH-15)	2	2, 5 and 10
Southwest Portion of the Property (BH-26 and BH-16)	2	2, 5 and 10
Southern Portion of the Property (BH-17)	1	2, 5 and 10

Northwest Corner of the Property (BH-27)	1	2, 5 and 10

3.12 SAMPLE CONTAINERS (SOIL SAMPLES)

Soil samples were obtained in acetate tubes sealed with Teflon sheeting and tight fitting plastic end caps from sample locations. Encores samples were used to subsample selected soil from the acetate sample tubes.

3.13 SAMPLE SCREENING WITH A PID

A photoionization detector (PID) was utilized to screen soil samples for elevated volatile organic substances. Since TPHs and VOCs (PCE) are known to be present at the site, the PID relative response (beep/alarm) was set to 25 ppm (CAL/OSHA PEL for PCE/TCE). To obtain a PID reading, a soil sample was placed in a capped tube or plastic Ziploc type bag, and allowed to volatilize for approximately one minute, at which time the probe tip of the PID was placed into the container, and the peak reading recorded. No elevated VOC reading was noted during our investigation.

3.14 BORING BACKFILL

Care was taken to assure that the borings were compacted and sealed, and that the potential cross contamination or future water migration is minimized. Once the soil and soil vapor sampling was completed, the borings were backfilled with bentonite, compacted and completed at the surface with concrete as appropriate.

3.15 GROUNDWATER SAMPLING

No groundwater sampling was conducted as part of this investigation. No groundwater was encountered at the depths explored.

3.16 DECONTAMINATION PROCEDURES

Decontamination procedures are outlined in the field operations sections of this report, specific to the equipment being utilized. General procedures were to use new field supplies. Staff wore new latex gloves when handling sampling equipment or samples. Reusable field equipment and samplers were washed in a mixture of water and non-

phosphate soap, followed by a triple rinse in distilled water. Decontamination procedures followed best environmental industry standards, and thoroughly washed and rinsed all reusable equipment prior to use.

3.17 WASTE MANAGEMENT

All disposable field supplies were collected on site, bagged, transported offsite, and disposed of appropriately.

3.18 SAMPLE HANDLING AND TRANSPORTATION

Sample container type and procedures for each sampling media are outlined in the Field Operations sections of this report. Once sealed, samples were labeled with sample point identification (to include date, time, location, project identification, boring number, and sample depth).

Soil samples were placed in an insulated chilled cooler (containing ice), and transported to the state certified analytical laboratory (AETL) in Burbank, California. Soil vapor samples collected with summa canister were also transported to the state certified analytical laboratory (AETL) in Burbank, California. Collected samples were transported in a timely fashion, as soon as the sampling and fieldwork had been completed for each phase of work.

All samples were logged on a chain-of-custody form and signed by SEG and AETL personnel. A copy of the chain of custody for each sample set is included with the analytical report.

3.19 ANALYTICAL LABORATORY AND QUALITY CONTROL

The soil and soil vapor samples were obtained by SEG and AETL personnel and analyzed at AETL, a State of California Certified laboratory. The selected soil and soil vapor samples were tested by the laboratories in conformance with EPA Method 8015B/5035 (TPHs), EPA Method 8260B/TO-15 (VOCs), EPA Method 6010B/7471 (METALS), EPA 9045C (pH), EPA method 8082 (PCBs), EPA method 7199 (Hexavalent Chromium), and EPA method 8081A (Chlorinated Pesticides/OCPs). Quality control data was provided as part of the laboratory

report(s) and included as part of the final report. AETL performed the analysis and conducted its own internal QA/QC procedures. These procedures include method blanks, surrogates, matrix spike and matrix spike duplicates, laboratory duplicates and initial and continuing calibration checks as appropriate. Copies of the analytical reports are included in Appendix A.

3.20 ANALYTICAL METHODS

Soil vapor samples were tested for a range of Volatile Organic Compounds (VOCs) by EPA Method TO-15 modified for soil vapor.

Selected soil samples were tested for a range of for Volatile Organic Compounds (VOCs) including Benzene, Toluene, Ethylbenzene, Total Xylenes (BTEX), MTBE, TAME, ETBE, TBA, DIPE and Fuel Oxygenates by EPA Method 8260B, Total Petroleum Hydrocarbons range (TPHs C_4-C_{40}) by EPA Method 8015B/5035, 17 Total Metals by EPA Method 6010B/7471, pH by EPA 9045C, Polychlorinated Biphenyls by EPA method 8082, Hexavalent Chromium by EPA Method 7199, and Chlorinated Pesticides/Organochlorine Pesticides (OCPS) by EPA method 8081A.

3.21 SITE ANALYTICAL ACTION LEVEL SOURCES

Environmental Protection Agency (EPA) Region 9 Regional Screening Levels (RSLs) Resident Air and California Department of Toxic Substances Control (DTSC) were utilized for actionable levels for soil vapor. California Regional Water Quality Control Board (CRWQCB) Los Angeles May 1996 Guidebook for Maximum Soil Screening Levels, Department of Toxic Substances Control (DTSC) - Human and Ecological Risk Office (HERO), Human Health Risk Assessment (HHRA) Note 3 Modified Screening Level Residential Soil, Southern California Regional Background Arsenic Concentration in Soil established by DTSC, and San Francisco Bay Regional Water Quality Control Board (SFBRWQCB) Environmental Screening Levels (ESL) were utilized for actionable levels for soil. The analytical results for soil vapor were screened using the current attenuation factor (AF) of 0.001 for future residential land use (per DTSC 2011 Vapor Intrusion Guidance). In addition, the soil vapors were also compared to screening levels using DTSC's February

2020 Draft Supplemental Guidance attenuation factor (AF) of 0.03 for comparison purposes.

3.22 SITE RESTORATION

Once the borings/probes were completed, and samples obtained, each boring was backfilled with bentonite. Care was taken to assure that the borings were compacted, sealed, and that the potential cross contamination or future water migration is minimized. Each boring was then compacted and surfaced with concrete as appropriate.

3.23 CHAIN OF CUSTODY FORMS

All samples were logged on chain-of-custody forms, signed by the laboratory personnel completing the sampling. Sample point identification is included on the chain-of-custody form and included the date, time, location, project identification, boring number, and sample depth. A copy of the chain of custody documentation is included in the analytical reports (see Appendix A).

4.0 HYDROGEOLOGIC SETTING

The subject site is located approximately one (1) mile west of San Gabriel River and 1.5 miles east of the Rio Hondo River within the Central Basin. The elevation of the site is approximately 290 feet above mean sea level (MSL) (USGS Topographic Map). Topography in the vicinity of the site slopes towards southwest.

The hydrogeologic units beneath the site are alluvium, lake, playa, and terrace deposits consisting of primary silty sands. Underlying the surface soils consists of medium grained silty sand, sand, sandy silt, and sand/silty sand mixtures.

According to information obtained from the Los Angeles Department of Public Works, Hydrological Division, the groundwater data in the vicinity of the site are listed as follows:

Well Number	Date Measured	Location	Depth to Water (in feet)
2963B	10-31-2017	Washington Ave & Brockway St. 1.0 mile to the N	100
2944F	10-27-2019	Chico Ave. & Rush St. 1.1 miles to the W	61
2965C	10-26-2018	Thienes Ave. & Leafdale Ave. 0.64 miles to the SE	56

This datum represents reported depths to static water levels for respective well locations at the time of measurement. The actual depth and flow of groundwater beneath the site is not known. Based on the DPW data, groundwater in the area is expected to be more than 50 feet below ground surface; however, the actual depth to the water table may vary depending on extraction activities, and manual or artificial recharge rates. Based on the direction of surface water, the groundwater flow direction is inferred to be towards the southwest. Note that the actual groundwater flow direction is often locally influenced by factors such as underground structures, seasonal fluctuations, soil and bedrock geology, production wells, and other factors beyond the scope of this study. The actual groundwater flow direction under the site can only be accurately determined by installing groundwater monitoring wells which was beyond the scope of this project.

5.0 ANALYTICAL RESULTS

The subsurface soil vapor samples were obtained and analyzed for Volatile Organic Compounds (VOCs) by EPA method TO-15 modified for soil vapor. A copy of the American Laboratories analytical report is included in Appendix A. Analytical results for the subsurface soil vapor samples are shown in Table 1.

DISUSSION OF SOIL VAPOR ANALYTICAL RESULTS

All twenty five soil vapor samples analyzed contained detectable concentrations of Acetone ranging from 8.4 µg/m^3 to 75.3 µg/m^3. These concentrations are below the RSL screening levels for residential air of 32,000,000 µg/m^3 (AF=.001) and 1,066,667 µg/m^3 (AF=.03).

Fifteen soil vapor samples analyzed contained detectable concentrations of Benzene ranging from 0.798 µg/m^3 to 2.36 µg/m^3. These concentrations are below the RSL screening levels for residential air of 360 µg/m^3 (AF=.001) and 12 µg/m^3 (AF=.03) and DTSC screening levels for residential air of 97 µg/m^3 (AF=.001) and 3.23 µg/m^3 (AF=.03)

Fourteen soil vapor samples analyzed contained detectable concentrations of 2-Butanome (MEK) ranging from 2.54 µg/m3 to 31.0 µg/m^3. These concentrations are below the RSL screening levels for residential air of 5,200,000 µg/m^3 (AF=.001) and 1,733,333 µg/m^3 (AF=.03).

Sixteen soil vapor samples reported detectable concentrations of Carbon disulfide ranging from 0.840 µg/m^3 to 3.73 µg/m^3. These concentrations are below the RSL screening levels for residential air of 5,200,000 µg/m^3 (AF=.001) and 1,733,333 µg/m3 (AF=.03).

Twenty three soil vapor samples analyzed contained detectable concentrations of Dichlorodifluoromethane ranging from 1.29 µg/m^3 to 2.27 µg/m^3. These concentrations are below the RSL screening levels for residential air of 100,000 µg/m^3 (AF=.001) and 3,333 µg/m^3 (AF=.03).

Four soil vapor samples (SV-4-15, SV-5-20, SV-5-40, & SV-10-5) analyzed contained detectable concentrations of Ethyl acetate ranging from 1.69 µg/m^3 to 5.43 µg/m^3. These

concentrations are below the RSL screening levels for residential air of 73,000 µg/m^3 (AF=.001) and 2,433 µg/m^3 (AF=.03).

Seven soil vapor samples analyzed contained detectable concentrations of Ethylbenzene ranging from at 1.13 µg/m^3 to 5.99 µg/m^3. These concentrations are below the RSL screening levels for residential air of 1,100 µg/m^3 (AF=.001) and 36.67 µg/m^3 (AF=.03).

Eighteen soil vapor samples analyzed contained detectable concentrations of 4-Methyl-2-pentanome (MIBK) ranging from 1.47 µg/m^3 to 13.1 µg/m^3. These concentrations are below the RSL screening levels for residential air of 3,100,000 µg/m^3 (AF=.001) and 1,033,333 µg/m^3 (AF=.03).

Twenty three soil vapor samples analyzed contained detectable concentrations of Naphthalene ranging from 1.36 µg/m^3 to 10.8 µg/m^3. Ten of these samples reported concentrations are below the RSL screening levels for residential air of 83 µg/m^3 (AF=.001) and 2.77 µg/m3 (AF=.03) and DTSC screening levels for residential air of 2,000 µg/m^3 (AF=.001) and 66.67 µg/m^3 (AF=.03). Thirteen of the soil vapor samples reported concentration exceeded the RSL screening levels for residential air of 2.77 µg/m^3 using the attenuation factor (AF) of 0.03.

Twenty four soil vapor samples analyzed contained detectable concentrations of Tetrachloroethene (PCE) ranging from 4.81 µg/m^3 to 342 µg/m^3. The reported concentration for four of these samples are below the RSL screening levels for residential air of 11,000 µg/m^3 (AF=.001) and 367 µg/m3 (AF=.03) and DTSC screening levels for residential air of 460 µg/m^3 (AF=.001) and 15.3 µg/m^3 (AF=.03), however twenty of the soil vapor sample concentrations exceed the DTSC screening levels for residential air of 15.3 µg/m^3 using the attenuation factor (AF) of 0.03.

Twenty three soil vapor samples analyzed contained detectable concentrations of Tetrahydrofuran ranging from 1.83 µg/m^3 to 13.4 µg/m^3. These concentrations are below the RSL screening levels for residential air of 2,100,000 µg/m^3 (AF=.001) and 70,000 µg/m^3 (AF=.03).

Seventeen soil vapor samples analyzed contained detectable concentrations of Toluene ranging from 1.02 µg/m^3 to 3.65 µg/m^3. These concentrations are below the RSL screening levels for residential air of 5,200,000 µg/m^3 (AF=.001) and 1,733,333 µg/m^3 (AF=.03) and DTSC screening levels for residential air of 310,000 µg/m^3 (AF=.001) and 10,333 µg/m^3 (AF=.03).

Eight soil vapor samples analyzed contained detectable concentrations of 1,1,1-Trichloroethane ranging from 1.36 µg/m^3 to 2.13 µg/m^3. These concentrations are below the RSL screening levels for residential air of 5,200,000 µg/m3 (AF=.001) and 1,733,333 µg/m3 (AF=.03) and DTSC screening levels for residential air of 1,000,000 µg/m^3 (AF=.001) and 33,333 µg/m^3 (AF=.03).

Twenty one soil vapor samples analyzed contained detectable concentrations of Tricholorethene (TCE) ranging from 1.34 µg/m^3 to 18.7 µg/m^3. These concentrations are below the RSL screening levels for residential air of 480 µg/m^3 (AF=.001) and 16 µg/m^3 (AF=.03) and DTSC screening levels for residential air of 2,000 µg/m^3 (AF=.001) and 66.67 µg/m^3 (AF=.03).

Eleven soil vapor samples analyzed contained detectable concentrations of Trichlorotrifluromethane ranging from 1.40 µg/m^3 to 3.26 µg/m^3. These concentrations are below the DTSC screening levels for residential air of 1,300,000 µg/m^3 (AF=.001) and 43,333 µg/m^3 (AF=.03)

Twenty four soil vapor samples analyzed contained detectable concentrations of Dichlorodifluroethane (Freon-113) ranging from 14.5 µg/m^3 to 89.6 µg/m^3. These concentrations are below the RSL screening levels for residential air of 5,200,000 µg/m^3 (AF=.001) and 1,733,333 µg/m^3 (AF=.03)

Fourteen soil vapor samples analyzed contained detectable concentrations of 1,2,4-Trimethylbenzen ranging from 1.23 µg/m^3 to 2.06 µg/m^3. These concentrations are below the RSL screening levels for residential air of 63,000 µg/m^3 (AF=.001) and 2,100 µg/m^3 (AF=.03).

Eight soil vapor samples analyzed contained detectable concentrations of o-Xylene ranging from 1.13 µg/m^3 to 8.55 µg/m^3. These concentrations are below the RSL screening levels for residential air of 100,000 µg/m^3 (AF=.001) and 3,333 µg/m^3 (AF=.03).

Sixteen soil vapor samples analyzed contained detectable concentrations of m,p-Xylenes ranging from 1.09 µg/m^3 to 27.6 µg/m^3. These concentrations are below the RSL screening levels for residential air of 100,000 µg/m^3 (AF=.001) and 3,333 µg/m^3 (AF=.03).

All remaining VOC concentrations were reported below detection levels and/or well below the regulatory action levels. Leak compound isopropyl was not detected on soil vapor sample analyzed indicating that an airtight seal were obtained at sample location.

ANALYTICAL RESULTS – SUBSURFACE SOIL SAMPLES

The laboratory was instructed to analyze selected soil samples for Total Petroleum Hydrocarbon (TPH) by EPA Method 8015B/5035, Volatile Organic Compounds (VOCs) by EPA Method 8260B, 17 Total Metal (CAM) by EPA Method 6010B/7471, pH by EPA Method 9045C, Polychlorinated Biphenyls (PCBs) by EPA method 8082, Chlorinated Pesticides (OCPs) by EPA method 8081A, and Hexavalent Chromium (Chromium VI) by EPA Method 7199. Routine laboratory quality assurance/quality control (QA/QC) procedures which include matrix spikes, matrix spike duplicates, equipment blanks, and surrogate recoveries are presented with the signed laboratory analytical data, included in Appendix A. The analytical results for the subsurface soil samples are tabulated on Tables 2, 3, and 4.

The laboratory analytical reports for VOCs, PCBs, and OCPs are listed in units of micrograms per kilogram (µg/kg); however, those units have been converted within the following tables to units of milligrams per kilogram (mg/kg).

DISCUSSION OF SOIL ANALYTICAL RESULTS

Analytical results indicated that the following:

Detectable TPH as gasoline (C4-C12) concentrations of 3.48 mg/kg was identified in soil sample BH-3-2'. This concentration is below the 430 mg/kg screening levels for TPH (gas)

published by SFBRWQCB for residential soil. Detectable TPH as diesel (C13-C22) were reported at concentrations ranging from 5.71 mg/kg to 222 mg/kg. These concentrations are below the 260 mg/kg screening levels for TPH (diesel) published by SFBRWQCB for residential soil. Detectable TPH as motor oil (C23-C40) concentrations ranging from 4.19 mg/kg to 1,020 mg/kg were reported in fourteen of the soil samples collected. These concentrations are below the 12,000 mg/kg screening levels for TPH (motor oil) published by SFBRWQCB.

Various Volatile Organic Compounds (VOCs) were detected in one soil sample (BH-5-5') at concentrations of 0.00292 mg/kg for Ethylbenzene, 0.00435 mg/kg for o-Xylene, and 0.0125 mg/kg for m,p,-Xylene. These concentrations are below the screening levels published by SFBRWQCB of 5.9 mg/kg for Ethylbenzene and 580 mg/kg for Xylenes.

Hexavalent Chromium (Chromium VI) was detected in one soil sample (BH-5-5') at concentrations of 0.202 mg/kg. This concentration is below the screening levels published SFBRWQCB of 0.30 mg/kg for Chromium VI.

Chlorinated Pesticides/Organochlorine Pesticides (OCPs) was detected in one soil sample (BH-3-2') at concentrations of 0.0103 mg/kg for 4,4' DDE, 0.00839 for 4,4' DDT, and 0.00647 mg/kg for Dieldrin. These concentrations are below the screening levels published by the regulatory agencies of 2.0 mg/kg (DTSC) and 1.8 mg/kg (SFBRWQCB) for 4,4' DDE, 1.9 mg/kg (DTSC/ SFBRWQCB) for 4,4' DDT, and 0.034 mg/kg (DTSC) and 0.037 mg/kg (SFBRWQCB) for Dieldrin.

None of the soil samples analyzed contained detectable concentrations of Polychlorinated biphenyls (PCBs).

Soil samples had pH levels ranging from 6.61 and 9.27, which are within expected parameters.

17 Total Metals were found to be present at concentrations below levels which require hazardous waste characterization in any of the soil analyzed. Arsenic was identified at concentrations ranging from 2.55 to 10.7 milligrams per kilogram (mg/kg) which exceed the screening levels published by SFBRWQCB of 0.67 mg/kg. However, these concentrations

are below the Southern California Background concentration of 12 mg/kg for Arsenic established by the DTSC. The Soluble Threshold Limit Concentration (STLC) identified a concentrations of soluble lead in soil samples BH-16-2' at 1.99 milligrams per liter (mg/L) and BH-23-2' at 1.45 mg/L. These concentrations are below the DTSC California Hazardous Waste Classification of 5 milligrams per liter (mg/L).

6.0 HEALTH RISK ASSESSMENT

As shown in Table 1, tetrachloroethylene (PCE) is the only reported compound that exceeds the soil gas screening level for a residential receptor using the most conservative soil gas attenuation factor of 0.03. The highest PCE value at the shallowest sampling depth (SV-4-5') is 66.7 µg/m3. This is about 4.5 times higher than the PCE screening level of 15.3 µg/m3. At the seven other locations where 5-foot depth is available data, the PCE concentrations were all less than 23 µg/m3. This is only 50% above the most stringent screening level of 15 µg/m3. In general, values do appear to increase with depth which may suggest a deep source.

In March of 2020, the California agencies issued draft supplemental guidance for screening and evaluating the vapor intrusion pathway (https://dtsc.ca.gov/vapor-intrusion/). Table 1 in that document lists an attenuation factor of 0.03 to use for both sub-slab soil gas data and 5-foot bgs soil gas data. This attenuation factor is from an EPA nationwide database with very few data from California, so its applicability to CA sites is considered non-representative. Updated California-specific attenuation factors have been developed by CA-DTSC in July of 2020 from data from California sites only. The CA-DTSC document is expected to be released to the public in the immediate future. A presentation on this document was given by DTSC staff on March 22, 2021. The CA-specific soil gas attenuation factor in this document for residential structures is 0.0006. The soil gas screening level using this attenuation factor for PCE becomes 767 µg/m3 (0.46 µg/m3/0.0006). PCE concentrations in the soil gas samples from all ten locations at all sampling depths are at least 2 times below this revised screening level.

Based upon the updated attenuation factor from this forthcoming document, and as presented by DTSC staff at a professional conference earlier this month, the indoor risk predicted from the soil gas data collected at this site in March of 2021 is less than 1 in 1 million. Hence, the PCE concentrations found in subsurface soils are not expected to present a significant health risk to the site occupants. Hence, SEG does not warrant any further investigation at this time.

7.0 CONCLUSIONS AND RECOMMENDATIONS

This report presents the findings of the Environmental Soil and Soil Vapor Sampling at 11640-11730 Valley Boulevard, City of El Monte, California. The program consisted of soil and soil vapor sampling and analytical testing to provide additional site data and to investigate soil and vapor concentrations at selected areas of concern which include former paint booths, former hydraulic hoists, the former clarifier and/or locations where impacted soils were identified during previous environmental investigations and at areas of concern not previously investigated. The scope of work was based on a SEG Soil and Vapor Workplan dated February 2, 2021 and approval letter from Los Angeles County Fire Department dated February 12, 2021.

SEG was retained by Arrow Environmental International to conduct this investigation the scope of which was based on review of the letter prepared by SCS Engineers dated July 14, 2020 and Terracon Phase I ESA report dated June 10, 2020 that recommended further investigation with regulatory agency oversight.

SEG conducted subsurface soils investigations at 27 selected locations to 10 below ground surface (bgs) and soil vapor investigations at 10 selected locations within the property to approximate depths range from 2 to 47 feet (bgs). The areas that were investigated included the former service bay areas, hydraulic hoists, former clarifier area, former paint booths, former compressor room, existing office building area, and other selected locations within the property.

Based upon the results of the soil and soil vapor data collected in this program, there is evidence of fuel additives (Benzene, Naphthalene, Toluene, Xylenes, MIBK, and MEK,) and solvents (PCE/TCE) to be present in the soil vapors.

Concentrations of PCE ranging from 17.5 µg/m^3 through 342 µg/m^3 were reported in 20 of the soil vapor samples which exceed the DTSC screening levels for residential air of 15.3 µg/m^3 (AF 0.03). In general, values do appear to increase with depth which suggest a deep source, possibly from the underlying groundwater. Groundwater within the areas of the San Gabriel Valley has been documented to have been impacted by both PCE and TCE. Based on the Health Risk Assessment, the PCE concentrations found in subsurface soils are not expected to present a significant health risk to the site occupants (Please refer to Heath Risk Assessment Section 6.0).

Of the 27 subsurface soils locations investigated petroleum hydrocarbons were not detected at 13 of the locations. Gasoline petroleum hydrocarbon was found in one soil sample in shallow subsurface soil (2 feet) at concentrations of 3.48 mg/kg which is below the SFRWQCB screening levels of 430 mg/kg. Diesel petroleum hydrocarbons were found in nine soil samples and oil range petroleum hydrocarbons were found in 14 soil samples; highest being at concentrations 222 mg/kg and 1,020 mg/kg; however, not exceeding the SFRWQCB levels 260 mg/kg and 1,200 mg/kg. No PCBs were detected in any of the samples that had detectable petroleum hydrocarbons.

Various VOCs, Hexavalent Chromium, and Chlorinated Pesticides/Organochlorine Pesticides (OCPs) were detected in one soil sample which was below the regulatory action levels. The PCBs were not detected in any of soil samples analyzed. The pH in the soil samples ranged from 6.61 and 9.27, which are within expected parameters. CAM 17 Total Metals were found in soils samples to be present at concentrations below levels which require hazardous waste characterization. Arsenic was identified in soil samples exceeding the regulatory action levels. However these concentrations are below the acceptable California Background concentration of Arsenic. The STLC-lead was identified in two soil samples at concentrations below the DTSC California Hazardous Waste Classification.

Based on results of our subsurface investigation, SEG does not recommend any further environmental site investigation. However, in our opinion, a Soils & Soil Vapor Management Plan be prepared to facilitate media (soil/soil vapor) management during potential future construction and excavation activities at the site. The Plan would identify steps to be taken during the course of development in the event that indications of elevated vapors in ambient air, impacted soil (e.g. presence of staining, odors, etc.), and/or any abandoned buried structures (e.g. hydraulic hoist systems) are identified.

8.0 LIMITS OF LIABILITY

The findings, conclusions, and recommendations contained in this report are based on site conditions as they existed at the time of our investigation. We further assume the explorations to be representative of subsurface conditions throughout the areas of the site which were addressed. This report was prepared solely for the use of Arrow Environmental International. The factual data and interpretations pertain to the specific project described in this report and any reliance on this document by any other person or entity shall be at that party's sole risk.

Our investigation was performed using the standard of care and level of skill ordinarily exercised under similar circumstances by reputable Environmental Assessors, Engineers, and Geologists currently practicing in these or similar localities. No other warranty, express or implied, is made as to the conclusions and professional advice included in this report.

mg/kg - milligrams per kilogram, or parts per million (ppm).
ND - non-detect at or above method detection limits
100 - Results Exceeds DTSC Residential Screening Levels

BOLD - exceeds the STLC and/or TCLP trigger values
“ - “ - sample not analyzed by this method
J - detected but below the Practical Quantitation Limit; therefore, result is an estimated concentration

TTLC - Total Threshold Limit Concentration
STLC - Soluble Threshold Limit Concentration

TCLP - Toxicity Characteristic Leaching Procedure
NS - Not Stablished
NA – Not Applicable

17 Total Metals

Sb - Antimony
As - Arsenic
Ba - Barium
Be - Beryllium
Cd - Cadmium
Cr - Chromium
Co - Cobalt
Cu - Copper
Pb - Lead
Mo - Molybdenum
Ni - Nickel
Se - Selenium
Ag - Silver
Tl - Thallium
V - Vanadium
Zn - Zinc
Hg - Mercury

UNIFIED SOIL CLASSIFICATION SYSTEM

Smith-Emery GeoServices

FILE NO.: 46934–1

DWG BY I. R.

PLATE NO.: 3

KEY TO SAMPLES

INDICATES DEPTH OF UNDISTURBED SAMPLE

INDICATES DEPTH OF SAMPLING ATTEMPT WITH NO RECOVERY

NOTE ON SAMPLERS:

Truck-mounted hollow-stem auger

Undisturbed samples were obtained with a "California" sampler having an O.D. of 3.0 inches and an I.D. of 2.4 inches. The SPT sampler is 2 inches O.D.; the bit has an I.D. of 1.4 inches and the split barrel has an I.D. of 1.5 inches. Unless practical refusal was encountered, the samplers were driven 18 inches into the soil using a 140 pound weight falling 30 inches. The blow count for the final 12 inches is recorded on the boring logs.

Truck-mounted Geoprobe drill rig (direct push)

Undisturbed samples were obtained with a 4 feet long barrel steel sampler. The steel sampler has an O.D. of 2.5 inches inserted with an I.D. of 1.5 inch acetate liner. Unless practical refusal was encountered, the barrel sampler was driven into the soil using Geoprobe with direct push method.

Hand-auger

Undisturbed samples were obtained by manually driving a steel sampler having an I.D. of 1.5 inches.
Unless practical refusal was encountered, the sampler was driven 6 inches into the soil using a 10 pound slide hammer falling 20 inches.

NOTES:

The descriptions on the boring logs apply only at the specific boring locations and at the time the borings were made. They are not warranted to be representative of subsurface conditions. Soil and rock descriptions are based on commonly accepted geotechnical methods of indentifi—cation and classification and are based on our professional judgment and experience. The stratification of soil layers is represented with approximate boundaries and the transition between soil types may be gradual.
Groundwater depths indicated on boring logs are specific to the time of drilling. The term "encountered" refers to the level at which free water was first noticed in the boring. The term "stabilized" refers to the level of the water after a lapse of at least one hour.

COOLER RECEIPT FORM

Client Name: Smith Emery Geo Services
Project Name:
AETL Job Number: BCC0079
Date Received: 3/9/21 Received by: Sargis Pirch
Carrier: ☑ AETL Courier ☐ Client ☐ GSL ☐ FedEx ☐ UPS
☐ Others:

Samples were received in: ☑ Cooler (1) ☐ Other (Specify):
Inside temperature of shipping container No 1: 26 °C, No 2: ____, No 3: ____
Type of sample containers: ☐ VOA, ☐ Glass bottles, ☐ Wide mouth jars, ☐ HDPE bottles, ☐ Metal sleeves, ☑ Others (Specify): 3 Lt Summa
How are samples preserved: ☑ None, ☐ Ice, ☐ Blue Ice, ☐ Dry Ice
☑ None, ☐ HNO_3, ☐ NaOH, ☐ ZnOAc, ☐ HCl, ☐ $Na_2S_2O_3$, ☐ MeOH, ☐ $NaHSO_4$
☐ Other (Specify):

	Yes	No*	N/A	Name, if client was notified.
1. Are the COCs Correct?	✓			
2. Are Sample labels legible & indelible ink?	✓			
3. Do samples match the COC?	✓			
4. Are the required analyses clear?	✓			
5. Is there enough samples for required analysis?	✓			
6. Does cooler or samples have custody seal(s)?			✓	
7. Are sample containers in good condition?	✓			
8. Are samples preserved?			✓	
9. Are samples preserved properly for the intended analysis?	✓			
10. Are the VOAs free of headspace?			✓	
11. Are the jars free of headspace?			✓	
* = see note below. N/A = Not Applicable				

PLEASE NOTE ALL SAMPLES WILL BE DISPOSED OF 30 DAYS AFTER RECEIVING DATE. IF AETL IS INFORMED OTHERWISE, THERE WILL BE A STORAGE CHARGE PER SAMPLE PER MONTH FOR ANY SAMPLE HELD BEYOND 30 DAYS.

***Explain all "No" answers for above questions:**

Case Narrative

The following "Sample Received" Section summarizes the samples received and associated analyses requested as specified on the enclosed chain of custody.

Results as reported by the laboratory apply only to 1) the items tested, 2) as the samples are received, and 3) the accuracy of information provided. Information supplied by the customer that may affect validity of results and may be contained in this report include Project Name/Number, Site Location, Sample Locations, Sampling Dates/ Times, Sample ID, Sample Preservation, Sample Matrix, Sample Properties, Field Blanks, Field Duplicates, Field Spikes, and Site Historical Data.

Accreditation applies only to the test methods listed on each scope of accreditation held by the laboratory; certifications held by the laboratory may not apply to results supplied in this report.

No analytical non-conformances were encountered.

Qualifiers are noted in the report.

Samples don't need to cool by ice for requested method of analysis.

The contents of this report apply to the sample(s) analyzed in accordance with the chain of custody document.
No duplication of this report is allowed, except in its entirety without written approval of the laboratory.

Qualifiers and Definitions

Item	Qualifiers
J	Analyte was detected. However, the analyte concentration is an estimated value, which is between the Method Detection Limit (MDL) and the Reporting Limit (RL).

Item	Definitions
% wt	Percent Weight
%REC	Percent Recovery
°C	Degrees Celsius
AETL	American Environmental Testing Laboratory, LLC
C	Carbon
CARB	California Air Resources Board
COC	Chain of Custody
DRO	Diesel Range Organics
Dup	Duplicate
ELAP	Environmental Laboratory Accreditation Program
EPA	Environmental Protection Agency
GRO	Gasoline Range Organics
HC	Hydrocarbon
LACSD	Los Angeles County Sanitation Districts
LCS	Laboratory Control Sample - A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes.
LCSD	Laboratory Control Sample Duplicate - A replicate of Laboratory Control Sample.
LOQ	Limit of Quantitation
MDL	Method Detection Limit - The minimum measured concentration of a substance that can be reported with 99% confidence. MDL is statistically derived number which is specific for each instrument, each method and each compound.
mg/kg	Miligrams per Kilogram
mg/L	Miligrams per Liter
MRO	Motor oil Range Organics
MS	Matrix Spike - A sample prepared, taken through all sample preparation and analytical steps of the procedure and analyzed as an independent test results.
MSD	Matrix Spike Duplicate - A replicate of Matrix Spike Sample.
N	No
ND	Analyte is not detected below Method Detection Limit.
ng/m3	Nanograms per cubic meter
NIOSH	National Institute for Occupational Safety and Health
nL/L	Nanoliters per Liter
NTU	Nephelometric Turbidity Units
Ohm-cm	Ohms per centimeter
OSHA	Occupational Safety and Health Administration

The contents of this report apply to the sample(s) analyzed in accordance with the chain of custody document.
No duplication of this report is allowed, except in its entirety without written approval of the laboratory.

PCB	Polychlorinated Biphenyl
PSU	Practical Salinity Unit
RL	Reporting Limit - The lowest concentration at which an analyte can be detected in a sample and its concentration can be reported with a specified degree of confidence, accuracy and precision. For usage at AETL, RL is equivalant to LOQ.
RPD	Relative Percent Difference
SIM	Selective Ion Monitoring
SPLP	Synthetic Precipitation Leaching Procedure
STLC	Soluble Threshold Limit Concentration
TCLP	Toxicity Characteristic Leaching Procedure
TPH	Total Petroleum Hydrocarbons
TTLC	Total Threshold Limit Concentrations
ug/kg	Micrograms per Kilogram
ug/L	Micrograms per Liter
ug/m3	Micrograms per cubic meter
WET	Waste Extraction Test
Y	Yes
ZHE	Zero Headspace Extraction

COOLER RECEIPT FORM

Client Name: Smith Emery Geo Services
Project Name:
AETL Job Number: BCC0094
Date Received: 3/9/21 Received by: Sergio Perez
Carrier: ☑ AETL Courier ☐ Client ☐ GSL ☐ FedEx ☐ UPS
☐ Others:

Samples were received in: ☐ Cooler (____) ☑ Other (Specify): BOX
Inside temperature of shipping container No 1: 22°C, No 2: ____, No 3: ____
Type of sample containers: ☐ VOA, ☐ Glass bottles, ☐ Wide mouth jars, ☐ HDPE bottles, ☐ Metal sleeves, ☑ Others (Specify): 3 Lt Sumas
How are samples preserved: ☑ None, ☐ Ice, ☐ Blue Ice, ☐ Dry Ice
☑ None, ☐ HNO_3, ☐ NaOH, ☐ ZnOAc, ☐ HCl, ☐ $Na_2S_2O_3$, ☐ MeOH
☐ Other (Specify):

	Yes	No*	N/A	Name, if client was notified.
1. Are the COCs Correct?	✓			
2. Are Sample labels legible & indelible ink?	✓			
3. Do samples match the COC?	✓			
4. Are the required analyses clear?	✓			
5. Is there enough samples for required analysis?	✓			
6. Does cooler or samples have custody seal(s)?			✓	
7. Are sample containers in good condition?	✓			
8. Are samples preserved?			✓	
9. Are samples preserved properly for the intended analysis?	✓			
10. Are the VOAs free of headspace?			✓	
11. Are the jars free of headspace?			✓	
* = see note below. N/A = Not Applicable				

PLEASE NOTE ALL SAMPLES WILL BE DISPOSED OF 30 DAYS AFTER RECEIVING DATE. IF AETL IS INFORMED OTHERWISE, THERE WILL BE A STORAGE CHARGE PER SAMPLE PER MONTH FOR ANY SAMPLE HELD BEYOND 30 DAYS.

***Explain all "No" answers for above questions:**

Case Narrative

The following "Sample Received" Section summarizes the samples received and associated analyses requested as specified on the enclosed chain of custody.

Results as reported by the laboratory apply only to 1) the items tested, 2) as the samples are received, and 3) the accuracy of information provided. Information supplied by the customer that may affect validity of results and may be contained in this report include Project Name/Number, Site Location, Sample Locations, Sampling Dates/ Times, Sample ID, Sample Preservation, Sample Matrix, Sample Properties, Field Blanks, Field Duplicates, Field Spikes, and Site Historical Data.

Accreditation applies only to the test methods listed on each scope of accreditation held by the laboratory; certifications held by the laboratory may not apply to results supplied in this report.

No analytical non-conformances were encountered.

Qualifiers are noted in the report.

Samples don't need to cool by ice for requested method of analysis.

The contents of this report apply to the sample(s) analyzed in accordance with the chain of custody document.
No duplication of this report is allowed, except in its entirety without written approval of the laboratory.

Qualifiers and Definitions

Item	Qualifiers
J	Analyte was detected. However, the analyte concentration is an estimated value, which is between the Method Detection Limit (MDL) and the Reporting Limit (RL).

Item	Definitions
% wt	Percent Weight
%REC	Percent Recovery
°C	Degrees Celsius
AETL	American Environmental Testing Laboratory, LLC
C	Carbon
CARB	California Air Resources Board
COC	Chain of Custody
DRO	Diesel Range Organics
Dup	Duplicate
ELAP	Environmental Laboratory Accreditation Program
EPA	Environmental Protection Agency
GRO	Gasoline Range Organics
HC	Hydrocarbon
LACSD	Los Angeles County Sanitation Districts
LCS	Laboratory Control Sample - A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes.
LCSD	Laboratory Control Sample Duplicate - A replicate of Laboratory Control Sample.
LOQ	Limit of Quantitation
MDL	Method Detection Limit - The minimum measured concentration of a substance that can be reported with 99% confidence. MDL is statistically derived number which is specific for each instrument, each method and each compound.
mg/kg	Miligrams per Kilogram
mg/L	Miligrams per Liter
MRO	Motor oil Range Organics
MS	Matrix Spike - A sample prepared, taken through all sample preparation and analytical steps of the procedure and analyzed as an independent test results.
MSD	Matrix Spike Duplicate - A replicate of Matrix Spike Sample.
N	No
ND	Analyte is not detected below Method Detection Limit.
ng/m3	Nanograms per cubic meter
NIOSH	National Institute for Occupational Safety and Health
nL/L	Nanoliters per Liter
NTU	Nephelometric Turbidity Units
Ohm-cm	Ohms per centimeter
OSHA	Occupational Safety and Health Administration

The contents of this report apply to the sample(s) analyzed in accordance with the chain of custody document.
No duplication of this report is allowed, except in its entirety without written approval of the laboratory.

	Project Name:	11640-11730 Valley Blvd.	Reported:	03/23/2021 12:32

PCB	Polychlorinated Biphenyl
PSU	Practical Salinity Unit
RL	Reporting Limit - The lowest concentration at which an analyte can be detected in a sample and its concentration can be reported with a specified degree of confidence, accuracy and precision. For usage at AETL, RL is equivalant to LOQ.
RPD	Relative Percent Difference
SIM	Selective Ion Monitoring
SPLP	Synthetic Precipitation Leaching Procedure
STLC	Soluble Threshold Limit Concentration
TCLP	Toxicity Characteristic Leaching Procedure
TPH	Total Petroleum Hydrocarbons
TTLC	Total Threshold Limit Concentrations
ug/kg	Micrograms per Kilogram
ug/L	Micrograms per Liter
ug/m3	Micrograms per cubic meter
WET	Waste Extraction Test
Y	Yes
ZHE	Zero Headspace Extraction

COOLER RECEIPT FORM

Client Name: Smith Emery Geo Services
Project Name:
AETL Job Number: BCC0095
Date Received: 3/9/21 Received by: Sargis Pireh
Carrier: ☑ AETL Courier ☐ Client ☐ GSL ☐ FedEx ☐ UPS
☐ Others:

Samples were received in: ☑ Cooler (1) ☐ Other (Specify):
Inside temperature of shipping container No 1: 3.2°, No 2: ____, No 3: ____
Type of sample containers: ☐ VOA, ☐ Glass bottles, ☐ Wide mouth jars, ☐ HDPE bottles, ☐ Metal sleeves, ☑ Others (Specify): Sleeves & En Cores
How are samples preserved: ☐ None, ☑ Ice, ☐ Blue Ice, ☐ Dry Ice
☑ None, ☐ HNO_3, ☐ NaOH, ☐ ZnOAc, ☐ HCl, ☐ $Na_2S_2O_3$, ☐ MeOH
☐ Other (Specify):

	Yes	No*	N/A	Name, if client was notified.
1. Are the COCs Correct?	✓			
2. Are Sample labels legible & indelible ink?	✓			
3. Do samples match the COC?	✓			
4. Are the required analyses clear?	✓			
5. Is there enough samples for required analysis?	✓			
6. Does cooler or samples have custody seal(s)?			✓	
7. Are sample containers in good condition?	✓			
8. Are samples preserved?	✓			
9. Are samples preserved properly for the intended analysis?	✓			
10. Are the VOAs free of headspace?			✓	
11. Are the jars free of headspace?			✓	
* = see note below. N/A = Not Applicable				

PLEASE NOTE ALL SAMPLES WILL BE DISPOSED OF 30 DAYS AFTER RECEIVING DATE. IF AETL IS INFORMED OTHERWISE, THERE WILL BE A STORAGE CHARGE PER SAMPLE PER MONTH FOR ANY SAMPLE HELD BEYOND 30 DAYS.

***Explain all "No" answers for above questions:**

Case Narrative

The following "Sample Received" Section summarizes the samples received and associated analyses requested as specified on the enclosed chain of custody.

Results as reported by the laboratory apply only to 1) the items tested, 2) as the samples are received, and 3) the accuracy of information provided. Information supplied by the customer that may affect validity of results and may be contained in this report include Project Name/Number, Site Location, Sample Locations, Sampling Dates/ Times, Sample ID, Sample Preservation, Sample Matrix, Sample Properties, Field Blanks, Field Duplicates, Field Spikes, and Site Historical Data.

Accreditation applies only to the test methods listed on each scope of accreditation held by the laboratory; certifications held by the laboratory may not apply to results supplied in this report.

Unless otherwise noted, all results of soil and solid samples are based on wet weight.

No analytical non-conformances were encountered.

Qualifiers are noted in the report.

Hexavalent Chromium, OCPs, and Metals analyses were performed by a subcontracted laboratory (Positive Lab Services).

The contents of this report apply to the sample(s) analyzed in accordance with the chain of custody document.
No duplication of this report is allowed, except in its entirety without written approval of the laboratory.

Qualifiers and Definitions

Item	Qualifiers
J	Analyte was detected. However, the analyte concentration is an estimated value, which is between the Method Detection Limit (MDL) and the Reporting Limit (RL).
M	The spike recovery for this QC sample is outside of established control limits possibly due to sample matrix interference. Laboratory Control Samples(LCS/LCSD) recovery were acceptable.

Item	Definitions
% wt	Percent Weight
%REC	Percent Recovery
°C	Degrees Celsius
AETL	American Environmental Testing Laboratory, LLC
C	Carbon
CARB	California Air Resources Board
COC	Chain of Custody
DRO	Diesel Range Organics
Dup	Duplicate
ELAP	Environmental Laboratory Accreditation Program
EPA	Environmental Protection Agency
GRO	Gasoline Range Organics
HC	Hydrocarbon
LACSD	Los Angeles County Sanitation Districts
LCS	Laboratory Control Sample - A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes.
LCSD	Laboratory Control Sample Duplicate - A replicate of Laboratory Control Sample.
LOQ	Limit of Quantitation
MDL	Method Detection Limit - The minimum measured concentration of a substance that can be reported with 99% confidence. MDL is statistically derived number which is specific for each instrument, each method and each compound.
mg/kg	Miligrams per Kilogram
mg/L	Miligrams per Liter
MRO	Motor oil Range Organics
MS	Matrix Spike - A sample prepared, taken through all sample preparation and analytical steps of the procedure and analyzed as an independent test results.
MSD	Matrix Spike Duplicate - A replicate of Matrix Spike Sample.
N	No
ND	Analyte is not detected below Method Detection Limit.
ng/m3	Nanograms per cubic meter
NIOSH	National Institute for Occupational Safety and Health
nL/L	Nanoliters per Liter
NTU	Nephelometric Turbidity Units

The contents of this report apply to the sample(s) analyzed in accordance with the chain of custody document.
No duplication of this report is allowed, except in its entirety without written approval of the laboratory.

Ohm-cm	Ohms per centimeter
OSHA	Occupational Safety and Health Administration
PCB	Polychlorinated Biphenyl
RL	Reporting Limit - The lowest concentration at which an analyte can be detected in a sample and its concentration can be reported with a specified degree of confidence, accuracy and precision. For usage at AETL, RL is equivalant to LOQ.
RPD	Relative Percent Difference
SIM	Selective Ion Monitoring
SPLP	Synthetic Precipitation Leaching Procedure
STLC	Soluble Threshold Limit Concentration
TCLP	Toxicity Characteristic Leaching Procedure
TPH	Total Petroleum Hydrocarbons
TTLC	Total Threshold Limit Concentrations
ug/kg	Micrograms per Kilogram
ug/L	Micrograms per Liter
ug/m3	Micrograms per cubic meter
WET	Waste Extraction Test
Y	Yes
ZHE	Zero Headspace Extraction

COOLER RECEIPT FORM

Client Name: Smith Emery Geo Services
Project Name:
AETL Job Number: BCC0095
Date Received: 3/9/21 Received by: Sargis Pireh
Carrier: ☑ AETL Courier ☐ Client ☐ GSL ☐ FedEx ☐ UPS
☐ Others:

Samples were received in: ☑ Cooler (1) ☐ Other (Specify):
Inside temperature of shipping container No 1: 3.2°, No 2: ____, No 3: ____
Type of sample containers: ☐ VOA, ☐ Glass bottles, ☐ Wide mouth jars, ☐ HDPE bottles, ☐ Metal sleeves, ☑ Others (Specify): Sleeves & En Cores
How are samples preserved: ☐ None, ☑ Ice, ☐ Blue Ice, ☐ Dry Ice
☑ None, ☐ HNO_3, ☐ NaOH, ☐ ZnOAc, ☐ HCl, ☐ $Na_2S_2O_3$, ☐ MeOH
☐ Other (Specify):

	Yes	No*	N/A	Name, if client was notified.
1. Are the COCs Correct?	✓			
2. Are Sample labels legible & indelible ink?	✓			
3. Do samples match the COC?	✓			
4. Are the required analyses clear?	✓			
5. Is there enough samples for required analysis?	✓			
6. Does cooler or samples have custody seal(s)?			✓	
7. Are sample containers in good condition?	✓			
8. Are samples preserved?	✓			
9. Are samples preserved properly for the intended analysis?	✓			
10. Are the VOAs free of headspace?			✓	
11. Are the jars free of headspace?			✓	
* = see note below. N/A = Not Applicable				

PLEASE NOTE ALL SAMPLES WILL BE DISPOSED OF 30 DAYS AFTER RECEIVING DATE. IF AETL IS INFORMED OTHERWISE, THERE WILL BE A STORAGE CHARGE PER SAMPLE PER MONTH FOR ANY SAMPLE HELD BEYOND 30 DAYS.

***Explain all "No" answers for above questions:**

Case Narrative

The following "Sample Received" Section summarizes the samples received and associated analyses requested as specified on the enclosed chain of custody.

Results as reported by the laboratory apply only to 1) the items tested, 2) as the samples are received, and 3) the accuracy of information provided. Information supplied by the customer that may affect validity of results and may be contained in this report include Project Name/Number, Site Location, Sample Locations, Sampling Dates/ Times, Sample ID, Sample Preservation, Sample Matrix, Sample Properties, Field Blanks, Field Duplicates, Field Spikes, and Site Historical Data.

Accreditation applies only to the test methods listed on each scope of accreditation held by the laboratory; certifications held by the laboratory may not apply to results supplied in this report.

Unless otherwise noted, all results of soil and solid samples are based on wet weight.

No analytical non-conformances were encountered.

Qualifiers are noted in the report.

Hexavalent Chromium, OCPs, and Metals analyses were performed by a subcontracted laboratory (Positive Lab Services).

The contents of this report apply to the sample(s) analyzed in accordance with the chain of custody document.
No duplication of this report is allowed, except in its entirety without written approval of the laboratory.

Qualifiers and Definitions

Item	Qualifiers
J	Analyte was detected. However, the analyte concentration is an estimated value, which is between the Method Detection Limit (MDL) and the Reporting Limit (RL).
M	The spike recovery for this QC sample is outside of established control limits possibly due to sample matrix interference. Laboratory Control Samples(LCS/LCSD) recovery were acceptable.

Item	Definitions
% wt	Percent Weight
%REC	Percent Recovery
°C	Degrees Celsius
AETL	American Environmental Testing Laboratory, LLC
C	Carbon
CARB	California Air Resources Board
COC	Chain of Custody
DRO	Diesel Range Organics
Dup	Duplicate
ELAP	Environmental Laboratory Accreditation Program
EPA	Environmental Protection Agency
GRO	Gasoline Range Organics
HC	Hydrocarbon
LACSD	Los Angeles County Sanitation Districts
LCS	Laboratory Control Sample - A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes.
LCSD	Laboratory Control Sample Duplicate - A replicate of Laboratory Control Sample.
LOQ	Limit of Quantitation
MDL	Method Detection Limit - The minimum measured concentration of a substance that can be reported with 99% confidence. MDL is statistically derived number which is specific for each instrument, each method and each compound.
mg/kg	Miligrams per Kilogram
mg/L	Miligrams per Liter
MRO	Motor oil Range Organics
MS	Matrix Spike - A sample prepared, taken through all sample preparation and analytical steps of the procedure and analyzed as an independent test results.
MSD	Matrix Spike Duplicate - A replicate of Matrix Spike Sample.
N	No
ND	Analyte is not detected below Method Detection Limit.
ng/m3	Nanograms per cubic meter
NIOSH	National Institute for Occupational Safety and Health
nL/L	Nanoliters per Liter
NTU	Nephelometric Turbidity Units

The contents of this report apply to the sample(s) analyzed in accordance with the chain of custody document.
No duplication of this report is allowed, except in its entirety without written approval of the laboratory.

Ohm-cm	Ohms per centimeter
OSHA	Occupational Safety and Health Administration
PCB	Polychlorinated Biphenyl
RL	Reporting Limit - The lowest concentration at which an analyte can be detected in a sample and its concentration can be reported with a specified degree of confidence, accuracy and precision. For usage at AETL, RL is equivalant to LOQ.
RPD	Relative Percent Difference
SIM	Selective Ion Monitoring
SPLP	Synthetic Precipitation Leaching Procedure
STLC	Soluble Threshold Limit Concentration
TCLP	Toxicity Characteristic Leaching Procedure
TPH	Total Petroleum Hydrocarbons
TTLC	Total Threshold Limit Concentrations
ug/kg	Micrograms per Kilogram
ug/L	Micrograms per Liter
ug/m3	Micrograms per cubic meter
WET	Waste Extraction Test
Y	Yes
ZHE	Zero Headspace Extraction

Report No.: 2103174
Project Name: # BCC0095 / P.O. # 32643

Dear Christine Novshadayan,

This report contains the analytical results for the sample(s) received under chain of custody(s) by Positive Lab Service on March 11, 2021.

The test results in this report are performed in compliance with ELAP accreditation requirements for the certified parameters. The laboratory report may not be produced, except in full, without the written approval of the laboratory.

The issuance of the final Certificate of Analysis takes precedence over any previous Preliminary Report. Preliminary data should not be used for regulatory purposes. Authorized signature(s) is provided on final report only.

If you have any questions in reference to this report, please contact your Positive Lab Service coordinator.

Hi Corey,

Please analyze the soil sample BH-16-2' for STLC lead.

Thanks,
Brando

Respectfully,

Ildebrando Resurreccion

Subject: Results for 11640-11770 Valley Blvd.

Hello Ayesha,

Attached are the PDF and summary table of the results for the samples collected on March 9, 2021 at 11640-11730 Valley Blvd., El Monte, CA (BCC0095). I apologize for the delay.

If you should have any questions or require additional information, please do not hesitate to contact us.

Best regards,

Corey Jones

COOLER RECEIPT FORM

Client Name: Smith Emery Geo Services
Project Name:
AETL Job Number: BCC0095
Date Received: 3/9/21 Received by: Sargis Pireh
Carrier: ☑ AETL Courier ☐ Client ☐ GSL ☐ FedEx ☐ UPS
☐ Others:

Samples were received in: ☑ Cooler (1) ☐ Other (Specify):
Inside temperature of shipping container No 1: 3.2°, No 2: ____, No 3: ____
Type of sample containers: ☐ VOA, ☐ Glass bottles, ☐ Wide mouth jars, ☐ HDPE bottles, ☐ Metal sleeves, ☑ Others (Specify): Sleeves & En Cores
How are samples preserved: ☐ None, ☑ Ice, ☐ Blue Ice, ☐ Dry Ice
☑ None, ☐ HNO_3, ☐ NaOH, ☐ ZnOAc, ☐ HCl, ☐ $Na_2S_2O_3$, ☐ MeOH
☐ Other (Specify):

	Yes	No*	N/A	Name, if client was notified.
1. Are the COCs Correct?	✓			
2. Are Sample labels legible & indelible ink?	✓			
3. Do samples match the COC?	✓			
4. Are the required analyses clear?	✓			
5. Is there enough samples for required analysis?	✓			
6. Does cooler or samples have custody seal(s)?			✓	
7. Are sample containers in good condition?	✓			
8. Are samples preserved?	✓			
9. Are samples preserved properly for the intended analysis?	✓			
10. Are the VOAs free of headspace?			✓	
11. Are the jars free of headspace?			✓	
* = see note below. N/A = Not Applicable				

PLEASE NOTE ALL SAMPLES WILL BE DISPOSED OF 30 DAYS AFTER RECEIVING DATE. IF AETL IS INFORMED OTHERWISE, THERE WILL BE A STORAGE CHARGE PER SAMPLE PER MONTH FOR ANY SAMPLE HELD BEYOND 30 DAYS.

***Explain all "No" answers for above questions:**

Case Narrative

The following "Sample Received" Section summarizes the samples received and associated analyses requested as specified on the enclosed chain of custody.

Results as reported by the laboratory apply only to 1) the items tested, 2) as the samples are received, and 3) the accuracy of information provided. Information supplied by the customer that may affect validity of results and may be contained in this report include Project Name/Number, Site Location, Sample Locations, Sampling Dates/ Times, Sample ID, Sample Preservation, Sample Matrix, Sample Properties, Field Blanks, Field Duplicates, Field Spikes, and Site Historical Data.

Accreditation applies only to the test methods listed on each scope of accreditation held by the laboratory; certifications held by the laboratory may not apply to results supplied in this report.

Unless otherwise noted, all results of soil and solid samples are based on wet weight.

No analytical non-conformances were encountered.

The contents of this report apply to the sample(s) analyzed in accordance with the chain of custody document.
No duplication of this report is allowed, except in its entirety without written approval of the laboratory.

Qualifiers and Definitions

Item	Definitions
% wt	Percent Weight
%REC	Percent Recovery
°C	Degrees Celsius
AETL	American Environmental Testing Laboratory, LLC
C	Carbon
CARB	California Air Resources Board
COC	Chain of Custody
DRO	Diesel Range Organics
Dup	Duplicate
ELAP	Environmental Laboratory Accreditation Program
EPA	Environmental Protection Agency
GRO	Gasoline Range Organics
HC	Hydrocarbon
LACSD	Los Angeles County Sanitation Districts
LCS	Laboratory Control Sample - A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes.
LCSD	Laboratory Control Sample Duplicate - A replicate of Laboratory Control Sample.
LOQ	Limit of Quantitation
MDL	Method Detection Limit - The minimum measured concentration of a substance that can be reported with 99% confidence. MDL is statistically derived number which is specific for each instrument, each method and each compound.
mg/kg	Miligrams per Kilogram
mg/L	Miligrams per Liter
MRO	Motor oil Range Organics
MS	Matrix Spike - A sample prepared, taken through all sample preparation and analytical steps of the procedure and analyzed as an independent test results.
MSD	Matrix Spike Duplicate - A replicate of Matrix Spike Sample.
N	No
ND	Analyte is not detected below Method Detection Limit.
ng/m3	Nanograms per cubic meter
NIOSH	National Institute for Occupational Safety and Health
nL/L	Nanoliters per Liter
NTU	Nephelometric Turbidity Units
Ohm-cm	Ohms per centimeter
OSHA	Occupational Safety and Health Administration
PCB	Polychlorinated Biphenyl
PSU	Practical Salinity Unit
RL	Reporting Limit - The lowest concentration at which an analyte can be detected in a sample and its concentration can be reported with a specified degree of confidence, accuracy and precision. For usage at AETL, RL is equivalant to LOQ.

Report No.: 2103174
Project Name: # BCC0095 / P.O. # 32643

Dear Christine Novshadayan,

This report contains the analytical results for the sample(s) received under chain of custody(s) by Positive Lab Service on March 11, 2021.

The test results in this report are performed in compliance with ELAP accreditation requirements for the certified parameters. The laboratory report may not be produced, except in full, without the written approval of the laboratory.

The issuance of the final Certificate of Analysis takes precedence over any previous Preliminary Report. Preliminary data should not be used for regulatory purposes. Authorized signature(s) is provided on final report only.

If you have any questions in reference to this report, please contact your Positive Lab Service coordinator.

COOLER RECEIPT FORM

Client Name: Smith Emery Geo Services
Project Name:
AETL Job Number: Bcc0096
Date Received: 3/10/2021 Received by: Arlet Tahmasian
Carrier: ☒ AETL Courier ☐ Client ☐ GSL ☐ FedEx ☐ UPS
☐ Others:

Samples were received in: ☒ Cooler ( ) ☐ Other (Specify):
Inside temperature of shipping container No 1: 3.1, No 2: , No 3:
Type of sample containers: ☐ VOA, ☐ Glass bottles, ☐ Wide mouth jars, ☐ HDPE bottles, ☐ Metal sleeves, ☐ Others (Specify): Sleeves, Encore
How are samples preserved: ☐ None, ☒ Ice, ☐ Blue Ice, ☐ Dry Ice
☒ None, ☐ HNO_3, ☐ NaOH, ☐ ZnOAc, ☐ HCl, ☐ $Na_2S_2O_3$, ☐ MeOH
☐ Other (Specify):

	Yes	No*	N/A	Name, if client was notified.
1. Are the COCs Correct?	✓			
2. Are Sample labels legible & indelible ink?	✓			
3. Do samples match the COC?	✓			
4. Are the required analyses clear?	✓			
5. Is there enough samples for required analysis?	✓		✓	
6. Does cooler or samples have custody seal(s)?	✓		✓	
7. Are sample containers in good condition?	✓			
8. Are samples preserved?	✓			
9. Are samples preserved properly for the intended analysis?	✓		✓	
10. Are the VOAs free of headspace?			✓	
11. Are the jars free of headspace?			✓	
* = see note below. N/A = Not Applicable				

PLEASE NOTE ALL SAMPLES WILL BE DISPOSED OF 30 DAYS AFTER RECEIVING DATE. IF AETL IS INFORMED OTHERWISE, THERE WILL BE A STORAGE CHARGE PER SAMPLE PER MONTH FOR ANY SAMPLE HELD BEYOND 30 DAYS.

***Explain all "No" answers for above questions:**

Case Narrative

The following "Sample Received" Section summarizes the samples received and associated analyses requested as specified on the enclosed chain of custody.

Results as reported by the laboratory apply only to 1) the items tested, 2) as the samples are received, and 3) the accuracy of information provided. Information supplied by the customer that may affect validity of results and may be contained in this report include Project Name/Number, Site Location, Sample Locations, Sampling Dates/ Times, Sample ID, Sample Preservation, Sample Matrix, Sample Properties, Field Blanks, Field Duplicates, Field Spikes, and Site Historical Data.

Accreditation applies only to the test methods listed on each scope of accreditation held by the laboratory; certifications held by the laboratory may not apply to results supplied in this report.

Unless otherwise noted, all results of soil and solid samples are based on wet weight.

No analytical non-conformances were encountered.

Qualifiers are noted in the report.

Metals and OCPs analyses were performed by Positive Lab Service.

The contents of this report apply to the sample(s) analyzed in accordance with the chain of custody document.
No duplication of this report is allowed, except in its entirety without written approval of the laboratory.

Samples Received
(Continued)

AETL received the following samples on 03/10/2021 with the following specifications

Project Name: 11640-11730 Valley Blvd.
Site: El Monte, CA

Client ID		Sample Date
BH-27-2'		03/10/2021 7:45
Lab ID	**Matrix**	**Quantity of Containers**
BCC0096-10	Soil	3

Analysis	Units	TAT
Archive	N/A	5

Client ID		Sample Date
BH-27-5'		03/10/2021 7:50
Lab ID	**Matrix**	**Quantity of Containers**
BCC0096-11	Soil	4

Analysis	Units	TAT
EPA 6010B	mg/kg	5
EPA 7471A	mg/kg	5
EPA 8015B TPH DRO/OI	mg/kg	5
EPA 8015B TPH GRO	mg/kg	5
EPA 8260B	ug/kg	5
EPA 9045C	pH unit	5
EPA 9045C	Deg C	5

Client ID		Sample Date
BH-27-10'		03/10/2021 7:55
Lab ID	**Matrix**	**Quantity of Containers**
BCC0096-12	Soil	3

Analysis	Units	TAT
Archive	N/A	5

Total Number of Samples received: 12

Qualifiers and Definitions

Item	Qualifiers
J	Analyte was detected. However, the analyte concentration is an estimated value, which is between the Method Detection Limit (MDL) and the Reporting Limit (RL).
M	The spike recovery for this QC sample is outside of established control limits possibly due to sample matrix interference. Laboratory Control Samples(LCS/LCSD) recovery were acceptable.
R	The RPD was outside of QC acceptance limits due to possible matrix interference.

Item	Definitions
% wt	Percent Weight
%REC	Percent Recovery
°C	Degrees Celsius
AETL	American Environmental Testing Laboratory, LLC
C	Carbon
CARB	California Air Resources Board
COC	Chain of Custody
DRO	Diesel Range Organics
Dup	Duplicate
ELAP	Environmental Laboratory Accreditation Program
EPA	Environmental Protection Agency
GRO	Gasoline Range Organics
HC	Hydrocarbon
LACSD	Los Angeles County Sanitation Districts
LCS	Laboratory Control Sample - A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes.
LCSD	Laboratory Control Sample Duplicate - A replicate of Laboratory Control Sample.
LOQ	Limit of Quantitation
MDL	Method Detection Limit - The minimum measured concentration of a substance that can be reported with 99% confidence. MDL is statistically derived number which is specific for each instrument, each method and each compound.
mg/kg	Miligrams per Kilogram
mg/L	Miligrams per Liter
MRO	Motor oil Range Organics
MS	Matrix Spike - A sample prepared, taken through all sample preparation and analytical steps of the procedure and analyzed as an independent test results.
MSD	Matrix Spike Duplicate - A replicate of Matrix Spike Sample.
N	No
ND	Analyte is not detected below Method Detection Limit.
ng/m3	Nanograms per cubic meter
NIOSH	National Institute for Occupational Safety and Health
nL/L	Nanoliters per Liter

The contents of this report apply to the sample(s) analyzed in accordance with the chain of custody document.
No duplication of this report is allowed, except in its entirety without written approval of the laboratory.

Report No.: 2103175
Project Name: # BCC0096 / P.O. # 32648

Dear Christine Novshadayan,

This report contains the analytical results for the sample(s) received under chain of custody(s) by Positive Lab Service on March 11, 2021.

The test results in this report are performed in compliance with ELAP accreditation requirements for the certified parameters. The laboratory report may not be produced, except in full, without the written approval of the laboratory.

The issuance of the final Certificate of Analysis takes precedence over any previous Preliminary Report. Preliminary data should not be used for regulatory purposes. Authorized signature(s) is provided on final report only.

If you have any questions in reference to this report, please contact your Positive Lab Service coordinator.

Project Manager

Subject: FW: Results for 11640-11770 Valley Blvd.

Hi Corey,

Additional testing. Please test the following samples.

BH-3-2' and BH-7-2' for PCBs
BH-7-2' for STLC-Lead

Thanks,
Brando

Respectfully,

Ildebrando Resurreccion
Project Manager

Good morning Corey,

Per our discussion last Friday 3/19/21, below are the list of the samples to be tested for PCBs - ASAP

BH9-5',BH10-5', BH12-5', BH18-5', BH19-5', BH20-5', BH21-5', BH22-5', BH23-2', BH24-5', BH25-5' and 10' = **12 samples Total**

Best Regards,
Brando

Respectfully,

Case Narrative

The following "Sample Received" Section summarizes the samples received and associated analyses requested as specified on the enclosed chain of custody.

Results as reported by the laboratory apply only to 1) the items tested, 2) as the samples are received, and 3) the accuracy of information provided. Information supplied by the customer that may affect validity of results and may be contained in this report include Project Name/Number, Site Location, Sample Locations, Sampling Dates/ Times, Sample ID, Sample Preservation, Sample Matrix, Sample Properties, Field Blanks, Field Duplicates, Field Spikes, and Site Historical Data.

Accreditation applies only to the test methods listed on each scope of accreditation held by the laboratory; certifications held by the laboratory may not apply to results supplied in this report.

Unless otherwise noted, all results of soil and solid samples are based on wet weight.

No analytical non-conformances were encountered.

The contents of this report apply to the sample(s) analyzed in accordance with the chain of custody document.
No duplication of this report is allowed, except in its entirety without written approval of the laboratory.

Qualifiers and Definitions

Item	Definitions
% wt	Percent Weight
%REC	Percent Recovery
°C	Degrees Celsius
AETL	American Environmental Testing Laboratory, LLC
C	Carbon
CARB	California Air Resources Board
COC	Chain of Custody
DRO	Diesel Range Organics
Dup	Duplicate
ELAP	Environmental Laboratory Accreditation Program
EPA	Environmental Protection Agency
GRO	Gasoline Range Organics
HC	Hydrocarbon
LACSD	Los Angeles County Sanitation Districts
LCS	Laboratory Control Sample - A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes.
LCSD	Laboratory Control Sample Duplicate - A replicate of Laboratory Control Sample.
LOQ	Limit of Quantitation
MDL	Method Detection Limit - The minimum measured concentration of a substance that can be reported with 99% confidence. MDL is statistically derived number which is specific for each instrument, each method and each compound.
mg/kg	Miligrams per Kilogram
mg/L	Miligrams per Liter
MRO	Motor oil Range Organics
MS	Matrix Spike - A sample prepared, taken through all sample preparation and analytical steps of the procedure and analyzed as an independent test results.
MSD	Matrix Spike Duplicate - A replicate of Matrix Spike Sample.
N	No
ND	Analyte is not detected below Method Detection Limit.
ng/m3	Nanograms per cubic meter
NIOSH	National Institute for Occupational Safety and Health
nL/L	Nanoliters per Liter
NTU	Nephelometric Turbidity Units
Ohm-cm	Ohms per centimeter
OSHA	Occupational Safety and Health Administration
PCB	Polychlorinated Biphenyl
PSU	Practical Salinity Unit
RL	Reporting Limit - The lowest concentration at which an analyte can be detected in a sample and its concentration can be reported with a specified degree of confidence, accuracy and precision. For usage at AETL, RL is equivalant to LOQ.

The contents of this report apply to the sample(s) analyzed in accordance with the chain of custody document.
No duplication of this report is allowed, except in its entirety without written approval of the laboratory.

Report No.: 2103175
Project Name: # BCC0096 / P.O. # 32648

Dear Christine Novshadayan,

This report contains the analytical results for the sample(s) received under chain of custody(s) by Positive Lab Service on March 11, 2021.

The test results in this report are performed in compliance with ELAP accreditation requirements for the certified parameters. The laboratory report may not be produced, except in full, without the written approval of the laboratory.

The issuance of the final Certificate of Analysis takes precedence over any previous Preliminary Report. Preliminary data should not be used for regulatory purposes. Authorized signature(s) is provided on final report only.

If you have any questions in reference to this report, please contact your Positive Lab Service coordinator.

Project Manager

Lead Technician	HOOGENHUIZEN, ANDREW	**Phone**		**Email**	drew.hoogenhuizen@gprsinc.com

Thank you for using GPRS on your project. We appreciate the opportunity to work with you. If you have questions regarding the results of this scanning, please contact the lead GPRS technician on this project.

EQUIPMENT USED

The following equipment was used on this project:

- Underground Scanning GPR antenna. Typically capable of detecting objects up to 8' deep or more in ideal conditions but maximum effective depth can vary widely and depends on site and soil conditions. Depth penetration is most commonly limited by moisture and clay/conductive soils. Depths provided should always be treated as estimates as their accuracy can be affected by multiple factors.

Work Performed

Ground Penetrating Radar Systems performed the following work on this project:

Underground Utility

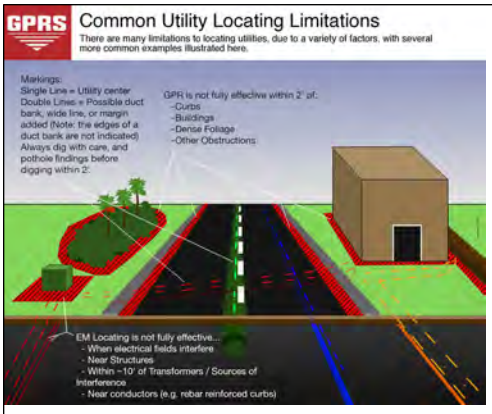

The scope of work included scanning the specified area to locate underground utilities. A tracer signal was sent along any accessible metallic utility or tracer wire, and the area was scanned with GPR to locate any additional targets. The locations of any detected utilities and anomalies were marked directly at the site with paint, flags, stakes, or other appropriate means, and results were reviewed with onsite personnel unless otherwise noted.

- GPR scan to identify the area of a clarifier that was removed from the ground.
- The effective depth of GPR will vary throughout a site depending on surface and soil conditions. In this area, the maximum effective GPR depth was approximately 0-3 feet.
- Our technicians performed a subsurface investigation to locate the possible location where a clarifier was excavated and removed. Scanned the entire project area to identify the location. Could not confirm the location of where the clarifier was excavated and removed. Had two technicians try to identify the location, no success. Soil lithology was consistent throughout the site. No areas of concern where a possible clarifier was removed.

Job Summary

Job Date : 3/10/2021

GPRS

1 866 914 4718 GPRSINC COM

UTILITY LOCATING

To ensure the overall timely success of your project, utility detection is critical to any construction project where subsurface excavation is planned. If this critical first step is ignored, the risk for injury increases, budget overruns can multiply and your schedule can be delayed.

VIDEO PIPE INSPECTION

Video Pipe Inspection (CCTV) is a service used to inspect underground water, sewer and lateral pipelines. VPI is a great tool for investigating cross-bores, structural faults and damages, and lateral line inspection.

CONCRETE SCANNING

With new build construction and renovation projects, the likelihood of needing to cut or core concrete is high. There is an inherent risk of striking rebar, conduits, and post tension cables during the cutting or coring process. Our industry-leading concrete scanning services can mitigate the risks associated with saw cutting and core drilling concrete slabs.

REPORTS & DRAWINGS

The goal of the GPRS Deliverables Department is to deliver clear and understandable findings with each of our outputs from field markings to field sketches, KMZ files, or CAD drawings that provide 2D site plans or even 3D CAD models. In addition, upon the completion of every project, our customers receive a job summary that includes job scope information, site photos, description of site conditions, equipment used, and notes from the project.

NATIONWIDE SERVICE

With team members located in every major metropolitan area in the U.S., we're just a short drive away from any project. Our footprint allows us to service all of your projects, nationwide.

RAPID RESPONSE

Time is always critical in any construction project. We understand this and have, accordingly, developed and perfected our operations to quickly and efficiently respond to our customers within 24-48 hours, or less.

CONSULTATIVE APPROACH

Our Project Managers are trained to ask questions and provide you with answers. This project-specific consultative approach – a GPRS trademark – helps us hone in on your subsurface issues and ensure we provide valuable problem-solving solutions to keep your job moving.

PROVEN RESULTS

GPRS deploys the best equipment, operated by skilled Project Managers, who know how to solve your subsurface locating issues. Since our inception, GPRS has completed hundreds of thousands of projects in North America. Our accuracy rate on these projects? Over 99%.
