Notes:

1. Data based on alternative specific information.
2. Horsepower and load factor based on default values for equipment in CalEEMod.
3. In accordance with Metro's Green Construction Policy, all off-road equipment equal to or greater than 50 HP would have emission factors for Tier 4 Final equipment, off-road equipment less than 50 HP would use fleet average emission factors from CalEEMod.
4. For Tunneling activities, the tunnel boring machine (TBM) (not listed) would be electric-powered.

EXH = Exhaust

FD = Fugitive Dust

*The terms volatile organic compounds (VOC) and ROG (reactive organic gases) are used interchangeably. SCAQMD uses VOC, and CalEEMod uses ROG.

Sepulveda Transit Corridor Project - ALTERNATIVE 3

Notes:

1. Conversion factor based on CalEEMod default value.
2. Emission factor based on CalEEMod default value.
3. Emissions account for dust control reduction from water application 3 times per day.

FD = Fugitive Dust

EXH = Exhaust

Notes:

1. Emission factor based on CalEEMod default value.
2. Emissions account for dust control reduction from water application 3 times per day.
3. Bulldozing emissions are only calculated for Rubber Tired Dozers which is consistent with CalEEMod methodology.

FD = Fugitive Dust

EXH = Exhaust

Notes:

1. CalEEMod provides the amount of acres that can be graded per 8-hours. The scaling factor is included in case equipment would operate more or less than 8 hours, thus, the amount of area to be graded would be adjusted.
2. Grading VMT based on methodology from CalEEMod which accounts for bladewidth of grading equipment and the amount of area grading equipment can complete in 8-hour day.
3. Emission factor based on CalEEMod default value.
4. Emissions account for dust control reduction from water application 3 times per day.
5. Grading emissions are only calculated for the following equipment types: Crawler Tractors, Graders, Rubber Tired Dozers, and Scrapers. This approach is consistent with CalEEMod methodology.

FD = Fugitive Dust

EXH = Exhaust

Sepulveda Transit Corridor Project - ALTERNATIVE 3

WORKER VEHICLES (OFFSITE)

Notes:

1. Emission factors generated from EMFAC2021. **Region:** SCAQMD; **Season:** Annual; **Vehicle Classification:** EMFAC2007 Categories; **Model Year:** Aggregate; **Speed:** Aggregate; **Fleet Mix:** Light-Duty Mix (25% LDA/50% LDT1/25% LDT2); **Fuel Type:** Gasoline

2. Running emission factors account for exhaust and fugitive dust from brake wear, tire wear, and road dust from paved roads.

3. Non-Running emission factors account for additional exhaust and evaporative processes. **Exhaust:** Engine starting and idling. **Evaporative (ROG Only):** Runloss, Diurnal, and Hotsoak.

FD = Fugitive Dust

EXH = Exhaust

*The terms volatile organic compounds (VOC) and ROG (reactive organic gases) are used interchangeably. SCAQMD uses VOC, and CalEEMod uses ROG.

Notes:

1. Emission factors generated from EMFAC2021. **Region:** SCAQMD; **Season:** Annual; **Vehicle Classification:** EMFAC2007 Categories; **Model Year:** Aggregate; **Speed:** Aggregate; **Fleet Mix:** Light-Duty Mix (25% LDA/50% LDT1/25% LDT2); **Fuel Type:** Gasoline

2. Running emission factors account for exhaust and fugitive dust from brake wear, tire wear, and road dust from paved roads.

3. Non-Running emission factors account for additional exhaust and evaporative processes. **Exhaust:** Engine starting and idling. **Evaporative (ROG Only):** Runloss, Diurnal, and Hotsoak.

FD = Fugitive Dust

EXH = Exhaust

*The terms volatile organic compounds (VOC) and ROG (reactive organic gases) are used interchangeably. SCAQMD uses VOC, and CalEEMod uses ROG.

Notes:

1. Emission factors generated from EMFAC2021. **Region:** SCAQMD; **Season:** Annual; **Vehicle Classification:** EMFAC2007 Categories; **Model Year:** Aggregate; **Speed:** Aggregate; **Fleet Mix:** Light-Duty Mix (25% LDA/50% LDT1/25% LDT2); **Fuel Type:** Gasoline

2. Running emission factors account for exhaust and fugitive dust from brake wear, tire wear, and road dust from paved roads.

3. Non-Running emission factors account for additional exhaust and evaporative processes. **Exhaust:** Engine starting and idling. **Evaporative (ROG Only):** Runloss, Diurnal, and Hotsoak.

FD = Fugitive Dust

EXH = Exhaust

*The terms volatile organic compounds (VOC) and ROG (reactive organic gases) are used interchangeably. SCAQMD uses VOC, and CalEEMod uses ROG.

Sepulveda Transit Corridor Project - ALTERNATIVE 3

Notes:

1. Emission factors generated from EMFAC2021. **Region:** SCAQMD; **Season:** Annual; **Vehicle Classification:** EMFAC2007 Categories; **Model Year:** Aggregate; **Speed:** Aggregate; **Fleet Mix:** Light-Duty Mix (25% LDA/50% LDT1/25% LDT2); **Fuel Type:** Gasoline
2. Running emission factors account for exhaust and fugitive dust from brake wear, tire wear, and road dust from paved roads.
3. Non-Running emission factors account for additional exhaust and evaporative processes. **Exhaust:** Engine starting and idling. **Evaporative (ROG Only):** Runloss, Diurnal, and Hotsoak.

FD = Fugitive Dust

EXH = Exhaust

*The terms volatile organic compounds (VOC) and ROG (reactive organic gases) are used interchangeably. SCAQMD uses VOC, and CalEEMod uses ROG.

Sepulveda Transit Corridor Project - ALTERNATIVE 3

SOIL/MATERIAL HAUL TRUCKS (ONSITE)

Notes:

1. Emission factors generated from EMFAC2021. **Region:** SCAQMD; **Season:** Annual; **Vehicle Classification:** EMFAC2007 Categories; **Model Year:** 2007 or newer; **Speed:** All Speeds; **Fleet Mix:** 100% HHDT; **Fuel Type:** Diesel; **Onsite Speed:** 15 MPH.
2. Running emission factors account for exhaust and fugitive dust from brake wear, tire wear, and road dust from unpaved roads.
3. Non-Running emission factors account for additional exhaust and evaporative processes. **Exhaust:** Engine starting and idling. **Evaporative (ROG Only):** Runloss, Diurnal, and Hotsoak.
4. PM emission factors account for dust control reduction from water application to unpaved roads 2 times per day.

FD = Fugitive Dust

EXH = Exhaust

*The terms volatile organic compounds (VOC) and ROG (reactive organic gases) are used interchangeably. SCAQMD uses VOC, and CalEEMod uses ROG.

Sepulveda Transit Corridor Project - ALTERNATIVE 3

SOIL/MATERIAL HAUL TRUCKS (ONSITE)

Notes:

1. Emission factors generated from EMFAC2021. **Region:** SCAQMD; **Season:** Annual; **Vehicle Classification:** EMFAC2007 Categories; **Model Year:** 2007 or newer; **Speed:** All Speeds; **Fleet Mix:** 100% HHDT; **Fuel Type:** Diesel; **Onsite Speed:** 15 MPH.
2. Running emission factors account for exhaust and fugitive dust from brake wear, tire wear, and road dust from unpaved roads.
3. Non-Running emission factors account for additional exhaust and evaporative processes. **Exhaust:** Engine starting and idling. **Evaporative (ROG Only):** Runloss, Diurnal, and Hotsoak.
4. PM emission factors account for dust control reduction from water application to unpaved roads 2 times per day.

FD = Fugitive Dust

EXH = Exhaust

*The terms volatile organic compounds (VOC) and ROG (reactive organic gases) are used interchangeably. SCAQMD uses VOC, and CalEEMod uses ROG.

Notes:

1. Emission factors generated from EMFAC2021. **Region:** SCAQMD; **Season:** Annual; **Vehicle Classification:** EMFAC2007 Categories; **Model Year:** 2007 or newer; **Speed:** Aggregate Speeds; **Fleet Mix:100%** HHDT); **Fuel Type:** Diesel
2. Running emission factors account for exhaust and fugitive dust from brake wear, tire wear, and road dust from paved roads.
3. Non-Running emission factors account for additional exhaust and evaporative processes. **Exhaust:** Engine starting and idling. **Evaporative (ROG Only):** Runloss, Diurnal, and Hotsoak.

FD = Fugitive Dust

EXH = Exhaust

*The terms volatile organic compounds (VOC) and ROG (reactive organic gases) are used interchangeably. SCAQMD uses VOC, and CalEEMod uses ROG.

Notes:

1. Emission factors generated from EMFAC2021. **Region:** SCAQMD; **Season:** Annual; **Vehicle Classification:** EMFAC2007 Categories; **Model Year:** 2007 or newer; **Speed:** Aggregate Speeds; **Fleet Mix:100%** HHDT); **Fuel Type:** Diesel
2. Running emission factors account for exhaust and fugitive dust from brake wear, tire wear, and road dust from paved roads.
3. Non-Running emission factors account for additional exhaust and evaporative processes. **Exhaust:** Engine starting and idling. **Evaporative (ROG Only):** Runloss, Diurnal, and Hotsoak.

FD = Fugitive Dust

EXH = Exhaust

*The terms volatile organic compounds (VOC) and ROG (reactive organic gases) are used interchangeably. SCAQMD uses VOC, and CalEEMod uses ROG.

Sepulveda Transit Corridor Project - ALTERNATIVE 3

Notes:

1. Emission factors generated from EMFAC2021. **Region:** SCAQMD; **Season:** Annual; **Vehicle Classification:** EMFAC2007 Categories; **Model Year:** 2007 or newer; **Speed:** All Speeds; **Fleet Mix:** 100% HHDT; **Fuel Type:** Diesel; **Onsite Speed:** 15 MPH.
2. Running emission factors account for exhaust and fugitive dust from brake wear, tire wear, and road dust from unpaved roads.
3. Non-Running emission factors account for additional exhaust and evaporative processes. **Exhaust:** Engine starting and idling. **Evaporative (ROG Only):** Runloss, Diurnal, and Hotsoak.
4. PM emission factors account for dust control reduction from water application to unpaved roads 2 times per day.

FD = Fugitive Dust

EXH = Exhaust

*The terms volatile organic compounds (VOC) and ROG (reactive organic gases) are used interchangeably. SCAQMD uses VOC, and CalEEMod uses ROG.

Notes:

1. Emission factors generated from EMFAC2021. **Region:** SCAQMD; **Season:** Annual; **Vehicle Classification:** EMFAC2007 Categories; **Model Year:** 2007 or newer; **Speed:** All Speeds; **Fleet Mix:** 100% HHDT; **Fuel Type:** Diesel; **Onsite Speed:** 15 MPH.
2. Running emission factors account for exhaust and fugitive dust from brake wear, tire wear, and road dust from unpaved roads.
3. Non-Running emission factors account for additional exhaust and evaporative processes. **Exhaust:** Engine starting and idling. **Evaporative (ROG Only):** Runloss, Diurnal, and Hotsoak.
4. PM emission factors account for dust control reduction from water application to unpaved roads 2 times per day.

FD = Fugitive Dust

EXH = Exhaust

*The terms volatile organic compounds (VOC) and ROG (reactive organic gases) are used interchangeably. SCAQMD uses VOC, and CalEEMod uses ROG.

Sepulveda Transit Corridor Project - ALTERNATIVE 3

Notes:

1. Emission factors generated from EMFAC2021. **Region:** SCAQMD; **Season:** Annual; **Vehicle Classification:** EMFAC2007 Categories; **Model Year:** 2007 or newer; **Speed:** All Speeds; **Fleet Mix:** 100% HHDT; **Fuel Type:** Diesel; **Onsite Speed:** 15 MPH.
2. Running emission factors account for exhaust and fugitive dust from brake wear, tire wear, and road dust from unpaved roads.
3. Non-Running emission factors account for additional exhaust and evaporative processes. **Exhaust:** Engine starting and idling. **Evaporative (ROG Only):** Runloss, Diurnal, and Hotsoak.
4. PM emission factors account for dust control reduction from water application to unpaved roads 2 times per day.

FD = Fugitive Dust

EXH = Exhaust

*The terms volatile organic compounds (VOC) and ROG (reactive organic gases) are used interchangeably. SCAQMD uses VOC, and CalEEMod uses ROG.

Notes:

1. Emission factors generated from EMFAC2021. **Region:** SCAQMD; **Season:** Annual; **Vehicle Classification:** EMFAC2007 Categories; **Model Year:** 2007 or newer; **Speed:** Aggregate Speeds; **Fleet Mix:100%** HHDT); **Fuel Type:** Diesel

2. Running emission factors account for exhaust and fugitive dust from brake wear, tire wear, and road dust from paved roads.

3. Non-Running emission factors account for additional exhaust and evaporative processes. **Exhaust:** Engine starting and idling. **Evaporative (ROG Only):** Runloss, Diurnal, and Hotsoak.

FD = Fugitive Dust

EXH = Exhaust

*The terms volatile organic compounds (VOC) and ROG (reactive organic gases) are used interchangeably. SCAQMD uses VOC, and CalEEMod uses ROG.

Sepulveda Transit Corridor Project - ALTERNATIVE 3

Notes:

1. Emission factors generated from EMFAC2021. **Region:** SCAQMD; **Season:** Annual; **Vehicle Classification:** EMFAC2007 Categories; **Model Year:** 2007 or newer; **Speed:** Aggregate Speeds; **Fleet Mix:100%** HHDT); **Fuel Type:** Diesel

2. Running emission factors account for exhaust and fugitive dust from brake wear, tire wear, and road dust from paved roads.

3. Non-Running emission factors account for additional exhaust and evaporative processes. **Exhaust:** Engine starting and idling. **Evaporative (ROG Only):** Runloss, Diurnal, and Hotsoak.

FD = Fugitive Dust

EXH = Exhaust

*The terms volatile organic compounds (VOC) and ROG (reactive organic gases) are used interchangeably. SCAQMD uses VOC, and CalEEMod uses ROG.

Notes:

1. Emission factors generated from EMFAC2021. **Region:** SCAQMD; **Season:** Annual; **Vehicle Classification:** EMFAC2007 Categories; **Model Year:** 2007 or newer; **Speed:** Aggregate Speeds; **Fleet Mix:100%** HHDT); **Fuel Type:** Diesel
2. Running emission factors account for exhaust and fugitive dust from brake wear, tire wear, and road dust from paved roads.
3. Non-Running emission factors account for additional exhaust and evaporative processes. **Exhaust:** Engine starting and idling. **Evaporative (ROG Only):** Runloss, Diurnal, and Hotsoak.

FD = Fugitive Dust

EXH = Exhaust

*The terms volatile organic compounds (VOC) and ROG (reactive organic gases) are used interchangeably. SCAQMD uses VOC, and CalEEMod uses ROG.

Sepulveda Transit Corridor Project - ALTERNATIVE 3

VENDOR TRUCKS (ONSITE)

											Running Emission Factor (g/mile)[1,2,4]

Notes:

1. Emission factors generated from EMFAC2021. **Region:** SCAQMD; **Season:** Annual; **Vehicle Classification:** EMFAC2007 Categories; **Model Year:** 2007 or newer; **Speed:** All Speeds; **Fleet Mix:** Heavy Duty-Mix (50% MHDT/50% HHDT); **Fuel Type:** Diesel; **Onsite Speed:** 15 MPH.
2. Running emission factors account for exhaust and fugitive dust from brake wear, tire wear, and road dust from unpaved roads.
3. Non-Running emission factors account for additional exhaust and evaporative processes. **Exhaust:** Engine starting and idling. **Evaporative (ROG Only):** Runloss, Diurnal, and Hotsoak.
4. PM emission factors account for dust control reduction from water application to unpaved roads 2 times per day.

FD = Fugitive Dust

EXH = Exhaust

*The terms volatile organic compounds (VOC) and ROG (reactive organic gases) are used interchangeably. SCAQMD uses VOC, and CalEEMod uses ROG.

Sepulveda Transit Corridor Project - ALTERNATIVE 3

VENDOR TRUCKS (ONSITE)

											Non-Running Emission Factor (g/trip)[1,3]

Notes:

1. Emission factors generated from EMFAC2021. **Region:** SCAQMD; **Season:** Annual; **Vehicle Classification:** EMFAC2007 Categories; **Model Year:** 2007 or newer; **Speed:** All Speeds; **Fleet Mix:** Heavy Duty-Mix (50% MHDT/50% HHDT); **Fuel Type:** Diesel; **Onsite Speed:** 15 MPH.
2. Running emission factors account for exhaust and fugitive dust from brake wear, tire wear, and road dust from unpaved roads.
3. Non-Running emission factors account for additional exhaust and evaporative processes. **Exhaust:** Engine starting and idling. **Evaporative (ROG Only):** Runloss, Diurnal, and Hotsoak.
4. PM emission factors account for dust control reduction from water application to unpaved roads 2 times per day.

FD = Fugitive Dust

EXH = Exhaust

*The terms volatile organic compounds (VOC) and ROG (reactive organic gases) are used interchangeably. SCAQMD uses VOC, and CalEEMod uses ROG.

Notes:

1. Emission factors generated from EMFAC2021. **Region:** SCAQMD; **Season:** Annual; **Vehicle Classification:** EMFAC2007 Categories; **Model Year:** 2007 or newer; **Speed:** All Speeds; **Fleet Mix:** Heavy Duty-Mix (50% MHDT/50% HHDT); **Fuel Type:** Diesel; **Onsite Speed:** 15 MPH.
2. Running emission factors account for exhaust and fugitive dust from brake wear, tire wear, and road dust from unpaved roads.
3. Non-Running emission factors account for additional exhaust and evaporative processes. **Exhaust:** Engine starting and idling. **Evaporative (ROG Only):** Runloss, Diurnal, and Hotsoak.
4. PM emission factors account for dust control reduction from water application to unpaved roads 2 times per day.

FD = Fugitive Dust

EXH = Exhaust

*The terms volatile organic compounds (VOC) and ROG (reactive organic gases) are used interchangeably. SCAQMD uses VOC, and CalEEMod uses ROG.

Notes:

1. Emission factors generated from EMFAC2021. **Region:** SCAQMD; **Season:** Annual; **Vehicle Classification:** EMFAC2007 Categories; **Model Year:** 2007 or newer; **Speed:** Aggregate; **Fleet Mix:** Heavy Duty-Mix (50% MHDT/50% HHDT); **Fuel Type:** Diesel

2. Running emission factors account for exhaust and fugitive dust from brake wear, tire wear, and road dust from paved roads.

3. Non-Running emission factors account for additional exhaust and evaporative processes. **Exhaust:** Engine starting and idling. **Evaporative (ROG Only):** Runloss, Diurnal, and Hotsoak.

FD = Fugitive Dust

EXH = Exhaust

*The terms volatile organic compounds (VOC) and ROG (reactive organic gases) are used interchangeably. SCAQMD uses VOC, and CalEEMod uses ROG.

Sepulveda Transit Corridor Project - ALTERNATIVE 3

Notes:

1. Emission factors generated from EMFAC2021. **Region:** SCAQMD; **Season:** Annual; **Vehicle Classification:** EMFAC2007 Categories; **Model Year:** 2007 or newer; **Speed:** Aggregate; **Fleet Mix:** Heavy Duty-Mix (50% MHDT/50% HHDT); **Fuel Type:** Diesel

2. Running emission factors account for exhaust and fugitive dust from brake wear, tire wear, and road dust from paved roads.

3. Non-Running emission factors account for additional exhaust and evaporative processes. **Exhaust:** Engine starting and idling. **Evaporative (ROG Only):** Runloss, Diurnal, and Hotsoak.

FD = Fugitive Dust

EXH = Exhaust

*The terms volatile organic compounds (VOC) and ROG (reactive organic gases) are used interchangeably. SCAQMD uses VOC, and CalEEMod uses ROG.

Notes:

1. Emission factors generated from EMFAC2021. **Region:** SCAQMD; **Season:** Annual; **Vehicle Classification:** EMFAC2007 Categories; **Model Year:** 2007 or newer; **Speed:** Aggregate; **Fleet Mix:** Heavy Duty-Mix (50% MHDT/50% HHDT); **Fuel Type:** Diesel

2. Running emission factors account for exhaust and fugitive dust from brake wear, tire wear, and road dust from paved roads.

3. Non-Running emission factors account for additional exhaust and evaporative processes. **Exhaust:** Engine starting and idling. **Evaporative (ROG Only):** Runloss, Diurnal, and Hotsoak.

FD = Fugitive Dust

EXH = Exhaust

*The terms volatile organic compounds (VOC) and ROG (reactive organic gases) are used interchangeably. SCAQMD uses VOC, and CalEEMod uses ROG.

Sepulveda Transit Corridor Project - ALTERNATIVE 3

WATER TRUCKS (ONSITE)

Notes:

1. Emission factors generated from EMFAC2021. **Region:** SCAQMD; **Season:** Annual; **Vehicle Classification:** EMFAC2007 Categories; **Model Year:** 2007 or newer; **Speed:** All Speeds; **Fleet Mix:** Heavy Duty-Mix (50% MHDT/50% HHDT); **Fuel Type:** Diesel; **Onsite Speed:** 15 MPH.
2. Running emission factors account for exhaust and fugitive dust from brake wear, tire wear, and road dust from unpaved roads.
3. Non-Running emission factors account for additional exhaust and evaporative processes. **Exhaust:** Engine starting and idling. **Evaporative (ROG Only):** Runloss, Diurnal, and Hotsoak.
4. PM emission factors account for dust control reduction from water application to unpaved roads 2 times per day.

FD = Fugitive Dust

EXH = Exhaust

*The terms volatile organic compounds (VOC) and ROG (reactive organic gases) are used interchangeably. SCAQMD uses VOC, and CalEEMod uses ROG.

Notes:

1. Emission factors generated from EMFAC2021. **Region:** SCAQMD; **Season:** Annual; **Vehicle Classification:** EMFAC2007 Categories; **Model Year:** 2007 or newer; **Speed:** All Speeds; **Fleet Mix:** Heavy Duty-Mix (50% MHDT/50% HHDT); **Fuel Type:** Diesel; **Onsite Speed:** 15 MPH.
2. Running emission factors account for exhaust and fugitive dust from brake wear, tire wear, and road dust from unpaved roads.
3. Non-Running emission factors account for additional exhaust and evaporative processes. **Exhaust:** Engine starting and idling. **Evaporative (ROG Only):** Runloss, Diurnal, and Hotsoak.
4. PM emission factors account for dust control reduction from water application to unpaved roads 2 times per day.

FD = Fugitive Dust

EXH = Exhaust

*The terms volatile organic compounds (VOC) and ROG (reactive organic gases) are used interchangeably. SCAQMD uses VOC, and CalEEMod uses ROG.

Sepulveda Transit Corridor Project - ALTERNATIVE 3

Notes:

1. Emission factors generated from EMFAC2021. **Region:** SCAQMD; **Season:** Annual; **Vehicle Classification:** EMFAC2007 Categories; **Model Year:** 2007 or newer; **Speed:** All Speeds; **Fleet Mix:** Heavy Duty-Mix (50% MHDT/50% HHDT); **Fuel Type:** Diesel; **Onsite Speed:** 15 MPH.
2. Running emission factors account for exhaust and fugitive dust from brake wear, tire wear, and road dust from unpaved roads.
3. Non-Running emission factors account for additional exhaust and evaporative processes. **Exhaust:** Engine starting and idling. **Evaporative (ROG Only):** Runloss, Diurnal, and Hotsoak.
4. PM emission factors account for dust control reduction from water application to unpaved roads 2 times per day.

FD = Fugitive Dust

EXH = Exhaust

*The terms volatile organic compounds (VOC) and ROG (reactive organic gases) are used interchangeably. SCAQMD uses VOC, and CalEEMod uses ROG.

Notes:

1. Emission factors generated from EMFAC2021. **Region:** SCAQMD; **Season:** Annual; **Vehicle Classification:** EMFAC2007 Categories; **Model Year:** 2007 or newer; **Speed:** Aggregate Speeds; **Fleet Mix:100%** HHDT); **Fuel Type:** Diesel
2. Running emission factors account for exhaust and fugitive dust from brake wear, tire wear, and road dust from paved roads.
3. Non-Running emission factors account for additional exhaust and evaporative processes. **Exhaust:** Engine starting and idling. **Evaporative (ROG Only):** Runloss, Diurnal, and Hotsoak.

FD = Fugitive Dust

EXH = Exhaust

*The terms volatile organic compounds (VOC) and ROG (reactive organic gases) are used interchangeably. SCAQMD uses VOC, and CalEEMod uses ROG.

Notes:

1. Emission factors generated from EMFAC2021. **Region:** SCAQMD; **Season:** Annual; **Vehicle Classification:** EMFAC2007 Categories; **Model Year:** 2007 or newer; **Speed:** Aggregate Speeds; **Fleet Mix:100%** HHDT); **Fuel Type:** Diesel

2. Running emission factors account for exhaust and fugitive dust from brake wear, tire wear, and road dust from paved roads.

3. Non-Running emission factors account for additional exhaust and evaporative processes. **Exhaust:** Engine starting and idling. **Evaporative (ROG Only):** Runloss, Diurnal, and Hotsoak.

FD = Fugitive Dust

EXH = Exhaust

*The terms volatile organic compounds (VOC) and ROG (reactive organic gases) are used interchangeably. SCAQMD uses VOC, and CalEEMod uses ROG.

Notes:

1. Emission factors generated from EMFAC2021. **Region:** SCAQMD; **Season:** Annual; **Vehicle Classification:** EMFAC2007 Categories; **Model Year:** 2007 or newer; **Speed:** Aggregate Speeds; **Fleet Mix:100%** HHDT); **Fuel Type:** Diesel
2. Running emission factors account for exhaust and fugitive dust from brake wear, tire wear, and road dust from paved roads.
3. Non-Running emission factors account for additional exhaust and evaporative processes. **Exhaust:** Engine starting and idling. **Evaporative (ROG Only):** Runloss, Diurnal, and Hotsoak.

FD = Fugitive Dust

EXH = Exhaust

*The terms volatile organic compounds (VOC) and ROG (reactive organic gases) are used interchangeably. SCAQMD uses VOC, and CalEEMod uses ROG.

Sepulveda Transit Corridor Project - ALTERNATIVE 3

Notes:

1. Emission factors generated from EMFAC2021. **Region:** SCAQMD; **Season:** Annual; **Vehicle Classification:** EMFAC2007 Categories; **Model Year:** 2007 or newer; **Speed:** Aggregate Speeds; **Fleet Mix:100%** HHDT); **Fuel Type:** Diesel
2. Running emission factors account for exhaust and fugitive dust from brake wear, tire wear, and road dust from paved roads.
3. Non-Running emission factors account for additional exhaust and evaporative processes. **Exhaust:** Engine starting and idling. **Evaporative (ROG Only):** Runloss, Diurnal, and Hotsoak.

FD = Fugitive Dust

EXH = Exhaust

*The terms volatile organic compounds (VOC) and ROG (reactive organic gases) are used interchangeably. SCAQMD uses VOC, and CalEEMod uses ROG.

Sepulveda Transit Corridor Project - ALTERNATIVE 3

Wind Blown Emission Factors[1]	PM_{10}	$PM_{2.5}$
EF (lb/day/acre)	***0.77***	***0.12***
s (silt content of material (weight %))	2.6	2.6
f (% of time the unobstructed wind speed is greater than 12 mph (5.36 m/s) at the mean pile height)[2]	7.8	7.8

Emission Factor Equations[1]

$$E_{PM10} = 0.85\ (s/1.5)\ (f/15)$$
$$E_{PM2.5} = 0.13\ (s/1.5)\ (f/15)$$

**Assuming mean pile height is equivalent to anemometer height of meteorological station.*

1. Countess Environmental, WRAP Fugitive Dust Handbook-Section 9.3

2. f for the project is based on the wind speed class distribution for the Van Nuys Meteorological Station. At this station, 7.8% of wind speeds were greater than 5.70 m/s (12.7 mph) throughout the meteorological period (2012-2016). Although f is based on wind speeds of 12 mph, the wind dataset only had categories for 5.7 m/s and greater. The meteorological site's anemometer height is approximately 10 meters (32 feet), therefore, an 'f' of 7.8% is valid for a storage pile height of up to 32 feet.

3. The number of storage piles assumes 2 piles for sand and 2 piles for coarse aggregate.

Tunneling Electricity Consumption

	Electricity Consumption (Megawatt-hours)[1]				
Tunnel Segment	**Alternative 1**	**Alternative 3**	**Total Electricity Consumption (MWh)**	**LADWP CO_2e Intensity Factor (lb/MWh)[2]**	**Total GHG Emissions ($MTCO_2e$)**
TBM Path #1 (Getty Station through Bel Air to UCLA)	—	536,668	536,668	567	138,024.19

Notes:

1. Project-specific data.
2. CO_2e intensity factor based on LADWP's 2022 Power Mix Content Label.

lb = pound

MWh = Megawatt-hours

$MTCO_2e$ = metric tons of carbon dioxide equivalent

Sepulveda Transit Corridor Project - ALTERNATIVE 3

Construction Electricity Consumption-Portable Offices

Electricity Consumption for 1 Portable Office[1,2]

			Annual		Monthly	
Land Use Type	Land Use Subtype in CalEEMod	Portable Office Area (SF)	Annual Electricity Consumption per Portable Office (kWh/year)	Annual GHG Emissions per Portable Office ($MTCO_2e$/year)	Monthly Electricity Consumption per Portable Office (kWh/month)	Monthly GHG Emissions per Portable Office ($MTCO_2e$/month)
Commercial	General Office Building	720	11,292.16	2.90	941.01	0.24

Construction GHG Emissions per Project Alternative[3]

Alternative	Number of Portable Offices	Monthly GHG Emissions per Portable Office ($MTCO_2e$/month)	Total Construction Duration (months)	Total GHG Emissions ($MTCO_2e$)
Alternative 3	3	0.24	106.5	77.3

Construction Electricity Consumption per Project Alternative[3]

Alternative	Number of Portable Offices	Monthly Electricity Consumption per Portable Office (kWh/month)	Total Construction Duration (months)	Total Electricity Consumption (kWh)	Total Electricity Consumption (MWh)
Alternative 3	3	941.01	106.5	300559.59	300.56

Notes:

1. CalEEMod was used to estimate electricity consumption from portable offices.
2. Monthly values estimated by dividing annual values by 12 months.
3. It was assumed each Project Alternative would have 3 portable offices used throughout the construction duration.

SF = square feet

kWh = kilowatt-hour

MWh = Megawatt-hour

$MTCO_2e$ = metric tons of carbon dioxide equivalent

Exceeds Threshold?	**No**	**No**	**No**	**No**			**Yes**			**Yes**

Notes:

MSF = Maintenance and Storage Facility

N/A = Not Applicable, no threshold for this pollutant.

1. Total emissions from MSF.
2. Total emissions from all stations.
3. Emergency generators were required for underground stations and at the MSF. Alternative 3 has two underground stations and would require one generator per underground station.
4. In accordance with City of LA Municipal Code, all new buildings would be required to have all electric appliances for water and space heating, therefore no natural gas would be consumed during operations.
5. It should be noted that the exceedances for PM10 and PM2.5 are a function of increased fugitive dust emissions related directly to growth in VMT from Baseline 2019 to Future 2045. Dust emission factors for tire wear, brake wear, and paved roads stay relatively constant over the 2019-2045 timeframe compared to engine process emissions factors which drastically decrease over this same time period due to compliance with vehicle emission standards.
6. Baseline emissions are related to mobile sources.

Daily Localized (Onsite) Operational AQ Emissions

Alternative 3 (2045)

	Daily Emissions (lb/day)			
Source Category	**NO_X**	**CO**	**PM_{10} Total**	**$PM_{2.5}$ Total**
MSF Area Sources[1]	0.03	3.52	0.01	0.00
Stations Area Sources[2]	0.33	39.01	0.07	0.05
Emergency Generators[3]	51.65	29.45	1.70	1.70
Alternative 3 Total Emissions	**52.01**	**71.98**	**1.77**	**1.76**
SCAQMD Localized Significance Thresholds[4]	172	1,434	3	2
Exceeds Threshold?	**No**	**No**	**No**	**No**

Notes:

MSF = Maintenance and Storage Facility

N/A = Not Applicable, no threshold for this pollutant.

1. Total emissions from main MSF and e-Bus MSF.

2. Total emissions from all stations.

3. Emergency generators were required for underground stations and at the MSF. Alternative 3 has two underground stations and would require one generator per underground station.

4. The components of the alternative (MSF and stations) are located at different locations along the alternative alignment, therefore it was conservatively assumed that the total localized emissions from all components would occur within a 5-acre site, although in reality, the total acreage of all these components is far greater than 5 acres. The LSTs were developed for sites less than 5 acres, however, the LSTs were used to conduct a screening-level analysis for projects greater than 5 acres to determine if further refined analysis of local air quality impacts is required. Therefore, the LSTs for a 5-acre site were used to evaluate the alternative's local impacts. The localized analysis uses LST values based on a 5-acre site with a receptor distance of 25 meters. Also, because the components are located in different Source Receptor Areas (#2: North Coastal LA County & #7 East San Fernando Valley), the lowest LST values (i.e., strictest thresholds) between these SRAs were selected for each pollutant.

5. In accordance with City of LA Municipal Code, all new buildings would be required to have all electric appliances for water and space heating, therefore no natural gas would be consumed during operations.

6. In accordance with SCAQMD methodology, localized emissions do not include offsite sources such as mobile sources.

Localized Significance Threshold (LST) Values

		Operations LST Values for 5-Acre Site with 25 meter Receptor Distance			
Source Receptor Area (SRA) #	**SRA Name**	**NO_X**	**CO**	**PM_{10}**	**$PM_{2.5}$**
2	Northwest Coastal LA County	221	1,531	3	2
7	East San Fernando Valley	172	1,434	4	2
	Minimum LST Value	**172**	**1,434**	**3**	**2**

The components of the alternative (MSF and stations) are located at different locations along the alternative alignment, therefore it was conservatively assumed that the total localized emissions from all components would occur within a 5-acre site, although in reality, the total acreage of all these components is far greater than 5 acres. The LSTs were developed for sites less than 5 acres, however, the LSTs were used to conduct a screening-level analysis for projects greater than 5 acres to determine if further refined analysis of local air quality impacts is required. Therefore, the LSTs for a 5-acre site were used to evaluate the alternative's local impacts. The localized analysis uses LST values based on a 5-acre site with a receptor distance of 25 meters. Also, because the components are located in different Source Receptor Areas (#2: North Coastal LA County & #7 East San Fernando Valley), the lowest LST values (i.e., strictest thresholds) between these SRAs were selected for each pollutant.

Operations Annual Greenhouse Gas Emission Summaries

Annual GHG Emissions

Alternative 3 (2045) Compared to No Project Alternative (2045)

	Annual GHG Emissions ($MTCO_2e/yr$) by Component

Daily Paved Road Dust Emission Factor[1]

$$E_{ext} = [\, k\,(sL)^{0.91} \times (W)^{1.02} \,]\,(1 - P/4N)$$

Parameter	Description	Source:
E_{ext}	Annual or other long-term average emission factor in the same units as k	USEPA AP-42, Paved Roads Methodology
k	Particle size multiplier for particle size range and units of interest	CalEEMod Default Value
sL	road surface silt loading (g/m^2)	CalEEMod Default Value
W	average weight (tons) of all the vehicles raveling the road (2.4 tons)	CalEEMod Default Value
P	Number of "wet" days with at least 0.254 mm (0.01 in) of precipitation during the averaging period	Avg of CalEEMod default values for Van Nuys and Santa Monica
N	Number of days in the averaging period (e.g. 365 for annual, 91 for seasonal, 30 for monthly)	CalEEMod Default Value

Parameters	PM_{10}	$PM_{2.5}$
k (g/VMT)	1.000	0.250
sL (g/m^2)	0.1	0.1
W (tons)	2.4	2.4
P ("wet" days)[2]	19.1	19.1
N (days per year)	365	365
EF without natural dust control (precipitation) (g/mi)	3.00E-01	7.51E-02

Notes:

1. AP42, Section 13.2.1 Paved Roads, January 2011
2. Consistent with Appendix C of the CalEEMod User's Guide, daily road dust emission factors do not account for a precipitation adjustment.

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	STC Alt 3-MSF Operations
Operational Year	2045
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	2.50
Precipitation (days)	18.6
Location	34.16099829872333, -118.4672501820317
County	Los Angeles-South Coast
City	Los Angeles
Air District	South Coast AQMD
Air Basin	South Coast
TAZ	3863
EDFZ	17
Electric Utility	Los Angeles Department of Water & Power
Gas Utility	Southern California Gas
App Version	2022.1.1.24

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
General Office Building	81.0	1000sqft	1.61	81,000	3,515	—	—	—

Parking Lot	395	1000sqft	9.07	0.00	19,750	—	—	—
Other Non-Asphalt Surfaces	667	1000sqft	15.3	0.00	33,363	—	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

No measures selected

2. Emissions Summary

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	15.4	annual days of extreme heat
Extreme Precipitation	7.15	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score

Temperature and Extreme Heat	2	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	2	1	1	3
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	80.0
AQ-PM	68.9
AQ-DPM	79.9
Drinking Water	83.1
Lead Risk Housing	43.8
Pesticides	0.00
Toxic Releases	64.7
Traffic	99.8
Effect Indicators	—
CleanUp Sites	0.00
Groundwater	14.3
Haz Waste Facilities/Generators	40.9
Impaired Water Bodies	77.3
Solid Waste	0.00
Sensitive Population	—
Asthma	37.7

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	65.0
Healthy Places Index Score for Project Location (b)	67.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No

Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Characteristics: Utility Information	This is a forecasted CO2e Intensity Factor for LADWP in 2045. SB100 will require electricity provided to customers to be from 100% renewable sources by 2045. SB100 allows for the use of renewable energy credits, which allows for natural gas to provide up to 10% of power generation, therefore the CO2e Intensity Factor accounts for some electricity generated from natural gas. Because it is a CO2e intensity factor, intensity factors for CH4 and N2O were zeroed-out.
Land Use	Assumed 5 percent of lot acreage would be landscaped.
Operations: Vehicle Data	Mobile emissions for employees at MSF calculated outside of CalEEMod.
Operations: Energy Use	For Office Buildings, CalEEMod generated default annual electricity (kWh) and natural gas consumption in kBTU/year, however, in accordance with the City of LA Municipal Code, all new buildings would be required to be all-electric buildings. Therefore, the annual natural gas consumption value (kBTU) was converted to kWh to account for the additional electricity consumption that is substituted for natural gas, and then added to the default electricity consumption value.

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	15.4	annual days of extreme heat
Extreme Precipitation	7.15	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth

Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	2	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	2	1	1	3

Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	80.0
AQ-PM	68.9
AQ-DPM	79.9
Drinking Water	83.1
Lead Risk Housing	43.8
Pesticides	0.00
Toxic Releases	64.7
Traffic	99.8

Effect Indicators	—
CleanUp Sites	0.00
Groundwater	14.3
Haz Waste Facilities/Generators	40.9
Impaired Water Bodies	77.3
Solid Waste	0.00
Sensitive Population	—
Asthma	37.7
Cardio-vascular	69.7
Low Birth Weights	73.3
Socioeconomic Factor Indicators	—
Education	23.7
Housing	57.4
Linguistic	25.6
Poverty	28.2
Unemployment	74.1

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	75.74746567
Employed	87.75824458
Median HI	58.59104324
Education	—
Bachelor's or higher	84.51174131
High school enrollment	100

Preschool enrollment	95.7141024
Transportation	—
Auto Access	45.25856538
Active commuting	52.31618119
Social	—
2-parent households	93.32734505
Voting	0.654433466

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	65.0
Healthy Places Index Score for Project Location (b)	67.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification

Characteristics: Utility Information	This is a forecasted CO2e Intensity Factor for LADWP in 2045. SB100 will require electricity provided to customers to be from 100% renewable sources by 2045. SB100 allows for the use of renewable energy credits, which allows for natural gas to provide up to 10% of power generation, therefore the CO2e Intensity Factor accounts for some electricity generated from natural gas. Because it is a CO2e intensity factor, intensity factors for CH4 and N2O were zeroed-out.
Land Use	CalEEMod does not have train station land use types, therefore, stations were represented using the "Enclosed Parking with Elevators" land use type. This land use type was selected because it accounts for electricity consumption from elevators and ventilation systems. Although aerial stations would not be enclosed, this land use type would result in a conservative estimate of electricity consumption. The building area represents the station area for all stations in this alternative. It was also assumed 5 percent of the lot acreage would be landscaped.

Alignment Electricity Consumption

LASRE Alternatives

Track Alignment Electricity Consumption for Design Year (2045)

LASRE Alternatives	Annual Consumption (MWh)[1]	2045 LADWP CO_2e Intensity Factor (lb/MWh)[2]	Annual GHG Emissions ($MTCO_2e$/yr)
Alternative 1	71,524	88	2856.4
Alternative 3	83,693	88	3342.4

Notes:

1. Electricity consumption values based on Energy Consumption During Operations Report (MRT.PH3.3.6.10.k.draft) Accounts for electricity consumption from all components (traction power for track alignment, stations, MSFs, e-buses, etc.).

2. This is a forecasted CO_2e Intensity Factor for LADWP in 2045. SB100 will require electricity provided to customers to be from 100% renewable sources by 2045. SB100 allows for the use of renewable energy credits, thus allowing for the combustion of natural gas to provide up to 10% of generation, thus the CO_2e Intensity Factor accounts for some electricity generated from natural gas.

lb = pound
MWh = Megawatt-hour
$MTCO_2e$ = metric tons of carbon dioxide equivalent

Emergency Generator Emissions

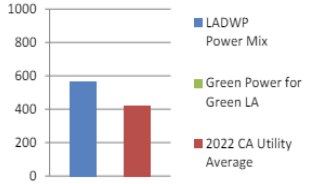
			Percentage of Retail Sales Covered by Retired Unbundled RECs[3]**:**	**3%**	**0%**	



[1]The eligible renewable percentage above does not reflect RPS compliance, which is determined using a different methodology.
[2]Unspecified power is electricity that has been purchased through open market transactions and is not traceable to a specific generation source.
[3]Renewable energy credits (RECs) are tracking instruments issued for renewable generation. Unbundled renewable energy credits (RECs) represent renewable generation that was not delivered to serve retail sales. Unbundled RECs are not reflected in the power mix or GHG emissions intensities above.
The unbundled RECs retired in association with LADWP's 2022 electricity portfolios were sourced from eligible renewable energy generators such as biomass, biowaste, geothermal, eligible hydroelectric, solar, and wind energy resources.

For specific information about this electricity portfolio, contact:	**Los Angeles Department of Water and Power 1-800-DIAL-DWP**
For general information about the Power Content Label, visit:	https://www.energy.ca.gov/programs-and-topics/programs/power-source-disclosure-program

Notes:

1. LADWP, 2022. Power Content Label
2. SB100 would require renewable energy and zero-carbon resources to supply 100 percent of electric retail sales to end-use customers by 2045. Los Angeles Department of Water and Power (LADWP) Strategic Long-Term Resource Plan (SLTRP) was developed to meet this requirement and even exceed this requirement by meeting the 100% renewables goal by 2035. To be conservative, it was assumed that LADWP's power mix would be compliant with SB100's standard schedule of 2045 due to uncertainty in assumptions made to meet the 2035 date. SB100 allows for the use of renewable energy credits which are a market-based mechanism to help meet renewable energy targets. This allows natural gas generation to help meet the 100% target if offset by the purchase of RECs. Therefore, it was assumed that natural gas could provide up to 10% of electricity generation in 2045, thus the CO_2e Intensity Factor accounts for some electricity generated from natural gas.

Notes:

1. Phasing and material data provided by STCP team and based on structural designs.
2. Number of workers evaluated using CalEEMod methodology of 1.25 workers piece of equipment.
3. Worker trip length based on CalEEMod default value.
4. Concrete truck trip length based on CalEEMod default value for vendors.
5. Haul trips lengths based on project-specific data.
6. It was assumed water trucks would make 3 passes per day for ground/soil disturbing activities.
7. Daily workday hours account for safety meetings and lunch breaks.

Notes:

1. Phasing and material data provided by STCP team and based on structural designs.
2. Number of workers evaluated using CalEEMod methodology of 1.25 workers piece of equipment.
3. Worker trip length based on CalEEMod default value.
4. Concrete truck trip length based on CalEEMod default value for vendors.
5. Haul trips lengths based on project-specific data.
6. It was assumed water trucks would make 3 passes per day for ground/soil disturbing activities.
7. Daily workday hours account for safety meetings and lunch breaks.

Sepulveda Transit Corridor Project - ALTERNATIVE 4

DUST CONTROL MEASURES/ASSUMPTIONS

General Construction Assumptions	Value
Onsite Vehicle Speed (mph):	15
Onsite Trip Length (miles):	0.10
Number of Watering Events per Day:	3
General Worksite Dust Reduction (%)	74%

Dust Control Measures[1]

Activity Area	Control Measure	Control Efficiency (%)	Additional Notes
General Worksite	Apply water at various intervals to disturbed areas within construction site (**3.2-hour watering interval)**	61%	If using this reduction, account for 2 water trucks trips per day (4 one-way trips/2 onsite trips)
General Worksite	Apply water at various intervals to disturbed areas within construction site (**2.1-hour watering interval)**	74%	If using this reduction, account for 3 water trucks trips per day (6 one-way trips/3 onsite trips)
Unpaved Roads	Implement watering twice a day for industrial unpaved road.	55%	The analysis assumes water trucks used for general worksite would also water unpaved roads and provide water during demolition activities. The AQ analysis assumes 3 water trucks per day,
Demolition Activities	Apply water every 4 hours to the area within 100 feet of a structure being demolished, to reduce vehicle trackout.	36%

Notes:

1. Data based on alternative specific information.
2. Horsepower and load factor based on default values for equipment in CalEEMod.
3. In accordance with Metro's Green Construction Policy, all off-road equipment equal to or greater than 50 HP would have emission factors for Tier 4 Final equipment, off-road equipment less than 50 HP would use fleet average emission factors from CalEEMod.

EXH = Exhaust

FD = Fugitive Dust

*The terms volatile organic compounds (VOC) and ROG (reactive organic gases) are used interchangeably. SCAQMD uses VOC, and CalEEMod uses ROG.

Notes:

1. Conversion factor based on CalEEMod default value.
2. Emission factor based on CalEEMod default value.
3. Emissions account for dust control reduction from water application 3 times per day.

FD = Fugitive Dust

EXH = Exhaust

Notes:

1. Emission factor based on CalEEMod default value.
2. Emissions account for dust control reduction from water application 3 times per day.
3. Bulldozing emissions are only calculated for Rubber Tired Dozers which is consistent with CalEEMod methodology.

FD = Fugitive Dust

EXH = Exhaust

Sepulveda Transit Corridor Project - ALTERNATIVE 4

Dust Control Reduction 74%

GRADING FUGITIVE DUST (ONSITE)

Notes:

1. CalEEMod provides the amount of acres that can be graded per 8-hours. The scaling factor is included in case equipment would operate more or less than 8 hours, thus, the amount of area to be graded would be adjusted.
2. Grading VMT based on methodology from CalEEMod which accounts for bladewidth of grading equipment and the amount of area grading equipment can complete in 8-hour day.
3. Emission factor based on CalEEMod default value.
4. Emissions account for dust control reduction from water application 3 times per day.
5. Grading emissions are only calculated for the following equipment types: Crawler Tractors, Graders, Rubber Tired Dozers, and Scrapers. This approach is consistent with CalEEMod methodology.

FD = Fugitive Dust

EXH = Exhaust

Notes:

1. Emission factors generated from EMFAC2021. **Region:** SCAQMD; **Season:** Annual; **Vehicle Classification:** EMFAC2007 Categories; **Model Year:** Aggregate; **Speed:** Aggregate; **Fleet Mix:** Light-Duty Mix (25% LDA/50% LDT1/25% LDT2); **Fuel Type:** Gasoline

2. Running emission factors account for exhaust and fugitive dust from brake wear, tire wear, and road dust from paved roads.

3. Non-Running emission factors account for additional exhaust and evaporative processes. **Exhaust:** Engine starting and idling. **Evaporative (ROG Only):** Runloss, Diurnal, and Hotsoak.

FD = Fugitive Dust

EXH = Exhaust

*The terms volatile organic compounds (VOC) and ROG (reactive organic gases) are used interchangeably. SCAQMD uses VOC, and CalEEMod uses ROG.
