3.	☐	☐	**Will there be any demolition, excavating, and/or grading construction activities that encompass an area exceeding 20,000 square feet?**
4.	☐	☐	**Does this project include the open outdoor storage of dry bulk solid materials that could generate dust?** If Yes, include a plot plan with the application package.

[1] A "project" means the whole of an action which has a potential for resulting in physical change to the environment, including construction activities, clearing or grading of land, improvements to existing structures, and activities or equipment involving the issuance of a permit. For example, a project might include installation of a new, or modification of an existing internal combustion engine, dry-cleaning facility, boiler, gas turbine, spray coating booth, solvent cleaning tank, etc.

[3] To download this form and the instructions, visit http://www.aqmd.gov/ceqa or http://www.aqmd.gov/permit

	Yes	No	
5.	☐	☐	**Would this project result in noticeable off-site odors from activities that may not be subject to SCAQMD permit requirements?** For example, compost materials or other types of greenwaste (i.e., lawn clippings, tree trimmings, etc.) have the potential to generate odor complaints subject to Rule 402 – Nuisance.
6.	☐	☐	**Does this project cause an increase of emissions from marine vessels, trains and/or airplanes?**
7.	☐	☐	**Will the proposed project increase the QUANTITY of hazardous materials stored aboveground onsite or transported by mobile vehicle to or from the site by greater than or equal to the amounts associated with each compound on the attached Table 1?[4]**
			Section III – Water Resources
8.	☐	☐	**Will the project increase demand for water at the facility by more than 5,000,000 gallons per day?** The following examples identify some, but not all, types of projects that may result in a "yes" answer to this question: 1) projects that generate steam; 2) projects that use water as part of the air pollution control equipment; 3) projects that require water as part of the production process; 4) projects that require new or expansion of existing sewage treatment facilities; 5) projects where water demand exceeds the capacity of the local water purveyor to supply sufficient water for the project; and 6) projects that require new or expansion of existing water supply facilities.
9.	☐	☐	**Will the project require construction of new water conveyance infrastructure?** Examples of such projects are when water demands exceed the capacity of the local water purveyor to supply sufficient water for the project, or require new or modified sewage treatment facilities such that the project requires new water lines, sewage lines, sewage hook-ups, etc.
			Section IV – Transportation/Circulation
10.			**Will the project result in** (Check all that apply)**:**
	☐	☐	**a. the need for more than 350 new employees?**
	☐	☐	**b. an increase in heavy-duty transport truck traffic to and/or from the facility by more than 350 truck round-trips per day?**
	☐	☐	**c. increase customer traffic by more than 700 visits per day?**
			Section V – Noise
11.	☐	☐	**Will the project include equipment that will generate noise GREATER THAN 90 decibels (dB) at the property line?**
			Section VI – Public Services
12.			**Will the project create a permanent need for new or additional public services in any of the following areas** (Check all that apply)**:**
	☐	☐	**a. Solid waste disposal?** Check "No" if the projected potential amount of wastes generated by the project is less than five tons per day.
	☐	☐	**b. Hazardous waste disposal?** Check "No" if the projected potential amount of hazardous wastes generated by the project is less than 42 cubic yards per day (or equivalent in pounds).

REMINDER: *For each "Yes" checked in the sections above, attach all pertinent information including but not limited to estimated quantities, volumes, weights, etc.*

South Coast Air Quality Management District

Form 400-CEQA

California Environmental Quality Act (CEQA) Applicability

Mail Application To:
P.O. Box 4944
Diamond Bar, CA 91765

Tel: (909) 396-3385

www.aqmd.gov

The SCAQMD is required by state law, the California Environmental Quality Act (CEQA), to review discretionary permit project applications for potential air quality and other environmental impacts. This form is a screening tool to assist the SCAQMD in clarifying whether or not the project[1] has the potential to generate significant adverse environmental impacts that might require preparation of a CEQA document [CEQA Guidelines §15060(a)].[2] Refer to the attached instructions for guidance in completing this form.[3] For each Form 400-A application, also complete and submit one Form 400-CEQA. If submitting multiple Form 400-A applications for the same project at the same time, only one 400-CEQA form is necessary for the entire project. If you need assistance completing this form, contact Lori Inga at (909) 396-3109.

FACILITY INFORMATION

Business Name of Operator to Appear on the Permit:	Facility ID (6-Digit):
GE Engine Services, Inc.	061160

Project Description:

Title V permit revision (Application for Permit to Operate existing batch oven (Rule 202(c)); addition of Rule 219 operations)

REVIEW FOR EXEMPTION FROM FURTHER CEQA ACTION

Check "Yes" or "No" as applicable

	Yes	No	Is this application for:
A.	○	◉	**A CEQA and/or NEPA document previously or currently prepared that specifically evaluates this project?** If yes, a permit cannot be issued until a Final CEQA document and Notice of Determination is submitted.
B.	○	◉	**A request for a change of permittee only (without equipment modifications)?**
C.	○	◉	**Equipment certification or equipment registration** (qualifies for Rule 222)?
D.	○	◉	**A functionally identical permit unit replacement with no increase in rating or emissions?**
E.	○	◉	**A change of daily VOC permit limit to a monthly VOC permit limit?**
F.	○	◉	**Equipment damaged as a result of a disaster during state of emergency?**
G.	○	◉	**A Title V** (i.e., Regulation XXX) **permit renewal (without equipment modifications)?**
H.	○	◉	**A Title V administrative permit revision?**
I.	○	◉	**The conversion of an existing permit into an initial Title V permit?**

If **"Yes"** is checked for any question above, your application does not require additional evaluation for CEQA applicability. Skip to page 2, "SIGNATURES" and sign and date this form.

REVIEW OF IMPACTS WHICH MAY TRIGGER CEQA

Complete Sections I-VI by checking "Yes" or "No" as applicable. To avoid delays in processing your application(s), explain all "Yes" responses on a separate sheet and attach it to this form.

	Yes	No	Section I – General
1.	○	◉	**Has this project generated any known public controversy regarding potential adverse impacts that may be generated by the project?** Controversy may be construed as concerns raised by local groups at public meetings; adverse media attention such as negative articles in newspapers or other periodical publications, local news programs, environmental justice issues, etc.
2.	○	◉	**Is this project part of a larger project?**
			Section II – Air Quality
3.	○	◉	**Will there be any demolition, excavating, and/or grading construction activities that encompass an area exceeding 20,000 square feet?**
4.	○	◉	**Does this project include the open outdoor storage of dry bulk solid materials that could generate dust?** If Yes, include a plot plan with the application package.

[1] A "project" means the whole of an action which has a potential for resulting in physical change to the environment, including construction activities, clearing or grading of land, improvements to existing structures, and activities or equipment involving the issuance of a permit. For example, a project might include installation of a new, or modification of an existing internal combustion engine, dry-cleaning facility, boiler, gas turbine, spray coating booth, solvent cleaning tank, etc.

	Yes	No	
5.	○	◉	**Would this project result in noticeable off-site odors from activities that may not be subject to SCAQMD permit requirements?** For example, compost materials or other types of greenwaste (i.e., lawn clippings, tree trimmings, etc.) have the potential to generate odor complaints subject to Rule 402 – Nuisance.
6.	○	◉	**Does this project cause an increase of emissions from marine vessels, trains and/or airplanes?**
7.	○	◉	**Will the proposed project increase the QUANTITY of hazardous materials stored aboveground onsite or transported by mobile vehicle to or from the site by greater than or equal to the amounts associated with each compound on the attached Table 1?[4]**
			Section III – Water Resources
8.	○	◉	**Will the project increase demand for water at the facility by more than 5,000,000 gallons per day?** The following examples identify some, but not all, types of projects that may result in a "yes" answer to this question: 1) projects that generate steam; 2) projects that use water as part of the air pollution control equipment; 3) projects that require water as part of the production process; 4) projects that require new or expansion of existing sewage treatment facilities; 5) projects where water demand exceeds the capacity of the local water purveyor to supply sufficient water for the project; and 6) projects that require new or expansion of existing water supply facilities.
9.	○	◉	**Will the project require construction of new water conveyance infrastructure?** Examples of such projects are when water demands exceed the capacity of the local water purveyor to supply sufficient water for the project, or require new or modified sewage treatment facilities such that the project requires new water lines, sewage lines, sewage hook-ups, etc.
			Section IV – Transportation/Circulation
10.			**Will the project result in** (Check all that apply):
	○	◉	**a. the need for more than 350 new employees?**
	○	◉	**b. an increase in heavy-duty transport truck traffic to and/or from the facility by more than 350 truck round-trips per day?**
	○	◉	**c. increase customer traffic by more than 700 visits per day?**
			Section V – Noise
11.	○	◉	**Will the project include equipment that will generate noise GREATER THAN 90 decibels (dB) at the property line?**
			Section VI – Public Services
12.			**Will the project create a permanent need for new or additional public services in any of the following areas** (Check all that apply):
	○	◉	**a. Solid waste disposal?** Check "No" if the projected potential amount of wastes generated by the project is less than five tons per day.
	○	◉	**b. Hazardous waste disposal?** Check "No" if the projected potential amount of hazardous wastes generated by the project is less than 42 cubic yards per day (or equivalent in pounds).

REMINDER: For each "Yes" checked in the sections above, attach all pertinent information including but not limited to estimated quantities, volumes, weights, etc.

Contact Title: Phone:

Fax: E-Mail:

Section D: Application Type

The facility is in ○ RECLAIM ◉ Title V ○ RECLAIM & Title V Program (please check if applicable)

6. Reason for Submitting Application (Select only ONE):

- ○ New Construction (Permit to Construct)
- ○ Permitted Equipment Altered/ Modified Without Permit Approval*
- ○ Equipment Operating Without A Permit or Expired Permit*
- ○ Proposed Alteration/Modification to Permitted Equipment
- ○ Administrative Change
- ○ Change of Condition For Permit To Operate
- ○ Equipment On-Site But Not Constructed or Operational
- ○ Change of Condition For Permit To Construct
- ◉ Title V Application (Initial, Revisions, etc.) (Also complete Form 500-TV)
- ○ Change of Location—Moving to New Site
- ○ Compliance Plan
- ○ Facility Permit Amendment
- ○ Registration/Certification
- ○ Streamlined Standard Permit

Existing Or Previous Permit/Application Number:
(If you checked any of the items in this column, you MUST provide a existing Permit/ Application Number)

* A Higher Permit Processing Fee applies to those items with an asterisk (Rule 301 (c) (1) (D)

7. Estimated Start Date of Operation/Construction (MM/DD/YYYY):

8. Description of Equipment:

9. Is this equipment portable AND will it be operated at different locations within AQMD's jurisdiction? ○ No ○ Yes

10. For Identical equipment, how many additional applications are being submitted with this application? (Form 400-A required for each)

11. Are you a Small Business as per AQMD's Rule 102 definition? (10 employees or less and total gross receipts are $500,000 or less, or a not-for-profit training center?) ○ No ○ Yes

12. Has a Notice of Violation (NOV) or a Notice To Comply (NC) been issued for this equipment?
○ No ○ Yes If yes, provide NOV/NC #:

Section E: Facility Business Information

13. What type of business is being conducted at this equipment location? Turbine Engine Repair and Testing

14. What is your businesses primary NAICS Code (North American Industrial Classification System)? 336412

15. Are there other facilities in the SCAQMD jurisdiction operated by the same operator? ◉ No ○ Yes

16. Are there any schools (K-12) within a 1000-ft. radius of the equipment physical location? ◉ No ○ Yes

Section F: Authorization/Signature

I hereby certify that all information contained herein and information submitted with this application is true and correct.

17. Signature of Responsible Official:

18. Title: Service General Manager

19. Print Name: John Macaulay

Section D. Application Type

The facility is in ○ RECLAIM ○ Title V ○ RECLAIM & Title V Program (please check if applicable)

6. Reason for Submitting Application (Select only ONE)

- ○ New Construction (Permit to Construct)
- ○ Equipment Operating Without A Permit or Expired Permit*
- ○ Administrative Change
- ◉ Equipment On-Site But Not Constructed or Operational
- ○ Title V Application (Initial Revisions, Modifications etc.)
- ○ Compliance Plan
- ○ Facility Permit Amendment
- ○ Registration/Certification
- ○ Streamlined Standard Permit
- ○ Permitted Equipment Altered/ Modified Without Permit Approval*
- ○ Proposed Alteration/Modification to Permitted Equipment
- ○ Change of Condition For Permit To Operate
- ○ Change of Condition For Permit To Construct
- ○ Change of Location—Moving to New Site

Existing Or Previous Permit/Application Number
(If you checked any of the items in this column you MUST provide a existing Permit/ Application Number)

* A Higher Permit Processing Fee applies to those items with an asterisk (Rule 301 (c) (1) (D)

7 Estimated Start Date of Operation/Construction (MM/DD/YYYY): 04/01/2007

8 Description of Equipment.
TLD Air Start Unit used as a backup power source to start aircraft engines The unit is equipped with a 2002 200hp Cummins diesel fueled engine (model number B5 9C, serial number 46274304) The engine family certification is 2CEXL0359ABA The unit is equipped with air pollution controls

9 Is this equipment portable AND will it be operated at different locations within AQMD's jurisdiction? ◉ No ○ Yes

10 For identical equipment, how many additional applications are being submitted with this application? (Form 400-A required for each): 0

11 Are you a Small Business as per AQMD's Rule 102 definition? (10 employees or less and total gross receipts are $500 000 or less, or a not-for-profit training center?) ◉ No ○ Yes

12 Has a Notice of Violation (NOV) or a Notice To Comply (NC) been issued for this equipment?
◉ No ○ Yes If yes provide NOV/NC #

Section E Facility Business Information

13 What type of business is being conducted at this equipment location?
Commercial Passenger Airline

14 What is your businesses primary NAICS Code (North American Industrial Classification System)? 4512

15 Are there other facilities in the SCAQMD jurisdiction operated by the same operator? ○ No ◉ Yes

16 Are there any schools (K-12) within a 1000-ft. radius of the equipment physical location? ◉ No ○ Yes

Section F. Authorization/Signature

Form 400-CEQA

California Environmental Quality Act (CEQA) Applicability

Mail Application To
P O Box 4944
Diamond Bar, CA 91765

Tel (909) 396-3385

www.aqmd.gov

The SCAQMD is required by state law, the California Environmental Quality Act (CEQA), to review discretionary permit project applications for potential air quality and other environmental impacts. This form is a screening tool to assist the SCAQMD in clarifying whether or not the project[1] has the potential to generate significant adverse environmental impacts that might require preparation of a CEQA document [CEQA Guidelines §15060(a)].[2] Refer to the attached instructions for guidance in completing this form.[3] For each Form 400-A application, also complete and submit one Form 400-CEQA. If submitting multiple Form 400-A applications for the same project at the same time, only one 400-CEQA form is necessary for the entire project. If you need assistance completing this form, contact Lori Inga at (909) 396-3109

FACILITY INFORMATION

Business Name of Operator to Appear on the Permit	Facility ID (6-Digit)
ExpressJet Airlines	

Project Description

Permit to operate a TLD Air Start Unit with a diesel-fueled engine used as a backup power source to start aircraft engines

REVIEW FOR EXEMPTION FROM FURTHER CEQA ACTION

Check "Yes" or "No" as applicable

	Yes	No	Is this application for
A.	○	◉	**A CEQA and/or NEPA document previously or currently prepared that specifically evaluates this project?** If yes, a permit cannot be issued until a Final CEQA document and Notice of Determination is submitted
B	○	◉	**A request for a change of permittee only (without equipment modifications)?**
C	○	◉	**Equipment certification or equipment registration** (qualifies for Rule 222)?
D	○	◉	**A functionally identical permit unit replacement with no increase in rating or emissions?**
E	○	◉	**A change of daily VOC permit limit to a monthly VOC permit limit?**
F	○	◉	**Equipment damaged as a result of a disaster during state of emergency?**
G	○	◉	**A Title V** (i.e., Regulation XXX) **permit renewal (without equipment modifications)?**
H	○	◉	**A Title V administrative permit revision?**
I	○	◉	**The conversion of an existing permit into an initial Title V permit?**

If **"Yes"** is checked for any question above, your application does not require additional evaluation for CEQA applicability. Skip to page 2, "SIGNATURES" and sign and date this form

REVIEW OF IMPACTS WHICH MAY TRIGGER CEQA

Complete Sections I-VI by checking "Yes" or "No" as applicable. To avoid delays in processing your application(s), explain all "Yes" responses on a separate sheet and attach it to this form

	Yes	No	Section I – General
1	○	◉	**Has this project generated any known public controversy regarding potential adverse impacts that may be generated by the project?** Controversy may be construed as concerns raised by local groups at public meetings, adverse media attention such as negative articles in newspapers or other periodical publications, local news programs, environmental justice issues, etc.
2	○	◉	**Is this project part of a larger project?**
			Section II – Air Quality
3	○	◉	**Will there be any demolition, excavating, and/or grading construction activities that encompass an area exceeding 20,000 square feet?**
4.	○	◉	**Does this project include the open outdoor storage of dry bulk solid materials that could generate dust?** If Yes, include a plot plan with the application package

[1] A "project" means the whole of an action which has a potential for resulting in physical change to the environment, including construction activities, clearing or grading of land, improvements to existing structures, and activities or equipment involving the issuance of a permit. For example, a project might include installation of a new, or modification of an existing internal combustion engine, dry cleaning facility, boiler, gas turbine, spray coating booth, solvent cleaning tank, etc.

[2] To download the CEQA guidelines, visit http://ceres.ca.gov/env_law/state.html

[3] To download this form and the instructions, visit http://www.aqmd.gov/ceqa or http://www.aqmd.gov/permit

© South Coast Air Quality Management District, Form 400-CEQA (2008.02)

	Yes	No	
5.	○	◉	**Would this project result in noticeable off-site odors from activities that may not be subject to SCAQMD permit requirements?** For example, compost materials or other types of greenwaste (i e , lawn clippings, tree trimmings, etc.) have the potential to generate odor complaints subject to Rule 402 – Nuisance
6.	○	◉	**Does this project cause an increase of emissions from marine vessels, trains and/or airplanes?**
7	○	◉	**Will the proposed project increase the QUANTITY of hazardous materials stored aboveground onsite or transported by mobile vehicle to or from the site by greater than or equal to the amounts associated with each compound on the attached Table 1?[4]**
			Section III – Water Resources
8.	○	◉	**Will the project increase demand for water at the facility by more than 5,000,000 gallons per day?** The following examples identify some, but not all, types of projects that may result in a "yes" answer to this question 1) projects that generate steam, 2) projects that use water as part of the air pollution control equipment, 3) projects that require water as part of the production process, 4) projects that require new or expansion of existing sewage treatment facilities 5) projects where water demand exceeds the capacity of the local water purveyor to supply sufficient water for the project; and 6) projects that require new or expansion of existing water supply facilities.
9	○	◉	**Will the project require construction of new water conveyance infrastructure?** Examples of such projects are when water demands exceed the capacity of the local water purveyor to supply sufficient water for the project, or require new or modified sewage treatment facilities such that the project requires new water lines, sewage lines, sewage hook-ups, etc.
			Section IV – Transportation/Circulation
10			**Will the project result in** (Check all that apply)
	○	◉	**a the need for more than 350 new employees?**
	○	◉	**b an increase in heavy-duty transport truck traffic to and/or from the facility by more than 350 truck round-trips per day?**
	○	◉	**c increase customer traffic by more than 700 visits per day?**
			Section V – Noise
11	○	◉	**Will the project include equipment that will generate noise GREATER THAN 90 decibels (dB) at the property line?**
			Section VI – Public Services
12			**Will the project create a permanent need for new or additional public services in any of the following areas** (Check all that apply)
	○	◉	**a Solid waste disposal?** Check "No" if the projected potential amount of wastes generated by the project is less than five tons per day
	○	◉	**b Hazardous waste disposal?** Check "No" if the projected potential amount of hazardous wastes generated by the project is less than 42 cubic yards per day (or equivalent in pounds)

"REMINDER. For each "Yes" checked in the sections above, attach all pertinent information including but not limited to estimated quantities, volumes, weights, etc."

- ○ Permitted Equipment Altered/ Modified Without Permit Approval*
- ○ Proposed Alteration/Modification to Permitted Equipment
- ○ Change of Condition For Permit To Operate
- ○ Change of Condition For Permit To Construct
- ○ Change of Location—Moving to New Site

Existing Or Previous Permit/Application Number
(If you checked any of the items in this column, you MUST provide a existing Permit/ Application Number)

* A Higher Permit Processing Fee applies to those items with an asterisk (Rule 301 (c) (1) (D)

7 Estimated Start Date of Operation/Construction (MM/DD/YYYY).
04/01/2007

8 Description of Equipment.
Hobart Ground Power Unit (GPU) used to power aircraft when engines are not running The unit is equipped with a 2003 110hp Cummins diesel fueled engine (model number B3 9C, serial number 46305201) The engine family certification is 2CEXL0239ACA The unit is equipped with air pollution controls

9 Is this equipment portable AND will it be operated at different locations within AQMD's jurisdiction? ◉ No ○ Yes

10 For identical equipment, how many additional applications are being submitted with this application? (Form 400-A required for each) 0

11 Are you a Small Business as per AQMD's Rule 102 definition? (10 employees or less and total gross receipts are $500 000 or less, or a not-for-profit training center?) ◉ No ○ Yes

12 Has a Notice of Violation (NOV) or a Notice To Comply (NC) been issued for this equipment?
◉ No ○ Yes If yes, provide NOV/NC #

Section E Facility Business Information

13 What type of business is being conducted at this equipment location?
Commercial Passenger Airline

14 What is your businesses primary NAICS Code (North American Industrial Classification System)? 4512

15 Are there other facilities in the SCAQMD jurisdiction operated by the same operator? ○ No ◉ Yes

16. Are there any schools (K-12) within a 1000-ft. radius of the equipment physical location? ◉ No ○ Yes

Section F Authorization/Signature

I hereby certify that all information contained herein and information submitted with this application is true and correct.

17 Signature of Responsible Official

18 Title
Director, Environmental

19 Print Name
Ronald Schultz

20 Date
03/10/2007

Form 400-CEQA

California Environmental Quality Act (CEQA) Applicability

Mail Application To
P O Box 4944
Diamond Bar, CA 91765
Tel (909) 396-3385
www.aqmd.gov

The SCAQMD is required by state law, the California Environmental Quality Act (CEQA), to review discretionary permit project applications for potential air quality and other environmental impacts This form is a screening tool to assist the SCAQMD in clarifying whether or not the project[1] has the potential to generate significant adverse environmental impacts that might require preparation of a CEQA document [CEQA Guidelines §15060(a)][2] Refer to the attached instructions for guidance in completing this form [3] For each Form 400-A application, also complete and submit one Form 400-CEQA. If submitting multiple Form 400-A applications for the same project at the same time, only one 400-CEQA form is necessary for the entire project. If you need assistance completing this form, contact Lori Inga at (909) 396-3109

FACILITY INFORMATION

Business Name of Operator to Appear on the Permit:	Facility ID (6-Digit)
ExpressJet Airlines	

Project Description

Permit to operate a Hobart Ground Power Unit used as a power source to run aircraft when engines are off and there is no other power available

REVIEW FOR EXEMPTION FROM FURTHER CEQA ACTION

Check "Yes" or "No" as applicable

	Yes	No	Is this application for
A.	○	◉	**A CEQA and/or NEPA document previously or currently prepared that specifically evaluates this project?** If yes, a permit cannot be issued until a Final CEQA document and Notice of Determination is submitted
B	○	◉	**A request for a change of permittee only (without equipment modifications)?**
C	○	◉	**Equipment certification or equipment registration** (qualifies for Rule 222)?
D	○	◉	**A functionally identical permit unit replacement with no increase in rating or emissions?**
E	○	◉	**A change of daily VOC permit limit to a monthly VOC permit limit?**
F	○	◉	**Equipment damaged as a result of a disaster during state of emergency?**
G	○	◉	**A Title V** (i e Regulation XXX) **permit renewal (without equipment modifications)?**
H	○	◉	**A Title V administrative permit revision?**
I	○	◉	**The conversion of an existing permit into an initial Title V permit?**

If **"Yes"** is checked for any question above, your application does not require additional evaluation for CEQA applicability Skip to page 2, "SIGNATURES" and sign and date this form

REVIEW OF IMPACTS WHICH MAY TRIGGER CEQA

Complete Sections I-VI by checking "Yes" or "No" as applicable To avoid delays in processing your application(s) explain all "Yes" responses on a separate sheet and attach it to this form

	Yes	No	Section I – General
1	○	◉	**Has this project generated any known public controversy regarding potential adverse impacts that may be generated by the project?** Controversy may be construed as concerns raised by local groups at public meetings, adverse media attention such as negative articles in newspapers or other periodical publications, local news programs, environmental justice issues, etc.
2	○	◉	**Is this project part of a larger project?**
			Section II – Air Quality
3	○	◉	**Will there be any demolition, excavating, and/or grading construction activities that encompass an area exceeding 20,000 square feet?**
4	○	◉	**Does this project include the open outdoor storage of dry bulk solid materials that could generate dust?** If Yes, include a plot plan with the application package

[1] A "project" means the whole of an action which has a potential for resulting in physical change to the environment, including construction activities, clearing or grading of land, improvements to existing structures, and activities or equipment involving the issuance of a permit For example, a project might include installation of a new, or modification of an existing internal combustion engine, dry-cleaning facility, boiler, gas turbine, spray coating booth, solvent cleaning tank, etc.
[2] To download the CEQA guidelines, visit http://ceres.ca.gov/env_law/state.html
[3] To download this form and the instructions, visit http://www.aqmd.gov/ceqa or http://www.aqmd.gov/permit

© South Coast Air Quality Management District, Form 400-CEQA (2006 02)

	Yes	No	
5	○	◉	**Would this project result in noticeable off-site odors from activities that may not be subject to SCAQMD permit requirements?** For example, compost materials or other types of greenwaste (i e , lawn clippings, tree trimmings, etc.) have the potential to generate odor complaints subject to Rule 402 – Nuisance
6	○	◉	**Does this project cause an increase of emissions from marine vessels, trains and/or airplanes?**
7	○	◉	**Will the proposed project increase the QUANTITY of hazardous materials stored aboveground onsite or transported by mobile vehicle to or from the site by greater than or equal to the amounts associated with each compound on the attached Table 1?[4]**
			Section III – Water Resources
8	○	◉	**Will the project increase demand for water at the facility by more than 5,000,000 gallons per day?** The following examples identify some, but not all, types of projects that may result in a "yes" answer to this question 1) projects that generate steam, 2) projects that use water as part of the air pollution control equipment; 3) projects that require water as part of the production process, 4) projects that require new or expansion of existing sewage treatment facilities, 5) projects where water demand exceeds the capacity of the local water purveyor to supply sufficient water for the project; and 6) projects that require new or expansion of existing water supply facilities.
9	○	◉	**Will the project require construction of new water conveyance infrastructure?** Examples of such projects are when water demands exceed the capacity of the local water purveyor to supply sufficient water for the project, or require new or modified sewage treatment facilities such that the project requires new water lines, sewage lines, sewage hook-ups, etc
			Section IV – Transportation/Circulation
10			**Will the project result in** (Check all that apply)
	○	◉	**a the need for more than 350 new employees?**
	○	◉	**b an increase in heavy-duty transport truck traffic to and/or from the facility by more than 350 truck round-trips per day?**
	○	◉	**c Increase customer traffic by more than 700 visits per day?**
			Section V – Noise
11	○	◉	**Will the project include equipment that will generate noise GREATER THAN 90 decibels (dB) at the property line?**
			Section VI – Public Services
12			**Will the project create a permanent need for new or additional public services in any of the following areas** (Check all that apply)
	○	◉	**a Solid waste disposal?** Check "No" if the projected potential amount of wastes generated by the project is less than five tons per day
	○	◉	**b Hazardous waste disposal?** Check "No" if the projected potential amount of hazardous wastes generated by the project is less than 42 cubic yards per day (or equivalent in pounds)

"REMINDER. *For each "Yes" checked in the sections above, attach all pertinent information including but not limited to estimated quantities, volumes, weights, etc* "

Report: On May 24, 2002 with Supervising Inspector Rich Watson, I arrived for an annual Title V inspection. The facility's Title V permit became official in October 2001. We met with Theresa Du Bois, EHS Specialist, and a temporary EHS Specialist named Stacy, whose last name I didn't acquire. The facility conducts aircraft engine overhauls and testing. A majority of the property is for engine maintenance. The 2 test cells and the soil vapor units are at 2264 Avion Place. A test cell is just an engine mount with an exhaust stack. Test cell #1 has not been operated for many months and #2 had been operated the day before the inspection. Records are maintained of fuel usage and this is used to calculate pollutant emissions based on engine-specific emission factors. Records show compliance with daily and 30-day average emissions. Soil unit "A" was in operation with an air flow rate of 141 cfm, in compliance with permit limit. Records are maintained of ppm concentrations based on readings from a PID. The soil units are only operated as needed. They currently have a consultant on-site all day to monitor the soil equipment.

All wipe cleaning of engines is done with acetone. There is no painting or plating. Rule 219 equipment include glove box abrasive blast cabinets and <50 HP emergency generators.

The company submitted the Title V annual and semi-annual compliance certifications on the same form with both check boxes marked. I informed Mr. Du Bois that they need to submit separate forms with only one box checked for each report. No notices were issued.

Report: On May 13, 2004, I arrived at 1923 Avion Street, and met with Rob Meyers, EHS Manager for GE Engine Services I informed Mr Meyers of the compliance inspection of the VOC vapor extraction equipment The facility is aircraft engine repair shop. The facility was in operation during the inspection.

Permitted VOC extraction unit F36249 was in operation and in compliance with permit limit. The other three units are permanently in place in various locations around the test cell facility. Based upon the plume and migration pattern if necessary the other units be placed in operation The average flow rate is 122 scfm which is in compliance with permit conditions Operation and maintenance is done on a weekly basis as well as there is a field service check by the Geosyntec the consultant for this equipment. Records are readily available for inspection

The facility is in compliance with all Soil Treat Vapor extraction equipment.

Report On August 5 2003 I arrived at GE Engine Services for an equipment check for Engineer Jim Fakhoury and a Title V compliance inspection

GE Engine Services conducts aircraft engine overhauls and testing The majority of the facility is for engine maintenance I met with Mr Rolando Espejo (909/937 5311) Environmental Health & Safety Generalist and Dr Phil Wang (909/937-6731)

The two Jet Engine Test Facility/Test Cells Permit F35578 and Permit F34664 are located at 2264 Avion Place A test cell is a large engine mount wit an exhaust stack Test Cell #1 was not operating and the stack height was measured at 45 feet 7 inches Test Cell #2 was in operation dunng the inspection and the height was measured at 58 feet 2 inches The test cell height was required by Engineer Jim Fakhoury for Title V evaluation Records are maintained of fuel usage and this is used to calculate pollutant emissions based on engine specific emission factors Records show compliance with daily and 30-day average emissions Soil units were not in operation at the time of my inspection and are only operated on an as needed basis Records are maintained of ppm concentrations based on readings from a PID

All wipe cleaning of engines is done with acetone No plating or painting is done on site Rule 219 equipment includes glove box abrasive blast cabinets and <50 HP emergency generators

All Title V annual and semi-annual compliance certifications have been submitted

The facility is in compliance with District Rules and Regulations

Inspector: Gamelito G. Bunitez Review By: _____ Date: _____

Diagram and info. on scrubber and tank tanks vented to it. I.E. 03290, Scrubber, previously was permitted with TK.12, Heated Nickel stripping tank was vented to it. TK.12 and the vent pipe had been removed. Two other vent lines on the other side of the room had been capped. The nitric acid striptank (D48559) had been relocated from the other side into the room housing the other Tks. For Safety Reasons. Co. was advised to send a letter informing ARMD of alteration to permit description of D57864 for the removal of TK.12 and the associated vent pipe which appeared to be open to the atmosphere. This equipment is exempt now from permit per R219(b)(4). Six UV Penetrant Inspection Booths vented to the atmosphere are exempt from permit per R219(e)(4), but usage records per R109 have to be started on the penetrant spray which contains VOC. Recordkeeping requirement was included in NCA 21909. One Steam Generator was exempt per R219(b)(2). Two storage Tks. of LPG were exempt per R219(m)(2). Facility is very well kept & maintained. I just informed the Co. of the possibility of R401 & R402 violations if the pressed sludge from the Electric Milling and 2 WWT Systems had to be transported to Hazardous Landfill.

Subject: Proposed WasteWater Treatment System

Dear David:

We have reviewed your drawings on the waste water system and have determined that the system as designed should not cause the issusance of any air contaminants. Mr. Randall Shaw of Engineering Science, the project manager for this system is also of the opinion that the treatment process for removing the nickel and lead from the waste stream will not cause any air pollution.

The sulphuric acid day tank is exempt from permit requirement as per District's Rule 219(m)(1)(A). Therefore the proposed system should not require any air quality permits.

If you have any further question regarding this matter please call Mohan Balagopalan at (714)872-6066.

Very truly yours,

William J. Dennison

Subject: Alternative Recordkeeping Form
Attachment:
Date: 2/6/96 12:09 PM

I faxed a sample R 109 form to GE and Hani Zarifa agreed to use it. The only allowance that we gave is to waive the daily requirement. GE can just log the date that the solvent is replenished. The facility showed in its records that the solvent is completely drained in approximately 30-45 days and new solvent is refilled . The waste solvent is sent to a solvent recycler.

I left a message in Hani's voice mail that the letter he sent for your signature was not applicable since the alternative record keeeping as proposed was not acceptable. A new form has to be sent to AQMD for approval.

Attention: Mohan Balagopalan

Subject: VOC Recordkeeping

Per our telephone conversation yesterday, this letter is to confirm your agreement with our proposed alternative to daily recordkeeping for our stoddard solvent tanks. As we discussed, we conducted a study to verify that no stoddard solvent is emitted as a VOC. For a two month period, the levels of stoddard solvent in each flow tank were recorded. It was shown that no recordable amount was lost due to evaporation. To further substantiate this finding, a comparison of the quantities of stoddard solvent hauled off the facility to that which was received during the entire year of 1995 was conducted. It was shown that the numbers were the same.

Therefore, per rule 109(c)(1)(D), an alternate method to daily recordkeeping is proposed. This method would consist of a yearly reconciliation of the quantity of stoddard solvent issued to the area to that which is collected for disposal.

As you indicated yesterday, you found this alternative to be adequate. Please confirm this by signing and returning this letter via fax at (909) 391-5319.

Your attention to this matter is greatly appreciated. If you have any questions, please call me at (909) 391-5274.

Sincerely,

Hani Zarifa

Sam,

Could you approve this or should it go to Anaheim unit. This facility was inspected by Carmelita.

Thank.

Disapproved — See Commissioner Review

1/29/95

Mohan,

I informed Hani that he has to include the informations that R 109 (c)(1) requires. The alternative that I suggested to him is to only record on the day that new solvent is replenished since they empty two degreasers every month or so loads a drum and Laodan for a recycler. I advised that the daily recording with only ditto marks are necessary.

VOC

Stoddard Solvent

VOC Recordkeeping

The Stoddard Solvent / Flow Tank operation is used to clean and inspect metal jet engine parts that include bearings and other engine parts. The Tank dimensions are 41"L x 21"W x 20"H. The tank is exempt per rule SCAQMD Rule 219(l)(10) since its surface area is less than 10.8 square feet, and an internal volume of less than 92.5 gallons, and having an organic solvent loss of 3 gallons per day or less. Another exemption for permitting is the solvent having an initial boiling point of 150 C or 302 F or greater or using material with a VOC content of 2 percent (20g/l) or less by volume. However, per SCAQMD Rule 219(o), recordkeeping is required per Rule 109 to verify and maintain any exemption. SCAQMD Rule 1122(g) for remote reservoir cold cleaners also regulates this process requiring no leaks, closed lid when not in use, and no atomizing of the solvent. The Stoddard Solvent (Calibrating Fluid Type II) specifications are as follows:

Material Name	Method of Application	Vapor Pressure	VOC Content
Calibrating Fluid Type II or Stoddard Solvent	Part Cleaning and Inspection	2.9mmHg	100%

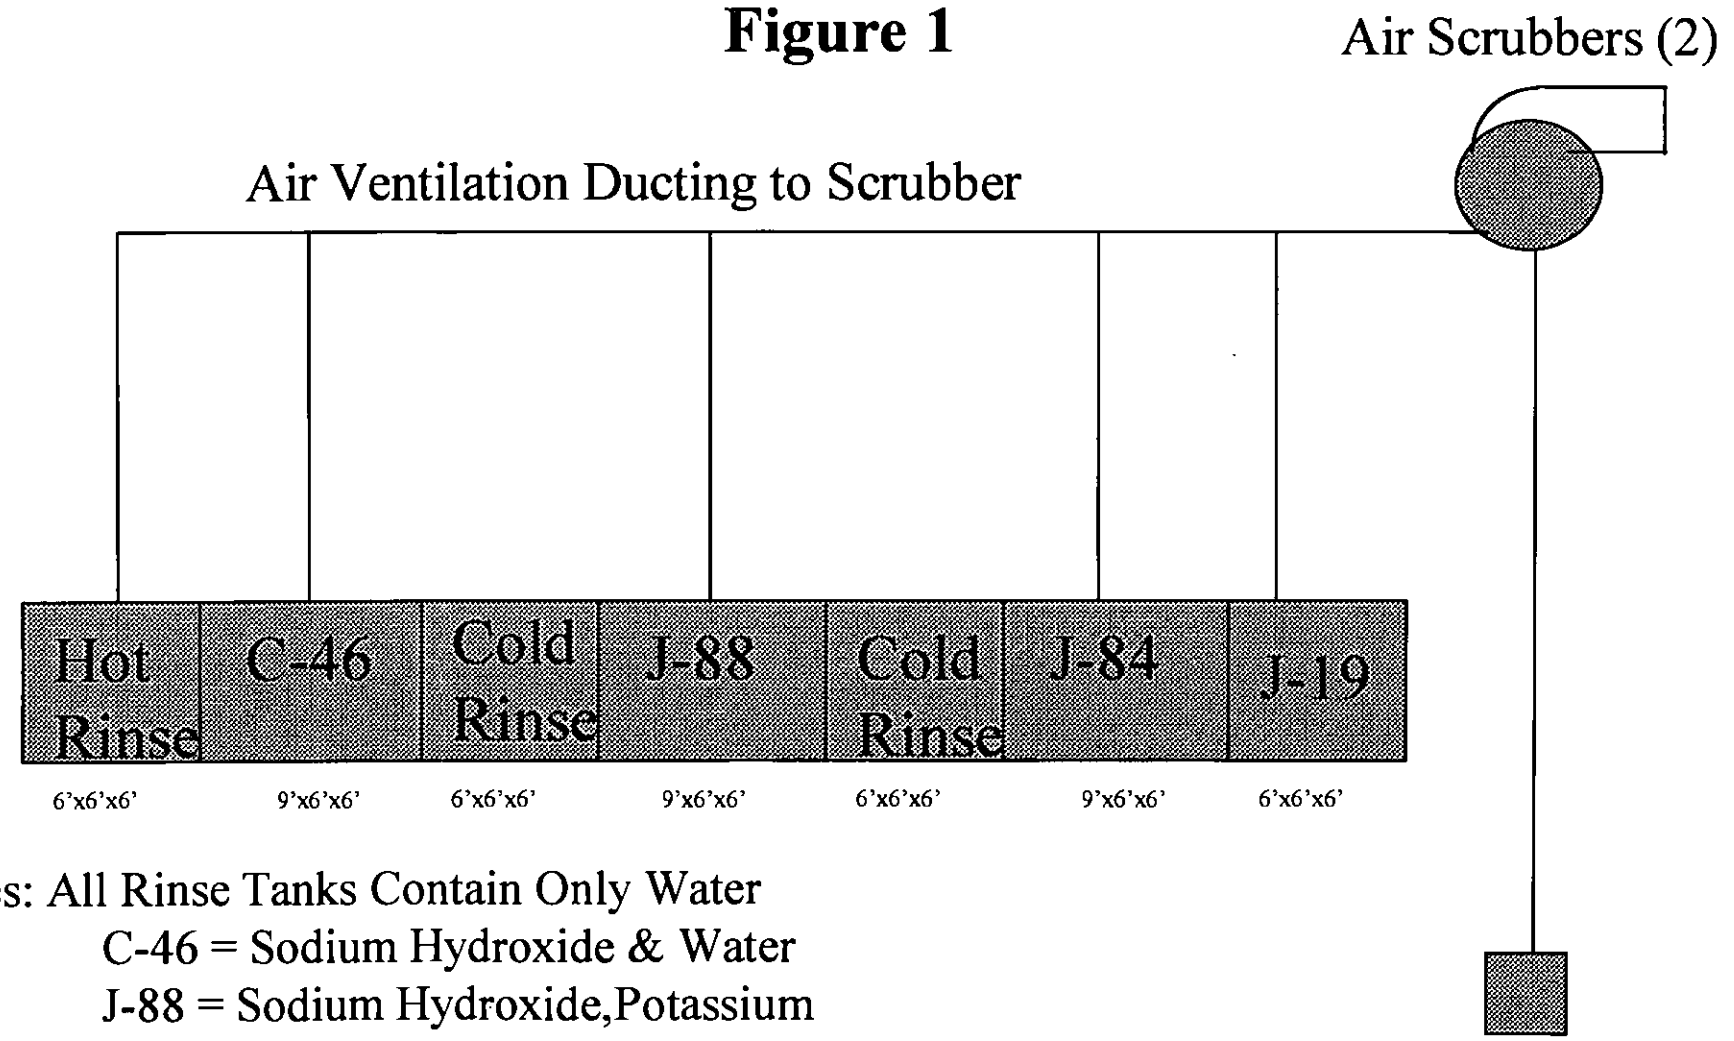
Attention: Mohan Balagopalan

This letter is in follow-up to the air inspection conducted by Ms. Carmelita Benitez on September 22, 1995 and the follow-up request for information dated September 29, 1995. Attached, you will find Figure 1 indicating the current layout of the cleaning line. The figure indicates all tank sizes, contents, and whether they are vented to the air scrubbers. Permit No. D57864, attached, was issued for hot and cold nickel stripping tanks containing nitric acid, which we no longer use. Since we have removed the hot nitric acid tank, which led to the previously issued permit, we request that you review the current layout to determine the necessity of a permit. The only nitric acid used on the cleaning line, indicated in figure 1, has a current permit No. D48559, attached, by which we will continue to operate. This small nitric acid tank has been relocated, but is still vented, to a safer area, where if any spills occur, they will be contained.

In Ms. Benitez's letter, she also indicated that we need to monitor usage of VOC containing penetrants in our penetrant inspection area. VOC records were reviewed during the inspection, as well as follow-up telephone conversations were held indicating that we have been keeping records of the VOC containing penetrants from the point of issue of the products, per Rule 109.

If you have any questions, please call me at (909) 391-5274.

Sincerely,



Hani Zarifa
Senior Environmental Engineer

ONTARIO, CA 91761-7766
ATTN: DAVID W LU

ID: 011726

Equipment located at : SAME AS ABOVE

Equipment Description:

NITRIC ACID SURFACE PREPARATION LINE CONSISTING OF:

1. NICKEL STRIPPING, TANK No. T-7, 6'-0" L X6'-9" W X 5'-6" H, UNHEATED.
2. NICKEL STRIPPING, TANK No. T-12, 6'-6" L X6'-11" W X 5'-3" H, STEAM HEATED.
3. ASSOCIATED RINSE TANKS.

Conditions:

1. OPERATION OF THIS EQUIPMENT SHALL BE CONDUCTED IN COMPLIANCE WITH ALL DATA AND SPECIFICATIONS SUBMITTED WITH THE APPLICATION UNDER WHICH THIS PERMIT IS ISSUED UNLESS OTHERWISE NOTED BELOW.
2. THIS EQUIPMENT SHALL BE PROPERLY MAINTAINED AND KEPT IN GOOD OPERATING CONDITION AT ALL TIMES.
3. THE FOLLOWING TANK(S) SHALL NOT BE HEATED:

   NICKEL STRIPPING TANK NO. T-7.

NOTICE

IN ACCORDANCE WITH RULE 206, THIS PERMIT TO OPERATE OR COPY SHALL BE POSTED ON OR WITHIN 8 METERS OF THE EQUIPMENT.

THIS PERMIT DOES NOT AUTHORIZE THE EMISSION OF AIR CONTAMINANTS IN EXCESS OF THOSE ALLOWED BY DIVISION 26 OF THE HEALTH AND SAFETY CODE OF THE STATE OF CALIFORNIA OR THE RULES OF THE AIR QUALITY MANAGEMENT DISTRICT. THIS PERMIT CANNOT BE CONSIDERED AS PERMISSION TO VIOLATE EXISTING LAWS, ORDINANCES, REGULATIONS OR STATUTES OF OTHER GOVERNMENT AGENCIES.

Report: September 30, 2005:

I arrived at GE Engine services for a Title V and annual compliance inspection. I met with Environmental Health & Safety Generalist Brett C. Boston and EHS Site Focal Point Bradley Grubbs. I was accompanied by both Mr. Boston and Mr. Grubbs during the facility inspection.

GE Engine Services conducts aircraft engine overhauls and testing. The majority of the facility is for aircraft engine maintenance. The two Jet Engine Test Facility/Test Cells, Permit F35578 and Permit F34664 are located at 2264 Avion Place. A test cell is a large engine mount with an exhaust stack. Test Cell #1 is not in operation at this time. Test Cell #1 has a stack height of 45 feet 7 inches. Test Cell #2 has a stack height of 58 feet and 2 inches (measured on previous inspection). Records are maintained of fuel usage and this is used to calculate pollutant emissions based on engine-specific emission factors. Records show compliance with daily and 30-day average emissions. Soil units were not in operation at the time of my inspection and are only operated on an as needed basis. Records are maintained of ppm concentrations based on readings from a PID.

All wipe cleaning of engines is done with acetone. No plating or painting is done on site. Rule 219 equipment includes <50 HP emergency generators.

All Title V annual and semi-annual compliance certifications have been submitted.

The facility is in compliance with District Rules and Regulations.

FACILITY PERMIT TO OPERATE
GE ENGINE SERVICES

Facility Equipment and Requirements
(Section D)

This section consists of a table listing all permitted equipment at the facility, facility wide requirements, all individual Permits to Construct and Permits to Operate issued to various equipment at the facility, and Rule 219-exempt equipment subject to source-specific requirements Each permit and Rule 219-exempt equipment will list operating conditions including periodic monitoring requirements, and applicable emission limits and requirements that the equipment is subject to Also included is the rule origin and authority of each emission limit and permit condition

FACILITY PERMIT TO OPERATE
GE ENGINE SERVICES

PERMITTED EQUIPMENT LIST

THE FOLLOWING IS A LIST OF ALL PERMITS TO CONSTRUCT AND PERMITS TO OPERATE AT THIS FACILITY

Application number	Permit to Operate number	Equipment description
341149	F35578	TURBINE ENGINE TEST CELL #1
341151	F34703	TURBINE ENGINE TEST CELL #2
376915	F36249	SOIL VAPOR EXTRACTION AND TREATMENT SYSTEM
376916	F36253	SOIL VAPOR EXTRACTION AND TREATMENT SYSTEM
376917	F36255	SOIL VAPOR EXTRACTION AND TREATMENT SYSTEM
376918	F36256	SOIL VAPOR EXTRACTION AND TREATMENT SYSTEM

NOTE EQUIPMENT LISTED ABOVE THAT HAVE NO CORRESPONDING PERMITS TO OPERATE NUMBER ARE ISSUED PERMITS TO CONSTRUCT THE ISSUANCE OR DENIAL OF THEIR PERMITS TO OPERATE IS SUBJECT TO ENGINEERING FINAL REVIEW ANY OTHFR APPLICATIONS THAT ARE STILL BEING PROCESSED AND HAVE NOT BEEN ISSUED PERMITS TO CONSTRUCT OR PERMITS TO OPERATE WILL NOT BE FOUND IN THIS TITLE V PERMIT

FACILITY PERMIT TO OPERATE
GE ENGINE SERVICES

FACILITY WIDE CONDITION(S)

Condition(s)

1 EXCEPT FOR ABRASIVE BLASTING OPERATIONS, THE OPERATOR SHALL NOT DISCHARGE INTO THE ATMOSPHERE FROM ANY SINGLE SOURCE OF EMISSIONS WHATSOEVER ANY AIR CONTAMINANT FOR A PERIOD OR PERIODS AGGREGATING MORE THAN THREE MINUTES IN ANY ONE HOUR WHICH IS

A AS DARK OR DARKER IN SHADE AS THAT DESIGNATED NO 1 ON THE RINGLEMANN CHART, AS PUBLISHED BY THE UNITED STATES BUREAU OF MINES, OR
B OF SUCH OPACITY AS TO OBSCURE AN OBSERVER'S VIEW TO A DEGREE EQUAL TO OR GREATER THAN DOES SMOKE DESCRIBED IN SUBPARAGRAPH (A) OF THIS CONDITION [RULE 401]

2 THE OPERATOR SHALL COMPLY WITH THE APPLICABLE REQUIREMENTS OF RULE 431 2 [RULE 431 2]

FACILITY PERMIT TO OPERATE
GE ENGINE SERVICES

PERMIT TO OPERATE

Permit No F35578
A/N 341149

Equipment Description

TEST CELL NO 1, TURBINE ENGINES CONSISTING OF

1 INLET STACK

2 TURBINE CELL AREA

3 AUGMENTER

4 EXHAUST STACK WITH ACOUSTICS

Conditions

1 OPERATION OF THIS EQUIPMENT SHALL BE CONDUCTED IN COMPLIANCE WITH ALL DATA AND SPECIFICATIONS SUBMITTED WITH THE APPLICATION UNDER WHICH THIS PERMIT IS ISSUED UNLESS OTHERWISE NOTED BELOW
[RULE 204]

2 THIS EQUIPMENT SHALL BE PROPERLY MAINTAINED AND KEPT IN GOOD OPERATING CONDITION AT ALL TIMES
[RULE 204]

3 PERMIT SHIELD NOT WITHSTANDING THE OTHER REQUIREMENTS AND CONDITIONS IN THIS PERMIT, THIS EQUIPMENT IS NOT SUBJECT TO THE FOLLOWING REQUIREMENTS

District Rule 404, as amended on February 7, 1986
District Rule 405, as amended on February 7, 1986
District Rule 407, as amended on April 2 1982
District Rule 409, as amended on August 7, 1981
District Rule 474 as amended on December 4 1981
District Rule 1134, as amended on August 8, 1997
District Regulation XX, as amended in 1997
Federal Regulation 40CFR Part 60 Subpart GG, as amended in 1995

COMPLIANCE WITH THE CONDITIONS OF THIS TITLE V PERMIT SHALL BE DEEMED IN COMPLIANCE WITH ANY REGULATORY REQUIREMENTS APPLICABLE AS OF THE DATE OF PERMIT ISSUANCE TO THIS FACILITY, PROVIDED THAT SUCH REGULATORY REQUIREMENTS ARE INCLUDED AND SPECIFICALLY IDENTIFIED IN THIS PERMIT NOTHING IN THIS PERMIT OR IN ANY PERMIT SHIELD CAN ALTER OR AFFECT (a) UNDER SECTION 303 OF THE FEDERAL CLEAN AIR ACT, THE PROVISIONS FOR EMERGENCY ORDERS, (b) THE LIABILITY OF THE OPERATOR FOR ANY VIOLATION OF APPLICABLE REQUIREMENTS PRIOR TO OR AT THE TIME

FACILITY PERMIT TO OPERATE
GE ENGINE SERVICES

OF PERMIT ISSUANCE, (c) THE APPLICABLE REQUIREMENTS OF THE ACID RAIN PROGRAM, (d) THE ABILITY OF EPA TO OBTAIN INFORMATION FROM THE OPERATOR PURSUANT TO SECTION 114 OF THE FEDERAL CLEAN AIR ACT (e) THE APPLICABILITY OF STATE OR LOCAL REQUIREMENTS THAT ARE NOT 'APPLICABLE REQUIREMENTS' AS DEFINED IN RULE 3000 AT THE TIME OF PERMIT ISSUANCE BUT WHICH DO NOT APPLY TO THE FACILITY, SUCH AS TOXICS REQUIREMENTS UNIQUE TO THE STATE, OR (f) THE APPLICABILITY OF REGULATORY REQUIREMENTS WITH COMPLIANCE DATES AFTER THE PERMIT ISSUANCE DATE THIS PERMIT SHIELD SHALL NOT APPLY TO ANY OPERATIONAL CHANGE MADE PURSUANT TO THE OPERATIONAL FLEXIBILITY PROVISIONS OF DISTRICT RULE 3005

Periodic Monitoring

4 THE OPERATOR SHALL CONDUCT AN INSPECTION FOR VISIBLE EMISSIONS FROM ALL STACKS AND OTHER EMISSION POINTS OF THIS EQUIPMENT WHENEVER THERE IS A PUBLIC COMPLAINT OF VISIBLE EMISSIONS, WHENEVER VISIBLE EMISSIONS ARE OBSERVED AND ON AN ANNUAL BASIS AT LEAST, UNLESS THE EQUIPMENT DID NOT OPERATE DURING THE ENTIRE ANNUAL PERIOD THE ROUTINE ANNUAL INSPECTION SHALL BE CONDUCTED WHILE THE EQUIPMENT IS IN OPERATION AND DURING DAYLIGHT HOURS IF ANY VISIBLE EMISSIONS (NOT INCLUDING CONDENSED WATER VAPOR) ARE DETECTED THAT LAST MORE THAN THREE MINUTES IN ANY ONE-HOUR, THE OPERATOR SHALL EITHER

A IDENTIFY AND VERIFY WITHIN 24 HOURS THAT THE EQUIPMENT CAUSING THE EMISSION AND ANY ASSOCIATED AIR POLLUTION CONTROL EQUIPMENT ARE OPERATING NORMALLY ACCORDING TO THEIR DESIGN AND STANDARD PROCEDURES AND UNDER THE SAME CONDITIONS UNDER WHICH COMPLIANCE WAS ACHIEVED IN THE PAST,

B TAKE CORRECTIVE ACTION(S) THAT ELIMINATES THE VISIBLE EMISSIONS WITHIN 24 HOURS AND REPORT THE VISIBLE EMISSIONS AS A POTENTIAL DEVIATION IN ACCORDANCE WITH THE REPORTING REQUIREMENTS IN SECTION K OF THIS PERMIT OR

C HAVE A CARB-CERTIFIED SMOKE READER DETERMINE COMPLIANCE WITH THE OPACITY STANDARD, USING EPA METHOD 9 OR THE PROCEDURES IN THE CARB MANUAL "VISIBLE EMISSION EVALUATION", WITHIN THREE OPERATING DAYS AND REPORT ANY DEVIATIONS TO AQMD

THE OPERATOR SHALL KEEP THE RECORDS IN ACCORDANCE WITH THE RECORDKEEPING REQUIREMENTS IN SECTION K OF THIS PERMIT AND THE FOLLOWING RECORDS

A STACK OR EMISSION POINT IDENTIFICATION

B DESCRIPTION OF ANY CORRECTIVE ACTIONS TAKEN TO ABATE VISIBLE EMISSIONS

C DATE AND TIME VISIBLE EMISSION WAS ABATED AND

D VISIBLE EMISSION OBSERVATION RECORDED BY A CERTIFIED SMOKE READER

[RULE 3004 (a)(4)]

FACILITY PERMIT TO OPERATE
GE ENGINE SERVICES

PERMIT TO OPERATE

Permit No F34703
A/N 341151

Equipment Description

TES I CEI L NO 2, TURBINE ENGINES, CONSISTING OF

1 INLET STACK

2 TURBINE CELL AREA

3 AUGMENTER

4 EXHAUST STACK WITH ACOUSTICS 36 L X 36' W X 57' H

Conditions

1 OPERATION OF THIS EQUIPMENT SHALL BE CONDUCTED IN COMPLIANCE WITH ALL DATA AND SPECIFICATIONS SUBMITTED WITH THE APPLICATION UNDER WHICH THIS PERMIT IS ISSUED UNLESS OTHERWISE NOTED BELOW
[RULE 204]

2 THIS EQUIPMENT SHALL BE PROPERLY MAINTAINED AND KEPT IN GOOD OPERA TING CONDITION AT ALL TIMES
[RULE 204]

3 THE MAXIMUM DAILY EMISSIONS FROM THIS TEST CELL SHALL NOT EXCEED THE FOLLOWING LIMITS

CONTAMINANT	EMISSION (LB/DAY)
VOLATILE ORGANIC COMPOUNDS	2387
NITROGEN OXIDES	3966
CARBON MONOXIDE	4039
PARTICULATE MATTER < = 10 MICRONS	29
SULFUR OXIDES	684

[RULE 212(g), 1303(b)(2)]

FACILITY PERMIT TO OPERATE
GE ENGINE SERVICES

4 THE EMISSIONS FROM THIS TEST CELL SHALL NOT EXCEED THE FOLLOWING LIMITS BASED ON A 30-DAY AVERAGE

CONTAMINANT	EMISSION (LB/DAY)
VOLATILE ORGANIC COMPOUNDS	2387
NITROGEN OXIDES	1633
CARBON MONOXIDE	4039
PARTICULATE MATTER < = 10 MICRONS	12
SULFUR OXIDES	282

[RULE 1303(b)(1)-MODELING, 1303(b)(2)-OFFSET, 1401]

5 A COMPUTER TRACKING SYSTEM SHALL BE USED TO CONTINUOUSLY MONITOR THE FUEL FLOW RATE DURING THE TURBINE TEST THE COMPUTER TRACKING SYSTEM SHALL BE ABLE TO CONTINUOUSLY CALCULATE THE EMISSIONS BY MULTIPLYING THE FUEL FLOW RATE BY A DISTRICT APPROVED ENGINE SPECIFIC EMISSIONS FACTOR
[RULE 212(g), 1303(b)(1)-MODELING, 1303(b)(2)-OFFSET 1401]

6 RECORDS SHALL BE MAINTAINED TO PROVE COMPLIANCE WITH CONDITIONS 3 AND 4 THE RECORDS SHALL BE FOR AT LEAST FIVE YEARS AND MADE AVAILABLE TO DISTRICT PERSONNEL UPON REQUEST
[RULE 212(g), 1303(b)(1)-MODELING 1303(b)(2)-OFFSET 1401]

7 PERMIT SHIELD NOT WITHSTANDING THE OTHER REQUIREMENTS AND CONDITIONS IN THIS PERMIT, THIS EQUIPMENT IS NOT SUBJECT TO THE FOLLOWING REQUIREMENTS

District Rule 404, as amended on February 7 1986
District Rule 405, as amended on February 7, 1986
District Rule 407, as amended on April 2 1982
District Rule 409, as amended on August 7, 1981
District Rule 474, as amended on December 4, 1981
District Rule 1134, as amended on August 8, 1997
District Regulation XX, as amended in 1997
Federal Regulation 40CFR Part 60 Subpart GG, as amended in 1995

COMPLIANCE WITH THE CONDITIONS OF THIS TITLE V PERMIT SHALL BE DEEMED IN COMPLIANCE WITH ANY REGULATORY REQUIREMENTS APPLICABLE AS OF THE DATE OF PERMIT ISSUANCE TO THIS FACILITY PROVIDED THAT SUCH REGULATORY REQUIREMENTS ARE INCLUDED AND SPECIFICALLY IDENTIFIED IN THIS PERMIT NOTHING IN THIS PERMIT OR IN ANY PERMIT SHIELD CAN ALTER OR AFFECT (a) UNDER SECTION 303 OF THE FEDERAL CLEAN AIR ACT THE PROVISIONS FOR EMERGENCY ORDERS (b) THE LIABILITY OF THE OPERATOR FOR ANY VIOLATION OF APPLICABLE REQUIREMENTS PRIOR TO OR AT THE TIME OF PERMIT ISSUANCE (c) THE APPLICABLE REQUIREMENTS OF THE ACID RAIN PROGRAM, (d) THE ABILITY OF EPA TO OBTAIN INFORMATION FROM THE OPERATOR PURSUANT TO SECTION 114 OF THE FEDERAL CLEAN AIR ACT, (e) THE APPLICABILITY OF STATE OR LOCAL REQUIREMENTS THAT ARE NOT "APPLICABLE REQUIREMENTS AS DEFINED IN RULE 3000, AT THE TIME OF PERMIT ISSUANCE BUT WHICH DO NOT APPLY TO THE FACILITY, SUCH AS TOXICS REQUIREMENTS UNIQUE TO THE STATE, OR (f) THE APPLICABILITY OF REGULATORY REQUIREMENTS WITH COMPLIANCE DATES AFTER THE PERMIT ISSUANCE DATE THIS PERMIT

FACILITY PERMIT TO OPERATE
GE ENGINE SERVICES

SHIELD SHALL NOT APPLY TO ANY OPERATIONAL CHANGE MADE PURSUANT TO THE OPERATIONAL FLEXIBILITY PROVISIONS OF DISTRICT RULE 3005

Periodic Monitoring

8 THE OPERATOR SHALL CONDUCT AN INSPECTION FOR VISIBLE EMISSIONS FROM ALL STACKS AND OTHER EMISSION POINTS OF THIS EQUIPMENT WHENEVER THERE IS A PUBLIC COMPLAINT OF VISIBLE EMISSIONS WHENEVER VISIBLE EMISSIONS ARE OBSERVED AND ON AN ANNUAL BASIS, AT LEAST, UNLESS THE EQUIPMENT DID NOT OPERATE DURING THE ENTIRE ANNUAL PERIOD THE ROUTINE ANNUAL INSPECTION SHALL BE CONDUCTED WHILE THE EQUIPMENT IS IN OPERATION AND DURING DAYLIGHT HOURS IF ANY VISIBLE EMISSIONS (NOT INCLUDING CONDENSED WATER VAPOR) ARE DETECTED THAT LAST MORE THAN THREE MINUTES IN ANY ONE-HOUR, THE OPERATOR SHALL EITHER

A IDENTIFY AND VERIFY WITHIN 24 HOURS THAT THE EQUIPMENT CAUSING THE EMISSION AND ANY ASSOCIATED AIR POLLUTION CONTROL EQUIPMENT ARE OPERATING NORMALLY ACCORDING TO THEIR DESIGN AND STANDARD PROCEDURES AND UNDER THE SAME CONDITIONS UNDER WHICH COMPLIANCE WAS ACHIEVED IN THE PAST,

B TAKE CORRECTIVE ACTION(S) THAT ELIMINATES THE VISIBLE EMISSIONS WITHIN 24 HOURS AND REPORT THE VISIBLE EMISSIONS AS A POTENTIAL DEVIATION IN ACCORDANCE WITH THE REPORTING REQUIREMENTS IN SECTION K OF THIS PERMIT, OR

C HAVE A CARB-CERTIFIED SMOKE READER DETERMINE COMPLIANCE WITH THE OPACITY STANDARD, USING EPA METHOD 9 OR THE PROCEDURES IN THE CARB MANUAL "VISIBLE EMISSION EVALUATION , WITHIN THREE BUSINESS DAYS AND REPORT ANY DEVIATIONS TO AQMD

THE OPERATOR SHALL KEEP THE RECORDS IN ACCORDANCE WITH THE RECORDKEEPING REQUIREMENTS IN SECTION K OF THIS PERMIT AND THE FOLLOWING RECORDS

A STACK OR EMISSION POINT IDENTIFICATION

B DESCRIPTION OF ANY CORRECTIVE ACTIONS TAKEN TO ABATE VISIBLE EMISSIONS

C DATE AND TIME VISIBLE EMISSION WAS ABATED AND

D VISIBLE EMISSION OBSERVATION RECORDED BY A CERTIFIED SMOKE READER

[RULE 3004 (a)(4)]

FACILITY PERMIT TO OPERATE
GE ENGINE SERVICES

PERMIT TO OPERATE

Permit No F36249
A/N 376915

Equipment Description

SOIL VAPOR EXTRACTION AND TREATMENT SYSTEM, FOR AREA "A", CONSISTING OF

1 VAPOR EXTRACTION WELLS AND DUCTS

2 WATER KNOCKOUT POT

3 EXTRACTION BLOWER, MAXIMUM FLOW RATE 150 SCFM

4 THREE CARBON ADSORBERS, WITH 1 000 LBS ACTIVATED CARBON EACH, CANISTER-TYPE IN SERIES

Conditions

1) OPERATION OF THIS EQUIPMENT SHALL BE CONDUCTED IN ACCORDANCE WITH ALL DATA AND SPECIFICATIONS SUBMITTED WITH THE APPLICATION UNDER WHICH THIS PERMIT IS ISSUED UNLESS OTHERWISE NOTED BELOW
[RULE 204]

2) THIS EQUIPMENT SHALL BE PROPERLY MAINTAINED AND KEPT IN GOOD OPERATING CONDITION AT ALL TIMES
[RULE 204]

3) UPON COMPLETION, ANY VAPOR EXTRACTION WELL(S) AND DUCT(S) SHALL BE CAPPED TO PREVENT VAPORS FROM VENTING TO THE ATMOSPHERE VAPORS SHALL NOT BE EXTRACTED FROM THE SOIL, UNLESS VENTED TO THE VAPOR CONTROL SYSTEM, WITH NO DETECTABLE LEAK BETWEEN THE OUTLET OF THE BLOWER AND THE OUTLET OF THE VAPOR CONTROL SYSTEM
[RULE 1166]

4) IDENTIFICATION TAG(S) OR NAME PLATE(S) SHALL BE DISPLAYED ON THE EQUIPMENT TO SHOW MANUFACTURER MODEL NUMBER AND SERIAL NUMBER THE TAG(S) OR PLATE(S) SHALL BE ISSUED BY THE MANUFACTURER AND SHALL BE AFFIXED TO THE EQUIPMENT IN A PERMANENT AND CONSPICUOUS POSITION
[RULE 206]

5) CURRENT CONTACT PERSON NAME, COMPANY AND PHONE NUMBER SHALL BE DISPLAYED IN A PERMANENT AND CONSPICUOUS POSITION
[RULE 206]

FACILITY PERMIT TO OPERATE
GE ENGINE SERVICES

6) A FLOW INDICATOR SHALL BE MAINTAINED AT ALL INLET STREAMS TO THE VAPOR CONTROL SYSTEM TO INDICATE THE TOTAL AIR FLOW RATE IN CUBIC FEET PER MINUTE (CFM) THE TOTAL FLOW RATE SHALL NOT EXCEED 150 SCFM IN CASE A DIFFERENTIAL PRESSURE DEVICE IS USED IN PLACE OF THE FLOW INDICATOR, A CONVERSION CHART SHALL BE POSTED ON THE EQUIPMENT TO INDICATE THE FLOW RATE, IN CFM, CORRESPONDING TO THE DIFFERENTIAL PRESSURE READING
[RULE 1303(b)(2)-OFFSET, 1401]

7) VOLATILE ORGANIC COMPOUND (VOC) CONCENTRATION MEASURED AT THE OUTLET OF THE TERTIARY ADSORBER SHALL NOT EXCEED 2 PARTS PER MILLION BY VOLUME (PPMV)
[RULE 1303(b)(2)-OFFSET]

8) WHENEVER THE VOC CONCENTRATION AT THE OUTLET OF THE SECONDARY ADSORBER EXCEEDS 2 PPMV, THIS EQUIPMENT SHALL BE SHUT DOWN AND REMAIN OFF UNTIL THE ADSORBERS ARE REPLACED AS FOLLOWS

A PRIMARY ADSORBER SHALL BE REPLACED WITH EITHER FRESH ADSORBENT OR ADSORBENT FROM THE SECONDARY OR TERTIARY ADSORBER, AND
B SECONDARY ADSORBER SHALL BE REPLACED WITH FRESH ADSORBENT OR ADSORBENT FROM THE TERTIARY ADSORBER AND
C TERTIARY ADSORBER SHALL BE REPLACED WITH FRESH ADSORBENT
[RULE 1166 1303(b)(2)-OFFSET, 1401]

9) SPENT CARBON REMOVED FROM THE SYSTEM SHALL BE STORED IN CLOSED CONTAINERS PRIOR TO DISPOSAL
[RULE 204]

Periodic Monitoring

10) VOC CONCENTRATION SHALL BE MONITORED BY USING A PHOTO IONIZATION DETECTOR OR A DISTRICT APPROVED ORGANIC VAPOR ANALYZER CALIBRATED IN PPMV OF HEXANE THE VOC CONCENTRATION SHALL BE MEASURED AT THE OUTLETS OF THE PRIMARY SECONDARY AND TERTIARY ADSORBERS AT LEAST ONCE EVERY OPERATING DAY FOR THE FIRST TWO WEEKS AND WEEKLY THEREAFTER
[RULE 1166, 1303(b)(2)-OFFSET, 1401 3004(a)(4)]

11) RECORDS SHALL BE MAINTAINED TO PROVE COMPLIANCE WITH CONDITIONS NUMBERS 4 THROUGH 10 THE RECORDS SHALL BE KEPT FOR AT LEAST FIVE YEARS AND MADE AVAILABLE TO THE DISTRICT UPON REQUEST
[RULE 3004(a)(4)]

Emissions and Requirements

PM RULE 404, SEE APPENDIX B FOR EMISSION LIMITS
VOC RULE 1166

RULE 219 EQUIPMENT

Equipment Description

RULE 219 EXEMPT EQUIPMENT, COATING EQUIPMENT, PORTABLE, ARCHITECTURAL COATINGS

Periodic Monitoring

1 THE OPERATOR SHALL KEEP RECORDS, IN A MANNER APPROVED BY THE DISTRICT FOR THE FOLLOWING PARAMETER(S) OR ITEM(S)

FOR ARCHITECTURAL APPLICATIONS WHERE NO THINNERS REDUCERS, OR OTHER VOC CONTAINING MATERIALS ARE ADDED MAINTAIN SEMI-ANNUAL RECORDS OF ALL COATINGS CONSISTING OF (a) COATING TYPE (b) VOC CONTENT AS SUPPLIED IN GRAMS PER LITER (g/l) OF MATERIALS FOR LOW-SOLIDS COATINGS (c) VOC CONTENT AS SUPPLIED IN g/l OF COATING, LESS WATER AND EXEMPT SOLVENT FOR OTHER COATING

FOR OTHER ARCHITECTURAL APPLICATIONS WHERE THINNERS, REDUCERS OR OTHER VOC CONTAINING MATERIALS ARE ADDED MAINTAIN DAILY RECORDS FOR EACH COATING CONSISTING OF (a) COATING TYPE, (b) VOC CONTENT AS APPLIED IN GRAMS PER LITER (g/l) OF MATERIALS USED FOR LOW-SOLIDS COATINGS, (c) VOC CONTENT AS APPLIED IN g/l OF COATING, LESS WATER AND EXEMPT SOLVENT FOR OTHER COATING
[RULE 3004 (a) (4)]

RULE 219 EXEMPT EQUIPMENT, ABRASIVE BLASTING EQUIPMENT GLOVE-BOX TYPE

Periodic Monitoring

1 THE OPERATOR SHALL PERFORM AN ANNUAL INSPECTION OF THE EQUIPMENT AND FILTER MEDIA FOR LEAKS, BROKEN OR TORN FILTER MEDIA AND IMPROPERLY INSTALLED FILTER MEDIA THE OPERATOR SHALL KEEP RECORDS, IN A MANNER APPROVED BY THE DISTRICT, FOR THE FOLLOWING PARAMETER(S) OR ITEM(S)

A THE NAME OF THE PERSON PERFORMING THE INSPECTION AND/OR MAINTENANCE OF THE FILTER MEDIA

B THE DATE, TIME AND RESULTS OF THE INSPECTION, AND

C THE DATE, TIME AND DESCRIPTION OF ANY MAINTENANCE OR REPAIRS RESULTING FROM THE INSPECTION

[RULE 3004 (a)(4)]

2 THE OPERATOR SHALL DISCHARGE DUST COLLECTED IN THIS EQUIPMENT ONLY INTO CLOSED CONTAINERS
[RULE 3004 (a)(4)]

3 THE OPERATOR SHALL CONDUCT AN INSPECTION FOR VISIBLE EMISSIONS FROM ALL STACKS AND OTHER EMISSION POINTS OF THIS EQUIPMENT WHENEVER THERE IS A PUBLIC COMPLAINT OF VISIBLE EMISSIONS WHENEVER VISIBLE EMISSIONS ARE OBSERVED AND ON AN ANNUAL BASIS, AT LEAST, UNLESS THE EQUIPMENT DID NOT OPERATE DURING THE ENTIRE ANNUAL PERIOD THE ROUTINE ANNUAL INSPECTION SHALL BE CONDUCTED WHILE THE EQUIPMENT IS IN OPERATION AND DURING DAYLIGHT HOURS IF ANY VISIBLE EMISSIONS (NOT INCLUDING CONDENSED WATER VAPOR) ARE DETECTED, THE OPERATOR SHALL TAKE CORRECTIVE ACTION(S) THAT ELIMINATES THE VISIBLE EMISSIONS WITHIN 24 HOURS AND REPORT THE VISIBLE EMISSIONS AS A POTENTIAL DEVIATION IN ACCORDANCE WITH THE REPORTING REQUIREMENTS IN SECTION K OF THIS PERMIT

THE OPERATOR SHALL KEEP THE RECORDS IN ACCORDANCE WITH THE RECORDKEEPING REQUIREMENTS IN SECTION K OF THIS PERMIT AND THE FOLLOWING RECORDS

A STACK OR EMISSION POINT IDENTIFICATION

B DESCRIPTION OF ANY CORRECTIVE ACTIONS TAKEN TO ABATE VISIBLE EMISSIONS AND

C DATE AND TIME VISIBLE EMISSION WAS ABATED

Equipment Description:

TEST CELL NO.2, JET ENGINES, 243' L. X 72' W. X 57' H., CONSISTING OF:

1. INLET STACK, 29' W. X 29' L. X 32' H.
2. JET CELL AREA.
3. AUGMENTER.
4. EXHAUST STACK WITH ACOUSTICS, 36' L. X 36' W. X 57' H.

Conditions:

1) OPERATION OF THIS EQUIPMENT SHALL BE CONDUCTED IN ACCORDANCE WITH ALL DATA AND SPECIFICATIONS SUBMITTED WITH THE APPLICATION UNDER WHICH THIS PERMIT IS ISSUED UNLESS OTHERWISE NOTED BELOW.

2) THIS EQUIPMENT SHALL BE PROPERLY MAINTAINED AND KEPT IN GOOD OPERATING CONDITION AT ALL TIMES.

3) THE MAXIMUM DAILY EMISSIONS FROM THIS TEST CELL SHALL NOT EXCEED THE FOLLOWING LIMITS:

CONTAMINANT	EMISSION (LB/DAY)
VOLATILE ORGANIC COMPOUNDS	2387
NITROGEN OXIDES	3966
CARBON MONOXIDE	4039
PARTICULATE MATTER < = 10 MICRONS	29
SULFUR OXIDES	684

FILE COPY

CONTINUATION OF PERMIT TO OPERATE

4) THE EMISSIONS FROM THIS CELL SHALL NOT EXCEED THE FOLLOWING BASED ON A 30-DAY AVERAGE:

CONTAMINANT	EMISSION (LB/DAY)
VOLATILE ORGANIC COMPOUNDS	2387
NITROGEN OXIDES	1633
CARBON MONOXIDE	4039
PARTICULATE MATTER < = 10 MICRONS	12
SULFUR OXIDES	282

5) A COMPUTER TRACKING SYSTEM SHALL BE USED TO CONTINUOUSLY MONITOR THE FUEL FLOW RATE DURING THE TURBINE TEST. THE COMPUTER TRACKING SYSTEM SHALL BE ABLE TO CONTINUOUSLY CALCULATE THE EMISSIONS BY MULTIPLYING THE FUEL FLOW RATE BY A DISTRICT APPROVED ENGINE SPECIFIC EMISSIONS FACTOR.

6) RECORDS SHALL BE MAINTAINED TO PROVE IN COMPLIANCE WITH CONDITIONS 3 AND 4. THE RECORDS SHALL BE KEPT FOR AT LEAST FIVE YEARS AND MADE AVAILABLE TO DISTRICT PERSONNEL UPON REQUEST.

7) PERMIT SHIELD. NOT WITHSTANDING THE OTHER REQUIREMENTS AND CONDITIONS IN THIS PERMIT, THIS EQUIPMENT IS NOT SUBJECT TO THE FOLLOWING REQUIREMENTS:

Fuel Storage and Dispensing Facility Consisting of:

1) 01 - GASOLINE DISPENSING NOZZLES, EQUIPPED WITH PHASE II VAPOR RECOVERY SYSTEM, BALANCE RETRACTOR (G-70-52-AM).

2) 01 - GASOLINE UNDERGROUND STORAGE TANKS, 6,000-GALLON CAPACITY, EQUIPPED WITH PHASE I VAPOR RECOVERY SYSTEM (G-70-97-A), NOT METHANOL COMPATIBLE.

Conditions:

1. OPERATION OF THIS EQUIPMENT SHALL BE CONDUCTED IN COMPLIANCE WITH ALL DATA AND SPECIFICATIONS SUBMITTED WITH THE APPLICATION UNDER WHICH THIS PERMIT WAS ISSUED, UNLESS OTHERWISE NOTED BELOW.

2. THIS EQUIPMENT SHALL BE PROPERLY MAINTAINED AND KEPT IN GOOD OPERATING CONDITION AT ALL TIMES.

3. PHASE I VAPOR RECOVERY SYSTEMS SHALL BE IN FULL OPERATION WHENEVER FUEL IS BEING TRANSFERRED INTO STORAGE TANKS.

4. PHASE II VAPOR RECOVERY SYSTEMS SHALL BE IN FULL OPERATION WHENEVER FUEL IS BEING TRANSFERRED INTO MOTOR VEHICLES, AS DEFINED IN RULE 461.

5. ALL PHASE I AND PHASE II VAPOR RECOVERY EQUIPMENT AT THIS FACILITY SHALL BE INSTALLED, OPERATED AND MAINTAINED TO MEET ALL CALIFORNIA AIR RESOURCES BOARD CERTIFICATION REQUIREMENTS.

FILE COPY

6. PHASE II VAPOR RECOVERY SYSTEMS SHALL BE INSTALLED, OPERATED, AND MAINTAINED SUCH THAT THE MAXIMUM ALLOWABLE PRESSURE DROP THROUGH THE SYSTEM (INCLUDING NOZZLE, VAPOR HOSE, SWIVELS, AND UNDER GROUND PIPING), DOES NOT EXCEED THE DYNAMIC BACK PRESSURE RATES DESCRIBED BY THE CALIFORNIA AIR RESOURCES BOARD EXECUTIVE ORDER BY WHICH THE SYSTEM WAS CERTIFIED:

NITROGEN FLOWRATES (CFH)	DYNAMIC BACK PRESSURE (INCHES OF WATER)
40	0.16
60	0.35
80	0.62

AT LEAST ONCE EVERY FIVE CALENDAR YEARS FROM THE ISSUANCE DATE OF THIS PERMIT, DYNAMIC BACK PRESSURE TESTS SHALL BE CONDUCTED TO DETERMINE THE PHASE II SYSTEM VAPOR RECOVERY BACK PRESSURE RATES. THE TESTS SHALL BE CONDUCTED IN ACCORDANCE WITH CARB TEST PROCEDURE METHOD TP-201.4. RESULTS SHALL BE SUBMITTED TO THE DISTRICT, OFFICE OF STATIONARY SOURCE COMPLIANCE, WITHIN THIRTY (30) DAYS OF TESTS.

THE SCAQMD SHALL BE NOTIFIED AT TELEPHONE NUMBER (909) 396-3886 AT LEAST TWENTY-FOUR HOURS PRIOR TO TESTING. SUCH NOTIFICATION SHALL INCLUDE THE NAME OF THE OWNER OR OPERATOR; THE NAME OF THE CONTRACTORS; THE LOCATION OF THE FACILITY; AND THE SCHEDULED START AND COMPLETION DATES OF THE DYNAMIC BACK PRESSURE TEST.

7. AT LEAST ONCE EVERY FIVE CALENDAR YEARS FROM THE ISSUANCE DATE OF THIS PERMIT, A STATIC PRESSURE LEAK DECAY TEST SHALL BE CONDUCTED TO DEMONSTRATE THAT THE STORAGE TANKS, THE REMOTE AND/OR NOZZLE VAPOR RECOVERY CHECK VALVES, ASSOCIATED VAPOR RETURN PIPING AND FITTINGS ARE FREE FROM VAPOR LEAKS. THE TEST SHALL BE CONDUCTED IN ACCORDANCE WITH CARB TEST PROCEDURE METHOD TP-201.3. RESULTS SHALL BE SUBMITTED TO THE AQMD, OFFICE OF STATIONARY SOURCE COMPLIANCE, WITHIN THIRTY (30) DAYS OF TEST.

THE SCAQMD SHALL BE NOTIFIED AT TELEPHONE NUMBER (909) 396-3886 AT LEAST TWENTY-FOUR HOURS PRIOR TO TESTING. SUCH NOTIFICATION SHALL INCLUDE THE NAME OF THE OWNER OR OPERATOR; THE NAME OF THE CONTRACTORS; THE LOCATION OF THE FACILITY; AND THE SCHEDULED START AND COMPLETION DATES OF THE STATIC PRESSURE LEAK DECAY TEST.

NOTICE

IN ACCORDANCE WITH RULE 206, THIS PERMIT TO OPERATE OR COPY SHALL BE POSTED ON OR WITHIN 8 METERS OF THE EQUIPMENT.

THIS PERMIT DOES NOT AUTHORIZE THE EMISSION OF AIR CONTAMINANTS IN EXCESS OF THOSE ALLOWED BY DIVISION 26 OF THE HEALTH AND SAFETY CODE OF THE STATE OF CALIFORNIA OR THE RULES OF THE AIR QUALITY MANAGEMENT DISTRICT. THIS PERMIT CANNOT BE CONSIDERED AS PERMISSION TO VIOLATE EXISTING LAWS, ORDINANCES, REGULATIONS OR STATUTES OF OTHER GOVERNMENT AGENCIES.

Equipment Description:

SOIL VAPOR EXTRACTION AND TREATMENT SYSTEM, FOR AREA "A", CONSISTING OF:

1. VAPOR EXTRACTION WELLS AND DUCTS

2. WATER KNOCKOUT POT

3. EXTRACTION BLOWER, MAXIMUM FLOW RATE 150 SCFM

4. THREE CARBON ADSORBERS, WITH 1,000 LBS ACTIVATED CARBON EACH, CANISTER-TYPE, IN SERIES

Conditions:

1) OPERATION OF THIS EQUIPMENT SHALL BE CONDUCTED IN ACCORDANCE WITH ALL DATA AND SPECIFICATIONS SUBMITTED WITH THE APPLICATION UNDER WHICH THIS PERMIT IS ISSUED UNLESS OTHERWISE NOTED BELOW.

2) THIS EQUIPMENT SHALL BE PROPERLY MAINTAINED AND KEPT IN GOOD OPERATING CONDITION AT ALL TIMES.

3) UPON COMPLETION, ANY VAPOR EXTRACTION WELL(S) AND DUCT(S) SHALL BE CAPPED TO PREVENT VAPORS FROM VENTING TO THE ATMOSPHERE. VAPORS SHALL NOT BE EXTRACTED FROM THE SOIL, UNLESS VENTED TO THE VAPOR CONTROL SYSTEM, WITH NO DETECTABLE LEAK BETWEEN THE OUTLET OF THE BLOWER AND THE OUTLET OF THE VAPOR CONTROL SYSTEM.

4) IDENTIFICATION TAG(S) OR NAME PLATE(S) SHALL BE DISPLAYED ON THE EQUIPMENT TO SHOW MANUFACTURER MODEL NO. AND SERIAL NO. THE TAG(S) OR PLATE(S) SHALL BE ISSUED BY THE MANUFACTURER AND SHALL BE ADHERED TO THE EQUIPMENT IN A PERMANENT AND CONSPICUOUS POSITION.

FILE COPY

CONTINUATION OF PERMIT TO CONSTRUCT/OPERATE

5) CURRENT CONTACT PERSON NAME, COMPANY AND PHONE NUMBER SHALL BE DISPLAYED IN A PERMANENT AND CONSPICUOUS POSITION.

6) A FLOW INDICATOR SHALL BE INSTALLED AND MAINTAINED AT ALL INLET STREAMS TO THE VAPOR CONTROL SYSTEM TO INDICATE THE TOTAL AIR FLOW RATE IN CUBIC FEET PER MINUTE (CFM). THE TOTAL FLOW RATE SHALL NOT EXCEED 150 CFM. IN CASE A DIFFERENTIAL PRESSURE DEVICE IS USED IN PLACE OF THE FLOW INDICATOR, A CONVERSION CHART SHALL BE POSTED ON THE EQUIPMENT TO INDICATE THE FLOW RATE (IN CFM) CORRESPONDING TO THE DIFFERENTIAL PRESSURE READING.

7) THE VOLATILE ORGANIC COMPOUND (VOC) CONCENTRATION SHALL BE MONITORED BY USING A PHOTO IONIZATION DETECTOR OR DISTRICT APPROVED ORGANIC ANALYZER CALIBRATED IN PARTS PER MILLION BY VOLUME (PPMV) OF HEXANE. THE VOC CONCENTRATION SHALL BE MEASURED AT THE OUTLETS OF THE PRIMARY, SECONDARY, AND TERTIARY CARBON ADSORBERS AT LEAST ONCE EVERY OPERATING DAY FOR THE FIRST TWO WEEKS AND WEEKLY THEREAFTER.

8) VOC CONCENTRATION MEASURED AT THE OUTLET OF THE TERTIARY ADSORBER SHALL NOT EXCEED 2 PPMV.

9) WHENEVER THE VOC CONCENTRATION AT THE OUTLET OF THE SECONDARY ADSORBER EXCEEDS 2 PPMV, THIS EQUIPMENT SHALL BE SHUT DOWN AND REMAIN OFF UNTIL THE ADSORBERS ARE REPLACED AS FOLLOWS:

   A. PRIMARY ADSORBER SHALL BE REPLACED WITH EITHER FRESH ADSORBENT OR ADSORBENT FROM THE SECONDARY OR TERTIARY ADSORBER, AND

   B. SECONDARY ADSORBER SHALL BE REPLACED WITH FRESH ADSORBENT OR ADSORBENT FROM THE TERTIARY ADSORBER, AND

   C. TERTIARY ADSORBER SHALL BE REPLACED WITH FRESH ADSORBENT.

10) SPENT CARBON ADSORBER REMOVED FROM THE SYSTEM SHALL BE STORED IN A CLOSED CONTAINER PRIOR TO DISPOSAL.

11) RECORDS SHALL BE MAINTAINED TO PROVE COMPLIANCE WITH CONDITIONS NUMBER 4 THROUGH 10. THE RECORDS SHALL BE KEPT FOR AT LEAST FIVE YEARS AND MADE AVAILABLE TO THE DISTRICT UPON REQUEST.

2) THIS EQUIPMENT SHALL BE PROPERLY MAINTAINED AND KEPT IN GOOD OPERATING CONDITION AT ALL TIMES.

3) UPON COMPLETION, ANY VAPOR EXTRACTION WELL(S) AND DUCT(S) SHALL BE CAPPED TO PREVENT VAPORS FROM VENTING TO THE ATMOSPHERE. VAPORS SHALL NOT BE EXTRACTED FROM THE SOIL, UNLESS VENTED TO THE VAPOR CONTROL SYSTEM, WITH NO DETECTABLE LEAK BETWEEN THE OUTLET OF THE BLOWER AND THE OUTLET OF THE VAPOR CONTROL SYSTEM.

4) IDENTIFICATION TAG(S) OR NAME PLATE(S) SHALL BE DISPLAYED ON THE EQUIPMENT TO SHOW MANUFACTURER MODEL NO. AND SERIAL NO. THE TAG(S) OR PLATE(S) SHALL BE ISSUED BY THE MANUFACTURER AND SHALL BE ADHERED TO THE EQUIPMENT IN A PERMANENT AND CONSPICUOUS POSITION.

FILE COPY

CONTINUATION OF PERMIT TO CONSTRUCT/OPERATE

5) CURRENT CONTACT PERSON NAME, COMPANY AND PHONE NUMBER SHALL BE DISPLAYED IN A PERMANENT AND CONSPICUOUS POSITION.

6) A FLOW INDICATOR SHALL BE INSTALLED AND MAINTAINED AT ALL INLET STREAMS TO THE VAPOR CONTROL SYSTEM TO INDICATE THE TOTAL AIR FLOW RATE IN CUBIC FEET PER MINUTE (CFM). THE TOTAL FLOW RATE SHALL NOT EXCEED 150 CFM. IN CASE A DIFFERENTIAL PRESSURE DEVICE IS USED IN PLACE OF THE FLOW INDICATOR, A CONVERSION CHART SHALL BE POSTED ON THE EQUIPMENT TO INDICATE THE FLOW RATE (IN CFM) CORRESPONDING TO THE DIFFERENTIAL PRESSURE READING.

7) THE VOLATILE ORGANIC COMPOUND (VOC) CONCENTRATION SHALL BE MONITORED BY USING A PHOTO IONIZATION DETECTOR OR DISTRICT APPROVED ORGANIC ANALYZER CALIBRATED IN PARTS PER MILLION BY VOLUME (PPMV) OF HEXANE. THE VOC CONCENTRATION SHALL BE MEASURED AT THE OUTLETS OF THE PRIMARY, SECONDARY, AND TERTIARY CARBON ADSORBERS AT LEAST ONCE EVERY OPERATING DAY FOR THE FIRST TWO WEEKS AND WEEKLY THEREAFTER.

8) VOC CONCENTRATION MEASURED AT THE OUTLET OF THE TERTIARY ADSORBER SHALL NOT EXCEED 2 PPMV.

9) WHENEVER THE VOC CONCENTRATION AT THE OUTLET OF THE SECONDARY ADSORBER EXCEEDS 2 PPMV, THIS EQUIPMENT SHALL BE SHUT DOWN AND REMAIN OFF UNTIL THE ADSORBERS ARE REPLACED AS FOLLOWS:

   A. PRIMARY ADSORBER SHALL BE REPLACED WITH EITHER FRESH ADSORBENT OR ADSORBENT FROM THE SECONDARY OR TERTIARY ADSORBER, AND

   B. SECONDARY ADSORBER SHALL BE REPLACED WITH FRESH ADSORBENT OR ADSORBENT FROM THE TERTIARY ADSORBER, AND

   C. TERTIARY ADSORBER SHALL BE REPLACED WITH FRESH ADSORBENT.

10) SPENT CARBON ADSORBER REMOVED FROM THE SYSTEM SHALL BE STORED IN A CLOSED CONTAINER PRIOR TO DISPOSAL.

11) RECORDS SHALL BE MAINTAINED TO PROVE COMPLIANCE WITH CONDITIONS NUMBER 4 THROUGH 10. THE RECORDS SHALL BE KEPT FOR AT LEAST FIVE YEARS AND MADE AVAILABLE TO THE DISTRICT UPON REQUEST.

NOTICE

IN ACCORDANCE WITH RULE 206, THIS PERMIT TO OPERATE OR COPY SHALL BE POSTED ON OR WITHIN 8 METERS OF THE EQUIPMENT.

PERMIT TO OPERATE

CONTINUATION OF PERMIT TO OPERATE

Conditions:

1. OPERATION OF THIS EQUIPMENT SHALL BE IN COMPLIANCE WITH ALL DATA AND SPECIFICATIONS SUBMITTED WITH THE APPLICATION UNDER WHICH THIS PERMIT WAS ISSUED, UNLESS OTHERWISE NOTED BELOW.

2. THIS EQUIPMENT SHALL BE PROPERLY MAINTAINED AND KEPT IN GOOD OPERATING CONDITION AT ALL TIMES.

3. EXCEPT FOR JET A FUEL TRANSFERS, PHASE I VAPOR RECOVERY SYSTEMS SHALL BE IN FULL OPERATION WHENEVER FUEL IS BEING TRANSFERRED INTO STORAGE TANKS.

4. ALL PHASE I VAPOR RECOVERY EQUIPMENT AT THIS FACILITY SHALL BE INSTALLED, OPERATED AND MAINTAINED TO MEET ALL CALIFORNIA AIR RESOURCES BOARD CERTIFICATION REQUIREMENTS.

5. A STATIC PRESSURE LEAK DECAY TEST SHALL BE CONDUCTED ON THE AVIATION GASOLINE AND GASOLINE STORAGE TANKS TO DEMONSTRATE THAT THE STORAGE TANKS AND ASSOCIATED VAPOR RETURN PIPING AND FITTINGS ARE FREE FROM VAPOR LEAKS. THE TEST SHALL BE CONDUCTED IN ACCORDANCE WITH CARB TEST PROCEDURE METHOD TP-201.3. RESULTS SHALL BE SUBMITTED TO THE AQMD, OFFICE OF ENGINEERING AND COMPLIANCE, WITHIN SEVENTY-TWO (72) HOURS OF TEST.

6. THE AQMD SHALL BE NOTIFIED BY E-MAIL AT R461TESTING@AQMD.GOV OR BY FACSIMILE AT TELEPHONE NUMBER (909) 396-3606 AT LEAST SEVENTY-TWO (72) HOURS PRIOR TO ANY OF THE ABOVE MENTIONED TESTING REQUIREMENTS. SUCH NOTIFICATION SHALL INCLUDE THE NAME OF THE OWNER OR OPERATOR; THE NAME OF THE CONTRACTOR; THE LOCATION OF THE FACILITY; AND THE SCHEDULED START AND COMPLETION DATES OF THE TESTS TO BE PERFORMED.

7. THE TESTING FOR THE ABOVE MENTIONED TESTS SHALL BE CONDUCTED IN ACCORDANCE WITH THE MOST RECENT RULE 461 AMENDMENT OR CARB EXECUTIVE ORDER REQUIREMENTS, WHICHEVER IS MORE STRINGENT.

8. THIS EQUIPMENT SHALL BE OPERATED FOR BOTTOM LOADING ONLY DURING THE TRANSFER OF AVIATION GASOLINE OR GASOLINE FUEL FROM THE UNDERGROUND STORAGE TANK INTO ANY TANK TRUCK. ALL VAPOR RETURN LINES SHALL BE CONNECTED BETWEEN THE ABOVEGROUND GASOLINE STORAGE TANK AND TANK TRUCK.

9. THE TRANSFER EQUIPMENT SHALL BE OPERATED AND MAINTAINED SO THAT THERE ARE NO OVERFILLS, FACILITY VAPOR LEAKS, LIQUID LEAKS, OR LIQUID LEAKS FROM DISCONNECT OPERATIONS.

10. THIS EQUIPMENT SHALL BE OPERATED SO THAT THE BACKPRESSURE IN THE VAPOR RECOVERY SYSTEM DOES NOT EXCEED 18 INCHES OF WATER COLUMN PRESSURE.

11. THIS CLASS "B" LOADING FACILITY SHALL BE INSTALLED, OPERATED AND MAINTAINED IN ACCORDANCE WITH DISTRICT RULE 462.

CONTINUATION OF PERMIT TO OPERATE

12. THE BULK PLANT VAPOR RECOVERY SYSTEM SHALL BE CERTIFIED BY THE CALIFORNIA AIR RESOURCES BOARD (CARB) AS REQUIRED IN DISTRICT RULE 462. THE COPY OF THE CARB BULK PLANT VAPOR RECOVERY CERTIFICATION TEST RESULTS SHALL BE RETAINED ON SITE AND MADE AVAILABLE TO DISTRICT REPRESENTATIVES UPON REQUEST.

13. RECORDS OF DAILY AND MONTHLY GASOLINE FUEL DISPENSED SHALL BE PREPARED AND MAINTAINED TO DETERMINE CLASSIFICATION OF THIS FACILITY IN ACCORDANCE WITH DISTRICT RULE 462.

14. ALL RECORDS AND TEST RESULTS THAT ARE REQUIRED TO BE MAINTAINED BY DISTRICT RULES 461 AND 462 SHALL BE KEPT ON SITE FOR FOUR (4) YEARS AND MADE AVAILABLE TO DISTRICT REPRESENTATIVES UPON REQUEST.

15. THE MAXIMUM QUANTITY OF JET A FUEL DISPENSED FROM THE STORAGE TANKS AT THIS FACILITY SHALL NOT EXCEED 100,000 GALLONS IN ANY ONE CALENDAR MONTH NOR 1,200,000 GALLONS IN ANY ONE CALENDAR YEAR.

16. THE MAXIMUM QUANTITY OF AVIATION GASOLINE DISPENSED FROM THE STORAGE TANK AT THIS FACILITY SHALL NOT EXCEED 5,000 GALLONS IN ANY ONE CALENDAR MONTH NOR 60,000 GALLONS IN ANY ONE CALENDAR YEAR.

17. THE MAXIMUM QUANTITY OF GASOLINE DISPENSED FROM THE STORAGE TANK AT THIS FACILITY SHALL NOT EXCEED 5,000 GALLONS IN ANY ONE CALENDAR MONTH NOR 60,000 GALLONS IN ANY ONE CALENDAR YEAR.

18. RECORDS OF MONTHLY AND ANNUAL FUEL DISPENSED SHALL BE PREPARED, SHALL BE RETAINED ON SITE FOR TWO YEARS, AND SHALL BE MADE AVAILABLE TO DISTRICT REPRESENTATIVES UPON REQUEST.

NOTICE

IN ACCORDANCE WITH RULE 206, THIS PERMIT TO OPERATE OR COPY SHALL BE POSTED ON OR WITHIN 8 METERS OF THE EQUIPMENT.

PERMIT TO OPERATE

CONTINUATION OF PERMIT TO OPERATE

THIS PERMIT DOES NOT AUTHORIZE THE EMISSION OF AIR CONTAMINANTS IN EXCESS OF THOSE ALLOWED BY DIVISION 26 OF THE HEALTH AND SAFETY CODE OF THE STATE OF CALIFORNIA OR THE RULES OF THE AIR QUALITY MANAGEMENT DISTRICT. ATLANTIC AVIATION SERVICES
2161 E. AVION STREET
ONTARIO, CA 91761

ID 162691

Equipment Location: 2161 E. AVION STREET, ONTARIO, CA 91761

Equipment Description:

CARGO TANK MOTOR VEHICLE FUELING SYSTEM (MOBILE FUELER), CONSISTING OF:

1) DUAL COMPARTMENT GASOLINE/DIESEL DISPENSING MOBILE FUELER, UNIT NO. 64339, FRANZEN-HILL HILL-VAC (G-70-193)/CARB ADVISORY LETTER #07-07, CYLINDRICAL, 12'- 0" L. X 8'- 0" W. X 2' - 4" H., 2,000 GALLON CAPACITY, POLYURETHANE INSULATION, WITH A WHITE SHELL, EQUIPPED WITH A PRESSURE/VACUUM RELIEF VALVE, AND TWO HEALY 100 JET PUMPS, CONSISTING OF:

   A) ONE 1,000 GALLON GASOLINE COMPARTMENT, EQUIPPED WITH PHASE I VAPOR RECOVERY SYSTEM.

   B) ONE 1,000 GALLON DIESEL COMPARTMENT, NOT EQUIPPED WITH PHASE I VAPOR RECOVERY SYSTEM.

2) I – GASOLINE DISPENSING NOZZLE WITH A 50'- 0" COAXIAL HOSE ON A RETRACTABLE HOSE REEL, EQUIPPED WITH PHASE II VAPOR RECOVERY SYSTEM, HEALY MODEL 400 ORVR.

Conditions:

I. OPERATION OF THIS EQUIPMENT SHALL BE IN COMPLIANCE WITH ALL DATA AND SPECIFICATIONS SUBMITTED WITH THE APPLICATION UNDER WHICH THIS PERMIT WAS ISSUED, UNLESS OTHERWISE NOTED BELOW.

2. THIS EQUIPMENT SHALL BE PROPERLY MAINTAINED AND KEPT IN GOOD OPERATING CONDITION AT ALL TIMES.

3. EXCEPT FOR DIESEL TRANSFERS, THE PHASE I VAPOR RECOVERY SYSTEM SHALL BE IN FULL OPERATION WHENEVER FUEL IS BEING TRANSFERRED INTO THE MOBILE FUELER.

4. EXCEPT FOR DIESEL TRANSFERS, THE PHASE II VAPOR RECOVERY SYSTEM, INCLUDING ALL ASSOCIATED ABOVE GROUND PLUMBING HARDWARE, SHALL BE INSTALLED, OPERATED, AND MAINTAINED AS CERTIFIED IN ACCORDANCE WITH CARB EXECUTIVE ORDER G-70-193 WHENEVER FUEL IS BEING TRANSFERRED INTO MOTOR VEHICLES, AS DEFINED IN RULE 461.

FILE COPY

PERMIT TO OPERATE

CONTINUATION OF PERMIT TO OPERATE

5. ALL PHASE I AND PHASE II VAPOR RECOVERY EQUIPMENT FOR THIS MOBILE FUELER SHALL BE OPERATED IN ACCORDANCE WITH THE MANUFACTURER'S RECOMMENDED MAINTENANCE INTERVALS; AND SHALL USE THE MANUFACTURER'S RECOMMENDED INSTALLATION, OPERATION, AND MAINTENANCE PROCEDURES. THE MANUFACTURER'S MANUALS SHALL BE READILY ACCESSIBLE ON SITE AND MADE AVAILABLE TO DISTRICT REPRESENTATIVES UPON REQUEST.

6. THE OWNER OR OPERATOR OF THIS EQUIPMENT SHALL CONDUCT A PHYSICAL INSPECTION OF THE EQUIPMENT AND MANUALLY MONITOR THE SYSTEM GAUGE LEVELS DURING GASOLINE DISPENSING ON A DAILY OPERATING BASIS PER SITE. THE EQUIPMENT SHALL OPERATE WITHIN THE FOLLOWING GAUGE LEVELS:

A)	VAPOR RETURN LINE VACUUM:	35" TO 65" WC
B)	GASOLINE SUPPLY PRESSURE:	27 PSIG TO 35 PSIG
C)	CARGO TANK PRESSURE:	LESS THAN 18" WC

ALL PHYSICAL INSPECTIONS AND GAUGE OBSERVATIONS SHALL BE RECORDED IN A SYSTEMS LOG AND BE KEPT ON BOARD THE MOBILE FUELER AT ALL TIMES.

7. IF A VIOLATION OF THE GAUGE RANGES SPECIFIED IN CONDITIONS 6A, 6B, OR 6C OCCURS, THE OWNER OR OPERATOR OF THIS EQUIPMENT SHALL:

A) RECORD THE DATE, TIME PERIOD, AND FUEL TOTALIZING METER READING WHEN THE SYSTEM FIRST BEGAN TO FAIL TO OPERATE WITHIN THE SPECIFIED RANGE.

B) RECORD THE DATE AND TIME THAT CONTACT WAS MADE WITH AN AUTHORIZED REPRESENTATIVE TO HAVE THE SYSTEM INSPECTED AND REPAIRED.

C) RECORD THE DATE AND TIME THAT THE AUTHORIZED REPRESENTATIVE INSPECTED THE SYSTEM, PROVIDE A WRITTEN DESCRIPTION OF THE REPAIRS PERFORMED, AND RECORD THE FUEL TOTALIZING METER READING.

8. THIS EQUIPMENT SHALL CEASE ALL GASOLINE DISPENSING OPERATIONS WHEN ANY ONE OF THE FOLLOWING CONDITIONS OCCUR:

A) ONE OF THE JET PUMPS IS DISABLED;

B) FAILING TO ACHIEVE THE MINIMUM OPERATING VACUUM OF 35" WC WITHIN FIVE SECONDS AFTER THE SYSTEM HAS BEEN ACTIVATED FOR THREE CONSECUTIVE DISPENSING EPISODES;

C) A VACUUM LEVEL BELOW 15" WC FOR MORE THAN THREE SECONDS AFTER THE SYSTEM HAS REACHED 35" WC;

D) A VACUUM LEVEL ABOVE 85" WC DURING A DISPENSING EPISODE TO NON-ORVR VEHICLES;

E) EXCEPT DURING TESTING OPERATIONS, A CLOSED VALVE AT THE VAPOR RETURN LINE CONNECTION TO EACH JET PUMP.

CONTINUATION OF PERMIT TO OPERATE

F) A PRESSURE IN THE CARGO TANK HEADSPACE EXCEEDING 18" WC FOR MORE THAN FIVE MINUTES (ACCUMULATED) DURING ANY SIXTY MINUTE GASOLINE DISPENSING PERIOD;

G) EXCEPT DURING REPAIR OPERATIONS, AN OPEN DRAIN VALVE IN THE LIQUID DROP OUT POT;

H) EXCEPT DURING TESTING OPERATIONS, A CLOSED DRAIN VALVE AT THE LIQUID DROP OUT POT IN THE LIQUID REMOVAL LINE;

I) ANY OBSERVATION OF BREAKS, CRACKS, OR HOLES IN THE INSULATION, WHICH AFFECTS THE INSULATING PROPERTIES OR DURABILITY OF THE INSULATION;

J) THE ACCUMULATED LENGTH OF ALL TEARS OF THE NOZZLE BOOT (INCLUDING RIPS, SLITS, CRACKS, ETC.) EXCEEDS 0.5" IN LENGTH; OR

K) THE FACEPLATE AND FILL PIPE INTERFACE CANNOT ACHIEVE A SEAL OF AT LEAST 25% OF THE ACCUMULATED CIRCUMFERENCE OF THE FACEPLATE.

9. AT LEAST ONCE EVERY TWELVE MONTHS FROM THE PREVIOUS TEST, A VAPOR RETURN LINE VACUUM INTEGRITY TEST SHALL BE CONDUCTED AND PASS IN ACCORDANCE WITH EXHIBIT 3 OF CARB EXECUTIVE ORDER G-70-193. RESULTS SHALL BE SUBMITTED TO THE AQMD, OFFICE ENGINEERING AND COMPLIANCE, WITHIN FORTY-EIGHT (48) HOURS OF TEST.

10. AT LEAST ONCE EVERY TWELVE MONTHS FROM THE PREVIOUS TEST, A FILL PIPE PRESSURE REGULATION FUELING TEST SHALL BE CONDUCTED AND PASS IN ACCORDANCE WITH EXHIBIT 4 OF CARB EXECUTIVE ORDER G-70-193. RESULTS SHALL BE SUBMITTED TO THE AQMD, OFFICE ENGINEERING AND COMPLIANCE, WITHIN FORTY-EIGHT (48) HOURS OF TEST.

11. AT LEAST ONCE EVERY TWELVE MONTHS FROM THE PREVIOUS TEST, A TEN GALLON PER MINUTE LIMITATION TEST SHALL BE CONDUCTED AND PASS IN ACCORDANCE WITH EXHIBIT 5 OF CARB EXECUTIVE ORDER G-70-193. RESULTS SHALL BE SUBMITTED TO THE AQMD, OFFICE ENGINEERING AND COMPLIANCE, WITHIN FORTY-EIGHT (48) HOURS OF TEST.

12. THE AQMD SHALL BE NOTIFIED BY E-MAIL AT R461TESTING@AQMD.GOV OR BY FACSIMILE AT TELEPHONE NUMBER (909) 396-3606 AT LEAST SEVENTY-TWO (72) HOURS PRIOR TO ANY OF THE ABOVE MENTIONED TESTING REQUIREMENTS. SUCH NOTIFICATION SHALL INCLUDE THE NAME OF THE OWNER OR OPERATOR; THE NAME OF THE CONTRACTOR; THE LOCATION OF THE FACILITY; AND THE SCHEDULED START AND COMPLETION DATES OF THE TESTS TO BE PERFORMED.

13. THE INDIVIDUAL AND COMPANY PERFORMING ANY MAINTENANCE ON ANY PART OF THE VAPOR RECOVERY SYSTEM SHALL PROVIDE AT A MINIMUM FOR THE OWNER OR OPERATOR OF THE MOBILE FUELER, A CHRONOLOGICAL RECORD CONSISTING OF THE FOLLOWING INFORMATION FOR THE MOBILE FUELER'S MAINTENANCE LOG. THE DATE OF SERVICE, NAME OF MAINTENANCE TECHNICIAN, A CONTACT PHONE NUMBER, A DESCRIPTION OF AND LOCATION OF ANY EQUIPMENT REPLACED INCLUDING APPROPRIATE TEST RESULTS, AND A DESCRIPTION OF THE SYSTEM PROBLEMS REPAIRED.

PERMIT TO OPERATE

CONTINUATION OF PERMIT TO OPERATE

14. A CURRENT CARB CERTIFICATION DECAL SHALL BE DISPLAYED ON THE MOBILE FUELER IN A MANNER APPROVED BY THE EXECUTIVE OFFICER.

15. ALL DAILY INSPECTION RECORDS SHALL BE COMPLETED IMMEDIATELY AFTER THE DAILY INSPECTION.

16. EXCEPT FOR NECESSARY INSPECTIONS DUE TO EQUIPMENT FAILURES, AND FOR SCHEDULED MAINTENANCE AND REPAIRS; THE MOBILE FUELER DOME HATCH SHALL REMAIN CLOSED AND LATCHED AT ALL TIMES. FURTHERMORE, THE MOBILE FUELER DOME HATCH SHALL REMAIN CLOSED AND LATCHED UNTIL THE HEAD SPACE PRESSURE IS LESS THAN 2" WC.

17. THE MAXIMUM QUANTITY OF GASOLINE DISPENSED FROM THIS MOBILE FUELER SHALL NOT EXCEED 5,000 GALLONS IN ANY ONE CALENDAR MONTH NOR 60,000 GALLONS IN ANY ONE CALENDAR YEAR.

18. ALL PHYSICAL INSPECTION AND GAUGE OBSERVATION RECORDS AS REQUIRED BY PERMIT CONDITIONS 6 AND 7; ALL TEST RESULTS AS REQUIRED BY PERMIT CONDITIONS 9, 10, AND 11; ALL MAINTENANCE RECORDS AS REQUIRED BY PERMIT CONDITION 13; AND ALL MONTHLY AND ANNUAL GASOLINE DISPENSED RECORDS AS REQUIRED BY PERMIT CONDITION 17; SHALL BE PREPARED, SHALL BE RETAINED FOR TWO YEARS, AND SHALL BE KEPT WITHIN THE MOBILE FUELER AND MADE AVAILABLE TO DISTRICT REPRESENTATIVES UPON REQUEST.

NOTICE

IN ACCORDANCE WITH RULE 206, THIS PERMIT TO OPERATE OR COPY SHALL BE POSTED ON OR WITHIN 8 METERS OF THE EQUIPMENT.

THIS PERMIT DOES NOT AUTHORIZE THE EMISSION OF AIR CONTAMINANTS IN EXCESS OF THOSE ALLOWED BY DIVISION 26 OF THE HEALTH AND SAFETY CODE OF THE STATE OF CALIFORNIA OR THE RULES OF THE AIR QUALITY MANAGEMENT DISTRICT. THIS PERMIT CANNOT BE CONSIDERED AS PERMISSION TO VIOLATE EXISTING LAWS, ORDINANCES, REGULATIONS OR STATUTES OF OTHER GOVERNMENT AGENCIES.

This initial permit shall be renewed by 11/01 ANNUALLY unless the equipment is moved, or changes ownership. If the billing for annual renewal fee (Rule 301.f) is not received by the expiration date, contact the District.

Legal Owner Or Operator:

GENERAL ELECTRIC COMPANY
1923 E. AVION AVENUE
ONTARIO, CALIFORNIA 91761
ATTN: DAVID LU

ID 11726

Equipment located at: SAME AS ABOVE

Equipment Description:

AIR POLLUTION CONTROL SYSTEM CONSISTING OF:

1. SPRAY BOOTH, METALLIZING SPRAY, TANK MODEL, FLOOR STYLE, 12' -0" W. x 14' -0" L. x 9' -0" H., WATER-WASH TYPE, WITH A 5-HP WATER PUMP, AND A 7 1/2-HP EXHAUST FAN.

2. CYCLONE SEPERATOR, TORIT, 3' -0" DIA. x 14' -9" H.

3. DUST COLLECTOR, TORIT, CARTRIDGE TYPE, MODEL 4DF80, 7' -2" W. x 4' -10" L. x 13' -6" H., WITH 80 ULTRA-WEB FILTERS, EACH 1' -1" DIA. x 2' -2" L., PULSE JET CLEANED.

4. DUST COLLECTOR, DONALDSON, HIGH EFFICIENCY PARTICULATE AIR FILTER, 4' -3" W. x 2' -5" L. x 1' -11" H., WITH 2 HEPA FILTERS, EACH 2' -0" W. x 2' -0" L. x 1' -0" H.

5. EXHAUST SYSTEM WITH A 75-H.P. BLOWER VENTING A METALLIZING SPRAY GUN

Conditions:

1. OPERATION OF THIS EQUIPMENT SHALL BE CONDUCTED IN COMPLIANCE WITH ALL DATA AND SPECIFICATIONS SUBMITTED WITH THE APPLICATION UNDER WHICH THIS PERMIT IS ISSUED UNLESS OTHERWISE NOTED BELOW.

2. THIS EQUIPMENT SHALL BE PROPERLY MAINTAINED AND KEPT IN GOOD OPERATING CONDITION AT ALL TIMES.

3. NON-TOXIC MATERIALS SHALL NOT BE SPRAYED BY THE METALLIZING SPRAY GUN UNLESS THE WATER-WASH UNIT IS IN FULL OPERATION WITH THE WATER-CURTAIN COMPLETELY COVERING THE EXHAUST.

4. MATERIALS CONTAINING CHROMIUM SHALL NOT BE SPRAYED BY THE METALLIZING SPRAY GUN UNLESS IT IS VENTED ONLY TO THE AIR POLLUTION CONTROL SYSTEM WHICH CONSISTS OF THE CYCLONE SEPERATOR, CARTRIDGE TYPE DUST COLLECTOR, AND HEPA FILTERS, WHICH IS IN FULL USE, AND WHICH HAS BEEN ISSUED A PERMIT TO OPERATE BY THE EXECUTIVE OFFICER.

FILE COPY

CONTINUATION OF PERMIT TO OPERATE

5. THE TOTAL AMOUNT OF CHROMIUM AND CHROMIUM COMPOUNDS CHARGED TO THE METALLIZING SPRAY GUN, EXPRESSED AS ELEMENTAL CHROMIUM, SHALL NOT EXCEED 484 POUNDS IN ANY ONE YEAR.

6. THE PRESSURE DIFFERENTIAL ACROSS THE HEPA FILTER DUST COLLECTOR SHALL NOT EXCEED 2.0 INCHES OF WATER COLUMN.

7. AN INTERLOCK CONTROL SHALL BE INSTALLED AND MAINTAINED TO PREVENT THE OPERATION OF THE METALLIZING SPRAY GUN WHEN THE PRESSURE DIFFERENTIAL ACROSS THE HEP[A FILTER DUST COLLECTOR EXCEEDS 2.0 INCHES OF WATER COLUMN

8. MECHANICAL GAUGES SHALL BE MAINTAINED SO AS TO INDICATE, IN INCHES WATER COLUMN, THE STATIC PRESSURE DIFFERENTIALS ACROSS THE CARTRIDGE-TYPE DUST COLLECTOR AND ACROSS THE HEPA FILTER DUST COLLECTOR.

9. DUSTS COLLECTED IN THE CYCLONE SEPERATOR AND IN THE CARTRIDGE-TYPE DUST COLLECTOR SHALL BE DISCHARGED ONLY INTO CLOSED CONTAINERS.

10. A DAILY LOG INDICATING THE FOLLOWING INFORMATION SHALL BE KEPT. THIS LOG SHALL BE MAINTAINED ON FILE FOR A MINIMUM OF TWO YEARS AND MADE AVAILABLE TO THE DISTRICT PERSONNEL UPON REQUEST:

    A. THE TOTAL AMOUNT OF EACH MATERIAL SPRAYED BY THE METALLIZING SPRAY GUN, IN POUNDS PER DAY.

    B. THE CHROMIUM CONTENT IN EACH MATERIAL SPRAYED, IN PERCENT BY WEIGHT.

    C. THE TOTAL AMOUNT OF CHROMIUM IN THE MATERIALS SPRAYED, EXPRESSED AS ELEMENTAL CHROMIUM, IN POUNDS PER DAY AND THE ACCUMULATED SPRAYED DURING THE PRECEDING 365 CALENDAR DAYS.

CONTINUATION OF PERMIT TO OPERATE

NOTICE

IN ACCORDANCE WITH RULE 206, THIS PERMIT TO OPERATE OR COPY SHALL BE POSTED ON OR WITHIN 8 METERS OF THE EQUIPMENT.

THIS PERMIT DOES NOT AUTHORIZE THE EMISSION OF AIR CONTAMINANTS IN EXCESS OF THOSE ALLOWED BY DIVISION 26 OF THE HEALTH AND SAFETY CODE OF THE STATE OF CALIFORNIA OR THE RULES OF THE AIR QUALITY MANAGEMENT DISTRICT. Legal Owner or Operator : FEDERAL EXPRESS CORP
1100 LAKE COOKRD
BUFFALO GROVE, IL 60089

ID 58000

Equipment Location: 1801 AVION ONTARIO, CA 91761-8003

Equipment Description:

Fuel Storage and Dispensing Facility Consisting of:

1) 1 - GASOLINE UNDERGROUND STORAGE TANK, 10,000 GALLON CAPACITY, EQUIPPED WITH PHASE I VAPOR RECOVERY SYSTEM OPW (VR-102-E), NOT METHANOL COMPATIBLE.

2) 2 - GASOLINE NOZZLES DISPENSING 2 PRODUCTS, EQUIPPED WITH PHASE II VAPOR RECOVERY SYSTEM, BALANCE RETRACTOR (G-70-52-AM).

Conditions :

1. OPERATION OF THIS EQUIPMENT SHALL BE CONDUCTED IN ACCORDANCE WITH ALL DATA AND SPECIFICATIONS SUBMITTED WITH THE APPLICATION UNDER WHICH THIS PERMIT IS ISSUED UNLESS OTHERWISE NOTED BELOW.

2. THIS EQUIPMENT SHALL BE PROPERLY MAINTAINED AND KEPT IN GOOD OPERATING CONDITION AT ALL TIMES.

3. ALL PERMIT CONDITIONS APPLICABLE TO THE EQUIPMENT DESCRIBED IN THE PREVIOUS PERMIT TO OPERATE M89141 SHALL REMAIN IN EFFECT UNTIL THE NEW OR MODIFIED EQUIPMENT IS CONSTRUCTED AND OPERATED AS DESCRIBED IN THIS NEW PERMIT. THIS PERMIT TO CONSTRUCT/OPERATE SHALL BECOME INVALID IF THE MODIFICATION AS DESCRIBED IN THE EQUIPMENT DESCRIPTION HAS NOT BEEN COMPLETED WITHIN ONE YEAR FROM THE ISSUE DATE.

4. EXCEPT FOR DIESEL TRANSFERS, PHASE I VAPOR RECOVERY SYSTEMS SHALL BE IN FULL OPERATION WHENEVER FUEL IS BEING TRANSFERRED INTO STORAGE TANKS.

5. EXCEPT FOR DIESEL TRANSFERS, PHASE II VAPOR RECOVERY SYSTEMS SHALL BE IN FULL OPERATION WHENEVER FUEL IS BEING TRANSFERRED INTO MOTOR VEHICLES, AS DEFINED IN RULE 461.

FILE COPY

6. ALL PHASE I AND PHASE II VAPOR RECOVERY EQUIPMENT AT THIS FACILITY SHALL BE INSTALLED, OPERATED AND MAINTAINED TO MEET ALL CALIFORNIA AIR RESOURCES BOARD CERTIFICATION REQUIREMENTS.

7. AT LEAST SEVENTY-TWO (72) HOURS PRIOR TO BACK-FILLING ANY UNDERGROUND STORAGE TANK OR PIPING, THE SCAQMD SHALL BE NOTIFIED BY E-MAIL AT R461BACKFILL@AQMD.GOV OR BY FACSIMILE AT TELEPHONE NUMBER (909) 396-3606. SUCH NOTIFICATION SHALL INCLUDE THE NAME OF THE OWNER OR OPERATOR; THE NAME OF THE CONTRACTORS; THE LOCATION OF THE FACILITY; AND THE SCHEDULED START AND COMPLETION DATES OF THE BACK-FILLING PROCEDURE. THE BACK-FILLING PROCEDURE SHALL NOT COMMENCE UNTIL INSPECTED BY A DISTRICT REPRESENTATIVE.

8. DEPENDING ON THE SYSTEM CONFIGURATION, A PRESSURE INTEGRITY TEST OF THE DROP TUBE/DRAIN VALVE ASSEMBLY SHALL BE CONDUCTED TO QUANTIFY THE PRESSURE INTEGRITY OF BOTH THE DROP TUBE AND DRAIN VALVE SEAL OR A PRESSURE INTEGRITY TEST OF THE DROP TUBE OVERFILL PREVENTION DEVICE AND SPILL CONTAINER DRAIN VALVE SHALL BE CONDUCTED TO QUANTIFY THE PRESSURE INTEGRITY OF THE DROP TUBE OVERFILL PREVENTION DEVICE AND THE PRESSURE INTEGRITY OF THE SPILL CONTAINER DRAIN VALVE. EITHER TEST SHALL BE CONDUCTED AS A REVERIFICATION TEST AND THE TEST SHALL BE CONDUCTED IN ACCORDANCE WITH TEST PROCEDURE METHOD TP-201.1C OR TP-201.1D, RESPECTIVELY. RESULTS SHALL BE SUBMITTED TO THE AQMD, OFFICE OF ENGINEERING AND COMPLIANCE, WITHIN SEVENTY-TWO (72) HOURS OF TEST.

   THE AQMD SHALL BE NOTIFIED BY E-MAIL AT R461TESTING@AQMD.GOV OR BY FACSIMILE AT TELEPHONE NUMBER (909) 396-3606 AT LEAST SEVENTY-TWO (72) HOURS PRIOR TO TESTING. SUCH NOTIFICATION SHALL INCLUDE THE NAME OF THE OWNER OR OPERATOR; THE NAME OF THE CONTRACTOR; THE LOCATION OF THE FACILITY; AND THE SCHEDULED START AND COMPLETION DATES OF EITHER THE PRESSURE INTEGRITY TEST OF DROP TUBE/DRAIN VALVE ASSEMBLY OR PRESSURE INTEGRITY TEST OF THE DROP TUBE OVERFILL PREVENTION DEVICE AND SPILL CONTAINER DRAIN VALVE.

9. A LEAK RATE AND CRACKING PRESSURE TEST OF PRESSURE/VACUUM RELIEF VENT VALVES SHALL BE CONDUCTED WITHIN THIRTY DAYS (30) AFTER THE START OF OPERATION OF THE OPW PHASE I EVR EQUIPMENT AND AT LEAST ONCE EVERY THREE (3) YEARS THEREAFTER TO DETERMINE THE PRESSURE AND VACUUM AT WHICH THE PRESSURE/VACUUM VENT VALVE ACTUATES, AND TO DETERMINE THE VOLUMETRIC LEAK RATE AT A GIVEN PRESSURE. THE TEST SHALL BE CONDUCTED IN ACCORDANCE WITH THE TEST PROCEDURE METHOD TP-201.1E. RESULTS SHALL BE SUBMITTED TO THE AQMD, OFFICE OF ENGINEERING AND COMPLIANCE, WITHIN SEVENTY-TWO (72) HOURS OF TEST. THIS TEST RESULT SHALL BE KEPT ON SITE FOR THREE (3) YEARS AND MADE AVAILABLE TO DISTRICT REPRESENTATIVES UPON REQUEST.

   THE AQMD SHALL BE NOTIFIED BY E-MAIL AT R461TESTING@AQMD.GOV OR BY FACSIMILE AT TELEPHONE NUMBER (909) 396-3606 AT LEAST SEVENTY-TWO (72) HOURS PRIOR TO TESTING. SUCH NOTIFICATION SHALL INCLUDE THE NAME OF THE OWNER OR OPERATOR; THE NAME OF THE CONTRACTOR; THE LOCATION OF THE FACILITY; AND THE SCHEDULED START AND COMPLETION DATES OF THE LEAK RATE AND CRACKING PRESSURE TEST OF PRESSURE/VACUUM RELIEF VENT VALVES.

FILE COPY

10. A STATIC TORQUE TEST OF ROTATABLE PHASE I ADAPTORS SHALL BE CONDUCTED AS A REVERIFICATION TEST TO QUANTIFY THE AMOUNT OF STATIC TORQUE REQUIRED TO START THE ROTATION OF THE ROTATABLE PHASE I ADAPTORS. THE TEST SHALL BE CONDUCTED IN ACCORDANCE WITH THE TEST PROCEDURE METHOD OUTLINED IN TP-201.1B. RESULTS SHALL BE SUBMITTED TO THE AQMD, OFFICE OF ENGINEERING AND COMPLIANCE, WITHIN SEVENTY-TWO (72) HOURS OF TEST.

    THE AQMD SHALL BE NOTIFIED BY E-MAIL AT R461TESTING@AQMD.GOV OR BY FACSIMILE AT TELEPHONE NUMBER (909) 396-3606 AT LEAST SEVENTY-TWO (72) HOURS PRIOR TO TESTING. SUCH NOTIFICATION SHALL INCLUDE THE NAME OF THE OWNER OR OPERATOR; THE NAME OF THE CONTRACTOR; THE LOCATION OF THE FACILITY; AND THE SCHEDULED START AND COMPLETION DATES OF THE STATIC TORQUE TEST OF ROTATABLE PHASE I ADAPTORS.

11. THE PHASE II VAPOR RECOVERY SYSTEM SHALL BE INSTALLED, OPERATED, AND MAINTAINED SUCH THAT THE MAXIMUM ALLOWABLE PRESSURE THROUGH THE SYSTEM INCLUDING NOZZLE, VAPOR HOSE, SWIVELS, AND UNDERGROUND PIPING DOES NOT EXCEED THE DYNAMIC BACK PRESSURES DESCRIBED BY THE CALIFORNIA AIR RESOURCES BOARD EXECUTIVE ORDER BY WHICH THE SYSTEM WAS CERTIFIED:

NITROGEN FLOWRATES (CFH)	DYNAMIC BACK PRESSURE (INCHES OF WATER)
60	0.35
80	0.62

    DYNAMIC BACK PRESSURE TESTS SHALL BE CONDUCTED TO DETERMINE THE PHASE II SYSTEM VAPOR RECOVERY BACK PRESSURES. THE TESTS SHALL BE CONDUCTED IN ACCORDANCE WITH CARB TEST PROCEDURE TP-201.4, METHODOLOGY 1. RESULTS SHALL BE SUBMITTED TO THE AQMD, OFFICE OF ENGINEERING AND COMPLIANCE, WITHIN SEVENTY-TWO (72) HOURS OF TESTS.

    THE AQMD SHALL BE NOTIFIED BY E-MAIL AT R461TESTING@AQMD.GOV OR BY FACSIMILE AT TELEPHONE NUMBER (909) 396-3606 AT LEAST SEVENTY-TWO (72) HOURS PRIOR TO TESTING. SUCH NOTIFICATION SHALL INCLUDE THE NAME OF THE OWNER OR OPERATOR; THE NAME OF THE CONTRACTOR; THE LOCATION OF THE FACILITY; AND THE SCHEDULED START AND COMPLETION DATES OF THE DYNAMIC BACK PRESSURE TESTS.

12. A STATIC PRESSURE LEAK DECAY TEST SHALL BE CONDUCTED TO DEMONSTRATE THAT THE STORAGE TANKS, THE REMOTE AND/OR NOZZLE VAPOR RECOVERY CHECK VALVES, ASSOCIATED VAPOR RETURN PIPING AND FITTINGS ARE FREE FROM VAPOR LEAKS. THE TEST SHALL BE CONDUCTED IN ACCORDANCE WITH CARB TEST PROCEDURE METHOD TP-201.3. RESULTS SHALL BE SUBMITTED TO THE AQMD, OFFICE OF ENGINEERING AND COMPLIANCE, WITHIN SEVENTY-TWO (72) HOURS OF TEST.

    THE AQMD SHALL BE NOTIFIED BY E-MAIL AT R461TESTING@AQMD.GOV OR BY FACSIMILE AT TELEPHONE NUMBER (909) 396-3606 AT LEAST SEVENTY-TWO (72) HOURS PRIOR TO TESTING. SUCH NOTIFICATION SHALL INCLUDE THE NAME OF THE OWNER OR OPERATOR; THE NAME OF THE CONTRACTOR; THE LOCATION OF THE FACILITY; AND THE SCHEDULED START AND COMPLETION DATES OF THE STATIC PRESSURE LEAK DECAY TEST.

CONTINUATION OF PERMIT TO CONSTRUCT/OPERATE

13. IF THE CARB EXECUTIVE ORDER REQUIRES THE INSTALLATION OF A LIQUID REMOVAL DEVICE, A LIQUID REMOVAL RATE TEST SHALL BE CONDUCTED TO DEMONSTRATE THE REMOVAL OF GASOLINE FROM THE VAPOR PASSAGE OF THE COAXIAL HOSE. THE TEST SHALL BE CONDUCTED IN ACCORDANCE WITH CARB TEST PROCEDURE METHOD TP-201.6. RESULTS SHALL BE SUBMITTED TO THE AQMD, OFFICE OF ENGINEERING AND COMPLIANCE, WITHIN SEVENTY-TWO (72) HOURS OF TEST.

    THE AQMD SHALL BE NOTIFIED BY E-MAIL AT R461TESTING@AQMD.GOV OR BY FACSIMILE AT TELEPHONE NUMBER (909) 396-3606 AT LEAST SEVENTY-TWO (72) HOURS PRIOR TO TESTING. SUCH NOTIFICATION SHALL INCLUDE THE NAME OF THE OWNER OR OPERATOR; THE NAME OF THE CONTRACTOR; THE LOCATION OF THE FACILITY; AND THE SCHEDULED START AND COMPLETION DATES OF THE LIQUID REMOVAL RATE TEST.

14. THE TESTING FOR THE ABOVE MENTIONED TESTS SHALL BE CONDUCTED IN ACCORDANCE WITH THE MOST RECENT RULE 461 AMENDMENT OR CARB EXECUTIVE ORDER REQUIREMENTS, WHICHEVER IS MORE STRINGENT.

15. ALL RECORDS AND TEST RESULTS THAT ARE REQUIRED TO BE MAINTAINED BY RULE 461 SHALL BE KEPT ON SITE FOR FOUR YEARS AND MADE AVAILABLE TO DISTRICT REPRESENTATIVES UPON REQUEST.

NOTICE

IN ACCORDANCE WITH RULE 206, THIS PERMIT TO OPERATE OR COPY SHALL BE POSTED ON OR WITHIN 8 METERS OF THE EQUIPMENT.

THIS PERMIT DOES NOT AUTHORIZE THE EMISSION OF AIR CONTAMINANTS IN EXCESS OF THOSE ALLOWED BY DEVISION 26 OF THE HEALTH AND SAFETY CODE OF THE STATE OF CALIFORNIA OR THE RULES OF THE AIR QUALITY MANAGEMENT DISTRICT. THIS PERMIT CANNOT BE CONSIDERED AS PERMISSION TO VOILATE EXISTING LAWS, ORDINANCES, REGULATIONS OR STATUES OF OTHER GOVERNMENT AGENCIES.

PERMIT 1433

A PERMIT IS HEREBY GRANTED TO: GENERAL ELECTRIC COMPANY
Los Angeles Aircraft Service Shop

FOR EQUIPMENT LOCATED AT: Ontario International Airport

Test Cell for High Bypass Ratio Turbofan
Engines (General Electric CF6)

Operated on turbine fuel A

300,000,000 BTU/hr

2-J

CONDITIONS: The permittee may be required to provide adequate sampling and testing facilities. Equipment modification requires a new permit.

REVOCABLE
This permit does not authorize the emission of air contaminants in excess of those allowed by Division 20, Chapter 2, Article 3, of the Health and Safety Code of the State of California or the Rules and Regulations of the Air Pollution Control District. This permit cannot be considered as permission to violate existing laws, ordinances, regulations or statutes of other governmental agencies.

VOID UNLESS VALIDATED

Fee: $ 1500.00

DONALD M. THOMAS, P. E.
Air Pollution Control Officer

By: _____ Engineer

For Period: 6/16/75 to 6/15/77

04-2056-923 — Rev. 8/75

PERMIT TO OPERATE

This initial permit must be renewed ANNUALLY unless the equipment is moved, or changes ownership.
If the billing for annual renewal fee (Rule 301.f) is not received by the expiration date, contact the District.

ID 114338

LEGAL OWNER
OR OPERATOR: MERCURY AIR GRP, MERCURY AIR CENTER, DBA
2161 E AVION ST
ONTARIO, CA 91761-7770

Equipment Location: 2161 E AVION ST, ONTARIO, CA 91761-7770

Equipment Description:

CARGO TANK MOTOR VEHICLE FUELING SYSTEM (MOBILE FUELER), CONSISTING OF:

1) DUAL COMPARTMENT GASOLINE/DIESEL DISPENSING MOBILE FUELER, VEHICLE NO. S-2, FRANZEN-HILL HILL-VAC (G-70-193), CYLINDRICAL, 10'- 0" L. X 3'- 7" W. X 5'-11" H., 1,200-GALLON CAPACITY, POLYURETHANE INSULATION, WITH A WHITE SHELL, EQUIPPED WITH A PRESSURE/VACUUM RELIEF VALVE, AND TWO HEALY 100 JET PUMPS, CONSISTING OF:

   A) ONE 700-GALLON COMPARTMENT GASOLINE TANK, EQUIPPED WITH PHASE I VAPOR RECOVERY SYSTEM.

   B) ONE 500-GALLON COMPARTMENT DIESEL TANK, NOT EQUIPPED WITH PHASE I VAPOR RECOVERY SYSTEM.

2) 1 – GASOLINE DISPENSING NOZZLE WITH A 75'- 0" COAXIAL HOSE ON A RETRACTABLE HOSE REEL, EQUIPPED WITH PHASE II VAPOR RECOVERY SYSTEM, HEALY MODEL 400 ORVR.

Conditions:

1. OPERATION OF THIS EQUIPMENT SHALL BE IN COMPLIANCE WITH ALL DATA AND SPECIFICATIONS SUBMITTED WITH THE APPLICATION UNDER WHICH THIS PERMIT WAS ISSUED, UNLESS OTHERWISE NOTED BELOW.

2. THIS EQUIPMENT SHALL BE PROPERLY MAINTAINED AND KEPT IN GOOD OPERATING CONDITION AT ALL TIMES.

3. EXCEPT FOR DIESEL TRANSFERS, PHASE I VAPOR RECOVERY SYSTEM SHALL BE IN FULL OPERATION WHENEVER FUEL IS BEING TRANSFERRED INTO THE MOBILE FUELER.

4. EXCEPT FOR DIESEL TRANSFERS, THE PHASE II VAPOR RECOVERY SYSTEM, INCLUDING ALL ASSOCIATED ABOVE GROUND PLUMBING HARDWARE, SHALL BE INSTALLED, OPERATED, AND MAINTAINED AS CERTIFIED IN ACCORDANCE WITH CARB EXECUTIVE ORDER G-70-193 WHENEVER FUEL IS BEING TRANSFERRED INTO MOTOR VEHICLES, AS DEFINED IN RULE 461.

FILE COPY

PERMIT TO OPERATE

CONTINUATION OF PERMIT TO OPERATE

5. ALL PHASE I AND PHASE II VAPOR RECOVERY EQUIPMENT FOR THIS MOBILE FUELER SHALL BE OPERATED IN ACCORDANCE WITH THE MANUFACTURER'S RECOMMENDED MAINTENANCE INTERVALS; AND SHALL USE THE MANUFACTURER'S RECOMMENDED INSTALLATION, OPERATION, AND MAINTENANCE PROCEDURES. THE MANUFACTURER'S MANUALS SHALL BE READILY ACCESSIBLE ON SITE AND MADE AVAILABLE TO DISTRICT REPRESENTATIVES UPON REQUEST.

6. THE OWNER OR OPERATOR OF THIS EQUIPMENT SHALL CONDUCT A PHYSICAL INSPECTION OF THE EQUIPMENT AND MANUALLY MONITOR THE SYSTEM GAUGE LEVELS DURING GASOLINE DISPENSING ON A DAILY OPERATING BASIS PER SITE. THE EQUIPMENT SHALL OPERATE WITHIN THE FOLLOWING GAUGE LEVELS:

A)	VAPOR RETURN LINE VACUUM:	35" TO 65" WC
B)	GASOLINE SUPPLY PRESSURE:	27 PSIG TO 35 PSIG
C)	CARGO TANK PRESSURE:	LESS THAN 18" WC

ALL PHYSICAL INSPECTIONS AND GAUGE OBSERVATIONS SHALL BE RECORDED IN A SYSTEMS LOG AND BE KEPT ON BOARD THE MOBILE FUELER AT ALL TIMES.

7. IF A VIOLATION OF THE GAUGE RANGES SPECIFIED IN CONDITIONS 6A, 6B, OR 6C OCCURS, THE OWNER OR OPERATOR OF THIS EQUIPMENT SHALL:

A) RECORD THE DATE, TIME PERIOD, AND FUEL TOTALIZING METER READING WHEN THE SYSTEM FIRST BEGAN TO FAIL TO OPERATE WITHIN THE SPECIFIED RANGE.

B) RECORD THE DATE AND TIME THAT CONTACT WAS MADE WITH AN AUTHORIZED REPRESENTATIVE TO HAVE THE SYSTEM INSPECTED AND REPAIRED.

C) RECORD THE DATE AND TIME THAT THE AUTHORIZED REPRESENTATIVE INSPECTED THE SYSTEM, PROVIDE A WRITTEN DESCRIPTION OF THE REPAIRS PERFORMED, AND RECORD THE FUEL TOTALIZING METER READING.

8. THIS EQUIPMENT SHALL CEASE ALL GASOLINE DISPENSING OPERATIONS WHEN ANY ONE OF THE FOLLOWING CONDITIONS OCCUR:

A) ONE OF THE JET PUMPS IS DISABLED;

B) FAILING TO ACHIEVE THE MINIMUM OPERATING VACUUM OF 35" WC WITHIN FIVE SECONDS AFTER THE SYSTEM HAS BEEN ACTIVATED FOR THREE CONSECUTIVE DISPENSING EPISODES;

C) A VACUUM LEVEL BELOW 15" WC FOR MORE THAN THREE SECONDS AFTER THE SYSTEM HAS REACHED 35" WC;

D) A VACUUM LEVEL ABOVE 85" WC DURING A DISPENSING EPIDSODE TO NON-ORVR VEHICLES;

E) EXCEPT DURING TESTING OPERATIONS, A CLOSED VALVE AT THE VAPOR RETURN LINE CONNECTION TO EACH JET PUMP;

PERMIT TO OPERATE

CONTINUATION OF PERMIT TO OPERATE

F) A PRESSURE IN THE CARGO TANK HEADSPACE EXCEEDING 18" WC FOR MORE THAN FIVE MINUTES (ACCUMULATED) DURING ANY SIXTY MINUTE GASOLINE DISPENSING PERIOD;

G) EXCEPT DURING REPAIR OPERATIONS, AN OPEN DRAIN VALVE IN THE LIQUID DROP OUT POT;

H) EXCEPT DURING TESTING OPERATIONS, A CLOSED DRAIN VALVE AT THE LIQUID DROP OUT POT IN THE LIQUID REMOVAL LINE;

I) ANY OBSERVATION OF BREAKS, CRACKS, OR HOLES IN THE INSULATION, WHICH AFFECTS THE INSULATING PROPERTIES OR DURABILITY OF THE INSULATION;

J) THE ACCUMULATED LENGTH OF ALL TEARS OF THE NOZZLE BOOT (INCLUDING RIPS, SLITS, CRACKS, ETC.) EXCEEDS 0.5" IN LENGTH; OR

K) THE FACEPLATE AND FILL PIPE INTERFACE CANNOT ACHIEVE A SEAL OF AT LEAST 25% OF THE ACCUMULATED CIRCUMFERENCE OF THE FACEPLATE.

9. AT LEAST ONCE EVERY TWELVE MONTHS FROM THE PREVIOUS TEST, A VAPOR RETURN LINE VACUUM INTEGRITY TEST SHALL BE CONDUCTED AND PASS IN ACCORDANCE WITH EXHIBIT 3 OF CARB EXECUTIVE ORDER G-70-193. RESULTS SHALL BE SUBMITTED TO THE AQMD, OFFICE ENGINEERING AND COMPLIANCE, WITHIN FORTY-EIGHT (48) HOURS OF TEST.

THE AQMD SHALL BE NOTIFIED AT TELEPHONE NUMBER (909) 396-3886 AT LEAST SEVENTY-TWO (72) HOURS PRIOR TO TESTING. SUCH NOTIFICATION SHALL INCLUDE THE NAME OF THE OWNER OR OPERATOR OF THIS EQUIPMENT; THE NAME OF THE TESTING CONTRACTOR; THE LOCATION OF THE MOBILE FUELER; AND THE SCHEDULED START AND COMPLETION DATES OF THE VAPOR RETURN LINE VACUUM INTEGRITY TEST.

10. AT LEAST ONCE EVERY TWELVE MONTHS FROM THE PREVIOUS TEST, A FILL PIPE PRESSURE REGULATION FUELING TEST SHALL BE CONDUCTED AND PASS IN ACCORDANCE WITH EXHIBIT 4 OF CARB EXECUTIVE ORDER G-70-193. RESULTS SHALL BE SUBMITTED TO THE AQMD, OFFICE ENGINEERING AND COMPLIANCE, WITHIN FORTY-EIGHT (48) HOURS OF TEST.

THE AQMD SHALL BE NOTIFIED AT TELEPHONE NUMBER (909) 396-3886 AT LEAST SEVENTY-TWO (72) HOURS PRIOR TO TESTING. SUCH NOTIFICATION SHALL INCLUDE THE NAME OF THE OWNER OR OPERATOR OF THIS EQUIPMENT; THE NAME OF THE TESTING CONTRACTOR; THE LOCATION OF THE MOBILE FUELER; AND THE SCHEDULED START AND COMPLETION DATES OF THE FILL PIPE PRESSURE REGULATION FUELING TEST.

11. AT LEAST ONCE EVERY TWELVE MONTHS FROM THE PREVIOUS TEST, A TEN GALLON PER MINUTE LIMITATION TEST SHALL BE CONDUCTED AND PASS IN ACCORDANCE WITH EXHIBIT 5 OF CARB EXECUTIVE ORDER G-70-193. RESULTS SHALL BE SUBMITTED TO THE AQMD, OFFICE ENGINEERING AND COMPLIANCE. WITHIN FORTY-EIGHT (48) HOURS OF TEST.

PERMIT TO OPERATE

CONTINUATION OF PERMIT TO OPERATE

THE AQMD SHALL BE NOTIFIED AT TELEPHONE NUMBER (909) 396-3886 AT LEAST SEVENTY-TWO (72) HOURS PRIOR TO TESTING. SUCH NOTIFICATION SHALL INCLUDE THE NAME OF THE OWNER OR OPERATOR OF THIS EQUIPMENT; THE NAME OF THE TESTING CONTRACTOR; THE LOCATION OF THE MOBILE FUELER; AND THE SCHEDULED START AND COMPLETION DATES OF THE TEN GALLON PER MINUTE LIMITATION TEST.

12. THE INDIVIDUAL AND COMPANY PERFORMING ANY MAINTENANCE ON ANY PART OF THE VAPOR RECOVERY SYSTEM SHALL PROVIDE AT A MINIMUM FOR THE OWNER OR OPERATOR OF THE MOBILE FUELER, A CHRONOLOGICAL RECORD CONSISTING OF THE FOLLOWING INFORMATION FOR THE MOBILE FUELER'S MAINTENANCE LOG. THE DATE OF SERVICE, NAME OF MAINTENANCE TECHNICIAN, A CONTACT PHONE NUMBER, A DESCRIPTION OF AND LOCATION OF ANY EQUIPMENT REPLACED INCLUDING APPROPRIATE TEST RESULTS, AND A DESCRIPTION OF THE SYSTEM PROBLEMS REPAIRED.

13. A CURRENT CARB CERTIFICATION DECAL SHALL BE DISPLAYED ON THE MOBILE FUELER IN A MANNER APPROVED BY THE EXECUTIVE OFFICER.

14. ALL DAILY INSPECTION RECORDS SHALL BE COMPLETED IMMEDIATELY AFTER THE DAILY INSPECTION.

15. EXCEPT FOR NECESSARY INSPECTIONS DUE TO EQUIPMENT FAILURES, AND FOR SCHEDULED MAINTENANCE AND REPAIRS; THE MOBILE FUELER DOME HATCH SHALL REMAIN CLOSED AND LATCHED AT ALL TIMES. FURTHERMORE, THE MOBILE FUELER DOME HATCH SHALL REMAIN CLOSED AND LATCHED UNTIL THE HEAD SPACE PRESSURE IS LESS THAN 2" WC.

16. THE MAXIMUM QUANTITY OF GASOLINE DISPENSED FROM THIS MOBILE FUELER SHALL NOT EXCEED 25,000 GALLONS IN ANY ONE CALENDAR MONTH NOR 300,000 GALLONS IN ANY ONE CALENDAR YEAR.

17. ALL PHYSICAL INSPECTION AND GAUGE OBSERVATION RECORDS AS REQUIRED BY PERMIT CONDITIONS 6 AND 7; ALL TEST RESULTS AS REQUIRED BY PERMIT CONDITIONS 9, 10, AND 11; ALL MAINTENANCE RECORDS AS REQUIRED BY PERMIT CONDITION 12; AND ALL MONTHLY AND ANNUAL GASOLINE DISPENSED RECORDS AS REQUIRED BY PERMIT CONDITION 16; SHALL BE PREPARED, SHALL BE RETAINED FOR TWO YEARS, AND SHALL BE KEPT WITHIN THE MOBILE FUELER AND MADE AVAILABLE TO DISTRICT REPRESENTATIVES UPON REQUEST.

18. IN CASE OF DEMONSTRATED NEED TO FUEL SERVICE EQUIPMENT IN THE FIELD, THIS MOBILE FUELER MAYBE USED TO FUEL MOTOR VEHICLES OFF SITE. IF THE PERIOD OF OFF SITE FUELING WILL EXCEED FOUR DAYS, THE AQMD SHALL BE NOTIFIED VIA TELEPHONE AT (877) 810-6995 WITH THE FOLLOWING INFORMATION:

A) THE PERMIT NUMBER OF THE MOBILE FUELER;
B) THE NAME AND PHONE NUMBER OF A CONTACT PERSON;
C) THE LOCATION WHERE THE MOBILE FUELER WILL BE OPERATED;
D) THE ESTIMATED TIME THE MOBILE FUELER WILL BE LOCATED AT THIS SITE; AND
E) THE DISTANCE TO THE NEAREST SENSITIVE RECEPTOR IF LOCATED WITHIN 1/4-MILE OF A LONG-TERM HEALTH CARE FACILITY, REHABILITATION CENTER, CONVALESCENT CENTER, RETIREMENT HOME, RESIDENCE, SCHOOL, PLAYGROUND, CHILD CARE CENTER, AND ATHLETIC FACILITY.

PERMIT TO OPERATE

CONTINUATION OF PERMIT TO OPERATE

THE OPERATOR SHALL OPERATE THE MOBILE FUELER IN ACCORDANCE TO ALL OF THE PREVIOUSLY MENTIONED PERMIT CONDITIONS. IN ADDITION, THE OPERATOR SHALL RECORD THE AMOUNT OF GASOLINE FUEL DISPENSED WHILE THE MOBILE FUELER WAS LOCATED OFF SITE, AND INCLUDE THIS AMOUNT AS PART OF THEIR MONTHLY AND ANNUAL THROUGHPUT TOTALS.

NOTICE

IN ACCORDANCE WITH RULE 206, THIS PERMIT TO OPERATE OR COPY SHALL BE POSTED ON OR WITHIN 8 METERS OF THE EQUIPMENT.

THIS PERMIT DOES NOT AUTHORIZE THE EMISSION OF AIR CONTAMINANTS IN EXCESS OF THOSE ALLOWED BY DIVISION 26 OF THE HEALTH AND SAFETY CODE OF THE STATE OF CALIFORNIA OR THE RULES OF THE AIR QUALITY MANAGEMENT DISTRICT. THIS PERMIT CANNOT BE CONSIDERED AS PERMISSION TO VIOLATE EXISTING LAWS, ORDINANCES, REGULATIONS OR STATUTES OF OTHER GOVERNMENT AGENCIES.

ONTARIO, CA 91761-7770

Equipment Location: 2161 E AVION ST, ONTARIO, CA 91761-7770

Equipment Description:

CARGO TANK MOTOR VEHICLE FUELING SYSTEM (MOBILE FUELER), CONSISTING OF:

1) DUAL COMPARTMENT GASOLINE/DIESEL DISPENSING MOBILE FUELER, VEHICLE NO. S-1, FRANZEN-HILL HILL-VAC (G-70-193), CYLINDRICAL, 12'- 0" L. X 8'- 0" W. X 2'- 4" H., 2,000-GALLON CAPACITY, POLYURETHANE INSULATION, WITH A WHITE SHELL, EQUIPPED WITH A PRESSURE/VACUUM RELIEF VALVE, AND TWO HEALY 100 JET PUMPS, CONSISTING OF:

   A) ONE 1,000-GALLON COMPARTMENT GASOLINE TANK, EQUIPPED WITH PHASE I VAPOR RECOVERY SYSTEM.

   B) ONE 1,000-GALLON COMPARTMENT DIESEL TANK, NOT EQUIPPED WITH PHASE I VAPOR RECOVERY SYSTEM.

2) 1 – GASOLINE DISPENSING NOZZLE WITH A 50'- 0" COAXIAL HOSE ON A RETRACTABLE HOSE REEL, EQUIPPED WITH PHASE II VAPOR RECOVERY SYSTEM, HEALY MODEL 400 ORVR.

Conditions:

1. OPERATION OF THIS EQUIPMENT SHALL BE IN COMPLIANCE WITH ALL DATA AND SPECIFICATIONS SUBMITTED WITH THE APPLICATION UNDER WHICH THIS PERMIT WAS ISSUED, UNLESS OTHERWISE NOTED BELOW.

2. THIS EQUIPMENT SHALL BE PROPERLY MAINTAINED AND KEPT IN GOOD OPERATING CONDITION AT ALL TIMES.

3. EXCEPT FOR DIESEL TRANSFERS, PHASE I VAPOR RECOVERY SYSTEM SHALL BE IN FULL OPERATION WHENEVER FUEL IS BEING TRANSFERRED INTO THE MOBILE FUELER.

4. EXCEPT FOR DIESEL TRANSFERS, THE PHASE II VAPOR RECOVERY SYSTEM, INCLUDING ALL ASSOCIATED ABOVE GROUND PLUMBING HARDWARE, SHALL BE INSTALLED, OPERATED, AND MAINTAINED AS CERTIFIED IN ACCORDANCE WITH CARB EXECUTIVE ORDER G-70-193 WHENEVER FUEL IS BEING TRANSFERRED INTO MOTOR VEHICLES, AS DEFINED IN RULE 461.

FILE COPY

CONTINUATION OF PERMIT TO OPERATE

5. ALL PHASE I AND PHASE II VAPOR RECOVERY EQUIPMENT FOR THIS MOBILE FUELER SHALL BE OPERATED IN ACCORDANCE WITH THE MANUFACTURER'S RECOMMENDED MAINTENANCE INTERVALS; AND SHALL USE THE MANUFACTURER'S RECOMMENDED INSTALLATION, OPERATION, AND MAINTENANCE PROCEDURES. THE MANUFACTURER'S MANUALS SHALL BE READILY ACCESSIBLE ON SITE AND MADE AVAILABLE TO DISTRICT REPRESENTATIVES UPON REQUEST.

6. THE OWNER OR OPERATOR OF THIS EQUIPMENT SHALL CONDUCT A PHYSICAL INSPECTION OF THE EQUIPMENT AND MANUALLY MONITOR THE SYSTEM GAUGE LEVELS DURING GASOLINE DISPENSING ON A DAILY OPERATING BASIS PER SITE. THE EQUIPMENT SHALL OPERATE WITHIN THE FOLLOWING GAUGE LEVELS:

A)	VAPOR RETURN LINE VACUUM:	35" TO 65" WC
B)	GASOLINE SUPPLY PRESSURE:	27 PSIG TO 35 PSIG
C)	CARGO TANK PRESSURE:	LESS THAN 18" WC

ALL PHYSICAL INSPECTIONS AND GAUGE OBSERVATIONS SHALL BE RECORDED IN A SYSTEMS LOG AND BE KEPT ON BOARD THE MOBILE FUELER AT ALL TIMES.

7. IF A VIOLATION OF THE GAUGE RANGES SPECIFIED IN CONDITIONS 6A, 6B, OR 6C OCCURS, THE OWNER OR OPERATOR OF THIS EQUIPMENT SHALL:

A) RECORD THE DATE, TIME PERIOD, AND FUEL TOTALIZING METER READING WHEN THE SYSTEM FIRST BEGAN TO FAIL TO OPERATE WITHIN THE SPECIFIED RANGE.

B) RECORD THE DATE AND TIME THAT CONTACT WAS MADE WITH AN AUTHORIZED REPRESENTATIVE TO HAVE THE SYSTEM INSPECTED AND REPAIRED.

C) RECORD THE DATE AND TIME THAT THE AUTHORIZED REPRESENTATIVE INSPECTED THE SYSTEM, PROVIDE A WRITTEN DESCRIPTION OF THE REPAIRS PERFORMED, AND RECORD THE FUEL TOTALIZING METER READING.

8. THIS EQUIPMENT SHALL CEASE ALL GASOLINE DISPENSING OPERATIONS WHEN ANY ONE OF THE FOLLOWING CONDITIONS OCCUR:

A) ONE OF THE JET PUMPS IS DISABLED;

B) FAILING TO ACHIEVE THE MINIMUM OPERATING VACUUM OF 35" WC WITHIN FIVE SECONDS AFTER THE SYSTEM HAS BEEN ACTIVATED FOR THREE CONSECUTIVE DISPENSING EPISODES;

C) A VACUUM LEVEL BELOW 15" WC FOR MORE THAN THREE SECONDS AFTER THE SYSTEM HAS REACHED 35" WC;

D) A VACUUM LEVEL ABOVE 85" WC DURING A DISPENSING EPISODE TO NON-ORVR VEHICLES;

E) EXCEPT DURING TESTING OPERATIONS, A CLOSED VALVE AT THE VAPOR RETURN LINE CONNECTION TO EACH JET PUMP.

F) A PRESSURE IN THE CARGO TANK HEADSPACE EXCEEDING 18" WC FOR MORE THAN FIVE MINUTES (ACCUMULATED) DURING ANY SIXTY MINUTE GASOLINE DISPENSING PERIOD;

G) EXCEPT DURING REPAIR OPERATIONS, AN OPEN DRAIN VALVE IN THE LIQUID DROP OUT POT;

H) EXCEPT DURING TESTING OPERATIONS, A CLOSED DRAIN VALVE AT THE LIQUID DROP OUT POT IN THE LIQUID REMOVAL LINE;

I) ANY OBSERVATION OF BREAKS, CRACKS, OR HOLES IN THE INSULATION, WHICH AFFECTS THE INSULATING PROPERTIES OR DURABILITY OF THE INSULATION;

J) THE ACCUMULATED LENGTH OF ALL TEARS OF THE NOZZLE BOOT (INCLUDING RIPS, SLITS, CRACKS, ETC.) EXCEEDS 0.5" IN LENGTH; OR

K) THE FACEPLATE AND FILL PIPE INTERFACE CANNOT ACHIEVE A SEAL OF AT LEAST 25% OF THE ACCUMULATED CIRCUMFERENCE OF THE FACEPLATE.

9. AT LEAST ONCE EVERY TWELVE MONTHS FROM THE PREVIOUS TEST, A VAPOR RETURN LINE VACUUM INTEGRITY TEST SHALL BE CONDUCTED AND PASS IN ACCORDANCE WITH EXHIBIT 3 OF CARB EXECUTIVE ORDER G-70-193. RESULTS SHALL BE SUBMITTED TO THE AQMD, OFFICE ENGINEERING AND COMPLIANCE, WITHIN FORTY-EIGHT (48) HOURS OF TEST.

THE AQMD SHALL BE NOTIFIED AT TELEPHONE NUMBER (909) 396-3886 AT LEAST SEVENTY-TWO (72) HOURS PRIOR TO TESTING. SUCH NOTIFICATION SHALL INCLUDE THE NAME OF THE OWNER OR OPERATOR OF THIS EQUIPMENT; THE NAME OF THE TESTING CONTRACTOR; THE LOCATION OF THE MOBILE FUELER; AND THE SCHEDULED START AND COMPLETION DATES OF THE VAPOR RETURN LINE VACUUM INTEGRITY TEST.

10. AT LEAST ONCE EVERY TWELVE MONTHS FROM THE PREVIOUS TEST, A FILL PIPE PRESSURE REGULATION FUELING TEST SHALL BE CONDUCTED AND PASS IN ACCORDANCE WITH EXHIBIT 4 OF CARB EXECUTIVE ORDER G-70-193. RESULTS SHALL BE SUBMITTED TO THE AQMD, OFFICE ENGINEERING AND COMPLIANCE, WITHIN FORTY-EIGHT (48) HOURS OF TEST.

THE AQMD SHALL BE NOTIFIED AT TELEPHONE NUMBER (909) 396-3886 AT LEAST SEVENTY-TWO (72) HOURS PRIOR TO TESTING. SUCH NOTIFICATION SHALL INCLUDE THE NAME OF THE OWNER OR OPERATOR OF THIS EQUIPMENT; THE NAME OF THE TESTING CONTRACTOR; THE LOCATION OF THE MOBILE FUELER; AND THE SCHEDULED START AND COMPLETION DATES OF THE FILL PIPE PRESSURE REGULATION FUELING TEST.

11. AT LEAST ONCE EVERY TWELVE MONTHS FROM THE PREVIOUS TEST, A TEN GALLON PER MINUTE LIMITATION TEST SHALL BE CONDUCTED AND PASS IN ACCORDANCE WITH EXHIBIT 5 OF CARB EXECUTIVE ORDER G-70-193. RESULTS SHALL BE SUBMITTED TO THE AQMD, OFFICE ENGINEERING AND COMPLIANCE, WITHIN FORTY-EIGHT (48) HOURS OF TEST.

THE AQMD SHALL BE NOTIFIED AT TELEPHONE NUMBER (909) 396-3886 AT LEAST SEVENTY-TWO (72) HOURS PRIOR TO TESTING. SUCH NOTIFICATION SHALL INCLUDE THE NAME OF THE

CONTINUATION OF PERMIT TO OPERATE

OWNER OR OPERATOR OF THIS EQUIPMENT; THE NAME OF THE TESTING CONTRACTOR; THE LOCATION OF THE MOBILE FUELER; AND THE SCHEDULED START AND COMPLETION DATES OF THE TEN GALLON PER MINUTE LIMITATION TEST.

12. THE INDIVIDUAL AND COMPANY PERFORMING ANY MAINTENANCE ON ANY PART OF THE VAPOR RECOVERY SYSTEM SHALL PROVIDE AT A MINIMUM FOR THE OWNER OR OPERATOR OF THE MOBILE FUELER, A CHRONOLOGICAL RECORD CONSISTING OF THE FOLLOWING INFORMATION FOR THE MOBILE FUELER'S MAINTENANCE LOG. THE DATE OF SERVICE, NAME OF MAINTENANCE TECHNICIAN, A CONTACT PHONE NUMBER, A DESCRIPTION OF AND LOCATION OF ANY EQUIPMENT REPLACED INCLUDING APPROPRIATE TEST RESULTS, AND A DESCRIPTION OF THE SYSTEM PROBLEMS REPAIRED.

13. A CURRENT CARB CERTIFICATION DECAL SHALL BE DISPLAYED ON THE MOBILE FUELER IN A MANNER APPROVED BY THE EXECUTIVE OFFICER.

14. ALL DAILY INSPECTION RECORDS SHALL BE COMPLETED IMMEDIATELY AFTER THE DAILY INSPECTION.

15. EXCEPT FOR NECESSARY INSPECTIONS DUE TO EQUIPMENT FAILURES, AND FOR SCHEDULED MAINTENANCE AND REPAIRS; THE MOBILE FUELER DOME HATCH SHALL REMAIN CLOSED AND LATCHED AT ALL TIMES. FURTHERMORE, THE MOBILE FUELER DOME HATCH SHALL REMAIN CLOSED AND LATCHED UNTIL THE HEAD SPACE PRESSURE IS LESS THAN 2" WC.

16. THE MAXIMUM QUANTITY OF GASOLINE DISPENSED FROM THIS MOBILE FUELER SHALL NOT EXCEED 25,000 GALLONS IN ANY ONE CALENDAR MONTH NOR 300,000 GALLONS IN ANY ONE CALENDAR YEAR.

17. ALL PHYSICAL INSPECTION AND GAUGE OBSERVATION RECORDS AS REQUIRED BY PERMIT CONDITIONS 6 AND 7; ALL TEST RESULTS AS REQUIRED BY PERMIT CONDITIONS 9, 10, AND 11; ALL MAINTENANCE RECORDS AS REQUIRED BY PERMIT CONDITION 12; AND ALL MONTHLY AND ANNUAL GASOLINE DISPENSED RECORDS AS REQUIRED BY PERMIT CONDITION 16; SHALL BE PREPARED, SHALL BE RETAINED FOR TWO YEARS, AND SHALL BE KEPT WITHIN THE MOBILE FUELER AND MADE AVAILABLE TO DISTRICT REPRESENTATIVES UPON REQUEST.

18. IN CASE OF DEMONSTRATED NEED TO FUEL SERVICE EQUIPMENT IN THE FIELD, THIS MOBILE FUELER MAYBE USED TO FUEL MOTOR VEHICLES OFF SITE. IF THE PERIOD OF OFF SITE FUELING WILL EXCEED FOUR DAYS, THE AQMD SHALL BE NOTIFIED VIA TELEPHONE AT (877) 810-6995 WITH THE FOLLOWING INFORMATION:

A) THE PERMIT NUMBER OF THE MOBILE FUELER;
B) THE NAME AND PHONE NUMBER OF A CONTACT PERSON;
C) THE LOCATION WHERE THE MOBILE FUELER WILL BE OPERATED;
D) THE ESTIMATED TIME THE MOBILE FUELER WILL BE LOCATED AT THIS SITE; AND
E) THE DISTANCE TO THE NEAREST SENSITIVE RECEPTOR IF LOCATED WITHIN ¼-MILE OF A LONG-TERM HEALTH CARE FACILITY, REHABILITATION CENTER, CONVALESCENT CENTER, RETIREMENT HOME, RESIDENCE, SCHOOL, PLAYGROUND, CHILD CARE CENTER, AND ATHELTIC FACILITY.

PERMIT TO OPERATE

CONTINUATION OF PERMIT TO OPERATE

THE OPERATOR SHALL OPERATE THE MOBILE FUELER IN ACCORDANCE TO ALL OF THE PREVIOUSLY MENTIONED PERMIT CONDITIONS. IN ADDITION, THE OPERATOR SHALL RECORD THE AMOUNT OF GASOLINE FUEL DISPENSED WHILE THE MOBILE FUELER WAS LOCATED OFF SITE, AND INCLUDE THIS AMOUNT AS PART OF THEIR MONTHLY AND ANNUAL THROUGHPUT TOTALS.

NOTICE

IN ACCORDANCE WITH RULE 206, THIS PERMIT TO OPERATE OR COPY SHALL BE POSTED ON OR WITHIN 8 METERS OF THE EQUIPMENT.

THIS PERMIT DOES NOT AUTHORIZE THE EMISSION OF AIR CONTAMINANTS IN EXCESS OF THOSE ALLOWED BY DIVISION 26 OF THE HEALTH AND SAFETY CODE OF THE STATE OF CALIFORNIA OR THE RULES OF THE AIR QUALITY MANAGEMENT DISTRICT. THIS PERMIT CANNOT BE CONSIDERED AS PERMISSION TO VIOLATE EXISTING LAWS, ORDINANCES, REGULATIONS OR STATUTES OF OTHER GOVERNMENT AGENCIES.

This initial permit must be renewed by 11/01 ANNUALLY unless the equipment is moved, or changes ownership. If the billing for annual renewal fee (Rule 301.f) is not received by the expiration date, contact the District.

Legal Owner
or Operator: GENERAL ELECTRIC COMPANY

Equipment
located at: 1923 EAST AVION STREET, ONTARIO, CALIFORNIA

Equipment Description:

STORAGE SYSTEM 1,1,1 TRICHLOROETHANE, CONSISTING OF TWO 500 GALLON STORAGE TANKS, EACH 4'-0" DIA. X 6'-6" H. WITH A PRESSURE/VACUUM RELIEF VALVE.

Conditions:

1. OPERATION OF THIS EQUIPMENT MUST BE CONDUCTED IN COMPLIANCE WITH ALL DATA AND SPECIFICATIONS SUBMITTED WITH THE APPLICATION UNDER WHICH THIS PERMIT IS ISSUED UNLESS OTHERWISE NOTED BELOW.

2. THIS EQUIPMENT MUST BE PROPERLY MAINTAINED AND KEPT IN GOOD OPERATING CONDITION AT ALL TIMES.

3. THIS TANK MAY STORE ONLY 1,1,1 TRICHLOROETHANE.

THIS PERMIT CONCLUDES ON THE NEXT PAGE.

PHASE II ENVIORNMENTAL SITE ASSESSMENT REPORT

Proposed 97-Acre Project Magellan Airport Cargo Distribution Center
Ontario, California

EXECUTIVE SUMMARY

At the request of Mr. Winters, GSI Environmental Inc. (GSI) completed a Phase II Environmental Site Assessment (ESA) for the Magellan Airport Cargo Distribution Center property, which is comprised of a 97-Acre Portion of the Ontario International Airport, Ontario, California ("the Site", Figure 1). The objective of the Phase II ESA was to:

- address the recognized environmental conditions (RECs) identified in GSI's Phase I Environmental Site Assessment (Phase I ESA) dated December 10, 2021, by assessing soil and soil vapor conditions at the Site, and
- to establish a baseline understanding of the existing subsurface conditions and potential risk to human health in the future structures in connection with the proposed land lease and redevelopment of the Site.

The Phase II investigation activities were conducted between February 23 and March 23, 2022, which consisted of drilling one hundred and forty-three (143) soil borings on Parcels 61, 62, 63, and 68 and collecting soil and soil vapor samples to evaluate subsurface conditions. The soil borings were advanced to depths between approximately 3 to 15 feet below ground surface (feet bgs). Results of soil and soil vapor sampling at the Site are below:

Soil

- Semi-volatile organic compounds (SVOCs), polychlorinated biphenyls (PCBs) and chlorinated herbicides were not detected above laboratory reporting limits in soil samples collected.
- Metals, total petroleum hydrocarbons (TPH), volatile organic compounds (VOCs), polycyclic aromatic hydrocarbons (PAHs), and organochlorine pesticides (OCPs), were detected above laboratory reporting limits but below their respective commercial/industrial screening levels.
- One or more per- and polyfluoroalkyl substances (PFAS) analytes were detected in 18 of the 28 samples analyzed at a concentration above their respective laboratory reporting limits. The PFAS detections were identified in the vicinity of the Guardian Jet Center and southern hangar buildings, and the historical fire house building adjacent to the former national guard hangar. Four of the 18 samples had reported concentrations that exceeded their respective San Francisco Bay Regional Water Quality Control Board Environmental Screening Levels (SFBRWQCB ESL) for PFOS and PFOA.

Soil Vapor (Dual-nested Soil Vapor Probes)

- Trichloroethylene (TCE) and chloroform were the only two VOC constituents with concentrations exceeding their respective commercial/industrial United States Environmental Protection Agency Screening Levels (USEPA SLs) using a default attenuation factor (AF) of 0.03 (USEPA AF SL) and only TCE exceeded the commercial/industrial Department of Toxic Substances Control Screening Level (DTSC SL) with an attenuation factor for future commercial/industrial buildings (DTSC AF SL). The commercial/industrial USEPA AF SL and the commercial/industrial DTSC AF SL for

TCE was exceeded in 13 samples and four samples, respectively. The TCE exceedances were located within the footprint of the General Electric leasehold building, also identified as Hangar 4, or within the proposed western building footprint (as part of the Phase 2 construction/development plans).

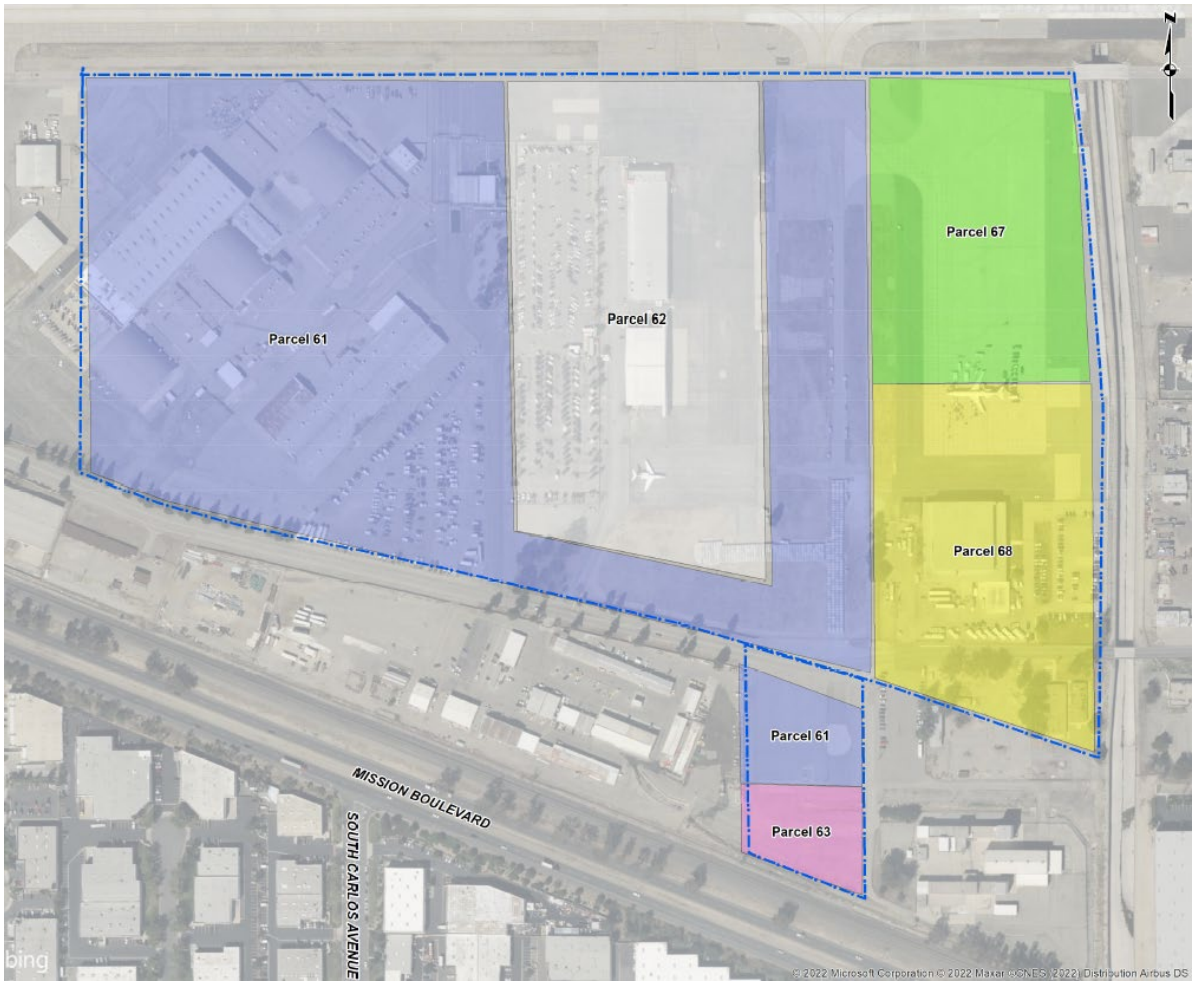
Based on the results obtained during this investigation, a soil management plan (SMP) is recommended to be prepared and implemented prior to and during planned Site redevelopment where soils will be disturbed. Due to the known presence of PFAS-impacted materials where AFFF is currently stored and may have been used, special attention should be made to demolition materials including concrete, fire suppression system tanks and associated piping, drains and drainage piping, and clarifiers within the northern and southern Guardian Jet Center hangars, and historical fire house associated with the former National Guard Facility. Additionally, addressing PFAS-impacted soils underlying these features and structures should be included in the SMP. Although PFAS is not currently regulated under the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) as a hazardous waste and PFAS analyte concentrations were below established USEPA RSLs, caution should be taken when handling materials and soils contaminated with PFAS due to their human health risks, which are still being developed/assessed by regulatory authorities. The USEPA on August 26, 2022, released a proposed rule designating two PFAS analytes – PFOA and PFOS as “hazardous substances” under CERCLA. The proposed rule is currently out for public comment and the USEPA may list additional PFAS as hazardous substances. This will result in substantial disposal costs if the PFAS-impacted materials are disturbed/excavated during proposed Site redevelopment. Additionally, if redevelopment plans allow implementation of engineering controls (capping PFAS-impacted materials/soil), such an approach would be a more feasible and cost-effective alternative compared to excavation and disposal. If planned redevelopment includes disturbing materials/soil in this area, additional soil sampling may be warranted in order to delineate the extent of PFAS impacts, enabling segregation and proper disposal during redevelopment and implementation of the SMP.

Additionally, based on the results obtained during this investigation, installation of a vapor intrusion mitigation system (VIM system) is recommended as part of the proposed western building footprint due to potential vapor intrusion from the subsurface into the future building. Alternatively, a soil vapor extraction remediation system could be utilized to reduce TCE and chloroform vapor concentrations through removal of VOCs in the area of the proposed western building footprint (as part of the Phase 2 construction/development plans).

1.0 INTRODUCTION

GSI Environmental Inc. (GSI) has prepared this Phase II Environmental Site Assessment (Phase II ESA) Report for the Magellan Airport Cargo Distribution Center property comprised of a 97-Acre Portion of the Ontario International Airport, Ontario, California ("the Site", Figure 1). The objective of the Phase II ESA was to address the recognized environmental conditions (RECs) identified in GSI's Phase I Environmental Site Assessment (Phase I ESA) dated December 10, 2021, through investigation of soil and soil vapor conditions at the Site. This Phase II ESA additionally establishes a baseline understanding of existing subsurface conditions and potential risk to human health in the future structures associated with the proposed land lease and redevelopment of the Site.

This report presents the results of the soil and soil vapor investigation conducted between 23 February and 21 April 2022.



2.0 BACKGROUND

The Site is located in Ontario, California and includes an approximately 97-acre portion of the Ontario International Airport. Operations at the Ontario International Airport began in 1921 when the Ontario Aircraft Corporation was organized. In 1929 the airport moved to a 30-acre parcel near the corner of Mission Boulevard and Grove Avenue in the southwestern corner of the current airport property. In 1940 an additional 405 acres were added to the airport property. Until the mid to late 1950's the Site was primarily agricultural with some vineyards. In the 1940's some vineyards were removed to construct portions of the airport. The Ontario Airport was utilized in support of World War II and after the war it was returned to the City of Ontario. The Site consists of 24 buildings and hangars, ancillary structures, and parking facilities and is located north of East Avion Street and west of the Cucamonga Creek with a small portion connecting to South Hellman Avenue. The Site is broken down into five parcels, Parcel 61, Parcel 62, Parcel 63, Parcel 67, and Parcel 68.

2.1 Current Past Site Use

The Site is comprised of portions of five parcels on the Ontario International Airport property.

- Parcel 61/APN 011326106 (approximately 48 acres)
- Parcel 62/APN 011326107 (approximately 21 acres)
- Parcel 63/APN 011326108 (approximately 2 acres)
- Parcel 67/APN 011327101 (approximately 12 acres)
- Parcel 68/APN 011327102 (approximately 14 acres)

2.1.1 Parcel 61

Parcel 61 encompasses the western portion of the site investigation area; the southern portion just north of East Avion Street; between Parcel 62 and Parcels 67/68; and the northern portion of the southern investigation area, just south of East Avion Street. Parcel 61 is the largest parcel within the investigation area and as such, has been broken up into three sections for the purposes of this report – western portion, designated as 61W herein, central portion, designated as 61C herein and southern portion, designated as 61S herein. Hangars 1 through 5 are located on Parcel 61W. Hangars 1 and 2 were constructed in the late 1940's, and in 1950 Northrop Aircraft Company reportedly began manufacturing operations in Hangar 1. Hangar 3 was constructed in 1951 and some time before 1953 Douglas Aircraft began operations in Hangar 2 or 3. In 1953 Hangar 4 was constructed and Lockheed Aircraft occupied Hangar 4 between 1955 and 1980. Hangar 5 is currently utilized for storage and administration. In approximately 1955, GE Engine Services, Inc. (GEES) moved operations to the Site and Northrop vacated Hangar 1. GEES moved to Hangar 4 once Lockheed vacated the building in 1980. The former Los Angeles Police Department (LAPD) Emergency Vehicle Operations Course (EVOC) was previously located in the center of the Site along the western border of Parcel 62.

2.1.2 Parcel 62

Parcel 62 encompasses the central portion of the site investigation area, encircled by Parcel 61. This portion of the Site was primarily agricultural through the 1970s. In 1983 the Guardian Jet Center East (main Hangar) and office building were developed, and by 1987 the second Hangar (southern building) was in use. By 1994 the outbuilding maintenance area was constructed and put into service. A fuel farm existed on the southwestern corner of the Parcel and two clarifiers, and a maintenance shop have been documented within this Parcel during the Phase I ESA. A former police station associated with the City of Los Angeles LAPD EVOC was previously located in the center of the Site along the western border of Parcel 62. Between 2002 and 2008 Parcel 62 did not change significantly (CTL, 2008).

2.1.3 Southern Parcel 61 and 63

Parcel 61S and 63 are located just south of East Avion Street and north of the railroad. The southern portion of the Site is comprised of small portions of Parcel 61 and Parcel 63. This location historically was used for agricultural purposes. It is now paved and utilized for parking. This area also includes a large storm drain outlet.

2.1.4 Parcels 67 and 68

Parcels 67 and 68 are the eastern-most parcels of the investigation area. Parcel 67 is adjacent to the airport runway and north of Parcel 68. Parcel 68 is just north of East Avion Street. The central area of Parcel 68 included a skeet range in the mid-1940's. The Ontario Air National Guard Station (ANGS) was located on Parcel 68 with ancillary structures to the south and east. From 1943 to 1948 the army maintained the area and in 1952 the 196th Tactical Air Support Group was assigned to Ontario International Airport. The facilities were updated at that time and the operations included maintenance of aircraft vehicles, and aerospace ground equipment. In the 1950's, a hangar, fire station, fueling station, and wash rack were constructed over the skeet range. A munitions bunker was constructed in the 1950s and later used by Lockheed in the 1990s for storage of ammunition and explosives. The 196th Tactical Air Support Group vacated the Site in 1983 and the 148th Combat Communications Squadron (CBCS) occupied the Site from 1984 through 1998. The ANGS was closed in September 1998.

2.2 Site Physical Description

The Site is a large airport facility consisting of 24 buildings and hangars, ancillary structures, and parking facilities located north of East Avion Street and west of the Cucamonga Creek.

2.3 Geologic, Hydrogeologic, Hydrologic, and Topographic Conditions

The Site lies within the Chino Basin, a managed groundwater basin that supplies groundwater for municipal, industrial, and agricultural uses. The Chino Basin is an adjudicated basin, with water rights controlled by the Chino Basin Watermaster, in accordance with the Chino Basin Master Plan. The Inland Empire Utility Agency and the Chino Basin Watermaster manage the Chino Basin water supply through a network of stormwater management channels and percolation basins developed to enhance groundwater recharge. The Ely Basins, located southwest of the Site, are a component of this recharge system (Wood, 2019).

Groundwater elevations across the Site have historically ranged between 600 and 645 feet above mean sea level (msl). From 1990 through around 2010, groundwater elevations were generally in a decline with a seasonal variation. Between 2010 and 2015, groundwater elevations increased about 15 feet. This increase is tribute to increased recharge and decreased municipal pumping in the vicinity of the Site. Since 2016, groundwater elevations appear to have stabilized.

Groundwater flow direction is predominantly to the southwest near the Site and west-southwest downgradient of the Site.

The Site is located in the Upper Santa Ana Valley, which is bounded by the San Gabriel Mountains and the Cucamonga fault to the north, the Colton-Rialto fault to the east, the Puente Hills and Chino fault to the west, and the Chino Hills, Chino fault, and Santa Ana River to the south southwest (CDWR, 2006). From the surface to approximately 45 feet below ground surface (bgs) are well graded sand with some fines and gravel. Sandy silt and silt are present beneath the Site at depths between 45 and 57 feet bgs followed by grained sand to approximately 80 feet bgs (Burns & McDonnell, 2014). Based on observations during Alta's investigation, soil beneath the Site generally consisted of silty sand from the surface to depths explored (10 feet bgs) (Alta, 2020).

Based on the most recent groundwater monitoring data available for the General Electric (GE) Company – Jet Engine Test Cell Facility, located adjacent to the Site, depth to groundwater ranges between 220 feet and 265 feet bgs with a groundwater flow direction to the west-southwest (Wood, 2022).

The Site is located approximately 910 feet above msl according to the United States Geological Survey (Ontario) 7.5 Minute Topographic Quadrangle map, with topography sloping to the southeast. Surface drainage at the Site currently flows to the south towards catch basins which discharge into three drainage area channels, the West Cucamonga Channel Drainage Area, the Cucamonga Channel Drainage Area, and the Deer Creek Drainage Area. The water is then discharged into the Cucamonga Creek, located on the eastern border of the Site.

Groundwater in the Chino-San Bernardino Basin at the former Ontario ANGS is bounded by the impermeable rock of mountains and hills to the north, west, and south, the Rialto-Colton barrier fault on the east, and the San Jose fault on the northwest. Groundwater occurs primarily within the confined, permeable alluvial sediments interbedded with discontinuous lenses of fine-grained material. The water table in the area of the station is approximately 250 feet bgs and groundwater flow is generally to the west-southwest. Recharge occurs primarily at the northern margin of the basin via infiltration of runoff from the San Gabriel Mountains. Discharge occurs from pumping of wells for agricultural and municipal use and as outflow to the Santa Ana River (Earth Technology Corporation, 1993).

Soils at the former Ontario ANGS are of the Tujunga soil series, which are characterized as nearly level to moderately sloping (0 to 5 percent) soil that formed on alluvial fans in granitic alluvium. The surface layer, which can be up to 10 inches in thickness, is a slightly acidic, brown, loamy sand. The substratum, which can be up to 54 inches in thickness, is a pale brown, coarse sand that is slightly acidic. In some areas, the substratum is composed of gravel that may range from 0 to 30 percent by volume (Science & Technology, Inc. 1990).

2.4 Previous Investigations

Included in the Phase I ESA is a summary of historical investigations that have been completed across the Site. A review of the existing investigation reports has identified historical uses at each parcel that include the following:

- Historical use of Parcel 61 has included the use of chlorinated solvents, the storage and dispensing of fuel, fire suppression chemical storage, and hazardous waste storage and waste treatment (including clarifiers, wash racks, and sumps).
- Historical use of Parcel 62 has included a fuel farm, two clarifiers, and a maintenance shop. Chemicals utilized at Parcel 62 have included chlorinated solvents and fire

suppression chemical storage. Poor housekeeping was identified in the vicinity of unmarked drums and stained concrete around the fire suppressant storage area within the Guardian Jet Center.

- Historical use on Parcels 67 and 68 has included the use of clarifiers, aboveground storage tanks (ASTs), and underground storage tanks (USTs). Multiple USTs have been documented at the Site and documentation of removal was not identified during the Phase I ESA investigation. Although USTs located on Parcels 62, 67 and 68 have been removed, closure documentation was not identified, and some impacted soil from at least one leaking UST reportedly remains in place at the Site.

Please refer to the Phase I ESA for a discussion of the following investigations:

- 1990 Phase I - Phase II ESAs. CDM, Portions of Parcels 61, 62, 67, and 68
- 1995 Underground Storage Tank Closure Report, El Capitan Environmental Services, portions of Parcel 68
- 1996 Draft Environmental Baseline Survey Ontario Air National Guard, Department of the Air Force, 1996, Off-Site Areas to the East and South of Parcel 68
- 1997 Hazardous Materials Survey Report, Encorp, 1997, Portions of Parcel 68
- 1998 ESA, Department of the Air Force, 1998, Off-Site Areas to the East and South of Parcel 68
- 2001 Airport Group International, AGI, Phase I ESA Transmittal (Various)
- 2001 Phase I ESA Former Air National Guard and Surrounding, CTL, 2001, Portion of Parcels 61, 62, 63, 67, and 68
- 2003 Phase I ESA Hangar 4 at GE Engine Services, Mactec, 2003, Portion of Parcel 61
- 2003 Phase I ESA Former Los Angeles Police Department Emergency Vehicle Operations Course (LAPD EVOC) Facility, CTL, 2003, Portions of Parcels 61 and 62
- 2004 Phase I ESA East Avion Complex, EarthTech, 2004, Small Portion on the Northwestern Corner of Parcel 61
- 2005 Phase II ESA East Avion Complex, EarthTech, 2005, Small Portion on the Northwestern Corner of Parcel 61
- 2005 Phase I ESA, ASIG, 2006; Dirt Lease Area (off-Site)
- 2006 Phase I ESA 1923 East Avion Street, MACTEC, 2006, Portion of Parcel 62
- 2008 Phase I ESA of the Ontario International Airport Mercury Air Center Facility, CTL, 2008, Portions of Parcel 62

3.0 CONSTITUENTS OF CONCERN

As identified in the Phase I ESA Report and based on historical uses of the Site, the constituents of concern include: metals, petroleum hydrocarbons, volatile organic compounds (VOCs), semi-volatile compounds (SVOCs), polycyclic aromatic hydrocarbons (PAHs), polychlorinated biphenyls (PCBs), organochlorine pesticides (OCPs), herbicides, per- and polyfluoroalkyl substances (PFAS), asbestos containing materials, and lead-based paint.

PFAS is considered a constituent of concern due to the presence of above ground tanks labeled with aqueous film forming foam (AFFF) for fire suppression within some of the hangars. AFFF are synthetic PFAS-containing foams designed for flammable liquid fires. Floor drains connected to sewer lines and clarifiers were also in the proximity of the AFFF equipment. Floor drains and

clarifiers are known to leak overtime, and therefore, AFFF may have entered these areas and leaked into the subsurface.

In May 2022, the USEPA issued residential and commercial/industrial human health RSLs for screening soil for the following PFAS analytes:

- Perfluorooctanoic acid (PFOA);
- Perfluorooctane sulfonic acid (PFOS);
- Perfluorohexane sulfonic acid (PFHxS);
- Perfluorononanoic acid (PFNA); and
- Perfluorobutane sulfonic acid (PFBS).

The SFBRWQCB has developed ESLs for PFOA and PFOS in soil for residential direct contact, commercial/industrial workers, and construction worker scenarios

4.0 FIELD INVESTIGATION

Between February 23 and March 23, 2022, one hundred and forty-three (143) soil borings were advanced on Parcels 61, 62, 63, and 68 (also referred to as areas of concern [AOC]) for the collection of soil and/or soil vapor samples. Parcel 61 is further divided as western (61W), central (61C), and southern (61S) areas. The proposed building footprint covers areas included in Parcels 61, 62 and 63 (Figure 2).

Borings Completed in Parcel 61 (AOCs 61W, 61C, and 61S):

- 89 borings were advanced for the collection of soil samples.
- 15 of the 89 borings were completed with dual-nested soil vapor probes that were sampled in April 2022.

Borings Completed in Parcel 62 (AOC 62):

- 32 borings were advanced for the collection of soil samples.
- 6 of the 32 borings were completed with dual-nested soil vapor probes that were sampled in April 2022.

Borings Completed in Parcel 63 (AOC 63):

- 2 borings were advanced for the collection of soil samples and were completed with dual-nested soil vapor probes that were sampled in April 2022.

Borings Completed in Parcel 68 (AOC 68):

20 borings were advanced for the collection of soil samples.

4.1 Pre-Field Activities

Prior to implementing field investigation activities, GSI completed the following pre-field activities.

- Prepared a Site-Specific Health and Safety Plan (HASP) in accordance with the requirements of the State of California General Industry Safety Order 5192 and Title 29 of the Code of Federal Regulations, Section 1910.120.
- Coordinated with representatives from Ontario International Airport, TBI Airport Management, Inc. (TBI; airside escort) and Allied Protection Services, Inc. (Allied; airside escort) regarding schedule and Site access to airside and landside locations.

- Coordinated with subcontractors including Subsurface Surveys (SSS; private utility locating subcontractor); InterPhase Environmental (InterPhase; drilling subcontractor); Advanced Technology Laboratories and Vista Analytical Laboratory (ATL and Vista, respectively; soil analytical laboratories); and H&P Mobile Geochemistry (H&P; soil vapor analytical laboratory).
- Marked proposed investigation boring locations and notified Underground Services Alert (USA) a minimum of two full working days prior to initiating field activities. USA tickets were obtained, and utility provider responses were reviewed prior to conducting subsurface activities.
- Geophysical survey was conducted by SSS of Carlsbad, California to clear the proposed boring locations of buried utilities and/or other subsurface structures or obstructions on 8 to 10 February 2022 and 14 to 16 February 2022. A summary of the geophysical survey is included in Appendix A.

4.2 Soil Sampling and Analysis

Between February 23 and March 23, 2022, InterPhase Environmental (InterPhase) of Commerce, California, advanced one hundred and forty-three (143) borings to depths between approximately 3 and 15 feet.[1] Borings were advanced to depths of approximately 5 feet using a hand auger, followed by using truck- and/or track-mounted direct-push drilling equipment and 2.25-inch outer diameter, dual-cased drive samplers lined with acetate sample liners to the total depth of the borings. This drilling method was selected to facilitate depth-discrete collection of relatively undisturbed samples, while minimizing the potential for downhole slough or cross-contamination between sampling depths by maintaining a cased boring between sample core drives.

Recovered soil from all borings was screened in the field for the presence of VOCs using a photo-ionization detector (PID) calibrated with a 100 parts per million (ppm) isobutylene standard and results are reported on the boring logs (Appendix B). GSI maintained and calibrated the PID according to manufacturer specifications.

Reusable sampling equipment was decontaminated between sample locations by washing with a plastic scrub brush using laboratory-grade detergent and potable water, followed by rinsing twice with potable water.[2]

Soil samples were collected in 4-ounce glass jars, 6-ounce high density polyethylene (HDPE) jars, and/or 40 milliliter (mL) Terra Core volatile organic analysis (VOA) vials containing 5 mL of sodium bisulfate or methanol and a stir bar. Samples were transported following chain-of-custody protocols to ATL of Signal Hill, California, and/or Vista of El Dorado Hills, California, state environmental laboratory accreditation program (ELAP) certified laboratories, and analyzed for one or more of the following:

- Title 22 metals including mercury using United States Environmental Protection Agency (USEPA) Methods 6010B/7471A;
- VOCs using USEPA Method 8260B;
- Total petroleum hydrocarbons (TPH) quantified as C4-C12, C13-C23, and C23-C32 using USEPA Method 8015B;

[1] Reference points for soil boring and soil sample depths are in reference to the top of the native soil contact.
[2] An additional bucket containing ultra-pure PFAS-free water was used at locations where soil samples were collected for PFAS analysis.

- SVOCs using USEPA Method 8270C;
- PAHs using USEPA Method 8270SIM;
- PCBs using USEPA Method 8082;
- OCPs using USEPA Method 8081A;
- Chlorinated Herbicides using USEPA Method 8051A; and
- PFAS using Vista's PFAS Isotope Dilution Method for the 23 PFAS analytes. This method is compliant with Department of Defense (DoD) Table B-15 of Quality Systems Manual (QSM), dated 2017, version 5.1 or later.

Analytical results from soil samples are summarized in Section 5.2.

4.3 Soil Vapor Probe Installation and Analysis

Temporary dual-nested soil vapor probes were installed at 23 boring locations at depths of approximately 5 and 15 feet. Soil vapor probes were installed in accordance with the July 2015 California Environmental Protection Agency (Cal/EPA) Advisory – Active Soil Gas Investigations (Advisory).

The soil vapor probes were constructed using 1/4-inch outside diameter Nylaflow tubing connected to a 4-inch long porous soil vapor sampling probe tip. The tip was centered in an approximately 1-foot thick layer of #3 filter pack sand. A six-inch layer of dry #8 granular bentonite was placed above each sand pack layer, followed by placing additional granular bentonite (hydrated with potable water in 6-inch lifts) to either the bottom of the next sand pack interval or near ground surface to create a seal. The surface at each location was completed with a flush mount, traffic-rated well box set in concrete.

Between April 18 and 21, 2022, soil vapor sampling activities were performed in accordance with the Advisory by H&P. Soil vapor sampling activities consisted of performing a shut-in test on the sampling train for each soil vapor probe before purging and collecting the soil vapor samples. The shut-in test was successful at all probe locations (i.e., to achieve a minimum vacuum of 100 inches of water maintained in the sampling train for a minimum duration of 1 minute). During soil vapor purging and sampling, 1,1 difluoroethane (1,1-DFA) was applied at the borehole and above ground fittings as a leak test compound to evaluate the integrity of the soil vapor sampling train.

The soil vapor probes were purged at a rate of approximately 200 milliliters per min (mL/min) until 3 purge volumes were removed followed by collecting soil vapor samples using 100-milliter glass syringes. Soil vapor samples were analyzed on-Site in a mobile laboratory for VOCs using USEPA Method 8260SV modified for soil vapor. Analytical results from soil vapor samples are summarized in Section 5.3.

4.4 Ivestigation- Derived Wastes

Investigation-derived wastes (IDW; soil and equipment wash water) were placed and stored in 55-gallon drums and temporarily stored on-Site pending waste profiling and off-Site disposal in accordance with applicable State and Federal regulations. A total of 11 drums were used during field activities, of which 9 contain soil cuttings and 2 containing decontamination water.

5.0 INVESTIGATION RESULTS

This section presents the analytical results from soil and soil vapor samples collected during this investigation and comparison of Site data to screening levels, including Cal/EPA, Department of

Toxic Substances Control (DTSC) modified screening levels (SLs), United States EPA (USEPA) regional screening levels (RSLs), San Francisco Bay Regional Water Quality Control Board Environmental Screening Levels (ESLs) and background levels.

5.1 Soil Lithology

As the borings were advanced, the hand auger cuttings and/or soil core were observed for general characteristics and a lithologic boring log was prepared by a field geologist under the direct supervision of a California licensed Professional Geologist using the Unified Soil Classification System (USCS) for guidance, as described in the American Society for Testing Materials (ASTM) International Standard D 2488.

The soil encountered in the 143 borings consisted predominantly of silty sand and poorly graded sand with and without gravel, with lesser amounts of silty sand with gravel, sandy lean clay, and poorly graded gravel with sand to depths of approximately 15 feet bgs. The general soil lithology for each parcel is listed below:

Parcel 61W

Silty sand was encountered from ground surface to approximately 9-10 feet bgs followed by poorly graded sand containing different percentages of gravel to approximately 15 feet bgs.

Parcel 61C

Poorly graded sand was encountered from ground surface to approximately 5 feet bgs, followed by silty sand and poorly graded sand to approximately 15 feet bgs.

Parcel 61S

Silty sand was encountered from ground surface to approximately 9 feet bgs followed by poorly graded sand to 15 feet bgs.

Parcel 62

Within the northern area of Parcel 62, predominantly poorly graded sand was encountered from ground surface to approximately 5.5 feet bgs, followed by silty sand to approximately 10 feet bgs. Within the southern area of Parcel 62, predominantly silty sand was encountered from ground surface to approximately 5 feet bgs followed by poorly graded sand to approximately 10 feet bgs.

Parcel 63

Silty sand was encountered from ground surface to approximately 10 feet bgs followed by poorly graded sand to approximately 15 feet bgs.

Parcel 68

Within the eastern and southern areas of Parcel 68, predominantly silty sand was encountered from ground surface to approximately 8 feet bgs followed by poorly graded sand to approximately 15 feet bgs. Within the western and central areas of Parcel 68, predominantly silty sand was encountered from ground surface to approximately 3 feet bgs followed by poorly graded sand in deeper soils to various depths.

Lithologic boring logs are included in Appendix B.

5.2 Soil Analytical Results

Analytical results for soil samples are discussed below and summarized in Tables 1 through 8. Laboratory analytical reports for soil samples are included in Appendix C.

Soil analytical results are evaluated by comparison to Regional Screening Levels (RSLs) for commercial/industrial soil published by USEPA and endorsed or modified by Department of Toxic Substances Control (DTSC; USEPA, 2022, DTSC, 2022a). These screening levels (SLs) are referred to as DTSC SLs herein. The DTSC SLs consider the incidental ingestion, inhalation of particulates and volatile compounds, and dermal adsorption pathways, and correspond to concentrations in soil that are not expected to pose a significant human health risk.

Arsenic occurs naturally in California soils at concentrations exceeding the risk based DTSC modified SLs and USEPA RSLs. Therefore, analytical results for arsenic in soil samples are compared to an estimated regional background level for Southern California of 12 milligrams per kilogram (mg/kg), as recommended by DTSC in Human Health Risk Assessment (HHRA) Note 11 (DTSC, 2020b).

Analytical results for TPH are compared to commercial/industrial ESLs established by the San Francisco Bay Regional Water Quality Control Board (SFBRWQCB; 2019). These screening levels are referred to as SFBRWQCB ESLs herein. The SFBRWQCB ESLs were developed for direct exposure to human health for construction workers. The samples analyzed for the 23 PFAS constituents are also compared to SFBRWQCB ESLs for commercial/industrial workers. The SFBRWQCB has published ESLs for only two PFAS analytes, while the US EPA has published RSLs for five PFAS analytes.

5.2.1 Parcel 61 and 63

Analytical results for soil samples collected within Parcel 61 (including AOCs, 61W, 61C, and 61S) and Parcel 63 are summarized below.

Metals (Table 1)

Ninety-one (91) soil samples were collected at depths of approximately 1 and 5 feet. The 5-foot samples were placed on laboratory hold pending results of the 1-foot samples. Various metals were detected at concentrations exceeding their respective laboratory reporting limits, but below the DTSC SLs and/or background concentrations; therefore the 5-foot samples were not analyzed.

TPH (Table 2)

One hundred and four (104) soil samples were collected at depths of approximately 5.5 feet at locations without soil vapor probes and approximately 5.5 and 15 feet bgs at locations with soil vapor probes. Only TPH quantified as C_{23} to C_{32} was detected at concentrations exceeding their respective laboratory reporting limit, but below the SFBRWQCB ESL.

VOCs (Table 3)

One hundred and three (103) soil samples were collected at depths of approximately 5.5 feet at locations without soil vapor probes and approximately 5.5 and 15 feet bgs at locations with soil vapor probes. Only trichloroethene (TCE), 1,1,1-trichloroethance (1,1,1-TCA), chloroethane, and methylene chloride were detected at concentrations exceeding their respective laboratory reporting limits, but below the DTSC SLs.

SVOCs (Table 4)

Ten (10) soil samples were collected at depths of approximately 5.5 feet. No SVOCs were detected at concentrations exceeding their respective laboratory reporting limits.

PAHs (Table 5)

Eighteen (18) soil samples were collected at depths of approximately 5.5 feet. Only benzo(g,h,i)perylene and chrysene were detected in one sample (61W-40-1-5.5) at concentrations exceeding their respective laboratory reporting limits but were below the DTSC SLs.

PCBs (Table 6)

Six (6) soil samples were collected at depths of approximately 1 foot. No PCBs were detected at concentrations exceeding their respective laboratory reporting limits.

OCPs and Chlorinated Herbicides (Table 7)

Six (6) samples were collected at depths of approximately 1 foot. Only 4,4'- dichlorodiphenyldichloroethylene (4,4'-DDE) and 4,4'-dichlorodiphenyltrichloroethane (4,4'-DDT) were detected in two samples (61W-1-10-1 and 61W-1-11-1) at concentrations exceeding their respective laboratory reporting limits, but below the DTSC SLs. No chlorinated herbicides were detected above their respective laboratory reporting limits.

PFAS (Table 8)

Ten (10) soil samples were collected at depths of approximately 3 and 6 feet bgs. No PFAS analytes were detected at concentrations exceeding their respective laboratory reporting limit.

5.2.2 Parcel 62

Analytical results for soil samples collected within Parcel 62 are summarized below.

Metals (Table 1)

Thirty-two (32) soil samples were collected at depths of approximately 1 and 5 feet bgs. The 5-foot samples were placed on laboratory hold pending results of the 1-foot samples. Various metals were detected at concentrations exceeding their respective laboratory reporting limits, but below the DTSC SLs and/or background concentrations; therefore the 5-foot samples were not analyzed.

TPH (Table 2)

Thirty-eight (38) soil samples were collected at depths of approximately 5.5 and 6 feet at locations without soil vapor probes and approximately 6 and 15 feet bgs at locations with soil vapor probes. Only TPH quantified as C_{23} to C_{32} was detected at concentrations exceeding their respective laboratory reporting limit, but below the SFBRWQCB ESL.

VOCs (Table 3)

Thirty-eight (38) soil samples were collected at depths of approximately 5.5 and 6 feet at locations without soil vapor probes and approximately 6 and 15 feet bgs at locations with soil vapor probes. No VOCs were detected at concentrations exceeding their respective laboratory reporting limits.

SVOCs (Table 4)

Eight (8) soil samples were collected at depths of approximately 5.5 and 6 feet. No SVOCs were detected at concentrations exceeding their respective laboratory reporting limits.

PAHs (Table 5)

Seven (7) soil samples were collected at depths of approximately 5.5 feet. No PAHs were detected at concentrations exceeding their respective laboratory reporting limits.

PFAS (Table 8)

Fourteen (14) soil samples were collected at depths of approximately 3, 3.5 and 6 feet. There were twelve PFAS analytes that were detected in one or more samples at concentrations exceeding their respective laboratory reporting limits. PFOS was detected in one sample (62-5-1-SO-3) which exceeds the SFRWQCB ESL but is below the USEPA RSL.

5.2.3 Parcel 68

Analytical results for soil samples collected within Parcel 68 are summarized below.

Metals (Table 1)

Nineteen (19) soil samples were collected at depths of approximately 1 and 5 feet. The 5-foot samples were placed on laboratory hold pending results of the 1-foot samples. Various metals were detected at concentrations exceeding their respective laboratory reporting limits, but below the DTSC SLs and/or background concentrations; therefore the 5-foot samples were not analyzed.

TPH (Table 2)

Twenty (20) soil samples were collected at depths of approximately 1, 5.5, and 6 feet. Only TPH quantified as C_{23} to C_{32} was detected at concentrations exceeding their respective laboratory reporting limit, but below the SFBRWQCB ESL.

VOCs (Table 3)

Nineteen (19) soil samples were collected at depths of approximately 5.5 and 6 feet. Only chloroethane was detected at a concentration exceeding its respective laboratory reporting limit, but below the DTSC SL.

PAHs (Table 5)

Nine (9) soil samples were collected at depths of approximately 5.5 feet. No PAHs were detected at concentrations exceeding their respective laboratory reporting limits.

PCBs (Table 6)

Four (4) soil samples were collected at depths of approximately 1-foot. No PCBs were detected at concentrations exceeding their respective laboratory reporting limits.

PFAS (Table 8)

Four (4) soil samples were collected at depths of approximately 3 and 6 feet. There were thirteen PFAS analytes that were detected in one or more samples at concentrations exceeding their respective laboratory reporting limits. PFOS was detected in one sample (68-12-1-3) which exceeds the SFRWQCB ESL but is below the USEPA RSL. PFOA was detected in two samples (68-12-2-3, 68-12-2-6) which exceed the SFRWQCB ESL but are below the USEPA RSL.

5.3 Soil Vapor Analytical Results

Between 18 and 21 April 2022, 46 primary and four replicate soil vapor samples were collected from the 23 soil vapor probe locations. Soil vapor sample analytical results for VOCs are presented in Table 9. The leak check compound (1,1-DFA) for this sampling event was not reported above the laboratory reporting limit of each respective sample. The laboratory analytical report for soil vapor samples is included in Appendix D.

The soil vapor analytical results were evaluated by comparing the reported concentrations to risk-based screening levels (SLs) for commercial/industrial buildings. Screening levels for soil vapor were developed by applying an attenuation factor (AF) to published screening levels for indoor air:

$$\text{Soil Vapor Screening Level } (SL_{sv}) = \frac{SL_{ia}}{\alpha}$$

Where:

SLsv	=	Soil vapor screening level (µg/m^3)
SLia	=	Indoor air screening level (µg/m^3)
α	=	Attenuation factor (unitless)

For this evaluation, SLs for commercial/industrial indoor air published by USEPA (2022) and endorsed or modified by DTSC (2022) were selected as the indoor air screening levels. The soil vapor SLs were calculated using the default soil vapor AF published by DTSC for future residential buildings of 0.001 and future commercial/industrial buildings of 0.0005. These soil vapor screening levels are referred to as "residential DTSC AF SLs" or "commercial/industrial DTSC AF SLs" herein. DTSC frequently considers soil vapor data with respect to the DTSC AF to evaluate if vapor intrusion mitigation measures are required at existing buildings. In addition, soil vapor SLs were calculated using the default soil vapor AF published by USEPA for existing and future buildings of 0.03. These soil vapor screening levels are referred to as "USEPA AF SLs" herein. DTSC considers the USEPA AF SL for initial screening evaluations at existing and future buildings to determine if additional sampling or evaluation is warranted. Soil vapor SLs calculated using attenuation factors are included in Table 9. The reported concentrations of detected VOCs in soil vapor samples are shown in data boxes on Figure 11, and the total VOC concentrations in soil vapor at depths of 5- and 15-feet are presented on Figures 12 and 13, respectively.

5.3.1 Parcels 61 and 63

Analytical results for soil vapor samples collected within Parcel 61 (including AOCs 61W, 61C, and 61S) and Parcel 63 are summarized below.

Soil Vapor: VOCs (Table 9)

Thirty-seven (37) soil vapor samples were collected from approximately 5 and 15 feet bgs. Tetrachloroethene (PCE), TCE, 1,1-Dichloroethene (1,1-DCE), carbon tetrachloride, chloroform, and toluene were detected in one or more samples at concentrations exceeding their respective laboratory reporting limits. With the exception of TCE and chloroform, all detected analyte concentrations were below either their respective residential or commercial/industrial USEPA AF SL or the residential and commercial/industrial DTSC AF SL.

5.3.2 Parcel 62

Analytical results for soil vapor samples collected within Parcel 62 are summarized below.

Soil Vapor: VOCs (Table 9)

Thirteen (13) soil vapor samples were collected from approximately 5 and 15 feet bgs. Trichloroethene (TCE), and 1,1-Dichloroethene (1,1-DCE) were detected in one sample (SV-2-15) at concentrations exceeding their respective laboratory reporting limits. However, both of the detected VOC concentrations were below their respective residential DTSC AF SL. The detected TCE concentration exceeded its residential USEPA AF SL. However, both of the

detected analyte concentrations were below their commercial/industrial DTSC AF SL and their commercial/industrial USEPA AF SL.

5.4 Data Quality Summary

Field quality assurance/quality control (QA/QC) samples during soil sampling activities consisted of the collection of daily equipment blanks and trip blanks. Equipment blanks were collected by pouring laboratory-provided deionized water over the drill bit at the end of each day after decontamination. On days where soil samples were collected for PFAS analysis, equipment blanks were collected by pouring laboratory-provided PFAS-free deionized water. Trip blanks were provided and prefilled by the laboratory with deionized water in 40 mL Terra Core VOA vials containing 5 mL preserved with hydrochloric acid. Both equipment blanks and trip blanks were placed on hold pending analytical results.

One temperature blank was included in each cooler sent to the laboratory along with the collected soil samples to document the temperature of samples in the cooler upon arrival at the laboratory.

Field QA/QC samples during soil vapor sampling activities consisted of the collection and analysis of four replicate samples at 61W-1-7-15, 62-9-1-5, SV-1-15, and SV-19-5, and a material blank. The replicate sample results were within the laboratory acceptance criteria. The material blank (EB-2022-0418) was collected by sampling ambient air through the materials used to construct sample probes (i.e., probe tip and tubing). The material blank result was non-detect for all VOCs analyzed. The field and laboratory quality control results indicate that the sampling and analyses performed in generating the data for soil and soil vapor were consistent with the analytical methods and provided data suitable for project objectives. Overall, the data generated during sampling are acceptable, are suitable for use in assessing subsurface soil conditions at the Site and can be used for decision-making purposes.

6.0 SUMMARY AND CONCLUSIONS

GSI has conducted this Phase II ESA to investigate soil and soil vapor conditions at the Site based on the RECs identified in the Phase I ESA. This investigation was also performed to establish a baseline understanding of the existing subsurface conditions and potential risk to human health in the proposed structures in the planned land lease and redevelopment of the Site.

Soil

- SVOCs, PCBs and chlorinated herbicides were not detected above laboratory reporting limits.
- Metals, TPH, VOCs, PAHs, and OCPs were detected above laboratory reporting limits but below their respective commercial/industrial DTSC SLs and SFBRWQCB ESLs. Detected VOC concentrations in soil are presented in databoxes on Figures 3-7.
- One or more per- and polyfluoroalkyl substances (PFAS) analytes were detected in eighteen of the 28 samples analyzed at a concentration above their respective laboratory reporting limits. The PFAS detections were identified in the vicinity of the Guardian Jet Center and southern hangar buildings, and the historical fire house building adjacent to the former national guard hangar (Figures 8, 9, and 10). Four of the 18 samples had reported concentrations that exceeded their respective screening levels (SFBRWQCB ESL) for PFOS and PFOA.

Soil Vapor

- TCE and chloroform were the only two VOC constituents with concentrations exceeding commercial/industrial USEPA AF SLs and only TCE exceeded the commercial/industrial DTSC AF SL. TCE soil vapors exceeded the commercial/industrial USEPA AF SL in 13 samples and exceeded the commercial/industrial DTSC AF SL in four samples. All TCE exceedances were either within the General Electric leasehold building, also identified as Hangar 4, or within the proposed western building footprint (Figures 11, 12, and 13).

Based on the results obtained during this investigation, a soil management plan (SMP) is recommended to be prepared and implemented prior to and during planned Site redevelopment where soils will be disturbed. Due to the known presence of PFAS-impacted materials where AFFF is currently stored and may have been used, special attention should be made to demolition materials including concrete, fire suppression system tanks and associated piping, drains and drainage piping, and clarifiers within the northern and southern Guardian Jet Center hangars, and historical fire house associated with the former National Guard Facility. Additionally, addressing PFAS-impacted soils underlying these features and structures should be included in the SMP. Although PFAS is not currently regulated under the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) as a hazardous waste and PFAS analyte concentrations were below established USEPA RSLs, caution should be taken when handling materials and soils contaminated with PFAS due to their human health risks, which are still being developed/assessed by regulatory authorities. The USEPA on August 26, 2022, released a proposed rule designating two PFAS analytes – PFOA and PFOS as “hazardous substances” under CERCLA. The proposed rule is currently out for public comment and the USEPA may list additional PFAS as hazardous substances. This will result in substantial disposal costs if the PFAS-impacted materials are disturbed/excavated during proposed Site redevelopment. Additionally, if redevelopment plans allow implementation of engineering controls (capping PFAS-impacted materials/soil), such an approach would be a more feasible and cost-effective alternative, compared to excavation and disposal. If planned redevelopment includes disturbing materials/soil in this area, additional soil sampling may be warranted to delineate the extent of PFAS impacts, enabling segregation and proper disposal during redevelopment and implementation of the SMP.

Additionally, based on the results obtained during this investigation, installation of a vapor intrusion mitigation system (VIM system) is recommended as part of the proposed western building footprint, due to potential vapor intrusion from the subsurface into the future building. Alternatively, a soil vapor extraction remediation system could be utilized to reduce TCE and chloroform vapor concentrations through removal of VOCs in the area of the proposed western building footprint (as part of the Phase 2 construction/development plans).

Notes:
Soil samples were collected by GSI Environmental Inc. and analyzed by Advanced Technology Laboratories for Title 22 metals including mercury using USEPA Methods 6010B/7471A.
Sample depth = feet below where native soil is first encountered
mg/kg = milligrams per kilogram
-- = not analyzed
< = constituent was not detected at a concentration equal to or greater than laboratory practical quantitation limit
ND = not detected

					Maximum Concentration	**mg/kg**	**ND**	**ND**	**110**
Environmental Screening Levels									
Commerical/Industsrial Land Use									
					SFBRWQCB ESLs[1]	mg/kg	2,000	1,200	180,000

Notes:
Soil samples were collected by GSI Environmental Inc. and analyzed by Advanced Technology Laboratories for TPH using USEPA Method 8015B.
Sample depth = feet below where native soil is first encountered
mg/kg = milligrams per kilogram
-- = not analyzed or not available
< = constituent was not detected at a concentration equal to or greater than laboratory practical quantitation limit
ND = not detected
* Sample was analyzed for TPH in the gasoline carbon range of C6-C12

Notes:
The soil samples were analyzed for PFAS by Vista Analytical Laboratory, a California Environment Laboratory Accreditation Program (ELAP), using Vista's PFAS Isotope Dilution Method for the 23 PFAS analytes. This method is compliant with Department of Defense (DoD) Table B-15 of Quality Systems Manual (QSM), dated 2017, version 5.1 or later.
PFAS = Per- and Polyfluoroalkyl Substances
Total PFAS were calcuated using detected values shown on this table.
Sample depth = feet below where native soil is first encountered
ng/g = nanograms per gram
< = constituent was not detected at a concentration equal to or greater than the laboratory reporting limit
J = The result is an estimated concentration. The associated numerical value is the approximate concentration of the analyte in the sample.
Q = The ion transition ratio is outside the accepted criteria.
NL = Screening level is not listed or established by the respective regulatory agency.

Commerical / Industrial Soil Vapor Screening Levels [1]													
					DTSC Future Commercial/Industrial Building (AF=0.0005)	µg/m^3	4,000	6,000	620,000	4,000	1,060	2,600,000	Various
					USEPA All Building (AF=0.03)	µg/m^3	67	100	10,000	67	18	43,000	Various

Notes:

Soil vapor samples were collected and analyzed by H&P Mobile Geochemistry Inc. for VOCs using USEPA Method 8260 modified for soil vapor.
Sample depth = feet below where native soil is first encountered
µg/m^3 = micrograms per cubic meter
< = constituent was not detected at a concentration equal to or greater than laboratory reporting limit
N = replicate sample
ND = not detected

[1] Soil vapor results are compared to soil vapor screening levels generated by applying default attenuation factors (AF) for all buildings (0.03), as published by the USEPA (2015), or for future residential buildings (0.001), or for future commercial buildings (0.0005), as published by the DTSC (2011) to regional screening levels for indoor air under commercial/industrial land use published by the USEPA (2022) and modified by the DTSC (2022).

February 24th, 2022

Subject: Geophysical Survey
Ontario International Airport
2500 E Airport Dr
Ontario, California

Project Number: 22-050

This report is to present the results of our geophysical survey carried over multiple areas of Ontario International Airport located at 2500 East Airport Drive in Ontario, California (Figure 1), from February 8th through 16th, 2022 (excluding February 11th to 13th). Purpose of the survey was to locate and identify, insofar as possible, the existence of any backfilled excavations that may exist within nine (9) predetermined areas located in different sections of the subject property. A secondary purpose of the survey was to locate and delineate underground utilities around the vicinity of multiple drain systems (i.e. sumps, clarifiers, drain inlets/outlets, etc.) for guidance in future borehole placement. And lastly, once these underground utilities were marked and identified, one hundred and forty-three (143) specific boreholes were positioned by the client around the aforementioned items in addition to other specific areas on the subject property.

A combination of electromagnetic induction (EM), magnetometry, and ground penetrating radar (GPR) were applied to the search. A utility locator with line tracing capabilities was also brought to the field and used where risers exist onto which a signal could be impressed and traced.

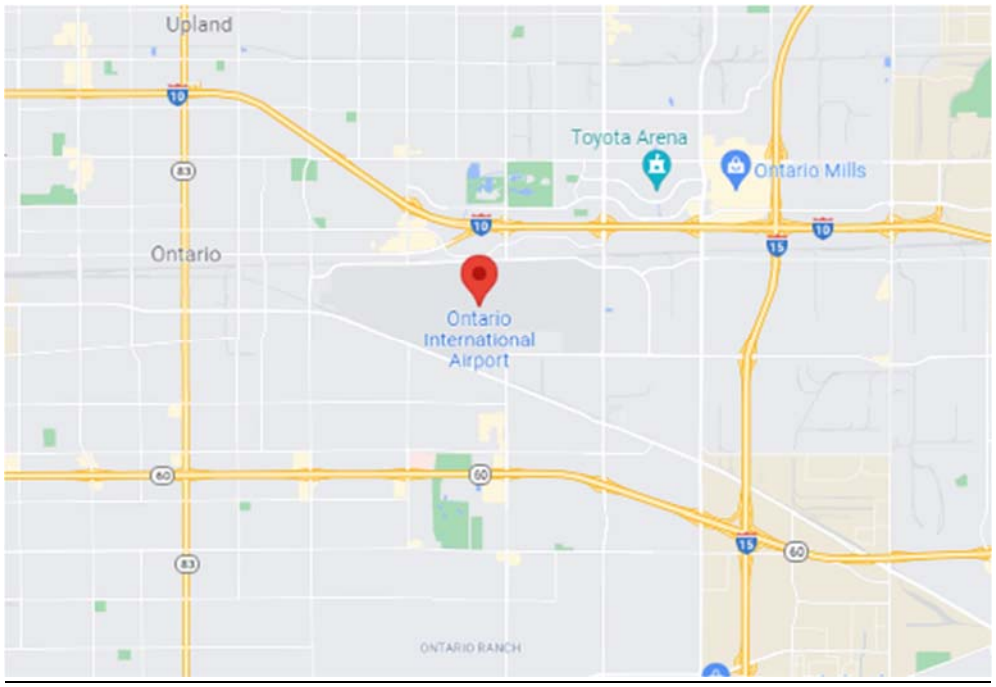

FIGURE 1a –Site Location Map (Map data ©2022 Google)

Survey Design – The areas to be surveyed were indicated in the field by the client and can be seen on the Area Location Map with purple circles (Figure 1b).

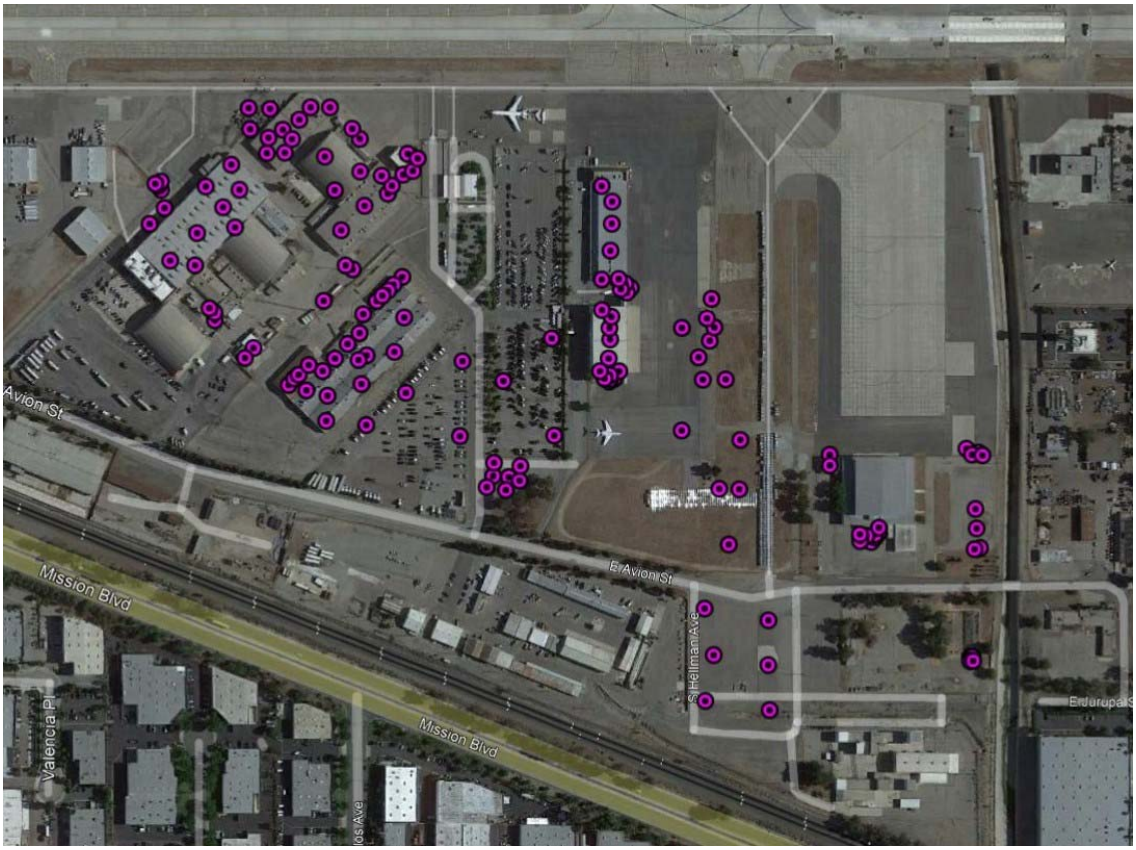

FIGURE 1b –Area Location Map (Map data ©2022 Google)

The EM61 and GPR were traversed in a reconnaissance mode over the suspect excavation areas. Once these areas, if any, were established, the magnetic gradiometer, line tracer, M-Scope and GPR were traversed systematically in many directions. Additional traverses were taken, access permitting, for detailing and confirmation where anomalous conditions were found. Multiple GPR profiles were also collected throughout the area and in specific areas for confirmation where other instruments detected anomalies. The line tracer was also used to trace out all detectable utilities in the area.

For the secondary purpose, the EM61, GPR, magnetic gradiometer, M-scope and line tracer were systematically traversed in many directions around each drain system. Additional traverses were taken, access permitting, for detailing and confirmation where anomalous conditions were found. Multiple GPR profiles were also collected throughout the area and in specific areas for confirmation where other instruments detected anomalies. The line tracer was also used to trace out all detectable utilities in the area.

And lastly, each instrument was traversed systematically over each proposed borehole, along the eight lines of the standard search pattern (Figure 2), wherein, there are two sets of three parallel lines, mutually orthogonal, and two diagonals, all centered on the marked drill location. Adjacent parallel lines are approximately 5 feet apart, and each line is approximately 20 feet long, access permitting. Other traverses were taken, access permitting, for detailing and confirmation where anomalous conditions were found.

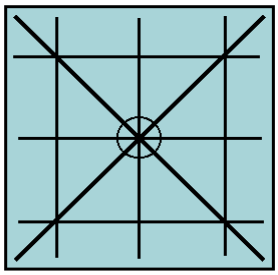

Figure 2: Standard search pattern around borehole

Hard copy of the EM data was not acquired, that is, discrete readings on the nodes of a grid were not recorded that could be put into a contoured map format. Rather, the instruments' meters were read continuously, and in real-time, during each traverse. This free-traversing method allowed for immediate detection of anomalous objects and facilitated the opportunity to investigate them further, without first having to download data in the office. The lack of hard copy for EM data sets does not degrade the quality of the survey in any way. Hard copy merely provides a basis for report documentation of these geophysical fields, if such documentation is needed.

The line tracers were used to impress signals onto pipes, generally through accessible risers and tracer wires when present, to delineate the lines' locations and orientations. The instruments were also used in passive mode, configured to detect 60 Hz electrical signals and other common radio-frequency signals.

A Geonic's model EM61 and a Fischer M-Scope was used for the EM sampling. A Sensors and Software Noggin Ground Penetrating Radar unit with a 500 MHz antenna produced the radar images. The magnetic gradiometer was a Schonstedt GA-52, and a Metrotech 9890 and RIDGID SR-60 SeekTech utility locator rounded out the tools applied.

Brief Description of the Geophysical Methods Applied - The line locator is used to passively detect energized high voltage electric lines and electrical conduit (50-60 Hz), VLF signals (14-22 kHz), as well as to actively trace other utilities. Where risers are present, the utility locator transmitter can be connected directly to the object, and a signal (9.8-82 kHz) is sent traveling along the conductor, pipe, conduit, etc. In the absence of a riser, the transmitter can be used to impress an input signal on the utility by induction. In either case, the receiver unit is tuned to the input signal, and is used to actively trace the signal along the pipe's surface projection.

The magnetic gradiometer has two flux gate magnetic fixed sensors that are passed closely to and over the ground. When not in close proximity to a magnetic object, that is, only in the earth's field, the instrument emits a sound signal at a low frequency. When the instrument passes over a buried iron or steel object, so that locally there is a high magnetic gradient, the frequency of the emitted sound increases. The frequency is a function of the gradient between the two sensors.

The GPR instrument beams energy into the ground from its transducer/antenna, in the form of electromagnetic waves. A portion of this energy is reflected back to the antenna at a boundary in the subsurface across which there is an electrical contrast. The instrument produces a continuous record of the reflected energy as the antenna is traversed across the ground surface. The greater the electrical contrast, the higher the amplitude of the returned energy. The radar wave travels at a velocity unique to the material properties of the ground being investigated, and when these velocities are known, the two-way travel times can be converted to depth. The depth of penetration and image resolution produced are a function of ground electrical conductivity and dielectric constant.

The EM61 instrument is a high resolution, time-domain device for detecting buried conductive objects. It consists of a powerful transmitter that generates a pulsed primary magnetic field when its coils are energized, which induces eddy currents in nearby conductive objects. The decay of the eddy currents, following the input pulse, is measured by the coils, which in turn serve as receiver coils. The decay rate is measured for two coils, mounted concentrically, one above the other. By making the measurements at a relatively long time interval (measured in milliseconds) after termination of the primary pulse, the response is nearly independent of the electrical conductivity of the ground. Thus, the instrument is a super-sensitive metal detector. Due to its unique coil arrangement, the response curve is a single well-defined positive peak directly over a buried conductive object. This facilitates quick and accurate location of targets.

The M-Scope device energizes the ground by producing an alternating primary magnetic field with AC current in a transmitting coil. If conducting materials are within the area of influence of the primary field, AC eddy currents are induced to flow in the conductors. A receiving coil senses the secondary magnetic field produced by these eddy currents, and outputs the response to a meter in the form of ground conductivity values for the M-Scope. The strength of the secondary field is a function of the conductivity of the object, say a pipe, tank or cluster of drums, its size, and its depth and position relative to the instrument's two coils. Conductive objects, to a depth of approximately 7 feet for the M-Scope are sensed. The devices are also somewhat focused; that is, they are more sensitive to conductors below the instrument than they are to conductors off to the side.

Interpretation and Conclusions - The interpretation took place in real time as the survey progressed, and accordingly, the findings of our investigation were marked on the ground cover with spray marking paint for the exterior boreholes and colored electrical tape was used for some of the interior areas and were further documented with site photographs (Figures 3-146), and radar images (Figures 147-155).

Piping and utilities detected during the survey were marked with spray marking paint on the ground cover using red for electric, yellow for gas, orange for communication, green for sanitary sewer/storm drain, green dashed lines were used to delineate the boundaries of each drain system (i.e. clarifiers, sumps, drains, etc.), orange dashed lines were used to delineate the boundaries of GPR Anomalies, pink dashed lines were used to delineate the boundaries of an EM Anomaly and white for lines of unknown utility type, buried vaults, footings and foundations.

There were 9 areas surveyed with geophysical instrumentation in attempts to determine the approximate location of former underground storage tanks. In some areas, more than one UST previously existed; however, using radar technology, once a backfilled excavation-like image is detected, the entire boundaries will be delineated and marked on the ground with orange spray marking paint. Radar imagery was captured over each GPR Anomaly and can be seen and referenced in the graphics in sequential order (Figures 147-155). Depending on soil conditions, backfilled materials, or near surface and/or subsurface features, anomalous characteristics may differ from one to the next. When locating and identifying a possible backfilled excavation, multiple factors are considered. These conditions may include but are not limited to; terminated lines, visible vent risers, asphalt cracking, existing fuel stations, etc. In some cases, site clues are not beneficial or do not exist and our reliance solely depends on the geophysical equipment. In some areas backfilled excavations can easily be detected with the radar system; however other areas may be more subtle where a “best candidate” anomaly will be marked if one can be identifiable.

GPR Anomaly #1 measures approximately 18 feet long and 9 feet wide and is located immediately adjacent to a possible buried vault (Figure 23). Radar imagery shows deeper penetrating levels over this anomaly, which may be caused by an existing void space (Figure 147). Asphalt cracking surrounded the anomalous feature, which may be caused by previous digging and/or excavating activities. The presence of a possible buried vault

sitting immediately adjacent to this anomaly is uncertain. A borehole was positioned between the potential vault and GPR Anomaly #1. There were no underground metallic objects detected within the boundaries of this anomaly.

GPR Anomaly #2 measures approximately 52 feet long and 16 feet wide (Figures 65-67). Radar imagery shows a soil depression suggesting that previous digging and/or excavating activities occurred here (Figure 148). Two unknown pipes were detected to terminate within the boundaries of this anomaly (Figure 66 and 67). One of these pipes led to a possible vent line still in place located adjacent to a fire suppression system (Figure 67). Asphalt cracking was also observed around the perimeter. An existing sewer line was detected running through the anomaly, so if this was indeed a former tank hold, the tank would then most likely predate the sewer line. There were no underground metallic objects detected within the boundaries of this anomaly.

GPR Anomaly #3 measures approximately 31 feet by 39 feet and is sandwiched between two sewer lines (Figures 70-73). Radar imagery shows a slanted reflection on both sides which is likely caused by the side walls of a backfilled excavation (Figure 149). An electric line was detected terminating within its southwestern boundary (Figure 73). These two conditions are common characteristics to a backfilled excavation. There were no underground metallic objects detected within the boundaries of this anomaly.

GPR Anomaly #4 measures approximately 22 feet long and 11 feet wide (Figure 75). Two unknown lines were detected in the vicinity of this anomalous feature; one of which terminated within its boundaries. Although radar imagery was subtle, there was a slight soil depression within the upper 2 feet of the near subsurface (Figure 150). This "depression" could be caused by previous scraping and/or excavating activities. GPR Anomaly #4 remains a potential backfilled excavation candidate because of these aforementioned factors. There were no underground metallic objects detected within the boundaries of this anomaly.

GPR Anomaly #5 measures approximately 28 feet long by 19 feet wide (Figures 76). Radar imagery was captured over this anomalous feature and similarly to GPR Anomaly #4 there was a slight soil depression within the upper 2 feet of the shallow subsurface (Figure 151). There was no other supporting evidence for the presence of a former tank hold. There were no underground metallic objects detected within the boundaries of this anomaly.

GPR Anomaly #6 measures approximately 15 feet by 19 feet and was located adjacent to a building structure within a parking space (Figure 81). Two unknown lines were detected in the vicinity of this anomaly; one of which terminated at the southwestern boundaries. Radar imagery here also shows a subtle soil depression or change within the upper 2 feet (Figure 152). This anomaly remains a candidate because of these soil characteristics and line termination. There were no underground metallic objects detected within the boundaries of this anomaly.

GPR Anomaly #7 measures approximately 50 feet long and 24 feet wide (Figures 106-108). Multiple linear features, both unknown and former electric lines, were found to terminate along its edges. Two of these linear features headed east towards an electric powered fuel shutoff station (Figures 107 and 108). Radar imagery shows deeper penetration levels and disturbed soils suggesting that previous excavating activities occurred here (Figure 153). There were no underground metallic objects within the boundaries of this anomaly.

GPR Anomaly #8 measures approximately 95 feet by 92 feet (Figures 110-114). Similarly to GPR Anomaly #7, multiple electric lines were found to originate from an electric powered fuel shutoff station and terminate at the edges of this anomaly (Figure 111). Radar imagery shows higher reflective properties and deeper penetration levels which are common characteristics to a backfilled excavation (Figure 154). Please note however there was an EM Anomaly detected within the center of GPR Anomaly #8. The EM Anomaly was a relatively low signature, meaning the metallic contents are most likely clusters of small bits of buried junk debris. The outer

most boundaries of this anomaly was marked on the ground cover with pink spray marking paint. The radar system did not detect any hyperbolic features suggestive of an underground storage tank.

GPR Anomaly #9 measures approximately 24 feet by 23 feet (Figures 121-124). Multiple unknown linear features were found terminating at the edges of this anomaly. Additionally, there is an active electric and gas line running through this feature. Radar imagery shows clear boundaries of this anomaly with a hyperbolic feature in the center, which is a gas line (Figure 155). The surrounding soils possess deeper reflective properties while the anomaly itself contrasts this characteristic. Because the soils differ, this suggests that previous excavating activities occurred here. It is unknown when these activities commenced as there are active utility lines present. Similar to GPR Anomaly #2, if an underground storage tank existed, it most likely predated the aforementioned utility lines. There were no other underground metallic objects detected within the boundaries of this anomaly.

Once all detectable buried cultural objects were marked and accounted for within each survey area, our findings were discussed in the field with the client. After our findings were discussed each borehole was then marked cleared by Subsurface Surveys and Associates with a white circle and a yellow "SSS". Please refer to the graphics along with the markings in the field for a better representation of our findings.

Limitations and Further Recommendations - It should be understood that limitations inherent in geophysical instruments and/or surveying techniques exist at all sites, and nearly all sites exhibit conditions under which instruments might not perform optimally. Consequently, the detection of buried objects in all circumstances **cannot be guaranteed**. Such limitations are numerous and include, but are not limited to, rebar-reinforced ground cover, abrupt changes in ground cover type, above-ground obstacles preventing full traverses or traverses in one direction only, above-ground conductive objects interfering with instrument signal, nearby powerlines or EM transmitters, highly conductive background soil conditions, limiting GPR penetration, non-metallic targets, shallower or larger objects shielding deeper or smaller targets, tracing signal jumping from one line to another, and inaccessible risers, cleanouts, valve boxes, and manholes. If one or more geophysical instrument is rendered ineffective and cannot be utilized, the quality of the survey can be somewhat degraded.

For the above reasons, and in the interest of maximum safety, we encourage our clients to take advantage of Underground Service Alert (USA), Dig Alert, or other similar services, when possible. Furthermore, we recommend hand-auguring and the use of a drilling method known as air knifing and vacuum extraction, when feasible or if applicable to this project. These methods may significantly limit damage to underground pipes, conduits, and utilities that might not have been detectable during the course of this survey. Please bear in mind, that geophysical surveying is only one of several levels of protection that is available to our clients.

SubSurface Surveys may include maps in some reports. While they are an accurate general representation of the site and our findings, they are not of engineering quality (i.e., measured and mapped by a licensed land surveyor).

SubSurface Surveys and Associates makes no guarantee either expressed or implied regarding the accuracy of the findings and interpretations present. And, in no event will SubSurface Surveys and Associates be liable for any direct, indirect, special, incidental, or consequential damages resulting from interpretations and opinions presented herewith.

All data acquired in these surveys are in confidential file in this office, and are available for review by your staff, or by us at your request, at any time. We appreciate the opportunity to participate in this project. Please call, if there are questions.

LOGGED BY J. Voss, GIT **REVIEWED BY** J. Voss, GIT
GROUND SURFACE 6" concrete **BORING DIAMETER (in)** 3.25 / 2.25
APPROVED BY V. Robino, PG 7878

Depth (ft bgs)	Soil Description	Lithology	USCS	Sample Type	Blows/ 6 inches	Recovery	Lab Sample	PID (ppm)	Water Level	Notes
	SILTY SAND (SM): olive brown (2.5Y 4/4), moist, ~85% fine to coarse sand, ~15% low plasticity fines, trace fine gravel		SM					2.0		Hand auger to 5 feet below bottom of concrete. Soil Sample 61W-1-2-1 Soil sample depths collected with reference to bottom of concrete.
								1.8		Soil Sample 61W-1-2-3 PID: MiniRAE 3000 calibrated to 100 ppm Isobutylene standard. PID readings are headspace readings of soil in resealable plastic bags.
5	~75% fine to medium sand, ~25% fines, trace coarse sand, trace fine gravel							2.6		Soil Sample 61W-1-2-6
										Temporary soil vapor probes set at 5 and 15 ft below bottom of concrete. Soil vapor probes constructed using 1/4-in Nylaflow tubing connected to a 4-in porous probe tip centered in a 1-ft thick layer of filter sand pack. A 6-in layer of dry bentonite was placed above each sand pack layer, followed by hydrated bentonite to the bottom of the next sand interval or ground surface. Surface completed with 6-inch traffic rated Emco Wheaton well box.
10	POORLY GRADED SAND WITH GRAVEL (SP): light olive brown (2.5Y 5/4), moist, ~60% fine to coarse sand, ~35% fine to coarse gravel, ~5% nonplastic fines		SP					2.8		
	SILTY SAND (SM): light olive brown (2.5Y 5/4), moist, ~70% fine to medium sand, ~30% low plasticity fines, trace coarse sand		SM							
15								2.3		Soil Sample 61W-1-2-15

Total Depth = 15.5 feet.

Note: Where soil was not recovered from continuous coring activities, geologic interpretations are based on the lithology above and/or below the no sample interval, as well as observations made in the field.

5	Increased moisture		3.7	Soil Sample 61W-8-1-5.5
	~70% fine to medium sand, ~30% low to medium plasticity fines			
	POORLY GRADED SAND WITH GRAVEL (SP): light olive brown (2.5Y 5/4), moist, ~70% fine to coarse sand, ~25% fine to coarse gravel, ~5% nonplastic fines	SP		PID: MiniRAE 3000 calibrated to 100 ppm Isobutylene standard. PID readings are headspace readings of soil in resealable plastic bags.
10			4.2	
				Soil sample depths collected with reference to bottom of asphalt.
15			4.9	

Total Depth = 15.0 feet.

Note: Where soil was not recovered from continuous coring activities, geologic interpretations are based on the lithology above and/or below the no sample interval, as well as observations made in the field.

Note: The boring was backfilled with granular bentonite hydrated in 1-foot lifts from total depth to near ground surface and patched with concrete.

GROUND SURFACE 5" concrete with 1' base below **BORING DIAMETER (in)** 3.25 / 2.25
APPROVED BY V. Robino, PG 7878

Depth (ft bgs)	Soil Description	Lithology	USCS	Sample Type	Blows/ 6 inches	Recovery	Lab Sample	PID (ppm)	Water Level	Notes
0	SILTY SAND (SM): olive brown (2.5Y 4/4), moist, ~85% fine to coarse sand, ~15% low plasticity fines, trace fine gravel		SM					2.5		Hand auger to 5 feet below bottom of concrete. Soil Sample 61W-23-2-1 PID: MiniRAE 3000 calibrated to 100 ppm Isobutylene standard. PID readings are headspace readings of soil in resealable plastic bags.
5	~75% fine to medium sand, ~25% fines, trace coarse sand, trace fine gravel							3.4		Soil Sample 61W-23-2-5.5
10								2.1		Soil sample depths collected with reference to bottom of concrete.

Total Depth = 10.0 feet.

Note: Where soil was not recovered from continuous coring activities, geologic interpretations are based on the lithology above and/or below the no sample interval, as well as observations made in the field.

Note: The boring was backfilled with granular bentonite hydrated in 1-foot lifts from total depth to near ground surface and patched with concrete.

GROUND SURFACE 4" concrete with 9" soil below followed by 2' asphalt **BORING DIAMETER (in)** 3.25 / 2.25
APPROVED BY V. Robino, PG 7878

Depth (ft bgs)	Soil Description	Lithology	USCS	Sample Type	Blows/ 6 inches	Recovery	Lab Sample	PID (ppm)	Water Level	Notes
	SILTY SAND (SM): olive brown (2.5Y 4/4), moist, ~85% fine to coarse sand, ~15% low plasticity fines, trace fine gravel		SM					2.3		Soil Sample 61W-30-2-1 PID: MiniRAE 3000 calibrated to 100 ppm Isobutylene standard. PID readings are headspace readings of soil in resealable plastic bags.
5	POORLY GRADED SAND (SP): light olive brown (2.5Y 5/4), moist, ~85% fine to coarse sand, ~10% fine to coarse gravel, ~5% nonplastic fines		SP					2.4 1.8		Soil Sample 61W-30-2-5.5 Hand auger to 1 foot bgs. Soil sample depths collected with reference to bottom of asphalt. Native soil starting at 3 ft bgs.
10	Total Depth = 10.0 feet.									

Note: Where soil was not recovered from continuous coring activities, geologic interpretations are based on the lithology above and/or below the no sample interval, as well as observations made in the field.

Note: The boring was backfilled with granular bentonite hydrated in 1-foot lifts from total depth to near ground surface and patched with concrete.

CLIENT Mr. William Winters
PROJECT NAME Proposed Cargo Distribution Center - ONT Airport
GSI JOB NUMBER 5925
PROJECT LOCATION Ontario Airport, Ontario, California
DATE STARTED 10 Mar 2022 **COMPLETED** 10 Mar 2022
GROUND ELEVATION Ground Surface **DATUM** NA
DRILLING CONTRACTOR Interphase Environmental, Inc.
TOP OF CASING ELEVATION NA **DATUM** NA
DRILLING METHOD Direct Push with Dual Tube Coring System
LATITUDE 34.052655420 **LONGITUDE** -117.608439161
DRILLING EQUIPMENT Geoprobe 6600
LOGGED BY J. Voss, GIT **REVIEWED BY** J. Voss, GIT
GROUND SURFACE 6" asphalt with 5" base below **BORING DIAMETER (in)** 3.25 / 2.25
APPROVED BY V. Robino, PG 7878

Depth (ft bgs)	Soil Description	USCS	PID (ppm)	Notes
0	SILTY SAND (SM): olive brown (2.5Y 4/4), moist, ~80% fine to coarse sand, ~20% low plasticity fines, trace fine gravel	SM	3.1	Soil Sample 61W-39-3-1
				PID: MiniRAE 3000 calibrated to 100 ppm Isobutylene standard. PID readings are headspace readings of soil in resealable plastic bags.
5			2.0	Soil Sample 61W-39-3-5.5
	POORLY GRADED SAND (SP): light olive brown (2.5Y 5/4), moist, ~85% fine to coarse sand, ~10% fine to coarse gravel, ~5% nonplastic fines	SP		Hand auger to 5 feet below bottom of asphalt.
10			4.9	
			2.9	Soil sample depths collected with reference to bottom of asphalt.
15	Total Depth = 15.0 feet.			

Note: Where soil was not recovered from continuous coring activities, geologic interpretations are based on the lithology above and/or below the no sample interval, as well as observations made in the field.

Note: The boring was backfilled with granular bentonite hydrated in 1-foot lifts from total depth to near ground surface and patched with concrete.

LOGGED BY J. Voss, GIT **REVIEWED BY** J. Voss, GIT
GROUND SURFACE 3" asphalt **BORING DIAMETER (in)** 3.25 / 2.25
APPROVED BY V. Robino, PG 7878

Depth (ft bgs)	Soil Description	Lithology	USCS	Sample Type	Blows/ 6 inches	Recovery	Lab Sample	PID (ppm)	Water Level	Notes
	POORLY GRADED SAND (SP): olive brown (2.5Y 4/4), moist, ~95% fine to coarse sand, ~5% nonplastic fines, trace fine gravel		SP					1.6		Soil Sample 62-2-4-1 PID: MiniRAE 3000 calibrated to 100 ppm Isobutylene standard. PID readings are headspace readings of soil in resealable plastic bags.
5	SILTY SAND (SM): olive brown (2.5Y 4/4), moist, ~75% fine to medium sand, ~25% low plasticity fines, trace coarse sand, and fine gravel		SM					1.4		Soil Sample 62-2-4-6 Hand auger to 5 feet below bottom of asphalt.
10	POORLY GRADED SAND WITH GRAVEL (SP): light olive brown (2.5Y 5/4), moist, ~55% fine to coarse sand, ~40% fine to coarse gravel, ~5% nonplastic fines		SP					1.8		
	~75% sand, ~20% fine gravel, ~5% fines							1.1		Soil sample depths collected with reference to bottom of asphalt.
15										

Total Depth = 15.0 feet.

Note: Where soil was not recovered from continuous coring activities, geologic interpretations are based on the lithology above and/or below the no sample interval, as well as observations made in the field.

Note: The boring was backfilled with granular bentonite hydrated in 1-foot lifts from total depth to near ground surface and patched with concrete.

	SILTY SAND (SM): light olive brown (2.5Y 5/6), moist, ~75% fine to coarse sand, ~25% low plasticity fines, trace fine gravel		SM					4.1		Soil Sample 62-8-5-1
	2-inch diameter weathered asphalt									PID: MiniRAE 3000 calibrated to 100 ppm Isobutylene standard. PID readings are headspace readings of soil in resealable plastic bags.
5	POORLY GRADED SAND (SP): light olive brown (2.5Y 5/4), moist, ~90% fine to coarse sand, ~5% fine gravel, ~5% nonplastic fines, trace coarse gravel		SP					4.1		Soil Sample 62-8-5-5.5
										Hand auger to 5 feet below bottom of concrete.
								4.8		
10										Soil sample depths collected with reference to bottom of concrete.

Total Depth = 10.0 feet.

Note: Where soil was not recovered from continuous coring activities, geologic interpretations are based on the lithology above and/or below the no sample interval, as well as observations made in the field.

Note: The boring was backfilled with cement-bentonite grout from total depth to near ground surface and patched with concrete.

APPROVED BY V. Robino, PG 7878

Depth (ft bgs)	Soil Description	Lithology	USCS	Sample Type	Blows/ 6 inches	Recovery	Lab Sample	PID (ppm)	Water Level	Notes
	SILTY SAND (SM): olive brown (2.5Y 4/4), moist, ~85% fine to coarse sand, ~15% low plasticity fines, trace fine gravel		SM					1.8		Soil Sample 62-13-6-1 Hand auger to 5 feet below bottom of asphalt.
5	POORLY GRADED SAND (SP): light olive brown (2.5Y 5/4), moist, ~90% fine to coarse sand, ~5% fine gravel, ~5% nonplastic fines		SP					1.6		Soil Sample 62-13-6-5.5
10	POORLY GRADED SAND WITH GRAVEL (SP): light olive brown (2.5Y 5/4), moist, ~55% fine to coarse sand, ~40% fine to coarse gravel, ~5% nonplastic fines		SP					1.9		PID: MiniRAE 3000 calibrated to 100 ppm Isobutylene standard. PID readings are headspace readings of soil in resealable plastic bags.
15								1.6		Soil sample depths collected with reference to bottom of asphalt.

Total Depth = 15.0 feet.

Note: Where soil was not recovered from continuous coring activities, geologic interpretations are based on the lithology above and/or below the no sample interval, as well as observations made in the field.

Note: The boring was backfilled with granular bentonite hydrated in 1-foot lifts from total depth to near ground surface and patched with concrete.

GROUND SURFACE 6" concrete **BORING DIAMETER (in)** 3.25 / 2.25
APPROVED BY V. Robino, PG 7878

Depth (ft bgs)	Soil Description	Lithology	USCS	Sample Type	Blows/ 6 inches	Recovery	Lab Sample	PID (ppm)	Water Level	Notes
	SILTY SAND (SM): olive brown (2.5Y 4/4), moist, ~85% fine to coarse sand, ~15% low plasticity fines, trace fine gravel		SM					1.2		Soil Sample 68-17-1-1
	POORLY GRADED SAND (SP): olive brown (2.5Y 4/4), moist, ~95% fine to coarse sand, ~5% nonplastic fines, trace fine gravel		SP							PID: MiniRAE 3000 calibrated to 100 ppm Isobutylene standard. PID readings are headspace readings of soil in resealable plastic bags.
5								3.6		Soil Sample 68-17-1-5.5
										Hand auger to 10 feet below bottom of concrete.
	SILTY SAND (SM): olive brown (2.5Y 4/4), moist, ~85% fine to coarse sand, ~15% low plasticity fines, trace fine gravel		SM							Soil sample depths collected with reference to bottom of concrete.
10								1.4		

Total Depth = 10.0 feet.

Note: The boring was backfilled with granular bentonite hydrated in 1-foot lifts from total depth to near ground surface and patched with concrete.

	SILTY SAND (SM): olive brown (2.5Y 4/4), moist, ~85% fine to coarse sand, ~15% low plasticity fines, trace fine gravel		SM					2.3		Soil Sample SV-1-1 Hand auger to 5 feet below bottom of asphalt. PID: MiniRAE 3000 calibrated to 100 ppm Isobutylene standard. PID readings are headspace readings of soil in resealable plastic bags.
5	~75% fine to medium sand, ~25% fines, trace coarse sand and fine gravel							2.2		Soil Sample SV-1-5.5 Temporary soil vapor probes installed at 5 and 15 ft below the bottom of asphalt. Soil vapor probes constructed using 1/4-in Nylaflow tubing connected to a 4-in porous probe tip centered in a 1-ft thick layer of filter sand pack. A 6-in layer of dry bentonite was placed above each sand pack layer, followed by hydrated bentonite to the bottom of the next sand interval or ground surface. Surface completed with 6-inch traffic rated Emco Wheaton well box.
10	POORLY GRADED SAND WITH GRAVEL (SP): light olive brown (2.5Y 5/4), moist, ~80% fine to coarse sand, ~15% fine gravel, ~5% nonplastic fines ~60% sand, ~35% fine to coarse gravel, ~5% fines		SP					3.7		Soil sample depths collected with reference to bottom of asphalt.
15								3.6		Soil Sample SV-1-14

Total Depth = 15.5 feet.

Note: Where soil was not recovered from continuous coring activities, geologic interpretations are based on the lithology above and/or below the no sample interval, as well as observations made in the field.

Re: ATL Work Order Number : 2200233
Client Reference : Ontario Airport / 5925

Enclosed are the results for sample(s) received on February 23, 2022 by Advanced Technology Laboratories. The sample(s) are tested for the parameters as indicated on the enclosed chain of custody in accordance with applicable laboratory certifications. The laboratory results contained in this report specifically pertains to the sample(s) submitted.

Thank you for the opportunity to serve the needs of your company. If you have any questions, please feel free to contact me or Project.Management@atlglobal.com.

Sincerely,

Victoria Michel, Project Assistant
Victoria.Michel@atlglobal.com
Authorized to Release on 03/04/22 10:59 on Behalf of

Amy Leung
Laboratory Director

The test results in this report relate exclusively to the samples as received by the laboratory, and meet the requirements of the methodology under which they were reported; any exceptions are noted within the report and/ or case narrative.

The cover letter/ signature page and the case narrative are integral parts of this analytical report; the absence of any portion of the report renders the report invalid. This report shall not be reproduced except in full, and shall have the express written approval of the laboratory, and the original client firm to do so

.

The electronic signature on this report is signed by an authorized signatory of Advanced Technology Laboratories, and is intended to be legally binding as the equivalent of a handwritten signature.

Notes and Definitions

R	RPD value outside acceptance criteria. Calculation is based on raw values.
MO	Manufacturer omitted analyte within the stock standard.
L5	Laboratory Control Sample high biased. Sample result/s was non-detect (ND) for the target analyte; therefore reanalysis was not necessary.
L4	Laboratory Control Sample outside of control limit but within Marginal Exceedance (ME) limit.
L3	Laboratory control sample outside in-house established limits but within method criteria.
B6	Associated method blank above PQL, analyte non-detected. Therefore, reanalysis is not necessary.
B	Analyte detected in the associated method blank above the PQL.
ND	Analyte is not detected at or above the Practical Quantitation Limit (PQL). When client requests quantitation against MDL, analyte is not detected at or above the Method Detection Limit (MDL)
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
NR	Not Reported
RPD	Relative Percent Difference
CA2	CA-ELAP (CDPH)
OR1	OR-NELAP (OSPHL)

Notes:
(1) The reported MDL and PQL are based on prep ratio variation and analytical dilution.
(2) The suffix [2C] of specific analytes signifies that the reported result is taken from the instrument's second column.
(3) Results are wet unless otherwise specified.

Re: ATL Work Order Number : 2200246
Client Reference : Ontario Airport / 5925

Enclosed are the results for sample(s) received on February 24, 2022 by Advanced Technology Laboratories. The sample(s) are tested for the parameters as indicated on the enclosed chain of custody in accordance with applicable laboratory certifications. The laboratory results contained in this report specifically pertains to the sample(s) submitted.

Thank you for the opportunity to serve the needs of your company. If you have any questions, please feel free to contact me or Project.Management@atlglobal.com.

Sincerely,

Victoria Michel, Project Assistant
Victoria.Michel@atlglobal.com
Authorized to Release on 03/07/22 09:19 on Behalf of

Amy Leung
Laboratory Director

The test results in this report relate exclusively to the samples as received by the laboratory, and meet the requirements of the methodology under which they were reported; any exceptions are noted within the report and/ or case narrative.

The cover letter/ signature page and the case narrative are integral parts of this analytical report; the absence of any portion of the report renders the report invalid. This report shall not be reproduced except in full, and shall have the express written approval of the laboratory, and the original client firm to do so

.

The electronic signature on this report is signed by an authorized signatory of Advanced Technology Laboratories, and is intended to be legally binding as the equivalent of a handwritten signature.

Irvine , CA 92612	Reported : 03/07/2022

Notes and Definitions

R	RPD value outside acceptance criteria. Calculation is based on raw values.
MO	Manufacturer omitted analyte within the stock standard.
M2	Matrix spike recovery outside of acceptance limit due to possible matrix interference. The analytical batch was validated by the laboratory control sample.
L5	Laboratory Control Sample high biased. Sample result/s was non-detect (ND) for the target analyte; therefore reanalysis was not necessary.
L4	Laboratory Control Sample outside of control limit but within Marginal Exceedance (ME) limit.
L3	Laboratory control sample outside in-house established limits but within method criteria.
ND	Analyte is not detected at or above the Practical Quantitation Limit (PQL). When client requests quantitation against MDL, analyte is not detected at or above the Method Detection Limit (MDL)
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
NR	Not Reported
RPD	Relative Percent Difference
CA2	CA-ELAP (CDPH)
OR1	OR-NELAP (OSPHL)

Notes:
(1) The reported MDL and PQL are based on prep ratio variation and analytical dilution.
(2) The suffix [2C] of specific analytes signifies that the reported result is taken from the instrument's second column.
(3) Results are wet unless otherwise specified.

Re: ATL Work Order Number : 2200255
Client Reference : Ontario Airport / 5925

Enclosed are the results for sample(s) received on February 25, 2022 by Advanced Technology Laboratories. The sample(s) are tested for the parameters as indicated on the enclosed chain of custody in accordance with applicable laboratory certifications. The laboratory results contained in this report specifically pertains to the sample(s) submitted.

Thank you for the opportunity to serve the needs of your company. If you have any questions, please feel free to contact me or Project.Management@atlglobal.com.

Sincerely,

Victoria Michel, Project Assistant
Victoria.Michel@atlglobal.com
Authorized to Release on 03/09/22 14:47 on Behalf of

Amy Leung
Laboratory Director

The test results in this report relate exclusively to the samples as received by the laboratory, and meet the requirements of the methodology under which they were reported; any exceptions are noted within the report and/ or case narrative.

The cover letter/ signature page and the case narrative are integral parts of this analytical report; the absence of any portion of the report renders the report invalid. This report shall not be reproduced except in full, and shall have the express written approval of the laboratory, and the original client firm to do so

.

The electronic signature on this report is signed by an authorized signatory of Advanced Technology Laboratories, and is intended to be legally binding as the equivalent of a handwritten signature.

Certificate of Analysis

GSI Environmental, Inc.	Project Number : Ontario Airport / 5925
19200 Von Karman Ave., Suite 800	Report To : Josh Voss
Irvine , CA 92612	Reported : 03/09/2022

Notes and Definitions

R	RPD value outside acceptance criteria. Calculation is based on raw values.
MO	Manufacturer omitted analyte within the stock standard.
M2	Matrix spike recovery outside of acceptance limit due to possible matrix interference. The analytical batch was validated by the laboratory control sample.
L4	Laboratory Control Sample outside of control limit but within Marginal Exceedance (ME) limit.
L3	Laboratory control sample outside in-house established limits but within method criteria.
ND	Analyte is not detected at or above the Practical Quantitation Limit (PQL). When client requests quantitation against MDL, analyte is not detected at or above the Method Detection Limit (MDL)
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
NR	Not Reported
RPD	Relative Percent Difference
CA2	CA-ELAP (CDPH)
OR1	OR-NELAP (OSPHL)

Notes:
(1) The reported MDL and PQL are based on prep ratio variation and analytical dilution.
(2) The suffix [2C] of specific analytes signifies that the reported result is taken from the instrument's second column.
(3) Results are wet unless otherwise specified.

Re: ATL Work Order Number : 2200261
Client Reference : Ontario Airport / 5925

Enclosed are the results for sample(s) received on February 28, 2022 by Advanced Technology Laboratories. The sample(s) are tested for the parameters as indicated on the enclosed chain of custody in accordance with applicable laboratory certifications. The laboratory results contained in this report specifically pertains to the sample(s) submitted.

Thank you for the opportunity to serve the needs of your company. If you have any questions, please feel free to contact me or Project.Management@atlglobal.com.

Sincerely,

Edward Bae, Project Assistant
Edward.Bae@atlglobal.com
Authorized to Release on 03/08/22 16:49 on Behalf of

Amy Leung
Laboratory Director

The test results in this report relate exclusively to the samples as received by the laboratory, and meet the requirements of the methodology under which they were reported; any exceptions are noted within the report and/ or case narrative.

The cover letter/ signature page and the case narrative are integral parts of this analytical report; the absence of any portion of the report renders the report invalid. This report shall not be reproduced except in full, and shall have the express written approval of the laboratory, and the original client firm to do so

.

The electronic signature on this report is signed by an authorized signatory of Advanced Technology Laboratories, and is intended to be legally binding as the equivalent of a handwritten signature.

Certificate of Analysis

GSI Environmental, Inc.	Project Number : Ontario Airport / 5925
19200 Von Karman Ave., Suite 800	Report To : Josh Voss
Irvine , CA 92612	Reported : 03/08/2022

Notes and Definitions

R	RPD value outside acceptance criteria. Calculation is based on raw values.
MO	Manufacturer omitted analyte within the stock standard.
M2	Matrix spike recovery outside of acceptance limit due to possible matrix interference. The analytical batch was validated by the laboratory control sample.
L5	Laboratory Control Sample high biased. Sample result/s was non-detect (ND) for the target analyte; therefore reanalysis was not necessary.
ND	Analyte is not detected at or above the Practical Quantitation Limit (PQL). When client requests quantitation against MDL, analyte is not detected at or above the Method Detection Limit (MDL)
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
NR	Not Reported
RPD	Relative Percent Difference
CA2	CA-ELAP (CDPH)
OR1	OR-NELAP (OSPHL)

Notes:
(1) The reported MDL and PQL are based on prep ratio variation and analytical dilution.
(2) The suffix [2C] of specific analytes signifies that the reported result is taken from the instrument's second column.
(3) Results are wet unless otherwise specified.

Re: ATL Work Order Number : 2200272
Client Reference : Ontario Airport / 5925

Enclosed are the results for sample(s) received on March 01, 2022 by Advanced Technology Laboratories. The sample(s) are tested for the parameters as indicated on the enclosed chain of custody in accordance with applicable laboratory certifications. The laboratory results contained in this report specifically pertains to the sample(s) submitted.

Thank you for the opportunity to serve the needs of your company. If you have any questions, please feel free to contact me or Project.Management@atlglobal.com.

Sincerely,

Christine Caballero, Client Relations Manager
Christine.Caballero@atlglobal.com
Authorized to Release on 03/08/22 21:10 on Behalf of

Amy Leung
Laboratory Director

The test results in this report relate exclusively to the samples as received by the laboratory, and meet the requirements of the methodology under which they were reported; any exceptions are noted within the report and/ or case narrative.

The cover letter/ signature page and the case narrative are integral parts of this analytical report; the absence of any portion of the report renders the report invalid. This report shall not be reproduced except in full, and shall have the express written approval of the laboratory, and the original client firm to do so
.
The electronic signature on this report is signed by an authorized signatory of Advanced Technology Laboratories, and is intended to be legally binding as the equivalent of a handwritten signature.

19200 Von Karman Ave., Suite 800	Report To : Vinnie Robino / Josh Voss
Irvine , CA 92612	Reported : 03/08/2022

Notes and Definitions

S4	Surrogate was diluted out.
R	RPD value outside acceptance criteria. Calculation is based on raw values.
MO	Manufacturer omitted analyte within the stock standard.
M6	Matrix spike analyte was diluted out.
M2	Matrix spike recovery outside of acceptance limit due to possible matrix interference. The analytical batch was validated by the laboratory control sample.
L4	Laboratory Control Sample outside of control limit but within Marginal Exceedance (ME) limit.
L3	Laboratory control sample outside in-house established limits but within method criteria.
D10	Sample required dilution due to dark sample
ND	Analyte is not detected at or above the Practical Quantitation Limit (PQL). When client requests quantitation against MDL, analyte is not detected at or above the Method Detection Limit (MDL)
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
NR	Not Reported
RPD	Relative Percent Difference
CA2	CA-ELAP (CDPH)
OR1	OR-NELAP (OSPHL)

Notes:
(1) The reported MDL and PQL are based on prep ratio variation and analytical dilution.
(2) The suffix [2C] of specific analytes signifies that the reported result is taken from the instrument's second column.
(3) Results are wet unless otherwise specified.

Re: ATL Work Order Number : 2200285
Client Reference : Ontario Airport / 5925

Enclosed are the results for sample(s) received on March 02, 2022 by Advanced Technology Laboratories. The sample(s) are tested for the parameters as indicated on the enclosed chain of custody in accordance with applicable laboratory certifications. The laboratory results contained in this report specifically pertains to the sample(s) submitted.

Thank you for the opportunity to serve the needs of your company. If you have any questions, please feel free to contact me or Project.Management@atlglobal.com.

Sincerely,

Victoria Michel, Project Assistant
Victoria.Michel@atlglobal.com
Authorized to Release on 03/16/22 11:46 on Behalf of

Amy Leung
Laboratory Director

The test results in this report relate exclusively to the samples as received by the laboratory, and meet the requirements of the methodology under which they were reported; any exceptions are noted within the report and/ or case narrative.

The cover letter/ signature page and the case narrative are integral parts of this analytical report; the absence of any portion of the report renders the report invalid. This report shall not be reproduced except in full, and shall have the express written approval of the laboratory, and the original client firm to do so

.

The electronic signature on this report is signed by an authorized signatory of Advanced Technology Laboratories, and is intended to be legally binding as the equivalent of a handwritten signature.

Irvine , CA 92612	Reported : 03/16/2022

Notes and Definitions

S4	Surrogate was diluted out.
S1	Surrogate recovery was above laboratory acceptance limit. No associated target analyte was detected in the sample.
R	RPD value outside acceptance criteria. Calculation is based on raw values.
MO	Manufacturer omitted analyte within the stock standard.
M2	Matrix spike recovery outside of acceptance limit due to possible matrix interference. The analytical batch was validated by the laboratory control sample.
L5	Laboratory Control Sample high biased. Sample result/s was non-detect (ND) for the target analyte; therefore reanalysis was not necessary.
L4	Laboratory Control Sample outside of control limit but within Marginal Exceedance (ME) limit.
L3	Laboratory control sample outside in-house established limits but within method criteria.
D10	Sample required dilution due to dark sample
ND	Analyte is not detected at or above the Practical Quantitation Limit (PQL). When client requests quantitation against MDL, analyte is not detected at or above the Method Detection Limit (MDL)
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
NR	Not Reported
RPD	Relative Percent Difference
CA2	CA-ELAP (CDPH)
OR1	OR-NELAP (OSPHL)

Notes:
(1) The reported MDL and PQL are based on prep ratio variation and analytical dilution.
(2) The suffix [2C] of specific analytes signifies that the reported result is taken from the instrument's second column.
(3) Results are wet unless otherwise specified.

Re: ATL Work Order Number : 2200288
Client Reference : Ontario Airport / 5925

Enclosed are the results for sample(s) received on March 03, 2022 by Advanced Technology Laboratories. The sample(s) are tested for the parameters as indicated on the enclosed chain of custody in accordance with applicable laboratory certifications. The laboratory results contained in this report specifically pertains to the sample(s) submitted.

Thank you for the opportunity to serve the needs of your company. If you have any questions, please feel free to contact me or Project.Management@atlglobal.com.

Sincerely,

Victoria Michel, Project Assistant
Victoria.Michel@atlglobal.com
Authorized to Release on 05/12/22 15:23 on Behalf of

Amy Leung
Laboratory Director

The test results in this report relate exclusively to the samples as received by the laboratory, and meet the requirements of the methodology under which they were reported; any exceptions are noted within the report and/ or case narrative.

The cover letter/ signature page and the case narrative are integral parts of this analytical report; the absence of any portion of the report renders the report invalid. This report shall not be reproduced except in full, and shall have the express written approval of the laboratory, and the original client firm to do so

.

The electronic signature on this report is signed by an authorized signatory of Advanced Technology Laboratories, and is intended to be legally binding as the equivalent of a handwritten signature.

Certificate of Analysis

GSI Environmental, Inc.	Project Number : Ontario Airport / 5925
19200 Von Karman Ave., Suite 800	Report To : Vinnie Robino / Josh Voss
Irvine , CA 92612	Reported : 05/12/2022

Notes and Definitions

R	RPD value outside acceptance criteria. Calculation is based on raw values.
MO	Manufacturer omitted analyte within the stock standard.
M2	Matrix spike recovery outside of acceptance limit due to possible matrix interference. The analytical batch was validated by the laboratory control sample.
L5	Laboratory Control Sample high biased. Sample result/s was non-detect (ND) for the target analyte; therefore reanalysis was not necessary.
L4	Laboratory Control Sample outside of control limit but within Marginal Exceedance (ME) limit.
L3	Laboratory control sample outside in-house established limits but within method criteria.
ND	Analyte is not detected at or above the Practical Quantitation Limit (PQL). When client requests quantitation against MDL, analyte is not detected at or above the Method Detection Limit (MDL)
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
NR	Not Reported
RPD	Relative Percent Difference
CA2	CA-ELAP (CDPH)
OR1	OR-NELAP (OSPHL)

Notes:
(1) The reported MDL and PQL are based on prep ratio variation and analytical dilution.
(2) The suffix [2C] of specific analytes signifies that the reported result is taken from the instrument's second column.
(3) Results are wet unless otherwise specified.

Project: **Work Order 2200288**
Lab I.D.: **220307-9, -10**

Dear Mr. Ancheta:

The **analytical results** for the soil samples, received by our lab on March 7, 2022, are attached. The samples were received chilled, intact and accompanying chain of custody record.

Enviro-Chem appreciates the opportunity to provide you and your company this and other services. Please do not hesitate to call us if you have any questions.

Sincerely,

Curtis Desilets
Vice President

Pearl Wong
Quality Manager

This data package has been reviewed for technical correctness and completeness. Release of this data has been authorized by the Laboratory Manager or Manager's Designee, as verified by the above signature which applies to this PDS File as well as any associated electronic data deliverable files. The results contained in this report meet all requirements of ELAP and pertain only to those samples which were submitted for analysis. This report may be reproduced only in its entirety.

Re: ATL Work Order Number : 2200301
Client Reference : Ontario Airport / 5925

Enclosed are the results for sample(s) received on March 04, 2022 by Advanced Technology Laboratories. The sample(s) are tested for the parameters as indicated on the enclosed chain of custody in accordance with applicable laboratory certifications. The laboratory results contained in this report specifically pertains to the sample(s) submitted.

Thank you for the opportunity to serve the needs of your company. If you have any questions, please feel free to contact me or Project.Management@atlglobal.com.

Sincerely,

Victoria Michel, Project Assistant
Victoria.Michel@atlglobal.com
Authorized to Release on 05/12/22 15:39 on Behalf of

Amy Leung
Laboratory Director

The test results in this report relate exclusively to the samples as received by the laboratory, and meet the requirements of the methodology under which they were reported; any exceptions are noted within the report and/ or case narrative.

The cover letter/ signature page and the case narrative are integral parts of this analytical report; the absence of any portion of the report renders the report invalid. This report shall not be reproduced except in full, and shall have the express written approval of the laboratory, and the original client firm to do so

.

The electronic signature on this report is signed by an authorized signatory of Advanced Technology Laboratories, and is intended to be legally binding as the equivalent of a handwritten signature.

Certificate of Analysis

GSI Environmental, Inc.	Project Number : Ontario Airport / 5925
19200 Von Karman Ave., Suite 800	Report To : Vinnie Robino / Josh Voss
Irvine , CA 92612	Reported : 05/12/2022

Notes and Definitions

S10	Surrogate recovery was outside of laboratory acceptance limit due to possible matrix interference.
S1	Surrogate recovery was above laboratory acceptance limit. No associated target analyte was detected in the sample.
R	RPD value outside acceptance criteria. Calculation is based on raw values.
MO	Manufacturer omitted analyte within the stock standard.
M2	Matrix spike recovery outside of acceptance limit due to possible matrix interference. The analytical batch was validated by the laboratory control sample.
L5	Laboratory Control Sample high biased. Sample result/s was non-detect (ND) for the target analyte; therefore reanalysis was not necessary.
L3	Laboratory control sample outside in-house established limits but within method criteria.
B6	Associated method blank above PQL, analyte non-detected. Therefore, reanalysis is not necessary.
B	Analyte detected in the associated method blank above the PQL.
ND	Analyte is not detected at or above the Practical Quantitation Limit (PQL). When client requests quantitation against MDL, analyte is not detected at or above the Method Detection Limit (MDL)
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
NR	Not Reported
RPD	Relative Percent Difference
CA2	CA-ELAP (CDPH)
OR1	OR-NELAP (OSPHL)

Notes:
(1) The reported MDL and PQL are based on prep ratio variation and analytical dilution.
(2) The suffix [2C] of specific analytes signifies that the reported result is taken from the instrument's second column.
(3) Results are wet unless otherwise specified.

Project: **Work Order 2200301**
Lab I.D.: **220308-28**

Dear Mr. Ancheta:

The **analytical results** for the soil sample , received by our lab on March 8, 2022, are attached. The sample was received chilled, intact and accompanying chain of custody record.

Trace concentrations between the MDL and the PQL have been reported with a "J" flag indicator.

Enviro-Chem appreciates the opportunity to provide you and your company this and other services. Please do not hesitate to call us if you have any questions.

Sincerely,

Curtis Desilets
Vice President/Program Manager

Pearl Wong
Quality Manager

This data package has been reviewed for technical correctness and completeness. Release of this data has been authorized by the Laboratory Manager or Manager's Designee, as verified by the above signature which applies to this PDS File as well as any associated electronic data deliverable files. The results contained in this report meet all requirements of ELAP and pertain only to those samples which were submitted for analysis. This report may be reproduced only in its entirety.

Re: ATL Work Order Number : 2200307
Client Reference : Ontario Airport / 5925

Enclosed are the results for sample(s) received on March 07, 2022 by Advanced Technology Laboratories. The sample(s) are tested for the parameters as indicated on the enclosed chain of custody in accordance with applicable laboratory certifications. The laboratory results contained in this report specifically pertains to the sample(s) submitted.

Thank you for the opportunity to serve the needs of your company. If you have any questions, please feel free to contact me or Project.Management@atlglobal.com.

Sincerely,

Victoria Michel, Project Assistant
Victoria.Michel@atlglobal.com
Authorized to Release on 05/12/22 15:41 on Behalf of

Irvine , CA 92612	Reported : 05/12/2022

Notes and Definitions

S1	Surrogate recovery was above laboratory acceptance limit. No associated target analyte was detected in the sample.
R	RPD value outside acceptance criteria. Calculation is based on raw values.
MO	Manufacturer omitted analyte within the stock standard.
L5	Laboratory Control Sample high biased. Sample result/s was non-detect (ND) for the target analyte; therefore reanalysis was not necessary.
L3	Laboratory control sample outside in-house established limits but within method criteria.
ND	Analyte is not detected at or above the Practical Quantitation Limit (PQL). When client requests quantitation against MDL, analyte is not detected at or above the Method Detection Limit (MDL)
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
NR	Not Reported
RPD	Relative Percent Difference
CA2	CA-ELAP (CDPH)
OR1	OR-NELAP (OSPHL)

Notes:
(1) The reported MDL and PQL are based on prep ratio variation and analytical dilution.
(2) The suffix [2C] of specific analytes signifies that the reported result is taken from the instrument's second column.
(3) Results are wet unless otherwise specified.
