Subject: Woodside Avenue Improvement Project Initial Site Assessment
Woodside Avenue
Lakeside, California 92040

Dear Ms. Ching,

We are pleased to submit our Updated Initial Site Assessment Report for the Woodside Avenue Improvement Project in the unincorporated community of Lakeside, California. This report identifies hazardous materials release properties within the Project area and the significance of these releases to Project construction.

Respectfully submitted,

**THE BODHI GROUP, INC.**

## 1. INTRODUCTION

The Bodhi Group, Inc. (Bodhi Group) has completed an Initial Site Assessment (ISA) of the Woodside Avenue Improvement Project (Project). The Project area includes the Woodside Avenue Right-of-Way (ROW) between Marilla Drive and Chestnut Street and portions of adjacent properties, in the unincorporated community of Lakeside in San Diego County (Figure 1).

The Project proposes to improve pedestrian and bicycle facilities along portions of Woodside Avenue, to improve sidewalk infrastructure, and to increase pedestrian and bicycle safety. Infrastructure improvements include the following:

- New sidewalk construction.
- Reconstruction and installation of curb, gutter, and curb ramps to meet American Disabilities Act compliance regulations.
- Modifying lane striping
- Utilization of bicycle buffers, accessible bus stops, speed reduction and medians.

The Project will include acquisition of 1,100 square feet of ROW.

This study addresses the objectives of an ISA to identify potential or known hazardous materials, hazardous waste, and contamination in the Project area. The ISA was prepared in compliance with National Environmental Protection Act guidelines under the Comprehensive Environmental Review, Compensation, and Liability Act, Section VIII 'Hazards and Hazardous Materials' of Appendix G (Environmental Checklist Form) of the California Environmental Quality Act Statute and Guidelines, the County of San Diego Guidelines for Determining Significance of Hazardous Materials and Existing Contamination, and closely follows the American Society for Testing and Materials (ASTM) standard for preparing Phase I Environmental Site Assessment (ESA) reports, discussed below. Specifically, this report was prepared in accordance with ASTM E1527-13 (ASTM, 2013).

The objective of this ISA is to document, to the extent feasible, Recognized Environmental Conditions (RECs). RECs are defined by ASTM as "the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment." De minimis conditions are not RECs as they do not present a threat to human health or the environment and generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

Consistent with the requirements of a Phase I ESA and ISA, this study identified locations (also referred to as properties in this report) in or adjacent to the Project area where hazardous chemicals and petroleum have been used, stored, conveyed, or dispensed, and properties where there have been documented spills or unauthorized releases of hazardous chemicals or petroleum to the subsurface.

Based on the type of hazardous materials released, toxicity and persistence of the chemicals involved, location, depths of affected media, residual contamination, and date of release, properties in the Project area have been screened and ranked based on the potential of the residual contamination to have adverse effects to the proposed Project. Possible mitigation measures have also been listed in Table 4.

The Bodhi Group conducted a preliminary field visit to view select properties from public access points (streets, sidewalks) identified during the database research. However, since the hazards at these properties are subsurface, the field visit did not provide further information other than confirmation of the presence of physical features or the presence of businesses adjacent to the Project area.

Intrusive investigation, including the collection and analysis of subsurface media samples, was beyond the scope of this evaluation. Intrusive investigation (referred to as a Phase II ESA) will confirm or revise the findings of this study of the presence of subsurface hazardous materials and petroleum constituents.

### 1.1. Significant Assumptions

Documentation and data referred to in the preparation of this assessment, are assumed to be complete and correct and have been used and referenced with the understanding that the Bodhi Group assumes no responsibility or liability for their accuracy. The conclusions contained herein are based upon such information and documentation as they existed on the date of this report. Because the Project area and subsurface conditions may change significantly over time and additional data may become available, conclusions drawn in this report are limited to current conditions and may not be relied upon on a significantly later date or if changes have occurred in the Project area that were not known at the time of report preparation.

### 1.2. Limitations and Exceptions

Reasonable efforts were made to identify properties of potential environmental concern. “Reasonable efforts” are limited to information gained from recorded database information and regulatory records readily accessible to the public. Such methods may not identify contaminant sources that are not listed in information readily accessible to the public. While some observations and discussion in this report may address conditions and/or operations that may be regulated, the regulatory compliance of those conditions and/or operations is outside the scope of this evaluation. Nothing in this report constitutes a legal opinion or legal advice.

This evaluation does not address asbestos-containing materials, radon, lead in drinking water, wetlands, protected environments and habitat, threatened or endangered species, industrial hygiene concerns, human health risk assessment, indoor air quality, high voltage power lines, geotechnical conditions, cultural and historical resources, health and safety, and mold. Monetary valuation was not performed for this assessment. In some instances, we may provide opinion on the potential for adverse health effects from the intrusion of volatile chemicals from the subsurface into indoor air.

### 1.3. User Reliance

This report was prepared for the use solely and exclusively by Helix Environmental Planning, Inc., the County of San Diego, and the California Department of Transportation. The report is not for the use or benefit of, nor may it be relied upon by, any other person or entity for any purpose without the advance written consent of the Bodhi Group. In the preparation of this report, the Bodhi Group has used the degree of care and skill ordinarily exercised by a reasonably prudent environmental professional in the same community in the same time frame given the same or similar facts and circumstances.

# 2. PROJECT AREA DESCRIPTION

## 2.1. Location and Description

The Project area is located along Woodside Avenue between Manilla Drive and Chestnut Street in the unincorporated community of Lakeside in San Diego County. The Project area is south of the San Vicente Freeway (Highway 67), shown on Figure 1. The west portion of the Project area is located in Township 15 south, Range 1 west, and Section 24 and the east portion is located in Township 15 south, Range 1 east, and Section 19 (EarthPoint, 2020). Land use in the Project area and vicinity is mixed and includes residential, commercial, and vacant land. The elevation of the Project area ranges from approximately 375 feet North American Vertical Datum of 1988 in feet (NAVD 88) in the west to approximately 420 feet NAVD 88 in the east (USGS, 2018).

## 2.2. Project Area Geology and Regional Hydrogeology

Based on a review of the Preliminary Geologic Map of the El Cajon 30' x 60' Quadrangle, the Site is underlain by Young alluvium and Granitoid rocks. Young alluvium is described as sand, silt, and gravel in modern streambeds and washes. Granitoid rocks are described as undivided tonalite and granodiorite (Todd, 2004).

The Site is located within both the Santee Hydrologic Subarea (HSA) and the Coches HSA of the Lower San Diego Hydrologic Area, of the San Diego Hydrologic Unit. The beneficial uses of groundwater in the Santee and Coches HSAs include municipal, industrial, agricultural, and processing supply (Coches HSA has potential beneficial use for processing supply; RWQCB, 1994). Because the Santee and Coches HSAs have existing beneficial uses for municipal supply, the water quality should meet California Code of Regulations Maximum Contaminant Levels (MCLs) for drinking water requirements (SWRCB, 2018) at properties in the Project area within this hydrologic basin (RWQCB, 1994).

Based on a review of previous environmental investigation reports, the groundwater in the Project area is estimated to flow to the north/northwest (EnviroApplications, 2020, ERM, 2006). The depth to groundwater data published in State Water Resources Control Board-managed GeoTracker website (Geotracker), reportedly ranged from approximately 23 feet below ground surface (bgs) in the west portion of the site (11719 Woodside Avenue, reported in 2006) to approximately 28 to 30 feet in the central portion of the site (12106 Woodside Avenue, reported in 2019). The proposed construction in the Project area includes excavation from the surface to a maximum depth of 12 feet bgs. Accordingly, work done in the Project area is not expected to encounter groundwater.

## 3. ENVIRONMENTAL DATABASE AND HISTORICAL REVIEW

The following sections summarize the results of searches of federal, state, and local databases by Environmental Database Resources, LLC (EDR) and historical information including aerial photographs, topographic maps, and city directories (EDR, 2020a-e).

### 3.1. Standard Environmental Record Sources

The environmental databases searched ("standard environmental record searches"), corresponding search radii, and properties within specific search radii and identified on environmental databases are listed in Table 1 and provided in the Environmental Database Report in Appendix B. Select properties with environmental conditions that could adversely affect the Project were analyzed and the results are summarized in Section 8 of this report.

**Table 1 – Standard Environmental Databases**

| Database Name | Search Radius (Mile) | Number of Mapped Listings |
|---|---|---|
| **FEDERAL DATABASES** | | |
| National Priority List (NPL) | 1.0 | 0 |
| Proposed NPL | 1.0 | 0 |
| NPL Liens | 1.0 | 0 |

| DTSC's HAZNET | 0.001 | 75 |
| Historical Cortese List (DTSC and CalEPA) | 0.5 | 16 |

### 3.2. Historical Aerial Photographs

The Bodhi Group reviewed aerial photographs from 1949, 1953, 1964, 1966, 1970, 1979, 1985, 1989, 1994, 1996, 2005, 2009, 2012, and 2016 (EDR, 2020a). The aerial photographs reviewed are included in Appendix B.

In the 1949 and 1953 aerial photographs, Woodside Avenue appears to be in its current configuration through the center of the Project area. The majority of the properties north of Woodside Avenue are generally agricultural with few associated structures (homes and/or barns) and a cluster of residential properties are located in the northeastern portion. Properties south of Woodside Avenue appear to be a mixture of undeveloped, agricultural, and residential use. Portions of cross streets (Manilla Drive, Riverview Parkway, Winter Gardens Boulevard, Cactus Street, and Maine Avenue) are located along the southern side of Woodside Avenue but do not yet extend north of Woodside Avenue, with the exception of Maine Avenue. The area surrounding the Project area appears to be undeveloped and agricultural land (including orchards) with some residences. A lake and park are located adjacent to the east of the Project area and a river appears to be located to the north.

In the 1964 and 1966 aerial photographs, the Project area and vicinity appear to be similar to the previous photographs with additional residential development and commercial properties. A school is observed in the western portion of the Project area in a similar configuration to present-day Lakeside Middle School.

The 1970 aerial photograph appears generally similar to the previous photographs. California State Route 67 (CA SR 67) appears to be under construction north of the Project area.

In the 1979 and 1985 photographs, the majority of the Project area is developed with commercial and residential properties with a few vacant lots. Agricultural properties are no longer observed within the

Project area. Cross streets including Winter Gardens Boulevard, Riverview Avenue, and Channel Avenue appear to be in their current configurations. The area surrounding the Project area is generally developed with residences and commercial properties. Some agricultural properties remain, although fewer than in previous photographs and the orchards are no longer observed. Construction of CA SR 67 appears to be complete and in its current configuration north of the Project area.

By 1989 the Project area and vicinity appear to be developed with commercial and residential properties, with some open space parks and vacant land in the vicinity. This is consistent with the present-day configurations of the Project area and the surrounding properties.

### 3.3. Historical Topographic Maps

The Bodhi Group reviewed historical topographic maps for the years 1893, 1901, 1903, 1939, 1942, 1947, 1948, 1955, 1967, 1975, 1996, and 2012 (EDR, 2020b). The topographic maps reviewed are included in Appendix B.

Information collected during the topographic map review was generally consistent with the aerial photograph review. The following describes any discrepancies or additional information observed during the topographic map review.

- Railroad tracks are depicted north of the Project area in topographic maps for years 1893 through 1948 and are no longer depicted after 1948.
- Woodside Avenue appears to be in its current configuration as early as 1939.
- An intermittent river is depicted north of the railroad tracks in topographic maps from 1893 through 2012 and is labeled “San Diego River” beginning in the 1939 map.
- The lake adjacent to the east of the Project area is depicted as “Lindo Lake” since 1893.
- A gasoline tank is depicted approximately 0.5 mile north of the east portion of the Project area in the 1955 map.
- A sewage disposal basin is depicted approximately 0.5 mile west of the Project area in the 1967 map.

### 3.4. Reverse City Directories

EDR conducted a search of available city directory data for the Project area (EDR, 2018c). The addresses of properties that used or stored chemicals or petroleum products (based on the listed name of the business) were cross-referenced against other sources (regulatory review) and properties that present a potential concern to the Project scope are included in Section 8. A copy of the City Directory Abstract is provided in Appendix B.

### 3.5. Sanborn Fire Insurance Maps

There is no Sanborn® Map coverage for the Project area (EDR, 2020d).

## 4. PROJECT AREA RECONAISSANCE

The objective of the Site reconnaissance was to obtain information indicating potential environmental concern to the Project scope in connection with current operations with the Project area. Ms. Brianne Cortright of the Bodhi Group performed the Site reconnaissance on June 2, 2020. Properties of potential concern are displayed in Figure 3 and photographic documentation is provided in Appendix D.

The Project area reconnaissance consisted of observing the Project area from public ROW (streets and sidewalks). The observations noted during the Project area reconnaissance, based on common observations relative to potential environmental concerns, are listed in Table 2 below.

**Table 2 – Project Area Observations**

| Conditions | Not Observed or Noted | Observed or Noted | Significant Concern? |
|---|---|---|---|
| Hazardous Substances/Petroleum Products | | X | No – Multiple gasoline service stations and auto mechanic shops are located within the Project area; while petroleum products are stored and dispensed, this does not directly present a concern to the Project. |
| Waste Generation/Storage/Disposal | | X | No – Multiple covered dumpsters (waste storage/disposal) associated with businesses were observed throughout the project area. The waste appears to be properly contained. |
| ASTs | | X | No- ASTs were observed at some gasoline service stations and appeared to be in good condition. |
| Potential Evidence of USTs | X | | No- Although not directly observed, the presence of multiple gasoline stations indicates likelihood of associated USTs; however, indications of leaks or releases were not observed. |
| Potential Polychlorinated Biphenyl (PCB)-Containing Equipment | | X | No – Transformers were observed and may or may not contain PCBs. Transformers were observed to be in good condition. |
| Chemical/Petroleum Odors | | X | No – Petroleum odors are common at gas stations, where petroleum products are stored and dispensed. |

| Conditions | Not Observed or Noted | Observed or Noted | Significant Concern? |
|---|---|---|---|
| Suspect Concrete Patches/Pads | | X | No –Patches were observed throughout roads, sidewalks, and parking areas but appear to be a result of general maintenance or abandoned monitoring wells. |
| Pools of Liquid | X | | Not observed |
| Sewage Discharge Pipes | X | | Not observed |
| Floor Drains/Sumps | X | | Not observed |
| Hydraulic Elevator | X | | Not observed |
| Wells | | X | No - Monitoring well vaults were observed in some ROW and parking areas; however, based on information from ongoing and closed investigations, this condition is not an additional concern to the Project beyond properties outlined in Section 8. |
| Drums | X | | Not observed |
| Unidentified Substance Containers | X | | Not observed |
| Stained Soil or Pavement | | X | No – Minor stains on roadways and parking areas were observed and appear to be a result of vehicle traffic and parking. |
| Stressed Vegetation | X | | Not observed |
| Pits, Ponds, or Lagoons | X | | Not observed |
| Wastewater Discharge Disposal Systems | X | | Not observed |
| Septic Systems/Cesspools | X | | Not observed |
| Municipal Solid Waste Disposal Areas | X | | Not observed |
| Other Conditions | | X | A small pile of soil and gravel was observed in the vacant lot on the northwest portion of the Project area. The soil did not appear to be stained or odorous; however, if the source of the soil is not known, further evaluation may be needed. |

The observations were limited to the Project area and did not cover adjacent properties. Environmental conditions of significant concern at locations in and near the Project area that may result in potential adverse effects to the Project are discussed in Section 8.

## 5. REGULATORY RECORDS REVIEW

Properties regulated for unauthorized releases of chemicals were identified through a search Geotracker, the California Environmental Protection Agency Department of Toxic Substances Control (DTSC)-managed EnviroStor website (Envirostor), San Diego County Department of Environmental Health (DEH) file review, and EDR reports. The EDR reports are included as Appendix B. Select records from sources listed above are included in Appendix C.

# 6. TYPES OF HAZARDOUS CHEMICALS AND EXPOSURE PATHWAYS

Past and present land use in the Project area (historical uses summarized in Sections 3 and 4), including agricultural and commercial, may have resulted in releases of hazardous chemicals to the environment. In addition, spills, and leaks of fuel from locations where fuel was stored and dispensed have impacted the subsurface.

Releases of these hazardous chemicals can leave residual contamination in soil, soil vapor, and groundwater within the Project area. These chemicals are classified based on their properties, persistence in the environment, and general adverse effects, as described below.

## 6.1. Total Petroleum Hydrocarbons

Total petroleum hydrocarbons (TPH) is a term used to describe a large family of chemical compounds that originate from crude oil and are used to make petroleum and other industrial products. Benzene, toluene, ethylbenzene, naphthalene, and xylenes are part of the more volatile fractions of TPH (gasoline mixture) and polynuclear aromatic hydrocarbons (PAHs) (e.g., benzo[a]pyrene) are part of the less volatile fractions (diesel and heavier mixtures). Both groups, volatile organic compounds (VOCs) and fractions that are non-volatile, can have adverse health effects based on the type of chemical, routes of exposure (inhalation, direct contact, ingestion), and the mass of chemical available for exposure.

Relative to other classes of hazardous substances, petroleum hydrocarbons will degrade in aerobic conditions (in the presence of oxygen). If present in significant quantities in groundwater, TPH can exist in its own phase (as product) and will float on the surface of the water table (EPA, 2012).

The most common pathways for exposure to the volatile fraction of TPH is inhalation, followed by direct contact (if the pathways of exposure are complete). The most common pathways of exposure to the non-volatile fractions of TPH is direct contact and inhalation of TPH-impacted dust particles generated from areas of soil disturbance.

## 6.2. Chlorinated Volatile Organic Compounds

Chlorinated volatile organic compounds (CVOCs) were commonly used for cleaning and degreasing and were associated with dry cleaning, manufacturing, automobile maintenance, and at former military facilities. Some common CVOCs in the environment are tetrachloroethylene (PCE), trichloroethylene (TCE), and their breakdown products, such as cis-1,2-dichlorethene (DCE), trans 1,2 DCE, and vinyl chloride. CVOCs are generally more persistent and can remain in the environment (soil, groundwater, soil vapor) for extended periods of time. Gas phase CVOCs can migrate into indoor air and enclosed spaces from soil vapor and result in adverse health effects from inhalation exposure (EPA, 2012).

## 7. EVAULATION AND CLASSIFICATION OF HAZARDOUS MATERIALS

Based on the Project area history, and review of regulatory records, online databases, and the database report, sources of contamination within and near the Project area with the potential for adverse effects on Project construction and/or land use changes are listed below.

- Unauthorized releases of petroleum from storage systems such as underground storage tanks (USTs) and aboveground storage tanks (ASTs), which can result in impacts from petroleum hydrocarbons and can contain chemicals of concern in the volatile and non-volatile fractions;
- Unauthorized releases of petroleum products, waste oil, and solvents from vehicle/equipment maintenance and storage and dry-cleaning operations that can result in impacts from petroleum hydrocarbons, CVOCs, and metals;
- Unauthorized releases of chemicals from industrial processes,
- Lead in shallow soil from leaded gasoline vehicle emissions,
- Organochlorine pesticides (OCPs) in shallow soil from former agricultural use.

The forty (40) properties identified by EDR, EnviroStor, and Geotracker were screened to twenty-four (24) properties and two (2) common conditions, that could result in potential adverse effects to the Project. The properties and conditions were identified based on at least one of the criteria listed below and are discussed in detail in Section 8.

- Properties with documented storage and use of hazardous chemicals in or near the Project area.
- Properties with unauthorized releases of hazardous chemicals or petroleum in or near the Project area.
- Properties with residual concentrations of chemicals in the subsurface in or near the Project area.
- Properties outside the Project area but where chemicals in the subsurface have the potential to migrate and affect Project construction.
- Properties with an open case regulatory status.

The remaining properties that were evaluated for this study from EDR reports and regulatory records review and were not included in Section 8 because they did not meet any of the above criteria. The degree of potential adverse effects differ based on the specifics of each release case and are influenced by the type and quantity of chemicals released (i.e., volatility, solubility, toxicity, persistence), affected media (i.e., soil, groundwater, soil gas), source area concentrations, physical characteristics of the site such as geology, preferential pathways for contaminant migration, and whether the chemicals have effectively attenuated or have been actively remediated to levels that are less than significant.

The three potentially complete pathways of exposure of contaminants to construction workers and/or the public from Project-related activities are listed below.

- Direct exposure of construction workers to chemicals in soil through dermal contact of contaminated surface soil
- Inhalation exposure of construction workers and the public to potential chemicals in dust generated by Project construction. Dust is an irritant on its own, but could also carry contaminants, such as lead, asbestos, PAHs, PCBs, and pesticides (ATSDR, 2001; USEPA, 2019).

- Inhalation exposure of construction workers and the public to VOCs that may volatilize from impacted soil and groundwater in the Project area or from adjacent contaminated properties.

Based on an evaluation of the above criteria and our experience, the properties were assigned a hazard ranking from 1 to 5, with 5 being the highest hazard and 1, the lowest. The properties are discussed in Section 8, with a summary of the unauthorized release, residual contamination, degree of potential adverse effects, and hazard ranking. The properties are illustrated on Figure 2.

**Table 3 – Hazard Ranking Criteria**

| Hazard Rank | Description | Consequences |
|---|---|---|
| 5 | Potentially acute threat to construction workers or public exposed to contaminants during Project construction. | Immediate action needed to mitigate threat. |
| 4 | Contaminated soil is documented remaining at the property and concentrations may be at levels hazardous to workers and the public. | Subsurface investigation may be needed to assess actual risk prior to Project construction in locations where there is a high probability of residual contamination from prior releases. Mitigation measures may be needed if investigation indicates potential hazard to workers or the public. |
| 3 | Potentially significant risk to workers, the public, or the environment due to residual contaminants in soil, soil gas, and/or groundwater | Environmental monitoring of excavated soil for indications of residual contamination (soil discoloration or odors) is recommended during construction. Excavated soil may require special handling and landfill disposal. Environmental monitoring for VOCs using a PID is recommended in the worker's breathing zone. |
| 2 | Low apparent significant risk to human health or the environment. VOCs may migrate in soil gas or groundwater impacting worker's health. | Environmental monitoring for VOCs using a PID is recommended in the worker's breathing zone |
| 1 | De Minimis conditions. | No action or special management needed. |

## 8. HAZARD EVALUATION

Twenty-four (24) properties were ranked from 1 to 5 in or near the Project area. No properties were ranked 5. Potential mitigation measures are listed below based on the probability of residual contamination, contaminated medium, pathways of exposure, and the hazard ranking criteria discussed in Table 3 above. The locations of properties discussed below with respect to proposed Project work are depicted on Figures 2 through 6.

**Table 4 – Hazard Summary and Mitigation Measures**

| **Mitigation Measures** | **Medium Affected** | | | **Types of Hazardous Chemical** | | |
|---|---|---|---|---|---|---|
| | **Ground water** | **Soil** | **Soil Vapor** | Non-Volatile fraction of TPH | Petroleum VOCs | CVOCs |
| Investigation of residual contamination in soil where there is a high probability of encountering such contamination during Project construction. | | ✓ | | ✓ | ✓ | ✓ |
| Preparation of health and safety plans (HSP) for monitoring and controlling worker and public exposure to residual contamination and soil management plan (SMP) for identification, management, and disposal of waste generated from Project construction. | ✓ | ✓ | ✓ | ✓ | ✓ | ✓ |
| VOC monitoring in worker's breathing zone during construction in accordance with prepared Project health and safety plan. | ✓ | ✓ | ✓ | | ✓ | ✓ |

To reiterate the ranking of properties discussed in Section 7:

- Properties with a high probability of encountering residual contamination for which further investigation is recommended prior to Project construction are assigned a ranking of 4.
- Properties with a relatively lower probability of encountering contamination, but health and safety monitoring and controls and monitoring for contaminated soil are recommended in accordance with an SMP as a precautionary measure are assigned a ranking of 3.
- Properties where there is no likelihood of encountering contamination, but air monitoring for VOCs are recommended in trenches and excavations, in which VOCs can accumulate and impact worker's breathing zone (i.e., at depths greater than 4 feet) in accordance with an HSP as a precautionary measure are assigned a ranking of 2.
- Properties where the residual contamination, if present, does not affect Project construction are assigned a ranking of 1.

### 8.1. Action Cylinder Heads (11903 Woodside Avenue, Map ID No. 1)

This property is associated with one closed unauthorized release case. The case was closed in 1989 and additional details are not available. The property is located approximately 75 feet from any proposed subsurface disturbance.

Based on the distance from proposed redevelopment, depth of proposed excavation (18 inches), and the case status (closed), any hazardous materials, if present, from prior releases, are not likely to result in adverse effects to the Project. A hazard ranking of 1 is assigned (no adverse effects).

### 8.2. Circle K #2983 (9755 Maine Avenue, Map ID No. 2)

The property has one closed case (H20535-001) for a gasoline release into soil and groundwater discovered during the removal of two 10,000-gallon USTs in 1993. According to the closure report, the case was closed in 1999 for commercial use with TPH in the gasoline range (TPH-g) and Benzene, Toluene, Ethylbenzene, and xylenes (BTEX) remaining in groundwater (DEH, 1999a). The exact location of the release is unknown. Soil excavation is planned along the northern and western property boundaries to a maximum depth of 2.5 feet bgs.

Although the exact location of residual soil and groundwater contamination on the property is not known, it is unlikely to be encountered during Project construction because the maximum depth of excavation is 2.5 feet (previous investigations have indicated depth to groundwater is 23 feet) and it is unlikely former USTs were located along the property boundaries adjacent to roadways. However, the type of release (gasoline) can result in volatilization of VOCs from residual contamination in soil and/or groundwater and can migrate and accumulate in trenches resulting in potential worker exposure. For this reason, a hazard ranking of 2 is assigned.

### 8.3. David B. & Yael Alpert (9806 Maine Avenue, Map ID No. 3)

The property is associated with one closed unauthorized release case (H19134-001). At the time of case closure (2011) the property was occupied by an auto repair facility and sales lot. During removal of nine USTs between 1993 and 1994, impacts to soil and groundwater were discovered. According to the closure report, TPH-g, TPH-d, and BTEX remain in soil and groundwater (DEH, 2011). Areas of subsurface disturbance are located adjacent to the property; however, according to figures available on Geotracker, the former USTs were located more than 40 feet from the proposed Project excavation.

Based on the distance of the contaminant sources (former USTs) to the Project excavation, it is unlikely that residual contamination in soil will be encountered; however, based on the depth of the proposed work (2.5 feet), there is a potential for VOCs in soil gas to migrate and accumulate in the excavation. For this reason, a hazard ranking of 2 is assigned.

### 8.4. H & L Co. (12160 Woodside Ave., Map ID No. 4)

This property is associated with one closed unauthorized release case (H20546-001) affecting soil only. The case was opened in March 1988 and closed in June of the same year, indicating the release was likely minor. Subsurface soil disturbance is proposed within the property and the exact location of the release into soil is unknown.

Project work consisting of driveway, sidewalk, and curb and gutter improvement (maximum excavation depth of 18 inches) is proposed along the southern property boundary. Based on the depth of excavation

(18 inches), VOCs volatilizing from contaminated soil will not accumulate and adversely affect workers. Although the residual contamination is minor, it is unlikely that contaminated soil will be encountered during redevelopment. For these reasons, a hazard ranking of 1 is assigned.

### 8.5. Jack E Childress Concrete Con (13685 Highway 8 Business, Map ID No. 5)

This property is located approximately 75 feet from any proposed Project work and is associated with one unauthorized released case (H21429-001). The case was opened and closed in 1987 and additional details are not available. The short duration of case administration indicates that it was likely a minor release.

Based on the distance from the area of proposed Project work, the minor nature of the release, and the depth of the proposed closest Project excavation (18 inches), any residual contamination, if present, at the property will not likely result in adverse effects to the Project. For these reasons, a hazard ranking of 1 is assigned.

### 8.6. Lakeside Chevron (12402 Woodside Avenue, Map ID No. 6)

The property is associated with two closed unauthorized release cases (H05711-001, and -002). The first case was closed in 1987 and details of the medium affected or contaminant released are not available on Geotracker. Case -002 was closed in 2000 and is related to a gasoline release into soil and groundwater discovered during removal of multiple USTs in 1994. According to the closure report, TPH-g and BTEX remain in soil and groundwater; however, there is no information on the location of the gasoline release (DEH, 2000).

Project excavation is proposed in the ROW adjacent to the property to a maximum depth of 6 feet. Because the excavation is outside the property boundary, residual soil contamination will likely not be encountered. However, VOCs volatilizing from residual contamination on the property can migrate and accumulate in trenches resulting in potential worker exposure. For this reason, a hazard ranking of 2 is assigned.

### 8.7. Lakeside Fire Protection District (14008 Highway 8 Business, Map ID No. 7)

This property is located approximately 75 feet from any proposed soil disturbance and is associated with a closed unauthorized release case (H20224-001) of gasoline into soil. According to the closure report, a release was discovered in soil during the removal of two USTs in 1995 and impacted soil was removed but then backfilled into the excavation (DEH, 1996). Low levels of TPH-d reportedly remain in soil.

Based on the distance of the property to areas of Project subsurface work (75 feet), the medium affected (soil only), and the depth of the closest excavation (18 inches), residual contamination at the property will not likely affect the Project. For these reasons, a hazard ranking of 1 is assigned.

### 8.8. Lakeside Motors (11719 Woodside Avenue, Map ID No. 8)

The property is associated with three closed unauthorized release cases (H35322-001, -002, and -003). The first case was related to a diesel release in soil and was closed in 1995 Additional details were not available. The second case (-002) was opened in 2004 after a diesel release was discovered during the removal of two USTs. The majority of diesel-impacted soil was removed, and groundwater wells installed and sampled indicated that groundwater was not affected. The case was closed in 2006. The third case (-003) was opened after buried waste including paint containers, oil filters, and stained soil was discovered on the property. The waste and stained soil was removed, and the case was closed in 2006. Project

subsurface work is proposed along the northern boundary of the property and adjacent ROW. According to figures available on Geotracker, the former USTs were located approximately 240 feet south of areas of proposed Project excavation. The exact location of the buried waste associated with case -003 is unknown, however the confirmation sampling included in the closure report indicate soil met cleanup levels at the time of closure.

Based on the medium affected (soil) and the type of release (diesel, which has less volatility) and the distance of the former UST to areas of proposed Project work, any remaining impacts from the closed cases, if present, are unlikely to have adverse effects to the Project. A hazard ranking of 1 is assigned.

### 8.9. Lakeside Texaco (12106 Woodside Avenue, Map ID No. 9)

The property is associated with one closed (H03147-001) and one open unauthorized release case (-002). Case -001 was opened in 1990 after impacted soil containing high levels of TPH was discovered in the area of former USTs. The first case was consolidated with case -002. Case -002 was opened in 1999 as a result of a release of gasoline and related contaminants to soil, soil vapor, and groundwater. Multiple groundwater monitoring wells were installed and, according to Geotracker, a vapor extraction system operated between 1999 and 2010 and an air sparge operated between 2004 and 2014. In 2000, a hydraulic barrier system was installed to protect a nearby public water supply system (approximately 1,800 feet west/northwest) from a methyl tertiary butyl ether (MTBE) groundwater plume.

In 2018, soil samples were collected to a maximum depth of 10 feet bgs at the property near the station building and analyzed for residual contamination (TPH, BTEX, and PAHs). Residual contamination was not detected. According to the most recent groundwater sampling report (EnviroApplications, 2020), the TPH-g and MTBE plumes at the property are stable (i.e., not migrating). The report indicates that the groundwater gradient is to the north/northwest and depth to groundwater levels range from approximately 25 to approximately 30 feet.

Project subsurface disturbance is proposed in the southern property boundary and adjacent ROW. According to figures available on Geotracker, the groundwater plumes are located approximately 100 feet north and upgradient of the proposed Project work and residual contamination in soil is not anticipated to be encountered. However, because of the depth of excavation (2.5 feet), there is a potential for VOCs volatilizing from contaminated groundwater to accumulate in trenches and may adversely affect workers. For this reason, a hazard ranking of 2 is assigned.

### 8.10. Lakeside Union School District (12335 Woodside Avenue, Map ID No. 10)

The property is currently owned and occupied by the Lakeside Union School District and is associated with multiple closed unauthorized release cases (H03112-001 through -003). Case -001 is related to impacts to soil from removal of one 1,000-gallon gasoline UST in 1995. Case -002 and -003 list the property as a Formerly Used Defense Site (FUDS). According to the FUDs information system (https://www.usace.army.mil/Missions/Environmental/Formerly-Used-Defense-Sites/), the warehouse at the property was formerly a World War II Army Site. A portion of the property, under the District's use, was used for engine cleaning and refueling until 1995 when all related activities were relocated to a new location on Marilla Drive. According to the FUDS information system, in addition to the 1,000-gallon UST removed in 1995, containment loss of oil/water from a sump pump was observed in 1988 and the

facility was associated with multiple inspection violations (details were not listed). Regulatory site closure was granted in 1990.

Project subsurface disturbance is proposed in the adjacent ROW. Because the excavation is outside the property boundary, residual soil contamination will likely not be encountered. However, there is a potential for VOCs volatilizing from residual contamination to accumulate in trenches (up to 2.5 feet deep for traffic conduits), adversely affecting workers. For this reason, a hazard ranking of 2 is assigned.

### 8.11. Lakeside Village Center (12328 Woodside Avenue, Map ID No. 11)

The property has one closed Voluntary Assistance Program (VAP) case on file. The case was opened after a Phase I Environmental Site Assessment identified areas of concern related to prior use as an auto repair station. Soil, soil gas, and groundwater samples were collected and analyzed in 2001. The closure report states the sample analysis revealed less than significant concentrations of petroleum and VOCs in soil and groundwater and low levels of VOCs in soil gas (DEH, 2002). The case was closed in 2002.

Project work proposed along the south and southeast property boundaries includes excavation for sidewalk, curb and gutter to a depth of approximately 18 inches, and small 6-foot-deep excavations are proposed to the southwest of the property for stormdrain infrastructure. There is a potential for VOCs in soil gas to accumulate in the excavations. For this reason, hazard ranking of 2 is assigned.

### 8.12. My Fuel (9774 Maine Avenue, Map ID No. 12)

The property is associated with one closed unauthorized release case (H03806-001). According to the closure report available on Geotracker, a release of gasoline and diesel was discovered during the removal of five USTs and associated piping in 1989 impacting soil and groundwater (DEH, 1998a). According to reports on file with the DEH, the former tanks were located in the northeast portion of the property. Liquid phase hydrocarbons (free product) were reported in two groundwater monitoring wells and approximately 2,290 tons of impacted soil was removed and disposed of. According to the closure report, approximately 2,000 cubic yards of impacted soil with a maximum concentration of 7,529 milligrams per kilogram, remained at the property and beneath the adjacent ROW at the time of closure (1998). The report also states a plume of dissolved benzene extends approximately 90 feet northwest of the property in the direction of a water supply well. Depth to groundwater at the property at the time of case closure was reported at approximately 21 feet bgs. A human health risk assessment indicated no excess risk to occupants of the existing building from residual contamination. The case was closed in 1998.

Project work proposed in the ROW adjacent to the north and northeast of the property consists of excavation for traffic conduit and loop detector, sidewalk, curb, and gutter to a depth of 2.5 feet. Because Project excavations are proposed in the area where contaminated soil reportedly remains (northwest portion of the property and adjacent ROW), there is potential to encounter residual contamination in soil. For this reason, additional investigation is recommended to confirm the presence and degree of contamination at the locations of proposed work and a hazard ranking of 4 is assigned.

### 8.13. Prestige Stations, Inc #9760 (12109 Woodside Avenue, Map ID No. 13)

The property is associated with two unauthorized release cases (H05359-001 and -002). The first case was opened and closed in January 1987 and details are not available; however, the short duration indicates the release was likely minor. The second case was opened following removal of four gasoline USTs.

According to figures available on Geotracker, the USTs were located in the southern portion of the property. Assessment activities identified free product at the site with a maximum thickness of 3 feet. A dual-phase extraction system operated at the property between 2001 and 2007. The last groundwater monitoring and sampling event at the property, conducted in November 2009, indicated that the primary contaminants (benzene and MTBE) were present at maximum concentrations of 3.8 and 643 micrograms per liter, respectively, which exceeded their respective primary MCLs at the time. The investigation report concluded that dissolved-phase contaminants appear to be limited to the property boundaries and are stable and that existing environmental conditions are protective of human health and the environment (Wayne Perry, Inc., 2010). The DEH concurred and closed the case in 2010.

Project excavation is proposed along the northern and northwestern property boundaries, to a maximum depth of 2.5 feet and borings for traffic signals to 12 feet bgs, downgradient from the former release. Groundwater was measured at a minimum depth of 26.5 feet bgs during the most recent groundwater sampling event (2009) and is not anticipated to be encountered during Project construction. Because Project excavation is proposed along the property boundaries and not in the vicinity of the former USTs, residual contaminated soil is unlikely to be encountered; however, there is potential for VOCs volatilizing from contaminated soil and/or groundwater to accumulate in the excavations and adversely affect workers. For this reason, a hazard ranking of 2 is assigned.

### 8.14. Shell Service (12087 Woodside Avenue, Map ID No. 14)

The property is associated with one closed unauthorized release case. The case was opened in 2003 after groundwater monitoring data was reviewed to investigate MTBE detections in nearby public supply wells. In 2006, five USTs were removed from the property and approximately 168 cubic yards of soil was excavated from the former UST area. Confirmation sampling indicated non-detect to trace concentrations of TPH and VOCs remained after excavation. Elevated concentrations of MTBE were detected in one well, located cross gradient to the former USTs during multiple sampling events. The case was closed in 2007.

Project excavation is proposed along the northern and eastern property boundaries to a maximum depth of 2.5 feet and boreholes for streetlights to 4.5 feet are proposed along the northern and eastern edges of the property. According to figures available on Geotracker, soil with low levels of TPH-D were detected within 25 feet of the proposed streetlight locations on the eastern side of the property. Because residual soil contamination remains at the property at low levels, the potential to encounter contaminated soil cannot be completely discounted; accordingly, a hazard ranking of 3 is assigned.

### 8.15. Winter Gardens Redevelopment (9808-9810 Winter Gardens Boulevard, Map ID No. 15)

The property was entered into the VAP program prior to proposed redevelopment to investigate potential soil gas impacts from contaminated groundwater at the Texaco gasoline station located at 12106 Woodside Avenue (adjacent to the east and cross gradient). A soil gas survey for benzene impacts from the adjacent Texaco release was performed and indicated no excess risk to building occupants at the property and the VAP case was closed in 1999 (DEH, 1999b).

Project subsurface work is proposed along the southern and southwestern boundaries of the property to a maximum depth of 2.5 feet. Based on the results of the previous investigation, and the location of the area of concern (crossgradient of proposed excavation), it is not likely that remaining contaminated soil or

groundwater would be encountered; however, VOCs can volatilize from residual contamination in soil and groundwater and migrate into trenches excavated during Project construction. For this reason, a hazard ranking of 2 is assigned.

### 8.16. Lakeside Cleaners (1208 Woodside Ave., Map ID No. 16)

The property is listed in EDR as a historical cleaner for various years between 1986 and 2017 (EDR, 2020e) Although there are no documented releases of chemicals to the subsurface at this property, dry cleaners have historically been a source of chlorinated VOC impacts in the subsurface. Accordingly, there is a potential for chlorinated VOC impacts in the shallow soil.

Project subsurface work is proposed along the southern portion of the property, outside the property boundary; therefore, it is unlikely that residual soil contamination will be encountered. However, there is a potential for VOCs volatilizing from contaminated soil and/or groundwater, if present, to accumulate in trenches and adversely affect workers. For this reason, hazard ranking of 2 is assigned.

### 8.17. California Pit Stop Unocal 76 (12401 Woodside Ave., Map ID No. 17)

The property was on file with the DEH under the name Unocal Corporation and was listed in the EDR report as an oil station for various years between 1971 and 1986 (EDR 2020e). Records on file with the DEH included a permit application for the installation of six groundwater monitoring wells at the property dated October 1990. An excavation report dated April 12, 1991 was also on file, and the report indicated that during advancement of soil borings at the property, a gasoline transmission line was ruptured and approximately three gallons of gasoline was released. According to the report, the product and impacted soil were removed and disposed of off-site.

Project construction includes excavation for traffic conduits, stormwater infrastructure, and biofiltration and underdrains to a maximum depth of 6 feet and is proposed along the northern and western portions of the property and in the adjacent ROW. Although the gasoline contaminated soil was removed from the property, the potential still exists for residual VOCs in soil and groundwater, that may be present from historical gasoline station use, to accumulate in trenches impacting worker's breathing zones. For this reason, a hazard ranking of 2 is assigned.

### 8.18. Continental Dry Cleaners (9744 Winter Gardens Blvd., Map ID No. 18)

The property is adjacent to the south of the Project area boundary and was listed on the EDR Historical Dry Cleaners database for various years between 1986 and 2005 (EDR 2020e). Unauthorized release cases were not found; however, as mentioned previously, dry cleaners have historically been a source of chlorinated VOC impacts in the subsurface.

The closest Project excavation (to a depth of 2.5 feet) is at a distance of approximately 90 feet. Due to the distance from proposed Project excavation, it is unlikely that contaminated soil, if present, will be encountered; however, there is potential for VOCs in soil gas, if present, to migrate and accumulate in trenches resulting in potential worker exposure. For this reason, a hazard ranking of 2 is assigned.

### 8.19. Former Lakeside Arco (12265 Woodside Ave., Map ID No. 19)

The property was listed in the City Directories under the name Lakeside Service in 1964 and Lakeside Arco in 1975. Documented releases are not on file for the property. Project work proposed in the

northwestern portion of the property consists of excavation for driveway and sidewalk improvement (maximum depth of 18 inches).

Because the excavation is limited to 18 inches and the sources of contamination will be at a depth of 2 feet or more (former USTs or fuel pipelines), it is unlikely that contaminated soil or groundwater, if present, will be encountered. VOCs volatilizing from contaminated soil and/or groundwater will not adversely affect workers because the depth of excavation is 18 inches or less. For these reasons, a hazard ranking of 1 is assigned.

### 8.20. Wright's One Hour Cleaner (12092 Woodside Avenue, Map No. 20)

The property was listed on the EDR Historical Dry Cleaners database for years 1971 and 1975 (EDR 2020e). Documented unauthorized releases were not found; however, as mentioned previously, dry cleaners have historically been a source of chlorinated VOC impacts in the subsurface. Project work is proposed along the southern and southeastern property boundaries to a maximum excavation depth of 2.5 feet and one traffic signal boring adjacent to the southeast will be advanced to a depth of 12 feet.

Because Project work is proposed along property boundaries (and not within the property), it is unlikely that contaminated soil, if present, will be encountered; however, the potential for VOCs volatilizing from contaminated soil and/or groundwater and accumulating in trenches cannot be completely discounted. For this reason, a hazard ranking of 2 is assigned.

### 8.21. Lakeside Muffler and Welding (12461 Woodside Avenue, Map ID No. 21)

The property was on file with the DEH and was listed in the EDR City Directories under the names El Monte Shell Station and Neal's Automotive for years 1964 and 1971; and 1975, respectively. DEH files included a boring permit application dated January 1994 and a Report of Findings dated February 1994. The documents indicated that one soil boring was installed in the northeast portion of the property to investigate potential contaminants in soil from a transformer release and from a nearby off-site property. TPH was detected in samples collected from the surface to approximately 6.5 feet bgs, and VOCs were detected in samples collected from 3 to 4.5 feet bgs. Stained and odorous soil was observed in the boring at a depth of 3 to 4.5 feet bgs. The contaminated soil was reportedly left in place. Supporting DEH files are provided in Appendix C.

Project work consisting of driveway, sidewalk, and curb and gutter work is proposed in the north portion of the property near the former soil boring location. Based on the documented presence of TPH and VOCs in soil at the property and because contamination was detected starting at the surface in the soil boring, there is a potential for contaminated soil to be encountered during excavation. For this reason, additional investigation is recommended to confirm the presence and degree of contamination at the locations of proposed work. Accordingly, a hazard ranking of 4 is assigned.

### 8.22. Barney's Cleaners (12154 Woodside Ave., Map ID No. 22)

The property is listed in the EDR Historical Cleaners Database for years 1969 and 1979. Unauthorized release cases were not found; however, as mentioned previously, dry cleaners have historically been a source of chlorinated VOC impacts in the subsurface.

Project work consisting of driveway improvement and installation of a stormwater biofiltration device and underdrains are proposed along the southern property boundary. The depth of excavations for the

stormwater improvements is 6 feet. Based on the location of the proposed work, it is unlikely that contaminated soil will be encountered. However, the potential for chlorinated VOCs, if present in soil gas, to migrate into the excavations for stormwater improvements cannot be completely discounted. For these reasons, a hazard ranking of 2 is assigned.

### 8.23. Half Hour Perma Cleaners (12403 Woodside Avenue, Map ID No. 23)

The property is located adjacent to the south of the Project and has one closed cleanup program case related to PCE contamination in groundwater from former dry-cleaning operations. The property was also listed on the EDR City Directories under the name Harmel Laundry for various years between 1971 and 1979 (EDR 2020e). According to the closure report, a human health risk assessment indicated no excess risk and the case was closed with PCE levels in groundwater slightly above MCLs in 1998 (DEH, 1998b).

Project excavation is proposed along a portion of the northwestern property boundary and the adjacent property to the north. Because the proposed excavation is located outside of the property boundary, it is unlikely that soil contamination will be encountered; however, the potential for VOCs volatilizing from groundwater and migrating into the excavations cannot be completely discounted. For this reason, a hazard ranking of 2 is assigned.

### 8.24. Soil and Gravel Pile (Northwestern portion of Project area, Map ID No. 24)

A small pile of soil and gravel was observed in a vacant lot north of Woodside Avenue in the northwest portion of the Project area approximately 60 feet from the nearest area of proposed Project subsurface disturbance. The source of the fill is unknown and has potential to be contaminated, depending on its origin.

If the soil and gravel pile is to be used or removed for Project construction, it may need to be evaluated for the presence of contaminants. A hazard ranking is not assigned pending information on whether the soil and gravel pile will be used or removed for Project construction.

### 8.25. Organochlorine Pesticides in Shallow Soil (Common Condition)

The aerial photograph review has indicated that since at least 1949 to approximately 1979, agricultural use was evident within the Project area and adjacent properties (EDR, 2018a). There is potential that residual organochlorine pesticides (OCPs) applied to agricultural crops in the Project area and adjacent properties may remain in shallow soil.

Although OCPs are a potential concern in shallow soil from former agricultural use, previous soil sampling in the area, along Winter Gardens Boulevard, indicated OCPs were not present in shallow soil at concentration above screening levels protective of residential use (Bodhi, 2019). Based on the results of the previous OCP investigation in the area, it is unlikely that OCPs are present in shallow soil at concentrations that will adversely affect this Project. If excavated soil is to be removed from the Project, it is recommended that soil be transported and handled in accordance with the SMP discussed in Table 4.

### 8.26. Aerially-Deposited Lead (Common Condition)

Along well-traveled transportation road corridors that existed prior to the phasing out of leaded gasoline, exposed soil may have been contaminated with aerially deposited lead (ADL) caused by historical emissions from vehicle exhausts (tetraethyl lead was mixed with gasoline from the 1920s to the 1970s as an anti-knock agent).

A review of the historical aerial photographs indicates that Woodside Avenue has been in its current configuration since at least 1939. Since leaded gasoline was used since the 1920s, it is possible that shallow soil in the Project area may have been impacted with ADL at concentrations exceeding State and Federal hazardous waste criteria or may be at concentrations that require special handling and waste management.

Although ADL is a potential concern near busy ROWs, previous soil sampling in the area, along Winter Gardens Boulevard (a nearby and similarly trafficked ROW), indicated ADL was not present in shallow soil (Bodhi, 2019). Based on the results of the previous ADL investigation it is unlikely that ADL is present in shallow soil in the Project area. If excavated soil is to be removed from the Project, it is recommended that soil be transported and handled in accordance with the SMP.

## 9. CONCLUSIONS AND RECOMMENDATIONS

The twenty-four (24) specific properties have been ranked from 1 to 4 based on the type of chemical and quantities released, and the medium affected, as discussed in Section 8 (none of the properties merited a rank of "5"). Properties assigned a rank of "1" do not require further investigation or action and properties assigned a ranking of 4 have a relatively high probability of encountering residual contamination during the Project. The 24 properties and associated ranking are depicted on Figures 2 through 6.

Mitigation measures are outlined in Table 4 and may include one or more of the following.

- Preparation of an HSP is recommended for work near properties with a hazard ranking greater than 1. The HSP should include procedures protective of workers and the public.
- Preparation of an SMP is recommended for work near properties with a hazard ranking greater than 2. The soil management plan should include procedures for identifying soil contamination, and present protocols for excavation, on-site management, and off-site disposal of contaminated soil in accordance with federal and state regulations.
- In work areas near properties with a hazard ranking greater than 3, additional investigation will be needed to evaluate if residual contamination will be encountered. A Work Plan should be prepared detailing procedures for the collection and laboratory analysis of soil samples prior to sample collection.

# APPENDIX A

# LIST OF APPLICABLE LAWS AND REGULATIONS GOVERNING HAZARDOUS MATERIALS

# 1 APPLICABLE LAWS, ORDINANCES, AND REGULATIONS

## 1.1 Federal Statutory Requirements:

- Resource Conservation and Recovery Act
- Comprehensive Environmental Response, Compensation, and Liability Act of 1980, as amended by Superfund Amendments and Reauthorization of 1987
- Toxic Substances Control Act of 1976
- Hazardous Materials Transportation Act of 1975
- Clean Water Act
- Clean Air Act
- Occupational Safety and Health Act of 1970
- The Emergency Planning and Community Right to Know Act of 1986

## 1.2 Environmental Protection Agency (EPA)

- 40 Code of Federal Regulations (CFR) 61 National Emission Standards for Hazardous Air Pollutants.
- 40 CFR 112 Oil Pollution Prevention.
- 40 CFR 122-124 National Pollutant Discharge Elimination System Permit Regulations.
- 40 CFR 261 Identification and Listing of Hazardous Waste.
- 40 CFR 262 Generators of Hazardous Waste.
- 40 CFR 264 Owners and Operators of Hazardous Waste Treatment, Storage, and Disposal Facilities.
- 40 CFR 265 Interim Status Standards for Owners and Operators of Hazardous Waste Treatment, Storage, and Disposal Facilities.
- 40 CFR 266 Management of Specific Hazardous Waste and Specific Types of Hazardous Waste Management Facilities.
- 40 CFR 270 Hazardous Waste Permit Program.
- 40 CFR 279 Used Oil Regulations.
- 40 CFR 300 National Oil and Hazardous Substances Pollution Contingency Plan.
- 40 CFR 302 Designation, Reportable Quantities, and Notification
- 40 CFR 355 Emergency Planning and Notification.
- 40 CFR 372-SUBPART D EPA Toxic Chemical Release Reporting Regulations.
- 40 CFR 761 Polychlorinated Biphenyls (PCBs) Manufacturing, Processing, Distribution in Commerce, and Use Prohibitions.

## 1.3 Occupational Safety and Health Administration (OSHA)

- 29 CFR 1904 Recording and Reporting Occupational Injuries and Illnesses.
- 29 CFR 1910 Occupational Safety and Health Standards.
- 29 CFR 1910.120 Hazardous Waste Operations and Emergency Response.

- 29 CFR 1926.59 OSHA Hazard Communication.

### 1.4 Department of Transportation

- 49 CFR 172 Hazardous Materials Table, Special Provisions, Hazardous Materials Communications, Emergency Response Information, and Training Requirements.
- 49 CFR 173 Shipments and Packaging.

### 1.5 State of California Statutory Requirements

- California Health and Safety Code Section 25100 et seq.
- California Health and Safety Code Section 25299.10 et seq.
- California Health and Safety Code Section 25300 et seq.
- California Health and Safety Code Section 25359.4
- California Health and Safety Code Division 20 Chapter 6.95 Hazardous Materials Release Response Plans and Inventory.
- Porter Cologne Water Quality Control Act, Cal. Water Code §§13000 et seq.

### 1.6 State of California Administrative Code and Regulations

- 8 California Code of Regulations (CCR) 1539 through 1541.
- 8 CCR 5144 and 5192 Cal OSHA Worker Protection Standards.
- 22 CCR Division 4.5 Environmental Health Standards for the Management of Hazardous Waste et seq.
- 22 CCR 66261 Identification and Listing of Hazardous Waste.
- 23 CCR Division 3, Chapter 15 Discharges of Hazardous Waste to Land et seq.

### 1.7 Local Agency Requirements

- California Regional Water Quality Control Board San Diego Region Water Quality Control Plan for the San Diego Basin.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Bodhi Group were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

with any questions or comments.

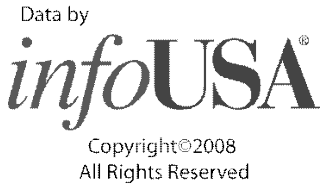
**Disclaimer - Copyright and Trademark Notice**

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. **NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OR DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT.** Purchaser accepts this Report "AS IS". Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction orforecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

Copyright 2020 by Environmental Data Resources, Inc. All rights reserved. Reproduction in any media or format, in whole or in part, of any report or map of Environmental Data Resources, Inc. or its affiliates is prohibited without prior written permission.

EDR and its logos (including Sanborn and Sanborn Map) are trademarks of Environmental Data Resources, Inc. or its affiliates. All other trademarks used herein are the property of their respective owners.

# EXECUTIVE SUMMARY



## DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

## RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

## RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.

| Year | Target Street | Cross Street | Source |

Contact: Brianne Cortright

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Bodhi Group were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

## *Certified Sanborn Results:*

**Certification #** 12D8-47DD-B517

**PO #** 9120004

**Project** Woodside Avenue ISA

### UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

Sanborn® Library search results

Certification #: 12D8-47DD-B517

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- ☑ Library of Congress
- ☑ University Publications of America
- ☑ EDR Private Collection

*The Sanborn Library LLC Since 1866™*

### Limited Permission To Make Copies

Bodhi Group (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

# EXECUTIVE SUMMARY

## TARGET PROPERTY SEARCH RESULTS

The target property was not listed in any of the databases searched by EDR.

## DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable ") government records either on the target property or within the search radius around the target property for the following databases:

## STANDARD ENVIRONMENTAL RECORDS

**SURROUNDING SITES: SEARCH RESULTS**

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

**STANDARD ENVIRONMENTAL RECORDS**

***Federal RCRA generators list***

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/16/2019 has revealed that there are 10 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 12/16/2019 has revealed that there are 2 RCRA-VSQG sites within approximately 0.25 miles of the target property.

***Federal ERNS list***

ERNS: The Emergency Response Notification System records and stores information on reported releases of oil and hazardous substances. The source of this database is the U.S. EPA.

A review of the ERNS list, as provided by EDR, and dated 12/16/2019 has revealed that there are 2 ERNS sites within approximately 0.001 miles of the target property.

***State- and tribal - equivalent CERCLIS***

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 01/27/2020 has revealed that there are 4 ENVIROSTOR sites within approximately 1 mile of the target property.

***State and tribal landfill and/or solid waste disposal site lists***

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database.

A review of the SWF/LF list, as provided by EDR, has revealed that there are 2 SWF/LF sites within

approximately 0.5 miles of the target property.

CPS-SLIC: Cleanup Program Sites (CPS; also known as Site Cleanups [SC] and formerly known as Spills, Leaks, Investigations, and Cleanups [SLIC] sites) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the CPS-SLIC list, as provided by EDR, has revealed that there are 16 CPS-SLIC sites within approximately 0.5 miles of the target property.

***Local Lists of Registered Storage Tanks***

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 19 SWEEPS UST sites within approximately 0.25 miles of the target property.

***Records of Emergency Release Reports***

CHMIRS: The California Hazardous Material Incident Report System contains information on reported hazardous material incidents, i.e., accidental releases or spills. The source is the California Office of Emergency Services.

A review of the CHMIRS list, as provided by EDR, and dated 12/24/2019 has revealed that there are 2 CHMIRS sites within approximately 0.001 miles of the target property.

***Other Ascertainable Records***

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA)

of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/16/2019 has revealed that there are 84 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

# EXECUTIVE SUMMARY

FINDS: The Facility Index System contains both facility information and "pointers" to other sources of information that contain more detail. These include: RCRIS; Permit Compliance System (PCS); Aerometric Information Retrieval System (AIRS); FATES (FIFRA [Federal Insecticide Fungicide Rodenticide Act] and TSCA Enforcement System, FTTS [FIFRA/TSCA Tracking System]; CERCLIS; DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes); Federal Underground Injection Control (FURS); Federal Reporting Data System (FRDS); Surface Impoundments (SIA); TSCA Chemicals in Commerce Information System (CICS); PADS; RCRA-J (medical waste transporters/disposers); TRIS; and TSCA. The source of this database is the U.S. EPA/NTIS.

A review of the FINDS list, as provided by EDR, and dated 11/22/2019 has revealed that there are 64 FINDS sites within approximately 0.001 miles of the target property.

# EXECUTIVE SUMMARY

ECHO: ECHO provides integrated compliance and enforcement information for about 800,000 regulated facilities nationwide.

A review of the ECHO list, as provided by EDR, and dated 01/05/2020 has revealed that there are 46 ECHO sites within approximately 0.001 miles of the target property.

HAZNET: The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets are not included at the present time. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method. The source is the Department of Toxic Substance Control is the agency. This database begins with calendar year 1993.

A review of the HAZNET list, as provided by EDR, and dated 12/31/2017 has revealed that there are 75 HAZNET sites within approximately 0.001 miles of the target property.

HWT: A listing of hazardous waste transporters. In California, unless specifically exempted, it is unlawful for any person to transport hazardous wastes unless the person holds a valid registration issued by DTSC. A hazardous waste transporter registration is valid for one year and is assigned a unique registration number.

A review of the HWT list, as provided by EDR, and dated 01/06/2020 has revealed that there is 1 HWT site within approximately 0.25 miles of the target property.

CERS: The CalEPA Regulated Site Portal database combines data about environmentally regulated sites and facilities in California into a single database. It combines data from a variety of state and federal databases, and provides an overview of regulated activities across the spectrum of environmental programs for any given location in California. These activities include hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials

A review of the CERS list, as provided by EDR, and dated 01/21/2020 has revealed that there are 36 CERS sites within approximately 0.001 miles of the target property.

**EDR HIGH RISK HISTORICAL RECORDS**

***EDR Exclusive Records***

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 11 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 6 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

**EDR RECOVERED GOVERNMENT ARCHIVES**

***Exclusive Recovered Govt. Archives***

RGA LUST: The EDR Recovered Government Archive Leaking Underground Storage Tank database provides a list of LUST incidents derived from historical databases and includes many records that no longer appear in current government lists. Compiled from Records formerly available from the State Water Resources Control Board in California.

A review of the RGA LUST list, as provided by EDR, has revealed that there are 45 RGA LUST sites within approximately 0.001 miles of the target property.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

| Violation Code: | 2030036 (TCR 9b) Failure to comply with one or more of the following overfill prevention equipment requirements: 1. Alert the transfer operator when the tank is 90% full by restricting the flow into the tank or triggering an audible and visual alarm; or 2. Restrict delivery of flow to the tank at least 30m before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95% of capacity and activate an audible alarm at least 5m before the tank overfills; or 3. Provide positive shut-off of flow to the tank when the tank is filled to no more than 95% of capacity; or 4. Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. 5. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1, 2018. 6. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. 7. For USTs installed on and after October 1, 2018, perform an inspection at installation and every 36 months thereafter. 8. Inspected within 30 days after a repair to the overfill prevention equipment. 9. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. 10. Inspected by a certified UST service technician. 11. Maintain records of overfill prevention equipment inspection for 36 months. 23 CCR 2635(c)(1), 2635(d), 2637.2(a-c), 2665, 2712(b)(1)(G) |

| Facility URL: | http://ofmpub.epa.gov/enviro/fii_query_detail.disp_program_facility?p_registry_id=110070102745 |

Environmental Interest/Information System:

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Facility URL: http://ofmpub.epa.gov/enviro/fii_query_detail.disp_program_facility?p_registry_id=110002659436

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of

**LAKESIDE UNION SCHOOL DISTRICT (Continued)** **1000222124**

events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Violation Status: No violations found

FINDS:
Registry ID: 110013849069
Facility URL: http://ofmpub.epa.gov/enviro/fii_query_detail.disp_program_facility?p_registry_id=110013849069

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
HAZARDOUS AIR POLLUTANT MAJOR

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Facility URL: http://ofmpub.epa.gov/enviro/fii_query_detail.disp_program_facility?p_registry_id=110002825658

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

| Potential Contaminants of Concern: | Gasoline, MTBE / TBA / Other Fuel Oxygenates |
| Site History: | Case H03147-001 was opened on June 20, 1990. The release was discovered due to environmental borings encountering high levels of soil impacts in the immediate area of the underground storage tanks (USTs). Case H03147-002 was opened on April 13, 1999 as a result soil contamination associated with the product lines. Site assessment began in March 1993 and continued through August 23, 1998 when a Corrective Action Plan (CAP) was approved for on-site AS/VES in the source area. In July 1998 DEH became aware of MTBE impacts to a public supply well field located approximately 1,800 feet to the west-northwest of the site. Subsequent investigation associated with the site and the other two station at the intersections of Woodside Av and Winter Gardens Av. [ARCO (former Thrifty Oil) and Shell Oil] indicated that GEN-MAR Texaco site was the source of the MTBE. Case H03147-001 and H03147-002 were combined under case H03147-002 and case H03147-001 was Administratively closed . The VES System went online on November 3, 1999 and has operated to present. This system was installed to remediate the free-product and soil in the vadose zone in the source area. The air sparge component of the system went online in August 2004 to focus on the dissolved impacts in the source area after the residual free-product had been removed. Due to the off-site impacts to the public water supply wells a hydraulic barrier system was installed off-site between the site and the well field to cut-off elevated levels MTBE impacted groundwater. This system went online on December 15, 2000. Note: Please refer to case H03147-002 for details and current status of case. |

| File Location: | Local Agency |
| Local Case Number: | H03147-001 |
| Potential Media Affect: | Well used for drinking water supply |
| Potential Contaminants of Concern: | Gasoline |
| Site History: | Case H03147-001 was opened on June 20, 1990. The release was discovered due to environmental borings encountering high levels of soil impacts in the immediate area of the underground storage tanks (USTs). Case H03147-002 was opened on April 13, 1999 as a result soil contamination associated with the product lines. Site assessment began in March 1993 and continued through August 23, 1998 when a Corrective Action Plan (CAP) was approved for on-site AS/VES in the source area. In July 1998 DEH became aware of MTBE impacts to a public supply well field located approximately 1,800 feet to the west-northwest of the site. Subsequent investigation associated with the site and the other two station at the intersections of Woodside Av and Winter Gardens Av. [ARCO (former Thrifty Oil) and Shell Oil] indicated that GEN-MAR Texaco site was the source of the MTBE. Case H03147-001 and H03147-002 were combined under case H03147-002 and case H03147-001 was Administratively closed. . The VES System went online on November 3, 1999 and has operated to present. This system was installed to remediate the free-product and soil in the vadose zone in the source area. The air sparge component of the system went online in August 2004 to focus on the dissolved impacts in the source area after the residual free-product had been removed. Due to the off-site impacts to the public water supply wells a hydraulic barrier system was installed off-site between the site and the well field to cut-off elevated levels MTBE impacted groundwater. This system went online on December 15, 2000. Note: Please refer to case H03147-002 for details and current status of case. |

Facility URL: http://ofmpub.epa.gov/enviro/fii_query_detail.disp_program_facility?p_registry_id=110013310988

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
HAZARDOUS AIR POLLUTANT MAJOR

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Address: 9806 MAINE AV
City,State,Zip: LAKESIDE, CA 920403106
Lead Agency: SAN DIEGO COUNTY LOP
Case Type: LUST Cleanup Site
Geo Track: http://geotracker.waterboards.ca.gov/profile_report.asp?global_id=T0607301434
Global Id: T0607301434
Latitude: 32.8574016
Longitude: -116.9214679
Status: Completed - Case Closed
Status Date: 07/14/2011
Case Worker: NS
RB Case Number: 9UT2684
Local Agency: SAN DIEGO COUNTY LOP
File Location: Local Agency
Local Case Number: H19134-001
Potential Media Affect: Aquifer used for drinking water supply
Potential Contaminants of Concern: Diesel, Gasoline
Site History: Comments: The site is an auto repair facility and sales lot. Nine (9) USTs containing gasoline, diesel and waste oil were removed from the site in 1993 and 1994. Soil samples collected from beneath the USTs showed minor concentrations of gasoline and diesel in three locations

**DAVID ALPERT (Continued)** **S104748843**

within the tank pit areas. Nine soil borings were drilled to a depth of 35 feet below grade and later were converted to monitoring wells. No soil impacts were detected, except low concentrations in MW-6 at 35 feet below grade. The results of the assessment showed that the extent of TPH in soil and in the groundwater was limited to MW-6 which is located up-gradient of former UST field area near the driveway from Woodside Avenue. The consultants conclude that the site contains 30.5 to 54.5 cubic yards of residual TPH-contaminated soil and are not contributing to impacts to groundwater and are not a threat to public health and the environment. Furthermore, based on the consultants review of records of two up-gradient release sites, they conclude that the minor TPH concentrations in MW-6 are due to offsite and up-gradient sources (e.g. Lucy May property, release # H03806-001, located at 9774 Maine Avenue) that have been granted closure. SAM has learned that the Lakeside Water District has no plans to utilize the shallow groundwater in the vicinity of the subject site. Based on these findings the consultants recommend closure of the site, and DEH concurs with this recommendation.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Handler Activities Summary:

| | |
|---|---|
| U.S. importer of hazardous waste: | No |
| Mixed waste (haz. and radioactive): | No |
| Recycler of hazardous waste: | No |
| Transporter of hazardous waste: | No |
| Treater, storer or disposer of HW: | No |
| Underground injection activity: | No |
| On-site burner exemption: | No |
| Furnace exemption: | No |
| Used oil fuel burner: | No |
| Used oil processor: | No |
| User oil refiner: | No |
| Used oil fuel marketer to burner: | No |
| Used oil Specification marketer: | No |
| Used oil transfer facility: | No |
| Used oil transporter: | No |

Violation Status: No violations found

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FINDS:
Registry ID: 110070429672
Facility URL: http://ofmpub.epa.gov/enviro/fii_query_detail.disp_program_facility?p_registry_id=110070429672

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

| File Location: | Local Agency |
| Local Case Number: | H05359-002 |
| Potential Media Affect: | Well used for drinking water supply |
| Potential Contaminants of Concern: | Gasoline |
| Site History: | On May 30, 1995, following the removal of four gasoline single wall steel underground storage tanks (USTs) and associated piping, 16 soil samples were collected under the direction of the County of San Diego. Hydrocarbon-impacted soil was observed up to 16,662 milligrams per kilogram. As a result, DEH case H05359-002 was opened and corrective actions were implemented at the site, including the excavation and disposal of approximately 600 tons (400 cubic yards) of hydrocarbon-impacted soil. Following UST removal activities and in accordance with County of San Diego direction, assessment and mitigation activities were implemented at the site, including the installation of multiple soil borings and groundwater monitoring wells. Assessment activities identified the existence of liquid-phase hydrocarbons (LPH) at the site with a maximum thickness of 2.97 feet. Hydrocarbon-impacted soil and groundwater, including LPH, primarily |

**PRESTIGE STATIONS, INC #9760 (Continued)** **S104746162**

existed beneath the former USTs and dispensers and to a lesser degree extended offsite to the north and west. Prior to implementation of full scale remediation activities, LPH mitigation was conducted via hand bailing, and periodic (approximately weekly) vacuum tanker extraction events from October 1996 through June 2001. In July 2001, a dual-phase extraction system began operation at the site and operated continuously until May 2003 when a pulsing schedule was implemented for the vapor portion of the system due to low influent vapor concentrations. The groundwater portion of the remediation system operated continuously until January 2007. In May 2005, seven confirmation borings where installed and sampled at the site to evaluate the effectiveness of the remediation system. Three confirmation borings, located in the former UST excavation, identified total petroleum hydrocarbons as gasoline (TPHg) up to 520 milligrams per kilogram. The majority of the impacts were observed at five feet below grade, approximately 20 feet above typical groundwater depths. In order to address the aforementioned TPHg detections, two of the confirmation borings in the former UST excavation were converted to extraction wells and connected to the existing system in an effort to mitigate the remaining low level soil contamination. The vapor portion of the remediation system was restarted in July 2006 and operated until December 2006. Based on available data, it appears that the majority of the soil contamination has been removed from the site due to the aforementioned remediation activities and therefore no estimate of remaining hydrocarbon-impacted soil was provided or deemed necessary. The consultant proposed utilizing natural attenuation to address the remaining low level dissolved-phase hydrocarbons. The last groundwater monitoring and sampling event at the site, conducted in November 2009, indicated that the primary constituents of concern (COC), benzene and methyl tertiary butyl ether (MTBE), existed at maximum concentrations of 3.8 and 643 micrograms per liter, respectively, which exceeded their respective primary maximum contaminant levels (MCLs) of 1 and 13 micrograms per liter. However, trend analysis conducted by the consultant estimates that benzene and MTBE will reach their MCLs by approximately May 2011 and June 2016, respectively. The consultant concluded that contaminants from this site are not commingled with H03147-002, located immediately adjacent to the north across Woodside Avenue, and that the data supports the existence of two distinctly separate dissolved-phase contaminant plumes. Based on available data, DEH concurs with this conclusion. There is a municipal well field consisting of four wells located approximately 2,000 feet to the west-northwest of the site. The wells are not currently in use but upgrades to the wells and associated treatment systems are possible in future years should the need arise. MTBE impacts to this well field, which were discovered in August 1999, have been attributed to the unauthorized release at the site located to the north (H03147-002) of Thrifty Station #423. Based on all available data from both sites, the release at Thrifty Station #423 has not and will not result in impacts to the well field. The consultant concluded that dissolved-phase COCs appear to be limited to the site boundaries and are stable and that existing environmental conditions are protective of human health and the environment. Based on available data, DEH concurs with the consultants conclusions.

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
HAZARDOUS AIR POLLUTANT MAJOR
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.
